Of course, terrorists didn't need the CIA to tell them that the U.S. government monitors their communications. Telegram is only one in a string of messaging systems ISIS has employed to protect its communications, U.S. officials told The Daily Beast. And some apps that have marketed their privacy-enhancing features, such as Snapchat and Secret have either disclosed their users' supposedly-private information, or have been shown to be vulnerable to hacking. In other words, they're not-so-secret after all.

But Telegram is ISIS' new "it" app—until they find another.

Founded in 2013, Telegram is the brainchild of a pair of Russian brothers, Pavel and Nikolai Durov. Pavel, the 31-year old founder of Russia's biggest social network, VKontakte, or VK, is a vocal critic of Vladimir Putin's government and provides the financial backing. Nikolai is the technical brains behind the outfit.

Not surprisingly, Telegram doesn't market its product to terrorists. But being a force against government surveillance is built into the company's philosophy.

"The No. 1 reason for me to support and help launch Telegram was to build a means of communication that can't be accessed by the Russian security agencies," Durov told TechCrunch last year in an interview.

The company says that Telegram has no connections to the Russian government. In fact, its headquarters are in Berlin.

Durov may have been trying to frustrate the Russians, who are waging their own war against Islamist militants. But he's also piqued the Americans. And, it turns out, the Iranians, who this week arrested administrators of more than 20 Telegram groups, accusing of them of spreading "immoral" content, Reuters reported. Smartphone messaging apps are popular among Iranian youth, who compose the majority of the country's population, and Iranian hardliners have been cracking down on potential subversion as the country opens up more to the West with the lifting of economic sanctions.

Telegram may be a tool for pro-democracy activists. But its anti-surveillance capabilities won't win it any points in the CIA's eye.

In his remarks Monday, Brennan was forceful in his assertion that technologies and policies set up in part to counter government overreach were making his agency's job harder.

"In the past several years, because of a number of unauthorized disclosures and a lot of handwringing over the government's role in the effort to try to uncover these terrorists, there have been some policy and legal and other actions that are taken that make our ability collectively internationally to find these terrorists much more challenging," Brennan said.

He didn't mention any names, but one in particular hung unspoken in the air: Edward Snowden.

Brennan seemed to give voice publicly to what dozens of his colleagues have argued privately, that a chain of events starting with the Snowden leaks in 2013 has worked their efforts to stop terrorist attacks. Following the disclosures, some European governments moved to enact stricter data protection rules seen as a bulwark against American surveillance. And the European Court of Justice recently invalidated an agreement that allows the free-flow of

personal information from European countries to the U.S., based on allegations of surveillance found in press article based on Snowden's leaks.

"I do hope that this is going to be a wake-up call, particularly in areas of Europe where I think there has been a misrepresentation of what the intelligence security services are doing by some quarters that are designed to undercut those capabilities," Brennan said.

Paris attack suspects: what do we know about them?, The Guardian

The Guardian
2015 11 17

French authorities have said seven attackers died while carrying out Friday night's terror attacks, while one other believed to be "directly involved" in the bloodshed is on the run. Belgian authorities have arrested seven other men in connection with the attacks.

Four have been officially named – three of the dead attackers, and the wanted man – but details have emerged about others suspected of involvement. Among them are three brothers: one dead, one arrested and one on the run.

The alleged mastermind

French officials have named Abdelhamid Abaaoud, a 27-year-old Belgian linked to a Brussels-based terror cell, as the alleged mastermind of the Paris attacks. He remains at large and is believed to be in Syria.

Abaaoud was also linked by French officials to the thwarted attacks on a Paris-bound high-speed train in August and a foiled plot to attack a church in Paris in April. The French newspaper Libération also linked Abaaoud to Sid Ahmed Ghlam, a French student charged with murder, attempted murder and terror offences.

It is alleged that documents found at Ghlam's home and results from a search of his computer and telephone suggested that he was in contact with a French speaker in Syria who had ordered him to carry out an attack on a church.

Abaaoud has been described as the alleged ringleader of a Belgian terror cell , which the authorities tried to destroy in January, days after the Charlie Hebdo attacks in Paris. The counter-terror raids led to the arrests of 13 jihadis in Belgium – however, Abaaoud remained at large.

In July, Abaaoud was sentenced in absentia to 20 years in prison for recruiting Islamic State fighters to Syria. He was among 32 people charged in Belgium with running one of Belgium's largest jihadist recruitment networks, although many of the defendants – including Abaaoud – were tried in absentia and remain at large.

Abaaoud was also accused of kidnapping after his younger brother Younes travelled to Syria in January 2014 at the age of 13 and earned the media nickname of "the youngest jihadist in the world." Their father Omar Abaaoud, having heard no news from his two sons, filed a police complaint against the older son, AFP reported in May.

He is known to have spent time fighting alongside Islamic State in Syria, arriving in the wartorn country in January this year. He was known to security forces after appearing in an Isis video at the wheel of a car transporting mutilated bodies to a mass grave.

VTM, a Flemish-language channel, reported that Abaaoud made calls from Greece to the brother of one of two heavily armed suspects killed in Verviers during the counter-terrorism raids in January.

In an interview with the Isis magazine Dabiq in February, Abaaoud boasted that he had been able to plot attacks against the west under the nose of Belgian intelligence agencies.

Abaaoud, also known as Abu Umar al-Baljiki, said he and two fellow jihadis wanted to "terrorise the crusaders waging war against the Muslims".

Posing for photographs holding an Isis flag and the Qur'an, the bearded militant said he and two fellow fighters travelled to Belgium to wage jihad in the country.

Abaaoud revealed that he was stopped during the journey by "an officer" after a picture of him fighting for Isis was published in Belgian media. He added, however, that the officer "let me go, as he did not see the resemblance". It is not clear when or where this police intervention is said to have taken place.

Asked by the magazine why he became a suspect, Abaaoud said: "The intelligence knew me from before as I had been previously imprisoned by them. After the raid on the safe house, they figured out that I had been with the brothers and that we had been planning operations together. So they gathered intelligence agents from all over the world – from Europe and America – in order to detain me.

"They arrested Muslims in Greece, Spain, France, and Belgium in order to apprehend me... All those arrested were not even connected to our plans! May Allah release all Muslims from the prisons of these crusaders."

He boasted that he had been able to plan terror attacks against westerners while living in Belgium and being wanted by intelligence agencies. Some time later, he travelled to Syria.

"I was able to leave... despite being chased by so many intelligence agencies," he told the magazine. "All this proves that a Muslim should not fear the bloated image of the crusader intelligence.

"My name and picture were all over the news yet I was able to stay in their homeland, plan operations against them, and leave safely when doing so became necessary. I ask Allah to accept the fruitful deeds of the shuhada' who terrorised the crusaders of America, France, Canada, Australia, Germany, and Belgium."

The Bataclan attackers

1. Omar Ismaïl Mostefai was the first attacker named by French authorities. The 29-year-old is of Algerian heritage and grew up in Courcouronnes, just south of Paris; he had a criminal record for petty offences. He was identified by prints taken from a severed finger found in the Bataclan concert hall, where he detonated his explosives belt.

French intelligence took note of Mostefai when he began spending time at a mosque with radical links in 2010, but they lost track of him in 2013, when he may have travelled to Syria, the Washington Post reported. Turkish authorities said he entered the country in 2013 and there is no record of him leaving. His brother said they had not spoken for years, but he is still being questioned by police along with six others, including Mostefai's father and sister-in-law.

Turkish authorities said they notified France twice about Mostefai – in December 2014 and June this year – after French officials requested information on his whereabouts on 10 October last year. Officials in Ankara said they never heard back from their French counterparts on the matter until after the Paris attacks, when they received another information request about Mostefai.

In 2010, Mostefai had been the subject of a police "S" file for radicalisation, but the state prosecutor said he had never been implicated in membership of a terrorist organisation. Police are reported to be investigating whether Mostefai travelled to Syria from 2013–2014. The local paper, Le Journal du Centre, reported that Mostefai attended a mosque in Lucé, a town that borders Chartres, and may have followed a radical Belgium-based Islamist who visited the mosque.

2. Samy Amimour , a 28-year-old Frenchman, was named on Monday as the other suicide bomber at the Bataclan. Born on 15 October 1987 in Paris, from the north-eastern suburb of Drancy, Amimour reportedly worked as a bus driver in Paris until 2012. Also that year, he was allegedly charged in a terrorism investigation and placed under judicial supervision. However, he dropped off the radar and was the subject of an international arrest warrant. Amimour's father, Mohamed, 67, went to Syria last year to try bring his son home – but was unsuccesful. Mohamed told Le Monde in December 2014 that he had an "extremely cold reunion" with his son in Syria in June last year and was unable to convince him to return. Samy had been injured and was on crutches during the brief reunion, Mohamed said: "Samy was with another guy who never left us alone. It was an extremely cold reunion and he did not take me to his house, did not tell me how he's been injured [or] if he had fought." Three of his family and friends were arrested in pre-dawn counter-terrorism raids on Monday.

The Stade de France attackers

3. Another attacker who lived in Belgium was named by the Washington Post as Bilal Hadfi, although he has not yet been officially identified by French prosecutors. The 20-year-old is thought to have fought for Islamic State in Syria, the paper said, but did not give his nationality. Belgian reports suggest Hadfi was from Neder-over-Heembeek, in north Brussels, and became quickly radicalised last year. He is said to have gone to Syria in spring this year, according to Belgian newspaper Het Laatste Nieuws .

4. Another attacker who detonated his explosive vest outside the Stade de France stadium was carrying a Syrian passport in the name of Ahmad Almohammad , aged 25, from Idlib. A statement from the prosecutor's office said the passport "remains to be verified, but that the fingerprints matched those of someone who entered Europe through the Greek island of Leros in October. The Serbian newspaper Blic said he crossed into the country on 7 October, having arrived four days earlier in Leros. The paper also reported that French security officials had asked their Serbian counterparts for help as the man had been registered in the southern Serbian town of Preševo. A Greek newspaper, Protothema, said he was travelling with a second man, Mohammed Almuhamed , and published pictures purporting to show their travel documents. As ever, such details are hard to verify. It cannot be ruled out that the men were

travelling under false documents – the Guardian has previously reported on the burgeoning trade in fake and stolen passports.

Suspect on the run

5. Salah Abdeslam went on the run after the attacks. He is the subject of an international police hunt after the Police Nationale issued a wanted notice for the 26-year-old on Sunday. Abdeslam is thought to have rented the black Volkswagen Polo used by the group that attacked the Bataclan concert hall, the Associated Press reported. He was born and lived in Belgium, although French police have described him as a French national. In the hours after the attacks, French police stopped Abdeslam and two other men close to the border with Belgium, but allowed them to go on their way because their names were not at that stage on any wanted list.

Boulevard Voltaire attacker

6. Brahim Abdeslam , the brother of the fugitive attacker Salah Abdeslam, was identified by prosecutors as the man who rented a Seat vehicle used in the attacks. He carried out the suicide attack at the Comptoir Voltaire cafe. Brahim, 31, was a French national based in Belgium.

Others

Belgian authorities on Monday released five out of the seven suspects who were arrested at the weekend after the Paris attacks, including the brother of one of the suicide bombers, prosecutors said. Mohamed Abdeslam – whose brother Ibrahim took part in the attacks and whose other brother Salah is being hunted by police – was freed "without being charged", a spokesman for the prosecutor's office told AFP.

Several people were also detained in anti-terrorist raids in Toulouse, Grenoble, Jeumont and Bobigny overnight on Sunday, but it is unclear whether any of these are directly connected to the Paris attacks. The Toulouse arrests are not said to be directly linked, but were carried out under the national state of emergency declared by President François Hollande after the Friday night attacks.

ISIS Is Using Everything From Encryption To PlayStations To Avoid Being Spied On, BuzzFeed News

BuzzFeed News
Sheera Frenkel
2015 11 16

New York - In the week leading up to the attack on Paris, which ISIS has claimed responsibility for, at least four different intelligence agencies warned French officials about a possible attack on "Western targets."
"We know of three agencies who passed on these warnings — we were one of them," said an Israeli diplomat, who acknowledged the intelligence they passed on did not include specific targets for an attack or a date. Jordanian officials told BuzzFeed News they had also sent

France a warning, less than a week ago, while Iraqi and Turkish officials have said that they passed on more specific intelligence to French authorities.

"It is fair to say that France was warned," said the Israeli diplomat, who spoke on condition of anonymity because he was not authorized to speak to the press. "But it is also safe to say France had been warned almost weekly for six months. That was what the chatter was telling us."

That chatter is the focus of intelligence agencies this week, as they try to figure out what they missed in the months leading up to ISIS's plan for a complex attack in Paris which left 129 people dead and over 350 wounded. **Western intelligence agencies say it is clear there was an intelligence failure, but what is less clear is how to monitor a group like ISIS, which has become increasingly savvy about its online communications**, encrypting messages and using a variety of platforms ranging from Tor — the browser helps mask location by bouncing it around a free, worldwide network — to the PlayStation gaming network, on which 110 million users regularly communicate, allowing militants to easily hide in plain sight.

Speaking from the G20 summit in Antalya, Turkey, President Obama said that the intelligence on hand before the Paris attacks was not specific enough to "allow for law enforcement or military actions to disrupt it."

"The concerns about potential ISIL attacks in the West have been there for over a year now. And they come through periodically. There were no specific mentions of this particular attack that would give us a sense of something that we need — that we could provide French authorities, for example, or act on ourselves," said Obama.

"ISIL, overall, has a very high level of awareness of operational security," said a U.S. intelligence official who spoke to BuzzFeed News from Jordan, using the acronym for ISIS preferred by the United States. He could not be quoted on the record as he was not authorized to speak to the press. "We've seen militant groups before where maybe the highest echelon are encrypting everything, and only using secure networks. ISIL, at least from mid-2014 onwards, when they declared themselves a caliphate, has used every tool at their disposal to mask communications from the bottom up," he said.

ISIS is hardly the first militant group to consider encryption technology: In papers captured during the U.S. raid on Osama bin Laden's compound a letter was found addressed to bin Laden from an individual identified as "brother Azmarai" which read, "We should be careful not to send big secrets by email. We should assume that the enemy can see these emails and [we should] only send through email information that can bring no harm if the enemy reads it. Computer science is not our science and we are not the ones who invented it."

Those tools range from the most basic — using encrypted messaging platforms such as WhatsApp and Kik — to the more advanced use of gaming platforms to share messages between ISIS leadership in Iraq and Syria and cells awaiting orders in the West. U.S., Israeli, and Jordanian officials who spoke to BuzzFeed News over the weekend said they were aware of the methods and admitted that even though they had the ability to spy on some of that technology, it was like "looking for a needle in a haystack."

The U.S. intelligence officer told BuzzFeed News that ISIS had shown a surprising flexibility to switch between platforms, recently adopting the privacy-centric Telegram app to set up challenges and deliver messages to over 10,000 followers. Telegram co-founder Pavel Durov recently told TechCrunch that the app is seeing 12 billion messages sent out daily via the platform. In his interview with Techcrunch, Durov seemed aware that his app had become popular among militant groups, including al-Qaeda and ISIS.

"I think that privacy, ultimately, and our right for privacy is more important than our fear of bad things happening like terrorism," Durov said, adding that if it wasn't his app, ISIS would find alternative platform for communicating. On Monday, Russian authorities considered a request to close access to the Telegram site.

Durov did not answer repeated requests from BuzzFeed News for comment.
One of those alternatives was highlighted on November 11, when Belgium's federal home affairs minister, Jan Jambon, said that a PlayStation 4 (PS4) console could be used by ISIS to communicate with their operatives abroad.
"PlayStation 4 is even more difficult to keep track of than WhatsApp," said Jambon, referencing to the secure messaging platform.
It remains unclear, however, how ISIS would have used PS4s, though options range from the relatively direct methods of sending messages to players or voice-chatting, to more elaborate methods cooked up by those who play games regularly. Players, for instance, can use their weapons during a game to send a spray of bullets onto a wall, spelling out whole sentences to each other.
In addition to using sophisticated methods to mask its communications, ISIS makes sure the message is often a code, pre-arranged and known only to the operatives involved.
"Today, intelligence agencies have the ability to intercept specific encrypted messages and decrypt them, given time and reason to do so," said the U.S. intelligence officer. "But if they do this, if they intercept the message and the message reads only one word, 'tomorrow' or even, 'the weather is good,' how does that help us? We might be warned that something is happening but we don't know where or when."
Even as intelligence agencies increase efforts to monitor the myriad platforms on which ISIS is communicating, ISIS can quickly shift and switch tactics. Jordanian and U.S. officials say the most critical intelligence they are lacking is the information gathered by human sources (HUMINT), rather than information gathered by intercepting signals (SIGINT) to monitor emails and phone calls.
"If you imagine the regular flow of SIGINT communication as an ocean where you are trying to find, and swim with, a certain school of fish, deciphering encrypted communication is like trying to find a specific fish in the ocean," said the Israeli diplomat, who has previously worked closely with his country's intelligence services. "It can be done, but you need to know exactly what you are looking for."

Alleged mastermind mocked Western security agencies after earlier terror plot, Globe and Mail

Tu Thanh Ha
17 November 2015
The Globe and Mail

No media-shy man, the alleged mastermind behind the Paris attacks gave an interview this year to a jihadi magazine in which he bragged about outwitting European law enforcement.

Abdelhamid Abaaoud also tipped his hat to those who had attacked Canada and other Western countries. "I ask Allah to accept the fruitful deeds of the shuhada [martyrs] who terrorized the crusaders of America, France, Canada, Australia, Germany and Belgium," he said at the end of the interview.

His remarks appeared in the February issue of Dabiq, the glossy propaganda magazine of the group calling itself the Islamic State (IS). That interview and a gruesome video in which he can be seen in IS-controlled Syria at the wheel of a pickup truck, smiling as his vehicle dragged a pile of bodies behind him, are now in the spotlight again.

As police in France and Belgium carried out a series of raids on Monday, attention turned to the connection of the suspects to IS, which has claimed responsibility for the attacks that killed at least 129 people in Paris on Friday.

According to French media, investigators believe that the 27year-old Mr. Abaaoud is a key figure in the plot, citing his ties to Salah Abdeslam, another Belgian national wanted by police as a suspect in the Nov. 13 attacks.

Both men have been in custody for their joint involvements in armed robberies in Belgium in 2010 and 2011, BFMTV and Le Monde reported.

Of the two, Mr. Abaaoud has the higher profile. He had already made the news for travelling to Syria to join the Islamic State, luring his teenaged brother to enlist and heading back to Belgium for a failed terror plot.

Mr. Abaaoud, one of six children of a Moroccan family, grew up in Molenbeek, the Brussels suburb that has a reputation as a nexus of Islamist activity and has been linked to four recent terrorist plots.

While a teen, he attended one of Brussels's fancier schools, the Catholic Collège Saint-Pierre, in the district of Uccle, the Belgian newspaper La Capitale reported, adding that he was remembered as “an intelligent boy who wasn't very motivated by his classes."

Mr. Abaaoud's father, Omar, runs a clothing store and has repudiated Abdelhamid, saying he has dishonoured his family by joining the Islamic State and getting involved in a terror plot against Belgium.

Abdelhamid Abaaoud appeared in a video obtained last year by two journalists working for Paris Match.

By Mr. Abaaoud's own account, a fellow jihadi had lost his camera, which “a murtadd" (apostate) later sold to journalists.

The gory video shows a cheerful Mr. Abaaoud driving a truck, towing behind him about half a dozen stiffened bodies. Wearing an Afghan pakol hat and with a GoPro camera strapped to his chest, Mr. Abaaoud jokes and tells the cameraman, “Before, we towed Jet Skis, quads, motorcycles, big trailers full of luggage and gifts for vacation. … Now we tow the apostates and the nonbelievers. You can film now, brother, film my new trailer."

Mr. Abaaoud was in the news again after a police raid last January in the Belgian city of Verviers near the German border, where officers killed two suspected terrorists.

In his interview with Dabiq, he said he and the two men who were killed had gone to Belgium “to terrorize the crusaders waging war against the Muslims."

Because of the video, “my picture [was] all over the media, but alhamdulillah [praise be to God], the kuffar [non-believers] were blinded by Allah," he said.

He said he was even stopped by an officer who failed to notice his resemblance to the face on the video.

Mr. Abaaoud said he was able to make his way back to IS-held territory after the shootout in Verviers.

“Allah blinded their vision and I was able to leave and come to Sham [the Levant] despite being chased after by so many intelligence agencies," he said.

In words that now carry more weight after the Paris attack, he ridiculed the efforts of European counterterrorism agencies.

“A Muslim should not fear the bloated image of the crusader intelligence," he said. “My name and picture were all over the news, yet I was able to stay in their homeland, plan operations against them and leave safely when doing so became necessary."

Column—Fake passports stoke concerns, National Post

Matthew Fisher
National Post
17 November 2015

'Everyone in the world is afraid of Syrians right now," says Mohammad Mohammed. "But that does not mean we are all terrorists."

The former clothing wholesaler, who fled his home in Edlib when extremist factions took over, was among those gathered outside Beirut's UN High Commission for Refugees Monday.

But like a million-plus other Syrians registered as refugees in Lebanon, he knows his chances could be worse since the Paris attacks last weekend.

One of the terrorists allegedly came to Europe as a Syrian refugee. Now, questions about screening procedures are being raised in many countries, including Canada, which is set to take 25,000 Syrian refugees in the next six weeks. Some groups are even calling for a cold stop to bringing Syrians across their borders.

The refugees on the street here say they understand the challenge facing anyone assessing who really is a refugee and who isn't, especially given that Lebanon and other countries in what is a notoriously tough neighbourhood are awash with dubious Syrian documents.

"Every one of us has heard about fake passports and ID cards," says Mohammed. "It is a business. Some Lebanese are buying them."

Khaled Ghazawi, who was pouring small cups of thick, sour coffee at $1 a shot, says he's seen what he believes are "fake" passports in the hands of people from seemingly everywhere - Morocco, Egypt.

The 45-year-old husband and father of six, a former grocery store manager from the brutally contested town of Daraa, says the worst are those he believes "help people get such papers."

If they are right, says Jihan Ismail, a Lebanese shop clerk, it compounds the challenge of figuring out "who is peaceful and who is a terrorist."

"It is not easy to identify terrorists," he says.

Omar Saifeddin, a fruit and vegetable salesman also from Edlib, raises his hand during the street-side discussion.

"You can see that not every finger is the same," he says. "It is like that with people, too. There are good Syrians and bad Syrians. The problem is that only God knows for sure who is good and bad."

Pouring more coffee for the growing crowd, Ghazawi says he understands the latest terror attacks claimed by ISIL "will, of course, have an effect on how foreign governments view us."

He believes the solution for countries willing to accept Syrian refugees is "really good clearances so you know who the people are that you are accepting. Remember there are many other ways for Daesh (the Arabic acronym for the terrorists) to reach where they want to go other than claiming to be refugees."

The men also insist taking in current Syrian refugees from Lebanon is a safe prospect: Lebanon ordered the UNHCR to stop registering Syrian refugees about a year ago, and "terrorists won't want to wait around for years to see if they can go somewhere," said one.

Mohammed adds he thinks the fear many countries have of refugees is misplaced.

"Canada's problem is not with Syrian refugees," he says. "There were French citizens involved in this too, so why aren't Canadians afraid of them? It is that Daesh is already in many centres overseas - they boast that they are in Canada, too, and I am sure that they are right."

Meanwhile, Radia Zammar, who had brought her fouryear-old granddaughter with her to the UNHCR compound, hadn't heard about the terror attacks in Beirut or Paris.

"I am anuneducated woman," she said. "I have only come here today to beg for help for my daughter who requires kidney dialysis. I am afraid that she is going to die. My son-in-law Ahmed Hajar disappeared last year in Syria and we believe he is dead.

" S " comme " sans résultats ", Sud Ouest

ANALYSE La plupart des terroristes qui sont passés à l'acte ces dernières années faisaient l'objet d'une fiche " S ".
Sud Ouest
Toutes éditions
mardi 17 novembre 2015, p. Périgueux-C1_6

DOMINIQUE RICHARD

Ce n'est pas une surprise : plusieurs des auteurs des attentats de Paris étaient connus des organes de renseignement, voire de la justice. Comme précédemment Mohamed Merah, Mehdi Nemmouche, Amedy Coulibaly ou Yassin Salhi, ces tueurs qui, de Toulouse au Musée juif de Bruxelles, de l'Hyper Cacher de Paris à Saint-Quentin-Fallavier, en Isère, ont semé la terreur.

Tous faisaient l'objet de la fameuse fiche " S ", la balise policière qui signale les individus susceptibles de menacer la sécurité de l'État. En France, la base de données relative aux personnes suspectées de radicalisation comporterait près de 10 000 noms.

Souvent critiqué, le système d'information européen Schengen a permis de l'étoffer du fait de la mutualisation des informations entre services. Bien que résident espagnol, le Marocain Ayoub el-Khazzani, l'agresseur du train Thalys, avait été signalé au printemps lorsqu'il avait pris de Berlin l'avion pour Istanbul.

Cible idéale

Cette fiche " S ", qui n'est pas systématiquement consultée lors des vérifications d'identité, n'a rien d'une botte secrète. En aucun cas, elle ne peut déboucher sur une arrestation ou une mesure coercitive. Pour ne pas éveiller l'attention, les forces de l'ordre sont d'ailleurs priées de rester discrètes lors des contrôles. Priorité est donnée au recueil d'informations sur les allées et venues des suspects potentiels.

En pratique, la collecte, même quand elle n'est pas freinée par des zizanies entre services, survient souvent avec un temps de retard. Au regard de l'importance de la population à surveiller, de son nomadisme et de l'afflux de candidats au djihad, les 3 500 agents de la Direction générale de la sécurité intérieure (DGSI) sont débordés.

" J'ai la conviction que les jours les plus sombres sont devant nous ", avertissait le 30 septembre dernier le juge antiterroriste Marc Trévidic au moment où, au terme des 10 ans autorisés, il était contraint de quitter ses fonctions (lire en page 5). Du fait de sa position géographique, des facilités d'entrée sur son territoire de djihadistes d'origine européenne, de sa politique étrangère, qui en fait l'allié du " grand Satan " américain, et de la fascination qu'exerce ce mouvement barbare sur une frange de la jeunesse issue de l'immigration, la France constitue presque la cible idéale.

Paradoxalement, elle n'a jamais été si désarmée, ses dispositifs policiers et judiciaires ne s'étant pas adaptés à la montée des périls. Ce que reconnaissent, entre les lignes, François Hollande et Manuels Valls en laissant entendre que le pire peut se reproduire à tout moment.

Les juges de côté

En décrétant l'état d'urgence sur tout le territoire et en invitant hier le Parlement à voter une loi qui prolongera ce dispositif de trois mois, du jamais-vu depuis la guerre d'Algérie, le gouvernement contourne la justice. Les préfets auront désormais la possibilité de " taper dans le fichier S " et d'ordonner des perquisitions et des assignations à résidence.

De quoi malmener l'État de droit. Mais peut-on critiquer cette mesure alors que, selon les mots mêmes du juge Trévidic, Daesh, le monstre que la France et les États occidentaux ont laissé se développer, peut à tout moment déclencher un 11 Septembre sur le territoire national ? Les premiers résultats des opérations engagées hier matin dans 19 départements ne sont pas anodins. Plus de 100 personnes présumées dangereuses sont désormais sous surveillance, des armes de guerre ont été saisies dans le Rhône, illustrant une fois de plus la connexion entre le banditisme et l'islamisme radical.

Espionnage légal

Imperceptiblement, la notion de " dangerosité supposée ", qui a émergé à l'époque du quinquennat de Nicolas Sarkozy, continue à se glisser dans les textes. L'emploi des outils d'espionnage survient désormais légalement avant toute saisine du juge. Les pouvoirs de la DGSI ont été considérablement renforcés lors du vote de la dernière loi sur le renseignement.

En annonçant hier des recrutements massifs aussi bien dans la justice que dans les services d'enquête, François Hollande s'est bien gardé de dire si la crise actuelle allait définitivement déplacer le curseur au détriment des juges, garants des libertés individuelles, mais aussi de l'efficacité des enquêtes.

Si le cas de Mohamed Merah, initialement signalé à sa hiérarchie par un policier toulousain, avait été transmis au parquet, sept personnes auraient peut-être eu la vie sauve.

Remarks for CIA Director John O. Brennan as Prepared for Delivery at the Center for Strategic & International Studies Global Security Forum 2015, CIA Press Office

November 16, 2015

Thank you very much, John, for those kind words and thank you for inviting me to speak this morning at CSIS's Global Security Forum. I had the pleasure of speaking at CSIS when I was at the White House serving as Assistant to the President for Homeland Security and Counterterrorism, and it is a privilege to come back to share some thoughts with you on some of the major global challenges our country faces today.

I also want to express publicly my deep appreciation to John Hamre, who has led CSIS for nearly 16 years and who is certainly one of the leading lights in the field of national security. After a distinguished government career, John has continued to make important contributions to our national security, and I think I speak for all of us in thanking him for adding such wisdom and value to the public conversation on global issues. [Applaud]

In many respects, CSIS shares the mission of our Intelligence Community: to help policymakers identify, understand, and—hopefully—successfully address the myriad national security issues that our Nation faces in a dynamic and very dangerous world.

A very dangerous world, indeed.

My opening remarks this morning are different from those I reviewed and finalized in the early afternoon of last Friday. They are different because our sensibilities and our souls have been jarred once again by the horrific and wanton violence perpetrated upon the innocent in the streets, cafes, and concert halls of the beautiful city of Paris. Our hearts ache for the scores killed and injured in those savage attacks, and our thoughts and prayers are with them and their families. Likewise, our condolences and our prayers go out to those killed in the crash of the Russian airliner a little over two weeks ago in the Sinai, Egypt.

And while we await confirmation of culpability for these tragedies, they each bear the hallmarks of terrorism carried out by the so-called Islamic State of Iraq and the Levant, or ISIL, an organization of murderous sociopaths that carries out its criminal and morally depraved actions under bogus religious pretense. With its roots in al-Qa'ida in Iraq, and empowered by a large influx of foreign adherents, ISIL over the past several years has swallowed up large swaths of

territory in Iraq and Syria, brutally killing thousands upon thousands of men, women, and children along the way. Not content to limiting its killing fields to Iraqi and Syrian lands and to setting up local franchises in other countries of the Middle East, South Asia, and Africa, ISIL has developed an external operations agenda that it is now implementing with lethal effect.

I am sure that we will talk more about ISIL in the question and answer session, but let me note that the grave threat posed by the phenomenon of ISIL makes it absolutely imperative that the international community urgently commit to achieving an even greater and unprecedented level of cooperation, collaboration, information sharing, and joint action—in intelligence, law enforcement, military, and diplomatic channels. The ISIL threat demands it.

At CIA, we work closely with foreign intelligence security services around the globe to advance our shared counterterrorism goals. Over the course of many years, we have forged broad and deep partnerships with our closest allies in Europe such as Great Britain, France, and many, many others. These strategic relationships have been instrumental in helping to knit together a transnational architecture that allows counterterrorism officials and experts to work closely together across sovereign borders to disrupt terrorist plans and activities. And while many terrorist operations have been thwarted as a result of strong transnational teamwork, tragically, not all terrorist plans are uncovered in time.

These strategic counterterrorism relationships need to stretch far beyond the traditional trans-Atlantic environment and alliances, which is why we are working closely with so many services in different parts of the world.

For instance, we are working very closely with our Egyptian partners, who are working tirelessly to prevent ISIL terrorists from launching attacks that are aimed at derailing Egypt's political reform initiatives and economic development objectives. I reiterated our commitment to strengthening our counterterrorism partnership with Cairo in a call to my Egyptian counterpart this past weekend.

And while Washington and Moscow have significant policy differences on how best to bring the bloodshed in Syria to a close, I have had several conversations with one of my Russian counterparts over the past several weeks about ways to strengthen U.S.-Russian counterterrorism cooperation, specifically on the ISIL threat.

These relationships are an essential adjunct to diplomacy and military operations. By working with our foreign partners, we enhance global security by helping them tackle challenges that threaten us all. And we benefit from a wider net of collection and from the insights of local services, all of which enhance the intelligence we provide to policymakers.

The fact is, good intelligence—timely, accurate, and insightful—is the cornerstone of almost every aspect of national security policy today, from military action to diplomacy to international law enforcement.

With good intelligence, our policymakers can better understand the risks, challenges, and opportunities attendant to key national security issues, which is ever-more important given the unprecedentedly complex and overlapping array of major challenges to US and global security that we face today.

The impression one might get from the daily headlines is that the world has become more unstable. And indeed, the historical record supports that judgment.

In the past three years, there have been more outbreaks of instability than at any time since the collapse of the Soviet Union, matching the rate we saw during decolonization in the 1960s. This has not just been a period of protests and government change, but of violent insurgency and, in particular, of breakdowns in many states' ability to govern.

Ongoing conflicts in Syria, Iraq, Ukraine, Yemen, Libya, and parts of Africa are clear examples. The human toll is reflected in the UN's recent announcement that the number of refugees and internally displaced persons in the world is the highest it has been since World War II. And of course, all this localized strife gives rise to the persistent threat of international terrorism.

When CIA analysts look for deeper causes of this rising instability, they find nationalistic, sectarian, and technological factors that are eroding the structure of the international system. They also see socioeconomic trends, the impact of climate change, and other elements that are cause for concern. Let me touch upon a couple of them.

First, the ideas, institutions, and states that have undergirded the post-Cold War system are under significant stress. It is easy to think of this as a phenomenon confined to the developing world, and that is certainly where we see states that have actually failed, and borders that no longer carry any practical effect, such as the border between Syria and Iraq. But there is considerable stress on governments in even the world's most stable regions.

In Europe, for instance, the migration crisis, sluggish economic growth, and a host of other factors have given rise to heightened nationalism, secession movements, and the increasing popularity of political parties on both the far-right and far-left. Even ideas that were the pillars of the Continent's postwar prosperity—such as economic integration and democracy itself—are being questioned in some quarters.

Across the globe, in both authoritarian and democratic societies, governments are finding it increasingly difficult to meet the demands—realistic or not—of their skeptical and restive populaces. The so-called Arab Spring revolutions were not fought for democracy per se as much as they were fought for relief from regimes that had failed to meet basic standards of governance and civil society.

And as we have seen, when people become disillusioned with the powers that be, social media enable them to more quickly and easily form associations that defy the status quo. And in part, that is why the global landscape has been changing at a faster, more disruptive pace.

How nations respond to these challenges, adapt to them, and evolve will be one of the great plot lines of this century.

When I meet with my foreign counterparts—from both friendly and not-so-friendly governments—I sense a very real apprehension about instability and its various manifestations: terrorism, humanitarian crises, proliferation, and so on. Interestingly, I hear these concerns even from officials representing governments whose policies are quite arguably contributing to the problem.

In Europe, anxiety has risen in states along Russia's periphery after Moscow demonstrated its willingness to use military and paramilitary forces in Ukraine. And in the South China Sea, tensions persist as China unilaterally pursues its territorial claims, including actions that rival claimants perceive as violating their sovereignty.

At the same time, the principle of democratic governance is under siege. For the ninth consecutive year, Freedom House in 2014 reported more declines than gains in the quality of democracy worldwide. Worsening ethno-sectarian and socioeconomic strains are eroding democracy, as is the rise of a more sophisticated form of authoritarianism that forgoes brute force and heavy-handed propaganda in favor of media manipulation, ubiquitous surveillance, criminalization of dissent, and controlled elections.

Second, the resumption of strong, sustained growth in the wake of the 2008 financial crash and Eurozone crisis has been elusive for some of the world's largest economies. Even China's economy, with its seemingly endless potential for growth, is slowing.

In many developing societies, growing pessimism about the prospects for economic advancement is fueling instability. Regions with burgeoning youth populations, such as the Arab world, have been unable to achieve the growth needed to reduce high unemployment rates. Perceptions of growing inequality have resulted in more assertive street politics and populism. At the same time, slower growth has left these nations with fewer resources to devote to economic, humanitarian, and peacekeeping assistance to address these challenges.

Mankind's relationship with the natural world is aggravating these problems and is a potential source of crisis itself. Last year was the warmest on record, and this year is on track to be even warmer.

Extreme weather, along with public policies affecting food and water supplies, can worsen or create humanitarian crises. Of most immediate concern, sharply reduced crop yields in multiple places simultaneously could trigger a shock in food prices with devastating effect, especially in already fragile regions such as Africa, the Middle East, and South Asia. Compromised access to food and water greatly increases the prospect for famine and deadly epidemics.

And finally, the rapid advance of information technology has given rise to an entirely new and wide-open domain for human interaction and progress: the cyber realm.

As an intelligence officer, much of my job involves dealing with the unintended consequences of the cyber revolution. For as much as it brings the world together, it also serves the purposes of those who wish us harm.

Of greatest concern, the cyber realm gives small groups and even individuals the potential to inflict damage on a scale previously restricted to nation-states. And while states are largely rational actors subject to deterrence, the same does not apply to terrorists and criminals.

Both government and private networks are under constant attack. The Department of Homeland Security reports that more than 640,000 cyber-related incidents affected federal agencies in fiscal year 2014. The massive and prolonged hacking of employee records held by the Office of Personnel Management underscores the intensity of assaults on government IT systems. And I am all too familiar with the ease with which miscreant hackers can use social engineering techniques to perpetrate criminal intrusions into personal email accounts and information technology and communication systems.

Unfortunately, there is every reason to expect cyber intrusions to increase in quantity, cunning, and impact. For one thing, the economics of cyber attacks are skewed to favor the attacker.

"Exploits," or malicious software tools, are easily acquired. In fact, their prices are falling dramatically in some criminal markets, not because of declining demand but because of an increasingly competitive marketplace. These exploits can be reused on multiple targets, and the likelihood of detection and punishment remains low.

And while the vast majority of cyber attacks target money, proprietary information, and privacy itself, we need to realize that the range of potential targets is much greater. We simply cannot discount the very real possibility of attacks against vital infrastructure—utilities, transportation, and other essential underpinnings of modern civilization.

The world has changed dramatically since I first raised my hand and swore an oath of allegiance to the United States Government as a 24-year old newly minted CIA officer eager to make a difference in August of 1980. I remember vividly taking a seat at my first desk on the sixth floor of our Langley Headquarters, putting my fingers not on the keyboard of a computer but on the keys of an electric typewriter, which was quite high tech at the time.

Thirty-five years later, our lives as well as our fingers are inextricably linked to the cyber realm—the new digital frontier, where most human interactions, transactions, and communications take place. And while that digital environment holds tremendous potential and opportunity for the further advancement of humanity, our increasing dependence on it brings obvious risks and challenges.

To deal with those risks and challenges, reactive strategies are insufficient. There has to be systematic learning, informed by constant information sharing, so that one organization's detection becomes another's prevention.

In other words, countering cyber threats is very much a team effort. And a crucial point to bear in mind is that about 85 percent of the Worldwide Web's critical infrastructure is held by the private sector. This is a privately owned and operated environment in which the rules remain uncertain at best.

A number of federal efforts in recent years have promoted the sharing of cyber threat information between the private sector and government. DHS and FBI, for example, have programs to share cyber threat information with a broad community of industry stakeholders.

We should be sharing a lot more information than we are as a nation, but programmatic, technical, and legal challenges—as well as concerns about privacy and the role of government—have hampered progress. Congress over the past few years has tried, so far without success, to pass laws addressing the need for comprehensive cyber policy, especially on information sharing.

The fact is, 20th century laws cannot effectively deal with 21st century threats.

Within the past few weeks, the Senate passed the Cybersecurity Information Sharing Act, or CISA, which is roughly similar to two bills passed in the House. We may see a conferenced bill by early next year, which would be an important step forward.

And as our country deals with this issue—and, specifically, the security and privacy concerns that revolve around information sharing—it is important to note that security and privacy are not mutually exclusive. The benefits of improved information sharing can be achieved in a manner that protects privacy and civil liberties.

My hope is that America—ideally, along with our allies—can eventually adopt a comprehensive legal and operational approach to this threat without being forced to by a catastrophic cyber attack, in the same way that 9/11 forced our country to integrate its national security assets in a more rational and effective way against terrorism.

Shortly after I returned to the Agency some two-and-a-half years ago, I started to consider what we could do to ensure that CIA is well-prepared for both the opportunities and challenges of the future. The digital world stood out as an area that required special attention.

When I asked a group of our senior officers last fall to ponder the Agency's future and come back with a strategic plan, they agreed that we had to do a much better job of embracing and leveraging the digital revolution. Consequently, one of the pillars of the modernization program we launched last March was the addition of a fifth Directorate as part of the biggest change to CIA's structure in five decades: the Directorate of Digital Innovation.

This new Directorate is at the center of the Agency's effort to hasten the adoption of digital solutions into every aspect of our work. It is responsible for accelerating the integration of our digital and cyber capabilities across all our mission areas—espionage, all-source analysis, open source intelligence, and covert action.

Multiple elements of the Agency in the past have responded to the challenges of the digital era. But if we are to excel in the wired world, we must place our activities and operations in the digital domain at the very center of all our endeavors.

Our new digital directorate was launched last month, and we expect it to contribute enormously to every facet of our global mission. Alongside our partners across the Intelligence Community, we at CIA will be more capable and effective in safeguarding our country from the full range of threats we face beyond our borders.

Let me conclude by saying what I always say to each new class of Agency officers to whom I administer the oath of office every month in our Headquarters lobby. I have the absolutely best job in the world, because I work each day with some of the most dedicated, talented, courageous, and patriotic individuals this country has to offer. And, in light of the nature and scope of the national security challenges I just highlighted, the need for the contributions of these individuals has never been greater.

Thank you, and I'll be happy to take your questions.

Paris attacks show how hard it is to profile ISIS recruits, CBC News

Sheena Goodyear
CBC News
2015 11 21

The fact that most of the Paris attackers identified so far were European-born radicals has once again shined the spotlight on the growing problem in the West of homegrown extremism.

Authorities have identified four Frenchmen and two Belgians as suspects in the shootings and suicide bombings that killed 129 people on Friday. That puts them among ISIS's legion of foreign fighters, which some have estimated to be as many as 200,000.

A seventh suspect's body was found near a Syrian passport, but its authenticity has come under scrutiny after Serbian police arrested a man with an almost identical copy, the Guardian newspaper reported.

The European backgrounds of the perpetrators puts France and the West in the difficult position of trying to understand why their own citizens would sacrifice their lives to murder their neighbours on behalf of an extremist organization in another part of the world ? a question radicalization analysts say is almost impossible to answer.

There is no reliable profile for many of the candidates being recruited by extremist Islamic groups, Phil Gurski, a former intelligence analyst with the Canadian Security Intelligence Service, told CBC News.

"Throughout my career at CSIS and looking at a lot of these things, we simply found that there were no useful elements in terms of profiles, whether it was age or ethnicity or employment status or education or psychological or criminal background," Gurski said.

Abdelhamid Abaaoud, the suspected mastermind of the Paris attacks, killed in a police assault, was a lifelong Muslim and the child of Moroccan immigrants.

By contrast, Damian Clairmont, the Calgary man who died fighting with ISIS in Syria last year, was a white Muslim convert with an Acadian ancestry.

Even gender is not a guaranteed common factor, as there have been multiple reports of Canadian women joining ISIS.

"We've had people ? poor, rich, married, unmarried, mental illness, converts, not-converts ? and so there's nothing really there in terms of profile," says Amarnath Amarasingam, a post-doctoral fellow who researches terrorism and radicalization at Halifax's Dalhousie University.

"What all of them do tend to have in common … is youth, [with a] thrust towards meaning and purpose and significance. A lot of these youth don't feel like they fit into the broader society, they don't feel like they belong."

Giving ISIS what they want

The fact that ISIS preys on those who feel isolated and excluded should be a wake-up call for Western nations to build more inclusive societies, says Rima Berns-McGown, a University of Toronto history professor who researches how government policy affects youth radicalization.

She's concerned that certain state responses to the Paris attacks, like closing doors to Syrian refugees, play into ISIS's hands.

"The reason ISIS does these things, launches these attacks and so on, is because it actually wants to create an environment in which the West appears to be hostile to people who are not of the West. It wants to create a sort of civilizational war," she said.

"It wants to create anger and resentment. It wants to create Islamophobia. It wants to create racism. Because if it does that, it makes the lives of individual Muslims more uncomfortable, and it wants to say, 'You cannot be at home in the West. You need to come and be at home in the only place that will respect you.'"

'Utopian' vision

For his part, Amarasingam said ISIS is unique among Islamic extremists organizations in selling this "utopian" vision of a caliphate, or Islamic state, where people can find a sense of belonging.

"It's a state where they believe that Islamic law is being practiced in its purest and fullest form, and therefore all Muslims around the world have an obligation to make migration to that state," he said.

"The fact that the vast majority of Muslims around the world disagree that this is the authentic Islamic state doesn't seem to bother them too much." But many of the youth it is able to recruit "are drawn to that nation-building, utopian vision that they're portraying themselves to be."

The warning signs

When people start to buy into this propaganda, they exhibit certain behaviours.

In his book The Threat From Within: Recognizing al-Qaeda-Inspired Radicalization and Terrorism in the West, he outlines 12 indicators of radicalization, including:

- Expressing vocal opposition to Western values.

- Spending lengthy amounts of time on violent jihadist websites.

- Exhibiting hatred towards non-Muslims, moderate Muslims or Shia Muslims.

- Isolating themselves from people who disagree with them.

He cautions that while all homegrown radicals exhibit some or all of these behaviours, not everyone who shows these warning signs crosses the line into violence and criminality.

People with friends or family members who fit this profile shouldn't necessarily make accusations or call 911, he said. Instead, just talk to them and find out what's going on.

"These are warning signs. In the same way that if you think someone is engaged in gang activity or illegal substances or whatever, you don't just kind of sit back and say 'Oh that's interesting.' You take action."

Liberals' refugee plan still unsettled, Globe and Mail

By DANIEL LEBLANC, STEVEN CHASE
21 November 2015
The Globe and Mail

Debate continues over whether to conduct screening on foreign soil to avoid later legal hurdles, which could have effect on timeline

The Liberals are still debating whether to extend the Dec. 31 deadline to bring 25,000 Syrian refugees to Canada in order to allow all health and security screening to be conducted on foreign soil, sources said.

The greatest concern at this point is that if some refugees land in the country as unscreened temporary residents, the government would face a series of legal hurdles before it could expel any of them for failing required tests, the sources said.

The Trudeau government is in the final stages of preparing its resettlement plan, which, in the recent election campaign, the Liberals promised to conclude by the end of the year. The final details will be unveiled on Tuesday, after a meeting of Prime Minister Justin Trudeau's full cabinet.

A key issue still under debate is whether to allow some of the refugees to land in Canada as temporary residents and undergo further screening here, or to conduct all screening abroad and welcome all of the asylum seekers in the country as permanent residents, sources said.

The first option would accelerate the process; the second one could push back the arrival of a portion of the refugees into January, a source said.

Given the ongoing conflict in Syria, the government wants to avoid a situation in which it would have “stateless citizens" on its soil. In that context, some federal officials are pushing for the government to do the entire screening abroad, in countries such as Lebanon and Jordan.

“You don't want people who are in the country who are legally ambiguous and you have nowhere to send them," a federal official said, adding that the internal debate “could change the timeline" for the arrival of the refugees.

Immigration lawyer Gordon Maynard said the issue for the government is that providing temporary residency status to refugees would speed up the process, but it would be hard to subsequently send them back to their “country of nationality."

Concerns about the security risks posed by Syrian refugees began spreading among provincial and municipal governments after last Friday's terror attacks in Paris. **The Trudeau government is striving to convince Canadians that the refugees are a minimal risk, insisting that the RCMP and CSIS have endorsed the proposed screening as robust and strong.**

Asked about polls suggesting Canadians are sharply divided on bringing in so many Syrian refugees so quickly, Canada's new Defence Minister, Harjit Sajjan, offered a passionate rejoinder.

Mr. Sajjan said welcoming 25,000 Syrians in a matter of weeks is not just “a humanitarian project" but also a rebuke of the Islamic State, which seeks to convince Syrian Muslims and others that the West is their enemy.

“This sends a great message to ISIS," he said, using one of the acronyms for the Islamic State, “that you might have created this environment for us but we will not let you take advantage of this."

Sources said there are still a “number of moving parts" as federal officials work with other levels of government to finalize plans to welcome and house the refugees across the country – as many as half at military bases – and help them integrate into Canadian society.

Speaking at the Canada202 conference in Ottawa, Ontario Premier Kathleen Wynne said she is convinced that adequate security measures are in place.

"What we can't give into is allowing security to mask racism," she said. "That's the danger."

Canada

Paris attacks a 'game changer' for NATO, general says, Globe and Mail

By STEVEN CHASE
21 November 2015
The Globe and Mail

One of NATO's senior officials says the Nov. 13 Paris attacks are a "game changer" for security in the West as the ascendant Islamic State moves beyond its selfproclaimed caliphate in Iraq and Syria to wage al-Qaeda-style attacks on distant targets.

General Petr Pavel, chairman of the North Atlantic Treaty Organization's military committee, said all Western countries are at risk of not just IS-inspired attacks but also terrorism planned and executed directly by the Islamic State, also known as ISIL and ISIS.

"Anyone who is not following the values of ISIL should be afraid."

Recent examples include IS-organized attacks in Beirut, Turkey and Paris, where 130 people were killed and hundreds wounded by gunmen and bombers, as well as the downing of a Russian aircraft carrying 224 people over the Sinai Peninsula in October.

"It is apparent that the Islamic State has reached the limits of geographical expansion and now they are even losing some, so they [will] probably expand into our domain and one of them may be even hitting us on our own ground," Gen. Pavel said in an interview.

"We are most probably at the beginning of a new phase of ISIL activities that will affect us in our own countries and we will have to take appropriate measures," said the general, who was attending the Halifax International Security Forum, an annual gathering of security and defence experts sponsored by the Canadian government.

Gen. Pavel argued that what happened in Paris does not constitute grounds for France to invoke Article 5 of the NATO treaty, which would oblige collective action by all members of the military alliance. The United States invoked this article for the first time in NATO's history after the Sept. 11, 2001, terrorist attacks, but France has not chosen to follow suit.

"It is difficult to imagine a terrorist attack in France as a military aggression against France," the general said. "It's not a military attack."

However, he said NATO needs to share intelligence better and continue to support local forces in Iraq and Syria to fight the Islamic State.

French President François Hollande has called for a grand military coalition of the United States, France and Russia to "eradicate" the Islamic State.

This would force Washington and Moscow to set aside their estrangement over Russia's 2014 annexation of Ukraine's Crimean Peninsula and its ongoing backing for rebels fighting Kiev in eastern Ukraine.

Gen. Pavel said that while the West may have to “pragmatically co-ordinate" with Moscow to fight the Islamic State, he warned against losing focus on Russia's ongoing occupation of Crimea and the fragile ceasefire in eastern Ukraine.

“That would be a mistake on our side," he said, warning that this would play into Moscow's hands. “That would be exactly … one of the objectives of President Putin – to take attention out of Ukraine and move it elsewhere [and] now in this case to Syria."

“We shouldn't let Ukraine disappear from the radar and stay focused on the fact there were breaches to the international security system made by Russia that are not forgiven and not forgotten."

He said there have been increasing breaches of the Minsk ceasefire between Kiev's soldiers and the Russian-backed rebels in recent days and heavy weaponry has not been removed from the immediate region, as required.

Canada has nearly 70 special forces soldiers in Iraq advising Kurdish fighters in their battle against the Islamic State and CF-18 warplanes are currently bombing IS targets in Iraq and Syria. The new Liberal government is planning to withdraw the jets and expand training efforts in Iraq, possibly including government forces.

About 200 Canadian troops are currently deployed to Ukraine to train Kiev's forces to better fight the Russian-backed rebels.

Le niveau d'alerte passe à 4, Agence Belga

Agence Belga
2015 11 21
"Un risque d'attentat par des individus avec armes et explosifs à plusieurs endroits de la capitale"

Le niveau d'alerte terroriste a été relevé samedi à 4, soit le niveau le plus élevé qui qualifie la menace de "sérieuse et imminente", pour toute la Région bruxelloise, indique le Centre de crise du SPF Intérieur à la suite d'une nouvelle évaluation de l'OCAM.

Selon le Premier ministre, Charles Michel, ce rélèvement du niveau d'alerte serait lié à un risque d'attentat par des individus avec armes et explosifs, peut-être à plusieurs endroits de la capitale.

Quatre axes de mesures

Le Premier ministre Charles Michel a annoncé l'entrée en vigueur de mesures immédiatement opérationnelles en quatre axes pour répondre au niveau maximal de menace terroriste à Bruxelles et au niveau trois dans le reste du pays, à l'issue d'une réunion du Conseil national de sécurité samedi matin. Le nombre de grands évènements sera diminué, "pour des raisons de sécurité et de capacité", a indiqué le Premier ministre, "car cela permet de libérer des capacités qui peuvent être mobilisées pour sécuriser tout le territoire". Les organisateurs d'évènements peuvent se mettre en contact avec le centre crise pour recevoir des informations complémentaires.

Les transports publics feront l'objet d'une vigilance accrue, principalement dans le métro. La circulation de ce dernier à Bruxelles reste stoppée jusque dimanche après-midi au moins. La capacité de déploiement de la police et de l'armée est renforcée sur tout le territoire, mais surtout à Bruxelles.

Enfin, une ligne téléphonique - 1771 - est ouverte pour permettre de s'adresser au centre de crise, recevoir des informations et des conseils. Pour ne pas surcharger cette ligne, il est recommandé de consulter en priorité le site internet www.centredecrise.be.

Le relèvement du niveau d'alerte terroriste au niveau quatre a été décidé durant la nuit sur base de l'évaluation de l'Organe de coordination pour l'analyse de la menace (OCAM), pour la région bruxelloise et Vilvorde, mais reste au niveau trois pour le reste du pays. "Cela résulte d'informations relativement précises d'un risque d'attentat tel que déroulé à Paris" a déclaré le Premier ministre, la menace portant sur une hypothèse d'un ou plusieurs individus avec des armes et explosifs à même de frapper à plusieurs endroits en même temps, a-t-il précisé lors d'une conférence de presse.

Les cibles potentielles, selon les informations dont les autorités disposent, sont les centres commerciaux, les rues commerçantes, les transports publics, et les évènements rassemblant beaucoup de monde, a indiqué Charles Michel.

Les mesures annoncées peuvent "à tout moment être modifiées", a précisé le Premier ministre. Le Conseil national de sécurité se réunira à nouveau dimanche dans l'après-midi. Une nouvelle évaluation de la menace par l'OCAM sera formulée à ce moment-là également.

Le Premier ministre a indiqué que les enquêtes en France et en Belgique sur les attentats de Paris se poursuivaient et qu'il n'était "pas question de faire le moindre commentaire pour des raisons de sécurité évidente". "Nous recommandons à la population de respecter l'ensemble des consignes de sécurité et de se tenir informée en utilisant les voies de communication officielles", a déclaré le Premier ministre.

Le gouvernement belge appelle la population à faire preuve de prudence et de vigilance, mais aussi de ne pas glisser dans la panique, a insisté Charles Michel.

"La situation est suivie de manière permanente"

Le Centre de crise n'était pas en mesure de préciser combien de temps le niveau 4 restera en application dans la Région bruxelloise. "La situation est suivie de manière permanente. Elle peut dès lors être réévaluée à tout moment si de nouveaux éléments nous parvenaient", a expliqué Peter Mertens, porte-parole du Centre de crise.

Lundi en fin de soirée, le Centre de crise avait annoncé le relèvement du niveau d'alerte terroriste à 3 pour l'ensemble du territoire. Il avait alors rappelé que Salah Abdeslam, suspecté d'avoir participé à l'organisation et à l'exécution des attentats perpétrés à Paris le 13 novembre, était toujours recherché. Celui-ci est encore en fuite actuellement. Le gouvernement communiquera au sujet du relèvement de la menace samedi matin.

Pour déterminer un niveau, l'Ocam se base sur les informations transmises notamment par la Sûreté de l'Etat, le Service général du renseignement et de la sécurité (SGRS), les polices locales et fédérale, les douanes et l'Office des étrangers. Placé sous l'autorité des ministres de la Justice et de l'Intérieur, cet organe est composé d'experts détachés des services dont il utilise les informations et d'analystes propres. Il est chargé d'évaluer périodiquement et ponctuellement le degré de menace terroriste en Belgique.

La deuxième fois de l'histoire du pays

C'est seulement la deuxième fois que le niveau d'alerte terroriste atteint l'échellon le plus elevé sur le territoire belge. La première fois était survenue lors des fêtes de fin d'année 2007-2008 après l'interpellation de 14 personnes qui planifiaient de permettre à Nizar Trabelsi de s'évader.

La section terrorisme de la police fédérale et le parquet fédéral craignaient alors des actes à caractère terroriste et avaient pris des mesures de sécurité exceptionnelles. Le niveau de la menace avait été à maintenu à 4 entre le 21 décembre 2007 et le 3 janvier 2008. Le traditionnel feu d'artifice du Nouvel an dans le centre de Bruxelles avait été annulé à la suite cette situation.

Nizar Trabelsi avait été condamné en juin 2004 à 10 ans de prison pour la préparation d'un attentat contre la base militaire de Kleine-Brogel.

Le Conseil national de sécurité se réunit samedi matin après que le niveau d'alerte a été relevé à quatre, soit le maximum, pour Bruxelles durant la nuit. "Nous avons suffisament d'éléments pour estimer que la menace est précise et imminente", a affirmé à son arrivée le ministre des Affaires étrangères Didier Reynders. Le Premier ministre Charles Michel, avec les vice-premiers ministres chargés de de l'Intérieur, Jan Jambon, des Affaires étrangères, Didier Reynders, de la Justice, Koen Geens, et de l'Economie, Kris Peeters, sont arrivés au 16 rue de la loi à Bruxelles vers 9h00, pour se concerter avec les autorité chargées de la sécurité. "La menace est suffisante pour passer au niveau d'alerte quatre, nous devons maintenant prendre des mesures", a déclaré à son arrivée le ministre de l'Intérieur, Jan Jambon.

Le niveau 3 maintenu ailleurs

Le niveau 3, soit une menace "possible et vraisemblable", reste en vigueur pour le reste du pays. L'analyse de l'Organe de coordination pour l'analyse de la menace (OCAM) démontre en effet "une menace sérieuse et imminente nécessitant la prise de mesures de sécurité spécifiques ainsi que des recommandations particulières à la population", précise le Centre de crise, qui qualifie la situation de "très grave" dans la Région bruxelloise.

Belgian capital under serious terrorism threat, with at least 1 Paris attacks suspect at large, Associated Press

Nov 21, 2015 7:36
THE ASSOCIATED PRESS

BRUSSELS _ **Heavily armed police and soldiers patrolled key intersections and subways were closed in Belgium's capital Saturday as the government warned of a threat of Paris-style attacks. At least one suspect from the deadly Paris attacks is at large, and was last seen crossing into Belgium.**

Prime Minister Charles Michel said the decision to raise the threat alert to the highest level was taken ``based on quite precise information about the risk of an attack like the one that happened in Paris ... where several individuals with arms and explosives launch actions, perhaps even in several places at the same time."

The Belgian Federal Prosecutor's office said Saturday that several weapons were discovered during the search of the home of one of three people arrested in connection with the Paris attacks, but said no explosives were found.

And in Turkey, officials detained 26-year-old Ahmad Dahmani, a Belgian national of Moroccan origin, who was believed to have been in contact with the Paris attackers.

Authorities across Europe, the Mideast and in Washington are trying to determine how a network of primarily French and Belgian attackers with links to Islamic extremists in Syria plotted and carried out the deadliest violence in France in decades _ and how many may still be on the run.

A new potential link emerged Saturday in Turkey, where authorities said they detained a 26-year-old Belgian suspected of connections to Islamic extremists _ and possibly to the Paris attacks.

Belgium's national Crisis Center had raised its terrorism alert for the Brussels region to Level 4, which indicates a ``serious and immediate threat.'' Belgium's special security Cabinet held an emergency meeting Saturday morning.

Brussels was the home of Abdelhamid Abaaoud, the suspected organizer of the Nov. 13 Paris attacks, and Belgium has filed charges of ``participation in terrorist attacks and participation in the activities of a terrorist organization'' against three suspects relating to the Paris attacks.

At least one Paris attacker, Salah Abdeslam, crossed into Belgium the morning after the attacks. A Paris police official and the Paris prosecutor's office said Saturday they had no firm information on Abdeslam's whereabouts, including whether he was in the Brussels area.

Heavily armed police and soldiers were patrolled Saturday morning at key intersections of the Belgian capital, a city of more than 1 million that is home to the headquarters of the European Union, the NATO alliance and offices of many multinational corporations.

Residents were recommended to avoid gatherings, train stations, airports and commercial districts. Service was halted on the Brussels Metro, as well as on streetcar lines that run underground.

The prime minister, speaking at a news conference after the emergency government meeting, said, ``We urge the public not to give in to panic, to stay calm. We have taken the measures that are necessary.''

He said that the government's crisis cell will meet again on Sunday afternoon to reassess the threat.

Dahmani was detained in the Turkish coastal city of Antalya along with two other suspected Islamic State militants. A senior Turkish government official said Dahmani was believed to have been in contact with the Paris attackers, though the official did not say when. Dahmani had arrived in Turkey Nov. 14 from Amsterdam, and the three were preparing to cross into Syria, the official said.

The official cannot be named because of Turkish government rules that bar officials from speaking to reporters without prior authorization.

Government officials in Belgium and France would not immediately comment on Dahmani's arrest.

A Paris police official said Saturday that he had no information about Dahmani or his possible visit to the attack sites. The Paris prosecutor's office said it had no information to communicate about Dahmani.

Concerns about Europe's porous borders prompted interior and justice ministers meeting in Brussels on Friday to promise tightened controls to make it easier to track the movements of jihadis with European passports travelling to and from warzones in Syria.

Paris prosecutors said Friday that they had determined through fingerprint checks that two of the seven attackers who died in the bloodshed Nov. 13 had entered Europe through Greece, an entry point for many of the hundreds of thousands of migrants seeking asylum in Europe.

The five other attackers who died had links to France and Belgium. One of the seven dead has not been identified, while a manhunt is underway for one suspect who escaped, 26-year-old Abdeslam. French police stopped Abdeslam the morning after Friday's attacks at the Belgian border but then let him go. His brother Brahim blew himself up in the Paris attacks.

The suspected ringleader, Abdelhamid Abaaoud, was killed in a raid Wednesday on an apartment in the Paris suburb of Saint-Denis.

Marking a week since the carnage, some Parisians lit candles and paid tribute Friday night to the victims with silent reflection. Others decided that enjoying themselves was the best way to defy the extremists. They sang and danced on Place de la Republique, in the heart of a trendy neighbourhood where scores of people were killed.

France's Parliament has extended a state of emergency for three months, expanding police powers to carry out arrests and searches and allowing authorities to forbid the movement of persons and vehicles at specific times and places.

French President Francois Hollande is also meeting with British Prime Minister David Cameron on Monday morning in Paris to discuss co-operation in the fight against the Islamic State group

in Syria and Iraq, Cameron's office said. Hollande will travel to Washington and Moscow later in the week to push for a stronger international coalition against IS.

L'enquête avance sur le commando de Saint-Denis, Le Monde

Trois personnes sont mortes lors de l'assaut. Le passeport de la cousine d'Abaaoud a été retrouvé sur place
Le Monde
2015 11 21

L'invité surprise des attentats du 13 novembre à Paris et Saint-Denis, Abdelhamid Abaaoud, a bien été abattu mercredi matin par les policiers du RAID, lors de l'assaut de l'appartement où plusieurs terroristes avaient trouvé refuge dans le centre de Saint-Denis, a révélé, jeudi 19 novembre le procureur de la République à Paris, François Molins. Il restait, vendredi matin, au moins un fugitif : Salah Abdeslam, 26 ans, Français résident à Bruxelles, reparti vers la Belgique samedi matin après les attaques.

Invité surprise, car si le rôle d'Abdelhamid Abaaoud, un Belge de 28 ans parti rejoindre l'Etat islamique (EI) début 2013, comme probable commanditaire des attentats du 13 novembre, est apparu assez rapidement aux enquêteurs, sa présence à Paris, et sa participation directe aux attaques, interroge sur la capacité des services de renseignement français et européens à suivre le mouvement des djihadistes de l'EI. Y compris les plus signalés d'entre eux.

Les enquêteurs s'interrogent aussi sur le parcours qui a permis à au moins deux autres auteurs des attaques de revenir de Syrie : Samy Amimour et Ismaël Omar Mostefaï, deux assaillants du Bataclan. Par ailleurs, l'identité réelle du kamikaze du Stade de France auprès duquel un passeport syrien a été découvert reste à établir.

« Nous ne savons pas » comment Abaaoud est entré en France, a reconnu le premier ministre, -Manuel Valls, jeudi. « Ce n'est que le 16 novembre, postérieurement aux attentats de Paris, qu'un service de renseignement d'un pays hors d'Europe nous a signalé avoir eu connaissance de sa présence en Grèce » , a précisé le ministre de l'intérieur, Bernard Cazeneuve, dans une déclaration à la presse.

Succès de police judiciaire, échec du renseignement? L'annonce de l'identification d'Abdelhamid Abaaoud parmi les corps retrouvés dans l'appartement rue du Corbillon, à Saint-Denis, où a eu lieu l'assaut, a provoqué un véritable soulagement parmi les enquêteurs. C'est la directrice centrale de la police judiciaire, Mireille Ballestrazzi, qui l'a annoncé personnellement au ministre de l'intérieur, Bernard Cazeneuve. Le corps du djihadiste était criblé de balles, sa tête méconnaissable et le buste en partie dévasté par le souffle d'une explosion.

L'enquête de la section antiterroriste de la police judiciaire parisienne, de la sous-direction antiterroriste de la direction centrale de la police judiciaire (SDAT) et de la direction générale de la sécurité intérieure (DGSI) avance à grand pas depuis les attaques de vendredi, qui ont fait 129 morts et plusieurs centaines de blessés lors d'attaques kamikazes et de fusillades simultanées au Stade de France, au Bataclan et dans l'est parisien.

Les tribulations d'Abdelhamid Abaaoud dans la capitale française et sa proche banlieue entre vendredi et mercredi se précisent. Une caméra de vidéosurveillance de la RATP l'a filmé sur la ligne 9 vendredi 13 novembre, à 22 h 14, entrant à la station Croix-de-Chavaux, à Montreuil

(Seine-Saint-Denis). Des images tendant à corroborer l'idée que celui qui se faisait appeler Abou Omar était dans la Seat convoyant le commando qui a tiré sur les terrasses de café du 10e et du 11e arrondissement. La voiture avait été retrouvée dans la nuit de samedi à dimanche, rue Edouard-Vaillant, à Montreuil. Des éléments de téléphonie en cours d'exploitations pourraient venir confirmer cette hypothèse.

Services marocains

Selon une source proche de l'enquête, c'est la géolocalisation du téléphone d'Hasna Ait Boulahcen, 26 ans, la cousine d'Abaaoud, qui a permis de confirmer le premier renseignement obtenu lundi après-midi selon lequel elle se trouvait à Saint-Denis avec son cousin. Un témoin est ensuite venu confirmer cette hypothèse. A la veille de la visite du roi du Maroc en France, plusieurs médias ont assuré que ce sont les services marocains qui avaient mis la police française sur la piste de l'appartement de Saint-Denis. Des informations démenties de sources judiciaires et policières françaises, qui tout au plus expliquent que les services du royaume chérifien ont transmis a posteriori des précisions sur les personnes interpellées dans l'appartement.

C'est bien un renseignement de police judiciaire, l'exploitation de la téléphonie et des réquisitions bancaires qui ont mis les enquêteurs sur la piste de Saint-Denis. Toutefois, il n'est pas exclu que la Direction générale de la sécurité extérieure (DGSE) a pu bénéficier de renseignements transmis par des services de renseignements étrangers qu'elle aurait ensuite fournis aux enquêteurs français.

L'assaut, d'une grande violence, a entraîné une certaine confusion concernant l'identification des occupants de l'immeuble. Alors que les services de la police scientifique progressaient péniblement dans l'appartement ravagé par la confrontation entre les policiers et les terroristes, l'incertitude demeurait sur le nombre exact de personnes tuées pendant l'assaut du Raid ainsi que sur le ou la kamikaze qui a déclenché une ceinture d'explosif au moment de l'affrontement.

Selon les informations du Monde, un corps de femme a été retrouvé dans les décombres ainsi qu'un sac à main contenant un passeport au nom d'Hasna Ait Boulahcen. Mais la tête retrouvée par la police scientifique correspond finalement à celle d'un homme. Aucune arme n'a pour l'instant été retrouvée dans l'appartement.

Le procureur de la République de Paris, François Molins, a affirmé mercredi soir que tout laissait à penser « qu'au regard de leur armement, de leur organisation structurée et de leur détermination, ce commando pouvait passer à l'acte . Mais aucun projet précis n'a pu être mis en évidence à ce stade.

Huit personnes étaient toujours en garde à vue à Levallois, dans les locaux de la SDAT, vendredi matin. Parmi elles, Jawad B., qui s'était spontanément présenté comme le logeur du dernier commando à Saint-Denis devant les caméras de BFM TV, assurant toutefois qu'il ignorait tout de ses hôtes. Parmi les autres, des Marocains et des Egyptiens en situation irrégulière qui pourraient n'avoir rien à voir avec les attentats mais qui squattaient vraisemblablement dans l'immeuble.

Des doutes subsistent sur le rôle précis de Salah Abdeslam, qui pourrait être l'un des passagers de la Seat noire utilisée lors des fusillades de terrasses de restaurants et cafés du 10e et 11e arrondissement, mais qui pourrait également avoir conduit la Clio noire qui a déposé

les trois kamikazes du Stade de France. Vendredi matin, l'identité de trois des assaillants morts durant les attentats restait inconnue : deux du Stade de France, et un au Bataclan.

Le rôle opérationnel d'Abaaoud se précise, Le Monde

Le Monde
France, lundi 23 novembre 2015, p. 13
Laurent Borredon, Simon Piel, et élise Vincent

Ses empreintes ont été retrouvées sur une kalachnikov laissée dans l'une des voitures du commando

Une semaine après les attentats qui ont frappé Paris, l'enquête menée par la section antiterroriste de la police judiciaire parisienne, de la sous-direction antiterroriste de la direction centrale de la police judiciaire (SDAT) et de la direction générale de la sécurité intérieure (DGSI) précise peu à peu les rôles tenus par les membres du commandos.

La place tenue par Abdelhamid Abaaoud, tué mercredi à Saint-Denis (Seine-Saint-Denis) lors de l'assaut du RAID, est au coeur des investigations en cours. Sa présence aux côtés de Brahim Abdeslam qui s'est fait exploser devant le Comptoir Voltaire et d'un homme encore non identifié dans la Seat Leon retrouvée à Montreuil (Seine-Saint-Denis) dans la nuit de samedi à dimanche est désormais établie. Il s'agit de l'équipe qui a mitraillé les terrasses des cafés du 10e et du 11e arrondissement.

Vendredi 20 novembre au soir, une source judiciaire indiquait que les empreintes du djihadiste franco-belge avaient été identifiées sur une kalachnikov retrouvée dans la voiture. Les policiers étudient l'hypothèse qu'Abdelhamid Abaaoud ait été au volant de la Seat dans la soirée du 13 novembre. Des éléments de géolocalisation téléphonique permettent de penser que la Seat a en tout cas continué à tourner dans le 11e après les fusillades pendant une quinzaine de minutes avant de se rendre à Montreuil. Des images filmées par une caméra de surveillance de la RATP attestent de la présence d'Abdelhamid Abaaoud au métro Croix de Chavaux à 22 h 14.

Son itinéraire ensuite est encore flou. Pendant le week-end, il semble errer sans point de chute; cherche à se procurer des couvertures ainsi que deux costumes pour des raisons encore inconnues. C'est ensuite parce que les appuis logistiques manquent qu'il fait appel à sa cousine Hasna Aït Boulahcen.

Selon l'AFP, celle-ci serait venu le récupérer mardi dans un entrepôt à Aubervilliers (Seine-Saint-Denis) après lui avoir trouvé le logement de la rue du Corbillon à Saint-Denis. Alors qu'il avait initialement été présenté comme l'unique commanditaire des attentats, le rôle opérationnel qu'il a joué à Paris et l'enregistrement diffusé par l'Etat islamique où Fabien Clain lit le communiqué tendent à s'interroger sur le véritable commanditaire des attaques. Le procureur de la République a d'ailleurs insisté sur ce point lors de sa conférence de presse tenue mercredi soir.

Samedi matin, les gardes à vue de sept des huits personnes interpellées à Saint-Denis après l'assaut du RAID avaient été levées. Cinq d'entre elles seraient des étrangers en situation irrégulière, sans lien avec les attentats, qui squattaient vraisemblablement l'immeuble de la rue du Corbillon. Seul Jawad B., qui s'était présenté comme le logeur du commando, devant les caméras de télévison, était toujours en garde à vue. Par ailleurs, à ce stade de l'enquête, l'identification du troisième assaillant du Bataclan était toujours en cours.

Le parcours de Salah Abdeslam dont le portrait avait été diffusé par la police française s'affine lui aussi. C'est lui qui aurait conduit le commando du Stade de France au volant d'une Clio retrouvée dans le 18e. Selon le Nouvel Observateur , son téléphone aurait été ensuite localisé un peu plus tard dans le secteur Montrouge-Châtillon avant d'être exfiltré par deux amis venus de Belgique aujourd'hui inculpés pour leur appui logistique.

Toujours selon le Nouvel Observateur , les deux hommes auraient retrouvé Salah, porteur d'une ceinture d'explosif, dans un état de " choc " . Une version qui expliquerait pourquoi l'Etat islamique a mentionné une attaque dans le 18e arrondissement de Paris dans son communiqué de revendication alors qu'aucune n'attaque n'a finalement eu lieu. Selon Me Xavier Carrette, l'avocat belge d'un des deux hommes, ces derniers auraient simplement admis que Salah était " un peu stressé " quand ils l'ont récupéré.

La confirmation qu'un deuxième kamikaze du Stade de France soit passé par la route des migrants conforte la crainte des autorités née après la découverte, dès samedi, d'un passeport syrien près d'un des djihadistes. " Nous ne sommes pas à l'abri d'un scénario où presque tous les auteurs des attentats soient passés par là ", explique une source proche de l'enquête.

Outre les deux kamikazes du Stade de France, des questions se posent notamment sur le parcours qui a permis à au moins quatre autres auteurs des attaques de revenir de Syrie : Samy Amimour et Ismaël Omar Mostefaï, deux assaillants du Bataclan. De même que sur les allers et retours entre la Syrie et l'Europe d'Abdelhamid Abaaoud, probablement le djihadiste francophone le plus connuainsi que le parcours de Salah Abdeslam avant son arrivée en France.

Depuis plusieurs mois, le ministère de l'intérieur avait été alerté par des policiers présents en Grèce de la faiblesse, voir de l'absence de filtrage sérieux à l'arrivée sur les îles de la mer Egée.

Une telle utilisation coordonnée de la route des migrants, sous des fausses identités et/ou avec de faux passeports, serait inédite. " A cette échelle, c'est une capacité que l'on découvre " , explique une source Place Beauvau. Les centre de " tri " des migrants, baptisés " hot spots " sont bien en train d'être installés aux frontières extérieures de l'Europe, notamment en Grèce ou en Italie, mais dans la pratique, leur fonctionnement serait surtout formel et surtout adaptés à l'identification des personnes vulnérables ayant besoin de protection.

Jusqu'ici, l'écrasante majorité des djihadistes français étaient revenus en Europe sous leur propre identité. Depuis le loupé qui avait vu trois hommes, dont un ami d'enfance de Mohamed Merah, échapper à la direction générale de la sécurité intérieure (DGSI) à leur retour en France, en septembre 2014, ils sont récupérés par la direction de la coopération internationale (DCI) du ministère de l'intérieur - qui a la responsabilité des attachés de sécurité intérieure placés dans les ambassades de France. Plus de 150 personnes auraient pris le chemin du retour à visage découvert depuis un an.

Enfin, l'irruption d'Hasna Ait Boulahcen, 26 ans, par le biais d'un témoignage spontané à la police, pose une nouvelle fois la question de la surveillance des milieux djihadistes par les services de renseignement. Alors qu'Abdelhamid Abaaoud était une cible privilégiée de la DGSI en raison de son rôle supposé dans plusieurs projets d'attentats en France, sa cousine, récemment radicalisée, avait-elle été repérée par la DGSI, ou a-t-elle échappé aux radars du service?

Les investigations judiciaires ne permettront pas forcément de répondre à cette question - ce n'est pas leur rôle - mais elle intrigue les enquêteurs. En tous cas, plusieurs sources confirment que, jusqu'au bout, tous les services de renseignement et de police judiciaire impliqués dans le dossier ont été persuadés que l'homme était toujours en Syrie, incrédules devant la possibilité que ce cadre de l'EI ait pu voyager aussi discrètement en Europe.

Analysis: In Terror Fight, French Feel Increasingly Isolated, Wall Street Journal

By Yaroslav Trofimov
21 November 2015
The Wall Street Journal

PARIS -- The world seems awash in sympathy with France's tragedy, from candlelight vigils to stadiums illuminated in tricolor. But, when it comes to action against Islamic State, there is growing fear in Paris that France may be in this fight dangerously alone.

French officials are particularly frustrated with their European Union partners over what they see as insufficient cooperation in intelligence, security and defense. "Everyone must understand that it's urgent for Europe to recover, to organize itself, and to defend itself against the terrorist menace," French Interior Minister Bernard Cazeneuve said this week.

In one way, the U.S. has responded much more quickly than France's European partners after the Nov. 13 attacks, boosting intelligence sharing with Paris. But Washington hasn't signaled that a more determined military effort against Islamic State lies ahead. President Barack Obama reiterated this week that the current U.S. approach of limited military engagement is working, and ruled out the use of ground troops.

French officials and politicians worry that the U.S. is underestimating the threat Islamic State poses to the international community.

"The goal of the attacks in Paris was to destroy our values, the values shared by the U.S. and France. And without a doubt we need for the American people to understand that this is also their war," said Frederic Lefebvre, a member of the defense committee in the French National Assembly and a former minister.

In September 2001, America's allies -- such as France -- instantly offered their help under the North Atlantic Treaty Organization's Article 5, which provides for collective defense.

Paris, which described the Nov. 13 shooting and bombing spree that killed 130 people as "an act of war," hasn't asked for NATO assistance, invoking instead the mutual-defense obligations of the European Union. The response has been lukewarm, at best. Even France's request to loosen fiscal rules so it could beef up its army and police to protect the country against Islamic State has been met with noncommittal statements from Brussels, so far.

"We are on our own, and we are counting our friends," said Francois Heisbourg, an adviser at the Fondation pour la Recherche Strategique think tank and a former senior French diplomat.

No other European country has joined France in airstrikes against Islamic State in Syria so far, though British Prime Minister David Cameron has called for a Parliament vote to authorize such an operation. In Iraq, too, no additional European countries entered the air campaign that is being conducted by France, the United Kingdom, Belgium, Denmark and the Netherlands as part of the American-led coalition against Islamic State.

Paris has asked for something simpler: help in its campaign against Islamist radicals in Mali and other West African nations. That would allow the French to free up elite troops to concentrate on Islamic State. But on that front, too, only Ireland has offered to send a "small" number of troops so far.

"Many countries avoid military action because they don't want to run the risk of becoming targets themselves, and because it is costly," said Mr. Lefebvre, the lawmaker.

Even though France asked, following the January Charlie Hebdo attacks, for the sharing of information on air travel bookings, the European Parliament scuttled the decision over privacy concerns. Mr. Cazeneuve this week noted that no European nation tipped off Paris on the movements of Abdelhamid Abaaoud, the architect of the Paris attacks, across the continent from Syria. There is also a persistent sense in Paris government offices that France can't count on the U.S., either.

Now, it is France rather than the U.S. that is paying the costs of Washington's regional "disengagement without taking into account the consequences," said Gilles Dorronsoro, a professor of political science at Sorbonne University in Paris.

"There are almost no refugees in America, and, for now, no terror attacks," Mr. Dorronsoro said. "The stakes, or at least the perceived stakes, for the U.S. are not the same."

Anti-terrorism 'ghosts' wage war from a computer, UK Times

James Dean
21 November 2015
The Times

An elite unit of anti-terrorism "hacktivists" is helping the British security services with intelligence operations against Isis, The Times has learnt.

Ghost Security Group, which counts former military computer experts among its members, is credited with providing intelligence that foiled a terrorist attack against British tourists in Tunisia this year.

Since the Paris attacks, members have infiltrated online Isis accounts run by individuals who had prior knowledge of the shootings. The group also believes that it has uncovered chatter stored on an encrypted messaging service that shows Isis members plotting the attacks.

Ghost Security Group (GSG) passes intelligence leads to MI5 and other security organisations across the world through the American authorities.

The group, which formed in January after the Charlie Hebdo massacre, comprises 14 anonymous individuals with backgrounds in the military and in private computer security

companies. The group focuses on intelligence gathering but it also launches digital attacks against Isis.

The group's executive director, who goes by the name DigitaShadow, told The Times: "You guys have a lot of jihadists over there. We try to identify these people, then alert the [US] authorities, so that they can alert MI5."

GSG investigates online accounts that it suspects are owned by influential members of Isis. One line of inquiry involves accounts on the Telegram encrypted messaging system, which has become the favoured messaging and broadcast service of several jihadist organisations. "We have data that the planning for Paris was conducted through Telegram," DigitaShadow said.

Members of Ghost Security Group create "infiltrator accounts" — online profiles where they pose as jihadist sympathisers or potential recruits — to develop trust with Isis insiders. Their infiltration operations are backed by translators and analysts to make their fake profiles as credible as possible. Once trust is gained, they are able to glean intelligence from the terrorists and make contact with others higher up the chain.

GSG tries to identify online accounts that are being used to lure would-be jihadists. The group focuses its attention on social media, messaging and other accounts where Isis operatives have already made progress with recruiting vulnerable individuals.

The group also provides intelligence to the authorities about the hacking capabilities of Isis, the targets of Isis hackers and the identities of the Isis hackers themselves.

DigitaShadow said that the group had removed 149 websites, 6,000 propaganda videos and 111,000 social media accounts linked to Isis since January. The group does not remove any sites that have intelligence value, Digita-Shadow said.

The group uses Michael Smith, the chief operating officer at Kronos Security, a US counterterrorism consultancy, as a conduit to pass information to the American security services. Mr Smith, who has advised the US Congress on terrorism matters, said that the group was focusing its efforts on intelligence about possible follow-up attacks to the Paris shootings.

Mr Smith said that intelligence gathered by GSG had helped to foil a terrorist plot to attack British and Jewish tourists at Houmt Souk in Djerba, Tunisia, in July.

"Ghost Security Group is the most effective and best of the very small cast of groups I'm engaging with," he said. "It's small but there are individuals who possess the knowledge and skills that are capable of producing quality information that can be passed to intelligence services.

"The authorities in the UK are aware of the value of GSG. I know that the officials here who I liaise with have spoken with officials from the UK about Ghost Security Group. They have expressed more and more interest in their work."

However, Mr Smith suggested that the attack campaign announced by Anonymous this week could upset some intelligence work being done online.

"If they [intelligence agents and Ghost Security Group members] are undercover posing as Isis agents, Anonymous is going to end up ruining someone's investigation."

He added that the security and intelligence agencies "really do have a strong handle on the social media landscape. But Isis is so prolific that there's a need to have more eyes on the system."

EU to Step Up Checks on Citizens Entering Bloc in Security Push, Wall Street Journal

Luxembourg says 'Europe has to act now' after Paris attacks
By Valentina Pop and Laurence Norman
1393 words
20 November 2015
The Wall Street Journal Online

BRUSSELS—The European Union has ordered stepped-up checks on its own citizens when they enter the bloc, a move aimed at stemming the terror threat from foreign fighters in the wake of last Friday's Paris attacks.

The decision comes after it emerged that the organizer of the Paris attacks, Abdelhamid Abaaoud, a Belgian citizen, had traveled unhindered from Syria back to Paris in time for last Friday's killing spree.

"The strengthening of controls at our external borders is indispensable for the protection of EU citizens," French Interior Minister Bernard Cazeneuve said, after meeting with EU justice and interior ministers in Brussels on Friday.

Under current rules, non-EU citizens are supposed to be checked against police data when they enter the bloc to see whether they are wanted by authorities or could be carrying a fake passport.

EU nationals are sometimes checked against police data if they display suspicious behavior or if there is reason to believe they pose a terror threat. However, such checks are sporadic.

Governments agreed to implement the measure immediately. Meanwhile, the European Commission, the bloc's executive, will start working on rule changes so that the systematic checks become permanent.

"I am happy about this, checks have to be made systematically and against all relevant databases to flag up the movement of jihadists," said Mr. Cazeneuve.

The new measures come as the bloc struggles to cope with the effects of the Paris attacks, the biggest act of terrorism in the bloc in years.

Central to the problem is the EU's 26-member Schengen border-free zone. Weak controls on Schengen's external borders, combined with the absence of checks once a person enters the bloc, have hugely complicated Europe's efforts to stop terror threats.

Ministers also pushed again Friday for new rules to be passed rapidly allowing airline passenger data to be shared.

The European Parliament has blocked the legislation for years over privacy concerns and has sought to water down how long the data would be retained and who would be registered.

France insisted again Friday that the proposed system—the so-called Passenger Name Record—should include intra-EU flights and that data should be kept for at least a year. The European Parliament wanted to restrict the data being kept longer than one month and to exclude intra-EU flights.

Luxembourg's Deputy Prime Minister Etienne Schneider said Friday the bloc wants an agreement on the new rules in early December and that they should be implemented “as soon as possible."

German Interior Minister Thomas de Maizière said that air travelers' records were needed because foreign fighters in Syria move back and forth when planning attacks on Europe.

“Almost every week a traveler [by air] is arrested in Germany. But there is also information we aren't getting, and then there are security gaps," Mr. de Maizière said, on his way into the meeting.

Ministers committed to better track and stop illegal firearms from being traded. The commission this week proposed tighter rules for the sale of decommissioned weapons after evidence emerged they have been used in other terror attacks in Paris this year.

The officials also pledged Friday to step up intelligence sharing. The head of the EU's police agency, Europol, said Thursday that half of the names on the organization's foreign fighters list come from just five of the EU's 28 member states.

The EU's counterterrorism coordinator, Gilles de Kerchove, said that intelligence agencies, not only police, need to include data on potential terrorists in the EU-wide databases. “This is the issue we had with Nemmouche, he was in the system but not explicitly linked to terrorism," he said, in reference to the French national, Mehdi Nemmouche, who shot four people at the Jewish museum in Brussels last year.

Mr. de Kerchove also spoke of “institutional schizophrenia" in the EU, where data gathered by the bloc's border agency Frontex on incoming migrants cannot be shared with Europol. Ministers on Friday said the two should be linked up and start exchanging data as of Jan. 1.

With Europe floundering to respond to the terrorist threat, some European officials have floated more radical options. European migration Commissioner Dimitris Avramopoulos said Friday he believed the bloc should explore an EU-wide intelligence agency, an idea quickly shot down by the German interior minister.

Meanwhile, Austria's Interior Minister, Johanna Mikl-Leitner, refused to discard some preliminary ideas, floated in the Netherlands, of restricting the Schengen free border-free zone to a small group of western European countries in an emergency.

“For now this is just a thought experiment that doesn't have highest priority. But in a situation as difficult as the one that we are experiencing at the moment, we must not prohibit the experts from thinking. Because we all know that things cannot continue as they are," she said.

Despite the decisions Friday, there is skepticism as to how quickly the EU can tighten security on its external borders.

Ministers are aiming for a March deadline to provide border authorities with the ability to run database checks against incoming people. However, in the case of Greece alone, that requires providing thousands of computers and staff at 220 border crossings, said one senior EU diplomat.

Greece has come under heavy pressure from its EU partners to improve its screening of the hundreds of thousands of migrants who have arrived there from Turkey over the past year.

One of the Paris suicide bombers, carrying what seems to have been a fake Syrian passport, was registered entering Greece in October. Mr. Abaaoud also traveled through Greece.

On Friday, Nikos Toskas, the Greek minister for public order and citizen protection, defended his country's record of securing Europe's external border.

“The big flows of refugees are continuously coming but they are checked, screened and identified according to European rules."

Meanwhile Hungarian Prime Minister Viktor Orban said Friday that European Union member states should renegotiate the bloc's founding treaty to reinforce a sense of strength and unity, or they will face the radicalization of the continent.

The Hungarian leader also lashed out at the open-door policy for migrants and criticized Europe's plan, supported by Brussels and Berlin, to resettle migrants in EU countries. Such plans provide a means to spread terrorism in Europe, Mr. Orban said.

“Migration increases the terrorism threat, increases crime and puts our cultural identity in danger. That's why it must be stopped," the prime minister said. “Support for off-mainstream, radical, extremist political forces is on the rise…which is not in the interest of any one of us."

Mr. Orban said the Schengen system “must be corrected by all means" in light of what he sees as the current inconsistency, which see countries such as Greece fail to protect their external borders from illegal immigration while others, like Hungary, do their utmost to guard their frontiers.

“Hungary doesn't really like to belong to a treaty that some adhere to while others don't. This system is impossible to maintain," Mr. Orban said in an interview on state radio Friday.

“Several things happened over the past six to seven years that underpin the claim that we must rethink some basic issues regarding European politics."

Suspected ISIL scout in Paris attacks arrested in Turkey's Antalya, Dogan News Agency

2015 11 21
Dogan News Agency

Antalya, Turkey—**Turkish police have detained a Belgian man of Moroccan origin on suspicion that he scouted out the target sites for Islamic State of Iraq and the Levant (ISIL) in attacks that killed 132 people in Paris on Nov. 10.**

The suspect, and two others detained for possible links to him, were arrested by a court on Nov. 21.

Ahmet Dahmani, 26, was detained at a luxury hotel in the Mediterranean coastal city of Antalya.

Two other men, 29-year-old Ahmet Tahir and 23-year-old MMohammed Verd -both Syrian citizens- were also detained on a nearby highway on suspicion that they had been sent by ISIL in Syria to ensure Dahmani's safe passage across the border and were planning to meet him. The suspects had fake passports in their possession, the police said.

Counter-terrorism police first became aware of Dahmani when he arrived on a flight to Antalya and tracked him to the hotel in the Manavgat district of the city.

Separately, Turkey deported a group of Moroccans detained at Istanbul's main airport this week over suspected links to ISIL.

The eight, who said they had arrived at Atatürk Airport on Nov. 17 night from Casablanca for a holiday, were detained by border police and questioned by profiling experts who flagged them as suspected militants, a government official told Reuters.

Ce que les Belges savaient d'Abaaoud, Le Monde

France, samedi 21 novembre 2015, p. 2
Elise Vincent
Le Monde

Les services de renseignement le croyaient en Syrie, il était en réalité en France. Abdelhamid Abaaoud, soupçonné d'être le commanditaire des attentats du 13 novembre à Paris, est mort le corps criblé de balles, mercredi 18 novembre, dans l'appartement de Saint-Denis (Seine-Saint-Denis) pris d'assaut par la police.

Les enquêteurs vont s'attacher à retracer le parcours du djihadiste de l'Etat islamique. Et tenter de comprendre les failles qui ont permis le retour en Europe, incognito, de ce jeune Belge d'origine marocaine, visé par un mandat d'arrêt international et soupçonné, selon le ministre de l'intérieur, Bernard Cazeneuve, d'être à l'origine de quatre des six attentats déjoués sur le sol français depuis le printemps.

Une fiche de synthèse des services de renseignements belges concernant le parcours d'Abdelhamid Abaaoud, que Le Monde a pu consulter, donne de premiers éléments de réponse. Ce document, daté du mois d'avril, reprend point par point, de façon chronologique, jusqu'en février 2015, l'itinéraire connu du djihadiste. Un parcours à l'évidence composé de nombreux trous, que les services belges ne cherchent pas à cacher.

Extrêmement précise, cette fiche d'une vingtaine de pages retrace notamment tous les numéros de téléphone connus du djihadiste. Le dernier date de mai 2013, et il est turc. Elle retrace également l'évolution de ses kunya (« pseudonymes ») : Abou Omar en mai, Abou Omar Soussi en juillet 2014, puis Abou Omar Al-Baljiki, à partir de février 2015. Son adresse email quasi certaine a aussi été identifiée.

D'après cette fiche, l'intérêt des services de renseignement belges pour le jeune homme commence suite à une note déclassifiée de la sûreté de l'Etat en date de février 2013. Celle-ci concerne le départ simultané vers la Syrie de sept jeunes gens. Rapidement, les enquêteurs vont découvrir une page Facebook où ils communiquent, intitulée la katiba al-muhajireen (« la brigade des immigrés »). Et très vite, ils vont mettre au jour la toile de leurs amitiés.

En parallèle, les enquêteurs vont commencer à faire des recherches sur l'histoire et l'entourage d'Abdelhamid Abaaoud. Le jeune homme est né à Anderlecht, dans l'agglomération de Bruxelles, le 8 avril 1987, il est l'aîné d'une famille nombreuse de six enfants. Il a la double nationalité belge et marocaine. Avant son premier départ pour la Syrie, début 2013, il était célibataire et vivait seul.

Le jeune homme a commencé à connaître des ennuis judiciaires à partir de 2002 et a multiplié les séjours en prison entre 2006 et 2012, « mais jamais pour plus de trois mois » , précise la note. Dans la famille, Abaaoud, Abdelhamid n'est pas le seul à avoir des démêlés avec la justice : son frère Yassine est connu pour des petits faits de délinquance. D'après son père, un petit commerçant auditionné en février 2014, la radicalisation d'Abdelhamid Abaaoud a démarré très vite après sa sortie, en septembre 2012, de l'établissement pénitentiaire de Forest. Il se met à porter la barbe. Arrête de fréquenter ses amis du quartier. Interrogé à la même époque, son frère Yassine pense qu'il a effectué un court séjour en Egypte avant de se rendre en Syrie.

Chapitrée par grandes dates clé, la fiche des services belges s'arrête ensuite sur la période de mars 2013. Abdelhamid Abaaoud est cette fois repéré par hasard, lors d'écoutes téléphoniques, sur le téléphone turc d'un interlocuteur situé à la frontière turco-syrienne. Abaaoud souhaite alors que ce jeune homme fasse l'intermédiaire avec son frère Yassine, resté en Belgique, et l'incite à lui envoyer de l'argent pour lui et pour « Allah » .

Sans explication, la fiche des services belges bascule immédiatement au mois de septembre 2013 : Abdelhamid Abaaoud est alors considéré comme en étant de retour en Belgique. « On sait très peu de choses sur [ses] faits et gestes jusqu'à ce qu'il revienne sur le territoire belge » , concède la fiche. « De source policière, il a été aperçu à la fin du mois de septembre en train de se promener dans Molenbeek-Saint-Jean [une banlieue de Bruxelles] . » Il était accompagné d'un homme qui est parti ensuite combattre en Syrie.

Younes, 13 ans

Le 20 janvier 2014, nouveau saut de puce temporel : le djihadiste est cette fois contrôlé à l'aéroport de Cologne, en Allemagne, direction Istanbul. « Il est resté très discret et ne réapparaît sur notre radar » qu'à ce moment-là, assume aussi la fiche de synthèse belge. Il est identifié en compagnie de son petit frère mineur Younes, âgé seulement de 13 ans, et d'un autre jeune homme d'origine malienne, qui mourra plus tard en Syrie. Abdelhamid Abaaoud a en fait soustrait Younes à l'attention de ses parents à la sortie de l'école. Rien ne les empêchera de s'envoler. L'adolescent sera alors surnommé « le plus jeune djihadiste de Syrie » par les médias belges.

A partir de février 2014, Abdelhamid Abaaoud est définitivement considéré par les services de renseignements comme un « moujahid de l'Etat islamique . Les services s'appuient particulièrement sur la vidéo de lui, diffusée sur le site de BFM-TV, où il apparaît tout sourire, au volant d'un pick-up traînant plusieurs cadavres de « mécréants », selon ses mots.

C'est vers le mois de juin 2014 que le père d'Abdelhamid Abaaoud situe ensuite le dernier contact téléphonique avec son fils. Ce jour-là, Omar Abaaoud tente d'obtenir de parler avec le plus jeune des frères, Younes. Il ne l'a plus eu au téléphone depuis deux mois et s'inquiète. Mais il n'aura plus jamais de nouvelles. Omar Abaaoud pense alors que les deux frères n'étaient plus ensemble en Syrie à ce moment-là.

Selon la fiche de synthèse, ce n'est qu'en août 2014 que des mandats d'arrêts belges et internationaux vont être émis formellement contre Abdelhamid Abaaoud.

Le feuilleton s'arrête finalement en février 2015, quand les services belges tombent sur l'interview du djihadiste au magazine de l'Etat islamique Dabiq. Sur l'une des photos de l'article, les enquêteurs reconnaissent deux jeunes gens soupçonnés de prévoir un attentat sur le sol belge. Deux hommes tués à Verviers lors d'une intervention des forces de l'ordre belges contre une « cellule terroriste opérationnelle », en janvier, quelques jours après les tueries de Charlie Hebdo et de l'Hyper Cacher. Dans cet entretien à Dabiq, Abdelhamid Abaaoud affirme qu'il se trouvait en Belgique le jour du démantèlement de la cellule de Verviers. Et qu'il avait pu regagner la Syrie sans se faire repérer.

Les deux mois qui courent avant la publication de la fiche de synthèse, en avril, ne sont pas documentés. Reste à écrire le film des sept mois suivants, jusqu'aux attentats de Paris.

Après l'assaut de Saint-Denis, la traque se poursuit, Le Figaro

Cornevin, Christophe
Le Figaro
samedi 21 novembre 2015, p. 7
Salah Abdeslam, ultime rescapé présumé des commandos de tueurs, est l'objectif prioritaire. Pas moins de 2 000 policiers sont mobilisés.

LA PLUS grande traque jamais menée par la police française pour percer les arcanes des commandos qui ont frappé de manière coordonnée le coeur de Paris et Saint-Denis ne se relâche pas d'un iota. Près de 2 000 limiers du renseignement et de la police judiciaire poursuivent leur course contre-la-montre pour identifier, localiser et neutraliser le reste de l'hydre djihadiste ayant semé la mort au nom de l'État islamique. Au dernier stade des investigations, neuf islamistes sont soupçonnés d'avoir participé directement aux fusillades et actions suicides qui se sont soldées par un bilan toujours provisoire de 130 morts. Selon une source judiciaire jointe par Le Figaro, les enquêteurs affichaient vendredi la plus grande prudence sur l'éventuelle implication des cinq personnes extraites de l'appartement « conspiratif » de Saint-Denis après l'assaut du Raid. En effet, si les vérifications se confirment, il s'agirait de trois Marocains et deux Égyptiens, tous clandestins qui squattaient sur place sans subodorer un seul instant partager le toit d'islamistes. La garde à vue des trois autres suspects se poursuit. Outre une jeune femme habitant elle aussi sur place, les policiers interrogent deux « logeurs » soutenant avoir mis les lieux à disposition d'un « ami qui avaient deux copains belges » .

Depuis une semaine, les limiers recomposent avec méthode un terrifiant puzzle dont ils ignorent le nombre de pièces. Après avoir exploré dans de périlleuses conditions les décombres de l'immeuble dévasté et en passe de s'écrouler à Saint-Denis, ils ont établi jeudi avec certitude, grâce à des comparaisons d'empreintes digitales, que le cadavre de femme est bien celui d'Hasna Aitboulahcen. Un passeport portant ce nom a en outre été retrouvé à ses côtés. Âgée de 26 ans, née dans les Hauts-de-Seine, elle est présentée comme la cousine du commanditaire présumé des attaques, Adbelhamid Abaaoud éliminé lui aussi mercredi matin

par les policiers d'élite. C'est notamment la géolocalisation et la mise sur écoute de son téléphone mobile qui aurait **permis aux services de renseignement** de recentrer leur recherches sur l'appartement « conspiratif » où était retranchée la cellule terroriste. Mercredi, le procureur de la République, François Molins, a révélé que « la présence d'Abaaoud sur le territoire français » émanait d'un « témoignage obtenu lundi, recoupé par de nombreuses vérifications téléphonique et bancaires » . « Il a été recueilli dans le seul et unique cadre des investigations de police judiciaire » , a confié une source au coeur du dossier. L'origine du « service de renseignement d'un pays hors d'Europe » qui a, comme l'a précisé Bernard Cazeneuve, « signalé avoir eu connaissance de sa présence en Grèce » , reste entouré d'un épais mystère. Même si le nom de la Turquie a été évoqué, sans confirmation.

Tour à tour dépeinte comme « parfois excentrique » , « extravertie » , « garçon manqué » voire « instable » par son proche entourage, Hasna Aitboulahcen avait rompu les amarres familiales dès l'âge de quinze ans avant de se radicaliser de manière brutale. Troquant le chapeau de paille qu'elle portait volontiers contre un niqab noir, elle avait posté le 11 juin dernier une photo sur son compte Facebook avec ce commentaire : « Jver biento aller en syrie inchallah biento depart pour la turkie » (sic).

À la faveur des investigations, les enquêteurs, qui savent que le troisième corps retrouvé dans l'appartement de Saint-Denis est celui d'une kamikaze non identifiée, ont désormais acquis la présomption qu'Abaaoud serait le neuvième membre des commandos de vendredi. Cette figure tutélaire du djihadisme européen, que les services antiterroristes croyaient en Syrie il y a une semaine encore, a en effet été filmé par une caméra de vidéosurveillance de la RATP à Montreuil-sous-Bois (Seine-Saint-Denis) alors qu'il entrait dans la station de métro Croix de Chavaux, à 22 heures 14, le soir des attentats. Un rapprochement a été fait avec la Seat Leon noire, retrouvée à proximité dans la nuit de samedi à dimanche, avec trois kalachnikov à son bord et utilisée lors du raid qui a décimé les terrasses de cafés de l'est parisien. C'est de cette voiture immatriculée en Belgique que Brahim Salah est sorti pour se faire sauter devant le Comptoir Voltaire, dans le XIe arrondissement. Et c'est à son volant que se trouvait a priori son frère Salah, toujours en cavale. Plus que jamais, cet « objectif prioritaire » est au coeur d'une chasse à l'homme menée sans relâche à travers toute l'Europe. Exfiltré de toute urgence à sa demande vers la Belgique au lendemain des attentats de Paris dans une Golf noire contrôlée à Cambrai et interceptée à Molenbeek d'où sa famille est originaire, le Français de 29 ans, natif de Bruxelles, est la cible de coups de filets répétés dans le royaume. Vendredi, sept des neuf individus interpellés la veille dans la capitale belge lors d'une vague de perquisitions ont été remis en liberté après interrogatoire. La garde à vue des deux autres a été prolongée de 24 heures. L'un est interrogé dans le cadre de l'enquête ouverte au début de l'année par la justice belge après le départ en Syrie de Bilal Hadfi, un des trois kamikazes confondus par ses empreintes papillaires prélevées près du McDonald's du Stade de France, où il s'est fait exploser.

Déterminé à mettre un nom sur chacun des supposés commanditaires ou inspirateurs qui ont planifié et orchestré les tueries, les services de renseignement tournaient à plein régime pour localiser Jean-Michel Clain et son frère Fabien, vétéran du djihadisme dont la voix a été authentifiée dans l'enregistrement de la vidéo de revendication de l'État islamique. Car la relève d'Abaaoud, dont la mort n'a pas encore été exploitée par l'appareil de propagande terroriste, ne saurait tarder. Aiguillonnés par l'idée de frapper à nouveau Paris, nul doute que ses prétendants réfléchissent à une réplique d'ampleur.

Depuis une semaine, les limiers recomposent avec méthode un terrifiant puzzle.

Attacks Push European Union to Consider Limits on Passport-Free Travel, New York Times

By STEVEN ERLANGER; James Kanter contributed reporting from Brussels, and Alison Smale from Berlin.
21 November 2015
The New York Times

PARIS -- If Europe's system of passport-free travel was not under enough pressure after a summer of chaotic migration, then last week's attacks in Paris have fortified doubts over how much longer that freedom of movement -- one of the most cherished accomplishments of the European Union -- can survive.

The Nov. 13 massacres in Paris were carried out almost entirely by European passport holders who slipped in and out of Syria without being identified or checked. In addition, the discovery of a Syrian passport apparently held by one of the Paris assailants has renewed fears that terrorists have infiltrated the migrant wave.

With the focus now on bolstering security, European Union interior and justice ministers met in an emergency session on Friday and vowed to complete French proposals for tighter controls by the end of the year.

For the first time, the ministers agreed finally to establish a system to share the passport data of air travelers within the open border area under what is known as the Schengen Agreement.

Given the double chaos of migratory flows and cross-border terrorists, many countries -- including France, Germany, Austria, Belgium, the Netherlands, Hungary, Slovenia, the Czech Republic, Slovakia and Sweden -- have already established temporary border controls.

The concern is that they will make those temporary controls, which are allowed under Schengen, effectively permanent, destroying the agreement.

On Thursday night, adding to the confusion, most nations along Europe's migrant corridor abruptly shut their borders to those not coming from war-torn countries such as Syria, Afghanistan or Iraq, leaving thousands stranded at Balkan border crossings.

Manuel Valls, the French prime minister, said on Thursday: "If Europe doesn't shoulder its responsibilities, then it's the whole Schengen system that's put into question."

The open-border arrangement, established 20 years ago, covers 22 European Union countries and four other nations. But the system can work only if its external borders are policed and protected, and it is obvious to all that Europe has failed to do so.

Arnaud Danjean, a member of the European Parliament and a former security official and diplomat from France, put it bluntly: "If by the end of the year necessary measures to reinforce external border controls and to check passports of Schengen citizens are not implemented, I think Schengen is dead."

Otherwise, he said, "many countries will come back in January and say we need another system, and until we have one, we will adopt permanent border controls."

French proposals for tighter controls were first made after Islamist radicals attacked the satirical newspaper Charlie Hebdo and a kosher supermarket in January.

But they were stalled by inaction and by concerns over data privacy in the European Parliament, raised particularly by Germany and the newer members from Central and Eastern Europe, which have been largely untouched by terrorism.

On Friday, however, the ministers gave their backing to measures demanded by France this week that included tightening external borders by extending checks to more people who can usually enter, and move freely within, the Schengen area.

Strengthening controls at external borders is "indispensable for the protection of European citizens," Bernard Cazeneuve, the French interior minister, said at a news conference.

Overhauling the Schengen rules would mean "systematic and obligatory checks to be carried out at all our external borders and on all people entering the Schengen area, including those who benefit from the freedom of movement," he said.

Mr. Cazeneuve has expressed fury that France found out that the ringleader of the Paris attacks, Abdelhamid Abaaoud, had slipped undetected back into Europe only from intelligence provided by a non-European country, believed to be Morocco.

Under the proposals, if a Schengen passport holder travels to a third country, whether Turkey, Syria or the United States, upon re-entering the Schengen area the passport should not just be examined but checked against criminal and security databases.

The ministers also agreed to establish a single European gun registration file. Mr. Danjean said he hoped that the gun control laws could be unified eventually in the European Union, pointing out that Belgian laws are much less restrictive than French ones.

While the difficulties with Schengen are largely technical and administrative, the politics around the subject have become nasty, feeding Europe's far-right parties, especially France's National Front and Sweden's Democrats.

Marine Le Pen, the leader of the National Front, said that "the absence of national borders is criminal madness." Striking a familiar but trenchant theme, she said: "The French elites have given themselves over to this surreal myth of a country without borders. Open your eyes, now!"

Euroskeptics and the far right, "those trying to benefit from the situation, are trying to redefine the entire Schengen debate in a way that makes Schengen look like the culprit here," said Jan Techau, director of Carnegie Europe, a Brussels-based research institution.

And the Islamic State "used a very vulnerable time for their attacks, knowing full well that the refugee crisis is like a force multiplier of their attacks," Mr. Techau added. However unfair, he said, "it's very hard to separate them now."

"The victim is Europe," said Alain Frachon, a columnist for Le Monde. The Paris attacks coming alongside the migrant crisis "are one more bullet in the corpse of Schengen," he said.

"But of course Schengen was never really applied," he said. "Freedom of internal travel required European border controls," under an agency called Frontex, "but no one wanted to put any money into Frontex."

In general, Mr. Frachon said, "the first reflex of any police, border and customs agency is to keep national control."

To defend Europe's external borders efficiently, he said, one needs a supranational, European agency that works. "But that is exactly the opposite of what public opinion is asking for now, and it's a terrible contradiction," he added.

For the European Union, this is a defining moment, said François d'Alançon, an analyst at the newspaper La Croix. "This is not only about Islamic State, but about the refugee crisis, the euro, freedom of movement and the integration of Muslims all over Europe," he said.

"We have all these people claiming that we should shut the national borders," he said, "but we know that all the answers are really European ones. For intelligence sharing, for refugees, you need more Europe, with unified asylum policies and security policies."

For many people, Mr. D'Alançon said, "we all thought the European idea, the European project was the only ideal left." But now, he said, "it's all gone, it's just a big fog."

Informer, c'est aussi démentir les rumeurs, Le Monde

Agenda, samedi 21 novembre 2015, p. 15
Le Monde

Théâtre de manifestations de solidarité, les réseaux sociaux sont également, en ces temps troublés, l'outil de propagation de « l'intox »

La France vit, agit, souffre et pleure aussi sur Internet et sur les réseaux sociaux. Et la tragédie du 13 novembre l'a, s'il le fallait encore, prouvé. La France qui sort le vendredi soir, celle des 18-40 ans, c'est celle des utilisateurs de Twitter, Facebook ou WhatsApp. Et c'est vers ces médias qu'elle se tourne, même, voire surtout, en cas d'urgence.

C'est par ces canaux que passeront, vendredi, les premières informations, celles des milliers de témoins qui tweetent ou postent pour dire les coups de feu, les victimes, la panique. C'est sur les réseaux sociaux qu'on verra, au coeur de l'horreur du vendredi soir, le meilleur : des mobilisations spontanées, comme le hashtag #porteouverte sur Twitter, sur lequel des habitants du 11e arrondissement proposent un abri à ceux qui courent dans les rues; ou les dizaines d'initiatives, ensuite, pour retrouver les disparus de cette soirée tragique.

Mais c'est aussi par les réseaux sociaux que viendra, sinon le pire, du moins le reflet de la panique du pays, sous forme de rumeurs, d'intox, relayées souvent de bonne foi, parfois avec de mauvaises intentions, et de « course au buzz », à la notoriété, à tout prix.

Il y a les paniques qui s'amplifient, comme celle de dimanche, après les rassemblements, place de la République, qui se sont soldées par des mouvements de foule, à la suite de quelques pétards, bruits de voiture ou ampoules éclatées. Les réseaux sociaux, cette fois, ont joué un rôle de caisse de résonance de la panique des uns, qui s'est transmise aux autres, dans un contexte d'angoisse collective qui l'explique aisément.

Recherche du « buzz »

Sur le site du Monde , nous avons ouvert dès vendredi un suivi en direct, jour et nuit, des événements, dans lequel nos lecteurs pouvaient nous poser des questions. Nous avons aussi beaucoup publié sur les réseaux, essentiellement pour démentir des rumeurs et des bruits qui se diffusent d'autant plus vite dans ce contexte de peur.

L'effroi, la sidération, l'angoisse, on pouvait les lire dans les questions de nos internautes, ou par le biais de messages directs sur Facebook, reçus dans une proportion inédite. « On parle de coups de feu à [Montélimar, Marseille, Bordeaux...] , pouvez-vous confirmer? » Des dizaines, sinon des centaines de questions de ce genre nous ont été posées cette semaine, par des internautes sincèrement inquiets après avoir entendu telle ou telle rumeur. Nous avons tâché d'y répondre au mieux.

Ces fausses informations provenaient généralement d'échanges, notamment via des SMS qui ont circulé massivement, partout en France, toute la semaine. Emanant d'un « ami qui connaît quelqu'un à la DCRI » ou dans quelque haute sphère, ils préviennent d'un péril imminent à tel ou tel endroit. Nos lecteurs nous en ont envoyé une bonne demi-douzaine, à Toulouse, Marseille, etc. Tous faux, évidemment, mais tous emblématiques d'un pays apeuré, inquiet.

Evidemment, au-delà de la peur, la malveillance existe. Sur les réseaux sociaux, quelques irresponsables, mauvais plaisantins ou militants de telle ou telle cause, ont diffusé mensonges, rumeurs et propagande, avec parfois un certain succès. Ce sont, par exemple, des photos de militants du Hamas se réjouissant d'un cessez-le-feu en 2012, en les faisant passer pour une célébration des attentats à Paris vendredi, ou cet adolescent en mal de notoriété qui inventera samedi des perquisitions à Strasbourg, où il ne s'est rien passé, simplement pour voir combien de partages il va obtenir.

La recherche du « buzz », c'est aussi ce qui poussera certains à créer des comptes supposés aider des familles à retrouver leurs disparus, mais qui diffuseront parfois de fausses photos, ou des clichés de personnes décédées, avec un message nauséabond : « Un RT [un partage] = un soutien », dans l'idée d'obtenir un maximum d'influence, puis de changer le nom et l'objet du compte. Il y a enfin ces petites histoires, moins essentielles, mais significatives : cette citation par exemple, certes fort belle, attribuée à un éditorial du New York Times et très largement diffusée, y compris par des personnalités diverses, qui était en fait... un commentaire sur le site du journal américain.

Le souci de la source s'est ici effacé devant le besoin de partager, de commémorer, de communier. On en recensera plusieurs, de ce même type, histoires erronées ou déformées, mais partagées en toute bonne foi par des dizaines de milliers d'internautes.

Aider à faire le tri

Face à ces mensonges, il nous a semblé important de ne pas négliger les réseaux sociaux. Inlassablement, durant toute la semaine, nous avons donc chassé ces canulars, pour mettre en garde les utilisateurs. Nous avons aussi taché de donner quelques « bonnes pratiques » pour éviter de se faire piéger. Ce qui n'a évidemment pas suffi à empêcher les rumeurs, bonnes ou mauvaises, de circuler, mais a pu aider une partie des internautes à faire le tri.

Quelles leçons tirer de cet épisode? Sans doute que, si les réseaux sociaux transforment chacun d'entre nous en média, au sens de transmetteur de l'information, la responsabilité que cela peut impliquer n'est pas évidente pour tout le monde. Les réseaux virtuels ont des conséquences réelles. Et la presse aussi doit en tenir compte : on ne peut plus faire le pari de « ne pas nourrir le troll », d'ignorer la rumeur : nous ne sommes qu'un canal parmi des millions d'autres. Et notre rôle doit être aussi de certifier la fiabilité de l'information et de combattre la rumeur.

Paris attacks: Indonesia calls for more intelligence sharing, Financial Times

Ben Bland
Financial Times
2015 11 21

Kuala Lumpur—**Indonesia, the world's most populous Muslim-majority country, has called on nations to step up intelligence sharing following last week's terrorist attack in Paris.**

Speaking on the sidelines of a regional summit in Kuala Lumpur this weekend, Retno Marsudi, Indonesia's foreign minister, told the FT countries were not doing enough to share information about the global threat from militants linked to Isis.
On Sunday, US President Barack Obama will meet 17 Asia-Pacific leaders at the East Asia Summit to discuss a range of regional security issues including terrorism, migration and the South China Sea disputes.

"The [terrorist] threat is not only to Europe but to every country," said Ms Marsudi. "That is why during the meeting, Indonesia will make a call again on the importance of having co-operation on intelligence information."

She said some countries were not sharing as much intelligence as Indonesia would like and that Indonesia was willing to become more open in order to support the global effort against the Isis threat.

"It's a must for every country because this is not a one-country issue, it's a global issue."

The Paris attacks exposed gaps in intelligence sharing even within the EU, where there is significant pooling of sovereignty and links between security services are well developed.

Intelligence co-operation is even harder in Southeast Asia and other parts of the developing world, where governments are less co-ordinated and the principle of non-interference in other nations' domestic affairs is considered sacrosanct.

One diplomat gave the example of Turkey, which has been deporting foreigners suspected of trying to join Isis without explaining to the relevant governments what level of threat the individuals posed: misguided youths or terrorist masterminds.

Southeast Asia is increasingly concerned about the threat from jihadi fighters returning from Syria and Iraq with military training, funding and the ideological determination to carry out mass-scale terrorist attacks.

Indonesia's elite antiterrorism police unit — Detachment 88 — has neutralised much of the threat from the Islamist terrorists who executed a wave of deadly bombings in the early 2000s.

But terrorism analysts and government officials in Southeast Asia fear that the conflict in Syria could become a breeding ground for a new generation of militants, as has happened in Europe.

The Indonesian government believes about 400-500 of its citizens are fighting in Syria, a number that Ms Marsudi said was relatively small given that nearly 90 per cent of the country's 255m people are Muslims.

Najib Razak, the prime minister of Malaysia, another Muslim-majority country, told other Southeast Asian leaders on Saturday that they must do more to combat extremism.

But he said that the problem "requires new solutions" and cautioned against calls for renewed military action in the Middle East.

"Understandably, many will want to fight the so-called Islamic State out of the lands they have stolen from millions of Syrians and Iraqis," he said. "But a military solution alone will not be enough to defeat those who see peace, and want to cause war; those who see order and civilisation and wish for nothing but mayhem and death."

The war in the Middle East: Fighting near and far, The Economist

21 November 2015
The Economist

Islamic State may be lashing out abroad because it has been weakened nearer home; but it will still be hard to take down

"ENDURING and expanding": Islamic State's alliterative motto leaves out its burning desire to eradicate everything else, but otherwise sums up its ambitions pretty well. If IS has, in recent times, seemed more concerned with the enduring bit, its history shows that it has never long lost sight of expanding in any way possible: by capturing territory, by spawning offshoots far and wide, by inspiring new recruits, and by spreading fear. As a state with puny resources and no real friends, it needs to be a moving target.

It is not clear to what extent recent strikes by IS beyond the boundaries of the territory it has carved out of Syria and Iraq mark a change of course. Its various affiliates--some 36 groups around the world have declared allegiance to IS's secretive caliph, Abu Bakr al-Baghdadi--have been mounting terrorist attacks for some time (see chart). A recent survey by the New York Times estimated that these offshoots have killed perhaps 1,000 civilians since January via mosque bombings in Yemen, attacks on tourists in Tunisia and suicide-bombs in Ankara and Beirut (the figure excludes the murderous rampages of Boko Haram in Nigeria). The group has also encouraged "lone-wolf" acts by like-minded would-be terrorists. But the death toll over the past few weeks seems to take things to a new level.

It may be a coincidence that plots to murder hundreds in Paris, blow up an aircraft over Sinai and kill indiscriminately on the streets in Beirut all came to fruition so close together. They may have been long planned; similar attempts earlier may have been thwarted. But it may also be a considered response to challenges that IS faces closer to home.

Pentagon sources say that coalition air strikes killed 20,000 IS fighters in the 14 months after their onset in August 2014. That sounds over-optimistic. But it is certain that a number of commanders have been among the dead. The intense fighting at Kobane, a Kurdish enclave in northern Syria to which IS laid siege last September, eventually being driven back by heavy air strikes in December, is thought to have cost it 2,000 men. An IS defector told Michael Weiss, an American journalist, that the losses were at least twice that, and that tightening of the Turkish border had made it harder for IS to replace fallen fighters. He said it was partly in response to this that IS turned to attacks on the "far enemy". Single, dramatic attacks are an immense force-multiplier in propaganda terms.

Losses on the scale of Kobane are doubtless a blow but not, alas, a fatal one. Estimates of the group's military manpower range from about 30,000 (America's Central Intelligence Agency) to about 100,000 (Hisham al-Hashimi, an Iraqi security expert). Mr Hashimi reckons about 20% are foreign-born, a similar figure to that given in UN papers.

Factor into these figures the fact that IS fighters seem a lot more effective than those who oppose them. When the Iraqi city of Tikrit was recaptured last April, it took 30,000 soldiers from the Iraqi army and associated Shia militias to overcome 1,000 IS fighters. When IS took the Iraqi city of Ramadi, its forces were outnumbered ten to one by the defenders.

A willingness to use kamikaze tactics is definitely part of what gives IS forces an edge; but they are also innovative, well-drilled and better led than many of those they face. In April IS used a drone to record its troops taking an oil refinery and distributed the footage on the internet. A former American Green Beret, quoted by McClatchy, a news service, said the attackers showed "quiet tactical confidence: correct movement, intervals, fire discipline".

Fighting well is not enough

Despite these impressive fighters, IS has recently been losing ground, largely because its adversaries have air power. Kurdish forces captured Sinjar in Iraq, along with adjacent territory in Syria, and IS forces are being pushed back elsewhere in Iraq, too. With help from Russian aircraft and Iranian-backed militias, Syrian government forces recently relieved an airbase near Aleppo to which IS had long laid siege. Following the deaths of 224 Russians in the Metrojet airliner bombing of October 31st, Russia may now be targeting IS in preference to other enemies of President Bashar Assad's regime.

Yet IS endures. Indeed its territory remains one of the safer parts of Syria: aid officials in Turkey say that in September and October as many as 70,000 civilians fled to Islamic State from the province of Homs. Coalition bombing in the caliphate is much less indiscriminate than that of the Russian and Syrian air forces elsewhere. What is more, food is cheaper and there is justice of a sort. There is also a functioning economy, largely thanks to an estimated 20,000-30,000 barrels of oil pumped daily from captured fields in eastern Syria and northern Iraq.

Its dependence on oil revenues--they provide around $50m a month, according to investigative reporting by the Financial Times--is just one way in which IS looks more like an old-fashioned Arab dictatorship than a new Islamic Utopia. It doles out alms to the poor in exchange for total obedience. It promotes a cult of personality around Mr Baghdadi. It churns out turgid propaganda about repaired bridges and newly opened schools. Like all the region's successful autocracies, it has created multiple and mutually suspicious security services, the better to stave off coups.

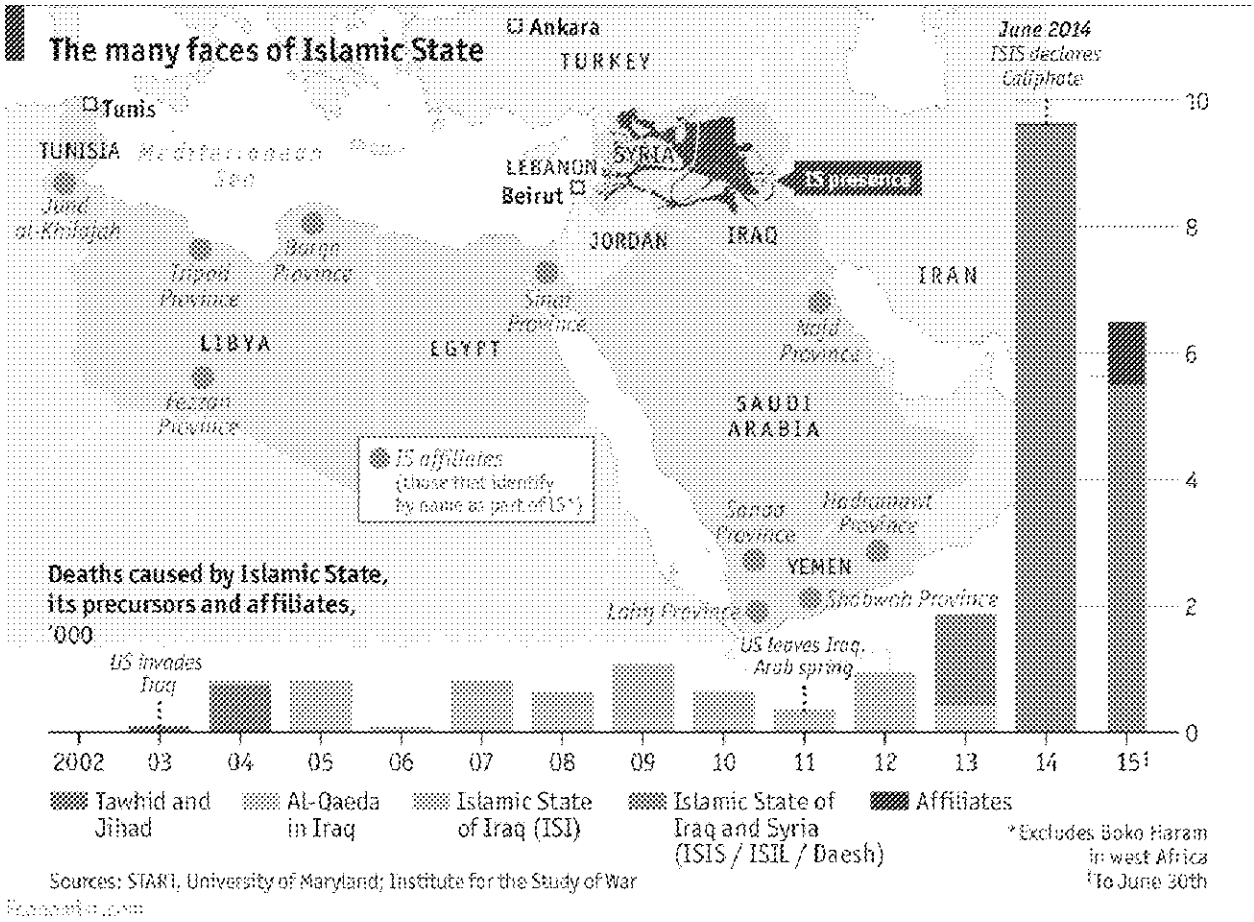
In the wake of the Paris attacks, military action aimed at denying IS its territorial base seem likely. The firepower available to IS's enemies dwarfs all that it can muster. In an interview with the BBC, the security chief of Iraq's Kurdish region reckoned that, given the necessary will, the job could be done in months or even weeks. France has already ramped up its aerial attacks and Russia, now fielding heavy bombers, says it will double the number of daily sorties. American aircraft are attacking new targets in the group's oil infrastructure. Recent strikes, preceded by warnings for civilians to escape, have destroyed hundreds of tanker trucks. America has also boosted supplies to Kurdish and other Syrian rebel forces on the IS frontlines.

The area IS controls seems likely to shrink under such pressure. But the capture of large cities like Raqqa and Mosul will require a far bigger effort on the ground. And as Sinjar and Kobane have shown, the cost will be high: both those towns now lie in ruins. The challenge is not just the diplomatic and military one of mustering, motivating, co-ordinating and deploying sufficient forces, huge though that is. It is also humanitarian: such action is likely to displace still more desperate refugees, and leave them little to return to.

The Western powers and Russia are not keen to send troops. They are even less keen to be left holding ravaged and probably hostile territory. Iraq's forces are overstretched and deeply distrusted by many of the Sunnis they would liberate; many prefer the rule of IS to that of Shia militias. Syria's forces are exhausted, overstretched and loyal to a regime responsible for war crimes. Local powers such as Iran, Turkey, the Kurds and Saudi Arabia have a range of conflicting agendas; eliminating IS is at the top of none of them.

There is progress to be made that does not need boots on the streets of Raqqa. Better police work can help; it is already producing results in Turkey, which has rounded up several cells in recent weeks. Improved planning and communication between anti-IS forces in the field would help, too. Trust, lamentably absent today, must be built.

Breaking up the would-be caliphate militarily would destroy the aura of invincibility which constitutes a large part of its attraction. But successor groups, and even more, IS's ideology, will endure for as long as the poisonous swamp it inhabits persists. A partial list of its ingredients includes a hyped-up sense of Sunni victimhood, indoctrination by xenophobic Wahhabists, the dismal anomie and yearning for heroism of some young urban Muslims in Europe and elsewhere, and the rage generated by brutal and repressive regimes such as Syria's. It has pooled and festered across the band of collapsed and failing states that stretches from Algeria to Pakistan. It will take more than a hot sun, or heavy firepower, to make it evaporate.



Le rôle déterminant du Maroc dans la localisation d'Abaaoud, France 24

France 24
2015 11 20

À l'occasion de la visite du roi Mohamed VI à Paris, vendredi, François Hollande a remercié le Maroc pour "l'assistance efficace" qu'il a apporté à la France en l'aidant à repérer la présence, sur son territoire, d'Abdelhamid Abaaoud.

François Hollande a vivement remercié le roi Mohamed VI en visite à Paris, vendredi 20 novembre, pour le rôle crucial des services de renseignement marocains dans l'enquête sur les attaques à Paris.

C'est en effet Rabat qui a permis aux services antiterroristes parisiens de se mettre sur la piste d'Abaaoud sur le territoire français et contribué à déclencher l'opération à Saint-Denis. C'est aussi le royaume chérifien qui aurait orienté les enquêteurs français sur la piste belge.

Le renseignement marocain appelé à l'aide

Dès mercredi matin, le site marocain Le360.ma, l'affirmait : "Ce sont les services de renseignement marocains qui ont réussi à localiser les terroristes retranchés dans un

appartement de Saint-Denis". Le site précisait : "Au lendemain des attentats qui avaient ensanglanté la capitale française, et sur demande des autorités françaises et belges, des officiers des renseignements marocains s'étaient rendus à Paris et Bruxelles pour aider dans les investigations en cours. Et déjà cette collaboration donne ses fruits avec l'opération menée ce (mercredi) matin."

Le mois dernier en effet, les services marocains ont arrêté un jeune frère du djihadiste, Yassine Abaaoud, alors que l'avion à bord duquel il se trouvait venait d'atterrir à Agadir, a indiqué vendredi une source marocaine à Reuters. Dès qu'elle a été informée de la présence d'Abdelhamid Abaaoud en France, la Direction générale de la sécurité intérieure (DGSI) a suivi les écoutes d'Hasna Ait Boulahcen, présentée comme sa cousine, explique-t-on de source policière.

La jeune femme d'origine marocaine de 26 ans, qui a été tuée mercredi avec Abaaoud lors de l'assaut des forces de l'ordre, était déjà surveillée par la police judiciaire (PJ) de Seine-Saint-Denis, pour trafic de stupéfiants. "Dès que l'information est tombée via le Maroc, la PJ de Seine-Saint-Denis a transmis à la DGSI ses informations, les correspondants d'Hasna Ait Boulahcen, les bornes téléphoniques, ses points de chute", explique la source policière.

"Surveillance physique"

Les écoutes ont permis d'entendre une conversation dans laquelle Hasna Ait Boulahcen faisait état de la présence d'Abaaoud, un Belge d'origine marocaine de 28 ans, selon une autre source policière. "Il y a eu ensuite une surveillance physique qui a permis de déterminer que la jeune femme et le djihadiste se sont présentés dans l'immeuble de la rue Corbillon à Saint-Denis mardi en début de soirée", explique-t-elle.

La Sous-direction anti-terroriste (SDAT) ayant l'assurance que la "cible" se trouvait dans l'immeuble, décision a été prise de donner l'assaut mercredi au petit matin, d'autant que le groupe était soupçonné de préparer une nouvelle attaque jeudi.

Les autorités françaises ont aussi indiqué cette semaine avoir bénéficié d'une information de la Turquie pour localiser Abdelhamid Abaaoud, le situant en Grèce.

After Paris attack, safety vs. liberties, New York Times

Rattled countries tilt toward bolder security, starting rights debate
By STEVEN ERLANGER and KIMIKO DE FREYTAS-TAMURA
21 November 2015
New York Times

Shocked by the carnage of the Paris attacks, France and Belgium moved aggressively to strengthen the hand of their security forces, pushing Europe more deeply into a debate that has raged in the United States since Sept. 11, 2001: how to balance counterterrorism efforts and civil liberties.

With their populations stunned and nervous, and political pressure growing on the right, the French and Belgian governments made it clear on Thursday that, for now, they would put protecting their citizens ahead of other considerations.

With time, the United States has moved to ease some elements of the U.S.A. Patriot Act, passed in the aftermath of the Sept. 11 attacks. It has also strengthened oversight of intelligence agencies and of mass domestic surveillance in the wake of the revelations by Edward J. Snowden, the former contractor for the National Security Agency who leaked documents about surveillance.

But European nations battered by terrorism are moving in the other direction. Those nations include France, which has suffered multiple attacks this year; Belgium, where many of the Paris attackers lived or grew up; and Britain, which has thwarted a number of plots in recent years. Each is updating and strengthening government power while debating further controls over passport-free travel within Europe.

Since the Nov. 13 attacks on Paris, France has aggressively used emergency powers, for example, to round up potential terrorism suspects across the country in an effort to disrupt any further plots.

Finding the right balance between individual rights and antiterrorism measures has grown more complex in the 14 years since the United States was struck by Al Qaeda, in part because of the pervasiveness of digital technology and the ensuing questions about personal privacy. But in the days after the Paris attacks, there has been relatively little reflection about the trade-offs as the nations most affected — France and Belgium — rushed to put new security measures in place and alter their legal and constitutional structures to give government more flexibility in dealing with threats.

As Prime Minister Manuel Valls of France warned darkly on Thursday of the possibility of chemical and biological attacks, France's National Assembly voted, 551 to 6 with one abstention, to extend for three months a national state of emergency imposed after the attacks in Paris by the Islamic State, which killed 129 people and wounded 352.

"The state of emergency, it's true, justifies certain temporary restrictions on liberties," Mr. Valls said. "But resorting to this, it's to give us every chance to fully restore these liberties."

In Belgium, Prime Minister Charles Michel said he would rush through legal changes to make it easier to capture, try and punish terrorism suspects operating there. He also said he would seek constitutional changes to extend the length of time suspects can be held by the police without the filing of charges to 72 hours, from 24.

His plan calls for the imprisonment of jihadists returning to Belgium from overseas, and would require anyone deemed a threat to wear an ankle bracelet. The plan would also ban the anonymous sale of telephone SIM cards that allow terrorists to hide their identities; would remove restrictions on what times of day the police are permitted to conduct raids on terrorism suspects; and would allow the authorities to arrest or expel religious figures "who preach hatred."

Mr. Michel also wants to require all passengers traveling on high-speed trains as well as airplanes to register their identities before departure.

Jan Techau, the director of Carnegie Europe, a research organization based in Brussels, said he saw the reactions as natural. "The home front is the field of political activity now — it will all be about homeland security," he said. "There is a sense that the authorities are no longer in control, and it's a clear attempt by authorities to regain some trust."

But advocates for civil liberties warned against governments going too far, and suggested that European nations had to be particularly careful that the measures they were taking were not aimed at one class of citizens: Muslims.

Officials at Human Rights Watch in Belgium cautioned on Thursday that the authorities should ensure such measures did not lead to indiscriminate roundups or unnecessary restrictions on freedom of speech, movement and religion.

"Like every nation, Belgium has a responsibility to protect its people from attacks, but it should not trample basic rights in the process," said Letta Tayler, a senior terrorism and counterterrorism researcher at Human Rights Watch. "Whenever a country is attacked or threatened, there is a danger that governments will overreact in an effort to make people secure."

The French emergency bill, which the French Senate was expected to approve on Friday, extends the powers of a 1955 emergency law to allow the dissolution of radical groups running mosques and other places of prayer; the blocking of websites and social media that glorify or incite terrorism; and the use, in certain cases, of electronic tagging for those placed under house arrest.

It is the first time since the 1955 law was passed that a national state of emergency has been declared. France is already being patrolled by heavily armed soldiers, and now police officers who are off duty will be allowed to carry firearms and use them if they wear an armband identifying themselves as police.

On Wednesday, the French authorities said they had carried out over 414 raids across the country, arrested 64 people and placed 118 under house arrest.

Under the emergency, the authorities are permitted to conduct raids and make arrests without first obtaining a warrant. But as soon as someone is arrested or property is seized, the regular legal system kicks in. Suspects in terrorism cases are already allowed to be held without charge for up to six days.

In the United States, even in the immediate aftermath of Sept. 11, raids on that scale would have created a storm of criticism, but the French, only 10 months after Islamist radicals attacked the newspaper Charlie Hebdo and a kosher supermarket, have generally accepted the crackdown as necessary.

President François Hollande has also called for enshrining the state of emergency law in France's Constitution, making it easier to declare such a state for longer periods of time without resorting to the more drastic options currently available in the Constitution.

Mr. Hollande also wants to make it easier to expel foreigners deemed to be a security threat; to revoke the French nationality of dual citizens, even those born in France, if they are convicted of terrorism-related offenses; and to close radical mosques.

France had already moved last summer to strengthen and modernize laws governing electronic surveillance after the attacks in January. Laws passed by large majorities gave broad legal authority for the state to snoop on citizens.

In Belgium, the call for broad new powers came after the government was stung by criticism that it had failed to act aggressively enough to identify and stop plots being planned on its soil. Mr. Michel also vowed a crackdown on Molenbeek, the Brussels district that has bred so many jihadists and harbored others.

As in France, many Belgians said that while the measures were drastic, they were prepared to give up some of their personal freedoms in return for security.

Belgium has been so shaken by the Paris attacks that there is a broad agreement that something needs to be done, said Steven Blockmans, an analyst at the Center for European Policy Studies based in Brussels. There is a consensus about the need to strengthen law enforcement, intelligence agencies and local governments, he said.

Mr. Michel's moves are a partial vindication for the right-wing New Flemish Alliance, which has been calling for these measures for years, Mr. Blockmans said. The interior minister, Jan Jambon, who is a member of the party, recently said that Molenbeek needed to be "flushed out."

Belgium has looser gun control laws than France but stricter controls on surveillance, which the new measures would loosen. For example, the authorities can intercept telephone conversations only if there is a strong suspicion that the targets are terrorists, said Jelle Van Buuren, a lecturer in counterterrorism at Leiden University. The surveillance cannot be extended to people who may be accomplices, he said.

Bart Tommelein, Belgium's federal secretary in charge of privacy, said that the restrictions on privacy would only apply to terrorism suspects.

"If we are talking about suspected terrorists and people who have committed such crimes, then privacy doesn't exist," he said. "So for people who go to Syria, or return from Syria, that border can be crossed, they lose that right," but others will not.

It was not the government's intention to "put everyone in a database, but to target and put people suspected of engaging in terrorist activity in a database," he said, and he insisted, "We won't place security above freedom."

MINISTER / MINISTRE

Appuis discrets malgré de bonnes finances
L'aéroport de Québec ne réclame plus de subvention pour la construction d'un centre de prédédouanement américain, en plus de promettre des retombées économiques appréciables. Le président et chef de la direction, Gaëtan Gagné, se demande donc pourquoi les appuis sont si difficiles à aller chercher en pleine campagne électorale. Dans son bureau avec vue sur les pistes, M. Gagné explique au Soleil les avantages d'un tel équipement. Les passagers, qui franchissent les douanes américaines au départ plutôt qu'à l'arrivée ou en escale, épargnent surtout du temps. Une fois aux États-Unis, ils peuvent récupérer rapidement leurs bagages ou prendre une correspondance sans autre embêtement. Les voyageurs devraient aussi avoir accès à de nouvelles liaisons, plaide le président d'Aéroport de Québec inc., la société privée qui gère l'aéroport international Jean-Lesage. Les transporteurs pourront en effet se rendre directement dans des aéroports sans poste de dédouanement puisque leurs passagers auront déjà reçu l'autorisation d'entrer aux États-Unis. Fini le détour par New York ou un autre grand aéroport seulement pour passer les douanes... Québec pensait que c'était acquis puisque son nom figurait sur la courte liste des aéroports où ajouter des «points de précontrôle», selon le jargon utilisé dans un accord entre le Canada et les États-Unis datant de 1995 et renouvelé en 2001. Or, une nouvelle version signée en mars dernier par le conservateur **Steven Blaney, ministre de la Sécurité publique** et député de Lévis, ne fait plus référence aux villes à desservir en priorité. Il faut dire que seules Québec et London (Ontario) n'ont toujours pas l'équipement tant désiré. Pour Gaëtan Gagné, cette omission est inquiétante. «Québec se retrouve pénalisée parce qu'on n'a pas suivi l'ancien protocole. [...] C'est comme si on avait décidé de fermer le marché du prédédouanement, ça n'a pas de sens», expose-t-il. Le gestionnaire poursuit en disant qu'«il faut que les politiciens décident que ça va

marcher». Il y va du développement de la région de Québec, selon lui. Le gouvernement du Québec l'a compris et a nommé vendredi dernier l'ex-ambassadeur Raymond Chrétien afin qu'il convainque les Américains - et les Canadiens - de la pertinence de la candidature de Québec. Le maire Régis Labeaume rame dans le même sens. Il a inclus le centre de prédédouanement dans ses priorités pour la campagne électorale fédérale. Jusqu'à maintenant, le Bloc québécois et le Nouveau Parti démocratique (NPD) ont appuyé l'initiative. Le Parti libéral et le Parti conservateur se font tirer l'oreille. M. Gagné en est à se demander s'il ne faudrait pas demander une subvention. «C'est un peu moins glamour pour les politiciens, peut-être, de dire qu'il n'y a pas d'argent qui va avec ça. Mais l'autorisation, ça nous suffit.» Au bureau du **ministre de la Sécurité publique**, on souligne que ***l'entente a été déposée à la Chambre des communes et doit encore être étudiée avant d'être ratifiée. Pour les nouveaux points de précontrôle, toutes les villes canadiennes seraient toutefois sur le même pied d'égalité. «Ce n'est pas un signal ou un non-signal»,*** nous a-t-on fait valoir. Le Soleil, 10/Front

«Je n'en espérais pas tant»
Lorsqu'on lui fait remarquer qu'il a connu une ascension fulgurante dans le gouvernement Harper, **Steven Blaney** secoue la tête. «Je ne pense pas que le mot fulgurant est approprié», corrige-t-il, admettant tout de même être surpris par sa trajectoire en politique. «Je n'en espérais pas tant.» Le candidat conservateur dans Bellechasse-Les Etchemins-Lévis a connu une année occupée qui a confirmé son ascension, de simple député au poste névralgique de **ministre de la Sécurité publique**. Avant le déclenchement hâtif des élections, c'est lui qui a été chargé d'articuler la réponse du gouvernement Harper aux attentats d'Ottawa et de Saint-Jean-sur-Richelieu. Les élections du 19 octobre surviendront d'ailleurs presque un an jour pour jour après la fusillade dans le Parlement fédéral. Le projet de loi C-51 a placé **Steven Blaney** sous le feu des projecteurs comme jamais auparavant. Aux Communes, devant la presse, il a martelé sans broncher le message conservateur, allant jusqu'à invoquer l'Holocauste pour justifier qu'on étende les pouvoirs des agences de surveillance. Finalement, cette question délicate pour le gouvernement conservateur est pratiquement absente des débats de la campagne fédérale. D'ailleurs, le Parti libéral a appuyé le projet de loi. ***«Ç'a été le plus grand défi de ma vie»*, relate Steven Blaney** en revenant sur la dernière année. La Presse, A5

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

***Belleisle rebounds after being hammered by rain**
Belleisle schools have reopened for those who can actually get to class. Anglophone School District South Supt. Zoe Watson says for those who cannot get to school, they have an excuse that won't be questioned. Both Belleisle Elementary School and Belleisle Regional High School were closed Oct. 1 and 2 after a rainstorm hammered the region, wiping out millions of dollars in infrastructure. Bridges and roads were destroyed making several in the region inaccessible. But as the community encompassing Belleisle, Springfield and Hatfield Point pulls together, there is a lot to be said about its resilience, says Aaron Law of Kars. "Great co-operation, compassion and camaraderie amongst friends and neighbours" is seeing the tight-knit community through, he said. Telegraph-Journal, B3

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Exiled spy kids battle to reclaim their citizenship
It's the stuff of a gripping spy thriller - international intrigue, stolen identities, even a mail-order diaper business. But for two brothers who were stripped of their Canadian citizenship when their parents were unmasked as Russian spies, none of that is important. The only thing that matters to them is the return of what they see as their birthright: their citizenship. Former Toronto residents Alexander Vavilov, 21, and his older brother, Timothy, 25, are in the midst of a legal battle to get their citizenship back, arguing they shouldn't be penalized for the sins of their parents. "It is not fair to punish us for something we have nothing to do with. We have done nothing wrong," Alexander Vavilov told the Star in an exclusive interview from an undisclosed city in Europe, where he is studying for an undergraduate degree (...) Alexander and Timothy have never been in trouble with the law, though it's a different story for their parents - Andrey Bezrukov and Elena Vavilova - who acquired their new personas by stealing the

identities of two dead Canadians, Donald Heathfield and Tracey Ann Foley. Ottawa would not even have been aware of the identity theft if FBI agents had not arrested them in 2010 for espionage in the United States, where the family lived for 11 years before they were booted out and deported to Moscow in a spy swap. Toronto Star, A1

Toronto 18 boss loses parole appeal
A leader of the Toronto 18 terrorist group has lost his appeal of a parole board decision that concluded he wasn't yet ready to be released from prison. The board's decision was fair and reasonable, the appeals panel ruled in the case of Fahim Ahmad, who organized a paramilitary training camp north of Toronto and plotted to attack the Parliament buildings and behead MPs in 2006. The decision was "based on relevant, reliable and persuasive information," the appeal division wrote in a five-page decision that cited the "gravity" of Ahmad's offences and "lack of a release plan," among other factors. Ahmad was the leader of one of two factions of the al-Qaidainspired Toronto 18. The leader of the second faction, Zakaria Amara, last month became the first Canadian terrorist to lose his citizenship under a controversial new law. At least five other Toronto 18 members have been notified they may also lose their citizenship under the law, which applies to dual nationals convicted of terrorism offences. Ahmad's lawyer said last week his client was not among those who had received such a notice. National Post, A6

Privacy breach possible in loss of citizenship
Federal officials are investigating an apparent privacy breach involving an imprisoned terrorist who was stripped of his citizenship. Zakaria Amara's receipt of a government letter informing him he no longer held Canadian citizenship was promptly reported in the media late last month and soon after confirmed by a Conservative cabinet minister in the middle of a closely fought election campaign. The issue quickly reignited campaign trail debate about new provisions that allow the government to revoke a terrorist's Canadian citizenship as long as the person has nationality elsewhere. However, Citizenship and Immigration Canada is refusing to release a copy of the letter to Amara "due to privacy considerations," said department spokesman Rémi Larivière. As for the public disclosure of the revocation, Larivière said the department "takes privacy matters seriously and has procedures in place to protect personal information." "Within the department, we will be looking into the matter according to normal procedures." Canadian Press (Times Colonist, B6; *Whitehorse Daily Star)

The 1970 October crisis: Questions still remain
The majestic home at 1297 Redpath Crescent in Montreal looks much like it did 45 years ago, its arched wooden door a gateway to the tony Golden Square Mile, once a bastion of Montreal's English speaking elite. Nestled at the foot of Mount Royal and located on a cul-de-sac, the classic stone manor remains a landmark of the October Crisis of 1970, a turbulent chapter in the history of Quebec and Canada that still stirs political passions and jars our collective memory nearly a half-century later. Then, more so than now, Quebec's place in Canada was unsettled. But the events of October 1970, which culminated in two highprofile kidnappings and the grisly murder of provincial cabinet minister Pierre Laporte by Front de libération du Québec (FLQ) terrorists shocked Quebecers of all political leanings at the time, and contributed to the loss of support for violent means to attain the political goal of Quebec independence (…) Forty-five years later, we are still left with unanswered questions about who actually killed Laporte and the role of Hamer, the lone anglophone who participated in the Cross kidnapping but was never brought to justice until his identity emerged publicly almost a decade later. (He was arrested in 1980, and sentenced the next year to 12 months in jail after pleading guilty for his role in the kidnapping.) But given the lay of Quebec politics, we may never find out the truth. "As long as there is an independent, federalist divide in Quebec, as long as Quebec politics is structured around this, you're not going to have an honest reckoning of what happened," Bélanger said. Montreal Gazette, A4

*** Programme - Violence conjugale et malbouffe au menu des libéraux: Les modifications à la loi antiterroriste C-51 sont enfin connues**
Le Parti libéral a divulgué sa plateforme électorale complète lundi, levant ainsi le voile sur les quelques éléments du programme de Justin Trudeau qui n'étaient pas encore connus. La lutte contre les gras trans et la malbouffe est au menu, tout comme le renversement du fardeau de la preuve pour la remise en liberté des récidivistes en matière de violence conjugale. Les changements envisagés à la loi antiterroriste sont aussi enfin connus (…) La plateforme explique aussi comment le Parti libéral

modifierait la loi antiterroriste C-51, pour l'appui de laquelle il a été vertement critiqué. Ainsi, pas question d'abolir les nouveaux super-pouvoirs de " perturbation " accordés aux espions canadiens. Les libéraux s'engagent seulement à garantir que tous les mandats obtenus par les agents du Service canadien du renseignement de sécurité (SCRS) soient conformes à la Charte canadienne des droits et libertés. On se rappellera que le C-51 a accordé au SCRS le pouvoir d'enfreindre la loi dans ses " perturbations " moyennant l'obtention de l'aval d'un juge. Le Devoir, A2

* **The big hole in Harper's policy on terror**
An opinion piece states "Stephen Harper and the Conservative government continually argue that terrorist organizations in the Middle East, notably ISIS, are a threat to Canadians at home. Their belief in this is so strong that they are willing to spend millions of dollars and risk the lives of Canadian military by participating in bombing and training missions in Iraq and Syria. Assuming this is true, apart from the moral issue of depriving people of their citizenship, how does he justify supporting terrorist organizations by providing new recruits?" Hamilton Spectator, A14

* **'Deport them'**
An open letter to the National Post states, "(…) I applaud the government's efforts to strip the citizenship of convicted terrorists. We should widen the scope of this law to include heinous crimes such as rape and murder. Canadians have the right to fulfil their ambitions in a peaceful and secure environment. Their lives should not be threatened by criminals who lurk in the shadows. Convicted criminals should be deported to their country of origin so that the lives of Canadians are not jeopardized by their menacing presence on Canadian soil. Revoking someone's citizenship only applies to dual citizens who have violated their oath to this country by committing a crime against the well-being of the population. Since there is no death penalty in Canada, the only way to get rid of these criminals is to deport them." National Post, A9

* **Dog-whistle politics**
An open letter to the National Post states "Calgary Mayor Naheed Nenshi doesn't like the dog whistles in the federal election campaign. Who is whistling and who are the dogs? (…) Dog whistles cannot be heard by ordinary people, as their ultrasonic waves are too high frequency for the human ear to detect. Dogs can hear them though, and so the dog whistle signals the dogs in a way that other people cannot hear. So, to take the example that greatly exercised Mayor Nenshi - whose rhetorical style blanches from anything so discreet as a lowly whistle when a bullhorn may be at hand - the prime minister is blowing his dog whistle on refugees. Prime Minister Stephen Harper says that refugee resettlement must respect the requirements of national security. That's the part ordinary people can hear. But there is another part that only the dogs can hear - namely that we have to be careful about these refugees because they are Arab and Muslim. The "dogs" are those animated by sundry bigotries; they don't like Arabs and Muslims." National Post, A9

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Norcal group grows its airport relationship
Calgary has become an important international hub specializing in receiving, transferring, storing and distributing air, rail and highway cargo. The Calgary Airport Authority continues to offer land lease development opportunities at both Calgary International Airport and Springbank Airport. More than 320 hectares of land are under lease and long-term plans envision future development that will add another 80 to 120 hectares to the city's industrial land base... Norcal managing broker Kevin Deeks says Norcal Centre, designed by Form 3 Designs, is located close to the Canada Border Services Agency and private jet hangers making it an ideal building for customs brokers, freight forwarders, a business centre and other airport related companies. Postmedia Network (Calgary Herarld, C2)

«Bon pour le Québec», dit Daoust
Certains producteurs agricoles québécois subiront les conséquences d'un nouvel accord commercial, mais son impact sera globalement positif pour l'économie québécoise, a déclaré lundi le ministre de

l'Économie, Jacques Daoust. M. Daoust a affirmé que les industries québécoises dans le secteur de l'aéronautique, du bois, des pâtes et papier ainsi que des métaux profiteront de la disparition progressive de droits de douane grâce au Partenariat transpacifique (PTP)... Le ministre a évoqué un resserrement des contrôles douaniers sur les substituts du lait, une interdiction formelle aux importations de lait produit avec des hormones de croissance, ainsi qu'une compensation adéquate des dommages subis à cause du PTP. Presse Canadienne (Le Quotidien, 21/Front); Le Soleil, 25/Front

Autres réactions au PTP

L'Union des producteurs agricoles (UPA) dénonce l'entente qui touche de plein fouet les producteurs laitiers, d'oeufs et de volailles. «Il est déplorable que les productions sous gestion de l'offre représentant 43% des revenus agricoles québécois fassent les frais de l'accession du Canada au Partenariat transpacifique (PTP)», souligne par voie de communiqué le président, Marcel Groleau. Ce dernier réclame maintenant la mise en place de mesures concrètes pour assurer un contrôle rigoureux des frontières et le respect intégral des normes de composition fromagère. «C'est la seule manière d'assurer une gestion de l'offre efficace et fonctionnelle pour l'avenir. L'UPA s'attend à ce que le gouvernement fédéral prenne sans délai les mesures qui s'imposent», ajoute M. Groleau. Le Quotidien, 7/Front

Qui sont les gagnants au Québec?

Le Canada et 11 pays se sont entendus sur le Partenariat transpacifique (PTP). Pour le Québec, l'intérêt de ce traité de libre-échange est notamment d'ouvrir les frontières du Japon, un pays développé de 127 millions de personnes qui maintient des tarifs élevés sur les produits agricoles et les biens manufacturés. En contrepartie, Québec subira la concurrence de pays dont la main-d'oeuvre est bon marché, comme le Viêtnam. Qui seront les gagnants et les perdants? Avec le PTP, le Canada reste sur le même pied que les Américains en ce qui a trait à l'accès au marché du Japon. «La réaction dans l'industrie est unanime», dit Jacques Létourneau, président de Canada Porc international. Le tarif de 4,3 % sera progressivement éliminé. Le Québec rattrapera ainsi deux pays du PTP, le Mexique et le Chili, qui profitaient d'un traitement préférentiel. De grands exportateurs porcins, le Brésil et le Danemark, deviennent désavantagés, puisqu'ils ne sont pas signataires du Partenariat. Le Canada a exporté 2,3 milliards $ en 2014 vers les marchés du PTP, dont 41 % à destination du Japon. Le Québec est le deuxième producteur de porc au pays. Le bois et les produits forestiers sont frappés de taux pouvant atteindre 10 % au Japon, 31 % au Viêtnam, voire 40 % en Malaisie. Les exportations canadiennes de bois et de produits forestiers atteignent 20,4 milliards par an. Le Québec produit 32 % des pâtes et papiers au Canada et arrive derrière la Colombie-Britannique pour le bois. Le Canada exporte pour 22 milliards $, «et ce chiffre est appelé à augmenter grâce à la nouvelle entente», s'est réjoui l'Association des produits forestiers du Canada (APFC) dans un communiqué. La Presse (Le Soleil, 24,25/Front); La Presse Canadienne (Le Soleil, 23/Front, La Presse, Le Devoir)

Twelve countries reach tentative Trans-Pacific trade deal

Twelve nations, including Canada, have reached a tentative deal on a massive Pacific Rim trading bloc billed as the largest-ever deal of its kind, with implications for hundreds of millions of people, hundreds of products and industries, and for long-term relationships between countries on four continents. After five days of marathon, aroundthe-clock negotiations, a deal was announced Monday to create the Trans-Pacific Partnership -- which would start by covering 40 per cent of the world's economy, with participants predicting it would become the building block for future trade deals. "Today is a historic day, it is a great day for Canada, it is a great day for Canadians," Prime Minister Stephen Harper beamed during a news conference Monday in Ottawa. "With this agreement, the largest economic partnership in the history of the world, Canadian exporters will gain nearly tariff-free access to almost 800 million customers in the Asia-Pacific region... including - crucially for us - Japan."... There's a major discrepancy between Canada and the U.S. on tariff-elimination for cheaper Asian parts - - with a five-times-faster phase-out north of the border, five years compared with the U.S.'s 25 years. In addition, both countries will see a 17.5-per-cent drop in the amount of regional content required in cars to avoid a tariff, compared with NAFTA. Canadian Press (Red Deer Advocate, A1, Times Colonist, B1/Front); Postmedia News (Ottawa Citizen, A1/Front); Postmedia News (National Post, A1, Chronicle Herald, Times Colonist , Calgary Herald)

Deal may signal 'slow erosion' of dairy supply management system

Canada is opening the taps to dairy from foreign competitors as part of the Trans-Pacific Partnership deal and though the new imports may just seem like a trickle right now, some say the leak could mean the beginning of the end for supply management. Details of the TPP released Monday include allotting 3.25 per cent of annual production to foreign dairy products entering Canada, to be phased in over the next five years with an increase in exports from the 11 other TPP countries that will annually displace about 250 million litres of Canadian milk. "There seems to be this slow erosion of our supply management principals, which is really based on one premise: producing what we need domestically, and that's it," said Sylvain Charlebois, a professor at the University of Guelph's Food Institute. "This gives dairy farmers the opportunity to shift their model in order to compete in the global market place, which is something they've never had to do before." The current supply management system controls levels of milk production by tying it to Canadian consumer demand and limiting foreign competition through high tariffs. Postmedia News (StarPhoenix, D1/Front; Montreal Gazette, Calgary Herald, Charlottetown Guardian); Globe and Mail, A1/FRONT; Montreal Gazette, A15

*** Will Canadians walk through the door to the Pacific?**
Canada's signature on Monday's sweeping trade deal will open a door for companies to expand deeper into the Asia-Pacific region - but it remains to be seen how many will actually walk through it. With the world's largest economy right next door, Canada's business community has had good reason to remain focused on the fish-in-a-barrel opportunities offered by the United States market. So, will Canada's participation in the Trans-Pacific Partnership - a 12-country pact billed as covering 40 per cent of the global economy - encourage Canadian companies to finally step out of their North American comfort zone? "It's so easy for Canadian firms to just walk across the border," said Ian Lee, an economics professor at Carleton University's Sprott School of Business in Ottawa. Toronto Star (Record, C1)

Bridge fixed on building new truck plaza
An ongoing project to upgrade the Ambassador Bridge includes the construction of a controversial on-site truck inspection plaza, the company revealed in a written statement Monday. The city has for years blocked the proposed plaza at the foot of the bridge on Windsor's west side because it requires closing streets in the area - including a section of Huron Church Road - and could have a significant impact on the surrounding neighbourhood. "They don't have permission," said Windsor Mayor Drew Dilkens. "We've had no discussion whatsoever with the Ambassador Bridge with respect to adding a commercial inspection plaza to their current facility." Should it be built, the plaza would be located west of Huron Church Road. "There are a lot of approvals required before they could ever move forward with that type of work," Dilkens said. "I'm not aware they have approvals from any of the various bodies required before they can move forward." Secondary truck inspection by the Canada Border Services Agency is currently done two kilometres south of the bridge at a large site off Malden Road. Postmedia (Windsor Star, A1/FRONT)

*** B.C. wife, husband 'stuck' after IRA-related refugee claim turned down**
A former British soldier married to a disabled Canadian woman may be forced to leave their Victoria home for the United Kingdom after a series of missteps and a snarl of red tape. John Collins, 62, first made an application for refugee status when he entered Canada, based on alleged harassment in the U.K. by a member of the Irish Republican Army. The application was denied and he's been ordered to leave by the Immigration and Refugee Board... Citizenship and Immigration Canada, the Immigration and Refugee Board and Canada Border Services Agency declined to comment on the case, citing privacy concerns. CTVNews (CityNews)

CHASE THE ACE

Cameron MacQuarrie has one piece of advice for communities planning a Chase the Ace fundraiser: be prepared. The vice-president of Branch 132 of the Royal Canadian Legion and chairman of its Chase the Ace committee in Inverness, said Monday that anyone considering such an undertaking should begin by developing contacts with other community groups that may be needed to help. "You need to gather your community leaders from other organizations and prepare with them in the event that it gets as big as it could possibly get," said MacQuarrie. "You need to look at what resources you have available in terms of other spaces, more volunteers, RCMP and EHS." By the 48th week of Inverness's Chase the Ace, thousands of people poured into the small community, pushing the jackpot up to $1.7 million for Saturday's draw. Donelda MacAskill of Englishtown got the jackpot by winning the draw and then selecting the ace from the three cards remaining in the deck. All previous draw winners had failed to flip the ace. Chronicle Herald, A1

Celebrity dance off to support Julietta's Place
A Red Deer celebrity dance event that raises money for charity has chosen its benefactor and announced the eight celebrity dancers. Women's Outreach Julietta's Place will be the partner charity for the 2016 Sheraton Celebrity Dance off, which will take place April 16. Co-chair of the event, Christine Moore, said the celebrity dancers include David Brant, Dusty Daines, Bonnee Gregg, veterinarian Pat Higgins, coach Ken King, RCMP Const. Charlotte Rockwell, Hermes Salas and Tammy Schlamp. Julietta's Place provides housing to women who are fleeing domestic abuse. The popular event has raised over $1 million over the past four years. It brings together professional dancers, community leaders, business and many volunteers. Tickets for the 2016 event go on sale Jan. 19. Red Deer Advocate, C1

Airdrie shooting suspect surrenders to police
A second suspect in the shooting of a man outside a fitness centre in a Calgary bedroom community last week has turned himself in. RCMP had issued a warrant for the man on Friday. Mathew Van Schiak of no fixed address faces one count of aggravated assault and three weaponsrelated charges. The 21-year-old is to appear in Airdrie provincial court later this week. Also charged with aggravated assault is Michael Sharman. The 35-year-old, who is from Calgary, was arrested during a traffic stop on Friday. The 39-year-old victim was shot three times but is expected to recover fully. Canadian Press (Edmonton Journal, A7, Calgary Herald, A11)

Man charged for turning a jar into a bomb
RCMP in southern Alberta have charged a man with making a homemade bomb. Mounties say a resident in Airdrie found a suspicious looking jar last Friday among some belongings left behind in a rental property. The person had moved several of the items when the jar was spotted in an ammunition container. Officers evacuated several homes in the neighbourhood and safely destroyed the device. Kristopher Goyman, 24, of Airdrie has been charged with making an explosive device with intent to endanger life or cause serious property damage. He is to appear in Airdrie provincial court Oct. 22. Canadian Press (Edmonton Journal, A2; Red Deer Advocate); Postmedia News (Calgary Herald, A11)

Escaped Bowden inmate captured by RCMP
A man who escaped Bowden Institution on Sunday morning was apprehended by Innisfail RCMP later the same day. Kenton Matthew Boyle, 29, had been unlawfully at large since 11: 45 a.m. after staff members discovered he was missing during a count. CSC said it immediately contacted the Innisfail RCMP detachment, and a warrant for his arrest was issued. Innisfail RCMP arrested him at about 7 p.m. Boyle is currently serving a sentence in the minimum security facility of four years, six months for armed robbery, disguise with intent, possession of property obtained by crime and operate motor vehicle - flight. CSC is conducting an investigation into the circumstances surrounding the incident. Red Deer Advocate, C1

*** Province investigating contract controversy**
The Alberta government is considering new accountability rules for municipal governments following a police investigation into a secretive $1.4-million contract awarded to the former mayor of Lloydminster. Last week, Lloydminster Mayor Rob Saunders revealed that the City of Lloydminster was "actively participating" in an RCMP investigation into a July 22, 2013, contract between the city and AHHA

Moments Inc., a consulting firm operated by former Lloydminster mayor Jeff Mulligan, that was signed on the same day Mulligan announced his resignation. "The RCMP review was forwarded to the Alberta Crown Prosecutors' Office and they have determined that there is no evidence to support any criminal charge against the City of Lloydminster or AHHA Moments Inc. in this matter and that this file is now closed," said Saunders in a prepared statement. Saunders refused to take questions from reporters on the issue. The city, which straddles the Alberta-Saskatchewan border, fought to keep details of the agreement under wraps but the contract was released last month by the Office of the Saskatchewan Information and Privacy Commissioner. The contract was worth an estimated $1.4 million over three years for consulting work but was severed by the city after three months and $178,000 in payments to AHHA Moments Inc. The contract was never publicly tendered and was signed by city officials the same day Mulligan announced his resignation but was still sitting as mayor. A spokesperson for Municipal Affairs Minister Deron Bilous said the NDP government "takes the concerns of the residents of Lloydminster seriously." "Under the Municipal Government Act (MGA), municipalities are first and foremost accountable to their residents," said spokesperson Shannon Greer. "We are aware of the situation and under the ongoing MGA review are examining whether additional tools to enhance municipal accountability are required." Edmonton Sun, 7

*** Former Windsor Mountie spent life helping others**

Bernie Campbell could be an imposing figure in his RCMP dress uniform. He had a long and distinguished career in law enforcement that stretched over three decades but at home with his boys, he was ready for all manner of hijinks. "Much to my mom's chagrin, he was one of the boys," said Bernie's oldest son Ian. "She didn't have three boys, she had four." Campbell died last Friday from complications of a genetic malady known as arteriovenous malformation. He was 64... Campbell proudly played the bagpipes in the Windsor Police Band, although he often joked he was positioned in the middle of the pack so no one could hear him. He spent 17 years in drug enforcement with the Windsor RCMP detachment. He retired with the rank of corporal after 33 years. "He was quite a character but he was an even better friend," said Rick Bohus, who worked with him on the force. "One of Bernie's greatest features was his caring attitude toward others on the job or in civilian life." Bohus, who is flying in for the funeral service from his retirement home in Moncton, N.B., recalled the story of a young RCMP officer who feared losing his career after being injured in the line of duty. With Campbell's help, the young man avoided a medical discharge, went on to a full career and rose to the rank of inspector. For his work in labour relations, Campbell won the Queen's Golden Jubilee medal and the Queen's Diamond Jubilee medal. He also received the RCMP's Good Conduct and Long Service medal. Postmedia News (Windsor Star, A2)

*** Mountie hurt, trial ordered**

Two men accused of severely injuring an RCMP officer near Kamloops have been ordered to stand trial. Jerry Lamar and Leon Leclerc were charged with one count each of attempting to wound, maim or disfigure Const. Paul Koester in Pritchard on July 5, 2014. A trial date is expected to be set on Nov. 9. Koester shot and killed Ian Bush, 22, during a 2005 altercation at the RCMP detachment in Houston. An investigation cleared him. Canadian Press (Times Colonist, A8)

*** When paranoia trumps evidence**

A column states "Re: The warming comfort of a familiar paranoia, Oct. 5. Columnist Shannon Gormley offers hard facts, logic and statistics to demonstrate that fundamentalist and terrorist Muslims are no more a threat than fundamentalist or terrorist Christians to Canada's security and values. However, paranoia trumps evidence more often than not - especially if used by a politician to cement support. Prime Minister Stephen Harper seems to be doing all that he can to provide warming comfort to Canadians who feel threatened by the niqab. In appealing court decisions and in promising new laws if his appeals do not succeed, he is making sure that Canadians know that he really cares about their feelings and values. Last week he offered even more comfort. There will be an RCMP tip line for Canadians to report barbaric cultural practices. Some of us were under the impression that we had a responsibility to report barbaric practices to the police. Now, we are to tip off the RCMP if culture is involved. Paranoia will always be with us. It does not need encouragement from Harper." Postmedia News (Ottawa Citizen, C3)

*** 'Barbaric' hotline no solution to serious issues of family abuse**

Sonia Bitar is no stranger to the issue of domestic violence in immigrant communities. The former citizenship court judge is executive director of Edmonton's Changing Together, a centre for immigrant women and their children. For years, Bitar has worked to empower women, helping them to understand their legal rights, flee abusive family situations, and integrate into the Canadian community. Many of the women and girls she works with are the very ones the federal Conservative Party says it's trying to help with its promised new "barbaric cultural practices" tip line. For Bitar, an immigrant from Lebanon, the party's campaign pledge provokes a sharp reaction. "Oh my God. Are we still using these kinds of words?" she says. "Are we now saying there are two different kinds of Canadians? I'm very disappointed." It isn't just the inflammatory language that bothers Bitar. She knows the oppressive domestic and cultural situations that women who are new to Canada can face. In her experience, the best way to assist women at risk is to build trust, and to reach out to them in their own languages. Many, she says, don't know their rights in Canada. Others don't trust the police. Others feel too economically or socially dependent on their husbands or families to break away. It can take time and patience to help them. Postmedia News (Edmonton Journal, A3)

*** Tip line? Surely they jest**

A colum states "Immigration Minister Chris Alexander has announced that, if re-elected, the Conservative government will create an RCMP tip line people can phone to report their neighbour's barbaric cultural practices. Some people, unused to the Harper government's wry sense of humour, have taken the announcement seriously. Immediately tipping off that it was an early April Fool's joke, however, was that it was delivered by Alexander, who is best known for his award-winning imitation of Fraser Crane's brother, Niles. This announcement, a bravura performance, exceeds even Alexander's stunning role in the recent Syrian refugee crisis. Were his announcement serious, my fingers would be at the ready to dial in such barbaric practices as circumcision, the drinking of blood and eating of flesh (even in symbolic form), and the yearly celebrations of murder by crucifixion. But since it was made in jest, perforce to bring some levity to this overly long election campaign - a newly introduced form of barbarism - I propose in similar vein the following list of barbaric cultural practices. To start, the cultural practice of displaying "butt crack." While it may be necessary to grant religious accommodation to plumbers, there is no excuse for anyone else. Women's shoes. 'Nuff said." Winnipeg Free Press, A9

*** Prisoner escapes from hospital, steals car**

A prisoner known for fleeing from police custody managed to run from corrections officers at Victoria General Hospital, steal a car and crash it into a motorcycle before escaping Sunday, according to police. Police were hunting Monday for Tyler Desmond Fong, 31. West Shore RCMP Const. Alex Berube said Fong is not considered armed or dangerous. "Although he has a history of fleeing from police, we have no information to suggest he has a violent past which jeopardizes public safety." The convict, being held at Vancouver Island Regional Correctional Centre, escaped shortly before 8 p.m. Sunday from the custody of provincial correctional officers while at Victoria General Hospital for medical treatment, police said. He smashed his way out of the emergency department. Police did not alert the media until after they got a warrant for his arrest Monday morning and were legally able to release the prisoner's name and photograph, Berube said. Justice Minister Suzanne Anton said B.C. Corrections takes public safety "very seriously" and such escapes are rare. "They are doing a review of this to find out what happened ... it's very unusual," Anton said. The Justice Ministry said privacy rules prevent it from releasing details of the medical treatment the prisoner was obtaining. The ministry said B.C. Corrections cannot disclose specifics of how inmates are managed while escorted outside of correctional centres, for security reasons. Every escort is determined on a case-by-case basis and security protocols are put in place based on risk level, the ministry said. A "critical-incident review" of the escape must be completed within 40 working days. Times Colonist, A3

***Surrey Six accused admits to drug, gun crimes**

A man accused of playing a role in the 2007 Surrey Six slayings has pleaded guilty to several drug trafficking and firearms charges. Sophon Sek entered the plea to seven counts in Surrey Provincial Court on Oct. 1. He'll be back before the judge on Nov. 3 to fix a date for his sentencing. Last spring, Surrey RCMP announced that Sek, 36, was facing 20 charges related to allegations he had trafficked drugs for months despite being on bail for manslaughter in connection with the Oct. 19, 2007 murder of six in a

Surrey highrise. Twelve others were also charged after a 21-month-long investigation that led to four search warrants being executed in September 2014. Postmedia News (Vancouver Sun, A9)

***The barbaric cultural practice of election pronouncements**
There's a low-frequency thrumming in the background of this election campaign – the political equivalent of the tension track used in movies to provoke anxiety and foreboding. If this election was indeed a movie, we would probably now be watching monochrome images of bewildered Canadians clutching their children while some sinister, shifting shape takes form in the near distance – foreign eyes staring malevolently from beneath slit veils or religious zealots mutilating their helpless daughters and forcing them into marital servitude. I can think of no better narration than Rod Serling's dire intonation at the beginning of each *Twilight Zone* episode: "It is the middle ground between light and shadow, between science and superstition, and it lies between the pit of man's fears and the summit of his knowledge." Instead of economic issues and the timeless election slogan of jobs, jobs, jobs, the drumbeat today seems to be Muslims, Muslims, Muslims. It's not quite that explicit, of course. Using that sort of language wouldn't be "politically correct," to borrow a Conservative attack phrase. Rather, the language is more suggestive. Just last week, we were reminded by the immigration minister, standing beside the minister responsible for the status of women, that Canada now has something called the Zero Tolerance for Barbaric Cultural Practices Act, and that if re-elected, the government would establish an RCMP task force, and a "tip line" for Canadians who wish to call the Mounties to denounce someone, a neighbour, it was suggested, for engaging in a barbaric cultural practice. CBC News

***Taloyoak's Netsilik School vandalized over the weekend**
School officials in Taloyoak, Nunavut, are picking up the pieces after their school was vandalized on Sunday. Principal Gina Pizzo says vandals entered Netsilik School and destroyed materials and equipment. She says she is grateful that some residents called police. "[It's] really nice when people do come forward to stop that kind of activity when they see it happening, or help clean up afterwards," she says. "We do really appreciate all the people pitched in to help us clean up the mess. Hopefully we won't see any more of this activity going on anytime soon." Pizzo says some material cannot be salvaged and replacements will have to be flown into the community. She says RCMP are investigating. CBC News

***Editorial: Missing and Murdered Vigil Needs to be Met With a Real Response From Canada**
An editorial "Sunday marked the 10th anniversary of the March and Vigil for Missing and Murdered Indigenous Women, and the Canadian government has still not addressed this problem with a nationwide, federal inquiry. With ever-rising numbers, it's a problem that is always at the forefront every October 4. The annual event is an important reminder, but it's an issue that falls on the wayside throughout the course of the year. The Canadian government ignores it as well as a majority of its population. For the last 10 years, marches have been happening all over the country for a federal inquiry into the deaths of more than 1,200 indigenous women. So far the demands have been met with an almost deafening silence. While promises have been made to have police investigations it does not address the severity of the issue. We live in world where we talk about appropriate responses to crimes daily, but when crimes actually need a significant response, there's almost none. According to the most recent RCMP report on the issue, there has been a 9 per cent decrease in unsolved cases—from 225 to 204. It's a start, but it's still not good enough. There are still at least 204 indigenous women whose stories are yet to be concluded, and we will not forget them." The Link

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Devries back in custody
A B.C. serial fraudster has turned himself in after being wanted on a Canada-wide warrant. Last week, police said they were actively looking for Wesley John Devries, 45, after he allegedly breached conditions of his release. Devries had been released from prison over the summer after pleading guilty in 2013 to 13 counts of fraud and theft. Many of his victims were women he met through dating websites. He had most recently been living in the Victoria area, said Victoria police spokesman Bowen Osoko. The Province, A10

* **'There is no appreciable gaps in his criminal behaviour'**
The federal Crown is seeking dangerous offender status for Mark Lange, a 40-year-old Yukon man with 42 convictions, including six for violent crimes. The status could put Lange in jail indefinitely. Alongside Dean Boucher, Lange was convicted of manslaughter in the death of a Carcross hotel owner in 2004. Both were originally found guilty of second-degree murder. However, the Yukon Court of Appeal overturned the sentence in 2011 citing contradictory instructions the presiding judge told the jury. On Friday, Crown prosecutor Noel Sinclair noted the crimes Lange had committed fit two of the requirements for the status: a pattern of persistent aggressive behaviour, and a failure to restrain his behaviour and a likelihood of causing death or injury to other persons. In the case of an indeterminate sentence, it must be shown a lesser sentence would not protect the public adequately.Sinclair pointed to Lange's lengthy criminal record. Whitehorse Daily Star, 2/Front

* **Ex-investment adviser gets 3û years**
Schriver pleaded guilty to 'cold, calculated scheme' involving 22 people, over $1m
A former Halifax investment adviser has been sentenced to 3û years in prison for defrauding investors of more than $1 million. Bruce Patrick Schriver pleaded guilty in June to one charge of fraud over $5,000, involving 22 victims who lost a combined $1,054,986 over a six-year period. "The wake of this fraud will be long felt and long suffered by his many victims," Crown attorney Mark Heerema said Monday at Schriver's sentencing in Halifax provincial court. "The number of victims also speaks to the amount of time that Mr. Schriver had to consider carefully what he was doing. This case is far from a momentary lapse of judgment or an impulsive decision. "It was a cold, calculated scheme that was occurring." The Chronicle-Herald, A7

* **UN CRIMINEL DE CARRIÈRE**
Robert Simpson est né en septembre 1962 dans la région d'Ottawa, où il a grandi. Il vient d'une famille nombreuse. Il est très proche de son jeune frère, Timothy, avec lequel il est devenu témoin repenti dans cette affaire. « J'ai toujours protégé mon frère, y compris de notre mère lorsqu'elle le battait », a-t-il témoigné. Robert Simpson est un criminel de carrière et un tueur de sang-froid. Il avait 17 ans lorsqu'il a été envoyé au pénitencier pour la première fois. Il y a passé plus de 35 ans de sa vie jusqu'à maintenant. La Presse+

* **Confessions d'un tueur de sang-froid**
Un procès pour meurtre qui s'est ouvert il y a quelques semaines à Montréal s'est transformé hier en véritable incursion dans le monde sordide et impitoyable des tueurs de sang-froid. Les sept femmes et cinq hommes chargés de déterminer le sort de l'accusé, Leslie Greenwood, un résidant de la Nouvelle-Écosse de 45 ans, ont commencé à entendre le témoignage de Robert Simpson, un criminel notoire devenu témoin repenti. Simpson, 53 ans, a déjà admis avoir commis les deux meurtres pour lesquels Greenwood est aussi accusé. Il a été condamné à la prison à vie, sans possibilité d'obtenir sa libération conditionnelle avant 25 ans. Les deux victimes, Kirk Murray et Antonio Onesi, ont été tuées le soir du 24 janvier 2010 dans le stationnement d'un restaurant McDonald's du quartier Notre-Dame-de-Grâce. Le Quotidien, 16; Le Journal de Montréal

* **Les élections font jaser... jusqu'en prison**
Lorsque Rick Sauvé rend visite à des prisonniers ces jours-ci, ils ont un nouveau sujet de conversation : les élections fédérales. Parce que chaque jour est comme le jour de la marmotte, chaque jour se ressemble. Alors, quand un scrutin survient, ça attire leur attention.» Les détenus de toutes les prisons provinciales et fédérales pourront voter vendredi, soit 10 jours avant les élections, à des bureaux de vote spécialement installés dans les établissements carcéraux. La Presse Canadienne (Le Soleil, 8; Le Devoir)

* **25-year stance on son's innocence impoverishes ex-Saanich parents**
After 25 years, David and Elouise Lord still believe their only son, Derik, is innocent of a notorious double murder that gripped B.C. in 1990. It's an enduring faith that has led them here, to a rundown house on Yale Road in Chilliwack that the insurance company won't touch. The yard is overgrown, the shoddy stairs near collapse. Inside, the small rooms are full of clutter, including several large cabinets stuffed with

papers and documents relating to Derik's case... The violent murders rank among B.C.'s most chilling and infuriating, in great part because Derik Lord continues to believe he was wrongfully convicted, despite a confession from Muir and a stack of compelling evidence. In 1992, Lord was sentenced to life in prison with no eligibility for parole for 10 years. It's where he has remained ever since. His claims of innocence have positioned him at odds with his two co-accused and bankrupted his fiercely loyal parents, who estimate they've spent $800,000 in legal bills over the years. His campaign has also ensured a regular flow of headlines over the past 10 years during which he's been eligible for parole - the latest hearing another unsuccessful, and emotionally charged, event this past March. By contrast, Muir, who at the time of the killings was a cherub-faced 16 year old, admitted his guilt and was granted full parole in 2003. He's lived a quiet life ever since. Huenemann, meanwhile, who was sentenced in 1991 to life in prison, became eligible for full parole this year. By his request, a parole hearing scheduled for this month was postponed until 2016, the Parole Board of Canada said. According to a newspaper report from 2003, he has also admitted to his role in the murders, after years of denial. It's believed he's in Quebec. Times Colonist, A2

* **Cellulaires, drogue, armes et porno saisis en prison**
Les agents correctionnels de la prison de Bordeaux viennent de faire un grand ménage dans l'aile abritant les hells Angels et les gangs de rue, saisissant des téléphones cellulaires, des pics artisanaux, de la drogue et du matériel pornographique contenu dans des ordinateurs. La rafle menée jeudi dernier aurait permis d'identifier une demi-douzaine de membres et d'associés des Hells Angels parmi les détenus fautifs, a appris Le Journal. Arrêtés lors de plusieurs opérations policières menées ces dernières années, ces motards sont détenus de façon provisoire dans la prison centenaire de Montréal en attendant l'issue des procédures judiciaires intentées contre eux. Certains de ces accusés bénéficient exceptionnellement d'une permission de la cour pour avoir accès à un ordinateur portable en détention afin de pouvoir préparer leur défense. Le Journal de Montréal, 6

* **New trial begins**
A new trial has begun for a man previously convicted of beating his lover to death. Michael Pearce was found guilty of manslaughter in the 2007 bludgeoning death of 36-year-old Stuart Mark and sentenced in 2012 to seven years in prison. At trial, prosecutors alleged Pearce flew into a rage after learning Mark was HIV-positive and beat him with a golf club at Mark's Alfred Avenue home. Last year, the Manitoba Court of Appeal ordered a new trial in the case, ruling jurors were not adequately cautioned about the phenomenon of false confessions. Winnipeg Sun, 4

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Suspects versus sex crime survivors
A Halifax taxi driver accused of sexually assaulting a passenger is allowed back on the job. A bartender charged with aggravated sexual assault can keep mixing drinks at a downtown bar. A university student charged with sexual assault after a frosh week incident continues attending classes on campus - until a second victim comes forward. The three cases pit the competing need to protect public safety and the survivors of sexual assault against one of the most sacred legal tenets: The presumption of innocence. "It's a difficult balance," Dalhousie University law professor Wayne MacKay said. "On one hand, you have the rights of the larger society and victims within that society to have a safe environment. On the other hand, you have to protect the important rights of the accused, including presumed innocence and the right to a fair trial." In each case, however, respecting the rights of the accused appears to be held in higher regard than the potential risk to public safety and women's sense of security. Yet MacKay, the Yogis &Keddy Chair in Human Rights Law, said there is an increasing shift toward survivors' rights. "It's a bit of a newer focus and one that has generated some political and policy heat. The current government has taken more of a stand in protecting victims." The Conservatives' proposed victims' bill of rights, for example, has generated support but has also faced criticism from more traditional legal academics, MacKay said. The Chronicle-Herald, A1

*** Chief defends crime comments**
Linking rising city crime rates to the tumbling price of oil and resulting job losses is just a general observation, says Acting Chief Brian Simpson, defending comments from Edmonton's top cop. Simpson made the point Monday after Wood Buffalo Mayor Melissa Blake slammed comments made last week by Edmonton police Chief Rod Knecht as "derogatory" towards oil field workers from northern Alberta. Knecht said displaced workers from Fort McMurray and Cold Lake gravitate to Edmonton after job losses and he pointed to low oil prices as a reason for Edmonton's sharp increase in property and violent crime. Edmonton police saw a 12% increase in violence and an 18% increase in property crime this year over last. "When oil is up we're busy, and when oil is down we're really busy," said Knecht. Calgary Sun, 20

*** Sisters in spirit 'Come together for a peaceful vigil and prayer ceremony'**
"I'll bet you and I would be treated very differently if we walked into a grocery store," says Josie Nepinak. "I might be followed around. I'd likely not receive the same courtesy as you would." Nepinak and I are women in the middle age of life, both well dressed and both educated with rewarding careers. It's the colour of our skin, she says, that changes everything. "I still hear, 'I hate you Indians,' sometimes at a bus stop." It's one other, even bigger difference between us that stands out when we make our acquaintance Monday morning on the steps of Calgary's City Hall. "I had an aunt back in 1978 who was murdered and her killer has never been found," she says matter-of-factly of tragedy hitting so close to home. "And I have a cousin who in 2012 was murdered by serial killer Sean Lamb in Winnipeg." As the executive director of Calgary's Awo Taan Healing Lodge Society, the only aboriginal women's shelter in Alberta, Nepinak has spent the past 25 years promoting health and wellness for First Nations women and their families. Once a year, though, her sole focus is on the more than 1,200 murdered and missing aboriginal women in Canada over the past three decades. Calgary Herald, A6

*** Police department tries to clarify link between rising crime, oil price**
Edmonton's police force tried to clarify Monday comments its chief made last week that out-of-work oilpatch workers could be to blame for the city's recent rise in crime. On the weekend, the Edmonton Police Service released tables and charts that it said shows monthly crime statistics in Edmonton climbing over the past 12 months as oil prices dropped to record lows. On Monday, deputy chief Brian Simpson spoke to reporters on the steps of police headquarters. "It's not linked to oil prices," he said. "It's linked to the change in the economy that we experience in Alberta. This has been an Alberta experience for a long time." Red Deer Advocate, A5

Long-awaited inquest into young aboriginal deaths starts
A long-awaited inquest into the deaths of seven aboriginal youths who moved from their remote reserves in northern Ontario to go to high school in Thunder Bay, Ont., opened Monday following a sunrise ceremony. In an opening statement to the jury, presiding coroner Dr. David Eden warned of a difficult road ahead. "We are starting on a long pathway," Eden said. "During that time as we go through this pathway, there will be differences. It's our job to manage those differences with wisdom, not with anger." The inquest, expected to last until next spring and hear from about 200 witnesses - some will testify more than once - is probing the deaths of Jethro Anderson, 15, Curran Strang, 18, Robyn Harper, 19, Paul Panacheese, 21, Reggie Bushie, 15, Kyle Morrisseau, 17 and Jordan Wabasse, also 15. All died between 2000 and 2011 while, as Eden put it, trying to advance their lives and the well-being of their communities through education. Canadian Press (Red Deer Advocate, A6; Kingston Whig Standard, Waterloo Region Record, Hamilton Spectator); Toronto Star; * Postmedia Network (Vancouver Sun, B2, StarPhoenix, C8, Calgary Herald, B2, Ottawa Citizen, C1/Front, Leader-Post, B5, Edmonton Journal, N3, Gazette, A11)

INTERNATIONAL

*** Snowden seeks return to U.S**

Edward Snowden says he has offered to return to the United States and go to jail for leaking details of National Security Agency programs to intercept electronic communications data on a vast scale. The former NSA contractor flew to Moscow two years ago after revealing information about the previously secret eavesdropping powers, and faces U.S. charges that could land him in prison for up to 30 years. Snowden told the BBC that he'd "volunteered to go to prison with the government many times," but had not received a formal plea-deal offer. Earlier this year, former U.S. Attorney General Eric Holder said a plea deal with Snowden was a possibility. Associated Press (Times Colonist, B7; Toronto Sun, Winnipeg Sun, Edmonton Sun, Waterloo Region Record, Globe and Mail, Times and Transcript)

***Ship sinks near Bahamas**

The captain of the 790-foot El Faro planned to bypass hurricane Joaquin, but some kind of mechanical failure left the U.S. container ship with 33 people aboard helplessly - and tragically - adrift in the path of the powerful storm, the vessel's owners say. On Monday, four days after the ship vanished, the U.S. Coast Guard concluded it sank near the Bahamas in about 15,000 feet of water. One unidentified body in a survival suit was spotted, and the search went on for any trace of the other crew members. The ship, carrying cars and other products, had 28 crew members from the U.S. and five from Poland. Associated Press (Times Colonist, B7)

MINISTER / MINISTRE

*** Politics This Morning: Ad hoc Cabinet committee on refugees meets today**
The Liberal government's announcement that it created an ad hoc committee on refugees to bring 25,000 Syrian refugees to Canada by the end of this year is "short on details" and doesn't show a concrete plan to deliver on the campaign commitment, says the NDP."We are glad that the government remains committed to resettling 25,000 Syrian refugees by year's end. We support this goal. But today's announcement was short on details and we believe Canadians were looking for a concrete plan for getting vulnerable refugees out of harm's way, not hearing about new Cabinet subcommittees," NDP MP Jenny Kwan told The Hill Times in a statement. "This is the new government's first test on delivering the change they promised to Canadians-we hope that the next announcement, on how they will achieve this goal, is coming very soon."The committee, which will hold its first meeting today, is chaired by Health Minister Jane Philpott and has eight other members. They include: Canadian Heritage Minister Mélanie Joly who will be the vice-chair, **Public Safety and Emergency Preparedness Minister Ralph Goodale,** Foreign Affairs Minister Stéphane Dion, Immigration, Refugees and Citizenship Minister John McCallum, Treasury Board President Scott Brison, International Development and La Francophonie Minister Marie-Claude Bibeau, Defence Minister Harjit Sajjan and Democratic Institutions Minister Maryam Monsef.HillTimes

Des réfugiés pourraient loger dans des bases militaire
Des réfugiés pourraient être accueillis dans des bases militaires canadiennes, a confirmé hier le nouveau ministre de l'Immigration, John McCallum. Le Parti libéral du Canada a promis en campagne électorale d'accueillir 25 000 nouveaux réfugiés d'ici la fin de cette année. M. McCallum a annoncé la création d'un sous-comité d'une demi-douzaine de ministres qui auront le mandat de coordonner cette tâche. La ministre de la Santé Jane Philpott présidera ce comité, qui inclura aussi la ministre du Patrimoine Mélanie Joly, **le ministre de la Sécurité publique Ralph Goodale** et la ministre des Institutions démocratiques Maryam Monsef, elle-même admise au Canada en tant que réfugiée provenant de l'Afghanistan. Le ministre de la Défense, celui des Affaires étrangères et celle du Développement international seront aussi impliqués. LaPresse

Bibeau nommée au comité special
Quelques jours après avoir été nommée ministre, la nouvelle députée de Compton-Stanstead, Marie-Claude Bibeau, voit son nom associé à un dossier chaud du nouveau gouvernement de Justin Trudeau. Le ministre de l'Immigration, des Réfugiés et de la Citoyenneté, John McCallum, a annoncé la création d'un comité spécial chargé d'aider à faire venir 25 000 réfugiés syriens au Canada. La ministre du Développement international et de la Francophonie fait partie du groupe. Ottawa n'est pas encore en mesure de préciser quand les premiers réfugiés syriens fouleront le sol canadien, mais ce comité spécial a été mis sur pied pour préparer le terrain. M. McCallum reconnaît que le temps presse pour le gouvernement fédéral, qui a promis d'accueillir 25 000 réfugiés syriens au Canada d'ici la fin de l'année, mais il dit ne pas vouloir rater son coup. En conférence de presse dans le foyer des Communes, lundi, il a annoncé la création d'un comité composé de neuf ministres qui aura le mandat de donner suite à cet engagement. Le comité sera présidé par la ministre de la Santé, Jane Philpott, qui sera notamment épaulée par son collègue aux Affaires étrangères, Stéphane Dion, **à la Sécurité publique, Ralph Goodale**, ainsi que la ministre du Patrimoine canadien, Mélanie Joly. La Presse Canadienne (LeDevoir, LaTribune); LaPresse; LeDevoir

Military aircraft, bases may be tapped for refugees
The federal government is considering using ships and commercial and military aircraft to transport 25,000 Syrian refugees to Canada by the end of December. At a news conference Monday, Citizenship and Immigration Minister John McCallum also said the Liberal government might lodge the refugees at military bases upon their arrival. The emphasis is being put on two factors: security screening and the health of the refugees. To that end, the government has established an ad hoc cabinet committee to ensure the Liberals make good on their election pledge. The nine-member committee, which will hold its first meeting Tuesday, is chaired by Health Minister Jane Philpott, who has previously worked with refugees in Africa. Others include: McCallum; Foreign Affairs Minister Stéphane Dion; **Public Safety Minister Ralph Goodale**; Defence Minister Harjit Sajjan; Treasury Board President Scott Brison; Canadian Heritage Minister Mélanie Joly; International Development Minister Marie-Claude Bibeau; and Democratic Institutions Minister Maryam Monsef, herself a refugee originally from Afghanistan. The government also appointed a senior bureaucrat to provide greater focus. Malcolm Brown, the deputy minister for International Development, becomes special adviser to the Clerk of the Privy Council Office on the "Syrian Refugee Initiative." He is a former executive vice-president of the Canada Border Services Agency with experience in several departments. Postmedia News (Leader-Post, B8, Vancouver Sun, StarPhoenix, Ottawa Citizen, Calgary Herald)

25,000 refugees are coming, one way or another
They might come by military transport, on chartered flights or warships; from Jordan, Turkey or Lebanon; to army bases or the homes of generous Canadians. When it comes to fulfilling the government's commitment of bringing 25,000 Syrian refugees to Canada over the next eight weeks, "all options are on the table," said John McCallum, Canada's new Minister of Immigration, Refugees and Citizenship, during his first news conference since taking over the cabinet post from Chris Alexander. "Whatever works, whatever is cost effective, whatever will get them here safely and quickly. So yes, we're looking at the possibility of commercial airlines. We're looking at the possibility of the air force. We're looking at the possibility of ships. All of these things are being considered as we speak, and all will be used to the extent that they are needed to get the job done." It will be up to a new Ad Hoc Committee on Refugees, chaired

by Health Minister Jane Philpott, to figure out how. (...)She will be joined by seven other high-profile ministers, including veteran politicians **Ralph Goodale** (**public safety minister**) and Foreign Affairs Minister Stéphane Dion, as well as the Minister of Democratic Institutions Maryam Monsef - whose own life in **Canada** began as a refugee from Afghanistan - and Defense Minister Harjit Singh Sajjan. Gazette

Réfugiés syriens
Le gouvernement fédéral n'est pas encore en mesure de préciser la date à laquelle les premiers réfugiés syriens attendus d'ici la fin de l'année fouleront le sol canadien, mais il a mis sur pied un comité spécial afin de préparer le terrain. Le ministre de l'Immigration, des Réfugiés et de la Citoyenneté, John McCallum, reconnaît que le temps presse pour le gouvernement, qui a promis d'accueillir 25 000 réfugiés syriens au Canada d'ici le 31 décembre. Mais Ottawa ne doit surtout pas rater son coup. «Oui, on veut le faire vite, mais en même temps, on veut le faire d'une façon correcte en termes de considérations de sécurité et de santé», a plaidé le ministre McCallum en conférence de presse au parlement, lundi. Pour atteindre l'ambitieux objectif que s'est fixé le chef libéral Justin Trudeau pendant la campagne électorale, un comité spécial composé de neuf ministres a été créé. Une première réunion de ce comité interministériel doit avoir lieu dès mardi. (...) Le ministre a également signalé que le gouvernement avait l'intention de rétablir dans son intégralité le Programme fédéral de santé intérimaire (PFSI), qui offre une protection en matière de soins de santé limitée et temporaire aux réfugiés et aux demandeurs d'asile. Le comité dont la formation a été annoncée lundi sera présidé par la ministre de la Santé, Jane Philpott. La coprésidence a été confiée à la ministre du Patrimoine canadien, Mélanie Joly. Elles seront notamment épaulées par leurs collègues aux Affaires étrangères, Stéphane Dion, **à la Sécurité publique, Ralph Goodale,** au Développement international, Marie-Claude Bibeau, ainsi que par la ministre des Institutions démocratiques, Maryam Monsef, une réfugiée afghane. La Presse Canadienne (Acadie Nouvelle, 16, Voix de l'Est, Soleil, Voix de lEst)

* **Un comité spécial créé pour accueillir 25 000 réfugiés syriens**
Le gouvernement Trudeau mobilise plusieurs ministres pour lui permettre d'atteindre son objectif d'accueillir 25 000 réfugiés syriens avant la fin de l'année. Le ministre de l'Immigration, des Réfugiés et de la Citoyenneté, John McCallum, a annoncé hier la création d'un comité spécial composé de neuf membres du cabinet qui se réuniront à compter d'aujourd'hui pour mettre l'épaule à la roue.
Si l'objectif d'accueillir 25 000 réfugiés en moins de deux mois tient toujours la route, M. McCallum a insisté pour dire que cet engagement électoral de Justin Trudeau devait se réaliser sans compromettre pour autant la santé et la sécurité. (...) Le comité ministériel sera présidé par Jane Philpott à la Santé, secondée par Mélanie Joly, à la tête du portefeuille de Patrimoine canadien. Outre M. McCallum, **les ministres de la Sécurité publique, Ralph Goodale,** des Affaires étrangères, Stéphane Dion, du Conseil du Trésor, Scott Brison, du Développement international, Marie-Claude Bibeau, de la Défense nationale, Harjit Singh Sajjan, et des Institutions démocratiques, Maryam Monsef, elle-même une réfugiée afghane, font partie du comité. JournaldeQuebec

* **Trudeau's Cabinet: The essential breakdown of roles and priorities**
Prime Minister Justin Trudeau unveiled his Cabinet last week, with 30 members in addition to himself, 15 men and 15 women. In the process, several changes were made to the machinery of government, giving some departments new titles and transferring responsibilities for some agencies. **Public Safety and Emergency Preparedness Minister Ralph Goodale** (Regina-Wascana, Sask.)The File**: Mr. Goodale's** most high-profile responsibility will be reforming the anti-terrorism law, Bill C-51, introduced by the last government. He is also next in line to take over Prime Minister Justin Trudeau's duties if needed. The Public Safety and Emergency Preparedness deputy minister is François Guimont, and the department has a $1.2-billion budget for 2015-16, according to the Main Estimates.Cabinet Committees: Chair of Canada in the World and Public Security; vice-chair of the subcommittee on Canada-United States Relations. Member of Agenda and Results; Intelligence and Emergency Management; and Open and Transparent Government.Background: **Mr. Goodale** was first elected as an MP in 1974, at the age of 24. He was then the Saskatchewan Liberal leader before coming back to the Hill in 1993. He's held several high-profile Cabinet positions. Hilltimes

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

***Le déversement est autorisé**
La Ville de Montréal ira «rapidement» de l'avant avec le déversement de 8 milliards de litres d'eaux usées dans le fleuve Saint-Laurent tout en respectant les conditions ordonnées par la nouvelle ministre de l'Environnement, a annoncé hier le maire Denis Coderre. Selon toute vraisemblance, le rejet aura lieu cette semaine. La date sera annoncée ce matin. «C'est réglé, il va y avoir déversement», a déclaré hier soir M. Coderre lors d'un point de presse à l'hôtel de ville. Une heure auparavant, en conférence téléphonique depuis Paris, la nouvelle ministre de l'Environnement Catherine McKenna a déclaré que le déversement pourrait se faire «dès ce matin», si la Ville acceptait quatre conditions. Elle demande notamment à la Ville d'effectuer une surveillance visuelle des panaches de l'effluent, de mettre sur pied un plan d'urgence pour gérer les rejets imprévus des industries durant la période de travaux et de fournir jusqu'en juin 2016 à Environnement Canada des données qui mesurent la qualité de l'eau du fleuve. La Presse, A2/FRONT (Le Quotidien, La Nouvelliste, Le Soleil); Globe and Mail, A4

*** Encore beaucoup de travail à faire**
Même si on vient d'annoncer à Lac-Mégantic que la décontamination est terminée, plus de 27 mois après la tragédie ferroviaire de juillet 2013, il ne faudrait pas croire que le travail du ministère du Développement durable, de l'Environnement et de la Lutte aux changements climatiques (DDELCC) est fini pour autant. Selon Paul Benoît, gestionnaire responsable des activités de nature environnementale associées à la réhabilitation du centre-ville de Lac-Mégantic, un plan de décontamination et une nouvelle planification adoptée au début de 2015 vaudraient sûrement qu'on rende public un certain rapport à saveur de bilan avec certaines statistiques sur l'ampleur des travaux réalisés. «Plusieurs étapes sont terminées, mais le rapport n'est pas encore disponible, cela devrait venir à la fin de 2015 ou au début de 2016. Tous les sols du centre-ville contaminés par le déversement causé par la MMA ont été excavés et remplacés par des sols propres, venant de l'extérieur. Cette opération s'est terminée en octobre», décrit Paul Benoît. La Tribune, 23

*** Crews work to clear tracks after 2 train derailments, oil and chemical spills in Wisconsin**
Crews worked Monday to clear freight cars from rail tracks and contain spilled crude oil and chemicals after two trains derailed in Wisconsin about 200 miles apart over the weekend. More than a dozen cars of a Canadian Pacific Railway train loaded with crude oil jumped the tracks in Watertown on Sunday afternoon, puncturing one car that spilled hundreds of gallons of its load and caused the evacuation of a neighbourhood in the small southern Wisconsin city. Residents who evacuated dozens of homes were still being kept away Monday as 12 derailed cars were moved to a temporary track. Thirteen of the train's 110 cars derailed, and 109 of them were carrying crude oil, officials said. Crews were dismantling and removing the car that was punctured, Canadian Pacific spokesman Andrew Cummings said, adding that it spilled no more than 1,000 gallons. The railroad said the leaking car was sealed, the oil contained and siphoned off, and that none of the product reached any waterways. Associated Press (Cape Breton Post)

*** Divers continue to investigate sunken barge**
Lake Erie divers surveying the sunken wreck of the barge Argo last week were sent to hospital after a sudden leak released an unknown substance. U.S. Coast Guard spokesman Thomas McKenzie said the divers were sent to hospital as a precaution but all have been released. "They were fine and they've already left the hospital," McKenzie said. Crews were conducting a "survey" of the vessel - what McKenzie described as a rinse offof the barge - when "a rivet popped or a pinhole leak opened up and they realized there was some discharge." The leak was sealed before the divers surfaced. Crews were preparing to dive again Monday to get a sample of the solvent-like material, thought to be the petroleum distillate benzol. The Argo was carrying 4,800 barrels of crude oil when it sank during a storm in 1937 in U.S. waters approximately 12 miles northeast of Sandusky, Ohio. It now sits 44 feet below the surface with silt and bottom sand building up around its sides. Windsor Star, A6

***'Two very lucky backcountry travellers' after avalanche near Rogers Pass**
Two people had a near-miss in a big avalanche near Rogers Pass on the weekend, kicking off this year's season in earnest. Around 2:35 p.m. Sunday, officials with Parks Canada said they received a report of a Size 3 avalanche - enough to bury a car, damage a truck, destroy a house or break trees - on the upper

part of Bruins Ridge. "It was a good-sized avalanche," said Percy Woods, a visitor safety technician with Glacier National Park. "We have two very lucky backcountry travellers." It's one of the first avalanches of the season where people got caught. A second one happened Saturday in Kootenay National Park, where five climbers on Mount Stanley were caught and carried 60 metres downslope. They were able to extricate themselves and walk away unharmed, according to Parks Mountain Safety in a Facebook post. The avalanches have prompted a reminder from officials to be prepared when heading into the backcountry. Calgary Herald

* **Families should have 72 hours of supplies on hand in case of an emergency**
This time of year, I always think about being prepared for an unexpected emergency situation in my home. In the Maritimes, we are lucky that we are naturally immune to some of the terrifying weather systems that occur in other parts of the world. There are, however, certain situations that we should be ready for at any given time. When I think about recent events that have given me cause to check my emergency preparedness kit, I think about autumn hurricanes, severe winter snow storms and a 15-minute evacuation order. You can't possibly be prepared for every scenario, but you can put together a very helpful kit for you and your family if you were trapped in your home without services for 72 hours or hear the knock on the door from EMO or the police ordering you to leave your home in 15 minutes. Chronicle-Herald

NATIONAL SECURITY / SÉCURITÉ NATIONALE

RCMP to honour Hill terror heroes
The RCMP will give awards to 20 Mounties and former House of Commons security officers in recognition of their bravery when a gunman stormed Parliament Hill last year. The national police force will make the presentations during a private Nov. 23 ceremony at RCMP headquarters. The RCMP said the awards are intended to recognize the online post. 1.866.977.2737 "bravery, dedication and quick thinking" of those who were directly involved in the events of Oct. 22, 2014. On that day, Michael Zehaf Bibeau fatally shot honour guard Cpl. Nathan Cirillo at the National War Memorial before rushing into Parliament's Hall of Honour, where he was killed in a flurry of bullets. Former House of Commons sergeant-at-arms Kevin Vickers, now Canada's ambassador to Ireland, was lauded for his role in subduing Zehaf Bibeau, but there has been no formal recognition of others. The RCMP was responsible for the grounds of the parliamentary precinct during the attack, while House of Commons and Senate security forces had jurisdiction inside the Parliament nuildings. A now-merged parliamentary protective service manages dayto-day security on Parliament Hill, a direct consequence of Oct. 22 intended to avoid confusion. Times Colonist, A8 (Kingston Whig-Standard, London Free Press, Chronicle Herald); * Postmedia News (Ottawa Citizen, A8); * Agence QMI (Journal de Montréal, 18)

* **Whistleblower to deliver address for Queen's**
A man some people consider a hero and others believe is a criminal is to present the opening address at a Queen's University conference later this week. Edward Snowden, 32, the former Central Intelligence Agency employee and United States government contractor who leaked thousands of classified documents that revealed the extent of global surveillance programs operated by the U S. and its English-speaking allies, is to present the opening keynote speech at the Queen's International Affairs Association's Model United Nations Invitational on Thursday. (...) Bill C-51, the Anti-terrorism Act 2015, broadened the authority of Canada's surveillance and law enforcement agencies by giving them more power to thwart suspected terrorist plots - not just gather information about them. Kingston Whig-Standard, A3

* **It's your military, Mr. Sajjan. What do you want it to do?**
Just a week into his government, Prime Minster Trudeau has made some bold moves. His fresh, balanced cabinet and his stated intent to bring collaboration back to the business of government policy-making is being welcomed with enthusiasm by a lot of Canadians. Every one of these new cabinet ministers faces a massive workload - none more than the new minister of Defence, Harjit Sajjan.(...) Key governmental departments, including DFATD, Public Safety Canada and DND, should collaborate quickly to help the government formulate a defence White Paper outlining a new national security

strategy. Once that's done, Mr. Sajjan and his team can start the work of drafting a national military strategy that would allow civilian and military leaders within DND to plan and execute their operational and institutional responsibilities more efficiently and effectively. iPolitics; Canadian Press (National Post, A5, Star Phoenix, Calgary Herald)

Brandon boy, 16, faces terrorism-related charge
A 16-year-old boy in Brandon, Man., faces a terrorism charge for allegedly using social media to express support for the Islamic militant group ISIS. The teen has also been charged with one count of possessing child pornography. He appeared in court in Brandon on Monday, but the case was adjourned until Thursday because he had not secured legal counsel, said Manitoba's chief federal prosecutor Ian Mahon. The boy, who cannot be named under the Youth Criminal Justice Act, remains in custody. Mahon said he expects a bail application to be heard on Thursday. Not much is known about the boy. Brandon residents told CBC News he grew up in the western Manitoba city and is attending high school there. Mahon said items have been seized from the teen's home, including a computer that is closely being looked at. The matter remains under investigation. Another Manitoban, Aaron Driver, was arrested in Winnipeg in June after he openly supported ISIS on Twitter. Although Driver is not accused of any crime, the RCMP is seeking to have his current bail conditions extended for a longer term, based on the suspicion that he might help or engage in terrorist activities. He appeared in court last week to fight the Mounties' attempts to limit his freedoms. Mahon, who is also the federal prosecutor in that case, had said the restrictions are "not punitive" but reasonable for public safety. CBC News (2015-11-09)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

* **Tim Hortons loses bid to turf rights complaint**
A Canadian coffee giant and franchisee have lost their bid to toss out a human-rights complaint lodged by Mexican workers in northeastern British Columbia. Edxon Chein, Eric Dessens, Rodolfo Lara and Ruben Ramirez were all hired under the Temporary Foreign Worker Program to work in a Tim Hortons franchise in Dawson Creek in 2012. The workers filed a complaint with the B.C. Human Rights Tribunal against Tim Hortons Inc., TDL Group Corp., a subsidiary that oversees restaurant operations, and franchise operator Tony Van Den Bosch. They allege they had to endure inferior working conditions, racist and derogatory comments and sub-standard living conditions owned by the franchise operator. A lawyer for Tim Hortons argued before the tribunal that the company wasn't connected to the issues raised in the complaint and that Van Den Bosch operates as independent contractor. The tribunal didn't make a final decision, but ruled against the application to dismiss the case, ordered it to go to a hearing and urged the parties to seek mediation. Canadian Press (Times Colonist, A6)

***Bakery owner could face jail for weapon stash**
Crown prosecution argued for as much as two years behind bars while defence counsel contended a conditional sentence order is appropriate during a hearing Monday for a Prince George man who was at the centre of a massive haul of guns and bullets from his home slightly more than two years ago. Much of the hearing, held in Prince George provincial court, was spent itemizing the weapons RCMP seized from his Prospect Point home and matching them to each of the six charges Karl Heinz Haus, 55, pleaded guilty to from the September 2013 incident. It began when Canada Border Services Agency officers intercepted two packages that originated in Germany and destined for Haus's home address. They contained components used to convert an M-16 assault rifle into a fully automatic weapon. The information was passed onto the RCMP federal serious and organized crime unit and after the parts were determined to be prohibited, investigators secured a search warrant for the home. Prince George Citizen (2015-11-09)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

***Europe declaws Iran's 'rocket kitten' hackers**

European authorities have taken action to take down a cyber espionage campaign believed to be linked to Iran's powerful Revolutionary Guard, the first operation of its kind since Tehran signed a nuclear treaty, researchers say. The hacker group - dubbed "Rocket Kitten" by security experts who have been hunting the hacker group since early 2014 - has mounted cyberattacks on high-profile political and military figures globally since that time, according to researchers from several cyber security firms who have monitored its activities. The action could hamper Tehran's efforts to gather sensitive intelligence from rivals including Saudi Arabia, Israel, Turkey, the United States. Reuters (Toronto Sun, A46; Edmonton Sun, Calgary Sun, Winnipeg Sun)

***Parsing the risks in cyber insurance**

When an insurance company sells protection against a house fire or car accident, it leans on decades of data from past experience to price policies. For every 1,000 houses you insure you have a rough idea how many will burn. That basic yet key ingredient is all but missing in the growing business of cyber insurance, in which business is booming as the list of hacking incidents from Target to Ashley Madison grows. Add to the mix the ever-changing nature of hacks and different levels of security sophistication among companies, and the challenges mount alongside the opportunities. "There are many unknowns," said Nick Galletto, cyber risk services leader for the Americas at Deloitte. Hacks such as the one that hit adultery website Ashley Madison can give an idea of the cost of the fallout of such an event. But that doesn't come close to providing the depth of data insurers use to create and measure the underwriting standards when they sell protection against house fires, break-ins and car accidents. Financial Post, FP3

LAW ENFORCEMENT / APPLICATION DE LA LOI

Dieppe Mountie gets major Interpol post

A New Brunswick Mountie and former commanding officer of the Codiac Regional RCMP has been elected Interpol's vice-president for the Americas. Todd Shean, who was born and raised in Dieppe,is currently an assistant commissioner and officer in charge of the RCMP's Federal Policing Special Services. This new position will be part of his regular duties with the RCMP. He was elected to Interpol's 13-member executive committee during the 84th Interpol General Assembly, which took place last week in Kigali, Rwanda. He is now one of three vice-presidents of the organization. Created in 1923, Interpol is the world's largest international police organization, with 190 member countries. In 1949, Canada became a member of Interpol and the RCMP was delegated the responsibility for administering and operating Canada's National Central Bureau, known as Interpol Ottawa. The bureau works with other countries through international criminal databases, the exchange of timely and accurate information and the coordination of international requests for assistance. Reached in Berlin, where he was attending the G7 summit on Monday, Shean said he plans to improve policing partnerships to advance Interpol's operational priorities. "We know that crime and all that goes with it is increasingly international," he said, emphasizing that it is more important than ever for law enforcement agencies to cooperate, corroborate and share information and best practices. Shean's 29-year career in law enforcement has included operational and leadership positions in tackling organized crime and financial crime, as well as in criminal intelligence and international policing. From 2005 to 2008, he led the Codiac Regional RCMP. At Codiac, he established a street crime unit, dedicated traffic section and other specialist officers in areas such as domestic violence. During that time, Metro Moncton had one of the lowest crime rates in the country. In 2008, Codiac had the best "clearance rate" among police forces in Canada for resolving serious crimes. Leading one of the largest RCMP detachments in the country, policing a bilingual city that is a microcosm of Canada, and providing services to three different municipalities were all good training, Shean said. "Codiac brings a number of different challenges. It really helps you prepare for other challenges." Shean has also held posts in British Columbia and Florenceville. Since leaving Codiac, he has gone back and forth between Ottawa and Fredericton. His base will continue to be in Ottawa, but he maintains a home in Dieppe. "I'm a Maritimer. All my ties are there. I'll be back." Times & Transcript, A1

'Our country benefits to this day'

Sgt. Gil Boone proudly participates in local Remembrance Day ceremonies each year with other members of the Cape Breton Regional Police Service. He is among 22 members of the Cape Breton Regional Police Service who have participated in 24 peacekeeping missions in places like Kosovo, Sierra

Leone, Jordan and Afghanistan. Each Nov. 11, he is reminded of his own time overseas, but says his service hardly compares to what others have gone through... He said it reminded him of the quality of life back in Canada and the veterans who fought in wars to make sure that was possible. "The men and women that went over and fought for us, they did so much for us, and our country benefits from it to this day. People just don't seem to realize that." That's why he marches each year in a Remembrance Day parade. This year, he'll take part in commemorations on the Northside. The RCMP manages the deployment of Canadian police on peacekeeping missions, including planning and evaluating, selecting and training personnel and providing support throughout deployment. Cape Breton Post, A3/Front

Remembrance Day ceremonies planned throughout region
Communities across southeastern New Brunswick will join Canadians across the country in pausing to remember those who have served the nation in uniform and those who made the ultimate sacrifice doing so. Here's a look at some of the main Remembrance Day ceremonies around our region. Moncton: Thousands will gather at the Moncton Coliseum for the largest ceremony in our region, organized by the Royal Canadian Legion Branch Number 6. The ceremony runs from 10:30 a.m. to noon, with a special Lest We Forget display open after the ceremony in the adjacent Agrena complex. As well, the Sunny Brae Legion will host a parade that will leave the legion, 164 Broadway St., at 10:40 a.m. and end at the cenotaph on Massey Avenue. If it rains, the ceremony moves to the Knights of Columbus Hall on Broadway. There is also the annual informal ceremony at the Victoria Park cenotaph - including veterans and anyone who has served as a police officer, firefighter or in the military - that will be held at 11 a.m. Dieppe: The City of Dieppe, in collaboration with the Dieppe Military Veterans Association, will be holding a ceremony on Wednesday, November 11, at École Anna-Malenfant to commemorate Remembrance Day. The parade, made up of veterans, cadets and members of the RCMP, will form up around 10:30 a.m. and will make its way indoors for the ceremony. Times & Transcript, A3

*** Troubled veterans lacking necessary support: critics**
It was chilly March day when former master corporal Collin Fitzgerald - one of the country's most highly decorated Afghan war veterans - decided that the way he wanted to go out was in a spray of police bullets. It was, he believed at the time, the only thing he could do to wash away the pain of his crumbling marriage and to erase from his mind the faces of dead Taliban fighters that haunted him each night, every time he closed his eyes. "I was done with life and everything," Fitzgerald told The Canadian Press. "And I cannot truly say to you what that feels like, but is a very hollow, shallow, cold place to be." He tried everything. Nothing worked. "Therapy. The alcohol had run its course, the (prescription) drugs had run their courses; I was done," he said. "You just want the pain to be done. I get it." But the fact he found the strength to go on living for his daughter, and to eventually face justice after holding police at bay for five hours at his home in Iroquois, Ont., south of Ottawa, was just the start of his nightmare. Fitzgerald soon encountered another chilling reality: that Canada's justice system often treats troubled veterans as threats to public safety. After an eight-month investigation, The Canadian Press has found that the federal government allowed key findings in the tragic shooting death of another troubled veteran with severe post traumatic stress disorder to gather dust. The B.C. coroner's office investigated the September 2012 RCMP killing of retired corporal Gregory Matters and made several recommendations to both National Defence and Veterans Affairs, including making mental-health professionals available to police emergency response teams who deal with troubled veterans. Letters obtained by CP, dated from the summer of 2014 and addressed to the coroner, show that both federal departments believe they are doing enough to reach and treat troubled military members. Canadian Press (Record, A3, Spectator, Times & Transcript, Daily Gleaner)

*** RCMP stymied in probe of Parliament Hill shooter's Winchester rifle**
The RCMP believes it has "come to a dead end" in its probe of where Parliament Hill shooter Michael Zehaf Bibeau got his gun one of the most vexing questions about the events of Oct. 22, 2014. The Mounties continue to investigate several threads of what happened that day, including whether Zehaf Bibeau had accomplices, but have not gathered evidence sufficient for criminal charges. A source with direct knowledge of the police investigation provided the update to The Canadian Press on condition of anonymity due to the ongoing sensitivity of the file. On Wednesday, crowds will gather for Remembrance Day ceremonies at the National War Memorial, where Zehaf Bibeau killed honour guard Cpl. Nathan Cirillo, shooting him in the back three times with a .30-30 Winchester rifle. The attacker quickly made his

way up Parliament Hill and into the Centre Block before being gunned down in the Hall of Honour, not far from then-prime minister Stephen Harper and countless MPs. The RCMP will honour 20 Mounties and former House of Commons security officers later this month in recognition of their bravery during the violent episode. Shortly before his attack, the gunman made a video in which he cites retaliation for Canada's military involvement in Afghanistan and Iraq as his motivation. Zehaf Bibeau, 32, plainly speaks of assaulting soldiers to show Canadians "that you're not even safe in your own land, and you gotta be careful." RCMP Commissioner Bob Paulson told a Commons committee in March that the Mounties considered Zehaf Bibeau a terrorist, and that he would have been charged with terrorism offences under the Criminal Code had he lived. Guardian (Prince Albert Daily Herald, Western Star, Telegram, Mississauga News, Brandon Sun); CTV News; Globe and Mail

*** Help sought in shooting probe - Investigative unit seeks witnesses to Friday's events**
The province's team of independent investigators is looking for witnesses as it probes a police shooting that killed a Winnipeg man Friday. Mark DiCesare, 24, died after being shot by officers near Kapyong Barracks following a police chase through River Heights around 1:15 p.m. Friday. DiCesare had been upset over a recent breakup with his girlfriend, a source told the Free Press. Whether DiCesare was armed as he led police on a chase Friday is part of the Independent Investigation Unit of Manitoba's probe, said executive director Zane Tessler... The unit is currently investigating several other cases, including the recent police shooting of 44-year-old Haki Sefa Sept. 20, the case of a stolen RCMP gun being used in a gang-related shooting that injured a teenage girl Oct. 24 and the apparent suicide of a murder suspect who shot himself after police tried to pull him over Nov. 2. Winnipeg Free Press, B1

*** Arbitration gets the boot - Carstairs backs away from option to resolve expense-claim dispute**
A former Manitoba senator has changed her mind about using binding arbitration to resolve her Senate expense-claim issues and will likely now face legal action. Sharon Carstairs, who left the Senate in October 2011, is one of 30 senators who were identified in June by the auditor general as having made what were deemed to be ineligible expense claims. Senators were given the option to repay the amount owing or go to binding arbitration with former Supreme Court Justice Ian Binnie. Those who don't repay and don't go to arbitration will be pursued in court... Former Liberal senators Rose-Marie Losier-Cool and Bill Rompkey and Conservatives Gerry St. Germain and Don Oliver also initially requested binding arbitration but have since rescinded that request. There are seven senators who still owe money from the audit who haven't sought binding arbitration, including former Manitoba Liberal senator Rod Zimmer, whose outstanding amount of $176,014 was the highest total for any of the senators identified in the audit. Zimmer's claims were related to his secondary residence as well as travel the auditor said didn't appear to be for Senate business, contracts without proper documentation, as well as gifts and taxi rides for Zimmer and his spouse in Ottawa for personal activities. All seven are among the nine whose files were referred to the RCMP to see if any criminal laws were broken. None of those senators has been charged. Winnipeg Free Press, A3

*** Un Néo-Brunswickois soupçonné d'agressions sexuelles**
Un homme âgé de 61 ans du Nouveau-Brunswick, Jean-Marie Rodrigue, doit faire face à la justice pour des agressions sexuelles graves qui auraient été commises il y a quelques années au Québec. Les faits qui lui sont reprochés seraient survenus entre 1985 et 1998 en Beauce et en Montérégie. Le Service d'enquêtes régionales de la Sûreté du Québec (SQ), avec la collaboration de la Gendarmerie royale du Canada (GRC), a procédé à l'arrestation du suspect samedi à sa résidence au Nouveau-Brunswick. L'Acadie Nouvelle a contacté la SQ pour savoir à quel endroit avait eu lieu l'arrestation, mais un agent nous a répondu que cette information «n'est pas disponible». Jean-Marie Rodrigue doit comparaître à Saint-Joseph-de-Beauce relativement à ces accusations d'agressions sexuelles. L'enquête de la Sûreté du Québec tend à démontrer qu'il pourrait avoir fait d'autres victimes. Selon la sergente aux communications de la SQ, Ann Mathieu, le suspect connaissait les personnes avec lesquelles il aurait posé ces gestes à caractère sexuel. La Presse Canadienne (Acadie Nouvelle, 7)

Youth worker left alone with violent teen
A 15-year-old Charlottetown youth in the care of the province has been placed on probation for two years after he engaged in the unwanted sexual touching of a female youth worker. The youth, whose identity is protected under the provisions of the Youth Criminal Justice Act, has been ordered by the court to attend

a sexual education program. He must undergo assessment, counselling and treatment for any underlying issue that might have contributed to the commission of this offence. That counselling could include sessions on sexual deviancy and anger management. Provincial Court Judge Nancy Orr ordered the accused to provide a sample of his DNA for the national DNA databank. She also imposed a weapons prohibition. Guardian, A1

*** 'God didn't want me to die'**

A Charlottetown youth who attempted to commit suicide by cop in the parking lot of the Charlottetown Mall was placed on probation Monday for two years on each of four weapons- related offences. The youth, whose identity is protected by the Youth Criminal Justice Act, had entered guilty pleas to possession of brass knuckles, using brass knuckles in a careless manner, using a firearm in a careless manner and possession of a weapon for a purpose dangerous to the public peace. The court was told the accused had drawn police to the rear parking lot of the Charlottetown Mall last Good Friday by placing a call to the authorities to say there was a man in the parking lot with a gun and shots had been fired. Multiple units were dispatched and when police arrived they spotted a figure with a gun, his face covered with a balaclava... Orr ordered the accused to perform 25 hours of community service on each of the four charges. He must also provide a DNA sample for the national DNA databank. Guardian, A3

Drug probe hits jackpot

A Saskatchewan police investigation dubbed Project F-Jackpot has cashed in, with four arrests and 25 charges. "The objective of this investigation was to disrupt the criminal activity and dismantle the group of individuals involved in the distribution of cocaine and crystal methamphetamine in communities in the province of Saskatchewan," said a news release issued Monday. No one was available for an interview to provide further details. The bust was made by the Saskatchewan Combined Forces Special Enforcement Unit (CFSEU), a provincewide integrated policing task force targeting existing and emerging organized criminal groups. Members of the Regina CFSEU have been involved in Project FJackpot for the past two months. The investigation concerned alleged drug trafficking by a group operating "extensively" across the province, according to the release. Saskatoon CFSEU, the Regina Police Service and RCMP units in Saskatchewan's F Division were also involved in the project. It culminated in four arrests on Wednesday. James Edward Lloyd, 36, of Regina is charged with trafficking in cocaine, possession of cocaine, meth and oxycodone for the purpose of trafficking, possession of cannabis under 30 grams, possession of proceeds of crime exceeding $5,000, and six weapons charges. Postmedia News (Leader-Post, A1)

Man critically injured in fight

Three suspects are in custody after a man was critically injured during a confrontation between two groups of people in Surrey City Centre early Monday. RCMP said that at 3:20 a.m. police were called to 108th Avenue and 132nd Street following reports of screams and two groups fighting on the street. Police found one man, in his early 20s and known to police, with a serious gash to his chest. Two men and one woman were arrested and remain in custody while the investigation continues. The victim is listed in critical condition. Postmedia Network (Vancouver Sun, A4)

Moose cull prompts protests

Dennis Day was all ready to protest a Mi'kmaq moose hunt that Parks Canada approved for Monday on North Mountain in Cape Breton Highlands National Park, but there was nothing to protest. Day, a resident of nearby Cape North, set up camp along the Cabot Trail just outside the park on Sunday night, but Mi'kmaq hunters and Parks Canada officials were still putting things in place Monday and were not expected to start hunting until Tuesday at the earliest. "I'm not even going up on the mountain," Day said Monday morning inside his roadside hut, which is equipped with a wood stove inside and a porta-potty next to it. "I'm staying right here." Day said he intends to peacefully protest Parks Canada's plan to cull up to 90 per cent of the moose population in a 20-square-kilometre area on North Mountain... However, Const. Mark Skinner of Nova Scotia RCMP said no complaints had been laid by Monday morning and police were not investigating any threats. Day said he didn't complain to police, because he didn't take an online threat he received seriously. And, he said, he has no intention of disrupting the hunt. "We just want to get our word across," he said. "I can't stress enough that this isn't against the aboriginals. This is against the park." RCMP and Parks Canada enforcement officers spent Monday morning meeting with Day and local citizens to keep things calm. Chronicle Herald, A3

Cops hunt for man
Surrey RCMP are looking for a man who allegedly tried to force his way into the home of a 15-year-old girl. Police say the man approached the teen outside her home in the 13300-block of Sutton Place around 2:15 p.m. Friday. He talked to her, then tried to go into the home uninvited. The two struggled in the doorway and the teen was able to call for help, police said. The man, described as a 25-to 30-year-old South Asian man, about 5-foot-8 with a medium build, fled in an older black car, possibly a Honda Civic. Canadian Press (Province, A8)

*** Charges laid in theft of poppy donations**
A man faces charges after poppy boxes were stolen in **Grande Prairie** gas station. RCMP were called to the business on Sunday. Corey Donald Muise, 23, is charged with theft under $5,000, possession of stolen property and failure to abide by probation orders. Grande Prairie is approximately 460 kilometres northwest of Edmonton. Postmedia Network (Edmonton Journal, A5); Edmonton Sun, A6

Missing man left financial quandary
Harold Backer, who has been missing since Nov. 3, may have left the country as a result of financial mismanagement that has cost his clients a considerable amount of money. The 52-year-old Backer, who is registered as an active mutual fund dealer with Investia Financial in B.C. and Ontario, was listed as missing last week by Victoria police. Some of Backer's clients, who asked to remain anonymous, told the Times Colonist it looks as though they have lost a substantial amount of money due to his actions. It is unknown how many clients are affected. According to Canadian Securities Administrators, the umbrella group that brings together the country's various provincial securities regulators, Backer was an active dealer with Investia but under the terms and conditions of his registration he had agreed "to be closely supervised." The Mutual Fund Dealers Association did not return calls Monday to clarify what that meant. According to a spokesman, the B.C. Securities Commission cannot comment on whether a complaint has been made against a dealer or if an investigation is ongoing... On Monday, Victoria police announced they are working with U.S. law enforcement agencies to find Backer. "Both through our efforts and the fantastic support from our U.S. law enforcement partners, such as the Port Angeles Police Department, we continue to receive tips that we're working with now," said Det. Sgt. Kris Rice in a statement. "Tips are important in a missing persons file like this and sometimes it is the smallest detail that helps." Times Colonist, A1

*** Opposition calls for action on fentanyl**
Alberta's main opposition parties say Premier Rachel Notley's government has responded with indifference as deaths from fentanyl abuse have surged in the province and turned into a public-health crisis. Ms. Notley's New Democrats have defended their response to the fast-acting opioid by pointing to the creation of a committee to review mental health care in the province. However, members of the Wildrose and Progressive Conservative parties say resources need to be allocated immediately to overtaxed health and police services. In the first half of the year, 145 Albertans died from fentanyl... A pill of fentanyl costs about $20 on the streets of Alberta's major cities and is 50 times more potent than heroin. While the drug has been tied to prescription abuse in Eastern Canada, the variant found in the Prairies is believed to be produced by organized crime. What sets fentanyl apart from other opioids is how toxic it is - two milligrams are enough to kill the average person in less than 15 minutes. Globe and Mail, A11

*** Bible Hill RCMP office undergoes renovations**
The RCMP detachment in Bible Hill is getting an expansion and facelift. Work is underway on the project that will expand and upgrade the detachment at 283 Pictou Rd., consolidating in one building all units and offices in the Bible Hill area, an RCMP news release said. “By expanding and upgrading our current detachment facility, the RCMP is making a long-term commitment to policing services in the Bible Hill area and Colchester County in general,” Staff Sgt. John Berry, Colchester District commander, said in the release. “This infrastructure project will also bring all RCMP resources in Bible Hill under one roof, which will enhance service delivery in the long run.” In the first phase of the project, the original building will be expanded by about 1,200 square metres. The original structure will be renovated and upgraded in the

second phase. When it is completed, the detachment will house eight RCMP units, including those now located in the nearby Agritech Park. Chronicle Herald (2015-11-09)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Collectibles thief granted day parole
The mastermind behind the thefts of more than 1,000 rare artifacts from universities, museums and private collections is being released on day parole. John Mark Matthew Tillmann of Fall River is serving an eight-year federal sentence for multiple counts of possession of stolen property, theft under $5,000, possession of a forged document and obstruction of justice. Tillmann was sentenced in 2013 after pleading guilty to the theft of the museum pieces, artifacts and other items in Nova Scotia. The items, which police said were worth hundreds of thousands of dollars, were recovered after police searched his Guildwood Drive home. In a Nov. 5 decision, the Parole Board of Canada granted Tillmann day parole for six months upon a bed becoming available at a community halfway house. He must return to the facility each night. Chronicle-Herald, A4

*** La maison de transition pour un importateur de cocaïne**
Après avoir purgé la moitié d'une peine de huit ans, Angelo Follano, chef d'orchestre d'un complot visant à importer 1300 kg de cocaïne éventé en 2006 durant la rafle antimafia Colisée, a convaincu hier matin les commissaires aux libérations conditionnelles de l'envoyer en maison de transition. Grand sportif, Follano, 42 ans, qui portait d'ailleurs un chandail des Bears de Chicago, de la Ligue nationale de football, a raconté aux commissaires que son implication dans le crime a commencé en raison de ses problèmes de jeu compulsif. La Presse, A8

*** Stéphane "Godasse" Gagné veut sortir de prison**
La file était longue, lundi, dans les couloirs du palais de justice de Montréal. Pendant des heures, les citoyens ont défilé devant le juge Jerry Zigman, certains dans l'optique d'être sélectionnés comme jurés, d'autres dans l'espoir d'être exemptés. Ce mardi, ils devraient être douze à s'installer dans une salle d'audience : ce sera à eux que le motard et célèbre délateur Stéphane Gagné s'adressera dans le but de faire devancer sa date d'admissibilité à la libération conditionnelle. Depuis près de 18 ans, Stéphane " Godasse " Gagné écoule le temps derrière les barreaux. Il s'y trouve parce qu'il a abattu par balles la gardienne de prison Diane Lavigne, une mère de famille choisie au hasard, le soir du 26 juin 1997, tuée pour le métier qu'elle pratiquait. Le Devoir, A4, Journal de Québec (Journal de Montréal), La Presse (La Tribune)

Psychiatric evaluation delays first-degree murder trial
Concerns over the mental state of a man convicted of first-degree murder delayed the start of his second trial for the gangland style killing of Brandon Neil Prevey. Christopher Martin Fleig, 31, was convicted in 2012 of the April 2009 drive-by shooting death of Prevey, 29, in Inglewood in Red Deer. Though Fleig did not actually shoot Prevey, the Crown believed he had orchestrated the killing. The Alberta Court of Appeal ordered a new trial on March 10, 2014, but did not overturn the conviction. Fleig's second trial started Monday in Red Deer Court of Queen's bench before Justice Larry Ackerl of Edmonton. Defence counsel Allan Fay began the trial by requesting an adjournment for a mental fitness evaluation for Fleig. Faye said he had concerns about the mental state of Fleig, citing his bipolar disorder and a recent refusal to take medication while being held at the Red Deer Remand Centre ahead of the trial. Fleig, wearing blue prisoner coveralls, was handcuffed in the prisoner box where he alternated between standing and sitting regularly. Faye told Ackerl he had visited Fleig over the Thanksgiving long weekend at the Edmonton Institution maximum security facility, and said he was lucid. But an attempt to visit Fleig at the prison this past weekend before the start of trial was thwarted by a lockdown. He later learned that Fleig was not taking his medication. (...) Fleig was convicted of first-degree murder and sentenced to life in prison by Justice Kirk Sisson on May 30, 2012. Red Deer Advocate, A1, Canadian Press (Cape Breton Post, The Guardian, The Telegram)

Cop's recorded threats halt robbery trial

A Fredericton police officer's threat toward a suspect was an abuse of process that merited a halt to a robbery and break-in prosecution, a judge ruled Monday. Michael David Johnston, 36, of no fixed address, stood trial Monday on charges of break, enter and assault at a residence at 548 Lincoln Rd. on May 24, and robbing Brittini Sowers of a cellphone and money on June 24. However, after hearing testimony and viewing video evidence Monday, provincial court Judge William McCarroll issued a stay of proceedings in the case. That means the prosecution has been halted and essentially fizzles out. The ruling came as a result of the actions of Sgt. Tim Sowers, father of the complainant, Brittini Sowers, 27. In an unexpected turn in the trial, it was revealed Sgt. Sowers had confronted Johnston at the police station after he was arrested this summer. (…)While the charges against him are now gone, Johnston remains in custody. He was federal parolee at the time of the allegations, and his parole was revoked as a result of them. It remains to be seen if that parole revocation will be lifted or if he'll have to serve the remainder of his previous federal-prison sentence for an unrelated incident. Daily Gleaner, A1

Mother hopes inquest into daughter's death will bring her peace
The mother of a seven-year-old girl killed by her legal guardians appeared shaken Monday as a coroner's inquest listened to the 911 call that led paramedics to her daughter's bruised and battered body in a Toronto apartment in 2008. Emotions broke through Bernice Sampson's otherwise stoic demeanour at least once more as the inquest into Katelynn Sampson's death began more than seven years after the girl's death. On the call, made in the early morning hours of Aug. 3, 2008, Katelynn's guardian, Donna Irving, could be heard sobbing as she told the operator the girl had choked to death on bread. "She's been laying there for half an hour and she's not breathing," she said on the recording. "I was so scared, I didn't know what to do." Irving continued to cry while the operator instructed her to perform CPR, and later mumbled: "I didn't mean to." Irving and Katelynn's other guardian, Warren Johnson, were convicted three years ago of second-degree murder in the girl's death and sentenced to life in prison with no chance of parole for 15 years. The pair beat Katelynn for months until her body went into septic shock. Canadian Press (Cape Breton Post, A9, Whitehorse Daily Star, The Telegram, The Guardian, Times Colonist), Postmedia Network (Toronto Sun, Ottawa Sun, Edmonton Sun, Winnipeg Sun, Toronto Sun, Calgary Sun), Toronto Star, Canadian Press (The Guardian, The Telegram)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

First Nations groups urge caution before government's missing women inquiry
A coalition on missing and murdered indigenous women is urging the new federal Liberal government to be cautious before launching an inquiry into the problem. The group says the failure of British Columbia's own missing-women inquiry led by former attorney general Wally Oppal should be a lesson in what not to do. The coalition, made up of more than two dozen groups and individuals, says B.C.'s investigation neglected to consult the families of the missing women and also fell short of implementing many of the final report's 56 recommendations. The group came together after their organizations were shut out of the B.C. inquiry and it has continued to meet to pursue justice for murdered and missing women. Canadian Press (Whitehorse Daily Star, 8, Red Deer Advocate, Times Colonist, Waterloo Region Record, Hamilton Spectator, London Free Press, The Province, Vancouver Sun, Globe and Mail, Cape Breton Post, The Telegram)

Government to consult on terms for missing, murdered inquiry, says Bennett
Canada's new minister of indigenous and northern affairs says pre-inquiry consultations should be launched within the next two weeks as the Liberal government lays the groundwork for a long-awaited probe on missing and murdered aboriginal women. Carolyn Bennett says the consultation process will involve speaking with the families of victims, provincial and territorial representatives and grassroots organizations. She also says it will be key to establish terms for the inquiry, including its mandate and how many commissioners should conduct the study. In their election platform, the Liberals promised to spend $40 million over two years on the inquiry. Canadian Press (iPolitics)

*** Val-d'Or: les chiffres d'une crise annoncée**

Les récentes révélations de l'émission *Enquête,* de Radio-Canada, sur les abus envers les femmes autochtones par des policiers de la Sûreté du Québec à Val-d'Or, braquent de nouveau les projecteurs sur les conditions de vie difficiles des femmes des Premières Nations. Des chiffres pour comprendre. L'Actualité

Quebec police probe shouldn't be delayed
An editorial states, "The Quebec government has taken some positive steps in the last two weeks in response to disturbing allegations made by several indigenous women in Val-d'Or, who have said they suffered physical or sexual abuse by Sûreté du Québec officers. Last Wednesday, Premier Philippe Couillard met with Quebec aboriginal leaders. he appointed Fannie Lafontaine, a human rights lawyer, as an independent observer of the probe being conducted by Montreal police. The province also pledged $6.1 million so vulnerable women in Val-d'Or can get medical and mental health help. In Val-d'Or, some police will be patrolling alongside social workers to make them more sensitive to the realities of marginalized society. However, those steps go only a small way toward addressing the enduring problems between aboriginals, police and the Quebec government. Lafontaine has said she would not have taken the post if she thought she would not be able to act independently. Let's hope her optimism proves warranted, but a fully independent investigation would have greater credibility with aboriginals, who have little trust in the SQ." Postmedia Network (Kingston Whig-Standard, A4, London Free Press)

Red dresses draw attention
A letter to the editor states, "All across the UPEI campus, there are red dresses hanging from trees. At first glance, they appeared to be nothing more than some form of a prank. However, along with these dresses are signs addressing the issue of the more than 1,200 Aboriginal women who have been murdered or gone missing. This has been a growing issue as Canadian citizens are pressing for the problem to be discussed in Parliament. Prime Minister Justin Trudeau has pledged to explore the different reasons why these women have been murdered or gone missing, and promised to give answers to those who are waiting for them. However, there is so much more to the issue than simply finding out what happened to these women. As Canadians, what can we do to prevent these disappearances from happening? Is there a way for us to save Aboriginal women before it is too late?" The Guardian, A6

Will carding crackdown tie officers' hands?
Community activists are applauding the Ontario government for proposing strict new curbs on carding. Police, to no one's surprise, are not. Some police chiefs and police unions say they are worried the curbs will hamper their ability to interact with the public and control crime. Police, of course, tend to resist any check on their authority. It would be easy to dismiss their complaints as nothing more than reflex. In this case, they deserve a hearing. Police argue that when they conduct street checks - questioning and documenting people they encounter on the beat but are not under arrest - they often learn things that help them prevent or solve crimes. Globe and Mail, A10

Police carding is not over
An opinion piece states, "Last week, the Wynne government announced draft regulations meant to herald in a new era in policing in Ontario. The proposed rules would mean the "end of carding," Queen's Park proclaimed. No longer would people be subject to discriminatory street checks by police. I was immediately suspicious. How can a government regulate a practice it is eliminating? Frustration soon turned to dull, familiar rage as I read the new policies. Carding is not over, and nothing in the draft regulations will prevent the status-quo discriminatory and disproportionate criminalization of black Ontarians. On the face of it, the regulations would prohibit police from stopping and questioning people based on race (with significant exceptions). They also state that being present in a "high crime neighbourhood" cannot be the sole reason for a street check (this doesn't scream progress to me). But let's be honest: these rules are nothing new. There are already laws in existence meant to prevent racist policing. Here's what's in the fine print: police are not to stop people based on their race, unless race is an important identifying factor in the police's search for a particular individual. In other words, carding can still happen to you - if you fit a certain description. Sadly, this is almost always the excuse used to criminalize black people. Also in the fine print: if an officer collects information from an individual in a manner that violates the regulation, there is no consequence to the officer, no recourse for the carded individual and

the identifying information is retained in the police database. In other words, police can continue to card with impunity." Toronto Star, A13

Changing the face of the force

When Ingrid Cataldo arrived in Montreal from Chile 20 years ago, she had her heart set on becoming a police officer. But like many immigrants, she had a hard time convincing her mother that being a cop is a respectable profession. Her mother wanted her to get a university degree; so Cataldo enrolled at Université de Montréal and studied social work and criminology. After receiving her diploma on graduation day, Cataldo hugged her mother and whispered something in her ear. "I told her: 'Now, I'm going to become a police officer.' " Cataldo, 41, has been a Montreal police constable for 13 years, having entered the force through an equal opportunity program at a time when the SPVM was hiring more women. Almost four years ago, the SPVM's human resources department was looking for a new recruiter, someone who could be successful in persuading members of Montreal's growing visible minority community to join their ranks. As a visible minority officer who speaks French, Spanish, Italian and some English, Cataldo felt she was a good candidate. The force agreed and gave her the difficult task of trying to woo other minorities into the police force. For years, Montreal police have talked about wanting to increase the force's diversity, and its top brass hasn't been shy about expressing frustration at not being successful. In 2014, only 317 of the force's 4,601 officers were members of a visible minority - about 6.8 per cent. Another 193 were ethnic minorities and 17 were First Nations. Former police chief Marc Parent acknowledged the department struggles to recruit non-white officers. "For some, it's a trust issue, maybe. For others, it's not a respectable profession for them," he said before his retirement this year. Among officers who work on the beat, about eight per cent are visible minorities. Philippe Pichet, the force's new chief, said that number is not high enough. Montreal Gazette, A1

Don't expect deep moral justice

A proposed class-action settlement for current and former foster children who were victims of child abuse and other crimes could cost Alberta more than $20 million. But the legal firm representing the plaintiffs says most will likely receive just $15,000 to $30,000 in compensation. An Edmonton court Friday will hear arguments about the draft settlement for victims who were in provincial care between 1966 and 2008. The class-action lawsuit was originally brought by Edmonton lawyer Robert Lee in 2004 and certified by the courts, after a long legal battle, in 2009. Since then, the courts have removed Lee from the case and reassigned it to a London, Ont., firm which specializes in class-actions lawsuits. Last week, the province and the firm, McKenzie Lake, finally agreed on a draft settlement. But for hundreds who joined the original lawsuit, the settlement may be a bitter disappointment. The lawsuit was never about holding the child welfare system accountable for physical and sexual abuses. It deals, instead, with a far narrower issue: whether the province, as their guardian, failed to take timely civil action to protect the financial rights of those abused children. The lawsuit claims the province failed to sue those who had victimized the minors and then failed to apply, on behalf of young victims, to the province's own Victims of Crime Compensation Fund. Edmonton Journal, A1

Identity crisis

He's survived being shot, stabbed and beaten with a baseball bat, so James Lathlin has plenty of experience when it comes to getting back on his feet. Lathlin has spent the last 15 years trying to make a better name for himself, but now it's his name that is causing him trouble. Lathlin speaks with children and teens about the perils of gangs and drugs. His work resulted in him being part of an art campaign last March that blanketed downtown, aiming to challenge negative perceptions of Winnipeg's indigenous residents. The campaign featured two photos of Lathlin, the first being a grim-faced portrait that read: "Drug Dealer?" The second was of a smiling Lathlin that read: "A father, son, youth counsellor, motivational speaker, coach, author, rapper and an aspiring stand up comedian." In an unfortunate coincidence, James Robert Victor Lathlin's younger cousin, James Roderick Lathlin, was identified in 2012 by RCMP in Portage la Prairie as one of more than 30 people charged in a major drug trafficking bust, dubbed Project DEMERIT. "Ever since then I've been having problems," Lathlin said. "It has sabotaged my entire life and it sabotaged that whole campaign ... because here was James Roderick Lathlin who was a drug dealer." Winnipeg Sun, A5

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Province gearing up for new influx of refugees - With 1,000 already arrived, 2,000 more is ambitious goal

Manitoba is flowing money and putting in place the logistics to accept another 2,000 refugees, on top of the 1,000 already arrived, by the end of the year if it can be done, Premier Greg Selinger said Monday. In an interview with the Free Press, Selinger said the $1.2 million the province pledged in September for settlement services for refugees is starting to flow to the organizations so they can ramp up to prepare for an influx of people. "We're working on it, we said let's get this money moving," he said. He said the money needs to flow so organizations can hire people and get the supplies they need to manage. Prime Minister Justin Trudeau promised during the election to bring 25,000 Syrian refugees to Canada by the end of this year. Manitoba committed to taking up to 3,000 this year, which would be about 1,500 more than originally planned. It is a tall order, and some immigration experts think it may even be impossible, but Immigration, Refugees and Citizenship Minister John McCallum said Monday the government will try to make it happen. Winnipeg Free Press, A4

Syrian refugees warned of resettlement scams on social media

Ottawa's plan to usher in 25,000 Syrian refugees may have also opened the door to unscrupulous people seeking to make a profit off the backs of desperate asylum seekers hoping to resettle in Canada. Flyers and online messages have sprung up on social media offering to connect Syrian refugees with sponsorship groups and submit their refugee applications to Canada - for a fee of hundreds and sometimes thousands of dollars. But resettlement groups are warning people to beware, noting that refugee resettlement is about helping people, not about turning a profit. "You don't make money off humanitarian work. That's why refugee resettlement is under the humanitarian stream of Canadian immigration," said Brian Dyck, chair of the Council of the Canadian Refugee Sponsorship Agreement Holders Association. Government-recognized private sponsorship agreement holders say they only work directly with groups or individuals who fundraise to support the refugee they select for resettlement at a fee of no more than $100, as government rules stipulate. One recent posting on the Arabic news page, Canada Today, offered to connect Syrian refugees with private sponsorship groups, referring inquiries to a licensed immigration consultant. It is not illegal for a registered member of the Immigration Consultants of Canada Regulatory Council (ICCRC) to charge for such a service. Toronto Star, A8

Air Canada offers planes to help airlift Syrian refugees by year's end

Plans to resettle 25,000 Syrian refugees by year's end could involve assistance from commercial air carriers, at least one of which has already offered space on its planes to the Liberal government. Air Canada reached out to the new government following the election, offering its services to help ferry people to Canada as they flee the ongoing civil war and other unrest in Syria. Though the airline can't fly directly into Syria itself, it could land planes in Istanbul as well as Beirut an estimated 1 million people in Lebanon have registered with the United Nations as refugees from the conflict. "Air Canada has offered to co-op-erate with the federal government to the fullest extent possible in any operation to transport Syrian refugees," spokesman Peter Fitzpatrick said in an email. "At this point, however, we have only exchanged preliminary information." Commercial aircraft are one of a range of options the government is exploring, Immigration Minister John McCallum said Monday as he announced a new cabinet committee specifically tasked with overseeing the resettlement program promised during the election campaign. Other options include ships and military planes, and the government is also exploring housing refugees in old military bases. Canadian Press (Daily Gleaner, B1, Red Deer Advocate, Ottawa Sun, Times Colonist, Times & Transcript, Telegraph-Journal, Chronicle-Herald)

Au moins 125 familles syriennes à Québec, espère Duclos

«J'ai espoir que la région de Québec puisse contribuer à l'accueil d'une bonne partie des réfugiés syriens», a dit le ministre canadien des Familles, des Enfants et du Développement social en entrevue au Soleil. Sans détour, il a avancé le nombre de «125 familles», soit environ 500 personnes. «C'est peu pour une population de 700 000 habitants. Je pense qu'on peut faire mieux, mais je mettrais ça comme barre minimale. On peut se donner comme objectif collectif ici à Québec de faire cette contribution», a poursuivi M. Duclos. Au-delà du fait d'aider une population en détresse, Québec bénéficiera, dit-il, de l'arrivée de

réfugiés à l'heure où la région a «besoin de nouveaux immigrants et de main-d'oeuvre». Le nombre minimal de 125 familles avancé par M. Duclos est le même que celui évalué par le maire de Québec, Régis Labeaume, et différents organismes comme le Centre multiethnique. Lors d'une conférence de presse en septembre, ils avaient dit vouloir accueillir de 125 à 200 familles, soit de 500 à 800 réfugiés syriens. Récemment, le maire de Québec a toutefois déploré ne «pas avoir eu de nouvelles» du gouvernement provincial alors que sa ville est prête à recevoir ces familles qui fuient la guerre. Lundi, Jean-Yves Duclos a dit que la question des réfugiés syriens a fait l'objet d'une discussion dès la première rencontre du Conseil des ministres la semaine dernière. Le gouvernement Trudeau a encore comme objectif d'accueillir 25 000 réfugiés d'ici la fin de 2015, même si le temps file. «On travaille fort, c'est notre intention d'y arriver», a martelé le nouveau ministre. La Presse (Le Soleil); *QMI Agency (Journal de Québec)

Ils seront 25 000

De Harper à Trudeau, le contraste est saisissant en matière d'accueil des réfugiés. D'un gouvernement qui utilisait la sécurité comme prétexte pour ne pas agir, nous voilà devant un gouvernement déterminé à relever tout un défi: accueillir 25 000 réfugiés au Canada d'ici le 31 décembre.Un scénario à l'étude prévoit l'accueil de 6000 réfugiés syriens par semaine qui seraient hébergés dans des bases militaires comme celles de Valcartier ou de Trenton, selon des informations obtenues par Le Devoir. Une opération d'urgence d'envergure qui s'inspire du plan déployé en 1999 lors de l'arrivée des réfugiés kosovars au Canada. Est-ce réaliste d'accueillir autant de réfugiés en si peu de temps? «Ça dépend du niveau d'urgence qu'on attribue à la chose», me dit Janet Dench, du Conseil canadien pour les réfugiés. Si la volonté politique est là, si l'organisation suit et que les citoyens se montrent solidaires, il est clair que l'on peut accueillir beaucoup plus de gens que le gouvernement précédent ne voulait nous le faire croire. Ce qui compte, ce n'est pas d'atteindre le chiffre magique de 25 000 réfugiés le 31 décembre à minuit. Ce qui compte, c'est d'admettre qu'il y a urgence, de reconnaître que nous avons des responsabilités en matière de protection des réfugiés et d'agir en conséquence. La Presse

***Former CFB Cornwallis site offers to house Syrian refugees**

Beth Earle knows the role Canadian military bases played in helping refugees from Kosovo in 1999 and she believes that can happen again as the federal government prepares to bring in refugees from Syria. "I thought, well, that was 5,000 refugees (in 1999), they're talking about 25,000 in a very short period of time (now) and maybe we can reach out and work once again with the federal government." Earle is the CEO of the Annapolis Basin Conference Centre, located at the site of the former CFB Cornwallis. While the location didn't host anyone from Kosovo back in 1999, there is more than enough space and experience to help this time, she said. Each summer, the site serves as home to 900 people as it hosts the HMCS Acadia Sea Cadet Training Centre. With Prime Minister Justin Trudeau's government planning to bring 25,000 refugees to Canada by the end of the year, Earle decided to reach out to representatives at the National Defence Department and local political representatives to see if they need help in the way of temporary housing. "All of our facilities are inspected regularly and we do have the size of facilities and the infrastructure to help out in that way," she said. Chronicle-Herald

***Liberals look to expedite refugee process**

Immigration Minister John McCallum says a portion of the 25,000 Syrian refugees the Liberals plan to bring here will likely be housed at first on military bases, and he predicts some asylum seekers might arrive under a temporary protection program rather than as permanent residents. The Trudeau Liberal government on Monday announced it is assigning nine cabinet ministers, including Health Minister Jane Philpott and Defence Minister Harjit Sajjan, to expedite the Syrian refugee initiative. The Liberals promised during the federal election campaign to resettle 25,000 Syrians by Jan. 1 - an exceedingly ambitious goal, according to refugee advocates in this country, who say it cannot be done this fast. Refugee experts say some Syrians might arrive with more temporary status for two reasons. In some cases, Ottawa may want to speed up intake of refugees by bringing them here before screening is complete. Others might be content to live here temporarily with a plan to return to their homeland if conditions significantly improve. To expedite the arrival of 25,000, Mr. McCallum could use a ministerial permit to bring in some refugees whose security or health checks were not yet completed - and allow the rest of the scrutiny to take place in Canada. Globe and Mail, A4

***Ottawa refugee health groups prepare to welcome Syrians**
Refugee settlement and community health groups in Ottawa are trying to figure out how to best help the thousands of new refugees expected to arrive in the region in the coming weeks. John McCallum, the minister of immigration, refugees and citizenship, confirmed Monday the federal government plans to bring in 25,000 government-sponsored refugees in the next eight weeks. Assmaa Bilouni spends her days helping refugees navigate Canada's health care system. She's been watching from afar as her home country, Syria, has been torn apart by war, forcing millions of people to flee to neighbouring countries for safety. (...) Bilouni, who is now a Canadian Citizen, recently met with a group of other refugee advocates to talk about how to help the displaced Syrians when they arrive. That group, called Refugee 613, is helping co-ordinate local efforts. (...)For the past few years, Dr. Doug Gruner, a refugee doctor in Ottawa, fought the former federal government's decision to cut interim health care for some refugees and claimants. Now that the Liberals are reversing those cuts and reinstating health care for all refugees, Gruner said he's redirecting his energy into helping the new arrivals. "Now, no longer will the costs of medications and other issues like prosthetics be on the shoulders of our private sponsors, church groups," said Gruner. CBC.ca

***Now comes the tough part for Trudeau**
An opinion piece states, "In all the commentary on political affairs no insight has ever come close to matching that concocted a near half-century ago by British Prime Minister Harold Macmillan. A journalist had asked him what had been the most challenging force he had ever had to deal with. MacMillan's famous reply was, "Events, dear boy, events." To this point, Justin Trudeau has performed with exceptional, indeed quite extraordinary skill. (...) In the election Trudeau promised to bring 25,000 Syrian refugees here by the year's end. That's incomparably better than the equivalent mean-mindedness of the Conservatives. But a Canadian winter is absolutely the worst time to bring in refugees who've lived their entire life in a warm country like Syria." Toronto Star, A13

***Advice for the new immigration minister**
An opinion piece states, "New Minister of Immigration, Refugees and Citizenship John McCallum faces some herculean tasks. He has to deliver on a promise to resettle 25,000 Syrian refugees before the end of the year. In addition, in order to meet a court-imposed demand, he must find ways to provide adequate health care and medications to asylum seekers and refugees.(...) In having the first conversation, Minister McCallum may want to evaluate how Canada has been avoiding its international obligations to refugees. To keep asylum seekers far from our borders, Canada uses devices such as visas, electronic travel authorizations, agreements to outsource decision-making to other states, carrier sanctions on transportation companies, and even billboards in foreign countries advertising that Canada will rapidly deport failed asylum seekers." Ottawa Citizen

*** New defence minister warned of 2006 attack**
Canada's new minister of national defence said he warned NATO command against a fateful 2006 Afghanistan mission that sent Canadian soldiers into an ambush where four were killed, but alliance officials ignored his warning. Harjit Sajjan, who served in Afghanistan before being named to cabinet by Prime Minister Justin Trudeau last week, also criticized coalition forces for not doing enough to "look at

the root cause" of Taliban recruitment in a documentary airing this week. Sajjan, who was deployed three times to Afghanistan, was released from military service on Sunday and is no longer a reservist in the Canadian Armed Forces. Postmedia Network (Edmonton Journal, N5, Gazette, London Free Press, National Post)

*** Forces plane carrying arms to Kurds held for days in Iraq**

Iraqi officials temporarily seized a military aircraft carrying weapons for Canadian special forces in Kurdistan, amid a wave of anti-western conspiracy theories rife in Iraqi politics. The seizure and the reasons for it raise questions for Canada's new Liberal government, which has vowed to do more military training in the country. The Iraqis said they held the Canadian Forces Hercules transport aircraft, carrying supplies into Kurdistan without authorization, for four days. Some Iraqis are concerned that the Kurds, who ultimately want independence for their territory, will use the support and weapons they receive from the U.S.-led coalition to eventually break away. MINISTER / MINISTRE

Réfugiés - L'objectif réel d'Ottawa prendra plus de temps
La promesse libérale de faire venir 25 000 réfugiés syriens " parrainés par l'État " ne sera pas remplie avant le 31 décembre : le gouvernement se donne quelques mois de plus pour atteindre cette cible, a appris Le Devoir. Les réfugiés qui arriveront avant la nouvelle année seront entre autres parrainés par des organismes privés. Le gouvernement fédéral a ainsi confirmé mercredi que plusieurs milliers de réfugiés faisant partie de la cohorte des 25 000 attendus avant 2016 sont en fait des déplacés qui seraient venus au Canada peu importe les résultats de l'élection du 19 octobre. " Les demandes de parrainage provenant du secteur privé [généralement des familles qui font affaire avec des organismes] font partie de notre objectif à court terme ", a expliqué Nancy Chan, porte-parole d'Immigration, Réfugiés et Citoyenneté Canada. Impossible de savoir exactement quel sera le ratio de réfugiés parrainés par le privé ou par l'État. Le ministère soutient ne pas " avoir plus de précisions à donner pour l'instant "... Ces détails suggèrent que la pression immédiate mise sur le processus de sélection et de vérification des dossiers de réfugiés sera plus légère de quelques milliers de cas. Le **ministre de la Sécurité publique**, **Ralph Goodale**, a par ailleurs confirmé mercredi que les dossiers de tous les réfugiés seraient épluchés et qu'aucun d'entre eux ne profitera d'une vérification allégée. Les demandeurs d'asile seront rencontrés en entrevue, les données biométriques seront contrôlées, leur passé corroboré dans des bases de données canadienne et internationale. ***" Nous détaillerons les différentes étapes de contrôle quand***

le plan complet sera annoncé. Mais ce sera robuste et nous voulons nous assurer que la qualité de la vérification de sécurité, au final, est au rendez-vous ", a-t-il dit en point de presse. Ce processus de contrôle prend actuellement 12 à 18 mois. Il faudra attendre ladite annonce officielle pour préciser les délais anticipés. ***" Mais ce sera beaucoup, beaucoup plus court*** ", a certifié M. **Goodale**. Le **ministre** avait évoqué la possibilité la semaine dernière qu'une part des vérifications soit menée une fois les réfugiés en sol **canadien**. ***" Notre objectif est d'accomplir la plus grande part du travail avant que les nouveaux arrivants arrivent ",*** a-t-il affirmé mercredi. Quant aux populations ciblées par Ottawa, ce sera les ***" vulnérables, qui [soulèvent] le moins de questions [en matière] de sécurité, et des gens qui ont les meilleures chances d'avoir une intégration réussie "***, a expliqué le ministre. Ottawa demeure globalement avare de détails sur la mécanique de l'opération, à six semaines de l'échéancier qu'il s'est fixé. Mercredi, Cogeco Nouvelles soutenait que la base de Valcartier pourrait accueillir 500 réfugiés dès le 1er décembre. La base de Trenton en recevrait pour sa part 1000. Le **ministre Goodale** a refusé de commenter ces informations. Le Devoir, A1; * La Presse, A7 (La Voix de l'Est)

Processing of Syrians can be 'fast, effective'

A respected authority on immigration and refugees says **Canada** and the United Nations have the operational know-how and security safeguards to safely vet 25,000 Syrians for rapid resettlement. But the question remains: Can the humanitarian resettlement project be pulled off by the Liberal government's looming Dec. 31 deadline without compromising domestic security? (...) Immigration Minister John McCallum has repeatedly said the would-be refugees will be properly screened. "I think his implication has been that if it takes longer, if it goes over the deadline, then it goes over the deadline," Showler said in an interview with the Citizen. "Certainly my understanding from him is that getting the job done properly is the priority."(...) **Public Safety Minister Ralph Goodale** Wednesday tried to reassure **Canadians** the timetable will not compromise safety. ***"There have been very enormous efforts and thorough consultations ... to make sure that that system is strong," Goodale*** said. Michel Coulombe, director of the Canadian Security Intelligence Service, added: "I want Canadians to know that as director of CSIS I am confident that the measures in place are robust and appropriate." Under normal circumstances, Showler explained, Canada's refugee-resettlement process happens in three phases. His comments are based largely on his experience helping Syrian and other refugees in Lebanon last year... Phase three is security screening by Canada-based CSIS, RCMP and Canada Border Services Agency officers. Names, travel documents and sometime a person's biometrics are checked against national and international police and security intelligence databases. **Goodale** and CBSA president Linda Lizotte-MacPherson said Wednesday no refugees will be allowed into Canada until those checks come back clean. Postmedia News (Ottawa Citizen, A1/Front); * Postmedia Network (Vancouver Sun, Windsor Star, StarPhoenix, Calgary Herald, Leader-Post, National Post, Gazette, Edmonton Journal)

RCMP, CSIS say Ottawa's refugee plan is feasible

The heads of Canada's police and spy agencies are backing the Trudeau government's plans to safely screen and bring in 25,000 Syrian refugees by the end of the year. A number of municipal and provincial politicians have called on the government to take longer to conduct security checks on the asylum seekers, but RCMP Commissioner Bob Paulson and CSIS director Michel Coulombe insist the government's plans are feasible. As the pair spoke alongside **Public Safety Minister Ralph Goodale** at a news conference in Ottawa Wednesday, giving assurances that it can be done in that time frame without compromising the country's safety, Ontario's Health Minister told reporters how Canada's most populous province can help meet the commitment. Details so far are vague as to Ottawa's plans, but Eric Hoskins says that Ontario is looking at decommissioned hospitals as potential housing for refugees. He noted, for example, that Toronto's Humber River Hospital has moved from three sites to one... "Yes," he answered in a direct question on the government's ability to meet its deadline. "We will play a role in making the security checks and confirm people's identity. In my view, the system is satisfactory." Added Mr. Coulombe, the director of CSIS: "I am confident that the measures in place are robust and ... appropriate." **Mr. Goodale** said that the first objective of the government's promise to take in 25,000 refugees is humanitarian, in order to ***"rescue people who are in terrible conditions and fleeing from the scourge that is [the Islamic State],"*** However, he added the government would meet its objective ***"without any diminution or reduction in our security work."*** The **Public Safety Minister** said federal officials would conduct database checks and **biometrics** tests to verify the ID of all refugees, in addition

to submitting them to interviews. To do the task quickly, some officials from other agencies are being seconded to the operation, including border guards. Globe and Mail, A1

Canada-Paris link probed
The RCMP is looking into whether the Islamic State in Iraq and the Levant's claim of responsibility for the Paris attacks was made by a Canadian, a spokeswoman for the police force says. Staff Sgt. Julie Gagnon said the RCMP was "following up" on reports the English-language audio recording issued by the terrorist group sounded Canadian. "What I can tell you is that we are aware of the reports and are following up," she told the National Post, responding after she was asked whether the RCMP was investigating whether a Canadian had made the ISIL statement. A **Public Safety Canada spokeswoman**, meanwhile, said, ***"We do not generally discuss operational matters related to national security"*** but that police and security agencies ***"continue to monitor the situation in Paris very closely."*** The morning after the co-ordinated killings that left 129 dead, ISIL released a series of written and audio statements in Arabic, French and English that said "a group of believers from the soldiers of the Caliphate" were responsible. The attacks targeted "the capital of prostitution and obscenity, the lead carrier of the cross in Europe - Paris," the statements said, adding France was singled out because of its role in the international coalition fighting ISIL in Syria and Iraq. The identically worded releases offered no new information about the attacks other than what had already been reported but the familiar accent of the narrator of the English version caught the attention of some Canadians. Dozens of Canadians have joined the conflict in Syria and Iraq, some on the side of ISIL. On Tuesday, former Calgary resident Farah Mohamed Shirdon, 22, who has appeared in previous ISIL videos, was placed on the INTERPOL wanted list. Kingston Whig Standard, B1/Front (National Post); Toronto Star, A8

*** Ottawa ne voit pas de menace imminente**
Malgré les attentats de Paris, le niveau d'alerte au Canada demeure inchangé, a indiqué le gouvernement libéral mercredi, tentant de se faire rassurant. Mais les autorités ont du même souffle reconnu qu'elles ne peuvent pas garantir hors de tout doute qu'aucun des Canadiens partis rejoindre le groupe armé État islamique n'est revenu au pays. " On ne peut pas garantir à 100 % qu'on peut détecter le retour de ceux qui sont là [au Moyen-Orient] ", a consenti le directeur du Service canadien du renseignement de sécurité, Michel Coulombe. L'un des terroristes qui pourraient être impliqués dans les attaques commises à Paris vendredi dernier devait se trouver, selon les informations de la communauté internationale, en Syrie. Or, il appert qu'Abdelhamid Abaaoud aurait été tué dans l'assaut lancé en banlieue parisienne dans la nuit de mardi à mercredi, selon le Washington Post. Se peut-il alors qu'un Canadien comme John Maguire, qu'on croit mort au combat en Syrie, soit discrètement revenu au pays sans que les autorités s'en soient aperçues ? " Il y a toujours une possibilité -- l'utilisation de faux documents par exemple serait une façon d'arriver au Canada. On met en place toutes les mesures avec nos partenaires domestiques et internationaux pour pouvoir détecter le retour. Mais comme toute chose dans la vie, une garantie à 100 %, ça n'existe pas ", a admis M. Coulombe lors d'une conférence pour faire le point sur l'état de la menace terroriste au Canada. Les autorités estimaient, l'an dernier, qu'une centaine de Canadiens sont partis à l'étranger grossir les rangs des organisations terroristes.
Vigilance M. Coulombe et le **ministre de la Sécurité publique**, **Ralph Goodale**, sont cependant catégoriques : le niveau d'alerte n'a pas changé depuis l'attentat d'octobre 2014 au parlement, et les individus impliqués dans les attentats de Paris n'ont aucun lien avec le Canada. Les deux hommes ont néanmoins appelé les Canadiens à demeurer ***" vigilants ".*** Le Devoir, A2; Canadian Press (Red Deer Advocate, A5, Cape Breton Post, Guardian, Telegram); 1 (Times Colonist, A9); Agence QMI (Journal de Québec, 7, Journal de Montréal); La Presse Canadienne (Le Droit, 16, Le Nouvelliste, La Tribune, Acadie Nouvelle); Ottawa Sun, A3

*** Canadians prefer bombs over trainers against ISIL, poll finds**
Canadians broadly approve of both the country's bombing mission against Islamic State and its program of training those who fight the militant group. But if they had to choose between the two policies, more would opt for bombs over trainers, a new poll for Postmedia has found. The study by Mainstreet Research, conducted three days after the deadly terror attacks in Paris, also found Canadians were not sure the country was prepared to deal with a terrorist attack, even as they maintained they don't feel personally threatened (...) Prime Minister Justin Trudeau has vowed to end the bombing campaign on ISIL militants in Iraq and Syria before March 2015. Meanwhile, he will expand the training mission,

although details on how this will be done have not yet been provided. He told reporters this week he wants Canada to be "a strong and positive contributor to the continuing mission against ISIL." Meanwhile, more than four in 10 Canadians said they didn't think Canada was prepared to deal with a terrorist attack should one occur here. Twenty-six per cent felt the country was prepared but fully one-third said they didn't know. Nonetheless, almost twothirds said they are not concerned about a terrorist attack where they personally live or work. This last finding is in accord with the government's own message. On Wednesday, **Public Safety Minister Ralph Goodale** said there's no reason to raise Canada's threat level, even after the Paris attacks. Postmedia News (Ottawa Citizen, A10)

*** Cyberattacks on infrastructure a 'major threat,' says CSIS chief**
The head of Canada's main spy agency says he views the possibility of a cyberattack by ISIS or other extremist groups on the country's "critical infrastructure" as "a major threat." "Cyber is one of our top priorities," Michel Coulombe, director the Canadian Security Intelligence Service (CSIS) told an Ottawa news conference on Wednesday. Coulombe was responding to questions after Britain announced it is nearly doubling funding for cyber counterterrorism amid fears ISIS is looking to target Western infrastructure such as hospitals, airports or power plants by using the internet. He was flanked by RCMP Commissioner Bob Paulson and **Ralph Goodale**, Canada's newly appointed **minister of public safety**. ***"This is an area that I'm beginning to be further briefed on by the department,"*** Goodale told reporters, deferring to his deputy minister and CSIS. CBC News

*** Those calling for a refugee crackdown should tread carefully**
An editorial states "The debate over whether to adjust our refugee policies on the chance that a **terrorist** might use them to enter Canada has had less to do with calculating the actual threat - and more to do with passing judgment on hundreds of thousands of desperate people.Following the traumatic attacks in Paris last week, refugees from Syria - people without homes or food or much money - have suddenly become the key suspects in the effort to thwart future terrorist plots.In Canada, those who have taken this leap of faith include the Conservative Party of Canada, several prominent pundits and one premier. They argue the federal government should slow down on its promise to bring 25,000 refugees from the Middle East by the end of the year.While the situation remains unclear and difficult to judge, people should tread with caution before agreeing with this speedy assessment. Xenophobic fear has accompanied all major refugee migrations; it's a story as old as exodus itself. The Islamic State itself reportedly believes the refugees are apostates who deserve to die. Denying haven to so many refugees amounts to delivering them into the hands of psychopaths.(...) A complete description is unlikely, but most of the information so far available has been coming from media reports - not the government. Before the Paris attacks, **Public Safety Minister Ralph Goodale** said refugee claimants are less of a security threat than the previous Conservative government thought. He owes the public a detailed explanation of what he meant then and whether he still means it now. On Wednesday, he said officials from CBSA have provided invaluable support in refugee processing." iPolitics

ATTACKS IN PARIS / ATTENTATS A PARIS

Alleged plotter remains shadowy figure
Much about Abdelhamid Abaaoud's path to armed Islamic radicalism remains mysterious. In the words of Koen Geens, the Belgian justice minister, he mutated from a student at an upscale Brussels school into "an extremely professional commando," one seemingly able to slip across borders at will, someone who openly mocked the inability of Western law enforcement agencies to catch him. On Wednesday, the fate of the son of an immigrant shopkeeper from Morocco remained unclear. Police raided a suburban Paris apartment where they believed he was hiding. The siege ended with two deaths and seven arrests but no definitive information on Abaaoud, who French authorities have called the mastermind of the violence that killed at least 129 in Paris last week. The wanted jihadi's own father believes prison - where he served time for petty crimes - changed him for the worse. After his son got out, Omar Abaaoud noticed "signs of radicalization," the elder Abaaoud's lawyer, Nathalie Gallant, told RTBF broadcasting Wednesday. If so, that would fit the pattern of a number of jihadis who were radicalized in prison. Associated Press (Chronicle-Herald, A15, Ottawa Sun, Telegraph-Journal, Times & Transcript); * Agence France Presse (Le Nouvelliste, 3, La Tribune)

*** Le cerveau des attaques mort ?**

L'Europe nageait en pleine confusion hier, alors que tous s'interrogeaient à savoir si le présumé «cerveau» derrière les attentats de Paris était bel et bien mort lors de l'assaut de sept heures à Saint-Denis. «Le présumé chef des attentats de Paris (Abdelhamid Abaaoud) a été tué hier lors de l'assaut de la police française, ont affirmé deux hauts responsables des autorités européennes», a écrit le Washington Post hier. Mais aucun autre média ni les autorités françaises n'ont confirmé cette information, ce qui a soulevé plusieurs questionnements dans la population. L'opération a été «extrêmement difficile » en raison de «l'usage de fusils d'assaut, de tirs de sniper et d'une grande offensive d'explosifs», a lancé le procureur de Paris, François Molins. L'opération qui a duré sept heures visait bel et bien le présumé «cerveau» des attentats de vendredi. Au moins deux personnes sont mortes, dont une kamikaze qui «a activé son gilet explosif au début de l'assaut», a précisé la police qui n'a pas confirmé les noms. De plus, huit personnes ont été placées en garde à vue après l'opération, mais ni Abaaoud, ni Salah Abdeslam, l'un des suspects des attaques toujours en fuite, ne figurent parmi elles. Une information qui laisse donc croire qu'Abaaoud serait le deuxième mort. Le Journal de Québec, 5 (Journal de Montréal); * Daily Gleaner, B1 (Telegraph-Journal); Associated Press (Toronto Star); 1 (Ottawa Sun, Calgary Sun, Winnipeg Sun, Toronto Sun); CNN

AIR FRANCE FLIGHT DIVERTED

Passengers aboard Air France Flight 055 didn't learn that a bomb threat was the reason their Paris-bound flight was being diverted to Halifax until after they landed Tuesday night. Genevieve Lapeyre, a pediatric anesthesiologist from Geneva, was flying back to Europe after a meeting in Washington, D.C. She is half-Swiss and half-French, and planned a three-day layover in Paris. The terrorist attacks Friday gave her a strong wish to be in the city. (…) None of the passengers panicked, but they felt something odd was going on, she said. At one point, she wondered if there had been another attack against Paris and the aircraft couldn't go there. After the Boeing 777 touched down at about 10:15 p.m., she soon realized there was something happening regarding her flight. "I saw the firemen and everything, and I said, 'OK, there is something else.'" Lapeyre said the pilot seemed to be trying to control his emotions. "He said, 'Don't worry.' He was too much trying to reassure us." On the tarmac, passengers were told to grab their belongings and get off the plane, which they did quickly. However, they were then housed for about 30 minutes in a bus parked alongside the aircraft, which some considered dangerous, she said. Halifax RCMP spokesman Cpl. Greg Church said 262 passengers and crew got off the jet within 15 minutes of landing, which is when officers began checking for explosives; none were found. The jet was declared explosives-free at 4:28 a.m. Wednesday. The passengers were taken to a secure area to pass through customs. 'Like A War Zone'

2 Dead, 8 in custody after paris police launch a massive early-morning raid against a suspected **terror** cell located in a reinforced apartment When Tagara Traoré, a former revolutionary soldier in his native Burkina Faso, was jolted awake by a boom early Wednesday, his "military reflex" kicked in. "You get up quickly and either hide or try to get out," he said. In socked feet and wearing the sweatpants he was sleeping in, he grabbed his key and ran out the door of his fourthstorey apartment, only to find a battalion of police rushing up the stairs, headlamps glaring. "I started sensing tear gas that was coming up the stairwell. I thought the building was on fire," he said. "The police told me, 'Go down, down, down!' There were so many they had to move aside to let me out." It was 4:20 a.m., and he had been caught in the middle of a massive anti-terror operation that quickly became a protracted gun battle between police and terror suspects. A woman in the targeted apartment in the Paris suburb of Saint-Denis, identified by French media as a native of nearby Clichy, was one of the dead. Initial reports said she killed herself by detonating an explosive vest, but the French prosecutor's office later said the "point needs to be verified by an analysis of the body and human remains." At least one other suspect in the apartment was killed and eight people were taken into custody. Five police officers suffered minor injuries, and a police dog - Diesel, a Belgian shepherd - was killed by the terrorists, according to the national police. Paris prosecutor François Molin said the targeted apartment had a fortified door that withstood initial police attempts to break in and gave the terrorists time to mobilize and return fire. Daily Telegraph (Windsor Star, N1/Front, National Post, StarPhoenix, Gazette); 1 (Vancouver Sun, B1/Front, Leader-Post, National Post, Edmonton Journal, Ottawa Citizen, Whig-Standard, Calgary Herald); Toronto Star, A1; Globe and Mail,

Prochaine station, la guerre
Il devait être 4h20 quand Fares s'est mis à crier. «Maman! Maman! La guerre commence! Il y a des bombes!» Fares a 7 ans. De grands yeux noisette dans lesquels on lit l'effroi. «Il ne sait même pas c'est quoi, la guerre», me dit sa mère Souhila, 38 ans. Souhila, elle, sait. Elle est née en Algérie... J'étais dans l'avion quand l'assaut antiterroriste a été donné à Saint-Denis, dans la banlieue nord de Paris, non loin du Stade de France. Dès que l'avion s'est posé, des cellulaires de passagers ont sonné. «C'est la pagaille à Saint-Denis.» La «pagaille», le mot est faible. C'est Fares qui avait raison. Ça ressemblait plus à une guerre. Rue Corbillon, à l'angle de la rue de la République, au moins deux personnes ont été tuées, dont une femme kamikaze qui a activé sa ceinture d'explosifs. Un commando, lourdement armé, qui semblait prêt à passer à l'acte, a été démantelé. Pendant une heure, les habitants du quartier ont entendu des tirs nourris. Le bruit était si fort que certains ont cru qu'il y avait un bombardement. Il y a eu au moins 5000 munitions tirées par la police. Un immeuble éventré, criblé de balles. Des voisins terrorisés. Comme si on était à Gaza et non en banlieue parisienne. L'assaut a duré sept heures, durant lesquelles le quartier a été bouclé, le métro, fermé, les écoles aussi. Des résidants ont été évacués. Les riverains ont été sommés de ne pas sortir de chez eux. Une fois l'assaut terminé, j'ai pu prendre le métro pour la guerre. La Presse, A4/Front

Mission
Ce sont des spécialistes des assauts risqués, qui montent au front contre les pires terroristes. Le RAID, le commando de la police française qui est intervenu hier à Saint-Denis, est constamment sollicité depuis un an. A Paris, La Presse s'est entretenue avec l'ancien chef des négociateurs de l'unité, Christian Caupenne, pour dresser le portrait d'une équipe devenue mythique. Fondé il y a 30 ans, le RAID (pour Recherche, Assistance, Intervention, Dissuasion) est l'unité d'élite de la police nationale, destinée à intervenir partout en France pour contrer le terrorisme et le «grand banditisme». Elle est notamment intervenue lors de l'attaque du marché Hyper Cacher en janvier et à la salle de spectacle Bataclan, vendredi dernier. Selon le chef de la police nationale, Jean-Marc Falcone, l'assaut à Saint-Denis a été l'un des plus difficiles que ses troupes ont connu. «Les scènes vécues par le RAID sont très dures. Même ces hommes rodés à la violence ont été marqués», a-t-il déclaré hier à ce sujet. La Presse, A5/Front

*** Paris attacks: Extremists may strike next with chemical, biological weapons, French PM says**
With France still reeling from last week's deadly attacks in Paris, Prime Minister Manuel Valls warned Thursday that Islamic extremists might at some point use chemical or biological weapons, and urged lawmakers to extend a national state of emergency by three months. "Terrorism hit France not because of what it is doing in Iraq and Syria ... but for what it is," Valls told the lower house of Parliament. He added, "We know that there could also be a risk of chemical or biological weapons." Valls did not say there was a specific threat involving such weapons. The French Interior Ministry and Paris prosecutor's office, meanwhile, said it still remains unclear whether the suspected mastermind of last week's attacks, in which 129 people were killed and hundreds of others wounded, has been killed or is still at large. Officials said authorities are working on determining whether 27-year-old Belgian Abdelhamid Abaaoud was among those killed in a chaotic and bloody raid on an apartment in the Paris suburb of Saint-Denis on Wednesday. Associated Press (CBC News)

*** Belgium vows crackdown on terrorists, boost security spending**
Belgium's prime minister on Thursday called for changes to the country's constitution to combat extremists, and promised hundreds of millions of euros to boost the security forces. Addressing the federal parliament as security forces were conducting raids around the capital Brussels, Charles Michel pledged to use changes to the constitution to extend preventive detention times for suspects from 24 hours to 72 hours. He also affirmed that Belgium would move forward alone on a system of airline passenger information sharing that European Union nations have been incapable of agreeing in four years. Associated Press (CTV News, Times Colonist)

*** EU to tighten anti-terror laws**

The European Commission, the EU's executive arm, will expand its anti-terrorist legislation early next year to target fighters like those involved in the Paris attacks. The new measures will widen the range of actions punishable under the legislation to include travelling for the purpose of carrying out a terrorist act, facilitating travel or receiving training to carry out an attack. In a direct response to the Paris killings, EU citizens who travel outside the bloc and then return to carry out attacks will be considered as foreign fighters, and those helping their movement will also face prosecution. The bloc 's Migration, Home Affairs and Citizenship Commissioner, Dimitris Avramopoulos, told a news conference Wednesday that the Commission would have proposals ready by the end of November and wants to see them enacted "within the first two months of the next year." Toronto Sun, A56 (Calgary Sun)

*** Killer's passport fueling fear of refugees**

After the bombs and Kalashnikov fire of the Paris attacks, a mere document - a passport - found near the body of an attacker is generating a new wave of dread throughout Europe and beyond. But whether the document ended up there by chance, or was part of an elaborate plot to sow panic, is not clear. Regardless of the answer, the passport has played into the Islamic State group's hands by raising concerns that militants may be marching alongside the thousands of asylum seekers flowing into Europe. That possibility is redefining the debate over immigration in Europe and even the United States, and prompting a backlash against Muslim refugees. The far-right French leader Marine Le Pen called for an immediate end to the flow of migrants into France, while across the Atlantic about half of U.S. governors are taking steps to prevent absorbing Syrian refugees in their states, citing the passport. "This terrorist attack will clearly change Europe's refugee policies and how the arrivals in Europe are treated," said Konrad Pedziwiatr, a sociologist and expert on Islam in Europe at the Krakow University of Economics. "Already the open-door policy (in Germany and Sweden) of welcoming refugees was going to be reformed because the inflow is so significant that countries cannot cope with the numbers," he said. "What the Paris attacks add to this difficult situation is the additional element of fear." A passport bearing the name of Ahmad Al Mohammad, 25, was found near one of the suicide bombers who blew himself up outside the Stade de France football stadium. It indicates that he entered Greece from Turkey on Oct. 3 and later passed through Serbia and Croatia, getting registered in every new country. The passport's authenticity has not been determined, but fingerprints of the attacker match those taken by Greece and Serbia. The other attackers who have been identified so far are all European citizens. The oddness that a passport - an intact one - was found near a man who blew himself up is creating suspicions that it is part of a plan by the Islamic State to create a backlash against the refugees. "I have never heard of terrorists carrying passports with them," Pedziwiatr said. Associated Press (Whig-Standard, B5, Telegraph-Journal, Times & Transcript)

*** ISIS is slowly killing the European experiment**

As neighours and allies declare solidarity with France, few are facing up to the inevitable: the fact that fallout from Friday's terrorist attack in Paris will stall - perhaps even reverse - the political integration of Europe. The discovery that most of the terrorists identified so far were Muslims born in France, using neighbouring Belgium as a base, will add volume to loud demands for an end to the open-border policy among the 28 members of the European Union. Pressure to terminate what is known as the Schengen Area - a pillar of the EU political integration project, along with the now-debased euro and attempts to unify foreign and defence policies - has been building as about a million refugees from the Middle East and North Africa have flooded into Europe (…) While ISIS has taken responsibility for the outrage and was, at the very least, the inspiration for it, the Paris killings were, like almost every other terrorist attack in Canada, the United States and Europe in the last 14 years, a home-grown affair. Neither Canada nor the U.S. is immune to the popular suspicion that the floods of Syrian and Iraqi refugees are an easy route for ISIS to plant terrorists in target countries. The governors of over half the 50 states in the U.S. have said they will not participate in settling Syrian refugees. And the new government of Prime Minister Justin Trudeau is facing growing pressure from both the public and provincial governments - on whom much of the responsibility for resettling refugees will fall - to rethink his campaign pledge to allow 25,000 Syrian migrants into Canada by the end of the year. iPolitics

*** French expats still feel sting an ocean away**

Juliette Elchinger was home in Montreal on Friday evening when her Twitter feed lit up with news of the terrorist assaults in Paris. "I went into a state of shock," the native Parisian said. "I just started to shake and cry." Five days later, the 19-year-old was still struggling to make sense of the violence visited on her cherished city. She stood on Wednesday surrounded by knots of other students and staff at the University of Montreal, some holding hands and wiping tears off stricken faces, for a sombre gathering of commemoration. In the days since the shocking attacks took the lives of 129 people, Ms. Elchinger has attended solidarity marches and commemorations, monitored news from Paris obsessively and joined other members of Montreal's large expatriate French community. Some have connections to the tragedy; Ms. Elchinger's best friend lost a professor, who was slain at the Bataclan theatre along with 88 others who had attended a rock concert there. For the expats, separation from events back home has fed feelings of loss and helplessness, along with a deepened call to their French identity. Globe and Mail, A9

*** Free world solidarity after Paris**

An editorial states, “There aren't a lot of game-changing moments in international affairs, says Peter Van Praagh. But the ISIS terrorist attacks on Paris last weekend, like the 9-11 attacks on New York and Washington in 2001, fall into that rare category. It is, he says, one of those "events that turn things." It has acutely heightened the public sense of "how vulnerable open societies are." But it has also produced, he believes, "a fundamental solidarity and common understanding that something has to be done to address it." "We are all affected now," the security specialist told our editorial board on Wednesday, after arriving in Nova Scotia to chair, for the seventh time, the annual Halifax International Security Forum. The forum will bring 300 delegates from 60 democratic countries to the city this weekend to brainstorm the complex angles of peace and security - military, political, economic, educational and cultural. The group ranges from four-star generals to ministers to aid organizations, journalists and scholars. Their agenda runs the gamut from building new anti-terror alliances to cutting off the financing of terrorism through drug and human trafficking. There was plenty of evidence in Halifax and elsewhere this week to show security issues now touch us all.” Chronicle-Herald, A6

*** Hollande faces the enemy from within**

The streets of Paris are no strangers to mass bloodshed. The City of Light has borne witness to more than its share of extreme violence over the centuries. The worst of it has not been perpetrated by a foreign army. The enemy has most often come from within.From the Wars of Religion, through the Revolution and the Reign of Terror, to the Paris Commune, the French often worked through their differences in the bloodiest ways possible. Since the 1960s, Paris has been a repeated target of terrorists, often French citizens or immigrants, aggrieving in some way France's unresolved colonial past in North Africa or its mandates in the Middle East.The inspiration for the most recent attacks may have come from Iraq or Syria, but their perpetrators came from the Paris suburbs. The January assaults on the satirical magazine Charlie Hebdo and a kosher supermarket were conducted by French-born radicalized Muslims. Most of those involved in Friday's sickening attacks on cafés and a concert hall appear to have had similar backgrounds."We know, and it's cruel to say it, it was French people who killed French people on Friday," President François Hollande said in a speech for the ages. "There are, living on our soil, individuals who move from delinquency to radicalization and then to terrorist criminality." Globe and Mail

*** La vie doit reprendre, dit Hollande**

Dans la foulée de la série d'attentats à Paris, le président français François Hollande a encouragé ses compatriotes à «défier les terroristes» en continuant de vivre normalement, en fréquentant les cafés, les musées, et les stades sans tomber dans la crainte et la xénophobie. Les terroristes prennent la vie des innocents, mais ils veulent aussi suspendre celle des autres, a soutenu le président, mercredi, lors d'un discours télévisé devant les maires de partout au pays. Il estime que les Français ont le «devoir» de poursuivre leurs activités normales. Il a martelé que la vie «devait reprendre pleinement», ajoutant que la sécurité serait resserrée dans les lieux publics. Le président français a assuré que la France resterait un pays «de liberté, de mouvement, de culture» qui ne «pliera pas à la peur». François Hollande s'est engagé à travailler avec ses alliés pour détruire le groupe armé État islamique, qui a revendiqué la responsabilité des attaques dans la capitale française qui ont fait 129 morts et 368 blessés. Dans une allocution prononcée quelques heures après une opération antiterroriste de la police en banlieue de

Paris, le président a réitéré que la France était «en guerre avec les terroristes», mais il a aussi appelé les Français à la retenue. Associated Press (Le Droit, 17)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Coderre veut éviter un autre Lac-Mégantic**
Depuis la tragédie de Lac-Mégantic, la Ville de Montréal se fait beaucoup plus prudente dans l'aménagement de son territoire, a expliqué Denis Coderre, hier, en réaction au reportage sur la récente interdiction de toute construction près des installations de Suncor. En revanche, au gouvernement du Québec, on ne s'émeut guère de la situation. Hier, La Presse faisait état d'un moratoire interdisant toute construction dans un rayon de 435 mètres des trois ballons de butane de Suncor. Même une enseigne de quatre pieds sur six ne peut y être installée. Le Centre de sécurité civile juge cette zone rouge à «risque très élevé» dans l'éventualité d'un accident impliquant les sphères de butane. Une explosion est jugée peu probable, mais elle provoquerait d'énormes dégâts. Or, cette zone rouge est traversée par l'autoroute Métropolitaine et 100 000 automobilistes y circulent chaque jour. La Presse, A16

*** Crise en santé publique - La surveillance de l'état de santé des Méganticois écope**
Bien que les impacts de la tragédie de Lac-Mégantic se fassent toujours sentir dans la population, la Direction de santé publique de l'Estrie a été contrainte de se départir de deux experts qui travaillaient de façon spécifique sur ce dossier. En janvier dernier, la Direction de santé publique de l'Estrie publiait une étude révélant que l'accident ferroviaire survenu à Lac-Mégantic en 2013 faisait encore souffrir la population : 95 % de Méganticois disaient avoir été touchés par la tragédie. On observait plus de dépressions, de troubles anxieux et de problèmes de consommation d'alcool. La directrice de la santé publique, la Dre Mélissa Généreux, s'en inquiétait. Pourtant, quelques semaines plus tard, elle mettait à pied le professionnel affecté à la surveillance de l'état de santé de la population de Lac-Mégantic. Ce dernier a fait les frais d'une vague de compressions imposée à toutes les directions de santé publique régionales au printemps dernier, dont Le Devoir tente de cerner les impacts dans une série diffusée cette semaine. En Estrie, la Direction de santé publique a dû couper 1,21 million sur un budget de 2,5 millions. " Ça représente 40 % de notre budget, ça a été toute une épreuve pour nous, tout un choc à absorber ", soupire Mélissa Généreux en entrevue téléphonique. Avec son équipe, elle a tenté de faire les choix " qui allaient engager le moins de conséquences possible sur la population ". Mais elle devait couper quelque part. " Ce n'est pas parce qu'on s'est dit que les impacts étaient moins importants, mais quand vient le temps de choisir les postes, il y a toutes sortes de considérants, en matière d'ancienneté entre autres. " L'enquête annuelle sur la population de Lac-Mégantic, qui est financée par un autre " petit budget protégé ", sera maintenue. " Ce qui a été plus difficile, c'est que parallèlement à ça, on ne voulait pas surveiller juste une fois par année, on avait donc un agent de programmation, planification et recherche (APPR) -- celui dont on a supprimé le poste --, qui se chargeait de faire des bulletins de surveillance périodiques. C'est lui qui prenait le crayon et qui faisait l'analyse de ces données. " Le Devoir, A1

*** Spend more to prevent dam spills, experts say**
As miners globally review the way they store waste in the wake of another horrific dam spill, the solution may be as simple as it is dramatic: spend a lot more. Images of sludge spewing into towns and rivers could be a thing of the past if mines used different types of storage such as removing water or building on more stable ground. While that can be as much as 10 times costlier for companies already squeezed by slumping prices, the cost is much higher when things go wrong. The cleanup bill for the Nov. 5 spill at the Samarco iron-ore venture in Brazil, owned by BHP Billiton Ltd. and Vale SA, probably will exceed $1 billion US, Deutsche Bank AG said. Then there's lost output and potential lawsuits. "A failure is a lot more expensive than doing it right," said Dirk van Zyl, professor of mining engineering at the University of British Columbia and one of three experts on a panel into a dam spill in Canada last year. Samarco says its dams were deemed safe in a July inspection and that it's too early to determine reasons for the spill. On Monday, BHP chief executive officer Andrew Mackenzie said the company is "carrying out a thorough review of all of our dam facilities of scale." On the same day, Vale said it's open to improvements, even after concluding that its other installations, which use state-of-theart safety practices, were fully compliant. The Samarco breach, which propelled about 50 billion litres of mud into communities below, comes a

year after Imperial Metals Corp.'s Mount Polley mine in Likely, southeast of Prince George, also dumped billions of gallons into lakes and rivers. Bloomberg (Vancouver Sun, D3)

*** Lepreau residents evacuated in simulation**
As an imaginary cloud of radioactive steam was vented from the Point Lepreau nuclear power plant Wednesday, real calls went out to residents within a 20 kilometre radius telling them to get out. By noon about 150 people were gathered in the gym at the G. Forbes Elliot Forbes Athletics Centre at UNBSJ and there was even space set up nearby for pets in a separate centre run by a disaster animal response team from Nova Scotia. It was the final part of a two-day exercise simulating a nuclear emergency at the power plant based on a couple of years of planning. The emergency was centred around an extreme bad weather event damaging the plant, said Meghan Gerrish a spokeswoman for NB Power... In September members of the media were given a tour of the plant to see the four large, mobile, diesel power generators that were added as a second level of backup to make sure there would always be power to control the equipment. The plant already had a backup generating system but the portable generators are a second level. Large water pumps capable of shooting streams of water over the outside of the reactor to cool it were also purchased. At that time Tony Munn, emergency preparedness manager at the plant, said the industry has learned many lessons from the three major nuclear accidents in the past 50 years - Three Mile Island in the United States, Chernobyl in Russia and Fukushima in Japan. Observers from utilities around the world were at the power plant during the exercise, Gerrish said. "There are over 1,000 people involved in this exercise," she said. Telegraph-Journal, B1

*** Body found near site of Tofino whale-watching tragedy - BC Coroners Services says it can't confirm if it's the passenger who was missing, presumed dead**
A body has been recovered close to Vargas Island near Tofino, B.C., says the BC Coroners Service.On Oct. 25, a whale-watching boat capsized in the area, killing five people. Another victim, 27 year-old Australian Raveshan Pillay, was never found, but presumed dead."While I appreciate there is certainly interest with the possibility this may be linked to the missing person from the Leviathan, it is premature to suggest so," said Matthew Brown with the Coroners Service. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Terror travel investigations on the rise
Radicalized Canadians intent on going to far-off combat zones are developing sophisticated cover stories and using "broken travel patterns" to disguise their true motivations, according to an internal RCMP document that reveals public safety officials were, as of one year ago, closely monitoring about 50 foreign fighters abroad and 14 who had returned home. Family and friends are often reluctant to notify police if they suspect someone is planning a trip, the document states. Also, the speed with which a person becomes radicalized to violence and makes travel plans is sometimes so fast, police only become aware of them after they've left the country. "There is no doubt that the number and complexity of terrorist travel investigations has increased," said the briefing document, which was prepared for the RCMP commissioner and obtained by the National Post through an access-to-information request. Though the document was prepared a year ago, many of the challenges of identifying extremist travellers persist, said a Dalhousie University researcher studying Canadian foreign fighters. Amarnath Amarasingam said much of ISIL's advice to people who want to migrate to Syria is to "blend in to Western ways of life," especially right before they leave... The wave of attacks in Paris last Friday that killed 129 people has heightened concerns about the foreign-fighter phenomenon. A new report this week from the think-tank Institute for Economics and Peace said an estimated 25,000 to 30,000 foreign fighters from 100 countries have flowed into Iraq and Syria since 2011 - half from neighbouring countries and a quarter from Europe and Turkey. Public safety officials in Ottawa said Wednesday there was no evidence of any Canadian involvement in the Paris attacks. They were also unaware of any direct threats to Canada related to the attacks. Amarasingam said he believes at least 60 Canadians have gone to fight in Iraq and Syria. One of them, Toronto-born Farah Mohamed Shirdon, who police say has served in combat, recruiting and propaganda roles with ISIL, was added to INTERPOL'S wanted list this week. Neither Bob Paulson, the RCMP commissioner, nor Michel Coulombe, director of the Canadian Security Intelligence Service, would say Wednesday how many high-risk travellers their agencies are tracking. Postmedia News (Vancouver

Ontario accent heard in video?

Investigators are working to confirm a potential Canadian accent heard in an English audio recording released by what is believed to be the Islamic State. The recording was released Saturday and claims responsibility for the terrorist attacks that shook Paris and the rest of the world last weekend. "It is concerning if it is Canadian, but it is speculative at this stage," said RCMP Commissioner Bob Paulson told a news conference Wednesday, adding that the Mounties are working to confirm it. Meanwhile, a dialect expert south of the border said it's very likely the male speaker has a Canadian - specifically an Ontarian - accent. "I mainly listened for vowel variations because that's where most of the variation in English is," said Erik Thomas, a linguistics professor at North Carolina State University. The professor was first asked by CNN to analyze the recording. He took detailed notes on words chosen by the speaker in the recording, such as "explosive" and "hand". "Everything he uttered seemed to match up with forms that predominate in Canada," he said. Certain vowels, such as the short 'o', were among the giveaways suggesting the accent originated in regions of either Canada or northern U.S. states. Winnipeg Sun, A7 (Ottawa Sun, Toronto Sun, Calgary Sun, Toronto Sun)

Hatred burns hot, but not very bright

Among responses to the scattered targeting of Muslims in the wake of the Paris attacks, the most indicative might be the safety preparations under way at a Hindu temple in Hamilton, Ont. Hindus had nothing to do with the killings in Paris. The "brains" behind the terrorist bloodshed appear to have lived in Belgium, not India. The preparations in Hamilton are predicated on the assumption that the sort of people who firebomb mosques and beat up helpless women won't know the difference. In other words, that they're so stupid they direct their hatred at anything that strikes them as vaguely Middle Eastern, even if they're off by an entire culture and a continent or two. There's good reason for their concern. The temple was set aflame in the days following the 9/11 terror attacks in the U.S., by someone who apparently confused it with a nearby mosque. A number of synagogues were also targeted at the time. Hatred may be all-consuming, but it's not very smart. That's already evident from the incidents of the past few days. The only mosque in Peterborough was torched by a person or persons unable to grasp the difference between peaceable people going about their life and the barbaric practices of the terrorists who characterize themselves as the Islamic State. A woman picking up her son at a school in Toronto was kicked, beaten and robbed in mid-afternoon by two men who are so stupid they think a hijab - which she was wearing - must signal support for the sort of brutalities meted out in Syria, most often on Muslims themselves. In Montreal, a man wearing a mask threatened to kill an Arab or a Muslim every week, obviously too dim to realize that plenty of Arabs aren't Muslims. There's a difference between ignorance and stupidity. Ignorance is a lack of knowledge. Stupidity is the determined projection of ignorance. It's likely that the people responsible for the incidents in Toronto, Peterborough and Montreal are both, but while ignorance is likely, stupidity is certain. Postmedia News (National Post, A1/Front)

Man charged after threat to kill Arabs in Quebec

A Montreal man will spend the next few days in jail after being charged in connection with a YouTube video in which someone wearing a Joker mask says one Arab would be murdered in Quebec every week. Jesse Pelletier, 24, was arraigned on Wednesday on charges of uttering threats, possession of a false weapon, public incitement of hatred and hoax regarding terrorist activities. Pelletier, who was arrested early Wednesday morning, will remain behind bars until his bail hearing Monday. The person in the video was wearing a Joker mask and could be seen brandishing what looked like a pistol as he made the threats and spoke about last week's terrorist attacks in Paris that killed 129 people. "It's really time to act," the person said in the three-minute video. Canadian Press (Times Colonist, A8, Calgary Sun, Telegraph-Journal, Times & Transcript, Toronto Sun, Winnipeg Sun, Kingston Whig-Standard, Ottawa Sun, Edmonton Sun, Red Deer Advocate), Presse canadienne (La Tribune, Voix de l'Est, Le Droit, Le Devoir), Montreal Gazette, Toronto Star

***To combat extremism, we must work together**
An opinion piece states "Last week, evil struck. There were vicious attacks in Paris, Beirut and Baghdad. I grieve with the families and friends of the victims and hope the perpetrators are brought to justice. Violent extremism is universally condemned; terror is never the answer and the loss of one innocent life is equal to that of all of humanity. We cannot let such horrific violence achieve its goal of striking fear into our communities and dividing us. It is deeply distressing to many that there has been apparent backlash against Muslim communities, including in Canada. In Peterborough, Ont., a mosque was set on fire last Saturday. Police are investigating the fire as a potential hate crime. This week in Toronto, a hijab-wearing woman was verbally assaulted, punched repeatedly in the stomach and had her hijab ripped off. Canadian Muslims are naturally very concerned. At the same time, Canadian Muslims know these cowardly acts do not represent our society. They are simply the ignorant expressions of criminals (…) Experts point out that there is no single reason why such people travel the path of radicalization. The roots are complex, the solutions not obvious. And combating the problem is made yet harder by the reality that this new brand of brazen terror is a contemporary phenomenon - it did not exist in the 1980s or 1990s. Toronto Star, A25

*** Doctor to assess man caught with knife on Parliament Hill**
A Toronto man arrested for allegedly carrying a hidden weapon at the entrance to the Centre Block of Parliament was remanded in custody Wednesday. Yasin Ali, 56, was detained by the Parliamentary Protective Service on Tuesday after a security screening discovered what police say was a knife. Ali made a brief court appearance Wednesday on a charge of carrying a concealed weapon. Defence lawyer Peter Azzi said his client is due back in court on Friday and will be assessed by a doctor. Neither Azzi nor the RCMP would discuss media reports that described the weapon as a meat cleaver. RCMP Commissioner Bob Paulson applauded the "great job" by the protective service, for which the Mounties have day-to-day responsibility. "The individual was identified behaving oddly, suspiciously. And one of our officers challenged him, saw the knife, took him into custody," Paulson said. "I understand that it is less a concern around socalled national security considerations than it is a mental-health issue." Security on Parliament Hill has been tight since Oct. 22, 2014, when Michael Zehaf Bibeau gunned down a soldier at the nearby National War Memorial and sprinted through the main doors of Centre Block. Moments later, Zehaf Bibeau was fatally shot by security officials outside the Library of Parliament. Canadian Press (Times colonist, A8)

*** Des musulmans sur leurs gardes après des menaces**
Menaces de mort au téléphone, agressions verbales dans la rue, messages haineux sur les réseaux sociaux: des membres de la communauté musulmane de Montréal affirment vivre dans la peur depuis les attentats de Paris. «Depuis ce qui est arrivé à Paris, je ressens une peur chez les musulmans. Je crains que tout cela finisse mal», lance Haroun Bouazzi, de l'Association des musulmans et des Arabes pour la laïcité au Québec (AMAL).«J'ai l'impression que ce n'est qu'une question de temps avant qu'un membre de notre communauté se fasse casser les deux jambes. Il y a trop de haine sur les réseaux sociaux», poursuit-il. Mercredi matin, le téléphone ne dérougissait plus à l'AMAL, plusieurs citoyens s'inquiétant de menaces de mort proférées sur les réseaux sociaux par un homme déguisé en joker, qui a finalement été arrêté par les policiers. «Beaucoup de gens m'ont écrit en panique. C'est étonnant de voir à quel point ils vivent dans la peur», affirme M. Bouazzi. Haroun Bouazzi dit recevoir régulièrement des menaces sur le site de son organisation. Mais il affirme ressentir une «pression supplémentaire» depuis quelques jours. Il n'est pas le seul. Joint mercredi par *Le Journal*, Mehmet Deger, président de la mosquée Dorval, a rapporté avoir reçu un coup de fil menaçant mardi après-midi (…) Cependant, le Centre islamique de l'est de Montréal de l'imam controversé Adil Charkaoui, de même qu'une mosquée du quartier Hochelaga, ont été vandalisés au cours des derniers jours. QMI Agency (Journal de Quebec, Journal de Montréal)

*** 'Loves Me Not' Poem Captures Heartbreaking Reality Of Islamophobia In Canada**
Taunts in public. Comments online. And recently, physical abuse. In the past months, Canada has witnessed far too many attacks against Muslims, particularly women. Earlier this week, a Muslim woman was physically assaulted in front of her children's school and called a "terrorist." In October, a woman wearing a niqab was attacked at a Toronto mall. It's difficult for most of us to imagine the emotional trauma victims of such discrimination endure. But one poem, written by a group of Muslim women in Toronto, captures the heartbreaking reality. "Loves Me Not", a video poem created earlier this year during

a filmmaking workshop hosted by TIFF Special Delivery and advocacy group Outburst, tells the story of a young Muslim girl who wears the hijab. The poem begins with the girl, her hijab constructed with colourful petals. She holds a flower in her hand, but as she suffers from Islamophobia her flower begins to die. "Everywhere she looked, people would stare," the poem states. "They asked, 'Is that something your dad forced you to wear'?" According to Outburst's Facebook page, the poem was inspired by Islamophobia endured by the writers as they attended school in Toronto. The video continues to show the lasting impact of discrimination. "One day she broke down, the comments made her drown." Huffington Post

*** Web et jeux vidéo au service du terrorisme**

Le 10 novembre dernier, soit trois jours avant les attentats de Paris, le ministre de l'Intérieur belge Jan Jambon a laissé entendre que des terroristes utilisaient une console PS4 pour communiquer entre eux, une information qui a refait surface au cours des derniers jours. La réalité: aucune console PS4 n'a été retrouvée lors des nombreuses perquisitions effectuées en France et en Belgique. Ce qui ne veut pas dire que les jeux vidéo ne jouent pas un rôle dans les milieux terroristes. En 2013, grâce à des documents rendus publics par Edward Snowden, le Guardian et le New York Times ont révélé que la NSA et la CIA avaient déjà mené des opérations d'espionnage sur des consoles Xbox. Quelle utilisation les terroristes peuvent-ils faire des jeux vidéo? «Dans les jeux multijoueurs (pensons au jeu Call of Duty, par exemple), on retrouve des plateformes de "chat" afin que les joueurs puissent échanger entre eux, explique Hugo Loiseau, professeur à l'École de politique appliquée de l'Université de Sherbrooke. La Presse, A14

*** Hindu temple gratified by public support**

Young Muslims from the Toronto area would like to help pay for the damage caused at the local Hindu temple that was vandalized this week, but a temple board member said insurance covered the costs and the windows have been repaired. So the group known as Dawahnet, which means "spreading knowledge" in Arabic, will donate $2,299 that was collected in 24 hours on a gofundme website to the temple. Temple board member Vijay Solanki said the temple was overwhelmed with public support with many offering to help with the damage costs. "We gratuitously thanked them for the offer, but it is not appropriate to raise thousands of dollars for something that didn't cost us," he said. The gofundme page was set to raise $10,000 for the Kitchener temple by Dec. 1, but organizer Arshia Lakhani of Mississauga said they closed the site after speaking to the temple (...) Swami Chaitanya Jyoti and two other women were in the building and were frightened by the noise at the back of the building shortly after 11 p.m. No one was hurt in the incident. Hours before the vandals struck, Jyoti was at the Kitchener vigil honouring those who lost their lives in the Paris terrorist attacks. Record, B2

*** Extend vigilance to everyday threats**

An opinion piece states "In the wake of the attacks in Paris, there has been no shortage of security experts in the media talking about how to best keep safe. RCMP Assistant Commissioner Roger Brown, for example, articulated what everyone intuitively knows - there's no real science to spotting a terrorist plot. The best you can hope for is your gut tells you something is wrong. "When you do find yourself in a position where you see or do become aware of something that's not right, the next logical step is to report it to the proper authorities," Mr. Brown said. To his credit, the assistant commissioner hasn't fanned the flames or paranoia. He's done a good job of explaining the scope of the threat in Canada, not exaggerating it. David Charters of the Gregg Centre for the Study of War and Society at the University of New Brunswick has a similar message, calling an attack "a possibility but a relatively remote possibility." "The message 'If you see something, say something' is not a bad idea," Mr. Charters says. This is sound advice. It's true New Brunswick hasn't been the target of a terrorist attack, which isn't to say it's been a terror-free province. Justin Bourque's rampage in Moncton remains fresh in New Brunswickers' memories. And who can forget the seven months Allan Legere was on the loose in 1989. While the threat of a terrorist attack in Fredericton is remote, it's no excuse to be complacent. It's the reason schools practice lockdown drills. It's the reason passing through security at airports has become a much more intimate experience thanks to body scans and random searches." Daily Gleaner, A8

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Douanes à Bagotville: Lebel offre sa collaboration
Au cours d'un entretien avec le journaliste du Quotidien, le député conservateur de Lac-Saint-Jean affirme que le gouvernement Harper était prêt à annoncer, il y a quelques mois, un projet-pilote à travers le Canada, mais que la défaite électorale du 19 octobre avait modifié les plans. Depuis plusieurs années, les compagnies aériennes et les passagers qui se rendent en vacances dans le Sud réclament un service de douanes à l'aéroport de Bagotville. Il faut savoir que le service existe pour les voyages d'affaires de 30 passagers et moins seulement. Présentement, lorsque l'avion quitte le Mexique, Cuba, le Panama ou la République dominicaine, le pilote doit obligatoirement faire un arrêt à Québec. Les touristes doivent débarquer et passer par les douanes. Chaque fois, l'arrêt dure au minimum une heure et oblige les compagnies d'aviation à défrayer des sommes d'argent pour avoir le droit de se poser, en plus des dépenses de carburant que cela implique. (…)Au cours des dernières années, Denis Lebel et des fonctionnaires du gouvernement ont tenté de trouver une solution qui ne serait pas coûteuse pour ce projet. Et l'ancien ministre y était parvenu. Chaque atterrissage à Québec entraîne des coûts assez importants pour les compagnies aériennes. Ils seraient de l'ordre d'environ 10 000$, que les voyageurs paient sur leur billet. «Ce que je propose, c'est que l'on prenne cette somme et qu'on l'investisse dans les équipes de douaniers. Ça ne coûterait rien de plus au gouvernement, mais ça éviterait une escale.» «L'équipe volante des douaniers pourrait être formée des douaniers actuels de l'aéroport et on pourrait ajouter des militaires et des policiers à la retraite pour donner un coup de main. Au départ, ce serait un projet temporaire, soit pour la durée des vols offerts vers les destinations du Sud», analyse Denis Lebel. La Presse

L'ABC des achats de Noël en ligne
plusieurs consommateurs n'aiment pas faire la tournée des centres commerciaux pour faire leurs emplettes des fêtes. de nos jours, il est possible d'éviter cette épreuve annuelle en commandant ses cadeaux en ligne. Selon un récent sondage du Conseil québécois du commerce de détail (CQCD), plus du quart des Québécois (26 %) prévoit acheter un ou des cadeaux sur inter-net cette année. Année après année, ce geste devient toujours plus populaire. En 2010, seulement 11 % des Québécois prévoyaient acheter en ligne pour la période des Fêtes. (…)En théorie, en achetant sur un site américain, vous épargnerez la taxe de vente, car vous êtes résident d'un autre pays. Cela dit, bon nombre d'États américains n'ont tout simplement pas de taxe de vente. L'économie atteint près de 15 %, mais elle prive le Québec de revenus. Par contre, à la frontière, votre paquet pourrait être vérifié par l'Agence des services frontaliers du Canada, qui procède de façon aléatoire. Le cas échéant, on vous facturera des frais de dédouanement et des taxes canadiennes. Ces frais augmenteront le coût de votre achat. Journal de Québec, 42; * Journal de Montréal, 36

U.S. border airports seeing drop in Canadian travelers
The shuffle off to Buffalo to catch a cheap flight on a U.S. airline is losing its shine, thanks to a lower loonie. "We have seen an impact, but it's difficult to quantify the exact number," said Pascal Cohen, senior manager of marketing at the Buffalo Niagara International Airport. That's because no data is collected on citizenship, when passengers arrive to catch their flight. However, airport officials do conduct licence plate surveys at the parking lot at the Buffalo airport. Previously, when the Canadian dollar was at par with the U.S. dollar, as many as 40 per cent of vehicles were Ontario plates. These days, the airport estimates it is about 15 to 20 per cent fewer Ontario plates. Cohen says overall passenger volume at the Buffalo airport is up 1.9 per cent, year over year, which could be attributed to an improving U.S. economy. It's unclear whether Canadian airports will enjoy a bump in traffic as travellers choose to fly from home airports. Pearson airport says passenger traffic on transborder routes are up this year, but can't attribute that to a shift in travel patterns. Toronto Star, S11

*** U.S. to have tariffs against Cape Breton paper**
A series of costly duties will be levied against Canadian mills, including one in Point Tupper, that produce glossy paper following a vote Wednesday affirming the trade action by the U.S. International Trade Commission. The trade body says the vote was part of the final phase of a countervailing duty investigation into Canadian imports of supercalendered paper, which is mainly used for magazines, catalogues, corporate brochures and advertising inserts... Canada's international trade minister Chrystia

Freeland, issued a statement saying an appeal under the North American Free Trade Agreement will determine if the countervailing duties are being applied in accordance with the laws of the United States. Canadian Press (Cape Breton Post. A1, A4); Chronicle Herald, A1

*** SNAPSHOT: Children in immigration detention**
The location of CBSA's three immigration detention centres. CROSSINGS. An agency spokesperson said that both children's parents prefer they stay in the centre with their families, rather than be relocated by child-protection services. "If you are a Canadian citizen and you're born in immigration detention or you're a Canadian citizen but your parents are undocumented, get arrested and placed in detention, the parents have a choice to give their children over to Children's Aid Society custody and never see them again or bring them in with them in prison. Adults make the difficult decision to bring their kids into prison ... What does a two-year-old do? Globe and Mail, L4

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Blackmailers target clients of Ashley Madison - Complaints to FTC claim online extortionists active in wake of site's hacking**
Victims of the Ashley Madison hack say they are being blackmailed months after millions of customers had their information leaked online. Complaints filed with the U.S. Federal Trade Commission detail how customers continue to feel the aftermath of the July attack on the Toronto-based adultery website. "A recent hack from the company exposed numerous amounts of private information from me. Now I am being harassed by others who are maliciously using the contents of that information," wrote one person. The hackers, who are still at large, leaked the information online, causing shock waves across the world as millions of alleged Ashley Madison customers had their dirty laundry aired. Toronto Police are still investigating the cyber attack, which they previously linked to online hate crimes, online scams and two unconfirmed reports of suicide. Toronto Star, S12

*** More offers too good to be true - Fraudsters finding new ways to victimize computer users**
An opinion piece states “Raise your hand if this has happened to you: A telephone call from Microsoft (or Windows) telling you your computer needs immediate attention. An email from your bank notifying you that your bank account has been compromised and you need to reset your password. Or, you are visiting a website, to get a recipe or read some news, and you get a screen message that your computer is running slowly so ‘click here’ to repair the problem. Keep your hand raised if you are a senior. Well then, join the club. And it's a growing club because fraudsters can easily get your phone or email address and with mass calls and/or mailings are sure to grab more and more unsuspecting customers. Locating the scammers is almost impossible; many are out of country and most use disposable cellphones that are difficult to trace. Here's a taste of how it all goes down. An elderly friend, let's call him Blake (whom I had previously helped with computer issues) called me to say that Microsoft had phoned him and he had allowed the caller remote access to his computer. The "technician" immediately claimed to find mountains of viruses and offered to clean his computer - for a price. What credit card would he like to use? Blake, rightfully reluctant to give out his card number, hesitated. The caller pressed him further, this time to go to Western Union and send cash. When Blake once again refused, the caller informed him that unless he paid $179 his computer would become inoperable. Blake hung up. When he called me I congratulated him for not responding to an obvious scam, but here's the thing: the scammer had reset his user password and Blake could not get into his computer. Not an easy fix. Other similar examples include opening your computer only to find a detailed welcome screen seemingly from the FBI/RCMP warning you to pay a fine for illegal downloads or else your computer will remain in lockdown. This kind of malware is more easily removed, but how many people - especially seniors - are intimidated and fall for these and similar schemes?” Hamilton Spectator, A15

LAW ENFORCEMENT / APPLICATION DE LA LOI

A night on the town

At 9:50 p.m. Nov. 4, two police trucks responded to a call about a woman threatening to commit suicide. The call came from a family member and was relayed to the detachment over the phone. "The whole town doesn't need to hear that over the scanner," said Const. Yannick Gagnon as he followed a vehicle to where the woman lives. In the end, police decided the woman wasn't an imminent threat to herself and took her to a relative's home. "Just to be on the safe side, we're not going to let her be alone," said Gagnon. "If she didn't have family to go to, we would bring her to the hospital to get her cleared, and if she was imminently suicidal she would be taken to the hospital right away. Better safe than sorry." He said this way if there are more concerns over the course of the night, at least the officers know the situation. Gagnon arrived at the RCMP detachment shortly before 7 p.m. on Nov. 4 to get ready for night shift. It was "superconstable" night, something that happens once every two weeks or so when shifts overlap and nearly all officers work on a given day. It means they can get caught up on paperwork and share important events with the next crew to come on. Gagnon's regular partner, Const. Mackenzie McGuffin, spent the shift preparing for a case going to court the next morning. "It's what ties everything together," he said. "You can respond to a call, but if you don't follow up with the paperwork, there's no chance those charges will go through." Gagnon said he was a few weeks into Depot, where all RCMP members go to be trained, before he realized the job was 90 per cent pencil-pushing and 10 per cent "fun stuff." "I wanted to quit right there," he joked. Inuvik Drum

Man charged over concealed cleaver

A Toronto man who allegedly tried to carry a meat cleaver onto Parliament Hill is to undergo a psychiatric assessment. A lawyer for Yasin Ali asked for the assessment in court Wednesday after the 56-year-old appeared by video from the courthouse cellblock on a charge of carrying a concealed weapon. He will remain in jail until his next appearance on Friday, when he is to appear in court in person. The man had a ticket to visit the Peace Tower, and was in line to go through the visitors' entrance at about 11:30 a.m. on Tuesday when a House of Commons security guard asked him to open his coat. The guard found the man was concealing a large cleaver with an approximately 15-cm-long blade. The man never made it as far as the metal detectors. RCMP Commissioner Bob Paulson told reporters that Ali is known to authorities, but "not in the sort of counter-terrorism context." In fact, Paulson does not believe that the man's actions were politically motivated or an act of terror. Postmedia Network (Windsor Star, N5, Toronto Sun, Ottawa Citizen); ; *La Presse; * Canadian Press, (Times Colonist, A8)

*** La GRC pourrait avoir agi illégalement, dit la juge**

Une juge de la Cour suprême de la Colombie-Britannique a affirmé que la preuve tendait à montrer que la Gendarmerie royale du Canada (GRC) avait agi illégalement durant une opération d'infiltration antiterrorisme de haut profil, et a ordonné à la police de remettre des documents juridiques confidentiels. La juge Catherine Bruce n'a pas encore déterminé si la GRC avait piégé John Nuttall et Amanda Korody pour qu'ils organisent un complot visant à faire exploser le parlement de la Colombie-Britannique en 2013, mais elle a indiqué que les agents pourraient être coupables d'avoir facilité en connaissance de cause un acte terroriste durant leur opération d'infiltration. «Il existe un lien suffisamment étroit entre les actes illégaux commis par la GRC et les faits reprochés aux accusés pour soutenir une allégation d'abus de procédures», a-t-elle écrit. Mme Bruce a ordonné à la police de dévoiler des avis juridiques confidentiels obtenus relativement à l'opération secrète pendant laquelle des agents se faisaient passer pour des combattants djihadistes. «Ces documents fournissent un aperçu fondamental de l'état d'esprit de tous les agents mêlés à l'intervention», a-t-elle mentionné. La confidentialité de la correspondance avec un avocat est habituellement protégée, mais la magistrate a indiqué que les agents de la GRC avaient renoncé à ce droit en dévoilant délibérément une portion de l'information en cour. La juge estime qu'il est pertinent de savoir si les policiers ont suivi les conseils de l'avocat, car cela pourrait montrer une mauvaise foi de leur part. John Nuttall et Amanda Korody ont été reconnus coupables plus tôt cette année sous des accusations de terrorisme pour avoir planifié de perpétrer un attentat sur le site de l'Assemblée législative de la Colombie-Britannique lors des célébrations de la Fête du Canada de 2013, mais leurs avocats ont argué que la GRC les avait piégés et que le complot n'aurait jamais été organisé sans l'aide de la police. La Presse Canadienne (Le Nouvelliste, 14, La Voix de l'Est); CBC News;

Postmedia News (Province, A8, Times Colonist); Postmedia Network (Vancouver Sun, A2, Calgary Sun, Winnipeg Sun, Province, Globe and Mail, S3)

*** Les agences se font rassurantes**
Les grands patrons des agences canadiennes de sécurité et du renseignement ont cherché à se faire rassurants, hier : ils ont bel et bien la capacité de faire les vérifications qui s'imposent afin de protéger les Canadiens contre les menaces potentielles posées par l'accueil rapide de 25 000 réfugiés d'ici la fin de l'année. « Je veux que les Canadiens sachent qu'en tant que directeur du SCRS, je suis sûr que les mesures en vigueur sont robustes et que j'ai pleinement confiance qu'elles seront appropriées », a déclaré Michel Coulombe, directeur du Service canadien du renseignement de sécurité (SCRS). De plus en plus de gens au Canada expriment leur inquiétude devant cet accueil jugé trop rapide et un nombre trop élevé de réfugiés d'ici six semaines. Les chefs du SCRS, de la Gendarmerie royale du Canada (GRC), de l'Agence des services frontaliers du Canada (ASFC) et le ministre fédéral de la Sécurité publique ont livré une rare conférence de presse conjointe pour répondre à ces préoccupations. Ils ont fourni quelques détails sur la situation sécuritaire au pays dans la foulée des attentats de Paris et sur leurs démarches pour assurer la sécurité tout en respectant la promesse électorale du Parti libéral. La Presse Canadienne (Voix de l'Est, La Presse,); La Presse

*** Takes two to tango in Duffy trial**
The Ol' Duff will be strutting today, his mind firmly convinced that, besides his courtroomdrama playing a key role in bringing down the spiteful Harper government, he will soon be walking out of court totally vindicated. This has been Duffy's firm belief from the outset, and he has sent chastising emails to many in the media who presupposed his guilt. (…)In fact, the RCMP exonerated Wright of any wrongdoing and, after he testified about cutting the cheque to Duffy, he skedaddled back to England and his job as managing director in the London office of Onex Corp. There is no jury here. It is trial by judge alone, so it comes down to Ontario Court Judge Charles Vaillancourt to decide if there was a bribe and, if so, then solve the riddle of who bribed who. But armchair jurors are already taking bets on acquittal. The most entertaining portion of the trial, of course, has been defence attorney Donald Bayne's tarring of the Prime Minister's Office, even though who-knew-what and/or who did or did not tell the prime minister about Wright's cheque has nothing to do with Duffy's guilt or innocence. Postmedia Network (Calgary Sun, A15)

*** Winnipegger warns of immigration phone scam - Callers demand payment**
More than 45 years after Winnipeg resident Monina Relano moved to Canada from the Philippines, she got a phone call Tuesday saying there was a problem with her immigration paperwork."I was scared," said Relano. Though she's been a Canadian citizen since 1975, she was taken aback by the authoritative voice on the phone. The man told her she didn't fill out a required immigration form and now had to pay an out-of-court settlement of $2,490 or the RCMP would be at her door.Relano figured out it was an immigration phone scam but worries more recent newcomers without permanent status in Canada might be conned. She wants to warn them before they get the call and end up swindled. Winnipeg Free Press, B6

*** Diverse workers sought by RCMP**
The RCMP is seeking some good men and women to diversify their ranks. With a visible minority presence of 9.7%, the force is seeking to increase that to 20% to better represent the country it serves, say Mounties. The force is holding a Calgary career presentation Nov. 25 at the Duncan Building, 7575 8 St. N.E. at 6 p.m. On offer are 150 different types of policing opportunities. Those applying for a position with the RCMP must be a Canadian citizen, 19 years of age and be fluent in either or both English and French. They must also possess a valid driver's licence and have a high school diploma or an equivalent, be able to meet fitness requirements and be willing to re-locate anywhere in Canada. Postmedia Network (Calgary Sun, A10)

*** New Kids on the cellblock**
A Red Deer crime syndicate has taken a big hit. Police have arrested and charged three alleged members of Bobby and the Kids, a group that deals mostly in the drug trade. One of them is believed to be "Bobby," the leader of the group. The organization has dealings throughout Central Alberta including Sylvan Lake, Blackfalds and Innisfail and has been operating for "some time," say police. The arrests are

believed to be the first made involving the organization. "We have definitely disrupted this group and eliminated the harm they are doing in the community," said Red Deer RCMP Sgt. Eric McKenzie. Police did not give any indication of the size of the group. Last Friday, the Priority Crimes Task Force seized 55 ounces of cocaine, nine ounces of methamphetamine, marijuana, a stolen pistol, drug paraphernalia and $30,600 in cash after executing search warrants at Timothy Drive and Leonard Crescent in Red Deer and Harvest Close in Penhold. Three men between the ages of 22 and 27 were arrested without incident. Postmedia Network (Red Deer Advocate, A1, A2)

* **Quebec police conduct major raids linked to drugs, organized crime**
Quebec provincial police say they are conducting major raids this morning linked to drug trafficking and organized crime in the Montreal area. Sûreté du Québec spokesperson Audrey-Anne Bilodeau says roughly 200 police officers are taking part in the operation. The raids target "different strains of organized crime in link with the control of the territory, the supply and the distribution of drugs in Montreal," Bilodeau said. In all, Bilodeau says they expect to arrest about 40 people this morning. Bilodeau would not give further details on the suspects or what kind of drugs may be involved. She says members of the SQ, Montreal police and the RCMP are collaborating. A news conference is planned for later this morning to give more details on the operation. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Young Shafia seeks appeal
Hamed Shafia, the Montreal man convicted, along with his father and mother, of murdering four family members in what the trial judge called a "heinous" and "despicable" mass honour killing, is poised to present a new claim to Ontario's top court regarding the appeal of his conviction. The youngest Shafia killer maintains that he was not 18 years old at the time of the murders on June 30, 2009, and he has documents newly obtained from Afghanistan, his birthplace, that purport to prove it. Shafia was tried and sentenced as an adult, based on documents that indicated he was born in Kabul on Dec. 30, 1990. Those records established that he was 18-and-ahalf years old at the time of the killings, and therefore subject to adult criminal law. After a 45-day trial, he was convicted of four counts of first-degree murder and sentenced to the mandatory term of 25 years in prison before parole eligibility. If convicted of murder in youth court and sentenced as a youth, he would be eligible for parole much sooner, perhaps in as few as five years, calculated from the date of his arrest in July, 2009, according to Nicholas Bala, a Queen's University law professor and expert on youth criminal law. The legal scholar said it might be the first case in Canada in which a killer sought to prove he was underage after his adult conviction. Postmedia Network (Kingston Whig-Standard, A1, Montreal Gazette, Toronto Sun, Calgary Sun, National Post, Ottawa Citizen)

McDonald's killer loses appeal
The man believed to be the mastermind behind the most notorious killings in Cape Breton history has lost his appeal of the decision to deny him day parole. Derek Anthony Wood was sentenced to life in prison with no eligibility for parole for 25 years after being convicted of a number of charges, including two counts of first-degree murder in the 1992 Sydney River McDonald's killings when he, Darren Muise and Freeman MacNeil robbed the restaurant and killed three workers. A fourth person was left permanently disabled. Wood had filed an appeal with the Parole Board of Canada after it denied his day parole application earlier this year. He had been deemed a medium-to-high risk to reoffend in a violent manner, according to a psychological assessment. Cape Breton Post, A1

'She's never coming back'
Eighteen years later, the daughters of murdered prison guard Diane Lavigne say they're still struggling to cope. Testifying Wednesday at a hearing where former Hells Angels underling Stéphane Gagné is seeking an earlier parole eligibility on the life sentence he is serving for taking part in the murders of two prison guards in 1997, 40-year-old Isabelle Daoust said she still remembers how sunny it was on the Friday morning her uncle knocked on her apartment door and told her "my sympathies, Isabelle. Your mother's been assassinated." Gagné killed Lavigne in June 1997, shooting her from the back of a motorcycle as she drove home from her job at the Montreal Detention Centre. He later became a

collaborating witness against biker boss Maurice (Mom) Boucher and helped convict him. Boucher is now serving a life sentence for the murders of Lavigne and Pierre Rondeau and the attempted murder of Robert Corriveau, all of them guards at provincial detention centres targeted in an effort to intimidate the Quebec justice system. Daoust called the sequence of events in 1997 "surreal. Things like that didn't happen in Quebec. It's like a film that I was watching from above ... too big and unexpected to ever see coming." Montreal Gazette, A3, Le Devoir, Journal de Québec (Journal de Montréal); * La Presse

* **James Leroy Leopold, convicted of killing fiancée, has parole revoked after 5 months**
A Nova Scotia man who killed his fiancée has had his day parole revoked after just five months. James Leroy Leopold was convicted of manslaughter and sentenced to six years in prison after the death of Laura Lee Robertson in 2012. During his trial, the court heard Leopold told police he and Robertson got into a fight and that she died after he hit her in the throat. Following a hearing in May of 2015, Leopold was granted six months of day parole by the Parole Board of Canada. In their decision, the board noted that Leopold is at a high risk of violence towards a partner. Global News (2015-11-18)

* **Parole extended for killer ex-Mountie**
A former Mountie convicted of first-degree murder who has been running an antiques store in Prince George must spend at least a further six months on day parole, according to a recent Parole Board of Canada decision. Patrick Michael Kelly, 65, was convicted in 1983 for throwing his wife off the 17th-floor balcony of their Toronto apartment. Kelly was originally granted day parole in 2003. Since then, his parole has been revoked several times for failing to disclose financial dealings or relationships with women. The former undercover officer was granted full parole in 2010 and opened his store in Prince George. But the board reversed his release in August 2012 after he failed to report two relationships with women. Prince George Citizen (2015-11-18)

Traque contre un couple de voleurs
Un enquêteur qui a traqué pendant des mois un couple de voleurs à la Bonnie et Clyde, qui ont dérobé pour plus de 1 M$ en cambriolant des maisons cossues partout au Québec, sera récompensé aujourd'hui pour son travail acharné. «Je suis tellement content d'avoir résolu ces dossiers. Sinon, ils auraient continué à commettre d'autres crimes. Certaines victimes ont été démolies en se faisant voler des objets de valeur importants à leurs yeux», a dit le sergent-détective de la Sûreté du Québec, Gordon Hunter. (...)Le sergent Hunter sera récompensé aujourd'hui dans le cadre du Gala des Prix policiers du Québec pour son implication dans cette enquête. (...)Jimmy Simard-Patry et Elyanne Miller ont respectivement écopé de cinq ans et demi et de deux ans de prison en juin. Un complice du couple n'a pas encore subi son procès. Journal de Montréal (Journal de Québec)

Province's plan a 'beacon' for justice: minister - Unveils details of restorative strategy
A five-year plan to make restorative justice a mainstream method of dealing with crime in Manitoba will include a community court in the North End, an expansion of current mental-health and drug-court diversion programs and a focus on victims, the provincial government announced Wednesday. Restorative justice is "local, swift, common-sense, tough justice," Justice Minister Gord Mackintosh told a room of restorative-justice advocates at the legislature building Wednesday, proclaiming legislation he hopes will establish Manitoba as a "beacon in North America for restorative justice." The term restorative justice refers to an individualized approach for offenders (who are often youth or first-time offenders) to take responsibility for their actions, usually by reconciling with victims, performing community service and working toward their rehabilitation. It's used mainly to handle less serious crimes and non-indictable offences, but the justice minister said the province is looking at "tacking on" restorative-justice techniques alongside criminal-court sentencing. The province plans to fulfil the new strategy, announced Wednesday to coincide with the implementation of the Manitoba Restorative Justice Act, by increasing its current $1.8-million annual spending on restorative justice, starting with an additional $320,000 next year. Winnipeg Free Press, B5, Winnipeg Sun; * Radio-Canada

* **Credit-card fraud extends sentence**
Credit-card fraud has added to the length of a Fredericton man's prison sentence. Ashley James Charlton, 35, was brought to provincial court in custody recently on a charge of using a stolen credit card between Aug. 5 to 6. The former Canada Street resident pleaded guilty to the offence during an

appearance last month. Judge Mary Jane Richards sentenced Charlton to six months' incarceration and ordered that he pay a $100 victim-fine surcharge. He was also instructed by the court to pay restitution in the order of $3,279. Charlton told court during an earlier appearance that he's serving time in the Springhill Institution in Nova Scotia for breaking into two food vendor kiosks at the Northside Market and stealing hundreds of dollars worth of meat on Aug. 19. Daily Gleaner, A4

*** World's indigenous leaders look to adopt prison practices at Waikeria**
Indigenous leaders from around the world hope to adopt practices from a Waikato prison unit that rehabilitated violent offenders, drug abusers and sex offenders. Daniel Levi Martin is a tribal leader of Tla-o-qui-aht First Nations people, who live on reserves along the Pacific Rim National Park, Canada. "I hope that I can learn the different ways of doing things here [at the prison], techniques I can take back home to my people," he said. Martin was in Hamilton for the week-long indigenous people's conference, Healing Our Spirit Worldwide - The Seventh Gathering, hosted by Te Rau Matatini. "I'm an elder and an advisor to treatment centres. I hope to learn something here." Waikeria Prison's Karaka Unit is an 80-bed therapeutic community for medium and high risk offenders. Since 2010, 245 prisoners have completed treatment programmes at Waikeria Prison's Karaka Unit. Since 2010, 245 prisoners have completed the programme, with 55 per cent of those identifying as Maori. There are three programmes within the unit; the Dependency Treatment Unit (DTU) for those with substance abuse, the Special Treatment Unit Rehabilitation Programme (STURP) for high-risk offenders, and the Adult Sex Offender Treatment Programme. COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Police must communicate to track missing women
Effective communication between police agencies is essential when it comes to investigating vulnerable women who have disappeared, says the man who oversaw British Columbia's Missing Women Commission of Inquiry. Wally Oppal, a former B.C. Court of Appeal justice and provincial attorney general, said there was little communications between the RCMP and the Vancouver police in the 1990s when multiple women went missing in that province. "When vulnerable women go missing police have to get involved and that is what they didn't do in the 90s," Oppal said in an interview. "The result is you have well over 100 women who were murdered." Exchanging information in such cases has to take place, Oppal said. What happened in B.C. was that women were being picked up in the eastside of downtown Vancouver but were being murdered in Port Coquitlam, about 35-40 minutes away, he said. "There were very little communication between the RCMP and the Vancouver police," Oppal said. "We were very critical of the policing that took place and that there was no real liaison between the sex trade workers and the police." Oppal will be at St. Thomas University Thursday night presenting a public lecture on the inquiry. Appointed commissioner in 2010, Oppal held close to 100 days of public hearings and forums in Aboriginal communities in northern B.C. in which the many victims and survivors of the Robert Pickton tragedies testified. The inquiry was called to examine why Vancouver police and the RCMP failed to catch Pickton before he was arrested in February 2002. Daily Gleaner, A3 (Times & Transcript)

*** Does Canada still need a Status of Women minister?**
We've come a long way in Canada on gender equality - far enough for Prime Minister Justin Trudeau to mandate gender parity in his first cabinet. So do we still need a Status of Women ministry? "Yes, we certainly do," said noted feminist and journalist Michele Landsberg, The new mandate letter for Status of Women Minister Patty Hajdu tasks her with trying to eliminate economic and political inequalities that affect women, tackling violence against women and moving forward with a planned inquiry into murdered and missing aboriginal women. Under the Harper government, Landsberg said, women's rights were set back by budget cuts for research and advocacy in the ministry. This loss of funding, she said, meant government couldn't get a complete picture of what was happening in the lives of women. iPolitics, Toronto Star

*** Saskatoon men asked to combat violence against women**
Members of the University of Saskatchewan Students' Union (USSU) have called for an end to violence against indigenous women and children, hoping men will lead the movement for change. "Traditionally as men, our role was to stand as protectors and also to support our women," said Regan Ratt-Misponas, indigenous student representative with the USSU. "Our women were very much regarded as the leaders of First Nations communities and First Nations reserves." On Wednesday, students were introduced to the "Moose Hide Campaign," a grassroots, non-profit that encourages aboriginal and non-aboriginal men to wear pins made of the material. Global News (2015-11-18)

*** Delete Day aims to combat social media cyberbullying**
Countless people can see what you're doing, and a lot of them are mean. That was the message Windsor police and Catholic Central High School tried to drive home Wednesday during Delete Day, an event they hosted to combat cyberbullying. Students spent time with their vice-principal and a police officer to learn how to delete bullying posts from their social media profiles, along with anything they might regret posting themselves. "There are adults and other people whose sole purpose is to troll the Internet and find young people using social media to see if they can acquire their information," said vice-principal Laura Beltran. "When that happens, it can ruin lives and it's very difficult to put lives back together once information is out there. Especially for young people, their reputation, their self-esteem, their self-concept is still growing and maturing and it can be devastating for them at a very early age." Dozens of students showed up for Delete Day, one of a number of events being held as part of Bullying Awareness Week. Grade 12 student Manal Muzamil said it was a good chance to "refresh" social media accounts, delete bad things people have posted and block those responsible for the negativity. Windsor Star, A3

*** Cyberbulling starts young**
Cyberbullying can affect children far younger than widely believed, experts warn. While it starts to become prevalent in students around the Grade 7 level, children can gain access to this world much sooner, said Brad Burns, principal of Highlands School in Edmonton. "I know of students that are in kindergarten who are coming to school with cellphones, because they are a very useful resource for safety and communication at homes," said Burns. "As technology is more prevalent in our lives and more integrated, that age of being in that world keeps moving down to younger and younger children." On Wednesday, as part of Bullying Awareness Week, Burns was one of five panellists speaking at an Alberta government-sponsored webcast on cyberbullying. He said it's up to the parents to inform and discuss with their children about the importance in becoming a "responsible digital citizen." Calgary Sun, A21 (Edmonton Sun)

*** There's value in carding**
An opinion piece states, "In September 2011, a 15-year-old girl was sexually assaulted in a Brampton park. Officers attached to Peel Regional Police's special victims unit had a description, but the perpetrator was long gone. Detectives checked to see whether there had been any PRP17s (street check reports) filed from anywhere nearby. Bingo. Up came a street check on a 37-year-old man - including name, date of birth and description - who was engaged by police at the park months earlier. They had a suspect and a reason for a search warrant which - when executed - led to the arrest of the man for possessing child pornography as well as the sexual assault on the girl. There's one example of the benefits of police community engagement that opponents feel is racial profiling. Under new rules being implemented next year by the provincial government, police will have to tell people encountered - such as the man engaged in the park - that there is no need for them to talk to officers and that they're free to go. It's absurd." Toronto Sun, A10

*** Fassbender saps amalgamation impetus**
It never was about forcing amalgamation on Greater Victoria, and Peter Fassbender knows it. B.C.'s community charter already bars the provincial government from imposing amalgamation on anyone. No, all that people are asking for is a study into whether amalgamation makes sense. (...)Of course, while Victoria and Esquimalt might see this disparity as an excellent reason to share the cost of policing more equitably, the other municipalities see it as a totally awesome reason to leave things as they are. Why would Langford, whose residents pay just $141 apiece for the RCMP, voluntarily eat a cost hike?

Both Victoria Mayor Lisa Helps and Esquimalt Mayor Barb Desjardins recognize this reality. Times Colonist, A3

*** 'Almost one an hour'**
When she refused to give him money to buy beer, one Edmonton man pushed his girlfriend to the ground, pulled her hair and punched her in the face. (...)"This is only a sample of the files received by the Edmonton Police Service this past weekend," Staff Sgt. Sean Armstrong, in charge of the domestic offender crime section, told a downtown crowd Wednesday. "There were 88 cases responded to by EPS members, and sadly this was a quiet week. I can guarantee you there are many more domestic violence occurrences in our city that were not reported to us." These revelations shocked those gathered for the the Alberta Council of Women's Shelters' (ACWS) 11th annual Breakfast with the Guys at the Chateau Lacombe on Wednesday. In 2014, Edmonton police were involved in nearly 8,000 domestic violence complaints. (...)According to government statistics, Alberta has the fifth highest rate of intimate partner violence reported to police and the second highest rate of self-reported intimate partner violence in Canada. Edmonton Sun, A7

*** First Nation contemplates ban on criminals on reserve**
Elders on the Little Pine First Nation are exploring the idea of banishing criminals from the reserve. The idea of kicking known offenders such as drug dealers and abusers offthe reserve was preposed at a recent community meeting aimed at dealing with crime on the First Nation, located north of North Battleford. "The criminal justice system is not working. Look at the statistics," said Jacob Pete, a band member who helped facilitate the meeting. "We have to take ownership of the problems and come up with local solutions." The idea of banishing criminals from a particular community is not unheard of. Saskatchewan's largest First Nation, Lac La Ronge Indian Band, has been banishing drug dealers and others for decades. First Nations like Mistawasis near Prince Albert and Fishing Lake have also banished people for crimes. StarPhoenix, A3 (Leader-Post)

*** Un quartier général de la mafia visé par un attentat**
Un incendie criminel allumé dans un bar de la rue Jean-Talon la nuit dernière pourrait constituer un nouveau chapitre d'une tension grandissante au sein de la mafia montréalaise. *La Presse* a en effet appris de sources de divers milieux que l'établissement visé, le café Empire, serait l'un des quartiers généraux de la Table de direction de la mafia qui dirige les rênes du crime organisé montréalais, en alliance avec d'autres groupes criminels, depuis la mort naturelle du parrain Vito Rizzuto, il y a près de deux ans. Selon nos sources, Vito Rizzuto aurait été vu souvent à cet endroit après sa libération d'un pénitencier américain et son retour à Montréal, en octobre 2012. La Presse (2015-11-18)

*** Front line workers get info on battling sexual exploitation**
If you don't think human trafficking is a concern within Norfolk County, think again. “Because we're rural, we're a very big source destination for sexual exploitation,” explained Christina Bodine, chair of the Sexual Assault Centre of Brant. Bodine and her colleagues played host to a human trafficking seminar for social service employees and concerned residents at the Norfolk Golf and County Club Wednesday. One of the main messages was human trafficking – at one level or another – certainly does take place in Norfolk, Brantford and Six Nations. The trouble is, not many get the message because young women are often being shuttled to places like Niagara Falls or Windsor. “You have to lay charges in the place that the crime happens, so they'll be laid in places like Niagara Falls and Windsor, but they're gals that are from Brant, Haldimand, Norfolk, Six Nations,” Bodine explained. “That's why those stats aren't showing up, but we're a big source area.” That's why gatherings like the one on Wednesday are held. Speakers addressed the warning signs of human trafficking, what its definition is and who is most vulnerable. “It is complicated, so we're just trying to give an overview so people are aware,” Bodine noted. “What we do know is over 90 per cent is domestic, so it's happening within Canada, it's happening within our borders.” While the day-long event was open to all, Bodine and her team targeted a specific group to take part. Simcoe Reformer (2015-11-18)

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

City pulling together for refugees
It was an unprecedented Edmonton conclave. Ninety representatives from more than a dozen social agencies and government departments met Wednesday at the Ramada on Kingsway to plan a joint mission. Their goal? To settle some 1,500 Syrian refugees in Edmonton before year's end. "We're still not sure of the exact number or the exact timing. And that's causing some anxiety for us," says Stephen Carattini, CEO of Catholic Social Services. His agency has the federal contract to settle refugees in Edmonton. "Normally, we settle 400 to 500 refugees a year. Now, we're going to be settling three or four times that many. It's not unfamiliar, what we're being asked to do. But this is happening very, very quickly." The meeting included representatives from the federal departments of Canadian Heritage and Immigration, Refugees and Citizenship. Representatives of the provincial departments of Alberta Jobs, Skills, and Labour, Alberta Health and Alberta Education were there, too. So were Edmonton's school boards, along with Capital Region Housing and Edmonton and Area Child and Family Services. And there was an eclectic and ecumenical range of other agencies, including the Islamic Family and Social Services Agency, the Edmonton Mennonite Centre for Newcomers, Edmonton Immigrant Services Association, ASSIST Community Services, Centre d'accueil et d'etablissement, Changing Together and the Indo-Canadian Women's Association. Postmedia News (Edmonton Journal, A1/Front)

Queens sponsorship effort edges ahead
A group of residents in Queens County has just squeaked past the halfway point in their goal of raising $20,000 to sponsor a family of Syrian refugees. The Queens Refugee Care Team hopes to sponsor a family of six, and has already raised almost $11,000. Chronicle Herald, A8

Premier confident about refugees
Nova Scotia's premier doesn't want to pre-judge whether Ottawa should pull back from a plan to bring 25,000 Syrian refugees into Canada by the end of the year. Stephen McNeil said that Ottawa is responsible for handling any security concerns that arise from its screening process of refugees and his province remained ready to proceed with welcoming newcomers once it's determined how that will happen. McNeil said he expected many of those concerns to be addressed in a federal-provincial meeting next week, in light of the recent terror attacks in Paris and Beirut. "Security coming into the country is the responsibility of the federal government," said McNeil. "So if it (the plan) continues to move forward we are ready to participate as part of the federation." Canadian Press (Cape Breton Post, A9)

Notley says Calgary, Edmonton among five Alberta cities likely to take refugees
Premier Rachel Notley says Calgary and Edmonton are expected to take in the bulk of Syrian refugees coming to Alberta, with the remainder spread out over three other cities - Medicine Hat, Lethbridge, and Red Deer. "We're working to ensure that we're able to provide a seamless and effective settlement process," Notley told reporters Wednesday. "There are five cities where refugees would most likely land. The vast majority of them will be in Calgary and Edmonton. "Obviously the mayors need to be fully on side with it, and I believe that they are and have it well in hand." Notley was flanked by Edmonton Mayor Don Iveson and Calgary's Naheed Nenshi at the legislature following a meeting to discuss a range of issues, including the refugee resettlement. The federal government has said it wants to resettle 25,000 Syrian refugees across Canada by the end of the year. Notley has said she expects Alberta will take between 2,500 and 3,000 of those fleeing the war-torn region. Postmedia News (Calgary Herald)

Goodwill beats bureaucracy
They've been offered an entire convent in Pointe-Claire to house the refugees, a CEGEP in Rosemont with classrooms and showers to use at least over the holidays, rooms and fridges, winter coats and dishes. While politicians wrangle over whether it's possible to bring in 25,000 Syrian refugees over the next six weeks, grassroots organizations and ordinary Quebecers are making it possible. "Since last week our phones and email accounts have been overloaded with offers from Quebec residents wanting to help Syrian refugees with clothes, furniture, appliances," said Paul Clarke, the executive director of Action Réfugiés Montréal. "As public consciousness has ramped up that Syrian refugees are coming, the generosity has been astounding." And the terrorist attacks in Paris did not stop the flow, Clarke added. He has had to ask people to stop bringing in winter coats and boots to the organization's downtown locale

- there was just no room for more. But while every bit helps, especially if Quebec does receive 5,700 refugees over the next 43 days, such a massive endeavour requires some coordination, between all the groups involved, and every level of government. The community groups tasked with helping refugees resettle in Montreal - there are 18 in Montreal alone that offer services in Arabic - have set up a central list of people who want to volunteer their time, housing and miscellaneous goods, including all those winter coats and boots: infoparrainage@tcri.qc.ca And cities, including the 13 in Quebec that could receive some of the refugees, are also mobilizing. Postmedia News (Montreal Gazette, A1/Front)

Valcartier se prépare à l'arrivée de réfugiés
La base militaire de Valcartier est sur un pied d'alerte et se prépare à accueillir des centaines, voire des milliers de réfugiés syriens d'ici la fin de l'année. Le Canada avait déjà évoqué la possibilité que les bases militaires servent de terre d'accueil temporaire aux réfugiés, et l'hypothèse se confirme selon de nombreuses sources. Les 500 premiers réfugiés syriens débarqueraient dans la région de Québec à partir du 1er décembre - une date évoquée par plusieurs - et seraient logés dans diverses installations de la base militaire, notamment au Camp des Cadets. L'Armée vient de lancer un appel d'offres pour l'«hivernisation » d'une dizaine de baraquements. Les travaux, qui prévoient l'installation de chauffage, sont évalués à 1,5 M$ et seront réalisés «dans un très court délai, d'ici le 30 décembre», peut-on lire dans les documents sur le portail MERX. Journal de Québec, 3 (Journal de Montréal, 7); Le Soleil, 5/Front

Les villes veulent être mieux informées
Les maires des 13 villes québécoises qui accueilleront les réfugiés syriens attendus d'ici la fin de 2015 demandent à être mieux informés des plans d'Ottawa et de Québec, les élus ignorant encore combien d'entre eux chaque ville recevra. Une conférence téléphonique d'une quarantaine de minutes a réuni hier midi ces maires afin de faire le point sur le dossier. «Ce qui me frappe, c'est la volonté des villes à accueillir les réfugiés. Chacune a déjà pris des initiatives pour réunir les groupes sur son territoire. Mais il manque deux morceaux du casse-tête: Québec et Ottawa. Les villes sont déjà à pied d'oeuvre, mais elles n'ont pas toute l'information», a indiqué la mairesse de Longueuil, Caroline St-Hilaire. L'Union des municipalités du Québec a mis en place un comité auquel on espère voir Ottawa et Québec se joindre pour coordonner l'arrivée des réfugiés. «Il faut qu'on s'assoie, s'il le faut quotidiennement, pour éviter que chaque maire appelle à gauche et à droite pour avoir de l'information. On veut éviter qu'il y ait des ratés. On a connu de beaux succès d'accueil de réfugiés et il ne faudrait pas manquer le bateau», a ajouté Mme St-Hilaire. La Presse, A10

Rookie MP Tassi says government committed to accommodating refugees
Filomena Tassi is assuring residents that Canada remains committed to accommodating 25,000 Syrian refugees by Jan. 1. "At the same time, we're going to exercise the highest level of vetting and security," said the rookie MP, who represents the riding of Hamilton West-Ancaster-Dundas and will be sworn in as part of Prime Minister Justin Trudeau's government on Dec. 2. Opposition to the Liberal campaign promise has already grown in reaction to reports that at least one of a number of ISIL terrorists who participated in the Paris attacks in last weekend entered France with other Syrian refugees. But with a majority government, Trudeau and his team appear to be moving ahead on the promise. "We are staying on course," Tassi said. Tassi has been to Ottawa and completed her training for first-time members of Parliament. She is now focused on setting up shop in her widespread constituency, searching for an office from which to serve residents from Ancaster to Westdale and the west Mountain. Tassi said there was nothing to officially announce as far as any committees she will be part of, or other specific roles within the government. Hamilton Spectator, A5

Les initiatives citoyennes se multiplient
Le téléphone de la Table de concertation des organismes au service des personnes réfugiées ou immigrantes n'arrête pas de sonner depuis des jours. «Les gens offrent des logements, des vêtements. Des professeurs à la retraite proposent de l'aide aux devoirs, des Syriens veulent faire de la traduction. Tout le monde veut contribuer et faire partie de ce moment historique», dit Sylvain Thibault. Parmi les offres de dons se trouvent aussi des messages de quelques personnes qui ont déjà pris les choses bien en main. Les initiatives citoyennes se multiplient. C'est le cas de Yasmine Abdelfadel qui a décidé lundi soir qu'elle lançait un projet de paniers d'accueil contenant notamment des paquets de couches et des

fournitures scolaires. Une autre dame est en train d'amasser entre 600 et 900 toutous «pour que chaque enfant qui arrive au Québec en ait un.» Pour l'instant, les gens qui veulent faire des dons spécifiquement destinés aux réfugiés syriens peuvent le faire par l'entremise des initiatives citoyennes qui apparaissent sur les réseaux sociaux ou en communiquant avec des groupes comme la Table de concertation des organismes au service des personnes réfugiées ou immigrantes. Toutefois, la plupart des organismes communautaires sont en attente. La Croix-Rouge canadienne a ouvert, il y a quelques mois, un fonds destiné aux réfugiés syriens, mais elle attend des annonces gouvernementales pour lancer des initiatives locales qui serviront les réfugiés à leur arrivée au Canada et au Québec. Carl Boisvert, porte-parole de la Croix-Rouge pour le Québec, conseille aux personnes qui veulent contribuer à l'accueil de réfugiés ici d'attendre que les campagnes spécifiques soient mises en place. La Presse, A10

On n'a pas le temps

Alors là, un gros bravo. Quand on a retrouvé le petit Alan mort noyé sur une grève en Turquie, vous trouviez que le Canada n'en faisait pas assez pour faire émigrer sa famille chez nous. Maintenant que le Canada a décidé d'accueillir 25000 réfugiés syriens d'ici la fin de l'année, vous branlez dans le manche. Vous avez peur. Tout d'un coup qu'un ou deux terroristes se glisseraient dans le lot. J'entends des maires, des députés, des ministres réclamer des délais. Il faut prendre le temps de bien faire les choses, dites-vous. Le temps de bien faire les vérifications de sécurité. Le temps? Pendant qu'on est là à niaiser autour d'un chiffre, des bombes continuent de tomber sur la tête des gens en Syrie et en Irak. Il y a des exactions, des viols, des décapitations, des défenestrations. Et dans le lot des innocentes victimes, il y a d'autres petits Alan. Qu'est-ce qu'il vous faut pour vous convaincre que le temps presse? Des photos d'enfants déchiquetés par les explosions? Avoir du temps devant soi, c'est le luxe d'une société éloignée de la guerre comme la nôtre. Le Droit, 2/Front

Rapid resettlement is possible: expert

An authority on immigration and refugees says Canada and the United Nations have the operational knowhow and security safeguards to vet 25,000 Syrians for rapid resettlement. But the question remains: can the humanitarian resettlement project be pulled off by the Liberal government's Dec. 31 deadline without compromising domestic security? "I hate answering that question at this point," said Peter Showler, former chair of the Immigration and Refugee Board and former director of the Refugee Forum at the University of Ottawa. "(However) it is possible in a relatively short period of time - with no reference one way or the other to the deadline - to do fast, effective processing that includes reliable security screening." Immigration Minister John McCallum has said the refugees would be properly screened. "I think (McCallum's) implication has been that if it takes longer, if it goes over the deadline, then it goes over the deadline," Showler said. "Certainly my understanding from him is that getting the job done properly is the priority." Showler's appraisal came as the Ottawa Citizen learned refugees arrived Tuesday in Montreal. Department of Immigration, Refugees and Citizenship spokesman Remi Lariviere confirmed a planeload of Syrian refugees landed, but did not make clear if the group was part of the 25,000 targeted for resettlement under the Liberals' plan. Postmedia News (Vancouver Sun, A1/Front)

Clock ticking on Canada's refugee plan

The timing of Canada's crash program to bring 25,000 Syrian refugees to Canada by the end of the year keeps sliding, according to two officials familiar with aspects of the planning. The original goal had been to begin the airlift by Thursday of this week, but as no charter aircraft have been booked yet, it would now be at least one more week before flights got underway, one of the officials said. When the flights reach their peak next month, about 1,000 refugees will be arriving in Canada every day. The officials did not want to be identified because diplomats and immigration officers have been told by Ottawa not to speak about the matter, with all requests referred to the government. "Unfortunately I have nothing to say to you at the moment," Immigration Canada spokesman Jean-Bruno Villeneuve said in an email from Ottawa, adding that he was unable to confirm any details about the resettlement program. (...)But the United Nations High Commissioner for Refugees, which registers asylum seekers and is supposed to be working with Canada on its resettlement program, said this week that it remained largely in the dark about Ottawa's plans. While the UNHCR welcomed the Canadian announcement to settle Syrians, "I am afraid I cannot talk about Canada's program," spokeswoman Ariane Rummery said in an email from Geneva "until we know more about the modalities." Whig-Standard, B2

Le temps du changement
Comme il était de mise dans ces circonstances tragiques qui relativisaient tout le reste, la couverture médiatique du dernier conseil général du PLQ a été presque exclusivement centrée sur les réactions aux attentats de Paris et l'accueil des réfugiés syriens. Même s'il est passé largement inaperçu, le premier ministre Couillard n'en avait pas moins un autre message à transmettre aux militants libéraux réunis à Québec. " Le temps du changement est venu, a-t-il dit. Il faut oser faire les choses différemment, oser remettre les choses en question. " Quelques minutes plus tôt, le président de la commission politique du PLQ, Jérôme Turcotte, avait évoqué les conséquences que le vieillissement accéléré de la population aura sur les coûts des services de santé qui, au rythme actuel, accapareront 70 % des dépenses gouvernementales en 2030. Ces propos semblaient rejoindre ceux que le ministre de la Santé, Gaétan Barrette, avait tenus la semaine dernière à propos du panier de services assurés par la Régie de l'assurance-maladie. S'il n'est pas question " à ce moment-ci " d'exclure certains services de la couverture, il a averti que " la situation budgétaire du Québec nous invite à une réflexion au long cours sur ces éléments-là ". Le Devoir, A4

Weil downplays 'anxiety' as polls reveal fears
Quebec's immigration minister was scrambling to reassure skittish Quebecers and mayors Wednesday that the province's decision to welcome Syrian refugees will not come back to haunt them. But two new polls reveal the brutal Paris terror attacks have spooked people. Suddenly, many are hot on the use of military force to put out threats and favour a goslow approach to accepting refugees. "There is a period of anxiety," Kathleen Weil told reporters on her way into a meeting of the Quebec cabinet. "But I think it's important that mayors and political leaders use the right tone, give the right message. "These are some of the most vulnerable people that we want to greet and settle in Quebec." Weil was responding to growing domestic blowback over the terror attacks last Friday in Paris which left 129 people dead and 350 injured - many of them seriously. With no clear plan forthcoming from Ottawa, Canadian premiers and municipalities have been operating in a void with growing questions about how the country will handle the complicated business of feeding, clothing, housing and integrating the 25,000 Syrian refugees Canada wants to welcome by Jan. 1. The province has already identified 13 Quebec cities with sufficient infrastructure and support systems to accept refugees. Quebec's share of the 25,000 is about 6,000. Postmedia News (Montreal Gazette, A4)

PM condemns racism as Syria refugee plan opposed
Prime Minster Justin Trudeau urged Canadians to resist hatred and racism as a poll showed most Canadians were opposed to his plan to bring in 25,000 Syrian refugees by year-end and a flurry of racist incidents were reported around the country. The Liberals, who took power after an election last month, campaigned on a promise to bring in the refugees by Jan 1. Critics say the number is too large and could threaten security following the attacks in Paris. An Angus Reid poll released on Wednesday showed 54 per cent of Canadians opposed the plan, up from 51 per cent before the bloodshed in Paris. But support for the plan also increased, with 42 per cent in favour, up from 39 per cent in October. Most of those who opposed Trudeau's plan did so because of the short timeline, with 53 per cent saying the schedule was too short to ensure all the necessary security checks were completed. Another 10 per cent said 25,000 was too many, and 29 per cent said Canada should not be accepting any Syrian refugees. (...)"Diversity is Canada's strength. These vicious and senseless acts of intolerance have no place in our country and run absolutely contrary to Canadian values of pluralism and acceptance," Trudeau said. Whig-Standard, B1/Front

Les initiatives citoyennes et les dons se multiplient
« Les gens offrent des logements, des vêtements. Des professeurs à la retraite proposent de l'aide aux devoirs, des Syriens veulent faire de la traduction. Tout le monde veut contribuer et faire partie de ce moment historique », dit Sylvain Thibault. À son bureau de la Table de concertation des organismes au service des personnes réfugiées ou immigrantes, le téléphone n'arrête pas de sonner depuis des jours. Sa boîte de courriels déborde. Parmi les offres de dons de toutes sortes se trouvent aussi des messages de quelques personnes qui ont déjà pris les choses bien en main. Les initiatives citoyennes se multiplient. C'est le cas de Yasmine Abdelfadel qui a décidé lundi soir, après en avoir discuté avec ses parents, qu'elle lançait un projet de paniers d'accueil. Le concept rappelle les paniers offerts spontanément à de nouveaux voisins qui arrivent dans le quartier. Mais les tartes bien chaudes et les confitures maison

seront remplacées par des paquets de couches et des fournitures scolaires. « Des choses que les gens ne pensent pas de donner lorsqu'il y a des collectes », précise la jeune femme, encore surprise de la réponse reçue sur la page Facebook de son Opération paniers de bienvenue. Une réponse telle qu'elle est entrée en contact avec la Table de concertation pour avoir de l'aide logistique. Ce qu'elle aura. « Nous allons faire des paniers personnalisés, selon la famille à laquelle ils seront destinés. » La Presse, 5

Autre dissonance libérale

Pour une deuxième journée d'affilée, le premier ministre Philippe Couillard et son ministre Pierre Moreau ont joué des notes discordantes sur la capacité du Québec à accueillir des réfugiés syriens d'ici la fin de l'année. Le chef de l'État québécois estime que le Québec parviendra «fort probablement» à accueillir sur son sol 3650 d'entre eux avant la fin de l'année, comme il s'y était engagé. Son ministre de la Sécurité est incapable de garantir plus de 2400 réfugiés syriens sélectionnés - et non pas accueillis - au 18 décembre. «Non, on est sur la même longueur d'onde, a assuré M. Couillard en fin d'après-midi. On vient d'en parler, lui et moi, avec tous les collègues. On est très confiants d'atteindre la cible du premier contingent.» (...) Des 1200 personnes prévues à l'origine, le gouvernement Couillard rehaussait son seuil à 3650. C'était avant que l'engagement du nouveau premier ministre canadien Justin Trudeau porte à quelque 5700 le nombre de réfugiés syriens à recevoir au Québec. «Sur le premier contingent [celui de 3650 réfugiés], on n'a aucun doute parce qu'on a les moyens financiers, les mécanismes, a affirmé le premier ministre Couillard. La question qui reste à éclaircir, c'est la mise en place du plan fédéral plus large.» Pourtant, un peu plus tôt, son ministre Pierre Moreau a été incapable d'assurer que Québec parviendrait à sélectionner - et non accueillir - les 3650 personnes prévues avant 2016. Un processus d'habilitation sécuritaire effectué par Ottawa suit l'étape de la sélection par le Québec. La Presse (Le Soleil, 6,7/Front; La Tribune, A7, 23, La Tribune, A7; Le Nouvelliste, 15) * Le Quotidien, 26,27 ; Le Droit, 16) ; * Agence QMI (Journal de Québec, 4 ; Journal de Montréal, 2)

D'ex-hôpitaux ontariens pour héberger des réfugiés?

Le gouvernement ontarien songe à utiliser des hôpitaux récemment désaffectés afin d'héberger temporairement les réfugiés syriens qui doivent affluer d'ici la fin de l'année dans cette province. Le gouvernement fédéral de Justin Trudeau a promis que le Canada accueillerait 25000 réfugiés d'ici le 1er janvier 2016, et l'Ontario s'est engagée à en accueillir 10000 d'ici la fin de 2016. Le ministre provincial de la Santé, Eric Hoskins, a indiqué mercredi que son gouvernement ignorait toujours le nombre de réfugiés qu'Ottawa lui demanderait d'accueillir d'ici la fin de l'année, mais il a assuré que l'Ontario était prête à faire sa «juste part» dans cette vaste opération. L'Ontario pourrait par ailleurs accueillir et soutenir certains réfugiés sur une base temporaire, avant qu'ils ne déménagent dans d'autres provinces ou territoires, a-t-il prévenu. Le Droit, 16; * Canadian Press (Cape Breton Post, A11; The Telegram, D3; Charlottetown Guardian, A7; London Free Press, A3); * Ottawa Sun, A9

La crainte de la passoire

Un article d'opinion déclare, « Ce n'est guère surprenant: 59 % des Québécois ont peur que des terroristes se faufilent parmi les réfugiés qu'on s'apprête à accueillir, parce qu'ils doutent que les autorités soient capables d'effectuer les contrôles nécessaires pour les débusquer. C'est ce que révélait, hier, un sondage Léger mené pour le compte de TVA Nouvelles. Un sondage, on n'en sera pas étonnés non plus, qui indique que trois Québécois sur quatre craignent que des attentats aient lieu au pays. Dans la foulée du drame parisien et de ses rebondissements, de même que de l'intense médiatisation qui a cours, redouter la menace terroriste, surtout après les événements de l'an passé à Saint-Jean et à Ottawa, est un réflexe qui se comprend. On ne peut pas rester insensibles à l'horreur, à la haine. Il est normal de ressentir de l'insécurité face à des actes aussi insensés, aussi méprisables. Encore faut-il gérer ce réflexe avec sang-froid et ne pas céder à la panique ou à la xénophobie. Il faut se rappeler que les auteurs des attaques de l'an dernier chez nous étaient des Canadiens, pas des immigrants. Gardons aussi à l'esprit que la menace terroriste se propage davantage par Internet que par les frontières. Enfin, considérons qu'il y a bien plus d'actes criminels commis par des bandits et des chauffards ivres que par des terroristes. Cela dit, le Canada doit bien sûr mener une lutte impitoyable au terrorisme... » Le Nouvelliste, 18

Canadians leery of Trudeau's refugee plan
A little more than half of Canadians disapprove of the federal government's plan to bring in 25,000 Syrian refugees by the end of next month, a new poll suggests. And if they had to choose, Canadians surveyed by Mainstreet Research for Postmedia appear to be more in favour of bombing terrorists than training other armies howto fight. "The training mission has wider support. Either way, most Canadians believe Canada should be taking a role in the fight against ISIS. Only 8% of Canadians would support no action at all," said Quito Maggi, president of Mainstreet. Conducted Monday, the firm polled a total of 2,718 people. It suggests public opinion is polarized over what to do on the world stage when it comes to bombs and refugees. "Our earlier polling showed strong support for bringing refugees to Canada, but after the attacks in Paris, security is now a higher concern," Maggi said. QMI Agency (Ottawa Sun, A10; Toronto Sun)

* **13 000 réfugiés pour trois mois**
Les Forces armées canadiennes affirment pouvoir fournir de l'hébergement à un maximum de 13 000 réfugiés syriens à travers le Canada pendant une période n'excédant pas trois mois. Si l'objectif de 25 000 avant la fin de l'année est maintenu, cela signifie que les premiers arrivés ne feront que passer par les bases militaires pour ensuite être relogés ailleurs. Le Soleil, 4, 5/Front ; Postmedia News (Winnipeg Sun, A6; Ottawa Sun, A8; Toronto Sun, A4; Calgary Sun, A8)

* **Hamilton readies for influx, but many questions remain**
A broad range of Hamilton groups, agencies, churches, officials and individuals say they have been working for weeks to build plans for what could be a significant number of Syrian refugees landing in this city in the very near future. The trouble is, they don't know how many are coming, or which sponsorship and resettlement programs the refugees will be funnelled through. Hamilton Spectator, A1

* **Canadian business groups tout refugee job opportunities**
Businesses that have a hard time recruiting Canadians say they are reaching out to the federal government and the provinces to see if they can match up with the incoming wave of refugees. Lobby groups for Canadian employers are intrigued by the 25,000 refugees Prime Minister Justin Trudeau expects to bring in by the end of the year. "This has been ramping up since a year ago," said Ron Davidson, director of government relations for the Canadian Meat Council, which lobbies on behalf of meat packing plants. Embassy

* **Un élan de générosité de la population**
L'arrivée massive à Québec de 800 réfugiés syriens prévue en décembre semble provoquer un élan de générosité dans la population. Le Centre multiethnique note une hausse importante du nombre de personnes intéressées à leur venir en aide. Une bonne nouvelle pour l'organisme, qui aura grandement besoin de ressources supplémentaires. Le Soleil, 8/Front

* **Où vont les réfugiés syriens?**
L'un des terroristes à l'origine des attentats de Paris a été retrouvé avec un passeport syrien. On ne sait pas encore si le passeport est authentique ou s'il appartenait vraiment à l'homme qui s'est fait exploser au Stade de France. Mais la nouvelle a fait grand bruit, provoquant des mouvements partout dans le monde afin de fermer les portes aux réfugiés syriens. Voici quelques chiffres pour faire le point sur la crise humanitaire de l'heure. Depuis 2011, l'Agence des Nations unies pour les réfugiés (UNHCR) a dénombré plus de 4,2 millions de personnes qui ont fui la guerre en Syrie. La très grande majorité a trouvé refuge dans des pays limitrophes. Plus du quart d'entre eux ont moins de 18 ans. L'Europe a accueilli à ce jour près de 510 000 réfugiés, dont plus de 150 000 en Allemagne. De son côté, le Canada propose de recevoir d'ici la fin de l'année 25 000 nouveaux réfugiés qui s'ajouteraient aux quelque 3000 déjà au pays. Voici une douzaine de pays ou de régions qui ont accueilli des réfugiés syriens jusqu'à présent. La Presse, A11

* **Accueillir des réfugiés est un devoir**
Comment les réfugiés syriens traverseront-ils l'océan vers le Canada? Quels sont les risques que des terroristes s'infiltrent parmi eux? Beaucoup de Québécois ont des appréhensions face à leur venue. Alors est-ce risqué pour eux de venir ici? Pourquoi les médias ne parlent-ils pas des réfugiés innombrables de

l'Afrique? Des questions comme celles-là, les élèves de cinquième secondaire de l'école Les Pionniers de Trois-Rivières en avaient plusieurs pour Béatrice Vaugrante. Le Nouvelliste, 5

*** Region prepares for 1,150 Syrian refugees**
Planning is underway to prepare for upward of 1,150 Syrian refugees who are soon expected to start arriving in Waterloo Region. Immigration Partnership is hosting a half-day preparedness planning session on Friday that will gather together service providers to be ready for the influx of refugees. The Record, B2

*** Canada should look to the U.S**
Six weeks to go until the new year and by the time we usher in 2016, the Liberal government is determined that 25,000 Syrian refugees will be in Canada. "There was an election. There was a commitment. And we'll deliver on our commitment," Foreign Affairs Minister Stephane Dion told reporters Wednesday at the annual summit of Pacific Rim leaders here. The Liberals may be determined to deliver on that commitment but there is growing unease in Canada that the arbitrary deadline of Jan. 1 may lead authorities to cut corners and open potential security concerns. Prime Minister Justin Trudeau himself says that won't happen but, so far, has yet to provide details on Canada's security arrangements. Trudeau will meet U.S. President Barack Obama on Thursday and, because of our long, shared, undefended border, one would assume Obama wil I want more than platitudes, he'll want some of those details. Postmedia News (Toronto Sun, A22; Calgary Sun, A35; Edmonton Sun, A50)

*** Blue Rodeoto Canada**
The Liberal government's plan to welcome 25,000 Syrian refugees into Canada shouldn't be deterred by recent terror attacks, said Blue Rodeo bandmates Jim Cuddy and Greg Keelor. Cuddy and Keelor, who were among 12 officers and 33 members welcomed into the Order of Canada Wednesday, continued their streak of political pillow talk to discuss some of the major issues facing Canadians under a new Liberal government. Ottawa Sun, A14

*** Ils ne l'ont pas, le temps**
Un article d'opinion déclare, « Alors là, un gros bravo. Quand on a retrouvé le petit Aylan mort noyé sur une grève en Turquie, vous trouviez que le Canada n'en faisait pas assez pour faire émigrer sa famille chez nous. Maintenant que le Canada a décidé d'accueillir 25 000 réfugiés syriens d'ici la fin de l'année, vous branlez dans le manche. Vous avez peur. Tout d'un coup qu'un ou deux terroristes se glisseraient dans le lot... » Le Droit, 21

*** PM has no clear plan**
An opinion piece states, "To be clear: I absolutely believe this country should take Syrian refugees. We have so far been sheltered from the humanitarian crisis that has engulfed Europe, as hundreds of thousands of migrants have fled the turmoil in Syria. What troubles me is the haphazard manner in which the federal government is going about it and the way it's turned into a political football..." Postmedia News (Ottawa Sun, A9; Toronto Sun, A5)

*** Here, the Pope would be suspect**
An opinion piece states, "Back in September, Pope Francis commented on the ongoing refugee crisis in the Mideast in an interview with a Portuguese radio station. He warned of the danger of Islamic State terrorists "infiltrating" European countries amid the huge flow of refugees streaming out of war-torn Syria and Libya. He also cautioned that host countries taking in refugees "cannot be simplistic" about integrating them into their societies, because of their own high unemployment rates. In Canada these days, such reasonable observations, are enough to get one accused of bigotry, hating refugees and fear-mongering by the liberal and Liberal elite..." Postmedia News (Ottawa Sun, A19; Toronto Sun, A15; Calgary Sun, A15; Edmonton Sun, A15)

*** Provinces need more of a role helping refugees**
An opinion piece states, "Most of Canada's premiers are outdoing each other with generous offers to accept Syrian refugees by the thousands during the next six weeks, but their promises are all but meaningless. Premier Kathleen Wynne re-stated her promise-2,500 refugees by the end of this year and

10,000 by the end of 2016-again Tuesday. "It's our responsibility to be open to the world," she said in Toronto..." Postmedia News (London Free Press, A6; Whig-Standard, A4)

*** The refugee discussion is just beginning**
A comment by Jeffrey Simpson reads "The commitment to bring 25,000 Syrian refugees to Canada before Dec. 31, made by the Liberals in the heat of an election campaign, should be seen not as the end but as the beginning of a multiyear commitment to bring tens and tens of thousands more refugees to Canada over many years. Quite apart from whether the government can meet its artificial and politically driven timetable for the 25,000, the larger question is whether the government and the Canadian people are willing, ready and able to handle much bigger numbers in the years ahead. No one has thought about this, let alone prepared for it. Circumstances, however, will force reflection. This 25,000 contingent, and the many who will follow if the government sticks to its policies, is not like, say, previous groups of refugees from Vietnam, Uganda or Kosovo. These groups were much smaller in number, displaced by one event at a given place. By contrast, there were three-day periods throughout the summer and fall when more refugees/migrants were landing on the Greek island of Lesbos than Canada proposes to admit in two months. Today's refugees/migrants are part of a mass movement of millions of people fleeing military conflict, entrenched poverty and government breakdowns across an arc of states in the Middle East and Africa. Climate change is already widening desertification, which causes people to leave drought in search of food." Globe and Mail, A19

*** Our history will win over our fear, anger**
An opinion piece states, "Canadians mostly have opened their doors and their hearts to refugees, displaced persons and immigrants since the 19th century, but it would be a mistake to believe it always was easy and that it happened without some of the fear and political grandstanding now surrounding the Syrian refugee crisis. Yet the common denominator for newcomers to Canada has always been the same, the promise of opportunity, tolerance, freedom and safety. In this, the vast majority of Syrians seeking refuge in Canada are no different from the millions of immigrants who came before them..." Postmedia News (Whig-Standard, A4; London Free Press, A6)

*** Trudeau focused on 'sunny ways'**
A letter to the editor states, "With no foreign policy credentials or experience, Justin Trudeau, in the aftermath of the Paris massacre, is Mark Twain's The Innocents Abroad, peddling his "sunny ways" election message of feel-good infrastructure deficit investment and economic inclusiveness to a G20 audience that is single-mindedly focused on dealing with the global threat of international terrorism. There is Trudeau, valiantly offering the world his prescription for saving an endangered middle class while an endangered world is grappling with how to save itself. But, of course, in Trudeau's world, Canada has nothing to fear from ISIS because of its much-vaunted multicultural diversity and inclusiveness, and soon to become the new home of some 25,000 Syrian refugees to be rushed into the country by year's end with electoral refugee "politics" trumping sustainable and responsible refugee "policies." As to fighting ISIS - glory be! Liberal "soft power" days are here again!" Windsor Star, A7

*** We must be vigilant in accepting refugees**
An opinion piece states, "The world has changed dramatically for Canada's new prime minister. Justin Trudeau needs to acknowledge the gravity of the situation imposed by the Paris terrorist bombings and enhance Canada's military commitment to fighting ISIS, rather than emasculating it. He should ensure no Syrian refugees, let alone 25,000, set foot on Canadian soil without a careful and comprehensive security screening process in place..." Winnipeg Sun, A13

*** Why Canada Can Safely Meet Its Refugee Commitments**
An opinion piece by an immigration lawyer states, "The attacks in Paris last week set off a world-wide flood of empathy and solidarity. Canadians attended vigils, lit monuments in the tricolour and mourned the loss of life and normalcy in the City of Love. However, grief quickly turned into anger, inciting the inevitable search for a scapegoat. Shocking instances of violence against mosques and Muslims have been reported around the world, including a fire at a mosque in Peterborough, Ontario. Xenophobic acts are not an uncommon public reaction; a spike in attacks on Muslims following terrorist attacks has been well studied and documented. In Canada, despite the objective lack of connection, politicians began

sounding off "security concerns" related to incoming Syrian refugees. Saskatchewan's Premier Brad Wall called for a delay in resettling Syrian refugees. Premier Christy Clark of British Columbia stated the obvious: that the government needs to ensure that security checks are done on every refugee. These statements demonstrate a clear lack of understanding by government officials of Canada's process for resettled refugees. Contrary to the influx of migrants crossing into Europe over the past months, Canada is resettling *pre-screened* refugees who have been approved for permanent residency by a Canadian visa officer abroad. The process is thorough and involves international and national law enforcement agencies." The Tyee (2015-11-18)

Lettre - Main-d'oeuvre et réfugiés
Une lettre à l'éditeur déclare, « A la suite de la proposition d'accepter 100 000 réfugiés syriens par année au Canada, il était particulièrement ahurissant d'entendre la présidente de la Fédération canadienne des entreprises indépendantes (FCEI), Martine Hébert, affirmer : " N'importe quelle politique permettant la venue de plus de travailleurs, dont les entreprises ont tant besoin, est une bonne politique. " Mme Hébert reprenait ainsi une rengaine répétée mille fois par les organisations patronales selon laquelle plus d'immigration est toujours souhaitable en raison d'une supposée pénurie de main-d'oeuvre... » Le Devoir, A8

Refugee backlash will strengthen
An opinion piece states, "Because this is Canada, the backlash begins in the most polite of fashions. But make no mistake, a backlash against Justin Trudeau's plan to bring 25,000 Syrian refugees to this country is taking root and seems certain to build. Although the Liberal pledge should be applauded, the new government has helped fuel this backlash by its stubborn determination to meet an arbitrary deadline forged in the hothouse of election campaign politics..." Charlottetown Guardian, A9, The Record, A11)

Vetting questioned
An editorial states, "Re: Don't let Paris attacks alter refugee plan: profs (SP, Nov. 16). So University of Saskatchewan counter-terrorism expert Colleen Bell thinks that turning our backs on 25,000 Syrian refugees would be "a tragedy" because "Canada is a huge country." This is the kind of academic-think that passes for expertise these days. Bell and her fellow academic Martin Gaal are reported as saying that both the UN and Canada "conduct detailed screening" of refugees. You can buy into that Liberal myth if you like. I'm more convinced by U.S. Congressman Peter King, a member of the House Homeland Security Committee, who says "there is no reliable vetting system" for these refugees. "We don't know who these people are because there are no data bases to work from." Saskatonians appear to harbour an admirable skepticism on the issue. For example, of those who responded to a (pre-Paris) CFQC-TV survey that asked if they support Prime Minister Trudeau's plan to import 25,000 Syrian refugees before year-end, 83 per cent replied No. Many media commentators and Canadians alike are cynical about Trudeau's claims that the refugees will be screened rigorously. I will be looking to see exactly which "robust" vetting methods his functionaries employ. But I won't be holding my breath that we'll be given many details." Postmedia News (StarPhoenix, A8)

Logistics, not background checks, are the problem
A letter to the editor states, "White House spokesman Josh Ernest said Wednesday the 10,000 Syrian migrants destined for the U.S, will be subject to background check vetting that can "last up to 24 months" before they are approved, or rejected, as immigrants. Fortunately for the 25,000 Syrian migrants heading for Canada, our security checking is apparently so overwhelmingly comprehensive that the 25,000 will be vetted and accepted into the Canadian family by New Year's Day. Of course, after New Year's, when one or two, or 20 migrants turn out to be Islamic State of Iraq the Levant recruits and sneak into the U.S. to inflict mayhem there, watch out for the wall construction to begin across the 49th parallel and the total loss of U.S. confidence in Canada as a reliable neighbour and ally." Postmedia News (National Post, A11)

Keeping the door open
An editorial states, "The terror attacks in Paris have provoked a maelstrom of emotions and calls to action. It's crucial that governments and individuals refrain from responding in ways that do more harm than good. Reports that one of the attackers had entered Europe as a Syrian migrant have heightened

Canadians' fears. That's because Canada has committed to welcoming 25,000 Syrian refugees by year's end. There had been warnings that ISIS might slip terrorists into the flow of Syrians seeking refuge in the West, and that one case is being cited as confirmation. However, that threat does not justify closing the door to the vast majority of legitimate refugees; it's a reminder of the need for effective security screening. Canada's new government has reiterated its promise to take in 25,000 Syrians by Dec. 31, and for this it should be commended. The renewed commitment underlines a message that is worth repeating : Asylum seekers should not be conflated with terrorists; they are fleeing terror." Postmedia News (Vancouver Sun, B6)

Syrian refugees now scapegoats
An editorial states, "The tragic events in Paris have resulted in an unfortunate over-reaction. There are the expected demands for justice and calls for revenge. But the alarm bells are now sounding that Syrian refugees are guilty until proven innocent. When politicians, statesmen and decision-makers are caught up in this hysteria, it is very disappointing. This irrational conclusion is threatening the refugee resettlement program involving thousands of innocent Syrian refugees involving many nations, including Canada. The attacks in Paris were carried out by French and Belgian citizens. Likely, they were radicalized by terrorist elements or inspired by real or perceived attacks or discrimination against Islam and Muslims. The murders carried out by fanatics have somehow resulted in blame being placed on innocent refugees..." Charlottetown Guardian, A8

Whose side are we on?
An opinion piece states, "There are all sorts of fascinating and necessary questions that remain unanswered about exactly why, whether or when Prime Minister Justin Trudeau should or will withdraw Canada's CF-18s from the U.S.-led coalition arrayed against the Islamic State of Iraq and the Levant (ISIL). There are at least as many troubling questions about whether it is wise or even remotely possible for Canada's new Liberal government to fulfil Trudeau's campaign promise to resettle 25,000 Syrian refugees in this country before Christmas. (...) But if Trudeau's Canada is to be something truly new and different, then in this most horrific of global calamities, Canada should be the voice for Syria's voiceless. That's whose side we should be on." Postmedia News (Ottawa Citizen, C7; National Post)

Let Watson stay
A letter to the editor states, ""... Canada should be a refuge from militarism." PM Pierre Elliot Trudeau, 1970 Among the policies of the past 10 years that the new government seeks to reverse, one is urgent and could be made with the stroke of a pen. Against the will of Parliament, who voted twice to let American war resisters stay, Harper's government issued a deportation order against Rodney Watson, who then went into sanctuary for six years in First United Church, Vancouver. Canadian Immigration Officers waited outside to deport Watson to the U.S., to spend up to two years in prison. What a different era we are in compared to the Vietnam War. In 1967, myself an officer in the U.S. Military Medical Corps, and my wife Bonnie, later an Officer of the Order of Canada, were processed at midnight at Dorval Airport, receiving Landed Immigrant status in 20 minutes. Prime Minister Justin Trudeau has expressed empathy for the plight of refugees from the Iraq War. Urge him and Citizenship, Immigration and Refugee Minister John McCallum, to rapidly end this travesty of justice." Postmedia News (Vancouver Sun, B7)

PUBLIC SERVICE / FONCTION PUBLIQUE

Open public data necessary for functioning democracy
An opinion piece states, "There may be a new era coming in our federal access-to-information laws, and that would be a good thing, However, it's one thing to promise access in a campaign and another to follow through when in government. We'll have to wait and see. Information laws exist to protect our collective right to access public records. Every citizen and permanent resident in Canada has the right to request information from federal, provincial/territorial and municipal governments. All orders of government are subject to the protocols set out in the Access to Information Act (ATIA) at the federal level and Freedom of Information (FOI) legislation at the provincial/territorial and municipal levels. These legal instruments allow individuals to request records, policy documents and correspondence that show how government agencies operate. ATI/FOI files are different than the open-source material found on government

websites, in the rhetorical speeches of politicians, and in the sanitized information packages of public relations experts. ATI/FOI files illustrate how power operates in democratic societies and can expose the often-secretive dealings between state entities and political players. There have been a number of instances where Canadians have become aware of an issue of public interest because of information uncovered using access-to-information laws." Winnipeg Free Press, A9

OTHER / AUTRE

*** Clarity from Liberals needed to calm tensions, says Ambrose**
The new interim Conservative leader is promising to change the party's tone, but Rona Ambrose was not as willing Wednesday to say she would abandon the practice of using cultural wedge issues as a political tactic. Ambrose was asked about a recent tweet in which MP Candice Bergen said she was embarrassed and sickened by Prime Minister Justin Trudeau's approach to the fight in the Middle East and his promise to resettle 25,000 refugees. The Liberals intend to withdraw Canada's jets from the ongoing bombing campaign against the Islamic State of Iraq and the Levant, also known as ISIL or ISIS, but will keep soldiers in the region to train anti-ISIL fighters. Ambrose chalked up Bergen's tweet to heightened passions in the wake of Friday's attacks by ISIL militants in Paris, which killed 129 people and left hundreds more injured. "After what happened last week, there is going to be some emotion and some passion and I'm going to chalk that one up to some emotion and passion," Ambrose said. Similar passions were conjured up during the election campaign in response to the Conservative emphasis on issues like the niqab ban and a tip line to report so-called "barbaric cultural practices," Ambrose acknowledged. Both were considered to be wedge issues exploited by the Conservatives to mobilize votes. Ambrose said she was not part of the decision to promise a tip line, nor did she support it.
But when asked whether her party would drop the wedge politics strategy, Ambrose didn't answer.
Canadian Press (Telegraph-Journal, A8); * Toronto Star

*** Whose side are we on?**
An editorial states "There are all sorts of questions that remain unanswered about Prime Minister Justin Trudeau's decision to withdraw Canada's CF-18s from the U.S.-led coalition fighting against the Islamic State of Iraq and the Levant (ISIL). There are at least as many troubling questions about whether it is wise, or even remotely possible, for Canada's new Liberal government to fulfil Trudeau's campaign promise to resettle 25,000 Syrian refugees in this country before Christmas. But there is a far more important unanswered question that deserves at least some passing attention in all this: just whose side are we on, anyway? For five full years, Stephen Harper's Conservatives chose to go along to get along with U.S. President Barack Obama's half-baked responses to the hideously violent Baathist reaction to the Arab Spring that has now metastasized into the world-devouring catastrophe with its jihadist epicentre in the Syrian hellhole of Raqqa (...) Of course there are other questions. Up to 1,000 Syrian refugees a day are expected to begin arriving next week in the first convoy of a half dozen widebody jumbo jets shuttling Syrian refugees from Jordan, Lebanon and Turkey to Canada. About all that, here's just one of the questions that remains unanswered: what exactly are we going to do with all these people?"
Postmedia News (National Post, A10)

*** Slain volunteer fighter to be honoured**
He was a volunteer fighter in a war in which Canada has no regular troops on the ground.
The group he fought with has murky ties to a group Canada officially lists as a terrorist organization.
John Gallagher, 32, who grew up in Southwestern Ontario and died fighting alongside Kurdish forces against the Islamic State in Iraq and the Levant (ISIL) in Syria, will get a hero's welcome home Friday when his body is returned from the Middle East. His death - and the Highway of Heroes-style salute planned for him - opens a new chapter in Canada's military story, one highlighting the shifting nature of allegiances and the tricky job of honouring those who serve. "He used to be in the military," said Casper Koevoets of the Royal Canadian Legion's Victory branch in London. "He was fighting the right fight that he believed in. I think he deserves a hero's welcome home," Gallagher was killed Nov. 4 in Syria by an ISIL "suicide attack" on Kurdish fighters with the People's Protection Units (YPG), a group that actively recruits English-speaking fighters. Its members include citizens of Canada, the United States and Britain.

Postmedia Network (Vancouver Sun, B2, London Free Press, National Post, Edmonton Journal, Whig-Standard)

*** Climate change the worst threat this century, Dion tells APEC summit**
Foreign Affairs Minister Stephane Dion says climate change is the "worst threat we are facing this century," and warned that emissions-reduction targets don't go far enough. It's a marked departure from the stance of the previous federal government, which had alternated between whether ISIL or Russia was the greatest threat to Canada and the world. The question of how to deal with climate change took centre stage at the Asia-Pacific Economic Co-operation summit Wednesday, which has brought together leaders from 21 countries on both sides of the Pacific. The Syrian refugee crisis and Trans-Pacific Partnership trade deal were also discussed. U.S. President Barack Obama said the Asia-Pacific region is particularly vulnerable to flooding and land loss associated with climate change. Ottawa Citizen (Vancouver Province, A24; Star-Phoenix; Leader-Post; National Post; Montreal Gazette)

INTERNATIONAL

False hope, no mercy for fleeing migrants
For more than two months this spring, Abul Taher did not know where his son had gone. Then his phone rang. "Your son is in the middle of the sea. Give us money," the voice on the other side said. "If you don't give the money, we will kill your son and throw him into the sea." In the background, he could hear screams from his son as captors beat him. Then his son, Muhammad Selim, was allowed to speak. "Please, give them money. Please, save my life," he said. (…)The unfolding of what Amnesty International called a "humanitarian crisis at sea" started long before Syrian refugees began leaving for Europe, and threatens to continue for years. A regional crackdown has won a pause in the number taking to the water this fall. But the grinding poverty and persecution that have driven the trade remain unchanged. "I fully expect that the trafficking will resume. I was in the camps a month ago and lots of people said, 'We don't care about the risk, we're just going to go,' " said David Scott Mathieson, a senior researcher with Human Rights Watch The long southeastern peninsula of Bangladesh slices alongside Myanmar, its 125 kilometres of sand forming one of Earth's longest beaches. It's one of the few places in Bangladesh that attract tourists. It's also home to one of Asia's most vulnerable populations, where poor farmers live alongside drug traffickers, corrupt police and a persistent dream that across the water, there is something better. Globe and Mail, A12

***L'EI lance un nouveau numéro de son magazine**
«Juste terreur» ou «juste la terreur». C'est par ce double sens arrogant - Just Terror, en anglais - que le groupe armé État islamique a coiffé la une du plus récent numéro de son magazine de propagande Dabiq, consacré en partie aux attentats de Paris. Lancé hier sur les réseaux sociaux, le numéro contient quelques images des attentats. Provenant d'agences de presse, elles ont été retouchées avant leur publication dans le magazine. La photo de la une, par exemple, montre des secouristes venant en aide à un blessé. Une femme, qui apparaissait à droite dans la photo originale de l'Agence France-Presse, a été carrément effacée de l'image avec un logiciel de retouche. Les chaussures d'une des femmes victimes de l'attentat, en bas à gauche, ont aussi été floutées. Selon nos vérifications, Dabiq n'a jamais publié de photo montrant une femme, même voilée, dans l'un ou l'autre des onze numéros précédents du magazine voué à la promotion du djihadisme. Une bombe dans une canette Dabiq a aussi publié une image de ce qui serait la bombe artisanale utilisée par l'EI pour abattre l'avion de Metrojet qui s'est écrasé dans le désert du Sinaï, en Égypte. Le dispositif aurait été dissimulé dans une simple canette de boisson gazeuse. «On ne voit que trois éléments: la canette, une charge explosive et un commutateur. Il n'y a pas de minuterie ou de dispositif de déclenchement à distance. Ça laisse croire, si l'image est véridique, qu'ils ont utilisé un kamikaze pour commettre l'attentat», note le Canadien Yannick Veilleux-Lepage, spécialiste de la propagande terroriste à l'Université St. Andrews, en Écosse. MINISTER / MINISTRE

Réfugiés - L'objectif réel d'Ottawa prendra plus de temps
La promesse libérale de faire venir 25 000 réfugiés syriens " parrainés par l'État " ne sera pas remplie avant le 31 décembre : le gouvernement se donne quelques mois de plus pour atteindre cette cible, a appris Le Devoir. Les réfugiés qui arriveront avant la nouvelle année seront entre autres parrainés par des organismes privés. Le gouvernement fédéral a ainsi confirmé mercredi que plusieurs milliers de réfugiés faisant partie de la cohorte des 25 000 attendus avant 2016 sont en fait des déplacés qui seraient venus au Canada peu importe les résultats de l'élection du 19 octobre. " Les demandes de parrainage provenant du secteur privé [généralement des familles qui font affaire avec des organismes] font partie de notre objectif à court terme ", a expliqué Nancy Chan, porte-parole d'Immigration, Réfugiés et Citoyenneté Canada. Impossible de savoir exactement quel sera le ratio de réfugiés parrainés par le privé ou par l'État. Le ministère soutient ne pas " avoir plus de précisions à donner pour l'instant "... Ces détails suggèrent que la pression immédiate mise sur le processus de sélection et de vérification des dossiers de réfugiés sera plus légère de quelques milliers de cas. Le **ministre de la Sécurité publique**, **Ralph Goodale**, a par ailleurs confirmé mercredi que les dossiers de tous les réfugiés seraient épluchés et qu'aucun d'entre eux ne profitera d'une vérification allégée. Les demandeurs d'asile seront rencontrés en entrevue, les données biométriques seront contrôlées, leur passé corroboré dans des bases de données canadienne et internationale. ***" Nous détaillerons les différentes étapes de contrôle quand***

le plan complet sera annoncé. Mais ce sera robuste et nous voulons nous assurer que la qualité de la vérification de sécurité, au final, est au rendez-vous ", a-t-il dit en point de presse. Ce processus de contrôle prend actuellement 12 à 18 mois. Il faudra attendre ladite annonce officielle pour préciser les délais anticipés. ***" Mais ce sera beaucoup, beaucoup plus court*** ", a certifié M. **Goodale**. Le **ministre** avait évoqué la possibilité la semaine dernière qu'une part des vérifications soit menée une fois les réfugiés en sol **canadien**. ***" Notre objectif est d'accomplir la plus grande part du travail avant que les nouveaux arrivants arrivent ",*** a-t-il affirmé mercredi. Quant aux populations ciblées par Ottawa, ce sera les ***" vulnérables, qui [soulèvent] le moins de questions [en matière] de sécurité, et des gens qui ont les meilleures chances d'avoir une intégration réussie "***, a expliqué le ministre. Ottawa demeure globalement avare de détails sur la mécanique de l'opération, à six semaines de l'échéancier qu'il s'est fixé. Mercredi, Cogeco Nouvelles soutenait que la base de Valcartier pourrait accueillir 500 réfugiés dès le 1er décembre. La base de Trenton en recevrait pour sa part 1000. Le **ministre Goodale** a refusé de commenter ces informations. Le Devoir, A1; * La Presse, A7 (La Voix de l'Est)

Processing of Syrians can be 'fast, effective'

A respected authority on immigration and refugees says **Canada** and the United Nations have the operational know-how and security safeguards to safely vet 25,000 Syrians for rapid resettlement. But the question remains: Can the humanitarian resettlement project be pulled off by the Liberal government's looming Dec. 31 deadline without compromising domestic security? (...) Immigration Minister John McCallum has repeatedly said the would-be refugees will be properly screened. "I think his implication has been that if it takes longer, if it goes over the deadline, then it goes over the deadline," Showler said in an interview with the Citizen. "Certainly my understanding from him is that getting the job done properly is the priority."(...) **Public Safety Minister Ralph Goodale** Wednesday tried to reassure **Canadians** the timetable will not compromise safety. ***"There have been very enormous efforts and thorough consultations ... to make sure that that system is strong," Goodale*** said. Michel Coulombe, director of the Canadian Security Intelligence Service, added: "I want Canadians to know that as director of CSIS I am confident that the measures in place are robust and appropriate." Under normal circumstances, Showler explained, Canada's refugee-resettlement process happens in three phases. His comments are based largely on his experience helping Syrian and other refugees in Lebanon last year... Phase three is security screening by Canada-based CSIS, RCMP and Canada Border Services Agency officers. Names, travel documents and sometime a person's biometrics are checked against national and international police and security intelligence databases. **Goodale** and CBSA president Linda Lizotte-MacPherson said Wednesday no refugees will be allowed into Canada until those checks come back clean. Postmedia News (Ottawa Citizen, A1/Front); * Postmedia Network (Vancouver Sun, Windsor Star, StarPhoenix, Calgary Herald, Leader-Post, National Post, Gazette, Edmonton Journal)

RCMP, CSIS say Ottawa's refugee plan is feasible

The heads of Canada's police and spy agencies are backing the Trudeau government's plans to safely screen and bring in 25,000 Syrian refugees by the end of the year. A number of municipal and provincial politicians have called on the government to take longer to conduct security checks on the asylum seekers, but RCMP Commissioner Bob Paulson and CSIS director Michel Coulombe insist the government's plans are feasible. As the pair spoke alongside **Public Safety Minister Ralph Goodale** at a news conference in Ottawa Wednesday, giving assurances that it can be done in that time frame without compromising the country's safety, Ontario's Health Minister told reporters how Canada's most populous province can help meet the commitment. Details so far are vague as to Ottawa's plans, but Eric Hoskins says that Ontario is looking at decommissioned hospitals as potential housing for refugees. He noted, for example, that Toronto's Humber River Hospital has moved from three sites to one... "Yes," he answered in a direct question on the government's ability to meet its deadline. "We will play a role in making the security checks and confirm people's identity. In my view, the system is satisfactory." Added Mr. Coulombe, the director of CSIS: "I am confident that the measures in place are robust and ... appropriate." **Mr. Goodale** said that the first objective of the government's promise to take in 25,000 refugees is humanitarian, in order to ***"rescue people who are in terrible conditions and fleeing from the scourge that is [the Islamic State],"*** However, he added the government would meet its objective ***"without any diminution or reduction in our security work."*** The **Public Safety Minister** said federal officials would conduct database checks and **biometrics** tests to verify the ID of all refugees, in addition

to submitting them to interviews. To do the task quickly, some officials from other agencies are being seconded to the operation, including border guards. Globe and Mail, A1

Canada-Paris link probed
The RCMP is looking into whether the Islamic State in Iraq and the Levant's claim of responsibility for the Paris attacks was made by a Canadian, a spokeswoman for the police force says. Staff Sgt. Julie Gagnon said the RCMP was "following up" on reports the English-language audio recording issued by the terrorist group sounded Canadian. "What I can tell you is that we are aware of the reports and are following up," she told the National Post, responding after she was asked whether the RCMP was investigating whether a Canadian had made the ISIL statement. A **Public Safety Canada spokeswoman**, meanwhile, said, ***"We do not generally discuss operational matters related to national security"*** but that police and security agencies ***"continue to monitor the situation in Paris very closely."*** The morning after the co-ordinated killings that left 129 dead, ISIL released a series of written and audio statements in Arabic, French and English that said "a group of believers from the soldiers of the Caliphate" were responsible. The attacks targeted "the capital of prostitution and obscenity, the lead carrier of the cross in Europe - Paris," the statements said, adding France was singled out because of its role in the international coalition fighting ISIL in Syria and Iraq. The identically worded releases offered no new information about the attacks other than what had already been reported but the familiar accent of the narrator of the English version caught the attention of some Canadians. Dozens of Canadians have joined the conflict in Syria and Iraq, some on the side of ISIL. On Tuesday, former Calgary resident Farah Mohamed Shirdon, 22, who has appeared in previous ISIL videos, was placed on the INTERPOL wanted list. Kingston Whig Standard, B1/Front (National Post); Toronto Star, A8

*** Ottawa ne voit pas de menace imminente**
Malgré les attentats de Paris, le niveau d'alerte au Canada demeure inchangé, a indiqué le gouvernement libéral mercredi, tentant de se faire rassurant. Mais les autorités ont du même souffle reconnu qu'elles ne peuvent pas garantir hors de tout doute qu'aucun des Canadiens partis rejoindre le groupe armé État islamique n'est revenu au pays. " On ne peut pas garantir à 100 % qu'on peut détecter le retour de ceux qui sont là [au Moyen-Orient] ", a consenti le directeur du Service canadien du renseignement de sécurité, Michel Coulombe. L'un des terroristes qui pourraient être impliqués dans les attaques commises à Paris vendredi dernier devait se trouver, selon les informations de la communauté internationale, en Syrie. Or, il appert qu'Abdelhamid Abaaoud aurait été tué dans l'assaut lancé en banlieue parisienne dans la nuit de mardi à mercredi, selon le Washington Post. Se peut-il alors qu'un Canadien comme John Maguire, qu'on croit mort au combat en Syrie, soit discrètement revenu au pays sans que les autorités s'en soient aperçues ? " Il y a toujours une possibilité -- l'utilisation de faux documents par exemple serait une façon d'arriver au Canada. On met en place toutes les mesures avec nos partenaires domestiques et internationaux pour pouvoir détecter le retour. Mais comme toute chose dans la vie, une garantie à 100 %, ça n'existe pas ", a admis M. Coulombe lors d'une conférence pour faire le point sur l'état de la menace terroriste au Canada. Les autorités estimaient, l'an dernier, qu'une centaine de Canadiens sont partis à l'étranger grossir les rangs des organisations terroristes.
Vigilance M. Coulombe et le **ministre de la Sécurité publique**, **Ralph Goodale**, sont cependant catégoriques : le niveau d'alerte n'a pas changé depuis l'attentat d'octobre 2014 au parlement, et les individus impliqués dans les attentats de Paris n'ont aucun lien avec le Canada. Les deux hommes ont néanmoins appelé les Canadiens à demeurer ***" vigilants ".*** Le Devoir, A2; Canadian Press (Red Deer Advocate, A5, Cape Breton Post, Guardian, Telegram); 1 (Times Colonist, A9); Agence QMI (Journal de Québec, 7, Journal de Montréal); La Presse Canadienne (Le Droit, 16, Le Nouvelliste, La Tribune, Acadie Nouvelle); Ottawa Sun, A3

*** Canadians prefer bombs over trainers against ISIL, poll finds**
Canadians broadly approve of both the country's bombing mission against Islamic State and its program of training those who fight the militant group. But if they had to choose between the two policies, more would opt for bombs over trainers, a new poll for Postmedia has found. The study by Mainstreet Research, conducted three days after the deadly terror attacks in Paris, also found Canadians were not sure the country was prepared to deal with a terrorist attack, even as they maintained they don't feel personally threatened (...) Prime Minister Justin Trudeau has vowed to end the bombing campaign on ISIL militants in Iraq and Syria before March 2015. Meanwhile, he will expand the training mission,

although details on how this will be done have not yet been provided. He told reporters this week he wants Canada to be "a strong and positive contributor to the continuing mission against ISIL." Meanwhile, more than four in 10 Canadians said they didn't think Canada was prepared to deal with a terrorist attack should one occur here. Twenty-six per cent felt the country was prepared but fully one-third said they didn't know. Nonetheless, almost twothirds said they are not concerned about a terrorist attack where they personally live or work. This last finding is in accord with the government's own message. On Wednesday, **Public Safety Minister Ralph Goodale** said there's no reason to raise Canada's threat level, even after the Paris attacks. Postmedia News (Ottawa Citizen, A10)

*** Cyberattacks on infrastructure a 'major threat,' says CSIS chief**
The head of Canada's main spy agency says he views the possibility of a cyberattack by ISIS or other extremist groups on the country's "critical infrastructure" as "a major threat." "Cyber is one of our top priorities," Michel Coulombe, director the Canadian Security Intelligence Service (CSIS) told an Ottawa news conference on Wednesday. Coulombe was responding to questions after Britain announced it is nearly doubling funding for cyber counterterrorism amid fears ISIS is looking to target Western infrastructure such as hospitals, airports or power plants by using the internet. He was flanked by RCMP Commissioner Bob Paulson and **Ralph Goodale**, Canada's newly appointed **minister of public safety**. ***"This is an area that I'm beginning to be further briefed on by the department,"*** Goodale told reporters, deferring to his deputy minister and CSIS. CBC News

*** Those calling for a refugee crackdown should tread carefully**
An editorial states "The debate over whether to adjust our refugee policies on the chance that a **terrorist** might use them to enter Canada has had less to do with calculating the actual threat - and more to do with passing judgment on hundreds of thousands of desperate people.Following the traumatic attacks in Paris last week, refugees from Syria - people without homes or food or much money - have suddenly become the key suspects in the effort to thwart future terrorist plots.In Canada, those who have taken this leap of faith include the Conservative Party of Canada, several prominent pundits and one premier. They argue the federal government should slow down on its promise to bring 25,000 refugees from the Middle East by the end of the year.While the situation remains unclear and difficult to judge, people should tread with caution before agreeing with this speedy assessment. Xenophobic fear has accompanied all major refugee migrations; it's a story as old as exodus itself. The Islamic State itself reportedly believes the refugees are apostates who deserve to die. Denying haven to so many refugees amounts to delivering them into the hands of psychopaths.(...) A complete description is unlikely, but most of the information so far available has been coming from media reports - not the government. Before the Paris attacks, **Public Safety Minister Ralph Goodale** said refugee claimants are less of a security threat than the previous Conservative government thought. He owes the public a detailed explanation of what he meant then and whether he still means it now. On Wednesday, he said officials from CBSA have provided invaluable support in refugee processing." iPolitics

ATTACKS IN PARIS / ATTENTATS A PARIS

Alleged plotter remains shadowy figure
Much about Abdelhamid Abaaoud's path to armed Islamic radicalism remains mysterious. In the words of Koen Geens, the Belgian justice minister, he mutated from a student at an upscale Brussels school into "an extremely professional commando," one seemingly able to slip across borders at will, someone who openly mocked the inability of Western law enforcement agencies to catch him. On Wednesday, the fate of the son of an immigrant shopkeeper from Morocco remained unclear. Police raided a suburban Paris apartment where they believed he was hiding. The siege ended with two deaths and seven arrests but no definitive information on Abaaoud, who French authorities have called the mastermind of the violence that killed at least 129 in Paris last week. The wanted jihadi's own father believes prison - where he served time for petty crimes - changed him for the worse. After his son got out, Omar Abaaoud noticed "signs of radicalization," the elder Abaaoud's lawyer, Nathalie Gallant, told RTBF broadcasting Wednesday. If so, that would fit the pattern of a number of jihadis who were radicalized in prison. Associated Press (Chronicle-Herald, A15, Ottawa Sun, Telegraph-Journal, Times & Transcript); * Agence France Presse (Le Nouvelliste, 3, La Tribune)

*** Le cerveau des attaques mort ?**

L'Europe nageait en pleine confusion hier, alors que tous s'interrogeaient à savoir si le présumé «cerveau» derrière les attentats de Paris était bel et bien mort lors de l'assaut de sept heures à Saint-Denis. «Le présumé chef des attentats de Paris (Abdelhamid Abaaoud) a été tué hier lors de l'assaut de la police française, ont affirmé deux hauts responsables des autorités européennes», a écrit le Washington Post hier. Mais aucun autre média ni les autorités françaises n'ont confirmé cette information, ce qui a soulevé plusieurs questionnements dans la population. L'opération a été «extrêmement difficile » en raison de «l'usage de fusils d'assaut, de tirs de sniper et d'une grande offensive d'explosifs», a lancé le procureur de Paris, François Molins. L'opération qui a duré sept heures visait bel et bien le présumé «cerveau» des attentats de vendredi. Au moins deux personnes sont mortes, dont une kamikaze qui «a activé son gilet explosif au début de l'assaut», a précisé la police qui n'a pas confirmé les noms. De plus, huit personnes ont été placées en garde à vue après l'opération, mais ni Abaaoud, ni Salah Abdeslam, l'un des suspects des attaques toujours en fuite, ne figurent parmi elles. Une information qui laisse donc croire qu'Abaaoud serait le deuxième mort. Le Journal de Québec, 5 (Journal de Montréal); * Daily Gleaner, B1 (Telegraph-Journal); Associated Press (Toronto Star); 1 (Ottawa Sun, Calgary Sun, Winnipeg Sun, Toronto Sun); CNN

AIR FRANCE FLIGHT DIVERTED

Passengers aboard Air France Flight 055 didn't learn that a bomb threat was the reason their Paris-bound flight was being diverted to Halifax until after they landed Tuesday night. Genevieve Lapeyre, a pediatric anesthesiologist from Geneva, was flying back to Europe after a meeting in Washington, D.C. She is half-Swiss and half-French, and planned a three-day layover in Paris. The terrorist attacks Friday gave her a strong wish to be in the city. (…) None of the passengers panicked, but they felt something odd was going on, she said. At one point, she wondered if there had been another attack against Paris and the aircraft couldn't go there. After the Boeing 777 touched down at about 10:15 p.m., she soon realized there was something happening regarding her flight. "I saw the firemen and everything, and I said, 'OK, there is something else.'" Lapeyre said the pilot seemed to be trying to control his emotions. "He said, 'Don't worry.' He was too much trying to reassure us." On the tarmac, passengers were told to grab their belongings and get off the plane, which they did quickly. However, they were then housed for about 30 minutes in a bus parked alongside the aircraft, which some considered dangerous, she said. Halifax RCMP spokesman Cpl. Greg Church said 262 passengers and crew got off the jet within 15 minutes of landing, which is when officers began checking for explosives; none were found. The jet was declared explosives-free at 4:28 a.m. Wednesday. The passengers were taken to a secure area to pass through customs. Postmedia Network (Chronicle-Herald, A1, Guardian, Whitehorse Star, Acadie Nouvelle); Postmedia Network (Cape Breton Post, A9)

'Like A War Zone'

2 Dead, 8 in custody after paris police launch a massive early-morning raid against a suspected **terror** cell located in a reinforced apartment When Tagara Traoré, a former revolutionary soldier in his native Burkina Faso, was jolted awake by a boom early Wednesday, his "military reflex" kicked in. "You get up quickly and either hide or try to get out," he said. In socked feet and wearing the sweatpants he was sleeping in, he grabbed his key and ran out the door of his fourthstorey apartment, only to find a battalion of police rushing up the stairs, headlamps glaring. "I started sensing tear gas that was coming up the stairwell. I thought the building was on fire," he said. "The police told me, 'Go down, down, down!' There were so many they had to move aside to let me out." It was 4:20 a.m., and he had been caught in the middle of a massive anti-terror operation that quickly became a protracted gun battle between police and terror suspects. A woman in the targeted apartment in the Paris suburb of Saint-Denis, identified by French media as a native of nearby Clichy, was one of the dead. Initial reports said she killed herself by detonating an explosive vest, but the French prosecutor's office later said the "point needs to be verified by an analysis of the body and human remains." At least one other suspect in the apartment was killed and eight people were taken into custody. Five police officers suffered minor injuries, and a police dog - Diesel, a Belgian shepherd - was killed by the terrorists, according to the national police. Paris prosecutor François Molin said the targeted apartment had a fortified door that withstood initial police attempts to break in and gave the terrorists time to mobilize and return fire. Daily Telegraph (Windsor Star, N1/Front, National Post, StarPhoenix, Gazette); 1 (Vancouver Sun, B1/Front, Leader-Post, National Post, Edmonton Journal, Ottawa Citizen, Whig-Standard, Calgary Herald); Toronto Star, A1; Globe and Mail,

A1; * Agence France Presse (Le Soleil, 22); * Associated Press (Times Colonist, A13, Times & Transcript)

Prochaine station, la guerre
Il devait être 4h20 quand Fares s'est mis à crier. «Maman! Maman! La guerre commence! Il y a des bombes!» Fares a 7 ans. De grands yeux noisette dans lesquels on lit l'effroi. «Il ne sait même pas c'est quoi, la guerre», me dit sa mère Souhila, 38 ans. Souhila, elle, sait. Elle est née en Algérie... J'étais dans l'avion quand l'assaut antiterroriste a été donné à Saint-Denis, dans la banlieue nord de Paris, non loin du Stade de France. Dès que l'avion s'est posé, des cellulaires de passagers ont sonné. «C'est la pagaille à Saint-Denis.» La «pagaille», le mot est faible. C'est Fares qui avait raison. Ça ressemblait plus à une guerre. Rue Corbillon, à l'angle de la rue de la République, au moins deux personnes ont été tuées, dont une femme kamikaze qui a activé sa ceinture d'explosifs. Un commando, lourdement armé, qui semblait prêt à passer à l'acte, a été démantelé. Pendant une heure, les habitants du quartier ont entendu des tirs nourris. Le bruit était si fort que certains ont cru qu'il y avait un bombardement. Il y a eu au moins 5000 munitions tirées par la police. Un immeuble éventré, criblé de balles. Des voisins terrorisés. Comme si on était à Gaza et non en banlieue parisienne. L'assaut a duré sept heures, durant lesquelles le quartier a été bouclé, le métro, fermé, les écoles aussi. Des résidants ont été évacués. Les riverains ont été sommés de ne pas sortir de chez eux. Une fois l'assaut terminé, j'ai pu prendre le métro pour la guerre. La Presse, A4/Front

Mission
Ce sont des spécialistes des assauts risqués, qui montent au front contre les pires terroristes. Le RAID, le commando de la police française qui est intervenu hier à Saint-Denis, est constamment sollicité depuis un an. A Paris, La Presse s'est entretenue avec l'ancien chef des négociateurs de l'unité, Christian Caupenne, pour dresser le portrait d'une équipe devenue mythique. Fondé il y a 30 ans, le RAID (pour Recherche, Assistance, Intervention, Dissuasion) est l'unité d'élite de la police nationale, destinée à intervenir partout en France pour contrer le terrorisme et le «grand banditisme». Elle est notamment intervenue lors de l'attaque du marché Hyper Cacher en janvier et à la salle de spectacle Bataclan, vendredi dernier. Selon le chef de la police nationale, Jean-Marc Falcone, l'assaut à Saint-Denis a été l'un des plus difficiles que ses troupes ont connu. «Les scènes vécues par le RAID sont très dures. Même ces hommes rodés à la violence ont été marqués», a-t-il déclaré hier à ce sujet. La Presse, A5/Front

*** Paris attacks: Extremists may strike next with chemical, biological weapons, French PM says**
With France still reeling from last week's deadly attacks in Paris, Prime Minister Manuel Valls warned Thursday that Islamic extremists might at some point use chemical or biological weapons, and urged lawmakers to extend a national state of emergency by three months. "Terrorism hit France not because of what it is doing in Iraq and Syria ... but for what it is," Valls told the lower house of Parliament. He added, "We know that there could also be a risk of chemical or biological weapons." Valls did not say there was a specific threat involving such weapons. The French Interior Ministry and Paris prosecutor's office, meanwhile, said it still remains unclear whether the suspected mastermind of last week's attacks, in which 129 people were killed and hundreds of others wounded, has been killed or is still at large. Officials said authorities are working on determining whether 27-year-old Belgian Abdelhamid Abaaoud was among those killed in a chaotic and bloody raid on an apartment in the Paris suburb of Saint-Denis on Wednesday. Associated Press (CBC News)

*** Belgium vows crackdown on terrorists, boost security spending**
Belgium's prime minister on Thursday called for changes to the country's constitution to combat extremists, and promised hundreds of millions of euros to boost the security forces. Addressing the federal parliament as security forces were conducting raids around the capital Brussels, Charles Michel pledged to use changes to the constitution to extend preventive detention times for suspects from 24 hours to 72 hours. He also affirmed that Belgium would move forward alone on a system of airline passenger information sharing that European Union nations have been incapable of agreeing in four years. Associated Press (CTV News, Times Colonist)

*** EU to tighten anti-terror laws**

The European Commission, the EU's executive arm, will expand its anti-terrorist legislation early next year to target fighters like those involved in the Paris attacks. The new measures will widen the range of actions punishable under the legislation to include travelling for the purpose of carrying out a terrorist act, facilitating travel or receiving training to carry out an attack. In a direct response to the Paris killings, EU citizens who travel outside the bloc and then return to carry out attacks will be considered as foreign fighters, and those helping their movement will also face prosecution. The bloc 's Migration, Home Affairs and Citizenship Commissioner, Dimitris Avramopoulos, told a news conference Wednesday that the Commission would have proposals ready by the end of November and wants to see them enacted "within the first two months of the next year." Toronto Sun, A56 (Calgary Sun)

*** Killer's passport fueling fear of refugees**

After the bombs and Kalashnikov fire of the Paris attacks, a mere document - a passport - found near the body of an attacker is generating a new wave of dread throughout Europe and beyond. But whether the document ended up there by chance, or was part of an elaborate plot to sow panic, is not clear. Regardless of the answer, the passport has played into the Islamic State group's hands by raising concerns that militants may be marching alongside the thousands of asylum seekers flowing into Europe. That possibility is redefining the debate over immigration in Europe and even the United States, and prompting a backlash against Muslim refugees. The far-right French leader Marine Le Pen called for an immediate end to the flow of migrants into France, while across the Atlantic about half of U.S. governors are taking steps to prevent absorbing Syrian refugees in their states, citing the passport. "This terrorist attack will clearly change Europe's refugee policies and how the arrivals in Europe are treated," said Konrad Pedziwiatr, a sociologist and expert on Islam in Europe at the Krakow University of Economics. "Already the open-door policy (in Germany and Sweden) of welcoming refugees was going to be reformed because the inflow is so significant that countries cannot cope with the numbers," he said. "What the Paris attacks add to this difficult situation is the additional element of fear." A passport bearing the name of Ahmad Al Mohammad, 25, was found near one of the suicide bombers who blew himself up outside the Stade de France football stadium. It indicates that he entered Greece from Turkey on Oct. 3 and later passed through Serbia and Croatia, getting registered in every new country. The passport's authenticity has not been determined, but fingerprints of the attacker match those taken by Greece and Serbia. The other attackers who have been identified so far are all European citizens. The oddness that a passport - an intact one - was found near a man who blew himself up is creating suspicions that it is part of a plan by the Islamic State to create a backlash against the refugees. "I have never heard of terrorists carrying passports with them," Pedziwiatr said. Associated Press (Whig-Standard, B5, Telegraph-Journal, Times & Transcript)

*** ISIS is slowly killing the European experiment**

As neighours and allies declare solidarity with France, few are facing up to the inevitable: the fact that fallout from Friday's terrorist attack in Paris will stall - perhaps even reverse - the political integration of Europe. The discovery that most of the terrorists identified so far were Muslims born in France, using neighbouring Belgium as a base, will add volume to loud demands for an end to the open-border policy among the 28 members of the European Union. Pressure to terminate what is known as the Schengen Area - a pillar of the EU political integration project, along with the now-debased euro and attempts to unify foreign and defence policies - has been building as about a million refugees from the Middle East and North Africa have flooded into Europe (…) While ISIS has taken responsibility for the outrage and was, at the very least, the inspiration for it, the Paris killings were, like almost every other terrorist attack in Canada, the United States and Europe in the last 14 years, a home-grown affair. Neither Canada nor the U.S. is immune to the popular suspicion that the floods of Syrian and Iraqi refugees are an easy route for ISIS to plant terrorists in target countries. The governors of over half the 50 states in the U.S. have said they will not participate in settling Syrian refugees. And the new government of Prime Minister Justin Trudeau is facing growing pressure from both the public and provincial governments - on whom much of the responsibility for resettling refugees will fall - to rethink his campaign pledge to allow 25,000 Syrian migrants into Canada by the end of the year. iPolitics

*** French expats still feel sting an ocean away**

Juliette Elchinger was home in Montreal on Friday evening when her Twitter feed lit up with news of the terrorist assaults in Paris. "I went into a state of shock," the native Parisian said. "I just started to shake and cry." Five days later, the 19-year-old was still struggling to make sense of the violence visited on her cherished city. She stood on Wednesday surrounded by knots of other students and staff at the University of Montreal, some holding hands and wiping tears off stricken faces, for a sombre gathering of commemoration. In the days since the shocking attacks took the lives of 129 people, Ms. Elchinger has attended solidarity marches and commemorations, monitored news from Paris obsessively and joined other members of Montreal's large expatriate French community. Some have connections to the tragedy; Ms. Elchinger's best friend lost a professor, who was slain at the Bataclan theatre along with 88 others who had attended a rock concert there. For the expats, separation from events back home has fed feelings of loss and helplessness, along with a deepened call to their French identity. Globe and Mail, A9

*** Free world solidarity after Paris**

An editorial states, “There aren't a lot of game-changing moments in international affairs, says Peter Van Praagh. But the ISIS terrorist attacks on Paris last weekend, like the 9-11 attacks on New York and Washington in 2001, fall into that rare category. It is, he says, one of those "events that turn things." It has acutely heightened the public sense of "how vulnerable open societies are." But it has also produced, he believes, "a fundamental solidarity and common understanding that something has to be done to address it." "We are all affected now," the security specialist told our editorial board on Wednesday, after arriving in Nova Scotia to chair, for the seventh time, the annual Halifax International Security Forum. The forum will bring 300 delegates from 60 democratic countries to the city this weekend to brainstorm the complex angles of peace and security - military, political, economic, educational and cultural. The group ranges from four-star generals to ministers to aid organizations, journalists and scholars. Their agenda runs the gamut from building new anti-terror alliances to cutting off the financing of terrorism through drug and human trafficking. There was plenty of evidence in Halifax and elsewhere this week to show security issues now touch us all.” Chronicle-Herald, A6

*** Hollande faces the enemy from within**

The streets of Paris are no strangers to mass bloodshed. The City of Light has borne witness to more than its share of extreme violence over the centuries. The worst of it has not been perpetrated by a foreign army. The enemy has most often come from within.From the Wars of Religion, through the Revolution and the Reign of Terror, to the Paris Commune, the French often worked through their differences in the bloodiest ways possible. Since the 1960s, Paris has been a repeated target of terrorists, often French citizens or immigrants, aggrieving in some way France's unresolved colonial past in North Africa or its mandates in the Middle East.The inspiration for the most recent attacks may have come from Iraq or Syria, but their perpetrators came from the Paris suburbs. The January assaults on the satirical magazine Charlie Hebdo and a kosher supermarket were conducted by French-born radicalized Muslims. Most of those involved in Friday's sickening attacks on cafés and a concert hall appear to have had similar backgrounds."We know, and it's cruel to say it, it was French people who killed French people on Friday," President François Hollande said in a speech for the ages. "There are, living on our soil, individuals who move from delinquency to radicalization and then to terrorist criminality." Globe and Mail

*** La vie doit reprendre, dit Hollande**

Dans la foulée de la série d'attentats à Paris, le président français François Hollande a encouragé ses compatriotes à «défier les terroristes» en continuant de vivre normalement, en fréquentant les cafés, les musées, et les stades sans tomber dans la crainte et la xénophobie. Les terroristes prennent la vie des innocents, mais ils veulent aussi suspendre celle des autres, a soutenu le président, mercredi, lors d'un discours télévisé devant les maires de partout au pays. Il estime que les Français ont le «devoir» de poursuivre leurs activités normales. Il a martelé que la vie «devait reprendre pleinement», ajoutant que la sécurité serait resserrée dans les lieux publics. Le président français a assuré que la France resterait un pays «de liberté, de mouvement, de culture» qui ne «pliera pas à la peur». François Hollande s'est engagé à travailler avec ses alliés pour détruire le groupe armé État islamique, qui a revendiqué la responsabilité des attaques dans la capitale française qui ont fait 129 morts et 368 blessés. Dans une allocution prononcée quelques heures après une opération antiterroriste de la police en banlieue de

Paris, le président a réitéré que la France était «en guerre avec les terroristes», mais il a aussi appelé les Français à la retenue. Associated Press (Le Droit, 17)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Coderre veut éviter un autre Lac-Mégantic**
Depuis la tragédie de Lac-Mégantic, la Ville de Montréal se fait beaucoup plus prudente dans l'aménagement de son territoire, a expliqué Denis Coderre, hier, en réaction au reportage sur la récente interdiction de toute construction près des installations de Suncor. En revanche, au gouvernement du Québec, on ne s'émeut guère de la situation. Hier, La Presse faisait état d'un moratoire interdisant toute construction dans un rayon de 435 mètres des trois ballons de butane de Suncor. Même une enseigne de quatre pieds sur six ne peut y être installée. Le Centre de sécurité civile juge cette zone rouge à «risque très élevé» dans l'éventualité d'un accident impliquant les sphères de butane. Une explosion est jugée peu probable, mais elle provoquerait d'énormes dégâts. Or, cette zone rouge est traversée par l'autoroute Métropolitaine et 100 000 automobilistes y circulent chaque jour. La Presse, A16

*** Crise en santé publique - La surveillance de l'état de santé des Méganticois écope**
Bien que les impacts de la tragédie de Lac-Mégantic se fassent toujours sentir dans la population, la Direction de santé publique de l'Estrie a été contrainte de se départir de deux experts qui travaillaient de façon spécifique sur ce dossier. En janvier dernier, la Direction de santé publique de l'Estrie publiait une étude révélant que l'accident ferroviaire survenu à Lac-Mégantic en 2013 faisait encore souffrir la population : 95 % de Méganticois disaient avoir été touchés par la tragédie. On observait plus de dépressions, de troubles anxieux et de problèmes de consommation d'alcool. La directrice de la santé publique, la Dre Mélissa Généreux, s'en inquiétait. Pourtant, quelques semaines plus tard, elle mettait à pied le professionnel affecté à la surveillance de l'état de santé de la population de Lac-Mégantic. Ce dernier a fait les frais d'une vague de compressions imposée à toutes les directions de santé publique régionales au printemps dernier, dont Le Devoir tente de cerner les impacts dans une série diffusée cette semaine. En Estrie, la Direction de santé publique a dû couper 1,21 million sur un budget de 2,5 millions. " Ça représente 40 % de notre budget, ça a été toute une épreuve pour nous, tout un choc à absorber ", soupire Mélissa Généreux en entrevue téléphonique. Avec son équipe, elle a tenté de faire les choix " qui allaient engager le moins de conséquences possible sur la population ". Mais elle devait couper quelque part. " Ce n'est pas parce qu'on s'est dit que les impacts étaient moins importants, mais quand vient le temps de choisir les postes, il y a toutes sortes de considérants, en matière d'ancienneté entre autres. " L'enquête annuelle sur la population de Lac-Mégantic, qui est financée par un autre " petit budget protégé ", sera maintenue. " Ce qui a été plus difficile, c'est que parallèlement à ça, on ne voulait pas surveiller juste une fois par année, on avait donc un agent de programmation, planification et recherche (APPR) -- celui dont on a supprimé le poste --, qui se chargeait de faire des bulletins de surveillance périodiques. C'est lui qui prenait le crayon et qui faisait l'analyse de ces données. " Le Devoir, A1

*** Spend more to prevent dam spills, experts say**
As miners globally review the way they store waste in the wake of another horrific dam spill, the solution may be as simple as it is dramatic: spend a lot more. Images of sludge spewing into towns and rivers could be a thing of the past if mines used different types of storage such as removing water or building on more stable ground. While that can be as much as 10 times costlier for companies already squeezed by slumping prices, the cost is much higher when things go wrong. The cleanup bill for the Nov. 5 spill at the Samarco iron-ore venture in Brazil, owned by BHP Billiton Ltd. and Vale SA, probably will exceed $1 billion US, Deutsche Bank AG said. Then there's lost output and potential lawsuits. "A failure is a lot more expensive than doing it right," said Dirk van Zyl, professor of mining engineering at the University of British Columbia and one of three experts on a panel into a dam spill in Canada last year. Samarco says its dams were deemed safe in a July inspection and that it's too early to determine reasons for the spill. On Monday, BHP chief executive officer Andrew Mackenzie said the company is "carrying out a thorough review of all of our dam facilities of scale." On the same day, Vale said it's open to improvements, even after concluding that its other installations, which use state-of-theart safety practices, were fully compliant. The Samarco breach, which propelled about 50 billion litres of mud into communities below, comes a

year after Imperial Metals Corp.'s Mount Polley mine in Likely, southeast of Prince George, also dumped billions of gallons into lakes and rivers. Bloomberg (Vancouver Sun, D3)

*** Lepreau residents evacuated in simulation**
As an imaginary cloud of radioactive steam was vented from the Point Lepreau nuclear power plant Wednesday, real calls went out to residents within a 20 kilometre radius telling them to get out. By noon about 150 people were gathered in the gym at the G. Forbes Elliot Forbes Athletics Centre at UNBSJ and there was even space set up nearby for pets in a separate centre run by a disaster animal response team from Nova Scotia. It was the final part of a two-day exercise simulating a nuclear emergency at the power plant based on a couple of years of planning. The emergency was centred around an extreme bad weather event damaging the plant, said Meghan Gerrish a spokeswoman for NB Power... In September members of the media were given a tour of the plant to see the four large, mobile, diesel power generators that were added as a second level of backup to make sure there would always be power to control the equipment. The plant already had a backup generating system but the portable generators are a second level. Large water pumps capable of shooting streams of water over the outside of the reactor to cool it were also purchased. At that time Tony Munn, emergency preparedness manager at the plant, said the industry has learned many lessons from the three major nuclear accidents in the past 50 years - Three Mile Island in the United States, Chernobyl in Russia and Fukushima in Japan. Observers from utilities around the world were at the power plant during the exercise, Gerrish said. "There are over 1,000 people involved in this exercise," she said. Telegraph-Journal, B1

*** Body found near site of Tofino whale-watching tragedy - BC Coroners Services says it can't confirm if it's the passenger who was missing, presumed dead**
A body has been recovered close to Vargas Island near Tofino, B.C., says the BC Coroners Service.On Oct. 25, a whale-watching boat capsized in the area, killing five people. Another victim, 27 year-old Australian Raveshan Pillay, was never found, but presumed dead."While I appreciate there is certainly interest with the possibility this may be linked to the missing person from the Leviathan, it is premature to suggest so," said Matthew Brown with the Coroners Service. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Terror travel investigations on the rise
Radicalized Canadians intent on going to far-off combat zones are developing sophisticated cover stories and using "broken travel patterns" to disguise their true motivations, according to an internal RCMP document that reveals public safety officials were, as of one year ago, closely monitoring about 50 foreign fighters abroad and 14 who had returned home. Family and friends are often reluctant to notify police if they suspect someone is planning a trip, the document states. Also, the speed with which a person becomes radicalized to violence and makes travel plans is sometimes so fast, police only become aware of them after they've left the country. "There is no doubt that the number and complexity of terrorist travel investigations has increased," said the briefing document, which was prepared for the RCMP commissioner and obtained by the National Post through an access-to-information request. Though the document was prepared a year ago, many of the challenges of identifying extremist travellers persist, said a Dalhousie University researcher studying Canadian foreign fighters. Amarnath Amarasingam said much of ISIL's advice to people who want to migrate to Syria is to "blend in to Western ways of life," especially right before they leave... The wave of attacks in Paris last Friday that killed 129 people has heightened concerns about the foreign-fighter phenomenon. A new report this week from the think-tank Institute for Economics and Peace said an estimated 25,000 to 30,000 foreign fighters from 100 countries have flowed into Iraq and Syria since 2011 - half from neighbouring countries and a quarter from Europe and Turkey. Public safety officials in Ottawa said Wednesday there was no evidence of any Canadian involvement in the Paris attacks. They were also unaware of any direct threats to Canada related to the attacks. Amarasingam said he believes at least 60 Canadians have gone to fight in Iraq and Syria. One of them, Toronto-born Farah Mohamed Shirdon, who police say has served in combat, recruiting and propaganda roles with ISIL, was added to INTERPOL'S wanted list this week. Neither Bob Paulson, the RCMP commissioner, nor Michel Coulombe, director of the Canadian Security Intelligence Service, would say Wednesday how many high-risk travellers their agencies are tracking. Ontario accent heard in video?
Investigators are working to confirm a potential Canadian accent heard in an English audio recording released by what is believed to be the Islamic State. The recording was released Saturday and claims responsibility for the terrorist attacks that shook Paris and the rest of the world last weekend. "It is concerning if it is Canadian, but it is speculative at this stage," said RCMP Commissioner Bob Paulson told a news conference Wednesday, adding that the Mounties are working to confirm it. Meanwhile, a dialect expert south of the border said it's very likely the male speaker has a Canadian - specifically an Ontarian - accent. "I mainly listened for vowel variations because that's where most of the variation in English is," said Erik Thomas, a linguistics professor at North Carolina State University. The professor was first asked by CNN to analyze the recording. He took detailed notes on words chosen by the speaker in the recording, such as "explosive" and "hand". "Everything he uttered seemed to match up with forms that predominate in Canada," he said. Certain vowels, such as the short 'o', were among the giveaways suggesting the accent originated in regions of either Canada or northern U.S. states. Winnipeg Sun, A7 (Ottawa Sun, Toronto Sun, Calgary Sun, Toronto Sun)

Hatred burns hot, but not very bright
Among responses to the scattered targeting of Muslims in the wake of the Paris attacks, the most indicative might be the safety preparations under way at a Hindu temple in Hamilton, Ont. Hindus had nothing to do with the killings in Paris. The "brains" behind the terrorist bloodshed appear to have lived in Belgium, not India. The preparations in Hamilton are predicated on the assumption that the sort of people who firebomb mosques and beat up helpless women won't know the difference. In other words, that they're so stupid they direct their hatred at anything that strikes them as vaguely Middle Eastern, even if they're off by an entire culture and a continent or two. There's good reason for their concern. The temple was set aflame in the days following the 9/11 terror attacks in the U.S., by someone who apparently confused it with a nearby mosque. A number of synagogues were also targeted at the time. Hatred may be all-consuming, but it's not very smart. That's already evident from the incidents of the past few days. The only mosque in Peterborough was torched by a person or persons unable to grasp the difference between peaceable people going about their life and the barbaric practices of the terrorists who characterize themselves as the Islamic State. A woman picking up her son at a school in Toronto was kicked, beaten and robbed in mid-afternoon by two men who are so stupid they think a hijab - which she was wearing - must signal support for the sort of brutalities meted out in Syria, most often on Muslims themselves. In Montreal, a man wearing a mask threatened to kill an Arab or a Muslim every week, obviously too dim to realize that plenty of Arabs aren't Muslims. There's a difference between ignorance and stupidity. Ignorance is a lack of knowledge. Stupidity is the determined projection of ignorance. It's likely that the people responsible for the incidents in Toronto, Peterborough and Montreal are both, but while ignorance is likely, stupidity is certain. Postmedia News (National Post, A1/Front)

Man charged after threat to kill Arabs in Quebec
A Montreal man will spend the next few days in jail after being charged in connection with a YouTube video in which someone wearing a Joker mask says one Arab would be murdered in Quebec every week. Jesse Pelletier, 24, was arraigned on Wednesday on charges of uttering threats, possession of a false weapon, public incitement of hatred and hoax regarding terrorist activities. Pelletier, who was arrested early Wednesday morning, will remain behind bars until his bail hearing Monday. The person in the video was wearing a Joker mask and could be seen brandishing what looked like a pistol as he made the threats and spoke about last week's terrorist attacks in Paris that killed 129 people. "It's really time to act," the person said in the three-minute video. Canadian Press (Times Colonist, A8, Calgary Sun, Telegraph-Journal, Times & Transcript, Toronto Sun, Winnipeg Sun, Kingston Whig-Standard, Ottawa Sun, Edmonton Sun, Red Deer Advocate), Presse canadienne (La Tribune, Voix de l'Est, Le Droit, Le Devoir), Montreal Gazette, Toronto Star

***To combat extremism, we must work together**
An opinion piece states "Last week, evil struck. There were vicious attacks in Paris, Beirut and Baghdad. I grieve with the families and friends of the victims and hope the perpetrators are brought to justice. Violent extremism is universally condemned; terror is never the answer and the loss of one innocent life is equal to that of all of humanity. We cannot let such horrific violence achieve its goal of striking fear into our communities and dividing us. It is deeply distressing to many that there has been apparent backlash against Muslim communities, including in Canada. In Peterborough, Ont., a mosque was set on fire last Saturday. Police are investigating the fire as a potential hate crime. This week in Toronto, a hijab-wearing woman was verbally assaulted, punched repeatedly in the stomach and had her hijab ripped off. Canadian Muslims are naturally very concerned. At the same time, Canadian Muslims know these cowardly acts do not represent our society. They are simply the ignorant expressions of criminals (…) Experts point out that there is no single reason why such people travel the path of radicalization. The roots are complex, the solutions not obvious. And combating the problem is made yet harder by the reality that this new brand of brazen terror is a contemporary phenomenon - it did not exist in the 1980s or 1990s. Toronto Star, A25

*** Doctor to assess man caught with knife on Parliament Hill**
A Toronto man arrested for allegedly carrying a hidden weapon at the entrance to the Centre Block of Parliament was remanded in custody Wednesday. Yasin Ali, 56, was detained by the Parliamentary Protective Service on Tuesday after a security screening discovered what police say was a knife. Ali made a brief court appearance Wednesday on a charge of carrying a concealed weapon. Defence lawyer Peter Azzi said his client is due back in court on Friday and will be assessed by a doctor. Neither Azzi nor the RCMP would discuss media reports that described the weapon as a meat cleaver. RCMP Commissioner Bob Paulson applauded the "great job" by the protective service, for which the Mounties have day-to-day responsibility. "The individual was identified behaving oddly, suspiciously. And one of our officers challenged him, saw the knife, took him into custody," Paulson said. "I understand that it is less a concern around socalled national security considerations than it is a mental-health issue." Security on Parliament Hill has been tight since Oct. 22, 2014, when Michael Zehaf Bibeau gunned down a soldier at the nearby National War Memorial and sprinted through the main doors of Centre Block. Moments later, Zehaf Bibeau was fatally shot by security officials outside the Library of Parliament. Canadian Press (Times colonist, A8)

*** Des musulmans sur leurs gardes après des menaces**
Menaces de mort au téléphone, agressions verbales dans la rue, messages haineux sur les réseaux sociaux: des membres de la communauté musulmane de Montréal affirment vivre dans la peur depuis les attentats de Paris. «Depuis ce qui est arrivé à Paris, je ressens une peur chez les musulmans. Je crains que tout cela finisse mal», lance Haroun Bouazzi, de l'Association des musulmans et des Arabes pour la laïcité au Québec (AMAL).«J'ai l'impression que ce n'est qu'une question de temps avant qu'un membre de notre communauté se fasse casser les deux jambes. Il y a trop de haine sur les réseaux sociaux», poursuit-il. Mercredi matin, le téléphone ne dérougissait plus à l'AMAL, plusieurs citoyens s'inquiétant de menaces de mort proférées sur les réseaux sociaux par un homme déguisé en joker, qui a finalement été arrêté par les policiers. «Beaucoup de gens m'ont écrit en panique. C'est étonnant de voir à quel point ils vivent dans la peur», affirme M. Bouazzi. Haroun Bouazzi dit recevoir régulièrement des menaces sur le site de son organisation. Mais il affirme ressentir une «pression supplémentaire» depuis quelques jours. Il n'est pas le seul. Joint mercredi par *Le Journal*, Mehmet Deger, président de la mosquée Dorval, a rapporté avoir reçu un coup de fil menaçant mardi après-midi (…) Cependant, le Centre islamique de l'est de Montréal de l'imam controversé Adil Charkaoui, de même qu'une mosquée du quartier Hochelaga, ont été vandalisés au cours des derniers jours. QMI Agency (Journal de Quebec, Journal de Montréal)

*** 'Loves Me Not' Poem Captures Heartbreaking Reality Of Islamophobia In Canada**
Taunts in public. Comments online. And recently, physical abuse. In the past months, Canada has witnessed far too many attacks against Muslims, particularly women. Earlier this week, a Muslim woman was physically assaulted in front of her children's school and called a "terrorist." In October, a woman wearing a niqab was attacked at a Toronto mall. It's difficult for most of us to imagine the emotional trauma victims of such discrimination endure. But one poem, written by a group of Muslim women in Toronto, captures the heartbreaking reality. "Loves Me Not", a video poem created earlier this year during

a filmmaking workshop hosted by TIFF Special Delivery and advocacy group Outburst, tells the story of a young Muslim girl who wears the hijab. The poem begins with the girl, her hijab constructed with colourful petals. She holds a flower in her hand, but as she suffers from Islamophobia her flower begins to die. "Everywhere she looked, people would stare," the poem states. "They asked, 'Is that something your dad forced you to wear'?" According to Outburst's Facebook page, the poem was inspired by Islamophobia endured by the writers as they attended school in Toronto. The video continues to show the lasting impact of discrimination. "One day she broke down, the comments made her drown." Huffington Post

*** Web et jeux vidéo au service du terrorisme**

Le 10 novembre dernier, soit trois jours avant les attentats de Paris, le ministre de l'Intérieur belge Jan Jambon a laissé entendre que des terroristes utilisaient une console PS4 pour communiquer entre eux, une information qui a refait surface au cours des derniers jours. La réalité: aucune console PS4 n'a été retrouvée lors des nombreuses perquisitions effectuées en France et en Belgique. Ce qui ne veut pas dire que les jeux vidéo ne jouent pas un rôle dans les milieux terroristes. En 2013, grâce à des documents rendus publics par Edward Snowden, le Guardian et le New York Times ont révélé que la NSA et la CIA avaient déjà mené des opérations d'espionnage sur des consoles Xbox. Quelle utilisation les terroristes peuvent-ils faire des jeux vidéo? «Dans les jeux multijoueurs (pensons au jeu Call of Duty, par exemple), on retrouve des plateformes de "chat" afin que les joueurs puissent échanger entre eux, explique Hugo Loiseau, professeur à l'École de politique appliquée de l'Université de Sherbrooke. La Presse, A14

*** Hindu temple gratified by public support**

Young Muslims from the Toronto area would like to help pay for the damage caused at the local Hindu temple that was vandalized this week, but a temple board member said insurance covered the costs and the windows have been repaired. So the group known as Dawahnet, which means "spreading knowledge" in Arabic, will donate $2,299 that was collected in 24 hours on a gofundme website to the temple. Temple board member Vijay Solanki said the temple was overwhelmed with public support with many offering to help with the damage costs. "We gratuitously thanked them for the offer, but it is not appropriate to raise thousands of dollars for something that didn't cost us," he said. The gofundme page was set to raise $10,000 for the Kitchener temple by Dec. 1, but organizer Arshia Lakhani of Mississauga said they closed the site after speaking to the temple (...) Swami Chaitanya Jyoti and two other women were in the building and were frightened by the noise at the back of the building shortly after 11 p.m. No one was hurt in the incident. Hours before the vandals struck, Jyoti was at the Kitchener vigil honouring those who lost their lives in the Paris terrorist attacks. Record, B2

*** Extend vigilance to everyday threats**

An opinion piece states "In the wake of the attacks in Paris, there has been no shortage of security experts in the media talking about how to best keep safe. RCMP Assistant Commissioner Roger Brown, for example, articulated what everyone intuitively knows - there's no real science to spotting a terrorist plot. The best you can hope for is your gut tells you something is wrong. "When you do find yourself in a position where you see or do become aware of something that's not right, the next logical step is to report it to the proper authorities," Mr. Brown said. To his credit, the assistant commissioner hasn't fanned the flames or paranoia. He's done a good job of explaining the scope of the threat in Canada, not exaggerating it. David Charters of the Gregg Centre for the Study of War and Society at the University of New Brunswick has a similar message, calling an attack "a possibility but a relatively remote possibility." "The message 'If you see something, say something' is not a bad idea," Mr. Charters says. This is sound advice. It's true New Brunswick hasn't been the target of a terrorist attack, which isn't to say it's been a terror-free province. Justin Bourque's rampage in Moncton remains fresh in New Brunswickers' memories. And who can forget the seven months Allan Legere was on the loose in 1989. While the threat of a terrorist attack in Fredericton is remote, it's no excuse to be complacent. It's the reason schools practice lockdown drills. It's the reason passing through security at airports has become a much more intimate experience thanks to body scans and random searches." Daily Gleaner, A8

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Douanes à Bagotville: Lebel offre sa collaboration
Au cours d'un entretien avec le journaliste du Quotidien, le député conservateur de Lac-Saint-Jean affirme que le gouvernement Harper était prêt à annoncer, il y a quelques mois, un projet-pilote à travers le Canada, mais que la défaite électorale du 19 octobre avait modifié les plans. Depuis plusieurs années, les compagnies aériennes et les passagers qui se rendent en vacances dans le Sud réclament un service de douanes à l'aéroport de Bagotville. Il faut savoir que le service existe pour les voyages d'affaires de 30 passagers et moins seulement. Présentement, lorsque l'avion quitte le Mexique, Cuba, le Panama ou la République dominicaine, le pilote doit obligatoirement faire un arrêt à Québec. Les touristes doivent débarquer et passer par les douanes. Chaque fois, l'arrêt dure au minimum une heure et oblige les compagnies d'aviation à défrayer des sommes d'argent pour avoir le droit de se poser, en plus des dépenses de carburant que cela implique. (...)Au cours des dernières années, Denis Lebel et des fonctionnaires du gouvernement ont tenté de trouver une solution qui ne serait pas coûteuse pour ce projet. Et l'ancien ministre y était parvenu. Chaque atterrissage à Québec entraîne des coûts assez importants pour les compagnies aériennes. Ils seraient de l'ordre d'environ 10 000$, que les voyageurs paient sur leur billet. «Ce que je propose, c'est que l'on prenne cette somme et qu'on l'investisse dans les équipes de douaniers. Ça ne coûterait rien de plus au gouvernement, mais ça éviterait une escale.» «L'équipe volante des douaniers pourrait être formée des douaniers actuels de l'aéroport et on pourrait ajouter des militaires et des policiers à la retraite pour donner un coup de main. Au départ, ce serait un projet temporaire, soit pour la durée des vols offerts vers les destinations du Sud», analyse Denis Lebel. La Presse

L'ABC des achats de Noël en ligne
plusieurs consommateurs n'aiment pas faire la tournée des centres commerciaux pour faire leurs emplettes des fêtes. de nos jours, il est possible d'éviter cette épreuve annuelle en commandant ses cadeaux en ligne. Selon un récent sondage du Conseil québécois du commerce de détail (CQCD), plus du quart des Québécois (26 %) prévoit acheter un ou des cadeaux sur inter-net cette année. Année après année, ce geste devient toujours plus populaire. En 2010, seulement 11 % des Québécois prévoyaient acheter en ligne pour la période des Fêtes. (...)En théorie, en achetant sur un site américain, vous épargnerez la taxe de vente, car vous êtes résident d'un autre pays. Cela dit, bon nombre d'États américains n'ont tout simplement pas de taxe de vente. L'économie atteint près de 15 %, mais elle prive le Québec de revenus. Par contre, à la frontière, votre paquet pourrait être vérifié par l'Agence des services frontaliers du Canada, qui procède de façon aléatoire. Le cas échéant, on vous facturera des frais de dédouanement et des taxes canadiennes. Ces frais augmenteront le coût de votre achat. Journal de Québec, 42; * Journal de Montréal, 36

U.S. border airports seeing drop in Canadian travelers
The shuffle off to Buffalo to catch a cheap flight on a U.S. airline is losing its shine, thanks to a lower loonie. "We have seen an impact, but it's difficult to quantify the exact number," said Pascal Cohen, senior manager of marketing at the Buffalo Niagara International Airport. That's because no data is collected on citizenship, when passengers arrive to catch their flight. However, airport officials do conduct licence plate surveys at the parking lot at the Buffalo airport. Previously, when the Canadian dollar was at par with the U.S. dollar, as many as 40 per cent of vehicles were Ontario plates. These days, the airport estimates it is about 15 to 20 per cent fewer Ontario plates. Cohen says overall passenger volume at the Buffalo airport is up 1.9 per cent, year over year, which could be attributed to an improving U.S. economy. It's unclear whether Canadian airports will enjoy a bump in traffic as travellers choose to fly from home airports. Pearson airport says passenger traffic on transborder routes are up this year, but can't attribute that to a shift in travel patterns. Toronto Star, S11

*** U.S. to have tariffs against Cape Breton paper**
A series of costly duties will be levied against Canadian mills, including one in Point Tupper, that produce glossy paper following a vote Wednesday affirming the trade action by the U.S. International Trade Commission. The trade body says the vote was part of the final phase of a countervailing duty investigation into Canadian imports of supercalendered paper, which is mainly used for magazines, catalogues, corporate brochures and advertising inserts... Canada's international trade minister Chrystia

Freeland, issued a statement saying an appeal under the North American Free Trade Agreement will determine if the countervailing duties are being applied in accordance with the laws of the United States. Canadian Press (Cape Breton Post. A1, A4); Chronicle Herald, A1

*** SNAPSHOT: Children in immigration detention**
The location of CBSA's three immigration detention centres. CROSSINGS. Chronicling the global refugee and migrant experience 65 Number of days spent in a Canada Border Services Agency immigration holding centre (as of Nov. 13) by one of the two children currently waiting to hear the results of a refugee claim. The other has been there for 18 days. An agency spokesperson said that both children's parents prefer they stay in the centre with their families, rather than be relocated by child-protection services. "If you are a Canadian citizen and you're born in immigration detention or you're a Canadian citizen but your parents are undocumented, get arrested and placed in detention, the parents have a choice to give their children over to Children's Aid Society custody and never see them again or bring them in with them in prison. Adults make the difficult decision to bring their kids into prison ... What does a two-year-old do? Globe and Mail, L4

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Blackmailers target clients of Ashley Madison - Complaints to FTC claim online extortionists active in wake of site's hacking**
Victims of the Ashley Madison hack say they are being blackmailed months after millions of customers had their information leaked online. Complaints filed with the U.S. Federal Trade Commission detail how customers continue to feel the aftermath of the July attack on the Toronto-based adultery website. "A recent hack from the company exposed numerous amounts of private information from me. Now I am being harassed by others who are maliciously using the contents of that information," wrote one person. The hackers, who are still at large, leaked the information online, causing shock waves across the world as millions of alleged Ashley Madison customers had their dirty laundry aired. *** More offers too good to be true - Fraudsters finding new ways to victimize computer users**
An opinion piece states “Raise your hand if this has happened to you: A telephone call from Microsoft (or Windows) telling you your computer needs immediate attention. An email from your bank notifying you that your bank account has been compromised and you need to reset your password. Or, you are visiting a website, to get a recipe or read some news, and you get a screen message that your computer is running slowly so ‘click here’ to repair the problem. Keep your hand raised if you are a senior. Well then, join the club. And it's a growing club because fraudsters can easily get your phone or email address and with mass calls and/or mailings are sure to grab more and more unsuspecting customers. Locating the scammers is almost impossible; many are out of country and most use disposable cellphones that are difficult to trace. Here's a taste of how it all goes down. An elderly friend, let's call him Blake (whom I had previously helped with computer issues) called me to say that Microsoft had phoned him and he had allowed the caller remote access to his computer. The "technician" immediately claimed to find mountains of viruses and offered to clean his computer - for a price. What credit card would he like to use? Blake, rightfully reluctant to give out his card number, hesitated. The caller pressed him further, this time to go to Western Union and send cash. When Blake once again refused, the caller informed him that unless he paid $179 his computer would become inoperable. Blake hung up. When he called me I congratulated him for not responding to an obvious scam, but here's the thing: the scammer had reset his user password and Blake could not get into his computer. Not an easy fix. Other similar examples include opening your computer only to find a detailed welcome screen seemingly from the FBI/RCMP warning you to pay a fine for illegal downloads or else your computer will remain in lockdown. This kind of malware is more easily removed, but how many people - especially seniors - are intimidated and fall for these and similar schemes?” Hamilton Spectator, A15

LAW ENFORCEMENT / APPLICATION DE LA LOI

A night on the town

At 9:50 p.m. Nov. 4, two police trucks responded to a call about a woman threatening to commit suicide. The call came from a family member and was relayed to the detachment over the phone. "The whole town doesn't need to hear that over the scanner," said Const. Yannick Gagnon as he followed a vehicle to where the woman lives. In the end, police decided the woman wasn't an imminent threat to herself and took her to a relative's home. "Just to be on the safe side, we're not going to let her be alone," said Gagnon. "If she didn't have family to go to, we would bring her to the hospital to get her cleared, and if she was imminently suicidal she would be taken to the hospital right away. Better safe than sorry." He said this way if there are more concerns over the course of the night, at least the officers know the situation. Gagnon arrived at the RCMP detachment shortly before 7 p.m. on Nov. 4 to get ready for night shift. It was "superconstable" night, something that happens once every two weeks or so when shifts overlap and nearly all officers work on a given day. It means they can get caught up on paperwork and share important events with the next crew to come on. Gagnon's regular partner, Const. Mackenzie McGuffin, spent the shift preparing for a case going to court the next morning. "It's what ties everything together," he said. "You can respond to a call, but if you don't follow up with the paperwork, there's no chance those charges will go through." Gagnon said he was a few weeks into Depot, where all RCMP members go to be trained, before he realized the job was 90 per cent pencil-pushing and 10 per cent "fun stuff." "I wanted to quit right there," he joked. Inuvik Drum

Man charged over concealed cleaver

A Toronto man who allegedly tried to carry a meat cleaver onto Parliament Hill is to undergo a psychiatric assessment. A lawyer for Yasin Ali asked for the assessment in court Wednesday after the 56-year-old appeared by video from the courthouse cellblock on a charge of carrying a concealed weapon. He will remain in jail until his next appearance on Friday, when he is to appear in court in person. The man had a ticket to visit the Peace Tower, and was in line to go through the visitors' entrance at about 11:30 a.m. on Tuesday when a House of Commons security guard asked him to open his coat. The guard found the man was concealing a large cleaver with an approximately 15-cm-long blade. The man never made it as far as the metal detectors. RCMP Commissioner Bob Paulson told reporters that Ali is known to authorities, but "not in the sort of counter-terrorism context." In fact, Paulson does not believe that the man's actions were politically motivated or an act of terror. *** La GRC pourrait avoir agi illégalement, dit la juge**

Une juge de la Cour suprême de la Colombie-Britannique a affirmé que la preuve tendait à montrer que la Gendarmerie royale du Canada (GRC) avait agi illégalement durant une opération d'infiltration antiterrorisme de haut profil, et a ordonné à la police de remettre des documents juridiques confidentiels. La juge Catherine Bruce n'a pas encore déterminé si la GRC avait piégé John Nuttall et Amanda Korody pour qu'ils organisent un complot visant à faire exploser le parlement de la Colombie-Britannique en 2013, mais elle a indiqué que les agents pourraient être coupables d'avoir facilité en connaissance de cause un acte terroriste durant leur opération d'infiltration. «Il existe un lien suffisamment étroit entre les actes illégaux commis par la GRC et les faits reprochés aux accusés pour soutenir une allégation d'abus de procédures», a-t-elle écrit. Mme Bruce a ordonné à la police de dévoiler des avis juridiques confidentiels obtenus relativement à l'opération secrète pendant laquelle des agents se faisaient passer pour des combattants djihadistes. «Ces documents fournissent un aperçu fondamental de l'état d'esprit de tous les agents mêlés à l'intervention», a-t-elle mentionné. La confidentialité de la correspondance avec un avocat est habituellement protégée, mais la magistrate a indiqué que les agents de la GRC avaient renoncé à ce droit en dévoilant délibérément une portion de l'information en cour. La juge estime qu'il est pertinent de savoir si les policiers ont suivi les conseils de l'avocat, car cela pourrait montrer une mauvaise foi de leur part. John Nuttall et Amanda Korody ont été reconnus coupables plus tôt cette année sous des accusations de terrorisme pour avoir planifié de perpétrer un attentat sur le site de l'Assemblée législative de la Colombie-Britannique lors des célébrations de la Fête du Canada de 2013, mais leurs avocats ont argué que la GRC les avait piégés et que le complot n'aurait jamais été organisé sans l'aide de la police. *** Les agences se font rassurantes**
Les grands patrons des agences canadiennes de sécurité et du renseignement ont cherché à se faire rassurants, hier : ils ont bel et bien la capacité de faire les vérifications qui s'imposent afin de protéger les Canadiens contre les menaces potentielles posées par l'accueil rapide de 25 000 réfugiés d'ici la fin de l'année. « Je veux que les Canadiens sachent qu'en tant que directeur du SCRS, je suis sûr que les mesures en vigueur sont robustes et que j'ai pleinement confiance qu'elles seront appropriées », a déclaré Michel Coulombe, directeur du Service canadien du renseignement de sécurité (SCRS). De plus en plus de gens au Canada expriment leur inquiétude devant cet accueil jugé trop rapide et un nombre trop élevé de réfugiés d'ici six semaines. Les chefs du SCRS, de la Gendarmerie royale du Canada (GRC), de l'Agence des services frontaliers du Canada (ASFC) et le ministre fédéral de la Sécurité publique ont livré une rare conférence de presse conjointe pour répondre à ces préoccupations. Ils ont fourni quelques détails sur la situation sécuritaire au pays dans la foulée des attentats de Paris et sur leurs démarches pour assurer la sécurité tout en respectant la promesse électorale du Parti libéral. La Presse Canadienne (Voix de l'Est, La Presse,); La Presse

*** Takes two to tango in Duffy trial**
The Ol' Duff will be strutting today, his mind firmly convinced that, besides his courtroomdrama playing a key role in bringing down the spiteful Harper government, he will soon be walking out of court totally vindicated. This has been Duffy's firm belief from the outset, and he has sent chastising emails to many in the media who presupposed his guilt. (…)In fact, the RCMP exonerated Wright of any wrongdoing and, after he testified about cutting the cheque to Duffy, he skedaddled back to England and his job as managing director in the London office of Onex Corp. There is no jury here. It is trial by judge alone, so it comes down to Ontario Court Judge Charles Vaillancourt to decide if there was a bribe and, if so, then solve the riddle of who bribed who. But armchair jurors are already taking bets on acquittal. The most entertaining portion of the trial, of course, has been defence attorney Donald Bayne's tarring of the Prime Minister's Office, even though who-knew-what and/or who did or did not tell the prime minister about Wright's cheque has nothing to do with Duffy's guilt or innocence. Postmedia Network (Calgary Sun, A15)

*** Winnipegger warns of immigration phone scam - Callers demand payment**
More than 45 years after Winnipeg resident Monina Relano moved to Canada from the Philippines, she got a phone call Tuesday saying there was a problem with her immigration paperwork."I was scared," said Relano. Though she's been a Canadian citizen since 1975, she was taken aback by the authoritative voice on the phone. The man told her she didn't fill out a required immigration form and now had to pay an out-of-court settlement of $2,490 or the RCMP would be at her door.Relano figured out it was an immigration phone scam but worries more recent newcomers without permanent status in Canada might be conned. She wants to warn them before they get the call and end up swindled. Winnipeg Free Press, B6

*** Diverse workers sought by RCMP**
The RCMP is seeking some good men and women to diversify their ranks. With a visible minority presence of 9.7%, the force is seeking to increase that to 20% to better represent the country it serves, say Mounties. The force is holding a Calgary career presentation Nov. 25 at the Duncan Building, 7575 8 St. N.E. at 6 p.m. On offer are 150 different types of policing opportunities. Those applying for a position with the RCMP must be a Canadian citizen, 19 years of age and be fluent in either or both English and French. They must also possess a valid driver's licence and have a high school diploma or an equivalent, be able to meet fitness requirements and be willing to re-locate anywhere in Canada. Postmedia Network (Calgary Sun, A10)

*** New Kids on the cellblock**
A Red Deer crime syndicate has taken a big hit. Police have arrested and charged three alleged members of Bobby and the Kids, a group that deals mostly in the drug trade. One of them is believed to be "Bobby," the leader of the group. The organization has dealings throughout Central Alberta including Sylvan Lake, Blackfalds and Innisfail and has been operating for "some time," say police. The arrests are

believed to be the first made involving the organization. "We have definitely disrupted this group and eliminated the harm they are doing in the community," said Red Deer RCMP Sgt. Eric McKenzie. Police did not give any indication of the size of the group. Last Friday, the Priority Crimes Task Force seized 55 ounces of cocaine, nine ounces of methamphetamine, marijuana, a stolen pistol, drug paraphernalia and $30,600 in cash after executing search warrants at Timothy Drive and Leonard Crescent in Red Deer and Harvest Close in Penhold. Three men between the ages of 22 and 27 were arrested without incident. Postmedia Network (Red Deer Advocate, A1, A2)

* **Quebec police conduct major raids linked to drugs, organized crime**
Quebec provincial police say they are conducting major raids this morning linked to drug trafficking and organized crime in the Montreal area. Sûreté du Québec spokesperson Audrey-Anne Bilodeau says roughly 200 police officers are taking part in the operation. The raids target "different strains of organized crime in link with the control of the territory, the supply and the distribution of drugs in Montreal," Bilodeau said. In all, Bilodeau says they expect to arrest about 40 people this morning. Bilodeau would not give further details on the suspects or what kind of drugs may be involved. She says members of the SQ, Montreal police and the RCMP are collaborating. A news conference is planned for later this morning to give more details on the operation. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Young Shafia seeks appeal
Hamed Shafia, the Montreal man convicted, along with his father and mother, of murdering four family members in what the trial judge called a "heinous" and "despicable" mass honour killing, is poised to present a new claim to Ontario's top court regarding the appeal of his conviction. The youngest Shafia killer maintains that he was not 18 years old at the time of the murders on June 30, 2009, and he has documents newly obtained from Afghanistan, his birthplace, that purport to prove it. Shafia was tried and sentenced as an adult, based on documents that indicated he was born in Kabul on Dec. 30, 1990. Those records established that he was 18-and-ahalf years old at the time of the killings, and therefore subject to adult criminal law. After a 45-day trial, he was convicted of four counts of first-degree murder and sentenced to the mandatory term of 25 years in prison before parole eligibility. If convicted of murder in youth court and sentenced as a youth, he would be eligible for parole much sooner, perhaps in as few as five years, calculated from the date of his arrest in July, 2009, according to Nicholas Bala, a Queen's University law professor and expert on youth criminal law. The legal scholar said it might be the first case in Canada in which a killer sought to prove he was underage after his adult conviction. Postmedia Network (Kingston Whig-Standard, A1, Montreal Gazette, Toronto Sun, Calgary Sun, National Post, Ottawa Citizen)

McDonald's killer loses appeal
The man believed to be the mastermind behind the most notorious killings in Cape Breton history has lost his appeal of the decision to deny him day parole. Derek Anthony Wood was sentenced to life in prison with no eligibility for parole for 25 years after being convicted of a number of charges, including two counts of first-degree murder in the 1992 Sydney River McDonald's killings when he, Darren Muise and Freeman MacNeil robbed the restaurant and killed three workers. A fourth person was left permanently disabled. Wood had filed an appeal with the Parole Board of Canada after it denied his day parole application earlier this year. He had been deemed a medium-to-high risk to reoffend in a violent manner, according to a psychological assessment. Cape Breton Post, A1

'She's never coming back'
Eighteen years later, the daughters of murdered prison guard Diane Lavigne say they're still struggling to cope. Testifying Wednesday at a hearing where former Hells Angels underling Stéphane Gagné is seeking an earlier parole eligibility on the life sentence he is serving for taking part in the murders of two prison guards in 1997, 40-year-old Isabelle Daoust said she still remembers how sunny it was on the Friday morning her uncle knocked on her apartment door and told her "my sympathies, Isabelle. Your mother's been assassinated." Gagné killed Lavigne in June 1997, shooting her from the back of a motorcycle as she drove home from her job at the Montreal Detention Centre. He later became a

collaborating witness against biker boss Maurice (Mom) Boucher and helped convict him. Boucher is now serving a life sentence for the murders of Lavigne and Pierre Rondeau and the attempted murder of Robert Corriveau, all of them guards at provincial detention centres targeted in an effort to intimidate the Quebec justice system. Daoust called the sequence of events in 1997 "surreal. Things like that didn't happen in Quebec. It's like a film that I was watching from above ... too big and unexpected to ever see coming." Montreal Gazette, A3, Le Devoir, Journal de Québec (Journal de Montréal); * La Presse

* **James Leroy Leopold, convicted of killing fiancée, has parole revoked after 5 months**
A Nova Scotia man who killed his fiancée has had his day parole revoked after just five months. James Leroy Leopold was convicted of manslaughter and sentenced to six years in prison after the death of Laura Lee Robertson in 2012. During his trial, the court heard Leopold told police he and Robertson got into a fight and that she died after he hit her in the throat. Following a hearing in May of 2015, Leopold was granted six months of day parole by the Parole Board of Canada. In their decision, the board noted that Leopold is at a high risk of violence towards a partner. Global News (2015-11-18)

* **Parole extended for killer ex-Mountie**
A former Mountie convicted of first-degree murder who has been running an antiques store in Prince George must spend at least a further six months on day parole, according to a recent Parole Board of Canada decision. Patrick Michael Kelly, 65, was convicted in 1983 for throwing his wife off the 17th-floor balcony of their Toronto apartment. Kelly was originally granted day parole in 2003. Since then, his parole has been revoked several times for failing to disclose financial dealings or relationships with women. The former undercover officer was granted full parole in 2010 and opened his store in Prince George. But the board reversed his release in August 2012 after he failed to report two relationships with women. Prince George Citizen (2015-11-18)

Traque contre un couple de voleurs
Un enquêteur qui a traqué pendant des mois un couple de voleurs à la Bonnie et Clyde, qui ont dérobé pour plus de 1 M$ en cambriolant des maisons cossues partout au Québec, sera récompensé aujourd'hui pour son travail acharné. «Je suis tellement content d'avoir résolu ces dossiers. Sinon, ils auraient continué à commettre d'autres crimes. Certaines victimes ont été démolies en se faisant voler des objets de valeur importants à leurs yeux», a dit le sergent-détective de la Sûreté du Québec, Gordon Hunter. (...)Le sergent Hunter sera récompensé aujourd'hui dans le cadre du Gala des Prix policiers du Québec pour son implication dans cette enquête. (...)Jimmy Simard-Patry et Elyanne Miller ont respectivement écopé de cinq ans et demi et de deux ans de prison en juin. Un complice du couple n'a pas encore subi son procès. Journal de Montréal (Journal de Québec)

Province's plan a 'beacon' for justice: minister - Unveils details of restorative strategy
A five-year plan to make restorative justice a mainstream method of dealing with crime in Manitoba will include a community court in the North End, an expansion of current mental-health and drug-court diversion programs and a focus on victims, the provincial government announced Wednesday. Restorative justice is "local, swift, common-sense, tough justice," Justice Minister Gord Mackintosh told a room of restorative-justice advocates at the legislature building Wednesday, proclaiming legislation he hopes will establish Manitoba as a "beacon in North America for restorative justice." The term restorative justice refers to an individualized approach for offenders (who are often youth or first-time offenders) to take responsibility for their actions, usually by reconciling with victims, performing community service and working toward their rehabilitation. It's used mainly to handle less serious crimes and non-indictable offences, but the justice minister said the province is looking at "tacking on" restorative-justice techniques alongside criminal-court sentencing. The province plans to fulfil the new strategy, announced Wednesday to coincide with the implementation of the Manitoba Restorative Justice Act, by increasing its current $1.8-million annual spending on restorative justice, starting with an additional $320,000 next year. Winnipeg Free Press, B5, Winnipeg Sun; * Radio-Canada

* **Credit-card fraud extends sentence**
Credit-card fraud has added to the length of a Fredericton man's prison sentence. Ashley James Charlton, 35, was brought to provincial court in custody recently on a charge of using a stolen credit card between Aug. 5 to 6. The former Canada Street resident pleaded guilty to the offence during an

appearance last month. Judge Mary Jane Richards sentenced Charlton to six months' incarceration and ordered that he pay a $100 victim-fine surcharge. He was also instructed by the court to pay restitution in the order of $3,279. Charlton told court during an earlier appearance that he's serving time in the Springhill Institution in Nova Scotia for breaking into two food vendor kiosks at the Northside Market and stealing hundreds of dollars worth of meat on Aug. 19. Daily Gleaner, A4

*** World's indigenous leaders look to adopt prison practices at Waikeria**
Indigenous leaders from around the world hope to adopt practices from a Waikato prison unit that rehabilitated violent offenders, drug abusers and sex offenders. Daniel Levi Martin is a tribal leader of Tla-o-qui-aht First Nations people, who live on reserves along the Pacific Rim National Park, Canada. "I hope that I can learn the different ways of doing things here [at the prison], techniques I can take back home to my people," he said. Martin was in Hamilton for the week-long indigenous people's conference, Healing Our Spirit Worldwide - The Seventh Gathering, hosted by Te Rau Matatini. "I'm an elder and an advisor to treatment centres. I hope to learn something here." Waikeria Prison's Karaka Unit is an 80-bed therapeutic community for medium and high risk offenders. Since 2010, 245 prisoners have completed treatment programmes at Waikeria Prison's Karaka Unit. Since 2010, 245 prisoners have completed the programme, with 55 per cent of those identifying as Maori. There are three programmes within the unit; the Dependency Treatment Unit (DTU) for those with substance abuse, the Special Treatment Unit Rehabilitation Programme (STURP) for high-risk offenders, and the Adult Sex Offender Treatment Programme. Stuff.co.nz

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Police must communicate to track missing women
Effective communication between police agencies is essential when it comes to investigating vulnerable women who have disappeared, says the man who oversaw British Columbia's Missing Women Commission of Inquiry. Wally Oppal, a former B.C. Court of Appeal justice and provincial attorney general, said there was little communications between the RCMP and the Vancouver police in the 1990s when multiple women went missing in that province. "When vulnerable women go missing police have to get involved and that is what they didn't do in the 90s," Oppal said in an interview. "The result is you have well over 100 women who were murdered." Exchanging information in such cases has to take place, Oppal said. What happened in B.C. was that women were being picked up in the eastside of downtown Vancouver but were being murdered in Port Coquitlam, about 35-40 minutes away, he said. "There were very little communication between the RCMP and the Vancouver police," Oppal said. "We were very critical of the policing that took place and that there was no real liaison between the sex trade workers and the police." Oppal will be at St. Thomas University Thursday night presenting a public lecture on the inquiry. Appointed commissioner in 2010, Oppal held close to 100 days of public hearings and forums in Aboriginal communities in northern B.C. in which the many victims and survivors of the Robert Pickton tragedies testified. The inquiry was called to examine why Vancouver police and the RCMP failed to catch Pickton before he was arrested in February 2002. Daily Gleaner, A3 (Times & Transcript)

*** Does Canada still need a Status of Women minister?**
We've come a long way in Canada on gender equality - far enough for Prime Minister Justin Trudeau to mandate gender parity in his first cabinet. So do we still need a Status of Women ministry? "Yes, we certainly do," said noted feminist and journalist Michele Landsberg, The new mandate letter for Status of Women Minister Patty Hajdu tasks her with trying to eliminate economic and political inequalities that affect women, tackling violence against women and moving forward with a planned inquiry into murdered and missing aboriginal women. Under the Harper government, Landsberg said, women's rights were set back by budget cuts for research and advocacy in the ministry. This loss of funding, she said, meant government couldn't get a complete picture of what was happening in the lives of women. iPolitics, Toronto Star

*** Saskatoon men asked to combat violence against women**
Members of the University of Saskatchewan Students' Union (USSU) have called for an end to violence against indigenous women and children, hoping men will lead the movement for change. "Traditionally as men, our role was to stand as protectors and also to support our women," said Regan Ratt-Misponas, indigenous student representative with the USSU. "Our women were very much regarded as the leaders of First Nations communities and First Nations reserves." On Wednesday, students were introduced to the "Moose Hide Campaign," a grassroots, non-profit that encourages aboriginal and non-aboriginal men to wear pins made of the material. Global News (2015-11-18)

*** Delete Day aims to combat social media cyberbullying**
Countless people can see what you're doing, and a lot of them are mean. That was the message Windsor police and Catholic Central High School tried to drive home Wednesday during Delete Day, an event they hosted to combat cyberbullying. Students spent time with their vice-principal and a police officer to learn how to delete bullying posts from their social media profiles, along with anything they might regret posting themselves. "There are adults and other people whose sole purpose is to troll the Internet and find young people using social media to see if they can acquire their information," said vice-principal Laura Beltran. "When that happens, it can ruin lives and it's very difficult to put lives back together once information is out there. Especially for young people, their reputation, their self-esteem, their self-concept is still growing and maturing and it can be devastating for them at a very early age." Dozens of students showed up for Delete Day, one of a number of events being held as part of Bullying Awareness Week. Grade 12 student Manal Muzamil said it was a good chance to "refresh" social media accounts, delete bad things people have posted and block those responsible for the negativity. Windsor Star, A3

*** Cyberbulling starts young**
Cyberbullying can affect children far younger than widely believed, experts warn. While it starts to become prevalent in students around the Grade 7 level, children can gain access to this world much sooner, said Brad Burns, principal of Highlands School in Edmonton. "I know of students that are in kindergarten who are coming to school with cellphones, because they are a very useful resource for safety and communication at homes," said Burns. "As technology is more prevalent in our lives and more integrated, that age of being in that world keeps moving down to younger and younger children." On Wednesday, as part of Bullying Awareness Week, Burns was one of five panellists speaking at an Alberta government-sponsored webcast on cyberbullying. He said it's up to the parents to inform and discuss with their children about the importance in becoming a "responsible digital citizen." Calgary Sun, A21 (Edmonton Sun)

*** There's value in carding**
An opinion piece states, "In September 2011, a 15-year-old girl was sexually assaulted in a Brampton park. Officers attached to Peel Regional Police's special victims unit had a description, but the perpetrator was long gone. Detectives checked to see whether there had been any PRP17s (street check reports) filed from anywhere nearby. Bingo. Up came a street check on a 37-year-old man - including name, date of birth and description - who was engaged by police at the park months earlier. They had a suspect and a reason for a search warrant which - when executed - led to the arrest of the man for possessing child pornography as well as the sexual assault on the girl. There's one example of the benefits of police community engagement that opponents feel is racial profiling. Under new rules being implemented next year by the provincial government, police will have to tell people encountered - such as the man engaged in the park - that there is no need for them to talk to officers and that they're free to go. It's absurd." Toronto Sun, A10

*** Fassbender saps amalgamation impetus**
It never was about forcing amalgamation on Greater Victoria, and Peter Fassbender knows it. B.C.'s community charter already bars the provincial government from imposing amalgamation on anyone. No, all that people are asking for is a study into whether amalgamation makes sense. (...)Of course, while Victoria and Esquimalt might see this disparity as an excellent reason to share the cost of policing more equitably, the other municipalities see it as a totally awesome reason to leave things as they are. Why would Langford, whose residents pay just $141 apiece for the RCMP, voluntarily eat a cost hike?

Both Victoria Mayor Lisa Helps and Esquimalt Mayor Barb Desjardins recognize this reality. Times Colonist, A3

*** 'Almost one an hour'**
When she refused to give him money to buy beer, one Edmonton man pushed his girlfriend to the ground, pulled her hair and punched her in the face. (...)"This is only a sample of the files received by the Edmonton Police Service this past weekend," Staff Sgt. Sean Armstrong, in charge of the domestic offender crime section, told a downtown crowd Wednesday. "There were 88 cases responded to by EPS members, and sadly this was a quiet week. I can guarantee you there are many more domestic violence occurrences in our city that were not reported to us." These revelations shocked those gathered for the the Alberta Council of Women's Shelters' (ACWS) 11th annual Breakfast with the Guys at the Chateau Lacombe on Wednesday. In 2014, Edmonton police were involved in nearly 8,000 domestic violence complaints. (...)According to government statistics, Alberta has the fifth highest rate of intimate partner violence reported to police and the second highest rate of self-reported intimate partner violence in Canada. Edmonton Sun, A7

*** First Nation contemplates ban on criminals on reserve**
Elders on the Little Pine First Nation are exploring the idea of banishing criminals from the reserve. The idea of kicking known offenders such as drug dealers and abusers offthe reserve was preposed at a recent community meeting aimed at dealing with crime on the First Nation, located north of North Battleford. "The criminal justice system is not working. Look at the statistics," said Jacob Pete, a band member who helped facilitate the meeting. "We have to take ownership of the problems and come up with local solutions." The idea of banishing criminals from a particular community is not unheard of. Saskatchewan's largest First Nation, Lac La Ronge Indian Band, has been banishing drug dealers and others for decades. First Nations like Mistawasis near Prince Albert and Fishing Lake have also banished people for crimes. StarPhoenix, A3 (Leader-Post)

*** Un quartier général de la mafia visé par un attentat**
Un incendie criminel allumé dans un bar de la rue Jean-Talon la nuit dernière pourrait constituer un nouveau chapitre d'une tension grandissante au sein de la mafia montréalaise. *La Presse* a en effet appris de sources de divers milieux que l'établissement visé, le café Empire, serait l'un des quartiers généraux de la Table de direction de la mafia qui dirige les rênes du crime organisé montréalais, en alliance avec d'autres groupes criminels, depuis la mort naturelle du parrain Vito Rizzuto, il y a près de deux ans. Selon nos sources, Vito Rizzuto aurait été vu souvent à cet endroit après sa libération d'un pénitencier américain et son retour à Montréal, en octobre 2012. La Presse (2015-11-18)

*** Front line workers get info on battling sexual exploitation**
If you don't think human trafficking is a concern within Norfolk County, think again. “Because we're rural, we're a very big source destination for sexual exploitation,” explained Christina Bodine, chair of the Sexual Assault Centre of Brant. Bodine and her colleagues played host to a human trafficking seminar for social service employees and concerned residents at the Norfolk Golf and County Club Wednesday. One of the main messages was human trafficking – at one level or another – certainly does take place in Norfolk, Brantford and Six Nations. The trouble is, not many get the message because young women are often being shuttled to places like Niagara Falls or Windsor. “You have to lay charges in the place that the crime happens, so they'll be laid in places like Niagara Falls and Windsor, but they're gals that are from Brant, Haldimand, Norfolk, Six Nations,” Bodine explained. “That's why those stats aren't showing up, but we're a big source area.” That's why gatherings like the one on Wednesday are held. Speakers addressed the warning signs of human trafficking, what its definition is and who is most vulnerable. “It is complicated, so we're just trying to give an overview so people are aware,” Bodine noted. “What we do know is over 90 per cent is domestic, so it's happening within Canada, it's happening within our borders.” While the day-long event was open to all, Bodine and her team targeted a specific group to take part. Simcoe Reformer (2015-11-18)

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

City pulling together for refugees
It was an unprecedented Edmonton conclave. Ninety representatives from more than a dozen social agencies and government departments met Wednesday at the Ramada on Kingsway to plan a joint mission. Their goal? To settle some 1,500 Syrian refugees in Edmonton before year's end. "We're still not sure of the exact number or the exact timing. And that's causing some anxiety for us," says Stephen Carattini, CEO of Catholic Social Services. His agency has the federal contract to settle refugees in Edmonton. "Normally, we settle 400 to 500 refugees a year. Now, we're going to be settling three or four times that many. It's not unfamiliar, what we're being asked to do. But this is happening very, very quickly." The meeting included representatives from the federal departments of Canadian Heritage and Immigration, Refugees and Citizenship. Representatives of the provincial departments of Alberta Jobs, Skills, and Labour, Alberta Health and Alberta Education were there, too. So were Edmonton's school boards, along with Capital Region Housing and Edmonton and Area Child and Family Services. And there was an eclectic and ecumenical range of other agencies, including the Islamic Family and Social Services Agency, the Edmonton Mennonite Centre for Newcomers, Edmonton Immigrant Services Association, ASSIST Community Services, Centre d'accueil et d'etablissement, Changing Together and the Indo-Canadian Women's Association. Postmedia News (Edmonton Journal, A1/Front)

Queens sponsorship effort edges ahead
A group of residents in Queens County has just squeaked past the halfway point in their goal of raising $20,000 to sponsor a family of Syrian refugees. The Queens Refugee Care Team hopes to sponsor a family of six, and has already raised almost $11,000. Chronicle Herald, A8

Premier confident about refugees
Nova Scotia's premier doesn't want to pre-judge whether Ottawa should pull back from a plan to bring 25,000 Syrian refugees into Canada by the end of the year. Stephen McNeil said that Ottawa is responsible for handling any security concerns that arise from its screening process of refugees and his province remained ready to proceed with welcoming newcomers once it's determined how that will happen. McNeil said he expected many of those concerns to be addressed in a federal-provincial meeting next week, in light of the recent terror attacks in Paris and Beirut. "Security coming into the country is the responsibility of the federal government," said McNeil. "So if it (the plan) continues to move forward we are ready to participate as part of the federation." Canadian Press (Cape Breton Post, A9)

Notley says Calgary, Edmonton among five Alberta cities likely to take refugees
Premier Rachel Notley says Calgary and Edmonton are expected to take in the bulk of Syrian refugees coming to Alberta, with the remainder spread out over three other cities - Medicine Hat, Lethbridge, and Red Deer. "We're working to ensure that we're able to provide a seamless and effective settlement process," Notley told reporters Wednesday. "There are five cities where refugees would most likely land. The vast majority of them will be in Calgary and Edmonton. "Obviously the mayors need to be fully on side with it, and I believe that they are and have it well in hand." Notley was flanked by Edmonton Mayor Don Iveson and Calgary's Naheed Nenshi at the legislature following a meeting to discuss a range of issues, including the refugee resettlement. The federal government has said it wants to resettle 25,000 Syrian refugees across Canada by the end of the year. Notley has said she expects Alberta will take between 2,500 and 3,000 of those fleeing the war-torn region. Postmedia News (Calgary Herald)

Goodwill beats bureaucracy
They've been offered an entire convent in Pointe-Claire to house the refugees, a CEGEP in Rosemont with classrooms and showers to use at least over the holidays, rooms and fridges, winter coats and dishes. While politicians wrangle over whether it's possible to bring in 25,000 Syrian refugees over the next six weeks, grassroots organizations and ordinary Quebecers are making it possible. "Since last week our phones and email accounts have been overloaded with offers from Quebec residents wanting to help Syrian refugees with clothes, furniture, appliances," said Paul Clarke, the executive director of Action Réfugiés Montréal. "As public consciousness has ramped up that Syrian refugees are coming, the generosity has been astounding." And the terrorist attacks in Paris did not stop the flow, Clarke added. He has had to ask people to stop bringing in winter coats and boots to the organization's downtown locale

- there was just no room for more. But while every bit helps, especially if Quebec does receive 5,700 refugees over the next 43 days, such a massive endeavour requires some coordination, between all the groups involved, and every level of government. The community groups tasked with helping refugees resettle in Montreal - there are 18 in Montreal alone that offer services in Arabic - have set up a central list of people who want to volunteer their time, housing and miscellaneous goods, including all those winter coats and boots: infoparrainage@tcri.qc.ca And cities, including the 13 in Quebec that could receive some of the refugees, are also mobilizing. Postmedia News (Montreal Gazette, A1/Front)

Valcartier se prépare à l'arrivée de réfugiés
La base militaire de Valcartier est sur un pied d'alerte et se prépare à accueillir des centaines, voire des milliers de réfugiés syriens d'ici la fin de l'année. Le Canada avait déjà évoqué la possibilité que les bases militaires servent de terre d'accueil temporaire aux réfugiés, et l'hypothèse se confirme selon de nombreuses sources. Les 500 premiers réfugiés syriens débarqueraient dans la région de Québec à partir du 1er décembre - une date évoquée par plusieurs - et seraient logés dans diverses installations de la base militaire, notamment au Camp des Cadets. L'Armée vient de lancer un appel d'offres pour l'«hivernisation » d'une dizaine de baraquements. Les travaux, qui prévoient l'installation de chauffage, sont évalués à 1,5 M$ et seront réalisés «dans un très court délai, d'ici le 30 décembre», peut-on lire dans les documents sur le portail MERX. Journal de Québec, 3 (Journal de Montréal, 7); Le Soleil, 5/Front

Les villes veulent être mieux informées
Les maires des 13 villes québécoises qui accueilleront les réfugiés syriens attendus d'ici la fin de 2015 demandent à être mieux informés des plans d'Ottawa et de Québec, les élus ignorant encore combien d'entre eux chaque ville recevra. Une conférence téléphonique d'une quarantaine de minutes a réuni hier midi ces maires afin de faire le point sur le dossier. «Ce qui me frappe, c'est la volonté des villes à accueillir les réfugiés. Chacune a déjà pris des initiatives pour réunir les groupes sur son territoire. Mais il manque deux morceaux du casse-tête: Québec et Ottawa. Les villes sont déjà à pied d'oeuvre, mais elles n'ont pas toute l'information», a indiqué la mairesse de Longueuil, Caroline St-Hilaire. L'Union des municipalités du Québec a mis en place un comité auquel on espère voir Ottawa et Québec se joindre pour coordonner l'arrivée des réfugiés. «Il faut qu'on s'assoie, s'il le faut quotidiennement, pour éviter que chaque maire appelle à gauche et à droite pour avoir de l'information. On veut éviter qu'il y ait des ratés. On a connu de beaux succès d'accueil de réfugiés et il ne faudrait pas manquer le bateau», a ajouté Mme St-Hilaire. La Presse, A10

Rookie MP Tassi says government committed to accommodating refugees
Filomena Tassi is assuring residents that Canada remains committed to accommodating 25,000 Syrian refugees by Jan. 1. "At the same time, we're going to exercise the highest level of vetting and security," said the rookie MP, who represents the riding of Hamilton West-Ancaster-Dundas and will be sworn in as part of Prime Minister Justin Trudeau's government on Dec. 2. Opposition to the Liberal campaign promise has already grown in reaction to reports that at least one of a number of ISIL terrorists who participated in the Paris attacks in last weekend entered France with other Syrian refugees. But with a majority government, Trudeau and his team appear to be moving ahead on the promise. "We are staying on course," Tassi said. Tassi has been to Ottawa and completed her training for first-time members of Parliament. She is now focused on setting up shop in her widespread constituency, searching for an office from which to serve residents from Ancaster to Westdale and the west Mountain. Tassi said there was nothing to officially announce as far as any committees she will be part of, or other specific roles within the government. Hamilton Spectator, A5

Les initiatives citoyennes se multiplient
Le téléphone de la Table de concertation des organismes au service des personnes réfugiées ou immigrantes n'arrête pas de sonner depuis des jours. «Les gens offrent des logements, des vêtements. Des professeurs à la retraite proposent de l'aide aux devoirs, des Syriens veulent faire de la traduction. Tout le monde veut contribuer et faire partie de ce moment historique», dit Sylvain Thibault. Parmi les offres de dons se trouvent aussi des messages de quelques personnes qui ont déjà pris les choses bien en main. Les initiatives citoyennes se multiplient. C'est le cas de Yasmine Abdelfadel qui a décidé lundi soir qu'elle lançait un projet de paniers d'accueil contenant notamment des paquets de couches et des

fournitures scolaires. Une autre dame est en train d'amasser entre 600 et 900 toutous «pour que chaque enfant qui arrive au Québec en ait un.» Pour l'instant, les gens qui veulent faire des dons spécifiquement destinés aux réfugiés syriens peuvent le faire par l'entremise des initiatives citoyennes qui apparaissent sur les réseaux sociaux ou en communiquant avec des groupes comme la Table de concertation des organismes au service des personnes réfugiées ou immigrantes. Toutefois, la plupart des organismes communautaires sont en attente. La Croix-Rouge canadienne a ouvert, il y a quelques mois, un fonds destiné aux réfugiés syriens, mais elle attend des annonces gouvernementales pour lancer des initiatives locales qui serviront les réfugiés à leur arrivée au Canada et au Québec. Carl Boisvert, porte-parole de la Croix-Rouge pour le Québec, conseille aux personnes qui veulent contribuer à l'accueil de réfugiés ici d'attendre que les campagnes spécifiques soient mises en place. La Presse, A10

On n'a pas le temps

Alors là, un gros bravo. Quand on a retrouvé le petit Alan mort noyé sur une grève en Turquie, vous trouviez que le Canada n'en faisait pas assez pour faire émigrer sa famille chez nous. Maintenant que le Canada a décidé d'accueillir 25000 réfugiés syriens d'ici la fin de l'année, vous branlez dans le manche. Vous avez peur. Tout d'un coup qu'un ou deux terroristes se glisseraient dans le lot. J'entends des maires, des députés, des ministres réclamer des délais. Il faut prendre le temps de bien faire les choses, dites-vous. Le temps de bien faire les vérifications de sécurité. Le temps? Pendant qu'on est là à niaiser autour d'un chiffre, des bombes continuent de tomber sur la tête des gens en Syrie et en Irak. Il y a des exactions, des viols, des décapitations, des défenestrations. Et dans le lot des innocentes victimes, il y a d'autres petits Alan. Qu'est-ce qu'il vous faut pour vous convaincre que le temps presse? Des photos d'enfants déchiquetés par les explosions? Avoir du temps devant soi, c'est le luxe d'une société éloignée de la guerre comme la nôtre. Le Droit, 2/Front

Rapid resettlement is possible: expert

An authority on immigration and refugees says Canada and the United Nations have the operational knowhow and security safeguards to vet 25,000 Syrians for rapid resettlement. But the question remains: can the humanitarian resettlement project be pulled off by the Liberal government's Dec. 31 deadline without compromising domestic security? "I hate answering that question at this point," said Peter Showler, former chair of the Immigration and Refugee Board and former director of the Refugee Forum at the University of Ottawa. "(However) it is possible in a relatively short period of time - with no reference one way or the other to the deadline - to do fast, effective processing that includes reliable security screening." Immigration Minister John McCallum has said the refugees would be properly screened. "I think (McCallum's) implication has been that if it takes longer, if it goes over the deadline, then it goes over the deadline," Showler said. "Certainly my understanding from him is that getting the job done properly is the priority." Showler's appraisal came as the Ottawa Citizen learned refugees arrived Tuesday in Montreal. Department of Immigration, Refugees and Citizenship spokesman Remi Lariviere confirmed a planeload of Syrian refugees landed, but did not make clear if the group was part of the 25,000 targeted for resettlement under the Liberals' plan. Postmedia News (Vancouver Sun, A1/Front)

Clock ticking on Canada's refugee plan

The timing of Canada's crash program to bring 25,000 Syrian refugees to Canada by the end of the year keeps sliding, according to two officials familiar with aspects of the planning. The original goal had been to begin the airlift by Thursday of this week, but as no charter aircraft have been booked yet, it would now be at least one more week before flights got underway, one of the officials said. When the flights reach their peak next month, about 1,000 refugees will be arriving in Canada every day. The officials did not want to be identified because diplomats and immigration officers have been told by Ottawa not to speak about the matter, with all requests referred to the government. "Unfortunately I have nothing to say to you at the moment," Immigration Canada spokesman Jean-Bruno Villeneuve said in an email from Ottawa, adding that he was unable to confirm any details about the resettlement program. (...)But the United Nations High Commissioner for Refugees, which registers asylum seekers and is supposed to be working with Canada on its resettlement program, said this week that it remained largely in the dark about Ottawa's plans. While the UNHCR welcomed the Canadian announcement to settle Syrians, "I am afraid I cannot talk about Canada's program," spokeswoman Ariane Rummery said in an email from Geneva "until we know more about the modalities." Whig-Standard, B2

Le temps du changement
Comme il était de mise dans ces circonstances tragiques qui relativisaient tout le reste, la couverture médiatique du dernier conseil général du PLQ a été presque exclusivement centrée sur les réactions aux attentats de Paris et l'accueil des réfugiés syriens. Même s'il est passé largement inaperçu, le premier ministre Couillard n'en avait pas moins un autre message à transmettre aux militants libéraux réunis à Québec. " Le temps du changement est venu, a-t-il dit. Il faut oser faire les choses différemment, oser remettre les choses en question. " Quelques minutes plus tôt, le président de la commission politique du PLQ, Jérôme Turcotte, avait évoqué les conséquences que le vieillissement accéléré de la population aura sur les coûts des services de santé qui, au rythme actuel, accapareront 70 % des dépenses gouvernementales en 2030. Ces propos semblaient rejoindre ceux que le ministre de la Santé, Gaétan Barrette, avait tenus la semaine dernière à propos du panier de services assurés par la Régie de l'assurance-maladie. S'il n'est pas question " à ce moment-ci " d'exclure certains services de la couverture, il a averti que " la situation budgétaire du Québec nous invite à une réflexion au long cours sur ces éléments-là ". Le Devoir, A4

Weil downplays 'anxiety' as polls reveal fears
Quebec's immigration minister was scrambling to reassure skittish Quebecers and mayors Wednesday that the province's decision to welcome Syrian refugees will not come back to haunt them. But two new polls reveal the brutal Paris terror attacks have spooked people. Suddenly, many are hot on the use of military force to put out threats and favour a goslow approach to accepting refugees. "There is a period of anxiety," Kathleen Weil told reporters on her way into a meeting of the Quebec cabinet. "But I think it's important that mayors and political leaders use the right tone, give the right message. "These are some of the most vulnerable people that we want to greet and settle in Quebec." Weil was responding to growing domestic blowback over the terror attacks last Friday in Paris which left 129 people dead and 350 injured - many of them seriously. With no clear plan forthcoming from Ottawa, Canadian premiers and municipalities have been operating in a void with growing questions about how the country will handle the complicated business of feeding, clothing, housing and integrating the 25,000 Syrian refugees Canada wants to welcome by Jan. 1. The province has already identified 13 Quebec cities with sufficient infrastructure and support systems to accept refugees. Quebec's share of the 25,000 is about 6,000. Postmedia News (Montreal Gazette, A4)

PM condemns racism as Syria refugee plan opposed
Prime Minster Justin Trudeau urged Canadians to resist hatred and racism as a poll showed most Canadians were opposed to his plan to bring in 25,000 Syrian refugees by year-end and a flurry of racist incidents were reported around the country. The Liberals, who took power after an election last month, campaigned on a promise to bring in the refugees by Jan 1. Critics say the number is too large and could threaten security following the attacks in Paris. An Angus Reid poll released on Wednesday showed 54 per cent of Canadians opposed the plan, up from 51 per cent before the bloodshed in Paris. But support for the plan also increased, with 42 per cent in favour, up from 39 per cent in October. Most of those who opposed Trudeau's plan did so because of the short timeline, with 53 per cent saying the schedule was too short to ensure all the necessary security checks were completed. Another 10 per cent said 25,000 was too many, and 29 per cent said Canada should not be accepting any Syrian refugees. (...)"Diversity is Canada's strength. These vicious and senseless acts of intolerance have no place in our country and run absolutely contrary to Canadian values of pluralism and acceptance," Trudeau said. Whig-Standard, B1/Front

Les initiatives citoyennes et les dons se multiplient
« Les gens offrent des logements, des vêtements. Des professeurs à la retraite proposent de l'aide aux devoirs, des Syriens veulent faire de la traduction. Tout le monde veut contribuer et faire partie de ce moment historique », dit Sylvain Thibault. À son bureau de la Table de concertation des organismes au service des personnes réfugiées ou immigrantes, le téléphone n'arrête pas de sonner depuis des jours. Sa boîte de courriels déborde. Parmi les offres de dons de toutes sortes se trouvent aussi des messages de quelques personnes qui ont déjà pris les choses bien en main. Les initiatives citoyennes se multiplient. C'est le cas de Yasmine Abdelfadel qui a décidé lundi soir, après en avoir discuté avec ses parents, qu'elle lançait un projet de paniers d'accueil. Le concept rappelle les paniers offerts spontanément à de nouveaux voisins qui arrivent dans le quartier. Mais les tartes bien chaudes et les confitures maison

seront remplacées par des paquets de couches et des fournitures scolaires. « Des choses que les gens ne pensent pas de donner lorsqu'il y a des collectes », précise la jeune femme, encore surprise de la réponse reçue sur la page Facebook de son Opération paniers de bienvenue. Une réponse telle qu'elle est entrée en contact avec la Table de concertation pour avoir de l'aide logistique. Ce qu'elle aura. « Nous allons faire des paniers personnalisés, selon la famille à laquelle ils seront destinés. » La Presse, 5

Autre dissonance libérale

Pour une deuxième journée d'affilée, le premier ministre Philippe Couillard et son ministre Pierre Moreau ont joué des notes discordantes sur la capacité du Québec à accueillir des réfugiés syriens d'ici la fin de l'année. Le chef de l'État québécois estime que le Québec parviendra «fort probablement» à accueillir sur son sol 3650 d'entre eux avant la fin de l'année, comme il s'y était engagé. Son ministre de la Sécurité est incapable de garantir plus de 2400 réfugiés syriens sélectionnés - et non pas accueillis - au 18 décembre. «Non, on est sur la même longueur d'onde, a assuré M. Couillard en fin d'après-midi. On vient d'en parler, lui et moi, avec tous les collègues. On est très confiants d'atteindre la cible du premier contingent.» (...) Des 1200 personnes prévues à l'origine, le gouvernement Couillard rehaussait son seuil à 3650. C'était avant que l'engagement du nouveau premier ministre canadien Justin Trudeau porte à quelque 5700 le nombre de réfugiés syriens à recevoir au Québec. «Sur le premier contingent [celui de 3650 réfugiés], on n'a aucun doute parce qu'on a les moyens financiers, les mécanismes, a affirmé le premier ministre Couillard. La question qui reste à éclaircir, c'est la mise en place du plan fédéral plus large.» Pourtant, un peu plus tôt, son ministre Pierre Moreau a été incapable d'assurer que Québec parviendrait à sélectionner - et non accueillir - les 3650 personnes prévues avant 2016. Un processus d'habilitation sécuritaire effectué par Ottawa suit l'étape de la sélection par le Québec. La Presse (Le Soleil, 6,7/Front; La Tribune, A7, 23, La Tribune, A7; Le Nouvelliste, 15) * Le Quotidien, 26,27 ; Le Droit, 16) ; * Agence QMI (Journal de Québec, 4 ; Journal de Montréal, 2)

D'ex-hôpitaux ontariens pour héberger des réfugiés?

Le gouvernement ontarien songe à utiliser des hôpitaux récemment désaffectés afin d'héberger temporairement les réfugiés syriens qui doivent affluer d'ici la fin de l'année dans cette province. Le gouvernement fédéral de Justin Trudeau a promis que le Canada accueillerait 25000 réfugiés d'ici le 1er janvier 2016, et l'Ontario s'est engagée à en accueillir 10000 d'ici la fin de 2016. Le ministre provincial de la Santé, Eric Hoskins, a indiqué mercredi que son gouvernement ignorait toujours le nombre de réfugiés qu'Ottawa lui demanderait d'accueillir d'ici la fin de l'année, mais il a assuré que l'Ontario était prête à faire sa «juste part» dans cette vaste opération. L'Ontario pourrait par ailleurs accueillir et soutenir certains réfugiés sur une base temporaire, avant qu'ils ne déménagent dans d'autres provinces ou territoires, a-t-il prévenu. Le Droit, 16; * Canadian Press (Cape Breton Post, A11; The Telegram, D3; Charlottetown Guardian, A7; London Free Press, A3); * Ottawa Sun, A9

La crainte de la passoire

Un article d'opinion déclare, « Ce n'est guère surprenant: 59 % des Québécois ont peur que des terroristes se faufilent parmi les réfugiés qu'on s'apprête à accueillir, parce qu'ils doutent que les autorités soient capables d'effectuer les contrôles nécessaires pour les débusquer. C'est ce que révélait, hier, un sondage Léger mené pour le compte de TVA Nouvelles. Un sondage, on n'en sera pas étonnés non plus, qui indique que trois Québécois sur quatre craignent que des attentats aient lieu au pays. Dans la foulée du drame parisien et de ses rebondissements, de même que de l'intense médiatisation qui a cours, redouter la menace terroriste, surtout après les événements de l'an passé à Saint-Jean et à Ottawa, est un réflexe qui se comprend. On ne peut pas rester insensibles à l'horreur, à la haine. Il est normal de ressentir de l'insécurité face à des actes aussi insensés, aussi méprisables. Encore faut-il gérer ce réflexe avec sang-froid et ne pas céder à la panique ou à la xénophobie. Il faut se rappeler que les auteurs des attaques de l'an dernier chez nous étaient des Canadiens, pas des immigrants. Gardons aussi à l'esprit que la menace terroriste se propage davantage par Internet que par les frontières. Enfin, considérons qu'il y a bien plus d'actes criminels commis par des bandits et des chauffards ivres que par des terroristes. Cela dit, le Canada doit bien sûr mener une lutte impitoyable au terrorisme... » Le Nouvelliste, 18

Canadians leery of Trudeau's refugee plan
A little more than half of Canadians disapprove of the federal government's plan to bring in 25,000 Syrian refugees by the end of next month, a new poll suggests. And if they had to choose, Canadians surveyed by Mainstreet Research for Postmedia appear to be more in favour of bombing terrorists than training other armies howto fight. "The training mission has wider support. Either way, most Canadians believe Canada should be taking a role in the fight against ISIS. Only 8% of Canadians would support no action at all," said Quito Maggi, president of Mainstreet. Conducted Monday, the firm polled a total of 2,718 people. It suggests public opinion is polarized over what to do on the world stage when it comes to bombs and refugees. "Our earlier polling showed strong support for bringing refugees to Canada, but after the attacks in Paris, security is now a higher concern," Maggi said. QMI Agency (Ottawa Sun, A10; Toronto Sun)

* **13 000 réfugiés pour trois mois**
Les Forces armées canadiennes affirment pouvoir fournir de l'hébergement à un maximum de 13 000 réfugiés syriens à travers le Canada pendant une période n'excédant pas trois mois. Si l'objectif de 25 000 avant la fin de l'année est maintenu, cela signifie que les premiers arrivés ne feront que passer par les bases militaires pour ensuite être relogés ailleurs. Le Soleil, 4, 5/Front ; Postmedia News (Winnipeg Sun, A6; Ottawa Sun, A8; Toronto Sun, A4; Calgary Sun, A8)

* **Hamilton readies for influx, but many questions remain**
A broad range of Hamilton groups, agencies, churches, officials and individuals say they have been working for weeks to build plans for what could be a significant number of Syrian refugees landing in this city in the very near future. The trouble is, they don't know how many are coming, or which sponsorship and resettlement programs the refugees will be funnelled through. Hamilton Spectator, A1

Businesses that have a hard time recruiting Canadians say they are reaching out to the federal government and the provinces to see if they can match up with the incoming wave of refugees. Lobby groups for Canadian employers are intrigued by the 25,000 refugees Prime Minister Justin Trudeau expects to bring in by the end of the year. "This has been ramping up since a year ago," said Ron Davidson, director of government relations for the Canadian Meat Council, which lobbies on behalf of meat packing plants. Embassy

* **Un élan de générosité de la population**
L'arrivée massive à Québec de 800 réfugiés syriens prévue en décembre semble provoquer un élan de générosité dans la population. Le Centre multiethnique note une hausse importante du nombre de personnes intéressées à leur venir en aide. Une bonne nouvelle pour l'organisme, qui aura grandement besoin de ressources supplémentaires. Le Soleil, 8/Front

* **Où vont les réfugiés syriens?**
L'un des terroristes à l'origine des attentats de Paris a été retrouvé avec un passeport syrien. On ne sait pas encore si le passeport est authentique ou s'il appartenait vraiment à l'homme qui s'est fait exploser au Stade de France. Mais la nouvelle a fait grand bruit, provoquant des mouvements partout dans le monde afin de fermer les portes aux réfugiés syriens. Voici quelques chiffres pour faire le point sur la crise humanitaire de l'heure. Depuis 2011, l'Agence des Nations unies pour les réfugiés (UNHCR) a dénombré plus de 4,2 millions de personnes qui ont fui la guerre en Syrie. La très grande majorité a trouvé refuge dans des pays limitrophes. Plus du quart d'entre eux ont moins de 18 ans. L'Europe a accueilli à ce jour près de 510 000 réfugiés, dont plus de 150 000 en Allemagne. De son côté, le Canada propose de recevoir d'ici la fin de l'année 25 000 nouveaux réfugiés qui s'ajouteraient aux quelque 3000 déjà au pays. Voici une douzaine de pays ou de régions qui ont accueilli des réfugiés syriens jusqu'à présent. La Presse, A11

* **Accueillir des réfugiés est un devoir**
Comment les réfugiés syriens traverseront-ils l'océan vers le Canada? Quels sont les risques que des terroristes s'infiltrent parmi eux? Beaucoup de Québécois ont des appréhensions face à leur venue. Alors est-ce risqué pour eux de venir ici? Pourquoi les médias ne parlent-ils pas des réfugiés innombrables de

l'Afrique? Des questions comme celles-là, les élèves de cinquième secondaire de l'école Les Pionniers de Trois-Rivières en avaient plusieurs pour Béatrice Vaugrante. Le Nouvelliste, 5

*** Region prepares for 1,150 Syrian refugees**
Planning is underway to prepare for upward of 1,150 Syrian refugees who are soon expected to start arriving in Waterloo Region. Immigration Partnership is hosting a half-day preparedness planning session on Friday that will gather together service providers to be ready for the influx of refugees. The Record, B2

*** Canada should look to the U.S**
Six weeks to go until the new year and by the time we usher in 2016, the Liberal government is determined that 25,000 Syrian refugees will be in Canada. "There was an election. There was a commitment. And we'll deliver on our commitment," Foreign Affairs Minister Stephane Dion told reporters Wednesday at the annual summit of Pacific Rim leaders here. The Liberals may be determined to deliver on that commitment but there is growing unease in Canada that the arbitrary deadline of Jan. 1 may lead authorities to cut corners and open potential security concerns. Prime Minister Justin Trudeau himself says that won't happen but, so far, has yet to provide details on Canada's security arrangements. Trudeau will meet U.S. President Barack Obama on Thursday and, because of our long, shared, undefended border, one would assume Obama wil I want more than platitudes, he'll want some of those details. Postmedia News (Toronto Sun, A22; Calgary Sun, A35; Edmonton Sun, A50)

*** Blue Rodeoto Canada**
The Liberal government's plan to welcome 25,000 Syrian refugees into Canada shouldn't be deterred by recent terror attacks, said Blue Rodeo bandmates Jim Cuddy and Greg Keelor. Cuddy and Keelor, who were among 12 officers and 33 members welcomed into the Order of Canada Wednesday, continued their streak of political pillow talk to discuss some of the major issues facing Canadians under a new Liberal government. Ottawa Sun, A14

*** Ils ne l'ont pas, le temps**
Un article d'opinion déclare, « Alors là, un gros bravo. Quand on a retrouvé le petit Aylan mort noyé sur une grève en Turquie, vous trouviez que le Canada n'en faisait pas assez pour faire émigrer sa famille chez nous. Maintenant que le Canada a décidé d'accueillir 25 000 réfugiés syriens d'ici la fin de l'année, vous branlez dans le manche. Vous avez peur. Tout d'un coup qu'un ou deux terroristes se glisseraient dans le lot... » Le Droit, 21

*** PM has no clear plan**
An opinion piece states, "To be clear: I absolutely believe this country should take Syrian refugees. We have so far been sheltered from the humanitarian crisis that has engulfed Europe, as hundreds of thousands of migrants have fled the turmoil in Syria. What troubles me is the haphazard manner in which the federal government is going about it and the way it's turned into a political football..." Postmedia News (Ottawa Sun, A9; Toronto Sun, A5)

*** Here, the Pope would be suspect**
An opinion piece states, "Back in September, Pope Francis commented on the ongoing refugee crisis in the Mideast in an interview with a Portuguese radio station. He warned of the danger of Islamic State terrorists "infiltrating" European countries amid the huge flow of refugees streaming out of war-torn Syria and Libya. He also cautioned that host countries taking in refugees "cannot be simplistic" about integrating them into their societies, because of their own high unemployment rates. In Canada these days, such reasonable observations, are enough to get one accused of bigotry, hating refugees and fear-mongering by the liberal and Liberal elite..." Postmedia News (Ottawa Sun, A19; Toronto Sun, A15; Calgary Sun, A15; Edmonton Sun, A15)

*** Provinces need more of a role helping refugees**
An opinion piece states, "Most of Canada's premiers are outdoing each other with generous offers to accept Syrian refugees by the thousands during the next six weeks, but their promises are all but meaningless. Premier Kathleen Wynne re-stated her promise-2,500 refugees by the end of this year and

10,000 by the end of 2016-again Tuesday. "It's our responsibility to be open to the world," she said in Toronto..." Postmedia News (London Free Press, A6; Whig-Standard, A4)

*** The refugee discussion is just beginning**
A comment by Jeffrey Simpson reads "The commitment to bring 25,000 Syrian refugees to Canada before Dec. 31, made by the Liberals in the heat of an election campaign, should be seen not as the end but as the beginning of a multiyear commitment to bring tens and tens of thousands more refugees to Canada over many years. Quite apart from whether the government can meet its artificial and politically driven timetable for the 25,000, the larger question is whether the government and the Canadian people are willing, ready and able to handle much bigger numbers in the years ahead. No one has thought about this, let alone prepared for it. Circumstances, however, will force reflection. This 25,000 contingent, and the many who will follow if the government sticks to its policies, is not like, say, previous groups of refugees from Vietnam, Uganda or Kosovo. These groups were much smaller in number, displaced by one event at a given place. By contrast, there were three-day periods throughout the summer and fall when more refugees/migrants were landing on the Greek island of Lesbos than Canada proposes to admit in two months. Today's refugees/migrants are part of a mass movement of millions of people fleeing military conflict, entrenched poverty and government breakdowns across an arc of states in the Middle East and Africa. Climate change is already widening desertification, which causes people to leave drought in search of food." Globe and Mail, A19

*** Our history will win over our fear, anger**
An opinion piece states, "Canadians mostly have opened their doors and their hearts to refugees, displaced persons and immigrants since the 19th century, but it would be a mistake to believe it always was easy and that it happened without some of the fear and political grandstanding now surrounding the Syrian refugee crisis. Yet the common denominator for newcomers to Canada has always been the same, the promise of opportunity, tolerance, freedom and safety. In this, the vast majority of Syrians seeking refuge in Canada are no different from the millions of immigrants who came before them..." Postmedia News (Whig-Standard, A4; London Free Press, A6)

*** Trudeau focused on 'sunny ways'**
A letter to the editor states, "With no foreign policy credentials or experience, Justin Trudeau, in the aftermath of the Paris massacre, is Mark Twain's The Innocents Abroad, peddling his "sunny ways" election message of feel-good infrastructure deficit investment and economic inclusiveness to a G20 audience that is single-mindedly focused on dealing with the global threat of international terrorism. There is Trudeau, valiantly offering the world his prescription for saving an endangered middle class while an endangered world is grappling with how to save itself. But, of course, in Trudeau's world, Canada has nothing to fear from ISIS because of its much-vaunted multicultural diversity and inclusiveness, and soon to become the new home of some 25,000 Syrian refugees to be rushed into the country by year's end with electoral refugee "politics" trumping sustainable and responsible refugee "policies." As to fighting ISIS - glory be! Liberal "soft power" days are here again!" Windsor Star, A7

*** We must be vigilant in accepting refugees**
An opinion piece states, "The world has changed dramatically for Canada's new prime minister. Justin Trudeau needs to acknowledge the gravity of the situation imposed by the Paris terrorist bombings and enhance Canada's military commitment to fighting ISIS, rather than emasculating it. He should ensure no Syrian refugees, let alone 25,000, set foot on Canadian soil without a careful and comprehensive security screening process in place..." Winnipeg Sun, A13

*** Why Canada Can Safely Meet Its Refugee Commitments**
An opinion piece by an immigration lawyer states, "The attacks in Paris last week set off a world-wide flood of empathy and solidarity. Canadians attended vigils, lit monuments in the tricolour and mourned the loss of life and normalcy in the City of Love. However, grief quickly turned into anger, inciting the inevitable search for a scapegoat. Shocking instances of violence against mosques and Muslims have been reported around the world, including a fire at a mosque in Peterborough, Ontario. Xenophobic acts are not an uncommon public reaction; a spike in attacks on Muslims following terrorist attacks has been well studied and documented. In Canada, despite the objective lack of connection, politicians began

sounding off "security concerns" related to incoming Syrian refugees. Saskatchewan's Premier Brad Wall called for a delay in resettling Syrian refugees. Premier Christy Clark of British Columbia stated the obvious: that the government needs to ensure that security checks are done on every refugee. These statements demonstrate a clear lack of understanding by government officials of Canada's process for resettled refugees. Contrary to the influx of migrants crossing into Europe over the past months, Canada is resettling *pre-screened* refugees who have been approved for permanent residency by a Canadian visa officer abroad. The process is thorough and involves international and national law enforcement agencies." The Tyee (2015-11-18)

Lettre - Main-d'oeuvre et réfugiés
Une lettre à l'éditeur déclare, « A la suite de la proposition d'accepter 100 000 réfugiés syriens par année au Canada, il était particulièrement ahurissant d'entendre la présidente de la Fédération canadienne des entreprises indépendantes (FCEI), Martine Hébert, affirmer : " N'importe quelle politique permettant la venue de plus de travailleurs, dont les entreprises ont tant besoin, est une bonne politique. " Mme Hébert reprenait ainsi une rengaine répétée mille fois par les organisations patronales selon laquelle plus d'immigration est toujours souhaitable en raison d'une supposée pénurie de main-d'oeuvre... » Le Devoir, A8

Refugee backlash will strengthen
An opinion piece states, "Because this is Canada, the backlash begins in the most polite of fashions. But make no mistake, a backlash against Justin Trudeau's plan to bring 25,000 Syrian refugees to this country is taking root and seems certain to build. Although the Liberal pledge should be applauded, the new government has helped fuel this backlash by its stubborn determination to meet an arbitrary deadline forged in the hothouse of election campaign politics..." Charlottetown Guardian, A9, The Record, A11)

Vetting questioned
An editorial states, "Re: Don't let Paris attacks alter refugee plan: profs (SP, Nov. 16). So University of Saskatchewan counter-terrorism expert Colleen Bell thinks that turning our backs on 25,000 Syrian refugees would be "a tragedy" because "Canada is a huge country." This is the kind of academic-think that passes for expertise these days. Bell and her fellow academic Martin Gaal are reported as saying that both the UN and Canada "conduct detailed screening" of refugees. You can buy into that Liberal myth if you like. I'm more convinced by U.S. Congressman Peter King, a member of the House Homeland Security Committee, who says "there is no reliable vetting system" for these refugees. "We don't know who these people are because there are no data bases to work from." Saskatonians appear to harbour an admirable skepticism on the issue. For example, of those who responded to a (pre-Paris) CFQC-TV survey that asked if they support Prime Minister Trudeau's plan to import 25,000 Syrian refugees before year-end, 83 per cent replied No. Many media commentators and Canadians alike are cynical about Trudeau's claims that the refugees will be screened rigorously. I will be looking to see exactly which "robust" vetting methods his functionaries employ. But I won't be holding my breath that we'll be given many details." Postmedia News (StarPhoenix, A8)

Logistics, not background checks, are the problem
A letter to the editor states, "White House spokesman Josh Ernest said Wednesday the 10,000 Syrian migrants destined for the U.S, will be subject to background check vetting that can "last up to 24 months" before they are approved, or rejected, as immigrants. Fortunately for the 25,000 Syrian migrants heading for Canada, our security checking is apparently so overwhelmingly comprehensive that the 25,000 will be vetted and accepted into the Canadian family by New Year's Day. Of course, after New Year's, when one or two, or 20 migrants turn out to be Islamic State of Iraq the Levant recruits and sneak into the U.S. to inflict mayhem there, watch out for the wall construction to begin across the 49th parallel and the total loss of U.S. confidence in Canada as a reliable neighbour and ally." Postmedia News (National Post, A11)

Keeping the door open
An editorial states, "The terror attacks in Paris have provoked a maelstrom of emotions and calls to action. It's crucial that governments and individuals refrain from responding in ways that do more harm than good. Reports that one of the attackers had entered Europe as a Syrian migrant have heightened

Canadians' fears. That's because Canada has committed to welcoming 25,000 Syrian refugees by year's end. There had been warnings that ISIS might slip terrorists into the flow of Syrians seeking refuge in the West, and that one case is being cited as confirmation. However, that threat does not justify closing the door to the vast majority of legitimate refugees; it's a reminder of the need for effective security screening. Canada's new government has reiterated its promise to take in 25,000 Syrians by Dec. 31, and for this it should be commended. The renewed commitment underlines a message that is worth repeating : Asylum seekers should not be conflated with terrorists; they are fleeing terror." Postmedia News (Vancouver Sun, B6)

Syrian refugees now scapegoats
An editorial states, "The tragic events in Paris have resulted in an unfortunate over-reaction. There are the expected demands for justice and calls for revenge. But the alarm bells are now sounding that Syrian refugees are guilty until proven innocent. When politicians, statesmen and decision-makers are caught up in this hysteria, it is very disappointing. This irrational conclusion is threatening the refugee resettlement program involving thousands of innocent Syrian refugees involving many nations, including Canada. The attacks in Paris were carried out by French and Belgian citizens. Likely, they were radicalized by terrorist elements or inspired by real or perceived attacks or discrimination against Islam and Muslims. The murders carried out by fanatics have somehow resulted in blame being placed on innocent refugees..." Charlottetown Guardian, A8

Whose side are we on?
An opinion piece states, "There are all sorts of fascinating and necessary questions that remain unanswered about exactly why, whether or when Prime Minister Justin Trudeau should or will withdraw Canada's CF-18s from the U.S.-led coalition arrayed against the Islamic State of Iraq and the Levant (ISIL). There are at least as many troubling questions about whether it is wise or even remotely possible for Canada's new Liberal government to fulfil Trudeau's campaign promise to resettle 25,000 Syrian refugees in this country before Christmas. (...) But if Trudeau's Canada is to be something truly new and different, then in this most horrific of global calamities, Canada should be the voice for Syria's voiceless. That's whose side we should be on." Postmedia News (Ottawa Citizen, C7; National Post)

Let Watson stay
A letter to the editor states, ""... Canada should be a refuge from militarism." PM Pierre Elliot Trudeau, 1970 Among the policies of the past 10 years that the new government seeks to reverse, one is urgent and could be made with the stroke of a pen. Against the will of Parliament, who voted twice to let American war resisters stay, Harper's government issued a deportation order against Rodney Watson, who then went into sanctuary for six years in First United Church, Vancouver. Canadian Immigration Officers waited outside to deport Watson to the U.S., to spend up to two years in prison. What a different era we are in compared to the Vietnam War. In 1967, myself an officer in the U.S. Military Medical Corps, and my wife Bonnie, later an Officer of the Order of Canada, were processed at midnight at Dorval Airport, receiving Landed Immigrant status in 20 minutes. Prime Minister Justin Trudeau has expressed empathy for the plight of refugees from the Iraq War. Urge him and Citizenship, Immigration and Refugee Minister John McCallum, to rapidly end this travesty of justice." Postmedia News (Vancouver Sun, B7)

PUBLIC SERVICE / FONCTION PUBLIQUE

Open public data necessary for functioning democracy
An opinion piece states, "There may be a new era coming in our federal access-to-information laws, and that would be a good thing, However, it's one thing to promise access in a campaign and another to follow through when in government. We'll have to wait and see. Information laws exist to protect our collective right to access public records. Every citizen and permanent resident in Canada has the right to request information from federal, provincial/territorial and municipal governments. All orders of government are subject to the protocols set out in the Access to Information Act (ATIA) at the federal level and Freedom of Information (FOI) legislation at the provincial/territorial and municipal levels. These legal instruments allow individuals to request records, policy documents and correspondence that show how government agencies operate. ATI/FOI files are different than the open-source material found on government

websites, in the rhetorical speeches of politicians, and in the sanitized information packages of public relations experts. ATI/FOI files illustrate how power operates in democratic societies and can expose the often-secretive dealings between state entities and political players. There have been a number of instances where Canadians have become aware of an issue of public interest because of information uncovered using access-to-information laws." Winnipeg Free Press, A9

OTHER / AUTRE

*** Clarity from Liberals needed to calm tensions, says Ambrose**

The new interim Conservative leader is promising to change the party's tone, but Rona Ambrose was not as willing Wednesday to say she would abandon the practice of using cultural wedge issues as a political tactic. Ambrose was asked about a recent tweet in which MP Candice Bergen said she was embarrassed and sickened by Prime Minister Justin Trudeau's approach to the fight in the Middle East and his promise to resettle 25,000 refugees. The Liberals intend to withdraw Canada's jets from the ongoing bombing campaign against the Islamic State of Iraq and the Levant, also known as ISIL or ISIS, but will keep soldiers in the region to train anti-ISIL fighters. Ambrose chalked up Bergen's tweet to heightened passions in the wake of Friday's attacks by ISIL militants in Paris, which killed 129 people and left hundreds more injured. "After what happened last week, there is going to be some emotion and some passion and I'm going to chalk that one up to some emotion and passion," Ambrose said. Similar passions were conjured up during the election campaign in response to the Conservative emphasis on issues like the niqab ban and a tip line to report so-called "barbaric cultural practices," Ambrose acknowledged. Both were considered to be wedge issues exploited by the Conservatives to mobilize votes. Ambrose said she was not part of the decision to promise a tip line, nor did she support it. But when asked whether her party would drop the wedge politics strategy, Ambrose didn't answer. Canadian Press (Telegraph-Journal, A8); * Toronto Star

*** Whose side are we on?**

An editorial states "There are all sorts of questions that remain unanswered about Prime Minister Justin Trudeau's decision to withdraw Canada's CF-18s from the U.S.-led coalition fighting against the Islamic State of Iraq and the Levant (ISIL). There are at least as many troubling questions about whether it is wise, or even remotely possible, for Canada's new Liberal government to fulfil Trudeau's campaign promise to resettle 25,000 Syrian refugees in this country before Christmas. But there is a far more important unanswered question that deserves at least some passing attention in all this: just whose side are we on, anyway? For five full years, Stephen Harper's Conservatives chose to go along to get along with U.S. President Barack Obama's half-baked responses to the hideously violent Baathist reaction to the Arab Spring that has now metastasized into the world-devouring catastrophe with its jihadist epicentre in the Syrian hellhole of Raqqa (...) Of course there are other questions. Up to 1,000 Syrian refugees a day are expected to begin arriving next week in the first convoy of a half dozen widebody jumbo jets shuttling Syrian refugees from Jordan, Lebanon and Turkey to Canada. About all that, here's just one of the questions that remains unanswered: what exactly are we going to do with all these people?" Postmedia News (National Post, A10)

*** Slain volunteer fighter to be honoured**

He was a volunteer fighter in a war in which Canada has no regular troops on the ground.
The group he fought with has murky ties to a group Canada officially lists as a terrorist organization.
John Gallagher, 32, who grew up in Southwestern Ontario and died fighting alongside Kurdish forces against the Islamic State in Iraq and the Levant (ISIL) in Syria, will get a hero's welcome home Friday when his body is returned from the Middle East. His death - and the Highway of Heroes-style salute planned for him - opens a new chapter in Canada's military story, one highlighting the shifting nature of allegiances and the tricky job of honouring those who serve. "He used to be in the military," said Casper Koevoets of the Royal Canadian Legion's Victory branch in London. "He was fighting the right fight that he believed in. I think he deserves a hero's welcome home," Gallagher was killed Nov. 4 in Syria by an ISIL "suicide attack" on Kurdish fighters with the People's Protection Units (YPG), a group that actively recruits English-speaking fighters. Its members include citizens of Canada, the United States and Britain.

*** Climate change the worst threat this century, Dion tells APEC summit**
Foreign Affairs Minister Stephane Dion says climate change is the "worst threat we are facing this century," and warned that emissions-reduction targets don't go far enough. It's a marked departure from the stance of the previous federal government, which had alternated between whether ISIL or Russia was the greatest threat to Canada and the world. The question of how to deal with climate change took centre stage at the Asia-Pacific Economic Co-operation summit Wednesday, which has brought together leaders from 21 countries on both sides of the Pacific. The Syrian refugee crisis and Trans-Pacific Partnership trade deal were also discussed. U.S. President Barack Obama said the Asia-Pacific region is particularly vulnerable to flooding and land loss associated with climate change. Ottawa Citizen (Vancouver Province, A24; Star-Phoenix; Leader-Post; National Post; Montreal Gazette)

INTERNATIONAL

False hope, no mercy for fleeing migrants
For more than two months this spring, Abul Taher did not know where his son had gone. Then his phone rang. "Your son is in the middle of the sea. Give us money," the voice on the other side said. "If you don't give the money, we will kill your son and throw him into the sea." In the background, he could hear screams from his son as captors beat him. Then his son, Muhammad Selim, was allowed to speak. "Please, give them money. Please, save my life," he said. (…)The unfolding of what Amnesty International called a "humanitarian crisis at sea" started long before Syrian refugees began leaving for Europe, and threatens to continue for years. A regional crackdown has won a pause in the number taking to the water this fall. But the grinding poverty and persecution that have driven the trade remain unchanged. "I fully expect that the trafficking will resume. I was in the camps a month ago and lots of people said, 'We don't care about the risk, we're just going to go,' " said David Scott Mathieson, a senior researcher with Human Rights Watch The long southeastern peninsula of Bangladesh slices alongside Myanmar, its 125 kilometres of sand forming one of Earth's longest beaches. It's one of the few places in Bangladesh that attract tourists. It's also home to one of Asia's most vulnerable populations, where poor farmers live alongside drug traffickers, corrupt police and a persistent dream that across the water, there is something better. Globe and Mail, A12

***L'EI lance un nouveau numéro de son magazine**
«Juste terreur» ou «juste la terreur». C'est par ce double sens arrogant - Just Terror, en anglais - que le groupe armé État islamique a coiffé la une du plus récent numéro de son magazine de propagande Dabiq, consacré en partie aux attentats de Paris. Lancé hier sur les réseaux sociaux, le numéro contient quelques images des attentats. Provenant d'agences de presse, elles ont été retouchées avant leur publication dans le magazine. La photo de la une, par exemple, montre des secouristes venant en aide à un blessé. Une femme, qui apparaissait à droite dans la photo originale de l'Agence France-Presse, a été carrément effacée de l'image avec un logiciel de retouche. Les chaussures d'une des femmes victimes de l'attentat, en bas à gauche, ont aussi été floutées. Selon nos vérifications, Dabiq n'a jamais publié de photo montrant une femme, même voilée, dans l'un ou l'autre des onze numéros précédents du magazine voué à la promotion du djihadisme. Une bombe dans une canette Dabiq a aussi publié une image de ce qui serait la bombe artisanale utilisée par l'EI pour abattre l'avion de Metrojet qui s'est écrasé dans le désert du Sinaï, en Égypte. Le dispositif aurait été dissimulé dans une simple canette de boisson gazeuse. «On ne voit que trois éléments: la canette, une charge explosive et un commutateur. Il n'y a pas de minuterie ou de dispositif de déclenchement à distance. Ça laisse croire, si l'image est véridique, qu'ils ont utilisé un kamikaze pour commettre l'attentat», note le Canadien Yannick Veilleux-Lepage, spécialiste de la propagande terroriste à l'Université St. Andrews, en Écosse. La Presse, A14

NIL

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** University, Intact team up on climate research site**
The University of Waterloo and Intact Financial Corp. have created a new research centre that will look for new ways to reduce weather-related property damage linked to climate change. Intact will initially provide $4.25 million for a program focused on how to protect Canadian communities from severe precipitation, such as unusually heavy rains and ice storms. Another program will identify how various Canadian industrial sectors are vulnerable to extreme weather. The new Intact Centre on Climate Adaptation will be based in the university's environment faculty. The centre will monitor applied research from around the world and conduct its own research. The ICCA will also launch a national Home Adaptation Audit Program (HAAP) to assess the vulnerability of homes to flood damage, and make specific recommendations to help homeowners avoid costly damage from extreme weather. Canadian Press (Chronicle-Herald, B4); Toronto Star

* **CP to fight $409-million Lac-Mégantic lawsuit**
Canadian Pacific Railway Ltd. says it will fight a $409-million lawsuit the province of Quebec has launched over the 2013 LacMégantic oil train explosion that killed 47 people. The lawsuit filed in Quebec Superior Court alleges CP was negligent in handing over the tank cars to Montreal, Maine and Atlantic Railway, the now-defunct company that was in possession of the 74-car train left unattended before it rolled into LacMégantic and wiped out much of the town's core. The lawsuit also accuses CP of failing to take steps to prevent the disaster. "CP intends to fully defend itself in court," a company spokesman said on Monday. CP hauled the oil train from its origin in North Dakota to Montreal, where it handed over the cars to MM&A. The train was destined for Irving Oil's refinery in Saint John. In October, CP dropped its objections to a $446-million compensation fund for victims, allowing the settlements to begin flowing. Of about 24 settling parties, CP was the sole company refusing to pay into the fund, a stance that leaves it open to possible future damage claims. Globe and Mail, B5

* **Belledune - forte opposition québécoise au projet de port pétrolier**
Le projet de construction d'un terminal pétrolier au port de Belledune par l'entreprise Chaleur Terminals continue de susciter la mobilisation de citoyens et de groupes écologistes du Québec opposés au transport de pétrole par train pour l'exportation. Jeudi, les partis de l'opposition à l'Assemblée nationale du Québec ont uni leurs voix à celle des opposants du projet qui prévoit l'acheminement par train au Nouveau Brunswick de pétrole issu des sables bitumineux de l'Alberta… En entrevue à l'Acadie Nouvelle, la députée Manon Massé a indiqué que sa formation politique exige elle aussi la tenue d'audiences et d'un examen par le Bureau d'audiences publiques sur l'environnement, l'organisme québécois voué à l'information et à la consultation publiques sur des projets susceptibles d'avoir un impact majeur sur l'environnement. Celle-ci se dit sensible aux critiques venants de plusieurs néo-brunswickois qui craignent de voir l'opposition à de tels projets mener à l'abandon d'initiatives qui seraient créatrices d'emplois pour diverses communautés du Nouveau-Brunswick. «Loin de nous l'idée de dire qu'il faut pénaliser les petites communautés. La question qui se pose, c'est comment pouvoir sortir de cette économie qui est basée sur la filière pétrolifère», explique Manon Massé. La députée montréalaise estime qu'à l'image de la tragédie de Lac-Mégantic, les populations locales subissent et absorbent les risques du transport de produits pétroliers. «L'Industrie pétrolifère est financée à coup de milliards de dollars, cet argent devrait plutôt être investi dans la création d'autres types d'emplois, comme dans la fonction publique et dans les industries de la forêt et des énergies renouvelables», estime Manon Massé. L'Acadie Nouvelle, 8

* **Incertitude**
Une pièce d'opinion dit « « Alors que Chemin de fer Central Maine & Québec (CMQ) pourrait techniquement transporter du pétrole brut à compter du 1er janvier, l'incertitude de la Coalition des citoyens et organismes engagés pour la sécurité ferroviaire est bien légitime et commande davantage d'écoute de la part des autorités. Le président du CMQ, John E. Giles, soutient que sa compagnie n'a encore aucun contrat pour le transport de pétrole brut et rappelle son engagement d'aller rencontrer les citoyens et les dirigeants municipaux si la situation change. Mais la levée même symbolique de l'embargo volontaire sur le transport de pétrole brut n'en constitue pas moins une épée de Damoclès. Depuis juin 2014, M. Giles a fait de la sécurité ferroviaire son leitmotiv, affirmant que sa compagnie a investi 22 millions$ pour améliorer la voie ferrée et les infrastructures après des années de négligence de l'ancien propriétaire, Montréal, Maine & Atlantic. Il a aussi démontré une volonté de rassurer les citoyens à la suite la tragédie de juillet 2013, alors qu'un convoi de 72 wagons-citernes remplis de pétrole avait déraillé en plein centre-ville. Toutefois, malgré le verdict de Transports Canada selon lequel les voies sont sécuritaires, les observations effectuées par des citoyens et le consultant Jacques Vandersleyen ont démontré des problèmes de rails usés, de traverses pourries, de même qu'un ponceau en mauvais état. » La Tribune, 14

NATIONAL SECURITY / SÉCURITÉ NATIONALE

* **Trudeau's Parliamentary Secretaries To Be Charged With Policy Files**
Prime Minister Justin Trudeau will appoint his parliamentary secretaries in the next day or two, The Huffington Post Canada has learned. Parliamentary secretaries resemble junior cabinet ministers, but

they traditionally don't attend cabinet meetings and they have no managerial responsibilities over departments. They mostly answer questions on behalf of their minister when he or she is not in the House. This time, however, some parliamentary secretaries will be charged with actual policy files... Another Liberal source cautioned that there might be several familiar names left off the list of appointees this week. The PMO is hoping that some who are left off the list will be elected committee chairs, including the chair of the soon-to-be struck national security committee — the oversight body the Liberals promised as a response to the concerns over increased sharing of information by security agencies in Bill C-51. Huffington Post (2015-11-30)

*** Can we please stop blaming terrorism on civil libertarians?**
An opinion piece by Andrew Mitrovica states "White. Male. Academic. Check off those three boxes and you've got a good chance of being anointed a "national security expert" by the mainstream media ... no questions asked. You'll be contacted by reporters for instant comment on the terrorist attack *du jour*, based on information that you've likely gleaned from reading newspapers and watching TV - just like everybody else. But you've got a PhD, so that's all that really matters. One frequent rider on the national security pundit carousel is Christian Leuprecht, a professor at the Royal Military College, Queen's University and a 'senior fellow' at the Macdonald-Laurier Institute. Last week, Leuprecht penned a column for the *Globe and Mail* that was rife with inaccuracies, offered a vacuous defence of Bill C-51 and made the breathtakingly absurd suggestion that "self-righteous" critics of the "surveillance state" (presumably including journalists like yours truly) have prevented the forces of order from "leveling the playing field with the bad guys" responsible for the Paris atrocities.. Readers may recall that in a March column I dissected the equally laughable remarks Leuprecht made before the Senate's Public Safety and National Security Committee considering Bill C-51. Caught in one act of ill-formed hyperbole, Leuprecht has chosen to double-down. He starts his latest rant in the *Globe* by chastising unnamed "critics" for pointing out that many of the terrorists who murdered hundreds of innocents all over Paris were hardly in deep cover - that, as the *Wall Street Journal* has so meticulously reported, the killers made their deadly preparations in "plain sight" of somnolent French and other European intelligence services... Leuprecht then compounds this bit of lunacy by suggesting Canadian cops and spies are reluctant to share such information because of ... Canadian torture survivor Maher Arar. "Since the Maher Arar case," Leuprecht writes, "Canadian agencies are loath to share intelligence with other departments, let alone countries." iPolitics

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Deportation order hard to grasp
At first glance it seems a contradiction, one many Londoners find difficult to understand. As Canada lays out the welcome mat for 25,000 Syrian refugees fleeing catastrophic conditions in their home country, the government shut the door last week on a Colombian family who say they fear they will be killed when they return to theirs. (...)"It's clear in the law, but I can understand why people in the community don't understand it. It's quite complex," London immigration consultant Mia Loebach said Monday. "The basic answer to that is anyone, before they come to Canada, needs a permanent resident visa to come in." "The (Syrian refugees) have been processed by the United Nations.They will land as permanent residents," Loebach said. In contrast, when people ask for refugee status after arriving in the country - as Johanna Santos, Edgar Regalado and their two children did in April 2013- they are immediately given what's called a "conditional removal order," Loebach said. "And that moves pretty quickly once the refugee claim is refused," she said. The plight of the Santos-Regalado family has triggered an outpouring of support in the northwest London community where the children attend St. Paul elementary school and the parents have put down roots. They said they had been targeted by the Revolutionary Armed Forces of Colombia (FARC) for years, had moved cities to avoid persecution and fled the country after a FARC member shot at Regalado. But in a decision later upheld by a federal court, a refugee board denied their claim for status here, saying they had not done enough to get help in Colombia. The family has received an order to leave the country on Wednesday. London Free Press, A1/Front

Woman arrested at St. Stephen border
A 28-year-old woman was sent to jail on Saturday after being taken into custody by Canadian customs officials. Police were called to St. Stephen on Saturday at 7 p.m. after the woman was identified as being wanted for an outstanding committal warrant, said Sgt. Lori Magee of the Saint John Police Force. Such warrants typically are issued for unpaid fines. Telegraph-Journal, B4

Low dollar gives tourism a temporary lift
Tourism to Canada rebounded in 2015, thanks to the low Canadian dollar, but the travel industry can't count on a favourable exchange rate to prop it up indefinitely. The sector has to make some significant changes if it is going to regain its spot among the top 10 destinations in the world, according to the latest annual report from the Travel Industry Association of Canada. That means boosting marketing efforts, trimming airport taxes and fees for incoming travellers and making sure there are enough employees to work in the sector. The report notes that Canada was in eighth place among the world's top destinations - measured by international visits - in 2000, but it has fallen well out of the top 10 since then. By 2014, Canada was in 17th place, behind countries such as Saudi Arabia, Greece, Thailand and Austria. (…) Another key issue for the tourism sector is a labour shortage, especially in Western Canada. Loosening the Temporary Foreign Worker Program to allow a seasonal stream of employees would be one short-term fix, TIAC suggests. Globe and Mail, B3

La lutte aux gangs de rue s'intensifie
Le chef de la police d'Ottawa, Charles Bordeleau, a présenté son budget préliminaire pour 2016, à la Commission des services policiers, lundi soir. Quelques heures plus tôt, le numéro un de la police municipale a confirmé au Droit que son unité des gangs de rue et des armes à feu était débordée. C'est pourquoi douze agents viendront en aide - temporaire - à la dizaine déjà en place dans cette escouade. (…) Du même souffle, le chef de police a mis en relief une surabondance des armes à feu provenant des États-Unis qui débordent à Ottawa. De plus en plus d'armes de poing achetées au pays de l'Oncle Sam traversent la frontière canadienne, et servent à des criminels plus ou moins avertis dans la capitale fédérale. Le Droit, 5/Front

Deporting this family seems wrong
An opinion piece states, "Regarding the article Colombian clan loses bid to stay in Canada (Nov. 28). Would someone please explain to me why this family of four (who apparently has assimilated into Canadian culture with support fromfamily, community, school and a job) is being deported. Meanwhile we are prepared to offer thousands of refugees free passage, lodging and everything else supplied to come to Canada, London included. Are we being humane only to Syrians and disregarding anyone else? I don't understand the rational behind this decision." London Free Press, A5

Jury duty can be taxing in more ways than one
A letter to the editor asks, "Q "I read recently that Canada and the U.S. are exchanging border information to keep closer tabs on how long people are staying in the two countries. The insinuation is that if you spend more than 182 days outside Quebec, you could lose your health benefits in Quebec. Is this true?" A It has been rumoured for a while that border monitoring is being stepped up, which could mean a nasty surprise for Quebecers who don't check - or don't care - how long they stay in the U.S. or anywhere else. To be covered by the provincial health card, residents are supposed to be present here more than half the year. You cannot be absent more than 182 days in a calendar year. (Departure and return days don't count against you in the calculation, and neither does any absence of 21 days or less). "Any person who does not respect this condition is not covered by the provincial health system for that year or any other where they're absent for 183 days or more," a spokesman for the Régie de L'Assurance Maladie du Québec said. "The Régie will ask to be reimbursed for any health services received during that period."" Postmedia News (Montreal Gazette, B1/Front)

Time for action on new terminal
An opinion piece states, "Victoria Mayor Lisa Helps is part of a 13-member delegation in Ottawa this week trying to drum up federal funding for a new Belleville Street ferry terminal. This is no junket. After decades of talks, task forces, reports and hand-wringing, replacement of the dismal terminal on the south side of Victoria's Inner Harbour is long overdue. Visitors coming to downtown Victoria by sea are treated to a

magnificent view that, besides natural features, includes the B.C. Parliament Buildings, the Empress Hotel and other heritage buildings. Much work over the years has gone into turning a bleak industrial site into an attractive, welcoming harbour. But the welcome mat for ferry passengers is tattered and grubby. The terminal is a hodge-podge of temporary industrial trailers, hardly a fitting portal to a beautiful harbour and a beautiful region. (...)Travellers arriving in Greater Victoria by air are greeted suitably. In 2011, Victoria International Airport, which receives federal funding for improvements, was rated among the top 10 most-loved airports in the world, and has consistently won awards for customer service. While the Belleville Street terminal does not handle as many travellers as the airport, it, too, is an important portal. The federal government should do its part to ensure travellers by sea are welcomed in comfortable and attractive surroundings, not in temporary buildings more suitable for an oil camp than a port of entry to Canada." CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Kids' tech maker VTech hacked, 5 million at risk**

Kid's technology maker VTech says the personal information of about 5 million of its customers and their children may have been stolen by hackers. The Hong Kong-based company disclosed the breach of a customer database late last week, but didn't say until Monday how many people could be affected. The news comes just as the holiday shopping season is kicking into gear and kids' smartwatches and tablets made by companies such as VTech are expected to be high on children's wish lists. VTech's Kidizoom Smartwatch is predicted to be a top seller this holiday season, while its InnoTab tablets have been popular in the past. Compromised information in the VTech breach includes the names, birthdates and genders of child users. It also includes adult user information including names, email addresses, passwords, secret questions and answers for password retrieval, IP addresses, mailing addresses and download histories. The affected database doesn't contain any credit card numbers, or personally identification information such as Social Security or driver's licence numbers, VTech said. Customers from the U.S., Canada and 15 other countries are affected. The hacking serves as a reminder to parents to be careful about what kinds of information about their children they enter into on Internetconnected devices. While devices like kid-friendly smartwatches and tablets may block a child's access to the bulk of the Internet, they're still a potential target for hackers. The breach took place Nov. 14 and was discovered 10 days later. It involved customer data stored on the Learning Lodge app store database. Customers use Learning Lodge to download apps, games, e-books and other content to VTech products. Associated Press (Times-Colonist, B3); Telegraph-Journal; Reuters (National Post)

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Vader Trial 'Crisis'**

Court hears how lack of disclosed evidence led to stayed charges. The Crown is denying it is an abuse of process to put Travis Vader on trial for killing two vanished St. Albert seniors after charges against him were earlier stayed. And court heard Monday during a hearing into the case that the "disclosure crisis" that led to the first-degree murder charges being stayed was the fault of the RCMP. Edmonton Chief Crown prosecutor Michelle Doyle testified at the Court of Queen's Bench hearing that she was "stunned" to learn of the "staggering" amount of evidence in the case which had not been disclosed by police. "I couldn't believe it," said Doyle. "I was very upset and very angry and that was communicated quite clearly." In the month before Vader's April 28, by2014, trial for the alleged killing of Lyle McCann, 78, and his 77-year-old wife Marie, was set to start, a team of 20 Mounties was tasked to figure out the situation, but it quickly became apparent the evidence would not be disclosed in time. "At this point I had lost all confidence in the status of disclosure," said Doyle, adding she knew then that she could not proceed with the upcoming trial. Postmedia Network (Edmonton Sun, A10); CBC (2015-12-01); CBC News; Edmonton Journal (2015-11-30)

Man charged with murder in death of Cutknife

A 19-year-man has been charged with second degree murder of a Samson Cree Nation woman. Maskwacis RCMP found the body of Kirsten Cutknife on the Samson Cree town site residence on

Saturday morning. Joshua Crier, 19, was also charged with assault with a weapon involving another women. She did not receive life-threatening injuries. All three people are known to one another. All three people are known to one another. Crier is in police custody and will make a first appearance in relation to the charges in Wetaskiwin Provincial Court on Dec.17. An autopsy has been tentatively scheduled for Wednesday at the Office of the Medical Examiner in Edmonton. Postmedia Network (Red Deer Advocate, A5)

Mother of five one of three found dead in rural home

Friends and family have identified a woman who recently started a new job at a fast-food restaurant as one of three people killed in a rural Alberta home. Mounties say the bodies of a man, a woman and a teenage girl - all with "obvious trauma" - were found in a house near Edson on Sunday. Sylvia Standing said Monday that her goddaughter Roxanne Ruth Berube was 36, had five children and was a good mother. There were also media reports identifying the male victim as Dan Miller. Insp. Gibson Glavin said the deaths were not a murder-suicide. "I will be clear that there was someone out there, or some people, who did this and we have not arrested them yet," he said. RCMP major crimes investigators and other Mounties were speaking with people in the area west of Edmonton looking for leads and clues, he said. Police found the bodies after responding to a call from someone outside the home. Glavin said police don't believe anyone else is at risk, but urged people to be careful. "We do urge the public to be cautious, to be aware of people or circumstances that cause them to believe that they have some knowledge or some connection with this homicide investigation," he said. Postmedia Network (Red Deer Advocate, A1,A2, Times Colonist, London Free Press Edmonton Journal, Edmonton Sun, Toronto Sun, Vancouver Sun, Calgary Sun, Calgary Herald Times & Transcript); National Post, Presse canadienne (La Voix de l'Est, 4)

*** School response to undisclosed threat was 'precautionary'**

Two messages sent to parents of students at Bernice MacNaughton High School concerning a threat at the school were a matter of caution, said the superintendent of the Anglophone East School District Monday afternoon. Gregg Ingersoll said in an emailed statement that the principal of the high school in west Moncton received information late last week that caused her to initiate a security protocol that resulted in two messages being sent to parents over the weekend disclosing that a threat had been made. The school district has an established assessment tool for determining the significance of any threat connected to a school. Ingersoll said in this case, "the result was that the situation posed a low level of concern, however the school asked the RCMP to get involved as a precautionary measure. The school had a smooth start up this morning and officials at the school are working with the RCMP in the ongoing investigation." The district's assessment tool defines a "Low Level of Concern" as instances when "risk to target(s), student, staff and school safety is vague and/or indirect." The involvement of the RCMP is typically reserved for high levels of concern when a threat is imminent or immediate, but that was not the case in this instance. Postmedia Network (Times & Transcript, A3)

*** Tories hand over Atcon computer servers to RCMP**

Progressive Conservatives have handed over Atcon's back-up computer servers to the RCMP after revealing on Monday that the party purchased them at a bankruptcy auction in 2013. The Miramichi company's bankruptcy cost taxpayers close to $70 million. The Progressive Conservatives have long said questions remain over the former Liberal government's dealings with the failed Miramichi company. Interim Tory Leader Bruce Fitch says there's now "enough new information" on the servers to prove a new audit is required, something the Liberal government hasn't committed to doing. Liberal cabinet Minister Donald Arseneault labelled the move a "pretty pathetic" attempt to divert attention away from issues of the current day by an opposition without any new ideas. Arseneault also questions whether there's anything to the servers - beyond a political stunt. In a 61-page report earlier this year, Auditor General Kim MacPherson found that Atcon received a total of $77 million from the defunct Department of Economic Development, with nearly $70 million of that amount in default. She noted that her office hadn't done a forensic audit on the money trail, but would be willing to do one if the Legislative Assembly asked her to do it and provided the resources to make it happen. The Progressive Conservatives contend it didn't seek to analyze the servers it quietly purchased now more than two years ago - even through a general election - because it was waiting on what the auditor general found. Fitch said on Monday that the current Liberal government's stance to not move forward on a larger audit then led the party to hand

the servers over to police. It first paid about $1,800 to have the servers analyzed by an IT firm to recover some of the documents. Postmedia Network (Times & Transcript, A10, Daily Gleaner, Telegraph-Journal)

*** Youth pleads guilty to being an accessory to robbery**

A Moncton teen has admitted to being an accessory to robbery and will be sentenced on Dec. 14. The female offender appeared in Moncton youth court Monday morning with her lawyer Helene Beaulieu. She can't be named because she was 17, a youth, when the offence was committed. She pleaded guilty to being "a party" to robbing Bharat Kumar Gadher of electronic items while wounding him with a knife. The Crown withdrew charges of aggravated assault and robbing money from him while armed with a knife. She also pleaded guilty to two breaches of undertaking in June and July. The offence occurred just before 4 a.m. on May 3. The RCMP were called to the parking lot of the Sports Rock Bar on Paul Street where a man was suffering from stab wounds. Police said he drove himself there and his vehicle ran into the back of a cab. Postmedia Network (Times & Transcript, A3)

Murder scene was 'pretty horrific,' officer tells jury

Even for a seasoned Hamilton police forensic investigator, the Lou Malone murder scene was horrific. "There is a male deceased lying on the west sidewalk with a large pool of blood at his head. The top part of his head appeared to have been shot off," Det. Const. Doug Moon told a jury of the murder scene he witnessed on Kenilworth Avenue North in the early morning hours of Nov. 9, 2013. "Are you able to characterize the scene?" prosecutor Craig Fraser asked the officer. "It was a bloody mess. Pretty horrific. It was ugly," Moon replied. Brothers John and Mike Josipovic, aged 52 and 49 respectively, have pleaded not guilty to first-degree murder in the slaying of Malone, 49. Malone, a former biker, had been shot point blank in the back of the head after being chased by two men in a pickup truck. Moon testified Monday that birdshot pellets from the shotgun blast that killed the ex-Hells Angel biker broke storefront windows on the west side of Kenilworth, south of Hope Street. The seven-man, five-woman jury learned earlier that Malone was initially grazed in the neck in front a home at 35 Robins Ave. Moon presented evidence that showed how close that blast had been. Postmedia Network (Hamilton Spectator, A8)

*** Murder charges should be stayed, lawyer say**

Murder charges against Travis Vader in the case of a slain St. Albert couple should be stayed because the prosecution gave itself an unfair advantage by delaying the case for two years, according to his lawyer. In turn, the prosecution has blamed the delay on an Alberta RCMP "fiasco" that put Vader's right to a fair trial in jeopardy with late disclosure of evidence. The RCMP's disclosure problems were massive and egregious, according to the prosecution, and left no option but to stay the charges in one of the province's most-watched trials. Michelle Doyle, the original prosecutor in the case, said she believed disclosure of evidence was complete before the RCMP sent thousands of new documents in the weeks before Vader's 2014 trial was set to begin. (...) Vader's previously scheduled trial was derailed on March 29, 2014, when prosecutors stayed the murder charges because of the RCMP's lack of disclosure. Later that year, they lifted the stay and Vader faced the murder charges once more. Postmedia Network (Edmonton Journal, A7)

Cocaine, weapons found in home near school

Drugs and a firearm were seized Sunday from a Sidney home directly across the street from Sidney Elementary School. Sidney/North Saanich RCMP executed a search warrant at the home and found cocaine that was packaged - seen as an indication that it was prepared for distribution - as well as a rifle with prohibited ammunition capacity and a set of brass knuckles with a Taser built in. Police arrested a 17-year-old girl, a 23-year-old woman and two men, ages 19 and 21. The females were released without charge, but the men are facing charges that include possession of a controlled substance for the purpose of trafficking and unlawful possession of a firearm. They have been released and are awaiting court appearances. Sidney/North Saanich Cpl. Erin Fraser said it's disturbing to have to carry out a bust like this one near a school. "Definitely not ideal, especially given there was a weapon found," she said. "There was no direct threat to the kids, no links that we could establish with the kids, but just the fact that it's right there certainly is concerning to us." Postmedia Network (Times Colonist, A4)

Property crimes spike
Police are cracking down on organized crime and making headway when it comes to safer youth and safe roads, according to the Red Deer RCMP's annual policing report. But the year-to-end results show a significant spike in total property crimes from Jan. 1 to Sept. 30 over the last five years. In 2015 there were 10,034 total property crimes compared to 9,506 in 2014 and 7,342 in 2011. RCMP Insp. Gerald Grobmeier said this may be attributed to the growth in Red Deer's population, the downturn in the economy or that people are reporting more crimes. It's probably a combination of everything," he said. Criminal code offences, such as disturbing the peace and offensive weapons, have stayed relatively the same with 16,313 in 2015 compared to 16,241 in 2014 and 14,297 in 2011. Total persons crimes were down to 2,117 in 2015 compared to 2,336 in 2014 and 2,567 in 2011. This includes crimes such as robberies, sexual assault and utter threats. Grobmeier said the downward trend is common throughout the country. He said it could be a combination of better education, better programs and more calls to the police. Postmedia Network (Red Deer Advocate, A1, A2)

*** Stemming the violence - Legislation would make it easier for victims to obtain protection orders**
An editorial states, "The Selinger government has introduced legislation to make it easier for victims of domestic violence to obtain protection orders and to require the subjects of such orders to surrender firearms they may possess.The measures come in the wake of two high-profile deaths in the province this fall. Manitoba has the second-highest rate of spousal homicide in Canada, next to Saskatchewan, Attorney General Gord Mackintosh said Monday in announcing several administrative and proposed legislative changes. "We have to do better," he said. "We have to end this terror." Mackintosh said amendments he introduced in the legislature to the Domestic Violence and Stalking Act will set a less onerous standard for obtaining protection orders. (…) Over the last two years, more than 1,200 protection orders have been granted in Manitoba, but another 1,700 have been dismissed." Canadian Press (Winnipeg Free Press, A3)

*** Real protection**
In the wake of two recent deaths linked to domestic violence, the provincial government hopes to soon offer victims the strongest protection in Canada. To do so, it must first eliminate barriers that are relatively unique to Manitoba. Over the past two years, 1,200 protection orders were granted in the province, while 1,700 - 59% - were dismissed because of a high threshold for victims to qualify, said Justice Minister Gord Mackintosh. And when protection applications came in, courts also weren't required to follow up on reports the suspected abuser had a gun or check into his or her criminal record. "We have to open wider the doors of justice, particularly for those women living in fear," said Mackintosh. Mackintosh announced new legislation Monday that aims to make protection orders easier to get. Those with orders against them would also face automatic criminal checks and be banned from keeping guns. The new bill follows two deaths that raised questions about Manitoba's current system. Selena Rose Keeper was denied a protection order before her ex-boyfriend was charged with killing her in October. And Camille Runke was allegedly shot to death by her ex-husband while she had a protection order against him. "This is for Selena and Camille and too many other women who deserve long lives and a life in peace," Mackintosh said. Postmedia Network (Winnipeg Sun, A5)

*** Solicitor general vows to help ALERT cope with shortfall**
Alberta's solicitor general has vowed to protect Alberta Law Enforcement Response Teams (ALERT) from layoffs stemming from a $3-million drop in funding anticipated next year, but future changes to the agency are being considered. On Monday, Kathleen Ganley dismissed fears that 70 ALERT members could be laid offnext year as a result of a reduction in federal grant funding. "We don't believe that will be the case," Ganley told reporters at the legislature. "We're committed as a fundamental principle to ensuring that no layoffs occur and that the functions of this organization continue going forward." The province received a $42.4-million grant from Ottawa in 2008-09 as part of the federal government's initiative to recruit new police officers. Funds were allocated to ALERT in increments until the grant was depleted. "During this fiscal year they are adequately funded and they can continue to maintain their operations," she said. "Going forward we have, with the support of both ALERT and the Association of Chiefs of Police, performed an audit on ALERT and we will be determining in the coming days how best to perform that function." She noted ALERT is made up of a series of specialized teams. The 280-member agency brings together six teams from across Alberta to deal with fugitives, grow ops, child pornography, cybercrime

and other large cases. ALERT chair Shami Sandhu said last December that a cut of one-quarter of the agency's officers would jeopardize the work it does and leave it on a "shoestring" budget. Ganley said earlier this month during her ministry's budget estimates that the province recently had an outside audit conducted into the operations of the 10-yearold integrated unit of municipal police, RCMP and provincial sheriffs "to see how well that was working for everyone." Postmedia Network (Calgary Herald, A6, Edmonton Journal)

*** Father of 2 shouldn't have been killed by Thompson RCMP, family says**
The family of a Thompson man shot to death by RCMP says he never should have been killed over a case of drinking and driving. Steven Campbell, 39, was shot and killed by an RCMP officer on Nov 21 after a short police chase ended in an officer shooting into the vehicle he was driving. "Steven had his demons, and Steven was no saint, but I just wanted to tell his story because he made mistakes, and he didn't deserve this," said Shannon Heck, Campbell's sister. According to RCMP, Campbell had been driving erratically when officers tried to pull him over. CBC (2015-12-01); Thompson Citizen (2015-11-30)

Downloading costs
In a classic case of downloading from Ottawa and Victoria, municipalities are being asked to pay more for DNA crime analysis. It's baffling that this isn't included in the current RCMP contract. Policing is the biggest of big-ticket items in municipal councils' budgets and they're growing impatient with ever-ballooning costs. This will likely spur a closer look into whether we could be saving money or getting better service by jettisoning the RCMP in favour of a local or regional police force. Housing is a provincial responsibility, yet cities and districts are regularly allowing denser condo developments in exchange for the inclusion of non-profit or market rental housing - both things the province and the feds have largely pulled out of over the last 30 years. That siphons off money that could otherwise be invested in areas that are within municipal jurisdiction, such as updating old rec centres or paying for local infrastructure. Postmedia Network (Times Colonist, A10)

*** Saisie par la GRC de cigarettes électroniques contenant de la marijuana**
Les policiers ont récemment saisi dans un véhicule intercepté au Nouveau-Brunswick une grande quantité de marijuana, de l'hydromorphone et des cigarettes électroniques contenant de la marijuana. Le conducteur, Stéphane Fournier, un homme âgé de 39 ans de la région d'Ottawa, a été arrêté lors de cette opération qui s'est produite en octobre, près de Havelock, mais qui n'a été rapportée que cette semaine par la GRC. Les cigarettes électroniques saisies contenaient de l'huile de cannabis et du tétrahydrocannabinol (THC), la composante psychoactive de la marijuana. C'était la première fois que la GRC au N.-B. interceptait un produit de la marijuana sous cette forme. Les cigarettes électroniques contenant de la marijuana peuvent être consommées discrètement, car elles ne dégagent aucune odeur et ressemblent à une cigarette électronique typique. En Cour provinciale à Moncton, Stéphane Fournier a été accusé de trois chefs d'accusation de possession d'une substance réglementée dans le but d'en faire le trafic et de trois chefs d'accusation de trafic d'une substance réglementée. Il a été libéré sous certaines conditions et comparaîtra de nouveau en cour à une date ultérieure. Presse canadienne (Acadie Nouvelle, 2)

*** Legalizing pot shouldn't be another promise to go up in smoke**
Prohibition has not served us well, let's hope Trudeau follows through. After Prime Minister Justin Trudeau's recent climb down on his refugee commitment, it might be fair to wonder how many other of his election promises might be compromised. For example, is it a certainty that marijuana will be legalized? It was one of Trudeau's first promises as Liberal leader, and his mandate letters to the relevant ministers spell out the need to create a federal-provincial process "that will lead to the legalization and regulation of marijuana." Mind you, "creating a process" makes it sound like the government is less than 100 per cent committed. If there's any kind of significant pushback on this issue, will they get cold feet? The public, at least, seems to be onside with the concept (…) Calgary police chief Rick Hanson, however, took a much different view on such matters, and was never shy about expressing his opinion on what laws we needed or did not need. So where does our current chief stand? Back in October, newly minted police Chief Roger Chaffin seemed to take a hands-off approach. He expressed his hope that law enforcement would at least be consulted, and said in the meantime, they would "continue our education, enforcement and

public outreach activities in regards to marijuana and other illicit drugs." Postmedia Network (Calgary Herald, B4)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Assante settlement greenlighted
A $10-million settlement has been approved in the class-action lawsuit involving a former Red Deer investor incarcerated for first-degree murder. Justice John Rooke, associate chief of the Alberta Court of Queen's bench, approved the settlement between a class of 804 claimants against Assante Capital Management, Assante Wealth Management, and Brian and Christine Malley. It was approved on Monday in Red Deer Court of Queen's bench. The Malley's ran the Assante Capital and Wealth Management office in Red Deer. Former clients launched the suit claiming invest mismanagement. (...)Brian Andrew Malley, 58, of Innisfail was convicted of first degree murder on Feb. 24 in Red Deer Court of Queen's bench. Victoria Shachtay, 23, of Innisfail was killed on Nov. 25, 2011. The quadriplegic single mother died when she opened a gift left on her doorstep. The gift disguised a pipe-bomb, which detonated. Malley was sentenced to life without parole for 25 years. He is currently appealing the decision and sentence. Red Deer Advocate, A2

*** Son sort repose sur la crédibilité des délateurs**
La crédibilité des frères Robert et Timothy Simpson, délateurs qualifiés de «sociopathes» par la défense, pèsera lourd dans le sort d'un de leurs présumés complices d'un double meurtre à Montréal. C'est ce qu'ont convenu les procureurs des deux parties au procès de Leslie Greenwood, qui tire à sa fin après deux mois et demi d'audition. Le garagiste est accusé d'avoir participé aux meurtres du trafiquant Kirk Murray et de son chauffeur, Antonio Onesi, dans le stationnement d'un McDonald's du quartier Notre-Dame-de-Grâce, le 24 janvier 2010. Les victimes ont été abattues par Robert Simpson, aidé de son frère cadet, sous l'ordre du Hells Jeffrey Lynds. (...)Robert Simpson est incarcéré pour sept meurtres, dont quatre perpétrés dans des pénitenciers et qu'il a décrits en détail au procès. Journal de Montréal, 18

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Speeding up justice for victims
In her more than 25 years working as a prosecutor, Kelly Winchester has never found that it gets easier to look at the bloody and bruised photographic evidence of intimate partner violence, or to hear the heartbreak of abuse. Yet she remains dedicated to prosecuting sexual assault and domestic violence cases. The images, the stories, as difficult as they may be, steel her determination. And she has plenty of work to do. Winchester estimates about a quarter of the files that come across her desk entail some type of domestic violence. This is in keeping with data from Statistics Canada that intimate partner violence comprises a quarter of violent crimes in New Brunswick. More than drugs, robbery, motor vehicle theft and even drunk driving, it's intimate partner violence that consumes Winchester's time. Winchester works out of the Crown's Saint John office. In a province that has the highest rate of police-reported intimate partner violence east of Manitoba, the Port City is the crime's epicentre. The city regularly ranks as one of the most dangerous for couples in the country. According to data obtained exclusively from Statistics Canada by the Telegraph-Journal, in 2014 Saint John Police reported more than one incident of domestic violence a day. One out of every five victims reported by police in the province was located in Saint John. Telegraph-Journal, A1 (Daily Gleaner, Times & Transcript)

*** Real protection**
In the wake of two recent deaths linked to domestic violence, the provincial government hopes to soon offer victims the strongest protection in Canada. To do so, it must first eliminate barriers that are relatively unique to Manitoba. Over the past two years, 1,200 protection orders were granted in the province, while 1,700 - 59% - were dismissed because of a high threshold for victims to qualify, said Justice Minister Gord Mackintosh. And when protection applications came in, courts also weren't required to follow up on reports the suspected abuser had a gun or check into his or her criminal record. "We have to open wider

the doors of justice, particularly for those women living in fear," said Mackintosh. Mackintosh announced new legislation Monday that aims to make protection orders easier to get. Those with orders against them would also face automatic criminal checks and be banned from keeping guns. Winnipeg Sun

* **First phase of inquiry into missing, murdered indigenous women expected this week**
The federal government is expected to release the details of the first phase of a national inquiry into missing and murdered indigenous women this weekend, CTV News has learned. Ottawa plans to make the announcement, which is expected to begin with the consultation of the victims' families, on or before the National Day of Remembrance and Action on Violence Against Women on Dec. 6. "As we promised, we will listen to the families first, who have good experience with this and good instincts, and then we will engage with the other partners in the aboriginal organizations, provinces and territories, (and) experts," said Indigenous and Northern Affairs Minister Carolyn Bennett. A full inquiry is expected to be launched in the spring of 2016. CTV News

* **'Gender inclusive' inquiry for indigenous men not for everyone**
A recent petition calling for a "gender inclusive" inquiry into missing and murdered aboriginal people in Canada is not sitting well with everyone. Adam Jones, an associate professor with the University of British Columbia, started the petition a few weeks ago, saying men and boys account for more than 70 per cent of total aboriginal homicide victims in Canada and should not be ignored in a national inquiry. Canada's minister of Indigenous Affairs, Carolyn Bennett, has previously said she hasn't ruled out the possibility of including men and boys in the national inquiry. CBC News

'Karina was stolen from our family'
Carol Wolfe never forgot the last words her daughter said before she disappeared five years ago. "The last memory I have is Karina saying, 'I love you mom and I will be home later,' " she said through a sign language interpreter Monday at the Saskatoon police station. Karina never came home. Last month, the man who is charged with killing Karina Wolfe led police to the area northwest of the city where they discovered her remains. (…)People said Carol Wolfe was tireless in her search for her daughter. "She never gave up," Darlene Okemaysim-Sicotte said, standing a few feet away from the spot where police recovered Karina's body. (…)Meanwhile, supporters are working hard to help Karina's family. Okemaysim-Sicotte said her grassroots organization, Women Walking Together, has been working with Wolfe's family since she disappeared. She said the fact that Constant volunteered information that led to the body's discovery and his subsequent arrest shows that awareness about missing and murdered aboriginal women is working. Postmedia News (StarPhoenix, A1, Edmonton Journal, Ottawa Citizen, National Post)

Man pleads guilty to Winnipeg assaults
A 21-year-old man has pleaded guilty to last year's attack on a Winnipeg teen, admitting his role in the nearly fatal assault that turned the young woman into a voice for Canada's missing and murdered indigenous women. In provincial court in the Manitoba capital on Monday, Justin Hudson, a member of the Poplar River First Nation, pleaded guilty to two counts of aggravated sexual assault in relation to the Nov. 8, 2014, attack on the young woman and a separate assault hours later on a second indigenous woman. He had been charged with attempted murder, aggravated sexual assault and sexual assault with a weapon. The young woman's name is protected by a publication ban ordered by the court on Monday, as is the second victim's. (…)The young woman, now 17, is today an advocate for a national inquiry into Canada's missing and murdered indigenous women - a probe the Liberal government has said it will launch by the summer. Her case also provoked a conversation about identifying victims of sexual assault. Globe and Mail, A3, Winnipeg Free Press, Canadian Press (Times Colonist), CBC News

Quilt stitches families together - Honouring slain, missing women
A quilt made by family members of Canada's missing and murdered indigenous women is to be unveiled Friday at the Winnipeg Art Gallery. The project, which involved 200 relatives from every province, is believed to be the first time families have come together to work on an art installation of this kind. The 200 family members made the patches in Winnipeg in September when the province hosted a national event to bring families from across Canada together. "There are a lot of projects to honour missing and murdered indigenous women and girls, but this one is about the families. It's the families who are creating

something, making something for their loved one," said Nahanni Fontaine, Manitoba's special adviser on aboriginal women's issues. Fontaine spearheaded the project, modelling it on a quilt created in Manitoba for missing and murdered indigenous women and girls. That quilt, with 35 patches, was unveiled at the art gallery in 2014. With 95 patches, the new quilt is three times the size of the Manitoba one, which Fontaine takes to meetings around the country. Winnipeg Free Press

*** Sunday vigil to mark 26th anniversary of Montreal Massacre**
In honour of the National Day of Remembrance and Action on Violence Against Women, the Comox Valley Transition Society and Honouring Our Sisters will host a vigil on Sunday, Dec. 6 at 2 p.m. on the plaza in front of the Comox Valley Art Gallery, 580 Duncan Ave., Courtenay. Dec. 6 will be the 26th anniversary of the Montreal Massacre, where 14 young women were gunned down simply because they were women who were studying to become engineers. Over the last 40 years, approximately 1,200 indigenous women have gone missing or have been murdered in Canada. Every six days, a woman is murdered by a current or former partner. Comox Valley Record (2015-11-30)

Police shuffle aims to deal with shootings, gangs
Ottawa's police chief has reassigned as many as 12 officers to his force's guns and gangs unit in response to the growing number of shooting incidents in the city. The deployment comes in advance of a meeting this week with Mayor Jim Watson, Chief Charles Bordeleau and police board chair Eli El-Chantiry to discuss what could become a record year for gunfire. Most of the 42 shooting incidents in Ottawa so far this year appear connected to gangs and have ranged from reports of shots being fired to young men showing up at hospitals with bullet wounds. The total compares with 49 incidents in all of 2014. El-Chantiry said the additional officers will come from other departments within the force. Ottawa Citizen, A2

Le SPVM mène une offensive contre les gangs de rue
L'opération policière qui a mené à une dizaine d'arrestations samedi à Montréal et sur la Rive-Sud s'inscrit dans une offensive plus globale contre les gangs de rue lancée par le Service de police de la Ville de Montréal (SPVM) à la fin de l'été, a appris *La Presse*. Cette offensive, baptisée « Projet Accalmie », doit se poursuivre au moins jusqu'à la fin de l'année et avait comme premier objectif de mettre fin à une vague d'événements violents qui ont secoué les gangs de rue depuis le printemps dernier. Une dizaine de meurtres, de tentatives de meurtre, d'agressions et d'autres événements se sont produits durant cette vague qui a culminé avec l'assassinat de Donald César, survenu à Montréal-Nord au début du mois de septembre. César était le demi-frère de Chénier Dupuy, défunt chef des Rouges tué durant l'été 2012, et des policiers avaient ensuite dit à *La Presse* craindre une escalade de la violence. Un inspecteur du SPVM avait toutefois assuré qu'il n'y avait pas de guerre entre les gangs de rue et que plusieurs mobiles différents pouvaient expliquer les événements violents. La Presse

*** Nunavik beer, wine sales foster lower crime rates: police**
Police in Puvirnituq say there has been a major drop in the number of calls they've had to handle since the Nunavik community's co-op store began selling beer and wine in October. The Povungnituk Co-operative Association began offering beer and wine sales from its local store in October, the second co-op in the region to do so since the Fort Chimo Co-operative Association in Kuujjuaq re-launched its own sales in 2013. "It's been a month, and for us, we've seen a huge decrease in the number of calls we've received," said Kativik Regional Police Force captain Jean François Morin, who serves as interim deputy chief of operations in Puvirnituq. "There's been a huge decrease in the number of files we've had." Morin said it's not just law enforcement that's noticed the difference, but the community's health and social services workers too. (…)It's less clear how beer and wine sales have impacted on crime in Kuujjuaq; last year, the KRPF has said crime rates in Nunavik's largest community have remained roughly the same. But the KRPF says there has been a recent and overall drop in violent crime across Nunavik, and that this decrease is related to a bump in alcohol seizures over the past year. Nunatsiaq Online (2015-11-30)

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Dilkens in Ottawa to hear federal plan for Syrian refugees in Windsor
Windsor Mayor Drew Dilkens could find out Tuesday in Ottawa how many hundreds of Syrian refugees his city will be expected to welcome over the next 90 days. "That's what all of us mayors are hoping to hear," said Dilkens, who is being joined by municipal leaders from across Canada at a morning meeting at Rideau Hall with Gov. Gen. David Johnston and federal and provincial ministers. The mayors are in the capital to hear the Liberal government's how-to plan on mobilizing Canadians and co-ordinating agencies to receive 25,000 refugees from war-torn Syria over the next three months. Initially advised that Windsor could expect up to 1,000 refugees - triple its normal annual immigrant intake - Dilkens said he was reassured by both the federal and provincial ministers responsible for immigration that the actual number could be anywhere between 200 and 400. He said he told both that Windsor has a relatively high residential vacancy rate of four per cent but also has Canada's highest unemployment ate. "Everybody wants them to be successful, and part of being successful is being able to find employment," said Dilkens. Postmedia News (Windsor Star, A1/Front)

* **First 'new wave' of Syrian refugees arrive in Canada from Lebanon**
Ibrahim Tonbari struggled off Air Canada Flight 8867 in Windsor, Ont., Monday with his wife, Zaineb, and four children under the age of seven. He shuddered in the cold, but told CBC News in Windsor that the first thing he thought of was a better future for his children. (...)Sunday, they piled into one taxi and make the three-hour drive to Beirut's Hariri airport. None of them has ever flown on a plane, let alone a 28-hour journey with four kids and two layovers. "I didn't sleep last night", says Zaineb wanely. The Canadian government has contracted the International Organization of Migration to handle logistics and country exits. The official arrives and starts calling out names for the 32 refugees who are on the flight that night. Each gets a blue bag, stenciled IOM, and inside is the coveted document , a copy of Canadian "permanent resident status" — one each for Ibrahim, his wife and four kids. CBC News

Refugee hotline set up
Manitobans looking for ways to help Syrian refugees coming to the province can now go to an information hotline. The line has been set up by the provincial government, the Manitoba Emergency Measures Organization and the Canadian Red Cross. It will provide information to anyone looking to make a donation or who wants to volunteer with resettlement efforts. Manitoba is expecting between 1,500 and 2,000 people who have fled Syria. Winnipeg Sun, A12

* **Advice for Syrian refugees**
Over the next month, thousands of Syrian refugees will land in Quebec, in a foreign land, at the beginning of winter, where few speak Arabic and still fewer have a full understanding of the kind of upheaval they have experienced - first in Syria, then as they waited in limbo in Jordan, Turkey or Lebanon. Some Montrealers do know what it's like, however - because they went through it themselves not so long ago. We asked a few of them what advice they had for those following in their footsteps. (...)Originally from Idlib in northwestern Syria, Feras, 41, fled to Lebanon in 2014 after his house was destroyed in fighting between the Assad government and rebel groups, and he started receiving threats from both sides. He arrived in Montreal June 23. Hariri's advice to newcomers? "You have to give it time. "You have to breathe," Hariri says. It's not easy to sit around and wait - for language classes, for an apartment, for a job, Hariri says. "Syrians want to be Canadian just like everyone else and get the new job right away and the new car. But it doesn't work that way. You have to be patient." Learn the language - French or English, preferably both. Postmedia News (Montreal Gazette, A1/Front)

* **Privately sponsored refugees fare better in the short term, research says**
It was nearly 20 years ago that Drenka Debro set foot in B.C., she, her husband and their young son fleeing the Bosnian war that had left an estimated 100,000 people dead. Given a choice between Australia, the United States and Canada, they chose Canada - partly because of Ms. Debro's childhood memory of a beloved pair of winter boots that were called "Canadian boots" and partly because they understood Canada was a peaceful country. Beyond that, they knew little. When they learned they were to be privately sponsored by St. Peter's Church in Campbell River, B.C., they had to look up the city on a map. (...)Privately sponsored refugees are most often brought over by Sponsorship Agreement Holders

(SAH) such as a humanitarian group or a church. The St. Peter's Church, which sponsored the Debro family, is part of the Anglican Diocese of B.C., which is a SAH. Refugees can also be sponsored by a constituent group - a group of five or more Canadian citizens or permanent residents, or a community sponsor. Privately sponsored refugees often have family links in the country of resettlement. In a 2012 survey, the department's research and evaluation branch found privately sponsored refugees economically outperform government sponsored ones, at least initially. Globe and Mail, S1

Phone calls about Canada offer hope to refugee family

Mohammad Mnaahe, only a year old and not yet walking, crawls across the beige carpets in his family's rented apartment about 30 kilometres from the Jordanian border with Syria. As his brother Tamim sleeps on a yellow and red mattress on the floor and another brother, Saif, is tucked in next to his father, Mohammad plays with a laminated plastic certificate, oblivious to the value it holds for his family. His parents, however, keep a close eye on it. To them, it represents their best hope of getting out of Jordan and to Canada - proof from the United Nations of their official status as refugees of the Syrian war.(…) When word begin to spread through Syrian refugees in this town that Canada was going to be taking in many thousands - and quickly –Mohammed's father, Mjdi, said something told him he might be among them. And then, two weeks ago, the call came. Would they be interested in moving to Canada, the UN asked him, possibly as early as the end of the year? He said yes, and last week, was among 900 people called to the UN's office building in Amman to have his file reviewed for possible submission to the Canadian government program. He was there eight hours, he said - case number 698. After two 15-minute interviews, was told to await another call. That one came, too. So on Dec. 10, his entire family will go to the new Canadian processing centre at a Jordanian military exhibition facility to fill out more paperwork, have their fingerprints and other biometric information taken, be interviewed by Canadian officials, and get a medical check or an appointment for a future one. Once all that's done, they'll wait again. Canadian Press (Times Colonist, B7, Red Deer Advocate, Times & Transcript)

Family beats odds to make first cut in bid to escape grim Zaatari camp

Ahmad Lakash was already a famous man in Zaatari. His falafel restaurant is the first thing you see when you enter the sprawling refugee camp. It sits right at the top of the dusty market road that residents refer to deadpan as the "Champs Élysées."Now Mr. Lakash is envied for another reason. His family of six are the only ones among Zaatari's 79,120 residents known to have received a text message from the United Nations High Commissioner for Refugees inviting them for an interview that could put them on track for resettlement to Canada. The family, who arrived in Jordan in early 2012 after fleeing the fighting in Syria, have no idea why they made the list while their neighbours in Zaatari didn't."Maybe we'll be making falafels in Canada," the 48-year-old says with a grin, leading a tour of the family's modest home in refuge - two sparsely furnished caravans connected by a tarp that creates a chilly sitting area between them. "We won't need to take anything with us from here. We'd be ready to leave within a week." While Immigration Minister John McCallum, Defence Minister Harjit Sajjan and Health Minister Jane Philpott made a show of visiting Zaatari during a whistlestop visit to Jordan on Sunday, the UN refugee agency says that none of the several hundred names it has forwarded thus far to the Canadian government are Zaatari residents. (Mr. Lakash has only been invited for a preliminary interview with the UNHCR.
If approved by the refugee agency, the family will be given an appointment with Canadian officials who have arrived in Jordan to do additional health and security screening before refugees are invited to Canada.) Globe and Mail, A1

Complications in Turkey slow arrival of Syrians to Canada

The operation to resettle as many as 5,000 Syrian refugees from Turkey to Canada is being slowed by the additional "complexities" of the situation in that country, Canada's ambassador to Ankara said in an interview. The situation in Turkey is different from both Jordan and Lebanon, the other countries from which Canada is accepting Syrian refugees, because the Turkish government and not the UN High Commissioner for Refugees registers and keeps track of refugees in the country. The sheer size of Turkey - as well as concerns about security in the southern regions where most of the Syrian refugees are registered - create additional complications. (…) John Holmes, Canada's ambassador to Ankara, told The Globe and Mail that the Turkish government last week submitted a list of 5,000 names that Turkey was suggesting for resettlement to Canada. The Canadian embassy will now hand the list to the International Organization for Migration, which will try to establish whether those 5,000 still reside at the

addresses where they're registered by Turkish authorities, and whether those families are indeed willing to move to Canada.(...) "Our normal points of operation, Istanbul and Ankara, are not really viable," Mr. Holmes said. Among the additional challenges, he said, would be finding hospitals that are up to Health Canada standards - so that health checks can be carried out on refugees - as well as airports capable of handling the large planes the Canadian government will likely have to charter for the operation. Globe and Mail, A1

Feds to waive travel costs

Syrian refugees' arrival in Canada will be made slightly easier as the federal government waives repayment of any costs they incur getting over here. Currently, the government provides loans of up to $10,000 for government-assisted refugees to make their way to Canada. It's a sticking point activists have been fighting for years. But last week, the government announced it will waive that repayment, along with costs refugees typically have to pay for medical exams and other fees. "Given the extreme and unprecedented hardships faced by this community, Canada is upholding its humanitarian tradition by offering help and protection to those most in need," Theodora Jean, a communications rep for Immigration, Refugees and Citizenship Canada, explained in an e-mail. Postmedia Network (Toronto Sun, A5, Calgary Sun, Winnipeg Sun, Ottawa Sun, Edmonton Sun)

Ottawa urged to double Syrian refugee intake

As Canada braces for the arrival of 25,000 Syrian refugees, the man who served as immigration minister during the Vietnamese boat people crisis says Ottawa should be doing much more. Ron Atkey believes the 25,000 Syrians Ottawa is promising to resettle initially is a "noble objective" but he wants Canada to up the ante. "If Canada can do another 25,000 - that would make a significant contribution in line with Canada's contribution with the Vietnamese boat people in 1979 to 1980. It will demonstrate to the Americans that they have to do more. We'll shame them into it, similarly the Australians," says Atkey, who was immigration minister in the Joe Clark government in 1979 when 50,000 Vietnamese refugees were granted asylum in Canada. By the end of 1980, that number had risen to 60,000. "For us to take a dramatic position on the world stage is important. We won a medal from the United Nations High Commission for Human Rights. We gained a lot of prestige as a humanitarian country. I think that's consistent with Canadian tradition." Atkey, who is also a lawyer, professor and national security expert, is chair of Humanity Wins, a group of prominent Canadians who came together earlier this year to advocate for re-settlement of Syrian refugees to Canada. Toronto Star, A6

* **Ottawa urged to sprinkle refugee flow across country**

Mayors and provincial officials are putting pressure on the federal government to ensure that Syrian refugees initially settle all over the country instead of congregating in Canada's biggest cities. Details of Ottawa's plans to bring in 25,000 refugees by the end of February remain incomplete, including when the Syrians will start arriving in Canada and where they will be settled. However, there are growing concerns that a large majority of the government-sponsored refugees will be drawn to cities such as Montreal and Toronto, where thousands of privately sponsored refugees are heading in coming weeks to join large, existing communities of Syrian Canadians. Officials in the Atlantic provinces, including Halifax Mayor Mike Savage, argue that having refugees more uniformly distributed could provide a great opportunity for the region to deal with its demographic challenges. "It ties in with the needs of Nova Scotia for immigrants to come to the province, so we think there can be not only a humanitarian and compassionate side to this, but also be very good for our economy," Mr. Savage said . "All provinces and cities will likely be saying, 'We think we can play a role here and we want to have a chance to do so.' " Manitoba Premier Greg Selinger added that his province would like to welcome up to 8 per cent of the Syrian asylum seekers - about twice Manitoba's proportion of the overall Canadian population. "We know that Manitobans want to do their part in welcoming these innocent victims of war [and helping them] find a better life," he said. Globe and Mail, A1

Refugee aid groups overwhelmed

A groundswell of public generosity for Syrian refugees has left some local non-profit organizations overwhelmed by the response of Montrealers. Action Réfugiés Montréal (ARM), a non-profit organization dedicated to helping refugees and asylum seekers, has been inundated with phone calls and emails since it put out a call through social media for winter coats and boots. "We were looking for 30 or 40 coats," said

Paul Clarke, executive director of ARM. "We put out a call in early November, then it got shared on Facebook 60 times. It was oversubscribed very, very quickly," said Clarke, who has already collected more than 50 coats, some with new retail stickers still attached. And the donations keep on coming. "I went to speak at a church yesterday and there were about 30 bags of what we need, plus more, and we have very limited space ourselves," said Clarke. He dropped offthe extra clothing at the Syrian Canadian Council, but wonders whether the local refugee aid effort could benefit from better coordination by civic authorities. Postmedia News (Montreal Gazette, A3); * Radio-Canada

Rideau Hall forum may be a 'call to action'
Because things are so urgent, most of the Syrian refugees coming to Canada are being brought in directly by the federal government, rather than through private sponsors. These government-assisted refugees, as they're called, are at greater risk of failing or of falling through cracks. How can you help? A forum at Rideau Hall Tuesday hopes to tell you. Governor-General David Johnston, who convened the forum, believes the Syrian refugee crisis is simply the latest in a long line of events that challenge Canada's willingness to welcome the world. (...)Participants include federal Immigration Minister John McCallum, who returned Monday from a fact-finding mission in Jordan, provincial immigration ministers, mayors from Halifax to Victoria, leaders of non-profits that work with refugees and of other charitable organizations, representatives of the Canadian Armed Forces, aboriginal leaders, faith and interfaith leaders, and representatives of the private sector, among others. The purpose of the gathering, which is open to the media and will be televised, is for everyone to tell everyone what everyone is doing, to swap ideas and tips, and to make sure that this extraordinarily complex and multifaceted operation will come off with as few hitches as possible. Globe and Mail, A9; * CBC News;* Hill Times

Sea of red tape faces refugees looking to Canada
Consider the to-do list of a Syrian refugee who hopes to come to Canada. This isn't someone who floated on a leaky boat across the open sea last month. This is someone who has been under observation for several years in a refugee camp in Lebanon, Jordan or Turkey. He or she has registered with the United Nations, then submitted to a multiple-step, protracted interview about their life history. Next, undergone a medical exam, then provided biometric data, including fingerprints. If they pass all this and are deemed "most vulnerable," the UN grants refugee status. The most vulnerable category accounts for less than one per cent of the world's refugees. ISIS would probably get better odds if it wanted to sneak a terrorist into Canada like a guy with a plane ticket and a Belgian passport. Next, the UN selects the resettlement country. If Canada is picked, our immigration officials conduct multiple interviews and background checks overseas, including fingerprint checks. The refugee's information is crosschecked with terrorist and criminal databases. The final check is in Canada, at the airport immigration counter. Chronicle-Herald, A4

All roads lead to Toronto
Almost 80% of the privately sponsored Syrian refugees coming to Ontario will start out in Toronto. Numbers released by the federal government over the weekend detail the destinations for 4,584 refugees who are being sponsored by organizations or groups of Canadians. Ottawa's numbers don't include the 3,650 refugees the government of Quebec says it will take in by the end of the year. Ontario, meanwhile, can expect 3,318 privately sponsored Syrian refugees - 33 have arrived since Nov. 4 and 3,285 are still being processed by the government. Of those refugees coming to Ontario, 2,602 will be coming to Toronto. According to the federal government, 1,326 will come to central Toronto, 1,079 are destined for Willowdale, 156 are headed to Scarborough, 23 will go to North York, and 18 are expected to head to Etobicoke. Councillor Joe Mihevc said Toronto can "absolutely" handle the refugees. "For a city of almost three million people, my back of envelope (calculation) that's 0.01% which is not a tough number for us to absorb," Mihevc said. Dr. David McKeown, the city's chief medical officer of health, added Toronto Public Health is preparing to help with the refugees coming to Toronto. Toronto Sun, A5

* **Ontario ready to take 4,000 refugees this year**
Ontario is prepared to take roughly 4,000 of the 10,000 Syrian refugees set to arrive in Canada by the end of the year and may not need as many resources to accommodate them as previously thought, says the province's health minister. Since Ontario accounts for about 40 per cent of the country's population, it is prepared to take in that proportion of refugees, Eric Hoskins said Monday. "It will depend on the flow of refugees coming from those various countries," he said. "I think it's a better approach to understand that

we will be receiving our share. We know what that will be roughly and we're prepared within a margin on either side of that to accommodate them." Hoskins has said Ontario was looking at using recently decommissioned hospitals to house refugees on an interim basis, but now they may not be needed. "We have sites identified. Some of those sites have taken the extra step of ensuring they are prepared to accommodate the refugees, but we'll see if that type of facility is in fact required," he said. "It will depend partly on the numbers that arrive. We were thinking maybe 1,000 a day. Now the federal government is thinking somewhat fewer than that and it's over a longer period of time." Ottawa has said military bases are an option for interim housing. The federal government pushed back the timeline for settling 25,000 people from the end of this year to the end of February, so Hoskins said Ontario may not need to dedicate as many resources. Canadian Press (Waterloo Region Record, A3, Toronto Sun, Calgary Sun, Ottawa Sun, Hamilton Spectator, Times & Transcript)

Ready to serve

Some have been jailed and tortured; others, sexually assaulted while their children were forced to watch. Some fled their homes and homeland years ago and-their hope rising and falling with the passage of time - have waited in refugee camps for the world to take notice. It's not just shelter these 100 Syrian refugee families coming to London will need, but support in dealing with a range of traumas inconceivable to most Canadians. And though large teams of volunteers are working out logistics of winter coats and English-language classes for when families arrive in coming months, some area professionals are working to meet needs of the psyche and soul for people who have been dislocated and relocated. At right is a look at how London professionals are preparing to help and how regular Londoners can help: "There's a lot for (refugees) to deal with," said LloyWylie, an assistant professor in the master's of public health program atWestern University. "In the past five years in London alone, people are saying there's a higher level of trauma (among refugees) than they've ever seen." Wylie is helping lead a team that includes mental-health professionals from London Health Sciences Centre, London Inter-Community Health Centre and the Cross-Cultural Learner Centre to help refugees and immigrants. London Free Press, A3

*** Refugees coming to province expect to work hard, says Syrian immigrant**

In his six years in Moncton, Elian Elias has invested more than a million dollars in the community creating businesses, buying a home and commercial buildings and employing many Canadians. He's contributing to his adopted community in small ways too, providing free pizzas each month to a local group that's been feeding the homeless, an interesting counterpoint to the voices these days arguing Canada should take better care of its poor and homeless people before welcoming Syrian refugees. Elias is not a refugee, because he had the good fortune to come to Canada from Syria in 2009 as an immigrant before there was any sign of significant trouble in his homeland. That's all changed now, of course, as Syrians find themselves trapped in the madness of civil war and the Islamic State. He's currently struggling to get his brother and brother's family out of Syria before more violence comes to their region near the Lebanese border. Elias owns the Freddie's Pizza in Riverview and Mama's Pizza in downtown Moncton. If he can get his brother here, he will employ him and house his family until they get their foothold, just as New Brunswickers are planning to do for the 1,500 Syrian refugees expected here in the next few months. Elias is sure of one thing: the Syrian refugees who come to Moncton and the rest of the province won't need as much help as some might imagine. "The Syrians are hard workers. The Syrians who already live in Canada? You will find they almost all own their own businesses. They come here for a better life and they expect to work hard. They have that plan before they leave their country." Times & Transcript, A1

300 to 600 refugees expected to resettle in city

Fredericton is now expected to receive 300 to 600 Syrian refugees, but there is still no word on when they will arrive. The capital is also getting ready to have translated into Arabic some key documents such as Fredericton's newcomers guide and its recreation guide to help the refugees adjust. David Seabrook, Fredericton's assistant director of growth and community services, released the refugee number to the capital's council-in-committee meeting Monday night. A city task force on Syrian refugees that involves all the local agencies involved was established last week and will meet for the first time on Thursday, said Seabrook. The lead organization in the refugee settlement effort is the Multicultural Association of Fredericton, he said. (...) Mayor Brad Woodside said he and other councillors are getting calls from people who want to help. He asked where they should direct those calls. Seabrook said councillors should direct those calls to the Multicultural Association of Fredericton. He also warned that volunteers

who want to work with refugees will have to undergo a police check. Fredericton Police Chief Leanne Fitch confirmed that requirement. Daily Gleaner, A1

Universities offer their support to Syrian refugees arriving in Fredericton
St. Thomas University is planning to offer full scholarships to Syrian refugees making their way to Fredericton. A team of professors and university staff members are discussing the possibility of providing tuition and covering residence and food costs. Jeffrey Carleton, communications director with St. Thomas University, says the scholarship is still in its early stages but there could be a range of up to four scholarships. "The idea came from a number of people at the same time," he said. "There's still lots of details to be worked out but there will always be a thousand details." Carleton says international scholarships range up to $13,000 per student. Telegraph-Journal, A3

Yukoners are ready to welcome refugees
There's still some unpacking to do, but the beds are made, dishes are stacked in the cupboards and towels are in the closet as Yukoners get ready to welcome a family of 10. Raquel De Queiroz, who heads up Yukon Cares, said this morning her group spent much of the weekend getting a four-bedroom house ready. It did so with numerous donations from the community for the family of Syrian refugees it's sponsoring to come to Canada. The group has been fundraising since September to sponsor the family. While the fundraising and collecting of household donations has been underway, the paperwork and formal process has also progressed, with the family recently having had their visa interview with federal authorities. Following that, Yukon Cares was asked to submit its paperwork to the federal government for the sponsorship. "That was done and submitted on Friday," De Queiroz said. The family must now go through medical and security clearance before they can be approved to come to Canada, she added. Whitehorse Daily Star, 2/Front

Les premiers vols nolisés pour bientôt
Le ministre de l'Immigration, des Réfugiés et de la Citoyenneté espère voir les premiers avions nolisés transportant des réfugiés syriens se poser au Canada la semaine prochaine. John McCallum n'a pas voulu avancer de date précise, disant souhaiter que le premier de ces vols nolisés arrive «aussitôt que possible», soit «possiblement» dans une semaine. Le gouvernement prévoit que le premier appareil à se poser en serait un des forces aériennes du Canada, et les suivants des vols commerciaux, a spécifié M. McCallum. On prévoit attendre «d'avoir la capacité d'avoir plusieurs vols et pas seulement un» avant de fixer une première date d'arrivée, a-t-il exposé en conférence téléphonique, lundi. Presse canadienne (Voix de l'Est, 14, Le Soleil, Le Nouvelliste, Acadie Novelle, La Tribune)

What is a privately sponsored refugee?
Groups or organizations can agree to privately sponsor refugees. The federal government's plan to bring 25,000 Syrian refugees to Canada by next year relies heavily on processing thousands of privately-sponsored refugees. Around 4,511 files of privately-sponsored refugees are being processed for Canadian cities outside Quebec. Postmedia has reported the province of Quebec has more than 3,000 privately-sponsored refugee applications. According to Citizenship and Immigration Canada, sponsoring groups must agree to provide refugees with care, lodging, settlement assistance and support for approximately the first year in Canada or until the refugee becomes self-sufficient. The group has to demonstrate they have the funds to cover rent, utilities, food and dayto-day living costs. Once the sponsored refugees arrive, the sponsors are expected to help them become accustomed to Canada including assisting with the search for employment. Ottawa Sun, A10

*** Lawyers bridge gap between Canada's goodwill and caution**
Many Canadians rushed to find a way to do something to help Syrian refugees in the days after photos were published showing little Alan Kurdi's lifeless body on a Turkish beach. It's who we are, and why Canadians bear the national stereotype of being nice. Do-gooders, even. Phone calls, emails and texts ping-ponged among friends, including my own. Maybe we can sponsor a family. How hard could it be?(...) For now, let's just focus on G5s - those nice people unaffiliated with a faith group or other sponsorship agreement holder. G5s "must agree to give emotional and financial support to the refugee(s) for the full sponsorship period - usually one year," according to the government's website. But what does that mean? Then, the G5 need to provide a settlement plan and prove the group can afford the

sponsorship. Before potential G5 members even get to the application, they are urged to go to the refugee sponsorship training program website. The application makes the longform census seem like a walk in the park, a superficial glance at people's private lives. Among the documents that must be filed by at least three of the five members of the group are: the most recent T4; the most recent notice of assessment from Revenue Canada; proof from your employer confirming financial details or a letter from an accountant if you are self-employed; proof of any other income. (...)So, a group of powerful and well-connected lawyers has stepped in to bridge that gap. It began as a conversation between Jennifer Bond, a professor at the University of Ottawa's law school and faculty director of its Refugee Hub, and Jacqueline Swaisland, a Harvard-trained, Toronto lawyer who teaches a course in immigrant and refugee law at the university. They decided to expand the Refugee Hub's existing sponsorship support program by training 15 students to advise groups in the Ottawa area about the process, the liabilities and legal responsibilities. Other lawyers expressed interest and were trained as well at a fivehour workshop in October. The next night, at a forum hosted by Ottawa Mayor Jim Watson, they held a pop-up clinic for wannabe sponsors. More than 450 people showed up and close to 60 lawyers helped them. Postmedia News (Vancouver Sun, A4)

'Like a dream come true'

A Kosovo refugee who arrived at Canadian Forces Base Kingston in the spring of 1999 has some advice for potential Syrian refugees should they arrive next month and move into barracks at the base, as he had over 15 years ago. "My first thing is you came to this country, you must love and respect this country because this country is your best opportunity. It's like a dream come true for everybody," said Avni Lushaku, now 37, on Monday from Mississauga, where he now lives with his wife, Shqipe, and one-month-old son Artin. (...)He was able to learn English by volunteering at the base's Salvation Army tent for donated clothes. His mother encouraged him to volunteer and learn English at the same time as an inbetween person the volunteers and refugees. During his time in Kingston, he toured around the city and took lots of photos. He added that many volunteers took his family offthe base for home-cooked meals. "They were our families, they were our uncles, like our aunts, because we had nobody here," Lushaku said. His family's stay was short at CFB Kingston, only a month, before being shipped offto Valcartier, Que., where he had to learn French, but by the end of September when the Canadian refugee camps started to wind down, he and his family came back to Kingston to settle. Kingston Whig-Standard, A1/Front

Accueil de réfugiés syriens

Le Centre d'accueil multiculturel et des nouveaux arrivants de Saint-Jean (CAMNASJ) tiendra une séance d'information sur l'arrivée de réfugiés syriens dans la région, le mercredi 2 décembre, à 9 h 30, au bureau du CAMNASJ, situé au 165 rue Union. Le Centre vous informera du besoin de bénévoles lors de l'arrivée des réfugiés syriens au cours des prochaines semaines et des prochains mois. Le Centre expliquera également ce qu'il prévoit mettre en place afin d'accueillir, d'orienter et de soutenir les familles qui arriveront à Saint-Jean. Veuillez confirmer votre présence auprès de Sandrine Selway, agente d'accueil et d'établissement, au 642-7265 ou par courriel (sandrine.selway@sjmnrc.ca). Acadie Nouvelle, 25

*** Laurentian students eager to help refugees**

Yvonne Udowa found the weather in Sudbury to be frigid, but the people full of warmth. An international student at Laurentian University who hails from Nigeria, she said the Nickel City was as friendly as any she has visited. "Everybody here is helpful," said Udowa, a fourth-year liberal science student at LU. "Everybody here is so open and ready to help, so it was easier for me to get into the community when I came. It's so easy to get around here, the transportation system is great – the weather, not so great, but other than that, everything else is good. There are so many activities, so many multicultural associations here that I could attend or join when I came, and it helped me get used to the society quickly. It wasn't hard at all." She hopes that when a pair of refugees from Syria arrive next year to study at Laurentian, they find folks just as welcoming. Udowa is a member of the World University Service Canada local committee at Laurentian, which plans to sponsor two young Syrian refugees who will study at the university beginning next year as part of the WUSC Student Refugee Program. (...)WUSC is now working in refugee camps in Jordan and Lebanon, in co-operation with the United Nations High Commissioner for Refugees, to interview and document appropriate candidates for sponsorship. Sudbury Star (2015-11-30)

*** One great heart, united**

An opinion piece states, "It's a truism that bears repeating: We all came from somewhere else. Canadians remember this to their credit as they prepare to welcome 25,000 Syrian refugees this year and early next. Of these, New Brunswick is on tap to resettle about 1,500 in Moncton, Saint John and Fredericton. In fact, all regions of this country are old hands at this form of humanitarian aid. According to one federal government web site, "Our compassion and fairness are a source of great pride for Canadians. These values are at the core of our domestic refugee protection system and our Resettlement Assistance Program. Both programs have long been praised by the United Nations Refugee Agency (UNHCR)." The system works this way: "Refugees selected for resettlement to Canada have often fled their homes because of unimaginable hardships and have, in many cases, been forced to live in refugee camps for many years. When they arrive in Canada, they basically pick up the pieces of their lives and start over again. "As a member of the international community, Canada helps find solutions to prolonged and emerging refugee situations and helps emerging democracies try to solve many of the problems that create refugee populations. To do this, Canada works closely with the UNHCR." Crucially, "Under our legislation, all resettlement cases must be carefully screened to ensure that there are no issues related to security, criminality or health. Citizenship and Immigration Canada (CIC) works with its security partners such as the Canada Border Services Agency to complete this work as quickly as possible." Times & Transcript, A9

Welcome to Canada

A letter to the editor states, "It's not common sense that's been missing from the discussion about screening Syrian refugees, it's a surprising inability to connect a few dots. The first dot is that the terror attacks carried out in IS's name in the West were done by homegrown supporters, not Syrian refugees. Why would IS bother smuggling someone out as a refugee when it has wannabe terrorists here? The second dot is that IS in Syria is primarily made up of, not Syrians, but Sunni Muslims from Iraq and a few thousand hotheads from Europe and elsewhere. The third dot is that there are more than three million Syrians seeking refuge.Connect these dots and the unsurprising conclusion is that there is a 99.9 per cent chance terrorists are not hiding among those who want to come here.Single men included. Tight screening won't better the odds." Globe and Mail, A10

Letters to the Editor

A letter to the editor states, "Are refugees aware of difficulties here? Our federal government wants to bring 25,000 Syrian refugees to Canada. I am in complete agreement because these people are leaving everything they own behind as they run for their lives. Any civilized country could do no less. But do we hide the total truth about Canada from these people who are so desperately in need of hope? Things like a lack of jobs, a lack of decent housing, poverty and isolation among so many of our indigenous peoples, poverty among children and seniors, food banks everywhere struggling to meet the needs of an ever growing number of clients, and social assistance programs that are based on the wealth of the individual provinces (for example, a person can get a lot more on social assistance in Alberta than in a province like New Brunswick)?" Telegraph-Journal, A6

Une politique discriminatoire

Un article d'opinion déclare, « L'accueil des réfugiés syriens se double d'une politique discriminatoire inacceptable: les hommes seuls seront exclus, sauf s'ils sont gais (on se demande comment ces derniers réussiront à en faire la preuve, mais c'est une autre question). On peut certes établir des priorités dans une politique d'accueil. Ainsi, il serait normal qu'en sélectionnant les réfugiés parrainés par le gouvernement, on privilégie les chrétiens et les yézidis, qui sont les premières cibles du groupe État islamique (EI). Les chrétiens sont la minorité la plus persécutée dans l'ensemble du Proche-Orient. Quant aux yézidis, adeptes d'une ancienne religion répandue chez les Kurdes, les hommes capturés sont assassinés sur-le-champ et leurs femmes, réduites à l'esclavage. Le gouvernement a manifestement voulu, en écartant les hommes seuls, rassurer les citoyens qui craignent que des terroristes ne s'infiltrent parmi les réfugiés. Mais l'exclusion des hétérosexuels masculins, outre qu'elle est injuste, constitue une protection parfaitement illusoire. Ce que cette décision laisse entendre, c'est que tout homme musulman est un terroriste potentiel, et que les hétérosexuels portent en eux un facteur supplémentaire de violence. Pourtant, les gais, comme n'importe quels autres humains, ont produit leur lot de déviants. » La Presse, A11

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Grits firm up line between politics, PS**
Prime Minister Justin Trudeau is introducing the first code of conduct on political staffworking for cabinet ministers, aimed at drawing a "line in the sand" between politics and public service neutrality for ministerial aides. The code is part of the Open and Accountable Government guide, released last week, on roles, responsibilities and standard of conduct Trudeau expects from his cabinet. The guide is an updated version of one that the Privy Council Office prepared for former prime minister Stephen Harper in 2011. The line between politics and the public service has been blurring for decades, with experts calling for a code to govern the behaviour of ministerial staffers - the "political warriors" or "kids in short pants" who roam Ottawa's corridors of power with little accountability. The code says ministerial aides can't meddle in the work of the public service, can't give public servants orders, and that ministers are responsible for their staff's actions. The guide also changes the rules on the personal and partisan use of social media. Ministers' staff, who are hired under the Public Service Employment Act, are exempt from the hiring rules for public servants. Their job is to provide political advice to ministers; bureaucrats offer nonpartisan advice. Karl Salgo, formerly of the Privy Council Office and now executive director of public governance at the Institute on Governance, said the guide doesn't break new ground, but is the first attempt to pull together the rules - written and unwritten - in a single code that will be enforced as a condition of employment. Postmedia News (Ottawa Citizen, A1)

Clinton emails
A U.S. official expressed amazement at how deeply detested Canada's Conservative government was by some employees of the Foreign Affairs Department. That impression was described in a note sent three years ago to Hillary Clinton, who was then the secretary of state and whose emails are now being publicly released. It was contained in a message where a U.S. official described how his colleagues across the border pleaded for his help lobbying the Canadian government not to cut a program for Haiti. The U.S. special co-ordinator for Haiti said Canadians were worried about budget cuts that would have slashed down an operation from 11 employees to four, for a country that was ostensibly a major Canadian foreign policy priority. "I was a little astonished at how openly the career folks at the foreign and assistance ministries disliked their new political masters and wanted us to convince them not to cut Haiti," said Tom Adams, in a May 2012 email forwarded to Clinton and released Monday... The latest released batch includes another interesting exchange about Canada. There was delight in Clinton's office over news that Omar Khadr was being released from the detention facility at Guantanamo Bay and repatriated to a prison in his home country. The newly released emails show the then-secretary of state's response to news that the young man was being transferred to Canada: "Thank you for all you did to get this resolved." She was writing to the State Department's legal adviser -- who was ecstatic at the 2012 development. "So glad we got this done," said the adviser, Harold Koh. "After spending the last 10 years on GTMO, at least this young man finally has another chance." Canada's then-Conservative government was far less enthusiastic about approving Khadr's return, which was delayed amid sniping between Canada and the U.S. In his written decision allowing the transfer, then-public safety minister Vic Toews expressed five points of concern about bringing home a young man he described as a known al-Qaida supporter and convicted terrorist. OTHER / AUTRE

Climate talks hailed as 'an act of defiance' against terror
Pushing for a powerful climate deal, President Barack Obama called the global talks opening Monday outside Paris an "act of defiance" against terrorism that proves the world stands undeterred by Islamic State-linked attacks in Europe and beyond. Obama used his speech to more than 150 world leaders at the UN's 21st Conference of the Parties (COP21) summit to salute Paris and its people for "insisting this crucial conference go on" just two weeks after attacks that killed 130 in the French capital. He said leaders had converged to show resolve to fight terrorism and uphold their values at the same time. "What

greater rejection of those who would tear down our world than marshalling our best efforts to save it?" Obama said. Obama's remarks came at the start of two weeks of make-or-break negotiations to finalize a sweeping global agreement to cut carbon emissions and hopefully stave off the worst effects of climate change. He exhorted leaders to fight the enemy of cynicism: "the notion we can't do anything" about the warming of the planet. Prime Minister Justin Trudeau's address dovetailed perfectly with these sentiments. In his opening comments on Monday, he told delegates that Canada "will take on a new leadership role internationally." "Canada is back, my friends," Trudeau declared. "We're here to help." Associated Press (Toronto Star, A1, Telegraph-Journal, Times & Transcript); Canadian Press (Record, A1, Whig-Standard, Red Deer Advocate, Telegram, Guardian, Chronicle-Herald, Cape Breton Post, Hamilton Spectator, Times Colonist, Daily Gleaner); Globe and Mail, A4; Postmedia News (National Post, FP7); * Associated Press (Acadie Nouvelle, 22)

NATO eager to size up Grits as ISIL threat emerges in Libya

Stephane Dion hasn't even arrived yet in Brussels, but a lineup is already forming to meet Canada's new foreign affairs minister. Canadian staffat NATO headquarters are fielding requests from alliance members keen to size up the Liberal government's new point man on the evolving confrontation with Russia and the growing influence of the Islamic State of Iraq and the Levant in Libya. Dion will join foreign ministers from the other 28 member countries on Tuesday and Wednesday, several of whom are eager to take stock of Justin Trudeau's plan to end the bombing campaign against extremists in Iraq and Syria, instead refocusing the military effort on training local forces. While NATO is not formally involved in the 62-country, U.S.-led coalition against ISIL, its members see Canada's planned actions as important.
One of Dion's most important tasks will be to reassure allies the country remains stalwart, especially in light of the terror attacks in Paris and the security lockdown in Brussels. Canadian Press (Whig-Standard, B1/Front, Guardian, Waterloo Record, Spectator); * Ottawa Sun, A9; * La Presse Canadienne (La Tribune, 33, Le Droit)

*** U.S. targets 2016 to end ISIL airstrikes**

A top U.S. general involved in the bombing war against ISIL says he hoping the campaign will be wrapped up by the end of next year. Canada is expected to withdraw its six CF-18 fighter jets from the coalition campaign before March. Lt.-Gen. Charles Brown Jr., who is in charge of the U.S. air force Central Command, said ISIL hasn't been able to mount any major ground offensives during the past several months. "By the time we get to the end of 2016, I hope to be pretty well done with Daesh," Brown told the Air Force Times newspaper, using an Arabic term for ISIL. "That's probably aspirational, but I think we are putting pressure on Daesh. We have not seen from Daesh any major offensive in the past couple of months. Most of the stuff we see is more harassing attacks. So they don't have the staying power that they're going to need to survive what we're putting on them." It's not the first time a U.S. military leader has talked optimistically about ISIL's waning military capabilities. Canadian and U.S. senior officers said this year the extremist group was on the verge of defeat, only to have ISIL forces go on the offensive. Prime Minister Justin Trudeau has said he is sticking to his election promise to remove the CF-18s. Postmedia News (Edmonton Journal, N6, Ottawa Citizen)

*** Conflict investigation involving former Alberta premier to be reviewed**

The Alberta government is launching an outside review of an investigation two years ago into conflict-of-interest allegations involving former premier Alison Redford. The 2013 investigation looked into how a Calgary law firm with close ties to Redford was awarded the contract to represent Alberta in a lawsuit against tobacco companies. One of the partners in the law firm was Redford's former husband, who remained a strong Conservative supporter. Neil Wilkinson, the ethics commissioner at the time, cleared Redford of any conflict in awarding the multibillion-dollar contract while she was justice minister. The NDP government says concerns have emerged that Wilkinson might not have had all the relevant information needed for his investigation. The review is to be handled by retired Supreme Court justice Frank Iacobucci. "These allegations are serious. We believe that the best path forward to ensure an objective review is to have that review performed externally," Alberta Justice Minister Kathleen Ganley said in a statement. "Our government is committed to transparency and accountability, which is why we're taking action." Canadian Press (Times Colonist, A8, Calgary Sun); Postmedia News (Calgary Herald, A3, Edmonton Journal); Edmonton Sun, A7

*** From observation to activism, one Canadian man's experience of Syria**
When Cody Bergerud left Saltspring Island for northern Syria, he didn't tell anyone where he was going. "It just made things easier," he says. No fights with family. No awkward conversations with the authorities, at least until he came back. Unlike other Canadians who have travelled to the region, Mr. Bergerud wasn't driven by the thought of taking up arms for or against the terrorist group the Islamic State. His is not that kind of story. The University of Victoria political philosophy student was in northern Syria to witness what he calls a social revolution. Amid the country's years-long civil war, the Kurdish population in the north has gained a level of autonomy. A website for the Lions of Rojava, which is aligned with the Kurdish People's Protection Units (YPG), describes its society's three principles as direct democracy, gender equity and sustainability - all of which it pursues while within firing range of the Islamic State. Mr. Bergerud, 26, went to Rojava to observe. He arrived in Syria in March, slipping into the country through the northeast after a 2 1/2-week stint as a volunteer at a Turkish refugee camp. While at the camp, Mr. Bergerud says he primarily helped on the construction side. He also took time to play with some of the children. Getting into Syria, he says, was fairly simple. "I made friends, and they were able to connect me with people who got me across the border," he said. "They pick out a good spot and you kind of just run over the border. The whole process takes three to five minutes." Mr. Bergerud met five or six Canadians while he was in Rojava. The youngest was 24, while the oldest was 67. He never met John Gallagher, a Canadian who was killed in Syria earlier this month while fighting with the YPG against the Islamic State. Globe and Mail

INTERNATIONAL

*** Key suspect in Paris attacks may have eluded dragnet, fled to Syria**
Paris attacks suspect Salah Abdeslam may have fled to Syria, according to reports quoting French intelligence services. A major manhunt is under way for the Belgian-born French national who has been on the run since the Nov. 13 attacks, which killed 130 people. But investigators are now working under the assumption the 26-year-old has slipped the net and is now in Syria, a source close to the investigation and a counter-terrorism source told CNN. The Islamic State of Iraq and Levant, which controls a large swathe of territory across Syria and Iraq, has claimed responsibility for the attacks. French police have issued an international arrest warrant and a wanted poster for Abdeslam, describing him as highly dangerous. He rented the VW Polo and Renault Clio cars used in the attacks. Investigators say he went to Belgium from France the day after the attacks in a VW Golf, despite being stopped by French police along the way in routine road checks before his name was circulated as a suspect. His brother Brahim died in the attacks. Postmedia News (National Post, A12)

*** La NSA ne stocke plus les données des appels**
C'est une victoire pour Edward Snowden, qui avait révélé l'ampleur des pouvoirs de surveillance de la toute puissante agence de renseignement américaine NSA: depuis dimanche, l'agence ne stocke plus les données liées aux appels téléphoniques des Américains. La révélation en juin 2013 par Edward Snowden que les métadonnées (horaires, durée, numéros appelés) des appels étaient conservées dans les gigantesques ordinateurs de la NSA avait provoqué la stupeur et l'indignation chez beaucoup d'Américains. En juin dernier, le Congrès avait adopté une loi mettant fin à cette collecte et introduisant un nouveau système qui permet à l'agence de renseignement de continuer à accéder si nécessaire aux données des appels des Américains, avec un contrôle juridique renforcé. Si elle ne dispose plus elle-même des données, la NSA peut toutefois les exiger auprès des compagnies téléphoniques. La NSA pourra toujours avoir accès aux données concernant les appels téléphoniques d'un suspect et les correspondants de ce suspect. Mais ces recherches seront moins «efficaces» et «prendront plus de temps», affirme Stewart Baker, avocat spécialiste des problèmes de cybersécurité et surveillance électronique. MINISTER / MINISTRE

Goodale calls refugee integration crucial
Public Safety Minister Ralph Goodale says it's vital that resettled Syrian refugees are successfully integrated into Canadian towns and cities, not just from a social and cultural perspective, but from a public safety perspective. ***"It's extremely important that they settle well and successfully and we and the settlement agencies and the provinces and the cities need to work at that to make sure that it is successful. If we, being Canada, are going to maintain our very successful efforts so far at pluralism, at diversity and inclusion ...then we've got to be among the best in the world at counter-radicalization. "Because if we fail to detect the causes or the signs, or we don't have the capacity to intervene at the right point and then don't make the intervention successful, then those values of openness and the plural nature of the country will be in jeopardy,"*** he said***. "And that's the very essence of Canada, so we've got to do outreach and counter-radicalization very well."*** Three months into his job in charge of Canada's national security agencies, which have been intimately involved in the resettlement project, **Goodale** says one of the priorities set out in his ministerial mandate letter was to boost efforts to counter violent extremism. At this time, he will say only that ***"a lot more attention"*** must be paid to outreach efforts, and the question of increasing funding for such programs and research into what leads people to become radicalized will be answered ***"a ways down the road."*** (...) **Goodale** stressed the importance of outreach, and research efforts ***"to identify what contributes to radicalization, how the process works."*** He said a national cross-cultural roundtable is a useful forum for different faith leaders, police agencies and social service agencies to work together.

But he said there is a definite need for more such groups on a local level. There are some scattered across Canada, often led by local Muslim leaders, he said. But it's a "***massive project***," he admitted. Toronto Star, A10 (Cambridge Times)

Tory policy up for review

The Trudeau Liberals will review controversial directives enacted by the Harper government that allow for the sharing of information even when it might lead to torture, says the **public safety minister**. The ***"troubling set of issues"*** raised by the foreign information-sharing policy ***"will be raised in the course of our consultations"*** on the overall national security direction of the new government, **Ralph Goodale** said in a recent interview with The Canadian Press. The news follows pressure from human-rights and privacy advocates to conduct a wide-ranging examination of security policies introduced by the Conservatives, booted from office in the October election. The federal policy on foreign information-sharing has been roundly criticized for effectively condoning the torture of people in overseas prisons, contrary to international law and Canada's United Nations commitments. A four-page 2010 framework document, released under the Access to Information Act, says when there is a "substantial risk" that sending information to, or soliciting information from, a foreign agency would result in torture - and it is unclear whether the risk can be managed through assurances or other means - the matter should be referred to the responsible deputy minister or agency head. In deciding what to do, the agency head will consider factors including the threat to Canada's national security and the nature and imminence of the threat; the status of Canada's relationship with - and the human rights record of - the foreign agency; and the rationale for believing that sharing the information would lead to torture. Canadian Press (Waterloo Record, A7, Whig-Standard, Toronto Star, Ottawa Citizen)

* **Dozens of families with no-fly list stories contact Ontario boy's mother**

It turns out the little Ontario boy who's been having trouble boarding airplanes is far from alone. The whirlwind of publicity about six-year-old Syed Adam Ahmed's difficulty at the airport has prompted dozens of other families with similar stories to contact Khadija Cajee, the boy's mother. Twenty-one of them agreed to be mentioned in a letter that Cajee has sent to federal cabinet ministers involved in the high-profile issue. **Public Safety Minister Ralph Goodal**e promised to investigate after Adam's father, Sulemaan Ahmed, tweeted a photo from Toronto's international airport that appeared to show the boy's name with a "DHP" or "deemed high profile" label and instructions on how to proceed before allowing the youngster to check in. They were trying to board an Air Canada flight Dec. 31 to Boston to see the NHL Winter Classic. Tales of other children with the same sorts of travel challenges soon emerged. And now Adam's mother has become an unofficial liaison with the Liberal government on behalf of many families.. After Adam's case hit the headlines, **Goodale** said his officials had reminded airlines they don't need to vet children against Canada's no-fly list. His department is also exploring possible changes to the Secure Air Travel Regulations that would help identify those who have similar or the same names as people on the no-fly list, but are not the intended targets. In addition, **Goodale** indicated the no-fly regime - officially known as the Passenger Protect Program - would be examined during broad public consultations on Canada's overall security framework. In a statement at the time, Adam's parents welcomed **Goodale's** announcement, saying he "addressed several key points that we asked for."... However, it's difficult to understand exactly why he and the other young travelers have been stopped at the airport, in part due to the quiet use of U.S. air-security lists in Canada. Other countries are at liberty to develop their own rules for their own purposes, **Goodale** said in a recent interview with The Canadian Press.***"But it can have a spillover effect that is very difficult to manage. We'll obviously look at that in the process of the consultation that we're going to undertake with the airlines and with the general public. It's just critically important to get this balance right."*** Canadian Press (CTV News, Guardian, Cape Breton Post, Telegram)

Canada is increasing its intelligence efforts

An opinion piece by Wesley Wark states "There was nothing said on the campaign trail, nothing promised in the election platform, nothing laid down in the ministers' mandate letters made public after the Trudeau government came into office. But as the Liberals struggle to define a revamped military mission in Iraq and Syria and come under pressure to respond to a recent spate of terrorist attacks that took Canadian lives in Indonesia and in Burkina Faso, the government is increasingly turning to a hidden dimension of Canadian statecraft for some answers. Intelligence, or in the popular parlance, spying, is increasingly on

the lips of Canadian ministers... Dion could have a look inside his own department to see whether he is satisfied about the resourcing of the little-known "Global Security Reporting program" and whether Global Affairs Canada has the analytical skills that are needed. **Ralph Goodale, the public safety minister**, could consider the question of whether one key intelligence agency in his portfolio, the Canadian Security Intelligence Service, can really perform well as a hybrid domestic and foreign intelligence agency." Postmedia News (Ottawa Citizen, C3)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** New HQ for flood forecasters**
Manitoba's flood forecasters have ditched their cramped headquarters in a west Winnipeg industrial park for roomier digs - equipped with $170,000 in new equipment - on Broadway. No longer confined to cubicles and a small boardroom, they will now judge the seriousness of impending floods in a "war room" adorned with computer monitors that provide real-time information on weather, accumulated precipitation, snowpack levels and other critical information. Improved technology and an expanded workspace for flood forecasters were among a host of recommendations resulting from the 2011 Flood Review Task Force report, issued in 2013. Winnipeg Free Press, A5; CBC.ca

*** New report adds billions to cost of oil spill offsouthern coast**
Environmental and risk assessments for projects that would increase tanker traffic in southwestern B.C. fail to consider billions of dollars in potential social, economic and environmental impacts, according to a new report on the region by the Raincoast Conservation Foundation. The environmental assessments required by senior governments are much too narrow and fail to consider the broader impacts of marine traffic on the ecological health of the region, which includes the Strait of Georgia, Juan de Fuca Strait and Puget Sound, argue the authors of the 108-page report Our Threatened Coast. The Salish Sea's 7,000 kilometres of intricate coastline support ecosystem services from tourism and recreation to flood protection, climate regulation and fish habitat worth tens of billions of dollars, according to studies cited by the authors. Vancouver Sun, A5; Times Colonist

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Questions swirl about our role
Defence Minister Harjit Sajjan has been touting the potential for Canada's military to help gather intelligence in Iraq in the battle against Islamic extremists. But with no recent history of meaningful involvement in Iraq or Syria, a scarcity of Arabic speakers, and a lack of intelligence-gathering equipment such as drones, how much of a contribution can Canada's military make? In late December, Sajjan told journalists that the Liberal government is considering contributing an intelligence capability to the war against the Islamic State, including helping improve the abilities of Iraqi security forces to target extremists. He suggested the Canadian Forces have technology to play this role but didn't specify whether that would be equipment on the ground or in the air. In other interviews, the minister has stated Canada's intelligence capabilities are second to none and the government was looking at how to increase that in the Iraq war... The federal government's electronic spy agency, the Communications Security Establishment, could play more of a role, but it is already monitoring phone calls and emails of Islamic extremists. The Canadian military doesn't have any long-range drones, such as those used by the U.S. and Britain to gather intelligence or target and kill ISIL leaders. Postmedia News (Ottawa Citizen, A6, London Free Press, Whig-Standard, Vancouver Sun)

Terror charge dropped but Quebec woman denied passport
Nearly two years after a court stayed charges against Mouna Diab, who had been accused of smuggling arms parts to the terror group Hezbollah, the government is still balking at granting her a passport. The National Post has learned that Diab, 30, filed a motion with the Federal Court last month, claiming Ottawa is infringing her Charter rights by refusing to act on a passport application she made in June 2014. The passport application came after the Crown abruptly dropped charges against Diab, who was arrested at

Montreal's Trudeau airport in 2011. A native of Lebanon, Diab immigrated to Canada in 1993 as a seven-year-old and gained Canadian citizenship two years later. When she was charged with committing a crime for the benefit of a terrorist group, the Royal Canadian Mounted Police issued a news release alleging she was "acting under the direction of a contact person in Lebanon who is associated with Hezbollah." She faced a second charge of violating a United Nations arms embargo of Lebanon. But on April 17, 2014, a federal prosecutor requested a stay of proceedings, declaring in a brief statement that "there was no longer a reasonable prospect of conviction." Her passport had been revoked following her arrest. When she applied for a new one she was told her request required "a second level of examination" and would not be processed within the standard time. Her lawyer, Richard Prihoda, said she was interviewed for 90 minutes by two Passport Canada agents in October 2014 and was told a decision was imminent. Whig-Standard, B1/Front (National Post)

*** We can't go backwards on terrorism**

If charity begins at home, so does national security - specifi cally at the House of Commons. Prime Minister Justin Trudeau is advised to remember this in the upcoming weeks, as Parliament resumes sitting and he has to decide whether the security measures of the previous Conservative government are too strong, too weak or just right. You know Trudeau has never discovered a security or defence scenario he considers too weak. He hypocritically voted for the Tory Anti-Terrorism Bill (C-51) while in Opposition because if there is anything Trudeau understands it is optics. With terrorist attacks, including a recent assault on Parliament Hill by an ISILinspired, lone-wolf fanatic named Michael Zehaf Bibeau, in everyone's mind, Trudeau reasoned (or at least received the correct advice) that he had better not appear too soft on terrorism with an election around the corner. Incredibly, the nattering Trudeau national media supporters now applaud Justin's "strategic" (read: cynical) decision to side with Stephen Harper. More incredibly, in the wake of outrageous terrorist attacks across Europe, and with the recent RCMP revelation that lone gunman Bibeau would have had a tough time pleading not guilty by reason of insanity in a court of law, Trudeau is prepared to pounce on the anti-terrorism act, suffi-ciently neutering its efficacy to the point of rendering it null and void. Ottawa Sun, A6

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Lawyer lands discharge for angler caught with pot at border

A New Jersey man avoided a criminal record on Tuesday for entering Canada with 14 grams of marijuana in his vehicle last year. However, Matthew Simonelli has likely earned himself trouble crossing the border, Judge Henrik Tonning noted in Saint John provincial court. The judge accepted the arguments from defence counsel Charles Bryant to grant the 30-year-old, Toms River, N.J., native an absolute discharge for possession of marijuana at St. Stephen on Sept. 9. (…) Federal Crown prosecutor Peter Thorn related in court that Simonelli and his wife crossed the border at St. Stephen and declared two expensive bamboo fishing rods. The Canada Border Services Agency officer discovered that one Ryan Mockler tried to bring these same rods into the country earlier but he was deemed inadmissible to Canada, Thorn said. Border agents searched Simonelli's vehicle and found the marijuana plus $600 U.S. in a black shoulder bag, the prosecutor said. The agents investigated further and found messages on Simonelli's cellphone "that made a reference to other drugs and pills being contained in a container or cooler," Thorn said. The border guards searched the vehicle but found nothing, Thorn said. The agents issued a civil penalty of $250 and turned the matter over to the RCMP. Telegraph-Journal, B2

Charges won't affect citizenship bid, says lawyer

The lawyer of a stateless man who has again been charged with drug crimes says the new charges will not affect Deepan Budlakoti's efforts to be declared a Canadian citizen. Yavar Hameed said he is waiting to hear back on his application to the Supreme Court of Canada for review of a Federal Court of Appeal decision "relating to the factual and legal question of whether or not (Budlakoti) is a Canadian citizen." The Citizen reported Monday that Budlakoti was charged Dec. 18 with possessing drugs for the purpose of trafficking and possessing property obtained by crime. He was arrested at his Gatineau apartment by the Gatineau police anti-gang squad in a raid that turned up nearly $10,000 worth of cocaine, a semi-automatic handgun and ammunition. "These charges have no bearing on that application," Hameed said in a statement to the Citizen. "In terms of removal prospects under immigration law, the new charges do

not make him a citizen of India or any other country, so his removal is still unenforceable in law." (…)Budlakoti learned of his unusual citizenship status in 2010 when he was sentenced to three years in prison for weapons and drug trafficking. Officials said the serious nature of those convictions necessitated deportation, but Indian authorities refused to take him. Ottawa Citizen, A4

And the red tape award goes to ...
We have a winner. Stewardship Ontario, Halifax Regional Municipality and Canada Border Services have each received a Paperweight Award from the Canadian Federation of Independent Business (CFIB). The CFIB's annual list, provided exclusively to the Toronto Sun, gives top "honours" a municipal, a provincial and a federal agency that creates the most red tape for small business owners. CFIB vice-president Satinder Chera said he hopes the recognition helps spur change. (…) The federal award goes to Canada Border Services Agency for its website. With no warning, the CFIB says the federal agency dropped a section on its website which included call centre numbers for small business owners. No timeline has been given for its replacement. Toronto Sun, A12 (Edmonton Sun, Winnipeg Sun)

Des impacts pour la région
Les besoins des Canadiens en produits laitiers ont augmenté de 18 % en 2015. La vente de crème et de beurre a connu une hausse marquée, mais celle du lait ne cesse de diminuer depuis quelques années. Et même si le Saguenay-Lac-Saint-Jean a connu une bonne année au niveau de la production, la baisse mondiale du prix du lait a eu des conséquences sur les agriculteurs. (…)« Nous voulions dresser un portrait de la situation et discuter des perspectives pour l'année 2016 avec les producteurs de la région. Évidemment, nous parlons des ventes, des quotas, mais aussi des différents accords et du contrôle des frontières. Mais je dois dire que depuis l'élection fédérale de l'automne dernier, nos producteurs ont une bonne compréhension du Partenariat transpacifique et de la gestion de l'offre, qui sont devenus des enjeux électoraux. En 2016, notre regard sera surtout tourné vers l'accord entre le Canada et l'Europe et vers le contrôle des frontières. Le Partenariat transpacifique nous fera moins mal que l'accord Canada-Europe, qui n'a toujours pas été conclu. On peut dire que ce sera encore une fois une année très politique », a indiqué Daniel Côté, le président régional des Producteurs du lait. Le Quotidien, 16 (La Presse)

Lametti on CETA: 'We'll get this deal to work'
Canada's new government is keeping an "open mind" when it comes to the controversial investor-state arbitration clauses in its proposed Comprehensive Economic and Trade Agreement with the European Union, says David Lametti, the Liberal parliamentary secretary for Trade Minister Chrystia Freeland. (…) Heading off another dispute with the United States over softwood lumber is another priority for the government, as is exploring free trade with China and pursuing Canada's stalled free trade talks with India, said Mr. Lametti. "A trade agreement with China, could it be reached, would be a good thing" if it was "done right," he said, adding the government has already begun to explore the possibility of trade talks with China in "very concrete ways." (…)The government's consultation process for the Trans-Pacific Partnership is another priority, said Mr. Lametti. Ms. Freeland has already spoken with at least 80 groups and individuals about the deal, and other ministers have also discussed the deal with stakeholders, including Finance Minister Bill Morneau and Agriculture Minister Lawrence MacAulay, he said. Mr. Lametti downplayed the importance of the signing ceremony for the deal, expected to take place Feb. 4 in New Zealand. The government still has not decided whether it will sign or ratify the agreement, he said. Whether or not to ratify the TPP is the key decision, he said, adding, "signing really isn't all that important." The TPP and CETA cover many of the same issues, with chapters ranging from competition policy to telecommunications and tariffs. The government is taking a more cautious approach to the TPP primarily because the Liberal politicians now in power have not had as much time to examine the deal, the text for which was only revealed to them during this summer's election campaign. Embassy

* **Canada – New Electronic Travel Authorisation effective 15 March 2016**
On 15 March 2016 the Canadian government will enforce the new Electronic Travel Authorisation (eTA) program. The eTA process went into effect in August 2015 but will not be mandatory until 15 March. The eTA is an online registration system that travellers access online. eTAs are valid for five years, or until the expiration date of a passport, whichever comes first. The eTA requirement applies to travelers who do not need a visa to enter Canada and who are planning to arrive by air. Visa exempt countries include the UK,

Japan, Australia, Korea, countries in the European Union and more. The eTA requirement does not apply to citizens of the US and it is not required if a person is entering at a land or sea port of entry. Nationals of certain visa-required countries (Brazil, Bulgaria, Mexico or Romania) who hold a current US non-immigrant visa, or who have held a Canadian visa in the past ten years, will be allowed to enter Canada with an eTA instead of a visa. This special visa exemption may not, however, be in place by 15 March 2016. Relocate Magazine

Stabbed in the back

Stabbed in the back, resident Patrick Mullin concluded bluntly. Yes, you were, Olde Sandwich Towne. By the very people you elected to represent you. The stately and historic John L. Forster Secondary School, once a hub on Windsor's vulnerable west side, now belongs to Matty Moroun, block-busting, neighbourhood-destroying owner of the Ambassador Bridge. It's not like the public school board didn't know the bridge company wanted - needed - this property. "There was an awareness the bridge company would be a potential buyer," board spokesman Scott Scantlebury admitted to the Windsor Star's Dave Battagello. The company has been hovering, waiting to snatch it, for more than a decade. The school's playing field off Felix Avenue is next to the site of a proposed new truck inspection plaza that the company needs for its planned twin span. (…) It's not like the trustees didn't know the bridge company. Everyone in Windsor knows the bridge company. It's the company that bought more than 100 houses on Indian Road, Edison Street, Bloomfield Road and elsewhere, boarded them up and left them to rot, creating a swath of blight, the scene of fires and rodents, that scars the west side. All for a new span that it doesn't have permission to build. Windsor Star, A2

*** Plaza upgrades approved for Lewiston-Queenston Bridge**

The plaza on the U.S. side of the Lewiston-Queenston Bridge is scheduled for a $50 million modernization project. U.S. Sen. Charles E. Schumer, D-N.Y., announced Tuesday afternoon that U.S. Customs and Border Protection and the U.S. General Services Administration have signed off on funding for the effort. (…) "The Lewiston-Queenston Bridge is a critical artery to cross-border commerce and is the lifeblood of Western New York's regional economy – but the U.S. plaza has needed a major upgrade for years. CBP and GSA have heeded our call and finally approved this $50 million expansion to the plaza is great news for Buffalo and Western New York," Schumer said. (…) Niagara Falls Bridge Commission Chairwoman Kathleen Neville praised Schumer's efforts. "The funding of the Lewiston Plaza project is an important regional trade and transportation priority that will have immense economic benefits for both Western New York and Southern Ontario," she said. Lockport Union-Sun & Journal; Glens Falls Post-Star

*** SI eyes Canada's labour mobility opportunities**

FOREIGN Affairs Minister Milner Tozaka has confirmed Solomon Islands Government's interest to engage in Labour Mobility opportunities with Canada. And to further strengthen relationship between Government and people of both countries, the Mr Tozaka said that plans are underway for the Solomon Islands Prime Minister, Manasseh Sogavare to make a historical visit to Canada and hold discussions on a number of important bilateral issues including labour mobility arrangements, clean energy and to also seek export opportunities for the people of Solomon Islands. These commitments were expressed by Minister Tozaka during his meeting in Honiara last week with the visiting Chairman of Canadian International Training & Education (CITREC) and Solomon Islands Honorary Consul General Mr. Ashwant Dwivedi. (…) "Canada has significant job opportunity which Solomon Islanders can be engaged into as temporary foreign workers. There is no doubt Hon. Minister that almost 80 per cent of Solomon Islands youth population is unemployed and this is an opportunity which can with proper training and education help see Solomon Islands nationals being employed by a Canadian employer," Chairman Dwivedi said. Soloman Star

*** Deadly Montrose hit-and-run suspect arrested at US-Canada border**

A man accused in a deadly hit-and-run accident in Montrose earlier this month is now behind bars in North Dakota. Matthew Alan Putterman is charged with failure to stop and render aid. He was arrested by border agents while trying to cross into Canada. Police say Putterman is responsible for the January 8 death of 23-year-old Michael Alexander Hill. Hill was struck and killed by a red-light runner as he tried to

cross Westheimer at an intersection near Taft. The driver sped off. Officials say Canadian border patrol officials noticed the damage to his vehicle and found text messages between him and his sister talking about the accident and ways to fix his damaged car. KTRK-TV (2016-01-19)

Population issues symposium topic
An editorial states, "Islanders are encouraged to attend a public symposium Thursday that will discuss Amish settlers to P.E.I. and the Temporary Foreign Worker Program. (...) Population change has always been at the core of the development of small islands - and it is no different on P.E.I. Every day the public media deliver news about some aspect of population: youth outmigration, rural depopulation, an aging workforce, temporary foreign workers, refugees, wealthy immigrant investors. The symposium will provide an opportunity for the public to hear about and contribute to the debate on several of the salient population issues that are crucial to the future of P.E.I." Guardian, A6

Weighing our privacy against security
A letter to the editor states, "Re: Thousands flagged for scrutiny by Canada's air screening system, Jan. 15. With a spike in terrorism over the past 15 years, governments around the world have moved to enhance border security. At first it was seen in more flight security and stricter travel laws but with advances in computer technologies security agencies have turned their attention toward spying on their own citizens. Agencies like the NSA have inserted themselves into the homes of almost every U.S. family, and even share data with other countries. In light of revelations into just how widespread government surveillance is, thanks to whistleblowers like Edward Snowden, a global debate has erupted on the ethical implications. Do governments have the right to collect data on their own citizens without their consent? And should personal freedoms like privacy be sacrificed in the name of security?" Toronto Star, A12

CYBER SECURITY / CYBERSÉCURITÉ

*** Beefing up our cyber defences**
An opinion piece states, "With cyber attacks steadily increasing in sophistication, frequency and magnitude, we must ask ourselves whether Canada is ready to meet the challenge these threats pose to our economy, national security and the overall wellbeing of Canadians. Unfortunately, when compared to the United States, the United Kingdom or Germany, Canada is clearly lagging in terms of cyber readiness. This is in part due to a lack of Canada-specific data on the types of cyber attacks affecting the public and private sectors in this country. While the pending mandatory data breach notification provisions under the Personal Information Protection and Electronic Documents Act will likely help in this regard, the notification requirement will be limited to personal information and won't cover cyber attacks involving the theft of intellectual property, trade secrets or other types of critical business information. Within this environment, it's understandable that the public and private sectors have struggled to develop an effective and comprehensive cyber strategy." National Post, A9

*** Take cybersecurity seriously: specialist**
SplashData Inc., one of the leading providers of password management applications, just came out with its list of the worst passwords of the year. Not surprisingly, the worst ones are the easy numeric progressions such as 123456 and the word "password." That sort of careless online presence is keeping cyber-security specialists such as Jay Smith busy. Smith, an information security consultant with Winnipeg-based Online Business Systems, says even if someone's online activity does not include anything that's deemed valuable enough to steal, there is still a responsibility to avoid being used as a patsy or middleman from which nefarious cyberactivity could be launched. Smith gave a presentation Tuesday to the Information and Communications Technology Association of Manitoba. Winnipeg Free Press, N/A

LAW ENFORCEMENT / APPLICATION DE LA LOI

Mounties sent to help authorities in Burkina Faso
RCMP officers have been dispatched to Burkina Faso to help local authorities after more than two dozen people - including six Canadians - were killed in a terrorist attack. A government official, speaking on condition of anonymity, says the Mounties will assist officials with victim identification and paperwork so the bodies of Canadian victims can be returned home. Six Quebecers on a humanitarian mission were killed in Burkina Faso's capital of Ouagadougou last week during an attack carried out by al-Qaida. Four of the dead were from the same family: Yves Carrier, his wife Gladys Chamberland, their adult son Charlelie Carrier and Yves' adult daughter, Maude Carrier. Adam Barratt, a spokesman for Foreign Affairs Minister Stephane Dion, says the department's priority is the families of the victims. He says departmental resources in Ottawa and overseas will be used to help repatriate the victims as fast as possible. Postmedia Network (Chronicle Herald, A9, Red Deer Advocate, Guardian, Edmonton Sun, Calgary Sun, Times Colonist, Winnipeg Sun, Ottawa Sun, Times and Transcript); Journal Montreal, 13; Gazette, A3; Journal Quebec, 7

*** Terror charge dropped but still no passport**
Nearly two years after a court stayed charges against Mouna Diab, who had been accused of smuggling arms parts to the terror group Hezbollah, the government is still balking at granting her a passport. The National Post has learned that Diab, 30, filed a motion with the Federal Court last month, claiming Ottawa is infringing her Charter rights by refusing to act on a passport application she made in June 2014. The passport application came after the Crown abruptly dropped charges against Diab, who was arrested at Montreal's Trudeau airport in 2011. A native of Lebanon, Diab emigrated to Canada in 1993 as a seven-year-old and gained Canadian citizenship two years later. When she was charged with committing a crime for the benefit of a terrorist group, the Royal Canadian Mounted Police issued a news release alleging she was "acting under the direction of a contact person in Lebanon who is associated with Hezbollah." She faced a second charge of violating a United Nations arms embargo of Lebanon. But on April 17, 2014, a federal prosecutor requested a stay of proceedings, declaring in a brief statement that "there was no longer a reasonable prospect of conviction." Her passport had been revoked following her arrest. When she applied for a new one she was told her request required "a second level of examination" and would not be processed within the standard time. Her lawyer, Richard Prihoda, said she was interviewed for 90 minutes by two Passport Canada agents in October 2014 and was told a decision was imminent. "Everybody keeps saying a decision is going to come soon, but here we are almost two years later, and nothing has been done," he said. He would not speculate on why her application is being held up, but described her arrest and the subsequent charges as "a tempest in a teapot." The federal attorney general has declared its intention to oppose Diab's request for a court order requiring the Department of Citizenship and Immigration to act on her application. The department would not comment when asked why Diab's passport application has been delayed. "As the matter is before the court, it would be inappropriate to comment," department spokeswoman Jessica Seguin said. This would not be the first time the government has used its passport powers against people who have come under RCMP scrutiny. The government has had the power to refuse or revoke passports on security grounds since 2004. The section was used to deny a passport to Fateh Kamel, who returned to Canada after serving prison time in France for terrorism-related offences. In 2014, Ali Sbeiti, an Iranian-trained Montreal imam, had his passport revoked and was informed he was a "subject of interest" in an RCMP national security investigation. National Post, A5

Crime Stoppers plays vital role
If you were driving past the Lunenburg County RCMP detachment in Cookville during the late afternoon of Jan. 8 you may have seen two hardened criminals being apprehended by detachment staff. You may also have seen those same criminals, in handcuffs and leg irons with ball and chains hampering their walking, being forced to raise the Crime Stoppers flag on the flag pole in front of the RCMP detachment. January is National Crime Stoppers Month and those two hardened criminals, Fenton Dibbin and Marlene Mercer, are volunteers with Lunenburg County Crime Stoppers. This month, several of the volunteers with the local organization will be at retail locations in the county promoting Crime Stoppers and the work that the organization does to support local police officers in their work. Crime Stoppers is a non-profit

organization that combines the public, media and police in a crime-solving effort. The simple premise of the program is to use the media to ask the public to get involved in assisting the police by identifying suspects involved in criminal activities. It is funded by donations from the public, service groups, organizations and through fund raising initiatives, emanating from the board of directors of local Crime Stoppers chapters. Postmedia Network (Chroncile Herald, S4)

Trial on hold over photo issue
The trial of a man charged with several sex-related and child pornography crimes had to be delayed Tuesday because some of the images in the disclosure package had not been altered to render them non-pornographic. Crown attorney Bob Morrison told Judge Alan Tufts in Kentville provincial court that he received a compact disc of material from the RCMP's technical crime unit Monday but found that some of the images had mistakenly not been altered. Without that, the Crown couldn't provide the disclosure package to the defence without committing the crime of distributing child pornography. The information within the package included images from a phone seized as part of the police investigation. Morrison said after court that only a few of the images were mistakenly not altered. He said there were hundreds of images that police were dealing with in the case. Robin Lee Spidle, 24, is charged with sexual touching of a minor under the age of 16, invitation to sexual touching, sexual assault, possession of child pornography, and communicating with a person under the age of 18 for the purpose of obtaining sexual services.Postmedia Network (Chronicle Herald, A7)

Mounties arrest man after tires slashed on four RCMP cruisers
An RCMP detachment east of Edmonton has been going through a lot of tires. Mounties say they have arrested a man after the tires of four police cruisers were slashed at the Vegreville detachment earlier this month. Jason Larry Kotowich, who is 35, has been charged with three counts of mischief under $5,000, resisting arrest and breaching a probation order. Postmedia Network (Red Deer Advocate, A3)

* **Sexist signs cause stir on social media**
A Prince Edward Island garage manager says he has received a death threat because of a promotional sign branded "sexist and misogynistic" by some angry commenters on social media. "Women are like snowflakes. They can't drive," read the sign outside Mellish Motors in New Annan, P.E.I., a rural community just outside of Summerside, P.E.I. John Mellish, 55, and his wife say they started the business nine years ago and post a new lighthearted message to the board every Sunday. "We've always had something funny or a topic of local conversation on our sign. I've poked fun at myself, my wife, overweight people. We've been brutal to some male people. " Because of social media, this morning at 6:45 a.m., a person phoned and threatened to shoot me. I reported it to the local RCMP because I think that person needs a little bit of help if an issue like this is touching them that bad." Local residents, commenting on Facebook, backed the business for its humorous messages. Some can remember phrases on the board from last February. Toronto Star, A3

* **Ambulance joyride ends in charges against patient**
A 21-year-old woman has been charged with dangerous driving and theft after she allegedly stole an ambulance from the Royal Alexandra Hospital Tuesday and took it on a 40-minute joyride to Duffield. The woman, a patient at the hospital, gained access to a secure ambulance bay on the east side of the central Edmonton hospital and made offwith the vehicle at about 6 a.m., ramming it through a glassand-steel garage door on 102nd Street north of Kingsway Avenue, said Dave Weiss, executive director for emergency medical services in the north zone. The keys were in the ignition, he said. Edmonton police pursued the vehicle, tracking it using its onboard GPS system, west through Edmonton and along Highway 16 into Parkland County. The RCMP managed to stop the ambulance and arrested the woman without incident at about 6:40 a.m. near Range Road 32 and Highway 16 in Duffield. No injuries were reported, police said. Edmonton Journal, A1

* **Charge laid, but cold case remains open**
It took 30 years for a murder charge to be laid in the death of an elderly Interlake man, and RCMP still don't consider the case solved, delaying closure for the family of two men who took polygraph tests in an attempt to prove their innocence. Four months ago, RCMP laid a second-degree murder charge against Lee Norman Pischke, 50, of the RM of Grahamdale, in the death of 80-year-old Michael Kalanza, who

went missing in 1985. Police also arrested a 53-year-old Winnipeg man but let him go without laying criminal charges. At the time, Manitoba RCMP said investigators believed the two were the only ones responsible for Kalanza's death. Police said the 53-year-old Winnipeg man is still not facing charges and the investigation remains open. "We are continuing on vigorously to ensure that all persons involved are held accountable for this murder," an RCMP spokesman said in an emailed statement. "To this end, we would ask that anyone with information regarding the murder of Mike Kalanza call the historical case unit tip line at 204-984-6447 or call Crime Stoppers anonymously at 1-800-222-8477." RCMP couldn't release any other details about the ongoing investigation, which has spanned three decades. The lack of closure doesn't sit well with Pischke's uncle, 67-year-old Dennis Pischke. Winnipeg Free Press, B2

Lawyer lands discharge for angler caught with pot at border
A New Jersey man avoided a criminal record on Tuesday for entering Canada with 14 grams of marijuana in his vehicle last year. However, Matthew Simonelli has likely earned himself trouble crossing the border, Judge Henrik Tonning noted in Saint John provincial court. The judge accepted the arguments from defence counsel Charles Bryant to grant the 30-year-old, Toms River, N.J., native an absolute discharge for possession of marijuana at St. Stephen on Sept. 9. Simonelli did not attend court, but Bryant entered a plea of guilty on his behalf. Federal Crown prosecutor Peter Thorn related in court that Simonelli and his wife crossed the border at St. Stephen and declared two expensive bamboo fishing rods. The Canada Border Services Agency officer discovered that one Ryan Mockler tried to bring these same rods into the country earlier but he was deemed inadmissible to Canada, Thorn said. Border agents searched Simonelli's vehicle and found the marijuana plus $600 U.S. in a black shoulder bag, the prosecutor said. The agents investigated further and found messages on Simonelli's cellphone "that made a reference to other drugs and pills being contained in a container or cooler," Thorn said. The border guards searched the vehicle but found nothing, Thorn said. The agents issued a civil penalty of $250 and turned the matter over to the RCMP. "There was no nefarious intent. There was no smuggling operation," Bryant said. Postmedia Network (Telegraph-Journal, B2)

RCMP defend handling of root beer incident
RCMP officers believed a man was obstructing a liquor offence investigation when he refused to comply with their instructions. Const. Robert Andrew Scott Burchett, 50, and Cpl. Kevin Roger Lee Halwa, 42, both testified Monday as to why they applied the force they did on Levi Desjarlais on the evening of Aug. 20, 2011. Desjarlais has filed a lawsuit against Halwa, Burchett and Cpl. Dean Allan Purcka, 41, for the alleged assault that followed. The three RCMP officers also face assault charges. Desjarlais said he was pepper-sprayed, kneed in the groin and beaten during the altercation. "If you obstruct the police, sometimes bad things happen," said Burchett during his testimony. Burchett and Purcka were in Sylvan Lake that evening on overtime from other detachments. In the summer, the Sylvan Lake RCMP are provided extra money from the town to increase the police presence for the summer rowdiness. Burchett was driving in a dark blue unmarked prisoner van. He saw Desjarlais walking on the sidewalk holding what he believed at the time to be a bottle of beer. Later, Burchett would learn it was in fact root beer. Throughout direct and cross examination, Burchett said he thought Desjarlais held a beer during the incident. Postmedia Network (Red Deer Advocate, A1)

***Saisie de drogue à Shippagan**
Deux femmes de Shippagan, âgées de 47 et 50 ans, ont été arrêtées à la suite de l'exécution d'un mandat de perquisition dans un appartement de Shippagan. Vendredi, vers 19 h, des agents du District du Nord-Est de la GRC, assistés par des membres de la Section de la réduction de la criminalité et de la Section des chiens policiers, ont exécuté un mandat de perquisition à Shippagan. La GRC annonce que les agents ont saisi de la marijuana, de la méthamphétamine, de la cocaïne, des produits du tabac non estampillés, de l'argent ainsi que des instruments pour l'utilisation de drogues illicites. Les femmes ont été libérées, mais devront comparaître en cour provinciale ultérieurement. Acadie Nouvelle, 7

***Driver unaware of fatal strike on senior**
Oceanside RCMP believe they have found the driver involved in a Jan. 13 incident that killed an 80-yearold woman in French Creek. Based on evidence from the scene and witness accounts, police believe a commercial truck driver unknowingly hit the woman with a piece of equipment that was sticking out from the side of the vehicle. The woman was found lying on the side of the road a short distance from her

home. She was taken to Nanaimo Regional General Hospital and then airlifted to Victoria General Hospital, where she died from head trauma. Speed or alcohol do not appear to have been factors. Police said the driver is very upset and is co-operating fully. Postmedia Network (Times Colonist, A4)

*** Wig-wearing robbery suspect arrested**
Police in Surrey said they have arrested a suspect after a man robbed a bank last month wearing an odd disguise. RCMP said they arrested a 39-year-old resident of Surrey after asking for the public's help in identifying the man following a heist near the Guildford Town Centre on Dec. 29. Police said the suspect was wearing a patterned dress, white wool sweater, a long blond curly wig and a pink tuque that partially obscured his face. Postmedia Network (Times Colonist, A2)

*** La GRC appelle à la vigilance dans une affaire de fraudeurs agressifs**
Des fraudeurs sophistiqués et agressifs qui se font passer pour des employés de l'Agence du revenu du Canada visent des Néo-Brunswickois. La GRC dit avoir reçu plus de 100 plaintes au cours du dernier mois. Alors que la saison des impôts approche, la GRC demande aux Néo-Brunswickois d'être sur leurs gardes contre des escrocs qui se font passer pour des employés de l'Agence du revenu du Canada (ARC). Équipés d'outils qui leur permettent d'afficher un numéro de l'ARC ou de la GRC, les fraudeurs demandent à leurs victimes potentielles de rembourser de l'impôt impayé. Avec un accent étranger, ils parlent d'un ton agressif et menacent de se rendre à la maison de leurs victimes si elles ne leur donnent pas immédiatement de l'argent par carte de crédit ou par Western Union. La fraude est répandue à travers le pays. Lundi, la GRC de l'Ontario a publié la transcription d'un échange entre un arnaqueur et sa victime dans laquelle le faux employé de l'ARC menace de faire sauter la maison de son interlocuteur (voir encadré). Acadie Nouvelle

*** Cops packin' major heat**
Toronto Police are getting more lethal and less lethal at the same time. And receiving some praise, as well, for doing so. It turns out there were voids in both availability of stronger firepower and in less deadly alternatives. So on the same day Canada's largest urban police service announced it has started to equip officers with military-style rifles - the C8 carbine - the police force said it would also begin furnishing members with what is called a sock round - in essence a beanbag gun. "(The C8 carbine) is a far more accurate rifle than what they currently have," spokesman Mark Pugash said Tuesday. One of the problems officers face, he said, is that "there are people out there who are wearing body armour ... " While other weapons in the force's arsenal are not able to stop criminals with body armour, the $2,000-$3,000 C8 carbine can. "It's important Toronto Police have these guns available in a timely manner," crime specialist ross McLean, a former Toronto Police officer, said. "The first things officers in san Bernardino called for were 'long guns' when they saw they were badly outgunned by the ar-15 carried by terrorists. RCMP did a long investigation after four of their members were killed without this sort of weapon available. It is a requirement in today's environment." Postmedia Network (Toronto Sun, A19)

*** Police puppy dies after eating rope**
An RCMP plan to document the lives of two German shepherd puppies during their training has ended sadly for one of the canine recruits. The Halifax division announced Tuesday one of the pups - Helo - has died after ingesting rope and rocks. Const. Mark Skinner says the accident occurred as the puppy pursued his natural tendency to chew on objects. (...) During the media launch of the two puppies on Dec. 18, the RCMP officers training them said the dogs live at their homes. Const. Tim Reid, Helo's trainer, had said that every two weeks he and the puppy took part in a six- to eight-hour training day that included a heavy focus on tracking skills. In a few more months, had Helo lived, a fully trained dog handler would have assessed the dog's progress. Reid said Helo was the sixth puppy he'd trained and that only one had graduated to become a police dog. One of the others died of a heart attack, another returned to Innisfail to breed and two others were sold as pets. Reid had said there are about 80 people like himself across the country who are in training to make it into the RCMP dog handler program in central Alberta. An RCMP news release said Reid was saddened by the loss, and noted that condolences can be shared on the force's Facebook page in Nova Scotia and on Twitter using the hashtag RIPHelo. Postmedia Network (Chronicle Herald, A9, Cape Breton Post, London Free Press)

*** Sex assault charge dropped against cabbie**

An Antigonish cab driver has had one of two sexual assault charges against him dropped. William Roger MacLellan was charged in November 2014 for allegedly, on two separate occasions, groping highly intoxicated young women who took his cab home from Piper's Pub to their dorms at St. Francis Xavier University. "I've reviewed the evidence," Crown attorney Darlene Oko told Judge Laurel Halfpenny-MacQuarrie during the third day of MacLellan's trial in Antigonish provincial court. "I do not believe the court could convict him on that charge." The dropped charge stems from an alleged incident during the early-morning hours of Feb. 15, 2014, when an underage St. F.X. student claimed a cab driver had groped her breasts. The woman admitted during her testimony last October that she was drunk to the point of blacking out during the alleged assault and that she never looked at the driver and could only identify him by his voice. Testimony by RCMP officers on Tuesday focused on the remaining sexual assault charge. (...) "My cab driver molested me," the alleged victim told the 911 operator. In the background, a man could be heard telling her that she had fallen and hit her head at the pub. "That's Roger (MacLellan)," RCMP lead investigator Const. Catherine Bezaire told the court. "I know his voice." Bezaire was one of three RCMP officers who testified Tuesday to the events of Oct. 19, from responding to the St. F.X. dorm where the heavily intoxicated victim was surrounded by a growing crowd of concerned passersby, to taking her statement and searching for a dark green van driven by a non-white male. Postmedia Network (Chronicle Herald, A4)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

No parole for Stanley Tippett, convicted of attack on 12-year-old Ontario girl

An Ontario man found guilty of kidnapping and sexually assaulting a 12-year-old girl seven years ago has been denied parole. The Parole Board of Canada says Stanley Tippett remains "an untreated sex offender" who has not addressed his risk to reoffend. Tippett was convicted in 2009 on seven counts - including kidnapping, sexual assault and sexual interference - relating to an August 2008 attack on the girl. (...)He was declared a dangerous offender after being found guilty - a designation which means he can be jailed indefinitely. In a decision issued earlier this month, the parole board denied Tippett day and full parole, saying any form of release to the community would present "undue risk." Canadian Press (Whitehorse Daily Star, 8); ***** Presse canadienne (Acadie nouvelle)

Back before the courts

Dylan Dingwell, who served federal time for the 2011 shooting death of his brother in Charlottetown, is before the courts in Nova Scotia. Dingwell, 27, who now resides in New Minas, N.S., was charged last week with possessing cocaine for the purpose of trafficking. He has consented to be remanded in custody until his next court appearance in April. Dingwell was found guilty of manslaughter for shooting his brother, Kyle Dingwell, on Jan. 17, 2011, and sentenced to five-and-a-half years in prison, minus 17 months for time served. He was granted full parole in February 2014. The Guardian, A3

*** Fate of Nicholas Rasberry's bail in judge's hands**

The Crown no longer has the authority to seek forfeiture of convicted killer Nicholas Rasberry's bail for violating his release conditions, a court was told Tuesday. Lawyers for Rasberry, who posted $60,000 cash for his release, and his grandmother and wife, who put up property, said Justice Jo'Anne Strekaf should rule she no longer can hear the matter. But Crown prosecutor Jonathan Hak said because Rasberry allegedly breached his bail the day before his sentencing occurred, the forfeiture hearing should proceed. "This isn't a case where his bail was discharged when he was sentenced, because there was a violation," Hak told Strekaf. (...)Lawyer Kelsey Sitar, who spoke for the grandmother and wife, said the prosecution should have sought the endorsement to proceed before Rasberry was sentenced to a penitentiary term. (...)Rasberry was sentenced Dec. 11, to seven years for the killing. (...)He has appealed his conviction arguing he should have been acquitted. The prosecution has also appealed, seeking a retrial on the original charge Rasberry faced of second-degree murder. Ottawa Sun (Winnipeg Sun, Calgary Sun, Toronto Sun)

*** La voleuse en Mercedes pourra sortir du pénitencier**

Les autorités ont remis en liberté une voleuse en Mercedes qui a dévalisé plusieurs résidences cossues avec son mari, même si elle a admis qu'elle aurait encore pu commettre des crimes si elle n'avait pas été arrêtée. «Peut-être. C'est l'arrestation qui a tout changé», a dit Elyanne Miller aux commissaires des libérations conditionnelles, hier, au pénitencier de Joliette. François Baron et Michel Lafrenière venaient de lui demander si elle aurait continué ses vols en série, n'eût été la vaste enquête policière qui a permis de lui mettre la main au collet l'an dernier. Auparavant, la jeune femme de 28 ans ne s'était «jamais posé de questions», at- elle répété à de multiples reprises hier. (…)Puisque Mme Miller «ne représente pas un risque indu pour la société », elle pourra reprendre une vie nor-male après trois mois en maison de transition. Journal de Montréal, 11 (Journal de Québec)

*** Nova Scotia music teacher who abused 13-year-old 40 years ago granted parole**

A former music teacher convicted of abusing a 13-year-old boy four decades ago on Nova Scotia's South Shore is being released from prison. Last year, William Albert Perrot pleaded guilty to two counts of indecent assault on a male for incidents dating to the 1970s. He was sentenced to 2½ years in prison. Perrot is originally from Portsmouth, Virginia, but moved to Kingston, N.S., in 1975. He taught music and English at West Kings District High School until he retired in 2009. At a hearing last Thursday, the Parole Board of Canada agreed to release Perrot on day parole, to be followed by full parole. The board said Perrot has caused no issues while in prison and is assessed as a low risk to reoffend. In requesting parole, Perrot told the board he was sexually immature at the time of the offences and thought his relationship with the boy was consensual, according to the board's written decision. He also said he wasn't aware how much damage his crimes caused until he heard the victim's impact statement. CBC News (2016-01-19)

Costly, overcrowded, dehumanizing prisons are doing harm

An opinion piece states, ""It is painful when we see prison systems which are not concerned to care for wounds, to soothe pain, to offer new possibilities," Pope Francis told inmates of the Curran-Fromhold Correctional Facility in Philadelphia last September. The prisoners were among the astounding 2.2 million Americans who are living behind bars. This pain afflicts Canada, too. Listen, for instance, to Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies. I spent a morning with her at a Cape Breton University workshop a year ago as she poignantly shared research and first-hand cases. I resolved to give this research, these human tragedies, more examination in my own work. The disgusting indignities inflicted on Ashley Smith are not isolated incidents. The New Brunswick teenager, who was living with mental illness, took her own life while being monitored in isolation. It happened in 2007 at an Ontario prison after years of neglect and taunts by so-called "professionals." Some of them coldly looked on as she placed a ligature around her neck. Pate documented case after appalling case of people thrown off by society and processed like numbers through a system, a very expensive system. Why is mainstream society not hearing a lot about the other cases? Excessive solitary confinement has rightly received recent attention, but why are we not having a serious national conversation about correctional reform? The overcrowding of prisons. Lack of effective programs for inmates. No real efforts for restitution, just punishment. Incarceration of non-violent criminals in human warehouses. The tolerance of abuse in prisons. Locking up instead of treating the mentally ill. Exposing youths to all kinds of bad influences in jail. Not enough caring mentors for youthful offenders who have had no positive role models in their lives. Contrary to a bizarre misconception, prisons in Canada are not country clubs." Cape Breton Post, A8

Pedophile jailed four years, declared long-term offender

A Montreal resident has been sentenced to a four-year prison term for possessing child pornography and for luring teenage boys over the Internet. Shawn King, 61, is also required to follow a series of conditions, for a period of 10 years following his prison term, because he was also declared a long-term offender based in part on his previous criminal record. (…)The offences that date back to the 1980s were committed during a period when King, an anglophone, sexually assaulted eight boys between the ages of 11 and 14 while he was involved in minor league sports programs in Shannon, a small town north of Quebec City, between 1969 and 1997. That case shocked the tiny community, and in 1998 King was sentenced to an overall prison term of seven years. While serving that sentence, King admitted to the

Parole Board of Canada there were other victims of his crimes. Two more victims came forward after news of King's arrest for child luring in 2010 became public. Montreal Gazette, A7

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** NL Left Out of Meetings on Missing and Murdered Indigenous Women**
The Government of Canada is holding meetings across the country to talk about murdered and missing indigenous women and girls. The meetings will be held with survivors, family members, and loved ones. But no meetings will be held in Newfoundland and Labrador, PEI or New Brunswick. On its website, the government says it "believes that an inquiry into missing and murdered Indigenous women and girls can only be designed after hearing from those directly affected." The first two meetings were held in December in Ottawa. Meanwhile A federal, provincial and territorial meeting for Justice and **Public Safety** is going ahead in Quebec City for the next two days. Items excepted to be discussed include violence against indigenous women and girls, cyber security and physician-assisted dying. VOCM

*** Nunavik women, families still have time to register for MMIW event**
Two pre-inquiry sessions with the families of missing and murdered Indigenous women and girls are set to be held in Quebec this week, but it's not too late for Inuit women or families in the province to take part. The Saturviit Inuit Women's Association of Nunavik is encouraging Nunavimmiut survivors or families of victims to register for one of two gatherings scheduled between Jan. 20 and Jan. 22 in Montreal and Quebec City. Indigenous and Northern Affairs Canada, the department heading a national inquiry into missing and murdered Indigenous women and girls, has begun hosting pre-inquiry gatherings in different regions across the country. The department, headed by its minister, Carolyn Bennett, has said the government will design the inquiry only after hearing from those directly affected. Only one gathering has been scheduled in the Arctic — Jan. 29 in Iqaluit. But while the Iqaluit session will be an Inuit-specific event, it's easier for Nunavimmiut to travel to southern Quebec, Saturviit's Pascale Laneuville said. Nunatsiaq Online

*** Art installation paying tribute to MMIW stops in Brandon next month**
An indigenous art installation that commemorates the lives of missing and murdered indigenous women will stop in Brandon, Man. next month. Walking With Our Sisters features more than 1,800 vamps, the decorative tops of moccasins, laid out in a design that will take viewers down a winding pathway. The display also commemorates children that died in Canada's residential school system. It's currently on display in North Battleford, Sask. and will open at Brandon University on Feb. 22. CBC News

Crime prevention centre taps social media to respond to growing complaints about crime
Advocates for deterring and reducing crime are on high alert as the economy continues to tank. Their weapon of choice? Information. TerryLee Ropchan, Central Alberta Crime Prevention Centre executive director, said as soon as you hear about the economy and layoffs, immediately the first thing that comes to mind is that there will be repercussions felt throughout the community. "Definitely it is on our radar," said Ropchan. "We try to stay connected with some of the social media so the Facebook pages around stolen vehicles. We are monitoring. We are watching." One of the agency's goals this year is to respond to some of the growing complaints about crimes or happenings in neighbourhoods on social media platforms. She wants people to know they have some place to go. "We have programs, resources and information," said Ropchan. "We want to engage more with the social media crowd. People use social media to vent and find other people who are experiencing the same. But it has not translated to people who want to be part of Citizens on Patrol or join Neighbourhood Watch. Those are the things that we are offering to them so they realize they can make a difference." Crime prevention is more important than ever and is reflected in the work it is doing in the community with its graffiti program, SAFE program, presentations and other programs, she said. Red Deer Advocate, A1

*** Un plus haut taux de crimes haineux à Ottawa**
Le Service de police d'Ottawa (SPO) a déclaré deux fois plus de crimes haineux que la moyenne des autres corps policiers municipaux du pays, selon les plus récentes données fournies par Statistique

Canada. Selon un rapport rendu public en novembre, le SPO a déclaré 64 incidents criminels de ce type en 2013. Il s'agit d'un taux de 6,6 crimes par 100000 habitants, le double du taux canadien, qui est de 3,3. Même les grandes villes cosmopolites comme Montréal et Toronto font meilleure figure, avec des taux de 3,0 et 4,9 respectivement. La police de Gatineau a quant à elle rapporté cinq crimes haineux en 2013. La police d'Ottawa soutient qu'il faut analyser ces données avec précaution. La constable Lila Shibley explique que les forces de l'ordre de la capitale, plus qu'ailleurs, sont très actives sur le terrain. Elle voit d'un bon oeil que les victimes sont nombreuses à porter plainte, car plusieurs décident de se taire. Le Droit, 4

Step up drug fight, health boss urges
London needs a drug strategy fast-by summer-to fight off an onslaught of crystal meth on the heels of the battering the area has taken from abuse of drugs like OxyContin, its top public health official warns. "We should be moving on this more quickly," Dr. Christopher Mackie, medical officer of health and chief executive of the Middlesex London Health Unit, said Tuesday. "It's fair to say we have people being harmed every day. We probably have someone dying of an overdose or an infection or complications due to an infection every week. We have a major issue here." Nothing less than a community-wide approach is needed, said Mackie, who doesn't expect the full-blown plan to be operating by summer but wants to see the first steps taken. He isn't calling anyone out on the lack of progress in London's battle against addiction: He and the health unit took the lead in calling for a community drug strategy after releasing alarming statistics on addiction in 2014. A health survey showed double the rate of overdose deaths in Middlesex County compared to the rest of Ontario, taxing health care and social service agencies, hospitals and police. London Free Press, A1

* **Don't blame violent crime on the mentally ill**
An opinion piece states, “One of my students recently sent me a message wherein he wondered why psychologists appear to be so helpless in predicting mass murders, such as those in San Bernardino, Calif. and in Colorado Springs, Colo. late last year. His question is a common one and the answer most often given by politicians, for example, is that we must improve our mental health outreach programs in order to prevent such tragedies. (…)But while some mass killers may have a psychiatric illness, the vast majority of violent people are not mentally ill and, indeed, most mentally ill individuals are not violent. According to recent statistics, about four per cent of overall violence can be attributed to those with mental illness. Homicides are most often committed by people without mental illness - by family members or people on a first-name basis with their victims. Some homicides are committed during the commission of a lesser crime, such as a robbery, which escalates. Other homicides are perpetrated by individuals who are convinced they will not be caught, and at the bottom are those people with known mental illnesses who commit homicide. Mass killers are almost always young men, isolated, friendless, and filled with smouldering hostility and resentment, people who are in the midst of planning some form of revenge for what they perceive as chronic slights or attacks on their sense of psychological integrity. Complicating the picture, in many cases these young men tend to avoid any contact with mental health professionals, making it more difficult to identify and support them.” Waterloo Region Record, A9

* **Mom wants curfew for teens as a crime-fighting measure**
Agatha Eaglechief says the city needs to enforce a nighttime curfew on all high-school-aged kids to stop gangs of teenagers from roaming late at night. "Their parents are letting them run wild," Eaglechief said from her home in Confederation Park. Eaglechief said she's noticed a spike in gang activity among teenagers in recent years. She said she has spent countless nights out on the streets helping her friends track down their teenage kids. Now it's time for the police to get involved, she said. "There are a lot of innocent children getting involved in the gangs, the thieving and stealing," she said. "We need to put our foot down. The government, the chief of police, everybody. Control these kids." Eaglechief has written a letter to Saskatoon's board of police commissioners and hopes to attend its meeting on Thursday to convince police to take action. Eaglechief isn't alone. Last November, the Town of La Ronge started enforcing an overnight curfew for people under the age of 18. RCMP were told to enforce of the bylaw - which has been on the books since 2005 - after a spate of break-ins, thefts and other vandalism, according to Mayor Thomas Sierzycki. StarPhoenix, A2

*** Charlottetown police rolls out new youth program to replace DARE**
A new program focusing on drug abuse and mental health, developed by Charlottetown police and student services workers, rolls out next week in elementary schools. Healthy Me replaces the Drug Abuse Resistance Education (DARE) program, which taught Grade 6 students about the dangers of drugs, alcohol and tobacco use. DARE has been slowly shutting down since 2014. The new program still covers the topics of drugs and alcohol abuse, but it also adds a mental health component. Also now included in the program is a cyberbullying and social media component. "With DARE, it talked about drugs and how they affect your body, but we never really looked at the wellness component as far as mental health," said Charlottetown police Const. Tim Keizer, who is a school resource officer. Keizer said the new Healthy Me programs asks young participants to ask themselves where they get their values and beliefs from and what are some of the outside influences on their lives. The Guardian

RATS, In gang culture, those who talk to cops are the worst form of life
Former New York mobster Lou Ferrante still remembers the day in 1991 that he heard the shocking news that Salvatore (Sammy the Bull) Gravano had betrayed the Gambino family and was going to testify against John Gotti Sr. "When Sammy the Bull became a rat, none of us believed it. I was the first to say: 'no way'. And a few people said, 'yeah, it's true. It's happening,'" Ferrante recalled in a recent interview. The underworld perception of ratting has percolated through other gangs as well - including B.C. groups like the Red Scorpions and United Nations. The late gangster Bal Buttar once told The Vancouver Sun he was involved in several murders, but would never help police. "I've never in my life been a rat and I'll never be one," Buttar said. (...)Things have changed in B.C. as well in recent years. Police here have convinced many living the gang lifestyle that the best thing they can do is co-operate. Even a killer known only as Person Y, who became a key Crown witness in the Surrey Six murder case, said he finally realized the only way he could break from a 20-year criminal career was to go to the police. "I'll just turn into the biggest rat," he said of his thinking at the time. "I am committing suicide in terms of my name in the game." Staff Sgt. Paul Dadwal, of the Integrated Homicide Investigation Team, has interviewed hundreds of gangsters and associates, persuading many to testify. Often, he said, he has to break through their aversion to "ratting." Underworld bosses and gang leaders perpetuate the myths about co-operating with police, Dadwal said. Vancouver Sun, A1

Black community unfairly targeted in war on drugs
An opinion piece states, "The Supreme Court of Canada will soon decide the fate of the mandatory one-year jail sentence for trafficking certain drugs. The mandatory minimum has come under fire by civil liberty groups for constituting cruel and unusual punishment, arbitrary imprisonment and restricting security of the person contrary to the Canadian Charter of Rights and Freedoms. The case at issue concerns Ryan Joseph Lloyd, a drug addict in his mid-20s, who lived in Vancouver's notorious Downtown Eastside. (...) Seven public interest groups including the African Canadian Legal Clinic, the West Coast Women's Legal Education and Action Fund, and the Union of British Columbia Indian Chiefs, among others, argue that an offender who lives in poverty, has faced systemic barriers and suffers from an addiction disorder should not be automatically subjected to a one-year sentence upon conviction. In fact, before the enactment of the mandatory minimum sentence, judges were free to take social disadvantage into account and prescribe punishments that fit the crime." Toronto Star, A13

*** Province doing little to stop sex slavery: Scott**
Teen girls across Ontario are being forced into sex slavery while the provincial government does little to stop it, says an area MPP. Laurie Scott is the Progressive Conservative MPP for Haliburton-Kawartha Lakes-Brock (which includes Lindsay and Cavan Monaghan Township in Peterborough County). She says about 30,000 girls - average age 14 - are being prostituted in Ontario. It's a huge problem, Scott says, and she'd like the province to do something. Scott belongs to a legislative committee that's trying to stop human trafficking. The committee would like to see Ontario judges, Crowns and police officers get special training to deal with human trafficking cases, for example. Scott said these teens are each making up to $280,000 a year for their pimps, and they're being trafficked in motels all along the Highway 401 corridor. The Peterborough area is not immune to the problem: A 28-year-old Cordova man was charged by police last week in a case of human trafficking involving children. The committee is also pushing for new rules to help victims of sexual abuse, such as new protocols for dealing with abuse on college and university campuses. Scott was in Peterborough with other members of the committee on Tuesday for a

day-long meeting at the Holiday Inn. Committee members were there to collect feedback from local experts on how the province could best help victims. Representatives from places such as Trent University, the Peterborough Haliburton YWCA and the Kawartha Sexual Assault Centre gave presentations. Scott said the committee is touring more cities to conduct the same type of meetings, soon. They're going to London and Toronto next. Scott said she's appalled that Ontario isn't doing more to curb human trafficking. Peterborough Examiner; My Kawartha (2016-01-19)

*** L'intimidation se transporte sur le Web**
Depuis quelques années, on parle de plus en plus d'intimidation à l'école et de ses conséquences parfois désastreuses sur les victimes. Or, l'intimidation peut parfois sortir de la cour d'école et se transporter jusque sur les réseaux sociaux. On parle alors de cyberintimidation. La cyberintimidation se traduit par des propos dégradants ou menaçants tenus publiquement ou en privé, sur les réseaux sociaux, par messagerie instantanée, dans les groupes de discussion, par courriel... Tout comme les gestes et paroles qui atteignent durement les enfants intimidés dans la cour d'école, la cyberintimidation peut affecter lourdement la personne visée. On parle de perte de confiance en soi, d'isolement, d'anxiété, voire de suicide. Le fait que le message puisse être relayé par de nombreuses personnes et devenir viral, en plus de durer dans le temps en raison du support utilisé, ne fait qu'aggraver les conséquences chez la victime. Jeunes et adultes doivent agir lorsqu'ils sont victimes ou témoins de cyberintimidation. La première étape, pour le jeune intimidé, consiste à en informer un adulte de confiance, par exemple ses parents ou un membre du personnel de l'école. On conseille également à la victime de ne pas répondre à l'intimidateur, de retirer celui-ci de ses contacts sur les réseaux sociaux, de bloquer les messages en provenance de cette personne et de conserver les messages reçus. La Revue (2016-01-19)

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

'We are ready'
As some cities take a breather from resettling government-assisted Syrian refugees, others say their doors are open - if the federal government asks and also offers to pay. While the home communities for refugees with private sponsors is dictated by where those sponsors are, refugees whose costs are covered entirely by the federal government are sent to just 36 cities. Not included is Victoria - the lone provincial capital that isn't an official reception centre for government assisted refugees. The only Syrians arriving there as part of the Liberals' Syrian program are those whose costs are split between the government and private sponsors, as well as those coming thanks to private sponsors alone. Victoria Mayor Lisa Helps said she told the federal immigration minister even before the Liberal program was unveiled that her city was interested in taking in Syrians but is still waiting. "We are ready. The church, the school board, the credit union, private donors, private families, we're ready," she said. Canadian Press (Edmonton Sun, A34, Ottawa Sun, Times & Transcript, Daily Gleaner, Times Colonist)

Soldiers prove they're up for any task thrown their way
There were tears, laughter, hugs and enough happiness to spread over this part of the world. It was a scene that could easily have been taken from the cover of a Hallmark greeting card. Early on Jan. 12 approximately 60 infantry soldiers, mostly from The Second Battalion, The Royal Canadian Regiment (2RCR) returned home from deployment in the Middle East - everyone was safe and sound. The unusual part of it all was what the kind of deployment they were coming back from. Usually, when infantry soldiers depart on a mission, they are heading into combat or peacekeeping scenarios. But not this group. They were in Lebanon and Jordan as part of Operation Provision, the federal government's initiative to resettle 25,000 Syrian refugees in Canada by the end of February. They left Canada on Nov. 26 and Nov. 28. An Immigration, Refugees and Citizenship Canada (IRCC) initiative, the ongoing mission sees Forces personnel provide assistance for data entry and biometric screening. (...) Base Gagetown commander Col. Dan MacIsaac said he was "very proud" of the returning soldiers. "It's a fantastic demonstration of the professionalism and agility that we have in the Canadian military and the fact that we are always ready for any missions," he said. Daily Gleaner, A7

Sunny ways won't cure economic woes
An opinion piece states, "Some questions are awkward to ask. Those who raise them risk being accused of hateful intentions. News this week that several Ottawa agencies are calling for a pause in this city's refugee flow has to raise the question of whether we have tried to do too much, too quickly, to meet a target founded in politics and hope, not realism and numbers. More than 11,300 Syrian refugees have arrived in Canada since November, including more than 500 here in the capital. The bulk of the initial wave has been privately sponsored. Local aid agencies say they are already experiencing a service bottleneck, though temporary, for those refugees. What's coming next is a larger, governmentassisted wave. That is also expected to challenge language and other support services. The assistance to Syrians that Canada and, more locally Ottawans, are offering is admirable and heartfelt. It has been good to see. But to bring families into a new life, to have them properly acclimate to our city and country, takes resources and support. Strained services and inadequate supports won't serve Syrian families and newcomers who are desperate not only for a safe haven, but for place where they can prosper and thrive. Let us make sure that we, as a city, get this right." Ottawa Sun, A12

Canada should look after poor, not refugees
A letter to the editor states, "In response to Liz Wall's letter to the editor Jan. 13, about blasting the prime minister on his refugee policies; Ms. Wall, if we people don't speak up against unwise or unfair policies made by government, who will? The prime minister promised to have 25,000 refugees from Syria in Canada by Jan. 1, 2016, and backtracked when it was said it couldn't/shouldn't be done so quickly, especially if security was to be maintained. It has also been reported that not a single applicant who has been screened to come to Canada has been refused refugee status. Canadians were right and the prime minister was wrong." Times & Transcript, A8

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Le fédéral passe à la traduction automatique**
Le fédéral installera un nouvel outil de traduction automatique sur les postes de travail de tous ses fonctionnaires, dès le 1er avril prochain. Mis au point dans le cadre du projet de modernisation du Bureau de la traduction, le nouveau logiciel de traduction est déjà utilisé par un groupe restreint de 200 fonctionnaires dans le cadre d'un projet pilote lancé l'an dernier. Il doit remplacer d'autres outils déjà disponibles sur le marché, dont Google Traduction, afin d'améliorer la compréhension et la traduction de courtes communications internes non officielles. Le projet est toutefois source d'incertitude et d'inquiétude pour les employés du Bureau de la traduction, qui emploie de nombreux traducteurs, interprètes et terminologues. Son arrivée fait craindre une détérioration de la qualité des traductions, alors que les effectifs sont déjà décimés par les compressions imposées ces dernières années sous le gouvernement conservateur. En juin 2015, la présidente de l'Association canadienne des employés professionnels (ACEP), Emmanuelle Tremblay, exprimait l'inquiétude de ses membres face à ce nouvel outil dans une lettre adressée à Donna Achimov, la pdg du Bureau de la traduction. Dans sa missive, la présidente de l'ACEP disait craindre que la «machine à traduction» vienne «souiller» la réputation de l'institution, alors que des traductions de piètre qualité risquent désormais de porter son sceau. Le Droit

*** Heures sombres pour le Bureau de la traduction**
Le Bureau de la traduction du gouvernement fédéral traverse des temps difficiles. Alors que le premier ministre Trudeau s'est engagé à ce que tous les services soient offerts «en parfaite conformité» avec la Loi sur les langues officielles, des sources décrivent le Bureau de la traduction comme un «champ de ruines», miné par des réductions de personnel et l'incertitude crée par le lancement du nouvel outil de traduction automatique. «Le moral des employés est à son plus bas et les conditions de travail deviennent intenables. Certains traducteurs font 80 heures supplémentaires par mois; les traducteurs compétents cherchent désespérément un autre emploi. Les épuisements professionnels se multiplient. Bref, c'est l'hécatombe. Une situation alarmante qui ne semble pas inquiéter le gouvernement Trudeau, qui a bien d'autres chats à fouetter», raconte un traducteur dans une lettre transmise au Droit. La dirigeante du bureau, Donna Achimov, a été nommée par le gouvernement conservateur. Bilingue, elle

se serait entourée d'une équipe de gestionnaires dont le niveau de bilinguisme serait «variable» - l'anglais étant la langue le plus souvent utilisée par la direction, selon nos sources. Le Droit

*** Outdated, understaffed system causes pension delay for reservists**
Senior officials in the Canadian Armed Forces say reservists are waiting too long to receive their first pension cheques because the human resources computers and processes at National Defence are outdated and the department has been understaffed. But they say the system is being streamlined, more administrative personnel have been being hired and the military is moving to faster and more modern technology, which should resolve the problems over the next two years. Globe and Mail, A1

OTHER / AUTRE

Ottawa says it won't grant Canadian citizenship to imprisoned Saudi blogger
The Trudeau government says it won't grant imprisoned Saudi blogger Raif Badawi Canadian citizenship, arguing this would not help the case of a man sentenced to 1,000 lashes and 10 years in jail for blasphemy. Mr. Badawi's spouse and their three children were granted sanctuary in Canada last year and now live in Sherbrooke, Que. Ensaf Haidar, speaking to The Globe and Mail last week, said Canada must do more to help her husband and said "the first thing" it could do now is give Mr. Badawi a Canadian passport. She argued Canadian citizenship would give Ottawa more standing to push for his release. Foreign Affairs Minister Stéphane Dion disagrees. Speaking after a cabinet retreat in southwestern New Brunswick on Tuesday, he said he doesn't believe Canadian citizenship would improve Mr. Badawi's situation. "As a way to release him, it may not be very helpful because Saudi Arabia does not recognize dual citizenship," he said. "We don't think this would be an additional reason for them to consider to release him." Mr. Dion said the government of Quebec has pledged to give Mr. Badawi sanctuary if he is set free. Globe and Mail, A4

Defence minister says anti-ISIL meeting one of many
Canada again finds itself on the outside looking in when it comes to a gathering of countries fighting militants in the Middle East, something the new defence minister is trying to shrug off in the face of opposition criticism. There are meetings all the time to discuss threats around the world, Harjit Sajjan insisted Tuesday, but he stopped short of explaining exactly why Canada isn't invited to this week's meeting in Paris. Counterparts from France, the U.K., Germany, Italy, Australia and the Netherlands will gather Wednesday with U.S. Secretary of Defence Ashton Carter to discuss the ongoing fight against the Islamic State of Iraq and the Levant. Defence sources and at least one defence analyst say there may be more to the fact the Trudeau government was excluded than the domestic political outrage suggests. Officials at NATO and the European Union are seized with ISIL's expanding presence in Libya. U.S. commandos were recently looking for allies among local militias to counter the extremist influence, but met with little success, according to published reports. Canadian Press (Times & Transcript, B4, Times Colonist, Whig-Standard, Toronto Sun, Edmonton Sun, Ottawa Sun, Calgary Sun); La Presse canadienne (Le Droit, 19, Acadie Nouvelle, Le Devoir); * La Presse (Le Quotidien, 18, Le Soleil, La Voix de l'Est); * Journal de Montréal, 30 (Journal de Québec)

*** Ottawa travaille au rapatriement des corps des victimes**
Quatre jours après les attentats terroristes d'Ouagadougou, le gouvernement du Canada ignore toujours quand les corps des six victimes québécoises seront rapatriés. «Nous sommes présentement en discussion avec les familles des victimes pour les détails du rapatriement. Le moment où les corps pourront quitter le pays pour revenir au Canada dépend des autorités du Burkina Faso», a indiqué François Lasalle, porte-parole du ministère des Affaires mondiales, qui ignorait également pourquoi les autorités de ce pays d'Afrique n'avaient pas encore libéré les corps. De son côté, Adam Barratt, porte-parole du ministère des Affaires étrangères, a affirmé à La Presse Canadienne que les ressources du Ministère seraient utilisées pour aider les familles et rapatrier les corps le plus rapidement possible. M. Lasalle a aussi indiqué qu'il y avait des progrès dans l'enquête sur les attentats qui ont coûté la vie à Yves Carrier, sa fille Maude, son fils Charlelie, sa femme Gladys Chamberland ainsi qu'à leurs amis Louis Chabot et Suzanne Bernier. «Tout ce processus est géré par les autorités du Burkina Faso.» Quant à l'identification des corps, M. Lasalle a indiqué que 28 des 30 corps avaient été identifiés. «Il en reste deux

à identifier et nous attendons le communiqué de la procureure à cet effet. Cependant, nous n'avons aucune indication à l'effet que ces personnes pourraient être canadiennes. Toutes les victimes canadiennes ont donc été identifiées.» Quatre des six ou sept terroristes ayant participé aux attentats ont été confirmés comme étant décédés par les autorités locales. Les attentats ont été revendiqués par l'organisation terroriste algérienne Al-Qaïda au Maghreb islamique. Le Soleil (Le Nouvelliste, 20, La Tribune, Le Quotidien, Le Soleil) (2016-01-20); la Presse (2016-01-19)

* **Justin Trudeau to talk up Canada when he takes stage at Davos**
Prime Minister Justin Trudeau makes his debut Wednesday at the annual gathering of the global super elite in this Alpine ski resort that plays host to the World Economic Forum. Mr. Trudeau is expected to be a popular attraction, with meetings scheduled with billionaire investor George Soros and the chief executive officers of Facebook and Microsoft. The annual events draws rich tycoons, the political elite and movie stars such as Leonardo DiCaprio. Mr. Trudeau has already made headlines and attracted buzz around the world. He will deliver a keynote speech to the main forum Wednesday, and is expected to talk up the benefits of investing in Canada and to explain the country has more to offer the world than oil and gas. Globe and Mail

*** How can the Liberals leave others to defend our national security?**
An opinion piece by John Ivison states "Tuesday, October 7, 2014 will go down as a day of ignominy for the Liberal Party of Canada. For crass electoral reasons, the party voted that day against the Conservative motion to send CF-18 fighters to join the coalition arranged against the barbarians of the Islamic State, the militant group who, at the time, were knocking at the gates of Baghdad. Calculating that the war would become unpopular, particularly in Quebec, the Trudeau Liberals locked themselves into a position advocating a "military role of a non-combat nature." That they still haven't found a face-saving way to fix that blunder is now Canada's disgrace. Camille Carrier, the mother of Maude Carrier, who was killed in a terror attack by Islamic fundamentalists in Burkina Faso on Friday, said she is ashamed of Canada. "I have plenty of friends in France who are ashamed of us," she said, as she called for military action against jihadist forces." * **Pakistan attacks: at least 30 dead in terror raid at Bacha Khan University**
A group of militants has stormed a university in north-west Pakistan, killing at least 30 people and leaving dozens injured. The gunmen entered Bacha Khan University in Charsadda, Khyber Pakhtunkhwa province, at about 9.30am (4.30am GMT), apparently using the cover of thick morning fog, and opened fire on students and teachers in classrooms and accommodation blocks. A gun battle ensued between the attackers and Pakistan security forces, with television footage showing soldiers entering the campus as ambulances lined up outside the main gate and anxious parents consoled each other. After several hours the army said four attackers had been killed and that a clearance operation had ended. At midday local time a provincial minister said 30 people had died, though unverified reports from witnesses suggested that number could rise. Naseer, a 23-year-old student, said he counted more than 50 bodies and saw gunmen shooting male and female students "without discrimination". TheGuardian.com

MINISTER / MINISTRE

Surveillance - Ottawa a laissé filer les informations des Canadiens
Les espions des réseaux électroniques du pays ont non seulement épié des Canadiens, mais ils ont en outre partagé des informations sur ces citoyens avec leurs alliés, a révélé le commissaire chargé de surveiller leurs opérations. L'incident -- " involontaire " -- a été décelé fin 2013... mais n'a été dévoilé au grand jour que deux ans plus tard. Il aura fallu attendre le rapport annuel du commissaire surveillant les activités du Centre de la sécurité des télécommunications (CST) pour apprendre jeudi que l'organisme a transmis certaines métadonnées de Canadiens à ses alliés sans que ces informations soient " adéquatement protégées ". " Aucun nom " n'a été transmis aux partenaires du Canada et les données " en soi ne comportaient pas assez d'information pour mener à l'identification d'un Canadien ", a insisté un fonctionnaire du CST en présentant les conclusions du rapport du commissaire Jean-Pierre Plouffe (...) Le **ministre de la Sécurité publique, Ralph Goodale**, a tenu à rappeler que le gouvernement libéral ***" a entrepris une révision complète du cadre de renseignement et de sécurité*** ". L'objectif : s'assurer que les agences parviennent à protéger les Canadiens, tout en respectant leurs droits et libertés, a-t-il résumé. ***" Et cette révision amènera un lot de changements.*** " Mais les libéraux ont refusé d'indiquer s'ils serraient la vis à l'espionnage de ressortissants canadiens. Le Devoir, A1

CSIS got taxpayer data without warrants
The Canadian Security Intelligence Service repeatedly obtained taxpayer information from the Canada Revenue Agency without presenting a courtapproved warrant for the data. That revelation was among

several concerns raised in the latest annual report of the Security Intelligence Review Committee, which monitors CSIS compliance with law and policy. The report tabled Thursday said the spy service must do more to ensure insiders don't pilfer secret material. It also urged CSIS to inform the Federal Court how it uses metadata - the telltale digital trails that accompany messages and phone calls - collected from cyberspace. The findings came the same day the watchdog over the Communications Security Establishment, Canada's electronic spy agency, found the CSE had improperly shared metadata about Canadians with key foreign allies. The reports prompted the NDP to express concern about erosion of civil liberties. **Public Safety Minister Ralph Goodale** said the federal government is embarking on a comprehensive review of Canada's national security and intelligence framework with the twin aims of effective security and respect for rights. Far from being an isolated incident, there were "multiple instances" of a CSIS regional office getting warrantless access to taxpayer data from the federal revenue agency, the review committee said in its report covering the 2014-15 fiscal year. Questions about the practice were first raised by the Federal Court, prompting CSIS to ask the review committee to look into the matter. Canadian Press (Times Colonist, A8)

Service gathered tax info

The Canadian Security Intelligence Service repeatedly obtained taxpayer information from the Canada Revenue Agency without presenting a court approved warrant for the data. That revelation was among several concerns raised in the latest annual report of the Security Intelligence Review Committee, which monitors CSIS compliance with law and policy. The report tabled Thursday said the spy service must do more to ensure insiders don't pilfer secret material. It also urged CSIS to inform the Federal Court how it uses metadata-the telltale digital trails that accompany messages and phone calls-collected from cyberspace. The findings came the same day the watchdog over the Communications Security Establishment, Canada's electronic spy agency, found the CSE had improperly shared metadata about Canadians with key foreign allies. The reports prompted the NDP to express concern about erosion of civil liberties. **Public Safety Minister Ralph Goodale** stressed the Liberal government was embarking on a comprehensive review of Canada's national security and intelligence framework with the twin aims of effective security and respect for rights. Far from being an isolated incident, there were "multiple instances" of a CSIS regional office getting warrantless access to taxpayer data from the federal revenue agency, the review committee said in its report for 2014-15. Questions about the practice were first raised by the Federal Court, prompting CSIS to ask the review committee to look into the matter. Canadian Press (London Free Press, B3, Toronto Star, iPolitics)

Senators demand role on national security committee

A leading senator is voicing concerns over what role the Senate will play on the Liberals' planned committee of parliamentarians responsible for reviewing the legality and effectiveness of Canada's national security activities. The government wants legislation enacted by June creating an "all-party committee of parliamentarians," to be chaired by Liberal MP David McGuinty. It's an oversight move meant to fulfil a key election promise and set the stage for the Liberals' promised overhaul of the Anti-terrorism Act of 2015, otherwise known as Bill C-51 (...) The committee would be sworn to secrecy, reporting to the prime minister and through him to Parliament. It would have a full-time staff, access to the necessary secret information and be tasked with strategic oversight of every government department and agency that has national security responsibilities. McGuinty, who represents Ottawa South, has declined requests for an interview. **Public Safety Minister Ralph Goodale's** office was no more forthcoming Thursday. ***"The government has committed to create an all-party committee with special access to classified information to review departments and agencies with national security responsibilities,"*** **Scott Bardsley**, **spokesman for Goodale**, said in a statement. ***"The minister's objective is to introduce legislation to do so before the summer. Work is ongoing and we have no further details to announce at this time."*** He wouldn't say if senators will be given seats on the committee. But Wesley Wark, a University of Ottawa security and intelligence expert, said the understanding is that Senate involvement "would be important to assist in the continuity of work of such a committee and to provide for additional expertise." Postmedia News (Ottawa Citizen, A6)

*** Canada Halts Sharing 'Top Secret Data' with Five Eyes**

Canada has stopped sharing secret spy information with a number of countries including the United States. The decision was made after Canada's spy agency discovered that its US counterpart, National

Security Agency, had shared personal details of a number of Canadians. Canada said the Communications Security Establishment failed to hide the metadata of Canadian citizens before sharing it with international partners. Canada is one of the "Five Eyes" intelligence sharing network. The other countries are Australia, New Zealand, the UK and the US (…) CSE said in a report to parliament on Thursday that the unintentional breach had been revealed internally in 2013. According to a CSE official, the blame goes to a software flaw which resulted in exposing personal details of Canadian citizens. According to **Public safety minister Ralph Goodale**, the allies have been ***"very supportive***" as CSE decided to halt information sharing. The Guardian reports that it is illegal to spy on Canadians even though CSE does keep an eye on some while investigating other targets. Australia Network

Teachers across Sask. to mark moment of silence for La Loche
Educators across the province are planning to participate in a show of support in response to the shooting in La Loche last week. While students in Saskatoon's two major school divisions won't be in classes Friday morning, teachers and staff across the city will be observing a moment of silence to honour those killed in the northern Saskatchewan community. The moment of silence at 9 a.m. on Friday was organized by the Federation of Saskatchewan Indian Nations. La Loche, approximately 600 kilometres northwest of Saskatoon, was the scene of multiple shootings on Jan. 22 that left four people dead and seven people wounded.(http://thestarphoenix.com/news/crime/la-loche-struggles-with-why) A 17-year-old boy is accused of shooting and killing Dayne Fontaine, 17, and Drayden Fontaine, 13, in a home in the town before going to the Dene High School in La Loche, allegedly killing 21-year-old Marie Janvier and 35-year-old teacher Adam Wood and wounding seven others. The 17-year-old cannot be named under the Youth Criminal Justice Act. The tragedy has thrust the remote Dene community into the national spotlight and drawn strong support for the community from around the province. Greg Chatlain, director of education with Greater Saskatoon Catholic Schools, said roughly 1,900 teachers and staff across the division will be participating in the moment of silence and conducting a group prayer on Friday. "We have staff and families that are related to and are friends of families in La Loche that have been very impacted by the event," Chatlain said. La Loche Mayor Kevin Janvier, left to right, Saskatchewan Premier Brad Wall, federal **Public Safety Minister Ralph Goodale** and MP Georgina Jolibois lay flowers at a makeshift memorial in La Loche on Jan. 24, 2016. Postmedia News (StarPhoenix) (2016-01-29); * CBC News (2016-01-28)

*** Trudeau to visit La Loche on Friday**
Prime Minister Justin Trudeau will travel to La Loche one week after the school shooting that plunged the northern First Nations community into shock. The Prime Minister's Office announced Thursday morning that Trudeau will travel to the town of about 3,000 people on Friday. The visit had been expected since federal **Public Safety Minister Ralph Goodale** visited La Loche on Sunday and told reporters that Trudeau intended to make the trip. The prime minister has been in Ottawa this week for the first session of Parliament of the new year. Toronto Star (Our Windsor) (2016-01-28)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Le virus Zika est inévitable au Québec, dit Barrette**
Le ministre de la Santé Gaétan Barrette confirme que le virus Zika, qui a notamment infecté trois voyageurs canadiens, est «inévitable» au Québec. À sa sortie du premier nouveau Conseil des ministres, hier, M. Barrette s'est tout de même voulu rassurant, qualifiant le virus Zika de «cousin» du virus du Nil occidental. «On a le virus du Nil au Québec et comme on peut le voir, ce n'est jamais devenu une situation dramatique, a-til expliqué. Le taux de mortalité du virus du Zika est plus faible que celui du Nil, c'est un virus qui est moins agressant. Le vrai enjeu est celui de ses effets sur les femmes enceintes. » Agence QMI (Journal de Québec, 30 ; Journal de Montréal)

*** WHO to decide if Zika is health emergency**
On Thursday, the World Health Organization announced it will hold an emergency meeting on the Zika virus, which is "spreading explosively" and "strongly suspected" of causing a surge in birth defects across Brazil...There are also increasing reports of tourists getting infected and bringing the virus home,

including to Canada, where three cases have been confirmed so far. Two were diagnosed in B.C. and a third in Alberta, with travel histories to either Colombia or El Salvador. All three have since recovered. While Zika's threat to Canadians remains low, the Public Health Agency of Canada is recommending that pregnant women - and women who plan to become pregnant - avoid travel to Zika-affected countries. Canadian Blood Services will also start turning away donors who have visited high-risk countries. The agency already prohibits blood donations from people who have recently travelled to malaria-endemic countries. Toronto Star, A4; Globe and Mail, A3

* **Zika virus 'spreading explosively' through Americas - Canada considered safe as transmitting mosquitoes have not yet arrived**
The mosquito-borne Zika virus is "spreading explosively" in the Americas and will soon be in all but two countries, Canada and Chile, the head of the World Health Organization says. Canada enjoys a "biological barrier" to widespread transmission of the virus, according to Dave Patrick, a physician and epidemiologist at the University of B.C. "The particular mosquitoes that are capable of transmitting the virus are not here," he said. "We've got to keep looking out for them and make sure there isn't a northward migration." Canadian Press (Vancouver Sun, A1/Front)

* **Northern Alberta town on alert after rise in water levels on rivers**
The northern Alberta town of Peace River is on a "green alert" after a rise in river water levels earlier this week. Alberta Environment and Parks Public Affairs officer Jason Penner stresses that right now it's a watch and not a warning. Canadian Press (Daily Star, 12)

* **NOVA SCOTIA**
Nova Scotians are hunkering down for another winter storm that could bring as much as 25 cm of snow to central and northern parts of the province on Friday. Chronicle Herald, A4

* **Tempête : jusquà 40 cm de neige prévus par endroits en Atlantique**
Les résidents de plusieurs régions des provinces de l'Atlantique vont devoir ressortir leur pelle, car d'importantes chutes de neige sont prévues vendredi et samedi. Le sud-est du Nouveau-Brunswick et presque toute l'Île-du-Prince-Édouard devraient recevoir de 15 à 20 cm de neige à compter de vendredi après-midi, selon Environnement Canada. Jusqu'à 40 cm sont prévus sur le comté de King à l'Île-du-Prince-Édouard. Radio-Canada ; Charlottetown Guardian, A2

* **Blacks Harbour residents fed up with power outages**
The village of Blacks Harbour is calling for a special meeting with the president of the NB Power, saying the community is experiencing an unusually high number of power outages this winter. Heather Chase, the village's chief administrative officer, says Mayor Terry James has received so many calls with complaints she wants a face-to-face meeting with the head of the utility. CBC News

* **Residents demand end to sewer backups**
Thompson Avenue residents say that the sewer backs up into their homes whenever a heavy rain and high tide come at the same time. Sherry Currie spoke on behalf of a delegation at Monday night's town council meeting, stating that sewers started backing up on a semi-regular basis since the major flood that hit Charlotte county in December 2010. Telegraph-Journal, B4

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Spy agency broke privacy law by sharing info, watchdog says
Canada's secretive electronic spying agency realized in 2013 it was breaking domestic privacy rules by transferring Canadians' data to allied countries, but the government kept the mistake under wraps for two years. The transfers were discovered by the spy agency, the Communications Security Establishment, at a time when the questionable practices of national security agencies were being revealed by U.S. whistleblower Edward Snowden in 2013. The agency said it quickly informed the defence minister at the time, as well as the watchdog that reviews its operations. Rob Nicholson, who was Conservative defence

minister when the transfers were discovered, could not be reached for comment Thursday (...) But metadata may not be as innocuous as it sounds. The former head of the National Security Agency, CSE's American counterpart, famously pointed out that the U.S. kills people based on metadata. CSE describes metadata as the "context" of Internet and telephone data, not the "content." Toronto Star, A1; Canadian Press (London Free Press, B1/Front, Times Colonist, Times & Transcript, Red Deer Advocate, Chronicle Herald, National Post, Waterloo Record, Ottawa Sun, Toronto Sun, Winnipeg Sun, StarPhoenix, Windsor Star, Gazette, Leader-Post, Calgary Herald, Edmonton Journal, Edmonton Sun, Whig-Standard, calagary Sun, Hamilton Spectator, Daily Gleaner); Globe and Mail, A1; * La Presse canadienne (Le Droit, 32); * La Presse canadienne (Le Nouvelliste, 24); * Journal de Québec, 25 (Journal de Montréal); * Journal de Québec, 25; * Agence France-Presse (Le Devoir)

*** Kurdish allies terrorists under Canuck law?**

The notion that Canadian volunteers fighting with Kurdish forces in northern iraq and Syria could face prosecution under the former Conservative government's tough anti-terror laws has one human rights group calling for stricter supervision of the country's military training mission. A secret "Canadian Eyes Only" analysis of the Kurdish peshmerga, prepared by Transport Canada's intelligence branch, warns there are some factions of the militia group that are designated as terrorist entities under federal law. "Any Canadians claiming to have links to organizations such as the People's Worker Party (PKK) are likely to become the subject of Canada's antiterror legislation," says the report to the department. The assessment comes to light following an amnesty international report last week that accused peshmerga forces of bulldozing, burning and blowing up arab villages in apparent retaliation for supporting islamic State of iraq and the Levant. Canadian special forces are training Kurdish fighters, and the Trudeau government is preparing to significantly increase the size of that commitment. Canadian Press (Ottawa Sun, A9, Toronto Sun, Winnipeg Sun, Calgary Sun, Province, Windsor Star, Leader-Post, Vancouver Sun, Calgary Sun, Ottawa Citizen, Whig-Standard, Edmonton Sun); * Times & Transcript, B3

*** Privacy report reinforces need for overhaul**

To learn that our digital surveillance agency broke privacy laws by revealing information about Canadian citizens to our allies is one thing. To learn that the Conservative government of the day, when apprised of this security breach, withheld the information from Canadians, is quite another. But that is where we are today, after learning of a major invasion of Canadian privacy more than two years after the fact. If our spy agencies, aided and abetted by the government of the day, wanted to fuel suspicion of internal surveillance in this country, they succeeded. If they wanted to ratchet up distrust, they scored. This despite an effort Thursday to get ahead of this story with the first-ever background briefing for journalists from an official with the Canadian Security Establishment (CSE) - only 26 months after a software glitch was discovered that was sending metadata on Canadians to our Five Eyes allies without the proper scrubbing to hide identities. How many Canadians? We don't know. What did the allies do with the information? We are only left with the assurances of Defence Minister Harjit Sajjan that our relationship with those allies, including the U.S. National Security Agency, was "solid" and they wouldn't take advantage of an honest mistake. Toronto Star, A12

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Hells Angels turfed from Hamilton haunt

A visiting Hells Angels member from Europe has been detained under a rarely used section of the Immigration Act after a landlord evicted the Hamilton chapter from its clubhouse for non-payment of rent. A bailiff, aided by 10 officers from the Hamilton Police Service and OPP Biker Enforcement Unit (BEU) drilled through the front door of Hells Angels' rented and fortified bunker at the corner of Gage Avenue North and Beach Road Thursday morning. The clubhouse is used by the Hells Angels motorcycle club as well as their puppet club, the Red Devils, according to Det. Staff Sgt. Len Isnor, the OPP officer in charge of the joint-forces BEU. (...) Police were there "to ensure public safety and keep the peace during the proceeding," according to Const. Steve Welton, Hamilton police media officer. He added that the eviction went smoothly and Hamilton police are "not conducting any criminal investigations there." However, the only person inside the clubhouse when the bailiff and police arrived was arrested by the Canada Border Service Agency (CBSA), Isnor said. Lawyer Jaime Stephenson, speaking on behalf of the

club, said the man - whose name was not revealed - would be "returning to Germany on his scheduled flight" Thursday evening. The man was visiting from Europe and is a "prospect member" of the Hells Angels, Isnor said. Under Section 37 of the Immigration and Refugee Act, any foreigner who comes into Canada and is part of a recognized criminal organization can be arrested - even if they do not have a criminal record, he said. Typically, a detention review hearing must take place within 48 hours of someone being taken into custody, said a CBSA spokesperson, who added that specific charges under the act "are not in the public domain" until a hearing takes place. (...) "Usually we don't have foreign (Hells Angels) in Canada," Isnor said, because most of the time, border agents nab organized crime members before they are able to enter the country. But in this case, the man is not yet a full-fledged Hells Angel and so may have slipped past them. Waterloo Region Record, B4 (Hamilton Spectator)

New cargo hub slow to bring in tenants
Progress on a cargo hub at Windsor Airport is behind what was suggested in a 2010 study commissioned by the city, and the one tenant so far is getting a "sweetheart deal" with rental rates, according to a former city councillor. Alan Halberstadt voted for the deal when he was on council, but now says he wouldn't have if he had been given details he recently received through a freedom of information request. The documents include the rental deal FedEx has with the city for being the first tenant in the $16.8-million cargo hub building. (...) The Institute for Border Logistics and Security, a partnership between the City of Windsor and the University of Windsor, will occupy 10,000 square feet. The city will also continue seeking tenants for the facility's remaining 27,000 square feet. "The cargo-hub development at the airport offers huge potential for employment and economic generation to the city of Windsor," Mayor Drew Dilkens said this week. (...) Windsor Airport is its own success story, going from a drain on city taxpayers to last year for the first time providing the city with a $1 million dividend. The same is expected this year. But as successful as Windsor Airport has become, with new airlines and destinations and an increasing number of passengers, it's still not enough for another thing that was supposed to give Windsor an edge with a new cargo hub: U.S. border pre-clearance. Former American ambassador to Canada James Blanchard was even hired to lobby Washington on the idea years ago, though little came of it. Still, Dilkens hopes with a new Canadian government in power, U.S. pre-clearance could one day become a reality. Either way, he sees good things coming. Windsor Airport is flying. And the longwished for cargo hub is about to start, with a global brand in FedEx. Windsor Star, A1/Front

The man without a country
The Supreme Court of Canada doesn't want Deepan Budlakoti either. On Thursday, the country's top court declined to hear the case of Canada's "stateless" man, whom the government has been trying to deport for years. "I'm stateless in the country I was born in - what am I supposed to do?" Budlakoti said in a statement released by his supporters. "I will continue to fight, no matter how many court challenges I have to launch." Budlakoti, 26 , was born in Canada, holds an Ontario birth certificate and was issued a Canadian passport. The government, however, says he is not a citizen and began trying to deport him since he was convicted of drug and firearms trafficking in 2010. (...) Budlakoti's immigration lawyer Yavar Hameed said Budlakoti's final plea to avoid deportation is before the United Nations Human Rights Committee and backed by the Canadian Civil Liberties Association. (...)The courts have said Budlakotih as a number of options open to him, including asking for Canadian citizenship or seeking Indian citizenship - avenues that have been open to him for years, but which he has never explored. India says they have no record of his citizenship and has refused to issue him a travel document. A Canadian citizenship application would likely be marred by his criminal convictions. Ottawa Sun, A3 (2016-01-29); * CBC News (2016-01-28)

*** André-Michel Boyer : Recherché pour meurtre au premier degré et outrage envers un cadavre**
MISE À JOUR: Il s'est livré de lui même cet après-midi aux enquêteurs de la Section des crimes majeurs du Service de police de la Ville de Montréal, moins de 24h après la diffusion de l'avis de recherche dans les médias. L'information a été confirmée à 15h35 par le SPVM. André Michel Boyer rencontre présentement les enquêteurs. (...) Les enquêteurs cherchent à localiser le suspect qui se serait rendu au Costa Rica et en Asie avant de revenir au Canada, le 11 janvier 2016, selon l'Agence des services frontalier du Canada. Un mandat d'arrestation pan–canadien a depuis été émis envers André Michel Boyer pour meurtre au 1er degré et pour outrage envers un cadavre. Zone 911 (2016-01-28)

Border officers seize marijuana
U.S. border officers at the Ambassador Bridge seized 76 pounds of marijuana Wednesday that was hidden in a truckload of auto parts. Customs and Border Protection said a 56-year-old truck driver arrived at Detroit's Fort Street cargo facility with a load of auto parts. After the driver declared the auto parts, an officer decided to put his truck through an X-ray inspection. The X-ray revealed "unusual shapes" in the back of the trailer. Officers broke the seals on the trailer and opened it up. They allegedly found two duffel bags stuffed with 68 bundles of marijuana. Officers seized the weed and turned the driver over to U.S. Homeland Security Investigations. U.S. Customs and Border Protection said the driver was a member of the Free and Secure trusted trader program. "The Free and Secure Trade program affords low-risk drivers to move through customs between the United States and Canada with minimal delay," said John Nowak, acting port director in Detroit. "Violations will result in immediate revocation and, in this case, prosecution to the fullest extent of the law." Windsor Star, A3

* **Windsor's weather, traffic and gas prices for Friday**
There is up to a 30-minute delay for commercial vehicles entering Canada at the Ambassador Bridge. At the Windsor-Detroit Tunnel there is a 10-minute delay for passenger cars. CBC News

* **Canada Confirms It Will Sign TPP Next Week**
Canada will sign the Trans-Pacific Partnership (TPP) agreement next week at a TPP meeting in New Zealand -- but this doesn't mean the deal is ratified. In an open letter regarding the massive, multi-lateral trade deal, Canada's Trade Minister Chrystia Freeland said Canada will attend next week's meeting in order to remain at the table with the other countries, but Freeland says this will not seal the deal, as more consultation and examination is needed. "Many Canadians still have not made up their minds, and many more still have questions," Freeland said in her letter. "That is why our consultations with the provinces, municipal officials, students, labour leaders and members, business representatives, academic experts, and others are just the beginning of the examination needed to fully understand the TPP's impact." (…) Ron Bonnett, president of the Canadian Federation of Agriculture, thinks this move is a good sign. "I think the government has recognized the negotiated deal was a balance," he says. "We can't be outside the deal. If all of a sudden the United States and Australia — the two main players I'd be worried about — have access to the Japanese market in a preferential way to Canadian producers, we'll be shut out of those markets." Steinbach Online

402 overpass damage leads to charges
Charges have been laid in last fall's collision between a tractor-trailer and an overpass that knocked out a stretch of busy highway near the Canada-U.S. border for several days. Two-way traffic on the Indian Road overpass at Highway 402 in Sarnia resumed only after a temporary fix following the Nov. 23 collision. (…)The 402's eastbound lanes reopened Nov. 26 after the damaged section was removed. The southbound side of the overpass is still awaiting repair. Lambton County has spent $100,000 on a temporary fix to allow overpass traffic to move in both directions. London Free Press, A3

Ottawa yet to conduct on-site inspections under new foreign worker program
The federal government has yet to conduct a single on-site inspection of employers under the new International Mobility Program, which was created as part of a heavily promoted overhaul of the Temporary Foreign Worker Program. In response to controversy, the Conservative government moved in 2014 to split the foreign worker program into two, with the creation of a new International Mobility Program aimed at more highly skilled workers. At the time, the government promised the new offshoot program would include "a robust compliance system, featuring inspections of thousands of employers." Those promised inspections were aimed at ensuring foreign workers received the wages they had been promised and that workplaces were free from abuse. Regulations for the new program came into effect on Feb. 21, 2015. However, newly released data show the enforcement activity has fallen short of the high bar Ottawa promised. (…) However, the 2014 decision to split the TFWP into two parts also created the International Mobility Program. Under that section, employers can bring in a foreign worker without having to prove they were unable to hire locally. The International Mobility Program includes workers who come to Canada under free-trade agreements such as the North American Free Trade Agreement. The flow of cross-border labour under the program is expected to increase, should Canada follow through with two proposed free-trade deals. They include the Comprehensive Economic and Trade Agreement with

the European Union and the Trans-Pacific Partnership agreement, involving Canada and 11 other Pacific Rim nations. Globe and Mail, A4

Escalating lumber exports expected to stir U.S. duties
The boost Canadian lumber exports are getting from the falling loonie is certain to bring out protectionist forces in the U.S. lumber lobby, said the CEO of Quebec-based forestry company Tembec. "I think that they're watching the Canadian dollar drop, particularly in lumber, and they're saying, 'This isn't fair,'" CEO James Lopez said Thursday. While groups such as the U.S. Lumber Coalition didn't complain about the Canadian dollar when it was above parity, Lopez suspects they will use the loonie's slump to argue that American producers are now at a competitive disadvantage, particularly since the Canada-U.S. softwood lumber agreement expired in October. (…) In 2006, Canada and the U.S. signed a nine-year agreement that set aside lawsuits and punitive tariffs against imported wood from Canada. It brought temporary peace in a dispute over whether Canadian lumber businesses receive an unfair subsidy through cheap access to public land. (…)The U.S. Lumber Coalition declined to comment on whether currency fluctuations have changed its view of the trade agreement. But it said it is pushing for a renewed softwood lumber agreement before a so-called standstill period, which prevents the U.S. from bringing trade action against Canadian softwood lumber producers, expires this October. (…) Canadian forestry companies are expected to save tens of millions of dollars this year because export tariffs and duties are no longer payable for one year following the expiry of the softwood lumber agreement three months ago. Canadian Press (Times Colonist, B1/Front, Cape Breton Post)

*** Tomas Tales: Canadian Motor Speedway Traffic Plan gets The Thumbs Up from Big Thumbs!**

Major stakeholders involved in the Canadian Motor Speedway Traffic Management Plan, or the TMP as we call it for short, have given CMS their support and final input on the implementation of what Executive Director Azhar Mohammad calls an "unprecedented document". And that's exactly what it is. The goal of the meeting in St.Catharines this week at The 4-Points Sheraton Hotel, where they make excellent sandwiches, was to get closer to the end of the Ontario Ministry of Transportation's (MTO) final process to approve the CMS TMP with a final review and consensus by those organizations and bodies who will have a hand in the traffic management process for major CMS events. The list of those in the meeting was very impressive. These are the key decision-makers who will ultimately make sure the fan experience, coming from both sides of the border to CMS is a pleasant and safe one. People like The Ministry of Transportation of The Province of Ontario, The Niagara Region, The Town of Fort Erie, The Niagara International Transportation Technology Coalition, Canada Border Services Agency, Department of Homeland Security, and of course The Ontario Provincial Police, The Niagara Regional Police Service, and Niagara Emergency Medical Services. The meeting was really one of the final steps after years of in-depth painstaking discussions with specific agencies responsible for traffic, transit, emergency services, border crossings and the QEW corridor which will service the facility. Sportsnet (2016-01-28); News Talk 610 CKTB (2016-01-28)

*** CLOSEUP: Banner year for Canadian operators**
Let the good times roll. The lower Canadian dollar is encouraging more Americans to visit and more Canadians to stay at home. At Fallsview Casino in Niagara Falls, business has been "solid since the spring of last year" and they have continued to experience measurable growth in the summer and fall of 2015. "January is following the same trend," said director of communications Greg Medulun. The favourable exchange rate and lower fuel costs, he added, is "definitely encouraging more Americans to visit." (…) Last year, a projected $3 billion was spent by tourists on same day and overnight stays in the peninsula's hot spots for travellers. Even so, the body blows to area tourism have been repeated — from the September 11, 2001 terror attacks, to new U.S. passport requirements and the 2008-09 recession. (…) To that end, a falling loony isn't the only positive sign, she said. Americans avoiding trips across the Canadian border now have less reason to do so, with 35 per cent of them now having a required passport, when only 15 per cent did in 2000. Niagara Falls Review (2016-01-28)

*** Guns finally go silent at Chilliwack's RCMP open-air gun range**
Conspicuous in their absence, volleys of gunfire no longer ring out near the Vedder Bridge as regular weekday Rotary Trail users and University of the Fraser Valley (UFV) staff and students have noticed. It was April 2014 when those behind the RCMP's Pacific Regional Training Centre (PRTC) announced $19

million in federal dollars to build the new indoor firing range to replace the open-air range, long the bane of UFV students and faculty, Vedder Crossing residential neighbours and Rotary Trail users. The new range is to be used to train and re-certify RCMP officers as well as agents with the Canada Border Service Agency (CBSA), and is a 4,000-square-metre building with two 16-lane, 50-metre ranges with advanced sound abatement technology. Chilliwack Times (2016-01-28)

Smart, reliable, experienced - and going nowhere
An opinion piece states, "You probably know someone who can figure anything out but doesn't have a Canadian degree or diploma; someone who is smart, well-organized and always comes through in a crunch, but stuck in an entry-level job; someone who could single-handedly improve the productivity of most workplaces but won't get the chance. There are 884,238 people like that in Canada, according to the Conference Board of Canada. They could earn an additional $13.4 billion to $17 billion if their skills, resourcefulness and experience were recognized, the Ottawa think-tank estimates. "Learning recognition systems need to evolve if Canada is to get the most out of its workforce," says Michael Bloom, vice-president of the Conference Board in a report released this week. Ottawa can do a better job of integrating credential recognition into its immigration selection and settlement process. After the 2013 debacle over temporary foreign workers, then-immigration minister Jason Kenney said he would link immigration to the labour market. But the Conservative government made little headway. Post-secondary institutions can accelerate their expansion into countries that produce large numbers of immigrants to Canada (China, India, the Philippines and Pakistan), offering students credentials that Canadian employers will recognize. They can also develop faster and more transparent procedures for assessing the credentials of graduates trained abroad." Toronto Star, A15

*** Organized crime possibility a concern**
A letter to the editor states, "I was interested in the article, "OPP tobacco team launched" (Chatham Daily News, Jan. 27). Indeed, it might be tempting to be able to buy a carton of cigarettes for less than $20, but lots of people don't realize it's contraband. I knew that smoke shops across First Nation communities in Ontario legally sell tobacco products that are both excise taxed and non-taxed. And, as the news story states, non-taxed tobacco products are illegal to buy, possess or distribute without proper authorization. Apparently, smoke shop operators on reserves are supposed to ask for identification when selling untaxed tobacco products. I wasn't aware of the scope of purchasing contraband tobacco until I read this story. And I certainly wasn't aware this is sometimes linked to organized crime. (…)The Ontario Ministry of Community Safety and Correctional Services has announced steps to snuff out illegal tobacco sales, using the OPP, the RCMP, Canada Border Services and international agencies. Apparently drivers could even be questioned about the possession of tobacco products found during traffic stops caused by a Highway Traffic Act offence. It amazes me – and scares me – that a packet of cigarettes could be providing cash for organized crime." Chatham Daily News (2016-01-28)

CYBER SECURITY / CYBERSÉCURITÉ

*** CBC adopts SecureDrop to allow for anonymous leaks**
CBC News is launching a powerful new tool to help those with important information or sensitive documents contact our journalists using encryption and anonymous online messaging. CBC's SecureDrop is a web-based system that allows whistleblowers to confidentially reach CBC journalists, including those who work in investigative units across Canada and on our leading programs the fifth estate, Go Public and Marketplace. CBC News

*** Ministry broke rules, leading to data breach: Privacy czar**
British Columbia's Education Ministry lost personal information pertaining to 3.4 million students when staff breached security policies and misplaced a hard drive with data stretching back 30 years, an investigation has revealed. Privacy Commissioner Elizabeth Denham said in a report released Thursday that the ministry did not secure a portable hard drive when the information was transferred from computer servers in an effort to save on storage costs. Globe and Mail, A5

*** Privacy concerns raised over webcams**
A young child asleep on a couch in Israel. Mourners huddled together at a small funeral in Brazil. An elderly woman stretching in a fitness centre in Poland. All available for anyone to watch via the unsecured webcams overhead. This isn't "1984," it's the world in 2016. Shodan, a search engine that indexes computers and devices rather than information, now allows users to pull screenshots from nanny cams, security cameras and other connected devices around the world that don't ask for a username or password. Canadian Press (Red Deer Advocate, C5)

*** U.S., British spies hacked Israeli air force: reports citing Snowden**
The United States and Britain have monitored secret sorties and communications by Israel's air force in a hacking operation dating back to 1998, according to documents attributed to leaks by former U.S. spy agency contractor Edward Snowden. Israel voiced disappointment at the disclosures, which were published on Friday in three media outlets and might further strain relations with Washington after years of feuding over strategies on Iran and the Palestinians. Reuters (Yahoo! News)

*** Privacy breach a failure of 'executive leadership'**
An opinion piece states, "For the sake of a $14,000 saving in storage costs, the B.C. Education Ministry embarked on a botched data backup scheme that risked breaching the personal privacy of millions of British Columbians. So said Information and Privacy Commissioner Elizabeth Denham Wednesday upon releasing the findings of an investigation launched last fall when the ministry reported it misplaced a computer hard drive containing data on some 3.4 million school students, their families and some teachers..." Vancouver Sun, B6

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** HIV-positive woman didn't infect man**
A Winnipeg woman convicted of aggravated sexual assault after having sex without disclosing she was HIVpositive may have exposed her victim to the virus but it is almost certain he contracted it from somebody else, a judge has been told. Marjorie Schenkels, 27, was found guilty of aggravated sexual assault following a jury trial last year. On Thursday, Schenkels' doctor told court her viral load is so low it is considered "undetectable." That points to another person being responsible for infecting the victim, defence lawyer Ian Histed told Justice Colleen Suche. "The odds here are extremely unlikely that he got the HIV from Ms. Schenkels," Histed said. "This is a case of exposure, not transmission." Crown attorney Manoja Moorthy said jurors could have convicted Schenkels of attempted aggravated sexual assault if they believed someone else had infected the victim. "We are asking the court to make the inference the jury did find (the victim) contracted HIV from Ms. Schenkels," Moorthy said. Histed is asking Suche to grant Schenkels a suspended sentence while the Crown is recommending a sentence of five years in prison. With medication, HIV is much more manageable than it once was. Still, "it's not the consequences only that we have to look at, but the moral blameworthiness (of the accused)," Moorthy said. In a police interview video played at her trial, Schenkels admitted she should have disclosed her diagnosis to the now 38-year-old victim but said she was "in denial." "I was still pretending I didn't have it and I continued to pretend I didn't have it until a few weeks ago," Schenkels told Gimli RCMP in the May 2012 video. Postmedia Network (Winnipeg Sun, A12)

*** Un influent motard trouvé coupable 23 fois**
Un influent motard de terrebonne dont la tête vient d'être mise à prix par la mafia italienne a subi un cuisant échec, hier, au terme d'une saga judiciaire de presque dix ans.Sergio Piccirilli, un ami de longue date du chef présumé des Hells Angels, Salvatore Cazzetta, a été déclaré coupable de 23 chefs d'accusation par la juge Marie- Suzanne Lauzon. Entre 2005 et 2006, l'homme de 56 ans a trempé dans le trafic de méthamphétamine, de cocaïne et de cannabis, en plus de comploter en vue de l'importation de produits servant à fabriquer des speeds dans un laboratoire clandestin à Laval. Des verdicts de culpabilité pour gangstérisme et possession illégale d'armes prohibées -dont une carabine semi-automatique et des silencieux -ont aussi été rendus contre ce membre fondateur des Devils Ghosts, un clubécole des Hells Angels. Piccirilli comptait parmi les 36 suspects appréhendés par la GRC lors du projet d'enquête Cléopatre, en juin 2006. Journal Montreal, 14

*** Fraud probe evidence raises**

Interviews conducted by B.C. Securities Commission investigators and read into evidence in a securities commission fraud hearing against Ayaz Dhanani reveal a complex real-estate transaction with connections to alleged fraud and organized-crime players. This raises big concerns about Vancouver's property market and the B.C. Real Estate Act. In late December 2014, Vancouver realtor Liang Ming Wei walked into the frenetic dining hall of Floata in Chinatown. With hundreds of diners and waiters racing around with steaming plates of dim sum, the Keefer Street restaurant was perfect for an obscure transfer. Wei had arranged for three million yuan to be deposited in a Chinese bank and transferred to a Richmond currency exchange. Exchange owner Tony Xu called Wei and told the realtor his client's cash had arrived and it was converted to $521,470 Canadian. It was 10 times the legal amount individuals are allowed to transfer from China. And it was 50 times over the $10,000 limit that must be reported under Canada's antimoney-laundering laws. Instead of having Wei come to his Richmond location to pick up the cash, Tony Xu said it was better for the realtor to meet his brother Frank Xu in Vancouver. Wei's client, Zhongyun Zhang, a Chinese transportation professional, had come to Vancouver in August 2014 and set up a Bank of Montreal account with Wei's help (...) In 2011 Cheng was arrested and charged in Calgary with three others in a joint, organized-crime fraud investigation involving the Calgary Police Service and the RCMP Commercial Crime section. Calgary's economic crime unit said the four were part of "a commercial enterprise" of "organized" cells sent from B.C. to Alberta to steal cash advances from casinos and buy high-end clothing and electronics using counterfeit credit cards. Province, A10

*** Police in no rush to probe Ponzi fraud**

Mismatched priorities: Government cracks down when ICBC is defrauded, but victims of investment scams seldom get justice. The RCMP won't go after a man who bilked more than 100 people out of nearly $12 million, a decision that emphasizes the lack of will to tackle whitecollar crime. The Insurance Corp. of B.C. and the government that owns it prosecute anyone suspected of car insurance fraud, but the authorities rarely give commercial fraudsters the same treatment. Consider that a B.C. Securities Commission panel recently concluded Thomas Arthur Williams and his Global Wealth Creation group of companies committed fraud and raised money illegally with the help of commissioned finders. The panel found that between February 2007 and April 2010, Williams masterminded a Ponzi scheme that fraudulently raised about $11.7 million from 123 investors across Canada and in the U.S. "Instead of investing the funds as Williams represented, investor funds were used to make payments to earlier investors, pay commissions to Williams and to pay money to third parties," the panel concluded. Roughly $4.9 million was returned to investors in makebelieve interest payments on their non-existent investments. Most of the $6 million that vanished, the panel said, was sent to entities controlled by or connected to crooks such as Michael Slamaj, sentenced in 2002 in the U.K. to six years in prison for fraud and possession of fake bonds. Williams, of Surrey, personally pocketed at least $440,000 and ignored the hearing. He did not return calls requesting comment. Vancouver Sun, A2

*** Un citoyen du Nord-Ouest coupable d'avoir poignardé son chien**

Un individu accusé d'avoir poignardé et abandonné son chien a reconnu sa culpabilité face aux accusations de cruauté animale déposées contre lui. Il connaîtra sa sentence le 7 mars. Les incidents reprochés à Marc Couturier, de Saint-Joseph, remontent à mai 2014. Il est accusé d'avoir attaché à un arbre et laissé à l'abandon son chien dans un secteur boisé près du chemin Maxim. Le corps de l'animal était perforé à trois endroits lorsqu'il a été retrouvé. Les plaies ont été commises avec un couteau. Ce sont des passants qui ont découvert l'animal mort et qui ont averti les autorités policières. Dès le lendemain, la GRC, assistée de la Société pour la prévention de la cruauté animale, a demandé l'aide du public et a rapidement obtenu des informations sur qui était le propriétaire du chien. L'individu est passé aux aveux durant son interrogatoire. L'homme âgé de 29 ans a inscrit un plaidoyer de culpabilité lors du début de son procès, jeudi. Il connaîtra sa sentence le 7 mars. Lors d'une comparution antérieure en septembre 2014, il avait reconnu sa culpabilité face à ce méfait. Les deux avocats en cause s'étaient entendus qu'une amende de 2000 $ était la peine appropriée. A ce moment, la juge Brigitte Volpé a dit vouloir consulter la jurisprudence au Canada avant de rendre la sentence. Les réactions à l'amende de 2000 $, que plusieurs estimaient inadéquate, ont été sévères dans les médias sociaux. Acadie Nouvelle, 8

*** Meurtre près de Campbellton**
La GRC continue d'enquêter sur le meurtre d'un homme âgé de 77 ans de Dawsonville. Le 9 janvier, un peu avant 12 h 30, des policiers se sont rendus à une résidence du chemin Restigouche River. Le corps d'Emerson Main a été trouvé à l'intérieur de sa demeure. L'autopsie a permis d'établir que le décès de M. Main est un homicide. La GRC refuse par contre de dévoiler les détails de l'autopsie, à savoir la cause du décès ou encore à quand remonte le décès. La rumeur court que l'homme a été abattu par balle, ce que refusent de confirmer les policiers. La GRC souligne que «les enquêteurs ont fait le suivi de plusieurs pistes en lien avec le décès de M. Main et ils poursuivent l'enquête». «Nous avons reçu des renseignements et nous en faisons le suivi, déclare la gendarme Jullie Rogers-Marsh de la GRC. Nous continuons tout de même à demander aux membres du public de communiquer avec la police s'ils pensent avoir des renseignements qui pourraient aider à élucider le meurtre d'Emerson Main». Quiconque a des renseignements est prié de communiquer avec le Déta-chement de Campbellton au 789-6000. Pour conserver l'anonymat, il est aussi possible de communiquer avec Échec au crime. Si vos renseignements mènent à une arrestation, vous pourriez être admissible à une récompense en argent pouvant aller jusqu'à 2000 $. Acadie Nouvelle, 11

*** RCMP seize meth, cocaine**
Three men face drug trafficking charges after RCMP recovered a stash of cocaine and meth from a Red Deer home. Mounties had been working a drug trafficking investigation on Jan. 14, and raided a home eight days later in the community of Clearview Ridge. They found 217 grams of cocaine, almost 49 grams of meth and $2,100 in cash. They also found two men, who were promptly arrested. While authorities were searching the home, a third man stumbled into the raid in progress. When officers searched him they found nearly a quarter pound of cocaine and $33,547 in cash. He too was arrested. Damon Rhys Meidinger, 22, of Red Deer, and Justin Davis Yakimchuk, 23, of Blackfalds, are charged with possession of stolen property over $5,000 and two counts of possession for the purpose of trafficking. Meidinger was released from custody and Yakimchuk was remanded in custody. Postmedia Network (Edmonton Sun, A38, Calgary Herald)

*** Escaped con fails in hijack attempt**
A 16-year-old B.C boy and tha baby he was travelling with were the victims of a "harrowing" carjacking by an escaped Alberta prisoner earlier this week. Police have released more details into the pursuit of 29-year-old Harley John Lay, a prisoner from Peace River Correctional Facility, who was sprung from police custody on Monday near the Peace River hospital by a masked armed man. A third person driving a white minivan acted as a getaway driver. Police say they first received reports of their whereabouts at around 10:30 a.m. Tuesday after Lay, and one other male suspect, confronted an employee at a Husky bulk fuel plant along the Alaska Highway after running out of gas just south of Fort Nelson, B.C. Northern Rockies RCMP Cpl. Dan Moskaluk says the employee recognized Lay and eventually called police, who set up on the highway and attempted to stop the oncoming van. Moskaluk says officers successfully deployed a spike belt but failed to bring the van to a full stop. "At least one front tire was punctured, and running on its rims," said Moskaluk. Postmedia Network (Edmonton Sun, A11, Edmonton Journal)

Pornographie juvénile
Un jeune de Caraquet a été jugé, jeudi, à Tracadie, pour avoir détenu et distribué sur le web des images pornographiques incluant des enfants, en 2013. Son ordinateur portable contenait près de 6500 photos de ce genre. Il encourt deux ans de prison. Jonathan Laplante, 24 ans, affirme qu'il voulait juste se faire des amis sur internet. C'est pourquoi il leur a envoyé, via les réseaux sociaux, des photos et des vidéos de pornographie juvénile qu'il trouvait sur la toile. D'après lui, ces «amis virtuels» - qu'il n'a jamais rencontrés - le lui demandaient. L'argument a été énoncé jeudi, en cour provinciale de Tracadie, dans le cadre du procès. Il est poursuivi pour possession et diffusion d'images et vidéos pornographiques mettant en scène des enfants. Devant le juge Camille Vautour, il a plaidé coupable. L'avocat de la Couronne, Me Pierre Gionet, a suggéré au magistrat de le condamner à deux ans de prison assortis de plusieurs restrictions. La sentence sera prononcée mardi. Les faits remontent à 2013 lorsque la compagnie Twitter, basée aux États-Unis, détecte qu'un de ces utilisateurs distribue à un groupe restreint d'individus, des photos tout aussi indécentes qu'illégales. Elle alerte les autorités américaines qui s'aperçoivent que le compte est alimenté depuis la Péninsule acadienne. Ces dernières transmettent le dossier aux services

concernés. La GRC ouvre une enquête. Rapidement, Jonathan Laplante est identifié. Le compte Twitter est associé à son adresse courriel et à celle de son ordinateur portable. L'Acadie Nouvelle

Bomb threat at Come By Chance refinery

Operations at the North Atantic Oil Refinery in Come By Chance have returned to normal, following a bomb threat Thursday morning. Clarenville RCMP said in a news release, shortly after 11 a.m., the RCMP, in consultation with management at the North Atlantic Oil Refinery, "have determined that the site is safe. Operations are returning to normal." Police investigators were departing the scene. However, the investigation into the origin of the threat is ongoing. North Atlantic spokeswoman Gloria Slade issued a news release Thursday afternoon. "In consultation with the RCMP, this morning we activated our bomb threat procedure and conducted an extensive search of our refinery site. It has been concluded that this is not a creditable threat. The RCMP is continuing their investigation." The facility's first bomb threat came in October 2015. Support services were also called in at that time, including an explosives disposal team and a police service dog trained in explosives detection, with added help from the refinery security team and Come By Chance and Arnold's Cove volunteer fire departments. Nothing was found in that case, with an all clear given by 5 p.m. the same day. Telegram, A9

Crown witness in murder trial found

A Crown witness sought to testify in the second-degree murder trial of a Cape Breton man has been located in British Columbia. Ashley MacDonald is now expected to be returned to Cape Breton to testify in the trial for Thomas Ted Barrett, 40, of Glace Bay who is charged with the murder of 19-year-old Brett Elizabeth McKinnon. McKinnon, of Glace Bay, was first reported missing in 2006 and her skeletal remains were found in a wooded area near a former dump in 2008. MacDonald is a former girlfriend of the accused and was the subject of a witness warrant issued last week by Justice Robin Gogan, who is presiding over the trial with no jury. Officers with the Cape Breton Regional Police travelled to British Columbia last week in a bid to locate MacDonald. The officers were aided in their search by the RCMP. Neither the Crown nor regional police would confirm Thursday that MacDonald was in custody but other sources have confirmed to the Post that she was located and is expected to be returned to Cape Breton. The trial was scheduled to continue this week but was adjourned Monday in order to allow time to locate MacDonald. Cape Breton Post, A2

RCMP hits YouTube in N.B. murder case

The New Brunswick RCMP have produced a YouTube video that includes nine new photos of a fugitive murder suspect who is accomplished at altering her looks. Twenty-year-old Marissa Shephard hasn't been seen since mid December. Shephard is charged with first-degree murder and arson in the death of 18-year-old Baylee Wylie, whose body was found by firefighters Dec. 17 in a burned-out triplex in Moncton. In the video, Insp. Jamie George encourages viewers to share the video, saying people should have a close look at the wildly different images. The pictures are mostly selfies, showing Shephard in a wide range of appearances - from a pouting glamour shot with heavy makeup to less-guarded images that depict a happy schoolgirl. The Mounties say Shephard is considered dangerous due to the violent nature of the crime, but police have yet to release details about the cause of death or a possible motive. She is described as white, 5-foot-5 and weighing about 100 lbs. She has brown eyes, brown hair and has a tattoo with the name Stephen on the back of her neck and a tattoo of a crown on her chest. Postmedia Network (Telegram, B8, Guardian); Acadie Nouvelle, 11

B.C. mom and dad convicted of assault for spanking 14-year-old girl for sexting

A British Columbia mother and father who used a plastic hockey stick and a skipping rope to spank their 14-year-old daughter have been found guilty of assault with a weapon. A provincial court heard the couple from Salmon Arm, B.C., wanted to punish their daughter for sending nude photos to a young man over the Internet and instead of being grounded, the teen chose the spanking. Her father used a mini hockey stick two or three times on his daughter's buttocks over her pyjama pants and when her mother came home, she delivered a similar punishment with a skipping rope. When the girl went to school with lacerations and bruises, her friends told administrators, who called RCMP. Postmedia Network (Red Deer Advocate, A7, Times Colonist, Calgary Sun, Toronto Sun, Province)

*** Police commissioners mum on profiling claims**

The majority of members of the Re- gina Board of Police Commission ers defer to the chairman, Mayor Michael Fougere, when it comes to the issue of racial profiling. Allegations of racial discrimi nation against aboriginals by city police officers have been made by community members over the years, and more recently by Simon Ash-Moccasin. The Regina man was detained by officers in De cember 2014, an action the prov ince's Public Complaints Commis sion (PCC) said was unnecessary, though it did not suggest he was targeted because he is First Nations. Vic Pankratz and Gordon Selinger sit on the five-member committee to represent civilians on the oversight governing body for police officers. Both declined to comment when asked about claims of racial profil ing in the city. "It was a personal decision not to speak," Fougere said on Wednes day. "In any case, they just don't want to comment." Shortly after the board's first meeting of 2016, in which Fougere was acclaimed as chair, Pankratz said the mayor is the spokesman and his views are reflective of the board. "It's a personal choice but (Pan kratz and Selinger) also speak in public session of the commission," said the mayor. "They speak their opinion and they provide account ability in that way." The police commission has not yet publicly discussed racial pro filing. Wednesday's meeting was in stead dedicated to accepting notes of appreciation - social media praise from community members - and once again naming the may or as the board's chairman. Fougere and the board are confi dent the systems in place to moni tor allegations of racial profiling are working. Those systems - most notably the PCC - never have proven true an allegation of racial profiling or racism made against a Regina police officer. "If there are issues of inappropri ate conduct by the police service, issues of alleged racism or activi ties that are difficult, any member of the public can go to the Public Complaints Commission and lodge that complaint," Fougere said. "The commission will investigate and come back. They are indepen dent of the police service and those rulings stand." There have been more than 400 Regina-based complaints to the PCC since 2006. Leader-Post, A6

Bomb threat case delayed

A preliminary hearing into charges laid after a verbal threat was made to blow up Parliament last year has been re-scheduled at the Chatham courthouse. The hearing for David Osterbrook, 50, of Chatham, was set to begin Thursday, but a representative for the defence said the adjournment was needed due to an unforeseen scheduling conflict. Osterbrook was arrested April 10 after an RCMP officer received a phone call from a man ranting about anarchy and making threats to blow up Canada's parliament buildings. Police laid two charges, making a terrorist hoax and uttering a threat. Postmedia Network (London Free Press, A2)

Accusée d'avoir volé plus de 100 000 $ à son employeur

A l'issue d'une longue enquête, des accusations ont été portées contre une femme d'Astle, au Nouveau-Brunswick, en lien avec un vol et une fraude de plus de 100 000 $. Le 23 avril 2013, le Détachement de Blackville de la GRC a reçu une plainte au sujet d'un vol et d'une fraude. Une femme a été arrêtée en janvier 2014, mais aucune accusation n'avait été portée à ce moment. L'enquête s'est poursuivie. Le 7 décembre 2015, des accusation ont été déposées contre Gina MacKay-Munn, 46 ans: un chef d'accusation de vol de plus de 5000 $ et un chef d'accusation de fraude de plus de 5000 $. Les vols se seraient produits sur une période de quatre ans, soit de 2008 à 2012. Alors que Gina MacKay-Munn était employée chez O'Donnell Line and Electric, elle aurait volé et escroqué plus de 100 000 $ à l'entreprise. Gina MacKay-Munn comparaîtra lundi en Cour provinciale à Miramichi, à 13 h 30, pour inscrire son plaidoyer. Acadie Nouvelle, 11

*** B.C. teen and baby became victims of carjacking by escaped Alberta prisoner**

A 16-year-old B.C. boy travelling with a baby were the victims of a "harrowing" carjacking by an escaped Alberta prisoner earlier this week. Police have released more details into the pursuit of 29-year-old Harley John Lay, a prisoner from Peace River Correctional Facility who was sprung from police custody Monday near the Peace River hospital by a masked, armed man. A third person driving a white minivan acted as a getaway driver. Police said they first received reports of the men's whereabouts at about 10:30 a.m. Tuesday after Lay and one other male suspect confronted an employee at a Husky bulk fuel plant along the Alaska Highway after running out of gas just south of Fort Nelson, B.C. Northern Rockies RCMP Cpl. Dan Moskaluk said the employee recognized Lay and eventually called police, who set up on the highway and attempted to stop the van with a spike belt, but the van kept going. Officers caught up to the van at a Highway 97 Subway restaurant, where police arrested a lone female occupant. While making the arrest,

police received calls about a carjacking that occurred minutes earlier at the same Subway. "It was alleged that the two males obtained the vehicle by telling a 16-year-old male to get out of the truck," says Moskaluk. "The young man did have time to retrieve an infant that was in a car seat in the vehicle." The two escaped without injury. Vancouver Sun

*** Mounties describe harrowing recapture of escaped Alberta prisoner**

British Columbia RCMP are describing a "harrowing" attempt to recapture an escaped Alberta prisoner this week, saying at one point the man and an accomplice carjacked a 16-year-old boy and a baby. Cpl. Dan Moskaluk of the Northern Rockies RCMP says in a news release that the chase began Tuesday morning when employees at a Husky bulk fuel plant along Highway 97 reported seeing Harley John Lay, 29. While several Mounties stopped traffic on the highway, others moved in and tried to stop a minivan carrying the prisoner, but it got away.Down the road, they deployed a spike belt which slowed the vehicle as it continued toward Fort Nelson, B.C., with officers following at a safe distance behind with emergency lights and sirens activated. One the minivan hit city limits, the pursuit was stopped but officers later spotted the vehicle and approached it, arresting a female occupant without incident. Then, police received a report of a truck at a fast-food restaurant being carjacked. "It was alleged that the two males obtained the vehicle by telling a 16-year-old male to get out of the truck," says Moskaluk. "The young man did have time to retrieve an infant that was in a car seat in the vehicle." RCMP found the truck in a ditch. Moskaluk says police allege Lay and a second male tried to commandeer another vehicle but traffic would not stop for them. They were arrested without incident. Mounties allege Lay escaped on Monday while he was being escorted to a hospital in Peace River, Alta. Postmedia Network (Guardian)

*** Legalized Marijuana could boost economy**

Call it Prime Minister Justin Trudeau's secret stash. A new report from CIBC World Markets says Canada's federal and provincial governments could reap as much as $5 billion annually in tax revenues from the sale of legal marijuana. CIBC economist Avery Shenfeld crunched the numbers using current estimates of Canadian recreational pot consumption, the revenue experience in U.S. states that have legalized, and other factors - such as prevailing "sin tax" rates on alcohol and tobacco. "The bottom line is that federal (and) provincial governments might reap as much as $5 billion from legalization, but only if all the underground sales are effectively curtailed," writes Shenfeld. "That's on the order of 0.25 per cent of GDP, no barnburner." The Liberal government has promised to legalize, tax and regulate marijuana and has made MP Bill Blair, the former Toronto police chief, the lead on investigating a new regulatory model. Trudeau maintains that legalized pot will not be a cash cow, and that all revenues will be used to address mental health and addictions issues. "It was never about a money-maker, it was always about public health, public safety," the prime minister said in December during a year-end interview. The report uses Colorado sales figures to estimate a Canadian pot market worth about $10 billion annually, then looks at net profit margins from Ontario's government booze monopoly and other associated income and payroll taxes to come up with the revenue total. Shenfeld also suggests that the oft-touted law enforcement savings from pot legalization may not materialize due to ongoing international obligations to stop marijuana exports and the enforcement needed to curb the untaxed black market. Canadian Press (Windsor Star, N6, Province, Calgary Sun, Vancouver Sun)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Crown says managing man's risk 'speculative hope'

Superior Court Justice Gary Tranmer was asked Thursday to sentence repeat sex offender David A. Wilson to an indeterminate term in prison and to leave the question of when, if ever, he's released back into the community in the hands of the Parole Board of Canada. Assistant Crown attorney Megan Williams argued that managing Wilson's risk in the community, even at the end of a lengthy sentence with a fixed release date and a long-term supervision order of up to 10 years, would amount to little more than "speculative hope." (...)It was suggested to the judge by forensic psychologist Looman that Wilson's risk could be controlled in part by requiring him to live in a federal halfway house such as the recently built Henry Traill Community Correctional Centre. Henry Traill, which sits on land attached to Collins Bay Penitentiary fronting Bath Road, currently replaces the contentious Portsmouth Community Correctional Centre, and the psychologist suggested it would provide 24-hour-a-day supervision for Wilson. But

Williams observed that a supervisor of parole officers for Correctional Service Canada testified that Henry Traill doesn't offer that level of security. Lindsay Maahs testified that there are parole officers and parole officer supervisors available during centre's daytime office hours and commissionaires on duty at night, but no correctional service officers. There used to be corrections officers on duty, she told Justice Tranmer, but she said that ended four or five years ago "as part of a debt-reduction action plan." Consequently, Williams said: "Mr. Wilson requires residency with 24-hour supervision that does not exist." Kingston Whig-Standard, A1

Des fraudes... à partir de la prison
Dominique Duhaime devra demeurer six mois de plus derrière les barreaux pour avoir fraudé des personnes âgées pendant qu'il était emprisonné pour un autre dossier. Cet individu de 24 ans a été incarcéré à partir de 2014 de façon préventive pour un dossier de voie de fait causant des lésions corporelles et utilisation d'une arme à feu. Du 20 au 25 novembre 2014, il en a alors profité pour frauder trois personnes âgées et deux commerces de la région. En utilisant le téléphone de la prison de Trois-Rivières grâce à une carte d'appel, il a téléphoné à des aînés en se faisant passer pour leur petit-fils. Une fois qu'il avait réussi à les mettre en confiance, il prétendait avoir besoin d'argent, soit parce qu'il était hospitalisé, soit parce qu'il avait eu un accident d'auto. (...)En effet, Duhaime a écopé il y a quelques semaines d'une peine de cinq ans de prison pour voie de fait causant des lésions. Les six mois de prison pour les fraudes viennent donc s'ajouter à cette première sentence. (...)Notons qu'au pénitencier, ses appels téléphoniques seront contrôlés, car il devra fournir la liste des personnes qu'il peut appeler. Le Nouvelliste, 7

Agression nocture dans NDG : le suspect comparaît
Mathew Roberge, 25 ans, a comparu brièvement à la cour, ses cheveux longs attachés en queue de cheval. La poursuite s'est objectée à sa remise en liberté. Il reviendra en cour le 15 février pour son enquête sur remise en liberté. (...) Matthew Roberge était sorti de prison à la mi-octobre. Il avait écopé d'une peine de quatre ans de prison pour homicide involontaire après avoir asséné un violent coup de poing à un client dérangeant dans un bar de Laval, en 2013. L'homme était tombé, s'était cogné la tête et était décédé après avoir sombré dans le coma. Au moment du prononcé de sa sentence, Roberge avait déjà passé un certain temps en détention préventive, ce qui fait qu'il ne lui restait que 19 mois et demie à purger. Comme le veut procédure, aux deux tiers de cette peine, il a été libéré automatiquement, cet automne. La Presse, * Journal de Montréal (Journal de Québec)

Coupable de leurre informatique
Martin Bourque plaide coupable aux accusations de leurre informatique. Avec ce plaidoyer, il pourrait être déclaré délinquant dangereux au terme du processus judiciaire. L'automne dernier, l'ancien militaire de 37 ans avait déjà déclaré qu'il était pour reconnaître sa culpabilité aux actes qui lui sont reprochés. Après avoir été représentée par Me Gitane Smith et Émelie Ainsley, c'est finalement avec Me Justine Guay-Langevin qu'il a entériné les plaidoyers de culpabilité, jeudi après-midi, devant le juge Jean Hudon, de la Cour du Québec. Il est reconnu coupable de leurre informatique auprès de 16 victimes, de bris de probation, de ne pas s'être inscrit au registre des délinquants sexuels (ce qui a été fait lors de son arrestation le 3 juin), d'avoir eu en sa possession du matériel informatique et d'avoir eu accès à Internet. Sorti du pénitencier en février 2015 (30 mois pour du leurre informatique en 2013), Bourque n'a pas mis de temps à répéter son manège auprès de jeunes filles de moins de 16 ans. Dès le mois d'avril suivant, il tentait de les attirer sous la couverture. Le Quotidien, 4, * Journal de Québec

Kaven Sirois de retour en cour le 18 février
Les plaidoiries visant à déterminer le lieu de garde de Kaven Sirois, ce jeune homme condamné à la prison à vie sans possibilité de libération conditionnelle avant dix ans pour le triple meurtre de la rue Sicard, auront finalement lieu le 18 février. C'est du moins ce qui a été convenu, jeudi matin, entre le juge Bruno Langelier et les avocats Me David Guévin à la défense et Me Hippolite Brin à la Couronne. Rappelons que le 30 octobre dernier, Kaven Sirois a été assujetti à une peine pour adultes après avoir plaidé coupable aux six accusations portées contre lui, soit trois chefs pour meurtre au premier degré et trois autres pour complot pour meurtre. Il pourra demander une libération conditionnelle après 10 ans et non 25 ans puisqu'il était mineur à l'époque. Il reste maintenant à déterminer son lieu de garde. Les

possibilités qui s'offrent au jeune homme sont l'Institut Philippe-Pinel, une prison provinciale ou le pénitencier. Le Nouvelliste

*** Pair in major cocaine bust loses court appeal**
Two men convicted of possession for the purpose of trafficking in connection with the largest cocaine bust in B.C. history will continue to serve lengthy prison sentences. On Thursday, the B.C. Court of Appeal dismissed a bid by Scott Pedersen, a commercial diver and former Port Hardy fisherman, and Mexican fisherman Vincente Serrano-Hernandez to have their convictions overturned. The two men were found guilty in 2011 of transporting 1,001 one-kilogram bricks of cocaine from Panama to Port Hardy aboard the sailing vessel Huntress. In March 2010, Pedersen and Serrano-Hernandez off-loaded $26 million in cocaine into a waiting Zodiac at Shushartie Bay, near the northern tip of Vancouver Island. Justice Jennifer Power sentenced Pedersen and Serrano-Hernandez to 16 years in prison. They have more than nine years left on their sentences. The two appealed on the grounds that they were improperly arrested when they sailed into Port Hardy and that evidence found on board the Huntress during unlawful police searches should have been excluded. Police searched the Huntress four times without a warrant. The appeal court dismissed these grounds of appeal. Times Colonist, A3

*** Il aurait pu empêcher le meurtre qui l'a envoyé en prison**
«On a comploté pour voler et ça a mal fini. Je n'ai pas tué la victime, mais je me sens responsable quand même. J'aurais dû l'empêcher. J'aurais pu.» Maxime Bourdage aimerait bien revenir en arrière. «Il y a 1000 affaires que j'aurais dû voir. Que ce n'est pas normal de voler. Que ce n'est pas normal de partir avec un couteau et un marteau», a dit le jeune homme de 21 ans aux commissaires des libérations conditionnelles hier. Bourdage purge actuellement une peine de cinq ans au pénitencier à sécurité minimum de Sainte-Anne-des- Plaines relativement à des infractions de complot pour meurtre et complicité après les faits. Bien qu'il démontre «une certaine in-conscience inquiétante», le jeune homme a obtenu sa semi-liberté hier, un peu moins de deux ans après sa condamnation, en mars 2014. Journal de Montréal, 22

No parole for pervert
An editorial states, “The plea deal that notorious pedophile Peter Whitmore struck nine years ago with Saskatchewan justice officials to avoid his being designated a dangerous offender will doubtless be a talking point on the inevitable day this deviant applies for parole. If he'd been designated a dangerous offender in 2007, Whitmore would have been given an "indefinite" federal prison sentence - and the stigma of that designation as one of the worst of the worst would have carried additional weight against his ever getting parole. As it was, Whitmore pleaded guilty to a dozen charges, including kidnapping, sexual assault, sexual assault causing bodily harm and uttering death threats against two boys, aged 10 and 14, in 2006. He was given a life sentence, but would be able to apply for parole in 2013 - seven years from the date of his arrest. Thus far, Whitmore hasn't applied - but according to one recent media report, his former lawyer says Whitmore, now 45, wants to be released. Yes, the plea deal was controversial, but even if he'd been designated a dangerous offender, Whitmore also would have been eligible to apply for parole after seven years. In either case, parole isn't automatically granted.” Leader-Post, A8

*** Sex offender living in King Township prompts concern from residents**
Residents of a King Township community are expressing concern following the release of a sex offender deemed at high risk to re-offend and now living at a group home in the area. Keith Constantin, 35, was let out of prison last month after serving time for numerous sexual assaults and attacks, including some against children, which took place in Hamilton. He now lives in a group home run by non-profit organization Christian Horizons."[He] technically served his time but when you say you have urges to rape again and even kill, I'm pretty sure that designates him as a 'dangerous offender,"' said resident Amy Castellano. Castellano is behind a string of community protests and a petition to have Constantin deemed a dangerous offender. That status would allow the courts to impose specific residency conditions, an indeterminate prison sentence or electronic monitoring. Constantin's release has people in the community of Schomberg concerned about their safety and prompted a warning this month by police to students in York Region. It also spurred the creation of a task force on high-risk offenders whose members include a retired OPP officer, a retired corrections officer and two Schomberg residents, among others. CBC News (2016-01-28)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

We need a leaner, more modern police service
An editorial states, "Earlier this month, Deputy Chief of Toronto Police Peter Sloly told Torontonians he wants to "blow up" what he sees as the wasteful and ineffective reactive model of policing. He wants more prevention and greater use of technology to push community safety forward. The resulting emotional and ideological maelstrom - now in its second full week - is all too familiar when it comes to policing reform. And it stands as a harbinger of what may come as the provincial government embarks on what Minister of Community Safety Yasir Naqvi calls "the biggest transformation of policing in 25 years," over the next 18 months. The entire process runs the risk of being overtaken by the type of low-level political and personality contests that have surrounded Sloly's public intervention. (…) Policing costs in Canada are rising much faster than inflation and as fast as health costs - all while most measures of crime are dropping and demands for health services grow. This reality was not suddenly discovered by Sloly. The Drummond Report on controlling Ontario's spending warned of precisely this trend five years ago. In it, prominent public economist Don Drummond proposed evidence-based controls to reduce police spending. The report has since been gathering dust, while the province slips deeper into debt every year. Other careful studies backing Sloly have so far been under-exploited. **Public Safety Canada** has convened two major national conferences on the Economics of Policing and Community Safety in the last five years, leading to reports that emphasize precisely the solutions pushed by Sloly to replace the reactive model. The Harper Conservatives mostly sat on this information - and it's not at all clear that Justin Trudeau's Liberals will have the stomach to grab a fraught and unforgiving file that promises little political reward to reformers trying to move public opinion." Toronto Star

*** Inquiry must be more than political theatre**
An opinion piece states, "When justice ministers from across Canada met recently in Quebec City, Prime Minister Justin Trudeau promised that an inquiry into missing and murdered indigenous women and girls was at the top of the agenda. Federal Justice Minister Jody Wilson-Raybould was particularly interested in the perspective of her B.C. counterpart, Suzanne Anton, given the province's recent experience with a similar probe. That, of course, was the Oppal Commission, headed up by former B.C. attorney-general Wally Oppal, which looked into the disappearance of scores of women, mostly aboriginal, from Vancouver's Downtown Eastside starting in the late-1970s. Many of them were victims of mass murderer Robert Pickton. Mr. Oppal's report led to 63 recommendations, many focused on the behaviour of the Vancouver Police Department. The force was criticized for the lack of concern it demonstrated toward those who had vanished, a disregard many attributed to the dim view the police held of the poor, often drug-addled aboriginal women who called the Downtown Eastside home. Despite Mr. Oppal's best efforts, many in the aboriginal community were not pleased with his commission. Some felt it was not inclusive enough, saying it ignored too many points of view. Others felt the most important thing it accomplished was telling the story of the women themselves - before their lives took a terrible turn. Which brings us to Ms. WilsonRaybould's challenge. What does she do with her inquiry that will ensure it produces something worthwhile, and not just an expensive vehicle for people to vent?" Globe and Mail, A11

*** Bullies, beware**
An editorial states, "Cyber bullies, beware. Canada's courts are prepared to come down hard on people who publish intimate videos or pictures on the Internet without consent. And a good thing it is, in an era of "sexting" and "revenge porn." In the first case of its kind in Canada, Ontario Superior Court Justice David Stinson has just ordered a man to pay $100,000 in damages, plus $41,708 in legal costs and interest, to a former girlfriend for posting a sexually explicit video of her after promising he wouldn't show it to anyone. This sends a forceful and welcome message that abusing a partner's trust can carry a heavy cost. While "publication of an intimate image without consent" has been a crime in Canada since 2014, subject to up to five years in prison, this latest ruling fills a gap by setting a precedent in civil law as well. It establishes the right to sue for breach of confidence "if the matter publicized or the act of publication ... would be highly offensive to a reasonable person and ... is not of legitimate concern to the public." And rightly so, given the damage that can result." Toronto Star, A14, Globe and Mail

*** Nova Scotia woman's cyberbullying video mocked by bullies**

A Dartmouth woman who made an online video to raise awareness about cyberbullying says she has become the target of bullies, with thousands of comments pouring in. Courtney Bolivar, 20, made the video in July 2014. It depicts a young woman who gets a series of degrading text messages, then takes her own life as a result. "I've dealt with [bullying] my whole life and it's something that awareness really needs to be brought to," said Bolivar. "Cyberbullying is such a big thing these days, and it's just so terrible that I ended up getting cyberbullied for making a cyberbullying short film." The irony isn't lost on Bolivar, who noticed a video making fun of her work this week. The attack video shows Bolivar's face and name. After the video was posted by an anonymous user who goes by Leafy, thousands of comments flooded Bolivar's YouTube channel. "It was mocked, just basically making fun of the awareness of it and a lot in the video is said that cyberbullying doesn't exist and people can just close their laptop, turn off their phone," she said. "Now there are thousands and thousands of internet trolls and people just being hateful on all of my videos." CBC News

*** Spousal-violence numbers on decline: report - But local agency has not detected decrease in demand for services**

Family-violence rates in Manitoba are some of the highest in the country, but over the past decade the number of Manitobans reporting spousal violence has steadily declined, a Statistics Canada report has found. Manitoba has the second-highest rate of police-reported family violence among the provinces after Saskatchewan, according to the 2014 data. (The territories still have the highest overall rate of family violence in Canada, more than double the rate of violence in the provinces.) About 3.29 per cent of Manitobans in spousal relationships reported experiencing violence in 2014, down from 7.32 per cent in 2004. Over those 10 years, reports of violence between spouses declined in every province but Prince Edward Island. Rates of self-reported family violence suffered by aboriginal people aren't on the same decline - from 10 per cent in 2009 to nine per cent in 2014 - the report shows, and aboriginal people, particularly indigenous women, remain more likely to face family violence. About 10 per cent of aboriginal women were victimized by their current or former partners, compared with three per cent of non-aboriginal women. Klinic Community Health, which runs a crisis phone line and offers family violence counselling, has not seen a decrease in self-reported family violence, said Rosemarie Gjerek, the organization's director of counselling and community health. (...)Statistics Canada found 41 per cent of those who reported they were victimized by a former partner said the violence happened after the relationship ended. Winnipeg Free Press, B3

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Le doute plane sur le nombre de parrainage privé de réfugiés syriens

Grâce à des soirées dans des bars, à des sites de financement collectif, à des soupers spaghetti dans des sous-sols d'églises et à des foires d'artisanat, des milliers de Canadiens tentent actuellement de ramasser l'argent nécessaire pour parrainer des réfugiés syriens. Il est toutefois difficile de déterminer combien de demandeurs d'asile syriens parrainés de manière privée le Canada finira par accueillir. Le programme des libéraux vise à amener le total à 25 000 réfugiés syriens au pays d'ici la fin du mois de février - auxquels doivent s'ajouter 25 000 autres d'ici la fin de l'année. Selon le plan initial, environ 10 000 du premier contingent de réfugiés devaient être parrainés par le secteur privé. Mais des renseignements récemment divulgués par le gouvernement indiquent qu'à la mi-décembre, les demandes de parrainage privées étaient insuffisantes. Des données fournies à la Chambre des communes en réponse à une question du Nouveau Parti démocratique (NDP) montrent qu'entre le 1er janvier et le 15 décembre 2015, le gouvernement a reçu des requêtes de parrainage privé pour 8214 personnes. (...)Selon les données, le délai de traitement pour les demandes de parrainage privé était en moyenne de 10 mois l'an dernier. Si les libéraux se disent toujours prêts à accueillir 25 000 réfugiés pris en charge par le gouvernement d'ici la fin de l'année, ils n'ont toutefois pas précisé combien de demandeurs d'asile parrainés par le secteur privé ils comptaient recevoir Au 26 janvier, 14 003 Syriens avaient mis les pieds au Canada depuis le 4 novembre, dont 8004 pris en charge par le gouvernement, 5112 parrainés par le secteur privé et 887 dans le cadre d'un programme mêlant public et privé. Près de 6000 autres Syriens ont reçu l'approbation pour venir s'installer au Canada, mais ne sont pas encore arrivés au pays. Presse canadienne (Acadie Nouvelle, 18); Canadian Press (Times & Transcript, B7)

Base 'on hold' for refugees
Military bases in Canada, including Canadian Forces Base Kingston, likely won't be used to house government-sponsored Syrian refugees, said a Queen's University immigration expert. CFB Kingston had been identified as an interim lodging site for government-sponsored refugees, but Naomi Alboim, an adjunct professor and chair of the policy forum at the School of Policy Studies, said the bases would be used only as a last resort. "Military bases are on hold, as in Kingston's, but in my opinion will likely never be used," Alboim said Thursday at the Community Foundation of KLFA's lunchtime speaker series event.(…) "The easy part is get them screened, getting them over here and transportation," she said. It's more important to get them into the community, she added. Military bases such as CFB Kingston would only be needed if the 36 settlement communities reach their capacity, which has not happened, although officials in Ottawa, Toronto and Vancouver earlier this month asked the federal government for a short pause in the flow of refugees coming to those cities. Whig-Standard, A2

Language barrier hampers refugee resettlement
The scope and pace of settling Syrian refugees in Metro Moncton is straining local resources, with the language barrier proving to be a major obstacle, says the executive director of Moncton's cultural agency. The Multicultural Association of the Greater Moncton Area was under the impression that refugee families settling here would have at least some basic command of English or French, said Jean-Pierre Alexandre on Thursday. "The reality is none of them have," he said, adding that most of MAGMA's volunteer interpreters have day-time jobs so settling the refugees has meant working against "a huge language barrier." This week, the Canadian Red Cross, the City of Moncton and area Rotarians joined forces with MAGMA to bolster the region's resettlement plans. Since Dec. 29, 120 refugees have landed in the city, with 37 more, the largest group yet, arriving Thursday. That's far more than the 70 to 100 annually that MAGMA is used to working with. "We knew the numbers were going to be high," says Moncton Ward 2 Councillor Charles Leger, who represents the city on MAGMA's board. "It's challenging. It's stressful for everyone." Telegraph-Journal, A5 (Times & Transcript, Daily Gleaner)

Struggle to find refuge for Syrian refugees
As the number of Syrian refugees in Ottawa is set to balloon, local officials are scrambling to find housing for them. About 35 governmentsponsored Syrian refugees are expected to start arriving in the city every day in the next month, said Carl Nicholson, executive director of the Catholic Centre for Immigrants. That will more than double the number Ottawa has during February alone. The big challenge now, Nicholson said, is to find enough two-and three-bedroom apartments for the Syrian families, which tend to be large. Out of the 90 families that have already landed, he said, accommodation has been found for 55 of them. Most of the families have four or five members; about 60 per cent of the new arrivals are children. "Clearly, they want to live in places where there are concentrations of people like them, but we can't always do that," said Nicholson. "So sometimes, it takes persuading. They want to live together: It's normal. It's comfort, it's security in a strange place." Ottawa Sun, A6; Ottawa Citizen, A3

*** Canada's refugee resettlement plan gets high marks from ex-UN refugee agency head**
Former United Nations high commissioner for refugees Antonio Guterres has high praise for Canada's resettlement program, ranking it as one of "the two best in the world" alongside Australia's. "Canada has been, during the 10 years I was high commissioner for refugees, a very reliable partner and a strong supporter of our activities worldwide," said Guterres in a phone interview with CBC News on Thursday. (…) Guterres said Canada's most recent contribution comes as the refugee crisis worsens and while anti-refugee sentiment has grown in cities around the world. "The Canadian initiative has been an extremely helpful initiative in trying to reverse this negative tide against foreigners in general, migrants and refugees in particular." "Canadians can be very proud of the society they are building," Guterres said on Thursday. (…) According to the UNHCR, "refugees are identified as in need of resettlement when they are at risk in their country of refuge or have particular needs or vulnerabilities." The list of persons the UN will prioritize for resettlement includes women and children at risk, survivors of torture and violence, refugees with medical needs, among others. Guterres said the UN agency does not pick and choose refugees based on their ethnicity or religion. "We are totally against that," Guterres told CBC News. CBC News (2016-01-28)

Refugees on safe but bumpy road

An editorial states, "It is better to be safe and warm in a Kitchener hotel than huddled in a bombed-out Syrian city where bullets fly and people die. Canadians intuitively know that. The 220 government-sponsored refugees from that war-torn country who recently arrived in this country and are now being housed in Kitchener's Howard Johnson hotel surely know it, too, from hard experience. Many have fled horrors that few Canadians could imagine, and they must be filled with thanks and hope for a chance at a new life here. Yet if many of these people also feel cooped up, frustrated and anxious about their future today, who can blame them? Strangers in a strange land, they awaken each morning to another bleak, grey January day where many will feel in their bones the unfamiliar but unrelenting bite of a Canadian winter. (...)That's how it is in Kitchener. That's how it is in Toronto where nearly 1,000 Syrian refugees are in a limbo-land of the city's hotels. That's how it is in Vancouver and Ottawa, too. And this leads us to ask if the Liberal federal government is doing a good enough job in managing the resettlement of so many people it has sponsored. (...)But the Liberals should learn from this experience because their handling of this file is helping yet also distressing highly vulnerable people. The warehousing of thousands of Syrian refugees is happening when there are plenty of private sponsors who have found homes for the new arrivals. But because the government-sponsored refugees are in a different stream from those who have been privately sponsored, the homes stand empty." Waterloo Region Record, A6

Drop focus on numbers in refugee intake
An editorial states, "Two weeks ago, the government announced it reached its refugee target score: 10,000 Syrian migrants by the middle of January. Yes, the goal had been revised - it was once 25,000 by Dec. 31 - but the Liberals conceded in November it would be nearly impossible to bring that many to Canada in such a short time. Public servants worked around the clock to meet the government's arbitrary deadline of Dec. 31 and managed to reach the 10,000-refugee mark a couple of weeks later. But local agencies have scrambled to find housing in tight markets such as Toronto, Ottawa and Vancouver. The task proved so difficult, some requested a temporary halt on the intake of new arrivals. Thousands of refugees have been put up in hotels at the public's expense - some, such as those in Vancouver, for a month or more - stuck in bureaucratic limbo while they wait to get their kids into school. Some refugees, evidently, have come to regret their decisions to leave the camps." Vancouver Sun, B6

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Trudeau's cozy relationship with unions will end up costing us coin**
Nice work if you can get it. At a campaign rally in Waterloo on September 15, a local union paid 23 members $100 each to stand behind Liberal Leader Justin Trudeau as he made an announcement about investing $750 million in worker training programs. Problem was, the party didn't declare the rent-a-crowd to Elections Canada. The Elections Commissioner has now ruled that the Liberals benefitted from the equivalent of a $2,300 donation, which the party has now paid to the Receiver General. The Liberals claim they were unaware of the payments. But they certainly courted Big Labour's support during the campaign. In "an open letter to Canadian public servants" published September 25, 2015, Trudeau pledged to repeal several bills that unions didn't like. These included changes to sick leave in Bill C-59, and to collective bargaining rights in Bill C-4. The Liberals also pledged to revoke Bill C-377 on union disclosure and C-525 on union certification. Now that they're in power, the Liberals are busily following through on those promises. Employment Minister MaryAnn Mihychuk announced this week that C-377, which required unions to make public all transactions over $5,000 and executive salaries in excess of $100,000, and Bill C-525, which required a secret ballot vote before certifying a workplace in industries governed by the Canada Labour Code, are both on the chopping block. iPolitics (2016-01-28)

*** Le Sénat pourrait bloquer**
Un premier bras de fer pourrait avoir lieu dans l'arène du Sénat sur la question des règles syndicales. Le gouvernement de Justin Trudeau abroge deux lois touchant les syndicats qui avaient été adoptées par les conservateurs. Ces derniers n'ont pas l'intention de se laisser faire et menacent à mots couverts de faire obstruction à l'initiative libérale au Sénat, où ils ont la majorité. Du temps où ils étaient au pouvoir à Ottawa, les troupes de Stephen Harper avaient déposé deux projets de loi qui avaient suscité la grogne dans le milieu syndical. La loi C-377 aurait obligé les syndicats à ouvrir leurs livres comptables, ce qui

aurait donné un avantage indu à l'employeur lors des négociations, selon les syndicats. Elle les aurait notamment forcés à dévoiler toute dépense de plus de 5000$ ainsi que tout salaire de plus de 100000$. Elle a reçu le sceau du Sénat en juin dernier, mais comme son annulation était dans la plateforme libérale, les syndicats avaient déjà eu la permission de ne pas fournir toutes ces informations détaillées sur leurs finances pour 2015. Quant à C-525, elle changeait les méthodes d'accréditation syndicale en imposant un vote secret. La ministre de l'Emploi, MaryAnn Mihychuk, a soutenu en conférence de presse à Ottawa, jeudi, que l'annulation de ces deux lois amènera «de l'équilibre et de l'équité» ainsi qu'un plus grand sens du «respect» dans les relations de travail. La Presse Canadienne (Le Droit, 22)

*** Liberals move to kill two anti-labour bills**
The federal government has taken the first step in repealing two controversial labour bills.
On Thursday, MaryAnn Mihychuk, Minister of Employment, Workforce Development and Labour; and her parliamentary secretary, Cape Breton-Canso MP Rodger Cuzner, announced that the department had filed notice to introduce legislation that will repeal Tory-backed private members bills C-377 and C-525. The legislation is expected to go before the House of Commons next week. Speaking with reporters, Mihychuk said the legislation is a move toward restoring fairness and balance to the labour landscape. "The prosperity of workers, employers and our economy as a whole depends on a sound labour relationship. So we cannot allow these bills to disrupt the vital relationship between employers and employees," she said. Labour unions across Canada welcomed the announcement, with many taking to social media to express their approval. "This proves what we've been saying all along: that these bills were nothing more than an attempt to undermine unions' ability to do important work like protecting jobs, promoting health and safety in the workplace, and advocating on behalf of all Canadian workers," said Canadian Labour Congress president Hassan Yussuff in a press release. Bill C-377 would have forced labour unions to disclose publicly expenditures, including how much they spend on political activities, as well as salaries. It was gutted through a series of amendments by a group of rogue Tory senators during its first go around in 2013, but the amendments died on the notice paper when then Prime Minister Stephen Harper prorogued parliament that summer. The bill was resurrected without the amendments in 2014 and eventually rammed through the Senate in the final days of the 41st Parliament. Chronicle-herald, A3

OTHER / AUTRE

Canadian detained in China on spy charges
China's official news agency says a Canadian who was detained more than a year ago has been indicted on accusations of spying for Canada and stealing Chinese state secrets. Xinhua says Kevin Garratt was indicted by prosecutors in Dandong city, near China's border with North Korea, where the former Vancouver man and his wife ran a popular coffee shop and conducted Christian aid work. Garratt and his wife Julia - who have lived in China for 30 years - were arrested in August 2014. Julia was released on bail in February 2015. The Xinhua report says that during an investigation Chinese authorities found evidence that implicates Garratt in accepting tasks from "Canadian espionage agencies to gather intelligence in China." Their son, Simeon Garratt, who lives in Vancouver, has denied his parents were involved in espionage. The accusations against the couple in August 2014 came about a week after Canada accused a China sponsored hacker of infiltrating Canada's National Research Council, the country's top research and development organization. Xinhua said the Garratt case will be tried at the Dandong Intermediate People's Court. Canadian Press (Ottawa Citizen, C1/Front, Province, Times Colonist, National Post, Daily Gleaner, Times & Transcript); Globe and Mail, A1; * Canadian Press (Vancouver Sun, A8); * London Free Press, B3 (Whig-Standard); * Le Figaro; * CBC News; * ABC News; * Presse canadienne (La Tribune)

Signs of discord after attack a threat to religious harmony
A few days after the **terrorist** attack that killed 30 people here, the people of Ouagadougou were outraged by a foreign report: A French television channel had described one of their neighbourhoods as the "Muslim quarter." Many people felt insulted and shocked. How could there be a "Muslim quarter" in a country where Muslims and Christians are so deeply integrated? How could anyone imply that the two religions were obliged to live separately? They are valid questions, and key to the country's resilience.

Unlike many countries around the world, Burkina Faso has managed the extraordinary achievement of connecting its two main religions in a cultural melting pot. Muslims and Christians coexist within even the same families, and there is widespread tolerance and conviviality between the two faiths. Despite the Jan. 15 terrorist attack, Burkina Faso's leaders are convinced that religious extremism will fail to find a foothold here. Their country could even be a model for others. Yet this achievement might now be under threat. Pressures are intensifying. Islamist radicals have slipped across the frontiers from countries such as Mali, where extremism is growing. Even within Burkina Faso, there have been worrisome signs of religious tension since the terrorist attack. Globe and Mail, A1; Toronto Star, A12

* **Helping Syria's neighbours**

An opinion piece states ''Lloyd Axworthy and Allan Rock states ''Harrowing scenes of starvation from the besieged Syrian town of Madaya this month served as yet another reminder of the horrific plight of those trapped inside Syria. It is hardly a surprise that so many attempt to flee. To date, 4.6 million Syrians - the equivalent of the entire population of British Columbia - have already done so. Canada is playing a commendable role in responding to the greatest refugee crisis since the Second World War. Since Prime Minister Justin Trudeau and the Liberal government came to power, Canada has welcomed more than 10,000 Syrian refugees, a number that will soon climb to the target of 25,000. While Canadians can be proud of the moral leadership we are displaying and the international example we are setting, more must be done for the refugees remaining in Jordan, Lebanon and Turkey. Those millions who will not be lucky enough to be welcomed to Canada (or a handful of other countries resettling refugees) face a difficult choice: continue a bare existence in a camp with few services and almost no hope, or risk a perilous journey to Europe.'' Globe and Mail, A12

INTERNATIONAL

* **Japan puts military on alert for possible North Korean missile test**

Japan has put its military on alert for a possible North Korean ballistic missile launch after indications it is preparing for a test firing, two people with direct knowledge of the order said on Friday. "Increased activity at North Korea's missile site suggests that there may be a launch in the next few weeks," said one of the sources, both of whom declined to be identified because they are not authorized to talk to the media. Indian Express

MINISTER / MINISTRE

Justin Trudeau se rend à La Loche pour «exprimer la tristesse du pays»
Le premier ministre Justin Trudeau a visité vendredi la petite communauté dénée de La Loche, dans le nord de la Saskatchewan, «pour exprimer personnellement le choc et la tristesse de tout le pays» à la suite des fusillades qui ont fait quatre morts et plusieurs blessés, il y a une semaine. **Le ministre de la Sécurité publique, Ralph Goodale**, est aussi le seul libéral qui a été élu en Saskatchewan lors du dernier scrutin. Dans un communiqué, M. Trudeau indique qu'«il est toujours déchirant et accablant de voir des vies si prometteuses nous être enlevées si prématurément». Presse Canadienne (L'Acadie Nouvelle, 28) ; Toronto Star, A12; Postmedia News (StarPhoenix, N1/Front; Whig-Standard, Montreal Gazette, Ottawa Citizen, Edmonton Journal, Vancouver Sun, Windsor Star, Leader-Post, National Post)

Data breaches renew calls for stricter oversight of spies
Civil-libertarians are responding to new privacy warnings from spy watchdogs by saying that such cases show that a proposed fix to Canada's intelligence system amounts to a half-measure. In separate reports on Thursday, watchdogs for Canada's two spy agencies revealed potentially unlawful breaches of Canadians' data. Such cases raise continued accountability questions for the agencies. "Review" is the preferred bureaucratic term for the work of the Security Intelligence Review Committee, and the Office of the CSE Commissioner (OCSEC), the federal agencies that determine whether Canada's spies are acting lawfully. SIRC and OCSEC look at spying operations of the Canadian Security Intelligence Service and the Communications Security Establishment after the fact, by pulling records and conducting

interviews... **Public Safety Minister Ralph Goodale** has promised wideranging consultations with citizens and stakeholders in coming months regarding how Canada runs its intelligence agencies. **Scott Bardsley, a spokesman for Mr. Goodale**, said on Friday that, although the Liberals did not campaign on reforming review bodies, the government would be open to hearing views. Globe and Mail, A13

Too little oversight on Allstream sale, MPs complain
The recent sale to a U.S. firm of the Allstream division of Manitoba Telecom Services Inc., raised the ire of some critics in Ottawa who think the government didn't look at the deal closely enough before allowing it through. The sale of Allstream to Colorado-based Zayo Group was announced in November 2015, and the sale was completed in mid-January. MTS expects to make $420 million on the sale. Manitoba MP Niki Ashton tried to get the government to provide more details about the review process for the deal, including its benefit to Canada and the national security considerations of having a coast-to-coast national fibre-optic cable network that carries data for the government and private sector in the hands of an American company... "The previous government blocked an earlier attempt based on national security concerns, so why is the Liberal minister refusing to do a review to protect Canadians?" she said. **Public Safety Minister Ralph Goodale**, who has authority over national security issues, brushed off Ashton's question in the House of Commons. ***"Security screening is part of the process,"* he** said. ***"That is in the law, and the government of Canada follows the law."*** Under the Investment Canada Act, if the minister of innovation believes a foreign investment, such as the Allstream-Zayo deal, raises national security concerns, cabinet can order a national security review. Once the companies involved are notified there may be national security issues to look at, and the government has 45 days to decide whether or not to do such a review. It can take up to 200 days to actually complete a national security review. **A spokesman for Goodale** told the Free Press Friday the Investment Canada Act prevents the government from speaking at all about what kind of reviews are completed. Winnipeg Free Press, B7

People in la loche need jobs above all
An opinion piece states, "Now that Prime Minister Justin Trudeau, Premier Brad Wall, **Public Safety Minister Ralph Goodale**, Assembly of First Nations Chief Perry Bellegarde and other dignitaries, along with hordes of media, have visited La Loche following last week's shooting spree that left four dead and seven injured, it is difficult to find something original or insightful to say about the tragedy. Much has been said and written about the lack of recreation facilities, the underfunding of social programs, the chronically high unemployment, the persistent problems of alcohol and drug abuse, the high suicide rate, the gangs, the sad history of colonization, residential schools and 'cultural genocide' of the Dene people. The last thing anyone in that community needs is another so-called "expert from the South" telling them what they need and don't need..." Postmedia News (StarPhoenix, B2; Leader-Post)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Public health officials attempt to ease fears about Zika virus**
As alarm about the Zika virus spreads through the Americas, Canadian public health officials are attempting to calm nerves at home. Chief public health officer Dr. Gregory Taylor said Friday the risk to Canadians is very low, although he acknowledged many questions that remain to be answered about the mosquito-borne virus that is being associated with birth defects in Brazil and elsewhere. Ottawa Citizen, A4

*** Héma-Québec prévoit des mesures d'exclusion**
Le premier cas d'un Québécois infecté par Zika a été révélé hier, alors que héma- Québec a mis en place des mesures d'exclusion pour les donneurs revenant de régions où le virus sévit. «Pour le moment, on invite les gens qui ont séjourné dans des régions autres que le Canada, les États-Unis et l'Europe à attendre 30 jours avant de faire un don de sang», confirme le porte-parole d'Héma-Québec, Laurent-Paul Ménard. Journal de Montréal, 9

*** Electrocuted squirrel latest animal blamed for Nova Scotia power outage**
Nova Scotia's power utility, which has blamed blackouts on everything from crows and seagulls to "salty fog" over the last decade, and Friday an electrocuted squirrel left a swath of suburban Halifax in the dark.

The furry critter scaled a transformer in a substation in the Hammonds Plains area just before 5 p.m. Thursday, Nova Scotia Power said Friday. Spokeswoman Bev Ware said the squirrel became a conduit for the electricity, which subsequently caused roughly 5,400 customers to lose power. Canadian Press (Cape Breton Post, Edmonton Sun, A66;)

*** Winter storm conditions strike much of Newfoundland**
A winter storm hampered much of Newfoundland Saturday, causing power outages and dangerous driving conditions. Todd Bate, meteorologist with the Environment Canada Gander weather office, said there is a blizzard warning in effect for much of central and western Newfoundland, a winter storm warning for Connaigre, Clarenville and the Bonavista Peninsula, a wind warning for the Avalon Peninsula, and a blowing snow advisory for the Northern Peninsula. CBC News

*** Lac-Mégantic: ouverture officielle du Bureau de reconstruction**
C'est samedi après-midi que sera officiellement ouvert le Bureau de reconstruction du centre-ville de Lac-Mégantic. Le gouvernement fédéral a délégué le ministre Marc Garneau pour assister à l'événement. Il doit faire une annonce de financement. Sur le budget total de 2,2 millions de dollars sur trois ans, Ottawa accorde 1,9 million au Bureau. La Presse

*** Hardisty expansion plan on hold**
An ambitious plan to expand an oil-by-rail terminal outside Hardisty, Alta., is being overhauled after the federal government ordered the first-ever environmental review of a rail-based oil-shipping facility... Federal scrutiny of the Alberta terminal would be one of the first public reviews of the growing oil-by-rail industry since the disaster in Lac-Mégantic, Que. Globe and Mail, S3

*** Leur machine de guerre contre des écosystèmes vitaux**
Après avoir qualifié la tragédie de Lac-Mégantic d'illustration du « côté sombre du capitalisme », notre cher maire Labeaume semble tout à coup aveuglé et incapable d'appréhender les risques pour l'eau potable que constitue le pipeline de TransCanada. Une compagnie canadienne qui souhaite tirer des profits de l'exportation d'un des produits pétroliers les plus toxiques de la planète ne pourra jamais faire croire qu'elle place « les gens et la nature avant ses profits ». Le Devoir

*** Security deals forced on RMs: Tories - Say they were bullied into signing contracts**
The Tories and a former reeve accuse provincial officials of misconduct over contracts for security during the 2011 flood. The Conservatives, along with the former reeve of the RM of St. Laurent, said government officials bullied municipal leaders into signing millions of dollars in contracts with Impact Security. Former reeve Earl Zotter, whose municipality is on the southeastern shore of Lake Manitoba, saw his community ravaged by the one-in-300-year flood. As water surrounded the community 80 kilometres northwest of Winnipeg, a security firm was called in to guard properties and watch checkpoints in the community of about 1,400 residents. Zotter and other former members of his council allege the Emergency Measures Organization (EMO) forced them to hire Impact Security. Winnipeg Free Press, A4

*** Coast guard begins annual ice-breaking operations**
U.S. and Canadian Coast Guard crews kicked office-breaking operations Friday in local waterways, 20 days later than last year. Dubbed Operation Coal Shovel, the work involves breaking ice in Southern Lake Huron, Lake St. Clair, the St. Clair/Detroit River system, Lake Erie, Lake Ontario and the St. Lawrence Seaway. Windsor Star, A5

Nova Scotia winter storm leaves thousands without power
Heavy snowfall has left thousands of people without electricity and Nova Scotia power estimates it could take until midnight before crews are able to restore electricity to many homes in the northern part of the province, many of which have been in the dark since Friday evening. About 51,800 customers were without power at 7:30 a.m. Saturday. The outages affect about two dozen communities and range from Yarmouth to Dartmouth, Tatamagouche to Sydney. CBC News; *Chronicle Herald, A6

Colombie-Britannique
Cinq personnes sont mortes dans une avalanche près de McBride, en Colombie-Britannique, a indiqué le bureau du coroner de la province. La porte-parole Barb McLintock a indiqué qu'il y avait eu une avalanche de grande ampleur, vendredi après-midi, dans un secteur où un groupe de personnes faisait de la motoneige. Elle a affirmé que deux coroners avaient été dépêchés de Prince George, et que la Gendarmerie royale du Canada (GRC) enquêtait. Avalanche Canada a soutenu que l'avalanche semblait avoir été déclenchée par une activité humaine, sans donner plus de détails. L'organisme a indiqué que la pluie et la neige au cours des quelques derniers jours ayant été suivies par un refroidissement, vendredi, pourraient avoir causé des pressions dans le manteau neigeux. Avalanche Canada a appelé les gens à la prudence en fin de semaine. Presse Canadienne (Le Devoir, A7; La Tribune, Le Quotidien, Le Droit) ; Canadian Press (Red Deer Advocate, A4; *Times Colonist; *Cape Breton Post, *Winnipeg Sun, *Edmonton Sun, *Calgary Sun, *Ottawa Sun, *Vancouver Sun, *Calgary Herald)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** 24 Sussex woes continue**
Prime Minister Justin Trudeau may be unable to move into 24 Sussex drive during his current four-year term in office, an email released to the Ottawa Citizen under access to information suggests. the email from Stephen Wallace, secretary to gov. gen. David Johnston, was sent to Mark Kristmanson, CEO of the national Capital Commission, on Oct. 27, 2015 - the day after the Prime Minister's office revealed that Trudeau and his family would live at Rideau Cottage "until further notice."... As well, the rCMP "has expressed the desire to implement security enhancements throughout the buildings and grounds," the document says. Postmedia News (Whig-Standard, B3; Ottawa Citizen)

Big Brother's tough week
One of Canada's foremost privacy experts is challenging the government's assessment that the impact of a privacy breach involving the Communications Security Establishment, Canada's electronic spy agency, "was low." "The privacy impact is not low," Anne Covoukian, the executive director of the privacy and big data Institute at Ryerson told The House. "Metadata can be far more revealing than the actual contents of communication," she said. CBC The House

A privacy breach and a country left in the dark
An opinion piece states, “To learn that our digital surveillance agency broke privacy laws by revealing information about Canadian citizens to our allies is one thing. To learn that the Conservative government of the day, when apprised of this security breach, withheld the information from Canadians, is quite another. But that is where we are today, after learning of a major invasion of Canadian privacy more than two years after the fact. If our spy agencies, aided and abetted by the government of the day, wanted to fuel suspicion of internal surveillance in this country, they succeeded. If they wanted to ratchet up distrust, they scored. This despite an effort Thursday to get ahead of this story with the first-ever background briefing for journalists from an official with the Canadian Security Establishment - only 26 months after a software glitch was discovered that was sending metadata on Canadians to our Five Eyes allies without the proper scrubbing to hide identities...” The Record, A11

Data breaches reason to worry
An opinion piece states, “It's bad enough that we have to be constantly on guard against online snoops and scamsters who would use our personal data for nefarious purposes - we shouldn't have to worry what the government does with the information it collects about us. Yet there is plenty of reason for concern. Privacy commissioner Elizabeth Denham has taken the B.C. Ministry of Education to task for losing a hard drive containing personal information on 3.4 million B.C. and Yukon students and teachers. Her report says the ministry ignored its own policies and violated privacy law. The Canadian Security Intelligence Service also broke the rules when it repeatedly obtained taxpayer information from the Canada Revenue Agency without a warrant, which means the CRA was complicit in those violations. Meanwhile, the watchdog over the Communications Security Establishment, Canada's electronic spy agency, has found that CSE has improperly shared metadata with key foreign allies. (Metadata is

information associated with a communication, such as an email address or a telephone number, but not the message itself.)..." Times Colonist, A12

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

*** Gun smuggler jailed in U.S**
A former Osoyoos resident who bought guns in Washington state and then smuggled them into B.C. for resale has been sentenced to prison time. Tyler Ryan Cuff, 32, of Oroville, Washington, pleaded guilty to one count of dealing firearms without a licence and was sentenced in U.S. District Court in Spokane to 30 months in custody, followed by three years of supervised release. Times Colonist, A6

*** Moroun files lawsuit against Windsor**
The Ambassador Bridge company has filed yet another lawsuit against the City of Windsor in regards to the dozens of boarded-up homes it owns in the city's west end. Bridge owner Matty Moroun was sued more than two years ago by residents who remain in the Indian Road neighbourhood for creating what they allege is an eyesore and is devaluing their properties. Windsor Star, A3

*** 'My dream became a nightmare'**
Looking back, Omar Figueroa Ramirez figures he had it pretty good: a hotel job in the Mexican resort town of Huatulco on the Pacific coast, leisure time on warm tropical beaches, and the closeness of his family, friends and a girlfriend. He gave it all up for the chance of a better life as a foreign worker on a Langley blueberry farm, of sending money to help support his family and of saving to build his own dream home in Huatulco. Or so he thought. "I was hoping for a good work experience in Canada," the 24-year-old recalls in an interview with The Vancouver Sun. "In Mexico, the Mexican people, we think that Canada is the best place in the world. But everything changed. My dream became a nightmare." With legal help from the West Coast Domestic Workers' Association, Ramirez has lodged an official complaint with the B.C. Employment Standards Branch demanding that his ex-employer, farm owner Randhir Singh Pandher, pay almost $20,000 in outstanding wages, overtime and vacation pay. Vancouver Sun, A14

*** Timing perfect for Canadian travel**
Fuel prices are dropping, the Canadian dollar is dissuading travel to the United States, and the Euro and other currencies seem to be experiencing a rebound of their own. Perhaps this is the year to visit one of the greatest countries in the world. Yours! Having travelled to more than 65 countries and nine Canadian provinces, I can state wholeheartedly what Canada has to offer ranks among the best tourist destinations around the world. From a scenic standpoint there can be little argument. Winnipeg Free Press, G2

*** Canadian lumber sees benefits from economy**
The boost Canadian lumber exports are getting from the falling loonie is certain to bring out protectionist forces in the U.S. lumber lobby, says the CEO of Quebecbased forestry company Tembec. "I think that they're watching the Canadian dollar drop, particularly in lumber, and they're saying, 'This isn't fair,'" CEO James Lopez said. Canadian Press (Montreal Gazette, B1/Front; Vancouver Sun); Globe and Mail. B1

*** Low dollar, food and shopping enticing Americans and others**
From British Columbia to Montreal, the low Canadian dollar is proving a boon to the tourism sector. Dragged down by cheap oil and an international slump in commodity prices, the dollar is trading at around 70 cents US and enticing Americans to travel north of the border. "We're getting more reservations at the last minute from Americans planning trips for the weekend," says Eve Pare, head of the Hotel Association of Greater Montreal. Canadian Press (Montreal Gazette, B1/Front)

Fini le visa imposé aux Mexicains
Le visa imposé aux mexicains par le canada, «fini, terminé, caput», a déclaré hier, non sans une pointe d'ironie, le ministre canadien des affaires étrangères, Stéphane dion, au terme d'une journée de discussions avec ses homologues du mexique, claudia ruiz massieu, et des états-Unis, John Kerry. Les libéraux de Justin Trudeau avaient pris l'engagement d'éliminer cette barrière à l'entrée qu'avait imposée le gouvernement Harper afin de réduire l'arrivée des travailleurs mexicains en terre canadienne. «Nous

comptons tenir notre engagement d'éliminer le visa imposé aux Mexicains. Ça ne pourra pas se faire du jour au lendemain. Le ministre de l'Immigration John McCallum y travaille», a assuré Stéphane Dion. Agence QMI (Journal de Montréal, 14 ; Journal de Québec)

Low loonie good for business in manufacturing, tech sector
Len Ruby knows all too well the fickle nature of the Canadian dollar. Just a few years ago, when the loonie was trading at or above parity with the U.S. greenback, things weren't pleasant for Ruby and others involved in the production of goods for the American market... Manufacturers with markets south of the border are, by and large, seeing the benefits of a low loonie. "There's a lot of good news out there," said Jay Myers, who heads up the industry association Canadian Manufacturers and Exporters. The Record, D12

Special rules apply near U.S. border
An opinion piece states, "The U.S. has inland Border Patrol checkpoints up to 160 kilometres from the border (usually with Mexico rather than Canada). Despite having broken no laws and being far from the actual border, all highway traffic is stopped and everyone inside each vehicle is detained to determine their immigration status. In Ontario, I believe, only the driver must provide identification if stopped by police. Passengers need not identify unless suspected of a crime. Is this correct, or do we lose freedoms near the border here, too? Apparently, special rules do apply near our border with the U.S. Section 154.2(3) of the HTA authorizes police to stop a vehicle in a border-approach lane and demand identification or authorization, as required, from everyone inside. During a non-border area traffic stop, police can demand identification from a vehicle passenger only if he/she is reasonably suspected of a crime. Ajay Woozageer of the Ontario Ministry of Transportation adds: Section 154.2 HTA was enacted in 2006. The Canadian and U.S. border authorities offer pre-border security clearance for registered commercial and passenger vehicles under the "FAST" and "NEXUS" border-crossing programs. It's an offence for unauthorized drivers to use FAST/NEXUS lanes, and all occupants in the vehicle using a border-approach lane must demonstrate that they are eligible by providing police with the appropriate documentation..." Toronto Star, W6

CYBER SECURITY / CYBERSÉCURITÉ

* **Privacy policies breach affected Yukon students**
Privacy policies were breached in the disappearance of a hard drive containing personal information about Yukon and B.C. students, B.C.'s privacy commissioner has found. Elizabeth Denham said Thursday in a 40-page report while the disappearance of the hard drive remains unsolved, it's clear employees of the B.C. Ministry of Education breached privacy policies. Daily Star, 3/Front

* **U.S. and U.K. spied on Israeli drones for years**
U.S and British intelligence cracked the codes of Israeli drones operating in the Middle East and monitored their surveillance feeds for almost 20 years, according to documents leaked by an American whistleblower and published in international media on Friday. Reports by the German magazine Der Spiegel and the investigative website The Intercept said the details emerged from documents leaked by Edward Snowden, the former National Security Agency contractor who leaked millions of documents about U.S. government surveillance in 2013. Associated Press (Whig-Standard, B5; Ottawa Citizen, Vancouver Sun)

* **Webcam search engine raises concerns for connected devices**
A young child asleep on a couch in Israel. Mourners huddled together at a small funeral in Brazil. An elderly woman stretching in a fitness centre in Poland. All available for anyone to watch via the unsecured webcams overhead. This isn't "1984," it's the world in 2016. Shodan, a search engine that indexes computers and devices rather than information, now allows users to pull screenshots from nanny cams, security cameras and other connected devices around the world that don't ask for a username or password. Canadian Press (Vancouver Sun, D3)

*** US declares 22 Clinton emails 'top secret'**
The Obama administration confirmed for the first time Friday that Hillary Clinton's home server contained closely guarded government secrets, censoring 22 emails that contained material requiring one of the highest levels of classification. The revelation comes three days before the Democratic candidate competes in the Iowa presidential caucuses. State Department officials also said the agency's Diplomatic Security and Intelligence and Research bureaus are investigating if any of the information was classified at the time of transmission, going to the heart of Clinton's defence of her email practices. iPolitics

Transit security beefed up in wake of computer threat
B.C. Transit has beefed up online security in the wake of a threat to its computer systems that prompted the agency to take its website offline for two days in early December. The Crown agency hired information technology experts to assess the situation and make recommendations. Times Colonist, A1/Front

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Infant involved in alleged carjacking by desperate escapee**
B.C. RCMP are describing a "harrowing" attempt to recapture an escaped Alberta prisoner this week. They say at one point the man and an accomplice carjacked a 16-year-old boy and a baby. Cpl. Dan Moskaluk of the northern Rockies RCMP says in a news release that the chase began Tuesday morning when employees at a Husky bulk fuel plant along Highway 97 reported seeing Harley John Lay, 29. Canadian Press (Calgary Sun, A7; Edmonton Sun, Ottawa Sun, Toronto Sun, Times Colonist, Times Colonist)

*** Un enseignant parmi les accusés**
Un enseignant, un animateur en bibliothèque, deux moniteurs scouts, un soi-disant éducateur spécialisé: plusieurs des hommes accusés d'avoir fait partie d'un « club » de pédophiles démantelé par la police cette semaine s'étaient positionnés tout près des enfants. Selon la Sûreté du Québec, ils échangeaient sur les meilleures stratégies pour abuser de mineurs, certains discutant d'ailleurs de leur expérience de récidivistes. Voici ce que La Presse a pu réunir comme information sur chaque membre du groupe. La Presse, A6

*** Les scouts auraient aimé être avisés**
Des organisations scoutes du Québec qui ont compté dans leur rang deux présumés pédophiles accusés de pornographie juvénile déplorent l'absence d'avertissement quant à une enquête visant ces individus. «On a été déçu de ne pas être avisé qu'ils étaient suspectés... Je comprends qu'il y ait une enquête en cours, qu'ils n'aient pas encore été accusés, mais dans ces casci, il me semble qu'il n'y a pas de chance à prendre», a laissé tomber Nicolas Rousseau, de l'Association des Aventuriers de Baden- Powell. Journal de Québec, 57

*** RCMP report into Donald Dunphy death complete**
The RCMP's final report into the investigation of the shooting death of Donald Dunphy is complete, and the police force says an independent review is being arranged. "They will review the file for thoroughness, competency and overall accuracy," said a spokeswoman for the RCMP. The Telegram, A9

*** No hiding from the law on Twitter**
Michelle Rempel was alone in a Winnipeg hotel room in the dark depths of winter when a stream of violent threats started filling her Twitter mentions. The message was so vulgar it has since been expunged from the Internet; so dangerous that the Conservative MP from Calgary - then a cabinet minister travelling for work - called the police. "It was really quite frightening and the appropriate route was to take it to the RCMP," Rempel says. "It doesn't matter if somebody is making a threat to someone or proposing violence to someone to their face or in a different medium, it's still unacceptable." Postmedia News (Calgary Herald, A7; Vancouver Sun, National Post)

*** Rexton students under investigation after video of assault posted to social media**
Richibucto RCMP are investigating an assault at a Rexton high school after video footage surfaced on social media last week. Mellisa Gallant said her daughter Josie Gallant, a Grade 10 student, does not want to return to school after she says she was targeted by a group of bullies at Bonar Law Memorial High School. Times & Transcript, A7

*** Accountant faces charges**
A accountant in Canmore is facing new charges related to a multimilliondollar fraud investigation by RCMP in the mountain resort town. James Russell Neilson, 49, was charged last May with three counts of fraud over $5,000, one count of theft over $5,000 and one count of laundering the proceeds of crime. Police said the latest charges against Neilson are related to his involvement with Abaca Solutions. They include fraud over $5,000, uttering a forged document and laundering the proceeds of crime that allegedly occurred between January 2009 and October 2014. Police suspect the accountant defrauded 40 people of $5.5 million. Canadian Press (Times Colonist, B4); Postmedia News (Calgary Herald, A8; Edmonton Sun, A8)

*** RCMP to demolish building**
The RCMP is planning to demolish the old detachment building in Ingonish Beach. The land will be restored as a community space with road access to the beach and electricity to the property. In early December, the new RCMP Ingonish Detachment officially opened, replacing the oldest detachment in Atlantic Canada. Cape Breton Post, A8

*** Man in standoff shoots himself**
The RCMP and its emergency response team evacuated a quiet Campbell River neighbourhood Friday morning after receiving reports of gunfire inside a house. Police surrounded a home on Glen Eagle Drive just after 9 a.m. and negotiators began talking with a man who had barricaded himself inside the home. The situation ended a few hours later, when the man fatally shot himself. Times Colonist, A4

*** Ex-guard's defence challenges drug analysis**
The defence's case in the trial of former correctional officer Michael Gaber became clearer on Thursday as they relentlessly challenged drug analysis evidence. The court heard from Health Canada drug analyst Sarita Jaswal in a very detailed testimony about the drug analysis process and the results of the analysis done on one of the pills Gaber had when he was arrested... Tarnow zeroed in on the RCMP's handling of the pills. On Wednesday, RCMP Const. Daniel Bray testified he didn't clean a table he used to bag the pills seized, and couldn't say for certain he was wearing gloves. "That's not the way we would request police to handle it," Jaswal said. Daily Star, 2/Front

'Armed and dangerous' suspect surrenders to Toronto police in what may be Mafia-linked slaying
Handout Domenico Scopelliti, 51, is being sought on a first-degree murder charge. A man considered "armed and dangerous" surrendered to Toronto police early Saturday, an hour after detectives launched a public manhunt in the slaying of an 87-year-old man, a shooting in the city's west end that seems linked to some of the city's long-established Mafia clans. National Post

*** Police say new groups behind wave of violence**
Months after promising to jail those responsible for a spike in gun violence, police announced the latest arrest Thursday, this time in connection with a December shooting in the northeast neighbourhood of Coral Springs. Investigators said they remain focused on unsolved cases of shootings from last year as they pore over video surveillance and await lab reports, but warned they are dealing with a new cast of criminals behind the latest shootings in 2016. Calgary Herald, A12

*** Police search nets big haul**
Hamilton police seized brass knuckles, a pellet gun and drugs Thursday after searching a Connaught Avenue South home. A release said the gangs and weapons enforcement unit was preparing to search the building around 10 p.m. when police saw a suspect leaving on foot. Hamilton Spectator, A6

*** Police say $4M hire, council says lower**
Politicians said no to London police Friday,making a relatively small impact in the total city budget but sending a big message about their willingness to curb spending on emergency services. In an 11-4 vote, city council carved about $4 million from the department's proposed operating budget of nearly $400 million over the next four years, cutting in half the hiring Chief John Pare had planned for 2016. In the debate, members of the police services board, which oversees the department, suggested council's vote - which scuttles plans to hire five officers and one civilian staffer this year - could be appealed to a provincial body, the Ontario Civilian Police Commission (OCPC). London Free Press, A1/Front

*** Judge finds Hamilton cop guilty of perjury**
A veteran Hamilton police detective who encouraged an informant to plant a gun at a home, so he could obtain a search warrant from a justice of the peace, has been convicted of three criminal charges. Superior Court Justice Catrina Braid convicted the 12-year officer Robert Hansen of one count of perjury and two counts of obstructing justice on Friday. Hamilton Spectator, A1

*** Calls for Transparency to bolster confidence in police**
Eliminating secrecy in Ontario's police accountability process would go a long way toward improving the public's trust, say critics. "There's an old adage: Justice must not only be done, but must be seen to be done," said criminal defence lawyer Daniel Brown. In Ontario, the Crown is required to notify the chief of police when a judge has called out an officer for questionable conduct and testimony, but the government never confirms or denies whether this has actually been done. Toronto Star, GT4

*** New Peel police board chair sets fresh tone**
"It doesn't affect brown people and white people - it affects black males." With that sharp rebuke of a report on police street checks - insisting that it missed the essence of the controversy - the man now heading the oversight of Peel Region police made clear that change is coming. Minutes after Amrik Singh Ahluwalia stood Friday morning and moved to his new seat following his unanimous election as chair of the Peel Police Services Board, he joined other members calling for change within the country's third-largest municipal police force. Toronto Star, GT2

*** Man gunned down Jan. 22 had long criminal history**
Yonatan (JK) Kassa had gang links and convictions for drug trafficking and a violent home invasion when he was shot to death Jan. 22. But friends who have raised over $9,000 for his family online are portraying Kassa, 30, as "an amazing man" with a "beautiful smile and caring personality."... Kassa's run-ins with police date back a decade, according to online court records. He was convicted of drug trafficking in Surrey in 2006, then in Vancouver in 2008. Kassa and two others were caught trying to rob a Maple Ridge marijuana grow-operation in July 2010. He was convicted and got a one-year conditional sentence. He breached that sentence when in August 2011 he and a gangster named Cody Sleigh forced their way into a North Delta house, waving guns and terrifying the people inside. The tenants sneaked out the back, hopped a fence and called for help. Vancouver Sun, A8

*** Eroding police trust could sway trials**
An opinion piece states, "When the lawyer for Const. James Forcillo said this week that he had unsuccessfully applied to get a judge-alone murder trial for his client, it raised an obvious question: Had public trust in police eroded to the point where juries - once believed to always find in favour of cops - would actually convict an officer for a shooting while on the job?..." Toronto Star, GT4

*** Maybe Forcillo should be treated differently**
An opinion piece states, "On Tuesday, the day after Toronto Police Constable James Forcillo was found guilty of attempting to murder 18-year-old Sammy Yatim aboard a streetcar in 2013, his lawyer, Peter Brauti, took to the airwaves on NewsTalk 1010 to explain why his client shouldn't be treated like someone found guilty of attempted murder. The five-year mandatory minimum sentence for attempted murder using a restricted weapon "was never meant to catch police officers who are acting in the line of duty and may have made a mistake in judgment," said Brauti. "That was meant for a completely different class of people." Twitter's outrage-o-meter spiked, and understandably so. ("Class of people"? Does counsel wish to rephrase?)..." National Post, A8

*** Weighing the Forcillo verdict**
An opinion piece states, "The jury made the best of an impossible situation. They knew they couldn't let Const. James Forcillo get away scot-free after killing Sammy Yatim, but they also didn't have the courage to convict a cop of murder. The "cops are tops" mentality persists. The verdict showed the wisdom of Solomon. It was savvy and wise. When announced, the relief on the streets of Toronto was palpable. Not perfect, but some justice was meted out. Yatim should not have died. Cops are not 007s. They don't - or shouldn't - have a licence to kill..." Toronto Star, IN7

*** Paid leave system for police needs to change**
An opinion piece states, "Wouldn't it be nice to collect a paycheque while you're on the golf course or out on the ski slopes? What if you could collect a paycheque to watch Netflix all day, or just to sleep? Does this sound like winning the lottery? No, it's just what you get if you're convicted of attempted murder as a police officer in Ontario. No, it's just what you get if you're convicted of attempted murder as a police officer in Ontario..." The Record, A10

*** Funds cover police pay hikes**
A Letter to the editor states, "Regarding the article Other cities cost London wage win, budget chief says (Jan. 25). Londoners need to rest assured that at least a portion of the gap between what other lead cities (Toronto, Hamilton,Waterloo Region-all north of 2.5 per cent a year) are settling their police budgets at versus London's recent settlement of 0.95 per cent a year is covered off in both contingency and reserve funds in the 2016-2019 budget currently before council..." London Free Press, E3

A FAMILIAR PAIN, A CONSTANT HOPE
Fires at the cemetery burned for days, flames rising from the frozen Saskatchewan ground where far too many of the town's youth are buried. Grieving relatives tended to the blazes, working to warm the soil and make way for graves. La Loche, a northern town set on a lake at the end of a highway, will begin burying its latest victims of tragedy on Saturday, eight days after gunfire rang out at a local residence and at the village's only high school. Globe and Mail, A10

RCMP make drug bust
Three men have been charged after drugs and a large amount of cash and were seized from a Clearview Ridge home in Red Deer last week. Red Deer RCMP began their investigation into a suspected drug trafficking operation one week before executing a search warrant on the home on Cooper Close on the afternoon of Jan. 22. Red Deer Advocate, C2

RCMP looking for armed robbery suspect
Red Deer RCMP are looking for the man who robbed an A & W Restaurant at gunpoint on Sunday evening. Police say a man entered the A & W Restaurant located at 2004 50 Ave. carrying a handgun shortly after 11 p.m. on Jan. 24. He ordered the employees to the ground and demanded cash. Red Deer Advocate, A4

'We knew the guns were coming'
Members of a Prince Albert group have sent a package to Ottawa containing a five-year plan to address the escalation of gun violence in Saskatchewan. Over the last seven weeks, 14 people have been killed or injured by gun violence in Prince Albert and the province's northern communities, including the La Loche shootings that drew national attention. In Prince Albert, 23-year-old Jonathon Lee Cowan dies on Jan. 9; on Dec. 29, a 15-year-old suffered non-life threatening injuries after being shot in the face; and on Dec. 5, a 26-year-old man was shot in the leg. Postmedia News (StarPhoenix; * Leader-Post, A8)

Hells Angels surprised by eviction and say clubhouse rent is paid
A day after being kicked out of their fortified Hamilton clubhouse, the Hells Angels deny they have been negligent in paying rent. A local lawyer representing the local Hamilton chapter say the issue is one between the building owner - the clubhouse's landlord - and the person who holds the mortgage on the property and not at all about the club. CBC News

Another case tossed due to police errors
Another case has been thrown out of court because of police errors. When the case of Kyle Clarke was called Friday in provincial court in St. John's, the Crown indicated it would not be proceeding with the case... Clarke, from Gull Island, had been charged with three counts - accessing child pornography, possessing child pornography and making child pornography available to others. The Telegram, A1

Suspended Ottawa police officers continue to make Sunshine list in 2015
Officers suspended with pay in the Ottawa Police Service cost more than half a million dollars in salaries last year. The oldest suspension dates back to December 2011, which means that officer has been receiving a full salary since then, aside from a brief five-month reinstatement between hearing processes in 2014. CBC News

Police commission suspends Oland investigation
The New Brunswick Police Commission has suspended its probe into how Saint John police handled the Richard Oland murder case. The investigation will resume once the criminal proceedings end, executive director Steve Roberge said in a statement on Friday. Brunswick News (Telegraph-Journal, B1; Daily Gleaner; Times & Transcript)

Change culture by changing recruits
Inside the Toronto Police College this week, more than 75 mental-health activists and members of the policing community witnessed the very latest in annual training that will be offered to all members of the force. Developed in conjunction with mental health rights groups and survivors, the training emphasizes skills and characteristics that advocates and health professionals have long said are must-haves for police: empathy, communication and understanding. Toronto Star, GT1

What's changed since Sammy Yatim died?
Following the death of Sammy Yatim, Toronto police commissioned an independent review of use of force, looking specifically at encounters between officers and people in crisis. Written by retired Supreme Court justice Frank Iacobucci, the report - based on a year of research - makes 84 recommendations to Toronto police, with the aim of eliminating fatal encounters with police... Iacobucci recommended Toronto police consider expanding the use of conducted energy weapons, or Tasers - currently, only front-line supervisors, about 275 officers, have the weapon - and that may happen in the long term. But in the shorter term, Toronto Police Service's less lethal weapon of choice is the so-called "sock round," a shotgun that has been converted to shoot a small bean bag instead of a bullet. The bean bag "bullets" do not penetrate the skin. The guns will be distributed to all divisions throughout the city. Toronto Star, GT4

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Court relaxes travel, curfew restrictions for Omar Khadr**
Omar Khadr is allowed to stay out past his midnight curfew if required by employment or education commitments, Court of Queen's Bench in Edmonton ruled Friday. Khadr, who is living with his lawyer's family in Edmonton, is taking courses to become an emergency medical responder, possibly working in an ambulance. Such a position would require late hours. Federal and provincial lawyers did not oppose the change to his bail conditions, nor did they oppose Khadr's request to make travel easier. Postmedia News (Edmonton Journal, A4; Edmonton Sun)

*** Conditions de libération conditionnelle allégées pour Vincent Lacroix**
Le fraudeur Vincent Lacroix vient d'obtenir un léger assouplissement de ses conditions de libération conditionnelle en raison de sa bonne conduite. L'ex-PDG de Norbourg, condamné à 18 ans de prison pour avoir floué 9200 investisseurs, devra faire huit heures de bénévolat en milieu défavorisé par mois au cours de la prochaine année. Il devait auparavant en faire le double, soit quatre heures par semaine. Dans une décision du 12 janvier obtenue par La Presse, la Commission des libérations conditionnelles du Canada (CLCC) maintient toutes les autres conditions imposées à Vincent Lacroix depuis sa libération conditionnelle totale en février 2014. Il lui est notamment interdit de travailler comme gestionnaire ou dans le domaine de la finance. La Presse, 11

*** Red Deer man jailed for drug possession**
A Red Deer man caught trying to smuggle drugs into prison pleaded guilty to drug possession on Friday. Cameron Glen Monkman, 31, had been in the Red Deer Remand Centre less than a day when guards found drugs in his cell last May. Cocaine, methamphetamines and marijuana were found hidden in socks in his cell... Defence lawyer Greg Gordon said Monkman has struggled with drugs but is trying to change his life behind bars. He has volunteered for a screening unit in Drumheller Institution where prisoners agree to frequent drugs tests to help them stay clean. Red Deer Advocate, A4

*** Life of Ashley Smith inspires art exhibit**
When Toronto artist Gretchen Sankey looks at pictures of Ashley Smith, she doesn't see the Moncton woman who killed herself inside an Ontario penitentiary as a criminal or a convict. Sankey, herself the mother of a teenager with mental health issues, views Smith as someone who was ultimately failed by the system. Times & Transcript, A9

Corrections investigation of Kinew James death at RPC finds medical response too slow
A nurse at the Regional Psychiatric Centre in Saskatoon took too long to call a Code Blue after finding an inmate unresponsive late one January night, three years ago. That's one of the findings of a federal Corrections investigation report into the death of Kinew James, obtained by the CBC... She experienced chest pains while at another federal prison, Grand Valley Institution in Kitchener, Ont.... Code Blue should have been called. "The Board [of Investigation] believed that a Medical Emergency should have been called when James was found to be unresponsive and that having to wait approximately five minutes for another Correctional Officer to arrive on Church Unit to open the cell door delayed the staff response to an emergency situation," the report stated. CBC News (2016-01-29)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Stories of healing**
STR8-Up has been helping young men and women escape the gang life for decades. Started in Saskatchewan's prison system in the mid-1990s, the program aims to show young people a way out of gangs. The stories of how members escaped can be terrifying. So, too, are the stories of how they entered gang life in the first place. Now, a new book compiles those stories with the aim to show others there is hope. STR8 UP: Stories of Courage - A Healing Workbook is an "autobiographical workbook" that features the stories of 29 men and women who share their personal stories of recovery. Many are exgang members and many have spent time in prison. Here's an excerpt from one of those personal stories by STR8-Up member Jorgina Sunn. StarPhoenix, D1/Front

*** 40 more correctional officers to be hired**
The province says it is recruiting another 40 new correctional officers for Ottawa's chronically understaffed jail. The Ministry of Community Safety and Correctional Services said it is in the process of recruiting 180 new correctional officers to staff jails across the province. The latest hires are on top of a class of 144 recruits the province announced it was sending to the Ontario Correctional Services College earlier this month. It brings the total number of new correctional officers expected to be deployed to the Ottawa-Carleton Detention Centre to 73 since 2013. "The hiring of these new correctional officers will help ensure that staffing levels grow beyond normal turnover and retirement and ensure that officers are reflective of the diverse communities they serve," said a ministry statement released Friday. The new recruits are expected to complete an eight-week correctional officer training and assessment program, which includes mental health training, inmate management techniques and a thorough assessment and evaluation, according to the ministry. Ottawa Citizen, A4; Toronto Star, A14

*** Appeal Court shoots down sentence for bullied man**
A one-year sentence given to a Manitoba man who said he fired shots at a home because two people who lived there had bullied him has been overturned by the province's Appeal Court. Bryce McMillan was given the 12-month term after pleading guilty to firing at the home in Carberry, west of Winnipeg, in 2011.

The trial judge ruled the federal government's mandatory four-year minimum sentence for gun crimes violates the Charter of Rights and Freedoms. The Crown appealed the decision and the Manitoba Court of Appeal imposed the federal minimum term. The Record, A3

*** Leoville man pleads guilty**
Christopher Stephen Hogan, 30, recently pleaded guilty to a single count of using a social media website to utter a death threat against someone. The Leoville man was sentenced on to serve 24 months of probation and must pay a $100 victim surcharge. The incident happened on Aug. 5, 2015. Charlottetown Guardian, A6

*** Heart of darkness**
On paper, Colleen Murphy's angry, anguished response to the Robert Pickton pig farm murders is a numbing, almost unbearably upsetting read. In Imago Theatre's production, the action, involving the sustained taunting, torture and slaughter of a bloody but defiantly unbowed indigenous prostitute, has been transformed into a kind of fugue for four voices. There's the Dying Girl herself (so named to leave us in no doubt of her fate) and the damaged, lonesome Killer who tries to make a connection with her in the vilest ways possible. Then, in another timeframe, there's the Sister who spends years in a fruitless search, and the Police Officer whose initial bureaucratic indifference comes to sear his conscience. Montreal Gazette, F10

*** Bootleg fentanyl, heroin suspected in rash of overdoses**
Drug users who think they are buying cocaine or heroin may be also getting bootleg fentanyl, which is being blamed for overdoses across the country. In Waterloo Region, six overdoses were reported in Cambridge and Kitchener from Jan. 23 to Jan. 26. One person died. The Record, B3

Prisoners' complaints
St. John's lawyer and mental-health advocate Mark Gruchy says psychiatric services in the province's prison system may be tantamount to human-rights abuse, and the province's Human Rights Commission says it's willing to look at cases. Under the Newfoundland and Labrador Human Rights Act, the commission is limited to looking at discrimination based on accommodation, employment and services. The Telegram, A3

UPEI student jailed for drunk driving
An international student at UPEI who was caught swerving on the road while driving drunk was sentenced Thursday to a night in jail... Yousuf is an international student at UPEI who was born in Pakistan. Before hearing his sentence, Yousuf told the court the drunk driving incident was the only time he had done something like it. Douglas sentenced Yousuf to one day in jail and ordered him to pay a $1,000 fine along with a $300 victims of crime surcharge. Charlottetown Guardian, A6

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

*** As other cities hit pause button, Windsor's Syrian refugees flow in**
Other Canadian cities are pressing the 'pause' button on the inflow of Syrian refugees, but not Windsor. "We can ask for a slowdown ... but we haven't needed one yet," said Kathleen Thomas, executive director of the Multicultural Council of Windsor and Essex County, which co-ordinates local resettlement efforts for government-assisted refugees. Windsor Star, A2

Réfugiés syriens
L'ancien ministre de l'Immigration Chris Alexander défend l'approche adoptée par son gouvernement pour relocaliser les réfugiés syriens, niant les allégations selon lesquelles les conservateurs avaient sélectionné soigneusement des dossiers en priorisant certaines minorités ethniques et religieuses. Tous les pays travaillant avec le Haut Commissariat des Nations unies pour les réfugiés en lien avec la crise humanitaire en Syrie ont fonctionné selon un processus accepté d'avance qui établissait les critères de sélection pour choisir les réfugiés, a déclaré M. Alexander en entrevue avec La Presse Canadienne.

Presse Canadienne (L'Acadie Nouvelle, 27) ; Canadian Press (Chronicle Herald, A11; Daily Star, Hamilton Spectator, The Record, Montreal Gazette)

PUBLIC SERVICE / FONCTION PUBLIQUE

The whistleblower
Sylvie Therrien considers herself a "bit of a rebel" - someone who doesn't like being told to keep quiet when she disagrees or feels an injustice is being committed. So when she was asked to help the government squeeze EI payouts, she refused to quietly play along... In the meantime, there is the matter of making a living. Therrien is currently before the Public Service Labour Relations and Employment Board pursuing a grievance against Service Canada, seeking financial compensation for her firing and to have it overturned. She's being represented by the Public Service Alliance of Canada, a union for federal workers. "PSAC has always fought to protect the rights of workers who disclose wrongdoing in the public service," says PSAC national president Robyn Benson, who wouldn't comment directly on Therrien's case. Toronto Star, IN1

PS unions want more than just 'review' of bill
The Liberal government and federal unions are locking horns over a piece of Conservative-era labour legislation even before they reach their first round of collective bargaining. Treasury Board president Scott Brison said Friday he is sticking to his plan to review rather than repeal Bill C-4, the contentious Tory legislation that completely changed the ground rules for collective bargaining in the public service... That's not what the unions wanted to hear. This week, union leaders asked the government to immediately repeal the legislation and bring back the rules that previously governed bargaining. The 18 unions signed a solidarity pact more than a year ago over the contentious issue of sick leave and disability management. They have presented a united front in refusing to make any concessions. "We are in strong disagreement with your proposal to revisit Bill C-4 through consultations with 'public sector partners,' " they wrote in a joint letter... The letter comes as the biggest union, the Public Service Alliance of Canada, is poised for its first bargaining session with the Liberals on Monday. Ottawa Citizen, A10

OTHER / AUTRE

La protection consulaire à géométrie variable
Maher Arar a été emprisonné et torturé en Syrie pendant plus d'un an, au début des années 2000. Omar Khadr a atterri à Guantánamo en 2002, à l'âge de 15 ans, pour en sortir une décennie plus tard, marqué à jamais par le traitement inhumain qu'il y a subi. Plus récemment, le journaliste Mohamed Fahmy a croupi pendant plus de 400 jours dans une prison égyptienne, sous des accusations bidon, avant d'être libéré avec une épaule définitivement endommagée en guise de séquelle. La Presse

Dion et Kerry discutent du futur rôle du Canada contre le groupe État islamique
Le secrétaire d'État américain, John Kerry, ne connaît toujours pas la nouvelle stratégie canadienne de lutte contre le groupe armé État islamique (EI), mais il s'attend à ce que la contribution du Canada soit à tout le moins maintenue. Au terme d'une rencontre des trois ministres des Affaires étrangères de l'Amérique du Nord organisée vendredi à Québec, John Kerry a affirmé qu'il demeure convaincu de voir le Canada maintenir une implication " significative " dans la lutte contre le groupe EI, principalement en Irak et en Syrie. Le Devoir, A3 ; Canadian Press (Chronicle Herald, A8; Times Colonist)

Jordan, Lebanon added to plans
Canada's new role in the fight against the Islamic State will involve ensuring Jordan and Lebanon remain stable, Foreign AffairsMinister Stephane Dion said Friday after a meeting with his U.S. and Mexican counterparts. Dion promised that Prime Minister Justin Trudeau will soon announce details of Canada's new deploymentwithin the Americanled coalition. The Liberals promised during the election campaign to end Canada's role in the bombing mission over Iraq and Syria. Canada's role won't focus solely on Iraq,

said Dion, adding "we will see what to do about Syria." Canadian Press (London Free Press, B3; Montreal Gazette, Times & Transcript)

Defence Minister Harjit Sajjan argued Friday in favour of a calm, considered recasting of Canada's combat mission in Iraq. He pointed to past mistakes, saying that in the Afghan war, some wellintentioned development aid wound up fuelling corruption and instability. Canadian Press (Times Colonist, A10; Whig-Standard, London Free Press); Postmedia News (Ottawa Citizen, A10; National Post)

China denies spy charge against Canadian is retribution against Ottawa
The Chinese government has denied claims it has charged a Canadian man with spying as an act of retribution for the arrest and extradition proceedings against a Chinese man wanted by the United States for allegedly stealing fighter-jet documents. Kevin Garratt was indicted this week after investigators "discovered some new evidence" regarding his "accumulation of information in China," foreign ministry spokeswoman Hua Chunying said Friday. Globe and Mail, A3

Man was spying for canada, china says
China's Foreign Ministry said Friday that an investigation has suggested that a Canadian man charged with spying and stealing Chinese state secrets had carried out assignments for Canadian intelligence agencies. The federal government said Thursday it was concerned that Kevin Garratt had been indicted and that it had raised his case with the Chinese government "at high levels." Associated Press (StarPhoenix, N5; Edmonton Journal, Leader-Post, National Post)

MPs demand federal government act on drug worries
Opposition MPs criticized the federal government Friday for distributing a controversial anti-malaria drug to military personnel while using outdated warnings to users. Their statements followed a U.S. expert's assertion to The Vancouver Sun that Canada is failing to inform soldiers they could suffer from serious and permanent health issues by using mefloquine. New Democratic Party defence critic Randall Garrison, the MP for Esquimalt-Saanich-Sooke, said Canada is handling the drug in a "disturbing" manner. Vancouver Sun, A16

Malaria Drug To Blame, Say Experts
Former soldiers from the disbanded Canadian Airborne Regiment are pushing for a ban on the controversial anti-malaria drug mefl oquine that some say plagued the disastrous 1993 Somalia mission. Two events - the 2013 U.S. military ban on mefloquine for Special Forces and new scientific studies showing toxicity from the drug can cause permanent brain damage - should force a review of Canadian policy, says John Dowe, a former airborne soldier. Edmonton Journal, B1

Canada should play leading role - UN official
A former United Nations refugee chief says Canada's new foreign policy makes it perfectly suited to play a major role in bringing peace to a world facing a dramatic shortage of it. Antonio Guterres said Canada is now perceived as an honest broker and can play a leading role in bringing together warring factions to negotiate peace. Chronicle Herald, A12

Déchéance et indignité
Un article d'opinion déclare, « Victoire du Front national (FN), qui a poussé le gouvernement socialiste de la France à adopter une mesure que n'aurait pas dédaignée le régime pétainiste de Vichy. Victoire des terroristes, qui ont réussi à altérer l'âme de la patrie des Lumières...C'est ainsi que l'on pourrait résumer, en exagérant à peine, ce qui se passe actuellement en France. Les parlementaires français s'apprêtent à voter une loi qui inscrira dans la Constitution la possibilité de retirer la citoyenneté française aux personnes condamnées pour «un crime ou un délit qui constitue une atteinte grave à la vie de la nation». Passons sur le flou de la formulation, qui ouvre la porte à n'importe quoi. On comprend bien qu'il s'agit (pour l'instant) de sévir contre le terrorisme... Au Canada, Stephen Harper comptait enlever la citoyenneté canadienne aux auteurs de crimes terroristes qui détiennent une autre nationalité. Ce projet est heureusement tombé avec son gouvernement. Le projet de loi français ne mentionne pas la binationalité,

pour ne pas donner l'impression de faire des binationaux des citoyens de seconde zone, ce qui aurait l'air de déroger au beau principe de l'égalité républicaine. La Presse, A19

Le sain débat
Une lettre à l'éditeur déclare, « La violence comporte plusieurs visages, dont certains sont flous, à première vue. Je pense à cette violence qui est l'absence de mots, comme le disait avec pertinence le poète Gilles Vigneault…En voulant ainsi clouer le bec aux adversaires, là vous dépassez vous-même les bornes. Je pense ici à un lecteur d'opinion qui traite de naïfs et accuse de raisonner follement celles et ceux qui avancent que les causes profondes des avancées du terrorisme islamique dans le monde sont l'impérialisme et le matérialisme occidentaux. Ou qui se dit en désaccord avec celles et ceux qui pensent que le retrait des avions de guerre canadiens d'Irak et de Syrie par le gouvernement protègera mieux les Canadiens contre les attentats terroristes… » Le Quotidien, 13

INTERNATIONAL

*** Deux des mafiosi italiens sont retrouvés dans un bunker**
Deux mafiosi italiens en cavale depuis plus de dix ans ont finalement été épinglés dans un bunker souterrain, dans le sud de la Calabre. Les deux dirigeants de la 'ndrangheta - Giuseppe Crea, 37 ans, et Giuseppe Ferraro, 48 ans - sont considérés comme deux des fugitifs les plus dangereux d'Italie. Crea est passible de 22 ans d'emprisonnement pour association mafieuse et il était en fuite depuis dix ans. Ferraro a été condamné à la prison à vie, notamment pour meurtre, et il échappait aux autorités depuis 18 ans. Associated Press (L'Acadie Nouvelle, 30) ; Associated Press (The Record, A6)

How Magnet Forensics is making a difference
Police captured Boston Marathon bomber Dzhokhar Tsarnaev from his hideout in a boat in a dramatic hail of bullets, but that was just the beginning of their work. Less exciting, but just as important, was the task of combing through at least 30 electronic devices seized in connection with the investigation into Dzhokhar and his brother Tamerlan Tsarnaev, who was killed in a previous shootout following the 2013 bombing that killed three and injured more than 260. Those devices included seven computers, 10 external hard drives and 13 cellphones, containing more than 20,000 pieces of data. National Post, FP5

The battle against Islam's bearded men
In a bid to curb Islamist radicalization, authorities in the Central Asian republic of Tajikistan shaved the beards off nearly 13,000 men in the country. They also shut down about 160 shops selling traditional Islamic garb and supposedly "convinced" more than 1,700 women to stop wearing hijabs, or head coverings. According to Radio Free Europe's Tajik service, the measures were taken in the southwest Khatlon region, which borders Afghanistan. The region's head of police said that 12,818 men with "overly long and unkempt beards" were "brought to order" in 2015. Washington Post (Toronto Star, WD6)

UN Syria envoy to start talks in Geneva without opposition
A UN official said Syrian peace talks will begin in Geneva as planned today, despite an ongoing boycott by the main Syrian opposition group which continues to stay away pending assurances from the UN chief on the implementation of Security Council resolutions related to humanitarian issues. Associated Press (Daily Star, 18)

Theme parks hire more security due to greater fear of terrorism
Walt Disney World and Universal Orlando are hiring additional security employees as theme parks enter what experts say is a new era of stepped-up efforts to shield visitors from possible terrorism and mass shootings. The theme parks would not say how many people they are adding or give details on the security measures they are taking. At Disney, many of the new security personnel will help staff metal detectors. Times & Transcript, F3

Canada steps away from Israel
An opinion piece states, "This week marked the anniversary of the liberation of Auschwitz, one of the largest Nazi death camps of the Second World War. Six million Jews were killed during the Holocaust,

many inside gas chambers at these death camps. On International Holocaust Remembrance Day, January 27th, people around the world commemorate the horror inflicted on the Jews of Europe... Canadian Foreign Affairs Minister Stephane Dion released a statement calling for restraint in the region and suggesting both sides are equally to blame..." MINISTER / MINISTRE

We're marshalling our snoops
The Communications Security Establishment, Canada's electronic spy service, is set to play a more prominent role in the war against the Islamic State of Iraq and the Levant, The Canadian Press has learned. Multiple sources familiar with the plans, speaking on condition of anonymity owing to the sensitivity of the matter, say the government is deploying a capability that only a "handful of countries" in the world can provide. CSE is part of the so-called "Five Eyes" community, along with the U.S. National Security Agency-the NSA. CSE spokesperson Ryan Foreman acknowledged the agency is helping Canada's military under the umbrella of Operation Impact, Canada's anti-ISIL mission in the Mideast, but refused to elaborate. "While we are proud of our contributions to CAF's missions, CSE is obligated to respect the Security of Information Act, and cannot address specific operational questions," Foreman said. Defence Minister Harjit Sajjan has for weeks been signalling the military will introduce a "more robust" intelligence-gathering regime, one that allies - chastened by withdrawal of six CF-18s -arehappy to see join the fight. Separately, **Public Safety Minister Ralph Goodale** confirmed Thursday that the Canadian Security Intelligence Service also will play a stepped-up role in the fight against the Islamic State, but he also refused to be specific. Canadian Press (London Free Press, B1/Front, Guardian, Red

Deer Advocate, Times Colonist, Record, National Post, Times & Transcript, Whig-Standard, Waterloo Chronicle); Toronto Star, A10; * Siver Times; * Our Windsor

Ottawa drops appeal of Omar Khadr's bail

The federal government has decided against pursuing an appeal of an Alberta court's decision to grant former Guantanamo Bay inmate Omar Khadr bail. The decision came in a joint statement Thursday from **Public Safety Minister Ralph Goodale** and Justice Minister Jody Wilson-Raybould. ***"The government of Canada respects the decision of the Court of Queen's Bench of Alberta, which determined that Mr. Khadr be released on bail in Canada pending his U.S. appeal of his U.S. convictions and sentence,"*** the statement said. ***"Withdrawing this appeal is an important step towards fulfilling the government's commitment to review its litigation strategy."*** The decision caught one of Khadr's lawyers by pleasant surprise. "We're pleased with the government's decision. We think it's the right decision. We never did think there was much merit to this appeal," Nate Whitling said in Toronto. "Now Omar can get on with his reintegration." The Liberal government decision is a sharp break from its Conservative predecessor, which fought hard to keep Khadr behind bars for the duration of his sentence. Canadian Press (Whig-Standard, B1/Front, Times Colonist, Red Deer Advocate, Guardian, Calgary Sun, Vancouver Sun, Winnipeg Sun, Record, National Post, Toronto Star, Winnipeg Free Press, Edmonton Sun, Toronto Sun, Ottawa Sun, Calgary Herald, Edmonton Journal); La Presse canadienne (Le Soleil, 19, Voix de l'Est, La Tribune, Acadie Nouvelle, Le Devoir, Le Droit, Globe and Mail, Times & Transcript, Telegraph-Journal); Journal de Montréal, 22 (Journal de Québec); * MacLean's; * James Town Sun

U.S. no fly list may have tripped up Canadian youngsters

The U.S. no-fly list, not Canada's secret air-security roster, might be what has been ensnaring Canadian youngsters, **Public Safety Minister Ralph Goodale** is telling several families experiencing travel headaches. In a letter to a representative of dozens of families whose children have trouble boarding airplanes, **Goodale** says delays can occur for passengers who have the same name as a person on Canada's list, or "***another security-related list such as the U.S. no-fly list.***" The reply to Khadija Cajee, whose six-year-old son Adam has been repeatedly delayed at the airport, underscores the complex _ and often hidden _ web of security measures intended to keep North American skies safe. **Goodale** promised to investigate after Adam's father, Sulemaan Ahmed, tweeted a photo from Toronto's international airport that appeared to show the boy's name with a "deemed high profile" label and instructions on how to proceed before allowing the youngster to check in. They were trying to board an Air Canada flight Dec. 31 to Boston to see the NHL Winter Classic. Soon after, **Goodale** said ***his officials had reminded airlines they don't need to screen children against Canada's no-fly list, officially known as the Passenger Protect Program.*** Canadian Press (Cape Breton Post, A9, Guardian, Calgary Sun, Times Colonist, Toronto Star, Winnipeg Free Press, Ottawa Sun, StarPhoenix, Leader-Post, Toronto Sun, Gazette, Calgary Herald, Ottawa Citizen, Whig-Standard); * La Presse canadienne (Acadie Nouvelle, 16)

*** Trudeau government targets cyber threats**

With Internet-based child sex-ploitation crimes skyrocketing, the Trudeau government intends to launch a "credible and comprehensive" review this spring of cybersecurity threats in Canada. Officials with **Public Safety Canada** said Thursday ***that while the details of that review are still being hammered out by Public Safety Minister Ralph Goodale***, a review will determine how Canada can best deal with everything from online predators to digital jihadists. Kathy Thompson, assistant deputy minister in charge of the Community Safety and Countering Crime Branch at Public Safety Canada, said that while the crime rate continues to decline across the country, "there are some exceptions. One of those exceptions is child sexual exploitation over the Internet - that is going up exponentially, year over year." Thompson made her remarks at the House of Commons Public Safety and National Security Committee, where MPs are looking for topics their group can zero in on during the current parliamentary session. A cybersecurity review that looks at legal gaps and shortcomings in police resources could form a plan for the way the Trudeau government approaches lawand-order issues. Toronto Sun, A8 (Calgary Sun, Winnipeg Sun, Ottawa Sun, Edmonton Sun)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Canadian lab ready to produce Zika vaccine by end of the year**
First, it was a Canadian creation that became the first real weapon against Ebola. Scientists at the National Microbiology Laboratory (NML) were working on a vaccine before the 2014 pandemic hit. The World Health Organization used vials of the untried medication in clinical trials in Guinea. It quickly proved a "game-changer" that protected everyone who received it. Now, only days after most people learned the word "Zika," the Winnipeg-based researchers may have done it again. The lab's head of special pathogens said last month they could have a vaccine to combat the mosquito-born illness ready by year's end. "This vaccine is easy to produce. It could be cranked to very high levels in a really short time," Dr. Gary Kobinger told Reuters. Postmedia News (National Post, A1; Vancouver Province, Vancouver Sun, London Free Press, StarPhoenix, Ottawa Citizen, Calgary Herald, Leader-Post, Montreal Gazette, Windsor Star, Edmonton Journal)

*** Rigorous testing of Canada's fixed wing search and rescue candidate aircraft to begin soon**
The Canadian military's fixed wing search and rescue project continues to move along. The bids went in Jan. 11 and the bid evaluation is now underway. An extensive testing of the candidate aircraft is soon to begin. "Bid evaluation, which includes aircraft testing, is expected to take about six months," Public Procurement and Services Canada spokeswoman Jessica Kingsbury told Defence Watch. "Testing is expected to begin in March and will take place at bidders' facilities." Kingsbury would not say which aircraft are being tested. "In order to preserve the integrity of the process, the department can provide no further information while the evaluation is underway," she added. Ottawa Citizen

*** Province preparing for upcoming wildfire season**
Even with snow still on the ground, the Ministry of Environment is preparing for wildfire season. After a precedent-setting wildfire season in 2015, government spokesperson Karen Hill said the government will be ready to respond to upcoming wildfires as they occur. "It is difficult to predict what the 2016 wildfire season may bring, as hazards depend on many factors including the timing and speed of the snow melt, temperatures, late winter [and] spring precipitation, and the overall forest fuel conditions," Hill said in an emailed statement. The wildfire season in Saskatchewan's north runs from April 1 to Oct 31. Hill said with the warm winter and below normal snowfall, Wildfire Management is getting ready for the possibility of an early start to the season. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Canada's electronic spies at the centre of beefed up ISIL intelligence effort**
The Communications Security Establishment, Canada's electronic spy service, is set to play a more prominent role in the war against the Islamic State of Iraq and the Levant. Multiple sources familiar with the plans, speaking on condition of anonymity owing to the sensitivity of the matter, tell The Canadian Press that the government is deploying a capability that only a "handful of countries" in the world can provide. A spokesman for the agency acknowledged the spy agency is helping the Canadian Forces under the umbrella of Operation Impact, but would not get into specifics. Defence Minister Harjit Sajjan has for weeks been signalling that the military would introduce a "more robust" intelligence-gathering regime, but has refused to discuss specifics. The capability being deployed is similar to the one CSE and the Canadian military used to combat the Taliban during the war in Afghanistan. Canadian Press (Cape Breton Post, A9)

*** ELLES JOIGNENT L'ÉI POUR FAIRE DES ENFANTS**
Des jeunes femmes canadiennes se sont rendues en Syrie et en Irak pour joindre le groupe État islamique et faire des enfants. Selon le Globe and Mail, au moins trois Canadiennes ont donné naissance au sein de ce groupe terroriste au cours des deux dernières années. Deux autres seraient enceintes. Ces jeunes mères seraient âgées de 19 à 22 ans et sont parties du Québec, de l'Alberta, de la Colombie-Britannique et de l'Ontario, a affirmé Amarnath Amarasingam, chercheur à l'Université de Waterloo. Leur décision serait motivée par leurs valeurs politiques et religieuses et leur but serait de «produire la

prochaine génération de combattants» islamiques, a-t-il indiqué au quotidien anglophone. Les familles de ces Canadiennes, qui se trouvent toujours au pays, seraient prêtes à les aider en leur envoyant des vêtements et des couches. Journal de Montréal, 28 (Journal de Québec)

*** Tensions et intimidation au collège de Maisonneuve**
L'un des protagonistes de cette bagarre fait partie du groupe de dix jeunes Montréalais arrêtés en mai dernier à l'aéroport de Montréal alors qu'ils tentaient d'aller grossir les rangs d'un groupe islamiste en Syrie. Le jeune homme est un élève du cégep. Rappelons que cinq élèves de Maisonneuve ont quitté le Canada en janvier 2015 et ont réussi à se rendre en Syrie et en Irak. Quatre, dont celui dont il est question dans cet article, ont été interceptés en mai. Deux autres sont derrière les barreaux en attendant leur procès pour avoir eu des substances explosives en leur possession. (…) C'est arrivé le 7 décembre. Le Service de police de la Ville de Montréal a confirmé que ses patrouilleurs sont intervenus dans le stationnement de l'établissement après qu'une bataille impliquant plusieurs personnes a éclaté. Le conflit s'est déclaré dans l'établissement entre un groupe de six élèves en administration qui préparaient un examen devant la bibliothèque et une quinzaine d'autres jeunes, qui, selon plusieurs employés et élèves, monopolisent quotidiennement cet espace. Le garçon intercepté par la GRC à l'aéroport en mai faisait partie de ce deuxième groupe. Selon nos informations, ce sont les commentaires sur le bruit ambiant lancés par une jeune femme qui tentait d'étudier qui auraient mis le feu aux poudres. S'en est suivie une série d'insultes et d'injures entre les deux camps. Puis les élèves en sont venus aux coups, selon ce que nous a raconté une personne impliquée dans l'incident qui a demandé l'anonymat, de peur de représailles. La Presse

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Federal Liberals lift deportation order for Syrian youth
The Liberal government has changed course and lifted a deportation order for a 16-yearold Syrian boy who was recently detained under Canada's immigration laws. The controversial case has highlighted the use of detention for foreign national children. It is supposed to be used as a last resort, but many critics have said it should be shelved. Immigration, Refugees and Citizenship Minister John McCallum cancelled the boy's deportation, which was scheduled for Feb. 25, on Thursday and granted him permanent residency, according to the boy's lawyer, Aviva Basman, of the Refugee Law Office in Toronto. The boy is being referred to as "Mohammed" for safety reasons. "We've had some great news. Mohammed's removal was cancelled. The minister has approved him for permanent residence on humanitarian and compassionate grounds," Ms. Basman said in an e-mail to The Globe and Mail. Mohammed was detained in isolation for three weeks in Toronto last month after attempting to claim refugee status at the Canada-U.S. border. The Canada Border Services Agency (CBSA) can hold people, including children, who are a flight risk, pose a threat to public safety or whose identities cannot be confirmed. However, the Immigration and Refugee Protection Act says that "a minor child shall be detained only as a measure of last resort." (…) The CBSA said that while there were no children in detention under Canada's immigration laws as of last Friday, 16 foreign national children have been detained at some point since November at one of the country's three immigration holding centres in Toronto, Vancouver or Laval, Que. Globe and Mail, A4; CBC News (2016-02-18); ; * Vice News (2016-02-18)

Border agents offer lift to school
A few more pieces of the puzzle regarding a Canada Border Service Agency raid at a Charlottetown motel are starting to fall in place. Ping Zhong, listed in the P.E.I. corporate registry as president, secretary and treasurer of the Sherwood Motel, was reluctant to comment, saying she was not on site Wednesday as agents swooped in to begin a day-long investigation at her motel. Zhong told The Guardian the raid was focused on a woman and her teenage son who had been living in one of the units at the motel for the past two years. A witness at the scene on Wednesday said a person was taken into custody as part of the raid. Zhong was told that is not the case. "I spoke to the mother today," Zhong said. "She said all they did was take the boy to school because he was late for the bus. He usually takes the bus every day." Agents arrived at the motel complex at around 8 a.m. Wednesday, according to residents who live full time at the motel. (…) Zhong said the investigation had nothing to do with the motel or with her personally. "I think this is really damaging our business reputation," she said. She said operations returned to normal

Thursday, but media inquires were pouring in. She said if there is anything more to learn about the investigation, it will be up to the Canada Border Services Agency to release those details. That certainly wasn't happening on Thursday. The Guardian requested additional details from the agency but was told there will be no further comment on the case because it is still under investigation. On Wednesday, Chastity McKinnon, regional director of communications for the Atlantic region of the Canada Border Services Agency, confirmed a search warrant had been executed in relation to an ongoing investigation. Guardian, A1, A2/Front (Journal Pioneer)

* **Le Salon bilingue de l'emploi de St. Catharines établit de nouveaux records de participation**
Le Centre d'emploi et de ressources francophones (CERF) du Niagara et Business Education Council, avaient organisé, le mercredi 10 février, un Salon bilingue de l'emploi dans le Niagara. Les deux organismes ont de quoi être fiers du succès de l'édition 2016 du traditionnel carrefour de rencontres entre les chercheurs d'emploi et les employeurs potentiels. Selon Nicole Schaubel, gérante de programme au CERF-Niagara, le Salon bilingue de l'emploi de St. Catharines a battu son propre record en accueillant plus de 600 visiteurs. En effet, en 2015, l'affluence se situait entre 500 et 600 visiteurs. Du côté des exposants, le répertoire des organisateurs indiquait 92 organismes dont 27 Services communautaires et 65 employeurs potentiels. (…) Du côté des employeurs, il fallait se bousculer pour caser tout le monde. Il y avait toutes sortes d'entreprises : des entreprises familiales aux bureaux locaux de multinationales en passant par des petites et moyennes entreprises. De nombreux secteurs d'activités étaient représentés dont l'industrie touristique, l'économie, l'éducation, la construction, la sécurité, la santé, l'industrie alimentaire ainsi que des associations sans but lucratif tel le Foyer Richelieu. Des services publics tels que la Police, les Forces armées et l'Agence des services frontaliers du Canada étaient également présents avec des renseignements utiles pour les chercheurs d'emploi. Selon le sergent Wayne Paulin, recruteur des Forces armées canadiennes, l'armée offre chaque année quelque cinq mille postes divers à des citoyens canadiens dont l'âge varie entre 18 et 75 ans. Le Régional (2016-02-18)

* **A criminal in Germany and Japan, a "refugee" in Montreal**
A federal department is trying to evict him, but a court decided otherwise. Proof that Canada can not filter those who enter the country as it would like to An arm of the federal government tries to deport an Iranian refugee while another arm tries to keep him here, as our Bureau of Investigation found out. Since 2010, the Ministry of Federal Public Security has tried to expel an Iranian refugee admitted to Canada in 2001, after discovering that he had hidden crimes in Japan and Germany. This refuge was denounced to the Canadian government for alledged involvement in drug trafficking and with the Yakuza, the Japanese organized crime members, according to our information. But as incredible as it may seem, the Immigration and Refugee Board refuse to allow the expulsion of this man from Canada. This is about Afshin Norouzi, who now lives in Montreal. Norouzi's case, which is still pending, shows that the security screening of refugees by the government and its agencies leaves much to be desired. (…) Through his attorneys, Norouzi finally admitted some of his misrepresentations in February 2015, including his criminal history and his multiple trips to Iran after his request for asylum. An important admission? No His criminal history in Japan and Germany had been confirmed to the investigators of Border Services, the GRC (RCMP) and Interpol. The Rebel

Dilkens makes a pitch for self-driving car test site
Windsor Mayor Drew Dilkens pitched the city as a potential test site for autonomous vehicles during a two-day visit to the Canadian International Autoshow. "With respect to the people and industry leaders who are here, we are having those conversations and trying to position our community as a potential test site," Dilkens said Friday. Dilkens joined government officials, auto and information technology industry leaders who attended a morning conference on the advent of autonomous vehicles. (…) Windsor, said Dilkens, has attributes that would also make it an attractive test bed for self-driving cars. "We look at our urban and rural environment; we look at our location with respect to being on the border and having those autonomous vehicles one day being able to cross the border and manage that type of setup," he said. "Those are just two examples of how our region is really well positioned to be a test site in the future for autonomous vehicles." Windsor Star, SR4

Market Slip silt affecting pleasure boat options
Pleasure boats may not have much space to dock at Market Slip this summer after the city scratched a $195,000 line from its capital budget that would have been used to dredge silt that has accumulated there. In the next few weeks, the Saint John Waterfront Development Corporation plans to measure the water depth there at low tide to see if they can put in any floating docks for the summer boating season, said Kent MacIntyre, general manager of the corporation. (...)Coun. David Merrithew has suggested that the Port Corporation might do the city a favour and dredge the spot at Market Slip. (...)Merrithew is disappointed that the Port Corporation can't do the dredging for the city. Port lands don't generate property tax because they are owned by the federal government, but the city provides policing and fire services to the port, he said. The port used to have its own police force but it was disbanded by the federal government in the late 1990s and the responsibility was downloaded onto the city, Merrithew said. In 2004 the Fundy Integrated Intelligence Unit was formed covering the Fundy region. It includes members of the Saint John Police Force, the RCMP J-division criminal intelligence, Canadian Border Services Agency, Rothesay Regional Police, Income Tax, Immigration, Canadian Correctional Services, **Public Safety**, N-West a national weapons enforcement support team, and the Hampton RCMP. Telegraph-Journal, B5

* **How to plan infrastructure spending for the greatest good**
As Finance Minister Bill Morneau prepares his first federal budget, there is a consensus among economists that, given the current state of the economy, some short-term stimulus is needed, and that infrastructure spending is the most effective tool. There is also a consensus that the best infrastructure spending is for strategic capital projects that are not necessarily "shovel-ready" today, that require more planning before they can be built, but that will increase Canada's productive capacity for the long term. Mr. Morneau's challenge is to square the circle. He must address a short-term economic imperative, but must also plan to provide the longer-term support needed for large, strategic capital projects. The new government has committed to investing $125-billion in infrastructure over the next 10 years. The minister's fundamental issues to decide are what types of infrastructure, over how long, how to pay for it and the role of politics in the project decisions. When Prime Minister Justin Trudeau and big-city mayors met in Ottawa on Feb. 5, the mayors had ideas about both kinds of projects - relatively small, shovel-ready projects and larger ones that can transform Canadian cities and contribute to greater economic productivity over the medium and longer term. Tens of billions of dollars are required for our cities because of many years of inadequate spending on municipal infrastructure. There is a large infrastructure deficit for deferred maintenance - repair and modernization of water and sewage lines, road repairs, modernization of civic buildings, construction of social housing and (given Canadian winters) the filling of potholes. But the larger-scale strategic infrastructure projects - public transit, green infrastructure, electricity grids, ports, critical highways, border infrastructure, science and technology infrastructure and so on - also require massive investment over the next decade. Globe and Mail, B4

Eye scanning, facial recognition being tested at San Diego border
The U.S. government announced Thursday it is using eye scans and facial recognition technology for the first time to verify the identities of foreigners leaving the United States on foot at a busy San Diego border crossing with Mexico, the latest move to close a longstanding security gap. Border officials in December started collecting the same information on non-citizens walking into the U.S. through the checkpoint connecting Tijuana and San Diego. The checkout system that launched Feb. 11 aims to ensure those who enter the country leave on time and identify those who stay after their visas expire. Up to half of the people in the U.S. illegally are believed to have overstayed their visas. Congress has long demanded biometric screening such as fingerprints, facial images or eye scans from people leaving the country, but the task poses enormous financial and logistical challenges. Privacy advocates worry the data could be misused or fall into the wrong hands. Before now, foreigners who left the country were rarely checked by authorities before walking into Mexico or Canada at ports of entry. Cameras have started photographing the eye and facial features of non-citizens leaving the country through the Otay Mesa port of entry to verify their identities on their documents. Winnipeg Free Press, A16 (Times Colonist, Cape Breton Post, Fox News)

*** Low loonie attracting U.S. tourists to P.E.I. this summer**
There's an Island upside to the low Canadian dollar: tourism operators say they're expecting to have a fantastic summer season. Several hotels are reporting that bookings from south of the border are already up, and they've been getting a lot of calls lately. "We are gradually getting, I'm finding, getting more and more calls trying to book in," said Nancy Leslie, of Canada's Best Value Inn & Suites. "Because last summer was really, people were calling and couldn't get rooms here." CBC News (2016-02-18)

*** Beating Moroun at his own game**
An opinion piece states, "Since Matty Moroun seems intent on destroying the Windsor waterfront both at the foot of Lauzon Road and in the west end adjacent to the Ambassador Bridge, I'd like to suggest a way to beat him at his own game. Since he sees nothing wrong with letting properties crumble and become eyesores, I suggest in like fashion we build the new Gordie Howe Bridge, and then completely cut offall access to the Ambassador Bridge, rerouting all roads so as to completely cut it off. Then, Huron Church Road will simply become what it was always intended to be - a major artery to the riverfront and the university in the west end. Mr. Moroun's eyesore of a bridge will continue to crumble as it will become a useless bridge to nowhere, thereby ending his monopoly while hugely improving profits at the Canadian-owned Gordie Howe Bridge." Windsor Star, A6

*** Canadian workers should build Site C dam**
A letter to the editor states, "We have heard Premier Christy Clark say Site C is going to provide jobs for the people of B.C. Would someone then explain why so many contracts have been awarded to Spanish and Korean companies? Could it be as high as 80? A job posting dated Feb. 9 states that duties include "creating the Monthly Temporary Workers Report" and "assisting in the Temporary Foreign Worker process." With all the unemployment we have in Canada, why are the B.C. Liberals handing out jobs to foreign corporations and temporary foreign workers? Aren't the unemployed in B.C., Alberta and Saskatchewan good enough to work in B.C. on something that will be paid for by B.C. taxpayers? All those "free trade" agreements signed by the previous federal government have provisions in them for foreign corporations to bring in their own workers, if they have contracts in Canada. Many of us will recall how coal miners were brought into B.C. from China, by simply insisting the miners needed to speak Mandarin. Will the workers this time be required to speak Spanish, Korean, Greek or Polish?" Times Colonist, A13

*** Alberta has potential to be agriculture powerhouse**
Alberta has the potential to be an agriculture and energy "super powerhouse," depending largely on its ability to find the right people for the jobs available, says an industry representative based in Calgary. "The potential is there and I don't think anybody denies that. But if you don't have the boots on the ground to do the work, it ain't gonna happen," said beef sector representative Casey Vander Ploeg, in Red Deer on Thursday for the Alberta Cattle Industry Conference. Like others gathered for the conference, Vander Ploeg was excited to hear earlier that day that the federal government has launched a review of the temporary foreign worker program with a view to easing the persistent labour crisis facing farmers and food processors. "The announcement that the Liberal government made in Ottawa, in my opinion, that is a very positive development," said Vander Ploeg, policy research manager for the Calgary-based National Cattle Feeders Association. "Historically, agriculture has been the gateway of immigration into Canada. Alberta can be an energy and agricultural super powerhouse." But the industry needs access to skilled workers who can fill the many highly specialized tasks involved on the farms and in the processing plants. Feedlot operator John Lawton, based in Niton Junction with additional operations in Southern Alberta, said that while finding workers is hard enough for the farms, the crisis is especially troublesome at processing plants. Alberta's two major beef processors, based in High River and Brooks, are unable to run at full capacity because they don't have enough people to fill their shifts. Red Deer Advocate, C3

CYBER SECURITY / CYBERSÉCURITÉ

*** Facebook, Twitter, Google express public support in Apple's fight with feds**
Leading tech companies are rallying behind Apple — some belatedly — in its fight against a court order requiring the company to help investigators break into an iPhone used by one of the San Bernardino

mass shooters. A U.S. magistrate ordered Apple to produce software that would give investigators access to the iPhone at issue. Apple has until next Tuesday to challenge that ruling, setting the stage for a legal clash that could determine whether tech companies or government authorities get the final say on just how secure devices like smartphones can be. Associated Press (CBC News)

*** Has Apple secretly leaked your private data to the government?**
An opinion piece states "Apple CEO Tim Cook's now widely shared "Message to our Customers" is an attempt to make the best PR move in a bad situation. Were Apple to comply with the FBI's request to access information locked on a suspected San Bernardino shooter's phone, it probably wouldn't be the first time that the government has deputized Apple to breach its customers' privacy. According to documents revealed by Edward Snowden in 2013, Apple was one of the participants in the U.S. National Security Agency's PRISM program, giving authorities access to its customers' information including their emails, messages and photos. Apple for its part has denied any such involvement, but given the secretive nature of the United States Foreign Intelligence Surveillance Court (FISA Court), Apple and other technology companies would be prohibited to publicly acknowledge their involvement in such programs. Hence the frustrating Catch-22 — is Apple really a champion of privacy rights? Or is all this bluster just an act to score PR points with their customers, despite the fact that legislative conditions already exist to force Apple to co-operate in secret?" Toronto Star; Toronto Sun

*** Apple likely to invoke free-speech rights in encryption fight**
Apple Inc will likely seek to invoke the United States' protections of free speech as one of its key legal arguments in trying to block an order to help unlock the encrypted iPhone of one of the San Bernardino shooters, lawyers with expertise in the subject said this week. The company on Thursday was granted three additional days by the court to file a response to the order. Apple will now have until Feb. 26 to send a reply, a person familiar with matter told Reuters. The tech giant and the Obama administration are on track for a major collision over computer security and encryption after a federal magistrate judge in Los Angeles handed down an order on Tuesday requiring Apple to provide specific software and technical assistance to investigators. Reuters

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Bullying, nudity alleged at RCMP training school**
The RCMP is scrambling to defuse a public relations bomb over an investigation into bullying, sexual misbehaviour and nudity among employees at the Canadian Police College in Ottawa, according to CBC News. Top brass have ordered new code of conduct investigations and a review of previous inquiries and have suspended two employees with pay after receiving what they say is new information about alleged harassment at the school, CBC reported Thursday. Yet CBC News said it spoke to four complainants - all former employees of the RCMP's explosives training unit at the school - who say the matter is common knowledge within the force. The men say they tried to share accounts of other disturbing behaviour, including unwanted sexual touching, rampant nudity, and bullying at the school in 2014 and 2015, but RCMP investigators didn't want to know. According to the report, one of the officers suspended Wednesday is RCMP Staff Sgt. Bruno Solesme, who was the unit manager. Solesme had already been disciplined for nudity in the workplace, specifically one instance where he was seen lying naked across the desk of a colleague. He was suspended with pay for several months in 2014 before an internal adjudication board formally issued a reprimand and docked him seven days' pay. The other man reportedly suspended this week is a civilian member of the RCMP and a former Canadian Forces Joint Task Force member, Marco Calandrini. He was docked five days' pay for walking naked around the office on a regular basis. Calandrini was docked another 15 days' pay after the force investigated allegations he had inappropriately touched a former colleague. CBC News said that Solesme and Calandrini were not available to respond to the story. The alleged bullying and harassment is at odds with the priority RCMP Commissioner Bob Paulson has put on addressing allegations of sexual harassment inside the force, as well as promised reforms to its disciplinary system. Late last week, one of those former employees wrote to Paulson for an explanation. Paulson passed the file to Deputy Commissioner Peter Henschel, who is responsible for the college. Ottawa Citizen

*** Le présumé meurtrier sortait de prison**

Le présumé meurtrier de Christine MacNeil, cette femme abattue dans une chambre de l'hôtel Four Points de Gatineau, en octobre dernier, venait de sortir du pénitencier lorsque le crime s'est produit. (…) Un agent de la compagnie de sécurité Garda avait appelé la police de Gatineau pour l'avertir qu'un homme tirait dans la rivière des Outaouais en compagnie d'amis. Les forces de l'ordre ont saisi l'arme et accusé l'homme de quatre chefs reliés aux armes à feu. Le P38 a été confisqué. Le 5 mars 2013, Blake Dooley a plaidé coupable à un seul de ces chefs, soit la possession d'une arme à feu à utilisation restreinte, chargée. La Couronne a demandé un arrêt des procédures sur les trois autres chefs. Le tribunal a alors prononcé une interdiction à vie de posséder des armes à feu. L'inspecteur-chef Leduc n'a révélé que peu de détails sur ce qui pouvait bien relier la victime à son tueur allégué. « L'enquête intensive des derniers mois a démontré que la victime était bel et bien ciblée par son meurtrier », a mentionné le policier. Les autorités croient qu'il est possible que d'autres personnes soient arrêtées dans cette affaire. Outre la police d'Ottawa, la Sûreté du Québec et la Gendarmerie royale du Canada ont aussi collaboré avec le SPVG dans cette affaire. Le Droit, 5

*** Norquay man wanted by police on warrants**

More details have emerged about why RCMP are looking for Wayne M. Babiuk of Norquay. On Tuesday, the RCMP announced it was seeking the public's assistance in locating the man because he was wanted on several Criminal Code warrants, but the force would say little else. Earlier that day Kamsack RCMP officers had received a call about a break and enter at a rural residence northwest of Swan Plain. The RCMP said on Thursday that the home and a vehicle were damaged by a baseball bat and threats were made to the homeowners and the police. Two firearms were also taken from the residence. The victims were not harmed but are known to Babiuk. The 41-year-old is charged with one count of the dangerous operation of a motor vehicle, one count of mischief, two counts of uttering death threats, one count of break and entering, one count of possessing a firearm and six counts of breach of an undertaking. A warrant is out for his arrest and RCMP say not to approach him because he is possibly armed and considered dangerous. Postmedia Network, A6

*** Lourdes amendes pour deux Sherbrookoises**

Deux Sherbrookoises devront acquitter de fortes sommes pour avoir participé à du trafic de tabac illégal. Une amende de 172 410 $ est imposée à Karine Baillargeon. Cette condamnation, prononcée par le juge de paix magistrat Sylvie Desmeules, est le résultat d'une opération effectuée par la GRC, le 30 novembre 2010. Les policiers avaient investi la résidence de Baillargeon et y ont saisi 45 400 cigarettes de contrebande. Pour sa part, Danika Baillargeon a aussi 12 mois pour verser 186 500 $ d'amende à la suite d'une condamnation prononcée par la même juge. Le même jour en 2010, les policiers fédéraux avaient effectué une perquisition visant la résidence de Baillargeon. Ils y ont saisi 404 cigarettes de contrebande. Dans les deux cas, la cour a ordonné la confiscation et la destruction du tabac saisi, annonce un communiqué de presse de Revenu Québec. Les deux Sherbrookoises font partie de personnes reconnues coupables d'infractions liées à la contrebande de tabac. Ces huit personnes ont été condamnées à payer des amendes totalisant plus de 1 073 000 $, dans des délais variant de 2 à 24 mois. De plus, l'une d'elles, Charles Patenaude de Saint-Césaire, a été condamnée à purger une peine d'emprisonnement. «, note le ministère. «Ces personnes n'étaient pas inscrites aux fichiers de Revenu Québec et n'étaient titulaires d'aucun des permis exigés par la Loi pour exercer des activités commerciales liées aux produits du tabac», note le ministère. La Tribune, 29

OFFICIERS DANS L'EMBARRAS POUR INCONDUITE SEXUELLE

Une enquête interne de la GRC a été ouverte en lien avec des allégations d'inconduite sexuelle, d'intimidation et de nudité au Collège canadien de police (CCP), à Ottawa, a rapporté la CBC hier. Les faits se seraient déroulés à l'unité de formation aux explosifs du CCP, un service de police national de la GRC. Le sergent Bruno Solesme et Marco Calandrini, un employé civil de la GRC et ancien de l'armée, ont été suspendus. Responsable de l'unité, le sergent aurait déjà été sanctionné dans le passé pour nudité sur son lieu de travail. Il se serait allongé nu sur le bureau d'un collègue. De plus, il aurait intimidé des anciens employés, les menaçant de ne pas renouveler leur contrat. L'autre employé aurait aussi été déjà suspendu parce qu'il se promenait nu dans le bureau régulièrement. Calandrini aurait aussi été suspendu pendant 15 jours parce qu'il était accusé d'avoir touché un ancien collègue. Une loi coûteuse et inutile. Journal de Montreal, A3

*** Police chief hails new PTSD law**
Waterloo Regional Police Chief Bryan Larkin applauds new provincial legislation making it quicker and easier for first responders with post-traumatic stress disorder to access benefits and treatment. "We have normal people doing an abnormal role in society," said Larkin, referring to the danger police officers face each day. The law introduced Thursday would create a presumption that PTSD in first responders is work-related, removing the need for them to prove a causal link to the Workplace Safety and Insurance Board. It would cover police officers, firefighters, paramedics, workers in correctional institutions, dispatchers of police, firefighting and ambulance services, and First Nations emergency response teams. Canadian Press (Waterloo Region Record, B1); Ottawa Citizen

*** Police critical of Apple technology**
The top-notch encryption technology on Apple mobile phones is now routinely hindering criminal investigations, police and prosecutors in New York City said Thursday. They predict the problem could worsen as more criminals figure out how effective the devices are at keeping secrets. Manhattan district attorney Cyrus R. Vance Jr. told a news conference that his cybercrime lab has 175 Apple devices that investigators can't access because of encryption embedded in the company's latest operating systems. "They're warrant-proof," he said. Associated Press (Waterloo Region Record, A6)

Horse owner charged with cruelty
A 65-year-old Fort McMurray man is charged with causing injury to animals after three horses were found dead and 82 others were found distressed on two of his northern Alberta properties. The RCMP's livestock investigations unit and the Alberta Society for the Prevention of Cruelty to Animals visited a property in the Wandering River area Feb. 3 where they found three horse carcasses and 52 horses in poor condition. Two horses and two donkeys were confined to corrals where there was not enough food or water, RCMP said. After visiting the man's second property, they found 20 more horses in distress. Two days later, police visited the properties again with a search warrant and a veterinarian determined all of the horses were in distress. Once police completed their searches, a total of 82 horses and two donkeys were seized and relocated to a facility for examination and treatment, police said. Gary Herbert Sparshu has been arrested and charged with causing injury to animals and breach of a court order. He has been remanded in custody and will appear in provincial court in Boyle on Tuesday. Calgary Sun, A12 (Edmonton Sun, Edmonton Journal); National Post, A6

Spray of bullets wounds man in taxi
A 40-year-old man was treated in hospital for a minor leg injury after a taxi was sprayed with bullets early Thursday in Surrey. Surrey RCMP Staff-Sgt. Blair McColl said the man was hit in the Surrey Metro cab shortly after 5 a.m. in the area of 109th Avenue and 143rd A Street. Numerous 911 calls were received from the area, he said, as well as a call from a man saying he'd been shot in the leg. The taxi driver was unharmed, but one of the windows was blown out as the cab was hit by multiple gunshots. McColl said the victim went to Surrey Memorial Hospital, where he was treated for a graze to his leg. "The bullet didn't penetrate the leg, and he has since been released." Moonyem Mohammad, the general manager of Surrey Metro Taxi, said the driver is in shock, but otherwise doing OK at home. He said the car has been impounded and the driver, who wishes to remain anonymous, will be off work for the next two or three days. "If he needs more time we can arrange that if he wants," Mohammad said. Postmedia Network (Province, A4, Red Deer Advocate, Times Colonist)

*** Le stratagème pyramidal en vogue dans la Péninsule est illégal, selon un expert**
Le stratagème pyramidal qui a pris de l'ampleur dans la Péninsule acadienne ces derniers mois est illégal, selon le conseiller juridique principal de l'autorité réglementaire provinciale. Comme le rapportait l'Acadie Nouvelle plus tôt cette semaine, un réseau pyramidal ciblant les femmes et présenté comme un «groupe d'entraide» ou un «groupe de don» a étendu ses tentacules dans le nord-est du Nouveau-Brunswick ces derniers temps. (…) Des arguments rejetés du revers de la main. D'après ce que l'on peut lire dans des documents de recrutement destiné aux éventuelles recrues et un courriel envoyé récemment aux femmes qui participent déjà au stratagème, les administrateurs (dont on ne connaît pas l'identité) tentent de se faire rassurants. Ils allèguent que leur combine n'est pas illégale parce qu'il s'agit d'un «groupe de dons» et que des chèques cadeaux sont échangés lorsque des recrues se joignent à un groupe de participants. Ils affirment aussi qu'il ne s'agit pas d'une pyramide parce que personne ne

demeure au sommet de la structure et que les participants sont regroupés en «nuages» de 15 personnes. Mais selon Me Brian Maude, il ne faut pas être dupe. «Ici, c'est bien de dire "non, non, non, c'est un cercle de dons, c'est un cercle de cadeaux." Moi, je peux appeler un cheval un chameau sans bosse. C'est toujours un cheval. L'appeler "nuage" au lieu de pyramide, c'est essentiellement changer le descriptif, mais c'est toujours la même chose.» Un autre argument avancé par les promoteurs du stratagème pyramidal actif dans le nord-est de la province est qu'un groupe semblable a collaboré avec la GRC à Calgary pour s'assurer que leurs activités sont blanches comme neige. Me Brian Maude accueille cela avec beaucoup de scepticisme. «Avez-vous déjà entendu parler d'un système d'investissement qui a travaillé avec la police pour assurer sa légalité?» L'Acadie Nouvelle est d'ailleurs en contact avec la GRC pour savoir si cette allégation faite par les administrateurs du réseau pyramidal est véridique. Nous attendons de leurs nouvelles. Il semble cependant peu probable que ce soit le cas. Un réseau pyramidal identique a fait l'objet d'une sérieuse mise en garde de la GRC albertaine en 2008. Acadie Nouvelle, 4/FRONT

*** Targeted shooting in Kamloops sends one man to hospital**
One man has been sent to hospital for surgery, after a shooting in Kamloops on Thursday night. Kamloops RCMP say the shooting happened in a parking lot near the intersection of Versatile Drive and Copperhead Drive. "This was a targeted shooting and not a random event," Staff Sgt. Edward Preto said in a statement. The victim is a 32-year-old man who is well-known to police. CBC News; CFJC

*** Grand Prairie RCMP investigate attempted child luring incident**
RCMP are investigating an incident where two women in a black van allegedly approached a youth in the Grande Prairie area. The incident allegedly occurred on 71 Avenue near 99 Street at about 3:45 p.m. on February 17. Police said a black mini-van pulled into a driveway and a young woman got out of the driver's seat - she allegedly offered the child a ride home. According to RCMP, when the child declined a second female opened the passenger side door and allegedly told her to get in the van. The girl declined a second time and continued walking until she could safely call her mother. CTV News

Une loi coûteuse et inutile
Un article d'opinion déclare "La tuerie de Polytechnique en 1989 et la fusillade au Collège Dawson en 2006 ont soulevé un débat sur les armes à feu entre les pros et les contre qui, dans certains cas, obnubile le simple raisonnement. Soulignons aussi que les événements sanglants aux États-Unis alimentent les arguments des pros qui continuent de penser que notre système d'acquisition des armes à feu est semblable et que n'importe qui au Québec et au Canada peut acheter une arme à feu sans aucun contrôle. Cette hystérie autour des armes à feu permet aux politiciens d'en faire un enjeu électoral auprès d'une partie de population souvent ignorante des règlements actuels de contrôle des armes à feu et qui ne cesse de réclamer une loi sur l'enregistrement des armes. (...) Une fois ce cours terminé, je peux si je le souhaite acquérir une arme à feu selon des conditions déterminées par la loi des armes à feu canadienne. Et voyons maintenant les exigences du permis d'acquisition. D'abord avoir 18 ans. En plus des renseignements réguliers, nom, adresse, etc., vous devez fournir vos antécédents personnels et ceux de votre partenaire conjugal en relation avec le Code criminel canadien au cours des cinq années précédentes à votre demande. Une réponse négative à l'une de ces questions ne vous permettra pas d'acquérir une arme à feu. De plus, vous devez obtenir la signature d'autorisation de votre conjoint ainsi que celle de deux répondants qui vous connaissent depuis au moins trois ans. Vous devez maintenant envoyer votre demande à la Gendarmerie royale du Canada qui doit vérifier la véracité des renseignements fournis et continuer l'enquête avant de vous délivrer le document demandé ce qui prendra au moins six mois. Votre dossier personnel doit donc être vierge. De plus, ce dossier est enregistré et toute personne de loi (policiers ou gendarmes, etc.) peut y avoir accès lorsque nécessaire. La sûreté du Québec n'a donc pas besoin d'un nouveau système pour savoir qu'un individu possède une arme à feu. Ils n'ont qu'à accéder au dossier d'acquisition." Le Soleil, 23

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Dorchester prison staff find $38K drug stash
Dorchester Penitentiary staff made a major discovery earlier this week when a package containing cocaine and other contraband was found at the prison. "It was a substantial amount," says spokesman Daniel Melanson. "It creates a network among inmates for buying and selling and puts everyone at risk." Correctional Service of Canada staff discovered a package around 10 a.m. on Tuesday, near the perimeter of the medium-security unit. The package was seized and found to contain marijuana, hashish, hashish oil, cocaine, tobacco, pills and nicotine patches. The estimated institutional value of the contraband is $38,000. Melanson said the matter is being investigated to determine how the package got there. CSC has a tip line for all federal institutions where any information relating to drug use or trafficking that may threaten the safety and security of visitors, inmates and staff can be reported. Times & Transcript, A6

Fewer inmates in solitary makes the case for legal reforms
An opinion piece states, “There has been a startling development in the solitary confinement of prisoners in our federal system. For many years, penitentiaries consistently held about 800 prisoners in segregation on any given day. However, over the past year, the Correctional Service of Canada has cut the number of segregated prisoners in half. According to data collected by the CSC, and obtained pursuant to an access-to-information request, the number of prisoners held in cells for up to 23 hours a day is now 405. Questions that emerge are why the change took so long to come about and whether we can expect it to last. This change, while positive, reveals a dark truth. The CSC has long asserted that it relies on segregation only when absolutely necessary, such that any reform would threaten prison security. But if the correctional service can take half of its segregated population out of isolation, it seems clear that it could have made this decision earlier. It seems that the change required only greater incentives within the prison service. The only plausible explanation for this development is that the CSC is responding to intense public pressure, litigation and criticism, including by The Globe and Mail. There has been no change in the law that could explain the reduction. The "administrative segregation" provisions in the Corrections and Conditional Release Act have not been significantly amended since their enactment in 1992. Although the law provides that administrative segregation can be used only as a measure of last resort, it has always lacked concrete rules of enforcement. For example, the law does not include a strict limit on the number of days that a prisoner can be isolated. The result is that prison officials have long enjoyed an enormous amount of discretion.” Globe and Mail, A13

«Ce qui s'est passé en cour m'a fait réaliser le côté inhumain de mes gestes»
Kaven Sirois, l'un des deux auteurs du triple meurtre de la rue Sicard à Trois-Rivières, restera à l'Institut Philippe-Pinel jusqu'en 2020 et sera ensuite transféré dans un pénitencier jusqu'à la fin de sa sentence. Comme prévu jeudi, le procureur de la Couronne, Me Hippolite Brin, et les avocats de la défense, Me David Guévin et Me Matthieu Poliquin, ont suggéré de façon commune le lieu de garde à privilégier pour le jeune homme, maintenant âgé de 18 ans. On sait que ce dernier a été condamné à une peine de prison à vie sans possibilité de libération conditionnelle avant 10 ans pour avoir tué de sang froid trois jeunes le 11 février 2014 et comploté pour tuer d'autres personnes. Déjà informé de cette recommandation, le juge Bruno Langelier l'a entérinée sur le banc, précisant du même coup qu'il envisageait déjà cette possibilité très sérieusement. Selon lui, il est essentiel de garder à l'esprit l'importance de la réhabilitation pour cet adolescent devenu un jeune adulte. (…)Par ailleurs, les procédures pour permission d'en appeler de la peine pour adultes imposée à Kaven Sirois vont se poursuivre. C'est que la défense voudrait faire renverser la décision du juge Langelier afin qu'il soit plutôt condamné à une peine spécifique, soit six ans de garde fermée et quatre ans de suivi externe. «Kaven appartiendra au Service correctionnel du Canada pour toute sa vie. Il s'agit d'un poids lourd à porter. Et c'est pourquoi nous allons en appel», a précisé son avocat Me Guévin. Des audiences sont prévues devant la Cour d'appel le 6 mai. Le Nouvelliste, 3, Journal de Montréal (Journal de Québec)

Lawyer concedes client is dangerous offender
The lawyer for 47-year-old David A. Wilson, a Kingston man soon to be sentenced for a break-in and sexual assault here in March 2014, concedes that his client meets the definition of a dangerous offender.

But defence lawyer Dan Scully is asking Superior Court Justice Gary Tranmer not to sentence his client to prison indefinitely. He told the judge "the Crown has met its burden (of proof)" and "it's open to the court to find that Mr. Wilson is a dangerous offender." That said, however, Scully is urging the judge to find that there's a reasonable expectation Wilson's risk can be managed in the community and to sentence him to seven years in prison followed by a 10-year long-term supervision order. Under the Criminal Code of Canada, a dangerous offender designation presumptively calls for indeterminate - or indefinite - sentencing, with release possible only through the Parole Board of Canada, which, if granted, means parole supervision for life. (...)Scully noted his client was granted early release on his 2010 sentence. Scully told Justice Tranmer that Wilson spent the final eight months of his second penitentiary sentence living at the Henry Traill Community Correctional Centre, a halfway house for federal offenders operated under the aegis of Correctional Service Canada, on the property of Collins Bay Penitentiary. He was there, Scully said, because the Parole Board of Canada imposed a residency requirement on his release. But Scully suggested it showed an increased level of confidence in his client. Kingston Whig-Standard, A1

* **Pushing for cows in pen**

It is easy to pick out the short-timers from the lifers on Jeff Peters' beef and pork farm. The 14 black and white Holstein dairy cows stand in sharp contrast to his regular herd of chocolate-brown Limousin beef cattle in the open winter barns. The dairy cows are excons of a sort. Peters is one of eight Ontario farmers who, for more than five years, have looked after the remnants of the dairy herd that once lived on a farm at the Collins Bay prison complex in Kingston. For most of that time, the farmers, hundreds of residents and a few celebrities have been fighting to reopen the farm and send the cows home. Years of weekly protests and fundraisers had led nowhere. But hopes have blossomed with the October defeat of the Conservative government, which closed the farm. Now, the new Liberal MP from the Kingston area is campaigning to bring farming back to the prison. There is a growing feeling among protesters their efforts will finally be rewarded. Farms have formed part of the Collins Bay Institution since it opened in 1930. In 1962, a farm annex, later named the Frontenac Institution. Prisoners swept stalls, and fed the cows and chickens. Many stayed up all night to help birth calves. In the farm's final years, an inmaterun operation provided milk and eggs for all the federal prisons in Ontario and Quebec, and some provincial jails. Why the Conservatives closed it and five other prison farms across Canada in 2010 was never clear. The move followed other steps that seemed intended to eliminate any notion life in prison was soft. The minister responsible for prisons at the time, Vic Toews, called the farm programs ineffective at rehabilitating prisoners. "Less than one per cent learned any skills that were relevant," he said. (...)Meanwhile, the Monday protests continue at the Collins Bay entrance. National Post, A7

* **Murderer waives parole hearing**

A man convicted of murdering two young girls, their parents and grandparents more than three decades ago in B.C. has waived his right to a parole hearing, and it will be 2021 before he can apply again. David Ennis, who has changed his name from David Shearing since the August 1982 murders, was due for a parole hearing in August. A spokeswoman for the Johnson and Bentley families says relatives of the victims are relieved at the cancellation. Vancouver Sun, A2 (Times Colonist, The Province)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Demand outpaces funding on reserves

Frantic calls for backup that go unanswered, cops wearing worn out bulletproof vests and a pay scale that discourages officers from staying on the job. These are some of the obstacles that plague officers serving in Quebec's remote aboriginal police departments, according to six veteran cops interviewed by the Montreal Gazette. Three of the officers did not want their names published for fear it might affect their future job prospects. Calls for improved working conditions come just days after the shooting death of constable Thierry Leroux - a 26-year-old who was killed last Saturday while patrolling in the Lac Simon First Nation, south of Val-d'Or. Meanwhile, a report released Thursday by the province's ombudsman points to failed crime prevention strategies in the Nunavik region (home to the majority of Quebec's Inuit

population). The document tracks a 239-percent increase in cases before Nunavik's court system over the past decade. It links the spike in crime to a lack of accessible substance abuse treatment and other essential government services. And while the workload for aboriginal police forces is only increasing, their resources can't keep up with the demand - according to senior police sources. (...)In contrast, Montreal's police budget increased by 41 per cent between 2005 and 2015. Though it's hardly scientific to compare a small department with the province's largest municipal police force, budget increases are common in non-Aboriginal communities. Montreal Gazette, A1

*** Sex trafficking at crisis point**
Advocates who work with victims of human trafficking are urging the Ontario government to adopt a private member's bill to take immediate action to address what they call a crisis. "Sex trafficking is a growing and significant issue in Ontario," said Cynthia bland, founder of Voice Found, a survivor-led nonprofit that educates people about commercial sexual exploitation. "The average age when most girls are trafficked into prostitution is 14, and many don't even recognize that they've been trafficked until it's too late." Simone bell of Ottawa, a victim of trafficking, said vulnerable young people need non-judgmental help and understanding. "No child or youth is a prostitute. ... it is human trafficking," said bell. PC women's critic Laurie Scott has a private member's bill that would give police the power to enforce protection orders on behalf of victims. Victims' families, police and Children's aid Societies would be able to apply for a minimum three-year protection order. Canadian Press (Toronto Sun, A16, London Free Press, Ottawa Sun, Hamilton Spectator)

*** Our sexual assault confusion**
An opinion piece states, "'I thought to be assaulted you had to be broken and raped," explained the first complainant in the Ghomeshi trial, when asked why she hadn't come forward sooner with her sexual assault allegations. A great number of Canadians appear to harbour this misconception, and others, about our sexual assault laws. According to two Statistics Canada data sets, there were 21,000 incidents of sexual assault reported to police in 2014, while 633,000 Canadians selfidentified as being victims of sexual assault that same year, either reported or unreported. The reason given by 43 per cent of survey respondents for not reporting an assault was that "Police wouldn't have considered the incident important enough." There may be other reasons why some of these self-identified victims chose not to report. But if we accept these figures as being broadly accurate, they are astonishing. To put them in context, in 2014, roughly 360,000 criminal cases were resolved in Canada's courts. If all 633,000 self-identified victims were to report, the number of sexual assault cases would outnumber all other criminal cases two to one. The high incident and low reporting rates may suggest that many Canadians - both women and men - are ignorant about what constitutes sexual assault in Canada, when to report it, and what level of communication is warranted to ensure sexual relations are consensual." National Post

*** Dites-le en rose : dites non à l'intimidation**
Jusqu'au 24 février, les visiteurs du Carrefour de l'Estrie sont invités à écrire une promesse de gentillesse pour appuyer le mouvement de lutte contre l'intimidation sur un Post-it, qui sera ensuite apposé au mur DITES-LE EN ROSE dans le coin restos du centre commercial. Le mercredi 24 février, les gens sont également invités à porter un chandail rose pour afficher l'importance qu'ils accordent à la sensibilisation et à la prévention face à l'intimidation.L'initiative #24février chandail rose est entre autres appuyée par le Service de police de Sherbrooke (SPS), le Carrefour de l'Estrie et la Fondation Jasmin Roy, qui a pour mission de lutter contre la discrimination, l'intimidation et la violence faites aux jeunes en milieu scolaire.« Comme parents, nous devons être des modèles pour nos enfants. Si nous sommes violents, nos enfants le seront probablement aussi. Si nous sommes stupides sur les réseaux sociaux, ils seront stupides aussi », en affirme le fondateur, l'animateur Jasmin Roy. Selon lui, la communauté doit être organisée et bienveillante pour confronter et lutter contre l'intimidation. Estrie Plus

*** Event highlights injustices faced by indigenous women**
There were several sobering and disturbing facts, thoughts and observations shared at an event at Memorial University Thursday night. The gathering, which included several speakers, was called "Know the Truth: Injustice and Indigenous Women in Canada." Anybody in the audience might very well have learned some general facts about indigenous peoples, but some words spoken by Amelia Reimer, a cultural support worker at the St. John's Native Friendship Centre, were much more powerful than trivia.

"Just this week, actually, I was given two more names of Mi'kmaq women here on the island who went missing a few decades ago. But still no one has ever heard from them and no one knows what happened," Reimer said. Reimer has been attempting to account for all the indigenous women who have gone missing in this province since 1980. It was recently revealed as many as 1,200 indigenous women may have gone missing in Canada since that time, but even that number is thought to be inadequately low by some. The number 4,000 has been emerging lately. The first questions that might come to mind would be why so many indigenous women are going missing, and why the public hasn't heard more about it. The Telegram, A4, VOCM

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Indigenous victims: more than a body count**
Indigenous Affairs Minister Carolyn Bennett recently outlined how she sees the scope of a national inquiry into missing and murdered aboriginal women shaping up. Ms. Bennett believes the fact-finding must also hear the stories of those victims not yet counted. So the official number — set at 1,181 by the RCMP in 2014 — will rise. The tally of the missing and murdered indigenous women and girls has been a moving target for years. From the hundreds first believed to be in RCMP files, the 582 counted by the Native Womens' Association of Canada in 2010, to the 800-plus painstakingly collected by a University of Ottawa PhD candidate. The organizers of the cross-country Walk4Justice say they've gathered upwards of 3,000 stories. Brandon Sun

*** An inquiry that seems to have no start, and no end**
An opinion piece, by Jeffrey Simpson states, "The inquiry into missing and murdered aboriginal women, promised by the Liberal government, is getting wider and wilder Its scope, length, cost and focus keep growing with every new pronouncement by Indigenous Affairs Minister Carolyn Bennett, who has become an echo chamber for the Native Women's Association of Canada, whose every claim the minister seems to endorse. This week, Dr. Bennett insisted that the number of women murdered or missing is "way bigger" than the nearly 1,200 cases the RCMP have investigated and reported on in considerable detail. How does she know this? By talking to aboriginal women's groups and individuals who have been making this claim all along. The cases that the RCMP have investigated occurred from 1980 to 2012 - more than three decades. In addition, the RCMP provided an update for cases in 2013 and 2014. How many did the RCMP miss or were not reported? Who knows? It is impossible to know, especially from 1980 to 2014. But Dr. Bennett is sure it is "way bigger," in which case this inquiry will be engaging in a massive fishing expedition. If the government chooses the vehicle of a public inquiry, then it will stretch on for many years and cost huge amounts of money - to produce outcomes that mostly can be predicted today, including that of the first-year criminology student's understanding that the majority of assaults were committed by men who had intimate or close relations with the victims (that is, aboriginal men); that sociological problems contributed to violent behaviour; that racism infected certain cases; that, in some instances, the police might have been late to the file; and that, of course, non-aboriginal people are largely, if not wholly, responsible for the entire tragedy. Do we need an inquiry to tell us more than these likely, if not obvious, conclusions? The straightforward answer is no, but you have to hand it to the Native Women's Association because it has been persistent and exceptionally media-savvy and has the minister entirely under its spell. Even the Conservative Party, which while in office rejected the idea of an inquiry, has swung around to favour one, such being the carefree ability of opposition parties to take positions devoid of responsibility. Globe and Mail, A13

*** Indigenous women inquiry may backfire**
An editorial states, "The promised inquiry into missing and murdered indigenous women hasn't started yet. But it is already growing in scope. During the election campaign, Liberal Leader Justin Trudeau vowed to authorize a full public inquiry into the roughly 1,200 aboriginal women and girls who, according to the RCMP, went missing or were murdered between 1980 and 2014. The aim, as expressed in the Liberal platform, was to come up with concrete recommendations "to solve these crimes and prevent future ones." But after talking to aboriginal people across Canada, Indigenous Affairs Minister Carolyn

Bennett has announced she wants something more. Specifically, she wants the inquiry to also determine whether the police have lowballed the number of women and girls murdered. She said she now believes there are "way more" than 1,200 victims. She also told reporters that the inquiry should hear evidence from indigenous females who were assaulted but not killed. At one level, casting a broader net could prove useful. There have been public probes into the murder of native women before. The most recent was British Columbia's two-year investigation into women who disappeared around the time of the Robert Pickton pig-farm murders. That Missing Women Commission of Inquiry was dismissed by aboriginal critics as too narrow. Bennett, it seems, is trying to avoid this particular problem. She may, however, be in danger of doing the reverse - of making her government's proposed inquiry too broad. Once started, public inquiries tend to take on a life of their own. At the best of times, they can take years to complete. The Royal Commission on Aboriginal Peoples, for instance, was launched in 1991 on a wave of public goodwill. But by the time it issued its report five years later, public interest in native issues had waned." Waterloo Regional Record, A8

*** Get reliable stats on missing**

An editorial states, "The editorial Indigenous victims: more than a body count (Feb. 18) suggests yet another dangerous initiative contrary to the common good. This national inquiry into missing and murdered aboriginal women and girls, in its own right, will likely be divisive, troublesome and prove nothing within the aboriginal community, and it is doubtful it will be useful or helpful to the country at large. However, the lack of common sense or practical execution of the inquiry, and the lack of truth gathering as represented by the Free Press in its editorial, is a perfect recipe for disaster. Mere talking points by a highly politicized minister, the research by a PhD student, the biased representations made by a cross-country "Walk-4Justice" and the unsubstantiated stories of families simply do not cut the mustard. If the RCMP estimate is not to be believed, which makes little to no sense, the process leading to a number acceptable to the entire country, including the investigation, gathering of irrefutable evidence, verification of the irrefutable evidence and the conclusion as to an acceptable estimate, must be conducted through a process every bit as reputable and respected as a full and open court; for example, a royal commission." Winnipeg Free Press, A8

*** Faire la lumière**

Un article d'opinion déclare, « Depuis la publication d'un rapport de la GRC en 2014, tout le monde croyait qu'environ 1200 femmes autochtones avaient disparu ou été assassinées entre 1980 et 2012. Cette semaine, le portrait s'est noirci. On a soudainement fait état de 4000 victimes. Est-ce vraiment le cas ? Et est-ce la question essentielle ? Que le nombre de victimes soit nettement supérieur à ce qu'a calculé la Gendarmerie royale est fort probable. Pour les ministres fédérales des Affaires autochtones, Carolyn Bennett, et de la Condition féminine, Patty Hajdu, cela ne fait d'ailleurs aucun doute à la suite des consultations qu'elles ont tenues depuis décembre avec des familles des victimes. Plusieurs d'entre elles ont fait état de cas traités comme des suicides ou des accidents et non comme des meurtres. Des cas où la police n'a pas pris l'affaire au sérieux. Des cas où aucune plainte n'a été déposée tant la méfiance à l'endroit des forces de l'ordre et du système judiciaire est grande. Certaines familles sont aussi persuadées que leurs proches n'apparaissent pas sur la liste de la GRC. Mais 4000 victimes ? Ce sont des activistes du groupe Walk 4 Justice qui en sont arrivés à ce nombre après avoir réuni, entre 2008 et 2011, des noms de femmes tuées ou disparues, dont 60 % étaient autochtones, rapportait la CBC cette semaine. Le chiffre a été cité par la présidente de l'Association des femmes autochtones du Canada, Dawn Lavell-Harvard, lors des consultations et repris cette semaine par la ministre Hajdu. » Le Devoir

*** Citizen X: Missing But Remembered**

When federal Indigenous Affairs minister Carolyn Bennett and Justice Minister Jody Wilson-Raybould stopped in Saskatchewan for phase one of the national inquiry into missing and murdered indigenous women, they mentioned Darlene Rose Okemaysim-Sicotte by name. She's the co-chair of Iskwewuk E-wichiwitochik (Cree for Women Walking Together), a grassroots organization which supports the families and survivors of the missing or murdered women in Saskatchewan. Community support has always been central to Okemaysim-Sicotte. She grew up on the Beardy's and Okemasis Willow Cree First Nation as one of 14 children. She says they were a big, happy, family, but they always faced poverty. But neighbours helped each other when they could, which sparked her interest in community involvement.

Okemaysim-Sicotte continued her community work at the University of Saskatchewan, and later while working in the Department of Native Studies (now Indigenous Studies). In 2005, she gathered with around 80 other people to find a way to tackle the unaddressed issue of missing and murdered indigenous women. That was the beginning of Iskwewuk E-wichiwitochik. I sat down with Okemaysim-Sicotte at her day job at the Gordon Tootoosis Nikaniwin Theatre to see what the proposed inquiry means to someone on the front lines. Planet S (2016-02-16)

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Ottawa to restore refugee benefits
Starting in April, Ottawa will fully restore health-care coverage for all refugees and asylum claimants to pre-2012 levels, before cuts were made by the previous Tory government. In a surprise twist, the Liberal government said it will also expand the Interim Federal Health Program by including coverage for refugees designated for resettlement to Canada before they arrive - a plan that was not part of its election pledge. By April 2017, these selected overseas refugees waiting to come here will receive coverage for their immigration medical exam, pre-departure vaccinations, services to manage disease outbreaks in refugee camps and medical supports during travel to Canada. Currently, the health program for refugees has a $51-million annual budget and the new measures will cost an additional $12.5 million in expenditures per annum, Immigration Minister John McCallum said on Thursday. "Canadians from many walks of life, from premiers to front-line health-care professionals to Canadians who privately sponsor refugees, spoke with one voice in rejecting the changes made to the Interim Federal Health Program in 2012. We have listened, and coverage will be restored," he said. "However, that expenditure is still below the amount that has already been budgeted of $51 million per year, so there will be zero net addition in the fiscal framework. All of these expenditures will be within the existing budget." 25,000 refugees: enough?
More than 70% of Canadians don't support taking in more than 25,000 Syrian refugees, according to a new poll from the Angus Reid Institute. About two in five respondents (42%) think Canada should stop taking in Syrian refugees immediately. As of Tuesday, more than 21,000 refugees had arrived in Canada, according to the government's website. The government is working to meet its target of 25,000 Syrian refugees by the end of February. Immigration Minister John McCallum recently promised the Liberals would exceed their original commitment and accept between 35,000 and 50,000 Syrian refugees by the end of 2016. The Angus Reid poll suggests this is at odds with what the majority of Canadians want. Support for exceeding the 25,000 benchmark is lowest in the Prairies and Quebec, where less than a quarter of respondents were in favour, and tops out in B.C., where roughly two in five respondents were in favour. B.C. was the province with the highest overall support for the refugee resettlement plan. The poll results come just days after a Calgary school was vandalized with the message "Syrians Go Home and Die." That incident is one of several across the country that suggest brewing anti-refugee sentiments. McCallum has said the potential for negative attitudes towards the arriving refugees. "It's a delicate balance," he said at a January press conference in Ottawa. "We want to welcome all of these refugees with open hearts and with love the way Canadians have, but at the same time we are mindful that we don't want to offend Canadians who have themselves been waiting for a long time for social housing and things of that nature." Winnipeg Sun, A17 (Toronto Sun, Ottawa Sun, Edmonton Sun, Calgary Sun, National Post, Cornwall Standard Freeholder, Sault Star, CNews); * Metro News

*** Avalanche of refugees about to hit B.C.**
British Columbia will receive 1,100 Syrian refugees in the next 10 days, effectively doubling the number already in the province. It will be the largest influx of government-assisted refugees to British Columbia, according to Chris Friesen, settlement services director with the Immigrant Services Society of B.C. Almost half the arrivals will be moved outside Metro Vancouver, which is unprecedented for government-assisted refugees in B.C., because Metro has been the only part of the province with the necessary

supports in place. About 240 will go to Victoria, designated last week as an alternative arrival city for refugees, and another 160 to Abbotsford, Friesen said. About 30 each will go to Nanaimo, Prince George, Kelowna and Vernon, he added. Friesen and other Immigrant Services Society staff will be on the road early next week, training settlement workers in those cities to deal with the coming arrivals. (...)The Abbotsford Community Services Society began planning for the arrival of Syrian refugees in October, said Manpreet Grewal, the society's director of multicultural and immigrant services. They had expected to assist privately sponsored refugees being brought to Abbotsford by many church groups. However, the governmentassisted refugees, due to start arriving Monday, pose an additional challenge because they don't have the supports of a community sponsoring group. Housing is the biggest issue, Grewal said. The Syrian families tend to be large, and the government support rates aren't enough to rent accommodation large enough to house them, especially in pricey Metro Vancouver. Vancouver Sun, A1/Front

*** Newcomers make schools busy places**

The recent arrival of close to 700 Syrian refugees has some Manitobans worried about the impact they will have on resources and services. A Winnipeg teacher who has worked with newcomer kids for more than a decade in the province's most diverse neighbourhood has some advice. "Don't freak out." Anita Riedl, an English as an additional language teacher at General Wolfe School in Winnipeg's West End, has seen the EAL program at the school double in size with the resettlement of families from around the world. "The kids just want to learn," she said. In the heart of the most diverse neighbourhood in Manitoba, staff and students have worked to make the school "newcomer-friendly." Winnipeg Free Press, A4

*** Syrian and Indochinese Refugee Movements**

He arrival of Syrian refugees fits within the longstanding Canadian tradition of providing solace and protection to the oppressed around the world who are directly threatened by political events beyond their control. That tradition began with the post-World War II movement of displaced persons, although there had been earlier informal movements of people to Canada in search not only of a better life, but also safety. The Hungarians, Czechoslovaks, Ugandan Asians, Indochinese and Kosovars — these are just a few of the many communities who have found refuge in Canada. As we reach the midpoint of the movement of Syrian refugees to Canada, it becomes possible to draw some comparisons with past resettlement initiatives. New American Media

*** Des réfugiés syriens au Nouveau-Brunswick ciblés par des fraudeurs**

Une famille de réfugiés syriens établie à Saint-Jean, au Nouveau-Brunswick, a perdu 400$ en tombant dans une arnaque téléphonique. Une personne s'exprimant en arabe a communiqué avec la famille, lundi soir. La personne a proposé à la famille d'acheter des DVD de cours d'anglais pour les enfants. La famille n'avait qu'à fournir quelques renseignements bancaires, a déclaré le fraudeur. Lorsque l'interprète qui aide la famille a compris ce qui se passait, les Syriens avaient déjà perdu des centaines de dollars. La directrice du YMCA de Saint-Jean, Shilo Boucher, qui aide la famille en question et d'autres réfugiés syriens, explique que la famille est très heureuse d'être à Saint-Jean, au Canada, et que la situation est décevante. Le YMCA distribue maintenant un dépliant rédigé en arabe afin de prévenir les autres réfugiés des risques associés à la divulgation de renseignements personnels au téléphone. Radio-Canada

*** Syrian refugees: New arrivals struggle to find work**

Ahmad Abu Nokta reaches into his breast pocket and pulls out a business card with his name printed against a bright blue-green background. Underneath, he lists his job titles-'art, paints and decorator.' The same message is printed in Arabic. The 54-year-old Syrian artist and painter fled the southwestern city of Daraa with his wife and four children three years ago. "My house got bombed," he said, through a translator. "My kids are young. I was afraid for my family. We ran away from the war." The family went to neighbouring Jordan, where they lived in a refugee camp for the next three years. Then came a chance to start over when a new Canadian government pledged to house thousands of Syrian refugees in cities across the country. CBC News

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Culture of presenteeism' blamed as Ottawans travel to work in snowstorm**
During Tuesday's record-breaking snowstorm in Ottawa, thousands of people braved the weather and went to work despite the city's suggestion that employees stay home. That fact doesn't surprise Robyn Bews."I think there's an incredible culture of presenteeism that permeates most organizations still, but particularly, probably, federal government," said Bews, the Calgary-based executive director of WORKshift, on CBC Ottawa's *All In A Day* Thursday afternoon. "This is about valuing seeing employees in the office ... organizations that still feel like they need to see their employees physically in the office are a little bit antiquated." Mass transit came to a near standstill Tuesday after the federal government decided at around 1 p.m., without telling OC Transpo, to let thousands of public servants go home early. Keith Egli, chair of the city's transportation committee, told CBC Ottawa on Wednesday that if the workers left waiting at bus stops were instead working from home, the commute wouldn't have been so cumbersome. "We've already entered into some discussions with them around what happened [Tuesday] and how it could've been handled better," said Egli. CBC News

*** Liberals rule out cutting military manpower**
Defence Minister Harjit Sajjan has ruled out cutting the size of the Canadian military, despite the country's bleak economic and fiscal picture. In fact, Sajjan says he eventually wants to see the force grow, but for now the Liberals will concentrate on filling the ranks to the existing approved levels of 68,000 full-time and 27,000 part-time soldiers. A recent federal report from last year's budget shows military reserves are running at roughly 20,000 paid members - about 19 per cent short of full strength. The numbers are only slightly better for the regular forces with roughly 66,000 full-time members in uniform. Sajjan says recruiting has slowed over the last few years and he wants to see measures stepped up so the country always has an agile, optimal force. National Defence is the largest single discretionary item in the federal budget and previous governments - Liberal and Conservative - have often used military cuts as a way to balance the books. Finance Minister Bill Morneau and Prime Minister Justin Trudeau have both indicated that the Liberal promise to balance the budget over four years has morphed into returning to black ink over the long-term. Canadian Press (Chronicle Herald, A6, Winnipeg Free Press)

*** Une pétition réclame la citoyenneté honorifique pour Raif Badawi**
Le député de Sherbrooke Pierre-Luc Dusseault donne son appui à une pétition électronique lancée par Ensaf Haidar, épouse de Raif Badawi, demandant au gouvernement canadien d'accorder la citoyenneté honorifique au blogueur saoudien. M. Dusseault dit vouloir ajouter de la pression sur l'Arabie Saoudite et demander au gouvernement du Canada de faire preuve de leadership en matière de droits de la personne. «M. Badawi est un homme de grandes convictions. Nous devons honorer les efforts, le courage et la détermination de cet homme», écrit-il dans un communiqué de presse. «Il purge aujourd'hui encore, et depuis beaucoup trop longtemps, cette sentence injustifiée et barbare.» Rappelons que Raif Badawi, dont l'épouse et les enfants vivent à Sherbrooke, a été condamné à la prison et aux coups de fouet pour avoir tenu des propos trop libéraux au goût des autorités saoudiennes. Il s'est vu décerner, pour son dévouement dans la défense des droits de la personne, le prix Sakharov par le Parlement européen en 2015, en plus d'avoir été finaliste pour le prix Nobel de la paix. La Presse Canadienne (La Tribune, 4)

*** PTSD bill on table**
Ontario's first responders diagnosed with post-traumatic stress disorder will automatically qualify for WSIB benefits under legislation introduced Thursday by Labour Minister Kevin Flynn. "If passed by the house, this legislation is going to provide a sense of security to our first responders," Flynn said. "That claim process can be very evidence-based and it can be very onerous for somebody that's undergoing the symptoms of PTSD." The bill would require the WSIB to treat PTSD in first responders, such as police and paramedics, as a workrelated illness. NDP MPP Cheri DiNovo, who has introduced four private member's bills on PTSD in first responders, said the legislation appears to address the concerns she has

been raising for eight years. "I have cases upon cases in my office. We have actually phoned first responders to respond to first responders attempting suicide," DiNovo said. "This is prevalent, this is everywhere." DiNovo first began advocating for presumptive legislation when Toronto paramedic Shannon Bertrand came to her office looking for help. Toronto Sun, A16 (Ottawa Sun)

*** Windsor first responders welcome speedy PTSD treatment**

Emergency responders in the Windsor region applaud the Ontario government for proposed legislation that aims to speed up treatment for post-traumatic stress disorder (PTSD). The legislation, introduced Thursday, aims to help first responders get mental-health treatment to help them cope with work-related trauma. Under the proposed law, first responders will no longer need to prove their condition was caused by a specific event, which should speed up approvals for access to benefits and treatment, explained Jim Jeannette, a clinical social worker who specializes in working with first responders. "There are countless stories of firefighters and police that I know, that I have talked to, who have spent so much time trying to prove that they have it," he said. "It's just more agony than what they are going through." Details of the proposed Supporting Ontario First Responders Act were revealed at Queen's Park by Labour Minister Kevin Flynn and Community Safety and Correctional Services Minister Yasir Naqvi. CBC News

INTERNATIONAL

N. Korea plans terror attacks, Seoul says

North Korean Leader Kim Jong-un recently ordered preparations for launching "terror" attacks on South Koreans, a top Seoul official said Thursday, as worries about the North grow after its recent nuclear test and rocket launch. In televised remarks, senior South Korean presidential official Kim Sung-woo said North Korea's spy agency has begun work to implement Kim Jong-un's order to "muster anti-South terror capabilities that can pose a direct threat to our lives and security." He said the possibility of North Korean attacks "is increasing more than ever" and asked for quick passage of an anti-terror bill in parliament. North Korea has a history of attacking South Korea, such as the 2010 shelling of an island that killed four South Koreans and the 1987 bombing of a South Korean plane that killed all 115 passengers aboard. But it is impossible to independently confirmclaims of any such attack preparations. The South Korean presidential official did not say where the latest information came from. Earlier Thursday, Seoul's National Intelligence Service briefed ruling Saenuri Party members on a similar assessment on North Korea's attack preparations, said one party official who attended the privatemeeting. During the briefing, NIS, citing studies on past North Korean provocations and other unspecified assessments, said the attacks could target anti-Pyongyang activists, defectors and government officials in South Korea, the party official said. Attacks on subways, shopping malls and other public places could also happen, he said. Associated Press (London Free Press, B1/Front, Calgary Sun, Vancouver Sun, Edmonton Sun, Toronto Sun)

*** Syrian no-fly zone comes 'four years too late'**

The daily drumbeat of death in Syria goes on: hospitals bombed, civilians fleeing for the borders, children starving under siege, homes reduced to rubble. Amid such carnage the call for protecting civilians inside a no-fly zone sounds like a no-brainer for humanitarian action. But the realpolitik of the widening war will keep those dreams of safety from becoming reality. This week, Germany and Turkey revived a years-old call for a safe zone to shelter displaced people inside Syria's borders. Turkish President Recep Tayyip Erdogan blamed the U.S. for not taking action sooner and preventing "tens of thousands" of deaths. German Chancellor Angela Merkel - under fire at home for accepting more than 500,000 Syrian refugees - told the German parliament Wednesday that a no-fly zone agreement should be reached with Syria's backers and the coalition fighting the Islamic State Group. The U.S. also has its no-fly advocates. Former officials Nicholas Burns and James Jeffrey wrote in the Washington Post that a protected zone south of the Turkish border would have "manifold benefits," including keeping refugees from flooding into Europe, restricting the operations of the Syrian air force and curbing attacks by Russia, Lebanon's Hezbollah militia and Iran. Former Liberal leader Michael Ignatieff, now a professor at Harvard University, wrote with Leon Wieseltier in the Washington Post that "operating under a NATO umbrella, the United States could use its naval and air assets in the region to establish a no-fly zone from Aleppo to the Turkish border." Toronto Star

MINISTER / MINISTRE

* **Facing deportation, Mohamed Harkat plans to ask government to let him stay in Canada**
Terror suspect Mohamed Harkat, facing deportation to Algeria, plans to ask **Public Safety Minister Ralph Goodale** to allow him to remain in Canada. Harkat is preparing a formal submission to **Goodale** requesting that he decide it would not be "contrary to the national interest" to let him continue living in Ottawa with his wife Sophie, said Barbara Jackman, one of the Algerian refugee's lawyers. At the same time, Harkat and his counsel will prepare a reply to the Canada Border Services Agency, which recently concluded he poses a risk to Canada and that he could be returned to his homeland. "They haven't relied on any kind of current evidence," Jackman said in an interview. "So I am assuming that there is no current evidence because otherwise they would have relied on it." Both submissions are due in early May, Jackman said. Harkat, 47, was taken into custody in Ottawa in December 2002 on suspicion of being an al-Qaida sleeper agent. He denies any involvement with terrorism and fears torture if sent back to Algeria. The federal government is trying to deport the former pizza-delivery man on a security certificate - a rarely used legal tool for removing non-citizens suspected of extremism or espionage. Harkat's lawyers argued the process was unfair because the person named in a certificate doesn't see the full case against them. In a 2014 ruling, the Supreme Court of Canada said the security certificate regime does not violate the person's right to know and challenge the allegations they face. However, the high court provided detailed guidance on applying the process to ensure it is fair. Federal Court Justice Simon Noel ruled in 2010 that

there were grounds to believe Harkat is a security threat who maintained ties to Osama bin Laden's terror network after coming to Canada. Two years ago, the Supreme Court concluded Harkat "benefited from a fair process" when Noel reviewed his case, meaning the certificate against him stood. But little has happened since. Many supporters, including Prime Minister Justin Trudeau's brother Alexandre, have written to the government on Harkat's behalf. That says a lot about the man, Jackman said. "Some of those letters are very powerful. Those are the people who are best able to judge the kind of character he is." Canadian Press (CTV News, CP 24)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** 'Krazy Canadian' snowmobiler Dan Davidoff killed in B.C. avalanche**
His last post to Facebook was "Norm. Look I can fly, Lol." and he was famous for doing just that with his high-powered machines. But sometime on Monday while out in the mountains alone, extreme snowmobiler Dan Davidoff, 45, was buried in an avalanche near his home in Castlegar and did not survive, the B.C. Coroners Service has confirmed. CBC News; CTV News; Canadian Press (Times Colonist, A2; Charlottetown Guardian, Maclean's, St. John's Telegram, Ottawa Sun, Toronto Sun, Edmonton Sun, Calgary Sun); Postmedia Network (Vancouver Sun, Vancouver Province)

*** Sherwood Park men killed in B.C. avalanche**
Both men killed in an avalanche near Blue River, B.C., on Monday were from Sherwood Park, RCMP have confirmed. At 5:45 p.m. Monday, Clearwater RCMP received a call from a group of snowmobilers that an avalanche had buried two men from their group 30 kilometres southwest of Blue River. Five of the seven snowmobilers escaped the avalanche. Members of the group, including family members of the two men killed, were able to dig the men from the snow. However, efforts to resuscitate them were unsuccessful. Edmonton Sun, A5; Edmonton Journal

*** Au pire, des dégâts de 620 M$**
Dans le pire des cas imaginables, un déversement de pétrole du pipeline Énergie Est causerait un maximum de 620 millions $ de dommages, incluant les opérations de nettoyage et de restauration des berges, ont estimé mercredi après-midi les représentants de TransCanada devant le Bureau d'audiences publiques sur l'environnement (BAPE). En incluant les dépenses des différents ordres de gouvernement, qui devraient également être remboursés par la compagnie, l'intervention d'urgence (confinement du pétrole, évacuation, etc.) coûterait environ 200 millions, principalement pour nettoyer les berges (85 millions $). La restauration des sites après ce premier nettoyage coûterait environ 110 millions $, et les indemnisations pour les tiers - réparation de routes brisées par l'équipement lourd, propriétés endommagées, etc. - s'élèverait à près de 310 millions, estime la compagnie, qui dit s'appuie sur la «littérature internationale» détaillant des déversements réels (…) Notons qu'à Lac-Mégantic, où près de 6 millions de litres de pétrole se sont déversés lors de l'accident de 2013 (une partie a brûlé, 100 000 litres ont coulé dans la rivière Chaudière et le reste a contaminé le sol), les coûts du nettoyage sont estimés à 200 millions. Le Soleil, 7 (Le Nouvelliste); Journal de Montréal (Journal de Québec)

*** Survival 101**
(…)"Research has determined that 29 to 92 seconds are normally required for an occupant to escape from a submerged helicopter. One study has shown that the median breath-holding time of 228 offshore oil workers immersed in warm 25 C water was 37 seconds," stated the Transportation Safety Board's report on the Cougar crash. "In near freezing water, breath-hold drops as low as 5 to 10 seconds." The North Atlantic off Newfoundland averages 12 to 14 C in the summer and 1 to 2 C in the winter. Having been through Helicopter Underwater Escape Training, it's hard to picture surviving a real world ditching, even if it's controlled by the pilots."The more often you do (the training), the more comfortable you're going to be with it and the better your chances of being successful are going to be," said Dan Chicoyne, chief safety officer with the Canada-Newfoundland and Labrador Offshore Petroleum Board, in an interview at the CNLOPB offices in downtown St. John's. He does not use terms like "live" or "die." Chicoyne has a military background working as a helicopter pilot and, for a time, as a search and

rescue pilot in Labrador. His military training would include completing the same helicopter simulation, in the dark. St. John's Telegram, A1/A2

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Un terroriste pourrait s'infiltrer**

Alors que des soldats canadiens ont été visés lundi par un troisième attentat en public en 18 mois, les Forces armées canadiennes (FAC) craignent qu'un « sympathisant de groupes terroristes » réussisse à infiltrer une base militaire en usurpant l'identité d'un soldat. Ce terroriste mettrait alors en péril la « protection des forces », a prévenu l'été dernier la police militaire de l'armée dans un document obtenu par La Presse en vertu de la Loi sur l'accès à l'information. Le cas du Québécois Franck Gervais en novembre 2014 a eu l'effet d'un coup de semonce pour l'armée canadienne. Vêtu d'un béret rouge et d'un uniforme militaire, Franck Gervais avait assisté avec sa femme aux cérémonies du jour du Souvenir au Monument commémoratif de guerre à Ottawa... La Section du renseignement criminel de la police militaire met en garde les membres des FAC des graves conséquences qu'une telle usurpation pourrait engendrer, « surtout dans le cas d'un acteur solitaire qui aurait des affiliations avec des terroristes ou qui serait un sympathisant de groupes terroristes ». Dans un bulletin interne du 25 mai 2015, intitulé Extrémistes criminels - ce qu'il faut surveiller et signaler, la police militaire rappelle en préambule que des « organisations terroristes étrangères », comme le groupe État islamique, ont « demandé à leurs partisans de cibler et d'attaquer activement les membres et les établissements des organismes militaires et d'application de la loi de divers pays, dont le Canada ». Le Quotidien, 22; La Presse, 4

*** Turning suspect's life upside down**

Police hope a laptop will provide quick clues into the life of Ayanle Hassan Ali. Police agencies know Ali once worked close to passenger jets at Pearson International Airport as a groundskeeper, but what they consider a priority right now is tracking his most recent movements before he allegedly tried to kill three Canadian Armed Forces soldiers with a knife at a recruitment centre in North York on Monday. "We want to determine not only where he has been, but who was he with and who influenced him," a police source said. Still, many people felt the hair on the back of their neck stand when news of Ali's former airport job broke Wednesday. "Mr. Ayanle Hassan Ali is not an employee of the Greater Toronto Airports Authority (GTAA) nor does he currently work at Toronto Pearson," spokesman Siobhan Desroches assured my colleague Maryam Shah. "Mr. Ali worked for a third party tenant at Toronto Pearson and possessed a Restricted Area Identification Card (RAIC) from December 2008 to March 2009." So this computer police removed from his Albion Rd. apartment is their quickest ticket into his world. "The computer is already being analysed and information shared amongst Toronto Police, the RCMP, OPP and CSIS," a source said. Every e-mail will be scrutinized. Every Google search and website, too. "His whole life will be looked up and down," a police source said. "Everybody he met or communicated with will be looked at, and his travels." The nice thing about having the Integrated National Security Enforcement Team (INSET) working on this, an officer said, is there's no red tape to ask officers in Calgary to talk to people Ali knew while attending the University of Calgary, or in Edmonton, where his cousin tells media he started talking about conspiracy theories and religion. Ottawa Sun (Toronto Sun)

Imam calls attack on soldiers 'disturbing'

The head of a council of Canadian imams has condemned an attack on soldiers at a recruitment centre in Toronto. Dr. Mohammad Iqbal Al-Nadvi called the violence, which saw two soldiers injured and a third threatened, "disturbing." Ayanle Hassan Ali, a 27-yearold Toronto man, allegedly told people at the scene "Allah told me to do this." "It was shocking for us," Al-Nadvi, of the Canadian Council of Imams, said. "He put the responsibility on religious reasons. It's a disturbing notion." Al-Nadvi said the council found the attack particularly upsetting because it has connections to, and supports, the Canadian Forces. Three Muslim chaplains are part of an interfaith community network that works with the Forces. "When we go there, we see how we can make the Forces a good and friendly environment for Muslims," he said. Al-Nadvi said Muslims share the concerns of their fellow Canadians about the security of their country. "We are not living in isolation," he said. "We are part of the national fabric. It's also important we make our point very clearly. "It's important to make our national security a shared responsibility. In the Muslim

community, we are part of it and we will do whatever we can do to denounce (wrongdoing) going on inside the Muslim community and what is going on outside." Calgary Sun, A12 (Toronto Sun, Ottawa Sun)

Expert says too early to tell if attack against soldiers is terrorist related
A terrorism expert with the Gregg Centre for the Study of War and Society at the University of New Brunswick says he's reserving judgment on an incident in Toronto this week that saw two uniformed soldiers at a military recruitment centre stabbed and wounded. David Charters said it's hard to classify what happened as terrorism because not much is known about the individual. "I'd like to know more and maybe we will know more when the guy is brought to trial," Charters said in an interview. "Was he completely by himself or was there someone else he was working with? Do we know anything about his motives or his mental state? The whole thing seems a little bit bizarre. It doesn't even sound terribly well planned." Police have named the suspect as Montreal-born Ayanle Hassan Ali, 27, who moved to Toronto in 2011. The incident occurred mid-afternoon Monday, when a man walked into the government building that houses a Canadian Armed Forces recruitment centre on the ground floor. He arrived with a "large knife" in hand and began striking a uniformed master corporal, who fell to the ground. The soldier was able to get to his feet, at which point the suspect slashed his right arm. As military personnel moved civilians to safety, investigators said the man tried and failed to slash a female soldier before other soldiers were able to subdue him and hold him for police. Another military member was injured as the suspect was apprehended. Daily Gleaner, A4

*** Islamophobia? What about knife-o-phobia?**
An opinion piece states "Ayanle Hassan Ali is facing nine charges after he allegedly walked into a Canadian Armed Forces recruitment office wielding a large knife, and went on a stabbing rampage. According to Toronto Police Chief Mark Saunders, the accused stabbed two members of the Canadian military, and narrowly missed a third, saying: "Allah told me to do this, Allah told me to come here and kill people." That's probably why CSIS has joined the RCMP and local police in investigating this incident. It will be up to the courts to determine if Ali, 27, is guilty of the crimes he has been charged with committing. Saunders said it's too early to know if the accused was connected to or inspired by a radical Islamic terrorist group, or was acting on his own, or whether mental health issues were involved. His lawyer, David Burke, said Ali, who has no prior criminal record, is "very scared and very, very upset to be in the position he finds himself in." Toronto Sun, A15 (Ottawa Sun, Edmonton Sun)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Arafat Ally thrown out
A Palestinian man - once wounded alongside Yasser Arafat in his Ramallah headquarters during an Israeli Defence Forces siege - has been thrown out of Canada for being a member of Fatah, which was deemed a terrorist group despite its role governing Palestinian territory with financial support from the Canadian government. The decision by the Immigration and Refugee Board (IRB), recently upheld by the Federal Court of Canada, highlights the awkward transition from violent roots to government entity. Akram Muslih Anteer, 30, said he is dismayedbyhis deportation. "I told them Fatah is not terrorist group. It is a group that works with Canada, it is a group that works with the Stephen Harper; the United Nations works with Fatah," said Anteer. "I don't have any history like that," he said when asked if he is a security risk. "President Arafat made the people inside Palestine to see outside Palestine. He worked for peace. I promise you, I worked with him for the peace. "Arafat came to Palestine and signed for peace with Israel. I was a volunteer with Arafat. I was a young guy. He talked about stopping the problems in Palestine; war wasn't good. Just talking to him about the problems; I talked to him like that." Fatah was founded in the 1950s by Palestinian activists, including Arafat, and for years promoted violent struggle to achieve its goals of a Palestinian state. It is through Fatah that Arafat became chairman of the Palestine Liberation Organization. Fatah has, like its founder, been moving from revolution to politics. Postmedia Network (London Free Press, N1, Leader-Post, Windsor Star, StarPhoenix, Edmonton Journal, Montreal Gazette, Calgary Herald, Ottawa Citizen, National Post, Vancouver Sun)

*** Heroin seized at HSIA by CBSA**
Close to five kilograms worth of heroin was seized by the Canadian Border Services Agency (CBSA) from a traveller at Halifax Stanfield International Airport, the federal agency announced on Feb. 19. During a routine secondary examination of a traveller on February 14, CBSA officers discovered inconsistencies in the traveller's suitcase. "Upon dismantling it, they uncovered a large package concealed within the suitcase liner," CBSA said in a release. "Tests identified the package as suspected heroin." CBSA officers arrested the male traveller and turned him and the narcotics over to the Royal Canadian Mounted Police. He has been charged under the Controlled Drugs and Substances Act. "Every day our border services officers use their extensive skills and training to protect Canada's borders," said Colin Murchison, Acting Chief, Newfoundland & Labrador, Nova Scotia Division, Atlantic Region. "A significant seizure like this one is crucial in keeping hard drugs off Canadian streets." Enfield Weekly Press (2016-03-16)

*** CBSA conducting raids on caregivers in B.C. and Yukon**
Project Guardian is a Canada Border Services Agency project targeting foreign caregivers in their employer's homes. Advocates say workers are being penalized for leaving exploitative workplaces. The West Coast Domestic Workers Association is one of the groups calling for fairer treatment for temporary foreign workers. Natalie Drolet is executive director of the West Coast Domestic Workers Assocaition. She speaks with Redeye host Jane Williams. Rabble.ca (podcast)

Ottawa eases restrictions on seasonal foreign workers
The Liberal government has quietly approved changes aimed at helping Atlantic Canadian seafood processors that will allow them to bring in unlimited numbers of low-skilled temporary foreign workers to fill seasonal jobs this year. Ottawa approved the foreignworker exemption in response to lobbying from Atlantic seafood processors and Liberal MPs, who warned that recent restrictions to the temporary foreign worker program were hampering business. New Brunswick Fisheries Minister Rick Doucet recently said the labour shortage in his province is so bad that some lobster processing plants have had to throw lobsters in the trash. The Liberals - who swept all 32 ridings in Atlantic Canada in last year's federal election - are justifying the exemption as a shortterm measure to buy time until a full review of the foreign worker program can be conducted later this year. Other industry groups - such as Restaurants Canada - are questioning why exemptions are being allowed for some sectors and not others, and why they were never told of the change. Globe and Mail, A1

Worker shortage hits consumers
A severe shortage of workers is costing Canada's farm industry an estimated $1.5 billion a year in lost revenue and is driving up the cost of food for Canadian consumers, anew industry study states. The study, conducted by the Conference Board of Canada on behalf of the Canadian Agricultural Human Resource Council, found there are currently about 59,000 unfilled farm jobs in Canada. And that number is expected to balloon to 114,000 by 2025, as the demand for food and agriculture-industry workers continues to grow and older workers retire. "What that (worker shortages) does for businesses and for industry is that it really constricts them," human resource council executive director Portia MacDonald-Dewhirst explained in an interview Wednesday. "The businesses aren't running efficiently, they're unable to meet their production targets and they're unable to meet any export opportunities that are presented to them because they don't have enough bodies to do the work." The release of the council's labour market information study coincided with a national three-day Growing the AgriWorkforce summit, which wrapped up Wednesday in Winnipeg. The event drew agriculture industry and government representatives from across the country to discuss worker shortages and ways to address the problem. MacDonald-Dewhirst and Debra Hauer, manager of the labour-market study, said the types of workers needed include farm owner/operators, farm managers, general farm workers, equipment operators, truck drivers and dairy workers. (...)Hauer noted about 12 per cent of the agriculture jobs in Canada are currently being filled by temporary foreign workers. That's up from six per cent a decade ago. "And we still don't have enough workers," MacDonald-Dewhirst said. Winnipeg Free Press, B6

Convicted Canadian narwhal tusk smuggler extradited to U.S. on money-laundering charges
A retired RCMP officer from New Brunswick who has already been convicted and fined in Canada for smuggling narwhal tusks has been extradited to the United States to face money-laundering charges related to the scheme. Narwhals, sometimes called the unicorns of the sea, are found in Arctic waters

and known for the long, spiralling tusk - actually a tooth - that in males can grow through the creature's upper lip into a sword-like tusk nearly three metres long. The tusks are collectors' items. Narwhals are protected under the Convention on International Trade in Endangered Species of Wild Fauna and Flora and it is illegal to import narwhals, or their parts, into the United States without a permit. A legal hunt for a few hundred animals each year is restricted to Inuit in Canada and Greenland. Gregory R. Logan was extradited on March 11 to face trial in U.S. District Court in Bangor, Me., the U.S. Department of Justice said Wednesday. A U.S. judge ruled Wednesday that Mr. Logan, a retired member of the RCMP, must remain in custody until his trial, which is currently scheduled for May 3. U.S. authorities allege that Mr. Logan committed "specified unlawful activities" by smuggling narwhal tusks into the United States, sold them to collectors and then laundered the proceeds by having the money transferred out of the United States. Globe and Mail, A6; * Associated Press (Daily Mail UK)

*** Québec veut le libre-échange avec les États-Unis**

Le gouvernement Couillard estime que son nouveau régime forestier lui permet de plaider le libre-échange en matière de commerce du bois d'oeuvre avec les États-Unis. Néanmoins, la ministre de l'Économie, Dominique Anglade, ainsi que son collègue aux Forêts, Laurent Lessard, sont bien au fait que ce scénario n'enchante guère les Américains. En point de presse à l'Assemblée nationale, mercredi, les deux ministres ont prévenu que les négociations entre le Canada et son voisin du Sud ne s'annonçaient pas faciles pour renouveler l'entente sur le bois d'oeuvre, venue à échéance l'an dernier. Entre-temps, les autorités américaines ne peuvent imposer de tarifs douaniers sur les produits canadiens du bois d'oeuvre jusqu'en octobre prochain en vertu d'une période d'interdiction de 12 mois. La semaine dernière, au terme de leur rencontre à Washington, le président américain Barack Obama et le premier ministre Justin Trudeau ont affiché leur confiance de trouver un terrain d'entente rapidement. L'accord de 2006 entre le Canada et les États-Unis sur le bois d'oeuvre s'était conclu après cinq ans de batailles devant les tribunaux. Presse canadienne (Le Nouvelliste, 14, Le Devoir)

Trump taps into opposition to free trade

Canadians used to fret over free trade. They don't much anymore. The notion that trade and investment deals are good things to pursue has become part of this country's political orthodoxy. The Liberals, who famously called the original 1984 Canada-U.S. Free Trade Agreement a threat to Canada's very existence, now take credit for implementing the 1993 North American Free Trade Agreement, its far more intrusive successor. Even the New Democrats have become accepting. They may oppose the looming Trans-Pacific Partnership trade and investment deal. But they broke with their union allies to support the 2015 free trade pact between Canada and South Korea. So it is intriguing to see free trade emerging front and centre as one of the key political issues in the U.S. presidential election. Free trade has been a part of modern American politics since NAFTA integrated the economies of the U.S., Canada and Mexico. Ross Perot based much of his 1992 third-party presidential campaign on his opposition to signing NAFTA. Bill Clinton, the Democratic candidate and eventual president, essentially supported it. Over time, Democrats, including U.S. President Barack Obama, played a more devious game - criticizing trade deals on the hustings, but supporting them once in power. In those years, only the Republicans could be counted on to support unfettered free trade in both word and deed. With Donald Trump, however, all of this has changed. Barring a miracle, the billionaire developer is poised to become the Republican Party's presidential nominee this summer. Toronto Star, A9

Bois d'oeuvre: la bataille «loin d'être gagnée»

La ministre de l'Économie et le ministre des Forêts ont promis mercredi d'être «très actifs» dans le processus menant à un nouvel accord sur le bois d'oeuvre. Ils se sont réjouis que, lors de son passage à Washington, le premier ministre Justin Trudeau plaide pour la fin des quotas et des taxes sur le bois d'oeuvre canadien. «On est content de la position canadienne, a affirmé M. Lessard. Elle est forte, elle est bien affirmée. […] La voix du Québec va être portée partout là où c'est nécessaire.» Le précédent accord sur le bois d'oeuvre est arrivé à échéance l'année dernière. M. Trudeau et le président Barack Obama se sont donné 100 jours pour en négocier une autre. Le bois d'oeuvre est celui qui est utilisé pour bâtir la charpente des maisons et pour la fabrication de plusieurs produits liés à la construction. (…)L'industrie forestière a été passablement ébranlée au cours des dernières années et l'imposition de tarifs douaniers élevés aurait des conséquences, souligne la ministre Anglade. «C'est 60 000 emplois

dans l'industrie de la forêt, a-t-elle noté. Ça aurait un impact direct sur la rentabilité des entreprises.» La Presse (Le Soleil)

*** Border officer honoured**
Twenty years of commendable service earned a Calgary border services officer recognition from Canada's governor general. Scott Jenkinson, senior officer trade compliance for the Canada Border Services Agency, received a Peace Officer Exemplary Service Medal from Gov. Gen. David Johnston on March 4 at a presentation in Vancouver. This honour is bestowed upon peace officers "who have served in an exemplary manner, characterized by good conduct, industry and efficiency." Only those who have at least 20 years of service - including 10 on the front lines performing duties involving potential risk - are eligible to receive the honour. "I have enjoyed my career as a peace officer and with the CBSA. Every day there is something new to learn and a wide variety of duties within this Agency," said Jenkinson in a statement. "I felt honoured to receive the medal and humbled to be included with such diverse recipients." Calgary Sun, A10 (Calgary Herald, Edmonton Sun, Toronto Sun, Ottawa Sun, Winnipeg Sun)

*** Roof replacement forces tunnel to close at night**
The Windsor-Detroit Tunnel will be closing overnight five days a week beginning in August for replacement of its original concrete roof. "It's a scheduled project and if you look at tunnels in the United States and Canada they have a lifespan, just like the roof on your house has a lifespan, and so this is just a scheduled replacement," said tunnel president Neal Belitsky. The roof replacement will be part of extensive renovations to the tunnel which will begin in May. "In the first part of the project is work that will be behind the scenes and so there will be no interruption to the travelling public," said Belitsky. "From May through sometime in August. Then sometime in August we plan on doing scheduled removal of the tunnel ceiling and that will run through, we're anticipating, through to December." The tunnel will be closed from 9 p.m. until 5:30 a.m. from Sunday through Thursday. "So we will be open on weekends, we plan on being open for the morning commuter rush," said Belitsky. "And the contractor will have to work around any special events that happen during that period." Attending an evening event in Detroit during the construction period days will require returning to Windsor on the Ambassador Bridge. Windsor Star, A5

CYBER SECURITY / CYBERSÉCURITÉ

*** Fredericton Mayor Brad Woodside's tweet about jobs causes stir**
A speech from Premier Brian Gallant followed by a tweet from Fredericton Mayor Brad Woodside has led to some confusion as to how many jobs would be coming to the capital and from where. On Wednesday morning Woodside tweeted, "Cyber security centre of excellence coming to Fredericton creating upwards to 400 jobs. Great announcement (...)"Gallant has voiced his intentions of creating "a centre of excellence in cybersecurity" in New Brunswick. The premier spent time earlier this month at a major cybersecurity conference in San Francisco promoting the province as an IT hub. CBC News

*** Canada's national cyber threat centre looking to expand**
Everyone looks forward to April 1 as a sign that spring will really be here. Gwen Beauchemin, director of the federal government's Canadian Cyber Incident Response Centre (CCIRC) is looking forward to it even more. That's because her budget for the new fiscal year starting on that date will allow here to up its staff to 87 from 43, which will help it expand its threat gathering capabilities as well as its threat intelligence services to Canadian organizations. "We're very thankful that we're seeing messages now that the [new Liberal] government would like us to be more forward leaning and outward," she said in an interview, "so I can only think that will raise awareness and the success of getting that information out to all." The centre, part of Public Safety Canada, has 1,200 provincial, municipal and private sector subscribers in the country — largely organizations in critical infrastructure — a number she'd like to substantially increase. It pulls in over 1 million pieces of spam a day and identifies 300,000 different vulnerabilities. In 2015 it discovered over 87 million new pieces of malware. The centre categorizes information in four levels based on the Traffic Light Protocol used by 14 countries. IT World Canada

*** Google intent on encrypting all online activity**

Google is disclosing how much of the traffic to its search engine and other services is being protected from hackers as part of its push to encrypt all online activity. Encryption shields 77 per cent of the requests sent from around the world to Google's data centres, up from 52 per cent at the end of 2013, according to company statistics released Tuesday. The numbers cover all Google services except its YouTube video site, which has more than one billion users. Google plans to add YouTube to its encryption breakdown by the end of this year. Encryption is a security measure that scrambles transmitted information so it's unintelligible if it's intercepted by a third party. Google began emphasizing the need to encrypt people's online activities after confidential documents leaked in 2013 by former National Security Agency contractor Edward Snowden revealed that the U.S. government had been vacuuming up personal data transferred over the Internet. The surveillance programs exploited gaping holes in unencrypted websites. Associated Press (Chronicle-Herald, B4)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Funds given to sham canvasser passed to charity

Nanaimo RCMP have located a woman in connection with reports of the unauthorized collection of donations on behalf of the B.C. Open Heart Society. After warning the public of fraudulent door-to-door canvassing last week, police followed up on tips from the public and found the suspect in her Nanaimo home. She voluntarily turned over the money she had collected to the investigating officer, who decided to deal with the matter informally. The woman was warned that further offences could lead to criminal charges. The money was given to the B.C. Open Heart Society, one of the groups the woman said she was collecting for. If you have doubts about the authenticity about an individual collecting funds, call the organization in question to see whether they have canvassers in your neighbourhood. Fraudulent fundraisers can be reported to your local police department's non-emergency line. Times Colonist, A3

RCMP clears senators under review: sources

After nearly four years of scandal, Prime Minister Justin Trudeau Wednesday said the Senate is "on the right track" with word the RCMP has cleared most, if not all, of the 30 senators under police review for questionable expense claims. Police won't comment on their findings, but sources said many of the senators under scrutiny have been notified in writing that RCMP reviews of their expense account files found nothing to warrant full criminal investigations. "The majority of 30 have received word (that) after a preliminary review (the case) didn't merit investigation," said one source. Another said it is "99 per cent sure all 30 will be cleared." Several of the senators were informally notified as far back as last July. Trudeau, in New York seeking a United Nations Security Council seat for Canada, said the damaging series of internal financial audits, police scrutiny and the related and continuing criminal trial of Sen. Mike Duffy, "have led us to a place where I think we're on the right track." (…) He is expected to soon name five new senators to sit as independents and to start filling 22 Senate vacancies. The RCMP review of the senators' expense claims was triggered last June when federal auditor general Michael Ferguson released the results of a sweeping audit that found what he characterized as repeated abuses of taxpayer dollars and a need for wholesale culture change. Leader-Post, N4 (London Free Press); Canadian Press (ChronicleHerald, Le Droit, L'Acadie Nouvelle); Le Devoir, A3

De fausses alertes à la bombe simultanées dans quatre écoles

Différents corps policiers enquêtent sur une série de menaces à la bombe perpétrées au même moment mercredi dans trois écoles du Nouveau-Brunswick et dans un autre établissement d'enseignement situé à Bangor, au Maine. Le premier incident est survenu mercredi matin à l'école Bangor High, qui a dû être évacuée en raison d'une alerte à la bombe. Le personnel de l'école a reçu un appel à 11h30 indiquant la présence d'un engin explosif à l'intérieur des murs de l'établissement. De son côté, la Force policière de Fredericton a dû intervenir au même moment à l'école Devon Middle, qui est située sur la rue Dobie. La direction de l'école a informé la police à 11h30 après avoir reçu un appel faisant état de la présence d'une bombe à l'intérieur de l'établissement. Les policiers de Saint-Jean ont pour leur part dû intervenir à 11h30 à l'école Forest Hills Junior High après que le personnel a reçu un appel disant qu'il y avait une bombe à l'intérieur de l'école. Le Service régional Codiac de la GRC a quant à lui mené une opération à l'école Riverview High peu après 11h30 mercredi après un appel faisant une fois de plus état de la

présence d'une bombe à l'intérieur de l'école. «L'appel logé par le directeur de l'école faisait mention d'un appel informatisé indiquant que l'engin allait exploser s'il y avait intervention policière», a indiqué le sergent de la GRC André Pépin. La GRC affirme que le contenu des appels téléphoniques logés au même instant dans les différentes écoles était similaire et pourrait fort bien être l'oeuvre d'une seule et même personne ou d'un groupe d'individus. La GRC a indiqué avoir institué une enquête en collaboration avec les autres corps policiers afin de tenter de faire la lumière sur ces appels à la bombe. Dans les quatre cas, les élèves ont pu réintégrer leurs classes après une fouille des lieux. L'acadie Nouvelle, 2

Sécurité renforcée après une «menace»
Le transporteur ferroviaire canadien Via Rail a renforcé mercredi les mesures de contrôle et de surveillance dans certaines gares après avoir reçu une menace qualifiée de « non fondée » par l'entreprise, mais prise au sérieux dans le contexte sécuritaire mondial. La société parapublique a demandé à ses employés « d'être vigilants » et va augmenter « ses patrouilles policières et canines dans certaines gares », a indiqué à l'AFP sa porte-parole, Marie-Anna Murat, disant travailler « en étroite collaboration avec les autorités policières ». Des contrôles accrus étaient notamment menés aux gares de Toronto et Montréal, les deux plus grandes villes du pays, selon les médias locaux. La Gendarmerie royale (GRC) a indiqué à l'AFP que ses agents étaient déployés aux côtés des forces de police municipales « afin d'assurer la sécurité des passagers qui transitent aux stations ferroviaires à travers le pays ». La menace visant Via Rail a entraîné l'ouverture d'une enquête par le service de police de la ville de Montréal (SPVM), a souligné la GRC. Cela semble indiquer que la gare de la métropole québécoise serait visée. Agence France-Press (Le Droit, 25)

RCMP applies to have man's dog destroyed
The RCMP is looking to have a Conception Harbour man's dog destroyed. The application was brought forward Wednesday morning when Robert Brant appeared in provincial court in St. John's. The 34-year-old faces charges of failing to tether a dog and unlawfully allowing a companion animal to cause a hazard under the Animal Health and Protection Act. The offences are said to have happened Nov. 9, 2015, in Conception Harbour. RCMP officer Adrian Cox, who filed the application, was in the courtroom. He told Judge Mike Madden that he served Brant with it on Feb. 10. Brant spoke up, saying he didn't know why he was in court because he had told the officer back then that he already agreed to have the dog destroyed. Telegram, A2

POLICE PROBE MYSTERIOUS DEATH
Police are being tight lipped on whether a blood-smeared van in Pines is connected to the death of a man found in a city alley. Red Deer City RCMP were called to a report of a man in distress at an alley around 4: 54 a.m. on Wednesday. The man was taken to hospital where he later died. Police had a street cordoned off in Normandeau. The Calgary RCMP Major Crimes Unit were called in to help with the investigation. Around the same time, one Pines resident looked out his window to see something out of the ordinary unfold on Page Avenue near Pamely Avenue. The resident did not give his name. "I just looked out the window and saw the van roll up slowly," he said. "It was eerie." The man said he walked away from the window and when he returned a few minutes later, the white cube van had plowed into a car. He did not want to speculate on what happened. The white cube van had what appeared to be blood smeared on the driver's side near the back tire. It appeared to have rammed into a small car. Details are few as police are continuing to investigate. A section of Page Street was taped off for most of the day as police went door to door to talk to residents. There was heavy police presence in both neighbourhoods throughout the day. Red Deer Advocate, A1

Ivvavik National Park meeting Aklavik...
A meeting to discuss Ivvavik National Park took place in Aklavik on March 14, according to Parks Canada. The meeting was scheduled to begin at 10 a.m. in the hamlet council chambers. Representatives from Aklavik's Hunters and Trappers Committee were invited to attend, as well as the directors of the Aklavik Community Corporation. Topics included an infrastructure update for the Sheep Creek base camp, cultural resource monitoring and Aklavik's role in managing the park. The meeting was scheduled to finish around 4 p.m. Gwich'in invited to Inuvik fracking workshop. The Gwich'in Tribal Council was inviting residents to attend a two-day workshop on fracking March 12 and 13 in Inuvik, according to a post on Fort McPherson's Facebook page. The workshop was done in partnership with

the Southern Alberta Institute of Technology and, according to the post, aimed to "gain knowledge and overall understanding of fracking." It was scheduled to take place at the council chambers in Inuvik and included lunch. (...) Members of the RCMP were also scheduled to visit the school the week of March 14 to host an anti-bullying and cyberbullying workshop, but many students were away sick, Berger said. INUNIK Drum

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Report identifies prison challenges
There's room for improvement in with the way Correctional Service Canada (CSC) operates, according to the annual report released last week from the office of the Correctional Investigator. The office, which acts as an ombudsman for federal offenders, released 18 recommendations addressing such challenges in the CSC as prison health care, aboriginal corrections, conditions of detention, how to handle federally sentenced women, offender employment, and resolution of offender complaints and grievances. According to the office's website, its primary function is to investigate and try to bring resolution to individual offender complaints and make recommendations on CSC's policies and procedures associated with inmate complaints and to make sure areas of common concern among the inmate population are brought up and investigated. (...) In his report, Howard Sapers, the correctional investigator, said some cost-cutting measures over the period may have had a detrimental effect on the prison system. Sapers brought up a variety of cancelled initiatives that affect reintegration and release programs by the former Conservative government, including the prison farm issue, saying the closure at Frontenac Institution and other prison farms in Canada and other support programs "effectively undermine reintegration efforts." (...)His report also said more than 70 per cent of women have children under the age of 18 and recommend that CSC reintroduce and strengthen their motherchild program, which has been "progressively eroded by operational, population and security concerns." Kingston Whig-Standard, A3

*** Jailed biker now facing weapons charges**
A Fallen Saints motorcycle club member serving prison time for kidnapping and viciously beating his ex-girlfriend faces new charges of weapons trafficking after getting caught up on the edges of a massive police investigation. Clint James McLaughlin, 38, made his first appearance Wednesday in Saskatoon provincial court on the weapons charges, which date back to March 28, 2014. He appeared via video from the Saskatchewan Penitentiary at Prince Albert, where he's serving his six-year kidnapping and assault sentence. McLaughlin's alleged involvement with a "big bag of guns," was the subject of testimony at a murder trial in Saskatoon last year, when police informant Noel Harder was being grilled about why he started working with the police. (...) Harder said that in early 2014, he was caught transporting a hockey-sized bag of guns "from a guy named Clint McLaughlin's house." To avoid prosecution, Harder said he volunteered to become a police informant. His role as an informant led to an investigation police dubbed Project Forseti, which culminated in January 2015 with police raids, arrests and the seizure of $8 million worth of illegal drugs and hundreds of firearms. By that time, McLaughlin was in prison - he was arrested in early June 2014 on the kidnapping and assault charges and remained in custody until his sentencing in December 2014. The 17 new weapons charges that McLaughlin faces relate to rifles, including an assault rifle, shotguns and handguns. Postmedia Network (StarPhoenix, A3, Leader-Post)

14-year sentence for preying on men
An Ottawa man who deliberately contracted HIV then had sex with unsuspecting victims - infecting a 17-year-old boy - has been sentenced to 14 years in prison and declared a long-term offender. The sentence Steven Boone, 35, received in Ottawa comes almost three years after he was sentenced to four years in prison for not disclosing his HIV status to sex partners in Waterloo. (...) The Ottawa sentence was for seven offences in 2010 - including three counts of attempted murder. (...)Boone's local crimes, committed in March 2010 with accomplice Noel Bowland of Kitchener, involved group sex with two men while high on marijuana at the Waterloo apartment of one of the victims. Boone and Bowland did not reveal they were HIV-positive. The victims did not contract HIV. The two were convicted of two counts of aggravated assault. Boone got four years; Bowland got 18 months. Waterloo Region Record, A1

In the Courts
Mazon Arbaji, 38, was convicted of violating probation he received in October 2014 in Toronto by failing to report to his probation supervisor. Arbaji, who is currently serving time in federal prison and nearing the end of his sentence, had the charge waived to Kingston in order to deal with it. He had 30 days added to the federal sentence he's currently serving. Federal inmate Gordon Craig, 44, was convicted of committing mischief by wilfully damaging a stolen truck he and another federal offender used to drive to Ottawa while they were both supposed to be living at the Henry Traill Community Correctional Centre. He had 90 days added to his existing sentence and a freestanding restitution order for $900 was issued against him. Kingston Whig-Standard, A7

* **In the courts, Feb. 16 to 19**
Federal inmate John Mensah, 28, was convicted of having illegal possession of marijuana while serving a sentence at Joyceville Institution. He had four months added to the nine-year-four-month sentence he's already serving for robbery and weapons offences. Federal Crown prosecutor Joe Dart said Mensah was caught with 12.4 grams of marijuana in early October after a young woman visiting him was seen to pass it to him inside a potato chip bag. Dart said there was a second substance inside the bag as well, which was initially thought to be MDMA (ecstasy) but turned out to be an unscheduled substance. Defence lawyer Phil Casey disclosed that Mensah's original statutory release date was August 2017. Kingston Whig-Standard (2016-03-16)

* **Segregation an 'essential tool' for officers**
An opinion piece by Jason Godin, VP of the Union of Canadian Correctional Officers, states, "Recently, there have been many interest groups calling for the abolishment of administrative segregation units inside Canada's federal institutions and restrictions on the amount of time spent in segregation. The Union of Canadian Correctional Officers represents more than 7,000 officers working the front lines inside Canada's penitentiaries. Segregation for us is an essential tool of our trade that allows us to keep inmates, staff, and ultimately the Canadian public, safe. Without it, our institutions would be chaos, become more dangerous for inmates and our safety would be more at risk in an already dangerous workplace. The interest groups also refer to our segregation as solitary confinement, implying that we put the inmate in a cell with no contact with the outside world. Nothing could be further from the truth, and the notion of solitary confinement only exists in the movies. (…)As correctional officers, we are concerned that various groups are creating a false misunderstanding of this essential tool for correctional officers. If radical changes are made into policy, they may jeopardize the safety and security of our institutions. We are proud of the work we do and the vital service we perform on behalf of Canadians, but we need to ensure that we have the proper tools in place to carry our mandate to protect the public and assist in the offenders' rehabilitation." Kingston Whig-Standard, A4

* **The deadly cuckoo's nest of solitary confinement**
An opinion piece states, "When prison watchdog Howard Sapers began penning his annual report on the litany of ills he continues to see within the federal corrections system, he did so thinking it would be his last kick at the can. His pink slip had already been signed. The Harperites, long on law and order but short on any expressed compassion for the incarcerated, made no secret about Sapers being an increasingly irksome pain in their collective psyche since his appointment in 2004. He was a watchdog who would not give up the bone. If his recommendations were not acted upon, for example, he would bring it up in his next annual report in a bolder fashion and with a louder denunciation. (…) Besides, the federal prison system, through solitary confinement, is doing a pretty good job anyway at killing off the tormented souls behind bars. As Sapers pointed out in his report, half of the 30 federal inmates who committed suicide between 2011-2014 did so in solitary confinement, with nearly all of them having known mental health issues. Further troubling, said Sapers, is that these suicides took place in what is supposedly the most closely-monitored part of a prison, and where suicide watch is one of the prime purposes of these cells existence. Yet 14 inmates were somehow able to find the means and opportunity to kill themselves with all those eyes watching. This could be interpreted, perhaps, as corrections officers figuratively asleep at their watch, or simply not caring about the mentally ill offing themselves in solitary. It's either one or the other." Winnipeg Sun, A15 (Calgary Sun, Toronto Sun, Ottawa Sun, Edmonton Sun)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** More overdoses from bootleg fentanyl reported**
More people are dying of drug overdoses than they are in car crashes in Waterloo Region. And that's because powdered fentanyl is 100 times more powerful than morphine and 50 times more potent than heroin, says Staff Sgt. Shirley Hilton, head of Waterloo Regional Police's drug branch. Hilton said that in three recent drug seizures it appeared that police had busted dealers selling cocaine and heroin, but after analysis, the white powder was found to be a blend of powdered fentanyl and heroin. The appearance of bootleg fentanyl means drug dealers are creating the drug in illicit labs, mixing it with other drugs, and passing off the new concoction as heroin or cocaine, Hilton said. "They are creating their own recipes," she said. "I wouldn't say we have a crisis, but we need to be aware. Fentanyl is definitely here." The Waterloo Region Crime Prevention Council created the Waterloo Region Integrated Drug Strategy, which also involves the police, so community partners can keep track of overdoses in the region. Waterloo Region Record, B3

*** Needle site cost?**
How much will safe injection sites cost Toronto? Dr. David McKeown, the city's chief medical officer of health, can't say right now, but they hope the province will help fund the three proposed drug injection sites that will be scattered across the city. McKeown is in the midst of consulting the public about his recommendation to allow three existing clinics that offer harm reduction services to begin to provide supervised injections. (...) Councillor Joe Cressy, chairman of the Toronto Drug Strategy, said the city's needle exchange program distributes 75% of its clean needles at the three proposed supervised injection sites. "That's where the people are using right now," Cressy said. "The reality is it is in our backyard here. This is a way for us to go to where the users are ... they're coming in the doors now to get their needles, this way they're not walking them around the corner." Cressy said overdose deaths, which are on the rise in the city, are "preventable deaths." "We have 206 people dying due to overdose in the most recent numbers," he said. "If we had 206 people dying due to an annual plane crash, we would demand, as a city, plane safety." He pointed out that in 2005, the year of the Summer of the Gun in Toronto, there were 52 gun murders. "It was a horrible, atrocious loss of life and we acted," Cressy said, adding that he believes safe injection facilities can save lives. Toronto Sun, A10

*** Le budget de la police ne sera pas augmenté, dit Brian Bowman**
Le comité exécutif de la Ville de Winnipeg refuse d'augmenter davantage le budget du service de police. Au terme d'un débat houleux, où des membres du conseil de police ont affirmé qu'il y aura des mises à pied sans une augmentation de 2,4 millions de dollars, le comité a décidé de maintenir le budget du Service de police de Winnipeg à 280,7 millions de dollars pour l'année 2016-2017. « Nous croyons qu'il y a suffisamment de financement pour assurer qu'il n'y aura pas d'ajustements au personnel », déclare le maire de Winnipeg Brian Bowman, tout en rappelant que le budget du Service de police a augmenté de 80 % au cours des 10 dernières années. Radio-Canada; CTV News (2016-03-16)

*** Ottawa Police blow overtime budget by $2.1 million**
Ottawa Police blew their overtime budget by 2.1 million dollars in 2015. According to a report to be presented at next week's Ottawa Police Services Board meeting, the deficit was due to several factors, including the taxi strike at the airport and homicide investigations. Chair of the Police Services Board, Eli El-Chantiry, says the main reason they went over budget was due to staffing shortages. "Hiring 25 police officers, you don't see the results right away," says El-Chantiry. "They are hired now but it's going to take time ... you're not going to see a lot of benefit until probably the last quarter of the year." All of this money was made up in the end, mostly because of paid duty revenue and compensation costs. The police service would have ended the year in the black, if it weren't for a $2.2 million shortfall in the amount of money expected from tax payers. CFRA News (2016-03-16)

*** BCTF calls for children's minister to resign after latest teen death**
The B.C. Teachers Federation is calling for the resignation of Stephanie Cadieux, minister of children and family development, after another young aboriginal person died months after her 19th birthday and the loss of government support. Patricia Lee Evoy, also known as Indigo, died last week. She was not in

foster care, but was on a youth agreement, which is a form of financial support for people under 19 whose families cannot care for them, said Mary Ellen Turpel-Lafond, B.C.'s representative for children and youth. Evoy turned 19 in October and her youth agreement expired, Turpel-Lafond said. "I'm still gathering information, but at this point what I can say is that after she turned 19, things pretty much fell apart," Turpel-Lafond said. "I'm very sad about this death and deeply concerned." Cadieux said she did not have a response to the teachers' call for her resignation. (...) Evoy appears to have died from a drug overdose, Turpel-Lafond said. A male and a female were found dead in an apartment in Burnaby on Willingdon Avenue on March 10 and the coroner is investigating, said coroner Barbara McLintock. Turpel-Lafond said it's possible that Evoy, like many young aboriginal women, was pressured to make money through dancing or working as an escort. Vancouver Sun (2016-03-16)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Target causes of violence against indigenous women**
An opinion piece states, "The government of Canada is finally launching a national inquiry into missing and murdered indigenous women and girls. But why has it taken so long? Why have thousands of aboriginal women and young girls disappeared with barely a blip on the national radar? I believe this has to do with the continued failure to acknowledge and address the past, present and unfortunate future effects of colonization. The Feminist Alliance for International Action Canada, The Native Women's Association and the Canadian Journal of Women and Law hosted a symposium in January to design a plan for the inquiry. Its most important recommendation was the need for Canada's focus to be on ending the gendered and racialized violence against indigenous women and girls. Dawn Lavell-Harvard, president of NWAC, argued that "gendered, sexualized and racialized violence against indigenous women and girls violates our commitments to equality and causes lasting inter-generational harm to families." The abuse and violence will not be eliminated until Canadians demand social and economic inequalities that perpetuated them are addressed. Intersecting factors boil down to the fact that the victims are both female and indigenous. Somehow, that has allowed these women and girls to be continually subjected to racialized and sexualized violence. It is as if to say they are not as important as other human beings." Chronicle-Herald, A11

*** 9 choses à surveiller lors du budget fédéral 2016**
Le ministre des Finances, Bill Morneau, dévoilera son premier budget le 22 mars 2016 qui affichera un déficit de 30 G$ - soit trois fois plus que prévu – selon Bloomberg. (...) « Nous n'avons besoin de rien de moins qu'un renouveau total de la relation entre le Canada et les peuples autochtones. Aucune relation n'est plus importante pour moi que celle-là. » C'est en ces termes que Justin Trudeau s'est engagé à appliquer les 94 recommandations de la Commission de vérité et réconciliation du Canada. Depuis son élection, il a promis de rétablir les relations avec les peuples autochtones du Canada, peu importe le coût. Son gouvernement a déclenché une enquête nationale sur les femmes autochtones disparues ou assassinées. Il promet également d'importants fonds pour que tous aient accès à de l'eau potable, à des logements salubres et à une éducation de qualité. Huffington Post (2016-03-16)

*** Survivors say Nordic model is our only hope**
People were turned away from a packed, standing-room only panel, addressing the impacts of various prostitution legislation around the world, on Monday afternoon. Organized by SPACE International, the parallel event, which took place in New York City in connection with the 60th session of the Commission on the Status of Women, featured the voices of survivors-turned-front-line-workers from around the world -- women we rarely hear from in the so-called "sex-work" debate, despite their expansive experience in various aspects of the sex trade. Moderated by Rachel Moran, co-founder of SPACE, Bridget Perrier, who is a survivor of child prostitution and human trafficking, spoke first, addressing the dire situation faced by Indigenous women and girls in Canada. An Ojibaway woman who lives in Ontario, Perrier was heavily involved in the passage of Bill C-36, Canada's new prostitution legislation, which criminalizes sex buyers as well as people who profit from the exploitation of women and girls, but decriminalizes

prostituted women. (...) Perrier called the Downtown Eastside of Vancouver, where Indigenous women are far overrepresented in the sex trade and where many have gone missing and been murdered, "a war zone," saying the link between prostitution and the missing and murdered women is undeniable. Beyond holding men who buy sex accountable, Perrier put forth another demand to the Canadian government: "We are asking that when a man kills an Indigenous women, he be charged with a hate crime." Rabble (2016-03-16)

PUBLIC SERVICE / FONCTION PUBLIQUE

* **National Defence reports IT headaches over Shared Services support**
More documents obtained by CBC News illustrate serious complaints about Shared Services Canada this time at the Department of National Defence. Briefing notes prepared for commander of the army Lt.-Gen Marquis Hainse in February 2014 detail how governance at Shared Services caused "significant inefficiency at every level," including service delivery, procurement, resource management and delegation of authority. CBC obtained the defence document following earlier reports about the dismal support Shared Services has provided to the RCMP. Shared Services is the federal department created in 2012 to take over the delivery of email, data centre and network services for 43 government agencies. At Defence, a memo authored by Lt.-Col M.C. Arguin and released under access to information described several mishaps that would have affected operations of the army. Defence employees stepped in to perform tasks that should have been done by Shared Services. "As a result the CA's [Canadian Army] C2 [command and control] systems that support exercises and operations have, up until now, remained slightly sheltered (although not completely) from the majority of the issues experienced across DND." Arguin noted that the deterioration of service delivery had affected army training. CBC News

* **Trudeau announces Canadian bid for 2021 seat on UN's Security Council**
Canada will vie for a seat on the Security Council for a two-year term starting in 2021, Prime Minister Justin Trudeau said today. The members of the General Assembly won't vote on candidates for the vacancy until the fall of 2020, which means Trudeau will have to win another federal election in 2019 if he wants to personally see Canada return to the UN's most powerful body. If Canada succeeds, it would end the country's longest absence from the council in the history of the United Nations - 21 years since the end of Canada's last two-year stint in 2000. Trudeau launched the campaign this morning from the lobby of the United Nations building in New York in front of a crowd of staffers, visiting students and foreign diplomats. Officials said they could only recall the room being used once this way for a public event in the last few years -for the Pope. In his speech, Trudeau said Canada wants to revitalize its entire relationship with the world body and he underlined peacekeeping as an area where Canada can have an impact. "We are determined to revitalize Canada's historic role as a key contributor to United Nations peacekeeping, in addition to helping advance current reform efforts," he said. "And Canada will increase its engagement with peace operations, not just by making available our military, police, and specialized expertise, but also by supporting the civilian institutions that prevent conflict, bring stability to fragile states, and help societies recover in the aftermath of crisis. He repeated his oft-made claim that Canada is back as a player on the UN stage. "It's time. It is time for Canada to step up once again." Foreign Affairs Minister Stephane Dion said later that the government is still considering possibilities for peacekeeping missions. Canadian Press (Chronicle Herald, A9, Whitehorse Daily Star, Waterloo Regional Record, Hamilton Spectator, Ottawa Citizen, Telegraph-Juuornal, Times & Transcript, Daily Gleanor) National Post (London Free Press) ; National Post, A4

* **Canadian causes stir at UN with drugs speech**
The Liberal government used its first foray into the global anti-narcotics arena this week to signal a clear shift from the war on drugs philosophy, promising more safe-injection sites, promoting "harm reduction" and touting its plan to legalize marijuana. The speech by Hilary Geller, an assistant deputy minister of

health, caused a stir at the generally staid Commission on Narcotic Drugs conference in Vienna, observers said. The audience of government and non-governmental organization officials from around the world "erupted in applause" midway through the address and gave a prolonged ovation at the end, said Jason Nickerson, an Ottawa-based researcher who is attending the meeting. The talk not only contrasted with the Stephen Harper government's international stance on drugs, but stood out from the cautious pronouncements most other nations made, said the Bruyère Research Institute scientist, who favours more liberal policies. "There are some countries here that are coming out and saying important, progressive things," he said. "But it's certainly not as explicit as what Canada is saying." A Conservative opposition critic had a different reaction, sounding the alarm about Geller's prediction of more government sanctioned injection sites - where opioid users can use illicit intravenous drugs under a nurse's supervision. While the Supreme Court of Canada ruled such sites legal, the Conservatives passed legislation requiring extensive public consultations and other measures before they could be set up, said Rob Nicholson, the party's justice critic. "Drugs that are used at these injection sites, mostly heroin, are dangerous and addictive and they kill Canadians," said the former justice minister. "I disagree with the idea they are safe. There's nothing safe about taking heroin." Nicholson also stressed that the Conservatives invested hundreds of millions of dollars in drug-abuse treatment and prevention. Windsor Star, N3 (Edmonton Journal, N3, StarPhoenix, Calgary Herald, Gazette; National Post

INTERNATIONAL

*** Hunt on for pair in raid linked to Paris attacks**

Belgian investigators were hunting Wednesday for two suspects who fled an apartment linked to the Nov. 13 attacks in Paris, one day after a police sniper killed a gunman holed up inside and authorities found a stock of ammunition and an Islamic State flag, officials said. Prosecutors on Wednesday released without charges two men they held in the wake of Tuesday's joint French-Belgian raid in Brussels, leaving the hunt on for two unidentified suspects. The dead man was identified as Mohamed Belkaid, an Algerian living illegally in Belgium, said Thierry Werts, a prosecutor. Belkaid, 35, was shot to death by a police sniper as he prepared to fire on police from a window, Werts said. A Kalashnikov was found by his body, as well as a book on Salafism. Inside the apartment, police found the banner of the Islamic State extremist group as well as 11 Kalashnikov loaders and a large quantity of ammunition. The anti-terror raid was linked to the Nov. 13 gun-and-bombing attacks in Paris that left 130 people dead. The Islamic State group claimed responsibility for the attacks, in which Belgian citizens played key roles. Among the fugitives is Belgian Salah Abdeslam, who fled the Paris attacks that night, slipped into Brussels and has not been seen since. The Associated Press (Record, A6, National Post, Whig-Standard)

*** EU leaders push on with contested Turkey migrant plan**

European Union leaders will push ahead Thursday with contested plans to send tens of thousands of migrants back to Turkey amid deep divisions over how to manage Europe's biggest refugee emergency in decades. With European unity fraying in the face of more than 1 million migrant arrivals over the last year, Turkey -- the source of most refugees heading to Greece -- is seen as the key partner to contain the influx. The U.N. refugee agency has reservations about asylum standards in Turkey and rights groups are concerned over Ankara's crackdown on the media and its bloody conflict with Kurdish rebels. The EU, however, feels it has no better option. "How are you going to help Greece without having an agreement with Turkey to handle the issue? Do you really want to condemn Greece to become a refugee camp for the rest of Europe?" EU Commission vice-president Frans Timmermans said, on the eve of the two-day summit in Brussels. Destabilized by the passage of hundreds of thousands of migrants, countries in the Balkans have begun to tighten border controls, with Macedonia north of Greece having all but locked the gates. Thousands have been camped on the Greek side desperately hoping to move on toward Germany or Scandinavia. CTV News

MINISTER / MINISTRE

Spies use C-51 on detained Canadians
Canada's spy agency is using controversial powers under the C-51 anti-terrorism legislation to gather intelligence from Canadians held in foreign prisons, a newly released memo reveals. Amnesty International Canada and the New Democratic Party are expressing concerns about the potential pitfalls of the previously unknown information-sharing arrangement between the Canadian Security Intelligence Service and Global Affairs Canada. The spy service and Global Affairs made the sharing deal this year through the Security of Canada Information Sharing Act, part of the omnibus security legislation known as C-51, says a secret memo to **Public Safety Minister Ralph Goodale** from Michel Coulombe, CSIS director. The provisions, ushered in by the previous Conservative government, expanded the exchange

of federally held information about activity that "undermines the security of Canada." "Information collected by (Global Affairs Canada) through the provision of consular services can be directly relevant to investigations of threats to the security of Canada," says the heavily censored CSIS memo, obtained by The Canadian Press under the Access to Information Act. However, it is often difficult for consular officials to determine when a detained Canadian has been tortured and what impact that has on the information they may be sharing, said Alex Neve, secretary general of Amnesty International Canada. Canadian Press (National Post, A5, Times & Transcript, Ottawa Citizen, Edmonton Journal, Calgary Herald, Vancouver Sun, Times Colonist, London Free Press, Red Deer Advocate); La Presse Canadienne (Le Droit, L'Acadie Nouvelle); SputnikNews.com

TOP STORIES / MANCHETTES

*** Bill C-51: Less Free Speech, Undermines De-radicalization**
An opinion piece written by Micheal Vonn, policy director of the BC Civil Liberties Association states, "The Anti-Terrorism Act passed by the Conservative federal government last year — Bill C-51 — created a new law criminalizing speech that "advocates or promotes the commission of terrorism offences in general." Unlike the hate propaganda offence that it is based on, the new offence contains no exemptions for private conversations or provisions for legal defences (such as a public interest defence). The federal government's national security consultation Green Paper offers a suggestion as to what "terrorism offences in general" might mean, but the Canadian legal community has no clear agreement on how courts would interpret this troublingly open-ended language. Presumably "terrorism offences in general" goes beyond the already broad definition of "terrorist activity" set out in Section 83.01 of the Criminal Code. Leading legal scholars in the field note "this is a potentially infinite number of offences." ... The government Green Paper describes a model in which law enforcement plays an important role in supporting individuals at risk of radicalization to violence and responding if individuals progress to criminal activities. Community capacity-building could include "mentorship, multi-agency interventions and training and support for front-line intervention work (such as youth workers, corrections and parole officers, social service providers, faith leaders and mental health practitioners)." Many countries are stressing the importance of measures to counter radicalization to violence. Unfortunately, we really don't know at this point which measures are effective. So far, the limited research and the experience of other countries have mostly served to show us what is not effective." TheTyee.ca (iPolitics)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Government wildfire relief funding for Fort McMurray to end Oct. 31**
Emergency funding from the Alberta government to help evacuees following the Fort McMurray wildfire is coming to an end. The province says almost $100 million has been paid out to 96,000 people who were forced to flee their homes in the Wood Buffalo area in early May. The money was intended to cover immediate housing needs, to help with day-to-day purchases and to limit outof-pocket expenses. But longer-term supports now are available to help fire victims rebuild, so the government is ending the emergency payment program on Oct. Eligible Albertans who have not yet applied for wildfire relief funding have until the end of the month to do so. Postmedia Network (Red Deer Advocate, A7; Edmonton Journal); CBC News

*** Ontario OK ' s Windsor-area disaster relief**
The province has declared parts of Windsor, Tecumseh and Lakeshore disaster areas and activated a relief program to help residents affected by last week's flooding. Municipal Affairs Minister Bill Mauro visited the area Monday to announce relief measures after the region received a month ' s worth of rain in two days, flooding many streets and homes." This morning I signed off and we have activated the ministry's and the province's disaster relief programs," Mauro said at a news conference "People are now eligible to apply to one of the two disaster programs that the province has." (...) According to Mauro, home-owners now will be able to apply for provincial assistance with the cost of essentials destroyed by the floods beyond what their insurer will cover. Postmedia Network (London Free Press, Windsor Star)

*** Flooding repairs to exceed $25M**
Unlike the August tornadoes in Windsor and LaSalle, last week's flooding in Windsor and Tecumseh will make it onto a list of 2016 Canadian insurance catastrophes. Damages stemming from the most recent flooding will take weeks to calculate, but a spokeswoman for a company that keeps track of the nation's costliest disasters said it will certainly exceed $25 million. That's the minimum threshold at which individual insurable weather events are reported by CatIQ (Catastrophe, Indices and Quantification Inc.) to the Insurance Bureau of Canada based on surveys of individual insurers. Windsor Star, A3

*** Keeping an eye on Hurricane Matthew**
Environment Canada and the Canadian Hurricane Centre in Dartmouth, N.S., are keeping a close eye on hurricane Matthew. Meteorologist Linda Libby said Monday it's far too early to say if it will have an impact on P.E.I., and if it does it would likely hit towards the end of the upcoming Thanksgiving holiday weekend. Heavy rains from the outer bands of hurricane Matthew drenched Jamaica and Haiti on Monday, flooding the streets and sending many people to emergency shelters as the Category 4 storm approached the two countries. Matthew had sustained winds of 220 kilometres per hour as it moved north, up from 210 kilometres per hour earlier in the day. "We are most assuredly keeping an eye on this thing and were before it developed," Libby said, noting that the Canadian Hurricane Centre was preparing to issue an advisory simply stating that it was officially watching the system (…) Right now, Environment Canada simply wants to make people aware that the track could take **hurricane** Matthew into Atlantic **Canada** so people can pay close attention to the forecast. TC Media (Guardian); Associated Press (Times Colonist)

*** Des Canadiens sur un pied d'alerte**

Avec plus de 3000 personnes déployées sur le terrain, la Croix-Rouge haïtienne travaille actuellement à sensibiliser les populations les plus vulnérables face au réel danger que représente l'ouragan (…) Lundi après-midi, la Croix-Rouge canadienne n'avait toujours pas reçu de demande officielle afin d'appuyer l'équipe locale. «Tout le monde est en stand-by et nous sommes prêts à intervenir, a assuré Brigitte Gaillis, porte-parole de l'organisme en Haïti. « Nous avons un système de réponse aux urgences si nos collègues haïtiens n'ont pas la capacité de répondre. » Presse Canadienne (Nouveliste, Le Devoir)

*** Search continues for Shalyn Sabine**
Summerside police have not yet located a woman who hasn't been seen since leaving Prince County Hospital early Monday morning. A ground search continued into the evening for Shalyn Sabine (…) Members of P.E.I. Ground Search and Rescue, as well as the RCMP, were in the area of the hospital, spending the day and into the evening searching a nearby park and woods for any signs of Sabine. Guardian, A3

*** Arctic cruise boom poses conundrum for Canada's indigenous communities**
Authorities in the northern Canadian territory of Nunavut are considering new regulations on marine tourism after the first successful voyage of a mammoth luxury liner through the North-West Passage. Nearly three football fields in length, the 13-deck Crystal Serenity docked in Manhattan last month after a 32-day voyage that saw it become the largest cruise ship to sail the once impenetrable passage (…) "Now that marine tourism is a significant and steadily growing presence in the territory," said Bernie MacIsaac of Nunavut's department of economic development, "it is important that new legislation be created that will effectively regulate the sector." (…) Many Inuit want to see more stringent controls of marine traffic in the Arctic, said Eegeesiak: "We're all worried about the potential for a disaster that will affect our livelihood, our food sources." The risks facing the industry were laid bare in 2010, after a small cruise ship carrying 128 passengers struck an uncharted rock shelf in the North-West Passage. It took 40 hours for a Canadian icebreaker to reach and evacuate the ship's passengers. (…)The idea of mass tourism in the Arctic, said Eegeesiak, is woefully out of step with the region's glaring lack of infrastructure and limited capacity for search and rescue. Guardian (UK)

*** Lacombe Firefighters Association donating more equipment to Paraguay**
Central Alberta firefighters have a hand in saving lives a continent away. Lacombe Firefighters Association began a fire engine donation campaign for Paraguay with a single truck last year. It was a life

changer for firefighters in the community of Caazapá, who had no fire truck and little other equipment to tackle fires. A second was shipped to the South American this past summer and two more pumpers have already been lined up as future donations. Besides the trucks, crates of donated equipment from fire departments around the province have been sent to grateful colleagues in Paraguay. Red Deer Advocate, A1, A8

*** 'Guardians' need $500m to watch over native lands**
The Trudeau government is being pushed to invest $500 million over five years on a 1,600-member national "Guardians" team to patrol, and assert aboriginal sovereignty in, the vast traditional territory of Canada's First Nations. Modelled in part after a land stewardship initiative by B.C.'s Haida Nation on the north coast, the initiative would help boost economies and build leadership in remote communities, members of the Indigenous Leadership Initiative said at a news conference Monday. The Guardians could operate as land managers, planners, community consultation officers, emergency response officers and even fisheries management officers, they said. But the hired stewards could also play a role in peacefully asserting sovereignty on traditional territories that are not yet part of settled land claims. Postmedia Network (The Province, A4; Vancouver Sun; National Post)

*** Rail firm great news, but strings attached**
An opinion piece states, "While an official statement might be weeks away, an American company has already announced on its website its intention to restore some of the lustre to Metro Moncton that our community has not seen since 1982. That year, the CN Rail Shops shut down, resulting in the loss of thousands of jobs. While Miami-based ARS Rolling Stock doesn't aim to quite bring Metro back to glory days, it aims for up to 700 well-paid employees (…)The new company appears focused on manufacturing, mainly grain hopper cars and the new, safer petroleum tankers demanded since the Lac Megantic rail disaster in July of 2013, in which older tank cars derailed and exploded, killing 47 people. Times & Transcript, A6

*** Vie privée - Moderniser les outils du Commissaire**
Une pièce d'opinion dit, « Dans son récent rapport annuel, le Commissaire à la vie privée explique la nécessité de " moderniser les outils du XXe siècle ". Il a raison : les lois sur la protection des renseignements personnels ont été mises en place avant Internet. Dans l'univers en réseau, le défi est de protéger la capacité des individus de contrôler l'information relevant de leur vie privée. Mais il importe aussi de garantir le fonctionnement des espaces publics, ces lieux désormais virtuels, dans lesquels les autres ont le droit de nous critiquer ou de connaître nos faits et gestes à caractère public. Évidemment, il faut regarder de très près les dispositions des lois mises en place afin de lutter contre le terrorisme. Les pouvoirs accrus accordés aux forces de sécurité doivent être balisés et surtout leur exercice surveillé efficacement. Le Commissaire préconise de réviser les lois sur la protection des renseignements personnels qui relèvent d'un contexte informationnel qui n'existe plus. » (…) Alors que le pays se prépare à affronter le pire, les Canadiens en Haïti sont invités à s'inscrire sur le site du gouvernement du Canada avec leurs coordonnées complètes afin d'être rejoints plus facilement en cas de désastre. Actuellement, environ 2000 Canadiens se sont inscrits sur le site. Le Devoir

*** @Kady's Watchlist for Oct. 4 – Senators, prepare to be… modernized**
Also on the Hill media circuit this morning: Later this afternoon, Privacy Commissioner Daniel Therrien and University of Ottawa visiting professor Wesley Wark will provide their respective perspectives on the state of Canada's national security framework at **Public Safety**. OttawaCitizen.com

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Contractors in alleged paving scam arrested, ordered deported
Four people have been ordered removed from Canada after police warned the public about an alleged paving scam. The Canada border services agency and Ottawa police's fraud unit teamed up to arrest the quartet on Sept. 24 and seized $70,000 in cash four days after police warned the public to beware of door-to-door paving contractors with Irish accents who would quote an inexpensive price to repave a driveway or lane, only to do the work and then demand more money. The CBSA said Monday that the four foreign nationals suspected of being involved were working without a permit. Ottawa Sun, A3 (Ottawa Citizen); * CBC News

Union calls for review of temporary foreign workers program
A union is calling for a review of the impact the temporary foreign worker program has had on the construction industry in Western Canada, saying a federal government report ignored the issue. The Western Canadian arm of the Labourers' International Union of North America says a report released last month by a House of Commons committee fell short, and failed even to acknowledge a 123-page submission from the union. Mark Olsen, the manager of the union's regional office, said on Monday that concerns include the effect of the temporary foreign worker program on the prevailing wage and how it is enforced. "Companies should have to pay whatever the going rate is for construction in a given area, because if they're allowed to advertise at a much lower rate and they're allowed to pay at a much lower rate, then they won't have as many Canadians applying, maybe none," he said in an interview. "And on top of that, they will be depressing the wage rates of companies that are competing for the same work, and workers that are competing for the same work." Mr. Olsen said that in some instances, a Canadian worker could be paid significantly more than a temporary foreign worker for the same task, which is discriminatory. Tom Sigurdson, executive director of the B.C. and Yukon Territory Building and Construction Trades Council, said his organization supports the union's call for a separate review. Globe and Mail, S1

Immigration detention of children, families must end
An opinion piece states, "As a psychiatrist who works with children and families, I am not supposed to cry. As a researcher, I strive to engage but remain an observer. Nevertheless, while sitting across from two parents incarcerated in an immigration holding centre, as they described the agony of being separated from their two young daughters, I felt my throat tighten and tears roll down my cheeks. Their pain filled the small interview room; my job could not insulate me. The parents told me how they had tried to convince their girls the reason they had not seen them in a month was that the parents were both working

overtime. But the Canadian-born children, who were staying with relatives so the girls would not be detained alongside their parents, knew something was wrong and were frightened. They had seen their parents taken away in handcuffs. "We are never apart," wept the girls' mother. The father, defeated and hopeless, told me with shame that he thought of suicide because he could not bear what the family was living through and his feelings of powerlessness. This was one of hundreds of families who face immigration detention in Canada each year. What happens to young children when their parents are sent to immigration jails? Luckier ones can stay with relatives. Some go into the child welfare system. Others join their parents in detention facilities. Our research shows all these scenarios have negative consequences for children's mental health. When separated from their parents, children - who have often lived through war and trauma in their country of origin - deteriorate. Being incarcerated alongside their parents is no better. Some children stop eating, others stop talking, and most have sleep difficulties and show signs of depression, anxiety or post-traumatic symptoms." Toronto Star, A11

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Cyber Security Awareness Month isn't only for consumers, says Canadian expert**
Cyber Security Awareness Month is often seen as a burst of news, videos and blogs aimed at consumers. But CSOs and infosec teams also have a role to play during October to ensure their employees are keenly aware of online dangers. ITWorldCanada.ca

*** WikiLeaks fête une décennie d'existence sous le feu des critiques**
WikiLeaks fête mardi ses dix ans en se targuant d'avoir lancé le phénomène des plateformes internet de divulgation de documents secrets et son controversé fondateur Julian Assange a promis de poursuivre son travail malgré les vives critiques (...) Dix ans après sa fondation, le site voit son image de plus en plus écornée par ceux qui l'accusent d'être manipulé par des gouvernements ou des partis politiques et de manquer de discernement dans ses divulgations. Julien Assange se voit accusé de servir les intérêts de la Russie, voire de recycler des documents fournis par Moscou, ou de «rouler» pour Donald Trump en vue de l'élection présidentielle américaine (...)À la veille de l'ouverture de la convention démocrate américaine fin juillet, WikiLeaks avait publié quelque 20 000 emails internes au parti démocrate révélant un possible biais de ses responsables en faveur d'Hillary Clinton pendant la campagne des primaires. M. Assange avait refusé de révéler comment WikiLeaks avait obtenu les messages piratés. La Russie est soupçonnée par de nombreux experts et responsables d'en être l'instigatrice --ce que n'a pas écarté non plus le président Barack Obama-- mais Moscou a démenti toute intervention. Tirant son nom de «wiki», en référence à l'idéal d'ouverture et d'auto-gestion par les usagers du site Wikipedia, et de l'anglais «leaks» (fuites), l'organisation non gouvernementale a publié en une décennie plus de 10 millions de documents fournis par des lanceurs d'alerte. Ces dernières années, l'exemple de WikiLeaks a été largement suivi, par l'informaticien Edward Snowden en particulier, qui a permis à la presse de révéler l'étendue des activités de surveillance de l'Agence de sécurité nationale (NSA) en matière de télécommunications, y compris pour espionner les conversations de dirigeants de pays alliés. AFP (Journal de Québec, Journal de Montréal)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Two suspected Vikings biker gang members arrested in raids still behind bars
Two suspected outlaw biker gang members are still behind bars as their lawyers attempt to make progress with their cases. Vince Aloysius Leonard Sr., 58, and Wayne Johnson, 57, were back in provincial court in St. John's Monday. Mike King, who represented Leonard Sr. in the courtroom, told Judge Mike Madden that his firm is still in the process of finalizing the retainer for Leonard Sr. He requested the case be postponed until Oct. 25 to work that out. Johnson's lawyer, Mark Gruchy, told the judge that Johnson wants a bail hearing heard as soon as possible. He said he had just received a substantial amount of information from the police evidence package, which he would like to review with his client. Gruchy and Crown prosecutor Trevor Bridger agreed to have the two-day bail hearing begin Wednesday. Due to scheduling issues, the second day won't be heard until Oct. 10. Leonard Sr. and Johnson were two of eight men arrested last week by RCMP officers as part of a two-year investigation

dubbed Project Bombard, an RCMP operation, with assistance from the Royal Newfoundland Constabulary, which delved into the criminal activities of the Vikings Motorcycle Club and the murder of Dale Porter in North River. Telegram, A1, A4

* **Quick-thinking Mounties use cruiser seat as flotation device to rescue man from Peace River**
Onlookers who watched as quick-thinking Mounties saved a man from drowning Saturday in the Peace River were on the edge of their seats. The two rescuers were, too. Just after 9 a.m., constables Brandon Goudey and Tim Stevens of the Peace Regional RCMP detachment received a call on the radio about a man in distress in the river as it flowed through the northwestern Alberta community's downtown. Along with EMS crews and firefighters, the officers tried to encourage the man to swim to shore. A rescue boat was on its way, but when it became clear the man was not getting closer to shore and beginning to lose the struggle, the two officers decided to improvise. Goudey said he remembered a lesson from police training that helped save the day - that the back-seat cushion of a Ford Crown Victoria can float. "I guess I was lucky that I remembered," Goudey said. Immediately after they arrived, Goudey asked his partner to pull the seat from the cruiser in case they needed it. "We noticed that he was struggling to stay above water," Goudey said. "At one point, we lost sight of him for a little bit." They stripped off their heavy equipment belts and both jumped in, using the cushion like a pool float and kicking their way to the drowning man. The water was frigid and flowing about 12 kilometres per hour. Edmonton Journal (Edmonton Sun)

* **Protest in Surrey addresses 'theft' of homeless belongings by RCMP**
A few dozen people marched the area around Surrey City Hall today protesting what they call theft of their belongings by RCMP and bylaw officers. Alliance Against Displacement organizer Dave Biewert says it happens on a regular basis on the strip near 135A Street and 106 Avenue. "Every morning at about 8:30 a.m. the RCMP and the bylaw officers roll onto the strip and make sure everybody tears down their tent, packs up their stuff and makes it movable. And if people aren't with their belongings, or are if they are slow at it, they will take their stuff and throw it into a truck." Surrey Bylaw Manager Jas Rehal says officers give people ample time to take their belongings and move off of the sidewalk. Surrey RCMP has not responded to our request for an interview. AM730.ca

* **Self-described millionaire found beaten in Brampton ditch charged with fraud**
A self-described millionaire and business coach found beaten and half-naked in a Brampton, Ont., ditch earlier this year has been charged with fraud. Reza Mokhtarian has been charged with one count of fraud against the public over $5,000 in connection with an alleged breach of the Criminal Code between July 1, 2013, and Dec. 31, 2015, the Ontario Securities Commission said in a release Friday. In February, Mokhtarian identified himself as the man found in the ditch, claiming on Facebook that his assailants were competitors. The Mississauga, Ont., man said he was dragged into a van after playing a game of soccer with friends before being held captive in his home for 15 hours by four "large individuals." He alleged another three men guarded the exits to his home, though details were murky because, he said, he had a concussion at the time. (...) The release from the OSC says the charges followed an investigation by the commission's joint serious offences team, which includes the RCMP's financial crime program and Ontario Provincial Police's anti-rackets branch. CBC News

* **Police practice skills with harbour side hostage situation**
Heavily armed police practiced a simulated hostage situation at the harbour in St. John's on Monday. Nicknamed Port Risk, the exercise in the pouring rain tested the skills of various enforcement and rescue groups. The Royal Newfoundland Constabulary's tactics and rescue unit, along with RCMP, Port Authority, Canadian Border Services Agency, Newfoundland and Labrador Search and Rescue Association and Suncor Energy all participated. In the scenario, people entered the harbour and disembarked from a boat before taking a hostage. CBC.ca; The Telegram

* **Kamloops ex-Mountie expected to plead guilty to trafficking cocaine**
A former high-profile Kamloops police officer accused of trafficking cocaine while still employed by the RCMP last summer is expected to enter a plea later this week. Randi Love did not appear in person on Monday for a brief hearing in Kamloops provincial court, at which her arraignment was set for Thursday. Her lawyer, Brad Smith, appeared on her behalf. The 40-year-old is facing three counts of trafficking

cocaine stemming from a trio of alleged incidents on separate dates in June 2015. At the time, Love was on injury leave from her job as an RCMP constable. Police launched an investigation into Love in the weeks that followed. She submitted her resignation papers to the national police force in October 2015. Love made headlines in 2013 when she testified at the fraud trial of her former boyfriend, then-RCMP Const. Trent Wessner, who was convicted of bilking Costco out of $400 based largely on Love's testimony. Wessner left policing following the conviction. In 2008, Love worked as the media-relations officer at the Kamloops RCMP detachment, acting as the de facto face of the city's police. Vancouver Sun (The Province)

*** Crash kills officer facing 34 charges**
What was described as a dark chapter in the history of the Winnipeg Police Service came to an abrupt end Monday morning when the officer charged with dozens of criminal offences last month died after his pickup truck slammed head on into the front of a gravel truck. Little more than two weeks after Const. Trent Milan, 42, an 18-year veteran of the force, was charged with 34 offences, including breach of trust, attempting to obstruct justice, possession of prohibited weapons and possession of various drugs for the purpose of trafficking, he was pronounced dead inside his heavily damaged pickup truck after it came to a rest on its side in a ditch on Garven Road at about 11:30 a.m. Monday. Milan's death occurred before he made his first court appearance on the charges. He wasn't set to appear in court until Nov. 1 on the weapons-related charges and Nov. 10 on the drug charges. He had been released on a promise to appear in court. A Manitoba Justice source said the Crown had recently told Milan and his lawyer that if the officer agreed to a plea bargain, he would have to accept a prison sentence of six years. During a brief press conference held just down the road from the scene of the collision, RCMP spokeswoman Tara Seel would not confirm whether Milan intentionally turned his pickup into the path of the gravel truck. The gravel truck driver suffered minor injuries in the collision. "It appears the eastbound pickup truck collided with the westbound gravel truck," she said. "The driver of the pickup truck was not ejected... He was pronounced dead at the scene." Winnipeg Free Press, A3; Winnipeg Sun

*** A year after approval, new RCMP officers may finally be hired for Kamloops**
More than one year after the City of Kamloops approved funding for 10 new officers, those positions may finally be filled, bringing staffing levels in the local detachment to the highest they've been in more than two years. Kamloops RCMP spokesperson Cpl. Jodi Shelkie says the additional funding will take the detachment to 130 officers from 120. "For the past 16 months we have been working with E Division Staffing to have these 10 new positions filled," Shelkie says. She says the funding was approved in May of last year. InfoTel.ca

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Man who threw book at judge back in prison
A violent offender who made headlines in New Brunswick for throwing a Criminal Code book at a judge and escaping custody, both in 2010, has lost his legal fight over what he complained was a deprivation of his liberty while serving his prison time for armed robbery. Peter Monteith, who has an extensive criminal history and been deemed a high risk to reoffend, had been living in Saint John when his parole was suspended in August and he was sent to isolation at Atlantic Institution, a maximum-security prison in Renous. Justice Hugh McLellan, with the Court of Queen's Bench in Saint John, ruled earlier this month that the Parole Board of Canada and Correctional Service of Canada's handling of Peter Monteith's case was "regrettable but also reasonable." Monteith had been transferred from a maximum security prison to Parrtown Community Correctional Centre, a federal halfway house in Saint John, on June 15, according to court documents obtained by Brunswick News. There were several conditions tied to his parole. He had to return to the facility nightly, abstain from alcohol and non-prescribed drugs, participate in drug and violence counselling and take all prescribed medication. According to the parole board, Monteith had to be segregated nine times, for lengthy periods, in prison due to his behaviour. He racked up 26 charges in custody and was involved with other institutional incidents. He was called "assaultive, aggressive and unmanageable." Telegraph-Journal, B1

Inquest called in 2010 death of inmate at Shepody Healing Centre

Glen Edward Wareham, 28, of New Waterford, N.S., died 2010 while an inmate in mental health facility. A inquest has been called into the death of an inmate at the Shepody Healing Centre in Dorchester in 2010. Glen Edward Wareham, 28, of New Waterford, N.S., died on April 29, 2010. The Shepody Healing Centre is a Correctional Service of Canada facility for prisoners with mental health issues. Chief coroner Gregory Forestell announced Monday that an inquest into Wareham's death will begin Oct. 17 at Crandall University in Moncton. Two weeks have been set aside for the inquest. Forestell will preside over the inquest and a jury will hear testimony from subpoenaed witnesses to determine the facts around Wareham's death. CBC News

Associate of accused in Stacey Adams murder has a spotty past
A known associate of the man accused of killing Stacey Adams has a history of deception and drug crimes, parole board records show. Parole Board of Canada records show Ryan Belanger was ordered this month to stay on day parole until early 2017, after breaking several conditions during his first six-month stint. Belanger and his brother Jeff were cocaine traffickers, according to appeal court documents. Their known associate was Steven Skinner — who was caught in Venezuela on an international warrant and now awaits extradition to face charges of the second-degree murder of Adams. Adams, a 20-year-old man with no criminal record and a child on the way, was found shot in a car in front of a house Ryan Belanger was listed as owning in 2011. Chronicle Herald; 1

* **Advocates rally for alternative jails**
An alternative correctional facility for indigenous people who have been convicted of minor offences could be effective in the Thunder Bay area, based on positive experiences in other provinces, like Saskatchewan, local advocates argue. “There are examples of these facilities in western Canada, which are an alternative to jail and in the spirit of (an aboriginal) healing lodge,” Thunder Bay’s Moffat Makuto said Monday. (…) Wednesday’s meeting is also to include a presentation from Correctional Services of Canada deputy commissioner Peter Linkletter. Kevin Haynen, the acting executive director of Thunder Bay’s John Howard Society branch, said he planned to attend to get more information. “We’re always looking to learn something new in our field,” said Haynen. Chronicle Herald

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

* **Health Canada OK's non-prescription nasal spray overdose antidote: Needle-free nasal spray easier to administer**
Canadians will now be able to acquire naloxone nasal spray without a prescription, Health Canada says. Health Minister Jane Philpott authorized the nasal spray, which works to temporarily reverse a potentially fatal opioid overdose, after an expedited review, the department said in a release on Monday. The needle-free nasal spray is easy to administer and ensures that anyone can reverse an opioid overdose and save lives within a few minutes, said Dublin-based Adapt Pharma. The company intends to market the product in Canada. Health Canada said more information on when the newly approved product will be available will be provided "in the near future." Health Canada says the nasal spray's manufacturer can now take the steps needed to officially bring the product to market in Canada. Until then, the U.S.-approved product will continue to be available in Canada to avoid interruption in supply. The interim order called the authorization "an emergency public health measure in response to the current opioid crisis." CBC News; CTV News

* **'Gun culture' arrives in Ottawa, as city reaches 51 shootings**
As the city once again grapples with uncharted levels of gun violence in its borders, police now say they are seeing a growth in non-gang-related shootings and that "gun culture" has come to quiet Ottawa. Acting Supt. Chris Renwick told Monday evening's Crime Prevention Ottawa board meeting that police are seeing more gunfire that isn't the result of gangs. "It tells us that the gun culture has arrived in Ottawa," Renwick said. "It's a problem we're going to be dealing with it.'" Renwick told the Citizen that nearly half of the 51 shootings on record for 2016 - the most the city has seen in any one year - are gang-related. But non-gang related shootings have doubled from just eight last year to 15 in a year that is still three months away from being over. Of the 13 homicides in Ottawa to date - also nearing record levels -

10 have been the result of gunfire, and five of those have been gang-related. Renwick refused to answer questions on whether police would increase the number of officers doing anti-gun and anti-gang work, saying instead that "it's counterproductive to get into details of where investigative resources are placed." "That number fluctuates depending on investigations," he said. Yet the same gang strategy report received by the CPO board Monday offered a glimpse of what happened when the guns and gangs unit was temporarily boosted. Ottawa Citizen

* **Moncton personal trainer offers anti-bully program for kids**
Growing up in Dakar, Senegal, Issa Seck learned early in life what it's like to be bullied. Today, he's a martial arts fighter and personal trainer in Moncton who is about to launch a new program designed to teach kids how to stand up to bullies and get the most out of life. "As human beings, we want to be part of the pack. And if you want to get rid of someone and get them out of the pack because of the way they talk or they look, that is social bullying, that is social exclusion," said Seck, 36, in an interview at FitCamp90, a gym and fitness centre on Halifax Street in Moncton. This month, he is launching a new Bullyproof program, an eight-session course designed for children aged five to 12. The course deals with different types of bullying and ways to stand up to bullies and the benefits of good nutrition, exercise and a positive attitude toward life. The first course will begin Oct. 17 with 15 children in the first group. The fee is $150. Seck is hopeful his Bullyproof program will eventually be supported by police, schools and social assistance agencies that can sponsor children whose families cannot afford the fee. Seck said bullying, in all its forms -peer pressure, verbal attacks, physical attacks and cyberbullying - can have long-lasting effects on an individual's self-esteem. He said he was bullied at school as a youngster. Times & Transcript, A4

* **Parents blamed for kids' cyberbullying: Expert suggests mom and dad's poor social behaviour sets bad example**
Even as a mom of elementary schoolchildren, I was completely engrossed by the #Being13: Inside the Secret World of Teens documentary on CNN. The kids featured in the documentary made their vexing online behaviour seem normal, and that gnawed at me for weeks. But what really left an impression on me was the parents near the end of the special, who shared their frustrations about their teens' online behaviour and excessive use of technology. Many said that their kids may have a real addiction to social media. During on-camera discussions with parents, documentary host Anderson Cooper displayed one teen's Instagram post, which belittled women. It left the boy's father shocked and visibly distressed. Why do kids engage in bullying or inappropriate behaviour online? The answer could lie in their parents. Robert Faris, an associate professor of sociology at the University of California, Davis, is one of the people behind the study that was the foundation of #Being13. He believes that certain parental behaviours could inadvertently promote aggression in kids. Parents who set poor social priorities, or don't encourage healthy social relationships, could be unintentionally playing a role in their teens' disturbing online activity, he said in an interview. Faris dispels the notion that most kids directly model behaviours online that they witness at home, dismissing the idea that many kids cyberbully because their parents engage in similar actions. However, he does suspect that parents' priorities could affect how their kids behave online. Washington Post, C4 (Red Deer Advocate)

* **Activists rewriting history of West End prostitution**
An editorial piece states, "Did a gang of racist vigilantes drive sex workers from the safety of Vancouver's West End into the dangerous streets of the Downtown Eastside, where they were murdered by sexual predators? This is the fevered concoction put forward by longtime activists Jamie Lee Hamilton and University of B.C. professor Becky Ross, who've successfully pushed for a memorial in the West End to commemorate the sex workers who lost their lives as a result of their expulsion from the West End in 1984. The most disturbing element of this story is that West End residents, Vancouver city council and the late B.C. Supreme Court Justice Allan McEachern have blood on their hands for having forced the young prostitutes out of the West End and into the hands of Robert Pickton. Nobody has tracked the whereabouts of the sex workers since they were ordered out of the West End by McEachern's injunction in 1984 and Hamilton and Ross cannot provide evidence of this allegation. Their allegation makes for a gripping story but it is nothing more than conjecture. What we do know from eyewitness accounts is the male sex workers simply relocated a few blocks outside the area covered by the injunction to Yaletown and many of the female sex workers moved to Mount Pleasant. In time, some of the female prostitutes

moved to the Downtown Eastside, but there is no evidence they were murdered. The assertion by Hamilton and Ross that vigilantes drove the sex workers from the West End is equally disturbing to those of us who lived in the West End in the 1980s. The West End residents most affected by the noise and squalor of the sex trade in their residential streets formed a citizens' group called." The Province

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Vancouver candlelight vigil for missing women one of hundreds nationwide**
Vancouver advocates for missing and murdered women are holding a solemn event in the Downtown Eastside, a neighbourhood where many have gone missing. The candlelight vigil on Tuesday evening hopes to honour families of the missing, and to coordinate efforts across the country for justice and an end to a crisis the RCMP admits has claimed more than 1,200 Indigenous women. "October 4 is a day where we honour the lives of missing and murdered Aboriginal women and girls," the event's Facebook page stated. "The violence experienced by Aboriginal women and girls in Canada is a national tragedy." The event will include a moment of silence, as well as performances by the dance troupe Butterflies in Spirit, hiphop duo Entertribal, and speeches from Angela Marie MacDougall of Battered Women's Support Services and other violence against women campaigners, as well as Gertie Pierre and Lorelei Williams, both family members of missing and murdered women. MetroNews.ca

*** First Nation vigils planned across Thompson-Okanagan to honour missing and murdered women**
First Nations across the country will be holding vigils this week to call attention to the increasing number of missing and murdered Aboriginal women and girls. Okanagan Indian Band spokesperson Shaylen Smith calls the Sisters in Spirit National Day of Vigils a "movement for social change." "Each year, family members, Aboriginal community members, and concerned citizens gather for a vigil on Oct. 4 to honour the memory of missing and murdered Aboriginal women and girls," she says in a media release. According to the Native Women's Association of Canada website the number of vigils has grown from 11 in 2006 to 216 in 2014. Vigils will be held in Kelowna, Vernon, Enderby, Penticton and Kamloops as well as other communities across Canada. InfoTel.ca

*** Confronting violence against indigenous women and girls**
An opinion piece states, "In late September, Inuit artist Annie Pootoogook died tragically in Ottawa. Pootoogook was an award-winning illustrator from Cape Dorset, Nunavut. Her ink-and-crayon depictions of everyday life in the north - families sitting to eat a meal of seal meat or shopping at the Arctic co-op - received international acclaim. In contrast to the idealized vision many Canadians have of the north, of majestic rock and ice landscapes or charismatic wildlife, such as polar bears, Pootoogook's drawings often reflected the crushing poverty northern families face and its devastating effects on their health and well-being. Ottawa police believe Pootoogook's death is suspicious - she may have been the victim of foul play. If so, Annie Pootoogook is yet another indigenous woman to die violently in Canada. Indigenous women and girls are three times more likely to experience violence than nonindigenous women and six times more likely to be murdered. On any given day, thousands of First Nations, Inuit and Métis women and children are living in emergency shelters to escape abuse (though on-reserve shelters remain woefully underfunded). The RCMP hasn't kept accurate statistics on the number of murdered or missing people, but indigenous women's organizations and affected families have reported hundreds of cases of loved ones who have been victims of violent crime. After years of indifference and inaction, Canada's government has finally launched an inquiry into the many lives lost to violence. Although the national inquiry into murdered and missing indigenous women won't investigate cases police previously examined, it will look at broader factors that put indigenous women and girls at such great risk. According to the UN Committee on the Elimination of Discrimination Against Women, this includes institutional racism, social and economic marginalization and inadequate access to affordable housing so women can escape abusive relationships. Police forces have often failed to deal with violence against indigenous peoples, and officers themselves have been implicated or charged with assaults and sexual abuse. Human-rights organizations, such as Amnesty International and Kairos, have also drawn attention to resource

development in indigenous territories, where the influx of transient workers - along with money, alcohol and drugs from outside the community - puts indigenous women at risk of aggressive harassment and violence by men." Toronto Star, A11

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Joint effort key in legalizing marijuana**
An opinion piece by Dan Kelly, president of the Canadian Federation of Independent Business states, "...about a month ago, there I was at a Government of Canada consultation on marijuana legalization and regulation led by Anne McLellan, a former deputy prime minister. From the start, it was made clear the consultation was on the "how" not "if" of legalization. Leading a member-driven organization whose mandate is exclusively business issues, not social policy, I worried I would have little to add. The one survey the Canadian Federation of Independent Business conducted on how recreational marijuana should be sold provided no clear direction. Many of the comments actually suggested there are divisions among business owners on whether legalizing marijuana is a good idea in the first place. For example, many small business owners expressed concern about the workplace safety and health implications of legalizing it. Still, while we have limited experience with cannabis regulation, CFIB has a wealth of experience on regulation in general - including how to get it right and what not to so. This includes experience with liquor and tobacco regulation, which offers some guidance - albeit imperfect. Based on CFIB's 45-year history with regulation making, here's what I have to offer: Focus on critical regulatory imperatives: Too often, governments examine a new area where regulation is needed and quickly expand the mandate to include every moving part. This automatically means proper enforcement is near impossible. Choosing a few critical regulatory priorities, such as preventing sales to minors, ensuring proper product safety information and rules, and prohibitions at work or while driving, seems to be a great place to start. Choose the most important aspects to regulate and then do them well. Leave the rest alone." Vancouver Sun, B4 (Windsor Star, Calgary Herald, Edmonton Journal, Montreal Gazette, Ottawa Citizen)

*** Un sénateur passe à l'offensive contre la drogue au volant**
Avec la légalisation prochaine de la marijuana, un sénateur conservateur veut s'assurer que les policiers ont les moyens de lutter contre la conduite avec les facultés affaiblies. Le leader de l'opposition officielle au Sénat, Claude Carignan, déposera aujourd'hui un projet de loi modifiant le Code criminel pour permettre aux patrouilleurs d'utiliser des appareils de dét ection pouvant déceler la présence de drogue dans le sang. «C'est un projet de loi d'une importance capitale qui cible un problème urgent: le manque d'outils pour permettre de détecter les drogues chez les conducteurs», a déclaré le sénateur Carignan en conférence de presse, hier. Le Journal de Québec, 12 (le Journal de Montréal)

*** 'How can this be possible?' Ottawa prepares for pot shops**
Tom Poirier, the owner of an army surplus store in a strip mall off Merivale Road, watched with curiosity as a new business prepared to open next door. Poirier discussed the odd renovations with Bill Chappell, who owns a hobby shop in the mall on Roydon Place. The tenant next door is CannaGreen, one of the city's newest marijuana dispensaries. The back room at CannaGreen contains an ATM machine and a couple of display cases filled with dried weed and cannabis-laced cookies, brownies, candy and cola with names like Grow-op Grape. But they are dumbfounded that a shop illegally selling pot can operate freely. The dispensaries are opening across the country, their owners emboldened by the federal government's promise to legalize recreational pot. They operate in what some have dubbed a "legal limbo." Police in some jurisdictions are reluctant to enforce drug laws when pot may soon be legal, and there is growing public acceptance both of marijuana use and its sale in stores. There are about 15 dispensaries in Ottawa. Dispensaries are illegal, selling products from the black market that may be unsafe, according to the federal government. Ottawa police say they are investigating - and consulting with - the Public Prosecution Service of Canada, which is responsible for prosecuting drug crimes. Ottawa Citizen, A6

*** Lessons from Denver**

The legalization of pot in Colorado has profoundly changed Denver, a city about the size of Ottawa that is now home to 1,054 marijuanarelated businesses. Dozens of municipal agencies have jumped in to help regulate the green-rush businesses, from the fire department to building inspectors, according to Ashley Kilroy, Denver's director of marijuana policy. She gave a presentation to the Association of Municipalities of Ontario in August that summarized the lessons learned in Denver since stores began selling pot on Jan. 1, 2014. Ottawa Citizen, A6

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Meet the new budget**
An opinion piece states, "People on the receiving end of federal government cheques can perhaps be forgiven for getting their hopes up. The Liberals had just won an election on a platform that called for deficit spending, and almost the first thing they did in power was to announce that their new government was preparing to run deficits two or three times as large as the $9-billion shortfall they had campaigned on. Prime Minister Justin Trudeau was promising to negotiate with respect and in a spirit of collaboration. After a decade of being invited by the Harper Conservatives to take it or leave it, these words were probably enough to make public sector workers' and the provinces' heads spin, and they were apparently enough to overlook one important fact: the Liberals never actually promised them much in the way of new money. This detail could be glossed over in their first budget, put together in a hurry and focused on the new government's priorities. But the absence of concrete Liberal spending commitments is getting harder to ignore as the 2017-18 budget cycle gets underway." National Post, A11

OTHER / AUTRE

*** Sister continues 8-year fight for Victoria man imprisoned in Iran**
It was eight years ago today that Victoria's Saeed Malekpour was snatched off a Tehran street and thrown into Iran's notorious Evin prison. That means it has been eight years that his kid sister Maryam Malekpour has been fighting for his release. Yet it feels like he's no closer to freedom than he was before. In fact, Maryam feels let down by Canada's year-old Trudeau government, which she says is doing less for her 41-year-old brother than the Harper Conservatives did. Saeed's story has been told here before. A gifted software designer who had worked for several top Iranian companies, he came to Canada in 2004 with his wife, Fatima Eftekhari, who wanted to study in the West. In 2006, they moved to Victoria, where Malekpour freelanced as a website designer while Eftekhari completed her doctorate in medical nanotechnology and taught at the University of Victoria. They earned permanentresident status. Saeed was planning to take his master's degree at UVic in 2008 when he was called back to Tehran to be with his dying father - only to be arrested and charged with distributing porn. Nonsense, his supporters say. All he had done was design software that was used, without his knowledge, to upload images. It was like charging the inventor of the typewriter with authoring the contents of a book. Times Colonist, A3

Family optimistic after UofT student released on bail in Bangladesh
The family of a Toronto university student who was detained in Bangladesh after surviving a terrorist attack is expressing cautious optimism now that the young man has been released on bail, apparently cleared of involvement in the deadly raid. Tahmid Hasib Khan, a permanent resident of Canada, was detained after a bloody attack this summer at a restaurant in the Bangladeshi capital, but his family has firmly maintained his innocence. On Sunday, a Bangladesh court released Khan on bail in Dhaka, the country's capital. Canadian lawyer Marlys Edwardh, who was hired by his family, said the decision came after police filed documents with the court saying investigators found no evidence against the 22-year-old in connection with the terror attack. Khan's older brother, who is a Canadian citizen and lives in Toronto, said the bail development was a relief for his family. Canadian Press (Times & Transcript, B4, National Post, Globe and Mail, Waterloo Region Record, Times Colonist, Cape Breton Post))

Ottawa offering cash, not advice, to aid Iraqis
The Iraqi bombdisposal experts Canada has promised to help are losing colleagues almost every day as they try to defuse bombs jihadists hide by the dozens beside the roads. The officer was speaking at the King Abdullah II Special Operations Training Centre outside Amman. It is here NATO is training Iraqi soldiers and security officials in such skills as defusing improvised explosive devices (IEDs). At a NATO summit in July, Prime Minister Justin Trudeau said Canada would contribute to this initiative, but provided no details. A Global Affairs Canada spokesman said this week no Canadian soldiers or government officials are involved. Instead, Canada will contribute $400,000. However, Ottawa has deployed some members of the military to Jordan. A small team arrived in late August to assess how Canada might develop bilateral training programs for the Jordanian military. A second team from Canadian Special Operations Forces Command is also here as part of Canada's Global Partnership Program and Counter-terrorism Capacity-Building Program. Canada also has about 200 special forces trainers with Kurdish peshmerga in northern Iraq. National Post, A6 (Kingston Whig-Standard)

*** Canadian photographer killed by her driver, Mexican official says**
Robbery appears to be the motive behind the murder of Canadian photographer and artist Barbara McClatchie Andrews, says a Mexican prosecutor. Yucatan state Attorney General Ariel Aldecua alleges the woman was killed by a man she hired to drive her from Cancun back to where she lived in Merida, the state's capital. Authorities said the body of the 74-year-old woman was discovered Friday, tossed on the side of a highway that connects the two cities. They said there were signs she had been strangled. McClatchie Andrews ran a non-profit art gallery in Merida called In Lak'Ech for several years that supported emerging artists, but she maintained close ties to Canada. Recent work on her website showcases abstract photos taken in British Columbia, from the scenic Sechelt Peninsula to Vancouver's bustling Main Street. CBC News

INTERNATIONAL

*** Hurricane Matthew pounds southwest Haiti, heads north**
Hurricane Matthew pounded the southwestern coast of Haiti on Tuesday, threatening a largely rural corner of the impoverished country with devastating storm conditions as it headed north toward Cuba and the eastern coast of Florida. Rain from the dangerous Category 4 storm fell across Haiti before dawn as the centre of the storm moved directly across the tip of the southern peninsula, where many people live along the coast in shacks of wood and corrugated steel that stand little chance of withstanding the force of the system's maximum sustained winds of 145 mph (230 kph). Matthew was also expected to bring 15-25 inches of rain, and up to 40 inches (100 centimetres) in isolated places, along with up to 10 feet (3 metres) of storm surge and battering waves, said Dennis Feltgen, a meteorologist and spokesman for the U.S. National Hurricane Center in Miami. ``They are getting everything a major hurricane can throw at them,'' Feltgen said. The storm was moving along the Windward Passage between Haiti and Jamaica, where it was also dumping heavy rain that caused flooding in parts of the country. It was headed for southeastern Cuba and then into the Bahamas. The hurricane centre said it would likely issue a tropical storm watch or hurricane watch for the Florida Keys or the Florida peninsula and that it could create dangerous beach conditions along the East Coast later in the week. Associated Press (MetroNews.ca); Reuters.com; News.Sky.com; CNN.com; NBCNews.com; ABCNews.go.com

Hurricane Matthew shifts closer to Florida, forecast says
Hurricane Matthew slightly grew stronger early Tuesday and shifted closer to Florida, according to the National Hurricane Center in Miami. The Category 4 hurricane headed toward Haiti with top sustained winds near 145 mph, up from 140 mph earlier, the hurricane center said. It was moving northward at 8 mph and was nearing the southwest peninsula of Haiti. ''The threat to Florida and the southeastern U.S. coast has increased,'' the National Hurricane Center said. Life-threatening rain and storm surge was expected in parts of Haiti by early Tuesday morning. USAToday.com

Morocco arrests 10 women linked to ISIS
Morocco's Interior Ministry says authorities have detained 10 women linked to the Islamic State group who are suspected of plotting suicide attacks and trying to recruit other women to join the extremists. The ministry said in a statement that the Central Bureau of Judicial Investigations dismantled the cell of women extremists Monday, in operations in eight towns. The ministry chemical products seized at the home of one suspect could be used in explosives. The women allegedly declared allegiance to IS, and some have family ties to Moroccan fighters with IS in Syria or Iraq, the statement said. The women are in custody pending further investigation. Associated Press (Edmonton Sun, A20)

U.S., Russia relations worsen over Syria: Peace Talks Falter
Ties between Russia and the U.S. deteriorated further on Monday after the Obama administration proclaimed bilateral peace talks over Syria dead and Moscow suspended a 16-year-old treaty meant to reduce the risk of nuclear proliferation. ''Everybody's patience with Russia has run out,'' White House spokesman Josh Earnest said in Washington, blaming Vladimir Putin's government for undermining the fight against Islamic State and for indiscriminate bombing that has killed civilians and targeted hospitals in Syria. ''Russians have been complicit'' in the Syrian tragedy, Earnest said, and ''there is nothing more for

the United States and Russia to talk about." The U.S. said Monday it was withdrawing personnel who had been dispatched to the Middle East in anticipation that a Syrian ceasefire deal reached Sept. 9 would go into effect, a move that would pave the way toward greater co-ordination between the U.S. and Russian militaries. That followed Putin's decision earlier Monday to withdraw from a 2000 accord that committed both countries to eliminating their stockpiles of the plutonium used as the core material in some types of nuclear weapons. Halting the plutonium pact is a "forced measure," Russian Foreign Minister Sergei Lavrov said, according to the ministry's website. Russia viewed the 2000 treaty as an "important step" toward nuclear disarmament, he said. Putin's decree withdrawing from the treaty accused the U.S. of "unfriendly" actions that posed a "threat to strategic stability." Bloomberg News, N5

MINISTER / MINISTRE

RCMP to settle suits: Sources
The RCMP commissioner is expected to issue an apology on Thursday as part of a historic settlement reached with the plaintiffs in two proposed class-action lawsuits alleging systemic gender-based harassment and discrimination within the force, sources say. Any female member who experienced harassment or discrimination will be eligible to apply for damages. Amounts will depend on the injuries, a source said. The potential number of Mounties who could be eligible is in the thousands and compensation could potentially reach as much as $100 million. As part of the settlement, the force will announce new details of how it plans to change its workplace culture. Reaching a settlement is a significant event, said Angela Workman-Stark, a former RCMP chief superintendent who played a key

role in helping the force address harassment and bullying. "For the women, it's a resolution for them. I think it's an acknowledgment of the issues they brought forward. I think it's great for the organization to move forward and take responsibility. Resolution and recognition is an important piece," said Workman-Stark, who left the force earlier this year. Thursday's announcement will take place at 11 a.m. ET in Ottawa. Bob Paulson, the commissioner, and **Public Safety Minister Ralph Goodale** will be joined by the lead plaintiffs in the proposed class-action lawsuits, Janet Merlo and Linda Gillis Davidson. National Post, A1 (Windsor Star, Leader-Post, London Free Press, The Province, Edmonton Journal, Montreal Gazette, Vancouver Sun, Calgary Herald, StarPhoenix, Ottawa Citizen); Globe and Mail; Canadian Press (680 News); * La Presse Canadienne (L'actualité); La Presse+; Le Journal de Montréal (Le Journal de Québec); Toronto Star; * Global News; The Hill Times; iPolitics; * Ottawa Citizen

Espionage bill will allow PM to muzzle watchdog, report says
Canada's new spy-accountability legislation will create a parliamentary watchdog that prime ministers can keep on a short leash, or even muzzle, a report on the bill by the Library of Parliament says. The Liberal government has said the national-security legislation will create an independent committee of MPs that will have regular briefings from government spy agencies on their activities. However, a report on Bill C-22 suggests the national security and intelligence committee of parliamentarians could end up "in effect, accountable to the Prime Minster alone." The report, done by the nonpartisan Library of Parliament and released this week, is a synopsis of the bill for parliamentarians. Such reports are among the information services the staff of the library provide to MPs and senators. The Library of Parliament's report points out that the bill would allow prime minsters and cabinet to shape, block or censor the committee's work. This hits a decidedly different tone from an essay published this week by **Public Safety Minister Ralph Goodale**, who said Bill C-22 creates a committee that "will set its own agenda and report when it sees fit. Every democracy has to determine how far legislators should be able to go to act as a check on government spies, who typically work under secret orders from presidents and prime ministers. Canada gives its elected politicians less information about and fewer review powers over the security agencies than most governments do. And, unlike its closest allies, Canada has not cleared any parliamentarians to hear state secrets. Under C-22, that would change. Globe and Mail, A1

* **Canadian government re-opens privacy debate on access to telecom subscriber info**
The Canadian government has revived a discussion on a particularly controversial privacy topic: how much access law enforcement should have to telecom subscriber information in the name of public safety. In September 2016 the government opened a public consultation on national security, releasing a 'green paper' and background document that details issues, challenges and general questions surrounding national security threats like domestic terrorism. Many topics are covered in the documents, but there's one in particular that may sound familiar to Canadians: the issue of warrantless access to subscriber information from telecom companies. Michael Geist, Canada research chair in internet and e-commerce law at the University of Ottawa, states in an article for The Globe and Mail that the government has been pushing for easier access to carrier data since the early 2000s, with the initiative seeing setbacks such as the defeat of Bill C-30. Lawful access legislation eventually passed in 2014, resembling something near a compromise between consumer and government interests. Warrant-less disclosure of information and government surveillance capabilities for telecoms were nixed, but the legislation also eliminated liability concerns for Internet service providers (ISPs) that voluntarily disclose basic information and gave the police new powers to require access to digital data. The above-mentioned public consultation — started by **Public Safety Minister Ralph Goodale** — has put the issue back up for debate, however. "The Public Safety consultation skips over the years of lawful access debate by putting everything back on the table," writes Geist, "acknowledging that the law was updated less than 24 months ago but suggesting that more change may be needed." As for **the Minister's** thoughts on the matter, a spokesperson stated to Motherboard: "***While both basic subscriber information (BSI) and a phone book can both be used to identify someone, BSI requires safeguards because some of it can reveal intimate details of a person's activities when linked to other information. That principle has been affirmed by the courts. The government is committed to protecting both Canadians' safety and their rights, including their privacy rights***." **The spokesperson** added that the green paper was meant to "***provoke discussion***." The public consultation remains open until December 1st, 2016 and can be accessed here if you'd like to add your voice to the conversation. MobileSyrup.com

*** Inondations : les élus de Windsor et Tecumseh veulent plus de soutien d'Ottawa et de Queen's Park**

Des élus de Windsor et Tecumseh réclament plus de soutien financier aux gouvernements fédéral et provincial pour venir en aide aux sinistrés touchés par les inondations. Le député Percy Hatfield veut que le gouvernement provincial change la législation pour étendre la couverture du programme d'aide en cas de catastrophe naturelle aux personnes qui ont subi des dommages en raison de refoulement d'égouts. M. Hatfield a soulevé le problème au cours de la période de questions à Queen's Park mardi après-midi. Plus tôt dans la journée, les autorités provinciales avaient indiqué que les sinistrés dont les dommages avaient été causés par les refoulements d'égouts n'étaient pas admissibles au programme d'aide pour la reprise après une catastrophe. La députée de Windsor-Tecumseh, Cheryl Hardcastle, a également plaidé la cause de ses concitoyens à la Chambre des communes à Ottawa. Elle a notamment pris Justin Trudeau à partie et lui a demandé de rétablir le fonds d'indemnisation en cas de catastrophe naturelle supprimé par le gouvernement précédent. **Le ministre de la Protection civile, Ralph Goodale**, a indiqué que le gouvernement étudiait la possibilité de rétablir les programmes coupés par les conservateurs. Radio-Canada (2016-10-05)

*** Understaffing on the Canadian side led to summer border delays**

Canada-bound drivers on the Peace Bridge had to wait an average of more than 18 minutes – and sometimes much longer – to cross the span during busy summer weekends thanks to a variety of factors that led to understaffing at the customs booths on the Canadian side of the border, sources familiar with the border backups said. Budget cuts, a new policy that Canadian border agents be armed, union rules and changing traffic patterns all played a part in the delays, according to government and union officials as well as people managing U.S-Canadian border crossings. The border delays have eased as the weather has cooled, but Rep. Brian Higgins, D-Buffalo, vowed Wednesday to keep up the pressure on Canadian officials in hopes that the delays don't reappear during next year's busy summer travel season. The long delays prompted Buffalo Mayor Byron W. Brown and six other mayors on both sides of the border to write a letter to **Ralph Goodale, the Canadian minister of public safety and preparedness**, to complain. "The situation is intolerable," the mayors said, noting that some travelers had to wait as long as 90 minutes to cross into Canada. "The local economies, the safety of our residents and workers at the bridge, commercial shipments and the proper management of our border crossings are all at the mercy of the Canada Border Services Agency." The mayors complained of understaffing at the borders, which has its roots in former Prime Minister Stephen Harper's Deficit Reduction Action Plan, a 2011 effort to cut federal spending in Canada. That led to a cut of 1,053 positions at the Canadian border agency, or about 10 percent of its workforce, said Jean-Pierre Fortin, national president of the Canadian Customs and Immigration Union. A spokesman for the Canadian border agency, Esme Bailey, said jobs were cut through attrition, with a focus on reducing employment at the agency's headquarters. "The focus was not to reduce capacity at ports of entry," Bailey said. Yet people who manage those ports of entry said unmanned booths on the Canadian side are proof that staffing is a central issue behind the delays – although budget cuts are not the only reason for the staffing issue. Buffalo News (2016-10-05)

*** Why Americans With DUIs Can't Enter Canada**

An opinion piece written by lawyer Henry Chang states, "Last month, the Canadian media reported on several instances of Canadian citizens being barred from the United States because they admitted to smoking marijuana, even if they had never been charged with or convicted of controlled substance possession. **Canadian Public Safety Minister Ralph Goodale** described the banning of Canadians as a "ridiculous situation" that needed to be addressed. However, in order to examine this issue in the proper context, we should consider how the Government of Canada treats United States citizens who seek entry into our country..." Huffington Post (2016-10-05)

TOP STORIES / MANCHETTES

*** Members of dormant national security roundtable seeking answers**

A group of Canadians who advise the federal government on national security issues are in the dark about the future of a 16-member roundtable they were appointed to. Members of the Cross-Cultural Roundtable on Security are supposed to meet in-camera at least twice a year, yet the group hasn't met

since October 2014. The roundtable was set up in 2005 to act as a sounding board for cabinet ministers and other high-ranking federal executives on how security matters and government policies affect different ethnic communities. Over the years, it has covered topics such as countering violent extremism, migration and cyber-security. (…) Myrna Lashley, a psychologist, was appointed to the roundtable in 2005 and has been the group's chairperson since 2007. But after receiving the letter in March, Lashley suspects her involvement has come to an end. "Effectively when you get that letter, you have been told 'thank you,'" Lashley said. In the meantime, Lashley is concerned the federal government is not communicating as effectively on national security issues with Canada's ethnically diverse communities, such as Syrian refugees. In the past, Lashley says the group met with and advised ministers of public safety and justice as well as senior executives from the RCMP, CSIS and Canada Border Services Agency on all sorts of issues that could or would affect an array of cultural groups. CBC News

* **'This is a way for everybody to heal': ex-Mountie on RCMP compensation for harassment**
A former Manitoba RCMP officer says it's time to heal, but no amount of money will ever pay for what she and others in the force had to endure. Sherry Benson-Podolchuk was following closely Wednesday after CBC reported that 500 past and present female RCMP officers were expected to be compensated at a Thursday news conference for allegations of sexual harassment, unwanted touching, and rape. "This is a way for everybody to heal," she said. Benson-Podolchuk, 53, isn't one of the 500 women being compensated but did reach out to the group to offer her support when she heard of their allegations a few years ago. Benson-Podolchuk was a single mom living on welfare in 1990 when she first joined the RCMP at a detachment in Tisdale, Sask. Benson-Podolchuk was excited to start a career in policing but said she was chronically harassed for being a woman at the detachment. "They always said tell the truth and obey the law and that you'd be protected by the RCMP, but they didn't tell you what would happen when you come to work and they'd start calling you beaver and raisin tits," she said. CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **STORM CHANGES COURSE**
Despite its brawn and fury, hurricane Matthew no longer poses much of a threat to Canada's East Coast, the Canadian Hurricane Centre said Wednesday after it dropped a tropical cyclone statement from its website. Meteorologist Bob Robichaud said the powerful, slow-moving storm is now expected to veer into the Atlantic Ocean after scraping along the coast of Florida, and it may double back for another run at the state later this week. Canadian Press (Chronicle Herald, A1), CBC News; Daily Gleaner

* **Up to 50 cm of snow in Prairie forecast**
As much as 50 centimetres of snow is expected to fall on parts of the Prairies as a pre-winter storm continues to pound the region. Environment Canada issued winter storm and snowfall warnings for northern Manitoba and a large chunk of Saskatchewan stretching from the northeast to the southwest. Times Colonist, A6

* **Dormant B.C. volcano sparks with activity**
Experts are taking a closer look at Mount Meager, a dormant volcano north of Pemberton, after they discovered activity on the peak earlier this summer. Volcanologist Melanie Kelman with Natural Resources Canada said sulphur smells and volcanic openings known as fumaroles were spotted on the the long-dormant volcano... While fumaroles pose no risk to the public, she said it would be unsafe to approach or enter them as they are letting off hydrogen sulfide - a poisonous gas - and the ice around them is crevassed and potentially unstable.Her team is now monitoring the area for increased seismic activity - the key sign of an upcoming eruption… Mount Meager was the site of one of the largest volcanic explosions in Canada. About 2,400 years ago, the mountain erupted, triggering a major landslide and spewing ash as far as Alberta. Although the mountain hasn't erupted for over 2,000 years, Kelman said that doesn't mean the volcano will never erupt again... Kelman added there is usually plenty of warning before a volcanic explosion takes place - mainly intensifying seismic activity - and B.C. scientists are well equipped to move in with intensive monitoring. She also emphasized the province is well-prepared for emergencies. "We've certainly talked to Emergency Management B.C. about the unrest in Meager and explained what's going on ... It doesn't pose a threat to public safety." CBC News

*** Tecumseh mayor praises flood response**

The Town of Tecumseh provided an update on flood recovery on Wednesday, a week after 195 millimetres, or 7.74 inches, of rain fell over two days. "I always say the people of Tecumseh are fantastic and this is true this week," Mayor Gary Mc-Namara said in a news release. "What this town has been through is unprecedented. No mayor likes to see their municipality in crisis, however, I'm proud of how the people of our town have responded." There have been 1,200 flood responses completed and more than 300 calls and visits to town hall..."I acknowledge the efforts of town staff and contractors for their emergency response," chief administrative officer Tony Haddad said in a news release. Postmedia Network (Windsor Star, A4)

*** Insurance workers take flak from frustrated public**

Last week's devastating floods in east Windsor and Tecumseh packed a double wallop of worry and work for Michelle Tremblay. As a career woman, Tremblay is the managing director of an east end insurance brokerage that was deluged with claims in the days that followed the Sept. 29 flood. As a Riverside resident, she suffered the same damage from basement flooding as many of her friends and neighbours. Frustrated by news accounts of people angry at their insurance providers about coverage limits or the spread of outright misinformation, Tremblay decided to speak out. "The insurance industry does a really poor job of promoting themselves and what we do for people," she said. She said people often don't understand the difference between an agent and a broker and too many fail to read and understand their policy and its limits. Postmedia Network (Windsor Star, A4)

*** Training exercise helps emergency personnel practice for potential disaster**

Some were in shock, some were trying to help friends, and some were rocking back and forth. They were victims in a simulated train disaster held Wednesday morning in Truro, used as a training exercise for a number of emergency services, including firefighters and paramedics... The province's Department of Health and Wellness hosted the simulation, which was held in the parking lot at the former Colchester Regional Hospital. Along with firefighters and paramedics, police and the local Hazardous Materials unit responded. Emergency Measures was also on site. This is a special day," said Jim MacDougall, manager of planning, exercise and training with the provincial department. "It's an opportunity to test our plans and practice our teams for a potential disaster." Truro Daily

*** La poursuite fédérale prête à fixer une date de procès**

La poursuite fédérale est prête à fixer le procès contre la compagnie ferroviaire Montréal, Maine & Atlantic (MMA) de même que certains dirigeants et employés à la suite de la tragédie de Lac-Mégantic. La MMA et certains employés en fonction le 6 juillet 2013 font face à des accusations pénales en vertu de la Loi sur les pêches ainsi que celle sur la sécurité ferroviaire du Canada à la suite de la tragédie de Lac-Mégantic, en juillet 2013. Lors du retour de la cause, mercredi, au palais de justice de Sherbrooke la procureure aux poursuites pénales du Canada, Me Josée Pratte, a déposé le cahier de procès, la liste des admissions et exposé sa théorie de la cause basée sur une culture de négligence. La Voix de l'Est, La Tribune, La Presse

*** Red Cross appeals for help for hurricane victims**

The Canadian Red Cross has started a fundraising appeal for Haiti and other Caribbean countries that have been affected by hurricane Matthew. In a news release, Hossam Elsharkawi, head of international operations for the Canadian Red Cross, said thousands are now in desperate need of emergency relief, including shelter, water, food and healthcare... Two Canadian Red Cross staff members were already in Haiti, helping with ongoing rebuilding and recovery work from the massive earthquake of 2010. Three more are being immediately sent as part of an international team to assess needs and co-ordinate a global Red Cross response while others are being placed on standby to deploy if needed, including medical and support staff of a field hospital, the agency stated. The Canadian Red Cross also contributes to a stockpile of tents, blankets, tarps and other emergency relief supplies warehoused at an airport in Panama for rapid deployment anywhere in the Caribbean or Central America, and these supplies are now being prepared for shipment to Haiti and other countries in Matthew's path, the Red Cross said. Daily Gleaner, A5

*** Aid rushing to Haiti**
Samaritan's Purse, a Christian relief and development organization that has been in Haiti for several years providing a variety of relief and development help, is sending specially trained staff and emergency supplies in response to the harm caused by Hurricane Matthew. The response team is travelling on Samaritan's Purse's DC-8 airplane loaded with 20 tons of essentials including clean water, blankets, hygiene items and plastic sheeting for immediate shelter. "We're asking Canadians to support us through their prayers and donations as we hurry to help Haiti's struggling hurricane victims," said Fred Weiss, executive director of Samaritan's Purse Canada. "They desperately need our help." Canadian Press (Chronicle Herald, A9)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Members of dormant national security roundtable seeking answers
A group of Canadians who advise the federal government on national security issues are in the dark about the future of a 16-member roundtable they were appointed to. Members of the Cross-Cultural Roundtable on Security are supposed to meet in-camera at least twice a year, yet the group hasn't met since October 2014. The roundtable was set up in 2005 to act as a sounding board for cabinet ministers and other high-ranking federal executives on how security matters and government policies affect different ethnic communities. Over the years, it has covered topics such as countering violent extremism, migration and cyber-security. (…) Myrna Lashley, a psychologist, was appointed to the roundtable in 2005 and has been the group's chairperson since 2007. But after receiving the letter in March, Lashley suspects her involvement has come to an end. "Effectively when you get that letter, you have been told 'thank you,"' Lashley said. In the meantime, Lashley is concerned the federal government is not communicating as effectively on national security issues with Canada's ethnically diverse communities, such as Syrian refugees. In the past, Lashley says the group met with and advised ministers of public safety and justice as well as senior executives from the RCMP, CSIS and Canada Border Services Agency on all sorts of issues that could or would affect an array of cultural groups. CBC News

Ottawa will attempt to close Fintracs lawyer loophole
The federal government will try to close a loophole in Canada's anti-money laundering system that excludes lawyers from having to report suspicious transactions, Postmedia has learned. In 2015, the Supreme Court of Canada ruled that, unlike other professionals such as bankers and real estate agents, lawyers do not have to report to Canada's anti-money laundering agency, Fintrac. Lawyers in B.C. won that case based on a constitutional argument about solicitor-client privilege, and the argument that law societies already regulate lawyers to prevent involvement in money laundering. But Canada faces increasing international scrutiny as concerns over money laundering in Vancouver real estate grow. In September, the Financial Action Task Force, a Paris-based intergovernmental group that makes recommendations for fighting money laundering, asked Canada to close the lawyer loophole. An agency report suggested there is a close relationship between money laundering in real estate and the services provided by lawyers, such as placing wire transfers in legal trusts and creating investment vehicles that can shield true ownership of property. (…) Kim Marsh, of due diligence company IPSA International, said that before the 2015 Supreme Court case, the company was asked by the federal Justice Department to do a report on money laundering risks connected to lawyers. "I think there are some people in the legal industry that are aiding and abetting money laundering, with impunity," said Marsh, a former RCMP organized crime unit leader. "There is no other English common law country that has given lawyers this reporting exemption. So Canada is unique. And the problem is coming to light now with the huge amount of money flowing into the property market, some of it stinky." Marsh said he believes Canadian law societies neither provide adequate member training on money laundering nor have the internal auditing and investigation needed to crack down on bad apples. Postmedia Network (Vancouver Sun, A3)

Let expert review security bills
Prominent security expert says legislation is fatally flawed, Oct. 3
A letter to the editor states, "Hopefully, the Star will soon report that, in fact, Paul Cavalluzzo has been hired to oversee a review of Bills C-51 and C-22. If nothing is done, then perhaps Canadians will have to await their own Edward Snowden some years down the road." Toronto Star, A18

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

New app provides border wait times
Border wait times across southern Ontario are expected to be lengthy during this Thanksgiving holiday weekend. The Canada Border Services Agency has unveiled a new app - CanBorder - which drivers can use to check the latest border wait times. Services under the app such as "Near Me" and "Favourites" make it easy to find and access information on ports of entry that are nearby, the agency said. CBSA also encourages the use of NEXUS lanes or ensure each passenger has proper travel documents prior to arriving at the border crossing. It also helps to have receipts ready and be familiar with personal exemptions. For information on food products or restrictions, visit the CBSA website at www.cbsa-asfc.gc.ca. Windsor Star, A4

*** Bridge closing briefly on Sunday**
The Ambassador Bridge will be shut down to vehicle traffic briefly on Sunday morning to allow cyclists to take part in the annual Bike the Bridge ride. The bridge will close to traffic at 9 a.m. and be shut down for about 15 minutes to allow 750 registered cyclists to ride across the bridge to the Detroit side and back. It's the only time during the year where cyclists are allowed on the Detroit River international crossing under a ride sponsored by the Tour de Troit group. Windsor Star, A4

*** Finches in hair rollers and other cases**
Wildlife is now the fourth largest illegal trade globally after drugs, counterfeit money and human trafficking, according to the World Wildlife Fund. Here are a few cases in which Canadians faced charges relating to illegal importation of exotic animals: - Turtles in pants: A student at the University of Waterloo who repeatedly entered Michigan to buy and ship thousands of turtles to his native China only to be caught with 51 of them strapped to his legs was sentenced in April to nearly five years in a U.S. federal prison for smuggling. The U.S. government said Kai Xu, 27, shipped turtles to China from Canada and the United States, or hired people to fly with turtles in their luggage to China. It's not illegal to buy turtles from breeders in the U.S., but Xu's crime was shipping them overseas without a federal permit. Turtles in pants: This year, another man - Dong Yan of Windsor, Ont.- was fined $3,500 and placed on probation for two years after getting caught smuggling nearly 40 turtles in his pants. Yan was convicted in February of illegally importing reptiles into Canada that were transported in contravention of a foreign state's law. Finches in hair rollers: A Toronto man was fined $2,500 four years ago after he was caught at Pearson International Airport with finches and seed-eaters hidden inside hair rollers in his coat. Ali Niamath had pleaded guilty to unlawfully importing live birds into Canada from Trinidad and Tobago. Federal law bars people from importing animals taken or transported in contravention with the laws of a foreign state and officials said Niamath did not have the proper export permits. The lesser seed-finch and ruddy-breasted seedeater are prized for their song and their population is in decline as they are often trapped in the wild and exported illegally. Times Colonist, C3

*** Chinese accused of visa fraud remanded to prison**
Two Chinese nationals, who were intercepted at the VC Bird International Airport attempting to board a flight with fake Canadian visas in their passports, have been remanded to prison. Jianming Chen, 43 and Qianqian Chen, 22 appeared before Magistrate Conliffe Clarke in the St John's Magistrates' Court, yesterday, and were remanded until Monday. The duo, through an interpreter, pleaded not guilty to two separate charges of uttering a Chinese passport containing a forged Canadian visa, and fraud. (...) The accused men claim their passports were taken by that unknown individual days later and when it was returned it contained the fake document along with a one-way ticket to Canada. While at the airport, the West Jet Airlines agent who checked in Jianming and his companion Qianqian on WS2739 destined for

Canada, observed some irregularities with the visa. A check with the Canadian Border Security confirmed the visa was not authentic. Upon his arrest, Jianming said he never requested nor applied for a Canadian visa. Antigua Observer

*** Expect to experience 'a whole new terminal'**
Fifteen years of planning, five years of construction, a $2.6-billion investment. The numbers give a sense of the scale of YYC's airport development project, the most ambitious undertaken on Calgary International Airport property since the opening of the existing terminal building in 1977. For most Calgarians, however, the magnitude of this project - which included the construction of a new runway, operational since 2014 - won't be apparent until the morning of Oct. 31, when the Calgary Airport Authority throws open the doors to its new International Terminal. On that day, travellers headed to U.S. or international destinations will see first-hand what all that time, money and e ort has produced. (...) For departing passengers, that experience will start in the spacious, light-filled check-in hall. Automated kiosks and a selfserve bag drop system will speed the check-in process, while a new, state-of-the-art baggage system - the first of its kind in North America - will track each bag individually through 10 kilometres of track and conveyor belt. Travellers will then proceed to security, where the Canadian Air Transport Security Authority (CATSA) has installed CATSA Plus, a combination of new technologies and procedures the agency hopes will improve passenger experience and decrease wait times. Calgary is the first airport in Canada to feature a full checkpoint with the CATSA Plus technology, which - among other things - will feature a remote screening room where a team of security o cers analyze x-ray images on multiple screens, a continually moving conveyor belt and an automated bin return for transferring empty containers to the start of the screening line. CATSA Plus is expected to eventually become the standard nationwide. There are new technologies and procedures at U.S. pre-clearance as well, where automated passport control kiosks are expected to reduce the amount of time travellers spend in front of a U.S Customs and Border Protection officer. (Similar kiosks will also be in place for arriving passengers clearing customs when entering Canada.) Calgary Herald, A8

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** NSA contractor arrested over 'stolen secret code used to hack Russia'**
The FBI has secretly arrested a National Security Agency (NSA) contractor suspected of stealing highly classified computer codes used to hack the computer systems of foreign governments including Russia and China, raising fears of another embarrassing intelligence leak to rival the Edward Snowden affair, the New York Times reported on Wednesday (...)The contractor in this case, who was reportedly arrested "in recent weeks", is suspected of stealing the NSA's "source code", used to break into the computer networks of rival powers such as Russia, China, Iran and North Korea. Independent (UK), New York Times, Washington Post, Associated Press (Times Colonist, Calgary Sun, Edmonton Sun, Ottawa Sun, Toronto Sun, Winnipeg Sun)

*** FBI's new San Francisco head will try to mend fences with Silicon Valley**
Special Agent Jack Bennett was at the FBI's computer investigation lab in Quantico, Va., on a Sunday in March when an outside company showed the bureau how it could hack into an iPhone used by one of the San Bernardino, Calif., shooters. The tool would end the FBI's high-profile fight with Apple over access to the phone, but Bennett said there was no celebration... The iPhone fight exposed a rift between the FBI and Silicon Valley technology companies over encryption, and sparked a debate about the right balance between privacy and national security. Bennett, 52, was a key figure in that battle as head of the bureau's digital forensics labs, which extract evidence from computers and other devices and were tasked with accessing the San Bernardino shooter's phone. Bennett is now in charge of the agency's San Francisco division, where he views his role, in part, as trying to bridge the divide between Silicon Valley and the FBI. Associated Press (Toronto Star, B2)

*** Yahoo's Mayer suffers a new hit to privacy reputation**
Yahoo was ordered last year to search incoming emails for the digital "signature" of a communications method used by a state-sponsored, foreign terrorist organization, according to a government official familiar with the matter. The Justice Department obtained the order from a judge of the Foreign

Intelligence Surveillance Court. To comply, Yahoo used a modified version of its existing systems that were scanning all incoming email traffic for spam, malware and images of child pornography. The system stored and made available to the FBI a copy of any messages it found that contained the digital signature. Yahoo was forbidden to disclose the order, and the collection is no longer taking place, the official said Wednesday. The news story has opened a new chapter in a public debate over trade-offs between security needs and privacy rights that has cast a spotlight on the sometimes cooperative, sometime antagonistic relationship between Silicon Valley companies and the U.S. government... Although the digital signature was individually approved by a judge, who was persuaded that there was probable cause to believe that it was uniquely used by a foreign power, the collection was unusual because it involved the systematic scanning of all Yahoo users' emails. More typical surveillance court orders instead target specific user accounts. Toronto Star

*** Reported Yahoo email scanning revives surveillance concerns**
Yahoo's reported agreement to assist U.S. investigators by searching all email sent to hundreds of millions of accounts has stoked fresh concerns about mass government surveillance - not to mention questions over just how much privacy tech companies owe their users. Associated Press (Red Deer Advocate, D1; ABC News)

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** 'This is a way for everybody to heal': ex-Mountie on RCMP compensation for harassment**
A former Manitoba RCMP officer says it's time to heal, but no amount of money will ever pay for what she and others in the force had to endure. Sherry Benson-Podolchuk was following closely Wednesday after CBC reported that 500 past and present female RCMP officers were expected to be compensated at a Thursday news conference for allegations of sexual harassment, unwanted touching, and rape. "This is a way for everybody to heal," she said. Benson-Podolchuk, 53, isn't one of the 500 women being compensated but did reach out to the group to offer her support when she heard of their allegations a few years ago. Benson-Podolchuk was a single mom living on welfare in 1990 when she first joined the RCMP at a detachment in Tisdale, Sask. Benson-Podolchuk was excited to start a career in policing but said she was chronically harassed for being a woman at the detachment. "They always said tell the truth and obey the law and that you'd be protected by the RCMP, but they didn't tell you what would happen when you come to work and they'd start calling you beaver and raisin tits," she said. CBC News

*** Alberta man involved in police standoff opens up about incident, says he's turned his life around**
Nine months ago, an Alberta man was shot and critically wounded after being at the centre of a tense and dramatic standoff with police west of Edmonton. The bullet's still sitting on top of my C1," Caleb Seeton, 30, says of the bullet that hit him in the head. "It hit the stabilizing disc on the side and that's millimetres away from the brain or just disconnecting the spine from death or paralysis." But today, Seeton says his life is very different and that he is now addressing the issues in his life that led up to the event that nearly ended it. He says he was suicidal at the time, overwhelmed by work problems exacerbated by Alberta's beleagured economy. (...) On Jan. 5, 2016, RCMP were called to a home in the Greenbury neighbourhood of Spruce Grove, Alta. after receving reports of shots fired. The neighbourhood was put on alert , streets were blocked off and residents were asked to seek refuge in their basements. Seeton fired several rounds before turning a gun on himself. He was taken into custody following a tense standoff, and rushed to hospital in critical condition. (...) Incredibly, Seeton survived his self-inflicted gunshot wound and is now receiving mental health treatment. He says he is grateful to the police and first responders who ended up saving his life. "You know, I took a lot from the community that day, so if i could start giving it back, that would be a good place to start," he says. Global News

*** Five teens exploited**
Okotoks RCMP have laid a series of charges after they say some local teens were recruited through social media and exploited for sex. Mounties say the investigation launched by a school resource officer revealed five teenage girls between the ages of 13 and 16 had been victimized. The teens are being helped by Child and Family Services and Foothills Victim Services. Samantha Pedersen, 23, of High River is facing five counts of trafficking in persons under 18 years, five counts of procuring persons under

18 years, four counts of living off the avails of prostitution, four counts of sexual exploitation of a young person and one count of assault. Okotoks Mayor Bill Robertson called the case distressing. "My full sympathies go out to the families of those that are involved in this," he said. Postmedia Network (Calgary Sun, A2, Calgary Herald)

Montreal police renew programs targeting contraband, money laundering
The Montreal police will renew two programs that give the department a financial incentive to crack down on contraband tobacco and alcohol and follow the money-laundering trail of criminal organizations in the city. Montreal's city executive committee gave its approval on Wednesday for the police to renew both programs with the province retroactively from April 1 of this year to March 31, 2017. It's the ninth consecutive year the police force is renewing one of the programs, known as Actions concertées contre les crimes économiques et financiers. Under ACCEF, a Montreal police unit specialized in proceeds of crime works with Revenue Quebec to investigate money laundering and tax evasion related to the underground economy. The program has allowed authorities to "drastically increase" the seizure of illicitly obtained assets, a report to the executive committee from the Montreal police says. The department's $2.4-million budget for ACCEF this year, which includes the salaries of 12 officers and a civilian employee, is fully subsidized by the province. (...) This year, the Montreal police are contributing 33 police officers and two civilian employees, who work with the Sûreté du Québec, RCMP, the Régie des alcools des courses et des jeux and other agencies. Montreal's $5.7-million budget for ACCES is fully subsidized by the province. Montreal Gazette, A2

Grow-op dismantled
Fish and Wildlife Enforcement officers discovered a marijuana grow-op near LaManche Tuesday. Officers alerted the RCMP, who dismantled the 95-plant operation. The plants and equipment used to grow and harvest them have been seized. This is the third outdoor grow-op dismantled by police in the eastern Avalon region in just over a week, with a total of 249 mature marijuana plants seized. Sixty-five plants were found in an area off Salmonier Line Sept. 26, while another 89 plants were found in Makinsons last Saturday. The Telegram, A6

*** Alberta RCMP officer resigns, faces no disciplinary action after accusations of sexual misconduct**
A well-known and decorated Alberta RCMP officer facing allegations of sexual misconduct involving female co-workers has resigned and will face no disciplinary action, RCMP told Global News Wednesday. Const. Pernell Cardinal of the Maskwacis RCMP detachment was being investigated for six counts of sexual misconduct. An RCMP spokesman confirmed in late September that three of those counts were substantiated during an internal RCMP hearing. The exact details of the incidents were not released by the RCMP. Cardinal was suspended by the force in September, although it's not known if he was suspended with or without pay. He was given two weeks to appeal the decision. Cardinal has been in the news often, as an RCMP spokesperson for the Chelsea Yellowbird case. Yellowbird, 23, was shot and killed outside a residence on Samson Cree Nation in September 2011. Global News (2016-10-05)

*** Disgraced former RCMP officer sued over sexual misconduct allegations**
A B.C. correctional officer alleges that a disgraced Chilliwack RCMP officer stalked and sexually assaulted her in her home while she was on disability for post-traumatic stress disorder. The officer claims that Daniel Marshall, a constable who was last year forced to resign over allegations of on-duty sexual misconduct, was dispatched to her home in September 2014 in connection with concerns over her mental health. In a notice of civil claim filed in B.C. Supreme Court, she says that she and Marshall discussed her mental health and substance abuse issues. In the following two weeks, Marshall, while on duty, returned to her home several times, stalking her and ultimately sexually assaulting her a number of times, says the lawsuit. "At all material times, the defendant, Daniel Marshall, was well aware of the mental instability and vulnerability of the plaintiff," says the suit. (...) In December an internal board of the RCMP found that all six allegations brought against Marshall were established. Marshall was ordered to resign from the force. Two complainants testified that they had sexual encounters with Marshall after meeting him during the course of his police work. Another case involved Marshall's alleged failure to properly investigate a report of a sexual assault. Vancouver Sun (2016-10-05)

*** Clown capers a problem, say police**

Incidents involving people dressed as clowns are on the rise in Nova Scotia. A 24-year-old man was arrested Tuesday evening after witnesses reported he grabbed at the clothing of a young boy walking with other youths along School Street in Clark's Harbour. "The man was wearing a clown mask and a T-shirt with a clown on it at the time of the incident," said RCMP Cpl. Jennifer Clarke. The suspect faces charges of breach of undertaking. He is scheduled to appear in Shelburne provincial court on Nov. 2. Police are also investigating after a photo posted on social media appeared to show a clown standing on a sidewalk outside a Halifax high school, the Canadian Press reported Tuesday. Chronicle Herald, A6

*** Police fire out warning to bomb, gun hoaxers**

Halifax police are warning would-be hoaxers that they could be charged and if convicted could do up to five years in jail. The force has had to deal with a string of bomb threats, with a dozen false alarms in less than a month. Halifax Regional Police and Halifax District RCMP have responded to a total of 12 bomb threats since Sept. 15. "We have a responsibility to treat each one as a legitimate call and do everything possible to mitigate the threat and work with the affected organization and other stakeholders," said the release. The range of charges under the Criminal Code of Canada include: public mischief (false report), five years' imprisonment mischief (render property or interferes with use), two years' imprisonment uttering threats, five years' imprisonment false messages (intent to alarm), two years' imprisonment hoax regarding terrorist activity, five years' imprisonment Halifax police and RCMP said in a news release that they take false reports seriously. Chronicle Herald, A4

*** People pack into Westview to hear about fentanyl scourge in Maple Ridge**

The question that Sherry Hebeler wanted answered Wednesday at the fentanyl forum in Maple Ridge was where was the help for her son when he needed it. Her son Bradley Hebeler, 33, died in a hospital washroom in Novermber 2015, after apparently taking crystal meth that had been laced with fentanyl. He had been admitted to the hospital and was addicted to painkillers but had gone missing. "Nobody found him for two hours," Hebeler said, adding it was only hospital security that found him. And on three times previously when her son overdosed, Hebeler had called police and asked that he be picked up on outstanding warrants when he was released from hospital. She felt that being in jail might be the safest place for him. But Ridge Meadows RCMP never did send a car to pick up her son. (…) Ridge Meadows RCMP Supt. Dave Fleugel said dealers are selling fentanyl and lacing other drugs with it because it's cheap and profitable. It's also powerful and easily obtainable. "It's very difficult for our border services and our postal services to detect." Fentanyl so far has killed 20 people in Maple Ridge this year. That number could hit 30 by the end of the year. Provincewide, it's killed 488 people since the start of the year. Fleugel said it's hard to prove a manslaughter charge against a dealer for selling fentanyl that leads to an overdose. Maple Ridge News

*** Saskatoon man, 25, charged after police seize fentanyl, cocaine, methamphetamine, guns**

A Saskatoon man is facing charges after police seized guns and drugs, including hundreds of fentanyl pills, from a vehicle. Officers from the Combined Forces Special Enforcement Unit searched the vehicle in the 3300 block of 8th Street E. Friday. A duffel bag containing 682 fentanyl pills, 22 grams of cocaine and a loaded handgun was seized. A further search of the vehicle found 550 grams of methamphetamine, about half a kilogram of crack cocaine, a handgun with a silencer and approximately $5,000 in cash. A 25-year-old man was arrested. He was carrying approximately $4,000 in cash at the time. The man now faces a number of charges, including possession and trafficking of fentanyl and cocaine. Both the RCMP and the Saskatoon Police Service say the investigation is continuing. CBC News (2016-10-05)

*** SQ breaks up crime ring that stole big rigs, dealt drugs**

The Sureté du Quebec says it has broken up a crime ring that stole heavy equipment and machinery, and trafficked in drugs. About 200 police officers conducted raids early Wednesday morning on the South Shore, in Laval and in and around Montreal. Police arrested 19 people including Patrick and Steve Daraiche, the owner of the Metaux St. Jean scrapyard and his brother. Police said the Daraiche brothers were the ringleaders of a group that stole big trucks and tore them down in order to resell parts. Investigators say it was a very organized network. "The parts were being stolen to put on other stolen vehicles or to recover the metal," said SQ investigator Eric Stevens. Police said they received many tips from the public as they conducted their three-year investigation into the ring. In addition to dealing in

stolen parts, the family was also dealing drugs, according to police. Officers seized $3 million worth cocaine, as well as firearms, 500 marijuana plants, and about 10 kg of cannabis. "We seized 65 kilos of cocaine that were hidden in a truck that was actually in the garage," said Stevens. Police found about two dozen stolen trucks on the lot, several in the process of being dismantled. CTV News (2016-10-05)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Man who killed and dismembered Calgary landlord Wendy Marie Hewko granted full release
Nearly a decade after the killing and dismemberment of his Calgary landlord, the man responsible has been given full release. Last month, the Parole Board of Canada (PBC) gave the green light for Dean Victor Gosse, 46, to leave a halfway house where he'd been subject to a nighttime curfew since May, 2015. But the board won't release information on where Gosse is expected to settle, stating to do so could "jeopardize the safety of any person" and "adversely affect the reintegration of the offender in the society." In its reasons for decision, the PBC said his behaviour in the past few years has been "positive" and that its statistics show two of three similar offenders won't commit an indictable offence within three years of release. "Your integration potential is assessed as moderate," it stated. Gosse was sentenced to 10 years for manslaughter in the killing of Wendy Marie Hewko, 48 in 2007. He admitted to the killing that occurred amid a cocaine-fuelled argument over rent owed on the basement suite of the woman's Castleridge home. Postmedia Network (Calgary Sun, Calgary Herald)

*** Cellphone stun gun**
Kingston Police seized a stun gun disguised as a cellphone after a traffic stop Tuesday afternoon. At about 3:30 p.m., a patrol officer was westbound on Princess Street near Albert Street when he noticed a General Motors SUV with no front licence plate but a rear Ontario plate. The Highway Traffic Act requires all vehicles in Ontario to have front and rear plates. Turning around, the officer stopped the vehicle near the Princess Street and University Avenue intersection. Running the rear plate through the Ministry of Transportation database, it showed it hadn't been reported stolen but was supposed to be attached to a Volvo sedan. (…) The provided name yielded no results in the Canadian Police Information Centre (CPIC) database. Speaking with the occupants of the vehicle, the officer formed grounds to believe the man was lying about his identification and was arrested for obstructing police. While the man exited the vehicle, officers saw a jacket filled with multiple cellphones and knives. There was also a wallet in the jacket with photo identification of the male passenger with his actual name and a Correctional Service Canada parole card. A search on CPIC showed the man was on a recognizance out of the Niagara Falls area to remain in his residence. He was also on a weapons prohibition following a prior conviction involving multiple weapons. Kingston Whig-Standard, A3

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

House of Pain
An editorial states, "The College of Physicians and Surgeons of New Brunswick and the provincial government merit recognition for their concern and timely action to better control the prescribing of opioids, thus lessening addiction rates to these narcotics. Recently I've discussed the rising death tolls from illegal narcotics, especially the synthetic fentanyl that can be many times more potent than morphine, and it's deadly variant carfentanyl, 10,000 times more potent than morphine. Just three salt-sized grains of the latter can kill a person. It's only legitimate use is to tranquilize large animals like elephants. New Brunswick isn't immune from the continent-wide problem. Canadians are the second heaviest abusers of opioids in the world. Exactly why merits some well-funded research. Part of the relatively new fentanyl problem is that authorities have taken fairly successful steps to stop other legally prescribed opioids like oxycontin and dilaudid from reaching the illegal street trade. Criminal drug suppliers thus turned to manufacturing their own synthetic versions, with no controls, little regard for dosages, and mixing it with other narcotics. It's cheaper and supply is reliable. Policing agencies can deal with the organized criminals, but a significant part of street-trade users does not involve the stereotypical, homeless, zonked-out drug addict shooting needles in dingy alleyways. Many addicts are

people who became so via legal prescriptions, often for chronic pain. And as physicians are cutting back, their only source is the street trade, which is now alarmingly risky and deadly. Yet if physicians have been inadvertently complicit in the past, so too have patients. Pain, especially chronic pain, persistent pain, is debilitating. " Times & Transcript, A10

*** Alberta steps up surveillance in new measures to tackle opioid drug crisis**
The Alberta government is announcing new measures it has put in place in response to the opioid crisis. It follows the latest information released by Alberta Health Services that shows 153 people in Alberta died from apparent fentanyl-related overdoses in the first half of this year. Now the office of the Chief Medical Examiner is gathering additional data in every death where opioids are believed to have been a factor. A statement from Justice Minister and Solicitor General Kathleen Ganley describes the previous data collection as "inadequate" and explains the medical examiner is working closely with the Chief Medical Officer of Health to gather as much data as possible. It's a move that's being described as long overdue by critics who have been calling for it for some time. The additional data comes from the fact that, starting in July 2016, the OCME now lists the drugs that caused a person's death on their death certificate. The department of Justice and Solicitor General said this will allow for the OCME to better collect and review information which, in turn, will allow the OCME to provide comprehensive data regarding opiod death to the Alberta Health. CBC News

*** "People need to be aware"**
Five near-fatal overdoses last weekend in Barrie have put the dangers of recreational drug use in the spotlight, say front-line professionals. "At the end of the day you don't know what you're getting," said Barrie Police Const. Sarah Bamford. "That's why we're telling people consuming any type of drug there's great risk associated with that." County of Simcoe Paramedic Services have recorded 564 overdoses so far this year. Those numbers include alcohol overdoses or drug-alcohol combinations and are not broken down into specific categories such as types of drugs. If the overdosed patient fits the protocol of a opiate overdose then a drug called Narcan is given by the paramedic in the field, explains Meredith Morrison, Deputy Chief, Performance, Quality and Development with County of Simcoe Paramedic Services. (…) Preliminary 2015 figures from the Office of the Chief Coroner, subject to change once the statistical year has been completed, show 6 fentanyl toxicity deaths in Barrie and a total of eight in Simcoe County. The Barrie numbers in the previous three years were less than five and are undisclosed as a result. Five young people in their 20's overdosed last weekend in Barrie after they all attended the same party at an apartment on Dunlop Street East. Barrie Today

*** Both violent and non-violent crime up in Waterloo Region**
Crime is up in Waterloo Region and the increase is larger than national and provincial averages, according to Statistics Canada. A report presented to the Waterloo Regional Police Services Board on Wednesday indicated both violent and non-violent crime had risen in 2015. The report showed there were three homicides in the region in 2014 compared to six last year. Attempted murders were down year-over-year, going from seven in 2014 to two in 2015. The Crime Severity Index, a weighted measure based on both the volume and severity of crime, increased in Canada, Ontario, and Waterloo Region by 5%, 2%, and 7.4% respectively. Focusing on violent crimes alone, Canada saw a 6% increase, Ontario a 3% increase, and Waterloo Region a 6.2% increase last year. The report points out however, that while violent crime is increasing in the region, it remains lower than national and provincial levels. Locally, person-to-person robberies were up 27% and assaults were up 7%. CTV News

*** Cities just don't get the danger of rural Saskatchewan crime**
The saddest days in Saskatchewan are when we see people divided, especially when that division is caused by a lack of understanding. Such days have been all too common in this province this year. And what's even sadder is when the misunderstanding relates to issues of safety, which is definitely not something that should divide us. Sadly, though, city people seeing the issue from the outside may not fully appreciate how unsafe some rural people feel. One of the flashpoints in the debate on rural crime has clearly been the racially charged incident near Biggar in which Colten Boushie of the Pheasant Rump First Nation died from a gunshot wound in the farmyard of Gerald Stanley. Stanley has been charged with second degree murder and has received bail that confines him to the vicinity of his farm until his trial date. (…) That has created policing challenges in two ways. There is sometimes no easily accessible

neighbour to watch properties and it's tougher to get law enforcement to remote locations to deal with an incident. Also, with fewer people in rural Saskatchewan, it is harder for those who remain to afford the policing costs. Municipalities of fewer than 5,000 people with RCMP detachments pay $77.06 per capita while those communities without a detachment pay $47.68 per person for policing. Any additional positions at a detachment would cost an additional $130,000 per year, so simply paying for police is getting harder. Canora Courier

* **Use health-care dollars on treatment and recovery, not on supervised drug-use sites**
Thirteen years ago, Vancouver's Downtown Eastside opened the first supervised drug-injection site in North America. This was to be a three-year clinical trial with an evaluation summary and reports for each year to determine the significance of Insite with regards to harm reduction in overdose mortality. The very rationale for the endeavours in Sydney, Australia, and Vancouver were specifically to gather data, they were created as scientific pilot projects. Beginning in 1996, snowball sampling was used to recruit injection drug users in the Downtown Eastside for a prospective cohort study. Data for the study comparing service users were obtained from 400 members of this cohort who returned for a semi-annual follow-up interviews and who reported using drugs by injection in the past six months. Snow balling is when the first respondent refers an acquaintance and that friend refers a friend and so on. Such samples are biased because of the higher response rate. In another study in 2005, those reported to have used Insite tended to be younger, inject in public, homeless or unstable, use cocaine daily and recently to have had a non-fatal overdose. Kamloops This Week

* **Sex Workers Explain the Struggles of Running An Illegal Business**
An editorial piece states, "When Dane gets into a car with a client, the first thing he does is ask the guy to pull out his dick. It's a measure he developed after nearly getting arrested for having an escort ad on Craigslist. "I met up with the person, and we drive around the block and he starts talking," said Dane, a Seattle-based escort. "The way he was talking was weird, and you could tell he didn't know anything about gay sex. After a while I told him to stop." That's when the cop pulled out a badge, terrifying Dane before letting him off with a lecture. Since then, Dane does what he can to ensure that his clients are honest about their intentions. He previously used Rentboy.com, but federal regulators seized the site over a year ago, and its legal status today remains unclear. Once the most visible site for male escorts, Rentboy allowed them to check client reputations and block minors, providing a peek at what a regulated escorting marketplace might look like. Because their work is illegal, escorts face a near-total lack of access to the protections and professional services that other entrepreneurs take for granted, from marketing to legal advice to insurance and beyond. As a result, sex workers who already face physical risks and financial volatility endure a unique form of economic isolation." VICE News

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

* **NWAC Says Get to Work on Murdered and Missing National Inquiry**
At the October 4th Sisters In Spirit vigils throughout the country, we heard family members describe their disappointment and concern about the delays in starting the National Inquiry. The Native Women's Association of Canada (NWAC) would also like to express our disappointment and frustration with the lack of substantial progress in the National Inquiry into Missing and Murdered Indigenous Women and Girls since its official launch on August 3rd, 2016. "We are very concerned. The two-year mandate that the National Inquiry Commission has been given leaves a very short time for the mandated tasks of establishing regional and issue-specific advisory bodies, creating trauma-informed and culturally aware counselling services, and beginning the substantive process of listening to family members, loved ones, and survivors express their stories all across Canada," said NWAC President Francyne Joe. (…)The time has come for the Inquiry Commission to illustrate its competence in being able to adequately address the systemic causes behind the high rates of violence against Indigenous women and girls. The immense responsibility associated with the tremendous task of addressing one of the gravest human rights abuses in Canada's history leaves no time to waste. REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

City has high expectations
Hand over a share of the tax revenue and give up the addresses of medical marijuana grow ops. Those are among the requests City of Calgary officials have for Ottawa along with a zero-tolerance policy for drivers under the influence of cannabis as the feds hammer out legislation for legalized pot. In an Aug. 24 submission to the federal government's Task ForceMarijuana Legalization and Regulation, CityManager JeffFielding calls for ongoing discussions "throughout the legalization process to ensure clear delineation of roles and expectations" between the three orders of government. "Municipalities will be an important partner in developing, implementing and enforcing new regulations in this area," Fielding wrote. The four-page document outlines concerns held by the Calgary police and various city departments on the implications of legalizing pot. Postmedia Network (Calgary Police, A3, Calgary Herald)

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Government accused of hiding full scope of Phoenix fiasco**
The federal government is being accused of hiding the full scope of the Phoenix payroll fiasco. The largest union representing public servants is demanding the government release updated information about the number of workers experiencing pay problems. "What is it that they're trying to hide?" said Chris Aylward, the national vice-president of the Public Service Alliance of Canada. Since trouble with the government's computerized pay system emerged, Public Services and Procurement Canada has said nearly 82,000 workers have experienced irregularities with their pay. But that number only includes workers who came forward with problems before July 1, 2016. The government has not publicly released the number of employees who have experienced trouble after that date. During a Phoenix update on Wednesday, the deputy minister of PSPC was asked about new numbers, but didn't offer any details. "It's an ongoing queue ... I can't really answer the question specifically, it's an ongoing flow," said Marie Lemay, the deputy minister. She explained the new cases are being dealt with separately from the backlog bulk. "The others that are coming in, we're treating them, there's a queue. But sometimes we are not treating them as fast as we will when we'll be in our steady state." Workers who formally registered problems before July 1 have been told their issue will be dealt with by the end of October. There is no solution timeline for employees who joined the queue after that date. CBC News

*** Ottawa says it has 'no reason to sue' IBM over issues with payroll system**
The head of the federal department overseeing the effort to fix the Phoenix civil-servant payroll system says the government isn't contemplating legal action, even though at least one other country has gone down that path. Tech giant IBM created the Phoenix pay system, basing it on the PeopleSoft program that is used worldwide and tailoring it to the federal civil service. The state government in Queensland, Australia, unsuccessfully tried to sue IBM for a similar paysystem problem in a case that wrapped up earlier this year. That case was getting started just as the Canadian government went to tender for its new pay system. Now, the federal Liberal government has budgeted an extra $50 million to handle issues related to Phoenix, including millions to IBM to make fixes to the system. "We have no reason to sue IBM right now. IBM is respecting its contract. They have been good partners," Marie Lemay, deputy minister at Public Services and Procurement Canada, said. "When we find issues that have to be corrected, they're right there, they're correcting it." Globe and Mail, A14

Phoenix backlog deadline no cure all
The senior bureaucrat overseeing the federal government's botched payroll system confirmed Wednesday that not all pay problems affecting Canada's public servants will be resolved by the promised Oct. 31 deadline. Marie Lemay, Public Services' deputy minister, insisted the government is on track to clear the backlog of 82,000 cases created by the Phoenix pay system that were sent by 46 federal departments for processing to the pay centre in Miramichi, N.B., by officials' self-imposed Oct. 31 deadline. "We're really on target," she told reporters during a briefing Wednesday. "The next month is a

big month, but we believe we are on target. ... We believe we will clear the backlog for the 31st." But the deadline only applies to the 46 departments that were sending their payroll processing to Miramichi, which covers about 191,000 employees and has 550 compensation advisers. Lemay was unable to say what happens to employees facing Phoenix foulups who work for 55 other departments that manage their own compensation and don't use Miramichi. *** Un tribunal bangladais innocente un étudiant canadien**
Un tribunal bangladais a blanchi un étudiant de l'Université de Toronto de toutes les allégations qui pesaient contre lui relativement à une attaque terroriste qui a fait 25 morts cet été. Le juge Nur Nabi a rendu sa décision mercredi après qu'un enquêteur eut demandé que soit innocenté Tahmid Hasib Khan, un résidant permanent du Canada. Le procureur Abdullah Abu a dit que M. Khan a été blanchi de tout soupçon concernant sa participation possible à l'attaque perpétrée le 1er juillet contre le restaurant Holey Artisan Bakery, à Dacca. M. Khan avait été libéré sous caution dimanche. L'attentat a été revendiqué par Daech (le groupe armé État islamique), mais le gouvernement pointe plutôt du doigt des militants locaux. Un avocat canadien embauché par la famille a expliqué que la libération de M. Khan a été ordonnée dimanche quand la police a présenté au tribunal des documents indiquant que les enquêteurs n'avaient trouvé aucune preuve de la participation du jeune homme de 22 ans à l'attentat. La Voix de l'Est, 25; Canadian Press (Red Deer Advocate, Winnipeg Sun, Toronto Sun, Ottawa Sun, Calgary Sun, Times Colonist, Hamilton Spectator, Waterloo Region Record, Toronto Star, Times & Transcript, Kingston Whig-Standard)

*** Détention - Homa Hoodfar a été victime de torture psychologique en Iran**
Homa Hoodfar avait beau être terrorisée dans sa cellule de la prison d'Evin, elle savait qu'elle pourrait, tout au long de sa détention, se raccrocher à une lueur d'espoir : ses geôliers ne feraient pas d'elle une seconde Zahra Khazemi, cette photojournaliste irano-canadienne torturée et violée avant d'être assassinée, dans la même geôle, il y a maintenant 13 ans. " Ils me disaient qu'ils renverraient ma dépouille au Canada. [...] J'étais prête mentalement à passer quelques années en prison, ou, comme ils disaient, peut-être 15 ans ", a relaté la professeure à la retraite de l'Université Concordia, relâchée le 26 septembre dernier après 112 jours de captivité. Le Devoir, A8; CBC News

*** Saeed Malekpour's story matters too**
An opinion piece states, "Actions speak louder than words. And in the case of Saeed Malekpour, Prime Minister Justin Trudeau's words are being put to the test. Tuesday was the eighth anniversary of the Canadian permanent resident and Iranian national's arrest in Iran on dubious charges. The web developer came to Canada in 2004 and worked in Richmond Hill, Ontario. He returned to Iran in 2008 to see his ill father and it was then that he was arrested. According to Amnesty International, which is lobbying for his release, Malekpour was originally sentenced to death on charges including "acting against national security by spreading propaganda against the system"; and "insulting and desecrating Islam." He is now sentenced to life in prison on charges of "insulting and desecrating Islam". The charges reportedly relate to his work on writing computer coding that was in turn used by a pornography website, with which Malekpour denies having any involvement. While the Canadian government hasn't so far been successful in securing Malekpour's release, that didn't stop it from speaking up in the past when he was faced with the death penalty..." Winnipeg Sun, A12 (Toronto Sun, Edmonton Sun)

*** Liberals urged to press Iran on executions of prisoners during Iran-Iraq war**
A group of Iranian Canadians is calling on the government to add a tough new element to its annual United Nations resolution on Iran's dubious human rights record an international call for a war crimes investigation. The group, which calls itself Canadian Friends for a Democratic Iran, will make the request later today at press conference on Parliament Hill. The group will present what it says is new evidence that shows complicity in a mass killing of Iraqi prisoners by senior Iranian government officials in 1988 at the end of the Iran-Iraq war. An audio recording from the era surfaced in August that implicates high-level

members of the current Iranian regime, including the country's current justice minister, said Shahram Golestaneh, the group's director. Canada has taken the lead each year since 2003 in sponsoring a resolution at the UN condemning Iran's human rights record. The Guardian

*** Canadian general: Fighting Islamic State will grow harder after retaking Mosul**
A Canadian general who directs training of Iraqi security forces says the widely anticipated ousting of the Islamic State group from its stronghold of Mosul in northern Iraq is likely to transform the extremist group into an even more dangerous force. Brig. Gen. Dave Anderson, speaking from a U.S.-led coalition military facility in Iraq, told reporters at the Pentagon on Wednesday he is certain the Iraqis will prevail in Mosul. "But the fall of Mosul does not mean that Daesh is defeated by any stretch of the imagination," Anderson said, using an acronym for the Islamic State group, or ISIL. "It just means it's defeated in its current format." Associated Press (Waterloo Region Record, A4, Telegraph-Journal, Times & Transcript)

INTERNATIONAL

Hurricane Matthew heads to Bahamas after killing 15 across Caribbean
Hurricane Matthew took aim at the Bahamas on Thursday after leaving behind a humanitarian crisis in Haiti. At least 15 people died from Matthew's wrath in Haiti, the Dominican Republic and St. Vincent and the Grenadines, officials said. Haiti, still recovering from the catastrophic 2010 earthquake, was hit the hardest. As the death toll rises and crucial infrastructure crumbles, thousands have been displaced. Mourad Wahba, the UN secretary-general's deputy special representative for Haiti, described Matthew as the "largest humanitarian event" since the earthquake. CNN

*** Rescuers battle to reach remote areas of Haiti hit by Hurricane Matthew**
Rescue workers and aid agencies were hoping to begin reaching remote areas of south-west Haiti on Thursday to assess the damage wrought by Hurricane Matthew, which has killed at least 35 people, displaced 15,000 and left hundreds of thousands in need of assistance. The hurricane, which hit Haiti on Tuesday, brought 145mph winds and torrential rains that have destroyed more than 3,200 homes, ruined plantations and drowned animals. Efforts to access the worst-affected areas – including the Grand'Anse and Sud departments – have been hampered by flooding, the collapse of communications networks and the destruction of a key bridge. But as the weather clears, Haitian authorities, the UN and national and international non-governmental organisations are starting to get a better idea of the scale of the destruction. The airport in the capital, Port-au-Prince, has reopened for humanitarian flights and two portable satellites are being used to restore communications with cut-off areas. Marie Alta Jean-Baptiste, the head of the country's civil protection directorate, warned the death toll was likely to rise as emergency workers reached the stricken regions. The Guardian

*** US Braces For Hurricane Matthew, 2 Million Urged to Evacuate as Deadly Storm Batters Bahamas**
Hurricane Matthew tracked closer to the U.S. coast on Thursday, strengthening over the warm waters of the Atlantic as officials warned residents of coastal areas to get out while they can. "The extreme winds of a major hurricane can do a lot of damage and not just at the coast," Rick Knabb, Director of the National Hurricane Center, told "Good Morning America." "Those winds can penetrate inland and that would be more so the case the closer it gets to the coast," Knabb warned. "In addition to the wind, you have storm surge potential. People who have been told to evacuate, they need to get out this morning, right away, because time is running out fast. You don't want to be caught in the storm surge which is the deadliest hazard of all." Officials in three states urged some 2 million people to head to safer ground as the most powerful storm to threaten the Atlantic coast in more than a decade continued on its path toward the U.S. at about 10 mph, packing 125 mph winds. Some 8 million Florida residents scrambled to make last-minute preparations as the deadly storm was expected to strengthen to a Category 4 hurricane with 145 mph winds before approaching the state on Thursday night. Up to 15 inches of rain may fall in spots, and a storm surge of up to 8 feet was expected along the coast from central Florida to Georgia. The National Hurricane Center extended its hurricane warning and its hurricane watch further north into Georgia and South Carolina, respectively, as the eye of the storm churned about 255 miles southeast of West Palm Beach, Florida at 5 a.m. Thursday. ABC News; FOX News; Sky News

* **Airlines Cancel Over 2,500 Flights Ahead of Hurricane Matthew, MIA to Close at Noon**
As Hurricane Matthew bears down on the southeastern portion of the country, residents of coastal communities in the south are not the only ones preparing their next move. Airlines and airports are working around the clock to weather the storm and ensure a quick restoration of their schedules. More than 2,500 flights have been cancelled from Wednesday through Friday so far, according to FlightAware.com as of Thursday morning. There have been more than 1,400 cancellations today alone and over 1,100 and counting for tomorrow. The most impacted airports were Miami International Airport and Fort Lauderdale-Hollywood International Airport, both of which plan to shut down today. Fort Lauderdale will halt operations at 10:30 a.m. with Miami to follow at noon. ABC News

MINISTER / MINISTRE

Canada's cybersecurity strategy is anemic: expert
Canada's cybersecurity strategy is so outdated, the last time it was revised was in 2010 when Conservative Vic Toews was public safety minister. Six years doesn't seem like a long time for a policy to lay untouched, but in the world of espionage it's an eternity. "I would suggest that our cybersecurity strategy is somewhat anemic," Stephanie Carvin, a former Government of Canada national security analyst, said. The assistant professor at Carleton University's Norman Paterson School of National Affairs said she believes Canada's strategy on the public safety department's website lacks any teeth. "The government has principles and it has a document that's called the cybersecurity strategy, but it's not clear to me that we actually do have a strategy that is behind it with any kind of meat." **Public Safety Minister Ralph Goodale** acknowledges the gaps in our system and has said he is committed to plugging them. ***"We're looking at the governance of our cyber security systems, we're looking at the technology,***

we're looking at the financing to see what's necessary to make us stronger," **Goodale** said. When he was appointed **minister**, **Goodale** was mandated to lead a full review of infrastructure to protect Canadians from cyber-threats. Department officials say that consultation will be done in December. There is no fixed timeline for the changes to be implemented, but **Minister Goodale** is looking to other nations for advice. "Israel for example, is considered to be very good at this, as well as the United States and the Brits and others," **Goodale** said. Surghar Daily

* **Chinese billionaires take interest in Canadian clean technology**
Canadian clean technology companies could be the next major investment for China's business elite. But cyber-security experts and the opposition are warning that the keen interest from Chinese investors must be treated carefully. "For us at the moment, natural resources is not the top priority," said Wang Chaoyong, the chairman and CEO of ChinaEquity, one of the country's most successful independent venture capital firms. "We are more interested in investing in environment technology, clean tech [and] innovative sectors such as creative industries," Wang said in an interview with CBC News. (…) As the federal government tries to strengthen ties with China, it is also downplaying concerns about investment and security. "There's a well-established Canadian process for dealing with these issues under the Investment Canada Act with all of the appropriate safeguards in place," said **Public Safety Minster Ralph Goodale**. "Canada's a country that welcomes foreign direct investment. Obviously, it needs to be a net benefit to Canada and all the security requirements need to be met. The procedure is there already in the law to deal with that," he added. CBC News

Who will pay for the RCMP's epic failure?
An opinion piece states, "The careers and lives of women in the RCMP were ruined. Yet an apologetic RCMP refuses to truly be accountable. On Oct. 4, Canadians were whipped into a froth of righteous indignation by an act of criminal harassment toward someone just trying to do his job—the odious beer-can toss by a Blue Jays fan at a Baltimore Orioles' left fielder during the American League wildcard game. Toronto police issued a photograph of the presumed suspect within a day. The *Toronto Sun* ponied up a $1,000 reward. (…) So where was the similar chant for accountability two days later, on Oct. 6, after RCMP Commissioner Bob Paulson's shockingly inadequate apology for far more grievous workplace assaults against potentially thousands of female RCMP officers? (…) Meanwhile, a Liberal government—one that claims to take violence against women seriously—stood by in nodding accord, represented by **Public Safety Minister Ralph Goodale** and Labour Minister MaryAnn Mihychuk. **Goodale**, who inherited the cesspool file, took a "Move along, folks, nothing to see" stance: The apology and payout "closes the door on a deeply troubling and unfortunate period in the history of our national police force," he said. (…)Yet **Goodale** expressed hope that the actions taken will ***"help strengthen Canadians' faith and trust in their national police force."*** That police force was once famous for always getting its man. No more." Macleans

A national security report card: Trudeau benefits from peaceful times, but must finish agenda,
An opinion piece states, "The Liberal government, in its first year in power, has enjoyed the benefit of a highly advantageous environment for national security policy-making: a majority in Parliament; ineffective political opposition; no terrorist attacks; a public whose attention is largely elsewhere. The pressure has been offand the government has been able to pursue its agenda at a measured pace. There was one close call, when Aaron Driver, placed under a terrorism peace bond, came very close to slipping the attention of the authorities and conducting some kind of attack using home-made IEDs. A dramatic shootout in August in front of his residence in Strathroy, Ont., ended in his death and the foiling of a plot. There was some fast intelligence and law enforcement work in this outcome, but also a good deal of luck. But even the best of political environments comes with its own challenges. No pressure doesn't mean a government is offthe national security hook. The Liberal government has some big election and mandate promises to live up to. (…) The most radical promise the Liberals made was to consult Canadians and increase transparency around intelligence and security issues. In fulfilling this promise, the government launched in September a "Green" (discussion) paper on national security, addressing 10 issues about which it encourages public discussion and input. An online portal is open until Dec. 1 and has already seen some 8,000 responses. In addition, the government has consulted with experts and stakeholders; the parliamentary Standing Committee on **Public Safety** and National Security is touring the country, holding "open mic" sessions; **Public Safety Minister Ralph Goodale** is on the road; and even his

officials have been thrust onto the public parapet. How the government will digest and respond to the Green paper exercise remains to be seen. But this is an unprecedented and welcome experiment, whether it succeeds, fails or fizzles." Ottawa Citizen, A9

TOP STORIES / MANCHETTES

Blank passports found in theft ring bust
A major investigation by Winnipeg police that recovered hundreds of thousands of dollars in stolen property has raised national security concerns after blank passports were among the items officers found. Tuesday, police announced Project Heavy Metal identified 20 suspects, including nine arrested in Manitoba, who are facing 140 charges related to a theft ring that operated across Western Canada. Calgary and Edmonton police, as well as the RCMP, helped with the investigation, which recovered more than $300,000 worth of goods stolen during break-ins and other thefts. Two RCMP uniforms and police equipment were recovered after a search warrant was executed at a Calgary home in September, Insp. Barry Kostchuk said. Vehicles, camper trailers, snow blowers, lawn-care equipment, new tires, tools, key-cutting machines and electronics were recovered. The most alarming items discovered may be the blank passports and birth certificates. Winnipeg police weren't ready to comment Tuesday about the blank identity documents - how many were found or if they were taken from government offices or are fakes, such as bogus Canadian passports sold online for less than $200. The theft of genuine blank Canadian passports has opened doors in the past for criminals such as human traffickers and raises concerns about dangerous people being allowed into the country. In 2002, the RCMP foiled a scheme to sell 246 stolen blank Canadian passports - but not before some of them found their way into the hands of international people-smuggling rings. An informant tipped off RCMP the black-market "books," stolen in June 2002 from the Scarborough passport office, were being sold on the streets of Toronto for $1,000 apiece. Winnipeg Free Press, 1

* **Businesses must buck surveillance**
Resisting government mass surveillance isn't just the right thing to do - it's good for business, whistleblower Edward Snowden told a Toronto cybersecurity conference Tuesday. Speaking via video link to the annual Canadian industry event SecTor, Snowden brought up the recent revelation that Yahoo Inc. had agreed to scan customers' emails for U.S. intelligence. Shortly after, Verizon Communications Inc. asked for a US$1 billion discount on its US$4.8 billion agreement to buy the company, according to a report in the New York Post. "If you collaborate with the government in this regard, far beyond what the law requires, it can actually have a significant, substantial consequence for your valuation," Snowden said. "Yahoo, which is a very powerful, very rich organization, cooperated beyond what was legally required. And it damaged its brand (...)"Snowden cited Open Whisper Systems, which makes the encrypted messaging app Signal, as an example of an organization that benefited from pushing back against a government request for cooperation in a surveillance program. With the help of the American Civil Liberties Union, Open Whisper Systems fought a gag order on a subpoena for information associated with two phone numbers. Ultimately, Open Whisper Systems had to comply with the subpoena, but the damage was mitigated because of another Snowden-approved policy: Only retaining as much personal data as absolutely necessary. The subpoena asked for browsing history and tracking data stored in web browsers, but Signal doesn't collect that information. "Companies work for their customers first. This means they should only hold the data that's absolutely necessary for the operation of their businesses," Snowden said. "When this story broke about Open Whisper Systems abiding by this principle, the fact they were being compelled through the state's monopoly on use of law actually benefited their brand." Postmedia (Financial Post, FP3; National Post);

* **Snowden says Trudeau afraid to kill anti-terrorism bill**
Whistleblower. Hero. Traitor. Patriot. These words and more have been used to describe former cybersecurity contractor Edward Snowden, who in 2013 copied and distributed thousand of documents to reporters and whose stories of Western intelligence agencies — including Canada's Communications Security Establishment (CSEC) — shook the world. This morning Snowden told the the annual SecTor cyber security conference in Toronto that Prime Minister Justin Trudeau want to amend the controversial Bill C-51 anti-terrorism law and not repeal it because he "is afraid of being attacked for being soft on

terrorism." Speaking by video from Russia, where he fled to avoid prosecution by U.S. authorities, Snowden said the legislation, needs three fixes: First, a judicial body should have oversight over federal intelligence agencies that has the power to prosecute authorities that have broken the law. Second, because intelligence agencies are trading personal information of citizens "like baseball cards" citizens should be told if the data sharing hasn't led to an arrest for criminal activity. And finally, what Snowden called the criminalization of speech through vague definitions of terrorism should be taken out of C -51. A lot of what police call terrorism is the activity of what he called "common criminals" or those who are trying to make a political point but don't constitute a "super criminal threat." IT World Canada (2016-10-18)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Oil cleanup criticized as storm brews**
With a storm threatening to disrupt operations, oil-spill response crews have been busy around the clock pumping fuel out of a tug that ran aground on B.C.'s central coast last week. But Kelly Russ, chair of Coastal First Nations, said the spill response was too slow when the tug Nathan E. Stewart hit a reef while pushing a massive fuel barge north of Bella Bella. The barge was empty but the tug contained more than 60,000 gallons of fuel, an unknown amount of which has spread in a huge slick throughout the region in the heart of the Great Bear Rainforest. "From a Coastal First Nations perspective, what we are seeing unfolding on the water is a crystallization of our worst fears, not only for the catastrophic event that's unfolded, but because the response, which we have been advocating for to be improved for at least a decade, is just not there," Mr. Russ said in an interview Tuesday. The Canadian Coast Guard and the industry-funded Western Canada Marine Response Corporation both reacted promptly to the accident, but the response has come under fire because the nearest oil-spill crews were based in Prince Rupert, more than 20 hours away by boat. Globe and Mail, S1

*** Hundreds attend Sydney flood meeting**
The water rose through Robin Nathanson's south end Sydney home so quickly on Thanksgiving Day that he and his girlfriend only had time to pack a few clothes and their pets into the car and flee to a relative's house. Now, just over a week later, he's finally had time to think about the big picture. While the immediate problems are trying to find a place to live and replacing 95 per cent of their possessions, he's now wondering if they'll ever be able to return to their house at the bottom of Cabot Street (…) Cape Breton Regional Municipality Mayor Cecil Clarke told the meeting that 18-20 households, including Nathanson's, have been declared unfit for occupancy as the result of a torrential rainstorm that saw some areas of the municipality hit by more than 220 millimetres of rain. Clarke told Nathanson he will meet to talk one on one with those hardest hit by the disaster but he also acknowledged that people less affected - nearly 1,000 people have now registered as flood victims through the CBRM helpline - are now beginning to get irritated. "The numbers continue to rise because people who have been able to, fortunately, take care of their own situation, they're now dealing with the 'What next?' he said. "When you have a once-in-a-200-year event, you can't help but have lessons learned. Cape Breton Post, A1/A4; Cape Breton Post; CBC News

*** App speeds up claims: Encircle was used in Fort McMurray by contractors to help see wildfire damage**
When Paul Donald left BlackBerry in 2009 he was looking for a startup opportunity, so he searched for an industry where mobile technologies had little or no uptake. He soon focused on insurance and founded Encircle, along with Ronuk Raval, and Christoph Bioccaa. Encircle built an app and platform for insurance carriers, policyholders and adjusters. It helps them quickly resolve claims using photos snapped from smartphones (…) Encircle's app was used by restoration contactors - firms hired by insurance companies to repair the properties of policyholders - after wildfires destroyed much of Fort McMurray this past summer, and heavy rains flooded thousands of basements in Windsor. Waterloo Region Record, C1

*** Kautex manager shares lessons learned from August tornado**
Kautex plant manager Steve Phillips was sitting down to dinner with his family when he got a call that a tornado had torn through his plant. Less than an hour later he was walking through a disaster area. "I'm so used to the plant being spotless," he said, describing a scene where roof debris littered the floor and

water from sprinklers and torrential rain had flooded parts of the building. "There were forklifts where they had just stopped," he added. "I've been to Pompeii, it's where time stopped and that's what it was like, walking though a place where time had just stopped (…)"After the storm an army of recovery workers descended on Kautex, which makes fuel tanks for cars, and just five days after the tornado one of the company's production lines was back in business (…) Phillip's presentation included CCTV footage from a camera that survived the storm and showed the moment a calm exterior shot was suddenly overtaken with pounding rain before a transformer exploded with a flash and swirling debris filled the frame. "You're in the eye of a tornado now," he told the group as audience members gasped. Phillips explained that safety measures such as bolting down equipment likely saved lives and passed along recovery strategies and best practices to other area companies should "worse come to worst." Windsor Star

*** Action is needed on PTSD**
An opinion piece by MP Todd Doherty states "On Oct. 4, the Standing Committee on Public Safety and National Security released a report calling on the Liberal government to introduce a plan of action for public safety officers and first responders dealing with mental health issues and post-traumatic stress disorder. According to the all-party committee study, between 10 and 35 per cent of first responders will develop PTSD at some point in their lives. These numbers are significant, and action needs to be taken immediately to help address an issue that affects Canadians from coast to coast to coast. Last January, I introduced private member's bill C-211, which seeks to establish a national, comprehensive federal framework to address the challenges of recognizing the symptoms and providing timely diagnosis and treatment of PTSD for all veterans and first responders. Since introducing Bill C-211, my office has been inundated with calls and emails from firefighters, first responders, military personnel, and corrections and police officers. These brave men and women face many dangers in their day-to-day duties, including protecting the lives and property of their fellow citizens and our nation's critical infrastructure. They are our silent sentinels. Only through bipartisan support and co-operation can we hope to achieve effective and viable strategies to ensure those in need receive direct and timely access to PTSD support. I hope that all members will join me in supporting Bill C-211 when it comes to the floor of the House of Commons." Vancouver Sun, A11

NATIONAL SECURITY CONSULTATIONS / CONSULTATIONS SUR LA SÉCURITÉ NATIONALE

Nil

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Quel sort attend les djihadistes canadiens qui rentreront au bercail ?**
Le Canada est-il prêt à gérer un retour massif de djihadistes sur son territoire ? Non, répondent des experts. Pourtant, une éventuelle chute de Mossoul, dernier fief du groupe armé État islamique (EI) en Irak, risque de pousser de jeunes Canadiens partis gonfler les rangs de l'EI à tenter de revenir au pays. Que faire avec eux ? « Avec ses pertes militaires quotidiennes ainsi que la perte éventuelle de la ville emblématique de Mossoul, la notoriété de Daech [acronyme arabe de l'EI] s'effrite, explique Jocelyn Bélanger, expert des questions de terrorisme et de radicalisation et professeur adjoint à l'Université de New York à Abou Dhabi. Par conséquent, nous pouvons prévoir que l'engouement pour ce groupe, qui connut son apogée en 2014, va s'estomper très fortement et que plusieurs djihadistes retourneront au bercail, ce qui veut dire, dans bien des cas, revenir en Occident. » Selon son confrère Amarnath Amarasingam, chercheur à l'Université Dalhousie d'Halifax qui étudie l'extrémisme islamiste, des Canadiens et d'autres étrangers tenteront de profiter du chaos de la bataille pour faire défection. (…) Invité à expliquer les mesures concrètes prises par le gouvernement pour se préparer au retour de djihadistes au pays, le bureau des communications du **ministère de la Sécurité publique du Canada** a fourni à La Presse une réponse générique. « Le Canada surveille avec vigilance toutes les menaces potentielles et des mesures solides sont en place pour y répondre. Les menaces potentielles font l'objet d'une surveillance constante par les organismes canadiens de renseignement, de sécurité et d'application de la loi, et le Canada dispose de mesures robustes pour les contrer. Le gouvernement du Canada reste

ferme dans son engagement à protéger la sécurité des Canadiens. Il continuera de prendre les mesures appropriées de lutte contre les menaces terroristes visant le Canada, ses citoyens et ses intérêts partout dans le monde. » Une porte-parole de la Gendarmerie royale du Canada (GRC) a pour sa part indiqué que le corps de police doit « veiller à ce que les Canadiens qui rentrent au pays après avoir participé à des activités terroristes ne mettent pas en péril la sécurité nationale du Canada, écrit Julie Gagnon. La GRC n'a pas de solution universelle à appliquer aux voyageurs de retour au pays. Chacun pose un défi multidimensionnel et chacun a ses propres motivations et intentions. » La Presse +

* **Blank passports found in theft ring bust**
A major investigation by Winnipeg police that recovered hundreds of thousands of dollars in stolen property has raised national security concerns after blank passports were among the items officers found. Tuesday, police announced Project Heavy Metal identified 20 suspects, including nine arrested in Manitoba, who are facing 140 charges related to a theft ring that operated across Western Canada. * **Why are three of the world’s richest countries doing so little to stop corruption?**
An opinion piece states, “One of the best-known data points in the anti-corruption field is the estimate from Global Financial Integrity that US$ 1.1 trillion in proceeds of corruption, crime and tax evasion are taken from developing countries every year and invested in Western banks, real estate, and luxury goods. The volume of illicit financial flows is higher than the total value of development aid and foreign direct investment into poor countries combined. The revenues lost by poor countries through tax dodging alone are estimated at US$ 160 billion every year, money which could be used to build thousands of schools and hospitals. (…) Following a Supreme Court decision in 2015, the Proceeds of Crime (Money Laundering) and Terrorist Financing Act and its regulations were found to breach attorney-client privilege insofar as record-keeping, client identification and verification, and compliance inspection by Canada’s Financial Intelligence Unit (FINTRAC) were concerned. The Government had previously withdrawn the

reporting requirement for the law profession following injunctions by law societies." Transparency International

*** Après un an**
Un éditorial note, "Il y a un an aujourd'hui, le ton changeait à Ottawa. La victoire des libéraux de Justin Trudeau levait une chape de plomb virtuelle sur le gouvernement fédéral. D'un gouvernement conservateur où toute initiative était mesurée à l'aune de la menace que cela représentait pour la sécurité nationale, l'économie canadienne ou l'emploi, les électeurs embrassaient tout d'un coup une vision d'un pays mû plutôt par l'espoir et l'optimisme. Mais c'est plus difficile à dire qu'à faire et 12 mois plus tard, les Canadiens attendent encore des résultats dans bien des domaines. Les premières semaines ont été prometteuses. Sous un radieux ciel d'automne, des centaines de Canadiens sont allés à Rideau Hall pour voir une nouvelle génération de politiciens franchir les portes du pouvoir. Quelques mots sont devenus emblématiques des premiers pas de cette administration : «Sunny Ways» («Voies ensoleillées»), évoquant Wilfrid Laurier, puis «Parce que nous sommes en 2015», pour justifier la parité homme-femme de son cabinet. Il fallait rapidement se mettre à l'ouvrage sur les sujets les plus urgents. Le monde entier s'interrogeait sur ce qu'il fallait faire pour résoudre un tant soit peu la crise des migrants syriens. Radicalement différente des conservateurs qui craignaient une intrusion terroriste, la position libérale s'articulait vers l'ouverture à 25000 réfugiés. Ce fut un succès et on aura déjà oublié le fait que le gouvernement aura mis deux mois de plus que prévu pour tous les accueillir. L'autre urgence, c'était l'imminence du sommet de Paris sur les changements climatiques. Aussitôt, M. Trudeau et sa ministre de l'Environnement, Catherine McKenna, ont signifié au monde que «le Canada était de retour». Cela s'est enchaîné récemment avec une politique contraignante pour forcer les provinces vers une tarification des émissions de CO2 - ce qui ne passera pas comme lettre à la poste en Saskatchewan et en Alberta. Au même moment, le fédéral a approuvé le plan d'un nouveau gazoduc vers le Pacifique : monnaie d'échange pour un accord national? » Le Droit, 14

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Aspirant Hells Angel et employé du Port de Montréal
Un motard en voie de devenir membre en règle des Hells Angels est au nombre des 800 débardeurs du Port de Montréal, a appris La Presse. Roger Bishop fils, 46 ans, est sorti de l'anonymat la semaine dernière lorsqu'il a échangé quelques mots avec un journaliste venu couvrir une perquisition policière dans un centre de conditionnement physique du chemin de Chambly, à Longueuil. Selon nos informations, Bishop est actuellement « prospect », l'ultime étape durant laquelle un motard doit faire ses preuves durant au moins un an avant de devenir membre du club. Il pourrait devenir membre de la section South des Hells Angels dans quelques mois. Le port de Montréal est, depuis des décennies, considéré par la police comme une importante porte d'entrée de la drogue dans la métropole. En 2011, un rapport de l'Agence des services frontaliers du Canada que La Presse avait obtenu affirmait que le port de Montréal demeurait un haut lieu du crime organisé au pays. « Plusieurs groupes du crime organisé opèrent dans la région du port de Montréal. Des employés sont reliés à divers groupes du crime organisé, y compris des groupes italiens, les Hells Angels et le gang de l'Ouest. Ces groupes continueront de faciliter le passage de la contrebande », écrivaient les auteurs du rapport. La Presse+, 7

*** Markham, Ont., man back home after U.S. no-fly list left him stranded in Amsterdam**
The Markham, Ont., man stranded in Amsterdam after he says he learned he was on the U.S. no-fly list has returned home to Canadian soil. Nanak Partap Singh had been travelling back to Toronto from Delhi when he made a connecting stop in the Netherlands on Oct. 12. There, he had been unable to print off his boarding pass and was told to check in at a counter where he learned that he was unable to fly because his name had been flagged by the United States, Singh said last week. It's unclear exactly when the Markham man returned home, but his wife sent CBC News an email Tuesday night to confirm her husband was back in Toronto. CBC News

*** Engineer on coast guard ship charged with smuggling child porn**
A Canadian Coast Guard employee was arraigned in Dartmouth provincial court Tuesday on charges of bringing child pornography into the country. Julien Pierre Marceau, 55, of Fredericton works as first

engineer on the CCGS Hudson. Judge Dan MacRury scheduled the case to return to court in late November. According to a search warrant, the Canada Border Services Agency opened an investigation in early August based on information it received from the Halifax Regional Police-RCMP Internet child exploitation unit. Border agents examined the vessel after it docked at the Bedford Institute of Oceanography in Dartmouth. A thumb drive found in Marceau's personal effects allegedly contained images of children "engaged in explicit sexual activity," the warrant says. An investigator with the border agency obtained a search warrant last month to seize three hard drives and another USB device that had been locked in a safe by a DFO security officer. Local Xpress

*** Man arrested in unprovoked 2014 Seattle slaying**

Seattle police arrested a 22-year-old man earlier this month in connection with a 2014 Seattle shooting that left one man dead and another injured. Meanwhile, the suspect's co-defendant remains at large. Officers arrested Jesus Chavez-Carrillo on Oct. 9. He and Jose Ortega-De La Mora, formerly of Auburn, left the area shortly after 26-year-old Mykola Shevchuk was killed in a drive-by shooting in Seattle's Sodo neighborhood. Both men were charged in August 2014 with second-degree murder and two counts of first-degree assault. The Seattle Police Department declined to discuss the case or how they found Chavez. De La Mora still has a bench warrant for his arrest. The incident occurred the night of June 22, 2014. Weeks later, on July 6, a Canada Border Services Agency officer stopped Ortega and his girlfriend at the border and turned him over to United States authorities after finding text messages on his phone that appeared to implicate him in a shooting. Seattle PI

Hunt for origin of unknown chemicals sent to drug producer led police to Portugal

In the search of Richard Valiquette's north end apartment following the discovery of Gavin Adams's body on Dec. 17, 2013, members of the Saint John Police Force found several invoice sheets from the business Avanztec. According to the officers executing the search, it was believed the invoices may have had something to do with drug production. As Valiquette stands trial for criminal negligence causing Gavin's death, mystery still surrounds those documents. Avanztec supplies chemical products. Const. Sean Rocca, the lead investigator looking into Gavin's death, said the invoices were linked to an address in Kanata, Ont. That address was for a postal box, said Rocca, which was connected to a man he later found living in Portugal. Rocca said he had the man flagged with Canadian Border Services. Telegraph-Journal, B3

Ottawa moves up review of drywall duties after complaints of high prices

The federal government has asked for an accelerated review of anti-dumping duties on drywall imports, but the new schedule isn't expected to immediately rollback duties blamed for higher prices for consumers. The Finance Department says it wants to help middle-class families in Western Canada, especially those involved in the reconstruction of Fort McMurray, Alta., following last spring's devastating wildfires. "With this action, we are putting in place an expedited process to look into the unintended impacts that these duties may be having," Finance Minister Bill Morneau said in a statement. The Fort McMurray fire destroyed about 1,800 houses as well as buildings containing 600 multifamily housing units, plus two hotels and a 665-room work camp. The federal move was welcomed by Alberta MLA Brian Jean, whose house was one of those destroyed in the wildfire. "I am grateful to hear the federal government is responding to our concerns and the concerns of people across Fort McMurray with the recent ruling by Canada Border Services Agency that effectively closed Western Canada from imported drywall," said the leader of the Opposition Wildrose Party in a statement. "We will continue to ask the federal government to suspend the tariff during its review or at the very least use its authority to exempt drywall coming into Fort McMurray from this new tariff." In September, the CBSA imposed preliminary tariffs of up to 276 per cent on U.S. gypsum board or drywall imported into Canada for use in British Columbia, Alberta, Saskatchewan, Manitoba and the Yukon and Northwest Territories. The agency said it was reacting to a complaint filed in April by CertainTeed Gypsum Canada Inc. of Mississauga, which resulted in a preliminary determination of dumping - meaning the products are being sold in Canada at less than normal prices. Canadian Press (Globe and Mail, Telegraph-Journal, Times & Transcript)

Air authority renews security contracts

The federal agency in charge of security at Canada's airports has renewed screening contracts with three private-sector firms, Garda World Security Corp., Securitas Transport Aviation Security Ltd. and G4S

PLC. The Canadian Air Transport Security Authority (CATSA) says the total value of the contract extensions is about $2.6-billion. They'll run from April, 2017, through March, 2022. Canadian Press (Globe and Mail, Times Colonist)

Screening at Canadian airports should be faster, smarter, safer
An editorial states, "If you've flown anywhere in Canada recently, you will have noticed that wait times are getting worse. Since 2013, the length of screening times has deteriorated so badly that the Canadian Airport Council referred to security screening services as a being in a state of crisis. Not only are we waiting more, we are paying more. And getting less service. According to the World Economic Forum, Canadians pay some of the highest air travel prices in the world. One part is a fee for the so-called Air Traveller's Security Charge (ATSC). The Air Traveller's Security Charge was introduced after 9/11 by the Chrétien government to fund air transport security and the newly minted Canadian Air Transport Security Authority. Instead of improving security, it has turned into a major cash grab by the Finance Department. Since 2011, the budget of CATSA has declined even though ATSC revenue has steadily increased. From 2010 to 2013, $260 million was siphoned away from airport screening into the Consolidated Revenue Fund... Another problem with airport security highlighted in David Emerson's 2015 Review of the Transportation Act, is the strange restrictions faced by CATSA. Essentially, CATSA has no control over security screening policy. This has led directly to poor service and long wait times. Emerson recommends adopting the U.S. model wherein a single "agency has responsibility for both regulatory oversight and operations." ... But perhaps the greatest failing of the Canadian model is with our trusted traveller program: NEXUS. That's the background check where travellers volunteer their information to border officials to become pre-screened. They are then deemed "trusted travellers" and expedited through customs. NEXUS cardholders are also offered a special line at security screening. The problem is, it's not that special. NEXUS users are still forced to submit to the same cumbersome screening procedures as other passengers. The question is: If our border officials allow these prescreened travellers to enter the country quickly and safely, why doesn't the same practice apply at airport security?" Montreal Gazette, A11

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Businesses must buck surveillance**
Resisting government mass surveillance isn't just the right thing to do - it's good for business, whistleblower Edward Snowden told a Toronto cybersecurity conference Tuesday. Speaking via video link to the annual Canadian industry event SecTor, Snowden brought up the recent revelation that Yahoo Inc. had agreed to scan customers' emails for U.S. intelligence. Shortly after, Verizon Communications Inc. asked for a US$1 billion discount on its US$4.8 billion agreement to buy the company, according to a report in the New York Post. "If you collaborate with the government in this regard, far beyond what the law requires, it can actually have a significant, substantial consequence for your valuation," Snowden said. "Yahoo, which is a very powerful, very rich organization, cooperated beyond what was legally required. And it damaged its brand (...)"Snowden cited Open Whisper Systems, which makes the encrypted messaging app Signal, as an example of an organization that benefited from pushing back against a government request for cooperation in a surveillance program. With the help of the American Civil Liberties Union, Open Whisper Systems fought a gag order on a subpoena for information associated with two phone numbers. Ultimately, Open Whisper Systems had to comply with the subpoena, but the damage was mitigated because of another Snowden-approved policy: Only retaining as much personal data as absolutely necessary. The subpoena asked for browsing history and tracking data stored in web browsers, but Signal doesn't collect that information. "Companies work for their customers first. This means they should only hold the data that's absolutely necessary for the operation of their businesses," Snowden said. "When this story broke about Open Whisper Systems abiding by this principle, the fact they were being compelled through the state's monopoly on use of law actually benefited their brand." Postmedia (Financial Post, FP3; National Post)

*** Over 100 groups cashing in on ransomware, Canadian infosec pros told**
Ransomware is such big business that security vendor F-secure is tracking 110 gangs making money from the malware, the company's chief research officer has told annual SecTor cyber security conference.

It's the biggest single problem infosec teams face today, Mikko Hypponen told the Toronto conference on Tuesday, because once a machine is infected "it will stop you dead in your tracks." Things are so bad that a number of organizations are buying digital wallets with Bitcoin as protection for the day they are infected – and their willingness to pay ransoms only makes things worse, Hypponen added, because the more victims that pay the more attackers are encouraged. IT World Canada (2016-10-18)

*** Only do penetration tests if your security program is up to it, say experts**
Penetration testing is an exam that cyber security experts tout for finding out the true strengths and weaknesses of an organization's personal and technology defences. However, if your organization doesn't have a mature security program pen testing is a waste of time and money, two veterans warned infosec pros Tuesday at the annual SecTor cyber security conference in Toronto (…) In an interview later West and Baseggio expanded on this and other points. "If you have a very immature security program and you know it – which most clients do – then that's a very clear indication you should probably put your money into the building blocks that make you secure rather than a shot in the dark," said Baseggio. "You already know your network is insecure because you haven't put any effort into it." IT World Canada (2016-10-18)

*** Province's cellphone security sub-par, but getting better**
The B.C. government's lax rules on taxpayer-paid iPhones and tablets has left it blind to the security risks of viruses, hackers and unauthorized applications used by public officials - some of whom wait months to report lost devices, according to two new investigations. Auditor General Carol Bellringer and acting Information and Privacy Commissioner Drew McArthur issued joint reports Tuesday that raise red flags about government security for thousands of smartphones and tablets. But they also admitted the province has plugged the most serious security holes since their audits concluded in November 2015, and they didn't investigate whether there were any cases in which data was inappropriately accessed. "While I'm encouraged, there's also some work to be done," McArthur said. "The highest of the risks have been addressed, or we would not have released the report publicly," Bellringer added. Postmedia (Vancouver Sun, A6)

*** Politics this morning: EU-Canada Arctic Conference takes place in Ottawa**
(…) There will be a panel discussion on cyber security in Canada, and how the country can increase the protection of important data. The event will take place from 9:15-11:15 in Room 160S, Centre Block, Parliament Hill in Ottawa. The speakers include: David Murakami Wood, Canadian research chair for the Surveillance Studies Centre at Queens University; Claude A. Sarrazin, president of SIRCO; Bonnie Butlin, national coordinator and chair of the National Council of the Canadian Cybersecurity Alliance; and Peter Sloly, executive director, risk advisory/cyber, national lead for security & justice sector, at Deloitte Canada. Hill Times

LAW ENFORCEMENT / APPLICATION DE LA LOI

856 Gang member charged with Hells Angel's murder
The man accused of killing Hells Angel Bob Green was out on bail at the time of the shooting. Jason Francis Wallace, 27, was charged Tuesday with second-degree murder for slaying Green on a rural Langley property Sunday morning. Wallace was on $1,000 bail on drug-trafficking charges he faces with Green's cousin. Cpl. Meghan Foster of the Integrated Homicide Investigation Team would not disclose Wallace's gang links. (…) Postmedia News has learned Wallace himself called police to say he was a suspect in the fatal shooting Sunday. That led to his dramatic arrest by Surrey RCMP on 152nd Street about 10 a.m. Monday. Foster said she couldn't comment on whether Wallace had turned himself in. "I can't speak to the details of what led up to Mr. Wallace's arrest," she said. "While police are learning some specifics of what took place preceding the homicide, the motive remains unclear." (…) Wallace has a long and violent history in B.C. He pleaded guilty eight years ago to aggravated assault for stabbing a student after a high school graduation party in Langley. He received a 21-month conditional sentence. "The attack was completely unprovoked and the victim did not know his assailant," RCMP Cpl. Diane Blaine said at the time. Wallace had been charged with attempted murder for the stabbing. Postmedia

Network (Province, A4, Vancouver Sun, Calgary Sun, Edmonton Sun, Ottawa Sun, Toronto Sun, Winnipeg Sun)

*** Five arrested after week-long human trafficking investigation**
Winnipeg police arrested five people as the result of a week-long human trafficking investigation in a phase of the Operation Northern Spotlight that has been sweeping across North America for five years. The five in Manitoba were among 32 people facing a total of 78 offences. All five were charged with obtaining sexual services for consideration. The Counter Exploitation Unit (CEU) interviewed a total of 22 women aged between 19 and 44 in areas known to be frequented by sex trade workers, such as hotels and massage parlours, in the city during the investigation. Police did not identify those who were arrested. "The five arrested here were exploiters more involved in street prostitution, but not the typical human traffickers," Sgt. Darryl Ramkissoon said Tuesday. "But the media attention this has garnered has sent a message to exploiters." A total of 54 police services in Canada, the RCMP and the FBI in the United States participated in the most recent phase of the operation. It is an ongoing investigation into human trafficking involving mainly young women who are participating in the sex trade against their will. "We've definitely connected them with the resources to either stay safe or exit the trade," Ramkissoon said. "We have helped some of them exit the trade in the past." Winnipeg Sun, A6; Winnipeg Free Press; Hamilton Spectator; Canadian Press (Toronto Star); Globe and Mail

*** Acts of bravery, courage honoured at RCMP awards in Calgary**
When Matthew Doane arrived at a bridge about 50 feet (15 metres) above the North Saskatchewan River after calls of a suicidal youth, he knew he had to act quickly. Several people had tried desperately to get a hold of the 12-year-old girl through the guardrails, but without success. The Rocky Mountain House RCMP constable crawled to the unsecured side of the bridge and used his body to protect the girl, preventing her from falling or jumping, possibly, to her death. Along with civilians and the local fire department, they potentially saved the girl's young life. That was back in March of 2014. Const. Doane's actions, along with other officers, were honoured at the RCMP Commendation Awards at a private ceremony in Calgary on Tuesday. "I am so honoured to be here today to recognize the inspirational efforts our employees have made," Deputy Commissioner Marianne Ryan said. Doane is now posted at the Didsbury RCMP detachment. In early June 2010, an armed man showed up at the Alberta Serious Incident Response Team (ASIRT) office in Calgary looking to speak with Andrew Johnson, an RCMP sergeant at the time. CBC News (2016-10-18)

Over 'n' out
Back to square one. In a tech-driven world where even the latest, greatest smartphone can simply burst into flames, square one is where the Calgary Police Service finds itself, three years after bodyworn cameras were officially touted as the tool of the near future for city cops. Well, that future just got pushed back over the distant horizon, and now it's back to the starting line. "Unfortunately, that's the case. It's a huge disappointment," said Deputy Chief James Hardy. The eagerly anticipated body-worn cameras ordered by Calgary cops under a $1.3 million, three-year contract have proven unreliable in the field after the initial units, worth about $800 each retail, were issued to officers for real-world testing. With CPS preparing for a possible legal fight in recovering that money from the camera supplier, Safety Innovations, exactly what went wrong is being kept vague - but last February, Postmedia reported glitches in the microphone buttons causing interference over the entire network. In any case, the combination camera/microphones, which were expected to be fully in use by early 2017 - making Calgary the first major police organization in Canada to implement body-worn cameras service-wide - are now considered ill-suited for police work and cannot be used. Calgary Herald, A7

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Le nouveau poste de police d'Edmundston coûte encore cher aux contribuables
Cinq ans après la construction de l'édifice qui abrite le poste de police d'Edmundston, 15 % des locaux sont encore vides. Les contribuables doivent donc continuer de payer pour le bâtiment. Cet édifice ultra-moderne a pignon sur rue à Edmundston depuis 2011. Il s'agit d'un bâtiment vert, ultramoderne et plus sécuritaire que le précédent. La moitié du bâtiment est occupé par les locaux du poste de police

municipale. L'autre moitié du bâtiment est occupé par les bureaux administratifs de la bibliothèque du haut Saint-Jean, Facilicorp et Service correctionnel du Canada. Le projet a coûté un total de 11 millions de dollars. Radio-Canada (2016-10-18)

Rafferty appeal irks Tori kin
For the family of Victoria (Tori) Stafford, the hearing is stalling time and the healing that goes with it. For Michael Rafferty, it a small hope for a different future. For Ontario legal community, it an essential lookback at a critical decision. The Ontario Court of Appeal will hear Rafferty arguments Monday for a new trial in the first-degree murder of Tori Stafford April 8, 2009. " It just a waste of everybody time ," one of Tori grandmothers, Doreen Graichen, said. "We talk about it and we try not to dwell on it. It upsetting, but there nothing we can do. I hope they stop wasting taxpayers ' money. The man is guilty without a doubt." Guilty or not, sending a person to prison for life is a crucial decision that often demands a second look, said Frank Addario, a former president of Canada Criminal Lawyers ' Association and winner this year of its lifetime achievement award in criminal law. London Free Press, A1 (Ottawa Sun, Toronto Sun)

L'ex-juge Jacques Delisle veut retrouver sa liberté
L'ex-juge Jacques Delisle, reconnu coupable du meurtre prémédité de son épouse Nicole Rainville, était de retour au palais de justice de Québec, mardi, pour la première fois depuis le verdict de juin 2012. L'ancien magistrat âgé de 81 ans purge une peine de prison à perpétuité pour le meurtre prémédité de sa femme trouvée morte en novembre 2009. Jacques Delisle espère pouvoir quitter le pénitencier de La Macaza en attendant la conclusion de la révision judiciaire de son dossier par le ministère fédéral de la Justice. L'octogénaire s'est présenté mardi au palais de justice de Québec visiblement amaigri. Il est entré dans le box des accusés vêtu d'un t-shirt blanc et d'un veston noir trop grand. La Tribune, 15 (Le Droit); * Canadian Press (Montreal Gazette, Squamish Chief); * Journal de Québec; * Le Soleil (2016-10-19); * Radio-Canada; * CBC News (2016-10-18)

* **«Mom» Boucher subira son enquête à Gouin**
L'ex-motard Maurice Boucher devra subir son enquête préliminaire pour tentative de meurtre sur un codétenu au Centre judiciaire de Gouin plutôt qu'au palais de justice de Saint-Jérome, afin de limiter les risques, a tranché la cour hier. Le centre de Gouin est effectivement directement relié à la prison de Bordeaux par un tunnel souterrain. Pendant l'enquête préliminaire, prévue en 2017, Maurice «Mom» et son coaccusé René Girard seront donc incarcérés au centre de détention de Montréal. Les deux hommes sont actuellement emprisonnés à la prison de Sainte-Annedes- Plaines. Ils sont accusés de tentative de meurtre et de voies de fait à l'endroit de Ghislain-André Gaudet. Journal de Québec, 28 (Journal de Montréal)

* **Top judge rejects Dennis Oland's relationship with father as 'fine'**
New Brunswick's top judge rejects the notion that Dennis Oland had a normal relationship with his murdered father, multimillionaire businessman Richard Oland. Chief Justice Ernest Drapeau of the Court of Appeal of New Brunswick made the comment on Tuesday during Dennis Oland's appeal hearing, which resumes Wednesday at 10 a.m. AT in Fredericton. Oland's defence team is seeking to have his second-degree murder conviction in the 2011 death of his father overturned and either an acquittal entered or a new trial ordered. CBC News; Telegraph-Journal, A1 (Times & Transcript, Daily Gleaner)

High ratio of isolated inmates have mental-health issues
Ontario's solitary-confinement cells hold a high proportion of inmates who have mentalhealth issues and other medical challenges, including one prisoner who has spent more than four years in isolation, according to figures released by the Ontario Human Rights Commission. The commission made the numbers public on Tuesday, at a briefing where Chief Commissioner Renu Mandhane relayed the case of one aboriginal inmate she'd met who has languished in segregation so long - more than 1,500 days - that his capacities for speech and memory have deteriorated. "It was really disturbing for me personally," Ms. Mandhane said of the encounter at Thunder Bay Jail. "I've been in a lot of prisons and spoken to a lot of prisoners. (...)The restarting of segregation clocks was found to be a factor in the cases of Ashley Smith and Eddie Snowshoe, two federal inmates whose deaths in solitary confinement cells three years apart galvanized public support for segregation reform across the country. The federal correctional service has

since phased out the practice. Globe and Mail, A1; Postmedia Network (Ottawa Citizen, Ottawa Sun); * Toronto Star; * London Free Press

*** When in politics, do another review**
An editorial states, "Ontario Corrections Minister David Orazietti actually said this on Monday, about his government's overuse of solitary confinement in provincial prisons: "After a thorough internal review and extensive consultations with a broad range of experts, it is becoming apparent to me ... that a more thorough and comprehensive review into the complex nature of the corrections system in Ontario needs to be conducted." (...)The United Nations, for instance, says putting a healthy, adult prisoner in solitary for more than 15 days in a row is a form of torture, and that it should never be used on youths and mentally ill inmates. Howard Sapers, the federal prisons ombudsman, says the maximum time in solitary should be 15 days. The Ontario Human Rights Commission has called for a complete ban on solitary in Ontario prisons. The union representing Ontario corrections workers says segregation is no place for inmates with mental illness, and that the province should build separate facilities for them. (...)There is no question that corrections systems are complex. But the issue of solitary confinement is not. It is abusive, and it harms inmates suffering from mental illness, making it harder for them to rejoin society when their sentences are complete." Globe and Mail, A12

Solitary changes a good first step
An editorial states, "Prisoners in Ontario's jails will no longer be dumped in solitary confinement as punishment for 30 days straight. New rules announced Monday will cut the maximum time for solitary to 15 days. That may sound reasonable to some, but the province needs to do better. We understand that many are worried about this change. Safety is important, and sometimes tossing rowdy prisoners into solitary is the only way to keep guards and other inmates safe. Sometimes it's the only way to keep the prisoner in question safe. We've long said safety should be the government's priority, not pandering to those who believe time in jail should be a comfortable experience. But a United Nations expert on torture says solitary confinement should end. The Ontario ombudsman has called for it to end. Instead, one-fifth of Ontario inmates spent time in solitary in the last three months of 2015. And 40 per cent of them had mental health issues." Ottawa Sun, A12

Tu es invité à consulter ce module du site Ado-Parlons santé qui a été conçu pour répondre aux questions des jeunes âgés de 13 à 25 ans concernant leur santé mentale et physique. Acadie Nouvelle, 21

*** City crime rate and severity increase**
St. Albert saw more crime, and crime of a more severe nature, in 2015 compared to previous years – but crime rates here are still the lowest in the province for a city this size. Policing services manager Aaron Giesbrecht presented the 2015 annual policing report to council at the Oct. 17 meeting, explaining the crime severity in St. Albert is below the provincial and national averages, and the increase is likewise comparable to provincial and national rates. He explained one incident in particular had a major influence on the increase in crime severity at the local level. In January, Const. David Wynn was killed and auxiliary officer Derek Bond was seriously injured in a shooting at the Apex Casino. Serious crimes have a major influence on crime severity in the city. "Despite that, St. Albert still has the lowest crime severity amongst Alberta municipalities," Giesbrecht said. St. Albert Gazette

*** Don Atchison endorses street checks as part of Saskatoon crime prevention**
Mayoral candidate Don Atchison is making his stance on street checks very clear: he supports them. "Street checks and carding I think are two different scenarios," said Atchison during a Tuesday afternoon press conference. "Carding is racial profiling. I don't believe that's where our police service is

going by any stretch of the imagination." In a release, Atchison also pointed to repairing relations between police and First Nations people in Saskatoon. He said that when he first became mayor in 2003 there was a dangerous divide between police and First Nations people. "Members were demoralized and embarrassed to say they were officers," said Atchison. "Today morale on the service is extremely high." The issue of street checks and carding was raised at a sold-out mayoral debate held at the Broadway Theatre in Saskatoon last week. During that debate, Atchison spoke strongly in favour of street checks, saying it was an integral part of policing. He argued it could also help improve safety for young people on the street by helping them find a safe place to sleep. CBC News (2016-10-18)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Tanya Tagaq's overdue call for retribution**

In a year that's presented us with the disheartening acquittal of Jian Ghomeshi, a paltry three months of imprisonment for convicted Stanford rapist Brock Turner, an American presidential campaign buoyed by racism, xenophobia and accusations of sexual assault, a class-action sexual-harassment lawsuit against the RCMP - 500 accusers strong - and little follow-through on Prime Minister Justin Trudeau's promise to repair relations with indigenous peoples, the hunger for amends is ubiquitous. Tanya Tagaq's Retribution, the follow-up to her 2014 Polaris Music Prize-winning Animism, is an embodiment of this. ("The retribution will be swift," go the lyrics to the title track.) (...)Retribution features a striking cover of the Nirvana song Rape Me, which Tagaq recorded with the thought of Canada's missing and murdered Indigenous women in mind. "I didn't know what it was going to be like," Tagaq says. "I thought I was going to be more aggressive with it. But when I recorded the cover, I was just so sad. I'm devastated that this is how we live. It came out very soft. I am in mourning of all the women who have been taken." (...)Behind her, the names of 1,200 missing and murdered indigenous women were projected onto a screen, which prompted the term "missing and murdered indigenous women" to appear in subsequent international media coverage of the event. Now that she's become a recognizable figure, she consistently uses her platform for protest. "I've been labelled an activist, but I'm just trying to survive and make sure that the people I love and care about are okay. I wouldn't be a responsible human being if I didn't point these things out," Tagaq says. Globe and Mail, L1

*** Stop selling 'racist garbage,' shop selling Indigenous Halloween costumes told**

A company with locations across Canada is coming under fire in Edmonton for selling Indigenous-themed Halloween costumes described as "racist garbage" and "keep us stuck in the past." Last Thursday, Zoe Glassman was surprised to come upon an entire section at Party City displaying items such as fringed dresses and headdresses with the package showing white models donning dark wigs, braids and face paint. "We're still trying to find truth and reconciliation," said Glassman, who was shopping at South Edmonton Common, one of four Party City locations in the city. (...) Indigenous artist and activist Todd Houseman said in the context of missing and murdered indigenous women, the sexualized costumes promote harmful attitudes such as: "I can now treat them like that," which, he says, "can lead to a lot of horrific things across the board." He said the costumes reinforce stereotypes of Indigenous people, undermining efforts to reclaim power and leadership. CBC News (2016-10-18)

*** Parties respond to questions from CYFN**

The Council of Yukon First Nations (CYFN) asked each political party to respond to five questions about how it would, if elected, work with First Nations governments. "Our relationship with the territorial government spans many generations and has weathered many difficult moments," reads the introduction to the questionnaire. "Our relationship is now one of equals since we are governments." (...) Liberals: The Liberals say the Yukon government must create culturally sensitive programs and services in the spirit of the TRC's recommendations. The TRC report lays out myriad ways governments, and people, can improve social, health, economic and education outcomes for indigenous peoples and therefore all Canadians. The party says it would support the the national inquiry into missing and murdered indigenous women and girls, but that First Nations should take the lead. It would also revise the

Prevention of Violence Against Aboriginal Women Fund to open up access to funds in the communities. Whitehorse Daily Star, 4

*** Youth, First Nations need more from next budget**
The House Finance Committee is once again in the middle of its pre-budget consultation process, marked, as in previous years, by crowded panels of diverse witnesses. With more than 120 witnesses and over 400 briefs received, it would be easy for an op-ed on the process to take the form of a laundry list. Instead, let's focus on just a few of the key electoral commitments that witnesses warned have fallen by the wayside since the Liberals formed government. Finally, on the social front, promises made to First Nations by the Liberals during the 2015 elections have to be kept. Unfortunately, one year into this government's mandate, while some progress has been made, it falls far short of the expectations that had been created. The Liberal government did launch an inquiry into Missing and Murdered Indigenous Women, but is falling short in key areas like police practices and child welfare. Hill Times

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Cannabis 101**
Call it a crash course in cannabis. Alberta's Justice Minister and Solicitor General is Coloradobound to see how the state has handled legal weed. Kathleen Ganley said with marijuana's legalization in Canada imminent, it's prudent to look at best practices and lessons learned from a place that's pioneered the way. "The federal government will set the tone, if you will, or set the broad strokes for how restrictive the model is going to be and a whole number of other things, but then provinces will have to step in because some of it will be in provincial jurisdiction ... and of course our policing partners, as well, will have a large role to play, and municipalities probably as well," Ganley said. "We're looking to all move together. "It's important that the province be prepared to ensure that we are doing our part to keep Albertans safe. Postmedia Network (Edmonton Sun, A22, Calgary Sun)

*** Ganley off to Colorado to probe policies on pot**
With legalization imminent in Canada, Alberta's Justice Minister and Solicitor General is headed to Colorado to see how the U.S. state has handled policies and procedures around pot, which has been legal there since January 2014. Kathleen Ganley flies out Thursday to Denver, where she's slated to meet with the attorney general, police and fire services and a host of municipal and state officials. "The federal government will set the tone, if you will, or set the broad strokes for how restrictive the model is going to be and a whole number of other things," Ganley said, "but then provinces will have to step in because some of it will be in provincial jurisdiction. "And, of course, our policing partners will have a large role to play, and municipalities ... We're looking to all move together. Calgary Herald, A5

PUBLIC SERVICE / FONCTION PUBLIQUE

Phoenix payroll update today as government deadline looms
Senior federal officials are expected to give an update on the Phoenix payroll mess Wednesday afternoon as the government's self-imposed Oct. 31 deadline to deal with the backlog of cases looms. CBC News will carry the briefing live online, beginning at 1:15 ET. The government's deadline is for the backlog of more than 80,000 cases filed by federal workers before June — not new cases filed later. But the government also committed to dealing with new high priority cases within two weeks of the claim. CBC News

OTHER / AUTRE

We grade the grits
An editorial states, "Is it fair to judge a government only a year after an election? If the government in question made 325 promises during the campaign, as the Liberals did, then yes. Given our four-year election cycle, they had better be one-quarter of the way through checking off their pledges. Of course,

only a deliverology guru could calculate this for sure. So let's just do a quick flyby: (…) INDIGENOUS AFFAIRS: A "renewed nation-to-nation relationship" was among the government's most significant promises to indigenous Canadians. Some things did happen: budget funding of $8.4 billion over five years is coming, and an inquiry is underway into missing and murdered indigenous women. Not accomplished: equal funding for First Nations children. SECURITY: Canadians still haven't seen the changes coming to the "problematic" anti-terrorism act, Bill C-51. But there will be an all-party national security oversight committee and there are broader security consultations. (…) PUBLIC SERVICE: Unions complain the Liberals aren't bargaining fairly, naturally. But any government has to negotiate hard on behalf of taxpayers. We don't think that's the problem. The problem is the poor rollout of the Phoenix pay system. No private enterprise would survive this kind of fiasco for long. It wasn't in your election agenda, Grits, but you own it and you have to fix it. Welcome to Year Two." Ottawa Citizen, A8; * Times Colonist

*** The canadian on death row**

An opinion piece states, "On Sunday, The Canadian Press presented a new interview with Ronald Allen Smith, the Albertan who is on death row in Montana for randomly murdering two young men in 1982 while hitchhiking on LSD (as one does). Smith, who had originally passed up a plea deal and asked for the death penalty, seems to grow more attached to life every time someone chats with him. Now 59, he says cheerfully that the election of a Liberal government in Ottawa "bodes well for (him)" and that he is "ready to come home ... if you're willing to take me back." With a carelessness that has practically become a tradition in Smith's case, the CP writes that a court "forced the (former Conservative) government to abandon the policy" of refusing to extend assistance to Canadians convicted of murder in democratic countries. Canadian courts, happily, do not have the power to revise foreign policy. The issue that came before the Federal Court was that there was no actual policy at all, and that various federal ministers seemed to be setting the conditions for consular assistance on the fly, in press releases and interviews. The new Liberal government is free, in principle, to create a policy that would leave Smith to face his fate in Montana State Prison. It would be a matter mostly of writing the policy down, which the Conservatives never bothered to do." National Post, A9

*** Markham, Ont., man back home after U.S. no-fly list left him stranded in Amsterdam**

The Markham, Ont., man stranded in Amsterdam after he says he learned he was on the U.S. no-fly list has returned home to Canadian soil. Nanak Partap Singh had been travelling back to Toronto from Delhi when he made a connecting stop in the Netherlands on Oct. 12. There, he had been unable to print off his boarding pass and was told to check in at a counter where he learned that he was unable to fly because his name had been flagged by the United States, Singh said last week. It's unclear exactly when the Markham man returned home, but his wife sent CBC News an email Tuesday night to confirm her husband was back in Toronto. CBC News

*** Suspected ISIS bomber killed in raid in Turkey: official**

Turkish police on Wednesday fatally shot a suspected Islamic State group militant who was believed to be planning a suicide bomb attack in the capital. The man was killed in a raid on a ninth-floor apartment on the outskirts of Ankara after he ignored warnings to surrender and opened fire on police, Ankara Gov. Ercan Topaca said. The state-run Anadolu Agency quoted Topaca as saying the man was believed to be planning a suicide attack in the city -- either targeting large gatherings or to coincide with two national ceremonies in the coming weeks. Topaca said police seized explosive materials from the apartment. Turkey has been rocked by a series of deadly suicide bombings over the past 18 months that were carried out by ISIS or Kurdish militants. Officials banned demonstrations or large gatherings in Ankara until the end of November citing intelligence over possible attacks. Interior Minister Suleyman Soylu told reporters that the man was spotted scouting Turkey's old parliament building as well as the mausoleum of Mustafa Kemal Ataturk -- the founder of the Turkish republic -- where ceremonies are scheduled to take place. "The Daesh militant was rendered ineffective following very important tracking and intelligence work," Soylu said, using the Arabic acronym for IS. "These operations are continuing." CTV News

*** Iraqi forces met with car bombs, mortars in military advance on Mosul**

Islamic State militants have deployed suicide car bombs and fired mortar rounds to slow down the advance of Iraqi troops outside a key town near the militant-held city of Mosul, an Iraqi army officer said Wednesday. The officer from the 9th Division told The Associated Press that his troops were now around 1 kilometre (half mile) away from Hamdaniyah, a historically Christian town also known as Bakhdida. Since Tuesday, IS has sent 12 car bombs, all of which were blown up before reaching their targets, he said, adding that Iraqi troops suffered a small number of casualties from the mortar rounds. The officer, who spoke on condition of anonymity because he was not authorized to talk to reporters, did not provide specific figures. Global News

MINISTER / MINISTRE

Liberals are consulting, but listening, too?
Justin Trudeau's Liberals swept to power last October with a promise of a more open government that better reflects the values and expectations of Canadians. A year later, they're getting credit for a willingness to listen. But it's too early to tell whether that is resulting in decisions and policies the public truly wants. The Liberals have launched a flurry of consultations on matters big and small. At last count, there were 84 consultations accepting online comments about everything from food additives and species at risk to a national housing strategy and security policy. (…) The Liberals promised during the election campaign to fix several specific "problematic elements" of the law. The NDP has chastised the government for embarking on a full national security review before changing even a single line of the legislation. **Public Safety Minister Ralph Goodale** recently defended the Liberals' unhurried approach, saying the government wants to take the necessary time to ***"get this right"*** after the Conservatives

rushed legislation onto the books without properly consulting Canadians. ***"A lot of people felt shut out, and we promised to give them the opportunity to be heard."*** New Hamburg Independent

TOP STORIES / MANCHETTES

* **Record Drug Bust: Seizure of 202 kg of cocaine at Coutts crossing largest in Prairie history**
Authorities intercepted $10 million worth of cocaine at Alberta's Coutts border crossing in the biggest seizure of the drug in Prairie history. The 202 kg of drugs were packed with goods in three separate shipments aboard commercial trucks, beginning with 60 packages of cocaine weighing 69 kg secreted in a cargo of televisions discovered Sept. 2. "Officers noted a small, dense package in a vacuumsealed bag that tested positive for cocaine," said Ana Maria Coutu of the CBSA. Another 40.5 kg of the drug was found two days later amid cargo of 2,000 Halloween costumes - the two making up the largest weekend seizure numbers for the Canada Border Services Agency's (CBSA) Prairie region. But the largest was yet to come on Oct. 10, when 83 bricks of cocaine weighing 92.74 kg were seized from another commercial truck, where it was hidden throughout its cab, said Coutu. "This is the largest cocaine seizure in Prairie region history ... it was destined for an Alberta business," she said. In all, five men have been charged in the three busts with importing a controlled substance and possession for the purpose of trafficking. The RCMP continues to investigate for any links between the three, whose suspects hail mainly from B.C., said Insp. Allan Lai. Calgary Sun, A3 (Edmonton Sun, * Calgary Herald, * Ottawa Sun, * Winnipeg Sun, * Toronto Sun); * Global News; * iNews880

* **DEPORTATION DRAMA: Mother of four fights order to leave**
A young mother facing deportation to the U.K. after spending much of her life in Canada issued a plea Thursday to be allowed to stay in the country she considers home, a day before her strange saga goes before a hearing that may determine her fate. Propped up in a hospital bed and groggy from pain medication, Fliss Cramman said she is terrified of being forced to return to England, where she was born but left at the age of eight when her parents moved to Ontario. "I'm just so scared to go back - I don't know anybody, I don't know anything," she said through tears, while two corrections officers stood guard in her drab hospital room. "If I leave here, I'm leaving my heart behind big-time. This is my homeland." The 33-year-old mother of four young daughters, who were all born in Ontario, only became aware that she was not a Canadian citizen following a recent drug conviction and incarceration. The Canada Border Services Agency looked into her status while she was in custody, discovering that her parents and several foster care families that took her in starting at the age of 11 failed to secure her Canadian citizenship. As a result, the agency says it wants to deport her by Dec. 16, despite her physician's assertion that she is in fragile health and needs to remain in the country for about 18 months to properly recover from a series of colon surgeries done after she was rushed to hospital from a prison facility in Dartmouth on Aug. 12. At a hearing in the basement of the hospital late last month, the Immigration and Refugee Board agreed Cramman would not be able to travel for "at least a couple of months." It said it would review the matter, along with a possible release from custody, at another hearing Friday. Advocates with the Elizabeth Fry Society and a local refugee group agree and have taken on her case, which has attracted attention from across the country. She was convicted of offering to traffic heroin in 2014 and sentenced to 27 months in prison. She served two-thirds of her sentence and was released on parole, but was detained by the Canada Border Services Agency to start the deportation process. Canadian Press (Chronicle Herald, A1, The Guardian, B5, Cape Breton Post, Whitehorse Daily Star, Times Colonist, London Free Press, Vancouver Sun, * StarPhoenix, * Windsor Star; * The Province, * Waterloo Region Record, * Edmonton Journal, * Calgary Sun, * Calgary Herald, * National Post, * Leader-Post)

Drug overdoses take a grim toll in B.C
The fentanyl crisis continues its grim toll with the latest statistics showing more people in B.C. have died from drug overdoses in the first nine months of this year than in all of 2015. There have been 555 deaths as a result of illicit-drug overdoses from January through September, eclipsing the 508 drug-related deaths in B.C. in 2015. The total number of illicit-drug overdoses in September was 56, up from 49 in August, according to the latest statistics released Thursday by the B.C. Coroners Service. The powerful opioid fentanyl was detected in 302 deaths - 61 per cent of all drug deaths from January through August

this year - more than triple the number of fentanyl-related deaths compared with the same period last year. "The ongoing high rates of fatal overdose in British Columbia demonstrate the need for continued collaboration, focus and energy," Evan Wood, interim director of the newly created B.C. Centre on Substance Times Colonist, A1; Canadian Press (Red Deer Advocate, National Post, The Guardian, The Telegram, CTV News, Calgary Herald, Globe and Mail) (2016-10-21); * CBC News (2016-10-20)

*** Tighter security could be coming to Parliament Hill: RCMP**
Parliament Hill security may be beefed up two years after the attack that claimed the life of Corporal Nathan Cirillo. Two years after Michael Zehaf-Bibeau stormed Centre block, the head of Parliamentary Protective Services (PPS) says he's open to putting measures in place to better screen people who want to access the front lawn of Parliament Hill. Currently, people can enter the grounds unhindered, but that may not be the case forever. In the 16 months since he was appointed the head of the new merged security force several measures have been put in place to prevent another attack on Parliament hill. Communications have been harmonized so that all levels of security can actually speak to each other, guards have been given hand guns and RCMP officers are now more visible and more heavily armed on the grounds. C8 carbine rifles are now in the hands of Mounties as they patrol Parliament Hill. The directive follows the report into the shooting deaths of four RCMP officers in Mayerthorpe, Alberta. Global News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Nova Scotia under heavy rain and flood warnings**
Nearly all of Nova Scotia is under a weather warning for heavy rain that could lead to flooding this weekend - but it's still unclear where it will hit the hardest. CBC meteorologist Jim Abraham says the interaction of three systems - a low-pressure system combined with a cold front over the St. Lawrence Valley and a low-pressure system over the Bahamas - will bring tropical moisture to the Maritimes. That means bands of heavy rain and strong southeast winds gusting as high as 70 km/h will start Friday afternoon and continue into Saturday. The latest prediction is that between 30 millimetres and 60 millimetres will fall with peak amounts of 80 millimetres in some areas. There's still much uncertainty as to where most of that rain will fall. Environment Canada's latest statement said it's not just how much rain falls, but the rate at which it falls, that creates problems. Heavy, sudden downpours can cause flash floods and water pooling on roads as well as localized flooding in low-lying areas. CBC News; Charlottetown Guardian; Chronicle-Herald; Cape Breton Post

*** Disaster deductible for storm claims waived**
The province is waiving the $1,000 deductible for people applying to the disaster financial assistance program as a result of the Oct. 10 storm. Announced shortly after the Thanksgiving Day storm that especially ravaged parts of Cape Breton, the program helps homeowners, small businesses, farmers and not-for-profit organizations recover from emergencies. It also provides support for municipalities. The program will cover up to $200,000 per household, an increase from $80,000. "We understand how difficult this situation is for people and how disruptive it is in their lives," said Zach Churchill, minister responsible for the Emergency Management Office. Chronicle-Herald, A7

*** First Nations recovering from flash flood emergency**
Neyaashiinigmiing is getting back to some sense of normalcy after flash floods led to a state of emergency being declared there earlier this week. " Things are progressing quite well and we have addressed most of the road issues ," Greg Nadjiwon, chief of the First Nation at Cape Croker, said Thursday afternoon. " It will be a while yet before we are back to normal, but we are well on our way ." On Monday afternoon, the Chippewas of Nawash Unceded First Nation was hit by heavy rains that led to flash floods that washed out roads and flooded properties and basements. Environment Canada didn ' t have rainfall totals for the region, but radar estimates indicated more than 50 millimetres of rain fell in a short period Monday. London Free Press, A4

*** Fortes pluies et risques d'inondations**

Une quantité de pluie plus grande que ce que l'on reçoit normalement en un mois devrait tomber en quatre jours au Québec, entraînant des risques d'inondations et de glissements de terrain de l'Outaouais jusqu'à Charlevoix. «On parle de 100 mm d'ici à dimanche, c'est une très grande quantité de pluie», estime le météorologue d'Environnement Canada Jean Brassard. La moyenne de précipitations des 30 dernières années pour le mois d'octobre en entier est de 78mm, selon les données compilées sur le site de MétéoMédia. Journal de Montréal, 7

* **Toronto citizens group not satisfied with lists of dangerous cargo released by railways - Crude oil tops list of dangerous substances being transported by rail**
Canada's major railway companies have released lists of the kinds of dangerous goods being transported on tracks that run through Toronto neighbourhoods, but a group of concerned citizens says it's still not enough information to make them feel safe. Canadian National Railway and Canadian Pacific Railway both gave reports to the city earlier this month listing the top 10 dangerous goods they transported in 2015, which account for less than 10 per cent of all the materials they ship. For both railways, crude oil topped the list, making up 44.9 per cent of all the dangerous goods CP carries. For CN, that figure is 34 per cent. The lists, which are posted at the bottom of this story, also contain figures for such substances as liquefied petroleum gases (CN: 16 per cent), sulfuric acid (CP: four per cent, CN: 11 per cent), propane and other petroleum products. Patricia Lai, co-founder of Safe Rail Communities — a non-partisan group that advocates for safe, transparent, and regulated rail — says she's not surprised by the types of dangerous goods the railroad companies have admitted to carrying. But she says the information is of limited value. CBC News

* **Le centre-ville revit à Lac-Mégantic - Les citoyens sont conviés à célébrer la réouverture de la rue Frontenac**
Plusieurs citoyens de Lac-Mégantic pousseront un soupir de soulagement, le mardi 1er novembre prochain, lors de la réouverture tant attendue de la rue Frontenac au complet, la rue principale, et les autres rues du centre-ville perdues à la suite de la tragédie ferroviaire du 6 juillet 2013. L'événement marquera une nouvelle étape dans le cheminement des Méganticois. Les autorités municipales de Lac-Mégantic veulent d'ailleurs marquer l'événement d'une pierre blanche dans l'histoire de la ville, en présentant toute une fête populaire, trois jours plus tôt, le samedi 29 octobre. «Une fête familiale, conviviale, sans fla-fla, du type rencontre entre les gens pour se réapproprier le centre-ville est prévue pour l'occasion», indique le maire Jean-Guy Cloutier. La Tribune, 4

* **'Was that an earthquake?': don't ask 911**
On the day when hundreds of thousands of British Columbians are learning how to survive an earthquake, the province's largest 911 call centre is reminding the public not to call them for information during a natural disaster. More than 800,000 people took part Thursday in the Great British Columbia ShakeOut. Participants were invited to stop, drop, cover and hold on for at least one minute in a simulated earthquake scenario. Last December, on the night a 4.7 magnitude earthquake rocked B.C.'s south coast, E-Comm was inundated with calls... The centre received 318 calls in 15 minutes. That's a 1500 per cent increase compared to normal call volume for that time of day. Most of the calls were for non-emergencies. CBC News

* **Earthquake swarm recorded outside Sussex**
A series of low magnitude earthquakes have been recorded in southern New Brunswick over the past month. A total of ten earthquakes were recorded between Sept. 19 and Oct. 5 in an area south of Route 111, between Sussex and St. Martin's. The earthquakes were recorded by the seismographs that Natural Resources Canada installed in the area. Despite the shallow focus of less than five kilometres, the earthquakes have not been reported as felt by people in this sparsely populated region. "This sequence is what we'd refer to as an earthquake swarm. A swarm is a series of earthquakes that occur within a short period of time and located within a small area." said Maurice Lamontagne, Natural Resources Canada seismologist. Telegraph-Journal, B1

* **Search-and-rescue training facility planned for Comox**
The national training facility for Canada's next generation of fixedwing search-and-rescue aircraft will be located in Comox, the commander of the Royal Canadian Air Force told the editorial board of The

Vancouver Sun and The Province. Bids from three groups are currently being evaluated for an estimated $3-billion contract to replace the country's aging fleets of six CC-115 Buffalo and 12 early model CC-130 Hercules searchand-rescue aircraft, Lt.-Gen. Mike Hood said Wednesday. The training facility at the Comox air-force base would include flight simulators to help pilots train on whichever new aircraft is selected by the federal government. That decision is expect before the end of the year, the general said. A new maintenance program would also be established at the base. The new aircraft would begin to arrive in 2019, said Hood, with the full fleet coming into service over three years and deployed to Canada's four search-and-rescue bases at Comox, Winnipeg, Trenton, Ont., and Greenwood, N.S. Hood said three aircraft are being considered by non-military evaluators, who will make recommendations to the defence minister and cabinet: n The Italian-built Leonardo C-27 turboprop aircraft, part of a joint venture led by General Dynamics Canada and DRS Technologies Canada; n The C295 turboprop military transport, manufactured by Europe-based Airbus; and the KC-390, a jet-powered military transport built by Brazilian aircraft manufacturer Embraer. Hood, a former Hercules pilot, noted the spinoff economic benefits of the new training facility and the additional personal that will based in Comox. Vancouver Province, A3

*** Deep scars left by whale boat tragedy - Pain of West Coast disaster lingers for survivors, families and rescuers**

Entire communities have been honoured, individuals cited for heroism and boats blessed, but one year after the sinking of a whale-watching vessel offBritish Columbia that tossed 27 people into the churning Pacific, the wounds have barely started to heal. Five Britons and one Australian died on Oct. 25, 2015, when the 20-metre Leviathan II capsized in waters near Tofino, about 320 kilometres northwest of Victoria. The cause of the tragedy remains under investigation. The Transportation Safety Board of Canada is expected to release its report next year. Calgary Herald, A7

*** Life-saving heroes honoured by city's fire department - Avalanche rescuer, man who saved LRT passenger, among 27 recognized**

One saved a fellow transit passenger. Another performed first-aid on an unconscious cyclist in a city park. In all, 27 civilians and emergency personnel were honoured by Calgary Fire Chief Steve Dongworth with a Medal of Bravery or certificate of recognition for their heroic acts. "To see folks stepping up in very difficult situations, often putting themselves at risk to help out other Calgarians ... you're often left speechless by the stories," said Dongworth during Thursday's Beyond The Call luncheon. Benoit St. Pierre was awarded the medal for his role in saving a group of skiers buried in an avalanche in March 2014. He used an avalanche beacon locator and a snow probe to dig out two people from under the snow. Calgary Herald, A10; CBC News

*** Windy, stormy weather complicates clean-up operations for sunken B.C. tug**

Blustery, wet weather thwarted efforts Thursday to assess the fallout of a sunken tugboat leaking diesel in a remote region off British Columbia's central coast. All small boats involved in the salvage effort were ordered to stand down at midday, including crews responsible for environmental sampling, wildlife surveys and shoreline assessment for eventual clean-up operations. Crews have recovered more than 88,000 of the estimated 200,000 litres of fuel from the Nathan E. Stewart, which ran aground and sank Oct. 13 in Seaforth Channel, about 20 kilometres west of Bella Bella. A situation report released Thursday afternoon said divers located diesel on the roof of the engine room, which they intend to vacuum out before emptying the boat's submerged fuel tanks. Some experts say the spill is a wake-up call as the provincial and federal governments consider giving permission for larger vessels carrying far greater volumes of fuel in Canada's West Coast waters. Canadian Press (Cape Breton Post; Chronicle-Herald) (2016-10-20)

*** La Ligue des droits et libertés demande à Ottawa d'abroger la Loi antiterroriste**

Environ 70 personnes ont participé jeudi aux audiences publiques sur la sécurité nationale, à Montréal, qui ont donné lieu à l'expression de plusieurs inquiétudes sur les moyens employés par le gouvernement

canadien pour lutter contre le terrorisme et la radicalisation. Plusieurs organismes ont pris la parole, dont l'Association des juristes progressistes, le Congrès maghrébin au Québec et la Ligue des droits et libertés. Le porte-parole de la Ligue, Dominique Peschard, a demandé que la Loi antiterroriste soit complètement abrogée ou, sinon, substantiellement modifiée. «On est préoccupé, entre autres, par toutes les nouvelles dispositions introduites par la loi qui permettent à 17 agences gouvernementales de partager tous les renseignements que le gouvernement détient sur les citoyens. Les nouveaux pouvoirs accordés au Service canadien du renseignement de sécurité de poser des gestes illégaux sont aussi inquiétants. Ça rappelle les années 60 et 70, où la GRC a volé les listes de membres du Parti québécois par effraction, brûlé des granges et commis toutes sortes de gestes illégaux.» Radio-Canada

*** National security framework needs major overhaul**
An opinion piece states, "Human rights are being abused by CSIS and the RCMP, which will hurt Canada in the end. Over the next few weeks, rights groups, lawyers, activists, experts and concerned individuals will all weigh in on how to achieve a National Security framework upholding both security and rights. The problems with the existing framework are too many to canvass here, but there are a few things that must be done. First, CSIS must stop its practices of: showing up at homes and workplaces unannounced at odd hours; speaking with employers (who are ordered not to disclose this fact); offering incentives for "information"; intimidating newcomers; questioning people about specific institutions; inquiring about one's religiosity; and discouraging people from legal counsel. The situation is so dire that rights groups have had to distribute thousands of "know your rights" guides and organize workshops across the country on dealing with security agencies. (…)The government says it is committed to openness, transparency, and accountability. It must address the above if it wishes to have any real success recruiting Muslims in fighting terror. Otherwise, the anti-radicalization and counter-terrorism office may be a non-starter with the community it seeks to engage." Thestar.com

*** Bill C-51 under review as public hearings take place in Calgary, Vancouver, Toronto, Montreal, Halifax**
When Bill C-51 passed in 2015, a public outrage ensued that Canadians rarely experience.
This past Wednesday, the Canadian government revisited the bill by holding a public hearing in Toronto where citizens were able to voice their views. Motherboard reports that the turnout was dismal compared to the protests that took place just under a year ago, but that those who did show up were passionate. While the bill was under discussion, Canadians protested that their personal privacy was being "eroded by giving the police latitude to essentially do whatever they deem is necessary to stop domestic terrorism," wrote *Motherboard* reporter Jordan Pearson. Speakers took to the mic with just three minutes to voice their concerns. Politicians reportedly looked exhausted, having gone through the same routine the night before in Calgary and the night before that in Vancouver. *Motherboard* reports that the hearing will continue in Montreal on October 20th and in Halifax on Friday. Mobile Syrup

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Security measures being added to protect legislature grounds
Large concrete posts are being erected in front of the legislature grounds at a cost of up to $400,000 to stop a truck bomb or other terrorist attacks. But there's no security measures being introduced to the back of the legislative assembly, close to where many of the politicians park, a seemingly big hole in the plan meant to foil bad guys. House Speaker Chris Collins said the priority was to protect scores of people who gather and demonstrate on the grounds in the provincial capital each year. (…) The politicians discuss security behind closed doors and their deliberations are secret. Collins said they were following the advice of the **federal Department of Public Safety**, which forwarded a threat and risk assessment for legislative buildings. "The people who come to voice their opinion about the legislature don't do that at the back. They congregate in front and we need to roll this out in phases. We can't have our building security brought up to 100 per cent in the first couple of years. This is an ongoing issue, we're making changes, and the bollards in front are the priority for this year." Security specialist Veronica Kitchen argued that if authorities in New Brunswick really wanted to improve security, they should ensure there's good co-ordination between security personnel at the legislature and the local Fredericton Police Force, a shortcoming that was cited in the chaos that surrounded the 2014 lone gunman attack on Parliament Hill

that led to the death of a soldier on ceremonial duty. "One of the lessons learned in Ottawa was that the officers tasked with protecting Parliament Hill were not communicating as well as they might with the Ottawa police and RCMP." She also said it would make sense to have more outreach programs for people who might be on a path to radicalization. "We shouldn't have blinkers on to think those might be just people who are associated with a mosque," she said. "There is also right-wing terrorism and extremism." Postmedia Network (Daily Gleaner, A1, Telegraph-Journal, Times & Transcript)

* **Tighter security could be coming to Parliament Hill: RCMP**
Parliament Hill security may be beefed up two years after the attack that claimed the life of Corporal Nathan Cirillo. Two years after Michael Zehaf-Bibeau stormed Centre block, the head of Parliamentary Protective Services (PPS) says he's open to putting measures in place to better screen people who want to access the front lawn of Parliament Hill. Currently, people can enter the grounds unhindered, but that may not be the case forever. In the 16 months since he was appointed the head of the new merged security force several measures have been put in place to prevent another attack on Parliament hill. Communications have been harmonized so that all levels of security can actually speak to each other, guards have been given hand guns and RCMP officers are now more visible and more heavily armed on the grounds. C8 carbine rifles are now in the hands of Mounties as they patrol Parliament Hill. The directive follows the report into the shooting deaths of four RCMP officers in Mayerthorpe, Alberta. Global News

* **We need an inquiry into the Ottawa shootings**
An opinion piece states, "On Oct. 22, 2014, Hamilton's Cpl. Nathan Cirillo, standing guard at the National War Memorial in Ottawa, was shot to death. The perpetrator, Michael Zehaf-Bibeau, then entered the Centre Block of Parliament with his loaded rifle, creating the worst security breach on Parliament Hill in Canada's history. Cirillo lost his life, and his family and friends suffered grievously. The repercussions of the event, however, go beyond this. Stephen Harper's government used this attack, as well as an assault on two soldiers on Oct. 20, 2014 in Saint-Jean-sur-Richelieu, near Montreal, to push Bill C-51 through Parliament. This controversial bill, now law in Canada, gives intelligence agencies increased power and diminishes the civil rights of Canadians. (…) Why did the RCMP commissioner say there had been "no advance warning" when the evidence suggests there were at least six warnings? Why was the B.C. legislature taking precautions because of these warnings while security forces in Ottawa were caught flat-footed? Why did security forces find it necessary to shoot Zehaf-Bibeau 31 times? Postmedia Network (Hamilton Spectator, A11, Waterloo Region Record, Ottawa Citizen)

* **Defending liberal democracy**
An opinion piece states, "Canadians are truly privileged to live in a stable liberal democratic country. We enjoy rights and freedoms that people in other parts of the world can only dream of but dare not push for out of fear of being killed. However, there are dark forces determined to destroy liberal democracy and kill Canadians. Thankfully, the people of this country can count on the brave women and men of the Canadian Armed Forces to defend democracy. And that makes our military personnel targets for cowardly terrorist attacks. (…) In a compelling chapter about the Islamic State, also known as ISIS, ISIL or Daesh, Welsh chronicles the rise of the terrorist force in the summer of 2014. The jihadists captured large swaths of territory in Iraq and Syria, launching a reign of terror and religiously motivated mass murder targeting Assyrian Christians and other ancient ethnic and religious minorities. (..) The threat to liberal democracy posed by Islamism was raised over a decade ago by American author Daniel Pipes. For years, he was lambasted for writing and speaking about the Islamist threat. But world events have vindicated his work." Kingston Whig-Standard (2016-10-20)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Record Drug Bust: Seizure of 202 kg of cocaine at Coutts crossing largest in Prairie history
Authorities intercepted $10 million worth of cocaine at Alberta's Coutts border crossing in the biggest seizure of the drug in Prairie history. The 202 kg of drugs were packed with goods in three separate shipments aboard commercial trucks, beginning with 60 packages of cocaine weighing 69 kg secreted in a cargo of televisions discovered Sept. 2. "Officers noted a small, dense package in a vacuumsealed bag

that tested positive for cocaine," said Ana Maria Coutu of the CBSA. Another 40.5 kg of the drug was found two days later amid cargo of 2,000 Halloween costumes - the two making up the largest weekend seizure numbers for the Canada Border Services Agency's (CBSA) Prairie region. But the largest was yet to come on Oct. 10, when 83 bricks of cocaine weighing 92.74 kg were seized from another commercial truck, where it was hidden throughout its cab, said Coutu. "This is the largest cocaine seizure in Prairie region history ... it was destined for an Alberta business," she said. In all, five men have been charged in the three busts with importing a controlled substance and possession for the purpose of trafficking. The RCMP continues to investigate for any links between the three, whose suspects hail mainly from B.C., said Insp. Allan Lai. DEPORTATION DRAMA: Mother of four fights order to leave

A young mother facing deportation to the U.K. after spending much of her life in Canada issued a plea Thursday to be allowed to stay in the country she considers home, a day before her strange saga goes before a hearing that may determine her fate. Propped up in a hospital bed and groggy from pain medication, Fliss Cramman said she is terrified of being forced to return to England, where she was born but left at the age of eight when her parents moved to Ontario. "I'm just so scared to go back - I don't know anybody, I don't know anything," she said through tears, while two corrections officers stood guard in her drab hospital room. "If I leave here, I'm leaving my heart behind big-time. This is my homeland." The 33-year-old mother of four young daughters, who were all born in Ontario, only became aware that she was not a Canadian citizen following a recent drug conviction and incarceration. The Canada Border Services Agency looked into her status while she was in custody, discovering that her parents and several foster care families that took her in starting at the age of 11 failed to secure her Canadian citizenship. As a result, the agency says it wants to deport her by Dec. 16, despite her physician's assertion that she is in fragile health and needs to remain in the country for about 18 months to properly recover from a series of colon surgeries done after she was rushed to hospital from a prison facility in Dartmouth on Aug. 12. At a hearing in the basement of the hospital late last month, the Immigration and Refugee Board agreed Cramman would not be able to travel for "at least a couple of months." It said it would review the matter, along with a possible release from custody, at another hearing Friday. Advocates with the Elizabeth Fry Society and a local refugee group agree and have taken on her case, which has attracted attention from across the country. She was convicted of offering to traffic heroin in 2014 and sentenced to 27 months in prison. She served two-thirds of her sentence and was released on parole, but was detained by the Canada Border Services Agency to start the deportation process. Canadian Press (Chronicle Herald, A1, The Guardian, B5, Cape Breton Post, Whitehorse Daily Star, Times Colonist, London Free Press, Vancouver Sun, * StarPhoenix, * Windsor Star; * The Province, * Waterloo Region Record, * Edmonton Journal, * Calgary Sun, * Calgary Herald, * National Post, * Leader-Post)

*** FDFA reports September land border and airport results**

The Frontier Duty Free Association (FDFA) has released the latest duty-free sales statistics, provided by the Canadian Border Services Agency for September 2016. The overall national land border duty-free sales figure for the month was C$15.7m ($11.8m) an increase of 7.80% on September 2015. January/September 2016 sales increased around 5.95% compared to the same period in 2015, while sales at land border duty-free shops for January/September 2016 equalled C$117m. On the airport front, the national duty-free sales figure for September was C$36m, an increase of 8% compared to September 2015. January/ September 2016 sales saw an approximate 7.3% increase compared to the same period in 2015. Sales at Canadian airport duty-free shops for January/September 2016 reached C$306m. DFNI Online

*** Airport delays costing economy, critics say**

Officials at Pearson International Airport are pressing Ottawa to cough up more funding to ease backlogs at security and customs checkpoints that have left thousands of air travellers fuming. The problem even has the attention of the prime minister's office after Gerald Butts, the principal secretary to Justin Trudeau, took to social media to express his frustration at recent lineups. "Friday of Thanksgiving weekend and half the security lines are closed at Pearson. #fail," Butts said on Twitter on Oct. 7. But the long lines at peak times are testing more than the patience of passengers - they mean delays, even

missed flights that give Canada's busiest airport a black eye and ultimately cost the economy. Transport Minister Marc Garneau told the Star this week that he's heard the complaints and is looking to act. Certainly Ottawa has been feeling the heat on the issue. The Toronto Board of Trade has joined forces with its counterparts in other major cities to demand Ottawa fix the problem. And now the Greater Toronto Airports Authority, which operates Pearson airport, is adding its voice too. In a Friday presentation to the Commons' finance committee - which is conducting pre-budget hearings - the authority will press Ottawa to invest millions of dollars more to improve security and border services. Scott Collier, the authority's vice-president of customer and terminal services, will call for at least $5 million in extra funding for the Canada Border Services Agency, responsible for customs and immigration screening of arriving international passengers, to improve services at Pearson. During May, authority staff were forced to hold passengers outside a jammed customs hall an average of twice a day with wait times topping 30 minutes. The authority is also urging Ottawa to earmark another $20 million to the Canadian Air Transport Security Authority (CATSA) to improve security screening at Pearson alone. Toronto Star, A7

*** CATSA testing new, improved security system in Montreal, in Calgary later in October**

The agency that oversees airport security is testing a new way of screening that it hopes will ease the backlogs and hassles endured by travellers. Known as CATSA Plus, the new system features motorized rollers to help move bins, a remote room where agents monitor the X-ray images and an automatic return system that ensures a steady supply of bins. It also has a redesigned area where passengers can collect and repack their belongings after screening. "This was designed to improve the passenger experience and the flow of passengers through the checkpoint," Mathieu Larocque, spokesperson for the Canadian Air Transport Security Authority (CATSA). The agency installed the new arrangement on a single security line at Montreal's Pierre Elliott Trudeau International Airport in mid-August. "Early results show it's very positive of the flow of passengers and passenger satisfaction," Larocque said. The new process will get a bigger workout later this month. That's when six security lines begin operating in the new international terminal at Calgary's airport. Toronto Star, A7

Airport screening could be faster, smarter, safer

An opinion piece by Senator Colin Kenny states, "If you've flown anywhere in Canada recently, you will have noticed that wait times are getting worse. Since 2013, the length of screening times has deteriorated so badly that the Canadian Airport Council referred to security screening services as a crisis. Not only are we waiting more, we are paying more. And getting less service. According to the World Economic Forum, Canadians pay some of the highest air travel prices in the world. One part is a fee for the air traveller's security charge (ATSC). The charge was introduced after 9 /11 by the Chretien government to fund air transport security and the new Canadian Air Transport Security Authority (CATSA). It has turned into a major cash grab by the Finance Department. Since 2011, the CATSA budget has declined even though ATSC revenue has increased. From 2010 to 2013, $260 million was siphoned into the consolidated revenue fund... Perhaps our greatest failing is NEXUS, the trusted traveller program. That's the background check where travellers volunteer their information to border officials to become pre-screened. They are then deemed "trusted travellers" and expedited through customs. NEXUS cardholders are also offered a special line at security screening. The problem is, it's not that special. NEXUS users are still forced to submit to the same cumbersome screening procedures as other passengers. If our border officials allow these pre-screened travellers to enter the country quickly and safely, why doesn't the same practice apply at airport security? Replacing this "one-size-fits-all" approach to passenger screening with a risk-based, intelligence-driven approach was a key recommendation in the Emerson review. The United States long ago adopted this model. As a result, "trusted travellers" are able to pass through security quickly. In fact, the processing rates at U. S. airports are twice as fast as in Canada. We could have a security screening system that works not just for a select few, but for everybody. Trusted travellers shouldn't have to take off their belt or shoes or separate their laptops. This would be particularly beneficial to elderly and disabled passengers." *** McCallum doesn't want to let fraudsters 'off the hook' through moratorium on citizenship revocation**

The federal government is trying to revoke the citizenship of fraudsters, and that's why it won't agree to a moratorium on citizenship revocation, says Immigration Minister John McCallum. "We have large numbers of a criminal element unveiled by the RCMP, and reported on by the auditor general. It was actually under the previous government that [investigations began that] we are now dealing with... and those people have really, truly abused our citizenship. So it would not be right to have a moratorium, and let them off the hook," he said in a phone interview Thursday. Pressure ramped up on the government to stop revoking citizenships after a refugee lawyer said that Democratic Institutions Minister Maryam Monsef could be at risk of losing hers, and even being deported. She revealed last month that she had recently learned she was born in Iran and not Afghanistan, like she had thought. Her mother, she said, hadn't thought it mattered. Ms. Monsef said she was in the process of fixing the mistake on her passport. But Ms. Monsef's citizenship could be revoked if her birthplace was misrepresented on her refugee claim to Canada and that was relevant to the decision on her case—even if it was an honest mistake or her mother was responsible, Toronto immigration lawyer Lorne Waldman told the Canadian Press last month. He is part of a group bringing a constitutional challenge against a law brought in by the previous Conservative government, known as it was as C-24, that means a person who's received notice of citizenship revocation doesn't have a right to an appeal or court hearing. In a written statement provided to The Hill Times, Mr. McCallum's office said "the recent increase in citizenship revocations is the result of large-scale fraud investigations led by our RCMP and [Canada Border Services Agency] partners that began under the former Conservative government. "These investigations led to criminal convictions of several immigration consultants, and notices of intent to revoke citizenship were sent to their clients who had provided fraudulent documents to suggest they were living in Canada when they were living abroad, in order to gain citizenship. Others changed their identity in order to hide criminal backgrounds. "These applicants were never entitled to Canadian citizenship." According to the statement, 80 per cent of citizenship revocations since May 2015 were due to "residency fraud, criminality, and identity fraud," while the remainder were "for other serious misrepresentations." The Hill Times

*** Lululemon warns it might move HQ out of Vancouver**

Lululemon is warning that it may forced to move its headquarters out of Canada because the federal government's temporary foreign worker program is limiting its ability to stretch its wings. The Vancouver-based apparel company best known for its yoga pants currently has 1,200 employees working in its head office in Vancouver and says it needs to hire specialized workers to further expand. "In order to continue growing in a very competitive marketplace, we depend on highly skilled and specialized talent. Currently, there is a shortage of the kind of specialized talent our industry needs here in Canada," wrote the company in a report submitted to the House of Commons Finance Committee. Lululemon was among dozens of other companies that presented the Government of Canada with recommendations on the temporary foreign workers program last month. The report will be responded to with a plan within 120 days. CBC News

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Snapchat, Skype, BBM not protecting users' privacy, says Amnesty International**

Major messaging services like Snapchat, Skype and BlackBerry's BBM are not taking basic steps to ensure privacy, according to Amnesty International. The organization said this failure has serious human rights repercussions since it leaves users, and particularly activists, vulnerable to spying from cybercriminals and government agencies. "If you think instant messaging services are private, you are in for a big surprise," Sherif Elsayed-Ali, the head of Amnesty International's technology and human rights team, said in a news release. "Young people, the most prolific sharers of personal details and photos over apps like Snapchat, are especially at risk," he added. The organization conducted a privacy assessment of the most popular messaging apps in the world. Some of the other apps included in the report are Facebook's messaging service and WhatsApp, Apple's iMessage and Facetime, Google's Allo, Duo and Hangouts, Tencent's QQ and Wechat, and Telegram. CBC News

*** Security breach caused online frenzy**

Last month Yahoo announced that at least 500 million accounts were hacked, leaking important personal information. This security breach caused an online frenzy that left many people afraid of having their online information stolen, both in the U.S. and right here at home in Nova Scotia. "People in Nova Scotia are at no greater nor lesser risk than anyone else in the world," said Dr. Wayne Patterson, professor of Computer Science at Howard University. ". . . some prominent Nova Scotians such as Premier Stephen McNeil, Sidney Crosby or Ellen Page might need extra levels of protection." But Patterson suggested keeping information as secure as possible by backing up documents onto a removable device, such as a memory stick. "Some vendors may suggest that you protect your data by storing it in a 'cloud,'" said Patterson, a New Brunswick native. "This is certainly becoming more and more popular, but it is a fairly unsettled issue amongst those of us who do research in cybersecurity." In Yahoo's case, they had recently shut down the division of research staff specifically addressing security issues and were in the process of rebuilding. But Yahoo is not the only company that has been breached in the past. "Microsoft was notorious for many years in putting the most minimal effort in their software development on providing strong security," said Patterson, director of the Cybersecurity Research Center, associate vice provost for Research and senior fellow for Research and International Affairs in the Graduate School at Howard. Chronicle-Herald, E3

*** Verizon relooking at Yahoo deal after millions hacked**

Verizon is doubling down on language it used last week to describe the massive, historic data breach affecting an estimated 500 million Yahoo accounts - a move that puts even greater pressure on the beleaguered web company as it seeks to close a sale to the telecom giant. At the moment, "we have to assume (the breach) will have a material impact on Yahoo," said Verizon chief financial officer Fran Shammo on an investor call Thursday. A change in Yahoo's business that's deemed "material" is one that could make the Internet firm much less attractive to Verizon financially, and under the terms of the deal could allow Verizon to back away from the transaction. Verizon's lawyers talked by phone with Yahoo for the first time Wednesday to discuss the impact of the breach on Yahoo's business, according to Shammo. Verizon will take "some time" to determine the fate of the deal, Shammo said, unless Yahoo "comes up with a different process" for interacting with its buyer. Washington Post (Waterloo Region Record, C7; Toronto Star)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Drug seizure said to be one of largest in B.C.

A routine traffic stop in Nanaimo led to the seizure of one kilogram of fentanyl, one of the largest seizures of the potent drug in B.C. A Vancouver Island man has been arrested as the investigation continues. Nanaimo RCMP officers checked a suspicious vehicle near Cassidy Airport on Oct. 10 about 5 p.m. Officers pulled over the vehicle and arrested the driver. Police found one kilogram of a powdered substance that, after lab testing, has been confirmed to be fentanyl. Island District RCMP spokeswoman Cpl. Tammy Douglas said the seizure is one of the largest for the B.C. RCMP in recent years. A kilogram of fentanyl can be ordered over the Internet and shipped from China or Mexico in small packages that go undetected by the Canada Border Services Agency. Times Colonist, A4

Don't bother coming here if you're a crook

Mounties in B.C. announced this week they were a mapping out a "red zone" for downtown Maple Ridge, a suburb east of Vancouver. A 15-block section known for high crime would become a "designated area" where habitual offenders could be arrested on sight. The National Post's Tristin Hopper called up the experts to get the details on the new crime-fighting tool. (…) Red zones are mainly a B.C. thing. They exist in Vernon, Kelowna, Kamloops and Nanaimo, for example. "I've never heard of it, and I've served all over Alberta," said Sgt. Darrin Turnbull, a spokesman with the Alberta RCMP. However, it's routine for offenders to be ordered to avoid locations connected to their crime. The notorious Atlantic Canadian art thief, John Mark Tillmann, has been ordered to stay away from museums, libraries and archives. Judges may also impose banishment when a regular restraining order doesn't work. In 2002, spousal abuser Ronald Felix was banished from his hometown of Tuktoyaktuk, N.W.T., because it was deemed to be too

small for him to keep the requisite 100 metres or so distance from his victim at all times. (...) Sort of. Red zones can be great at clearing a specific area of crime. But, as has been noted in other communities, the ultimate effect can be to push criminals into another part of town. Vernon RCMP have reported their red zones instantly clear areas of drug activity and property crimes, but that as offenders were driven out "they move to another coordinate around the city." In Kamloops, a similar result prompted city officials to compare red zones to a balloon: push down on one part of the balloon, and the air rushes to another part. (...) Parole conditions can be extensive and, with proper justification, a geographic ban isn't that big of a stretch. Where it might get murkier is in cases where someone has not yet been convicted, yet is still banned from the red zone under release conditions. This is the idea with the Maple Ridge red zone: it is being used to deal with offenders who continue break-ins "even after they have been arrested and are awaiting their court process to begin." Imposing behaviour conditions is standard procedure when an accused criminal is released. The standard Canadian "promise to appear" form even includes a blank section where an arresting officer can write in all the places the accused can't go. Still, there is a judge in the equation - a red zone ban can't simply be a unilateral action by the RCMP. National Post

Dealer jailed as fentanyl conference gets underway

A baby-faced drug dealer nabbed in the first Edmonton seizure of the deadly fentanyl opioid by organized crime investigators was sentenced to 5 1/2years in prison on Thursday. Adrian Laureno Cambiazo, 21, earlier pleaded guilty to possession of fentanyl for the purpose of trafficking, possession of cocaine for the purpose of trafficking and possession of ecstasy for the purpose of trafficking in relation to a March 18, 2015, bust by members of the Alberta Law Enforcement Response Teams (ALERT) - their first such seizure in Edmonton. (...) Speaking at the opening of a fentanyl conference hosted by the RCMP in Sherwood Park on Thursday and Friday, Edmonton Police Service Insp. Dwayne Lakusta said his force has provided extensive training to front-line officers about how to recognize and manage the drug if they come across it, and has introduced safe handling procedures for dealing with fentanyl. Lakusta, who leads the force's Edmonton Drug and Gang Enforcement (EDGE) unit, said they have also acquired an instrument used to safely analyze drugs through their packaging. Police are also hoping to tackle the fentanyl issue through the courts, and are working with Crown prosecutors and the medical examiner's office on a number of cases where investigators are trying to gather enough evidence to lay manslaughter or criminal negligence causing death charges against traffickers or dealers who have supplied drugs that have led to overdose deaths, Lakusta said. Although many of the 400 attendees at the RCMP's conference work in law enforcement, several speakers stressed that "we cannot arrest our way out of the problem." Much of the focus was on safety for responders who encounter fentanyl. A dose of just 2 mg, about the size of two grains of salt, is lethal. British Columbia RCMP Cpl. Eric Boechler showed offwhat he said was one of the first Naloxone nasal spray kits to arrive in Canada. Naloxone blocks and reverses the effects of opioids. Police forces, health workers and social agencies across Canada have begun using injectable doses of Naloxone to prevent overdose deaths, but Alberta RCMP is in the process of switching to a nasal spray version that is easier to use. Edmonton Journal, A3

* **B.C. attempts to seize Burnaby house once used as grow-op**

Vancouver real estate agent Maurizio Mastronardi says he plans to fight the B.C. government's attempt to seize a North Burnaby property he owns, which was once the site of a marijuana grow-op. Earlier this month, B.C.'s Director of Civil Forfeiture filed a claim in the Supreme Court of B.C. seeking to seize a property on Braeside Drive in Burnaby. Mastronardi, a licensed realtor with an east Vancouver brokerage, said a marijuana grow operation at the rental property had been installed by former tenants without his knowledge. He said he was surprised on Wednesday to learn of the civil forfeiture action, coming three months after criminal charges against him were stayed because of court delays. (...) In February of 2011, Burnaby RCMP officers arrested Mastronardi as he left the property, which was assessed last year at $1.65 million. Soon after, Mounties executed a search warrant and found a marijuana grow operation with 152 plants, 41 pounds of recently harvested marijuana bud, a hydroelectric bypass, and other growing equipment, according to court filings. Mastronardi and four others were charged with possession and production of a controlled substance and theft of electricity. A day before the 2011 Burnaby bust, Ridge Meadows RCMP executed a search warrant on a different property in Maple Ridge also owned by Mastronardi, the civil claim notes, where officers found a 443-plant marijuana grow-op. Vancouver Sun, C1

*** Items gathered at Baylee Wylie death scene presented in murder trial**
The jury in Devin Morningstar's first-degree murder trial heard about and saw a number of items of interest Thursday as the Crown started presenting evidence gathered by the RCMP in the death of Baylee Wylie in December. Those items included a box cutter, a piece of broken mirror, a curtain rod, a Big 8 bottle of green liquid, rubber gloves and a rope. The items were presented or mentioned during the testimony of RCMP Cpl. Patrick Gould. His testimony is to continue Friday. CBC News

*** Decision in Yellowknife journalist's obstruction trial expected today**
A ruling is expected this afternoon in the case of a Yellowknife reporter charged with obstruction of justice. John McFadden, a journalist with Northern News Services, was arrested in 2015 while taking photographs of RCMP officers searching a parked van outside the Elks Club in downtown Yellowknife. His trial began in June and wrapped up in September. Today's decision is scheduled to be delivered by territorial court judge Justice Garth Malakoe at 1:30 p.m. in the Yellowknife courthouse. CBC News

*** La GRC enquête sur plus de 80 incendies suspects dans le comté de Kent**
La GRC enquête sur une série d'incendies jugés criminels. Plus de 80 feux suspects se sont produits depuis septembre 2014 dans différentes localités servies par les détachements de Richibucto, Bouctouche et Elsipogtog. La force policière a déterminé que tous ont été allumés délibérément. Environ la moitié sont survenus en soirée ou pendant la nuit dans des résidences, des chalets, des granges, des remorques et des véhicules vacants ou abandonnés. Les autres incendies sont survenus dans d'autres structures et propriétés, comme des commerces et des logements inhabités qui n'étaient pas occupés au moment de l'incident. Personne n'a été blessé jusqu'à présent. Les communautés de Saint-Paul, Harcourt, Beersville, Pine Ridge, Saint-Norbert ou encore West Branch ont été victimes du ou des malfaiteurs. L'Acadie Nouvelle

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Dangerous offender's sentence is reduced**
Although he failed in his attempt to have his conviction and dangerous offender designation overturned, Donald Francis Wilton had some success in appealing the length of his sentence. Wilton was found guilty in November 2012 of break, enter and commit sexual assault, resulting from an offence in the summer of 2008 in which he broke into a residence and stripped to his underwear before lying on top of a 13-year-old girl and touching her sides. DNA evidence linked Wilton to the crime. With 25 convictions for violent or threatening behaviour, the Crown applied for, and received, a dangerous offender designation against Wilton. He was handed a prison sentence of 8½ years (with 45 months remaining after remand credit) to be followed by eight years community supervision. The 39-year-old appealed and, in June, the Saskatchewan Court of Appeal heard arguments from Crown prosecutor Dean Sinclair and Wilton's lawyer Kevin Hill. (…) While the province's highest court didn't agree with Wilton's position on conviction or the DO finding, it found Chicoine had erred in sentencing and replaced the 45 months with 36. Leader-Post, A11

*** Drug-smuggling lawyer offto prison... again**
A lawyer convicted of drug trafficking for smuggling meth into the Edmonton Remand Centre and giving it to an inmate has been ordered to surrender himself into custody after losing his appeal. According to a Court of Appeal of Alberta decision Thursday, Justin Sidhu, 33, was given a week to turn himself in. Sidhu had begun serving a four-year prison sentence in September 2015, but was released on bail a week later pending his appeal. His conviction appeal was heard Oct. 7 and a three-judge panel reserved its decision. In the decision, the panel dismissed the appeal. Postmedia Network (Edmonton Sun, A7, Edmonton Journal, Calgary Sun, Ottawa Sun, Toronto Sun, Winnipeg Sun)

*** Convicted priest faces new sex abuse allegations**
New allegations of sexual assault have emerged against a Winnipeg priest and convicted sex offender, CBC News has learned. Four men have come forward alleging Ronald Léger sexually assaulted them beginning when they were children aged 10 to 12, during the 1980s. All frequented the youth drop-in centre he founded, Teen Stop Jeunesse (TSJ). (…) Léger was sentenced to two years in prison for those

assaults. In September, his application for full parole was denied. A federal parole board determined he is an "undue risk." Instead, the board voted to grant him day parole for six months after determining Léger had a one-in-five chance of reoffending and he scored "just over the low threshold" as a moderate risk to reoffend sexually. CBC News

*** Le suicide et l'homicide possibles**
Nicole Rainville peut s'être suicidée ou avoir été victime d'un homicide. La preuve pathologique laisse les deux portes ouvertes, convient l'expert de la défense. Depuis le début, les avocats de Jacques Delisle défendent une thèse : Nicole Rainville, dépressive et handicapée, s'est enlevé la vie le 12 novembre 2009 en se tirant une balle dans la tête à l'aide du pistolet de calibre 22 de son mari. Selon la défense, la septuagénaire tenait l'arme à l'envers, de sa main gauche, la seule valide. D'abord pour les émissions Enquête et Fifth Estate, puis pour la défense, le Dr Michael Shkrum, pathologiste judiciaire de London en Ontario, a révisé le cas à l'aide de photos et de radiographies. A la lumière de la preuve pathologique, l'expert réputé affirme depuis qu'il y a un doute raisonnable que Nicole Rainville se soit suicidée. Contre-interrogé par le procureur de la Couronne Me Michel Fortin, le pathologiste expert du clan Delisle a admis que si le suicide ne peut être exclu, l'homicide est aussi une possibilité. Le Soleil, 8

Oland decision could come Monday
Dennis Oland should know on Monday whether he'll be able to walk out of court a free man or be sent back to federal penitentiary in Renous to continue serving a life sentence for killing his father, Richard. The New Brunswick Court of Appeal hopes to hand down a decision at 11 a.m. on Monday, providing the three judges involved in the Oland appeal can reach agreement over complex issues in the case. The court could reject the appeal and uphold Oland's second-degree murder conviction, as argued by Crown prosecutors. It also could overturn the conviction and either enter an acquittal or order a new trial - options suggested by Oland's defence team. Daily Gleaner, A1 (Telegraph Journal, Times & Transcript); Canadian Press (The Guardian, National Post, Chronicle Herald); * Presse canadienne (Acadie Nouvelle)

Ontario to limit inmate isolation
Ontario is changing regulations to make the use of segregation in its jails and correctional facilities "a measure of last resort" and cutting in half the amount of time inmates can be kept in isolation. Correctional Services Minister David Orazietti says segregation should be used under the least restrictive conditions possible while still maintaining inmate and staff safety. There will also be a limit of 15 consecutive days in disciplinary segregation, down from the current maximum of 30 consecutive days. Orazietti says the loss of all privileges in disciplinary segregation will be eliminated and replaced with alternative sanctions and increased incentives for inmates to maintain good behaviour. Windsor Star, SR5.

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Drug overdoses take a grim toll in B.C
The fentanyl crisis continues its grim toll with the latest statistics showing more people in B.C. have died from drug overdoses in the first nine months of this year than in all of 2015. There have been 555 deaths as a result of illicit-drug overdoses from January through September, eclipsing the 508 drug-related deaths in B.C. in 2015. The total number of illicit-drug overdoses in September was 56, up from 49 in August, according to the latest statistics released Thursday by the B.C. Coroners Service. The powerful opioid fentanyl was detected in 302 deaths - 61 per cent of all drug deaths from January through August this year - more than triple the number of fentanyl-related deaths compared with the same period last year. "The ongoing high rates of fatal overdose in British Columbia demonstrate the need for continued collaboration, focus and energy," Evan Wood, interim director of the newly created B.C. Centre on Substance Times Colonist, A1; Canadian Press (Red Deer Advocate, National Post, The Guardian, The Telegram, CTV News, Calgary Herald, Globe and Mail) (2016-10-21); * CBC News (2016-10-20)

Surdoses mortelles en hausse en C.-B.

Le nombre de surdoses mortelles en Colombie-Britannique pour les neuf premiers mois de 2016 a dépassé le total de l'an dernier, a rapporté le ministère de la Sécurité publique de la province. Depuis le début de l'année, le bilan s'élève à 555 morts contre 508 cas pour toute l'année 2015. Le fentanyl est la substance la plus souvent en cause, souligne le Ministère. Dans plus de 60 % des cas mortels, des traces de l'opioïde ont été retrouvées. Le bureau du coroner presse les consommateurs de drogue de prendre des mesures pour réduire les risques. Le Soleil, 29

* **Increase in fentanyl deaths sparks justice, health summit in Nova Scotia**
The province's deputy ministers of health and wellness, and justice are calling a meeting to respond to opioid overdoses that are claiming the life of a Nova Scotian every six days. That rate is expected to surge with the rise in street fentanyl. A government email leaked to CBC shows Nova Scotia has averaged 60 opioid overdose deaths per year for the last decade. That's the first time the province has put a number to the deaths from opioid misuse. The deaths are mostly from OxyContin alone, or in combination with alcohol, benzodiazepenes and other prescription and/or street drugs, said the email. But the death toll is even higher so far this year, according to Dr. Gus Grant, the registrar and CEO of the College of Physicians and Surgeons of Nova Scotia. He said approximately 70 Nova Scotians have fatally overdosed. "Can you imagine another health crisis that took the lives of 70 young people? Can you imagine the impact that would have, and it's still only October?" said Grant. CBC News

* **Les drogues de plus en plus contaminées avec du fentanyl**
Consommer de la drogue est plus dangereux que jamais au pays, s'il faut en croire Santé Canada, qui trouve de plus en plus de traces de fentanyl dans les échantillons de substances illicites qu'elle analyse. Selon des données obtenues par Global News, du fentanyl a été découvert dans 2503 échantillons de différentes drogues analysés depuis le début de l'année, en hausse de 43 % par rapport à 2015. Plus de 20 % de l'héroïne vendue dans la rue, et près de 5 % de la cocaïne, serait contaminé avec cet analgésique 100 fois plus puissant que la morphine. «2016 est une année comme on en a jamais vu dans l'histoire canadienne de la drogue et il n'y aura pas de retour. Il n'y a probablement pas eu d'époque plus dangereuse pour être un consommateur de drogue», s'est inquiété Michael Parkinson, un spécialiste du conseil régional de prévention du crime de Waterloo, en Ontario. La mortalité associée à la consommation de fentanyl, voulue ou non, a grimpé en flèche au Canada. Alors que 655 décès par surdose avaient été répertoriés à la grandeur du pays entre 2009 et 2014 par le Centre canadien de lutte contre les toxicomanies, 238 ont été recensés lors des six premiers mois de 2016 seulement en Colombie-Britannique. Un nombre en hausse de 20 % par rapport à la même période en 2015. Journal de Montréal (Journal de Québec) (2016-10-21); Global News (2016-10-20)

* **Bitter Pills**
They lost their children to a powerful drug and hope to spare others from enduring the same pain. "I'm trying to change it so they don't have to walk around with their son's ashes," said Arlene Last-Kolb, whose 24-year-old son Jessie died of a fentanyl overdose on July 18, 2014. "I don't want others to go through what we went through," added Last-Kolb as her voice cracked with emotion. Fentanyl, carfentanil - a drug 100 times more toxic than fentanyl - and other powerful opioids have triggered police warnings across the country. In Manitoba, 29 deaths were linked to the drugs last year, up from 75 such deaths between 2009 and 2013. Several mothers were among those who came to the Manitoba Legislature Thursday to support an NDP resolution for a provincial anti-opiate strategy. That resolution aimed to ensure the antidote naloxone, which can prevent deaths from fentanyl, is equally accessible throughout the province. Fort Garry-Riverview MLA James Allum's resolution also called to reduce treatment wait times for fentanyl users. Winnipeg Sun, A3; Winnipeg Free Press

* **Maple Ridge seeks overdose kits in schools**
The Maple Ridge school board is asking the provincial government to put anti-overdose kits in all B.C. high schools as part of a package of measures to combat the rising number of fentanyl deaths. Board vice-chairwoman Susan Carr's motion, passed this week, seeks "provincial standards for addressing drug use and possible incidents of overdose in B.C. schools, including protocols for training and administering of naloxone (Narcan) in all middle and secondary schools in B.C." Postmedia Network (The Province, A16, Vancouver Sun); CBC News

* **P.E.I. getting fentanyl patch exchange program**
A program to stop fentanyl abuse and the deadly overdoses it can cause is coming to P.E.I. A patch exchange program could be in place by the spring. Fentanyl is an opioid, much more powerful than morphine or heroin. It's prescribed in patch form to treat extreme pain, but if those patches aren't disposed of properly they can easily be used to make and sell the drug on the street. There have only been two fentanyl-related deaths on the Island, according to Michelle Wyand, the registrar of the P.E.I. College of Pharmacists, but she said the program is worth implementing. CBC News

* **Fentanyl filled drug vacuum, and brought waves of deaths**
It is known as the law of unintended consequences. When the opioid painkiller oxycodone, widely sold under the brand name OxyContin, was discontinued in 2012 because of widespread abuse, a cheap, deadly drug filled the vacuum. Drug traffickers began to import low-cost, highly potent fentanyl from China to create counterfeit OxyContin pills. Fentanyl, a prescription painkiller 50 to 100 times more powerful than other narcotics, began turning up in heroin, cocaine, crystal meth and fake Oxy. And the body count began to rise. In 2014, of the 300 illegal-drug overdose deaths, 25 per cent involved fentanyl, according to the B.C. Coroners Service. Last year, 465 people died in B.C. from illicit drug overdoses, and fentanyl was detected in 30 per cent of those deaths. So far this year, 555 people have died of illicit-drug overdoses. Fentanyl was detected in 61 per cent of the deaths recorded January through August. If the trend continues, more than 700 people will die from drug overdoses this year. Vancouver Island has been particularly hard hit: The region has the worst rate of illicit-drug overdose deaths in the province. In the first nine months of 2016, there were 107 deaths on the Island and 44 in Victoria, placing the city behind only Vancouver (110) and Surrey (71). What makes fentanyl so dangerous is its potency. A dose the weight of a grain of sand can bring on a heroin-like high. A dose the weight of two grains of sand can kill a healthy adult. Times Colonist, A3

* **Police board: Policy on carding being posted**
The Hamilton Police Services Board has approved the police capital expenditure plans for 2017 to 2026 — including a new $25 million police Mountain station in 2025. No capital expenditures were listed for 2017 because the board and city council have already approved capital expenditures in 2017 for the new $24-million investigative and forensic building to be constructed next year, said board chair Lloyd Ferguson. (...)A draft of the proposed new Hamilton police policy on carding is being posted to the police website to allow for public input. The draft policy on the "collection of identifying information in certain circumstances — prohibition and duties" is to be posted Friday. The public can register online to make presentations on it to the next police services board meeting on Nov. 17. Carding is an intelligence gathering measure involving the stopping, questioning, and documenting of individuals when no particular offence is being investigated. The draft states that the chief shall ensure the collection of identifying information is done in a manner consistent with the Police Services Act, the Ontario Human Rights Code, and "shall not be based on racial/biased profiling or done in any arbitrary way." See hamiltonpolice.on.ca for more. Hamilton Spectator

* **Campaign underway to help protect youth from cybercrime, cyberbullying**
Efforts are underway to help Fredericton's youth protect their online reputations and avoid cybercrime and cyberbullying. The Fredericton Police Force, Canadian Association of Chiefs of Police and a Telus Wise are working together to roll out a cybersecurity campaign called Smart Social. It will run until the end of the year and is designed to engage local 15 to 22 year olds and their schools in a discussion about cybersecurity. In a press release, Chief Leanne Fitch said everyone has seen the often devastating impact of cybercrime and cyberbullying. "Youth are among the most vulnerable segment of our community and suffer the most from victimization. We hope this campaign has a positive impact on the youth of our community in making their school and young adult experiences safer and happier," Fitch said. Police resource officers will be providing information on cyberbullying, sharing intimate images and identity theft with schools. Daily Gleaner, A3

* **Renowned Communicator Visits School, Focuses on Dangers of Bullying**
Elementary school students in Bulyea took in a powerful presentation Wednesday regarding bullying and cyber-bullying. Retired Saskatoon Police Force Detective Brian Trainor has traveled from coast to coast spreading the word about the sometimes tragic effects of harassment. He specifies that his police work

dealt with bullying on almost every call. "Most of the calls that the police are called to deal with some form of a power abuse or a power imbalance and that's the very definition of bullying. Getting into talking to kids about bullying and then extending into cyber-bullying is just kind of a natural progression from my years of policing." Without trying to be too blunt, especially for online targeting he says it starts with education at home and the raising of the children. Discover Humboldt (2016-10-20)

La violence n'est pas attribuable qu'aux bandes de rue
Les bandes de rue ne sont pas les seuls responsables de la violence, selon Prévention du crime Ottawa (PCO). Les responsables de la Stratégie relative aux bandes de rue dénombraient huit bandes de rue en activité qui regroupaient 435 membres, en 2015. «Le commerce de la drogue, les infractions relatives aux armes, la violence et le commerce du sexe ne sont plus l'apanage de bandes de rue bien organisées. Actuellement, la violence dans la rue est plutôt attribuable à des individus vaguement reliés. Il s'agit surtout de jeunes hommes entre 20 et 30 ans», peut-on lire dans le rapport qui fait état des trois premières années d'opération de la Stratégie relative aux bandes de rue. Malgré la hausse des fusillades depuis le début de l'année 2016, l'important est de changer la façon d'opérer afin d'enrayer la violence dans les rues et mieux répondre aux activités criminelles qui surviennent dans les rues d'Ottawa, soutient PCO. Bien que la criminalité soit en baisse, selon eux, les infractions en lien avec les armes à feu inquiètent. Le Droit, 9

* **Gangs de rue et prostitution : le silence des victimes complique les choses**
Les gangs de rue se livrent notamment à la prostitution comme source de revenus. Or, les femmes qui sont embrigadées de force dans cette forme de commerce du sexe observent souvent la loi du silence, ce qui complique le travail des intervenants communautaires. C'est là l'un des constats faits à l'occasion du forum public sur les gangs de rue à Ottawa et à Gatineau, organisé par Radio-Canada, jeudi après-midi, au collège La Cité. Des spécialistes en traite de personnes et en intervention communautaire ont raconté la difficulté qu'elles éprouvent à obtenir des témoignages des victimes lorsque des accusations sont portées contre de présumés recruteurs ou proxénètes. « Ça prend beaucoup de temps avant que la victime soit prête à pousser pour dire : "Voici, c'est cette personne-là qui est venue me chercher." », a expliqué la responsable du volet éducation chez Personnes en action contre la traite des personnes (PACT-Ottawa), Pauline Gagné. Radio-Canada

* **Police board OKs $500,000 request for bodycam bids**
The Toronto police board has approved a pricey second step in an ongoing examination of body-worn cameras, taking the service closer to equipping all front-line officers with the increasingly popular technology. One month after a much-anticipated report on the Toronto police body-worn camera pilot project was released, the civilian board agreed to spend $500,000 on a non-binding request for proposals to find the best, most affordable camera technology. The money will also pay for a fairness commissioner and outside experts to ensure the search is above-board - something city councillor and police board member Shelley Carroll said is costly but necessary. "The reality is, we absolutely need this. This will be the biggest contract for a new technology in the country," she said at Thursday's board meeting at Toronto police headquarters. A supporter "in principle" of the deployment of body-worn cameras, Mayor John Tory said the cost of ensuring the police service does a proper technology evaluation "will pay itself back many times over. Toronto Star, GT1

* **Study shows EPS and Somali community making progress**
Edmonton's Somali community and its police service have not always been working from the same playbook. But that trend is slowly changing. A study brought to the Edmonton Police Commission on Thursday suggests both police in the city and young Somali Edmontonians are interested in working with each other to tackle issues facing the Somali community. "We interviewed and surveyed 301 young Somali Canadians in the city ... 81 per cent of these young people identify that they are hoping to build a stronger relationship with EPS," said Sandra Bucerius, associate professor of sociology at the University of Alberta, who was part of the team that did the study. Researchers also spoke with 57 police officers of all ranks and all areas of the city except the southeast and found that police were also enthusiastic about learning more. The question is, what community should that education be focused on? "Do we need training? Absolutely. But it becomes a bit exhaustive, too," said Chief Rod Knecht. The committee heard that, despite their willingness to learn about Edmonton's smaller community groups, there are just too

many groups to do that with and still do the job of policing. The Somali community was the focus of the study because of ongoing concerns that peaked a decade ago when violent crimes in that community reached record levels. Postmedia Network (Edmonton Sun, A8, Edmonton Journal)

*** Lots of green for Boys in Blue**

Ottawa police are expecting to blow their overtime budget by $2.4 million by year's end and are blaming the "significant pressure" on what officers counter are understaffed units and a record year for shootings and homicides. Despite the forecast on overtime, the force still expects to have a balanced budget by the end of year and won't increase its overtime budget for 2017. In a financial status update expected to be received by the police board Monday, the force said the overtime deficit ballooned by an additional $250,000 after a national outlaw biker run by the Hells Angels at the now-defunct Nomads clubhouse in Carlsbad Springs. Police said the additional costs were coming from "a number of sources" and, for the first time, detailed which units had the most "significant" costs during the first nine months of the year. The force attributed high overtime numbers to the homicide squad, "special projects," the tactical unit, the guns and gangs squad and emergency services unit. Postmedia Network (Ottawa Sun, A3, Ottawa Citizen)

Poll reveals crime a concern among public

Almost a decade after an infamous Maclean's magazine article dubbed this city "rotten Regina" and claimed it was home to "Canada's worst neighbourhood" (North Central), perceptions about crime continue to provoke debate. Newcomers to the city whose opinions might have been coloured by them hearing repeated statistics on Regina's admittedly high crime rate often express surprise (and delight) at the relative safety of most streets and neighbourhoods. Sure, like anywhere else some serious crimes are committed here, but for most residents, Regina is a safe place to work, live and raise a family. Still, it only takes something like a dramatic increase in the number of guns seized by police combined with several shootings - as has happened this year - to make people uneasy and fearful. It is certainly an issue for new police chief Evan Bray, a 21-year veteran of the Regina Police Service, who said this week the escalation of gun crimes was "concerning" and he was making it one of his priorities. That's good to hear. We don't want to overstate it, but a new Postmedia poll conducted by Mainstreet Research reflects some significant public concern about crime. Though 56 per cent of Reginans surveyed felt the city was "very" or "somewhat" safe, compared with 39 per cent calling it "not too safe" or "not at all safe," a substantial number - 45 per cent - believe crime is increasing. Just 15 per cent felt it was decreasing, while 34 per cent said it was staying the same. The rest didn't know. StarPhoenix, BR18

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** 'Pig Girl' - a Play About #MMIW Portrayed by Akwesasne Mohawk Women**

Sacred Roots Productions is a Native production company owned by Akwesasne Mohawk women, Shelby Mitchell-Adams and Jessica Loft-Thompson. In October 2015 they began production on a culturally appropriated adaption of "Pig Girl," a riveting, intense play by Governor General Award Winning Playwright Colleen Murphy, loosely based on serial murderer Robert Picton. Many of Picton's victims were Indigenous women and along with "The Highway of Tears," the infamous Highway 16 in northern British Columbia where at least 19 women disappeared and probably many more, these events sparked the #MMIW movement. (…) Sacred Roots' sole intention at the outset was to remind people why it is important for the government to continue to push forward with a National Inquiry into Missing and Murdered Indigenous Women. Which they finally did on September 1, 2016. Indian Country Today Media Network (2016-10-20)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Riding high: Tougher penalties now in place for drug-impaired drivers**

Sarnia Police say they are ready to enforce a new provincial law that can cost motorists their licence if caught driving high. As of Oct. 2, drivers under the influence of drugs face an immediate three-day licence suspension, a $180 fine and, following further testing, a possible 90-day licence suspension. But unlike alcohol, there is no universally accepted roadside test for marijuana impairment, which is where things get hazy. Const. John Sottosanti said until a proven and available drug detection device becomes available Sarnia Police will rely on a specially trained officer called a Drug Recognition Expert, or DRE. "He's been trained to determine if the person is actually impaired by drugs, and to make a determination of what type of drug the person has taken," Sottosanti said. "The final step of the whole process involves that a urine sample be taken and sent off for testing." As Ottawa inches closer to legalizing recreational marijuana use, police departments are working to improve their methods of detecting roadside impairment. RCMP in Vancouver are testing Breathalyzer-like devices able detect trace amounts of THC, the active chemical in marijuana, in a person's saliva. "Such devices can aid in the identification and apprehension of drug-impaired drivers and are becoming increasingly commercially available and are currently being used in other countries," the RCMP said in a statement. Officers ask drivers to stick out their tongue and saliva is taken with an instrument similar to a tongue depressor. Sarnia Journal

*** Grits' plan to legalize pot hazy: province**

The Manitoba government said Ottawa must provide more information about its plans to legalize marijuana as soon as possible because the provinces have work to do in order to implement the change. Justice Minister Heather Stefanson said all her provincial counterparts agreed at their recent meeting in Halifax they're going to need details before legislation is introduced. "We need to know what the framework is going to look like so we can prepare," she said. The federal government has said it intends to begin the legislative process to legalize marijuana next spring, but it hasn't released details. A task force led by former health minister Anne McLellan is studying the issue. Bill Blair, former Toronto police chief-turned Liberal MP, said this week the issue is complex, but he spent two hours on the phone with the task force Monday, and its members will be ready to deliver their report on time next month. Provincial health ministers got an update from McLellan Tuesday during their meeting in Toronto, but Stefanson said the province is still mostly in the dark about the direction Ottawa intends to take. "Whatever happens, they have to provide clarity," she said. The province could have to pass its own legislation or regulations on aspects of the change, including the setting of an impaired-driving limit, as well as determining whether police and court resources require adjustments and how and where marijuana will be sold. Stefanson said distribution is going to fall under provincial jurisdiction. Manitoba's former NDP government was leaning toward marijuana sales at provincial liquor stores, which is also the route Ontario Premier Kathleen Wynne has said she prefers. Winnipeg Free Press, A3

*** Ottawa police only want to hear 'legitimate' complaints about illegal pot shops**

Don't approve of marijuana? Please, don't call the police to share your views. But if you have "legitimate" concerns about an illegal marijuana dispensary that's opened in your neighbourhood, by all means, Ottawa's finest want to hear from you. That's the message from a report to be presented by Chief Charles Bordeleau at the Ottawa Police Services Board meeting on Monday. At the last board meeting the chief was asked for the force's position on marijuana dispensaries currently operating illegally in Ottawa, in response to several councillors' concerns about having these illegal shops in their wards. Bordeleau's response came in the form of a report that asked "councillors to encourage people to contact the OPS to file legitimate complaints regarding a dispensary. By legitimate we are referencing something that goes beyond personal beliefs about marijuana or beliefs that marijuana should not be available to anyone at any time." CBC News

*** The black market turns grey**

Meet the boss of Canada's illegal marijuana trade, Don Briere. To police and the criminal courts, he is already a familiar face, a maverick dealer and convicted grower who has served multiple prison sentences for refusing to obey this country's longstanding prohibition on pot. Briere has fought the law and lost, most of the time. And yet, even at an age when most Canadians are entering retirement, this 65-year-old British Columbian is more involved in the underground cannabis business than ever. (…) None of Briere's Vancouver stores passed muster with the city; none received the required permits. They have remained open, racking up thousands of dollars in municipal fines, which Briere refuses to pay. He is not waiting for the federal government to introduce legislation that will legalize and regulate the sale of

recreational marijuana to adults in Canada, either. Briere doubts the new rules - expected to come into force in the next year or two - will make room for his stores. (...) According to several sources, even the regulated medical marijuana market in Canada has been compromised. For decades, police have used a breathalyzer to test whether a driver has had too much alcohol. Now that Canada is on the verge of legalizing marijuana, is there a similar roadside test to detect pot-impaired motorists? The answer, according to the RCMP, is yes ... and no. Q So, what are police doing to get ready to crack down on stoned drivers? Public Safety Canada and the RCMP are investigating three roadside devices that will collect saliva from drivers. It's easier to collect, compared to blood or urine, which typically require warrants. Q How do they work? Unlike a breathalyzer, they will not tell police how impaired a person is. They will not quantify the amount of pot in the system, the RCMP says, but instead will indicate when a drug is present so further followup can be done to confirm the amount. Postrmedia Network (National Post, A2, Ottawa Citizen, Edmonton journal, Calgary Herald, StarPhoenix, London Free Press, Vancouver Sun, Windsor Star, Leader-Post)

* **Légalisation de la marijuana : boom économique au Colorado**
Le gouvernement de Justin Trudeau souhaite déposer un projet de loi visant à légaliser la marijuana au printemps 2017. Plusieurs craignent les effets de cette mesure sur la santé et la sécurité publique. Radio-Canada Acadie s'est rendue au Colorado où la marijuana est légale depuis 2012 et où la vente est réglementée depuis 2014 pour voir comment l'État s'est adapté à cette nouvelle réalité. Voici le premier d'une série de reportages sur la question. L'année 2016 s'annonce historique au Colorado. Les revenus de la vente de marijuana sont en hausse. Depuis 2015, les ventes dépassent celles de l'alcool. Les ventes de marijuana ont atteint 996 millions en 2015 au Colorado. Cent trente-cinq millions de dollars reviennent dans les coffres du gouvernement. Tout indique que l'État atteindra de nouveaux records en 2016. Selon le plus récent rapport du gouvernement, les revenus des taxes et droits perçus sur la marijuana ont augmenté de 45 % comparativement à l'an dernier. Radio-Canada

OTHER / AUTRE

Investment, immigration, infrastructure keys to growth, say fed's advisers
The Trudeau government's influential team of economic advisers unveiled a batch of growthlifting recommendations Thursday that focused on immigration, infrastructure and investment strategies. The objective, the experts say, is to double Canada's projected growth trajectory and add $15,000 to the annual incomes of Canadian households by 2030. The suggestions comprise a first tranche of ideas from the group of external experts who have been enlisted by Finance Minister Bill Morneau to help

Ottawa find ways to resuscitate Canada's lacklustre economy. The recommendations zeroed in on three areas: productivity-boosting infrastructure, attracting more foreign investment and opening Canada's doors wider to a larger number of talented immigrants. "Now is the time where we have to take very bold actions," council chair Dominic Barton, who is global managing director of consulting giant McKinsey Co., told a news conference in Ottawa. "[The suggestions] may not be new, these have been talked about before - but they haven't been done. And so what we're keen to do is to jolt it." It also recommended that the federal government ramp up permanent immigration to 450,000 people a year over the next five years - with a focus on top business talent and international students. "An increased immigrant population has positive implications for business and job creation for Canadians through entrepreneurship and innovation, international trade and if done right, can raise living standards for all Canadians," the document said. But Immigration Minister John McCallum, who was briefed on the recommendation, has already described that kind of a spike in immigration levels as overly ambitious. Canadian Press (Times Colonist, B2); * Postmedia News (Vancouver Sun, StarPhoenix, Edmonton Journal, Leader-Post, Calgary Herald, Ottawa Citizen)

INTERNATIONAL

Germany passes new spy law allowing espionage against allies
German lawmakers have approved a bill that allows the country's foreign intelligence agency to spy on European Union institutions and fellow EU member states. The legislation passed Friday is part of a range of measures meant to improve oversight of espionage in the wake of the revelations by former U.S. National Security Agency contractor Edward Snowden. A panel of independent judges will have to be informed when the BND spy agency eavesdrops on Germany's allies. Judges will also have the right to undertake spot checks of the agency's work. Parliament's intelligence oversight powers will also be increased and intelligence chiefs will have to attend a public hearing before lawmakers every year. Critics say that instead of clamping down on questionable BND activity the law will merely legalize them. Metro News

ISIS fighters kill at least 11 in Kirkuk attacks: Suicide bomb attack occurs at power plant north of Kirkuk
Islamic State militants armed with assault rifles and explosives attacked targets in and around the northern Iraqi city of Kirkuk early Friday in an assault that appeared aimed at diverting Iraqi security forces from a massive offensive against the ISIS-held city of Mosul. At least 11 workers, including two Iranians, were killed when ISIS militants stormed a power plant north of Kirkuk and then blew themselves up. Multiple explosions meanwhile rocked the city, and gun battles were ongoing, said witnesses in Kirkuk, speaking on condition of anonymity as they were concerned for their safety. Much of the fighting was centred on a government compound in the city. They said the streets were largely deserted out of fear of militant snipers. ISIS said its fighters targeted the provincial headquarters. The claim was carried by the ISIS-run Aamaq news agency and could not immediately be verified. Local Kurdish television channel Rudaw aired footage showing black smoke rising over the city as extended bursts of automatic gunfire rang out. It quoted Kirkuk Gov. Najmadin Karim as saying that the militants have not seized any government buildings. CBC News

*** Syrie: 500 morts en un mois à Alep et risque de pénurie alimentaire**
Le secrétaire général de l'ONU Ban Ki-moon a fustigé jeudi les résultats "horribles" des bombardements russes et syriens sur Alep-est qui ont fait, selon lui, près de 500 morts et 2.000 blessés depuis le 23 septembre. Un quart des personnes tuées sont des enfants et la nourriture se raréfie dans la partie assiégée de la ville syrienne, a-t-il souligné lors d'une session informelle de l'assemblée générale de l'ONU consacrée au martyre d'Alep. Aucun convoi de l'ONU n'est entré dans cette partie de la ville depuis le 7 juillet "et, dans ces conditions dignes du Moyen-Age, les plus vulnérables sont ceux qui souffrent le plus", a-t-il rappelé. "La faim a été utilisée comme arme" dans cette offensive, a estimé M. Ban. "Les rations alimentaires seront épuisées à la fin du mois". Tout en "accueillant favorablement" la pause décidée par la Russie dans les bombardements --ce qui devrait permettre des évacuations médicales dès vendredi--, il a ajouté: "C'est le strict minimum". Il a exigé "un plein accès humanitaire à la partie Est d'Alep". "N'avons-nous rien appris de Srebrenica et du Rwanda?", a-t-il lancé aux ambassadeurs réunis.

"Quand la communauté internationale va-t-elle s'unir pour mettre fin à ce carnage?" Cette réunion avait été convoquée à l'initiative du Canada, soutenu par 71 pays, après que le Conseil de sécurité eut échoué à adopter une résolution pour mettre fin aux bombardements russes et syriens sur Alep. Ces 72 pays, sur les 193 membres de l'ONU, ont signé une lettre adressée à M. Ban lui demandant que l'assemblée se saisisse de la crise humanitaire en Syrie. La Russie et la Chine, ainsi que de nombreux pays africains et quatre autres membres du Conseil (Angola, Sénégal, Japon, Venezuela) n'avaient pas signé cette missive. TRT

* **Turkey ramps up fight against Kurdish fighters in Syria**
Turkey escalated its offensive Thursday against Kurdish fighters in northern Syria, pounding them with airstrikes and artillery, and complicating the battle against the Islamic State group by Ankara and Washington, both NATO allies. In the fight for Aleppo, meanwhile, the Syrian military used a lull in violence to urge residents and rebels to evacuate the besieged opposition-held part of the city. Turkey's state-run Anadolu news agency said as many as 200 members of the Kurdish-led forces were killed in Syria's Aleppo province by the Turkish bombing and shelling. A senior commander with the main Syria Kurdish militia confirmed the Turkish attack on his forces north of Aleppo but disputed the casualty toll, saying that no more than 10 fighters were killed. Like in Iraq, where Kurdish fighters are at the forefront of the offensive to retake the city of Mosul from the Islamic State group, Kurdish forces in Syria also have been battling IS militants and made significant territorial gains in Aleppo province. That has dismayed Turkey, which is dealing with a homegrown Kurdish insurgency and trying to prevent an expansion of Kurdish influence in Syria. "We will not back down," senior Kurdish commander Mahmoud Barkhadan of the People's Protection Units told The Associated Press by telephone from the region. "We are fighting Daesh. Why are they striking at us?" he asked, using the Arabic acronym for IS. Barkhadan accused Turkey of aiding IS militants by turning the fight into a Turkish-Kurdish battle. Turkish artillery also hit near Afrin, a Kurdish enclave in northwestern Syria, he said, adding that his forces have not retreated but that Turkey's actions allowed IS fighters to wage a counteroffensive. MINISTER / MINISTRE

Big Brother et « Five-eyes »
La consultation sur la sécurité nationale menée par le gouvernement Trudeau tire à sa fin et deux événements récents appellent les Canadiens à la plus grande vigilance pour la suite des choses. L'affaire de la surveillance des journalistes au Québec et le jugement de la Cour fédérale sur la collecte et la rétention de données personnelles par le Service canadien du renseignement de sécurité (SCRS) montrent bien que l'équilibre entre la sécurité et la protection de la vie privée reste au centre des préoccupations devant les demandes incessantes de pouvoirs accrus des autorités. Les libéraux ont promis en campagne d'« annuler les dispositions problématiques » du projet de loi C-51 adopté en vitesse après les attaques d'octobre 2014, législation qu'ils avaient appuyée avec réserve. Ils ont inclus cet engagement dans une consultation plus large basée sur un livre vert qui lance les discussions. Le

gouvernement est déjà passé à l'action sur un aspect de la consultation, soit la supervision politique des agences et organismes chargés de la sécurité nationale. Le projet de loi C-22 prévoit la formation d'un Comité parlementaire sur la sécurité nationale et le renseignement. Tenus au secret, ses membres auront un accès sans précédent au Canada aux informations sur les opérations liées à la sécurité nationale. **Le ministre de la Sécurité publique, Ralph Goodale**, a expliqué son empressement en indiquant que le Canada était une « ***anomalie*** » en la matière par rapport à ses partenaires de ce club du renseignement qu'est le « Five-Eyes », qui regroupe aussi les États-Unis, la Grande-Bretagne, l'Australie et la Nouvelle-Zélande. Il s'est d'ailleurs rendu en début d'année à Londres, se disant inspiré par le modèle britannique, qui a le grand mérite selon lui de ne pas avoir donné lieu à des fuites qui auraient pu mettre en danger la sécurité nationale. La participation du Canada aux échanges du groupe Five-Eyes est d'ailleurs un élément central du contexte dans lequel les nouvelles normes canadiennes sur la sécurité nationale seront définies. C'est un aspect que les Canadiens doivent garder à l'esprit quand ils évaluent les positions des autorités compétentes et des défenseurs de la vie privée. Étant donné l'attirance britannique du **ministre Goodale**, l'adoption jeudi dernier à Londres du projet de loi sur les pouvoirs d'investigation mérite l'attention. Fait intéressant, d'autres dispositions de la même loi se retrouvent parmi les hypothèses soumises aux Canadiens par **le ministre Goodale** dans son livre vert. C'est ainsi que les fournisseurs britanniques de services de communication (FSC) devront conserver pendant une année les données de navigation en ligne de leurs clients et que les enquêteurs pourront accéder sans mandat aux données de connexion. Les FSC seront contraints d'aider les autorités lors d'interceptions ciblées, en plus de devoir retirer sur demande leur propre chiffrement des données. Le Devoir, A3

Senator tables bill to protect source confidentiality

The relationship between a journalist and a confidential source is sacrosanct, according to a Parliamentarian who wants to enshrine that relationship in law. Amid a scandal over revelations that police in Quebec spied on several journalists, Conservative Senator Claude Carignan has introduced a private member's bill that aims to keep police from ferreting out reporters' sources. "It's a fundamental principle. It's very important to protect the journalist and also the whistleblower," Mr. Carignan, the Senate's opposition leader, told reporters in Ottawa on Tuesday. While Quebec recently announced a commission of inquiry into press-freedom issues, Prime Minister Justin Trudeau has resisted calls for a Canada-wide inquiry. But Mr. Carignan said Parliament cannot afford to wait. Bill S-231, the Journalistic Sources Protection Act, seeks to "protect the privilege of journalistic sources, and secrecy," he said. Last year, the RCMP ordered a Vice News reporter to surrender materials related to conversations with a Canadian member of the Islamic State. And the Mounties briefed **Public Safety Minister Ralph Goodale** last year about the fact that some detectives had shadowed a Quebec reporter who obtained a leaked CSIS document. Globe and Mail, A4

Watchdog wants rules for spies sharing info

Other national security agencies may be taking the same broad view of the law that led CSIS to illegally keep data on innocent people for almost a decade, the federal privacy watchdog says. Privacy commissioner Daniel Therrien said he's calling on Parliament for clearer rules about how spy- and law-enforcement agencies obtain, retain and destroy information on Canadians. Therrien said information-sharing powers granted in Bill C-51, the former Conservative government's controversial spying bill, need restrictions on what agencies can share and how long they can keep the information. "Security agencies, with (Bill C-51 powers) and with the absence of rules around retention, for instance, would be able to collect and retain information that they don't really need," Therrien told the Star outside a House of Commons committee Tuesday. "I don't dispute that CSIS needs to analyze information in order to do their job ... but once the analysis has been completed and the vast majority of people about whom they're collecting information are found not to be a threat, and that's the case, then they should destroy that information." "I don't think that's the kind of country we want, where the security services of the country hangs onto information on vast amounts of people in case it might be helpful one day," Therrien added. In his testimony before the access to information, privacy and ethics committee, Therrien noted Canadian spy agencies misusing powers is not a "theoretical" issue. He noted that CSIS was recently found by a federal court to have illegally kept data on an unknown number of innocent Canadians between 2006 and 2015. Therrien's comments come as the governing Liberals are in the midst of a wide-ranging review of Canada's national security agencies and issues of oversight for spies. They also come as Canada's

national police force, the RCMP, are publicly arguing for expanded investigative powers in the online world. A spokesperson for **Public Safety Minister Ralph Goodale** said the minister looks forward to the Commons committee's report on Bill C-51's information-sharing powers and appreciates Therrien's insight into these issues. Toronto Star, A10

Territorial government preparing for federal marijuana legalization
The territorial government has formed an inter-departmental working group to prepare for the eventual legalization of marijuana across Canada. The group is also in discussions with the federal government, according to Department of Justice spokesperson Sue Glowach. The task force was established by the minister of Justice and Attorney General of Canada, **the minister of Public Safety and Emergency Preparedness** and the minister of Health, according to Glowach. She stated the task force's mandate is to inform the federal government's commitment legalize and regulate marijuana. The report is expected to be released to federal ministers by the end of the month ahead of next April's anticipated marijuana legalization legislation. "The information on potential systems for production, distribution, promotion and taxation provided in the report should make it possible to determine what the role of the ... territories will be," she stated. EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Lesson learned in Japan**
Japan learned through a series of hard lessons, culminating 20 years ago, that it needed to make a more concerted effort to reduce the damage from earthquakes before they happened. Although the country had made progress in improving seismic resiliency through improved building codes and early-warning systems, there was a major shift toward this preventive approach following the catastrophic 1995 earthquake in southern Japan near Kobe, which killed more than 6,000 people... "There was a call for a nationwide movement of disaster reduction," Satoru Nishikawa, executive director of research for the Japan Center for Area Development Research, told a disaster forum at the University of B.C. this week... The event Monday - organized by the Japanese and B.C. governments - attracted about 100 provincial, local government, emergency, academic, business, engineering and aid representatives. The forum was held as the B.C. government is attempting to increase its preparation for a major earthquake. Scientists say there is a 30 per cent probability of a damaging earthquake hitting a populated area in southwest B.C. in the next 50 years. Underscoring the need for preparedness was a report released Tuesday by the Conference Board of Canada that says a major quake in British Columbia could devastate the Canadian economy, lead to longlasting costs and potentially the failure of the insurance industry... The B.C. government has seismically retrofitted schools and bridges, but shown little interest in addressing thousands of privately owned buildings that do not meet modern seismic safety standards, an examination by Postmedia has shown. The province's minister of state for emergency preparedness, Naomi Yamamoto, told the forum she does not believe British Columbians are prepared for a major earthquake. Postmedia Network (Vancouver Sun, A8)

*** Red tape, uncertainty slows rebuild for some in Waterways**
For months, demolition crews frantically razed thousands of pounds of ash and debris in Waterways to clear the way for a hasty rebuild. With construction on new homes starting, there is no trace of the anticipated non-stop frenzy at roughly half of the empty lots in the neighbourhood most devastated by May's wildfire. When municipal council stripped rebuild restrictions in early October, it came with a caveat: anyone rebuilding in a flood hazard zone - properties below the 250-metre land contour mark - would be doing so at their own risk. Council assured the dozens of homeowners in the floodway they would receive financial aid from Alberta's Disaster Recovery Program if floodwaters engulfed the community before mitigation measures were built. Homeowners willing to take that risk needed to sign a legal waiver, absolving the municipality of any responsibility if their homes flooded in the future. Even for those still

willing to return to Waterways, construction cannot begin because the waiver is still being written by the municipality's legal and planning departments. Fort McMurray Today

*** Some Cape Breton flood victims live with mould as they await cleanup info**
Until this past weekend, Kenny MacLean was living in a house so infested with mould his eyes were burning and he was getting headaches. During the Thanksgiving Day storm, overland flooding coming in through ground-level windows filled the finished basement of MacLean's Sydney Mines, N.S., home with more than half a metre of water. Yet he left the damage largely untouched for almost six weeks... MacLean - who does not have homeowner's insurance - had been calling the Cape Breton Regional Municipality's flood helpline and the Emergency Management Organization office in Halifax, but was getting conflicting advice... MacLean finally turned to the Cape Breton Flood Facebook page for help. New Waterford resident Neil Rideout created the page on the day of the storm as a way to share photos, but it has since developed into a platform for connecting flood victims with help... In an emailed statement an EMO official said "the disaster financial assistance claim does not interfere with your cleanup," meaning an application for disaster relief should not hold up the cleanup process. The statement also said "it is important to ensure your safety from any contaminated materials." CBC News

*** Flood victims to finally have homes**
More than half the residents who were flooded out of their homes in Lake St. Martin First Nation more than five years ago should be able to move to a new home in a new community within a year. Indigenous and Northern Affairs Canada issued a tender earlier this month to build 150 new homes on the reserve's new land, located adjacent to the community destroyed by flooding in May 2011. The tender was to have closed Tuesday but was extended by a week-and-a-half after a meeting with more than 20 interested companies. The winning bid should be determined before the end of December and construction will be timed for completion next fall... The process of rebuilding the community has been fraught with problems, including mismanagement of the program by the Manitoba Association of Native Firefighters, which gave up control of the evacuee program in June 2013. The Canadian Red Cross took over. An audit of the INAC program overseeing the evacuations and rebuilding, dubbed Operation Return Home, found the whole program was poorly resourced, plagued with delays and very disorganized. Winnipeg Free Press, 3

*** LaSalle residents offered last chance to provide feedback on flooding plan**
LaSalle is hosting an information meeting for residents of the Heritage Estates and Oliver Farms neighbourhoods to provide information on a proposed plan to prevent future flooding in those areas. The meeting on Dec. 1 will be a final opportunity to provide feedback on plans to install a pond in Heritage Park, along with storm system improvements in Oliver Farms. Conceptual drawings will outline the options being considered. Postmedia Network (Windsor Star)

*** Inondations à Brigham: identifier les causes et les solutions**
L'Institut national de recherche scientifique (INRS) se penche sur ces questions à la demande du ministère de la Sécurité publique. L'organisme devrait remettre un rapport l'été prochain. L'administration municipale a hâte de s'y référer. « On s'attend à avoir un rapport qui va nous donner un portrait précis de la situation », indique Me Jean-François Grandmont, directeur général de la municipalité. « Quand on a des inondations, des fois, nos véhicules d'urgence ne peuvent même pas se rendre sur place. On ne peut pas continuer comme ça. C'est un gros problème pour nos citoyens. Ils sont exaspérés. » L'INRS, explique Me Grandmont, étudiera la récurrence des inondations et estimera les dommages causés. Ces données aideront le ministère à décider si les résidents touchés pourront se prévaloir d'un programme de rachat de leur propriété. La Presse; La Voix de l'Est

*** Get ready for lots of storms this winter with plenty of snow, ice and freezing rain**
It's coming and it's not going to be pretty. The winter outlook for Atlantic Canada is calling for a lot of messy weather. The Weather Network has released its winter forecast for December, January and February. It's calling for an active season with plenty of storms and above-normal precipitation levels including snow, ice pellets, freezing rain and rain. Daily Gleaner, A3

*** Lobster season around the corner**

Wharves all along the south shore are piled high with lobster fishing gear and boats are at the ready for dumping day and the start of the commercial lobster fishery on Monday, Nov. 28 in Lobster Fishing Areas (LFA) 33 and 34... A full compliment of resources will be on standby on the water and in the air for the season start, said Sean Arbour, search and recue coordinator at the Joint Rescue Coordination Centre (JRCC) in Halifax. "The three lifeboat stations at West Port, Clark's Harbour and Sambro will have the cutters on the water in position about 20 to 30 miles out on stand-by," said Arbour. "Offshore we will have two large vessels on-site tasked to search and rescue. Typically, one is stationed off Yarmouth and the other one stationed off Liverpool about two hours off." From their positions, they will be reporting weather and sea conditions "so we are in the know," said Arbour. The vessels will be on standby most of the day, said Arbour. On land at the lifeboat stations, extra crews for the zodiacs will be on standby. As for air resources, a cormorant helicopter will de deployed to the Yarmouth airport, said Arbour, where it be fueled up and the crew suited up. A Hercules airplane will also be "tasked and deployed" patrolling up and down the coast. Chronicle Herald, S26

*** Chris Metallic search continues 4 years after disappearance**

New searches for a Mount Allison University student who disappeared four years area will be taking place in the coming days. Chris Metallic was reported missing on Nov. 25, 2012, after a party at a residence in Sackville. Sackville RCMP say the new searches by police officers are being organized in an effort to get more information that could help find Metallic. "We continue to receive information about the disappearance of Chris Metallic," Sgt. Paul Gagné said. CBC News (2016-11-22); Guardian; Times & Transcript

*** Body of missing Trail, B.C., senior found - Ida Cragnolini had dementia and had gone missing in the past**

The body of a 70-year-old woman with dementia has been found. Ida Cragnolini went missing in Trail B.C. on Sunday, according to the RCMP. RCMP, search and rescue teams and members of the public had been searching for Cragnolini after she left her residence near the Waneta Plaza shopping mall Sunday morning. She was last seen around 4 p.m. PT in the east Trail area. Her body was located before noon on Tuesday in the Miral Heights area not far from where she was last spotted, according to a family friend. CBC News (2016-11-22)

*** Everything counts in Yarmouth search and rescue exercise**

Search and rescue teams from the tri-counties were combing local shores on Nov. 19 during a training exercise. The scenario was that a collision had occurred between a fishing boat and a pleasure craft stolen from the Chebogue River Aquatic Club. The fishing boat, with three people aboard, was taking on water. The whereabouts of the stolen vessel were unknown. Searchers were tasked with scouring the shores from Comeau's Hill to Chebogue Point for survivors or objects that could be from the collision. Shelburne County Coast Guard (2016-11-22)

*** Government right to tighten waste rules**

An opinion piece by Jim Emberger, a spokesman for the New Brunswik Anti-Shale Gas Alliance, states, "We applaud the Gallant government's decision to amend the Clean Environment Act to ban the disposal of fracking waste water in municipal and provincial sewage treatment systems. The scientific studies behind the decision have long noted that municipal waste water systems were not designed to deal with industrial waste. They cannot remove substances for which they were not designed and the plants themselves can be damaged. Fracking waste water added an overwhelming new set of problems stemming from the large numbers of fracking chemicals used, and the variety of naturally occurring toxic substances brought up from the earth by fracking... No one really knows how well-contained the waste is at hundreds of different sites, or how long it will stay contained, or how far it could migrate. But the main problem is that high-pressure pumping of billions of litres of liquid, containing lubricants among other things, can cause geologic faults to move, thus causing earthquakes. These earthquakes have been documented in B.C., Alberta, and widely in the U.S.A., where the state of Oklahoma has gone from having almost no earthquake activity to becoming one of the earthquake capitals of the world, and the evidence points to waste water injection. This deep injection well method of waste water disposal is currently not allowed in New Brunswick, but remains the "best practice" for the industry, illustrating the

uselessness of that term... A study from Alberta this week tied earthquakes more closely to the fracking process itself (not waste water injection as discussed above.)..." Telegraph Journal, A9

NATIONAL SECURITY CONSULTATIONS / CONSULTATIONS SUR LA SÉCURITÉ NATIONALE

NIL

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Rendu malade par le pot, il menace Trudeau**
Favorable à la légalisation du cannabis, le premier ministre Justin Trudeau a été victime de menaces de mort d'un jeune Montréalais en proie à des troubles psychiatriques aggravés par la marijuana, cet été. «La drogue, je ne veux plus en prendre», a dit ce dernier devant un tribunal après avoir été déclaré criminellement nonresponsable de ces délits, puis enfermé dans un hôpital du-rant deux mois. Selon une décision récente de la Commission d'examen des troubles mentaux, le Montréalais, dont l'identité n'a pas été rendue publique, a acheminé un courriel au bureau du premier ministre, le 10 juin dernier. «Je te jure, Justin, je commence à m'entraîner pour te tuer si tu ne fais rien pour mon cas», a-t-il écrit dans un message confus. Sans réponse, il a ensuite téléphoné au bureau de M. Trudeau et réitéré ses menaces avant d'être arrêté par la GRC. Le Journal de Montréal, 15

*** Youth charged over alleged terror...**
A youth arrested Thursday in Yellowknife faces a charge of making a hoax terrorism threat, RCMP stated in a news release. The youth, who cannot be identified, lives in the territory. An investigation started Nov. 1 that included the RCMP's Integrated National Security Enforcement Team in Alberta determined the threat was a hoax. It's unclear what the hoax allegation involves and RCMP aren't elaborating. "The rest of the information will come out in the court process," RCMP spokesperson Marie York-Condon stated in an e-mail. The youth's next court date was not known. Yellowknifer

*** Government surveillance overshadows free speech for Canadian journalists**
Mass surveillance causes reporters to avoid writing or speaking about some topics, according to a recent survey of journalists by Ryerson's Centre for Free Expression (CFE). "Journalists and writers are society's eyes and ears and [when] they feel they have to self-censor because of government surveillance, then we as a public lose," CFE director James Turk said. Twenty-two per cent of respondents to the CFE survey said they deliberately avoided writing or speaking about certain topics and 15 per cent said they seriously considered doing so. Nine per cent of respondents said they had chosen not to cover or write about a protest, demonstration or controversial political event because of mass surveillance. Twenty per cent of respondents said they refrained from conducting internet searches or visiting certain websites. Another 17 per cent said they thought about doing that because of surveillance. The survey, published Nov. 14, was prepared by Turk. A total of 129 Canadian writers and journalists volunteered to complete the survey between May 27 and June 20. The federal government is currently consulting Canadians about the state's security apparatus by holding hearings to solicit public opinion. Turk is "very pessimistic" about the prospect of the Trudeau government limiting surveillance, despite the federal Liberal Party campaigning on a promise to reform Bill C-51, a security bill passed in 2015 that expands security powers. The Eyeopener

Big Brother sleeps easy
An opinion piece states, "The revelation that Montreal police secretly monitored several journalists' smartphones for months, ostensibly in hopes of discovering the source of internal information leaks, has brought home for many people the troubling reality of government snooping. The fact that thousands of students recently lined up to watch whistleblower Edward Snowden at a video conference at McGill University is another sign of the public's growing concern about respect for the right to privacy. Indeed, it is not just journalists who are targeted by electronic surveillance. Revelations about the National Security Agency (NSA) in the United States also touch Canadians, since in the age of the Internet and social

networks, telecommunications knows no borders. It is reasonable to imagine that practically all our communications could be intercepted, filtered and recorded by governments. This is now the world in which we live. Thanks to Snowden's revelations, Canadians know our federal government is actively helping the United States with surveillance programs of its own. For example, it was revealed in April that the RCMP had decrypted about one million private messages from BlackBerry smartphones. In addition, we know that the number of communications intercepted in Canada grew by a factor of 26 in 2015, without the authorities giving any reasons. This opacity is at the heart of the problem: "Big Brother" is completely lacking in transparency. A Federal Court ruling revealed recently that the Canadian Security Intelligence Service (CSIS) had acted illegally by conserving personal data for 10 years. It is alarming to discover just how unclear the limits imposed on surveillance agencies and police forces are. It is probably this lack of clarity that allowed Montreal's police force and the provincial Sûreté du Québec to put so many journalists under watch for such specious reasons." National Post, A11

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Border agency touts drug, gun seizures

Loaded guns, stolen vehicles, child pornography, weed, booze and tobacco are all things that have been seized by the Canadian Border Services Agency in Atlantic Canada in the last quarter. The agency processed about three million travellers at its 50 service locations in the Atlantic region from April to October 2016. Details of its activities were released Tuesday. On Oct. 3, border officials at the the St. Stephen 3rd Bridge port of entry in New Brunswick searched a motorhome and found four tasers, five pepper spray canisters, a loaded 9mm handgun and a loaded .357 Magnum, which are prohibited weapons in Canada. A traveller got $2,300 in fines after pleading guilty the next day to failing to report weapons and providing untrue statements under the Customs Act. "It is important that anyone travelling to Canada understand that undeclared and prohibited firearms are not allowed in our country," said Calvin Christiansen, CBSA director general for the Atlantic region said in a news release. "We welcome our United States neighbours but remind them to leave their guns at home." On their way to inspect a vessel with three foreign nationals arriving in Shelburne, CBSA officials received a tip that a number of bags containing wine, rum, tobacco and marijuana were found in the woods in the region. Officers were able to determine that the bags belonged to the individuals on the vessel, and each traveller was charged with three offences under the Customs Act: non-report of alcohol, tobacco and marijuana; making false statements; and smuggling. They each pled guilty to non-reporting. Fines of $2,500 (for the captain), $1,000, and $500 were charged to the travellers. Total seizures from the hidden bags and boat totalled 39.9 litres of alcohol, 0.79 kg of tobacco and 17.46 grams of marijuana. CBSA officers, along with members of the Internet Child Exploitation unit of the Integrated Halifax Regional Police/RCMP Criminal Investigation Division unit, discovered child pornography on an electronic device belonging to a crew member while searching a vessel Aug. 16. Chronicle-Herald, A4

*** Visa denial to Serbs has created 'negative picture of Canada' says Serbian foreign minister**

Too many Serbs are being wrongly caught up in a visa rule intended to keep human rights abusers out of Canada, says Ivica Dačić. By backing Canada's bid to secure a temporary seat on the United Nations Security Council, and finalizing a bilateral travel agreement to establish a direct air link between Toronto and Belgrade, Serbia views itself as extending a hand in friendship toward Canada. But now Serbia would like to see some reciprocity, as the country's foreign minister made clear during a visit to Ottawa last week. The Balkan country, which Canada bombed in 1999 during the NATO mission in support of ethnic Albanians in the then-Serbian province of Kosovo, would ideally like the federal government to lift the visa requirement for Serbs seeking to enter Canada. (Canadians can visit Serbia without a visa.) But first, Serbia wants Canada to stop denying visas to Serbs perceived to have been associated with the regime of former Serbian president Slobodan Milošević. The current Serbian government estimates that almost one in 10 (nine per cent) of its citizens are prevented from entering Canada based on section 35 (1) (b) of the Immigration and Refugee Protection Act (IRPA), which designates someone inadmissible if that individual was a senior official in a government considered to have been involved, or still involved, in "terrorism, systematic or gross human rights violations, or genocide, a war crime or a crime against humanity." Hill Times

First Lumber, Now Drywall as Canada-U.S. Trade Tensions Escalate
A new trade dispute has broken out between Canada and the U.S. that threatens to raise prices in Canada's already overheated housing markets. The Canada Border Services Agency imposed a provisional tariff as high as 277 percent on U.S. drywall imports in September after ruling that manufacturers were dumping the product, or selling it below the price in their home market, undercutting local suppliers. The tariff has raised the price of drywall, or gypsum board as it's also called, by as much as 30 percent and is causing "chaos" and delays as contractors scramble for alternative sources. Some builders say the tariff could add as much as C$13,000 ($9,671) to the cost of a new home, which would amount to a C$2.6 billion increase to the roughly 200,000 homes built in Canada each year. Bloomberg

À Vancouver, de l'héroïne contient un sédatif pour éléphants
Santé Canada a confirmé que quelques grammes d'héroïne saisis par la police lors d'une arrestation le 20 septembre à Vancouver contient du carfentanil, un sédatif longtemps utilisé pour tranquilliser les éléphants. La police a découvert cet opiacé toxique lors de la fouille d'un suspect qui avait été aperçu muni d'une arme à feu dans une ruelle du quartier Downtown Eastside. Il s'agit de la première présence confirmée de carfentanil à Vancouver. Le carfentanil est 100 fois plus puissant que le fentanyl, une drogue responsable de nombreuses surdoses en Colombie-Britannique et qui se propage vite au Canada. Selon la police, il suffit de 20 microgrammes, soit moins d'un grain de sel, pour tuer un humain. La drogue est moins chère et plus facile à obtenir que d'autres stupéfiants. Radio-Canada

Guenther: Canada's beef export sector waiting, watching
As speculation swirls around U.S. President-elect Donald Trump's promise to renegotiate NAFTA, officials with Canada's beef industry are taking a measured approach. They're not ignoring the possibility of trade disruptions in the U.S., said Ryder Lee, CEO of the Saskatchewan Cattlemen's Association — "but neither are we lighting our hair on fire yet at each proposal you catch wind of." Lee expects to hear plenty of proposals between now and the Jan. 20 inauguration, and even through the next year. "And a lot of the things we'll hear now are kind of spitballs. They're waiting to see what sticks and what doesn't." (…) But while Canada's beef industry supplies other markets, the U.S. remains an important trading partner. "A lot of the time it's our home market that's most important," Lee said. "And the U.S., we can service it fresh and on a truck. So those two are always the biggest ones." Canadian Cattleman

*** Morneau open to trade talks with Trump**
Canada's finance minister says the federal government will work in a "collaborative" manner with the incoming U.S. administration, which has pledged to scrap or heavily amend the North American Free Trade Agreement. Finance Minister Bill Morneau said Tuesday the Liberals "look forward to working with the new administration in the United States." "Our goal, of course, is to work on the behalf of Canadians to present the issues that are important to us in our discussions with all of our international partners," Morneau told a gathering of the Federation of Canada Municipalities in Ottawa. "And that's something we will continue to do." The Nov. 8 election of controversial candidate Donald Trump has thrown into question the continued existence of the 22-year-old NAFTA, or what shape a new trade agreement would take under the presidentelect. Trump also campaigned on a promise to pull out of the 12-nation Trans-Pacific Partnership, of which Canada, the U.S. and Mexico are partners. TPP was agreed to early this year, but still requires ratification by signatories to the pact, which was expected to expand bilateral trade with many key Asian markets - including Japan, Indonesia, Malaysia and Singapore. StarPhoenix, C5 (London Free Press, Kingston Whig-Standard, Windsor Star, Leader-Post)

*** Hire Canadians first for new infrastructure jobs**
The federal government has embarked on an ambitious infrastructure program to stimulate the national economy, and has also announced plans to revamp the temporary foreign worker program that may allow companies to bring in offshore workers. Finance Minister Bill Morneau has further announced the formation of an infrastructure bank to try to secure private financing for a portion of the billions of dollars needed to build everything from bridges and roads to rail and port improvements. To attract that private-sector investment, the minister's advisers are also telling us that Canadians need to embrace the idea of user fees and tolls, just as we see in the Lower Mainland with the Golden Ears and Port Mann bridges. (…) He is advising Morneau that companies need more temporary foreign workers. Although we still await the details of how many workers and in what sectors the Liberals would import workers, there is no doubt

that temporary foreign worker quotas may be raised. The trade unions in Canada represent more than 400,000 highly skilled workers. In B.C., we represent more than 35,000 of Canada's mostly highly skilled construction workers and we have serious qualms about Barton's advice and how the government will interpret it for the construction sector. Province; L'Acadie Nouvelle

*** Disruptions loom at Ojibway Parkway intersection: Overpass to link it with Howe plaza**
One of the city's busiest intersections and a primary route for commuters from LaSalle and Amherstburg is about to face disruptions again for up to two years. Lane closures are planned for a section of Ojibway Parkway, just west of E.C. Row Expressway, during construction of a new multilane overpass that will link the Herb Gray Parkway to the Canadian plaza of the Gordie Howe International Bridge. The work is expected to begin in a few months. This is the second time in two years the intersection will be disrupted because of construction involving the new border crossing. Ojibway Parkway and E.C. Row Expressway in 2015 was under repair for nearly a year due to the Herb Gray Parkway construction. Up to 25,000 vehicles travel through the intersection each day. "It should start late spring, then you are looking at a two-year project," said Dennis Regan, senior project manager for Ontario's transportation ministry which will oversee the project. Two separate bridges to carry traffic in both directions will have a total of eight lanes rising above Ojibway Parkway. Windsor Star, A4

*** 21 proches tués en quelques heures : Une étudiante syrienne réfugiée à Sherbrooke vit dans l'angoisse**
Une étudiante est arrivée en larmes, lundi, au Centre d'éducation populaire de l'Estrie parce que 21 membres de «sa famille» avaient été tués dans les frappes aériennes en Syrie. La réfugiée syrienne de 28 ans, qui est arrivée au Canada il y a huit mois avec son mari et ses enfants, est reconnaissante d'être aujourd'hui installée en pays de paix, mais vit dans une inquiétude permanente pour tous ses proches laissés derrière. A 3 h, dans la nuit de dimanche à lundi, Rinam, un nom fictif, a appris que son oncle, sa femme et ses enfants étaient décédés tout comme le frère de son mari et son fils. Du même coup, elle apprenait que les trois générations d'une famille, des voisins qu'elle considère comme des membres de sa famille, étaient tombées sous les bombes. (…) Rinam est originaire d'Ar-Raqqah, une ville syrienne située à environ deux heures d'Alep. Il y a environ quatre ans, Rinam, son mari et leurs trois enfants quittaient la Syrie pour se rendre dans un camp de réfugiés au Liban, un trajet de 12 h en autobus qui les éloignerait de la guerre. Au cours des trois années qu'elle a vécues dans ce camp de réfugiés, Rinam a mis au monde deux enfants. Mais peu de temps avant de recevoir son laissez-passer pour le Canada, le plus jeune est décédé à l'âge d'un mois. Tribune, 4

*** How you can use tech to score the best deals**
Bargain hunters use online tools to wade through all the salesand decipher the best offers: With Canadian retailers trying to keep people shopping on this side of the border on Black Friday, the best deal might come from the soft warm glow of your computer, tablet or phone screen. Even if you're out and about, there are plenty of ways to use technology to make sure you are actually getting a deal. Do your research: Most of the big retailers already have their flyers out, and plenty of sites are compiling them so you can decide if it's worth heading out or just clicking away at home. Flipp is an app that collects all your local flyers and lets you search them. Redflagdeals.com also has a Black Friday section, but its forums are one place that hardcore deal hunters share their tips year round. Toronto Star, B1

A vulnerable person
A letter to the editor states, "I've been following with incredulity the story of Fliss Cramman and how, until Immigration Minister John McCallum intervened at the eleventh hour, Canada Border Services agents were about to deport the unfortunate woman to Britain because her papers were not in order. Neither she, nor her parents on her behalf when she was a child, had ever thought to take out Canadian citizenship, despite her having resided in this country for 25 years, since the age of eight. If this stress weren't enough following major surgery, she was was shackled to her hospital bed and a guard posted on her door. How somebody hooked up to an intravenous machine in a recovery room could be considered a flight risk is quite beyond me. It took a direct order from Nova Scotia Justice Minister Diana Whalen for the shackles to be removed. Thankfully, due mainly to the efforts of the Elizabeth Fry Society and Ms. Cramman's lawyer, good sense prevailed and the threat of deportation was lifted on this mother of four

children. But that doesn't explain how this situation was allowed to develop to the point it did before John McCallum picked up a pen and ticked the appropriate box." Chronicle Herald, A9

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Online voting deserves a try
An opinion piece states, "If there's any place that would use new technology to drive local democracy, you'd think it would be Waterloo. Once voted the smartest city in the world, it is respected and celebrated as one of Canada's most thriving high-tech hubs. So, when faced with dismally low turnouts in local municipal elections, you might expect Waterloo's civic leaders to leap at the chance to employ online voting to increase voter participation. Unfortunately, you'd be wrong to do so. On Monday, city councillors rejected trying something new and chose to stick with traditional paper ballots… Waterloo councillors were spooked by the possibility hackers could break into the electronic voting system. They worried it would be hard to prove such a vote was free of fraud and that, if a problem arose, it would be impossible to do a recount." Record, A6

LAW ENFORCEMENT / APPLICATION DE LA LOI

Late Mountie honoured at YMCA Peace Breakfast
Peace was everything Lisa Gallagher's late husband fought for. Gallagher, addressing the annual YMCA Peace Breakfast on Tuesday morning, spoke to an audience of Metro Moncton politicians and volunteers about the legacy of her husband, former Codiac RCMP Sgt. Mark Gallagher, and what he taught her. Mark Gallagher died in Haiti in January 2010 when a devastating earthquake hit the country. He died the same day he arrived in the Caribbean nation to serve a six-month stint with a UN mission that was training a national police force. The retired RCMP member had spent the holiday season with his wife and two kids, but felt he still had more to give, and wanted to return to Haiti. "It was only that morning he was leaving, I realized what a brave man he had become," Lisa Gallagher said of her husband of 31 years. During her talk, Gallagher spoke at length about the idea that peace comes from respecting each person and understanding that they have value. Daily Gleaner, B3 (Times & Transcript)

*** Moncton woman sentenced for kicking Mountie in head**
A Moncton woman will spend the next 18 months on probation after assaulting police officers and saying Justin Bourque should have shot more of them. Lia Olivia Chase, whose adoptive father is a retired Mountie, was in court for sentencing on six charges, including two counts of assaulting police, resisting arrest, uttering death threats and two counts of breaching an undertaking by consuming alcohol. Judge Irwin Lampert ordered her to take anger-management counselling, avoid drugs and alcohol, do 30 hours of community service and write a letter of apology to Codiac Regional RCMP. "I would only describe your behaviour as disgusting and disgraceful," said the judge. "To say that about the RCMP, after what's happened in this community in the last couple of years? And your father is a retired RCMP member?" Chase made no comment to the court when given the chance during her sentencing. The prosecutor told the court the incident occurred on Sept. 19, 2015 in Moncton. Her partner called police after a domestic incident, saying she was assaulting him and tearing up the apartment. When they arrived he said she was gone and he didn't want to pursue the matter. Police learned the woman was "wandering the streets intoxicated" and set out to find her. They heard she was hiding in Victoria Park but she fled when they approached. She fell and they found her lying on the ground, barefoot and crying. Times & Transcript, A6

*** Investigators examining death of man in Prince George jail**
An investigation has been launched into the death of a man found unresponsive in a jail cell in Prince George. RCMP say officers responded Sunday night to reports of an intoxicated man causing a disturbance. He was arrested and taken to the police detachment, where he was placed into a cell. RCMP say the unidentified man was found unresponsive during a check at about 2 a.m. Monday and that emergency crews were called. Paramedics took over resuscitation efforts but the man was pronounced

dead shortly before 3 a.m. The Independent Investigations Office is now looking into the case in an effort to determine whether there is a connection between police actions and the man's death. Vancouver Sun

* **Ex-RCMP recruiter charged with sex assault**
A Winnipeg woman has filed a lawsuit alleging a former RCMP recruiter sexually assaulted her in his home. Court records confirm former Const. Michael Adam Timmer, 34, has been criminally charged with one count of sexual exploitation in connection with the alleged August 2014 incident. According to a statement of claim filed last week, the then-17-year-old female met Timmer at a career fair in January 2014. A month later, Timmer - whose image was used on RCMP recruitment posters, the lawsuit alleges - invited the teen to apply to attend a RCMP youth camp in Regina, where Timmer was to act as a chaperone. The teen attended the youth camp the following August. Within days of returning home, Timmer texted her and the two made arrangements to meet for coffee. As the coffee date ended, Timmer kissed the teen "without her invitation or consent," the lawsuit alleges. Later that week, Timmer invited the teen to a party at his house. "Upon her arrival , it became apparent to (her) that no one else had been invited," says the lawsuit. Timmer then led the teen to his bedroom where he sexually assaulted her, the lawsuit alleges. The lawsuit also names the RCMP as a defendant, alleging the police service breached its position of trust by exposing the woman to "sexual conduct and harm" and took no steps to uncover the alleged abuse. "The RCMP in particular, in placing Timmer in charge of recruits and displaying him on the poster for recruiting as an inducement to the public, had a duty to investigate his character and personality and failed to do such," the lawsuit alleges. Winnipeg Sun, A5

* **Surrey's top cop concerned by ages of suspected shooters**
The officer in charge of the Surrey RCMP says he's troubled that nine young people have been arrested in connection with a shootout in south Surrey. "To say anything other than the fact that they are youths would probably be saying too much," said Chief Supt. Dwayne McDonald. "I don't want to risk identifying them but youths involved in crimes such as that is definitely a concern for me and for the Surrey RCMP and for the city of Surrey." Several shots were fired in a hotel parking lot early Monday morning near King George Boulevard and 11th Avenue. One person was cut by broken glass but no one was seriously hurt. McDonald says he's heard false reports about the accused. "It was reported that some of the youths or many of the youths involved in yesterday's incident were part of our Wrap Program and that is not the case," he said. CBC News

* **Crime on decline in Surrey**
Surrey's new top cop wants to change the perception that his expanding city is a hotbed of crime. "I believe, having lived and worked in Surrey for a number of years, the perception of crime in Surrey tends to be that crime is high," Chief Supt. Dwayne McDonald said Tuesday during a keynote address at a Surrey Board of Trade luncheon. "That's something that I want to address as an officer in charge." McDonald, appointed officer in charge of Surrey's RCMP detachment last month, pointed to the recently released third-quarter crime statistics as one reason for optimism. "We have work to do, but I'm pleased by the results," he said. According to the latest police statistics, there's been a 13 per cent decrease in violent crime, a slight decrease in property crime, a 38 per cent decrease in robberies, a 21 per cent drop in business break-and-enters, and a 17 per cent curtailment in incidences of theft under $5,000. Residential break-and-enters are up, however, and McDonald said that's an area police need to target. Province, A12 (Vancouver Sun)

* **Surrey police deny suspects were part of Wrap program**
Surrey police deny that any suspects in a shooting Monday were participants in an anti-gang program for youth. On Monday, Kash Heed, a retired police officer and former B.C. MLA who served as minister of public safety and solicitor general, said a source had informed him that of the nine people arrested following a shootout in the parking lot of the Pacific Inn Resort and Conference Centre, five were students in Surrey schools and a person alleged to have had a gun was in Grade 8. Heed said three of the accused were involved in the Wraparound (Wrap) Program, a Surrey RCMP and school district initiative that works with at-risk youth to help them stay out of gangs and the criminal lifestyle. But following a keynote address Tuesday at the Surrey Board of Trade, Surrey RCMP Chief Supt. Dwayne Mc-Donald told reporters that none of the suspects was involved in Wrap. "It was a bit disappointing," Mc-Donald said. "It was factually inaccurate yesterday. It was reported that some of the youth or many of the youth

involved in yesterday's incident were part of our Wrap program, and that is not the case. I won't get into too many details on that other than to say that that's inaccurate." As many as 20 shots were fired between two vehicles on Monday and one person was treated for minor injuries. Vancouver Sun, A11

*** Police bust fentanyl lab in city's S.W**

Two men have been charged after police busted a fentanyl powder reprocessing lab. Calgary police evacuated an apartment building in the 0-100 block of Westpark Link S.W. last week after officers found signs of the lab. Police initially entered the building on a search warrant for what was believed to be a heroin trafficking investigation. The RCMP Clandestine Laboratory Enforcement and Response Team was brought in to identify and remove the substances found in the residence. No one was injured as a result of the investigation. Police found 11 grams of methamphetamine, more than 26 gram of power cocaine, 65 grams of crack cocaine, 263 grams of fentanyl powder and 645 fentanyl pills as part of the search. Calgary Sun, A19

*** Alarm raised on fentanyl after overdose death**

A Nova Scotia woman is raising awareness after her 21-year-old granddaughter's fentanyl overdose. Charly Ann Torikka, a young mother and Maple Ridge, B.C., resident, was found dead in bed by her boyfriend on Nov. 6. An autopsy report revealed fentanyl-laced cocaine was in her system, and her father used the media to warn others in B.C. about the drug. Now, the girl's grandmother, Lynda Koile, is doing the same on the East Coast. (…) RCMP spokeswoman Cpl. Jennifer Clarke said the department now has a supply of Naloxone, a drug that reverses or blocks the effects of opioids. "(It) is being distributed to employees across the province in stages. The first to receive the Naloxone kits are the employees who are the most likely to come into contact with it, then to those employees who are at a lower risk of contact," she wrote in a late October email. "We are actively rolling them out to the rest of the division." Chronicle-Herald, A1

*** Investigation into child's death delayed**

A police investigation into the death of a four-year-old girl who died in care is waiting on paperwork, said an RCMP spokesman Tuesday. "There are different agencies involved here," said Sgt. Jack Poitras of Edmonton's K Division. "Investigators are waiting for reports to come in." He said he couldn't release further information on what the reports are and doesn't know the timeline for the investigation. Serenity died on Sept. 27, 2014, while in kinship care, being looked after by family members. Her death prompted a review of the case by Alberta's child and youth advocate, who found that no workers had checked on Serenity or her two older half-siblings in almost a year before she died, despite reports she was unwell, malnourished and bruised. Medical records obtained by Postmedia showed Serenity weighed 18 pounds when she died. She was suffering from hypothermia and had multiple bruises, including around her genitals, when she arrived at hospital. Her hymen was gone. The Alberta medical examiner's report on her death was completed almost two years after her death before being given to the RCMP, who asked that the report not be released. Poitras said the autopsy report will be withheld until the investigation is concluded. He added that due to the different agencies involved with children in care, it isn't uncommon for investigations to be delayed. Edmonton Sun, A9 (Calgary Herald, Edmonton Journal)

*** Athol man arrested on child pornography charges**

A 24-year-old Athol man has been charged with offences allegedly related to child pornography. The RCMP's Provincial Internet Child Exploitation Unit has charged Darryl Wayne Baxter with luring a child and six counts of breach of conditions. On Nov. 18, police searched a home in Athol and arrested Baxter at the scene without incident. He was held in custody pending an appearance in Amherst Provincial Court Tuesday. Chronicle-Herald, A5

*** Search for Chris Metallic continues four years later**

Four years after a 20-year-old man was reported missing, Sackville RCMP continue to investigate the disappearance of Chris Metallic, and police officers will conduct new searches in the Sackville area in the coming days in hopes of getting more information that could help find him. Metallic was reported missing on Nov. 25, 2012, following a party at a residence in Sackville. A few days after his disappearance, footwear belonging to him was located off the Haute-Aboujagane Road. We continue to receive

information about the disappearance of Chris Metallic. By conducting these new searches we will be following up on some of that information in order to see if it provides any more information about what happened to Chris. Sgt. Paul Gagné. Metallic is described as aboriginal, measuring six feet tall, and weighing about 180 pounds at the time of his disappearance. He has short, dark, black hair and was last seen wearing a shiny bright blue sweater and jeans. "We continue to receive information about the disappearance of Chris Metallic," says Sgt. Paul Gagné with the Sackville RCMP. "By conducting these new searches we will be following up on some of that information in order to see if it provides any more information about what happened to Chris." Times & Transcript, A8 (Guardian)

*** Claims of attacker in clown mask could lead to charges in Port Hardy**

Port Hardy RCMP are preparing to bring mischief charges against a 19-year-old man suspected of clowning around with the law. The move follows a month-long investigation of a reported October assault where the man said he had been set upon by someone wearing a clown mask. Police allege the report was false and misled the detachment. The incident mirrors the "creepy clown" phenomenon in Canada and the United States that has seen people dress up as clowns to scare or surprise others. Victoria police had an experience with the phenomenon when a man possibly disguised with a clown mask was arrested in October for a burglary at Frank White's Dive Store. Port Hardy RCMP Cpl. Stuart Foster said every report received by the detachment is taken seriously. "Investigations such as these, where there are no witnesses and [they] allege a violent offence, are especially difficult and time-consuming to investigate," Foster said in a statement. He said specialized RCMP units were brought to Port Hardy to help investigators. "It is not only a waste of resources, it is a criminal offence and one for which we will seek charges," Foster said. Times Colonist

Jury Hears Of Suspected

An ex-girlfriend of an accused gangster boss killer told an Edmonton jury Tuesday she saw her boyfriend give a suspected gun to one of his drug thugs a few days before the killing. Testifying at the first-degree murder trial of Josh Petrin, Karissa Dow, 24, told jurors she dated Petrin from 2010 to November 2012 culminating in the birth of their daughter following his arrest. 'Patched' member Dow testified that Petrin, 33, revealed to her that he was a "patched" member and a "boss" with the "drug-dealing" White Boy Posse street gang and said he has a WBP tattoo on his arm. (…) Under cross-examination, Dow told defence lawyer Markham Silver that she never saw Petrin hand anything to Halbauer and agreed she does not know what he might have given him. She also agreed that drugs were sometimes stashed in the same places where guns were. Dow also said in crossexamination that she was pressured to speak with the RCMP and told jurors that one Mountie threatened to have her jailed and to have her newborn baby taken away. She clarified to Rudiak that the officer told her after Petrin's arrest that they could take away her child. She also said the officer told her friends she was going to deliver the baby while in jail. She added her daughter was never taken away and she was never charged. Postmedia Network (Edmonton Sun, A5, Edmonton Journal)

*** Denecho King murder case moves to preliminary inquiry**

A preliminary hearing for a man charged with second degree murder and attempted murder began Monday, almost two years after police found two men seriously injured in a downtown apartment building. John Wifladt, 39, succumbed to his injuries while Colin Digness, who is in his early 40s, was medevaced to Edmonton for further medical treatment. Denecho Noel Calvin King, 24, was charged with second degree murder and attempted murder months after police responded to the early morning incident Dec. 14, 2014, at the Sunridge Place apartment building on 51A Avenue. Eleven days have been set aside for NWT Territorial Court Judge Robert Gorin to hear evidence in the case and to decide whether it is strong enough to proceed to trial on the charges police announced against King on May 1, 2015. The Crown may call up to 40 people to testify, defence lawyer Jay Bran has previously said. Crown prosecutor Alex Godfrey was expected on Tuesday to call paramedics who transported the two men to hospital as the hearing continued. A publication ban was imposed on testimony and exhibits, such as photos of items in the apartment. The ban means little can be reported about what occurred. The preliminary inquiry began with testimony from five RCMP officers Monday in Courtroom 4, one of the smallest courtrooms in the building. There was added security, with two RCMP officers keeping watch. A third RCMP officer in a suit watched from the gallery as evidence was given. King also faces a charge in connection with an escape from the North Slave Correctional Centre on Aug. 10. King, wearing grey sweatpants, a white T-shirt with

a graphic print, remained in leg shackles during the hearing as he sat beside his lawyer. He listened without any obvious reaction to the testimony of five RCMP officers, slumping in his chair as the hearing wore on through Monday afternoon. The public gallery remained largely empty on the first day of the hearing. Yellowknifer

*** Sask. community up in arms over RCMP carbine training**

Drew Erickson thought he knew what he was getting into when he built his home in Stone Pointe Estates in 2011. Stone Pointe is an up-scale neighbourhood located east of Regina. The community has about sixty-five homes, many valued at more than a million dollars. For the last two summers, it has also had some very noisy neighbours. Across the road is the Regina Wildlife Federation and its gun range. At first, Erickson's family heard what they expected: small caliber fire and the odd shotgun. That all changed one summer morning in 2015. "We awoke, about a quarter after seven, to what sounded like automatic rifle fire, very loud, rapid succession." According to the Regina Police Service which uses the same weapon, C8 Carbines are noisier than typical rifles or shotguns because the projectile travels faster than the speed of sound. The gun fire could be heard in Emerald Park and White City two kilometres away. Erickson, who lives just a few hundred metres away, says it's like living in a war zone. He said the gunfire woke his wife, who is from South Africa, and sent her into a panic. "When she heard that noise when she was a kid, that meant somebody nearby was in peril," Erickson explained. It's not just his wife either. When the matter was brought before the RM by Erickson and a group of concerned community members, it was mentioned some members of the group had immigrated to Canada from a war-torn country. Erickson said a man and his wife heard the gunfire on their first day in the community. "She effectively thought she was back in a war zone," he said. "This is not why they came to Canada. This is not why they came to live in a rural community." Erickson says closing doors and windows does little good. He says the RCMP needs to find another range, away from the community. "Our community is at the point where we've done our time, we've taken our turn, this is two summers in a row, and if it's a third it's unnaceptable." CBC News

Accused UN killer tells undercover cop he dreamed about his arrest

Cory Vallee, a United Nations gang member and accused killer, had a dream he was going to be arrested the day before Mexican police raided his Guadalajara house and took him into custody. Vallee described the dream to an undercover cop posing as a criminal and planted in the accused killer's cell at the Richmond RCMP detachment on Aug. 17, 2014. A secretly recorded video of the conversation was played for B.C. Supreme Court Justice Janice Dillon at Vallee's murder trial Tuesday. "I started packing the day before I got arrested because I had a dream that I got arrested. I swear to God," Vallee said to the cop, whose identity is shielded by a court order. "I had a dream that someone was coming in my house and I woke up and thought I saw a shadow and they were trying to arrest me. It was like a nightmare." He said he started packing all his clothes, books and DVDs the same day. So when police arrived and shouted his name the following day, "everything was in boxes." Replied the undercover cop: "That is f-king trippy." The jail cell conversation took place about 2:40 a.m. after Vallee had been escorted back to Canada by two other RCMP officers. Vallee met the undercover cops at Vancouver airport when they were all placed in the same Canada Border Services Agency holding cell early on Aug. 17. He also said that going to jail won't be so bad, since he had already cut offall contact with family and friends years earlier when he went on the run. Vancouver Sun, A11, 1

*** De la colère à l'action**

Un article d'opinion note, « S'il veut faire toute la lumière sur les violences subies par les femmes autochtones, le gouvernement Couillard doit commencer par ouvrir les yeux. Depuis une semaine, son plan d'action se résume ainsi : se cacher derrière la commission d'enquête fédérale, et ne pas faire grand-chose en même temps. M. Couillard a d'abord proposé une vague « table de concertation ». Mais avant de lancer cette idée, il aurait dû consulter les communautés touchées. Acculé au mur, il accepte maintenant de le faire. Il a parlé hier avec le chef de l'Assemblée des Premières Nations du Québec et du Labrador, et d'autres entretiens sont prévus dans les prochains jours. La pression augmente pour déclencher une enquête judiciaire québécoise sur les relations entre les femmes autochtones et les policiers (violences sexuelles, abus de pouvoir et autres formes de discrimination). Québec refuse de bouger, en invoquant que le fédéral fait déjà ce travail avec la nouvelle commission d'enquête lancée sur les femmes autochtones tuées et disparues. Cette excuse ne convainc pas. Certes, la commission fédérale se penchera entre autres sur le Québec, et son mandat inclut maintenant les violences

sexuelles. Mais le Canada est un vaste pays, et le temps de la commission sera limité. Le gouvernement Couillard pourrait rétorquer que la commission pourra compléter cet examen, car les causes sont en partie déjà connues. Mais si c'est le cas, cela signifie qu'on les connaît aussi déjà assez pour trouver des solutions ! Or, Québec n'a encore rien proposé pour mieux former les policiers et protéger les femmes. Le refus de Québec aurait également été plus crédible si les policiers étaient eux aussi prêts à agir. Mais contrairement à la Gendarmerie royale du Canada, la Sûreté du Québec (SQ) refuse de reconnaître la discrimination envers les autochtones. » La Presse, 2

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Dog daycare gives B.C. prison inmates a second chance**

By all accounts, Chilko and Riley are well behaved and haven't been convicted of any crimes, yet every day they end up behind the razor wire and heavily fortified walls of a federal prison. Chilko, a border collie-cross, and Riley, a golden retriever, are part of of a program called The Doghouse, a dog daycare and kennel inside a women's prison in Abbotsford, B.C., where inmates look after dogs while their owners are away at work. (…) More than 150 women prisoners have worked in the Doghouse program in the decade since the Langley Animal Protection Society (LAPS) partnered with Corrections Canada on the project. The latter provides the space and facilities, but staff say the program is otherwise revenue neutral. LAPS handles day-to-day operations, and pet owners pay $18 a day — cheaper than the going rate at many private facilities. (…) The Nova Institution for Women in Truro is the only other federal women's prison with a dog program, though the focus there is on training assistance dogs. The women's prison in Edmonton is also planning a program that teaches prisoners dog-grooming skills. Catherine Latimer, executive director of the national John Howard Society, says she's a firm believer in the power of animal therapy for prisoners. "Dogs have a remarkably strong impact on people," Latimer says, and they can help foster "soft skills" such as being in a trusting relationship. "Being exposed to a situation where prisoners learn empathy is important." CBC News

Shooting victim was trying to turn his life around after time in prison

Tyler Keizer had been trying to turn his life around after a history of violence and criminal activity, when he was shot dead Monday night. According to parole documents, the 22-year-old man had been in prison since his teenage years, had dropped out of school after Grade 10 and had links to organized crime. Keizer landed in prison after he was convicted of robbery and possession of prohibited substances. (…) Keizer was sentenced to two years and nine months in prison, but within six months of being incarcerated was involved in a stabbing at the Springhill Institution that left another offender with punctures to his lung. That attack, according to parole board documents, was suspected to have been a result of the victim owing money to an organized crime group. Keizer was eventually convicted of assault as a result of the attack and had a year added to his sentence. Keizer was then sent to the Atlantic Institution, a maximum security prison in Renous, N.B. (…) But at his most recent parole hearing on Aug. 30, Keizer seemed to be going straight. (…) As a result, the board granted him a one chance statutory release with strict conditions. Less than three months later, he was killed in Halifax's 12th homicide of the year. CBC News

Un nouveau pardon pour Bernard «Rambo» Gauthier

Bernard «Rambo» Gauthier est de nouveau «pardonné». La Commission des libérations conditionnelles, qui avait révoqué le pardon du leader syndical au printemps, revient sur sa décision, a appris Le Soleil. «La logique vient de tomber», a réagi le principal intéressé, qui venait d'apprendre la nouvelle. En avril, le syndicaliste de la Côte-Nord s'était vu retirer son pardon, octroyé en 2007 pour des gestes posés il y a 18 ans, parce qu'il avait «cessé de bien [se] conduire», avait fait valoir la Commission en raison de ses récents démêlés avec la justice. La décision a rapidement été contestée devant l'instance fédérale par le local 791 de l'Union des opérateurs de machinerie lourde, dont Bernard Gauthier est le représentant. «On a eu la permission d'en appeler, explique-t-il. Ça prouvait selon moi que c'était un peu abusif, que ça n'avait comme pas de bon sens.» Dans ses conclusions initiales, la Commission s'appuyait sur des événements «qui avaient nécessité l'intervention du système de justice», notamment lorsque M. Gauthier a été reconnu coupable en décembre 2014 d'intimidation sur un chantier de construction, une condamnation pour laquelle il a ensuite été absous conditionnellement. Le Soleil, 20

*** Demande d'appel refusée pour Jean-Paul Néashish**
Reconnu coupable de plusieurs chefs d'accusation de nature sexuelle et condamné à six ans de prison, l'ancien chef de police de la communauté atikamekw de Wemotaci, Jean-Paul Néashish, souhaitait aller en appel du verdict de culpabilité rendu en première instance. Toutefois, l'accusé a été débouté devant la Cour d'appel du Québec. Les requêtes ont été entendues, lundi. On demandait une prolongation du délai d'appel, la permission d'en appeler du verdict de culpabilité du 9 décembre 2015 et la remise en liberté de Jean-Paul Néashish durant les procédures. «J'en viens à la conclusion que le requérant n'a pas fait preuve de diligence en attendant, sans raison valable, près d'un an avant de se pourvoir en appel. Les moyens qu'il invoque ne sont pas, non plus, sérieux», a écrit le juge de la Cour d'appel Jean Bouchard avant de rejeter les requêtes. Le Nouvelliste, 5

Suspect wanted for robbing woman at gunpoint
Police are asking for the public's help to find a Red Deer man after he allegedly robbed a woman at gunpoint in West Park on Remembrance Day. Michael Wayne Lamontagne, 47, is wanted on Alberta-wide warrants. (…) He is also wanted on a Canada-wide warrant for violating his parole. Police ask residents not to approach Lamontagne because he may have a weapon. Red Deer Advocate, A3

*** Federal inmate convicted of armed robbery testifies against alleged partner in crime**
A federal prison inmate convicted of a brazen armed robbery earlier this year testified against his alleged partner in crime in a Saint John court testifying against his alleged partner in crime. Mark Lejeune's shackles clinked as he shuffled his way to the witness stand Monday morning. He says Matthew Paul Martin, who's pleaded not guilty to a total of five offences, formulated the plan to rob Alan Roy's west side home with him, and it was Martin who followed him inside the home, sword in hand, after he booted in the rear door on the morning of May 7. Lejeune, who has a shaved head and a thick, salt and pepper ducktail beard, admitted to the robbery shortly after his arrest. He's now serving a five-year prison sentence, incarcerated at Springhill Institution in Nova Scotia. Presented on the witness stand with the sawed off 16-gauge shotgun he says he used during the robbery, Lejeune's back stiffened and his eyes darted down and away from the firearm. "It was mine and I modified it," said Lejeune, recognizing the weapon, "and I don't really care to look at it, what was going on what could have happened." Telegraph Journal, B3

*** Killer denied unescorted visits to Sudbury**
A convicted killer of a husband and wife won't be coming to a Sudbury halfway house for a limited number of unescorted visits, after the Parole Board of Canada ruled against his request. George Harding Lovie, 58, had applied for six unescorted temporary absences – each lasting 72 hours – over a period of a year. Lovie has served 25 years of his life sentence for the brutal murders of Donna and Arnold Edwards on March 21, 1991. He was also convicted of attempted murder of their daughter, Michelle, with whom he had a brief relationship. (…) The family is opposed to any release program for Lovie, who is being housed at the Beaver Creek Institution, a minimum security prison near Gravenhurst. Sudbury.com (2016-11-22)

Solitary conditions 'unacceptable': Ontario
Ontario's Corrections Minister has appealed to the Premier for new prison spending and dispatched a 25-member team to examine conditions in segregation cells across the province as part of a response to revelations about the use of solitary confinement in provincial institutions. David Orazietti divulged the new steps during a sit-down interview that came on the heels of a series of Globe and Mail articles focusing on the plight of a young aboriginal inmate at Thunder Bay Jail. Adam Capay, 24, has spent over four years in solitary confinement awaiting trial, much of it inside an acrylic-glass-lined cell with 24-hour artificial light. (…) The minister said there are currently "under 20" inmates in Ontario whose elapsed time in solitary confinement tops one year. That's well above the 15-day maximum guideline set out by the United Nations General Assembly's Mandela Rules. Outgoing federal Correctional Investigator Howard Sapers has said the cap in Canada should be 30 consecutive days - with an absolute prohibition on the segregation of inmates with serious mental-health issues. Globe and Mail, A1

*** A smarter approach**
An editorial states, "The parents of Fouad Nayel will not likely see justice done in the case of their son, who was found murdered in Ottawa four years ago. Adam Picard, who had been charged with Nayel's

killing, was allowed to walk free last week after a Superior Court judge ruled that long delays in the case had violated the right of the accused "to be tried within a reasonable time." It's the latest reminder that the crisis in court delays in Ontario and across the country is a threat not only to timely justice but also to public safety. (…) On this last front, a valuable model has emerged from Nova Scotia - one that ought to spur a national rethinking of how to be smart, not just tough, on crime. The province announced this week that its restorative justice pilot project will be made permanent and province-wide this month, the first program of its kind in Canada. Restorative justice emphasizes the importance of offenders taking responsibility for their actions, addressing root causes, offering support to victims and helping to undo the damage their crimes caused in the community. Initial government studies suggest such programs have the potential to save huge sums of money by averting long trials and incarceration, to modestly decrease recidivism and to help address racial inequities in the justice system." Toronto Star, A18

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

City, cops clash on carding

City council sent a clear, precedent-setting message to London police Tuesday: end street checks now. The only hitch? Chief John Pare and the board overseeing city police don ' t have to listen to them, and probably won ' t. But in a symbolic, emotionally charged vote, Coun. Mo Salih and Mayor Matt Brown led council to unanimously back a citizen group ' s request that Brown urge police to end a practice critics call racially biased. It's believed London is the first municipal government in Ontario to make such a request of its local police. "We have heard this is an important tool for the police to use, to help them solve crimes. But there are many tools they could use," Coun. Maureen Cassidy said, citing tapping everyone's phone or emails as examples. (…) London police statistics from 2014 showed officers collected information from a disproportionate number of black and indigenous citizens compared with white people. Pare downplayed the conflict over carding. "We all have a voice ," he said. "It's (about) working together and resolving those issues." London Free Press, A1

End of program puts public at risk

Criminal trial lawyers in Alberta are worried the public could be at risk if a treatment program for sex offenders is shut down. The Criminal Trial Lawyers Association in Edmonton and the Criminal Defence Lawyers Association in Calgary say they've been told the Alberta government will end the Phoenix program by next March. The program is offered in a secure, 19-bed facility operated out of Alberta Hospital Edmonton and provides intensive therapy to convicted sex offenders serving provincial jail sentences. Ian Savage with the Calgary lawyers association said the treatment involves 35 hours of therapy a week, while a potential replacement program operated by Alberta Health Services would offer six hours. "It's essentially world-renowned and quite successful, particularly with the numbers that matter. The recidivism rate is extremely low compared to other similar programs," said Savage. The lawyers say the program has reported recidivism rates as low as 3.3 per cent in 120 offenders who received treatment and were tracked over a three-year period. * Unions won't back down

Leaders of two of the three civic unions whose contracts expire this year say they won't be intimidated by the city's 2017 budget during bargaining. Gord Delbridge, president of CUPE 500 - the city's largest union - and Moe Sabourin, president of the Winnipeg Police Association, said the city's budget for 2017 will have no affect on how they bargain on behalf of their members. (…) Sabourin said he's troubled to see the police budget is increasing only 1.3 per cent, adding it's not a realistic target. "Calls for service are continuing to skyrocket (35 per cent increase since 2007)," Sabourin said. "Criminals don't take into account inflation rates when they're planning to do their crimes. We're definitely concerned this is going to cause a decrease in service to the citizens of Winnipeg." Sabourin said the fentanyl epidemic, which is blamed for several drug overdose deaths in Winnipeg recently, is already straining police operations. "The time we have to take, the precautions we have to take... The job becomes that much more dangerous, that much more complex," he said. "The time constraints required by the members to respond to these calls has increased, which will cause an increase in costs. A one per cent increase (in the police

budget) definitely has me concerned." Bowman said there's no chance he'll support more funds for police. Bowman said the funds set aside in the 2017 budget for police had been proposed by the police board. Winnipeg Free Press, B1

*** Nelson police request $253,000 budget increase for 2017**
The Nelson Police Department is asking for an increase of $253,000 for 2017, which would bring its total budget to $3,178,291. Police Chief Paul Burkart presented the figures to city council on Monday on behalf of the Nelson Police Board. The board is required to provide a provisional budget in November of each year in anticipation of council's budget deliberations in the spring. The increase will cover the cost of two new employees — one officer and one civilian support person — whom the department recently hired after being ordered to do so by the provincial director of police services in March. Burkart said the two positions will cost about $180,000 in 2017 and the remainder of the requested increase would go toward anticipated costs resulting from a new collective agreement, which is still being negotiated with the city. The police department has been without a contract since 2012. Nelson Star (2016-11-22)

*** Fentanyl scourge seen up close in DTES alleyway**
It's not quite noon, and three people have overdosed after using drugs at an unsanctioned injection site set up inside a filthy alleyway, in Vancouver's Downtown Eastside. Next to a fixing table, under a portable canopy, a thin, middle-aged woman pitches forward and then slumps back in a chair. She has almost certainly injected herself with fentanyl, enough to kill her. She is today's alleyway overdose No. 4. There will be many more. (...)It is everywhere. It's why B.C. declared a state of public health emergency in April, why federal and provincial politicians met in Ottawa last weekend to discuss a national fentanyl strategy, why activists and volunteers are throwing together "pop up" injection sites in the DTES. (...)Drug dealers mill around the Insite entrance. Chances are, everything they sell contains fentanyl. Postmedia Network (Vancouver Sun, N3, Montreal Gazette, StarPhoenix, Ottawa Citizen, London Free Press, Kingston Whig-Standard, Windsor Star, Leader-Post, Calgary Herald, National Post, Edmonton Journal)

Drug users warned about carfentanil
Vancouver police are warning drug users to be cautious following the seizure of an opioid that is used to tranquillize elephants and believed to be 100 times more powerful than fentanyl. Police said two samples of a drug seized in September have been confirmed by Health Canada to contain trace amounts of carfentanil. The drug was believed to be heroin when it was confiscated from a man reported to be carrying a firearm in the city's Downtown Eastside, police said. "It's the first time we've seen it in Vancouver in any of the seizures we've done," Sgt. Brian Montague said Tuesday. The drug has been seen elsewhere in Canada, including Alberta, Manitoba and Ontario. Vancouver police don't know where the carfentanil came from, though fentanyl is believed to be exported from China, Montague said. Times Colonist, A5; * Radio-Canada; * Postmedia Network (The Province, Vancouver Sun)

*** At least two dozen dead from opioids this year: Goertzen**
Manitoba has recorded "at least" two dozen deaths from opioid overdoses in 2016 - nine confirmed to be caused by or related to fentanyl, Health Minister Kelvin Goertzen told the legislature Tuesday afternoon. The confirmed deaths occurred in the first five months of 2016, Goertzen said. "This number is expected to go up," he said. "Sadly, we know as the toxicology reports come back from other overdose cases, this number will almost certainly be higher than in previous years." Goertzen dismissed demands from NDP health critic Matt Wiebe to declare a provincial public health emergency and to open up safe injection sites for addicts. He did, however, agree the situation is an emergency. "Many (users) are unaware it is the drug they are taking, and of its deadly consequences," he said, adding the problem does not recognize provincial borders. "We need national action on this issue," he said. "It is not a problem that can be legislated away." Winnipeg Free Press, B2 (2016-11-23); CBC News (2016-11-22)

*** Fentanyl crisis requires B.C. pill press ban, NDP MLA says**
After 14 overdoses in Vancouver's Downtown Eastside on Sunday night, an NDP MLA is renewing his call for strict regulation of pill presses that can be used to manufacture fentanyl pills. Mike Farnworth is the MLA for Port Coquitlam and the NDP's public safety critic, and over the summer, he tabled a bill modelled after one in Alberta that would limit pill press ownership to pharmacists. However, the government cancelled the fall session, which means the legislature won't see the bill again until January.

"Right now, there are companies in this province selling those machines and they know exactly the purpose they are being used for," Farnworth told *On The Coast* host Stephen Quinn. "These businesses and these individuals are profiting from the overdose crisis. They are profiting from the deaths of people in this province." Farnworth said it was "unacceptable" that pill presses are still available in B.C. to anyone who can afford one. CBC News (2016-11-22)

*** More overdoses as fentanyl epidemic grows in Penticton**
The suspected overdose death of a 43-year-old Penticton woman Monday at the Black Forest Motel was just another in what is believed to be the growing, fentanyl-related epidemic locally. It was one of at least two overdoses that day. The second was in the early evening at a Government Street residence. However the male victim survived after being given two doses of the opiate antidote Narcan and taken to Penticton Regional Hospital. "We're seeing more than usual. I can't say for sure but I'd say we've had 13 overdoses and one death (Monday) in the last two weeks," said Cpl. Don Wrigglesworth of the Penticton RCMP. "We'll see in a week or a month what we normally see in a year, in fact it's daily, it's a huge problem." Penticton Western News (2016-11-22)

*** A path to healing**
An editorial states, "Rev. Anthony Bailey of Parkdale United Church believes in forgiveness - and that includes the 17-year-old youth who is charged with painting racist graffiti on his church last week. "It has to do with an understanding (of) our Christian teaching around loving neighbour, loving enemy, reaching out in love," Bailey says. So he's among those who suggest we depart from traditional justice - charge someone, hold a trial, send them to jail - and think more about constructive ways of dealing with some crimes. The youth in this particular case, who cannot be named because of his age, faces 20 charges related to the racist and anti-Semitic graffiti spray-painted on Ottawa churches, mosques and synagogues recently. Several charges are related to past breaches of the Youth Criminal Justice Act; he was on probation for assault, robbery and bail violations. Bailey and some others believe an approach known as "restorative justice" should be at least considered. Under restorative models, the accused meets with victims or members of the affected community to repay the harm done and understand the true consequences of his or her actions. Restorative justice can proceed in parallel to charges, be part of sentencing, or, in some cases, lead to charges being stayed or dropped. " Ottawa Citizen, A6

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Aboriginals seek inquiry into alleged abuse by police**
Premier Philippe Couillard has promised to meet with indigenous leaders to discuss ways to investigate alleged "systemic racism" in Quebec. "We're aware of the enormous trauma in aboriginal communities, we're not trivializing it ... we'll find concrete ways to bring some answers," the premier said. Couillard made the remarks Tuesday at the National Assembly, where a dozen women stood wearing small, red felt dresses pinned to their shirts, reminiscent of the red square worn by student protesters in 2012. They said the red dress symbolizes the murdered and missing aboriginal women. The Couillard government has suggested that Canada's national inquiry into missing or murdered indigenous women is a sufficient vehicle for examining alleged abuse of aboriginal women by police forces. But on Tuesday, aboriginal women argued Quebec's problems will be lost in a national inquiry. Montreal Gazette, A10; Le Devoir; TVA Nouvelles; La Presse Canadienne (L'actualité, Radio-Canada); La Presse; Huffington Post Québec

*** Elsipogtog hoops player takes a knee in support of missing and murdered aboriginal women**
Quentin Sock has some personal experience with the issue of missing and murdered aboriginal women and girls. The 30-year-old student athlete at St. Thomas University, a member of the Elsipogtog First Nation, and the men's basketball team at the school, was one of the organizers of an awareness campaign/protest at the Tommies' Atlantic Collegiate Athletic Association basketball home game against the University of Kings College Blue Devils earlier this month in Fredericton. Before the playing of the national anthem prior to the game, the entire Tommies team quietly took a knee. Sock and team co-captain Jeremy Speller, a native of the Gesgapeplag First Nation in Quebec, bowed their heads and

raised a red shawl, a symbol of the plight of missing and murdered aboriginal women across the country. They did so with the blessing of the university president, Dawn Russell, and the university community. Literature handed out with the program, quoting the Native Women's Association of Canada and the Government of Canada, noted that 16 per cent of all women murdered in Canada between 1980 and 2012 were of aboriginal descent and notes that, "the RCMP has identified that there may be 1,181 missing and murdered Aboriginal women and girls." Times & Transcript, D3

* **Anti-violence campaign to begin Friday**
A coffee house, panel discussions, the Take Back The Night march and a family day are all part of the list of events on tap for this year's 12 Days to End Violence Against Women campaign. Set for Nov. 25 to Dec. 6, the annual campaign that's organized by a variety of local groups aims to draw attention to the issue of violence against women. Panelists will include Patricia Bacon, a human sexuality expert and executive director at the Blood Ties Four Directions Centre; Mark Rutledge, a White Ribbon Yukon member and father; and Sara Tillett, a counsellor at Golden Horn Elementary School. That will be the first of two panel discussions included in the campaign's schedule. The other one will focus on missing and murdered indigenous women in Canada and is scheduled for noon on Dec. 5 at Yukon College. Whitehorse Daily Star, 5

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Pour ou contre la légalisation de la marijuana?
C'est au printemps 2017 que le gouvernement Trudeau déposera son projet de loi pour légaliser la marijuana à des fins récréatives. D'ici le 30 novembre, le Groupe de travail sur la réglementation et la légalisation de la marijuana, présidé par Anne McLellan, déposera ses recommandations au gouvernement. Plus de 30 000 commentaires ont été émis depuis le début des consultations, dont 500 de différentes organisations. Pour ou contre la légalisation de la marijuana? Les partisans (Line Beauchesne, professeure de criminologie à l'Université d'Ottawa, et Philippe Hurteau, chercheur à l'Institut de recherche et d'informations socio-économiques) en débattent avec les opposants (Jean-Pierre Chiasson, médecin spécialisé en toxicomanie et fondateur de la Clinique Nouveau Départ, et Claude Carignan, leader de l'opposition officielle au Sénat). Radio-Canada (2016-11-22)

PUBLIC SERVICE / FONCTION PUBLIQUE

Shared Services fiasco reveals federal sprawl
An editorial states, "hared Services Canada was supposed to do the following: Collapse 63 email systems into one; decommission more than 500 data centres, replacing them with a mere handful; upgrade 50 telecommunications centres connecting 3,500 federal buildings. And do this with staff pulled from 43 different departments, running 14,000 software applications. What could possibly go wrong? In a special report, journalist James Bagnall has offered a meticulous examination of exactly what did, from the time Shared Services appointed its first president in 2011 to the present day, as it staggers under project delays, financial challenges and general mistrust across government. As significant as the Phoenix pay system scandal is, the Shared Services challenge dwarfs it. As Bagnall points out, several concrete problems have undermined the task of Shared Services: It was born in secrecy - through an administrative services review conducted on the QT by the Privy Council Office. From the start, people who could have offered additional depth and expertise were shaded out. As a result, many experts feel the initial business case was flawed or incomplete." *** 2 attack plotters arrested in France may have visited Syria**

French officials say that two suspects - one a school employee - arrested in an alleged attack plot on France apparently travelled briefly to Syria. An official said Wednesday that two others among the seven suspects arrested over the weekend have been freed. Interior Minister Bernard Cazeneuve said on Monday that the arrests in Strasbourg and Marseille culminated a six-month investigation that thwarted an attack. Two officials close to the investigation said that two of the four people arrested in Strasbourg had travelled to Cyprus as if on a vacation, then apparently made a quick trip to Syria. One, identified as Yassine B., 38, worked in a Strasbourg school. The officials spoke on condition of anonymity because they were not authorized to speak publicly on the case. Associated Press (The Telegraph)

MINISTER / MINISTRE

*** Welcome to the capital, outgoing Vice-President Biden!**
On the eve of his second pre-holiday First Ministers Meeting, Justin Trudeau is set to host an "official dinner" for visiting US Vice-President Joe Biden, who is scheduled to arrive in Ottawa later this afternoon in advance of what the draft itineraries provided to media suggest will be an event-packed day in the capital on Friday. Before lifting his glass to toast the outgoing Veep, however, the prime minister will hold a pre-summit meeting with Yukon Premier Sandy Silver, who will stop by his Centre Block office this morning. For those keeping track, the PMO-issued advisory indicates that Trudeau also intends to be in his seat for Question Period. Meanwhile, Public Safety Minister Ralph Goodale and Canadian Security Intelligence Service director Michel Coulombe will field questions from Public Safety committee members on a recent federal court ruling that found the agency failed to properly advise the court on its data retention policies, which the court views as a "breach of candour." MPs will also spend an hour quizzing

Goodale, Coulombe, RCMP Commissioner Bob Paulson and other officials on the latest requests for add-on budget boosts included in the most recent supplementary estimates. Ottawa Citizen

Biden's visit to Ottawa could damage Canada-U.S. relations, Tory MPs warn
Outgoing Vice-President's presence in the capital a little more than a month before Mr. Trump takes over the White House is seen as an effort to "calm the waters," one MP says. U.S. Vice-President Joe Biden's visit to Ottawa this week is intended to reassure the public that the bond between the two countries is strong, but Canada's Conservative opposition warns the trip could sabotage the country's relationship with the incoming Trump administration. Mr. Biden will be celebrated at an official dinner in Ottawa on Thursday, and on Friday will meet with Prime Minister Justin Trudeau and the country's premiers already in town to discuss climate change at a first ministers' meeting. (…) "We look forward to him perhaps sharing his perspectives in this time of transition," Transport Minister Marc Garneau told reporters. "I'm sure that we'll have an opportunity to speak to him and ask him some questions, so it, I think, is going to be very valuable for Canada." **Public Safety Minister Ralph Goodale** said there are always important cross-border issues for Canada and the United States to discuss. ***"So keeping that relationship in very good shape, whether it's at the beginning of a new administration or at the end of a departing administration, all of that is high on the agenda for Canada,"*** he said. Globe and Mail

Trump's view on torture may change secrets sharing, spy watchdog executive says
The civil servant in charge of the government's spy-watchdog agency says Canada may have to reconsider how it shares intelligence with the United States if president-elect Donald Trump makes good on his promise to torture terrorists to gather intelligence. The federal official also remarked that had former U.S. intelligence analyst Edward Snowden worked for Canadian intelligence and leaked secrets, "he should be shot," but quickly backed off the opinion. Michael Doucet, the executive director of the Security Intelligence Review Committee, made the off-the-cuff remarks to a small audience in Toronto last week. An audio recording of his talk was provided to The Globe and Mail by a student journalist from the Eyeopener, a campus newspaper at Ryerson University, which was the venue for the talk. For 11/2 hours, the former intelligence analyst held forth on intelligence issues. Members of SIRC rarely make unscripted or unguarded remarks publicly because they are sworn to secrecy about their work reviewing the highly classified spying operations of the Canadian Security Intelligence Service. (…) During his talk, Mr. Doucet highlighted that **Public Safety Minister Ralph Goodale** recently called SIRC ***a "whistle-blower"*** agency. That followed a Federal Court ruling this fall, when judges responding to a SIRC report accused CSIS officials of "breaching their duty of candour" in their applications for surveillance warrants by not revealing what they do with the data. One broad theme of Mr. Doucet's talk was that CSIS and its foreign counterparts are veering far from their roots of building cases with intelligence from informants by increasingly using technological surveillance instead. Globe and Mail, A1

*** Liberals' Digital Surveillance Proposals Far Scarier Than Bill C-51**
An opinion piece states, "Imagine how you would feel if the government installed cameras in your home that recorded everything you did, then gave police the power to review the footage without a warrant, whenever they want. If that sounds to you like a gross violation of your privacy, you should probably be aware that the federal Liberals are contemplating pretty much exactly that for the digital world. (…) **Public Safety Minister Ralph Goodale** has vowed to remove ***"problematic elements"*** of Bill C-51, but his department's survey suggests it's looking at ways of enhancing the bill instead. (…) What alarms me most about the C-51 review is not the proposals themselves, but how the government appears to be selling them to the public. In short, they want you to agree to these ideas without realizing what you've agreed to. The Public Safety department's survey contains questions that are imprecise, confusingly long and sometimes misleading. Understanding things is essentially what I do for a living, and I had to read these questions three or four times before they started to make some sense, and even then." Huffington Post

TOP STORIES / MANCHETTES

$1B RCMP overtime bill proof of 'exhausted and depressed' members, retirees say
The Royal Canadian Mounted Police (RCMP) has paid its members more than $1 billion of overtime since 2009, according to documents obtained by CBC News. Recent retirees from the force say the costs

confirm anecdotes that many officers are stressed, overworked and depressed. "The rank and file - especially the patrol guys and girls - are burnt out," said Derek Snow, a recently retired RCMP member with 29 years of policing experience. "You want to do a good job and you want to do extra," Snow said, who lives in Shediac, N.B. "But there's only so much anybody can take." Between April 2009 and June 2015, the RCMP paid $1.01 billion in overtime, according to documents obtained via access to information requests. (...)Terry McKee advocates for RCMP members and acts as a spokesperson for the Mounted Police Professional Association of Canada (MPPAC). He says the money spent on overtime should instead be used to hire more officers. "You're putting members' health at risk because they're always being called to supplement for shifts that are not staffed properly," McKee said, who is based in Moncton. (...) Contained within the documents obtained by CBC News is the RCMP's response to the work-life balance report. "Human Resources and Corporate Management will benefit from the content of this report and are committed to providing the enhancements needed to improve operational management and oversight. We will also address the concerns outlined in this report, many of which have already been actioned," wrote Dan Dubeau, chief human resources officer. CBC News

Border bill gains traction in U.S. Congress
A bill to simplify crossing the Canada-U.S. border moved ahead in the American Congress on Wednesday, with little time left to get it passed before U.S. lawmakers break to form a post-election legislature in the new year. It's a long-awaited development on both sides of the international border. The Harper and Trudeau governments both signed socalled preclearance deals with the Obama administration, but the arrangement required implementing legislation and U.S. lawmakers have not made it a priority. The bill finally got some attention from Congress on Wednesday evening. It sailed through the House of Representatives without objection. Lawmakers there urged the Senate to adopt it quickly, and make it law before breaking next week for the Christmas-season holidays. Lawmakers from different parties and different parts of the U.S. spoke in favour of the bill, before moving it forward. "[This] is great news for U.S.-Canadian relations," said New York Republican Elise Stefanik. "Canada is more than just a bordering nation. They are our neighbours, our friends and our largest trading partner. Plattsburgh, a city in my district, has even branded itself as Montreal's U.S. suburb." Canadian Press (Times Colonist, A8); Presse canadienne (Voix de l'Est, Métro)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Anxious days: Residents to learn flood disaster aid details during EMO meetings this week**
Anna Mae Muise is filled with many emotions as she prepares to enter a meeting with the province's Emergency Management Organization officials. Muise is one the many Cape Breton victims of record Thanksgiving Day flooding who will be at Cambridge Suites in Sydney today through Saturday to learn the status of financial assistance that could come their way... She's been told that EMO officials will meet with families on a one-on-one basis to go through assessments of damage to their homes, their appraisal of the homes and costs associated with flood damage. Cape Breton Post, A1

*** Mossey River, Man., declares state of emergency after lake ice piles up in river**
A state of emergency has been declared in the Winnipegosis, Man., area because of lake ice that caused river levels in the village to rise to critical levels Tuesday night. Mossey River Municipality declared the state of emergency Tuesday evening due to an "ice event" on the Mossey River, head of council Kate Basford said Wednesday. Winnipegosis, Man., is about 280 kilometres northwest of Winnipeg on the west shore of Lake Winnipegosis. "The wind had pushed the ice off the lake and down the river," she said. "We had never really experienced an ice event where it was piling up." She said in the end, the municipality declared a state of emergency out of an abundance of caution. CBC News

*** Des citoyens interpellent Trudeau**
Des citoyens de Lac-Mégantic et des élus de l'opposition reprochent au premier ministre Justin Trudeau de manquer à son « obligation morale » de construire une voie de contournement. Des représentants de la Coalition des citoyens et organismes engagés pour la sécurité ferroviaire à Lac-Mégantic ont fait le déplacement à Ottawa, mercredi, pour l'exhorter à bouger dans ce dossier. Le porte-parole du regroupement, Robert Bellefleur, a fait remarquer qu'en juillet 2013, peu après le drame ferroviaire, Justin

Trudeau a signé une pétition réclamant la construction d'une voie. La Coalition brandissait d'ailleurs, au bénéfice des journalistes, une grande affiche reproduisant cette pétition avec la signature de M. Trudeau en évidence. Une autre pancarte indiquait le trajet actuel de la voie ferrée au centre-ville de Lac-Mégantic et le tracé suggéré pour la voie de contournement. Mais depuis qu'il a été élu premier ministre, c'est silence radio, a déploré le Méganticois en conférence de presse au parlement, aux côtés d'élus du Parti vert et du Bloc québécois. Tribune, 5; Le Droit; Postmedia Network (Cape Breton Post; Calgary Sun; Times & Transcript)

*** Fort McMurray horse owners getting special delivery of hay**
Horse owners in Fort McMurray are being "baled" out by the Alberta Equestrian Federation. The organization is sending 1,500 bales of hay to the fire-ravaged region of northern Alberta on Dec. 16 to help support owners through the winter after much of their own supply was destroyed. It is hoped the delivery will help alleviate some of the feed costs over the winter months. Horse owners who registered with the federation during the disaster will be able to pick up hay bales Dec. 17 and 18. Postmedia Network (Edmonton Journal)

*** The future of online giving**
The Fort McMurray wildfires spurred the largest collective donation by Canadians toward any single event on the fundraising platform GoFundMe in 2016, says its chief executive, Rob Solomon. That outpouring - 10,200 individual donations to 183 separate campaigns for a total of $1.1-million - is an example of how Canadians' online generosity continues to grow, Solomon says, with an estimated $66 million in donations on the website so far in 2016, up from $55 million in 2015. GoFundMe, which uses crowdfunding to raise money for personal causes such as paying for steep medical bills or supporting a family hit by tragedy, hit US$3 billion in total donations globally in October, roughly six years after it was founded. Postmedia Network (National Post, FP 5)

*** Be prepared for more 'extreme' rainfalls - think biblical floods - U.S. climate scientists warn**
In a research paper that reads like it was written by a horseman of the apocalypse, U.S. climate scientists are predicting more frequent extreme rainfalls, the kind of downpours that cause flooding, landslides and massive infrastructure damage, especially in cities where paved ground cannot absorb water. The same goes for snowstorms and ice storms, according to the team from the National Center for Atmospheric Research, which also found the expected frequency of these "extreme precipitation events" increases five-fold in large parts of Canada and the western United States in the coldest winter months. The effect is dramatically lessened south of the 30th parallel, which runs through Houston, Texas. The reason is simple physics, playing out in the chaos of continental weather patterns. Warm air can hold more moisture than cold air. That is why storms from the Arctic, or the famed Alberta clippers, tend to be windy but dry, while the ones that come up from the southern United States are warm and full of precipitation, and can become ice storms if they run into a cold front. If climate change raises atmospheric temperature by one degree, the air can hold about 12 per cent more moisture. According to the study, this same increase would cause precipitation intensities to increase by about seven per cent. Postmedia Network (National Post)

*** N.L.'s seasonal SAR stations close for the winter**
The Canadian Coast Guard's seasonal search and rescue (SAR) stations in Lark Harbour and Port aux Choix are closed for the winter Wednesday. Vessels from the seasonal SAR stations are unable to operate in the Gulf of St. Lawrence's ice-covered waters. The coast guard uses icebreakers and calls on other local, commercial or recreational vessels for its winter SAR operations in the Gulf when necessary. Aircraft with the Department of National Defence are also used. The seasonal stations resume operations in April. Telgram, A2

*** Feds set to pick new military rescue planes**
One of the longest and most contentious defence procurements in Canadian history will inch closer to conclusion today when the federal government announces a replacement for the military's ancient search-and-rescue planes. The decision comes 14 years after the Chretien government first launched plans to replace the air force's Buffalo and Hercules aircraft, the oldest of which have been flying since the 1960s. What followed was a series of missteps and controversies eerily reminiscent of those that

have plagued the effort to replace Canada's aging CF-18 fighter jet fleet. Public Procurement Minister Judy Foote and Defence Minister Harjit Sajjan will announce the winning bid during an event at Canadian Forces Base Trenton alongside air force commander Lt.-Gen. Mike Hood. Canadian Press (Chronicle Herald, A8; Guardian; Cape Breton Post; Times & Transcript)

*** Side-scan sonar used in search for missing St. Anthony woman**
Just before 3 p.m. Wednesday afternoon, a search and rescue unit of the RCMP began their search of the harbour around St. Anthony. Hillier-Penney has been missing since last Wednesday, when she was seen in the area of her family's home on Husky Drive. Following an extensive investigation, the RCMP now considers the disappearance of St. Anthony resident Jennifer Hillier-Penney to be suspicious. A side-scan sonar boat was brought to the area for the search of the water. Cst. Toby Acreman of the St. Anthony RCMP detachment was onboard the vessel, along with other search and rescue personnel. Telegram, A5; Canadian Press (Cape Breton Post; Calgary Sun; Edmonton Sun; Ottawa Sun; Toronto Sun; Whig-Standard; London Free Press); Labradorian

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Garratts recount dark odyssey through China's security apparatus
The Garratts didn't realize they were being set up until it was too late. It was August, 2014, and the Christian aid workers were at a restaurant in the remote northern Chinese city of Dandong, on the North Korean border, where they had lived and run a café for years. An acquaintance had asked them for advice on sending his daughter to study in Canada - so there they were, prepared to offer assistance, as they had been doing in China since falling in love with the country 30 years before. Shortly after arriving amid what looked like a wedding party, Kevin and Julia Garratt were grabbed by strange men and driven away in separate cars. The surprise arrest launched a dark odyssey through the Chinese state security apparatus: Mr. Garratt was imprisoned for two years on espionage charges, Ms. Garratt was detained, then placed under surveillance, and the family was traumatized, immiserated and finally reunited, with troubling questions to spare. (…) Former foreign affairs minister John Baird requested a meeting during his tenure. And in 2009, the Garratts were contacted by Canadian Security Intelligence Service, the Canadian spy agency, to ensure the couple hadn't violated sanctions through their aid work. (They hadn't.) Ms. Garratt now believes all of the attention from foreign diplomats and security agencies put a bull's eye on their backs. Unbeknownst to them, another drama was playing out, as the United States sought the deportation from Canada of Su Bin, a Chinese man accused of masterminding a plan to steal U.S. military secrets. Diplomatic discussions suggested very strongly the Garratts had been seized in retribution. Globe and Mail, A1/front

Ces Québécois sont secrètement partis combattre en Syrie
Un groupe de jeunes Québécois s'est joint secrètement aux milliers de combattants étrangers en Syrie pour lutter contre le régime de Bachar Al-Assad. Aujourd'hui, ils sont soupçonnés d'avoir commis des actes terroristes. Nous avons découvert qui ils sont. Une enquête de Sonia Desmarais, Chantal Lavigne et Karine Bastien Une dizaine d'amis se retrouvaient régulièrement dans un centre de tir de la région de Montréal pour s'entraîner avant le départ de sept d'entre eux pour le Moyen-Orient entre l'été 2012 et l'été 2013. Les jeunes hommes y apportaient deux armes, selon des témoins. L'une d'elles était une imitation de carabine semi-automatique soviétique appelée SKS, similaire à celle qu'utilisent les rebelles en Syrie. Certains d'entre eux s'y sont exercés durant des mois, de deux à trois fois par semaine. Lors des séances de tir, ils prennent souvent des pauses pour prier. Plusieurs d'entre eux s'étaient convertis à l'islam. Un jour, un client aurait entendu un jeune dire qu'il était malheureux que les cibles ne soient pas des mécréants. Avertis de l'incident, les propriétaires contactent les autorités, qui décident de déclencher une enquête. Les policiers seront à partir de ce moment présents lorsque les jeunes s'exercent et la

Gendarmerie royale du Canada (GRC) met plusieurs d'entre eux sous écoute électronique. Certains sont surveillés de près, parfois jour et nuit. Ces jeunes représentent la première vague de Québécois à avoir quitté le pays pour combattre le dictateur syrien, a appris l'émission *Enquête* en collaboration avec CBC. Certains auraient rejoint l'Armée syrienne libre, des rebelles qui luttent contre Al-Assad et qui collaborent avec des islamistes liés à Al-Qaïda. Radio-Canada; CBC News

*** La menace invisible des revenants**
Le recul du groupe EI renvoie chez eux des jeunes désillusionnés, mais toujours radicalisés. Après avoir répondu à l'appel du groupe armé État islamique (EI), être allée en Syrie, Mali est de retour en France où dans les derniers mois, elle ne rêvait que d'une chose : repartir. " Elle a pourtant connu les pires injustices là-bas, résume à l'autre bout du fil le journaliste français David Thomson, auteur de Les revenants (Seuil), essai percutant dans lequel il détaille ses nombreuses discussions avec de jeunes djihadistes partis en Syrie et en Irak, puis revenus en France. Elle a été emprisonnée, elle s'est fait confisquer ses biens, mais elle continue de légitimer les actes terroristes et voulait rejoindre la branche libyenne de l'organisation, là où, dit-elle, il y a moins de Français qui corrompent l'esprit du djihad avec leur culture des cités. " La disparition de cette branche, cette semaine, dans la foulée de la reprise de la ville de Syrte, en Libye, va la contraindre à changer ses plans. Le recul de l'organisation terroriste donne peut-être des signes d'espoir dans des régions qui subissent depuis des années ces fanatiques obscurantistes, mais elle s'accompagne aussi d'un effet secondaire que plusieurs pays, dont la France, mais également la Suisse, la Belgique ou le Canada, ne peuvent plus ignorer : le retour sur leur territoire de jeunes partis combattre pour le groupe EI et qui reviennent chez eux désillusionnés, certes, mais toujours aussi radicalisés, estime l'essayiste, journaliste à Radio-France international (RFI). L'homme a signé en 2014 Les Français jihadistes (Les Arènes), bouquin dans lequel il relatait déjà ses rencontres avec des jeunes appelés par la guerre sainte, jeunes qu'il a côtoyés de près, après les avoir découverts en Tunisie, au coeur du printemps de 2012. BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Border bill gains traction in U.S. Congress
A bill to simplify crossing the Canada-U.S. border moved ahead in the American Congress on Wednesday, with little time left to get it passed before U.S. lawmakers break to form a post-election legislature in the new year. It's a long-awaited development on both sides of the international border. The Harper and Trudeau governments both signed socalled preclearance deals with the Obama administration, but the arrangement required implementing legislation and U.S. lawmakers have not made it a priority. The bill finally got some attention from Congress on Wednesday evening. It sailed through the House of Representatives without objection. Lawmakers there urged the Senate to adopt it quickly, and make it law before breaking next week for the Christmas-season holidays. Lawmakers from different parties and different parts of the U.S. spoke in favour of the bill, before moving it forward. "[This] is great news for U.S.-Canadian relations," said New York Republican Elise Stefanik. "Canada is more than just a bordering nation. They are our neighbours, our friends and our largest trading partner. Plattsburgh, a city in my district, has even branded itself as Montreal's U.S. suburb." Canadian Press (Times Colonist, A8); Presse canadienne (Voix de l'Est, Métro)

'Visa lift' gives Mexican cartels chance to expand in Canada
Violent drug cartels are expected to expand their reach in Canada now that a visa requirement for Mexicans has been lifted, according to government documents obtained by Postmedia News. The Canada Border Services Agency report says "the visa lift will make travel to Canada easier in order to establish or strengthen existing cartel smuggling chains." "In the next three years, Mexican drug cartels are expected to expand their presence in Canada by sending operatives and recruiting local airport or marine port workers with ties to Mexico," says the document, obtained from a source. The Sun obtained only a section of the document titled: Implications for the Canada Border Services Agency and Canada. Postmedia earlier reported on the increasing presence of Mexican cartels in Canada, as well as the fact that gangsters and organized criminals were working at the Port of Vancouver. As of Dec. 1, Mexicans are no longer required to obtain a visa to come to Canada. The previous visa program had existed for

seven years. The CBSA document said the cartels generally don't use tourists to smuggle drugs for them. Postmedia Network (Vancouver Sun, A1/Front, Calgary Herald, Montreal Gazette)

*** Canadian coalition wants Ottawa to reduce security screening times at borders, airports**
A coalition of business leaders in Canada's largest cities is putting pressure on Ottawa to reduce security screening times and cut travelling costs to bolster a prime engine of the country's economy. In its first political foray, the Canadian Global Cities Council is pushing to make airports more internationally competitive in order to attract more tourists, enhance economic activity and improve the travelling experience. (…) The council is calling for increased funding for CATSA and the Canada Border Services Agency to meet growing demands. It also wants Canada to harmonize immigration and trusted traveller programs with other countries. That means only requiring visas for citizens of high-risk countries and increasing the use of automated border clearance systems. Canadian Press (Global News, CTV News, CP24)

*** Des accusations contre Vaporium et ses administrateurs**
Même si l'entreprise Vaporium n'existe plus, les accusations fédérales contre l'entité ainsi que ses deux anciens administrateurs Sylvain et Christian Longpré se poursuivent. Ces dossiers étaient de retour, mercredi, au palais de justice de Sherbrooke. L'entreprise Vaporium se spécialisait dans la distribution de cigarettes électroniques et la fabrication de liquides aromatisés nécessaires à leur utilisation. Vaporium et son président Sylvain Longpré font face à quatre accusations pénales en vertu de la Loi sur les douanes. Entre le 21 novembre 2013 et le 9 juin 2014, des indications fausses ou trompeuses auraient été fournies lors de l'importation de nicotine liquide au Canada. Sylvain Longpré aurait aussi fait des déclarations trompeuses et tenté d'introduire illégalement de la nicotine liquide au Canada par le poste frontalier de Stanstead. La même accusation d'avoir introduit ou tenté d'introduire illégalement des marchandises passibles de droits ou dont l'importation est prohibée a été portée pour des événements qui se seraient déroulés au poste frontalier d'East Hereford. Christian Langlois, qui était le vice-président de l'entreprise dont la boutique était située aux Galeries 4-Saisons, est accusé de deux chefs en semblable matière. Pour sa part, les gestes reprochés seraient survenus le 6 janvier 2015 au poste frontalier de Stanstead. La Tribune, 7

Ruling on drywall tariff expected in early January
Final arguments started Wednesday in a hearing on whether to continue a controversial drywall tariff one Edmonton contractor says has cost his company almost $35,000. The federal government imposed preliminary anti-dumping tariffs Sept. 8 that now reach up to 324 per cent on gypsum board products imported to Western Canada from the United States following a complaint by manufacturer CertainTeed Gypsum Canada Inc. The Canada Border Services Agency ruled companies were selling the product below the price in their home market, undercutting local suppliers - CertainTeed, with the only drywall plants in the West, has said dumping was making it impossible to compete. But David Lessard, vice-president of Edmonton's DCL Drywall Inc., said the industry wasn't consulted about the tariff, which boosted drywall costs by 30 per cent, including products the company agreed to supply for jobs but hadn't purchased yet. "I can tell you that we have been paying most of that 30-percent increase. There's been small percentages that suppliers have agreed to take, and we had to go to homebuilders to try to pass on some (of it)." The average 200-square-metre bungalow has about 630 square metres of drywall. The price rise will add approximately $600 to the cost of the house, cutting DCL's profit on a typical residential project by as much as half, Lessard said. DCL has 20 full-time workers and employs 60 contractors. Edmonton Journal, A9

$1B RCMP overtime bill proof of 'exhausted and depressed' members, retirees say

The Royal Canadian Mounted Police (RCMP) has paid its members more than $1 billion of overtime since 2009, according to documents obtained by CBC News. Recent retirees from the force say the costs confirm anecdotes that many officers are stressed, overworked and depressed. "The rank and file - especially the patrol guys and girls - are burnt out," said Derek Snow, a recently retired RCMP member with 29 years of policing experience. "You want to do a good job and you want to do extra," Snow said, who lives in Shediac, N.B. "But there's only so much anybody can take." Between April 2009 and June 2015, the RCMP paid $1.01 billion in overtime, according to documents obtained via access to information requests. (...)Terry McKee advocates for RCMP members and acts as a spokesperson for the Mounted Police Professional Association of Canada (MPPAC). He says the money spent on overtime should instead be used to hire more officers. "You're putting members' health at risk because they're always being called to supplement for shifts that are not staffed properly," McKee said, who is based in Moncton. (...) Contained within the documents obtained by CBC News is the RCMP's response to the work-life balance report. "Human Resources and Corporate Management will benefit from the content of this report and are committed to providing the enhancements needed to improve operational management and oversight. We will also address the concerns outlined in this report, many of which have already been actioned," wrote Dan Dubeau, chief human resources officer. CBC News

Wall concerned about reports that RCMP staffing in north is in 'dire straits'
Premier Brad Wall says he is concerned about reports of serious RCMP staff shortages in some communities in northern Saskatchewan. Wall was responding to internal RCMP emails obtained by radio station CKOM that indicate some Mountie detachments in the region are operating well below full strength. One memo says they are running out of people and are in "dire straits." RCMP Supt. Kris Vibe says they sometimes operate with fewer officers due to retirements, people being away on leave or training courses and redeployment. He says the RCMP does the best it can with the people they have and that staffing levels are ultimately a provincial and municipal funding responsibility. Wall says with crime rates up his government plans to speak with the RCMP about staffing levels. "The provincial government has as its provincial police force the RCMP - there is a contract between the government on behalf of the people of Saskatchewan and the RCMP," Wall said in Regina on Wednesday. Postmedia Network (Leader-Post, A3, Star Phoenix)

La GRC reporte l'installation des caméras corporelles sur ses agents
Les agents de la Gendarmerie royale du Canada (GRC) ne seront pas munis de caméras vidéo corporelles (CVC). Du moins, pas pour l'instant. La GRC a indiqué qu'elle reportait l'adoption de ces appareils par ses agents après que des tests eurent révélé certains problèmes technologiques, notamment concernant la durée de vie des piles et la durabilité des caméras. Le déploiement des CVC implique l'achat de milliers de dispositifs destinés à plus de 750 détachements, souligne-t-on. La police fédérale veut d'abord être certaine qu'elle peut faire confiance à la technologie choisie, plaide la GRC dans un communiqué. Les dispositifs seront installés, en règle générale, sur l'uniforme des agents de la GRC. Ils pourront par exemple être fixés à des lunettes ou à un casque. Acadie Nouvelle, 14; Canadian Press (The Guardian, Red Deer Advocate, The Telegram, Cape Breton Post, Times Colonist, Globe and Mail, Times & Transcript, Prince George Citizen); * The Register UK

RCMP, securities regulator team up to target repeat financial criminals
The long arm of the law just got a little longer in Alberta thanks to a new unit focusing on white-collar crime. The Alberta Securities Commission, the regulatory agency responsible for administering provincial securities laws, and the RCMP are forming the Joint Serious Offences Team. The unit is to investigate and prosecute cases under Alberta's Securities Act as well as more serious offences that fall under the Criminal Code. A specialized prosecutor will pursue any criminal charges resulting from investigations. The nine-member unit - comprising investigators, forensic accountants, legal professionals and RCMP officers - will target repeat offenders, serious frauds and breaches of court orders and bans. (...) RCMP Insp. Allan Lai said the collaboration will provide more access to information and intelligence collected provincially, as well as through national and international networks. In the end, he said, it will bolster the case for stricter punishment of those found guilty. "It's looking at the recidivists, targeting repeat offenders of the securities act that continue to violate the regulatory process," said Lai. Postmedia Network (Calgary Herald, A3, Times Colonist, Edmonton Journal); Red Deer Advocate (Globe and Mail)

Whistler RCMP to review officer conduct after cellphone seizure complaint
RCMP in Whistler will launch a review after a Vancouver woman filed a complaint, alleging officers seized her cellphone after she used it to film an arrest. The officer in charge of Sea-to-Sky RCMP, said she found - in her initial review of the incident - that parts of the complaint from Valerie Connelly and the corresponding police report were "unclear." "For this reason, I have initiated a comprehensive review of the matter in addition to the public complaint," said Insp. Kara Triance in a statement. Connelly told CBC News she was capturing what she believed to be was an undercover arrest on Saturday, Nov. 19. As Mounties wrapped up the arrest, she says a uniformed officer grabbed the phone out of her hands and said he was taking it for evidence. When she refused to give officers the passcode to her phone, she herself was arrested. CBC News (2016-12-07)

Cops arrest 10 people in organized-crime dragnet
Officers with Alberta Law Enforcement Response Teams (ALERT) have arrested 10 people and laid 111 charges after a year-long investigation into an organized crime group. ALERT began its investigation in November 2015 and wrapped up on Nov. 21 this year with the arrest of 40-yearold Calgary man Timothy Varga, who police allege was the central figure in a criminal network that extended from Alberta to B.C. and had ties to Manitoba. (...) Police say they seized a variety of drugs, including 147 grams of cocaine, 26 grams of heroin, 106 grams of methamphetamine and 1.2 kg of ketamine, in addition to a loaded handgun from the home of Varga, who has a lifetime firearms prohibition from a previous manslaughter conviction. RCMP StaffSgt. Barry McCurdy said the investigation focused primarily on disrupting the group's suspected streetlevel drug sales. The estimated value of the drugs seized was about $115,000. McCurdy said there could be more charges pending. Postmedia Network (Calgary Sun, A5, Calgary Herald)

Police returned abused boy to what looked like 'loving home,' superintendent says
Ottawa police say there was no indication a nine-year-old boy was being abused when officers spoke to him 15 months before his father, a former RCMP officer, and stepmother were arrested. "If hindsight was 20/20 could we have done anything differently? I don't think so," Ottawa police Supt. Don Sweet said Wednesday. Sweet was responding to mounting questions about why officers returned the boy to his father and stepmother after he told police he was being mistreated. The boy first spoke to police in November of 2011. His father had reported the boy missing, and within an hour he was located at a neighbour's house. Sweet said he reviewed the report from the two officers who responded to the missing person's call "from beginning to end." CBC News

Carfentanil seized in Toronto for first time
Police in Toronto say they've made their first confirmed seizure of the deadly drug carfentanil. They said Wednesday in a release that analysis of recently seized substances purported to be heroin tested positive for carfentanil, cocaine and caffeine. Carfentanil is a synthetic opioid that is used to sedate large animals and is not for human consumption. The drug is fatal in small doses and has a potency approximately 10,000 times that of morphine and 100 times that of fentanyl. (...) The Canada Border Services Agency has made three carfentanil seizures in the Pacific region this year and the RCMP announced late last month it had reached an agreement with China aimed at halting the transpacific flow of fentanyl into Canada. The force said Commissioner Bob Paulson and Chen Zhimin, the vice-minister of China's public security ministry, agreed to boost efforts to disrupt the flow of fentanyl and other opioids. Paulson has said opioids pose a grave threat to community safety in Canada. Canadian Press (Hamilton Spectator, A10, Waterloo Region Record, Thunder Bay Chronicle-Journal, Cape Breton Post, Red Deer Advocate); * Agence QMI (Journal de Montréal)

«Les policiers n'accordent aucune valeur aux promesses effectuées»
Si Jean-Claude Savoie a été acquitté des accusations criminelles qui pesaient contre lui, il pourrait bien décider, à son tour, d'emprunter la voie des tribunaux pour obtenir justice. Ses avocats étudient la possibilité de poursuivre la GRC pour certaines fautes commises préalablement au dépôt des accusations contre leur client. C'est qu'en janvier 2014, l'enquêteur principal au dossier à l'époque, le caporal Gabriel Deveau, a contacté Me Leslie Matchim (également avocat de M. Savoie) afin de l'informer de la fin de son enquête et qu'aucune accusation ne serait déposée. Afin de clore le dossier pour de bon, le policier a toutefois demandé s'il était possible d'obtenir certains compléments

d'information de la part de M. Savoie. Réticent au départ, Me Matchim a fini par accepter sous la promesse écrite qu'aucune accusation ne serait déposée contre son client. Mais voilà, peu de temps après, l'enquêteur a été muté et son remplaçant a porté des accusations, faisant fi de l'enquête et de l'entente du caporal Deveau, ainsi que de deux révisions indépendantes (interne et GRC d'Halifax) aux conclusions similaires: pas d'accusation. Acadie Nouvelle, 6

*** St. Albert man charged after stealing prisoner transport van**

Police in Fort McMurray have charged a 21-year-old man after he escaped custody by stealing a van used to transport prisoners. Wood Buffalo RCMP responded to a call from the courthouse after he escaped in a sheriffs' prisoner van about 5 p.m. Monday. Police said they also received a report about dangerous driving in the area before they found the man. Lyndon Rankin of St. Albert is charged with escaping lawful custody, theft of a motor vehicle, dangerous operation of a motor vehicle and possession of cocaine. Postmedia Network (Calgary Sun, A38, Edmonton Sun, Edmonton Journal)

*** Kitimat welcomes crisis dog**

Everyone loves a man in uniform, right? The newest team member at the Kitimat RCMP detachment is no exception to that rule. Ozzie, a two year old Corgi/Labrador mix, is currently being trained to become a therapy dog with the Victim Services section, run by liaison Leisl Kaberry, who is also Ozzie's owner. Kaberry and her family adopted Ozzie from the Kitimat Humane Society when he was just four months old. He has a naturally calm demeanour, says Kaberry, which makes him a great candidate for the therapy dog training. Kaberry is hoping to get Ozzie tested for his full therapy dog certification in the spring, after he completes his four levels of training. He's already got a good handle on some of the behavioural commands, such as laying down and sitting when asked. He can also high five, which he is keen to do when there's a treat involved. Northern Sentinel (2016-12-07)

High time for province to act on deaths in care

An opinion piece states, "I've never yelled at a cabinet minister before. But I did Wednesday night. That's when Human Services Minister Irfan Sabir told me his department neglected to give the RCMP its internal report into the death of four-year-old Serenity, the First Nations girl who died after being placed in kinship care on a central Alberta reserve, until Tuesday of this week. (…) There have never been any charges laid in Serenity's death. Last month, the RCMP told Postmedia their investigation was on hold, awaiting further reports. What reports? Now we know. Elden Block, the statutory director of children's services, said his department did an internal review of Serenity's death. The review, said Sabir, was forwarded to the First Nations child welfare authority, responsible for the First Nations reserve where Serenity had been living in a kinship care guardianship arrangement. Sabir said it was the job of that band welfare authority to forward the file to the RCMP for investigation. That never happened. No one ever gave that information to the police. Instead, the Mounties had to contact Sabir's department to ask for the information - after they read the news stories about Graff's report into the little girl's death. That was in mid-November. Yet for reasons no one could explain to me, the RCMP didn't actually get the critical report until Tuesday, Dec. 6." Postmedia Network (Edmonton Journal, A1, Calgary Herald)

*** Le retrait de la SQ serait progressif, selon Coiteux**

Le ministre de la Sécurité publique, Martin Coiteux, dément le retrait immédiat de la Sûreté du Québec du territoire de Lac-Simon, en Abitibi-Témiscamingue. En entrevue à Radio-Canada, mercredi, la chef Adrienne Jérôme disait avoir été informée du départ de la police provinciale quelques heures après avoir déclaré qu'elle ne pouvait plus faire confiance à ses agents et qu'elle ne souhaitait plus leur présence. Le ministre Coiteux, qui dit ignorer la source de ces informations, soutient qu'une telle décision nécessiterait d'abord une demande formelle de la communauté algonquine. Il insiste sur le fait que le départ de la SQ, s'il se confirme, se réalisera de manière progressive, et qu'il ne fait pour l'instant que l'objet de discussions. Les renforts de la SQ visent à réhabiliter le corps de police autochtone, secoué par deux incidents mortels survenus en février et en mars dernier. Une intervention policière ayant tourné au vinaigre avait entraîné la mort de l'agent Thierry LeRoux, puis, quelques mois plus tard, le jeune Autochtone Sandy Tarzan Michel avait perdu la vie lors d'un affrontement avec les forces de l'ordre. Le Droit, 17; Radio-Canada; Journal de Montréal

*** Vancouver police seize 56 kilos of cocaine**

A traffic stop by Vancouver police has resulted in a large cocaine bust. Police say patrol officers stopped a SUV with two people inside on Tuesday after they saw some suspicious behaviour. Officers found four kilograms of what they believe is cocaine and had the vehicle towed for a continued search after a warrant was obtained. Police now say that search turned up an additional 52 kilograms of the suspected drug inside the vehicle. The two men have been released pending lab tests on the drugs, and police say charges of possession for the purpose of trafficking are expected to be recommended. Officers estimate the drugs have a street value of between $3 million and $4.5 million. The Telegram, A7

* **Teen accused of threatening attack on Toronto school**
The Toronto Police Service has charged a 17-year-old boy for allegedly threatening to attack Oakwood Collegiate Institute, with fears he might have acted on the 27th anniversary of the École Polytechnique massacre. Detective Len Nicholson said Wednesday that on Dec. 1 someone in the United States tipped off the force about a threat, directed at a Toronto school, on a blogging site. Nicholson said the Montreal massacre - the horrific killing spree of Dec. 6, 1989 - was mentioned in the alleged threat, a detail that made the police's investigation more urgent. (...) Officers raided the suspect's home in the early hours of Tuesday morning and seized several weapons - a machete, two swords, four knives, and arrows - along with computer equipment and clothing; all of them items that can be purchased legally at a hardware store. Nicholson said the teen's plan allegedly involved concealing his weapons under his clothing while en route to the attack. Toronto Star

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Grand Valley prison locked down for search
The Grand Valley Institution for Women was put on lockdown on Wednesday for a search of the multilevel correctional facility. Correctional Services Canada said in a news release that the prison was locked down at about 11:30 a.m. on Wednesday to conduct an "exceptional" search, "ordered to ensure the safety and security" of staff and inmates. The prison has multiple security levels and a capacity for about 200 inmates. Visits are on hold until the search is complete. This is the third lockdown at the women's prison this year. The most recent one was in October and lasted six days. Unauthorized items were discovered, but Correctional Services Canada did not specify what was found. Waterloo Region Record, B2

Springhill prison in lockdown after inmate assaulted
The Springhill medium security institution was put on lockdown Tuesday and all visits suspended following an assault against one of the 400 inmates. "It usually takes two or three days to do a full search," assistant warden Shannon Oickle said Wednesday. "During that time all inmates will get their food and their medication in their cells." Oickle said in a news release that an inmate was the victim of an assault shortly after noon on Tuesday. The inmate was evaluated by staff members and transported to an outside hospital for treatment. No staff members or other inmates were injured. The incident is under investigation by Correctional Service of Canada and the Springhill RCMP. Times & Transcript, A12; * 100.9 Big Dog Truro (Cat Country 99.5 Truro)

* **Inmate death at Millhaven Institution**
An inmate serving time on sex related charges has died at Millhaven Institution. Bryen Madill, 72 was serving an indeterminate sentence for invitation to sexual touching and sexual interference. He was sentenced in March 2009. **Correctional Services** did not give a cause of death. CKWS (96.3 Big FM) (2016-12-07)

* **Federal inmate accused of assaulting sheriff's officer**
A man who allegedly punched a Fredericton sheriff's officer in the face while awaiting transfer to court in Woodstock appeared via video conference to answer to the charge Wednesday. Thomas Joseph Travis (TJ) Ferguson, 36, of no fixed address, faces a charge of assaulting a peace officer in Fredericton - specifically, sheriff's officer Dale Kozak. The charge alleges an incident at the Justice Building in Fredericton on Nov. 7. Wednesday marked his first appearance on the charge, and he appeared in

Fredericton provincial court via video conference from the Atlantic Institution in Renous. Daily Gleaner, A2

* **Protect Kingston Penitentiary**
An opinion piece states, "... Every city has highrises and subdivisions, but not the history and architecture of which Kingston should be proud and should protect. Kingston Penitentiary, with its beautiful buildings and unique history, should not fall prey to the seeming determination to fill it with yet another housing development, highrise condos and the introduction of roadways. Much of the waterfront is already lined with highrises and housing. I hope that it can instead be maintained as a historic site that would be a destination for tourists, already proven by the popular penitentiary tours in the summer, and would be made available to the public at all times, not just to those who reside in the planned housing and condos." Kingston Whig-Standard, A5

* **Notorious rapist released: Police warn public of violent sexual offender living in Edmonton**
Edmonton police are warning that a man once dubbed the "Mill Woods rapist" will be out of prison and living in the city, a warning they have issued several times before. In 1994, a 16-year-old Dana Fash forced his way into the Mill Woods home of a 65-year-old woman and threatened her with a knife. In 1997, he was convicted as an adult and sentenced to 12 years in prison. In December 2008, soon after his third release - he had breached his conditions on two prior releases already - Fash breached his conditions to stay away from alcohol and drugs, prompting police to issue a warrant for him. At the time, Fash's mother approached the media, asking for a stop to coverage of her son's case and saying it would have negative effects on his daughter. She also said the media attention was the reason he fled police. But colleagues of his victims spoke said Fash, who had been described by a top sex crimes police investigator as one of the two worst sex offenders he'd ever dealt with, should not have been paroled at all. On New Year's Day 2009, Fash entered a Vancouver police station and turned himself in after a month-long manhunt. Six months later, police were once again warning Edmonton residents that Fash would be released into the city, describing him as "a violent sexual offender who poses a risk of significant harm to the community and, in particular, adult females." Less than a year after that, Fash was again in court, having breached a court-ordered peace bond for high-risk offenders that allowed police to keep close tabs on him. Fash had been approached by police officers investigating a mischief report. He gave them his identification, but while officers were speaking with another man, Fash fled the scene. He was picked up the following day and found to be in possession of crack cocaine. He went back to prison, charged with obstruction of justice, possession of a controlled substance, and six breach charges. On Wednesday, police issued a statement warning of Fash's latest release, calling him "a violent and sexually violent offender." Edmonton Sun, A5; iNews880

* **Sex offender's penis-injury appeal dismissed**
An appeal by a convicted Edmonton sex offender who argued a judge refused to grant him an adjournment to get medical evidence on his injured penis has been tossed out. Robert Allen Cote, 60, was sentenced to 6-1/2 years in prison after being convicted of sexual assault with a weapon, possession of a dangerous weapon and uttering death threats. However, Cote - who testified in his own defence that he could not have sexually assaulted the victim as he was "incapable of getting an erection" - appealed the 2014 conviction, saying he was denied an opportunity to present medical evidence on his injury. In a decision issued this week, a three-judge panel of the Court of Appeal of Alberta dismissed the appeal after ruling the judge's denial of an adjournment was reasonable in the circumstances. Edmonton Sun, A5

* **Les audiences sur la remise en liberté de l'ex-juge Jacques Delisle se prolongent**
Le juge qui entend la demande de libération de l'ex-juge Delisle veut que le débat prenne fin cette semaine. « Et la semaine se termine samedi à minuit », a prévenu le juge Benoit Moulin au terme d'une longue journée mercredi. En principe, l'audition de la cause devait prendre fin jeudi après trois jours d'audience qui ne seront de toute évidence pas suffisants. Au départ, les partis avaient évalué qu'ils allaient régler le débat en deux jours en octobre, mais la cause avait débordé sur un total de cinq jours. Jeudi, l'avocat de Jacques Delisle va poursuivre le contre-interrogatoire de l'expert en balistique de la Couronne qui écarte la thèse d'un suicide pour expliquer la mort de Nicole Rainville. Radio-Canada; La Presse; Canoë (2016-12-07)

*** Mental health is an issue for more than one-quarter of Ontario's prison population**
More than a quarter of Ontario's prison population has been flagged for a possible mental health issue, according to new numbers provided to VICE News in the days after an inmate diagnosed with schizophrenia hanged himself. Justin St. Amour was in the health care unit of the Ottawa-Carleton Detention Centre when he attempted suicide by using a bedsheet to hang himself, sources told the Ottawa Citizen. Now he's on life support, and his mother is preparing herself for the worst. Laureen St. Amour wants to know why her son, who correctional officers said repeatedly threatened or attempted suicide, wasn't in a psychiatric hospital instead, she told the Citizen. And even as St. Amour lay in the intensive care unit, no one thought to notify his lawyer. Over the past year, 16,387 provincial inmates had a 'mental health alert' attached to their files, or 28 percent of a total of 58,313 prisoners. Those alerts include not only inmates reporting issues themselves, but also "possible management concerns" identified by correctional staff. But the problem may actually be much worse, correctional officers fear, since conditions such as depression or suicidal thoughts are not always visible and can be missed by the untrained eye. VICE News (2016-12-06)

*** Inmate who attempted suicide at Ottawa jail removed from life support**
An inmate with mental illness who attempted suicide by hanging himself in his segregation cell in the health care unit of the Ottawa jail has been removed from life support. The family of Justin St-Amour made the decision to remove the 32-year-old from his ventilator and feeding tube on Wednesday, a week after he attempted suicide at the Ottawa-Carleton Detention Centre. He's not expected to survive for much longer, his mother said. Ottawa Citizen (2016-12-07)

«Un mythe populaire»
La violence en prison existe, mais dans une ampleur moindre que tend à l'indiquer la croyance populaire. Il s'agit davantage d'un «mythe populaire» qui remonte à une autre époque, sans qu'elle soit révolue. Selon Mathieu Lavoie, président du Syndicat des agents de la paix en services correctionnels du Québec (SAPSCQ-CSN), la situation a «évolué à travers le temps» et a été atténuée par la mise sous protection de plusieurs détenus. De plus, les agents correctionnels «ne peuvent fermer les yeux sur de tels événements ni tolérer une menace». «Ça existe quand même. A certaines personnes, quand elles ont certains types d'accusations ou que leur dossier a été très médiatisé, on leur propose de ne pas les mettre dans la population régulière. Souvent, ce sont les détenus qui le demandent, mais ça peut être une décision administrative, toujours pour assurer la sécurité dans nos établissements», a commenté M. Lavoie. La mise sous protection est d'ailleurs une mesure fréquente. «Les secteurs de protection débordent dans les prisons de la province. Dans le cas d'Yves Martin, puisque son dossier a été très médiatisé, s'il se sent menacé, il pourrait s'y retrouver», a-t-il ajouté. Le Quotidien, 18

Libération possible au tiers de la peine
Un article d'opinion déclare, « Peu importe la sentence qu'il recevra, Yves Martin sera admissible à une libération conditionnelle après avoir purgé le tiers de sa peine. Par exemple, s'il écope de 15 ans, il pourrait reprendre sa liberté au bout de cinq ans. Si cela existe, c'est que le système judiciaire canadien favorise la réinsertion et la réhabilitation des détenus. Le législateur croit qu'il est préférable de relâcher un individu afin de lui permettre de réintégrer la société, plutôt que de lui faire purger la totalité de sa peine et ensuite de l'envoyer dans la rue. En revanche, même si Yves Martin devait profiter d'une libération conditionnelle après cinq ou six années de détention, il demeure tout de même sous le joug de la justice pour la balance de sa sentence. S'il commet la moindre erreur, il est possible qu'il soit ramené derrière les barreaux. » Le Quotidien, 18

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Racist comments cost cop his rank**
An Ottawa cop has been demoted for three months for posting "insulting and racist" comments about the death of acclaimed Inuk artist Annie Pootoogook. Sgt. Chris Hrnchiar, a veteran officer who works in the forensic identification unit, was demoted Wednesday to the rank of firstclass constable and must take

multicultural training within three months. The police force and his defence had submitted a joint submission on penalty. The officer's actions "were clearly inappropriate and an embarrassment to the Ottawa Police Service," said Ret. Deputy Chief Terrence Kelly, who oversaw Hrnchiar's sentencing hearing Wednesday. In September, the officer openly discussed Pootoogook while off duty using his personal Facebook account, writing in the comment section of a online article about her death that it "has nothing to do with missing and murdered Aboriginal women" while the probe into her death was still ongoing and continues to this day. Postmedia Network (Ottawa Sun, A5, Ottawa Citizen, National Post)

* **Late teen 'a catalyst for change'**
Shelby Maunder wants to put a local campaign out of business. That's what she told a crowd of people Tuesday in the lobby of the Yukon Government Main Administration Building, during the final event in the 12 Days to End Violence Against Women campaign. "I was feeling really discouraged. I don't want us to need this campaign anymore," said Maunder, the executive director of Bringing Youth Towards Equality (BYTE). "It can be easy to feel that way. In the fight to end violence against women, it seems like, for every gain we make, there are setbacks to accompany it." However, she said, the theme for this year's campaign - prevention - is one that gives her hope. That was the message of many speakers at the event, meant to remember the 14 women killed at Montreal's École Polytechnique on Dec. 6, 1989. The date marks a National Day of Remembrance and Action on Violence Against Women. Sarah Murphy, one of the event's hosts, said the memorial also served as a reminder of violence closer to home. "In the Yukon, this ceremony is also an opportunity to recognize the continued injustice of missing and murdered aboriginal women across our country, and here in our territory," said Murphy, the program co-ordinator with the Victoria Faulkner Women's Centre. "We will take the time today to remember and honour the 39 Yukon First Nations women who have disappeared or been killed in the last 30 years." Whitehorse Daily Star, 4 (2016-12-07)

* **Ottawa paramedics warned to wear masks over fear of powerful new drug**
A new drug called carfentanil, an animal tranquillizer that's 100 times stronger than fentanyl, is so dangerous Ottawa Paramedics are being warned to wear masks on the job. Carfentanil has now been detected in drugs sold on the streets in Ontario. Green pills seized last month in the Waterloo region contained the potentially lethal opioid, Health Canada confirmed. Yesterday, Toronto Police also warned they found carfentanil in heroin sold on city streets. "From Toronto it's going to make it's way here in a week or two or three," expects Ottawa Paramedic Service spokesperson J.P. Trottier. "This is a huge concern for us." The drug is commonly used at zoos to sedate large animals. In humans, it's so potent it has been linked to the deaths of 15 people in Alberta and one overdose in Vancouver. Ottawa paramedics have been watching the crisis unfold out west over the past year in an effort to prepare first responders. Staff are being briefed on how to treat patients and stay safe themselves by wearing masks whenever possible. CBC News

Muslim group denounces Edmonton LRT incident as 'hate crime' calling it 'absolutely horrifying'
The national organization representing Canadian Muslims is calling on Edmonton police to lay hate crime charges against a man after two Muslim women were threatened with a noose on a city LRT platform. Amira Elghaway, communications director for the National Council of Canadian Muslims, said the incident on Nov. 8 at the University LRT Station was "absolutely horrifying." Cellphone video shot by one of two young women shows a man pulling a rope from his pocket and tying it into a noose before dangling it from his hand while threatening them, saying “This is for you.” He then proceeded to sing the Canadian national anthem. "For an individual to specifically be walking around with a noose looking for that opportunity to basically instil fear in someone or people is rather troubling," Elghaway said. On Tuesday, the Edmonton police hate crimes unit said it had a suspect in custody. "A vast majority of Canadians do not support these racist or anti-Muslim acts but unfortunately it's the few that, with one act, can send out a very scary message to the community," said Elghaway. "That's why hate crimes are so dangerous in our society because they are not just targeting an individual, they are targeting an entire community. Edmonton Sun

* **Let's not sugar-coat the issue**
An editorial states, “Communication is more than just understanding language. It's also an understanding of the social construction of meaning that underscores language. Take for example the phrase: "How are

you doing?" When said in a coffee shop to a co-worker, it's a greeting. When said to a loved one at a funeral, it's a condolence. When said to someone at a bar, it's a pickup line. (…) There's a 'but' here. Ms. Poorman's occupation had everything to do with her murder. While the police were very careful not to call Ms. Poorman a sex-trade worker, the assertion that hers was a high-risk lifestyle could be seen as victim-blaming. But it isn't untrue. There are countless efforts being made by both the police and indigenous groups to assist women working in the sex trade to get off the streets for that very reason. Sex-trade work is very often high-risk, and police make it safer by arresting those who prey on the exploited. Communication is also two-way. Saying "How are you doing" in the workplace could be taken as a pickup line by the recipient, even if that's not the intention. Ms. Spillett made an assumption the description used by police reinforced negative stereotypes. Others may not hear it that way, particularly as more information is made available daily about the vulnerability of women involved in the sex trade. For some, it may make her death even more tragic and increase resolve to end the cycle of violence and poverty First Nations women inordinately face. If we are to fully understand the issues facing First Nations women, particularly those who are missing and murdered, then the public needs to be aware of their circumstances. Sex-trade workers are more likely to be victimized, making this a high-risk situation." Winnipeg Free Press

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Reference, reframed**
A letter to the editor states, "Re Agnes Macphail Becomes Canada's First Female MP (Moment In Time, Dec. 6): With great respect to Agnes Macphail, 1921 was not "the first year all Canadian women could cast a ballot in a federal election." That didn't happen until another 39 years had passed. As Canada undertakes an inquiry into the many missing and murdered indigenous women and girls, it seems appropriate to recognize First Nations women as worthy and valued citizens. It was not until 1960 that these citizens could vote in a federal election." Globe and Mail, A16

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Panel to tell Ottawa to monitor legal pot
A federal panel reporting to Ottawa on the next steps toward legalizing marijuana is expected to call for a comprehensive regime to monitor the impacts of bringing the substance out of the shadows and into the mainstream. And that could make Canada the world's first national case study on the dangers - and potential benefits - of cannabis when the drug becomes legal, some of the country's leading drug researchers say. Researchers must study the dangers, such as impaired driving and more young people using it, says Dan Werb, director of the Toronto-based International Centre for Science in Drug Policy. But, he adds, they must also be open to looking for pot's potential public-health benefits, such as people substituting cannabis for alcohol or opioids. Globe and Mail, A14

*** Aphria determined to power on**
Leamington pot grower Aphria Inc. is so high on the prospect of Canada soon legalizing the recreational use of marijuana that it's giving Hydro One an ultimatum - guarantee extra power or the company builds its own power plant. (…) The Trudeau Liberal government's point man on the marijuana file, Scarborough MP and former Toronto police chief Bill Blair, is expected as soon as next week to divulge recommendations on how Ottawa should proceed with legalization. Former deputy prime minister Anne McLellan recently handed in her task force report on pot legalization and regulation, and Prime Minister Justin Trudeau reiterated on the weekend that voters gave his government "a clear mandate" to proceed on legalization of recreational weed. The Liberals have stated repeatedly that legalization will not open the doors to homegrown pot. Neufeld anticipates recreational use for adults will likely begin in 2018 and that licensed producers such as Aphria (there are currently 36 Health Canada-approved LPs across

Canada) will become the legal source of all marijuana for medicinal and recreational purposes. Windsor Star, A1

*** Start the pot talk early**
Mom Scarlett Ballantyne wonders if Ottawa's plans to legalize marijuana will make her 14-and 16-year-old daughters more inclined to try it. But she's not waiting to find out. Ballantyne says her family has been discussing the dangers of drug use since the girls were 13 - a pre-emptive strike as pot shops and marijuana headlines have been popping up everywhere they turn. She's proud to say they are athletic, self-confident kids, but she also gets the impression that their generation sees marijuana as "not that big of a deal." "As parents, it's just [about] stressing to them that it is a big deal," she says from her home in White Rock south of Vancouver. (…) Many questions remain about what restrictions Ottawa might impose when it introduces legislation next year to legalize recreational use. In the meantime, experts say parents should be prepared for any questions their kids might have - but don't wait until you find a stash in their room. (…) Researchers generally agree that adolescents should be strongly discouraged from using marijuana. The Canadian Paediatric Society notes brains develop well into our 20s and that cannabis can affect both the structure and functionality of young brains. They also warn that heavy users are at risk of mental-health issues later in life. Last month, the society urged that the federal government ban sales to those younger than 18 or 19, depending on their location in Canada, to align with age limits for alcohol and tobacco sales. Times Colonist, D1

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Where are the checks and balances on public spending?**
An opinion piece states, "What can really get many of us riled up is government waste. We've all heard at least one story that's a real head-shaker. For some, the answer is to cut government. For me, that's just shooting ourselves in the foot, or worse. Public services have already deteriorated thanks to years of cutbacks in the public service. What we need is to ensure public monies allocated to government departments, and to the health and education systems, are spent effectively and prudently. That is the job of MLAs. (…) Much of the spending by the Aboriginal Affairs Secretariat is actually done through the Regional Development Corporation. However, during the shale gas protests in 2013, Aboriginal Affairs paid for a person retained by the **Department of Public Safety** to de-escalate tensions between the protesters, the RCMP and the community of Elsipogtog. In that instance, **Public Safety** failed to get much value for the money it spent from Aboriginal Affairs after violence flared. (…) The **Department of Public Safety** which is increasingly responsible for enforcing many of the province's laws, governing everything from liquor control to private eyes, spends $15 million a year on inspections and investigations. Apparently, the compliance rate for the laws they enforce is 65 per cent, yet, the department does not track the number of cases it refers for prosecution, nor does it hear back about the results of the court cases. **Public Safety** funds an intelligence gathering service called the Criminal Intelligence Service of New Brunswick at a cost of $588,000. Yet its employees and activities are nowhere to be found on the department's website or in its annual report, making it impossible to determine whether this is an effective use of public funds." Daily Gleaner, A9

*** Public service pay unsustainable**
An editorial states, "A new review from the Fraser Institute shows that Canada's public sector workers earn 11% more than their private sector counterparts. And, in most cases, they enjoy generous, even "gold-plated" pension and other benefits relative to the private sector. The Fraser study examined wages across all levels of government and compared them to employees doing similar work in the private sector. They adjusted for factors such as level of education and years of experience. All things being equal, government workers doing the same work, with the same qualifications as private sector workers earn more, and are better offin retirement. The wage-gap between the public and private sector has been growing for years. But there is now a significant inequity in compensation between our public servants and those who pay taxes to support them." Winnipeg Sun, A10 (Ottawa Sun, Toronto Sun)

*** Pakistan plane recorder found as crash investigation, recovery continue**
Pakistani military helicopters on Thursday ferried remains of plane crash victims to the capital, Islamabad, as aviation authorities said they opened a probe into the crash that killed 47 passengers and crew the day before in the country's northwest. The small twin-propeller aircraft was travelling from the scenic mountain resort city of Chitral to Islamabad on Wednesday when one of its engines failed shortly after takeoff and crashed in the hillside village of Gug in the district of Abbottabad, according to Pervez George of the Civil Aviation Authority. The plane belonged to the Pakistani national carrier, the Pakistan International Airlines, and had 42 passengers and five crew members on board, PIA spokesman Daniyal Gilani said. Witnesses said they saw the plane suddenly tilting and going down, then bursting into flames upon crashing in Gug. The village is located next to another, Saddha Batolni, from where residents also joined the rescue work. CBC News

*** Search for survivors continues in Indonesia as death toll climbs to 102**
Humanitarian organizations descended on Indonesia's Aceh province Thursday as the government in Jakarta promised tons of emergency aid and officials raced to assess the full extent of damage from an earthquake that killed more than 100 people. Search efforts involving volunteers and nearly 1,500 rescue personnel were concentrated on the hard-hit town of Meureudu in Pidie Jaya district near the epicentre of the magnitude 6.5 quake that hit before dawn Wednesday. Humanitarian assessment teams were fanning out to other areas of the district. National Disaster Mitigation Agency spokesman Sutopo Purwo Nugroho said the death toll had risen to 102 and warned it could increase. Search teams were using devices that detect mobile phone signals with a 100-metre radius to help guide their efforts as they scoured the rubble, he said. Aceh's disaster mitigation agency said more than 600 people were injured. CBC News

*** Gatlinburg fire: 2 juveniles face aggravated arson charges**
Two juveniles face charges of aggravated arson in connection with a deadly Tennessee wildfire that began in late November and spread to Gatlinburg, Tennessee, according to Mark Gwyn, director of the Tennessee Bureau of Investigation. Additional charges are being considered, 4th District Attorney General James Dunn said, including the possibility of seeking a transfer to adult criminal court. He said the youths were from Tennessee, but not from Sevier County, where the fires started. Neither their ages nor genders were released. Fourteen people lost their lives in the fires and more than 175 more were injured, according to officials. Residents and visitors to the resort-heavy area were among the dead. CNN

*** ISIS launches advice show**
Even terrorists have problems - and ISIS wants to help. The terrorist organization's radio station has launched a new program. The show, Fatwas Over the Airwaves, features a host, along with Muslim clerics answering queries on lust and religious law. The biggest query is women's roles. Should they be allowed to watch executions? Do women lustover executioners? "Some of the scholars have tended not to permit women to look at male strangers," one cleric answer a troubled jihadi. "It is fundamentally permissible for the Muslim women to watch ISIS videos." He added some jihadis have been uncompromising on forbidding women from looking at strangers. The cleric couldn't say whether it was pure desire or the executioner that was causing temptation. This puzzle was debated after ISIS released footage of the tubby terror known as the Bulldozer using a chainsaw to execute nine teens. Swoon. Calgary Sun (Toronto Sun)

*** Iraqi forces face fierce IS attacks after new Mosul push**
Significant Islamic State group counterattacks in southeastern Mosul inflicted heavy losses on Iraqi forces overnight after a new push deeper into the city this week, according to an Iraqi Army officer. Despite the counterattacks, the fresh Iraqi push appears to have relieved pressure on Iraq's special forces who have been largely leading the fight inside the city on the eastern front. Wednesday afternoon, the special forces

announced new gains. The troops retook another neighbourhood bringing them closer to the Tigris River that divides Mosul's east from west, according to the commander of a joint operations centre that oversees the Mosul campaign. Lt. Gen. Abdul-Amir Yarellah, said in a statement that troops had "fully liberated" the al-Elam neighbourhood and raised the Iraqi flag over its buildings. Yarellah added that IS militants "suffered losses" without elaborating. (...) "Daesh waited until night to attack the troops," Iraqi Army Sgt. Maj. Hakim Saranbii told The Associated Press. He added that the attacks "inflicted heavy losses," without giving specific casualty figures or further details. Iraqi Defence Ministry officials in Baghdad did not immediately comment. Telegram, B10

MINISTER / MINISTRE

Lawyers say cops' crime database is full of holes

Lawyers say they regularly receive incomplete or inaccurate criminal records from the national police database which can lead to wrongful arrests, unfair sentences or critical information missing at bail hearings. The consequences of this were most recently seen when a man convicted of sexual assault fled to Pakistan in November before he could be sentenced. Moazzam Tariq was allowed to remain out on $10,000 bail after his conviction, because the Toronto police and Crown didn't know he'd fled the country before while on bail after being criminally charged in Peel Region in 2010. Tariq, now 29, came back to Canada in 2011 and was arrested at the airport. He eventually pleaded guilty to dangerous driving in 2012. However, that conviction and his withdrawn charges - including for a failure to appear for his court date - were not recorded in the Canadian Police Information Centre (CPIC) database, a Toronto court heard Thursday. It's unclear whether Peel Regional Police failed to submit the information to the RCMP, which is in charge of the database, whether it was part of the backlog of convictions the RCMP has yet to

enter into the database, or whether it fell through the cracks. The RCMP was not able to respond to questions by deadline on Friday and questions to the **Minister of Public Safety** were referred to the RCMP... While the RCMP is working on modernizing the system, CPIC records continue to fail to show an up-to-date and accurate criminal history across jurisdictions, lawyers say. Toronto Star

No concrete timeline for prison farm decision

Kingston and the Islands MP Mark Gerretsen told members of the Prison Farm Co-op last night that he has no news for them yet on the possible return of the farms. "I was really hoping to hear from the **minister's office** on what their decision was prior to the holidays, but they informed me two or three weeks ago they wouldn't have a decision before then," Gerretsen told the Whig-Standard on Friday afternoon before heading to the meeting. The decision on whether to reopen the prison farms rests with **Public Safety Minister Ralph Goodale...** Last month, Correctional Service Canada released a report from a survey on its website gauging Canadians' opinion on reopening the farms in some form or another. More than 6,000 people responded to the online survey, conducted between June 2 and Aug. 4, and the main factors supporting reopening the farms included the need to help the rehabilitation process of inmates and the positive impact the farms could have in their communities. Specifically, 95 per cent of respondents "strongly agreed" or "agreed" that an institutional agribusiness initiative would contribute to rehabilitation, the consultation report said. "My understanding, from what I've been told by **the minister's office**, is that they are currently reviewing the findings," Gerretsen said. Gerretsen said he doesn't have a timeline on a decision from the **minister's office**. "Not that I haven't been asking," he said. "I've been continually asking the **minister's office** for an update, but I haven't received anything to date."... Gerretsen said the challenge will be to combine the prison farm co-op plans along with plans from CSC and the **minister's office**. Postmedia Network (Whig-Standard, A4)

Has terror suspect been de-radicalized?

During the 14 years that he has been a terror suspect, Mohamed Harkat has put down roots in Ottawa. Although branded by the federal government an al-Qaida terrorist - an opinion upheld by the Supreme Court of Canada - Harkat has managed to establish relationships with relatives, friends and neighbours, many of whom have submitted letters of support as he campaigns to remain in the country. A federal official known as the **minister's delegate** must now decide whether those letters are evidence that Harkat has been de-radicalized, or whether he still poses a threat to Canadians. The Algeria-born Harkat, who works as a custodian at a church, has lived under court-ordered conditions in the Heron Gate area since he was released on bail more than a decade ago. The letters offer a rare glimpse into his life. "My uncle gave me my first driving lessons: He was very patient. He has also helped me with my school projects," wrote Harkat's 16-yearold niece, Gabrielle, in one of 70 letters sent to **Public Safety Minister Ralph Goodale,** and shared with the Citizen... The portrait that emerges is either the product of a sustained con job by an al-Qaida sleeper agent, or it is hard evidence of Harkat's mainstream assimilation... The issue of whether Harkat has been de-radicalized is now frontand-centre in his case since the government must decide whether to deport him to his native Algeria. Earlier this year, a Canada Border Services Agency official filed a confidential report with the **minister's delegate**, arguing that Harkat should be sent back to Algeria despite facing "some risk" of torture. The report was prepared by Anne-Marie Charbonneau, manager of the agency's danger assessments section. If Harkat is not removed, she warned, he would be free to resume contact with members of the Islamic extremist network... Harkat's defence team has until Dec. 19 to make submissions to the minister's delegate, who will have to weigh Harkat's personal risk in Algeria against the risk he poses to Canadians. A decision on deportation is expected next year. Postmedia Network (Ottawa Citizen, A11)

Goodale keeps door open to CSIS use of metadata gathered from innocent people

The **federal public safety minister** is keeping the door open to the idea of Canada's spy agency crunching potentially sensitive data about innocent people. **Ralph Goodale** told MPs at a House of Commons committee Thursday he is weighing views on whether the Canadian Security Intelligence Service should be allowed to retain and use such information... **Goodale** told MPs on the public safety committee the government would ***"consider all of the factors that are relevant in these circumstances"*** as it completes a review of national security policy. Canadian Press (Whitehorse Star, 19)

TOP STORIES / MANCHETTES

Crown rests case in Montreal terror trial
The Crown rested its case Friday at the trial of a Quebecer charged with attempting to leave the country to participate in the activities of a terrorist group. Ismael Habib, 29, is also charged with giving false information in order to obtain a passport. The trial was adjourned until Jan. 23, when lawyers will debate the admissibility of a confession by Habib extracted by an undercover police officer last February when Habib said he intended to join Islamic State of Iraq and the Levant in Syria. Habib's lawyer, Charles Montpetit, has suggested it was obtained in a Mr. Bigtype operation where officers pose as criminals to obtain confessions... The RCMP scenario for Habib involved reeling him into a fictitious crime organization specializing in counterfeit passports and a fake human-smuggling ring. On Friday, the Mountie who designed the elaborate scenarios was the final prosecution witness as he provided details from behind a divider about a civilian source used to reel in Habib. The RCMP handler, under cross-examination by Habib's lawyer, described the source, a Muslim man in his 40s who was paid per piece of information... Described as a "mentor," the man was used to gain Habib's trust and steer him to the collection of RCMP agents in the sting. Upon learning Habib had gone to Syria in 2013 and returned, the civilian source raised concerns, without proof, that Habib might be a sleeper agent returning to commit a terror act. An RCMP document filed in the case suggests the force wanted to discover where he was trained, why he'd returned to Canada, what his intentions were and whether he presented a public security risk. Postmedia Network (National Post, A11; Guardian; Telegram; Cape Breton Post; Toronto Sun); La Presse; La Voix de l'Est; Le Droit; Gazette

Border officer faces charge in smuggling probe
The RCMP says a Canada Border Services Agency officer has been charged in a smuggling investigation. The Mounties say the arrest came as part of an investigation that focused on a criminal organization allegedly smuggling tobacco into Canada from the U.S. They allege the smuggling activities were facilitated by a CBSA border services officer in Fort Erie, Ont. Investigators say arrests and seizures were made in Canada and the U.S. Police say 37-year-old Chad Gale of Welland, Ont., is charged with breach of trust by a public officer. CBSA regional director Rick Comerford called it a very serious matter. "It is an isolated incident and in no way reflects the integrity and professionalism of the thousands of dedicated CBSA officers who carry out their duties each day in an exemplary manner," Comerford added. Postmedia Network (National Post, A11; Whig-Standard)

*** Mountie sues over stress suffered in child-sex unit**
An RCMP officer has filed a lawsuit alleging he nearly suffered a nervous breakdown after being assigned to a child sex offences unit in Surrey. Const. Michael Wardrope says he was exposed to too much child pornography and claims the conduct of his superiors amounted to intimidation and harassment and resulted in him suffering from post-traumatic stress disorder. Wardrope, who became a Mountie in January 2007 and is a resident of Maple Ridge, says in the lawsuit filed in B.C. Supreme Court that in 2009 he was recruited to the child abuse and sexual offence unit... Wardrope says his health was deteriorating and his mental health was affected by unforgettable images and memories from the files he had worked on and he was never offered a debriefing in the entire period he was in the unit. Postmedia Network (Vancouver Sun, A23)

*** Investigation clears RCMP officers of any wrongdoing in shooting death**
An investigation has cleared Morinville RCMP officers of any wrongdoing in the 2015 shooting death of a man with a "history of significant mental illness and conflict with the law." In a detailed report released Friday, the Alberta Serious Incident Response Team found the officers involved were "acting lawfully and the use of force was reasonable and justified in all the circumstances." The incident happened May 22, 2015, when Mounties attended a rural home near Morinville after receiving a 911 call from a family member who was concerned for their safety. Postmedia Network (Edmonton Sun, A10; Edmonton Journal; Calgary Herald)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Toronto joins 100 Resilient Cities group to prepare for the next crisis**
With the three-year anniversary of the 2013 Toronto ice storm approaching, the city is taking steps to improve how it responds to extreme weather events and other potential disasters... The mayor's remarks followed an event that formally marked Toronto's acceptance into 100 Resilient Cities, an initiative funded by the New York-based Rockefeller Foundation, dedicated to building "urban resilience" in cities around the world. The objective is resilience to more than just ice storms. 100 Resilient Cities was formed to respond to three major trends impacting cities: urbanization, globalization and climate change - trends that are causing both "acute shocks" and "chronic stresses." The ice storm is one example of acute shocks, a category that includes fires, floods, extreme weather, an infectious disease outbreak, terrorism, riots or other natural and man-made disasters. CBC News

Rescuers to try drones in two cities
Drones will be used by searchand- rescue crews in two cities in British Columbia as part of a one-year pilot project. The drones will be used in Coquitlam and Kamloops with the blessing of Emergency Management B.C. The provincial government said the devices have the potential to help emergency management personnel and are increasingly being used by public safety agencies across North America. Emergency Management said it will ensure the drones are used in ways that consider privacy and Transport Canada regulations. Tom Zajac, vice-president of Coquitlam Search and Rescue, said in a statement the organization is always looking at using new technologies and techniques to improve its search capabilities or reducing risks to people involved in search-and-rescue operations. Postmedia Network (Times-Colonist, A8; National Post)

*** Federal government upgrading coast guard headquarters in St. John's**
The federal government announced $4 million will be spent on harbourside improvements to the Canadian Coast Guard Atlantic Headquarters in St. John's. The government will remove sediments from the bottom of the harbour near the dock to increase water depth, allowing for larger Coast Guard vessels to tie up at the wharf on the south side of the harbour. "Having larger vessels close to the Atlantic Regional Headquarters building will also facilitate increased efficiency in the day-to-day operations of shore-based personnel," the Coast Guard said in a news release. The work is already underway and is expected to be completed by February 2017. Telegram

Spread by trade and climate, bugs butcher America's forests
In a towering forest of centuries-old eastern hemlocks, it's easy to miss one of the tree's nemeses. No larger than a speck of pepper, the Hemlock woolly adelgid spends its life on the underside of needles sucking sap, eventually killing the tree. The bug is one in an expanding army of insects draining the life out of forests from New England to the West Coast. Aided by global trade, a warming climate and drought-weakened trees, the invaders have become one of the greatest threats to biodiversity in the United States. Scientists say they already are driving some tree species toward extinction and are causing billions of dollars a year in damage - and the situation is expected to worsen... Insect pests, some native and others from as far away as Asia, can undermine forest ecosystems. For example, scientists say, several species of hemlock and almost 20 species of ash could nearly go extinct in the coming decades. Such destruction would do away with a critical sponge to capture greenhouse gas emissions, shelter for birds and insects and food sources for bears and other animals. Dead forests also can increase the danger of catastrophic wildfires. Whitehorse Star, 26

Search continues for missing Islander
Police are trying to piece together the activities of a Murray Harbour man Wednesday when he failed to show up at work. Kings County RCMP Corp. Alexis Triantafillou told The Guardian police have "reason to believe" that Alan Richards, 68, spent the night in Summerside Tuesday... The RCMP Police Dog Service, Ground Search and Rescue volunteers, a Cormorant rescue helicopter, and boats have all been deployed in the search. Guardian, A5

*** Jennifer Hillier-Penney search moves to other bodies of water**
The search of St. Anthony Harbour for missing person Jennifer Hillier-Penney has concluded, but the search continues. RCMP Media Relations Officer Trevor O'Keefe said the search for the 38-year-old St. Anthony woman, who was last seen on Nov. 30 on tHusky Drive, will continue in other bodies of water in

the area. O'Keefe would not confirm which bodies of water were being considered at this time. Telegram, A3

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Crown rests case in Montreal terror trial
The Crown rested its case Friday at the trial of a Quebecer charged with attempting to leave the country to participate in the activities of a terrorist group. Ismael Habib, 29, is also charged with giving false information in order to obtain a passport. The trial was adjourned until Jan. 23, when lawyers will debate the admissibility of a confession by Habib extracted by an undercover police officer last February when Habib said he intended to join Islamic State of Iraq and the Levant in Syria. Habib's lawyer, Charles Montpetit, has suggested it was obtained in a Mr. Bigtype operation where officers pose as criminals to obtain confessions... The RCMP scenario for Habib involved reeling him into a fictitious crime organization specializing in counterfeit passports and a fake human-smuggling ring. On Friday, the Mountie who designed the elaborate scenarios was the final prosecution witness as he provided details from behind a divider about a civilian source used to reel in Habib. The RCMP handler, under cross-examination by Habib's lawyer, described the source, a Muslim man in his 40s who was paid per piece of information... Described as a "mentor," the man was used to gain Habib's trust and steer him to the collection of RCMP agents in the sting. Upon learning Habib had gone to Syria in 2013 and returned, the civilian source raised concerns, without proof, that Habib might be a sleeper agent returning to commit a terror act. An RCMP document filed in the case suggests the force wanted to discover where he was trained, why he'd returned to Canada, what his intentions were and whether he presented a public security risk. Postmedia Network (National Post, A11; Guardian; Telegram; Cape Breton Post; Toronto Sun); La Presse; La Voix de l'Est; Le Droit; Gazette

How 'sigint' nabbed a Canadian al-Qaeda operative
Communications intercepted by U.S. and British spy agencies led to the arrest of the first al-Qaeda inspired terrorist caught in Canada, according to a newly leaked document. The memo, circulated within the U.S. National Security Agency more than a decade ago, provides a rare and detailed look at the world of intelligence-sharing. In early 2004, a cell of British terrorists was caught scheming to explode a bomb in London. After Scotland Yard launched "Operation Crevice" to round up the conspirators , Canadian police simultaneously moved to arrest an Ottawa software engineer. Momin Khawaja had helped build detonators for the conspirators. The suspects, including Mr. Khawaja, were twenty something Westerners whose families had hailed from Pakistan. They had travelled to a terrorist training camp in that country and emerged from it wanting to bomb Britain for its role in the invasions of Iraq and Afghanistan. Evidence included discussion of close co-operation between British and Canadian police. But prosecutors glossed over how "signals intelligence" (or sigint) captured long before the bust had laid a foundation for detectives. The details are revealed in a document flowing from Edward Snowden, the fugitive former American contractor who took volumes of files from the NSA in 2013 to leak them to the media... The leaked NSA memo, which is to be officially declassified in 2032, says that "well over 100 Sigint reports were issued on Operation Crevice." Most came from GCHQ but "the NSA reporting contributed significant pieces to the jigsaw." A Canadian agency called the Communications Security Establishment is a close NSA and GCHQ ally, but the Operation Crevice memo makes no mention of it. At that time, the Canadian agency was beginning to get secret authorizations from cabinet ministers to expand its powers. Globe and Mail, A8

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Border officer faces charge in smuggling probe

The RCMP says a Canada Border Services Agency officer has been charged in a smuggling investigation. The Mounties say the arrest came as part of an investigation that focused on a criminal organization allegedly smuggling tobacco into Canada from the U.S. They allege the smuggling activities were facilitated by a CBSA border services officer in Fort Erie, Ont. Investigators say arrests and seizures were made in Canada and the U.S. Police say 37-year-old Chad Gale of Welland, Ont., is charged with breach of trust by a public officer. CBSA regional director Rick Comerford called it a very serious matter. "It is an isolated incident and in no way reflects the integrity and professionalism of the thousands of dedicated CBSA officers who carry out their duties each day in an exemplary manner," Comerford added. Postmedia Network (National Post, A11; Whig-Standard)

Canadian government tests automated border crossing

First there were automated drive-through carwashes. Then automated drive-through banks. Now, the Canadian government is experimenting with an automated drive-through border crossing. While the fate of the wall along the U.S.-Mexico border promised by President-elect Donald Trump remains uncertain, Canada is carrying out a pilot project with an opposite aim: to use the latest technology to ease the flow of traffic across the United States' northern frontier. If you drive into the province of Quebec via the crossing at Morses Line, Vt., after 4 p.m. on any day, no live Canadian customs agent will stop and interrogate you. Instead, a gate opens and you drive into a large, garage-like building. There, under the gaze of several TV cameras, you are invited by a customs officer to insert your passport or other border ID into a document reader and are asked the usual questions put to visitors seeking to enter Canada. The customs officer addressing you over a microphone is located at a service center operated by the Canadian Border Services Agency in Hamilton, Ont. "So far, it's going very well. We've seen an increase in the use of the border crossing," said Dominique McNeely, a spokesman for the agency. The experiment's budget is $16 million, most of which has been spent on the new building and its high-tech equipment. The year-long pilot program ends in a couple of months, at which time it will be decided whether to expand it to include other small crossings... The union representing Canada's 10,000 border guards thinks the automated-crossing experiment is a waste of money and a threat to security. "To cut two jobs, they've invested $16 million," said Jean-Pierre Fortin, the union president. "We are the first line of defence for this country. Technology should be there to assist us, not to replace us." Fortin said that if criminals were to be flagged trying to enter Canada via the drive-through, they could easily abandon their cars and escape on foot, with no guard around to stop them. Also, he says, there is no way a camera can determine whether a driver has been drinking and driving. The Border Services Agency says that no jobs have been lost, since the alternative was a border that was closed 16 hours a day, and that the automated post is more secure than simply having a gate across the highway. Washington Post (Winnipeg Free Press)

Accused in 2010 slaying nabbed in Kuala Lumpur

A suspected killer who has been sought for six years was finally tracked down in Malaysia and brought back to the city to face the music. Toronto Police named a suspect in the murder of Nanthi Eashan Dharmaratnam almost immediately after he was allegedly deliberately run down by a car in a Scarborough parking lot on March 13, 2010. But the 25-yearold's killing remained unsolved until cold case homicide investigators found Seran Kasilingam, aka Kutty Shawn, halfway around the world over the summer. Kasilingam was located in Kuala Lumpur on Aug. 26 and "arrangements were made to return him to Toronto," Det.-Sgt. Stacy Gallant said Friday, explaining an RCMP liaison in Malaysia and the Canadian Border Services Agency helped with the 28-year-old murder suspect's extradition. Postmedia Network (Toronto Sun, A4)

Span, staff settle strike

A nearly three-week strike by toll collectors and other workers at one of Oanada's busiest border crossing ended Friday when the 47 workers at the Blue Water Bridge voted to accept a new contract deal. The agreement with the striking workers, members of the Public Service Alliance of Canada, was reached a day earlier following a day of bargaining by the union and the Federal Bridge Corp., with a conciliation officer. London Free Press, A7

Where Is Timloh (Butchang) Nkem
Two years ago, Timloh (Butchang) Nkem just disappeared. He'd been convicted of rape and was supposed to appear in Saskatoon Court of Queen's Bench for sentencing arguments on Oct. 31, 2014... Court was adjourned with the sense that the worst had happened: A convicted rapist who was allowed to remain out of custody pending his sentencing had fled... Danyliuk decided Nkem could be managed in the community and would return to court for his sentencing. He released the rapist on the same conditions he had been on since he got bail in 2013, including showing up to court when expected and surrendering his passport to the court if it were ever returned by border services... Then it took seven weeks for Saskatoon city police to post Nkem's photo to the wanted section of the police website... A Canada wide arrest warrant was also issued and applications were made for an "Interpol Red Notice." It means the province committed to have Nkem extradited if he is arrested in a foreign country that has an extradition treaty with Canada... The Canada Border Services Agency (CBSA) seized Nkem's passport and retains all travel documents until a person is deported, an agency spokesperson confirmed by email... Canada and the United States currently exchange entry information on foreign nationals; entry into one country serves as an exit record from the other but only if the person enters the United States by land. That means the CBSA has no exit records for people who leave Canada by air, travelling through a country other than the United States. Postmedia Network (Leader-Post, D1; StarPhoenix)

Canadian officials ask U.S. residents to leave guns home
Canadian officials are asking Alaska residents to leave their guns stateside before travelling. The Canadian Border Service Agency seized about 300 undeclared firearms from travellers in 2015, with more than half coming from travellers crossing into Canada from Alaska, The Ketchikan Daily News reported earlier this year. "Many of these travellers faced criminal charges and/or a monetary penalty that could have been avoided by simply declaring the guns," read an announcement from the agency. Whitehorse Daily Star, 10

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Fintech as a Force for Social Good**
For enterprises concerned about network security, identity verification has become a top-of-mind issue in an era of ubiquitous cyber-crime. But for millions around the world with no valid identification, standard computer access and identity authentication measures such as passwords pose a formidable barrier to not just public services, but also to the formal economy and traditional financial institutions. Postmedia Network (National Post)

*** Students in province to become 'Cyber Patriots' to battle hackers**
A worldwide search for the next generation of cyber-security experts landed in a New Brunswick high school on Friday. A quartet of Grade 12 students at Hillsborough's Caledonia Regional High School spent the day warding off virtual attackers targeting a hypothetical company's computer system as part of a multinational contest called Cyber Patriot IX. The contest is hosted by the United States Air Force Association which hopes to recruit new talent through it for the flourishing industry. Telegraph Journal, A7

*** It's online scam season and 'the phishing is good'**
As Christmas approaches, experts suggest an extra dollop of caution before clicking on email package delivery notices. Fake notifications are proliferating, bringing not holiday cheer - but holiday ransomware. The holiday phishing season began just before U. S. Thanksgiving and will likely extend until after Christmas, said Caleb Barlow, vice-president for IBM Security. "This is a US$445-billion business. These are campaigns, run by the criminal equivalent of marketers," he said. Security company FireEye sees a significant increase in fake package email alerts beginning in November, an almost 100 per cent increase from the average of September-October. USA Today (Winnipeg Free Press)

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Mountie sues over stress suffered in child-sex unit**

An RCMP officer has filed a lawsuit alleging he nearly suffered a nervous breakdown after being assigned to a child sex offences unit in Surrey. Const. Michael Wardrope says he was exposed to too much child pornography and claims the conduct of his superiors amounted to intimidation and harassment and resulted in him suffering from post-traumatic stress disorder. Wardrope, who became a Mountie in January 2007 and is a resident of Maple Ridge, says in the lawsuit filed in B.C. Supreme Court that in 2009 he was recruited to the child abuse and sexual offence unit... Wardrope says his health was deteriorating and his mental health was affected by unforgettable images and memories from the files he had worked on and he was never offered a debriefing in the entire period he was in the unit. Postmedia Network (Vancouver Sun, A23)

*** Investigation clears RCMP officers of any wrongdoing in shooting death**
An investigation has cleared Morinville RCMP officers of any wrongdoing in the 2015 shooting death of a man with a "history of significant mental illness and conflict with the law." In a detailed report released Friday, the Alberta Serious Incident Response Team found the officers involved were "acting lawfully and the use of force was reasonable and justified in all the circumstances." The incident happened May 22, 2015, when Mounties attended a rural home near Morinville after receiving a 911 call from a family member who was concerned for their safety. Postmedia Network (Edmonton Sun, A10; Edmonton Journal; Calgary Herald)

*** Police did as trained, inquest told**
An inquest into the 2008 police shooting death of an indigenous man in Winnipeg - the first in Manitoba to specifically consider the role of racism - heard from its final witnesses Friday. Two officers responsible for use-of-force training with the Winnipeg Police Service and the RCMP said the police who shot Craig McDougall acted appropriately, and bias-free police training wouldn't have changed the outcome. Patrol Sgt. Julio Berzenji, co-ordinator of the police officer safety unit, said officers are trained to make preservation of life their priority, so getting to the stabbed person they believed was in the house was their goal. Winnipeg Free Press, B2

*** The cost of accountability: Can Canadian police services afford body cam technology?**
One of the clearest conclusions following the recent Toronto Police Service pilot project of body-worn cameras was how positive the public felt about them. A police commissioned survey found 95 per cent strongly supported the idea and 85 per cent of the police officers involved agreed, according to Insp. Michael Barsky who led the program, adding many officers didn't want to give the cameras back at the end of the pilot. Less clear was the cost. A report following the pilot project pegged the price tag at $85 million over 10 years. But Barsky concedes, while the technology may be the wave of the future: "I don't know if that means today, though. It may mean that we need this to mature a little bit more." It seems that's the conclusion this week by the RCMP following a feasibility study. The national police force would have been the largest to don body-worn cameras. A statement said the study found the technology wasn't ready for the realities of RCMP policing... RCMP officers are disappointed, but not surprised, said Sgt. Brian Sauvé, on leave from his position on the force to co-chair the National Police Federation. "They're probably making the right decision," said Sauvé. He notes officers across the country were alarmed to find out police involved in the Toronto pilot project were spending as much as two hours dealing with video at the end of the day. He said the RCMP is already wrestling with budget constraints and out-of-control over-time costs. The RCMP is just the latest police service to abandon body cams — at least for now. Edmonton and Vancouver police services have also agreed to shelve the idea following concerns over price. CBC News

Nearly half of B.C.'s most expensive homes secretly owned
Critics say the B.C. government must work to close loopholes that allow homeowners in the province to hide their identities behind false fronts such as shell companies. NDP housing critic David Eby and Green MLA Andrew Weaver called for changes after reading about a Transparency International report that slams Canada for failing to close loopholes that allow homes to be owned through shell companies, trusts and nominees. The report shows almost half of Vancouver's 100 most expensive houses were bought using shell companies or other methods that obscure the identity of the owners. Report author Adam Ross found that use of tactics to obscure ownership has increased in the past five years in B.C. He also concluded the prevalence of opaque ownership in B.C. luxury real estate makes it impossible to measure

how much offshore cash is invested in B.C. homes, even though B.C. is attempting to collect data on foreign ownership... "Though Canada is not known as a global hub for money laundering and tax evasion, our legal framework and lax enforcement environment make it easy for individuals to misuse private companies and trusts," [the report] says. "Anonymous companies and trusts are the getaway cars of financial crime. ... Canada is an increasingly attractive destination for those looking to park and invest the proceeds of crime."... The report highlights lawyers are exempted from reporting to Canada's anti-money laundering agency, Fintrac, under a 2015 Supreme Court of Canada ruling. Canadian lawyers won the case by arguing that attorney-client privilege prevented them from reporting transactions to Fintrac. One of the case studies in the Transparency International report suggests lawyers are often central to money-laundering schemes... Ross said that he believes the federal government must find a way to include Canadian lawyers in Fintrac reporting, or many of the loopholes his report reveals, will remain open. Postmedia Network (Vancouver Sun)

'Common sense legislation'

The grieving widow of a murdered RCMP officer made an emotional plea Friday in St. Albert, calling on the federal government to not let partisan politics get in the way of public safety... Wynn's husband, Const. David Wynn, was shot and killed outside of a St. Albert casino in January 2015 by Shawn Rehn, a man wanted on numerous outstanding warrants. Rehn was granted bail a month earlier despite facing 29 Criminal Code charges. In response, a federal bill was drawn up to close a loophole in the law that allows bail hearings to take place without requiring a full disclosure of the applicant's criminal history, something Wynn believes may have prevented the murder of her husband and the wounding of auxiliary Const. Derek Bond during the same encounter... The bill, first proposed by Conservative Sen. Bob Runciman, passed swiftly through the Senate, finding support from both Liberals and Conservatives, and was unanimously supported by the Senate legal and constitutional affairs committee. But Liberal MPs, including federal Justice Minister Jody Wilson-Raybould, have since said they will not support the bill, claiming it will cause delays in an already backlogged bail system as criminal history is collected. Postmedia Network (Edmonton Sun, A4; Edmonton Journal); Postmedia Network (Guardian; Telegram)

RCMP give computers to Eskasoni students - but there's a catch

Students in Eskasoni, N.S., were excited to be given new computers yesterday - but they may not be allowed to keep them. It's part of the national Connecting Kids with Cops through Technology program that helps local RCMP officers sit down with elementary and middle-school children to work on projects. If the 27 students complete the workshops, they can keep the computers. CBC News

* **Hot on the trail**

An RCMP dog and his handler followed a scent that started near a Cornwall break-in to where the alleged "screencutter" parked his car, a judge heard Friday in provincial court. That was part of the testimony during the fourth day of Richard Joseph Arsenault's trial before Chief Judge Nancy Orr in Charlottetown. Arsenault is on trial for 17 charges, including numerous break and enters. The court heard from Cpl. Marc Periard, one of the RCMP's dog handlers in P.E.I. In August, Periard was the province's only dog handler, and he testified that Charlottetown Police Deputy Chief Brad MacConnell asked him to go to Cornwall where Arsenault had been spotted... The court also heard from RCMP Cpl. Shaun Brown who compared a shoe impression left at the scene of the Cornwall break-in to sneakers the police seized from Arsenault. Guardian, A4

Project Red Ribbon resumes

As part of Project Red Ribbon, Mothers Against Drunk Driving (MADD) Whitehorse and the Yukon's chief coroner will join RCMP tonight as they conduct impaired driving enforcement check-stops on Whitehorse roads. Project Red Ribbon is an annual holiday campaign that raises awareness of the dangers of impaired driving... With more frequent traffic stops planned for the coming weeks, Yukon RCMP are also asking motorists to slow down and move over if possible when approaching emergency vehicles that have their flashing lights on. Earlier this week, two Whitehorse RCMP officers were waiting roadside on Two Mile Hill for a suspected impaired driver's vehicle to be towed. Whitehorse Daily Star, 7

Family of man who died in Toronto police Taser incident speaks out

On the morning of November 4, Rui Nabico awoke in his family home on Sagres Cres., in a quiet residential corner of the city's northwest. He spoke to his parents before they left for work and, according to his sister, "all was perfectly normal." Hours later, the family would learn there had been a serious incident involving police on their street. Officers were called after reports of a man brandishing two knives and screaming. After a Taser was deployed, a 31-year-old man died. It was Nabico... Nabico's death has also prompted larger questions about the safety of Tasers, with some critics saying his death is a tragic reminder that the health risks of conducted energy weapons are still not understood. Pat Capponi, co-chair of the Toronto police services board mental health sub-committee, told the Star justdays after Nabico's deaththat his fatality "contradicts assurances that Tasers don't kill." Toronto Star

*** A'burg cops deploy less lethal weapon to minimize casualties**
Amherstburg police officers are now armed with beanbags. The police department is the first in Ontario to arm all frontline officers with shotguns that fire a "lesslethal projectile" that looks similar to a beanbag. The service made the move to be "more progressive" after also becoming the first Ontario police service to make body-worn cameras standard equipment for frontline officers early this year. "This is another tool on our belt when it comes to less lethal," said Const. Shawn McCurdy. "It gives us another option if you're engaging somebody who is assaultive and there is time and distance on our side." Officers have been receiving training with the projectiles and the "sock guns" that fire them, over the last month. McCurdy said all of the police service's seven patrol cars have one of the guns. Toronto police also have the beanbag guns, he said, but they're not fully deployed. Postmedia Network (Windsor Star, A2)

*** Organized crime suspect turns himself in**
Police have arrested another suspect as part of an investigation into an organized crime group active in Alberta, British Columbia and Manitoba. Calgary police say Andrew McGuire has turned himself in. McGuire and nine other people face drugs, firearms and organized crime charges. Earlier this week police announced the arrest of Timothy Varga - who police allege is the central figure in the criminal network. Varga faces multiple charges including recruiting members for a criminal organization. Red Deer Advocate, A10

Mississauga man charged in counterfeit goods probe
Toronto police say a Mississauga man is facing charges as a result of an investigation into the sale of counterfeit merchandise. Investigators say they received reports from the public about personal safety incidents involving recently purchased merchandise, including skin irritations and products overheating. They say the merchandise was traced to three businesses - Lucky's Import and Wholesale, Beach GLO and Jazz Casuals. All three locations were searched and police say officers seized 16 trucks of evidence worth an estimated $2.5 million... Police say two other people face immigration-related charges. Toronto Star (Record, A7); Postmedia Network (Toronto Sun)

When the case doesn't close: tales from the Toronto police cold-case unit
More than 500 cold-case files haunt the Toronto police major crimes unit like unfinished business. It's Det.-Sgt. Stacy Gallant's job not to forget about them - and he won't, if the victims' families have anything to say about it... The majority of the files are "DNA case" crimes, such as sexual assault and murder, where DNA would normally be found at the scene. But for the cases that stay cold, not a trace was recovered. And where DNA evidence is found, it isn't always the breakthrough that crime television shows lead viewers to believe. Gallant says that DNA samples merely read like a random set of numbers if they don't match any that are stored in the national DNA data bank. Even a positive ID can fall through for several reasons, according to Gallant... Canada's DNA data bank contains the blood, saliva and hair of roughly 266,000 people who have been convicted of a crime. The DNA is harvested after conviction, not upon arrest, which Gallant and RCMP Commissioner Bob Paulson have argued would help solve more crimes faster. CBC News

Un homme de Bécancour interpellé par les policiers
Un septuagénaire résident à Bécancour a été interpellé dans le cadre d'une opération en lien avec la contrebande de tabac, mercredi, alors qu'il se trouvait dans un véhicule circulant sur l'autoroute 20 est près de la sortie 138 à Saint-Hyacinthe. L'individu en question fera face à des accusations en vertu de la Loi concernant l'impôt sur le tabac. Lors de son interpellation, les policiers ont aussi procédé à une

perquisition dans le véhicule et y ont saisi 224 sacs de type Ziploc contenant 200 cigarettes chacun et 1095 $ en argent comptant en devises canadiennes. Cette opération, qui découle d'une enquête amorcée en 2016 à la suite d'informations reçues du public, a mobilisé trois policiers de la division des enquêtes sur la contrebande de tabac. Le Nouvelliste, 9

*** Jonathan Bettez traqué par la SQ**
Les policiers de la Sûreté du Québec (SQ) ont mené une traque intensive contre Jonathan Bettez et trouvé des traces de fichiers de pornographie juvénile dans ses possessions, révèlent des documents judiciaires rendus partiellement publics à la demande d'un consortium de médias. L'homme de Trois-Rivières, qui a été rencontré pendant l'enquête sur la disparition de Cédrika Provencher, a été surveillé étroitement après son arrestation pour possession et distribution de pornographie juvénile, le 29 août. La SQ a installé un GPS sur sa voiture, effectué de la surveillance physique et perquisitionné sa résidence et son lieu de travail à son insu, rapporte ICI Radio-Canada. La surveillance a permis de découvrir qu'une des adresses IP utilisées par M. Bettez a servi à télécharger des fichiers qui pourraient être de la pornographie juvénile. Le Devoir, A8; La Voix de l'Est; Le Nouvelliste (Le Quotidien; Le Nouvelliste); La Tribune; Le Soleil; La Presse

*** Professeur accusé de leurre informatique**
Un enseignant de mathématiques suppléant de la commission scolaire de la Capitale et de la commission scolaire des Premières-Seigneuries, Marc-Olivier Cloutier, 26 ans, a été accusé de leurre informatique après une perquisition menée à son domicile de Sainte-Foy jeudi. Cette perquisition a également permis aux policiers de mettre la main sur de la pornographie juvénile. Le Soleil (Le Soleil, 24; La Voix de l'Est; Le Quotidien)

*** Edmonton man charged with sex trafficking woman across the Prairies**
Police say an Edmonton man is facing a list of charges related to firearms and human trafficking for allegedly forcing a woman to work in the sex trade. Police arrested Prince Opoku, 25, following an investigation into his alleged connections to the sex trade. It's alleged he forced a woman in her early 20s to travel to cities in Manitoba, Saskatchewan and Alberta in order to work in the sex trade starting in early 2015. He is facing a variety of charges, including: procuring, trafficking in persons, material benefit from sexual services, advertising sexual services, knowingly possessing an unauthorized firearm, and careless storage of a firearm. Postmedia Network (Whig-Standard, B1)

*** Saskatoon teacher faces child porn, sex charges**
A 39-year-old teacher at a Saskatoon high school faces child pornography charges after an investigation by the Saskatchewan Internet Child Exploitation unit. Rhett Jeffrey Lundgren, 39, is charged with two counts of arranging to commit a sexual offence against a child and one count of attempting to access child pornography, Saskatoon police announced Friday after Lundgren appeared in provincial court. He was released from custody on several conditions. According to a police news release, the ICE unit arrested Lundgren and executed a search warrant on Thursday, nine days after starting an investigation into the online sexual exploitation of children through social media applications. Postmedia Network (Leader-Post, A11)

*** RCMP looking for new information in 2007 murder of Portage grandmother**
RCMP re-visited the scene of Charlene Ward's death nine years ago and continued to encourage anyone who knows something about her last day to contact police. After bringing the case back into the public eye on Nov. 22, the RCMP's Historical Case Unit investigators visited the scene of Ward's Nov. 1, 2007 death in Portage la Prairie. Her death has been ruled a homicide. Winnipeg Free Press, 4

***Saddling up for the red serge**
The RCMP Musical Ride held its graduation ceremony, known as "Passing-Out," on Friday. Among the new graduates is Const. Mathieu Crousset, who says he's "very humbled to have this opportunity to represent the RCMP." The Musical Ride's mounties and horses are invited to perform at about 50 events a year in Canada and abroad. The equitation course, which teaches horsemanship, is the second-longest RCMP course, with only recruit training in Regina taking longer. As the newest graduates, these riders will

be among the official riders in the Canada 150 tour. We asked Const. Crousset a few questions. Postmedia Network (Ottawa Sun, A2)

*** 'Heroic' rescue**
Footage from the dashboard camera of an RCMP cruiser has captured the dramatic efforts to save a man overdosing on fentanyl. "The only word that I feel accurately describes it is 'heroes,' " said deputy commissioner Marianne Ryan, commanding officer for the Alberta RCMP. "Without regard for their own personal safety, they did what they were trained to do without hesitation." On Sept. 28, around 9:15 a.m., an Athabasca RCMP officer was waved down by two people in a black pickup on Hwy. 55. The female driver told the officer a 27-year-old man in the backseat was overdosing on fentanyl, the potentially deadly synthetic opioid... While the officer began attending to the man, a woman in another vehicle pulled up to report she had narrowly escaped being hit by the same truck. Recognizing the severity of the situation and understanding it would be at least 20 minutes until an ambulance could arrive, the officer and the woman loaded the unresponsive man into the back of the truck and performed CPR while the truck barrelled down the highway to the nearest hospital. Postmedia Network (Calgary Sun, A17)

***RCMP investigation of Winnipeg police HQ remains active**
The RCMP investigation into Winnipeg's police headquarters remains active as the two-year anniversary of the criminal probe approaches. Winnipeg Mayor Brian Bowman said the Mounties recently contacted the city to request additional information pertaining to their investigation of the $214-million police-HQ project, which was completed this summer after three years of delays, $79 million worth of cost overruns and two external audits... The Mounties launched a criminal investigation into Winnipeg's police headquarters on Dec. 17, 2014, when officers executed a search warrant at McGillivray Boulevard headquarters of Caspian Construction, the primary contractor on the city project. Court documents later revealed RCMP were looking into fraud and forgery allegations pertaining to the construction. The RCMP also raided the police headquarters itself in June 2015. Information used by the Mounties to obtain their initial search warrant also revealed former Winnipeg mayor Sam Katz received thousands of dollars in personal cheques from Caspian Construction. CBC News

*** Residential burglaries up 42% over last year in Richmond**
Richmond police say the city has seen a significant spike in burglaries in recent weeks - which they say is being committed largely by drug users looking to feed their habit. RCMP say residential burglaries were up 42 per cent between November and December 2016, compared to the same period last year. "We normally see a slight increase around this time of year," said Cpl. Dennis Hwang in a release. "However, our numbers are above normal, and we are tracking them carefully." RCMP say they are reassigning officers from other units to address the increase. CBC News

***RCMP launch holiday CounterAttack campaign**
Holiday season revelers are being urged to think twice before getting behind the wheel after a night on the town. The annual winter CounterAttack program is up and running. It means RCMP will be out in force, setting up roadblocks and generally keeping an eye out for drivers who've had too much to drink. "The Prince George detachment is committed to improving public safety," said Prince George RCMP Supt. Warren Brown. Prince George Citizen

*** Man wanted for assault, intimidation of witness in Fort McMurray**
Wood Buffalo RCMP are trying to identify a man who assaulted and threatened a witness to not testify at an upcoming trial. Postmedia Network (Edmonton Journal)

*** Saint John cocaine kingpin gets 11-year sentence**
It took police almost three years of investigation, the help of a covert agent who turned on his criminal partners, and more than two years of prosecution, but a Saint John-based cocaine kingpin has received an 11-year prison sentence. Shane Stephen Williams, the head of one of the criminal organizations targeted by Operation J-Tornado, was sentenced on Friday at noon. He was sentenced alongside his co-conspirator Joshua Eldon Kindred, with whom he shared a courtroom dock at trial between April and June. The Crown's key witness at trial is a former associate, friend and groomsman of Williams, who agreed to work with the RCMP for a payout of hundreds of thousands of dollars. His identity can't be

reported due to a publication ban, and he appeared in court with a heavy security presence. The agent had been providing Williams' crew with Army-level encrypted Blackberry devices that police couldn't crack. But police devised a plan for the agent to funnel similar new devices, that routed through an RCMP server and allowed officers to track their messages. Times & Transcript, B1

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** ATTEMPTED MURDERER RELEASED**
The mother of a shooting victim now confined to a wheelchair is devastated by the early release of his would-be killer. Mykel Smith shot Mike Patriquen point blank on Nov. 11, 2008, the bullet piercing the 25-year-old's lung and spine. He'll be in a wheelchair for the rest of his life. Smith received a nearly-13 year sentence for attempted murder after he and Sergio Bowers attempted to rob Patriquen of bracelets and a necklace he was wearing in his home. Smith was given day parole on Tuesday, less than halfway through his sentence... The board was not optimistic about Smith's prospects in society. "CSC is of the opinion that you will re-offend in a violent manner if your need areas are not addressed adequately," the document reads. "You are described as having no empathy, traits of narcissism, anti-social personality disorder and psychopathy; you are superfluously charming but have no real depth for any emotions." More recent assessments show an improvement in demeanour and attitude. He is said to have been involved in many programs in prison and achieved his GED. Stephen doesn't understand how the board let someone out they believed could be a risk to re-offend. Chronicle Herald, A7

*** Murder casts a long shadow**
There's a saying that time heals all wounds. But it's not really true. Some wounds can never be healed. Nearly 25 years ago, a solitary man named Patrick Dombroskie walked into the Ontario Glove factory in Waterloo. He had been suspended from his job as a leather cutter a few days earlier, for not doing his work properly. It was Feb. 3, 1992. Dombroskie, 28, carried a hunting rifle and 60 rounds of ammunition. He chose his victims carefully, while stunned colleagues hid or ran away. He killed Elizabeth Travassos, who was at work on the floor. He killed Greg More, co-owner of the company, and Larry Strack, a supervisor who, like Dombroskie, was from Barry's Bay, a small community 150 kilometres west of Ottawa. Then Dombroskie got into his car and drove away... Dombroskie was convicted of murder and sent to jail for life with no chance at parole for 25 years. That chance was denied at a hearing near Kingston last week. Toronto Star (Record, B1)

*** Un violeur trop dangereux pour être libéré de prison**
Léopold Boies, 51 ans, est tellement dangereux qu'il est impossible de le laisser sortir de prison, estime la Couronne qui demande de l'enfermer sans date prévisible de libération. La procureure aux poursuites criminelles et pénales, Me Nicole Ouellet, recommande au tribunal de le déclarer délinquant dangereux parce qu'il attaque des gens dès ses sorties de prison. Il est détenu préventivement depuis plus de deux ans pour avoir agressé sexuellement deux femmes après quelques semaines de liberté. Pendant sa plus récente incarcération, Boies a attaqué deux agentes des services correctionnels en leur lançant un seau de matières fécales. Les deux agentes ont dû être traitées préventivement contre une gamme de rétrovirus et d'hépatites. Agence QMI (Journal de Québec; Journal de Montréal); La Presse; Le Quotidien; Radio Canada

*** Le sort de Jacques Delisle entre les mains du juge**
Alors que la couronne soutient que le suicide est «impossible» dans le dossier de Jacques Delisle, les avocats de l'ex-juge demandent la libération de leur client, un homme qui a perdu «son honneur, sa réputation et sa liberté» après avoir été condamné sur une «preuve inexacte». Les parties ont présenté leurs plaidoiries hier au neuvième et dernier jour de l'enquête sur cautionnement de l'ex-juge, qui se dit condamné à tort pour le meurtre prémédité de son épouse. Le sort de Jacques Delisle, 81 ans, repose maintenant entre les mains du juge Benoit Moulin, qui devrait rendre sa décision d'ici les Fêtes. Agence QMI (Journal de Québec)

*** Contraband seized at Atlantic Institution**

A package containing 65 grams of marijuana was seized by guards at the Atlantic Institution in New Brunswick on Nov. 29. The estimated value of this seizure is about $10,000. The Correctional Service of Canada uses tools including ion scanners and drug-detector dogs to search buildings, personal property, inmates and visitors. Such activities may be related to drug use or trafficking that may threaten the safety and security of visitors, inmates and staff members working at federal jails. Chronicle Herald, A4

*** Contrebande: iPad, Game Boys et vibrateurs saisis en prison**
Les agents des services correctionnels saisissent de tout dans les prisons québécoises, allant de l'alcool frelaté jusqu'à un banc de toilette en passant par une poivrière et de l'huile à massage. «C'est problématique. Oui, nous sommes pour la réinsertion des détenus, mais il faut aussi un encadrement», a réagi le président du Syndicat des agents de la paix en services correctionnels du Québec Mathieu Lavoie. Des documents diffusés par le ministère de la Sécurité publique du Québec montrent en effet que les articles de contrebande ne se limitent pas à la drogue, aux cellulaires et aux armes. Agence QMI (Journal de Québec; Journal de Montréal)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Rewards set to a maximum of $2,000
Crime Stoppers has had previous kicks at the can in the Yukon, Mayor Dan Curtis acknowledged Thursday, but he's optimistic about the program's recent re-launch... Crime Stoppers previously folded in the territory in 2011, when it was shut down due to a lack of community involvement. Last spring, the Yukon government contributed $21,000 to start-up costs for the program... Crime Stoppers can accept government money for administrative costs, but it must rely on donations to make up the reward money paid out to tips that result in arrests. When a Yukoner calls the tip line, the information they give is attached to a number, rather than the name of a person. The information is relayed to Yukon RCMP liaisons, who assess the information. RCMP Supt. Brian Jones said tips aren't enough to obtain warrants, but they give officers a starting point, or a new direction to investigate. They become, he said, "another piece of the puzzle." If the RCMP determine a tip has contributed directly to solving a crime, they tell the Crime Stoppers board. The board then pays out the tipster. Whitehorse Daily Star, 2

Un fraudeur de personnes âgées condamné à cinq ans de prison
Un homme de 31 ans qui a arnaqué des dizaines de personnes âgées de Montréal a été condamné jeudi à cinq ans de prison pour fraude, complot de fraude et trafic de bien criminellement obtenus. André Westerhout faisait partie d'un réseau criminel spécialisé dans les fraudes «grands-parents» démantelé par les policiers ce printemps. Le Nouvelliste, 12

*** Drug death 'didn't need to happen'**
Two of Winnipeg's most important advocates for our most vulnerable people lined up at city hall this week in a way we normally associate with their homeless and often substance-addicted clients. With their hands out. Siloam Mission was asking for $2 million. Main Street Project, which provides the drug treatment Siloam doesn't, was all but begging for $70,000 more. By comparison, the facility once known callously as "the drunk tank" was asking for spare change; a mere pittance of an increase to the city's long-standing allotment of $96,000 toward Main Street Project's 34-bed Mainstay Residence. But Thursday, when the shelter's executive director, Rick Lees, spoke in front of Mayor Brian Bowman and his executive policy committee members, he wanted to stress why the money is so desperately needed in a way they would understand not just as politicians, but as people. Winnipeg Free Press

*** Lighthouse funding shortfall means more people in jail cells**

Saskatoon police Chief Clive Weighill says the decision to cease funding to the stabilization unit at the Lighthouse has meant more intoxicated people are again ending up in police cells. In September, the province ended partial funding for the 38-bed unit that provides emergency shelter for people who are intoxicated by drugs or alcohol. Such people are not typically allowed into other emergency shelters. Weighill said many of them are now ending up back in police cells. Postmedia Network (StarPhoenix, A3)

***Councillors bicker over funding while fentanyl kills two a day**
For Vancouver city councillor Geoff Meggs, raising property taxes to help stem the current overdose crisis is a complete nobrainer. His argument goes like this: First responders such as firefighters and police are funded with property taxes; there is unprecedented pressure on those first responders because of the number of people overdosing on fentanyl; and so when more resources are needed to support those emergency services, property tax is the obvious source. Globe and Mail, S1

*** It's about to get easier to set up supervised drug injection sites in Canada**
As the number of Canadians dying from opioid overdoses continues to grow, the federal government is preparing to make it easier to open supervised drug injection sites. Federal Health Minister Jane Philpott is set to bring forward on Monday proposed legislation to make changes to the Controlled Drugs and Substances Act. For months, Philpott has been facing pressure to speed up the process to open new sites, where addicts use intravenous drugs in a safe and medically supervised environment. B.C. in particular has been vocal. The province has seen hundreds die from drug overdoses this year alone, and provincial officials have labelled the opioid crisis a public health emergency. CBC News

***Police chief backs safe-injection sites for Edmonton**
Edmonton police Chief Rod Knecht says he's in favour of a plan to open four safe-injection sites in the city. "We, Edmonton, have an opportunity to get it right," Knecht said after visiting safe-injection sites in Vancouver. "I think we can build a safe-injection site that serves everybody's needs in the broader community." An advisory committee for medically-supervised injection sites presented a report to city council on Monday, asking councillors for support. Coun. Dave Loken said it is something the city should have done long ago. Couns. Scott McKeen and Bev Esslinger agreed. At the same meeting, the city's community and public services committee unanimously supported four injection sites in Edmonton - one at the Royal Alexandra Hospital and three others in existing community organizations. CBC News

*** Public health gets green light to study bringing safe injection sites to town**
City councillors have given public health the green light to study the possibility of bringing safe injection sites to Hamilton. The pitch for such a study was first made to the Board of Health earlier this year, in light of a deadly opioid crisis that has led to a spike in overdoses across the country... The Hamilton study was initially estimated to cost $250,000, but after some councillors expressed concern about the cost, public health staff established a partnership with McMaster University to get that cost down to $92,000. *** Winnipeg called strong for inclusion of Muslims**
With a rise in anti-Muslim hate crimes and divisive rhetoric in Canada and the United States, the National Council of Canadian Muslims is training youth to be more media-savvy - and thinks Winnipeg can teach the rest of the country a thing or two. Today, the non-profit human rights and advocacy group is holding a workshop in Winnipeg, the last stop on a four-city tour that includes Montreal, Ottawa and Calgary. The plan is to help young people identify stereotypes in popular culture related to Islam and Muslims and to learn how to counter them by sharing their own stories, said organizer Amira Elghawaby in Ottawa. She said Winnipeg has fewer anti-Muslim hate crimes reported than most Canadian cities, and the council wants to learn why. Winnipeg Free Press

*** Police Odd Squad Enjoys Financially Fruitful Evening**

Composed of off-duty police officers, the Odd Squad Productions Society reportedly raised over half its $100,000 basic budget at a party in the Imperial Theatre. That Main-off-Hastings facility is located in what Vancouver Chief Constable Adam Palmer calls "arguably the most challenging beat in Canada." It's where Odd Squad officers have produced 20 documentary films and many youth-oriented drug-and gangeducation programs. Vancouver Sun, G2

*** Pharmacists urge government to expand addiction treatment**
New Brunswick's pharmacists are urging the government to devote more resources to drug addiction treatment, as the province prepares to roll out a prescription monitoring program. Paul Blanchard, executive director of the New Brunswick Pharmacists' Association, says pharmacists aren't sure where to refer people who will be identified through prescription monitoring as abusing their medication. CBC News

MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

Auditor raps B.C. for stopping progress reports on missing women programs
British Columbia's auditor general rapped the province Thursday for dropping its public progress reports on a commission of inquiry that reviewed the disappearances of 67 women - some of them victims of serial killer Robert Pickton - from Vancouver's Downtown Eastside. Carol Bellringer said the tragedies continue to affect families and communities, and the government must keep British Columbians informed of its progress in meeting more than 60 recommendations from the inquiry. She said the government stopped public reporting in 2014, two years after former attorney general Wally Oppal tabled his report. Whitehorse Daily Star, 18

*** How to make a 'nation-to-nation' relationship genuine**
An opinion piece states, "The dispute over the North Dakota Access pipeline has been resolved, but the months-long protest by the Standing Rock Sioux has already served as a beacon to First Nations of Canada feeling the aggravation of their accumulated injuries - the Missing and Murdered Indigenous Women and Girls, Laloche, Val d'Or, Grassy Narrows, the Site C Dam, the Trans Mountain pipeline - and for this Canada has only itself to blame..." Toronto Star

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** High-flying pot stocks could soon be in the weeds**
The surge of capital into Canada's nascent marijuana industry has sent stock prices soaring - and brought warnings it's a bubble that could soon burst. The value of 26 marijuana stocks listed in Canada has swelled to almost $4 billion from close to nothing in the past two years, as investors rushed to bet on the country's move toward legalizing recreational use... How Ottawa will regulate, tax or distribute the products remains unknown, and some of the publicly traded companies have yet to make a sale. "Oh, they're going to pop," Nick Brusatore, the largest shareholder of Affinor Growers Inc., said by phone. Once a mining company, the Vancouver firm now develops greenhouse technology for crops, including cannabis. "It's going to pop hard." Bloomberg News (Winnipeg Free Press)

*** Chief right to put pot shops on notice**
An editorial states, "Saint John police Chief John Bates is right to have the city's two marijuana-selling dispensaries "in our radar screens." Simply put: the law is the law, until it changes. There is little wisdom in speculating on how it might change in the future, and adjusting enforcement in the present on the basis of that speculation. Such a speculative standard would surely be rejected even by those who advocate increased access to marijuana. Laws are enforced as they are, not as they might someday be. And there is no court ruling suspending the current legislation -- as has been a factor in some circumstances when police choose to turn a blind eye. If the chief of police believes, as he's said, that the city's two storefront pot-sellers are operating outside of the bounds of the law, it's his force's job to enforce that law. Prime

Minister Justin Trudeau's clear support, in evidence from comments he made this week, is certainly helpful, but the ultimate standard is the law on the books..." Telegraph Journal, A11

*** Feds, union near deal for 5% hike over 4 years**
The federal government and the union representing professionals working in the public service wound up three days of contract talks early Friday morning with what some say are the makings of a tentative deal that could boost salaries by five per cent over four years. The Professional Institute of the Public Service of Canada, which had publicly resolved to have a contract deal by the end of the year, appears to have broken the logjam that has dogged negotiations for more than two years. Union and Treasury Board negotiators met until early Friday morning, when they wrapped up discussions for three of the union's bargaining groups. Two other groups return to bargaining today for another session. Ottawa Citizen, A3

*** MP backs payroll protesters**
Approximately 80 members of the Public Service Alliance of Canada staged a noisy protest on Friday afternoon in front of Kingston and the Islands MP Mark Gerretsen's Princess Street office over the beleaguered Phoenix pay system. But what the protesters may not have known is they were preaching to the converted. "I'm behind them." Gerretsen said in an interview on Friday afternoon a few hours before the protest. Whig-Standard, A4

OTHER / AUTRE

*** Journalists seek asylum in Canada amid Turkish crackdown**
In March, shortly after the Turkish government took over Zaman, the country's best-selling English daily, the paper's political writer Arslan Ayan lost his job. In the days after a short-lived failed coup on July 15, more media outlets were shut down with more journalists arrested and jailed. Fearing repercussions from his critical writings of the regime, Ayan fled Istanbul to stay at his parents' home in a small Turkish town. On August 1, he said, police came to the house and seized his books and computer. By the time his neighbours saw the return of the authorities the next day, Ayan had made it back to Istanbul to find a way out of Turkey. With a still-valid U.S. visa, he flew to New York on August 5 to join a contingent of Turkish journalists seeking protection abroad, and arrived Toronto via Montreal on October 10. Ayan is among at least 15 Turkish journalists who have fled to Canada in the last few months seeking asylum. Many have fled to Africa, to countries like Chad and Tanzania where visas are not required. Toronto Star

Dreaded 'Month 13' looms for newcomers
Bedrettin Al Muhamad and his wife, Mariam, have been taking English classes and making every effort to immerse themselves in Canadian culture since arriving here from Turkey in February... But the honeymoon will soon be over... For many of the 35,000 Syrians who have arrived in the country - 15,000 in Ontario - since Canada started bringing in planeloads of newcomers last Dec. 9, what is commonly known in the refugee resettlement circle as "Month 13" is looming. After a year of being warmly welcomed into communities across the country, the 12-month financial commitment to these refugees by Ottawa and private sponsorship groups will start to come to an end. Many of the adult Syrian newcomers will be faced with the reality of choosing between quitting English classes, working or living off provincial welfare - an income that is less than the meagre resettled refugee assistance they currently receive from the federal government. Officials estimated half of the privately sponsored refugees and 10 per cent of those supported by the government would have employment income in their first year. Toronto Star, A1

Solidarité - Plus de 7000 réfugiés syriens attendent de venir au Québec
Sprint final ; la ministre québécoise de l'Immigration promet que quelque 400 réfugiés syriens vont arriver d'ici le 31 décembre, ce qui permet d'atteindre la cible de 7300 pour 2015-2016. Or, la priorité sera donnée aux réfugiés pris en charge par l'État et non aux réfugiés parrainés au privé par des familles québécoises, qui devront prendre leur mal en patience jusqu'en 2017. Encore très nombreux, 7705

Syriens parrainés au privé, et qui ont été acceptés, attendaient toujours de prendre un avion pour le Québec en date du 8 décembre. Le Devoir, A8

CANADA MUST LEARN TO INTEGRATE REFUGEES

An opinion piece states, "Syrian refugee Assam Hadhad's story is bittersweet. The bitter part was fleeing his war-ravaged country with his family, leaving behind the chocolate factory it took him 30 years to build. The sweet part is that in August, only seven months after he landed in Canada, he opened a new chocolate shop in tiny Antigonish, N.S... Still, while Hadhad's example is inspiring - Prime Minister Justin Trudeau shared it when he visited the United Nations - it is not representative of the harrowing stories of most of the 35,745 Syrian newcomers who have arrived in Canada over the past year. Indeed, this past week the Senate rang a cautionary bell, suggesting in a report that the federal government is not doing enough to support them. It landed only days before the Dec. 10 anniversary of the arrival of the first wave of 25,000 Syrian refugees that Trudeau had promised would land before the end of February. "We can't abandon them," said Sen. Jim Munson. "We can't let indifference set in. We need to help them in their next resettlement steps." Among the report's recommendations: The federal government must boost access to language training, provide daycare so that parents can attend classes, increase mental health supports for those who suffer from post-traumatic stress disorder, and work with the Canada Revenue Agency to make sure refugees quickly qualify for the Canada Child Benefit..." Toronto Star

Most Syrian refugees taking English classes, few find work

More than threequarters of the Syrian refugees in B.C. have been able to access English classes, but just 17 per cent have been able to find work in the year since they arrived, according to a report released Friday. The Immigrant Services Society of B.C. surveyed 300 Syrian refugee families by phone and 60 Syrian refugee youths last month. All of those interviewed were government-assisted refugees who arrived in Metro Vancouver between Nov. 4, 2015 and Feb. 28, 2016. Those surveyed overwhelmingly expressed their gratitude to Canada and its people for taking them in. They were particularly happy with their children's experience in the school system. Times-Colonist, A5; Globe and Mail

Lawyers seek aid for Hong Kong refugees

A group of Montreal lawyers is urging the Canadian government to help impoverished asylum-seekers in Hong Kong who say they have faced harassment for having housed whistle-blower and U.S. fugitive Edward Snowden. The lawyers have launched a Canadian organization named For the Refugees to raise money for the families and to lobby Ottawa to give them sanctuary as they come under pressure in Hong Kong - a jurisdiction known for being tough on asylum-seekers. Since the refugees' involvement with Mr. Snowden rose to global prominence this fall - including in scenes in a recent Oliver Stone film on the fugitive - they say they've been questioned on Mr. Snowden by welfare authorities, seen welfare benefits cut and had visits from police. Globe and Mail, A16

STANDOFF

Melina Laboucan-Massimo, a Lubicon Cree, grew up in Alberta's oil country. Since the age of 7, she has joined blockades and protests aimed at protecting her community's traditional lands from resource development. "I was born into it," she said in an interview. "It's my inheritance."... The high-profile protest at Standing Rock against the Dakota Access Pipeline has galvanized Canadian indigenous communities, who watched as one community stood up against an oil company and its powerful backers. The Standing Rock tribe was empowered by thousands of allies - indigenous and non-indigenous alike - who flooded into the area from both sides of the border to stand with the Sioux. They faced threats of rubber bullets, attack dogs and water cannons in frigid weather. Now, some indigenous leaders are pledging to use the tactics of Standing Rock to block the two pipeline projects approved last week by the Liberal government: the bitterly fought expansion of Kinder Morgan's line that runs to Vancouver Harbour, and Enbridge's lessernoticed plan to rebuild and expand its Line 3, a main oil export line from Alberta to the U.S. Midwest. Globe and Mail, F1

A bishop's quest

The millions in ransom money came in dollar by dollar, euro by euro from around the world. The donations, raised from church offerings, a Christmas concert, and the diaspora of Assyrian Christians on Facebook, landed in a bank account in Iraq. Its ultimate destination: the Islamic State of Iraq and the

Levant (ISIL) group. Deep inside Syria, a bishop worked around the blurred edges of international law to save the lives of more than 200 people - one of the largest groups of hostages yet documented in ISIL's war in Syria and Iraq. It took more than a year, and videotaped killings of three captives, before all the rest were freed. Paying ransoms is illegal in most of the West, and the idea of paying the militants is morally fraught, even for those who saw no alternative. "You look at it from the moral side and I get it. If we give them money we're just feeding into it, and they're going to kill using that money," said Aneki Nissan, who helped raise funds in Canada. But, he said, there were more than 200 lives at stake, "and to us, we're such a small minority that we have to help each other." Postmedia Network (Edmonton Journal, B1)

*** HMCS Kingston returns to Halifax in time for Christmas**

The Royal Canadian Navy welcomed HMCS Kingston home after a two-month deployment with a special homecoming ceremony in Halifax Friday. The vessel participated in Operation Caribbe, which is Canada's contribution to Operation Martillo, a U.S.-led multinational effort by Western and European nations to prevent illicit drug trafficking in the Caribbean Sea, eastern Pacific Ocean and the coast of Central America. This week also marked 10 years of participation in Martillo for Canada. According to a news release issued by the Department of National Defence, since 2006 the Royal Canadian Navy and the Royal Canadian Air Force have supported the seizure or disruption of more than 66 metric tonnes of cocaine and just under four metric tonnes of marijuana. Just in the past year, Canada directly contributed to the seizure or disruption of 5,750 kilograms of cocaine and 1,520 kg of marijuana. Chronicle Herald

INTERNATIONAL

*** French government seeks extension of state of emergency**

French Prime Minister Bernard Cazeneuve says 17 attacks have been thwarted in the country so far this year and he is asking Parliament to extend the state of emergency until July 15. Speaking after an extraordinary cabinet meeting, Cazeneuve said Saturday that Parliament will vote on the bill next week. He said the extension for seven more months is "absolutely necessary" to ensure the highest possible level of protection in the country in the context of next spring's presidential and general elections. Associated Press (Metro News)

Russia intervened to elect Trump

The CIA has concluded in a secret assessment that Russia intervened in the 2016 election to help Donald Trump win the presidency, rather than just to undermine confidence in the U.S. electoral system, according to officials briefed on the matter. Intelligence agencies have identified individuals with connections to the Russian government who provided WikiLeaks with thousands of hacked emails from the Democratic National Committee and others, including Hillary Clinton's campaign chairman, according to U.S. officials. Those officials described the individuals as actors known to the intelligence community and part of a wider Russian operation to boost Trump and hurt Clinton's chances. "It is the assessment of the intelligence community that Russia's goal here was to favour one candidate over the other, to help Trump get elected," said a senior U.S. official briefed on an intelligence presentation made to U.S. senators. "That's the consensus view." Toronto Star, A30

MINISTER / MINISTRE

Correctional investigator calls riot at P.A. prison 'devastating'
Canada's prison watchdog is investigating the deadly 24-hour prison riot that left one inmate dead and several others injured at Saskatchewan Penitentiary in Prince Albert. The riot started Wednesday afternoon, forcing the federal institution to lock down its medium and maximum-security units. Canada's correctional investigator, Howard Sapers, said his office has dispatched two staff members to collect information from the scene... Correctional Services Canada spokesman Jeff Campbell said lockdown procedures were still in place Friday and visitations remain cancelled. **CSC Commissioner Don Head was at the penitentiary on Friday to lend *"his support and assistance,"* according to a statement from the office of federal Public Safety Minister Ralph Goodale.** Star-Phoenix, A4; Postmedia News (Vancouver Sun); * Canadian Press (Cape Breton Post)

Halifax police test 'drugalyzers' before pot legalization
Halifax police are "happy to participate" in a project testing a new tool to nab suspected impaired drivers, Supt. Robin McNeil says. Canadian police forces may soon be armed with the "drugalyzers," as they've been nicknamed. They'll use those to test whether drivers are high from cannabis, opioids or other drugs. **Halifax Regional Police is one of several police forces across the country taking part in a national pilot project announced earlier this week by the federal public safety minister...** With the legalization of marijuana on the horizon, MADD Canada has been lobbying for the introduction of the devices here. Currently police officers are limited to drug sobriety tests, such as asking drivers to touch their nose or walk straight on a line. Some officers have specialized training to catch small movements of the eye as signs of drug impairment. CBC News; * Radio-Canada

Opioids, pot and economics: three ways politics touched Canadians this week
... The government has announced a two-pronged approach to confronting the opioid crisis. Health Minister Jane Philpott has tabled legislation that would give cities more leeway to open up supervised drug injection sites. The law would essentially remove the high bar set by the previous Conservative government, which required communities to meet 26 conditions in order to qualify. For now, there are only two safe injection sites in Canada, both in Vancouver. **At the same time, Public Safety Minister Ralph Goodale proposed measures to crack down on illegal drugs and their ingredients coming over the border.** Border guards would be allowed to examine very small suspicious packages and also restrict the import of equipment used to make drugs. In British Columbia alone, officials say there have been 622 fatal drug overdoses between January and October this year, of which about 60 per cent were linked to fentanyl. Canadian Press (Cape Breton Post)

Canada's federal jails may stop sorting trans inmates by their genitalia
Canada's federal prison system could soon scrap a longstanding policy of housing trans and intersex offenders based on their genitalia while effectively barring them from gender-confirming surgeries, Xtra has learned. Since at least 1999, Correctional Service Canada (CSC) has sorted trans inmates who haven't transitioned based on their genitalia... Scott Bardsley, a spokesman for **Public Safety Minister Ralph Goodale** says CSC is currently monitoring Bill C-16 — which is on track to add gender identity and gender expression to Canada's human-rights legislation — to see if it requires a change in federal prison policy. CSC houses all adult Canadians serving sentences of two years or more, representing about 40 percent of the almost 40,000 adult prisoners in Canada. The rest are in provincial and territorial jails, including people awaiting a trial or serving community sentences. Ontario and British Columbia jails have sorted inmates based on their self-identified gender since 2015. Daily Xtra

TOP STORIES / MANCHETTES

Martin Couture-Rouleau voulait tuer d'autres militaires
Le terroriste Martin Couture-Rouleau, qui a heurté à mort l'adjudant Patrice Vincent, le 20 octobre 2014 dans le stationnement d'un centre commercial de Saint-Jean-sur-Richelieu, s'en serait pris à d'autres militaires s'il en avait eu l'occasion. C'est ce que démontre la conversation qu'a eue Couture-Rouleau avec un préposé du 9-1-1 dans les minutes suivant l'attentat, dont des extraits se trouvent dans le rapport d'enquête du coroner André Dandavino sur le décès du militaire, rendu public vendredi. L'auteur du délit de fuite, pourchassé par les policiers après avoir heurté l'adjudant Vincent et un autre militaire qui a eu la vie sauve, a appelé le 9-1-1 pour, disait-il, « passer un message ». Il a alors refusé de se rendre, disant qu'il allait peut-être « croiser un autre de vos soldats » et qu'il allait « l'abattre. » Il demandait au service d'urgence « d'avertir le Canada, le gouverneur » et d'autres de quitter la coalition qui était opposée à « l'État islamique. » La Tribune, 14 (Le Nouvelliste; Le Droit); La Presse

Peace bond target denies terror links - British Columbia
The latest target of Canada's terrorism peace bond system insisted he has no connection to extremist violence and turned up at a B.C. police station to complain about press coverage of his case. "I throw your newspaper in the garbage," Khalid Ahmad Ibrahim, 39, told a reporter at the door of a New Westminster, B.C. apartment. "There is no terrorism," he added. The RCMP told the provincial court on

Dec. 8 there were "reasonable and probable grounds to believe. that Khalid Ahmad Ibrahim may commit a terrorism offence." He was released on $1,000 bail and must adhere to 25 bail conditions, including not accessing or viewing any materials related to a terrorist group. He was due back in court Dec. 20. Peace bonds are not a criminal charge but rather impose conditions on the conduct of those subjected to them. Police have been using them to control suspected violent extremists. Postmedia News (London Free Press, N4; Windsor Star; Montreal Gazette; Whig-Standard)

CSIS aware of terror suspect's flight while RCMP investigated

In 2013, while the RCMP were still investigating how a suspected terrorist had quietly left Canada to join ISIL the previous year, Canada's spy agency informed the Mounties they had in fact already known the intimate details of the terrorism suspect's final hours before he boarded a plane for Syria, new court records reveal. John Maguire left Canada in December 2012 to join ISIL in Syria, where he was featured in a propaganda video declaring religious war on his home country. The Islamic State reported Maguire died fighting in 2015, though his death has never been confirmed. Before he left for Syria, Maguire was the alleged star terrorism recruit of Ottawa's Awso Peshdary, 26, who was charged in February 2015 with recruiting, financing and facilitating terrorism. And the RCMP's case against Peshdary is where new details have emerged about the Mounties' investigation into an alleged Ottawa terror network. The RCMP's case that yielded charges against Peshdary, 26, was built on a foundation so shaky that investigators were twice turned down when they went to get search warrants against Maguire. Whig-Standard, B1

Obama warns Putin that US could strike back on cyber

President Barack Obama has put Russia's Vladimir Putin on notice that the U.S. could use offensive cyber muscle to retaliate for interference in the U.S. presidential election, his strongest suggestion to date that Putin had been well aware of campaign email hacking. "Whatever they do to us, we can potentially do to them," Obama declared Friday. Caught in the middle of a post-election controversy over Russian hacking, Obama strongly defended his administration's response, including his refusal before the voting to ascribe motive to the meddling or to discuss now what effect it might have had. U.S. intelligence assessments say it was aimed at least in part on helping Donald Trump defeat Hillary Clinton, and some Democrats say it may well have tipped the results in his favour. Associated Press (iPolitics; Chronicle-Herald); AFP (Le Devoir)

Thirteen deaths in one day linked to drugs - Cause of 'dangerous upsurge' in overdoses is unknown, coroner says

The B.C. Coroners Service has issued an urgent warning to illicit-drug users after an unprecedented number of drug overdose deaths in B.C. As many as 13 people died of suspected drug overdoses on Thursday, and Premier Christy Clark said the rising death toll is one of the most difficult issues she has faced this term. "I can't remember anything in the last four years that has felt like such a crisis - such an urgent crisis - where so many lives are being lost every single day, and that is so complicated to get our hands around," she said. Within eight hours, six people died after using drugs in Vancouver's Downtown Eastside, said coroner Barb McLintock. Two other deaths, at the same time, in the same area, are believed to be drug-related. Five other people died after using drugs on Thursday. The deaths occurred in Vancouver, Burnaby, northern B.C. and two in the Fraser region... Health Minister Terry Lake and Minister of Public Safety Mike Morris later said in a joint statement that the province expects to meet its goal of adding 500 substance-use beds by the end of March. The province has earmarked $43 million to respond to the crisis by expanding access to naloxone, establishing overdose prevention sites and working with the federal government to stop drugs from entering Canada. Jusqu'à 38 000 doses de furanyl-fentanyl saisies à Ottawa

Un homme de 42 ans se retrouve derrière les barreaux après que les policiers de la Gendarmerie royale du Canada eurent saisi environ 19 grammes de furany-lfentanyl, une drogue mortelle. La perquisition a eu lieu dans le secteur d'Orléans, à Ottawa. Cette saisie aurait été assez puissante pour tuer des milliers de personnes. La quantité saisie peut sembler minime, mais elle représente jusqu'à 38 000 doses. Un quart de milligramme de furanyl-fentanyl peut être mortelle, selon la GRC. C'est beaucoup plus dangereux que le fentanyl. Selon Santé Canada, il ne suffit que de 2 mg de fentanyl pur - soit l'équivalent

de quatre grains de sel - pour tuer un adulte. Les accusations ont été déposées après l'intervention des policiers de la GRC au croissant Clearcrest, jeudi. L'homme doit faire face à des accusations d'importation d'une substance contrôlée et d'autres infractions liées aux drogues. Radio-Canada

Drug flow into prisons top priority for officials
With more than three-quarters of incoming inmates having addictions, stemming the flow of drugs and other contraband in prisons is a priority, officials say. It has become even more crucial as toxic narcotics such as fentanyl are being smuggled into institutions and unsuspecting staff and prisoners are exposed." Almost 80 per cent of offenders arrive at federal institutions with some level of substance abuse problem, and many have multiple addictions," said Jeff Campbell, spokesman with the Correctional Service of Canada (CSC). "We acknowledge the prevalence of substance abuse problems among offenders and assist in addressing those problems through a drug strategy." A Bowden Institution guard collapsed this week during a search for drugs. It's believed he was exposed to fentanyl. Staff at the federal medium-security facility administered naloxone to reverse the effects of the opioid, which is 50 to 100 times more potent than morphine. While it produces an intense high, it also can cause nausea, vomiting, sedation and death. The officer is now back at work. Campbell said CSC has security and intelligence measures to monitor and investigate inmate activity, potential drug-smuggling attempts and seizure of illicit substances. EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Snow, freezing rain will make driving dicey
The Ottawa region entered the weekend under a winter storm watch, with a mix of snow and freezing rain expected to bring icy, dicey driving conditions into Sunday. The snow was expected to begin late Friday night and continue through all day Saturday, according to an Environment Canada bulletin issued at 3:59 p.m. Friday. There's a chance the precipitation could change to "an extended period of freezing rain Saturday night," the news release said. With a Colorado low system moving into southern Ontario Friday night and driving conditions expected to worsen, **Public Safety Canada** encouraged travellers to make emergency kits with drinking water, food, medicine, a flashlight and a first-aid kit. Total accumulation was expected to be about 9 cm, with five of that to come through the day Saturday and another two that night. Canadian Press (Ottawa Sun, A2; Ottawa Citizen)

Storm closes the Island - Snow and wind force drivers to abandon vehicles and keep tow truck operators busy across P.E.I.
RCMP Const. Jamie Parsons knew it was going to be a long day before he even got to work on Friday morning. Travelling into the Maypoint detachment in Charlottetown for his shift, which started at 6:30 a.m., he passed by vehicles that were abandoned in the snowstorm. "And that's just within the city itself," Parsons said late Friday afternoon. "Once I got to work a lot of other calls were coming in with motorists stranded out in the country where we patrol. "Most of them we couldn't get to. It was too dangerous for us to go out. We called Department of Transportation and let them know where these people were stuck and, unfortunately, the plows were even off the roads at the time." As the province dealt with a bevy of weather issues - snow squalls, winds gusting to 90 km/h blowing the white powder around and temperatures that plunged to -18 C (with wind chill value of -30 C) - RCMP kept checking in with people who were stranded. Charlottetown Guardian, A1

*** More power outages hit P.E.I. - About 3,800 Maritime Electric customers in Albany, Victoria and Kinkora have no power**
About 3,800 Island households and businesses were without power Saturday in Albany, Victoria and Kinkora. A spokesperson with Maritime Electric said crews are out investigating the problem and the cause of the outages isn't yet known. Power crews were busy dealing with outages caused by Friday's storm. At one point, more than 1,000 customers had lost power. CBC News

Power outages continue for thousands of Nova Scotians
High winds and snow are the causes of most of the power outages in Nova Scotia Saturday morning. As of 6:50 a.m., there were 90 active outages in Nova Scotia affecting 3,155 customers as far west as

Freeport to as far east as Meat Cove. Most of the power outages are concentrated in Cape Breton, with 1,488 affected customers in the Judique area and 1,174 customers in the Ingonish, Meat Cove and Pleasant Bay. There are also outages reported in Cumberland County and New Glasgow. Power is expected to be restored to most places by 2 p.m. Saturday, according to Nova Scotia Power's outage map. The cause of outages near Hart Lake in Cumberland County is still under investigation. Nova Scotia Power expects electricity will be back on there by midnight. CBC News; Chronicle-Herald; Cape Breton Post

Government puts more money into flooding, drought programs
The Alberta government has announced more funding for flood and drought protection. The province is to invest an additional $31 million over four years in flood resiliency projects through the Alberta Community Resilience Program. The 10-year, $500-million program has so far helped to build flood barriers, as well as other safeguards. Another $14 million is to go to the Watershed Resilience and Restoration Program, which supports wetland and riverbank areas. That program had been set to wrap up in 2017. Environment Minister Shannon Phillips says the money will help communities adapt to changing climate and more common severe weather. Red Deer Advocate, A8

Letter to Ottawa was sent 'inadvertently' - B.C. minister
A B.C. cabinet minister is apologizing to the federal government for a letter that called on Ottawa to reopen the Coast Guard communications base in Comox. Naomi Yamamoto, the Minister of State for Emergency Preparedness, said Friday that her ministry made a mistake in sending the letter and is not, in fact, asking Ottawa to reopen the Comox base as part of the federal government's $1.5-billion ocean protection plan. "Earlier this week, a letter was inadvertently sent to the federal government from my office," Yamamoto said in a statement. "The letter dealt with the federal government's ocean protection plan and ensuring there is reliable communications along the entire British Columbia coast. "I want to be clear, under the federal government's oceans protection plan, that marine communications capacity is being improved to a world-leading standard." Yamamoto's letter came at a sensitive time for the two governments, which are trying to hammer out the details of the ocean-protection plan into specifics for British Columbia after Ottawa's approval of the Kinder Morgan pipeline. Vancouver Sun, A22

*** Search continues for missing 79-year-old man**
Eskasoni band members resumed their search for a missing elder Friday, despite the continuing storm. Camilius Alex, 79, has not been seen for days, said his son Rodney Alex. "There were quite a few (searchers)," Rodney said. "I just put it out there that I needed help, and the residents responded quickly. He's on a lot of medications - he received a triple bypass two years ago and he has a little dementia." The searchers are concentrating their efforts on Mountain Road, near the elder's home. "He loves walking and last week was really nice days," Rodney said, adding he believes that Camilius did not have his medication with him. RCMP described Camilius as being 6-foot-1, about 190 pounds, with grey hair and brown eyes. He was last seen wearing a dark coat, hoodie and dark gloves and had a walking cane. Chronicle-Herald, A4

Pipelines draw a line in the sand
An opinion piece states "Pipelines have become the new pariah in Indian Country. From Standing Rock to The Assembly of First Nations pipelines opposition to pipelines has become a rallying cry and a hill many political leaders have staked out as their preferred location for death. Pipelines come in many different forms and risk factors. The Gateway pipeline was a none starter because it passes through ecologically sensitive terrain with a myriad of mountains, lakes and rivers. A spill in this pristine area would be catastrophic... The chiefs of the Assembly of First Nations are split on the issue and those opposed to pipeline are becoming increasingly shrill. Other First Nations leaders see resource development as one of the roads to financial independence. The issue has the potential to pit First Nations against one another. I think it's time to we stood back and did a little critical thinking. Right now oil is being shipped by rail. Each day oil trains travel through Saskatoon and across the prairies. The risk of a spill and serious accident is much greater with rail cars than a pipeline. The tragedy at Lac Megantic stands out as an especially serious case. Rather than a wholesale ban on pipelines each case must be reviewed separately. Some are replacing existing lines which will be safer and more efficient in the future; others are heading into

pristine wilderness and creating a ticking environmental time bomb never mind the mess that the pipeline construction will create." Star-Phoenix

Martin Couture-Rouleau voulait tuer d'autres militaires
Le terroriste Martin Couture-Rouleau, qui a heurté à mort l'adjudant Patrice Vincent, le 20 octobre 2014 dans le stationnement d'un centre commercial de Saint-Jean-sur-Richelieu, s'en serait pris à d'autres militaires s'il en avait eu l'occasion. C'est ce que démontre la conversation qu'a eue Couture-Rouleau avec un préposé du 9-1-1 dans les minutes suivant l'attentat, dont des extraits se trouvent dans le rapport d'enquête du coroner André Dandavino sur le décès du militaire, rendu public vendredi. L'auteur du délit de fuite, pourchassé par les policiers après avoir heurté l'adjudant Vincent et un autre militaire qui a eu la vie sauve, a appelé le 9-1-1 pour, disait-il, « passer un message ». Il a alors refusé de se rendre, disant qu'il allait peut-être « croiser un autre de vos soldats » et qu'il allait « l'abattre. » Il demandait au service d'urgence « d'avertir le Canada, le gouverneur » et d'autres de quitter la coalition qui était opposée à « l'État islamique. » La Tribune, 14 (Le Nouvelliste; Le Droit); La Presse

Peace bond target denies terror links - British Columbia
The latest target of Canada's terrorism peace bond system insisted he has no connection to extremist violence and turned up at a B.C. police station to complain about press coverage of his case. "I throw your newspaper in the garbage," Khalid Ahmad Ibrahim, 39, told a reporter at the door of a New Westminster, B.C. apartment. "There is no terrorism," he added. The RCMP told the provincial court on Dec. 8 there were "reasonable and probable grounds to believe. that Khalid Ahmad Ibrahim may commit a terrorism offence." He was released on $1,000 bail and must adhere to 25 bail conditions, including not accessing or viewing any materials related to a terrorist group. He was due back in court Dec. 20. Peace bonds are not a criminal charge but rather impose conditions on the conduct of those subjected to them. Police have been using them to control suspected violent extremists. La liberté, c'est l'esclavage - Qui s'offusque encore si Big Brother nous regarde? - La surveillance généralisée et une soumission volontaire aux données numériques
Le Royaume-Uni a adopté en novembre la Loi sur les pouvoirs d'enquête. Cette loi donne aux services de sécurité de Sa Majesté le droit d'utiliser à peu près n'importe quel moyen pour espionner ses citoyens. Aucun autre pays de l'Occident n'en permet autant. " Le Royaume-Uni vient de légaliser la surveillance la plus extrême de l'histoire des démocraties occidentales, a ensuite gazouillé le lanceur d'alerte sur la

surveillance planétaire Edward Snowden. La mesure va plus loin que bien des régimes autoritaires. " M. Snowden est maintenant réfugié en Russie, pays-continent héritier de l'URSS, l'empire rouge qui implosait il y a tout juste 25 ans, le 26 décembre 1991. Le régime totalitaire soviétique, obsédé de surveillance et de répression, a en partie inspiré le roman dystopique 1984. La prophétie du cauchemar sous l'angsoc (le socialisme anglais, en novlangue) ne s'est évidemment pas réalisée comme telle. N'empêche, dans notre monde postorwellien, libre jusqu'au vertige, Big Brother vous regarde, beaucoup, passionnément, à la folie. " En fait, plusieurs Big Brothers vous surveillent maintenant ", corrige le professeur de l'Université Laval Stéphane Leman-Langlois, spécialiste du renseignement et du contrôle social. " La différence est là, dans le foisonnement de points de collecte de données qui permet d'en amasser beaucoup plus au profit de plusieurs centres de surveillance. " Le Devoir, A4

Has Harkat been 'de-humanized'?
A letter states "I must object to the assumption made in this article that Mohamed Harkat was a radical Muslim. That was not what the courts said. It is not possible to de-radicalize someone who has never been a radical. He cannot stop being what he's not been. Perhaps the title should have read 'has he been de-humanized?' since Harkat is one of the kindest humans I've met, despite our justice system's attempt to change that. A retraction would be a good first step to change the image your paper conveys of him." Ottawa Citizen, B7

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

*** City man faces 136 immigration-related fraud charges**
A Winnipeg man has been hit with a slew of charges after he is alleged to have fraudulently collected fees as an immigration consultant. The Canada Border Services Agency announced 56-year-old Vladimir Bibilov is facing 102 counts under the Immigration and Refugee Protection Act, and another 34 counts under the Criminal Code for alleged offences between January 2009 and December 2015. Bibilov is alleged to have acted as a paid immigration consultant when he was not licensed to do so and allegedly took fees from clients. The CBSA alleged Bibilov "misrepresented himself to foreign nationals with the promise to provide immigration services to Canada," and also alleged he "provided false and misleading information to induce or deter immigration to Canada." He will appear in a Winnipeg courtroom on Monday. "The CBSA takes immigration fraud very seriously and is committed to fully investigating and prosecuting those who violate our laws and seek to profit illegitimately from our immigration system," CBSA spokeswoman Kim Scoville said in a release. Winnipeg Sun, A8

*** Faster border isn't a win**
A letter to the editor states "I believe The Globe and Mail's editorial board and our Prime Minister may be seriously underestimating the extent to which the world will change when Donald Trump assumes the presidency. For example, both The Globe and Justin Trudeau view the recent agreement with the United States with regard to transborder travel as a victory. The devil is in the details (A Faster Border, Dec. 14). We have been told that this is just like the present prescreening arrangements in place at some Canadian airports. It is not. U.S. border guards in Canadian airports have the right to question, but not to detain Canadian citizens. The new arrangements will allow armed U.S. border guards on Canadian soil to detain Canadians. Under the current arrangements, U.S. border guards must obey Canadian laws. The new arrangements do not allow Canadian law enforcement to arrest or charge U.S. border guards for actions taken while on the job. The U.S. may choose to act, but it will be entirely up to the U.S. Department of Homeland Security." Globe and Mail, F2

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Obama warns Putin that US could strike back on cyber
President Barack Obama has put Russia's Vladimir Putin on notice that the U.S. could use offensive cyber muscle to retaliate for interference in the U.S. presidential election, his strongest suggestion to date that Putin had been well aware of campaign email hacking. "Whatever they do to us, we can potentially do to them," Obama declared Friday. Caught in the middle of a post-election controversy over Russian

hacking, Obama strongly defended his administration's response, including his refusal before the voting to ascribe motive to the meddling or to discuss now what effect it might have had. U.S. intelligence assessments say it was aimed at least in part on helping Donald Trump defeat Hillary Clinton, and some Democrats say it may well have tipped the results in his favour. Associated Press (iPolitics; Chronicle-Herald); AFP (Le Devoir)

FBI agrees - Russia hacks helped Trump
The FBI is supporting the CIA's conclusion that Russia interfered in the presidential election with the goal of supporting Republican candidate Donald Trump. In a message sent to employees, CIA Director John Brennan said he had spoken with FBI Director James Comey and James Clapper, the director of national intelligence. Brennan said in the message that "there is strong consensus among us on the scope, nature, and intent of Russian interference in our presidential election." Associated Press (Ottawa Sun, A10)

Des Canadiens demandent un recours collectif contre Yahoo
Des Canadiens dont les informations personnelles pourraient avoir été volées lors de failles informatiques de Yahoo demandent un recours collectif de 50 millions $ contre le géant internet. Un cabinet d'avocats de Toronto affirme que l'avis de demande en justice a été déposé vendredi, à la Cour supérieure de l'Ontario. Le recours collectif comprendra des Canadiens dont les données d'utilisateurs ont été volées ou dont les comptes ont été piratés dans les dernières années. La représentante des demandeurs utilisait Yahoo pour sa correspondance électronique. Originaire de Barrie, en Ontario, Natalia Karasik dit avoir transmis par courriel des informations sur son état de santé ou encore d'ordre financier. Selon l'avis, elle ignorait que des pirates pourraient y avoir accès, et ce, depuis 2013. Au mois de septembre, l'entreprise de Sunnyvale, en Californie, a signalé à certains de ses utilisateurs que les données figurant à leurs comptes avaient été volées lors d'une cyberattaque survenue en 2014. Le Nouvelliste, 27; Canadian Press (Red Deer Advocate; St. John's Telegram)

Un nouveau piratage massif fragilise Yahoo ! face à Verizon
Décidément, la fin de règne de Marissa Mayer à la tête de Yahoo ! s'apparente de plus en plus à un long chemin de croix. Le mercredi 14 décembre, le portail Internet a indiqué avoir été victime d'un nouveau piratage informatique, « probablement » différent de celui révélé fin septembre et qui concernait 500 millions de comptes d'utilisateurs. La portée de cette deuxième cyberattaque est de plus grande ampleur : plus d'un milliard de comptes ont été compromis. Il s'agit du plus important vol de données de l'histoire. Selon la direction, l'attaque a été menée en août 2013 mais n'a été détectée que très récemment. Ses auteurs ont pu dérober de nombreuses informations personnelles : noms, dates de naissance, adresses électroniques, numéros de téléphone. Ils ont aussi mis la main sur les réponses aux questions de sécurité qui permettent de modifier le mot de passe en cas d'oubli. Mais ils n'auraient en revanche pas récupéré les coordonnées bancaires. La société indique que les utilisateurs touchés vont être avertis et devront changer leur mot de passe. Le Devoir

Literacy test goes paper-only - move comes after online test hacked in October
The next province-wide literacy test for Ontario high school students will be administered on paper, after an online trial last time was hit with a cyber attack. In October, the agency that runs the Ontario Secondary School Literacy Test was forced to cancel an online trial run due to technical glitches, later determined to be a distributed denial of service attack. Most of the province's 900 secondary schools - representing a maximum of 147,000 students - had signed up to participate in the online test, and only about 15,000 students managed to complete it. Canadian Press (London Free Press, A7; Ottawa Sun; National Post; Globe and Mail)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Plan emerges for security barriers around police HQ
City hall is moving ahead on a plan to install security barriers around the new downtown police headquarters. The city recently issued a request for proposals for engineering consulting services for the design of a downtown cycling network. Included in the RFP was the design and installation of security

bollards around the police HQ. Security bollards were not included in the project's final price tag, which climbed to $214 million - $75 million over budget. The RFP, which closes Jan. 20, said the bollards are needed to protect the building and staff from a terrorist attack. "The headquarters was not designed or built to withstand large-scale attacks," states the RFP. "The increased level of global terrorism against government institutions, including emergency services, dictate basic and affordable security measures be considered to ensure essential services are maintained." The document states a vehicle could drive over the sidewalk and into the building, and security bollards need to be installed around it. No cost estimate is provided in the RFP documents for the bollards, but police officials said in September the project could would likely cost $1.7 million. The HQ and the adjoining commercial tower have proven to be a headache for politicians and administrators. The city purchased the former Canada Post building and warehouse in 2010 for $29 million. The plan was to convert the warehouse into a new home for the Winnipeg Police Service and the officer tower would be sold, expected at a price of $18 to $20 million. The renovations costs for the warehouse ballooned to $214 million from $139 million. A two-year-old RCMP investigation has been probing allegations of fraudulent billing. Winnipeg Free Press, B1

* **Jusqu'à 38 000 doses de furanyl-fentanyl saisies à Ottawa**
Un homme de 42 ans se retrouve derrière les barreaux après que les policiers de la Gendarmerie royale du Canada eurent saisi environ 19 grammes de furany-lfentanyl, une drogue mortelle. La perquisition a eu lieu dans le secteur d'Orléans, à Ottawa. Cette saisie aurait été assez puissante pour tuer des milliers de personnes. La quantité saisie peut sembler minime, mais elle représente jusqu'à 38 000 doses. Un quart de milligramme de furanyl-fentanyl peut être mortelle, selon la GRC. * **Car slides off highway into deep water - Strange accident happens on Trans-Canada Highway in rural Holyrood**
A motorist was lucky someone saw their car slide off the road and into a pond Friday. An ambulance was called, and paramedics transported the driver to hospital. The incident happened shortly after noon on the Trans-Canada Highway near the Foxtrap Access Road, the RCMP stated in a news release. It is unknown whether the driver suffered serious injuries, the RCMP stated. "The driver was taken by EMS before police arrived, so the sex and age of the driver are yet to be confirmed." The RCMP in Holyrood was busy Friday responding to calls arising from the snowy and slippery road conditions, but the pond incident was the only accident reported, and it is under investigation, the release stated. Charlottetown Guardian, A7

* **Saskatchewan RCMP officer charged with firearms offences**
A Saskatchewan Mountie is facing firearms charges in Alberta. Const. Dale Malbeuf of the Morse detachment in southern Saskatchewan was arrested this week at a home in Edmonton. Police allege the officer produced and pointed a firearm at a woman in the home. Malbeuf appeared in Edmonton court Wednesday on charges of pointing a firearm and careless use of a firearm. He was released on conditions and is to attend court again Jan. 6. RCMP say Malbeuf, on the force for 12 years, has been suspended with pay. Red Deer Advocate, A8; Edmonton Journal

* **RCMP still investigating body found in burned vehicle**
The circumstances of a body found in a burned vehicle earlier this week remain a mystery as Mounties continue their investigation. On Friday, police involved in the investigation said reports were being reviewed, and the investigation was continuing. An autopsy was performed on Monday at the office of the Chief Medical Examiner in Calgary. The results have yet to be released. On Dec. 10, Stettler RCMP were called to a complaint of a burned vehicle in the rural Stettler area. Through their investigation, they found there was a dead person inside the vehicle. RCMP Major Crimes are assisting Stettler RCMP with the investigation. Red Deer Advocate, A7

* **Man arrested after murder on reserve**

A 37-year-old man has been charged with a homicide on the Little Black Bear First Nation. Sherman Luke Bellegarde made his first appearance in Regina Provincial Court on Friday morning on a charge of second-degree murder. According to the charge read out in court, Bellegarde is accused of killing 33-year-old Lauren Quewezance. Both are from Little Black Bear. Bellegarde, who sought the assistance of Legal Aid, was remanded in custody. He'll return to court in Fort Qu'Appelle on Dec. 22. The RCMP has not yet released any information about the incident. Little Black Bear is located in the Fort Qu'Appelle area, about 130 kilometres east of Regina. Star-Phoenix, A6 (Leader-Post)

* **WHO IS TRAVIS VADER? - The man at the centre of one of Alberta's highest-profile homicide cases says a lot, but answers little**
In an Edmonton courtroom on a frigid Monday morning, members of a grieving family attempted to express the many ways their lives have been torn apart by the killings of Lyle and Marie McCann. There were the familiar scars that homicide leaves on survivors: Deep anxiety, nightmares, a fear of ringing phones and of people not answering. There were the unanswerable questions: How could someone do this? Why?... In the years since 2010, when the McCanns disappeared, Mr. Vader has become one of the province's most recognizable figures: A man with a villain's last name and a widely disseminated mugshot, charged - and now convicted - in the killings of a kindly couple in their late 70s, one of the biggest RCMP cases in Alberta's history. Globe and Mail, S1

* **Cops wrong to act on hunch that suspect would poop drugs, judge rules**
A judge has found that the RCMP unlawfully arrested a man who later excreted from his rectum small quantities of heroin, cocaine and fentanyl while in custody. Ronjot Dhami, who has been charged with three counts of possession for the purpose of trafficking, was a passenger in a Mercedes that was pulled over by police in Kelowna in June 2014. An RCMP officer, who had earlier been conducting surveillance on an apartment building where the Mercedes was initially spotted, saw Dhami vigorously rubbing his hands together and reaching into the vehicle's glove box, according to a ruling by B.C. Supreme Court Justice Peter Rogers. Vancouver Sun

* **Un homme accusé de possession de pornographie juvénile**
Une enquête ayant débuté l'été dernier a mené au dépôt d'accusations liées à la pornographie juvénile contre un homme de 28 ans d'Ottawa. La police d'Ottawa a procédé jeudi à l'arrestation de Michael Lalonde, à la suite d'une perquisition menée dans le pâté de maisons des 400 du chemin Montréal. L'enquête avait pris naissance à la mi-juin. Le Centre national de coordination contre l'exploitation des enfants avait alors fourni à la police d'Ottawa des rapports reçus par le biais de la ligne d'appel du National Centre for Missing and Exploited Children des États-Unis. Des rapports ont ainsi été relayés à la police d'Ottawa jusqu'à la fin août, et ont démontré que des images d'exploitation sexuelle d'enfants avaient été déposées, à partir d'une adresse IP d'Ottawa, sur une plateforme privée de clavardage appelée ChatStep. Michael Lalonde devait comparaître vendredi pour être formellement inculpé de trois chefs de possession de pornographie juvénile et de deux chefs d'avoir rendu accessible de la pornographie juvénile. Le Droit, 12

* **N.B. should be wary of joining 'police militarization' trend**
An opinion piece states “Fredericton City Council Monday managed to step into the middle of a highly contentious debate across North America about 'the militarization of police forces.' It did so by approving a police force request for the lease to purchase of a 'light-armoured vehicle,' setting aside a whopping $350,000 for it, according to a CBC report of the meeting. At the same time, the council rejected a $440,000 police department request to hire two new officers and some civilian staff... Need for militarization of policing appears limited. Much expert opinion involves evidence showing it tends to make dangerous situations more dangerous and confrontational rather than significantly helping to de-escalate a situation. If there are justified uses, albeit rare, for such vehicles, perhaps the solution would be to have the province buy three or four and station them strategically so every region is reasonably quickly reached. The cost would be shared by every municipality. Let them be manned by the RCMP, who also emphasize de-escalation whenever possible. It'd be a good compromise, though even then I suspect they'd be underused.” Times and Transcript, A12

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Man's 911 call leads to his arrest - Twenty-eight-year-old charged with multiple probation breaches, driving offence, mischief

... An inmate serving a life sentence for second-degree murder was found dead on Tuesday in the minimum-security unit of Joyceville Institution. Robert Brunet, 71, was convicted in September 2008 of murdering 81-year-old Violet Graves in Hawksbury eight years earlier. Brunet, who lived in the same building as Graves at the time of the murder, broke into her basement apartment, then beat, sexually assaulted and strangled her. Her body was found in the apartment on July 30, 2000. He was arrested by police in 2005 after voluntarily giving a DNA sample. Justice Robert Maranger, who was also the judge of the 2011 Shafia trial in Kingston, called the elderly woman's killing brutal and vicious, before sentencing Brunet to life in prison with no chance of parole for 20 years. Emergency services were called on Tuesday and Brunet was taken to hospital. He was pronounced dead at 2:51 p.m. A release from Correctional Service Canada said the inmate's family has been notified of his death. Whig-Standard, A3

Ontario hiring more jail staff to help mentally ill inmates

Ontario is hiring more corrections staff, including officers, nurses, psychologists and segregation managers in an attempt to address issues with solitary confinement and inmates with mental-health challenges. The dedicated segregation managers will work at institutions with higher segregation rates to try to reduce the use of isolation and help inmates who have been in solitary transition back to the general population. "This is a first step towards implementing dedicated segregation teams across the system," said Correctional Services Minister David Orazietti. The announcement comes shortly before federal correctional investigator Howard Sapers is set to officially lead an Ontario review into the use of segregation. Orazietti said he didn't want to prejudge what Sapers will recommend, but this is work that could be done in the meantime. Postmedia News (Windsor Star, A9)

*** Bowden Institution locked down**

Between a corrections officer potentially exposed to a toxic substance and a subsequent lockdown, Bowden Institution has been busy. It was reported that an officer was exposed to the substance while searching a cell in the correctional facility south of Red Deer. The substance is being tested, but the reaction was described as similar to an opioid, or fentanyl exposure. Naloxone was administered, and the officer is recovering. The lockdown was initiated on Tuesday, and an exceptional search was conducted. Red Deer Advocate, A6

*** Drug flow into prisons top priority for officials**

With more than three-quarters of incoming inmates having addictions, stemming the flow of drugs and other contraband in prisons is a priority, officials say. It has become even more crucial as toxic narcotics such as fentanyl are being smuggled into institutions and unsuspecting staff and prisoners are exposed." Almost 80 per cent of offenders arrive at federal institutions with some level of substance abuse problem, and many have multiple addictions," said Jeff Campbell, spokesman with the Correctional Service of Canada (CSC). "We acknowledge the prevalence of substance abuse problems among offenders and assist in addressing those problems through a drug strategy." A Bowden Institution guard collapsed this week during a search for drugs. It's believed he was exposed to fentanyl. Staff at the federal medium-security facility administered naloxone to reverse the effects of the opioid, which is 50 to 100 times more potent than morphine. While it produces an intense high, it also can cause nausea, vomiting, sedation and death. The officer is now back at work. Campbell said CSC has security and intelligence measures to monitor and investigate inmate activity, potential drug-smuggling attempts and seizure of illicit substances. Postmedia News (Edmonton Journal, A10; Calgary Sun)

*** A Hells Angel-turned-police informant pleads for 2nd chance**

On a warm June day in 1997, Diane Lavigne, a widow with two adult daughters, got into her van and headed home. She left Montreal's Bordeaux jail, where she had worked for more than 10 years. As she drove north on the Laurentian Highway, a motorcycle pulled up beside her. She was gunned down in what has been described as a "hail fire" of bullets, becoming one of more than 100 victims of Quebec's infamous biker wars. Hells Angel Stéphane "Godasse" Gagné, 47, pleaded guilty to first-degree murder in Lavigne's death and was sentenced to life in prison, where he has now served more than 19 years.

Gagné, slated to be released in 2023, filed a motion last year to be released before the end of his sentence. The motion was granted. At his Parole Board of Canada hearing for conditional release, held earlier this week, Gagné detailed the path that landed him behind bars and brought him to the point of seeking a second chance. CBC News

*** Family of murder victim Kate Reid will speak for her at parole board hearings**
Kate Reid's family members say they will speak for her at any parole hearings for the man who murdered her. Her family said in a statement on Friday that when Hugh McColl becomes eligible for parole, "someone from the Reid family will sit in front of the parole board to ensure she always has a voice." On Wednesday, a jury found McColl, 63, guilty of second-degree murder in the killing of Reid, 51. They were roommates in an apartment on Burn Place in Kitchener. McColl killed her with a hammer on Jan. 2, 2015. McColl will get an automatic life sentence with no chance of parole for at least 10 years and possibly as long as 25 years. His parole eligibility date will be set by a judge on Feb. 17. Waterloo Region Record

*** Indigenous prisoners face discrimination, violence, say frontline workers - 'I've seen inmates get beaten black and blue,' says First Nations activist**
Armand MacKenzie spent 15 years representing Indigenous offenders before he quit the practice. MacKenzie, an Innu lawyer, said when an offender showed up for a court appearance at the Sept-Îles courthouse on Quebec's North Shore, he'd face a room filled with white people: the judge, the constable, the prosecutor and the support staff... Once an Indigenous person is convicted and goes from being a suspect to an inmate, that person can face a whole new set of challenges, said Albert Dumont. Dumont, who worked for three years in one of Ontario's toughest prisons, said Indigenous prisoners are treated differently, including when it comes to punishment. "I've seen inmates get beaten black and blue and be thrown in segregation for upwards of two months and not have a hearing. They'd only be let out when I'd get involved," said Dumont, who worked in the maximum security "J-Unit" at Millhaven Institute in Bath, Ont. "The sins of the system are far greater than what the offender ever committed, in a lot of cases," Dumont told Quebec AM. In his autumn 2016 report, Canada's Auditor General Michael Ferguson highlighted that Indigenous people make up just three per cent of the country's adult population, but they account for 26 per cent of the inmates in federal institutions. CBC News

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Thirteen deaths in one day linked to drugs - Cause of 'dangerous upsurge' in overdoses is unknown, coroner says
The B.C. Coroners Service has issued an urgent warning to illicit-drug users after an unprecedented number of drug overdose deaths in B.C. As many as 13 people died of suspected drug overdoses on Thursday, and Premier Christy Clark said the rising death toll is one of the most difficult issues she has faced this term. "I can't remember anything in the last four years that has felt like such a crisis - such an urgent crisis - where so many lives are being lost every single day, and that is so complicated to get our hands around," she said. Within eight hours, six people died after using drugs in Vancouver's Downtown Eastside, said coroner Barb McLintock. Two other deaths, at the same time, in the same area, are believed to be drug-related. Five other people died after using drugs on Thursday. The deaths occurred in Vancouver, Burnaby, northern B.C. and two in the Fraser region... Health Minister Terry Lake and Minister of Public Safety Mike Morris later said in a joint statement that the province expects to meet its goal of adding 500 substance-use beds by the end of March. The province has earmarked $43 million to respond to the crisis by expanding access to naloxone, establishing overdose prevention sites and working with the federal government to stop drugs from entering Canada. Times-Colonist, A3; Vancouver Sun; Globe and Mail; Canadian Press (Cape Breton Post); Le Droit; La Presse

Alert issued in B.C. after 11 deaths
An urgent warning has been sent out to illicit drug users in British Columbia after 11 people died in the province on Thursday alone, six of them in Vancouver's Downtown Eastside. The warning from the B.C. coroners' service on Friday came at the same time police, firefighters, the mayor and health officials in Vancouver collectively called on the provincial government to provide treatment on demand for drug

users... Premier Christy Clark described the overdose crisis as a complex issue that requires more police and treatment options. But she stopped short of promising more money or programs. "The thing that frustrates me has been people who say, 'Here's the one thing we need more of, "' she said. "We're not going to simplify it down to just detox beds. We need more police. We need more RCMP on the ground. We need more Canada Border Services Agency drug interdictions. We need more treaties. We need more health care. We need more naloxone." Canadian Press (Red Deer Advocate, A7)

* **Fentanyl crisis: November death tally expected to reach 35 in B.C. - Vancouver had 9 drug overdose deaths on Thursday**
The B.C Coroners Service is expected to release a tally of November overdose deaths on Monday, and officials expect the worst — predicting that 35 or more people may have died. Health Minister Terry Lake and Provincial Health Officer Perry Kendall have both said that, while finalized numbers have not been confirmed, early estimates of opioid deaths during November appear grim. Both say they were optimistic earlier this year after numbers from the summer appeared to indicate the crisis was improving, but statistics since then have deteriorated. During a recent cold spell, the fentanyl crisis hit a brutal low point. On Thursday officials reported 13 deaths across the province in one night, nine of them in Vancouver. CBC News

New centres offer 'rapid access' to drug addicts
Two "rapid access" centres for those addicted to drugs will open in Cambridge and Kitchener-Waterloo in the new year, says the co-ordinator for the Waterloo Region Integrated Drugs Strategy. Addicts - whether using prescription drugs or those sold on the street - will be able to see a doctor and access an addiction counsellor, said Lindsay Sprague. "For someone in the ER department or a user, here is where you go next," she said. "Anyone can come. You can self-refer." In Ontario, there are seven similar centres where any substance user can get help without waiting weeks to get treatment. The pilot project clinic will be open two days a week and donations will pay for the centre, Sprague said. A firm date has not been set. For Waterloo Region, the "rapid access" addiction centre is welcome news for police, paramedics and emergency room doctors who are dealing on a daily basis with the opioid crisis - often heroin laced with the deadly drug fentanyl. Waterloo Region Record, B1

* **Services d'injection supervisée : fini le déni**
Les demandes pour ouvrir de tels lieux devront répondre à cinq questions, indique le projet de loi déposé lundi par le gouvernement Trudeau. C'est cinq fois moins que le processus actuel. Et surtout, c'est beaucoup plus ciblé, et justifié. Les cinq facteurs dont Santé Canada devra tenir compte sont directement inspirés du jugement de la Cour suprême qui avait confirmé la légitimité de la clinique vancouvéroise InSite, a souligné la ministre fédérale de la Santé Jane Philpott. C'est autrement plus pertinent que la liste d'épicerie actuelle. Celle-ci, rappelons-le, comprend 26 critères, et c'est bien parce que notre alphabet ne compte pas plus de lettres : avec les requêtes hétéroclites regroupées sous des points comme b) ou i), on frise la trentaine de questions. La Presse

* **In need of full services - Future Edmonton supervised injection sites should offer counselling and medical services, police say**
When Edmonton drug and gang enforcement detective Guy Pilon toured the Insite supervised injection site in Vancouver's Downtown Eastside several months ago he didn't like what he saw. He had visited it three years prior and wanted to see the progress of it and other drug treatment facilities in the city. "There are users now waiting outside of Insite just waiting to get in," Pilon said. "They are shooting up in the street, they are shooting up around the corner. There are just users everywhere." Insite, he said, was less about the treatment of drug addictions and more about allowing people to do it safely. Two blocks away at another of Vancouver's drug treatment facilities, Providence Crosstown Clinic, they were taking a different approach for drug addicts to seek support. Postmedia Network (Edmonton Sun, A3; Edmonton Journal); CBC News

* **Calgary police chief sees supervised injection sites as part of bigger strategy**
Calgary's police chief is open to introducing supervised facilities for drug users, so long as such programs are part of a larger strategy to lower addiction rates and address problems that accompany drug dependency, such as crime and joblessness. "It always makes police chiefs look resistant when they say

no to these things. My answer has been: 'Sure, as long as it is part of a better strategy,' " Calgary Police Service Chief Roger Chaffin said in an interview this week. "I'd be more mindful of it if it was part of a more robust strategy to lower the issues of addiction." Alberta is in the midst of a drug crisis that has also hit several other provinces, most notably British Columbia, with opioids such as fentanyl at the centre of the problem. Supervised drug-use sites, such as two already operating in Vancouver, are designed to reduce risks for drug users because health professionals are there to quickly treat overdoses. The federal government this week proposed legislation that would make it easier for cities to open supervised drug-use facilities, so long as they can prove there is a need, consult the community, show they will reduce crime, demonstrate they have the resources to run the facilities and follow regulations. Globe and Mail, S1

*** Relations avec les autochtones: une enquête publique au mandat très large**
Au terme d'une enquête de près d'un an menée par le SPVM, le Directeur des poursuites criminelles et pénales avait décidé cet automne qu'aucune accusation ne serait déposée contre les policiers de Val-d'Or visés par un reportage de l'émission Enquête de Radio-Canada. Des femmes autochtones de Val-d'Or avaient soutenu avoir été victimes de sévices sexuels commis par des agents de la SQ. Selon les informations obtenues par La Presse, le premier ministre Philippe Couillard annoncera à l'issue de la réunion du Conseil des ministres, mercredi, une commission d'enquête publique qui portera sur les rapports entre les autochtones et la police en général, mais aussi sur les rapports entre la communauté autochtone et le réseau de la santé et des services sociaux, le secteur correctionnel et celui de la protection de la jeunesse. On voudra vérifier si la communauté a fait l'objet de « racisme systémique », mais aussi déterminer les problèmes dans la relation entre les autochtones et les réseaux publics. La Presse; Le Nouvelliste; Montreal Gazette

*** A new purpose - Stories of victims turned survivors**
A sexual predator, the murder of a teenage girl, a missing indigenous woman ultimately found slain - shocking crimes that dominated the news years ago. But these are the other stories, of victims who became survivors. They found ways to move forward to help themselves and others. Star-Phoenix, D1

*** Secrecy around abuse remains to this day - Silence in James scandal is deafening after soccer, gymnastics revelations**
An opinion piece states "It has been the most enduring - and troubling - question in the sickening saga of Graham James right from the beginning: did hockey's most notorious pedophile really act alone? No accomplices? No enablers? No one covering up for him? No other hockey coaches just like him sexually abusing the young players in their charges? No one else? Really? That's the narrative Canadian hockey authorities would certainly like all of us to believe: 'move along, folks... nothing more to see here. And, don't forget to stop by the box office on your way out.' But it's also almost certainly nonsense, as we were all reminded once again this week with new and spiralling abuse scandals from the worlds of soccer and gymnastics strongly suggesting that if James was truly a lone wolf, both he and the institution (religion?) of Canadian hockey are unique in the world of sport." Winnipeg Free Press, C3

*** Editorial - Don't overuse heavy narcotics**
An editorial states "The epidemic of fentanyl deaths sweeping our province has been blamed, in part, on illicit-drug shipments from China. But while there is no question that a major smuggling operation is underway, this is by no means the whole story. That we are in the midst of an epidemic is unquestioned. The number of overdose deaths this year will rise to more than triple the total in 2008. When the final numbers are tallied, more than 600 fatalities are projected across British Columbia. And Vancouver Island, led by Victoria and Nanaimo, has the highest death rate of any health region in the province. Other parts of Canada are also recording heavy fatalities. So why are Canadians caught up in this fentanyl crisis?... Here is part of the answer. Canadian physicians prescribe far more opioid painkillers than their European counterparts. Specifically, they write three times as many prescriptions for fentanyl, and five-and-a-half times as many for oxycodone - another powerful drug in this class. Is this pure coincidence? Likely not. Studies in the U.S. have shown there is a direct correlation between the number of opioid prescriptions written and the number of overdose fatalities. In essence, painkiller medications like these

are the pathway through which many Canadians become addicts. When their prescription runs out, they turn to street drugs." Times-Colonist

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Why inquiry into missing and murdered Indigenous women should stay focused on its name**
An opinion piece states "Last week, a new coalition called Expand the Inquiry met with federal officials to argue for the need to expand the terms and scope of the inquiry into missing and murdered Indigenous women to include men and boys. The coalition's leader, Chief Ernie Crey of Cheam First Nation in British Columbia, became an advocate for Indigenous women after his sister, Dawn Crey, was killed by Robert Pickton. Crey said he refocused his attention after hearing from families across the country about the lack of advocacy for missing and murdered Indigenous men. His coalition argues that because 70 per cent of murdered Indigenous people are men, they should be included in the inquiry. But that statistic doesn't change the fact that Indigenous women face a significantly higher rate of violent victimization than men, including physical and sexual assault. And it doesn't change the fact the MMIW inquiry was created to explain why Indigenous women are targeted and find ways to stop it." CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Montreal police raid illegal pot shops - Ten people arrested
Montreal police launched raids Friday evening against illegal cannabis stores opened one day prior by Vancouver's self-styled "Prince of Pot," Marc Emery, and his wife, Jodie. Police said they made a total of 10 arrests. Local television outlets broadcast images of police taking away Marc Emery outside one of his stores in the city's Plateau neighbourhood. As he was being led by officers into a patrol car, Emery flashed a peace sign with his fingers and said: "It's despicable and an injustice, but we will win. The prime minister is a disgrace... A few hours earlier, Prime Minister Justin Trudeau told reporters in Montreal that "until we've changed the law, the current laws exist and apply." Ottawa is moving "properly and responsibly" to legalize marijuana, Trudeau said, but the current law governing cannabis will stand until new legislation is ratified. "The reason we are legalizing and controlling marijuana is not for any other reason than to better protect our kids and to remove the black market, the criminal elements, organized crime, from profiting massively from the sale of cannabis," he said alongside Quebec Premier Philippe Couillard. Canadian Press (Times-Colonist, A10; Cape Breton Post; Chronicle-Herald)

Le pot n'est plus ce qu'il était
Durant la transaction, l'acheteur avait le coeur qui battait fort. L'excitation de faire quelque chose de défendu s'emparait de son corps. On dissimulait la marchandise au plus profond de son sac à dos. Et chaque fois qu'on croisait un policier, on se disait : « S'il savait... S'il savait... ». On se sentait despérado. Un hors-la-loi, un anticonformiste, un rebelle. On allumait son pétard en faisant un pied de nez à la société. Je quitte votre monde corrompu. À moi les vapeurs d'un monde meilleur. En entonnant du Harmonium : « Pour un instant, j'ai respiré très fort... Hee ! Haw ! » Presque 50 ans plus tard, jeudi dernier à Montréal, des gens faisaient la queue devant la boutique Cannabis Culture pour aller s'acheter du pot. Comme on fait la queue devant la boutique Apple pour s'acheter un iPhone. Au vu et au su de tout le monde. Ça ne peut pas être plus au grand jour que ça. Il y a même des caméras. Personne ne se cache le visage. Pas de pixels ajoutés sur les yeux au montage : « Que faites-vous là ? - Ben, j'm'en viens acheter du pot, c'est une boutique de pot. » La Presse

*** Trudeau says current pot law in place until new legislation passes**
Ottawa is moving "properly and responsibly" to legalize marijuana but the current law governing cannabis will stand until new legislation is ratified, Prime Minister Justin Trudeau said Friday. Cannabis activists opened six shops in Montreal on Thursday in defiance of the current law and said they are considering opening another in Trudeau's riding in the city. Longtime marijuana advocate Marc Emery said Trudeau

would be as much of a criminal as them if they were arrested. Trudeau's response to a question about that comment was as follows: "Until we've changed the law, the current laws exist and apply." "The reason we are legalizing and controlling marijuana is not for any other reason than to better protect our kids and to remove the black market, the criminal elements, organized crime, from profiting massively from the sale of cannabis," he told a news conference alongside Quebec Premier Philippe Couillard. "We will get this done properly and responsibly because that is what Canadians expect us to do . . . and until we have changed the law, the current laws apply." Canadian Press (Chronicle-Herald, A10; Whig-Standard)

*** Vancouver Island cannabis growers high on legal pot prospects**
Licensed medical marijuana producers on Vancouver Island are already angling for expansion into a legalized recreational market as proposed new rules take shape. The Task Force on Cannabis Legalization and Regulation recommended this week keeping a separate framework for supplying recreational pot to Canadians. Meanwhile, two of the three dozen companies licensed to supply medical marijuana to Canadians are already laying the groundwork for diversification into the multi-billion dollar recreational market. Executives for Tilray, based in Nanaimo, B.C., and United Greeneries Ltd., in nearby Duncan, endorse the task force's main recommendations, including a minimum age of 18 for purchase of pot, a ban on advertising and sales through stand-alone outlets or mail-order. Brendan Kennedy, president of Tilray, said the company will expand into recreational marijuana, but it won't be a simple matter of ramping up production. CBC News

*** Les coûts du pot légal sur la santé**
Les économistes s'entendent là-dessus : le pot deviendra bien plus populaire s'il est légalisé. Or, même si cette popularité aura certains effets positifs sur l'économie, elle engendrera aussi des coûts sociaux importants. Plusieurs lecteurs m'ont rappelé ces coûts indirects à la suite de ma chronique « Le pot créera-t-il de la richesse ? », parue hier. La chronique se terminait justement par cette préoccupation de la plupart des études sur les effets de la légalisation sur la santé publique. Courriel du lecteur Daniel Masse : « La hausse de consommation provoquera une hausse des coûts des soins en santé mentale, en oncologie (la fumée de pot est aussi cancérigène que celle du tabac), en accidents de voiture, en accidents du travail et autres accidents causés par l'intoxication. Dans son ensemble, la légalisation de la marijuana aura un impact plus négatif que positif sur les finances publiques. Je demeure pour sa légalisation à la condition que cela se fasse en mode fumeur payeur. » Ce genre de coûts indirects est très difficile à évaluer. Le Conference Board a fait l'exercice pour le tabac et les chiffres sont épeurants. Selon l'organisme, le tabac est la cause de plusieurs maladies, notamment la maladie pulmonaire obstructive chronique (MPOC) et le cancer du poumon. À elles seules, ces deux maladies engendrent des coûts annuels de quelque 10 milliards de dollars au Canada (environ 2,5 milliards au Québec). La Presse, 6

PUBLIC SERVICE / FONCTION PUBLIQUE

Single mom gets Phoenix-related claims approved after going public
Claire Lavallee's kids will get a Christmas after all. The single mom feared she would not be able to put presents under the tree for her two children after getting caught up in the Phoenix pay system fiasco. But two days after the public servant's story aired on CBC News, the government agreed to give her nearly $1,000 to cover most of the out-of-pocket expenses she racked up while being paid improperly. "Everything's going to be great," a relieved Lavallee said in a phone interview. "I'll be able to finish buying gifts for my kids this weekend." Lavallee first went weeks without pay, and was then was underpaid for months, after returning to work from a maternity leave in April... Tens of thousands of public servants have been underpaid, overpaid, or not paid at all since the government launched its new payroll system last April. Ottawa has hired more than 200 compensation advisors for satellite offices across the country to resolve the issues. It has also opened a call centre in Toronto with more than 100 agents to assist public servants. In September, Public Services and Procurement Canada announced it would reimburse workers for certain types of expenses, like interest charges and penalty fees, incurred as a result of improper pay. CBC News

'This was a terrible idea that was always going to be a disaster'
A former senior Conservative advisor says he and others tried to warn the government about a web project that's now at risk of turning into a billion-dollar boondoggle. "This was a terrible idea that was always going to be a disaster," says Kasra Nejatian, a former director of strategy for Citizenship and Immigration Canada. As early as 2011, bureaucrats at the powerful Privy Council Office worked to persuade the prime minister's office that merging the 1,500 different government websites under the single Canada.ca portal was a good idea. An initial contract of $1.54 million was issued in 2013 to Adobe to begin work on the project. It's unclear if the government had any idea of the actual scope of the project. The contract value has since risen to just under $10 million. Yet experts predict the cost of the project - which is only an estimated 0.5% complete despite having already passed its original deadline - could balloon to $1 billion. Ottawa Sun, A8 (Toronto Sun); Postmedia News (Windsor Star)

* **'Dismal' record on hiring of wounded vets**
Just over 25 per cent of veterans who were given priority hiring status in the federal public service because the military released them for medical reasons weren't able to find jobs, according to newly released statistics. Five hundred and eighty-five individuals released from the Canadian Forces for medical reasons between 2005 and early 2016 were unsuccessful in finding work with federal departments within the period for which they were allotted priority status for employment appointments, and as a result lost that status. That has prompted one Liberal senator to call on federal departments to step up. "There's no reason why more of the injured aren't being hired," said Senator Percy Downe, who obtained the job statistics from the government. "Most departments have a dismal record of hiring veterans."... Since 2005, when those medically released from the Forces have been eligible for priority status, the bulk of hiring of those eligible has been by the Department of National Defence. Since 2005, it has been responsible for 70 per cent of the hires of those with priority-status, some 928 veterans. **Correctional Service Canada** hired five per cent, or 66 veterans, according to the figures provided to Downe. Postmedia News (National Post, A8)

Military aims to stop ISIL's 'spillage' outside of Iraq, Syria
Two Canadian military teams are in Lebanon and Jordan as the international community searches for ways to keep the Islamic State of Iraq and the Levant from spreading once the city of Mosul falls. Senior military commanders have warned that victory in Iraq's second-largest city will not mark the end of ISIL as a threat, but that the group will instead go underground and resort to suicide attacks and similar tactics. There are also growing fears that defeat in Iraq and Syria will see ISIL attempt to spread into the surrounding region, where it will try to foment fresh havoc and instability. British Defence Secretary Michael Fallon said Thursday that preventing that spread will be a key focus for those countries involved in the fight against ISIL -- also known as ISIS and Daesh -- in the coming months. "We need momentum across the Middle East to defeat Daesh wherever it now disperses to," Fallon said at the start of an anti-ISIL meeting in London. "As they are pushed out of Iraq, they will disperse and move to different theatres and redefine their success not by territory, but by insurgency." Speaking by phone after the meeting, Defence Minister Harjit Sajjan said Canadian troops will remain in Iraq for the foreseeable future to ensure local forces can maintain peace and security. Canadian Press (Cape Breton Post)

* **Quebec woman pleads guilty to smuggling $30.5M worth of cocaine**
A published report says a Canadian woman pleaded guilty Friday to her involvement in allegedly importing cocaine into Australia. The Sydney Morning Herald says 28-year-old Isabelle Lagace entered the plea on a charge of importing a commercial quantity of cocaine into the country. Lagace, along with two other Canadians - 64-year-old Andre Tamine and 23-year-old Melina Roberge - were arrested in late August after the MS Sea Princess berthed in the Australian city. Australian Border Force commander Tim Fitzgerald had said detection dogs helped police allegedly find 95 kilograms of cocaine in suitcases. The drugs were worth an estimated $30.5 million. Toronto Star; Le Quotidien

* **Hope for Canadian pastor imprisoned in North Korea**

Canada is calling the case of imprisoned Toronto pastor Hyeon Soo Lim "absolutely a priority" after Ottawa officials travelled to North Korea this week to visit him for the first time and to discuss his release. Lim, 62, has been detained for nearly two years for what North Koreans say was an attempt to overthrow the government. Global Affairs Canada spokesperson Kristine Racicot confirmed Thursday that a ministry delegation "recently visited Pyongyang and was able to undertake a consular visit to Mr. Lim." "The Government of Canada is very concerned about the health, well-being and continued detention of Mr. Lim," Racicot said. "We have been actively engaged on this difficult case." The visit was arranged with the aid of the Swedish embassy acting as a "protecting power" for Canada, which does not maintain a diplomatic presence in North Korea. Until now, Global Affairs Canada has shared little with the public about the fate of the imprisoned Christian minister. However, on Thursday, the Canadian government disclosed it has been working closely with Lim's family. Toronto Star

*** Ontario cabinet minister quits - Community Safety and Correctional Services Minister Orazietti is leaving for family reasons**
Liberal cabinet minister David Orazietti is resigning from provincial politics, setting the stage for a byelection in his northern Ontario riding about a year before the next general election. The Community Safety and Correctional Services minister made the announcement in his Sault Ste. Marie riding Friday, saying he is leaving for family reasons. "A career in politics comes with many sacrifices - for me, that has meant missing many family events and important milestones in my children's lives," said the father of two. Canadian Press (Hamilton Spectator, A10)

*** The battle within our armed forces**
An editorial states "Numbers in a recently released survey of Canadian military personnel were extremely disturbing. They show nearly 1,000 full-time soldiers, almost two per cent of the regular workforce, report being sexually assaulted in the last year. In November, a proposed class-action lawsuit claimed systemic discrimination in respect to gender and sexual orientation in a Canadian Armed Forces described as rife with sexual misconduct and harassment of women. In October, RCMP Commissioner Bob Paulson delivered an apology to hundreds of current and former female officers and employees subjected to alleged incidents of bullying, discrimination and harassment. This all shines a bright light on a dark corner of our uniformed personnel and an absence of respect for women in the workplace." Chronicle-Herald (Hamilton Spectator, A14)

Powerful quake hits off Papua New Guinea; no damage reported
A powerful earthquake struck off the coast of the Pacific island nation of Papua New Guinea on Saturday, and a tsunami threat was issued to areas near the epicenter. There were no immediate reports of injuries or damage. The magnitude-7.9 quake struck 46 kilometers (29 miles) east of Taron in Papua New Guinea, the U.S. Geological Survey said. The quake was deep, at 103 kilometers (61 miles). Deeper earthquakes tend to cause less damage than shallow ones. The Pacific Tsunami Warning Center said there was a threat of a tsunami in Papua New Guinea and nearby areas. The quake rattled residents near the epicenter on the island of New Ireland, but was not felt in Papua New Guinea's capital, Port Moresby, said Mathew Moihoi, an official with the Geophysical Observatory. There were no immediate reports of damage, though officials were still assessing the situation, he said. Papua New Guinea sits on the Ring of Fire, the arc of seismic faults around the Pacific Ocean where earthquakes are common. Associated Press (Washington Post)

Navy's underwater drone seized by Chinese warship, pentagon says
A Chinese warship seized a U.S. navy unmanned underwater glider that was collecting unclassified scientific data in the South China Sea, and the U.S. is demanding its return, the Pentagon said Friday. Navy Capt. Jeff Davis, a Pentagon spokesman, said that the U.S. has issued a formal diplomatic complaint over Thursday's incident, but he was not aware of any response yet. He said this may be the first time in recent history that China has taken a U.S. naval vessel. The Chinese Embassy said it had no immediate comment. But the incident is likely to fray the already tense relations between U.S. and China. Beijing was angered by president-elect Donald Trump's decision to talk by phone with Taiwanese

President Tsai Ing-wen on Dec. 2, and by his later comments that he did not feel "bound by a one-China policy" regarding the status of Taiwan. There also have been increased tensions over Beijing's ongoing military buildup in the South China Sea. It includes the development and militarization of manmade shoals and islands aimed at extending China's reach into the Pacific region. Postmedia News (Windsor Star, N6)

*** Turquie: au moins 13 soldats tués dans un attentat**

Au moins 13 soldats turcs ont été tués et 48 blessés dans un attentat visant un bus qui les transportait samedi matin à Kayseri, dans le centre de la Turquie, a déclaré l'armée turque. Les soldats - des non gradés et des sous-officiers - avaient obtenu la permission de quitter le quartier général des commandos pour la journée, a expliqué l'armée dans un communiqué. Elle a précisé qu'il pourrait y avoir des blessés civils. L'explosion, survenue à 8 h 45 (heure locale), s'est produite une semaine après l'attentat qui a fait 44 morts dans le coeur d'Istanbul, revendiqué par un groupe armé kurde. AFP (Journal de Québec)

*** Reprise des évacuations à Alep**

Un nouvel accord a été conclu pour achever l'évacuation des secteurs de l'est d'Alep encore tenus par les rebelles, ont confirmé samedi un chef rebelle et un responsable du gouvernement syrien. L'accord prévoit l'évacuation des deux villages chiites de la province d'Idlib assiégés par les insurgés, Al-Foua et Kefraya, l'évacuation des personnes blessées de Madaya et Zabadani, deux communes bloquées par les forces progouvernementales près de la frontière libanaise, et l'évacuation totale de la partie d'Alep-Est encore tenue par les rebelles. L'évacuation, qui avait commencé jeudi, a été interrompue vendredi par l'armée syrienne, qui a accusé les rebelles de « ne pas respecter les conditions de l'accord », en ayant tenté d'ouvrir le feu et d'avoir voulu sortir d'Alep avec des armes moyennes et des otages. Radio-Canada; Postmedia News (London Free Press, N6; Windsor Star; Leader-Post; Vancouver Sun; Edmonton Journal); Globe and Mail; AFP (Journal de Montréal)

The fall of Aleppo: Four sobering lessons

An opinion piece states “To name a mass atrocity as enormous in scale and as heartbreaking in detail as what Syrian President Bashar Hafez alAssad's forces did to retake Aleppo from his civil-war opponents this week after four years of heartless siege, you have to reach deep into the previous century. Nothing in this century - and it has had several mass atrocities - has come close to the 400,000 lives lost, the 10 million rendered homeless, the gas attacks, the barrel-bombing of residential districts, the mass executions, the denial of medical assistance, the forced starvation and torture delivered by Mr. al-Assad. The fall of Aleppo, delivered with massive Russian support and no concern at all for humanitarian law, UN Security Council resolutions or basic human decency, is a decisive moment: It means Mr. al-Assad will remain nominally in control of the most important parts of Syria. But it is not a terminal moment: His artificially engineered hold on power virtually guarantees the atrocities will continue, the civil war will not be resolved and chaos and extremism will reign in the country's northeast, where the Kurdish-dominated rebels are using adjoining Turkey to battle for control against the Islamic State.” Globe and Mail, F7

MINISTER / MINISTRE

Deaths prompt agency review
The Liberal government says it is looking for ways to improve scrutiny of Canada's border agency amid mounting calls to create an independent watchdog for the organization. The office of Public Safety Minister Ralph Goodale said Tuesday the government "is examining how best to provide the Canada Border Services Agency with appropriate review mechanisms." The statement came as civil rights groups and refugee lawyers decried the second death of someone in the border agency's custody in less than a week. The agency holds people who are considered a flight risk or a danger to the public and those whose identities cannot be confirmed. In 2013-14, it detained 10,088 immigrants - almost one-fifth of them refugee claimants - in a variety of facilities, including federal holding centres and provincial and municipal jails. On March 7, the border services agency was notified by the Ontario Ministry of Community Safety and Correctional Services that an individual in immigration detention at the Toronto East Detention Centre had died. On Sunday, the border agency was advised by the Ontario ministry that a person detained at the Maplehurst Correctional Complex had died. A border agency spokeswoman declined Tuesday to identify the two individuals, citing privacy law. The agency's mandate requires it to use detention ***"only when necessary" and to "safeguard the health, well-being and safety of detainees,"*** noted **Scott Bardsley, a spokesman for Goodale**. The minister is ***"concerned about the two recent deaths" and his thoughts are with their families*****, Bardsley** said. ***"However, we are***

unable to comment about these cases while they are under investigation." Canadian Press (chronicle-Herald, A6, Red Deer Advocate, National Post, Toronto Star, Cape Breton Post, Guardian, Waterloo Region Record, Times Colonist, Times and Transcript)

Detainee deaths spark calls for border services oversight

The government is considering an oversight body for the Canada Border Services Agency following the deaths of two immigrant detainees in CBSA custody last week. Rights and refugee groups have long called for independent oversight of the government agency and the creation of a civilian-led body to investigate deaths in custody. After the two recent deaths, **Public Safety Minister Ralph Goodale's** office said the issue will be examined as part of the government's upcoming public consultations on Canada's national security framework. ***"The government is examining how best to provide the Canada Border Services Agency with appropriate review mechanism,"*** said **Mr. Goodale's press secretary, Scott Bardsley. Mr. Goodale** has said that he is open to considering an oversight body for the CBSA. Josh Paterson, executive director of the BC Civil Liberties Association, said the organization is "encouraged" that the government will consider improved scrutiny of the CBSA. "Any such mechanism has to be completely independent of CBSA," Mr. Paterson said in a statement Tuesday. "At a minimum, it must be able to receive and deal with public complaints and complaints from third parties, initiate its own reviews and investigations of CBSA conduct even when there is no complaint, and include independent civilian investigation of critical incidents of harm or death involving CBSA officers." Globe and Mail, A4; * Radio-Canada

'Allah told me to come here and kill people'

The man accused of a violent attack on a Canadian military recruiting centre comes from a family with a history of severe mental illness, according to a Toronto researcher on extremism and radicalization. Amarnath Amarasingam, a fellow at the George Washington University program on extremism, said he spoke to a close relative of Ayanle Hassan Ali Tuesday. The relative told him Ali's mother has long suffered from either schizophrenia or bipolar disorder and that Ali himself has displayed symptoms consistent with some kind of mental illness for at least the past five years. Ali was charged Tuesday with three counts of attempted murder, one day after he allegedly slashed two Canadian soldiers and narrowly missed a third in a brief, wild rampage in Toronto. The 27-year-old appeared in bail court Tuesday afternoon. He wore a white, prison-issue jumpsuit and spoke only to say his own name. His case was put over until Friday, when a full bail hearing will be held. Toronto Police Chief Mark Saunders told reporters Tuesday that Ali was born in Montreal and moved to Toronto in 2011. In between, he lived for a time in Alberta. He was registered as an open studies student at the University of Calgary for two semesters in 2009; he later lived with his mother's cousin in Edmonton, according to Amarasingam. In court Tuesday, Ali wore a neat black beard that stretched several inches off his chin. He kept his eyes down throughout the hearing and shuffled at times from foot to foot... Toronto Police are working with the RCMP, CSIS and the Ontario Provincial Police to investigate the attack. Saunders would not rule out future terrorismlinked charges but he said investigators had yet to identify any link to an outside organization or individual. "I want to be very, very, very careful, when it comes to the national security piece, that we don't go through that Islamophobia nonsense," Saunders added. "I don't want this categorizing of a large group of people. That would be very unfair and very inaccurate."... "I probably know as much about the actual facts surrounding the case as you people do," Burke said. **Federal Public Safety Minister Ralph Goodale** said Tuesday the attack appears to have been an isolated incident. National Post, A1 (Vancouver Sun, Province); * Canadian Press (Edmonton Journal, N1/FRONT, Windsor Star, Leader-Post, Montreal Gazette, Ottawa Citizen, Calgary Herald, London Free Press, StarPhoenix, Guardian, Whitehorse Daily Star, Red Deer Advocate, Waterloo Region Record, Chronicle-Herald, Telegram, Cape Breton Post, Kingston Whig-Standard, Hamilton Spectator, Telegraph-Journal, Times and Transcript); * Presse canadienne (Le Devoir, A4, Le Quotidien)

Be proactive at stopping radicalization, Goodale says

Public Safety Minister Ralph Goodale says so-called lone-wolf terrorist attacks are some of the most difficult to prevent and that's why Canada needs to be among the best in the world at stopping radicalization. **Goodale** says indications are that the man who attacked two soldiers at a north Toronto military recruitment centre was acting on his own. He says it is important that Canadians remain vigilant against possible terrorist attacks and alert police to any suspicious behaviour. But **Goodale** also says

authorities need to reach out to communities susceptible to radicalization. Canadian Press (Waterloo Region Record, A3, Cape Breton Post)

National security policy under review, says Goodale

Public Safety Minister Ralph Goodale says his department is undertaking a national security review. ***"We want open, inclusive consultations that reassure Canadians that their engagement is not just a window dressing but that it's meaningful and has impact,"*** the minister told a recent Ottawa defence conference. **Mr. Goodale** said the government is looking for ***"thoughtful discussion, analysis [and] debate."*** He specifically cited a National Post op-ed by Luc Portelance, former president of the Canada Border Services Agency and Ray Boisvert, former assistant director of intelligence at Canada's spy agency, the Canadian Security Intelligence Service. Their message was that the government has a ***"timely opportunity to consider a thorough assessment of our national security structure" and advocated a "national security reset."*** That kind of input is **"very valuable," Mr. Goodale** said, adding expert opinion will be ***"taken very seriously into account."*** (…) **Mr. Goodale** told reporters after his remarks that he didn't mean to use the word "review" as a ***"term of art." "We need to examine a broad collection of things related to national security,"*** he said. ***"This will involve a very extensive examination of our security and intelligence operations now and how we can make them better."*** As to the method, **Mr. Goodale** said, ***"we will begin the process by circulating materials that we would invite Canadians to comment on. Where that leads at the end of the process, we'll have to see what the process itself generates."*** It's unclear what those materials might be. But **Mr. Goodale** said some of the work has already started. A committee of Parliamentarians will scrutinize Canada's security groups, while Public Safety is looking to establish a new counter-radicalization office, he said. There is also the issue of Canada's controversial Anti-Terrorism Act. ***"We will be consulting Canadians broadly and Parliamentarians and subject matter experts to revise the provisions in the law,"*** he said, although he didn't provide a timeline. Embassy

Trump shouldn't be allowed into Canada: petition

In a development that might spur even more U.S. electors to thoughts of moving to Canada should Republican presidential nominee Donald Trump win, an electronic petition with more than 2,000 signatures is calling on the Liberal government to prohibit him from entering Canada until he withdraws comments he made about Muslims during his campaign. The e-petition, sponsored by New Democratic Party MP Kennedy Stewart (Burnaby South, B.C.), has been certified by House of Commons officials who verified the electronic signatures and says Mr. Trump's entry should be denied on grounds he is inadmissible to Canada because his call for a ban on Muslims entering the U.S. constitutes a hate crime in Canada. With 2,345 signatures, the e-petition, formally logged under the heading "E-54 (Inadmissibility to Canada)" on Parliament's website numerically ranks well below an e-petition signed by 21,944 gun owners who want **Public Safety Minister Ralph Goodale** (Regina-Wascana, Sask.) to allow over-the-counter sales of semi-automatic AR-15 assault-style hunting rifles. Hill Times (2016-03-15)

DND still conducting full security review 18 months after ISIL-inspired attacks

National Defence launched a full-scale review of security at its installations, including recruiting centres, following the terror attacks of October 2014 — an assessment that officials said Tuesday is still ongoing. The wounding of two uniformed soldiers in north Toronto this week is the second violent incident to take place at a military centre. Defence officials undertook a full review of what's known in army lingo as its "force protection posture" following the Oct. 20, 2014 attack in Saint-Jean-sur-Richelieu, Que., which killed Warrant Officer Patrice Vincent. The 53-year-old soldier and a companion were run down by a "radicalized" Martin Rouleau outside a federal building that offers support to Canadian military veterans and other personnel. Vincent was killed and the second soldier was injured. Rouleau, 25, fled the scene but was later shot dead after a pursuit in which his car rolled over. Friends said he had become increasingly radicalized. The defence department did not advertise its security review, but one of the country's senior operational commanders — Maj.-Gen. Christopher Coates —testified about it before a House of Commons committee four months after the deaths of Vincent and Cpl. Nathan Cirillo, on Oct. 22, 2014, who was gunned down at the foot of the National War Memorial. Almost 18 months down the road, defence spokesman Capt. Thomas Edelson said the review has yet to be finalized. (…)**Public Safety Minister Ralph Goodale** said many recruiting centres are "***storefront operations***" that must balance security and accessibility for the public. "***I'm sure DND of all departments would make sure***

security arrangements were always appropriate," he said. Canadian Press (News 1130, The Telegram, The Guardian, Cape Breton Post, CTV News, Huffington Post), Presse canadienne (L'actualité)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Latest avalanche victims came from Alberta**
The Mounties have confirmed a man killed Monday in an avalanche near Blue River, B.C., is from Sherwood Park. A second Alberta man also died, but his hometown has not yet been made public. At 5:45 p.m. Monday, Clearwater RCMP received a call from a group of snowmobilers that an avalanche had buried two men from their group 30 kilometres southwest of Blue River. Five of the seven snowmobilers escaped the avalanche. Members of the group, equipped with rescue equipment, were able to dig the two men out of the snow. Efforts to resuscitate the pair were unsuccessful. The survivors radioed for help, but due to oncoming darkness and weather conditions they left the area Monday evening. Local search and rescue teams set out at first light Tuesday. Cpl. Mark Labossiere with Clearwater RCMP said poor weather made it difficult to get a helicopter to the site. The deaths came one day after Avalanche Canada official Joe Lammers urged backcountry skiers and snowmobilers to take special care as March is statistically the most deadly month for avalanches. Edmonton Journal (Edmonton Sun, A8; Edmonton Journal); Vancouver Sun (Times Colonist)

*** Survivor tells story of terrifying plunge inside an avalanche**
A relaxing Sunday in the mountains near Jasper took a terrifying turn when Dana Ruddy found himself being swept down the side of a mountain by an avalanche. Ruddy was with his long-time skiing and climbing buddy, Sean Elliott, hiking and skiing through mountain passes about 25 kilometres southeast of Jasper (...) But as they worked their way down a mountain pass above the Maccarib Campground, a large piece of ice and snow Ruddy had just crossed gave way. "It was just like basically a big steep dinner plate that kind of all started breaking up," Ruddy said. "So I kind of pointed my skis downhill and did the best I could to get out of the way, and try to ski out of the avalanche." Elliott was above the avalanche, watching in horror as his friend was swept away. "I called out 'avalanche' as soon as I knew that it was happening, and Dana tried really, really hard to outrun it, to ski out of the avalanche. But it was too big, too broad." CBC News

*** Three more deaths spur renewed calls for avalanche safety**
Experienced riders are urging fellow snowmobilers to get serious about avalanche safety after the deaths of three more sledders this week. Two Alberta snowmobilers were killed Monday while exploring the backcountry as part of a group of seven near Blue River, northeast of Kamloops, and another man died after being buried by a slide near Castlegar. So far this year, 12 snowmobilers and one skier have been killed by avalanches. While the total number of avalanche deaths in 2016 is in line with the 10-year average recorded by Avalanche Canada, officials with the safety organization say the proportion related to snowmobiling is noteworthy. According to Penny Cartwright of the B.C. Snowmobile Federation, most of those deaths could have been prevented with proper training and equipment. Between 7,000 and 8,000 people take avalanche safety courses across Canada each year, but snowmobilers only make up about 10 per cent of each class - even though they're the largest group of backcountry users, according to Avalanche Canada. Vancouver Province, A10

*** Molson Coors faces criticism for ad showing skiers going out of bounds**
The B.C. Search and Rescue Association is criticizing a Coors Light ad campaign that shows skiers having fun as they go out of bounds. The ad, which recently aired on television and was also posted on YouTube, was part of a campaign called #BraveTheCold. It shows three skiers heading down a trail while a narrator asks, "will you brave going out of bounds?" On Tuesday, BCSARA said the advertisement's messaging raised a high level of concern. "Brave The Cold focuses on the thrill of adventure ... and includes 'going out of bounds' as a 'good decision,' which is a complete contradiction of BCSARA's safety message," BCSARA said in a statement. CBC News

*** New choppers ready for action**
Fifteen new helicopters are ready for action in the Canadian Coast Guard fleet. On Monday, Fisheries Minister Hunter Tootoo, Procurement Minister Judy Foote and Canadian Coast Guard commissioner Jody Thomas accepted the last of the model 429 light lift helicopters built by Quebec-based Bell Helicopter Textron Canada Ltd. The $172-million contract was awarded in 2014 and the project delivered on budget and ahead of schedule. Dartmouth-Cole Harbour MP Darren Fisher was on hand at the Canadian Coast Guard hanger at 12 Wing Shearwater in Dartmouth Monday to inspect the newest helicopter. Another one will be delivered to the base later this month. According to a government press release, 12 of the new helicopters are already in service across the country carrying out Canadian Coast Guard missions, including at Shearwater. The remaining three helicopters are undergoing pilot training. "These made-in-Canada light-lift helicopters are faster, safer, more reliable and more efficient than the models they are replacing," said Tootoo in the release. Chronicle-Herald, A5

*** Un organisme bénévole de Rivière-à-Pierre possède de l'équipement de sauvetage**
Alors que les ambulanciers ne sont pas équipés pour s'aventurer dans des voies non carrossables, le groupe de bénévoles Recherche et sauvetage de Rivière-à- Pierre possède son propre véhicule d'urgence pour motoneige, qui aurait pu servir à sauver l'Américain tragiquement décédé, le 2 mars dernier. À la suite du décès de Glenn Dumont lors d'un accident de motoneige survenu dans le parc des Laurentides, Michel Voyer, secrétaire de l'organisme, s'explique mal pourquoi les ambulanciers à proximité des sentiers n'ont pas plus facilement accès à ce type d'équipement. «Ça prend ça, insiste M. Voyer. Les ambulanciers de notre région, ils embarquent avec nous autres, car le ministère de la Sécurité publique nous y oblige», observe-t-il. Le Journal de Québec, 19 (Le Journal de Montréal)

*** Un déversement en mer serait très difficile à contrôler**
Un déversement d'hydrocarbure en eau salée serait extrêmement difficile à circonscrire. Témoignant, mardi, devant le Bureau d'audiences publiques sur l'environnement (BAPE) qui se penche sur le projet d'oléoduc Énergie Est, le professeur Émilien Pelletier, de l'Institut des sciences de la mer de Rimouski, a expliqué qu'une nappe de pétrole en mer n'est pas homogène (...) Les audiences du BAPE portent, mardi après-midi, sur les impacts d'un déversement sur les milieux sensibles, la flore et la faune. David Berryman, du ministère de l'Environnement, a utilisé le déversement survenu lors de la catastrophe de Lac-Mégantic, en juillet 2013, comme point de référence. Il a notamment démontré que la rivière Chaudière avait été affectée de façon importante et, en plus de causer la fermeture de plusieurs prises d'eau pendant quelques mois, le déversement survenu lors de la catastrophe avait entraîné des travaux importants de décontamination qui n'avaient pas réussi à rétablir complètement le cours d'eau. La Presse Canadienne (Le Droit, 41); Le Soleil, 15

*** Vaudreuil's new signage urges trains to slow down**
Vaudreuil-Dorion has installed new speed-limit signs along freight train tracks that evoke the tragedy of the deadly Lac-Mégantic crude oil shipment derailment of 2013.
Mayor Guy Pilon said the recently installed 55 km/h speed limits for passing trains are a symbolic gesture and are not legally binding. A trio of red signs, installed in different locations along the tracks, replaced older ones that were taken down last year by the municipality. "It's to make sure the engineers who drive the train remember what happened in Lac-Mégantic and to slow down," Pilon said. "No one, not even the companies, want that to happen again." Montreal Gazette, D14

*** Les cours d'eau sous haute surveillance**
Signe de l'arrivée imminente du printemps et du temps doux, les autorités auront à l'oeil, au cours des prochaines semaines, les nombreux cours d'eau de la province afin d'y prévoir le débit et de déterminer les endroits où les crues printanières pourraient causer des problèmes (...) De fait, les températures chaudes et les faibles précipitations enregistrées au cours de la saison hivernale ne signifient pas pour autant que la province sera épargnée par les inondations durant l'année 2016. «Difficile de dire pour l'instant si ce sera une saison difficile ou non, tout va dépendre de ce que la météo va nous apporter au cours des prochaines semaines», a indiqué Nadine Caissie Long, du ministère de l'Environnement et des Gouvernements locaux. Selon elle, ce sont les précipitations, sous forme de pluie, qui vont s'abattre prochainement - ou non - sur la province qui détermineront si le Nouveau-Brunswick aura à nouveau à faire face à des risques d'inondations ce printemps. L'Acadie Nouvelle, 7; CBC News

*** Fast-flowing water a concern this week**
Warm temperatures and rain could cause floods in low-lying areas Conservation Sudbury has issued a watershed conditions statement for all parts of the Greater Sudbury watersheds effective 1 p.m. on March 15. This statement will remain in effect until another update is provided. Conservation Sudbury remains in direct contact with the City of Greater Sudbury and all other partners as required. Northernlife.ca

*** Pipe break floods ice road entrance**
A crew from the Department of Transportation was hard at work on Monday, using a grader and a front-end loader to try to smooth out the Yellowknife entrance to the Dettah ice road. That part of the route across Yellowknife Bay was badly rutted and partially flooded over the weekend after a water line break several blocks away. "We found out as early as Friday that there is water seeping in from the city's storm drains," said Michael Conway, the department's regional superintendent. "We had a grader out there and crews worked all weekend trying to move the water and slush to the side and maintain as smooth a driving surface as possible." Yellowknifer

*** Death from flu confirmed**
A Kingston-area person has died of the flu, the region's medical officer of health has confirmed. The recent death from influenza highlights the need for people to do what they can to limit the potential impact of the virus, according to Dr. Ian Gemmill, medical officer of health with Kingston, Frontenac and Lennox and Addington Public Health. The 2015-16 flu season is winding down, but, as of last week, 85 labconfirmed cases of influenza and one outbreak in a long-term care facility had been detected in the Kingston area, said Dr. Gemmill, who would not confirm the identity of the local victim. Kingston Whig-Standard, A1/FRONT

NATIONAL SECURITY / SÉCURITÉ NATIONALE

STABBING SUSPECT FACES NINE CHARGES
Ayanle Hassan Ali walked alone into the Canadian Forces recruitment office Monday afternoon, then the tall, bearded man - now accused of attempting to murder three military officers - allegedly uttered a statement that transformed a disturbing assault into a possible terrorist attack. "Allah told me to do this. Allah told me to come here and kill people," Ali is said to have declared, moments before he was subdued by army members, according to Toronto police Chief Mark Saunders. But as the details of the attack became clearer Tuesday, the possible motivations turned murky, suggesting the case may not have been simply a "lone wolf" terrorist attack. Separate sources close to the family told the Star that Ali, 27, had been struggling with both family and mental-health issues. "This has nothing, nothing to do with crazy terrorist organizations," Mariam Adam, a first cousin of Ali's mother, told the Star of the attack. "He's just a very sick person who needs help," added Adam, who lives in the United States and who lived for a time with the accused. Ali, who has no previous convictions, now faces nine charges stemming from the mid-day attack, including three counts of attempted murder against members of the Canadian Forces: Ryan Kong, Jesus Castillo and Tracy Ann Gerhardt. Gerhardt escaped unharmed, while Kong and Castillo were treated for minor stab wounds. Toronto Star, A1; Toronto Sun, A3; La Presse, 5; * Canadian Press (Record, A3)

*** Attacker said higher power drove him**
In the midst of a frenzied attack on soldiers at the Canadian Forces recruiting centre in north Toronto on Monday, the attacker declared he was driven to violence by a higher power. "Allah told me to do this. Allah told me to come here and kill people," the attacker yelled as he was wrestled to the ground after injuring two people. Those words now have authorities exploring potential terrorism charges. In a Toronto courtroom on Tuesday, police charged Ayanle Hassan Ali, 27, with a litany of offences, including three counts of attempted murder. Yet people who know Mr. Ali say he is not known as a violent fanatic. Rather, the Canadian Muslim of Somali heritage has become increasingly erratic and withdrawn. Lately, he has been given to talking about conspiracy theories, more about the Illuminati than Islam. In cases like this, police and prosecutors are finding that religious motivations and a precarious mental state can mix in the minds of the same suspects. This creates questions about motivation and culpability, and whether

crimes can truly be considered terrorism. "I think there's a lot of assumptions made that people who are mentally ill can't also be radicalized, but people can experience both. That link isn't mutually exclusive," said Amarnath Amarasingam, a terrorism researcher at the University of Waterloo... The chief said his force is working with federal investigators - including the RCMP and the Canadian Security Intelligence Service - to see if AntiTerrorism Act charges can be laid. But such investigations are painstaking, he cautioned. "It's a slow-moving process," the chief said, adding that the wider public should not rush to any judgments. "One of the things I want to be very, very careful of, when it comes to the national security piece, that we don't go through that Islamophobia nonsense."... The case bears some parallels to the events of October, 2014, when two extremists killed two Canadian Forces soldiers in attacks two days apart. Both suspects were shot dead by police. In a speech in Ottawa earlier this year, **RCMP Commissioner Bob Paulson** spoke about how the difficulties of such cases like those were compounded by questions about the suspects' mental states. "I'm very aware that a big chunk of our vulnerable potentially radicalized people in Canada may have mental-health issues," he was quoted as saying at the time. Globe and Mail, A4

*** 'Very Upset'**

"Allah told me to do this." Toronto Police Chief Mark Saunders says a 27-year-old Toronto man uttered those words Monday to people at a Canadian Forces recruitment centre on Yonge St., north of Sheppard Ave., minutes after attacking and injuring two uniformed soldiers with a knife. During a media briefing Tuesday, Saunders said that while he couldn't definitely call it a terror attack, it hadn't been ruled out in light of those cryptic comments. "While at the scene, the accused stated, 'Allah told me to do this,' " Saunders alleged. "'Allah told me to come here and kill people.' " Saunders said investigators have found no indication the man was working with anyone else or with a terror group. The chief declined to comment further on the man's remarks at the scene, but acknowledged they raise the spectre of a terror attack. "Certain comments were made that fit a profile," he said. "There needs to be more ... it can't just be one statement made." The man allegedly arrived shortly after 3 p.m. at the recruitment centre and attacked a soldier near the door. After repeatedly striking the soldier, he drew a knife and slashed him on the upper arm, according to police. As the attacker advanced, he encountered another soldier. He slashed at her, but she escaped unharmed, investigators said. The suspect was allegedly restrained by soldiers before police arrived. Another soldier received minor wounds while apprehending the suspect. Both soldiers were released from hospital Monday night. Saunders cautioned people about leaping to conclusions about the suspect's links to any religion or ethnic group in the city. Toronto Sun, A5 (Ottawa Sun, Winnipeg Sun, Calgary Sun), Toronto Star CBC News, Daily Gleaner, Presse canadienne (La Tribune), Global News; Paris Match, Le Figaro, Atlantico (2016-03-15)

*** Let it play out**

Ontario Community Safety Minister Yasir Naqvi issued a brief statement Tuesday on the attack of three soldiers at a Toronto military recruitment centre: "Yesterday's attack was deeply troubling and I am pleased to hear that the two Canadian Forces members have been released from hospital. I wish them both a speedy recovery. As you know, there are multiple investigations currently underway into this incident. I understand that the OPP are working in close co-operation with Toronto Police, CSIS, and the RCMP. It is important that we allow those investigations to take place." Ottawa Sun, A9 (Toronto Sun)

* **'Very scared, very upset'**

The man accused of trying to kill three soldiers at a recruitment office Monday is terrifi ed, his lawyer says. "(Ayanle Hassan Ali) just seems very scared and very, very upset to be in the position he finds himself in," lawyer David Burke, a member of well-known defence lawyer Calvin Barry's firm, told reporters following his client's first court appearance Tuesday. Earlier, police Chief Mark Saunders told reporters the accused said, "Allah told me to do this. Allah told me to come told me to come and kill people," after he allegedly wounded two soldiers with a knife and tried to hurt a third at the Canadian

Armed Forces recruitment office on Yonge St. in North York. Ali is charged with three counts of attempted murder, three counts of assau lt wit ha weapon, two counts of aggravated assault, and awe offence. Postmedia Network (Winnipeg Sun, A28, Calgary Sun, Toronto Sun, Edmonton Sun, Ottawa Sun)

* **Via Rail steps up security after online threat**
Employees at Via Rail have been asked to be vigilant in the wake of an online bomb threat targeting Central Station , the Dorval train station and the Saint-Lambert train station. The Journal de Montreal says the threat came via an e-mail to Via Rail's IT department. It demanded an unspecified payment in bitcoin. Investigators say similar threats have been sent to passenger carriers around the world, and this one has been found to be "baseless". Via Rail says it has still stepped up patrols by it's private security force. The Journal de Montreal says Montreal police have opened an investigation, but they are refusing to confirm the report. CJAD News

* **Charkaoui faces assault charges**
Adil Charkaoui faces three criminal charges in connection with the alleged assault of a security guard at Collège de Maisonneuve last month. The 42-year-old is expected to appear in court on Friday to be formally charged with two counts of assault and with threatening to use a weapon, a door, while committing assault. All three charges allege the victim was assaulted on Feb. 21. The alleged assault reportedly occurred on a Sunday while a gymnasium at Collège de Maisonneuve was being used for a soccer game. One media report said Charkaoui became involved in an altercation when the students who were playing soccer began throwing balls at the security guard. The incident has generated headlines because of Charkaoui's previous successful challenge of having been detained for years, without being charged, through the use of a security certificate imposed on him by the Canadian government that alleged he had ties to terrorists. Charkaoui challenged the validity of the certificate for years until it was removed in 2009. Montreal Gazette, A4

*** Menace de bombes contre des gares VIA Rail**
Plusieurs gares de VIA Rail seront sous haute surveillance ces jours-ci en raison d'une supposée alerte à la bombe. La menace, jugée non fondée, proviendrait de gens qui exigent une rançon en bitcoins. Dans une note interne dont Le Journal a obtenu une copie, VIA Rail invitait hier ses employés à rehausser leur niveau de vigilance. «Le service informatique de VIA Rail Canada a reçu un courriel de menaces exigeant une rançon en bitcoin [monnaie virtuelle] et indiquant qu'une bombe allait exploser dans une de ses gares de train le 16 mars à 18 h», précise la note. Selon nos informations, les trois gares visées seraient celles de Dorval, de Saint-Lambert et la Gare Centrale de Montréal. «Pour augmenter la sécurité de nos employés et de nos passagers, nous vous demandons d'augmenter votre niveau de vigilance dans les jours à venir », dit la note. VIA Rail confirme qu'une menace a récemment été reçue contre ses installations, sans toutefois valider le contenu de la note interne. La menace serait d'ailleurs «sans fondement», assure le porte-parole Malcolm Andrews. «Depuis quelque temps, il semble que les transporteurs de passagers, à travers le monde, font l'objet de menaces non fondées», remarque- t-il. Journal de Montréal (Journal de Québec)

*** Adil Charkaoui aurait utilisé une porte comme arme**
Adil Charkaoui comparaîtra vendredi sous des accusations de voies de fait et d'agression armée pour une altercation avec un agent de sécurité au Collège de Maisonneuve. «Le ou vers le 21 février 2016, à Montréal, district de Montréal, Adil Charkaoui s'est illégalement livré à des voies de fait», lit-on sur un document de cour que Le Journal a pu consulter. Un autre chef indique, quant à lui, que le prédicateur controversé aurait agressé sa victime alors qu'il a «porté, utilisé ou menacé d'utiliser une arme ou une imitation d'arme (une porte)». Fait à noter, Adil Charkaoui a été accusé par procédure sommaire, ce qui est moins grave que s'il avait été accusé par voie criminelle. Ainsi, s'il est reconnu coupable, il risque une peine maximum de quelques mois de prison ou une amende. S'il avait été accusé par voie criminelle, il aurait pu

écoper de 10 ans d'incarcération, advenant sa culpabilité. Journal de Québec, 32 (Journal de Montréal); CBC News (2016-03-15)

*** 'Lone wolf' terrorist attacks hard to prevent**

'Lone wolf' terrorist attacks aren't new in Canada - but they remain near impossible to prevent. In a seemingly random lone attack on Monday in Toronto, a man attempted to kill three Canadian Forces members. He faces nine charges related to the stabbings, which injured two of the officers. The motivation of the accused is not known. However, "lone wolves are particularly difficult to head off at the pass and that's because, often, their violence is driven on a combination of a personal agenda and some sort of ideological fervour that they wrap themselves in," and there can be mental health concerns as well, said James Ellis of the Canadian Network for Research on Terrorism, Security and Society, who was speaking in general terms about such incidents. "These folks are not connected to an organization that can be easily tracked - quite often they are shunned by organizations because they are too volatile, and as a result it makes it very difficult for traditional law enforcement . . . to pick them up in their surveillance net." And if they have no criminal history, they aren't on anyone's radar. "It's an opportunity for them to gain some sort of prominence . . . it's an opportunity for them to go out in a blaze of glory," he said of the lure to commit violence. With technology and the Internet, "what an individual can do today with a drone and a smart phone and good satellite mapping" gives them advantages they didn't have in the past, he added. The network's research has found that since 1960, there have been 377 incidents committed by a lone perpetrator or small groups with no affiliation. "That suggests this is not a new thing to Canada . . . lone wolves are part and parcel of the terror threat and violent extremism threat in Canada." Some previous lone wolves Parliament Hill, October 22, 2014 Cpl. Nathan Cirillo was shot and killed while standing guard at the National War Memorial in Ottawa during the unprecedented attack on Parliament Hill. The lone gunman, Michael Zehaf-Bibeau, then made his way to Centre Block, where he stormed in and was killed in a gunfight with RCMP and House of Commons officers. Saint-Jean-sur-Richelieu, October 20, 2014 Martin Couture-Rouleau was shot and killed by Quebec police after he rammed two Canadian Forces soldiers with his car, killing one, in this attack south of Montreal. He was reportedly known to anti-terrorism investigators and had tried to leave the country to fight overseas after being radicalized. RCMP later said they'd earlier taken Couture-Rouleau's passport and named him a "high-risk traveller." Toronto Star (2016-03-15)

Domestic terrorism is a terrible fact of life, even in Canada. We can't let it drive us to hate

An opinion piece states '' Canada's borders, and our distance from Islamic terrorism's epicentre in the Middle East and North Africa, can't shield us. All kinds of things are "the kinds of things" that happen in Canada. Among them, acts of terror. Police are still investigating whether Toronto was hit by a terror attack Monday, when Montreal-born Ayanle Hassan Ali barrelled into a military recruiting centre in Toronto, stabbing two Forces members and shouting, "Allah told me to come here and kill people." But whatever this investigation reveals, we should be prepared for domestic terrorism. And our reaction should, I think, be split: some outrage, and something more like preparedness. Not complacency, not anything so passive as acceptance, but understanding that this is the world, and the country, we live in now. Extremism has a platform on the web it has never had before. Dangerous ideas spread rapidly. Individuals can commit terrorism unaided, untethered to an organization. People born in Canada, and people radicalized here. Witness Parliament Hill, 2014. Canada's borders, and our distance from Islamic terrorism's epicentre in the Middle East and North Africa, can't shield us. Our intelligence and law enforcement agencies, however, aren't doing such a bad job, according to security expert Martin Rudner. Last year, the RCMP prevented 30 terrorist plots targeting Canada, Rudner said. Rudner, founding director of the Canadian Centre of Intelligence and Security Studies at Carleton University, argues lone-wolf attacks should be taken very seriously." Metro News

*** Islamist terrorism is real and it's here**

An opinion piece states, "Canadians aren't being "Islamophobic" when they worry Monday's attack on an armed forces recruiting centre in Toronto during which two soldiers were stabbed - thankfully, not seriously - might be linked to Islamist terrorism. Not when Toronto Police Chief Mark Saunders tells them the accused said: "Allah told me to do this. Allah told me to come here and kill people." Not when Prime Minister Justin Trudeau rightly tweets in response to the attack that: "Canadians - and the @Canadianforces - will not be intimidated by terror hate. May the CAf members injured yesterday make a

full recovery." We leave it to our justice system to determine whether Ayanle hassan Ali, 27, the man police have in custody charged with multiple offences in connection with the stabbings, is guilty of any crimes, or what his mental state may have been. Obviously, there will be an investigation by our security agencies to determine whether the accused, a Canadian citizen with no criminal record, is affiliated with any terrorist organizations, acted under their influence, or as a so-called "lone wolf". In that context, we understand why Chief Saunders issued a warning against "Islamophobia nonsense" in the wake of this incident. We agree with him. We must never hold all Muslims responsible for what one individual, who may not be a Muslim for all we know, is accused of doing. Toronto Sun, A18 (Calgary Sun, Edmonton Sun)

Waging peace to counter the allure of extremism

An opinion piece by Evan Hoffman, senior associate at the Canadian International Institute of Applied Negotiation, states "Not surprisingly, in the wake of the Paris attacks we've had all sorts of expert opinions on how to defeat ISIS. The approaches have run the gamut from using non-violent counter-narratives, to bombing ISIS strongholds in Syria, as Britain has recently decided to do. It also isn't surprising that we now have two very distinct camps on this issue. Those in the non-violent camp rightly proclaim that bombing will only create more terrorists, where those in the use-of-force camp rightly fear that, if left unchecked, the ISIS threat will spread and grow.The problem with all these approaches, however, is that they are only partial solutions at best. A problem as big and complex as terrorism can't be adequately addressed by a single tactic. This would be naïve and foolish.While it is true we have no past precedent to base our responses on, we know that-as with any complex problem, from preventing genocide to curbing greenhouse gasses-efforts that are multi-sectoral, multi-level and address both short- and long-term factors are required.Countering radicalization and violent extremism, whether foreign or domestic, is no different. This is a very complex problem that will require long-term efforts occurring in several different arenas simultaneously by numerous different government and non-governmental actors (e.g., legal, policy, education, policing, intelligence, etc.). Indeed, nothing short of a whole-of-problem approach will suffice.One of the areas of activity to especially focus on is working with young Canadians in order to take them out of the reach of terrorist recruiters. A recent United States study suggests that it is neo-Nazi and anti-government groups that have inflicted the most damage in the US, and not radical Muslims as is the popular perception. Other evidence clearly shows that ISIS ideology inspires would-be terrorists: it offers them an exciting meaningful purpose to life." Embassy

*** Canada must address the threat of jihad**

An opinion piece states, "By now, most of us are familiar with the sullen-looking face of Ayanie Hassan Ali, who, according to Toronto Police Chief Mark Saunders, said he was inspired by Allah to kill infidels in his name. What may be the latest chapter in Canada's brush with Islamist extremism happened around 3:00 pm Monday. According to Saunders, Ali, 27, entered a military recruitment centre in a Department of National Defence building in Toronto, pulled out a knife and stabbed a uniformed officer at the front desk. He then tried to get past the desk but was tackled by a group of military officers. One soldier was cut while stopping the suspect, according to Saunders. The two people injured suffered non-life-threatening injuries and were treated in hospital. Toronto's police chief said this incident would have been far more serious had it not been for a group of soldiers who stepped in and grappled the attacker to the ground. Even though the alleged attacker was arrested and witnesses told police they heard him say Allah had told him to kill, authorities were initially reluctant to release the name of the attacker or the precise words used in the attack. The fact the alleged attacker was likely a Muslim Canadian gave it a political dimension and, like the rest of the world, the police seemed uneasy about mentioning this." BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

New Ambassador Bridge inches closer to reality
The twinning of the Ambassador Bridge inched a step closer to reality on Tuesday after the U.S. Coast Guard issued a permit approving the Detroit International Bridge Company's location and plans for a new span. "The coast guard's permit action is based on the potential impact of the project on navigation and the human environment," said coast guard public relations officer Lisa Novak. "Outside of those parameters, we don't have an opinion on whether the bridge should be built." In a news release out of Washington, the coast guard says it completed an environmental assessment in accordance with the National Environmental Policy Act, and the coast guard determined the new bridge "would not have a significant impact on the environment." (…)While not willing to weigh in on this week's decision by the U.S. Coast Guard, a spokesman for the proposed downriver Gordie Howe International Bridge said it will have no bearing on the publicly owned project. "The announcement about the U.S. Coast Guard permit for the Ambassador Bridge Enhancement Project is a matter between the Detroit International Bridge Company and the U.S. federal government," said Mark Butler, spokesman for the Windsor-Detroit Bridge Authority. "The new Gordie Howe International Bridge is being built to provide redundancy, additional capacity, system connectivity through the Rt. Hon. Herb Gray Parkway and connection to I-75, and improved border processing, resulting in greater crossing time predictability," said Butler. Windsor Star, A3; * Detroit News, * Associated Press (Daily Journal, Brown County Democrat, Clay Center Dispatch, San Antonio Express-News, Chron, My San Antonio, Greenfield Daily Reporter, The Republic), * CTV News, * Windsorite.ca, * MLive, * CBC News, * Blackburn News, * Click on Detroit (2016-03-15)

*** Computer glitch causes truck back ups on border bridges**
A Canadian government computer glitch backed up trucks along the entire northern border at mid-day Tuesday before being resolved early in the afternoon. General Manager Ron Rienas of the Peace Bridge Authority said “extensive delays” resulted in truck lanes only after problems with Customs and Border Protection computers began about 11:15 a.m. and were not resolved until about 12:30 p.m. “This happens periodically, and it affected the entire border,” Reinas said, pointing to similar problems at other key border crossings such as the Lewiston-Queenston, Ambassador and Blue Water bridges. He said the 75-minute problem resulted in truck delays that were expected to take several hours to resolve. Buffalo News (2016-03-15)

Province's biggest cities feeling the strain of settling refugees
There is a growing movement among New Brunswick's biggest cities to ask the federal government to temporarily halt the flow of refugees as volunteer organizations struggle to keep up with demand. Both Fredericton and Moncton have asked Ottawa to temporarily delay the arrival of new refugees, while the president of the province's multicultural association says strain is being felt in Saint John as well. Mike Timani, president of the Multicultural Council of New Brunswick, says the province's major cities are temporarily at capacity when it comes to accepting more refugees. "It's a bit of a crunch, but it will ease off and we'll move forward," he said. Some 1,300 Syrians are now in Fredericton, Moncton and Saint John, said Timani. Another 200 are located at the Riverside Resort and Conference Centre in Mactaquac awaiting resettlement. Meanwhile, the Convention of Atlantic Baptist Churches says the flood of Syrian refugees has overwhelmed New Brunswick's major centres and the next wave of newcomers should be located in rural communities rather than being sent to the province's three big cities. Paul Carline, director of inter-cultural ministries with the Convention of Atlantic Baptist Churches, said nobody who's been working on the resettlement of 1,500 Syrian refugees in the province and more than 25,000 across the country has been happy with the speed of their arrival. "There was a rush on that timeline of the end of February and that really didn't have people's best interests in mind," he said. Carline said Ottawa's push to fulfil its promise on time

has negatively impacted both the Syrian newcomers and the province's three major centres. Daily Gleaner, A1 (Times & Transcript, Telegraph-Journal)

Building a nation, 300,000 newcomers a year
Immigration Minister John McCallum has announced his "levels plan" targets for immigration for 2016. The total is 300,000 and it could go higher. The plan is usually tabled by November, but this year's change in government and the frenzy around Syrian refugee arrivals delayed things until March. If the target is achieved, despite this later start toward the goal, it will be the largest number of immigrant arrivals in more than 100 years. That record happened in 1913 when Canada had a population in the eight million range, and welcomed 400,000 people. The new target reflects both a shift in numbers and in emphasis. (…)But the shift is not coming at the expense of economic immigration categories, despite Opposition clamour in the House on announcement day. The targets for immigrants such as highly skilled workers, caregivers, provincial nominees and others will remain near the average achieved in the last few years. This will still be a cause for concern among some premiers who want higher levels for their provincial programs. And issues still have to be addressed around the supply of temporary foreign workers; these stand outside the levels plan for immigrants. There will also be concern among those who sponsor refugees the allowance for new cases is again severely capped at low numbers, including Syrians, at a time when there is a public appetite to do more. The 2016 focus is on reducing those overseas backlogs, and training and equipping of staff to augment the visa posts will take time. Winnipeg Free Press

Erdogan presses Trudeau on free trade
Turkey wants a free trade deal "as soon as possible" with Canada, and Ankara's top leaders have raised the matter personally with Prime Minister Justin Trudeau and members of his cabinet, says Turkey's ambassador to Canada. Turkish President Recep Tayyip Erdogan and Prime Minister Ahmet Davutoglu brought up trade negotiations during a meeting with Mr. Trudeau on the margins of the G20 summit in Antalya in November, said Selçuk Ünal, Turkey's ambassador to Canada. Turkish Foreign Minister Mevlüt Çavusoglu also talked trade with Foreign Minister Stéphane Dion during a NATO summit in Brussels in December, and Turkish Economic Minister Mustafa Elitas spoke about the deal with Trade Minister Chrystia Freeland during the WTO meeting in Nairobi that same month, added Mr. Ünal. Finally, he said he has raised the matter himself with Global Affairs Canada. (…)Canada's mining companies stand to benefit from a free trade agreement, said Mr. Ünal, though he said it was too early to discuss specific areas the negotiations could cover. Several Canadian mining companies have gold and zinc mining projects in Turkey. The Mining Association of Canada and Prospectors and Developers Association of Canada support freer trade with Turkey and other emerging markets, spokespeople told *Embassy*. Pulse Canada also supports freer trade with Turkey and any other efforts to liberalize international trade, said Gord Kurbis, the organization's director of market access and trade policy. (…)Apart from tariffs, Mr. Kurbis said Canadian pulse farmers want Canada's government to work to reconcile differences in sanitary and phytosanitary rules and regulations with Turkey and other trading partners. Embassy

Family whose son has Down syndrome can appeal immigration 'inadmissibility,' Ottawa says
After a Costa Rican family went public with an allegation that their permanent residency was blocked due to their son's Down syndrome, Canadian immigration officials are urging them to not give up on their application. York University professor Felipe Montoya told CBC News his application for permanent residency was deemed "inadmissible" because his 13-year-old son Nico's Down syndrome would be too much of a burden on taxpayers. The family has until May 3 to respond to a "procedural fairness letter," which was sent by federal officials last December

that outlines the government's concerns, Citizenship and Immigration Canada spokesperson Nancy Caron said in an email statement. The family may still be able to get permanent residency if they can explain how they will cover any costs associated with Nico's Down syndrome. CBC News (2016-03-15)

CYBER SECURITY / CYBERSÉCURITÉ

*** Google aims for more encryption**
Google is disclosing how much of the traffic to its search engine and other services is being protected from hackers as part of its push to encrypt all online activity.
Encryption shields 77 per cent of the requests sent from around the world to Google's data centres, up from 52 per cent at the end of 2013, according to company statistics released Tuesday. The numbers cover all Google services except its YouTube video site, which has more than one billion users. Google plans to add YouTube to its encryption breakdown by the end of this year. Encryption is a security measure that scrambles transmitted information so it's unintelligible if it's intercepted by a third party. Google began emphasizing the need to encrypt people's online activities after confidential documents leaked in 2013 by former National Security Agency contractor Edward Snowden revealed that the U.S. government had been vacuuming up personal data transferred over the Internet. The surveillance programs exploited gaping holes in unencrypted websites. Associated Press (Chronicle-Herald, B2; London Free Press)

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Government tech support putting RCMP, public safety at risk, documents reveal**
Internal RCMP reports and emails obtained by CBC News show that Shared Services Canada's takeover of the Mounties' tech support has been a costly disaster that has jeopardized court cases and investigations while putting the safety of officers and members of the public at risk. The documents received through access to information include correspondence from RCMP Commissioner Bob Paulson in which he refused to give SSC any more control over the Mounties' information technologies. SSC is the federal department created in 2012 to take over the delivery of email, data centre and network services for 43 government agencies, including the RCMP. By all internal accounts, its work on behalf of the RCMP has been a fiasco. At a Sept. 25, 2015 meeting between Paulson and SSC president Liseanne Forand, the commissioner highlighted a number of examples where the department's mistakes and oversights have affected policing operations, including... Overall, the documents raise serious concerns about three major areas — safety and security, loss of service or information, and cost to taxpayers. A January 2014 memo to Paulson from the RCMP's civilian IT employees highlighted dozens of concerns. In December 2013, Mounties reported having to spend almost $1 million to sustain systems critical to two special units, including one that investigates online child sex assaults, because SSC "is neither willing nor able to purchase" the equipment required. "There is simply no appetite to fix any systems until they have failed. When this happens, it will be too late. RCMP will lose court cases," the group of employees told Paulson... "Shared Services has not been paying their bills. Vendors have threatened and have cut-off service to various units such as Shaw Cable, disrupting operations to the RCMP. There is risk to the front line," the employees warned Paulson. Several more egregious examples of ineptitude include how SSC couldn't get the newly opened Berens River RCMP detachment any kind of telecommunications service for two years... No one from the RCMP or Shared Services Canada responded to our requests for comment on the documents. However, in Paulson's Nov. 25, 2014 letter to Forand, the commissioner wrote that the department's proposal to manage even more of the RCMP's information technologies "pose unacceptable risks to public safety, protection of RCMP members and policing across Canada." Paulson went on to explain how he is compelled to exercise his authority to refuse the Mounties' participation in the next phase of Shared Services Canada. CBC News

Two groups duel to represent Mounties

The RCMP may be set for an old-style unionization war as a new organization has sprung up to compete to be the national bargaining unit for Canada's Mounties, the Star has learned. Calling itself the National Police Federation (NPF), the group incorporated last week in order to launch a national certification drive among some 17,000 RCMP front-line policing officers and reservists. This latest development means two organizations - the NPF and the Mounted Police Professional Association of Canada (MPPAC) - are jockeying to become the bargaining agent as a Liberal bill to allow unionization is rushed through parliamentary committee before May 15. That's the extended legislative deadline set by the Supreme Court of Canada, which ruled last year the Mounties have a right to be represented by a bargaining agent that is independent from management. The unionization drive is shaping up as a competitive race. Among the new group's leadership ranks are members of the RCMP's now defunct staff relations representative program - dismantled suddenly via a Feb. 12 internal memo from the RCMP Commissioner Bob Paulson that left Mounties in a labour relations vacuum, and warned them against speaking to media, ministers or MPs about RCMP matters without authorization. The NPF is also drawing on the ranks of its competition. It counts among its co-chairs a former member of the Mounted Police Association of Ontario's executive, Sgt. Pete Merrifield. Merrifield is also plaintiff in a high-profile harassment lawsuit against the RCMP. The MPAO was among three provincial associations to successfully challenge the RCMP's non-unionized labour relations scheme at the Supreme Court. Toronto Star, A6

RCMP clear 24 senators of wrongdoing

The RCMP have ruled out pursuing criminal investigations against 24 of 30 current and former senators whose expenses were flagged by Auditor-General Michael Ferguson after a two-year forensic audit of the Red Chamber, sources say. The Auditor-General's comprehensive audit, released last June, named nine current and former senators whose files warranted RCMP investigation and another 21 whose expenses were questionable. The Mounties decided to review the expenses of all 30 and sources said those probes are nearly complete. "The RCMP has exonerated - in writing - 24 of 30 senators and there are six files left," a source said. "They investigated thoroughly and they did not find anything to warrant any formal investigation of anyone." Another source said RCMP investigators expect that the remaining six senators will also be cleared of any wrongdoing, citing a lack of "strong evidence." Unlike the case of Conservative Senator Mike Duffy, the source said the RCMP do not have detailed diaries of these senators to help in their probe. Five of the senators still under investigation were on the list of the nine that the Auditor-General recommended to be referred to the RCMP, according to two sources. They are: Liberal Senator Colin Kenny and former senators Rose-Marie Losier-Cool (LiberalN.B.); Marie Charette-Poulin (Liberal-Ont.); Donald Oliver (Conservative-N.S.); and Gerry St. Germain (Conservative-B.C.). Conservative Senator PierreHugues Boisvenu and retired Liberal senators Rod Zimmer, Bill Rompkey and Sharon Carstairs received letters from the Mounties saying there was no evidence to mount a criminal investigation. The expenses of a sixth senator, which were questioned by the Auditor-General, are also being reviewed by the RCMP. The Globe and Mail was unable to confirm the name of that senator. Sources say the senator has not yet been interviewed by the RCMP. "Generally, the RCMP and Crown don't like to prosecute unless they have a good case," former House of Commons law clerk Rob Walsh said. "I suspect after Duffy, they don't feel they have good enough cases to warrant prosecution." Mr. Duffy was charged with 31 counts of fraud, breach of trust and bribery. Justice Charles Vaillancourt is set to deliver a ruling in the case on April 21. The RCMP would not comment on the state of its Senate investigation and when it expects to close its files. "Generally, only in the event that an investigation results in the laying of criminal charges, would the RCMP confirm its investigation, the nature of any charges laid and the identity of the individual (s) involved," RCMP Corporal Valerie Thibodeau said in a statement to The Globe and Mail. Globe and Mail, A1; * News Talk 1010

Suspect charged, held in custody

A 21-year-old Red Deer man is accused of shooting up the downtown RCMP detachment with a replica firearm and allegedly threatening to torch the building. Shots were fired from a passing vehicle at the RCMP station at 4602 51st Avenue shortly before 4 p.m. on Monday. second-storey windows at the detachment were pebbled by the rounds' impacts but did not shatter due to a protective coating. RCMP said the trouble began with a 3: 15 p.m. report that the occupants of a maroon truck were taking potshots at street signs in the Normandeau area. A second call around 3: 30 p.m. pegged the location of the truck

near the downtown detachment when the two windows were hit. When the damage was discovered, police evacuated the public from the building, and the large windows were checked to make sure they wouldn't shatter. The truck's driver was soon identified and with help from the public police tracked the vehicle to the Bower subdivision. Two men and two women were taken into custody after a "highrisk arrest" near Boyce Street and Beatty Crescent about 4 p.m. Police took all four into custody and recovered a BB pistol believed to have been used to fire the shots. Cory Daniel Picard has been charged with using an imitation firearm in the commission of an offence, possession of a weapon for a dangerous purpose, mischief damage to property over $5,000, and uttering threats. RCMP said he was alone in the back seat of the truck. The driver and two other passengers were released without charges but the investigation continues. Red Deer Advocate, A1 (Times Colonist); * Postmedia News (Edmonton Journal, A9); * Calgary Sun, A19

12 days in holding cell

After learning a 19-year-old woman spent 12 consecutive days in a barren RCMP cell under 24-hour lockdown, a territorial court judge ordered her immediately sent to the women's jail in Fort Smith. Judge Robert Gorin told court Friday the RCMP detachment isn't suitable for holding prisoners more than a couple days. "The cells at RCMP are meant to hold people overnight," said Gorin. "We have a women's facility in Fort Smith and it's not being used." Tamara Simpson pleaded guilty to trafficking after selling a gram of cocaine to members of a federal RCMP investigations unit last summer. She was taken into custody Feb. 29 and remained in RCMP cells until Friday when Judge Gorin ordered her transfer. It's up to the courts to decide where a person in custody will be remanded, said RCMP spokesperson Const. Elenore Sturko, who confirmed by e-mail the woman was held at the detachment. "Unfortunately there is no other facility which is used to house female prisoners in Yellowknife at this time," she stated. According to Crown prosecutor Brendan Green, a series of short adjournments kept Simpson behind bars at the RCMP detachment. Whereas men awaiting court appearances in Yellowknife do so at the North Slave Correctional Centre where they have access to the outdoors, television and visitors, women must either be sent to Fort Smith, or wait at the detachment. Lights are kept on 24-hours a day at RCMP cells, no visitors aside from lawyers are permitted and no phone calls aside from lawyers allowed. The concrete room has no window and no pillow. Simpson first went before a justice of the peace Tuesday, March 1, who set a bail hearing for March 3. That hearing was adjourned to the next day, then adjourned again to the following Monday, March 7. She was denied bail that day. Green couldn't say why she was denied. The Crown sought to have the sentencing hearing take place March 9 but the defence opted for Friday, March 11. Simpson remained at RCMP cells until that time. Because Judge Gorin needed more time to consider his sentence, that is now set for Friday. Yellowknifer

Elsner asks court to stop probe into alleged improper Tweets

Victoria's chief constable is trying to stop an investigation ordered by the police complaint commissioner into allegations he sent inappropriate Twitter messages to the wife of a subordinate officer. In a petition filed Tuesday in B.C. Supreme Court in Vancouver, Frank Elsner is seeking an order to stop RCMP Chief Supt. Sean Bourrie from investigating the Twitter allegations. Elsner is also trying to prevent the search of his electronic devices and telephone records. Elsner is also asking the court to order police complaint commissioner Stan Lowe to remove from his website the 12-page order outlining the allegations against him. In the petition, Elsner claims Lowe has no authority to order an external investigation into conduct that has been the subject of an internal investigation. In August, Victoria Mayor Lisa Helps and Esquimalt Mayor Barb Desjardins, co-chairwomen of the police board, received information that Elsner had exchanged Twitter messages with a Saanich police officer who was the wife of one of Elsner's officers. They brought the information to the attention of the police complaint commissioner. The matter was treated as an internal discipline matter. On Dec. 4, Helps and Desjardins told the board that Elsner had been disciplined following an internal investigation, and the board expressed confidence in the police chief. The two mayors decided not to make the matter public on the grounds that it was a confidential personnel matter. Two days later, the story was leaked to a reporter. Elsner apologized, saying he was "deeply humiliated." Times Colonist, A1

*** RCMP referrals spark racial profiling concern**

Immigration advocates raised concerns after the *Straight* presented them with statistics on police and RCMP referrals to the Canada Border Services Agency (CBSA). The numbers obtained via a CBSA

freedom-of-information request reveal stark discrepancies in how municipal police forces and RCMP detachments refer cases to the federal agency tasked with immigration enforcement. "This might reflect racism and ethnic profiling," Byron Cruz, an activist and member of Vancouver's mayor's working group on immigration, said in a telephone interview. Cruz said the issue is immigrants' health and safety. "We can see women who have suffered from domestic violence in situations where they don't call the police," he explained. The Vancouver Police Department has the highest numbers, having contacted CBSA on 144 cases in 2015 (up to December 7). That was down from 321 in 2014 and 165 in 2013. Surrey RCMP takes second place, with 114 referrals in 2015, down from 265 in 2014 and 178 in 2013. In third place is Richmond RCMP, which referred 30 cases to CBSA in 2015. Burnaby RCMP had 23 referrals, and North Vancouver RCMP had 21. Across the Lower Mainland, there were a total of 456 police and RCMP referrals to CBSA last year. Georgia Straight

*** Auto theft training for RCMP debuts in Red Deer**

About 35 Red Deer RCMP members gathered with officers from around Alberta and British Columbia for a twoday training session on investigating auto theft in Red Deer on Tuesday. Hosted by the Insurance Bureau of Canada, it's the first time Provincial Auto Theft Network (PATNET) training has been available outside the Atlantic region where it began in 2010. Red Deer RCMP Supt. Scott Tod said PATNET will give his officers a chance to network, share strategies and create a more co-ordinated approach to investigating property crime like vehicle theft which has increased significantly over the last three or four years in the city. Red Deer Advocate, A2

*** Nouveau parcours pour le Défilé de la Saint-Patrick**

Pour sa septième édition, le désormais traditionnel Défilé de la Saint-Patrick de Québec, qui se tiendra samedi après-midi, empruntera un nouveau parcours. Avec comme point de départ le coin Fraser et De Salaberry, le millier de participants attendus déambulera dans l'avenue Cartier, la Grande Allée, la rue Saint-Louis et la rue du Fort, pour terminer son itinéraire sur la rue Saint-Jean. «Ce nouveau trajet [qui évite de traverser Honoré-Mercier] permettra de limiter les arrêts pendant le défilé», a expliqué, mardi après-midi, en conférence de presse, le président de l'événement, Stephen Burke. M. Burke n'était pas peu fier d'annoncer le retour des groupes de cornemuses et percussions de la police de New York et de Chicago. En l'absence de leurs collègues de Boston, retenus à leur propre défilé dimanche, les organisateurs accueilleront les musiciens du Toronto Fire Services Pipes and Drums. La foule verra également défiler des formations musicales de Québec et Montréal, des troupes de danse celtique, des amuseurs publics, des lévriers irlandais, sans oublier deux chevaux du Carrousel équestre de la GRC. Le Soleil, 22

*** Plans for P.E.I.'s first medical marijuana dispensary to open in Summerside**

Craig Gaudet of Summerside, P.E.I., hopes to open the Island's first medical marijuana dispensary this April. Gaudet says he already supplies medical marijuana to people who have approval in P.E.I., but wants to make it easier for others to get medical marijuana at one central location. He told CBC he's already picked out a location - on Water Street in Summerside. He's hoping to open in April. "I really want to help more people. Our patients are having to travel from end to end on the Island just to be able to get their treatments and get their medications. We can't even buy medications here on the Island, we have to send away and get it through the mail," he said. A former reservist, Gaudet says he uses medical marijuana himself to manage pain from an injury he sustained in the 1980s, when his legs were crushed by an army vehicle. Gaudet plans to carry 186 products, and said he will do more than just dispense. "We spend time with our patients, making sure of their medications, making sure their doses, finding out about their licensing, what they are recommended to take per day, how they're taking it per day and helping people find and obtain a license is a lot of what we do," he said. Health Canada says the dispensaries that have been cropping up across Canada for the past 20 years are illegal. CBC News

*** LED light thiefs nabbed**

Northeast District RCMP have arrested three men in connection with an investigation into the thefts of LED light bars on the Acadian Peninsula. On March 11, police arrested a 23-year-old man from Hacheyville and seized a light from his vehicle. Also on March 11, as part of the investigation, RCMP executed a search warrant at a home in Six Roads where a 32-year-old man was arrested at his residence. A total of six light bars were seized. Both men were released from custody and are scheduled

to appear in court at a later date. Since the middle of February, the RCMP on the Acadian Peninsula have been investigating the thefts of LED light bars from all-terrain vehicles and boats. The thefts took place in the Le Goulet, Sainte-Rose and Tracadie areas. On March 14, RCMP arrested 23-year-old Louis-Philippe Bulger-Landry of Haut-Sheila in connection with the investigation. He appeared in Caraquet provincial court on March 15 and was charged with operating a motor vehicle while pursued by police and dangerous driving in relation to his arrest. Times & Transcript, A10

***Second person charged for P.A. man's homicide**

A second person has been charged with murder in connection with the death of a Prince Albert man who was missing for nine months. RCMP announced Tuesday that Skylar Patrick Bird, 29, is charged with first-degree murder in the death of Troy Cecil Napope, who went missing last May. Napope's sister, Christie, said news of the arrests has conjured up mixed feelings. "I was really relieved and really sad at the same time ... it was heartbreaking for us," Christie Napope said in an interview Tuesday after seeing Bird appear in court in Prince Albert. Bird is one of two people charged in the case. On Monday, 27-year-old Braidy Chase Vermette appeared in Prince Albert provincial court, charged with first-degree murder in Napope's death. RCMP said Tuesday that Napope, Vermette and Bird were all known to each other. According to an RCMP news release, Bird was charged on Feb. 25 with one count of forcible confinement and one count of arson in connection with Napope's death. He made his court appearance on those charges on Feb. 26. "Further investigation resulted in the charge of first-degree murder, which will replace the two charges laid on Feb. 25," the release stated. StarPhoenix, A3

*** Solving a homicide**

An editorial states ''The RCMP says that redeploying Mounties to tackle terrorism has strained its resources. The Toronto Police Service says it's so stretched it needs photo radar to free up uniformed officers. Across Canada, officers are feeling the heat as they struggle to meet public expectations for cracking down on crime. It's no surprise, then, that the Ottawa police are under intense scrutiny after the fifth homicide of 2016 - the third in less than a year in the same part of the city. The death of Nooredin Hassan has been quickly politicized: Area Coun. Tim Tierney demanded a meeting with police Chief Charles Bordeleau, then presented a "sevenpoint plan" for the Jasmine Crescent area where the homicide occurred. Bordeleau responded with an article in the Citizen, doling out statistics about arrests, weapons seized and the redeployment of staffto the guns and gangs unit. This political jockeying hasn't been entirely useless: The councillor has made some useful suggestions, and the chief has reached out to specific organizations that can help. All sides have urged community members to come forward with information, even if anonymously. Ottawa has cleaned up violence-ridden neighbourhoods before and can do so again. But the blame for such crimes should be placed squarely where it belongs: not on police, not even on politicians, but on the perpetrators themselves. (Indeed, Canadian cities, including Ottawa, have a pretty strong record tackling violence. The most recent crime-rate statistics, for 2014, show the police-reported crime rate at its lowest since 1969. Ottawa's own numbers, measured against a variety of national markers, are pretty healthy.)'' Ottawa Citizen, A8

Health firings the story that won't end

An opinion piece states **''**While ombudsperson Jay Chalke conducts the latest investigation into the botched firings of a group of drug researchers, the leaked findings of an earlier investigation raise disturbing questions about the B.C. Liberals' handling of the affair. Why did the Liberals order the internal investigation into allegations of wrongdoing by the researchers when they had already, in effect, pronounced the accused guilty by firing them? Why did the Liberals allow the investigation to proceed, even as they were admitting the wrongheadedness of the firings via out-of-court settlements, reinstatements and apologies? ... The health firings followed in September 2012 along with the government announcement that it was calling in the RCMP and the comptroller general. Then came suits for wrongful dismissal, the suicide of one of the fired researchers and, starting in 2014, a series of out-ofcourt settlements, reinstatements and apologies. Still, the office of the comptroller general continued to investigate amid mounting questions about why it was taking so long and whether there was much point in light of the public backdown on the firings. Finally, in the spring of last year, the investigation was completed, two and a half years after the firings and a year after the first of the reinstatements. The findings were passed along to the RCMP, which had closed their barely active file on the investigation for

lack of evidence in 2014 and only reopened it on learning (as a result of a different leak to The Sun) of an ongoing investigation by the comptroller." Vancouver Sun, A10

*** Non-lethal weapon**

An opinion piece by Daniel Bear, professor of criminal justice at Humber College's School of Social and Community Services, states "No person viewing video of the shooting death of Sammy Yatim on a streetcar would hesitate if given the opportunity to magically replace Constable James Forcillo's handgun with one of the Toronto Police Service's newly acquired beanbagshooting shotguns. Such a switch might have saved Mr. Yatim's life, Constable Forcillo's career and whatever amount of the community's trust and confidence in police that was lost that night in 2013. But in even acknowledging that less-lethal weapons may be preferable in specific situations, we must ask ourselves if the continued expansion of those options supports our larger goals for what policing should be in the modern Canadian context. Over the past few years, police forces in several cities, the RCMP and Corrections Canada have adopted new less-lethal weapons that fire projectiles meant to disable rather than kill. They are intended for two primary situations: non-compliant individuals and crowd control. Recently, Toronto Police added blaze-orange shotguns designed to shoot a "super sock round." Like the tasers already used by the force, the sock guns are deemed less lethal, but both beanbags and tasers have killed and maimed before. The primary argument for adding the shotguns is that they provide officers a longer-range option when faced with situations that are dangerous but do not involve an imminent threat to life or grievous bodily harm." Globe and Mail, A10

*** Keeping politicians honest**

An opinion piece by Lauren Heuser, lawyer and journalism fellow at the Munk School of Global Affairs, states " "In politics, questions of ethics cannot be left to the judgment of individual politicians. Clear rules are essential for establishing the standards public officials must meet and the consequences for failing to do so. This point has recently come to the fore with Canada's new justice minister. In the past few weeks, Jody Wilson-Raybould has faced two conflict of interest allegations: the first over revelations that her husband, Tim Raybould, belatedly registered to lobby the justice department on behalf of his First Nations clients; and the second over news that she will be making policy on B.C.'s controversial Site C dam, a project that she protested against before becoming a member of Parliament. Fortunately, the Conflict of Interest Act, Canada's key ethics legislation for federal office holders, includes rules that govern conflicts of interest and does not leave it to impugned individuals to judge whether their conduct is permissible or not. The conflict of interest and ethics commissioner provides expert advice on precisely such matters. Unfortunately, the standard for what constitutes a conflict of interest under the act is far too lax and the penalties that can be imposed for violating its rules are far too inconsequential and uncertain… For example, Ethics Commissioner Mary Dawson's investigation into former chief of staff Nigel Wright's $90,000 payment to Sen. Mike Duffy may well have led to findings that Wright violated the act (the investigation was suspended when a RCMP criminal investigation began). But one can question whether then-prime minister Stephen Harper would have done anything about it, not least because his complicity in the wrongdoing was a live question." National Post, A8

*** Proposed gun registry law draws praise from many sides**

A coalition of police, public health and victims' rights organizations held a news conference Tuesday to express their support for Bill 64, a proposed gun registration law. The Quebec Association of Provincial Police and the Association pour la santé publique du Québec said the long-gun registry was abolished by the federal government, which means they can now be "purchased and transferred without leaving a paper trail." Bill 64, which goes before a parliamentary committee next week, calls for non-restricted firearms to come with a registration number and for business owners to keep a chart tracking the sale of weapons. The organization said Tuesday that 94 per cent of guns in circulation in Quebec are non-restricted - a category that includes hunting rifles but also assault weapons. Pierre Veilleux, president of Quebec's provincial police union, said these tracking measures are crucial to ensure that guns "don't fall into the wrong hands." Bill 64 would be a useful tool for police, he said, because they can better manage interventions knowing if a person owns weapons or not. Yves Francoeur, the president of Montreal's police brotherhood, said gun legislation is an "essential component" that would help police who cannot otherwise rely on a federal gun registry. La Presse Canadienne (Gazette, A2); Le Quotidien, 15

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Lockdown lifted
The lockdown put in place last Thursday at the medium-security unit at Collins Bay Institution has been lifted. The lockdown was ordered so staff could conduct an exceptional search of the institution. Normal operations and visits have resumed, said a news release from Correctional Service Canada. CSC did not say if anything significant was found in their search. Kingston Whig-Standard, A3

Shepard due for release Friday
An elderly woman known as the Internet Black Widow has agreed she won't be romancing any men once she's out of prison unless police are first informed, but it's possible she'll fight this and other conditions of her release at a future court date. Melissa Ann Shepard, now in her early 80s, is set for release from a federal women's jail in Truro on Friday, after being denied parole and serving her full sentence. In her latest conviction in June 2013, she was sentenced to two years, nine months and 10 days in jail for spiking her newlywed husband's coffee with tranquilizers. (…) In 2005, Shepard was also sentenced to five years in prison on seven counts of theft from a man in Florida she had met online. A recent parole board report that said Shepard has a tendency to fabricate and deny events to correctional staff, and is unable to link consequences to actions. Canadian Press (Chronicle-Herald, A1, Kingston Whig-Standard, Whitehorse Daily Star, Cape Breton Post, Times & Transcript, The Guardian, Windsor Star, Leader-Post, Ottawa Sun, London Free Press, Toronto Star, Montreal Gazette, National Post, Edmonton Journal, Ottawa Citizen, Calgary Herald, StarPhoenix); Presse canadienne (Le Droit, L'Actualité)

La mère de la victime pleure encore la perte de son fils
Si l'avocate qui représente les intérêts du meurtrier André Roy a fait entendre plusieurs témoins et experts pour que son client puisse bénéficier d'une libération anticipée, la couronne, elle, n'a déposé en preuve qu'une simple lettre, écrite par la mère de la victime, Victor Lemay. «Je me demande souvent si Victor aurait continué à étudier pour créer des jeux vidéo. Il était très bon en dessin et il avait beaucoup d'imagination», enchaîne- t-elle. «La prison à vie pour moi, ce n'est pas que vingt-cinq années. Pour moi, en tant que mère de Victor, ce sera le restant de mes jours», a écrit Madeleine Lauzé dans une brève missive qui a été transmise aux membres du jury. (…) Comme la preuve est maintenant fermée des deux côtés, le juge devrait donner ses directives, aujourd'hui, aux membres du jury qui, par la suite, seront séquestrés. Si jamais ils acceptent la requête présentée par Roy, ce dernier pourra alors déposer une demande devant la Commission des libérations conditionnelles du Canada pour être entendu, dans l'espoir de bénéficier d'un retour progressif dans la société. Journal de Québec, 13

*** Bad grandpa**
Manitoba's highest court has ordered that a man convicted of sexually abusing four young girls - three of them his grandchildren - serve an additional 2 1/2 years in prison. The 70-year-old accused pleaded guilty to four counts of sexual interference and was sentenced last year to 5 1/2 years in prison. In a written decision released Tuesday, the Manitoba Court of Appeal ruled the sentence unfit and replaced it with a sentence of eight years. The high court ruled provincial court Judge Tim Killeen erred when he calculated what he considered to be an appropriate total sentence, and then apportioned individual sentences for each offence, rather than decide the individual sentences first. Winnipeg Sun, A6

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** La criminalité baisse encore**
Malgré une hausse des crimes contre la personne et des arrestations pour conduite avec les capacités affaiblies, la criminalité continue globalement à diminuer à Bromont. « En deux ans, la criminalité a diminué de 20 %, ce qui est important. Oui, il y a certains écarts, mais rien de dramatique. Le résultat global, en fonction de la population qui croît, est satisfaisant », a indiqué le directeur du service de police de Bromont, Jean Bourgeois, lors de la présentation du rapport annuel de l'organisation, mardi. Une diminution de 17 % de la criminalité avait été enregistrée en 2014. En 2015, la baisse a atteint 3,5 %. Les

crimes contre la personne ont grimpé de 21,7 %, passant de 46 à 56. Une statistique à nuancer, par contre, car les policiers ont reçu plusieurs plaintes croisées (les deux personnes impliquées dans une altercation portant plainte), ce qui fait augmenter les chiffres relatifs à ce type de crime. Les vols de moins de 5000 $ ont connu une importante diminution de 35,7 %, passant de 56 en 2014 à 36 en 2015. Les autres infractions au Code criminel - tel que les bris de condition, la possession de stupéfiants, les délits reliés à la conduite automobile - sont en baisse. On en a dénombré 125 en 2014, contre 105 en 2015. Voix de l'Est, 4 (La Presse)

* **Saskatoon group continues call to end police carding, questions police budget**
A rally in Saskatoon called for the city's police service to end carding and scale back government funding for law enforcement. Tuesday marked the International Day Against Police Brutality, and a group of about 40 gathered at Pleasant Hill Park in Saskatoon to share stories of how they've been mistreated by police through carding; an investigative tactic that allows police officers to randomly stop, question, and document individuals when no criminal offense has been committed. (...) Rally organizer Kota Kimura said carding remains a big issue in Saskatoon, but he's also hoping to win the ear of politicians to change the way law enforcement agencies are funded. "We have four demands in light of International Day Against Police Brutality. First one is to end carding the second is to smash police racism," Kimura said. "More importantly there are some structural issues we want to address. We believe police are getting a disproportionate amount of money, they're getting millions of dollars from the City of Saskatoon when many community organizations and social programs are getting their funding cut and some services are facing closures." CBC News

* **Police budget in red**
The Thunder Bay Police Service is $325,000 in the red for 2015. Police Chief J.P. Levesque reported to the Thunder Bay Police Services Board Tuesday morning that their approved operational budget for last year came in with a 0.087 per cent deficit. That number is considerably lowering than the negative variance of 1.73 per cent or $639,000 projected in October after the third quarter. "We'd be happy if it wasn't a negative variance but it's better than what we had projected, so we're pleased with that," said Levesque. The improvement in the variance came after some unexpected funding for the police service's cyber crime unit from the province. The remaining deficit comes from items that are usually underfunded like overtime and legal fees, said the police chief, adding that 91 per cent of the budget goes towards wages and benefits. Chronicle Journal

* **Services policiers en milieu autochtone : des communautés de la région demandent un meilleur financement**
Le budget du service de police de Lac-Simon est de 1,3 million de dollars pour 5 ans. La communauté connait actuellement un manque à gagner de 300 000 $. « On manque d'argent actuellement pour servir notre corps de police. Juste un exemple, on manque d'autos-patrouilles. Nos autos-patrouilles sont au bout du rouleau », illustre Jean-Marie Papatie, conseiller à Lac-Simon. La communauté de Pikogan, près d'Amos, vit aussi une problématique de sous-financement de son corps policier. Le chef, Bruno Kistabish, explique qu'« il manque deux personnes à temps plein et deux personnes à temps partiel pour combler les horaires, pour avoir toujours deux policiers dans le véhicule. De prime abord, je dirais qu'il en va de la sécurité de nos employés qui sont les policiers, mais il en va aussi de la sécurité de nos membres qui habitent sur la communauté. » Cette problématique se vit dans plusieurs communautés, selon le député d'Abitibi-Baie-James-Nunavik-Eeyou. Romeo Saganash. Il affirme qu'Ottawa doit réformer le programme pour mieux répondre aux besoins des communautés. Radio-Canada

* **Mayor Brian Bowman grills Winnipeg police over planned layoffs, budget shortfall**
A special meeting of the city's executive policy committee got heated in Winnipeg on Tuesday. The committee is mulling over details of the Winnipeg Police Service's $2.45-million budget shortfall. The preliminary 2016 police service budget includes plans to lay off 40 of 68 cadets, cancel the 2016 recruitment class and lay off 20 of 37 members enrolled in the class, the police board revealed at its meeting Friday. Mayor Brian Bowman and the executive policy committee grilled the police board on Tuesday morning over its proposed layoffs. The city has already offered to boost funding to the police service by 6.3 per cent this year, but it's not enough, according to outgoing police Chief Devon Clunis.

The police board is asking the city to shell out more money to help cover the shortfall. CBC News (2016-03-15)

*** Wanted : Political champion to take on gangs in North Central**
A large fence around a home on the 1300 block of Cameron Street has a beautiful mural on it. The homeowner had a community group paint it as part of a neighbourhood improvement initiative. Then a well-known local gang tagged it. This is North Central. Home of the most crime in the city. Ground zero for gangs and the young people being recruited into them. Warren McCall, the NDP candidate running to represent the people of the neighbourhood for another term, grew up here. He still lives in the area - within a block of the tagged mural. "There was a time when I think we had a better handle on even the little things like that, in terms of being vigilant about not giving ground to the gangs in things like tagging and marking out turf, but that has slid over the years," he says. In an effort to stop that slide, community members organized a brainstorming session this week to talk about ways to make the neighbourhood safer - to alleviate the inevitable tragedy gangs bring to any neighbourhood. (…) McCall said long-term funding for specific programs targeting gang exits are "missing in the battle right now" and a properly resourced program is needed. Competing for the same seat this election is Bill Stevenson, who has his own experiences with gangs. "Gang violence has touched my life in many ways. It's touched my family," he said, adding he thinks investments in education and housing will go a long ways to improve conditions within North Central. Leader-Post, A3

*** Children must be armed with the right tools to battle abuse, conference hears**
Children must be empowered through proper sex education in order to keep them safe, a group of community members heard on Tuesday at a child safety conference. The more than 100 people at the conference, hosted by Big Brothers and Sisters at the Delta Hotel, were in awe as panelist Jessica Lanigan shared her story of sexual abuse and the need for blunt education. (…) In 2008, Saint John had the notorious distinction of having the highest rate of violence against children and youth in the country, according to a Statistics Canada Incident-based Uniform Crime Reporting survey. (…) Lanigan said such education needs to be part of daily conversations because about 30 per cent of girls and 20 per cent of boys will encounter unwanted sexual experiences before the age of 18. Panelist Bill Reid, the former Saint John police chief, said in his remarks that in 2015 alone, the force's family protection unit handled 80 reports of sex offences where the victim was under the age of 17. In 36 of those cases, the victim was under the age of 12, he added. "Additionally, there were 169 reports of family violence," he said. "This is precisely why education is so critical to prevention and awareness." Telegraph-Journal, B1

*** Deadly illegal drug**
Local police are warning Ontarian's about a new illegal drug that is deadly. While W-18 hasn't been found on the streets here it has been reported in Calgary and police say it's only a matter of time before it arrives in our neck of the woods. You won't find the drug in any pharmacies. It is an illegal drug that is being sold on the streets as fentanyl or oxycodone pills. It's 100 times stronger than fentanyl patches prescribed by doctors to manage pain and can be addictive. One tablet could be ten times more potent than another tablet which can cause a lot of risk as well for overdose. The man made synthetic opioid is also 1000 times stronger than morphine. These pills come as long acting medications, so they are released over a long period of time. If you crush these pills you end up releasing all of the medication at once. That's where the risk of potency comes and risk of over dose. Both Hamilton and Niagara police have seen an increase in pharmacy robberies specifically targeting fentanyl. Halton police say there has been a consistent number of pharmacy robberies in that region. CHCH News (2016-03-15)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Chief loses credibility**
An editorial states, "Canada used to have three levels of government: municipal, provincial and federal. Now, we've apparently got another layer of bureaucracy, at least when it comes to pipeline applications: aboriginal. "TransCanada will be forced to abide by Mohawk law, including the prohibition to pass the

pipeline through Mohawk lands and waters," says Mohawk Kanesatake Grand Chief Serge Simon regarding the Calgary company's Energy East application. (...) Further, where does Simon think the money is coming from to combat social problems that afflict aboriginals? The federal Liberal government has already committed to spending about $40 million over the next two years on an inquiry into missing and murdered aboriginal women. Now, the national chief of the Assembly of First Nations is calling for a strategy to combat suicides among indigenous communities. "Our young people need hope and inspiration," Chief Perry Bellegarde said. "They don't see that right now. We've got to make those key strategic interventions now. It's a life-and-death situation.'" Calgary Herald, A9

PUBLIC SERVICE / FONCTION PUBLIQUE

Brison to 'work closely' with commissioner on Access to Information Act review
Canada's government will "work closely" with Information Commissioner Suzanne Legault on an upcoming review of the Access to Information Act, the office of Treasury Board President Scott Brison has confirmed. Mr. Brison and Justice Minister Jody Wilson-Raybould will also work with Parliamentarians and "other interested stakeholders" to "make sure we get it right," press secretary Jean-Luc Ferland wrote to Embassy in an email. "Our goal is to have a culture of government open by default," he said. "This change is long overdue, but it's also quite complex." The office couldn't offer a timeline for when the review would be completed and publicly released. (...) Alternative to being found well-founded or not, some complaints are settled, meaning that the institution and complainant agree on a solution to close the file before the end of a full investigation. Some others are discontinued or dropped by the complainant if, for example, they obtain the desired records before an investigation is finished. Other trends emerge too: that in 2015, Global Affairs Canada and the Department of National Defence appear to be of elevated interest for members of the media, but that lawyers are particularly interested in Immigration, Refugees and Citizenship and the Canada Border Services Agency. And that members of the public form, by far, the largest group complaining about the Royal Canadian Mounted Police-to which the most complaints in total were directed. Embassy

Liberals' offer on sick leave dismays union
The Liberal government's decision to propose the same controversial sick leave plan as the previous government is a "missed opportunity" that could lead to labour unrest, warns the president of the largest federal union. Robyn Benson, president of the Public Service Alliance of Canada, said she is surprised a government elected on promises to restore respect for the public service and fair bargaining is pushing the "same old" Tory proposal for a short-term disability plan that the unions solidly ejected for more than a year. "We thought bargaining would be a priority when they got elected and we thought we would get a Liberal mandate," Benson said. "They seem to be recycling the same old positions of the Conservative government. That is a problem." She said treating public servants with respect is also about improving public services after the "slash, cut and burn" of the Conservatives. "I don't think they want labour unrest during the first year in power. If we don't get a tentative agreement, we will follow the process and go into conciliation. "It would be a missed opportunity for this government not to settle with us." PSAC met with Treasury Board negotiators last week, the second major bargaining session since the Liberals came to power. Ottawa Citizen, A4

OTHER / AUTRE

*** Trudeau should push for UN reform**
When Canada lost its bid for a United Nations Security Council seat to Portugal in 2010 it was widely seen as a humiliation, an embarrassment, the dagger through the heart of Stephen Harper's foreign policy. It was the diplomatic equivalent of a loss to Kazakhstan on the ice. At least, that was the view of the chattering class. One could argue that it didn't really bother Canadians, who turned around and awarded a majority government to Harper months later, despite the best efforts of opposition parties to keep the issue on the electoral radar. Wednesday in New York, Justin Trudeau will officially announce the country's bid for a Security Council seat, but one must ask if this is more a matter of returning national prestige - "Canada is Back (again)" - than a sign of the actual value of the seat at the UN inner circle. It is one of the legacies of the Harper era that our historic engagement with the UN was severed. He did

address the General Assembly three times, but there was the 2009 visit to Tim Horton's instead of a speech to the General Assembly, and the 2012 speaking engagement blocks from the UN without dropping in. UN envoys who travelled to Canada to study our treatment of indigenous peoples were aggressively given the bum's rush. Harper famously vowed Canadian foreign policy would not include courting "every dictator with a vote at the United Nations." He said that 1.5 km from the UN headquarters. Toronto Star, A8

* **Sunnier times for Canada's disarmament diplomacy**
Foreign Minister Stephane Dion's March 2 address to the Conference on Disarmament in Geneva represents both a welcome re-engagement at a key if moribund multilateral forum, as well as an indicator that Canada is prepared once again to assume a leadership role in the demanding field of multilateral disarmament activity. Dion's rebuke of the CD was amply deserved. After a 20-year failure to agree on any program of work (let alone undertake any official action pursuant to one) the 65-member state consensus-based forum has egregiously failed its core raison d'être-to serve as the UN's forum for negotiating multilateral arms control and disarmament agreements. The only thing more shocking than the CD's dysfunctionality has been the willingness of leading states to tolerate it as long as they have. Mr. Dion rightly recalls that the major multilateral arms control and disarmament agreements have all been negotiated outside the CD. The 1997 Ottawa Convention banning anti-personnel landmines and the 2008 Convention prohibiting cluster munitions were accomplished through ad hoc diplomatic conferences and the more recent Arms Trade Treaty through a negotiation authorized by the UN General Assembly. If the CD does not find a way to liberate itself from the straitjacket of conflicting national vetoes, it will become irrelevant to the international security community. There is no magic formula for overcoming the CD's impasse and Mr. Dion can only call on the states "to redouble our efforts to find innovative ways of moving forward" and "to set realistic objectives." Embassy

* **How the parties collect your personal info - and why Trudeau doesn't seem to mind**
Numbers are definitely in fashion in the new Liberal government at the moment - and not just because the budget is landing next week. A first-ever session on "behavioural economics" for public servants was filled to capacity last week, according to a *Hill Times* report. "Combining economics with behavioural psychology," said PCO spokesperson Raymond Rivet, "this new tool can help governments make services more client-focused, increase uptake of programs, and improve regulatory compliance. Better government through behavioural economics - the idea was popularized by the 2009 book *Nudge* and almost immediately adopted through the establishment of a "nudge unit" by the British government in 2010. Justin Trudeau's government is already borrowing the concept of "deliverology" from the Brits, so the 'nudge' was never going to be far behind. President Barack Obama, Trudeau's new best friend, also has taken steps to introduce nudge theory to the U.S. government in recent years. But the real motivation for data-based governance in the Trudeau government may have come from a source much closer to home - the recent election, specifically the Liberals' extensive use of big data to win 184 seats last fall. Make no mistake: Trudeau's Liberals may have won the election by promising intangibles like 'hope' and 'change', but they sealed the deal with a sophisticated data campaign and ground war. So now that the Liberals have seen how mastery of the numbers can help win elections, we probably shouldn't be too surprised that they see those same skills as useful for governing as well. Big-data politics is here to stay. (…)It seems odd to me that citizens can get (often appropriately) worked up about "intrusive" government measures, whether it's the census or the C-51 anti-terrorism law, and yet be mostly indifferent to what the chief electoral officer has called the "Wild West" of political data collection. Even Conservatives who resented the gun registry didn't seem to mind that their own party was keeping track of gun owners in its database, so that it could send them specially targeted fundraising messages from time to time. That's just behavioural economics, applied to the political arena. iPolitics

INTERNATIONAL

* **Islamic State flag found after Belgium shooting**
Belgian prosecutors said a flag of the so-called Islamic State group and a jihadist manual were found by the body of an armed suspect who was shot dead during an anti-terrorist operation in Brussels yesterday. The dead man has been named as 35-year-old Mohamed Belkaid, an Algerian living illegally in Belgium.

Belgian federal prosecutors say two people have been detained but it is not clear if they are connected to the shooting. One of those detained was taken to hospital with a broken leg. Brussels police killed Belkaid, who was armed with an assault rifle, after four officers were wounded yesterday during what investigators had expected to be a routine search on an apartment in the south of the Belgian capital. Two other people escaped. Reuters (RTE); Sky News; Independent UK; Mirror UK

*** Gunman Fires On Police During Terror Raid**

Belgian police launched a manhunt in a Brussels neighbourhood on Tuesday after at least one gunman opened fire on officers during an antiterror raid linked to last year's Paris attacks, officials said. Three police officers were slightly injured during the operation. French Interior Minister Bernard Cazeneuve said that "a team composed of Belgian and French police came under fire, apparently from assault weapons, during a raid." Two hours after the first shots were fired, a big swath of the Forest neighbourhood was in lockdown as special police units in body armour and balaclava hoods moved in, several with their guns drawn. A helicopter was hovering overhead to patrol the area as police were still hunting for at least one suspect. "Two individuals, apparently barricaded themselves inside a home," Forest Mayor Marc-Jean Ghyssels told local media. Officials later said a man had been found dead in a Brussels apartment following the anti-terror raid. Police found the body after they stormed the apartment. Four months on, Belgian police and magistrates are still piecing together the role Belgian nationals played in aiding the Paris attackers, as well as trying to track down missing suspects, including international fugitive Salah Abdeslam. Associated Press (Windsor Star, N4, Leader-Post, Ottawa Citizen, London Free Press, Edmonton Journal, Calgary Herald, Montreal Gazette, StarPhoenix); Associated Press (National Post, A10, Toronto Sun, Calgary Sun, Winnipeg Sun, Kingston Whig-Standard, Edmonton Sun, Ottawa Sun, London Free Press)

*** Police Suspect Bomb Caused Fatal Car Explosion In Berlin**

An explosion that destroyed a car and killed the driver in downtown Berlin during rush-hour traffic Tuesday was likely caused by a bomb, police said, but investigators are working on the assumption that it was not a terrorrelated attack. The explosion occurred at about 8 a.m. in the western district of Charlottenburg on a busy street leading into the heart of the German capital. Photos from the scene showed the wreckage of a Berlin-registered silver VW Passat station wagon, its windows blown out and its front end smashed in, about a kilometre from the capital's landmark Victory Column. "(The) explosion occurred inside or on the vehicle," said Carsten Mueller, deputy chief spokesman for Berlin police. "Our investigators are working on the assumption that it was an explosive device that caused this," Mueller said. Nobody else was injured in the blast despite heavy traffic, he said. Hours after the blast police were concentrating on the possibility that the explosion might be linked to organized crime, said Kerstin Ziesmer, a police spokeswoman. The Associated Press (Windsor Star, N4, Leader-Post, Ottawa Citizen, Gazette, Calgary Herald, Edmonton Journal, London Free Press, StarPhoenix)

*** U.S. airstrike kills senior Daesh commander**

Omar al-Shishani, a top Daesh (otherwise known as ISIS or ISIL) commander who was a magnet for fighters from the former Soviet Union, has died of injuries suffered in a March 4 U.S. airstrike in Syria, a senior Iraqi intelligence official and the head of a Syrian activist group said Tuesday. Al-Shishani, who was injured in a U.S. airstrike earlier this month, died on Monday evening outside Daesh's main stronghold of Raqqa in Syria, the two told The Associated Press. A U.S. military spokesman confirmed the reports. The Daesh-affiliated Aamaq news agency cited an unnamed source as denying that al-Shishani was injured or killed, without providing any evidence that he was still alive. The red-bearded ethnic Chechen, who was in his 30s, was one of the most prominent Daesh commanders, appearing in several online videos leading fighters into battle. He served as the top commander in Syria before being appointed to lead three elite units that carried out special missions in Syria and Iraq, according to Hisham al-Hashimi, an Iraqi scholar who follows the group. Al-Shishani, whose real name was Tarkhan Batirashvili, was an ethnic Chechen from Georgia, a former Soviet nation in the Caucasus. He hailed from the Pankisi Valley, a centre of the Chechen community and a former militant stronghold. Associated Press (Toronto Star, A12)

*** Al Qaeda's new reality in Africa**

When an Al Qaeda affiliate makes things go boom, stoking global fear isn't always the main goal, however much the horrible headlines suggest otherwise. Nor is simple competition - Al Qaeda's obsession with winning back jihadist supremacy from the 2.0 upstarts of Daesh, also referred to as ISIS and ISIL - always driving the attacks. Too bad, right? Can't we just think of Al Qaeda versus Daesh as we do the Leafs versus the Habs? Simple one-upmanship, and nothing more? Sorry, no. Not if we really want to understand and counter the loose and often very regional affiliations and intrigue behind the headlines. This is especially true in sub-Saharan Africa, where "specific local and regional dynamics" are "crucial" to understanding the crisis, as the International Crisis Group noted Monday in a nuanced special report on the evolving jihadist landscape. None of this in any way blunts the unprecedented shock that visited the Ivory Coast on Sunday, when gunmen acting in the name of Al Qaeda's North African branch quaffed beer at a beachside bar before unleashing a fusillade of bullets throughout the resort town of Grand Bassam. MINISTER / MINISTRE

WAR MEMORIAL SHOOTING ANNIVERSARY

Gov. Gen. David Johnston rejects the notion that the country was fundamentally changed by the attacks that killed two Canadian military members a year ago. While that may be true, there was certainly evidence of changes, some small, others gapingly vast, as Canadians gathered Thursday to mark the first anniversary of the deadly Parliament Hill attack that killed Cpl. Nathan Cirillo. "Today, I cannot help but think of his boy," said Marcela Coquet, from behind the counter of her downtown Ottawa souvenir store, a block from the National War Memorial... Public Safety **Minister Steven Blaney noted the symbolism of the moment, saying "*our nation is coming together*."** Re-elected Monday and headed for the opposition benches**, Blaney said he has a "*profound sense of mission accomplished*"** after a year of leading the Conservative government's response to the attacks, including a controversial anti-terror law that faces Liberal amendments. Canadian Press (Cape Breton Post, A10/FRONT, Chronicle-Herald, A1/FRONT, London Free Press, Winnipeg Sun, Ottawa Sun, Kingston Whig-Standard, Record, Daily Gleaner, Hamilton Spectator, Times & Transcript, Telegraph Journal)

Here we stand, here we stay

The police officers, first responders and citizens who responded with such bravery and compassion **to the killings of two Canadian military members a year ago exemplified what Canada is, Gov**. Gen. David Johnston said today. Johnston joined soldiers, veterans, dignitaries and hundreds of ordinary citizens at the National War Memorial to mark the first anniversary of the deadly Parliament Hill attack that killed Cpl. Nathan Cirillo. Some suggested a year ago that the country would be dramatically changed by the incident, Johnston said, but he disagreed... **Public Safety Minister Steven Blaney**, who was one of

the Conservatives re-elected in Monday's vote, was among those who strode down Sparks Street towards the commemoration. He says he went for a morning jog to the memorial at 7 a.m. to pay tribute to both fallen soldiers. **Blaney** met Vincent's family earlier. "***Today our nation is coming together,"*** **Blaney** told The Canadian Press. "***We are stronger than we were.... The elected prime minister will be there with our right honourable Mr. Harper***." ... **Blaney** said he has a "***profound sense of mission accomplished***" after a year of leading the Conservative government's controversial response to the attacks. Canadian Press (Whitehorse Star, 8)

*** Preview of Liberal rewrite of security bill**

The incoming Liberal government says it will repeal "problematic elements" of Stephen Harper's anti-terrorism law, known as C-51. Here's a look at 10 things the Liberals are expected to do in the revamped legislation, based on party platform promises and amendments proposed during parliamentary hearings: Guarantee that all Canadian Security Intelligence Service warrants respect the Charter of Rights and Freedoms. This would roll back provisions allowing CSIS to disrupt terror plots through tactics that contravene the charter as long as a judge approves. Critics have called the provisions an extraordinary inversion of the judicial role to uphold - not sanction violations of - the charter. Require the Security Intelligence Review Committee, the watchdog over CSIS known as SIRC, to examine all activities the spy agency carries out under its new threat reduction mandate and have the committee provide an annual report to the **public safety minister** and Parliament on its findings. Canadian Press (Times Colonist, A10, Calgary Sun, Times & Transcript)

*** Hill shooting has lasting impact for MPs, staffers**

The effects of a gunman's assault on Parliament Hill still reverberate for New Democrat MP Nathan Cullen, who can't forget the scene inside the party's caucus room as shots cracked in the hall outside. "As I put my hand on the door to open it, our security came in the other way and then we stood against it or tried to figure out what to do next," Cullen said Thursday. "Me and another MP went and barred the other door." Cullen said it wasn't until later that he realized his colleague was standing just where a bullet lodged in a door. "That sort of brings it home a bit for sure," he said. Michael Zehaf Bibeau stormed into the Centre Block with his lever-action rifle after shooting and killing honour guard Cpl. Nathan Cirillo at the nearby National War Memorial. Cullen says the day's events have had a long-term impact. "It is very much still on my mind," Cullen said. "It certainly affects the place where we all work." Bullet holes can still been seen in the Hall of Honour. There are imprints on people, too. Marc-Andre Viau, a NDP political staffer, remembers leaving the building that day and being told to "get down" by police. He also recalls seeing Zehaf Bibeau making his way toward Parliament Hill. "We took cover and that's when I saw in my peripheral vision, someone running towards the front door," Viau said. "We heard the shots, five, ten shots followed by a short pause and then about 40 shots after that . . . It was hard to believe that shots could be fired in Centre Block, it was kind of surreal." Outgoing **Public Safety Minister Steven Blaney** said he remembers being in the Conservative caucus, across the hall from the NDP meeting, when he heard shots. "***There was a moment of disarray where we realized that something was happening and that we were facing the unexpected***," Blaney said. Canadian Press (London Free Press, B1)

*** Leaders stand together at soldiers' memorial**

Days after contesting a bitter election campaign, Prime Minister Stephen Harper and prime minister-designate Justin Trudeau came together to lay a wreath in remembrance of two soldiers slain last October. It was a striking image of solidarity as the two men paid their respects, along with the Governor General and the families of Warrant Officer Patrice Vincent, killed in separate attacks one year ago this week. "Warrant Officer Vincent and Cpl. Cirillo both had very important jobs - to defend our rights and our freedoms as a people," said Gov. Gen. David Johnston. "This is who we are. "Our Parliament is a symbol of who we are. It, too, was attacked last October. Many of you valiantly rushed to defend it, just as others of you rushed to the aid of the wounded here in Ottawa and in Saint-Jean-Sur-Richelieu. You boldly reminded us that with our rights and freedoms, come responsibilities - responsibilities toward each other and to Canada." It was a moving tribute. Thousands gathered at the National War Memorial in Ottawa to mark the anniversary that featured a 21-gun salute and a flyover of CF-18s in the missing-man formation. After two minutes of silence, prayer and reflection came the laying of wreaths. But it was Johnston's speech that captured a reflective and sombre mood as he recalled the events of Oct. 20 and Oct. 22, 2014, when the two soldiers were slain. "Many people said Canada changed forever last October. But I

don't think Canada changed forever. Canadians are a caring, courageous people and that did not change, and that will not change." As he spoke, Nathan Cirillo's son, Marcus, now 7, fidgeted and gazed around at the cameras, the crowds and all the uniformed men and women… Outgoing public safety minister **Steven Blaney** switched between English and French as he recalled "***the fear, the panic" in the Conservative caucus room that morning as people thought a team of assailants were coming for them: "It was a moment of complete anguish***." … "It was crazy last year," RCMP commissioner Bob Paulson told the Star before the ceremony began. "It was a very challenging time … for the city of Ottawa, for the armed forces, for everyone." Paulson said the RCMP officers who were in the direct line of fire will be publicly honoured for valour soon, but this day was to remember the fallen and to mark "how far we've come since last year." Toronto Star, A4

*** Mountie killer prompted RCMP to test guns that can be converted to fully automatic**
RCMP tests on a variety of semi-automatic weapons sold in Canada have found the guns can be converted temporarily into fully automatic firearms through an improvised technique described on the internet. That was the conclusion of an internal report prompted by last year's shooting deaths of three Mounties in Moncton, N.B. The report was delivered to the public safety minister for possible action. RCMP Commissioner Bob Paulson wrote to **Steven Blaney** last December, detailing test results on six types of semi-automatics and recommending the government consider laws or regulations to ensure the improvisation technique is prohibited. The Mounties also sent a warning, known as an officer safety alert, to Canadian police forces in January this year tipping them to the technique "so that they may take appropriate enforcement or investigation measures." "Criminals could … adopt this technique to work around prohibitions on fully automatic firearms, potentially resulting in an increase in gun violence, mass casualties or copycat crimes as the technique is applied more broadly," Paulson advised the minister. In a response six months later, however, Blaney said changes are not needed. CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Magnitude-4.7 earthquake reported off northern Vancouver Island**
An earthquake with a magnitude of 4.7 occurred off northwest Vancouver Island this afternoon. The earthquake occurred at 4:07 p.m., about 200 kilometres west of Port Hardy, according to Earthquakes Canada. It occurred at a depth of 10 kilometres. Port Hardy Coun. Patricia Corbett-Labatt was at a meeting at the district's office and said no one there noticed it. Earthquakes Canada said it had not received any reports from people who felt the quake. There are no reports of damage, and none would be expected, the federal agency said. Times-Colonist

*** Quadrivalent flu vaccine offers extra protection, Alberta health officials say**
Children vaccinated against the flu will be getting additional protection thanks to new vaccines available for the first time this year, according to Alberta health officials. Traditional flu shots and nasal mists protect against the H3N2 virus, the H1N1 virus and one strain of the influenza B virus. The new Quadrivalent vaccines, available for the first time this year, immunize against a fourth type of flu. CBC News

*** Eight Arctic nations to sign historic coast guard deal**
All eight Arctic nations - including Canada and Russia - are to sign a historic deal next week for their coast guards to work together in the treacherous and increasingly accessible waters of the North. Creating the Arctic Coast Guard Forum is considered a significant step forward for international co-operation in the region and will flesh out previous search and rescue agreements. "[The forum] will be an operationally focused organization that strengthens maritime co-operation and co-ordination in the Arctic," said an emailed statement from the United States Coast Guard. "The impetus for creating [it] grew out of the concerns of Arctic Council member countries over the increasing need to ensure safety, security, and stewardship of Arctic waters." The forum will also discuss emergency response, icebreaking and collaboration, said a statement from the Canadian government. "The heads of the eight coast guard agencies, including Canada, have agreed that collaboration on such operational matters is to everyone's benefit," said Carole Swaindon of the Department of Fisheries and Oceans, which runs the Canadian Coast Guard. Canadian Press (Times-Colonist, B5; National Post; Times and Transcript)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Anti-Islamophobia resolution fell short**

On Oct. 2, following an attack on a Muslim woman, the Quebec National Assembly passed a motion condemning Islamophobia. While Muslim Quebecers are supposed to applaud the gesture, it has in fact only strengthened the fears of many. Because, in the very act of officially recognizing the existence of the phenomenon of Islamophobia, our MNAs have drained the concept of any real significance. In fact, the content of the motion and some statements to media following its adoption make clear that our politicians unfortunately still do not understand that, before its expression in criminal acts, Islamophobia is first and foremost an ideology. The function of this ideology is to justify Islamophobic acts; without it, these acts would be condemned for what they are: racist and despicable crimes. And it would not be enough to merely condemn them, but necessary to fight them through concrete action, similarly to how the problem of radicalization has been approached. This, however, is far from our current situation. Postmedia Network (Montreal Gazette, A17)

«Je connais le son d'une détonation d'arme à feu»

Il y a un an, Robert Aubin se trouvait dans la salle du caucus de son parti lorsque Michael Zehaf Bibeau s'est mis à semer la terreur sur la colline parlementaire..«La grande question qui n'a pas été résolue par les conservateurs, c'est quelles sont les mesures de déradicalisation pour prévenir ces faits-là? Je l'ai vécu de très près et de l'interne, j'ai une grande réticence à parler d'un acte de terrorisme», soulève-t-il comme interrogation, évoquant un «gars isolé avec une arme rudimentaire». D'où l'opposition de son parti au fameux projet de loi C-51. «On va certainement revenir là-dessus. Tous les bons coups réussis par la GRC l'ont été par les lois précédentes. Ce n'est pas une question de loi, mais de ressources qu'on n'affectaient pas suffisamment à la GRC. Le projet de loi C-51 empiète sur les droits personnels», déplore celui qui rappelle la fin de l'hymne national, qui parle de protéger nos foyers et nos droits. «On doit faire les deux», a-t-il précisé. La Presse Canadienne (La Nouvelliste, 2/FRONT)

'On that day, we lost a son'

Tears fell where blood had been spilled at the National War Memorial as Canadians gathered Thursday to mark one year since a gunman brought terror and death to the country's capital.
Yet, while the ceremony was punctuated with sadness as Canadians remembered Warrant Officer Patrice Vincent and Cpl. Nathan Cirillo - two soldiers who died within days of each other at the hands of radicalized assailants - there was also strength, compassion and unity. "It's been one year," Gov. Gen. Postmedia Network (Vancouver Sun, B1/FRONT, Ottawa Citizen, A1/FRONT, Windsor Star, N1/FRONT, Leader-Post, Province, Star Phonenix)

*** One year on, a thankful nation pays its respects**

At 10:30 Thursday morning, 200 people ascended the ramp from the National Arts Centre to sunlit Elgin Street, pipers announcing the start of the ceremonies honouring Warrant Officer Patrice Vincent and Cpl. Nathan Cirillo, both victims of terrorism-inspired acts of violence a year ago. The marching group included members of the Argyll and Sutherland Highlanders of Canada (Princess Louise's), the Hamilton unit in which Cirillo served; the Royal Canadian Air Force, in honour of Vincent, an RCAF firefighter; and first responders from emergency organizations involved when Michael Zehaf-Bibeau, after fatally shooting Cirillo as he stood ceremonial guard at the Tomb of the Unknown Soldier, stormed the Parliament Buildings. Ottawa Citizen, A3

*** The shots that shook a country**

In a reflective moment this week, Cpl. Nathan Cirillo's sister Nicole likened her family's grieving experience to that of an overturned snowglobe. Canada has also been shaken by the tragedy, and numerous security procedures, laws and protocols have changed since the Oct. 22, 2014 shooting of Cirillo, 24, at the National War Memorial and the death of Warrant officer Patrice Vincent, 53, who was killed by a political extremist two days before in Saint-Jean-sur-Richelieu, south of Montreal. Here are some changes that have taken place as a response to the killings: Parliament Hill security: In June, a new

Parliamentary Protective Service was formed to handle security on Parliament Hill, inside buildings and out. Previously, the RCMP had jurisdiction over the grounds, while House of Commons and Senate security forces handled activity inside the buildings. The new force reports to the RCMP's national division. Bill C-51: The controversial bill increases powers of the Canadian Security Intelligence Service, criminalizes the promotion of terrorism and gives the RCMP new powers of preventive arrest. Hamilton Spectator, A10

* **Cérémonie en hommage aux deux soldats tués en octobre 2014**
Un an après les deux attentats commis contre autant de militaires canadiens, plusieurs centaines de citoyens se sont massés dans les rues d'Ottawa pour leur rendre hommage. Dignitaires, membres des Forces armées, policiers et premiers répondants se trouvaient hier matin au pied du Monument commémoratif de guerre du Canada, où le caporal Nathan Cirillo est tombé, le 22 octobre 2014, sous les balles d'un tireur qui s'était radicalisé. Cette attaque survenait deux jours après que l'adjudant Patrice Vincent eut été assassiné à Saint-Jean-sur Richelieu, en Montérégie, par un autre individu qui était aussi adepte de l'idéologie djihadiste. Dans un geste d'unité, le premier ministre sortant Stephen Harper et le premier ministre désigné Justin Trudeau ont déposé ensemble une gerbe de fleurs devant la tombe du soldat inconnu. Après avoir froidement assassiné le caporal Cirillo, le tireur Michael Zehaf Bibeau avait fait irruption dans l'édifice du Centre du parlement. Il est passé devant les salles où étaient réunis les caucus du Parti conservateur et du NPD avant d'être abattu par les services de sécurité. De nouvelles mesures de sécurité pourraient être déployées prochainement sur la colline du Parlement qui incluraient notamment un contrôle plus rigoureux des visiteurs se promenant à pied, selon un dirigeant de la Gendarmerie royale du Canada (GRC). La Presse Canadienne (La Presse, A10)

* **Standing firm in the face of terror**
A year ago, Canada was grappling with our first glimpse of radical Islamic terrorism on our own soil. We were trying to piece together the cowardly execution of Canadian soldier Cpl. Nathan Cirillo, gunned down while on ceremonial guard duty in Ottawa. Just two days earlier, another home-grown Islamist terrorist claimed the life of Warrant Officer Patrice Vincent in Saint-Jean-sur-Richelieu, Quebec, using a car as his weapon instead of a gun. Similar to the Ottawa attack, it was perpetrated by a Canadian-born Muslim convert who deliberately targeted members of Canada's armed forces. A year later, it's still impossible to make sense of such senseless acts. Cpl. Cirillo was murdered in front of the National War Memorial as he was standing ceremonial guard over the Tomb of the Unknown Soldier. The few times I've walked past the Cenotaph memorial since the shooting, I've felt a lump in my throat and a chill down my spine.
It's difficult not to get emotional when thinking about the brave men and women who stand on guard for Canada and fight for our freedom and security every day, both here and around the world. Post Media Network (Winnipeg Sun, 17, Toronto Sun)

* **Questions still loom over deadly shooting**
One year after the Oct. 22 attack on Parliament Hill, there are still many lingering unknowns about the events that unfolded that day. And while many of the blanks have been filled in by numerous profiles and news accounts about shooter Michael Zehaf-Bibeau, and numerous reports prepared by the various security agencies involved, many questions still remain.
And under the veil of a still-ongoing national security investigation, some may never be adequately answered. Where did a man with a history of psychological issues, drug abuse and incarceration obtain the long-barrel Winchester rifle used in the attack? In the days following the attack, RCMP Commissioner Bob Paulson acknowledged the source of the weapon wielded by Zehaf-Bibeau-- a Winchester .30-30 lever-action hunting rifle-- "is of tremendous interest to us." Ottawa Sun, 6

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

City's bill for legal fees to battle bridge: $2.9M
The Battle for the Bridge continues to cost Windsor, even before construction starts. The City of Windsor has spent $2.9 million the last five years in legal fees, fighting the Ambassador Bridge in court over a string of issues - though courts have reimbursed the city $1.3 million in awards. And the legal war should only heat up. A financial report going to council Monday shows that city legal costs so far this year are

about $650,000 over budget. Two-thirds of that revolves around the battle with the bridge, the city's single largest legal issue, according to treasurer Onorio Colucci. Also, in the next year or two the city will spar at the Supreme Court, which will cost an estimated $75,000 to $100,000 alone - to determine whether the bridge is deemed a federal undertaking, and therefore immune to municipal bylaws. "The legal investments made by the City of Windsor have led to creating nothing but lost opportunities," Stan Korosec, president of the Ambassador Bridge-owned Canadian Transit Company, said in a statement. "The previous city administration has spent taxpayers' dollars for well over 10 years objecting to any efforts made by the Ambassador Bridge. The end result is the community loses, the Windsor taxpayers lose, the travellers lose, and this region loses because we should have already had a new bridge operating." Korosec said Ambassador Bridge vice-chairman Matthew Maroun recently met with Mayor Drew Dilkens, and believes the parties can work out differences without amassing such high legal fees. (…)Though granting approval rests with Transport Canada, Dilkens does not oppose a second Ambassador Bridge span, as long as the city's concerns are addressed and the Gordie Howe International Bridge proceeds as planned. Windsor Star, A1 (London Free Press)

Let Morouns build new bridge now

A letter to the editor states, "If the Ambassador Bridge is collapsing as many local residents say, it's time to fix the problem. It's probably safe to say someone could get killed. But one cannot fix an old structure forever. Sooner or later, the repairs will not be enough to hold back the crumbling. How about a brand new one? It's time to face that fact. It is the answer to a crumbling bridge. Windsor should get behind bridge owner Matty Moroun and help expedite a new bridge immediately. Without the roadblocks thrown at this project, we could have had a new bridge by now." Windsor Star, A10

*** TPP would allow milk from cows receiving hormones into Canada**

As dairy imports from the United States appear set to increase under the terms of the Trans-Pacific Partnership trade deal, Canadian consumers concerned about drinking milk from cows receiving hormones will need to read their labels more carefully. In the agreement in principle reached Oct. 5, Canada conceded an additional 3.25 per cent of its dairy market to imports from the 11 other Pacific Rim countries signing on, most notably the U.S., New Zealand and Australia. That amount may not seem significant, but until recently, Canada's supply-managed dairy sector offered only the stingiest of tariff-free market access to its trading partners, on specific terms — such as the cheese deal struck with the European Union in 2013. Small levels of imports are possible while maintaining supply management, if they are managed carefully. The ultimate impact of the TPP on the dairy industry might depend on details not yet available on what kinds of products — and in what amounts — make up that 3.25 per cent. CBC News

Les agriculteurs souhaitent davantage de reconnaissance

Au moment où l'agriculture vit un vent de changements importants avec la signature possible de l'entente de Partenariat transpacifique (PTP) et l'imposition de normes environnementales de plus en plus rigoureuses dans un contexte de désengagement de l'État, les agriculteurs du Saguenay-Lac-SaintJean souhaitent obtenir davantage de reconnaissance en tant qu'acteurs économiques d'importance. Réunis à Jonquière dans le cadre de leur 85e congrès annuel sous le thème « On cultive aussi l'économie locale », une soixantaine d'agriculteurs ont pu discuter d'accaparement des terres, d'assurance agricole, de tarification compétitive pour les locataires de bleuetières et de financement de la recherche agricole. (…)Les deux porte-parole ont ajouté que la reconnaissance du travail des agriculteurs devrait se concrétiser également auprès des gouvernements supérieurs afin qu'ils investissent davantage dans le secteur de la recherche et développement ainsi que dans le contrôle à la frontière canado-américaine de l'entrée des protéines laitières. Le Quotidien, 8

Multiculturalism: Canada's ace card in the Trans-Pacific game

An opinion piece states, "The recent announcement of the Trans-Pacific Partnership (TPP) free-trade deal is one more confirmation of the importance of international trade for Canada. I anticipate that the new Liberal government of Justin Trudeau will endorse the TPP agreement. With the arrival of explorer John Cabot on the shores of Newfoundland, it was international trade in 1497 that started the economic heartbeat of the land mass that would become Canada. And international trade has nurtured Canada as one of the most prosperous countries in the world. International trade is an important contributor to

Canada's economic growth, business vitality, employment creation and the standard of living of its citizens. Canada's domestic population is far too small to alone sustain the standard of living that we have become accustomed to. International trade is the trump card that helps us create a larger market, through our exports and outreach. Canada is facing a demographic deficit, a fiscal deficit and a jobs deficit. Our economic salvation rests with an aggressive strategy for global outreach. The TPP will open new doors for our exports and create significant international trade opportunities. (…) In addition, Canadian exports will be granted unrestricted and preferential access to the EU domestic markets once the Comprehensive Economic and Trade Agreement (CETA) is ratified. The removal of the economic burden of tariffs will enhance our ability to be truly competitive in Europe." Times & Transcript, A11

The downsides of a good trade deal
An editorial states, "The Trans-Pacific Partnership is a good deal for Canada. It will give Canadian businesses new access to markets in Asia and provide consumers with less expensive goods. But no deal is perfect. Based on the few details available at this point, Canada may have yielded to changes to its copyright regime by agreeing to extend protections on original works from the current 50 years beyond the death of the author, to 70. In effect, this country and the other TPP partners will adopt U.S. rules that were largely crafted by lobbyists for Disney, which sought to forestall Mickey Mouse entering the public domain. There is no mention of this on the federal government website summarizing the pact. Instead, it emerged via leaks and information released by other countries, and was brought to the fore by intellectual property experts like University of Ottawa law professor Michael Geist, who reckons Ottawa "caved." (…)Since the TPP deal was announced, there have been other concerns. A big one is the inclusion of provisions that may open the door to more temporary foreign workers in Canada. But we don't yet know the scope and details of this. Which is why the most serious issue right now is making the agreement public as quickly as possible, so Canadians can finally see what they are getting into." Globe and Mail, A14

Unveiling for the camera?
A letter to the editor states, "Re: Wrong Side Of The Wedge, Robyn Urback; A Stand Too Far, Barbara Kay, both, Oct. 21. If Zunera Ishaq says she cannot unveil herself in a public citizenship ceremony because of her religion, how does she propose to deal with the requirements for a Canadian passport? Will Justin Trudeau be revising requirements for passport photos to accommodate her or will he insist only female Canadian Border Services agents can view her passport? How much accommodation should the Canadian government make for two women who do not wish to follow the normal procedures expected of all the other 30 million Canadians?" National Post, A13

*** Exercise aids preparation for potential St. Lawrence Seaway disaster**
Resuming ship traffic on the St. Lawrence Seaway as quickly and as safely as possible after a natural or man-made disaster was the topic of a binational exercise led Wednesday by the U.S. Coast Guard at Riveredge Resort. The exercise follows a 2011 initiative by the U.S. and Canadian governments called Beyond the Border, which is designed to address threats to cross-border commerce and promote binational law enforcement activities to mitigate the threats. Wednesday's exercise focused on potential disruptions in trade that could be caused by an interruption in shipping on the Seaway and a "maritime Commerce Resiliency" plan to restore traffic after a disaster. More than 100 participants, from law enforcement to shoppers to environmentalists, considered a scenario in which a foreign cargo vessel had become grounded near an international bridge, spilling fuel into the St. Lawrence River. For many, the scenario called to mind the April 21 grounding of the freighter Juno under the Thousand Islands Bridge, although no fuel or cargo was spilled in that incident and no one was injured. (…) participating in the exercise aside from the Coast Guard were the Canadian Coast Guard, U.S. Customs and Border Protection, Canada Border Services Agency, St. Lawrence Seaway Development Corp. and St. Lawrence Seaway Management Corp., Transport Canada, state Department of Environmental Conservation, Thousand Islands Bridge Authority, St. Regis Mohawk Tribe and Save the River, among others. Watertown Daily Times

*** Cig smugglers busted on St. Lawrence**
Cornwall police have been busy the last couple months stopping illegal tobacco from entering the region.

Five people have been charged, but at least two other suspects managed to flee in a dramatic getaway. The first major shipment of tobacco hauled out of the St. Lawrence River was intercepted by marine police officers who noticed a boat floating eastbound without its navigation lights on Aug. 4. Four people were seen waiting onshore south of Pointe Trepanier, Que. Cops say two people on the boat jumped ship and fled into the darkness. A white van was later spotted peeling away from the scene. Police, however, were able to seize the boat -- a 24-foot orca with two big engines. Onboard, cops found a total of 336 kilograms of tobacco in 30 large green garbage bags. "You open the bag ... and all you see is tobacco," recalled Const. Jean Juneau. (...)He said the tobacco sometimes comes from places in the U.S. or the Akwesasne region. Toronto Sun

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** TalkTalk cyber-attack: Boss 'very sorry for security breach'**
The head of TalkTalk says she is "very sorry" for the frustration and worry caused to customers after a major cyber-attack on the firm on Wednesday. The phone and broadband provider said personal and banking details of up to four million customers may have been accessed in the "significant" attack. Chief executive Dido Harding said the company had been working through the night to try to contact all customers. TalkTalk said it was too early to know exactly who had been affected. "I'm very sorry for all the frustration, worry and concern this will inevitably be causing all of our customers," Ms Harding told BBC News. "We have been working through the night to make sure that we contact all of our customers and can reassure them about how they can keep their data safe." BBC News

*** CIA director's emails published**
WikiLeaks posted material Wednesday from what appears to be CIA director John Brennan's personal email account, including a draft security clearance application containing personal information. The material presumably was taken in a compromise of Brennan's email account by a hacker who told The New York Post he's a high school student protesting U.S. foreign policy. The hacker claimed he posed as a Verizon employee and tricked another employee into revealing Brennan's personal information. Brennan was seeking security clearance while applying for a job as a White House counterterrorism adviser. Associated Press (Calgary Herald, A19; Toronto Star; Leader-Post)

*** Le transfert Europe-USA de données personnelles est compromis**
Dans une décision rendue le 6 octobre, la Cour de justice de l'Union européenne a invalidé le « Safe Harbour », un arrangement administratif qui permettait le transfert de données personnelles entre l'Europe et les Etats-Unis. La décision est une conséquence des révélations d'Edward Snowden au sujet des intrusions de l'agence américaine de sécurité dans les données personnelles de milliers d'internautes. Elle remet en question le cadre juridique qui permet le transfert massif de données d'un continent à l'autre, notamment plusieurs services reposant sur des solutions « infonuagiques », comme Facebook, Google ou Amazon. L'affaire origine d'une plainte logée par un citoyen autrichien utilisateur de Facebook. Comme pour les autres abonnés résidant dans l'Union européenne, les données qu'il fournit à Facebook sont transférées, en tout ou partie, à partir de la filiale irlandaise de Facebook sur des serveurs situés sur le territoire des États-Unis. Le citoyen s'est adressé à l'autorité irlandaise de protection des données personnelles. Il a invoqué les révélations faites en 2013 par Edward Snowden au sujet des activités des services de renseignement des États Unis. Journal de Québec

LAW ENFORCEMENT

Arrests made in $5-billion fraud scheme
Toronto Police helped the FBI uncover a $5-billion fraud and money-laundering conspiracy in a case they say highlights the need for co-operation to track crime proceeds that cross borders more easily than ever. FBI officers and United States Postal Inspection Service investigators watched Thursday in Toronto police headquarters as Detective Sergeant Ian Nichol traced the evolution of the case, which led to

charges against three Toronto-area residents and six south of the border. "We saw significant linkage with what was going on on the U.S. side ... notes were compared, and lo and behold, we were onto something bigger than what we had originally," Det. Sgt. Nichol said. The three charged locally are alleged to have wired funds through accounts in several countries, including the proceeds of "romance scams." They came to police attention through a local case: a 63-yearold Canadian widow who was swindled of her life's savings in 2014. Globe and Mail, A12; Toronto Sun, 4

Twenty rescued in human trafficking investigation

A major investigation into human trafficking has led to the rescue earlier this month of 20 people - some as young as 14 - suspected of working in the sex trade as minors or against their will, police said Thursday. The investigation - called Operation Northern Spotlight - led to the arrest of 47 people who are now facing 135 charges, including trafficking in persons, forcible confinement, child pornography, and sexual assault with a weapon. Officers met with people suspected of taking part in the sex trade in early October at locations across the country. Most of those rescued were under the age of 19, said Ontario Provincial Police Deputy Commissioner Scott Tod. "Human trafficking victims rarely identify themselves to authorities, so we have to take a proactive approach," Tod said at a news conference. Ontario Provincial Police led the latest phase of Operation Northern Spotlight, which involved officers from 40 police agencies across Canada and 350 officers and support staff. Canadian Press (Guardian, A8, Times Colonist, B5, Edmonton Sun, 50, Calgary Sun, 27, Edmonton Journal, N6), 1; Record, B1; Ottawa Sun, 9; Winnipeg Sun, 8; Winnipeg Free Press, B4 * La Presse Canadienne (Le Devoir, A4, Acadie Nouvelle, 19)

Six women interviewed during sex trade probe

Six women were interviewed locally as part of a national investigation into human trafficking and the sex trade that resulted in 47 people being charged with 135 offences. While the Cape Breton Regional Police Service and Eskasoni RCMP contributed to the investigation, none of the charges were laid locally. Earlier this month as part of Operation Northern Spotlight, members of 40 police services arranged to meet with people suspected of partaking in the sex trade, potentially against their will, at urban locations across Canada. The arrests were made over a seven-day period in early October. Police were also able to ensure the safety of 20 people who had been working in the sex trade as minors or against their will. In Cape Breton, Cape Breton Regional Police and Eskasoni RCMP interviewed six women ranging in age from 20 to 40. Cape Breton Post, A1, A4

Clark staff breaks rules, report says

Political staff in Premier Christy Clark's office and in ministries have been routinely destroying government records and violating the province's access to information law, a new report says. Privacy commissioner Elizabeth Denham said Thursday she uncovered evidence of negligent searches for records, failures to document searches and the "wilful destruction" of records in response to requests for information. Denham said "it is difficult to overstate the seriousness of the problems" or the threat they pose to the integrity of access to information in B.C. "I am deeply disappointed by the practices our investigation uncovered," she writes in the 65-page report, Access Denied. "I would have expected that staff in ministers' offices and in the office of the premier would have a better understanding of records management and their obligation to file, retain and provide relevant records when an access request is received. "In conducting this investigation, it has become clear that many employees falsely assume that emails are impermanent and transitory, and therefore of little value." Denham launched the investigation in May after Tim Duncan, a former executive assistant to Transportation Minister Todd Stone, wrote to her complaining about the destruction of records. Duncan said in the letter that he had been on the job only for a few weeks in November 2014 when the ministry received a request for records relating to the disappearance of women along Highway 16, known as the Highway of Tears. He said he searched his emails, turned up more than a dozen relevant documents and informed ministerial assistant George Gretes, who told Duncan to delete the records... "It is government's clear expectation that all government staff follow all legislation without exception," said Citizens' Services Minister Amrik Virk. Victoria lawyer Chris Considine, who is representing Gretes, declined comment. The RCMP confirmed receipt of Denham's report. "We will be reviewing the content of their report and assessing it with respect to possible Criminal Code offences," Staff Sgt. Rob Vermeulen, a media relations officer, said in a statement. "It would be inappropriate to comment further at this time, as the review process has just begun." Times Colonist, A1; Postmedia Network (Vancouver Sun, A1); Globe and Mail, A1; Canadian

Press (Kingston Whig Standard, B1), Calgary Herald, A3); Globe and Mail, A1; Canadian Press (Kingston Whig Standard, B1, Toronto Sun, 16, National Post, A9); * 1

*** B.C. Liberals would like to delete this report**

An editorial states " Premier Christy Clark left it to cabinet minister Amrik Virk Thursday to respond to the information watchdog's devastating findings about the culture of coverup inside the B.C. Liberal government. Clark knew very well what was coming. Information Commissioner Elizabeth Denham, respecting protocol, shared her findings with the government in advance. The government fired back with a legal letter, disputing some aspects of the report and seeking more time to respond. Denham, to her credit, stuck to the scheduled release time of 9:30 a.m. Thursday. By that time Clark, who was in the capital Wednesday, was ensconced in the cabinet office in Vancouver, ostensibly to participate in a telephone conference with other provincial leaders. So it fell to Virk, as minister responsible for the Freedom of Information (FOI) legislation, to handle the press gallery - reporters were given all of 15 minutes to read the 60-page report before the minister met with them - then a barrage of questions in the legislature from the New Democratic Party Opposition. He said much the same as Clark will no doubt say, when she gets around to it. Findings being taken seriously. Recommendations being implemented. Government expects everyone to respect FOI. Unfortunately these isolated incidents crop up from time to time - rarely, mind you - where some rogue staffer - a total miscreant, really - departs from the guidelines that everyone else - and I do mean everyone - follows to the letter and respects without reservation. Or other empty words to that effect. Granted, one finding in the Denham report was both shocking and unprecedented: Transportation ministry staffer George Gretes lied under oath a half-dozen times about deliberately deleting emails and confessed only when confronted with the overwhelming forensic evidence of his deletions. He's now resigned, his case has been sent to the RCMP, and the whistleblower in this affair, ex-Liberal staffer Tim Duncan, stands vindicated. Indeed, one now has to credit Duncan's claim that other Liberal political staffers routinely delete what they shouldn't, and otherwise tamper with the documentary record." Postmedia Network (Vancouver Sun, B6)

*** RCMP boss defends force's actions in 2014 attacks on Parliament**

Terror-attack warnings received in the days before the Oct. 22, 2014, assaults at the National War Memorial and in Parliament were not specific enough for the RCMP to stop the shooter, says the commissioner of the Mounties. Bob Paulson was reacting Thursday to a CBC News story that said the Mounties had received three separate terror-attack warnings in the five days before Michael Zehaf-Bibeau shot dead a sentry at the war memorial, then stormed Parliament Hill where he died in a hail of gunfire in the hall of honour. "There was no specific threat that said, 'Hey, there's a guy named Bibeau who's going to come shooting and run up on the Hill,"' Paulson said at a downtown Ottawa memorial service marking the tragedy. "That said, we responded to those elevated threat levels." Internal documents obtained under access to information show the force distributed three warnings, the first on Oct. 17 alerting all security personnel to potential terror attacks, and raising Canada's threat level to medium from low. None of the documents identified likely dates, locations or targets. Security experts have also said that without more precise details, it is difficult to act apart from instructing officers about an elevated threat level that requires precautions. CBC News (2015-10-22)

*** Mounties who helped take down Ottawa gunman not invited to anniversary ceremony**

RCMP Commissioner Bob Paulson says he doesn't know why four Mounties who helped corner and kill the Parliament Hill gunman one year ago were not invited to Thursday's official commemoration. "We have a troop of 32 people (who are) going to march in here, so I don't know the answer to that question," Paulson told CTV's Ottawa Bureau Chief Robert Fife ahead of a sombre ceremony at the National War Memorial, where Cpl. Nathan Cirillo was killed. Paulson has faced criticism after Sergeant-at-Arms Kevin Vickers was honoured for his part in subduing the gunman, while four heroic officers – including a man who delivered a shot killing Michael Zehaf-Bibeau – did not even receive a handshake or a thank you note from their boss. Sources say the four officers had hoped that Paulson would invite them to Thursday's ceremony. Former RCMP Deputy Commissioner P.Y. Bourduas called the failure to include the men in the ceremony "a regrettable oversight." Paulson said, however, that he has publicly thanked his officers, and that a ceremony is being planned where the four Mounties will get commendations and bravery awards. "Today is not the day to be talking about that," he added. "Today is the day to be

remembering what happened." Since the shooting, one of the officers was briefly assigned to RCMP car wash duty, sources say. CTV News (2015-10-22)

A tribute to the fallen
It was the perfect day for some welcome healing - a warm, midautumn sun, mostly blue skies and a gentle breeze. The specific occasion was to pay tribute to the average citizens and first responders who raced to help, but could not, one year ago; to the police and security personnel who risked their own lives to protect others - but most of all to the two soldiers who were hunted down and killed for reasons that will forever escape. The larger occasion brought together the country's three most significant personalities of the moment: Stephen Harper, the current Prime Minister of Canada, Justin Trudeau, the prime-minister-designate and David Johnston, the Governor-General who will hand power from Mr. Harper to Mr. Trudeau on Nov. 4... Kevin Vickers, the Canadian ambassador to Ireland who was then sergeant-at-arms for the House of Commons, was one of those who put a quick end to the attack, thereby saving countless other lives. "Today," Mr. Vickers tweeted from Ireland as the ceremony took place, "my thoughts and prayers are with Kathy Cirillo, Nathan's mom, all HoC& Senate Security, RCMP, Ottawa Police. Globe and Mail, A1* Calgary Sun, 7 (Ottawa Sun, 5)

Friends of Harry Doyle frustrated by delays in case
There are several steps that must be taken before an arrest warrant is executed for a Fredericton woman facing charges in the Philippines relating to the 2012 shooting death of her husband. Staff Sgt. Julie Gagnon with the RCMP in Ottawa said the force is aware of the International Criminal Police Organization's (Interpol) red notice about Erma (Jane) Doyle, which it has received along with 189 member countries at the request of the Philippine National Police. Doyle came to Canada shortly after former Fredericton businessman Harry Doyle was shot and killed on Aug. 12, 2012, during a family barbecue at Palma Beach Resort in Punta Pilar, Surigao City. In August 2013, the Philippine National Police issued an arrest warrant for Doyle on a charge of parricide. She continues to live in Fredericton along with her sons. Gagnon said the RCMP won't comment on investigations being conducted by foreign authorities. "What should be noted is that an arrest warrant issued by a foreign country is not valid in Canada," said Gagnon. She said a foreign suspect can only be arrested if he or she has committed the crime in Canada or is in violation of the Canadian Immigration Refugee and Protection Act. An arrest warrant would be issued by Canadian authorities following the receipt of a provisional arrest request from a foreign country, Gagnon said. The international assistance group with the federal Department of Justice would first look into a case to determine whether a provisional assistance warrant is required. "It would mostly likely be given to the police of jurisdiction to act upon it then and to arrest the individual based on the request. "People believe that an Interpol red notice is an international warrant which doesn't exist. That's why a provisional arrest warrant needs to be issued after the fact," Gagnon said. In this case a provisional arrest warrant would be served by the Fredericton Police Force. The RCMP said it would be up to justice authorities in the Philippines to send an extradition request to the Department of Justice in Canada. Daily Gleaner, A1

***Police can't 'detain people just because people don't want to talk to them,' judge warns**
A judge has acquitted Susan Lynn Carter, 52, of Chamcook in St. Stephen provincial court on a charge of drinking and driving. RCMP Const. Pierre Phaneuf did not form a suspicion that Carter had alcohol in her system until after he detained her without grounds on Aug. 23, 2014, in Saint Andrews, Judge Henrik Tonning ruled on Wednesday. Phaneuf pulled Carter over for speeding, but it turned into an investigation into possible domestic violence, until a bottle of wine on a bed and a "fruity" smell on Carter's breath tweaked the officer to suspect that he had an impaired driver on his hands, according to testimony at the trial. The officer testified that the suspected speeder on Route 127 pulled into a Saint Andrews driveway. He noted a "fruity" smell on the woman's breath which he attributed to chewing gum, he said. Phaneuf testified that he suspected a domestic assault after the woman pointed to bruises on her arm. They agreed to go to the Saint Andrews RCMP, but Carter insisted that they drive to her mother's home first... "She was arbitrarily detained ... he had no right to keep her there, and no right to keep her licence, and no right to demand that she follow him to the RCMP station," he ruled. Tonning ruled further that the officer detained Carter for obstruction at her mother's house without advising her of her right to consult counsel. The fruity smell might have given grounds to demand that Carter breathe into an approved screening device after Phaneuf stopped her for speeding, but not later after detaining her without legal grounds, he

ruled. The bottle of wine was in the house, not in the car, so could not give rise to suspicion that the woman was drinking, Tonning ruled. "The point is, the police simply can't bird-dog or detain people just because people don't want to talk to them," the judge ruled. Telegraph Journal, B7

A grim reality: 'Grain is dangerous'
When Dennis Becker saw his grandson sinking in a semi-trailer loaded with grain, he did all he could to save him. But as he clawed through the pile of tiny kernels trying to free 14-year-old Layne Langridge, the 63-year-old man became trapped as well. Within minutes, both had suffocated on Becker's farm near Burstall in southwestern Saskatchewan. Family members later realized, after the bodies were freed from the truck, how frantically Becker had been trying to pull the boy out - the nails on his purple fingers were peeled back. Becker's son, Barry, says he and his family replay the Aug. 31 tragedy in their heads every day... "Had I said that back then, when I had a chance, who knows?" Could he have saved those girls? RCMP have said Catie Bott, 13, and 11-year-old twins Dara and Jana were playing in a truck loaded with canola on their family's farm near Withrow when they died Oct. 13. Their funeral is in Red Deer on Friday. Canadian Press (StarPhoenix, A1, Calgary Herald, Leader-Post, National Post); * Canadian Press (Calgary Sun, 12)

***Helicopter goes down on island in North Saskatchewan River**
Emergency services responded to a helicopter crash on an island in the North Saskatchewan River near Paynton on Thursday afternoon. "At 2:05 p.m., STARS Air Ambulance, from our Saskatoon base, began responding to a helicopter crash approximately 23 kilometres northeast of Maidstone," STARS Air Ambulance spokesman Cam Heke said Thursday night. Heke would not confirm if anyone travelling in the downed helicopter was killed or injured. He said STARS personnel landed on the island but that the air ambulance "was not medically required to transport patients." Heke said several people who had perhaps swum out to the island to assist in the aftermath of the crash were assessed by ground emergency services, who were assisted by STARS medical staff. Heke said he didn't know what kind of helicopter crashed or the circumstances surrounding the incident. "Aviation, particularly helicopter aviation in Canada, it's a relatively small world, and so our hearts and our thoughts are with those involved," he said. Officers from the Maidstone, Turtleford and Battlefords RCMP detachments also responded to the crash. Postmedia News (StarPhoenix, A6, Calgary Herald, A11), 1; * Journal de Montréal, 17

***All clear at Come By Chance refinery**
All non-essential personnel were evacuated from the Come By Chance refinery site Thursday after a bomb threat was made, a spokesperson for North Atlantic Refinery said. Shortly before 5 p.m. Thursday, the RCMP, consulting with management at the North Atlantic Oil Refinery, determined the site was safe, and operations returned to normal. Clarenville RCMP Sgt. Greg Hicks told The Packet that police support services, including the explosive disposal unit and police dog service, went to the scene.
"The investigation into the threat is ongoing," Hicks said. Telegram, A5

***Hold people to account for police HQ: Mayor**
Mayor Brian Bowman says that if someone on city council is found at fault in the RCMP investigation of the new Winnipeg Police headquarters, he will hold them accountable. "I'll do everything in my power to make sure that people are held accountable if there's wrongdoing," said Bowman. "I am quite anxiously awaiting the results of the RCMP investigation." Originally estimated to cost $135 million, Winnipeg's new police service headquarters is now expected to cost $214 million and has been delayed multiple times. Media reports earlier this year state the RCMP investigation has "multiple targets" but did not identify individuals. A whistleblower reportedly alleged invoices were altered and a payment was made to a member of city council. It was also alleged that one witness to this was interviewed by Winnipeg police. An external audit found severe mismanagement plagued the project, while an ongoing RCMP investigation will determine if the project involved criminal wrongdoing. To date, no city official has been penalized for their involvement in the project, a fact the Canadian Taxpayers Federation has questioned. Winnipeg Sun, 5

***Traffic crackdown results in 20,000 tickets**

A traffic enforcement initiative by RCMP and city police forces in Saskatchewan - aimed at excessive speeders, distracted and impaired drivers - has resulted in massive numbers of tickets. Officers in the joint initiative, called Combined Traffic Services Saskatchewan (CTSS), issued nearly 20,000 tickets all over Saskatchewan between October 2014 and September 2015. Thirty per cent of the tickets were issued in Saskatoon. CTSS is a two-phase program. The first phase is being enforced in Saskatoon and central Saskatchewan. The second phrase was started in June and is enforced in the Weyburn and Estevan areas. Superintendent Grant St. Germaine, acting criminal operations officer for the RCMP in Saskatchewan, said CTSS will team up with other agencies, such as the ministry of highways, this week.They will undertake an enforcement initiative to educate people about the importance of slowing down in construction zones and passing emergency vehicles. "We've had members from the local communities come up to our members and the RCMP members to appreciate the additional enforcement," Saskatoon city police Insp. Mitch Yuzdepski said. Postmedia News (StarPhoenix, A7)

***Escaped Island inmate captured in Surrey**

A prisoner who was able to run from a B.C. Corrections officer at Victoria General Hospital, smash through a window, and steal a car to aid his dramatic escape has been apprehended. Tyler Desmond Fong, 31, was arrested Wednesday after a quick foot pursuit at about 3:50 p.m. in the 10200 block of King George Boulevard in Surrey. No one was injured, police said. Fong was in jail following convictions this year for a string of property offences in the Ladysmith and Nanaimo areas. He was on the run for 19 days. A prisoner at Vancouver Island Regional Correctional Centre, Fong was brought to Victoria General Hospital's emergency department on Oct. 4 for medical treatment. Fong escaped shortly before 8 p.m. that night from the custody of a provincial correctional officer at the emergency department. Police did not alert the media until the next morning, after they had acquired a warrant for his arrest and approval to release the prisoner's name and photograph. West Shore RCMP received information on Fong's location, co-ordinated its search with Surrey RCMP and its auto crime unit, and executed Fong's capture Wednesday. Fong had a history of escaping from custody, said West Shore RCMP. At the time, Justice Minister Suzanne Anton would not provide details as to how the prisoner - in an emergency room with other patients and staff - was supervised and how he was able to escape. The provincial Justice minister said B.C. Corrections would review the escape. Postmedia News (Province, A9, Times Colonist, A3)

Arrests made in $5-billion fraud scheme

Toronto Police helped the FBI uncover a $5-billion fraud and money-laundering conspiracy in a case they say highlights the need for co-operation to track crime proceeds that cross borders more easily than ever. FBI officers and United States Postal Inspection Service investigators watched Thursday in Toronto police headquarters as Detective Sergeant Ian Nichol traced the evolution of the case, which led to charges against three Toronto-area residents and six south of the border. "We saw significant linkage with what was going on on the U.S. side ... notes were compared, and lo and behold, we were onto something bigger than what we had originally," Det. Sgt. Nichol said. The three charged locally are alleged to have wired funds through accounts in several countries, including the proceeds of "romance scams." They came to police attention through a local case: a 63-yearold Canadian widow who was swindled of her life's savings in 2014. *** Probe into Quebec police abuse nears end**

Quebec provincial police have nearly completed a five-month internal investigation into eight officers accused of abuses against indigenous people, and say they will soon send the files to the Crown for possible criminal charges.The Sûreté du Québec launched a probe into officers at its Vald'Or detachment in May, after 12 aboriginals - mostly women - came forward with allegations of abuse of power as well as sexual and physical abuse dating to between 2002 and 2015, spokeswoman Sergeant Martine Asselin said. All of the officers, including at least one woman, have been questioned and remain on duty, she said. In the coming weeks, the files will be provided to the Crown for potential prosecution.Several of the aboriginal women gave their accounts to CBC's French service, Radio-Canada, and some went on to file formal complaints. According to the program Enquête, the women alleged a long-standing pattern of officers picking up women, driving them to remote areas and then leaving them there to walk back. Some women alleged physical assault and sexual abuse, with one saying she was paid to perform sex acts - at

times in exchange for cocaine."We went to a road in the woods and that's where they would ask me to perform fellatio," Bianca Moushoun told the program. The officers, whom she said offered her beer from their trunk, would allegedly pay her $100 for the sex act and $100 in hush money. "They were in uniform, with their guns," she said."They have the power. They have the badge."Allegations about aboriginal women being abused and mistreated by police have surfaced across the country over the years. Human Rights Watch released a scathing 2013 report detailing allegations against the RCMP in northern B.C. regarding the abuse of aboriginal women, including rape and an unwarranted attack by a police dog.These kinds of accusations, indigenous leaders say, feed into the historic mistrust of law enforcement and underscore the need for a national inquiry into Canada's more than 1,181 missing and murdered aboriginal women. Prime-minister-designate Justin Trudeau said earlier this week his Liberal government would move forward "quickly" with an inquiry.Dawn Lavell-Harvard, the president of the Native Women's Association of Canada, said she was "disgusted" by the Val-d'Or allegations and not entirely surprised; she has heard similar accusations elsewhere, she said."Until you have an inquiry ... to actually expose how our women are treated, this kind of thing won't change," she said.Police services have been working to rebuild their relationship with the aboriginal community after decades of tension - stemming, in part, from law enforcement's role in forcibly removing indigenous children from their homes and taking them to residential schools, where they were stripped of their culture and abused. Some families of missing or murdered indigenous women continue to express deep mistrust, saying they believe their relatives' case was mishandled due to police bias. Globe and Mail, A7

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Dorchester inmate hospitalized after assault**
An inmate from the Dorchester Penitentiary was sent to the hospital earlier this week after being assaulted in the medium security unit. Correctional Service Canada issued a statement on Thursday saying the inmate was assessed by staff after the assault and then taken to an outside hospital. No staff members or other inmates were injured during the altercation, which happened on Sunday morning. "The assailant has been identified and the appropriate actions have been taken," the statement said. The Correctional Service Canada says it will review the assault and will take the appropriate steps to prevent further incident. CBC News

Dorchester tulip garden honours Second World War veterans
A small group of volunteers braved the rain and cold Thursday to plant hundreds of tulip bulbs in the Dorchester Village Square to commemorate the 70th anniversary of the liberation of the Netherlands during the Second World War. "It's very fitting that we are doing this in Dorchester, right next to the cenotaph that remembers our veterans from the wars," said Susan Spence, co-president of the IODE Shepody Chapter, as she and others knelt on the cold ground to set the bulbs in a freshly-dug trench surrounding the war memorial. "We have a very strong Remembrance Day program here." (...)The volunteers from the IODE had help Thursday from a few inmates from Dorchester Penitentiary, who did the work of digging and refilling the flower bed. The Correctional Service of Canada inmate community work program allows inmates supervised leave from the institution for several hours. In Dorchester, they have done jobs ranging from building maintenance and gardening to painting lamp posts and fire hydrants. Telegraph-Journal, A4 (Times & Transcript)

Deportation awaits killer
After a decade in prison, a 33-year-old man will have to choose between staying in a Canadian jail or applying for his parole and likely being deported to Somalia. Bashir "Donovan" Gaashaan, 33, was sentenced to life in prison with no possibility of parole for 10 years on Thursday in Red Deer Court of Queen's Bench. He pleaded guilty to second degree murder and committing an indignity to human remains on Monday. Jenna Cartwright, 21, was killed on March 30, 2011. Her body was dumped in a treed area east of Olds, about six metres from a rural road. Justice Read said when the body was found more than a month later, it had been scavenged by wild animals. Gaashaan, a Somalian refugee who came to Canada in 1993, faces potential deportation back to Somalia upon his release from jail. "You may deprived of your ability to remain in Canada," said Justice Donna Read. "That's terrible, but that's

what happens." Read imposed the minimum wait of 10 years for a parole application for a second-degree-murder conviction. She said Gaashaan has shown remorse and has made steps to improve his life while in custody at the Edmonton Remand Centre for the last four years. Red Deer Advocate, A1

*** Conviction, sentence appealed**
A Dartmouth man who was shot by police in June 2013 after he pulled a knife on officers is appealing his conviction and sentence. Last month, Christopher James Cockerill, 37, was sentenced to four years five months in prison for the June 27, 2013, incident. However, because he was granted remand credit of about 40 months, he only has 13 months to serve. Cockerill pleaded guilty last year to eight charges in connection with the incident, including three counts of assaulting a police officer with a knife and one count each of possession of weapons (two knives) for a dangerous purpose, uttering threats and resisting arrest. He filed papers with the Nova Scotia Court of Appeal earlier this week. Chronicle-Herald, A6

*** L'ancien père oblat Eric Dejaeger fait appel**
Un ancien père oblat dans l'Arctique déjà en prison pour des dizaines d'infractions à caractère sexuel contre des enfants inuits interjette appel. L'information a été divulguée dans un tribunal du Nunavut à Iqaluit, jeudi, alors qu'Eric Dejaeger s'est vu infliger une peine concernant d'autres agressions sexuelles contre des enfants en Alberta. Des peines de cinq ans ont été ordonnées pour des gestes commis contre trois enfants âgés de six à neuf ans à Edmonton et Grande Cache dans les années 1970. L'une des victimes, alors enfant de choeur âgé de neuf ans, a été agressée sur une période de quatre ans. Les deux autres étaient un frère et une soeur, âgés de huit et six ans, qui ont été agressés sur une période de trois ans. (…)Il purgeait déjà une peine de 19 ans dans une prison du Nunavut avant l'audience de jeudi. Presse canadienne (Voix de l'Est, 9), Canadian Press (National Post, Times Colonist), Radio-Canada

*** The Shop makes cut as prison hangout**
An opinion piece by federal inmate Jose Vivar states, "I haven't cut my hair in close to a year, and I'm starting to look like someone who attended Woodstock or wherever those hippie parties used to happen back in the '70s. But just because I don't get my hair cut doesn't mean I'm not a regular to the **prison** barber shop. There's not a day that I don't visit The Shop. Not only because I have to pass it on the way to the library, chapel or school and might as well drop in to see what's going on, but I visit it because it's the most fascinating place in here." Kingston Whig-Standard, A6

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

End of the road for random street checks
Random and arbitrary carding by police forces across Ontario will be illegal by the end of fall. Yasir Naqvi, minister of community safety and correctional services, made the announcement during a debate Thursday where MPPs from across the province spoke out against carding. At the time they were considering a private member's motion from a New Democrat MPP to ban random and arbitrary carding, also known as street checks. "It's a historic day," said Margaret Parsons, executive director of the African-Canadian Legal Clinic, who watched the debate in the legislature. "This is a monumental shift in our province," said Parsons, who has worked to end carding. She repeatedly paused to compose herself when talking to the Star outside the legislature. "We have been around for 21 years. We have been fighting on this issue since the day our doors opened in July 1994." Earlier in the legislature, Naqvi moved quickly during the debate to address the motion from New Democrat MPP and deputy party leader Jagmeet Singh. "We as a government stand opposed, Speaker, to any arbitrary, random stops by the police simply to collect information when there are no grounds or reason to do so," Naqvi said. "We have heard from the community that street checks, by definition, are arbitrary as well as discriminatory and therefore cannot be regulated; they must simply be ended. The province agrees that these types of stops must end." Toronto Star, A1 (Hamilton Spectator, A1); Waterloo Region Record

*** A useful inquiry into the missing, murdered**

An editorial states, “The timing, it seemed, was worthy of a top-notch Hollywood movie. No sooner had the keys to Parliament been handed to a party that has promised a national inquiry into Canada's missing and murdered indigenous women when news broke Quebec provincial police face allegations they have taken aboriginal women for rides out of town and demanded sex. The aboriginal communities' distrust of police across Canada is like a poison infecting efforts on both sides to battle the violence plaguing indigenous girls and women. Yet, the coincidence is not so remarkable: on any given day, Canadians can hear of yet another tragedy, heinous crime or grave offence against an aboriginal person. This is a sad reflection on the reality in this country. And Justin Trudeau's Liberal government has now assumed the prime responsibility of addressing the historical, complex factors that feed into a shameful state of affairs.” Winnipeg Free Press, A8

*** Inquiry a waste of resources**

An editorial states, “Prime minister-designate Justin Trudeau has promised to quickly launch an inquiry into missing and murdered aboriginal girls and women - an expensive exercise in telling Canadians what they have known for years. An inquiry will generate a thick tome of recommendations and remonstrations that will be consigned to a shelf where, over the coming years, it will be cocooned in a layer of gently accumulating dust. As outgoing Prime Minister Stephen Harper has pointed out, we know the many factors behind these women's tragic fates; this is a matter for law enforcement agencies, not for government rumination on, and review of, what is already known. Unemployment, substance abuse, domestic violence and the other ills that plague many of Canada's reserves and urban aboriginal communities have been extensively documented. Eight years ago, the federal Department of Justice's publication, Victims of Crime Research Digest No. 3, focusing on a summary of the literature on aboriginal victimization in Canada, stated: "Perpetrators of violence against aboriginal people are most often other members of the aboriginal community such as spouses, relatives, or friends of the victim, and as such, victimization among aboriginal people in Canada is often regarded as a mirror image of aboriginal offending."” Calgary Herald, A20

*** Privacy commissioner slams government for deleting emails about Highway of Tears**

In a scathing report that includes evidence of potential crimes in Victoria, B.C.'s privacy commissioner slammed Premier Christy Clark's government for hiding and destroying damaging political information in high-level offices. Commissioner Elizabeth Denham's report examined the record-keeping practices in Clark's own office, the Ministry of Transportation, and the Ministry of Advanced Education. In all three offices Denham found political staffers breached their duty to inform the public. Denham found that staffers did not adequately keep email records under freedom of information law, neglected to respond to information requests, and intentionally destroyed records that were seen by the government as politically sensitive and confidential. "Taken together, these practices threaten the integrity of access to information in British Columbia," Denham said. Denham says she was saddened to have to forward evidence to the RCMP after a Ministry of Transportation political staffer was found to have intentionally deleted emails and lied under oath to Denham's investigators. The RCMP confirmed it is reviewing evidence of "possible offences" submitted by Denham. Denham's investigation was triggered after a whistleblower alleged that in November 2014 George Gretes, a former staffer for Transportation Minister Todd Stone, deleted emails about Victoria's response to Highway of Tears concerns. The whistleblower, 36-year-old Tim Duncan, alleged Gretes directed him to delete the emails and when he hesitated Gretes took his computer keyboard and did it himself. The Province

*** Local artist hopes project will make a national impact**

Eagleclaw Thom knows he has a daunting task ahead of him. But he's looking forward to the challenge of honouring the legacy of women through art. He was one of two artists selected for the University of Regina's new Michele Sereda artistin-residence position. Thom hopes his project, which pays tribute to missing and murdered indigenous women (MMIW), will not only honour the families, but his former colleague as well. Sereda, an alumnus of the theatre department, was one of five people killed in a multi-vehicle crash north of Regina in February. "Michele cared very deeply for the community, so that's why I proposed a project that includes community involvement, and she cared a lot of social justice issues," he said. "I hope it will be responsive to the ways she was involved in the community and contribute in some way that she would be proud of." The issue of MMIW is something that has affected his own life. Leader-Post, A4

U of T throws learning lifeline to those who've faced danger
It was in a public park, of all places, one summer morning in a Tajikistan village that University of Toronto PhD researcher Alex Sodiqov had his freedom snatched away.
The 32-year-old international student had returned to his home country for two weeks last year to do research on conflict resolution. He was meeting an activist when authorities approached to ask for his ID - in broad daylight. Within days he was charged with treason on grounds that were never explained. He spent 40 days in jail. It would be nearly three months before he, his wife and baby daughter were allowed to return to Canada, where they were embraced by a program that supports newcomers who face danger back home.
"When you come out of a hot situation where you've been detained, your finances are stretched because you're hiring lawyers and your family is staying in hotels as they wait for your release," said Sodiqov, now in his second year of support from U of T's Scholars-at-Risk program. Toronto Star, GT1

Don't cosy up to Saudi Arabia
Some experts would have Canadians believe that this country's influence in the world would be enhanced by jettisoning a principled approach to foreign policy in favour of an expanded role at the morally compromised United Nations. Last month, Canadian government documents marked "secret" and "confidential" were leaked to the media during the heat of the recent federal election campaign. The internal documents offered critical analysis of Canadian foreign policy. The leaked documents reportedly lamented the supposed decline of Canada's international status and influence. They made much of Canada's failed bid to secure a temporary seat on the United Nations Security Council in 2010, citing the Harper government's staunch support for Israel as one of the reasons for Canada's international decline. INTERNATIONAL

* **Hurricane Patricia bears down on Mexico**
Residents of a stretch of Mexico's Pacific Coast dotted with resorts and fishing villages boarded up homes and bought supplies ahead of Friday's arrival of Hurricane Patricia, a monster Category 5 storm that forecasters warned could be catastrophic. Officials declared a state of emergency in dozens of municipalities in Colima, Nayarit and Jalisco states that contain the bustling port of Manzanillo and the posh resort of Puerto Vallarta. The governor of Colima ordered schools closed on Friday, when the storm was forecast to make what the U.S. National Hurricane Center called a "potentially catastrophic landfall." Rain pounded Manzanillo late Thursday while people took last-minute measures ahead of Patricia, which quickly grew from a tropical storm into a Category 5 hurricane, leaving authorities scrambling to make people safe. Associated Press (CTV News)

* **'An immense tragedy': Dozens killed in French bus-truck collision**
A truck and a bus transporting retirees on a day trip collided and caught fire Friday in wine country in southwest France, killing 42 people and badly injuring four others, authorities said. It was the nation's deadliest road accident in more than 30 years. An image released by BFM television showed the carcass of the bus -- nothing but a collapsing, charred frame engulfed by smoke. Firefighters fanned out along the narrow country road, between a wooded area and an upward slope near the village of Puisseguin, about 50 kilometres east of Bordeaux. Eight people, including the driver, escaped from the bus after the driver opened the door, but others were trapped as the blaze consumed the vehicles, Puisseguin Mayor Xavier

Sublett said on i-Tele television. The four injured were among those who escaped. French media said the truck driver was killed. Associated Press (CTV News)

MINISTER / MINISTRE

Tory senators could disrupt plan to change anti-terror act
Liberal government changes to the Conservatives' incendiary anti-terrorism law could face a bumpy trip through the Conservative-controlled Senate. "There may be some things that Mr. Trudeau and some of his colleagues are very supportive of, but they may be matters that an overwhelming majority of Canadians are not comfortable with," said Conservative Sen. Bob Runciman, who sponsored the controversial Bill C-51 national security legislation in the upper chamber in May.(…) Requiring government to review all appeals by Canadians whose names are on the no-fly list as potential threats to commercial aviation. Currently, names on the no-fly list have to be reviewed by the **public safety minister** every 90 days. A named individual can apply to the minister to have their name removed. But the minister is not required to reply and, after 90 days, is deemed to have rejected the application. The named individual can appeal to the Federal Court. Postmedia Network (Ottawa Citizen)

Stephen Harper démissionnera en tant que chef du Parti conservateur
Le chef conservateur, qui a déclenché les élections fédérales en août dernier, a donc perdu son pari lundi de remporter un quatrième mandat consécutif au pouvoir. Les électeurs ont opté pour le changement incarné par le chef libéral, Justin Trudeau, qui a balayé plusieurs régions au pays et dans la province. (…)Les conservateurs ont remporté les quatre autres circonscriptions qu'ils détenaient, soit celles de Maxime Bernier en Beauce, de **Steven Blaney** (Bellechasse-Les Etchemins-Lévis), de Jacques Gourde (Lévis-Lotbinière) et du candidat Luc Berthold qui a succédé à l'ex-ministre Christian Paradis dans Mégantic-L'Érable. Ils ont aussi gagné dans Portneuf-Jacques-Cartier, Richmond-Arthabaska, Charlebourg-Haute-Saint-Charles, Beauport-Limoilou et Louis-Saint-Laurent. QMI Agency (Journal de Quebec)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Government announces flood funding
The Alberta government will spend $297 million to build a new reservoir west of Calgary in hopes of preventing a repeat of one of the worst floods in Canadian history. About 120,000 were affected after heavy rains hammered southern Alberta in June 2013. The deluge wiped out roads and bridges and swamped streets, homes, and vehicles. The Springbank Off-Stream Reservoir will provide protection for communities along the Elbow River, including Calgary. "The floods of June 2013 were the largest natural disaster in Alberta's history by almost every measure - the extent of the damage, the number of people affected and the financial cost," Alberta Environment Minister Shannon Phillips said at a Calgary news conference Monday. "We cannot let a disaster of this magnitude happen again." Red Deer Advocate, A3

Tour boat 'must have got swamped by huge wave'
Five British nationals are dead and one person is missing after a whale-watching tour boat sank off Vancouver Island on Sunday afternoon with 27 people on board. Three of the dead were tourists in Canada, while one lived in Ontario and the other in B.C., according to the BC Coroners Service. The victims include four men and one woman between the ages of 18 and 76. "They must have got swamped by a huge wave and it flipped their boat completely," said Alec Dick, one of the first to reach the stricken vessel. "I don't think they had time to do anything. Whatever happened, happened so quick." An official with the Joint Rescue Coordination Centre said 21 people were rescued before the search was called offlate Sunday night. Mounties have taken charge of the search for the one remaining missing passenger, and RCMP crews, along with coast guard and local search and rescue workers, were all out on the water Monday. Postmedia Network (Ottawa Citizen, C1)

Trouble came suddenly for capsizing Leviathan II
The Leviathan II was rolling with the steady swell coming in from the open Pacific when the 27 people on a whale-watching trip from Tofino suddenly realized they were in trouble. Instead of riding up the face of the next wave, the 20-metre boat, with a high, open viewing platform on the upper deck, just flipped over. And investigators and the company don't know why. Five Britons - three tourists and two residents of Canada - died and a sixth person, a 27year-old Australian, was missing after the tour boat operated by Jamie's Whaling Station went down near Plover Reefs, in a rugged wilderness area on the west coast of Vancouver Island. The Sydney man's family said he was on the boat with his girlfriend and her family when it sank, the Australian Associated Press reported. His girlfriend's father was among the five British citizens confirmed dead, it said. It happened so fast there was no time for a mayday call, said officials with Jamie's Whaling Station, who held a news conference Monday afternoon to express their dismay. Globe and Mail, A1

*** 5 Britons killed on whale watching tour**
Five British nationals are dead and one person is missing after a whale-watching tour boat sank off Vancouver Island on Sunday afternoon with 27 people on board. Three of the dead were tourists in Canada, while one lived in Ontario and the other in B.C., according to the BC Coroners Service. The victims include four men and one woman between the ages of 18 and 76. An official with the Joint Rescue Co-ordination Centre said 21 people were rescued before the search was called off late Sunday night. Mounties have taken charge of the search for the one remaining missing passenger, and RCMP crews, along with coast guard and local search and rescue workers, were all out on the water Monday. *** Springbank the 'least-worst' option**
As the province unveiled its plans for flood mitigation on the Elbow River, scientists and environmentalists called the Springbank reservoir the "least-worst" option to protect Calgary. On Monday, the province committed $297 million for a dry dam at Springbank rather than one that was proposed further upstream at McLean Creek. Environment Minister Shannon Phillips said Springbank was chosen for several reasons: lower cost, a shorter timeline to build and fewer environmental impacts. Although scientists and

environmentalists were pleased the province rejected the McLean Creek dam, most said they would have preferred to see the province focus on fixing the river's headwaters upstream of the city rather than building any engineering solutions. Calgary Herald, A3; National Post; Edmonton Sun (Calgary Sun)

*** 80-year-old wreck poses pollution threat**
Authorities continue to monitor a suspected solvent leak in Lake Erie from a barge that sank nearly 80 years ago and a local environmentalist said its contents could have a significant negative impact. Last week, divers were exploring the wreck of the Argo - a tanker barge that sank during a storm in 1937 carrying 4,800 barrels of benzol, a buoyant petroleum distillate, and crude oil - when they noticed an unknown substance that smelled strongly of solvents and reported the discharge to the U.S. Coast Guard. Derek Coronado, co-ordinator of the Citizens Environmental Alliance, said the worst-case scenario is that the oil begins leaking from the barge. Canadian Coast Guard spokeswoman Carol Launderville said both the Coast Guard and Transport Canada are "closely monitoring the situation and are in frequent contact with the (U.S. Coast Guard) on this issue. Windsor Star, A10

*** Body of missing hiker, 49, found near Pemberton**
Search and rescue teams found the body of 49-year-old hiker Michael Charles Low in a crevasse Sunday, Whistler Pemberton RCMP said. Because it was getting dark, recovery of the body was left until Monday, Staff-Sgt. Steve LeClair said. Times Colonist, A10

*** SEARCH CONTINUES**
Search and rescue crews were out on the Yukon River on Friday afternoon, looking for 25-year-old Jeremy Scurvey. The man was first reported missing on Oct. 10. He was last seen in the waters of the Yukon River at the end of Lambert Street. Whitehorse Daily Star, 3

*** Rétablir les faits**
Le choix du thème de la sécurité apparaissait comme une nécessité pour la SODES et les Armateurs du Saint-Laurent, afin de « remettre les pendules à l'heure » et de s'assurer que l'information qui parvient aux représentants de la population au Parlement soit juste et vérifiée. « Il y a un questionnement [sur la sécurité dans les transports] excessivement présent dans la population, dans les municipalités, surtout depuis [la tragédie ferroviaire de] Lac-Mégantic », indique Nicole Trépanier, PDG de la SODES. « C'est un questionnement qui est sain et fondé, mais il y a des faussetés qui se propagent [...] Il y a une tendance à laisser entendre qu'on fait n'importe quoi, n'importe comment », déplore Mme Trépanier, qui insiste sur l'importance de « rétablir les faits ». Le Quotidien, 16

*** New insurance coverage available for weather damage**
Insurance companies are starting to offer additional coverage for severe weather-related property damage. Gordon Murray, Aviva's Atlantic business development vice-president, said it's the first insurance company to offer what it calls 'overland water coverage.' This would cover things such as runoff from snow to heavy rains that result in water-filled basements. The company worked with flood-mapping experts to find 15 risk zones in each province, which can be obtained through an insurance broker, he said. More than 90 per cent of New Brunswick homes fall into zones considered low- to medium-risk. This coverage, he said, is meant for areas that typically don't flood. Flood-prone areas would be excluded from coverage. He said consumers in low- to medium-risk areas will have to weigh the risks of overland water damage created by future severe weather events. Daily Gleaner, A8

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Senate could balk at changes to terrorism law, Tories warn
Liberal government changes to the Conservatives' incendiary antiterrorism law could face a bumpy trip through the Conservativecontrolled Senate. "There may be some things that Mr. Trudeau and some of his colleagues are very supportive of, but they may be matters that an overwhelming majority of Canadians are not comfortable with," said Conservative Sen. Bob Runciman. The senator sponsored the controversial Bill C-51 national security legislation in the upper chamber in May. Overhauling C-51, known as the Anti-terrorism Act of 2015, was a key Liberal pledge when party leader Justin Trudeau and his

caucus voted in support of the Conservative bill in the House in the spring. Now that the Liberals will form government, sources say preliminary drafting of the changes is underway and that these will be tabled early in the new parliamentary session, in concert with public consultations. Other Conservative senators said the Liberal national security legislation will be given the same respect accorded any government legislation, especially from a majority government. "Our position will be reasonable, common sense and in good faith and not on an ideological position," Conservative Senate Leader Claude Carignan said. "We have seen the results of the election and we will play our role as senators and will study very seriously all legislation and we will decide," Carignan said. But he added that final acceptance "depends on the results of our study." Postmedia News (Ottawa Citizen, A1)
