Toronto's Police Services Board may be planning to overhaul a community policing unit set up 10 years ago to decrease violence and increase safety in high crime areas, sources have told CBC News. The police services board, which meets Friday, is expected to make an announcement about the future of TAVIS, the Toronto Anti-Violence Intervention Strategy. Sources said the unit could be renamed and made more community friendly in an effort to cut costs. TAVIS police program has dedicated funding cut. TAVIS, which was created in 2006, had its annual provincial funding cut nearly in half last September. The ministry of community safety and correctional services cut its budget from $5 million to $2.6 million, a cut that took effect at the beginning of this year. Community leaders say what is needed is appropriate, not extra, policing. They say TAVIS has created tension between police and residents of neighbourhoods where the unit has been deployed. There have been concerns about carding in areas where TAVIS was

working. Toronto Police Association President Mike McCormack said TAVIS has made a difference. "TAVIS is a unit that has been very effective, very efficient as far as surge policing is concerned, responding to different hot spots throughout the GTA. They have done some amazing work as far as reduction of crime and providing public safety." McCormack said the question remains what kind of resources the city will make available for crime prevention. CBC News

*** Gun amnesty program will actually save lives**

An opinion piece states, "It is unfortunate that the idea of a new gun surrender program has been envisioned and articulated by Councillor Giorgio Mammoliti in such a way that it has been met with derision and skepticism because to me, as a criminal defence lawyer, it is a very good idea. Anyone who finds such a concept that involves paying criminals to surrender firearms repugnant may not realize the Toronto Police Service already pays tens - if not hundreds - of thousands of dollars annually to criminals to inform upon illegal gun possessors. In fact, paying underworld informants is the main police weapon against illegal gun possession. Unfortunately, it is also an economically inefficient, unreliable weapon that causes tremendous collateral damage. It works like this: police offer individuals entrenched in the criminal subculture money (or, in some cases, a "walk" on outstanding charges) to tell them who has a gun and the place he or she keeps it. The outlay of taxpayer dollars to the criminal informant, however, is only the first expense required to remove a particular firearm off the streets. Dwarfing the initial outlay to the informant are the costs of the investigation to attempt to confirm some criminal aspect of the informant information - a prerequisite for a search warrant - the execution of the warrant, and the detention and prosecution of the alleged possessor. The dollar cost of the seizure of a gun through the search warrant process can be measured. What cannot be measured is the societal cost of the execution of search warrants where the informant has lied or been mistaken. The police are not required to publish how many times their affidavits sworn in support of search warrants applications proved to be inaccurate or untruthful, but my office gets multiple calls each week from people complaining their doors were smashed in, their homes ransacked and their children traumatized by the police and nothing illegal was alleged to be found. It is a devastatingly alienating experience." Toronto Star, A13

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Ministers, indigenous representatives gather**

Ministers responsible for indigenous affairs in the territories and provinces, and leaders from national indigenous organizations met with the federal minister of Indigenous and Northern Affairs in Ottawa Friday to discuss how governments can improve the quality of life for indigenous peoples in Canada, and advance the process of reconciliation. The Federal, Provincial and Territorial Indigenous Forum, which will happen annually, replaces the Aboriginal Affairs Working Group. The major difference is that the federal government is now actively involved. Deputy premier Elaine Taylor was present on behalf of the Yukon, and called the meeting "historic," because it was the first time the federal government was at the table with ministers from the provinces and territories in charge of indigenous affairs in their respective jurisdictions. "Now the feds have come to the table, so this is an opportunity to really engage with Canada on issues important to indigenous peoples and all Canadians," said Taylor. The primary focus of the FPTIF is to find ways to close the socio-economic gaps between indigenous and non-indigenous peoples. This means reducing the number of indigenous children in the child welfare system, bringing down rates of poverty, improving the delivery of health services, and preventing violence against indigenous women and girls. The group discussed the Truth and Reconciliation Commission's 94 Calls to Action, which aim to redress harms caused by the legacy of the residential school system, and the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), which Canada officially adopted last month. Under UNDRIP, governments are required to secure "free, prior and informed consent," for natural resource development on traditional territories. The group also agreed to work together on the National Inquiry of Missing and Murdered Indigenous Women and Girls. "The national inquiry that the federal government has committed to proceeding with is of utmost importance to Canada and of great importance to the Yukon," said Taylor, who has been in charge of this file as minister responsible for the Women's Directorate. Whitehorse Daily Star, 3 (2016-06-13)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Feds reject NDP motion to decriminalize marijuana for personal use
The federal Liberal government has no plans to decriminalize marijuana before legalizing it, Attorney General Jody Wilson-Raybould said Monday. "It would mean that marijuana would remain an illegal substance and that it would continue to be grown and distributed by organized crime networks," Wilson-Raybould told the House of Commons. "Canadians, both adults and youth, would continue to purchase a product of unknown potency and quality while fuelling the profits of organized crime." She said the Liberals would therefore not be supporting an NDP motion urging the federal government to immediately decriminalize simple possession of marijuana. Prime Minister Justin Trudeau campaigned on a promise to legalize, regulate and restrict access to marijuana, and his government plans to introduce legislation next spring. But New Democrat MP Murray Rankin said that could take two years to come into effect, leaving many Canadians at risk of criminal records for something the government doesn't believe should be a crime. The Guardian, A8 (Cape Breton Post, Telegram, National Post)

* **Marijuana producer eager to expand: Awaits legalization of recreational pot**
The politicking goes on in Ottawa about how and when to legalize recreational marijuana use. Meanwhile, existing licensed medical marijuana producers continue to operate within a costly compliance environment, and are forced to grapple with the challenges of being left outside of the mainstream of the capital markets. The industry is looking toward a massive increase in demand when recreational use is legalized, but its ability to scale up in anticipation of that demand can be challenging. Delta 9 Biotech, the only licensed producer in Manitoba, is a case in point. John Arbuthnot of Delta 9 said the company is on the verge of closing a financing, but has been struggling to come up with the right formula with which to approach investors. Delta 9 has been operating for more than two years, and was one of the original group of 13 producers Health Canada licensed in 2014 (there are now 31, with most of them in Ontario and British Columbia.) Prime Minister Justin Trudeau has promised to legalize marijuana and his government plans to introduce legislation next spring. In the House of Commons Monday, the government said it will not decriminalize it before a task force reports in the spring. It's just more uncertainty for an industry that was forced to invest heavily in security and standard operating procedures in order to comply with Health Canada standards to become licensed. But the ongoing uncertainty continues to create challenges. "Access to capital is difficult," said Arbuthnot, who is still weighing options that may include an initial public offering or a reverse takeover to get a public listing. Winnipeg Free Press, B8

* **Decriminalization of pot nixed**
The federal government will not decriminalize the possession of marijuana until it becomes law - with stringent regulations and restrictions in place, Attorney General Jody Wilson-Raybould said on Monday. "Our government's objectives in doing so are to protect young Canadians by keeping marijuana out of the hands of children and youth," said Wilson-Raybould. "We also want to keep profits out of the hands of criminals, particularly organized crime." The federal attorney general spoke against an Opposition Day motion introduced in Parliament on Monday by NDP justice critic Murray Rankin, who represents Victoria. The bill urges the government to decriminalize possession of personal amounts of pot before it's made legal. Prime Minister Justin Trudeau campaigned on a promise to legalize, regulate and restrict access to marijuana. "You can't have the prime minister announcing it's going to be legalized and then stand up and prosecute it," Rankin said in the House of Commons. "It's a ludicrous situation, ludicrous." The Liberal government says it plans to introduce legislation in the spring of 2017, after it has put together a task force to develop a comprehensive regime for controlling the safe production, distribution and consumption of cannabis products across Canada. "This task force will be set up very shortly and will have an ambitious timeline so that it can inform the government on its progress and complete its review in a timely and responsible way," Wilson-Raybould said. Decriminalizing possession of marijuana without ensuring the appropriate controls are in place would be giving a green light to dealers and criminal organizations to sell marijuana to Canadians, especially children and youth, she argued. Times Colonist, A5

PUBLIC SERVICE / FONCTION PUBLIQUE

Des experts examineront l'aide fédérale aux sciences
Le gouvernement Trudeau a annoncé, lundi, la création d'un groupe de travail pour faire l'examen des programmes fédéraux de soutien aux sciences fondamentales. Le Conseil consultatif pour l'examen du soutien fédéral à la recherche fondamentale sera chargé de faire des recommandations d'ici à la fin 2016 à la ministre fédérale des Sciences, Kirsty Duncan, pour améliorer les programmes axés sur les sciences. Le groupe formé de neuf experts sera présidé par le Dr David Naylor, ancien recteur de l'Université de Toronto, et compte parmi ses membres Art McDonald, ancien directeur de l'Observatoire de neutrinos de Sudbury et titulaire d'un prix Nobel, Rémi Quirion, scientifique en chef du Québec, et Robert Birgeneau, ancien chancelier de l'Université de la Californie. En plus de recueillir les commentaires du milieu de la recherche, le groupe devra analyser les pratiques exemplaires internationales touchant le financement de la science, et examinera les obstacles qui empêchent les jeunes chercheurs d'atteindre leurs objectifs de carrière et ce qui doit être fait pour les éliminer. Le milieu scientifique a connu des années difficiles pendant le règne du gouvernement Harper. Une campagne nationale en faveur de la science publique, menée par le principal syndicat des scientifiques, l'Institut professionnel de la fonction publique (IPFPC), a attiré l'attention à l'échelle nationale et internationale. Lors de la dernière campagne électorale, les libéraux avaient promis de redonner toute sa place à la science publique, et promis de mettre fin au musèlement des scientifiques fédéraux. Dans le cadre des présentes négociations, l'IPFPC demande la reconnaissance de l'intégrité scientifique dans la convention collective des scientifiques fédéraux. Le Droit, 9

Deux syndicats, deux strategies
Les deux principaux syndicats de la fonction publique ont décidé de stratégie différente, cette année, dans le cadre de la Semaine nationale de la fonction publique, qui a pris son envol lundi. Pendant que l'Alliance de la fonction publique du Canada (AFPC) invite ses membres à boycotter encore une fois les activités organisées par le gouvernement, l'Institut professionnel de la fonction publique du Canada (IPFPC) incite plutôt les siens à participer aux activités organisées par leur employeur en arborant des articles de visibilité appuyant les équipes de négociations. Pour la présidente de l'AFPC, Robyn Benson, le boycottage est encore nécessaire en raison de la lenteur des négociations. «Le gouvernement libéral n'a pas tenu parole, a-t-elle indiqué par voix de communiqué. Il avait pourtant promis de réparer les ponts avec les fonctionnaires et de faire preuve de respect envers eux. Compte tenu des négociations qui piétinent et de l'incertitude qui pèse sur les relations de travail, nous contestons la pertinence des activités qu'organise l'employeur à l'occasion de la Semaine de la fonction publique.» (…) Pour sa part, l'IPFPC a décidé de ne pas boycotter la Semaine cette année, afin de profiter de la fenêtre qui s'est ouverte avec l'arrivée du gouvernement libéral. La présidente de l'Institut professionnel, Debi Daviault, estime qu'il s'agit du «moment idéal» pour ses membres de montrer leur appui à leurs équipes de négociation, «pour que les choses bougent à la table de négociation». Les négociations doivent reprendre mardi et mercredi pour certaines équipes de l'Institut professionnel. (…) Lundi, le premier ministre Justin Trudeau a lancé la Semaine nationale de la fonction publique en participant à une rencontre avec de jeunes fonctionnaires fédéraux. Dans une déclaration, il a aussi salué le travail et le dévouement des fonctionnaires fédéraux en insistant sur l'importance de travailler dans «un milieu de travail sain, […] dynamique, stimulant et attirant». Le Droit, 9

Ottawa working on pay delays
A federal government spokesman says it is working to ensure that its employees receive accurate and timely pay after some workers in Sydney complaints of delays receiving their final pay and records of employment. Some casual employees with Immigration, Refugees and Citizenship Canada's office in Sydney said last week that more than a month after finishing their most recent stints there, they are still awaiting their final pay and haven't received their records of employment. In response to questions posed by the Cape Breton Post, Jean-François Létourneau, spokesman for Public Services and Procurement Canada, said in an email it is "working closely with all departments and agencies, to ensure that employee data is appropriately entered" into human resource systems and the Phoenix pay system. "We fully appreciate the challenges employees face any time pay is affected," Létourneau wrote. Among the steps that have been taken include hiring Phoenix experts on-site and online to answer questions from human resources advisers, and the pay centre has hired new compensation adviser trainees who have

started processing cases and "50 additional temporary resources" have been hired to answer calls. The workers who spoke with the Post indicated they believe the delays are being caused at the federal government's pay centre in Miramichi, N.B., which they have had difficulty reaching by phone. The Public Service Alliance of Canada, which represents many federal employees, issued a news release in April calling on the government to fix the relatively new Phoenix pay system. It blamed insufficient staff, training and what it believed to be flaws in the Phoenix system in preventing pay centre workers from ensuring people are paid accurately and on time. Cape Breton Post, A3

OTHER / AUTRE

Canada mourns slain hostage

Canada is mourning with the family of a Canadian man killed by a militant group in the Philippines, Prime Minister Justin Trudeau said Monday. Trudeau said Philippines President Benigno Aquino has offered his condolences and regrets over the murder of Robert Hall, who had been held hostage by Abu Sayyaf since September 2015. The prime minister praised Hall's family. "The Hall family has shown great strength of character in their resilience and are admirable in the face of this terrible situation," he said. "This is a grievous loss for them and their country mourns with them." The government is still seeking formal confirmation of Hall's death, Trudeau said during a brief news conference in the foyer of the House of Commons. However, "we have every reason to believe that the reports are unfortunately true." He said Canada holds Abu Sayyaf fully responsible for Hall's death. "We are more committed than ever to working with the government of the Philippines and international partners to pursue those responsible for these heinous acts and bring them to justice, however long it takes." He called terrorism "a scourge on the world." "Too many families have endured the unspeakable grief the Hall family is feeling today because of these senseless acts of hatred." "On behalf of them and all Canadians, we mourn their loss and reassert our resolve." (...) Trudeau has steadfastly refused to entertain the thought of paying ransom to hostage takers. He said after learning of Ridsdel's execution that Canada would never pay a ransom for the hostages in the Philippines and last month he persuaded leaders of the other G7 countries to reiterate their opposition to paying ransoms. Today, he repeated that paying ransoms would put more Canadians in danger. "Canada cannot and will not pay ransoms to terrorists," he said. "We will not turn the Maple Leaf worn with pride by over three million Canadians abroad into targets." Interim Conservative Leader Rona Ambrose also expressed shock and outrage at the news of Hall's execution. "The threat of radical and barbaric acts of terrorism remains very real. Canada is not immune to the danger presented by global terror networks," she said in a statement. Canadian Press (The Guardian, A8, Cape Breton Post, The Telegram, Times Colonist, Whitehorse Daily Star); * Presse canadienne (Voix de l'Est, Le Nouvelliste, Le Quotidien, La Tribune, Le Soleil, La Presse+); * Presse canadienne (Le Quotidien); * Le Devoir; * Journal de Montréal

*** Not paying ransom the right thing to do**

Justin Trudeau looked as pensive as Canadians have yet seen him, as he announced that a second hostage, Robert Hall, had been killed by his captors in the Philippines. The prime minister and many staff were working on only a few hours of sleep and, in the words of one senior staffer, were "emotionally devastated" by the outcome. The fatigue was likely compounded by a sense of guilt. After all, Hall's unimaginably grisly fate was sealed by the Canadian government's refusal to pay a ransom to the terrorist group, Abu Sayyaf. "We will not turn the Maple Leaf, worn with pride by over three million Canadians abroad, into targets," Trudeau said. It does not seem as if Hall and his friend John Ridsdel, and Norwegian Kjartan Sekkingstad and Filipino Teresita Flor, were targeted by Abu Sayyaf militants because of their nationality. (...) The real problem for Canadians unfortunate enough to be kidnapped abroad is not the no-ransom policy - it's the failure of successive governments to invest in the capacity to project this country's power beyond its borders. "Security is like an insurance policy - you get the coverage you pay for. And in Canada's case, we don't pay a lot," said Christian Leuprecht, a terrorism expert at Queen's University. Our intelligence and diplomatic capabilities in much of the world, particularly southeast Asia are limited. The decision by governments of all stripes not spend the $500 million necessary to set up a foreign intelligence service means that we rely on the goodwill of allies, whose priorities may not always dovetail with our own. "We don't have our own networks on the ground and once people have been kidnapped, it's too late," said Leuprecht. Canada has shown an increased interest in pursuing

extraterritorial prosecutions, such as in the case of Ali Omar Ader, who is accused of being one of the main negotiators in the 2008 kidnapping of Canadian journalist, Amanda Lindhout, in Somalia. Ader was lured to Canada by the RCMP with the offer of a book deal and arrested on landing. National Post, A6

*** So now what?**
An editorial states, "In what has already been a terrible week comes news that a second Canadian, Robert Hall, has been murdered by members of an Islamist criminal organization in the Philippines. Like the people slaughtered in Orlando, Mr. Hall must not be forgotten, and his death must lead to action to prevent further such tragedies. The thing is, what can Ottawa and the authorities in countries where kidnappers operate with near impunity do to stop this from happening again? Prime Minister Justin Trudeau's solution has been to state repeatedly that his government does not pay ransom to terrorists holding Canadians hostage. He first announced the policy after another Canadian, John Ridsdel, was murdered by the same Philippines-based thugs in April. His statement came as something of a surprise, as there was clear evidence that Ottawa had paid or facilitated ransoms in the past to other kidnappers in other countries. (...) There is little doubt that Mr. Trudeau is right that the citizens of a government that pays ransoms are more likely to be targeted. But Mr. Hall's killing is evidence that some Islamist kidnappers simply don't care; that they will grab anyone and, if they don't get the money they want, happily kill them. It is a game of chicken, and the pressure to blink will be greater on Mr. Trudeau than it ever will be on the terrorists. If Mr. Trudeau intends to uphold his no-ransom policy, he will have to demonstrate to the public that there is a viable alternative to that of helplessly watching as Canadian hostages are killed. He has vowed that Ottawa will work with the Philippine government to bring the killers to justice, "however long it takes." Show us some results, Mr. Trudeau, or your talk will look cheap." Globe and Mail, A12

*** Concordia community urges Iran to free academic**
Bring Homa home. That is the urgent message from colleagues at Concordia University and around the world as pressure mounts to secure the release of Concordia University professor emerita Homa Hoodfar, 65, who has been detained in a notorious Iranian prison since last Monday. A week after contact with Hoodfar was cut off, family, colleagues and friends are urging the Canadian government to use whatever means necessary to free the retired academic - who holds Canadian, Iranian and Irish citizenship - from Evin prison. Public pressure is also being exerted, with several petitions demanding to #Free-HomaNow, including one signed by 1,500 academics worldwide. Her friends are haunted by the knowledge that the respected anthropologist and scholar has already endured gruelling conditions since she was first detained in March (although subsequently released on bail), including ninehour interrogation sessions and being ordered to write essays on certain topics. Now they are worried she is sequestered in a prison known for torture, unable to take medication for a neurological illness (Myasthenia Gravis) and fear for her safety in a country with which Canada no longer has diplomatic ties. After being called for another interrogation session last Monday, she was incarcerated in Tehran. The petition by academics says "her academic research seems to have been interpreted as a threat to national security on the basis of her comparative research on women's status, law, development and the family in different Muslim contexts." It's a nightmare, said her niece, Amanda Ghahremani, who is studying international criminal law and describes this experience as a difficult merging of her professional and personal lives. Montreal Gazette, A3

*** MacKay regrets failure to buy Canada fighter jets**
Buying a fighter jet that's different from the one used by Canada's closest allies risks disconnecting the country from the global alliances it needs the most, a former Conservative defence minister said Monday. Peter MacKay told a Senate committee that in his mind, there's no question the Lockheed-Martin F-35 is the right plane for Canada - from defending the Far North to helping to confront the threat of terrorism around the world. MacKay's government tried to purchase that very plane but questions about its costs and capabilities forced a halt to the process - something MacKay said he regrets. "I'm very much lamenting some of the to-ing and fro-ing that's going on currently over the purchase of fighter aircraft," he said. "Do I regret that we did not make the final purchase of that aircraft? Absolutely. We need it, it's good for industry, it's good for interoperability, we need it at Norad." During the election campaign, the Liberals said they would not buy the F-35 and would instead open the process up to a competition. However, cabinet is now grappling with how to meet that commitment and Canada's defence needs at the

same time. "Our government is committed to making sure that we replace the fighters and we will do so and any procurement that takes place with our fighters will benefit Canada and make sure that our industry benefits as well," Defence Minister Harjit Sajjan said. Canadian Press (Red Deer Advocate, A8, Times & Transcript, Times Colonist)

*** Freedom to hate, freedom to kill**

An editorial states, "Once again, the world has witnessed an act of mass murder on American soil, perpetrated by an example of "home grown extremism", in the words of U.S. President Barack Obama. The massacre in Orlando raises a host of issues: gun violence, mental illness, homophobia, religious extremism and terrorism. Coming during Pride month, it strikes at the heart of not only the LGBTQ2S community, but at the fundamental belief that people in free societies have the right to live as they choose, with dignity and respect. Since the attack, we've been learning more about the perpetrator, Omar Mateen. His ex-wife paints a picture of a violent and unpredictable man she fled after only a few months of marriage. While he was an observant Muslim, he never expressed sympathies for radical Islam or terror groups during their relationship. His father has denounced his actions, saying he would have arrested his son himself had he known of his intentions. He claims his son was incensed when he and his three-year-old son saw two men kissing in Miami, and that the massacre may have been in reaction to this incident. At the same time, CBS News has reported that the elder Mateen hosted a television program in which he warned that "God will punish those involved in homosexuality". He also praises the Afghan Taliban, who seek to overthrow the Afghan government and introduce Sharia law, which criminalizes homosexuality. In 2011 and 2012, the younger Mateen made pilgrimages to Saudi Arabia, though it is not clear whom he met on these trips. In 2013, he was questioned by the FBI, and came under surveillance in 2014, due to a possible link with Moner Mohammad Abusalha, the first American suicide bomber in Syria. The FBI closed its inquiry after finding only "minimal contact" between the two men. Was Mateen influenced by his father's views? Was he mentally disturbed? Did he invoke ISIS in his 911 call because he supported them, or as a means of gaining notoriety for his crimes? He left no note, no video, no real explanation for his actions. He did, however, repeatedly voice his hatred for gay men - and it is that prejudice which lies at the root of this nightmare. The sad reality is that, despite thirty-seven years of Pride parades, public education campaigns, legalization of same-sex marriages in many western jurisdictions - and polls that show that seventy per cent of Americans born after 1980 support the institution - there are still young people like Mateen who not only hate, but choose to murder in obedience to that hate. At the same time, it's important to acknowledge that there are forces which *teach* people to hate. Religious extremism is one of those - whether it's in the form of anti-gay edicts from the Catholic Church, or a Canadian politician saying that homosexuals will burn for all eternity in "a lake of fire", or imams preaching that gays and lesbians should be put to death "out of compassion". iPolitics; La Presse (Le Droit); L'actualité (2016-06-13)

*** Terrorisme - Pourquoi les malfrats du monde musulman commettent-ils des attentats?**

Un article d'opinion déclare, « Omar Mateen, le meurtrier présumé des attentats d'Orlando, fut décrit par son ex-conjointe comme étant un mari violent qui la battait et une personne peu religieuse. Les principaux auteurs des attentats de Paris étaient aussi des malfrats : Abdelhamid Abaaoud était un délinquant ayant fait plusieurs séjours en prison et Salah Abdeslam fut décrit comme un consommateur de drogue peu religieux. Plus près de nous, Michael Zehaf-Bibeau était aussi un délinquant avec un historique de consommation de drogue, mais pas d'historique de religiosité. On peut tracer une constante : ce sont des individus n'ayant pas vécu selon les préceptes coraniques, qui, rapidement, passent à l'acte. Les psychologues pourront prendre des grilles d'analyse psychopathologique pour expliquer, mais mon expérience m'indique que c'est plutôt leur système de croyances qui est le moteur de leurs actions et qui explique pourquoi ce sont les malfrats plutôt que les personnes religieuses qui passent à l'acte. Le point de départ pour comprendre leurs actions, c'est leur système de croyances. Il faut entrer directement dans ces croyances pour expliquer leur influence sur les comportements. Ce système commence par les écrits coraniques et je synthétiserai principalement les écrits eschatologiques du monde musulman pour expliquer le soudain retour à la religiosité chez les malfrats. » Le Devoir, A9; Toronto Star

INTERNATIONAL

Double meurtre terroriste en France
Un policier a été tué de plusieurs coups de couteau lundi soir devant son domicile dans les Yvelines, près de Paris, où son agresseur se réclamant du groupe armé État islamique s'est retranché et où sa compagne a ensuite été retrouvée morte. L'assaillant a été abattu par les policiers du Raid, qui ont retrouvé le fils du couple, âgé de trois ans, sain et sauf. Le parquet antiterroriste s'est saisi de l'enquête. Selon des sources concordantes, l'homme s'est revendiqué du groupe djihadiste État islamique (EI) durant les négociations avec le Raid. L'information a été relayée par l'agence Amaq liée au groupe extrémiste, selon le centre américain de surveillance de sites djihadistes SITE. Des témoins ont rapporté aux enquêteurs qu'il aurait crié «Allah akbar » en attaquant le policier. «Toute la lumière sera faite » sur « la nature exacte » de « ce drame abominable », a promis le président français, François Hollande. Agence France-Presse (Le Devoir, A1); * Toronto Star; * Radio-Canada; * TVA Nouvelles

Gunman had 'talked about killing'
He was a body builder and a security guard, a religious man who attended the local mosque and wanted to become a police officer. Early Sunday, 29-year-old Omar Mateen opened fire at a gay nightclub in Orlando. Police said 49 victims died and 53 were wounded. Mateen was also killed. Mateen attended evening prayer services at Fort Pierce's Islamic centre three to four times a week, most recently with his young son, said Imam Syed Shafeeq Rahman. Although he was not very social, he also showed no signs of violence, Rahman said. He last saw Mateen on Friday, he said, two days before the massacre. "When he finished prayer, he would just leave," Rahman told The Associated Press. "He would not socialize with anybody. He would be quiet. He would be very peaceful." He was also bipolar, Mateen's former wife, Sitora Yusufiy, told reporters in Boulder, Colo. (…) Rahman agreed. "My personal opinion is that this has nothing to do with (the Islamic State of Iraq and the Levant)," he said. However, FBI director James Comey said Monday that Mateen had "strong indications of radicalization" and was likely inspired by foreign terrorist organizations. Authorities had immediately begun investigating Sunday's attack as a possible act of terrorism. A law enforcement official said the gunman had made a 911 call from the nightclub professing allegiance to the leader of the Islamic State, Abu Bakr al-Baghdadi. President Barack Obama said Monday that the killer had been inspired by extremist information over the Internet, calling it an apparent example of the "homegrown extremism" that U.S. officials have been fearing for years. Postmedia Network (Windsor Star, N1. StarPhoenix, Vancouver Sun, Leader-Post, Montreal Gazette, Edmonton Journal, Toronto Star, The Province); Associated Press (The Guardian, Whitehorse Daily Star, Cape Breton Post, The Telegram, Cape Breton Post)

* **Shooter cheered for 9/11 hijackers, ex-classmate claims**
At a Florida high school, students saw the horrors of 9/11 unfold on live TV. When the second hijacked airliner slammed into World Trade Center's south tower, the class watched in stunned disbelief. One student, however, "started jumping up and down cheering on the terrorist." That was Omar Mateen, according to one of the accounts from Martin County High School. It offers yet another stitch in the wider tapestry of the man's life and views before Sunday's rampage, which included his pledge of loyalty to the Islamic State of Iraq and the Levant. Robert Zirkle, then a freshman, said Mateen was excited and making fun of how America was being attacked on 9/11. "He was making plane noises on the bus, acting like he was running into a building," Zirkle recalled. "I don't really know if he was doing it cause he was being taught some of that stuff at home or just doing it for attention because he didn't have a lot of friends ... After 9/11 happened, he started changing and acting different." Mateen was suspended or expelled from the school soon after. Washington Post (Windsor Star, N3, Vancouver Sun, StarPhoenix, Ottawa Citizen, Leader-Post, Montreal Gazette, Calgary Herald, National Post, Edmonton Journal)

* **Mateen visited club, used gay dating app**
The gunman who attacked a Florida gay nightclub had attended the club before the attack and had used a gay dating and chat app, witnesses said. Kevin West, a regular at Pulse nightclub, said Omar Mateen messaged him on and off for a year before the shooting using the gay chat and dating app Jack'd. But they never met - until early Sunday morning. West was dropping off a friend at the club when he noticed Mateen - whom he knew by sight but not by name - crossing the street wearing a dark cap and carrying a black cellphone about 1 a.m., an hour before the shooting. "He walked directly past me. I said, 'Hey,' and he turned and said, 'Hey,' " and nodded his head, West said. "I could tell by the eyes." At least four regular customers of Pulse, the nightclub where the massacre took place, told the Orlando Sentinel on

Monday that they believed they had seen Mateen there before. "Sometimes he would go over in the corner and sit and drink by himself, and other times he would get so drunk he was loud and belligerent," said Ty Smith, who also uses the name Aries. He saw Mateen at the club at least a dozen times, he said. "We didn't really talk to him a lot, but I remember him saying things about his dad at times," Smith said. He told us he had a wife and child." As soon as West saw photos released of Mateen after the shooting, he said, he drove to his local police station, where officers summoned FBI officials, who showed him a photo of Mateen on a computer screen. "I said, 'That's him,' " West said, and turned over his phone and Jack'd log-in information to the FBI, which still had the phone late Monday, he said. Toronto Star, A9

*** ISIL is no army and it doesn't speak for Islam**

An opinion piece by Phil Gurski, CEO and president of Borealis Threat and Risk Consulting, states, "As we continue to get more information on the terrorist who killed 49 people and injured even more in Orlando Sunday, we find ourselves yet again in the murky world of "Why?" Why would someone kill dozens of innocent civilians? Why was he not being followed? Why was he able to get a gun given what the FBI knew about him? Why didn't others report his behaviour to authorities? Why are we incapable of getting beyond prayers for the victims and implementing real action that has a chance of preventing future tragedies? In all this maelstrom of information, the inevitable has happened: a terrorist group, Islamic State (ISIL), has claimed responsibility for the attack and Omar Mateen as one of their own. Fuelling this is the fact that Mateen called 911 just before his siege and pledged allegiance to the group (note, however, that allegiance - "bay'a" - is not pledged to an organization but to a person, showing that Mateen was not quite up on terrorist etiquette). Ergo, he was ISIL. Not so fast. Saying you are something does not mean you are. Anyone can pledge allegiance to anything whether or not that person has any real links, ties, relationship or communications with that group. Nothing to date suggests that Mateen had any of the above. He appears, so far, to be a young man inspired by the violent ideology promulgated by ISIL and others. Note that this does not mean he was self-radicalized, that meaningless term which has already been thrown about in this case. He was radicalized through the influence of others. Who those mentors were is impossible to say at this point, although his father's reported support of the Taliban is interesting. We will learn more, undoubtedly, and yet we may never figure out all the twists and turns of this man's path to violence. But back to Islamic State. The terrorist group has praised Mateen's actions and called him a "soldier of Islam." ISIL is quick to take advantage of terrorist acts carried out in its name, and its leadership regularly calls on Muslims to engage in "Nike terrorism": Just do it. No surprise there. Omar Mateen, however, is not a soldier of Islam. He is a terrorist, and a dead one. Islam does not condone the slaughter of innocents. Islam does not throw homosexuals off buildings." MINISTER / MINISTRE

No plans to move cybersecurity jobs to province
There are no immediate plans to move federal government cybersecurity jobs from Ottawa to New Brunswick, says Beauséjour MP and House leader Dominic LeBlanc - despite a pitch made by Premier Brian Gallant on Parliament Hill last week. But LeBlanc says talks will continue on a role for the federal Liberals with Defence Minister Harjit Sajjan slated to visit New Brunswick later this week. In visiting Ottawa for meetings, Gallant said he asked the federal government to set up its cybersecurity infrastructure in New Brunswick as the province attempts to carve out a new niche as a centre of excellence in the emerging industry. The premier met with federal Innovation, Science and Economic Development Minister Navdeep Bains, as part of larger meetings with provincial and territorial counterparts responsible for economic development and innovation. Gallant then met with **Public Safety Minister Ralph Goodale**. The meetings come as the province attempts to grow its tech sector. "I made it very clear to **the minister** that one of the best things that government could do is actually set up some of their cybersecurity shops in New Brunswick," Gallant said. "They have a lot of cybersecurity within the defence sector or whether it's their IT sector, so we certainly believe that Fredericton, New Brunswick, and especially with [Base] Gagetown we have a lot to offer. "This would very much further help develop

the cluster that we have in cybersecurity [and] would allow for a lot of synergies and collaboration." He added: "I made that pitch to **the minister**." (…) "I was encouraged by the extent to which **Ralph Goodale** was aware of CyberNB, knew about the research that had been done by the University of New Brunswick, and is certainly anxious to see how the government of Canada can become a partner in a centre of excellence," LeBlanc said. LeBlanc said that both he and Gallant spoke to **Goodale** about the example of Israel. Telegraph-Journal, A1 (Times & Transcript, Daily Gleaner)

PM's CSIS oversight plan is, in reality, nearly toothless
An editorial states, "Will Justin Trudeau's government keep its pledge to undo the worst parts of Stephen Harper's wide-ranging anti-terror laws? The signs are not encouraging. To date, the Trudeau government has moved firmly on only one portion of that particular election promise: the formation of a parliamentary committee to oversee the country's various security agencies. But that proposed committee would be hedged in by so many restrictions as to render it almost toothless. Meanwhile, the substantive security amendments the Liberals promised in last year's election campaign are being put off until at least the fall. **Public Safety Minister Ralph Goodale** says he wants to consult first. That the new government is moving so hesitantly on its predecessor's anti-terrorism law should come as no surprise. When the Harper Conservatives introduced Bill C-51 last year, Trudeau's response was carefully inconsistent. He said his Liberals didn't like the bill but would vote for it anyway - and then amend it if they won power. In their election platform, the Liberals vowed to "repeal the problematic elements of Bill C-51" and introduce a new bill that better protected civil liberties. To that end, they made eight specific promises, ranging from establishment of a parliamentary oversight committee to partial repeal of a provision that, with judicial consent, allows the Canadian Security Intelligence Service to engage in any disruptive activity short of bodily harm, obstruction of justice or violation of a person's sexual integrity. In the latter case, the Liberals didn't promise to remove this disruptive power entirely. But they said they would insist that if CSIS broke the law it do so within the confines of the Constitution's Charter of Rights and Freedoms. In government, the Liberals have been even more cautious. (…) In short, even with the best of intentions, parliamentary oversight is not enough to curb too-powerful security services. The trick is to ensure that such services are not given excessive power in the first place. Some critics, including eventually the New Democrats, understood this when Bill C-51 was unveiled. I'm not sure the Liberals ever did." Toronto Star, A13

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Fire prompts evacuation of two Manitoba communities**
A raging forest fire has forced the evacuation of more than 2,000 people from two northern Manitoba communities. The province's Sustainable Development department announced Thursday evening that evacuation orders had been issued for the communities of Easterville and the Chemawawin First Nation, due to smoke and threat from fires that have moved to within a half-kilometre of the communities. Officials said fire crews are working on three fires in the area, with a ground attack underway as well as aerial support in the form of two water bombers. Approximately 70 Easterville residents were being evacuated to The Pas, officials said, while up to 2,000 from the Chemawawin reserve were on their way to Winnipeg. The Canadian Red Cross is helping to co-ordinate the evacuation. Winnipeg Sun, A5; Canadian Press (Times Colonist)

* **B.C. preparing for another year of severe drought**
B.C.is preparing for another severe year of drought after an early start to hot weather has reduced the snow pack and water levels to rates far below normal. The province has registered 13 per cent of the normal amount of snowpack in the mountains after high temperatures in March, April and early May, said Dave Campbell of the government's River Forecast Centre. Vancouver Sun, A8 (The Province); Canadian Press (Times Colonist)

* **Threat of wildfire being reduced**
A little hard work can help minimize the threat of wildfire. Crews from the Vernon Fire Department and the B.C. Wildfire Service held FireSmart demonstrations at Canadian Lakeview Estates Monday and Tuesday. VernonMorningStar.com

* **First Nation flooding forces evacuation**
Flooding has forced 140 people from their homes on a northern Alberta First Nation, prompting a local state of emergency. Dene Tha' First Nation Chief Joe Pastion said Thursday that heavy rains last week dramatically raised water levels. Dene Tha' First Nation is about 750 kilometres north of Edmonton. The community has a population of about 1,200. Pastion said the community is accepting donations to help people get through the evacuation. Edmonton Journal, A2 (Edmonton Sun); Canadian Press (Whitehorse Daily Star, Red Deer Advocate)

* **New emergency radio system proven in wildfires launched**
First responders across the province will soon be able to tap into an Alberta-wide digitized radio communication system, one in the works for eight years and which played a "pivotal" role during the Fort McMurray wildfire crisis. The Alberta First Responders Radio Communications System (AFRRCS) will be activated July 1, allowing police, emergency medical services, fire departments and government agencies to access and communicate on the same network instead of the stand-alone systems they use now. Justice Minister Kathleen Ganley said the new system will improve co-ordination and response to emergencies between agencies, including those that cross jurisdictional boundaries, such as a police pursuit or natural disaster. Edmonton Journal, A3 (Calgary Herald, Edmonton Sun, Red Deer Advocate)

* **Feds to conduct environmental review of Springbank dry dam plan**
Opponents of a dry dam at Springbank are hoping Ottawa's decision to review the flood mitigation project will be a game-changer. On Thursday, the Canadian Environmental Assessment Agency announced it would review the project that's meant to divert the Elbow River and temporarily store its water to prevent the kind of flooding that ravaged Calgary in 2013. Those who've condemned the huge project as disruptive and costly, like local landowner Ryan Robinson, had been urging the federal agency to take action and say it's a move that could help them halt it in its tracks. Robinson, with the group Don't Damn Springbank, predicts federal involvement will also revisit an alternative the group has been pushing: a reservoir upstream of Bragg Creek at McLean Creek they insist will be less disruptive. The environmental agency is also accepting public input for its assessment with a deadline of July 25. Calgary Herald, A3

* **Rescue group looks to reel in funds**
When Cole Marsh slipped and fell into Lynn Creek this spring, North Shore Rescue put in 1,950 volunteer hours to recover the 17-yearold's body. And that was just one of 52 calls the group has responded to so far this year. It has been an unusually busy six months for the organization, following a record-breaking 139 calls in 2015. And those efforts don't come cheap. The volunteer group typically spends about $500,000 annually, according to team leader Mike Danks, and depends on an unreliable mix of community fundraising, provincial gaming grants and municipal grants. Search-and-rescue groups across the province have called for a stable source of funding for years. A $10-million contribution by the province to the B.C. Search and Rescue Association earlier this year added $100,000 to North Shore Rescue's pot, but it was just a temporary boost. Vancouver Sun, A7 (The Province)

* **Lessons learned in emergency planning**
The biggest mistake possible in disaster planning is to overlook the lessons of the past, says the specialist in charge of emergency planning for the City of Red Deer. "The worst thing you can do is watch somebody else go through an emergency and not learn anything from it," Karen Mann, emergency management co-ordinator for the city, told a small gathering of business leaders during a training session at the Red Deer Chamber of Commerce on Thursday. Within her presentation, Mann offered business leaders her insight into the variety of emergencies they could encounter along with advice on how to prepare for them. In recent weeks, Mann has toured the Fort McMurray region to inspect the devastation from forest fires and visited the Village of Bentley during a shutdown of local Internet services. Red Deer Advocate, D1

NATIONAL SECURITY / SÉCURITÉ NATIONALE

No telling how we're being watched

Canada's version of the Star Chamber is about to get another case - the B.C. Civil Liberties Association challenge of the mass interception of Canadians' international telephone and Internet use. The group claims the Communications Security Establishment is spying on citizens in violation of the charter's protections against unreasonable search and seizure, but needs to see secret material to make its case. "We believe this dragnet program is probably one of the largest surveillance efforts the Canadian government has ever launched against its own citizens," BCCLA litigation director Grace Pastine said outside the Federal Court in downtown Vancouver. This battle began in October 2014 after the disclosures of U.S. whistleblower Edward Snowden; the BCCLA filed suit demanding to know who the CSE was watching, what data it was collecting, how long it was storing the information and how it was protecting privacy. Under the National Defence Act and a secret ministerial directive, the agency is permitted to read Canadians' email and text messages as well as listen to their international phone calls. (…) Unsurprisingly, the federal government responded to the first legal challenge of the CSE's activities with heavily edited documents saying their contents could be injurious to the nation's security. The BCCLA says the court must order Ottawa to reveal the material being protected so its constitutional challenge can proceed. "Much of what is sought to be redacted is already in the public domain as a result of comparable litigation in other jurisdictions and as a result of the voluntary disclosures that the (Attorney General of Canada) has elected to make in this case," BCCLA lawyer David Martin said in his submission. "In addition, the (BCCLA) does not seek the disclosure of information that would tend to reveal sources, targets or the identity of national security or intelligence, nor does the respondent seek the granular details of specific operations or the specific no doubt evolving technologies that underpin investigative techniques." Full disclosure of the scope of the CSE's activities might be embarrassing to the government, he maintained, but that does not mean it is injurious to national security interests. In particular, Martin pointed out that judicial warrants are required by other government agencies, including the 16 others involved in national security. "(The Canadian Security Intelligence Service) is subject to judicial control and there is no reason why CSE should not be," he insisted. Vancouver Sun, A3; Globe and Mail; CBC News (2016-06-23)

Cirillo shooting search warrant to stay sealed

The Supreme Court of Canada has rejected an Ottawa man's bid to learn why the RCMP raided his south-side townhouse in its investigation into the 2014 Parliament Hill shootings. Mounties executed a warrant to search the Heatherington Road home of Farhan Nur in May 2015, looking for any evidence connected to Michael Zehaf-Bibeau, who gunned down National War Memorial sentry Cpl. Nathan Cirillo, 24, Oct. 22, 2014. Zehaf-Bibeau, 32, then stormed Centre Block with an old rifle, wounding a parliamentary security officer before being quickly killed in a wild shootout with police and security officers in the Hall of Honour. Shortly before, he recorded a cellphone video saying the attack was "in retaliation for Afghanistan and because (former prime minister Stephen) Harper wants to send his troops to Iraq." The RCMP has long suspected jihadi sympathizers exploited Zehaf-Bibeau's faltering mental state and influenced him to launch the armed attack. Nur and another man whose south-side Ottawa home was searched - police have never charged or named either as a suspect or material witness in the Hill attacks - asked an Ontario court to order the release of RCMP affidavits, called "Information to Obtain" (ITOs), setting out the confidential details police used to win judicial approval for the warrants. Postmedia Network (StarPhoenix, N5, Vancouver Sun, Ottawa Sun, London Free Press, Leader-Post, Calgary Herald, Ottawa Citizen, National Post, Kingston Whig-Standard)

Victims of Air India bombing remembered at 31st memorial service

With poetry, prayers and calls for justice, the 331 victims of the 1985 Air India terrorist bombings were remembered at a memorial in Stanley Park Thursday night. Gurdial Sidhu, who lost her sister-in-law Sukhwinder, niece Parminder, and nephew Kuldip in the terrorist attack, said all sense of normalcy in her family's life also died the day of the bombing. "We still did not get any justice," she told about 60 people gathered at the Air India memorial wall. "At the end, I am forced to think there is no justice for this criminal travesty. The terrorists are still alive. They're free and they enjoy their lives." Two B.C.-made suitcase bombs exploded on June 23, 1985. The first killed two Japanese baggage handlers who were transferring a bag onto an Air India flight. The second exploded aboard Air India Flight 182, killing all 329 aboard. Two B.C. men linked to the Sikh separatist movement were charged in 2000 and acquitted in 2005. A third, Inderjit Singh Reyat, pleaded guilty to manslaughter for helping to build the bomb. He was released on day parole earlier this year. Former Surrey-Newton MP Jinny Sims said it was shameful so few people

attended a memorial service for the victims of Canada's worst mass murder. "Where is everyone else today?" she asked. This was the largest act of terrorism against Canadians and we have to remember that it was against Canada and Canadians." She also said there are people in Metro Vancouver who have critical information that could lead to more charges in the case. "We know that out there are people who know exactly what happened. But they are not saying," she said. "Why is it there is a cone of silence? Why is it that people are not speaking up?" Vancouver Sun; * iNews880 (2016-06-23)

*** Toronto imam says he is a changed man despite homophobic comments on YouTube**
A prominent Toronto imam who has signed two declarations against the shootings in Orlando appears on a recently posted YouTube video saying gay men should be put to death. But Abdullah Hakim Quick, a teacher at the Islamic Institute of Toronto in Scarborough, said in a statement that he is a changed man. "Many years ago I made hurtful comments against homosexuals for which I have apologized. My views have evolved over the years. I am fully committed to peaceful coexistence and respect among all people," he said. "The video was made in 2000 and is totally unrepresentative of my present position," he added in a note after CBC News asked him for an interview, which he declined. (…) Raheel Raza, president of the Council for Muslims Facing Tomorrow, and an author who tries to fight hate in Islam, said the video is shocking and Quick's remarks dehumanize gay men. She said the comments do not reflect the teachings of Islam. (…) "If the imams are playing God," Raza said, it is disturbing and it shows that religious leaders may be the source of hate that is taught to young people. "No one is born a terrorist. No one is born a radical. Somebody teaches them and they teach them through hate. This is where it starts," Raza said. If he is truly apologetic, she said he needs to make it clear where he stands on certain issues. "He needs to stand up and condemn the Sharia and armed jihad and all these radical notions from the seventh century, which we don't want to perpetuate in the 21st century. CBC News (2016-06-23)

Terrorism in Canada
A letter to the editor states, "It is unbelievable so many individuals try to blind themselves to the fact some Muslims advocate hostility against those who are not in their particular faith group, and that includes other Muslims. From all evidence, it appears Omar Mateem was gay, that a local iman inspired Muslims to act compassionately toward gays by killing them, and that by doing so Mateem could erase his guilt of being gay. Barbara Kay is correct in pointing out the methods other than firearms, used by terrorists who were all motivated in some degree by their interpretation of Islam. It is not Islamophobic to face the facts there are such people in this country, as evidenced by attacks by Islamic-inspired terrorists and that the Mounties and the Canadian Security Intelligence Service are surveilling as many as their budgets and physical resources will allow. Fortunately, there are Muslims who advocate for a reformation in the interpreting of wording that might encourage those looking at terrorism to adopt a more tolerant approach to others." National Post, A9

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Groups call claims limit discriminatory
Canadian human-rights and refugee groups say the federal government's decision to limit the number of annual Mexican refugee claims is discriminatory, after federal officials had argued the move protects Canada from bogus refugees, many of whom are involved in organized crime syndicates. Since 2014, the Canada Border Services Agency agents have intercepted more than 100 fraudulently obtained Mexican passports, some of which were carried by members of South American criminal gangs, according to government sources. The Globe and Mail reported on Wednesday that the Liberal government will follow through on its promise to lift visa restrictions for Mexican travellers effective Dec. 1, but it's prepared to partially reimpose the measure if the number of Mexican asylum seekers surpasses 3,500 within any 12-month period. (…) Officials were concerned that the presence of Mexican organized crime groups in Canada would increase and human-smuggling networks would take advantage of Mexico's weak passport security system. The federal cabinet was told Canada would also face pressure to lift visa restrictions on Ukraine, Romania, Bulgaria and Costa Rica, sources say. Globe and Mail, A4

Roma family returns to Canada after Conservatives' deportation order reversed

When Georgia Brouwer, 11, hugged her friend Viktoria (Lulu) Pusuma, 7, goodbye at Toronto Pearson International Airport in 2014, neither of the girls wanted the moment to end. "We wouldn't let go of each other and it was really sad," Georgia said of their farewell two years ago. But her dad, Andrew Brouwer, also the Pusumas' lawyer, promised his daughter he'd keep fighting for the family until they came home. On Thursday, the family - deported from Canada in 2014 - did just that, returning to the country that was their sanctuary for nearly three years. "This is freedom's smell!" Lulu's mother, Timea, exclaimed, stepping outside the airport for the first time after their return. CBC News

*** Il a voulu fuir la prison, il y passera des mois**
Un Montréalais qui a fui en Italie en plein procès, par peur d'aller en prison, devra vraisemblablement passer plusieurs mois derrière les barreaux pour avoir tabassé une femme. (…) Expulsé du pays ? James Sartor pourrait avoir des problèmes avec l'immigration s'il était condamné à une longue peine de prison. «En raison de son statut de résident permanent, il est d'ores et déjà interdit de territoire. Il pourrait être expulsé du Canada à l'issue de sa peine», a précisé Me Robillard. Le quadragénaire risquerait aussi de perdre son entreprise de couvreur de toitures, a spécifié l'avocate de la défense. Journal de Montréal

*** Temporary foreign worker cap stays at 20%**
The federal government is freezing the 20 per cent cap on the number of low-wage temporary foreign workers a company can hire. Labour Minister MaryAnn Mihychuk said the controversial temporary foreign worker program needs an overhaul and will announce her plan for more changes later this year. But for now, the cap, which was set to go down to 10 per cent beginning July 1, will instead stay where it is. "I believe this is a prudent step to take as we work to develop a better temporary foreign worker policy and fix some of the problems with the program that emerged under the previous government," Mihychuk said. Employers who first began hiring low-wage temporary foreign workers before the previous Conservative government changed the program will still be able to use it for 20 per cent of their workforce. Those who started using the program after that point, or who are hiring temporary foreign workers for the first time, are subject to a 10-per-cent cap. All the other program requirements - including having employers ensuring that Canadians and permanent residents have the first opportunities to apply for available jobs - will remain in place while the cap is frozen. Canadian Press (Times Colonist, B5; Globe and Mail)

*** Local, state, Canadian lawmakers gathering Friday in Ogdensburg to support bill that would alleviate problems for boaters**
Local, state and Canadian lawmakers will gather in support of a bill that would ease laws for boaters crossing international waters. Under Canadian legislation introduced by Senator Bob Runciman (Ontario – Thousand Islands and Rideau Lakes), American boaters would no longer have to report to Canadian customs when passing through Canadian waters, as long as they do not disembark, anchor, moor, make contact with another vessel or import goods. The measure would also exempt Canadian boaters from reporting to Customs when they return from American to Canadian waters, as long as they meet these same conditions. NCNow News (2015-06-23)

Court turfs Howe bridge suit
The final piece of a lengthy lawsuit designed to stop construction of the Gordie Howe International Bridge has been dis- missed by a U.S. federal court judge in Washington. Lawyers for Ambassador Bridge owner Matty Moroun launched a sweeping lawsuit more than six years ago against the Canadian government, several ministries and U.S. federal departments to stop the Detroit River crossing project. (…) Inquires to the federal government for reaction to Collyer's decision were referred to Infrastructure Canada, which did not provide a response. At the Windsor-Detroit Bridge Authority, which is overseeing construction of the Howe span, an official did not wish to address the decision. "Windsor-Detroit Bridge Authority's focus is on delivering the Gordie Howe International Bridge project as expeditiously as possible," spokesperson Heather Grondin said. "We have been making significant process since shovels first went into the ground last fall for our early works activities." Windsor Star (London Free Press, A2)

4 ways Brexit could affect Canadians
The results of Thursday's "Brexit" referendum (…) Canada could also lose out on some of the benefits of the Comprehensive Economic and Trade Agreement (CETA), the country's trade agreement with the EU, which is under review. The deal removes most tariffs on Canadian goods entering Europe, a boon for

many Canadian businesses. Canada exported almost $16 billion worth of products to the U.K. in 2015, or about 3 per cent of total exports, according to Statistics Canada, which makes it Canada's third largest trading partner behind the U.S. and China. Toronto Star

Liberal immigration policy
An editorial states, "Our Liberal government intends to lift the visa requirement for Mexican citizens, and it is proceeding in the most Liberal way imaginable - which is to say, not all that unlike the Conservatives, while righteously claiming the opposite. Indeed, reports Thursday could hardly illustrate better the mostly cosmetic differences between the Liberals and the Harper-era Tories on the immigration file. The goal is simple enough: to eliminate a diplomatic irritant with one of our major trading partners. And the problem is simple as well, if large: in 2007-09, nearly 25,000 Mexican citizens applied for asylum in Canada, and most - well more than 90 per cent - were not granted it. In a world of limitless resources, that would be fine: everyone would get a hearing and we wouldn't turn away legitimate claimants, of whom Mexico produces a great many - 1,500 over that three-year-period, exceeded only by Sri Lanka, China and Colombia." National Post, A9

CYBER SECURITY / CYBERSÉCURITÉ

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Mike Duffy Investigation, Trial Cost RCMP $477,858**
The Royal Canadian Mounted Police spent nearly $478,000 investigating Sen. Mike Duffy and preparing for his trial, The Huffington Post Canada has learned. Documents released under the Access to Information Act show a total of $477,858.52 was spent on "Project AMBLE," the Mounties' probe of Duffy. The bulk of the money — $402,901.29 — was spent on the investigation itself: $320,039.80 on salaries and overtime and $82,861.49 on travel and forensic accountants. Court preparation accounted for $49,199.03 and the trial for $25,758.20. But that nearly half a million dollars in RCMP expenses comes on top of the tens of thousands of dollars spent by the province of Ontario in court costs. At least $60,000 was paid to the judge for overseeing the 62-day trial and deciding Duffy's fate — not to mention the rest of the court staff, the Crown attorneys, and security costs. The Senate also spent $137,784 on an audit looking into Duffy and fellow senators Patrick Brazeau and Mac Harb's travel and living expenses. HuffPost Politics (2016-06-23)

*** Duffy to Fight Senate over Repaying $16,995 in 'Ineligible Expenses'**
Sen. Mike Duffy will be fighting the Senate committee for its demand for him to repay $16,955 in expenses as he argues that the Upper Chamber unjustly denied him $155,867.56 in salary while he awaited his trial. The court acquitted Mr. Duffy of all 31 charges against him last spring and he started receiving his salary and benefits again on Aug. 1, 2015. Duffy's lawyer, Donald Bayne, wrote in a brief open letter to the Senate on late Wednesday night that "this unjust suspension and severe economic and reputational penalty was imposed on a man known to be confronting grave health issues exacerbated by stress," adding that "the Senate now seeks to compound that unjust and oppressive penalty already paid in full by Senator Duffy." Oye Times; Canadian Press (Castanet, Sudbury.com)

Evidence missing, say police
Halifax police admitted Thursday drugs, money and possibly weapons have gone missing from exhibit vaults, and say they plan a wider search to determine the full extent of the problem. Supt. Jim Perrin said an audit of a vault containing drug exhibits found 90 per cent of samples being sought last year couldn't be found, and the "alarming" result prompted a closer look this year. At a news conference Thursday, Perrin said the follow-up audit produced better results, but he said Halifax Regional Police are still looking for dozens of exhibits that may have been misplaced, destroyed or stolen. (...) "At the end of this, we may be able to account for where all those exhibits went," Perrin said. "Police officers make mistakes .... It happens." Canadian Press (Chronicle Herald, A1, Times & Transcript)

Two officers were hospitalized after collision
The RCMP have released a few more details about a collision involving one of its vehicles earlier this week. Three people are recovering after Monday morning's accident on the Alaska Highway at Wann Road in Porter Creek. At around 10:30 a.m., an RCMP emergency response team vehicle was travelling north along the highway when it was involved in the collision with a small car. According to the RCMP, the circumstances of the accident, which closed the highway to traffic for five hours, are still being investigated. Two RCMP officers were transported to Whitehorse General Hospital. One underwent surgery for injuries to his arm. The other was assessed and released. The driver of the second vehicle was assessed onsite by EMS. Whitehorse Daily Star

Sophie tours RCMP Heritage Centre
Who can resist two fine-looking horses ridden by Mounties in red serge? Not Sophie, Countess of Wessex. Accompanying Lt.-Gov. Vaughn Solomon Schofield into the RCMP Heritage Centre for breakfast Thursday, the countess stopped by Salute and Turbo, two former musical ride horses, and chatted with their riders, constables Dale Malbeuf and Carman Hunter. "She just wanted to know how old the horses were and if we were the only ones who rode them," Malbeuf said. "Salute is 17 and we let her know there's a group of about 20 of us that ride the horses here." The officers volunteered to pull royal duty; Malbeuf from the Morse RCMP detachment and Hunter from Shaunavon. Al Nicholson, CEO of the Heritage Centre, pointed out museum exhibits as he walked Sophie to the dining room. One display in particular caught her eye - a dress worn by Sitting Bull's daughter. "She stopped for the longest time in front of that exhibit and read all that was written there," Nicholson said. Leader-Post, A3

Three charged after weapons found in van
Three people have been charged after reports of rapid-fire automatic weapons in the Otter Point area of Sooke on Tuesday night. Kyle Fletcher, Michael Masson and Brady Shivak are charged with unlawfully being in a vehicle knowing there was a firearm, prohibited weapon, restricted weapon, prohibited device or magazine in the vehicle. Shivak is also charged with possessing a firearm when prohibited by a court order. Masson is also charged with possessing heroin. Sooke RCMP said they arrested five people who were seen driving away in a red minivan from Otter Point about 9 p.m. Tuesday. A search of the vehicle turned up a 12-gauge shotgun, a semi-automatic SKS assault rifle and ammunition. Officers also found bear spray, knives, a substance suspected to be methamphetamine, heroin, cocaine, marijuana and several cellphones. Sooke RCMP Staff Sgt. Jeff McArthur said he believed the people were involved in target shooting, honing their firearms skills. Times Colonist

Alleged drug kingpin had several legitimate businesses, lawyer says
The alleged kingpin of one of the two alleged drug organizations targeted in Operation J-Tornado had several legitimate businesses, according to his lawyer. Shane Stephen Williams' lawyer, Brian Munro, referenced several of his client's alleged ventures while cross-examining the RCMP officer who was responsible for the money used by police during the almost three-year investigation. Comments have been made multiple times throughout the trial, which began at the end of April, about BigShots Sports Bar being Williams' bar. Police searched the bar, which was located at Westmorland Place in east Saint John, as part of co-ordinated raids on Sept. 10, 2014. On Thursday morning, though, Munro alleged Williams also had a construction company, Port City Builders. In addition to this, he said Williams had a numbered company that supplied second mortgages. Sgt. Dustine Rodier said these ventures were investigated as part of the proceeds of crime portion of the operation. She denied ever telling any of Williams' clients after his arrest not to pay any outstanding loans or money, and rejected Munro's allegation that she had harassed Williams' clients. "As part of the proceeds of crime investigation, my role was to contact businesses and parties Mr. Williams had dealings with and determine if there's evidence to be gathered for the investigations," said Rodier. Telegraph-Journal, B2

*** Red Deer teen faces over a dozen charges after stolen truck crashes into townhouse steps**
An 18-year-old Red Deer man is facing numerous charges after RCMP allege he stole a truck before crashing into several vehicles and a townhouse on Wednesday. According to police, the stolen truck was seen driving westbound on Cornett Drive in Red Deer when it hit another pickup truck and a car before veering onto a townhouse's lawn and getting stuck on the front steps. Mounties said the suspect then

tried to run away on foot while carrying a shotgun in an unsecured case, along with ammunition. Police said about five witnesses were able to apprehend the suspect in a nearby park until officers arrived. In a release, police said while they "appreciate citizens' wish to help out" and were glad nobody was injured, they urge the public not to try making citizen's arrests. Global News

*** Pit bull involved in violent Surrey attack to be put down**
The pit bull that was involved in an attack on a woman in Surrey earlier this week will be put down, according to Surrey RCMP. The dog's owner voluntarily surrendered the dog to Animal Control to be put down, according to the City of Surrey. "While the Surrey RCMP's investigation remains open, officers have looked at the totality of the circumstances in this file and have deemed that there is insufficient evidence to proceed with criminal charges at this time," Sgt. Alanna Dunlop said in a statement. Surrey RCMP and the City of Surrey have been searching for the dog and its owner since it attacked a 65-year-old woman outside a convenience store on 120 Street on Monday. Police say the woman was walking in the area "when she was attacked, unprovoked, by an unleashed grey and white pit bull dog." CBC News; AM730; Castanet; Voice Online

*** RCMP searching for man who allegedly attempted to abduct a boy in Sylvan Lake**
RCMP are looking for a man who allegedly attempted to abduct a boy in Sylvan Lake on Wednesday. It happened around 4 o'clock in the afternoon, when a 12 year old boy was approached by a man in an older grey Honda 4-door, near Mother Theresa school. It's alleged the man drove up to the youth, grabbed him by the arm and tried to pull him into the vehicle. The youth was able to escape to safety. The suspect is described as a white male between 25 and 30 years of age, with a medium to heavy build, bald wearing a black hoodie pulled over his head. He was also wearing sunglasses. A composite sketch is on our website. iNews880; CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Les États-Unis peu enclins à transférer des détenus canadiens
Les probabilités qu'un Canadien incarcéré aux États-Unis soit transféré dans son pays sont équivalentes à celles de gagner à la loterie, et ce, même avec un gouvernement libéral qui a promis d'en faire plus pour les détenus à l'étranger. Des données obtenues par La Presse Canadienne grâce à différentes sources - notamment Affaires mondiales Canada, Service correctionnel Canada et, aux États-Unis, le Bureau des prisons et le département de Justice - démontrent que la plupart des Canadiens incarcérés au sud de la frontière se trouvent dans des établissements gérés par des États. Un total de 964 Canadiens avaient été emprisonnés aux États-Unis en date du 18 mai, de loin la plus grande proportion de citoyens canadiens détenus dans un autre pays. Parmi ceux-ci, 420 se trouvaient dans des établissements carcéraux étatiques, et 394, dans des prisons fédérales. Les États sont toutefois peu enclins à accepter les demandes de transferts de prisonniers désireux de purger leur peine au Canada, mettent en lumière les données compilées. Règle générale, les États sont responsables des personnes reconnues coupables de crimes violents. Entre 1978 - quand l'accord a été conclu - et 2014, 1256 détenus canadiens ont été retournés en sol canadien par les autorités américaines fédérales. Les États n'ont quant à eux accepté que 161 transferts. De nombreux Américains voient le système carcéral canadien comme n'étant pas suffisamment rigide, observe l'ex-responsable en chef du programme de transfert aux États-Unis, l'avocate Sylvia Royce. Presse canadienne (Acadie nouvelle)

*** Tories demand public inquiry after prisoner death**
Nova Scotia's Tory opposition is demanding a public inquiry in light of details revealed this week about the death of inmate Jason Marcel LeBlanc. Nova Scotia provincial jails have on-site nursing seven days a week but only from 8 a.m. to 8 p.m. There was no medical help on hand when LeBlanc suffered breathing trouble and died in the early hours of Jan. 31 at the Cape Breton Correctional Facility. He had previously ingested a lethal amount of methadone and bromezapan. That is because prison healthcare in Nova Scotia is not as extensive as in some other provinces. In Saskatchewan for example, prison nurses are available for 16 hours per day. Doctors in that province also offer weekly on-site clinics and are otherwise on call, according to the Human Rights in Action Handbook for Provincially Sentenced Prisoners in Saskatchewan. Tory leader Jamie Baillie said Thursday he can't be certain on-site medical care would

have saved LeBlanc. "That is one way. We need to find out the best way to provide medical assistance to people who enter our justice system as a result of mental illness or addictions like Jason," According to a Canadian Press report, LeBlanc was sent to jail on the afternoon of Jan. 30, after he was arrested for a parole violation. His blood pressure was already starting to go awry at that point and he managed to keep a bag of bromezapan pills in his pocket that were only found after he died. Chronicle Herald, A4

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Police can swab rape suspects, court rules
In a ruling that adds to police powers in investigating rape, the Supreme Court of Canada says police have the right to take a penile swab from suspected attackers, forcibly if necessary, as long as they do so in a private cell and have reasonable grounds to believe they will find relevant evidence. The new power is aimed not at gathering the suspect's DNA but the victim's. In that sense, it is, in a far more modest form, a male suspect's version of the rape kit, the highly intrusive examination of victims done in medical clinics, albeit with their consent, partly to recover DNA evidence to identify their assailant. Police will not need a warrant to obtain the swab from a suspect. His own DNA cannot be used in court unless police first obtain a warrant, or the suspect consents to the search, the court said. It is the first time the court has empowered police to take bodily samples without a warrant, according to Ottawa criminal lawyer Howard Krongold, who represented the Criminal Lawyers Association, which intervened in the case. Globe and Mail, A5

Arrest warrant issued for accused challenging minimum sentences
A judge has issued a warrant for the arrest of a man who was convicted of firearms offences and is challenging the constitutionality of mandatory minimum sentences for such crimes. On Thursday, B.C. Supreme Court Justice Stephen Kelleher was set to give his ruling on the constitutional application filed by Aosama Salim Hmod Al-Isawi, but instead issued the arrest warrant after the offender, who is out on bail, failed to show up in the Vancouver courtroom. Andrew Bonfield, Al-Isawi's lawyer, told the judge he had spoken to his client Wednesday night and told him to be in court Thursday. He said Al-Isawi had medical issues, but couldn't say why he was a no-show. Al-Isawi was convicted of using an imitation firearm to rob or try to rob 11 Lower Mainland pharmacies of the painkilling drug Percocet. The Province, A18

*** Crime prevention, victim services initiatives funded**
The Crime Prevention and Victim Services Trust is providing funding totalling $140,737 to eight community-led projects with a crime prevention or services for victims focus. The trust awards funds twice a year for eligible projects that are intended to: reduce crime; prevent violence against women and children; address the root causes of crime; provide services and information to victims of crime; or provide information about crime prevention and victimization. More than half the money ($72,064) is going to the Yukon Status of Women Council _ for Women and Girls: Sex Work and Trafficking in the Yukon. Whitehorse Daily Star, 4

*** Crime down across Durham Region, Oshawa**
It's official – crime was down in the region last year. According to the recently released annual report for 2015, Durham residents experienced less crime than the year before. The report – of which a preliminary version was presented to regional councillors earlier this year – highlights a 0.3 per cent drop in Criminal Code violations, not including traffic charges, with 23,202 known violations. On its own, Oshawa saw a 1.8 per cent drop in crimes not including traffic violations, including notable decreases in break and enters (24.6 per cent), motor vehicle thefts (33.7 per cent) and drug possession (20.8 per cent). The city, however, did see increases in fraud (27.6 per cent), arson (14.3 per cent) and drug production (20 per cent). For police chief Paul Martin, the general downward trend seen in Durham is similar to that across the country, but adds that may change in the future. Oshawa Express (2016-06-23)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Advocate calls on Canada to remove sexism from Indian Act before MMIW inquiry**
A prominent Indigenous feminist says Canada's upcoming inquiry into missing and murdered Indigenous women can't be taken seriously until the federal government addresses sexism within its own legislation that's existed since 1876. Sharon McIvor said she was dismayed to find out recently that the federal government asked the United Nations Human Rights Committee to suspend consideration of a petition she launched aiming to stop gender inequality in Indian status designations. McIvor has been fighting for several decades against provisions in the Indian Act that stop Indigenous women from gaining Indian status and passing it along to their descendants on the same basis as men. "Because of this, Aboriginal women and their descendants have been separated from their families and communities, treated as less worthy, less human, less Indian, and not full members of their cultures and communities," McIvor said in a statement. The federal government's reason for blocking her petition to the UN is that it will be embarking on its own wider consultations in an effort to fix the problem. APTN (2016-06-23)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Underage access to marijuana a concern
Talk about a joint effort. There are bureaucrats from a dozen provincial departments working on an exhaustive cannabis strategy that will examine the impact of legalized recreational marijuana. As Prime Minister Justin Trudeau's government prepares to change federal laws next year, officials at Queen's Park are looking at everything from the effects on health and road safety to justice issues and fiscal implications. Public servants from the Ministries of Health, Education, Finance, Transportation, the Attorney General, Community Safety and Correctional Services, Municipal Affairs, Children and Youth Services, Indigenous Relations and Reconciliation, Community and Social Services, the Treasury Board secretariat, and the cabinet office are involved in the effort. Premier Kathleen Wynne emphasized Thursday that regulating the drug and limiting access for children and teenagers is a key concern no matter what the forthcoming federal legislation looks like. "I want there to be a controlling protocol in place. I think it is important in the same way that in Ontario we have controls on alcohol," Wynne told CBC Radio's Metro Morning. "We need to have some regulation of recreational marijuana. What I'm concerned about right now is that there hasn't been a clear delineation between recreational and medicinal marijuana," she said. While such marijuana is legal for those who have a prescription from a medical doctor, the storefront "dispensaries" sprouting up across Toronto are illegal. Wynne said the lack of legislative clarity from Ottawa has allowed the weed outlets to thrive to the point that there are more than 100 in the city even with the police cracking down. Toronto Star, A8

Future legalization of pot a factor in ruling
Former University of Saskatchewan football linebacker Seamus John Neary gave an audible sigh of relief when Queen's Bench Justice Shawn Smith sentenced him to two years of probation, but no jail time. Neary, 25, was convicted in November of trafficking marijuana and possessing the proceeds of crime, after 21 pounds of marijuana and $1,000 in cash were seized during an investigation in February 2014. Smith noted the Court of Appeal has ruled sentences of 15 to 18 months in jail are appropriate for marijuana trafficking involving amounts similar to Neary's case, but said the fact Canada is in a transition period with the federal government promising to legalize marijuana was a factor in his ruling. StarPhoenix, A11

*** We should legalize pot and move on**
A letter to the editor states, "Marijuana use carries a costly toll - June 23 Regarding Carol Mary Awrey's letter about the legalization of marijuana, I have some thoughts on her points. While I do agree that drug addiction is a real concern facing society today, I for one do not believe that simply legalizing marijuana will produce a whole (pardon the pun) crop of weed addicts. Personally, I have never been a pot smoker nor do I plan on becoming one. Does this writer really believe that, should it be legalized, thousands of

people who have never smoked marijuana before are suddenly going to run out and light up? Maybe it's time we stop putting people in jail for smoking a joint on Friday night after work and keep our jails for the real criminals." Waterloo Region Record, A8

*** Canada's drug policy is completely inadequate**
An opinion piece states, "The new government has promised to table a cannabis legalization bill in April 2017. This will "keep marijuana out of the hands of children, and the profits out of the hands of criminals." Due to this promise, Liberals now regard themselves as savants, leading a shining bastion of New Age drug laws. Why then, is Canada's current system so fucked up? Available treatment programs don't help, and the same policies that underpin the government's swank are being thwarted. Conservatives repeatedly bombarded policies hailed by the new Liberal platform, rendering them ineffective under their reign. Although Liberals won a majority, these policies remain as they were under the Harper government. Recently, this stagnation affected the Liberals' own kin**.** The ex-Liberal and now independent Honourable Hunter Tootoo resigned as Minister of Fisheries and Oceans after blaming an unspecified substance abuse problem. What else can be done for people — and public officials like Tootoo — if the resources that are available on a relatively consistent basis (unaffected by partisan politics) are a joke?" The Gateway (2016-06-23)

PUBLIC SERVICE / FONCTION PUBLIQUE

Fear that whistle blowing?
A fear of reprisals is the main reason why federal public servants are reluctant whistleblowers, says a report done for the Office of the Public Sector Integrity Commissioner. The report, Exploring the Culture of Whistleblowing in the Federal Public Sector, was prepared by Phoenix SPI, an Ottawa public opinion and market research firm. It summarizes the results of 10 focus groups of public servants - management and non-management - last November in Ottawa, Winnipeg, Regina, Quebec City and Moncton. The report says that, while more procedures are in place to facilitate whistle-blowing, some public servants were skeptical about the extent to which things had really changed. "Most participants believe that fear of reprisals for reporting wrongdoing is a real concern," the report says, though the extent to which the concern is real can vary. "For example, it was suggested that some departments are probably worse than others, given their internal culture," says the report. "In other words, the fear is justified, but to different degrees depending on context and circumstances." Moreover, a majority of managers in each focus group said concerns about reprisals for reporting wrongdoing "are as justified or more justified" for public service managers, in part because they have no union to support them. Ottawa Sun, A10 (Ottawa Citizen)

*** Federal workers sound off over payroll problems**
Unpaid bills, emergency loans, mortgages in default. Those are some of the hardships faced by a growing number of federal employees… all because of glitches with the government's new payroll system. It's short-changing everyone from prison guards to the coast guard. In a CKWS News exclusive — Newswatch's Morganne Campbell talks to some local workers who aren't getting the pay that's owed to them. Dealing with hardened criminals on the inside – a tough job for correctional officers. Bryan"/Correctional Guard: "The stress level is right through the roof. Everyone is on edge. But these days, much of the stress is coming from their employer…. the federal government. We've concealed the identity of this man, who's been told by Corrections Canada that he could face disciplinary action for speaking negatively about his employer. We've decided to call him "Bryan." Bryan is a correctional officer in the Kingston area — who's impacted by ongoing glitches with the Government's new "Phoenix automated payroll program". (…) Bryan figures he's been short-changed one-thousand dollars so far this month … plus overtime and other expenses. CKWS TV (2016-06-23)

OTHER / AUTRE

*** Abu Sayyaf frees Filipino woman kidnapped with Canadians Robert Hall, John Ridsdel**

Abu Sayyaf extremists on Friday freed a Filipino woman who was with two Canadian hostages beheaded by the militants in the southern Philippines after failing to get a huge ransom, officials said. Marites Flor was abandoned by the gunmen in front of the house of Sulu provincial Vice Governor Abdusakur Tan before dawn Friday. She was later turned over to the military for medical checkup, said police Superintendent Junpikar Sitin. Flor was abducted with two Canadians, John Ridsdel and Robert Hall, and Norwegian Kjartan Sekkingstad by the ransom-seeking militants from a resort on southern Samal island in September last year. Sekkingstad remains in captivity. It was not immediately clear if a ransom was paid to secure the freedom of Flor, who appeared in Abu Sayyaf videos tearfully pleading for her life and those of her companions. In a final video, she called on President-elect Rodrigo Duterte to save their lives before the extremists killed Hall a few days later. Associated Press (Global News); AAP

*** Do We Really Want a War With Russia?**
An opinion piece states, "No area of public policy is so shrouded in secrecy, obfuscation and outright deception than foreign policy. Most of the time it doesn't seem to matter much to the majority of voters who have more pressing things to worry about. But when Canadians read a headline that says "Russia mobilizing for war" one would hope they would take notice. A more absurd declaration is hard to imagine but there it was – coming out of the offices of CSIS, the Canadian Security and Intelligence Service. It was just the latest alarmist rhetoric in a steady stream of anti-Russian propaganda that coincided with the largest military build-up (a recent NATO military exercise called Anaconda) on Russia's borders since the German invasion of WW 2. As with almost every aspect of foreign policy, context is everything and this particular gem only begins to make sense if you go back to a February 1990 meeting between Soviet President Mikhail Gorbachev and the US Secretary of State, James Baker. That meeting saw a deal concluded (regrettably only with a handshake) whereby Gorbachev agreed to dismantle the Soviet Union and the Warsaw Pact (the NATO equivalent), in exchange for Baker's promise that NATO would not expand "one inch to the east."" Counter Punch

Is Iran holding a Canadian hostage?
An editorial states, "Homa Hoodfar, a 65-year-old Canadian-Iranian university professor, should be home in Montreal right now but is instead being held by the Iranian government in the country's most notorious jail - a place where prisoners are routinely tortured. She has not been allowed contact with her family or her lawyer since she was arrested on June 6 in Tehran by Iran's Revolutionary Guard. No official charges have been announced. The Canadian government does not have formal diplomatic relations with Iran. Officials say they don't know why Ms. Hoodfar was arrested, and that they are concerned for her health. Ms. Hoodfar suffers from a neurological disorder and is unlikely to have access to the medication she needs. This farce would be unacceptable under any circumstances, but it is even more appalling because it appears Ms. Hoodfar may have been taken prisoner in the hope of exchanging her for another Canadian-Iranian dual citizen living in Toronto. Iran has long wanted to get its hands on Mahmoud Reza Khavari, the former chief of the Melli Bank of Iran, who fled to Canada in 2011 after prosecutors tried to question him in connection with an alleged embezzlement and money-laundering scheme." Globe and Mail, A10; Kingston Whig-Standard (London Free Press)

Do something to stop ISIL
An editorial states, ""Is it better to not call a genocide 'genocide' and do nothing, or is it better to call a genocide 'genocide' and still do nothing?" - Payam Akhavan, former UN war crimes prosecutor. Remarkably, last week's parliamentary debate over whether to recognize that the Islamic State of Iraq and the Levant (ISIL) is committing genocide skirted one key question: how will declaring genocide affect what Canada is doing to prevent it? Perhaps this was an oversight. Perhaps the Tories really believed that calling a thing by its proper name is a triumph in its own right. If so, they were mistaken. Canada's recognition of this atrocity changes nothing on the ground. However, as the Liberals were right to note, genocide is a legal term. And it's one that triggers significant responsibilities. Now that the government has accepted that ISIL is trying to wipe out the Yazidi population, it should make clear how it intends to make good on its obligations. Specifically, under the Genocide Convention, Canada is now obliged to "prevent and punish" the perpetrators of this crime. This is not as pie-in-the-sky as it sounds. Canada is obviously not expected to solve this gargantuan problem alone. Rather, the obligation rests on all signatories to the convention, but to differing degrees, depending on each state's capacity to influence the perpetrators' actions, its geographical distance from the events and the strength of its political ties. So the

bar for Canada is not that high. But however low it may be, there can be no question that Canada has not yet crossed it. The Liberals will, of course, tell a different story. They will note that they have put in calls for the United Nations to take "urgent action" to investigate and prosecute ISIL. But we must be honest about where such efforts will lead, or more precisely, not lead." National Post, A8

INTERNATIONAL

Brexit: les Britanniques quittent l'UE et provoquent un séisme mondial
Les Britanniques ont décidé de quitter l'Union européenne, un désaveu pour la construction européenne qui a assommé les marchés mondiaux en ouvrant une ère d'incertitude sans précédent depuis des décennies, et dont David Cameron a tiré les conclusions en démissionnant. Selon les résultats définitifs publiés vendredi matin, 51,9% des électeurs ont voté pour le Brexit lors du référendum de la veille, marqué par une participation importante (72,2%). L'ensemble des marchés mondiaux a été gagné par la panique, les Bourses de Paris et Francfort plongeant d'environ 10% avec des valeurs bancaires en déroute. "C'est l'un des plus gros chocs sur les marchés de tous les temps", a estimé Joe Rundle, analyste chez ETX Capital. Les résultats montrent un pays divisé, avec Londres, l'Ecosse et l'Irlande du Nord qui voulaient rester, tandis que le nord de l'Angleterre ou le Pays de Galles ont largement voté contre. Partisan du maintien dans l'UE, en première ligne pendant la campagne, le Premier ministre conservateur David Cameron en a rapidement tiré les conclusions en annonçant sa prochaine démission lors d'une brève allocution devant le 10, Downing Street. "Les Britanniques ont pris une décision claire (...) et je pense que le pays a besoin d'un nouveau leader pour prendre cette direction", a déclaré M. Cameron, en précisant qu'il resterait en place jusqu'à l'automne et la désignation d'un nouveau leader par son parti. * Agence France-Presse (Huffington Post); Radio-Canada; * Associated Press (CBC News, CTV News)

*** Teacher recalls battle with tornado that killed 98 in China**
Teacher Guo Haimei said the ferocious wind, blacked with dust and debris, seemed to descend out of nowhere onto her kindergarten and its 120 pupils. Within minutes, the powerful tornado and its accompanying rain and hailstorm had scythed through the area of eastern China with merciless force, leaving almost 100 people dead and another 800 injured. "I was very scared. I had no idea what was happening," said Guo. "When I tried to close the door, my hand was injured by the wind pushing it back." Guo and her mostly 6-year-old pupils were among the lucky ones. Although the school was heavily damaged, just seven students were injured, two of them seriously. One day after the storm, rescuers on Friday continued searching for survivors in this densely populated area of farms and factories on the outskirts of the major city of Yancheng in Jiangsu province. The twister was one of the most extreme weather events witnessed by China in recent years, leaving a swath of destruction with destroyed buildings, smashed trees and flipped vehicles on their roofs. A sprawling solar panel factory was shredded, forcing fire crews to secure toxic materials before they leaked into neighbouring waterways. Associated Press (CTV News)

*** EgyptAir recorders to go to France after data downloads fail**
Initial attempts to download information from the flight data and voice recorders of an EgyptAir plane that crashed into the Mediterranean last month have failed, and key parts of the recorders are being sent to France for repairs, according to Egyptian and U.S. officials. The "electronic boards" of the recorders are being flown next week to the offices of the French aviation accident investigation bureau near Paris, authorities said. After the boards are repaired and salt removed, they will be sent back to Cairo for data analysis, Egypt's Investigation committee said in a statement late Thursday. The recorders, also known as black boxes, were extensively damaged when EgyptAir Flight 804 travelling from Paris to Cairo plunged into the sea on May 19, killing all 66 people on board. MINISTER / MINISTRE

Inquest needed into prison death
An editorial states, "How did it happen again? How did yet another woman with mental health issues choke herself to death while in a solitary confinement cell at Kitchener's Grand Valley Institution for Women? How and why did Terry Baker die in this terrible way this week? We thought Correctional Services Canada and the federal government had learned important lessons after all the lengthy investigations and earnest recommendations for change that followed the 2007 death of Ashley Smith, in the same prison, in what appear to be remarkably similar circumstances. We thought the serious systemic problems uncovered by a scathing report from the country's chief correctional investigator and then a coroner's inquest into Smith's death had already been dealt with. A deeply troubled 19-year-old, Smith was in prison for a series of minor offences when she choked herself to death in a segregated cell at Grand Valley prison while prison guards watched... Holding a coroner's inquest into Terry Baker's death would serve the public interest. There should be one. Yet we say this knowing we've been here before and that all the hard work done by the jury probing Ashley Smith's death was not enough to stop Baker from dying. However the federal government, which is responsible for the nation's prisons and ultimately for the conditions in which Baker found herself, need not wait for an inquest to act. **Public Safety Minister Ralph Goodale** said Thursday that the practice of segregation in women's prisons must

be addressed. That's a promising response but deeds, not words, are needed from this still young Liberal government." Waterloo Region Record, A6

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Firefighters holding their own against burning Wainfleet Bog
Firefighters are holding their own against a smouldering burn in the Wainfleet Bog. The fire had expanded from one hectare Tuesday to 6.4 hectares by Thursday morning. A Niagara Peninsula Conservation Authority news release said the blaze is now in the second phase of forest fire fighting: 'being held.' The four fire fighting phases are: not under control, being held, under control and out of control. Hamilton Spectator, A7

Another improperly-doused fire causes problems
One new wildfire was confirmed in the Southern Lakes fire region at 3 p.m. Thursday. The 0.01-hectare blaze began on a small island on the southeast side of Braeburn Lake. As with numerous other fires this season, Thursday's was caused by an abandoned campfire that was not properly extinguished. One crew and a helicopter responded with support from another crew, and the fire was quickly extinguished, Yukon Wildland Fire Management officials said today. Whitehorse Daily Star, 5

Quelque 14 000 canards atteints du virus H5N2 seront euthanasiés
Environ 14 000 canards d'une ferme ontarienne atteints du virus de l'influenza H5N2, mieux connu comme étant la grippe aviaire, seront euthanasiés. Les canards issus d'une ferme de St. Catharines, en Ontario, ont pour l'instant été placés en quarantaine.Ces oiseaux sont affectés par une sous-classe faiblement pathogène du virus qui provoque une maladie moins grave chez eux, a indiqué un vétérinaire en chef pour l'Agence canadienne d'inspection des aliments (ACIA), Harpreet Kochhar.Tous les canards affectés seront euthanasiés. La Presse Canadienne (Le Nouvelliste, 27); Canadian Press (Waterloo Region Record)

Trois ans après Lac-Mégantic
Un article d'opinion dit, « Il y a trois ans, le 6 juillet 2013 devenait une triste journée pour les Canadiens. A ce moment, personne ne se doutait qu'une tragédie allait secouer la municipalité de Lac-Mégantic dans la région de l'Estrie. Malheureusement, cette nuit-là, un train laissé à la dérive qui transportait du pétrole brut a déraillé en plein coeur du centre-ville et a emporté dans les flammes les vies de 47 personnes remplies d'avenir. Aujourd'hui, malgré la reconstruction de leur centre-ville, les citoyens de Lac-Mégantic sont toujours inquiets et préoccupés par les nombreux trains qui traversent leur ville. C'est avec raison qu'ils réclament l'implantation d'une voie de contournement afin d'éviter qu'un drame semblable ne se reproduise. » La Tribune, 16

Stampede begins: Ft. McMurray wildfire first responders honoured
The Calgary Stampede parade reserved a special spot for Fort McMurray on Friday, more than two months after a fierce wildfire forced everyone to flee the northeastern Alberta city. A contingent of first responders and staff from the Regional Municipality of Wood Buffalo marched directly behind the vintage car carrying the parade marshals and singers Jann Arden and Paul Brandt. The group carried a banner reading "Thank You Alberta" and wore T-shirts with "We are here. We are strong" printed on them. Canadian Press (Waterloo Region Record, B12, Chronicle-Herald, Red Deer Advocate)

UNB grad fighting 'the beast' in Alberta
It's a wildfire called 'the beast' and a University of New Brunswick graduate is using his brains and brawn to battle it. The massive Fort McMurray wildfire has burned 600,000 hectares of forest since it started in May - and it forced the evacuation of more than 80,000 people. Almost 15 years ago, Bathurst-born Alan Gammon was tree-planting in the forests of New Brunswick and studying for a bachelor of science and kinesiology at the University of New Brunswick. Now he's assessing wildfires and flying in helicopters over the wooded expanses of the Fort McMurray forest as a fire technologist for the government of Alberta. And while Gammon won't talk specifically about battling the beast - the blaze's firefighting efforts

are currently under review - he describes a life full of high-flying adrenaline as a front-line strategist planning attacks and techniques designed knock fires down. Daily Gleaner, A1 (Telegraph-Journal)

Fort McMurray fire seared in our memories
An editorial states, "It was neither the largest nor the hottest fire on record but it was the most traumatic. It destroyed some 2,400 buildings and threatened a major industrial complex. Perhaps more important, as Fire Chief Darby Allen said, was "the way this thing happened, the way it travelled, the way it behaved." The speed and intensity with which the fire grew and spread through town brought criticism that the emergency officials did not respond quickly enough. But that was also evidence of what Allen called "the overwhelming nature of the fire." Trauma and stress afflicted residents and firefighters alike." Waterloo Region Record, A6

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Ottawa braces for era of leaks
It's not a matter of if there will be another Edward Snowden, it's a matter of when, according to internal government documents obtained by the Star. Global Affairs officials warned minister Stéphane Dion in November an event on the scale of Snowden's disclosures about Internet surveillance is inevitable. "Incidents similar to the Snowden disclosures and the Sony hack will happen again and we can expect that sudden events will affect international debates on cyberspace," the document reads. The briefing note, prepared for Dion in November and obtained under access to information law, suggests that Snowden's disclosures about western mass surveillance "altered the tone" of the international discussion on cyberspace. In 2013 Snowden, a former employee of the U.S. National Security Agency (NSA), pulled back the curtain on mass surveillance online, detailing the capabilities of the "Five Eyes" countries - Canada, the United States, the U.K., Australia and New Zealand - to monitor activity online. His release of classified NSA documents triggered outrage among those who said he put lives at risk, and praise from others who argued he shed light on questionable practices. He was forced to flee the U.S. and was granted asylum in Russia. Toronto Star, A6

*** The developer, the fugitive and the feud**
Five years ago, Sam Mizrahi, one of Toronto's most ambitious real estate developers, found himself in a basement in the city's Bridle Path neighbourhood. It was there, he says, he began to fear for his safety. In a span of just a few hours, one of the main financial backers of two of his luxury condominium projects, Mahmoud Khavari, had become one of Iran's most wanted men, having left his position as the chairman of the country's largest bank and fled to Canada amid a corruption scandal. With Iran demanding Mr. Khavari's immediate return, Mr. Mizrahi feared being caught in the crossfire of a potentially violent international dispute as they debated the future of their business partnership inside the former banker's Toronto home. The agreement worked out in that basement in the hours that followed the frantic flight to Canada has become the subject of a multimilliondollar lawsuit before the Ontario Superior Court, and led to a feud between Mr. Mizrahi and the Khavari family of near-Shakespearian proportion, involving alleged death threats, international intrigue and some of the city's hottest real estate. Mr. Mizrahi, in his sworn statement, says the Khavari family and CSIS officials informed him in 2011 that the Iranian government was sending a "special force" to Toronto with the aim of spiriting the former banker back to Tehran. Iranian officials have also reportedly raised his name in discussions related to Saren Azer, an Iranian-Canadian doctor who is accused of abducting his four children and fleeing to Iran. In May, two former federal officials working on the file told the Globe that Mr. Khavari had been mentioned in back channels with Iranian officials, suggesting there's a deal to be made. All the while, Mr. Khavari has remained in Toronto, living in North York, as his family expands its real estate holdings across the city. Globe and Mail, M1

Government downplays terrorism threat
Re: "Terrorism: Is Canada ready?" July 2
A letter to the editor states, "This is a very thought-provoking column by Geoffrey Johnston, and anyone who thinks Canada is prepared to handle a major radical Islamist attack on a soft target like one of our

airports is dreaming. We have to give full marks to the RCMP and CSIS for their having thwarted numerous planned attacks on Canadian soil." Kingston Whig-Standard, A4

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Pair arrested in relation to fentanyl production bust
A search warrant executed last December in Red Deer County has been tied to a complicated investigation and two arrests this week related to largescale production of fentanyl pills. That search was carried out at a business in the county by police authorities who seized four barrels containing 100 kgs of N-phenethylpiperidinone (NPP), used to make fentanyl. The barrels were originally from China and had come to the attention of the Canada Border Services Agency in October at Edmonton International Airport. Red Deer Advocate, A3

Cloutier veut des actions rapides
Le candidat à la direction du Parti québécois (PQ), Alexandre Cloutier, a interpellé le premier ministre Justin Trudeau vendredi à propos du dossier du lait diafiltré. Le député réclame des actions rapides de la part du gouvernement fédéral. « C'est la survie de centaines de fermes familiales qui est en jeu en ce moment », a expliqué M. Cloutier par communiqué de presse. Selon lui, le gouvernement fédéral fait preuve de laxisme dans le dossier. Il a ajouté que les importations de lait diafiltré ont fait perdre 220 millions de dollars aux producteurs laitiers de la province en 2015. Alexandre Cloutier croit que le gouvernement Trudeau n'a aucune raison de ne pas régler tout de suite le dossier. D'après le député, l'Agence des services frontaliers du Canada devrait cesser de traiter le lait diafiltré comme un ingrédient, ce qui lui évite les tarifs imposés aux aliments sous la gestion de l'offre. Le Quotidien, 15

Tips for easier border crossings
Summer's here and many Canadians may be thinking of hitting the road for a much-needed vacation. The Canadian Border Services Agency is providing travel tips for those who choose to venture out of the country. They have issued several key tips... LethbridgeHerald.com

*** Mounted Police Professional Association of Canada (MPPAC) Granted Intervener Status In RCMP's Appeal Re: St Albert Member Shooting**
The Mounted Police Professional Association of Canada (MPPAC) continues to stand up for the rights and interests of Royal Canadian Mounted Police (RCMP) members to ensure their employer complies with health and safety recommendations following a situation which resulted in the shooting and death of RCMP Constable David Wynn, and shooting injuries to Auxiliary Constable Derek Bond in January 2015. Earlier this year, RCMP management attempted to block MPPAC from having any status in the RCMP's appeal of the direction issued by Economic Skills and Development Canada (federal agency mandated for oversight of health and safety of federal employees) as a result of an investigation regarding this matter. However, this week the Occupational Health and Safety Tribunal of Canada ruled in favour of MPPAC being granted intervener status. Mounted Police Professional Association of Canada News Release (Newswire.ca)

*** Pint-sized crime fighter has dream visit by Mountie in Maple Ridge**
An accidental 9-1-1 call by his baby sister ended up being a dream come true for a pint-sized Albion crime fighter. On Wednesday evening, Tara Adamyk said her husband, Mathew, turned his head for a brief moment, just long enough for their one-year-old daughter Elizabeth to grab a phone and hit buttons. Unfortunately, those buttons were 9-1-1. Although Mathew took the phone away, a 9-1-1 operator called

back, making sure everything was okay, as they are required to do in the case of miss-dialed 9-1-1 calls. MRTimes.com

*** Secrecy shrouds deaths involving officers**

In 2015, five Alberta men were shot and killed by police: one in Grande Prairie, one in Calgary, one in Edmonton, one in Morinville, and one in Red Deer. A sixth man died in Edmonton after being Tasered by police. In addition, 12 people died while in police custody. Eight were shot and seriously injured by police, and another 11 were seriously injured by police due to physical force. Those numbers come from ASIRT, the Alberta Serious Incident Response Team, which investigates all police incidents that result in serious injury or death. Not all that data are publicly available on the ASIRT website. I had to obtain if through a series of access to information requests using Alberta's Freedom of Information and Protection of Privacy Act. But despite my repeated FOIP attempts, I can't tell you the names of those who were killed or seriously injured by police in Alberta last year. Despite FOIP, Alberta Justice won't make that information public. It says it has to protect the rights of those who've died and their families. And it insists the right to privacy extends 25 years after a death. Edmonton Journal, A4

*** Canadians lost $2 million to taxpayer scam in 2016**

The national RCMP and the Canada Revenue Agency (CRA) are again warning people of the "taxpayer scam" as Canadians continue to be victimized almost daily. In a news release issued Friday, the RCMP said "pushy scammers" impersonate CRA employees and demand either personal information or payment for a made-up fee or back taxes. They threaten arrest or worse if the fee is not paid immediately. Scammers also alter parts of their story in the hopes of victimizing more Canadians. In the latest variation, scammers ask that the payment be made via iTunes cards. Times & Transcript, A10; Leader-Post

*** Online story claiming man murdered family a virus: RCMP**

A fake news article posted on Facebook, claiming that a Moncton man shot and killed his wife and four children, works as a virus when users click on it; the story will be posted to your Facebook page without your permission. Sgt. Aurele Pelletier with Codiac RCMP confirmed Friday the incident the post describes did not happen. "I'm sure if it would have happened you would have heard about it," he said. The fake article originates from a website called reportletter.com and attached is a photo of Codiac RCMP members huddled behind a car, taken by Moncton freelance photographer Marc Grandmaison for The Canadian Press following the shooting of three Moncton Mounties in 2014. Grandmaison said Friday the image was used without his permission. Times & Transcript, A3

*** Mother makes tearful plea to missing teen**

There were emotional scenes at RCMP headquarters in Regina on Friday as the mother of missing Yorkton girl Mekayla Bali spoke of her love for the daughter she has not seen in almost three months. "I feel that I have failed you in my most important role of life as your mother, because I can't protect you now," Paula Bali said as she choked back tears. "We want you to know that you are not in trouble - we are worried about you. We love you to the moon and back, and that will never change." Bali - whose 17th birthday was this week - was reported missing after failing to return from school on April 12. She was last seen at the Yorkton bus depot at 1:45 p.m., and since then rumours have swirled of sightings in Regina and Saskatoon. The net has been widened into the U.S., but police say there is no evidence she has acquired a passport. Neither can they confirm any of the sightings in either city. StarPhoenix, A7 (Leader-Post)

*** Two men are dead in Ponteix after possible murder-suicide**

Two people are dead after a possible murder-suicide in the small community of Ponteix. "We're kind of like everybody else: We don't have a lot of details. We just know it's a murder-suicide. Two people are dead right now," said Tammie Norheim, an assistant town administrator. According to an RCMP news release, officers were called to the local dump, about six kilometres east of Ponteix, at 3:45 p.m. Thursday and located two dead men. Details about what transpired at the dump have not been released and police won't say any more about the case. Ponteix is 85 kilometres south of Swift Current. StarPhoenix, A10 (National Post); Canadian Press (CTVNews.ca)

*** Oversight, watchdogs & Ontario's thin blue line**

Andrew Loku lay on the floor dead. Near his body was the hammer the 45-year-old had been holding when police pumped two bullets into his chest. His death, in the hallway of a Toronto apartment building last July, had unfolded in a matter of moments - it was five minutes from the time a neighbour called police until the fatal confrontation with police. From there, the timeline stretches out. It would be eight days before Ontario's police watchdog, in search of answers, interviewed the officer who shot Loku. It would be nine more months before the public was told what had happened. Next March, eight months from now, Ontarians will find out whether the events of that night in Toronto will prompt a fundamental change to the oversight of police forces in this province. It is change, some say, that has been years in the making. Ottawa Citizen, B1

* **Police commission facing serious financial struggles due to rising investigative costs**
The New Brunswick Police Commission is dealing with a $243,000 deficit from the previous two fiscal years due to soaring investigative costs sparked by a string of complaints against New Brunswick police officers. The commission is an independent civilian body that oversees complaints from the public involving the conduct of police officers and reviews the quality of the services provided by municipal or regional police forces within the province. It's required to perform these duties in a transparent manner, ensuring that both the complainants and the police officers who are subjected to these complaints, are treated fairly and with respect. Steve Roberge, executive director of the New Brunswick Police Commission, said the costs associated with carrying out this work has spiked in recent years, exceeding the commission's allotted annual budgets. Daily Gleaner, A3

* **Charges laid after RCMP find stolen vehicles in Sylvan Lake**
Sylvan Lake Mounties have laid charges in two separate incidents involving stolen vehicles, including one case in which a driver tried to run over an officer and another where a man jumped out of a window to elude police. In the first incident, on Wednesday, police were conducting an investigation on Sylvan Drive when they noticed a suspicious truck around the corner on Parkland Drive with front-end damage to the front driver's side wheel. Officers determined the plate did not match the 2007 black Ford F350, which had been stolen out of the Rimbey area on July 2nd, and approached the lone male occupant of the vehicle. When the man saw police, he jumped into the driver's seat, fled the scene, and tried to hit one of the members standing beside the truck. That officer was able to jump out of harm's way. The driver then continued travelling in an erratic manner with no front driver's wheel through the central Alberta town, resulting in numerous complaints made to police by the public. Calgary Herald, A8

* **Six boys accused of cyberbullying**
Six male high school students in southwestern Nova Scotia are facing charges following an investigation into complaints that intimate images of at least 20 young female students were shared online without their consent. Bridgewater Police chief John Collyer said Friday the case marks one of the first in Canada that involves federal anti-cyberbullying legislation introduced in late 2013 after the high-profile death of Nova Scotia teen Rehtaeh Parsons. The bill became law in March 2015. After complaints came in from school officials, investigators seized a number of electronic devices - mainly cellphones - and handed them to the RCMP Technological Crime Unit for analysis. Canadian Press (Waterloo Region Record, A9, The Guardian, Cape Breton Post, Chronicle-Herald, London Free Press, Toronto Sun, Kingston Whig-Standard, Times Colonist, Windsor Star, Toronto Star, StarPhoenix, National Post, Leader-Post, Montreal Gazette, Calgary Herald)

* **Regina man charged with luring young teen girls over Internet**
A Regina man accused of child luring for allegedly seeking out teenage girls on the personals section of a website has been remanded in custody. Rodney Joseph Barras, 55, made his first appearance in Regina Provincial Court on Friday on two Internet-related child exploitation charges. After Barras sought the assistance of Legal Aid, the charges were put over to Wednesday for a possible bail hearing. The Saskatchewan Internet Child Exploitation Unit - known as ICE - began investigating Barras' online activities on June 16 in connection with Internet advertisements, according to an ICE news release issued Thursday. Officers searched Barras' Regina residence that same day. The Saskatchewan ICE unit comprises members of the RCMP and the Regina, Saskatoon and Prince Albert police services. Leader-Post, A3

*** Man arrested for child porn identified**
The Kingston man who has been charged by police with multiple child pornography-related offences has been identified as Matthew V. Sears. The 47-year-old was charged Thursday after more than a month-long investigation by the Kingston Police Internet Child Exploitation unit and a tip from the American Centre for Missing and Exploited Children. The RCMP National Child Exploitation Co-ordination Centre was told by its American counterpart in May that a resident had uploaded a digital image file that appeared to contain child pornography. On Thursday morning, officers executed a search warrant at a west-end residence where they arrested the accused and also seized electronic devices and media for analysis. Kingston Whig-Standard, A6

*** Nanton man faces 13 charges after fleeing from RCMP**
A 36-year-old Nanton man faces numerous charges after allegedly fleeing from Sylvan Lake RCMP in a stolen truck on Wednesday. RCMP said an officer noticed a damaged pickup truck with a licence plate that did not match the vehicle on Parkland Drive. The driver fled in the truck when he saw police and the officer had to jump out of the way to avoid injury. Red Deer Advocate, A3

*** Mounties raid suspected chop shop**
St. Albert RCMP are investigating a potential automobile chop shop after seizing a mini John Deere excavator, a Dodge pickup truck and drugs from a rural property. Edmonton Journal, A9 (Edmonton Sun)

*** Lawyer convicted in refugee claim case**
Windsor immigration lawyer Sandra Saccucci Zaher is guilty of a criminal offence for fabricating a refugee claim, a judge ruled Friday. Zaher was also found guilty of two Immigration and Refugee Protection Act offences for misrepresenting facts in a refugee claim and helping someone to make a false claim for refugee status. Zaher's legal assistant, Diana Al-Masalkhi, who had been facing identical charges, was found not guilty. She and Al-Masalkhi were arrested at the end of an RCMP sting operation. The investigation was launched after a local lawyer tipped off police that Zaher had allegedly filed a fraudulent refugee claim for a client. The RCMP investigation involved an officer posing as a Sikh man working illegally in Canada and a second officer posing as a translator. The two men met with Zaher on several occasions and each meeting was recorded. The RCMP also tapped Zaher's phones. Windsor Star, A6

Saskatoon police chief says Dallas shooting 'felt by every member of law enforcement'
Flags at the Saskatoon police headquarters were lowered to half-mast Friday to honour officers killed Thursday night in Dallas. Five officers were killed and seven others were wounded by sniper fire at a peaceful protest. Saskatoon police Chief Clive Weighill offered his condolences to the victims, saying the shooting highlights the dangers faced by police every day. "This is a tragedy felt by every member of law enforcement, not just in the United States but north of the border as well," Weighill, who is also the president of the Canadian Association of Chiefs of Police (CACP), said in a written statement. Weighill said Canadian officers are not immune to similar violence, referring to the shooting of two RCMP officers in Spiritwood a decade ago. StarPhoenix, A3

Support pours in for police 'in harm's way'
Windsor's police chief said the horrific killing of five Dallas officers is a grim reminder of how dangerous policing work can be, anywhere and at any time. "It's a reminder that each and every day when we suit up ... that the ultimate sacrifice could be expected or required of us," said Al Frederick. Friday began with a moment of silence at Windsor Police Service headquarters for the victims of the shooting ambush late Thursday on uniformed police in Texas, which included nine other officers injured. Frederick said front-line officers would be given the opportunity to express any thoughts or bring forward concerns during the day's three shift changes. Windsor Star, A1

Préserver le lien entre population et policiers
Le directeur du Service de police de la Ville de Gatineau (SPVG), Mario Harel, estime que les événements dramatiques qui se sont produits à Dallas, aux États-Unis, ont des répercussions de son côté de la frontière. Réagissant à cette tuerie d'au moins cinq policiers de la capitale texane, mercredi soir, M. Harel affirme que le SPVG est «conscient» de la situation délicate qui prévaut aux États-Unis. «Nous sommes conscients du fait que les gens parlent de profilage racial, dit-il. Chez nous, on dit à nos

agents de ne pas en faire. On peut parler de profilage criminel, mais pas de profilage social ou racial. Le lien de confiance entre la police et la population doit être préservé.» Le Droit, 2

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Dangereux mélange de détenus à Donnacona**
Échauffourées, bagarres, agressions. La prison de Donnacona a été le théâtre de nombreux incidents violents il y a quelques semaines, dont certains ont mis en danger la vie de détenus. Ce climat d'agressivité serait lié à la décision de l'administration de fermer une aile presque vide de l'établissement et d'intégrer 23 détenus dans les autres secteurs de la prison. Selon nos sources, des bagarres ont éclaté entre les nouveaux venus et leurs confrères de rangée et au moins deux détenus ont été plus gravement blessés. L'un d'eux a été agressé dans sa cellule par quatre détenus munis d'armes artisanales et a dû être transporté à l'hôpital. Le Service correctionnel du Canada (SCC) confirme qu'un incident est survenu le 14 juin impliquant un détenu qui avait été déplacé. " Le détenu a été vu par notre personnel de soins de santé. Il a été transporté dans un hôpital externe et est revenu à l'établissement la même journée. Aucune blessure grave n'est rapportée ", a-t-on informé Le Devoir par courriel. Aux premières loges, les agents du service correctionnel disent avoir effectivement dû intervenir pour des règlements de compte entre détenus, mais aucun " incident n'est tombé en dehors de notre contrôle ", a expliqué Frédérick Lebeau, président régional pour le Québec du Syndicat des agents correctionnels du Canada (UCCO-SACC). Pour lui, il est normal que, dans les changements de cellule, " ça brasse plus ". " Ce ne sont pas des enfants de choeur, vous savez ", a-t-il indiqué. Le risque que la violence éclate est plus grand lors de changements de secteur. Car, en milieu carcéral, ne cohabite pas qui veut. Règle générale, on sépare les prisonniers qui sont incompatibles. Par exemple, les agresseurs sexuels sont dans une aile, ensemble, et les membres de gangs criminalisés rivaux sont séparés. Le Devoir, A1

*** Louise Arbour, former Supreme Court justice, calls for end of segregation in prisons**
Louise Arbour, one of Canada's most renowned jurists and a human rights champion, is calling for the end of segregation in women's prisons following the death of an inmate at a federal women's institution in Kitchener, Ont., earlier this week. "I'm just outraged," she told CBC Radio's The House host Chris Hall. Terry Baker was found unresponsive in her cell at Grand Valley Institution for Women in Kitchener, Ont., Monday evening. She had been serving a sentence for first-degree murder. The Canadian Association of Elizabeth Fry Societies said the 30-year-old had been in segregation and had attempted suicide on Monday night. Baker's death has sparked comparisons to Ashley Smith, who died in 2007 at the same facility. Arbour — a former justice of the Supreme Court and one-time UN high commissioner for human rights — led an inquiry into the women's prison in Kingston back 1996, which called for limited use of segregation. "Frankly, at this point I don't think it should be used at all," she said. "A sentence of imprisonment, the punishment is the deprivation of liberty. It's not an opportunity for further abuse ... [Segregation] is extremely, extremely damaging." CBC.ca

*** Leone granted another parole hearing**
Sex offender Carl Leone has failed in his latest attempt to get out of prison, but he'll soon get another chance. The Parole Board of Canada shot down the Windsor man's appeal of an earlier ruling that denied him day parole, which would have seen him released from prison to live at a halfway house in the community. But in the same written decision, the board's appeal division stated it is ordering another hearing because it's possible one of the panel members who rejected his bid for day parole was biased against him. *** Marijuana industry closely watches advertising rules**
As the Liberal government prepares to introduce legislation next spring to legalize cannabis, it has asked a nine-member task force to look at what restrictions should be in place when it comes to marketing marijuana. "Since marketing, advertising and promotion of marijuana would only serve to 'normalize' it in society and encourage and increase usage, it has been proposed that these should be strictly limited so as to dampen widespread use and reduce associated harms," reads the government's discussion paper on the issue. "Limitations could include products being sold in plain packaging." That's tough for the industry to inhale. CBC.ca

Canada to send 450 troops, armoured vehicles to Latvia for long-haul mission
Canada is sending hundreds of troops to Latvia for the long haul. Prime Minister Justin Trudeau announced at the NATO leaders' summit in Poland on Friday that Canada will take command of a 1,000-strong multinational force in Latvia, as the alliance beefs up its presence in the Baltics and Poland in response to recent Russian actions. Speaking on the sidelines of the summit, defence chief Gen. Jonathan Vance revealed that Canada will send about 450 soldiers along with armoured vehicles to the Baltic state as part of an "enduring" NATO presence in Eastern Europe. The Canadians will form the "nucleus" of a battle group in Latvia, Vance said, that with the addition of forces from other allies, is expected to grow to about 1,000 troops. Germany, the United States and Britain are leading similar forces in Lithuania, Poland and Estonia. Canadian Press (Times & Transcript, B2, The Guardian, Cape Breton Post, Chronicle-Herald, Toronto Sun, Times Colonist, Ottawa Sun, Edmonton Sun, Calgary Sun, Hamilton Spectator, Waterloo Region Record, Toronto Star, Telegraph-Journal, Daily Gleaner); National Post (Ottawa Citizen); La Presse Canadienne (Le Droit, La Voix de l'Est, L'Acadie Nouvelle)

Canada's return to NATO's front line has air of familiarity to it
An opinion piece states, "And so Canadian soldiers are heading back to Europe. Times change and the world, despite a steady drumbeat of appalling headlines, is safer for us than for our parents. So the deployment of 450 Canadian Forces troops to Latvia won't be nearly as formidable as the deployment to West Germany - often more than 10 times larger - that was Canada's defining military commitment for 42 years through the Cold War. But the purpose is wearyingly similar." Toronto Star, A1

Russian threats spark summit
NATO leaders geared up Friday for a long-term standoff with Russia, ordering multinational troops to Poland and the three Baltic states as Moscow moves forward with its own plans to station two new divisions along its western borders. Alliance Secretary-General Jens Stoltenberg said that on the first day of a landmark two-day summit, U.S. President Barack Obama and leaders of the 27 other NATO countries also declared the initial building blocks of a ballistic missile system operationally capable, recognized cyberspace as a domain for alliance operations, committed to boosting their countries' civil

preparedness, and renewed a pledge to spend a minimum of two per cent of their national incomes on defence. Chronicle-Herald, A12

*** Le Canada promet de verser 465 M $ à l'Afghanistan**
Le Canada a annoncé qu'il verserait un soutien financier plus généreux à l'Afghanistan tandis que certains de ses alliés ont promis de maintenir leurs troupes dans le pays qui fait face à une flambée de violence actuellement. Ottawa s'est engagé à offrir 465 millions $ qui seront répartis sur trois ans, à partir de 2018 — lorsque le financement promis par l'ancien gouvernement conservateur viendra à échéance. Le premier ministre Justin Trudeau en a fait l'annonce lors d'une rencontre spéciale des dirigeants de l'OTAN qui se tenait samedi, à Varsovie, en Pologne. M. Trudeau s'était entretenu vendredi avec le président afghan, Ashraf Ghani. La Presse Canadienne (Journal Métro); Canadian Press (iPolitics.ca)

INTERNATIONAL

First shot came as dusk fell
The murderous havoc unleashed on police at an anti-racism protest in Dallas Thursday night began with sniper fire. But at least one officer died in close quarters street combat. Dramatic footage taken by a civilian on a phone shows the entrance of El Centro College from a building rooftop across the street. A man with a rifle paced by the doors, shooting in both directions at police stationed around both street corners. An officer approached, also armed with a rifle, and took shelter behind a pillar. He fired on the gunman but missed, and stepped back behind the pillar. The gunman then appeared to run a fake, charging first to the side of the pillar where the officer fired from, then shifting to his right and coming around the other side, easily shooting the officer repeatedly in the back, and continuing to fire as he fell to the ground. The gunman then left the body where it lay and rounded the corner, as gunshots, presumably from police, kick up dust from the pillars and sidewalk around him. He did not appear to be hit. Panicked hours would pass before he was cornered on the second floor of a nearby parking garage and, after failed negotiations, killed by a remote control police bomb. He had shot 12 law enforcement officers, killing five. The mayhem and panic, charged through with racial tension, threatened to further divide a country already tormented by the killings of black men by white officers, nearly all of which have gone unpunished. The Dallas protest was in response two such killings in as many days, in Louisiana and Minnesota. National Post, A2 (Leader-Post)

Dallas gunman had bomb materials
The brazen attack in downtown Dallas that killed five police officers and injured nine other people was the act of a lone gunman, an Afghanistan veteran drawn to Black Power symbology and a determination to kill white people, authorities concluded. Investigators discovered bomb-making materials, rifles and a "personal journal of combat tactics" in the home of the black former Army reservist who struck during a demonstration against the shooting of two black men by police officers in Minnesota and Louisiana. Authorities identified the gunman as Micah Xavier Johnson, 25, a Dallas-area resident, a "loner" with no criminal history who "wanted to kill white people" and "especially white officers," police said. "He appears to have been a lone gunman, and at this point, we cannot see any connections to any foreign or international terrorist organization, or any inspiration from them," Homeland Security Secretary Jeh Johnson said. LA Times (Hamilton Spectator, A10); Globe and Mail

*** Islamic State's terrifying transition**
Massacres attributed to the Islamic State have struck on four continents this year, reflecting how the appeal of the group's ideology is growing even as the territory it controls in Iraq and Syria has receded, experts say. The slaughter of civilians in three large attacks in the past week alone - in Istanbul on Tuesday, in Dhaka, Bangladesh, on Friday, and in Baghdad on Sunday - suggests militant actions beyond the caliphate's borders are taking place more frequently and not necessarily with any overt direction from some caliphate headquarters. Even more alarmingly, a growing number of attacks, starting with those in Paris and Brussels, were conducted by gangs of assailants instead of by an individual gunman. Winnipeg Free Press, D5

MINISTER / MINISTRE

Police cleared in Somali detainee's death
More than a year after Abdurahman Ibrahim Hassan died in immigration custody, Ontario's police watchdog has cleared the officers responsible for guarding him at a hospital from any wrongdoing. On Friday, the Special Investigations Unit said there are "no reasonable grounds" to charge the two officers, one from Peterborough police, the other from the Ontario Provincial Police, who were watching the 39-year-old man at the Peterborough Regional Health Centre where he was under medical treatment in June 2015. (…)"We can't bring Abdurahman back, but Mr. **(Public Safety Minister Ralph) Goodale** can step in and stop future deaths by ending immigration detentions now. We can't wait for another two, three years for an inquest, which may turn out nothing." Hassan's family has declined to comment on the SIU and coroner's decisions. (…) **Scott Bardsley, Goodale's spokesperson**, said the minister is working on issues related to detention and hopes to put forward proposals in public later this year. In recent months, **Goodale** has already met with the United Nations High Commissioner for Refugees, the B.C. Civil Liberties Association, the Canadian Association of Refugee Lawyers and other groups working for reform, **Bardsley** said. ***"The government will consider how to strengthen the accountability and security of all our security, including Canada Border Services Agency. Our goal is to ensure our Canadian***

approach is world-class, including our methods of enforcement, with effective transparency and accountability," he said. Toronto Star, GT2

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Green and White team up with Red Cross to help flooded communities
The Saskatchewan Roughriders have had a couple of difficult weeks, but nothing compared to their fans in flood-ravaged communities. With that in mind, the Riders are teaming up with the Red Cross to help communities in need. Starting on Monday, the Riders announced that $5 from every ticket sold for Friday's game against the Ottawa Redblacks will go to the Red Cross "to help provide assistance in cleanup efforts." On Saturday, the province said there were 623 people forced to leave their homes because of flooding. Many of them, including 576 people from the Red Earth Cree Nation, have returned home. CBC News

Nuclear oversight challenged
The Ottawa-based Canadian Nuclear Safety Commission is investigating allegations, purportedly from an internal group of specialists, that CNSC commissioners are receiving "insufficient information" to make informed safety decisions about Ontario's nuclear power plants. In an unsigned letter to CNSC president Michael Binder, copied to the Citizen, the authors say their main concern is that the nuclear watchdog's commissioners "do not receive sufficient information to make balanced judgments (...)" The letter makes specific allegations involving CNSC oversight of Ontario's Darlington and Bruce nuclear power plants. In the case of Darlington, it says that CNSC granted the operator, Ontario Power Generation, a one year licence in 2014 on the understanding that it would provide the safety case for the refurbishment of the station. Ottawa Citizen, A1/FRONT

SGI prevails despite storms and wildfires
Mild winter weather and geographic diversification helped Saskatchewan Government Insurance (SGI) to increase profits in its general insurance business, SGI Canada, while Saskatchewan Auto Fund, the mandatory automobile accident insurance plan administered by SGI, hiked rates in late 2014, boosting its rate stabilization reserve to a record high in fiscal 2015-16 (...) Increased earnings were achieved, despite $55.1 million in claim losses due to summer storms and wildfires in Northern Saskatchewan. In fact, four of the last six years have seen major weather events, like $12 million in damages from a hailstorm in Kindersley last year, that have boosted catastrophe claims well above the 10-year average of $28.2 million. Leader-Post, B6 (StarPhoenix)

Plus d'outils et une meilleure connaissance
Au cours des deux dernières décennies, ce ne sont pas les occasions de bonifier ou de corriger les interventions qui ont manqué en matière de sécurité civile. Il y a eu la crise du verglas en 1998, le bogue de l'an 2000, Septembre-2001, la grippe A (H1N1), les inondations de Rivière-au-Renard, les tragédies de Lac-Mégantic et de L'Isle-Verte, etc. «Après chaque événement, on fait un « debriefing » avec les autorités municipales et on apprend. Ce qu'on a bien fait, on le garde et on améliore ce qui a cloché», explique Éric Houde, directeur aux opérations en sécurité civile. Grâce aux avancées technologiques, les systèmes d'alerte et de prévisions météorologiques se sont améliorés. Les différents paliers de gouvernement sont mieux équipés pour communiquer rapidement entre eux, ne serait-ce que grâce aux téléphones intelligents et aux systèmes de radiocommunications. Le Quotidien, X10

Wildfire smoke advisory issued for Northwest Territories
N.W.T.'s Chief Public Health Officer has issued a wildfire smoke advisory for the entire territory, saying many communities are experiencing varying levels of poor air quality. The advisory says exposure to smoke can result in sore eyes, tears, cough and runny nose and can cause worsening of pre-existing lung and heart disease. People at higher risk include young children, pregnant women, the elderly and people with chronic conditions such as diabetes, lung or heart conditions. CBC News

Tornado warnings ended for parts of southern Alberta
Tornado warnings were issued for parts of southern Alberta on Monday, but have now been lifted. The

areas around Lethbridge, Taber and Milk river areas were under a tornado warning, as was the area around Cypress Hills Provincial Park and Foremost. Tornado watches, a lesser level than a warning, were also in place for many other areas in southern Alberta. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Crashed drone found near Parliament Hill
A downed drone found near Parliament Hill has piqued the curiosity of at least one local couple. Melissa Presz and her boyfriend Luke Brimacombe found the crashed drone in a shrub at Nepean Point, near the statue of Samuel de Champlain, which overlooks the Alexandra Bridge, and is just steps from Parliament Hill, which is considered restricted airspace. Presz and a group of friends were playing bocce at Nepean Point on Sunday when she made the startling discovery. The drone – a Phantom 4K manufactured by DJI – is no cheap toy, either. It typically retails for between $1,000 and $2,000, depending on the model. (…) Transport Canada is revamping the laws around recreational drones as the "widespread public recreational use" can create a hazard for aviation safety. In May, the military scrambled CF-18 fighter jets after a drone was spotted by two passenger planes near the Ottawa airport. Under current regulations, drones cannot be flown within nine kilometres of airports, military bases or other restricted airspaces. Parliament Hill and Rideau Hall are both listed as "restricted" in NAV Canada's Designated Airspace Handbook. Ottawa Citizen (2016-07-18)

Terrorisme : jusqu'où l'hypocrisie ?
Un article d'opinion rapporte, « il faudrait être un parfait crétin pour nier que nous sommes en guerre. C'est certes une guerre d'un type nouveau, mais c'est une guerre quand même. Quand on veut gagner une guerre, il faut une compréhension lucide de nos forces et de nos faiblesses, autant que de celles de nos ennemis. Certaines de nos faiblesses crèvent les yeux. (…) La plus évidente est certainement l'incapacité de nos dirigeants à appeler un chat un chat. On préfère multiplier les boniments insignifiants sur l'«intégration ». Comment diable voulez-vous intégrer des gens qui souhaitent vivre comme au VIIe siècle ? Comment diable voulez-vous intégrer des gens qui pensent que leur religion doit être le socle indiscuté et indiscutable du fonctionnement de toutes les sociétés ? Une autre de nos faiblesses, au moins aussi débilitante mais dont on parle moins, est l'hypocrisie de nos dirigeants ou, si vous préférez, le fait de dire le contraire de ce que l'on sait être vrai. » Journal de Montréal, 8 (Journal de Québec)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Cuban ballplayers defect in Surrey: MISSING: Two women didn't show up Sunday for game at Women's World Softball Championship
Two Cuban ballplayers disappeared Sunday from the site of the Women's World Softball Championship in what organizers have taken to be a bid to defect. The Cuban team arrived in Canada last week, before the 31-country tournament started Friday, tournament spokesperson Laura Ballance said. The team played games Friday, Saturday and Sunday nights, and the two women didn't show up for the Sunday game, Ballance said. "We've been made aware that two of the Team Cuba players are not with the team," she said Monday as the remaining Cuban players prepared for a fourth game Monday night. The tournament wraps up July 24. Tournament organizers notified Surrey RCMP about the missing players Sunday, and RCMP passed the matter on to the Canada Border Services Agency. The Cuban players all had sixmonth tourist visas allowing them to attend the tournament, so the two women weren't breaking Canadian law by not showing up for their game at Softball City in south Surrey. Tournament players were staying at area hotels and school dormitories. Ballance wouldn't say specifically where the Cuban players were housed, nor would she release the missing women's names, saying only that they were adults. Cuban officials approached by Postmedia Sunday had no comment. The Communist government of Cuba, which recently liberalized relations with the U.S., has a long history of using international athletics as a means of promoting its political system, with elite athletes treated well back home. Despite that, the country also has a long history of its athletes defecting, with Canada and the U.S. among popular destinations. The Province, A6

Brothers accused of drug smuggling to be extradited

Two B.C. brothers accused of conspiring to smuggle large quantities of cocaine and ecstasy across the border have been ordered extradited to the U.S. Oscar Edgardo Mendoza and Rember Oswaldo Guevara-Mendoza were charged after authorities seized 54 kilograms of cocaine in the United States that was destined for Canada and 59 kg of ecstasy in Canada that was headed for the U.S. The drugs were seized following an elaborate undercover operation involving police and drug enforcement officials on both sides of the border. Evidence against the brothers consisted mainly of phone and text communications they had with a man in Washington state who was, unbeknownst to them, working with law enforcement. In July 2012, after communications between the accused and the man identified only as a "confidential witness," 29 kg of cocaine destined for Canada was seized in Bellingham, Wash. Authorities replaced a suitcase full of the 29 kg of cocaine they had seized with a substance resembling cocaine. The suitcase containing the sham cocaine was then smuggled across the border and later recovered by police and drug enforcement officials at an Abbotsford home. Apparently unaware one of their shipments had been seized, the brothers continued to conspire to traffic in drugs across the border, according to evidence presented in court. Two more shipments of cocaine - 14 kg in August 2012 and another 11 kg in December 2012 - allegedly linked to the brothers were seized by police in Washington. The Province, A4

Roma family in limbo as status reviewed: Mother, daughter risk deportation to Hungary unless permit approved

A Roma mother and daughter who risk being deported back to Hungary are waiting in limbo in Montreal to find out if they will be allowed to remain in Canada. Katalin Lakatos and her daughter Gilda, 17, applied for a permanent status permit on humanitarian grounds 10 months ago. They received a temporary residence permit in May, valid for two months, as they awaited the outcome of their application. That permit expired on Saturday. "We're kind of wondering why the minister gave them a two-month reprieve if it wasn't to respond to their permanent application," said Mary Foster of Solidarity Across Borders, who has been assisting the family through the application process. The family will be allowed to stay in Canada at least until their application for a renewal of their temporary residence permit is heard. Even with the permit, Gilda isn't allowed to go to school and Katalin can't work. They applied for permits separately, Foster said, but haven't received word on whether or not they will be accepted. Half of the family was deported in March, when Gilda's father and brother were sent back to Hungary. They said systemic racism against the Roma in the European country has made it impossible to live there. If the family's permanent permit is approved, the father and brother will be allowed to return. The family arrived in Canada in 2011. Montreal Gazette, A2

Tories draw fire after push for Yazidis

As the Conservatives push for more help for Yazidis fleeing persecution at the hands of Islamic militants, new information suggests their efforts to do so while in government were minimal. Data from a controversial audit of Syrian refugee cases ordered by former Prime Minister Stephen Harper late last spring reveals that, of 546 people reviewed, three identified as Yazidi, a Kurdish minority group that practises an ancient faith. Immigration officials also told a House of Commons committee Monday that Yazidis were never highlighted specifically by the Conservatives as a group that should be prioritized for resettlement, even with their targeted approach to resettlement. The data and the testimony Monday give both the Liberal and the Tory arguments over Canada's refugee policy some new energy after the file was a political flashpoint for most of 2015. The Conservatives' areas-of-focus policy drew heavy criticism, with many arguing it flew in the face of international obligations that see the UN choose who is resettled. The Tories argued they were using the UN criteria, but were drilling down within them to ensure the most vulnerable were helped. Canadian Press (National Post, A4, Record, Ottawa Citizen); Le Droit

Airport authority, union reach agreement

The Greater Moncton International Airport and the Public Service Alliance of Canada have inked a new collective agreement with the Union of Canadian Transportation Employees after four months of negotiations with Local 60605. The union, which represents 25 full-time airport administrative, maintenance and emergency response staff as well as 16 seasonal workers responsible for winter operations such as snow cleaning and one term employee, voted in favour of ratifying the agreement on March 15. Anna Goguen, who was team lead for the union in the talks, said both sides were able to work

together and left the table happy with what they got. "At the end of the day, [this agreement] is a win-win for everyone," she said. Airport president and CEO Bernard LeBlanc said he feels very lucky the talks went as well as they did. "When we get to the negotiation and everyone knows what the workplace environment is, we can come to the table with everyone being realistic," he said. "It means we'll have stability for the next five years." The previous contract expired on Dec. 31, 2015. This one will last for the next five years and includes an 11 per cent increase over the term. The agreement marks the fifth set of contract negotiations for the union and the airport authority since 1997. Times & Transcript, A4

Injured motorcyclist's family asks driver: 'Why?'
Ron Broda's family confronted the man who seriously injured the former Saanich police officer at Ogden Point three years ago, during an emotional sentencing hearing Monday in B.C. Supreme Court. In April, Justice Jennifer Power found Eric Gosse, 58, guilty of dangerous driving causing bodily harm. Broda lost his lower left leg and suffered life-threatening injuries when he was struck by Gosse's Toyota Highlander in the July 24, 2013, crash. Gosse, a pilot-boat operator, did not take the stand during the trial. Broda, 58, was not called as a witness because he has no memory of what happened that day. Broda, who works part time as a Canada Border Services officer, was on his way to the cruise-ship terminal at Ogden Point from his home in Central Saanich the morning of the crash. "All I want to know is why," said Broda's youngest daughter, Shayla, looking at Gosse. Daughter Janelle said she was "completely shattered" by the crash and described a night of terror, praying that her father would live. "You should be held accountable. You should tell them why it happened, at least apologize," said Janelle, looking directly at Gosse. Gosse appeared to redden slightly but held their gaze. Broda himself described the emotional, physical and financial impact of the crash and talked about his own experience running over a six-year-old boy with an 18-wheeler on Blanshard Street 10 years ago. "It was the worst day of my life. I co-operated with the police investigation. I reached out to the boy's family through the police to offer my sorry for the incident and best wishes for his recovery. I say this because I know how it feels to be in a situation of being responsible for the serious injury of another person," said Broda. Times Colonist, A3

West Vancouver property developers caught in cross-country lawsuit
A wealthy West Vancouver real estate developer faces an unusual lawsuit involving a $10 million loan which was advanced in China with the key term that it must be repaid in B.C. (…) China has strict rules barring citizens from transferring more than $50,000 out of the country. In Canada, funds over $10,000 must be reported to Canada's border agents and large cash transfers must be reported to the government. As tough as China's capital flight rules are, individuals and companies attempting to transfer money into Chinese banks face equally strict rules. The Financial Times noted some investors employ "underground banks" in China which provide "matchmaking services." These institutions connect Chinese citizens who want to move money abroad with offshore investors who want to move money into China, and no money crosses borders. According to Gui Hua Chen's claim, in June 2015 she loaned Chongye $10 million with a "promissory note" that stated "the borrower promises to pay the plaintiff in British Columbia," by May 1, 2016. Interest would be 10 per cent, with $875,000 interest due to be paid in December 2015. The Province

Australia and New Zealand sign new free trade deal
Customs authorities in Australia and New Zealand have signed a Mutual Recognition Agreement that accepts each other's supply chain security programmes and provides reciprocal benefits to the other country's trusted partners. (…) At the Council sessions, the Department also formally agreed to work towards mutual recognition of respective supply chain security programmes with the Canada Border Service Agency, Hong Kong Customs and Excise and Singapore Customs. These agreements were made through the signings of Statements of Intent and Action plans. The Department also reaffirmed Authorized Economic Operator cooperation with China with the signing of the latest schedule of the Strategic Partnership Program. Lloyd List Australia

CBP relocates NEXUS center to I Falls
U.S. Customs and Border Protection Office of Field Operations has moved the CBP Trusted Traveler Enrollment Center from Fort Frances to International Falls.The International Falls Enrollment Center will continue to support the NEXUS, FAST, and Global Entry Trusted Traveler Programs. The new enrollment center will be located at the U.S. Border Patrol station located on Highway 11 east, International Falls.

NEXUS is a joint program with the Canada Border Services Agency that provides prescreened, low-risk and approved travelers faster processing by U.S. and Canadian border officials. Approved applicants are issued a photo-identification/Radio Frequency Identification enabled card, which is valid for five years. Small boat operators who are NEXUS program participants may report their arrival by telephone, but may be selected for a more extensive examination. NEXUS also benefits CBP by allowing them to focus efforts on potentially higher risk travelers, thereby facilitating the movement of trusted travelers in a more efficient and effective manner. International Falls Journal

Hongkongers warned to avoid fake websites charging high fees for travel permits to Canada
Hongkongers who are required to apply for additional electronic authorisation when travelling to Canada have been warned to stay away from fake websites which scam travellers into paying additional fees costing up to 17 times the official charge. The warning from the Canadian government was issued after it reportedly received about 500 complaints from victims who had paid unnecessary fees or from people reporting suspicious websites. A statement from the Canadian government issued on Monday said several companies have set up websites since August 1 last year, when Electronic Travel Authorisation (eTA) was first phased in, to lure travellers into paying more than the official fee of C$7 (HK$ 41.92) to provide information and submit the applications on behalf of the applicants. South China Morning Post

LAW ENFORCEMENT / APPLICATION DE LA LOI

Cops warn of selfie risks for young people
Police fighting child exploitation are calling for reinforcements: from young people and their parents. Photos and videos of crimes against children form the bulk of the imagery found in child pornographers' collections, police say. But those investigators also say the public can help stop the proliferation of some illicit images: those created by young people. Created for perhaps a boyfriend or girlfriend, the images can be stolen or distributed illegally, at times ending up in child-pornographers' vast – and widely-traded – collections. (…)The RCMP centre handles 1,000 cases a year and the caseload is increasing, he said. (…) Canadian Internet service providers (ISPs) are bound by law to report suspected child exploitation. ***"The act also calls for ISPs to safeguard evidence if they believe an offence has been committed using an Internet service that they provide,"*** **Public Safety Canada spokesman Jean-Philippe Levert** wrote in an e-mail. Peterborough Examiner (Belleville Intelligencer) (2016-07-18)

Trial almost done for Mountie accused of abusing kid
The trial of a suspended Mountie accused of chaining his 11-year-old son naked in the basement of the family home and starving him has taken a sudden turn towards wrapping up. Closing arguments in the case were scheduled to begin Monday in an Ottawa courtroom. Instead, after a behind-the-scenes meeting with Crown prosecutors and lawyers for the Mountie and the boy's stepmother, Ontario Superior Court Justice Robert Maranger agreed to accept written submissions from all parties. Crown lawyer Mike Boyce said it's not an unusual move, but one that could result in the judge reaching a verdict sooner, possibly by early fall. The one-time officer with an RCMP anti-terrorism unit, now 44, as well as the boy's stepmother, were charged in February 2013 in what Ottawa police described as one of the worst cases of abuse they had seen. The couple, who cannot be named publicly under a court order to protect the boy's identity, face charges of aggravated assault, forcible confinement and failing to provide the necessaries of life. Canadian Press (Times & Transcript, B4, Red Deer Advocate)

CRA fraudsters scam Sask. residents out of $70K in 2016
RCMP in Saskatchewan say at least 17 people have been scammed out of a total of $70,000 this year by people posing as Canada Revenue Agency agents. RCMP have received 850 calls about the scams, where the caller pretends to be a CRA agent and demands payment over the phone, according to a news release. The callers often threaten legal action - threatening seizure of assets such as homes or vehicles - if people don't directly fork over cash over the phone. The fraudsters also often "spoof" local telephone

numbers and have even been known to imitate local police officers, using rank and badge numbers. RCMP are reminding the public that the CRA would not contact people by telephone this way and are asking any victims or anyone who receives the calls to get in touch with the authorities. People should take down the number and any names the callers give, RCMP said. StarPhoenix, A7; Canadian Press (Toronto Sun, Winnipeg Sun, Edmonton Sun, Ottawa Sun, Calgary Sun, Times Colonist); Leader-Post

Suspect pulls hand gun during high-risk arrest

A suspect armed with a skateboard and a handgun has been returned to custody after a tussle with police in downtown Red Deer on Thursday. Red Deer City RCMP allege that the 38-year-old Red Deer man had been wanted on outstanding warrants when he was seen walking along 50th Avenue, near 47th Street. Police allege that the suspect tried to run off, using his skateboard to ward them off, but found himself cornered. Police allege that he then produced a handgun, but dropped it during the high-risk arrest that followed. His weapons were seized and he was taken into custody on a variety of charges: Four counts of breaching release conditions, two counts of assaulting police, possessing a weapon for a dangerous purpose, possessing a stolen weapon, careless use of a firearm, carrying a concealed firearm, unauthorized possession of a loaded, restricted firearm, uttering threats, possession of stolen property worth less than $5,000. Red Deer Advocate, A2

When the trail runs cold

It was a cold Monday night in November 2012 when Alicia Dawn Boone stepped out onto George Street in Fredericton. Boone walked toward Brunswick Street, where she was planning on meeting someone. (...) Some 14 hours later, on the afternoon of Nov. 6, 2012, a Fredericton woman went out to collect mail from her roadside community mailbox on Killarney Road and came upon the body of Alicia Boone. She was naked, lifeless and alone. Boone's death was suspicious, police say, and it's one of 27 unsolved cold cases still under investigation by the RCMP in New Brunswick highlighted in the force's recent annual report. "All the evidence has been examined through the investigation, and there were no signs of foul play," Cpl. Chantal Farrah said in 2014. "She died, like we said, of exposure to the freezing temperatures." Const. Derek Black, a spokesperson for the RCMP, told The Daily Gleaner on Friday that because these cases are still open and ongoing, the RCMP won't comment on the techniques involved in solving or investigating cold cases. "Getting into details about our procedures and process is not something we do in the public," said Black. "We never have and we won't to protect investigations and individuals involved with the investigations." The 27 cases read like a dismal history of the province, each one poignant and sad. Sometimes, though, a case is solved. For example, investigations like the Kennedy Corrigan case sometimes get solved years later by the RCMP. (...) So why does the RCMP take such care to detail these cold cases on its website? The RCMP is adamant anyone with any information should come forward and contact the police. Forensic technology has come a long way for the RCMP, but it only helps solve the puzzle if the Mounties know where to look. "Obviously we want to do a good and thorough investigation on all our cases," Black said. "Sometimes we need to reach out to the public to ask for their assistance to provide anything that will help us with our investigation."Because of law like the privacy act there is only certain information that we can release and we can't jeopardize an investigation." Times & Transcript, A10

Du crack et de l'argent comptant saisis à Saint-Jean

Une opération policière qui s'est déroulée dimanche midi à Saint-Jean a mené à l'arrestation d'un individu âgé de 55 ans qui fait désormais face à des accusations de possession de crack en vue d'en faire le trafic et de recyclage des produits de la criminalité. L'Unité intégrée des crimes de rue, composée d'agents de la GRC, de la police régionale de Kennebecasis et du Service de police de Saint-Jean, a mené l'opération policière qui s'est déroulée aux abords de l'Hôtel Best Value Inn du Canada. Munis d'un mandat de perquisition, les policiers ont procédé à l'arrestation du suspect lorsque celui-ci s'apprêtait à quitter l'hôtel qui est situé sur la place Portland, à proximité du centre-ville de Saint-Jean. L'arrestation de l'individu a mené à la saisie relativement importante de 80,2 grammes de crack et d'une somme d'argent d'un peu moins de 3000$ en devises canadiennes. «La valeur de la drogue saisie par les policiers est estimée à 16 000$, une fois écoulée dans les rues de Saint-Jean», a indiqué Lori Magee, porte-parole du Service de police de Saint-Jean. La police a également indiqué que le suspect arrêté était incarcéré en attendant de comparaître en Cour provinciale à Saint-Jean. Acadie Nouvelle, 7; Telegraph-Journal

Health authorities seek safe inhalation site after overdoses
At least 43 overdoses in Surrey's Whalley area over the weekend are being attributed to crack cocaine being laced with the deadly opioid fentanyl. And as police and health care workers scramble to warn people of the unprecedented risks they face in using crack cocaine, those on the front lines think it is time to open up a safe inhalation site. At the Vancouver Area Network of Drug Users, spokesman Hugh Lampkin said they used to have a "consumption room" for both intravenous and crack cocaine users. But three years ago the facility was closed by Vancouver Coastal Health, with Insite now the only safe-injection facility in Vancouver's Downtown Eastside. "I'd like to see a sanctioned inhalation and consumption room where they could smoke or use a needle," Lampkin said Monday. Lampkin said having a safe, properly ventilated room to smoke crack would reduce the number of fatalities. "Staff would be in there monitoring people," he said. As for the risk on the street, Lampkin said any hard drug may be laced with fentanyl. "People have to be very, very careful right now," he said. Surrey RCMP Cpl. Scotty Schumann said police and health care providers have been warning Whalley's drug users that the crack cocaine sold on the street has high levels of fentanyl in it. "What we believe is happening is the crack cocaine is being cross-contaminated at the facility where they are packaging it up," Schumann said. "A minuscule amount is enough to cause an overdose." Despite the high number of overdoses, no one has died. Postmedia Network (Vancouver Sun, A8, The Province, C-FAX 1070)

Craven crime report: Calls for service down in 2016
A widespread animal cruelty case overshadowed what RCMP said was an otherwise more law-abiding Craven Country Jamboree. RCMP said they had fewer calls for assistance at the 2016 Craven Country Jamboree than a year ago. This year, there were 114 calls for service at the Craven site, which was down from 149 in 2015. CBC News (2016-07-18)

Summer program builds bridges between police, First Nations youth
As deadly encounters increase tension between police and visible minorities in the United States, some Edmonton officers hope a summer program will help First Nations teens see them as friends, not foes. At the Oskayak Police Academy, 25 teens scramble through obstacles courses, construct and decorate traditional drums and rattles, and tramp through the brush picking plants with medicinal properties. "The thing that surprised me is, (police are) human beings, too. They strap on the belt and they go out to work and they don't know exactly what's going to happen," said 14-year-old Theron Auigbelle. For three summers, organizers have brought teens and police together for two weeks of cultural and policing activities. A partnership between several organizations, Oskayak was created to mend relations by giving First Nations youth and police a glimpse into each other's lives. The teens earn three high school credits for completing the program. "A lot of our aboriginal community members, there's a stigma. A lot of bridges have been broken. There's no trust between our people and police," said Kari Thomason, a street outreach and street prostitution program coordinator with the Metis Child and Family Services Society. She's been involved with Oskayak from the get-go. Some children's first encounter with police may be when they arrest a family member, she said. After they get to know officers in the program, teens may go home and tell their friends and family the police aren't all that bad, she said. Police, meanwhile, benefit from getting to know the kids, hearing their stories, and learning that many want to live productive lives. Dispelling stereotypes would improve relationships between minorities and police, Auigbelle said. Postmedia Network (Edmonton Journal, A1, Edmonton Sun, Calgary Herald)

Sask. gamer's guide to Pokemon Go dos and don'ts
The continuing global roll out of Pokemon Go is taking the gaming world by storm. But as more and more potential Pokemon trainers download the app, concerns of public game play etiquette increasingly grows. (...) The Kindersley RCMP expressed their concerns for Pokemon trainers through a Facebook post Monday morning. The post read, "We love PokemonGo just as much as you and if you feel the need to run around playing it this summer, that's cool, just be smart about it." The officers stated, "Always be aware of your surroundings, this also includes looking both ways before crossing the street, respecting private property at all times and not playing the game while driving." CBC News

When people target police, all bets are off
An editorial states, "Police in Baton Rouge, La., held an emotional press conference Monday, just a day after an armed-to-the-teeth gunman killed three officers and wounded three others, one of whom remains

in hospital in critical condition after taking a shot to the head. As Col. Michael Edmonson of the Louisiana State Police, Sheriff Sid Gautreaux of the East Baton Rouge Parish and Chief Carl Dabadie of the Baton Rouge Police took their turns on the podium, they would then stand behind the next one at the microphone, eyes filling or blinking hard. They looked shattered, as indeed the Royal Canadian Mounted Police appeared two years ago, when a young man named Justin Bourque deliberately drew their members to a trailer park by walking down its main street, dressed in camouflage and openly carrying a rifle and a shotgun, never even pointing either at the civilians he passed. Unwilling pawns in an ambush they couldn't conceive, some of those civilians dutifully called 911 to report what they'd seen, just as police in Baton Rouge early Sunday morning began to receive calls about "a dude with a rifle," as Edmonson put it. The traps were duly set. Ditto Gavin Long, the 29-year-old who killed Montrell Jackson, with his big heart, and Brad Garafola, who died trying to get to the wounded Matthew Gerald (Long shot Garafola first, killing him, and then finished off Gerald with two more). Long wasn't after civilians, just cops, exactly as Bourque was. Their motivations may have been different and difficult to know, but they had that in common. (…) Police may expect to be occasionally shot at by criminals, particularly those they corner or catch in mid-crime; they don't expect it of ordinary citizens, and ordinary citizens don't expect or want it, either. No one should think otherwise, either in the United States or Canada. As then-PM Stephen Harper said at the regimental funeral for the three slain Mounties way back then, which is to say in 2014, "That is the understanding between us: Their service, and our support.'" Postmedia Network (Vancouver Sun, N5 StarPhoenix, Montreal Gazette, National Post, London Free Press, Calgary Herald, Windsor Star, Leader-Post, Ottawa Citizen)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Family of man who killed himself while in solitary wants answers

A coroner's inquest began Monday into the death of a man who committed suicide while in solitary confinement at Matsqui Institution. Christopher Robert Roy, 37, died on June 3, 2015, two days after he was found hanging from a ligature in his cell in the segregation unit of the Abbotsford prison. He had been in administrative segregation for two months. The inquest is expected to last five days. "It is expected that the jury will hear evidence indicating a direct correlation between Mr. Roy's suicide and his placement in segregation," Bibhas Vaze, lawyer for Roy's parents, Robert and Brenda Roy, said in a news release. Vaze said Roy's parents are seeking answers about whether there were concerns about Roy's mental health, what efforts were made to address any mental health concerns, and whether Roy was monitored in segregation. They also want to know if the Correctional Service of Canada is making any effort to end solitary confinement. "My son was not suicidal before he was placed into solitary confinement," Robert Roy said in a release. The Province, A10 (Vancouver Sun); CBC News (2016-07-18)

Delaying learning-disabled services are costly

An opinion piece states, “Saving money on public education is like saving money by using your credit card. You've still got plenty of cash for other things, and that minimum monthly payment is not really a problem. Until it is. (…)The cost of not providing adequate remedial support during an individual's public-school career far exceeds what it might have cost to provide those services. The Learning Disabilities Association of Vancouver reports that 35 per cent of students identified with a learning disability drop out of high school, twice the rate of non-disabled peers, and up to 70 per cent of inmates in Canadian prisons are learning disabled. A 2014 news article quotes a report from Correctional Services of Canada that estimated the cost in Canada of one year of incarceration for one person is $117,788, up 46 per cent from a decade ago.” Times Colonist, A10

Un meurtrier confiné en maison de transition

Le jeune homme condamné à cinq ans de pénitencier pour avoir causé la mort de son ami lors d'une beuverie qui a mal tourné au centre-ville de Jonquière en 2012 a récemment obtenu une semiliberté conditionnelle. Incarcéré depuis le 23 janvier 2015, Maxime Pelletier a pris le chemin d'une maison de transition le 6 juillet dernier après avoir reçu l'aval de la Commission des libérations conditionnelles du Canada. Celle-ci lui a octroyé une semi-liberté de quatre mois au cours de laquelle il devra éviter de consommer de l'alcool et des drogues en plus de se tenir loin des débits de boissons. Il pourra ensuite profiter d'une liberté conditionnelle complète par la suite. (…)Dans sa décision, la Commission des

libérations conditionnelles indique que Maxime Pelletier ne représente pas un risque pour la société et présente un potentiel de réinsertion élevé. Il a eu un comportement irréprochable depuis le début de son incarcération en janvier 2015. Journal de Québec, 2

Murder suspect 'no threat'
Parole board documents say a man accused of killing a Calgary mother and daughter had a 20-year criminal history but didn't pose a threat to society when he was granted full parole in 2010. Edward Delten Downey is facing two counts of first-degree murder in the deaths of Sara Baillie and her five-year-old daughter Taliyah Marsman. The 34-year-old waitress was found dead in her home on July 11 and an Amber Alert was issued for the little girl. Police found Taliyah's body late Thursday in a rural area just east of Calgary. Downey had not retained a lawyer when he was charged and is scheduled to appear in court Wednesday. None of the charges against him has been proven in court. Documents from the Parole Board of Canada granting Downey full parole in 2010 say the 46-yearold's criminal history began in 1990 with a series of convictions including possession of a credit card obtained by crime and possession of a restricted weapon. "It is evident that you have been involved in criminal activity over the years; however, it has been sporadic at times," said the parole board report dated May 2010. Canadian Press (Calgary Herald, A1, Edmonton Sun, Times Colonist, Calgary Sun, Edmonton Journal, Maclean's, National Post, Red Deer Advocate, Western Star, Prince Albert Daily Herald); Globe and Mail; Radio-Canada; CBC News

Il ne «se considère pas pédophile» malgré 26 ans de tourisme sexuel
Un octogénaire ayant fait du tourisme sexuel en République dominicaine pendant 26 ans ne croit toujours pas qu'il a une déviance, après plus de trois ans en prison. «Ce n'est pas une maladie que j'ai. C'est arrivé comme ça», a lancé d'emblée Joseph-Charles Côté, lors d'une audience des libérations conditionnelles. Condamné à sept ans de pénitencier en décembre 2014, le détenu de 85 ans a tenté en vain d'obtenir la permission de quitter le Centre fédéral de formation de Laval, hier. «Le risque de récidive est encore présent, autant pour les contacts sexuels sur des mineurs que la pornographie juvénile, ont statué les commissaires Michel Lafrenière et Richard Dupuis. Vu l'absence de changement et de progrès de votre part, une libération conditionnelle serait prématurée.» Journal de Montréal, 9 (Journal de Québec)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Sask. crime rate declined over decade, but many think it's rising
The long-term crime trend in Saskatchewan and the other provinces is downward — but public perception appears to be going the other way, an Angus Reid poll says. According to a recent survey by the pollster, 56 per cent of people surveyed in Saskatchewan say there has been an increase in crime in the province over the past five years or so. However, according to Statistics Canada, the evidence points the other way. The federal statistics agency produces a crime severity index report, which looks at numbers per capita but also factors in the severity of the crimes reported. StatsCan's most recent report on the index showed that from 2004 to 2014, there was a decline in all provinces, including Saskatchewan. However, Saskatchewan is the province with the highest crime severity index. CBC News (2016-07-18)

Black Lives Matter rally posters torn down in Peterborough
There's going to be a Black Lives Matter rally in Peterborough on Friday at 4 p.m. People will be invited to gather at Confederation Square to come and hear speakers such as Stephen Wright, the only black candidate to run for council in the last municipal election. You might not have seen much publicity, though. The organizers - Charmaine Magumbe and Niambi Leigh - say the posters downtown get ripped away by people as fast as they can post them. Why the vandalism? "Racism is real and alive - in Peterborough and everywhere," says Magumbe. Black Lives Matter is a grassroots movement that campaigns against violence toward black people. The movement has been around since 2013. Since then, participants have demonstrated against the deaths of several African-Americans in the U.S. by police action or while in custody of police. Magumbe, the chairwoman of the city's race relations

committee, got the local movement started here almost as soon as BLM began in the U.S. This will be the third local rally. Peterborough Examiner

James Forcillo Appeals Conviction in the Killing of Sammy Yatim
An opinion piece states, "Constable James Forcillo, the police officer who shot and killed Sammy Yatim on a TTC streetcar on July 27th, 2013 is now asking that his sentence be served under house-arrest instead of facing jail time. Constable Forcillo was convicted of attempted murder on January 25th, 2016. The fact that Forcillo was actually convicted, even of the lesser offence of attempted murder instead of second-degree murder, has surprised many. In the 23 year old history of the Special Investigations Unit (SIU), Forcillo is only the second cop in Toronto to be charged for murder. He is the first to ever be found guilty of even so much as a related charge. This exceptional event in the history of police self-investigations can be explained as a result of the public backlash against the police." Fightback

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Government's call for Manitoba commissioner on inquiry not a deal-breaker
Premier Brian Pallister says it's not an 'either or,' that a Manitoba commissioner be appointed to the inquiry into missing and murdered Indigenous women, but says it would be a "missed opportunity" if it didn't happen. The premier was responding to questions that the start to the MMIW inquiry was being delayed because of issues raised by Manitoba's Progressive Conservative government. The province is still in negotiations with the federal government over the terms of reference for the inquiry. Pallister and other Canadian premiers will meet the leaders of the five national Aboriginal organizations in Haines Junction, Yukon on July 20. Pallister says Manitoba has spent millions of dollars looking into issues such as the province's child welfare system's failure to protect Phoenix Sinclair and Brian Sinclair's 34 hour wait in a hospital emergency room. "Millions of dollars of money have been invested on behalf of taxpayers here in Manitoba to address finding solutions to these issues; curative solutions. That kind of healing has to happen nationally. Why wouldn't we want to benefit the country from our work?" Pallister said. Pallister told CBC News its imperative the MMIW inquiry doesn't "till the same fields again and again," and says he's been told the inquiry can't overlook work that is ongoing. "Indigenous people and non-Indigenous people are telling me and they are telling our members of the Legislature; our cabinet ministers, don't use this inquiry as a catch-all- as an excuse to delay other initiatives and other actions that have to be taken. Make sure you walk and chew gum at the same time here," Pallister said. Pallister says Manitoba can take a lead role both at the inquiry and when looking for solutions to problems facing Indigenous people. CBC News

Drag the Red sets out on new boat to search fast-moving waters
Behind weeds growing from the riverbank and in the heat of mid-July, Kyle Kematch unwinds rope from a four foot-wide bar to attach to Drag the Red's new boat. He is one of few community members that volunteer their time to drag the Red River for traces of missing and murdered people. "It eases my mind to know I'm doing the best to find my sister. She's been missing for six years now," he said. "In my eyes, everybody deserves to go home." The return home Kematch describes is synonymous with closure for families — particularly those with loved ones among 1,017 Indigenous women killed between 1980 and 2012 and 169 more listed as missing, the earliest case dating back to 1952. The new boat, which an Indigenous elder blessed in a smudging ceremony on Monday, brings about renewed hope that families will get that closure, Kematch said. "It's hard knowing those answers might be at the bottom of the river but if they're there, somebody has to go and try to find them," he said. CBC News (2016-07-18)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Marijuana task force faces 'fascinating journey' in making regulation decisions

Mark Ware was working with patients suffering from a painful blood disease in the late 1990s when he noticed that many of them were self-medicating. The sickle cell anemia research clinic where he was working was in Jamaica, and the pain reliever of choice for a growing number of his patients was cannabis. The episode put the Britishborn, Jamaica-raised doctor on the path that has made him a world-renowned expert on the use of cannabis in pain management. Now based at McGill University in Montreal, Dr. Ware will turn his attention in coming months to the use of marijuana for recreational purposes. As a key member of a new task force, he will help the federal government to create a legal regime for all adult pot users. "The next six months will be a fascinating journey in understanding a different aspect of cannabis regulation than the medical model," he said recently in his first media interview since being named vice-chair of the task force. The government called on former Liberal cabinet minister Anne McLellan last month to lead a nine-member task force on marijuana legalization and regulation. She was hired because of her political knowhow and the expertise she gained as a minister of health, justice and public safety in the 1990s and 2000s. The panel will provide its findings to the government and the public by November, with new legislation to come in the spring of 2017. Dr. Ware, who was brought in as one of Canada's foremost experts on the science behind marijuana, said he does not believe that cannabis is a "panacea" as a medical drug. He also said there should be strict controls on the quality and potency of recreational marijuana, especially as Canada starts research on the long-term impact of legalization. "Under a regulated, nonmedical model, the opportunity stands to learn in a much more informed way what is the true picture of cannabis use and its impact on health," Dr. Ware said. Globe and Mail, A4

Osoyoos debates banning all marijuana operations

Osoyoos boasts of having 'Canada's warmest welcome,' but not when it comes to marijuana retail shops. Instead those may continue getting a cold reception as the town considers passing a bylaw that would ban marijuana operations. A the last council meeting, mayor and council were split on the proposal. But in a 3-2 vote, they approved the initial readings of the bylaw. "If this bylaw gets passed, I don't think it is incredibly harmful, I just don't personally think it is necessary," said councillor Mike Campol, who voted against. "We have the right to refuse business licenses and the RCMP are, and have been, doing a great job with dealing with what we've been faced now with dispensaries trying to open here." The town said there's been growing business interests from marijuana dispensary owners. So it sought legal counsel, which recommended implementing a new zoning bylaw amendment. The town said this would be a 'short-term, interim measure' as officials wait for the federal government to introduce new regulations that would impact marijuana dispensaries. "Just because any zoning bylaw can be changed any time, it is just my feeling that we're discouraging something that we don't completely understand," Campol said. On Monday, people will be able to provide input at a public hearing before the issue goes for a third hearing. Global News (2016-07-18)

PUBLIC SERVICE / FONCTION PUBLIQUE

80 000 fonctionnaires touchés

Les témoignages se multipliaient et les différents syndicats de la fonction publique sonnaient l'alarme depuis plusieurs semaines. Lundi, Travaux publics et Services gouvernementaux Canada a confirmé l'ampleur des problèmes liés à l'implantation du système de paie Phénix. Au total, ce sont plus de 80000 fonctionnaires qui ont été touchés, d'une manière ou d'une autre, a confirmé la sous-ministre, Marie Lemay. «Je suis profondément inquiète de cette situation», affirmait Mme Lemay d'entrée de jeu lors d'une conférence de presse visant à faire le point sur les ratés de Phénix. «Cette situation est inacceptable et nous allons travailler sans relâche pour résoudre cette situation.» (...)Le vice-président exécutif régional de l'Alliance de la fonction publique du Canada, Larry Rousseau, se dit satisfait de voir le gouvernement admettre l'ampleur des problèmes liés à l'implantation de Phénix. M. Rousseau est toutefois sceptique quant à la capacité de Travaux publics et Services gouvernementaux Canada de rembourser rapidement tous les employés qui n'ont pas été payés à la hauteur de leur travail, malgré l'annonce de l'embauche d'employés supplémentaires à Miramichi et Gatineau pour résoudre la crise. «D'après moi, ce sera un travail de longue haleine», dit-il. La Presse Canadienne (Le Droit, 3); Postmedia Network (Ottawa Citizen, Times and Transcripts) La Tribune; Globe and Mail

StatsCan says government's IT agency providing 'slower, lower quality services'
Setbacks and shortcomings at the federal government's tech support agency could delay Statistics Canada's release of "mission critical" information required by the Bank of Canada, Department of Finance and commercial banks, according to a report. The document, submitted to Canada's chief statistician Wayne Smith, is one among more than a dozen reports, drafted at Smith's request from all of his directors general. Smith asked for the reports in an effort to fully understand the impact of Shared Services Canada (SSC) on his department. The memos, obtained by CBC News under access to information laws, detail how yet another federal ministry is embroiled in a dispute with SSC over services standards, red tape, billing and the capacity of IT infrastructure to keep up with departmental demands. CBC News

Salaries won't solve public servant crisis
If you don't already work for the public service, what would it take to get you to jump ship from your current gig and head for the sunny shores of government? The Professional Institute of the Public service of Canada is betting on money, asking for an ambitious 12 per cent raise over three years for the professional government employees it represents. The reason, apparently, is that salaries of federal government professionals are outstripped by the private sector. Crank up that pay cheque, and the employees will come. This is important, considering more than 25,000 of these folks will be looking to retire in the next five years. To modify the union's pitch slightly: Raise the salaries and the millennials will come. The concern is that the positions, at lower salaries, will still doubtless be filled, but the best and brightest will stay away unless compensated. There might be truth to that. But for a generation struggling with labour instability, the public service is already a relatively attractive employer. There are solid benefits, decent wages and long-term employment stability. Is money a factor? No doubt, but there are many other issues at play, including workplace culture; the public service has alarmingly high rates of depression and anxiety. Who wants to walk into that job? A salary hike is unlikely to compensate for these troubling issues. Postmedia Network (London Free Press, A5, Kingston Whig-Standard)

OTHER / AUTRE

The uncomfortable lesson of Nice and terrorism
Like magicians, spies are adept at creating illusions. Arguably, their biggest, most impressive trick, is convincing people they exist primarily to protect us from the infinitesimal prospect that we may, at some point in our lives, fall victim to terror. (Truth is, as whistleblower Edward Snowden and WikiLeaks have revealed, their most important job is, in fact, to spy on you and each other.) Of course, despite the tragic, unsettling times, the chances of you, me or our families being killed or maimed by a terrorist are still so remote that we are more likely to succumb to a rare brain infection than die at the murderous hands of a deranged zealot - whatever their equally deranged cause or motivation. But the fear industry, which undeniably includes the so-called "intelligence community" and their allies, enthusiastically gives sustenance to these irrational fears, rather than dampen them because it's in their institutional interest to do so. No matter. For interim Conservative leader, Rona Ambrose, the response to the mayhem in Nice was to rush onto Twitter and urge Canadians to "get serious" about terrorism. By employing this tired, meaningless bromide, Ambrose has confirmed yet again that she's more interested in cheap sloganeering than, you know, thinking. (…) One scribe suggested that the official response to Nice required "real and determined leadership." I have no idea what that tripe means, but it's intended, I suspect, to sound like we're doing something. Another high-profile pundit insisted, in effect, that Canada and the world should belatedly declare perpetual war. I don't know about you, but it certainly appears to me that the world is already in a state of perpetual war and has been for some time. Have the attacks miraculously stopped? Toronto Star, A11

Why France, over and over
An opinion piece states "On Bastille Day 2015, my family and I walked over to the banks of the Saône River in Lyon to watch the fireworks with thousands of the city's residents. I only briefly noticed the metal barricades blocking the street set up next to the french fry stands. France was still recovering from the Charlie Hebdo and Hyper Cacher massacres. The Lyon region had just been the site of a decapitation and a truck-based attack on a gas factory. In previous years, there had been attacks in cities such as Toulouse, Tours, Dijon and Nantes. But most were aimed at Jews or members of the police or military.

Most people in France still felt safe from direct violence. The events in Nice are a horrific reminder that, in reality, everyone in France is a target. While it is not the only country in the region to have experienced terrorist acts in recent years, France has suffered more frequently than neighbours like Britain, (...) The answer lies in three factors: the country's foreign and domestic policies, history and demography, and approach to citizenship and immigrant integration. The individual factors are not unique to France. It is the combination that makes France a focal point for violence." National Post

INTERNATIONAL

Attentat de Nice - Le profil "radical" du tueur se précise

Le tueur de Nice a marqué " un intérêt certain " pour le djihadisme dans les semaines précédant son carnage méticuleusement préparé, selon l'enquête sur l'attentat du 14 juillet, autour duquel le climat politique s'envenime en France. Quatre jours après l'attaque, la plus meurtrière en Europe depuis les attentats du 13 novembre à Paris et du 22 mars à Bruxelles, l'opposition de droite a réclamé lundi soir une commission d'enquête parlementaire sur la tragédie de la capitale de la Côte d'Azur. Dans la journée, le premier ministre socialiste, Manuel Valls, a été visé par quelques huées à Nice. L'exécutif se prépare à un débat houleux mardi et mercredi à l'Assemblée nationale puis au Sénat sur la prolongation de l'état d'urgence en vigueur depuis huit mois dans le pays. Si le tueur de Nice a été adoubé par le groupe État islamique (EI), qui a revendiqué l'attaque, " aucun élément de l'enquête ne démontre à ce stade une allégeance de Mohamed Lahouaiej Bouhlel à l'organisation terroriste ", a déclaré lundi le procureur de Paris, François Molins. Le magistrat, qui chapeaute l'enquête, a souligné en revanche que " l'exploitation de son ordinateur illustre un intérêt certain et récent pour la mouvance djihadiste radicale ". Ce Tunisien de 31 ans résidant à Nice depuis une dizaine d'années a ainsi multiplié entre le 1er et le 13 juillet les recherches de chants religieux utilisés comme outils de propagande par le groupe État islamique. MINISTER / MINISTRE

Canada's electronic spy agency won't reveal if shared info leads to torture overseas
Canada's electronic spy agency won't say how often it shares information that could lead to someone being tortured in an overseas prison. The Communications Security Establishment – which monitors threats from foreign terrorists and spies – has censored documents that spell out the figures, even though the RCMP and Canadian Security Intelligence Service have revealed such numbers in the past. The reticence prompted Amnesty International Canada to say "much greater transparency" is needed from the Ottawa-based CSE. "At stake is Canada's compliance with crucial international human rights obligations to prevent torture and ill-treatment," said Alex Neve, Amnesty's Canadian secretary general. The secretive CSE has been thrust into the national spotlight in recent years due to leaks by Edward Snowden, the former spy contractor who worked for the National Security Agency, CSE's American counterpart. It is also among a handful of Canadian agencies, including the RCMP, CSIS, the Canada Border Services Agency and National Defence, bound by a government instruction that allows it to share information with foreign partners – even when it means someone could be abused as a result of that exchange. **Public Safety Minister Ralph Goodale** said earlier this year the Liberals will review the

"troubling set of issues" raised by the foreign-sharing policy, enacted by the previous Conservative government. Canadian Press (Global News, News Review, Times Colonist, CTV News)

Protesters have Goodale listening
Controversy followed the federal **public safety minister** - right into the University of Regina. As **Ralph Goodale** rose to announce a bundle of research grants for U of R researchers, a small group of protesters from the Colonialism No More camp in downtown Regina appeared and unfurled a banner restating their opposition to the government's continuing use of detention for some people arriving in Canada. People in two Ontario federal detention centres recently began refusing food because they want to meet with **Goodale** about their imprisonment and conditions. Tuesday's protesters were polite, waiting until other speakers had finished, and presenting themselves only when **Goodale** began talking to reporters - and even then at low volume. Within minutes, **Goodale** was talking to them and agreeing to meet, a plan confirmed by his office later Tuesday. Coincidentally, his office had sent out a statement earlier Tuesday in which **Goodale** said only 400 persons - or about 0.01 per cent of all arrivals - are detained, as a last response, when there are problems identifying them with certainty, or because they are deemed a flight risk or to ***"threaten the safety of Canadians."*** He said they are given ***"immediate and regular legal review"*** by the independent Immigration and Refugee Board and have access to health, spiritual and legal help, plus visits by the UN High Commission for Refugees and the Red Cross. And though more money is needed to improve their lot even more, he hopes "to make specific announcements in the future." Leader-Post, A2

Winter traffic safety among U of R studies to get federal funding
Before Babrak Mehran came to Regina from balmy Ontario, he didn't know what a block heater was. But the assistant professor of environmental engineering at the U of R has thrown himself so thoroughly into his new home that he's studying traffic safety in winter and how to improve it. Insight into drivers' behaviour, speed limits that change with the weather via networked signs, amber lights that stay on longer (or shorter) because of the weather, and lane markings that are easier to see. They're all things that could emerge from his work, with possible testing on the South Regina Bypass, he said after a news conference announcing federal grants totalling $1.57 million to 16 U of R research projects at the University of Regina. These projects are in fields as varied as biology, physics, math and engineering ***"and will undoubtedly produce the next generation of smart, new ideas that will make the economy stronger and more successful,"*** said the man who brought the federal money, cabinet **minister Ralph Goodale**. Emphasizing the difference between fundamental science and ***"applied science",*** which he described as typically guided more by private interests than by a researcher's curiosity, he recalled what happened just over a halfcentury ago. Leader-Post, A2

Liberals promise plan to bolster emergency preparedness as extreme weather events surge
The Trudeau government says it will reach out to provincial, municipal and territorial governments and indigenous communities to improve disaster preparedness planning amid concerns that extreme weather events will become more frequent and severe in the coming years because of climate change. **Scott Bardsley**, **spokesperson to Public Safety Minister Ralph Goodale** (Regina-Wascana, Sask.), said department officials will work collaboratively with partners to help better ***"predict, prepare for, and respond to"*** weather-related emergencies and natural disasters. ***"Our government is determined to pay greater attention to emergency planning, preparedness and response, and that work is underway,"*** he said in an emailed message. Mr. Bardsley also noted that disaster mitigation and aid plans were major discussion points during the May 6 meeting of federal, provincial and territorial ministers responsible for emergency management. Hill Times

Reports could hide true police activity
"Clear gaps" in how the federal government reports invasive surveillance practices may hide the true scope of police activities, according to documents prepared for Canada's privacy watchdog. Although the number of authorized wiretaps has "plummeted" since 2002, a January briefing for Privacy Commissioner Daniel Therrien suggests those numbers may mask police surveillance practices. "It would be erroneous to infer from the drop in overall warrants issued that surveillance is affecting fewer individuals," reads the document, obtained under access to information law. "While federal authorities issued just over a hundred surveillance warrants last year (2014), they issued 792 notifications of surveillance to individuals

previously targeted. From this, one can conclude more and more individuals are being named as targets in a warrant application. "With a single warrant from the Federal Court (police) may list dozens of individuals for surveillance targeting." Public Safety is required to issue a report each year about the number of warrants sought to put individuals under surveillance - "wiretap" warrants that allow police extraordinary powers to keep tabs on individuals. (...) Canada has also seen confirmed uses of "Stingray" technology, a device, called an IMSI catcher, that simulates a cellphone tower to force any mobile device in the area to connect to it. A recent Vice News investigation reported the RCMP has used IMSI catchers in public places for more than a decade, citing court documents. The Star requested an interview with both Therrien and **Public Safety Minister Ralph Goodale** for this article. Neither was available Wednesday or Thursday. But in an emailed response to the Star, a **spokesman for Goodale** said the minister is open to changing the system. Guardian, A6 (Whitehorse Daily Star)

Howard Sapers urges legal limits on prison segregation

Canada's prison watchdog is calling for tighter legal restrictions and greater oversight over solitary confinement as two more cases of suicide in segregation hit the spotlight. Howard Sapers, Canada's correctional investigator, said he is "very concerned" that the circumstances around these deaths in custody had similar elements as those flagged years ago in the high-profile inquest into the death of teen prisoner Ashley Smith. "Simply leaving it to the Correctional Service of Canada (CSC) within the existing legal and policy framework is not producing an adequate response," he told CBC News. An inquest into the suicide death of 37-year-old Christopher Roy at British Columbia's Matsqui Institution began Monday — just weeks after 30-year-old Terry Baker took her own life at Grand Valley Institution for Women in Kitchener, Ont. That's the same facility where Smith died in a segregated prison cell in 2007. A coroner's jury ruled that her self-inflicted choking death was a homicide and made 104 recommendations to prevent similar deaths in future. (...) A spokesman for **Public Safety Minister Ralph Goodale**, who oversees Canada's prison system, said the government is making progress but promises to do more. Scott Bardsley said a framework developed by CSC in 2015 that strengthens rules and decision-making around placement and review has led to a "significant decrease" in the number of inmates in segregation. There was a 34 per cent decrease in the number of people in segregation in federal prisons last year. In March, there were 691 inmates in administrative segregation, compared to 454 in December, Bardsley said. There was also a 52 per cent decrease in the number of inmates in administrative segregation for 60 days or less. "***The government recognizes that the challenges raised by these issues are complex and require careful consideration,"*** Bardsley said. ***"We can and must do better. We will continue to strengthen the review process to ensure that alternatives to administrative segregation are considered for all offenders.***" CBC News

Time to fix a broken system

A hunger strike is a choice of last resort, something only the desperate attempt to draw attention to their plight. So we should listen to the message coming from 50 immigration detainees being held at the Toronto East Detention Centre in Scarborough and the Central East Correctional Centre in Lindsay, Ont. They have been on a hunger strike for more than a week to press their demand that they no longer be held indefinitely in facilities intended for criminals. Their health may already be threatened. According to scientific studies, by now they will have lost muscle mass and fat; important electrolytes, such as potassium, will have fallen to dangerous levels. But according to an advocacy group called the End Immigration Detention Network, they are intent on starving themselves until **Public Safety Minister Ralph Goodale** meets their demands. **Goodale** needs to resolve this situation urgently. The detainees are not alone in saying they should not be held indefinitely in maximum security prisons, in conditions that include lengthy lockdowns and solitary confinement. They are being supported by a host of organizations, including the United Nations, the Ontario Human Rights Commission, Amnesty International, the Canadian Council for Refugees and a group of 140 health-care professionals. As the University of Toronto's International Human Rights Program has said, housing immigration detainees in facilities intended for criminals violates international human rights law and constitutes "arbitrary detention and cruel, inhuman and degrading treatment." Still, it is all too common in Canada. Indeed, in 2013-14 the Canada Border Services Agency (CBSA) detained 10,088 migrants, with a third being held in provincial jails, even if they posed no danger to society. They may simply be failed refugee claimants, people without documents or those who have had their resident status revoked. Toronto Star, A10 (Our Windsor)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Busy agenda for Notley at premiers' meeting in Yukon
Premier Rachel Notley is scheduled to be in Whitehorse, Yukon, on Wednesday for the annual Council of the Federation meeting. Emma Graney looks at five items on the agenda (…) With memories of the Fort Mc-Murray wildfire still fresh, Notley added natural disaster preparedness to the meeting's agenda. Floods and fires affect all provinces, she said, and come with huge cost implications for all Canadians. Notley wants premiers to lobby the federal government for changes to the disaster relief program. Postmedia (Calgary Herald, A5; Edmonton Journal, Edmonton Sun); Canadian Press (St. John's Telegram); Radio-Canada

Atikamekw chief disillusioned by federal appeal
As the 2015 federal election campaign reached its climax in October, Christian Awashish was one of the few Quebec aboriginal chiefs to endorse a political party. The chief of Opitciwan's Atikamekw nation backed Justin Trudeau's Liberals because he believed they would fundamentally change the relationship between Canada and its indigenous people. Awashish says he now regrets that decision. Last month, the federal government appealed a tribunal ruling that would have awarded millions to the Atikamekw in Opitciwan - a First Nations reserve on the shores of the Gouin Reservoir (…) The legal decision could have granted the impoverished First Nation of 2,000 residents up to $150 million in compensation for flooding, contaminated drinking water and other damage caused by the creation of La Loutre dam in 1918 (…) The Liberals were swept into power in 2015 on a promise to help lift First Nations out of poverty, address historical injustices and speed up land claims negotiations. In their short time in government, they've committed to billions in new spending on education, housing and infrastructure on reserves. So when Judge Johanne Mainville of the Specific Claims Tribunal ruled on May 20 that the federal government failed in its duties to protect the Atikamekw from flooding and didn't properly compensate them for losing their homes as well as hunting and trapping revenue, Awashish was hopeful the government would "do the honourable thing." Postmedia (Montreal Gazette, A2; Kingston Whig-Standard, London Free Press, Vancouver Sun, Edmonton Journal)

Many Fort McMurray businesses struggle with serious lack of staff
Serving a beer within five minutes can be quite an accomplishment for some Fort Mc-Murray bars these days. It certainly was during the first few weeks of June at the East Village Pub. As the first restaurant to open following the wildfire, crowds usually seen on St. Patrick's Day became a daily occurrence. Yet, five kitchen and serving staff announced they were not returning. Others said they needed time to themselves before they could return to work. "We were the only place for people to come and the crowds reflected that," said Mike Lambert, the Eagle Ridge bar's manager (…)The Canadian Red Cross is offering financial relief to small businesses of up to $1,000, but Tatum said that only goes so far. Few employers, including Tatum, can afford the incentives of the halcyon boom days such as covering the first month's rent or travel expenses. Others have learned their commercial insurance policy does not include interruption coverage, which covers lost revenue during a disaster. Bryce Kumka, president of the Fort McMurray Chamber of Commerce, worries how a lagging economy will hit the staff, especially ones at businesses already struggling. Edmonton Journal, A2 (Edmonton Sun)

Tree Canada commits to Fort McMurray effort
After visiting the scorched areas of the Wood Buffalo region, Tree Canada is now committed to helping Fort McMurray rejuvenate its urban foliage. Following a helicopter tour of the area July 14, Tree Canada president Michael Rosen met with city officials, including Wood Buffalo Mayor Melissa Blake and urban forestry planner Stephen Fudge, to discuss how to go about replanting the 10,000 urban trees that the city lost during the wildfire. "Fire is a natural part of the boreal forest, so it regenerates naturally quite well," said Rosen, explaining why they won't be replanting trees in rural areas. "So we're looking more at people's residences, like the 2,000-plus homes that actually burnt. We're trying to give them that sense of normalcy when they finally come back and build their new homes." Postmedia (Edmonton Journal, A11; StarPhoenix)

'Last hurrah' of tsunami cash helps scour province's coast
A co-ordinated marine-debris cleanup described as the largest in Canadian history is underway all along B.C.'s west coast, from the remote wave-tossed beaches of Cape Scott and Haida Gwaii to the tourist-heavy Pacific Rim National Park Reserve. It is largely funded by the last of a $1-million package provided by the Japanese government in 2012 for tsunami debris cleanup in B.C. "This is the last hurrah," confirmed Karen Wristen, executivedirector of Living Oceans Society, the conservation group co-ordinating the effort on the western coast of Vancouver Island. "It will be the largest marine debris cleanup operation ever undertaken in Canada." Vancouver Sun, A1/FRONT

City to hire expert on climate change to help with future planning
With extreme weather patterns affecting both day-to-day operations and planning for the city, Calgary officials are looking to hire a fulltime climate change expert to better adapt to changing conditions. A job posting by the City of Calgary's water resources department says the climate change engineer will assess potential climate change risks for future infrastructure projects, as well as analyze any potential impact of climate change. Frank Frigo, senior planning engineer with water resources, said there's growing awareness about how climate change can affect city operations and it makes sense to have expertise when making decisions on new projects and ongoing operations. Calgary Herald, A6

Flood damage shifts SGI facility in Estevan, Sask., to temporary location
The SGI facility in Estevan, Sask. is moving to a temporary location after heavy rains and flash flooding damaged its building. The southeastern city of about 11,000 received 130 millimetres of rain on July 10. And while repairs are underway, claims, licence issuing, and driver examiner services are moving to 1210 7th St. The staff had previously been working out of the Estevan Claims Centre garage and at partner insurance broker offices. CBC News (2016-07-19)

Gloomy weather a mixed blessing for B.C.
Not everyone's feeling blue about B.C.'s recent grey skies. By Monday, 32.8 millimetres of rain had fallen at Vancouver airport this month, compared to last year's 1.4 mm, says Matt MacDonald, a meteorologist with Environment Canada. Vancouver had 11 days of rain by July 19, nearly twice the normal average of six days. Temperatures were about a degree cooler than normal, with an average high around 21.3 C. But this miserable month has so far proven a mixed blessing for the province. The rain has caused a downturn in wildfire activity after an early and active start to the season, particularly in northeastern B.C., said Claire Allen, an information officer with the B.C. Wildfire Service. "That's definitely slowed down with the June rains and with that kind of continuing into the July rains," said Allen, adding the fire danger rating is "significantly lower" than last season. This year, 545 wildfires burned 93,612 hectares by July 18, compared with the 1,141 wildfires that burned 293,664 hectares during the same period last year. Vancouver Province, A8

Baseball sized hail, tornado warning issued for south central Sask.
A tornado warning is in effect for the rural municipalities of Arm River and Willner, including Davidson and Girvin, Sask. According to Environment Canada, a sighting of a tornado was reported near Davidson at about 8:20 p.m. CST. A severe thunderstorm is moving east to southeast at 50 km/h. The weather agency warns that extreme hail the size of baseballs or larger are also possible along with damaging winds and intense rainfall. CBC News

Le Nouveau-Brunswick épargné par les tornades... mais pas par les rumeurs!
Les tornades qui ont durement frappé le Nord-est américain lundi soir n'ont finalement pas atteint le Nouveau-Brunswick. Environnement Canada a confirmé tôt mardi que la région de Grand-Sault n'a pas été balayée par une tornade, contrairement à des propos rapportés la veille par certains médias et réseaux sociaux. «Il y a eu des orages violents, une tornade rapportée du côté du Maine, mais pas de preuve et de trace de tornade au Nouveau-Brunswick sur nos radars», a indiqué Bob Robichaud, météorologue à Environnement Canada. «Environnement Canada est demeuré en contact lundi soir avec les agents américains de la National Weather Service, au Maine. La cellule orageuse qui se déplaçait vers l'est a été soigneusement observée, elle perdait au fur et à mesure sa capacité de produire une tornade en s'approchant du Nouveau-Brunswick», a-t-il expliqué. L'Acadie Nouvelle, 2

West Nile risk rises in province
As the mercury rises, so does the West Nile risk. With temperatures heating up, there has been an increase of Culex tarsalis mosquitoes - the species of skeeters that carry the West Nile virus (WNV). One pool of infected WNV mosquitoes has been found in southern Saskatchewan, where the risk is moderate, said Phil Curry, an entomologist and the provincial WNV co-ordinator with the Ministry of Health. "Ironically, that heavy rain event (earlier in the month) temporarily reduced Culex tarsalis activity," Curry said. "They're not flying on cold nights, either. Even in areas where they've experienced heavy flooding, that will actually reduce the habitat. It's really disruptive and everything really slows down. Leader-Post, A4

West Hants rafters lost, then found
Two missing female rafters in West Hants have been located near Scotch Village. RCMP confirmed that at 2:30 p.m. Tuesday that several local fire departments responded to reports of two missing female rafters, ages 29 and six years old. Emergency response crews, including a water rescue team equipped with a zodiac, EHS, RCMP were seen on the Kennetcook Bridge on Hwy 215 and then heading down Block Wharf Road in Summerville toward the Avon River. Cpl. Jennifer Clarke said a search and rescue Cormorant helicopter had also assisted in the search. Clarke said the two rafters from the Gore area were also wearing lifejackets. They were reported missing over an hour and were part of a larger group. Chronicle-Herald, A5

Search underway for missing boater on Lac La Martre
A search and rescue operation is underway near Whati, N.W.T., after a male boater was reported overdue. A spokesperson with the Department of Defence says a boat was found on the shore of Lac La Martre with no one inside it. A Twin Otter plane has been sent in from Yellowknife to help with the aerial search of the area. CBC News

Search to resume this morning for man missing in Lake Saint-Louis
Montreal firefighters and the Canadian Coast Guard will resume their search this morning for a 40-year-old man who went missing in the waters of Lake Saint-Louis near Beaconsfield Tuesday night. Fire department spokesman Bruno Ruscio said the man fell from the sailboat he was captaining around 8:30 p.m. while reaching for something in the water. "It was an accident... He wasn't wearing a life jacket. We searched all night and did not find him," Ruscio said. The man was accompanied by a friend with no experience steering the vessel. Ruscio said it's unclear why they were out on the water at night. CBC News

Search underway for Ulukhaktok father and daughter overdue from ATV trip
A search and rescue is underway for a father and his daughter from Ulukhaktok, N.W.T. Billy Joss and his young daughter were reported overdue after they failed to return to the community Sunday evening. The pair were last seen about 150 kilometres away from the hamlet. The pair were traveling by ATV. Dozens of local searchers are now out looking in known areas where Joss would typically be camping or hunting. "In addition to that there's actually a local pilot in Ulu who's conducting an initial flight around that area as well to help them out," said RCMP Const. Rob Frizzell. Joss is known to be an experienced hunter who frequently spends time on the land with his children, Frizzell said. According to Frizzell, there is now talk of bringing in Civil Air Search and Rescue Association volunteers from Inuvik to do a more extensive air search. It's currently 2 C in Ulukhaktok and foggy, with a chance of rain or flurries overnight. CBC News (2016-07-19)

The SQ's tips for safe outdoor adventuring
Thousands take advantage of Quebec's great outdoors every year, and provincial police are hoping to reduce the number who get into serious trouble while they do. The Sûreté du Québec issued comprehensive guidelines on Tuesday that are designed to help solo adventurers adequately prepare for their time in the province's more isolated areas. SQ search and rescue teams were called to more than 1,600 incidents last year, of which 200 required the deployment of teams to the field, said spokeswoman Sgt. Audrey-Anne Bilodeau. The cost of such operations are not cheap, but Bilodeau added "there's no cost that's as important as someone's life." CBC News

BlackBerry makes big sale for D.C. security
BlackBerry says it has received a multimillion-dollar order for secure software that would used in the U.S. Capitol complex in times of crisis. The order was awarded by the U.S. Senate Sergeant at Arms Office in Washington, D.C. BlackBerry says its AtHoc system will be fully implemented for the Capitol complex over the coming months. It didn't say how many millions of dollars the Senate contract will be worth over five years. The system will provide secure notification and communication for up to 50,000 people at the complex. CEO John Chen has shifted BlackBerry's focus more to software sales than its handsets, which have lost most of their market share. BlackBerry also says its AtHoc division will extend the capability of the U.S. Coast Guard's warning system to allow staffmembers in the National Capitol Region to receive and respond to emergency alerts through their computers. Delays in refugee arrivals likely in wake of failed coup d'état
Delays in the resettlement of Syrian refugees from Turkey to Canada are likely to grow even longer after a failed coup attempted there. Securing exit permits for Syrians in Turkey has been a difficult process already, holding up the Liberal government's plans last fall to resettle thousands of people from there as part of their landmark program to bring 25,000 Syrians to Canada in a matter of months. Now, political instability in the country in the wake of the military's failed efforts to seize power July 15 is expected to delay things more. "We are continuing to work with the government of Turkey to obtain exit permits as quickly as possible and are continuing to monitor the situation," said Sonia Lesage, a spokesperson for the Immigration Department. "However, given recent events, we do expect delays." There are an estimated 549 Syrian refugees in Turkey who have been approved to come to Canada but haven't been cleared to travel, and a further 3,815 applications from that country are in progress. Among them are several Yazidi families, a Kurdish minority group whose plight is the subject this week of hearings at the House of Commons immigration committee. Canadian Press (Hamilton Spectator, A11, Telegram, Chronicle Herald, Ottawa Sun); Presse Canadienne (Le Droit, Le Quotidien)

Two Cuban defectors likely in U.S.: Lawyer thinks softball players crossed border
Cuban athletes who defect while at sporting events in Canada, such as the two softball players who disappeared from a tournament in Surrey over the weekend, almost always make a fast dash for the U.S. border, experts say. The whereabouts of the two softball players who disappeared Sunday are unknown, but "it would make sense for them to go to the U.S.," said Peter Edelmann, a Vancouver immigration lawyer who specializes in refugee law. This is because it is much easier for Cubans to obtain a green card in the U.S. than permanent residence in Canada. Jaime Ruiz, a Los Angeles-based spokesman with U.S. Customs and Border Protection, said he could not comment on specific cases of individuals seeking admission to the U.S. due to privacy laws. Generally speaking, if a Cuban national arrives at a U.S. port of entry and expresses fear of returning to Cuba, border patrol officers will check whether the person has a criminal or immigration history in the U.S., Ruiz said. If not, they are given a temporary residence permit that allows them to stay in the U.S. for one year. After that, they typically apply for permanent residence under the Cuban Adjustment Act of 1966. Vancouver Sun, A6 (The Province); CBC News

Texas man apologetic after failing to declare gun at border
A 69-year-old man from Texas was ordered to pay a $1,500 fine for failing to declare a gun at the St. Stephen border. Marwynne Garfield Khun from Webster, Texas, pleaded guilty to the charge when he appeared in provincial court in Saint John on Tuesday. He was charged under Section 160 of the Customs Act. Kuhn and his wife were stopped by customs officers at the Ferry Point border crossing between Maine and St. Stephen on July 15. They were travelling from Texas to New Brunswick. Federal

prosecutor Peter Thorn told the court the couple was greeted by the officers and asked if they had any weapons in their possession. Kuhn replied that he didn't have any weapons, the court heard. The officer noticed a "flushing" on Kuhn's wife's face so they asked the question again and received the same answer, the court heard. Kuhn's vehicle was referred for a secondary inspection. Upon investigation, officers found an empty gun holster in a storage compartment. They also found a .38-caliber pistol, in another holster, which is a prohibited weapon in Canada. Kuhn was interviewed by officers at the border and he admitted that he owned the pistol, but he had said he was confident that he didn't have any weapons. He said he had owned a .25-caliber pistol as well, but he had left the firearm at a gun shop in Maine, the court heard. Telegraph-Journal, B3

'Barbaric cultural practices' tip line dead, but other snitch lines have continued
The government is fielding hundreds of tips every month from Canadians standing on guard against immigration fraud. Most go nowhere. A small team in a secretive government office in the nation's capital stands ready, 24/7, to hear from Canadians who want to squeal on their neighbours. Working in 12-hour shifts, between two and four Canada Border Service Agency employees are assigned every day to monitor the agency's Border Watch Tip Line, a creation of the Paul Martin Liberal government that gives Canadians a chance to report "suspicious immigration activity" to the government around the clock, in either official language. "No information, however trivial it may seem, is too small," according to the CBSA webpage for the tip line. Most of those tips end up being deleted or filed away in government archives, as do those made to two of the government's other immigration-related tip lines, according to statistics provided to The Hill Times by the federal government. Many of the communications via the tip lines have actually been questions about how to file paperwork for visas or other routine and unrelated matters. Some are reports of illegal activity that falls outside of the CBSA's jurisdiction-for example, financial fraud. Others simply don't include enough information, or do include information "not substantiated" by database searches of CBSA officials, the agency says. Hill Times

B.C. couple must pay $111,000 for immigration fraud against 'friends' from China
A judge has ordered a Langley couple to pay a Chinese couple who were their friends more than $100,000 for committing civil fraud while helping them with immigration services. Bi He Zhao and Rui Du, a husband and wife whose home base is China, argued in court that Yubin Dong and Bing Ji of Langley offered to assist them as friends with their immigration to Canada. Dong and Ji claimed during a two-week trial in B.C. Supreme Court that they had an oral agreement to provide the services. Zhao, a lawyer with a successful practice in China, testified that sometime in late 2008, he was contacted by Dong, a former law school classmate in Beijing. That contact eventually led to Dong offering to help them come to Canada. Zhao testified that Dong said she would contact a friend who had an immigration consulting firm and that she would not charge him a fee; instead, she would be paid a commission by the company. Dong, who described herself as a businesswoman who had been working in the field of immigration services for several years, was neither a registered immigration consultant nor a lawyer in Canada. Instead, Dong had an association with a Vancouver-based immigration consultant business called Can Achieve Consultants, court heard. Vancouver Sun

La guerre de l'acier se joue aussi au Québec
ArcelorMittal sollicite l'appui du gouvernement provincial pour lutter contre le dumping d'acier au Canada, une pratique qui tire à la baisse le prix de cet alliage dans un marché déjà déprimé. L'entreprise souhaite que Québec fasse pression sur le gouvernement fédéral afin qu'il procède aux réformes promises. ArcelorMittal Produits Longs Canada s'est inscrite vendredi dernier au registre des lobbyistes du Québec dans le but « d'obtenir un appui politique pour demander au gouvernement fédéral de mettre en oeuvre les mécanismes de recours commerciaux proposés par l'Association canadienne des producteurs d'acier [ACPA] ». (…) Contourner les règles Selon l'Agence des services frontaliers du Canada (ASFC), le dumping consiste à « vendre des marchandises à des importateurs au Canada à des prix inférieurs aux prix de vente de marchandises similaires dans le pays d'exportation ou à des prix ne permettant pas de réaliser un bénéfice ». Le Devoir

Georgian national wanted in 3 provinces removed by ICE to Canada
A Georgian national and documented Russian mafia associate wanted for crimes committed in Canada was deported by U.S. Immigration and Customs Enforcement's (ICE) Enforcement and Removal

Operations (ERO) Tuesday and turned over to Canadian authorities to face criminal charges there. Alex Alexidze, 41, was repatriated to Canada via ground transportation under ICE escort July 19, from York County Prison and turned over without incident to the custody of the Canada Border Services Agency at the Niagara Falls International Rainbow Bridge. Provincial authorities in Alberta, Manitoba and Ontario have active warrants for Alexidze's arrest on multiple charges related to theft, identity fraud, false documentation and other charges, stemming from alleged crimes committed between 2013-2015 — some under the alias Alex Row. ICE confirmed his true identity with Canadian authorities using photos and biometric data. US Immigration and Custom Enforcement

U.S. tourist destinations try to counter weak loonie
Several American businesses are freezing their prices and trying to appeal to Canadians in a bid to have them cross the border this summer. The loonie's ongoing drop - which began in 2014 - has led to many people choosing places other than the U.S. for vacation. Last year, about 1.29 million people crossed the Quebec border into the U.S. for at least one night between June and August. This was a 13.6-per-cent drop compared with the same period the previous year, according to Statistics Canada. However, 686,000 American tourists spent more than a night in Quebec between June and August 2015 - an 11.8-per-cent increase over the year before. Suzanne Beaulieu, owner of Kebec 3 Motel in Old Orchard Beach, Maine, whose business is 90 per cent from Quebec, said the strength of the U.S. dollar has had a significant impact on her establishment. "Last week, over three days, it was clearly indicated that we had space here and no one stopped by," she said during a phone interview. "It's been years since this has happened." The 35-room motel is booked solid until Aug. 26, but Beaulieu said the peak season used to last until late September. Furthermore, she used to rent rooms in her motel for entire weeks, something that has changed in recent years. Canadian Press (Gazette, A3)

Persecuted Roma need protection
An editorial states, "Re: "Roma family in limbo as status reviewed" (Montreal Gazette, July 19) and "Roma family's deportation postponed" (Montreal Gazette, May 13) With Canada justifiably accepting thousands of Syrian refugees, it makes no sense to deport Katalin Lakatos and her daughter Gilda, back to Hungary, where the Roma are a persecuted minority. We need to welcome them with open arms. The Harper government's deportation of thousands of Roma, under the rationale that Hungary is safe for them, is a blot on our history. This policy needs to be eliminated. The Roma nation is one of the most oppressed in history. They were murdered by Nazi Germany in the hundreds of thousands and targeted for annihilation, like the Jewish people. Their ashes co-mingled in Auschwitz. In 1951, against the background of the Holocaust and the Second World War, the United Nations adopted its "Convention Relating to the Status of Refugees," which states that no signatory shall deport a refugee to a country where the person's life will be in danger. Our government breaks that commitment when it forces people back to countries where their lives will be in danger. We need to adopt Emma Lazarus's poem, The New Colossus, as our guiding spirit: "Send these, the homeless, tempest-tost to me /I lift my lamp beside the golden door!"" Gazette, A11

CYBER SECURITY / CYBERSÉCURITÉ

Cyber Security Threats
Cyber security threats because of employees' mobile gaming use are a concern for chief information officers (CIO). "There is ongoing conversation about what data is being collected with these sorts of interactive online games, so if employees are using their corporate mobile device, it's possible that it could create some vulnerabilities - though there is no talk of such a threat at the moment," says Nima Mirpourian, of Robert Half Technology. A recent survey of CIOs from Robert Half shows that keeping their organization's data safe is their top concern. In another one of their surveys, 54% cite plans to enhance employee training on IT security issues. Toronto Sun, A61

Exploit kits now adopting recent Office vulnerabilities: Report
Cyber security trends can be hard to nail down because attacker strategies constantly evolve. But a new report from Sophos suggests that criminals have finally turned away from an old Microsoft Office exploit and instead are favouring two new ones. However, the report also emphasizes the importance CISOs

have to put in their patching strategy because even the new exploits have fixes out for them. Sophos says that data gathered recently from customers shows the four-year old CVE-2012-0158 vulnerability, which allows remote attackers to execute arbitrary code via a crafted Web site, Office document, or .rtf file has been supplanted in exploit kits by CVE-2015-1641, also a remote execution attack and CVE-2015-2545, which allows remote attackers to execute arbitrary code via a crafted EPS image that would be embedded in a document or email. IT World Canada

LAW ENFORCEMENT / APPLICATION DE LA LOI

Hells Angels a major force in B.C. despite recent loss

As B.C. Hells Angels mourn the recent death of a member of the West Point chapter, police say the biker gang remains a significant criminal force in the province. Bjorn Sylvest died July 3 while on a houseboat on the Shuswap Lake, Barb McLintock, of the B.C. Coroners Service, confirmed. "The death of Mr. Sylvest was reported to us and we are investigating," she said. Sylvest was remembered last week by his fellow Hells Angels and other friends at a service in south Surrey. And they paid tribute to the 35-year-old heavy-duty mechanic Thursday with a procession of 200 to 300 bikers riding from the White Rock Hells Angels clubhouse to the Among the mourners were bikers wearing patches of the Hells Angels, the Throttle Lockers, the Shadow Club, the Jesters, the Devil's Army, the Castaways, the Ironworkers Motorcycle Club and the Horsemen Brotherhood. While Sylvest's West Point chapter has taken a hit with his death, the Hells Angels "remain active in British Columbia and overall membership appears to have remained consistent over the last few years," RCMP Supt. Sandro Colasacco said in an interview. He said the current membership of the HA in B.C. is about 120 in nine chapters. "This number does fluctuate based on factors such as police enforcement initiatives and criminal charges," said Colasacco, intelligence officer for the RCMP's E Division. "Previous investigations have made it clear that some members of the Hells Angels are involved in illicit drug, weapons and violencerelated offences, including murder. It is for this reason that the Hells Angels and other outlaw motorcycle gangs remain a priority for the RCMP and our law enforcement partners." Postmedia Network (The Province, A4, Vancouver Sun, Times Colonist)

Former Red Deer Mountie sentenced on assault charge

A Mountie whose career started in the Red Deer city detachment has been given a conditional discharge for punching a man he had arrested on suspicion of impaired driving. Const. Eric Pomerleau, currently on administrative duties with the Brooks RCMP, was tried and found guilty before Judge Gregory Lepp in Red Deer provincial court in June on an assault charge laid after the incident, which took place at the Red Deer city detachment on Nov. 7, 2012. Sentencing arguments were heard on Tuesday, with Calgary-based Crown prosecutor Photini Papadatou asking for a fine in the range of $500 to $1,000. Papadatou stressed that a police officer in charge of a prisoner is in a position of trust and that all police officers must be held to a higher standard than ordinary citizens. Defence counsel Robb Beeman, also from Calgary, asked for a conditional discharge, which would uphold the conviction without creating a criminal record for his client. Red Deer Advocate, A2; Radio-Canada (2016-07-20); CBC News (2016-06-19)

Conduct hearing for Mountie postponed again

A B.C. RCMP conduct hearing, which had been scheduled for Monday, was postponed for the fourth time leaving the former Osoyoos Mountie in his fourth year of paid suspension awaiting the rescheduled date. Const. Amit Goyal, who last served with the Osoyoos RCMP detachment, has been suspended with pay since at least June 2013. His hearing was originally set for 2015 before being rescheduled repeatedly, and as of Tuesday, the RCMP conduct hearing schedule website showed Goyal's hearing was set to begin in Federal Court in Vancouver on July 25. But Staff Sgt. Julie Gagnon, with the RCMP national communication service in Ottawa, confirmed Tuesday that Goyal's hearing had been adjourned again until Sept. 13. He remains suspended with pay, she said. "Every effort is made for adjudication board hearings to be scheduled in a timely manner," Gagnon wrote in an email. "However, these hearings are formal, court-like processes. Much like judicial proceedings, hearing dates, times and locations are subject to change for any number of reasons." Goyal faces five allegations under the 1988 RCMP Regulations, according to the RCMP hearing schedule. The allegations include three counts under Section 39, which prohibits members from engaging in "any disgraceful and disorderly act or conduct,"

and two counts of Section 45 (b), which says a member must not "knowingly or wilfully make a false, misleading or inaccurate statement or report" to a superior officer about an investigation. Goyal also faces a civil lawsuit, filed in B.C. Supreme Court last year by former Osoyoos resident Steve Condon. In the suit, Condon claimed he suffered harassment and left Osoyoos because of Goyal and the RCMP. Postmedia Network (The Province, A13, Vancouver Sun)

Boylston man charged after threatening RCMP with firearm

A 20-year-old man arrested after threatening citizens and RCMP officers in Guysborough District on July 13 has been remanded to the East Coast Forensic Hospital for assessment. William Anthony Pius George appeared in Port Hawkesbury Provincial Court on Friday. He is scheduled to be back in court on August 5 to answer to the charges. At 9 p.m. July 13, RCMP responded to a dispute on East Side Harbour Rd. where a man had broken the windows out of a residence and vehicles. Police arrived and were told by witnesses that he had threatened to kill individuals inside the residence and discharged a rifle multiple times prior to their arrival. According to RCMP, the man then threatened to kill police. RCMP officers moved the individuals inside the residence to a safe location and called in additional RCMP officers from neighbouring detachments and the Nova Scotia RCMP Emergency Response Team (ERT). The situation was resolved when the man surrendered to the RCMP just after 5 a.m., without incident. No one was injured. The individuals inside the residence and the accused are known to one another. George has been charged with uttering threats (8 counts), assault, careless use of a firearm, unauthorized possession of a firearm and mischief. Guysborough Journal

Police charge ex-boyfriend with murder

After Carol King's body was found in an abandoned farmyard near Herschel, Sask., her ex-boyfriend said he had nothing to do with her death. In an interview, he claimed he was "the fall guy" for the 2011 killing that rocked the small farming town. Almost five years later, that man, Joseph 'David' Caissie of Bluffton, Alta., is charged with first-degree murder. "We start with the people closest to the victim and attempt to clear them and work their way out. In this investigation, we were never able to clear Mr. Caissie," RCMP StaffSgt. Murray Chamberlin told reporters at a news conference announcing the arrest. Carol King went missing on Aug. 6, 2011. Chamberlin said Caissie was taken into custody in Saskatoon without incident. He is also charged with offering indignity to human remains. Caissie is scheduled to appear Wednesday in Saskatoon provincial court. "We are extremely sad but extremely happy at the same time, and have a sense of relief knowing that charges have been laid," Carol King's family said in a statement. Caissie had been under the microscope of RCMP investigators for years, but had long proclaimed his innocence. Postmedia Network (StarPhoenix, A1, Leader-Post); Canadian Press (Edmonton Journal, Toronto Star, Red Deer Advocate)

Une nouvelle fraude qui cible les immigrants

Pendant quelques minutes, la semaine dernière, Yoann a bien cru que le Canada allait l'expulser vers son pays d'origine, la France. Au bout du fil, un agent des services canadiens de l'immigration lui disait bel et bien que des policiers l'attendaient chez lui, prêts à l'embarquer dans le premier avion qui traverserait l'Atlantique. Sauf que Yoann a eu un doute quand il s'est rendu compte que l'employé en question ne parlait pas français et ne semblait avoir aucun collègue qui puisse s'exprimer dans cette langue. Son incertitude aura été bénéfique : le Français était bel et bien victime d'un type de fraude qui fait de plus en plus de victimes chez les immigrants installés au pays. De quatre plaintes en 2013, le nombre de signalements concernant la fraude d'immigration est passé à 1087 en 2015, selon des chiffres que le Centre canadien antifraude (CCAF) a transmis au Devoir. Depuis le début de l'année en cours, 554 Canadiens ont porté plainte pour cette raison, un chiffre qui laisse entendre que la quantité de signalements pourrait dépasser ceux compilés l'année précédente. En pertes, cela équivaut à plus de 416 000 $ depuis janvier. En général, le modus operandi des fraudeurs consiste à exiger des frais qui permettent d'éviter une prétendue expulsion du pays. " La fraude fonctionne. Les gens payent. C'est aussi simple que ça ", a répondu la caporale Josée Forest, de la Gendarmerie royale du Canada, quand on lui a demandé pourquoi les plaintes continuaient d'augmenter. Pire, les statistiques du CCAF montrent qu'environ 5 % de la population rapporte les cas de fraude. " Ce n'est pas beaucoup ", a commenté Mme Forest. Le Devoir, A3

Pot bust yields 400 plants

Police have seized five pounds of pot, 400 marijuana plants, growing equipment and cash after searching a Sturgeon County property this week. St. Albert RCMP say the amount of pot being grown could have produced hundreds of thousands of joints, which could have had a significant impact. Insp. Ken Foster said in a release he was concerned about the large amount of pot seized, noting it's indicative of a criminal trafficking operation rather than someone growing for personal use. "If these drugs were not seized, they would have impacted the well-being of our residents and our children in Morinville, Sturgeon County, St. Albert and throughout the Edmonton region," he said. Cpl. Laurel Kading said police wanted to make clear this was a commercial operation rather than anything personal or medicinal, emphasizing the danger associated with this kind of unregulated operation. "A concern raised to me by one of our experts is there aren't any controls around those kinds of operations," she said. "You don't know if stuff has been added to make the plant grow differently, or could potentially be health hazards growing plants." Officers from several agencies worked together on the bust: St. Albert RCMP, Morinville RCMP, Fort Saskatchewan RCMP, and the Alberta Law Enforcement Response Teams. The Edmonton Police helicopter helped survey the scene during the search for officer safety. St Albert Gazette

Épinglé avec 200 kg de cocaïne

Un résidant de la région de Québec est incarcéré depuis le début de février au Panama après avoir été arrêté en possession de plus de 200 kilos de cocaïne dans ce pays d'Amérique centrale. Le suspect, Steve Miller, a été appréhendé avec deux présumés complices, un Panaméen et un Colombien, lors d'une opération de la police nationale menée le 4 février dernier. L'affaire a fait les manchettes dans les journaux locaux, mais pas dans les médias québécois et canadiens. Lors de la frappe, les policiers panaméens ont découvert 212 kilos de cocaïne et quelques centaines de dollars en devises canadiennes et américaines. La drogue, qui était emballée dans des paquets d'un kilo chacun, avait été dissimulée dans un placard d'une résidence de Betania. Une camionnette, qui aurait servi à transporter la cocaïne, a aussi été saisie par les policiers. On ignore à quelle peine s'expose le présumé trafiquant québécois. La Presse a tenté plusieurs fois de communiquer avec une porte-parole du Ministère public panaméen, en vain. Ici, la Gendarmerie Royale du Canada a confirmé l'arrestation d'un Québécois pour une saisie de 212 kilos de cocaïne sans toutefois donner plus de détails. Selon nos sources, la drogue aurait été destinée aux Hells Angels québécois, en particulier ceux de la section de Trois-Rivières, une information qui n'a toutefois pas été confirmée par les principaux corps policiers du Québec. Au cours des dernières années, les Hells Angels du Québec ont planté leur drapeau ou renforcé leur influence en Amérique centrale, plaque tournante de l'importation de cocaïne vers le Canada, et dans les Antilles. En avril dernier, TVA a révélé que les Hells Angel du Québec auraient parrainé une nouvelle section que l'organisation internationale a fondée en Équateur. Father says daughter 'fell through the cracks'

Kent Robinson just wanted his daughter to come home. Cynder Robinson, 17, lived on a northern reserve, away from family, for nearly a year. By the time he convinced her to return, it was too late. "Obviously it was a dangerous situation. I knew that right away," Robinson said. "I don't want to let it rest. I don't think my daughter should have ever been there." Cynder was found dead inside a home on the Big Island Cree Nation on Friday. RCMP called the death suspicious, but would not confirm a homicide investigation is underway. An autopsy was scheduled for Tuesday in Saskatoon. Cynder's father said he tried to get her to come home to Taber, Alberta for months, but because she was over 16, the RCMP and social services workers could not force her to return. "Cynder was a beautiful, beautiful soul. She just made the one mistake and it cost her life," Robinson said. Few details have emerged about what happened inside the home, but Robinson said his eldest daughter suffered from an arachnoid cyst that made her more susceptible to fatal head injuries. (...) He said he doesn't know for sure if his daughter was killed or if she died of natural causes. If someone did kill her, he wants justice, he said. "She was not a violent person. She knew she couldn't be a violent person because of her condition," he said. (...) Trevor Kahpeepatow, a Big Island band councillor, said it's not uncommon for non-band members to spend time on the reserve, although it is usually temporary. He said Cynder was a well-known face around the reserve and that her death has hit hard. "It is a shock," he said He and the band council are working hard to make sure the reserve - which is technically a dry community - is a safe place, Kahpeepatow said, adding they are trying to get tough on the drinking rules and deal with some of the root problems in the community. StarPhoenix, A3

New Kelowna criminal gang is small but dangerous
When RCMP arrested a member of a new street gang in **Kelowna** this month, it was a significant blow to the organization. "They are what we consider a low level street gang (present) only in the immediate Kelowna area," Staff sgt. Lindsey Houghton of the B.C. Combined Forces Special Enforcement Unit says. "You can count their members on two hands." The gang came to light last week when a cache of guns, drugs and a vest bearing an unfamiliar crest was displayed to the media by local police after a warrant was executed at a home in West Kelowna. Two men and a woman were arrested and a seven-year-old child found inside the home was brought under the care of the Ministry of Child and Family Development. A 24-year-old West Kelowna woman was questioned and released. A 37-year-old West Kelowna man is expected to appear in court Oct. 13 on possible drug and firearms related charges and a 32-year-old West Kelowna man, Tyson Ashleigh Bone, remains in custody. Const. Jesse O'Donaghey said Bone is a member of a small, new gang called the Kelowna Warriors. "They've been around for about four years," Houghton confirmed on July 19. "Mostly street-level stuff like drugs but often times they are the most dangerous." Houghton says there are fewer than ten members and that membership changes quickly. "We see a lot of transiency at levels like this," he says. "They say they're in one group one day and then swear allegiance to another the next day." The vest taken from the West Kelowna home included three patches, a central logo and the name of the city and gang above and below. "In order to wear the three-piece patch you have to get the consent of whichever outlaw groups control the area. In Kelowna it's the Hells Angels." Houghton says although they likely have permission from the Angels to operate, there is no evidence of cooperation between the groups. InfoTel (2016-07-19)

Quarterly report: $155,770 in drugs seized by Valley police unit
The Valley Integrated Street Crime Enforcement Unit is taking thousands of dollars worth of drugs off of the streets. Kenneth Reade, acting chief of police for the Kentville Police Service, shared the unit's report for the quarter that concluded June 30 during a council advisory committee in Kentville July 11. In a three-month period, the unit executed 14 search warrants, and charged 16 people with 20 criminal code offences and 25 Narcotic Control Act violations. Twelve of the warrants were drug related and two were for Criminal Code matters. "There were $155,770 worth of drugs seized, $17,810 worth of other property seized, $22,007 in cash seized," said Reade.The quarterly report lists the drugs seized as: marijuana, cocaine, $137,000 worth of marijuana plants, hash, various prescription pills and Psilocybin. (…) The specialized law enforcement unit is comprised of members of the Kentville Police Service and Kings District RCMP and Windsor RCMP. Nova News Now

Burnaby 'demoviction' protesters continue fight for affordable housing
Protesters occupying a building slated for redevelopment in Burnaby, B.C., are renewing their call for affordable housing as the building approaches its demise. "I hope the politicians, you know, do something or take it serious," said a man who has been living in the building who referred to himself only as Mohammed. "These are people, they are not trash on the street. They're being treated like trash."The protesters have occupied the building at 5025 Imperial Street since July 9. They previously told CBC the developer, Amacon, would begin removing hazardous materials last Monday to prepare for demolition in August. Burnaby RCMP have obtained a court injunction to clear out the group, which is operating under the name Alliance Against Displacement. CBC News

Four suspects face charges after drug bust
Four people are facing charges after Mounties seized approximately 200 fentanyl pills and other drugs during a traffic stop in southern Alberta on Sunday afternoon. Pincher Creek RCMP said they stopped a vehicle for a "serious traffic violation" at around 4 p.m. in the town about 200 kilometres south of Calgary. Inside the vehicle, police found a backpack containing approximately 200 fentanyl pills, three ounces of methamphetamine, nearly two ounces of crack cocaine, a small amount of marijuana and a large amount of cash. RCMP say there was also open liquor in the vehicle. Sebastion Aranzalez, 21, of Calgary, Ruairi McGinnity, 22, of Lethbridge, Christie Reed, 39, of Pincher Creek, and Sherri Lagrandeur, 40, also of Pincher Creek, are charged with possession of a controlled substance for the purpose of trafficking. Police say Aranzalez was also charged with driving with no licence and careless driving. All four were released with conditions ahead of their court appearances. Calgary Herald, A10

La GRC invite à la prudence

La GRC a demandé aux joueurs de Pokémon Go de faire preuve de «gros bon sens». Des amateurs de l'application mobile l'utilisent en conduisant pour couvrir du terrain plus rapidement et ainsi attraper plus de Pokémon, au détriment de leur sécurité et de celle des autres. La gendarme Isabelle Beaulieu rappelle que l'utilisation du cellulaire au volant est interdite au N.-B. et souligne que les agents circulent sur les routes de la province, aux aguets pour repérer les conducteurs distraits. Toute personne arrêtée en train d'utiliser un appareil électronique au volant d'un véhicule à moteur s'expose à une amende de 172,50$, en plus de voir soustraire trois points d'inaptitude à son permis de conduire. Elle demande aussi aux utilisateurs de ne pas s'introduire sur des terrains privés. Acadie Nouvelle, 5

RCMP not letting youth off the hook following prank bomb threat at Vernon mall
Police are sending a message after the latest incident of swatting — deceiving law enforcement with a phoney call — led to major disruptions at a Vernon mall. The prank resulted in numerous employees and patrons being evacuated from the Landing Plaza for several hours while police investigated. But it's not the first time emergency officials have been 'swatted.' Last year in Kamloops, several schools were locked down due to swatting pranks involving fake bomb threats. The same thing happened in Toronto, and a host of other cities. Sgt. Mike Moyer of Vernon RCMP says a youth was identified as the source of the prank call in Vernon and won't be let off the hook for the crime. Given the seriousness of the incident, Moyer says they will be recommending criminal charges, including mischief and possibly more, to Crown counsel. "Obviously, it scares a lot of people, especially with what's going on worldwide," Moyer says. "We, as the police, take these calls very seriously." Significant resources were deployed to the incident, including specialized RCMP units, the Vernon Fire Department, B.C. Ambulance Services and bylaw. Numerous businesses were forced to shut down, equating to thousands of dollars lost, Moyer says. And while the threat was a hoax and no one was hurt, Moyer says they want to make it clear pranks like this one are a crime and will not be tolerated. "We want to send a strong message," Moyer says. InfoTel (2016-07-19)

RCMP nab alleged drug traffickers
The Wood Buffalo RCMP Drug Unit arrested two individuals on July 15 after receiving a tip through Crime Stoppers of a male and female selling drugs in a Thickwood apartment building. Tristen Bradbury, 19 and Jennie Podanovitch, 19, both of Fort McMurray, were arrested Friday when they were leaving their Signal Road residence. RCMP spokesperson Cpl. George Cameron said officers opened an investigation after receiving the tip at the beginning of June. "There was enough evidence in order for the courts to grant a search warrant," Cameron said. Officers located 144 grams of cocaine, 49 grams of marijuana and 1.5 fentanyl pills after searching the apartment. Cameron couldn't give an exact amount, but estimated the drugs to be worth "thousands of dollars." Also inside the residence was a shotgun and ammunition and approximately $35,000 in cash believed to be proceeds from selling drugs. Bradbury and Podanovitch were both charged with possession of cocaine and marijuana for the purpose of trafficking, possession of fentanyl, possession of property obtained by crime, unauthorized possession of a firearm and unsafe storage of a firearm. Fort McMurray Today (2016-07-19)

OPP charge two men in grow-op bust
Ontario Provincial Police have charged two Ottawa men after a raid on a commercial property in Beckwith, about 45 kilometres southwest of Ottawa, led to the discovery of a large-scale marijuana grow operation. According to police, an investigation into allegations of marijuana trafficking led to the July 11 raid when the two men were arrested. Police confiscated 2,012 plants in various stages of growth, 25 pounds of marijuana buds, 26 grams of cannabis resin (hash) and hydroponic growing equipment. Facing charges related to illegally growing marijuana are Adam Gunderson-Lord, 37, and John Armstrong, 36. Ottawa Citizen, A6

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Former Nfld. priest gets parole after serving one-third of sex abuse sentence
Roman Catholic priest George Ansel Smith abused more than a dozen boys over two decades, using alcohol, threats and bribes with children as young as 8 years old. In 2013, the judge who sentenced him to 11 years described him as a "predator." But in a decision this month, the Parole Board of Canada has

released the retired cleric on full parole after a third of his sentence, saying he is considered a low risk to reoffend. It noted that the Correctional Service of Canada rated Smith's potential for reintegration into society as high. "CSC is of the opinion that you have repeatedly demonstrated that you are fully committed to leading a pro-social life and are ready for a less structured release," the decision said. Smith was sentenced in March 2013 after he pleaded guilty in provincial Supreme Court to 41 charges, 38 of which resulted in a convictions for sexual assault, indecent assault and assault with intent. Canadian Press (CTV News, Toronto Sun, Ottawa Sun, Red Deer Advocate, Blackburn News, News 1130)

Rallo's claims of innocence slam door on parole
If ever there was going to be a time for Jon Rallo to confess to murdering his wife and children, this was it - his first parole hearing since his beloved mother's death. Yet despite the hopes and rumours that have churned around Hamilton in the 40 years since the killings, Rallo clung stubbornly to his "denial stance" Tuesday. "If my position doesn't change, am I never going to get full parole?" Rallo asked of the Parole Board of Canada (PBC) panel. "Because gentlemen, my position hasn't changed." It's that refusal to admit his guilt that has blocked him from full parole over and over again - this time being no different. And now, thanks to legislation championed by Flamborough-Glanbrook Conservative MP David Sweet, the convicted murderer may not get another chance for five years. Standing outside Beaver Creek Institution in Gravenhurst just moments after Rallo was denied his bid for full parole, his victims' family and Sweet wondered if this might be the last time they are dragged through this painful process. "Rallo will be 78 by then," said Janice Orovan, dabbing at her tears. "Imagine not coming back to this place?" Sweet's private member's bill calling for changes to the Corrections and Conditional Release Act was passed in April 2015, forcing offenders to wait longer for legislated full parole hearings. The change stretched from two years to five. Though offenders can apply before the five years is up, the PBC has the right to deny the application. Hamilton Spectator, A1

Adult sentence upheld in brothel murder case
A youth who was sentenced as an adult in the murder of a sex-trade worker has lost his appeal of his sentence. Peter Wong was five months short of his 18th birthday when he shot and killed Ping Li, a young woman, as she begged for her life in the Burnaby brothel where she worked. During the course of his attempted robbery of the brothel, Wong also shot Xing Li, the owner of the brothel. Li was placed in a medically induced coma for two weeks and survived. Wong was convicted by a B.C. Supreme Court jury of first-degree murder and discharging a firearm with intent to wound in connection with the March 2009 slaying. Following an application by the Crown, on the murder count Wong was sentenced as an adult to life in prison with no parole eligibility for 10 years. He was sentenced to four years in prison for the firearm count, to be served concurrently. Vancouver Sun, A3 (The Province)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Public has right to film officers on the job
A black man is wrestled to the ground and shot by a Louisiana police officer. The incident is caught on a bystander's camera. A day later, a Minnesota police officer shoots and kills a black man at a traffic stop. The incident is broadcast by the man's girlfriend using her smartphone. Those incidents - viewed by millions on social media - have underscored already strained race relations in the U.S. and spurred Black Lives Matter rallies throughout the United States. On Tuesday in Winnipeg, a teen girl wearing a mask and waving a replica gun at Portage and Main was caught on camera by a passerby just seconds before police officers ran into the intersection, tackled her and diffused a potentially escalating situation. The dramatic video was uploaded to Facebook and quickly watched by Winnipeggers and others. But can you automatically film and photograph police doing their jobs? Are there any rules? Winnipeg police spokesman Const. Rob Carver said if people want to pull out their smartphones to record officers performing their duties in public, police can't stop them. "There are no restrictions on people taking video of police officers in public," he said. "People have the right to record officers arresting somebody... by and large, there are no prohibitions whatsoever." However, Carver said police would be suspicious if people set up outside police headquarters with a video camera and targeted individual officers. "We've had gang members surveil us," he said. Police want the public to realize they shouldn't endanger themselves or

police while recording or getting too close to a potential crime scene, Carver said. Winnipeg Free Press, A3

Public help sought for anti-violence strategy
The federal government is turning to Canadians for their ideas on how to stamp out the "unacceptable" level of violence facing women and girls online. Status of Women Minister Patty Hajdu used a Toronto visit on Monday to launch consultations on a federal strategy to reduce gender-based violence and the first topic up for discussion is cyberviolence. "From my perspective, this is the Wild West of communication, where there are very few rules and very few avenues for people experiencing violence, women and girls in particular, who are disproportionately the victims of this type of violence online," Hajdu told the Toronto Star. The Internet and social media can be nasty forums for harassment, sexism and misogyny. In 2012, B.C. teen Amanda Todd took her life after becoming the target of cyberbullying. Hajdu said there is no doubt the abuse aimed at women and girls online should be branded as violence. "Language and abuse through the use of words is a form of violence. We take that very seriously and, quite frankly, think it's intolerable," Hajdu said. "We need to call out and condemn violent behaviour, sexism whenever it occurs. "Cyberspace is one of those areas that it's occurring at an astronomical rate. It seems like a logical place for us to start," she said last Friday in an interview from her Thunder Bay, Ont. riding. She said there is a role for Ottawa to act in this arena, but how remains a question. Whitehorse Daily Star, 7

Halton police praise Province's $72 million anti-human trafficking strategy
With Canadians being 93 per of Canada's sex trafficking victims, Ontario accounting for 65 per cent of police-reported human trafficking in Canada, and Halton's sex trade hidden behind closed doors along the QEW and Hwy. 401, a recently announced $72 million provincial anti-human trafficking strategy is a step in the right direction. That's according to a detective with the Halton Regional Police Service Human Trafficking and Vice Unit. "This is very positive and a step in the right direction in terms of addressing this issue," said Det. Sgt. Raf Skwarka, Halton police. The provincial government announced the investment in late June, stating the strategy is aimed at increasing awareness, coordination and enhancement of justice-sector initiatives and improving survivors' access to services. The provincial government, in announcing the strategy, admitted Ontario is a major centre for human trafficking in Canada — accounting for roughly 65 per cent of police-reported cases nationally. Inside Halton (2016-07-19)

Crime rates falling
Crime rates are higher in Western Canada than in the East of the country, according to an Angus Reid Institute survey. However crime decreased right across the nation, from 2000 to 2014, shows Statistics Canada's Crime Severity Index – used by the pollsters. The survey found that Canadians living west of Manitoba are much more likely than those living farther east to have reported falling victim to a crime over the last two years. British Columbia, Alberta and Saskatchewan residents are more than twice as likely as Ontarians or Quebecers to have experienced a crime. The east-west divide is also reflected in the perception that crime is on the rise in one's own community. Those in Western Canada are more likely to say crime has increased in recent years than respondents in the east. As might be expected, crime has fallen the most in the two provinces where Canadians are least likely to report having been the victim of a crime in the last two years – Ontario and Quebec. Only Quebecers seem be conscious of this fact, however. In Ontario, only seven per cent of respondents report that crime in their communities has been decreasing in the last five years. Five times that many (39 per cent) say crime has been on the rise. Castanet (2016-07-19)

Survey suggests Sask. residents believe crime on the rise; numbers show otherwise
Saskatchewan residents think crime is on the rise, even though crime numbers are dropping in the province, a new survey suggests. An online survey by Angus Reid shows 56 per cent of people in Saskatchewan believe crime has increased over the last five years in their communities, despite numbers from Statistics Canada showing crime and severe crime have dropped in the province. The belief is likely influenced by people being exposed to individual crime reports in the news, according to Angus Reid. More than 100 adults in Saskatchewan were surveyed by Angus Reid between May 30 and June 6. Four per cent indicated they thought crime had dropped during the last five years. CTV News (2016-07-19)

Opt for justice system that reduces crime, recidivism
An opinion piece states, "Monday City Views columnist Craig Babstock's column this week capably argued for establishing 'addiction courts,' much like we have 'youth courts' and 'family courts' to provide a justice system with specialized, focused expertise that aims to ensure rehabilitation and the minimizing of damage for all in society, including the guilty, rather than merely mete out punishment. That column was prompted by recent funding of a study to explore the practicality of such a court. Mr. Babstock, also a veteran Times & Transcript's court reporter, thinks our federal and provincial governments ought to forget more study and just knuckle down now to set up such a court. I second his notion. It's an issue worth informed public discussion. Unfortunately, too often discussion of our justice system isn't well informed. Too often it divides into the simplistic camps of 'law and order' versus 'rehabilitate and don't punish much, if at all.' (...)Why not an 'addictions court' too (including alcohol)? Addiction is illness. A court would help rehabilitate large numbers. It'd prevent repeat offences, saving money. It'd lower policing costs and add to economic productivity. It'd prevent impaired driving deaths, prevent other accidents due to impairment, and lower health care costs as long-term addictions decline. The more addicts an addiction court system can help, the more society saves. And even repeat offences are ironically a positive: it's common for addicts to try several times before successfully beating their addictions. Much violence in society, including domestic violence, is fueled by booze. Murders, assaults and other attacks would diminish noticeably. Impaired driving too." Times & Transcript, A8

The law needs to catch up on cyberbullying
An opinion piece states, "In 2014 I wrote a paper: "Cyberbullying: The Current State of Our Privacy and Technology Law". This report provided a review of cyberbullying legislation across Canada, including the relevant case law. This is a new, and fast-changing, area of the law. Since I wrote the paper, there have been new developments with the Nova Scotia Supreme Court, thus the striking down of that province's cyberbullying law. Striking it down for infringing privacy rights set out in the Charter of Rights and Freedoms, Nova Scotia's Cyber-Safety Act had been the most comprehensive among Canadian provinces. An article in Canadian Lawyer magazine by David Fraser of the law firm McInnes Cooper entitled: "Nova Scotia's cyberbullying law is a disaster" referring to the civil liberties infringements from the legislation's broad wording which captured activities that would be considered beyond cyberbullying. He argued in court this legislation should be struck down. Meanwhile, the problem of cyberbullying is hardly going away, with the increasing pervasiveness of social media platforms from Twitter to Facebook to SnapChat and many more. With laptops, tablets, and smartphones, the Internet is mobile, everywhere, creating a disturbing new dimension to cyberbullying. (...)Law enforcement needs to have the tools to deal appropriately with cyberbullying. Rather than using other legislative tools, such as child pornography laws, that could either be too strict, too lenient, or simply not capture the nature of the action. While effective laws capturing the problem of cyberbullying are needed, these laws must not be so overboard to capture forms of speech beyond cyberbullying." Telegraph-Journal, A9

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Zoe Saldana producing film on Canada's missing indigenous women
A new documentary by a team of Los Angeles-based filmmakers – including Avatar star Zoe Saldana – is hoping to shed light on the disappearance and murders of as many as 4,000 indigenous women across Canada. "If this exact same story were being told in a country in Africa, I think we would be paying attention to it and we would be donating money to it," said Leslie Owen, the American producer-director behind Gone Missing. "But because it's in Canada, a first world nation, we don't want to see it in our own backyard." She began researching the story in 2015, after stumbling across a news story highlighting 1,200 cases of murdered and missing women that had been compiled by police bodies from across the country. "I was like, what does that mean?" Recent months have seen the number revised upwards, with one government minister estimating the number of missing and murdered indigenous women could be as high as 4,000 women. The Guardian (UK)

Leaked document appears to give broad powers to MMIW national inquiry

There will be five commissioners sitting on a national inquiry into missing and murdered Indigenous women (MMIW) and they appear to have the power to run the inquiry as they see fit, according to the Terms of Reference (ToR) obtained by APTN National News. The document, watermarked "sensitive and confidential," appears to be a template for a final version. It does not name the five commissioners. The ToR document also appears to address a pivotal question asked by MMIW family members and their advocacy groups: how much power will the commission have. "Authorize the Commissioners to adopt any procedures that they consider expedient for the proper conduct of the inquiry," the ToR states. But it doesn't elaborate on how much power that is or whether the commissioners will have the power to compel people to testify. The ToR does call for the inquiry to bring the "ongoing national tragedy" of MMIW to an end and examine the "systemic causes of violence against Indigenous women and girls in Canada" and make recommendations. That means looking at the "underlying social, economic, cultural, institutional and historical causes" that have led to more than 1,200 Indigenous women and girls to be murdered or go missing in the last 30 years. APTN News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

City urged to act on pot shops

There are growing calls to shut down or regulate Ottawa's budding marijuana dispensary business, as new - and illegal - storefronts pop up around the city. Since the beginning of July, five more dispensaries have opened or plan to shortly, boosting the number in the city to nine. They are part of a wave of marijuana stores that have been opening across the country, in defiance of federal drug laws. Ottawa Coun. Mathieu Fleury says he has asked Ottawa's police chief to enforce the law and shut them down. He and other councillors who represent urban wards have also begun to discuss whether the city should regulate where the dispensaries operate. Coun. Riley Brockington, who is upset about a cannabis store about to open across the street from a school in his River Ward, said the city can't wait to act until the federal government makes recreational marijuana legal. The umbrella group for Ottawa's Business Improvement Areas invited two police officers to a recent meeting to provide information about the pot shops. The officers gave the same answer that a police spokesperson provided to the Citizen: They are aware of the dispensaries, and are investigating. With the legalization of recreational marijuana on the horizon, these businesses are "jumping the gun," says Christine Leadman, executive director of the Bank Street Business Improvement Area. Two marijuana shops have opened on Bank Street downtown, a situation that until recently would have "been unfathomable," Leadman said. "In my mind, the city police and bylaw should be shutting them down." But she's sympathetic about the difficulty the city may have in regulating the shops. "How do you build in (bylaw) planning for a business that's illegal?" The pot dispensaries are confounding police and municipal officials across the country. The federal government has promised to introduce legislation to legalize and "strictly regulate" recreational pot next spring. Ottawa Citizen, A1 (Ottawa Sun)

PUBLIC SERVICE / FONCTION PUBLIQUE

Minister says civil servants won't lose out for pay system problems
Civil servants who have been forced to max out credit cards or borrow money as a result of problems with the federal government's dysfunctional new pay system can expect to be compensated, says the minister responsible for the system. Public Services and Procurement Canada will review hardship cases one at a time, and make things right for anyone who has been placed in dire financial circumstances, minister Judy Foote told The Canadian Press on Tuesday. "Nobody should be out-of-pocket as a result of something over which they had no control," Foote said. Newly released documents obtained by the CBC also show that officials were warned as early as Jan. 18 that the new Phoenix system has a flaw that allows widespread access to employees' personnel records, including social insurance numbers. The minister told the CBC she learned only this week of the internal breach of private information. "I am aware of it, and I've been told that none of the information became public." She said she has turned the matter over to the privacy commissioner for investigation, and will focus on getting people paid. Heads could roll once the dust settles from investigations that have been launched into the new Phoenix pay system, Foote said. The government acknowledged Monday that nearly 82,000 public servants have had trouble getting the compensation they are owed because of major problems with what is the biggest pay system in the country, serving roughly 300,000 civil servants. (...) The Public Service Alliance of Canada has also called on the government to take Phoenix off-line and revert to the old system. Foote, however, says that's not possible. Canadian Press, (Record, A4, Times Colonist, Ottawa Citizen, Hamilton Spectator); Telegraph-Journal (Times and Transcript, Daily Gleaner); Le Droit (La Presse)

Phoenix flaw put PS personnel files at risk
The Public Service Alliance of Canada is renewing its call to scrap the government's Phoenix payroll system in light of newly released documents indicating that a flaw exposed the personal information of thousands of civil servants. "We knew this was going to be a disaster right from Day 1," PSAC executive vice-president Chris Aylward fumed Tuesday evening. "We knew this was going to be a Gong Show, and look where we are today," he said. "This is completely unacceptable. ... It's time to shut it down." Documents obtained by CBC News reportedly show officials were warned as early as Jan. 18 that the Phoenix system has a flaw that allows widespread access to employees' personnel records, including social insurance numbers. In an emailed statement to Postmedia, Public Service Minister Judy Foote's office confirmed government officials discovered the flaw early in the Phoenix rollout. Canadian Press (Ottawa Citizen, A2, Ottawa Sun); CBC News (2016-07-19)

Growing tech woes hinder Statscan's ability to meet mandate, chief says
Statistics Canada's technological troubles have become so acute that its chief statistician says they are hampering the agency's ability to carry out its mandate - and he places the blame squarely on one source: Shared Services Canada, the department now running the agency's informatics infrastructure. Statscan's website has for months been beset by crashes, delays and outages, most notably on July 8, when its main website was down for more than seven hours on the day of the release of the labour force survey. In an interview with The Globe and Mail at his Ottawa office, chief statistician Wayne Smith said that that outage - along with a long list of other information technology troubles - relates to problems with Shared Services. "It's had a significant impact on our operations," Mr. Smith said. "Our service to the public has suffered, clearly, in ways that we would rather not have happened. Some of our relationships have suffered. ... There's a frustration among our clients." Canada's statistical agency is tasked with producing quality data and analysis about the country on everything from oil exports to jobless rates, food prices and health outcomes. That mandate, Mr. Smith said, is at risk as tech glitches - stemming partly from a lack of maintenance at its data centre - have caused delayed releases, lost time in conducting quality assurance and higher costs. If the situation continues, he warned, data quality could be hurt and, if the agency incurs additional costs to boost muchneeded capacity at the data centre, it could result in cuts to surveys and programs. Mr. Smith said the frequency of incidents is growing. On July 8, the agency's main website was down for 7 hours 50 minutes when a power transfer switch failed. "The issue on July 8 was a pure informatics infrastructure issue, entirely under the responsibility of Shared Services," he said. Globe and Mail, A1

OTHER / AUTRE

U of T student interrogated in Bangladesh
Bangladeshi police have confirmed that a University of Toronto student is being interrogated, without clarifying his whereabouts or his condition, or saying whether he was being charged - escalating concerns over possible human-rights violations in his detention. Tahmid Hasib Khan, 22, and a fellow detainee, British citizen Hasnat Karim, 47, were among several hostages who survived a terrorist attack at a restaurant in Dhaka that left 23 people dead on July 1. They were then taken in by police for questioning. Family members have had no contact with Mr. Khan since July 3, aside from a phone call from an unknown agency confirming his detention. "We have to conduct the investigation through interrogation of witnesses, rescuers and others concerned. The puzzle cannot be solved without interrogation," the Dhaka Metropolitan Police commissioner said, according to a report in The Dhaka Tribune newspaper. Local outlets also reported that the commissioner evaded questions about the nature of the detention. The DMP's counter-terrorism and transnational crimes unit is said to be investigating. The commissioner's statement marks the first time law-enforcement authorities have acknowledged that Mr. Khan, a permanent resident of Canada, has been in custody since the attack. Last week, the deputy commissioner said everyone rescued had been "released." Globe and Mail, A7

No compromise with Iran
Iran's indictment of one foreigner and three Iranian dual-nationals, including Iranian-Canadian professor Homa Hoodfar, vindicates the Harper government's 2012 decision to sever ties with that country. Iranian prosecutors have not specified why Hoodfar and the others are being charged. Even Hoodfar's lawyer doesn't know what crimes have been alleged, having been denied access to the Canadian woman since June. Hoodfar, a professor at Concordia University, had been in Iran researching feminist activism when she was put in prison for interrogation last month. In some ways, the official charges hardly matter since everyone concerned knows the judicial case is little more than a grim charade - the sort we've seen before with Iranian-Canadian photojournalist Zahra Kazemi, who was tortured to death in Tehran's Evin prison after being arrested for allegedly taking photos of sensitive parts of the facility. (In reality, Kazemi, carrying an Iranian-government-issued press card, was documenting concerned family members of students who had gone missing after a massive police clampdown on demonstrations in the city. It was assumed the students had been jailed in Evin.) National Post, A7

Trudeau can and should bring home Canadian man trapped in Egypt
An opinion piece states" All three of us have spent substantial time in Egypt's most notorious prisons among thousands of people arbitrarily detained - activists, journalists and regular citizens, Egyptian and non-Egyptian. Tireless advocacy and political lobbying finally helped bring us home, but we left behind those who weren't as lucky. One of those prisoners is Canadian permanent resident Khaled Al-Qazzaz, a philanthropist, educator, husband and father, whose wife and four children are all Canadian citizens, and who now faces life-threatening injuries as a result of his imprisonment. We believe that the Liberal government under Prime Minister Justin Trudeau can bring him and his family home and bring their nightmare to an end. Like many people who are arbitrarily detained, Khaled was not charged with a crime. He was arrested in 2013 and spent hundreds of days in solitary confinement. He was kept in the adjacent cell to one of us, Mohamed Fahmy, a journalist with Al Jazeera at the time. As Khaled will surely tell you, it's the sheer physical loneliness that's toughest to deal with, the feeling of being cut off from family and friends. He and Mohamed tried their best to console each other as they dealt with this feeling." Toronto Star, A11

What to do about Turkey?
An opinion piece states, "These days, even the most forgiving observer of Turkish politics is having a difficult time glossing over the disturbing news coming out of Turkey. Certainly, the recent aborted coup attempt is important enough. But well before this, journalists, academics and activists critical of the government found themselves under arrest and their newspapers and television channels shut down. The net result is that Reporters Without Borders just listed Turkey in 151st place out of 180 countries in its 2016 World Press Freedom Index - lower even than Russia. (…) How, then, should Canada react to the current situation? We certainly shouldn't turn our backs on the Turkish people, who, during the past year, have faced continuous terrorist attacks and now an aborted coup attempt. However, the coup aside,

Canada needs to make clear that it does not condone the Turkish government's own assault on democracy, in which even those who dare to share a tweet can be branded as terrorists and traitors. Ottawa Citizen, A9 (London Free Press, Kingston Whig-Standard)

INTERNATIONAL

Daesh claims attack on German train

A 17-year-old Afghan asylum seeker who police say carried out an axe attack on a German commuter train had pledged loyalty to Daesh before slashing at least five people, in an incident that appeared likely to intensify opposition to Germany's influx of migrants. In a video issued by Daesh (also known as ISIS or ISIL), the teenager identifies himself as a "soldier of the caliphate" and threatens further attacks by the group "in every village, city and airport," according to a translation by the SITE intelligence group, which tracks jihadists. "I lived among you and in your houses," the Afghan said. "I will slaughter you in your houses and tear you apart. I will make you forget the horror of the France operation," a reference to an attack Thursday in Nice, France, that killed 85 people and injured more than 300. The authenticity of the video could not immediately be confirmed. More than two million people poured into Germany last year, many of them seeking asylum in a historic influx that was the largest since 1950. The migrant flows upended German institutions with sudden new demands and created the biggest political challenge for German Chancellor Angela Merkel in her 11-year rule. (...) Daesh earlier claimed that the teen was a "fighter" for the group, the Amaq agency said. It was not clear whether the video was evidence of a direct link to the man, or whether he posted it online without having arranged it with the group beforehand. The Daesh claim came just hours after the attack, in which at least five people were injured. Toronto Star, A8

Officer killed while looking for suspect

Kansas City, Kansas, police officer was shot and killed on Tuesday while searching for a suspect in a drive-by shooting, police said. Capt. Robert Melton was searching for the suspect when he drove up to someone who matched that person's description just before 2 p.m., police spokesman Tom Tomasic said. Before Melton could get out of his vehicle, the person opened fire, hitting the officer multiple times, Tomasic said. The alleged shooter was caught five minutes later about a block away, he said. A police spokeswoman said the suspect was being questioned Tuesday evening along with another person suspected in the initial drive-by shooting. Police weren't releasing the suspects' names because charges hadn't been filed. A third person who had been taken into custody was determined not to have been involved and was released, police said. It's the second time a Kansas City, Kansas, police officer has been shot and killed this year. In early May, detective Brad Lancaster was fatally shot near the Kansas Speedway, and Melton had served in the police honour guard at Lancaster's funeral. The shooting also comes as police departments across the country are on edge after ambush attacks left eight officers dead in Texas and Louisiana. "There's a lot of pain and brokenness in our community and our nation right now, and we just want to ask everyone to be prayerful and thoughtful right now," Mayor Mark Holland of the Unified Government of Wyandotte County said. Associated Press (Red Deer Advocate, A8, Edmonton Sun, Kingston Whig-Standard, Calgary Sun, Toronto Sun, London Free Press, Ottawa Sun, Winnipeg Sun, Times and Transcript, Hamilton Spectator, CBC News, Global News, St. Catherin Standard)

EU police agency warns of extremist threats to Europe

The number of people killed in attacks by extremists throughout Europe soared in 2015 from a year earlier, the European Union police agency reported Wednesday as it warned the Islamic State group may "put more emphasis on operations abroad" as a Western military alliance puts it under pressure in Syria and Iraq. The Europol report painted a worrying picture of an EU assailed by Islamic extremist threats that are unlikely to recede any time soon. It warned that Syrian asylum-seekers could be targeted and swiftly radicalized by IS recruiters while a new generation of fighters is being raised in IS territory in Syria and Iraq. The report also stated that IS appears to favour attacks against soft targets because they " instil more fear in the general public." That threat was horrifically underscored by the Bastille Day truck attack in Nice, France, that left 84 people dead. In a move that underscored the swiftly evolving nature of the extremist threat, Europol also issued a separate statement on recent attacks in Nice, Germany and the United States, saying they "highlight the operational difficulties in detecting and disrupting lone actor attacks." Associated Press (Metro Winnipeg)

The murky role of mental illness in extremism, terror

After family members of the driver who slammed a truck into a holiday crowd in the French city of Nice said he suffered from depression, questions have been raised again about the links between mental illness, extreme ideology and mass violence. Mental illness cannot be blamed for terror attacks, experts say. The overwhelming majority of people with mental illness never turn violent. But mental health disorders may make some people more susceptible to extremist ideology, and in rare cases that ideology can lead to horrific acts. "People who are loners and who become angry and resentful can easily be drawn to extremist ideologies," said Dr. Raj Persaud, a psychiatrist and professor at London's Gresham College. "They begin to dehumanize others and may not need much more motivation before deciding to commit a terrorist attack." It is not known for sure that the Nice attacker, 31-year-old Mohamed Lahouaiyej Bouhlel, was mentally ill. It is also unclear whether he was acting out of personal impulse or was driven by ideology. But the Nice attack and other recent ones, like the attack at a nightclub in Orlando, have involved a murky mix of extreme ideology and hints of mental illness. "Terrorist acts are not caused by mental illness but mental illness can provide a background that's receptive to terrorist activity," said Persaud. Canadian Press (Brando Sun)

MINISTER / MINISTRE

Trudeau's deafening silence on C-51
Thursday, June 21 passed with the usual run of crime, chaos and political lies we've come to know as "the news". But it was an important anniversary - and it went almost unnoticed. A year ago, the Canadian Journalists for Free Expression (CJFE), in partnership with the Canadian Civil Liberties Association, launched a Charter of Rights challenge of Stephen Harper's police state anti-terrorism act, Bill C-51. And not a moment too soon. C-51 handed Canada's spy service grotesque new powers that are unconstitutional, indefensible and unnecessary. Short of killing or sexually assaulting 'persons of interest' in its quest to disrupt activities deemed to be 'dangerous' to national security, CSIS was handed carte blanche by the Harper government. (...) Justin Trudeau did not offer blanket approval. Despite having helped to pass the bill, the Liberals vowed that they would amend it to ensure that it was Charter-compliant. Included in **Minister of Public Safety Ralph Goodale**'s mandate letter are explicit instructions to deal with the offensive sections of C-51. The Liberals promised to protect the rights of Canadians to lawful protest and advocacy, to require that government review all appeals by Canadians on the no-fly list, to rein in the Communications Security Establishment (CSE) by requiring a warrant to engage in surveillance of Canadians, and to hold a statutory review of the entire law after three years. When the

new government came to power after the October 2015 election, party officials assured the public that this deeply flawed "security bill" would be "overhauled without delay." A critical part of the Liberals' promise to amend C-51 was a pledge to hold public meetings to get citizen and expert input on what needed to be changed. Though the government announced the meetings, none have been held - and C-51 remains in force. While it's true that **Goodale** has a full plate in front of him - from prison reform to a broad-ranging national security review - critics of C-51 find the government's inaction disquieting and unacceptable. iPolitics

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Husky oil spill 'not a short-term event' for North Sask. River communities
Drinking water issues facing about 70,000 people along the North Saskatchewan River could persist for weeks and possibly months after a Husky Energy Inc. pipeline spilled more than 200,000 litres of oil near and into the fast-moving water. "It's not going to be a short-term event," said Sam Ferris, executive director of environmental and municipal management services at the Saskatchewan Water Security Agency, during a conference call with reporters on Monday afternoon. "We want to be certain that source water is safe and secure before it is reused for treatment for drinking water purposes ... We need further time just to assess the existence of any oil or globules of oil that may be suspended in the water column," he added. The leading edge of the oil plume passed Prince Albert early Monday afternoon, having travelled about 370 kilometres from the spill site near Maidstone, where the discharge was detected early Thursday morning. Postmedia (StarPhoenix, Leader-Post, Edmonton Sun, Calgary Sun); La Presse Canadienne (Le Devoir, Le Soleil); Canadian Press (Red Deer Advocate, Waterloo Region Record, Times-Colonist, Daily Gleaner, Charlottetown Guardian, Whitehorse Daily Star, St. John's Telegram, Cape Breton Post); Reuters (Globe and Mail)

Sask. oil regulator's budget slashed
The 2016-17 provincial budget in June cut funding of provincial offices tasked with enforcing oil and gas development in Saskatchewan. Government officials confirmed Monday that the Petroleum and Natural Gas branch, which serves as the province's main energy regulator, had its "budget reduced due to a reorganization." The branch got $2.7 million less than the $14.2 million it received in 2016-16. The province said the field staff complement has remained the same, but "we are unable to determine field office budget differences due to that organization." With about 118,000 kilometres of provincially regulated pipeline in the province, there is fewer than one inspector per 1,000 kilometres of pipeline (...) It remains unclear when the pipeline that leaked 200,000 litres of oil into the North Saskatchewan River was last inspected. The province said that, up until November, that data was kept by paper. By late Monday afternoon, the province was unable to track that information down and provide it to media. Government officials were able to confirm Monday that Husky Energy Inc., which owns the pipeline that leaked, had a required emergency response plan in place. The company was expected to file its initial incident report with the province on Monday. StarPhoenix, A5

Two oil-soaked birds pulled from spill site
Four birds, one fish and a frog are among the confirmed fatalities of the Husky Energy pipeline leak that sent more than 200,000 litres of oil pouring into the North Saskatchewan River near Maidstone. Another two oil-soaked birds have been rescued from the spill site and are being cared for by volunteers in Maidstone. Jan Shadick, who runs the Living Sky Wildlife Rehabilitation Centre in Saskatoon, said it's "shocking" how few oil-soaked animals have been found. "It's really quite hard to believe that they haven't found anything," Shadick said from Maidstone, where she is helping coordinate efforts to clean any rescued animals that come in. Leader-Post, A4

Elfros cleanup begins after flash flooding
Janice Schreiner panicked as a wave of water came over the hood of her Ford Focus. She'd been in Wadena when the rain began Saturday, but knew she had to make it to her home in flooding Elfros because her 11 Sheltie dogs were locked inside, she said (...) When she finally made it home, the water in her yard was up to her knees and rushing into her home through windows and any other "crack it could find," she said. She found her dog Brody in his kennel, which was floating, along with her deep-freeze, in

a basement that was filling fast. Brody was fine, other than being a bit wet, but the water was more than 1.8 metres high in her basement before she and her dogs were loaded into trucks and evacuated to Wadena, she said. Everything in her basement was destroyed. The flash flood put the village of less than 100 people onto a growing list of Saskatchewan communities that have fallen victim to severe flooding this summer. Leader-Post, A7

U of C prof gets five more years to predict forest fires
With the help of a NASA satellite, Quazi Hassan is working to anticipate dangerous forest fire conditions across Alberta - even the nooks and crannies of the province unable to be accurately watched in the past. The University of Calgary engineering professor has been at it for five years. And now, he's got the funding to push his project forward another five years. Postmedia (Calgary Herald, A3; Edmonton Journal)

Le ministre Garneau confirme que les DOT-111 ne transporteront plus de pétrole
L'Union des municipalités du Québec (UMQ) se réjouit de l'annonce d'Ottawa concernant les wagons-citernes DOT-111, mais elle estime que «beaucoup de travail reste encore à faire afin de réduire les risques liés au transport de matières dangereuses par train au Canada». Le ministre fédéral des Transports a confirmé, lundi, que les wagons-citernes DOT-111, comme ceux qui avaient explosé lors du déraillement à Lac-Mégantic, ne pourront plus transporter de pétrole brut dès le 1er novembre prochain. La Presse Canadienne (Le Nouvelliste, 15; Le Quotidien); Canadian Press (Times Colonist, B3, Times and Transcript, Daily Gleaner, Telegraph Journal,); Postmedia (Financial Post, National Post, Windsor Star, Calgary Herald, Edmonton Journal, Montreal Gazette, StarPhoenix, Leader-Post, Edmonton Journal, Ottawa Citizen); Agence QMI (Journal de Québec, Journal de Montréal)

Les Québécois inconscients des risques qu'ils courent
Inconscients, mal préparés... et donc, vulnérables. Même si les trois quarts des Québécois vivent dans des zones à risque moyen ou élevé de tremblements de terre, la grande majorité d'entre eux sous-estiment la menace. Pire : les Québécois ignorent non seulement comment réagir en cas de séisme, mais ils ont en plus des réflexes carrément dangereux (...) Les tremblements de terre, ça arrive en Californie et au Japon, mais pas au Québec ? Détrompez-vous. En vérité, les trois quarts des Québécois, dont les Montréalais, vivent dans des zones considérées comme à risque «moyen ou élevé». «C'est vrai qu'on ne parle pas de séismes de magnitude 8 au Québec comme on le fait à Vancouver ou en Californie, précise Maurice Lamontagne, séismologue à Ressources naturelles Canada. Mais ça peut monter à des magnitudes de 6 ou 7. Si ça survenait près d'une grande ville comme Montréal, Québec ou Ottawa-Gatineau, il n'y a aucun doute que ce serait assez pour causer des problèmes et des dommages importants.» La Presse (Le Quotidien, 18; La Tribune, Le Soleil, Le Nouvelliste); Le Devoir

Recovery operation
The search for a Calgary boy swept away by the Yoho River has changed from a rescue to a recovery operation. Behzad Ahmad, 11, fell into the river near the Takkakaw Falls Day Use Area about 7 p.m. Friday while visiting Yoho National Park with his family. Dwight Bourdin, acting resource conservation manager with Parks Canada, said regular monitoring searches with helicopters will take place until the boy is found. He said air searches are the best bet given current water levels. Calgary Sun, A3; Calgary Herald

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Alleged Surrey money launderer seeks bail
A Surrey man wanted in the U.S. for money laundering told an undercover American cop that some of the millions collected would be "wired to Afghanistan where it would potentially be used to fund terrorism," a federal prosecutor told B.C. Supreme Court Monday. Glenn Sheck also boasted during a 2012 meeting attended by the cop that he was "the fourth most wanted gangster in Vancouver," Federal Crown Diba B. Majzub told Associate Chief Justice Austin Cullen. Sheck wants to be released on bail pending his full extradition hearing scheduled for January 2017. But Majzub told Cullen that Sheck should remain in

custody because the U.S. case against him is "very strong." He said Sheck is alleged to have been involved in 23 transactions averaging $300,000 each between 2007 and 2011. One of his associates went to U.S. authorities and became a confidential witness against the Surrey man, Majzub said. Sheck was involved in a scheme known as "double exchanges" where he would direct couriers across the U.S. to pick up money owed for B.C. pot and have it delivered to Los Angeles for cocaine purchases, Majzub said. "The conduct here is very serious in that it involves international money laundering in the order of millions of dollars for the purpose of facilitating cross-border drug trafficking," Majzub said. (...) In another meeting a few days later, "Mr. Sheck talked about a friend who needed $800,000 moved to the Dominican Republic. "He expressed concern that the Dominican Republic was cracking down on money laundering. And he also explained that his friend wanted the money picked up in Toronto and then wired to Afghanistan where it would potentially be used to fund terrorism," Majzub said. "So not only is Mr. Sheck directing large-scale money laundering transactions, he is also involved by his own admission in the funding of international terrorism." Vancouver Sun, A5 (Province)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Brothers convicted in B.C. drug case
Two brothers from Bellingham have been convicted of various charges after attempting to smuggle more than 29 kilograms of cocaine into British Columbia. The U.S. Department of Justice said 46-year-old John Brown Jr. drove to Los Angeles in November 2014 to pick up cocaine, valued at more than $2 million US. The department said Brown contacted his 38-year-old brother, Derrick Carter, to help in the smuggling operation before the pair recruited a cousin and another man from Surrey to carry the cocaine over the border in backpacks. It said Carter was stopped for speeding near the border by a sheriff's deputy and that U.S. Border Patrol personnel later spotted three people running north from the border. Emily Langlie, a spokeswoman from the U.S. Attorney's Office, said RCMP arrested the cousin and the Canadian man with three backpacks containing items including cocaine, camouflage gear and a firearm. Brown and Carter are scheduled for a sentencing hearing in October and face mandatory minimum sentences of 10 years to life in prison. Associated Press (Times Colonist, B5)

Lait diafiltré
Les producteurs laitiers sont parvenus à récupérer une partie des revenus perdus depuis que les grandes entreprises de transformation importent des États-Unis des protéines contenues dans le lait diafiltré. Ce procédé leur permet de baisser les coûts de production dans la fabrication de fromage et autres produits dérivés nécessitant des protéines laitières. Le président du Syndicat régional des producteurs de lait, Daniel Côté, affirme qu'il sera difficile pour les fermes laitières de combler en totalité les écarts de prix entre ce que les producteurs obtenaient avant l'affaire du lait diafiltré et ce qu'ils recevront après la signature de l'entente de principe à l'automne. L'intervention du gouvernement fédéral aux frontières aurait été nécessaire pour réussir à combler les pertes et surtout freiner l'hémorragie. (...)«Quand il est aux États-Unis, il s'agit d'un produit qui peut traverser la frontière sans aucun problème. Quand il est introduit dans les usines de transformation au Canada, le produit qui est un concentré peut redevenir du lait même si les inspecteurs du gouvernement savent qu'il s'agit d'un concentré. Il redevient du lait», reprend Daniel Côté. Le Quotidien, 8

Property issues holding back start of work on Gordie Howe Bridge
Delays in buying properties in Detroit, Michigan, could hold up construction of the proposed 3.2km Gordie Howe International Bridge that will link the US city to Windsor in Canada. A report by the Detroit Free press said that around 30 of the estimated 900 parcels of land in the city's Delray district could pose potential problems if owners resist selling the sites to the bridge's developers. The newspaper noted that Dwight Duncan, interim chair of the Windsor-Detroit Bridge Authority - the Canadian entity managing the project - said about 20 of 30 parcels belong to businessman Manuel (Matty) Moroun, owner of the 2.3km Ambassador Bridge that already spans the Detroit River. Wold Highways

City legal fees come in at $1.3M more than expected
The City of Windsor will likely spend $1.3 million more than budgeted on lawyers' fees this year - three times what was forecast. The extra legal bills mainly represent fallout from battles over the bridge, bingo

and the 2014 election. "We see that legal expenses are increasing in general," Mayor Drew Dilkens said Monday. "We see that in the claims being made, that the slip and falls are a little more aggressive. Where people used to say, 'It was my fault,' now people will look to the city for some compensation. (…)The city also paid more than expected in legals costs for its challenge to the Ambassador Bridge's application to build a twin span, as well as heading to the Supreme Court to battle the bridge on its assertion that the Canadian Transit Company need not follow city bylaws since it is a federal entity. Finally, the city paid extra to defend two challenges alleging improprieties with the 2014 municipal election. One election challenge was dismissed in court while the other is ongoing. Windsor Star, A1

CYBER SECURITY / CYBERSÉCURITÉ

DNC email hack: A look at the theory Russian operatives led attack to boost Trump's bid
Days after a massive leak of hacked emails threatened to spoil the Democratic Party's convention kickoff, political operatives and assorted experts continue to debate whether the attack was a Russian plot to boost Donald Trump's presidential bid. Donald Jensen, a resident fellow at the Center for European Policy Analysis and expert on Russia, says the potential motive is obvious. "Certainly the Kremlin prefers Trump, there's no question about that at all," he said (…) A cybersecurity firm the Democrats hired reportedly found traces on the party's network of at least two sophisticated hacking groups that have ties to the Russian government. In an interview with Democracy Now, Wikileaks founder Julian Assange refused to reveal the source of the emails, but said when it comes to the DNC, "there's lots of consultants that have access, lots of programmers." "And the DNC has been hacked dozens and dozens of times. Even according to its own reports, it had been hacked extensively over the last few years." In a later interview with NBC, Assange said there's "no proof … whatsoever" that Russian intelligence was responsible for the hack. The FBI announced Monday it's investigating. CBC News; Washington Post (Leader-Post, StarPhoenix, Vancouver Sun, Montreal Gazette, Edmonton Journal, Calgary Herald, Windsor Star, National Post, Ottawa Citizen); Globe and Mail; AFP (Le Nouvelliste); Canadian Press (Telegraph-Journal, Winnipeg Sun, Edmonton Sun, Toronto Sun, Kingston Whig-Standard, Calgary Sun, Ottawa Sun, Waterloo Region Record)

Courriels démocrates - "La publication de WikiLeaks n'est pas un "scoop"
Un article d'opinion dit « pour WikiLeaks de publier ces courriels ? WikiLeaks a besoin d'exister et de publier régulièrement. Mais je ne suis pas sûr que cette publication leur profite, ni sur le crédit ni sur la confiance que l'on peut accorder à leurs publications. Le problème est que, contrairement à d'autres lanceurs d'alerte comme Edward Snowden [l'ex-consultant de la National Security Agency (NSA) à l'origine des révélations sur le programme de surveillance de la NSA], WikiLeaks est dépendant de ses sources et surtout de la qualité des informations que des tiers lui apportent. Il y a eu violation des correspondances, mais il n'y a pas en contrepartie le bénéfice de la désignation d'un péril supérieur, qui justifierait la violation du secret des correspondances. De plus, même si ce n'est pas systématique, WikiLeaks a pris l'habitude de s'adjoindre les médias, qui venaient mettre en perspective et raffiner leur matière brute. Ici, il y a juste la mise en ligne de données, mais pas de travail éditorial autour. On peut s'interroger sur le fait qu'il n'y ait pas eu de média qui ait été mis dans la boucle. Ont-ils estimé que le jeu n'en valait pas la chandelle ?» Le Devoir, B5

LAW ENFORCEMENT / APPLICATION DE LA LOI

Ottawa man Abdirahman Abdi dies after confrontation with police
Abdirahman Abdi died on Monday afternoon, a day after a confrontation between him and police prompted a Special Investigations Unit probe into how the 37-year-old Somali-Canadian man suffered fatal injuries during his arrest. In a statement, the SIU said Abdi attempted to elude arrest and led police on a foot chase through Hintonburg in the Wellington Street West and Fairmont Avenue area on Sunday morning, the SIU said in a release. The SIU said police confronted a man outside 55 Hilda St. and that "at some point during the confrontation, the man suffered medical distress." The SIU -- a civilian oversight agency -- investigates cases resulting in serious injury, death or sexual assault when police are involved. The details around what happened between Abdi and police remain scattershot and incomplete. The

Ottawa police and SIU have said little because the investigation is ongoing. However, witness accounts have shed some light on the events that led to Abdi's death. Witnesses who spoke with Postmedia said the man was beaten by multiple officers as he tried to run into an apartment building on Hilda Street. "You can't go against five cops at once," said witness Asli Mohamed. "It was unnecessary." Witnesses also said Abdi lay unconscious on the ground for about 10 minutes minutes before paramedics arrived and began administering CPR. However, on Monday, Ottawa police Chief Charles Bordeleau said officers called paramedics 23 seconds after Abdi collapsed. He said officers also administered CPR. Postmedia News (Calgary Sun, Edmonton Sun, Winnipeg Sun, Toronto Sun, Ottawa Sun)

Memorial plaque to be unveiled Wednesday

A bronze plaque marking the death of RCMP Const. Sarah Beckett will be formally unveiled at the West Shore detachment on Wednesday. The plaque reads "In honour of the memory of RCMP Constable Sarah Anne Beckett, regimental # 51939, perished in the line of duty April 5, 2016." Beckett, a 32-year-old mother of two children, died after a pickup collided with her vehicle in the intersection of Peatt Road and Goldstream Avenue. The driver of the pickup was taken into custody, but released the next day without charges. An investigation is ongoing. Beckett's family will be in attendance at the ceremony along with Langford Mayor Stew Young. The gathering will be held in front of the main entrance of the detachment at 698 Atkins Ave. Times Colonist, A5

Slain man 'not intended target': NO CRIMINAL RECORD: Police believe Surrey shooting victim was case of mistaken identity

A Surrey man with no links to an ongoing gang conflict has been identified as the victim of a fatal shooting Saturday. Staff Sgt. Jennifer Pound of the Integrated Homicide Investigation Team said Monday that Jatinder "Michael" Sandhu, 28, may not have been the intended target of the killer or killers who sprayed the vehicle he was in with gunfire about 10:20 p.m. on July 23. She said the shooting in the 14300-block 90A Avenue is believed to be part of an ongoing gang conflict involving street-level players in the drug trade. (...) "While the injured male does not possess a criminal record, he is related to an individual involved with the conflict and police continue to look into his direct involvement and/or connections to the current conflict," Pound said. She said investigators have done extensive canvassing in the area "and information from the public continues to be processed." "A suspect was witnessed fleeing the scene in a grey or silver Infiniti SUV (unknown year) and IHIT is asking for the public's assistance to locate this vehicle," Pound said in a news release. "Police would like to remind individuals that just because you're not directly involved in criminal activity or violence as a result of conflict, does not mean that you're immune to the associated risks. Province, A6 (Vancouver Sun)

Couple charged with attempted murder

Two Reginans appeared in court accused of a string of serious offences after RCMP officers were shot at during an evening of high drama near Punnichy. Kristin Marie Lerat, 32, is charged with attempted murder, fleeing from police, dangerous use of a motor vehicle, robbery with a firearm and other offences. Among other charges, Keli William Stonechild, 24, is accused of attempted murder as well as operating a vehicle while impaired and failure to comply with a recognizance. The sequence of events began after the Regina Police Service was called to a morning assault at the 1300 block of King Street on July 19, in which a 26-year-old woman was hospitalized with non-life threatening injuries. With police concerned that weapons were in the home, a SWAT team cleared the block but the house was found to be unoccupied. The next day at around 8:40 p.m., city police alerted the RCMP that a vehicle containing armed occupants was northbound on Highway 6 having fled an investigation. Regional RCMP teams then mounted a search for a white Dodge Caravan. After a motorist on Highway 6 north of Southey reported a gun being fired into a field from a matching van, at about 9:50 p.m. the Dodge was spotted in Punnichy, with local RCMP giving chase. Speaking Monday, Sgt. Craig Cleary of Punnichy RCMP described the scene's final moments, which included an alleged attempt to carjack a 65-year-old man, who suffered minor injuries after a long-barrelled firearm was drawn, but not fired. Star Phoenix, A3

Calves stolen from barn in Freetown

The East Prince RCMP is requesting the public's assistance regarding a theft of two calves that occurred overnight Saturday. The animals were taken from a barn on Route 8 in the Freetown area. The owner advised RCMP that a rope, which secured a fence on the property, was untied. "It appears the suspect

(or suspects) entered the property through an alternate driveway, and footprints and tire marks were located leading to the barn," said a statement issued Monday by the RCMP. "It is not something we see a lot of," said S/Sgt. Kevin Baillie. "The gentleman who owns them put the cows in the barn around 6 (p.m. Saturday), came out (Sunday) morning to feed them. The barn door was shut as it was the night before, but two calves were missing. "He went to a fence that leads out to a field, an alternate driveway, and the rope that secured the fence was not tied the way it is normally tied. "He noticed footprints and tire tracks," said Baillie. "We are quite confident they were stolen," he said. "It wasn't a case of them just getting loose in the barn." He said there is no bad blood among neighbours, no history of conflict, no land disputes. "There is nothing that could be a possible motive," said Baillie. Guardian, A3

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Inmate dies at Collins Bay institution
Correctional Service Canada has released a report on the death of an inmate. Christopher Leach, an inmate at Collins Bay Institution died at Bath regional hospital last week. He was 58 and had been serving an indeterminate sentence since September 19, 1997 for second degree murder. As in all cases involving the death of an inmate, the police and the coroner have been notified, and Correctional Service of Canada will review the circumstances. Napanee Today (2016-07-25)

Antigonish man who killed 2 teens while driving high granted parole
A Nova Scotia man serving a six-year prison sentence for killing two teenage boys in Antigonish County while driving impaired has been granted parole. On Nov. 24, 2011, William Lionel Edmund Byron Fogarty was driving a car on Highway 4 in Tracadie, N.S., when it crossed over the centre line and collided with another vehicle. The other car's driver, 16-year-old Kory Mattie, died at the scene. Seventeen-year-old Nicholas (Nico) Landry, a passenger in the vehicle, died of his injuries later in hospital. A drug test revealed Fogarty had methadone, several prescription drugs and Valium in his system at the time of the crash. Fogarty was convicted of two counts of dangerous driving causing death and two counts of impaired driving by drugs causing death. He was sentenced to six years in prison, less time served, in September 2013. Last week, the Parole Board of Canada granted Fogarty's parole. He will first be released on a six-month day parole program, and will live in a community-based residential facility. Fogarty will be released on full parole to live with family members once the six-month day parole is successfully completed. "The Board is of the opinion that, if released on day parole, you would not present an undue risk to society by reoffending, and that such a release would contribute to public protection by facilitating your reintegration into society as a law-abiding citizen," said parole documents released by the Parole Board of Canada. CBC News

Man exposes himself in Brunswick Square
A man was arrested Friday afternoon in Brunswick Square after exposing himself to a female sales clerk. Saint John Regional Police received a call from Brunswick Square security when the man who had committed the act the night before was spotted in the mall. The 33-year-old, who was on parole, was arrested at 2:41 p.m. on Friday. His parole was revoked. He was transported to provincial jail on a warrant and was released to appear in court on charges of committing an indecent act. Telegraph-Journal

Second sex assault gets 40 months
Jeffrey Lee Hogg sentenced by Provincial Court Judge Nancy Orr to 13 months longer than a similar conviction in 2012. Orr said the need for deterrence is "much more significant" in this case because Hogg was still on parole for second offence. The Guardian

Les Hells «purs et durs» de retour
«Les Hells Angels deviendront l'organisation criminelle la plus importante au Québec en 2016 et au cours des prochaines années», ont récemment confié à La Presse des sources policières spécialisées dans la lutte contre le crime organisé. Les membres québécois de cette organisation en ont peut-être donné un avant-goût en fin de semaine, dans la région d'Ottawa, alors qu'ils se sont rendus nombreux au Canada Run, le rassemblement de tous les Hells Angels canadiens qui a lieu tous les quatre ans, en alternance, dans les provinces canadiennes. Selon nos informations, au moins une trentaine de membres en règle

des sections de Montréal, South et Trois-Rivières ont pris part à l'événement, en compagnie de membres de leurs principaux clubs-écoles ou supporteurs : Red Devils, Devils Ghosts, Deïmos Crew et Beast Crew. L'absence de deux influents membres en règle Mario Brouillette et Michel Lajoie-Smith a toutefois été remarquée. Brouillette, que la police a déjà considéré comme un chef potentiel pour l'organisation au Québec, a déclaré devant les commissaires aux libérations conditionnelles avoir quitté les Hells Angels. Quant à Lajoie-Smith, certaines informations veulent qu'il se soit retiré lui aussi. Mais dans les deux cas, la police les considère comme faisant toujours partie de l'organisation, que ce soit avec des couleurs dans le dos d'une veste ou non. La Presse (Le Droit, 5, Le Nouvelliste, La Tribune, Le Quotidien)

Dauphin Correctional Centre inmate death under investigation
Corrections officials won't say how a man in custody at the Dauphin Correctional Centre died earlier this month. The inmate's name is not being released but Manitoba Corrections said he died July 14 and his family has been notified. "For privacy reasons, we are unable to provide additional information about the deceased person," Manitoba Corrections said. "We have launched an internal review and reported the death to the Office of the Chief Medical Examiner, as required by law," a spokesperson said. "We have also offered support and counselling to affected offenders and staff at DCC." It has not been made clear how the man died. RCMP have ruled out any likelihood it was the result of a crime. "Our investigation so far has not revealed any criminality to this incident, and no charges are expected," said RCMP spokesperson Sgt. Bert Paquet. Manitoba Corrections has launched an internal investigation. A spokesperson said there has not been a death at the facility in at least 28 years, which is as far back as records were readily available. CBC News (2016-07-25)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Sudbury safer, stats indicate
When it comes to crime, it appears Greater Sudbury is bucking a national trend. Last week, Statistics Canada released police-reported crime statistics for 2015. For the first time in 12 years, the Crime Severity Index and Crime Rate increased in Canada. Ontario's Crime Severity Index increased by 2 per cent; however, Greater Sudbury had the second largest percentage decreases in Ontario in both the crime severity index (-3 per cent) and crime rate (-5 per cent) in 2015. "The Greater Sudbury Police Service cannot take sole credit for the decrease in the crime severity index and the crime rate here in Greater Sudbury," Greater Sudbury Police Chief Pedersen said in a release. "It is a team-based approach to safety, security and wellness that could not be achieved without the support of our community."The citizens of the City of Greater Sudbury continue to demonstrate a commitment to community safety and well-being by showing respect, vigilance and tranquility." The statistics are based on the crime severity index and crime rates broken down by province and by census metropolitan area. Sudbury Star

Les 150 ans du Canada risquent de coûter cher à la police d'Ottawa
Le Service de police d'Ottawa prévoit terminer 2016 avec un budget équilibré malgré les pressions fianncières causées par le nombre élevé de meurtres et de fusillades dans les six premiers mois de l'année. Mais 2017 s'avère déjà un défi, alors que les nombreuses activités entourant les festivités du 150^{e} anniversaire de la Confédération lui entraîneront d'importantes dépenses. «Si les festivités de la fête du Canada durent deux semaines, ce sera un énorme défi pour nous, un défi très coûteux pour nous», a illustré le chef de la police d'Ottawa, Charles Bordeleau, lundi, devant le comité des finances et de la vérification des services policiers de la Ville d'Ottawa. Le gouvernement fédéral verse une somme de 2 millions $ par année au Service de police d'Ottawa (SPO) afin d'éponger certaines dépenses encourues lors d'événements comme la fête du Canada, le 1er juillet. Le problème pour le SPO est qu'il ne connaît pas encore toutes les activités que le fédéral organise dans la capitale, des activités qui seront différentes de celles que prévoit Ottawa 2017, avec qui la police travaille présentement pour se préparer dans sa gestion des effectifs. «Tout dépendamment de la grosseur et de la fréquence des événements, nous pourrions devoir examiner la possibilité d'imposer des restrictions additionnelles sur les congés de nos membres en 2017», a prévenu le chef Bordeleau. La Presse (2016-07-25)

Northern plights

An editorial states, "The 134 members of Canada's largest First Nations police force are threatening to go on strike in August, and the ultimatums are flying. Alvin Fiddler, Grand Chief of the Nishnawbe-Aski Nation, says he will disband the Nishnawbe-Aski Police Service (NAPS) unless it is properly funded by the Ontario and federal governments, which hold the purse strings. He wants officials from both governments at the bargaining table. But Ontario and Ottawa are balking. Officials from both levels of government say the labour dispute is between the officers' union and their employer. They have no interest in taking part in the negotiations. But they add that they are prepared to have the Ontario Provincial Police step in to provide coverage, should NAPS officers walk off the job. The Chief's demand that Ottawa and Ontario get involved directly is reasonable. NAPS was created by the federal and provincial governments in 1994 to provide culturally sensitive policing to 200,000 square kilometres of territory in northern Ontario. The force's 134 officers and 30 civilian employees serve 23,000 people across 35 remote communities, many of which are afflicted by chronic alcohol and substance abuse and concomitant problems of family violence and suicide. NAPS officers often patrol alone, a dangerous practice. They work out of plywood shacks heated by oil drums. There is no running water in some of these so-called detachments. Prisoner cells in many are made of plywood. Two prisoners burned to death and one officer was injured when a detachment caught fire in 2006. Ottawa and Queen's Park promised in the past to improve conditions but did nothing." Globe and Mail, A10

Political will needed to rein in price of policing

An editorial states, "When the Winnipeg Police Service released its 2015 annual report last week, the headline and key concern it reported was obvious - the crime rate had climbed for the first time in a decade. There was an equally or even more important trend hiding in plain sight on the report's first page. It was a dollar figure that, when compared with a decade of declining crime stats, put last year's $261-million cost of supporting public safety through our police service in a personal perspective. In 2005, the so-called "tax supported cost" of policing was $195.40 per citizen. Last year, it was $363.45. That's with a 2015 population of 718,000, and a full 67,000 citizens more to be factored into the per capita cost since 2005. It's not as if Winnipeg is the only Canadian city with a police budget problem. Three years ago, the per capita cost of policing in Toronto was $352 , about $11 less than Winnipeg's this year. Ballooning police budgets - Winnipeg's is $280.7 million this year - are a well-documented national problem. So, for that matter, is the price of the fire and paramedic service, which amounted to a $190 million allocation for this year. Last March - when the 2016 budget was being debated - politicians finally signalled they were ready to begin addressing the out-of-control costs of policing in our city. There was serious talk of police layoffs. No one wanted that, and with some non-core cutting - $1 million for the introduction of body-cameras, for example - the police budget was passed and the service's 1,916 total cop and staff body count - up by more than 350 since 2005 - held steady." Winnipeg Free Press, B1

New police must count

An editorial states, "Facing a massive city hall agenda before summer break, councillors had myriad topics to wade through Monday, such as the never-ending secondary suite issue, transit passes and the ethics report into the mayor's comments on Uber. But one item that took no time at all was the Calgary Police Service's request for 50 more officers at a cost of $7.5 million. The manpower was proposed to be funded by the increase in revenue that has occurred since the provincial government raised fines for speeding, running red lights and other offences in the spring of 2015. With soaring city crime figures, which coincidentally came out last week, it was a hard argument to reject. And council didn't, voting unanimously to hire the crimefighters. And that's what we hope they will be - officers assigned to tackle the burgeoning thefts and robberies and break and enters afflicting our city. We expect they won't be out en masse nabbing speeders to generate more revenue to pay for even more police in a self-fulfilling scenario. We expect these additional officers on the street will make a difference in the numbers and types of crime being committed in our city. Statistics Canada numbers released July 20 show that a growing number of thefts - including robberies and stolen cars - has pushed the city's Crime Severity Index (or CSI), to its highest level since 2009. That increase, at 29 per cent, is the largest of any municipality across the country. Crime in Calgary had dropped for 11 consecutive years before 2015. The police attributed the numbers to a struggling provincial economy and the prevalence of highly addictive drugs such as fentanyl and methamphetamine. Whether it's due to addicts needing to feed their addiction or homeless individuals needing to feed themselves, the crimes on the rise affect us all. Police Chief

Roger Chaffin is correct in saying, "These are the crime trends that tend to affect public confidence.'" Calgary Herald, A9

Pokemon Go can be good for your mental health
An opinion piece states, "We're hitting the middle of the summer this week. July is almost over and we're heading into the long hot days of August. The kids are having fun, playing the new Pokemon Go game, getting out and about in groups, exploring the city. But all is not as well as it seems. Last week, the Centre for Addiction and Mental Health reported that one-third, 34 per cent, of Ontario students experience increased levels of psychological distress. That's an estimated 328,000 kids. That's a lot of kids. And more disturbing is that this is a 10 per cent increase over the 2013 number. The situation, it seems, is getting worse. (…) Social media has had a huge impact on society. Over the past 10 years, we've seen technological innovations that have put a computer in almost everyone's pocket. The development of applications has exploded as developers find ever new and amazing ways to make our lives easier and keep us constantly entertained. Got a problem, I bet there's an app for that. Bored? Angry Birds, Candy Crush, and Farmville to the rescue. But the downside is not pretty. Dr. Hayley Hamilton, co-investigator of the study, highlighted the connection between time spent on social media and the increased risk of cyberbullying. We've seen the real life impacts over the past few years in the cases of Rehtaeh Parsons and Amanda Todd, to name just two Canadian kids who killed themselves over cyberbullying. The number of American examples is much greater." Hamilton Spectator, A13

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Road warriors: Epic journeys raise funds, awareness
Mark Quattrocchi rode up a rough, dusty path into the small village of El Trapiche on a bicycle laden with bags. The 28-year-old Ontario teacher had pedalled more than 20,000 kilometres from China to Nicaragua. A group of local boys on bikes watched the stranger approach, and fell in beside Quattrocchi as he headed down the last hill. (…)Then there's Gwich'in First Nation native Brad Firth (who is also known as Caribou Legs.) He is running along the Trans-Canada Highway from Vancouver to St. John's in an epic effort to get more people to pay attention to the issue of missing and murdered indigenous women. Quattrocchi says by the time he had biked through China, he had raised enough to build a school room. Rather than stopping at the border, he plotted a new route that allowed him to visit all of the other communities in India, Kenya, Ecuador and Nicaragua where he wanted to build school rooms. REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Premiers push for pot policy
An opinion piece states "Canada's premiers are signaling they need swift action from Ottawa on recreational marijuana legalization to keep cannabis away from kids, motorists and criminals. With a federal panel set to deliver a report this November that will be the blueprint for legislation next spring, the provincial leaders say time is of the essence. "There's real concerns, there's concerns on so many levels," Manitoba Premier Brian Pallister said Thursday at the annual Council of the Federation meeting. "I would hope that we can develop a national approach, a co-operative approach, rather than each of us going in our own separate ways. (…) "Young people should not have access to marijuana before they're of age. People should know - if they're consumers of it - that the product that they're getting is what they expect and the criminal element must be kept out," Clark said. "Those are the three things I'm most concerned about. We need to see the federal legislation. Then once we get through that we will build a system … that complies completely, but it will be focused on safety." Guardian

Let lounges sell pot like bars sell alcohol, forum told

Marijuana bars that sell pot rather than alcohol should be licensed to operate in Toronto, a city councillor's forum on marijuana distribution heard Monday. Coun. Jim Karygiannis, who represents Ward 39 Scarborough-Agincourt, called the meeting to give frustrated medical marijuana distributors and their supporters a chance to air their thoughts, after controversial police raids in May led to hundreds of charges against owners and employees at 43 Toronto marijuana dispensaries. (...) The federal government has promised to legalize and regulate recreational marijuana use in 2017. But some dispensaries are already selling marijuana from storefront operations, mainly to medicinal users. CBC News (2016-07-25)

PUBLIC SERVICE / FONCTION PUBLIQUE

Opposition parties want probe of Phoenix 'debacle'

As the federal government was scrambling to make sure hundreds of civil servants get paid this week, the opposition parties joined forces Monday to call for emergency hearings into the government's problem-plagued new payroll system. Newly released documents from one of the government's biggest departments show that questions about "critical defects" in the so-called Phoenix system were going unanswered just weeks before its scheduled launch. Both the Conservatives and New Democrats demanded the government operations committee be recalled to talk about how Phoenix has resulted in tens of thousands of civil servants being improperly paid -or not paid at all. "I would hope that Liberal committee members would welcome an opportunity to examine what lead to this fiasco, why it has taken so long to get clear answers, and why we have yet to receive clear timelines for resolution of numerous problems," NDP public works critic Erin Weir said in a statement. (...) "We are truly disappointed to see the Liberal members of this committee ignore our request to convene an emergency meeting," said Conservative public services critic Steven Blaney. "After reaching out to their offices, and receiving no response, it is clear that this issue is not a priority for them." Prime Minister Justin Trudeau said last week that the clerk of the Privy Council, which advises him and his cabinet on government operations, would head up efforts to fix the system, which has left more than 80,000 civil servants facing pay issues. Wife of Calgarian held captive in Turkey allowed brief visit

Friends and relatives say a Calgary man being detained in Turkey has been allowed to see his wife, but the visit was too brief to glean much information about how Davud Hanci is faring and what might happen next. Hanci's wife, Rumeysa, called from a police station in Turkey on Monday to say she was able to see her husband for between 30 seconds and a minute, said her brother Selman Durmus, who lives in Toronto. "All she could ask is, 'How are you?' to my brother-in-law and that was pretty much it," said Durmus, relaying what another sister, who also lives in Toronto, told him about the call. "He said he was doing all right. He was stressed out. That was pretty much it." Hanci, an imam who provides spiritual counselling to prisoners, is being held on accusations he was involved in a July 15 coup attempt in Turkey, Durmus said. Pictures are being circulated in Turkish media showing a man purported to be Hanci with U.S.-based cleric Fethullah Gulen, a critic and former ally of Turkish President Recep Tayyip Erdogan. "They do look alike, but they're not the same person at all," said Durmus. Hanci's family members are waiting to hear from Turkish prosecutors about what happens next. Hanci, his wife and two sons, 8 and 9, left for Turkey on July 7 to visit his ailing father. Had the father not been so gravely ill, it's likely they would have opted to take the trip another time, given the political instability in the country, said Durmus. He fears for the safety of his sister and nephews if they stay in Turkey. He said Canadian government officials have told the family they can help get Hanci's wife and children out of the country, but cannot provide security while they're there. A spokeswoman for Global Affairs said in an email Saturday night that the department is "aware of a Canadian dual-citizen detained in Turkey" and that Canadian consular officials are ready to assist if needed. Canadian Press (Calgary Herald, A10, Winnipeg Sun, Calgary Sun, Daily Gleaner)

Canadien détenu
L'ambassadeur de la Turquie à Ottawa a été convoqué à une rencontre avec les autorités canadiennes à la suite d'informations selon lesquelles le gouvernement turc a arrêté un homme de Calgary relativement à la tentative de coup d'État avorté dans ce pays. Des médias turcs ont soutenu que Davud Hanci a aidé à orchestrer la tentative de coup du 15 juillet, au cours de laquelle plus de 200 personnes ont été tuées. Des photos semblant montrer M. Hanci avec Fethullah Gülen, un religieux musulman établi aux États-Unis accusé par le régime du président Recep Tayyip Erdogan d'avoir organisé le soulèvement, se retrouvent un peu partout dans les journaux en Turquie. Presse canadienne (Acadie Nouvelle, 15, Le Nouvelliste); Canadian Press (Ottawa Citizen, Vancouver Sun)

INTERNATIONAL

Church hostage situation in France ends with priest, 2 attackers dead
Two attackers killed a priest with a blade and seriously wounded another hostage in a church in northern France on Tuesday before being shot dead by French police. Another person inside the church was seriously injured and is hovering between life and death, Interior Ministry spokesman Pierre-Henry Brandet said. Police managed to rescue three people from the church in the small northwestern town of Saint-Etienne-du-Rouvray, Brandet said. The hostage-taking occurred during morning mass, he told reporters. There were no immediate details on the identity or motives of the two assailants, but the investigation was handed to the anti-terrorist unit of the Paris prosecutor's office. Associated Press (CBC News, CFRA News); Daily Mail

Une attaque au couteau fait 19 morts
Dix-neuf personnes ont été tuées et 25 blessées lors d'une attaque au couteau dans un centre pour handicapés mentaux au Japon, perpétrée aux premières heures mardi par un ancien employé. «Les médecins ont confirmé la mort de 19 personnes», a déclaré à l'AFP un porte-parole du département des pompiers. Parmi les blessés, 20 sont gravement touchés, a-t-il précisé. La police avait fait état un peu plus tôt de plus de 10 morts. Un homme âgé d'une vingtaine d'années s'est rendu à la police après 3 h mardi (18 h GMT lundi), disant être l'auteur de la tuerie, a indiqué à l'AFP un porte-parole de la police de la préfecture de Kanagawa, dans la région de Tokyo. «Nous sommes en train d'essayer de déterminer les détails de l'affaire», a ajouté le porte-parole. La police avait auparavant reçu un appel du centre les alertant de l'agression, qui s'est déroulée à Sagamihara, une ville de plus de 700000 habitants située à une cinquantaine de kilomètres de Tokyo. Le meurtrier présumé, identifié comme Satoshi Uematsu, 26 ans, a affirmé être un ancien employé, selon l'agence de presse Kyodo. Agence France-Presse (Le Droit, 3, Le Soleil, Voix de l'Est, Le Devoir)); Associated Press (Times Colonist, B5, CBC News); Canadian Press (Cape Breton Post, B4)

German officials vow more checking of refugees after attacks
Top security officials in Germany called Tuesday for tougher security screening of asylum-seekers and also announced that more police officers will be hired following four attacks in the country — two of them claimed by the extremist ISIS group. Horst Seehofer, the interior minister of Bavaria — where three of last week's attacks took place — told the daily Sueddeutsche Zeitung Tuesday: "We must know who is in our country." Thomas Strobl, the interior minister of Baden-Wuerttemberg — where a woman was killed by a Syrian attacker Sunday — also demanded a tougher stance toward asylum-seekers. "Those who abuse the right to hospitality must go back to their home countries — make no mistake about it," Strobl told Funke media group. Three of the attacks were carried out by recent immigrants, rekindling concerns about Germany's ability to cope with the estimated 1 million refugees registered entering the country last year. Associated Press (CBC News); Bloomberg (Toronto Star, A4)

Brazil police arrest last suspect in Olympics terror case
Police arrested the last suspect sought in the case of a group of Islamic State sympathizers who allegedly discussed attacking the Olympics in Rio de Janeiro. The Federal Police said in a statement late Sunday that the man was caught in the city of Comodoro, in the central west region of Brazil. Police said he was taken to a federal prison but didn't reveal his name, citing security reasons. The anti-terror probe was

announced by authorities last week when 10 Brazilians were arrested in different states of Brazil. Another man turned himself in on Friday. Justice Minister Alexandre de Moraes said some of the men had pledged allegiance to the IS without having any personal contact with members of the terrorism group. The suspects also didn't know each other and only communicated via WhatsApp and Telegram. Moraes said the group was amateur and ill-prepared. The closest it got to planning an attack was an alleged attempt via email to buy an AK-47 assault rifle in a store in Paraguay. Associated Press (Waterloo Region Record, Globe and Mail) (2016-07-25)

Did Saudi Arabia play role in 9/11?

An opinion piece states, "In the Middle East, it can be difficult to tell the difference between a friend and an enemy. For decades, the United States treated Saudi Arabia as a friend and ally, while the Saudis treated America as an enemy. A newly declassified report highlights this betrayal. In 2002, the United States Congress released its inquiry into the 9/11 attacks. But for 14 years, it kept 28 pages hidden from the public. Those pages were finally released last week. They outline possible connections between al-Qaida terrorists, Saudi spies in the U.S. and members of the Saudi royal family. While the Obama administration and Saudi Arabia's rulers insist the pages provide no conclusive evidence of official Saudi involvement in 9/11 - a view repeated by mainstream media - the report itself offers a somewhat different perspective." Winnipeg Sun, A9

Up to 100 homes evacuated near Vernon due to wildfire
Vernon Fire and Rescue Services says it is battling a wildfire in the Adventure Bay area near the city on the west side of Okanagan Lake above Tronson Road. Captain Trevor Keenan says RCMP officers are assisting in getting residents from 100 homes out of the area. CBC News

Crews dig up breached oil pipeline
The Saskatchewan government says the breach that leaked up to 250,000 litres of oil and other material into a river earlier this month has finally been found, but word on what caused it will have to wait. Laurie Pushor, the deputy minister of the economy, says the section of the Husky Energy pipeline where the spill

occurred into the North Saskatchewan River near Maidstone, Sask. on July 20 was dug up Friday. Canadian Press (Edmonton Sun, A7)

Storm wallops city again
Another storm rolled through Edmonton Saturday evening flooding Whitemud Drive and stranding motorists for the second time this week. The storm also forced the early closure of the Heritage Festival. K-Days, meanwhile, pushed on despite the weather... Emergency services were deployed to help stranded motorists under both the 106 Street and 111 Street overpasses on Whitemud Drive and portions of the highway were closed as a result of the flooding around 6 p.m. Edmonton Sun, A5

NATIONAL SECURITY / SÉCURITÉ NATIONALE

LE QUÉBEC EST UN MODÈLE À SUIVRE
Une sommité française en matière de lutte contre la radicalisation soutient que le Québec est un modèle à suivre en la matière pour la France, ciblée par de nombreux attentats récemment. «Le Québec et le Canada sont en avance sur la France, notamment en ce qui concerne la réflexion et les indicateurs d'alerte. Ils sont aussi en avance sur le processus de déradicalisation», avance Dounia Bouzar, une anthropologue française et fondatrice du Centre de prévention contre les dérives sectaires liées à l'Islam (CPDSI). Agence QMI (Journal de Québec, 16)

Snowden made Canadian spies review contractor policy
When Edward Snowden begin leaking secrets about mass surveillance in the United States, Canada's electronic spy agency quietly wondered if their security screening was sufficient to stop a copycat. Newly released documents show some of the behind-the-scenes actions taken by the Communications Security Establishment (CSE) three years ago, when contractor Snowden first pulled back the curtain on the West's pervasive mass surveillance capabilities. Toronto Star, A4

Canada's electronic spies revealed
EONBLUE: The Communications Security Establishment's EONBLUE program tapped into the physical infrastructure of the Internet, collecting data at real-world choke points, according to documents published by Der Spiegel newspaper. The program reportedly allows CSE to collect vast amounts of information, as well as conduct cyberdefence and potentially offensive actions. Levitation: Another tool in CSE's mass surveillance box, Levitation tracked between 10 million and 15 million downloads and uploads to popular file-sharing sites per day, according to documents reviewed by CBC. Of the hundreds of millions of interactions tracked, CSE found approximately 350 "interesting downloads" per month, the outlet reported. Toronto Star, A4

'They were out of their league'
A retired RCMP inspector who helped develop the 'Mr. Big' sting tactic in B.C. believes the officers in the Canada Day terror probe were "out of their league" while investigating John Nuttall and Amanda Korody. "The police that were engaged in this particular investigation never had the experience to be running something of this nature," former Mountie Al Haslett said. "They were not experts in undercover work and they were out of their league." Nuttall and Korody were arrested in July 2013 as part of a police sting after planting what they believed were pressure-cooker bombs at the B.C. legislature on Canada Day. Canadian Press (The Province, A4)

Impact on RCMP unclear after entrapment ruling in B.C. terror trial: lawyer
It's unclear what the impact on law enforcement will be in the wake of a landmark court decision that slammed the RCMP for investigative methods it used during an elaborate undercover operation into two terrorist suspects, a legal expert says. Micheal Vonn of the B.C. Civil Liberties Association said police would do well to reconsider their anti-terrorism tactics after Friday's B.C. Supreme Court ruling tossed out guilty verdicts against John Nuttall and Amanda Korody. Canadian Press (Times Colonist, A6; Ottawa Sun)

Des méthodes de la GRC remises en question
Le jugement rendu vendredi reprochant à des agents de la Gendarmerie royale du Canada (GRC) d'avoir piégé un couple pour que celui-ci soit ensuite accusé de terrorisme créera un précédent qui, selon plusieurs experts, demeure vague. Le directeur général de l'Association des libertés civiles de la Colombie-Britannique, Micheal Vonn, estime que la police devrait reconsidérer ses tactiques antiterroristes. Presse Canadienne (Le Soleil, 16)

Syrian refugees

Of course, officials screen the adult refugees who pass, but it is their children who may grow up to be indoctrinated by radical Islam. After all, Jihadi John, who was killed last November by an American drone in Syria, was raised in Britain, and many of the Toronto 18 terrorists were born in Canada or immigrated here as children. Let us also not forget the hundreds of millions of dollars..." Toronto Sun, A19

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Major investigation into cocaine smuggling from Mexico to Canada brings arrests
Mounties say they have arrested people from Manitoba and Ontario after a two-year investigation into a criminal group moving large amounts of cocaine into Canada from Mexico. RCMP said during the course of their investigation, they seized more than two kilograms of cocaine. Times Colonist, A8

L'homme qui fuit
Marie-Hélène Girard croyait marier un juriste spécialisé en droit pénal international. C'était plutôt un homme en fuite, soupçonné d'avoir enlevé sa propre fille au Guatemala. Comment les autorités canadiennes ont-elles pu laisser filer Carlos Arnoldo Reyes Rivas aussi longtemps ? Marie-Hélène Girard avait des idéaux plein la tête. En ce mois de septembre 2009, elle rentrait d'un voyage au Guatemala et voulait s'impliquer pour ce pays d'Amérique latine. Alors, elle a cogné à la porte d'Amnistie internationale, à Montréal. C'est là qu'on lui a présenté Carlos Reyes, coordonnateur pour le Guatemala au sein de l'organisme de défense des droits de l'homme... Carlos Arnoldo Reyes Rivas était cultivé, séduisant et doté d'une intelligence exceptionnelle. Avocat spécialisé en droit pénal international, il était observateur de l'ONU au procès du criminel de guerre rwandais Désiré Munyaneza. Il côtoyait des professeurs de renom de l'UQAM, de McGill et de l'Université Laval. Il était le père dévoué d'une fille de 11 ans, Michelle. Pour couronner le tout, il était le richissime héritier d'oligarques guatémaltèques. Tout le monde y a cru. Les militants d'Amnistie, trop heureux de pouvoir compter sur le travail bénévole d'un tel cerveau. Les juristes québécois, impressionnés par la feuille de route de leur distingué confrère. Et Marie-Hélène Girard, bien sûr. Conquise par ce brillant humaniste, elle lui a passé la bague au doigt huit mois après l'avoir rencontré, le 8 mai 2010. Ce jour-là, elle ne se doutait pas que le piège tendu par Carlos venait de se refermer sur elle ; qu'en l'épousant, elle avait aidé un présumé criminel, recherché par la police guatémaltèque, à fuir la justice de son pays ; que l'Agence des services frontaliers du Canada (ASFC) était à ses trousses ; que la GRC faisait enquête pour enlèvement d'enfant ; que d'autres femmes étaient tombées dans ses filets. La Presse (Le Soleil, 18)

Attrape-moi si tu peux
Ciudad de Guatemala, Guatemala. Carlos Arnoldo Reyes Rivas est né le 11 décembre 1969, à Guatemala. Il a été élevé dans un quartier très modeste. Sa mère avait réussi à l'inscrire dans une école située dans un secteur plus riche de la capitale. Mais le jeune Carlos avait honte de ses origines et s'était inventé un personnage de riche héritier auprès de ses camarades, selon son ancienne femme, la Française Isabelle Auclair. Le couple a eu deux enfants au Guatemala : Michelle et Nicolas... Carlos Reyes a demandé le statut de réfugié lors de son arrivée au Canada, le 8 septembre 2002. Le processus s'est étiré pendant des années. Il avait épuisé tous ses recours lorsqu'il s'est marié, en 2010, avec Marie-Hélène Girard, qui a accepté de le parrainer. C'est ainsi que Carlos Reyes a obtenu sa résidence permanente en juin 2013_ tout en étant visé par un avis d'expulsion de l'Agence des services frontaliers du Canada (ASFC). La Presse, 2,3

Que font les autorités ?
Carlos Arnoldo Reyes Rivas a obtenu sa résidence permanente au Canada en juin 2013, alors même qu'il était visé par une mesure de renvoi dans son pays d'origine, le Guatemala. Comment expliquer cette incohérence ? « Le problème, c'est que personne ne se parle, dit Marie-Hélène Girard, qui a mené sa propre enquête sur son ex-mari. Un tas d'organismes publics ont des dossiers contre Carlos, mais ne se partagent pas l'information : l'Agence des services frontaliers du Canada, Citoyenneté et Immigration Canada, la GRC, le SPVM_ » Dans ce dossier, Marie-Hélène Girard a eu l'impression que les différents organismes « ne connaissaient pas toute l'histoire » au moment de rendre leurs décisions. Un travail en vase clos qui semble avoir joué en faveur de Carlos Reyes. Voici les principales étapes de son parcours au Canada. La Presse, 2, 5

Cross-border co-operation needed to halt march of opioid drugs
A letter to the editor states, "In 2011, there were six. Only five years later, and there are 274. That's the number of lives lost to the deadly drug fentanyl last year in Alberta. With an increase of nearly 46 times the amount of deaths, we are seeing a public health crisis impact every community in our province. Alberta is leading the nation in the fight against opioid drugs. The Progressive Conservatives were strong advocates for additional funding for the Alberta Law Enforcement Response Team (ALERT) that cracks down on illicit drugs flooding our communities. I also received unanimous support for Bill 205, the Pharmacy and Drug Amendment Act, 2016. This bill regulates the ownership of pill presses used to create fentanyl tablets..." Calgary Sun, A16

CYBER SECURITY / CYBERSÉCURITÉ

Cyberattaque contre des organismes publics
Les services russes de renseignement ont annoncé samedi avoir mis au jour une attaque informatique «planifiée» visant à espionner une vingtaine d'organisations, dont des agences publiques et industries militaires. Le FSB, l'héritier du KGB soviétique, explique avoir détecté des cas d'infection par un logiciel malveillant «destiné au cyberespionnage dans les réseaux informatiques d'environ 20 organisations sur le territoire de la Russie». Agence France-Presse (Journal de Montréal, Journal de Québec)

Mountie injured in traffic stop
A Mountie was sent to hospital with minor injuries and three police cruisers damaged when Blackfalds RCMP tried to stop a stolen pickup truck in the central Alberta town. RCMP received a tip from the public on Thursday afternoon that a black Dodge Ram previously reported stolen in Red Deer was parked in an alley behind a home in Blackfalds. Three RCMP cars attempted a traffic stop. Postmedia Network (Edmonton Sun, A6; Calgary Sun)

Les Hells Angels encore une fois à Saint-Gédéon
Lors du passage du Progrès-Dimanche en début d'avant-midi, un barrage policier était érigé comme l'an dernier près de l'établissement hôtelier, dans le rang des Îles. Plusieurs patrouilles de la MRC Lac-Saint-Jean Est de la police provinciale étaient sur place, avec des agents spécialisés pour les interventions liées au crime organisé. La Presse

Il venait de devenir un Hells
Le plus récent motard à être devenu membre en règle des hells angels est mort dans un accident spectaculaire survenu au nouveau- Brunswick. Kenny Bédard, 51 ans, est mort dans une collision impliquant neuf motos et un véhicule récréatif, dans le secteur de Saint-Basile, à Edmundston, dans le nord-ouest du Nouveau- Brunswick, vendredi soir. Selon les informations obtenues par TVA Nouvelles, Kenny Bédard était le tout dernier venu chez les Hells Angels. Agence QMI (Journal de Montréal, 3, Journal de Québec)

Quebec man dies in N.B. pileup involving members of biker groups
An employee at a New Brunswick campsite said the highway "looked like it had blown up" after a pileup involving nine motorcycles and an RV that left one man dead. Edmundston police said eight men and a woman, all of whom were travelling on motorcycles, also suffered injuries in the crash Friday night and are in hospital. Police said the male motorcyclists involved in the crash were members of various biker groups such as Hells Angels, Red Devils and Darksiders. Times Colonist, A7

Ruling to come Sept. 30 as Hells Angels cocaine conspiracy trial ends
The months-long cocaine conspiracy trial of two Kelowna Hells Angels and three of their associates wrapped up Wednesday in B.C. Supreme Court. Justice Carol Ross said she would hand down her ruling in the judge-only case Sept. 30. Hells Angels David Giles and Brian Oldham and associates James Howard, Michael Read and Shawn Womacks were charged with conspiracy to import cocaine following a 2012 reverse sting by Mounties posing as members of a South American drug cartel. Three other co-accused have already pleaded guilty in the case. The Province, A22

Crime Stoppers turns 40

Travel insurance tip
You've booked a trip from Canada to Istanbul but you're worried about political unrest or terrorism and want to cancel. You can always cancel a flight, of course, but you might have to pay a steep penalty and may not get any or very little of your money back. Experts say most travel insurance policies will cover you if you're heading out to a trouble spot where terrorism has just happened or is on high alert. But most policies won't cover you if your trip is months out or if you're flying to an area where you simply are afraid of problems. Toronto Sun, A59

INTERNATIONAL

Investigate Muslims
A letter to the editor states, "Germany is now paying the price for Chancellor Angela Merkel's foolish decision to allow its immigration system to go unchecked. The same is likely in store for Canada. The immigration system is wrought with ineptitude, incompetence and constantly under pressure from politicians demanding security checks to be lowered to the point where they are irrelevant. Tens of thousands of German women have been sexually assaulted by Syrian refugees and now the cancer of radical Islam is causing terror to run rampant..." Winnipeg Sun, A11

Skewed message on terror in Israel
A letter to the editor states, "From Israel: lessons on living with terror, Insight July 23. This article implies that Palestinians are a constant source of terrorism. Of course, some Palestinians have committed horrific

acts. But they did not terrorize thousands of Israelis to flee their homes in 1948 and 1967 and then obliterate their villages. Nor have they systematically bulldozed thousands of Israeli olive groves to clear the land for Palestinian settlements. They have not used Palestinian armed forces to assist in removing Israelis from their homes in East Jerusalem and Hebron so that they can be occupied by their own people. And they have not built a wall through Israeli villages and separated people from their families and fields..." Toronto Star, A10

MINISTER / MINISTRE

Government to rebuild immigration detention facilities

Immigration holding facilities in Vancouver and Laval, Que., will be replaced as part of a $138-million overhaul intended to improve detention conditions for newcomers to Canada. The federal government will also move ahead with plans to ***expand the range of alternatives to locking up immigrants, with the aim of making detention a last resort***, said **Public Safety Minister Ralph Goodale**. In addition, a community supervision program will be developed for released detainees. **Goodale** announced the details Monday during a visit to the aging Laval facility. The Canada Border Services Agency holds people who are considered a flight risk or a danger to the public and those whose identities cannot be confirmed. The Canadian Red Cross Society has found numerous shortcomings at facilities for immigrant detainees, including overcrowding and lack of mental health care. Newcomers are often held in provincial jails or police facilities alongside suspected gang members and violent offenders. There are three federal immigration holding centres and the government has flagged the Vancouver and Laval facilities as most in need of attention. One in Toronto is considered to be in better shape. The planned improvements are designed to reduce reliance on provincial facilities. Some of the new money will go to mental health and

medical services for detainees in federal holding centres. Canadian Press (Guardian, A5, Red Deer Advocate, Cape Breton Post, Chronicle Herald, Telegram); * Postmedia News (London Free Press, N4)

La détention des immigrants remise en question
L'annonce de la réfection des centres de détention canadiens doit relancer la réflexion, jugent des groupes. Le **ministre de la Sécurité publique, Ralph Goodale**, a annoncé lundi des investissements de 138 millions de dollars, principalement pour moderniser les centres de détention d'immigrants à Laval et en banlieue de Vancouver. Des voix s'élèvent pour réclamer la fin de cette pratique, digne d'un traitement réservé aux criminels dans certains cas. En mai dernier, Carmelo Monge s'est présenté aux bureaux de Citoyenneté et immigration Canada 1010 à Montréal, croyant qu'il repartirait avec un permis de travail renouvelé. Il a plutôt été arrêté. " Ils m'ont mis les menottes et alors je me suis senti comme si j'avais fait quelque chose de très grave ", relate-t-il, encore sous le choc. " Je ne suis pas un criminel, je suis ici pour travailler, pour aider ma famille restée au Mexique ", dit l'homme de 45 ans. Il est au Canada depuis huit ans, en attente d'une demande de résidence permanente fondée sur des considérations humanitaires, après avoir vu sa demande d'asile déboutée. A son arrivée au centre de détention de Laval, des bâtiments entourés de barbelés, c'est la surveillance constante qui l'a marqué. " J'ai vu une femme du Pakistan avec son enfant à l'entrée, avec des gardes autour d'eux ", rapporte M. Monge. Circonstances : En 2014-2015, l'Agence des services frontaliers du Canada (ASFC) a détenu 6800 personnes. Si un agent de l'ASFC doute de l'identité d'un ressortissant étranger, s'il croit que celui-ci se soustraira aux procédures d'immigration ou encore s'il considère que sa demande est inadmissible, il a le pouvoir de le détenir. Le Devoir, A1, A8; Presse Canadienne (Acadie Nouvelle, 14, Quotidien, Voix de l'Est, Tribune, Soleil)

* **Critics slam oversight on immigration detention reforms**
Migrants advocates welcome Ottawa's reforms of the immigration detention system, but say the government is falling short on creating proper oversight of the agency responsible for the enforcement operations. "It is encouraging the federal government is promising actions and reforms to the immigration detention system. Detention of immigrants needs to be absolutely the last resort and the government recognizes that," said Josh Paterson of the British Colombia Civil Liberties Association. "The thing is, we need to put an end to housing migrants in criminal population. The money dedicated to the immigration infrastructure must not become the reason to detain more migrants and for longer period of time." **Public Safety Minister Ralph Goodale** announced on Monday that $138 million would be invested to ***"enhance alternatives to detention"*** and invest in rebuilding immigration holding facilities. He also plans a series of community consultations. **Goodale** has been under fire after a series of deaths of detainees held in immigration custody this year. A United Nations human rights report last year also raised alarm over Canada's lengthy immigration detention and lack of medical support for inmates. Anthony Navaneelan of the Canadian Association for Refugee Lawyers said what was missing in **Goodale**'s announcement was creating an independent oversight of the Canada Border Services Agency, which is responsible for enforcement of immigration laws including immigration detention. Toronto Star, A7

* **Feds move to reassure Canadians on terrorism**
The governing Liberals are moving further to reassure Canadians that they have a grip on combating the threat of terrorism in the wake of last week's death of a man suspected of plotting an attack. **Public Safety Minister Ralph Goodale** was in Montreal Monday where he was expected to give a talk about how the government is moving ahead with a program designed to reach out to those who are vulnerable to radicalization in order to nip in the bud suspected terrorist plots like the one in southern Ontario last week. **Goodale** was expected to visit a Montreal centre devoted to preventing radicalization that leads to violence. Details about the program aren't expected until a later date. Last week, he stressed the importance of identifying those who are open to radicalization and finding the right way to prevent situations such as the death of a man in Strathroy, Ont., who was suspected of planning a terrorist attack. **Goodale** will announce the government will replace immigration detention facilities in Laval, Que., and Vancouver. (...) In his statement, **Goodale** suggested that a free flow of information between Canadian and U.S. intelligence and law enforcement agencies is the norm***. "Consistent with the robust security alliance that we have with the U.S., the Americans passed that material to the RCMP,"*** said **Goodale**'s statement, which prominently mentioned the context of the FBI contribution. ***"It's important for Canadians to know that our agencies and their global partners are monitoring potential risks***

and threats all the time - 24-7, 365 days a year." Last week's incident, as well as the attack on Parliament Hill in 2014, have led to an appetite among Canadians to examine current national security measures and look at how they can be improved to better protect Canadians while safeguarding civil liberties, **Goodale** said. Canadian Press (Waterloo Region Record, A8, Times Colonist, Hamilton Spectator, Red Deer Advocate)

*** Canada to launch counter-radicalisation office**

The Canadian government announced plans for a specialised centre to fight radicalisation of its citizens following a police shooting death of a suspected jihadist last week and lone-wolf attacks. **Public Safety Minister Ralph Goodale** said Ottawa would combine a patchwork of counter-radicalisation efforts launched by cities and universities under a new federal office. ***"We pride ourselves on being a generous and diverse society," Goodale*** said. ***"If we want to keep it that way, we have to be among the best in the world in dealing with radicalisation and trying to head off these tragedies before they happen."*** Last week's foiled terror plot, and two separate lone-wolf attacks in October 2014 that resulted in the deaths of two Canadian soldiers have led to demands for a review of Canada's national security framework. ***"The largest concern," Goodale*** said in a statement, ***"is about lone wolves who get sucked into perverse and extreme ideologies that promote violence."*** A new national centre for 'community outreach and counter-radicalisation' will be modelled on existing centres in Montreal and Calgary. Pakistan Today

The RCMP needs to arrest terrorists

Public safety minister Ralph Goodale is either pulling our leg or we've got a very serious problem in the upper ranks of Canada's policing and intelligence services. For the past couple of days, **Goodale's** been highlighting the need for counterradicalization. But somehow he missed the glaringly obvious anti-terror measure that's already at our disposal: That the RCMP need to do their job and arrest terrorists. In March, RCMP commissioner Bob Paulson told a Senate committee that for some of the Canadians who've gone abroad to participate in terror-related activities "we've assessed that they're back, they're sorry, they're working to try to get their heads straight and we're relying on family members or other professionals." Yup. That's right. If terrorists say they're sorry the RCMP doesn't charge them. What the heck kind of policing is this? It's already illegal, according to the Criminal Code, to leave the country or attempt to leave to participate in terror. Yet there are dozens of jihadists returned from abroad the RCMP knows about who haven't been charged. (…) If the Liberals want to spend a few dollars on community outreach, go ahead. But police aren't social workers. And **Goodale** isn't running a daycare. The cops need to enforce the law. It must be their top priority. ***"We need to know how to intervene with the right tools at the right time in the right way -all to head-offtragedies before they happen, as much as humanly possible," Goodale*** wrote in a statement released on Sunday. We already have the right tool though. It's the law. And we're opting not to use it. Prime Minister Justin Trudeau and **Goodale** either aren't aware of this or they're choosing to ignore it. Either way, it's a big problem. Postmedia Network (Winnipeg Sun, A10, Edmonton Sun, Calgary Sun)

*** Trudeau, Trump go opposite ways on homegrown terror**

Compare and contrast. ***"Canada is an open, pluralistic democratic society and if we want to maintain those qualities and values then we have to become among the best in the world at dealing with radicalization to violence."*** That was Canada's **Public Safety Minister Ralph Goodale** speaking Monday morning about some new approaches his government will take in the coming months to combat domestic terrorism. Now contrast. "Our country has enough problems. We don't need more." That's Donald Trump, the Republican nominee for president, a few hours after **Goodale**, talking about how new barriers to immigration will protect America from terrorism. "I call it extreme vetting," he said. Trump wants new barriers and actual real walls put up in the belief that it's bad guys from somewhere else who are threatening American security. He said he'll set up a screening system for immigrants which will detect danger to America from any children those immigrants might one day have. Canada, by contrast, will continue to accept thousands of Syrian refugees in addition to broadening the kinds and types of immigrants the country will accept. That's because the Trudeau government believes fighting terrorism is not done by shutting borders. Trump believes the opposite. And yet, immigration could cut to zero tomorrow and there would still be young, disaffected Canadians and Americans watching ISIS propaganda online and signing up to do harm. Calgary Sun, A18

*** Mosque lauds feds' radicalization fight**

The London Muslim Mosque welcomed news from Ottawa that the government is moving ahead with a nationwide program to combat radicalization. "This is in line with what we've been talking about," mosque spokesperson Nawaz Tahir said Monday. "We'd be happy to lend any support we can. This is a multi-disciplinary issue. It's not a London issue, it's a macro issue and it requires a national response." His comments came after **Public Security Minister Ralph Goodale** spoke about plans for Ottawa to spend $35 million during five years to fund programs that reach out to vulnerable people open to radicalization in a bid to prevent terror attacks in Canada. ***The federal government will establish a national centre for deradicalization that will co-ordinate efforts across Canada to fight extremism***, **Goodale** said. ***"The events of the last week or so have demonstrated in Canada that we need to get better and better at understanding and dealing with the serious issue of radicalization."*** **Goodale** was referring to a situation that unfolded in the London region last Wednesday, after the FBI tipped off the by Strathroy resident Aaron Driver. Police tracked down Driver, who was killed after getting into a Strathroy taxi believed to be headed for London. **Goodale** said most of the money will go to groups and organizations at the community level that are best equipped ***"to intervene in the right way, with the right tools and at the right time."*** Postmedia News (National Post, A1, London Free Press)

Single bullet killed terror suspect, dad says

Father says son's death was 'gut-wrenching,' but doesn't blame police for lethal takedown. The suspected terrorist who allegedly planned an attack on a major Canadian urban centre last week was killed by a bullet as Mounties descended upon him outside his sister's home, according to his family. Wayne Driver, a retired military officer whose youngest son Aaron Driver died after detonating an explosive device inside a taxi during the confrontation with police in Strathroy, Ont., told the Star that the family also plans to give him an Islamic funeral Thursday - on what would have been his 25th birthday. "We're going to respect his beliefs," Wayne Driver said, shortly after arriving in London, Ont., Monday to plan his son's burial. Both Driver and Aaron's older brother, Rob, say they were told by the RCMP that an autopsy concluded the 24-year-old died from one of two gunshots wounds. Driver said he was told that one bullet pierced his son's spleen, and another went through his heart and liver. (…) **Public Safety Minister Ralph Goodale** was in Montreal Monday, where he was expected to talk about how the Liberal government in Ottawa is preparing a program designed to reach out to people who are vulnerable to radicalization, The Canadian Press reported. Details aren't expected until a later date. In a statement Sunday, **Goodale** said ***co-operation between agencies like the FBI and the RCMP are "consistent with the robust security alliance" between Canada and the U.S. "It's important for Canadians to know that our agencies and their global partners are monitoring potential risks and threats all the time - 24/7, 365 days a year,"*** he said. Canadian Press (Toronto Star, A1)

La mère d'un djihadiste dénonce le gouvernement

Une mère de famille de Calgary dont le fils djihadiste de 22 ans a été tué en Syrie il y a deux ans croit que le gouvernement a laissé tomber Aaron Driver et sa famille. Aaron Driver, 24 ans, est mort la semaine dernière lors d'un affrontement avec la police à Strathroy, en Ontario, après avoir apparemment réalisé une vidéo suggérant qu'il allait commettre un attentat-suicide dans un centre urbain du pays. La mère du jeune radicalisé Damian Clairmont, Christianne Boudreau, dit avoir pleuré lorsqu'elle a appris la nouvelle. Mme Boudreau, qui vit maintenant à Eymet, en France, a ajouté qu'elle avait le coeur brisé de constater que tant d'agences et d'organisations n'avaient pas pu aider sa famille. (…) «Il aurait dû fournir un suivi psychologique pour lui et sa famille afin de s'assurer qu'ils s'occupent de ce qui le troublait, ce qui le dérangeait; de prendre toute cette motivation émotionnelle et ces croyances qui le poussaient dans cette direction et d'utiliser cette énergie pour quelque chose de positif», a-t-elle ajouté. **Le ministre de la Sécurité publique Ralph Goodale** a dit jeudi que son gouvernement avait consacré 500 millions $ pour assurer la sécurité au pays et pour contrer la radicalisation. Presse Canadienne (Acadie Nouvelle, 12)

Canada approves transfer of Florida lifer but state mum on approval

The federal government has approved the transfer of a Canadian jailed for 30 years in Florida prisons for a murder committed when he was 18 years old. However, there was no immediate word whether the state, which has previously blocked William (Russell) Davies from serving out his life sentence in Canada, will let him go. "Canada will bring Russell back but we have to go through the States yet," Davies's

mother, Carol Davies, said. **Public Safety Minister Ralph Goodale** had no immediate comment while a spokeswoman for Florida Gov. Rick Scott said she was looking for information on the case. In an investigative series in June, The Canadian Press chronicled the events leading to Davies's conviction for first-degree murder following a trial in Daytona Beach that essentially lasted only seven hours and which some legal experts have denounced as a sham. Now 48, Davies was then an 18-year-old runaway misfit from Richmond Hill, Ont., when he and five others were charged with gunning down a seventh member of their group in June 1986. His co-accused - initially represented by the same lawyer - quickly pleaded out in return for testifying against him, and were given probation or short sentences. Red Deer Advocate, A7

*** I'm very glad the Mounties got their man**

An opinion piece states, "The biggest story in Canada this weekend was the triumph of Penny Oleksiak, the dazzling young Canadian who took the swimming world by storm. Lucky us. The biggest story could have been the triumph of Aaron Driver, the Islamist-inspired jihadi warrior, if he had blown himself up at a train station in Southern Ontario and taken a dozen innocent people with him. We'll never know, of course. Just as Mr. Driver stepped into a taxi, police opened fire and he detonated a bomb. Officially, we don't know what killed him, but either way, the Mounties got their man. I'm sorry they had to do it, but I don't have a shred of sympathy for him - only for his family, who saw him going to the dark side and were helpless to prevent it. Mr. Driver had rejected help. He sought out martyrdom. All the evidence indicates that he was a traitor to his country. The RCMP don't get much good press these days. They're usually portrayed as the gang that can't shoot straight. Most stories about the Mounties are meant to tell us how sexist, racist and incompetent they are. They deserve a lot of credit for getting this one right. Around 8:30 a.m. last Wednesday, the FBI sent them a screen shot of a man with his face masked, taken from a homemade "martyrdom" video. By 11 a.m., Canadian authorities had identified the suspect. At 4:30 p.m., when the man got into a taxi outside his house in Strathroy, Ont., police were waiting for him. (…) **Ralph Goodale**, the minister of public safety, says Canada needs to step up its counter-radicalization efforts. I'm all for that. The trouble is, nobody knows what works. And nobody will ever devise the perfect combination of police powers and social intervention that will keep us completely safe. Like it or not, sometimes the only solution is the violent one." Globe and Mail, A11

*** Canada, it's time we discussed the Islamic reformation**

An opinion piece states, "We need to get really good at counter-radicalization, **Public Safety Minister Ralph Goodale** recently argued. And he's right. But we won't succeed at that until we add talk about the Islamic reformation into the mix. Yet media and politicians here never even reference the phrase. And what is it? It's the idea that Islam needs to "jump from totalitarian fundamentalism to enlightened, liberal religion," as Foreign Policy magazine describes it. Sort of like the 16th century Christian reformation. We need to talk about it in the wake of Aaron Driver. We need to talk about it because almost 200 Canadians are now abroad training or fighting armed jihad. Dozens more have already returned. And we need to talk about it because Muslims in Canada, according to a recent Environics Institute report, are becoming more observant. The 18-34-year-olds are the most observant and "they identify primarily as Muslim rather than as Canadian," the report notes. Now, you can bet the politically correct will be resistant. They'll plug their ears. They'll look the other way. Or, worse, they'll call anyone who brings it up "Islamophobic." But they'll be speaking out of ignorance. Because the conversation's already happening. In journals, at think-tanks and during conferences. It just hasn't made its way into daily conversation yet. It will soon. Even the leader of the free world talks about it." Toronto Sun, A15

TOP STORIES / MANCHETTES

*** Feds want RCMP to look into Canadian firm's armoured car shipments to war-torn Libya**

The Liberal government has asked the Mounties to look into a UN report that found a Canadian-owned company shipped dozens of armoured personnel carriers into the chaos of Libya, possibly in violation of an arms embargo. In a statement released late Monday, the Global Affairs Department said a copy of the UN panel's findings about the Streit Group has been handed to the Mounties. There's no indication at the moment whether the RCMP intends to launch a full-blown investigation. The Liberal government says it will leave the matter up to law enforcement. "It is the role of the RCMP to investigate potential offences under Canadian law, while the prosecution of offences under federal jurisdiction is the responsibility of the

Public Prosecution Service of Canada who will determine if Canada has jurisdiction to prosecute based on the facts of the case," spokesman Francois Lasalle said in a statement. The department didn't say when the UN report, which was released in March, was shared with the Mounties. But the handover of the file to the RCMP comes less than a week after CBC News published a series of stories about the activities of Streit in both Libya and South Sudan. CBC News (2016-08-15)

*** Prisoner on the lam was deemed a low risk to the public**
A man deemed a dangerous offender by the provincial justice system was determined to be a low risk to public safety prior to his escape from the Pe Sakastew federal prison in Maskwacis over the weekend. Darell Moosomin, 54, was on an escorted temporary absence from Pe Sakastew on Sunday, where he was serving an indeterminate sentence, when he escaped. He was on a leave to attend the Samson Powwow when the elder who was supposed to be with him lost sight of him. A Canada-wide warrant was issued for his arrest, but Moosomin remained at large Monday. (…) Correctional Service Canada spokesman Jeff Campbell said inmates are evaluated before being granted permission to go on these types of outings, which can include excursions to complete community service, attend family functions or to access resources such as a doctor or a hospital. Campbell said there are also conditions that must be followed when the leave is granted. Edmonton Sun, A4 (Edmonton Journal, Calgary Sun); Red Deer Advocate

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Wildfires torch province's firefighting budget**
Nova Scotia's firefighting budget is up in smoke, thanks to the worst wildfires in years. Spending is already three times the 2016 provincial firefighting allocation of $686,000 battling 10 wildfires across Nova Scotia, according to estimates from the Natural Resources Department. Spokesman Andrew Preeper said this year's provincial firefighting budget is $686,000 and actual expenditures as of Aug. 8 were $520,000. Chronicle-Herald, A1

*** Officials worry about fracking risks**
BC Hydro officials have worried that earthquakes triggered by fracking could damage or destroy some of the utility's dams in the province's north, an issue that has been a point of discussion among staff over recent years, documents show. Globe and Mail, S1

*** Sweet ending in the search for missing three-year-old boy**
Rescuers say a three-year-old boy who wandered away from his Vancouver Island home Sunday evening has been found safe - and covered in berry juice. Constable Rob Gardner with the Comox Valley RCMP said Lochlan McKenzie was playing in the yard of his home near Union Bay, south of Courtenay on Sunday evening, when he went missing. It appears as though the little boy simply decided to ride his scooter bike further than he was supposed to, Constable Gardner said. A significant effort was mounted to find the boy, including eight search-and-rescue teams from across Vancouver Island, said Paul Berry, commander of the Comox Valley Ground Search and Rescue. A large contingent of RCMP officers also assisted in the search, along with the Mounties' air and marine services, a drone, dog teams and crews on horseback. Globe and Mail, S2; Canadian Press (Toronto Sun, Ottawa Sun, The Telegram, Cape Breton Post, The Guardian)

*** 'It was a win, win'**
Cape Breton Regional Police North Division will move into its new headquarters in the historic former town hall in Sydney Mines next week. During a tour of the new station Monday morning, Chief Peter McIsaac admitted initially he was a little reluctant to consider moving into another old building. Mayor Cecil Clarke said with Central Division being upgraded this year, by 2017 the budget process will include a new police station for East Division and within two years all of the police facilities across the regional municipality will be upgraded. "This will allow us to focus on the fire and emergency service review long term, along with ground search and rescue." Cape Breton Post, A6

*** Les juges comprennent-ils le terrorisme ?**
C'est la vigilance du FBI qui a permis à la GRC d'intercepter Aaron Driver, le plus récent djihadiste «made in Canada» avant qu'il ne commette un attentat-suicide. Bravo et merci! Mais que faisait ce jeune homme, connu des autorités pour ses positions pro-État islamique, en liberté à peine surveillée? L'étude du dossier d'Aaron Driver révèle que l'homme de 24 ans a passé une bonne par-tie de 2015 entre la prison et les salles d'audience du palais de justice de Winnipeg. On lui reprochait, outre sa proximité intellectuelle avec le groupe État islamique, d'avoir exprimé son admiration pour le salaud qui a tué le caporal Nathan Cirillo sur la colline du Parlement en octobre 2014. Mais, aux yeux de la justice, il n'avait commis aucun crime. De plus, son casier judiciaire était vierge. Impossible donc de le garder en prison, mais les avocats du jeune homme et la Couronne s'étaient entendus sur l'imposition d'engagements à ne pas troubler l'ordre public parce qu'il existait «des raisons de croire qu'il pourrait participer ou contribuer directement ou indirectement aux activités d'un groupe terroriste». Parmi les conditions qui ont rendu possible sa libération, Aaron Driver devait porter un bracelet électronique avec GPS à la cheville. La Commission des droits de la personne du Manitoba a poussé les hauts cris, repris en choeur par tout ce que le Canada anglais peut contenir de bonnes âmes opposées à tout raffermissement des lois antiterrorisme: «On ne peut soumettre une personne qui n'a commis aucun crime à une surveillance 24 jours par jour.» Journal de Montréal, 8 (Journal de Québec)

*** ISIL happy to get know-nothing new recruits**
An analysis of thousands of leaked Islamic State documents reveals most of its recruits from its earliest days came with only the most basic knowledge of Islam. A little more than 3,000 of these documents included the recruit's knowledge of Shariah, the system that interprets into law verses from the Qur'an and "hadith" - the sayings and actions of the Prophet Muhammad. LITTLE OR NO KNOWLEDGE According to the documents, 70 per cent of recruits were listed as having just "basic" knowledge of Shariah - the lowest possible choice. Around 24 per cent were categorized as having an "intermediate" knowledge, with just five per cent considered advanced students of Islam. IGNORANCE PREFERRED Are disaffected people who understand Shariah more prone to radicalization? Or are those with little knowledge of Islam more susceptible to the group's radical ideas that promote violence? The documents suggest the latter. The group preys on this religious ignorance, allowing extremists to impose a brand of Islam constructed to suit its goal of maximum territorial expansion and carnage as soon as recruits come under its sway. Those who've claimed advanced knowledge in Shariah on the ISIL entry documents were less likely to want to become suicide bombers, according to a study by the U.S. military's Combating Terrorism Center, an academic institution at the United States Military Academy. "If martyrdom is seen as the highest religious calling, then a reasonable expectation would be that the people with the most knowledge about Islamic law (Shariah) would desire to carry out these operations with greater frequency," said the report. However, despite the religious justification that ISIL uses for suicide missions, "those with the most religious knowledge within the organization itself are the least likely to volunteer to be suicide bombers," the study found. Associated Press (StarPhoenix, N2, London Free Press, Edmonton Journal, Windsor Star, Montreal Gazette, National Post, Ottawa Citizen, Vancouver Sun, Calgary Herald)

*** Timely police work**
An opinion piece states, “Canada came close to suffering a terrorist attack last week, but countless lives were saved when police disrupted the plan. The would-be terrorist, Aaron Driver, who was living in Strathroy, Ont., under what's basically a restraining order, was killed. How he died isn't yet clear. The Ontario Provincial Police are investigating whether he died by police gunfire or from a bomb that went off in the back of a taxi, injuring the cabbie who had picked up Driver at the house where he lived. The RCMP acknowledged the tragic outcome, but noted correctly that, had Driver not been stopped, the carnage would have been far, far worse. So let's take a moment to give our police and security authorities - whose actions are often challenged - full credit. In a fine example of cross-border co-operation, the operation began with a tip from the FBI, which had come across a martyrdom video Wednesday. By afternoon, Canadian police had identified and were swooping in on Driver. It's something of a miracle they were able to figure out so quickly who the ISIL video star was. Self-radicalized, homegrown terrorists are elusive. It appears officials at a local mosque had been attempting to break through to Driver; the Muslim community is an important ally in the fight against terror, and this event shows the difficulty in actually

talking sense into radicalized people. The Liberals remain committed to reforming the Tories' anti-terrorism bill, C-51 - rightly, in our view - but this incident adds complications. And the task has barely begun, although a bill to create a new national security oversight committee has been tabled." Times Colonist, A8

*** Co-operation, outreach best terrorism defence**
An opinion piece states, "By its nature, terrorism targets innocent people and seeks to create distrust among citizens through shock, panic and fear. This is what makes it the weapon of the ignorant and of the cowardly. And last week, our region and city felt its impact. What is the way forward and how should we respond? By keeping in mind a few important truths about what keeps societies secure. The first of these is the need to remain vigilant, yet reasonable. Questions will be asked about whether more could have been done to keep us safe from the likes of Aaron Driver. This is appropriate, but unless the conversation is measured, we might end up trying to fix what is not broken. The result will be that important resources needed to maintain public safety - time, energy and money - could be used ineffectively. Avoiding this problem requires us to search first for lessons, not in what went wrong, but in what went right. Last Wednesday, various agencies - the Royal Canadian Mounted Police, the Canadian Security Intelligence Service, the London Police Service, Strathroy-Caradoc and the Ontario Provincial Police - worked together to thwart an act of terrorism. The importance of this cannot be overstated. When the RCMP was informed about an imminent attack, they acted swiftly and were successful. Local forces were involved and engaged. Partnership, rather than rivalry, is what defined this effort and we are all safer because of it. This example, in fact, provides a model as we move forward. Some may ask why the U.S. Federal Bureau of Investigation identified the threat instead of the RCMP. This is beside the point. What matters much more is that the information was discovered and shared. This happens between the FBI and the RCMP on a regular basis and last week provided another example of the importance of co-operation. The second need is to pursue proactive policies that offer reassurance in the face of unpredictability. This is why a counter-radicalization policy is important and why the federal government is right to direct funding - $35 million during the next five years - to the office of a new Community Outreach and Counterradicalization Co-ordinator." London Free Press, A5

*** Former Islamist discusses how to end spread of terrorist ideology**
An opinion piece states, "Canada needs to revamp its approach to Islamic extremism if it hopes to prevent another homegrown radical from setting off a bomb, says the founder of an international anti-radicalization think tank. In an exclusive interview with Postmedia, Maajid Nawaz - a former Islamist radical and founder of the U.K.-based Quilliam Foundation - called for a societywide effort to undercut the intellectual and theological planks of Islamist and jihadist ideology. "There certainly needs to be training. Counter-radicalization training involves de-radicalization training on how to disengage somebody from the theory of violence, and it involves taking them beyond that actually and discrediting the theory of Islamism in their minds," said Nawaz. "A lot of this, Muslims simply don't know." Nawaz was in Niagara Falls Saturday to address the third annual Non-Conference at the Americana hotel as the keynote speaker. Although the event was billed as a conference for non-believers, Nawaz, a Muslim seeking to reform the faith, told his audience he looked upon them as allies in combating radicalization. "You are more my brothers and sisters than anyone who ever joined ISIS," Nawaz said. "Islam needs to reform. And Islamism needs to be intellectually terminated," Nawaz's address comes only days after headlines were dominated by a jihadist incident in Strathroy. On Wednesday, RCMP counterterrorism officers shot and killed Aaron Driver, a declared ISIS supporter. According to news reports, Driver regularly attended a London-area mosque. The mosque's leaders were aware of Driver's radical views and believed if they kept him as a member they might be able to pull him away from Islamist ideology. Nawaz said most mosques are ill-equipped to counter radical ideology." Postmedia Network (Toronto Sun, A9, Ottawa Sun, Edmonton Sun, Kingston Whig-Standard, Calgary Sun)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Plea ends potential test of privacy rights
A Quebec man arrested last year at the Halifax airport for refusing to provide border officers with the password for his cellphone pleaded guilty Monday and was ordered to pay a $500 fine. Alain Philippon's

plea on the eve of a scheduled trial brought an abrupt end to a case that was being watched closely as a test of the line between privacy rights and the state's power to control its borders. Robert Currie, director of Dalhousie University's Law and Technology Institute, said the plea deal represents a "missed opportunity" to explore an emerging legal question. "We've got case law around the Customs Act, going back in time, which says essentially that you have next to no privacy at the border," Currie said in an interview. "On the other hand, we've got very recent case law from the Supreme Court of Canada, starting in about 2010, that says you've got an intense amount of privacy in your electronic devices. "What we have not seen to date is a case where a court has really wrestled with all of this and tried to put it all together." Philippon, 39, was returning to Canada from the Dominican Republic in March 2015 when he was pulled aside by the Canada Border Services Agency and as part of a search asked to provide access to his BlackBerry. He refused to give the password and was charged under the federal Customs Act with hindering or preventing an officer from doing his job. Postmedia Network (Ottawa Citizen, N1, Edmonton Journal, London Free Press, Starphoenix, Windsor Star, Leader-Post, Montreal Gazette, National Post, Vancouver Sun, Calgary Herald); * Radio-Canada (2016-08-15)

Un véritable arsenal confisqué
Un couteau format carte de crédit, des arbalètes miniatures, des poings américains, des pistolets paralyseurs et des vaporisateurs de gaz irritants ne sont là que quelques exemples d'armes prohibées saisies par les agents des services frontaliers du Canada à trois points d'entrée de la région d'Ottawa au cours des 18 derniers mois. Une liste des armes illégales interceptées par les douaniers canadiens à Prescott, à Cornwall et à l'aéroport international Macdonald-Cartier d'Ottawa en 2015 et jusqu'à présent en 2016 fait état d'une variété d'articles saisis. C'est le cas à Prescott, un petit poste douanier situé à une soixantaine de minutes de voiture au sud d'Ottawa. (…) Les douaniers de Prescott ont aussi mis la main depuis janvier 2015 sur deux arbalètes miniatures, deux pistolets paralyseurs, quatre vaporisateurs de gaz poivré, deux pistolets à impulsion électrique (Taser), deux nunchakus, huit armes de poing et trois couteaux à ouverture automatique. Une interception menée le 16 juin 2015 a d'ailleurs permis aux douaniers de mettre la main sur 33 armes prohibées, dont des poings américains et des poings américains munis d'un canif. Du côté de Cornwall, les agents de l'Agence des services frontaliers du Canada (ASFC) ont saisi une dague à pousser (poignard), huit couteaux à ouverture automatique, une arme de poing, une sarbacane avec des fléchettes, un Taser, deux vaporisateurs de gaz poivré, une réplique d'une arme à poing et une matraque rigide à ressort. A l'aéroport international Macdonald-Cartier, seul un vaporisateur de poivre a été intercepté par les douaniers depuis le début de 2015, selon les données fournies par l'ASFC. Le Droit, 2

* **Passenger denied boarding over travelling with only a Nexus card**
A Washington state man was recently denied boarding for a flight from Newark to Toronto after only presenting his Nexus card, thinking it was the only documentation he needed. Justin Thompson is a U.S. citizen and was travelling on Porter Airlines from Newark Airport to Billy Bishop Airport in Toronto in July. Thompson was travelling with his Nexus card and did not have his passport. When he tried to board the flight, the Porter Airlines gate agent refused to allow him on. (…)There are eight designated Canadian cities with Nexus kiosks. While Billy Bishop Airport isn't on the list, CBSA's website says there is a "trusted traveller kiosk" for Nexus members at that airport for incoming flights. In a statement to CTV News, Canada Border Services Agency (CBSA) said that a Nexus card can be used in lieu of a passport for "Canadian and American citizens who are Nexus members entering Canada from the U.S." (…) Porter Airlines told CTV News that it's in the "best interest of all international travellers to carry a valid passport" and "the language on our website and flight reminder is explicit noting the requirement for a passport, which is supported by CBSA indicating that an airline may do so." CBSA's website also states that a passport may be required by an airline or alternative transportation authority. CTV News (2016-08-15)

Deportation overturned
Media attention, including a recent Vancouver Sun column, has helped a man thrown out of Canada because of a wrongful sexual assault conviction obtain a permit to return and seek redress. Vancouver lawyer Jason Gratl said his client, Gurdev Dhillon, was ecstatic after the immigration department did an about-face late Friday afternoon and said the subsistence farmer in Punjab could come back. He was wrongly convicted in October 2005 of participating in a July 2004 Surrey gang rape at his apartment and

served four years in prison before deportation. The convictions were set aside in December, 2014. Postmedia Network (Vancouver Sun, A6) * Voice Online (2016-08-15)

Cimenterie
La Caisse de dépôt et placement du Québec (CDPQ) ne croit pas que la nouvelle ronde de financement réalisée pour compléter le projet de cimenterie de Port-Daniel ravivera les menaces de barrières tarifaires aux États-Unis. Son président et chef de la direction, Michael Sabia, a voulu se montrer clair vendredi, en marge de la mise à jour semestrielle, en affirmant qu'il ne s'agissait pas de fonds publics. Le projet de cimenterie, dont le principal marché d'exportation sera les États-Unis, a fait l'objet de critiques au sud de la frontière, où des membres de l'industrie et certains élus crient à la concurrence déloyale. Questionné à ce sujet, M. Sabia a affirmé que la CDPQ était un investisseur privé qui a pris une décision d'affaires afin de générer du «rendement pour ses clients». Il n'a pas semblé craindre que le dossier puisse prendre une ampleur similaire à celui du bois d'oeuvre canadien, qui a fait l'objet de barrières tarifaires à la frontière étant donné que les Américains estimaient que l'industrie était subventionnée. Selon M. Sabia, il n'y a «pas un soupçon» de subvention dans le financement de 250 millions $ auquel contribue la CDPQ dans une proportion de 125 millions $. Le dossier de la cimenterie, qui fait face à des dépassements de coûts de l'ordre de 450 millions $. La Presse Canadienne (Le Soleil, 37, La Tribune, La Voix de L'est)

Halifax port boom tops all across North America
Container traffic at the Port of Halifax is spiking this year as it grabs a growing share of the market due to its newfound ability to receive bigger cargo ships coming through the new Suez and Panama Canals. (…) And while there has been growth at some ports, like Miami which saw an increase of 5.5 per cent, the biggest percentage jump so far this year has been in Halifax. Industry insiders are chalking it up to three things: a low Canadian dollar; fast and efficient turnaround of container cargo in Halifax; and the port being ready to handle the new, big ships coming from Asia through the newly-widened and lengthened Suez and Panama canals. (…) When the Canadian Border Services Agency needs to inspect a container, that extra space makes things easier for the Port of Halifax where these inspections are done more quickly than in Vancouver, said Snowden. The executive director of the national freight forwarders thinks the time lost at the Port of Vancouver, compared with Halifax, may be encouraging companies to use the Atlantic seaport. Chronicle Herald, B1

*** Masse politicizes Ambassador Bridge debate**
An opinion piece by Doug Sartori states, "I find it neither "troubling" or "alarming" that Dwight Duncan is diligently pursuing all options with respect to the current and future crossing. Government ownership of the Ambassador Bridge would address many issues faced by residents of Windsor West, particularly the residents of Sandwich Town who have been caught in the crossfire between the City of Windsor and the Ambassador Bridge Company. It's absurd to suggest that it is not in the best interests of our community to explore this option. I find it troubling that the Windsor West Member of Parliament has chosen a needlessly aggressive approach in requesting answers from the government. Surely, if Mr. Masse was sincere about his concerns, he would see that over-the-top accusations are a counter-productive way to engage with the government." Windsor Star

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

LAW ENFORCEMENT / APPLICATION DE LA LOI

Why did cops target city home?
Five days after swooping down on a northwest London home in the dark of night as part of a terrorism probe, the RCMP still won't say why the place is under investigation. But the family who lives there has had "no communication" from the RCMP since their home was searched - without a warrant - and cleared the night terrorism suspect Aaron Driver died in a confrontation with police in Strathroy, their lawyer said Monday. "My understanding is they are not suspects," said Gord Cudmore, who is acting as a lawyer for

the London Muslim Mosque and, by extension, the family who lives at 43 Blanchard Cres. because they are members of the mosque. London police and officers with the RCMP searched the home Wednesday and Thursday, hours after Driver was killed in a confrontation with police after detonating a bomb in a Strathroy cab. (...) Hours after police had left the property and released it to the owners, the RCMP announced the address at a news conference in Ottawa, and said the property was still under investigation. "I was concerned the address was released," Cudmore said. Asked about that probe Monday, an RCMP spokesperson said via email "the RCMP is not answering any other questions at this time." (...) Told he was not doing anything illegal, a group in the community set out to try to change him by teaching him, "about warmth, about peace, about community engagement," a spokesperson said. "There is no formal program to do this thing, so it was informal people in our community." But despite their best efforts, Driver remained a firm supporter of the Islamic State. RCMP said they were alerted by the U.S. Federal Bureau of Investigation at 8:30 a.m. Wednesday that an individual was planning to bomb an urban centre during morning or afternoon rush hour in the next 24 hours. London Free Press, A1, Front

*** Agir après les faits**

Plus on en apprend sur aaron driver, l'islamiste qui a été neutralisé par la grc alors qu'il s'apprêtait à commettre un attentat suicide, plus on se pose des questions... En juin 2015, Driver (qui avait été arrêté pour «activités suspectes» sur les réseaux sociaux) a été remis en liberté sous conditions. On lui demandait, entre autres, de s'engager à ne pas troubler l'ordre public , d'assister à «des séances de counseling religieux » et de porter un bracelet électronique. À l'annonce de ces conditions, l'Association manitobaine des droits et libertés (AMDL) s'était immédiatement portée à la défense d'Aaron Driver. «On parle d'un citoyen canadien qui n'a pas été inculpé d'un crime, mais qui sera surveillé grâce à un bracelet de surveillance chaque heure du jour, a lancé le directeur de l'AMDL, Corey Shefman. C'est franchement inacceptable .» Je sais qu'il est facile de jouer au gérant d'estrade une fois qu'on sait comment les choses ont tourné... Mais je me demande si, à la lumière des événements récents, le directeur de l'AMDL dirait la même chose aujourd'hui. Défendrait-il encore les droits d'Aaron Driver sachant que le gars était aussi dangereux? «La GRC demande à M. Driver de promettre qu'il va bien se comporter, a dit Corey Shefman. Le problème c'est qu'aux yeux de la loi, M. Driver ne s'est jamais mal comporté...» Ah oui? Affirmer ses sympathies envers l'État islamique n'est pas «mal se comporter»? Entretenir des liens avec des djihadistes qui veulent massacrer des innocents pour déstabiliser le pays n'est pas «mal se comporter»? Journal de Québec, 6 (Journal de Montréal)

*** Police appeal for help after four shootings**

In three decades of policing in Ottawa, Supt. Don Sweet says he doesn't think he's seen any other day quite like Sunday: four shootings in the city in just 13 hours, including the nightclub killing of a known gang member. Police say they're mobilizing every available resource to investigate the killing and the gun violence, but they are also turning to the public for help. Potential links between the shootings are being investigated and police are asking anyone with information to come forward - while promising to protect them from any retaliation - and reassuring all Ottawans that the city remains safe. Within hours on Sunday, police rallied officers from forensics, guns and gangs, general investigations and patrol over multiple scenes with lots of evidence and witnesses, Sweet said. He said he's confident there will be an arrest soon in the slaying of Omar Rashid-Ghader, 33, who was shot multiple times inside the Sentral nightclub in the ByWard Market at about 3:20 a.m. Sunday. (...) Chief Charles Bordeleau said that while he understands residents are concerned, the incidents were targeted shootings involving criminal activity and gang members. "They are not random," Bordeleau said at the Shaw Centre, where the Canadian Association of Chiefs of Police is holding its national meeting. Bordeleau said that Ottawa is not alone as urban police forces see an increase in gang-related shootings. Ottawa police are working with the RCMP and border forces to stem the flow of smuggled handguns, such as a recent arrest of someone bringing the illegal guns through Cornwall to Ottawa. Bordeleau urged witnesses to come forward despite what he called legitimate concerns about retribution for going to police. Ottawa Citizen, A3 (Ottawa Sun)

Children bitten at former daycare, trial told

The former owner of a Memramcook daycare was accused by a former employee of biting some of her young charges as a form of discipline, a Moncton courtroom heard on Monday. The trial for Celine Lang, 56, who is accused of assaulting her young charges and an employee, opened on Monday in Moncton Court of Queen's Bench with testimony from five witnesses. Lang is standing trial on 13 counts of assault,

one count of assault with a weapon and breach of an undertaking. Her judge-only trial is scheduled to last for 13 days before Judge Jean-Paul Ouellette. The opening day of the trial featured testimony from five witnesses: two RCMP officers, two Francophone Sud school district officials and the former employee that Lang is accused of assaulting. (…) When she got home, de la Rosvil called the police. RCMP Const. Kevin Tremblay arrived at her home in Memramcook, where she was with three other daycare workers prepared to talk about what they believed was abuse occurring at the daycare. "They talked about the young kids that were submitted to physical punishment that the women didn't think was safe," Tremblay, who at the time was with the Sackville RCMP detachment, said while testifying on Monday. "In the next few days, I got a list from the daycare with all the people who worked or had worked there. I called them to learn about Ms. Lang. "I also met with parents to take statements, and after all the statements, we determined the incidents to be illegal." Times & Transcript, A1 (Daily Gleaner, Telegraph-Journal)

Distrust, racism loom over probe into farm shooting

Even before a murder charge was laid against Gerald Stanley, a 54-yearold Saskatchewan farmer, for the shooting death of Colten Boushie, a 22-year-old First Nations man whose friends drove a truck on to Stanley's property, the incident became symbolic of a deep social divide. Just as recent police shootings in the U.S. fit an increasingly obvious pattern of official racism, and have drawn more attention because of it, so has Boushie's killing come to seem like the inevitable result of distrust, racism and antipathy between Saskatchewan's white and indigenous people. Dangerously for dispassionate justice, that political weight will hang on the police investigation, the public reaction and any eventual prosecution. "In too many ways, this is a sad day for Saskatchewan," said National Chief Perry Bellegarde of the Assembly of First Nations. (…) Colten Boushie, 22, of the Red Pheasant First Nation died at the scene. He was in the back seat of the truck and was shot in the head, his uncle, Alvin Baptiste, said. His mother, Debbie Baptiste, showed media cherished diplomas and awards, and the boots and helmet her son got for volunteer firefighting work. In their early press statements, police said three people from the vehicle, one woman, one girl and one man, were taken into custody as part of a theft investigation, and they were still looking for another man. The next day, Thursday, when Stanley made an appearance in court in North Battleford, police said "charges are still being considered with respect to some property-related offences pending further investigation." The three were released without charge. Even the police description of the investigation into "the events leading up to the arrival of the vehicle to the yard, the circumstances involving the death, and the actions following," seemed to suggest doubt of the accidental flat tire story. This, at least, is how it seemed to Chief Bobby Cameron of the FSIN, who told The Canadian Press the RCMP statement "provided just enough prejudicial information for the average reader to draw their own conclusions that the shooting was somehow justified. The messaging in an RCMP news release should not fuel racial tensions." Chief Clint Wuttunee of the Red Pheasant First Nation likewise said the resulting stories made it sound like the truck was on the property to commit a crime. Postmedia Network (National Post, A1, Front, London Free Press, Vancouver Sun, Edmonton Journal, Windsor Star, Montreal Gazette, Ottawa Citizen, Calgary Herald); * National Post

'I went a far way, way from home'

When three-year-old Lochlan McKenzie was finally found by searchers on Monday morning, after wandering away from his home the evening before, his face was purple and blue from eating berries. Lochlan, who disappeared while playing outside on his bike, was found safe on a logging road about 10:30 a.m. Monday - nearly 14 hours after he went missing. He was discovered, still with his bicycle, by a team on an ATV after an overnight search in Union Bay, a community of about 1,200 south of Courtenay. (…) The RCMP had a helicopter, a drone, police dogs and a vessel patrolling the shoreline. "We used a lot of resources, put as many people in there as we could," Comox RCMP Const. Rob Gardner said. Gardner said the boy was found near Langley Lake. While the lake is only about two kilometres from his home, the boy likely travelled about five or six kilometres "when you add in all the logging roads," he said. Times Colonist, A1, Front

Teen involved in crash driving with suspended licence

The 16-year-old driver of the vehicle that was involved in a single-vehicle collision Friday that sent four teens to hospital was driving when he wasn't supposed to be. RCMP confirmed Monday that the driver was, in fact, driving while his learner's licence had already been suspended. RCMP were called to the scene at 5:56 a.m. following reports that a vehicle had left the roadway on Brackley Point Road near

Harrington. Four occupants - two boys aged 16 and 15, and two girls aged 17 and 16 - were taken to the Queen Elizabeth Hospital in Charlottetown with serious and potentially life-threatening injuries. At least one of the people in that car, a female, is still in hospital. She was transferred to a hospital in Halifax for treatment. A blood demand was given to the 16-year-old driver who showed signs of impairment. Alcohol was seized from the vehicle. "He was already suspended. He should not have been driving according to the law," said RCMP Staff Sgt. Mark Crowther. Guardian, A4, Front

* **Company believed to be a scam operation**
Police are investigating a possible fraud scheme that cost at least one person thousands of dollars. RCMP said over the course of two weeks, a St. Albert resident transferred money to a company named Option Giant, which police believe is a scam. Police said the resident believed the company traded foreign currencies and there would be a return on investment within 90 days. Slave Lake RCMP had a similar case earlier this summer with the same alleged company. In both cases, funds were sent outside the country so the money wasn't recovered. Police are warning people not to invest in companies without doing prior research. Edmonton Journal, A5 (Edmonton Sun)

Crime top of mind among residents
Crime is increasingly on the minds of Red Deer residents, the City of Red Deer's 2016 Citizen Satisfaction Survey shows. The survey, which cost $21,500 and was released on Monday, shows that 28 per cent of those surveyed named crime as top-of-mind and the most important issue facing the community. That compares with 25 per cent in 2015 and 22 per cent in 2014. Crime also became the top priority this year when respondents were asked what were the top three priorities they felt the city should address over the next 12 months. Those top three priorities are crime (38 per cent); transportation (32 per cent); and municipal government services (26 per cent). Crime surpassed last year's top three - where transportation came in as tops in the May 2015 satisfaction survey - 22 per cent compared with second place crime at 18 per cent. (…) On Thursday Red Deer RCMP will be outline the impact its new crime reduction strategy has had since it came into affect on April 1, along with crime statistics for the second quarter. The worsening economy is reflected in the 2016 satisfaction survey when compared to 2015. Red Deer Advocate, A1, A8

Woman wins battle over security clearance
After a two-year battle with Transport Canada, Ayaan Farah could have her security clearance and job restored. A Federal Court judge quashed the decision to revoke the US Airways employee's security clearance, because Transport Canada failed to give her enough information to defend herself against allegations of links to individuals with criminal records. The decision was "both procedurally unfair and substantively unreasonable," Justice Susan Elliott wrote in a ruling released Monday. Elliott sent the matter back to the federal Minister of Transport Marc Garneau to be considered again in light of her ruling. (…) Elliott criticized Transport Canada for an "improper blanket reliance on the Privacy Act" when responding to Farah's request to know who Subject A was and the date and location of the interaction. In fact, Transport Canada fundamentally changed Farah's questions when they passed on her request to the RCMP, instead asking for "any further information related to the method by which this information was received by police," Elliott found. As a result, the RCMP's answer did not address Farah's questions. Transport Canada then gave Farah a "somewhat misleading" response, blaming the Privacy Act for being unable to provide names of details of third party individuals or sources, Elliott wrote. Toronto Star, A1

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prison locked down as staff look for contraband items
A federal prison near Moncton is in lockdown while staff search for contraband. On Aug. 11, at about 11:30 a.m., a lockdown was put in place in the medium-security unit at Dorchester Penitentiary to enable staff members to conduct a search. The search was ordered to ensure the safety and security of the institution, its staff and inmates. Normal operations will resume as soon as it is considered safe to do so. Visits have been suspended until the search is completed. The Correctional Service of Canada said in a news release that it is committed to preventing the entry of contraband into its institutions. CSC also

works in partnership with the police to take action against those who attempt to introduce contraband into correctional institutions. Times & Transcript

Prisoner on the lam was deemed a low risk to the public
A man deemed a dangerous offender by the provincial justice system was determined to be a low risk to public safety prior to his escape from the Pe Sakastew federal prison in Maskwacis over the weekend. Darell Moosomin, 54, was on an escorted temporary absence from Pe Sakastew on Sunday, where he was serving an indeterminate sentence, when he escaped. He was on a leave to attend the Samson Powwow when the elder who was supposed to be with him lost sight of him. A Canada-wide warrant was issued for his arrest, but Moosomin remained at large Monday. (…)Correctional Service Canada spokesman Jeff Campbell said inmates are evaluated before being granted permission to go on these types of outings, which can include excursions to complete community service, attend family functions or to access resources such as a doctor or a hospital. Campbell said there are also conditions that must be followed when the leave is granted. Edmonton Sun, A4 (Edmonton Journal, Calgary Sun); Red Deer Advocate

Police say Bedford '100%' likely to reoffend
Internet predator Mark Bedford is contesting an effort by Kingston Police to have him placed on twoyear peace bond meant to keep him offthe Internet and away from children, adolescents and young teens. Det. Brian McCormick, manager of the sexual offender registry for the Kingston Police Force, testified Monday on the first of what is scheduled to be a two-day hearing this week that he made the application based on a series of reports and assessments of Bedford by Correctional Service Canada and the National Parole Board. (…)He was sentenced to three years in prison and ended up serving every day of it after the National Parole Board denied him early statutory release. The board determined that he remained a high risk to re-offend sexually against children. His sentence expired in March 2011, however. (…)He was later found to have violated both those conditions and, after nine months in pretrial custody, was sent back to prison in June 2013 for a further 27 months. The hearing is to continue Wednesday with testimony from two CSC staff. Kingston Whig-Standard, A1

Couple 'reel' busy with derby
Saskia and Mike Deslauriers discovered one drawback when it came to organizing this year's annual Kingston Kids Perch Derby: it didn't leave them any time this summer to do any fishing themselves. (…)Mike Deslauriers is also a correctional service officer at Joyceville Institution and has been involved in the derby since 2013 when he and other officers stepped in with some financial assistance to keep it going after a Ministry of Natural Resources grant was cancelled. At the time, he was president of the correctional officers' union, and its involvement continued in subsequent years. (…)Things looked OK until this past winter when, in a conversation with fish and game club executive member Jim Muir, Deslauriers learned the club membership had dwindled to such a point it didn't have enough bodies to do all the work needed to run a good derby. So he considered taking it on himself. Deslauriers got some unexpected backing from Don Head, commissioner of corrections, who was willing to support what he believed to be a worthwhile community endeavour with resources and manpower. (…)The number of loaner rods traditionally available to any kids who don't already have their own were down this year, so CSC used an inmate work program to help fill the void. Inmates at Joyceville Institution made fishing rod handles and put the rods together before sending them to Bath Institution to be painted. Kingston Whig-Standard, A2

Privacy: subverting good laws for no good purpose
An opinion piece states, "I hadn't paid much attention to stories about the 'departure' of Dieppe's fire chief, but last week a story indicated there's considerable upset over it, including among firefighters who call him a great leader. (…)That said, these cases do not negate the fact that privacy legislation has often proven highly problematic. (…)Correctional Services Canada is notoriously bad for this. They won't tell the public where specific prisoners are jailed, or details of serious incidents inside prison walls. In the tragic case of Moncton teenager Ashley Smith, who hung herself while guards refused to intervene, CSC did everything possible to withhold evidence from a coroner's jury although findings led to some guards being charged with 'negligent homicide,' the charges later withdrawn. And this in a penal system that has repeatedly been exposed as less enlightened than it might be." Times & Transcript, A8

*** Mariage sans contact pour un détenu**
Privé de contact physique avec celle qu'il désire épouser le 12 septembre, un détenu de Portcartier poursuit l'établissement carcéral et le procureur général du Canada pour la somme de 30 000 $. Selon la poursuite déposée devant la Cour fédérale, ces refus de donner à Dominic Delisle accès à l'élue de son coeur «lui causent préjudice». (...)En novembre 2015, alors que les deux tiers de sa peine étaient purgés, la Commission des libérations conditionnelles refusait que Delisle soit remis en liberté, dans une décision considérée comme «exceptionnelle ». (...)Dans le cadre de sa décision, la Commission avait également fait savoir que le détenu avait traité sa conjointe «comme un bien et service ne servant qu'à rapporter financièrement» et en août de la même an-née, une accusation de menace avait été déposée, qui, finalement, s'était soldée par la signature d'un document où il s'engageait à ne pas «harasser, molester, harceler, importuner et épier» sa conjointe. Journal de Québec, 5 (Journal de Montréal)

Abuser doc's victims go after MD watchdog
Some former patients of disgraced ex-psychiatrist Stanley Dobrowolski have lined up to sue him, but their bigger civil target is the governing body for doctors across Ontario. It's the legal actions against the College of Physicians and Surgeons of Ontario that could attract the most scrutiny and debate, says a London civil lawyer who has seven clients who were sexually abused by the former London psychiatrist. The cases, said London lawyer Robert Talach, could end up in the Ontario Court of Appeal to determine whether the college can be held judged for decisions it made to allow Dobrowolski to keep his medical licence while the accusations of sexual abuse kept piling up. (...)Dobrowolski, 69, is serving a four-year sentence after pleading guilty two years ago to 18 charges: 16 counts of sexual assault, one of voyeurism and one of disobeying a court order. He recently was denied parole after it was found he still posed a risk to the community and that he asked his in-prison probation officer when she last had a breast exam. London Free Press, A1

*** Un Canadien détenu en Floride sera rapatrié**
Le Canada a donné son accord au rapatriement de William Russel Davies, un Ontarien détenu en Floride depuis 30 ans après avoir été reconnu coupable d'homicide volontaire. L'État américain où le Canadien purge sa peine depuis ses 18 ans n'a toutefois pas indiqué, pour l'instant, s'il autorisera le transfert. William Russel Davies a été condamné à la prison à vie. Presse canadienne (Le Soleil, 18)

*** Parole denied for man convicted in Sask.'s largest fraud case**
The Saskatchewan man convicted in the biggest fraud case in the province's history has been denied early release from prison. Ronald Jerry Fast, 73, is serving a seven-year sentence after pleading guilty to fraud over $5,000 and possession of property obtained by crime. He was arrested in 2012 following a two-year police investigation that revealed Fast had defrauded more than 200 investors of $16.7 million. Fast used his company, Marathon Leasing Corporation, in a Ponzi scheme, promising high interest rates through the infusion of money from new investors, court heard at his sentencing in 2014. During a parole hearing earlier this month, Fast sought either day parole or full parole, citing his remorse, lack of criminal record and family support. The parole board ruled there is no evidence Fast has addressed any of his risk factors over the course of his sentence, thus denying him both parole options. StarPhoenix, A2

*** Serial rapist released, police warn**
Vancouver police are warning residents that "compelling circumstances exist" to warn the public that Larry John Takahashi, a high-risk sexual offender, is now living in the city. Notoriously known as the 'Balaclava Rapist,' Takahashi was released on day parole in the Vancouver area last month, following a previously shortened 2013 release in Victoria. It remains unknown exactly where Takahashi, now 63, will reside, but police said Monday that he will stay at a correctional halfway house. The Province, A4 (Vancouver Sun); CBC News (2016-08-15)

*** Pimp gets three years for attempt at bribery**
A Vancouver pimp who tried to bribe a Crown witness not to testify against him has been sentenced to three years in jail. The sentence imposed Monday on Reza Moazami will run consecutively to a 23-year jail term he is currently serving for running a prostitution ring of underage girls. Moazami persuaded his co-accused, Babak Najafi-Chaghabouri, to contact a friend outside prison to approach the Crown witness,

who can only be identified by the initials S.W. due to a publication ban. S.W. was told that Moazami was prepared to pay a $5,000 bribe for her to approach his lawyer and recant her evidence against him. He was ready to pay another $5,000 for her not to testify at trial and more money if other witnesses could be convinced not to testify. Vancouver Sun, A4 (The Province, National Post)

*** What is the purpose of an official apology?**
An opinion piece states, "The Globe and Mail reported last week that the Liberal government is set to apologize for the historic persecution of gay Canadians. Their sources suggest an announcement may come as early as the fall. For decades, discrimination based on sexual orientation was built into Canada's legal structure. Beginning in the 1950s, sexual minorities in Canada were prohibited by law from working in the public service and serving in the military. Many were fired from their jobs as a result. Prior to 1969 when then-prime minister Pierre Trudeau's amendments to the Criminal Code came into effect and homosexuality was decriminalized, people who engaged in same-sex acts could be convicted of gross indecency and imprisoned. Homosexuals were classified as "inadmissible" under Canada's Immigration Act until 1978. The list goes on. If it moves forward, this will be the latest in a string of government apologies. (...)In 1967, Everett Klippert, a gay man from the Northwest Territories, was imprisoned as a "dangerous sex offender." It was a legal decision upheld by the Supreme Court of Canada. A mere 38 years later in 2005, same-sex marriage was legalized in Canada." Kingston Whig-Standard, A4 (London Free Press)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Ottawa seen as safe - and stats say it's true**
Ottawa is considered the safest city in Canada, according to a Mainstreet/Postmedia poll to be released Tuesday. It's also one of the rare cases in which the perception almost matches reality as measured by Statistics Canada's Crime Severity Index, said Quito Maggi, president of Mainstreet Research, which conducted the automated telephone poll of 4,213 Canadians about their perceptions of safety in 15 cities. Almost three-quarters of the respondents said Ottawa was safe or very safe. Charlottetown, Moncton, St. John's and Quebec City rounded out the top five "safest" cities, according to the survey respondents. Toronto, Montreal, Saskatoon and Edmonton were in the bottom five. Regina, Halifax, Victoria, Vancouver and Calgary were perceived to be in the middle of the pack. According to the Crime Severity Index, which takes into account both the volume and the severity of crime, Ottawa is actually the thirdsafest city of the 15 on the list, after Quebec City and Toronto, said Maggi. A lot of the public perceptions about a city's relative safety are based on its media exposure, especially on a national level, he said. "When people read about Ottawa, it's not about crime. It's about the prime minister or politics." But some cities got an unfair bad rap in the survey. Winnipeg, for example, was ranked as the most dangerous city in Canada by the respondents - 35 per cent said it was safe or very safe, compared with 56 per cent who said it was unsafe. Ottawa Citizen, A2

*** Plurality of Canadians view Toronto as unsafe: poll**
Canadians view Toronto as one of the most dangerous cities in the country despite a crime rate that actually places it among the safest, a new poll has found. Mainstreet Research asked 4,231 Canadians for their opinion on whether 15 major cities are safe or unsafe. The poll revealed that 47 per cent of respondents view Toronto as unsafe compared to 46 per cent who view it as safe and seven per cent who weren't sure. Only Winnipeg had a less favourable rating (56 per cent viewed it as unsafe). Montreal was the other city in the bottom three (44 per cent viewed it as unsafe). Meanwhile, Ottawa topped the list with 72 per cent of respondents viewing the capital city as safe and just 16 per cent perceiving it as unsafe. Charlottetown (65 per cent viewed it as safe) and Moncton (64 per cent viewed it as safe) rounded out the top three. The results contrast with Statistics Canada's Crime Severity Index, which takes into account the total number of crimes in a given city as well as the severity. CP24

*** New poll ranks Winnipeg as the most unsafe city in the country**
A new Mainstreet/Postmedia poll of 4231 Canadians has found among 15 major cities surveyed, Winnipeg is seen as the most dangerous and Ottawa is seen as the safest. In a news release, Mainstreet/Postmedia says while Winnipeg is seen as the most unsafe, crime statistics recently released

by Stats Canada show Saskatoon actually has the highest crime rate in the country. Toronto, Montreal, Saskatoon and Edmonton were the bottom five most unsafe. Only Toronto joined Winnipeg with a negative score with 46% saying it was unsafe. CTV News

* **Crime-plagued city a 'myth'**
Edmonton is perceived as the fifth most dangerous city in Canada, outranked by Winnipeg, Toronto, Montreal and Saskatoon, a new poll suggests. Winnipeg is considered the least safe place. Ottawa is ranked as the safest city. More than 4,200 Canadians across the country were surveyed and asked to rank 15 cities in terms of safety, regardless of crime statistics, for a poll released Tuesday. Fifty-two percentofthose polled believed Edmonton to be safe, compared to 41 per cent who believed it was unsafe. Seven per cent said they weren't sure. Women were slightly more likely to believe Edmonton was dangerous than men. Seventy-two per cent of Canadians said Ottawa is safe or very safe, compared to 16 per cent who believe it is unsafe. "Perceptions compared to Statistics Canada's Crime Severity Index yields some interesting comparisons," Quito Maggi, president of Mainstreet Research, said in a written statement. "Winnipeg, which is ranked at the bottom by Canadians has a Crime Severity Index lower than Vancouver, Edmonton, Regina and Saskatoon." Edmonton 's Crime Severity Index, which measures the volume of reports and how serious they are, put it as the 13th safest city in Canada in 2015, ahead of Regina and Saskatoon. Edmonton Sun, A4 (Edmonton Journal)

* **Education the best prevention when dealing with bullying**
Education is one of the most imperative tools for preventing bullying. Northern Lights Public Schools (NLPS – formerly Northern Lights School Division) superintendent Rick Cusson suggests sitting down with your children and reminding them to speak to an adult if they are faced with conflict. (…) Cyberbullying adds another platform for bullies, and is defined on the RCMP website as "involving the use of communications technologies, such as the internet, social networking sites, websites, email, text messages and instant messaging to repeatedly intimidate or harass others." Years ago, when you were bullied you would go home and the bullying would stop, said Skinner, however with phones, computers and social media, bullying now follows students home. Cusson recommends having an open relationship with you children in regards to social media. Bonnyville Nouvelle

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

* **Justice for Canada's indigenous women**
An opinion piece states, "Each number has a name, a family, a life story and, tragically, an unresolved ending. One of those stories belongs to Danita Faith BigEagle. The youngest of six children, Danita was born in Arcola, a tiny town known as the "city of angels" that sits in the southeast corner of the Canadian prairie province of Saskatchewan. Like her ancestors, Danita is part of the Ocean Man First Nation, just one among the countless indigenous communities that was a fixture on the prairie long before European settlers arrived and remains an essential part of the Canadian mosaic. On February 14, 2007, the 32-year-old mother of two was, Danita was reported missing after she didn't show up for a visit to her mother who was "caretaker" to her young son and daughter while she got help for drug and alcohol addiction. Her whereabouts and fate are unknown. Sadly, Danita's story is far from unique. In 2014, Canada's national police first revealed that between 1980 and 2012, 1,017 Aboriginal women and girls were murdered across the country and another 164 were missing. These appalling figures continue to climb. (…)But the conscience of Canada and Canadians may be in for a sharp reckoning following the Liberal government's decision earlier this month to launch a commission of inquiry to address belatedly what has been appropriately described by Amnesty International as a "national human rights crisis". (…)Whatever the inquiry's ultimate recommendations, the institutional efforts to finally find the missing women and girls must be redoubled and the perpetrators must - if possible - be apprehended. Only then, will Canadians be able to right, in part, the injustice visited upon their indigenous neighbours for generations." Al Jazeera

* **Making progress with First Nations**

An opinion piece states, "The Canadian Government announced the official launch of a national inquiry into missing and murdered indigenous women (MMIW) on Aug. 3. It's about time, given the RCMP report stating there are a total of 164 missing women and 1,017 homicide victims in Canada — a total of 1,181 MMIW — between 1980 and 2012. Those are staggering numbers, especially if we assume they have gone up since 2013. To those who say, 'Violence in the indigenous community is indigenous-on-indigenous violence, therefore it's an indigenous problem' — I have a response. (…)So, to the people with the aforementioned mentality: the way I see it, any problem within the indigenous community isn't just an indigenous problem — it's a Canadian problem — a problem for us all to rectify." Rocky Mountain Goat News (2016-08-15)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Calgary Police Commission push for roadside drug testing device ahead of marijuana legalization**

Driving impaired is driving impaired - it doesn't matter what substance a person's on, but Calgary police and their overseeing commission wants to be ready when one in particular is legalized. This weekend in Ottawa, at a Canadian Association of Police Governance Conference, the Calgary Police Commission put forward a resolution to continue pressure on the federal government to identify and approve a roadside drug screening device, in light of the feds' commitment to legalize and regulate marijuana by 2017. "Currently, when police suspect a driver of being impaired by drugs, a drug recognition expert is called to the scene to administer a field sobriety test. A roadside drug screening device would greatly improve the ability of police officers to detect drug impaired driving and provide objective and efficient means of enforcing drug impaired driving laws," the commission's resolution read, in part. "A roadside drug testing regime would be similar to roadside breath testing for alcohol. "This capability would simplify the current investigative process for drug-impaired driving, including potentially reducing the time a motorist is detained." "Given the imminent legalization of marijuana and its proven negative effect on drivers, there is now urgency around acquiring appropriate tools in Canada to enable police to detect drug-impaired drivers roadside so they can effectively enforce road safety laws, especially the stricter punishments for marijuana-impaired drivers that government intends to introduce," the resolution read. Calgary Herald

*** As Canada Moves to Legalize Marijuana, Shop Owners Ask: Why Wait?**

The Cannabis Culture Lounge has everything a pothead might need to feel right at home: $3 marijuana buds, bongs for rent, bags of Skittles and Doritos for sale, and black leather couches where customers can recline in zoned-out contemplation in a pungent haze. Never mind that it is all technically prohibited by Canadian law. Still, some enthusiasts have higher hopes for the business, which opened more than a decade ago as a kind of speakeasy for marijuana smoking — long tolerated by the city's authorities. The lounge began selling marijuana after Justin Trudeau was elected prime minister in November. "This is what recreational marijuana legalization in Canada looks like," said Jodie Emery, an activist and the co-owner of the lounge and several medical marijuana dispensaries across Canada. Mr. Trudeau has promised to make recreational marijuana legal in Canada as soon as next year, bypassing the nation's strict medical marijuana regulations. Under the latest rules for medical use, announced last week, patients must be registered, have a prescription and obtain their supplies only by mail from a government-licensed producer or by growing a limited amount privately. MINISTER / MINISTRE

Goodale contradicted over detainee claim: 17 responded to minister's request for details on why detention was unfair
Advocates for a group of hunger-striking immigration detainees were shocked Monday to hear **Public Safety Minister Ralph Goodale** say none had replied to his request for details of why their detention was unfair. In fact, 17 of 50 detainees in two Ontario jails who ended a hunger strike in July responded to **Goodale**'s invitation conveyed to them by Canada Border Services Agency officials. Syed Hussan, a member of the End Immigration Detention Network, told the Star that many wrote **Goodale** to make their individual case, and others did not. "Many of the detainees refused to participate. They didn't know what it was for. They didn't know it came from **Goodale**'s office," Hussan said, adding many felt that, "the onus is not on the detainee to prove why he shouldn't be in there. "The onus is on the government to explain why someone is in prison without trial or charges, in the case of the people we work with, mostly for two-plus years." Scott Bardsley, a spokesman for **Goodale**, told the Star Tuesday that the minister was not fully briefed with the latest information on the hunger strikers' file prior to a news conference in Laval, Que., Monday. Toronto Star, A11

Prison farm proponents make their case

Correctional Service Canada finally hosted its town hall meeting Tuesday night at City Hall surrounding the reinstatement of prison farms at the Joyceville and Collins Bay institutions, a gathering anticipated since July 13 by the Save Our Prison Farms (SOPF) committee. Between 2009 and 2013, six federally run prison farms across the country, two of which were in Kingston, were closed by the Conservative government. The farms were closed as a cost-cutting measure. The government also claimed, at the time, that offenders were not being prepared to enter the workforce, as "very few ex-inmates were obtaining work in agriculture." Frontenac institution was the only farm to earn limited revenue, being the largest at 900 acres and housing a dairy operation, egg production, fruit and vegetables and a prizewinning breed of heritage cattle, the last of which were shipped out in August 2010 before hundreds of protesters. **Ralph Goodale, the minister of public safety and emergency preparedness** was in attendance at the town hall meeting. A couple of hours earlier, he took a tour of the Collins Bay facility, saying, "***I know the issue [of reopening the prison farms] is close to many in Kingston and the Islands***." He deemed the tour of the penitentiary's long unused farm facility "***largely a learning experience***" for him. (...) "***There are certain values and morals that you gain doing farm work***," he said in response to the question of why the government is regaining interest in a program it had earlier rejected. "***I can't discuss specific cases, but we're looking at minor offenders who sincerely want to reintegrate into society, and we can help them do that***." Goondale suggested the town hall meeting as part of a larger feasibility study to assess the viability of re-establishing the "***agri-food employment initiatives for offenders***" that organizations like Save Our Prison Farms have been pushing for the past six years. (...) **Goodale** seemed to be in agreement with the positive results of farming programs. "***Effective rehabilitation and integration programming for inmates are absolutely fundamental in successfully achieving that goal of public safety,"*** he said. ***"Part of that is making sure they have the right skills, the right qualities, the right attitudes, to maintain employment and be constructive to society.***" Kingston Whig-Standard, A1

Driver killed by gunfire: Father: ISIS supporter's funeral won't be held at mosque in London, spokesperson says

An ISIS supporter who died during a confrontation with an RCMP tactical team outside his home in Strathroy, Ont. was killed by a police bullet, his family said Tuesday. Wayne Driver said an autopsy had determined that his son Aaron had been shot two times and that one of the bullets had struck his liver and travelled to his heart. The other hit his spleen, he said. The 24-year-old was allegedly in the final stages of preparing a terrorist attack on Aug. 10 when a police Emergency Response Team surrounded him. He detonated an explosive device and police opened fire. Following the incident, the RCMP said it was unsure whether Driver had died as a result of his own bomb or police bullets but the father said the autopsy had put that question to rest. "It was the police officer's bullet that killed him," the father told the National Post. "The bomb that exploded he could have walked away from with minor to severe injuries they said." (...) In his first reaction to the alleged terror plot, Prime Minister Justin Trudeau said a wider response to domestic terrorism would be rolled out by **Public Safety Minister Ralph Goodale**. "All Canadians expect their government to do two things: To keep Canadians safe and to defend and uphold the values and rights that all Canadians hold dear," he said during a stop in Bridgetown, N.S. "Getting that balance right isn't always easy in the challenging situation we now live in but it's extremely important." Kingston Whig-Standard, B1/FRONT; * Canadian Press (Times Colonist, A7)

Change terror tactics

The RCMP thought Martin Couture-Rouleau was on the right track when officers met the 25-year-old radicalized convert on Oct. 9, 2014. Despite a failed attempt to travel to Syria, he seemed to be coming around. Eleven days later, he drove to a strip mall frequented by uniformed soldiers in Saint-Jean-sur-Richelieu, Que., and killed Warrant Officer Patrice Vincent. Chased by police, he crashed his car and charged officers with a knife before he was shot dead. Following a similar scenario in Strathroy, Ont., on Aug. 10, which ended with the shooting death of ISIL supporter Aaron Driver as he was allegedly about to conduct a bombing, some experts are calling for changes to the way extremists are assessed. In the Couture-Rouleau and Driver cases, the assessments were ultimately wrong. Both men had come to the attention of the RCMP but were apparently thought to have softened their views and were not being closely monitored. (...) The Violent Extremist Risk Assessment tool currently used is a guide that rates

extremists based on whether they score low, medium or high on 25 categories such as use of extremist websites, direct contact with extremists and military training. But it "has some weaknesses," Prof. Dawson said. "It shows some potential but it's got some real limitations. ... Everyone recognizes that we really need to get serious about developing better assessment mechanisms." He said the office of community outreach and counter-radicalization that **Public Safety Minister Ralph Goodale** has announced would likely take on the task. "They're aware of this and this is probably one of the things they're going to be pouring a lot of resources into." Postmedia Network (National Post, A1, Front, Vancouver Sun, Windsor Star, Kingston Whig-Standard, StarPhoenix, Leader-Post, Montreal Gazette, Ottawa Citizen, London Free Press, Edmonton Journal, Calgary Herald)

How will PM tackle terror? Just watch him

An opinion piece states, "So far on terrorism, Justin Trudeau is more or less the prime minister Stephen Harper told us he would be. On the very day Trudeau became leader of the Liberal Party of Canada, in April 2013, he sat in Ottawa for an interview with Peter Mansbridge of the CBC. Two bombers had just detonated their home-brew contraptions at the Boston Marathon, killing three and wounding hundreds. How would you respond if you were prime minister, Mansbridge asked. "Over the coming days," Trudeau replied, "we have to look at the root causes." That language seemed custom- designed to ruffle Conservative feathers. But Trudeau was not done. "There is no question that this happened because there is someone who feels completely excluded. Completely at war with innocents . . . And our approach has to be, where do those tensions come from?" (...) In a long weekend news release, **Goodale** first reassured Canadians that the police had done their job well and that Canada's threat level is no higher than it has been for a year and a half. Then he added: ***"We have also budgeted for a new national office and centre of excellence for community outreach and counter-radicalization. "We need to get really good at this - to preserve our diversity and pluralism as unique national strengths."*** So if you want a government that conveys any view other than utter condemnation, this new Liberal government's language will seem wildly complicated. **Goodale** remains unbowed. ***"We need to know how to identify those who could be vulnerable to insidious influences that draw certain people - especially young people - toward extremism leading to violence,"*** he wrote. ***"We need to understand what positive messages can counteract that poison."*** Toronto Star, A1

A question of balance: CIVIL LIBERTIES, SECURITY EQUAL IN BATTLE AGAINST TERRORISM: PM

An alleged terrorist plot in Ontario that created anxieties over police monitoring of suspects hasn't shaken Prime Minister Justin Trudeau's emphasis on balancing civil liberties with public safety. In his first reaction to an alleged plot that led to the death of Aaron Driver in Strathroy, Ont., Trudeau said Tuesday that balancing individual rights with keeping Canadians secure from bombing threats has to be handled with care. "Canada is a country that values its freedom (and) its basic charter rights," he said during a stop in Bridgetown, N.S., for an infrastructure funding announcement. "All Canadians expect their government to do two things: to keep Canadians safe and to defend and uphold the values and rights that all Canadians hold dear." "Getting that balance right isn't always easy in the challenging situation we now live in but it's extremely important." (...) During the news conference, the prime minister said the wider response against domestic terrorism will be rolled out by **Public Safety Minister Ralph Goodale** as the Liberals continue plans to reform Bill C-51. During the last federal election, the Liberals pledged to guarantee that all Canadian Security Intelligence Service warrants respect the charter, that the right to lawful protests and advocacy aren't violated, and they pledged to "narrow overly broad definitions (in Bill C-51), such as defining 'terrorist propaganda' more clearly." They also said a Liberal government would limit the Communications Security Establishment's powers by requiring a warrant to engage in the surveillance of Canadians and emphasize community outreach to battle radicalization of youths. Canadian Press (Red Deer Advocate, A8, Cape Breton Post, Telegraph-Journal); Postmedia News (Ottawa Sun, A9, Winnipeg Sun, Toronto Sun, Edmonton Sun, Calgary Sun)

*** Review of Harper's Anti-Terrorism Bill Likely to Launch End of Summer**

Long anticipated look at C-51, national security starts 'soon,' official says. The government's highly anticipated review of its national security framework, including the Harper government's controversial anti-terrorism legislation C-51, is expected to start before parliamentarians return from summer break***. "Yes, it will be soon — so most likely before Parliament resumes,"*** said **Scott Bardsley**, press secretary for

Public Safety Minister Ralph Goodale. Prime Minister Justin Trudeau campaigned on a promise to "repeal the problematic elements of Bill C-51, and introduce new legislation that better balances our collective security with our rights and freedoms." But so far, he has not provided details on when he envisions starting that process despite pressure from critics of the law. (…) As well, the government has moved ahead on a promise to help those whose names match those on the no-fly list and who face travel delays during the extra time needed to clear their name in the system.In June, **Goodale** announced the creation of a new government office to support those travellers, with the eventual goal of allowing those travellers to apply for a unique identification number to distinguish them in aviation systems. iPolitics (The Tyee)

*** Border phone search case raises thorny issues: lawyers**
Several thorny questions still haven't been answered in the case of a Quebec man who refused to give border officers his cellphone pass code, say privacy and technology lawyers. Alain Philippon had said he would fight a charge of obstructing border officials but pleaded guilty Monday in Dartmouth, N.S., and was fined $500. He was charged when he refused to unlock his cellphone in March 2015 after flying to Halifax from the Dominican Republic. David Fraser, a privacy lawyer with McInnes Cooper in Halifax, says that because the case didn't go to trial there are still serious doubts about phone searches. (…) "A phone really is a portal that goes well beyond the sorts of things that have been traditionally searched at the border." In an email, a spokesman for **Public Safety Minister Ralph Goodale** said the government wants to hear from experts and the general public on how to ensure safety while protecting rights during upcoming consultations on national security. **Scott Bardsley** said those consultations would include border security policies. ***"Canadians need to reflect on new and emerging areas of law, privacy and public safety," he said. "We all need to think this through carefully. There are no easy answers."*** Canadian Press (Times & Transcript, B4, Record, Hamilton Spectator, Chronicle Herald, Cape Breton Post)

TOP STORIES / MANCHETTES

*** Trudeau se tourne vers le comité parlementaire**
Le premier ministre Justin Trudeau estime que le comité parlementaire créé pour surveiller les activités des agences de renseignement aura à évaluer l'efficacité du travail de ces agences. La semaine dernière, la Gendarmerie royale du Canada (GRC) a intercepté un jeune Canadien qui préparait une attaque terroriste. Le jeune homme était connu des autorités canadiennes, mais c'est le FBI qui a alerté la GRC alors que l'homme préparait un attentat imminent. (…) «Cette situation de la semaine dernière et des situations semblables, c'est exactement le genre de choses sur lesquelles le comité de parlementaires aura à s'exprimer, aura à réfléchir», a-t-il ajouté. Le premier ministre s'attend à ce que ce comité offre «des conseils sur la manière dont on peut encore mieux assurer la sécurité des Canadiens, comme nous avons pu le faire la semaine dernière». Presse canadienne (Le Droit, 15, La Presse+, Le Soleil) (2016-08-16); ***** Agence QMI (Journal de Montréal)

Funeral for terrorist sympathizer will not be held at mosque
Muslim institutions in London, Ont., are keeping their distance as funeral arrangements are underway for a terrorist sympathizer killed in a high-stakes police standoff in a nearby community. A spokesman for the London Muslim Mosque says the organization is offering support to Aaron Driver's family and advice on planning the service according to Islamic traditions, which is expected to be held Thursday. But Nawaz Tahir says the ceremony will not be held at any Muslim institution in the city, nor will any local imam preside, acknowledging there were concerns over appearing to be associated with someone linked to terrorism. In a statement issued after last week's takedown, the mosque said it had taken notice of Driver and his views more than a year ago and had tried to steer him away from extremism. "We engaged him with the hope of changing his views on Islam and to show him the true, peaceful nature of our religion," the statement read. "We constantly monitored his activities within the mosque and did our best to keep the authorities engaged with our activities. Driver, 24, died during a confrontation with RCMP in Strathroy, Ont., last Wednesday after making a martyrdom video that suggested he was planning to detonate a homemade bomb in an urban centre. Ontario Provincial Police, who took over the investigation into his death, said Tuesday he died from a gunshot wound, but gave no other details. The investigation into the

incident is also ongoing. (...) Aaron Driver's father has said his son was a troubled child but appeared to have turned his life around after converting to Islam. But then the father said CSIS contacted him in January 2015 about disturbing posts his son had made on social media. *** Les chefs de police réclament l'accès légal aux mots de passe**
Les chefs de police canadiens réclament une loi pour contraindre les gens à révéler leurs mots de passe aux forces de l'ordre s'ils ont obtenu l'approbation d'un juge. L'Association canadienne des chefs de police (ACCP) a adopté une résolution incitant le gouvernement à prendre des mesures législatives pour faciliter l'obtention de preuves électroniques. L'ACCP estime que les criminels ont de plus en plus recours au chiffrement pour dissimuler leurs activités illicites en ligne. Le commissaire adjoint de la Gendarmerie royale du Canada (GRC), Joe Oliver, a déclaré qu'aucune loi canadienne ne contraignait actuellement le détenteur d'un mot de passe à le révéler aux policiers dans le cadre d'une enquête. Lors d'une conférence de presse mardi, M. Oliver a soutenu que les criminels, qu'ils soient membres de la mafia ou pédophiles, bénéficient d'un anonymat quasi absolu grâce à des outils en ligne qui camouflent leur identité, de même que leurs communications. «Les victimes dans l'espace numérique sont réelles, a rappelé M. Oliver. Les lois du Canada et sa capacité à maintenir l'ordre doivent suivre le rythme de l'évolution technologique.» Cette résolution de l'ACCP survient alors que le gouvernement fédéral entame ses consultations en matière de cybersécurité, notamment par rapport à l'équilibre entre les besoins des policiers et les libertés fondamentales. Ces consultations se poursuivront jusqu'au 15 octobre. La Presse Canadienne (Le Quotidien, 17, Le Soleil); Canadian Press (Times & Transcript, Calgary Herald, National Post, Ottawa Citizen, Leader-Post, Edmonton Journal, Waterloo Region Record, Toronto Star, Hamilton Spectator, Edmonton Sun, Toronto Sun, Cape Breton Post, Chronicle-Herald, The Telegram, The Guardian)

*** Calgary police push for right to access digital passwords**
Calgary police are supporting calls for a new law that would force civilians to hand over electronic passwords to investigators with a judge's permission. Calgary police Chief Roger Chaffin was among those at the Canadian Association of Chiefs of Police who voted Tuesday to ask for legal means to obtain such digital evidence, saying it would help law enforcement keep pace with cybercrime. But civil liberties advocates say such a law would be highly problematic, and might even clash with the Charter of Rights and Freedoms. "When the chiefs of police want this sort of self-incrimination and openness, will it apply to them as well?" said Rocky Mountain Civil Liberties Association director Sharon Polsky, insisting it would be "flagrantly in violation" of Canadians' privacy rights. Current laws don't allow police to compel someone to give them a password. Deputy Chief Sat Parhar, who was in Ottawa with Chaffin to vote on the resolution, said the new legislation would be a guide for law enforcement, outlining when it is and isn't OK to access certain data. "There's a rule book, the rule book is the criminal code," said Parhar. "We're just saying this needs to be represented in the rule book. You don't want the police doing things without some sort of guidance through the law." Calgary Herald, A1

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Up to 47,000 houses face flood risk**
The Insurance Bureau of Canada wants a new deal for people who live in the riskiest, most flood-prone areas. On Tuesday, the association that represents most insurance companies in the country told the legislature's climate change committee it wasn't fair for taxpayers to keep subsidizing people who live in floodplains or along coastal areas. "I hate to say this, but in the industry we now call water the new fire," said Amanda Dean, a vice-president with the bureau. Thanks to torrential downpours, flooding has become the biggest insurance claim in recent years, outstripping the former number 1 claim, for fire damage. Over the last 20 years, property claims have doubled in New Brunswick, most of them due to water damage. Across Canada, annual insured losses from catastrophic events are now close to $1 billion, with 2013 the high-water mark, when insurers paid out a record-high $3.2 billion. In June, the association submitted a proposal for a national flood strategy to Ottawa. It spent more than $1 million mapping out areas in Canada that are prone to flooding from rivers, and is about to do the same for

coastal areas. According to its analysis, about 90 per cent of the country's homeowners live in areas that are not at high risk of flooding, and are insurable. The other 10 per cent live in areas such as floodplains that are just too risky to insure. Although there's a perception many of these people are wealthier people with waterfront homes, most of them are actually low-income or middle class. Typically, when these uninsurable properties are inundated, the federal and provincial governments step in to help. Over the last decade in New Brunswick, the government payouts have been $135 million - about $100 million covered by Ottawa and $35 million by the province. Times & Transcript, B1 (Daily Gleaner, Telegraph-Journal)

*** Storm damage hits $48 million**

The Insurance Bureau of Canada says severe storms that swept across the Prairies last month caused more than $48 million in insured damage. Intense thunderstorms between July 8 and 11 produced strong winds, hail, lightning, heavy rain and funnel clouds in Alberta, Saskatchewan and Manitoba. Most property damage was reported in Saskatchewan, where up to 130 millimetres of rain in a short period resulted in significant flooding in Estevan. The downpour overwhelmed the local stormwater network and caused streets to flood and sewers to back up. Bill Adams, a vice-president with the insurance bureau, says severe storms are happening more often and with greater intensity across the Prairies. He advises people to understand their insurance policies and be prepared for an emergency. Canadian Press (Calgary Herald, B12, StarPhoenix, Edmonton Journal)

*** Firefighters keep watch after rain**

While the recent precipitation in western Nova Scotia was enough for firefighting crews to get a toehold on blazes around Seven Mile Lake, it's not over until it's over, say provincial officials. "You can never say things are good when it comes to wildfires because things change so quickly," said Department of Natural Resources forest technician Dave Steeves. "Where we are sitting with it now is much more favourable than where we were three days ago." Having 100 per cent containment doesn't mean the fire is completely extinguished, it just means crews have a perimeter around the area of the fire, he said. Chronicle-Herald, A3

*** Smoke from B.C. fire may enter Yukon**

The BC Wildfire Service in Dease Lake is cautioning the public to be aware of smoky conditions on Highway 37 from Wheeler Lake to the Yukon border and along the Alaska Highway. It's due to a Blue River wildfire. Smoke may also be visible from Upper Liard, Watson Lake, and Lower Post. Warm temperatures and gusty wind conditions have increased fire growth and hampered visibility. Drivers are advised to drive cautiously and should not stop between Blue River and One Ace FSR. The Blue River wildfire was started by lightning on July 17. It is approximately 1,846 hectares in size and is located about 22 kilometres south of the Yukon border. The fire is burning within an area where a wildfire occurred in 2010 and there are no structures or communities threatened. The wildfire is currently in "modified response" status. Whitehorse Daily Star, 5

*** BC Hydro emails show concern for fracking**

Officials at British Columbia's public power utility have been raising concerns as early as 2009 that earthquakes caused by a controversial gas-extraction method used in the mining industry may put the province's largest hydroelectric dams at risk, internal documents reveal. Emails obtained through an access-to-information request by the Canadian Centre for Policy Alternatives show BC Hydro discussing the possible threat posed by hydraulic fracturing, or fracking, a mining technique that involves injecting high-pressure fluid deep underground in order to extract either natural gas or coal-bed methane. Critics have slammed fracking as a poorly understood and risky industrial activity that contributes to increased seismic activity and risks contaminating nearby aquifers. In one BC Hydro email exchange dated Dec. 3, 2009, safety officer Ray Stewart expresses his unease to water rights comptroller Glen Davidson over the risks of a particular methane-extraction project near the Peace Canyon Dam. Canadian Press (Chronicle-Herald, A6, Red Deer Advocate)

*** Fort Mac residents plagued by sleepless nights**

Geneviève Belleville is struck most about the many Fort McMurray residents who are having nightmares and trouble sleeping. The psychology professor at Université Laval in Quebec City is heading a mental-

health study of people from the northern Alberta city who were forced to flee a voracious wildfire in May. Two of her research assistants were returning Tuesday after spending three weeks in the community. They conducted clinical interviews with about 50 residents and another 300 people completed an online questionnaire. Analysis is to begin soon on whether some are suffering from post-traumatic stress disorder, Belleville said. A preliminary look at the data shows many in the group aren't sleeping well. Canadian Press (Toronto Star, A9, Edmonton Journal)

* **Mayor pans Kinder Morgan's 'risky' pipeline expansion**
Vancouver Mayor Gregor Robertson has told a federal panel on the proposed Kinder Morgan pipeline expansion that the project could be catastrophic to the city. The Province, A10

* **Local search and rescue group helps member repair fire damages to home**
Darleen Steeves woke Aug. 11 to snapping noises and a glow coming into her window. When she looked out of the window she was shocked to see the trailer next door on fire. She called 911 and proceeded to get out of the house. So before waiting for the investigation to be concluded, volunteers at the York Sunbury Search and Rescue (YSSR) group she belongs to rallied together to repair the damages to the side of her home Sunday. Daily Gleaner, A4

Expansion urged for programs that combat radicalization

After RCMP thwarted a major terror threat in Ontario last week, Mohamed El-Rafih knew that his community anti-radicalization initiatives were more urgently needed than ever. El-Rafih is best known in Calgary's Muslim community as the creator of an anti-radicalization program that he calls Fostering Youth Inclusiveness (or FYI). The program is a day camp for children aged five to 12 that aims to fight radicalization by tackling the feeling of isolation that some Muslim children experience while trying to integrate into Western society. Now, El-Rafih is gathering a group of local politicians, police, religious leaders and Muslim community members on Thursday to see how his programs can be expanded and brought to high schoolage youth. "The purpose behind this meeting is to look at the messaging (we've come up with), and to get everybody's opinion on … whether it is going to help us against radicalization," said El-Rafih. "There's messaging for Muslims and there's a message for non-Muslims. The message for Muslims is on how there could be misinterpretations on misguided imams and misguided leaders that could make youth vulnerable to radicalization." (…)El-Rafih expects the Calgary police, RCMP and Darshan Kang, Liberal MP in the Calgary SkyView riding, to attend Thursday's meeting, and hopes their input can help craft an effective message that will help to prevent the radicalization of teenage Muslims. Postmedia Network (Calgary Herald, A11, Edmonton Journal, Calgary Sun)

Terrorism propaganda case referred straight to trial

The Public Prosecution Service of Canada says the case against a Fort St. John man charged with four terrorism-related offences will go directly to trial. Spokeswoman Elizabeth Armitage said the case of Othman Ayed Hamdan will proceed by direct indictment, meaning there will not be a preliminary inquiry. Hamdan was arrested in July 2015 and accused of posting Islamic State propaganda online. An RCMP statement at the time alleged the propaganda included inducement and instructions to commit murder in the name of jihad. None of the allegations has been proven in court. Hamdan was originally charged with three terrorism related charges in provincial court, but Armitage said those charges have been stayed. B.C. Supreme Court documents show he is now charged with counselling to commit murder for a terrorist group, counselling to commit assault causing bodily harm for a terrorist group, counselling to commit mischief for a terrorist group and instructing a person to carry out a terrorist activity. Canadian Press (Times Colonist, A5)

*** American Involvement In Canadian Terror Cases Must Be Questioned**

While watching last week's RCMP press conference in the aftermath of Aaron Driver's death, many questions invaded my mind but were left unanswered. The RCMP's narrative of the events that transpired was repeated over and over in the media with very little questioning. Mike Cabana -- the deputy commissioner of the RCMP who stood alongside his colleagues in the conference room at the RCMP headquarters, apparently nervous and uncomfortable answering some questions -- is the same Mike

Cabana that was involved in the case of Maher Arar. (…) By contrast, Ottawa resident Mohamed Harkat has been the object of a security certificate due to suspicions that he is an Al-Qaeda sleeper agent for more than a decade. Today, he continues to face the threat of being deported to torture by the Canadian government, and has worn a GPS electronic bracelet for more than six years while living under what amounts to house arrest. All his visitors must report to Canada Borders Services Agency (CBSA) and he must obtain the authorization of the CBSA to leave his house. For years, he couldn't use the Internet or even get near a computer. Huffington Post (2016-08-16)

Kudos and questions in terrorist takedown
An editorial states, "Canada came very close to suffering a terrorist attack last week, but countless lives were saved when police disrupted the plan. The wouldbe terrorist, Aaron Driver, who was living in Strathroy under what was basically a restraining order, was killed. How he died isn't yet clear. The Ontario Provincial Police are investigating whether he died by police gunfire or from a bomb that went offin the back of a taxi, injuring the cabbie who had picked up Driver at the house in which he lived. The RCMP acknowledged the tragic outcome but noted correctly that had Driver not been stopped, the carnage would have been far, far worse. So let's take a moment to give our police and security authorities - whose actions are often challenged - full credit. In a fine example of cross-border co-operation, the operation began with a tip from the FBI, which had come across a martyrdom video. (…) Questions remain, of course. We don't know how the FBI got the video, for example. Some wonder about the peace bond Driver was under and why an electronic monitoring bracelet had been removed. There's a tricky balance between monitoring for terrorism and respecting civil liberties; he had never been charged or convicted of a dangerous crime. Even if he had, severe conditions, particularly imprisonment, can further fast-track extremist tendencies. There are dicey political and policy issues ahead. The Liberals remain committed to reforming the Tories' anti-terrorism bill, C-51, but this incident adds complications. And the task has barely begun, although a bill to create a new national security oversight committee has been tabled." Kingston Whig-Standard, A4

Don't overestimate terrorist threat to Canada
An opinion piece states, "Last Wednesday Canada experienced another brush with global terrorism, when Aaron Driver was killed during a violent encounter with police in the sleepy southern Ontario town of Strathroy. No one but Driver was killed in the incident, but the fear-mongers were quick to tell Canadians that the intent of this deranged Islamic supporter of Daesh (also known as Islamic State, ISIS, and ISIL) was to commit mass murder during a workday rush hour. Scary stuff. According to the official version of events, it was the FBI that first discovered that Driver had made a recent martyrdom video and was about to launch an attack. It had to be the FBI because the Canadian Security Intelligence Service insists that it does not spy on Canadians. Driver had long publicly declared his sympathy for the Daesh cause and, as a result, had been arrested prior to signing a peace bond to secure his release. (…) First of all, Driver was a troubled youth who found popularity among Daesh sympathizers online. He was not a hard-core member of the Daesh evildoers. He had never even been to the Middle East, and the congregation at his local mosque tried to correct his skewed take on the Islamic faith. He did make some sort of bomb, but if the result was that exploding it in his own lap failed to kill him and left the taxi driver largely unhurt, it really wasn't much of a bomb. The intelligence and security services-both Canadian and American in this case (because Canadians don't spy on Canadians)-worked efficiently together. Driver did not get to carry out a terror attack. He was killed before he could even attempt the attack. No one was terrorized by his actions. Yet after Driver's death we were told of all the carnage he "would have" created, therefore making it imperative to impose stricter security measures and better monitoring to keep the public safe. (…) Canada remains very, very safe." Hill Times

*** How much do we really know about the Canadian intelligence community?**
An opinion piece states, "Last year American whistle-blower Edward Snowden proclaimed that Canadian intelligence agencies have the "weakest oversight" in the Western world and compared the Canadian government's Bill C-51 to George W. Bush's post-9-11 *U.S. Patriot Act*. Canada became a surveillance state under the Stephen Harper Conservatives. In 2014, for example, it came to light that the Government Operations Centre was monitoring residents of Newfoundland and Labrador, including Indigenous Peoples, residents of the Island's west coast who opposed fracking, and fishermen who were protesting shrimp quotas. This ongoing problem is further complicated by multiple transnational intelligence sharing

agreements, in place since World War II, that remain largely unknown to the general public. Indeed, the rise of the surveillance state is a global phenomenon that cannot be separated from the rise of the internet. But in Canada, because of the lack of any credible oversight, it has played out in a very specific way. This has everything to do with what the Canadian public knows—and more importantly, *does not know*—about Canadian intelligence agencies. Canada's new and highly invasive so-called anti-terror legislation came into force last year with the support of then-Opposition Leader Justin Trudeau and the Liberal caucus. The Trudeau Liberals knew that in order to win the election they would need to undo—or at least promise to undo—much of the damage done by their predecessors. They would have to address the alienation felt by Canadians from having a government that used national security as an excuse to trade away its citizens' freedom and civil liberties. Unfortunately, they have yet to repeal or even reform Bill C-51, and recent terrorist attacks in Europe, the U.S, and here at home in Canada have provided the perfect backdrop against which to further delay the process. On August 10, for example Aaron Driver, a 24-year-old Canadian citizen who was allegedly plotting a terrorist attack in the southern Ontario town of Strathroy, died in a confrontation with police who were following up on a tip from the FBI." The Independent (2016-08-16)

Trump's jihad against jihad deserves support

An opinion piece states, "It didn't take long for critics of Donald Trump to cry foul when the Republican presidential candidate announced his plans to "temporarily suspend immigration from some of the most dangerous and volatile regions of the world that have a history of exporting (Islamic) terrorism." (...)But Trump is not the first to propose such a policy. A Muslim group in Canada, in the wake of the failed "Toronto 18' terror plot, called for a similar suspension. In 2006, the Muslim Canadian Congress (MCC) suggested to Prime Minister Stephen Harper that he suspend immigration from Pakistan, Saudi Arabia, Iran and Somalia, until Canadians officials did thorough security checks of prospective immigrants from these countries. Unknown to many is the fact that security checks of wouldbe immigrants to Canada are not done solely by Canadian (or U.S.) officials, but also rely on information from foreign security agencies that may themselves be infiltrated by terrorist sympathizers. In 2015, I was invited to make a submission to Canada's Senate committee studying the rise of Islamic radicalism. As part of my submission, I suggested a plan akin to what Trump has proposed. I testified that, "We (should) suspend immigration from Somalia, Iran, Pakistan and Saudi Arabia until we are assured that the men and women coming here are committed not to the Muslim Brotherhood, al-Shabaab, Hamas, Hezbollah, and Jamaat-e-Islami, but to a separation of religion and state, gender equality, liberal democracy.'" Toronto Sun, A17 (Ottawa Sun, Edmonton Sun, Calgary Sun)

'Rising threat'

A letter to the editor states, "Not only is there no national deradicalization plan to deal with radical Islamists, the Trudeau Liberals are sending mixed messages. From naively saying we are not at war with the Islamic State of Iraq and the Levant - even though this murderous group has called Canada a legitimate target and claimed last week's thwarted terrorist as its operative - to still planning to remove several provisions from Bill C-51, this government has a disjointed approach to tackling this rising threat. We cannot count on our ability to deradicalize individuals, or on the ability of the RCMP and CSIS to stop future attacks on our soil. Without the timely intelligence from the FBI, we could have had more Canadian casualties last week." National Post, A7

Arrest The Terrorists

A letter to the editor states, "Our prime minister needs to pull his head out the sand. Like his father before him, he needs to re-introduce the War Measures Act so potential terrorists can be arrested and locked up without being charged before more innocent people are injured or killed here in Canada. A wise person who once said "those that fail to learn from history are doomed to repeat it," wasn't far off with what is occurring in the world today. We can't afford to sit on the sidelines any longer." Ottawa Sun, A18

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Privacy and border phone search

Several thorny questions still haven't been answered in the case of a Quebec man who refused to give border officers his cellphone pass code, say privacy and technology lawyers. Alain Philippon had said he would fight a charge of obstructing border officials but pleaded guilty Monday in Dartmouth, N.S., and was fined $500. He was charged when he refused to unlock his cellphone in March 2015 after flying to Halifax from the Dominican Republic. (...)Smartphones typically contain reams of data that go far beyond what could be physically carried in hard copy in any piece of luggage as now defined under an outmoded Customs Act, he said. "I totally understand the law enforcement desire to search devices under certain circumstances. "But what I'm most interested in would be a judge saying, under the Charter of Rights and Freedoms, where that line is and what the proper procedures are." Rob Currie, director of the Law and Technology Institute at the Schulich School of Law at Dalhousie University, said the case highlights legal and regulatory gaps. "The powers that the Canada Border Services Agency have under the act - both to search your things and to make you open them - really only apply to luggage, and also things that you import," he said in an interview. "The Supreme Court of Canada has been quite clear that our electronic devices are not comparable to luggage." (...) There has so far been no constitutional challenge, however, that would clarify what's expected at border crossings. (...) Still, the border agency has been clear that it believes its officers have the authority to search cellphones, Currie said. "The CBSA feels that it has the authority to search your electronic device and they've shown that they will indeed charge you with hindering or preventing customs officers from doing their jobs if you don't unlock the device when you are asked to." Canadian Press (Waterloo Region Record, A3, Hamilton Spectator, Chronicle Herald, Cape Breton Post, Global News, Sudbury.com, Times and Transcripts); *La Presse Canadienne (L'actualité)

Texans hiding guns learn that the fines for firearms can be big in New Brunswick

Vacation trips to Canada for two Texas men ended in provincial court on Tuesday because they lied about guns at the border. Than Jeffrey Do, 56, of Murphy, Texas., pleaded guilty to denying that he had weapons on board when he and his wife Van Bich Pham pulled up to the primary inspection booth at the Canadian end of the Ferry Point Bridge in St. Stephen at about 9:30 a.m. on Saturday. The officers conducting the secondary inspection found three handguns, a shot gun and pepper spray in their camper trailer, federal Crown prosecutor Peter Thorn related in court. Do, a retired engineer, intended to travel across Canada and the United States, defence counsel Rod Macdonald said. He noted that, in Texas, his client could have worn these guns publicly strapped to his waist. They brought the guns for personal protection, the lawyer said. Judge Henrik Tonning agreed, but said that Canada has strict gun laws. He said that this couple could have saved legal trouble by simply answering truthfully when the Canadian border agent asked if they had weapons on board. Tonning fined him $1,700 on top of the $3,500 civil penalty levied by the Canada Border Services Agency for the return of their vehicle. The Crown withdrew charges against Pham. Lloyd Norman Chaffin, 57, Aurora, Texas, failed to declare a 40-calibre Glock handgun at the same bridge in St Stephen at about 2 p.m. on Sunday. Telegraph-Journal, B6

Abbotsford police warn of immigration phone scam

Abbotsford police are warning the public about a phone fraudster who appears to be targeting the South Asian community. Const. Ian MacDonald says the scam artist presents himself as a police officer and uses caller ID 'spoofing' to display the APD phone number. The suspect then suggests the victim has immigration issues, and requests personal and family information - and eventually looks for payment. "The cash could take the form of a wire transfer, it could be a breach of your credit card information, or they might even try to compel you to buy gift cards for them," MacDonald said. MacDonald says there have been similar scams where a caller poses as a Canada Revenue Agency officer. "They prey on people who might be vulnerable, in the sense that they might be immigrants to Canada - new and old - and suggests that they could be deported or they could be in trouble with Immigration Canada," MacDonald said. Four complaints in one day. MacDonald says police received four complaints on Monday. The victim who picked up the call said a man identified himself as "Steve Miller" and told the victim the family failed to fill out proper paper work when they immigrated to Canada several years ago. The fraudster also threatened deportation if the person didn't co-operate in answering questions about the names and birth dates of family members. CBC News (2016-08-16); Postmedia Network (Province, A8, Vancouver Sun)

* **Revocation of airport-security clearance was unfair**

A government decision that stripped a woman of her airport-security clearance and put her out of work more than two years ago was unfair, incomprehensible and unreasonable, a Federal Court judge has ruled. In ordering the minister of transport to take another look at the case, Judge Susan Elliott slammed the government for treating Ayaan Farah in a shoddy fashion. The advisory group that recommended revoking the clearance did not carefully review documents, Elliott said in her written decision, while the director general of aviation security failed to "ensure the critical facts upon which she relies are very clear." Elliott quashed the revocation, saying the government had hidden behind the Privacy Act and failed Farah badly - especially in light of the "gravity of the consequences" to her. Farah expressed delight with the ruling, saying she hopes it will help others caught in a similar situation. Canadian Press (Times Colonist. A8)

*** Canada Should Not Follow Europe's Example In Taxing Online Purchases**

There has been some debate in Canada recently over the issue of sales taxes when making purchases on the Internet from abroad. Right now, when Canadians buy products and services, such as clothes or movie streaming subscriptions, from online vendors located abroad, it is the consumers who are responsible for declaring sales taxes. Very few do so, however, or are even aware that they are supposed to. To remedy this fiscal gap, the Canadian Border Services Agency filters packages, applying taxes and an extra handling fee, but many packages get through untaxed. Beyond this fiscal gap, Canadian sales taxes, both federal and provincial, give foreign vendors an advantage over Canadian retailers. However, the search for an alternative to current policies should not neglect consumers' interests. Huffington Post (2016-08-16)

Immigration detention reform a chance to lead

An opinion piece by Madeline Ashby states, "The government of Canada has announced an investment of up to $138 million in a "better, fairer immigration detention system for the humane and dignified treatment of individuals." It has been a long time coming. According to the Canadian Council for Refugees, Canada is one of the few nations that still detains immigrants, refugees, foreign nationals and permanent residents alongside convicted criminals in prisons. Those in detention, including minors, can wait for the Canada Border Services Agency to review their cases alongside people already convicted of a violent crime like murder, rape, assault or armed robbery. (…) But let's think bigger: in what ways can the CBSA and the Canadian government as a whole change immigration detention itself? Since the 9/11 attacks, immigration norms have taken on an antiterrorist flavour. According the Global Detention Project, the Immigration and Refugee Protection Act (passed in 2001) pulls focus away. (…) Since 2002, the laws regarding immigrants and refugees have grown more strict and more punitive: The 2012 Protecting Canada's Immigration System Act allowed deportations of refugees seeking asylum on humanitarian grounds and cut offany avenues of appeal to the Immigration and Refugee Board for those refugees who had already been rejected. It also mandated biometric identification procedures for those applying for a Canadian visa. The legislation drew criticism from Human Rights Watch, Amnesty International and the Canadian Civil Liberties Association." Postmedia Network (Kingston Whig-Standard, A4, Ottawa Citizen, London Free Press)

Now serving cups of Discontent

An opinion piece states, ' Peter O'Neil's article on our labour shortage and the supposed need for temporary foreign workers fails to address a crucially important point. The Trudeau government has now set our annual intake of immigrants at the absurdly high level of 300,000. This figure is unjustifiable, but surely in this human tsunami there should be enough workers to meet our labour needs three times over. Isn't that what immigration is supposed to be for? If this isn't the case, then not only are we bringing in far too many immigrants, we're bringing in the wrong kind." Vancouver Sun , A11

Le gouvernement contrevient à ses propres règles

Une article d'opinion mentionne, « Lettre adressée au premier ministre du Canada, Justin Trudeau. Monsieur le premier ministre, Depuis quelques années, un de vos ministères ne respecte pas les règles au niveau de l'importation des produits laitiers au Canada en laissant passer à sa frontière du lait diafiltré. Il contrevient donc à une règle canadienne très simple à faire respecter. Il n'est pas normal que dans une agence, le lait ne soit pas du lait et soit dédouané, et que pour une autre agence canadienne, le lait redevienne du lait! L'agriculture en général au Canada, mais particulièrement la

production laitière au Québec, est souvent le principal levier économique de nos régions. Depuis la baisse du prix du lait payé aux agriculteurs, causée par l'importation illégale de lait diafiltré, plusieurs d'entre eux ont décidé de reporter des projets ou même de les abandonner. » Le Nouvelliste (La Presse)

Out of touch and out of gas: where are post-Harper Conservatives headed?
An opinion piece states, -"I always thought Preston Manning was done as champion of the restive western-driven Reform party the day he changed his mind and decided to move into Stornoway, the official opposition leader's residence. (…) Tony Clement has lots of government experience and is the only remaining big-name Mike Harris acolyte among those who jumped to Ottawa from Ontario in 2006. But Tony isn't exactly lighting up the scoreboard. Beyond his social media expertise, he brings little that is new or compelling to the race. And his credibility as a fiscal hawk went south after he secretly shifted $50 million in border infrastructure money to his Muskoka region for a lavish G8 spending spree on a gazebo, public washrooms, and other facilities." Hill Times

* **US Customs and Border Protection hosts Trade Day in Detroit**
The U.S. Customs and Border Protection's Detroit Field Office is hosting its 5th annual Trade Day. The event takes place Wednesday at the Patrick V. McNamara Building in Detroit. Those involved in Trade Day say that it offers the chance for U.S. and Canadian importers, brokers and other trade groups to network with officials from the U.S. and Canada. Participants include Immigration and Customs Enforcement, the U.S. Department of Agriculture, the U.S. Fish and Wildlife Service, the Consumer Product Safety Commission, the Environmental Protection Agency and the U.S. Patent and Trademark Office. Others include the U.S. Food and Drug Administration, the Canadian Border Services Agency and the Canadian Food Inspection Service. Click on Detroit

LAW ENFORCEMENT / APPLICATION DE LA LOI

* **Police chiefs want access to passwords**
Canada's police chiefs want a new law that would force people to hand over their electronic passwords with a judge's consent. The Canadian Association of Chiefs of Police has passed a resolution calling for the legal measure to unlock digital evidence, saying criminals increasingly use encryption to hide illicit activities. There is nothing currently in Canadian law that would compel someone to provide a password to police during an investigation, RCMP Assistant Commissioner Joe Oliver told a news conference Tuesday. Oliver said criminals - from child abusers to mobsters - are operating online in almost complete anonymity with the help of tools that mask identities and messages, a phenomenon police call "going dark." "The victims in the digital space are real," Oliver said. "Canada's law and policing capabilities must keep pace with the evolution of technology." The chiefs' proposed password scheme is "wildly disproportionate," because in the case of a laptop computer it would mean handing over the "key to your whole personal life," said David Christopher, a spokesman for OpenMedia, a group that works to keep the Internet surveillance-free. "On the face of it, this seems like it's clearly unconstitutional." The police chiefs' resolution comes as the federal government begins a consultation on cybersecurity that will look at issues including the best way to balance online freedoms with the needs of police. The consultation runs until Oct. 15. Police demands for access to online communications and the concerns of civil libertarians about privacy rights have created tensions around the globe in recent years. The issue came to fore last year when the U.S. Federal Bureau of Investigation went to court in a bid to crack the password of a terror suspect's iPhone following a mass shooting in San Bernardino, Calif. Canadian Press (Red Deer Advocate, A7, Guardian, Telegram, Chronicle-Herald, Cape Breton Post, Toronto Sun, Hamilton Spectator, Waterloo Region Record, Edmonton Sun, Toronto Star, Edmonton Journal, Leader-Post, Ottawa Citizen, National Post, times & Transcript); Canadian Press (Calgary Sun,A3, Calgary Herald); Presse canadienne (Acadie-Nouvelle, 12, Le Quotidien, La voix de l'est, Le Soleil)

*** Transfert d'armes en Libye**
Le gouvernement fédéral a transmis à la Gendarmerie royale du Canada (GRC) les conclusions d'un rapport de l'Organisation des Nations unies (ONU), qui révèle qu'une entreprise canadienne aurait opéré le transfert illicite de véhicules blindés vers la Libye. En mars, un rapport de l'ONU a avancé que l'entreprise ontarienne Streit aurait transféré en 2012 des véhicules blindés de ses installations des Émirats arabes unis vers la Libye, pourtant sous un embargo commercial qui y interdit la vente d'armements. Selon le comité de l'ONU concernant la Libye, tout transfert de véhicule blindé vers le pays de l'Afrique du Nord devrait être interdit. En 2014, des membres de ce comité ont rencontré des représentants de Streit, qui se sont défendus d'avoir agi illégalement. Or, selon la CBC, qui a eu accès à des avis de livraison et des reçus de vente, l'entreprise canadienne aurait continué de vendre des véhicules blindés à la Libye et au Soudan du Sud après avoir été avertie par l'ONU. Le Devoir, A5

*** King may have been on the move**
Denecho King is believed to have hid in several locations throughout the city prior to being found in a housing unit on Sissons Court Saturday morning, police say. "We can confirm that we suspect he was moving to different locations during the three-day search, thus the police activity that was all over Yellowknife," RCMP civilian member Marie York-Condon stated in an e-mail Tuesday. The force declined an interview request. King, 23, had escaped Wednesday from the North Slave Correctional Centre. He was found in a home on Sissons, an area with multiple rowhouses, by police through "investigational techniques" and tips from the public. Between 25 to 30 RCMP officers were involved at the height of the search, police have stated. "We followed up on any and all sightings reported around the city, and followed the investigational leads," York-Condon stated. "Ultimately, this led us to King at the residence where he was apprehended." RCMP officers were going door to door around 8 a.m., Sissons Court resident Leroy Mantla said. Police confirmed King was in a unit and a crisis negotiator established contact with the occupants. How many people were inside remains unclear. By 9 a.m., officers with weapons drawn could be seen around the buildings as more officers arrived. About 30 minutes later, an officer began giving instructions to King over a loudspeaker. After about 30 minutes more, King left the unit through the front door and was led away in handcuffs to a waiting police truck. "Through the hard work and professional conduct of our RCMP members, we were able to bring this search to a successful conclusion without incident," Yellowknife RCMP detachment commander Insp. Matt Peggs stated in a news release. Northern News; Yellowknifer; Yellowknifer

*** Revocation of airport-security clearance was unfair**
A government decision that stripped a woman of her airport-security clearance and put her out of work more than two years ago was unfair, incomprehensible and unreasonable, a Federal Court judge has ruled. In ordering the minister of transport to take another look at the case, Judge Susan Elliott slammed the government for treating Ayaan Farah in a shoddy fashion. The advisory group that recommended revoking the clearance did not carefully review documents, Elliott said in her written decision, while the director general of aviation security failed to "ensure the critical facts upon which she relies are very clear." Elliott quashed the revocation, saying the government had hidden behind the Privacy Act and failed Farah badly - especially in light of the "gravity of the consequences" to her. Farah expressed delight with the ruling, saying she hopes it will help others caught in a similar situation. "I hope this brings light to the fact that Transport Canada needs to do a better job regarding security-clearance decisions - cancelling people's clearance," Farah said in an interview Tuesday. "Transport Canada needs to change its policy." In April 2014, Transport Canada told Farah the RCMP had reported her having contact with criminals only identified as subjects A, B, and C. Police claimed that two of the individuals used Farah's car to go to a funeral for a known gang member - although she was not in the car and did not attend the service. RCMP also said police interacted with her while she was in A's company, but she said she had no memory of being stopped by police. She also said she did not know who the criminals were, although her lawyer suggested one might have been her brother. Canadian Press (Times Colonist, A8, Chronicle-Herald, Kingston Whig-Standard, Waterloo Region Record, Leader-Post, Ottawa Citizen, Calgary Herald)

Mario Harel s'affaire déjà à la tâche
Le directeur du Service de police de la Ville de Gatineau, Mario Harel, est devenu le «chef des chefs» de police, d'un océan à l'autre. A peine 24 heures après son élection unanime à la tête de l'Association canadienne des chefs de police (ACCP), M. Harel s'est prononcé mardi sur les enjeux qui marqueront

son mandat de deux ans, se réjouissant au passage de l'oreille attentive du nouveau gouvernement fédéral. M. Harel est passé de vice-président à numéro un de l'organisme représentant plus de 1000 membres, lors du congrès de l'ACCP, qui se termine à Ottawa ce mercredi. Il compte profiter de son siège pour marquer des points sur la colline parlementaire. «Avec l'arrivée du nouveau gouvernement, dit M. Harel, il y a un dialogue avec l'ensemble des décideurs qui touchent la sécurité publique. (Le gouvernement) écoute nos enjeux et on écoute ceux du gouvernement. Il y a une bonne communication avec les autorités. On sent qu'il y a une écoute et on sent un désir d'améliorer le cadre législatif dans le but d'améliorer la sécurité publique.» M. Harel sera président lorsque le gouvernement Trudeau légalisera la marijuana, l'an prochain. Ce dossier fait partie des préoccupations à court terme de l'ACCP. Le Droit, 5

*** Rift between Muslims and police deepens**

An opinion piece by Amira Elghawaby, the communications director at the National Council of Canadian Muslims, states, "The past few weeks have deeply shaken whatever trust exists between Canadian Muslim communities and law enforcement agencies. First, news and video footage of the heartbreaking and unjustifiable death of a mentally ill Canadian-Somali man in Ottawa as a result of a police intervention. Then, a B.C. Supreme Court judge ruled that the RCMP were the key architects of a terrorism plot that was used to entrap two marginalized individuals who had recently converted to Islam. Both of these cases have spotlighted some troubling excesses in our country's security establishments. They further underscore the need for Canadians to continually question the unequal power balances in our society that can and do sometimes lead to violations of the human rights and dignity of fellow community members. (...) "We need a fundamental and transformative cultural change to policing attitudes and practices," argued criminology professor and policing expert Darryl Davies in a recent Ottawa Life Magazine article. The same conclusion might be drawn from the RCMP's role in manufacturing a terrorist plot, which points to deep flaws in how security agencies operate. Justice Catherine Bruce's ruling in the case against John Nuttall and Amanda Korody should serve as a wake-up call for our elected leaders. "There must be a balance between the need to protect the public from crime and what is tolerable police conduct in a free and democratic society," wrote Justice Bruce. There is clearly an urgent need for adequate checks, balances, and oversight of those who hold incredible power and authority. With the federal government's current consultations on the Anti-terrorism Act, the time for Canada to properly balance civil liberties with public safety is now. Trust is fundamental to our collective well-being. We need more of it, not less. As the authors of a 2016 Kanishka research study of Canadian Muslim concerns around counterterrorism policies discovered in their interviews, citizens are losing faith in the state." Toronto Star, A13

*** Fighting crime in the digital age**

An opinion piece states, "This week, top police officials from coast to coast have descended on our nation's capital for the 111th annual Canadian Association of Chiefs of Police conference. The topic that will shape their discussion, Public Safety in a Digital Age: Real Victims - Real Crime, is timely, given that we're at an important societal juncture. So much of our daily lives now take place online: our wealth passes through jurisdictions in the form of ones and zeros; the most intimate details of our lives, whether they are held by government or industry, rest on servers located somewhere around the globe; and our critical infrastructure, whether it is managed by the public or private sector, is operated digitally. Given the recent media coverage of data breaches and many people's personal experiences with fraudulent phishing schemes, it's understandable that we, as consumers and citizens, want to erect the highest walls possible around our valuable digital assets. This is a natural human reaction, but it isn't a realistic societal response, given the magnitude of our online world." National Post, A8

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Contraband search done, prison back to normal operations

The lockdown at Dorchester Penitentiary's medium-security unit has now ended, prison management announced on Tuesday. On Aug. 11, at about 11:30 a.m., a lockdown was put in place at Dorchester to enable staff members to conduct a search for contraband items, to ensure the safety and security of the

institution, its staff and inmates. As of Tuesday, the institution returned to normal operations and visits to the institution have resumed. Times & Transcript, A7

Court to consider convicted bomber's appeal next month
In less than a month, the financial advisor convicted of setting a bomb on the doorstep and ultimately killing a former client will have his appeal heard. Brian Andrew Malley, 59, of Innisfail will go before the Calgary Court of Appeal on Sept. 14. He was convicted of first-degree murder on Feb. 24, 2014 by a jury and sentenced to life in prison, without the possibility of parole for 25 years, by Justice Kirk Sisson. Victoria Shachtay, 23, was killed on Nov. 25, 2011 opening a gift left on her doorstep. The paraplegic single mother opened the gift disguised as a bomb, it went off and killed her instantly. (...)Malley's counsel has maintained throughout the proceedings that investigators had tunnel vision and focused in on Malley without considering other alternatives. After the conviction defence counsel Bob Aloneissi, of Edmonton, said his client was wrongfully convicted and compared it to the convictions of Guy Paul Morin and David Milgaard. Red Deer Advocate, A1

Forcillo appeal up next
Const. James Forcillo's police disciplinary hearing will begin after his appeal for the attempted murder of Sammy Yatim is finished. Forcillo is suspended with pay and on bail pending appeal of his conviction and six-year prison sentence. (...)A judge sentenced him to six years in jail. Forcillo was granted bail pending appeal of the conviction and sentence. Toronto Sun, A5 (Ottawa Sun, Winnipeg Sun, Calgary Sun, Edmonton Sun)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Deux fois plus de crimes contre des groupes religieux
Graffitis nazis sur une synagogue, tête de porc devant une mosquée, homosexuels agressés : plus de 250 crimes haineux ont été commis au Québec en 2014, dont près d'une centaine à Montréal. En un an, les crimes ciblant un groupe religieux ont doublé dans la province. Les communautés juive et musulmane sont préoccupées par le phénomène, mais n'observent pas de flambée sur le terrain. Le nombre de crimes haineux perpétrés au Québec était relativement stable dans les dernières années, et même en baisse au Canada. Or, 257 délits haineux ont été rapportés en 2014, un bond de 39 % par rapport à l'année précédente, a révélé le ministère de la Sécurité publique (MSP) dans un volumineux document rendu public lors de l'étude des crédits, en avril dernier. Depuis 2010, il n'y avait jamais eu plus de 200 crimes haineux pendant une année. Cette récente augmentation est « majoritairement attribuable à la hausse des délits motivés par la haine contre certaines religions », selon le MSP. En effet, ces crimes ont doublé entre 2013 et 2014 (48 contre 94). D'autre part, 80 crimes étaient guidés par la haine contre la « race ou l'ethnie » et 27 par l'orientation sexuelle de la personne. Le Ministère prévient toutefois qu'une « grande prudence est de mise dans l'interprétation des données [_] considérant qu'il est parfois complexe d'établir le caractère haineux d'un délit ». Les données de 2015 n'ont pas été compilées. À Montréal, 113 crimes haineux ont été répertoriés l'an dernier, une hausse de 24 % en un an. Pourtant, au moment de présenter la nouvelle escouade vouée aux crimes et incidents haineux, en mai dernier, le chef Philippe Pichet évoquait plutôt une moyenne d'environ 70 crimes haineux chaque année dans la métropole. Il avait aussi spécifié que le phénomène n'était pas en hausse. La Presse+

Les verdicts de non-responsabilité criminelle en légère baisse au Canada
Alors que Richard Henry Bain connaîtra bientôt son verdict, certains se demandent si le tireur de la soirée électorale québécoise de 2012 ajoutera son nom à la liste de ceux qui ont invoqué avec succès la défense de non-responsabilité criminelle pour cause de troubles mentaux. Si les procès lors desquels ce moyen de défense a été invoqué font souvent beaucoup parler et remplissent les pages des journaux, le nombre de causes où un tel verdict est rendu demeure stable et est même légèrement en baisse ces trois dernières années au pays, selon de récentes données de Statistique Canada. Il s'agit d'une «faible proportion» du total des causes criminelles au pays, ajoute l'agence fédérale. Selon ses données, 230 verdicts de non-responsabilité criminelle pour cause de troubles mentaux ont été rendus au Canada lors de la dernière année compilée par l'agence fédérale, soit 2013-2014, sur un total de 295 116 affaires

criminelles. Elle a donc été utilisée avec succès par les accusés dans moins d'un pour cent des causes criminelles, note Statistique Canada. Moins de 0,08 pour cent, pour être plus précis. Il est toutefois important de noter que les chiffres du Québec ne sont pas inclus dans l'étude de Statistique Canada, qui a compilé les données de 2005-2006 à 2011-2012, puis jusqu'à 2013-2014 à la demande de La Presse canadienne, qui vient d'obtenir la mise à jour. Le ministère de la Justice du Québec ne recense pas ces données, pas plus que l'Institut de la statistique du Québec. (...)C'est toutefois au Québec que deux des causes hautement médiatisées sur ce type de verdict se sont déroulées, soit les affaires Guy Turcotte et Luka Rocco Magnotta. Presse canadienne (Le Quotidien, 14, Le Droit, Le Soleil)

*** Poll finds Moncton third-safest Canadian city**
A national survey focusing on which cities Canadians consider safe and unsafe has produced some flattering results for New Brunswick. Although Fredericton wasn't included in the just released Mainstreet/Postmedia poll of 4,231 Canadians, much can be interpreted from the results, David Valentin, executive vice-president of Mainstreet Research, said Tuesday. Moncton ranked third nationally and was considered safe by 63 per cent of respondents. I think if we had asked about Fredericton, we would probably have gotten a very similar score to Moncton," Valentin said in an interview. Charlottetown ranked second and St. John's, N.L., fourth in the survey and were considered safe by 68 per cent and 58 per cent of respondents from across Canada. Halifax, ranked seventh, was perceived safe by a majority at 53 per cent. Only Ottawa was considered safe by more people at 72 per cent. Daily Gleaner, A5

*** John Howard Society exec director downplays poll results**
The perception that Winnipeg is Canada's unsafest city is simply wrong, asserted the executive director of the John Howard Society of Manitoba. "I don't care what people in Vancouver and Toronto think," John Hutton said Tuesday. "It's more important what we think in Winnipeg." Hutton was responding to a Mainstreet Research/Postmedia poll that shows that 56% of Canadians surveyed consider the Manitoba capital unsafe. "It 's certainly not as dangerous as Vancouver, Regina or Saskatoon - and I pulled that out of that poll," Hutton said. "It's not a perception that's based on reality." The problem is that the perception is partly fuelled by politicians who are always pushing for more police out of fear, Hutton said. Winnipeg Sun, A4; 1; 2; Winnipeg Free Press; 1; CBC News

*** Canadians see city as less safe**
Canadians perceive Calgary to be one of the country's less safe cities, ranking it 10th out of 15 major centres in a new poll. The poll comes after last month's release of Statistics Canada crime stats, which showed a 29% increase in the severity of crime in Calgary. Based on StatsCan's Crime Severity Index, Calgary ranks ninth among the 15 cities covered by the poll (it ranks seventh for overall crime rate, regardless of severity). Winnipeg was seen as Canada's least safe city by poll respondents, followed by Toronto and Montreal. Calgary Sun, A18

*** Les politiques doivent être revues, dit un expert**
Les quatre fusillades survenues en l'espace d'une quinzaine d'heures dimanche à Ottawa devraient inciter les autorités municipales d'Ottawa à bonifier les programmes de prévention pour lutter contre les gangs de rue, croit un professeur en criminologie à l'Université d'Ottawa. «Ottawa peut faire beaucoup plus pour prévenir ce genre de violence», a lancé le professeur Irvin Waller, affirmant notamment que les 400000 $ annuels qu'a budgété la Ville d'Ottawa pour les stratégies de sortie pour les membres de gang, d'aide à l'emploi et de formation sont insuffisants. «C'est un investissement minuscule, a déploré M. Waller. J'ai écouté le maire (Jim Watson) qui a dit qu'il y avait récemment eu le recrutement de 25 policiers additionnels. Je ne crois pas que c'était pour l'escouade antigang. Vingt-cinq policiers de plus, c'est minimum 2,5 millions $. Ce n'est pas une politique de prévention, c'est une politique de réaction». Augmenter le nombre de policiers sans investir davantage dans les programmes de prévention ne règle pas la situation, a-t-il ajouté. Le Droit, 6

*** Forum targets sex slavery**
Police, social service groups and others in the battle against human trafficking emerged from a roundtable discussion in Windsor Tuesday calling for a provincewide task force to fight the growing scourge. Progressive Conservative MPP Laurie Scott from Haliburton-Kawartha Lakes-Brock, who introduced the private member's bill known as Saving the Girl Next Door Act, said there are victims in

virtually every city, neighbourhood and high school. "This is one of the largest growing crimes in Ontario, Canada and globally," said Scott, who travelled to Windsor for the discussion. "We have to recognize it's happening in our neighbourhoods and we have to help our children from these horrific situations." Windsor police hosted the roundtable, which brought together officers, community organizations and others with a stake in the fight against human trafficking. Scott, whose Bill 158 has passed second reading, said more than 90 per cent of victims in this country are Canadian-born. Scott added that Ontario has been designated as a hub for human trafficking in Canada, with 65 per cent of all cases occurring in the province. Windsor Star, A3

*** Human trafficking survivor lured by gifts, fake affection**
Human trafficking survivor Caroline Pugh-Roberts of London wants to tell her story with the hope of preventing young women from experiencing the nightmare she lived. "What they [the predators] do is something called 'love bombarding'," explained Pugh-Roberts. "They tend to shower the girl with gifts, designer clothes, nails, make-up, jewellery, take the girls out for meals and get the girls to fall in love with them." Often the girls are young, vulnerable and come from a difficult family background. Pugh-Roberts was 35 and at a vulnerable stage in her life. Her mother, husband and two friends had all died within six months of each other. She said she loved him. But the 'love bombarding' turned into commands to work and help support what he described as "the family." That support meant being forced to work as a stripper in various clubs along the 401 highway corridor in southwestern Ontario. Sometimes, she made extra money from prostitution. He kept all of the money she made over the eight years she was with him. (...)Pugh-Roberts entered counselling and received help for seven years. Now, when she is not speaking to high school students or helping other women escape from from trafficking, she's at school, entering her final year studying social services. CBC News

*** Ontario on right path in fighting human trafficking**
An opinion piece by Tracy MacCharles, Ontario's Minister responsible for Women's Issues, states, "Human trafficking is a deplorable activity that robs the safety, livelihood and dignity of those being exploited and abused. Our government is aware of the devastating effects that human trafficking can have on individuals, families and communities across Ontario, and is deeply committed to protecting and supporting survivors. That is why our government brought forward a comprehensive strategy to end human trafficking in Ontario in June, with dedicated funding of up to $72 million to fight back against this heinous crime. We have clearly heard from those on the front lines of this issue, and have incorporated their feedback into an approach that we believe to be truly responsive to needs on the ground. Our approach is a survivor-centred approach, one that both provides sustained and meaningful supports for survivors but also gives police, intelligence services and the justice sector the resources they require to combat and prosecute traffickers. These are long-term, sustainable solutions aimed to end human trafficking in Ontario. However, such solutions don't happen overnight. Work is set to begin on a number of the initiatives below: The development of an anti-human trafficking co-ordination office to help collaboration across law enforcement, justice, social, health, education, and the child welfare sectors. Establishing a provincial human trafficking prosecution team, composed of a provincial coordinator and specialized, trained Crowns to effectively prosecute human trafficking cases and ensure consistency across the province. The creation of an anti-human trafficking intelligence team in the Criminal Intelligence Service Ontario (CISO). The team will include a provincial human trafficking intelligence co-ordinator, an intelligence training co-ordinator and an intelligence analyst." Waterloo Region Record, A8

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

MMIW Red Dress Campaign heading to Prince George
There will be empty red dresses hanging in parts of the city on October 2nd, honouring missing and murdered indigenous women. Local organizer Tammy Meise saw the Red Dress display while in Vancouver in 2014. She wants to give a voice back to local women who've gone missing, especially one. "One of my childhood best friends, Kari Anne Gordon, she was murdered and she has become a statistic. When I saw the red dress project it impacted me, it literally took my breath away ... us that are mothers,

that are sisters, that are daughters, that are aunties, have family and friends that have gone missing. When you actually talk to people and start making connections, it's actually amazing how it affects so many people." Meise presented the event to Council on Monday night. Councillors unanimously supported the event and met her request of waiving the Lheidli T'enneh Memorial Park liability costs and covering the Park rental fees. Council also gave Meise permission to hold a candlelit vigil at the Park that night and many, including Councillor Terri McConnachie, promised to be there. My Prince George Now (2016-08-16)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Liberals failing Canadians on marijuana reform
An opinion piece states, "The Liberal government does not seem to be taking too seriously its promise to regulate and legalize marijuana. Sure, the federal party is looking at ways to reform obsolete and arguably draconian drug laws. After all, a permanent criminal record and jail time is rather heavy handed for a non-violent act and use of a substance that indigenous cultures around the world have used for millennia. But as authorities are still throwing the proverbial book at Canadians whose only "crime" was being in possession of a substance that the government is working to legalize, lives continue to be ruined. This might not seem like a serious issue to some voters, many of whom were outright dismissive about it before, during and since the election, but it should be a concern to every Canadian." Sundre Roundup (2016-08-16)

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Workers plan protest to crank up pressure on Foote to fix Phoenix**
The giant Public Service Alliance of Canada is cranking up the pressure on Public Services Minister Judy Foote to fix the troubled Phoenix pay system by staging a public protest by workers in her home province. Employee frustration over the malfunctioning pay system has escalated in recent weeks as new cases of public servants being unpaid, overpaid or not paid at all keep cropping up, but Thursday's planned demonstration is the first political action against the Liberals since PSAC first sounded the alarm about the massive project more than a year ago. The rally will be held at Harbourside Park in St John's NL, drawing public servants from federal offices there as well as from Quebec, Nova Scotia and New Brunswick. Until now, the unions have been working with senior bureaucrats at Treasury Board and Public Services and Procurement Canada to try and resolve mushrooming pay problems caused by Phoenix which appear to be getting more complicated. It also comes the day before Foote is expected to have her first face-to-face meeting with PSAC President Robyn Benson and Debi Daviau, president of the Professional Institute of the Public Service of Canada. Unions have complained that Foote has dodged responsibility for the fiasco and let her senior bureaucrats take the heat. She didn't appear as a witness at the government operations committee meeting that was hastily called last month to discuss Phoenix. John MacLennan, president of the Union of National Defence Employees whose members are among the hardest hit by Phoenix foulups, said public servants want more urgent action. He said workers feel the Oct. 31 deadline Foote's department promised to clear the backlog is too far away. Postmedia Network (Ottawa Citizen, Ottawa Sun)

*** Security concerns prompt backpack ban at Oktoberfest in Munich**

Munich city officials say they're banning backpacks from this year's Oktoberfest and plan to erect a fence in an effort to increase security after recent attacks rattled Germany. Deputy mayor Josef Schmid said Wednesday that bags of more than 3 litres (0.8 gallons) in capacity won't be allowed into the annual beer celebration, which runs Sept. 17-Oct. 3. The number of security staff also will be increased. Schmid said a 350-meter (380-yard) fence will be put up to secure a previously open entrance to the festival grounds. Bavaria was shaken last month by three attacks in a week. Two were carried out by asylum-seekers and claimed by the Islamic State group. Only the attackers were killed. Unrelatedly, a teenager killed nine people in a shooting rampage in Munich. Associated Press (Global News)

MINISTER / MINISTRE

U of S leads major water project
A new $143.7-million water research program could have "vast" economic benefits for Saskatchewan by allowing scientists to predict and citizens to prepare for floods, droughts and towering summer storms, according to its associate director. "If we go back in history, every civilization has been built upon its ability to manage its water successfully, and when civilizations have collapsed, it's because they failed to do so," University of Saskatchewan hydrologist John Pomeroy told reporters. (…) **Public Safety and Emergency Preparedness Minister Ralph Goodale** - whose arrival at the announcement was ironically delayed by fog - said severe weather driven by climate change means research into water and weather systems is crucial. ***"The damages that we will save by better controlling the water flow and the profit that we can make in a more diversified agricultural sector, the payback will dwarf the initial investment (and) return it to Saskatchewan, to Canada many, times over,"*** he said. Since its launch, CFREF has handed out 13 grants, of which two have gone to the U of S. The first, a $37.2 million

package announced last month, will fund the university's new Designing Crops for Global Food Security program. Postmedia Network (Starphoenix, A1, Leader-Post)

Universities take lead on flooding research
Southern Alberta's 2013 flood - which claimed five lives and caused billions of dollars in damage - has prompted researchers to launch the largest university led water project in the world. On Tuesday morning, the federal government announced the Global Water Futures: Solutions to Water Threats in an Era of Global Climate Change initiative in Saskatoon. (…) The project will position Canada ***"as a global hub for leading-edge, user-driven water science for the world's cold regions,"*** **Ralph Goodale**, **minister of public safety and emergency preparedness**, said in a news release. Postmedia Network (Edmonton Journal, A12, Calgary Herald); 650 CKOM (2016-09-06)

Time to talk about electoral reform across the country
It must be important: two meetings in Regina across only five days on how to overhaul the way we Canadians elect our House of Commons. The meetings were requested by the federal Liberals, who, during last autumn's election campaign, pledged the 2015 federal election would be the last one using the familiar first-past-the-post system. (…) Weir was first out of the organizational gate back in June when he began planning a local meeting, but he complained last week that neither of the two other MPs representing the Regina area - Liberal **Ralph Goodale** and Conservative Andrew Scheer - would attend it. **Goodale, the federal public safety and emergency preparedness minister**, cited a busy schedule and conflicts with his work as a minister. Weir claimed **Goodale** indicated he'd be available only on the two days when Weir was expected to be in a national NDP caucus meeting. Postmedia Network (Starphoenix, A4, Leader-Post)

Ottawa ditches ISIL, will call group Daesh
The federal government will no longer refer to the Islamic State of Iraq and the Levant and will instead call the group by a different, potentially insulting name: Daesh. **Public Safety Minister Ralph Goodale** revealed the change in a report on terrorism released last month, saying ISIL is neither Islamic nor a state and that the report would instead use the group's Arabic acronym. Global Affairs Canada and the Department of National Defence also say they are adopting Daesh to refer to the group. The decision continues a trend that has been sweeping through western governments. France and the United Kingdom are among those that have adopted the term in recent years. But while the term has long been used by Arabic speakers and comes from the group's Arabic acronym, it can also be considered an insult, with some translations meaning to tread underfoot or crush. The group has forbidden use of the term Daesh within its territory. *** Canadian Firearms Institute Offers To Help Americans Bring Guns to Canada**
An open letter from the CEO of the Canadian Firearms Institute states, "Dear American Friends, As a Canadian Firearms owner that has enjoyed the hospitality of your country many, many, times, I'd like to offer an explanation of why our Border guards are asking you to leave your guns at home. After spending years enjoying the company of American shooters, I now think I understand the difference between us with respect to firearms and perhaps why it exists. (…) All of the details of how this can be done can be found on the RCMP Canadian Firearms Program website. The address is: (…). If you need help, or have questions, they are happy to help you through the paperwork." Editors Note: Recently the Canadian Border Services Agency issued a warning in the form of a public awareness campaign to tell Americans not to bring their guns to Canada, after seeing a seven per cent increase in the number of firearms seizures at the boarder. Ammoland (2016-09-06)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Flood sparks global initiative**
Southern Alberta's 2013 flood - which claimed five lives and caused billions of dollars in damage - has prompted researchers to launch the largest universityled water project in the world. On Tuesday morning, the federal government announced the "GlobalWater Futures: Solutions to Water Threats in an Era of Global Climate Change" initiative in Saskatoon. The water research project will be funded with a $77.8-million grant to the University of Saskatchewan. The seven-year program, one of 13 projects being funded Tuesday through a $900 million investment from the Canada First Research Excellence Fund, will grow to $143.7 million with additional money fromother universities and industry partners. Calgary Sun, A12

*** Coast guard fleet deteriorated under Tories and Liberals, report says**
The majority of the Canadian Coast Guard fleet is so old that its book value is almost worthless, says an independent report presented to the Liberal government. A third-party analysis was commissioned by the agency, which has for the last 20 years fallen under the responsibility of the Fisheries Department. A heavily censored copy of the report, which was included in a briefing package for former fisheries minister Hunter Tootoo, was obtained by CBC News under the Access to Information Act. It pulls no punches when it comes to the state of the fleet that performs vital ice-breaking and life-saving search and rescue functions on all three coasts. CBC.ca

*** No summer floodway use to control Winnipeg river levels: report**
The Red River Floodway should not be used during the summer to control water levels in Winnipeg, according to a report commissioned by the former NDP government and made public after the Progressive Conservatives took power. A review of provincial flood-control infrastructure operating guidelines, ordered up by the Selinger government in 2013 and completed in 2015, concludes the floodway should not be used to prevent the Assiniboine riverwalk and other riverbank recreational amenities in Winnipeg from being submerged during the summer. The document, authored by a panel of high-profile consultants, was published with zero fanfare after the Pallister government took power and was made aware of its existence, said a spokesman for Manitoba Infrastructure Minister Blaine Pedersen. CBC.ca

*** Presque toutes les familles ont été indemnisées**
Un montant avoisinant les 114 millions $ a été distribué aux réclamations en cas de décès dans le cadre du Fonds d'indemnisation des victimes de la tragédie ferroviaire du 6 juillet 2013 à Lac-Mégantic. Le 23e rapport du contrôleur déposé à la Cour supérieure en vertu de la Loi sur les arrangements avec les créanciers des compagnies (LACC) révèle que près de la totalité de la somme remise au fiduciaire a été distribuée aux familles des 48 personnes décédées en lien avec les tragiques événements. Le Tribune, 8

*** Canadians stepped up to help lead Ebola fight**
Ottawa's Dr. Mélissa Langevin stepped forward when the federal government and the Red Cross launched an extraordinary recruitment drive in late 2014, asking doctors, nurses and others to "join the fight against Ebola." Langevin, who spent a month working in an Ebola treatment centre in Sierra Leone, was one of 900 Canadians to do so. Ottawa Citizen, A9

*** Major oil spill response improvements planned for B.C.**
The organization responsible for cleaning up oil spills around Vancouver and B.C.'s South Coast has plans for major improvements to its facilities and spill response times - but the $200 million upgrades come with a catch: they won't go ahead if the Kinder Morgan Trans Mountain pipeline expansion project isn't approved. Western Canada Marine Response Corporation (WCMRC) currently has about 17 vessels ready for duty around Vancouver's harbour. The proposed upgrades include a new $10-million spill response base a little west of the Iron Workers Memorial Bridge in Burrard Inlet. CBC.ca

*** B.C. search-and-rescue teams renew call for new funding model**

All over British Columbia, search crews are being pressed for resources as call volumes increase. The provincial government has increased funding for the teams, but many say it's not enough to support B.C.'s 80 search-and-rescue groups. At a press conference Tuesday, BC Premier Christy Clark said the government is aware of the issue. "I think we have the best funded volunteer search and rescue anywhere in the country by a long shot, but we know we need to change the funding model, we need to chance some of the ways that it's run," BC Premier Christy Clark said Tuesday. While some argue people should be charged for the cost of their rescue, search-and-rescue teams have said they do not want go down that path. GlobalNews.ca

* **Sask. woman Sheree Fertuck still missing after 9 months**
It's been nine months since RCMP began investigating the disappearance and suspected homicide of a missing Kenaston, Sask., woman Sheree Fertuck, 51. On Dec. 8, 2015, Fertuck's semi was found abandoned at a gravel pit near Kenaston, about 80 kilometres south of Saskatoon. She was last seen wearing a grey sweater, grey pants, white running shoes and glasses. Since then police said there has been no banking activity, use of her passport or cellular phone. Fertuck also hasn't made contact with any family. She's described as being five-foot-four and 250 pounds, with greying brown hair and blue eyes. CBC.ca

* **Helicopter wreckage pulled from Restigouche River**
The wreckage of a helicopter that crashed on Sunday, killing two and injuring one, was pulled from the Restigouche River at Flatlands near Campbellton early Tuesday afternoon. Federal Transportation Safety Board officials oversaw the operation. Times & Transcript, B1

* **Boat carrying 4 missing fishermen discovered off St. John's harbour**
Officials from the Joint Rescue Coordination Centre (JRCC) in Halifax say a boat carrying four missing fishermen outside St. John's habour has been located by search and rescue crews. According to JRCC, the 6.7-metre open boat was found near their fishing nets. Air efforts were stalled overnight due to poor visibility, but are expected to resume Wednesday morning as weather conditions improve. JRCC said the boat had been overdue since Tuesday. A Cormorant helicopter from Gander, a Hercules aircraft from Greenwood, N.S., several fishing boats and the Royal Newfoundland Constabulary have also been involved in the search. Air searches are expected to resume Wednesday morning. CBC.ca

Bridge lane closure causes concern about economy, commuting
Windsor's local economy and commuter travel time will feel the pinch if Ambassador Bridge owner Matty Moroun doesn't move quickly to address "safety deficiencies" that have indefinitely closed down a curb lane on the 87-year-old crossing, said local leaders on Tuesday. Transport Canada and federal Transport Minister Marc Garneau announced a section of the bridge will be blocked with concrete barriers near the entrance to Windsor where there is a crumbling sidewalk and rusted-out railings. Due to the shutdown of a traffic lane entering Canada, lineups are expected for both trucks carrying cross-border goods and vehicle traffic that each weekday includes a few thousand commuters travelling across the Windsor-Detroit border. "The sooner we can add capacity at the Windsor-Detroit border the better for business and for trade," said Matt Marchand, CEO for the Windsor-Essex Regional Chamber. "This certainly highlights the need for redundancy and need for the (planned Gordie Howe International Bridge) to move forward in a timely manner. I understand infrastructure and international projects are complex, but the sooner we can add more lanes, the better." It has been estimated up to 25 per cent of the local economy is linked to the movement of cross-border goods and trade, most notably within the auto and agricultural sectors. Windsor Star, A4

*** Accusé à 71 ans d'exportation de marijuana aux États-Unis**
Le doyen d'un «club de l'âge d'or» d'exportateurs québécois de pot ne pourra esquiver la justice américaine, qui risque de l'envoyer finir ses jours en prison. Yvan Chandler, 71 ans, sera jugé dans l'État de New York face à des accusations de complot pour trafic de plus de 1000 kilos de marijuana et pour blanchiment d'argent, vient de trancher la Cour d'appel du Québec. (...)Une dizaine d'autres «old timers » québécois croyant que leur âge n'attirerait pas les soupçons ont été épinglés dans cette enquête. Parmi eux, Monique Storie, une sexagénaire de Saint-Jean-sur-Richelieu, cachait un magot de 212 485 $ US dans des couches pour adultes quand les douaniers du poste frontalier de Champlain ont fouillé sa voiture, en juillet 2010. Journal de Montréal, 23

*** Police blotter**
(...) Kenento Boots, 62, of Akwesasne, was arrested on Sept. 5 at the port of entry. Police alleged Boots was found to be in breach of his conditions while at the port of entry and police were called. Police also alleged Boots kicked a CBSA officer in the leg and refused to provide a breath sample. He was taken into custody and charged with refusing to provide a breath sample, assault and breach of undertaking for operating a vehicle while under the influence of alcohol. He is scheduled to appear in court on Sept. 13. Cornwall Standard-Freeholder (2016-09-06)

*** Interactive Advance Passenger Information Initiative: coming soon**
On September 30 2016 changes relating to the government's collection of information regarding all passengers and crews aboard commercial air carriers destined for Canada will come into effect. Over the past few months the Canada Border Services Agency (CBSA) has been working with the more than 200 foreign air carriers that operate in Canada to transition them to the Interactive Advance Passenger Information Initiative (IAPI). This regime replaces the Advance Passenger Information/Passenger Name Record Programme (API/PNR). Air carriers must provide information to the federal government under two pieces of legislation: the Customs Act and the Immigration and Refugee Protection Act. Regulations setting out the prescribed information have been made under each act, but the information prescribed is the same under both. (...)The Canadian government has stated that the IAPI initiative will "contribute to preventing prescribed persons and improperly documented foreign nationals from reaching Canadian ports of entry, thereby protecting the integrity of Canada's immigration program and enhancing public safety" – a virtual wall of sorts. Interactive systems that allow or require earlier transmission of PNR data are also said to "facilitate faster clearance of international passengers and [to] reduce examination time upon arrival". International Law Office

*** Frustrations et préoccupation sécuritaire**
Le temps d'attente dépasse parfois les deux heures à la douane internationale. Le syndicat des agents frontaliers redoute des failles de sécurité résultant du surnombre de voyageurs. Des milliers de voyageurs ont dû patienter pendant deux heures, voire davantage, hier après-midi, pour franchir la douane internationale de l'aéroport Pierre-Elliott-Trudeau, submergée de vacanciers et d'étudiants étrangers depuis trois semaines. Le « manque chronique » de douaniers est tel que le président du syndicat des agents frontaliers craint qu'on ne puisse « échapper » des personnes suspectes à la frontière. « C'est présentement une de mes craintes qu'on puisse laisser passer des gens dans ce maillon-là parce qu'il y a un manque d'employés et que la pression est très forte », s'inquiète Jean-Pierre Fortin, président national du Syndicat des douanes et de l'immigration. Il craint que les agents frontaliers ne soient tentés d'« aller dans la facilitation » en raison de la grande pression à laquelle ils sont soumis. Le syndicaliste assure néanmoins que ses membres font leur travail méticuleusement, même en période de congestion. (...) Un nombre très important de vols internationaux a atterri à l'aéroport Montréal-Trudeau entre 15 h et 18 h hier, provoquant un déferlement de 6100 personnes à la douane. L'objectif opérationnel de 20 minutes de l'Agence des services frontaliers du Canada (ASFC) a ainsi été dépassé par cet afflux de voyageurs. « Les délais d'attente ont été causés principalement par une convergence de vols internationaux ayant occasionné un temps d'attente de plus de 60 minutes », a indiqué par courriel hier soir Stéphane Malépart, directeur régional adjoint des communications de l'ASFC au Québec. La Presse +; CJAD

*** Encore moins de vols vers les États-Unis**

L'offre de vols vers les États-Unis diminue encore à l'aéroport international Jean-Lesage, cet automne, alors même que l'établissement peaufine son projet de centre de prédédouanement américain. Trois transporteurs ont réduit la cadence vers les États-Unis ou s'apprêtent à le faire. Depuis la fin d'août, Delta Airlines n'offre plus qu'un vol quotidien vers l'aéroport John-F. Kennedy à New York. La construction en cours est évoquée comme raison à court terme. Une demande insuffisante durant la saison creuse constitue toutefois la véritable raison à long terme, indique le porte-parole Anthony Black. United abandonne pour sa part son service annuel vers Chicago pour le rendre saisonnier. Les voyageurs peuvent encore profiter d'un vol par jour d'ici la fin du mois d'octobre, à défaut de quoi il faudra attendre le mois de juin. (…)En mars, les gouvernements canadien et américain sont parvenus à une entente diplomatique sur le prédédouanement qui accorde un centre à Québec. Cela fait plus de 10 ans que l'aéroport de Québec souhaite obtenir cette infrastructure qui devrait coûter autour de 30 millions $. Dans un centre de prédédouanement, les voyageurs en direction des États-Unis ou qui y font escale passent les douanes américaines avant l'embarquement, ce qui réduit l'attente à l'arrivée ou entre deux vols. Le Quotidien, 18 (La Presse, Le Soleil)

New Chinese visa offices could spur more tourism to Canada
The opening of several new offices in China where citizens can apply for visas to visit Canada could be a boon for travel operators in this country, if Chinese tourism surges as a result. Among the deals signed by Prime Minister Justin Trudeau during his state visit to China was an agreement to allow Canada to open seven new visa application centres, in addition to the five already there. Until now, the Chinese government has permitted visa offices only in cities where Canada has an embassy or a consulate. The new offices are expected to open in 2017. With more Chinese people heading out on travels from secondary cities, smoothing the visa application process could sharpen Canada's competitive edge as a travel destination. (…)Rob Taylor, vice-president of the Tourism Industry Association of Canada (TIAC), said that in the long term, the new offices will also help deal with a new technical requirement: After 2018, tourists coming to Canada will have to provide "biometric" data with their visa applications, which might include electronic fingerprints or retinal scans. That can only be done in person, so having more offices will help prevent roadblocks. Canada has become a key destination for Chinese tourists, with close to 500,000 visiting in 2015. Globe and Mail, B5

Province in a better position to accept intake of refugees
The B.C. government and settlement groups are bracing for a new wave of roughly 1,500 government-assisted refugees from the Middle East before the end of this year. Another 750 privately-sponsored newcomers to the region are expected before next spring. That rough estimate of 2,250, provided Tuesday by the Immigrant Services Society of B.C., compares with the more than 3,000 government and privately-sponsored Syrian refugees welcomed to the province since the program began in November of 2015. The national total is slightly over 30,000. Vancouver Sun, A3 (The Province)

Report to EU threatens $200M lobster industry
Federal Fisheries Minister Dominic LeBlanc says Canada will partner with the United States to vigorously oppose any and all efforts to have live American lobsters banned from the European Union. The EU moved a step closer to a ban on Tuesday following a report that says there's enough scientific evidence to proceed with a review of Sweden's request to declare the American lobster an invasive species. (…)Some observers have wondered if the proposed lobster ban is an attempt in Europe to erect a non-tariff barrier to free trade and head off Canadian and U.S. live lobster imports, now worth $200 million annually. "I hope not," LeBlanc said. "We believe a free trade agreement with Europe is in the economic interests of Canada and the EU." Lobstermen in the U.S. and Canada had hoped to stop the proposal before it moved any further. Telegraph-Journal, A1 (Times & Transcript, Daily Gleaner); * Associated Press (Ottawa Citizen, Cape Breton Post)

*** Keep compassion for Syria alive**
An editorial states, "It's been one year since three-year-old Alan Kurdi's lifeless body was lifted from a Turkish beach. The photo of the toddler, one of thousands fleeing the war in Syria, hit the front pages of newspapers around the world and touched a nerve. In Canada amid a federal election campaign, it prompted all political parties to take a hard look at their refugee resettlement promises and see what more they could do. After the Liberals were brought to power, they mounted an exceptional campaign to

resettle thousands of Syrian refugees in Canada. Faith and community groups banded together to raise money and other resources to host refugees in dozens of communities across the country. The UN's refugee agency says that since Alan Kurdi's death, "4,176 people have died or gone missing on the Mediterranean-an average of 11 men, women, and children perishing every single day over the last 12 months." The world, including Canada, must not forget about the Syrian refugees looking for resettlement in safer places. Canada has resettled more than 30,000 Syrian refugees since the Liberals began their campaign last November. But they're still a ways off of meeting their goal of bringing in 25,000 government-assisted refugees by the end of this year. They had brought in just over 19,000 from this category as of Aug. 28. The Canadian Press reported Aug. 29 that the government has learned from the first wave and is preparing to welcome a second influx to meet the end-of-year goal. Let's hope it does." Hill Times

Canadian Firearms Institute Offers To Help Americans Bring Guns to Canada
An open letter from the CEO of the Canadian Firearms Institute states, "Dear American Friends, As a Canadian Firearms owner that has enjoyed the hospitality of your country many, many, times, I'd like to offer an explanation of why our Border guards are asking you to leave your guns at home. After spending years enjoying the company of American shooters, I now think I understand the difference between us with respect to firearms and perhaps why it exists. (…) All of the details of how this can be done can be found on the RCMP Canadian Firearms Program website. The address is (…). If you need help, or have questions, they are happy to help you through the paperwork." Editors Note: Recently the Canadian Border Services Agency issued a warning in the form of a public awareness campaign to tell Americans not to bring their guns to Canada, after seeing a seven per cent increase in the number of firearms seizures at the boarder. Ammoland (2016-09-06)

*** No match for China**
An opinion piece states, "This week, China indicated its interest in a free-trade agreement (FTA) with Canada through the removal of tariffs and some non-tariff barriers. Will Canada be able to respond appropriately? Australia, a country that mirrors Canada in many respects, already has a freetrade agreement with China that began Dec. 20, 2015. The agreement sets out reductions on tariffs on coal, copper alloys, pharmaceuticals, car parts and agriculture goods (dairy, beef, wine and wool) and will ensure free access to the Chinese market for iron ore and energy. There will be greater access for services, like financial industries, telecommunications, tourism and education. A mechanism will be in place to challenge non-tariff barriers and settle investmentstate disputes. Restrictions on foreign direct investment are to be eased, with Australia still screening all investments by Chinese stateowned enterprise (SOE), regardless of their size. Presumably, Canada should learn from Australia's negotiation with China. However, we should not fool ourselves. Gains from free trade may not be sufficient to overcome our discomfort with China's human rights, espionage and environmental practices, subsidies and non-tariff protectionism and other policies aimed at gaining global market share. Even if a good FTA is in the making, it is unclear that Canada has much to offer, given our proximity to the United States and our inability to get key resources to tidewater." National Post, FP9

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Watch How Government Spyware Infects a Computer in This Leaked Demo Video**
Just like any regular tech company, vendors such as Hacking Team or NSO Group, which sell software designed to spy on computers and cellphones, have to convince potential customers that their product is worth the thousands of dollars, or sometimes millions, that it costs. For that, companies often set up controlled live demos, showing the potential buyers, usually police departments and intelligence agencies, how their technology works and just how great their spyware is. Unless you are a police agent, a middleman who resells this type of software, or you've worked in one of these companies, you've probably never seen one of these demos—until today. Motherboard has obtained a never-before-seen 10-minute video showing a live demo for a spyware solution made by a little known Italian surveillance contractor called RCS Lab. Unlike Hacking Team, RCS Lab has been able to fly under the radar for years, and very little is known about its products, or its customers. Motherboard.vice.com

Edmonton police allow Mill Woods residents to return to homes after bomb investigation
Police said residents of Mill Woods who were forced out of their homes by the potential discovery of an improvised explosive device (IED) Tuesday, were told they could return to their homes shortly after 10 p.m. after officers "concluded investigations of the IED." Police also said two people had been taken into custody in connection with their investigation and that charges were pending. They did not provide details about the suspects or what type of charges might be laid. Earlier in the day, police said officers were evacuating residents within a one-block radius of a home at 20 Avenue and 46 Street while they conducted their investigation. "There was an investigation that brought us to the address today… at approximately 4 p.m. today," said Insp. Gary Godziuk with the Edmonton Police Service. "The search warrant that we were conducting discovered a quantity of improvised explosive devices which needed to be dealt with in a safe and reliable manner." Global News

Charges withdrawn: Teen agrees to peace bond in case involving lyrics and death threats
The Crown has withdrawn death-threat charges against a Cape Breton teenager who posted online a song he wrote that included lyrics suggesting a school shooting "sounds like bliss." The RCMP said the lyrics, written by 18-year-old Nelson Fletcher Rudderham, represented a threat against students and staff at the Inverness Education Centre Academy. His trial was due to begin Tuesday, but the Crown withdrew the charge when the Inverness teenager agreed to sign a peace bond. Defence lawyer Kevin Patriquin said he was happy with the outcome. "I think it's a good resolution. It's one where you know what the outcome is going to be in terms of not having a criminal record, as long as he complies with the terms, and that is one of the most important aspects of it," he said. Under the terms of the 12-month recognizance, Rudderham is required to keep the peace, stay away from the Inverness school, and not own or possess any firearms or explosives. Crown attorney Herman Felderhof told the court he would drop the charge if Rudderham signed a bond, but did not elaborate. He would not comment afterward. Patriquin said the peace bond conditions were all standard, and his client will have no problem complying with the firearms condition, which the Crown wanted because of the perceived threat conveyed in the song. "That was a pretty easy one because Mr. Rudderham doesn't own any firearms anyways," he said. "It's almost a non-issue from his point of view." *** Youth who escaped from Dojack centre remains at large**
A youth who escaped from the Paul Dojack Centre last week remains at large, and the province hopes to be granted an extension of a court order that allows for the publication of his name. The youth escaped from the Regina-based youth correctional facility Thursday. The Ministry of Justice received a five-day exemption so it could release the boy's name and photo in hopes of it leading to his apprehension. That exemption expired at midnight Tuesday and the ministry cannot reapply until Wednesday morning. A justice ministry official said last week that the young man - whose age and offences are still protected by a publication ban under federal legislation - was in custody for reasons that were "violent in nature." Names of youth offenders are normally protected under the Youth Criminal Justice Act. Whatever the specific reasons for his custody is, it was enough to prompt the government to seek a rare court order

allowing for his name and photo to be released to the public. A judge agreed there was enough of a threat to public safety to warrant the approval, and allowed the boy's name to be published for five days. The boy is five-foot-11, 145 pounds with a slim build. He has brown eyes and brown hair. Anyone with information about his location is asked to contact local police or the RCMP. Leader-Post, A6

*** La GRC veut mettre la main sur du matériel de l'émission *Enquête***
La GRC tente de forcer Radio-Canada à lui remettre des extraits jamais diffusés d'entrevues réalisées par l'animateur Alain Gravel à l'époque où il travaillait à l'émission Enquête, a appris La Presse. Déjà, la société publique a mobilisé son service juridique pour bloquer la manoeuvre des policiers et protéger ce que son directeur général de l'information décrit comme un «principe sacré»: l'assurance que le matériel amassé par des journalistes servira uniquement à informer le public, pas à compléter par la bande le travail des autorités. Le dossier qui intéresse la GRC est celui de la corruption à l'Agence du revenu du Canada, qui avait fait l'objet d'une fouille approfondie à l'émission Enquête. Plusieurs personnes ont été accusées au criminel dans cette affaire, dont deux intervenants avec qui Alain Gravel avait réalisé des entrevues: Francesco Bertucci, propriétaire de l'entreprise Thomson Tremblay, et Adriano Furgiuele, vérificateur du fisc congédié en 2009. La Presse

Accused reporter awaits ruling: Crown argues journalist sought confrontation with police defence says RCMP exaggerated on stand
A judge will issue a ruling in October on whether a Yellowknifer reporter obstructed police officers last year while taking photos of them searching a van downtown. A three-day trial of John McFadden, 53, ended Friday with Crown prosecutor Annie Piche questioning the reporter followed by closing arguments from Piche and defence lawyer Peter Harte. McFadden was arrested on July 5, 2015 just before 1 a.m. in front of Shoppers Drug Mart on 49 Street after taking 20 photos over 3.5 minutes of four RCMP officers searching a van for ownership information. The van had licence plates reported as stolen in Alberta and police wanted to confirm a drunken man seen climbing into the driver's seat was its owner, according to testimony from officers. The testimony of three RCMP officers formed the basis of the Crown case when the trial began June 22 in territorial court before Judge Garth Malakoe. It had been adjourned after the first day until it resumed Thursday afternoon with cross examination of the last officer to take the stand. Sarah Heaton, a friend of McFadden, testified in his defence. She said McFadden joined a family dinner at her home July 4 before they went to the Black Knight Pub. They had two rounds and had ordered a third when McFadden had left the bar to smoke, Heaton and McFadden testified. While outside, he saw police vehicles blocking part of the roadway with their emergency lights on. He walked toward the vehicles where McFadden said Const. Christopher Hipolito told him, "What the f--- do you want? You shouldn't be here, get the f--- out of here." McFadden testified that he walked back toward the bar, muttered that he would get his "f---ing camera." The remark from the officer, the reporter said, left him frustrated and heartbroken because it came after a period of acrimonious relations with RCMP, including him being barred from a press conference in April 2015. Northern News Service (Yellowknifer)

RCMP end probe into Senate expenses
Mounties drop cases of 30 current, former senators as source cites lack of evidence, says investigation no longer in the public interest. The RCMP will not launch any further criminal investigations into the remaining Senate expense files, officially closing the book on one of this decade's biggest political scandals without a conviction. Sources say the Mounties have reviewed 30 cases of current and former senators that were flagged by Auditor-General Michael Ferguson in his June, 2015, report and decided none warrant a criminal investigation. The decision comes after Senator Mike Duffy, the only member of the Senate whose case made it to trial, was exonerated last April on 31 charges of fraud, breach of trust and bribery relating to his Senate spending. He has since returned to work. A source close to the RCMP files cited lack of evidence and said it was no longer in the public interest to pursue investigations. The Mounties also shut down their nearly three-year investigation into Senator Pamela Wallin in May without laying charges, and fraud and breach of trust charges against Senator Patrick Brazeau were withdrawn in July. Both are now back in the Senate. Globe and Mail, A14

*** Condamnation d'un prêcheur islamiste bien connu de la GRC**
L'un des prêcheurs radicaux les plus influents d'Occident, suivi sur les réseaux sociaux par les terroristes canadiens Martin Couture-Rouleau et Michael Zehaf Bibeau, vient d'être condamné à plus de cinq ans de

prison au Royaume-Uni pour avoir soutenu le groupe armé État islamique (EI). En 2013, il avait prédit un attentat au Canada. Les Anglais le surnomment «l'homme le plus détesté» de leur pays, le «prêcheur de haine». Anjem Choudary, avocat de 49 ans d'origine pakistanaise, prédicateur emblématique dans les milieux islamistes britanniques, marchait sur une fine ligne depuis plusieurs années. Il s'était fait «le porte-parole des extrémistes, faisant des commentaires des plus déplaisants, mais sans jamais franchir le seuil de la criminalité», comme l'a expliqué au Guardian le commandant Dean Haydon, chef de l'escouade antiterroriste de Scotland Yard. La Presse

* **Racism lesson of the day**
Students returning to class in Surrey Tuesday got a lesson in racism. Police were called to Johnston Heights Secondary because of a large swastika and a racial slur that had been spray-painted on the outside wall. By the afternoon, someone had turned the swastika into a flower and covered up the slur, but students and parents said the damage was already done. "I saw this disgusting language and it really hurt me," one student told CTV News. A cleanup crew was also called to the school grounds in the mid-afternoon. It's unclear who is responsible for the spray-painted vandalism. Another student said she believes it was likely the work of "stupid kids." "Obviously they're stupid enough to write things like a swastika on the school," she said. The RCMP said investigators take cases like these very seriously. If the vandal is identified, Mounties said it's possible the individual will be charged with mischief, and that the incident could be treated as a hate crime. Castanet

* **Arrest leads Penticton police to cache of stolen mountain bikes**
Penticton RCMP's Targetted Enforcement Unit was successful in recovering a number of stolen bikes last week. Cpl. Don Wrigglesworth says the enforcement team arrested a 30-year-old Penticton man for possession of a high-end mountain bike stolen out of Kelowna last Tuesday, Aug. 27. That arrest led police to a downtown residence where police found $14,000 worth of stolen high-end mountain bikes. While making patrols on Van Horne Street Tuesday, police witnessed two men and a woman in front of a Van Horne residence with three expensive mountain bikes. The Van Horne residence was known to police, who were also looking for four mountain bikes reported stolen the previous night. A red Specialized Crave mountain bike was in possession of one of the men, which was found to have been stolen from Peachland on Aug.12. The man was also found to be in possession of methamphetamine and heroin. He was released on a promise to appear. Police then attended the residence of the man in possession of the stolen bike, leading them to Eckhardt Avenue where they found several high end mountain bikes in a shed. The bikes came from all over the Okanagan Valley, Wrigglesworth says. Infotel

* **La Loche, Sask., staff and students return to school where shooting took place**
Tuesday morning marks back to school for staff and students in La Loche, Sask. It has been nearly nine months since a horrific shooting rocked the northern Saskatchewan village. On Jan. 22, two staff members were killed and seven people were wounded in a shooting that took place at the community school. In a home nearby, two brothers were found dead. A 17-year-old is charged in connection with the shooting. At the time, officials were calling for the school to be torn down. (…) La Loche RCMP have confirmed that a school resource officer will be posted in the building. In addition to the RCMP officer at the school, officials have said the school division has hired a security service. The high school and Ducharme Elementary School will both have three security staff working in the buildings from morning to evening. The health region has also hired a suicide prevention worker who will also provide services through the Friendship Centre. Currently, there are two mental health counsellors and two addictions workers that are providing services in the community of La Loche. CBC News

West Shore RCMP identify man arrested after standoff
West Shore RCMP have released the name of the man arrested after shots were fired during an armed standoff in Langford on Saturday. Michael Godolphin, 36, is now in custody. West Shore court officials said Godolphin is facing at least two charges, possession of a weapon and two counts of possession of a controlled substance, and is scheduled to appear in court on Thursday. RCMP received a report of an agitated male in the 800 block of Langford Parkway just after 5 p.m. Saturday. Minutes later, responding officers found a man waving a handgun while standing on the side of the road near Langford Parkway and Veterans Memorial Parkway. A witness reported hearing two shots fired. Nobody was injured. Streets were blocked and the nearby Rona store was evacuated. Emergency responders, including Vancouver

Island and Greater Victoria emergency response teams, crisis negotiators and B.C. Ambulance paramedics, were on scene. Negotiators made contact with the man and talked to him for just under three hours until he surrendered shortly after 8 p.m. The handgun was recovered and sent for forensic tests. RCMP Report: Thief gets away with $4,000 cash from Reddi Mart
The Golden-Field RCMP responded to 184 calls for service in the last two weeks, an average for this time of year. Calls for service included, but weren't limited to, 43 traffic complaints, 16 collisions, 14 abandoned 911's, 4 reported thefts, and 6 disturbances. (...)Local RCMP assisted the CP Police Service and Canadian Border Services Agency on August 31 after two males were located riding a train near the Beaverfoot, east of Golden. Further investigation by police determined that the males were US Citizens who had not reported their entry into Canada. The males were then detained and lodged in cells awaiting an immigration hearing which resulted in CBSA agents escorting the two back to the United States. Golden Star (2016-09-06)

*** Police believe 3 Burnaby sex attacks are related**
Burnaby RCMP is investigating three apparent sexual assaults against women between Sept. 1 and 3. Police said that on Sept. 1, they received two reports of women being followed as they walked along Mary Avenue and 16th Street. The women said the unknown male approached them from behind and pulled their pants down to the ground. When the women turned around, he fled the area on foot. The incidents happened within 20 minutes of each other and the suspect's description was similar in both cases. He is medium-skinned and in his late teens or early 20s, 5-foot-7 to 5-foot-10 with a thin build and prominent dark eyebrows. He wore a black baseball hat, black hoody and dark jeans. On Sept. 3 at 7:50 a.m., a woman reported that she'd been grabbed by a male on the 7400 block of Kingsway Avenue. The woman was walking down an alley when he approached her from behind and grabbed her buttocks. When she turned around the man ran away. The suspect was described as light-skinned with a thin build and 5-foot-7 to 5-foot-10. He wore a red jacket and blue jeans. RCMP, which believes the three incidents are related, said extensive patrols have been undertaken. None of the three women were injured. Burnaby RCMP caution people to be vigilant when walking alone, and to walk in pairs or groups if possible. Vancouver Sun, A6

Langford RCMP deserve kudos
An opinion piece states, "The incident in Langford Saturday could have so easily turned out differently, but because police officers did their job - and did it well - a dangerous situation was resolved with no one getting hurt. West Shore RCMP got a report at about 5:20 p.m. Saturday of an agitated man with a gun along the road near the intersection of Veterans Memorial Parkway and Langford Parkway. When officers arrived, the man fired two shots with a pistol. It would be hard to criticize officers if they had fired back. There was a serious threat to the lives of the police officers and to many civilians at a busy intersection at a busy time of the day. It was a tense situation. Yet the officers handled it with patience. Despite the man's highly agitated state, despite the fact that he set the gun down and picked it up several times, waving it around, officers waited him out. Instead of shooting him, they talked to him. They answered his agitation with calmness and it paid off. He gave himself up about 8 p.m. Police-involved shootings are in the news with distressing regularity these days, but the Langford incident won't make headlines outside of the region. Move on, folks, nothing to see here. But in reality, there was something to see: commendable professionalism and remarkable restraint. Witnesses, some of whom were trapped in their cars as police stopped traffic for understandable reasons, noted how calm the police were, not an easy task in such a high pressure situation. Officers had to weigh the welfare of the man with the gun with the safety of the public - the lives of innocent people were at risk. It was a situation for which police are trained, but one that most officers hope they never confront." Times Colonist, A10

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Rapist sightings false, say police
Vancouver police say convicted rapist Larry Takahashi has not been seen in an east Vancouver neighbourhood. Someone has posted leaflets claiming to have seen the 63-year-old in the neighbourhood

but Acting Sgt. Brian Montague says the sightings are false. Takahashi is staying at a halfway house in an unknown location in Vancouver but Montague says he has not yet left that facility. In 1984, Takahashi was sentenced to three life terms after admitting to raping at least 30 women in Edmonton in the 1970s and 1980s. He was recently granted parole, even though a Parole Board report found he poses a moderate to high risk to reoffend and is a danger to teen girls and women. Privacy laws prevent officials from naming where Takahashi is staying. Canadian Press (The Province, A9, Vancouver Sun, Waterloo Region Record)

Un procès devant juge seul pour une affaire de maltraitance d'enfant
Un couple de Sherbrooke accusé de maltraitance envers son enfant et qui devait subir son procès devant jury retourne devant juge seul. (...) Les accusations portées contre le père de famille sont plus imposantes que celles qui pèsent contre la mère. Le père a été condamné le printemps dernier de gestes à caractère sexuel sur deux filles sous sa garde. (...) Dans le dossier complémentaire de cette affaire, le père a été condamné à 12 ans de prison en mai dernier pour les gestes à caractère sexuel sur deux de ses filles. Il a porté la peine en appel et la permission d'en appeler doit être entendue le 14 septembre prochain à Montréal. La Tribune, 11

*** Former Quebec judge Jacques Delisle, convicted of murdering wife, applies for release from prison**
The only judge in Canada to ever have served time for a murder conviction is filing for bail as he waits for a ministerial review of his case. The lawyer for former Quebec judge Jacques Delisle, who was convicted in 2012 of first-degree murder in the death of his wife, filed an application for bail in Quebec Superior Court today. Delisle was sentenced to life in prison with no chance of parole for 25 years in the shooting death of his wife. (...) In Canada, convicted prisoners who have lost all legal appeals are allowed by law to ask the government to reopen the case by making a direct appeal to the federal justice minister. The Department of Justice`s Criminal Conviction Review Group has advanced the application for review to the Investigation stage, the second of four stages in a ministerial review. Lockyer said that means Justice Minister Jody Wilson-Raybould "is saying that she has determined that there may be a reasonable basis to conclude that a miscarriage of justice likely occurred." "Having done that, Mr. Delisle is entitled to bring a bail application, pending the minister's final decision," Lockyer said. The review is the final recourse for Delisle, who has maintained his innocence since his wife's death. CBC News (2016-09-06)

*** Kevin McMurrer, convicted of second-degree murder, granted full parole**
A Prince County man, convicted and sentenced in the murder of his estranged wife, has been granted full parole. Kevin Kenneth McMurrer, now in his mid 50s, had been serving a life sentence for second-degree murder of his ex-wife, Carrie Ellen (Crossman) McMurrer. (...) In August 2015, his case was again reviewed and he was granted a six-month day parole, which was extended another six months in February. At that time, leave privileges were authorized and special conditions imposed “to protect society” and assist with his reintegration. The board wrote that during this release McMurrer “met and exceeded expectations” of his supervision plan; maintained regular counselling with different supports; obtained employment; participated in programming, community groups related to combating domestic violence; and attended Alcoholics Anoymous meetings and psychological counselling. Journal Pioneer (2016-09-06)

*** Routine patrol results in drug charges**
A Grande Prairie man is facing drug charges after being caught with what is believed to be cocaine in his mouth during routine patrols on Saturday, south of Grande Prairie. At about 3 a.m., RCMP patrolling the area near the County Industrial Park saw a man walking south on 93 Street near 42 Avenue. During questioning, police determined the man was hiding a small amount of what is believed to be cocaine in his mouth and was arrested without incident. Blake Dean Murphy, 29, of Grande Prairie has been charged with possession of a controlled substance and obstructing a Peace Officer. Murphy is currently on parole but remains in police custody. Daily Herald Tribune (2016-09-06)

*** Dartmouth woman gets almost 6 years in prison for prolonged attack on ex-lover**
A Dartmouth woman who confined her former lover, threatened to kill her and repeatedly stabbed her with a steak knife has been sentenced to five years and 10 months in prison. Diane Lynn Pothier, 37, pleaded

guilty in June to a charge of aggravated assault and was sentenced Tuesday in Halifax provincial court. (…) The judge made Pothier's sentence consecutive to a three-year term she is already serving for an attack on an Elizabeth Fry Society employee in Ontario. That incident happened while Pothier was on bail on the charges involving her ex-lover. Last summer, while in a federal facility in Kitchener, Ont., she threatened to kill a corrections officer, an offence that drew a one-month sentence. Local Xpress (2016-09-06)

*** La Fête des pères**
Une lettre à l'éditeur déclare, « Je suis détenu à la prison de Cowansville. On m'a faussement accusé de tentative de meurtre. La lenteur des délais pour aller à procès au provincial ainsi que les conditions inhumaines de détention m'ont emmené à plaider coupable pour limiter ma peine à 6 ans. J'ai pris cette décision pour éviter le suicide et faire du meilleur temps au fédéral. Les conditions de détention au provincial sont invivables, incluant les préjudices et injustices causés, tant par les agents correctionnels que les autres détenus. Personne ne peut comprendre la réalité du milieu carcéral s'il n'a pas le malheur d'y avoir séjourné. J'écris un Journal au quotidien pour éventuellement dénoncer la vie en milieu carcéral dans un livre à publier pour conscientiser les citoyens sur la réalité d'ici. Je suis un homme avec de belles valeurs et une bonne éducation. Même si je souffrais dans certains aspects de ma vie d'avant, jamais je n'aurais pu imaginer les pressions psychologiques que j'allais subir en dedans. Je termine un DEC en sciences humaine et j'étudie par correspondance en gestion des ressources humaines. Pourriez-vous me référer à une personne qui serait intéressée à me publier. Il est important que les gens sachent que les détenus, victimes du système, payent 100 fois plus cher au niveau des conséquences, que l'importance véritable de ce qui les a mené en prison. » Journal de Montréal, 47 (Journal de Québec)

Buzz kill
An editorial states, "There goes another Harper tough-on-crime law out the judicial window. Because, of course, we wouldn't want to be too hard on a woman farming 1,100 pot plants in the middle of a Jane St. highrise apartment building. In a landmark ruling, an Ontario judge has struck down yet another of the former Conservative government's mandatory minimum sentences as unconstitutional, this time the two-year minimum jail term - with an extra year for endangering public safety - for growing more than 500 marijuana plants. In 2015, Hai Thi Pham was convicted of tending an elaborate commercial pot grow-up in a three-bedroom apartment at 2755 Jane St. Toronto Police found 1,110 plants being grown under 19 high-pressure sodium lights connected to 20 ballasts that made them compatible with 1,000-watt lightbulbs. (…)10 Months Pham's lawyers argued the 45-year-old mother of two shouldn't be sentenced to the mandatory minimum mandated in the 2012 amendments to the Controlled Drugs and Substances Act. They challenged the law not because a three-year sentence would be "grossly disproportionate" in her particular case - they actually agreed it wouldn't be - but because it could possibly affect other, less blameworthy offenders where it would amount to cruel and unusual punishment. (…) Mandatory minimum sentences were championed by the former Conservative government as a legislated way to curtail courts too often seen as soft on crime. But now that Harper-era agenda is being systematically dismantled by a judiciary which never liked being told what to do." Toronto Sun, A5

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Court reviewing acquittal in death**
The Alberta Court of Appeal is hearing arguments on whether to overturn a controversial acquittal of an Ontario trucker charged with killing an indigenous woman. Last year, a jury found Bradley Barton not guilty of first-degree murder in the death of Cindy Gladue, a 36-year-old sex-trade worker who was found dead in a bathtub in an Edmonton motel room in 2011. Gladue bled to death after a night of what Barton called consensual, rough sex. (…) In a submission to the court, the Women's Legal Education and Action Fund criticized the way the trial was conducted. The brief said Gladue was consistently dehumanized and stereotyped. "The characterization of Ms. Gladue as 'native, ' coupled with the characterization of her as a prostitute, created a heightened risk that the jury would bring to the fact-finding process discriminating beliefs, misconceptions or biases about the sexual availability of indigenous women. Canadian Press

*** SaskTel's 'I Am Stronger' returns to help youth tackle bullying**
As students head back to school this week, SaskTel is ramping up its program designed to help youth put an end to bullying. In partnership with the Ministry of Education, the I Am Stronger program offers grants of up to $1,000 for youth-led initiatives that promote kindness and address the issue of bullying and cyber-bullying both online and in local communities. In addition, the website offers dedicated to resources for kids, teenagers, families, and educators, plus assists victims of bullying or cyber-bullying in getting help and reporting bullying activity safely. SaskTel said that it acknowledges that the products and services it sells may be used to conduct bullying activities. "Since the program launched in 2014, we are excited to have offered 27 grants to date totaling $25,735," said SaskTel president and CEO Ron Styles, in the news release. "We are pleased to assist with empowering our youth to turn their ideas into actions that positively influence social change in schools, communities, and online." SaskTel (2016-09-06)

*** Opioid addiction 'epidemic' in N.L. says U-Turn founder**
The founder of the U-Turn Drop in Centre in Carbonear says that opiate abuse in Newfondland and Labrador has reached "epidemic" levels. In an interview with the *St. John's Morning Show*, Jeff Bourne said that in his region, opioids used as pain medication and as street drugs are a problem just like everywhere else in the province. "I say we're into an epidemic right now," said Bourne. He said that fentanyl – a drug that can be up to 100 times stronger than morphine – has been showing up around Carbonear, first as a slow-release patch and lately as a pill. CBC News (2016-09-06)

*** Drug education upgraded in schools amid B.C. overdose crisis**
Educators are working diligently to warn youth about the inherent dangers of fentanyl as the death toll from B.C.'s overdose crisis shows little sign of receding. According to the B.C. Coroners Service, 433 people died in B.C. of illicit-drug overdose between Jan. 1 and July 31. Fentanyl, a potent synthetic opioid increasingly being cut into street drugs and counterfeit opioids, was detected in 62 per cent of cases in the first half of 2016. The vast majority of those who died — 235 people — were between the ages 20 and 39, but 11 were between 10 and 19. To protect children from fentanyl — which police and health authorities have detected in heroin, cocaine, crack, amphetamines and counterfeit prescription pills — educators are bolstering their outreach in schools. Rob Rai, director of school and community connections for Surrey School District 36, said his district is working closely with the City of Surrey and Fraser Health to obtain updates on fentanyl's presence in the community. Since last year, the district has distributed such information to counsellors, administrators and youth-care workers, who then work with students to answer their questions and clarify misconceptions about fentanyl and other toxic adulterants. "One of the things the kids have shared with us is that they don't see pill drugs as a hard drug," Rai said. "We're working hard to educate the kids that just because it's not a pipe or not a needle, doesn't mean that you're any less at risk." Vancouver Sun (2016-09-06)

*** New addictions treatment program for women opens as demand soars**
A new addictions treatment program designed specifically for women has opened its doors as the province grapples with a growing demand for services to help individuals with drug and alcohol abuse problems. On Tuesday, the Recovery Acres Society unveiled its CARE (Co-occurring Addiction Recovery Essentials) for Women office next door to its existing treatment facility for men in Marda Loop. Janine Copeland, program director for CARE for Women, said the short-term, outpatient-only program will "fill a gap." "I've always suspected that there has been missing pieces when it comes to programming for women. Historically, I'd always been told that addiction is addiction and recovery is recovery. That never sat right with me," she told the crowd gathered for the grand opening. (…) The government has acknowledged Alberta is facing an "opioid crisis," as it deals with a rising death toll from illicit fentanyl that reached 153 fatalities in the first six months of this year. On Wednesday, Liberal Leader David Swann will renew his call for the provincial government to declare a public health emergency to deal with fentanyl. The provincial government provides about 40 per cent of the funding to the Recovery Acres Society but did not put dollars specifically toward the CARE for Women program. Calgary Herald (2016-09-06)

*** Crown seeks 'incredibly harsh' sentence for B.C. fentanyl trafficker**

Does the dire nature of the deadly fentanyl epidemic demand extreme punishment for the drug's dealers? That's the question facing a B.C. provincial court judge this week as she considers the Crown's call for an unprecedented 18-year jail sentence for Walter James McCormick, a fentanyl trafficker arrested in a Vancouver police investigation. Crown counsel Oren Bick is calling for 10 years for the initial charges and eight for a subsequent fentanyl-related offence that occurred while McCormick was on bail. He wants the two terms served consecutively. "This is an incredibly harsh and high sentence," Bick told Judge Bonnie Craig during the first day of sentencing last week. But Bick said the circumstances demand action. "Mr. McCormick is and has been a high-level drug trafficker in fentanyl, which is a drug that is extremely dangerous, and he and other high-level fentanyl dealers bear personal significant responsibility for hundreds of fentanyl-detected deaths in British Columbia," he said. (…) In calling for a tough sentence, Bick entered into evidence a series of reports about the scope of the fentanyl crisis currently facing British Columbia and other provinces. He also called Dr. James Kennedy, an expert on internal medicine from St. Paul's Hospital in Vancouver, as a witness to talk about the effects of fentanyl on the brain and the rise of the drug in both the worlds of medicine and illicit drug use. On cross-examination, Kennedy agreed with the defence's suggestion that over-prescribing doctors and pharmaceutical companies have contributed to an epidemic that has ravaged communities and killed hundreds. Bick didn't disagree. But he said dealers like McCormick are taking advantage of the bigger problem of opioid dependence to introduce dangerous new drugs onto the illicit market. CBC News

* **Draft Police Budget Approved**
The draft budget was passed by the board at a special meeting last Tuesday. The budget sees board expenditures total $103,378. Board Chair Pat Hehn says they worked really hard to find efficiencies and savings this year. She says the projected budget for 2017 will be less than the 2016 budget. The OPP portion of the budget works out to be close to $8.3 Million. Hehn says the OPP is in salary negotiations with the union and it could see the budget go up by as much as $250,000 due to salaries and wages. She says that is one component in the budget that the board has no control over. Bayshore Broadcasting

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

* **Attorney joins national inquiry**
The art piece that will hang in Mary Potter' s new Toronto office was created to remember Canada ' s missing and murdered aboriginal women and girls. A print of Not Forgotten , by Manitoba artist Maxine Noel, was Potter ' s going-away gift from the Middlesex County Crown ' s office where she made history as the first woman to hold the top job. Potter will be part of national history in her new post as a member of the legal team heading up the Ontario leg of the National Inquiry into Missing and Murdered Aboriginal Women. "When I saw they were looking for experienced Crown counsel to be part of this team, I thought it ' s something that ' s worthwhile, fulfilling work. It ' s definitely my niche ," Potter said. " This is something that I feel deeply committed to, and if I can be part of this nationwide inquiry, even the smallest part into reviewing what happened in the past and exploring what can be done to stop us from going down this road in the future, then I will be able to feel I have done something rewarding with my legal career ." The inquiry began its two-year probe Sept. 1 into the deaths of 1,200 women across Canada between 1980 and 2012. London Free Press, A3

* **A conversation with the minister for the status of women**
Federal status of women minister Patricia Hajdu is no stranger to the struggles of being a woman working in volatile environments. Prior being elected to Parliament in the Liberal return to power in the fall of 2015, Hajdu worked as executive director of a Thunder Bay homeless shelter. Before that, she raised two sons as a single mother while attending university. Last week, Hajdu was in Winnipeg to attend a roundtable discussion on gender-based violence as part of a cross-Canada tour on the issue. Hajdu played a major role in organizing an inquiry into missing and murdered indigenous women (MMIW) and has been travelling country-wide to speak at and attend roundtables, town halls, and conferences covering everything from the inquiry – which began its mandate Sept. 1 – to physical and sexual violence against women and international women's issues. While in Winnipeg, Hajdu spoke with the *Manitoban* about the

MMIW inquiry and a broad range of issues facing women both within Canada and internationally, including campus sexual assault and pay equity. (…) "The government's role in the [MMIW inquiry] is pretty much complete. We were responsible for choosing commissioners and making sure that the inquiry was designed and planned. We also made sure that the inquiry was funded and launched. Now the inquiry becomes an independent process and the commissioners take over and decide exactly how they will move forward." Manitoban

* **Reconciliation takes leadership**
An opinion piece states, "Is reconciliation between indigenous and nonindigenous peoples going where it needs to go? Reconciliation has taken the road of least resistance. Sure, residential schools were awful, but they were symptomatic of a larger problem - colonialism. Colonialism was supported by mid-19th-century racist scientific ideas of alleged aboriginal inferiority, which allowed Canadians to believe they should control the lives of First Nations. Real leadership is personified by people like Gitxsan Cindy Blackstock and Anishinabe John Borrows. Ms. Blackstock has forced the federal government to rectify its discriminatory underfunding of on-reserve social services. Mr. Borrows argues cogently that Canada needs to accept indigenous legal systems. In addition, the inquiry on missing and murdered indigenous women and girls needs our attention." Vancouver Sun, A11

* **Vancouver aboriginal men don high heels**
Curtis Ahenakew will walk in high heels this weekend to urge a stop to gender violence and sexual assault. Ahenakew is one of the organizers of Walk a Mile In Her Shoes: Aboriginal Men Against Violence Against Women. The march calls on indigenous men to walk in high heels as an act of raising awareness. "We're doing this as men to speak out openly about it," he said. "We could have called it walk a mile in their moccasins, but walking in a pair of heels is the symbol or the metaphor of the pain they've experienced." (…) The walk's opening speaker is Musqueam elder Shane Pointe. Ahenakew said speakers will also talk about the National Inquiry into Missing and Murdered Indigenous Women and Girls. 24 Hrs Vancouver (2016-09-06)

* **Explore the city with Vancouver Book Award finalists**
When was the last time you saw your city through someone else's eyes? Three provocative books shortlisted for the City of Vancouver Book Award encourage readers to do just that. This year's finalists include *The Revolving City: 51 Poems and the Stories Behind Them*, an anthology of poetry edited by Wayde Compton and Renee Sarojini Saklikar; *That Lonely Section of Hell*, a memoir of Vancouver's Missing and Murdered Women Investigation by Lorimer Shenher; and *Lawrence Paul Yuxweluptun: Unceded Territories*, the catalogue for an art exhibition currently on display at the Museum of Anthropology, by Karen Duffek and Tania Willard. (…) *That Lonely Section of Hell: The Botched Investigation of a Serial Killer Who Almost Got Away*, published by Greystone Books, is Shenher's first book, and it's been shortlisted for several awards. The moving first-person account of the Vancouver police investigation into missing women in the Downtown Eastside in the 2000s is also a call for change in what he calls a "toxic" police culture. "I have felt like, while this issue has been an important issue, I've felt that to some degree it's been ignored," Shenher said. "So I'm thrilled that the City of Vancouver, the people there have read it, and I hope that the Vancouver Police will take their lead and read the book." Metro News (2016-09-06)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

N.B. government has high hopes in economic return of marijuana legalization
Medical marijuana is a rapidly growing industry, and with the federal government looking into legalization, the potentially enormous economic return is something the province of New Brunswick is counting on. The Gallant government has recently announced a $4 million investment for Zenabis, a marijuana production facility in Atholville, and has given previous money to medical marijuana producer Organigram in Moncton. "We see it as a huge opportunity both in the growth of medical marijuana and the impending legalization," said Susan Holt, New Brunswick's chief of business relationships. Global News (2016-09-06)

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Federal workplace charity donations delayed over Phoenix fears**
When the federal government rolls out its annual workplace charitable campaign this morning, it will advise departments to delay collecting pledges from employees until the dust from the Phoenix pay system fiasco settles. The precaution — a first in the campaign's history — comes as some public servants say they're afraid to sign up for automatic payroll deductions over fears it could lead to other problems with their pay. Since January, more than 80,000 public servants have reported being overpaid, underpaid or not paid at all during the government's transition to the new Phoenix pay system. Some said they've maxed out credit cards, taken out loans, gone on stress leave or even quit their jobs entirely over the debacle. CBC News; Radio-Canada

*** Canadians lack faith in upper ranks of public service: survey**
Canadians don't have a lot of trust in senior bureaucrats to "do the right thing" in managing federal operations and delivering services. The findings of a survey, conducted by Environics Institute and the Institute on Governance, into how Canadians view accountability and oversight in government underscore a troubling level of mistrust among Canadians in their government, both elected officials and public servants. Canadians put more faith in front-line public servants delivering services — as long as they have the resources and authority to do the right thing — than they do for MPs and senior bureaucrats. The majority have at least some trust in front-line workers and MPs, but views of senior public servants are almost equally divided between some trust and little or no trust. At the same time, Canadians overall perceptions about government and its effectiveness — even among its harshest critics who believe government is broken — improved significantly since a similar survey in 2014, which some attribute to the "Trudeau Effect." Ottawa Citizen (2016-09-06)

*** Les étudiants, victimes oubliées du système de paie Phénix ?**
Le nouveau système de paie de la fonction publique, le système Phénix, connaît de nombreux ratés depuis sa mise en place en février dernier. Des dizaines de milliers de fonctionnaires fédéraux rencontrent des difficultés à percevoir l'intégralité de leurs paies, lorsqu'ils ont la chance de recevoir un salaire. Entre 3000 et 5000 étudiants de l'Université d'Ottawa (U d'O) auraient travaillé pour le gouvernement cet été. En raison de la nature et des particularités de leurs contrats, ces derniers seraient pour la plupart concernés par les erreurs du système Phénix. **(…)** Dans un communiqué publié la semaine dernière sur le portail uoZone, l'U d'O annonçait avoir pris des mesures pour venir en aide aux étudiants employés par le gouvernement. Concrètement, les personnes concernées sont invitées à prendre contact avec le bureau des Comptes étudiant afin d'établir des ententes de paiements pour la session d'automne. La Rotonde (2016-09-06)

Canadian military aircraft playing 'critical' role in anti-ISIL fight
Despite the withdrawal of Canada's fighter jets from Iraq and Syria last spring, a senior officer says Canadian military aircraft are providing vital intelligence to allies for air strikes and other operations against the Islamic State of Iraq and the Levant. The Liberal government announced in February that it was ending Canadian combat operations in Iraq by withdrawing six CF-18s that had been part of the U.S.-led bombing campaign against ISIL since October 2014. But the Liberals left behind a Polaris air-to-air refueller and two Aurora surveillance aircraft. Those aircraft have continued to support the bombing campaign against ISIL, also known as Daesh, even as public attention has turned to the role of Canadian special forces operatives in northern Iraq. *** Turkey's Victory Day has new meaning in light of coup attempt**

Turkish Ambassador Selçuk Ünal welcomed guests to his beautiful Rockcliffe home on Aug. 30 to celebrate Turkey's Victory Day. The celebration commemorates the Turkish victory over Greek forces in the Battle of Dumlupinar in 1922, a fight instrumental in the Turkish War of Independence. (…) The tone of the event was sombre while the president's message, one delivered at all Turkish embassies around the world on that day, was delivered by Hakan Cengiz, counsellor at the embassy. (…) Since July 15, the Turkish government has labelled the coup as the work of what it calls the terrorist organization of Fethullah Gulen, a Turkish cleric living in the United States who denies involvement in the coup. The Turkish government has detained thousands of judges, public servants, academics, journalists, and others, including two Turkish-Canadians and Turkey's former ambassador to Canada, Tuncay Babali, many for suspicion of collaborating with the coup plotters. Turkey has been widely criticized for its actions after the coup attempt, including by Canadian Parliamentarians Judy Sgro, a Liberal MP and chair of the Canada-Turkey Parliamentary Friendship Group, and Foreign Minister Stéphane Dion. Hill Times

*** The untold story of the two weeks when Edward Snowden was the world's most wanted man**
The tall, lanky American dressed in all black looked familiar. But Ajith, a 44-year-old Sri Lankan refugee seeking asylum in Hong Kong figured the nervous-looking man with the red-rimmed eyes fidgeting in the darkness outside the United Nations building in the Tsim Sha Tsui district of Kowloon was a U.S. army dodger. Summoned by his immigration lawyer in the late evening of June 10, 2013, Ajith (last names of the refugees in this story have been withheld), a former soldier in the Sri Lankan military, was told the unidentified man was "famous" and needed "protection." Little else was revealed except that he would be responsible for covertly moving the American around at a moment's notice. (…) To escape the long arm of American justice, the man responsible for the largest national security breach in U.S. history retained a Canadian lawyer in Hong Kong who hatched a plan that included a visit to the United Nations sub-office where the North Carolina native applied for refugee status to avoid extradition. (…) Supun wasn't told that Snowden had earlier that day escaped his hotel room where he had been holed up with Poitras and felllow journalist Glenn Greenwald leaking classified documents he had stolen from the National Security Agency's Threat Operations Centre in Hawaii where he worked as an outside contractor for Booz Allen Hamilton Inc. The media's explosive reporting captivated the world, and infuriated and embarrassed the U.S. government. Postmedia Network (Vancouver Sun, N1/FRONT, National Post, Starphoenix, Leader-Post, Montreal Gazette, Calgary Herald, Windsor Star, Ottawa Citizen, London Free Press, Edmonton Journal, Windsor Star); Canadian Press (Hamilton Spectator, Waterloo Region Record)

*** Defend our own interests through universal rights**
An opinion piece states, "Another meeting between a powerful dictatorship and a liberal democracy, another chance to pretend that by defending universal values, governments unavoidably hurt their countries' own interests. China has perfected the art of censoring speech, repressing minorities, jailing critics and flouting the rule of law at home. The consequences of its abuse extend beyond the mainland, though. (…) Don't expect these indignities to remain local. They humiliate and terrify a group so intolerably as to foment violent terrorism in China, and violent terrorism doesn't tend to stay put. Well over 100 Uighurs have travelled to Syria and joined jihadist movements; many bring their wives and kids because they believe it better to live in a war zone than back home. And it's not as if China reserves repression for minority groups. It detains and tortures critics without anything approaching due process. We might think this a tragic violation of the rights of Chinese citizens, and perhaps we could leave it there, were China not jailing citizens of other countries, too, including our own. Foreign governments can't console themselves with the knowledge that the only way people will get thrown in a Chinese prison cell is if they travel to the Chinese mainland. China allegedly sent special agents into Hong Kong and Thailand, kidnapped some booksellers, and whisked them back for a bit of detention and forced confession. If political dissidents won't go to China, China might come to them." Kingston Whig-Standard, A4, (London Free Press)

*** Paris police discover car with gas cylinders near Notre Dame**
Peugeot owned by man on terror watchlist found near cathedral on Saturday night. A car containing several gas cylinders was discovered close to the Notre-Dame cathedral in central Paris last Saturday

night and its owner, now in custody, is on an intelligence services watchlist of people suspected of religious radicalisation, police officials said. The Peugeot 607, which had no registration plates, contained seven gas cylinders, one of them empty on the front passenger seat. It was found with its hazard lights flashing, as if to attract attention, two police officials said on Wednesday. "We think he may have been trying to carry out a test-run," one of the officials said. There was no detonating device present in the car, found on a Seine riverside stretch called the Quai de Montebello, metres from the Notre-Dame cathedral. Documents with writing in Arabic were also found in the car. More than 200 people have been killed in terror attacks over the past year and a half in France. France remains on maximum alert after calls by the Islamic State group for followers to attack the country, which is bombing the militant group's bases in Iraq and Syria. Irish Times

MINISTER / MINISTRE

Erosion of trust threatens to ravage internet, 'eighth wonder of the modern world,' say authors
An interview between Kate Malloy of the Hill Times and Fen Hampson states, "When former CIA computer specialist Edward Snowden leaked classified information in 2013 revealing the United States National Security Agency and other government agencies were using global surveillance programs to spy on internet users, Fen Olser Hampson and Eric Jardine started thinking about how a worldwide lack of trust could destroy the internet. So they wrote a book about it, Look Who's Watching: Surveillance, Treachery, and Trust Online, published by the Centre for International Governance Innovation. [Malloy] What is your message to Canadian federal lawmakers and to the **federal minister responsible for public safety** in Canada, specifically? What can the government do? [Hampson] "The Canadian government and indeed all governments have a major, fiduciary responsibility to respect and ensure the privacy and security of their citizens online, not to compromise that trust through their actions, and to

ensure that private corporations do the same. As we say in the book, without trust the internet won't be an effective tool of prosperity, growth, communication, and innovation. We also argue that internet policy in all of its aspects, not just public safety, is too important to be left solely in the hands of governments or, for that matter, private corporations... The public believes that there is a role for surveillance, but, at the same time, they don't want governments snooping into their own private communications. As authors, we believe that there should be no back doors to end-to-end encrypted data and communications for the simple reason that governments are not very good at keeping secrets and if the good guys have encryption keys, the bad guys will eventually get their hands on them too..."" The Hill Times

'Deep concerns' over proposed security panel

Battle lines are being drawn in the House of Commons over the Liberal government's proposed new National Security and Intelligence Committee of Parliamentarians. The Conservatives and NDP expressed qualified support for the committee's creation during second reading debate on Bill C-22 that began Sept. 27, but both parties zoomed in on what they said were serious flaws, such as too much governmental control over the committee's membership and direction and too little secret information the security-cleared committee of seven MPs and two Senators will be allowed see... However, Saskatchewan lawyer and **Public Safety Minister Ralph Goodale** said if committee members were to uncover something they considered problematic — that their oath of confidentiality prohibited them from disclosing — they would have recourse, without disclosing any classified information. ***"Without getting into specifics, committee members would command a great deal of attention and put a great deal of pressure on the government of the day if they were to tell Parliament and the public that there was something going on within the realm of security and intelligence activities that they believed was improper,"*** he assured the Commons Sept. 27. ***"The committee would be able to outline the problem in detail in its report to the prime minister, and the prime minister would be accountable to Canadians. Subsequently, the committee would be able to tell Canadians whether the problem had been adequately addressed, and the pressure would not go away until the committee gave the all clear. That public pressure would be a powerful tool, and only a committee of parliamentarians could bring it to bear."*** **Goodale** said C-22 aims to help create a national security framework that makes Canada "a world leader in both effectiveness and accountability." The Lawyers Weekly

Defending the damned

For Howard Sapers, one of the most striking moments of the last decade came soon after he released a damning report on racism and discrimination in Canada's prisons. By any reasonable standard, the 2013 report by Sapers, the country's correctional Investigator, should have given pause to every Canadian. It found that black and indigenous people were being thrown in jail at alarmingly accelerated rates, far out of proportion with their numbers in Canadian society. Moreover, once inside, their treatment seemed to suggest particular scorn... Instead, the response from the Conservative government and its members of Parliament landed somewhere between mockery and dismissal. 'The only identifiable group that our justice system is targeting is criminals," said **Steven Blaney, then-public safety minister,** when the report came up during Question Period on Nov. 26, 2013... Soon after, the Conservatives called an election, and lost power. This spring, the new Liberal government gave him another year. Sapers says rather than seeing it as a second chance, he just sees a continuation of the work that needs to be done. And there's a lot of that work to do. Justice Minister Jody Wilson-Raybould's mandate letter from Prime Minister Justin Trudeau, for example, specifically calls for the implementation of recommendations from the inquest into the death of Ashley Smith. Hill Times

Climate change 'issue of the century,' ministers should be demanding environmental assessments from their departments, says environment commish

Calling climate change "the issue of the century," Canada's federal Environment and Sustainable Development Commissioner Julie Gelfand says federal departments must do more to help the government realize its sustainable development goals, and ministers and cabinet should refuse to consider their proposals until they are accompanied by assessments of the environmental impacts of their plans. With this being the fourth year the audit has been done, her office has now reported on 21 departments with five left to do next year: **Public Safety Canada**, Western Economic Diversification Canada, Atlantic Canada Opportunities Agency, the Public Health Agency, and Canada Economic Development for Quebec Regions. Hill Times

TOP STORIES / MANCHETTES

CSIS, Bill C-51 and Canada's growing metadata collection mess
An opinion piece states, “Much has been made over whether the Canadian Security Intelligence Service, Canada's spy agency, should be armed with broader powers to "disrupt" what it perceives as terrorist plots. A report tabled this month by the Security Intelligence Review Committee, which watches over CSIS's work, notes that while the spy agency hasn't abused its new powers of disruption, its bulk data collection program needs to be scaled back. It's easy to think of CSIS and other spy agencies as shadowy organizations that carry out James Bond-like "missions" involving cool gadgets and high-tech weaponry, but the Snowden leaks, among other revelations, have shown the public that metadata collection (online communications, phone logs and other electronic exchanges that can be intercepted in enormous amounts) now constitutes the state's primary instrument of control. Privacy Commissioner Daniel Therrien recently called upon legislators (the Liberals in particular) to amend certain aspects of Canada's national security laws in order to address the issue of metadata collection…” CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort Mac residents say thanks
As Canadians count the reasons they have to be grateful this Thanksgiving, Fort McMurray, Alta. is expressing its own thanks to Canada with a special video. The Regional Municipality of Wood Buffalo has posted a video on its Facebook page expressing the gratitude residents have for the help and support they received in the spring when a massive wildfire forced everyone to flee the city for weeks. The video begins with scenes of smoke and flames, along with accounts from residents about what they went through as they left. It then shifts to talk of the rebuilding effort, as well as the help that came from the rest of Canada… "Thanksgiving is a time to reflect on what we are thankful for, and this weekend we are thankful for the support of Canadians. Your thoughts, prayers, donations, volunteer hours, hand-made gifts, shipments of supplies and kind words are a constant reminder of the care the residents of Wood Buffalo received in their time of need," the post states. The fire in May forced over 80,000 people out of the northeastern Alberta city for a month and destroyed 10 per cent of its structures. In August, the Canadian Red Cross said $299 million had been raised to help with recovery from the Fort McMurray wildfire. Red Cross CEO Conrad Sauve said that included $165 million donated by Canadians to the charity. The federal government contributed $104 million to match funds donated made by individual Canadians and the province matched $30 million given by individual Albertans. Canadian Press (Whig Standard, Toronto Star, For McMurray Toda, Owen Sound Sun Times, Brantford Expositor, Chatham Daily News, North Bay Nugget, Sault Star, Cornwall Standard Freeholder, London Free Press, Chronicle-Journal)

Paying the piper
When Saleemul Huq gets into a room with negotiators to hash out climate change agreements, he prefers not to mince words in making his point about compensating developing countries for loss and damage… There are two elements to the conversation about loss and damage: scientific and political. On the science side, there isn't much disagreement. If no one does anything about climate change… the planet Earth and its inhabitants are in for a rough ride. Finding examples of climate change-induced loss and damage doesn't even require looking beyond North America's borders. The Alberta government's website lists increased forest fires, droughts, and "heavy precipitation with associated increased risk of flooding" as examples of extreme weather events brought about by climate change… The Canadian government, which as of publication, had yet to ratify the Paris Agreement, says it's a proponent of supporting efforts to minimize loss and damage… But the Canadian government draws the line at shouldering the blame. "Canada encourages and supports all countries to put in place frameworks or strategies that will allow them to undertake effective adaptation actions that would also increase resilience to prevent or minimize loss or damage," the email says. "These strategies may be developed at the country or community-level. Linking loss and damage to liability could inhibit a country-driven approach to adaptation. Hill Times

Plane crash survival story recounted
A short flight ended up as a long night for two men after their Maule M-4 float plane flipped upside down into the frigid waters of Gordon Lake on Sept. 29. The lake is about 100 kilometres northeast of Yellowknife. When the private plane carrying Shariff Adam, piloted by his friend Ken Quackenbush, didn't make it back to Sandy Point Lodge on the lake, his father Hassan Adam and others in the party grew anxious as hours ticked by... Hassan, who recounted for News/North his son's story about the crash, said the two were landing in the northwestern part of the lake when the engine cut out... Several hours after the plane failed to return to the lodge, Hassan called his friend Adam Bembridge who owns a helicopter company. Bembridge said he knew it would take time for search and rescue efforts to get underway and reach the area... He called one of his pilots at Acasta HeliFlight Inc., John Buckland. Within 30 minutes Hassan heard the helicopter at the lodge. The search of the edge of the lake that evening included help from float plane pilot Ray Decorby and a Royal Canadian Air Force Twin Otter but nothing was spotted. Without a cache of fuel at the lodge, the helicopter had to return to the city. For several hours overnight, Hassan said he heard the C-130 Hercules from Winnipeg circle. On the island, the two could see and hear the search but without fire or lights had no way to signal the aircraft... Not long after the search resumed, Beck was peering out the chopper's window when he spotted Hassan's bright blue jacket. He was waving his arms on a high spot on the island. NWT News/North

'I want to change my life'
Lanny Stewart says one of the hardest things about being lost in the bush for nearly a week was hearing helicopters flying overhead looking for him - and then hearing them fly away. The 37-year-old Fort McPherson man was lost in the wilderness from Sept. 5 to Sept. 10... He was wearing a hoodie and jacket, jeans, a ball cap and boots. Stewart told his hunting companions that he would be back by about supper time that evening, but he didn't return. His friends searched for him through the night and called the RCMP early the next morning... A search and rescue helicopter saw his fire and landed.
He was flown back to to camp after declining medical assistance. Though his ordeal didn't cause any lasting physical damage, Stewart said it has impacted him mentally... Stewart said he is grateful to everyone who participated in his search, which was comprised of members from the Civil Aviation Search and Rescue (CASARA), Canadian Helicopters, Gwich'in Helicopters and North-Wright Airways, in addition to Fort McPherson residents, search and rescue workers and hunters at James Creek Camp. NWT News/North

Winter gifts to Resolute
Children in Resolute will have new books, winter clothes and sports equipment this winter, thanks to a donation from a Grade 12 class at an Ontario high school. The Civil Air Search and Rescue Association (CASARA) delivered 1,000 lbs. of goods Oct. 4. Mayor Ross Pudluk accepted the gift at a presentation ceremony at the Kenn Borek hangar. NWT News/North

Survivre à la prison d'Evin
C'était à la fin du mois d'août. L'anthropologue montréalaise, qui était détenue depuis le 6 juin dans la prison même où la photojournaliste canado-iranienne Zahra Kazemi avait été torturée à mort en 2003, souffrait alors d'une infection aux poumons et de sévères problèmes respiratoires. Sa maladie auto-immune (la myasthénie grave) et le manque de sommeil - elle dormait à peine deux heures par nuit - la rendaient de plus en plus faible. « Il n'y avait pas assez d'air dans ma cellule », raconte-t-elle... Pour survivre à la prison d'Evin, Homa Hoodfar devait rester forte moralement, quitte à souffrir davantage sur le plan physique. Ses geôliers avaient déjà tenté de la briser et de l'intimider en utilisant toutes sortes de techniques de torture psychologique. La Press

Nightmare in notorious Egyptian prison
When the Arab Spring came to Egypt in 2011, Khaled Al-Qazzaz was full of hope for the country's future. Instead, he and his wife, Sarah Attia, were caught up in a three-year nightmare that left them and their four young children struggling to recover from emotional scars - and Al-Qazzaz from serious physical injuries that may require years of rehabilitation. A Canadian permanent resident and University of Toronto engineering graduate, he was arrested while serving as an aide to Egyptian president Mohamed Morsi, who was ousted in a military-backed coup in July 2013. Now back home in Mississauga, 37-year-old Al-Qazzaz recounted the ordeal that continued even after his release without charge in January 2015. Toronto Star, A6

All alone on the West's front
What makes a Canadian join forces fighting in a war zone? The Mounties put that question to Dillon Hillier, 28, after he got back from Iraqi Kurdistan last year. At the time, he had just spent three months fighting alongside factions out to reclaim territory seized by the Islamic State group. Prior to that, Mr. Hillier, the son of rural Ontario MPP Randy Hillier, had spent five relatively uneventful years with the Canadian Forces. He was only getting reacquainted with a workaday life as a civilian when the terror group known as IS - also referred to as ISIS - started capturing swaths of Iraq and Syria. Then, in October, 2014, the Canadian sympathizers of IS killed two Canadian Forces soldiers. Weeks later, Mr. Hillier was on a plane overseas hoping to battle the terror group... Making a name for himself as a new breed of vigilante soldier savvy in social media, he became something of a controversial cause célèbre for publicly encouraging other veterans to join him. Now, comes his memoir, One Soldier. Globe and Mail, A11

E-petition condemning all forms of Islamophobia attracts highest number of signatures in a year, fails to receive unanimous House consent
Rookie Liberal MP Frank Baylis's e-petition condemning all forms of Islamophobia in the country failed to receive unanimous consent in the House last week, despite having garnered the highest number of signatures of any e-petition on the parliamentary website since the e-petition system began last year. The non-partisan e-petition, numbered 411 and sponsored by Mr. Baylis (Pierrefonds-Dollard, Que.), opened up for signatures on June 8 and closed Oct. 6. In total 70,317 Canadians signed the petition. The petition received support from Canadians across the country, but most came from Ontario, Quebec, and Alberta... Meanwhile, Mr. Baylis' e-petition calls upon the House of Commons to join Canadians in condemning all forms of Islamophobia. "We, the undersigned, citizens and residents of Canada, call upon the House of Commons to join us in recognizing that extremist individuals do not represent the religion of Islam, and in condemning all forms of Islamophobia," reads the last part of the 179-word-long petition... The petition says that a small number of extremist individuals have undertaken terrorist activities in the name of Islam, which has caused anti-Muslim sentiments in Canada. But these individuals do not speak for Islam, the petition says... On Wednesday, NDP Leader Tom Mulcair (Outremont, Que.) rose in the House to seek unanimous consent in the Commons but failed. It was an oral vote, and the Speaker heard at least one MP or more opposing it. Liberal and NDP MPs say some Conservative MPs opposed it but did not know who. Hill Times

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

HIS DYING WISH IS TO LEAVE THE PSYCH WARD

Facing deportation is the least of Hassan Ason Mazinani's problems. Three years ago, the 42-year-old refugee from Iran was diagnosed with the debilitating and usually fatal Lou Gehrig's disease. In despair, he says he made three failed suicide attempts before being admitted to the psychiatric ward at St. Michael's Hospital. Three years later, he's still on the ward - and his dying wish is to get out... Mazinani has had several run-ins with the law over the years, including convictions for possession of narcotics, drug trafficking and firearms charges between 1993 and 2007. He was ordered deported in 2000 and later immigration officials twice assessed him and deemed him a danger to the public, in 2002 and 2008, according to the Canada Border Services Agency. However, he cannot be removed from Canada because Tehran has refused to issue him a travel document. A CBSA spokesperson confirmed Mazinani is still under a removal order but stressed he is not being detained under the Immigration and Refugee Protection Act... Ottawa does cover the health care of refugees, failed refugees and migrants facing removal like Mazinani under its interim federal health program. However, the federal program only covers medical expenses and losing OHIP will put his access to a long-term care facility in jeopardy. A homeless shelter may now be the only option for him if he leaves the hospital. Toronto Star

The Great Debates: advisory groups and a new NAFTA

An interview between the Hill Times and Patrick Leblond, Senior Fellow at the Centre for International Governance Innovation at the University of Ottawa states, "Our experts go head-to-head to debate two hot topics: the probable renegotiation of NAFTA and the high number of consultations being undertaken by the Liberal government. Q: Would a renegotiation of NAFTA be a blow to Canada's economy or an opportunity to make improvements? [A]... Since the 9/11 attacks, there have been calls in Canada to deepen NAFTA through a grand bargain: deeper trade integration with the U.S. in return for more security in Canada. This logic led to the Security and Prosperity Partnership (SPP), agreed to in Waco, Texas in 2005 by then-Prime Minister Paul Martin, U.S. President George W. Bush and Mexican President Vicente Fox. Unfortunately, the SPP was quietly abandoned five years later, owing in large part to insufficient political support from former Prime Minister Stephen Harper and U.S. President Barack Obama. Instead of a trilateral approach to North American economic and security collaboration, a double bilateral one was adopted. For instance, in 2011, Canada and the U.S. negotiated a Beyond the Border agreement that aimed to make the border both more secure and more fluid in order to facilitate trade between the two countries. Mexico and the U.S. negotiated a similar agreement. Although welcome, given that the border had become "thicker" since the 9/11 attacks, these new measures were much less ambitious than the SPP. Moreover, they did not amount to a modernization of NAFTA. They were administrative in nature and targeted a very specific, even if crucial, issue: border security and fluidity. Hill Times

Dion's candour

An opinion piece states, "The successive visits of Prime Minister Justin Trudeau to China and Premier Li Keqiang to Ottawa in September carried some overtones of naiveté on Canada's part - perhaps most notably, the agreement to begin negotiations toward an bilateral extradition treaty, with an apparent emphasis on supposed economic crimes of Chinese citizens to be shipped back to China.So it is reassuring, and indeed encouraging, that Foreign Affairs Minister Stéphane Dion answered questions in late September about Tibet with considerable candour..." Globe and Mail, A8

The softwood war is poised to reignite

Canada and the United States are about to find themselves in a very familiar place - quarrelling over softwood lumber. The U.S. lumber industry will be in a legal position to file a potentially damaging trade case against Canada at midnight Oct. 12, when a decade-long truce between the countries ends. If the United States launches a challenge - as widely expected - Canada and the United States will be locked in a lumber trade war for the fifth time since the 1980s. Globe and Mail, B1

Angus Reid's survey actually shows high level of support for our diverse society

An opinion piece states, "Much is being made of a new Angus Reid poll on the attitudes of Canadians towards minorities, coming out as it does on the heels of Kellie Leitch's plan to test immigrants on "anti-

Canadian" values. Polling people's attitudes on diversity is always a good thing as the mood does change from time to time, depending on the issues that face us… There were two sets of questions on diversity in the poll. Interestingly, the first did not receive coverage-not even in Reid's own article on the CBC News website-while the second, the more sensational one, garnered all the coverage. Surprising! Respondents were asked to first comment on: "How well immigrants are integrating into society." A full 67 per cent said they were satisfied and 33 per cent said they were dissatisfied. (The report does not reveal how many had no opinion, which seems odd. Not even one per cent? But I digress.) This is a good news story, no? Two to one, Canadians believe immigrants are integrating well. Not many government policies or societal trends get that kind of support…" Hill Times; Toronto Star

LAW ENFORCEMENT / APPLICATION DE LA LOI

Cold case leads police to alleged Sask. grow-op
The case of a missing Edmonton doctor led police recently to an alleged marijuana grow-op east of Regina. Dr. Patrick Cyril Thauberger, a 53-year-old clinical psychologist with a doctorate in pharmacology, was on leave from his job when he disappeared on Sept. 3, 1997… As the unsolved file grew older, it eventually became what's termed a "cold case." The Regina Police Service has continued to investigate and, recently, that investigation reportedly led investigators to what was described as a large, outdoor marijuana grow-op in the RMs of Indian Head and South Qu'Appelle. The grow-op reportedly contained more than 300 plants, police reported. A news release from the RPS indicated the grow-op was discovered by its members, along with members of the RCMP, during the execution of a search warrant under the Controlled Drugs and Substances Act. Although police didn't provide additional details, the release said the warrant "was obtained as part of the investigation" into the Thauberger case. Postmedia News (Leader-Post)

Pesky drone annoys people in Oakbank, but RCMP can do little to stop buzz
Curt Danners couldn't believe it when a drone buzzed by him in his backyard while he was cleaning his pool recently. The wind generated by the propellers fanned down on him, and it wasn't the first time. A week earlier, Danners and his wife were coming home from work when he got out of his car in the garage and spotted the device for the first time… People in Oakbank have been complaining on social media about a persistent drone that has been flying very close to people's homes since the end of September. The City of Winnipeg is considering a bylaw to regulate the use and the sale of drones… Danners said RCMP told him and other neighbours there is little they can do. CBC News

Patrick Côté a eu un poumon perforé
Patrick Coté, cet ancien joueur de la Ligue nationale de hockey (LNH) qui a été blessé par balle jeudi, au pénitencier de Donnacona, a eu un poumon perforé. Selon son père, Gilles Côté, l'ex-joueur de hockey serait maintenu dans un coma artificiel, mais on ne craint pas pour sa vie. « Ils lui ont tiré dans le dos. La balle a performé son poumon », a déclaré Gilles Côté à Radio-Canada en entrevue téléphonique. Le père du prisonnier déplore n'avoir recu aucune information du pénitenicer. Il a finalement obtenu des informations de l'Hôpital de l'Enfant-Jésus. Patrick Côté a été gravement blessé jeudi soir lors d'une violente bagarre avec un autre détenu de la prison de Donnacona Incapables de le maîtriser, les agents correctionnels ont utilisé du gaz irritant, sans succès, avant de tirer des coups de semonce avec leurs armes de service. Un des gardiens l'aurait finalement atteint d'un tir pour le neutraliser. Radio Canada

Songs for women prisoners

Nancy Gallant of Cole Harbour is a passionate ministry worker and speaker, and she made correctional and local music history Oct. 4 as the first musician to hold a CD release party inside a federal prison... The idea stemmed from her work with Royce Harris of Daybreak Prison Ministry and was inspired after six years of monthly musical and biblical counsel, song, and discussion with inmates at Truro's Nova Institution for Women. Her motives are simple: to give hope and peace to those confined - and defined - by the walls of the prison they find themselves in. Chronicle Herald

Search for slain teen Cooper Nemeth inspires Winnipeg homeless initiative
The family of slain 17-year-old Cooper Nemeth is giving back to a Winnipeg street patrol group that played a significant role in searching for the teen in February — and brought together Indigenous and non-Indigenous communities in the process. The Nemeth Initiative is supplying Bear Clan Patrol with care packs for community members in need that they come across. The goal of the initiative is to give people on the streets hope and keep Cooper Nemeth's spirit alive. Nemeth, 17, was found dead on Feb. 20, 2016, after a high-profile six-day search for the teen. Nicholas Bell-Wright was charged with second-degree murder in the case. Police have said the incident was drug-related. CBC News

Province, police want help cracking down on crimes involving illegal tobacco
Crime Stoppers and the Department of Public Safety want the public's help to stop crimes involving illegal tobacco. New Brunswickers are asked to report anything involving the use, sale, transportation, and distribution of tobacco that's not purchased from a licensed retailer. Times & Transcript, A10

Shepherds of Good Hope launches fundraising appeal to help Pootoogook's brother attend her Nunavut funeral
The Shepherds of Good Hope has launched a fundraising appeal to help the brother of renowned Inuit artist Annie Pootoogook with the purchase of a plane ticket to attend her burial... Pootoogook's body was in the hands of the Ontario's Coroner's Office until a few days ago as Ottawa police continue to investigate her death as suspicious. Ottawa Citizen

Walk for murdered, missing women ends awareness week
A 5-kilometre walk for murdered and missing indigenous women has wrapped up an awareness week aimed at educating and engaging people across the country. Wolastoqiyik Sisters in Spirit hosted the awareness events throughout the week, which included a vigil, poetry slam and panel discussion, along with Saturday's walk... Among Saturday's runners was Brad Firth, also known as Caribou Legs, who is currently finishing his cross-Canada marathon in support of missing and murdered women. Telegraph Journal, A5

It's Canada's time to lead on women's rights at home, abroad
An opinion piece states, “Maybe it takes a rock star to remind us of who we are as Canadians and what we are capable of. At the recent meeting of the Global Fund to fight AIDS, tuberculosis and malaria, U2 lead singer Bono declared "the world needs more Canada." These words were spoken at an urgent time for many of the world's women and girls, and while laudatory, should be taken as a challenge to our nation to do more to help end gender inequality and violence. The attention being afforded Canada must be used wisely. We should leverage this moment to do three things: Lead by example. Income equality, sexual violence, and gender discrimination are not foreign ills. They infect Canada too. We need look no further than our shamefully delayed response to missing and murdered indigenous women. We are taking

action now, but from how we treat survivors of sexual assault to female representation in government and on corporate boards, Canada can do more..." Hill Times

Senator dishonours Inuit experience
An opinion piece states, "Nunavut's only Senator seems to have forgotten the people he is representing in Ottawa. In a Sept. 21 opinion piece for the National Observer, Senator Dennis Patterson said "racism ... is motivating Pauktuutit, Canada's national Inuit women's association, and the Qulliit Nunavut Status of Women Council to condemn" the choice of an Iglulik-born non-Inuk woman, Qajaq Robinson, as a commissioner to the inquiry into Missing and Murdered Indigenous Women and Girls. We do not doubt that Robinson is qualified for the role. A graduate of Nunavut's Akitsiraq Law School, Robinson is a successful lawyer in Ottawa and her Inuk husband is an RCMP officer on Parliament Hill. She speaks Inuktitut and Patterson points to her work defending the interests of indigenous people. The problem is not with the appointee, but with Sen. Patterson's belief that he is right to question Pauktuutit's and Qulliit's motives. They are right to want an Inuk commissioner. The four other commissioners are indigenous: a judge from the Mistawasis First Nation in Saskatchewan; a former Quebec deputy minister and activist from the Innu community of Mani Utenam; a Metis law professor - who taught at Akitsiraq - from Saskatchewan; and a First Nations lawyer from Ontario..." NWT News/North

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

All you need to know about marijuana legalization in Canada
An opinion piece states, "...Welcome to the world of marijuana spot checks, a hypothetical place that may soon become a reality in Canada... But we do know the RCMP confirmed this spring that it planned on field testing oral fluid screening devices similar to breathalyzers-which could detect marijuana-at roadside stops. Plus, a new handheld device has been developed at the University of British Columbia that can detect the primary ingredient of marijuana in the breath up to 12 hours after consumption. Lastly, the Liberals under Prime Minister Justin Trudeau, who have promised to introduce a bill to legalize and regulate maryjane next spring, said in their election platform they would "create new, stronger laws to punish more severely those who...operate a motor vehicle while under [marijuana's] influence." So the elements are all there... A related issue for legalization is deciding which places in Canada should be 420 friendly, and which should ban the bud... Along with where it should be smoked, there's also the questions of private cultivation and commercial sales. In Canada's most populous province, stars seem to be aligning in favour of Ontario Premier Kathleen Wynne's plan. She has been planting the seeds for months, trying to grow the idea in Ontarians' minds that the LCBO, the Crown corporation that sells booze across the province, would be the natural place to sell marijuana...Not everyone agrees. The head of the largest food retailer in Canada, Loblaw Companies, which also owns Canada's largest pharmacy chain Shoppers Drug Mart, wants to sell marijuana through its pharmacies... Still, others think legalized marijuana shouldn't be sold in storefronts at all, rather that it should replicate the existing medical marijuana regime by allowing Canadians to order their weed directly from licensed producers and have it delivered to them through the mail... With any of these systems, there is still the question of whether individual Canadians will be allowed to grow their own..." Hill Times

College should wait for clarity
An opinion piece states, "Even if the New Brunswick Community College network is an arm's-length provincial government learning institution, it appears ready to join with the rest of New Brunswick government groupthink in embracing reefer madness. The French sector of the community college system is ready to offer specialized training in marijuana production, even if some of the basic skills needed for marijuana cultivation (such as growing crops, or laboratory analysis) are already offered in public institutions in the region. Let's refrain from further inflation of the speculative New Brunswick marijuana bubble - because if we don't stop, taxpayers will have a real hangover when it eventually pops..." Telegraph-Journal, A6

LE CANADA POURRAIT S'INSPIRER DE LA SUISSE
Substance psychoactive la plus consommée au monde, le cannabis fait l'objet de débats depuis des années dans la Confédération helvétique. En 2008, la proposition de dépénaliser la marijuana a été

rejetée par 63% de la population lors d'un référendum. Presque 10 ans plus tard, la question revient sur la table. «Le problème qu'on a aujourd'hui est que dans la mesure où le cannabis est illégal, on a quand même 600 à 700000 personnes dans notre pays qui, chaque année, en fument. Et on ne sait pas exactement ce qu'ils consomment», statue Alain Berset, ministre de la Santé en Suisse. D'où l'initiative des villes de Berne et de Genève, qui ont mandaté des chercheurs universitaires afin d'élaborer des projets pilotes qui pourraient permettre une vente ou une remise légale de cannabis. Refugees take in Caliph talk after fleeing persecution
Hundreds of refugees from Syria were able to experience religious freedom for the first time in years as they gathered at a conference of 25,000 Ahmadiyya Muslims in Mississauga this weekend. Wissam Alburaki, 41, brought his wife and three children to Canada as refugees last month, landing in Calgary by way of Kuwait and Dubai. And while Calgary is where his family intends to stay, Alburaki was west of Toronto over the weekend, attending Canada's Jalsa Salana - an annual meeting of the Ahmadiyya Muslim Jama'at. He was one of hundreds of Syrian refugees attending the conference, according to Safwan Choudhry, a spokesperson for the Canadian chapter of the group... And this year marks the 40th anniversary of the convention in Canada, which was attended by the community's spiritual leader, Caliph Hazrat Mirza Masroor Ahmad, who is from Pakistan. Canadian Press (Toronto Star, Chronicle Herald); Globe and Mail; CBC News

One man in custody as part of manhunt for German bomb plot suspect
German police searched nationwide Sunday for a 22-year-old Syrian man believed to have been preparing a bombing attack, who slipped through their fingers as they were closing in on him, and were questioning a second Syrian man on suspicion he was involved in the plot. The man in custody was one of three apprehended in the eastern city of Chemnitz on Saturday. He was the renter of the apartment that police raided in their search for the main suspect, Jaber Albakr from the Damascus area of Syria, Saxony police spokesman Tom Bernhardt told The Associated Press. The other two men have been released... The raid came after Saxony police were given a tip from Germany's domestic intelligence service that Albakr may be planning an attack. He had been on the agency's radar, but Bernhardt said it was not clear how long. German media have reported that Albakr is believed to be connected to Islamic extremist groups, but Saxony police have not commented on his possible motivation or the bomb plot's target. Federal police have increased security around the country, particularly around "critical infrastructure" like train stations and airports, as authorities search for Albakr. Associated Press (Times & Transcript, Yahoo)

Matthew downgraded, but still dangerous

When Hurricane Matthew dumped torrential rains on North Carolina, thousands of people found themselves suddenly trapped in homes and cars. Rescuers in Coast Guard helicopters plucked some of them from rooftops and used military vehicles to reach others, including a woman who held onto a tree for three hours after her car was overrun by floodwaters. The storm killed more than 500 people in Haiti and at least 17 in the U.S. - nearly half of them in North Carolina. Gov. Pat McCrory said authorities were searching for five people and feared they may find more victims. The problems were far from over as all that rain - more than 30 centimetres in places - flows into rivers and downstream, likely causing days of flooding in many of the same places devastated by a similar deluge from Hurricane Floyd in 1999. "Hurricane Matthew is off the map. But it is still with us. And it is still deadly," McCrory said. More than a million people in South Carolina and North Carolina were without power, and at least four separate sections of Interstate 95 - the main artery linking the East Coast from Florida to Maine - were closed in North Carolina. Reuters (Toronto Star, A2)

Bellingham, Wash. airport evacuation called off

An evacuation at the Bellingham International Airport in Washington state has been called off. Bellingham police said a piece of luggage that had tested positive for explosives was empty. Police deployed a bomb robot to X-ray the suitcase shortly after it was reported about 3 p.m. PT. on Sunday. CBC News

MINISTER / MINISTRE

Feds to review CSIS powers in the digital age
A federal review of national security will consider whether Canada's spy service should be able to sift through the kind of personal data it kept illegally for years, says **Public Safety Minister Ralph Goodale**. **Goodale** said Friday the notion that the Canadian Security Intelligence Service should avoid stashing away information about innocent people is a ***"fundamental principle of Canadian privacy."*** But **the minister** appeared to leave the door open to one day giving CSIS the legal authority to keep and analyze electronic data about individuals who do not pose a security threat. ***"I want to hear the professional advice on both sides,"*** **Goodale** told a news conference in the foyer of the House of Commons. ***"I'm not pre-empting the consultation."***... **Goodale said** he became aware of the ***"full scope of the issue"*** when the court judgment was made available to him in preliminary form a couple of weeks ago. **He said he took** the immediate step of informing the Security Intelligence Review Committee, the watchdog over

CSIS, and asked the review committee to supervise management of the data and ensure full compliance with the judgment. Coulombe ***"understands my expectations here,"*** **Goodale added.** ***"A serious error has been made. This situation needs to be remedied. It has to be remedied quickly."*** The NDP said Friday the revelations underscore the need for stronger parliamentary oversight. Canadian Press (Cape Breton Post, A10; The Telegram, Chronicle Herald, Red Deer Advocate, Charlottetown Guardian, Whig-Standard, Edmonton Sun, Calgary Sun, Times Colonist, Hamilton Spectator, Times Colonist, The Record, iPolitics, Times & Transcript, Daily Gleaner); Presse Canadienne (Le Droit, 21 ; Le Devoir, L'Acadie Nouvelle)

Espionnage de journalistes - Ottawa ferme les yeux sur le passé
Aucun journaliste n'est actuellement surveillé par la GRC et le SCRS... mais Ottawa n'a pas idée si cette situation a pu se produire dans un passé récent. **Le ministre de la Sécurité publique, Ralph Goodale**, ne l'a pas demandé. Et **il n'a pas** l'intention de le faire : c'est le présent qui compte, dit-il. **Pour M. Goodale,** ***" la question porte sur ce qui se passe maintenant et nous pouvons offrir l'assurance que ce genre d'activité n'a pas lieu. Je ne sais rien sur les événements qui se sont produits lorsque nous [les libéraux] ne formions pas le gouvernement "***, **a indiqué le ministre** en point de presse. Questionné à savoir s'il demanderait directement au patron du Service canadien du renseignement de sécurité (SCRS) si des mandats de surveillance ont pu être lancés dans les cinq dernières années, **Ralph Goodale** a répondu que c'était précisément la ***" responsabilité du directeur de répondre aux questions opérationnelles "***... Lors de la période de questions, **M. Goodale a indiqué** trouver ***" très inquiétantes "*** les révélations qui ont marqué la semaine au Québec -- l'espionnage de plusieurs journalistes par le Service de police de la Ville de Montréal (SPVM) ou la Sûreté du Québec (SQ). Le Devoir, A7

Advocates urge Liberal government to reduce number of women in prison
Sometimes when she goes to the grocery store, all Alia Pierini can do is sit in the parking lot, unable to bear the idea of going inside. She tries a different store, but Pierini, 31, often ends up coming home without the food she had planned to buy for lunch. "I feel like a big loser, to be honest, but I can't help it," the former prisoner told a news conference Thursday as she described the lingering anxiety, panic and fear she still feels as a result of months spent alone in solitary confinement... Now a regional advocate for female prisoners in federal custody, Pierini joined the Canadian Association of Elizabeth Fry Societies, which provides support for women and girls in the justice system, in calling on the Liberal government to reduce the number of women behind bars. The association's longtime executive director, Kim Pate - newly recommended for the Senate by Prime Minister Justin Trudeau - urged the government to give judges the discretion to overturn or alter the mandatory minimum sentences brought in by the previous Conservative government... Pate also said she was "heartened" to see Justice Minister Jody Wilson-Raybould given a mandate to restrict the use of solitary confinement and improve the treatment of prisoners with mental illness by implementing recommendations from the Ashley Smith inquest... **Public Safety Minister Ralph Goodale**, who is working with Wilson-Raybould on reviewing the inquest recommendations, has said that when it comes to administrative segregation, the government is looking at reforms that touch on everything from policy and programs to physical infrastructure and hopes to have specific proposals sometime this winter. ***"We need to dramatically change the scenario, and we're working at that,"*** **Goodale said** last week. Daily Star, 25

Spies could be left out in the cold
" Trust, but verify ." Academics Craig Forcese and Kent Roach argue that this should be the maxim in the security sector when dealing with powerful state agencies like the Canadian Security Intelligence Service and the RCMP. But trust in Canada ' s security services is thin on the ground, after the news Thursday that a CSIS unit illegally kept data deemed unrelated to national security threats. **Public Safety Minister Ralph Goodale said** Friday that a Federal Court decision by Justice Simon Noel, who found CSIS has ***"breached, again, the duty of candour it owes the court,"*** is timely because the Liberals are in the midst of reviewing the national security laws... Even before that, both Mosley and Noel had lambasted CSIS for providing inaccurate information to the court. In the Mohamed Harkat case, Noel criticized the agency ' s lack of candour... **Yet Goodale** did not rule out a change to the law to allow CSIS to keep the information ruled offside by the court. "***This is an issue that I think needs to be examined in the context of our national security review,"*** **he said**. ***"I want to hear the professional advice on both***

sides...Our security agencies to be effective in keeping Canadians safe. At the same time, what the agencies do needs to be in accord with the law and with the Constitution." Phil Gurski, a former CSIS analyst, said the metadata were retained for a rea-son - to identify people involved with, or sympathetic to, terror groups. Postmedia News (London Free Press, N6; Vancouver Sun, Calgary Herald, Leader-Post, Montreal Gazette, The Record, Ottawa Citizen, National Post)

Feds to look at border-crossing challenges for First Nations
The federal government will appoint a special ministerial representative to look at border crossing issues faced by First Nations. In a joint letter written in response to a Senate committee study, Indigenous Affairs Minister Carolyn Bennett, Immigration Minister John McCallum and **Public Safety Minister Ralph Goodale** say the adviser and First Nations will discuss significant and complex challenges. The letter said the resolution of these issues will require a ***"horizontal approach"*** involving several departments and agencies. ***"This will be necessary in order for the government of Canada to arrive at workable and sustainable solutions that facilitate the ability of First Nation community members to cross the U.S.-Canada border and, at the same time, take into consideration issues such as status, international sovereignty and security,"*** it said. Canadian Press (Whig-Standard, B2; Daily Gleaner, Telegraph-Journal, Times & Transcript)

Spy watchdog that triggered scathing rebuke of illegal CSIS activities facing job cuts
The federal watchdog that triggered this week's scathing judicial rebuke of Canada's spy service for illegal activities faces significant job cuts because of a chronic lack of sustained government funding, even as the Liberals hinted Friday the agency could be asked to do more to police federal spies. The Security Intelligence Review Committee (SIRC), the independent agency that reports to Parliament on the operations of the Canadian Security Intelligence Service (CSIS), says the equivalent of at least 11 full-time positions will disappear March 31 unless the Liberal government delivers millions more dollars under a sustained, multi-year funding plan announced by the previous Conservative government. "We don't know if we're getting any more funding," SIRC spokeswoman Sabrine Barakat said Friday. "SIRC has been actively working to access that money on a permanent basis but we're still waiting to see." The government has offered no explanation, she said. **The office of Public Safety Minister Ralph Goodale was unable** Friday to explain the funding confusion. Treasury Board officials could not explain either when asked the same question by the Ottawa Citizen last March... **Goodale repeated the pledge** for robust oversight again Friday in the swirling aftermath of the Federal Court ruling that CSIS illegally retained a decade's worth of metadata gleaned from Canadians' electronic communications that had nothing to do with threats to national security. Questions about the activity were first raised by SIRC in its 2014-15 annual report... Speaking with reporters, **Goodale said** the length of time it took for the decade of CSIS metadata misconduct to surface is of ***"critical concern."***... Paul Cavalluzzo, counsel for the Maher Arar commission, said SIRC is not in a position to adequately deal with CSIS. National Post (2016-11-04); Postmedia Network (London Free Press, N6; Calgary Herald, Vancouver Sun, Leader-Post, Montreal Gazette, Ottawa Citizen)

Watchdog defends CSIS, its director
Michel Coulombe, Canada's top spy, is in deep trouble with the courts and his political boss, **Public Safety Minister Ralph Goodale**, over revelations CSIS kept a decade's worth of data on Canadians who are no threat to national security. But Pierre Blais, head of the civilian watchdog agency over CSIS, says Coulombe "acted in good faith" and should not lose his job over the affair... Still, the judge said CSIS breached its "duty of candour" when it failed to reveal what it was up to. Goodale said Friday the first he learned of it was two weeks ago when an unredacted copy of the pending judgment reached his desk. Asked if he still has confidence in Coulombe, **Goodale said** only that he has made his expectations to the director clear. ***"A serious error has been made. (Coulombe) maintains that in his view, and in the view of the advice he got from the Department of Justice over the course of the last number of years, that the course of conduct by CSIS was within the parameters of law,"*** **Goodale told** reporters. ***"The court has now said very clearly and unequivocally that it was not. This situation needs to be remedied. It has to be remedied quickly ... CSIS must be forthcoming and candid with the court. That will happen."***... **But Goodale** was adamant Friday that innocent people should not have their information tracked and stored by Canada's spies. ***"That's a fundamental principle of Canadian privacy,"*** **he said.** Toronto Star, A10

Pas d'assurances pour le passé à Ottawa
S'il a obtenu l'assurance qu'aucune surveillance de journalistes ne se produit «actuellement» au niveau fédéral, le gouvernement Trudeau n'a pas demandé à la Gendarmerie royale du Canada (GRC) et au Service canadien du renseignement de sécurité (SCRS) s'ils ont mis des journalistes sous surveillance au cours des cinq dernières années. ***«L'enjeu, c'est ce qui se passe maintenant et nous pouvons offrir l'assurance que ce genre d'activités ne se produit pas actuellement. Je n'ai pas connaissance de choses qui se sont produites quand nous ne formions pas le gouvernement du Canada»*, a dit le ministre Ralph Goodale**, qui n'a pas l'intention de demander à la GRC ou au SCRS si des mandats de surveillance ont été lancés à l'égard de journalistes au cours des cinq dernières années. ***«La réponse, autant de la GRC que du SCRS, est que rien de la sorte ne se produit actuellement. [...] C'est la responsabilité du directeur du SCRS de répondre aux questions opérationnelles. Vous allez sur une pente très dangereuse quand vous invitez les politiciens à aller dans ce domaine»,* dit le ministre Goodale.** La Presse, A12

Minister vows action on CSIS
Public Safety Minister Ralph Goodale says he will make sure Canada's spy agency takes action after a Federal Court found that its officials have misled justices and unlawfully amassed data about people not suspected of being threats... On Friday, **Mr. Goodale said he** intends to ensure that CSIS follows the Federal Court's directive to stop the controversial practices. Pressed on whether he plans to fire anyone now, **Mr. Goodale said** only that **he** wants to have words with CSIS officials. ***"I will discuss with the executive management of the service how they plan to respond to this judgment,"* he said**. **The minister told** reporters that CSIS director Michel Coulombe has told him that CSIS lacks records that indicate whether it briefed previous ministers on the programs. ***"I take that as a pretty serious defect in the record keeping of the organization. "That is one of the things that absolutely needs to be rectified," he said***. Globe and Mail, A9

It's not easy being a journalist's unnamed source in the Information Age
An opinion piece states, "Were I in a position of authority, I would probably hang up if contacted by a journalist. Not because I don't think people in positions of authority should speak to journalists - I do, and I'm grateful to all the people in positions of authority who haven't hung up on me over the years... In Canada, Mounties investigating a document leak have targeted journalists, and last week, reporters at La Presse in Montreal and at Radio-Canada discovered Quebec police, hunting for leakers in their own ranks, have been tracking and tapping their communications. (We have no idea how many other journalists have been surveilled, but it's safe to assume it happens.)... Glenn Cowan, GRA Quantum's Canadian CEO, says such software allows phone, video or email communication without leaving any record: no metadata, no communications link to analyze, no tracking log, nothing... Cowan stresses that his firm does not regard law enforcement as a "threat actor," to use the language employed by the super-secret Communications Security Establishment in its advice to government employees on how to protect their communications..." CBC News

The worst part about the spying spree - it was legal
An opinion piece states, "Connect the dots between Quebec's police corps and the half-dozen or more investigative journalists who were put under surveillance over the past decade and you will find a gaggle of judges potentially derelict in their gatekeeping duties. In each of the spying episodes that have come to light over the past week, the police had to convince a judge to sanction the surveillance and, in some cases, to do so more than once..." Spying eyes
An editorial states, "Taken in isolation, either case is concerning. But this week, we actually had two major law enforcement misconduct issues surface. The Canadian Security Intelligence Service, it turns out, has been collecting unrelated information it received as part of terrorism investigations (and was supposed to destroy), and instead loaded it into database systems that its legal overseers weren't even told existed. Meanwhile, in Quebec, police services were tracking some reporters' calls and texts for periods as long as five years, in an effort to catch and punish police whistleblowers. There's a huge problem here. And it's an oversight problem..." The Telegram, A15

Clean up spy agency
An editorial states, "So, Canada's spy agency has gobs of people's metadata in a secret database. Well, it's just numbers, isn't it? You know, telephone numbers and Internet IP addresses and so forth. Who cares? The justice system, to begin with. On Thursday, the Federal Court released a ruling saying that the Canadian Security Intelligence Service's retention and analysis of wide swaths of data, which had been going on for 10 years, was illegal. And CSIS hadn't bothered to inform the court of what it was doing... **Public Safety Minister Ralph Goodale was shifty** on Friday when asked if the Liberals' planned security oversight committee would have stopped this sort of spying; instead he repeated talking points. **He also refused** to say how many Canadians had their data captured. Reassuringly, though, the government won't appeal the court ruling..." Ottawa Citizen, B5

Surveillance des journalistes - La nouvelle chasse aux sorcières
Un article d'opinion déclare, « Le professeur Stéphane Leman-Langlois est un spécialiste de la police, du renseignement, du terrorisme, des technologies et du contrôle social. Il a récemment collaboré au livre "Transparent Lives" sur la surveillance au Canada. Il enseigne à l'Université Laval.\r\nAvez-vous été surpris par les récentes révélations sur l'ampleur de l'espionnage des journalistes québécois ? Pas du tout. Chaque fois que je parle de surveillance depuis des années et que je dis aux journalistes qu'ils sont les premières cibles, la plupart d'entre eux lèvent les yeux au plafond parce qu'ils n'y croient pas. Ils me traitent de parano parce que je suis dans les études de la surveillance. Je suis certain que le phénomène est d'une ampleur bien supérieure à ce qui vient d'être dévoilé. Je pense que les révélations de la SQ -- arrivées très, très rapidement et concernant, comme par hasard, des écoutes datant d'anciens directeurs de ce corps de police -- sont faites pour détourner l'attention. Mais bon, il va y avoir une commission d'enquête et, si elle peut lever des pierres, on va en trouver bien plus, de ces histoires de surveillance... » Le Devoir, B1

Surveillance - La confiance ébranlée
Un article d'opinion déclare, « Pendant dix ans, le Service canadien du renseignement de sécurité (SCRS) a conservé et analysé des données associées à des personnes qui n'étaient soupçonnées de rien, mais qui avaient eu le malheur de communiquer avec des personnes légalement surveillées. Et le service l'a fait sans en informer la Cour fédérale, un des rares garde-fous contre d'éventuels abus de nos espions. Le gouvernement doit serrer la vis et vite ; la confiance des citoyens et la protection de leur vie privée en dépendent... Le Tribunal rappelle que le SCRS doit, en vertu de la loi, conserver les données uniquement " dans la mesure strictement nécessaire ", ce qui n'était pas le cas. Lors d'une conférence de presse convoquée en toute hâte, le directeur du SCRS, Michel Coulombe, a dit que le service avait cessé toute analyse et verrouillé l'accès aux données en question. **Le ministre de la Sécurité publique, Ralph Goodale**, a précisé que le gouvernement n'interjetterait pas appel et a déploré le manque de franchise du SCRS devant la Cour. Mais ensuite ? La Cour n'a pas demandé de détruire ces données et personne ne sait trop ce qu'on en fera. Le plus préoccupant est que M. Coulombe espère pouvoir les conserver et que **le ministre de la Sécurité publique, Ralph Goodale**, n'a pas fermé la porte. **Il a noté** que cette question serait mieux débattue lors des consultations publiques en cours sur ***" le cadre de sécurité nationale "***. **Le ministre** a d'ailleurs **relevé** que le juge Noël avait suggéré de revoir la loi sur le SCRS et de l'adapter à la réalité des nouvelles technologies... » Le Devoir, B4

TOP STORIES / MANCHETTES

*** Alberni flooding may shut highway for days**
Flooding near Port Alberni has the potential to close Highway 4, the only highway link to Ucluelet and Tofino, for five or six days, says the emergency preparedness co-ordinator of the Tseshaht First Nation. Times Colonist, A1

*** Complaints skyrocket at women's prison**
The number of complaints to the Correctional Investigator from women at the federal women's prison in Kitchener has skyrocketed in the past three years, Correctional Investigator Howard Sapers received 344 complaints from Grand Valley Institution in 2015-16 — about 41 per cent of all complaints from women in federal prisons anywhere in Canada. Of the 45 federal prisons across the country, only one other was the

subject of more complaints. The number of complaints at Grand Valley has increased each year for the past several years, from 144 in 2013, to 193 in 2014, to 218 in 2015 — a 139 per cent increase in three years. "I think the numbers (of complaints) going up is indicative of how desperate some of the women are," said Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies, who added that her agency has encouraged women to complain more in an effort to get their concerns addressed. The Record, A1

* **Health Canada disputes police story on fentanyl**
Police were alerted by both phone and mail in July that there was liquid fentanyl in Hamilton, says Health Canada. The statement is in direct contradiction to police claims that the vice and drug unit were notified the week of Oct. 31 about the lab results and that they were not physical documents that landed on an officer's desk. Torstar (Hamilton Spectator, A1; The Record)

Pregnant killer Kelly Ellard's boyfriend a 'person of interest' in drug dealer disappearance
The boyfriend of pregnant killer Kelly Ellard is a "person of interest" in the May 2016 disappearance of a low-level drug dealer, according to Parole Board of Canada documents. Darwin Dorozan, 42, had his parole revoked after Correctional Services of Canada officials were made aware of the investigation into the missing dealer, the just-released documents say. "On the same date full parole was granted, police advised CSC that you were a person of interest in the suspicious disappearance of a low-level drug dealer in May 2016," the parole board said in its Oct. 27 ruling...She was denied day parole in May despite the Parole Board of Canada noting that she was finally taking some responsibility for the murder and had made strides in her rehabilitation. Retour sur une semaine sombre pour la liberté de presse
Pour les trois journalistes de Radio-Canada, il s'agit de tous leurs appels de novembre 2008 à octobre 2013, confirme la SQ. Cette procédure ne prévoyait pas d'écoute électronique. La SQ cherchait à faire la lumière sur des fuites d'éléments d'enquête provenant de l'écoute électronique en 2008 et 2009 du président de la Fédération des travailleurs du Québec (FTQ) de l'époque, Michel Arsenault - qui s'est plaint en 2013 de ces divulgations dans les médias... Jeudi, il a dit s'être assuré auprès de la Gendarmerie royale du Canada (GRC) et du Service canadien du renseignement de sécurité (SCRS) que de telles « activités » ne se passent pas « au niveau fédéral ». Rappelons que deux journalistes de La Presse ont été espionnés en 2007 par des agents de la GRC. Radio-Canada

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Climate change: What does it mean for Canada and how can we respond?**
Canada has already seen smoke-related health impacts and stressful evacuations as the result of increased wildfires; the spread of Lyme disease; and food security and mental health challenges related to rapid changes in the Far North, which is two to three degrees Celsius warmer than it was in the 1950s. Here's How Canada's Provinces Are Responding To Climate Change. New Brunswick banned fracking. Last month, lawmakers in New Brunswick voted to place a moratorium on fracking within the province. Canada Journal

* **Alberni flooding may shut highway for days**
Flooding near Port Alberni has the potential to close Highway 4, the only highway link to Ucluelet and Tofino, for five or six days, says the emergency preparedness co-ordinator of the Tseshaht First Nation. Times Colonist, A1

* **Winter gear guide**
El Nino is famous for weather media headlines. But its sister act - La Nina - is known to be pretty frosty and forecasted to slam the Canadian Rockies with a good old-fashioned winter, full of what skiers and snowboarders love, cooler temperatures and above-average moisture. Calgary Herald, G10

* **Tornado-damaged homes still waiting to be repaired**
Some of the of roofs, siding and porches wrecked in just four seconds when a tornado touched down on Riberdy Road Aug. 24 remain unfixed 10 weeks later, and resident Greg Tremblay says he's had enough. Windsor Star, A5

* **Une heure de plus... pour vérifier son détecteur de fumée**
Le changement d'heure, dimanche, est le moment idéal pour faire penser de vérifier son avertisseur de fumée et en remplacer la pile. La remarque vient du Service de protection contre les incendies de la Ville de Sherbrooke. La Tribune, 10

* **CBRM phases out storm help line**
Assistance will continue for residents reeling from October flood. The Cape Breton Regional Municipality shut down its emergency telephone help line for residents affected by the Thanksgiving Day flood. The provincial government issued a news release Friday indicating that while the help line is being phased out, the municipality will follow up with anyone who has called for assistance. Cape Breton Post, A3

* **Les municipalités veulent plus de sécurité**
Le monde municipal n'a pas oublié la tragédie de Lac-Mégantic. Réunis à l'occasion d'une rencontre spéciale à Edmundston au Nouveau-Brunswick vendredi, quelques dizaines de représentants municipaux ont discuté de sécurité ferroviaire en compagnie de divers intervenants. Ils ont réclamé l'adoption d'une série de mesures pour accroître la sécurité des communautés à l'issue de leurs discussions. La Tribune, 9

* **High hopes for Elbow River brown trout after devastating 2013 flood**
River watchers are hoping this year's brown trout count in the Elbow River continues to show growth after the 2013 Alberta flood had a devastating effect on the population. Chris Bjornson, a senior fisheries biologist with Golder Associates, says the flood three years ago continues to affect the population. CBC News

* **Springbank dam raises concerns for environment**
An opinion piece states, "It has now been one year since the Alberta government flip-flopped on its election promise to scrap the Springbank dam project in favour of the McLean Creek dam. I remember watching the news conference - led by the environment minister, flanked by the mayor of Calgary - but with no one there from Springbank, Rocky View County or the impacted First Nations..." Calgary Herald, A13

* **Letters to the Editor**
A letter to the editor states, "Independent probe needed. Husky Energy was supposed to file a major and conclusive report on the disastrous oil spill in the North Saskatchewan River to the provincial government. Instead, it filed a one pager and asked the government for an extension later into November. This request was granted..." StarPhoenix

The beast is still alive
Six months after it sent the population of Fort McMurray fleeing, the wildfire known as MWF-009 is still burning. The fire can no longer be seen; there is no smoke or open flames. But in a remote section of Alberta and Saskatchewan far from the city it nearly destroyed, the blaze is still being carefully watched. Rappelons que deux journalistes de La Presse ont été espionnés en 2007 par des agents de la GRC. Radio-Canada

Why spying on the press hurts democracy
An opinion piece states, "Revelations this week that two Quebec police forces spied on journalists by secretly monitoring their smartphones was widely condemned in Canada and abroad as an outrageous attack on press freedom. Critics from Edward Snowden to domestic and international media groups decried the police tactics as a spectacular assault in a country that is widely considered to be a gold standard for democracy..." Ottawa Citizen, B5

Important questions
An editorial states, "Quebecers are on the verge of another potentially explosive public inquiry, this one sparked by revelations about police spying on journalists. The need for a full inquiry became rapidly apparent as the snooping scandal that broke Monday widened, from Montreal police tracking one columnist for months, to the Sûreté du Québec peering into five years' worth of phone records belonging to six top investigative journalists. To its credit, the Couillard government, which first had announced more limited measures, was quick to see the broader need..." Montreal Gazette, A14

Police spying threatens freedom of the press
"An editorial from the Toronto Star, published Oct. 31: "Are you a journalist?" tweeted American whistleblower Edward Snowden on Monday. "The police spying on you specifically to ID your sources isn't a hypothetical," he warned. "This is today."..." Hamilton Spectator, A14

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Deportation order for men linked to human smuggling put on hold
Two men caught trying to bring people into Canada from the United States across the St. Lawrence River on an inflatable raft had their deportation orders put on hold in the wake of last year's landmark Supreme Court of Canada ruling on human smuggling. The two cases not only highlight the top court's reversal on what is considered criminal human smuggling, but also reveals rich details on what authorities said was a crew moving people back and forth across the Canada-U.S. border along the Thousand Islands archipelago. Whig-Standard, A1

Canadians charged in cross-border fraud
Four Canadians facing charges they crossed into the United States to fraudulently skim money from ATM machines in Vermont could have stolen almost $250,000 US, court documents say. A federal grand jury in Burlington, Vermont, indicted the men Thursday on a charge they acquired bank account information belonging to others and put it on the magnetic strips of gift cards that were then used at ATMs in the Burlington area to get cash advances. Times Colonist, A9

Whoever wins the presidency will have a big impact on B.C.
British Columbians don't get to vote in the U.S. election although the results are likely to have a major impact on varied issues germane to the province. Here are a few ways the outcome of Tuesday's vote could affect B.C.: Softwood lumber and trade. A 2006 agreement to manage the trade of softwood lumber, which is crucial to the B.C. economy, expired in October of last year, and so far there is no replacement. While the future of the softwood agreement hasn't factored significantly in the campaign, the larger issue of trade has - with Donald Trump railing against the North American free-trade agreement and the Trans-Pacific Partnership... The border. Another concern is a "thickening" of the Canadian-U.S. border under a Trump presidency that could complicate things for Canadian professionals who need to spend time in the United States, the board of trade's Mr. Black said. While Mr. Trump has talked about a wall between Mexico and the United States, the board fears a "spillover" into relations with Canada although Mr. Trump has been more focused on the southern U.S. border than the Canadian border. Globe and Mail, S4

Trade deal affects how Canadian firms do business
An opinion piece states, "The Comprehensive Economic Trade Agreement that Canada recently signed with the European Union is Canada's most important trade deal since the North American Free Trade Agreement. CETA is likely to transform Canada much more than NAFTA has, and has already had a significant impact on provincial-federal relations in Canada..." Times Colonist

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

* **Security matters**
The Canadian Centre For ethics in Sport has shut down its email and internet systems after an october cyberattack that mirrors similar security breaches against the World anti-doping agency and the u.S. antidoping agency, the Canadian Cyber Incident response Centre detected the attack that might have involved the theft of confidential information of some athletes. Cyber security experts are investigating the breach in hopes of discovering what, if anything, was stolen and how the hackers got in. "We are looking at how we can ensure this doesn't happen again," Paul melia, president and chief executive officer of the CCeS, told Postmedia on Friday. "We've been told our system is a very secure one, but these cyber-attacks are very sophisticated and very difficult to defend against. Postmedia Network (Winnipeg Sun, S10; Edmonton Sun, Ottawa Sun, Toronto Sun)

* **Commissioner wants mandatory privacy breach reporting**
New Brunswick's privacy commissioner is calling for tougher legislation to force government departments to report breaches of personal information. Anne Bertrand's call comes as the Liberal government plans to introduce changes next year to the province's right to information and privacy legislation. According to one cyber security expert, the call also comes at a time when public bodies are facing more complex and serious security threats...As director of strategic initiatives in information technology services, David Shipley works to protect the university from cyber attacks and other threats. He said encryption is important, but the cost can discourage public bodies from taking that step. CBC News

* **Russia likely can't hack polls, but still a threat**
U.S. intelligence agencies do not think Russia is capable of using cyber-espionage to alter the outcome of Tuesday's presidential election, but they warn that Moscow could continue meddling after the voting has ended to sow doubts about the legitimacy of the result, U.S. officials said. Washington Post (Toronto Star, A14)

* **Ashley Madison gets an 'open-minded' facelift**
Ashley Madison - or just "Ashley," as the hookup website's new management team calls "her" - has more users now than before last year's infamous cyber attack, according to the men brought in for her massive makeover. Torstar (Hamilton Spectator, Toronto Star)

*** The hacking saga**
2002: Ashley Madison is founded. July 2015: Ashley Madison claims to have some 36.5 million users. July 12: Hackers threaten to release client information from Ashley Madison and Established Men unless both sites are taken down. Toronto Star

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Police arrest man after indecent act complaints**
A Lawrencetown man has been arrested and charged after RCMP received complaints about a man committing indecent acts in front of children. Annapolis County District RCMP started an investigation after receiving a complaint Tuesday afternoon about a man masturbating while fully undressed in front of a window as children walked by. A second similar complaint was received at about 8:30 a.m. the next morning. Chronicle Herald, A5

*** Pas de retraite**
Avec l'accord des Hells Angels, Richard «Bob» Hudon disait avoir pris sa retraite comme membre en règle à l'automne 2010. Pourtant, un an plus tard, c'est dans le local du club-école des Dark Souls à Scott en Beauce que les policiers de l'escouade régionale mixte sont allés le cueillir. Le Soleil, 8

*** Police expect to roll out new dispatch system on Nov. 15**
Lacombe Police Service expects to roll out a new dispatch system designed to speed up response times on Nov. 15. Barring any last-minute snags, in mid-November 911 calls will be passed directly from the 911 centre to Lacombe police without first going through the RCMP's communication centre in Red Deer. Red Deer Advocate, A4

*** Charge pending for officer who stopped Green**
A provincial police oversight agency has directed Hamilton police to lay a disciplinary charge against one of its officers accused of "carding" a black city councillor. The Police Services Act charge will be officially laid when the officer makes his first appearance on Dec. 15, says Clint Twolan, president of the Hamilton Police Association. The officer has continued to perform his regular duties throughout the complaint process. Hamilton Spectator, A3

*** Retirement number forces police budget tweak**
Winnipeg Police find themselves $2 million over budget on salaries and expenses this year. Acting chief Art Stannard told the Winnipeg Police Board Friday retirement numbers have fallen short of WPS projections for the year. Winnipeg Free Press, 1

*** Working on use-of-force policy**
The Winnipeg Police Board is prioritizing the establishment of a use-offorce policy for the Winnipeg Police Service and will seek public feedback on the issue. The board announced Friday it has approved a draft for a policy on use of force in shaping how WPS members conduct themselves in the line of duty. A repor t that went before the board Friday morning said the intent is to "promote officer and community safety, effective policing, accountability and trust between the public, the board and the service." Winnipeg Sun

*** Board formalizes appointment; WPS salary budget topped up**
The Winnipeg police board has confirmed the appointment of Danny Smyth as the next police chief. Board members voted unanimously on the recommendation from the board's recruitment committee. The move wasn't a surprise given all members of the board were members of the recruitment committee. Winnipeg Free Press, B1

Kinder Morgan braces for Standing Rock-type protests
A person only has to read a few of the stories about the Standing Rock protest or see some of the pictures and videos to get a sense of the hostile stalemate over the construction of the new Dakota Access pipeline. The protests in North Dakota began small and peaceful, but grew in support and captured the attention of the continent... "I'd be naive if I didn't expect that," said CEO Ian Anderson told

reporters recently in Calgary... Meetings with RCMP. The preparations involve meeting with law enforcement. "We've been in deep conversations with policing authorities, RCMP in the planning for our project - what can we anticipate and what their role needs to be," said Anderson. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Complaints skyrocket at women's prison**
The number of complaints to the Correctional Investigator from women at the federal women's prison in Kitchener has skyrocketed in the past three years, Correctional Investigator Howard Sapers received 344 complaints from Grand Valley Institution in 2015-16 — about 41 per cent of all complaints from women in federal prisons anywhere in Canada. Of the 45 federal prisons across the country, only one other was the subject of more complaints. The number of complaints at Grand Valley has increased each year for the past several years, from 144 in 2013, to 193 in 2014, to 218 in 2015 — a 139 per cent increase in three years. "I think the numbers (of complaints) going up is indicative of how desperate some of the women are," said Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies, who added that her agency has encouraged women to complain more in an effort to get their concerns addressed. The Record, A1

*** Liberals outline mental health, justice priorities**
A Liberal government would refocus the implementation of the Yukon Mental Wellness Strategy and include comprehensive after-care services in the communities. Liberal Leader Sandy Silver and Jeanie Dendys, the party's Mountainview candidate in Monday's election, outlined their plan to improve mental health, justice and health care services Tuesday... Dendys, who is the Kwanlin Dun First Nation's justice director, said improved mental health services are just one part of a larger plan to improve the justice system. "A responsive and culturally relevant justice system will help protect all Yukoners, respect the human rights of incarcerated individuals and provide for rehabilitation that reduces the recidivism rates in the correctional system," she said. Daily Star, 10

*** Judge denies charter application for killer**
A criminal court is not the proper venue to award constitutional damages to someone who suffered a psychotic breakdown after spending 18 consecutive months in solitary confinement, a judge has ruled. Ottawa defence lawyer Dominic Lamb filed a charter application Friday in the hopes that Ontario Superior Court Justice Robert Maranger would make a declaration that Mutiur Rehman's constitutional rights were violated in jail and award damages for those breaches, but he left the courthouse with neither. Ottawa Citizen, A5

Pregnant killer Kelly Ellard's boyfriend a 'person of interest' in drug dealer disappearance
The boyfriend of pregnant killer Kelly Ellard is a "person of interest" in the May 2016 disappearance of a low-level drug dealer, according to Parole Board of Canada documents. Darwin Dorozan, 42, had his parole revoked after Correctional Services of Canada officials were made aware of the investigation into the missing dealer, the just-released documents say. "On the same date full parole was granted, police advised CSC that you were a person of interest in the suspicious disappearance of a low-level drug dealer in May 2016," the parole board said in its Oct. 27 ruling... She was denied day parole in May despite the Parole Board of Canada noting that she was finally taking some responsibility for the murder and had made strides in her rehabilitation. Postmedia Network (Edmonton Sun, Ottawa Sun, Calgary Sun, Vancouver Sun, Winnipeg Sun, * Toronto Sun, * The Province)

Torture in our jails
An opinion piece states, "Humans are social animals. We need to interact with other humans merely to exist. Otherwise, we can perish. We may kill ourselves. We may be so emotionally shattered that we lose all sense of who we are... The British Columbia Civil Liberties Association has launched a constitutional challenge to the use of solitary confinement in Canadian federal prisons. The BCCLA says that in Canada one out of every four federal prisoners has spent some time in solitary. At any moment, in federal or provincial prisons, up to 1,800 people are confined in solitary..." National Post, A15

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Health Canada disputes police story on fentanyl**
Police were alerted by both phone and mail in July that there was liquid fentanyl in Hamilton, says Health Canada. The statement is in direct contradiction to police claims that the vice and drug unit were notified the week of Oct. 31 about the lab results and that they were not physical documents that landed on an officer's desk. Torstar (Hamilton Spectator, A1; The Record)

*** Une année meurtrière à Ottawa**
Ottawa pourrait supplanter Montréal au chapitre du nombre d'homicides en 2016. Malgré une population deux fois moins importante, la capitale fédérale affiche un bilan semblable à celui de la métropole québécoise. Vendredi, le Service de police de la Ville de Montréal (SPVM) comptait 18 homicides sur son territoire, depuis le début de l'année. Au même moment, le Service de police d'Ottawa (SPO) en dénombrait 16. Le Droit, 3 / Front

*** Prudence avec les comparaisons**
Un professeur en criminologie de l'Université d'Ottawa privilégie la prudence avec les statistiques qui tendent à démontrer qu'Ottawa connaît plus d'homicides per capita que Montréal. «Mais je demeure quand même impressionné par la chute vertigineuse des homicides à Montréal», dit Ronald-Frans Melchers de l'Université d'Ottawa. Selon lui, il vaut mieux être prudent avec les données brutes concernant les homicides rapportés à Ottawa et Montréal, en 2016. Bien que les deux villes aient une certaine parité en 2016, le criminologue préfère comparer les statistiques sur les Régions métropolitaines de recensement (RMR) et se fier aux taux d'homicides calculés par Statistique Canada. Le Droit, 2

*** So many cops aren't neighbours**
An opinion piece states, "The irony made me smile. On Sunday, in the midst of getting ready to negotiate a new contract with the city, the Winnipeg Police Association is conducting a door-to-door public relations campaign they're calling Neighbour to Neighbour Outreach. On Tuesday - two days before the Neighbour to Neighbour news release - I had called police union president Moe Sabourin to inquire about how many of his membership aren't really neighbours. I wanted to know how many live outside the city. For years, it's been well-known that when large numbers of city police officers leave work, they head home to neighbourhoods or acreages outside the city that pays them so handsomely..." Winnipeg Free Press

What happens when our schools aren't safe for all students?
An opinion piece states, "Imagine videos purportedly showing violent "Jewish takeovers" or "homosexual takeovers" of Paris and London, or a video headlined: "Must see: Dutch mayor tells fellow Jews they can f------ if they don't like freedom." To some it may be just the simple exercise of free speech rights. Others will argue that as distasteful as they are, a person must have the right to express such views. Yet others may feel that these cross the line into hate..." Toronto Star

Religious neutrality bill comes in for embarrassing criticism
An editorial states, "The Couillard government's legislative venture into identity politics is not going well. Last year, to keep an election promise made under pressure from the nationalist opposition parties, the Liberal government introduced an anti-"radicalization" package of measures aimed at Muslims in particular..." Montreal Gazette, A14

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Call for peace**
It's a call for justice. And, it's a call for healing, said Catherine Dickson one of the leaders for the recent CGIT and explorers pilgrimage walk. "This is a response to the call from the aboriginal community to

make a change," she said. Dickson, and about 30 others, participated in the walk in October to raise awareness about murdered and missing aboriginal women in Canada. Charlottetown Guardian, C4

*** We can't afford to ignore indigenous women and girls**
Before providing aid money to support resource-development projects in other countries, Canadian policy requires a careful examination of how the project might affect the lives and safety of women and girls... In 2004, Amnesty International published a report called Stolen Sisters, which demonstrated that the economic marginalization of indigenous women and the discrimination they face in Canadian society are critical factors putting them in positions of increased risk, fuelling violence against them, and denying them the protections and support they deserve. At the time, we noted that indigenous women had long struggled to draw public attention to these issues and that there was already, at that point, a significant body of government reports and other studies pointing to the need for action. Yet it is only now, with the launch of a national inquiry on missing and murdered indigenous women and girls, that we begin to see real government acknowledgment of the scale and urgency of this crisis. Globe and Mail, S2

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Police hope pot shop raids**
Ottawa police raided six marijuana dispensaries Friday morning, closing a big chunk of the city's pot shops in one fell swoop... The targeted shops are operated by a B.C.-based outfit that moved into Ottawa this summer, opening dispensaries called Green Tree, WeeMedical and CannaGreen. Ottawa Citizen, A2

*** Local Ottawa politicians applaud raids on marijuana dispensaries**
Local politicians in Ottawa are applauding the closure of a string of marijuana dispensaries operating illegally in the city. Police arrested nine people and raided seven pot shops this week after mounting complaints from community members and councillors. "I'm happy with the level of response that OPS has put in," said Jody Mitic. "We were kind of tightening the screws a little bit on the [police] chief." CBC News

PUBLIC SERVICE / FONCTION PUBLIQUE

Feds' payroll system a nightmare
An opinion piece states, "Over 30,000 workers are waiting to have their paycheques fixed, many haven't been paid in months, due to the federal government's new pay system, Phoenix. Phoenix was rolled out in February of 2015, despite being warned by the Public Service Alliance of Canada (its largest union), that the system was flawed..." Windsor Star, A6

INTERNATIONAL

*** Paris pour un "meilleur encadrement" des armes à feu**
Le ministre français de l'Intérieur, Bernard Cazeneuve, a appelé vendredi l'Union européenne à un " meilleur encadrement " de la circulation des armes à feu dans le cadre de la lutte contre le terrorisme. " Nous devons avancer " et " être fermes " sur l'adoption par le Parlement européen d'une nouvelle directive sur les armes à feu, a insisté le ministre qui recevait le Britannique Julian King, nouveau commissaire européen en charge de la sécurité et de la lutte contre le terrorisme. Les États membres de l'UE se sont mis d'accord en juin sur un renforcement des règles de contrôle des armes à feu au terme d'une négociation difficile. Mais l'adoption définitive de la directive requiert désormais un vote favorable du Parlement européen. Pour M. Cazeneuve, il s'agit de " permettre un meilleur encadrement et une

meilleure traçabilité des armes à feu au niveau européen '', une priorité de la France. Agence France-Presse (Le Devoir, C6)

Les déplacés de Boko Haram - Venir en aide malgré le silence médiatique
Dans l'Extrême-Nord du Cameroun, l'organisme de bienfaisance L'Oeuvre Léger offre depuis six mois une aide humanitaire d'urgence aux déplacés internes du groupe terroriste Boko Haram. Un aspect du conflit peu médiatisé, alors que des milliers de Camerounais souffrent de malnutrition et n'ont accès ni à des soins de santé ni à de l'eau potable.\r\n'' Les 31 500 personnes à qui le projet vient en aide sont victimes de violation grave des droits de la personne, en vertu du droit humanitaire international '', lance d'emblée Chanèle Boulet-Gauthier, coordonnatrice de l'action humanitaire à L'Oeuvre Léger et responsable du projet. En partenariat avec une ONG locale, le Comité diocésain de développement (CDD) -- Caritas du Cameroun, et avec le soutien d'Affaires mondiales Canada, ce projet vise à aider les déplacés dans la région de l'Extrême-Nord ainsi que les membres des communautés hôtes. '' Le projet vient casser le cycle de vulnérabilité de ces personnes '', présente la coordonnatrice, précisant que dans cette région, la plus pauvre du pays, les déplacements de population provoquent des situations particulièrement difficiles. Le Devoir, I4

MINISTER / MINISTRE

Feds to review CSIS powers in the digital age
A federal review of national security will consider whether Canada's spy service should be able to sift through the kind of personal data it kept illegally for years, says **Public Safety Minister Ralph Goodale**. **Goodale** said Friday the notion that the Canadian Security Intelligence Service should avoid stashing away information about innocent people is a ***"fundamental principle of Canadian privacy."*** But **the minister** appeared to leave the door open to one day giving CSIS the legal authority to keep and analyze electronic data about individuals who do not pose a security threat. ***"I want to hear the professional advice on both sides,"*** **Goodale** told a news conference in the foyer of the House of Commons. ***"I'm not pre-empting the consultation."***... **Goodale said** he became aware of the ***"full scope of the issue"*** when the court judgment was made available to him in preliminary form a couple of weeks ago. **He said he took** the immediate step of informing the Security Intelligence Review Committee, the watchdog over

CSIS, and asked the review committee to supervise management of the data and ensure full compliance with the judgment. Coulombe ***"understands my expectations here,"*** **Goodale added.** ***"A serious error has been made. This situation needs to be remedied. It has to be remedied quickly."*** The NDP said Friday the revelations underscore the need for stronger parliamentary oversight. Canadian Press (Cape Breton Post, A10; The Telegram, Chronicle Herald, Red Deer Advocate, Charlottetown Guardian, Whig-Standard, Edmonton Sun, Calgary Sun, Times Colonist, Hamilton Spectator, Times Colonist, The Record, iPolitics, Times & Transcript, Daily Gleaner); Presse Canadienne (Le Droit, 21 ; Le Devoir, L'Acadie Nouvelle)

Espionnage de journalistes - Ottawa ferme les yeux sur le passé
Aucun journaliste n'est actuellement surveillé par la GRC et le SCRS... mais Ottawa n'a pas idée si cette situation a pu se produire dans un passé récent. **Le ministre de la Sécurité publique, Ralph Goodale**, ne l'a pas demandé. Et **il n'a pas** l'intention de le faire : c'est le présent qui compte, dit-il. **Pour M. Goodale,** ***" la question porte sur ce qui se passe maintenant et nous pouvons offrir l'assurance que ce genre d'activité n'a pas lieu. Je ne sais rien sur les événements qui se sont produits lorsque nous [les libéraux] ne formions pas le gouvernement "***, **a indiqué le ministre** en point de presse. Questionné à savoir s'il demanderait directement au patron du Service canadien du renseignement de sécurité (SCRS) si des mandats de surveillance ont pu être lancés dans les cinq dernières années, **Ralph Goodale** a répondu que c'était précisément la ***" responsabilité du directeur de répondre aux questions opérationnelles "***... Lors de la période de questions, **M. Goodale a indiqué** trouver ***" très inquiétantes "*** les révélations qui ont marqué la semaine au Québec -- l'espionnage de plusieurs journalistes par le Service de police de la Ville de Montréal (SPVM) ou la Sûreté du Québec (SQ). Le Devoir, A7

Advocates urge Liberal government to reduce number of women in prison
Sometimes when she goes to the grocery store, all Alia Pierini can do is sit in the parking lot, unable to bear the idea of going inside. She tries a different store, but Pierini, 31, often ends up coming home without the food she had planned to buy for lunch. "I feel like a big loser, to be honest, but I can't help it," the former prisoner told a news conference Thursday as she described the lingering anxiety, panic and fear she still feels as a result of months spent alone in solitary confinement... Now a regional advocate for female prisoners in federal custody, Pierini joined the Canadian Association of Elizabeth Fry Societies, which provides support for women and girls in the justice system, in calling on the Liberal government to reduce the number of women behind bars. The association's longtime executive director, Kim Pate - newly recommended for the Senate by Prime Minister Justin Trudeau - urged the government to give judges the discretion to overturn or alter the mandatory minimum sentences brought in by the previous Conservative government... Pate also said she was "heartened" to see Justice Minister Jody Wilson-Raybould given a mandate to restrict the use of solitary confinement and improve the treatment of prisoners with mental illness by implementing recommendations from the Ashley Smith inquest... **Public Safety Minister Ralph Goodale**, who is working with Wilson-Raybould on reviewing the inquest recommendations, has said that when it comes to administrative segregation, the government is looking at reforms that touch on everything from policy and programs to physical infrastructure and hopes to have specific proposals sometime this winter. ***"We need to dramatically change the scenario, and we're working at that,"*** **Goodale said** last week. Daily Star, 25

Spies could be left out in the cold
" Trust, but verify ." Academics Craig Forcese and Kent Roach argue that this should be the maxim in the security sector when dealing with powerful state agencies like the Canadian Security Intelligence Service and the RCMP. But trust in Canada ' s security services is thin on the ground, after the news Thursday that a CSIS unit illegally kept data deemed unrelated to national security threats. **Public Safety Minister Ralph Goodale said** Friday that a Federal Court decision by Justice Simon Noel, who found CSIS has ***"breached, again, the duty of candour it owes the court,"*** is timely because the Liberals are in the midst of reviewing the national security laws... Even before that, both Mosley and Noel had lambasted CSIS for providing inaccurate information to the court. In the Mohamed Harkat case, Noel criticized the agency ' s lack of candour... **Yet Goodale** did not rule out a change to the law to allow CSIS to keep the information ruled offside by the court. "***This is an issue that I think needs to be examined in the context of our national security review,"*** **he said**. ***"I want to hear the professional advice on both***

sides...Our security agencies to be effective in keeping Canadians safe. At the same time, what the agencies do needs to be in accord with the law and with the Constitution." Phil Gurski, a former CSIS analyst, said the metadata were retained for a rea-son - to identify people involved with, or sympathetic to, terror groups. Postmedia News (London Free Press, N6; Vancouver Sun, Calgary Herald, Leader-Post, Montreal Gazette, The Record, Ottawa Citizen, National Post)

Feds to look at border-crossing challenges for First Nations
The federal government will appoint a special ministerial representative to look at border crossing issues faced by First Nations. In a joint letter written in response to a Senate committee study, Indigenous Affairs Minister Carolyn Bennett, Immigration Minister John McCallum and **Public Safety Minister Ralph Goodale** say the adviser and First Nations will discuss significant and complex challenges. The letter said the resolution of these issues will require a ***"horizontal approach"*** involving several departments and agencies. ***"This will be necessary in order for the government of Canada to arrive at workable and sustainable solutions that facilitate the ability of First Nation community members to cross the U.S.-Canada border and, at the same time, take into consideration issues such as status, international sovereignty and security,"*** it said. Canadian Press (Whig-Standard, B2; Daily Gleaner, Telegraph-Journal, Times & Transcript)

Spy watchdog that triggered scathing rebuke of illegal CSIS activities facing job cuts
The federal watchdog that triggered this week's scathing judicial rebuke of Canada's spy service for illegal activities faces significant job cuts because of a chronic lack of sustained government funding, even as the Liberals hinted Friday the agency could be asked to do more to police federal spies. The Security Intelligence Review Committee (SIRC), the independent agency that reports to Parliament on the operations of the Canadian Security Intelligence Service (CSIS), says the equivalent of at least 11 full-time positions will disappear March 31 unless the Liberal government delivers millions more dollars under a sustained, multi-year funding plan announced by the previous Conservative government. "We don't know if we're getting any more funding," SIRC spokeswoman Sabrine Barakat said Friday. "SIRC has been actively working to access that money on a permanent basis but we're still waiting to see." The government has offered no explanation, she said. **The office of Public Safety Minister Ralph Goodale was unable** Friday to explain the funding confusion. Treasury Board officials could not explain either when asked the same question by the Ottawa Citizen last March... **Goodale repeated the pledge** for robust oversight again Friday in the swirling aftermath of the Federal Court ruling that CSIS illegally retained a decade's worth of metadata gleaned from Canadians' electronic communications that had nothing to do with threats to national security. Questions about the activity were first raised by SIRC in its 2014-15 annual report... Speaking with reporters, **Goodale said** the length of time it took for the decade of CSIS metadata misconduct to surface is of ***"critical concern."***... Paul Cavalluzzo, counsel for the Maher Arar commission, said SIRC is not in a position to adequately deal with CSIS. National Post (2016-11-04); Postmedia Network (London Free Press, N6; Calgary Herald, Vancouver Sun, Leader-Post, Montreal Gazette, Ottawa Citizen)

Watchdog defends CSIS, its director
Michel Coulombe, Canada's top spy, is in deep trouble with the courts and his political boss, **Public Safety Minister Ralph Goodale**, over revelations CSIS kept a decade's worth of data on Canadians who are no threat to national security. But Pierre Blais, head of the civilian watchdog agency over CSIS, says Coulombe "acted in good faith" and should not lose his job over the affair... Still, the judge said CSIS breached its "duty of candour" when it failed to reveal what it was up to. Goodale said Friday the first he learned of it was two weeks ago when an unredacted copy of the pending judgment reached his desk. Asked if he still has confidence in Coulombe, **Goodale said** only that he has made his expectations to the director clear. ***"A serious error has been made. (Coulombe) maintains that in his view, and in the view of the advice he got from the Department of Justice over the course of the last number of years, that the course of conduct by CSIS was within the parameters of law,"*** **Goodale told** reporters. ***"The court has now said very clearly and unequivocally that it was not. This situation needs to be remedied. It has to be remedied quickly ... CSIS must be forthcoming and candid with the court. That will happen."***... **But Goodale** was adamant Friday that innocent people should not have their information tracked and stored by Canada's spies. ***"That's a fundamental principle of Canadian privacy,"*** **he said.** Toronto Star, A10

Pas d'assurances pour le passé à Ottawa
S'il a obtenu l'assurance qu'aucune surveillance de journalistes ne se produit «actuellement» au niveau fédéral, le gouvernement Trudeau n'a pas demandé à la Gendarmerie royale du Canada (GRC) et au Service canadien du renseignement de sécurité (SCRS) s'ils ont mis des journalistes sous surveillance au cours des cinq dernières années. ***«L'enjeu, c'est ce qui se passe maintenant et nous pouvons offrir l'assurance que ce genre d'activités ne se produit pas actuellement. Je n'ai pas connaissance de choses qui se sont produites quand nous ne formions pas le gouvernement du Canada»*, a dit le ministre Ralph Goodale**, qui n'a pas l'intention de demander à la GRC ou au SCRS si des mandats de surveillance ont été lancés à l'égard de journalistes au cours des cinq dernières années. ***«La réponse, autant de la GRC que du SCRS, est que rien de la sorte ne se produit actuellement. [...] C'est la responsabilité du directeur du SCRS de répondre aux questions opérationnelles. Vous allez sur une pente très dangereuse quand vous invitez les politiciens à aller dans ce domaine»,* dit le ministre Goodale.** La Presse, A12

Minister vows action on CSIS
Public Safety Minister Ralph Goodale says he will make sure Canada's spy agency takes action after a Federal Court found that its officials have misled justices and unlawfully amassed data about people not suspected of being threats... On Friday, **Mr. Goodale said he** intends to ensure that CSIS follows the Federal Court's directive to stop the controversial practices. Pressed on whether he plans to fire anyone now, **Mr. Goodale said** only that **he** wants to have words with CSIS officials. ***"I will discuss with the executive management of the service how they plan to respond to this judgment,"* he said**. **The minister told** reporters that CSIS director Michel Coulombe has told him that CSIS lacks records that indicate whether it briefed previous ministers on the programs. ***"I take that as a pretty serious defect in the record keeping of the organization. "That is one of the things that absolutely needs to be rectified," he said***. Globe and Mail, A9

It's not easy being a journalist's unnamed source in the Information Age
An opinion piece states, "Were I in a position of authority, I would probably hang up if contacted by a journalist. Not because I don't think people in positions of authority should speak to journalists - I do, and I'm grateful to all the people in positions of authority who haven't hung up on me over the years... In Canada, Mounties investigating a document leak have targeted journalists, and last week, reporters at La Presse in Montreal and at Radio-Canada discovered Quebec police, hunting for leakers in their own ranks, have been tracking and tapping their communications. (We have no idea how many other journalists have been surveilled, but it's safe to assume it happens.)... Glenn Cowan, GRA Quantum's Canadian CEO, says such software allows phone, video or email communication without leaving any record: no metadata, no communications link to analyze, no tracking log, nothing... Cowan stresses that his firm does not regard law enforcement as a "threat actor," to use the language employed by the super-secret Communications Security Establishment in its advice to government employees on how to protect their communications..." CBC News

The worst part about the spying spree - it was legal
An opinion piece states, "Connect the dots between Quebec's police corps and the half-dozen or more investigative journalists who were put under surveillance over the past decade and you will find a gaggle of judges potentially derelict in their gatekeeping duties. In each of the spying episodes that have come to light over the past week, the police had to convince a judge to sanction the surveillance and, in some cases, to do so more than once..." Toronto Star

Spying eyes
An editorial states, "Taken in isolation, either case is concerning. But this week, we actually had two major law enforcement misconduct issues surface. The Canadian Security Intelligence Service, it turns out, has been collecting unrelated information it received as part of terrorism investigations (and was supposed to destroy), and instead loaded it into database systems that its legal overseers weren't even told existed. Meanwhile, in Quebec, police services were tracking some reporters' calls and texts for periods as long as five years, in an effort to catch and punish police whistleblowers. There's a huge problem here. And it's an oversight problem..." The Telegram, A15

Clean up spy agency
An editorial states, "So, Canada's spy agency has gobs of people's metadata in a secret database. Well, it's just numbers, isn't it? You know, telephone numbers and Internet IP addresses and so forth. Who cares? The justice system, to begin with. On Thursday, the Federal Court released a ruling saying that the Canadian Security Intelligence Service's retention and analysis of wide swaths of data, which had been going on for 10 years, was illegal. And CSIS hadn't bothered to inform the court of what it was doing... **Public Safety Minister Ralph Goodale was shifty** on Friday when asked if the Liberals' planned security oversight committee would have stopped this sort of spying; instead he repeated talking points. **He also refused** to say how many Canadians had their data captured. Reassuringly, though, the government won't appeal the court ruling..." Ottawa Citizen, B5

Surveillance des journalistes - La nouvelle chasse aux sorcières
Un article d'opinion déclare, « Le professeur Stéphane Leman-Langlois est un spécialiste de la police, du renseignement, du terrorisme, des technologies et du contrôle social. Il a récemment collaboré au livre "Transparent Lives" sur la surveillance au Canada. Il enseigne à l'Université Laval.\r\nAvez-vous été surpris par les récentes révélations sur l'ampleur de l'espionnage des journalistes québécois ? Pas du tout. Chaque fois que je parle de surveillance depuis des années et que je dis aux journalistes qu'ils sont les premières cibles, la plupart d'entre eux lèvent les yeux au plafond parce qu'ils n'y croient pas. Ils me traitent de parano parce que je suis dans les études de la surveillance. Je suis certain que le phénomène est d'une ampleur bien supérieure à ce qui vient d'être dévoilé. Je pense que les révélations de la SQ -- arrivées très, très rapidement et concernant, comme par hasard, des écoutes datant d'anciens directeurs de ce corps de police -- sont faites pour détourner l'attention. Mais bon, il va y avoir une commission d'enquête et, si elle peut lever des pierres, on va en trouver bien plus, de ces histoires de surveillance... » Le Devoir, B1

Surveillance - La confiance ébranlée
Un article d'opinion déclare, « Pendant dix ans, le Service canadien du renseignement de sécurité (SCRS) a conservé et analysé des données associées à des personnes qui n'étaient soupçonnées de rien, mais qui avaient eu le malheur de communiquer avec des personnes légalement surveillées. Et le service l'a fait sans en informer la Cour fédérale, un des rares garde-fous contre d'éventuels abus de nos espions. Le gouvernement doit serrer la vis et vite ; la confiance des citoyens et la protection de leur vie privée en dépendent... Le Tribunal rappelle que le SCRS doit, en vertu de la loi, conserver les données uniquement " dans la mesure strictement nécessaire ", ce qui n'était pas le cas. Lors d'une conférence de presse convoquée en toute hâte, le directeur du SCRS, Michel Coulombe, a dit que le service avait cessé toute analyse et verrouillé l'accès aux données en question. **Le ministre de la Sécurité publique, Ralph Goodale**, a précisé que le gouvernement n'interjetterait pas appel et a déploré le manque de franchise du SCRS devant la Cour. Mais ensuite ? La Cour n'a pas demandé de détruire ces données et personne ne sait trop ce qu'on en fera. Le plus préoccupant est que M. Coulombe espère pouvoir les conserver et que **le ministre de la Sécurité publique, Ralph Goodale**, n'a pas fermé la porte. **Il a noté** que cette question serait mieux débattue lors des consultations publiques en cours sur ***" le cadre de sécurité nationale "***. **Le ministre** a d'ailleurs **relevé** que le juge Noël avait suggéré de revoir la loi sur le SCRS et de l'adapter à la réalité des nouvelles technologies... » Le Devoir, B4

*** Alberni flooding may shut highway for days**
Flooding near Port Alberni has the potential to close Highway 4, the only highway link to Ucluelet and Tofino, for five or six days, says the emergency preparedness co-ordinator of the Tseshaht First Nation. Times Colonist, A1

*** Complaints skyrocket at women's prison**
The number of complaints to the Correctional Investigator from women at the federal women's prison in Kitchener has skyrocketed in the past three years, Correctional Investigator Howard Sapers received 344 complaints from Grand Valley Institution in 2015-16 — about 41 per cent of all complaints from women in federal prisons anywhere in Canada. Of the 45 federal prisons across the country, only one other was the

subject of more complaints. The number of complaints at Grand Valley has increased each year for the past several years, from 144 in 2013, to 193 in 2014, to 218 in 2015 — a 139 per cent increase in three years. "I think the numbers (of complaints) going up is indicative of how desperate some of the women are," said Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies, who added that her agency has encouraged women to complain more in an effort to get their concerns addressed. The Record, A1

* **Health Canada disputes police story on fentanyl**
Police were alerted by both phone and mail in July that there was liquid fentanyl in Hamilton, says Health Canada. The statement is in direct contradiction to police claims that the vice and drug unit were notified the week of Oct. 31 about the lab results and that they were not physical documents that landed on an officer's desk. Torstar (Hamilton Spectator, A1; The Record)

Pregnant killer Kelly Ellard's boyfriend a 'person of interest' in drug dealer disappearance
The boyfriend of pregnant killer Kelly Ellard is a "person of interest" in the May 2016 disappearance of a low-level drug dealer, according to Parole Board of Canada documents. Darwin Dorozan, 42, had his parole revoked after Correctional Services of Canada officials were made aware of the investigation into the missing dealer, the just-released documents say. "On the same date full parole was granted, police advised CSC that you were a person of interest in the suspicious disappearance of a low-level drug dealer in May 2016," the parole board said in its Oct. 27 ruling...She was denied day parole in May despite the Parole Board of Canada noting that she was finally taking some responsibility for the murder and had made strides in her rehabilitation. Retour sur une semaine sombre pour la liberté de presse
Pour les trois journalistes de Radio-Canada, il s'agit de tous leurs appels de novembre 2008 à octobre 2013, confirme la SQ. Cette procédure ne prévoyait pas d'écoute électronique. La SQ cherchait à faire la lumière sur des fuites d'éléments d'enquête provenant de l'écoute électronique en 2008 et 2009 du président de la Fédération des travailleurs du Québec (FTQ) de l'époque, Michel Arsenault - qui s'est plaint en 2013 de ces divulgations dans les médias... Jeudi, il a dit s'être assuré auprès de la Gendarmerie royale du Canada (GRC) et du Service canadien du renseignement de sécurité (SCRS) que de telles « activités » ne se passent pas « au niveau fédéral ». Rappelons que deux journalistes de La Presse ont été espionnés en 2007 par des agents de la GRC. Radio-Canada

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Climate change: What does it mean for Canada and how can we respond?**
Canada has already seen smoke-related health impacts and stressful evacuations as the result of increased wildfires; the spread of Lyme disease; and food security and mental health challenges related to rapid changes in the Far North, which is two to three degrees Celsius warmer than it was in the 1950s. Here's How Canada's Provinces Are Responding To Climate Change. New Brunswick banned fracking. Last month, lawmakers in New Brunswick voted to place a moratorium on fracking within the province. Canada Journal

* **Alberni flooding may shut highway for days**
Flooding near Port Alberni has the potential to close Highway 4, the only highway link to Ucluelet and Tofino, for five or six days, says the emergency preparedness co-ordinator of the Tseshaht First Nation. Times Colonist, A1

* **Winter gear guide**
El Nino is famous for weather media headlines. But its sister act - La Nina - is known to be pretty frosty and forecasted to slam the Canadian Rockies with a good old-fashioned winter, full of what skiers and snowboarders love, cooler temperatures and above-average moisture. Calgary Herald, G10

* **Tornado-damaged homes still waiting to be repaired**
Some of the of roofs, siding and porches wrecked in just four seconds when a tornado touched down on Riberdy Road Aug. 24 remain unfixed 10 weeks later, and resident Greg Tremblay says he's had enough. Windsor Star, A5

* **Une heure de plus... pour vérifier son détecteur de fumée**
Le changement d'heure, dimanche, est le moment idéal pour faire penser de vérifier son avertisseur de fumée et en remplacer la pile. La remarque vient du Service de protection contre les incendies de la Ville de Sherbrooke. La Tribune, 10

* **CBRM phases out storm help line**
Assistance will continue for residents reeling from October flood. The Cape Breton Regional Municipality shut down its emergency telephone help line for residents affected by the Thanksgiving Day flood. The provincial government issued a news release Friday indicating that while the help line is being phased out, the municipality will follow up with anyone who has called for assistance. Cape Breton Post, A3

* **Les municipalités veulent plus de sécurité**
Le monde municipal n'a pas oublié la tragédie de Lac-Mégantic. Réunis à l'occasion d'une rencontre spéciale à Edmundston au Nouveau-Brunswick vendredi, quelques dizaines de représentants municipaux ont discuté de sécurité ferroviaire en compagnie de divers intervenants. Ils ont réclamé l'adoption d'une série de mesures pour accroître la sécurité des communautés à l'issue de leurs discussions. La Tribune, 9

* **High hopes for Elbow River brown trout after devastating 2013 flood**
River watchers are hoping this year's brown trout count in the Elbow River continues to show growth after the 2013 Alberta flood had a devastating effect on the population. Chris Bjornson, a senior fisheries biologist with Golder Associates, says the flood three years ago continues to affect the population. CBC News

* **Springbank dam raises concerns for environment**
An opinion piece states, "It has now been one year since the Alberta government flip-flopped on its election promise to scrap the Springbank dam project in favour of the McLean Creek dam. I remember watching the news conference - led by the environment minister, flanked by the mayor of Calgary - but with no one there from Springbank, Rocky View County or the impacted First Nations..." Calgary Herald, A13

* **Letters to the Editor**
A letter to the editor states, "Independent probe needed. Husky Energy was supposed to file a major and conclusive report on the disastrous oil spill in the North Saskatchewan River to the provincial government. Instead, it filed a one pager and asked the government for an extension later into November. This request was granted..." StarPhoenix

The beast is still alive
Six months after it sent the population of Fort McMurray fleeing, the wildfire known as MWF-009 is still burning. The fire can no longer be seen; there is no smoke or open flames. But in a remote section of Alberta and Saskatchewan far from the city it nearly destroyed, the blaze is still being carefully watched. Rappelons que deux journalistes de La Presse ont été espionnés en 2007 par des agents de la GRC. Radio-Canada

Why spying on the press hurts democracy
An opinion piece states, "Revelations this week that two Quebec police forces spied on journalists by secretly monitoring their smartphones was widely condemned in Canada and abroad as an outrageous attack on press freedom. Critics from Edward Snowden to domestic and international media groups decried the police tactics as a spectacular assault in a country that is widely considered to be a gold standard for democracy..." Ottawa Citizen, B5

Important questions
An editorial states, "Quebecers are on the verge of another potentially explosive public inquiry, this one sparked by revelations about police spying on journalists. The need for a full inquiry became rapidly apparent as the snooping scandal that broke Monday widened, from Montreal police tracking one columnist for months, to the Sûreté du Québec peering into five years' worth of phone records belonging to six top investigative journalists. To its credit, the Couillard government, which first had announced more limited measures, was quick to see the broader need..." Montreal Gazette, A14

Police spying threatens freedom of the press
"An editorial from the Toronto Star, published Oct. 31: "Are you a journalist?" tweeted American whistleblower Edward Snowden on Monday. "The police spying on you specifically to ID your sources isn't a hypothetical," he warned. "This is today."..." Hamilton Spectator, A14

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Deportation order for men linked to human smuggling put on hold
Two men caught trying to bring people into Canada from the United States across the St. Lawrence River on an inflatable raft had their deportation orders put on hold in the wake of last year's landmark Supreme Court of Canada ruling on human smuggling. The two cases not only highlight the top court's reversal on what is considered criminal human smuggling, but also reveals rich details on what authorities said was a crew moving people back and forth across the Canada-U.S. border along the Thousand Islands archipelago. Whig-Standard, A1

Canadians charged in cross-border fraud
Four Canadians facing charges they crossed into the United States to fraudulently skim money from ATM machines in Vermont could have stolen almost $250,000 US, court documents say. A federal grand jury in Burlington, Vermont, indicted the men Thursday on a charge they acquired bank account information belonging to others and put it on the magnetic strips of gift cards that were then used at ATMs in the Burlington area to get cash advances. Times Colonist, A9

Whoever wins the presidency will have a big impact on B.C.
British Columbians don't get to vote in the U.S. election although the results are likely to have a major impact on varied issues germane to the province. Here are a few ways the outcome of Tuesday's vote could affect B.C.: Softwood lumber and trade. A 2006 agreement to manage the trade of softwood lumber, which is crucial to the B.C. economy, expired in October of last year, and so far there is no replacement. While the future of the softwood agreement hasn't factored significantly in the campaign, the larger issue of trade has - with Donald Trump railing against the North American free-trade agreement and the Trans-Pacific Partnership... The border. Another concern is a "thickening" of the Canadian-U.S. border under a Trump presidency that could complicate things for Canadian professionals who need to spend time in the United States, the board of trade's Mr. Black said. While Mr. Trump has talked about a wall between Mexico and the United States, the board fears a "spillover" into relations with Canada although Mr. Trump has been more focused on the southern U.S. border than the Canadian border. Globe and Mail, S4

Trade deal affects how Canadian firms do business
An opinion piece states, "The Comprehensive Economic Trade Agreement that Canada recently signed with the European Union is Canada's most important trade deal since the North American Free Trade Agreement. CETA is likely to transform Canada much more than NAFTA has, and has already had a significant impact on provincial-federal relations in Canada..." Times Colonist

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

* **Security matters**
The Canadian Centre For ethics in Sport has shut down its email and internet systems after an october cyberattack that mirrors similar security breaches against the World anti-doping agency and the u.S. antidoping agency, the Canadian Cyber Incident response Centre detected the attack that might have involved the theft of confidential information of some athletes. Cyber security experts are investigating the breach in hopes of discovering what, if anything, was stolen and how the hackers got in. "We are looking at how we can ensure this doesn't happen again," Paul melia, president and chief executive officer of the CCeS, told Postmedia on Friday. "We've been told our system is a very secure one, but these cyber-attacks are very sophisticated and very difficult to defend against. Postmedia Network (Winnipeg Sun, S10; Edmonton Sun, Ottawa Sun, Toronto Sun)

* **Commissioner wants mandatory privacy breach reporting**
New Brunswick's privacy commissioner is calling for tougher legislation to force government departments to report breaches of personal information. Anne Bertrand's call comes as the Liberal government plans to introduce changes next year to the province's right to information and privacy legislation. According to one cyber security expert, the call also comes at a time when public bodies are facing more complex and serious security threats...As director of strategic initiatives in information technology services, David Shipley works to protect the university from cyber attacks and other threats. He said encryption is important, but the cost can discourage public bodies from taking that step. CBC News

* **Russia likely can't hack polls, but still a threat**
U.S. intelligence agencies do not think Russia is capable of using cyber-espionage to alter the outcome of Tuesday's presidential election, but they warn that Moscow could continue meddling after the voting has ended to sow doubts about the legitimacy of the result, U.S. officials said. Washington Post (Toronto Star, A14)

* **Ashley Madison gets an 'open-minded' facelift**
Ashley Madison - or just "Ashley," as the hookup website's new management team calls "her" - has more users now than before last year's infamous cyber attack, according to the men brought in for her massive makeover. Torstar (Hamilton Spectator, Toronto Star)

*** The hacking saga**
2002: Ashley Madison is founded. July 2015: Ashley Madison claims to have some 36.5 million users. July 12: Hackers threaten to release client information from Ashley Madison and Established Men unless both sites are taken down. Toronto Star

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Police arrest man after indecent act complaints**
A Lawrencetown man has been arrested and charged after RCMP received complaints about a man committing indecent acts in front of children. Annapolis County District RCMP started an investigation after receiving a complaint Tuesday afternoon about a man masturbating while fully undressed in front of a window as children walked by. A second similar complaint was received at about 8:30 a.m. the next morning. Chronicle Herald, A5

*** Pas de retraite**
Avec l'accord des Hells Angels, Richard «Bob» Hudon disait avoir pris sa retraite comme membre en règle à l'automne 2010. Pourtant, un an plus tard, c'est dans le local du club-école des Dark Souls à Scott en Beauce que les policiers de l'escouade régionale mixte sont allés le cueillir. Le Soleil, 8

*** Police expect to roll out new dispatch system on Nov. 15**
Lacombe Police Service expects to roll out a new dispatch system designed to speed up response times on Nov. 15. Barring any last-minute snags, in mid-November 911 calls will be passed directly from the 911 centre to Lacombe police without first going through the RCMP's communication centre in Red Deer. Red Deer Advocate, A4

*** Charge pending for officer who stopped Green**
A provincial police oversight agency has directed Hamilton police to lay a disciplinary charge against one of its officers accused of "carding" a black city councillor. The Police Services Act charge will be officially laid when the officer makes his first appearance on Dec. 15, says Clint Twolan, president of the Hamilton Police Association. The officer has continued to perform his regular duties throughout the complaint process. Hamilton Spectator, A3

*** Retirement number forces police budget tweak**
Winnipeg Police find themselves $2 million over budget on salaries and expenses this year. Acting chief Art Stannard told the Winnipeg Police Board Friday retirement numbers have fallen short of WPS projections for the year. Winnipeg Free Press, 1

*** Working on use-of-force policy**
The Winnipeg Police Board is prioritizing the establishment of a use-offorce policy for the Winnipeg Police Service and will seek public feedback on the issue. The board announced Friday it has approved a draft for a policy on use of force in shaping how WPS members conduct themselves in the line of duty. A repor t that went before the board Friday morning said the intent is to "promote officer and community safety, effective policing, accountability and trust between the public, the board and the service." Winnipeg Sun

*** Board formalizes appointment; WPS salary budget topped up**
The Winnipeg police board has confirmed the appointment of Danny Smyth as the next police chief. Board members voted unanimously on the recommendation from the board's recruitment committee. The move wasn't a surprise given all members of the board were members of the recruitment committee. Winnipeg Free Press, B1

Kinder Morgan braces for Standing Rock-type protests
A person only has to read a few of the stories about the Standing Rock protest or see some of the pictures and videos to get a sense of the hostile stalemate over the construction of the new Dakota Access pipeline. The protests in North Dakota began small and peaceful, but grew in support and captured the attention of the continent... "I'd be naive if I didn't expect that," said CEO Ian Anderson told

reporters recently in Calgary... Meetings with RCMP. The preparations involve meeting with law enforcement. "We've been in deep conversations with policing authorities, RCMP in the planning for our project - what can we anticipate and what their role needs to be," said Anderson. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Complaints skyrocket at women's prison**
The number of complaints to the Correctional Investigator from women at the federal women's prison in Kitchener has skyrocketed in the past three years, Correctional Investigator Howard Sapers received 344 complaints from Grand Valley Institution in 2015-16 — about 41 per cent of all complaints from women in federal prisons anywhere in Canada. Of the 45 federal prisons across the country, only one other was the subject of more complaints. The number of complaints at Grand Valley has increased each year for the past several years, from 144 in 2013, to 193 in 2014, to 218 in 2015 — a 139 per cent increase in three years. "I think the numbers (of complaints) going up is indicative of how desperate some of the women are," said Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies, who added that her agency has encouraged women to complain more in an effort to get their concerns addressed. The Record, A1

*** Liberals outline mental health, justice priorities**
A Liberal government would refocus the implementation of the Yukon Mental Wellness Strategy and include comprehensive after-care services in the communities. Liberal Leader Sandy Silver and Jeanie Dendys, the party's Mountainview candidate in Monday's election, outlined their plan to improve mental health, justice and health care services Tuesday... Dendys, who is the Kwanlin Dun First Nation's justice director, said improved mental health services are just one part of a larger plan to improve the justice system. "A responsive and culturally relevant justice system will help protect all Yukoners, respect the human rights of incarcerated individuals and provide for rehabilitation that reduces the recidivism rates in the correctional system," she said. Daily Star, 10

*** Judge denies charter application for killer**
A criminal court is not the proper venue to award constitutional damages to someone who suffered a psychotic breakdown after spending 18 consecutive months in solitary confinement, a judge has ruled. Ottawa defence lawyer Dominic Lamb filed a charter application Friday in the hopes that Ontario Superior Court Justice Robert Maranger would make a declaration that Mutiur Rehman's constitutional rights were violated in jail and award damages for those breaches, but he left the courthouse with neither. Ottawa Citizen, A5

Pregnant killer Kelly Ellard's boyfriend a 'person of interest' in drug dealer disappearance
The boyfriend of pregnant killer Kelly Ellard is a "person of interest" in the May 2016 disappearance of a low-level drug dealer, according to Parole Board of Canada documents. Darwin Dorozan, 42, had his parole revoked after Correctional Services of Canada officials were made aware of the investigation into the missing dealer, the just-released documents say. "On the same date full parole was granted, police advised CSC that you were a person of interest in the suspicious disappearance of a low-level drug dealer in May 2016," the parole board said in its Oct. 27 ruling... She was denied day parole in May despite the Parole Board of Canada noting that she was finally taking some responsibility for the murder and had made strides in her rehabilitation. Postmedia Network (Edmonton Sun, Ottawa Sun, Calgary Sun, Vancouver Sun, Winnipeg Sun, * Toronto Sun, * The Province)

Torture in our jails
An opinion piece states, "Humans are social animals. We need to interact with other humans merely to exist. Otherwise, we can perish. We may kill ourselves. We may be so emotionally shattered that we lose all sense of who we are... The British Columbia Civil Liberties Association has launched a constitutional challenge to the use of solitary confinement in Canadian federal prisons. The BCCLA says that in Canada one out of every four federal prisoners has spent some time in solitary. At any moment, in federal or provincial prisons, up to 1,800 people are confined in solitary..." National Post, A15

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Health Canada disputes police story on fentanyl**
Police were alerted by both phone and mail in July that there was liquid fentanyl in Hamilton, says Health Canada. The statement is in direct contradiction to police claims that the vice and drug unit were notified the week of Oct. 31 about the lab results and that they were not physical documents that landed on an officer's desk. Torstar (Hamilton Spectator, A1; The Record)

*** Une année meurtrière à Ottawa**
Ottawa pourrait supplanter Montréal au chapitre du nombre d'homicides en 2016. Malgré une population deux fois moins importante, la capitale fédérale affiche un bilan semblable à celui de la métropole québécoise. Vendredi, le Service de police de la Ville de Montréal (SPVM) comptait 18 homicides sur son territoire, depuis le début de l'année. Au même moment, le Service de police d'Ottawa (SPO) en dénombrait 16. Le Droit, 3 / Front

*** Prudence avec les comparaisons**
Un professeur en criminologie de l'Université d'Ottawa privilégie la prudence avec les statistiques qui tendent à démontrer qu'Ottawa connaît plus d'homicides per capita que Montréal. «Mais je demeure quand même impressionné par la chute vertigineuse des homicides à Montréal», dit Ronald-Frans Melchers de l'Université d'Ottawa. Selon lui, il vaut mieux être prudent avec les données brutes concernant les homicides rapportés à Ottawa et Montréal, en 2016. Bien que les deux villes aient une certaine parité en 2016, le criminologue préfère comparer les statistiques sur les Régions métropolitaines de recensement (RMR) et se fier aux taux d'homicides calculés par Statistique Canada. Le Droit, 2

*** So many cops aren't neighbours**
An opinion piece states, "The irony made me smile. On Sunday, in the midst of getting ready to negotiate a new contract with the city, the Winnipeg Police Association is conducting a door-to-door public relations campaign they're calling Neighbour to Neighbour Outreach. On Tuesday - two days before the Neighbour to Neighbour news release - I had called police union president Moe Sabourin to inquire about how many of his membership aren't really neighbours. I wanted to know how many live outside the city. For years, it's been well-known that when large numbers of city police officers leave work, they head home to neighbourhoods or acreages outside the city that pays them so handsomely..." Winnipeg Free Press

What happens when our schools aren't safe for all students?
An opinion piece states, "Imagine videos purportedly showing violent "Jewish takeovers" or "homosexual takeovers" of Paris and London, or a video headlined: "Must see: Dutch mayor tells fellow Jews they can f------ if they don't like freedom." To some it may be just the simple exercise of free speech rights. Others will argue that as distasteful as they are, a person must have the right to express such views. Yet others may feel that these cross the line into hate..." Toronto Star

Religious neutrality bill comes in for embarrassing criticism
An editorial states, "The Couillard government's legislative venture into identity politics is not going well. Last year, to keep an election promise made under pressure from the nationalist opposition parties, the Liberal government introduced an anti-"radicalization" package of measures aimed at Muslims in particular..." Montreal Gazette, A14

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Call for peace**
It's a call for justice. And, it's a call for healing, said Catherine Dickson one of the leaders for the recent CGIT and explorers pilgrimage walk. "This is a response to the call from the aboriginal community to

make a change," she said. Dickson, and about 30 others, participated in the walk in October to raise awareness about murdered and missing aboriginal women in Canada. Charlottetown Guardian, C4

*** We can't afford to ignore indigenous women and girls**
Before providing aid money to support resource-development projects in other countries, Canadian policy requires a careful examination of how the project might affect the lives and safety of women and girls... In 2004, Amnesty International published a report called Stolen Sisters, which demonstrated that the economic marginalization of indigenous women and the discrimination they face in Canadian society are critical factors putting them in positions of increased risk, fuelling violence against them, and denying them the protections and support they deserve. At the time, we noted that indigenous women had long struggled to draw public attention to these issues and that there was already, at that point, a significant body of government reports and other studies pointing to the need for action. Yet it is only now, with the launch of a national inquiry on missing and murdered indigenous women and girls, that we begin to see real government acknowledgment of the scale and urgency of this crisis. Globe and Mail, S2

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Police hope pot shop raids**
Ottawa police raided six marijuana dispensaries Friday morning, closing a big chunk of the city's pot shops in one fell swoop... The targeted shops are operated by a B.C.-based outfit that moved into Ottawa this summer, opening dispensaries called Green Tree, WeeMedical and CannaGreen. Ottawa Citizen, A2

*** Local Ottawa politicians applaud raids on marijuana dispensaries**
Local politicians in Ottawa are applauding the closure of a string of marijuana dispensaries operating illegally in the city. Police arrested nine people and raided seven pot shops this week after mounting complaints from community members and councillors. "I'm happy with the level of response that OPS has put in," said Jody Mitic. "We were kind of tightening the screws a little bit on the [police] chief." CBC News

PUBLIC SERVICE / FONCTION PUBLIQUE

Feds' payroll system a nightmare
An opinion piece states, "Over 30,000 workers are waiting to have their paycheques fixed, many haven't been paid in months, due to the federal government's new pay system, Phoenix. Phoenix was rolled out in February of 2015, despite being warned by the Public Service Alliance of Canada (its largest union), that the system was flawed..." Windsor Star, A6

INTERNATIONAL

*** Paris pour un "meilleur encadrement" des armes à feu**
Le ministre français de l'Intérieur, Bernard Cazeneuve, a appelé vendredi l'Union européenne à un " meilleur encadrement " de la circulation des armes à feu dans le cadre de la lutte contre le terrorisme. " Nous devons avancer " et " être fermes " sur l'adoption par le Parlement européen d'une nouvelle directive sur les armes à feu, a insisté le ministre qui recevait le Britannique Julian King, nouveau commissaire européen en charge de la sécurité et de la lutte contre le terrorisme. Les États membres de l'UE se sont mis d'accord en juin sur un renforcement des règles de contrôle des armes à feu au terme d'une négociation difficile. Mais l'adoption définitive de la directive requiert désormais un vote favorable du Parlement européen. Pour M. Cazeneuve, il s'agit de " permettre un meilleur encadrement et une

meilleure traçabilité des armes à feu au niveau européen '', une priorité de la France. Agence France-Presse (Le Devoir, C6)

Les déplacés de Boko Haram - Venir en aide malgré le silence médiatique
Dans l'Extrême-Nord du Cameroun, l'organisme de bienfaisance L'Oeuvre Léger offre depuis six mois une aide humanitaire d'urgence aux déplacés internes du groupe terroriste Boko Haram. Un aspect du conflit peu médiatisé, alors que des milliers de Camerounais souffrent de malnutrition et n'ont accès ni à des soins de santé ni à de l'eau potable.\r\n'' Les 31 500 personnes à qui le projet vient en aide sont victimes de violation grave des droits de la personne, en vertu du droit humanitaire international '', lance d'emblée Chanèle Boulet-Gauthier, coordonnatrice de l'action humanitaire à L'Oeuvre Léger et responsable du projet. En partenariat avec une ONG locale, le Comité diocésain de développement (CDD) -- Caritas du Cameroun, et avec le soutien d'Affaires mondiales Canada, ce projet vise à aider les déplacés dans la région de l'Extrême-Nord ainsi que les membres des communautés hôtes. '' Le projet vient casser le cycle de vulnérabilité de ces personnes '', présente la coordonnatrice, précisant que dans cette région, la plus pauvre du pays, les déplacements de population provoquent des situations particulièrement difficiles. Le Devoir, I4

MINISTER / MINISTRE

Un projet pour détecter les fautifs
Les automobilistes de plusieurs provinces et territoires canadiens pourraient bientôt se faire demander par des policiers de se soumettre à un test de salive sur une base volontaire et ainsi participer à un projet pilote visant à mieux détecter la conduite affaiblie par la consommation de drogue. L'initiative menée par le gouvernement fédéral, la Gendarmerie royale du Canada (GRC) et plusieurs services de police du pays vise à déterminer quels appareils fonctionnent le mieux pour détecter la présence de drogue dans la salive. Le **ministre de la Sécurité publique, Ralph Goodale**, a indiqué que son ministère et le Conseil canadien des administrateurs en transport motorisé (CCATM) travailleront en collaboration avec les forces policières pour tester deux systèmes de détection différents. De tels appareils permettent de déceler la présence de cannabis, de cocaïne, de méthamphétamine et d'opioïdes. (…) Les services de police des villes de Gatineau, Toronto, Vancouver et Halifax participeront au projet pilote, de même que la Police provinciale de l'Ontario et les détachements de la GRC à North Battleford, en Saskatchewan, et

à Yellowknife. (…) ***«La mise à l'essai de ces nouveaux appareils de détection de drogues constitue une étape importante de nos efforts soutenus visant à renforcer l'application des lois sur la conduite avec les facultés affaiblies par la drogue, à réduire la conduite avec les facultés affaiblies par la drogue et à améliorer la sécurité de tous les Canadiens»,*** a soutenu **le ministre Goodale** dans un communiqué. Le Nouvelliste, 24 (Voix de l'Est, Le Quotidien); Canadian Press (Chronicle Herald, Waterloo Record, Hamilton Spectator, Cape Breton Post); Postmedia Network (Leader-Post, Star Phoenix); Journal de Montréal; Radio-Canada

Spies and lies, but no lost jobs
An editorial states, "This goes from the sublime to the bizarre - and beyond. Back in November, the Canadian Security Intelligence Service found itself in the hottest of hot water: a Federal Court judge ruled that the spy agency had broken the law by collecting and storing information it was not legally entitled to gather - in particular, metadata on innocent Canadians unconnected in any way with legal investigations. The judge ruled, in fact, that CSIS misled the court when the agency had applied for special warrants to collect documents. It was a huge embarrassment for the spies, especially when the federal government would not appeal the ruling. The information was collected starting in 2006, and processed through the secretive Operational Data Analysis Centre. But things are twistier than just a decade's worth of private information unlawfully held by the agency. Last week, a federal committee was told that the spy agency hasn't gotten rid of the material it was never supposed to have, even though it was illegally collected in the first place. CSIS director Michel Coulombe told the committee that it should know, within six months or so, what it will do with the data. And federal **Public Safety Minister Ralph Goodale** told the committee that he's still deciding whether the spy agency should be allowed to retain and process such information." Waterloo Record, A10 (Hamilton Spectator)

Canada's top spy "watchdog" says Edward Snowden should be shot
An opinion piece states, "Michael Doucet—the director of the government "watchdog" agency tasked with ensuring the Canadian Security Intelligence Service (CSIS) doesn't violate Canadians' rights—has publicly declared that US National Security Agency (NSA) whistleblower Edward Snowden should be shot. Far from being an individual outburst, Doucet's remarks exemplify broad sentiments within establishment circles. More than three years after Snowden lifted the veil on the NSA's illegal activities, including the major role that Canada plays in the NSA-led "Five Eyes" global spy network, the Canadian ruling elite remains outraged at his exposures. The head of the Security Intelligence Review Committee (SIRC), Doucet responded to a question at a recent talk he gave at Toronto's Ryerson University on what Snowden's fate would have been had he been Canadian by saying, "Do you want my opinion on that? Do you really want it? I'll give it to you. If Edward Snowden had worked for CSIS and did what he did, he should be shot." Doucet's outburst underscores the fraudulent character of the SIRC and like government "oversight" bodies charged with ensuring CSIS, Canada's premier intelligence agency, and other parts of the national-security apparatus don't violate Canadians' civil liberties. (…) The Liberal government response to Doucet's inflammatory comments is no less revealing. Asked about them, **Public Safety Minister Ralph Goodale** noted blandly, ***"That remark strikes me as highly inappropriate."*** Beyond this, there has been no official government response, let alone any suggestion that Doucet should be removed or otherwise sanctioned. Nor have the opposition parties seen fit to raise the issue. As for the corporate media, only the *Globe and Mail* reported Doucet's remarks and **Goodale's** tepid criticism of them." World Socialist Web Site

TOP STORIES / MANCHETTES

*** Assaults, violence leading causes of injury for Mounties**
More than 530 Mounties were injured on the job last year while being subjected to assaults and other violent acts - usually during incidents where officers had to use force to subdue someone. The information is contained in the RCMP's 2015 report on occupational health and safety, obtained by CBC News, which looks at everything from ergonomics at employees' desks to on-the-job injuries and fatalities. The report notes that physical control is more effective in subduing a suspect than using current "intermediate weapons," such as a baton or a stun gun. No one from the RCMP responded to CBC's request for information or an interview. CBC News

*** Operation Picnic was secret phone-tapping feast for RCMP, historian discovers**
The federal government secretly gave RCMP security officials the authority to tap telephone calls without court oversight during the Cold War, newly unearthed archival documents show. The surveillance program, codenamed "Picnic," began as an emergency effort during the Korean War, but federal agencies collaborated with telephone companies in 1954 to continue the wiretaps, says Dennis Molinaro, who teaches history at Ontario's Trent University. Molinaro's research indicates the RCMP security branch was listening in on the embassies of East Bloc countries, "certain unfriendly organizations" and individuals suspected of disloyalty. It has long been known the Mounties kept an eye on a wide array of people and organizations — from church and gay rights groups to Quebec separatists and Communists — in the name of national security, amassing hundreds of thousands of dossiers. Mountie scandals in the 1970s led to a royal commission, the demise of the RCMP security service and creation in 1984 of the civilian Canadian Security Intelligence Service. Molinaro believes the documentation he has uncovered with the help of tenacious staff at Library and Archives Canada helps flesh out how the RCMP surveillance of Canadians took place and implicates federal politicians and bureaucrats in making it happen. Canadian Press (Truro Daily); CBC News; 1

*** Police may soon ask you to spit for them for pilot project**
Drivers in some jurisdictions may soon find themselves asked by police to volunteer for a saliva test, part of a pilot project aimed at detecting drug-impaired drivers. The "oral fluid" screening systems test saliva for the presence of drugs, including cannabis, cocaine, methamphetamine and opioids. Police forces in Toronto, Vancouver, Halifax and Gatineau, Que., will take part in the project, along with the Ontario Provincial Police and RCMP detachments in North Battleford, Sask., and Yellowknife. Police officers will be trained in the use of two types of screening devices, but only with drivers and passengers who volunteer to provide a sample anonymously. Toronto Star

Inmates sue Ottawa over solitary confinement
A $600-million class action lawsuit was certified in an Ontario court this week, opening the door for thousands of prison inmates with diagnosed mental illnesses to seek compensation for their alleged mistreatment in federal jails. The lawsuit alleges Canada's federal prison agency fails to properly care for mentally ill inmates, relies too much on the "cruel and unusual punishment" of solitary confinement and neglects to adequately train its staff. Superior Court Justice Paul Perell ruled that the lawsuit should go ahead in a decision released Wednesday. (...) A spokesperson for the Justice Ministry referred questions on the lawsuit to the Correctional Service of Canada, the agency responsible for federal prisons. In an emailed statement, Corrections spokesperson Véronique Rioux said "effective and timely" treatment for inmates with mental illness is a priority for the agency. Front-line staff are trained to "understand the mental health needs of offenders," and $77 million was "invested" to address the needs of these inmates during the 2015-16 fiscal year, she said. Rioux added that segregation - the term the government uses for solitary confinement - is a legally available tool that is used to "manage risk," either to the inmate or staff, and is not a punitive measure. She said there are ongoing reviews of an inmate's placement in solitary confinement, including physical and mental health, and the agency is legally required to remove them from segregation "at the earliest time." She would not discuss the newly certified lawsuit, because it "is currently before the courts." Toronto Star, A1

Saskatchewan Penitentiary locked down in Prince Albert after 'major disturbance'
A lockdown was put in place Wednesday at the Saskatchewan Penitentiary following what Corrections Canada was calling "a major disturbance" and what the union representing guards was calling "a riot." "It was a flat-out riot," said James Bloomfield of the Union of Canadian Correctional Officers. "There are serious injuries and several inmates at outside hospitals right now. "There's been no staff hurt. Control has been gained at the institution. We're working through how we're going to be operating from here going forward." The lockdown was first instituted in the medium-security unit at about 1 p.m. Wednesday, and then expanded to the maximum-security unit at 3:30 p.m. as a precautionary measure. Visits to the prison in Prince Albert, Sask., were suspended. "It's still locked down," Jeff Campbell, spokesman for the Correctional Service of Canada, said late Wednesday. "It's been the scene of a major disturbance, so as I say, we're locked down in the interests, of course, of safety and security at the institution for the staff and inmates and the general public as well." He said to his knowledge, the involved prisoners had been

confined to their cells. "A lockdown takes place when there's a clear and substantial danger to safety and security at an institution," Campbell said. "Normal operations are suspended for the moment but they're going to be resumed as soon as it's considered safe to do that." Canadian Press (CTV News, Castanet, Global News, Times Colonist); CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Du froid extrême s'amène sur les Maritimes et un blizzard à Terre-Neuve-et-Labrador**
Les résidents des Maritimes doivent s'attendre à du temps glacial accompagné de vent fort à compter de jeudi soir, tandis que ceux de certaines régions de Terre-Neuve-et-Labrador doivent se préparer à un blizzard. Environnement Canada estime que la température va chuter sous la barre de - 20 degrés Celsius dans l'ensemble du Nouveau-Brunswick. Le refroidissement éolien sera de - 35 vendredi. Les autorités recommandent aux gens de porter plusieurs couches de vêtements, des chaussettes chaudes, des gants, une tuque et un foulard. À l'Île-du-Prince-Édouard, Environnement Canada prévoit des rafales à 90 km/h avec des averses de neige et de la poudrerie, de jeudi soir à vendredi. La température pourrait chuter à - 20 degrés Celsius avec refroidissement éolien de - 30 vendredi matin. Radio-Canada

* **Messy morning for much of Newfoundland Thursday**
For the second morning this week, people in Newfoundland woke up to snow-covered roads Thursday morning as schools, government buildings and businesses have delayed openings with updates scheduled before noon. Check out the following links for a complete list of storm-affected openings in each area: Newfoundland East Storm Centre, Newfoundland Central Storm Centre and Newfoundland West Storm Centre. A snowfall warning is in effect for the eastern region of Newfoundland Thursday morning, with wind warnings for the east and south by evening and Friday morning. CBC News

* **'Significant precipitation' could develop over southern Ontario Friday evening - Environment Canada says snow or a mix of snow and rain may continue straight through Saturday**
Environment Canada has issued a special weather statement for much of southern Ontario in anticipation of "significant precipitation" starting Friday evening. The federal agency also issued a winter travel advisory Thursday for much of the Greater Toronto Area, warning that bands of snow coming inland from Lake Huron will bring brief periods of heavy snowfall and blowing snow. The weather "will make travel hazardous at times," and "brief whiteouts may occur," the advisory said. It covers Toronto and Hamilton, as well as parts of Halton, Peel, York and Durham regions. CBC News

* **Residents unaccounted for after fire at First Nation near London, Ont.**
Ontario Provincial Police say the residents of a home engulfed in flames on a southern Ontario First Nation remain unaccounted for. Emergency crews were called to the home on the Oneida Nation of the Thames, southwest of London, at about 11 a.m. Wednesday. Police, however, have not yet indicated how many people are unaccounted for, nor have they released any information on their ages of genders. There was also no immediate information on what caused the blaze. The Ontario Fire Marshal's Office has been called in to investigate. Canadian Press (Truro Daily News); Windsor Star

* **Letter on flood dam investigation rankles Springbank landowners**
The province's letter on a review of a contentious flood mitigation project has angered some opponents of a dry dam planned for Springbank. In a Dec. 9 email sent to Rocky View County residents, an impending engineering and environmental review of the McLean Creek site is described partly as a means to confirm the merits of the Springbank location for a dry dam to which the province has committed. "This additional work is intended to further demonstrate the essential nature of this project and support the position that SR1 is the best course of action - environmentally, financially and in the best location - to protect communities downstream," it states... Opponents, primarily some area landowners, argue the Springbank proposal to divert the Elbow River during a time of extreme flooding would disrupt their lives and be environmentally and financially costly. Proponents in Calgary say it's the best way to protect far more people from 2013-scale flooding downstream. Calgary Herald, A10

*** B.C. wants Ottawa to reopen Comox centre in its marine safety plan**
B.C. wants the federal government to reopen the coast guard marine communications centre in Comox, as part of Ottawa's recently announced $1.5-billion ocean-protection plan. Naomi Yamamoto, Minister of State for Emergency Preparedness, wrote to Federal Fisheries Minister Dominic LeBlanc on Tuesday "to express my continued concern" about the Comox closure and request it be reopened in the federal plan. "British Columbians need to know they can rely on assistance from the Canadian Coast Guard during emergencies," wrote Yamamoto. "Recent events have highlighted the need to maintain reliable communications to support a swift marine response. "I am asking that the safety and protection of our marine users, coastal communities and environment continue to be given the highest priority and that due consideration be given specifically to the reopening of the Canadian Coast Guard Comox Marine Communications and Traffic Services Centre." The Comox centre was closed in May. A similar closure at Vancouver's Kitsilano Coast Guard Station was subsequently reversed by Prime Minister Justin Trudeau. But the Comox station remained closed, after a parliamentary committee concluded it wouldn't affect emergency response on the West Coast. Vancouver Sun

*** Small earthquake rattles nerves of some homeowners in southwestern Nova Scotia**
A small earthquake rattled some nerves on Nova Scotia's south shore on Tuesday. Earthquakes Canada said the 3.0-magnitude earthquake was reported around 10:40 a.m. and was centered about 42 kilometres southwest of Digby, between Weymouth and Meteghan. The Earthquakes Canada website says more than a dozen people have reported feeling the earthquake. Canadian Press (Times and Transcript, B6)

*** Warship crew helped out in quake**
The commanding officer of the warship that helped with relief efforts after a major earthquake in New Zealand said the mission offered a valuable learning experience for the Royal Canadian Navy, which would be called into action in the event of a major earthquake on the West Coast. The crew of HMCS Vancouver spent five days delivering humanitarian aid to Kaikoura, a small coastal town 180 kilometres north of Christchurch, which was cut off after a 7.8-magnitude earthquake on Nov. 14 caused landslides and damaged roads. "It was an excellent opportunity to practise some things we probably need to do if we have a similar event here, so it was great training," Cmdr. Clive Butler said from a jetty at CFB Esquimalt during the ship's homecoming ceremony Wednesday. "A number of government departments will have a role to play if there's an event like that here, and that's what struck me, it was really an all-government effort there. [There were] civilian emergency-response folks working, police, fire, ambulance and navies from four countries." Times-Colonist, A4

Police seek terrorism peace bond for B.C. man
A British Columbia man has been arrested on a terrorism peace bond, officials said Wednesday, marking the 19th time since last year police have used the legal tool against suspected extremists. Khalid Ahmed Ibrahim was to appear in provincial court in New Westminster, B.C. on Dec. 20. Police told the court on Dec. 8 there were reasonable grounds Ibrahim "may" commit a terrorism offence. He has also been charged with uttering threats, court staff said. The threatening charge dates to July 19 and was to return to court Dec. 21. No further details about Ibrahim or the allegations were available. The arrest was made by RCMP in B.C., according to the Public Prosecution Service of Canada. Postmedia Network (Vancouver Sun, N6, The Province, National Post, Calgary Sun) (2016-12-15); * Vice News (2016-12-14)

*** Canadian man arrested over fears he might commit act of terrorism**
25 conditions - Canadian cops arrested, and released, a man over fears he may commit an act of terrorism. Now he's living with his mother and facing 24 other restrictions on his freedom. Police are pursuing a terrorism-related peace bond against a 39-year-old man from British Columbia, who has since been released from custody under at least 25 bail conditions. Police believe Khalid Ahmad Ibrahim "did cause fear of terrorism" on December 8, according to court documents obtained by VICE News. A peace bond is not a formal criminal charge, but can allow police to restrict someone's movement and activities and is easier to obtain than criminal charges. Ibrahim's case is the 19th time that police have pursued the controversial tool meant to deter terror over the last year. But as the National Post first reported Wednesday, Ibrahim was also formally charged with uttering threats in July of this year... Ibrahim is the third person from BC to face a terror-related peace bond, according to a list provided to VICE News from the Public Prosecution Service of Canada. John Nuttall and Amanda Korody, of Victoria, are waiting for the outcome of their terrorism-related peace bond applications. The couple had their terrorism criminal charges stayed this summer after a BC judge ruled they had been entrapped by the RCMP. Vice News (2016-12-14)

*** Who speaks for Muslims?**
A letter to the editor from Martin Collacott, former Canadian ambassador to Syria and Lebanon, states "Ihsaan Gardee, the executive director of the National Council of Canadian Muslims, criticizes columnist Barbara Kay for suggesting that his organization has to be treated with considerable caution. Among other things, Kay points out in her column that the group has a history of threatening legal action against those who level charges of worrisome connections against them. In his rejoinder, Gardee chooses not to mention that the FBI ceased working with the NCCM's parent organization, the Council on American-Islamic Relations, in 2008 after evidence emerged that linked the group to support for questionable causes. He also fails to note that in 2014 the RCMP withdrew its support for a handbook titled United Against Terror prepared in part by the NCCM due to its adversarial tone including, according to media reports, counselling Canadian Muslims to limit the extent of their co-operation with Canadian security and intelligence agencies." National Post, A12

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Number of asylum-seekers crossing illegally into Quebec from U.S. spikes
823 caught crossing Quebec's border between April 1 and Nov. 30, 2016, compared to 166 two years ago. The number of asylum-seekers entering Quebec illegally from the United States has more than quadrupled in the last three years, according to an exclusive report by Radio-Canada. According to the Canada Border Services Agency, 823 refugee claimants were taken into custody by the RCMP between April 1 and Nov. 30, 2016, after illegally crossing into Quebec. By comparison, the RCMP detained 166 asylum-seekers for entering Quebec illegally in the year between April 1, 2014, and March 31, 2015, and another 315 between April 1, 2015, and March 31, 2016. Last month alone, 273 asylum-seekers entered Quebec illegally — by far the highest one-month total for the three years. "They come regularly every week," said retired police officer Francois Doré, who lives near the Roxham Road crossgin near

Hemmingford, about 70 kilometres south of Montreal. Doré said the migrants cross the Canadian border easily enough, passing under yellow tape that divides the two countries. "Sometimes you see whole families with babies and suitcases," Doré said, adding that many arrive by taxi. CBC News

*** A Trump bump? American refugee claims in Canada increased last month**
The number of Americans seeking refugee status in Canada has experienced a significant bump this year, increasing more than five times in November 2016 from the same period a year earlier. The overall numbers, however, remain tiny. Few people seek to flee the world's largest economy, and one of its oldest democracies, on humanitarian grounds: A mere 170 Americans claimed asylum at Canada's land borders through the first 11 months of this year. Yet that was more than twice the total from 2015 — and it was led by a noticeable five-fold increase in the month of November, with 28 people claiming refugee status last month compared with merely five in November 2015. Was any of this driven by politics — and Donald Trump's Nov. 8 election? The Canadian government won't touch that question. "Refugee claims are protected under the Privacy Act," said Nicholas Dorion, a spokesman for the Canada Border Services Agency, which supplied the figures to The Canadian Press. "Therefore the CBSA will not discuss specifics of asylum cases." Canadian Press (Metro News)

Le fédéral confirme qu'il bannit l'utilisation et l'importation d'amiante au Canada
L'utilisation de l'amiante dans toute nouvelle construction au pays, et son importation, seront interdites par le gouvernement fédéral. Ces mesures entreront en vigueur d'ici 2018. Comme Radio-Canada l'annonçait la semaine dernière, Ottawa ne prend pas la chose à la légère. Quatre ministres libéraux présentent, jeudi matin, une stratégie nationale au Centre de cancérologie de l'Hôpital d'Ottawa. Ils seront accompagnés de personnes souffrant de problèmes de santé à la suite d'une inhalation prolongée d'amiante. La raison fondamentale, c'est vraiment pour la sécurité des travailleurs et la sécurité des citoyens. Marie-Claude Bibeau, ministre du Développement international et de la Francophonie Le gouvernement fédéral lancera donc prochainement un processus de modification de la Loi sur la protection de l'environnement, afin d'y inclure une interdiction d'utiliser de l'amiante. Une série de mesures L'Organisation mondiale de la santé (OMS) a condamné ce produit dès 1987, puisqu'il est cancérigène et peut entraîner des problèmes pulmonaires. Pourtant, l'amiante n'a jamais été entièrement proscrite dans le Code national du bâtiment du Canada, alors que plus d'une cinquantaine de pays l'ont fait. Radio-Canada

Fin du principe de « premier arrivé, premier servi »
Ottawa change les règles d'immigration en matière de réunification familiale afin de privilégier le hasard plutôt que la ruse ou l'argent. Jusqu'à présent, certains Canadiens pouvaient payer des centaines de dollars pour s'assurer que le dossier des proches qu'ils souhaitaient parrainer se retrouve au sommet de la pile évaluée par les fonctionnaires fédéraux. Mercredi, le ministre de l'Immigration, des Réfugiés et de la Citoyenneté, John McCallum, a annoncé un changement des règles pour 2017. Ceux qui veulent faire venir un parent ou un grand-parent au pays auront 30 jours à compter du 3 janvier pour remplir un simple formulaire en ligne. Le ministère sélectionnera au hasard 10 000 personnes, qui seront alors appelées à envoyer par la poste une trousse de demande complète. Jusqu'à cette année, le fédéral fonctionnait selon le principe du premier arrivé, premier servi. En conséquence, des demandeurs se prévalaient de coûteux services de courrier, qui gonflaient leur prix pour l'occasion. D'autres faisaient le pied de grue devant l'unique bureau d'immigration qui acceptait les formulaires, à Mississauga, en banlieue de Toronto. Selon M. McCallum, cette nouvelle façon de faire assurera que « tout le monde aura la même chance ». La semaine dernière, le ministre avait annoncé qu'il prendrait des mesures pour accélérer les demandes de réunifications familiales, et abaisser les délais à 12 mois. Voix de L'Est

U.S. border cities fear ending NAFTA would hurt economies
Donald Trump's only visit to the U.S.-Mexico border while running for president was a stop in Laredo that lasted less than three hours. On some days, that's not long enough for 18-wheelers hauling foreign-made dishwashers and car batteries to lurch through the gridlocked crossing. Trump's campaign promise to tear apart the North American Free Trade Agreement helped win over Rust Belt voters who felt left behind by globalization. But the idea is unnerving to many people in border cities such as Laredo and El Paso or Nogales in Arizona, which have boomed under the 1994 treaty. About 14,000 tractor-trailers cross the border daily in Laredo, the nation's busiest inland port. Local officials say roughly 1 in every 3 jobs

benefits from international trade. "We are NAFTA on wheels," Mayor Pete Saenz said. Free trade across the border, he explained, is the "backbone" of this city of 255,000 people. The Democrat endured a backlash from his party for welcoming Trump in July 2015 after the then-candidate called immigrants from Mexico criminals and rapists. Trump described NAFTA as "the worst single trade deal ever approved in this country." That kind of talk resonated in hard-hit industrial towns such as Greenville, Michigan, where Electrolux shut down a factory a decade ago and moved jobs to the Mexican border city of Ciduad Juarez. CTV News

Glib talk about NAFTA won't help Canada
Suggestions that we could still thrive without the North American free-trade agreement ignore the realities of our relationship with Mexico. The election of Donald Trump as president of the United States has prompted a flurry of speculation about what his campaign pledge to renegotiate or withdraw from the North American free-trade agreement might actually mean. A number of commentators have been quick to suggest that if Mr. Trump tore up NAFTA it would be no big deal, because we could just fall back on the Canada-U.S. free-trade agreement (FTA). Part of this narrative then becomes that our relationship with Mexico doesn't really matter much. I strongly disagree on both counts. Here are two points of advice for Canada: One, let's wait to see what Mr. Trump as president actually decides to do about NAFTA, rather than react publicly to his campaign rhetoric; and two, given the seriousness of the situation, the government should urgently, but quietly, begin preparations for a possible renegotiation of NAFTA. Given the primordial importance of our trade relationship with the United States, some Canadians might be forgiven for occasionally forgetting about the importance for Canada of our other NAFTA partner. (…) Under the influence of NAFTA Mexico has become our fifth-largest export market and our third-largest supplier. Trade between Mexico and Canada has grown by more than 800 per cent since NAFTA came into force. Much of the trade with Mexico is inputs to North American supply chains, inputs that help make North American companies more competitive on a global basis. Globe and Mail

*** Piant ne sera jamais remis en liberté au Canada**
Si l'on se base sur les lois canadiennes, Claude-Auguste Piant sera pris en charge par l'Agence des services frontaliers du Canada (ASFC) dès sa sortie de prison avant d'être expulsé du pays. Ce ressortissant français de 62 ans a été condamné en début de semaine à 30 mois de prison pour avoir trempé dans une affaire d'inconduite sexuelle avec une adolescente de 15 ans à Sherbrooke. Sans commenter ce cas précis, l'ASFC explique que « les étrangers reconnus coupables d'avoir commis des actes criminels ont droit à une application régulière de la loi. Ils doivent purger leur peine avant d'être renvoyés du Canada », explique l'Agence des services frontaliers du Canada. Piant devra donc régulariser sa situation criminelle en purgeant sa peine avant que soient appliquées les affaires d'immigration. « Il y a sursis de la mesure de renvoi tant que n'est pas purgée la peine d'emprisonnement infligée au Canada à l'étranger », stipule la loi sur l'immigration et la protection des réfugiés du Canada. Pour le moment, l'ASFC ne peut expulser Claude-Auguste Piant du Canada tant que sa peine de prison ne sera pas expirée. Une fois la peine terminée, Piant ne sera pas remis en liberté. Un renvoi du Canada sera alors exécuté. Pour le moment, Claude-Auguste Piant purgera sa peine au Canada. Tribune

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** More than just hacks: Russia's 'hybrid warfare' has been targeting western Europe for months**
One might wonder whether the suspected Russian cyberattacks during the U.S. election were serious enough to warrant all the calls for investigation - an argument that could be made, were it not for all the other cases worrying Western governments.Start with remarkably similar warnings of Moscow's interference and cyber-sabotage voiced by Germany, France, Britain, Poland and Sweden, along with much of NATO and even the security committee of the European Union. To view the cyberattacks on Hillary Clinton's campaign, then, as a unique offence - as many Americans seem to do - is to miss the full picture. Western Europe has been a far more consistent target of what some intelligence chiefs now see as "hybrid warfare" emanating from the Kremlin. European spymasters have repeatedly expressed alarm over the years about a sharp rise in Russian espionage under Vladimir Putin. But what is far more worrisome are the attempts to destabilize Western governments through the same cocktail of political interference. CBC News

*** Poutine aurait été impliquédirectement dans le piratage des démocrates américains**
Des responsables américains du renseignement estiment que le président russe Vladimir Poutine s'est personnellement impliqué dans les piratages informatiques qui ont marqué l'élection présidentielle américaine, motivé par un désir de revanche contre Hillary Clinton, avançait la chaîne NBC. Vladimir Poutine aurait lui-même donné les instructions sur la façon de filtrer et d'utiliser les messages dérobés aux démocrates après les piratages informatiques, affirmait la chaîne américaine mercredi soir, en citant deux hauts responsables ayant eu connaissance de cette information Les responsables disent avoir un «haut degré de confiance» dans ces conclusions. «Les absurdités ne peuvent reposer sur aucun fondement», a rétorqué jeudi le porte-parole du Kremlin Dmitri Peskov, balayant ces allégations. La CIA a conclu dans un rapport secret révélé la semaine dernière par le *Washington Post* que la Russie était intervenue par ses cyberattaques dans la campagne électorale dans le but précis d'aider Donald Trump à être élu, et non dans le but plus général de troubler le bon déroulement de l'élection. Le président élu a rejeté avec virulence ces allégations. Agence France-Presse (Journal de Montréal, Journal de Québec)

*** Georgia asks Trump to investigate 'failed cyber-attacks'**
The state of Georgia is asking President-elect Donald Trump to investigate what it described as "failed cyberattacks" on its secretary of state's network that it traced to the U.S. Homeland Security Department. In a letter Tuesday, Georgia Secretary of State Brian Kemp said his staff has uncovered nine more instances this year in which computers they traced back to the Homeland Security Department apparently attempted to infiltrate the state's network between Feb. 2 and Nov. 8. His letter followed earlier complaints that his office had detected what it called "a large attack on our system" one week after the presidential election. Trump's transition team did not immediately respond to a request for comment. Chronicle Herald, A10

*** Cyberaggression is the 'new normal' Trump can't ignore**
An opinion piece by Wesley Wark states, "The furor over allegations of Russian meddling in the U.S. election continues to grow and poses one of the first big tests for the incoming Trump administration. The story has a long trail, leading back to the summer of 2016, when FBI investigations into Russian hacking targeted at the presidential election began in earnest. Media reporting suggests the growing body of intelligence on Russian involvement in U.S. domestic politics even made its way into President Barack Obama's top level intelligence report - the President's Daily Brief - during the campaign. Very recently, the CIA reached a judgment, according to intelligence sources tapped by The Washington Post, that Russian hacking had a very specific aim - not just to undermine confidence in the U.S. electoral system, but to help Donald Trump win the election. This is an explosive charge, but one not limited to the U.S. arena. Concerns about Russian cyberaggression caused the head of Britain's Secret Intelligence Service, Alex Younger, to make a rare public speech, delivered from SIS headquarters on the Thames, charging that cyberattacks and information warfare represent "a fundamental threat to our sovereignty; they should be a concern to all those who share democratic values."" Globe and Mail, A13

*** Yahoo reveals hack affecting 1B users**
Yahoo has discovered a 3-year-old security breach that enabled a hacker to compromise more than 1 billion user accounts, breaking the company's own humiliating record for the biggest security breach in history. The digital heist disclosed Wednesday occurred in August 2013, more than a year before a separate hack that Yahoo announced nearly three months ago that affected at least 500 million users. Toronto Star

*** Yahoo's Big Breach Helps Usher in an Age of Hacker Anxiety**
Yahoo has become the worst-case example of an unnerving but increasingly common phenomenon — massive hacks that steal secrets and other potentially revealing information from our personal digital accounts, or from big organizations that hold sensitive data on our behalf. On Wednesday, Yahoo disclosed a gargantuan breach affecting more than a billion user accounts, the largest such attack in history. (...) "The lesson is clear: no organization is immune to compromise," said Jeff Hill, director of product management for cybersecurity consultant Prevalent. And since most of us are dependent on big organizations that hold our digital lives in their hands, in a broad sense that effectively means no one is safe. ABC News

*** Were Yahoo hackers state-sponsored?**
Yahoo has said more than one billion user accounts may have been affected in a hacking attack dating back to 2013. Names, phone numbers, passwords and email addresses were stolen, but not bank and payment data. Professor Peter Sommer, a cyber security expert, told the Today programme he questions "what on earth" would motivate a state to want details of ordinary users. BBC News

*** Ashley Madison pays $1.6M to settle hack probes**
The parent company of adultery website AshleyMadison.com, based in Toronto, has agreed to pay a steeply discounted $1.65 million (U.S.) settlement to resolve U.S. state and federal probes into a 2015 hack that exposed personal data of 37 million users of the site, whose slogan was "Life is Short. Have an Affair." The company, which changed its name to Ruby Corp. from Avid Life Media Inc. after the breach, agreed to a $17.5 million penalty to resolve the multi-state investigation, New York Attorney General Eric Schneiderman said in a statement. The amount was reduced by about 90 per cent due to an "inability to pay," and the rest was suspended. "Reckless disregard for data security will not be tolerated," Schneiderman, who joined with 12 other U.S. states and the U.S. Federal Trade Commission to announce the settlement. Hackers dumped almost 10 gigabytes of data on the Internet. Toronto Star

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Assaults, violence leading causes of injury for Mounties**
More than 530 Mounties were injured on the job last year while being subjected to assaults and other violent acts - usually during incidents where officers had to use force to subdue someone. The information is contained in the RCMP's 2015 report on occupational health and safety, obtained by CBC News, which looks at everything from ergonomics at employees' desks to on-the-job injuries and fatalities. The report notes that physical control is more effective in subduing a suspect than using current "intermediate weapons," such as a baton or a stun gun. No one from the RCMP responded to CBC's request for information or an interview. CBC News

*** Police may soon ask you to spit for them for pilot project**
Drivers in some jurisdictions may soon find themselves asked by police to volunteer for a saliva test, part of a pilot project aimed at detecting drug-impaired drivers. The "oral fluid" screening systems test saliva for the presence of drugs, including cannabis, cocaine, methamphetamine and opioids. Police forces in Toronto, Vancouver, Halifax and Gatineau, Que., will take part in the project, along with the Ontario Provincial Police and RCMP detachments in North Battleford, Sask., and Yellowknife. Police officers will be trained in the use of two types of screening devices, but only with drivers and passengers who volunteer to provide a sample anonymously. Toronto Star

*** Defence argues Travis Vader should serve no more jail time after claims of pre-trial abuse**
Travis Vader's lawyer is asking a judge to let his client go without serving more jail time or drop the case altogether. In a notice of motion filed in court, Nate Whitling argued that Vader's constitutional rights were violated following his arrest and during his lengthy imprisonment leading up to the trial. He argued Justice Denny Thomas should either impose a sentence equivalent to the time Vader has already served or impose a stay of proceedings, which would essentially drop the case. The document was filed Wednesday on the third day of Vader's sentencing hearing for two manslaughter convictions for the killings of Lyle and Marie McCann. A manslaughter conviction can result in a sentence ranging from probation to life in prison. During the sentencing hearing, which started Monday, Vader has testified he was subjected to a humiliating, recorded strip search after his arrest in 2010, was constantly harassed by remand centre guards, and endured abuse from other inmates. "The applicant was subjected to cruel and unusual conditions in pre-trial custody," according to the notice of motion. It also claimed the strip search was illegal and that RCMP denied Vader's right to seek legal advice when he was arrested six and a half years ago. But an extended audio recording played in court appeared to show that RCMP officers gave Vader all night to reach his defence lawyer after his arrest. When Vader finally reached the law office just after 9 a.m. the day after he was taken into custody, an RCMP officer could be heard saying, "The door is closed. I can't hear the conversation. I can see Mr. Vader talking to somebody, but I can't

hear the conversations they're having." CBC News (2016-12-14); Calgary Herald (Edmonton Journal, Edmonton Sun) (2016-12-15)

*** Police force needs more cops to maintain service: chief**
The current level of city policing is "not sustainable" without more officers and is taking a toll on members, according to Fredericton Police Chief Leanne Fitch. "We have been making it work for the last four years only because of the hard work, commitment and dedication of our officers," Fitch said in an interview with The Daily Gleaner earlier this week. "The city is still in good hands, has been in good hands, but I know the toll it is taking on our staff. "I have done my best to educate council to these realities." Fitch's comments came after council's rejection of a request from the force for an extra $440,000 to hire two police officers and several civilian employees in 2017. Councillors did, however, approve an extra $60,000 a year for the police to lease a new light armoured vehicle. In 2016, the police force budget was about $15.3 million. Council approved a 2017 police budget of $15.8 million, an increase of 3.63 per cent, compared to an overall municipal budget increase of 1.34 per cent. Most of that jump is a result of a newly negotiated police union contract, the city said. The force has 103 officers, including the chief and deputy chief. Fitch believes those officers will log about 10,000 hours of overtime this year at a cost of about $500,000. That translates into a lot of time where officers are away from home and working when they should be resting, she said. Daily Gleaner, A1 (Telegraph-Journal)

*** Arson with possible Mafia link probed**
Police are investigating an eastend arson with possible links to the Montreal Mafia. They opened the investigation early Wednesday after a used-car lot in Pointeaux-Trembles was apparently the target of a firebombing. Though his name does not appear in any of the business's paperwork, the car lot has links to alleged mobster Marco Pizzi, according to a report by La Presse. Pizzi, 46, survived an attempt on his life in August after two men tried to gun him down in his car on Grande-Allée St. He escaped on foot. He was arrested last May after an RCMP investigation into an alleged international cocaine trafficking ring. He was released on bail while awaiting his trial. Montreal Gazette, A8

*** 'Those Kugs' donate to Tuk A group...**
A group of Inuvialuit men who have formed "Those Kugs" gave a Christmas hamper donation of three turkeys and three hams to the community feast in Tuktoyaktuk. They organized the donation with the Tuktoyaktuk recreation department and RCMP to make the delivery. Inuvik Drum

*** RCMP may charge teen for sharing photo**
Queens County RCMP are considering laying charges against a 16-year-old boy relating to the sharing of an intimate photo. He allegedly sent a 12-year-old girl an image of himself through Snapchat. The boy reportedly asked for an image in return but the girl refused and reported the incident. "The investigation is ongoing and we will do a media release if and when we lay charges," RCMP spokeswoman Cpl. Jennifer Clarke wrote in an email. Chronicle-Herald, A3

*** Warrants to tell tale of 'scandalous' probe**
She is a TV reporter who exposed the rot in Quebec's construction industry; he is a print journalist known as much for his hard-news scoops as his opinion columns. Marie-Maude Denis and Patrick Lagacé are among at least eight journalists who were recently spied upon by either the provincial Sûreté du Québec or the Montreal Police Service. The first clear sense of what happened is set to come out soon in Montreal, where a court will release the first of dozens of warrants that targeted some of Quebec's best-known journalists. The disclosure could come as early as Thursday, or in ensuing days, depending on the ruling. The search warrants gave police unprecedented access to journalists' cellphones to track their movements and calls. They raise troubling questions about the relationships among officers, politicians and the judges who are supposed to keep the authorities in check. The Quebec government has launched a public inquiry into the surveillance, and the ramifications will go on for years. Globe and Mail, A3

*** Hells Angels bring trouble**
An editorial states, "The arrival of the Hells Angels on Prince Edward Island is a disturbing development. Motorcycle gang members are not the kind of newcomers we want to see in this province. They are

unwelcome visitors at any time, but especially around Christmas when expressions of peace and goodwill are on most lips. The Angels is the most notorious motorcycle gang in Canada. Wherever they set up, illegal activity follows. In some jurisdictions, violence is commonplace. The only reason the club has arrived on P.E.I. is to make money through criminal activity - likely drugs. Police seem powerless to stop them. All our law enforcement agencies can do is watch and let Islanders know what's going on." The Guardian, A6

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Inmates sue Ottawa over solitary confinement
A $600-million class action lawsuit was certified in an Ontario court this week, opening the door for thousands of prison inmates with diagnosed mental illnesses to seek compensation for their alleged mistreatment in federal jails. The lawsuit alleges Canada's federal prison agency fails to properly care for mentally ill inmates, relies too much on the "cruel and unusual punishment" of solitary confinement and neglects to adequately train its staff. Superior Court Justice Paul Perell ruled that the lawsuit should go ahead in a decision released Wednesday. (...) A spokesperson for the Justice Ministry referred questions on the lawsuit to the Correctional Service of Canada, the agency responsible for federal prisons. In an emailed statement, Corrections spokesperson Véronique Rioux said "effective and timely" treatment for inmates with mental illness is a priority for the agency. Front-line staff are trained to "understand the mental health needs of offenders," and $77 million was "invested" to address the needs of these inmates during the 2015-16 fiscal year, she said. Rioux added that segregation - the term the government uses for solitary confinement - is a legally available tool that is used to "manage risk," either to the inmate or staff, and is not a punitive measure. She said there are ongoing reviews of an inmate's placement in solitary confinement, including physical and mental health, and the agency is legally required to remove them from segregation "at the earliest time." She would not discuss the newly certified lawsuit, because it "is currently before the courts." Toronto Star, A1

Fentanyl puts prisoners and guards at risk
Correctional officers at the Bowden Institution rushed to the aid of one of their peers this week after a guard collapsed due to suspected fentanyl exposure. James Bloomfield, regional president of the Union of Canadian Correctional Officers, said staff at the medium-security facility immediately applied first aid and administered naloxone, a medication used to reverse the effects of opioids. The officer had been in the process of conducting a search for suspected drugs in the institution. "The officers that responded to this situation - they really did save this officer's life," said Bloomfield. (...) On Tuesday, the Bowden Institution announced that a lockdown was in effect to allow staff to conduct an "exceptional search." Bloomfield said the institution is currently under an "adjusted routine" due to the incident involving the officer. "We are currently under a searching protocol at the institution and trying to ensure we don't have any further drugs that we're going to be coming across, so we're taking all precautions necessary in that searching and just working our best through a tough situation," he said. The officer who collapsed Tuesday was taken to hospital and is now recovering well at home. Bloomfield noted the correctional facilities have various drug interdiction and searching strategies in an effort to keep the institutions drug free. However, despite those efforts, there are "so many different ways to bring drugs into an institution," he said. "It comes in everywhere - through visits, through getting thrown over the fences, to drone drops. Everything and anything you can imagine - when someone sits inside for 24/7 and tries to figure out how they're going to get their next hit, they come up with some pretty creative ways to bring stuff in." Correctional Service Canada has various programs to treat addictions among inmates, including a methadone program, he added. A spokesperson from Correctional Service Canada was not available to comment Wednesday. Calgary Herald, A3

Saskatchewan Penitentiary locked down in Prince Albert after 'major disturbance'
A lockdown was put in place Wednesday at the Saskatchewan Penitentiary following what Corrections Canada was calling "a major disturbance" and what the union representing guards was calling "a riot." "It was a flat-out riot," said James Bloomfield of the Union of Canadian Correctional Officers. "There are serious injuries and several inmates at outside hospitals right now. "There's been no staff hurt. Control has been gained at the institution. We're working through how we're going to be operating from here

going forward." The lockdown was first instituted in the medium-security unit at about 1 p.m. Wednesday, and then expanded to the maximum-security unit at 3:30 p.m. as a precautionary measure. Visits to the prison in Prince Albert, Sask., were suspended. "It's still locked down," Jeff Campbell, spokesman for the Correctional Service of Canada, said late Wednesday. "It's been the scene of a major disturbance, so as I say, we're locked down in the interests, of course, of safety and security at the institution for the staff and inmates and the general public as well." He said to his knowledge, the involved prisoners had been confined to their cells. "A lockdown takes place when there's a clear and substantial danger to safety and security at an institution," Campbell said. "Normal operations are suspended for the moment but they're going to be resumed as soon as it's considered safe to do that." Canadian Press (CTV News, Castanet, Global News, Times Colonist); CBC News

Les coûts d'incarcération presque deux fois plus élevés à la prison Leclerc qu'à Bordeaux
Le coût d'incarcération par détenu est presque deux fois plus élevé à l'établissement Leclerc, loué depuis deux ans au gouvernement fédéral, qu'à la prison de Bordeaux, révèlent des documents du ministère de la Sécurité publique. Chaque détenu coûte 299 $ par jour à la prison Leclerc, comparativement à 159 $ à la prison de Bordeaux, indique la Direction générale des services correctionnels. Ces coûts ont été estimés en date du 31 décembre 2015, avant le transfert à Leclerc de 248 détenues de la prison Tanguay. Il s'agit d'une comparaison des coûts de deux prisons provinciales pour hommes (à l'époque) de la région de Montréal. La prison Leclerc héberge des hommes et des femmes depuis février dernier. Les coûts de l'établissement depuis qu'il est devenu mixte n'ont pas été précisés, mais la seule autre prison hébergeant des détenus des deux sexes, celle de Québec, signale des coûts par détenu de 213 $ par jour -- nettement moins que les 299 $ par jour à Leclerc. Le Devoir, A3

* **Le délateur Stéphane Gagné débouté**
Le délateur Stéphane Gagné aurait échoué dans sa tentative de convaincre les commissaires aux libérations conditionnelles de lui permettre d'effectuer ses premières sorties du pénitencier avec escorte policière, a appris La Presse de diverses sources. La Commission des libérations conditionnelles n'a toutefois pas voulu confirmer l'information puisqu'il aurait fallu que les commissaires rendent leur décision séance tenante lundi pour qu'elle devienne publique. Gagné, alias Godasse, est détenu depuis près de 20 ans. Il a été condamné à la prison à vie en 1998 pour le meurtre de la gardienne de prison Diane Lavigne, commis un an plus tôt, à la demande de l'ancien chef guerrier des Hells Angels Maurice Boucher. Gagné a témoigné dans le procès pour les meurtres des gardiens de prison intenté contre Boucher à la fin des années 90 et au début des années 2000 et a contribué à faire condamner l'ancien chef des Hells Angels. La Presse, 12

City keeps 'door open for other' KP plans
A group of five prominent Kingston citizens on Tuesday disclosed their vision for the mothballed Kingston Penitentiary property and Portsmouth Olympic Harbour site. But their vision may not jibe with a consultant's report, which is currently being prepared for the city. In a telephone interview on Wednesday, Kingston Mayor Bryan Paterson said there will be time over the next few months to discuss various proposals once the consultant releases its recommendations. "We're looking forward to, some time early in the new year, a concept that will come to city council for approval, and once that concept has been approved, certainly we look forward to interested parties coming forward with proposals that would align with that final vision," Paterson said. The citizens group consists of George Hood, a former viceprincipal at Queen's University; George Jackson, a Kingston business consultant; lawyer and former Olympic sailor John Curtis; former Kingston mayor Harvey Rosen; and Dr. Michael de la Roche. They also have dozens of local citizens working behind the scenes on what they call the Hatter's Bay project. (...) "I'm certainly pleased to see there's interest in developing Kingston Penitentiary," Paterson said. The mayor also said the city doesn't own the property but is appreciative with the partnership it has developed with Canada Lands, the Crown corporation in charge of disposing of the property, and Correctional Service Canada. Kingston Whig-Standard, A1/Front

* **Moms Make Noise**
Supporters of an inmate who took his own life while at the Ottawa-Carleton Detention Centre held a vigil outside the jail Wednesday evening to send a message: that mentally ill inmates should be in treatment centres, not prisons. Justin St. Amour, who had been diagnosed with schizophrenia, hanged himself in

his segregation cell at OCDC on Nov. 30. He died eight days later at The Ottawa Hospital, one day after he was removed from life support. His death came just months after another man, Yousef Mohammed Hussein, hanged himself while on suicide watch at OCDC. "We shouldn't be warehousing our mentally ill sons and daughter and brothers and sisters, they should be in treatment centres, in healthcare facilities," said Irene Mathias of Mothers Offering Mutual Support (MOMS), a group that advocates for the humane treatment of prisoners. Members gathered outside OCDC Wednesday to share experiences, observe a minute of silence for St. Amour and lay flowers near the gate. Farhat Rehman, a member of MOMS, was there on behalf of her son, who had been jailed at OCDC and is currently serving time at a federal prison. Ottawa Sun, A5 (Ottawa Citizen)

* **Première peine spécifique aux Autochtones à Québec**
Pratique courante dans le Nord, c'est la première fois, dans le district judiciaire de Québec, qu'un avocat demande la confection d'un rapport présentenciel spécifique aux Autochtones, une disposition législative disponible depuis l'arrêt Gladue, rendu par la Cour suprême du Canada en 1999. Sans réduire la peine imposée à une jeune Autochtone de Colombie-Britannique, le plus haut tribunal du pays avait alors tranché qu'il fallait changer d'approche pour déterminer les peines afin de contrer la surincarcération des membres des Premières Nations. Le Code criminel a été modifié afin d'obliger les juges à travers le pays à ordonner la confection de ce type de rapport spécifique aux Autochtones. La Presse (2016-12-14)

* **Advocate encouraged but challenges remain in mental health system**
Roughly half of young people in New Brunswick with mental health disorders have to wait more than 30 days to get help, and the rate of hospitalization for troubled youngsters is significantly higher than the national rate, a new report shows. But Norm Bossé, the province's Child and Youth Advocate, says in his latest state of the child report he is encouraged by the new focus the provincial government and communities are placing on identifying and helping troubled young people. "There are so many ways in which New Brunswickers are developing innovative programs and interventions to support children and youth with mental health needs that it is, in fact, possible to be optimistic about the future," the advocate states in his report. The issue of mental health in children has been a concern in New Brunswick since the case of Ashley Smith and her tragic death in prison highlighted shortcomings in the mental health system in the province and across Canada. Smith, a native of Moncton, died by self-inflicted strangulation in 2007 in an Ontario women's prison while under suicide watch. She was 19. Smith's short, troubled life and sad death have become a lightning rod for improved mental health treatment for children and youth. Daily Gleaner, B1 (Telegraph-Journal, Times & Transcript)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

* **Alberta and Saskatchewan lead country in drinking and driving**
A new report from Statistics Canada breaks down drunk driving numbers from across the country, and Alberta does not fare well. Overall, drunk driving numbers are down in Canada. Last year there were 72,039 incidents, an average of 201 per 100,000 people. But Alberta had 314 incidents per 100,000, and in Saskatchewan, it's even higher. (…) "This province and city are going through some very difficult times," said Chief Roger Chaffin, Calgary Police Service. "It's not surprising at all to see alcohol really fueling people out in the community right now, people medicating through alcohol not a surprise, I think impaired driving is still something the city is very alive to." (…) The RCMP is teaming up with **Public Safety Canada** to run a pilot project to test new roadside drug testing devices, but police say that is putting the cart before the horse. "How is it going to be operationalized, and that's one of the aspects is that there isn't any particular per se limits set yet, there aren't any devices yet we can use to help identify when impairment occurs," said Chaffin. "I think as we are racing along to this, chances are legalization is going to occur before we've even begun to answer those questions." CTV News (2016-12-14)

* **'Not surprising' province has highest impaired rate in country, MADD says**
Saskatchewan is 30 years behind the rest of Canada when it comes to rates of impaired driving. Figures released by Statistics Canada Wednesday show that Saskatchewan had the highest provincial rate of police-reported impaired driving in 2015, with 575 incidents per 100,000 of population. Rates include drug

and alcohol impairment. Among the more startling figures is that Saskatchewan's 2015 impaired driving rate is almost exactly what the national average was in 1986, when comparable statistics were first made available. Thirty years ago the national average was 577 per 100,000, but Saskatchewan's rate today is just two lower at 575. The province's rate has decreased by 37 per cent since 1986, but the national drop has been 65 per cent - to 201 per 100,000 - over the same period. Saskatchewan's rate is almost double that of Alberta, which had a rate of 314 per 100,000 last year and ranks second among all provinces. The lowest-rated province, Ontario, had just 111 incidents per 100,000. StarPhoenix, A1 (Leader-Post)

* **Impaired Driving by the Numbers**
1986: The year comparable impaired driving data was first gathered. The national rate of impaired driving then was 577 incidents per 100,000, which mirrors Saskatchewan's rate in 2016. 72,039: The total number of police-reported impaired driving incidents nationwide in 2015, which is a rate of 201 incidents per 100,000 of population. 122: Countrywide incidents of impaired driving causing death in 2015. There were 596 cases of impaired driving causing bodily harm. Leader-Post, A5

* **Edmonton amongst worst Canadian cities for impaired driving**
Edmonton ranked in Canada's 10 worst cities for impaired driving as reported by police in 2015, according to a Statistics Canada report. Police filed 226 reports of impaired driving per 100,000 Edmontonians last year. In a city of nearly 900,000 people, that number translates to about 2,000 reports overall-or roughly five every day. That rate made Edmonton the seventh-worst city for impaired driving in Canada. Edmonton's rate is nearly four times higher than in Kingston, Ont., the city with the lowest rate of impaired driving. CBC News (2016-12-14)

* **Victoria has fourth highest rate of impaired-driving incidents in Canada**
Victoria had the fourth highest rate of impaired-driving incidents in Canada, according to a Statistics Canada report released Wednesday. The report also found that while drunk driving is steadily declining, drug-impaired driving, which is harder to detect, is on the rise. Victoria had 271 impaired driving incidents per 100,000 population in 2015, which was behind Kelowna and Regina with 323 and 311 impaired incidents, respectively. St. John's, N.L., had 411 impaired-driving incidents, the highest rate in the country. Times Colonist, A6

* **Impaired driving rate among lowest**
The London area had one of the lowest rates of impaired driving of major centres in Canada last year, new figures show. But as the federal government moves toward legalizing recreational marijuana use, police warn they could see increases in drug-impaired driving charges. Only four other census metropolitan areas in Canada had a lower rate of alcohol-impaired driving than the London area in 2015, Statistics Canada reports. With a total of 444 cases of impaired driving in 2015, the London area's rate of impaired driving per 100,000 people was 87 cases. London Free Press, A2

* **Cape Breton police order 250 naloxone kits amid fentanyl crisis**
The Cape Breton Regional Police Service recently ordered 250 naloxone kits - one for each of its officers and jailers - as one measure to protect its workers from exposure to fentanyl. Naloxone can temporarily reverse the effects of an overdose from opioid drugs, including fentanyl, which has been responsible for hundreds of deaths across Canada. While the Cape Breton Regional Municipality has not yet seen a major influx of fentanyl, police are sure it's on its way. 1 confirmed fentanyl overdose in CBRM "There's probably been some form of it come back from out west. We have a large population of people that travel out west for work and come back. So we do think that there has been some here," said Staff Sgt. Paul Muise, one of two senior officers taking the lead on fentanyl for the police service. Muise said he's been told there has already been one confirmed overdose death in the area as a result of fentanyl. Safety for first responders When it comes to fentanyl, the safety of first responders such as police and EHS is a major concern given that as little as two milligrams of the drug can kill a person, said Muise. CBC News

*** Safe injection bill 'welcome news' for Hamilton**
In the face of a deadly opioid crisis, the federal government is hoping to speed up the process for cities like Hamilton to open safe injection sites. It was just last week that public health was given the green light by city councillors to launch its study into the feasibility of bringing safe injection sites to town. At last Friday's general issues committee meeting, associate medical officer of health Dr. Jessica Hopkins estimated it would be early 2018 before the "onerous and time-consuming" application could be completed. But the federal government has announced a bill that would trim the to-do list for communities looking to apply for an injection site, simplifying the required criteria from 26 items to five. It's a "timely" move - and "welcome news" for Hamilton, Hopkins says. Opioid overdoses are up across the country, with an increasing number of deaths being attributed to fentanyl, a potent painkiller 100 times stronger than morphine. Of the province's staggering 685 opioid-related deaths last year, 162 of them were specifically linked to fentanyl. In Hamilton alone, there were 19 fentanyl deaths last year (up from 10 in 2014). And just this week, the presence of carfentanil - a drug 100 times more potent than fentanyl - has been confirmed in four provinces including Ontario. Hamilton Spectator

*** Inside Quebec's far right: At the crossroads with Soldiers of Odin**
In the early evening darkness, four figures huddled in the parking lot of a Quebec City arena, all wearing black sweatshirts emblazoned with a drawing of Odin, the Norse god of war. One was a professional hunter, another a wood-factory worker. They stomped their boots in the cold, shared a cigarette or two, then set off to patrol the historic streets of the city, armed only with a flashlight and the belief they were protecting Quebecers from a vague but dangerous threat. (…) In Canada, the Soldiers of Odin met with criticism as they established themselves across the country. Its patrols in Edmonton, for instance, were described as "troubling" by the National Council of Canadian Muslims. A city councillor in Hamilton accused them of spreading hate speech. (…)And it has teamed up on a number of occasions with Atalante Québec, an openly neo-fascist organization that speaks of protecting the "neo-French." The two groups joined forces for a food drive last month and jointly patrolled the Laval University campus after a spate of sexual assaults there in October. CBC News (2016-12-14)

MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** PM meets indigenous leaders a year after Truth and Reconciliation report release**
Prime Minister Justin Trudeau is scheduled to sit down with indigenous leaders today, the one-year anniversary of the Truth and Reconciliation Commission's final report. The commission, led by Murray Sinclair, Manitoba's first indigenous judge, issued 94 sweeping recommendations after six years spent examining the legacy of Canada's residential school system. (...) Trudeau says progress is underway on 36 of the 45 calls to action in the report that are under federal jurisdiction. Hearings are expected to begin next spring in the inquiry into missing and murdered aboriginal women and girls — one of the recommendations enacted by the Liberal government. Canadian Press (570 News)

*** Kamloops woman teaches modelling to help keep Indigenous women safe**
Kim Coltman is teaching Indigenous women how to walk tall in the hope it will protect them. When Tanya Pellett walks down the street, she makes sure to walk tall and make eye contact with the people she passes. But theTk'emlups te Secwepemc band member didn't always do that. "I would always look down," she said. "I felt like I was always vunerable." Pellett made the change after taking a training course offered by Fashion Speaks International. The Kamloops-based agency was founded by Kim Coltman. She's hoping to use fashion to help raise awareness about the issue of murdered and missing Indigenous women. Coltman is teaching women, especially Indigenous women, how changing the way you walk can change the way people perceive you. CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Police will need more resources for legal pot
Saskatoon police Chief Clive Weighill says he expects marijuana legalization will require more resources from the police force. The work will include training and enforcing new regulations, and he also expects the black market will maintain some of its hold over the industry, he said. "Through what we learned from Colorado and Washington, the people who are moving marijuana illegally have undercut the selling price at the dispensary and are still doing quite a bit of business." Recommendations from the federal task force suggest recreational marijuana sales should be conducted through a mail-order system or from designated stores, with the added suggestion that higher-potency marijuana should be taxed at a higher rate than weaker strains. Police are not the only ones who will require more resources after legalization, Mayor Charlie Clark said, noting city hall will likely require additional funds, especially if new technology is needed to determine if someone is driving under the influence. Clark said the federal government should consider helping with some of the new costs. Leader-Post, A3 (StarPhoenix)

Top pot dispensaries plan to expand before legalization
The entrepreneurs behind Canada's two biggest chains of illegal marijuana dispensaries say they will continue to expand the number of their storefronts aggressively across the country while the federal and provincial governments take the next two years to fine-tune new laws to legalize the substance. A day after an independent panel provided Ottawa with a road map for ending the prohibition on recreational marijuana that could include dispensaries, MP Bill Blair, the government's point person on the issue, warned that, in the meantime, anyone selling marijuana outside the federal mail-order system is breaking the law and police could raid their stores. But those behind two Vancouver-based chains say the new report indicates they will have two years of challenging the existing cannabis laws - and police departments' appetite for enforcing them - during which they plan to open more than 100 new stores across Canada. They say they are willing to comply with future regulations and hope to join the regulated sector once the federal laws change, but Mr. Blair said it is too early to say whether the new legal system will allow dispensaries to participate. Globe and Mail, A6

Top doctor says province may set age to buy marijuana at 21
New Brunswick's top doctor says the province may set a minimum age of 21 to buy marijuana. Jennifer Russell, New Brunswick's acting chief medical officer of health, says an internal working group, set up by government in the wake of Ottawa's move toward legalization, has landed on that age as a balance between access and impacts on health. Meanwhile, a new report ordered by Ottawa on legalizing and regulating pot has recommended that federal government set a minimum age of 18, and then leave it to the provinces to set a higher minimum age if they want to. "Our discussions have revolved around the age of 21," Russell said in an interview with the Telegraph-Journal. "Some of the things that we have discussed would be balancing the risk to people's health with the practical aspects of implementation and the black market issue. "Some of the evidence suggests that we wait until 25, so we have to compromise somewhere." Russell said that a final decision on setting the legal age at 21 has not been made and is still subject to internal debate within government. Telegraph-Journal, A3 (Times & Transcript, Daily Gleaner)

N.S. among top supporters of marijuana legalization
Nova Scotia has the highest support for the legalization of marijuana in the Atlantic Provinces, a new public opinion poll says. The Corporate Research Associates survey of 1,502 Atlantic Canadians showed the vast majority, 82 per cent, support the legalization of marijuana for medical purposes - compared with 84 per cent one year ago - while 53 per cent support legalizing it for personal use, compared to 49 per cent in 2015. Conversely, 41 per cent of Atlantic Canadians oppose recreational marijuana legalization while only 13 per cent oppose it for medical purposes. In Nova Scotia, however, 86 per cent support legalization for medical purposes while 57 per cent support legalization for personal use. P.E.I. has the lowest support for recreational legalization, at 46 per cent. The survey also also notes that support for legalization of marijuana for personal use is stronger among younger residents, with 70 per cent of 18-34 years old expressing support. Chronicle-Herald, A5

*** Victoria's pot rules backed in task force report**
For Victoria mayor Lisa Helps, this week's federal task force recommendations on marijuana sales look a lot like the regulations her own city council approved in September. Age restrictions, a ban on advertising

and buffer zones to keep shops far from schools and parks are among the measures urged by the panel appointed to advise Justin Trudeau's Liberal government on legalizing pot. "We're not way out there in terms of our approach. That's a good thing," Helps told On the Island host Gregor Craigie. Even with this first step towards a national framework for legalized marijuana, Helps said Victoria remains on its own in enforcing regulations. "Until legislation passes there's still a vacuum," she said. "We couldn't wait for something to be done, in terms of the proliferation of these cannabis dispensaries." For existing marijuana storefronts in Victoria, the city now requires a lengthy rezoning process that costs $7,500 and could take seven or eight months. If successful, the business is then allowed to purchase a $5,000 business license. "We've put a regulatory regime in place. That will stay in place until we get further direction from the federal government and the province," Helps said. "That couldn't come soon enough." While the task force urged distribution of legal pot through stand-alone dispensaries or by mail-order, Helps said she thought it would recommend the sale of cannabis through pharmacies. CBC News (2016-12-14)

Marijuana : où et à quel âge pourra-t-on s'en procurer?
Au lendemain de la présentation du rapport du Groupe fédéral de travail sur la légalisation et la réglementation du cannabis, il est toujours impossible de savoir avec exactitude à quel endroit et à quel âge il sera possible de se procurer de la marijuana. Les opinions des spécialistes et des intervenants concernés divergent quand il est temps d'aborder ces deux questions cruciales. Le gouvernement provincial a indiqué mercredi que la légalisation est une initiative fédérale, tout en soulignant que les répercussions sont importantes pour les gouvernements provinciaux. «Le gouvernement du Nouveau-Brunswick accueille favorablement le rapport rendu public mardi par le Groupe de travail sur la légalisation et la réglementation du cannabis. Il s'agit d'une étape importante pour définir l'orientation que prendra le gouvernement fédéral dans le dossier de la légalisation», a indiqué à l'Acadie Nouvelle Cathy Rogers, la ministre des Finances. «Nous attendons avec intérêt la réponse du gouvernement fédéral à ce rapport, car il aidera le Nouveau-Brunswick ainsi que les autres provinces et territoires à prendre les dispositions nécessaires en vue de la légalisation de la marijuana», de poursuivre la ministre. L'Association des pharmaciens du Nouveau-Brunswick demeure pour sa part sur sa position. Selon elle, quelle que soit la classification gouvernementale de la marijuana lorsqu'elle est utilisée de façon thérapeutique, elle peut avoir un impact sur les fonctions physiologiques du patient et sur les effets d'autres médicaments. L'Acadie Nouvelle, 3

Canadian parents prepare for realities of legalized marijuana
B.C. mom Scarlett Ballantyne wonders if Ottawa's plans to legalize marijuana will make her 14- and 16-year-old daughters more inclined to try it. But she's not waiting to find out. Ballantyne says her family has been discussing the dangers of drug use since the girls were 13 - a pre-emptive strike as pot shops and marijuana headlines have been popping up everywhere they turn. She's proud to say they are athletic, self-confident kids, but she also gets the impression that their generation sees marijuana as "not that big of a deal." Telegraph-Journal, C1

Councillors weigh in on marijuana in Saskatoon
Before the civic election, The Star-Phoenix asked councillors their opinions on how Saskatoon should prepare for marijuana legalization. These are their responses... StarPhoenix, A3

Entre deux joints
Un article d'opinion note, « Justin Trudeau avait promis de légaliser la marijuana récréative au Canada : les recommandations du groupe de travail présidé par l'ancienne ministre libérale Anne McLellan lui donnent maintenant les balises pour aller de l'avant. Et c'est là que ça va se compliquer. La consommation de marijuana fait pratiquement partie des moeurs au Canada. Or son commerce profite exclusivement au crime organisé qui n'a rien à faire de l'impact social et sanitaire de cette drogue « douce » qui ne l'est plus vraiment puisque la concentration de sa principale composante psychotrope, le THC (tétrahydrocannabinol), a augmenté de 300 à 400 pour cent depuis les années 70. Bizarrement, le rapport du groupe de travail ne se prononce pas sur la teneur en THC, pas plus que sur l'impact de cette drogue sur la maturation cérébrale des adolescents. » La Tribune, 10

* **Free-market buzzkill**

An opinion piece states, "What were they smoking? Actually, the report of the federal government's task force on how to legalize and regulate marijuana isn't all that bad, as these things go. I just couldn't resist that line. One part of the report that seemed remarkably clear-headed was its recounting that: "The vast majority of respondents to the (task force's) online consultation expressed a preference for a competitive private-sector production model, noting that this would allow for a greater variety and diversity of products with fair pricing." National Post, FP9

* **Liberals must get it right on pot**

An editorial states, "Prime Minister Justin Trudeau campaigned to legalize pot in the 2015 election campaign. This federal task force report on the subject released this week offered no quick fix to the complex issues surrounding legalization, and the sensible recommendation that the Liberals proceed slowly. The 106-page report made more than 80 recommendations - including restricting pot sales to those 18 and older, banning sales near schools, banning pot advertising and branding (similar to tobacco products) and a new, proposed Cannabis Control Act to police illegal production and trafficking. Marijuana consumption is an estimated $7 billion-a-year underground business in Canada, and that market could grow to $10 billion to $20 billion with legalization. Legalization is also broadly supported by the Canadian public. Meanwhile, the case for criminalization is increasingly difficult to support. Canada needs to reconcile the agreements it made via international treaties to criminalize and prosecute drug possession and production with legalization in this country. But our decades old "war on drugs" has failed miserably to deter drug use or abuse." Edmonton Sun, A16 (Winnipeg Sun, Toronto Sun, Calgary Sun, Ottawa Sun)

Pot report on the hazy side

An opinion piece states, "The federal government has just released the report of its special advisory task force on marijuana legalization. While the report lays out broad strokes, key decisions remain on retail distribution, legal age limit, and taxation that Ottawa and the provinces should agree on soon. The report recommends that provinces be given the jurisdiction to determine the precise mechanism of retail distribution. However, the report has also recommended against allowing the sale of marijuana in stores that also offer liquor and/or cigarettes. This is consistent with my own study that was released by the C.D. Howe Institute, in which I recommended retail sales through stand-alone stores as opposed to government-owned retail outlets, as is the case in Ontario. Ontario Premier Kathleen Wynne has supported the idea of the provincially owned LCBO distributing marijuana. The idea has also received considerable support from the trade unions representing LCBO employees. A supporting argument is that selling marijuana through LCBO outlets reduces the possibility of underage consumption. In this respect, the task force has certainly made a sound economic and health policy recommendation... However, the task force's proposed legal age limit of 18 raises some valid concerns. The task force has acknowledged that a higher age limit of 19 is possible if a province wishes to harmonize marijuana regulation with corresponding alcohol minimum ages. On the other hand, the federal government should consider an even higher national legal consumption age for marijuana, possibly at 21 years of age." National Post, FP9

* **Happy daze?**

Re Ottawa Plans To Open Up Legal Market For Cannabis By Early 2019 (Dec. 14)

A letter to the editor states, "The personal use limits proposed by the marijuana task force make sense - 19 or older to buy it, can't carry more than 30 grams, can't grow more than four plants at home. The task force seems to have walked a line between trying to discourage a market for organized crime and throwing the door wide open. The issue now will be how to discourage the 18- to 25-year-olds from heavy use, since those young brains of theirs are still developing. The forbidden is always more attractive." Globe and Mail, A12

* **Big Changes**

A letter to the editor states, "As Canada is about to join Uruguay as one of two countries to legalize marijuana, we are in for major changes in our culture, plus added pressure on our ailing health care. It is most disturbing that the Trudeau Liberals are rushing ahead with legalization before a simple roadside test is available to test for driver pot-smoking impairment. The government is ignoring the Canadian Medical Association's recommendation to raise the age for purchase to at least 21. Police better get

ready for the entry of organized crime groups, which will surely take advantage of black market pot sales." Ottawa Sun, A20

Huit boutiques de pot ouvrent aujourd'hui à Montréal
Les proprios de huit boutiques illégales de marijuana qui ouvrent leurs portes aujourd'hui se croisent les doigts pour que la police de Montréal n'intervienne pas. «Nous ne savons pas ce qui va arriver, a avoué hier Jodie Emery, copropriétaire de la marque Cannabis Culture, dont des franchises s'installent dans la métropole. On espère que la population va nous soutenir et que nous pourrons servir de modèle pour démontrer de quoi la légalisation devrait avoir l'air à Montréal et au Québec.» L'activiste de longue date croit que les autorités policières peuvent choisir d'intervenir ou non. Dès 10h ce matin, huit boutiques vendront de la marijuana récréative aux adultes de 19 ans et plus, même si employés et clients risquent d'être arrêtés. Dans les prochaines semaines, ce nombre grimpera à 10 commerces, a confirmé Mme Emery. Pour l'instant, Cannabis Culture s'installe dans les secteurs d'Hochelaga, de Ville-Marie, du Plateau- Mont-Royal, de Rosemont, de Villeray et de Côte-des-Neiges-Notre-Dame-de-Grâce. Le Journal de Montréal, 7; Canadian Press (Chronicle-Herald) (2016-12-14)

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Privacy watchdog investigating Liberals' survey**
The federal privacy commissioner is investigating the Liberals' new online survey about Canadians' feelings toward electoral reform. Privacy commissioner Daniel Therrien's office said it is looking into the government's mydemocracy.ca site, which asks for highly personal information such as household income, education and employment status, and for postal codes. The survey lists the information as "optional," but it's actually required if respondents want their views meaningfully counted in a final report for Democratic Institutions Minister Maryam Monsef. A spokesperson for Therrien's office said it has already recommended improvements to the government to "better protect" respondents' privacy. But because the commissioner received a formal complaint about the website, Therrien will open an investigation. "Our goal is to have these issues resolved as quickly as possible," wrote spokesperson Valerie Lawton in an email to the Star. Toronto Star, A6

*** Public servants urged to donate**
Ottawa community groups are urging federal public servants to donate to a massive United Way workplace campaign that's "at risk" of falling short of its $19-million fundraising goal - something the groups say could have a "devastating impact on our city's most vulnerable people." The plea is contained in an open letter to public servants co-authored by Susan Ingram of Big Brothers Big Sisters of Ottawa and Kathryn Hill of Family Services Ottawa. The letter was penned on behalf of the 25 agencies supported by the United Way charity organization that distributes the proceeds of the annual campaign. The current total of donations sits at $14.6 million, Ingram told the Sun. The deadline for donating is March 31, 2017. "We are able to provide vital programs and services because of your generous donations to United Way Ottawa through your annual workplace campaign," the letter reads. "This year, our ability to support those who need it most is at risk." Marie Lemay, a campaign co-chair AD{NS50921906} and deputy minister of Public Services and Procurement Canada, confirmed the campaign will fall short of its goal but said "below target is still a big amount of money." "It's still a very positive contribution that federal public servants are making to the community." Ottawa Sun, A16

*** Fiasco du système de paye: encore 10 000 fonctionnaires fédéraux touchés**
«Nous progressons lentement en raison de la complexité de ces cas, a admis la sous-ministre du ministère des Services publics et de l'Approvisionnement, Marie Lemay, mercredi. Mais nous nous approchons d'un objectif important, a-t-elle ajouté au sujet du seuil des 10 000 cas encore non résolus. Ottawa avait promis de régler les ratés de son système de paye Phénix avant le 1er novembre. Depuis cet échec, le ministère n'ose plus s'enfermer dans un nouvel échéancier. Mme Lemay a concédé que «l'année qui se termine a été très éprouvante» pour bon nombre de fonctionnaires qui n'ont pas reçu leur dû. «En particulier avec la période des Fêtes qui approche, votre patience et votre tolérance sont extrêmement appréciées», a-t-elle dit, s'adressant aux employés du gouvernement federal. Agence QMI

*** Phoenix system will not cause tax problems: LeMay**
The federal government is assuring public servants they won't have tax trouble because of the Phoenix pay system, despite thousands of over-payments and other delays. Deputy Minister Marie LeMay gave another update Wednesday on the troubled pay system, reporting that there are still 10,000 cases in the backlog the government first identified in July. Another 200,000-230,000 cases are outside of the government's standards for processing but have come in since July. LeMay said the government was addressing the problem and was seeing steady and continued improvement. "Our processing capacity will further increase once we have cleared the backlog," she said. She said she was confident that over-payments would not show up on T4 tax statements. Metro News

La preuve contre les deux Québécoises emprisonnées en Australie devrait être révélée
Mélina Roberge et Isabelle Lagacé, originaires de Granby et Longueuil, ont été arrêtées le 28 août dans le port de Sydney en compagnie d'André Jorge Tamine, avec 95 kg de cocaïne dans leurs valises. Les deux Québécoises emprisonnées en Australie, Mélina Roberge et Isabelle Lagacé, devraient prendre connaissance des éléments de preuve amassés contre elle, lors de leur retour en cour, jeudi soir, à Sydney. Mélina Roberge, 23 ans de Granby, et Isabelle Lagacé, 28 ans de Longueuil, doivent subir leur enquête préliminaire à 17h30, jeudi, heure du Québec. À l'heure locale de Sydney, en Australie, l'audience se tiendra à 9h30, le 16 décembre. Il est prévu que la Couronne y dévoile sa preuve. Le juge de la cour criminelle locale de Sydney devra alors conclure si les éléments sont suffisants pour justifier la tenue d'un procès. (...) Les deux Québécoises, ainsi que leur complice André Tamine, âgé de 64 ans, ont été arrêtés au port de Sydney, en Australie, le 28 août dernier. Petite-Nation

*** Battle for Mosul will shape Canada's ground commitment in Iraq**
Anti-ISIS coalition members meet in London to review progress and chart future course. Canada will continue to have a military mission in Iraq through 2017, but the size and scope of it have yet to be determined, the country's defence minister said in advance of an international meeting with allies battling ISIS. Defence planners have been spinning various scenarios for months, but the Liberal government committed — when it overhauled the mission against ISIS last February — to reviewing the deployment of special forces, helicopters, surveillance planes, an air-to-air refueling jet and a military field hospital. The assessment is due by March of next year, but the last budget numbers put before Parliament have set aside only $41 million for the operation, less than one-third of what's being spent in the current budget year. CBC News

Medical convoy trying to leave Aleppo comes under fire
An attempt to evacuate people in need of medical attention from rebel-held eastern Aleppo stalled on Thursday when fighters loyal to the Syrian government fired on the convoy, wounding three, the head of the ambulance service said. The vehicles had intended to leave under a deal to evacuate people from rebel areas following rapid advances in Aleppo by government forces. The evacuation of the last rebel enclave would end years of fighting for the city and mark a major victory for Syrian President Bashar al-Assad. "The convoy was shot at by regime forces and we have three injured, one of them from civil defense ... They were brought back to besieged areas," ambulance service Ahmed Sweid told the pro-opposition Orient TV. A Reuters witness in nearby government-held territory heard a burst of gunfire that lasted several minutes. An official with an Aleppo rebel group said the medical convoy had stopped before clearing the besieged eastern part of the city. A Syrian official source told Reuters earlier on Thursday that efforts to organize the departure of fighters from east Aleppo had begun and the International Committee of the Red Cross said it had been asked to assist with the evacuation. Globe and Mail; * Acadie Nouvelle

J'Accuse

Aleppo has fallen. The last and sturdiest bastion of the Syrian uprising is gone. The Battle of Aleppo is over, the revolution is finished, and the Syrian mass murderer Bashar al-Assad has won. Russia has won. Iran has won. Hezbollah has won. The United States has lost. The United Nations has lost, and the bloody war in Syria, already having taken nearly half a million lives, goes on. Aleppo mattered, it should go without saying, but it's worthwhile enumerating what did not matter. You can start with Aleppo's 31,000 dead and proceed from there through each and every statutory war crime codified by the International Criminal Court. (...) And now Aleppo is undergoing what UN humanitarian spokesman Jens Laerke calls "a complete meltdown of humanity." The still-living lie with dead in the rubble of bombed out buildings. You can hear them screaming. Regime militias are carrying out mass executions of civilians. In one case, 11 women and 13 children were shot "on the spot." Women are committing suicide rather than face the prospect of rape and murder. A planned evacuation of perhaps 100,000 civilians and rebel fighters from East Aleppo was heralded as a breakthrough on Tuesday, following the abject surrender by all of Aleppo's remaining rebels - hardline Islamists and democratic patriots alike. Postmedia Network (National Post, A1, Montreal Gazette, Vancouver Sun, Windsor Star, Leader-Post, Star Phoenix, Ottawa Citizen, London Free Press, Edmonton Journal, Calgary Herald)

*** Evacuation of eastern Aleppo underway, aid workers say: Buses move into rebel-held territory after earlier coming under fire**

Efforts to evacuate people from the rebel-held eastern areas of Aleppo are underway, according to aid workers, after a convoy came under fire earlier Thursday. The International Committee of the Red Cross said in a Tweet shortly after noon local time that the operation to evacuate around 200 wounded people from rebel-held areas, part of a wider ceasefire deal, was under way. The Britain-based Syrian Observatory for Human Rights monitoring group said ambulances and municipal buses had crossed from government territory. Those same buses were seen on webcams, set up by the Russian military, as they rolled through the besieged city. Evacuation efforts stalled earlier in the day when pro-Syrian forces opened fire on a convoy as it prepared to leave eastern Aleppo. Three people were wounded according to the head of the ambulance service in the district. "The convoy was shot at by regime forces and we have three injured, one of them from civil defence ... They were brought back to besieged areas," Ahmed Sweid told the pro-opposition Orient TV. (...) The rebels have held to the eastern part of the city for four years but their enclave rapidly evaporated in the past days in the face of a fierce Syrian government onslaught. CBC News

*** Un djihadiste reconnaît son implication dans l'attaque du Thalys**

Près de 18 mois après l'attentat raté contre un Thalys, en août 2015, le tireur présumé Ayoub El Khazzani a reconnu pour la première fois son implication dans l'attaque djihadiste, tout en réfutant avoir voulu commettre un «massacre de masse». Entendu pendant plus de cinq heures devant un juge d'instruction antiterroriste, ce Marocain de 27 ans est revenu sur son parcours jusqu'à cette journée du 21 août 2015 lorsque muni d'une kalachnikov et de neuf chargeurs pleins, il a ouvert le feu dans un Thalys Amsterdam-Paris, peu après son entrée en France, dans le Pas-de-Calais. Il avait grièvement blessé un passager avant l'intervention de plusieurs voyageurs qui l'avaient maîtrisé, mettant ainsi en échec un potentiel carnage, sept mois après les attentats de janvier à l'Hyper cacher, Montrouge et *Charlie Hebdo* et trois mois avant ceux de Paris, le 13 novembre. «Maintenant il assume, il prend ses responsabilités. Il explique que c'est en tant que djihadiste qu'il est monté dans ce Thalys (...) mais ce qu'il comptait faire savoir, c'est qu'il n'était pas là pour faire un massacre de masse et tuer n'importe qui (...) Pas du tout», a déclaré à la presse son avocate Sarah Mauger-Poliak à l'issue de l'audition. Agence France-Presse (La Presse) (2016-12-14)

MINISTER / MINISTRE

*** Ottawa veut une révision en profondeur du financement des services policiers pour les Premières Nations**

Le gouvernement fédéral promet de revoir la façon dont il finance les services de police dans les communautés autochtones. **Le ministre de la Sécurité publique, Ralph Goodale**, dit que le Programme des services de police des Premières Nations est dépassé et aurait besoin d'être réformé. ***« Il est en place depuis le début des années 1990. Ça va prendre plus de fonds, mais également une restructuration »*** - **Ralph Goodale, ministre de la Sécurité publique du Canada.** Les commentaires du **ministre** ont été faits en réaction à un rapport interne de **Sécurité publique Canada** qui explique en détail les problèmes persistants du programme qui finance les services de police dans plus de 450 communautés inuites et des Premières Nations au Canada. Le statu quo n'est plus une option viable, conclut en substance le rapport qui a été publié le mois dernier. Radio-Canada

Trudeau hopes to rein in spy agencies

Justin Trudeau says his government will ensure security and spy agencies follow the "letter and spirit" of the law, amid mounting concerns they have trampled the privacy of journalists and other Canadians. In a roundtable interview this week with The Canadian Press, the prime minister stressed that national security agencies must protect Canadians but also safeguard the laws and values the public cherishes. Trudeau's words come as the Liberal government wraps up a national consultation on federal security policy and they follow two recent episodes that heightened public concern about unwarranted surveillance. It emerged last month that the Montreal and Quebec provincial police forces had been tracking the communications of several journalists. Only days later, a Federal Court judge found the Canadian Security Intelligence Service had broken the law by keeping and analyzing information about the communications of innocent people - potentially revealing data that was collected during investigations into actual suspects. (…) **Public Safety Minister Ralph Goodale** told MPs at a House of Commons committee this month he was keeping an open mind as to whether CSIS should be allowed to retain and use the incidentally gathered data trails - such as phone numbers and email addresses. Canadian Press (Ottawa Sun, A9, Red Deer Advocate, Montreal Gazette, Ottawa Citizen, Vancouver Sun, Edmonton Journal, Calgary Herald, Times Colonist, London Free Press, Star Phoenix)

Change will require 'diplomatic skills'

Their position on marijuana is hardly the only difference between Canada's prime minister and the president-elect of the United States. But when Justin Trudeau's government introduces legislation to legalize cannabis this spring, it could spark problems between Canada and the U.S., particularly since Donald Trump has indicated he will keep pot illegal at the federal level. Here's a look at what could change in Canada-U.S. relations once Canadians start lighting up legally. Border control Len Saunders, an immigration lawyer in Blaine, Wash., predicts a boom in his business after Canada legalizes marijuana - though it's one he has a hard time feeling happy about. Saunders represents Canadians who have been banned from entering the U.S. after admitting they have smoked marijuana in the past. Every year, he files as many as 30 costly waivers for people who've made this admission and hope to regain access. (…) Earlier this year, **Public Safety Minister Ralph Goodale** said Canadians banned from entering the U.S. because they've admitted to using pot was a ***"ludicrous situation"*** that needed to be addressed. **Scott Bardsley, a spokesman for the minister**, said **Goodale** will continue to discuss with American officials the need for Canadians to be treated appropriately when they are entering the U.S. Canadian Press (Kingston Whig-Standard, B3, Chronicle Herald); Agence France-Presse (Le Droit, Huffington Post Québec) (2016-12-22); * Les Affaires (2016-12-21)

Toughen gun laws

An editorial states, "Canada may pride itself on not being the Wild West of gun violence, like its neighbour to the south. But it can still do better. The reality is Toronto police are concerned about gaps in gun control laws that they say are putting more legally purchased Canadian guns into the hands of dangerous criminals. That's not their only worry. They have also seen a spike in criminals using rifles and shotguns for crimes since the former Harper government shut down the long gun registry in 2012. Now their concerns are rightly being taken up by Mayor John Tory, who shared them in a letter last week with **Public Safety Minister Ralph Goodale**. As Tory put it, he wants only one thing: 'To get the guns out of the hands of those who choose to do harm and are hell-bent on disrupting our peaceful city.'" Toronto Star, A22

*** Trudeau is his Person of the Year**

A letter to the editor states, "Because it's 2016, Dec 15 Even if Justin Trudeau accomplishes nothing more, he has already launched two mighty waves that are unlikely to be reversed, namely the empowerment of women in politics and a change in the ways in which we view and negotiate with our indigenous brothers and sisters. That already makes him Person of the Year. Areas of Liberal government weakness remain, such as the unseemly issue of money for access, wavering around electoral reform and compromises struck on pipelines that call into question this government's determination to combat climate change. And I would argue that Mr. Trudeau and **Ralph Goodale** have not yet awakened to what it has meant to have had no genuine **public safety minister** for 10 years, i.e. someone beholden more to their job than to the gun lobby." Toronto Star (2016-12-21)

TOP STORIES / MANCHETTES

*** Des dizaines d'agents de la GRC ont fouillé dans la vie privée de Canadiens sans permission**
Des documents obtenus par Radio-Canada révèlent que des dizaines d'agents de la Gendarmerie royale du Canada (GRC) se sont servis de bases de données policières pour chercher des informations sur la vie privée de Canadiens sans autorisation. Selon des documents obtenus grâce à la Loi sur l'accès à l'information, de 2010 à 2015, 62 agents de la GRC se seraient servis sans permission de bases de données policières pour fouiller dans la vie privée de proches ou de citoyens. De ce nombre, 34 plaintes ont été jugées fondées. Notons par exemple celle d'un agent du Manitoba reconnu responsable d'avoir cherché sans autorisation le numéro d'une plaque d'immatriculation dans la base de données du Centre d'information de la police canadienne (CIPC). D'autres cas sont beaucoup plus inquiétants : en 2012, un agent a été reconnu responsable d'avoir recueilli de l'information sans autorisation d'une base de données de la GRC, en plus d'avoir entretenu des liens avec un criminel connu. Sa sanction? Une simple réprimande informelle. Une plainte déposée en février 2015 accuse un agent de s'être servi d'une base de données de façon inappropriée, d'avoir envoyé des photos à caractère sexuel à un mineur et d'avoir utilisé sa position en tant que policier pour entretenir une relation avec cette personne. L'information ne précise pas quelle sanction a été appliquée et la GRC a refusé de nous dévoiler plus de détails sur cette plainte sans une autre demande d'accès à l'information. Dans un courriel, une porte-parole de la GRC affirme que « la GRC prend très au sérieux les contraventions au code de déontologie, et elle s'emploie résolument à gérer les affaires disciplinaires avec diligence, efficacité et équité ». Elle ajoute que les employés de la GRC « doivent se comporter de façon non seulement à satisfaire, mais à dépasser les attentes élevées et justifiées des Canadiens. » Radio-Canada; Le Journal de Montréal

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** No quick end to disaster despite lack of new cases**
The Canadian Food Inspection Agency says it has not found any new cases of bovine tuberculosis in the past week, though it could take several more months to sound the all clear. Cattle ranchers in parts of Alberta, and Saskatchewan, have been rocked after a cow from Alberta that was slaughtered in the U.S. in October was found to have the disease. About 26,000 cows have been quarantined on dozens of ranches, and around 10,000 are set to be slaughtered to ensure the disease doesn't spread. Any animal that shows a sign of the disease is destroyed, and the meat cannot be eaten. CFIA chief veterinary officer Harpreet Kochhar told reporters on Wednesday that testing continues on thousands of animals, but the number of confirmed cases is unchanged from the six reported last week. Postmedia (Red Deer Advocate, A6; StarPhoenix, Edmonton Sun, Calgary Sun, Edmonton Journal)

*** Canada launches hotline to report bad drone drivers**
The government wants bad drone drivers reported. Expecting a spike in drone sales for Christmas, the transportation ministry on Wednesday launched an online hotline to report bad drone pilots. The new "incident-reporting tool," according to Transport Canada, aims to keep Canadians "safe from reckless drone use." The ministry urges Canadians to go to its website and fill out a report if they believe someone is flying a drone "in an irresponsible manner without a permit." Complaints would be reviewed by officials and if an operator is found to have broken the rules, he or she would be fined up to $25,000 or jailed. Agence France Presse (CTV News); Canadian Underwriter

*** Search for missing man suspended**
Eskasoni RCMP have suspended the search for 79-year-old Camillius Alex after five days. They were unable to find Alex, despite help from Ground Search and Rescue, volunteers in Cape Breton and area, and the Eskasoni fire department. The RCMP provided a helicopter, a fixed-wing plane, all-terrain vehicles, police dogs and UAV services. Chronicle-Herald, A5; Canadian Press (CTV News)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

La vigilance est de mise pour le 375e de Montréal

Si les Montréalais ne devraient pas nécessairement craindre des actes de terrorisme pendant les célébrations du 375e anniversaire, des experts soulignent l'importance de rester vigilant. «Tout grand évènement peut être une cible potentielle, parce que c'est une opportunité pour les terroristes. Le défi[en matière de sécurité], c'est un terrorisme improvisé, des loups solitaires qui agissent à la dernière minute», dit Michel Juneau Katsuya, ancien agent du Service canadien du renseignement de sécurité (SCRS). «Compte tenu que la menace est extrêmement évolutive et versatile, [...] ça pourrait contourner les dispositifs de sécurité mis en place», ajoute Stéphane Berthomet, codirecteur de l'Observatoire sur la radicalisation et l'extrémisme violent. Une dizaine de rassemblements de plus de 10 000 personnes sont prévus dans le cadre du 375e anniversaire, en plus des festivals habituels. Le Québec a toutefois beaucoup moins de risques d'être touché par le terrorisme que l'Europe et les États-Unis. «Malheureusement, Montréal a été le théâtre d'activités favorisant la montée d'un certain radicalisme. [...] Statistiquement, on a eu un taux disproportionné, par rapport au reste du Canada, de jeunes qui ont voulu partir ou qui sont partis faire le djihad», nuance M. Juneau Katsuya. Journal de Montréal, 14 (TVA Nouvelles)

Digitally secure, but private
An opinion piece states, "Historically, liberaldemocratic societies have tried to balance security challenges and reconcile the limits on civil liberties required to maintain the peace. In the 1950s, in an effort to curb the growing number of drunk drivers, Canadians became subject to breath tests and subsequently random spot checks without a reasonable doubt of guilt. (...) Police agencies, both in Canada and abroad, have looked for leadership from their governments since investigations into major crimes such as human-trafficking, terrorism, murder and the sexual abuse of children have been enabled by digital devices or the internet. The magnitude of the challenge was highlighted by the Royal Canadian Mounted Police's unprecedented looks into the challenges they face in securing Canadians in the digital age. Law enforcement agencies largely have the legal framework they need to investigate digital devices that enable crimes. However, the increasing levels of encryption that now exist on commonly used smartphones and applications will render these authorities borderline toothless. Here in Canada, privacy commissioners from around the country came together recently to caution lawmakers against legislating against encryption. Their argument is that any weakening of encryption would result in both risks to our civil liberties and unintended security challenges as we weaken the security architecture of commonly used platforms. The civil liberties argument against providing police the powers to collect and share the private data of citizens is not misguided. Security agencies around the world were alleged to have violated civil liberties in the name of national security by former U.S. National Security Agency contractor, Edward Snowden." National Post, FP7

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Man accused of killing Groton good Samaritan back in Conn. after fleeing to Canada
A man who ran from Groton, Connecticut, all the way to Canada was returned to the United States on Tuesday, and arrived back in the United States on Wednesday after an extradition process. Dante Hughes, 30, of Groton, is suspected of shooting and killing Joseph "Joey" Gingerella, 24, also of Groton, on December 11 around 1:30 a.m. after Gingerella tried to intervene when he allegedly saw Hughes beating a woman in a restaurant parking lot. It's been reported that she was Hughes' girlfriend. Gingerella was shot multiple times and died, and an arrest warrant charging Hughes with murder was issued. Groton Police told FOX 61 that on Wednesday, Hughes appeared at Niagara County Court in Lockport, New York, on charges of being a fugitive from justice. He had been deported there from Canada. At the hearing Hughes waived extradition, and was returned to Groton police. He will appear in court on December 22 to be arraigned for the murder charge. Fox 61

* **Canada-U.S. trade not broken: Freeland**
Donald Trump has pledged to fix a lot of broken things when he becomes U.S. president. But Canada's trade minister says the world leading trade relationship between Canada and the United States need not be on the president-elect's to-do list. "I think the reality is the trading relationship with Canada is the farthest possible thing from being broken. It is very balanced and mutually beneficial," Chrystia Freeland told The Canadian Press. That's the message she said she has been actively spreading to Republicans and others in Washington during the presidential transition period. Freeland visited Washington last week

and met with some senior Trump advisers and Republican senators. She had get-acquainted meetings with former House Speaker Newt Gingrich, now a Trump adviser, and Stephen Schwarzman, the CEO of the Blackstone Group investment firm, who was appointed earlier this month to lead the President's Strategic and Policy Forum. Trump has said the collection of 16 CEOs and business leaders will provide him what it takes to create jobs and drive growth. Freeland also met with the Republican chairs of two powerful committees - Sen. Pat Roberts of the agriculture committee and Sen. Orrin Hatch of the finance committee. Freeland reminded them the $2.4 billion a day that crosses the border is good for both countries. She hauled out some other well-worn statistics: nine million Americans depend directly on exports to Canada while 35 states have Canada as their top customer. London Free Press

High prices force millions to buy medicine outside U.S.
As drug prices have spiraled upward in the past decade, tens of millions of generally law-abiding Americans have committed an illegal act in response: They have bought prescriptions outside the U.S. and imported them. (…) The Food and Drug Administration has cautioned that many online pharmacies aren't what they seem. An international crackdown in 2014 found that many packages of medicines purportedly from Australia, Canada, New Zealand and the United Kingdom contained drugs from other countries, including India, China and Laos. (…) When purchased outside the country, many prescription medicines cost half or less than they do in the states. According to the FDA's website, it is generally illegal for Americans to import drugs into the states for personal use. The law isn't rigorously enforced, in part because it is difficult to monitor the entry of medicine in suitcases and small packages. But in 2015 the FDA implemented a rule that would give government border inspectors expanded authority to destroy drugs imported for personal use at their point of entry. Detroit News

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

* **Cybersecurity firm finds evidence that Russian military unit was behind DNC hack**
A cybersecurity firm has uncovered strong proof of the tie between the group that hacked the Democratic National Committee and Russia's military intelligence arm — the primary agency behind the Kremlin's interference in the 2016 election. The firm CrowdStrike linked malware used in the DNC intrusion to malware used to hack and track an Android phone app used by the Ukrainian army in its battle against pro-Russia separatists in eastern Ukraine from late 2014 through 2016. While CrowdStrike, which was hired by the DNC to investigate the intrusions and whose findings are described in a new report, had always suspected that one of the two hacker groups that struck the DNC was the GRU, Russia's military intelligence agency, it had only medium confidence. Washington Post; Reuters (New York Times); Wall Street Journal

* **Don't get cyber-Scrooged!**
Tis the season to be jolly - but it's also the season for identity theft, phishing and credit card fraud. With Christmas just days away, people are using their smartphones and other devices to get a handle on their last-minute shopping. Hackers are on the hunt as well, looking to steal personal information from easy targets. "People just need to have their radar up, so that when they're trying to get their perfect gift to grandma's house in time for Christmas day, they're not clicking on things they shouldn't," says Michael Kaiser, executive director of the National Cyber Security Alliance. Here are some tips for staying safe this holiday season: You'd better watch out Make sure your phone's operating system and all the apps you use to shop are up to date. That way you'll have the fixes for any recently discovered security problems. You should also enable multifactor authentication in the settings on your important accounts. This is a security measure that requires you to enter a temporary code in addition to your password when signing in; services often text this code to your phone. It complicates life for hackers should they somehow manage to get your password. Improvements in credit card fraud detection have pushed hackers to focus on stealing legitimate login credentials, so adding an extra layer of protection to these accounts is a must, says John Dickson with the cybersecurity firm Denim Group. And while some cybersecurity experts question the value of changing your password frequently, Dickson says it's not a bad idea this time of year. Associated Press (Kingston Whig Standard, D5; Whitehorse Daily Star)

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Des dizaines d'agents de la GRC ont fouillé dans la vie privée de Canadiens sans permission**
Des documents obtenus par Radio-Canada révèlent que des dizaines d'agents de la Gendarmerie royale du Canada (GRC) se sont servis de bases de données policières pour chercher des informations sur la vie privée de Canadiens sans autorisation. Selon des documents obtenus grâce à la Loi sur l'accès à l'information, de 2010 à 2015, 62 agents de la GRC se seraient servis sans permission de bases de données policières pour fouiller dans la vie privée de proches ou de citoyens. De ce nombre, 34 plaintes ont été jugées fondées. Notons par exemple celle d'un agent du Manitoba reconnu responsable d'avoir cherché sans autorisation le numéro d'une plaque d'immatriculation dans la base de données du Centre d'information de la police canadienne (CIPC). D'autres cas sont beaucoup plus inquiétants : en 2012, un agent a été reconnu responsable d'avoir recueilli de l'information sans autorisation d'une base de données de la GRC, en plus d'avoir entretenu des liens avec un criminel connu. Sa sanction? Une simple réprimande informelle. Une plainte déposée en février 2015 accuse un agent de s'être servi d'une base de données de façon inappropriée, d'avoir envoyé des photos à caractère sexuel à un mineur et d'avoir utilisé sa position en tant que policier pour entretenir une relation avec cette personne. L'information ne précise pas quelle sanction a été appliquée et la GRC a refusé de nous dévoiler plus de détails sur cette plainte sans une autre demande d'accès à l'information. Dans un courriel, une porte-parole de la GRC affirme que « la GRC prend très au sérieux les contraventions au code de déontologie, et elle s'emploie résolument à gérer les affaires disciplinaires avec diligence, efficacité et équité ». Elle ajoute que les employés de la GRC « doivent se comporter de façon non seulement à satisfaire, mais à dépasser les attentes élevées et justifiées des Canadiens. » Radio-Canada; Le Journal de Montréal

*** Sharing RCMP social media posts helps solve crimes**
An opinion piece written by RCMP Assistant Commissioner Larry Tremblay states, "As 2016 comes to a close and we begin to look forward to a new year, I wanted to take this opportunity to thank the people of New Brunswick for the support enjoyed by the RCMP in this province. Many may not realize what an important role they play in helping to keep our communities safe, be it by consistently making responsible decisions, ensuring the safety of others, reporting impaired drivers, sharing RCMP messages on social media, or providing police or Crime Stoppers with information that might help solve a crime... In the past year, people sharing our posts has helped us to solve crimes, bring guilty parties to justice, and find missing people. One of the most memorable examples is perhaps the case of Marissa Shephard and Tyler Noel, who were wanted in connection with the December 2015 murder of Baylee Wylie in Moncton. Mr. Noel evaded police for three weeks, while Ms. Shephard remained a fugitive for two and a half months. Throughout the investigation, we saw thousands of people sharing our calls for information about Ms. Shephard's whereabouts, and keeping the case in the public eye until she was apprehended." Daily Gleaner, A7

*** This bill will save lives. Why are the Liberals against it?**
An opinion piece states, "Constable David Wynn died on duty, but it didn't have to be that way. It happened in January 2015, when Wynn and Auxiliary Constable Derek Bond were at a casino in St. Alberta, Alta., confronting a suspect about a stolen vehicle. The suspect, Shawn Rehn, shot both officers and fled the scene, later committing suicide. Bond survived his injuries; Wynn did not. Rehn never should have been at the casino that night, much less out on the streets. Months earlier, he was released on bail despite facing 29 outstanding Criminal Code charges. Rehn was a poster boy for the "revolving door" criminal, with a record spanning 20 years and 206 charges. Yet the court consented to his release on a cash bail and a number of conditions, which he subsequently broke. We know how that ended: with a widow, three children without a father and a family changed forever. The problem was that the court never heard Rehn's criminal history during his bail hearing — an oversight that makes entirely no sense. Indeed, risk assessment 101 dictates that past negative behaviour is the best predictor of similar future behaviour. But courts can't make proper assessments unless they actually hear about a bail applicant's past criminal activity. That's where Bill S-217 comes in. Proposed by Conservative Senator Bob Runciman, the bill proposes a simple amendment to the Criminal Code that would change the word "may" to "shall." That move would require the prosecutor or police representing the Crown to put an accused's criminal record, recent charges and/or "breach of trust" offences before the court. The judge still

maintains absolute independence, and the decision to release or detain remains his or hers alone. Yet for some unconscionable reason, the Liberals seem determined to kill the bill." CBC News

*** Amanda Lindhout kidnapping: Accused to face trial next October**
A man charged with taking journalist Amanda Lindhout hostage in Somalia is slated to face trial by judge alone next October. Three weeks have been set aside for the trial of Ali Omar Ader, which will come more than two years after he was arrested and over nine years after the abduction. Lindhout and Australian photographer Nigel Brennan were seized by masked gunmen near strife-scarred Mogadishu in August 2008. Both were released on Nov. 25, 2009. Ader, a Somalian national, faces a criminal charge of hostage-taking for his purported role as a negotiator. He was arrested by the RCMP in Ottawa in June 2015. The Mounties said Ader, 39, had been in town for a few days but the national police force has not publicly confirmed how he arrived in Canada. At the time, RCMP Asst. Commissioner James Malizia said successfully prosecuting such a case "depends on a certain level of discretion." Canadian Press (Global News)

*** Death in disguise: Seized pills confirmed to be fentanyl masquerading as Oxycontin**
On the street, they have a few nicknames: green monsters, greenies, green beans, green apples. They're 100 times stronger than morphine, and have caused an increasing number of deaths in Newfoundland and Labrador in recent years. It's fentanyl, an extremely potent synthetic pain medication, and it doesn't just come from pharmaceutical companies. Drug dealers are cooking them up in home labs and selling them disguised as less-potent Oxycontin pills and other drugs. On Wednesday, police said "Oxycontin" pills seized by the RNC/RCMP's Combine Forces Special Enforcement Unit (CFSEU) last month as part of Operation Titanium have been confirmed by Health Canada to be fentanyl. Police believe the pills were made in a clandestine lab and not by a pharmaceutical company, since they look identical to Oxycontin 80s - green with the number 80 stamped on one side and "CDN" on the other. Tree Walsh, co-ordinator of the AIDS Committee of Newfoundland and Labrador's Safe Works Access Program (SWAP), says the disguised fentanyl isn't a new thing in this province. "Even cocaine is laced with fentanyl now," she says. "It's in essentially everything." The homemade pills are especially deadly since their fentanyl content is never consistent, Walsh says. There could be none in one pill and an excessive amount in another, leading to an almost instant death. Walsh is confident if those 252 pills seized by police had made their way to the street, it would have resulted in multiple overdoses. The Telegram, A1/A3

*** More police presence needed in Hanwell**
Hanwell Mayor Chris Melvin says it's time for the community to come together to protect itself from an increased number of crimes. Thieves have been helping themselves to items left in unlocked vehicles, sheds, garages and houses. "It's not a sharp spike in crime but there has been an increase in thefts over the past couple of months. Other communities are also seeing the same thing," he said. According to the Keswick RCMP detachment, the thefts have occurred throughout the community, but especially in the Brookdale and Starlite subdivisions. Daily Gleaner, A2

*** Kelowna RCMP detachment commander announced**
Kelowna RCMP have announced Insp. Brent Mundle will officially take the reins as their detachment commander in the new year. The announcement was made on Wednesday by Chief Supt. Brad Haugli, commander of the B.C. RCMP's Southeast District, in consultation with Kelowna City Manager Ron Mattiussi. Global News (2016-12-21)

*** Surrey RCMP release 10 most wanted list**
These folks are on the naughty list, but you could get on the nice list if you have information that leads to an arrest. Surrey RCMP have released their wish list this year, naming the top ten most wanted criminals, along with a public call for tips. Each of the offenders are wanted for "numerous charges." The Province, A10

*** Terrace Mountie gets suspended sentence for assaulting teen**
A veteran B.C. Mountie convicted of assaulting an Indigenous teenager in Terrace, B.C., has been handed a suspended sentence with 12 months probation. RCMP Const. Bruce Lofroth was charged after

video surfaced in 2014 of a violent arrest of a teenage boy on a Terrace sidewalk Lofroth was sentenced Wednesday afternoon in a Terrace court. Provincial judge Edmond de Walle, who was brought in from Salmon Arm, also ordered Lofroth to perform 100 hours of community service and pay a $200 fine. In the video, played at Lofroth's sentencing hearing in October, a Mountie in black leather gloves appears to punch the youth's body and head. After the boy is handcuffed, the officer then appears to strike him in the face The video sparked two investigations. One was an RCMP code of conduct review. The second was a probe by the Independent Investigations Office of B.C. Lofroth was charged with one count of assault and placed on administrative desk leave. He pleaded guilty in August. CBC News (2016-12-21); Times Colonist (2016-12-22)

*** Police raid leads to couch fire in Moncton home**
The RCMP's tactical unit wound up in a literal firefight this week when a "flash-bang" device tossed into a home during a raid accidentally set a couch ablaze. The Emergency Response Team ended up carrying the couch outside where the fire was extinguished by police. The police team was called Tuesday to help detain people in a one-storey home on Shirley Avenue, between John and York Streets, in downtown Moncton. As part of the raid, police used a "flash bang, a non-lethal explosive device" that creates a burst of light and sound to disorient people and help the officers enter the house. The device landed on a couch in the home, setting it on fire as it discharged. Mounties were able to extinguish the fire before the Moncton Fire Department arrived. No one was injured in the incident. Telegraph-Journal, A4 (Times & Transcript)

*** Surrey's singing Mounties spread Christmas cheer**
Their shifts are spent patrolling a city plagued by gunfire and gang violence. With some 60 shootings in 2016, Surrey RCMP have no shortage of crimes to solve. Still, a few busy Mounties are finding time to continue a decade-old Surrey RCMP holiday tradition. "It's just another thing, another gesture of just giving," Const. Parnelli Parnes said. This year, the three-year Mountie is leading a team of more than a dozen caroling cops, who are lending their voices to spread Christmas cheer at local seniors' homes. Global News

*** RCMP extended family answers call**
Ever since her son Zachary was born, Heidi Hessing has never spent his birthday or Christmas away from him. So when Hessing, who is the spouse of an RCMP officer stationed in Lillooet, B.C., learned she wouldn't be able to see Zachary for his 20th birthday on Wednesday, she enlisted the help of some local "angels" to ensure he wouldn't feel alone. A few days ago, Hessing turned to a Facebook group for spouses of RCMP officers with a simple request. Could someone in Lethbridge please bring Zach some balloons? Her request resulted in an outpouring of support. Although they have never met Hessing, about two dozen local RCMP members, spouses and their children took up her call. Their mission was dubbed "Operation: Hug My Child," and they went above and beyond her request. Lethbrdge Herald (2016-12-21)

*** La GRC sauve un homme qui s'était effondré sur la glace d'une rivière**
En fin de semaine, des agents de la GRC et d'autres premiers intervenants ont sauvé un homme qui s'était aventuré sur les glaces de la rivière Saint-Jean. Samedi, vers 11h30, la GRC a reçu un appel l'informant qu'un homme de la Première Nation de Tobique s'était aventuré sur les glaces et qu'il s'y était effondré, inconscient. Les policiers ont réussi à atteindre l'homme et à le transporter près de la berge pour lui donner les premiers soins. L'Acadie Nouvelle, 8

*** Police, firefighters get together to put on big blood drive in Metro Moncton**
With days to go before Christmas, Metro Moncton firefighters and police joined forces to give the best gift they could think of: life. On Wednesday, the Codiac Regional RCMP and the Moncton Fire Department held Guns and Hoses, a bi-annual blood drive. Times & Transcript, A6

*** Rescued bald eagle on the mend**
An injured eagle that was coaxed to safety in southeastern B.C. with the help of a hockey stick and a chunk of salmon appears to be on the mend. The juvenile male bald eagle, dubbed Lily, appeared to have a broken wing when it was spotted in Revelstoke on Friday. But with no trained wildlife officers

nearby, it was up to two passing RCMP officers to use Canadian ingenuity to nab the bird. The officers used a hockey stick to extend a chunk of salmon to the starving bird, and it followed the fish to a spot where rescuers could cover and gently restrain him. Calgary Sun, A35 (Times Colonist, Calgary Herald)

*** Shediac holds property tax rate steady**
Shediac will maintain its property tax rate at $1.4784 per $100 of assessment for a 16th consecutive year. In a news release, Mayor Jacques LeBlanc says the town's 2017 operating budget of $11.5 million reflects 3.09 per cent growth in the town's tax base, to $655 million from $635.2 million, but also a decrease in its unconditional grant from the province to $148,500 from $214,000. Also, a 4.6 per cent jump in RCMP costs, to $1.3 million from $1.24 million comes on the heels of an increase the previous year of 5.8 per cent. Times & Transcript, A3

Drugs, Cash Seized
After six months of investigation, Edmonton police drug and gang investigators raided three homes, seizing hundreds of thousands of dollars worth of drugs and cash, and arrested three men with alleged ties to organized crime. More than $108,000 in Canadian currency was seized during the warrant executions, along with variety of illegal drugs including: Two kg of cocaine with a street value up to $110,000; 10 kg of marijuana with a street value up to $50,000; 357 grams of psilocybin with a street value up to $3,570; 103 grams of hashish with a street value up to $1,550; 84 grams of ketamine with a street value up to $4,210; 13 grams of shatter with a street value up to $965; and 44 kilograms of phenacetin with a street value up to $154,000. Edmonton Sun, A7 (Edmonton Journal)

*** Investigation launched into foster-care death**
Circumstances surrounding the death of an 18-year-old woman in foster care, in a home in Oakbank, will be subject to an external investigation requested by Sandy Bay Child and Family Services. Lydia Whitford was found dead in a licensed foster home last summer in Oakbank, in the rural municipality of Springfield, but her death was ruled a homicide only this week. Oakbank RCMP said Tuesday they responded on July 14 to the home where Whitford's body was found. The RCMP's major crime and serious crime units also are investigating. Winnipeg Free Press, B3 (2016-12-22); CBC News (2016-12-21)

*** Regina police renew rewards for information on cold cases**
The rewards for the Tamra Keepness disappearance and a 2011 triple homicide were renewed for another year at the monthly Regina board of police commissioners meeting Wednesday. Keepness was last seen at her home in Regina on the evening of July 5, 2004. She was reported missing the next morning. On July 13 that year, a $25,000 reward for information about Keepness' location was made. Ten years later, the reward was increased to $50,000. On Aug. 6, 2010, the bodies of Gray Nay Htoo, his wife Maw Maw, and their three year-old son Seven June were found at a home in Regina. The family were Karen refugees from a Thailand refugee camp and had lived in Regina for approximately two years. Since the beginning of the investigation, the RPS has worked with an RCMP member of Karen descent in order to communicate with the Karen community. StarPhoenix, A6 (Leader-Post)

*** Remains of missing Red Deer woman found on rural property**
A Red Deer woman, who went missing in February, has been confirmed dead after human remains were discovered on a rural property. Lorie Nichols, who was 49, was last seen in the Michener area in Red Deer on the evening of Feb. 23. She was reported missing that evening by her family. Blackfalds RCMP said in a statement on Wednesday that they were alerted to the discovery of human remains last Friday. Red Deer RCMP Forensic Identification Section, and Major Crimes South, completed an examination of the scene and investigated the circumstances of the discovery of the remains. Red Deer Advocate, A6

*** OPP back fentanyl awareness initiative**
Ontario Provincial Police are joining the fight to educate the public about the dangers of fentanyl, which has been linked to more than 500 deaths in the province over the past five years. The force is releasing public service announcements and says it will post or link content to its Facebook and Twitter accounts in an effort to make the public aware of the threats posed by fentanyl and similar opioids. RCMP

Commissioner Bob Paulson and Chen Zhimin, the vice-minister of China's public security ministry, have agreed to boost efforts to disrupt the flow of the drug and other opioids. British Columbia has been hard-hit by the opioid crisis - fentanyl was detected in 374 overdose deaths during the first 10 months of 2016. Waterloo Region Record, B5

*** 'He Had Four Months With Them And He Took Them Away'**
The mother of two boys killed by their father in a double-murder suicide said Wednesday her sons only moved in with their father this year so that they could play hockey in Spruce Grove. Ryder MacDougall, 13, and Radek MacDougall, 11, and their father Corry MacDougall, 39, were found dead in MacDougall's Spruce Grove home Monday morning. The boys moved to Spruce Grove this past summer after living in Whitecourt, where their mother and stepfather still live. RCMP have since confirmed the triple death was a double homicide-suicide and gunshots were the boys' cause of death. Calgary Sun, A7 (Edmonton Sun, Calgary Herald, National Post) (2016-12-22); CBC News (2016-12-21)

*** Man accused of sexual communications with minor**
A man in Dallas, Texas, is accused of having sexual communications over the Internet with an underage person in the Indian Head area. Indian Head's RCMP detachment received the complaint on Nov. 21, 2015. Police said the complaint concerned inappropriate online communication that was sexual in nature between an adult man and a minor in the Indian Head area. Police would not specify the age or gender of the victim. An investigation was carried out with the assistance of the Saskatchewan Internet Child Exploitation Unit (ICE), and police later determined the male suspect was located in the United States. Since the suspect was in the U.S. and the communication originated from that country, police passed the information along to the Department of Homeland Security. Last week, a man in Dallas was identified and arrested in connection with the investigation. Leader-Post, A3

*** Credit card scam widespread**
The RCMP is warning businesses throughout the province to be on the alert for a credit card scam targeting merchants. Const. Jeremiah Donahue of the RCMP's Gander detachment said new evidence shows that the recent fraudulent credit card activity reported in Gander is much more widespread than previously thought. He also noted that the pattern of criminal activity suggests more than one culprit may be involved. The Telegram, A3

*** RCMP officers conducting checkstops over holidays**
December is Impaired Driving Awareness Month in Alberta and Corporal Curtis Peters, media relations officer with the RCMP K Division, said checkstops will be conducted across the province throughout the month of December. Alberta RCMP has partnered with Mothers Against Drunk Driving (MADD) to promote Impaired Driving Awareness Month through the media and social media. The most recent statistics on MADD Canada's website show 1,497 out of 2,546 fatal collisions across the country in 2012 involved drivers who had some sort of alcohol or drug presence in their systems. Airdrie City View

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** How bad is Canada's recidivism problem? Nobody knows.**
Numbers matter in banking, golf and lotteries — and no less in the murky world of crime and punishment. By the numbers, crime in Canada is a swamp of confounding data. According to recent statistics, a little over two million incidents were reported to police in Canada in 2014. As a result of those reports, there were 228,328 guilty findings in adult criminal courts. Of those, 64,604 resulted in admissions to provincial or territorial custody and 4,781 to federal prisons — where those who commit the more serious crimes are sent if they receive a sentence of two years or more. Try to figure out how many of those people reoffend, however, and the numbers start to baffle. Consider recidivism rates in the federal system (federal and provincial jurisdictions overlap, of course). According to the 2014 Correctional Service of Canada (CSC) offender population profile, about eight out of 10 male and seven out of 10 female offenders have previous convictions. In the 2013 report, the stats were nine out of 10 men and eight out of 10 women. (…) A significant portion of the prison population suffers from serious mental disorders. According to a 2015 Correctional Service Canada report, 'National Prevalence of Mental Disorders Among Incoming

Federally-Sentenced Men', 44.1 per cent of inmates have antisocial personality disorder, 15.9 per cent have borderline personality disorder, 29.5 per cent suffer from anxiety disorders and 3.3 per cent are classified as "primary psychotic". iPolitics

Justice - L'ex-juge Jacques Delisle ne sera pas remis en liberté
L'ex-juge de la Cour d'appel Jacques Delisle, qui purge une peine de prison à perpétuité pour le meurtre de sa femme, va demeurer derrière les barreaux en attendant le résultat de sa demande de révision judiciaire du verdict auprès de la ministre fédérale de la Justice, a tranché un juge mercredi. Jacques Delisle se dit victime d'une erreur judiciaire, et il a demandé à être libéré pendant que sa demande est étudiée à Ottawa. Mais le juge Benoit Moulin, de la Cour supérieure, a refusé que l'homme de 81 ans soit remis en liberté, car il estime que cela pourrait miner la confiance du public envers le système de justice. Il a rendu sa décision mercredi matin après avoir entendu cet automne les arguments du procureur de la Couronne et des avocats de l'ex-juge. " La confiance du public dans l'administration de la justice commande que M. Delisle continue de purger sa peine : un public formé de personnes raisonnables, bien informées des dispositions législatives et des circonstances réelles de l'affaire, qui apprécient les fondements de notre système de justice criminelle et qui ne sont pas mues par la passion mais par la raison, n'accepteraient pas la mise en liberté, à ce stade des procédures ", écrit le magistrat dans sa décision. Presse canadienne (Le Devoir, A5, Le Droit, Le Soleil, La Tribune, Le Nouvelliste); Canadian Press (Chronicle-Herald, A8); Postmedia Network (London Free Press, StarPhoenix, Leader-Post, National Post, Ottawa Citizen, Windsor Star, Vancouver Sun, Edmonton Journal, Calgary Herald, Montreal Gazette, Province); Agence QMI (Journal de Québec, Journal de Montréal)

* **NS man convicted of child luring, child porn offences granted day parole**
A Nova Scotia man convicted of child luring and accessing child pornography has been granted day parole. Alexander John Ernst was sentenced to three years in prison in June 2015. Parole Board of Canada documents obtained by Global News show that Ernst used social media to attempt to lure underage females, and one of the potential victims turned out to be an undercover police officer. A search of his computer following his arrest also turned up 250 deleted images of child pornography. Global News (2016-12-21)

* **Saskatoon police carding practice evolves in face of criticism**
Saskatoon's police chief says officers are changing the way they approach street checks. The police practice of stopping and quizzing individuals at random emerged as a hot button issue this year. Critics characterized it as thinly-veiled racism. Police chief Clive Weighill said he appreciates the concerns of people who feel racially targetted. To that end, police now explain to a person why they are being stopped. "I think the good compromise is, and we've already told our officers to do this, if you do stop somebody the very first thing out of your mouth should be the reason why you're stopping that person," he said in a recent interview. But Weighill said it's counterproductive for officers to begin an exchange explaining that a person does not need to answer any questions. CBC News

* **B.C.'s first responders at the breaking point: MENTAL HEALTH CRISIS**
Incessant overdose calls and multiple drug deaths during shifts are taking a serious toll on the mental health of B.C. paramedics, according to their union. Bob Parkinson, director of health and wellness for the Ambulance Paramedics and Emergency Dispatchers of B.C., said even before the current fentanyl-related overdose crisis, paramedics were feeling strained while responding daily to life-and-death situations. (...) With an overdose crisis across the province, paramedics in small communities are responding to calls and reviving friends' kids or handling multiple overdoses involving casual drug users at parties, Parkinson said. Parkinson said depression and anxiety are the most common mental health issues among paramedics, but some are dealing with post-traumatic stress disorder or struggling with family problems and their own addiction issues. He's worried the workforce will lose quality women and men. "You know how we cope as a first responder or a paramedic or a dispatcher - we go 'til we break and then it's too late," he said. Both Parkinson and Bronwyn Barter, president of the union, are pleading

for more resource support and for government to quickly respond to an ORH report recommending an increase in B.C. Emergency Health Services' fleet size. (...) Barter said paramedics are accustomed to responding to life-and death situations, but the overdose crisis has changed the nature of their work. Province, A14 (Vancouver Sun)

*** Fentanyl campaign begins with arrests**

Talk about underlining a point. Just as Ontario Provincial Police launched a public relations offensive Wednesday against the growing scourge of fentanyl and similar opioid drugs, London police were wrapping up the seizure of 30 fentanyl patches of various dosages. The OPP said it's moving ahead with public service announcements and links to its Facebook and Twitter accounts in a bid to make the public better aware of the dangers of fentanyl, a powerful painkiller whose use has led to a dramatic spike in overdose deaths across the country. In London, advocates for the drug-addicted say misuse of another drug, the stimulant crystal meth, is much higher than the misuse of fentanyl. The local crisis is so bad the city's homeless coalition is launching its own awareness campaign next year. London police say fentanyl seizures have not become common in London. still, the city has not been immune from the fallout of the drug's abuse. dozens of vials of the potent drug in liquid form went missing from a London hospital five years ago, as the drug's street crisis in canada began. At the time, local outreach workers blamed up to 30 deaths in the previous two years on fentanyl overdoses. Wednesday, London police said they arrested two people and seized prescription fentanyl patches - used to administer the drug through the skin - after investigating a vehicle in the Millbank drive area. London Free Press

*** For addicts, road to recovery starts with a wait: At Royal Jubilee, 45 people are on list for treatment at its 21-bed detox unit**

While officials scramble to set up places where illicit drugs can be safely injected, addicts wanting to get clean and sober are looking at wait-lists for detox - the first step on the road to recovery. It makes no sense whatsoever, said Carole James, B.C. NDP MLA for Victoria-Beacon Hill. "We're hearing that the fentanyl crisis has people who are ready, ready to go to detox," James said. "Everyone who works in the addictions field knows that in order to be successful, you have to grab someone when they are ready." Island Health is applying to open three supervised injection sites in Victoria. Such sites offer a hygenic place in which users can inject drugs under the supervision of health professionals. In the meantime, it plans to open temporary overdose-prevention sites. There were 755 fatal drug overdoses in B.C. between January and November, an increase of more than 70 per cent increase over the same period in 2015. The opioid fentanyl has been linked to about 60 per cent of drug deaths in B.C. this year. Island Health spokeswoman Kellie Hudson said 45 people are on a wait-list for the 21-bed detox unit at Royal Jubilee Hospital. That is more than double the usual number, but isn't out of the norm for the Christmas season, especially given the cold weather, she said. Times Colonist, A3

*** Naloxone saved pup from drug overdose**

Two doses of naloxone saved a six-month-old puppy from an overdose after it ingested drugs in Mount Douglas Park. Veterinarian Helen Rae said Chico was brought to the McKenzie Veterinary Hospital on Friday evening after her owners noticed she was wobbly and appeared to be under the influence of drugs. The owners knew the puppy had eaten something while on leash in the Saanich park but didn't know what. Rae noticed the dog, a pug cross, couldn't walk straight, seemed sedated and had constricted pupils. "We thought it was marijuana at first, because we see so many of those [cases], but she didn't quite fit the picture," she said. Rae made the dog vomit and gave her activated charcoal to stop further absorption of the drug, but Chico's condition continued to deteriorate. The vet decided to administer two low doses of naloxone. Naloxone reverses the effects of opioid drugs such as heroin, fentanyl, oxycodone and morphine. "She went from being flat on the table, unable to lift her head, to lifting her head and responding to voice and stimulation," Rae said. While pets are often brought to the vet after consuming marijuana, Rae said this is the second time she has seen a dog overdose from opioids in her 18-year career. A public health crisis has been declared because of a rise in deaths linked to fentanyl, an opioid that is 50 to 100 times more powerful than heroin. Times Colonist, A1/Front

*** Transit Police to get more Tasers**

Transit Police Chief Doug LePard is ordering a three-fold increase in the number of officers equipped with Tasers as a way of providing an alternative to using guns during critical incidents. LePard said

Wednesday that there are currently about 20 officers trained and equipped with Tasers among the force's 120 front-line officers. That number should reach 60 during the coming year. "I want police officers to have that option if it's appropriate," he said. "You never want to be forced to use deadly force if there is an option." The directive would mean one officer in every pair would be equipped with a Taser that could be used to subdue a person acting dangerously, while the other officer would stand "lethal overwatch" with a standard-issue Glock handgun. LePard made the comment in response to the shooting earlier this week of a man armed with a machete-like weapon at the 29th Avenue SkyTrain Station. Transit officers had locked the man inside a train, but he escaped after kicking out a window and was shot by Vancouver police. The man remains in serious condition in hospital but is expected to survive. Metro Vancouver is the only region in Canada with dedicated transit police. The shooting provides a window into the unique role of transit police and their relationship with other municipal and RCMP forces in the region. Province, A3

*** 'It's just tragic': Therapist concerned about treatment programs in Cape Breton**
A 70 per cent increase in the number of suicides from 2014 to 2015 has a local clinical therapist questioning the present state of mental health and addictions treatment programs in Cape Breton. "People want help," says Todd Vassallo, a psychotherapist based in Sydney. "But we need to be human about this." Vassallo said he became increasingly concerned when he read data from the Nova Scotia Medical Examiner's office indicating that suicide deaths in Cape Breton (including acute drug toxicity suicide deaths) had risen from 14 in 2014 to 24 in 2015. That figure could be even higher since the data for 2015 was incomplete. In 2009, the number of suicide deaths in Cape Breton was 25. In 2010, it declined to 11. The following two years it increased again to 21 deaths in 2011 and 22 deaths in 2012. In 2013, the number of suicides island-wide dropped to 17. As for acute drug toxicity deaths last year, it was determined that suicide was the cause of death in seven cases and nine were accidental in nature. Vassallo began to notice the increasing suicide rate last year but the provincial numbers didn't seem to mirror what he saw happening around him. Cape Breton Post, A1

MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Quebec calls public inquiry into systemic racism**
Premier Philippe Couillard has launched a public inquiry into the treatment of aboriginals, acquiescing to a long-time demand of indigenous chiefs and women's groups. The announcement drew cheers and tears of joy at the Val-d'Or native friendship centre, where women had gathered to watch the news conference on Wednesday. "We experience many things - racism, injustice, so ... we are very relieved that there's a public inquiry. For once, we'll be treated as equals," Cherilyn Papatie told Radio-Canada. Calls for an independent inquiry grew louder this fall after an investigation into allegations that provincial police abused indigenous women in Val-d'Or concluded there was not enough evidence to lay charges. Quebec's director of penal and criminal prosecutions (DPCP) did not charge officers in Val-d'Or, but charged two retired SQ officers from Schefferville for sexual assault alleged to have occurred in the 1980s and 90s. "The impact of these denunciations is that other women and men in Quebec now have a forum to tell their stories," said Édith Cloutier, executive director of the Val-d'Or native friendship centre. "We are celebrating the moment; these women know they just made history." The Couillard government had been opposed to holding an independent public inquiry, saying concerns would be investigated as part of the federal inquiry into missing and murdered indigenous women. Gazette; Globe and Mail; CBC News

*** Racisme systémique - Le Québec s'ouvre à la critique : Le gouvernement Couillard lance l'enquête publique que réclamaient les autochtones**
Après bien des réticences, le premier ministre Philippe Couillard a annoncé la tenue d'une commission d'enquête québécoise sur les relations entre les services publics et les autochtones sous le titre " Écoute, réconciliation et progrès ". Présidé par le juge à la retraite de la Cour supérieure Jacques Viens, la commission d'enquête visera non seulement les corps policiers, mais aussi les services sociaux, la protection de la jeunesse, les services correctionnels et le système de justice. Alors que jusqu'ici, tant le

premier ministre que ses ministres avaient évité de parler de racisme systémique en ce qui a trait aux autochtones, Philippe Couillard a reconnu, mercredi, le phénomène. " Ce que nous voulons accomplir, c'est d'examiner les enjeux systémiques, incluant le cas du racisme, a-t-il affirmé en réponse à une question d'une journaliste. Je veux le dire ouvertement : le Québec n'est pas différent d'autres sociétés. Une des causes qui rassemble les Québécois, " c'est notre désir de lutter contre l'intolérance, la discrimination, l'exclusion et la stigmatisation ", a déclaré Philippe Couillard dans sa présentation. " Parce que peu importe la couleur de notre peau, nos croyances ou qui nous aimons, personne ne mérite d'être humilié, diminué ou exclu. " Le premier ministre était accompagné de quatre de ses ministres -- Stéphanie Vallée (Justice), Martin Coiteux (Sécurité publique), Geoffrey Kelley (Affaires autochtones) et Lucie Charlebois (Protection de la jeunesse et Santé publique) --, ainsi que du chef de l'Assemblée des Premières Nations du Québec et du Labrador (APNQL), Ghislain Picard, et du grand chef des Cris, Matthew Coon Come. Le Devoir, A1

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Drug impaired driving fatalities on the rise in Washington State
The number of fatal car accidents involving drugged drivers is on the rise in Washington State. Shortly after pot was legalized in Washington, the percentage of potentially stoned drivers involved in fatal car accidents more than doubled, according to a study by the AAA Foundation for Traffic Safety. The most recent data suggests that in 2014, 17 per cent of drivers involved in fatal accidents had THC - the active ingredient in marijuana - in their blood. According to Shelly Baldwin, legislative and media relations manager for the Washington Traffic Safety Commission, the issue still looms large. CBC News (2016-12-21)

Marijuana shop raided. Owner charged, $20,000 of pot seized
A medical marijuana dispensary owner has been charged following a police raid of the business. Vice and drug officers - armed with a search warrant - arrived at the Royal Farmacy on Main Street East at Kenilworth Avenue around 1 p.m. Tuesday, where they seized $20,000 worth of marijuana and marijuana products, including edibles. Hamilton Spectator, A6

Perquisition dans une boutique de cannabis
La police de Gatineau a frappé mercredi après-midi en mettant la clef dans la porte de la première boutique de vente libre de marijuana à avoir pignon sur rue du côté québécois de la rivière des Outaouais. Au terme d'une courte enquête qui avait été entamée à peine 24 heures plus tôt à la suite d'informations reçues du public, des policiers munis d'un mandat de perquisition se sont rendus vers 14h30 au commerce Clinique Canna-Plus, situé au 341, boulevard Saint-Joseph, en face des Galeries de Hull. Sur place, trois femmes et un homme ont été arrêtés puis transportés au quartier général du Service de police de la Ville de Gatineau (SPVG), où ils devaient demeurer détenus toute la nuit en vue de comparaître devant le tribunal jeudi. Ces quatre individus pourraient faire face à des accusations de possession et de trafic de cannabis. Le Droit, 5

PUBLIC SERVICE / FONCTION PUBLIQUE

Ils se privent d'argent pour éviter Phénix
Les fonctionnaires fédéraux sont de plus en plus nombreux à se priver de revenus en refusant les promotions ou le temps supplémentaire, de peur que cela n'affecte leur salaire. «Depuis quelques semaines, on nous rapporte de plus en plus de cas d'employés qui refusent de prendre l'intérim de postes supérieurs ou de faire du temps supplémentaire. Ils sont trop craintifs à l'idée que Phénix «joue» dans leur paie régulière», affirme la porte-pa-role de l'Alliance de la Fonction publique du Canada (AFPC), Monique Déry. Le syndicat, qui regroupe 128 000 fonctionnaires, croit que le phénomène ne peut que prendre de l'ampleur dans les prochaines semaines si les problèmes du système de paie ne sont pas bientôt réglés. Journal de Québec, 7

*** CAPE says federal government isn't offering what it offered other unions**
A union representing thousands of federal government economists, translators and Library of Parliament workers says contract talks are at an impasse because the government isn't offering what it gave members of other large public service unions earlier this month. The Canadian Association of Professional Employees, or CAPE, has rejected the offer to some of its 12,000 members. The union's leadership says it's upset some of its employees aren't being offered the same raises as members of other unions, and that it isn't getting protection for members that give the government what it calls "evidence-based advice," according to a media release. CBC News

*** HP Canada complaint raises concerns over federal procurement process**
A spat between Hewlett-Packard Canada and Shared Services Canada (SSC) is bringing the accountability of the federal government department into sharp focus. The computer supplier filed a complaint with the Canadian International Trade Tribunal (CITT) in November, alleging that SSC wrongfully rejected its bid on a high-performance computing solution. The $430.4 million project in question is said to be for a weather forecasting supercomputer to be used by Environment Canada. HP Canada accuses the SSC of unfairly concluding that its bid didn't meet the conditions set out in its request for proposal (RFP). Reports said that HP has asked a federal court to determine whether SSC wrongly invoked a national security exception (NSE) during the procurement process and chose a solution from IBM. In 2012, SSC notified suppliers that it would invoke NSEs for procurements related to email, telecommunications and data centres. These exemptions are intended for use when there is a national security concern around a project. They enable government departments to avoid following procurement rules laid down by trade agreements when purchasing solutions such as IT equipment. An NSE means that they don't have to consider proposals from companies that may put other governments' interests first. IT World Canada (2016-12-21)

OTHER / AUTRE

Ses deux enfants sont nés en captivité
Les parents d'un Canadien retenu en otage en Afghanistan se désolent que la plus récente vidéo de sa famille et lui ait été leur première occasion de voir leurs petits-enfants, nés en captivité. Joshua Boyle et sa femme américaine, Caitlan Coleman, ont été enlevés en 2012 alors qu'ils voyageaient dans la région montagneuse du nord de l'Afghanistan. Dans une vidéo dévoilée plus tôt cette semaine, on peut apercevoir le couple et ses deux enfants implorer les «gouvernements des deux côtés» de parvenir à une entente pour leur libération. Les parents de Joshua Boyle affirment qu'ils ont entrevu leurs deux petits-enfants pour la première fois dans cette vidéo. Les enfants grimacent face à la caméra alors que les cliquetis des chaînes de Joshua se font entendre en trame de fond. Par communiqué, Patrick et Linda Boyle ont qualifié d'«incroyable» tout ce que Joshua et sa femme ont dû faire pour protéger les bambins. Selon une lettre de leur fils, sa femme et lui protègent leurs garçons en prétendant se livrer à un jeu avec les talibans. *** Latvian envoy defends Canadian-led NATO mission**
Latvia's ambassador to Canada is defending a NATO decision to send a Canadian-led battle group to his Baltic country in 2017, after a Russian diplomat suggested this act of deterrence aimed at Moscow was a waste of resources that would be better spent fighting terrorism. Karlis Eihenbaums said it's Moscow's aggression that has made the deployment necessary, including a buildup of Russian military assets on Russian territory adjoining Eastern and Central European countries. Alexander Darchiev, Moscow's ambassador to Canada, told The Globe and Mail in an interview on Wednesday he felt the coming North Atlantic Treaty Organization deployment to Latvia was an unwise diversion of resources from fighting what he considered the biggest menace: terrorism. Mr. Darchiev acknowledged it was a "sovereign decision" made by Canada but said he felt it would be bad for European security. Mr. Eihenbaums said, however, that NATO's decision to shore up its eastern flank - including sending British fighter jets to Romania and U.S. tanks and soldiers to Poland - was triggered by Russia's annexation of Crimea in 2014

and the ongoing support Moscow is providing to pro-Russian militants in Eastern Ukraine still fighting a bloody war with Kiev. Globe and Mail

*** Trudeau pays back taxpayers about $38K for personal expenses**
Prime Minister Justin Trudeau reimbursed taxpayers at least $38,000 for personal and family expenses during his first year in office, with extra childcare for his three kids topping the list. CBC News has obtained financial records of more than two dozen reimbursements Trudeau made for food, internet service and caregivers since becoming prime minister on Nov. 4 last year, as well as his payments to National Defence and RCMP for personal and family use of government aircraft. Trudeau has paid National Defence more than $9,000 for personal and family travel on the military Challenger jets, nine such trips so far that included holiday destinations in St. Kitts Nevis and Tofino, B.C. The prime minister also reimbursed the RCMP for use of their aircraft to fly to Fogo Island, N.L., last March, at $556.20. CBC News

INTERNATIONAL

Berlin suspect had been under surveillance
The prime suspect for the Berlin massacre was under covert surveillance for months as a possible terrorist threat until police let him slip through their grasp earlier this month. Anis Amri, 24, a Tunisian asylum seeker who arrived in Germany last year, was investigated for "preparing a serious crime endangering national safety," involving funding the purchase of automatic weapons for use in a terrorist attack. Amri had been arrested earlier this year and was known to be a supporter of the terrorist group thought to be behind the Sousse terrorist attack in Tunisia, as well as being a suspected disciple of a notorious hate preacher. He had multiple identity documents with six different aliases under three nationalities, and a criminal record in Italy and Tunisia. He spent four years in an Italian prison before travelling to Germany after an expulsion order expired. The German authorities, who were facing serious questions Wednesday about how Amri was still at large, tried to deport him in June, but because he had no valid papers proving his nationality he was allowed to stay. In a further twist, Germany had asked Tunisia to issue a new passport for him so he could be deported, but the document only arrived Wednesday - two days after the Christmas market attack that claimed 12 lives. Postmedia Network (The Province, A18, Ottawa Citizen, National Post, Star Phoenix, Leader-Post, Edmonton Journal, Calgary Herald, London Free Press, Windsor Star); Associated Press (Times Colonist, Telegraph-Journal, Times & Transcript, Montreal Gazette, Vancouver Sun, National Post, Global News); Kingston Whig-Standard; Edmonton Sun (Ottawa Sun, Toronto Sun, Winnipeg Sun); * Le Devoir

*** Germany has 7,000 terror suspects at large and is finding it 'almost impossible' to monitor them, former UK intelligence chief says**
Germany is finding it 'almost impossible' to keep track of around 7,000 potential terror suspects in the country, a former British intelligence chief has warned. Richard Barrett, who was head of counter-terrorism at MI6, said the authorities were finding the number of 'live' cases unmanageable. The grim assessment came as German security services face difficult questions following the Berlin Christmas market massacre. Daily Mail

*** Attentat de Berlin: les autorités allemandes critiquées**
Les autorités allemandes faisaient face jeudi à une polémique croissante au sujet des dysfonctionnements qui ont permis au suspect tunisien de l'attentat au camion-bélier à Berlin d'échapper à la police alors qu'il était connu comme islamiste dangereux. «Ce n'est pas comme cela que nous allons garantir la sécurité de l'Allemagne», a dénoncé l'un des responsables du parti conservateur de la chancelière Angela Merkel (CDU), Armin Laschet, à propos des failles ayant empêché l'arrestation ou l'expulsion d'Anis Amri. Les informations que nous avons sur la manière dont les autorités ont travaillé sont choquantes», a-t-il ajouté sur la radio publique. Une chasse à l'homme à l'échelle européenne est en cours contre Anis Amri, un demandeur d'asile débouté de 24 ans, depuis que la justice allemande a lancé un mandat d'arrêt sur tout le continent, plus de deux jours après l'attentat qui a fait 12 morts sur un marché de Noël de Berlin. L'acte a été revendiqué par le groupe État islamique (EI). Six victimes sont

allemandes. Une septième a été identifiée comme étant une ressortissante israélienne, ont annoncé les autorités de son pays jeudi. Agence France-Presse (La Presse, TVA Nouvelles)

*** German market attack suspect's brother urges him to surrender**

Authorities across Europe scrambled Thursday to track down a Tunisian man suspected of driving a truck into a Christmas market in Berlin as one of his brothers urged him to surrender. Nearly three days after the deadly attack that killed 12 people and injured 48 others, the market in the centre of the capital was due to reopen. German authorities issued a wanted notice for Anis Amri on Wednesday and offered a reward of up to 100,000 euros ($104,000 US) for information leading to the 24-year-old's arrest, warning that he could be "violent and armed." One of Amri's brothers urged him to turn himself in. "I ask him to turn himself in to the police. If it is proved that he is involved, we dissociate ourselves from it," brother Abdelkader Amri told The Associated Press. He said Amri may have been radicalized in prison in Italy, where he went after leaving Tunisia in the wake of the Arab Spring uprisings. Associated Press (CBC News)

Jordan's king vows 'iron fist' response to security threats

Jordan will respond with an "iron fist" to those threatening its security, King Abdullah II said Wednesday after a series of attacks on police and tourists this week left 14 people dead. The extremist group Islamic State has claimed responsibility for some of the shootings, including a gun battle at a Crusader castle popular with foreign visitors. In all, 11 members of the security forces, two Jordanian civilians and a Canadian tourist have been killed in clashes this week. Five gunmen were also killed. The pro-Western kingdom is a key member of a U.S.-led military coalition against IS which controls parts of neighbouring Iraq and Syria. The state news agency Petra quoted the king as saying that "we will respond with an iron fist to any attempts to tamper with the kingdom's security." The Guardian, B6 (Cape Breton Post, Ottawa Sun, Waterloo Record)

Snow-capped end to Aleppo war

Hundreds of rebel fighters and civilians, including small children swaddled in thick blankets, were bused out of war-ravaged Aleppo in heavy snow on Wednesday as the evacuation of former rebel strongholds entered its final phase. Scenes of buses slowly driving out of Aleppo in a shroud of white offered an evocative finale to what has been one of the most brutal chapters in Syria's civil war. The departures from Aleppo pave the way for Syrian President Bashar Assad to assume full control, after more than four years of fighting over Syria's largest city. It marks the most significant victory for Assad since an uprising against his family's four-decade rule swept the country in 2011. The evacuations were set in motion last week after Syria's opposition agreed to surrender its last footholds in eastern Aleppo. Since then, about 25,000 fighters and civilians have been bused out, according to the United Nations. Associated Press (Toronto Star, A12)

MINISTER / MINISTRE

Immigration centres detain hundreds of children each year
An average of 242 children, including babies born in Canada, are held in immigration detention in Canada each year, according to a new report by the University of Toronto. "Conditions of detention are woefully unsuited for children. Immigration holding centres resemble medium-security prisons, with significant restrictions on privacy and liberty, inadequate access to education, insufficient recreational opportunities and poor nutrition," said the report, No Life for a Child, to be released on Parliament Hill Thursday. (…) **Public Safety Minister Ralph Goodale** has been under fire this year after three detainees died in custody of the Canada Border Services Agency. In August, Ottawa announced $138 million in funding to "enhance alternatives to detention" and invest in rebuilding immigration holding facilities. **A spokesperson for Goodale** said the minister welcomed the report as it underlines the government's commitment to create a better, fairer immigration detention system while upholding public safety.

***"Minister Goodale has been clear that he wants to try to avoid housing children in detention facilities, as much as humanly possible. He welcomes the report's suggestion that when decisions are made on the detention of parents, the best interests of their children should be given greater prominence,"* the spokesperson** said in an email. The report shows living in immigration detention causes serious psychological harm to children. Those who have lived in detention experience increased symptoms of depression, anxiety, post-traumatic stress and suicidal ideation, as well as developmental delays and behavioural issues. "These mental-health consequences often persist long after the children have been released, affecting their adjustment to life post-detention," the 77-page study said. Toronto Star, GT6

Blame Montreal's airport folly on a broken management model

Perhaps no three words in the French language generate more fear and loathing among air travellers these days than "Bienvenue à Montréal." To land in Canada's secondlargest city from an overseas or U.S. destination means experiencing customs wait times that stretch up to two hours (the worst in the country) and traffic bottlenecks exiting the airport that rival those of a developing country. Almost none of this is the fault of Aéroports de Montréal (ADM), the non-profit authority that runs Pierre Elliott Trudeau International Airport under a longterm lease from the federal government. ADM does the best it can, with limited financial resources and no control over customs or highways. But while the management model Ottawa adopted for Canada's airports more than two decades ago has been a good deal for the federal government, it's clearly not working for Montreal. (…) Montreal's business leaders have had enough. This month, a group led by ADM chief executive officer James Cherry and Montreal Board of Trade president Michel Leblanc wrote an open letter to **Public Security Minister Ralph Goodale** to complain about the CBSA's foot-dragging. "The higher traffic levels that Montreal-Trudeau has experienced this summer are not a surprise," they said, noting that the arrival of new carriers and expanded seasonal schedules of other airlines was known by CBSA well in advance. "The customs wait times ... are unacceptable and tarnish Montreal's image as a [global] metropolis." Globe and Mail, B4

TOP STORIES / MANCHETTES

Feds warn of potentially crippling 'insider' cyberthreat to key sectors

Federal officials have quietly warned operators of electrical grids, transportation hubs and other key infrastructure of the cyberthreat from insiders who could unleash devastating viruses and cripple systems, internal government notes reveal. Crucial networks that Canadians rely on for everyday needs face a "substantial threat" from rogue employees out to wreak digital havoc, warn the **Public Safety Canada** briefing notes. The insider threat is difficult to detect and can cause real damage." No special hacking skills are required, just a portable memory key loaded with a malicious code. As a result, it is important that organizations have the right security protocols and procedures, "for example by limiting access to systems only to those who genuinely need it." A federal briefing on the insider threat was delivered last December to leaders of the 10 most crucial infrastructure sectors, the notes say. They point out that over 90 per cent of critical infrastructure key to delivering everything from food and clean water to banking and health services is controlled by the private sector and all of it is dependent in one way or another on information technology to operate. Many critical infrastructure sectors are interdependent, meaning a problem in one could have a "cascading impact" in others. The notes, prepared earlier this year for Monik Beauregard, a senior assistant deputy minister at **Public Safety Canada**, were obtained by The Canadian Press under the Access to Information Act. Beauregard is chairing a panel today on the global implications of the challenges to cybersecurity at an intelligence conference in Ottawa. In addition, Greta Bossenmaier, the head of Canada's electronic spy agency, the Communications Security Establishment, plans to discuss the various cyberchallenges the country faces. The conference comes as the Liberal government undertakes a cybersecurity consultation that runs through mid-October. The overall aim is to identify gaps and opportunities, bring forward ideas to shape a renewed approach and capitalize on the advantages of new technology. Canadian Press (Guardian, Telegram, Cape Breton Post, CTV News, Global News)

Correctional service admits 'staff misconduct' in inmate's death

Correctional Service Canada has fired one staff member and disciplined three others after an inmate was beaten and repeatedly pepper-sprayed at a New Brunswick prison before his death. The top correctional official in Atlantic Canada admits there was "staff misconduct" and "excessive force" in the case of Matthew Hines, who died in hospital on May 27, 2015 - less than two hours after his struggle with guards at Dorchester Penitentiary began. "We take this case very seriously and we're trying to learn from it," Scott Harris, regional deputy commissioner for the Atlantic region, said in an interview. CBC News has also learned that RCMP have reopened the criminal investigation into Hines's death, after saying last month their investigation was finished and foul play had been ruled out. But "additional information" has since come to the RCMP's attention, prompting police to "re-examine" the case, according to Const. Hans Ouellette, a spokesman for the New Brunswick RCMP. He wouldn't say when the investigation was reopened or what kind of new information police received. The details of Hines's death were secret until last month, when CBC News revealed the quick escalation of force used against the 33-year-old Cape Breton man after he refused to return to his cell. Minutes after his struggle with guards began, Hines was hit and then pepper-sprayed five times - including four times in less than one minute. CBC News

'Very active investigation'
A small army of police officers is working to track the person or persons responsible for a bomb threat to Island schools now deemed not to have been a credible threat. RCMP Staff Sgt. Kevin Baillie says the police agency's entire provincial major crime unit has joined forces with members of the RCMP's federal investigation unit. Collaboration is also taking place with other jurisdictions that had similar threats made against schools in Winnipeg, Newfoundland and Nova Scotia on Wednesday and in Nunavut on Thursday. "We have a very active investigation that is continuing now, following up a couple of leads," says Baillie. When pressed on the leads, however, Baillie conceded police have not had any success in determining the origin or author of a fax threatening bombs in multiple P.E.I. schools would be detonated Wednesday. "We'd love to have a tip - someone to call in," he says. Between 50 and 60 RCMP officers were involved in the investigation Wednesday. (…) Baillie says the RCMP will review procedures in the next day or two to assess how police handled the bomb threat. He notes there is "nothing glaring" to him that was not done well on the RCMP's end. The Guardian, A1, 1, 2

Tackling potential danger
School officials in four Canadian provinces all received similar bomb threats this week, but each responded to the potential danger differently. Universities and schools across Prince Edward Island were evacuated Wednesday morning after **police** received a fax from someone threatening to detonate bombs at several schools. Three colleges in Nova Scotia were also evacuated after receiving threats. Hours later, a school board in Winnipeg received a similar bomb threat, but no schools were evacuated. And on Thursday, schools in three regions of Nunavut were closed due to a bomb threat, but reopened after lunch. "Assessing a bomb threat is very, very difficult," said Chris Mathers, a Toronto-based crime and risk consultant. "You can't examine a bomb threat in a vacuum." Mathers said a number of factors are considered when assessing the credibility of a bomb threat, including the frequency of the threats and whether similar threats have made. "If you're getting a bomb threat every day, eventually someone had to make a decision not to act out as the person making the threats wants them to," said Mathers. "And typically, serious bombers don't call it in." But he said with minimal information available, many officials would err on the side of caution, as was the case in P.E.I. P.E.I. RCMP StaffSgt. Kevin Baillie said when the threat was received Wednesday, police didn't have enough information to determine whether the threat was credible or not. Edmonton Sun, A67

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Déversement de pétrole : des excédents d'hydrocarbures demeurent dans la rivière Saskatchewan Nord**
Trois mois après un déversement de pétrole de la compagnie Husky Energy dans la rivière Saskatchewan Nord, l'Agence de la sécurité de l'eau de la province signale encore des excédents d'hydrocarbures dans la région de North Battleford et de Prince Albert. Dans une mise à jour publiée jeudi, elle note toutefois que ces niveaux ne sont pas nuisibles à la consommation d'eau courante ou pour les plantes. L'Agence affirme qu'elle se base sur l'analyse de 229 échantillons d'eau et de 4

échantillons de mousse. Vingt-deux échantillons démontrent la présence d'hydrocarbure dans des sédiments de 9 localités. Environ 200 000 litres de pétrole se sont retrouvés dans la rivière Saskatchewan Nord en juillet. L'Agence assure qu'elle continuera d'évaluer la qualité de l'eau et l'état des sédiments jusqu'au mois d'octobre. Elle indique qu'elle étudiera les effets du pétrole sur les sédiments dans plusieurs régions. Radio-Canada (2016-09-22)

*** North Battleford's incoming mayor faces no competition for tough job**
No one but Ryan Bater wants to be mayor of North Battleford, a city beset by an oil spill, racial tension and Canada's worst crime rate. On top of that, residents have been engaged in a heated debate over whether to amalgamate with the adjacent town of Battleford. "We definitely have issues to overcome," Bater said in an interview Thursday. When the nomination deadline passed this week, the former Liberal Party of Saskatchewan leader was the only one who had filed papers. It appeared current North Battleford Mayor Ian Hamilton was preparing for another campaign, but the incumbent pulled out a couple of weeks ago. In Saskatoon and Prince Albert, four candidates are vying for the mayor's chair. Regina and Moose Jaw each have five contenders. In all four cities, mayoral incumbents are seeking re-election. Bater, 38, said he planned to run for another term as a city councillor, but Hamilton's withdrawl "left a leadership void." City councillors and other others talked among themselves, several encouraged him to take on the job, and he agreed, he said... On July 20, the Husky oil spill forced North Battleford to shut off its main drinking water intake in the North Saskatchewan River and use alternate sources. An outpouring of hatred on social media and among some Battlefords-area residents followed the Aug. 9 killing of Red Pheasant Cree Nation man Colten Boushie on a nearby farm. Hundreds attended rallies outside the court appearances of the alleged murderer. North Battleford also currently ranks first on a national crime severity index. Bater said the oil spill was unfortunate, but Husky and the provincial government have treated North Battleford fairly. He said the new council will be watching closely to ensure more safeguards are put in place to prevent future spills. Leader-Post, A11

*** Rescuers pluck 15 from water in mock disaster**
Canadian and American coast guard personnel and their auxiliaries enjoyed a great Thursday morning on Passamaquoddy Bay. About 50 personnel, including volunteer 'survivors', took part in a joint search and rescue exercise, training together to respond to a real marine emergency in these international waters. The scenario: a vessel sinks following an on-board explosion. Mass casualties in the water and on life rafts, some injured, others deceased, conflicting accounts from the survivors. Vessels and crew taking part gathered for a briefing at the coast guard headquarters in Eastport, Maine. Phil Walker, Canadian Coast Guard rigid hull inflatable training (RHIOT) co-ordinator in Dartmouth, N.S., captained the media boat which left and eventually returned to the St. Andrews Biological Station wharf. His passengers included two volunteers who, when the time came, donned flotation suits and jumped overboard to play their roles as survivors awaiting rescue. Other survivors took their stations in orange life rafts. The crew on the rescue craft used the clues they got at the briefing in Eastport to find these orange dots in the water among the islands and rocks in the bay - hard enough on a calm day with a cloudless blue sky like this one, but next to impossible in more typically choppy water, in a storm, after dark and freezing cold. Survival suits, personal flotation devices, life rafts and other safety gear are bright orange for a reason, said Dave Griffiths, rescue specialist co-ordinator with the Canadian Coast Guard in Dartmouth. Telegraph-Journal, B5

NIL

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Li defends use of death penalty while pushing extradition pact
Chinese Premier Li Keqiang publicly defended the death penalty as he pressed Prime Minister Justin Trudeau to sign a formal extradition treaty while denying agents are covertly dispatched to Canada to

intimidate Chinese fugitives to return home. Mr. Li, the first Chinese leader to visit Canada in six years, is on a mission to forge closer ties. That included announcements to start exploratory talks on free trade, the settling of a canola dispute and pledges to double trade by 2025. (…) The Globe and Mail reported Wednesday that the Canadian Security Intelligence Service and RCMP are investigating the covert Chinese spy operation. CSIS has interviewed Chinese citizens living in Canada, all of whom have been threatened by agents from China. "I don't know where you got those reports," Mr. Li said when asked about The Globe report. "I can tell you firmly that China ... strictly follows international law and norms and we obey the laws of other countries." The Prime Minister said Canada would not deport anyone who would face execution but argued he was confident a formal extradition treaty could be worked out. Globe and Mail, A1; * Presse canadienne (Acadie-Nouvelle, Le Droit); * Le Devoir; * Agence QMI (Journal de Montréal, Journal de Québec)

* **Extradite to China**

A letter to the editor states, "Re Trudeau Defends Extradition Treaty Talks (Sept. 22): As Canadians watch a new relationship with China unfurl and our Prime Minister eagerly meets with Chinese leaders, it's worth glancing away from the big picture and focusing on smaller, often disturbing facts. CSIS has identified China as a country that spies on Canada in search of scientific, technological and economic information. China is doing irreparable environmental damage through widespread pollution. And human rights in China are - as Amnesty International, Human Rights Watch and others point out - literally brutal. Despite this, China is being encouraged to play a leading role in the development of the massive mineral-rich "Ring of Fire" region of Northern Ontario. We look the other way when it comes to questionable Chinese investment in real estate. And we thank leaders from the Middle Kingdom when they release a Canadian coffee shop owner and humanitarian imprisoned for two years on trumped-up charges (laid, it should be noted, in wake of the arrest of Su Bin in Vancouver on charges of stealing U.S. military secrets to sell to the Chinese). Justin Trudeau approaches China as a "friend" of Canada. Truth be told, any new Canada-China relationship will be complicated and based on economic convenience, not real friendship." Globe and Mail, A12

Monsef faces calls to step aside

Federal cabinet minister Maryam Monsef says she was shocked to find out she was born in Iran - not Afghanistan - but political opponents in her riding are challenging her claim and alleging her true birth country has "been known for quite awhile." Yet, one of Monsef 's first cousins said Thursday that he and his immediate family members weren't aware that she was born in Iran, and while a "shock" to them, it "is not a big deal." Monsef is also facing calls from a Conservative leadership contender to consider stepping aside from cabinet while an investigation can be completed. (…) Tony Clement said Thursday an investigation is required to confirm Monsef 's explanation of events, how the birthplace mix-up was missed by the federal security vetting and whether citizenship laws were violated. He also said Monsef "should consider seriously stepping aside if there is going to be an investigation." Incoming cabinet ministers go through a "rigorous vetting process," the Privy Council Office (PCO) said in a statement Thursday. It includes criminal background checks by the RCMP and by the Canada Revenue Agency for bankruptcies or financial insolvencies. The Canadian Security Intelligence Service (CSIS) does automated record checks of its databases for what's called "adverse intelligence traces" related to non-criminal matters from espionage to terrorism and subversion. The service will typically ask allied security intelligence agencies to check names against their databases, as well. But CSIS can only go so far, especially in such places as Afghanistan and Iran, where there are either no government records or reliable government agencies on which to rely and where the fog of war lingers. Postmedia Network (Leader-Post, N1, Windsor Star, National Post, Vancouver Sun, StarPhoenix, Montreal Gazette, Ottawa Citizen, Edmonton Journal, Calgary Herald, London Free Press); * Canadian Press (Times & Transcript); * Globe and Mail, A7

* **Edmonton notary public stripped of appointment**

An Edmonton notary public who was chastised for aiding the efforts of a selfproclaimed Freeman on the Land by a top Alberta judge is no longer a notary public, Alberta Justice confirmed Thursday. Edward J. Powell was named in Court of Queen's Bench Associate Chief Justice John Rooke's 2015 decision that restricts self-described Freeman on the Land Allen Boisjoli's ability to access Alberta courts. The scathing decision in which Rooke labelled Boisjoli, 45, a "vexatious litigant" was in reaction to Boisjoli's attempt to

subvert the legal process by filing a default judgment using his own forms to get out of paying a traffic ticket. Powell notarized those documents. On Wednesday, Edmonton police announced that Boisjoli is facing a criminal charge of intimidation of a justice system participant as a result of his alleged act of "paper terrorism" against the peace officer, which included a claim that the officer was liable to Boisjoli for $225,000. Notaries public perform a variety of functions, usually to do with the production and certification of official documents, as well as administering oaths and taking affidavits, affirmations or declarations. Postmedia Network (Edmonton Sun, A7, Edmonton Journal)

*** Hollywood gets it right on Snowden**

An opinion pieces states, "There is a moment in Oliver Stone's new biopic when Edward Snowden, the National Security Agency (NSA) leaker, distracted by a pre-dinner discussion with girlfriend Lindsay Mills, dashes to the stove where he has left the pasta. Testing the dangling fettuccine, he declares it as close to correctly cooked as he's managed. Whatever the film critics make of the Snowden docudrama, it, too, may come as close to correctly rendered as Hollywood can manage. If you want to understand the serious computer geek who dared defy the NSA and, indeed, the entire U.S. government, Stone gets it about right. (…) Though we might not express things in exactly the same way, many Canadians are also leery of some government activities. They're not being unpatriotic; it's an expression of the desire to see Canada flourish. Many, too, are concerned about the uncomfortably close relationship between the NSA and our own Communications Security Establishment (CSE), and about specific ways that the Anti-terrorism Act (Bill C-51) facilitates just such suspicionless surveillance (that is, placing under surveillance persons to whom are attached no already-existing suspicions) - based on "big data," as seen in the NSA. Films such as Snowden should be a spur to pressuring security agencies to more transparency and accountability. The current government's proposals for new oversight mechanisms are a solid start. This does not mean governments should abandon all surveillance, as the movie also makes clear. It means querying the idea that metadata - details such as the times, places and duration of communication between identifiable persons - is merely "like a phone book," or that oldfashioned labour-intensive sleuthing can be abandoned in favour of flashy new solutions involving big data. Equally, the Snowden biopic may inspire efforts to demystify the arcane algorithms that guide the security surveillance systems to their persons of interest. The film hints helpfully at ways these algorithms are far from the neutral instruments they may be sold as - when in fact they're shaped politically." Ottawa Citizen, A9

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Report urges Canada to end jailing of child migrants

A new report by human-rights researchers urges Canada to urgently find alternatives to locking up child migrants, saying the practice has a harmful and lasting effect on already vulnerable newcomers. Canada has held hundreds of children - including some from Syria and other war-torn regions - in immigration detention in recent years in violation of global legal obligations, says the report by the University of Toronto's international human-rights program. Researchers released the report, No Life for a Child, at a news conference Thursday. The Canada Border Services Agency holds newcomers who are considered a flight risk or a danger to the public and those whose identities cannot be confirmed. An average of 242 children were detained annually between 2010 and 2014, the report says. But it cautions the figure is actually higher, because it excludes those not subject to a detention order but who were held because their parents were in custody. Children are generally kept in federal immigration holding centres in Toronto and Laval, Que., facilities that are designed for long-term stays. Those facilities resemble medium-security prisons, with little privacy or freedom of movement, inadequate access to education and poor nutrition and recreation, the report says. Globe and Mail, A5; *Yahoo News; * RT

Province's sole super sniffer retires from service with her tail held high

Holly has hung up her collar after nine years of service with Canada Border Services Agency. "We're happy for her to be retiring but it's also just a bittersweet time because she was very well loved in the community and a great, excellent detector dog," said Luke Reimer, communications officer with CBSA. Aug. 12 was Holly's last day of work, based out of the North Portal crossing with her handler. "The detector dogs help by reducing labour intensive searches, by cutting down the time it takes to search through a large shipment by using noses. And that helps to improve the service for travellers for the time

needed to screen or examine passengers or luggage," Reimer said. During Holly's career she was involved in 216 seizure actions and was trained to sniff out guns and drugs all across Saskatchewan. Holly was a bright dog. She participated multiple times in the annual Canadian Police Canine Association Trials, placing first three years in a row and as runnerup twice. "It just goes to show that she was a great detector dog and it really shows the CBSA detector dog service program," Reimer said. Holly was the only detector dog based in Saskatchewan. She would travel back and forth along the American border and to nonland ports, wherever needed. Postmedia Network (Starphoenix, A9, Leader-Post)

* **Milk Throwing in Cornwall Ontario CCPS Police Blotter**
Stephen Kuno, age 55, of Potsdam, NY, was arrested on September 21, 2016. He was apprehended by Canada Border Service Agency this date for attempting to enter the country with a firearm in his vehicle. Cornwall Police were contacted and an investigation was conducted. He was subsequently charged with Unauthorized Importing of a Firearm, Possession of a Prohibited Firearm, and Careless Storage of a Firearm. He was released to appear in court on October 25, 2016. Cornwall Free Press

* **Sick woman who didn't know of citizenship issue faces deportation:advocacy group**
An advocacy group for female inmates says it is concerned about that the Canada Border Services Agency is attempting to deport a Halifax woman in serious medical distress. The Elizabeth Fry Society says a hearing will be held by the Immigration and Refugee Board of Canada today at the Dartmouth General Hospital for Fliss Cramman. The society says in a news release the Canada Border Services Agency is moving to deport the woman later this fall, three months after her hospitalization for a perforated colon. The group says that would run against her doctor's advice and despite ongoing critical health concerns. t says the woman was born in England, but was brought to Canada when she was eight years old and was unaware of her citizenship issues until she was jailed for drug offences two years ago. The society says Cramman doesn't pose a threat to public safety, has Canadian children, and has worked and paid taxes to the Canadian government. A spokeswoman for the Canada Border Services Agency was not immediately available for comment. Canadian Press (Metro)

* **Push on for bikes on tunnel buses**
Transit Windsor is taking steps to allow bikes to be transported for the first time on its tunnel buses heading into Detroit. Final approval by city council, likely to occur on Oct. 3, is the next step for Transit Windsor to proceed with an application to the Ontario Ministry of Transportation to carry bikes through the Detroit-Windsor tunnel, said Carolyn Brown, the city's corporate leader of transportation. All municipal buses are already equipped with bike racks, but the transportation ministry's permission is required to allow bikes to travel attached to the front of the bus through the border crossing, she said. "It's subject to council approval, then it will be a standard application to the ministry," Brown said. "They review it, we pay a small fee and we should be good to go." She could not provide exact timelines on when cyclists will officially be allowed to bring their bikes with them on the tunnel bus at the local border crossing. But customs authorities on both sides of the border are fine if tunnel bus passengers bring along their bikes, Brown said. (…) The move comes just months after a June 8 episode when Windsor resident Kyle Colasanti, 24, gambled he could successfully ride through the tunnel into Detroit on his own bike in order to see a downtown Steely Dan music concert. After extensive questioning by U.S. customs, Colasanti was allowed entry into Detroit, but he later conceded his decision was a bit foolish. Riding a bike through the tunnel or over the Ambassador Bridge is illegal. Windsor Star, A5

* **Canada-U.S. border crossing bridge in Rainy River, Ontario to be replaced**
A highway bridge connecting northwestern Ontario with northern Minnesota is slated to be replaced in the next few years, raising hopes that it will be easier to transport large cargo across the Canada-U.S. border.The bilateral project between Ontario's Ministry of Transportation and Minnesota's Department of Transportation is expected to replace the bridge between Rainy River, Ont., and Baudette, Minn., - a bridge that represents more than just an access point between the two communities."There's relationships, there's marriages, there's families living on both sides [of the border]," said Rainy River Coun. Gordon Prost."There's people who work on one side, live on the other side. There's even some education, schooling and stuff going on."Prost, who has also worked as a customs officer at the bridge, added that the old structure - built in 1959 - had some unique characteristics. "When you reach the halfway point, suddenly it was brighter, cleaner paint, and it was in nicer condition," he said. "So, you

knew when you were going from one country to the other."Prost added that "the Ontario side was the nicer side."The bridge is being replaced to conform with new maintenance standards in Minnesota and calls for the new structure to be built south of the existing bridge.The new bridge is expected to do away with the overhead structure present on the current one, meaning that larger and heavier loads will potentially be able to cross the expanse. Currently, it can be difficult to get large items into the area as there also restrictions on the bridges in Sioux Narrows and Fort Frances, Ontario. CBC News

Suited for the needs of the community
Deep in Manitoba's Bible Belt, the small cities of Winkler and Morden have drawn so many immigrants recently that newcomers are helping create new places of worship. There are now more than 25 churches in Winkler, up from 18 at the turn of the millennium. Immigrants are flocking to these cities in the Pembina Valley for two main reasons: quality of life and jobs. But driving through their quiet streets, a visitor wouldn't know the booming companies on the outskirts of both communities manufacture everything from down jackets to model homes. (…)Both cities and the surrounding region have grown by more than 3,000 people since, in great part to immigration programs. As their populations age and young adults move away, small cities and towns across Canada are increasingly looking to immigration to rejuvenate their workforce and expand their tax base. (…)More often than not, employers, immigration consultants or city officials from the region travel abroad to meet prospective immigrants, interview them on Skype or invite them for a visit to make sure they are a good fit. The criteria for selecting newcomers is often the opposite of those used by the federal immigration system. At times, the two cities have favoured community connections over Canada's points-based metrics or sought out people who didn't speak English. Notably, many of the people they pick probably wouldn't have made it into Canada without them.(…)Many immigrants who go to the Maritimes leave within a year of their arrival. In July, the Atlantic provinces and the federal government jointly announced a three-year pilot project to boost immigration as part of an economic growth strategy, taking in an additional 2,000 immigrants and their families in 2017. But those working to boost immigration to small cities and towns lament that the system is geared against them. Postmedia Network (Edmonton Journal, N2, Calgary Herald, London Free Press, Vancouver Sun, Starphoenix, Leader-Post, Windsor Star, Montreal Gazette, Ottawa Citizen)

* **Let's treat temporary foreign workers better**
An editorial states, “As successive federal governments wrestle with the controversial temporary foreign worker program, let’s not lose sight of one thing — the employees themselves. Employers in several sectors, such as agriculture and hospitality, depend on the program to keep their doors open. They need foreign workers to occupy positions that can’t be filled by Canadians — either because they don’t have the specialized knowledge or they don’t want to perform the menial work. Earlier this week, a parliamentary committee released a review of the program. The report invites attention to a year-long Calgary Herald investigation by Alia Dharssi, this year’s recipient of the Michelle Lang Fellowship in memory of the reporter killed while covering the conflict in Afghanistan. The final segment of Dharssi’s six-part series appears in today’s edition.The government, to the greatest extent possible, should stop the abuse of foreign workers by predatory recruiters who gouge applicants. Dharssi’s investigation found that many workers paid between $2,000 and $10,000 for access to a low-paid position and, even then, often faced mistreatment by their recruiters. Employers have also been involved in shady dealings.” Calgary Herald

Eurocracy not welcome here
An opinion piece states, “The European Union doesn't just want Canadian products and services in negotiating a Comprehensive Economic Trade Agreement (CETA) with us. It also wants our sovereignty and our soul. Canada should walk away from CETA, a deal scheduled to be signed at the Canada-EU summit in Brussels on Oct. 27. Otherwise, we may lose not just our Canadian character in pursuing this deal; we may also lose much of our economy. The EU's approach to trade has always been about more than lowering tariffs and ending quotas - it doesn't simply want an FTA (freetrade agreement), it wants a "comprehensive" trade agreement. The EU sees trade as a mechanism through which its political goals can be met. That's why it still insists that its trading partners agree to everything from welfare policies to open borders - it even demands this of the U.K. in any new trade deal that Britain strikes after it leaves the EU. For a while, it seemed that CETA would break the EU's mould in its deal with Canada, that the EU would not in the end insist on making Canada accept the type of political strings that it forced on

Switzerland and other European trading partners. But now, after a marathon, seven-year-long-and-running negotiation that seemingly resolved money matters - dairy quotas, intellectual property rights, investor protections - the EU's negotiating focus has turned to its social agenda." National Post, FP7; iPolitics

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Feds warn of potentially crippling 'insider' cyberthreat to key sectors
Federal officials have quietly warned operators of electrical grids, transportation hubs and other key infrastructure of the cyberthreat from insiders who could unleash devastating viruses and cripple systems, internal government notes reveal. Crucial networks that Canadians rely on for everyday needs face a "substantial threat" from rogue employees out to wreak digital havoc, warn the **Public Safety Canada** briefing notes. The insider threat is difficult to detect and can cause real damage." No special hacking skills are required, just a portable memory key loaded with a malicious code. As a result, it is important that organizations have the right security protocols and procedures, "for example by limiting access to systems only to those who genuinely need it." A federal briefing on the insider threat was delivered last December to leaders of the 10 most crucial infrastructure sectors, the notes say. They point out that over 90 per cent of critical infrastructure key to delivering everything from food and clean water to banking and health services is controlled by the private sector and all of it is dependent in one way or another on information technology to operate. Many critical infrastructure sectors are interdependent, meaning a problem in one could have a "cascading impact" in others. The notes, prepared earlier this year for Monik Beauregard, a senior assistant deputy minister at **Public Safety Canada**, were obtained by The Canadian Press under the Access to Information Act. Beauregard is chairing a panel today on the global implications of the challenges to cybersecurity at an intelligence conference in Ottawa. In addition, Greta Bossenmaier, the head of Canada's electronic spy agency, the Communications Security Establishment, plans to discuss the various cyberchallenges the country faces. The conference comes as the Liberal government undertakes a cybersecurity consultation that runs through mid-October. The overall aim is to identify gaps and opportunities, bring forward ideas to shape a renewed approach and capitalize on the advantages of new technology. Canadian Press (Guardian, Telegram, Cape Breton Post, CTV News, Global News)

* **Yahoo hack steals personal info from at least 500 million accounts**
Computer hackers swiped personal information from at least 500 million Yahoo accounts in what is believed to be the biggest digital break-in at an email provider. The massive security breakdown disclosed Thursday poses new headaches for beleaguered Yahoo CEO Marissa Mayer as she scrambles to close a $4.8 billion sale to Verizon. The breach dates back to late 2014, raising questions about the checks and balances within Yahoo -- a fallen internet star that has been laying off staff and trimming expenses to counter a steep drop in revenue during the past eight years. At the time of the break-in, Yahoo's security team was led by Alex Stamos, a respected industry executive who left last year to take a similar job at Facebook. Associated Press (Chronicle-Herald; Red Deer Advocate; St. John's Telegram; Toronto Sun); Le Soleil; Bloomberg (Ottawa Citizen); USA Today (Waterloo Region Record); National Post

LAW ENFORCEMENT / APPLICATION DE LA LOI

'Very active investigation'
A small army of police officers is working to track the person or persons responsible for a bomb threat to Island schools now deemed not to have been a credible threat. RCMP Staff Sgt. Kevin Baillie says the police agency's entire provincial major crime unit has joined forces with members of the RCMP's federal investigation unit. Collaboration is also taking place with other jurisdictions that had similar threats made against schools in Winnipeg, Newfoundland and Nova Scotia on Wednesday and in Nunavut on Thursday. "We have a very active investigation that is continuing now, following up a couple of leads," says Baillie. When pressed on the leads, however, Baillie conceded police have not had any success in determining the origin or author of a fax threatening bombs in multiple P.E.I. schools would be detonated

Wednesday. "We'd love to have a tip - someone to call in," he says. Between 50 and 60 RCMP officers were involved in the investigation Wednesday. (…) Baillie says the RCMP will review procedures in the next day or two to assess how police handled the bomb threat. He notes there is "nothing glaring" to him that was not done well on the RCMP's end. The Guardian, A1, 1; Cape Breton Post (The Guardian); * Globe and Mail

*** Nunavut minister praises police, schools for swift response to bomb scare**
While few people believed the Sept. 22 bomb threats against Nunavut's 43 schools held much weight, officials were more than happy to confirm the territory is safe from harm. Just before 9 a.m. that day, Education Minister Paul Quassa received a phone call and a copy of a fax sent to police, claiming bombs had been placed in schools in all three regions of the territory. "We've seen bomb threats here in Iqaluit [schools], but this is first time there's been a bomb threat made in all of our schools," Quassa said. By the time he made contact with senior education officials—many of whom were in Iqaluit for meetings—classes had already started for the day in schools through the Qikiqtani region. (…) The RCMP's response was equally fast; Quassa said police across Nunavut were able to sweep through schools that morning, determining by noon that the bomb threats were unfounded. "We take this kind of threat very seriously, even though we are very isolated from the rest of Canada," he said. "It was a relief to hear there was nothing serious." But as police cleared the territory's schools to re-open the afternoon of Sept. 22, the RCMP were responding to another scare, this time directed at southbound flights preparing to depart Iqaluit's airport. Police were seen sweeping at least one Ottawa-bound jet before the aircraft was cleared for take-off and the threat was also found to be non-credible. Now Nunavut RCMP said it's working with other agencies across the country to track who is responsible for the false threats faxed to Nunavut and other provinces this week. Nunatsiaq Online

Tackling potential danger
School officials in four Canadian provinces all received similar bomb threats this week, but each responded to the potential danger differently. Universities and schools across Prince Edward Island were evacuated Wednesday morning after **police** received a fax from someone threatening to detonate bombs at several schools. Three colleges in Nova Scotia were also evacuated after receiving threats. Hours later, a school board in Winnipeg received a similar bomb threat, but no schools were evacuated. And on Thursday, schools in three regions of Nunavut were closed due to a bomb threat, but reopened after lunch. "Assessing a bomb threat is very, very difficult," said Chris Mathers, a Toronto-based crime and risk consultant. "You can't examine a bomb threat in a vacuum." Mathers said a number of factors are considered when assessing the credibility of a bomb threat, including the frequency of the threats and whether similar threats have made. "If you're getting a bomb threat every day, eventually someone had to make a decision not to act out as the person making the threats wants them to," said Mathers. "And typically, serious bombers don't call it in." But he said with minimal information available, many officials would err on the side of caution, as was the case in P.E.I. P.E.I. RCMP StaffSgt. Kevin Baillie said when the threat was received Wednesday, police didn't have enough information to determine whether the threat was credible or not. Edmonton Sun, A67 (Chronicle Herald, Times & Transcript)

*** RCMP binocular purchase collapses amid allegations bid rigged in favour of one company**
What should have been a straightforward purchase of binoculars for the RCMP has gone off the rails after it emerged the deal was rigged to favour one particular company. A government watchdog has recommended the entire process be restarted, but this time in an open, fair and transparent manner - which amounts to yet another blow for the troubled federal government procurement system. The March 2016 purchase spiralled out of control, say industry representatives, after it became apparent that the requirements were geared toward one particular firm. One company refused to bid as a result. Another, MD Charlton Co., one of Canada's top police-equipment suppliers, raised objections that the purchase favoured a particular firm, which has not been named. The MD Charlton complaint was met with silence: federal officials refused to answer any questions about the purchase, according to an investigation by the Canadian International Trade Tribunal (CITT), the government watchdog. Then Public Services and Procurement Canada took the highly unusual step of trying to force MD Charlton to destroy a copy of the binocular specifications it had received - a key document the firm needed to prove the purchase was being rigged. (…) Industry representatives warned the government about the proposed purchase, shortly after the RCMP issued the call for equipment this year. The RCMP invoked a national security exemption

for the purchase of the night-vision binoculars, meaning that regular rules governing federal procurement didn't apply. It claimed the exemption was needed so criminals and terrorists wouldn't learn the technical specifications of the binoculars. The request was then sent to a pre-determined list of three potential bidders. Postmedia News (National Post)

Pictou revenge porn thread back online
The revenge-porn thread on a Russian-based pornography site that featured private photos of Pictou County women is back up again, just two days after being taken down. Girls of Pictou County was back online Thursday but no photos had been posted yet, said Kayde Stanley, the woman who waged a public campaign this week against the website's unauthorized use of intimate images. "It's disheartening, sad and unbelievable with everything going on," she said. "There is a post today requesting (photos of) specific girls." Stanley made the site public on social media earlier this week after someone told her there was a post about her. It was filled with photos of local women who did not consent to having their private photos shared. The thread had a note urging users to only post photos of people who consented, otherwise the RCMP would be involved. (...) Stanley said she was going to meet with the RCMP late Thursday to bring them information about the women she's spoken to this week. She said at least five of the women featured on the thread want law enforcement involved. "But there are at least seven women we were able to identify I haven't spoken to." Chronicle Herald, A1

* **U.S. alleges Vancouver firm laundered money on 'transnational' scale**
The U.S. government has named a little-known Vancouver financial company as a "significant transnational criminal organization" that it alleges has worked for 20 years with "direct mailer" scammers to launder hundreds of millions of dollars defrauded from millions of vulnerable victims. In a news conference on Thursday, U.S. Attorney General Loretta Lynch named PacNet, a company with offices in a building in downtown Vancouver, as a financial linchpin in global money laundering. PacNet was the payment processor - a sort of banking system middleman - that allowed global criminals to deposit cheques scammed from mostly elderly victims, Lynch alleged. "The schemes involve a complicated web of actors located across the world," she said. And in a stunning financial order that points to Vancouver's growing reputation as a hub for global money laundering, the U.S. government put PacNet on an international short list of about seven organizations that includes several of the world's most dangerous criminal cartels, including Las Zetas from Mexico and the Camorra from Italy. (...) Vancouver police spokesman Sgt. Brian Montague said Thursday in an email: "We do have good relationships with other law enforcement agencies in both Canada and the U.S., but unfortunately I am not able to share any information about investigations unless criminal charges are laid - so not able to confirm if there has been or there is any investigation by the VPD." B.C. RCMP spokesman Staff Sgt. Rob Vermeulen said Thursday afternoon that any comment on the matter would have to come from the force's national headquarters in Ottawa. Vancouver Sun

* **T.-N.-L.: L'association de la police provinciale veut que toutes les enquêtes sur la mort de Don Dunphy soient publiques**
Seules des bribes de l'enquête de la GRC sur la mort de Don Dunphy, abattu par un policier en 2015 ont été partagées, la semaine dernière. L'association qui représente les policiers de la Force constabulaire royale à Terre-Neuve et Labrador souhaite mettre fin aux hypothèses, en rendant toutes les enquêtes publiques. Don Dunphy a été abattu en 2015 dans sa résidence. L'association de la Force constabulaire royale soutient que le dévoilement incomplet des enquêtes alimente trop de spéculation au sein du public. Le policier qui a tiré les coups de feu mortels, l'agent Joe Smyth, faisait partie de l'équipe responsable de la protection du premier ministre, Paul Davis, à l'époque. La GRC a affirmé la semaine dernière qu'aucune accusation ne sera portée et que le policier n'a fait qu'employer la force nécessaire pour se défendre. Une enquête sur l'incident a également été menée par une unité d'enquêtes indépendantes de l'Alberta et par la police de Saskatoon. Le gouvernement provincial a lui aussi promis une enquête publique dès que possible. Radio-Canada; Times & Transcript, B4

Hillsborough man accused of ramming police car
A Hillsborough man is in custody on accusations he rammed a RCMP cruiser while officers were attempting to arrest him. Arthur Barry Russell appeared in provincial court Thursday and several charges were laid against him relating to an incident that occurred Wednesday afternoon in the Hillsborough area.

The Crown objected to his release and his bail hearing was set for Monday. Russell is charged with operating a motor vehicle on streets and trails in and around Hillsborough in a manner dangerous to the public, assaulting Cpl. Dan Poirier and Const. Matthew Beaulieu while threatening to use a vehicle as a weapon, failing to stop for police in an attempt to evade them and several breaches of probation. Times & Transcript, A3

Fake $100 bills passed in Sooke
Sooke RCMP are warning the public about counterfeit currency, after investigating five complaints from area businesses in the past month about phoney $100 bills. The circumstances of how the bills were passed are unknown because they weren't discovered until the businesses made their bank deposits, police said. The counterfeit bills have been created to look like ones in the new polymer series. Times Colonist, A4

*** Police cruiser set ablaze in B.C.**
A witness told Creston RCMP that they watched a man pour something on the police car and then threw a lit bottle on the car. The vehicle was parked in the RCMP detachment parking lot. After setting the vehicle on fire, the witness told officers that the man drove away. His vehicle description and the license plate was written down by the witness. The vehicle suffered damage to the rear area and trunk lid. Surrounding area police units were told about the incident and were provided with the vehicle description. An officer with the RCMP East Kootenay Traffic Services was in the Creston area and spotted the suspect vehicle just South of Moyie. Kelowna Now (2016-09-22)

Three arrested in bust at Medstead grow-op
RCMP say a grow-op bust last week in the RM of Medstead led to the largest seizure of marijuana in the province this year. Officers executed a search warrant at 11:20 a.m. on Sept. 16 in the Rural Municipality of Medstead, and found a "sophisticated" grow op, according to a news release issued Thursday. Officers seized about 700 marijuana plants, 2.3 kilograms of packaged pot and more than $6,000 cash, the release said. A 44-year-old man and a 34-year-old woman from the RM of Medstead were arrested alongside a 43-year-old man from Ontario. All three are charged with producing marijuana, possession of marijuana for trafficking and possession of property obtained by crime. Firearms charges will be laid as the investigation continues, the release said. Postmedia Network (StarPhoenix, A9, Leader-Post)

Tough break
A fleeing suspect suffered a broken clavicle when he was tackled by an RCMP officer in Portage la Prairie earlier this week. Manitoba's Independent Investigation Unit is looking into the case, as is customary when there are serious incidents involving police officers in this province. Officials with the IIU said the incident happened Tuesday morning, when an RCMP constable in Portage tried to pull over a vehicle they believed to be driving erratically. The vehicle turned offthe road and into a ditch, at which point three occupants got out and ran. The IIU said the officer caught one of the suspects "and, in the course of the arrest, both fell to the ground." The suspect complained he didn't feel well after being handcuffed and placed in the police vehicle. He was subsequently checked out at the detachment, then taken to hospital in Portage for X-rays, where the broken clavicle was confirmed. Winnipeg Sun, A6; * Winnipeg Free Press

No leads in Hannah's roadside assault case
It's been three weeks since Hannah was pushed out of the passenger side of a logging truck and left to lie injured and in pain on the side of Highway 101. RCMP told the Chronicle Herald on Thursday they still don't have a suspect. Released from a Nova Scotia hospital this week, Hannah told the Chronicle Herald that she feels she's not being taken seriously. "The RCMP were supposed to be in to see me at the hospital with a sketch artist but that hasn't happened." Hannah said she's afraid as more time goes on she'll remember fewer details of the night a truck driver tried to trade a ride for sex. Cpl. David Fairfax of the Annapolis District RCMP said he understands it can be frustrating waiting for the wheels of justice to turn. "We only have two sketch artists in the country, and the lead investigator on Hannah's case had to be seconded to a major criminal event in the area," he said in an interview. "Sometimes it just comes down to managing resources." Chronicle Herald, A5

*** Bonavista RCMP investigating dumping of needles, diabetic supplies**
The Bonavista RCMP detachment is investigating the dumping of diabetic supplies, including used needles, lancets, safety tabs and test strips in an area off Lance Cove Road in the town. Diabetic supplies, including used needles, lancets, safety tabs and test strips were found in an area off Lance Cove Road in Bonavista Thursday. -- RCMP photo The RCMP said in a news release, officers responded to a call around 5:30 p.m. Thursday regarding used needles dumped in an area frequented by pedestrians, ATV users and pet owners. The needles were dumped sometime Wednesday night or Thursday. The area was cleaned up with volunteer assistance. CBC News

*** Sask. producers look to set up patrol to protect rural properties**
Barry Kidd installed the first security cameras on his farm five years ago after his property was broken into. Now the Rosetown, Sask.-area man sleeps with two guns near his bed as the area continues to deal with crime. "I worked hard for this place to build up the way it is, and I don't want people coming in robbing me. This is my stuff, not theirs," Kidd said. Some producers in the area have shared photos with CBC News of guns they travel with while harvesting, saying it's a precaution due to crime in the area. On Monday, Rosetown RCMP responded to a report of an attempted armed robbery of a farmhand who was allegedly approached by three masked men carrying guns. CBC News

*** TIMBERLEA**
Police in Timberlea are asking the public to be on the lookout for a missing 15-year-old girl. An RCMP news release says Cali Elisabeth Singer was last seen leaving her home in Timberlea Tuesday morning. She never arrived at school that day. Police describe Singer as a biracial female, 5-foot-one and 96 pounds. Chronicle Herald, A4

*** Driving downtown could be royal pain**
Police are advising people planning to drive in downtown Vancouver during the upcoming royal visit to look for alternate routes and allow for longer travel times. William and Catherine, the Duke and Duchess of Cambridge, and their children, Prince George and Princess Charlotte, are set to visit Western Canada Sept. 24 to Oct. 1. They'll be based in Victoria, and will spend time in Vancouver, the Great Bear Rainforest, Bella Bella, Kelowna, Yukon and Haida Gwaii. (…) Neither the Vancouver Police Department, nor the RCMP - which is responsible for providing security for visiting members of the Royal Family - would provide additional information about tour stops, travel times, routes or specifics regarding traffic or street closures, also due to security reasons. The VPD suggested "those travelling near official locations listed as part of the royal visit look at alternate routes and give themselves extra time to get to where they are going, but any traffic disruptions should be minimal." Postmedia Network (The Province, A8, Vancouver Sun)

*** Rural crime a serious issue most don't get**
An editorial states, "This has been another tough week for rural Saskatchewan's image. Maybe a little of it can be blamed on an aging population that's both scared and reacting badly to growing social problems. But maybe the bigger problem is that we haven't bothered to take the time needed to recognize the real problems and their causes. Consider the now-popular Internet image of rifles in combines - all-too-easy confirmation of the East's wrong-headed view of rural western rednecks. One can almost hear the gun-registry advocates hollering: "See, I told you so." (…) After all, can we blame rural people - whether in their farmyards or alone in the field on their combines - for being damn scared after hearing RCMP reports of masked gunmen attempting to hold up people who are isolated from police or other help? Nearly lost in the image of rural Saskatchewan reverting to the Wild West is the less-spectacular story of how an economically challenged part of our country simply isn't getting the government support it needs. Large farms (the long-term result of Canada's cheap food policy) mean farmers are farther apart. In turn, that means huge policing challenges - especially in getting law enforcement to remote critical incidents in a timely manner. A news story by the Leader-Post's Craig Baird on Thursday thoroughly explores the reality of rural crime, and also the even more critical issue of rural RCMP detachment underfunding. (…)Municipalities of fewer than 5,000 people with RCMP detachments pay $77.06 per person, the Leader-Post story noted. Communities without a detachment pay $47.68 per person for policing. Communities can pay for an additional officer position at a detachment (an additional $130,000 per year). But with a rapidly declining rural population, can residents

afford to pay for extra police? Are other Canadians willing to subsidize rural people as much as they should? And then, there is the elephant in the room - why rural Saskatchewan might be more crime-ridden than it used to be." Postmedia Network (StarPhoenix, A12, Leader-Post)

*** Police contempt for public must be arrested**
An editorial states, "It's impossible to know whether the RCMP and RNC's obvious contempt for the public is a feeling returned in kind, but the actions of the Mounties and Constabulary are likely pushing more than a few people in that direction. The long-suffering citizens of Newfoundland may be accustomed to being treated with scorn and disregard by their politicians, but up until recently they surely expected more from their police forces. You have to wonder whether the police realize, or care, that they are destroying public trust and respect with their actions regarding the Donald Dunphy case. It verges on farcical, except that it is so serious. (…) What is extremely bothersome is the leadership of the RCMP and RNC apparently also subscribe to the notion that the public should shut up and doesn't deserve answers until the police decide they are good and ready to provide them. The situation is astounding. The leaders of the RNC and RCMP apparently regard the concepts of open, transparent, responsible, answerable power - in political governance and in policing - as mere textbook items that are fine in theory, but in practice can be ignored whenever necessary. (Albeit, in this, they are in the company of a good many politicians.)" The Telegram, B6

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Correctional service admits 'staff misconduct' in inmate's death
Correctional Service Canada has fired one staff member and disciplined three others after an inmate was beaten and repeatedly pepper-sprayed at a New Brunswick prison before his death. The top correctional official in Atlantic Canada admits there was "staff misconduct" and "excessive force" in the case of Matthew Hines, who died in hospital on May 27, 2015 - less than two hours after his struggle with guards at Dorchester Penitentiary began. "We take this case very seriously and we're trying to learn from it," Scott Harris, regional deputy commissioner for the Atlantic region, said in an interview. CBC News has also learned that RCMP have reopened the criminal investigation into Hines's death, after saying last month their investigation was finished and foul play had been ruled out. But "additional information" has since come to the RCMP's attention, prompting police to "re-examine" the case, according to Const. Hans Ouellette, a spokesman for the New Brunswick RCMP. He wouldn't say when the investigation was reopened or what kind of new information police received. The details of Hines's death were secret until last month, when CBC News revealed the quick escalation of force used against the 33-year-old Cape Breton man after he refused to return to his cell. Minutes after his struggle with guards began, Hines was hit and then pepper-sprayed five times - including four times in less than one minute. CBC News

*** Inmate dies after attack in jail**
An inmate who was assaulted earlier this month while in custody at the Calgary Remand Centre has died from his injuries, Calgary police have confirmed. Alvin Clifford Chiniquay, 40, had been in hospital on life support since he was allegedly attacked by his cellmate. He was found in life-threatening condition by emergency responders at about 9:30 a.m. on Sept. 9. The victim's cellmate was taken into custody. The homicide unit continues to investigate, but police say charges are expected to be laid against Chiniquay's cellmate. Chiniquay was taken offlife support on Thursday. An autopsy is expected to take place. Postmedia News (Calgary Herald, A10); * CBC News

*** Canada-wide warrant issued for man convicted of second-degree murder**
A man convicted of second-degree murder who is known to frequent the London and St. Thomas area is being sought by police. Lyle Ridgewell, 60, is wanted on a Canada-wide warrant for breach of parole. Ontario Provincial Police said Ridgewell is 5'6", 143 lbs. with hazel eyes and brown hair. London Free Press (CTV News)

*** Editorial: Justice system fails us all**
An editorial piece states, "Yet another report has come out about how slow, inefficient and expensive Canada's justice system is. How many more such reports will it take to spur governments and the

judiciary into making needed changes? Delays in the justice system are not merely inconvenient to those involved, they seriously threaten the rights of victims and the accused, and the well-being of society. The ponderous pace of justice is a problem all across Canada, but B.C. ranks near the bottom, according to a report released by the Macdonald-Laurier Institute. In B.C. Supreme Court last month, charges were stayed against a former Vancouver Island investment dealer because of what a judge called an unreasonably long wait for a trial. Charles Kamal Dass, who was a registered investment adviser in Port Alberni, was charged with 15 counts of theft, fraud and forgery, based on transactions with 13 persons and two corporations between 2000 and 2007, court was told. Criminal charges were laid in June 2013 and the trial was set to begin Aug. 2, but on the first day of trial, Dass's lawyer applied to have the charges stayed. The following week, Justice Robert Johnston advised Crown counsel he would direct a stay of proceedings because of the time the case has taken to come to trial." Times Colonist

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Thunder Bay police face allegations of 'systemic' racism
The Ontario police oversight body will hold a sweeping review of Thunder Bay Police's conduct in the investigations in the deaths of indigenous people. The Office of the Independent Police Review Director (OIPRD) will conduct their systemic review this fall. They will drill down on the deaths of Stacey DeBungee, 41, whose body was found in a Thunder Bay river on Oct. 19, 2015, and on "information and evidence" surrounding the deaths of seven students who attended a Thunder Bay high school from 2000 to 2011. DeBungee's body was found in the McIntyre River. Within three hours of the discovery, the Thunder Bay Police issued a statement that a body was found and that an "initial investigation does not indicate a suspicious death. A post mortem examination will be conducted to determine an exact cause of death." In a second press release on Oct. 20, 25 hours after the discovery, the police identified DeBungee and said DeBungee's "death has been deemed as non-criminal." "There is a systemic treatment of indigenous deaths that is not lost on any of my clients," said Julian Falconer, the DeBungee family lawyer who also acted for Nishnawbe Aski Nation at the inquest into the seven students' deaths. Police put both the releases out before a post mortem occurred, Falconer said. "They are less than worthy victims. This is simply a more acute example, a very clear example, of what is sadly being experienced in the murdered and missing indigenous women and girls' scenario. The quality of the investigations are in my decades of practice, well below the standard of anything I have ever seen," Falconer said. Toronto Star, A1

*** Forceful arrests decline, as police get busier**
Edmonton police officers are resorting to less forceful means to make arrests, a report to the city's police commission revealed Thursday. "We don't want to discourage our members from using force when it's necessary but it's imperative that the use of force is professional in its application, reasonable given the circumstances and defensible," Supt. Dave Christoffel said. Every time an officer uses force, be it through a physical disarming technique, using a weapon such as a gun or a baton, or even deploying a police dog, they have to fill out a report. In the first six months of 2016, the numbers of those incidents are down from the year previous. Police saw an increase in overall workload, dealing with 128,000 cases, up from slightly more than 124,000 last year. Despite that, use of force occurrences dropped from 1,175 in 2015 to 1,127 this year, something Christoffel called good news. (...)One area that saw a spike was the use of conducted energy weapons, or Tasers, which was up almost 89 per cent. (...) That said, out of the roughly 400 Tasers carried by police in the city, they were used just 17 times in the first six months of 2016. "I often thought that Tasers got a bit of a bad rap," said Coun. Scott McKeen, who serves on the commission. He said a lot of high-profile cases of Taser use leading to death in recent years put too much emphasis on the weapon itself and not the context. "It sounds ridiculous to say, but I'd rather have a Taser than a gun or even a baton, as far as causing physical harm to somebody who needs to be brought down in a humane way," McKeen said. Edmonton Journal, A4

Morphing crime rate: Halifax police chief says drop in numbers obscures rise in online wrongdoing

Statistics suggesting crime rates in Canada have been falling for decades may not tell the whole story when it comes to criminal wrongdoing, the chief of Halifax Regional Police says. Jean-Michel Blais says there are indications that the nature of crime is changing in a way that is not reflected in traditional crime data. "And this crime is not being committed by your neighbour, and probably not someone here in Nova Scotia or even in Canada," he said in an interview. "It's being committed by somebody in a different country." Blais, who plans to explore the issue today in a speech to the Halifax Chamber of Commerce, says traditional crimes appear to be "morphing" and migrating to criminal acts perpetrated online. As a result, he says, crime probably hasn't decreased as much as statistics might suggest. In 2014, a study in the United Kingdom found just over half of those surveyed in Britain had been the victim of an online crime, including identity theft, hacking and illegally accessing and stealing from bank accounts. The study found that much of this crime was never reported, which means it didn't show up in police statistics. The Get Safe Online survey, conducted by market research firm Vision Critical, also showed that 53 per cent of those surveyed said they considered online crimes as serious as physical crimes. "Crime really hasn't gone down as much as we think," Blais said in an interview. "It's ... migrated onto the Internet." Canadian Press (Guardian, B5, Time Colonist)

* **New cyberbullying law months away, justice minister says**
A landmark cyberbullying law that was ruled unconstitutional and struck down nearly 10 months ago won't be replaced until at least next spring, says Nova Scotia's justice minister. Diana Whalen said Thursday that provincial government officials are still consulting with experts and want to ensure the new law can withstand a court challenge. Whalen said it's important to take the time to do it right, noting the original law was passed in only three weeks with all-party support. "What we want to make sure is that we don't bring something in, in great haste that is going to be challenged again," said Whalen. "I'm not committing to a timeline, but we couldn't do it by this fall - it wouldn't be before the spring at the earliest." The Supreme Court of Nova Scotia struck down the CyberSafety Act last December, saying it infringed on charter rights involving freedom of expression. Canadian Press (Times & Transcript, B5, Guardian, Cape Breton Post, Chronicle Herald)

* **Nunavut: a fast, efficient justice system where victims fare poorly**
Nunavut's justice system deserves some of the highest marks in Canada for efficiency, fairness and access to justice, but failing marks for victims' services and costs, an Ottawa-based think-tank found in a national report card released Sept. 21. The report card, done for the Macdonald-Laurier Institute by law professor Benjamin Perrin and statistics expert Richard Audas, hands out grades ranging from F to A+ for each of Canada's 13 territorial and provincial justice systems. They graded each jurisdiction on five criteria: public safety, support for victims, costs and resources, fairness and access to justice, and efficiency. After that, each of the five grades is compiled to produce an overall mark. They gave Nunavut an A+ for fairness and access to justice, and an A for efficiency. Nunavut's A+ mark for "fairness and access to justice" is better than the marks they handed out to all other jurisdictions in that category. This likely means that Nunavut does exceptionally well in ensuring that the constitutional rights of accused persons are protected and that they get fair and impartial trials. On "efficiency," Nunavut's mark of A suggests that police are able to solve most crimes and that criminal cases proceed through the courts in a timely manner. Nunatsiaq News

* **'A misunderstanding': Northerners question failing grades on new justice report card: Nunavut, Yukon, N.W.T. receive Fs for victim support, costs and resources**
Some Northern officials are giving a new report evaluating the country's justice systems an A for effort, but say it inaccurately reflects the reality in Yukon, the N.W.T. and Nunavut due to "significant flaws" in methodology. The report, co-authored by associate professors Benjamin Perrin and Richard Audas of the Macdonald-Laurier Institute, is based mostly on data available from Statistics Canada. Each territory and province is given a letter grade for "five major objectives" of the justice system, according to the authors: public safety, support for victims, costs and resources, fairness and access to justice, and efficiency. Out of all 13 provinces and territories, Yukon placed 13th. Manitoba placed 12th, followed by the N.W.T. and then Nunavut. The three territories were the only regions in the country to get Fs — they got two each. One for the high cost of running the justice systems — everything from the cost per inmate to the number of RCMP officers per capita — and the other for a lack of support for the victims of crimes. CBC News

*** N.B. has great justice system, except for two crucial failings**
An opinion piece states, "This week the Macdonald-Laurier Institute public policy 'think tank' stated New Brunswick's criminal justice system ranks third among the 13 provinces and territories in Canada, behind only Prince Edward Island and Newfoundland. It gives us some bragging rights at a time when we have little to be bragging about as our economy continues to sink under its own decrepit state and continued political neglect. The study highlights some genuine positives about the criminal justice system in New Brunswick, including that it's less costly and more efficient than most of Canada, rendering justice more quickly. And we get great grades for public safety. We have fewer property crimes and only moderate rates for violent crimes compared to most of Canada. Many of us have known or intuited these things for years; it's partly what we refer to when we talk of the quality of life in the Maritimes despite the many challenges we face. It is also notable that, to quote the report, "the police in New Brunswick perform highly in public perceptions, particularly in enforcing the law, ensuring safety, satisfactions with public safety, supplying information, being approachable, being fair, and responding promptly." Take a bow, men and women of our police forces." Times & Transcript, A10

*** Rural crime a serious issue most don't get**
An opinion piece states, "This has been another tough week for rural Saskatchewan's image. Maybe a little of it can be blamed on an aging population that's both scared and reacting badly to growing social problems. But maybe the bigger problem is that we haven't bothered to take the time needed to recognize the real problems and their causes. Consider the now-popular Internet image of rifles in combines - all-too-easy confirmation of the East's wrong-headed view of rural western rednecks. One can almost hear the gunregistry advocates hollering: "See, I told you so." However, these images have emerged after Monday's incident near Fiske (between Kindersley and Rosetown in west-central Saskatchewan), in which three masked men carrying handguns tried to hold up a farmhand. Stories abound throughout rural Saskatchewan of vandalism, break-ins, vehicle, farm machinery and gas thefts, and even occasional home-invasion robberies with violence. This was the case even before the racially charged incident near Biggar that resulted in the shooting death of Red Pheasant First Nation resident Colten Boushie and a second-degree murder charge. Yes, the RCMP was right to issue a warning about proper use and storage of firearms before we see an unintentional tragedy. But it's far more complicated than rural people simply acting irrationally or misusing firearm privileges. After all, can we blame rural people - whether in their farmyards or alone in the field on their combines - for being damn scared after hearing RCMP reports of masked gunmen attempting to hold up people who are isolated from police or other help?" Leader-Post

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

Stark lesson on need to act
The sudden guilty plea in a Regina court this week by Clayton Eichler to the murders of two young women, Kelly Goforth, 21, and Richele Bear, 23, puts in stark focus the grim reality and the heartbreak of the families whose loved ones are on Canada's long list of missing or murdered aboriginal women. While Eichler's 11th hour decision to plead guilty to two counts of second-degree murder and his expression of regret may have brought a measure of comfort to the family of Goforth, whose body was discovered in a hockey bag thrown away in a trash bin, there was no closure for the relatives of Bear, whose pleas to learn where her body could be found elicited no answer from the killer. A shouted response from the gallery to Eichler, "Burn in hell, you bastard," attests to the anguish and despair of the family. With the conviction that nets him at least 20 years in prison before parole eligibility, Eichler becomes Regina's first known serial killer. He joins the despicable ranks of the likes of Saskatoon's John Crawford, who brutally murdered three other indigenous women, Shelley Napope, 16, Eva Taysup, and Calinda Waterhen in the early 1990s. In sentencing Crawford, Queen's Bench Justice David Wright likened him to a "wild animal, a predator" and expressed deep regret that he couldn't extend the parole eligibility beyond 25 years. Starphoenix, A12

*** President of Native Women's Association of Canada stepping down**

The president of the Native Women's Association of Canada is stepping down to spend more time with her family, just weeks after the historic launch of a national inquiry into Canada's missing and murdered indigenous women. On Thursday morning, Dawn Lavell-Harvard, who was elected to a three-year term in July of 2015, issued a letter of resignation to NWAC's board of directors after more than 20 years of formal advocacy. (...) Looking back on her time at the helm, Dr. Lavell-Harvard is struck by the heightened awareness among Canadians about indigenous issues, as well as the dramatic shift in political tone. "I was at the head of the association during this amazing shift from a government that said the violence against indigenous women and girls was not even on their radar, to a government that has [launched] an inquiry," said Dr. Lavell-Harvard, a member of Wikwemikong First Nation, in northern Ontario. "This is something we have been pursuing for years." Former prime minister Stephen Harper dismissed calls for an inquiry, saying the tragedies were not part of a "sociological phenomenon" but rather criminal matters best handled by police. NWAC, as the leading voice for indigenous women in Canada, was in a constant state of agitation. Although the organization had been championing an inquiry for more than a decade, never had the matter been so prominent and hot-button. It was a major issue in last year's federal election, which saw the Liberals rise to power on the promise of a renewed nation-to-nation relationship with indigenous peoples. Globe and Mail (2016-09-22)

*** Trudeau needs to take action**

An opinion piece states, "The Liberal government of Justin Trudeau has, so far at least, talked a good game about rebuilding goodwill between Ottawa and Canada's First Peoples. He has said publicly on more than one occasion he wants to re-establish a "nation-to-nation" relationship with aboriginal communities. Trudeau has promised to end decades-old boil-water advisories on countless reserves in Canada within five years, earmarking roughly $1.8 billion to the task. Additionally, he has acknowledged the need to develop a mental health or suicide strategy for dealing with unconscionable rates of suicide among aboriginals. Most significantly, he has launched a wide-ranging inquiry into missing and murdered indigenous women and children. He also pledged to not move forward on major resource development projects in Canada that don't have sufficient social licence - especially from indigenous communities. The government has also indicated its intention to follow through on the 94 "calls to action" of the 2015 Truth and Reconciliation Commission Report. It has been silent recently on how that objective will be accomplished and how much money will be allocated for doing so. First Nations leaders, then, have reason to be skeptical at worst and cautiously optimistic at best." Winnipeg Free Press

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Marijuana - La DSP repousse le modèle de la SAQ

La Santé publique montréalaise rejette l'idée de confier la vente de marijuana, une fois légalisée, à la Société des alcools du Québec. Elle préconise plutôt la création d'une nouvelle agence provinciale qui ne subirait pas de pressions pour verser des profits au gouvernement. Si cette agence devait administrer les points de vente, " un tel monopole ne devrait pas être considéré comme une source majeure de revenus pour l'État ", juge la Direction régionale de la santé publique de Montréal dans un mémoire publié sur son site Web cette semaine. " La Société des alcools du Québec, à qui le gouvernement demande des profits, ne constitue pas un modèle ", ajoute-t-elle. Ce mémoire, qui met de l'avant 52 recommandations, a été préparé dans le cadre de la consultation amorcée par le fédéral en vue de la légalisation du cannabis. La période de consultation se terminait le 29 août. " On ne doit pas voir la marijuana comme source de revenus additionnelle ", explique le psychiatre Robert Perreault, qui est aussi médecin-conseil à la Direction de la santé publique de Montréal et l'un des auteurs de ce mémoire. " D'un point de vue de santé publique, la façon dont l'alcool est géré est problématique, car il y a une incitation à la consommation. On ne souhaite pas que la marijuana subisse le même traitement. " Le Devoir, A1

Homelessness, pot tax on UBCM agenda

Nearly 2,000 municipal politicians, civic staff and other community leaders are preparing for a five-day Union of B.C. Municipalities convention beginning Monday in Victoria. (...) Election of a new president and executive team is slated for Thursday, as Cariboo Regional District chairman Al Richmond ends his term leading the UBCM. He said the issue of marijuana regulation and tax sharing is expected to raise

strong interest among delegates, but housing affordability is also high on the agenda. Canadian Press (Times Colonist, B1)

Pot shop next to kids' classes angers parents
Some parents in Orléans are furious that an illegal pot shop has opened in the building where their children attend martial-arts classes and after-school tutoring. A marijuana dispensary called CannaGreen opened on Sept. 11 in the front of a small commercial building on St. Joseph Boulevard. (…) Municipalities and police forces are struggling to figure out what to do. Most dispensaries say they serve medical marijuana patients, and screen customers to make sure they have a medical condition. Medical marijuana is legal in Canada, but only if purchased from producers licensed by Health Canada, who send the products by mail. The federal government has promised to introduce legislation in the spring to legalize recreational marijuana. It's not known whether selling marijuana in stores will be allowed. The government has promised to "strictly regulate" sales to keep pot out of the hands of children and away from organized crime. In the meantime, it's become a free-for-all. Federal politicians warn that products sold at the illegal dispensaries are unregulated, and may be unsafe. Enforcement of the drug laws is up to police. In some cities, including Toronto, Quebec City, Barrie, Oshawa, Whitby and Peterborough and parts of B.C., police have raided the dispensaries. Employees and owners have been charged with drug trafficking and other offences. In Vancouver, police have chosen not to raid the shops unless there is evidence the operators are selling to minors or connected to organized crime. Ottawa Citizen, A1

Test de crédibilité, test d'identité
Bono avait d'abord lancé ces mots dans un discours au Centre Air Canada, à Toronto, fin 2003 lors de l'élection officielle de Paul Martin à la tête du pays. Le rockeur irlandais ne tarissait pas d'éloges à l'endroit de Paul Martin, qui s'était engagé à accroître significativement les budgets canadiens d'aide aux pays en développement et dans les programmes de lutte contre les épidémies. Il les a répétés samedi à la Conférence de reconstitution des ressources du Fonds mondial de lutte contre le sida, la tuberculose et le paludisme tenue à Montréal sous l'égide du gouvernement Trudeau. (…)Difficile à dire parce que pour le moment, le succès de M. Trudeau repose beaucoup plus sur ce qu'il a promis de faire que sur ce qu'il a accompli après bientôt un an au pouvoir. (…)La légalisation de la marijuana, autre promesse de Justin Trudeau, occupera aussi les esprits. Normalement, les nouveaux gouvernements préfèrent enclencher leurs réformes dans les deux premières années de leur mandat, question de libérer la voie vers les prochaines élections. On sent toutefois plus de prudence que d'empressement sur cette question. Autres dossiers chauds : la réforme de la loi C-51 (antiterroriste), les projets de pipeline, l'aide financière à Bombardier, le financement de la santé pour les provinces, la négociation des traités de libre-échange et d'une nouvelle entente sur le bois d'oeuvre avec les États-Unis. La Presse

Vintage Vinyl celebrates 25 years as pot attitudes change
Vintage Vinyl and Hemp Emporium is known for a lot of things, notably its history with marijuana. Dylan and Janelle Baumet's father Pat opened Vintage Vinyl and Hemp Emporium 25 years ago in downtown Regina. The store has remained a family business over the years and sells everything from records to marijuana smoking accessories. (…)The Liberal government is on the path to legalizing marijuana, which Dylan believes is for the best and is long overdue. Vintage Vinyl is the longest-running hemp store in Canada so Dylan believes that legalization will just help the store to grow. Leader-Post, A3

Not high on pot shop
Parents in Orleans are furious that an illegal pot shop has opened where their children attend martialarts classes and after-school tutoring. A marijuana dispensary called CannaGreen opened on Sept. 11 in a building on St. Joseph Boulevard that also houses The Edge Taekwon-Do Academy and Kumon Math and Reading Centre. All the businesses share a parking lot in the back. (…)At least 15 mari juana dispensaries have opened in town. (…)None of the dispensaries has a business licence. City bylaws don't include provisions for illegal pot shops. Mayor Jim Watson has repeatedly declined to comment on the issue. "The federal government regulates marijuana laws, and Ottawa Police has the jurisdiction to enforce them if a complaint arises," a statement from his office said. The federal government says these dispensaries are all illegal, and municipalities and police forces are struggling to figure out what to do. Medical marijuana is legal in Canada, but only if purchased from producers

licensed by Health Canada, who send the products by mail. The federal government has promised to introduce legislation to legalize recreational marijuana in the spring and "strictly regulate" sales to keep pot out of the hands of children. Ottawa Sun, A11

PUBLIC SERVICE / FONCTION PUBLIQUE

Phoenix payroll chaos: Prison guards struggling to make ends meet
The prison guards who watch over some of Canada's most dangerous criminals are the latest to see their pay lost to glitches in the federal government's new automated national payroll system. Kent Institution corrections officer Doug Holloway was left scrambling to meet a car payment and buy groceries this week, after he didn't get paid at all. His previous two cheques also fell short, forcing Holloway, his wife and three of his four children — his eldest has left home — to go without as they waited for emergency salary advances that took several days to come. "I have my car payments scheduled with my paydays," said Holloway, whose family is still living in Grande Cache, Alta., where he worked at a federal prison before transferring to Kent three months ago. "I was catching myself thinking, do I have enough on my MasterCard so I can buy milk to have on my cereal?" Province

* **Pour un gouvernement qui « se bat pour protéger ses ressortissants »**
Q Quand vous êtes sorti de prison, vous avez dit que l'ancien premier ministre canadien Stephen Harper vous avait « trahi » et « laissé tomber » et vous avez dénoncé le manque de soutien aux Canadiens qui sont détenus à l'étranger. Pensez-vous que la situation s'est améliorée depuis ? R Oui, c'est le jour et la nuit. Alors que j'étais en prison, Stephen Harper, plutôt que d'user de toute son influence pour intervenir auprès du président égyptien, a délégué ses responsabilités à ses subalternes. Les diplomates canadiens ont fait du super travail, mais ils me disaient qu'ils étaient menottés par Ottawa. On ne peut pas comparer cela à ce que le gouvernement Trudeau fait aujourd'hui. Les faits sont éloquents. Les libéraux ont récemment réussi à faire libérer le Canadien Kevin Garratt en Chine et à ramener au pays Khaled al-Qazzaz, l'ancien bras droit de l'ex-président Mohamed Morsi, avec qui j'ai été emprisonné en Égypte. Ce sont deux grands succès. C'est plus important que jamais d'avoir des gouvernements qui se battent pour protéger leurs ressortissants. À travers le monde, pas juste en Égypte, les pays créent des lois antiterroristes très vagues qui font que tous les Canadiens à l'étranger _ et pas seulement les journalistes et les travailleurs humanitaires sur la ligne de front _ peuvent être mis en prison et être accusés de terrorisme ou d'espionnage. C'est sans précédent. On le voit avec Homa Hoodfar [la professeure de Concordia détenue en Iran]. Et il n'y a pas de communiqué de presse ou de rhétorique vide qui puisse vous aider à ce moment-là. Vous avez besoin d'une intervention robuste de votre gouvernement et de votre famille. Q Dans le même ordre d'idées, vous défendez un projet de charte qui renforcerait la protection des ressortissants canadiens à l'étranger. Avez-vous une oreille attentive à Ottawa ? R J'aimerais que cette charte, que je défends conjointement avec Amnistie internationale, devienne une loi qui obligerait le gouvernement canadien à agir quand un Canadien est détenu à l'étranger. En ce moment, c'est à la discrétion des politiciens, alors qu'en Allemagne, aux États-Unis, au Brésil, c'est la loi. Nous projetons d'en faire un projet de loi bientôt avec le soutien de politiciens néo-démocrates qui ont manifesté leur intérêt. Et jusqu'à maintenant, nous avons reçu une excellente réponse de Justin Trudeau et du ministre des Affaires étrangères, Stéphane Dion. La Presse, 17; Montreal Gazette

* **Sailors and pilots hitting St. John's as anti-submarine warfare training wraps up - About 3,000 people took part in multi-nation anti-submarine training**
Warships are descending upon St. John's this morning for the end of the Cutlass Fury training exercise. The exercise saw groups from Canada, the United States, Spain, the United Kingdom and France work together on anti-submarine warfare simulations off Nova Scotia and Newfoundland, the biggest such exercise on the coast in more than 20 years, said Capt. Craig Skjerpen. "We're pretending that there's a conflict and we made it all better through our training," said Skjerpen from HMCS Fredericton. He said anti-submarine training is crucial for the armed forces. "Because of their ability to hide, their stealth, to be

able to move into an area, they can pose a significant threat to maintaining the sea lanes. Keeping those lanes open is crucial to a nation's economy, said Skjerpen. "This kind of threat, if it's imposed on a nation with submarines, we have to be able to defend ourselves and be able to maintain those sea lanes of communication open to global commerce." CBC News

INTERNATIONAL

*** Government signs peace deal with warlord**
Afghanistan's government signed a draft peace deal on Thursday with a designated "global terrorist" after lengthy negotiations that could pave the way for a similar accord with the Taliban, who have been waging war on Kabul for 15 years. The deal with warlord Gulbuddin Hekmatyar is the country's first peace agreement since the Taliban launched their insurgency in 2001, after being driven from power in the wake of the 9/11 attacks on the United States. It grants full political rights to his Hezb-i-Islami Gulbuddin party and obliges the Afghan authorities to work to have it removed from the United Nations' list of foreign terrorist organizations. Hekmatyar himself was designated by the U.S. as a "global terrorist" in 2003. The agreement ends years of talks between Kabul and Hekmatyar. It enables him to return to Afghanistan after 20 years in exile - he is believed to live in Pakistan. Associated Press (Vancouver Sun, Whitehorse Daily Star, London Free Press, Montreal Gazette, Edmonton Journal, Leader-Post, Ottawa Citizen, Windsor Star, Calgary Herald, National Post)

*** Man pleads guilty in blogger beheading plot**
A Rhode Island man charged with plotting to help the Islamic State group has pleaded guilty to conspiracy charges, including a plot to behead conservative blogger Pamela Geller. Nicholas Rovinski pleaded guilty Thursday in U.S. District Court in Boston to two federal charges including conspiracy to commit acts of terrorism transcending national boundaries. Prosecutors say Rovinski, of Warwick, plotted with two Massachusetts men to kill Geller. The plot was never carried out. Rovinski's lawyer says his client renounces allegiance to the Islamic State group. Prosecutors alleged the 25-year-old, while in jail, tried to recruit people to carry out violent attacks in the United States. A plea agreement Rovinski reached with prosecutors called for a sentence of between 15 and 22 years in prison. Sentencing is scheduled for March 23. Associated Press (Guardian, B6, Cape Breton Post)

*** Prosecutors charge white Oklahoma police officer, who fatally shot unarmed black man, with manslaughter**
Prosecutors in Tulsa, Oklahoma, charged a white police officer who fatally shot an unarmed black man on a city street with first-degree manslaughter Thursday. Tulsa County District Attorney Steve Kunzweiler filed the charge less than a week after officer Betty Shelby shot and killed 40-year-old Terence Crutcher on Sept. 16. Kunzweiler said arrangements were being made for Shelby's surrender. "I do not know why things happen in this world the way they do," Kunzweiler said, adding that he determined first-degree manslaughter the appropriate charge. "We need to pray for wisdom and guidance." Dashcam and aerial footage of the shooting and its aftermath showed Crutcher walking away from Shelby with his arms in the air. The footage does not offer a clear view of when Shelby fired the single shot that killed Crutcher. Her attorney has said Crutcher was not following police commands and that Shelby opened fire when the man began to reach into his SUV window. But Crutcher's family immediately discounted that claim, saying the father of four posed no threat to the officers. They also pointed to an enlarged photo from police footage that appears to show Crutcher's window was rolled up. And police said Crutcher did not have gun on him or in his vehicle. MINISTER / MINISTRE

McGuinty to earn extra $42,000 as head of Joint National Security Committee
The bill at the centre of debate in the House of Commons for most of this week-Bill C-22, the government's proposed legislation to create a National Security and Intelligence Committee of Parliamentarians-comes with sizeable pay bumps for those selected to be on it. The bill, currently at second reading, was introduced just ahead of MPs fleeing Parliament for the summer, and is being sponsored by Government House Leader Bardish Chagger (Waterloo, Ont.). The government has dedicated three days of debate to it in the House this week-Tuesday, Wednesday, and Friday-in hopes of passing it at second reading and getting it off to the Public Safety and National Security Committee by the end of the week. (…) Mr. McGuinty said it will be Mr. Trudeau's purview on what the committee studies and noted that **Public Safety Minister Ralph Goodale** (Regina- Wascana, Sask.) has been conducting parallel consultations on potential Bill C-51 reforms. Further, the work of the committee's secretariat

would be exempt from the Access to Information Act, as the bill states that it "shall refuse to disclose any record requested under this Act that contains information obtained or created by it or on its behalf in the course of assisting the National Security and Intelligence Committee of Parliamentarians in fulfilling its mandate." The bill follows through on a Liberal campaign promise to create an all-party committee to oversee the government's national security agencies in an effort to align with the other countries in the so-called "Five Eyes" alliance, which includes Canada, the United States, the United Kingdom, Australia, and New Zealand. Hill Times

Canada says new border accord with China will speed deportations
An agreement signed between Canada's border agency and China will result in the faster deportation of Chinese citizens deemed inadmissible by Canadian authorities, a Liberal government spokesman said on Sunday. The deal will allow Chinese officials to travel to Canada to interview Chinese citizens considered inadmissible, with the aim of verifying their identities and documents, said **Scott Bardsley, press secretary to Public Safety Minister Ralph Goodale**. **Bardsley** said the verification process could otherwise take a long time and had often delayed deportations. (…) The border agency agreement, which will not be in place immediately, is similar to one China has with the European Union, and officials from both countries will revisit the matter in November, said **Bardsley**. (…) The countries on Thursday settled a trade dispute and said they would start exploratory talks on a free trade pact. The countries also signed a memorandum of understanding under which the Royal Canadian Mounted Police and the Ministry of Public Security of China will cooperate to combat a broad range of crimes. **Bardsley** said the memorandum was a renewal of a similar one signed in 2010 that called for broad cooperation. Reuters (2016-09-25)

It's time for a commission of inquiry on Afghan detainees
An opinion piece by NDP MP Hélène Laverdière states, "Over the past months, we have seen renewed calls on the Canadian government to launch a Commission of Inquiry into Canada's practices and policies relating to the transfer of hundreds of detainees to Afghan authorities, during Canada's mission in Afghanistan. In June, more than 40 civil society groups, lawyers, academics and prominent Canadians signed a letter calling for a Commission of Inquiry. Signatories included former prime minister Joe Clark, the inaugural chair of the Security Intelligence Review Committee Ron Atkey, Ed Broadbent, Stephen Lewis, Canadian diplomats posted to Afghanistan during the war, the secretary general of Amnesty International Canada, and leading scholars and representatives of human rights, foreign policy, and lawyers' organizations. New Democrats were among the signatories. (…) Stéphane Dion and **Ralph Goodale** strongly supported the NDP's call for a public inquiry while in opposition. Now, as ministers responsible for Global Affairs and Public Security-two of the three ministries with responsibility for this case-they are abdicating their responsibilities and refusing to pursue the matter. The third minister involved is the minister of National Defence and it is alarming that the government has assigned to him the role of responding to these allegations. Sajjan was a senior officer in Kandahar during the period in question and it is likely that he would be a key witness at an inquiry. The potential conflict of interest should disqualify him from oversight of this case. This is not solely a Defence issue, and in no way should be handled by this minister alone. It is time for the prime minister to take the lead." Hill Times

Spy chief issues encryption warning
The head of Canada's electronic spy agency warned Friday the advent of super-fast quantum computers will cripple current encryption methods for securing sensitive government and personal information within a decade. In a rare public speech, Greta Bossenmaier, chief of the Communications Security Establishment, said cryptologists at the CSE and around the world are racing to find new cryptographic standards before Y2Q - years to quantum - predicted for 2026. She was the third senior CSE official in less than a week to warn publicly of the threat quantum computing poses to widely used public key cryptography (PKC), protecting sensitive data transmissions from hackers, hacktivists, foreign state spies and other malicious actors. The CSE is best known as a spy agency - it collects, decrypts and analyzes phone calls, faxes, emails, tweets, satellite and other electronic signals emanating from adversarial foreign nations and overseas threat actors. But it's also mandated to protect government computer

systems and networks, and the information they carry. Already, federal computer systems are "probed" more than 100 million time a day by suspected malicious actors searching for vulnerabilities. Now, "the challenge of protecting systems is about to get a lot harder thanks to quantum computing," Bossenmaier told an Ottawa conference of the Canadian Association for Security and Intelligence Studies. An extradition treaty with China sends a message about corruption

A lawyer at Duhaime Law, with a specialized practice in anti-money laundering, counterterrorist financing and asset recovery. The topic of an extradition treaty between Canada and China is at the forefront among the news media, government officials and the public these days. Indeed, it should be, because it's a topic that's important to both countries. There are a lot of experts telling us what's wrong with an extradition treaty with China. We are told that Canada can't sign an extradition treaty with China because China has capital punishment. But that's never been a bar to entering into an extradition treaty. Canada has extradition treaties with the United States, Japan, Zimbabwe, Singapore and the Maldives, all of which have capital punishment. (...) The Globe and Mail recently published a story about a foreign national who bought houses in Vancouver using third parties to obtain mortgages. That practice, if not disclosed to the banks in advance, would cause the banks, realtors and insurers conducting legally required due diligence to unwittingly file reports to the Financial Transactions and Reports Analysis Centre of Canada with the wrong persons identified as conducting financial transactions. The resulting (unwitting) systematic filing of reports with the wrong persons identified would stand in the way of FinTRAC's efforts to process information accurately, jeopardizing our security against money laundering and terrorist financing. The rule of law would not prevail if there were an absence of legal transparency - the public would be defrauded of the delivery of a vital public service by a few foreign homeowners and we would all be placed at risk. Globe and Mail, B4

Canada deports family to Ukraine as appeals fail

Canada deported a mentally ill 15-yearold boy to Ukraine Sunday night, despite medical evidence it is likely to trigger a second suicide attempt. Two border guards approached Vladyslav Zadorozhnyi the minute he arrived in the departures hall, and asked, as a formality, whether he is ready to go. "I don't know what to say," he said. "I feel very bad. Anxiety." Wearing a sporty zipup and a backpack, his hair carefully gelled, he was taken into the border security office with his mother Maryna Zadorozhna, 34, and his brother Andriy, 7. They arrived with the tearful parents of Vladyslav's new best friend, Alex, a classmate in his west Toronto school. (...) A key factor appears to have been Canada's late discovery of a fraud charge in Ukraine against Andriy. It was first mentioned by Canada on September 14 - more than a year after the family arrived, and a few days after the first scheduled deportation was cancelled at the 11th hour - in a letter from a senior immigration officer with the Backlog Reduction Office of Citizenship and Immigration Canada. Andriy denies being charged with fraud, and his refugee application includes clean police records checks. His counsel suggests the unspecified charge has been fabricated, and fits with the family's story about persecution by gangsters allied with crooked police, which a refugee tribunal did not believe. In an emergency hearing Saturday, the family's lawyer Hart Kaminker argued the process has been procedurally unfair and below the legal standard of how Canada treats children. Canadian Border Services Agency is "acutely aware of the fragility of Vladyslav's health," and putting the family on this "roller coaster," with two deportations scheduled in as many weeks, is not being "alert, alive and sensitive" to the boy's best interests. Those three words were used by the Supreme Court of Canada, in the 1999 case of Mavis Baker, a Jamaican woman whose four children were born in Canada. The case made a child's interests a mandatory factor in any deportation decisions that affect the child. But it did not make them a "primary" consideration. That is the higher standard set by the United Nations Convention on the Rights of the Child, which Canada has signed. Vladyslav's file was reviewed by a doctor on behalf of CBSA, who disagreed with a psychiatrist and judged him fit to fly, with no communicable disease. CBSA also confirmed medical staff will be on hand in Kyiv. Postmedia Network (National Post, A3, Vancouver Sun)

Waterloo Regional Police take extra precautions to avoid drug exposure during investigations: Inspector

Local police officers are taking more precautions during drug seizures and when helping those who have overdosed because of the dangers involved in even inadvertently touching certain drugs, the head of

Waterloo Regional Police's strategic and tactical services division says. "We've had to do some significant changes even just within our own service here in regards to the handling of those drugs once they're seized just because of the relative danger of them," Insp. Dave Bishop told CBC News. (…)The RCMP released a video earlier this month warning about the dangers first responders face when it comes to fentanyl. "The danger this drug presents to all Canadians cannot be overstated," RCMP Commissioner Bob Paulson said in a release. "It's spreading across the country, leaving a trail of misery and death, and first responders and the public need to know that even being near it can make you sick, or worse." The video tells the story of Const. Rob Dupuis in Kamloops, B.C., who found a man slumped over the steering wheel of his vehicle. The man was arrested, Dupuis put him in the cruiser and then went back to search the vehicle. "I noticed there was a bit of a chemical smell," Dupuis said. He started to feel lightheaded and nauseous, so he asked the man what he had in the car and the man said it was fentanyl. Dupuis had a urine test and it found he had trace opioids in his system. "The traffic stop is one of the most dangerous things that we'll ever do in our career because of the unknown. Now adding fentanyl to the mixture, you're stopping a vehicle and you think it's drugs and you're looking at it and you go, 'Oh wow, that looks like cocaine or heroin,' you just don't know anymore," he said. *** Tackling compliance challenges**
Move over fintech: Start ups using technology to solve compliance challenges for heavily-regulated financial services firms are on the rise. And one area generating interest among entrepreneurs is automation of the time-consuming process of verifying clients for banks and payment companies. Banks invest a lot of time and effort to prove their clients really are who they say, and that they are not tied to

criminal or terrorist organizations. The "know your client," or KYC, process is a crucial part of the anti-money laundering, or AML, practices all banks must follow. But it's a process that can drive up costs and create compliance risks, and the penalties can be heavy when the banks get it wrong. In April, authorities fined an unnamed Canadian bank $1.1 million for not reporting a suspicious transaction. HSBC, which had already paid $1.9 billion to resolve a drug cartel money laundering investigation in 2012, was sued again this past February by families of the cartel's victims. (...) So-called regtech firms work in a constantly shifting regulatory landscape with many regional variations. Canada's Anti-Money Laundering and Anti-Terrorist Financing (AML/ATF) regime is supported by the Proceeds of Crime (Money Laundering) and Terrorist Financing Act. "Canada's AML/ATF Regime is continually reviewed to ensure that it remains effective and addresses the changing financial landscape, including the development of financial technology," Paul Duchesne, deputy spokesperson at Canada's Department of Finance, said. Jacqueline Shinfield, partner at legal firm Blake, Cassels Graydon LLP, who specializes in financial compliance agrees the regulations keep evolving. For example, "There are changes coming in June next year that deal with the requirement to determine whether or not the account holder is a politically exposed domestic person, as opposed to a politically exposed foreign person," she noted. As well, the Financial Transactions Reports Analysis Centre of Canada (FINTRAC), which enforces compliance with the AML/ATF, is looking into the growing number of financial technology startups to figure out which qualify as money services businesses. Financial Post, FP4

*** The CSIS spy who co-founded Heritage Front neo-Nazi group . . . and shares the story behind the stories**

Find the fence. Follow the fence. Find the spy. That's not terribly sexy work in the world of investigative journalism, but it is, in this stranger-than-fiction episode, the truth of how, in 1995, I tracked down Grant Bristow, a government agent who had infiltrated the Canadian neo-Nazi group, the Heritage Front. Bristow was now in hiding after allegations surfaced that the CSIS mole had instigated and funded many of the criminal acts he was supposed to be monitoring. He co-founded the hate-mongering Heritage Front and allegedly drew up lists of targets for the group, encouraging its members to spy on and harass prominent Jewish leaders, all while on the government payroll. After he was outed, the government took its spy in from the cold and hid him, allegedly for his protection. Finding Bristow had become an obsession among the ultracompetitive Toronto media. Now, courtesy of a source, I had a photograph of the disgraced spy, sitting in the backyard of his new house somewhere in Canada. Beside him, by a pinkish-white stucco post, a pair of crutches to one side. If I could find that fence, I could find Bristow. I had worked on the Bristow case for months, chasing multiple, fruitless sightings. I had compiled quite a bit of information on Bristow's time inside the Heritage Front, even his visit to Libya as a guest of Moammar Gadhafi, but I had drawn a complete blank as to his current whereabouts. Then came the lucky break. A man walked into the Star newsroom carrying photographs of Bristow, his wife and son, which he claimed had been taken at their new hideout, somewhere out west, possibly Calgary or Edmonton. CSIS had given Bristow a new identity, a new home and two brand-new cars, he said. Toronto Star, GT3

*** Calgary mother and daughter who fled domestic abuse forced to leave Canada**

Two years after they came to the country to escape an abusive relationship, a mother and her daughter are being forced to leave Calgary and return to their home country on Monday. Ariunaa Demberel and her daughter Enky Ankhbayar came to Canada back in 2014 to escape from an abusive ex-husband. Demberel says he kidnapped and assaulted them before they made the decision to flee Mongolia, their home country. The pair applied for refugee status in hopes of staying here, but a judge ruled over the weekend that they would have to leave. In the ruling, the judge said there would be no 'irreparable harm' associated with the act of deportation and there no psychological harm posed to either of them. Demberel says she attempted to appeal to a federal court to put their deportation on hold, so Enky could finish her final year of high school in Canada, but that was not to be. "I don't want to break the law, so they told me to come to the airport tomorrow at 7:00, so I will be there and I have no plans. I don't know, I don't have any plans, I guess," she said. CTV News

Representatives for Chinese economic fugitives critical of extradition treaty talks

Alex Ning remembers the feeling of despair when a man he had helped represent returned to China to face embezzlement charges. Mr. Ning, a Vancouver-area immigration consultant, said Gao Shan "couldn't stand the pressure" after his father, brother and brother-in-law were detained by Chinese authorities for aiding and abetting. It was Mr. Ning's first case in which China sought the return of an economic fugitive. Today, Mr. Ning says he is helping about 30 others who are in the same situation as Mr. Gao. Mr. Ning said about half have been visited by Chinese authorities on Canadian soil. The other half, he said, have been pressed to return to China over the phone or online. The Globe and Mail reported last week that China's security services have been sending undercover agents into Canada on tourist visas to strong-arm expatriates to return home, including some suspected of corruption and other criminal activities. And with the Canadian government recently agreeing to negotiate an extradition treaty with China, representatives for some who have returned to the country in recent years to face criminal charges are criticizing the move – and noting there can be unpleasant surprises for those who go back.(…) He was ordered deported by this country's Federal Court after China provided several assurances, including that Mr. Lai would not face the death penalty. Mr. Lai was convicted on charges of smuggling and bribery in 2012 and sentenced to life in prison. "I don't think he anticipated that he wouldn't get proper medical care," Mr. Matas said in an interview. Mr. Matas said one of the assurances Mr. Lai received was that Canadian officials would be able to visit him in custody. However, Mr. Matas said he was later told by the Canadian embassy in China that the assurances did not apply post-conviction. Globe and Mail, A3 (2016-09-25)

*** Border officials kept busy in August**

Americans continue to run afoul of Canadian law when they try to enter Alberta. But dozens of would-be visitors – some of them convicted criminals – were refused entry during a busy August at southern Alberta's border crossings And two of them were teenagers who may have arrived at the Coutts crossing by accident. Officials with the Canada Border Services Agency say it was the undeclared guns – a pistol, a rifle and a shotgun – that first raised the alarm. Then the officers learned the two had been reported as missing children, who may not have realized they were about to leave the U.S. They were arrested and turned over to American authorities to be returned to their parents. Lethbridge Herald

Guns, throwing stars among weapons seized at border
Border officials are reminding travellers to leave their weapons at home after guns and bladed throwing cards were seized at local crossings last month. An Ontario man is facing charges after he was caught transporting throwing stars, knives and knifed throwing cards at the Windsor-Detroit Tunnel. The Canada Border Services Agency said the man was crossing through the tunnel on Aug. 16. Officers located and seized the throwing stars, knife throwing cards and knives in a plastic bag in the vehicle's trunk under several layers of personal goods. The vehicle was seized as penalty and the man was arrested and charged. (…)On Aug. 10, an Ontario resident and NEXUS member was referred to secondary inspection regarding importing a classic car with a declared value of US$20,000. Research revealed the purchase price of the vintage car was actually US$85,250. The man was arrested and released. He will appear in court next month. On Aug. 4, a man from Michigan was referred to secondary inspection at the tunnel where officers discovered a firearm under the passenger seat, .5 grams of marijuana and four amphetamine pills. The gun and drugs were seized and the man was arrested. He was scheduled to appear in court on Sept. 12 but did not attend. A warrant has been issued for his arrest. On Aug. 10, a man arrived at the tunnel to inquire about his admissibility for future trips to Canada. During the course of the exam, the man admitted to not declaring a firearm and ammunition which were located in the vehicle. Officers also located pepper spray and a switch blade. He was arrested and the weapons were seized. Windsor Star, A3

*** Windsor man at centre of 1999 human trafficking case denied bail**
A Windsor man who fled to Canada rather than face time behind bars for 'alien trafficking' in the United States has been denied bail. American court documents reveal that in 1999 Sang Thanh Nguyen was stopped by the Coast Guard while travelling by boat between Amherstburg and Michigan. Eleven "Chinese aliens" were found aboard the boat and Nguyen was arrested and charged with human smuggling. At the time he pleaded guilty and agreed to spend 15 months in prison, but he did not appear at his sentencing hearing and instead absconded to Windsor where he lived and worked for 17 years. (…) During those years American authorities did make some efforts to find Nguyen, but according to information read in court by Superior Court Justice T.J. Carey, they were under the incorrect impression that Canada wouldn't sign an extradition order for human smuggling. "One is a little astounded when the U.S. is visible outside this courtroom window and authorities are in offices a few kilometres from here, that nobody picked up the phone," said Carey. In 2015 Canadian authorities alerted their American counterparts that Nguyen was in the country, because of suspicions that he may have been active in human trafficking again, although there was no evidence disclosed that he was. An extradition order was signed and Nguyen was arrested on August 11. Windsor Star, A6

Migrant workers caravan hits Toronto en route to Parliament Hill
As symbols go, the schedule of the "Harvesting Freedom Caravan" that hit Toronto on Sunday could hardly have been better designed. Activists campaigning for an end to exploitation of migrant workers in Canada set out on Labour Day weekend from the Ontario town of Leamington, home to the largest concentration of agricultural greenhouses in North America. They aim to conclude in Ottawa - where they say the problem must be addressed - just before Thanksgiving weekend, when Canadians across the country will be preparing to chow down on what the caravaners describe as the fruits and produce of injustice. On Sunday morning, the caravan protested outside the Ontario Food Terminal. And in the afternoon, at Ryerson University, leaders attended a screening of director Min Sook Lee's jarring documentary Migrant Dreams. It was all part of a campaign asking Canadians to consider where, how and by whom the food they enjoy is picked and packed. (…) At the rally, farm workers - including Gabriel Allahdua, a 45-year-old father of two from St. Lucia who works in Leamington - spoke about the conditions they endure under the temporary foreign workers program. Allahdua, carrying protest signs shaped like pumpkins and apples, told the Star later that the problem is rooted in government laws and policies. "In Canada, if you have no status you have no rights. And if you have no rights it means that you are vulnerable. And because we are vulnerable, we have been exploited." Critics say the federal Seasonal Agricultural Worker Program is 50 years old this year and long past due for wholesale reform or replacement. For half a century, producers have been profiting and Canadians have been dining out on the sweat and misery of migrant workers treated as disposable labour, caravan organizers said. Toronto Star

B.C. urges Ottawa to fix tech talent gap

B.C. Premier Christy Clark is pressing Ottawa to open the floodgates for high-skilled foreign tech workers to immigrate to Canada, saying her province's burgeoning tech sector faces an acute shortage of talent to fill thousands of jobs. (...)The Premier's call adds to those from technology companies across Canada who have put pressure on the Liberal government to speed up and streamline the immigration process so they can more readily recruit top foreign talent. They say that unless the government dramatically shortens visa-processing times for foreign programmers, researchers and tech executives, they will lose out to other countries for talent needed to help grow their business and create jobs here. (...)Streamlining the [immigration process] and increasing total immigration "makes a world of sense" for his and other companies. Mr. Booth and other Canadian tech executives have made their case in recent weeks directly to Immigration Minister John McCallum to streamline the immigration process in round tables in Ottawa, Toronto and Vancouver organized by the Council of Canadian Innovators, a lobby group representing emerging Canadian tech firms. Globe and Mail, B1

* **Dion's stance confusing: critics**

Foreign Affairs Minister Stéphane Dion sowed confusion and showcased cracks in Liberal ranks when he angrily denied recently that negotiations are under way on an extradition treaty with China, critics say. One federal official said that Mr. Dion was simply flustered about semantics when he denied the launch of talks: "Preliminary discussions are a precursor to negotiations and those discussions have only just begun. "Still, another senior Liberal added, "I'm not clear what [Mr. Dion] was trying to say. "In a telephone interview with The Globe and Mail on Friday, Mr. Dion insisted there are no negotiations in the works that could see Canada return Chinese fugitives accused of economic crimes. "Your paper should check the facts. There is no negotiation. To write like pretending it is, it is wrong. Stop that please," Mr. Dion said. When asked what kinds of specific guarantees the Canadian government would demand with a formal Chinese extradition treaty, Mr. Dion again became testy. "We never extradite people to countries who have the death penalty. Your question is unfair because never the government of Canada would do such a thing. And why you are implying that is beyond me. That's my answer to your question." However, Canada has returned more than 1,400 Chinese nationals since 2009, most of whom were involved in illegal immigration. In addition, Canada has an extradition treaty with the United States, although Ottawa insists on receiving assurances that people will not face the death penalty if they are sent back to face the American justice system. Globe and Mail, A6

Don't wait to improve borders

Fewer than two months remain before elections in the United States, and public interest in Canada is riveted on the campaign for president. It's important, however, not to lose sight of the opportunities our governments still have to make progress on issues vital to the future of our economic relationship - progress that can and should be made before the end of the presidency of Barack Obama. Now, more than ever, Canada should be making a concerted effort to ensure initiatives undertaken during the past several years to improve the security and efficiency of our borders and eliminate costly and unnecessary regulatory impediments to business between our two countries can be shown to have benefits that will sustain them during the next administration.(...)Strengthening border security, eliminating costly and needless regulatory impediments to trade and focusing on outcomes such as improved health, safety, environmental and consumer protection while making government more efficient are worthy objectives regardless of the political stripe of the next president. Bilateral priorities don't change when governments on either side of the border change. If Canada waits until a new administration is in place in Washington, a great deal of momentum, goodwill and opportunity will be lost. This is the time to demonstrate agreements that have mutual economic benefits are possible to achieve. Now is a good time for both governments to reaffirm publicly their commitment to work together to improve border and regulatory management. Winnipeg Free Press, A7

* **The driver who fled as a girl lay dying**

An opinion piece states, "Kara Parman lay dying in the road. The 7-year-old Toronto girl was crossing the street to buy some candy when she was struck by a car. The driver sped off. It was Nov. 22, 1993. Kara, a Grade 3 student, died after lingering in a coma for five days. Police set up a special squad and launched a massive dragnet to catch the driver. I was searching for him, too. I worked day and night, following a tip that he might have been a Portuguese immigrant. I knocked on doors across Toronto's

Portuguese community: body shops, cafés, neighbourhood parties. Like the police, I was coming up with nothing. The trail went cold for more than a year. (...) I went back to Portugal and accompanied Jose Fernandes Castro to Canada. When we arrived at Pearson airport on March 2, 1995, two RCMP officers came aboard and arrested him. He was carrying a letter from his priest and another from his mother to Kara's mom. Castro, sentenced to a year in jail, was released after eight months and immediately deported to Portugal. The story garnered international headlines and praise from my employer, colleagues, the police and Kara's mother, Karen, who went on radio and television to thank me for bringing closure to her nightmare." Toronto Star, GT3

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Spy chief issues encryption warning**

The head of Canada's electronic spy agency warned Friday the advent of super-fast quantum computers will cripple current encryption methods for securing sensitive government and personal information within a decade. In a rare public speech, Greta Bossenmaier, chief of the Communications Security Establishment, said cryptologists at the CSE and around the world are racing to find new cryptographic standards before Y2Q - years to quantum - predicted for 2026. She was the third senior CSE official in less than a week to warn publicly of the threat quantum computing poses to widely used public key cryptography (PKC), protecting sensitive data transmissions from hackers, hacktivists, foreign state spies and other malicious actors. The CSE is best known as a spy agency - it collects, decrypts and analyzes phone calls, faxes, emails, tweets, satellite and other electronic signals emanating from adversarial foreign nations and overseas threat actors. But it's also mandated to protect government computer systems and networks, and the information they carry. Already, federal computer systems are "probed" more than 100 million time a day by suspected malicious actors searching for vulnerabilities. Now, "the challenge of protecting systems is about to get a lot harder thanks to quantum computing," Bossenmaier told an Ottawa conference of the Canadian Association for Security and Intelligence Studies. Postmedia Network (Kingston Whig-Standard, B1, Ottawa Citizen)

Spy agency exec calls for debate on encryption

Canadians are being encouraged to ask more questions about the security of their electronic devices from an unlikely source - an executive at the country's electronic intelligence agency. Scott Jones, the deputy director of IT security at the Communications Security Establishment (CSE), said Canadians need to start taking a greater interest in how their electronic devices protect personal information. "We should be asking when we go and buy the stuff we have at home, OK, tell me how it's being protected," Jones said in an interview. "If it's my cellphone, does it have encryption if I lose it? Can somebody just read the data off of it or not? We need to start asking questions like that ... We need to start helping each other, and helping citizens, helping businesses, helping the government. When we're buying these products, they need to be secure by default." It may come as a bit of a surprise to hear an employee at CSE counselling Canadians to protect private information. The agency was thrust into the spotlight after U.S. whistleblower Edward Snowden's disclosures. CSE is part of the Five Eyes security alliance, which includes spy agencies in the U.S., the United Kingdom, Australia and New Zealand. Snowden's disclosures revealed the mass surveillance programs used by those countries, including programs that scooped up their own citizens' data. Jones's comments also come as law enforcement agencies in the U.S. and Canada are forcefully arguing for the need to limit encryption - calling for so-called "back doors" that would let authorities decode citizens' data. The argument is that encryption helps bad guys - terrorists, organized crime, child pornographers - hide their tracks. The everyday uses for encryption, such as protecting credit card transactions, safeguarding personal messages, or protecting sensitive government documents, are brought up less often. Toronto Star, A4

*** Les grands enjeux**

(...) En juin 2015, environ 1400 passagers du transporteur polonais LOT ont été coincés à l'aéroport Chopin de Varsovie en raison d'une cyberattaque touchant 10 avions. De tels incidents demeurent rares même si chaque mois, les systèmes informatiques aériens du monde subissent en moyenne 1000 cyberattaques, selon l'Agence européenne de la sécurité aérienne. Des experts vont jusqu'à prédire que le prochain gros attentat terroriste sera le fait de pirates informatiques. Après l'adoption d'un plan d'action

en 2014, l'OACI demandera à ses pays membres d'avaliser une résolution leur enjoignant de redoubler d'efforts en la matière. La Presse

*** American spies get wireless devices**
U.S. spies are catching up to the masses in their gradual embrace of 21st-century technology, from installing wireless connections in secure facilities to wielding iPhones and tablets, according to an official with the U.S. National Geospatial-Intelligence Agency. "We'd be cutting off our noses to spite our faces by denying us those kinds of tools," Matt Conner, deputy chief information security officer of the agency, said. The NGA provides intelligence to other parts of the government from battlefield maps to satellite imagery of national disasters. It's among agencies that are working with the Director of National Intelligence to study how to maximize the use of secure wireless networks and devices, while still maintaining the cover that spies need. Bloomberg News (National Post)

*** Yahoo email hack: Are biometrics the answer to a safer online world? Not yet, says expert**

Actors and celebrities' websites are hacked, or nude photos are stolen and spread online. Oh, and your antivirus programs aren't solving the problem.. The flood of headlines suggests the frequency and severity of cyberattacks is getting worse, instead of better. Are the tools we're using to keep our personal information secure keeping up? Technological advances in security measures are slowly gaining traction. Biometrics, especially, have grown in popularity. By scanning your fingerprint, retina, or even listening to your heartbeat, devices can identify you with data that's unique only to you - and without the hassle of remembering and managing multiple passwords over dozens of services. It sounds like a promising, password-free future. But Eldon Sprickerhoff, chief security strategist of Cambridge, Ont-based cybersecurity firm eSentire, warns that it will be a long time before any single method can supplant traditional passwords as the preferred method of locking down your online accounts. *** Waterloo Regional Police take extra precautions to avoid drug exposure during investigations: Inspector**
Local police officers are taking more precautions during drug seizures and when helping those who have overdosed because of the dangers involved in even inadvertently touching certain drugs, the head of Waterloo Regional Police's strategic and tactical services division says. "We've had to do some significant changes even just within our own service here in regards to the handling of those drugs once they're seized just because of the relative danger of them," Insp. Dave Bishop told CBC News. (...)The RCMP released a video earlier this month warning about the dangers first responders face when it comes to fentanyl. "The danger this drug presents to all Canadians cannot be overstated," RCMP Commissioner Bob Paulson said in a release. "It's spreading across the country, leaving a trail of misery and death, and first responders and the public need to know that even being near it can make you sick, or worse." The video tells the story of Const. Rob Dupuis in Kamloops, B.C., who found a man slumped over the steering wheel of his vehicle. The man was arrested, Dupuis put him in the cruiser and then went back to search the vehicle. "I noticed there was a bit of a chemical smell," Dupuis said. He started to feel lightheaded and nauseous, so he asked the man what he had in the car and the man said it was fentanyl. Dupuis had a urine test and it found he had trace opioids in his system. "The traffic stop is one of the most dangerous things that we'll ever do in our career because of the unknown. Now adding fentanyl to the mixture, you're stopping a vehicle and you think it's drugs and you're looking at it and you go, 'Oh wow, that looks like cocaine or heroin,' you just don't know anymore," he said. CBC News

100 fallen officers honoured at annual memorial
No names were added to the roll of 100 fallen officers remembered Sunday at the Alberta legislature during the Police and Peace Officers' Memorial Day ceremony. But for those whose loved ones fell in the line of duty, the occasion was still a bittersweet one. (...) We're always very fortunate when we don't have to add another name to the memorial," said Alberta Justice Minister and Solicitor General Kathleen Ganley. "We're really grateful for that but there are many families here to mourn those that they have lost

so it's still a very sad day but an important day to remember the service provided to all Albertans," she said. Deputy Commissioner Marianne Ryan, commanding officer of RCMP in Alberta, said the day is an emotional reminder that officers put themselves in harm's way every day. She pointed to massive wildfires earlier this year that forced the evacuation of communities in northeastern Alberta including Fort McMurray. "When the wildfires first struck, I was immediately advised that our officers were running towards subdivisions banging on doors trying to get people evacuated," she continued. "While the firemen did an outstanding job of fighting the fires, our folks did an outstanding job of keeping people safe ... at great personal risk both for themselves and knowing that their homes were likely in the path of the fire and not knowing where their own families and children were. Postmedia Network (Edmonton Journal, A1, Edmonton Sun, Calgary Herald); The Telegram; Postmedia Network (Leader-Post, StarPhoenix); Winnipeg Sun

Fallen Island Mountie added to honour roll

As he concluded the ceremony Sunday in Vancouver's Stanley Park, Chaplain Jim Turner told those attending the British Columbia Law Enforcement Memorial that, by this time next year, he hopes for one thing. "It is my prayer that, by this time next year, we will have no more names to add to the honour roll," Turner told the crowd. The annual ceremony is well attended by representatives of B.C's law enforcement and public safety community and their counterparts in the United States. The new name Turner was talking about was the Const. Sarah Beckett of the RCMP's West Shore detachment on Vancouver Island, who was killed April 5 when her police cruiser was hit by a pickup truck in a Langford intersection. (...) Beckett's name also was added to an honour roll, cenotaph and memorial wall at the RCMP's national memorial service for fallen members Sunday. The memorial ceremony is held annually at RCMP Depot Division in Regina, where the force's academy is located. The addition of Beckett's name to the memorial brings the total number of fallen members to 237 since the creation of the North-West Mounted Police in 1873. During the Vancouver ceremony, RCMP Deputy Commissioner Craig Callens said a death among the ranks is a burden on everyone in the force. "We are here to honour those police office who have made the ultimate sacrifice," said Callens. "Fresh in our minds is Const. Beckett," he said. "I can tell you Sarah exemplified the very best." Postmedia Network (Vancouver Sun, A9, The Province); CBC News; Agence QMI (Journal de Montréal); * Radio-Canada

Too much talking, cellphone use, during federal 'lockdown' exercise, report says

A "lockdown" exercise designed to test whether federal workers know what to do if a gunman ever stormed their Ottawa office building was marred by too much talking, too many ringing cellphones and too many hiding spots that were too visible. "Employees at all levels were heard talking while they were hiding," says an internal report on the March 30, 2016, exercise. "Remind employees to stay quiet to prevent the aggressor from knowing where they are hiding." The fake "lockdown" was conducted this spring just a few blocks from Parliament Hill, where a real gunman had stormed the Centre Block and started shooting on Oct. 22, 2014. The gunman died in a shootout, after killing a soldier at the National War Memorial and injuring a House of Commons guard. (...) Local police, RCMP and the office workers themselves were given plenty of notice for the 2 p.m. ET exercise, and were told how to behave over the eight minutes that a faux gunman was supposedly roaming the halls looking for victims. But the concept seemed to be poorly understood, or not taken seriously, by significant numbers of participants. "Cellular telephones could be heard ringing in hiding areas," says the report. "Remind employees to participate fully in the exercise by turning off their electronic devices." Observers also noted that the glow from cellphones could tip an "active shooter" to the presence of a hiding worker. "RCMP Protective Policing recommends that cellular telephones be turned off during an incident and this approach will be evaluated." CBC News

*** Bomb threats force Mohawk College students out of their dorms**

A series of bomb threats forced students to evacuate their dorms at Mohawk College on Sunday night. The phone calls came at about 9 p.m., Hamilton police said. McMaster University and Joseph Brant Hospital in Burlington were also targeted. However, all locations were checked and nothing was found. Students have since been allowed back into their dorms. The bomb threats come days after similar incidents in P.E.I., Nova Scotia, Manitoba and Nunavut. Last week, every single school in Prince Edward Island was evacuated due to a bomb scare, sending parents scrambling. RCMP spokesman Sgt. Kevin

Baillie said a fax was sent to Ottawa RCMP Wednesday morning from someone threatening to detonate bombs at several schools. City News

Police investigate five more bomb threats
The woman running for mayor of Halifax wants "big consequences" for those making fake bomb threats after five more hoax calls this weekend. Mayoral candidate Lil MacPherson said Sunday these calls are wasting emergency resources. "This is unacceptable in this city," said MacPherson. "These people are taking away special services that will be going to people who really need them." (…) On Sunday, five separate bomb threats were reported to police during the early morning hours. The RCMP say they received an anonymous call at 1:30 a.m. from a male who claimed he was in the parking lot of Cole Harbour Place with bombs and a hunting rifle. Police immediately cordoned off the area but found nothing. Shortly after 2 a.m., the RCMP office received an anonymous, automated phone message saying there was a bomb at Halifax Stanfield International Airport. Halifax Regional Police and the RCMP Police Dog Service conducted a search and also found nothing. Around the same time, Dalhousie University received a threatening automated phone message. Chronicle Herald, A5; Canadian Press (Winnipeg Sun, London Free Press, Edmonton Journal, National Post, StarPhoenix, Windsor Star, Montreal Gazette, Vancouver Sun, Calgary Herald, Leader-Post, Ottawa Citizen)

Targeted Surrey shooting sends two to hospital
Two people are in hospital after an apparent targeted shooting in Surrey on Sunday. Surrey RCMP were called to a home in the 4200-block 152nd Street after learning of the incident. When police arrived, they found the adult male and female residents of the house suffering from non-life-threatening injuries. The victims were taken to a local hospital via ambulance. Vancouver Sun

Royal Visit
Vancouver came together Sunday to give the Duke and Duchess of Cambridge a welcome so warm that it felt like a truly Canadian embrace - respectful, enthusiastic and multinational. Vancouver showed up bearing flowers, wearing cocktail dresses and dress shirts, tiaras and Union Jacks, and replicas of Diana's exquisite sapphire ring. We also came carrying hand-written signs that pleaded our causes: reconciliation, climate change, fisheries and the environment, pipelines and PTSD - and if the royal engagements of the day are any indication, that's exactly the way the duke and duchess want it to be. At every stop, with Prime Minister Justin Trudeau and his wife, Sophie Gregoire Trudeau, serving as escorts, the duke and duchess walked a fine line between the glamour and drama, the glitter and grit. (…) RCMP officers conduct a sweep as hundreds of people wait to greet the Duke and Duchess of Cambridge before their arrival at the B.C. Legislature in Victoria, B.C., Saturday, Sept 24, 2016. Vancouver Sun

*** Crossfield not moving forward with security cameras**
Town-operated security cameras will not be going up in Crossfield. Discussions about the feasibility of security cameras has been a recurring topic in council since Chief Administrative Officer Ken Bosman spoke of the Town's "future technological vision" at a meeting May 17. During its Sept. 20 regular meeting, council agreed it was clear both residents and RCMP were not in favour of the matter following a Sept. 15 open house surrounding a proposed Video Surveillance Cameras in Public Areas policy. "I think we've heard from the people that security is important to them, but this is not the right solution," Bosman said. According to Councillor Hadi Feltham, much of RCMP's concern regarding the use of surveillance video is that most incidents occur between midnight and 4 a.m. when recording conditions are poor. Mayor Nathan Anderson said if RCMP didn't have faith the security cameras could be utilized effectively, there was no point in continuing to pursue the effort. "People said they didn't want it (and) RCMP said it wasn't useful, so my thought is that we're not moving ahead with it," he said. Feltham said the RCMP recommended Crossfield invest in a second peace officer or more enhanced policing shifts rather than security cameras. Rocky View Weekly

*** Vancouver fintech named criminal organisation by US**
US authorities have named a Vancouver fintech called PacNet Group a "significant transnational criminal organisation" and is seizing its U.S. assets. The US Treasury Department's Office of Foreign Assets Control (OFAC) alleges the PacNet Group has been involved for years in criminal activity, including money laundering and facilitating mail fraud. "PacNet has knowingly facilitated the fraudulent activities of

its customers for many years, and today's designations are aimed at shielding Americans and the nation's financial system from the large-scale, illicit money flow that are generated by these scams against vulnerable individuals," OFAC acting director John Smith said in a press release. It's not known yet if the RCMP have been involved with the investigation that led the OFAC to list PacNet and its affiliates as a transnational criminal organisation, or if the network is even on the RCMP's radar. The allegations have not been proven in a Canadian court or confirmed by Canadian police. South China Morning Post

Will Ft. Simpson situation lead to reflection?
An editorial states, "Where small communities are concerned, bad news almost always travels faster than good. That was certainly the case when Const. Akira Currier arrested Wrigley's Daryl Sibbeston on Fort Simpson's main drag at lunch time on a busy Friday afternoon. It's been just over a year since Currier moved to Fort Simpson. In that time, he's become a familiar face at the schools, helping out with the end-of-school bike rodeo that took place in June, coming out to check stops and even participating in last year's barbecue for Family Violence Awareness Week. Now, on the eve of that same week this year, his Sept. 9 arrest of Sibbeston has left the Wrigley man with a black eye and a bloody face. It was a metaphorical black eye for RCMP, as well - witnesses say Sibbeston was intoxicated at the time of his arrest but they also say he was alone and not causing trouble when the RCMP pulled up. People are entitled - obligated, even - to ask questions and criticize the RCMP officer's methods when they hear such accounts, even after the RCMP charged (…) It is unfortunate that the RCMP's good deeds in the community are now tainted in the eyes of many. Initiatives to combat impaired driving, drug busts, safety training and anti-bullying initiatives for the community's children and youth should not be overshadowed by Sibbeston's arrest." NWT News

Bomb hoax at P.E.I., N.S. schools reminds us of valuable lesson
An editorial states, "Last Wednesday, briefly, there was an international news story out of the Maritimes, featured prominently on the 'front' home pages of CNN and BBC news websites. Many citizens may have rapidly forgotten about it since the whole thing quietly slipped out of view, being one more apparent hoax in a jittery western world. (…) The RCMP wasted no time responding and evacuating schools, getting students to safe pickup points. The school system's plans for such emergencies worked well too. That nothing was exploding, or had exploded, helped, but the organization was clearly there and impressive. That's good, because as the international media attention indicated, **terror** can strike anywhere, anytime, and when least expected. That's what makes it terrifying." Times & Transcript, A8

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Sex offender sent back to prison
A 54-year-old sex offender who was living at the Henry Traill Community Correctional Centre, on Bath Road across from the Frontenac Mall, has been returned to prison for failing to disclose what he claims was a simple friendship with a Kingston woman. John R. McCauley pleaded guilty in Kingston's Ontario Court of Justice to violating a condition of a 10-year, long-term supervision order imposed on him in January 2002, which requires that he report all relationships, platonic or otherwise, to his parole officer. He was given enhanced credit on 163 days of pretrial custody and sentenced to a further 957 days in lock-up, a little more than two years and seven months. Justice Larry O'Brien was told that McCauley served a five-year federal sentence for sexual assault before being released initially on his long-term supervision order. However, according to Crown attorney Ross Drummond, the supervision order was suspended in August 2013 after McCauley was convicted of criminal harassment and sent back to prison for another 27 months. In January 2015, he was released again from Warkworth Institution and sent to Henry Traill - a federal halfway house operated by Correctional Service Canada - to resume long-term supervision. It was impressed on him that a key condition of his supervision was reporting all friendships and relationships so his pertinent offence history could be disclosed. Kingston Whig-Standard, A1

Breaking bad: These eight broke parole, now the cops need your help finding them
They did the crime, and they did some time ... then decided they'd been punished enough. Many of this month's Crime Stoppers Most Wanted were granted early release then are believed to have violated their parole conditions and left their court-appointed residences. If you know where they're hiding out, contact

Crime Stoppers - they pay cash for tips that lead to an arrest. Kayla Allen, 29, was to serve two years after being convicted of break and enter and drug possession. Instead she was released early on June 10, 2016. (…) Jesse Thompsett, 25, was charged and convicted on several offences including aggravated assault, and received a three-year jail sentence. He was given early parole on Aug. 22,2016, but only two days later he breached his conditions of release and has disappeared. There is a Canada-wide warrant in effect. Jason Moar was handed 31 months upon conviction of manslaughter. He was however deemed a good candidate for early release and started parole on Aug. 4, 2016. Moar, 24, made it till Aug. 30 before breaching his conditions. His current whereabouts is unknown and a Canada-wide warrant has been issued. Winnipeg Sun

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Sextortion of children on the rise**
Canadian cases of online sex-related extortion — "sextortion" — against children are increasing, following trends in the United States. U.S. federal officials and advocates are urging educators and parents to help raise awareness at school events. In sextortion cases, preying adults typically pose on social media as someone younger to coerce victims into sending inappropriate photos or video clips. Once initial images are delivered, the adult threatens to expose them publicly unless the victim sends more explicit pictures. The Canadian Centre for Child Protection reported that in 2012, the organization received three cases of sextortion cases a month through its Cybertip.ca line. Now, it receives upwards of 15 a month. Last September, the centre said it saw a spike of 40% in teen sextortion tips in a six-month period. Toronto Sun

*** Awareness week against cyberbullying, online exploitation kicks off in Quebec**
Sunday marks the beginning of an awareness week to teach kids and their parents how to handle intimidation and violence, and Sûreté du Québec wants them to be aware of the resources available to combat cyberbullying and sexual exploitation. The SQ says these issues have grown in recent years thanks to new technology. And as much as these things happen in a virtual world, the criminals acts have real victims. (…) Youth and their parents can find out how to manage risk and what actions to take when they have been the victim of cyberbullying. Anyone can signal a concern about the sexual exploitation of a minor to Canada's tipline to report the online sexual exploitation of children at cyberaide.ca. Montreal Gazette

*** Sex Slavery Thriving On Facebook And WhatsApp. Mark Zuckerberg, Are You Listening?**
An opinion piece states, "Sex slavery is very real today, even though International Law says it's illegal in every country of the world. In fact it is so real, that according to the Global Slavery Index, "45.8 million people are in some form of modern slavery in 167 countries", as of 2016. Just let that truth sink in. According to findings made by the report, 58% of those enslaved live in India, China, Pakistan, Bangladesh and Uzbekistan. This doesn't mean that the slate for other countries is clean. Luxembourg, Ireland, Norway, Denmark, Switzerland, Austria, Sweden and Belgium, the United States and Canada, and Australia and New Zealand fall into the category of lower estimated prevalence. Yes, the international law prohibits slavery. And yet, slavery is very, very existential. We're in the 21st century—the digital age. And slavery is as prevalent as it was in the dark ages. It's just the medium that has changed now. Technology—the boon of our lives; that's what organisations like the ISIS and Boko Haram are using to facilitate the trade, no holds barred. In fact, the Islamic State has openly advocated the revival of sex slavery, without any fear whatsoever. We could debate over why they have no fear. But, there isn't much of a debate, really." MensXP

2 free passes show flaws in system
An opinion piece states, "A teen from a village near Fredericton was granted a conditional discharge some time ago for a break-in at an area school, which meant he would have no criminal record for the crime. While this might irk some, it was a just outcome, as the offender had no prior record, and the philosophy that young offenders ought to be given chances and that the system should focus on rehabilitation for them, is a sound one, entrenched in our Youth Criminal Justice Act. However, it's not a

perfect piece of legislation, as a recent development for the same offender demonstrated. The same young man, now an adult, was in court in Fredericton recently to be sentenced for another break-in committed when he was a minor, this one at a church. The glitch in the case arises from the fact the church burglary occurred before the one at the school, meaning the young man, whose identity is protected by the Youth Criminal Justice Act, appeared as a first-time offender for the second time. As a result, he was once again given a conditional discharge. Two break-ins. Two investigations. Two guilty pleas. And technically, zero convictions. (…) The fault lies with the Youth Criminal Justice Act. Its focus on rehabilitation of youths is an honourable one, just as it was for its predecessor, the Young Offenders Act. (…) Ottawa needs to revisit this legislation and ensure it's serving all of society, not just kids who have gone astray." Daily Gleaner

Un sédatif pour éléphants, la nouvelle «drogue du jour»
Les autorités craignent qu'un sédatif pour éléphants, 10 000 fois plus puissant que la morphine et ayant déjà fait des victimes aux États-unis, ne fasse son apparition dans nos rues. «C'est très inquiétant, parce qu'on voit déjà une vague de surdoses avec de nouvelles drogues, comme le fentanyl. Donc, le fait que le carfentanil puisse s'ajouter à ça... On risque d'avoir davantage de surdoses», a averti Jessica Martel, du Groupe de recherche et d'intervention psychosociale (GRIP) de Montréal. Le carfentanil, un tranquillisant utilisé depuis longtemps pour endormir certains gros animaux comme les éléphants, semble depuis peu être devenu l'ingrédient secret des chimistes clandestins. Ce sont surtout les consommateurs d'héroïne qui sont à risque, puisque du carfentanil y est mélangé pour «couper la drogue». La plupart en consomment à leur insu. «C'est dangereux, parce qu'il suffit d'une erreur de dosage pour que ça entraîne une mort par surdose», craint Jean-François Mary, directeur général de l'Association québécoise pour la promotion de la santé des personnes utilisatrices de drogues (AQPSUD). En effet, selon la GRC, 20 microgrammes de carfentanil (un poids moindre que celui de quelques grains de sel), peuvent être mortels. Selon Santé Canada, le carfentanil n'aurait fait son entrée au pays sur le marché clandestin que cette année. Les autorités ont effectué en juin dernier une première saisie à Vancouver. Journal de Montréal, 3 (Journal de Québec)

Victim was a suspect in 2014 killing
The man shot dead in a hail of gunfire outside a troubled westend eatery Sunday morning in the city's second weekend homicide was once under investigation for his suspected role in the 2014 unsolved killing of Jabeir Jemmie. Abdi Jama, 26, also known by the street name "Ajax," was shot multiple times around 6 a.m. in a Shillington Avenue parking lot where a large group had congregated. Jama had previously been inside eatery The Suya Spot, long heralded by nearby residents and police as a problem area. The restaurant is well-known to anti-gang and drug officers for its clientele. Police believe Jama's death is gang-related. (…) Ottawa police said they are very concerned about the escalating gun violence in the city. "We are obviously seeing an increase in gun violence," Duty Insp. Sean McDade said. "We're very concerned for public safety." Coun. Rick Chiarelli, in whose College ward Thompson was killed, said he wants to know if the issue is one of police resources and thinks it's time to revisit talks about police budgets and officer allocation. "It's kind of a wake-up call to everybody in the city," Chiarelli said. "And we have to help police get control of the situation in all parts of the city. You get fear being struck in the hearts of people across the city." Ottawa Citizen, A1

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

Native leader to support families in new role
Francyne Joe remembers her eighth birthday, not for the McDonald's restaurant in Kamloops, B.C., where it was spent with friends, but rather for what she saw en route from her home on Lower Nicola reserve. She spotted her 12-year-old cousin, Monica Jack, riding her bike along the highway. It was May 6, 1978 - the last day Monica would be seen alive. In the years since, Ms. Joe has travelled that stretch of road, one of several B.C. highways notorious for the alarming number of indigenous women who have disappeared or died violently along them. On Saturday, Ms. Joe was appointed interim president of the Native Women's Association of Canada (NWAC), taking on the role just weeks after the historic launch of

a national inquiry into Canada's missing and murdered indigenous women and girls. (…) NWAC was at the fore in pressing for the long-sought national inquiry, and it will undoubtedly play a key role as the commission carries out its work over the next two years. Ms. Joe said her priority will be ensuring that victims' loved ones are heard and supported. "We need to ensure that the inquiry is going in the direction that the families want," she said. "The children of these victims need as much support as they can get." She also said she intends to continue pressing for an independent civilian body that would review cases where the quality of the investigation has come into question. She plans to raise the issue with federal ministers, as well as with the RCMP and the Canadian Association of Chiefs of Police. Nearly one month into the inquiry, Ms. Joe said she had expected more to have been done. There is no website or phone line for victims' families to call with questions or concerns. Globe and Mail, A13

*** First class lawyers: Lakehead's new graduates embody its small-town, northern, Indigenous focus**

Canada's newest law school opened in northern Ontario in 2013 with a unique commitment to teach about small-town practice, natural resources and environmental issues and, not least, Indigenous law. This week, the first graduates of Lakehead University's Bora Laskin Faculty of Law are among those being called to the bar at a Law Society of Upper Canada ceremony in Toronto. (…) In the first cohort, four students self-identified as Indigenous while another four have Indigenous roots-a modest start on Laskin's ambitions to recruit future First Nations, Metis and Inuit lawyers. "This is a marathon, not a sprint," says dean Angelique EagleWoman, the first Indigenous woman to head a law faculty in Canada. Her faculty is expanding its outreach efforts this fall. Already, some Laskin graduates see themselves as agents of change following last year's recommendations of the Truth and Reconciliation Commission and a newly established federal inquiry into missing and murdered Indigenous women. Macleans

*** Trek in memory of missing/murdered women**

Joseph Alfred Beaver is walking from Athabasca all the way to Terrace, B.C., in memory of murdered and missing aboriginal women. The 71-year-old from Calling Lake had breakfast Friday morning at the Grande Prairie Friendship Centre before setting out again, followed by about 25 women who were seeing him off. Beaver said he'd originally planned to go to Fort St. John, but he decided to extend his trek to Terrace B.C. so that he could walk the Highway of Tears, the name given to the stretch of Highway 16 where nine women – all but one of them aboriginal – were murdered between 1989 and 2006. "The idea for this memorial walk didn't happen overnight; I've had several relatives that went missing over the years," Beaver said. (…) Beaver said he supports the newly established inquiry on missing and murdered Indigenous women, which started Sept. 1 and goes until Dec. 31, 2018. "I have to say thank you to the Prime Minister for creating the inquiry. Now, I hope something does come out of it, not just spending millions of dollars." Beaver would like to a see a memorial on B.C.'s Highway 16. Daily Herald Tribune (2016-09-25)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Are we ready for neighbourhood sales of pot? Hell no, say worried parents**

Pretty soon, marijuana will officially be wonderful. God help us. There was a revealing story in Friday's Citizen by reporter Jacquie Miller about a marijuana dispensary in Orléans that opened in a building that also houses a couple of services that cater mostly to children. (…) It suggests - as parents, as suburban communities that cherish safety, as a people spooked by a national fentanyl crisis, as guardians who worry what our teenagers are up to at night - we are not wholly ready for this. Here, evidently, are the groups jittery about marijuana becoming legally available at an outlet near you: parents, young kids, senior citizens who never touch the stuff, cranky middle-aged newspaper hacks, small businessmen who don't want pot shops nearby, the police, educators and plenty, plenty more. So, who are we really legalizing marijuana for? I was noodling through statistics from the Canadian Centre on Substance Abuse. What an eye-opener. According to a respected national survey done in 2013, eight per cent of adults 25 and older reported cannabis use in the previous year. Yes, eight. The rate in 2012 was 8.4, while the figure from 2011 was 6.7 per cent. If the entire over-15 population is considered, the rate in 2013 was 10.6 per cent. The rate among the 15-to-24 year-olds was, of course, higher, but not shockingly so: 24.4 per cent for past-year use, with males twice as likely to have used. To recap, as a

country we're about to twist ourselves into knots because eight per cent, or one in 12 Canadians, has used pot - and maybe only once - in the last year. And of those eight per cent, it appears a good chunk are young people, males especially, going through a skater-boy phase. Ottawa Citizen, A2

*** What's next for marijuana legalization?**
With Canada inching towards marijuana legalization, the federal government announced on April 20, 2016, that a new law is expected to be introduced in the spring of 2017. A nine-membered task force, chaired by Anne McLellan (a former deputy prime minister under the prime minister Paul Martin), will be talking to provincial, territorial, and municipal governments, indigenous people, youth, and addiction and health experts on the subject. Of the eight other members on the government task force, five are doctors. While the constitution of the task force symbolizes the focus on health, many of us may pause to deliberate over the context of this debate within a larger narrative. Kiran Siddiqui, a fourth-year student pursuing a comparative physiology specialist, has a similar view. "I'm sure this debate has many more layers than just legalizing or prohibiting, but I think it is good that we are paying attention to it, especially its effects on health and contribution to chronic disease," says Siddiqui. If you find yourself doing some preliminary research on the development of the legalization policy in Canada, as I did for this piece, you may find the subject being largely divided into either support for prohibition, driven by results shown by scientific research, or a call for legalization, motivated by the need to remove the social stigma around active users. However, the U of T faculty is taking a more holistic approach towards understanding the complexities of the debate. In order to discuss the complexities, we'll start with the basics. "The first thing is of course [...] that cannabis is not a deadly drug," says Harold Kalant, an emeritus professor with both an M.D. and Ph.D., who previously taught at U of T's Department of Pharmacology and Toxicology. "But it has shown to lead to problems with certain maturation processes required for the development of our executive functions, such as working memory, reasoning, [and] problem solving." The Medium

Canadian one of three people taken hostage in Libya
Ottawa has confirmed that a Canadian is among three people taken hostage in Libya last week. In a statement Sunday, Global Affairs spokesman Michael O'Shaughnessy says the Canadian government is "diligently pursuing all appropriate channels to obtain more information about this troubling incident." He says the government will not comment further or release any information that may compromise efforts to secure the hostages' release or endanger the safety of Canadian citizens. Earlier in the week, a Libyan official said authorities were investigating the abduction of three foreigners working for a maintenance company near the border with Algeria. Canadian Press (Guardian, B4, National Post, Province); * Journal de Montréal, 26

*** Mohamed Fahmy comes to Concordia: Award-winning journalist talks about his experience in prison and calls for the university to support Homa Hoodfar**
Concordia University welcomed Egyptian-born Canadian journalist Mohamed Fahmy as a lecturer for the first in a series of homecoming lectures at the Sir George Williams campus on Sept. 22. Just over one year ago, Fahmy was released from prison in Cairo, Egypt. He, along with two of his colleagues, were accused of being terrorists, he said. They were arrested in December 2013, and found guilty in June 2014, staying incarcerated for over 400 days. Fahmy also spent six weeks in solitary confinement. To a full house at the D.B. Clarke theatre, Fahmy spoke about his experience in prison and his campaign to free other journalists in similar situations. Fahmy detailed his experience working at various news stations prior to his arrest—namely CNN, the BBC, and Al-Jazeera, where he worked as an English bureau chief in Cairo. "I knew it was going to be a challenge when I took the [Al-Jazeera] job," he said. "My last story, before going to prison, was on the branding of the Muslim Brotherhood as a terrorist organization." Concordian

*** Putin on a roll , but has big issues at home**

Vladimir Putin' s cold heart will have been gladdened by Stephane Dion ' s eagerness for Ottawa to re-engage with the Russian dictator - a rapprochement that began with little fanfare when Canada ' s foreign minister met for half an hour two months ago in the Far East with the Kremlin ' s top diplomat, Sergei Lavrov. Almost everything still appears to be going the Russian president ' s way - on the surface. Although voter turnout was feeble last week, Putin ' s United Russia Party was returned to parliament with three-quarters of the seats. Russian warplanes have resumed their relentless bombing of the besieged Syrian city of Aleppo on behalf of Bashar Assad ' s ghastly regime. A rickety aircraft carrier is going to wave the Russian tricolour off Syria ' s Mediterranean coast. There has also been another uptick in violence by Russian proxies in eastern Ukraine to keep the Balts and Poles wondering whether they might be next on Putin ' s hit list. (...) As ISIL, Al-Nusra and al-Qaida lose their grasp in western Iraq and Syria, some of their jihadi zealots have shifted their attention to Western Europe, the Maghreb and sub-Saharan Africa. Others are returning home to the former Soviet republics of Turkmenistan, Uzbekistan, Kazakhstan and Kyrgyzstan, which like Ukraine the Kremlin has never stopped considering to be part of its informal empire, and to secessionist-minded Chechnya, Dagestan and Ingushetia, which are part of Russia. Crimean Tatars have also begun to create problems on the Black Sea peninsula that Russian forces annexed from Ukraine in 2014. It is not well known in the West that Russia has 20 million Muslims - one in seven citizens. Nor is it generally known that as many as 7,000 jihadists are from what Russia considers its sphere of influence, including as many as 2,400 Russians, which Aron notes is far more than any western European country. Most Russian Muslims are strongly secular. They have little interest in their religion and even less in radical Islam. But as Belgium, France and Britain have discovered, it only takes a few inspired radicals to cause hideous violence and tie up many police and soldiers. Putin is gravely concerned by the prospect of homegrown Islamic terror spilling north from the Caucasus. *** Decision on House vote peacekeeping mission into Africa 'putting the cart before the horse': Defence minister**

The House of Commons should debate Canada's upcoming peacekeeping mission into Africa, where Canada could use force if needed to protect civilians, but it's still too early to say if it should vote on it, says Defence Minister Harjit Sajjan. "First we need to decide on what we're going to do; to decide on the parliamentary process that it needs to take, and that is very important, to be able to decide the process before we decide on how; it literally is putting the cart before the horse," said Mr. Sajjan (Vancouver South, B.C.) in a sit-down interview with The Hill Times last Wednesday afternoon. Mr. Sajjan told The Canadian Press earlier this month that Canada was still determining where to send an estimated 600 Canadian soldiers, although it's believed that it could be Mali, and he said that Canada could use force if needed. "When Canada goes in, yes, we will be fulfilling that mandate of protection of civilians and proactively acting in that manner. And we expect other nations to do the same thing. That's one concern I do have and I will be looking at that all the way through," he told CP, after it was reported in July that foreign aid workers in the Democratic Republic of Congo and Mali were raped and attacked by local soldiers and local peacekeepers failed to respond for hours. Hill Times

INTERNATIONAL

Jordanian writer killed before trial for cartoon mocking Islam

A prominent Jordanian writer was shot dead by a suspected Islamist gunman Sunday outside the courtroom where he was due to stand trial for offending Islam by sharing a cartoon on Facebook. Nahed Hattar, a 56-year-old intellectual from Jordan's Christian minority, was gunned down on the steps of a courthouse in Amman in what appeared to be a religiously motivated attack. The gunman was arrested at the scene and a security source identified him as Riyad Ismail Abdullah, a 49-yearold imam. The killing is a fresh blow to Jordan's image as a bastion of stability amid the sectarian violence wracking much of the Middle East. It is also the latest in a string of killings linked to cartoons about Islam. Hattar was arrested last month for sharing a cartoon on his Facebook page that showed a jihadist smoking in bed with two women while Allah waits attentively at the window for him. The jihadist orders Allah to fetch him some

wine and take away the dirty plates while demanding the archangel Gabriel get him some cashew nuts. Telegraph (Province, A18); Le Devoir

*** État de Washington - L'auteur présumé de la fusillade dans un centre commercial arrêté**
Au terme d'une chasse à l'homme de 24 heures dans le nord-ouest des États-Unis, la police a annoncé samedi avoir capturé le tireur présumé, un jeune homme de 20 ans né en Turquie, accusé d'avoir tué cinq personnes dans un centre commercial. Selon le porte-parole de la police de l'État de Washington, Mark Francis, le suspect se nomme Arcan Cetin, est âgé de 20 ans, et réside à Oak Harbor, une ville voisine de Burlington, commune de quelques milliers d'habitants à 110 km au nord de Seattle où a eu lieu la fusillade vendredi soir. Aucun autre suspect n'est recherché, a précisé le porte-parole, au lendemain de la fusillade qui a tué quatre femmes et un homme dans le centre commercial Cascade Mall de Burlington. Le tireur, qui avait été présenté dans un premier temps par la police comme un jeune d'origine hispanique, a ouvert le feu au rayon maquillage d'un grand magasin de l'enseigne Macy's. Une page Facebook, présentée comme étant celle du suspect, indique qu'Arcan Cetin est né à Adana, quatrième ville de Turquie située sur les bords de la Méditerranée. Il a fait ses études à Oak Harbor et travaillé dans une épicerie de Widbey Island, une autre localité de l'État de Washington. Agence France-Presse (LE Devoir, B3)

MINISTER / MINISTRE

D'autres reporters surveillés?
Le chef de la police de Montréal n'a pas exclu lundi que d'autres journalistes soient sous surveillance, à la fin d'une journée au cours de laquelle le monde politique a unanimement exprimé sa vive préoccupation par rapport à l'espionnage du téléphone cellulaire de Patrick Lagacé. Au cours d'un point de presse tendu, Philippe Pichet a défendu l'obtention par ses hommes de 24 mandats judiciaires concernant l'iPhone du journaliste entre janvier et juin dernier. La Presse a révélé lundi que la police avait fait main basse - avec la bénédiction de la justice - sur la liste complète des interlocuteurs du journaliste pendant plusieurs mois, ainsi que sur ses données de localisation transmises par le GPS intégré au téléphone. (…) À Ottawa aussi, on était inquiets. «Je suis troublée par les révélations d'aujourd'hui», a écrit la ministre Mélanie Joly sur les médias sociaux. Le **ministre fédéral de la Sécurité publique Ralph Goodale** se dit ***«certainement prêt à avoir une discussion de politique sérieuse» et «à entendre les***

représentations» des médias sur la façon dont les forces policières devraient concilier leurs enquêtes avec la protection des sources journalistiques et la liberté de la presse. Le **ministre Goodale**, qui n'a pas voulu commenter le cas de Patrick Lagacé, mais qui se dit «***profondément préoccupé par ce genre de dossier»***, s'assurera prochainement auprès du commissaire de la Gendarmerie royale du Canada Bob Paulson que les directives fédérales en vigueur sont respectées dans les faits. En dehors du monde politique, la Fédération professionnelle des journalistes du Québec (FPJQ) et Reporters sans frontières ont tous deux exprimé leur indignation face aux actions du Service de police de la Ville de Montréal (SPVM). Le Nouvelliste, 6 (La Presse)

«Troublant», «inacceptable», «extrêmement grave»
Quelques réactions aux révélations d'espionnage de policiers à l'endroit du journaliste Patrick Lagacé. «Lorsque j'ai lu le journal ce matin [hier] et que j'ai vu le cas de Patrick Lagacé, on est passé par toutes sortes d'émotions. On trouve cela préoccupant, on trouve cela inacceptable.» - Denis Coderre, maire de Montréal. ***«Nous devons traiter de cet enjeu sérieusement, et je suis certainement prêt à entendre les représentations [des médias et d'associations de journalistes comme la FPJQ] sur ce qui pourrait être un meilleur ensemble de règles.»*** **- Ralph Goodale, ministre fédéral de la Sécurité publique.** «C'est extrêmement grave, ce qui a été permis. [...] Il faut se tenir debout face à une telle invasion de nos droits et libertés. [...] Je trouve ça ahurissant, je suis abasourdi qu'on soit en train de vivre ça au Canada au XXIe siècle. [...] Ça renvoie à une question fondamentale : dans quelle sorte de société nous voulons vivre?» - Thomas Mulcair, chef du Nouveau Parti démocratique. La Tribune, 11 (La Presse)

Une enquête publique demandée par les médias
Après la saisie de l'ordinateur d'un journaliste du Journal de Montréal et la mise sous surveillance d'un chroniqueur de La Presse, un exbâtonnier du québec et plusieurs médias réclament une commission d'enquête sur les pratiques policières à l'égard des sources journalistiques. Le cellulaire du journaliste Patrick Lagacé a été placé sous surveillance en début d'année, dans le cadre d'une enquête interne du spvm, a révélé hier la presse. les enquêteurs auraient obtenu les numéros de téléphone entrant sur l'appareil. ses allées et venues auraient aussi été surveillées grâce au système gps du téléphone. (…) ce qu'ils ont dit... «la première chose qui s'impose, c'est de vérifier que les processus en place et les politiques qu'utilisent les corps policiers lorsqu'ils demandent de tels mandats soient dument respectés. (…) la capacité de la presse de faire son travail, c'est très important. » -martin coiteux, ministre de la sécurité publique «je trouve ça très inquiétant. il n'y a rien de plus important pour les journalistes que les sources journalistiques .» -Nathalie Roy, députée caquiste et ancienne journaliste «le spvm devra s'expliquer. la liberté de la presse et la protection des sources journalistiques sont des choses fondamentales dans une démocratie.» -Agnès maltais, députée du parti québécois «il faut une sépa - ration claire des pouvoirs entre l'administration et le service de police. il est inconcevable que le chef de police n'ait pas été mis au courant. et s'il n'a pas été mis au courant, c'est qu'il a perdu le contrôle de son organisation.» -luc ferrandez, chef intérimaire de projet Montréal «je lui ai dit (au directeur pichet) que j'étais préoccupé par ce que je voyais et je lui ai réitéré que la question de la liberté de la presse est importante.» -Denis Coderre, maire de Montréal ***«la liberté de la presse est un principe fondamental qui est en fait protégé dans la charte canadienne des droits et des libertés. le plus grand soin doit être pris par les forces de l'ordre quand des enquêtes criminelles et le journalisme se croisent.» -*** **Ralph Goodale, ministre fédéral de la sécurité publique** «vous êtes journaliste? la police vous espionne pour identifier vos sources, ce n'est pas hypothétique. c'est maintenant.» -Edward Snowden, lanceur d'alerte bien connu. Agence QMI (Journal de Québec, 4, Journal de Montréal)

Grits rapped for unspent funds
Like the Harper government before it, the Trudeau government left billions of dollars unspent on everything from national parks to veterans services to economic development grants during the 2015-16 fiscal year. The so-called "lapsed" funding for fiscal 2016 is $9.7 billion, according to the Public Accounts of Canada. All of those unspent funds were used to pay down the federal debt. This year's three-volume public accounts also close the books on fiscal 2016, a year in which the Harper Conservatives controlled the purse strings for the first seven months and the Trudeau Liberals for the final five months. (…) **Public Safety Canada**, which includes the RCMP, the Correctional Service of Canada, and Canada Border Services Agency, was authorized to spend $9.2 billion in fiscal 2016 but left unspent 11.6 per cent of that

- about $1 billion. **Scott Bardsley, press secretary to Public Safety Minister Ralph Goodale**, said the lion's share of the lapse - about $700 million - was related to disaster relief for the provinces that, while booked by the federal government in 2016, was not paid out. Infrastructure Canada left $858 million unspent, nearly 20 per cent of the $4.4 billion it was authorized to use in 2016. Postmedia Network Kingston Whig-Standard, B1/Front, London Free Press, Leader-Post, Vancouver Sun, Ottawa Citizen, StarPhoenix, National Post, Montreal Gazette)

Ahmadiyya Caliph to meet with city's growing faith community
The head of the world's Ahmadiyya Muslims will visit Saskatchewan for the first time, spending a day in Saskatoon before inaugurating Regina's first purpose-built mosque. The Caliph, Hazrat Mirza Masroor Ahmad, arrived Monday evening in Saskatoon, where he was greeted by Ahmadi Muslims and public officials. Among Ahmadiyya Muslims, the Caliph is the highestranking member of the sect, after the Prophet Muhammad. "Whenever his Holiness comes to Canada, his primary objective is to meet with members of his community. Saskatchewan ... particularly Saskatoon, has become, believe it or not, a hub for the community, even though we're headquartered in Toronto," spokesman Safwan Choudhry said. In his one-day Saskatoon visit, he is expected to meet with members of the community, local administration of the Ahmadiyya Muslim Jama' at, Syrian refugees and local politicians. Choudry said the Caliph spends time meeting with young women, as he is a strong advocate for women's rights and equal freedoms for women. The visit is a part of his Canadian tour, which included a meeting with Prime Minister Justin Trudeau earlier this month. He also gave a rare interview to CBC National anchor Peter Mansbridge. Premier Brad Wall and **federal Minister of Public Safety Ralph Goodale** are expected to attend a reception alongside him in Regina. The Caliph's visit coincides with the inauguration of Regina's mosque, which will be broadcast worldwide. The province's largest mosque is scheduled for inauguration in Saskatoon in about a month. "If that kind of tells you why Saskatchewan's become so important ... with a growing community here, members of our community have found Saskatchewan, particularly as a province, Saskatoon, especially, to be good to them," Choudhry said. StarPhoenix, A7

TOP STORIES / MANCHETTES

Prison watchdog alarmed by pepper-spray use
Canada's prison watchdog is calling for tighter controls on the use of pepper spray in federal penitentiaries amid concerns correctional officers have taken to dousing inmates with the noxious repellent on a "routine" basis. Pepper spray was used in 60 per cent of the incidents in which Correctional Service Canada officers used force last year, correctional investigator Howard Sapers said in his annual report on the state of Canada's prisons and prisoners, released Monday. That works out to more than 1,000 times - three times as often as five years ago. The increase was not the result of an increase in dangerous security incidents, said Sapers, who instead blamed the simple fact that pepper spray became standard equipment for correctional officers in September 2010. As a result, officers are abandoning other interventions, such as simply talking to inmates, in favour of their spray cans. Correctional Services Canada said it is reviewing its policies around the use and oversight of pepper spray and other chemicals and will report back in April. Canadian Press (Times & Transcript, B3, National Post, Red Deer Advocate, Daily Gleaner); Le Devoir; Le Journal de Montréal (Le Journal de Québec)

Killer wants out: Bernardo's day-parole hearing set for March
School girl killer Paul Bernardo has a day parole hearing tentatively set for March, the Toronto Sun has learned. Bernardo was sentenced in 1995 to life in prison with no parole for 25 years for the horrific sex slayings of teens Leslie Mahaffy and Kristen French. Lawyer Tim Danson, who represents the Mahaffy and French families, said he believes the system will work. "I don't believe that Paul Bernardo will ever be paroled, now or in the future," Danson said Monday night. "Having said that, remember, I represent the victims of Paul Bernardo, and so we will take nothing for granted, we will be very vigilant." Prominent Toronto criminal lawyer Edward Prutschi, who has no connection to the case, said he's also confident Bernardo will not taste freedom anytime soon. "He's the poster child for incarceration in Canada," Prutschi said. "If there's one person who personifies the desire to actually see somebody serve the rest of

their life behind bars, it's Paul Bernardo." Toronto Sun, A16 (Edmonton Sun, Winnipeg Sun, Ottawa Sun, Winnipeg Sun); Toronto Star

Ottawa plans to reduce use of mandatory prison sentences
The Trudeau government intends to cut widespread use of mandatory minimum sentences by giving judges back their discretion over punishment, Justice Minister Jody Wilson-Raybould says. The changes will undo a major element of the Harper government's tough-on-crime agenda. Judges will be given the "appropriate discretion to be able to impose sentences, engage and understand - as they do better than anybody else - the individual that is before them," the Justice Minister told The Globe and Mail in an interview as the Liberals near the end of their first year in power. "To base their decisions on the actual circumstances of the case before them and render judgment." She said new legislation on mandatory minimums is coming soon, "certainly in the early part of next year." Last month, the government gave judges back the discretion they had lost in 2013 over the victim surcharge - a financial penalty from which judges once routinely exempted impoverished offenders, until it became mandatory. A new federal law rolling back mandatory minimum terms could cut the number of Canadians incarcerated, which is high despite falling crime rates. It could also reduce the rates of indigenous people behind bars. Globe and Mail, A1

Complaints about elderly B.C. couple's arrest prompt federal investigation
Days after troubling footage emerged of Mounties arresting an elderly couple in Coquitlam, B.C., a federal agency is launching an investigation into the officers' conduct. The Civilian Review and Complaints Commission for the RCMP said it has received more than a dozen complaints from people expressing concerns about the YouTube video, which at one point shows an officer dragging a senior down a stairwell. "We've received approximately 15 complaints from concerned citizens," said Richard Evans, senior director for the independent agency. "Some were present at the scene and some were not." The incident, which took place after a heated strata meeting at a Best Western hotel, is already being investigated by the New Westminster Police Department, which will decide whether to recommend charges against the officers involved. But the Civilian Review and Complaints Commission's probe could potentially lead to changes in RCMP policy moving forward, Evans said. "Our investigation is designed to make findings and recommendations about [officers'] conduct to inform better policing practices," he told CTV News. "Issues like: Did they have the authority to arrest? Was the appropriate use of force used? Were the RMCP members there properly trained? Were they properly supervised? Was there a language issue?" CTV News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** MLAs honour wildfire heroes**
Darby Allen still thinks about the wildfire that swept through Fort McMurray. The Wood Buffalo fire chief has good days and bad; the evacuation of 80,000 people from the city still plays on his mind. He wonders: "Could we have done more?" Monday was one of the good days, as he and his fellow first responders were recognized at the Alberta legislature for their work during the disaster. I's been six months since the blaze - nicknamed The Beast - ripped through the region, destroying homes and livelihoods. While 85 per cent of structures were saved, the situation was touch and go as temperatures rose and winds fanned the flames, playing havoc with firefighting efforts. Postmedia News (Edmonton Journal, A3; Calgary Herald, Calgary Sun, Edmonton Sun); CBC News; Canadian Press (Red Deer Advocate)

*** Maximum fine for causing wildfire jumping to $1M under new bill**
Proposed amendments to legislation would substantially hike fines for people or companies that cause forest fires by ignoring fire bans or improperly extinguishing campfires. The changes are contained in Bill 24, the proposed Forest and Prairie Protection Amendment Act. Maximum fines under the amendments would jump from $5,000 to $1 million for corporations and up to $100,000 for individuals. Companies could be fined up to $10,000 for not having a proper wildfire plan and inadequate firefighting equipment on site. CBC News (2016-10-31)

*** B.C. gets a failing grade for flood preparedness in new report**
British Columbia is one of the least prepared provinces to deal with a major flood, according to a recently released national report called Climate Change and the Preparedness of Canadian Provinces and Yukon to Limit Potential Flood Damage. B.C. and Prince Edward Island have the lowest overall grade of D, while Ontario scored the highest with a B-minus on preparedness to limit climate change-related flood damage. No province was a standout. The overall average for all 10 provinces and Yukon was C. B.C. received aD grade in 11 of the 12 assessment categories that examined issues such as whether the province or territory has a flood plan map, how well the transportation system would function during flooding, and whether drinking water sources would be protected. Postmedia News (Vancouver Sun, A2; Vancouver Province)

*** Don't blame Mother Nature for flooding's devastating impact**
An opinion piece states "Reports of human loss and suffering from flooding are far too frequent. And while the reports heighten our perception of the problem, they still don't fully illustrate the growing impacts of floods on people and their homes. Or accurately reflect the cause. According to the World Bank report Cities and Flooding, A Guide to Integrated Urban Flood Risk Management for the 21st Century, the 10-year moving median number of reported flood events is rising steadily and was a full 16 times higher in 2010 than 50 years earlier. Floods are nothing new. They are natural events that have been happening for millennia, shaping the earth we live on and creating much of the natural bounty that supports us. Still, we like to villainize nature when it brings us harm. Floods, like wildfires, have gotten a very bad name because of the harm to people we associate with these events. But Mother Nature is not the problem. Dr. Gilbert White, the late founder of the internationally-recognized Natural Hazards Center in Boulder, Colo., put it well: "Floods are acts of nature; but flood losses are largely acts of man." We must take heed of this wisdom as we plan for resilience -- especially in light of climate change." Torstar (Daily Gleaner, A7; Waterloo Region Record)

*** Warning as Canada faces rising costs of climate change**
Canada is ill-prepared for the increased flooding and extreme weather that climate change will bring, and needs to act now, a new report expected to be released today has claimed. The report – which comes as the insurance industry is increasingly concerned over the cost of weather-related events and natural disasters post-Fort McMurray – warns that the country must take action or face much higher costs to fix damaged buildings and infrastructure in the future. The University of Waterloo's Intact Centre on Climate Adaptation evaluated provincial efforts to mitigate disasters from the flooding that will be caused by extreme weather and rising sea levels. Insurance Business (2016-10-31)

*** Canada safety watchdog says action needed on train crew fatigue**
Too many Canadian train crews are not getting sufficient rest and railroads need to do more to apply fatigue science to scheduling, the country's transport safety watchdog said on Monday. The Transportation Safety Board of Canada, an independent government agency, singled out rail fatigue in its 2016 watch list, which identifies key safety issues in Canadian transportation. TSB Chair Kathy Fox said by phone the board would meet with industry and government representatives as soon as Tuesday to push for concrete action, including the creation of more predictable schedules for employees who often work on two hours' notice. Reuters (2016-10-31)

*** Heiltsuk diesel-spill site too tough to clean up: Booms torn apart in rough weather**
An opinion piece states "I am a Raincoast Conservation Foundation biologist lucky enough to study black and grizzly bear populations in Heiltsuk Territory and to call Bella Bella home. I'm often astounded by the richness of this area. Unfortunately, my time recently has been spent in awe, not of ecological and cultural treasures, but of the aftermath of a petroleum tug-barge tanker crashing into one of them. Almost two weeks ago, the Nathan E. Stewart drove straight into a reef in Heiltsuk waters in the middle of the night. Fortunately, the barge was empty, but the tug sank and began leaking marine diesel. In the aftermath of the accident, it took more than a week to remove the remaining leaking oil from the tug, and, two weeks in, the tug is still in the water, diesel slicks are still being observed and area beaches remain contaminated. That this happened is beyond disappointing, but where it happened is devastating." Times Colonist, A11

*** The real mess is our woeful oil-spill response system**
An opinion piece states "Every time there's a minor oil spill on the B.C. coast, it's treated as yet another warning that a bigger spill is possible and it's time to do something about it. It's been going on for years. From the 2007 Kinder Morgan pipeline breach that dumped 70,000 litres of crude into Burrard Inlet and sprayed a dozen homes with smelly oil to the 2015 spill of toxic bunker fuel into English Bay from the leaky MV Marathassa cargo ship. The latest wake-up call is the release of an estimated 105,000 litres of diesel fuel into the waters off Bella Bella from the Nathan E. Stewart tugboat that struck a reef and sank Oct. 13. As with the Marathassa spill, the emergency response to the tugboat spill has been criticized for being slow and ineffective. Sadly, this doesn't come as a surprise to experts who have taken a close, hard look at B.C.'s oil-spill prevention and response system, and found it sorely lacking." Vancouver Province, A7

*** Crew member hoisted from boat off Cape Scott for medical help**
A crew member on a fishing boat about 60 nautical miles northwest of Cape Scott was hoisted onto a Royal Canadian Air Force helicopter Monday after having unspecified medical issues. Victoria's Joint Rescue Co-ordination Centre was informed of the situation about 1 p.m. by Prince Rupert Coast Guard Radio and sent the helicopter, a fixed-wing aircraft and two coast guard vessels to the scene. The helicopter took the man to Port Hardy, where he was put on the fixed-wing aircraft and flown to Victoria for treatment. Times Colonist

*** Search on for missing senior in C.B.S**
A search is underway for missing 82-year-old man in the Kelligrews area of Conception Bay South. The Royal Newfoundland Constabulary said William Snelgrove was last seen at 1 p.m. on Monday when he left his personal care home to go berry picking off Middle Bight Road. He is five feet nine inches tall, 130 pounds and is believed to be wearing a white jacket, black pants, red hat and green boots. Police said Snelgrove has medical issues and they are concerned about his safety. The Rovers ground search and rescue team and a Cormorant helicopter from the search and rescue squadron in Gander were active Monday night. CBC News

Search for missing hunters underway near Quesnel
A search for a pair of hunters is underway northeast of Quesnel. 55 year old Glen Brooker and his 10 year old step son were reported overdue Sunday. They left their home Saturday to hunt the Stoney Lake or Narrow Lake area. Brooker was driving a 2005 Dodge Pickup and was pulling a grey and green Kingfisher riverboat. The pair also had their chocolate coloured Lab dog with them. RCMP are working with Search and Rescue officials. CKPG News

NATIONAL SECURITY CONSULTATIONS / CONSULTATIONS SUR LA SÉCURITÉ NATIONALE

NIL

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Une grappe sans racines**
Une chaire de recherche mondiale en prévention de la radicalisation rayonnera à l'Université de Sherbrooke même si l'institution n'a jamais perçu le moindre signe que de ses étudiants buvaient à la fontaine de l'intolérance et de la violence. Convenons qu'il était pour le moins incongru que deux représentants du gouvernement québécois, dont le ministre responsable de l'Estrie, Luc Fortin, vantent lundi matin la contribution de l'Université de Sherbrooke à la création d'un comité scientifique au lendemain de révélations associant un autre de ses anciens étudiants aux djihadistes. «Je salue le dynamisme de l'Université de Sherbrooke, qui est à l'origine de cette initiative inspirante que le gouvernement québécois appuie fièrement», a pourtant mis en valeur la ministre des Relations internationales et de la Francophonie, Christine St-Pierre, en annonçant la nouvelle en présence de représentants de l'UNESCO. «La région de Sherbrooke continue de se démarquer sur la scène

internationale grâce à son expertise et à son savoir-faire», a renchéri son collègue Fortin, si l'on se fie au communiqué de presse émis par le gouvernement et diffusé sur le Portail Québec. La Tribune, 4; Montreal Gazette

*** Les visages de la radicalisation**

«Je suis là pour m'excuser.» Devant nous, un grand baraqué. Rempli de remords. La Fédération des Québécois de souche, c'est lui. Ou plutôt, c'était lui, quand il cultivait le nationalisme blanc, vraiment blanc. «Je suis le fondateur, le seul et unique. C'est parti de ma tête.» Et elle était rasée, cette tête, à l'époque skinhead. Lui, c'est Maxime Fiset, de Québec, aujourd'hui étudiant universitaire... qui a déjà pensé faire sauter une bombe comme celle du marathon de Boston. Il a aussi été modérateur pour un site Web très raciste. Lundi, il est sorti de l'ombre pour dire qu'il a tout balancé. La radicalisation violente, «c'est plus proche de nous qu'on pense», prévient-il. Il était rendu à un tel point que les policiers l'ont arrêté pour propagande haineuse. (...) C'était avant l'État islamique. C'était les talibans, Al-Qaida. Mubin Shaikh étudiait la religion. Il avait 19 ans. Il est parti du Canada en voyage initiatique au Pakistan. Pas dans des camps. Juste un voyage de jeune croyant, raconte-t-il. Et il a rencontré ses nouveaux voisins, des talibans de la ville de Quetta. «Ils sont encore là.» Il a appris quoi? «Que pour être un vrai musulman, il faut combattre. Au retour, il a rejoint d'autres extrémistes ici. Il a recruté dans des mosquées, des conférences islamistes. Puis il y a eu le 11 septembre 2001, les tours de New York qui tombent. Ça, c'était trop pour lui. Il est parti pour la Syrie (bien avant la guerre). «J'ai appris le vrai islam.» Revenu au Canada, il a vu un de ses amis se faire arrêter. Il a alors appelé les services secrets : «Ils m'ont recruté pour être agent infiltrateur. Pendant deux ans, j'ai été infiltré.» Il a aussi travaillé pour la GRC. L'arrestation du groupe des 18 de Toronto, inspiré par Al-Qaida, c'est un peu lui. Il jure que cet épisode policier est derrière, qu'il se concentre sur son doctorat en psychologie en Angleterre. Son sujet : comment contrer et prévenir l'extrémisme. La Presse (Le Soleil)

*** Pas de filière djihadiste à l'UdeS**

Malgré les dernières révélations sur un ex-étudiant de l'Université de Sherbrooke qui serait un présumé djihadiste, «on ne peut pas encore parler de filière de radicalisation islamiste» à l'UdeS, estime le professeur David Morin de l'UdeS, codirecteur de l'Observatoire sur la radicalisation et l'extrémisme violent (OSR). M. Morin deviendra le cotitulaire d'une nouvelle Chaire de recherche en prévention de la radicalisation et de l'extrémisme violent, dont la création a été annoncée lundi à la Conférence Québec-Unesco intitulée «Internet et la radicalisation des jeunes : prévenir et agir ensemble». Le Toronto Star révélait qu'un autre ancien étudiant de l'UdeS, Assane Kamara, fait face à une série de chefs d'accusation de terrorisme au Sénégal parce qu'il aurait tenté de joindre les rangs de l'État islamique (EI). Son nom s'ajoute à celui de trois Sherbrookois qui ont fait les manchettes, Zakria Habibi, Samir Halilovic et Youssef Sakhir, qui auraient fui le Canada pour joindre la Syrie. En 2015, Chiheb Esseghaier, un ex-étudiant de l'UdeS qui a été membre de l'Association musulmane de l'UdeS (AMUS), a reçu une peine de prison à vie après avoir comploté dans le but de faire dérailler un train de passagers de VIA Rail entre Toronto et New York. La Tribune, 5 (La Presse)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Mystery man spent two years in prison being grilled by CBSA

For more than two years, a man who calls himself Paul Rooney sat in a Maple Ridge prison while border agents tried to figure out exactly who he was and where he came from. They interviewed his friends and co-workers, examined his health records and ran his fingerprints through international databases. Officially speaking, Paul Rooney's origins were a complete mystery. The Canada Border Services Agency came up short, and earlier this year, the Immigration and Refugee Board ordered Rooney released from detention at the Fraser Regional Correctional Centre, a decision that has now been upheld twice by the Federal Court. "He may or may not have been born in Toronto. He may or may not have been born in St. Vincent and the Grenadines. He may or may not have been born in England ... In other words, he may or may not be Canadian," Federal Court Justice Sean Harrington wrote in a decision back in March. (...) Vancouver police opened an investigation, though no charges were laid, and officers with the Canada Border Services Agency dropped by his workplace to interview him. When they learned he may have been born in England, they detained him and got an order to deport him on

Oct. 28, 2013. The only question was where to send him. Neither the U.K. nor St. Vincent and the Grenadines recognized Rooney as a citizen. Interpol was alerted and his photo was distributed internationally, but there were no hits. (...) There are no guidelines for how long someone can be kept in immigration detention, but the onus is on the federal government to prove each month that imprisonment is justified. In a case like Rooney's, that means CBSA officers need to show progress in determining someone's real name and citizenship status. Postmedia Network (Vancouver Sun, A1, The Province)

Woolly mammoth tusk, $100K in jewelry seized at Windsor border
A woolly mammoth tusk and nearly $100,000 worth of jewelry were among the more unusual items Windsor border officers seized in September. Officers with the Canada Border Services Agency seized the jewelry on Sept. 9 from an American woman who was sent to secondary inspection at the Ambassador Bridge. A search of her vehicle revealed several empty jewelry boxes. Officers then searched her handbag and found a large amount of gold jewelry, which the woman said was from Dubai. (...) Officers came across the mammoth tusk on Sept. 20. Two Canadian residents told a customs officer at the bridge they had $760 worth of antiquities, including the tusk. Officers discovered the tusk was actually worth $6,100. The CBSA said there are no restrictions on importing the items, but travellers must still declare the proper value. They were slapped with a $3,317 penalty. Border officers also seized several guns at southern Ontario border crossings in September. Windsor Star, A5

Defence no refuge
An immigration fraudster who tried to use deception and bribes to sponsor 528 refugees into Canada has undermined the public's confidence in the country's refugee process, an Ottawa judge said Monday before sentencing the man to three years and nine months in prison. Ontario Superior Court Justice Robert Beaudoin also expressed surprise that Mohamed Farah Abdulle was able to carry out his scheme for as long as he did without being detected by officials at Citizenship and Immigration Canada. "He just learned how to exploit the apparent lack of oversight in the system," said the judge. Over a five-year period, the 54-year-old former janitor participated in 170 sponsorship applications that attempted to bring 528 refugees to Canada. Thirty-seven refugees were successfully sponsored. (...) Abdulle's trial heard that Canada Border Services Agency investigators found a stack of citizenship and permanent residence cards that were an inch thick after executing search warrants. Postmedia Network (Ottawa Sun, A3, Toronto Sun, Calgary Sun, Edmonton Sun, Winnipeg Sun)

*** New terminal opens at Calgary International Airport**
After five years of construction, the first passengers passed through the gates of Calgary's new $2 billion airport terminal on Monday. The completed project doubles the space at the airport, at 185, 000 square metres. Officials say the new building has all the amenities that travellers are looking for including; automated check-ins, 50 shopping and dining locations and a 300 room hotel. Security lines are expected to move faster and four passengers will now be able to check through at the same time. Canada Border Services Agency says the new space will be the agency's primary location in the Prairie Region. The CBSA says 5,200 travellers can now be accommodated, which is more than double the amount of the old terminal. The agency has also installed 54 automated kiosks, 44 automated border clearance kiosks and 10 NEXUS kiosks. Passengers who are looking to make connecting flights can take advantage of a new and secure connection corridor. "We are grateful to the airport authority for all of their hard work on this project. The new CBSA space demonstrates the strong relationship that CBSA has with YYC," said Kim R. Scoville, Regional Director General, Prairie Region, CBSA. Last year, the CBSA processed over 2.2 million travellers and over 111,000 NEXUS passages at the Calgary airport. CTV News (2016-10-31)

*** Canada's naive about immigrants, refugees**
An opinion piece states, "During a panel discussion on CTV News last week I was lectured by the two other panelists - one Liberal, one NDP - over my assertion we need to be careful about who we let in as immigrants and refugees. They both insisted there is no problem with arrivals from other countries, nor will there be. When I asked about the Shafia family, there was no response, other than to continue to assert that immigrants and refugees pose no danger to our safety or "Canadian values," a term which, sadly, too many people mock. (...) In 2008, then federa l auditor general Sheila Fraser reported Canada's border agency had lost track of 41,000 illegal immigrants, noting this was, "jeopardizing the integrity of Canada's immigration program". All of those people were under deportation orders, but we

didn't know then, and may still not know, where they went. Why were they deemed ineligible? Was it safe to let them go free? Several of the terrorists that attacked Paris came in to Europe through Greece, posing as Syrian refugees. Could the same thing happen here? Obviously, if we are so naive and careless as to assume that it never could happen." Postmedia Network (Ottawa Sun, A15, Toronto Sun)

Masse makes Halloween-themed member statement on new bridge
Windsor West NDP MP Brian Masse used his member statement in the House of Commons Monday to draw attention to what he believes is government dawdling on the construction of the Gordie Howe International Bridge. "Mr. Speaker, Halloween is the perfect time of year to talk about the Windsor-Detroit border, because under the current government it keeps getting scarier and scarier," Masse told the House. "After stirring up old Liberal ghosts to lead Canada's most important infrastructure priority, the project seems to have slipped into the Twilight Zone. "Whether it is spooky backroom conversations with the ghouls at the Ambassador Bridge or a zombie-like approach to property acquisition, the government appears to be lost in a haunted corn maze rather than on track to build a new crossing." Windsor Star

* **Auerbach, Schafenacker heading for Canadian border**
The two UNBC graduate students jailed and released in North Dakota are heading for the border today. Katriona Auerbach and Nicole Schafenacker drove from Prince George to North Dakota to protest the Dakota Access pipeline. Their UNBC research supervisor Dr. Sarah de Leeuw confirmed the girls were caught up in a mass arrest on Thursday. (…) Auerbach and Schafenacker were told there shouldn't be any issues crossing the border, despite the pending charges. The two are testing that advice at a border crossing; de Leeuw was uncertain which one the two are heading for. My Prince George Now

300 000 nouveaux arrivants pour 2017
Le Canada n'augmentera pas le nombre d'immigrants qu'il accueillera l'an prochain, mais il jette les bases pour une éventuelle hausse des seuils dans les années à venir. Les chiffres annoncés lundi à la Chambre des communes indiquent que le Canada prévoit recevoir 300 000 nouveaux arrivants l'an prochain, soit la même proportion d'immigrants qui doivent arriver durant l'année en cours. Ce seuil avait été revu, l'an dernier, à la hausse dans le but d'accueillir plus de réfugiés syriens. Le Nouvelliste, 20 (Le Soleil, Le Droit); Canadian Press (Red Deer Advocate, London Free Press, Leader-Post, Vancouver Sun, Montreal Gazette, Ottawa Citizen, StarPhoenix, National Post, The Telegram, Cape Breton Post, Edmonton Journal, Times Colonist, Times & Transcript); Agence QMI (Journal de Montréal); Globe and Mail; * Le Devoir; * Postmedia Network (Vancouver Sun, The Province)

* **Over 7,000 Irish workers expected to go to Canada this year**
With the Irish economy improving, the impetus to travel overseas in search of employment has dwindled for many. However, experts at VisaFirst.com say that while some people no longer feel "forced" to move away, Ireland's love affair with travel has certainly not gone away and an estimated 6,500 Irish workers are expected to sign up for the 2016/2017 Canadian Working Holiday programme, which has just opened its doors to applicants. The migration experts say that every year there are disappointed applicants to the 3 stage application process, but that, in the main, this is largely down to poorly completed and tardy application forms. (…) VisaFirst.com say that over the last 10 years the numbers of Irish travelling to Canada on temporary work visas had risen significantly, but that as a result of the upturn in the economy the last couple of years have seen the numbers fall somewhat. However, VisaFirst.com says that while temporary visa figures appear to be falling, Ireland was still ranked the 11th highest country to be issued work permits in 2014. Business World

Jury hears details of Tamil migrants' ocean journey
A Tamil man whose uncle died during their voyage to Canada on a migrant vessel six years ago has told a human-smuggling trial his relative was extremely ill in the days leading up to his death. The MV Sun Sea docked in British Columbia in August, 2010, carrying 492 Sri Lankan Tamils - 380 men, 63 women and 49 children. The ship was the second Tamil migrant vessel to arrive in this province in less than a year and made international headlines. Kunarobinson Christhurajah, Lesly Emmanuel, Nadarajah Mahendran and Thampeernayagam Rajaratnam have each been charged under the Immigration and Refugee Protection Act with organizing the trip. Their jury trial began two weeks ago in Vancouver. Globe and Mail, S1

Not all removals are extraditions
A letter to the editor states, "Re: Dozens already extradited to China, Oct. 24. This story confuses two separate processes for removing individuals from Canada and sending them to another country: extradition and deportation (through removal orders). These are distinct situations based in different legislation. Extradition involves a crime committed in one country and a person located in another country who has either been charged and is wanted for trial, or has been convicted of that crime. It is triggered by a request from the country where the crime was committed to return the person to face trial or sentence. Deportation involves the removal from a country of a person who has either entered the country illegally or has otherwise lost the right to remain legally. Both of these areas of Canadian law are complex, and each involves the fundamental question of what conditions in other countries should prevent return under any circumstances. However, it does not help the discussion of either subject to conflate the two and it is misleading in a discussion of a potential extradition treaty to present total removal statistics as extradition totals." Ottawa Citizen, A6

* **Harper was right: Private refugee sponsorship works better**
An opinion piece states, "It was the image that first turned the tide of the 2015 election: a photograph of a little boy, washed up on a Greek beach, his face in the sand, his tiny trainers still on his feet. Overnight, the haunting picture of Alan Kurdi, a four-year-old Turkish refugee who perished trying to cross the Mediterranean Sea, ostensibly after his family was refused refugee status in Canada, made Syrian migrants the top issue of the campaign. The story disrupted the Conservative narrative of Justin Trudeau being "not ready" and focused public attention on the government's refugee policy, including its failure to meet its modest resettlement targets of 3,500 migrants in 2015. (…) But a year later, it turns out that the Harper government's refugee policy, which emphasized private sponsorship over mass government assistance, may have had more going for it than it got credit for. According to a report released this week by Immigration, Refugees and Citizenship Canada, cited by the *Toronto Star*, government-assisted refugees have a tougher time adapting to Canadian life than their privately-sponsored counterparts - and cost the taxpayer more in the process." iPolitics

* **Complaints about elderly B.C. couple's arrest prompt federal investigation**
Days after troubling footage emerged of Mounties arresting an elderly couple in Coquitlam, B.C., a federal agency is launching an investigation into the officers' conduct. The Civilian Review and Complaints Commission for the RCMP said it has received more than a dozen complaints from people expressing concerns about the YouTube video, which at one point shows an officer dragging a senior down a stairwell. "We've received approximately 15 complaints from concerned citizens," said Richard Evans, senior director for the independent agency. "Some were present at the scene and some were not." The incident, which took place after a heated strata meeting at a Best Western hotel, is already being investigated by the New Westminster Police Department, which will decide whether to recommend charges against the officers involved. But the Civilian Review and Complaints Commission's probe could potentially lead to changes in RCMP policy moving forward, Evans said. "Our investigation is designed to make findings and recommendations about [officers'] conduct to inform better policing practices," he told CTV News. "Issues like: Did they have the authority to arrest? Was the appropriate use of force used? Were the RMCP members there properly trained? Were they properly supervised? Was there a language issue?" CTV News

Elderly couple speak out about Coquitlam RCMP altercation caught on video
An elderly Korean couple are speaking out about how they were treated by Coquitlam RCMP after a video of the incident went viral. Seventy-eight year old Myung Ju Lee was shown being dragged down the

stairs by an officer after police were called to the local Best Western hotel on Oct. 26. “Then the police come in and grab my arm, and twist it, then.. push the stairs.” Police were originally called after reports that a fight had broken out at a regular strata meeting. RCMP said in a statement following the incident that the couple had refused to leave the site at the time. “Then the police come in and grab my arm, and twist it, then.. push the stairs.” Police were originally called after reports that a fight had broken out at a regular strata meeting. RCMP said in a statement following the incident that the couple had refused to leave the site at the time. Myung Ju’s wife, Kap Su Lee, was also restrained by officers and says she was left with bruises. Their five-year-old granddaughter was with them the entire time, she can be seen screaming and crying throughout the video footage. The young girl is living with her grandparents full time so that she can attend school in Vancouver while her parents live in Edmonton. AM 730

*** La SQ met sur pied un grand centre de «cybersurveillance»**
Le directeur général de la SQ, Martin Prud'homme, a confirmé la création de cette équipe spéciale à La Presse, hier, lors de la conférence parrainée conjointement par l'UNESCO et le gouvernement québécois, à Québec, et ayant pour thème «Internet et la radicalisation des jeunes». Une vingtaine de policiers travailleront sous peu dans cette unité centralisée sous les ordres du capitaine Jean Lafrenière. Et les budgets seront au rendez-vous, promet le patron du corps policier. Même si les logiciels, les équipements et la formation coûtent cher dans ce domaine. «C'est un des sujets de discussion à la conférence aujourd'hui: on se doit d'être au bon niveau dans l'ensemble des domaines. On veut regrouper nos équipes et augmenter leurs ressources humaines et matérielles. C'est vraiment une priorité», a affirmé M. Prud'homme. Ces patrouilleurs du Net devront être à l'affût d'un ensemble de crimes, pas seulement de ce qu'on appelait autrefois la cybercriminalité. «Aujourd'hui, on peut avoir de l'extorsion sur internet, des agressions sexuelles, de la pornographie juvénile ou de la radicalisation», dit M. Prud'homme. Des policiers du Service de police de la Ville de Montréal et de la Gendarmerie royale du Canada participent déjà à l'initiative, dont le succès reposera aussi beaucoup sur la collaboration de la population, selon le directeur général, qui encourage les citoyens à dénoncer les gestes potentiellement criminels sur le web, même s'ils peuvent parfois avoir l'impression que leur signalement reste sans effet pendant longtemps. La Presse

*** Faire notre travail**
Tout a commencé par un texto de l'éditeur adjoint de La Presse, Éric Trottier. « Faut que je te parle, jeune homme. » C'était jeudi en fin d'après-midi, je venais de finir une répétition pour l'enregistrement de Deux hommes en or, l'émission que je coanime à Télé-Québec. Je rappelle donc Éric. Sur le bruit de fond caractéristique des conférences téléphoniques, il m'annonce qu'il est avec Patrick Bourbeau, l'avocat de La Presse. Me Bourbeau m'explique les détails de l'affaire. Les quatre policiers arrêtés en juillet_ Mon nom qui apparaît sur le radar des enquêteurs_ Une demande faite à un juge_ Un de nos procureurs qui parle à celui de la Couronne. Et mon téléphone, espionné pour ses métadonnées pendant six mois. Pendant six mois, la police de Montréal a pu avoir accès à tous les numéros qui entraient dans mon téléphone, à tous ceux que je composais. Pour des appels ou pour des textos. Si vous m'avez appelé entre le 13 janvier et le 7 juillet, si je vous ai appelé, si nous avons échangé des textos : la police de Montréal le sait. Ce fut plus fort que moi : dans le hall du Monument-National, j'ai lâché un gros juron du terroir québécois qui commence avec un T et qui finit avec un K. En majuscules. J'étais sous le choc. Sans être expert du droit des médias, j'ai tout de suite anticipé ce qui s'est confirmé par la suite : la police qui obtient le droit d'espionner un journaliste de la sorte, c'est du jamais-vu au Canada. Ça ne s'est pas vu pour trouver les sources d'articles traitant de sécurité nationale, de l'armée canadienne, de terrorisme. Mais le SPVM, lui, a obtenu le droit inusité de m'espionner pour des affaires de crimes de droit commun qui sont, dans le grand ordre des choses, stupéfiantes de banalité. La Presse, 4

*** Montreal journalist ' spied on ' by police**
A Montreal journalist whose iPhone was monitored by police for months says he was outraged to discover he had been '' spied on '' as part of what he calls an effort to identify his sources. '' I was living in the fiction that police officers wouldn ' t dare do that, and in the fiction that judges were protecting journalists - and this type of police intrusion ,'' Patrick Lagace, a columnist for La Presse, said in an interview Monday '' Clearly, I was naive .'' The French-language newspaper said it learned at least 24 surveillance warrants were issued for Lagace ' s phone this year at the request of the Montreal Police ' s special investigations unit. That section is responsible for looking into crime in the police force. Three of

those warrants reportedly authorized police to get the phone numbers for all Lagace ' s incoming and outgoing texts and calls, while another allowed them to track the phone ' s location via its GPS chip. The surveillance was ordered as part of an internal probe into allegations police anti-gang investigators fabricated evidence. Five police officers were arrested this summer and two were charged as a result. Lagace said police told him they obtained the courtauthorized warrants because they believed the target of one of their investigations was feeding him information. Canadian Press (London Free Press, N3, Leader-Post, Vancouver Sun, Edmonton Journal, Ottawa Citizen, Windsor Star, StarPhoenix, Waterloo Region Record, Calgary Herald, National Post); Montreal Gazette; Le Devoir; Globe and Mail; Toronto Star; La Voix de l'Est

*** Liberté de presse et protection des sources journalistiques - Les élus doivent passer aux actes**
Un article d'opinion rapporte, « Nous, dirigeants des principales salles de rédaction de Montréal, tenons à exprimer notre indignation et notre inquiétude face à l'espionnage électronique du journaliste Patrick Lagacé par la police de Montréal. Il est inacceptable que des enquêteurs aient pu obtenir accès aux données téléphoniques et à la géolocalisation d'un journaliste sans autre motif que d'identifier des sources journalistiques à l'intérieur du corps de police. Ce n'est pas le seul cas d'intrusion injustifiée des autorités policières dans le travail des journalistes. En juin, le premier ministre Justin Trudeau avait qualifié d"' inacceptable " la filature par la GRC des journalistes Joël-Denis Bellavance et Gilles Toupin, de La Presse. Puis en septembre, l'Assemblée nationale a adopté à l'unanimité une motion pour " rappeler l'importance du principe de protection des sources journalistiques " après que la Sûreté du Québec eut perquisitionné l'ordinateur du journaliste Michaël Nguyen, du Journal de Montréal. Dans les trois cas, les élus ont soit dénoncé l'intervention policière, soit s'en sont dits fortement préoccupés. Des actions concrètes sont nécessaires pour protéger les sources journalistiques formellement. C'est essentiel pour la liberté de la presse, un droit fondamental consacré par la Charte canadienne des droits et libertés et reconnu par la Cour suprême du Canada. La procédure pour obtenir un mandat de surveillance contre un journaliste doit être plus contraignante pour les corps policiers. » Le Devoir, A9

*** A bad precedent**
An editorial states, ""'Are you a journalist?" tweeted American whistleblower Edward Snowden on Monday. "The police spying on you specifically to ID your sources isn't a hypothetical," he warned. "This is today." Snowden was referring to the case of Patrick Lagacé, a columnist at Montreal's La Presse newspaper, who revealed that police have been spying on him for months, tracking his whereabouts using his cellphone and monitoring his calls and texts. Montreal police suspected that a target of one of their internal investigations was leaking information to Lagacé and so applied for - and, bizarrely, received - a series of warrants to monitor the columnist. The state spying on a journalist suspected of no wrongdoing, in an apparent attempt to identify his sources, is unprecedented in Canadian history and poses a troubling threat to freedom of the press." Toronto Star, A10

Woman killed by son had informed police she was afraid of him
Statement heard at sentencing of Michael McCormick, who pleaded guilty to manslaughter. Ten days before she was killed, Pamella Dyer told police she was afraid of her adult son, Michael McCormick, because crystal meth made him delusional. "He thinks I'm not his mother, that I'm out to get him," Dyer told RCMP in a video recorded statement on July 10, 2014. "He's using meth," she said on the recording, played in Victoria Supreme Court Monday. "And when he is in that state, he is as strong as an ox and he has no mind." On July 20, 2014, Dyer, 64, was found lying dead in her Sooke home, at 2227 French Rd. McCormick was arrested and charged with second-degree murder on Sept. 17, 2014. McCormick, 38, was in B.C. Supreme Court for a sentencing hearing on Monday after pleading guilty to manslaughter in his mother's death. He entered the guilty plea on Oct. 11. Prosecutor Ruth Picha told Justice Brian Mackenzie that the Crown is seeking a prison sentence of 12 to 15 years. Picha said McCormick's addiction to crystal meth and personality disorders led to bizarre behaviour. But psychiatric examinations determined McCormick is not mentally ill. Times Colonist, A1/Front

Vader reversal cold comfort for McCann clan
"This has gone on a long time, to say the least," Justice Denny Thomas said with a grimace. That's an understatement. On Monday, Thomas vacated Travis Vader's two second-degree murder convictions, which he had handed down Sept. 15. In effect, he reversed himself and found Vader was not guilty of

murder. But Thomas wasn't done. He then found the Alberta man guilty of two counts of manslaughter in the deaths of Lyle and Marie McCann, the St. Albert seniors who disappeared west of Edmonton while on a camping holiday in June 2010. (…) A more likely sentence, suggested Sankoff, could be around 15 years. Crown prosecutor Ashley Finlayson seemed sanguine Monday. "We felt justice would be done," he said calmly outside the courthouse. It may not look like justice to everyone. After 6-1/2years of blunders by the RCMP, the Crown prosecutors office and the trial judge, this case has taxed public patience and diminished public confidence in the administration of justice in Alberta. Edmonton Journal, A1/Front; * Globe and Mail

Jury watches video recording of Morningstar's police interview
Devin Morningstar told police investigators during a jailhouse interview, a video recording of which was shown to jurors Monday, that Marissa Shephard sent her young son away hours before Baylee Wylie was killed, telling people at her house she was worried for his safety. (…) In the video, played in Court of Queen's Bench, Morningstar was crying and unintelligible at times at the start of the video as he spoke to two police officers from the RCMP Major Crime Unit who visited him in jail two days after his arrest for murder. In the Dec. 20 video, Morningstar said he participated in the attack on Wylie but didn't kill him. "I know I deserve a punishment, but I did not murder that guy," he told Codiac RCMP Sgt. Jim MacPherson when the video was played for the jury Monday morning. "Who did?" asked the investigator. "Tyler," said the murder suspect. Times & Transcript, A1, Front

* **Former military members who were discharged over sexuality launch class-action suits**
People discharged from service because of their sexuality say they suffered extreme psychological trauma from the experience by inaction from Ottawa, former members of the Canadian military who were discharged because of their sexuality are launching class-action lawsuits against the federal government. The plaintiffs seek redress for members of the Canadian Forces and the federal public service "who were investigated, targeted, sanctioned and/or who were discharged or terminated by the Government of Canada because of their sexual orientation, gender identity or gender expression," according to a statement of claim deposited Monday in Quebec Superior Court. (…)Beginning in the 1950s, security agencies sought to identify suspected homosexuals serving in the military and public service, including government agencies such as the CBC and the National Film Board. The investigations continued until the 1990s, when the Mulroney government ordered an end to the practice. At one point, the RCMP had the names of 9,000 people on file. Those targeted were subject to dismissal, demotion or other punishment. Many simply left the military or the public service rather than face investigation. Ms. Roy was dismissed from the military in 1984, after being labelled a sexual deviant because she is a lesbian. Globe and Mail

Inquest into police shooting death of Felix Taqqaugaq begins in Igloolik: Man was shot in his own home after officers say he threatened them with a weapon
More than four years after Felix Taqqaugaq was shot and killed by RCMP officers in his own home, his family and the community of Igloolik, Nunavut, will get some answers starting today. Taqqaugaq died March 20, 2012. A coroner's inquest into the death begins Tuesday morning in Igloolik and is scheduled to run until Nov. 11. It's a mandatory inquest since the death was police-related. Nunavut Chief Coroner Padma Suramala will preside over the inquest, which will detail the events surrounding Taqqaugaq's death, and the findings from the subsequent investigation by the Ottawa Police Service. The details of the investigation, which was completed last year, have not yet been made public. In March 2012, Taqqaugaq phoned in to the community radio station in Igloolik and started ranting. Family members said he suffered from mental health issues. After the rant, someone in the community called the RCMP and police went to his house to check on him. CBC News

Fort McMurray first responders recognized for battling 'The Beast'
Darby Allen still thinks about the wildfire that swept through Fort McMurray. The Wood Buffalo fire chief has good days and bad; the evacuation of 80,000 people from the city still plays on his mind, the thought of, "Could we have done more?" Monday was one of the good days, as he and his fellow first responders were recognized at the Alberta legislature for their work during the disaster. (…) In addition, companies without a firefighting plan or a lack of firefighting equipment on-site could also face a fine of $10,000 per offence. There will also be an increased focus on handing out tickets for careless use of campfires. Peace

officers, forestry, fish and wildlife and conservation officers and RCMP officers will be able to hand out tickets from $150 to $1,000. Roughly 70 per cent of wildfires in the last five years were caused by people and RCMP have said they believe the Fort McMurray fire was caused by human activity. Edmonton Sun

*** Ex-tax auditor acquitted in corruption case**
One of the eight Canada Revenue Agency auditors charged in connection with an RCMP investigation into alleged corruption at the taxman's offices was acquitted at the Montreal courthouse Monday. Quebec Court Judge Christian Tremblay found Luigi Falcone not guilty on all four counts he has faced since 2012, when charges were laid against him in Project Cloche. The charges involved allegations that Falcone, 54, of Laval, Que., solicited a $50,000 bribe from a man who owned a restaurant in Notre-Dame-de-Grâce at the time. The owner, Mario Agostini, alleged that Falcone falsely claimed he had looked at his file at the Canada Revenue Agency, found out it was going to pursue him for $250,000 in undeclared revenue and warned he might go to jail. Agostini testified that he turned down Falcone's offer after consulting a lawyer and an accountant. Six witnesses testified for the Crown during the trial in February. Falcone gave evidence in his own defence. "Mr. Agostini is not credible and (was) unreliable concerning some of his testimony," Tremblay said before acquitting Falcone, who worked for CRA in 1990-2009. The judge even raised the possibility that Agostini misunderstood Falcone after asking his advice on what to do about the actual audit his restaurant was about to be subject to. Leader-Post, N6 (Windsor Star, National Post, Gazette)

*** Man arrested after costume gun scare at Camosun**
What's thought to be a poorly-thought out Halloween costume caused a scare at Camosun College's Lansdowne campus Monday afternoon when a man was spotted in army fatigues and what looked to be a pistol strapped to his leg. A 28-year-old man has been arrested and Saanich police are recommending one charge of possession of a weapon for a dangerous purpose. Police responded to several reports of a man with a handgun on the Lansdowne campus around 3 p.m. Officers were on scene within four minutes and quickly arrested a man, said Saanich police spokesman acting Sgt. Jereme Leslie. A replica hand gun was seized. "We would like to remind people that carrying an imitation firearm is extremely dangerous, even at Halloween," Leslie said. "Responding to this incident put many people at possible risk." It's unclear if the man is a Camosun student. The man will appear in court in mid-December. (…) Victoria police took 12 people into cells for public intoxication between noon on Friday and noon on Monday, according to department spokesman Bowen Osoko. West Shore RCMP arrested two people for public intoxication Saturday night. Times Colonist, A3

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prison watchdog alarmed by pepper-spray use
Canada's prison watchdog is calling for tighter controls on the use of pepper spray in federal penitentiaries amid concerns correctional officers have taken to dousing inmates with the noxious repellent on a "routine" basis. Pepper spray was used in 60 per cent of the incidents in which Correctional Service Canada officers used force last year, correctional investigator Howard Sapers said in his annual report on the state of Canada's prisons and prisoners, released Monday. That works out to more than 1,000 times - three times as often as five years ago. The increase was not the result of an increase in dangerous security incidents, said Sapers, who instead blamed the simple fact that pepper spray became standard equipment for correctional officers in September 2010. As a result, officers are abandoning other interventions, such as simply talking to inmates, in favour of their spray cans. Correctional Services Canada said it is reviewing its policies around the use and oversight of pepper spray and other chemicals and will report back in April. Canadian Press (Times & Transcript, B3, National Post, Red Deer Advocate, Daily Gleaner); Le Devoir; Le Journal de Montréal (Le Journal de Québec)

*** Former inmates get fresh start by launching their own businesses**
Learning about the principles of entrepreneurship, from writing a business plan to managing cash flow and developing marketing strategies, is important to anyone looking to start a small business. When the lessons are delivered in a federal penitentiary, they are all the more critical, educators and volunteers

who offer such courses say. The audience is captive, to say the least, and the message is particularly poignant given the sort of past business experience many prisoners have, as well as their challenging job prospects for the future. "You can't just hang out a shingle and say you're open for business," says Sue Tait, a business consultant and teacher in Bracebridge, Ont., who has developed an entrepreneurial training program for inmates. "Being self-employed eliminates a huge barrier that many inmates face upon release." Ms. Tait, who owns a small business selling jewellery along with her husband, Stan, and has a background teaching entrepreneurship to at-risk populations, was contracted last year by St. Lawrence College to deliver the course to two groups of inmates at Beaver Creek Institution, a minimum– and medium-security federal prison operated by the Correctional Service of Canada (CSC) in nearby Gravenhurst, Ont. CSC provides a broad range of correctional programs and interventions to meet offenders' needs and address their risk of reoffending, says Brittanie Sullivan, a spokeswoman for the service. Corcan, a special operating agency within CSC, provides employment, vocational training and employability skills to offenders. Globe and Mail

*** Ottawa plans to reduce use of mandatory prison sentences**

The Trudeau government intends to cut widespread use of mandatory minimum sentences by giving judges back their discretion over punishment, Justice Minister Jody Wilson-Raybould says. The changes will undo a major element of the Harper government's tough-on-crime agenda. Judges will be given the "appropriate discretion to be able to impose sentences, engage and understand - as they do better than anybody else - the individual that is before them," the Justice Minister told The Globe and Mail in an interview as the Liberals near the end of their first year in power. "To base their decisions on the actual circumstances of the case before them and render judgment." She said new legislation on mandatory minimums is coming soon, "certainly in the early part of next year." Last month, the government gave judges back the discretion they had lost in 2013 over the victim surcharge - a financial penalty from which judges once routinely exempted impoverished offenders, until it became mandatory. A new federal law rolling back mandatory minimum terms could cut the number of Canadians incarcerated, which is high despite falling crime rates. It could also reduce the rates of indigenous people behind bars. Globe and Mail, A1

*** Killer wants out: Bernardo's day-parole hearing set for March**

School girl killer Paul Bernardo has a day parole hearing tentatively set for March, the Toronto Sun has learned. Bernardo was sentenced in 1995 to life in prison with no parole for 25 years for the horrific sex slayings of teens Leslie Mahaffy and Kristen French. Lawyer Tim Danson, who represents the Mahaffy and French families, said he believes the system will work. "I don't believe that Paul Bernardo will ever be paroled, now or in the future," Danson said Monday night. "Having said that, remember, I represent the victims of Paul Bernardo, and so we will take nothing for granted, we will be very vigilant." Prominent Toronto criminal lawyer Edward Prutschi, who has no connection to the case, said he's also confident Bernardo will not taste freedom anytime soon. "He's the poster child for incarceration in Canada," Prutschi said. "If there's one person who personifies the desire to actually see somebody serve the rest of their life behind bars, it's Paul Bernardo." Toronto Sun, A16 (Edmonton Sun, Winnipeg Sun, Ottawa Sun, Winnipeg Sun); Toronto Star

Years in solitary 'disturbing,' Wynne admits

The treatment of an inmate held in segregation for four years is "extremely disturbing," Ontario Premier Kathleen Wynne said Monday, but she declined to call it torture. Adam Capay has been in isolation for 52 months at a Thunder Bay, Ont., jail. Until recently he had been held in a Plexiglas cell with the lights on 24 hours a day, but after his case gained public attention, Capay was moved to a standard cell, with access to a day room, telephone and television, though is still being kept apart from the general population. Correctional Services Minister David Orazietti said Monday he has asked ministry officials to confirm that no one else is being held in the conditions Capay faced for four years. Federal correctional investigator Howard Sapers called Capay's case "troubling," and said he had never before heard of someone being kept in such conditions. There have been cases, however, in the federal system in which offenders are kept in segregation for years, he said. "Until we have a legislated cap, I'm very concerned that long-term segregation and segregation that could go on almost indefinitely is still possible," Sapers said in Ottawa. Critics have called the 23-year-old First Nations man's treatment torture, but Wynne would not, when asked Monday. Canadian Press (National Post, A5, Waterloo Region Record, Hamilton

Spectator, * Kingston Whig Standard); Globe and Mail; * Toronto Sun (Ottawa Sun, Edmonton Sun); * Le Droit

Canada's record in human rights 'on the upswing'
Canada's human-rights record has improved in the year since the Liberals took office, but major issues regarding prisons and First Nations remain, says the secretary general of Amnesty International Canada's English division. Excessive solitary confinement and stepping on indigenous Canadians' cultural concerns are troubling, despite steps forward, Alex Neve told the Times Colonist. Amnesty was founded in 1961 as a source of support for the unjustly imprisoned, and Neve draws attention to "the outrageously excessive use of solitary confinement in the Canadian prison system." Any more than 15 days in a row is torture, and Canada is guilty of that, he said, adding that Canada's rates of solitary confinement are far greater than in other democracies. "We use it more frequently and for longer periods of time. Solitary confinement isn't just a prison management tool; it very often constitutes torture," he said. "Its impact is severe and often irreversible, and even UN human rights experts have made it clear that solitary confinement should never be used for more than 15 days at a time." Canadian prison watchdog Howard Sapers issued a report last March saying that on any given day, 500 federal prisoners are in solitary. More than one-quarter of inmates are in solitary during their sentences. Times Colonist, A4

* **Adam Capay's lawyer plans 'habeas corpus' application to review solitary confinement**
The lawyer for a 24-year-old First Nations man who had been in solitary confinement in Ontario for more than four years says he will ask the court to formally review his client's detention. Anthony Bryant is representing Adam Capay on the charge of first degree murder. Capay was charged in 2012 with the death of another inmate at the Thunder Bay Correctional Centre. Since then he has been held in segregation, most recently at the Thunder Bay District Jail, where his situation came to the attention of the Chief Commissioner of the Ontario Human Rights Commission during a tour last month. Bryant said he is planning to file a habeas corpus application "to have the nature of [Capay's] pre-trial detention reviewed and to see if that can be properly ameliorated." Habeas corpus is a legal concept - a test of the validity of a prisoner's detention - dating back to the Common Law of England. CBC News

* **Capay case**
Re Long Stay In Segregation Could Mitigate Prosecution Of Capay (Oct. 31)
A letter to the editor states, "Like many others, I was horrified to read of the plight of Adam Capay who has spent four years in solitary without facing trial, only to be taken out of one solitary cell and placed in another. The inhumanity of that is mind-boggling." Globe and Mail, A10

* **Capay case**
Re Solitary Confinement Is Pure Torture. I Know, I Was There (Oct. 31
A letter to the editor states, "As I read Donald Best's piece, all I kept thinking was, "In my country?" How can this be? My Canada does not include such human rights violations. Apparently I am very wrong." Globe and Mail, A10

* **Capay case**
A letter to the editor states, "What is happening in Canada? I am appalled by the story about the young man held in solitary in an Ontario jail for four years, without a trial." Globe and Mail, A10

* **Dennis Oland's lawyer asks top court to rule in its favour**
Dennis Oland's lawyer says the country's top court must find that the New Brunswick Court of Appeal made a mistake in originally denying his client bail "so it can't come back to haunt us" if a pending second murder trial takes an "unfortunate turn." Less than a week after he walked free from a Fredericton courthouse, still charged with the murder of his father but his conviction now overturned, Oland was in Ottawa as the Supreme Court of Canada heard arguments on a potentially groundbreaking legal question. Despite successfully securing a re-trial and then his release from custody, the country's top court - on the ask of Oland's lawyer and several interveners, including other provinces - decided to use the Oland case to delve into when convicted killers can be granted bail. Dennis Oland made the trip to Ottawa to watch. Daily Gleaner, A1; Canadian Press (Cape Breton Post, Chronicle-Herald, Red Deer Advocate)

*** Fry society wants mandatory jail death inquests reinstated**
The province isn't backing away from removing a level of accountability in the death of inmates. Right now, a coroner's inquest takes place if someone being held in a Saskatchewan correctional facility or in police custody dies. The only time an inquest is not held is if the person clearly died from natural causes. Now, the province is removing the part of the law that makes those inquests mandatory. Coroner's inquests aim to determine how, when, where and by what means someone in custody died, while also informing the public about the circumstances of the death. They also alert the public to dangerous practices within provincial correctional facilities and make recommendations to avoid preventable deaths. Sue Delaney, executive director of the Elizabeth Fry Society, says the decision by the government is short-sighted and does a disservice to the justice system. StarPhoenix, A2 (Leader-Post)

*** Inmates awaiting trial put pressure on jail system**
Manitoba's provincial adult jail population is rising quickly, largely due to a burgeoning group awaiting trial. Julie Frederickson, the province's deputy minister of justice, told a legislative committee Monday the current count "under roof" stands at 2,555. That's an increase of 100 since June. Frederickson said the increase is mainly due to a rising number of inmates on remand. She said the number of those serving out sentences is relatively stable. The department has said 70 per cent of inmates in provincial jails are on remand. Winnipeg Free Press, B2

*** Overdose kills inmate**
Justin Thompson was supposed to get out of jail this week, after beating his main charges and finishing up a minor sentence. Instead, he died Monday in his London provincial jail cell of a drug overdose, just days before completing a three-week term for failing to get fingerprinted. His cellmate, a man accused in a Sarnia murder case, was clinging to life in hospital. Both men, sources say, fell victim to illegal drugs - likely heroin - at Elgin-Middlesex Detention Centre (EMDC), a frequent flashpoint for troubles in Ontario ' s correctional system. The overdoses also come amid mounting debate over why the jail still isn't equipped with a body scanner that can detect weapons and drugs. London Free Press, A1

Dangerous offender status sought for man
It's been a long time coming, but the office of Kingston's Crown attorney is applying to seek a dangerous offender designation for a 39-year-old sexual predator initially sent to prison in 2004 for drugging and raping three women in North Bay between 1999 and 2002. The decision follows Rene R. Bourdon's convictions in Kingston's Superior Court on two new counts of sexual assault in the Kingston area; eight violations of the long-term supervision order imposed on him 12 years ago at his original sentencing; and fraudulent personation in the service of a sex scheme of Rube Goldberg complexity. In the first nine months following his release in November 2005, however, his release was suspended four times for violating conditions of the LTSO and he was shunted between all three (at that time) Ontario federal halfway houses directly operated by Correctional Service Canada. Known as community correctional centres, they're the the only halfway houses in the system that can't refuse to accept high-risk offenders. The Parole Board of Canada banned his computer access and prohibited him from having a cellphone capable of taking photos. After his release, he was sent back to Hamilton, where he was back in hot water with the Parole Board by April 2009, again over a computer. Kingston Whig-Standard, A1

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Opioid overdose treatment kit requires training before use, but available soon**
Government-funded kits announced this summer that will contain the antidote for the deadly drug Fentanyl and other opioid overdoses aren't on the streets yet. While there's no specific timeline, provincial officials are still promising a fall launch. The province announced funding for the Naloxone take-home kits in late August. According to the Department of Health, within days of that announcement, it struck a working group - addictions experts, representatives of regional health authorities, government and the Aids Committee of Newfoundland and Labrador - that has been meeting regularly. People who

take the kit home have to be trained on its use and just last week, a train-the-trainer program got started. The Telegram, A3

*** Authority awaits OK on safe-injection sites**
Vancouver's health authority has applied for two new supervised injection sites to combat the drug overdose crisis. Vancouver Coastal Health says the proposed sites would be embedded into existing community health-care centres that serve addicts in the Downtown Eastside. British Columbia declared a public health emergency earlier this year over a spike in overdoses, many of them linked to the dangerous opioid fentanyl. Vancouver Sun, A8

*** Indigenous and Northern Affairs Minister speaks at Trinity College: Bennett talks Nation-to-Nation, endangered languages, re-Indigenizing urban spaces**
Federal Indigenous and Northern Affairs Minister Carolyn Bennett spoke at Trinity College on October 28. The event was part of a series called *Conversations with the Chancellor Bill Graham*; it consisted of a brief introduction made by Trinity Provost Mayo Moran, a discussion period, and a question and answer period. A reception was held when the formal event finished. (…) The preservation of Indigenous languages was also discussed; Bennett reiterated that the endangered languages and the extreme importance of Indigenous education are the responsibility of the government. Throughout the conversation, specific examples of Indigenous concerns and issues arose. There was discussion on pipelines, the United Nations Declaration on the Rights of Indigenous Peoples, missing and murdered Indigenous women and girls, as well as the Trans-Pacific Partnership deal. (…) In terms of resolution, Bennett said that the government must change their "urban-Aboriginal strategy." Bennett explained how this relies on a "commitment to reconciliation." Varsity (U of T)

*** Alberta trucking company says racist slur sticker 'a joke'**
A photo taken of a truck with a sticker above the front grill has gone viral on social media as a result of its derogatory language towards indigenous women. The sticker, which read "One Squaw Too Many," was spotted in the area of Grande Cache, Alta. and has some wondering if charges should be laid for hate speech. Grande Cache RCMP confirmed they received a complaint about the truck and have dealt with the matter, declining to go into anymore detail. No charges have been laid against the company. Sandra Jansen, MLA for Calgary-North West who shared the post on social media, said when she saw the post it made her blood boil. "There's absolutely nothing funny about this when across the country we're defining the parameters of the Missing and Murdered Indigenous Women Inquiry and talking about some serious endemic problems." she said. Metro News

Hope for 'Liberal mandate' sways PSAC to reopen talks with Treasury Board
The largest federal union says it has decided to return to the bargaining table this week with the federal government's promise of a "revised mandate" that could revive stalled contract talks. Robyn Benson, president of the Public Service Alliance of Canada, said Treasury Board negotiators signalled the government may be willing to move on key issues, including the contentious issue of replacing the existing sick leave regime. (…) The Liberals picked up bargaining a year ago and have so far stuck with the same short-term disability proposal the Conservatives made - with some improvements. Benson said

PSAC had no further dates booked for bargaining until Treasury Board negotiators recently suggested the government was ready to make changes to its previous position. With that, the bargaining team for the border guards at the Canada Border Services Agency meet with federal negotiators Tuesday. The rest of the bargaining teams have booked talks for Thursday and Friday and into the weekend. Benson said she expects an up dated position on the proposal to replace sick leave with a shortterm disability plan. Unions have signed a solidarity pact against making concessions on the issue. PSAC previously asked the government to take sick leave offthe table to get negotiations going again. Postmedia Network (Ottawa Citizen, A3, Ottawa Sun)

*** Passer «de la parole aux actes»**

Plusieurs centaines de fonctionnaires fédéraux sont descendus dans la rue lundi midi pour montrer leur mécontentement devant le bureau du premier ministre Justin Trudeau, réclamant qu'il passe «de la parole aux actes». En ce 31 octobre, jour de l'Halloween et à la veille de la reprise des négociations en vue du renouvellement de la convention collective, plusieurs syndiqués de l'Alliance de la fonction publique du Canada (AFPC) étaient costumés pour cette bruyante manifestation, appuyés par des collègues représentant d'autres organisations syndicales. Ensemble, ils voulaient rappeler au gouvernement Trudeau qu'ils sont toujours en quête d'un nouveau contrat de travail alors que les discussions ont été amorcées il y a déjà plus de deux ans. Les manifestants en avaient aussi gros sur le coeur en raison des problèmes avec le système de paie Phénix qui ne sont toujours pas réglés, malgré l'engagement de résoudre les 82000 dossiers problématiques en ce jour du 31 octobre. «Lors des dernières élections, la population a dit non aux coupes du gouvernement conservateur dans les services publics. Mais nos membres n'ont vu aucun changement depuis l'arrivée des libéraux. M. Trudeau est déguisé en Stephen Harper. Il est temps qu'il change son costume», a lancé la présidente de l'AFPC, Robyn Benson, qui a reproché au gouvernement libéral d'avoir recyclé le programme des conservateurs à la table de négociation. L'AFPC a décidé de retourner négocier mardi après avoir appris qu'un nouveau mandat a été donné aux négociateurs du Conseil du Trésor. «S'il n'y a pas d'entente cette semaine, nous allons devoir constater que c'est l'impasse dans les négociations», a indiqué la présidente Benson. Le Droit, 9 (La Presse)

*** «Le respect, pas sorcier!»**

C'était jour d'Halloween et de manifestation lundi au Centre fiscal de Shawinigan, d'où le thème «Le respect, c'est pas sorcier!». Et parmi les doléances des membres de l'Alliance de la fonction publique du Canada, il y a ce fameux système de paie Phénix qui fait encore défaut pour 30 000 employés. «Le gouvernement fédéral a confirmé qu'il ne pourra pas régler tous les problèmes liés au système Phénix d'ici le 31 octobre. La sous-ministre de Services publics et Approvisionnement Canada, Marie Lemay, a indiqué qu'il restait plus de 30 000 dossiers à régler. En juin, le gouvernement avait reconnu que plus de 80 000 fonctionnaires avaient été victimes d'erreurs de paye», a fait savoir le conseiller syndical de l'AFPC, Normand Pelletier. La seule retombée positive de ces ratés, c'est qu'un total de 20 employés ont été rappelés au service de la rémunération de Santé Canada à Shawinigan afin de venir à la rescousse du système de paie Phénix. «Bon nombre de travailleurs attendent toujours que la situation se règle. C'est très décevant. Nous avions émis des réserves concernant l'échéance et demandé au gouvernement d'être plus réaliste. Plusieurs questions demeurent sans réponse», avait déjà déploré le vice-président exécutif national de l'AFPC, Chris Aylward. Or, aux 80 000 dossiers qui étaient à régler s'ajoutent les autres cas rapportés depuis juin. «Pourquoi le gouvernement n'en parle-t-il pas?», se demande le syndicat. Le Nouvelliste, 5 (La Presse)

She'll speak in senate for 'the women who have died'

Ashley Smith. Terry Baker. Camille Strickland-Murphy. Veronica Park. Kinew James. They're women who've died behind bars in Canada - and if you know their names, it's likely due to the advocacy of Ottawan Kim Pate, a champion for incarcerated women named Monday as one of a new breed of independent senator. Reporter Megan Gillis spoke with Pate about her optimism that she can make a difference in the Senate. Ottawa Citizen, A8; CBC News; Canadian Press (Chronicle-Herald, Prince George Citizen, Times & Transcript, Times Colonist); Kingston Whig-Standard; Journal de Montréal; Le Droit

MINISTER / MINISTRE

Quebec acts to protect press freedom after police tracking of journalists
The Quebec government has moved quickly with a series of measures to try to restore confidence in the judicial system and protect press freedom amid a widening controversy over the surveillance of journalists by police. Premier Philippe Couillard announced his government would immediately send directives to the province's three largest police forces aimed at making it harder to obtain a search warrant against a journalist. "People have died for the freedom of the press," Mr. Couillard said. (…) The Ministry of Public Security will also begin an "inspection" of procedures at the province's largest forces - Montreal, Quebec City and the provincial Sûreté du Québec. The precise mandate was not clear. And rules to obtain the kind of warrant that put La Presse columnist Mr. Lagacé in the police's sights - a process that has come under heavy criticism - will be tightened. Officers will have to get clearance from the Quebec public prosecutor's office before seeking a warrant before the courts. (…) In Ottawa, **Public Safety Minister**

Ralph Goodale told reporters his government is open to toughening the rules that govern how and when the federal government can investigate members of the media. "***We'll look at the ministerial directive at the federal level to ensure that is appropriate and sufficient in the circumstances. If we think some additional adjustment needs to be taken, we'll make it,"*** he said. RCMP Commissioner Bob Paulson added he was not aware of "any **ongoing investigations or surveillance activities against any journalists."** Globe and Mail, A1

Enquête publique et projet de loi réclamés à Ottawa
La pression s'accentue sur le gouvernement Trudeau à la suite de l'affaire Patrick Lagacé. Le NPD veut une enquête publique. Le sénateur indépendant André Pratte et le Bloc québécois entendent tous deux déposer un projet de loi sur la protection des sources journalistiques si le gouvernement n'en propose pas un, a appris La Presse. Et le commissaire à la protection de la vie privée du Canada souhaite aussi des lois plus claires en matière de protection des sources journalistiques. Le gouvernement Trudeau estime « prématurée » la question d'une intervention législative, mais le ministre fédéral de la Sécurité publique Ralph Goodale a annoncé hier qu'il « examinera » la directive ministérielle de 2003 demandant aux forces policières de porter une « attention spéciale » au statut des médias dans le cadre d'enquêtes sur la sécurité nationale. Le cabinet du **ministre Goodale** n'était pas en mesure d'indiquer hier si cet « examen » comprendrait des consultations publiques. ***« Le ministre examine la directive ministérielle [_] afin de s'assurer que les plus grands soins sont pris lorsque des enquêtes criminelles et du journalisme se recoupent et que la valeur canadienne fondamentale de la liberté de presse est protégée »,*** a indiqué **Scott Bardsley, attaché de presse du ministre Goodale**, qui se dit ***« toujours ouvert à recevoir des représentations »*** sur le sujet. Plusieurs parlementaires auront des suggestions pour le gouvernement Trudeau. Au Sénat, le sénateur indépendant André Pratte, qui a été journaliste pendant 37 ans (la grande majorité du temps à La Presse) avant d'être nommé au Sénat au printemps dernier, se dit « prêt à déposer un projet de loi privé » si le gouvernement n'a pas l'intention de revoir les lois en vigueur. La Presse + (Le Nouvelliste, Le Soleil, La Voix de l'Est)

Le commissaire à la protection de la vie privée s'inquiète Des lois plus claires sont nécessaires
Le commissaire à la protection de la vie privée du Canada, Daniel Therrien, croit que l'affaire entourant la surveillance policière dont le journaliste Patrick Lagacé a fait l'objet démontre que des lois plus claires en la matière sont nécessaires. Daniel Therrien estime que le Parlement a son rôle à jouer pour mieux orienter les tribunaux quant aux circonstances permettant d'accorder des mandats pour obtenir des informations sensibles. C'est ce qu'il a indiqué au Comité permanent de l'accès à l'information, de la protection des renseignements personnels et de l'éthique, mardi. Ce dernier travaille actuellement sur une réforme de la Loi sur la protection des renseignements personnels. (…) Le ***ministre fédéral de la Sécurité publique, Ralph Goodale***, a toutefois fait valoir que la Cour suprême avait déjà énoncé selon quels critères il est justifié que des corps policiers interfèrent avec la liberté de la presse. **M. Goodale** a nié que des directives supplémentaires soient nécessaires. ***«C'est assez clair dans la Charte des droits et libertés. Je ne vois pas comment (nous) pourrions le rendre plus clair que d'enchâsser (le principe) dans la Constitution canadienne»***, a-t-il dit à la sortie d'une réunion du Cabinet. Le ministre a néanmoins invité les associations journalistiques et tous ceux qui veulent livrer des recommandations à le faire. Le chef du Nouveau parti démocratique (NPD), Thomas Mulcair, a pour sa part profité de la période de questions pour exhorter le ministre à indiquer si d'autres journalistes sont actuellement surveillés, demande à laquelle **M. Goodale** a refusé de répondre. Presse canadienne (Le Droit, 16); Canadian Press (Times & Transcript, Chronicle-Herald, Ottawa Sun, Edmonton Sun)

Dompter la police ?
On ne pourra pas accuser, cette fois, le gouvernement Couillard d'avoir trop tardé à réagir ou de l'avoir fait trop mollement. À quelque chose malheur est bon, dit-on, et à peine plus de 24 heures après que l'« affaire Lagacé » eut éclaté au grand jour, Philippe Couillard a annoncé trois mesures importantes, dont une devrait ralentir passablement la « machine distributrice » de mandats de surveillance. Dorénavant, a annoncé M. Couillard, hier, les journalistes jouiront d'un niveau accru de protection, comme les députés, les juges et les avocats, et c'est le Directeur des poursuites criminelles et pénales (et non plus un juge de paix) qui étudiera la demande de mandat faite par un corps de police. La multiplication, pendant des mois, des mandats de surveillance à l'endroit de Patrick Lagacé démontre que c'était presque aussi facile pour les enquêteurs du SPVM que de retirer de l'argent au guichet automatique de la banque du coin.

(…) Au fédéral, le gouvernement Trudeau a d'ailleurs baissé les bras devant la GRC, qui s'est pourtant rendue coupable de filature illégale de deux autres collègues, Joël-Denis Bellavance et Gilles Toupin. Le **ministre de la Sécurité publique, Ralph Goodale**, a affirmé lundi que ***« la liberté de la presse est une valeur canadienne fondamentale »***, mais son gouvernement a décidé le printemps dernier de fermer les yeux sur cette grave violation de la liberté de la presse par la police fédérale. La Presse +; Canadian Press (Red Deer Advocate)

A dark age in our prisons
An opinion piece states, "Canada's prison system has outdone itself again, only not in a good way. The Ontario human rights commissioner recently revealed that Adam Capay had been held in solitary confinement for more than 1,500 days in a Plexiglas room that was constantly bathed in artificial light. This surpassed already horrifying precedents, including those set by Richard Wolfe, who spent 640 days in solitary, Edward Snowshoe, who spent 162 days, and Ashley Smith, who spent close to a year. While these are some of the worst-known cases, the practice is evidently widespread. As the Office of the Correctional Investigator (OCI) noted in its annual report, released in March, there were 8,300 placements in administrative segregation and 200 placements in disciplinary segregation in 2014-15 alone. Most troublingly, the OCI found that Correctional Services Canada was favouring administrative segregation in order to "circumvent the more onerous due process requirements of the disciplinary segregation system." Whereas disciplinary segregation cannot exceed 30 days, administrative segregation can be of indeterminate length. Fortunately, there's reason to believe change is on the way. Prime Minister Justin Trudeau instructed the justice minister last fall to eliminate long-term segregation. Advocacy groups may force the government's hand if its resolve weakens: they are challenging solitary confinement as unconstitutional in court. And in the wake of the Capay controversy, **Public Safety Minister Ralph Goodale** has said a package of prison reforms is forthcoming." National Post, A9

*** OpenMedia meeting with Public Safety emphasized the importance of a genuine consultation on C-51**
A blog post states, "Yesterday, we met with top officials at **Public Safety Canada** to discuss ongoing privacy concerns shared by Canadians across the country. Right now, the ministry is running a public consultation about Bill C-51, privacy, and national security, asking for feedback from Canadians on some of the most pressing civil liberties issues of our time. Meanwhile, we've been hearing from you for well over a year that Canadians expect a full repeal of the "Canadian Patriot Act" -- Bill C-51. Brought into force by Stephen Harper's Conservative government in 2015, Bill C-51 puts our freedom of expression rights on the chopping block, throws the door open to widespread information sharing among a huge range of government agencies, gives CSIS spies powers that would normally be reserved for police, and puts our privacy at risk in a number of different ways. You already know all this -- and that's why you've been calling on the government to take immediate action and completely repeal this legislation and start from scratch. And yesterday, we made sure that **Minister Ralph Goodale's** top advisers were reminded of that fact, and that they promised Canadians they would address our privacy deficit in the last election." Rabble

Watchdog downplays marijuana revenue potential
The parliamentary budget watchdog is being a bit of a buzz kill when it comes to forecasting government revenue windfalls from legalized marijuana. "We're talking millions and millions - not billions and billions - of dollars of revenues," Jean-Denis Frechette, the parliamentary budget officer, said Tuesday after releasing a study entitled, Legalized Cannabis: Fiscal Considerations. The 77-page report finds that the federal government may have little fiscal space to heavily tax cannabis the way it does tobacco without pushing the legal price well beyond that of currently illicit pot. What's more, the Liberal government's stated aims of decreasing marijuana use and accessibility for young Canadians while choking off pot revenues from organized crime will require a delicate balancing act, the study found. Price legal pot too high and the black market will continue to flourish. Too low and governments could be seen to be encouraging its use. The report projects sales tax revenue in 2018 could be as low as $356 million and as high as $959 million, with a likely take of about $618 million based on legalized retail cannabis selling for $9 per gram - in line with current street prices. Canadian Press (Chronicle-Herald, A1, Toronto Star, Kingston Whig-Standard, Ottawa Sun, Times Colonist, Daily Gleaner, Telegraph-Journal, Times & Transcript, Red Deer Advocate)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Quake readiness : Group sends $65-billion seismic upgrade proposal to Ottawa**
A group that includes Green party Leader Elizabeth May, structural engineers and earthquake-safety advocates are pitching a bold $65-billion program to the federal government to promote seismic upgrades of buildings across Canada. The idea is that Ottawa would reimburse building owners 50 cents on the dollar after seismic upgrades are complete. The program would stretch over 25 years and build resiliency into homes and commercial and municipal buildings, particularly in British Columbia, to counter the risk from a massive earthquake, similar in extent to the quake and ensuing tsunami that hit Japan in 2011, killing more than 16,000 people, or from a shallow earthquake nearer the surface such as the 2011 earthquake in Christchurch, New Zealand, that killed 185 people. The program would also focus on the Ottawa and St. Lawrence river valleys, where a significant earthquake risk has been identified. Scientists have estimated the probability of a major earthquake causing damage in a populated area of British Columbia in the next 50 years at 30 per cent. Postmedia (Vancouver Sun, A6; Vancouver Province)

*** Why I want this veteran-led disaster response team to grow in Canada: When I first heard about Team Rubicon, I was inspired. Little did I know that Canada would need it so soon thereafter**
An opinion piece by Veterans Affairs Minister Kent Hehr states " (…) When I first heard about Team Rubicon, I was inspired-not only by what they were doing, but by the opportunity it presented to the men and women who had served, who would yet again be able to put their incredible skills to work. I felt compelled to do whatever I could to bring them to Canada. Little did I know that Canada would need Team Rubicon so soon thereafter. In May of this year, disaster hit northern Alberta and Saskatchewan with wildfires displacing thousands of people. It was the largest fire evacuation in Albertan history and has been deemed the costliest disaster in Canadian history. I was tasked with heading a cabinet committee charged with leading the federal response. To that end, we expedited more than $400-million to the response and continue to provide any and all assistance that we can. I can tell you that the federal government will continue to stand shoulder to shoulder with the people of Alberta and Saskatchewan for as long as it takes to move past this tragedy. For its part, Team Rubicon deployed more than 80 members from the United States, the United Kingdom, Australia, and from Canada, to help with the relief efforts (…) As minister of veterans affairs and associate minister of national defence, I can tell you that those who have served possess the skills and training to help those coping with disaster. It is why I love Team Rubicon; it allows those volunteering to continue with their mission and to help those most in need

in doing so. I am very proud to help facilitate the establishment of Team Rubicon Canada; it is only fitting that a country with our values has a Team Rubicon to call its own." Hill Times

*** Avalanche educators weigh pros, cons of social media on safety**
As social media continues to grow in popularity, Canadian avalanche educators say it can have both pitfalls and benefits for skiers and snowboarders heading into the backcountry. In October, avalanche experts from around the world met in Colorado for the International Snow Science Workshop. It included discussions on how social media can influence decision making because it can lead to a culture of competitiveness on Instagram feeds and in YouTube videos. Officials in Alberta and British Columbia, however, said there have always been outside factors on how skiers and snowboarders make decisions in the backcountry (...) They also started a new approach last year by having a team of Avalanche Ambassadors, mostly high-profile athletes who have a big social media networks, to promote training and safe backcountry behaviour. Calgary Herald, A9

*** Barely passable grade on flood preparedness demands immediate action: report**
All 10 Canadian provinces and Yukon are not making the grade when it comes to flood preparedness, signalling the need for change, including not allowing municipalities to override provincial or territorial direction on development in flood-prone areas, argues a new report from the Intact Centre on Climate Adaptation at the University of Waterloo. Canadian Underwriter (2016-10-31)

*** Flooding study gives C- grade**
New Brunswick received a 'C-minus' in flood preparedness in a new nationwide report released by the University of Waterloo. The report's authors said the province did well when it comes to responding to emergencies but not as well in preventing them. The report collected data from a survey sent out to provincial ministries and departments involved in flood prevention, mitigation and emergency response management. The survey, conducted between December and April, asked officials to answer questions in 12 categories that included items such as the province's role in mapping flood prone areas, in land-use planning, emergency preparedness and response, and mitigating flood risk to drinking water systems. Daily Gleaner, B4 (Times & Transcript)

*** Thanksgiving storm one for the record books: 'There's no city that could have withstood that kind of a downpour'**
The Thanksgiving Day storm that caused widespread flooding in the Cape Breton Regional Municipality will go down in the history books as the wettest day ever recorded on the island. Reviewing weather data that dates back to 1870, Environment Canada senior climatologist David Phillips said the rain that fell Oct. 10 in Sydney established a new benchmark for precipitation in Cape Breton. A total of 219 mm of rain was recorded that day at one official recording station in Sydney, and at the Sydney Airport 136 mm of rain was reported. "(Previously) the wettest ever day in Sydney was 129 mm back on Aug. 17, 1981," he said. "So this one totally swamped the previous wettest day ever, and that's in any month. I looked at the wettest days in the entire period of records." Provincially, the Oct. 10 storm in Cape Breton will also register among the wettest days ever, with only a rainfall of 239 mm in Halifax on Sept. 21, 1942, eclipsing what happened in Sydney. "It was absolutely unprecedented. It was incredibly damaging," said Phillips. "I do a thing at the end of the year called the top 10 weather stories of the year (in Canada) - this is clearly going to be one of the stories." Cape Breton Post, A4

*** Keeping firefighters safe: Seventeen Cape Breton fire departments receive funding**
A total of 77 provincial emergency service providers have received a safety boost from the government. The province recently announced approximately $1 million, under the provincial Emergency Services Provider Fund, will go to assist fire departments across the province, 17 of which are in Cape Breton (...)The Emergency Services Provider Fund is used to help groups buy equipment such as personal protective equipment, self-contained breathing apparatus and rescue tools. Eligible groups receive up to 50 per cent of eligible costs to a maximum of $20,000. First responders include fire departments, Hazmat organizations and ground search and rescue teams. Cape Breton Post, A2/ FRONT

*** CN Rail to continue oil spill clean-up near Gogama, Ont.**
After months of lobbying and protesting by people in the small northern Ontario town, CN Rail has agreed

to do further clean-up of an oil spill near Gogama. "I was ecstatic for sure," says Gogama fire chief Mike Benson, who was recently elected as the chair of the local services board, the government in the unincorporated township. Benson says he was surprised to find out Monday that CN Rail wants to do further dredging on the Makami River and remove more soil from the river bottom contaminated with oil from the fiery train derailment in March 2015. CBC News (2016-11-01)

*** Le maire de Lac-Mégantic ému**

Le maire de Lac-Mégantic, Jean-Guy Cloutier, s'est dit ému «comme jamais auparavant», au terme de l'inauguration officielle de l'ouverture des rues de son centre-ville, confinées depuis plus de trois ans, inauguration qu'il a effectuée symboliquement sur une bicyclette électrique GeeBee. Ce qui allait très bien avec l'adoption, par les élus municipaux, d'une philosophie écologique pour la reconstruction de leur centre-ville, traduite par plusieurs certifications obligatoires pour la conception des nouveaux édifices, comme Leeds et Novoclimat, pour ne nommer que ces deux-là. «C'est pas croyable, émotionnellement, j'aurais de la difficulté à parler davantage et j'aurai une autre émotion quand je verrai les premières automobiles déambuler sur la rue Frontenac. Les citoyens attendaient ça depuis longtemps. Ils ne viendront pas tous aujourd'hui, avec leurs automobiles. Il y en a qui ne pourront pas. Mais je respecte ça. Que chacun le fasse à son rythme!» a-t-il déclaré. La Presse (La Tribune, 6); CBC News

*** Family claims police bungled search**

The family of a Regina woman whose body was found near Swift Current on Oct. 2 after she had been missing nearly two weeks, have outlined in scathing terms their concerns about the work of the Regina Police Service (RPS), RCMP and Search and Rescue officials in the search for her. The vehicle belonging to 65-yearold semi-retired teacher Judy Campbell was found on Sept. 27. But her body was not found until Oct. 2, when volunteer searchers discovered it in long grass just 225 feet from her Subaru Cross Trek, in an area apparently previously combed over by the combined authorities' search team. Though questions are raised about the search itself, the main concern outlined in a letter to Postmedia News from Campbell's brother, David Howlett, and sister, Karin Mitchell, is that despite Campbell telling her family she was going to Swift Current to visit her mother, police traced a final text from her phone to a cell tower in the North Battleford area. As a result, the search was directed to that region in error, the family claims. Postmedia (StarPhoenix, A3; Leader-Post)

*** Missing Quesnel hunters found 'safe and sound,' police say**

Quesnel RCMP say a pair of hunters are "safe and sound" after not returning from a hunting trip on Saturday. In a release, police say Glen Booker, 55, and his stepson, 10, were found just before noon PT on Tuesday by a helicopter operated by Dunkley Lumber. "The hunters' vehicle experienced mechanical issues on a very remote road forcing them to stay out longer than expected," Sgt. Chris Riddle wrote. "Both individuals are in good spirits and are on their way back to Quesnel to connect with their family." CBC News

*** RCAF SAR Techs come to aid of ailing sailor**

Late Monday afternoon 442 Transport and Rescue Squadron was involved in a mission to medevac a crew member of a commercial fishing vessel to hospital for immediate care, the Canadian Forces said in a news release Tuesday. More details from the news release: The vessel was 60 nautical miles (110 km) northwest of Cape Scott at the time of the call for assistance, A CH-149 Cormorant helicopter and a CC-115 Buffalo were tasked to respond, The Buffalo arrived on scene first and after making contact with the crew by radio provided them instructions to prepare for the arrival of the Cormorant with SAR Techs on board. Ottawa Citizen

*** Family overjoyed missing senior found alive**

The Royal Newfoundland Constabulary says searchers have found William Snelgrove, 82, missing since Monday in the Conception Bay South area after he left to go berry picking. Police were alerted Monday shortly after 7 p.m. that Snelgrove was overdue from his berrypicking trip. He'd last been seen on foot in the area of the Power Substation on Middle Bight Road in Foxtrap just after 1 p.m. Monday. At approximately 3 p.m. Tuesday, a C.B.S. resident located Snelgrove in a wooded area in Conception Bay South near Red Bridge Road. He was treated by the C.B.S. Fire Department and was conveyed to hospital for additional medical assessment. St. John's Telegram, A4

*** Police warn outdoors enthusiasts to prepare for winter months**
With the days shrinking and the weather getting colder, Wood Buffalo RCMP are warning people heading into the wilderness to be mindful of their surroundings and outdoor plans. On Oct. 27, search and rescue teams with Wood Buffalo RCMP spent the day looking for two individuals near the Richardson Sand Dunes and Six Lakes area, located north of Fort McMurray. One individual had gotten lost. The second individual had maintenance issues with the off-road vehicle they were using and needed help. Fort McMurray Today

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** How Montreal police were able to use legal means to track a journalist**
The Quebec government says it wants to make it more difficult to obtain a search warrant that would target a journalist, raising the bar to a higher level – on par with lawyers and judges. The move, announced by Premier Philippe Couillard, comes after it came to light that La Presse journalist Patrick Lagacé was being spied on by Montreal police. Through 24 issued surveillance warrants, the SPVM was able to obtain the identities of the people he spoke and texted with as well as to track his whereabouts via his iPhone's GPS. (...) Though some have pointed to the contentious anti-terrorism legislation, Bill C-51, as a catalyst for more invasive police tactics in Canada, Christopher Parsons, managing director of the Telecom Transparency Project at Citizen Lab, says a bill originally passed to curb cyberbullying may be to blame. Bill C-13 amended the Criminal Code to allow police to, among other things, track an object, person, or transmission of data if the authorities have the suspicion or belief that doing so could assist an investigation. Parsons said that Bill C-13 was "sold to the Canadian public as necessary to stop cyberbullying," but applies to the general public. (...) Even CSIS, he said, "tends to place the monitoring of journalists alongside monitoring of academics or monitoring certain government officials, so they're fairly protected." "The very fact that they were using these very, very invasive tools to monitor where the journalist was going and whom they were speaking with struck me as fairly extraordinary." CBC News

Police union wants chief's resignation
The head of the Montreal police union said police Chief Philippe Pichet should be fired for allowing his officers to spy on journalists, calling the decision to track the cellphones of La Presse columnist Patrick Lagacé and at least three other reporters "unforgivable." "It was a serious error in judgment and it is unforgivable," Yves Francoeur, head of La Fraternité des policiers et policières de Montréal told the Montreal Gazette Tuesday. "The SPVM is the second largest police service in Quebec and the fifth largest municipal force in North America, so we need a strong leader." La Presse reported Monday that police requested 24 search warrants to track Lagacé's iPhone since January, which allowed police to access the numbers Lagacé had called or received calls from and track him by activating a GPS mechanism on his phone. At least three other journalists have since learned they were under similar surveillance by police - Félix Séguin of TVA, Monic Néron from 98.5 FM, and freelance journalist Fabrice de Pierrebourg. Montreal Gazette, A1

*** Journalistes surveillés - La protection des sources passe-t-elle par une loi?**
Ce qu'il faut désormais appeler l"' affaire Lagacé " montre qu'il y a visiblement un problème. Reste à trouver la solution. Vaut-il mieux appliquer les principes établis par la Cour suprême du Canada en matière de protection des sources journalistiques ? Faut-il plutôt enchâsser cette protection dans une nouvelle loi ? Québec réagit au lendemain des révélations d'espionnage par la police de Montréal du journaliste de La Presse Patrick Lagacé, à la suite d'un mandat délivré par une juge de paix magistrate. Le ministère de la Sécurité publique accordera dès cette semaine aux journalistes le même niveau de difficulté pour l'obtention d'une surveillance légale qu'aux députés, juges et avocats. Québec annonce aussi la formation d'un groupe d'experts formé par le gouvernement pour formuler des recommandations

sur le délicat sujet. Le groupe des sages, dirigé par " un juge de prestige ", pourra aller jusqu'à recommander l'adoption d'une loi pour mieux protéger les sources journalistiques. C'était le souhait de Claude Robillard pendant tout le temps qu'il a agi comme secrétaire général de la Fédération professionnelle des journalistes du Québec (FPJQ), de 1989 à 2014. Il n'a pas changé d'idée. Le Devoir, A2I; La Presse (Le Quotidien, Le Nouvelliste, Le Droit, Le Soleil); Montreal Gazette, 1, 2; La Presse +; La Tribune; La Voix de l'Est

* **Des cas controversés ici et ailleurs**
Les pratiques de surveillance des États préoccupent depuis des années les organisations de défense des droits de l'homme. Bien que les révélations d'Edward Snowden sur la National Security Agency (NSA) américaine aient attiré l'attention du public sur les risques inhérents aux nouvelles technologies de communication, nombre d'États continuent à faire la sourde oreille aux appels en faveur d'une plus grande transparence et d'un encadrement accru. Alors que le Service de police de la Ville de Montréal se retrouve sur la sellette pour avoir espionné un journaliste, un nouveau rapport diffusé par l'International Network of Civil Liberties Organizations (INCLO) dresse un préoccupant état des lieux en matière de surveillance en évoquant des cas survenus dans une dizaine de pays, dont le Canada. (…) En 2009, le Service canadien du renseignement de sécurité (SCRS) a demandé l'autorisation à un juge de la cour fédérale de travailler avec le Centre de sécurité des télécommunications (CSTC) pour surveiller deux Canadiens jugés suspects lors de leurs déplacements à l'étranger. Le CSTC n'est normalement pas autorisé à cibler ainsi des Canadiens, mais l'autorisation a été accordée. Le magistrat a appris quelques années plus tard que des services de renseignements étrangers avaient aussi été mis à profit par le CSTC pour espionner les deux hommes, ce qui contrevenait aux engagements pris pour protéger les informations recueillies. Il a fait annuler le mandat en 2013. Le rapport de l'INCLO relève que l'on ne sait toujours pas qui étaient les deux individus ciblés ni quelle était la nature de leurs activités. La Presse +

* **Curbing online extremism 'like trying to block wind'**
Pulling hate material from the Internet will never be enough to curb the phenomenon of violent extremism, the head of free expression and international relations at Google told a conference on radicalization Tuesday. "What we've seen over the past couple of years is a realization that simply taking the content down doesn't work because one website goes down, two or three more are up the very next day," Ross LaJeunesse said. "Simply taking down the content doesn't address the feeling and the hatred which caused the speech in the first place. You need to engage the speakers who are promoting radicalization and hate online." He acknowledged that Google, the U.S.-based company that runs a search engine and the video-sharing service YouTube, has a role to play and argued the company is taking that responsibility very seriously. "We have started doing various programs, where, much like a regular advertising campaign, when someone searches for a key word that we think indicates they're looking for radical content, we then show them an advertising campaign about content that counters that speech," LaJeunesse said. Montreal Gazette, A6

* **De jeunes internautes montent au front**
Pour contrer les extrémistes violents sur le Web, il faut faire en sorte que des jeunes leur répliquent sur le Web, estiment de nombreux participants à la Conférence de l'UNESCO sur Internet et la radicalisation. Charlotte De Mesmaeke, 24 ans, et Amal Hamich, 30 ans, font partie de la délégation belge de « Non à la haine ». « Non à la haine » est une campagne européenne lancée en 2013 pour lutter contre tous les discours haineux en ligne et hors ligne. Après avoir dressé un portrait de la radicalisation lundi, la Conférence de l'UNESCO tournait mardi les projecteurs vers les solutions, ou du moins des pistes de solutions, pour endiguer le phénomène. (…) Amal porte le voile ; Charlotte pas. Elles s'insurgent contre la haine de l'Occident, l'islamophobie et toutes les formes d'intolérance. Dans leurs temps libres, ces deux « activistes » donnent des formations dans les écoles. « On ne met pas de barrière avec les jeunes. On crée un espace sans jugement, précise Amal. Même s'il y a un discours raciste, ce n'est pas grave dans le cadre de la discussion parce que l'objectif, c'est de savoir d'où vient ce discours et ce qui pousse la personne à penser de cette manière. » Au Québec, elles ont collaboré à la création d'un organisme du genre. Le gouvernement Couillard a annoncé mardi une aide de 10 000 $ pour en élargir l'impact. Le Devoir

* **La Commission des droits de la personne juge le projet de loi 62 discriminatoire**

La Commission des droits de la personne et des droits de la jeunesse (CDPDJ) a réduit en pièces, mardi, le projet de loi 62 sur la neutralité de l'État tandis que la Ligue des droits et libertés (LDL) a accusé le gouvernement libéral de vouloir faire du *« profilage religieux »*. C'est l'article 9 qui représente le principal écueil du projet de loi 62, selon la CDPDJ et la LDL, c'est-à-dire l'obligation faite à un employé de l'État de fournir les services, et à toute personne d'obtenir ce service, à visage découvert. (…)La charte des valeurs québécoises du PQ a constitué l'une des sources de la radicalisation de jeunes, suggère l'auteur d'une bande dessinée dévoilée par le premier ministre Philippe Couillard en marge de la conférence Québec-UNESCO sur l'« Internet et la radicalisation des jeunes » mardi. Le bédéiste El Diablo écrit qu'*«* on n'avait pas besoin d'être comme les autres pour faire partie intégrante de la société [québécoise] ». « Ça a changé ? » demande un personnage. « Ouais ! Quasiment du jour au lendemain. Quand ils ont sorti leur fameuse " Loi pour la neutralité des valeurs " », répond un autre. « Il n'y a aucune exagération. C'est la parole des jeunes », a soutenu le directeur général du Centre de prévention de la radicalisation menant à la violence, Herman Deparice-Okomba, qui a commandé la bédé. La charte *« nourrissait le phénomène* [de la radicalisation] *par les mesures d'exclusion »*, a fait valoir M. Couillard. Le Devoir

*** La censure est inefficace contre la radicalisation, dit Google**

Les gouvernements engagés dans la lutte contre la propagande des groupes jihadistes sur internet ont compris que la censure était inefficace et menaçait la libre expression sur la toile, a relevé mardi un dirigeant de Google. «Nous avons assisté à un énorme changement d'attitude des gouvernements», a confié à l'AFP Ross LaJeunesse, responsable des relations internationales du géant d'internet, interrogé sur les lois anti-terroristes adoptées par des pays comme la France ou le Canada dans la foulée d'attaques jihadistes. «À chaque fois qu'une crise éclate, il peut arriver que les gouvernements en fassent trop. Mais nous trouvons, avec les discussions que nous menons actuellement avec eux, que les gouvernements réalisent que la (censure) n'est pas la bonne approche», a-t-il déclaré en marge de la conférence «Internet et la radicalisation des jeunes », organisée lundi et mardi par l'UNESCO à Québec. « Au début, les États ne voulaient pas parler de contre discours et nous disaient seulement: ce contenu est mauvais, retirez-le! », a indiqué M. LaJeunesse, notant que Google se permettait d'interpeler « les législateurs lorsqu'ils sont trop zélés». Agence France-Presse (TVA Nouvelles); Agence France-Presse (Huffington Post) (2016-11-01)

*** Les dessous de la radicalisation**

Mardi, c'était le deuxième et dernier jour de la conférence de l'UNESCO sur la radicalisation violente des jeunes, à Québec. Les organisateurs ont dit que c'est un succès; le premier ministre a dit qu'il va agir. Et l'«Appel de Québec» - florilège de voeux rédigés avant même la tenue des débats - a été signé par les élites... Mais en parlant avec les spécialistes, on a aussi ouvert des portes moins convenues. Jour 2 des morceaux choisis! Le titre est un peu fort! Mais à l'extrême gauche comme à l'extrême droite, chez les djihadistes comme les farouches pro-vie, il existe bel et bien un modus operandi similaire afin d'attirer et retenir des recrues pour gonfler les rangs. La titulaire de la Chaire de recherche du Canada sur les conflits et le terrorisme de l'Université Laval, Aurélie Campana, étudie la question depuis nombre d'années. Sur le terrain. Pour embarquer plus de membres, on remarque que les factions extrémistes, qui avaient l'habitude de se cacher, tendent à sortir au grand jour, observe-t-elle. Ils soignent leur aura : «il y a une euphorisation du discours haineux». Tout pour attirer. Et pas besoin d'enrôler des convaincus. «La radicalisation n'est pas nécessairement préalable au recrutement.» En fait, souvent, les nouveaux ne maîtrisent pas du tout l'idéologie! La Presse (2016-11-01)

Education of women key to curbing radicals, Caliph says

The spiritual leader of up to 20 million Ahmadi Muslims is emphasizing the importance of educating women to prevent the radicalization of youth. "The literacy rate of our women is more than men," said the Caliph, Hazrat Mirza Masroor Ahmad, who was in Saskatoon on Tuesday as part of a Canada-wide tour. "And we say if the woman is not well educated, she cannot train her children well. "If the children are not trained properly, they cannot be good citizens. They cannot be law-abiding citizens. (…) In a morning news conference, he praised Canada as a peaceful country. Canadians are tolerant due to the nation's multiculturalism, and Ahmadis don't face many challenges here - save for the "economic crisis" faced by everyone, he said. Throughout his tour of Canada, the Caliph has addressed the issue of peace - including when he spoke to Parliament in Ottawa earlier this month. When asked about the importance of his message of peace to Muslims, he said "It is quite obvious. This is the message that you need today."

Spreading the "true message of Islam" - peace and harmony - is also the way to address misconceptions about Muslims, he said. StarPhoenix, A1

*** Ottawa falls short of real oversight for C-51 powers**
An editorial states, "Last year, former prime minister Stephen Harper's Bill C-51 brought in controversial new security powers, despite the opposition of hundreds of thousands of Canadians and the advice of legal scholars and civil liberties organizations. Resisting calls from the NDP and others to repeal the law, the Liberal government has kept C-51 on the books. Under the legislation, the sharing of personal information between government agencies was expanded, the Canadian Security Intelligence Service was given unprecedented powers to disrupt terrorist plots and a range of perceived security threats, the right of police to preventively arrest people was expanded, and urging others to commit terrorism became a criminal offence. Now, Parliament is debating a proposal to plug a long-standing gap in our security architecture: Canada today stands alone among our closest allies in lacking independent, elected oversight of security and intelligence agencies. Unfortunately, the government's plan falls short of giving Canadians a real watchdog for their rights and safety. Bill C-22 would create a committee without the powers, the independence and the public trust needed to get the job done. The prime minister and cabinet would appoint its members, hand-pick its head, control the information it receives, block investigations into certain areas, and revise its reports without notifying Parliament and the public." Province, A13

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Canadian couple faces U.S. charges for allegedly importing, exporting fentanyl
A Canadian couple is accused of importing fentanyl products from China into the United States and then mailing the powerful opioid drugs to Canada. Karl and Sorina Morrison, both 59, were arrested at a border crossing near Niagara Falls, N.Y., last month after an investigation by U.S. authorities. The Kitchener, Ont., couple has been charged with conspiracy to import and export controlled substances and analogues, and attempt to export controlled substances and analogues. Each charge carries a maximum penalty of 20 years in prison and a $1-million fine. The couple has pleaded not guilty. In a criminal complaint filed with a New York court, a Homeland Security agent says a package mailed from China to Karl Morrison at a mailbox in a UPS store in Niagara Falls, N.Y., contained four packets, two of which were found to contain types of fentanyl. (…) The complaint notes that the Morrisons have a son and that since 2009, five packages mailed to him were seized by the Canada Border Services Agency after they were found to contain controlled substances. Canadian Press (The Telegram, The Guardian, Times Colonist, 570 News, Thunder Bay Chronicle-Journal, Cape Breton Post, Global News, Guelph Mercury); * Presse canadienne (L'Actualité)

*** The CBSA (As Administrator Of Laws) Must Follow CITT Decisions (Subject To Limited Exceptions)**
This case is a must-read for all customs and trade lawyers. This case is a must-read by other administrative lawyers who appear before quasi-judicial tribunals. The general administrative law rules for law enforcers and tribunals have been clarified in simple, understandable terms. May there be greater certainty, greater predictability and finality as a result of this important case. On October 21, 2016, Justice David Stratas of Canada's Federal Court released a game-changing customs decision/administrative law, which is *Canada (Attorney General) v. Bri-Chem Supply Ltd.*, 2016 FCA 257 (the "Bri-Chem Decision – FCA"). The Federal Court of Appeal has spoken. The Canada Border Services Agency ("CBSA") is an "administrator" of Canada's border laws. The Canadian International Trade Tribunal ("CITT") is a a quasi-judicial tribunal that has been granted the powers of a superior court of record. The CBSA must follow the decisions of the CITT and can no longer ignore decisions it does not agree with (subject to general rules set out below). I will put money on an appeal of the Bri-Chem Decision-FCA to the Supreme Court of Canada. As a result, I expect more significant developments in Canada's customs and trade laws regimes to be forthcoming. But, until then, the Bri-Chem Decision-FCA is a significant decision that will be quoted often by counsel for importers who are the subject of CBSA enforcement actions. It will also be quoted by lawyers who regularly appear before other tribunals. Mondaq

Ottawa unveils strategy to court foreign tech talent
The federal government is rolling out measures to lure more foreign cash and talent to Canada as it tries to dig the country out of a slow-growth trap. The strategy, unveiled Tuesday by Finance Minister Bill Morneau, includes measures that will make it easier for fast-growing Canadian tech firms and multinational corporations operating here to quickly bring in skilled foreign workers for jobs they are struggling to fill in Canada. For qualifying companies, Ottawa said it will establish a twoweek "standard" for approving visas and work permits early next year - down from several months - and create a 30-days-ayear work permit allowing companies to bring in workers for short stints. The permit is intended for intercompany work exchanges, study exchanges and to fill temporary needs, according to the finance department. Globe and Mail, B1

* **Crimes contre nature**
La contrebande d'animaux exotiques est devenue presque banale en Amazonie péruvienne. Singes, tortues, perroquets sont capturés sans égard aux espèces menacées et exportés grâce à la complaisance des autorités. (…) Impossible de savoir si le ministère canadien de l'Environnement est au courant de ce stratagème de permis truqués. Ce ministère, qui est responsable de l'application de la Convention sur le commerce international des espèces de faune et de flore sauvages menacées d'extinction, se montre peu bavard. «Le permis atteste que l'animal, l'espèce végétale ou le produit est issu d'une source durable», s'est contentée de préciser sa porte-parole par courriel, ajoutant que 85 agents de la faune travaillent en collaboration avec les agents frontaliers pour inspecter les cargaisons à destination du Canada. L'éleveur québécois Dominic Lapointe assure que la combine employée par les trafiquants péruviens n'est pas un cas isolé. (…)Il déplore que les douaniers canadiens manquent de formation sur ce commerce. L'Actualité

My NEXUS plan went nowhere
A letter to the editor states, "Re: "Screening at Canadian airports should be faster, smarter, safer" (Opinion, Oct. 19) My partner and I tried to apply for the NEXUS program. In October 2013, we duly completed our forms and each sent our $50 fee. We waited for a call for the interview step of the enrolment procedure but never heard a word back until a letter arrived five months later saying, "Applicant did not finalize program enrolment within required time frame." After a series of phone calls that yielded no clear means of following up, we abandoned the process. Needless to say, were $100 out-of-pocket for our efforts!" Montreal Gazette, A8

Don't forget today's needs
An editorial states, "Governments usually get criticized for thinking short-term. Since they have to go back to the voters every four years, they're naturally fixated on what can get done by the next election. So it seems a bit churlish to fault Finance Minister Bill Morneau for thinking too long term. In his fall fiscal update, Morneau is looking way down the road - announcing measures he hopes will make sure Canada's economy is more productive "one, two and three decades from now." (…) He also plans to make it easier for companies to bring in highly qualified workers by speeding up applications for work permits and visas. That's fine as long as they truly bring in special skills needed to help businesses staff up quickly, and just don't displace Canadians who could do the same jobs. It must not be a repeat of the Conservatives' ill-fated temporary foreign-workers program." Toronto Star, A14

* **Gordie Howe Bridge may never be built**
A letter to the editor states, "Re: Behind the bridge, by Anne Jarvis, Oct. 28. Congratulations to Anne Jarvis for an excellent piece of investigative journalism. It seems clear that this bridge may never be built for any number of reasons: the attitude of the current owner of the Ambassador Bridge, the lack of initiative from the government in Ottawa, the change in direction from the state of Michigan, and the continuing decline in bridge traffic. What will be the result if the current situation does not change? Windsor residents will still be left with the noise, fumes and truck traffic. The Ontario government will have constructed a very expensive highway to nowhere. The federal government will build a bridge in Montreal because there are a lot more Liberal votes in Montreal than there are in Windsor." Windsor Star

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Cybersecurity talent shortage on the radar of government, business**
An international shortage of cybersecurity talent is expected to grow over the next few years, according to the Information and Communications Technology Council. The council's vice-president of talent innovation, Sandra Saric, said there's an expected need for more than 1.5 million people to work in cybersecurity globally by 2020. Solving the talent shortage was one of the challenges emphasized by government and private industry executives at a cybersecurity forum at the GTEC conference in Ottawa on Tuesday. It's an annual technology event that brings together business and government. "Getting more people to take science, technology, engineering and mathematics courses and degree programs, and also training them to be cybersecurity savvy is probably the first challenge," said Scott Jones, assistant deputy minister responsible for the information technology security program with Communications Security Establishment Canada (CSEC). Saric said there's a need for computer scientists, analysts, investigators and psychologists, as well as communications and marketing professionals. "We connect with the Ottawa police who have a cybercrime unit, they're having difficulty finding people. I've spoken to the RCMP who are also struggling ... it's across the board," she said. Saric said the Information and Communications Technology Council, a Canadian non-profit, is working on developing talented students before they have even graduated high school. CBC News

*** Britain updates cyber security strategy**
Britain has launched a new national cyber security strategy, promising to spend $3.1 billion over the next five years to strengthen the defences of government, critical national infrastructure sectors and the wider economy. That includes the ability to mount offensive cyber action to retaliate against state or criminal actors. The announcement from chancellor of the exchequer (finance minister) Philip Hammond on Tuesday comes as Ottawa enters the last month of its public consultation on updating Canada's national security policy framework, which includes cyber issues. Questions raised in the Canadian consultation paper include under what conditions telecom and Internet providers should have to give police and intelligence agents access to basic subscriber information, whether providers should have to buy equipment to give police access to communications, how much subscriber data should providers have to keep and for how long and whether makers of encryption products should have to have a back door for law enforcement and intelligence agencies. IT World Canada (2016-11-01)

*** Microsoft Says Russian Hackers Exploited Flaw in Windows**
The hackers believed responsible for breaking into computers at the Democratic National Committee have exploited previously undisclosed flaws in Microsoft Corp.'s Windows operating system and Adobe Systems Inc.'s Flash software, Microsoft said Tuesday. It is unclear if those hackers, reportedly tied to Russia, used the newly disclosed vulnerabilities to hack into the DNC. Microsoft Tuesday criticized Alphabet Inc's Google for publicly identifying the Windows flaw on Monday, before Microsoft had had a chance to issue a patch. Wall Street Journal

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Python made 'growling noises' after killing New Brunswick boys, Mountie testifies**
Jean-Claude Savoie pleaded not guilty to criminal negligence causing death after two sleeping boys were suffocated in his apartment. A 45-kilogram python lunged, snapped its jaws, and made "growling noises" when it was forced back into its pen after killing two sleeping boys, an RCMP officer told a New Brunswick jury Tuesday. Const. Stephane Dugas described the scene on the morning of Aug. 5, 2013, shortly after Jean-Claude Savoie, who is facing trial for criminal negligence in the boys' deaths, called 911. Dugas testified that he found Savoie wearing a bloody shirt, two boys who were beyond medical help, and a 4.7-metre snake in the laundry room. Savoie followed Dugas' instructions to return the snake to its enclosure, where it made noises, rose up almost 1.8 metres and lunged at the glass, Dugas said. The two boys — four-year-old Noah Barthe and his six-year-old brother, Connor — were covered in bruises, and one had a lot of wounds. "I knew at the time not much could be done," said Dugas. "There was lots of blood." Toronto Star; Regina Leader-Post; Sputnik News; La Presse

*** 'I did do it. I wasn't myself': Man told police he was using crystal meth when he killed his mother, court hears**

Michael McCormick told police he was in the grip of a crystal meth psychosis when he killed his mother, Pamella Dyer, at her home in Sooke in July 2014. "She came downstairs and we got in a big fight right away," McCormick told Det. Mike Darling in an interview videotaped at West Shore RCMP detachment on Sept. 17, 2014. "I don't even know what happened. It was a big red blur for me. It wasn't me. Well, it was me, obviously. But it wasn't the right Mike. It was stupid, f--ing drugged out, f--ing idiot Mike." McCormick, 38, was originally charged with the second-degree murder of his mother. Last month, he pleaded guilty to the lesser offence of manslaughter. At his sentencing hearing Monday, Justice Brian MacKenzie heard that Dyer probably died on July 19. She was found dead the next day. Crown prosecutor Ruth Picha, seeking a prison sentence of 12 to 15 years, told the court the cause of Dyer's death was likely asphyxia caused by 25 fractures to the ribs, a blood clot to the lungs and a person lying on Dyer's body. At the sentencing hearing Tuesday, the Crown played the videotape of McCormick's confession. In the small interview room with photos of the crime scene taped to the wall, Darling tells McCormick his DNA has been found in blood on a milk carton found at the scene. McCormick denies killing his mother. Times Colonist, A3

Nanaimo man sprays family with bear spray during Halloween

A Nanaimo family had their Halloween ruined when an angry driver sprayed them and several bystanders with bear spray, RCMP said Tuesday. All were treated at the scene by paramedics. Police said the incident happened at about 8 p.m. Monday when a vehicle in the area of Cilaire and Montrose was reportedly driving too fast and revving its engine. Several parents were concerned as sidewalks were full with children going door to door. At one point the vehicle drove past and several parents yelled at the driver to slow down. During the exchange, an adult male allegedly struck the passing vehicle with a flashlight causing some damage. The driver got out, demanding to know who hit his vehicle. The suspect driver then grabbed a can of bear spray and sprayed not only the male who hit his vehicle but also his wife and seven-year-old son. Other parents came to help and were also contaminated by the affects of the spray. Witnesses obtained the licence plate number of the vehicle. The driver, who appeared to be in his early '20s, was later identified and has provided a statement to investigators. The investigation is continuing. Province

Former RCMP officer assault trial on P.E.I. delayed

Judge issues warrants for witnesses in Jeffrey Rae Gillis assault trial. A trial for a former RCMP officer charged with assault and uttering threats was adjourned Tuesday after two key witnesses didn't show up to court. Chief Judge Nancy Orr issued warrants for the two witnesses who were scheduled to testify in Jeffrey Rae Gillis's trial in provincial court in Charlottetown. Gillis was charged with uttering threats and two counts of assault. The trial was scheduled for two days, but Crown attorney David O'Brien told the court the two main witnesses in his case weren't there. O'Brien said he received a text message from one of the witnesses who said they didn't want to pursue the matter further. Guardian

*** Wiltz: Bull on both sides of the border**

An opinion piece states, "It is my opinion that we really have no choice when it comes to presidential candidates in next Tuesday's election. It comes down to Supreme Court nominations, our Constitution and our national defense. President Obama has run roughshod over our Constitution, and Hillary Clinton will continue to do the same. Yes, Donald Trump can be offensive and obnoxious, but he will not sell out the United States. (…) In June of 2013, flash floods struck Southern Alberta. In High River, one of the hardest hit communities, the citizens were forced to evacuate immediately. They had no time to load up their most valued possessions. Access to the largely submerged town was controlled by the Royal Canadian Mounted Police to prevent looting. What followed was unthinkable. The RCMP made forcible entries into private residences by breaking down doors and picking locks. They claimed they did this to search for flood victims and stranded pets despite the fact that no people or pets were reported missing. The RCMP also searched for firearms and confiscated all they found." Daily Republic

*** Cohen: There's a Canadian parallel to the FBI vs. Clinton, and the RCMP hasn't explained it**

An opinion piece states, "Kennedy learned that Dr. Martin Luther King, Jr., had been arrested on a technicality – a traffic charge – and was in jail. On Oct. 26, Kennedy called King's wife, Coretta, to show

his sympathy and offer his help. His brother, Robert F. Kennedy, made a call of concern to the judge. Surprisingly, King was released. African-Americans voted for Kennedy overwhelmingly. They may have been the difference in a race that Kennedy won by some 118,000 votes. (…) Did the RCMP sway the election? Two years later, a report from Paul Kennedy, the RCMP's public complaints commissioner, said the decision "had an adverse impact" on the vote and called it "a pre-meditated and calculated course of conduct." He said he had not "the slightest idea what was going through the commissioner's mind." Yet this all passed with little notice – and without consequences. In Canada, there was no outrage, no broader inquiry, no accountability. (…) In Canada, Zaccardelli, who threw the election to the Conservatives, has said nothing. He still owes us an explanation. Wasylycia-Leis, who said it was "credible" to think Goodale was involved in the allegations, and who expressed righteous indignation at other injustices as an MP, says she has no regrets. She still owes Goodale, whose reputation was smeared, an apology. (She ran for mayor of Winnipeg in 2010 and was trounced, poetically). More than a decade later, no one explains. No one apologizes. This is Canada's politics of passivity. No chance of that happening down here." Ottawa Citizen

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Paul Bernardo seeks day parole
The families of two school girls brutally raped and killed by Paul Bernardo say the notorious killer's application for day parole is "gut-wrenching." Bernardo is scheduled for a day parole hearing next March. Tim Danson, the lawyer for the families of Bernardo's murder victims, 14-year-old Leslie Mahaffy and 15-year-old Kristen French, is confident Bernardo will never be granted parole. "I believe he will die in prison," Danson said. "But we take nothing for granted and will be vigilant responding to Bernardo every step of the way." Canadian Press (Times Colonist, A7, Times & Transcript, Red Deer Advocate, Hamilton Spectator, Daily Gleaner, Waterloo Region Record, National Post, Kingston Whig-Standard); La Presse Canadienne (L'Acadie Nouvelle)

Bernardo playing odds: Parole bid not hurt by dangerous offender label
School girl killer and serial rapist Paul Bernardo is the only known Canadian offender to consent to being declared a dangerous offender, says a well-known Toronto defence lawyer. Dan Brodsky, who often represents dangerous offender candidates, said Bernardo agreed to the designation because it "has the tactical advantage of not airing the facts (of the crimes) and no psychiatric assessment. "He was taken to Royal Ottawa Hospital for an assessment, but no report was prepared," Brodsky said. When Bernardo consented to the declaration and its indeterminate sentence in November 1995, Bernardo pleaded guilty to a slate of rapes in Scarborough and St. Catharines, and the manslaughter of Tammy Homolka. Bernardo was already serving his life sentence for the first-degree murders of Leslie Mahaffy, 14, and Kristen French, 15. As a result, the dangerous offender declaration didn't change his parole eligibility. Dangerous offenders can seek release on parole seven years after the date of their offences, but Bernardo was prohibited from doing so because of his murder sentence. Bernardo, now 52, who'll tentatively be applying for day parole in March, has been eligible to make such an application since Feb. 17, 2015. Toronto Sun, A6

*** A man called monster: After watching mom brutally murdered, son fears dad's return**
Daniel Benoit remembers everything from that summer night when he was four years old, from the layout of his home to the way his mother screamed as the monster - called dad - brutally killed her. In July 1997, Dale Ogden killed Benoit's mother, Judy Ogden. Ogden was convicted of the second-degree murder of his wife, sentenced to life and sent to prison in February 2000. He had faced theft, extortion and assault charges long before his murder trial. At sentencing, Judge Gail Welsh could have given him more time, but she chose to set parole at 14 years. He could have been sentenced to as little as 10. Dale Ogden has been out on day parole since September, after being released from William Head Institution. He is currently living in a halfway house on Vancouver Island. Last year, Benoit filed an application as a victim under Correctional Services Canada so he could receive information on Ogden's whereabouts. He even wrote a victim impact statement that was read aloud at Ogden's parole hearing. But reliving the nightmare to produce the statement did nothing to keep Ogden behind bars. His parole was granted. Benoit went so far as to request a current picture of the man, so he could be on lookout. His

request went unanswered. He also filed a geographic separation request with Corrections Services Canada to keep Ogden out of Newfoundland and Labrador. Benoit's fear is that, despite that order, Ogden could still show up on his doorstep - and after one scare, he wants Correctional Services Canada to do more. On Sept. 30, Benoit received a call from officials saying a warrant had been issued for his father's arrest because police could not confirm his location. Ogden was quickly detained, but Benoit wasn't notified until 24 hours later. Benoit believes he wouldn't be as fearful if Correctional Services Canada were more transparent. Benoit said he will continue to contact the parole board and Correctional Services Canada, requesting a recent picture of Ogden - a picture that will show how much or how little they look alike. CBC News

*** Ex-Spitfire Johnson to be released pending appeal**

The Ontario Court of Appeal has ruled former Windsor Spitfire Ben Johnson can be released on bail while he challenges his sexual assault conviction. But Johnson remained in custody Tuesday, the ruling from the appellate judge coming down too late for Johnson to be released the same day. Superior Court Justice Kirk Munroe sentenced Johnson last week to three years in prison for having sex with a 16-year-old girl who was too drunk to consent. Johnson was taken from the courthouse to Windsor's South West Detention Centre to begin serving his sentence. Eventually, he was to be transferred to a federal penitentiary. Johnson filed his appeal two days into his sentence. He is being represented by the Toronto firm Lockyer Campbell Posner, which specializes in appellate law and whose partner, James Lockyer, is a founding director of the Association in Defence of the Wrongly Convicted. Lockyer was involved in overturning the murder convictions of Guy Paul Morin and Steven Truscott, among others. Windsor Star, A5

*** Fixing solitary crisis starts at the top**

An editorial states, "In the two weeks since the world woke up to the plight of Adam Capay, two things have become clear. One, federal and provincial politicians have no intention of accepting responsibility for the multiple factors that conspired to place a young indigenous man in solitary confinement for more than 1,500 days while awaiting trial. And two, only those same politicians have the power to end this kind of human-rights abuse. The culture of indifference reflected in the treatment of Mr. Capay starts at the top." Globe and Mail, A16

*** Every Manitoba jail over capacity: Inmates 'will be living in tents' warns advocate**

Every provincially-run jail in Manitoba has more inmates than what each facility is rated to hold. There are 2,555 inmates in seven facilities - the capacity for all Manitoba jails is 2,010 inmates. "People will be living in tents at some point. There is just too many people going into the system and not enough people going out and the solution isn't to build more jails," said John Hutton, executive director of the John Howard Society. Overcrowding is most severe at the Headingley Correctional Centre. The capacity is 549, but there are 842 inmates inside. Six other Manitoba jails are also overcrowded. The Manitoba government has made attempts in the past two years to lessen the backlog but despite those efforts, there's been a seven per cent increase in the inmate population since 2013. CBC News

Troubles at London's provincial jail have spilled into the Ontario legislature again. A frequent flashpoint for problems in the province's correctional system, from overcrowding to violence, the Elgin-Middlesex-Detention Centre was thrust under the political spotlight Tuesday over drug overdoses a day earlier that left one inmate dead and his cellmate in hospital. London New Democrat Teresa Armstrong blasted the Liberal government for the problems at the jail during the daily question period at Queen's Park. London Free Press, A1

*** It's straight sadness: Lawyer for dead inmate questions prisoner classification at EMDC**

Justin Thompson told a judge he was done with drugs. standing before Ontario Court Justice George Brophy in a Goderich courtroom last month, when he was sentenced to 21 days in jail for failing to provide his fingerprints to police, the 27-year-old said he wanted to push his brushes with the law behind him. But Monday, 10 days after that Oct. 21 hearing, Thompson died of a drug overdose - it was either heroin or fentanyl powder, sources suggested - at the embattled Elgin-Middlesex Detention Centre (EMDC), the provincial jail in London often in the headlines for overcrowding, violence and other

troubles. Thompson's cellmate, Warren Williams, 45, of Sarnia, in custody awaiting trial for first-degree murder in the death of a Sarnia man in March, also overdosed but survived. London Free Press, A3

OD TREATMENT: Jails need 'immediate' access
The arrival of the highly potent opioid fentanyl in Nova Scotia is prompting the province's jails to move more quickly on a plan to provide frontline staff with a potentially life-saving overdose reversal drug, says the director of correctional services. Sean Kelly said a final decision on whether to allow guards or other staff to provide naloxone in jail overdose cases hasn't been taken, but it is necessary to make the drug quickly available in the province's prisons. However, in two cases over the past two-and-a-half years, inmates have died in prison cells from opioid overdoses and the existing response system wasn't able to revive them. * **Alberta Child and Youth Advocate calls for tighter policies to prevent online child sexual exploitation**
The provincial government must take steps to improve protection for young Albertans vulnerable to online sexual exploitation, the province's child and youth advocate said Tuesday. The new recommendation from Del Graff stemmed from an investigation into the tragic case of a teenage girl who died by suicide at age 17. Among the issues she faced in her last few years was a lack of supportive relationships that helped put her at risk of attracting Internet predators, he said in his report on the case. Calgary Herald, A1 (Edmonton Journal)

* **Coroners Service to hold first-of-a-kind inquest into fentanyl death**
The B.C. Coroners Service has announced a coroner's inquest into the fentanyl-related death of a Coquitlam man and will establish a team to provide more timely and in-depth probes into illicit drug overdoses. It is the first time an inquest has been called to investigate a death relating to the fentanyl epidemic, part of the B.C. government's efforts to prevent further overdoses. Brandon Juhani Jansen, 20, died while staying at a substance-abuse treatment centre in Powell River in March 2016. Chief coroner Lisa Lapointe said the B.C. Coroners Service is deeply concerned about the rising number of illicit drug deaths in B.C. Times Colonist; The Province

* **Naloxone nasal spray will be available to combat overdoses**
A new tool to save lives after an overdose will soon be available in Waterloo Region. Nasal spray naloxone, which reverses the effects of an opioid overdose, will be available to those at risk, likely in the new year. Opioid overdoses are regularly reported in the region in recent months, often linked with powerful bootleg fentanyl. Waterloo Region Record

* **'It's very scary right now': Bear Clan Patrol looking to carry fentanyl antidote**
The Bear Clan Patrol spends their days and nights walking the streets of Winnipeg and now they want to carry a drug which could save lives. Bear Clan spokesperson James Favel says fentanyl and carfentanil, a synthetic opioid that is 100 times stronger than the highly addictive fentanyl, "scares the life out" of him. "We are seeing a stark rise in the amount of syringes that we are finding around the community," he said. "The places that we are finding them is not typical either." Syringes used to be found mostly under bridges, in the industrial areas and places where people could "hide away," Favel said. However, now the patrol is finding them at the bell tower gathering area and along busy streets. Favel said the Bear Clan has been in talks with paramedics about how they can get the training that is needed to carry naloxone, which can block or reverse the effects of opiod medications such as fentanyl. NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Canada's Feminist Prime Minister, One Year In**
An opinion piece states, "One year ago, Justin Trudeau took office as Canada's 23rd prime minister and promptly fulfilled a major campaign promise by appointing a diverse and gender balanced cabinet that "looks like Canada." When a reporter asked why appointing women was a priority, Trudeau shrugged and responded with his now-famous quip, "because it's 2015." (…) Human Rights Watch's investigations in northern British Colombia have documented police officers' abusive treatment of indigenous women and girls, including excessive use of force, physical assault, rape, and other forms of sexual violence. In Saskatchewan, indigenous women, including victims of violence, have also reported a deep distrust of police, recounting incidents of misconduct, abuse, and neglect. First Nations women are significantly overrepresented among homicide victims, and this violence – coupled with mistreatment by the very officers charged with protecting them – leaves many indigenous women in a near constant state of insecurity. For years, this problem was ignored by the Canadian government and one of Trudeau's most significant early policy decisions was his decisive action to launch a national public inquiry into missing and murdered indigenous women and girls. While the inquiry is an essential step forward, its terms do not explicitly mention policing. For this process to be successful, the inquiry must include rigorous investigations into police misconduct and take an unflinching look at critics' allegations of widespread misogyny and racism in the ranks of Canada's police forces." Human Rights Watch

*** Le CEDAW tient le Canada responsable de ses résultats décevants en matière de droits des femmes**
Un article d'opinion rapporte « Les résultats du Canada en matière d'égalité des femmes ont été la cible de toutes les critiques aux Nations Unies, à Genève, cette semaine. La 65e session du Comité pour l'élimination de la discrimination à l'égard des femmes (CEDAW) a lieu à un moment opportun pour les Canadiennes. Le Canada a un nouveau gouvernement fédéral, ainsi qu'un premier ministre qui se dit féministe, préconise une relation de nation à nation et reconnaît que « la pauvreté est sexiste ». Nous savons que les mots comptent, mais il nous faut maintenant de l'action. (…) Les organisations de femmes autochtones, de droits des femmes et de droits de la personne accueillent favorablement la création de l'enquête nationale sur les femmes et les filles disparues et assassinées. Cependant, nous demeurons préoccupées par l'insuffisance du cadre de référence et par le fait que 37 autres recommandations de l'enquête sur la crise des meurtres et disparitions menée par le comité CEDAW n'ont pas encore été mises en œuvre. » CDEACF (2016-11-01)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Watchdog downplays marijuana revenue potential
The parliamentary budget watchdog is being a bit of a buzz kill when it comes to forecasting government revenue windfalls from legalized marijuana. "We're talking millions and millions - not billions and billions - of dollars of revenues," Jean-Denis Frechette, the parliamentary budget officer, said Tuesday after releasing a study entitled, Legalized Cannabis: Fiscal Considerations. The 77-page report finds that the federal government may have little fiscal space to heavily tax cannabis the way it does tobacco without pushing the legal price well beyond that of currently illicit pot. What's more, the Liberal government's stated aims of decreasing marijuana use and accessibility for young Canadians while choking off pot revenues from organized crime will require a delicate balancing act, the study found. Price legal pot too high and the black market will continue to flourish. Too low and governments could be seen to be encouraging its use. The report projects sales tax revenue in 2018 could be as low as $356 million and as high as $959 million, with a likely take of about $618 million based on legalized retail cannabis selling for $9 per gram - in line with current street prices. Canadian Press (Chronicle-Herald, A1, Toronto Star, Kingston Whig-Standard, Ottawa Sun, Times Colonist, Daily Gleaner, Telegraph-Journal, Times & Transcript, Red Deer Advocate)

*** So much for that marijuana tax bonanza**

In about 30 or 40 years, today's millennials may well be wistfully telling their grandchildren about the good old days, when smoking pot was fun. The signs are already out there: Legalizing marijuana is going to be a sobering experience - a buzz-kill, in fact - for pot users and governments too. The latest party crasher is none other than the Parliamentary Budget Officer. In a report issued Tuesday, Jean-Denis Fréchette warned that tax revenues from pot legalization, at least at the outset, would be in the hundreds of millions of dollars - not the billions that governments may have envisioned. The reason for this modest outlook is simple: The government can't afford to price marijuana above what the illegal market will bear, not if it wants pot smokers to switch to official, legal suppliers. Or, as the report puts it: "When legalization occurs, the government may have little fiscal space to apply tax without pushing the price of legal cannabis significantly above the illegal market price." The report echoes similar warnings issued a couple of months ago by the head of the federal government's own task force on marijuana legalization and regulation. Former deputy prime minister Anne McLellan said in an interview with CBC in September that governments would need to find the "sweet spot" on pricing marijuana, to stay competitive with the illegal market. iPolitics

*** All you need to know about marijuana legalization in Canada**

Picture this: you're driving back from a weekend at the cottage with your friends. It's Sunday at noon, and the countryside is beautiful. Suddenly you see blue and red flashing lights ahead; it's a roadside spot check. You kill the music. You tell yourself you've got nothing to worry about. You're sober as a gopher. In fact, you're kind of wired on that large Timmies coffee you stopped for an hour ago. You're fine. You pull over and the officer comes up to the window. He asks you a few questions, and looks around the inside of the car. Suddenly he seems to get a whiff of something. The next thing you know, he's asking you to take a breathalyzer test. No biggie, you think. You certainly imbibed last night by the campfire, but you got a good night's sleep, and woke up feeling refreshed—the booze should be long-gone from your system by now. (…) But critics say decriminalization doesn't solve the problem of the $7-billion weed black market in Canada. Sure, stoners will be off the hook, but the organized crime that produces and sells weed will continue to operate. Only legalization will destroy the black market, they say. That's how Prime Minister Justin Trudeau sees it; he's ruled out decriminalization between now and the spring of 2017, when the Liberals plan to introduce the new law. So what will be in that law? If we scan the government's discussion paper for clues, there are some likely factors. The paper suggests the following elements are "largely self-evident": legalized possession of a certain amount of weed; regulations surrounding its production, distribution, quality, safety, potency and access; new criminal laws to punish those who try to keep selling illegally; support for prevention, addiction and other services; an education and awareness campaign; and data-gathering. Feds continue to struggle with Phoenix pay system: Employees still waiting for money as government misses Oct. 31 deadline to fix problems

Samuel Bourget has been waiting for a $700 paycheque since June. He's an Operational Records Management System (ORMS) officer with the RCMP, and one of 22,000 federal employees who are missing money because of problems with the Phoenix pay system. The federal Department of Public Services and Procurement failed to reach its Oct. 31 deadline to clear the backlog of 82,000 employees who were waiting for money. In July, deputy minister of Public Services and Procurement Canada Marie Lemay estimated about 720 public servants were missing paycheques, while another 1,100 were missing payments for parental leave, long-term disability and severance. The other 80,000 hadn't been paid for supplementary or extra duties, overtime, or, like Bourget - pay adjustments. The money he's missing should have been a raise he received in June. "As it goes longer, it adds up," he said. He was one of about a dozen people who braved the cold to protest in front of the Greenstone Government of Canada Building on Monday. The Public Service Alliance of Canada North organized the Day of Action. Bourget has two children at home, and says even though the amount owed to him isn't astronomical, it's affecting his life. "With my wife at home with the kids, money's tight to begin with. Every little bit helps, and if you don't (get) it then that's another decision you have to make on what you're going to purchase or go without," he said. Yellowknifer; Telegraph-Journal

*** Christie Blatchford: New Senate appointments just more of the same**
An opinion piece states, "With slavish regard to the late, great Dorothy Parker, the new Canadian senators - 14 of them, thus far, the most recent six announced this week - run the gamut from A to B. In other words, while they may turn out to be grand appointments and may be brimming with noble intentions, on the surface they are just like all the others who went before them, utterly conventional good Canadians chosen from the most conventional quarters of this curious country... The others either mostly worked for government (former Ontario government deputy minister and secretary of cabinet Tony Dean) or for organizations supported mostly by government (the ferocious justice advocate Kim Pate, former Federal Court Judge Howard Wetston, and the aforementioned Boniface). Where are the ordinary Joes? The steelworkers, teachers, the guys on the line at Ford, the out-of-work oilpatch folks, the cashiers at Metro? Where is there anywhere someone who isn't from the conventionally approved swaths of Canadian society?" National Post

*** $17.5-million spent on security during Obama visit: fiscal update to Parliament**
The federal government spent $17.5-million on security when U.S. President Barack Obama visited Ottawa for a summit of North America's three national leaders last June, show spending details revealed Tuesday in the government's annual fall fiscal update to Parliament. The cost of heavy security and protection for President Obama, Prime Minister Justin Trudeau, and Mexico President Enrique Peña Nieto at the June 29 summit is contained in a list of $2.8-billion-worth of costs and forecast spending due to "policy actions" the government has taken since the first Liberal budget last March... As well, the government spent $104.5-million on assistance to residents of Fort McMurray, Alta., after the oil sands city was ravaged by wildfires, through matching funds with private donations from across the country. The mini-budget also disclosed the government has significantly increased the budget for a national commission of inquiry into missing and murdered indigenous women and girls. The government initially earmarked $40-million for the inquiry in the 2016 Budget last March, and then amped that up to $53.8-million when it revealed more details in August. Hill Times (2016-11-01)

*** Canada marches into mission with 'eyes wide open,' Sajjan says**
Defence Minister Harjit Sajjan is headed to Mali and Senegal on a fact-finding mission next week as the federal government makes plans to deploy a military mission to Africa. Sajjan's five-day visit comes after an August trip to the Democratic Republic of Congo, Ethiopia, Kenya, Tanzania and Uganda, all against the backdrop of the Liberal pledge to commit troops to an African mission. "We need to go into this eyes wide open, making sure that ... we look at the complexities of how (peace) operations have been done in the past and what we need to do," Sajjan told reporters in Ottawa. Sajjan offered no timeline of when a decision on the deployment could be made. (...) The Liberal government is weighing options to deploy as many as 600 soldiers and 160 police officers somewhere in Africa on a peace mission. Lang praised Sajjan for taking time to carefully consider the deployment, given the risks. Toronto Star, A1

'True Liberation' of Mosul begins
Waving white flags and looking equally relieved and bewildered, crowds of civilians were headed for safety Tuesday, riding in battered cars and trucks that rumbled down the road east of Bazwaya. Iraqi troops had arrived in Bazwaya and were using the strategic village on the eastern outskirts of Mosul as the launch pad for their first assault on the city limits. By the end of the day, troops from the Golden Division, part of Iraq's Counter Terrorism Service (CTS), had seized a foothold inside the city at Gogjali, an industrial district of Mosul less than five kilometres away. "Now is the beginning of the true liberation of the city of Mosul," Gen. Taleb Sheghati al-Kenani, head of the CTS, said from Gogjali. Iraq's Joint Operations Command said troops had "entered the Judaidat Al-Mufti area, within the left bank of the city." The assaults mark the beginning of the endgame in a massive offensive launched two weeks ago and involving tens of thousands of Iraqi and Kurdish troops backed by U.S.-led airstrikes. Residents inside the

city reported airstrikes and artillery pounding the city. "We can see Daesh (also known as the Islamic State of Iraq and the Levant, or ISIL) fighters firing toward the Iraqi forces and moving in cars between the alleys of the neighbourhood. It's street fighting," one resident said. National Post, A1

Surveillance de journalistes : mutisme à la GRC et au SCRS
Le commissaire de la GRC Bob Paulson a dit mercredi «ne pas être au courant que nous avons des enquêtes actives ou de la surveillance à l'égard de journalistes», mais la GRC n'a pas voulu confirmer si des journalistes ont été surveillés dans le cadre de ses enquêtes. Un cas de filature avait été rendu public il y a un an, celui du journaliste de La Presse Joël-Denis Bellavance qui a été pris en filature en 2007. Tout en précisant «reconnaître» et «respecter [...] l'importance de la liberté et de l'indépendance de la presse», la Gendarmerie royale du Canada (GRC) a indiqué ne pas pouvoir commenter «l'existence d'enquêtes en cours» ou «discuter des détails opérationnels» d'enquêtes passées. (...) Le Service canadien de renseignement de sécurité (SCRS) n'a pas répondu aux questions de La Presse à savoir si l'organisme fédéral responsable des enquêtes de sécurité nationale (...) Le **ministre Goodale** examine la Directive ministérielle sur les enquêtes dans les secteurs sensibles existante afin de s'assurer que les

plus grands soins sont pris lorsque des enquêtes criminelles et du journalisme se recoupent et que la valeur canadienne fondamentale de la liberté de presse est protégée. Il est toujours ouvert à recevoir des représentations sur ce qu'il y a d'autre à faire pour protéger les libertés fondamentales de la presse», indique **Scott Bardsley, attaché de presse du ministre fédéral de la Sécurité publique Ralph Goodale**. (...) Le **ministre Goodale** doit demander des comptes aux services policiers sous sa juridiction et rendre des comptes en Chambre aussi. Tout ça va peut-être nous permettre de découvrir qui est surveillé, mais ça ne règle pas le problème, ce qui rend encore plus pertinent et urgent que jamais notre projet de loi [sur la protection des sources journalistiques].» Le Parti conservateur du Canada aimerait que le **ministre Goodale** fasse un examen de la situation et vienne en faire rapport en comité parlementaire. La Presse (2016-11-02)

*** Une enquête fédérale demandée par le npd**
Alors que Justin Trudeau promet de faire le «nécessaire» pour défendre la liberté de presse, Thomas Mulcair demande la tenue d'une enquête fédérale. «Ce gouvernement est à la défense de liberté de la presse et on va faire ce qui est nécessaire pour l'encadrer s'il y a d'autres étapes nécessaires», a soutenu le premier ministre, hier ma-tin, à l'entrée de la réunion hebdomadaire de son caucus. Le chef sortant du NPD, Thomas Mulcair, n'est pour sa part pas rassuré par la situation et exige la tenue d'une enquête fédérale pour s'assurer que les journalistes ne fassent pas l'objet d'une surveillance similaire de la part de la GRC. «Au Canada, en ce moment, il y a combien de journalistes qui sont surveillés soit par la GRC, soit par le SCRS? [...]. Alors moi, je m'attends à ce que Justin Trudeau tire ça au clair», a-t-il dit. Le **ministre fédéral de la Sécurité publique, Ralph Goodale**, a indiqué que le commissaire de la GRC, Bob Paulson, avait dit ne pas être au courant de cas de journalistes qui feraient actuellement l'objet d'une telle surveillance. Le Bloc québécois entend déposer un projet de loi privé sur la protection des sources journalistiques. Journal de Montréal, 26

Better protection for reporters sought in wake of Montreal surveillance
Independent senator and former journalist André Pratte wants the federal government to look at beefing up protection for reporters and their sources. Pratte said that if the government shows no interest, he'll pursue the idea himself. It is "quite worrisome" that Montreal police obtained warrants to monitor one of his former colleagues, La Presse columnist Patrick Lagacé, Pratte said Wednesday in an interview. "I think it is time to look at this again." The newspaper said this week it had learned at least 24 surveillance warrants were issued for Lagacé's iPhone this year in connection with an internal probe into allegations police anti-gang investigators fabricated evidence. **Public Safety Minister Ralph Goodale** said the Supreme Court of Canada has already explicitly laid out the test that must be satisfied when police investigations intersect with media freedoms. In two key 2010 rulings, the high court did not create blanket constitutional protection for journalists, saying they are a "heterogeneous and ill-defined group of writers and speakers." Instead, the court spelled out a four-point test that allows judges to weigh competing public interests on a case-by-case basis. The Lagacé case shows more is needed, said Pratte, a former editorial writer at La Presse. "I don't think we can simply say: 'The Supreme Court has issued those criteria, and they're good enough.' Well, obviously, they were not good enough to protect Mr. Lagacé and his sources for a period of five months." Despite his apparent reluctance to revisit the existing regime, **Goodale** left the door open a crack. Canadian Press (Times Colonist, D3, Chronicle-Herald)

Six more journalists confirmed as targets of police surveillance
A controversy over police surveillance of the press in Quebec deepened Wednesday with revelations that six journalists, including some of the province's top investigative reporters, had their cellphones surreptitiously monitored by provincial law enforcement as far back as 2013. The disclosures made by several media outlets and confirmed by the provincial Sûreté du Québec suggest that covert police surveillance of Quebec journalists dates further back and is more widespread than previously known. La Presse revealed this week that one of its journalists, columnist Patrick Lagacé, had his iPhone data tracked by Montreal police for months this year after they obtained search warrants. On Wednesday, Quebec provincial police said it had also obtained court warrants to monitor the log of incoming and outgoing cellphone calls of six journalists. (...) On Tuesday, the Premier attempted to get ahead of the controversy, announcing measures to tighten rules for obtaining search warrants against journalists and striking a panel of experts to look into the situation. In Ottawa that day, **Public Safety Minister Ralph**

Goodale told reporters his government is open to toughening the rules that govern how and when the federal government can investigate members of the media. Globe and Mail, A1

Ils ont dit

« Je couvre la politique depuis près de 40 ans, souvent sur des dossiers délicats. On se dit toujours que c'est possible d'être épié par les policiers, mais on est convaincu qu'ils n'oseraient pas aller jusque-là. Bien, il semble qu'on se soit trompé. » Denis Lessard, chef du bureau parlementaire de La Presse à Québec. « Je suis assez surpris de voir qu'un juge de paix ait pu autoriser un mandat à mon sujet alors que je n'avais pas écrit sur Michel Arsenault. [_] Le seul motif que je vois pour faire l'objet d'un mandat, c'est que ma conjointe [Marie-Maude Denis] avait déjà fait des reportages sur Michel Arsenault. ». Éric Thibault, Journal de Montréal. (...) « La réponse de la SQ de dévoiler [ces informations] démontre que le public a besoin d'être rassuré. Ce sont des questions auxquelles [la GRC et le SCRS] doivent répondre. On continue de demander une enquête publique qui nous permettrait de constater les faits : est-ce une pratique répandue ou arbitraire ? » Matthew Dubé, porte-parole du NPD en matière de sécurité publique. « Comme n'importe qui, je vois que si la SQ et le SVPM le font, je ne tomberais pas en bas de ma chaise [si les corps policiers fédéraux le font aussi]. Le **ministre Goodale** doit demander des comptes aux services policiers sous sa juridiction et rendre des comptes en Chambre aussi. » Rhéal Fortin, chef par intérim du Bloc québécois. La Presse +

Bridge cameras not for police

An editorial states, "There is general unease when police or government officials pry deeper into the private affairs of citizens. We are constantly monitored and watched - and most times, not even aware of it. When citizens stop caring about this intrusion or welcome surveillance - it's even more disturbing. The issue of surveillance cameras is back in the news with a request from the Charlottetown police department to gain quicker access to special cameras that record every vehicle travelling on and off P.E.I. In 2009, a security-obsessed former government provided funds to install licence plate reader cameras on the Confederation Bridge. We were assured the applications would be for traveller information, emergency response management and vehicle safety. (...) New police powers to track Canadians are basically limitless. There is little oversight and the Quebec reporter is an example of how abuses can happen. It's being blamed on a cultural shift that began with the passing of Bill C-51under the previous Conservative government. The Liberals pledged to amend parts of the Bill, but have done nothing. **Public Safety Minister Ralph Goodale** expressed horror at the Quebec warrants. Fine, then do something about it. » Guardian, A6

Shafia murder convictions to stand
A father, mother and son found guilty in the drowning deaths of three teenaged sisters and another woman who had apparently shamed the family lost their bid Wednesday to overturn their first-degree murder convictions. In unanimously rejecting an appeal by the Shafia family members, Ontario's top court ruled, among other things, that expert evidence on so-called honour killings had been properly admitted at their trial and the son was properly tried as an adult. Canadian Press (Kingston Whig-Standard, A1, The Guardian, Waterloo Region Record, Red Deer Advocate, The Telegram, Ottawa Citizen, Times & Transcript, Whitehorse Daily Star, Hamilton Spectator, Times Colonist, Chronicle-Herald, National Post, Cape Breton Post); La Presse Canadienne (Le Devoir, Le Quotidien, La Tribune, La Presse); Le Journal de Québec (Journal de Montréal); Edmonton Sun (Calgary Sun, Ottawa Sun, Toronto Sun)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Is the Beast still burning? Fort McMurray wildfire may smoulder through winter**
The Beast could still be burning. The fire which devastated much of Fort McMurray in May may still be smouldering, deep underground. At its peak, the fire was moving 30 to 40 metres per minute, creating its own weather pattern of wind and lighting. It crowned high in the trees, raining down ash and cinders as it raced north, jumping the Athabasca River, and wrapping itself around the northern Alberta city like a noose. Even then, smouldering ash underground grew into powerful infernos, making the fire an unpredictable foe for firefighters. In the end the Beast covered 589,552 hectares and devoured 2,400 structures. Extinguished on the surface, the fire may continue burning undetected throughout the winter, feeding on peat and dead vegetation. CBC News

* **Six months after the fire, families still reach out for help**
At a hotel in downtown Fort McMurray, workers in coveralls walk through the faded carpeted hallways, coming and going from their shifts at some of the many construction sites in the city. But behind one of the doors, there is other work underway. Colouring books and brightly coloured paper line a table, as the five Goetz children are immersed in a crafting session. The two adjoining hotel rooms, each with queen beds, became the temporary home for the family of seven on Tuesday (…) His family has now been put up in the hotel temporarily by the Red Cross, assistance Goetz originally didn't realize was available to his family. Officials with the Red Cross say are seeing up to 125 people in Fort McMurray each day and many

of them are people who are asking for help for the first time because they thought they would be able to get by on their own. "We are Albertans. There is a can-do attitude in this province," said Jennifer McManus, the vice-president for Alberta and the Northwest Territories with the Canadian Red Cross. CBC News

*** Slowdown in oilsands rebuild cuts revenue for camp firm**
A Calgary company that operates work camps for the oilsands industry in northern Alberta says demand for its services has been weaker than expected over the summer following the Fort Mc-Murray wildfire. Horizon North Logistics Inc. said Wednesday that rebuilding efforts in the oilsands region of northern Alberta have proceeded at a much slower pace than expected and demand for its camp, catering and modular building services fell off "significantly" in September. Horizon North's 665-unit Blacksand Executive Lodge near Fort McMurray was destroyed by the wildfire in May. It says it expects to settle its insurance claim by year-end, without giving any dollar target. On a conference call, CEO Rod Graham blamed lower activity for a 27 per cent drop in Horizon's revenue to about $60 million in the quarter ended Sept. 30 versus the same period last year. Postmedia (Calgary Herald, B2; Edmonton Journal, Edmonton Sun, Red Deer Advocate)

*** Drones useful in fight against wildfires, but how to deploy them up for debate**
The use of drones in battling wildfires in Alberta could save millions of dollars and reduce the risk to front line pilots flying dangerous sorties over blazes like the one that devastated Fort McMurray in May. But just how unmanned aerial vehicles (UAV) can be best utilized in the heat of a raging inferno is still up for debate. Their role in wildfire management was one of the topics at a three-day conference and trade show in Edmonton dedicated to the burgeoning technology (…) On Tuesday, the NDP government brought in new rules in Alberta that ban drones that may interfere with firefighting. This year, Alberta spent millions of dollars as firefighters battled 1,329 wildfires. The province's five-year average for aircraft costs in wildfire management is roughly $128 million, so it is important to fire officials to look at all types of technologies that could save money and lives, McIlwaine said. "We spend a lot of money on aircraft," McIlwaine said. "And we are responsible to the taxpayers." Drones equipped with infrared imaging could be used in tracking fire fronts and large-incident fire mapping, as well as post-blaze fire investigation. And they could also be used to complement the province's fire detection program, which currently relies on 126 lookouts around the province. B.C. has tested the use of drones over the past two fire seasons and announced in August it is adding them to the province's firefighting arsenal. Postmedia (Edmonton Journal, A3; Edmonton Sun)

*** IBC commends federal government's focus on infrastructure and flood mitigation in 2016 fall economic statement**
In the statement, released on Tuesday, the federal government proposed $21.9 billion over 11 years for green infrastructure, including targeted investments that "support greenhouse gas emission reductions; enable greater climate change adaptation and resilience; and ensure that more communities can provide clean air and safe drinking water for their citizens." The Government of Canada said in the economic statement that it will "work with its provincial, territorial, municipal and Indigenous partners to evaluate, select and fund the green infrastructure projects that will deliver the best outcomes for Canadians." Projects that may receive additional investments include, among others: the construction of infrastructure to help manage the risk associated with floods and wildfires (…) IBC said that the "frequency and severity of flooding events and wildfires are having a significant impact on Canadians across the country. Canada must build a culture of disaster risk reduction that resonates with consumers and engages all levels of government, businesses, and institutions." Canadian Underwriter (2016-11-02)

*** Flood warnings likely on tap as November forecast includes more rain**
After a record rainy October, the start of November doesn't look much better. Heavy rainfall forecast for the next few days has forced officials to warn of potential evacuations in parts of B.C. due to flooding. A high wind warning is also in place for the coast of Haida Gwaii, with winds expected to hit 90 km/h overnight Wednesday. As the storm system moves through, the area will get more than 100 millimetres of precipitation. According to Environment Canada meteorologist Ross Macdonald, the rainy start to November may be a sign of more to come. Vancouver Province, A6

*** Alberta's flood plain mapping gets failing grade**
Alberta's lack of progress in mapping future flooding hazards dragged down the province's grade in a university study's rating of provinces' disaster readiness. The province scored a C-plus in a University of Waterloo study on climate change adaptation, slightly above the C-minus average nationwide. But that mark would have been higher if Alberta's flood plain mapping was updated to better reflect future extreme weather events that are increasingly likely given climate change, said Dr. Blair Feltmate of the Intact Centre on Climate Adaptation at the U of W. "I do find it somewhat shocking ... if it was seven months after the 2013 event I could see it," said Feltmate. "But three years later, the flood plain maps haven't been brought up to date." Postmedia (Calgary Herald, A5; Calgary Sun)

*** $108M insured damage in local flooding**
Swamped homes, stalled vehicles and soaked industrial properties affected by September's flooding in Windsor and Tecumseh resulted in almost $108 million worth of damage, according to the Insurance Bureau of Canada. The IBC confirmed Wednesday more than 6,000 claims - for home, auto and business - were filed with insurers after record levels of rain ruined hundreds of basements in Windsor and Tecumseh. Peter Karageorgos, a spokesman for the IBC, said the organization considers any event where there's more than $25 million in damages a catastrophe. "The dollar amount from the flood is large," he said. "But the more interesting point is the number of claims. That shows how widespread the damage was." Windsor Star, A7; CBC News

*** Urgent repairs needed at Bay d'Espoir**
Newfoundland and Labrador Hydro is moving fast to complete repairs, welding work, on a key piece of infrastructure at the island's largest power plant - the hydroelectric power plant at Bay d'Espoir. The push is on to complete the required maintenance, estimated at $12.9 million, to avoid heading into the winter season with significantly reduced island power reserves. The utility is also trying to repair access roads in the area, after damage from more than 200 millimetres of rain dumped on Oct. 10 by the remnants of hurricane Matthew. There were at least 24 washouts on roughly 400 kilometres of utility roads around the Bay d'Espoir power system, including an access road to the neighbouring Upper Salmon power plant. The road repair is estimated at an additional $4.6 million, according to information filed with the Public Utilities Board. Telegram, A3

*** Search for missing Codroy Valley hunting guide into 2nd day**
A ground search will continue Thursday for a 49-year-old man who became separated from his hunting group Tuesday afternoon on Newfoundland's west coast. The RCMP said a helicopter search continued until midnight Wednesday and it will be back in the air Thursday as well, weather permitting. Barachois Ground Search and Rescue, a Joint Rescue Coordination Centre helicopter and RCMP assisted in the search which began shortly after the man was reported missing at 1 p.m. Wednesday. CBC News

NATIONAL SECURITY CONSULTATIONS / CONSULTATIONS SUR LA SÉCURITÉ NATIONALE

Join the #YourNatlSec twitter chat and tell Public Safety Minister Ralph Goodale Canadians want privacy reforms
If you're one of the millions of Canadians who oppose Bill C-51, you probably have a lot to say to decision-makers about your reasons why. And this Thursday, November 3 at 8:00 pm EST/5:00 pm PST, Public Safety Minister Ralph Goodale will be on Twitter holding an "online discussion focusing on national security accountability" using the hashtag #YourNatlSec. It's a huge chance for us to join our voices together and flood the conversation with pro-privacy messages -- will you join us? Rabble (2016-11-02)

*** National security green paper is a whitewash**
An opinion piece state, "To guide the much-lauded and keenly anticipated public consultation on national security - billed as an unprecedented opportunity for Canadians to shape national security law and policy - the government has published a national security green paper entitled "Our Security, Our Rights." The configuration of the title reflects the general orientation of the document: security first, rights second. While the green paper's self-proclaimed purpose is "to prompt discussion and debate about Canada's

national security framework," it seems far more concerned with manufacturing consent for Bill C-51's dramatic - and likely unconstitutional - expansion of security powers, than with enabling a well-informed public consultation. The federal privacy commissioner has observed that the "tone of the Government's discussion ... focuses heavily on challenges for law enforcement and national security agencies," as opposed to "democratic rights and privacy." According to the BC Civil Liberties Association (BCCLA), the green paper "reads like it was drafted by a public relations firm tasked with selling the current state of extraordinary, unaccountable powers." (And in response, the BCCLA has produced a "Different Shade of Green Paper," elucidating several problematic aspects of the Canadian national security framework that the government "forgot to mention.") The government's green paper and associated "background document" are a montage of tendentious elements. There are the Pablum reassurances ("National security institutions in Canada are professional, responsible, and effective ... They work within a well-defined set of legal authorities and respect Canadian law")." Toronto Star, A21

* **National security review must acknowledge Canadian government's shortcomings**
An opinion piece state, "The Liberal Party is conducting a national security review process to figure out how to fulfil its election-time promise of amending the "problematic" parts of Bill C-51, now the Anti-Terrorism Act. The government has published a 21-page "Green Paper," along with a 73-page backgrounder, to pose questions to the Canadian public on the parameters of what reforms should take place. But the Green Paper's rhetoric and the national consultation itself go beyond just the topic of Bill C-51. It goes on to pose more general and philosophical questions of what kind of society Canadians want to live in and how the citizens of this country want to prioritize what are apparently the competing rights of security and freedom. Unfortunately, though the Green Paper admirably addresses the important issues of Canada's national review structure (or lack thereof), as well as the secretive relationship between intelligence-gathering and the due process of law, its overarching outlook doesn't include a strong civil liberties perspective. (...) In other words, the consultation process and the Green Paper seem to have more or less ignored the robust criticisms regarding Canada's national security apparatus by civil society organizations, preferring instead to source (or "consult") public opinion as if Canadians haven't been voicing their concerns all this time. For instance, numerous civil society organizations, such as Canadian Journalists for Free Expression (CJFE) and the Canadian Civil Liberties Association (CCLA) have sounded the alarm on how Canadian agencies have collected metadata over the years. Individuals within government such as Daniel Therrien, the Harper-appointed Privacy Commissioner, along with Jean-Marie Plouffe, the former Commissioner of the Communications Security Establishment (CSE), have voiced similar concerns as to how current collection of "signals intelligence," which includes metadata, continues to jeopardize the privacy of Canadian citizens. And yet, despite these voices, the Green Paper doesn't include any mention of the CSE, Canada's main agency for the collection of signals intel." CBC News (2016-11-02)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

* **Mutisme à la GRC et au SCRS**
La GRC et le Service canadien du renseignement de sécurité (SCRS), les deux corps policiers fédéraux, ne veulent pas confirmer s'ils ont déjà mis des journalistes sous surveillance, contrairement à la SQ, qui a dévoilé ces informations hier à la suite de vérifications internes. Si le premier ministre du Canada Justin Trudeau a promis hier de « faire ce qui est nécessaire » pour défendre la liberté de la presse, son gouvernement ne demandera toutefois pas aux corps policiers fédéraux de dévoiler publiquement ce type d'informations, comme le réclament le Bloc québécois et le Nouveau Parti démocratique. La GRC précise seulement que « les cas où des enquêtes de la GRC concernant des journalistes ont eu lieu sont extrêmement rares ». La Presse +

Les Canadiens mal protégés contre la surveillance abusive, selon Snowden
Les Canadiens sont très mal protégés contre les pratiques de surveillance abusives, estime Edward Snowden, qui s'alarme des possibilités ouvertes aux services de renseignements d'ici et d'ailleurs par les nouvelles technologies de communication. L'ex-sous-traitant de la National Security Agency (NSA), qui participait hier à une vidéoconférence organisée par l'Université McGill, a souligné que le système de régulation des services de renseignement canadiens était probablement le plus « déficient en Occident ».

Il a déploré à ce titre que le gouvernement libéral de Justin Trudeau tarde à réviser la Loi antiterroriste, dite loi C-51, qui confère des pouvoirs accrus à ces mêmes services. Nombre d'analystes, a-t-il relevé, pensent que la loi en question est trop mal formulée pour être modifiée et devrait tout bonnement être retirée. M. Snowden estime qu'il n'est tout simplement pas possible, ici ou ailleurs, de faire confiance aux autorités pour utiliser de manière responsable les technologies de surveillance existantes. La Presse +, 1; Agence QMI (Journal de Montréal, Journal de Québec) (2016-11-03); Montreal Gazette (2016-11-02)

* **Six journalistes ciblés par la SQ**
Après le SPVM, au tour de la Sûreté du Québec. Le corps policier national québécois admet avoir obtenu secrètement les registres téléphoniques de six journalistes, dans le cadre d'une enquête sur les fuites d'informations aux médias amorcée en 2013. C'est ce qu'a confirmé le corps policier hier après-midi, dans la foulée des vérifications demandées par le directeur général Martin Prud'homme. Celui-ci dit avoir tout ignoré de cette affaire jusqu'ici puisqu'elle s'était déroulée sous la direction de son prédécesseur, Mario Laprise. «M. Prud'homme est très irrité», a affirmé le capitaine Guy Lapointe, porte-parole de la SQ. Joint par La Presse, Mario Laprise a refusé de discuter de l'affaire. «Je n'ai pas de commentaires à faire par rapport à ça. Il y a des vérifications qui sont faites, on va laisser les gens faire leur travail», a-t-il laissé tomber. La liste des gens visés. Parmi les reporters ciblés par la SQ, on retrouve le chef du bureau parlementaire de La Presse à Québec, Denis Lessard. «Je couvre la politique depuis près de 40 ans, souvent sur des dossiers délicats. On se dit toujours que c'est possible d'être épié par les policiers, mais on est convaincu qu'ils n'oseraient pas aller jusque-là. Eh bien, il semble qu'on se soit trompé», a-t-il réagi. Les journalistes de Radio-Canada Alain Gravel, Marie-Maude Denis et Isabelle Richer sont aussi du nombre, tout comme Éric Thibault, journaliste au Journal de Montréal et conjoint de Marie-Maude Denis. Le sixième journaliste est André Cédilot, journaliste chevronné de La Presse qui a ensuite travaillé pour Radio-Canada. La Presse (Le Quotidien, 21, Le Nouvelliste, La Voix de l'Est, La Tribune); Le Soleil; Le Droit; Agence QMI (Journal de Montréal, Journal de Québec)

* **Liberté de presse - La SQ a espionné six journalistes**
En lieu et place de l'" affaire Lagacé ", il faudra désormais traiter du scandale de la surveillance des journalistes : la Sûreté du Québec a confirmé mercredi qu'elle avait, tout comme la police de Montréal, traqué des reporters au cours des dernières années dans le cadre d'une enquête, suscitant une nouvelle vague d'inquiétudes et de dénonciations dans l'univers des médias. Le SPVM n'était donc pas seul à épier les faits et gestes des journalistes du Québec. En 2013, la SQ a mis sous surveillance les téléphones cellulaires de Marie-Maude Denis, Alain Gravel et Isabelle Richer de Radio-Canada, du chef du bureau de La Presse à l'Assemblée nationale, Denis Lessard, du reporter spécialiste du crime organisé André Cédilot et d'Éric Thibault du Journal de Montréal. Le corps de police tentait alors de faire la lumière sur une fuite d'information concernant l'enquête policière qui visait le président de la Fédération des travailleurs du Québec, Michel Arsenault. La SQ en a elle-même fait la révélation mercredi. (…) À Ottawa, le premier ministre Justin Trudeau s'est montré ouvert à la possibilité de revoir les lois pour protéger la liberté de presse. " On va regarder attentivement les conversations qui vont avoir lieu entre l'Hôtel de Ville de Montréal et [le SPVM], mais [...] comme on a dit plusieurs fois, ce gouvernement [se porte] à la défense de la liberté de la presse et on va faire ce qui est nécessaire pour l'encadrer, s'il y a d'autres étapes nécessaires. " Fait inquiétant, ni la Gendarmerie royale du Canada ni le Service canadien du renseignement de sécurité (SCRS) n'ont voulu préciser si des journalistes avaient déjà été, ou se trouvent actuellement sous écoute électronique. La Presse, A1, A8

* **Bienvenue dans le Club**
Alain (Gravel) ! Éric (Thibault) ! Denis (Lessard) ! Marie-Maude (Denis) ! Isabelle (Richer) ! Enchanté, moi, c'est Affaire. Comme dans Affaire Lagacé. Je me suis trouvé un nouveau prénom, cette semaine. Bienvenue, donc. Oui, bienvenue dans le Club des Journalistes espionnés ! Le local ne paie pas de mine, comme vous le voyez, mais c'est chaleureux ! Il y a de la bière dans le frigo (achetez-en de temps en temps), le mot de passe du WiFi est sur le routeur et le divan est un peu miteux, mais au moins on a le câble : RDI, LCN, TVA Sports, RDS, Canal Vie. Pour le téléphone, avant de faire un interurbain, faites le 9 et… C'est une blague, je n'ai pas fait installer le téléphone. On ne sait jamais, hein ? Blague à part, je suis content de vous recevoir. Je me sentais un peu seul, ici… Je l'ai dit toute la semaine : je suis sûr que je ne suis pas le seul à avoir été espionné par la police. Je pensais surtout au Service de police de la Ville de Montréal (SPVM), dont les réponses au sujet de l'espionnage d'autres journalistes ont été on ne

peut plus évasives. Et là, hier, paf, on a su le résultat des vérifications internes faites par la Sûreté du Québec (SQ) dans la foulée des révélations de La Presse : en 2013, six journalistes ont fait l'objet de mesures que Nixon à son plus parano n'aurait pas reniées. La Presse +

* **How to protect yourself (and your phone) from surveillance**
Cyber security and online privacy experts aren't surprised by revelations that Quebec and Montreal have been spying on several journalists. In fact they say journalists — and the public at large — are far too careless. When the news came out this week that police had been spying on LaPresse journalist Patrick Lagacé, it was no surprise to Geneviève Lajeunesse with Crypto Québec. "I was shocked by their shock." Here are five key tips to sum up Lajeunesse's advice on protection from online surveillance, whether you're a journalist, an anonymous source, or a citizen who happens to protect your privacy. CBC News

* **Protection des sources - Assez les abus!**
Un éditorial note, « La liberté de presse est menacée au Québec. Il est grand temps d'adopter une loi sur la protection des sources pour mettre fin aux abus de la police.\r\nIl ne s'agit plus d'un cas isolé ou d'un abus de pouvoir anecdotique par une grosse police en mal de contrôle. L'espionnage des journalistes d'enquête est un mal si répandu au Québec qu'il faut maintenant des actions fermes pour casser cette désagréable impression de vivre dans un État policier. Ces tares ne sont pas uniques au SPVM puisque la Sûreté du Québec (SQ) fouine aussi dans les téléphones intelligents des journalistes. Radio-Canada a révélé mercredi que la police provinciale avait obtenu les registres d'appels des téléphones intelligents de trois de ses reporters, Isabelle Richer, Marie-Maude Denis et Alain Gravel. Au total, les communications d'une bonne dizaine de journalistes ont été épiées par le Service de police de la Ville de Montréal (SPVM) ou la SQ depuis 2013. La dérive des policiers n'a d'égale que celle des juges de paix qui ont autorisé ces chasses aux sources. Deux institutions fondamentales en démocratie, la police et la justice, ont traité la liberté de presse, le journalisme d'enquête et la protection des sources avec une grossière indélicatesse. Le resserrement des règles dans l'octroi des mandats de surveillance des journalistes, annoncé mardi par le premier ministre Philippe Couillard, est un pas dans la bonne direction. » Le Devoir, A6; Montreal Gazette

* **Challenging jihadist propaganda online eggs on extremists: experts**
Challenging online jihadist propaganda with counterarguments or shutting down extremist websites and social media accounts have little impact, and distract from the real threat, according to experts. As the Islamic State group (IS) spread across parts of Iraq and Syria, it ramped up its outreach to youths. Videos shared online depicting executions and others touting the creation of a caliphate became powerful recruiting tools, drawing hundreds of Western youths to the Middle East to join IS. Experts who met this week in Quebec City to find ways to combat this threat agreed that IS has used online propaganda to extend the conflict zone like no other. (...) The American, British and Canadian governments have taken similar measures, and with the help of major Internet firms such as Twitter took down some 235,000 extremist accounts in the first six months. Digital Journal

* **La radicalisation, une «crise de l'engagement»**
Un article d'opinion rapporte, « Alors que se tient actuellement à Québec une grande conférence sur la radicalisation, il semble utile de se faire attentif à une voix venue du passé, mais pourtant bien présente, celle de Hannah Arendt. Dans un très beau texte de 1953, intitulé Compréhension et politique, la philosophe d'origine allemande écrivait que « dans la mesure où les totalitarismes sont apparus dans un monde non totalitaire (ils ne sont pas tombés du ciel, mais ont cristallisé des éléments présents dans ce monde), le processus de leur compréhension implique clairement, et peut-être essentiellement, que nous nous comprenions nous-mêmes ». Si ces quelques lignes concernent au premier chef le phénomène totalitaire — le nazisme et le stalinisme analysés par Arendt —, il est possible d'en tirer une leçon utile dans le cadre de la lutte contre toutes les formes de radicalisation menant à la violence. En effet, on y retrouve l'idée chère à Arendt de la « cristallisation » d'éléments présents dans la société qui, combinés les uns aux autres, peuvent déboucher sur des évènements catastrophiques. Ainsi en est-il de la radicalisation religieuse menant à la violence dont il a été largement question ces derniers mois. Cette dernière « n'est pas tombée du ciel » pour reprendre les mots de la philosophe. » Le Devoir

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Ministry promises to help children of immigrants get health coverage
A representative for migrants struggling to get health coverage for their B.C.-born children is "in a bit of shock" after the Ministry of Health called her organization this week with a pledge to fix the problem. Following months of campaigning by Sanctuary Health and the B.C. Health Coalition, three ministry staffphoned both organizations Tuesday to assure them it will help the affected families acquire coverage. Parents with precarious immigration status, represented by both groups, had complained the application process for B.C.'s Medical Services Plan (MSP) prevented them from enrolling their B.C.-born children. The ministry's call came a day after Postmedia published a frontpage article about the struggle of two parents from Mexico who have five times attempted to enrol their 18-month-old, B.C.-born son for MSP coverage. Both parents said their applications were hampered by requirements they provide documentation they don't possess and concern their identities would be shared with the Canada Border Services Agency. (...) Cruz said concern about the ministry contacting the CBSA was a major factor for these families and said the ministry assured them it doesn't contact border officials. Postmedia Network (Vancouver Sun, A5, The Province)

Couple charged with importing fentanyl
A couple from Kitchener is accused of importing fentanyl products from China into the United States and then mailing the powerful opioid drugs to Canada. Karl and Sorina Morrison, both 59, were arrested at a border crossing near Niagara Falls, N.Y., last month after an investigation by U.S. authorities. The couple has been charged with conspiracy to import and export controlled substances and analogues, and attempt to export controlled substances and analogues. Each charge carries a maximum penalty of 20 years in prison and a $1-million fine. (...) In a criminal complaint filed with a New York court, a Homeland Security agent says a package mailed from China to Karl Morrison at a mailbox in a UPS store in Niagara Falls, N.Y., contained four packets, two of which were found to contain types of fentanyl. (...) The complaint notes that the Morrisons have a son and that since 2009, five packages mailed to him were seized by the Canada Border Services Agency after they were found to contain controlled substances. Canadian Press (Kitchener-Waterloo Record, A1, Telegraph-Journal, Hamilton Spectator, Toronto Star); Calgary Sun (Ottawa Sun, Toronto Sun, Edmonton Sun)

Feds' fast-track of skilled, foreign workers lauded
The "critical" problem B.C. companies face in trying to lure skilled foreign workers to sectors such as technology and film may have been resolved with a new federal policy on hiring short-term overseas help. That was the preliminary conclusion Wednesday of B.C. Jobs Minister Shirley Bond, Vancouver Mayor Gregor Robertson, industry associations and one immigration policy expert in response to Finance Minister Bill Morneau's plan to fast-track foreign talent, announced Tuesday as part of his federal economic update. Bond went so far as to say the initiative could help convince Lululemon - which recently warned it could move its Vancouver head office overseas if the Temporary Foreign Worker Program doesn't become more flexible - to stay. (...) The plan includes setting what the government acknowledges is an "ambitious" two-week standard to process visas and work permits for "low-risk, high-skill talent" for "high-growth Canadian companies that need to access global talent in order to facilitate and accelerate investments that create jobs and growth." As part of the plan, Ottawa will create a "short-duration work permit" that applies to employees in Canada for fewer than 30 days a year, or those here on "brief academic stays." Vancouver Sun, A1

Crown seeks prison for LaSalle mother in gun smuggling case
A Crown prosecutor requested during a court sentence hearing Wednesday that a LaSalle mother found guilty of smuggling three loaded, nine-millimetre handguns into Canada receive three to four years in a federal penitentiary. (...) Michelle Downey, 38, on Aug. 10 was found guilty of 22 criminal and Customs Act charges by Superior Court Justice Scott Campbell. The woman testified during her trial she didn't know acquaintances in Detroit had hidden the guns behind the glove box in her car before she drove over the Ambassador Bridge on April 21, 2013. But Campbell determined based on evidence that Downey's explanation wasn't believable - that she knew about the guns in her vehicle, what she was doing was a crime and was paid $1,000 in cash each time to smuggle handguns into Canada. Windsor Star, A7

*** Six months of Peace Bridge lane closures begins on Nov. 15**
With the busy summer tourism season out of the way, the Peace Bridge Authority announced this week it would soon be bringing in long-term lane closures related to construction work. Starting on Nov. 15, one lane will be closed – bringing the bridge down to just two lanes – and will remain closed until May 15, 2017. The closure is necessary to accommodate the $100-million rehabilitation project on the bridge. As it preps to bring in the closures, the PBA also urged, yet again, to have inspection booths staffed to appropriate levels needed to keep traffic flowing smoothly. Border wait times over the summer skyrocketed, however, the PBA said much of the delays were due to the high number of vacancies at the inspection booths. Through the summer, it was not uncommon to see only a handful of inspection booths open, while the rest sat empty. "So long as customs appropriately staffs and keeps inspection lanes open this winter, then we anticipate little to no traffic disruption," said PBA Board Chair Sam Hoyt. (…) "While we are pleased that a respected, third-party traffic consultant has determined that our closure plan will not impact the continued flow of cars and trucks across the span, it is important to note that this positive traffic flow scenario is contingent on proper Customs staffing and inspection lane availability," said Hoyt. "We've gotten strong indications from U.S. Customs and Border Protection that they can meet the staffing demand and we need Canada Border Services Agency to follow suit." Niagara This Week (2016-11-02)

Politics This Morning: Lisa Raitt to hold press conference to kickoff leadership bid
Today is Thursday, Nov. 3. (…) Representatives from Immigration, Refugees and Citizenship Canada (IRCC) and the Canada Border Services Agency (CBSA) will be holding a teleconference to provide details on the Electronic Travel Authorization (eTA) program, and other updates to travel document requirements. This is set to the place at 1 p.m. and is for background only-not for attribution. Hill Times

*** PVT Canada 2017 : les inscriptions sont ouvertes**
Depuis ce lundi 17 octobre les inscriptions au PVT Canada 2017 sont ouvertes, ce sont les autorités canadiennes qui en ont fait l'annonce. Les jeunes Français et Belges souhaitant s'envoler vers le Canada peuvent soumettre leur candidature en ligne afin de pouvoir participer aux rondes d'invitations prévues pour dans quelques semaines. (…) Les places d'obtention du PVT Canada sont limitées en raison d'un quota établi. En 2016 il était de 6 500 places pour les citoyens français et 750 pour les citoyens belges. Le nombre de demandes étant supérieur aux places disponibles, la sélection des candidats se fait par tirage au sort depuis 2016, alors qu'auparavant elle se basait sur la règle du premier arrivé, premier servi. Le Parisien Étudiant

*** Desserte aéroportuaire : l'Office du tourisme de Québec interpelé**
L'ancien président du Réseau de transport de la capitale (RTC), Gilles Marcotte, croit que c'est à l'Office du tourisme de Québec d'assumer le leadership pour l'implantation d'une éventuelle navette aéroportuaire. L'Office avait pourtant rejeté un tel projet en 2013. « Tous les organismes qui travaillent au développement du tourisme devraient contribuer », suggère M. Marcotte, qui a été à la tête du RTC en 2006. Déjà, à l'époque, l'idée d'une desserte vers l'aéroport Jean-Lesage était discutée, mais plus ou moins structurée », se rappelle-t-il. Dix ans plus tard, il estime qu'il est temps que le dossier se concrétise. « On investit beaucoup d'argent dans les infrastructures dans l'aéroport avec le centre de prédédouanement. Donc, on a besoin d'une navette. C'est officiel. » Radio-Canada (2016-11-02)

Stay home
A letter to the editor states, "Note to American celebrities threatening to "come to Canada" if Trump gets elected: Our Canada Border Services may have something to say about your decision. This ain't Hollywood, folks. It's The Great White North and we do the choosing!" Toronto Sun, A16

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Teen charged for prank bomb threat in Vernon**

A youth has been criminally charged in relation to a prank bomb threat at the Landing Plaza last summer. The Vernon RCMP confirms a 17-year-old is facing a charge under the 'false messages' section of the criminal code after he allegedly made a prank call about a bomb. The incident prompted a full scale emergency response from police, the fire department, B.C. Ambulance, and bylaw services on July 12. Numerous businesses in the Landing Plaza on 25 Avenue were evacuated and forced to close down while police investigated the threat. While no one was hurt and the incident turned out to be a hoax, it was serious enough for police to recommend charges to Crown counsel. Shortly after the prank, Sgt. Mike Moyer of the Vernon RCMP said they wanted to send a strong message that such acts will not be tolerated. The false messages charge is laid against people who send information they know to be false, either by letter, telegram, phone, cable or radio, with the intent to injure or alarm others. The offence carries a maximum sentence of two years in jail. The incident in Vernon is not the first time police in the Interior have been deceived with false information — an act known as 'swatting'. Last year in Kamloops, several schools were locked down due to swatting pranks involving fake bomb threats. Because he is a minor, the teen's identity is protected under the Youth Act. Infotel

*** In Canadian first, liquid fentanyl seized on the street, Hamilton police say**

In what Hamilton, Ont., police believed is a first in Canada, fentanyl in a liquid form has been seized from suspected street-level drug dealers. The dark brown glass vial of liquid, containing about 20 mL of liquid, was confiscated by Hamilton police's vice and drug unit in May, but was originally believed to be GHB. It was sent to Health Canada for routine laboratory testing along with other drugs seized prior to a criminal prosecution. The test results showed it was liquid fentanyl. Even then the significance didn't register. Det. Const. Adam Brown, of the city's drug unit, said it was not until he attended a fentanyl-themed police conference in Alberta this month that he learned how unique a find it was. Experts at the conference told him that liquid fentanyl had not previously been seized on the streets in Canada. "Fentanyl hasn't been widely seen in Hamilton. It was at the conference, in discussions with people who had the specialized knowledge, that we realized the seizure was such a big deal. "This is something very new to us," he said. "It is extremely dangerous, even in small amounts." Fentanyl is a powerful opioid painkiller. When Brown handles the vial he wears a full chemical protection suit, a respirator and double rubber gloves because fentanyl can easily be absorbed through the skin. Health Canada estimates a lethal dose of pure fentanyl for a typical adult is as little as two milligrams. National Post; Hamilton Spectator

*** Surrey Mountie accused of child luring to appear in court Nov. 30**

Surrey RCMP Constable Dario Devic is expected to appear in Surrey provincial court on Nov. 30 on a charge of child luring. Devic was arrested on Sept. 9 after Creep Catcher Surrey, a citizen group that aims to weed out "potential predators" and "blast" them in social media, did a sting outside a local mall. A woman working with Creep Catcher Surrey posed as a 15-year-old girl and allegedly communicated with the officer online after posting an ad on Craigslist. A meeting was set up outside the Boston Pizza at Surrey Central Shopping Mall in Whalley and Creep Catcher Surrey president Ryan LaForge and his crew live-streamed the sting on the Internet. Devic's last court appearance, set for Oct. 19, was adjourned to Wednesday, Nov. 2. He didn't appear in court on either date. Supporters of Creep Catchers, wearing black hoodies and masking their faces with scarves, rallied outside the courthouse on Oct. 19. A handful of them were also at court Wednesday, when the arraignment hearing date was set. LaForge told the Now another rally will be staged on Nov. 30 and he expects it will be bigger than the first. Now News

*** RCMP part of international raids on Darknet users**

Law enforcement agencies around the world are stepping up their efforts to check the growth of cyber crime, most recently last week when nine police and intelligence agencies, including the RCMP, launched co-ordinated action against buyers and sellers of illicit drugs and other illegal activities on Darknet global marketplaces. "In Canada, the collaboration between the Royal Canadian Mounted Police, Canada Post, and the Canada Border Services Agency led to the identification and targeting of an international distributor of narcotics based in Quebec that was operating on the Darknet," the force said in the statement. "This resulted in numerous seizures and the detention of an individual involved in the international distribution of the narcotics. The investigation is ongoing." Internationally the action, dubbed by all participants as Operation Hyperion, resulted in numerous international seizures, arrests and leads on cases related to the buying and selling of illicit drugs and other goods on the Darknet, the part of the

Internet only accessible through browsers that ensure Websites selling illegal material can only be reached anonymously. The RCMP said the operation will also help law enforcement agencies continue to combat the trafficking of illegal goods and services by identifying new smuggling networks and trends. IT World Canada (2016-11-02)

*** Kamloops RCMP predict Fortis B.C. phone scam will be back as temperatures drop**
A scam that has surfaced on and off over the years in a variety of forms could be back in Kamloops this winter. Kamloops RCMP spokesperson Cpl. Jodi Shelkie says a phony Fortis B.C. phone call scam has the potential to rob residents of their hard earned money. "Some people call and say 'I'm from Fortis and you're way behind on your gas bill. If you don't pay it we're going to cut off your gas immediately'," Shelkie says. This can cause homeowners to panic, she says, with residents believing they will have their gas shut off and have their house become cold in the winter. "They'll ask for a prepaid debit card or something," Shelkie says, "It's better (for them) if they have a prepaid credit card." Shelkie says there are steps people can take to protect themselves from scammers. "Even if they do call, just say 'I'm going to call back and ask for accounting and speak to them," Shelkie says. Last summer, Fortis B.C. sent out a news release about the scam. Infotel (2016-11-02)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Shafia murder convictions to stand
A father, mother and son found guilty in the drowning deaths of three teenaged sisters and another woman who had apparently shamed the family lost their bid Wednesday to overturn their first-degree murder convictions. In unanimously rejecting an appeal by the Shafia family members, Ontario's top court ruled, among other things, that expert evidence on so-called honour killings had been properly admitted at their trial and the son was properly tried as an adult. Canadian Press (Kingston Whig-Standard, A1, The Guardian, Waterloo Region Record, Red Deer Advocate, The Telegram, Ottawa Citizen, Times & Transcript, Whitehorse Daily Star, Hamilton Spectator, Times Colonist, Chronicle-Herald, National Post, Cape Breton Post); La Presse Canadienne (Le Devoir, Le Quotidien, La Tribune, La Presse); Le Journal de Québec (Journal de Montréal); Edmonton Sun (Calgary Sun, Ottawa Sun, Toronto Sun)

Kingston Penitentiary's next life
An opinion piece states, "Although a credible sifting of ideas from the community for reworking the site, one worries about the joint city/correctional service visioning project missing Kingston Penitentiary's overriding historical and social/economic importance to the Kingston region, how it has been a cultural anchor for decades. This must not fade to black but be commemorated in the redevelopment of the site. It is totemic: seven generations of breadwinners - builders, architects, prison guards, healthcare trained staff, warden's staff - have driven the Kingston economy and minimized evil and danger lurking among the law-abiding for 177 years... For Canada, "KP is a monument to correctional history," reports architectural historian Jennifer McKendry, the same as is Eastern Penitentiary at Philadelphia for the U.S. You can shortcut through KP's labyrinthine history via **Correctional Service Canada's** "Historical Overview." Kingston Whig-Standard, A5

*** Judy Ogden's murder, Dale Ogden's release 'a fail in the justice system': St. John's lawyer**
St. John's lawyer Lynn Moore remembers the 1997 murder of Judy Ogden. Moore was a Crown attorney at the time. She especially remembers thinking the crime could have been prevented. "Specifically, I recall that he [Dale Ogden] was on bail when he committed this murder and that struck me as a failing of the justice system. That he was allowed or given the opportunity to commit this heinous crime," she said. Dale Ogden, who had a court order to stay away from his estranged wife Judy, forced his way into her home and beat her to death while their four-year-old son Daniel watched. Ogden served 16 years behind bars for second degree murder. He was released in September of this year. Daniel Benoit is now 22 and suffers from post traumatic stress . He's fighting with Correctional Services Canada and the National Parole Board for more information on the whereabouts of his father, who is out on day parole near Victoria, B.C. Benoit is registered as a victim, but does not feel Correctional Services Canada is transparent enough on Ogden's whereabouts and who he is in contact with. He requested recent pictures

of his father, but his request went unanswered. The Privacy Act protects Ogden's personal information. CBC News

*** Keep killers in jail longer, says convict's son**
A Newfoundland man who was four years old when he saw his father brutally beat his mother to death says he's living in fear knowing Dale Ogden is out on day parole and believes he should have received a more punitive sentence. Daniel Benoit, 22, said he wants to start a national conversation about murder sentences and Canada's justice system in general, which he says lets convicted murderers off too easily. Ogden was sentenced to life in prison for the second-degree murder of his wife Judy Ogden in early 2000, and the judge set his parole eligibility at 14 years. He has been out on day parole since September after being released from William Head Institution in Victoria, B.C. Canadian Press (Chronicle-Herald, A10, The Guardian)

*** Indigenous jail population: Prison reforms must go beyond justice**
An opinion piece states, "Last week, Australian Attorney-General George Brandis launched yet another inquiry into what he called a "national tragedy" - the country's exploding aboriginal prison population - and directed the Australian Law Reform Commission to come up with solutions to the crisis... You could easily substitute Canada for Australia in the above sentence. Despite long ago recognizing the travesty of disproportionate indigenous incarceration, the aboriginal prison population has risen unabated in both countries. While they make up 4.3 per cent of Canada's population, First Nations, Métis and Inuit account for a quarter of inmates in federal prisons. In the past decade, the overall federal prison population rose by 10 per cent; aboriginal incarceration spiked by 50 per cent... About half of Canada's 1.5 million aboriginals are under the age of 25 and the indigenous population is projected to grow at as much as twice the rate of the overall population over the next two decades. Without major changes, Canada will soon be facing an ever bigger aboriginal incarceration crisis." Globe and Mail

*** Woman tried to smuggle morphine into prison**
A Winnipeg woman has been convicted of attempting to smuggle morphine into Stony Mountain Institution after a judge rejected her claim she feared she might be "done in" if she didn't comply. Sandra Dignard, 36, was arrested Dec. 21, 2012, after corrections officers caught her trying to enter the prison with 100 morphine tablets hidden on her body. Dignard will return to court for sentencing early next year following the completion of a court ordered pre-sentence report. Winnipeg Sun, A3

*** Sentence Turfed: Court of Appeal overturns adult conviction for woman in U of C student's murder**
Alberta's top court has overturned the adult sentence handed to a woman who took part in the slaying of U of C student Brett Wiese, reducing her punishment to the maximum youth term. In a 2-1 split decision the Alberta Court of Appeal said the appropriate sentence for the now 21-year-old is four years of custody followed by three years of community supervision. In a dissenting opinion, Justice Bryan O'Ferrall said he would have upheld the life sentence without parole for a minimum seven years, handed the woman in May, 2015. But in overturning the adult sentence handed the convicted killer, Justice Patricia Rowbotham said Court of Queen's Bench Justice Charlene Anderson erred in finding the woman's blameworthiness wasn't diminished by her immaturity. Since the offender is now serving a youth sentence she can no longer be identified. Calgary Sun, A16 (Calgary Herald); CBC News

*** Johnson released pending appeal**
Former Windsor Spitfire Ben Johnson, sentenced last week to three years in prison for a 2013 rape, was released from jail on $45,000 bail Wednesday and ordered to live in Windsor, according to documents signed by a local justice of the peace. The Ontario Court of Appeal Tuesday granted Johnson bail pending appeal. Johnson was able to fulfil the bail requirements Wednesday. Windsor Star, A5; London Free Press

*** Prisons shouldn't allow conjugal visits**
Re: "Prison conjugal visits defended," Nov. 1.
A letter to the editor states, "The rationalization in support of conjugal visits in our federal prisons program is not convincing. Whether you believe the purpose of incarceration is to impose retribution or enable

rehabilitation, neither justifies the facilitation of sexual privileges for prison inmates. Unintended consequences inevitably occur. A case in point is that of the noted eight-month pregnancy of prisoner Kelly Ellard, impregnated on a conjugal visit by a boyfriend who was a prisoner on day parole from a different prison. It is past time to emulate prison policy from such jurisdictions as Britain and the U.S. (federally), where conjugal visits are not allowed." Times Colonist, A11

*** Torture behind bars**
An editorial states, "Ontario Premier Kathleen Wynne isn't taking lightly reports that a prisoner facing trial in her province was subjected to treatment defined as torture. Far from it. When asked, she volunteered that it was "extremely disturbing." And she assumed it was being looked into. Oh. Good. Recent revelations about Adam Capay's horrific treatment in an Ontario correctional facility are, indeed, extremely disturbing. But not, unfortunately, a surprise. The province has a major problem with its jails and court system. Yet based on its plodding, lackadaisical response to this incident and many others, the government seems unable to grasp the fact." National Post, A8

*** Different takes on Adam Capay case**
Justice delayed, once again, Editorial Oct. 30
A letter to the editor states, "Adam Capay spent four years in solitary while awaiting trial. Since by UN standards his ordeal was worse than the most severe sentence he would be likely to get if he was tried and found guilty, he should be released, with compensation, immediately. There's also the question of the jail superintendent and anyone else responsible for keeping him in solitary. Perhaps they should spend a few months in solitary so they can understand what they have done." Toronto Star, A20

*** Time to address systemic inequality**
An opinion piece states, "Manitoba has a prison problem. It isn't just that Manitoba imprisons its citizens at nearly three times the Canadian average. And it isn't just that 60 per cent of those prisoners are legally innocent, in prison awaiting trial. Nor is it simply that 70 per cent of people in Manitoba prisons are indigenous, a number more indicative of serious systemic racism in Manitoba than anything else. Although each of those numbers is concerning on their own, confronting the prison problem became unavoidable when we learned that in 2016, seven people have died while in custody in Manitoba. Five of those were inmates at the Winnipeg Remand Centre. The deaths in state custody of Hollie Hall, Errol Greene, Robert McAdam, Russell Spence and three others whose names we do not yet know, are all tragedies. Each of these people relied on the government and were under the complete control of the government. Their medicine was dispensed (or not) according to government policies. They were given emergency medical treatment (or not) according to government policies. They were allowed to leave their cell (or not) according to government policies. The government must be held accountable for their deaths." Winnipeg Free Press

*** Showered In Complaints: Ottawa jail among tops for gripes, despite size**
The Ottawa-Carleton Detention Centre remained among the three most complained-about jails in Ontario, despite being the only jail in the top five that housed fewer than 1,000 inmates. There were 394 complaints about the Ottawa jail to provincial ombudsman Paul Dube during the 2015-16 fiscal year, the ombudsman said in his annual report released Wednesday. The good news was that the number of complaints has been trending slightly downward since 2013-14, when there were 416 complaints. It was also down slightly from the previous year's 410 complaints. The Ottawa-Carleton Detention Centre "has consistently been one of the most complained-about in the province," said the ombudsman. The OCDC made the top three even though it has a capacity of 505 inmates, less than half that of the Central East Correctional Centre in Lindsay, Ont., which had 647 complaints, and the Toronto South Detention Centre, which had 455 complaints. The bulk of complaints from OCDC were about health care issues, but there were also 27 about segregation and 26 about living conditions, the ombudsman said. That included one from an inmate who was housed in a shower in March 2016. Ottawa Sun, A10 (Ottawa Citizen)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Lack of funding forces women's addiction centre to halt services**
Despite the overwhelming need for addiction services in New Brunswick, a women's treatment facility in Tracy will suspend services as of Dec. 1. Bridges of Canada, a non-profit organization, has been operating the Sarah Tracy Centre for Women in Tracy, which is located about 40 minutes from Fredericton, since the spring of 2014. Misty McLaughlin, a spokeswoman for the centre, said Wednesday that the centre will be temporarily suspending services to its clients as of the first of next month because it lacks the $800,000 required to run the live-in centre and addictions treatment programs offered there. Times & Transcript, A6

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Genesis House Looks To Reach More Demographics With New And Established Initiatives**
The women's shelter will host its annual Family Dance this Friday, November 4th at the Morden Friendship Centre, the usual P.J. parties are planned at the branches of the South Central Regional Library, and Peace Begins at Home hockey games with the Winkler Flyers, Garden Valley Collegiate Zodiacs, and Pembina Valley Hawks. "Last year I was able to attend the World Conference for Shelters, and the United Nations has a couple of things they do, so we are picking up on one of those things." She said they have engaged with the art galleries in Winkler, Morden, and Altona to light up in purple." This will take place during the 16 days of activism for gender based violence, November 25th to December 10th. During the 16 days of activism, Braun noted the art gallery in Morden will exhibit the faceless dolls, representing missing and murdered Aboriginal woman. Pembina Valley Online

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Edmonton city councillors consider zoning restrictions on marijuana dispensaries**
City councillors are asking if new marijuana dispensaries should be kept away from schools and restricted like liquor stores. Worried about a proliferation of dispensaries and grow-ops when Ottawa legalizes recreational marijuana, Coun. Mike Nickel introduced a lengthy zoning inquiry at council's planning committee Wednesday. "We can't bury our heads in the sand anymore on this. ... We need to be proactive," Nickel said, pointing to the way marijuana dispensaries spread in Vancouver, rivalling the number of Starbucks. Vancouver has since restricted how close each pot shop can be to the others, similar to how Edmonton limits liquor stores to being 500 metres from a competitor. Liquor stores here must also be 100 metres from a school. But drinking liquor near a store doesn't affect bystanders the same way a cloud of pot smoke would, Nickel said: "As an intoxicant, how are you going to deal with that?" The federal Liberals committed to legalizing and restricting access to marijuana in their 2015 throne speech. They've launched a task force with cross-country meetings on how to effectively do that. Edmonton Sun

*** Cannabis in your blood stream doesn't mean you're stoned**
Before raising the alarm on cannabis-impaired motor vehicle accidents, the stats presented in this article require additional clarification and contextualization. Unlike alcohol, for which there is a close correlation between blood-alcohol content and impairment, there is no defined standard of impairment for cannabis. Determining whether or not these drivers were impaired by cannabis is further complicated by the fact that tetrahydrocannabinol (THC) — the primary psychoactive component in cannabis — can be detected in the blood several days and even weeks after consuming cannabis. This means that the observed increases in the proportion of fatally injured drivers testing positive for cannabis in these states might not

indicate increases in cannabis-impaired driving, but rather general increases in cannabis use following legalization. This is particularly plausible when we take into consideration the overall rate of motor vehicle accidents over time. Surveillance for cannabis among drivers in Colorado and Washington likely increased with legalization. Province

*** Beer Companies Don't Know How to Handle Marijuana Legalization Yet**
One of the bigger unknowns in the marijuana legalization movement is how the end of prohibition will affect the alcohol and tobacco industries. While current generations may not let legal weed curb their booze and cigarette cravings drastically, future generations may not see the benefit of straying from cannabis for a more dangerous alternative. Understandably, beer companies are nervous about that precise possibility. On a recent conference call to discuss quarterly earnings, Molson Coors International CEO Stewart Glendinning gave some insight as to how his company was handling looming cannabis legalization. Asked by an analyst how the imminent legal marijuana market in Canada may affect beer sales, Glendinning answered, "Cannabis is something we are thinking very carefully about, not only as a business but also as an industry." Canada is set to introduce recreational marijuana legislation in the Spring that will legalize the plant nationwide. Marijuana

*** Canada legal cannabis no tax windfall: report**
Canada will have little wiggle room to tax recreational marijuana sales when it moves to legalize the psychoactive drug, a report to parliament said Tuesday. One of the principal rationales cited by supporters for ending the prohibition on pot has been the bounty of tax revenues legalization would bring. But parliamentary budget officer Jean-Denis Frechette, tasked with providing independent analysis to lawmakers, warned it would not be a bonanza. Retail sales taxes are expected to be relatively modest at the start -- about Can$300 million to Can$600 million (US$224 million to US$448 million) and not billions, he said. That is far below the annual future cannabis tax revenue of up to Can$5 billion estimated by CIBC World Markets in January. Also, tax policy decisions will require trade-offs between the government's two main objectives: discouraging consumption among Canadian youths and reducing the profits in the illicit cannabis market. *** After Phoenix and Shared Services problems, government seeks feedback on digital future**
The federal government continues to receive advice on how it should improve its digital future as it works to fix problem-plagued projects including the Phoenix payroll system and Shared Services Canada. In a so-called, "intimate, armchair discussion" at the annual GTEC conference in Ottawa on Wednesday, parliamentary secretary for Public Services and Procurement Canada, Leona Alleslev opened up about the pitfalls experienced in the development of Shared Services Canada, or SSC. The department that's drawn criticism from other departments, including the RCMP, Statistics Canada and the Auditor General. Alleslev acknowledged the project has been ambitious with aggressive timelines and its attempt to save money. (…) Shared Services was created to streamline information technology across the government by combining more than 100 different email systems into one, reducing the number of data centres from 600 to about 20 and make the systems more secure and reliable. It was also supposed to save money. But to date, savings have not been realized, only 80 data centres have been closed, and the centralized email system is currently on hold with no scheduled date for completion. CBC News

*** Bonuses at Shared Services Canada despite criticisms**
Shared Services Canada approved more than $1.5 million in bonuses and merit pay for its executives, despite a year of widespread criticism of the agency's botched technology projects. More than 100 senior managers were awarded the extra pay in the summer, including 19 who received bonuses of about $4,300 each, CBC News has learned. The executives also received so-called "performance pay" for succeeding or surpassing expectations, sharing a pot of $1.5 million among them, or an estimated $15,000 each on average. CBC News

*** German interior minister lauds detention of terror suspect**
Germany's top security official is praising the detention of a suspected extremist in Berlin, saying it shows authorities are being vigilant and doing "everything to avoid terrorist attacks in Germany." The man, who claims to be 27 and from Syria, was taken into custody late Wednesday on suspicion of being a member of the Islamic State militant group. Interior Minister Thomas de Maiziere said Thursday "it is very good this person has been taken out of circulation." He said the suspect had been under surveillance for a while, but didn't give further details. Associated Press (Metro News) (2016-11-03); Deutsche Welle (2016-11-02)

MINISTER / MINISTRE

*** Feds hold Twitter consultation on national security**
Public Safety Canada held a Twitter chat Thursday night to hear what Canadians think about national security and its responsibility to Canadians. The department in charge of the RCMP, the Canadian Security Intelligence Service and its oversight body, and the Canada Border Services Agency asked people to tweet them using the hashtag #YourNatlSec starting at 8 p.m. ET to discuss accountability in national security. (...) **Public Safety Minister Ralph Goodale** didn't participate in the Twitter chat. New Democrat justice critic Murray Rankin says he wanted as many people as possible to participate. "Any effort to get Canadians engaged is great," he said. The department is holding national security townhalls across the country until Dec. 15. It's also is accepting input on its website too. Rankin, who once served as a lawyer to the Security Intelligence Review Committee, says he'd like to see changes to C-22. The bill would set up a parliamentary committee to review spy agency activity after the fact, but no oversight

during operations. **Goodale** has promised more changes to C-51 are still to come, but Rankin says he wants to know when. "It's been more than a year. I haven't seen a single comma change in C-51, which is an odious bill that deserves to be, we say, repealed," he said. CTV News (2016-11-03)

*** CSIS collected data on citizens for past 10 years**
Canada's spies for almost a decade illegally kept and analyzed data on people who posed no threat to national security, a federal court judge has ruled. In a scathing ruling, Justice Simon Noël said the Canadian Security Intelligence Service had illegally retained an unknown amount of data on "third party" and "non-threat" individuals since 2006. CSIS fed that data into a powerful database that allowed the agency to draw out "specific, intimate insights into the lifestyle and personal choices of individuals," read the heavily censored court ruling, circulated to journalists on Thursday. (...) The revelations prompted an unprecedented snap press conference by CSIS director Michel Coulombe. Coulombe told journalists the agency believed its actions were legal, from 2006 until October's ruling, but accepts Noël's findings. Coulombe could not, however, explain why CSIS believed it needed to inform the court of ODAC's existence in 2006, but failed to do so for almost 10 years. "I'll be honest, we went through our records and we really can't find a good explanation of why the court was not informed," Coulombe told reporters Thursday evening. Coulombe was clear that CSIS believed the program was useful and effective, and said he would like to keep it in operation. "That is something I will discuss with officials, (**Public Safety Minister Ralph Goodale**) and it is a public policy decision that the government and parliamentarians will have to make," the director said. In a statement, **Goodale** said the government will not appeal Noël's decision. But the minister did leave open the possibility of changing the CSIS Act to allow for such techniques in the future. **Goodale** noted the court ruling found the legislation governing CSIS was beginning to ***"show its age"*** after 30 years, and threats and investigative techniques have changed over that time. **Goodale** said he would be discussing CSIS's failure to tell the court the full truth, however, with the agency's senior management. ***"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the (government) are being effective at keeping Canadians safe, and equally, that they are safeguarding our rights and freedoms,"*** **Goodale** wrote. Toronto Star, A1

*** Le SCRS a conservé illégalement des données personnelles**
L'agence d'espionnage du Canada a agi dans l'illégalité en conservant des données personnelles pendant 10 ans, a tranché la Cour fédérale. Dans un jugement rendu public hier, le magistrat Simon Noël a statué que le Service canadien du renseignement de sécurité (SCRS) avait manqué à son devoir d'informer le tribunal de son programme de collecte de données, qui opérait en vertu d'ordonnances judiciaires. Le juge Noël estime que le SCRS aurait dû communiquer ses activités à la Cour puisqu'elles ne concernaient pas directement la sécurité nationale. Colliger les données permet à l'agence d'identifier des habitudes de déplacements, de communication, de comportements et de liens qui lui seraient sinon inaccessibles, a indiqué hier le directeur du SCRS Michel Coulombe, qui dit « regretter que le SCRS a manqué à son obligation de franchise envers la Cour ». Rappelant « l'efficacité de l'analytique de données », le SCRS a l'intention de poursuivre ce programme dans le respect de la loi. Le **ministre de la Sécurité publique, Ralph Goodale**, a indiqué **« accueillir positivement »** la décision rendue dans cette affaire, et a souligné que le gouvernement n'interjetterait pas appel. Le **ministre Goodale** a dit prendre **« très au sérieux »** les conclusions du juge et a assuré qu'il ferait le suivi avec le SCRS. ***« Lorsqu'il est question de la sécurité et du renseignement, les Canadiens doivent avoir la certitude que tous les ministères et organismes du gouvernement du Canada réussissent efficacement à assurer la sécurité des Canadiens, et ce, en accordant autant d'importance au respect de nos droits et libertés »,*** a indiqué le **ministre Goodale** dans un communiqué. La Presse, 10; Journal de Montréal

CSIS data program illegal, court rules
The Federal Court of Canada has faulted Canada's domestic spy agency for unlawfully retaining data and for not being truthful with judges who authorize its intelligence programs. Separately, the court also revealed that the spy agency no longer needs warrants to collect Canadians' tax records. All this has been exposed in a rare ruling about the growing scope of Canadian intelligence collection disclosed by the court on Thursday. At issue is how the federal domestic spy service has been pushing past its legal boundaries in the name of collecting data, in hopes of rounding out the holdings of a little-known Canadian intelligence facility dubbed the "operational data analysis centre." Many corporations and

government agencies are now gravitating toward so-called big data computer analytics that can predict patterns of future behaviour based upon records about what has happened in the past. Spy agencies are no different, and the centre in question appears to be the Canadian Security Intelligence Service's equivalent of a crystal ball - a place where intelligence analysts attempt to deduce future threats by examining, and re-examining, volumes of data. (...) Following the ruling, **Public Safety Minister Ralph Goodale** released a statement that was equal parts stern and upbeat. ***"I will be pursuing this criticism with the executive management of the service,"*** he said. But **Mr. Goodale** added that the judges mentioned that CSIS's data-analytics program "***has yielded some useful intelligence results."*** He suggested the program could be bolstered with a few legislative changes. ***"The CSIS Act is now more than 30 years old and showing its age as global affairs, threat profiles, technology and public expectations have rapidly evolved,"*** **Mr. Goodale** wrote. Globe and Mail, A15

CSIS broke law by keeping sensitive metadata

A Federal Court judge says Canada's spy agency illegally kept potentially revealing electronic data about people who posed no security threat over a 10-year period. In a hard-hitting ruling made public Thursday, Justice Simon Noel said the Canadian Security Intelligence Service breached its duty to inform the court of its data-collection program, since the information was gathered using judicial warrants. CSIS should not have held on to the information since it was not directly related to threats to the security of Canada, the ruling said. "Ultimately, the rule of law must prevail," Noel wrote, adding, "without it, the actions of people and institutions cannot be trusted to accurately reflect the purpose they were entrusted to fulfil." **Public Safety Minister Ralph Goodale** welcomed the decision and said the government would not appeal. CSIS crunched the data beginning in 2006 using a powerful program known as the Operational Data Analysis Centre to produce intelligence that can reveal specific, intimate details about people the spy service monitors, the judge said. The improperly retained material was metadata - information associated with a communication, such as a telephone number or email address, but not the message itself. Canadian Press (Hamilton Spectator, A8, Calgary Sun, Edmonton Sun, Kingston Whig-Standard, Ottawa Sun, London Free Press, Toronto Sun, Winnipeg Sun, Waterloo Region Record, Fort McMurray Today); Presse canadienne (Le Droit)

Secret CSIS unit illegally kept data, court rules

A previously unknown unit of Canada's intelligence service has been illegally keeping data unrelated to national security threats, the Federal Court disclosed Thursday. In a hard-hitting ruling that was partly blacked out, Justice Simon Noel rebuked the Canadian Security Intelligence Service for not telling the court about a secret metadata program launched in 2006. The Operational Data Analysis Centre was unknown even to the judges who had been issuing the warrants to collect the information it mined, according to Noel's ruling. (...) **Public Safety Minister Ralph Goodale** said the government would not appeal the decision and would ask the Security Intelligence Review Committee to ***"monitor the situation carefully to ensure compliance."*** **Goodale** said he intended to speak to the CSIS executive about Noel's findings and had taken note of the court's observation that the CSIS Act was ***"now more than 30 years old and showing its age."*** The ruling touched on an issue many governments are struggling to address: amid fears over terrorism, how far can they can intrude into the lives of citizens in the name of national security? Postmedia Network (National Post, A1/Front (Edmonton Journal, Calgary Herald, StarPhoenix, Windsor Star, Leader-Post, Ottawa Citizen, Montreal Gazette, London Free Press)

* **Canadian spy agency put on notice**

A Canadian federal court has dealt the country's spy agency a major blow by declaring it illegally kept data collected during investigations over the past decade. It has also threatened sanctions if it happens again. Although judges have previously criticised the Canadian Security Intelligence Service (CSIS) for a lack of openness, the ruling is being seen as particularly uncompromising. Federal Court Judge Simon Noel said CSIS secretly set up a special data analysis centre in 2006 to help track potential terrorism suspects. However, he said it stored and retained electronic information from people not linked to particular threats, which it was not permitted to do."CSIS has a limited mandate which does not permit the retention of associated data ... as it has done so since 2006. Therefore this retention of associated data is illegal," Judge Noel said in the ruling. (...) "The fact that CSIS could go 10 years retaining large quantities of our sensitive private information, yet we're only finding out about this now, and only as a result of a court judgement, is deeply concerning," said David Christopher of OpenMedia, an advocacy group. (...)

Federal Public Safety Minister Ralph Goodale, who has overall responsibility for law enforcement agencies, welcomed the ruling and said the government would not appeal it. ***"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service," Goodale*** said in a statement. Radio on New Zealand

*** Canadian Court Rules Spy Agency Illegally Kept Data Unrelated to Threats**
A Canadian court issued a strong rebuke to the country's intelligence agency in a ruling released Thursday, saying the Canadian Security Intelligence Service broke the law by holding on to data that wasn't directly related to security threats. Federal Court Justice Simon Noel said CSIS overstepped its mandate when it began retaining and analyzing metadata that wasn't relevant to investigations or prosecution, or to national defense or international affairs. Metadata can include information such as a telephone number or email address but doesn't include the content of a communication. The data was sent to a CSIS program called the Operational Data Analysis Centre for processing, which the court judgment said has the ability to produce "specific, intimate details" on the life and environment of individuals under investigation. The program was launched in 2006, according to the judgment. The issue of data collection has come under greater scrutiny since former U.S. National Security Agency contractor Edward Snowden revealed that agency was conducting surveillance of U.S. citizens. (...) **Canada Public Safety Minister Ralph Goodale** said in a statement that the government doesn't intend to appeal the court's decision. Wall Street Journal (2016-11-03)

*** Judge raps Canada spy agency for data collection abuse**
The head of the Canadian Security Intelligence Service said he agreed with a court ruling that the spy agency had held onto sensitive data beyond the time frame allowed by court warrants. CSIS director Michel Coulombe ordered all access to information dating back as far as 2006 to be denied while the agency assesses the legal impact of the decision and determines how best to move forward. "I regret that we did not meet our duty of candor to the court and I commit to continuing my efforts with the deputy minister of justice to address this concern," CSIS director Coulombe told a press conference. "All associated data collected under warrant was done so legally. The court's key concern related to our retention of non-threat related associated data linked with third party communications, after it was collected," Coulombe said. (...) **Public Safety Minister Ralph Goodale**, meanwhile, welcomed the ruling, saying in a statement that ***"the court's insight and guidance are timely, coming in the midst of the public consultations we now have underway about Canada's national security framework."***
AFP (Yahoo! News) (2016-11-03)

Online national security quiz is not exactly neutral
An opinion piece state, "Making sense of the federal government's online national security quiz is not easy. The Liberal government, which during last year's election campaign had promised to scrap significant portions of the anti-terror law known as Bill C-51, now says it wants to see what Canadians have to say before acting. To that end, according to a spokesperson for **Public Safety Minister Ralph Goodale**, the government has held 27 face-to-face consultation sessions. More are in the offing. But the jewel in the crown for Justin Trudeau's very modern government is an online questionnaire. Here, the Liberal government has received 9,500 individual responses and 9,300 bulk submissions. I'm surprised it got that many. Canada's anti-terror legislation is both complicated and technical. What, for instance, is a lay person supposed to make of this question in the online quiz: "Do the current Section 38 procedures of the Canada Evidence Act properly balance fairness with security in legal proceedings?" Mind you, the online consultation does include a so-called green paper written in passably clear English that purports to describe how the current system works. But like **Goodale** himself, this green paper exudes a soothing, untroubled tone suggesting that - in the end - the law as written is pretty sensible and, at most, needs only a few tweaks." Toronto Star, A13

Aucun journaliste n'est épié par la GRC ou le SCRS, affirme Trudeau
Le premier ministre Justin Trudeau a indiqué jeudi qu'aucun journaliste ne faisait actuellement l'objet d'une surveillance de la part des services policiers ou de renseignement fédéraux. Disant suivre avec « préoccupation » les cas des reporters du Québec qui ont été espionnés par deux corps policiers de la province, il a affirmé avoir effectué des vérifications auprès de la Gendarmerie royale du Canada (GRC)

et du Service canadien du renseignement de sécurité (SCRS). « Dès qu'on a commencé à avoir ces nouvelles, j'ai commencé à communiquer avec le commissaire de la GRC et le SCRS pour m'assurer qu'effectivement, il n'y a aucune activité de ce type qui se passe au niveau fédéral », a-t-il dit en conférence de presse à Ottawa. « On a des balises, des règles et des paramètres très stricts en place, et j'ai été rassuré qu'ils sont tous en train d'être suivis, et on peut être rassurés qu'au niveau fédéral, on n'a pas cette préoccupation », a poursuivi Justin Trudeau. (…) Le chef néodémocrate Thomas Mulcair n'achète pas les réponses de Justin Trudeau, pas plus que celles fournies en Chambre par le **ministre de la Sécurité publique, Ralph Goodale**. Selon lui, les deux hommes ne disent pas explicitement qu'aucun journaliste n'est espionné. « Je vous invite à faire comme j'ai fait : d'aller lire et relire les réponses. [_] J'ai la transcription, et M. Trudeau n'a à aucun moment affirmé qu'il n'y avait aucune cause de surveillance policière en ce moment au Canada », a-t-il insisté en point de presse. Presse canadienne (Le Devoir, Le Soleil)

Advocates urge Grits to reduce number of women in prison
Sometimes when she goes to the grocery store, all Alia Pierini can do is sit in the parking lot, unable to bear the idea of going inside. She tries a different store, but Pierini, 31, often ends up coming home without the food she had planned to buy for lunch. "I feel like a big loser, to be honest, but I can't help it," the former prisoner told a news conference Thursday as she described the lingering anxiety, panic and fear she still feels as a result of months spent alone in solitary confinement. Pierini, from Chilliwack, B.C., was behind bars for 44 months after she was convicted on drug and assault charges. The last stretch of time she spent in solitary lasted a full eight months. Now a regional advocate for female prisoners in federal custody, Pierini joined the Canadian Association of Elizabeth Fry Societies, which provides support for women and girls in the justice system, in calling on the Liberal government to reduce the number of women behind bars. The association's longtime executive director, Kim Pate - newly recommended for the Senate by Prime Minister Justin Trudeau - urged the government to give judges the discretion to overturn or alter the mandatory minimum sentences brought in by the previous Conservative government. Pate also recommended making more use of sections of the Corrections and Conditional Release Act that allow federal inmates to be transferred to a provincial facility - or a hospital, such as in cases of mental illness - and for aboriginal communities to provide their own correctional services. **Public Safety Minister Ralph Goodale**, who is working with Wilson-Raybould on reviewing the inquest recommendations, has said that when it comes to administrative segregation, the government is looking at reforms that touch on everything from policy and programs to physical infrastructure and hopes to have specific proposals sometime this winter. "***We need to dramatically change the scenario, and we're working at that***," **Goodale said** last week. Canadian Press (Times & Transcript, B3, Daily Gleaner, Red Deer Advocate)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Ottawa exigera l'installation d'enregistreurs dans les locomotives**

Ottawa exigera dorénavant l'installation d'enregistreurs audio-vidéo dans les locomotives, comme le recommandait le Bureau de la sécurité des transports, a annoncé jeudi le ministre fédéral des Transports. Marc Garneau a indiqué que ces appareils serviront aux enquêtes sur les accidents comme celui de Lac-Mégantic, qui a fait 47 morts à l'été de 2013. Le ministre a aussi promis que l'examen de la Loi sur la sécurité ferroviaire sera terminé en 2017 plutôt qu'en 2018, afin de renforcer plus rapidement la sécurité du réseau de chemins de fer. M. Garneau était à Montréal, jeudi matin, pour présenter sa stratégie «Transports 2030» - fruit de consultations que le nouveau ministre a menées depuis six mois. «Des accidents surviendront toujours, mais nous devons tirer des leçons de notre expérience pour tenter de les éviter à l'avenir», a-t-il lancé. Le président-directeur général de la Compagnie des chemins de fer nationaux du Canada (CN) a accueilli favorablement l'annonce concernant l'installation d'enregistreurs. Par voie de communiqué, Luc Jobin a souligné qu'il s'agit d'un «outil puissant et important» afin de comprendre les facteurs provoquant des accidents. Le Soleil, 14; Canadian Press (Times and Transcript; Whig-Standard)

*** Recording captures countdown to oil disaster**

The officer of the watch aboard the tugboat Nathan E. Stewart checked in with the Coast Guard's marine traffic centre in Prince Rupert late on the evening of Oct. 12, making a routine report of his vessel's progress through the inside passage of B.C.'s north coast as it passed Freeman Point, pushing a 100metre-long empty fuel barge. After confirming there was no other marine traffic in the area, the official with the Coast Guard's Marine Communications and Traffic Services (MCTS) concluded the radio exchange, wishing the bridge crew a "safe watch" as the articulated tug and barge headed south toward Milbanke Sound on a route through the heart of the Great Bear Rainforest. But the night ended in disaster, with the tugboat running aground and a large oil spill lapping at the shores of the rain forest. The accident occurred as the federal Liberal government was preparing to respond to British Columbia's calls for a "worldleading marine oil spill response" plan as early as Monday - and weeks ahead of a decision on the fate of Kinder Morgan's proposed oil pipeline expansion to the west coast. Audio recordings obtained by The Globe and Mail reveal how first responders struggled to get a clear picture of the unfolding

disaster, while the crew of the U.S.-based tugboat sought to manage the accident in hostile waters. Globe and Mail, S1

*** Feds to unveil coastal protection plan, face B.C. vs. Alberta choice in pipeline politics**
The Trudeau government, put on notice by its own advisory panel that it must choose between B.C.'s interests and those of Alberta when deciding whether to approve the Kinder Morgan pipeline expansion, is expected to announce a new coastal protection strategy within days. B.C. Premier Christy Clark has insisted for years that her government won't allow an oilsands pipeline project to proceed unless Ottawa meets her conditions, which include the need for a "world-leading" marine and land-spill response regime. Federal Transport Minister Marc Garneau, scheduled to be in Bella Bella Sunday to observe the impact of a recent diesel oil spill, told a Montreal audience that Ottawa is serious about protecting Canada's coasts. He said Thursday that will announce details "in coming days" of a plan to improve tanker safety and spill response regimes on Canada's coastlines. "We must and we will offer more robust environmental protections for our coastal areas and oceans," Garneau said. "Canada needs a national world-class plan to increase maritime safety and improve emergency response and strengthen partnerships with indigenous peoples and coastal communities." Postmedia News (Vancouver Sun; Vancouver Province)

*** Soil dumping to resume at Shawnigan Lake, B.C., following court ruling - Appeal court overrules previous decision by B.C. Supreme Court**
A B.C. Court of Appeal ruling has cleared the way for dumping to continue at a Vancouver Island contaminated soil facility. The decision overturns a B.C. Supreme Court ruling that previously gave the Cowichan Valley Regional District the authority to prohibit soil dumping under its local bylaws. The Shawnigan Lake soil facility is categorized as a mining activity because the operation involves filling an old quarry. The site has drawn controversy for years. Many residents say they're concerned that contaminated dirt could taint the water of Shawnigan Lake, which thousands of people in the area north of Victoria rely on for drinking water. The soil dump has received several warnings from the Ministry of Environment over water escaping the property. But the ministry has been satisfied with fixes made, allowing it to continue operating under a provincial permit. Canadian Press (CBC News) (2016-11-03)

*** Earthquake felt in Trout Brook area**
Residents in the Trout Brook area may be a bit shaken following a small earthquake Tuesday night. The 3.1-magnitude quake, while small, led to at least 30 felt reports to Earthquakes Canada. "This is about the size where you'd expect that people would have felt it close to where it originated from, so maybe 20 kilometres to 50 kilometres [away from the initial site] ... people would have felt it," said seismologist Michal Kolaj in a phone interview from Ottawa... The strength of the earthquake, a magnitude of 3.1, is not uncommon for the area, said Kolaj. In terms of historical seismicity in New Brunswick, in 1982, there was a series of earthquakes near the Miramichi area. "New Brunswick has had 5.0 magnitude to six ... historically, but these are rare events," he said. "There was the McAdam swarm [in February 2016 in the village of McAdam area], which was a series of earthquakes that occurred in [southwestern] New Brunswick. We tend to lump New Brunswick into what we call the northern Appalachian seismic zone, so it's an area where we do expect earthquakes, but of course, we're not talking about [a place] like west coast B.C., which is on the play boundary type of thing. We don't have those types of things in Eastern Canada, but we do get earthquakes." Times and Transcript, B5

*** Missing hunting guide still not found - Search to resume at daybreak today**
A search Thursday didn't yield any results for missing 49-year-old male hunting guide Randy Hilliard from Codroy Valley. The RCMP said the man was reported missing around 1:04 p.m. Monday with his last known location near Little Mica Pond, located inland on the opposite side of the highway from the Jeffrey's area in Bay St. George South. Brian Joy, co-ordinator of the Barachois Ground Search and Rescue team, said members have been on the ground since Wednesday afternoon; however, he said little searching was done due to the weather conditions in the area. He said a Royal Canadian Air Force Cormorant helicopter made its way to the area on Thursday afternoon and he and another search and rescue member went up to help out as spotters for about two hours; however low cloud cover hampered the search. "The cloud cover was so low we could only fly about 70 feet from the ground; whereas in good conditions we were told the helicopter flies at about 500 feet for visibility at a further distance," Joy said. He said in the conditions they were working in, the missing man would have to be straight belwo

them to be spotted. Joy said 16 search and rescue members were on hand, joined by members of the Stephenville-Kippens-Port au Port Search and Rescue team. Plans are to resume the search at daylight Friday and hopefully get a window for an air search. St. John's Telegram, A8

*** Waiting for the Big One**
An opinion piece states "On a recent trip to Fort McMurray, I met a woman who shared a sad but familiar story. Rewaida's family lost their home in the wildfires last May. Still shaking her head in disbelief, Rewaida told me that before the disaster, her family often donated to the Canadian Red Cross when others needed help somewhere in the world. She never expected to need that help herself. Like more than 80,000 others from the Wood Buffalo region, Rewaida and her family fled with almost nothing as flames engulfed the forests. Struck by this tragedy, Canadians from coast to coast responded like never before, so the Red Cross could help Rewaida and all those needing support. But Rewaida's story illustrates another important fact. No one wants to think disasters can happen to them or those they love. At the Red Cross, we know how often things go wrong. Every three hours, the Red Cross responds to emergencies large and small - from fires in Canadian neighbourhoods to earthquakes overseas. Too often, people tell us they weren't ready and just didn't know what to do. Now, six months since people were caught off-guard by the Alberta wildfires, the Red Cross is calling upon our nation and every Canadian to get better prepared for disaster. Although none of us wants to imagine worst-case scenarios, our experience and our mission compel us to do exactly that. And what keeps us up at night are thoughts about the 'Big One' - a catastrophic emergency hitting this country. We've already seen what earthquakes can do to industrialized nations like Japan. Our message is clear: It's time for Canadians to prepare robust, comprehensive and collaborative pre-disaster plans. It is time to invest in emergency preparedness, so that our cities, towns and small communities can protect their residents, forests, coasts and infrastructure from fires, storms, earthquakes, floods and other natural disasters." iPolitics

*** Put a price on pollution to improve people's health**
An opinion piece states "Climate change is the biggest health threat of the 21st century, according to the World Health Organization. What does it mean for Canada and how can we respond? Canada has already seen smoke-related health impacts and stressful evacuations as the result of increased wildfires; the spread of Lyme disease in New Brunswick; and food security and mental health challenges related to rapid changes in the Far North, which is two to three degrees Celsius warmer than it was in the 1950s. Climate change is no longer just a suspected diagnosis. It's a health emergency, causing systemic damage to the well-being of many around the world, including Canada. The consequences are far-reaching: climate-related drought and subsequent crop failure are exacerbating factors in the conflict in Syria, for example.. The Lancet, one of the world's most respected medical journals, reports that based on current emissions trajectories, temperature increases over the next 85 years may bring dire consequences. It says resultant sea-level rise, malnutrition, conflict and other destabilizing factors would be 'incompatible with an organized global community.'" Canadian Press (Daily Gleaner, A8)

*** Shift to renewables easy on the pocketbook - Nuclear power infrastructure is expensive to maintain - it's time for Ontario to change**
An opinion piece states "We just weathered one of the hottest summers on record in Ontario. We're not alone: Around the world, temperature records are being set and broken like it was an Olympic event. Storms get more severe, people wade through streets flooded chest-deep in water, and wildfires consume huge areas left bone-dry by 100-year droughts that now seem to be annual events. We know we can't simply ignore what climate change is doing to our planet. But we have left the problem unchecked for so long that we now need ambitious solutions that can sometimes feel out of reach. But despite the perception that change will be difficult, solutions like shifting to 100-per-cent clean renewable energy are actually well within our grasp. In fact, more than 1,000 jurisdictions around the world have already committed to going 100-per-cent renewable by 2050, including the City of Vancouver. In 2016, wind power alone provided enough energy to meet 97 per cent of Scottish household electricity needs. In Canada, the power supplied by renewable sources such as wind, solar and biomass, grew sixfold in the last decade. Progress is happening faster than we think." Hamilton Spectator, A15

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Hillary Clinton was warned in 2010 that U.S.-Canada intelligence sharing 'may be controversial for Canadians'
Huma Abedin warned Hillary Clinton in 2010 that cables from the U.S. Embassy in Ottawa could cause problems for Stephen Harper's government, emails released Thursday show. "Two cables set for release contain especially sensitive information on counterterrorism and intelligence sharing. The depth of bilateral cooperation detailed in the cables may be controversial for Canadians," said longtime Clinton-advisor Abedin. The email between Abedin and the then-U.S. Secretary of State is one of 357 released Thursday by the State Department in response to a lawsuit. More emails are scheduled for release Friday. Abedin's email was sent on Nov. 27 2010. On Nov. 29 the New York Times published a story detailing a 2008 conversation between the former head of the Canadian Security Intelligence Service Jim Judd and senior State Department counsellor Eliot Cohen. (...) One of the most significant revelations was the Canadian government's concern in 2004 that they were being locked out of the Five Eyes network as punishment for not joining the U.S.-led war in Iraq. One leaked document said the Canadian government had: "expressed concern at multiple levels that their exclusion from a traditional 'four-eyes' construct is 'punishment' for Canada's nonparticipation in Iraq and they fear that the Iraq-related channel may evolve into a more permanent 'three-eyes' only structure." The Five Eyes network is an alliance between the signals intelligence agencies of Canada, the United States, Australia, the United Kingdom and New Zealand. Signals intelligence agencies focus on monitoring people via telephone and computer instead of by relying on human agents to monitor them in person. The five countries divided the world during the Cold War with each spying on certain regions and all sharing the information they intercepted. The United States temporarily restricted Canada and New Zealand's access within the Five Eyes network following both countries reluctance to join the 2003 war in Iraq. National Post

* **Federal court ruling deems CSIS data mining actions unacceptable**
The Federal Court of Canada has handed down a ruling stating that CSIS (Canadian Security Intelligence Service) illegally stored data for over 10 years. Justice Simon Noel reportedly ruled Thursday that, since the information was collected using judicial warrants, the federal agency breached its duty to inform the court of its mechanisms. The *CBC* reports that since the information was not collected to national security threats against Canada, the data should not have been retained by CSIS. CSIS published an statement which conveys that the agency accepts the decision of the court and will take steps to respond. “The Federal Court has recently ruled on the retention of associated data linked to third party information. CSIS fully accepts the Court’s decision, and has taken immediate actions to respond. Given the Court’s decision with respect to third-party data, CSIS has halted all access to, and analysis of, associated data while we undertake a thorough review of the decision in order to assess potential operational and legal impacts, and determine our way forward,” read the letter. When asked about whether Canadians would be able to rebuild their trust in the agency, chief general counsel for Justice Canada Robert Frater told the CBC that CSIS now understands its limits. Mobile Syrup (2016-11-03)

* **« Aucune activité » de surveillance par la GRC ou le SCRS, assure Trudeau**
Le directeur du SCRS ne peut confirmer que des journalistes n'ont pas été visés par des mandats de surveillance par le passé. Après le SPVM et la SQ, les journalistes ont-ils aussi été surveillés par les corps policiers fédéraux ? Après avoir vérifié auprès de la GRC et du SCRS, le premier ministre du Canada Justin Trudeau se dit « rassuré » qu'il « n'y a effectivement aucune activité » de surveillance de journalistes par les corps policiers fédéraux. Le directeur du SCRS, Michel Coulombe, n'est toutefois pas aussi affirmatif. S'il dit que « ce qui s'est passé au Québec ne se produit pas au niveau fédéral », M. Coulombe a refusé de confirmer de façon claire que des journalistes n'ont pas été visés par des mandats de surveillance du SCRS au cours des cinq dernières années. Questionné hier en conférence de presse à savoir si le Service canadien de renseignement de sécurité (SCRS) a obtenu des mandats de

surveillance sur des journalistes au cours des cinq dernières années, le directeur du SCRS Michel Coulombe a répondu « ne pas commenter sur des questions opérationnelles ». Il a servi la même réponse quand il lui a été demandé s'il avait entamé des vérifications internes cette semaine pour savoir si son organisme avait déjà surveillé des journalistes, comme l'a fait la Sûreté du Québec qui a dévoilé avoir mis six journalistes sous surveillance _ parfois durant des années. La Presse +; Times Colonist

*** Quebec to probe surveillance of media**

Quebec has announced a public inquiry into press freedom and police surveillance amid fresh disclosures that the monitoring of some journalists' cellphones lasted as long as five years and targeted an ever-growing list of reporters. On Thursday, new evidence added to growing concerns about the scope of the police spying. Three of Quebec's most respected investigative journalists said they were told by the provincial Sûreté du Québec that their phone data had been tracked from 2008 to 2013 - the very years police were unearthing and exposing corruption in Quebec's construction industry. The disclosures suggest police would have been able to access logs of calls that included those from whistle-blowers dealing with highly sensitive matters. "During this whole period - I feel sick about it - the police had their noses in our phones," Alain Gravel, an award-winning Radio-Canada journalist, said on the public broadcaster on Thursday. Two other Radio-Canada television journalists, Marie-Maude Denis and Isabelle Richer, say they too were told they were under scrutiny for five years. All three had been identified on Wednesday as part of a group of six journalists targeted for surveillance by the provincial police. Globe and Mail, A3; Montreal Gazette; Postmedia Network (Toronto Sun, Winnipeg Sun, Ottawa Sun, Edmonton Sun)

Public inquiry into spying on journalists

The normally tension filled relationship between the media and government took a strange twist this week in the National Assembly. Politicians - from the premier down - were standing up for freedom of the press and the protection of journalistic sources. Thursday's decision by the Couillard regime to go whole hog into a commission of inquiry over police spying on reporters - the same professionals who have made the Liberal government's life miserable for years by exposing corruption and ethical dalliances - will go down in history. For one thing, it's a first in Quebec, launched post-haste by a government known for notorious dithering on issues of ethics and integrity. (…) The panel is to include a representative of the media and the police and will be presided over by a judge. It will have similar powers to the Charbonneau Commission, meaning it can solicit opinions from experts, convene witnesses and hold public hearings. It was a stony-faced Premier Philippe Couillard who rose in the legislature to confirm the decision. He said the government's decision to act swiftly "illustrates the gravity of the issue." Fundamental democratic principles - freedom of the press and the independence of political, judiciary and journalistic institutions - were on the line, he said. "Public confidence is shaken," Public Security Minister Martin Coiteux told reporters earlier at the Vallée news conference. Parti Québécois Leader Jean-François Lisée, who Thursday morning had asked again that the Bureau des enquêtes indépendantes be handed the issue, welcomed the government's decision. Montreal Gazette, A1/Front; Le Devoir; National Post; Le Droit (Le Soleil)

*** Grands maux, grands remèdes**

Un éditorial rapporte, « L'« affaire Lagacé » a pris de l'ampleur. Il est normal que les mesures correctrices en prennent aussi. Plus tôt cette semaine, les Québécois ont appris que le journaliste Patrick Lagacé avait fait l'objet d'une filature électronique où tous ses appels, textos et données de géolocalisation ont été épiées pendant plusieurs mois. Seule la police de Montréal, qui avait obtenu l'approbation d'une juge de paix, était concernée. La population croyait que cette histoire inquiétante était, somme toute, assez circonscrite. Puis, comme un fil qui se détricote d'un chandail de laine, trois autres journalistes ont été ciblés : Fabrice de Pierrebourg, autrefois de La Presse, Monic Néron, du 98,5 FM, et Félix Séguin, du Journal de Montréal. Mercredi, l'histoire a pris une ampleur insoupçonnée : la Sûreté du Québec est aussi impliquée. Six autres journalistes -- Isabelle Richer, Denis Lessard, André Cédilot et Éric Thibault -- ont parfois fait l'objet de filatures bien plus larges, et sur une bien plus longue période. Dans les cas d'Alain Gravel et Marie-Mau-de Denis, qui pilotaient l'émission Enquête, sur les ondes de RadioCanada, l'espionnage téléphonique a duré cinq ans. A peu près les mêmes années au cours desquelles elle et lui déshabillaient l'industrie de la construction au Québec et fournissaient au gouvernement les raisons de créer ce qui a été la commission d'enquête Charbonneau. Qu'est-ce que ce sera demain ? La

Gendarmerie royale du Canada ? Notre corps d'espionnage, le Service canadien du renseignement de sécurité ? Le Centre de la sécurité des télécommunications ? En voilà d'autres qui n'ont peu à faire des contraintes sur les métadonnées de nos appels ! Le Droit (La Presse); Le Nouvelliste

*** Fragile est la démocratie**

Un article d'opinion note, « L'onde de choc se fait sentir à travers le Québec. La police de Montréal et la sûreté du Québec espionnent les journalistes. des collègues dont le champ d'activité est l'enquête. Que des policiers enquêteurs les perçoivent comme des compétiteurs ne devrait surprendre que les naïfs et plus largement tous ceux qui croient que la démocratie est inscrite dans les fondements mêmes de la société. (...) En ce sens, la démocratie est un idéal. La réalité démocratique est une autre affaire. La police, par définition, protège les citoyens, mais elle est aussi une institution répressive. Son éthique, sa morale ne lui appartiennent pas en pro-pre. La police doit être indépendante de la politique, mais ses pouvoirs lui sont conférés par les parlements et les Assemblées nationales. L'espionnage policier rendu public cette semaine en dit long sur le déra - page de notre démocratie. Que les policiers se soient présentés devant un juge pour obtenir les autorisations pour mettre la main sur les registres téléphoniques des journalistes ne peut leur servir d'excuse. Faute de trouver eux-mêmes les sources, ils instrumentalisent mes confrères. Et les juges qui ont accordé leur demande sans se questionner ont fait preuve d'une légèreté de jugement, ce qui pour un juge, fût-il juge de paix, est une faute professionnelle. Agence QMI (Journal de Montréal, Journal de Québec)

*** Spying an attack on freedom**

An editorial states, "you thought we are living in a country with freedom of the press you need to think again after revelations this week. A well known journalist, Patrick Lagace with La Presse, discovered Montreal police had been spying on his whereabouts using GPS on his phone, monitoring his calls and texts for an extended period this year. It is important to know Montreal police did not consider Lagace a threat to national security nor was he a threat to public safety, which may have been a reasonable argument in favour of the surveillance. Montreal police simply wanted to know which police officer had been leaking information to the press. The revelation has made international news. This sort of surveillance may be common in developing countries but not many people would have believed it would happen in Canada. The vice president of information at La Presse, Eric Trottier, told media this week "this is the kind of thing you see in Russia, or North Korea." He called the practice extremely dangerous." Medicine Hat News

*** Liberals look at more changes to foreign investment rules**

The federal government's decision to more quickly loosen rules on foreign investment in Canadian companies is a signal that the country is more open to international money and more changes are on the way, Finance Minister Bill Morneau said Thursday. He didn't detail what further changes could be coming, or what protected industries - telecommunications and cultural companies, for example - the government may open to foreign investors. Morneau said that whatever rules the government lays down on foreign investment will protect Canadians and national interests, while giving investors clarity so they can consider making investments here. "If we're able to do things that create excellent jobs for Canadians, those are things we should be doing," Morneau said in an interview with The Canadian Press. Prime Minister Justin Trudeau and other cabinet ministers have been trying to sell investors on the idea of Canada as a great investment destination and this week they loosened rules about foreign takeovers of domestic companies and foreign investment levels in airlines. The federal foreign investment law gives the government enormous powers to review takeovers or mergers involving domestic and foreign companies and block those that don't provide a net benefit to the country. Cabinet can also block deals that may raise national security issues, but the act doesn't clearly define national security. The Liberals loosened the rules for reviews of foreign investment in their fall economic update, raising the threshold for review to $1 billion from $600 million and doing so more than two years sooner than previously planned. The government also promised to publish guidelines by the end of the year to explain which investments would be subject to national security reviews. Canadian Press (Chronicle-Herald, B4)

*** Poll suggests only 9% of Canadians remember infrastructure spending as budget initiative**

When Finance Minister Bill Morneau stood up in the House of Commons Tuesday to announce he would be adding tens of billions in additional money into an already hefty infrastructure plan, he had more than

just conviction driving him. The Liberal government also had polling that suggested infrastructure spending was the most memorable part of a largely forgettable economic plan. The poll was conducted in June and the questions suggest that even then the government wanted to explore just how enthusiastic Canadians were about infrastructure spending. (…) The majority of Canadians gave a passing grade when asked whether the government was on the right track. The exception was Alberta, where there were more negative responses than positive. Under the title "management of issues," Trudeau's Liberals got the highest marks for the way they have dealt with the question of national security. CBC News

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Un transporteur reçoit sa sentence
Le jugement est tombé au dossier d'un homme de Saint-Césaire reconnu coupable d'avoir voulu importer illégalement 14,3 tonnes de tabac en vrac. Une amende de 10 000 $ et un an de prison à domicile ont récemment été imposés à Jean-François Beaulieu, 42 ans, qui possède une entreprise de transport portant son nom. M. Beaulieu avait été arrêté alors qu'il tentait de rentrer au pays par le poste frontalier de Saint-Armand/Philipsburg, un peu avant minuit le 21 novembre 2013. Son camion-remorque contenait 132 boîtes. Les agents ont remarqué qu'une forte odeur de tabac s'en dégageait. Selon l'Agence des services frontaliers du Canada (ASFC), la somme des droits et taxes éludés s'élevait à plus de 1,6 M$. «La Loi sur les douanes stipule que toutes les marchandises qui entrent au Canada doivent être déclarées», avait indiqué le directeur général régional de l'ASFC, Benoît Chiquette. «La contrebande de marchandises, les fausses déclarations et les autres infractions liées aux douanes peuvent mener à des sanctions administratives et à des poursuites judiciaires.» Voix de l'Est (La Presse)

Deportation order stayed for prisoner
A Nigerian man who was facing deportation amid a court fight to secure a $60,000 award by an Ontario judge over mistreatment during jail lockdowns has been granted a last-minute reprieve. Jamil Ogiamien, 46, was awarded the compensation in a decision in May by Superior Court Justice Douglas Gray. But the ruling is under appeal by both the federal and Ontario governments and not scheduled to be heard until February. (…)He was scheduled to be deported on Friday to Nigeria, a country he left as a child and has no memory of. Ogiamien was arrested and charged by Peel Regional Police in April 2013 for impaired driving and possession of cannabis. Although he was acquitted of the charges a year later, he continued to be held by Canada Border Services Agency for alleged immigration violations, until June 1, when the court ordered the compensation and his immediate release from detention. However, border enforcement officials arrested him again in October when he showed up in their office for his regular reporting. Toronto Star, GT6

Smugglers win new deportation hearing
Two men caught trying to bring people from the United States into Canada across the St. Lawrence River on an inflatable raft have had their deportation orders put on hold in the wake of last year's landmark Supreme Court of Canada ruling on human smuggling. (…) They found Tamazi Gechuashvili, then 59, and a citizen of Georgia, the former Soviet republic. He said he was lost, the Immigration and Refugee Board (IRB) heard. The officers searched his vehicle and discovered a patch kit for an inflatable rubber raft and a backpack containing a letter to Robert Comeau. Gechuashvili, who had applied for permanent resident status in Canada, was arrested. The crew on the other side fared no better. U.S. Border Patrol found Michael Robertson, a Canadian, with two foreign nationals, also Georgians. Robertson admitted he was trying to smuggle the two into Canada. (…) Gechuashvili and Vashakidze were deemed inadmissible to Canada on the grounds of organized criminality for international people smuggling. Both were ordered deported, but have not yet been removed. Since then, the Immigration and Refugee Protection Act changed after a court challenge. The Supreme Court reversed the interpretation of the organized criminality section last November, ruling only smugglers obtaining financial or material benefit could be considered transnational organized crime participants. Gechuashvili and Vashakidze appealed to the Federal Court for their cases to be reassessed by the IRB. Postmedia Network, N3 (Montreal Gazette, Edmonton Journal, Calgary Herald, Star Phoenix, Windsor Star, London Free Press, Leader-Post, The Province, Ottawa Citizen, National Post)

Refugee pleads guilty to theft, avoids possible deportation
A refugee from Iran who stole $3,500 in goods from a Home Depot in Waterloo could have faced deportation but caught a break in Kitchener court on Thursday. Ali Mahmoudian, 37, put several items in a garbage can at the King Street North store, closed the lid and went through self-checkout, paying for only the can. (...) He pleaded guilty on Thursday to theft under $5,000. Justice Colin Westman struck the conviction when the prosecution and defence jointly recommended a conditional discharge. A conviction may have led to deportation. Kitchener-Waterloo Record, B4

*** Monsef's critics are spreading 'misinformation,' Trudeau says**
Prime Minister Justin Trudeau says political detractors are conflating Democratic Institutions Minister Maryam Monsef's complex refugee story with that of deliberate dishonesty as questions about her birthplace linger. (...) The revelation has prompted questions about whether Ms. Monsef misrepresented her birthplace. Sun Media has reported that a file has been opened to investigate Ms. Monsef for possible citizenship fraud, although sources tell The Globe this is not the case. Mr. Trudeau was asked Thursday following a town-hall event with high-school students to mark his first year in government whether the information that Ms. Monsef was born in Iran could cause her Canadian citizenship to be revoked. The current law allows for citizenship to be revoked without a hearing if a Canadian is found to have misrepresented him or herself in their application. "This is a situation in which people are conflating, for political reasons, the very real situation that so many refugees face - of fleeing from conflict situations where there is not always perfect clarity on which side of a border one is born on, or the conditions in which one is raised, and mixing that with very deliberate acts of omission or else dishonesty in trying to gain Canadian citizenship through fraudulent declarations or attestations," Mr. Trudeau said. Globe and Mail, A6, Presse canadienne (Le Droit, Le Devoir), Canadian Press (Calgary Sun, Edmonton Sun, Toronto Sun, Winnipeg Sun, Ottawa Sun, Kingston Whig-Standard, London Free Press)

*** Mentally ill Edmonton man in deportation limbo could be sent to Montreal**
A mentally ill deportee stuck in an Edmonton jail may be sent to Quebec to get health services not available in Alberta. (...) Gelle, who fled-war-torn Somalia with his family as a child, has spent half his life and nearly his entire Canadian existence in and out of jail. Now 31, he has suffered from severe mental illness since he was 13, according to his mother, who also lives in Edmonton. He has been convicted of dozens of crimes but has remained in the remand centre after serving sentences because he is considered too dangerous to be released. Authorities hope to deport him but the Somali government has said it won't accept mentally ill people being returned to that country. At Monday's review, Sebastian Thibodeau, the hearings officer lawyer representing the government, said the goal is to stabilize Gelle so he can still be deported. (...)But Gelle's lawyer, Ruth Williams, told officials she has found no local alternative to address the severity of Gelle's condition, which requires long-term treatment so he can be stabilized. As a result, Canadian Border Services Agency officials say Gelle might have to be sent to Louis-Philippe Pinel Institute, a psychiatric facility in Montreal. CBC News

*** Bientôt plus de compagnies aériennes à bas prix**
Ottawa a ouvert la porte jeudi aux investisseurs étrangers dans le secteur aérien afin de créer des lignes à bas prix. «On veut créer plus de compétition pour augmenter le nombre de destinations et faire baisser les prix des billets d'avion pour les consommateurs», a lancé le ministre fédéral des Transports, Marc Garneau. (...)Le ministre Garneau souhaite une réorganisation. Conscient du temps d'attente «inacceptable» à l'aéroport Pierre-Elliott-Trudeau, le ministre fédéral Marc Garneau croit qu'il faut réorganiser le passage aux douanes. «Pour améliorer le contrôle de sûreté, il y a la technologie, pour les douanes, il y a la question de l'utilisation des ressources pour les heures de pointe et la possibilité d'avoir plus de guichets automatisés, tous ces facteurs seront examinés», a indiqué Marc Garneau, ministre fédéral des Transports. Rappelons que cet été, d'importantes files d'attente s'étaient créées en amont des douanes, certains passagers devant patienter jusqu'à trois heures avant d'atteindre un guichet. À l'époque, le Syndicat des Douanes et de l'Immigration avait alors déploré le manque criant d'effectifs. Bien qu'aucune décision ne soit encore prise, le ministre Garneau a confirmé se pencher présentement sur la question avec la Sécurité publique du Canada. Agence QMI (TVA Nouvelles) (2016-11-03)

*** Talent is global today. Canada needs to adapt**
An opinion piece states, "President and CEO of the Canadian Employee Relocation Council in Toronto T here is strong consensus today that the key to future economic prosperity is through knowledge-based economies. (…)Immigration is but one of several policy options available to the government to cushion the impact of a growing skills shortage and an aging population. For that reason, Immigration Minister John McCallum is on the right track in announcing increased immigration targets of 300,000 for 2017, one of the most ambitious targets in more than a century. (…) Canada must adapt to this reality and implement more flexible rules to facilitate the movement of highly skilled talent into our country, even if they're not always interested in permanent residency. Earlier this year, we conducted an employer survey on the impact of changes to the temporary foreign worker program introduced by the former Conservative government. Fifty-nine per cent reported the changes have had a negative impact on their ability to recruit skilled workers, and 16 per cent had moved work outside of Canada." Globe and Mail, B4

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Microsoft to block Windows flaw used by Russian hackers**
Microsoft says it will release a patch next week to address vulnerabilities in its Windows operating system exploited by a group reportedly tied to the Russian government and linked to the theft of emails from the Democratic National Committee. The group, called Strontium by Microsoft but Fancy Bear or APT 28 by other security researchers, has been tied to Russian state-sponsored hacking. U.S. government intelligence agencies have said Russian groups were behind attempts to interfere with this year's U.S. presidential election. Strontium has targeted government agencies, diplomatic institutions, military organizations, plus defence contractors and public policy research institutes, Microsoft's executive vice-president of Windows and devices group, Terry Myerson, said in a blog post. The patch doesn't mean that Strontium or other hackers will no longer be able to launch attacks, merely that they will need to find new vulnerabilities. Fancy Bear/Strontium has a history of using security holes in software that are unknown. USA Today (Hamilton Spectator, A13; Waterloo Region Record; Toronto Star)

*** Why light bulbs may be the next hacker target**
The so-called Internet of Things, its proponents argue, offers many benefits: energy efficiency, technology so convenient it can anticipate what you want, even reduced congestion on the roads. Now here's the bad news: Putting a bunch of wirelessly connected devices in one area could prove irresistible to hackers. And it could allow them to spread malicious code through the air, like a flu virus on an airplane. Researchers reported in a paper made public on Thursday that they have uncovered a flaw in a wireless technology that is often included in smart home devices like lights, switches, locks, thermostats and many of the components of the much-ballyhooed "smart home" of the future. The researchers focused on the Philips Hue smart light bulb and found that the wireless flaw could allow hackers to take control of the light bulbs, according to researchers at the Weizmann Institute of Science near Tel Aviv and Dalhousie University in Halifax. That may not sound like a big deal. But imagine thousands or even hundreds of thousands of Internet-connected devices in proximity. Malware created by hackers could be spread like a pathogen among the devices by compromising just one of them. And they wouldn't have to have direct access to the devices to infect them: The researchers were able to spread infection in a network inside a building by driving a car 75 metres away. New York Times (Waterloo Region-Record, C10; Toronto Star)

*** How to protect yourself (and your phone) from surveillance**
Cyber security and online privacy experts aren't surprised by revelations that Quebec and Montreal police have been spying on several journalists. In fact they say journalists - and the public at large - are far too careless. When the news came out this week that police had been spying on LaPresse journalist Patrick Lagacé, it was no surprise to Geneviève Lajeunesse with Crypto Québec. "I was shocked by their shock," she said. Here are five key tips to sum up Lajeunesse's advice on protection from online surveillance, whether you're a journalist, an anonymous source, or a citizen who wants to protect your privacy. CBC News (2016-11-03)

LAW ENFORCEMENT / APPLICATION DE LA LOI

New Brunswick RCMP's first e-joints seizure earns man 2 years in prison
An Ottawa man was sent to prison on Thursday after being caught trafficking marijuana and e-joints in southeastern New Brunswick. Stephane J. André Fournier, 40, pleaded guilty in Moncton provincial court in late January to possessing marijuana, hydromorphone and cannabis resin. The prosecutor withdrew three counts of trafficking those substances. Judge Alfred Brien followed a joint recommendation on Thursday for two years in prison. Prosecutor Patrice Deschenes told the court that a Mountie pulled over a vehicle on the Trans-Canada Highway in River Glade on Oct. 7, 2015. Upon approaching the vehicle, the officer smelled fresh cannabis and further investigation resulted in the seizure of three briefcases containing 12 kilograms of marijuana, several e-joints or electronic marijuana vapour cigarettes that contained cannabis resin, along with some hydromorphone pills. He admitted to police he was transporting the illegal substances from Ottawa to Nova Scotia for re-sale. The defence told the court the offender committed the crimes out of economic necessity. "Clearly this was a bad decision on your part," said Brien. New Brunswick RCMP said after the arrest that it was their first seizure of e-joints in this province. Times & TranscriptTimes & Transcript

* **Des francophones de la GRC intentent une action collective**
Des francophones de la Gendarmerie royale du Canada veulent intenter une action collective contre leur employeur en raison de la discrimination et du harcèlement qu'ils disent subir à cause de leur langue. «Les opportunités d'avancement sont de beaucoup diminuées pour des policiers francophones, alors que dans l'autre sens, un unilingue anglophone peut accéder à un haut grade», s'insurge Paul Dupuis, un retraité de la police fédérale, à l'origine de ce recours. Cet ancien sergent d'état-major, qui a aussi été président de l'Association des membres de la police montée du Québec (AMPMQ), n'est pas tendre envers son ex-employeur. Dans la demande déposée au palais de justice de Montréal, il affirme avoir été victime «d'une campagne de harcèlement systématique» à cause de son militantisme pour ses droits linguistiques et de ses revendications pour créer un syndicat au sein de la police fédérale. «Après une campagne de harcèlement prolongée [...] M. Dupuis s'est senti de prendre sa retraite en 2016», peut-on lire dans le document de cour. Journal De Montreal; La Presse

Police seek details on suspect: RCMP-led homicide unit releases photo of 21-year-old man in hopes of gaining information from public
Homicide investigators are still trying to piece together the past of a young man who they believe drifted between Alberta and British Columbia before allegedly stabbing an Abbotsford high-school student to death in a random attack that has shocked the conservative suburb. On Thursday morning, the Lower Mainland's RCMP-led homicide unit released a photo of the 21-year-old suspect, which was captured by the security camera of a local Abbotsford business and shows the suspect just hours before he is alleged to have entered Abbotsford Senior Secondary School barefoot on Tuesday afternoon and stabbed two female students. In the photo, the slim young man wears running shoes, blue jeans, a camouflage hoodie and a backpack. Police are hoping the photo prompts more information from the public about the suspect, about whom they say they know very little. Spokeswoman StaffSergeant Jennifer Pound said the young man, who is in jail facing second-degree murder and aggravated assault charges, had no apparent connection to the community, the school or the two girls he is accused of stabbing. Globe and Mail

$100M radio network for first responders goes live
With the flip of a lever on a silver control box, a $100-million, state-of-the-art digital radio network for New Brunswick's first-responders went live on Thursday. It's called the New Brunswick trunk mobile radio project and it will allow 3,400 police, firefighters, paramedics, forest rangers, school bus drivers, and snowplow operators now - and up to 8,000 in the future - to communicate clearly, quickly, and easily. It replaces a 30-year-old system that lacked coverage in some parts of the province and didn't allow different agencies to talk to each other. (...)Larry Tremblay, RCMP assistant commissioner for J Division, said the new radio system will make communications between agencies smoother, more reliable and give wider coverage. "I can say this new system will enhance the safety of our police officers when they are out on call, as well as the safety of other first-responders assisting them," he said. "Every call we answer carries risks for all involved and this new system will help reduce that risk by ensuring better

communication." New Brunswick Fire Chiefs Association president Dan McCoy said information is one of the most important requirements when responding to a call. Daily Gleaner

Nanaimo sheriff rushed to hospital after exposure to fentanyl
The potentially lethal drug has become so rampant and led to so many fatal overdoses that the province has declared a health emergency and this incident reminds front line workers of the risk they run everyday. In the war on Fentanyl, Const. Justin Ickringill has gotten closer than any officer wants to be to the potentially lethal drug. "I was immediately light headed and dizzy," says the Nanaimo RCMP officer. "I had a racing heart and it caught me by surprise. (…)Monday a Nanaimo deputy sheriff became the latest front line worker to experience an accidental exposure to it. When conducting a gloved search of a prisoner at the RCMP detachment before transport to court she was exposed to the crystal-like substance in the pocket of a jacket being searched, and quickly became ill. "She was taken to the hospital in Nanaimo and the doctor determined that it was in fact Fentanyl that she was exposed to," says Dean Purdy of BCGEU's Corrections & Sheriff's Unit. "So from our standpoint it's a big concern for us because we would like to see some interim measures put into place so that we can try and prevent this." RCMP say fentanyl has now made its way into everything from marijuana, to cocaine and heroin. Chek News

Surveillance of reporters in Quebec to be probed: PM
As Quebec announced plans Thursday to hold an inquiry into freedom of the press and police surveillance of journalists, Prime Minister Justin Trudeau said spying on reporters is not happening at the federal level. The Quebec government said a public inquiry will be held against the backdrop of revelations that various forces monitored reporters' phones for years. A panel of experts that was announced this week will have all the powers typically granted to a commission of inquiry, including being able to compel witnesses to testify, said Justice Minister Stéphanie Vallée. "We consider it's important for the population of Quebec to trust their public institutions," she said. On Thursday, some of the reporters targeted by provincial police learned that authorities obtained years worth of phone logs. Meanwhile, the controversy reverberated in Ottawa, where Trudeau said monitoring of journalists does not take place. Trudeau told reporters he immediately contacted RCMP and CSIS leadership after news broke about the Quebec surveillance. "There is nothing of this sort happening at the federal level," he said. "We have actually very strong safeguards and protections in place to protect freedom of the press in the course of the business conducted by CSIS and the RCMP." Times Colonist; * Canoe

*** Former Mountie on trial in Moncton for impaired driving**
Arresting officer says Ronald Cleveland suggested he 'pretend that you never found me'. Former RCMP sergeant Ronald Cleveland is on trial in Moncton on a charge of impaired driving dating back to an incident in the early hours of March 21, 2014. Cleveland was released from the RCMP on a medical discharge earlier this year. Testifying Thursday, Const. Joel Arsenault described how uncomfortable he was arresting a superior officer. "Up until June 4, that was the worst day of my career," Arsenault said, referring to the day a few months later when three Codiac RCMP officers would be shot and killed by a lone gunman. Arsenault testified the RCMP had received a call about a possible drunk driver. The caller gave a license plate number that was traced back to Cleveland. Arsenault said he recognized his fellow RCMP member's name. CBC News

*** Halloween snatch and grab in Kelowna**
A cashier in Kelowna was the victim of a snatch and grab on Halloween night. Shortly before 10 p.m., Monday, Oct. 31 a man entered the Esso in the 2300 block of Highway 97 North and asked for a pack of cigarettes, according to a Central Okanagan Crime Stoppers media release. "When the clerk turned to get them, the man reached under the lottery ticket glass and grabbed a tray of $3 lottery tickets," it says. Roughly 55 tickets including Crossword, Bingo, Lucky Lines, Holiday Homes and Solitaire were stolen. The suspect is between 30 and 35 years of age with a short beard and wearing beige pants. He also had on a grey hoodie with orange writing on the front. Infotel

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

The Sun steps up again for victim: Murdered woman's brother turns to us for help in parole issue

For Chris Gill, the email was brief but exceedingly welcome. "Just a quick message to advise you that the offender in question did not go out on the scheduled ETA (escorted temporary absence) today," wrote Maurice Hebert, regional victim services manager for Corrections Canada. "I will be forwarding you a letter in the next few days to provide details in relation to our previous conversations." Score that a victory for a brother determined to ensure his sister's killer remains safely behind bars. The offender in question was Greg Ashford, who, at 23, strangled Gill's sister Faith "Faye" Russell, a University of Toronto dental school supervisor, and then went on to murder Brenda Garside, a pregnant Moncton prostitute, while he was on the run across the country in 1985. Ashford eventually surrendered and pleaded guilty to two counts of second-degree murder. Sentenced to life with no chance of parole for 20 years, he's at Dorchester Penitentiary in New Brunswick. Eligible for full release since 2005, he's always abandoned his application when Gill and his family went public with their opposition. Last year, Ashford reconsidered his request to attend four-hour Narcotics Anonymous meetings outside the prison after a Toronto Sun story questioned why the heroin addict was being allowed in the company of vulnerable women who wouldn't know of his past. Now he was angling for release again. Gill was shocked to learn a warden had the authority to overrule the security concerns of the parole board - a panel that had carefully examined Ashford's case last year and found he still posed "an above-average risk" to the community. He was consumed with rage towards women when he killed in the past and at his hearing, there were no signs that he'd changed. For now, at least, Ashford won't be out after all. "Your story had a huge impact on the warden changing her mind. It also led to Corrections Canada getting bombarded with emails. To be honest, they did not want the negative attention." Toronto Sun, A8

Un meurtrier pourra sortir de prison plus tôt
Un meurtrier emprisonné depuis 17 ans peut demander une libération conditionnelle dès maintenant s'il le désire, a tranché un jury à Longueuil. Danny Bouchard-Asselin a de quoi être heureux. Les huit femmes et quatre hommes auxquels il a raconté sa vie ces deux dernières semaines ont jugé hier qu'il pourrait s'adresser à la Commission des libérations conditionnelles plus tôt que prévu, comme il le souhaitait. Le 9 mars 2001, un premier jury avait reconnu Bouchard-Asselin coupable du meurtre prémédité de Sylvain Bélanger. Il avait alors été condamné à la prison à vie, sans possibilité de libération avant 25 ans. Puisqu'il est incarcéré depuis le 17 septembre 1999, cette échéance était prévue pour 2024. Il serait alors admissible à une libération conditionnelle totale, c'est-à-dire qu'il pourrait vivre à l'extérieur des murs du pénitencier. Ce n'est toutefois pas un automatisme, car la Commission des libérations conditionnelles du Canada (CLCC) doit évaluer le dossier. De plus, le délinquant demeurerait sous le joug des services correctionnels jusqu'à sa mort. Le meurtrier aujourd'hui âgé de 38 ans s'est prévalu de la clause de la dernière chance pour faire réduire ce délai. Un jury de Longueuil devait prendre la décision, en se basant sur le caractère du détenu, sa conduite en prison et la nature de son crime, entre autres. Après une journée de délibérations, les jurés ont décidé hier de fixer la date de son admissibilité à une libération conditionnelle totale à 20 ans, soit en 2019. Le Journal de Montréal, 18; * Journal de Chambly

*** Victim rights not protected, says Stephenville women's group about Ogden case**
The Bay St. George Status of Women Council says the death of Judy Ogden and the release of the man convicted of her murder illustrates the need to improve victim rights. Council co-chair Bernice Hancock is speaking out after Ogden's son, Daniel Benoit, talked to CBC about his fears. Benoit is concerned that his father, Dale Ogden, who served 14 years in prison before his release in September, will try to contact him. Dale Ogden's parole documents state that he had a previous conviction of assault against his first wife, in 1992. He was convicted of killing his second wife, Judy, after beating her to death in front of their son, then four-years-old, in July 1997. Hancock said she sees a theme with women in violent intimate relationships; the victim's rights are not protected. Parole Board of Canada documents state Ogden is required to disclose any relationships with women directly to the parole board. The board said he is still at a high risk of violent abusive behavior to women. CBC News

*** Rafferty judge made no mistake**
London's Superior Court Justice Thomas Heeney did an "exemplary" job handling the difficult first-degree murder trial of Michael Rafferty, Ontario ' s highest court concludes. "The trial judge made none of the errors that (Rafferty) has raised," the Ontario court of appeal states in the written reasons dismissing his appeal, released Thursday. "On the contrary, his handling of a difficult trial, was, in our view, exemplary."

The three-member court panel rejected on Oct. 24 Rafferty's appeal of his first-degree murder conviction of Victoria (Tori) Stafford, stating that written reasons would follow. Rafferty was convicted in 2012 of the kidnapping, rape and murder of eight-year-old Tori on April 8, 2009. London Free Press, A5; Toronto Sun; Canadian Press (Chronicle-Herald, National Post)

*** Pedophile loses bid to have sentence reduced**
The Nova Scotia Court of Appeal has turned down Jason Troy Pitts' appeal of his child pornography and other sex-related charges. Pitts, who pleaded guilty in October 2014 to charges of accessing and making child pornography and eight charges of conspiracy to commit sexual assault on a child, received a global sentence of seven years, but appealed his five-year sentence on the sex assault charges as "harsh and excessive." Chronicle-Herald; Cape Breton Post

*** Two-year sentence reduction for man who sexually assaulted mentally disabled daughter**
A Vernon man who was convicted of sexually assaulting his mentally disabled daughter has had his sentenced reduced by two years on appeal. The man, who can only be identified by the initials R.J.B. due to a publication ban, had attacked his daughter, identified as A.B., an average of two times a week, from November 1998 to September 2002, when A.B. was between 10 and 14 years old. B.C. Supreme Court Justice Alison Beames, who was not the trial judge, sentenced R.J.B., who had a previous conviction for sexually offending against another daughter from his first marriage, to six years in prison. On appeal, the Crown and defence agreed that Beames had erred by sentencing R. J. B on the basis that the sexual assaults involved sexual intercourse. The main issue on appeal was whether the sentence was "demonstrably unfit" and should be reduced. In a ruling released Thursday, a three-judge panel of the B.C. Court of Appeal concluded that the sentence was unfit and should be reduced to four years in prison. In his reasons for judgment, Justice John Savage said that Beames had included in her consideration an aggravating factor that was not present, in the context of an uncertain "factual matrix" in the case. Vancouver Sun

Report calls for improved inmate reintegration plans
David was in his late 50s when he first set foot inside Ottawa's detention centre, Day 1 of what would be nearly a year inside the province's jails. He quickly learned that toothpaste makes a good glue, that working in the jail kitchen has its perks like french fries and pizza, and that you never tell anyone you are sick because you'll end up in medical segregation. But his real education began the day he walked out of jail on early work release with little more than his canteen money. In a new report released Thursday, the John Howard Society said there isn't enough being done in Ontario to help reintegrate inmates back into society after they serve their sentences. According to Keast, Ontario inmates are often leaving jails or prisons without appropriate discharge plans. Every jail in Ontario has a discharge planner, but frequently inmates are receiving little to no assistance in planning for life after release, she said. The ministry of community safety and correctional services said they work with inmates to connect them with outside agencies, but participation isn't mandatory and some inmates choose not to take part. According to the report, inmates who are released often don't receive reintegration support, and they struggle to find stable housing, employment or educational opportunities. Ottawa Citizen, A1 * (Ottawa Sun); Ottawa Sun (Ottawa Citizen)

*** Increased number of inmates costing Sask. $10M more per year**
An increase in the number of inmates in Saskatchewan's jails is hitting the province in the pocket. At the end of August, the average daily count for all facilities was 1,871 - up from the 1,710 count for the year before. That means there are about 160 more inmates behind bars every day in the province compared to one year ago. With the average cost per inmate at approximately $62,000 per year, the province is having to pony up $10 million more annually. Justice Minister Gord Wyant said the number is significant enough to impact the upcoming budget. Inmates on remand make up about 60 per cent of the population in provincial jails. CBC News

*** Indiscernible: The eight-part series, ending Saturday, chronicles the demise and jailhouse death of area realtor Jamie High**
In life, Jamie High had trouble getting the attention he needed from Ontario's health care and justice systems. In death, at least, he's received a measure of official recognition in the provincial body charged

with overseeing those systems. London West New Democrat MPP Peggy Sattler rose in the Ontario legislature Thursday to make a statement about High, who died at age 40 after being found lifeless on the floor of a jail cell. High's death is the subject of an eight-part London Free Press series, called Indiscernible, online in its entirety and finishing in print on Saturday. London Free Press

*** Correctional officer at Ottawa jail sent to hospital after sucker punch by inmate**
A correctional officer at the Ottawa jail was sent to hospital Wednesday after he was sucker-punched in the face by an inmate, according to the union representing correctional officers. The union alleges the assault is a consequence of recent changes the ministry made regarding the use of disciplinary segregation. The ministry limited disciplinary segregation to 15 consecutive days and no longer allows institutions to take away privileges of offenders who are in disciplinary segregation. The union representing correctional officers is opposed to those changes, arguing it puts correctional officers at risk because inmates no longer have anything to lose. The changes were abruptly announced one day before the Ontario Human Rights Commission released a scathing report on statistics that it alleged showed the ministry's systemic overuse of segregation. The union has argued the ministry shouldn't have made the changes to disciplinary segregation without first coming up with an alternative. They also allege the real problem with segregation involves inmates who are being held in what is known as administrative segregation. The commission's report showed more than two-thirds of all segregated inmates were in segregation for administrative reasons, including because they suffered from mental health problems, asked to be there, or were deemed a threat to the safety and security of the institution. Ottawa Citizen (Ottawa Sun)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Police knew in summer about liquid fentanyl**
Police knew as far back as July that there was liquid fentanyl in Hamilton - months before they alerted the public of the presence of the deadly drug. The small vial of the potent milky liquid was seized during a raid of a central mountain home back on May 26. Police said Wednesday that it was only last week that they received results that the drug was indeed liquid fentanyl and not GHB as they had originally suspected. But Health Canada says it sent them those lab test results on July 12. Det. Const. Adam Brown in the Vice and Drug unit clarified Thursday that while the police service did indeed receive the "certificate of analysis" at that time, he wasn't made personally aware of it until last week. They're not physical documents that land on officers' desks, he says. But having recently attended a conference on fentanyl in Calgary, he made an inquiry about seizures of the drug in Hamilton - and learned of the liquid fentanyl findings. Hamilton Spectator, A1; Calgary Sun (Edmonton Sun, Winnipeg Sun); Canadian Press (Times Colonist, Red Deer Advocate)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Thunder Bay cops face probe for all missing persons cases**
Review broadened to focus on interaction with indigenous community. All indigenous missing persons and death investigations will be under the microscope of the Ontario police watchdog as it expands its "systemic review" of the Thunder Bay Police Services, looking for discriminatory conduct. The sweeping review, to be conducted by the Office of the Independent Police Review Director, was formally unveiled on Wednesday and begins immediately. The issue of police racism toward indigenous people has galvanized the country in wake of greater exposure to the issue of murdered and missing indigenous women and girls. Many indigenous families have not been satisfied with how police authorities handled their initial complaints about their loved ones, and how they followed up on them. Those concerns spill over into all aspects of the justice system and in cases of other indigenous death investigations. The incarceration of Adam Capay in segregation in a Thunder Bay cell for four years, without a trial, is a stark

reminder of human rights inequalities. The systemic review will focus on the interaction between the police and indigenous people in Thunder Bay; if indigenous people have been "over-policed" or "under-policed," and if investigations have been carried out in a discriminatory manner, said Gerry McNeilly, the Independent Police Review director. Toronto Star; CBC News

* **Missing, murdered Indigenous women cases face systemic review in Thunder Bay, Ont.**
Ontario's police watchdog says he'll share the results of his systemic review into how Thunder Bay police investigate the disappearances and deaths of Indigenous peoples with the national public inquiry into missing and murdered Indigenous women. The Ontario Independent Police Review Director, Gerry McNeilly, set the terms for his review this week after "alarming questions" were raised about how officers interact with Indigenous peoples. Rainy River First Nations Chief Jim Leonard is one of the people asking those questions. He filed the complaint that prompted the review after Thunder Bay police said the death of one of his community members was accidental. CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

* **Nepean pot shop case highlights hazy enforcement rules for police**
A knife point robbery didn't do it. Neither did a truck crashing through the store's front window. Nothing seemed to be able to shut down CannaGreen, a marijuana dispensary in a Nepean strip mall this summer, until the owner of the building slapped an eviction notice on the front of the store. But even then the bailiff hired to enforce the order said the owner of the pot shop got back into the store and kept selling. And that's when Ottawa police came on Wednesday to help the bailiff enforce the eviction and arrested a man for trespassing. Ottawa police have said they are hesitant to enforce trafficking charges against dispensaries, given the fact that they could be thrown out of court once federal legislation comes into effect. But the CannaGreen situation may provide the blueprint for how neighbourhoods and police deal with the proliferation of unregulated pot dispensaries that have popped up in the capital after the federal government signaled its intent to legalize marijuana: where the criminal laws are murky, municipal bylaws and provincial regulations can be used to shut stores down. CBC News

* **Calgary to ask Ottawa for a slice of pot pie**
When marijuana legalization hits Canada in spring 2017, Calgary hopes it gets a cut of the new tax revenue that's sure to follow. On Thursday, a council committee approved official positions that the city will present to Ottawa as the federal government begins making decisions about how pot legislation should be crafted. Those policy positions include making sure the city has control over licensing, that people are allowed to grow a limited amount of cannabis at home, and that Calgary get a slice not just of any marijuana tax, but of all sin taxes. CBC News (2016-11-03)

PUBLIC SERVICE / FONCTION PUBLIQUE

* **Federal pay system a worker's nightmare**
A letter to the editor state, "Over 30,000 workers are waiting to have their paycheques fixed, many haven't been paid in months, due to the federal government's new pay system, Phoenix. Phoenix was rolled out in February of 2015, despite being warned by the Public Service Alliance of Canada (its largest union), that the system was flawed. How many of us could miss a paycheque and still pay our bills? Imagine not being paid for months. People have lost their homes or quit to find other jobs and the stress and anxiety this has caused is unimaginable. If this was any other employer, they would have been fined and action taken against them right away. But, because it's the federal government they've been able to get away with this. We've heard from workers who are coming into work sick and cancelling their vacations because they are afraid they will be the next victims of these pay issues." Windsor Star

OTHER / AUTRE

* **Canada has more to offer in Africa than military muscle, Trudeau says**

Canada's soon-to-be-announced peace mission to Africa will attempt to tackle "root causes of conflict" because going to fight is not justification enough for deployment, says Prime Minister Justin Trudeau. "Canada has an awful lot to offer other than just stopping people from shooting at each other," Trudeau said Thursday, though he added that is "an important and one of the first things that we want to do" in any engagement. However, Trudeau said Canadians expect a "layered approach" to any United Nations mission that will "create the conditions for longer-term stability and security." Trudeau's Liberal government is weighing where to dispatch up to 600 Canadian troops and 150 police officers on an African peace mission. Trudeau told reporters that a decision is expected "in the coming weeks." Defence Minister Harjit Sajjan suggested the "peace operation" will include the goal of countering the radicalization of youth in impoverished countries. At a news conference and at an earlier town hall session with 300 high school students to mark a year since the Liberal government took power, Trudeau and Sajjan articulated some considerations in the government's looming decision. "It's not just about going out and fighting and trying to solve conflict," said Sajjan. "We need to start looking at the root cause and preventing it in the first place." That means looking at a problem "not just from a national defence perspective, it's going to be looking at a whole-of-government perspective, of having an impact for the youth that are out there," Sajjan told the students. Sajjan referred to the strikingly youthful population of most African countries, where 50-60 per cent of people are aged 24 or younger. "Instead of them being radicalized and going into other groups" Canada will aim to empower them, he said. Toronto Star, A1

*** Exclusive: Canada Paid More Than $855,000 for Will and Kate to Visit**
The Duke and Duchess of Cambridge balled out on Canada's dime when they visited their former British colony in late September, spending an estimated grand total of $855,600 on their week-long trip to BC and the Yukon, according to numbers obtained by VICE News through an access to information request. MINISTER / MINISTRE

*** Latest U.S. marijuana votes could bolster Canada's legalization effort: law prof - See more at:**
Canada's effort to craft a legalized marijuana regime could be boosted by the move of four more U.S. states to approve recreational use of the drug, says a Halifax law professor. As it designs a new system, the Liberal government must address the fact Canada is a signatory to three international conventions that require criminalization of the production and possession of cannabis. (…) Currently someone convicted of simple possession of up to 30 grams of marijuana is eligible to apply for a pardon, now known as a record suspension, five years after their sentence is completed. An internal **Public Safety Canada** briefing note, released under the Access to Information Act, says the issue of record suspensions will be "important to consider during the marijuana legalization discussions." The federal task force's report ***"may include recommendations on past convictions,"*** said **Scott Bardsley, a spokesman for Public Safety Minister Ralph Goodale**. Until new legislation comes into effect, current

laws and rules remain in place, **Bardsley** added. Canadian Press (Times Colonist, CTV News, Brandon Sun)

TOP STORIES / MANCHETTES

Support grows for prison farms
Public consultations carried out by the federal government suggest there is "strong support" for reopening prison farms that were shut down across the country six years ago. The Liberal government is currently carrying out a feasibility study on penitentiary farms and is looking in particular at the possibility of reopening two in the Kingston, Ont., area. As part of that study, the Correctional Service of Canada conducted an online survey between June 2 and Aug. 4, inviting Canadians to weigh in on re-establishing the farms. The results of that consultation - which drew responses from 5,890 respondents - were released publicly on Wednesday. "There seems to be large recognition of the value of institutional agribusiness and thus, a strong support for re-establishing penitentiary farms," the consultation report released by CSC said. The CSC's consultation on the farms found that the main factors supporting reopening the farms included the need to help the rehabilitation of inmates and the positive impact the farms could have in communities. Canadian Press (Ottawa Sun; Times Colonist, Kingston Whig-Standard)

New rules for dual citizens, foreign visitors
Americans looking to move north following Donald Trump's surprise presidential victory presumably crashed the Canadian immigration website Tuesday, but agency officials could see another surge in traffic this week. Starting today, the federal government will enforce new rules intended to bring Canada's entry requirements in line with those of the U.S. Foreign nationals who don't normally need a visa to come to Canada will now have to comply with a new entry requirement, known as an electronic travel authorization (eTA). Exceptions include U.S. citizens and travellers with a valid Canadian visa. Canadian citizens, dual citizens and permanent residents don't need to apply for an eTA. But dual Canadian citizens who are in the habit of flying with their foreign passport will no longer be able to do so, starting Thursday - though the government will make some exceptions for a brief time for those whose travel plans are "imminent." Postmedia Network (Ottawa Citizen, Ottawa Sun)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

***Eleven families evacuated as flooding hits near Port Alberni, B.C.**
Wet weather is forcing evacuations on Vancouver Island and evacuation alerts in the Lower Mainland as rising waters threaten to flood homes. Eleven families have been moved from the Tseshaht First Nation on Vancouver Island as the Somass River surges over its banks in low-lying areas west of Port Alberni, B.C. An evacuation alert has also been issued for homes in Pemberton, B.C., and on the Lil'Wat First Nation, near Lillooet River. Drivers have also been warned to watch for high water levels, as creeks and rivers spill onto the road ways. Tseshaht emergency preparedness co-ordinator Hugh Braker said the state of emergency has not been lifted and the river continued to rise Wednesday. Canadian Press (CFJC Today)

***'Dismal news' for flooded First Nation**
Flood waters that have closed a section of Highway 4, which connects Port Alberni with Ucluelet and Tofino, are expected to rise and should remain for some time. After water from the Somass River threatened the highway for several days as heavy rain fell, it was fully blocked Tuesday night about three kilometres west of Port Alberni where the Tseshaht reserve is located. "The news is extremely dismal," said Hugh Braker, emergency-preparedness co-ordinator for the Tseshaht First Nation, on Wednesday. He expects the record flood levels of 2014 to be surpassed on the weekend as more storms arrive... The Ministry of Transportation has opened a detour around the closure via McCloy Lake Road, Stirling Arm Drive and Faber Road. The route will add about 10 minutes driving time to the west coast, said Janelle Erwin, the ministry's deputy regional director. Rain around Port Alberni let up Wednesday but another

storm is expected to begin tonight and extend into Friday, said Environment Canada meteorologist Matt MacDonald. Times Colonist, A6

***Une crue provoque une alerte d'évacuation à Pemberton**
En Colombie-Britannique, une alerte d'évacuation a été lancée aux résidents du village de Pemberton qui habitent dans le secteur de la route Airport en raison d'un risque de débordement d'une rivière. Le Centre de prévision des régimes fluviaux a lancé des avis de risque d'inondation pour la rivière Lillooet près de Pemberton et la rivière Squamish près de Brackendale. La Première Nation Lil'Wat a aussi alerté ses membres, selon la province. Les résidents doivent être en mesure de vite quitter le secteur, car un ordre d'évacuation peut être déclenché à tout moment. Radio Canada; AM 640; CBC News

***Flood of trouble spots**
Edmonton made history Wednesday by being the first Canadian municipality to give residents access to home-specific flood history and predictions for overland flooding. Americans are able to access a detailed home insurance claim history for any property they own through LexisNexis. But Canada has no similar program and insurance companies guard their histories for competitive advantage. On Wednesday, Edmonton was forced by Postmedia's Freedom of Information request to disclose its maps, which are not related to flooding caused by the river. Officials also added a complete set of flood reports for each upland home dating back to 1946, and outlined the sewers they expect to reach capacity in a 1-in-100-year flash flood, causing backups into basements. Those maps - with red zones in many neighbourhoods spanning several city blocks - are now publicly available at edmonton.ca/floodmitigation. Postmedia Network (Edmonton Sun, A10; Edmonton Journal); Metro News; CBC News

***Flare exercise Nov. 11 as part of survival course for sailors**
In the early afternoon of Nov. 11, an emergency flare exercise will take place on the grounds of the PEI Ground Search and Rescue Base and surrounding grounds around the Charlottetown Airport. WaveSkills Sailing School is hosting an Offshore Personal Survival at Sea course involving two types of flares and fire extinguishing exercises, as well as various water exercises offsite. The afternoon of Saturday, Nov. 12 is an alternative date for the flare exercise pending weather or an increase in airport traffic. The flare exercise is part of a two-day course offered by Wave Skills Sailing School and is aimed at preparing sailors for potential scenarios which may arise while offshore. Guardian, C8

***Spill cleanup rules hard on small firms**
New federal regulations designed to ensure that pipelines have "readily accessible" funds on hand to deal with oil or gas spills will have little impact on major pipeline projects, but could spell trouble for smaller companies, lawyers say. The rules come as several major Canadian pipeline projects are in various stages of development, including Enbridge Inc.'s Northern Gateway, Kinder Morgan's Trans Mountain Expansion and Trans-Canada Corp.'s Energy East. "I would absolutely not expect the regulations to be a deterrent to major pipeline developments, neither chilling nor boosting the risk profile significantly," says Allison Sears of Stikeman Elliott LLP in Calgary. "It is the smaller pipeline producers with lower capacity infrastructure who may struggle to meet some of these requirements." The regulations, which apply to all federally regulated interprovincial pipelines, follow the Pipeline Safety Act, which came into force in June. They are designed to ensure that pipeline companies are adequately prepared to cover response, remediation costs and liability claims if there is an unintended or uncontrolled release from their pipelines. Postmedia Network (Edmonton Journal, B10; Windsor Star)

***Hydroelectric dams spike methylmercury risk for indigenous people**
The Muskrat Falls project will cause a spike in toxic methylmercury in wild food sources that are crucial to Labrador communities, says a new Harvard University study of hydro dam effects on indigenous people. "Methylmercury concentrations in locally caught fish, birds and seals - which nearby Inuit populations use as a source of food - likely will increase up to 10-fold" in the dammed lower Churchill River, it says of Muskrat Falls. "After flooding, expected mean methylmercury concentrations in lake trout, seal, tern eggs, brook trout and char liver are all projected to be at or above the Canadian retail limit for methylmercury." Average exposure to the neurotoxin for local Inuit "is forecasted to double following flooding, and over half of the women of childbearing age and young children in the most northern community (Rigolet) are projected to exceed the U.S. Environmental Protection Agency's" guidelines, says the study. The peer-

reviewed paper was published today in the journal "Environmental Science & Technology." Canadian Press (Whitehorse Star; Telegram; Gazette; Whig Standard; Calgary Herald)

***Clark and Trudeau begin a dance**
An opinion piece states, "Here's the unofficial checklist on the call-and-response dance the federal and provincial governments are doing about marineresponse capabilities on the West Coast. The minuet will likely end with Prime Minister Justin Trudeau and Premier Christy Clark standing together with arms linked on the proposition that Canada will soon have a "world class" safety regime to deal with marine oil spills. Then two new dances will begin on the other conditions Clark has set before B.C. will sign off as full backers of the Trans Mountain pipeline expansion project. They include First Nations buy-in and a fair share of the pipeline revenue to B.C. for risks incurred..." Times-Colonist, A12

New rules for dual citizens, foreign visitors
Americans looking to move north following Donald Trump's surprise presidential victory presumably crashed the Canadian immigration website Tuesday, but agency officials could see another surge in traffic this week. Starting today, the federal government will enforce new rules intended to bring Canada's entry requirements in line with those of the U.S. Foreign nationals who don't normally need a visa to come to Canada will now have to comply with a new entry requirement, known as an electronic travel authorization (eTA). Exceptions include U.S. citizens and travellers with a valid Canadian visa. Canadian citizens, dual citizens and permanent residents don't need to apply for an eTA. But dual Canadian citizens who are in the habit of flying with their foreign passport will no longer be able to do so, starting Thursday - though the government will make some exceptions for a brief time for those whose travel plans are "imminent." Postmedia Network (Ottawa Citizen, Ottawa Sun)

Five ways Donald Trump could have an impact on Canada
Canada's close relationship with America has been rattled by the election of Donald Trump. Canadians are worried about how Trump's campaign promises - if fulfilled - could reverberate north of the border. Here are the key issues to watch and what Trump has said about each. Trade: Donald Trump made radically overhauling U.S. trade arrangements a key issue in his campaign, and this issue could have the greatest effect on Canada after he takes power. The president-elect campaigned on a pledge to force Canada and Mexico to renegotiate the North American Free Trade Agreement, to provide greater benefits to U.S. businesses. (...) Border: Trump vows to build a wall on the U.S.-Mexico border but rejected a wall on the border with Canada as too long, too expensive, and unnecessary. Yet it's far from clear if a Trump administration will honour deals to ensure a thinner, smoother border to the north. Canada and the U.S. have a "perimeter" approach to economic and border security that saw countless travel and security screening procedures harmonized. Bills to enable more information-sharing on entries and exits, and more pre-clearance of cross-border travellers are now before Parliament and the U.S. Congress. Canadian Ambassador David McNaughton is "quite optimistic" a lame-duck Congress will pass the necessary legislation because of bipartisan support before a new administration takes over. But the business community worries if NAFTA collapses, the flow of goods and people across the border could be choked by tariff and non-tariff regulations and/or stiffer immigration controls in the guise of security

concerns. McNaughton says he's nevertheless "open" to discussions about reopening NAFTA. Toronto Star (2016-11-09)

*** Nova Scotia woman awaits deportation to country she hasn't seen since childhood**
After finishing a two-year prison sentence for being an accessory after the fact in a 2014 homicide, Debra Spencer finds herself living in a halfway house in Sydney, N.S., because she has nowhere else to go. Except for one place: She may be deported to a country she hasn't visited since she was a child. Born in the nation of St. Vincent and the Grenadines, the 32-year-old, who has lived in Canada for two decades, was ordered deported back to the Carribean country in the fall of 2015, following her conviction. She's heard no word on when she might be sent, but fears what will happen if she is. CBC News

Feds launch bid phase for Howe bridge build
The federal government on Thursday is launching the final phase of bidding to construct the Gordie Howe International Bridge, signalling it is still committed to the project. (...) The release of a request for proposals to determine who will build the border crossing between Windsor and Detroit comes 11 months later than anticipated, and Sohi admits that will prevent it from being completed by the original target year of 2020. (...)He said an analysis was done of the risks related to expropriating properties for the project in Detroit, including a handful owned by Ambassador Bridge owner Matty Moroun, who has fought in court to stop the project. (...)When asked whether the Canadian government was interested in buying the 87-year old Ambassador Bridge from Moroun, Sohi said the government is focused on building the Howe crossing. "We are not having any (further) conversations with Mr. Moroun on this," the minister said. "We understand the importance of building this new crossing between Michigan and Windsor and we are moving forward on that." The Ambassador Bridge company declined to comment Wednesday. Postmedia Network (Windsor Star, A1)

*** Bid request issued for Gordie Howe bridge**
In a big step forward for the Gordie Howe International Bridge project, the Windsor-Detroit Bridge Authority on Thursday announced that it has issued the formal request for proposals to three teams of finalists vying to build the massive span. (...)The bridge authority, the Canadian entity charged with getting the project done, will then choose a winning team about a year from now. (...) Amarjeet Sohi, Canada's minister of infrastructure and communities, echoed that. “The Gordie Howe International Bridge is one of the most significant infrastructure projects in North America because of its vital role in maintaining and growing Canada’s most important trade relationship and closest partnership with the United States," he said. The Gordie Howe International Bridge is planned as a six-lane span that will cross the Detroit River about two miles downstream from the Ambassador Bridge. When built, it will link directly into I-75 on the Detroit side and connect via the new Herb Gray Parkway with Canadian highways. Detroit Free Press; CBC; CTV

*** Celebrating city's 'wonderful asset'**
Windsorites have been using the Herb Gray Parkway Trail for months - but now they can do it officially, with the 17-kilometre bicycling and walking route having had its formal opening ceremony. "The Parkway Trail is a continuous pathway with bridges and tunnels, allowing both pedestrians and cyclists to travel end-to-end along the parkway without ever encountering a vehicle," Ontario Minister of Transportation Steven Del Duca in Windsor on Wednesday. (...) Asked about lack of certainty surrounding construction of the Gordie Howe Bridge - the yet-to-be-built border crossing that the Herb Gray Parkway is meant to service - Del Duca said he knows the federal government has been working hard to bring the project to reality. "I'm looking forward to hearing an update, which I anticipate will be coming over the next number of days or weeks," Del Duca said. "I also know the province has worked very hard to produce the infrastructure outcome that we're standing alongside today... We'll continue to work with all of our partners." Del Duca described the Gordie Howe Bridge as the transportation option that "makes sense economically, for Ontario and for Canada, but also makes sense in terms of quality of life." Postmedia Network (Windsor Star, A3)

*** Detroit area in shellshock after Trump win**
"Right now it's still a matter of processing what happened in the United States," said Saeed Khan, who teaches history and global studies at Wayne State University. (...) Khan worries a Trump presidency will

affect the border. "There are a lot of statements president-elect Trump has made regarding immigration," Khan said. "It's more focused on the Mexican border than the Canadian border. But there's going to be a perception, particularly with Arabs and Muslims, and maybe even Hispanic people crossing the border. "There's going to be a sense of foreboding." Aaron Kall, the director of the University of Michigan debate program, wonders what Trump will do for the proposed Gordie Howe International Bridge, though he did note that the Republican president-elect has talked a lot about investing in infrastructure. But he said trade programs that affect Canada - such as NAFTA and the Trans-Pacific Partnership - could end up being scrapped, potentially affecting cross-border business. Postmedia Network (Windsor Star)

*** What's in store for Canada now?**
An opinion piece states, "A campaign marked by sexism, racism and xenophobia, by anger, resentment and fear. A country divided by gender, colour and class, by education and geography. People who voted against candidates, not for them. And a staggering win by the most unlikely and volatile candidate with seemingly few real plans. What now for our neighbour and ally? What now for Canada, living in its shadow? (...) What about the Gordie Howe International Bridge? The two countries are building it together to carry that trade across the border. Construction hasn't started. It was the Republicans who refused money for the new U.S. customs plaza. It was Republicans in Michigan who refused to spend any money on the project. Now, there's a Republican president. The party also controls Congress. Can the presidential permit be revoked? Matty Moroun, owner of the competing Ambassador Bridge, has the money, lawyers and government connections to ask that question. Postmedia Network (Windsor Star)

New Opportunities - More cargo headed to Port of Halifax
A huge consortium of shipping lines is going to be sending more container vessels to the Ceres Group's Fairview Cove Container Terminal at the Port of Halifax. (...)The exact impact of the recently-inked Canada-European Comprehensive Economic and Trade Agreement on shipping volumes to and from Europe is also still up in the air. When it is ratified, likely in mid-2017, CETA will immediately wipe out tariffs on 98 per cent of non-agricultural goods and another one per cent of those tariffs will be phased out over the next seven years. Tariffs on seafood and agricultural products will be phased out over three to seven years. Karen Oldfield, president and chief executive officer of the Halifax Port Authority, has lauded the federal government for CETA and said it will create growth opportunities for Nova Scotia and Atlantic Canadian exports to Europe. Halifax Chronicle Herald, B1

*** Canadian spy agency concealed mass data intelligence-bank from courts**
An opinion piece states, "In a damning ruling issued last Thursday, Federal Court Judge Simon Noel sharply criticized the Canadian Security Intelligence Service (CSIS), the country's premier spy agency, for concealing the existence of a mass data collection program for over a decade. (...)Coulombe added that all access to the illegally collected data has been halted. Significantly, however, the store of metadata has not been destroyed, but continues to be expanded because CSIS has other means of increasing its volume. Provisions in Bill C-51, passed by the Harper Conservatives with the support of the Liberals in 2015, mean that CSIS can collect data from 17 government departments without a warrant, including the Canada Revenue Agency, the border service and CSE. As Noel noted, this meant CSIS now has free access to such information as Canadians' tax returns." World Socialist Website

*** Les producteurs gardés en otage par le gouvernement fédéral**
Selon le député néo-démocrate, le secteur agricole, qui constitue 12 % de l'économie du Bas-Saint-Laurent, a raison d'être déçu du gouvernement Trudeau, car les producteurs laitiers et fromagers sont toujours dans l'incertitude quant aux compensations promises en lien avec l'accord commercial avec l'Europe. « Les Libéraux ont suggéré la semaine dernière qu'il y aurait compensation, mais rien n'a été annoncé officiellement. Les Conservateurs avaient, quant à eux, promis 4,3 milliards de $ pour le secteur », se souvient Guy Caron. La question du lait diafiltré n'est toujours pas réglée et le député fédéral estime que la solution pour régler le problème est pourtant simple : « En uniformisant la définition du lait diafiltré utilisée par l'Agence des services frontaliers du Canada et celle utilisée par l'Agence canadienne d'inspection des aliments, le problème serait réglé demain matin. » L'Agence des services frontaliers du Canada considère ce lait transformé comme une protéine, et non du lait, lui permettant d'entrer au pays en contournant les quotas de la gestion de l'offre, explique le député. Et l'Agence canadienne

d'inspection des aliments considère quant à elle qu'il s'agit bien de lait et qu'il peut donc être utilisé dans la production de fromage et de yogourt. L'Avantage (201-11-09)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

***City organization reeling from malicious cyber attack**
U.S. presidential candidate Hillary Clinton isn't the only one upset about Russian cyber attacks these days. A Sarnia-based cultural organization was victimized this summer by hackers who seized its computer system and demanded a ransom to unlock the files and data. A director with the non-profit agency, which The Journal has agreed not to name, opened a computer file in July and discovered names and numbers had been replaced with bizarre-looking digits. She opened an older version of the same document from a year earlier and found the same thing. An on-screen pop-up announced: "This file has been converted to a Zepto file." She called an IT professional and learned the organization was in trouble. "The bottom line was that we were totally encrypted," the director said. The computer was infected with a type of malicious software called ransomware, which encrypts sensitive data until it can only be unlocked with a keycode. The hackers demanded $2,000 in bitcoins, an online currency that's nearly impossible to trace. When the director contacted law enforcement she was in for another surprise. Sarnia Police, the OPP and the RCMP all said they couldn't help. Sarnia Journal

***Major cloud is infested with malware, researchers say**
Cloud repositories are actively supplying malware, according to computer experts. And problematically, it's insidious and hard to find. Hundreds of buckets have been undermined, says Xiaojing Liao, a graduate student at Georgia Tech who's the lead author on a study that's looking into the problem. Buckets are chunks of storage used in cloud operations… The recent "study of cloud hosting services has found that as many as 10 percent of the repositories hosted by them have been compromised," the article continues. The "bad repositories," called "Bars," were found on "leading cloud platforms like Amazon and Google" the paper says (PDF). Those major cloud services are often thought of as being highly secure because of their use of encryption and large numbers of staff dedicated to security. Network World

***Android banking malware attacks more than 300,000 devices in two months**
A newly-discovered Android banking malware has been found exploiting a flaw in Google's Chrome browser, allowing hackers to infect more than 300,000 devices in just two months. The Trojan, known as Svpeng, had been infecting as many as 37,000 victims per day until it was uncovered by Kaspersky Labs and patched out by Google. The malware campaign originally began by implanting a malicious piece of adware code into Google AdSense. The malware also disguised itself as an important browser update or a popular app, too, to ensure that victims download it. Once downloaded, the malware resorts to social engineering to make sure that it gets installed, telling victims to enable third-party installations due to the "urgency" of the update it is purporting to be. The creators are only targeting Russian-speaking users at this time, though Kaspersky warns that they may shift focus. IBS Intelligence

***Google Slaps Malware Sites With Punishments Similar To Giving Kids Time-Out**
Google is upping the ante when it comes to dealing with websites that have malicious content by branding them with a "Repeat Offender" label. This is the search engine company's way of telling users that these websites have been known to infect computers with malware or phish for personal information in the past. It's also a way for Google to do something about malware without completely removing the sites from its indexing list. Google has been warning users against potentially harmful sites through their Google Chrome browser for years, Tech Crunch reports. When a user visits a site that Google believes carries some harmful code, Chrome will take the user to a warning page before allowing them to proceed. If the user's computer gets infected because they chose to ignore the warning, at least Google did its part. Eventually, however, these sites figured out a way to get around the filter by playing nice for a little while until Google forgave them. Once the websites are back in the search engine company's good graces, the warning page would be removed. At that time, they'll resume their illicit activities as before. Well, it seems Google has had enough and has announced that any website caught infecting users with malware repeatedly will be cut off once again. The sites won't be able to request for re-verification for 30 days, which is good news for users. Unfortunately, once the 30 days are up, these websites can do what

they did before and play the innocent online entities that learned their lesson card. The month-long delay might be inconvenient, but there still ways around it that enterprising ne'er do wells can take advantage of. Econo Times

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Jury finds python owner not guilty in deaths of New Brunswick boys**

A jury has found a New Brunswick man not guilty of criminal negligence causing death after his African rock python escaped its enclosure and killed two young boys three years ago. Four-year-old Noah Barthe and Connor Barthe, 6, died during a sleepover in Jean-Claude Savoie's apartment in August 2013. (…) Matchim said an investigation by the RCMP and two subsequent reviews concluded that charges were not appropriate. He said he received that assurance in writing. The lawyer said a new lead investigator was then appointed and suddenly is client found himself facing a charge. (…)He responded to the earlier testimony of RCMP officers about the python's aggressive behaviour after it was captured - hissing and lunging at the glass of the enclosure. "A snake that responds like that is a very aggressive snake," he said. "It was an extreme response to human presence. This animal was dangerous." Truro Daily

Nanaimo city council calls for RCMP to investigate Mayor

If there was still any hope of Nanaimo council healing from their very public fractures, this new scandal will end that. "Well this is a really strange situation obviously and a situation that is really complex," says Coun. Bill McKay. As city council openly calls for RCMP to investigate Nanaimo Mayor Bill McKay for alleged corruption. "When you hide something everyone assumes its corruption and that's the allegation," says Coun. Jerry Hong. "Until he comes forward and presents it and shows it otherwise that's what the allegations are." It's the latest in a saga of dysfunctional chapters in this council's story that was seen publicly for the first time last March, when 7 city councillors signed a letter calling for McKay's resignation "You know the public asked why we did it. These are some of the things why," says Hong. Chek

Four cattle dead after chased by four-by-four

Okotoks RCMP are looking for help to catch individuals responsible for the death of four cattle after they were chased by a vehicle on a rural property in the DeWinton area. Sometime on Oct. 7 someone opened the gate to a property west of Macleod Trail where the animals were grazing. The suspects drove a four-by-four vehicle onto the ranch land and used it to chase cattle for an unknown length of time."It looked like someone had come in and chased them," said Heather Mills, who owned the animals with her family. "From what we could see it looked like they had brought them up the fence line where we had a catch pen. I don't know if they were trying to steal them or if it was a cruel joke." She said they want people to be aware and watchful for anything suspicious. Mills said the loss of four animals will impact their farm. The cattle were insured, but they are working to see how much they will receive. "This is livelihood and it affects everyone in the long run if people are injuring animals," she said. "There isn't a large margin at the end of the day for what farmers get off their cattle." Mills said she and her husband received a phone call from someone living on a neighbouring property that there was a dead cow. They were in Calgary at the time and received a second call soon after about a second animal. Upon arriving, Mills she said they counted their herd and realized another was missing. After euthanizing another, in total four animals were dead. Western Wheel

Court told of cop's data hunt

Repeated bids to access police data that was allegedly sold by a city cop were described in court Wednesday by another officer. Staff Sgt. Jasbir Kainth told court he zeroed in on five days between March 10 and July 5, 2010 in which Det. Gerard Brand allegedly dug up information on people sought by a lending company trying to track down deadbeat debtors. He was paid $2,300 by the lending firm, contends Edmonton-based Crown lawyer Leah Boyd. "Were there any entries queried by Mr. Brand on that date?" asked Boyd, referring to June 16, 2010. (…) Kainth said he also sought out Brand's access record to the RCMP computer database shared with city police. "I asked for an audit of Brand's CPIC queries," he said, referring to the system known as the Canadian Police Information Centre. Two computers were seized from Brand's home along with other records to be analyzed. He's also accused of

providing information on four people obtained through his employment for a friend. Calgary Sun, A18 (Calgary Herald)

Surrey mayor wants three tiers for RCMP auxiliary policing program
Surrey Mayor Linda Hepner said the city favours the third of three options governing the future of the RCMP's Auxiliary Constable Program. This option, which Hepner said is also the favoured choice of the Union of B.C. Municipalities, presents a three-tiered system which she says "allows us the broadest range of services." "I think it's a better option for both the city and the volunteers," Hepner told the Now. "It may very well take them into a career of law enforcement." The three options the RCMP is considering include settling with the status quo, setting up a community corps programs, or adopting a three-tiered program that would incorporate both options one and two. In January Surrey's roughly 80 volunteer cops – the largest contingent of roughly 1,500 auxiliaries across Canada – learned from RCMP headquarters in Ottawa that they would no longer be able to ride with Mounties, receive firearms familiarization training, and that their uniforms will be changed to better distinguish them from regular officers. Now Newspaper

* **Nipawin RCMP issue Amber Alert for 7-year-old Sask. girl believed to be taken by father**
Nipawin RCMP have activated an Amber Alert for seven-year-old Nia Eastman believed to have been taken by her father Adam Jay Eastman, 45, Wednesday night. RCMP said Nia was to be returned home to her mother by 7:00 p.m. A vehicle believed to be operated by her father was located on a rural property east of Smeaton, Sask., near Snowden around 10:00 p.m. Neither Nia nor Adam were found with the vehicle. Officers are searching the vicinity. Police have described Nia as 3'9" with shoulder-length blonde hair. She was last seen wearing pink eyeglasses, purple long-sleeved shirt with butterflies, pink skirt and purple leggings with silver trim at the bottom. 650 CKOM; Global News; Toronto Star; CBC News

Pot dispensary owner charged with trafficking after two raids in Whitewood
A marijuana dispensary owner has been charged with a range of offences after Broadview RCMP conducted two raids in Whitewood, about 175 km east of Regina, on Tuesday. An RCMP brief said that marijuana and property, including cellphones, computers, cash and three vehicles, were all seized during raids on a business - not named by RCMP but known to be Martin Medical Services on the 600 block of 3rd Ave. in Whitewood - and a private residence. Jerry Matthew Martin, 45, is charged with offences relating to the "operation of an unlawful marijuana dispensary," RCMP said. These include the trafficking and possession of marijuana and cannabis resin, possession of the proceeds of crime, trafficking in the proceeds of crime and laundering the proceeds of crime. After an appearance at provincial court in Broadview on Wednesday, Martin was released to reappear on Nov. 23. Martin and his lawyer, the Vancouver-based medical marijuana advocate Kirk Tousaw, could not be reached for comment. Star Phoenix, A7 (Leader-Post)

* **First Nations police service recommends its own disbanding at suicide inquest**
The suicide of a First Nations woman in the back of a police truck is causing Canada's largest Indigenous police service to do some soul searching. The Nishnawbe Aski Police Service, which covers 34 First Nations in northern Ontario, told an inquest into Lena Anderson's death that it has neither the resources nor the legal foundation to do its job properly. So it took the drastic step on Wednesday of asking the jury at the inquest to recommend the police force be disbanded if Ontario does not bring it under the province's Police Services Act by March 31, 2017. "Enough is enough," said Nishnawbe Aski Police Service (NAPS) board chair Mike Metatawabin. "We can't do this all the time where you promise something and then turn around and say you can't do it." Ontario's Ministry of Community Safety and Correctional Services says it plans to introduce legislation in the spring that will "modernize" the Police Services Act and that it is consulting with First Nations on "exploring a legislative framework for First Nations policing." CBC News

* **Two men facing charges in kidnapping in mountain resort town of Jasper, Alta.**
RCMP say two men have been charged after an armed kidnapping in Jasper Alta., on Saturday. Mounties say the complainant has taken into a vehicle by two males armed with firearms, but managed to jump out of the moving vehicle and ran into a nearby business for help. He was taken to hospital and treated for non-life threatening injuries. A few hours later, RCMP in nearby Hinton conducted a high-risk traffic stop and took one male into custody while another man turned himself in at the local detachment two days

later. Otto Richard Latimer, 21, and Nathan Rodney Shevalier, 29, are charged with forcible confinement, uttering threats to cause death, possession of a weapon for a dangerous purpose and theft under $5000, along with additional charges for Shevalier. Lethbridge Herald

Zero tolerance for job horrors
An opinion piece states, "'To all the women who have been impacted by the force's failure to have protected your experience at work, and on behalf of every leader, supervisor or manager, every commissioner: I stand humbly before you today and solemnly offer our sincere apology." Those words, uttered by RCMP Commissioner Bob Paulson on Oct. 6, put on the public record what far too many female Mounties already knew for decades to be true: They were victims of workplace sexual harassment and abuse, some to such a degree careers were cut short and personal lives were ruined. The apology and accompanying multi-million-dollar financial settlement was preceded by separate class action lawsuits filed by two former RCMP officers, representing hundreds of women. Linda Davidson said she was sexually harassed by a male supervisor, when she was a young officer. Her legal claim stated she continued to face such attitudes as she rose through the ranks to become an inspector. Janet Merlo said she had to deal with sexist attitudes while on the force, even to the point of a manager asking why she didn't "keep her f---legs closed" when he learned she was pregnant. Both reported having to put up with sexual innuendos, comments and pranks. But both also said they blamed a minority of former colleagues for fostering such a toxic work environment. As the national police force took its first steps toward closure, a similar issue would come to light in Calgary." Winnipeg Sun

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Support grows for prison farms
Public consultations carried out by the federal government suggest there is "strong support" for reopening prison farms that were shut down across the country six years ago. The Liberal government is currently carrying out a feasibility study on penitentiary farms and is looking in particular at the possibility of reopening two in the Kingston, Ont., area. As part of that study, the Correctional Service of Canada conducted an online survey between June 2 and Aug. 4, inviting Canadians to weigh in on re-establishing the farms. The results of that consultation - which drew responses from 5,890 respondents - were released publicly on Wednesday. "There seems to be large recognition of the value of institutional agribusiness and thus, a strong support for re-establishing penitentiary farms," the consultation report released by CSC said. The CSC's consultation on the farms found that the main factors supporting reopening the farms included the need to help the rehabilitation of inmates and the positive impact the farms could have in communities. Canadian Press (Ottawa Sun; Times Colonist, Kingston Whig-Standard)

* **Prisoner segregation puts us all at risk: advocate**
A prisoner advocate is speaking out against prolonged segregation, after three prisoners filed a lawsuit claiming they were isolated for more than six weeks at Edmonton Institution, a maximum security facility. "Human contact is natural and it's an absolute must for human beings," said Chris Hay, executive director of the John Howard Society of Alberta. He noted isolation can lead to despair, health problems, suicidal thoughts and sometimes irreversible mental issues. In a statement of claim for their $5.6-million lawsuit against the Attorney General of Canada, Matthew Christopher Hamm, 37, Taylor Tobin, 19, and Shawn Keepness, 31, say they were forced to stay in segregation for 43 consecutive days under suspicion that they were conspiring to assault correctional officers. The Corrections and Conditional Release Act states an inmate can be kept in segregation for a maximum of 30 days for breaking an institution's rules, while UN guidelines say no one should be segregated for more than 15 days. Hay has also spoken out against increased charges for prisoners to make phone calls, which he said plays into the same issue – further removing prisoners from the outside world makes them less able to reintegrate. That, he said, means more danger for guards on the inside and society on the outside. He applauded apprenticeship programs that kept prisoners working from the inside, though those have been disappearing. According to Correctional Services Canada, 26 prisoners at Edmonton Institution were actively in segregation on Oct. 9. "All institutions adhere to legislation and policy surrounding

administrative segregation, and ensure that all viable alternatives to placement in administrative segregation are explored," spokesperson Lori Halfper said in an e-mail. Metro News (2016-11-08)

*** No way to prevent inmate suicides, inquest judge says**
Nothing can be done to stop prison inmates "bent on taking their own life," a Manitoba provincial court judge says in an inquest decision released Wednesday. Gilbert Moise, 21, committed suicide on April 7, 2013, about midway through a five-year sentence at Stony Mountain Institution. "Sadly, events such as this are not uncommon, and many inquests into similar situations have been held," Judge Dale Harvey wrote in the 10-page decision. Harvey did not make any recommendations for changes in prison policies or procedures to prevent similar deaths in the future. The inquest, mandatory when an inmate dies in custody, was called by the province's chief medical examiner in December 2013 and conducted in May of this year. The inquest was told Moise was seen by a psychiatrist two days before his death and said he wasn't thinking of causing harm to himself or committing suicide. Moise was last seen by a guard about an hour before his death sitting on his bed in his cell with the television off. Winnipeg Free Press, 11

Court rejects killer's 'suicide pact' argument
When Thomas Elton and Brenda Turcan married in 2005, both were convicted killers. Then Elton strangled and stabbed his chronically ill wife in June 2009. He was later convicted of second-degree murder, despite explaining that the couple had a suicide pact and that he only killed Turcan because he thought she had overdosed in an attempt to die that day. In 2012, a trial judge accepted that Elton believed he was committing a mercy killing, but ruled that he was still guilty of murder because the evidence showed his wife died by his hand and had not overdosed. In 2014, Elton was sentenced to life in prison with no parole eligibility for 25 years. He appealed the verdict, arguing that the trial judge erred by not fully considering whether "he aided the victim's suicide or committed her murder." On Wednesday, the B.C. Court of Appeal dismissed Elton's appeal and upheld his murder conviction. Elton's appeal was heard last March, four months after the two-time killer was found dead in his jail cell at Matsqui Institution in Abbotsford. The B.C. Coroners Service is still investigating his death, the coroner said Wednesday. The Province, A12 (Vancouver Sun)

Man convicted of murdering future brother-in-law deserves re-trial, lawyer tells appeals court
Questionable evidence from a "Mr. Big" sting operation should garner a convicted killer a new trial, an appeal panel heard Wednesday. Some of the claims Neil Lee Yakimchuk made to an undercover police officer following the Dec. 15, 2008, murder of Juan Carlos Dequina are dubious and should be subject to further court examination, lawyer Alias Sanders told the Alberta Court of Appeal. Yakimchuk was convicted in April 2014 of first-degree murder in the shooting death of his brother-in-law-to-be Dequina, who was lured to a remote road on the Tsuut'ina First Nation and shot in the back of the head. When Yakimchuk was convicted and sentenced to life in prison without parole eligibility, Justice Earl Wilson slammed him for his deceitful testimony, saying "this is a stone-cold killing." The appeal panel will render its decision at a later date and Yakimchuk remains in custody. Calgary Herald

*** Kidnapper handed 12-year term**
An Edmonton criminal convicted of the thumb-chopping abduction of a man who drove into a restaurant patio and killed a young boy was handed a 12-year prison term Wednesday. Steven (Diamond) Vollrath, 33, was earlier convicted of kidnapping, aggravated assault, impersonating police and possession of a dangerous weapon in connection with the Jan. 22, 2015, abduction of Richard Suter, 65, from his Riverbend home. Provincial court Judge Elizabeth Johnson noted the violent offence was "planned and deliberate" and motivated by a "heinous" reason, that being "to extract vengeance by inflicting serious harm." Suter was sentenced to four months in jail on Dec. 17, 2015, after earlier pleading guilty to refusing to provide a breath sample where a death ensued. However, the Court of Appeal of Alberta later called the sentence "unfit" and increased it to 26 months. He was also banned from driving for 30 months. Edmonton Journal, A7 (Calgary Sun, Toronto Sun, Edmonton Sun, StarPhoenix)

*** Low on staff, jail couldn't help High, inquest told**
No one could help Jamie High in the final moments he lay dying on the floor of a segregation cell at London's provincial jail because there weren't enough correctional officers in the unit, an inquest into his death heard. A shortage of nurses also prevented a mental-health specialist from doing what he wanted

to help the St. Thomas realtor, the inquest heard Wednesday. Understaffing – along with overcrowding - have often been cited in recent years as contributors to problems at the Elgin-Middlesex Detention Centre (EMDC), a frequent flashpoint for troubles in Ontario ' s correctional system. London Free Press, A1

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** 20% of Ontario drug-benefit recipients on prescription opioids**
More than 20 per cent of adults on Ontario's publicly-funded drug benefit plan are taking doctor-prescribed opioids, swelling to nearly 30 per cent in some parts of the province, says a new study to be released on Thursday. The study tracks the use of such painkillers as oxycodone and fentanyl in Ontario. CBC News

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

*** Calls for justice, communication, and cultural display at Amnesty Forum**
While it wasn't a full house, the audience was engaged at Amnesty International's public forum in Fort St. John on Friday, Nov. 4. The forum acted as a venue to discuss the findings of Amnesty's report Out of Sight, Out Of Mind: Gender, Indigenous Rights, and Energy Development in Northeast B.C., and had five panelists on stage as voices for various aspects of the report. (…) Calls for justice for missing and murdered indigenous people were also raised. Inspector Mike Kurvers, detachment commander for the Fort St. John RCMP, spoke about the role of police in the community, particularly in dealing with the shadow population of transient workers who come through the area to work in the oil patch. "We are aware of it, we understand it, but from a police perspective it hasn't impacted the detachment to date. We still get the same number of calls and … treat each call on its own merits," Kurvers said. Alaska Highway News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Tuesday's vote saw more U.S. states legalize pot: Why Canada could benefit**
There could be an upside for Canada now that several U.S. states have decided to legalize marijuana, according to one of the architects of Canada's pot policy. On Tuesday night while Americans were electing Donald J. Trump as their next president, several states also had ballot questions about whether to legalize pot for recreational use. California, Nevada and Massachusetts all said yes. All three states plan to have possession of small quantities of marijuana legalized by Jan. 1, 2017. That means by early next year, more than one in five Americans will live in a state where marijuana is legal for adult use. So what does it mean for Canada? Bill Blair, parliamentary secretary to the minister of justice and former Toronto police chief, told CBC News he sees a couple of benefits. "I think we will have an opportunity to learn from them and I think there's also some encouraging signs that they'll be more investment in research and more information about how this can be safely and healthfully regulated," said Blair. Canadian officials have already taken a look at how legalization has worked in Colorado and Washington state as the Trudeau government prepares to table its own legislation in spring of 2017. Oregon, Alaska and Washington, D.C., have also already legalized the drug. With 97 per cent of the vote in, Maine voters were separated by less than a percentage point, leaning towards legalization. California's move is significant because it's the most populous U.S. state, clocking in at around 39 million people. CBC News

*** No sale for medical marijuana business in St. John's**
The owner of Health Cannabis on Water Street in St. John's says he has been put on notice by the Royal Newfoundland Constabulary: sell marijuana and risk criminal charges. The warning comes despite the federal government's promise of new legislation to come in spring 2017 - expected to legalize the

business of marijuana and possession for more than just medical use. "They called my landlord a couple of days ago," said David Ferkul, who spoke with The Telegram Wednesday afternoon. "Then he gave us a number. I phoned them back. They waited a couple of days and I finally got the call today." He said the caution was also delivered in writing. A business for patients: Ferkul said Health Cannabis is a "members only" spot, with membership being limited to medical marijuana licence holders. The location is only open on weekends and potentially some other, unusual hours. "The new federal law states that you have to receive your (prescription) marijuana through mail order from one of the 36 licenced producers," he said, referring to a list of producers licenced by Health Canada (the list is available on the regulator's website). Telegram, A5

*** B.C. pot grower seeing green as more states legalize marijuana**
As California, Nevada, Maine and Massachusetts appear set to join the growing list of states that have legalized recreational pot, one of B.C.'s biggest medical marijuana producers is seeing big opportunities in the American market. After several successful ballot initiatives south of the border this week, B.C. will soon be the only West Coast jurisdiction between the Bering Sea and Tijuana where toking up is still restricted to medical use. But the people behind Tilray, the federally licensed cannabis production facility on Vancouver Island, aren't concerned about losing their edge to rivals south of the border when Canada eventually legalizes pot. "I think Canadian companies have a huge advantage based on the very tight regulatory framework that exists in the medical cannabis program in Canada," Tilray president Brendan Kennedy said Wednesday. That tight framework may have squeezed out many entrepreneurs interested in jumping into the legal medical marijuana business, but the lack of competition has allowed licensed producers like Tilray to grow quite large. Vancouver Sun, A5

*** Plenty of questions on peacekeeping**
An opinion piece state, "Last week the Star ran a series of articles on Canada's peacemaking options in Africa and quoted both Justin Trudeau and Romeo Dallaire as saying that these missions must offer more than military might. Yet there were no specifics about non-military options. Similarly, the government's recent cross-country public consultations on defence policy and cyber security only focused on militarized options. What can be made of Canadian peacekeeping when Canada increases its direct military involvement in Iraq and in the NATO exercises up to the Russian border, as Canada is now No. 6 in worldwide arms sales ($15 billion sales to Saudi Arabia), with the Trudeau government further watering down of weapons export regulations? How can the public evaluate peacekeeping when they are not informed that Canada just voted against the UN Open Ended Working Group resolution to eliminate nuclear weapons?" Toronto Star

INTERNATIONAL

*** One injured after grenade attack outside French embassy in Athens**
A hand grenade attack outside the French Embassy in central Athens slightly wounded a policeman early Thursday, police said, days before outgoing U.S. President Barack Obama is due to visit the Greek capital. Authorities said the policeman, who had been on guard outside the embassy, was wounded when unknown assailants threw a hand grenade outside the embassy building, located opposite Parliament on a major avenue. Police shut down the area to vehicles and pedestrians for several hours while anti-terrorism forensics experts combed the scene for evidence. The government condemned the attack and described it as an act of terrorism, adding that the police would track down the culprits. "The relations of friendship and solidarity between Greece and France can't be affected in the slightest by such terrorist

acts," government spokesman Dimitris Tzanakopoulos said in a statement released by his office. Associated Press (CTV News); Agence France-Presse (Digital Journal)

*** Pakistan wants to work on counter-terrorism with Trump**
Pakistani foreign affairs adviser Sartaj Aziz says his country would like to work with U.S. President-elect Donald Trump on the common interest of combatting terrorism. In an interview with Pakistan's Geo News channel Thursday, he says that helping negotiate a political settlement in Afghanistan is another area where the two countries could work together. The U.S. president-elect has publicly criticized Pakistan in the past for battling some Islamic militant groups while tolerating others. Associated Press (Metro News)

*** Chinese official named head of Interpol, drawing criticism**
A top Chinese police official was elected president of Interpol on Thursday, setting off alarm bells among rights advocates over abuses and a lack of transparency within China's legal system, as well as the potential misuse of the police organization to attack Beijing's political opponents.Vice Public Security Minister Meng Hongwei was named as the first Chinese to hold the post at the organization's general assembly on the Indonesian island of Bali, Interpol announced in a press release.The Lyon, France-based International Criminal Police Organization has 190 member nations and has the power to issue "red notices." It's the closest instrument to an international arrest warrant in use today. Interpol circulates those notices to member countries listing people who are wanted for extradition.While Interpol's charter officially bars it from undertaking "any intervention or activities of a political, military, religious or racial character," critics say some governments, primarily Russia and Iran, have abused the system to harass and detain opponents of their regimes. Interpol says it has a special vetting process to prevent that from happening. Associated Press (Times Colonist)

MINISTER / MINISTRE

***'Unacceptable toxicity' at the RCMP needs to be cleaned up, says Ralph Goodale**
Canada's public safety minister says the latest allegations of harassment and bullying have made the RCMP ***"an embarrassment." "This is the national police force, this is an icon of the nation and it's got to be remedied very quickly to Canadian satisfaction. Canadians will not tolerate any half measures in the response here,"*** **Ralph Goodale** said in an interview with host Chris Hall on CBC Radio's The House. The strong condemnation comes after CBC News reported allegations of unwanted sexual touching, bullying and rampant nudity in the workplace at the explosives training unit of the Canadian Police College in Ottawa. ***"It's an embarrassment, and I think [RCMP Commissioner Bob Paulson] is fully aware of that. That this kind of conduct and behaviour is simply unacceptable in the most absolute of terms and it's got to stop. It's got to be properly disciplined,"*** **Goodale** said in an interview that is set to air Saturday morning (...)**The public safety minister** said he spoke to Paulson Friday morning after the alleged misconduct was revealed. ***"I expressed to the commissioner very clearly my outrage at this situation. He knows very clearly what I expect. I expect a complete transparent and comprehensive investigation. I expect strong discipline that suits the misbehaviour that has taken place,"*** **Goodale** said. ***"How could this have***

happened in a facility that is designed to train police officers?" he said. ***"I expect a clean-up of what appears to be unacceptable toxicity in the workplace at the RCMP, where people should expect exemplary behaviour, not this kind of bizarre and degrading kind of conduct."*** RCMP Deputy Commissioner Peter Henschel told CBC News Thursday that he immediately ordered another review of the conduct. CBC News

Goodale outraged by mounties' 'Toxic Workplace'
The public safety minister says he has expressed his outrage to the country's top Mountie over the latest allegations of sexual harassment in the force. **Ralph Goodale** says he told RCMP Commissioner Bob Paulson he expects a comprehensive, transparent investigation, strong discipline, support for victims and a plan to end what he calls ***"this toxic workplace behaviour."*** The strong words come after CBC News reported allegations of unwanted sexual touching, bullying and rampant nudity in the workplace at the explosives training unit of the Canadian Police College in Ottawa. In a statement, **Goodale** said Prime Minister Justin Trudeau has given him a clear mandate to ensure the RCMP is a healthy workplace free from harassment and sexual violence. **Goodale's parliamentary secretary, Michel Picard**, confirmed two RCMP members had been suspended in relation to the allegations. Const. Annie Delisle, an RCMP spokeswoman, had no additional comment. The RCMP has been beset by numerous cases of sexual harassment and bullying. Canadian Press (National Post, A7; Waterloo Region Record, Cape Breton Post)

Electronic spies lack government oversight
Canada's electronic spies can assist CSIS with the agency's new mandate to disrupt security threats with little oversight from politicians or the courts, documents obtained by the Star show. The Communications Security Establishment (CSE) told Defence Minister Harjit Sajjan last November they can aid CSIS with new "threat reduction" efforts - a power granted to the agency under Bill C-51. It's not unusual for CSE to lend a hand to police or intelligence agencies; in addition to electronic espionage and cyber defence, assistance to law enforcement is one of the agency's core mandates. But that assistance often requires a warrant. But under C-51, CSIS can take action to reduce threats to national security without a warrant - so long as the agency's efforts don't violate Canadian law or charter rights. CSE confirmed that they do not necessarily need a court's approval to assist CSIS in threat reduction. The new power has opened the door for CSE to act as a "virtuous hacker" for CSIS, according to national security researcher Craig Forcese. "This was the sleeper in C-51, because CSE is barely mentioned in C-51," said Forcese, a vocal critic of the new terrorism law. "CSE has been a watcher ... It has not been able to do things kinetically to people. But under the umbrella of CSIS assistance, it can now go kinetic (...)"**A spokesperson for Public Safety Minister Ralph Goodale** noted that the Liberals have promised to revisit some of the more controversial aspects of the bill, but did not address the specific question of CSIS-CSE co-operation. ***"(The government) will launch broad, public consultations on our national security framework to ensure that our police and security agencies are being effective at keeping us safe, and that our values, rights and freedoms are being respected,"*** **Scott Bardsley** wrote in a statement. ***"We want to hear from parliamentarians, from subject-matter experts, from the general public and from foreign partners ... We'll listen to Canadians and we'll produce a truly Canadian model that will work well for us."*** Toronto Star, A12

Les conservateurs déçus de l'abandon de l'appel
Pour les conservateurs, le gouvernement trudeau a pris une mauvaise décision en ne s'opposant plus à la décision de la Cour d'appel d'alberta d'accorder à Omar Khadr sa liberté sous caution. Jeudi, **le ministre de la Sécurité publique Ralph Goodale** avait annoncé que son gouvernement abandonnait son appel, ce qui permettra à M. Khadr de jouir de sa liberté sous caution. Ainsi, ce dernier pourra attendre la décision en appel de ses déclarations de culpabilité aux États-Unis sans craindre de devoir retourner en prison au Canada. «Nous sommes déçus par cette décision, a fait savoir le porte-parole de l'opposition officielle en matière de sécurité publique, Erin O'toole, hier. La sécurité publique demeure une priorité importante pour le Parti conservateur, et l'expérience de la famille Khadr montre que la radicalisation au Canada peut entraîner des risques, ici au pays et à l'étranger.» Agence QMI (Journal de Montréal, 38; Journal de Québec)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Cyberthreats could pose danger to oilpatch infrastructure
Alberta's energy department will hold meetings in the coming weeks to discuss the threat of cyberattacks on oil-and-gas infrastructure - an issue that was flagged in a recent report by the province's auditor general. The report noted the Alberta government does not require provincially regulated oil-and-gas operators to meet minimum IT security standards for the systems that control pumps, valves and other key oil-and-gas equipment. There are standards for utilities, but electrical operators aren't required to comply with those until October of next year. Although the threat of an attack on the oil-and-gas industry was found to be low, the auditor general's report says there's been no government assessment of what the impact would be if a cyberattack were to occur. Alberta Energy Minister Marg McCuaig-Boyd says her department accepts the auditor general's recommendations. Canadian Press (St. John's Telegram, A22; Red Deer Advocate, Calgary Herald, Calgary Sun, Waterloo Region Record, Times Colonist, *Whitehorse Daily Star)

New bill targets PTSD
A bill introduced to the Ontario legislature would give first responders who are battling posttraumatic stress disorder (PTSD) extra support. The Supporting Ontario's First Responders Act was introduced by Labour Minister Kevin Flynn and Community Safety and Correctional Services Minister Yasir Naqvi on Thursday. If passed, which is likely, due to the Liberal majority, the act would amend the Workplace Safety and Insurance Act and the Ministry of Labour Act. The act would expedite the claims process for those diagnosed with PTSD, require employers to implement PTSD prevention plans and remove the need to prove a link between PTSD and a workplace event. "Given all that we ask of our first responders, it is only fair that we support them when they need us most," Flynn said in a news release. "This legislation will give first responders and those who work in corrections the peace of mind they deserve, and our prevention, resiliency and research initiatives will round out a comprehensive PTSD approach we can all be proud of and that will protect the brave men and women who we entrust with keeping us safe and secure." The act will apply to police officers, dispatchers of police, firefighters, First nations emergency response teams, paramedics, ambulance services, and workers in youth justice facilities and correctional institutions. Kingston Whig-Standard, A1

Two rescuers to get Red Cross bravery award
Bravery may not be their middle names, but it's something Earl LeBlanc and Naveed Majid have embraced. The two men will be honoured next month with the Red Cross Rescuer Award. The accolade acknowledges the efforts of non-professional rescuers and off-duty first responders who go out of their way to save a life, prevent further injury and/or provide comfort to the injured. Daily Gleaner, A2

1st confirmed case of Zika virus in Ontario, province says
Ontario's first case of the Zika virus has been confirmed by the province's Ministry of Health and Long-Term Care. In a statement, the province's chief medical officer of health said Friday that Public Health Ontario received positive test results for the virus in an individual who had travelled to Colombia. The ministry did not confirm whether the person affected is a man or a woman, but did say that the patient is not pregnant. CBC News

Canadian family on board helicopter that crashed into Pearl Harbor
A Canadian family was on board a helicopter that crashed into Pearl Harbor Thursday. The family of four visiting from Canada and the pilot on board made it out, but one passenger – a 15-year-old boy who was trapped underwater and had to be cut free from his seat – remained hospitalized in critical condition Friday. Global News

***Making mountains safe for skiers**
Avalanche experts in Canada are working on a new project in hopes of helping recreational backcountry enthusiasts answer a question that could help save their lives: What would the pros do? The $1.02-million research spree comes as organizations such as Avalanche Canada continue to expand their outreach efforts, trying to broaden the range of folks who take their traditional and standardized safety courses. The research slice depends on academics; the expansion plans lean on professional skiers such as Leah

Evans offering a cool factor to education (…) Avalanche information available to the public today provides technical information about snow layers, as well potential hazards relative to terrain. Mr. Haegeli wants to add another aspect by providing mountain fans - even experienced ones - with more refined guidelines on what type of terrain would be most appropriate under certain conditions. Globe and Mail, S1

***Avalanche warning issued for southeastern B.C**
Avalanche Canada has issued an immediate warning as potentially deadly snow conditions develop on slopes across parts of eastern and southeastern British Columbia. The warning is in effect through to Monday, Feb. 22, and covers the North and South Columbia regions, the Purcell Mountains and the Kootenay Boundary. Glacier National Park has issued a similar warning for backcountry users in that region east of Revelstoke. Canadian Press (Red Deer Advocate, A4, Times Colonist, Calgary Sun)

***Ice-cutters launching on Red River due March 2**
If the mild weather wasn't enough to convince you spring is around the corner, maybe this will: the province's ice-cutting machines will be out on the Red River north of Selkirk this weekend. Ice-cutting is set to begin Sunday as part of the province's flood-fighting effort. The next day, icebreakers are scheduled to be on the river between Netley Creek and Netley Lake, cutting and scoring the ice to help enable ice movement and reduce jamming. The province has yet to release a spring flood outlook. However, a spring flood forecast released Thursday by the U.S. Weather Service said the threat is slightly lower than average in North Dakota. Postmedia Network (Winnipeg Sun, A7)

*** Flood restoration open house in Rocky on March 1**
An open house in Rocky Mountain House on March 1 will provide updated information of efforts to restore backcountry trails damaged in the 2013 floods. The Alberta government will host information sessions in three communities along the Eastern Slopes to share progress on repairs to the damaged trails and set rehabilitation priorities for the 2016 season. Red Deer Advocate, C1

***New technology helps increase safety for the deaf and hard of hearing**
Hearing smoke alarms blaring and escaping a fire is a terrifying experience for anyone. Now, imagine if you are deaf or hard of hearing. A smoke alarm with an integrated LED strobe light has been introduced by Kidde Canada to help the deaf and their family members have greater peace of mind in fire emergencies. Designed to be hardwired into a home's electrical system, the new device also features a 10-year sealed backup battery to keep the alarm functioning during a power outage. Postmedia Network (Edmonton Sun, H14)

*** Lac-Mégantic, une ville en sursis**
Un article d'opinion dit "La catastrophe ferroviaire du 6 juillet 2013 de Lac-Mégantic avait été pressentie huit mois avant son triste avènement. Cette tragédie qui a coûté la vie à 47 personnes en plus de détruire près de la moitié du centre-ville de Lac-Mégantic avait pourtant fait l'objet de plusieurs avertissements préalables. Le 12 novembre 2012, les élus de la municipalité de Lac-Mégantic et ceux de la MRC avaient effectivement adressé une mise en garde écrite à la Montreal Maine & Atlantic ainsi qu'à deux ministres du gouvernement Harper, Denis Lebel, ministre des Transports, et Christian Paradis, lieutenant de Stephen Harper au Québec. Cette lettre accompagnée d'une résolution officielle de la municipalité déplorait le piètre état du tronçon de chemin de fer à l'entrée de la municipalité. La résolution précisait que le chemin de fer avait été endommagé par des pluies abondantes survenues en 2008, et que les travaux correctifs s'imposaient rapidement. " La Tribune, 13

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Why don't we charge more people with terrorism?
An opinion piece by Senator Daniel Lang states "I have just returned from a NATO meeting in Brussels where our delegation heard that Europe's security concerns mirror many of ours: an unpredictable and belligerent Russia continues to challenge the transatlantic alliance; mass migration is destabilizing Europe; and Islamic radicalization is on the rise. During the past three years that I have chaired the Standing Senate Committee on National Security and Defence, we have studied and reported on the

threats to national security. Our report, Countering the Terrorist Threat in Canada, was clear about the terrorist threat we face. After nine months of hearings and testimony from over 100 witnesses, we learned that: n By late 2014, authorities identified 318 radical Canadian jihadists, 93 of them seeking to travel abroad, 145 overseas and 80 returnees. These numbers have since increased. There were 683 identified cases of terrorist financing in the last five years, to our knowledge, there have not been any specific charges or prosecutions were initiated. Foreign funds had entered Canada for religious-oriented programming despite their donors and recipients being linked to radicalization. Eight Canadian charities had their charitable status revoked because of indirect or direct connections to terrorism - yet none of their executive or staff faced criminal prosecution. Terrorist promotion and radicalization remain a concern in many areas of society, including at schools, colleges, and in religious facilities." Postmedia Network (Calgary Sun, N15; Toronto Sun, Edmonton Sun, Winnipeg Sun, Ottawa Sun)

Wrong to fund radical agency
An opinion piece states "Bravo to the Trudeau Liberals for supporting Tony Clement and Michelle Rempel's opposition motion to condemn the 'Boycott, Divestment and Sanctions' (BDS) movement against Israel. BDS is popular on university campuses, but most people see it for what it is, a hateful movement trying to delegitimize the world's only Jewish state and the Middle East's only democracy. While it was refreshing to see Prime Minister Justin Trudeau stand up for peace and freedom in Israel, this symbolic gesture came only days after a troubling media report." Postmedia Network (Calgary Sun, N15; Ottawa Sun, Edmonton Sun, Toronto Sun)

Grits soft on terror
A letter to the editor states "It is not surprising in the least that the Liberals have dropped a bail appeal against Canada's most infamous terrorist, Omar Khadr. The Grits' soft stance on terrorism began when they announced their withdrawing of our bombing mission against ISIS. Expect the feds to cave to his lawsuit demands and put the taxpayer on the hook for millions of dollars. It would also not surprise me if Omar became a special adviser with regards to our Middle East policy." Ottawa Sun, A20

***Snowden to make SFU presentation**
A man considered everything from a heroic whistleblower to a traitor is making a cyber visit to British Columbia. Edward Snowden will make the keynote presentation, via web link, as part of a Simon Fraser University program examining the opportunities and dangers of online data gathering. The presentation, at Vancouver's Queen Elizabeth Theatre on April 5, will be followed by a moderated discussion with expert panellists from SFU and the B.C. Civil Liberties Association. Times Colonist, A7

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

***Couillard, champion du libre-échange**
Pour sa première visite à Washington, vendredi, le premier ministre Philippe Couillard s'est positionné comme un champion du libre-échange devant des gens d'affaires ainsi qu'avec Michael Froman, le représentant américain au Commerce. " C'est de la musique à nos oreilles de vous entendre parler de l'importance du libre-échange et du libre marché ", lui a répondu Jodi Hanson Bond, vice-présidente de la Chambre de commerce des États-Unis. Concernant sa rencontre avec Michael Froman, qui dirige l'organisme en charge de négocier et d'administrer les accords commerciaux aux États-Unis, le premier ministre a dit avoir fait des progrès sur le projet d'installer des centres de prédédouanement à l'aéroport de Québec et à la gare centrale de Montréal. " Le signal est positif, a précisé M. Couillard. La question à l'aéroport de Québec semble très bien aller. A la gare [de Montréal], c'est un peu plus compliqué, mais cela va bien aussi. On peut être optimiste qu'on va être capable de régler ces questions, ce qui va être un gros avantage non seulement pour nos voyageurs, mais également pour les transports de marchandises. " Ces centres permettraient que des douanes soient installées à même l'aéroport de Québec et la gare de Montréal, comme c'est déjà le cas à l'aéroport Pierre-Elliott Trudeau. Le Devoir, C1; La Presse Canadienne (Le Quotidien, La Voix de l'Est); Agence QMI (Journal de Québec, Journal de Montréal)

***Border agents expand scope of investigation**

Agents of the Canada Border Services Agency were at the Cavendish Farms plant in New Annan Wednesday, the same day they moved in on a Charlottetown motel. But nobody is saying why or whether the two incidents are connected. Allan Donovan, a communications officer with the agency, confirmed agents were at Cavendish Farms during an interview with The Guardian on Friday. "I can't provide any further details because the investigation is ongoing," he said. In an email, Mary Keith, a spokeswoman for Cavendish Farms, said the company itself was not part of the agency's investigation and Cavendish Farms had no information regarding the matter. A witness at the plant said border agents left with one of the plant's workers. On the same day, border agents spent hours at the Sherwood Inn and Motel removing boxes of documents from the main building and two units from the adjacent motel. The agency would not provide The Guardian with any details about its activities at the motel saying it is part of an ongoing investigation. Charlottetown Guardian, A3/FRONT

***Activist urges Russian rights sanctions**

Anglo-American financier and anti-Putin campaigner Bill Browder arrives in Canada Monday seeking all-party support to adopt a Canadian version of the U.S. Magnitsky Act, which freezes assets and bans visas of Russian human-rights violators. Mr. Browder, who campaigned to get the U.S. Congress to pass the law in 2013, is meeting cabinet ministers, officials from the Prime Minister's Office and members of Parliament from all parties, and will appear before the Commons Foreign Affairs committee. "I am coming back to Canada to basically uphold the Liberals to their promise and to make this law," he said in a telephone interview from London, where he has been living since he was deported from Russia in 2005. "It should apply to all the perpetrators of human-rights abuses in Russia. Not just the people who tortured and killed Sergei Magnitsky." Parliament unanimously adopted a motion put forward by then Liberal MP Irwin Cotler last year, calling for U.S.-style sanctions against individual human-rights violators in Russia, including those involved in the 2009 detention, torture and murder of Russian whistle-blower Sergei Magnitsky. Globe and Mail, A3

***FAA banned Canadian private planes from U.S. airspace for 1 month**

U.S. security decision that banned private Canadian aircraft from flying through American airspace when travelling between cities in Canada affected dozens of flights and cost thousands of dollars in extra fuel before the decision was reversed, industry officials say. The U.S. Federal Aviation Administration [FAA] issued a notice Dec.14 last year warning private pilots that all foreign private planes now had to obtain diplomatic clearance from the secretary of state before entering U.S. airspace (...)The issue began when the FAA issued a notice to airmen (NOTAM) Dec.14, 2015 warning non commercial pilots about increased security measures. "The FAA administrator hereby orders that all U.S. territorial airspace is national defence airspace," read the notice. "Pilots of such aircraft that do not adhere to procedures in the special security requirements contained in the NOTAM may be intercepted, detained and interviewed by law enforcement, U.S. Secret Service, or other security personnel. "Any person who knowingly or willfully violates the special security requirements ... may be subject to penalties," the notice said.
Both aviation groups contacted Transport Canada to discover officials in the department had no idea the notice had been issued by the U.S. authorities. "How come nobody knows about this," Toering asked. "How come Transport wasn't advised? How come our embassies weren't advised? CBC News

Officers find nearly five kilos of suspected heroin at Halifax airport

The Canada Border Services Agency says nearly five kilograms of suspected heroin has been seized at Halifax Stanfield International Airport. The agency says CBSA officers discovered inconsistencies in a traveller's suitcase during a routine secondary examination on Sunday. The officers dismantled the suitcase and found a large package hidden in the suitcase liner. The agency says tests identified a substance in the package as suspected heroin. Canadian Press (Cape Breton Post, A10; Red Deer Advocate)

Holy Mackerel! Heroin in frozen fish

Canada Border Services Agency says there was something fishy about a shipment inspected at Toronto's airport - and it wasn't just the frozen fish. CBSA says officers at Pearson International Airport were conducting a routine examination of cargo arriving off a flight from Lahore, Pakistan, on Tuesday when they discovered suspected heroin. Officials say officers found two small packages deep within a large

shipment of frozen fish that were similarly wrapped and loosely placed inside the contents. The packages were cut open and the contents tested positive for heroin. Canadian Press (Toronto Sun, A4)

***Ex-fugitive convicted of Seattle rape**
A former Edmonton man and highrisk sex offender who escaped Canada in 2013 has been found guilty of raping a 69-year-old woman in Seattle. Michael Stanley, 49, triggered a manhunt across Saskatchewan and Alberta when he cut off his ankle bracelet in Lloydminster on the boundary of the two provinces and made a run for the U.S. border, which he managed to cross unchallenged. At the time, Canadian authorities alerted their U.S. counterparts about Stanley. But U.S. officials determined he was a U.S. citizen and they had no reason to arrest him, so let him enter the country. Canadian officials did not ask for his extradition. Times Colonist, A10; Canadian Press (Kingston Whig-Standard, Calgary Sun, Winnipeg Sun, Edmonton Sun, Toronto Sun)

*** Séduire les touristes américains**
La MRC Brome-Missisquoi profitera de la faiblesse du dollar canadien pour faire de l'oeil aux touristes américains. Une campagne marketing est en chantier pour les attirer dans la région cet été. C'est à la demande de quelques maires que l'équipe du CLD Brome-Missisquoi se penche sur le dossier, explique son directeur du développement économique, Denis Beauchamp. « Y a-t-il moyen de tirer avantage de ce contexte pour encourager nos voisins à venir nous voir ? On travaille là-dessus », dit-il (…) La région a déjà été plus fréquentée par les Américains, a fait remarquer M. Beauchamp, citant la fin des années 90 et le début des années 2000. Le contexte international a changé depuis, note-t-il. Les attentats du 11 septembre 2001, suivi du resserrement des contrôles douaniers et de la crise du SCRAS (syndrome respiratoire aigu sévère) ont découragé les Américains de voyager au Canada, a indiqué M. Beauchamp. Par ailleurs, le refus du Canada de participer à la guerre en Irak en 2003 a également eu un impact négatif. La Voix de l'Est, 11

***BCSC fines woman $37 million for cross-border Ponzi scheme**
The B.C. Securities Commission has found that former Mission resident Doris Elizabeth Nelson committed fraud with her Little Loan Shoppe payday loan business that was a front for a cross-border Ponzi scheme that had raised as much as $135 million US. In a decision released Friday, the commission levied $37 million in fines against Nelson and banned her permanently from B.C. financial markets after finding that her business "was the front for a widespread Ponzi scheme that resulted in at least 121 British Columbia investors making investments," and suffering losses. Of the $19 million that B.C. investors put into the scheme, $18.5 million remains unaccounted for (…) Nelson is currently in a U.S. jail serving a nine-year sentence on wire fraud charges after pleading guilty in 2014 to 110 counts in the U.S. District Court of Eastern Washington. Her lawyer said she has filed an appeal seeking to withdraw her initial plea and seek a full trial. Vancouver Sun

***Myrtle Beach has a deal for Canadians**
The limping loonie has meant trouble for u.S. destinations that rely on Canadian visitors. The Canadian Press recently reported that tourismto the States was down 9% in 2015 compared to the same period in 2014. Myrtle beach is one of those destinations that relies on Canadian tourism dollars to inject millions into the local economy. So many of us visit the South Carolina destination each year, it hosts an annual Canadian-american days Festival with special events just for visitors from north of the border. In light of the weak loonie, the Myrtle beach Convention and Visitors bureau has launched a new promotion to attract Canadian travellers and help them save. Postmedia News (London Free Press, F2)

Psychologists fighting national-security ban

Canada's police forces are increasingly calling on psychologists to help them get into the minds of criminals - seeking advice on how to talk to suspects or deciding whether they are being truthful. But this growing relationship has invited scrutiny, especially after a damning report last year uncovered severe ethics violations by prominent U.S. psychologists who had helped Washington develop torture and other coercive techniques to question terrorism suspects. The American Psychological Association (APA) subsequently prohibited all its members, including about 800 Canadians, from participating in any national security-related interrogations. Now a leading Canadian forensic psychologist has entered the fray. Stephen Porter penned a column this month in the journal Canadian Psychology, calling the blanket ban a "kneejerk" overreaction and making the case for expanding psychologists' roles in criminal investigations. The University of British Columbia professor says while the actions of the American psychologists were reprehensible, the ban could create the wrong impression that psychologists have nothing to contribute to law enforcement or national security. "It suggests we don' t have knowledge that is meaningful ... and that we can't be expected to act ethically," said Porter, who is regularly called on by police to help in cases. "Psychological science has really led to a lot of great knowledge that is relevant to interviewing suspects, including terror suspects - interviewing them in humane but also effective ways." The controversy erupted last July, after an independent report found senior APA members had worked with the Pentagon and the Central Intelligence Agency in developing "enhanced interrogation" methods and manipulating ethical guidelines. Postmedia News (National Post, A6)

***Shootings show dangers facing police in remote communities**

It's hard to think of anything that Steve Déry or his partner could have done differently to avert tragedy that night in Kuujjuaq. Responding to a routine call, they pulled up to a bungalow on the Inuit territory to break up a fist fight inside the home. It was during the short walk between their squad car and the front door that the first shot rang out. The bullet clipped Déry's partner in the shoulder, crumpling him on impact. Before they could assess the damage, both men sought shelter behind the police cruiser. Then, more shots from inside the house. In that second burst of gunfire, a .300 calibre bullet pierced Déry's left cheekbone and exited through his jaw, causing a massive hemorrhage. He fell and sustained two more gunshot wounds to his ankle and foot before his partner picked up Déry's sidearm, fired two rounds at the house and dragged him behind another vehicle. But despite the efforts of his partner - who was severely injured when he pulled Déry to safety - the initial gunshot wound proved fatal, according to the Quebec coroner's report obtained by the Montreal Gazette. While paramedics tried, in vain, to revive the 27-year-old Déry, the shooter barricaded himself in the house. After a 16-hour standoff with police, the shooter committed suicide on the morning of March 3, 2013. Fast-forward three years and a remarkably similar situation unfolded in the Lac Simon First Nation, near Val-d'Or. Though details are still hazy, 26-year-old Thierry Leroux and his partner were responding to a routine call on the Algonquin reserve last week when the officer was fatally gunned down. The suspect then turned his weapon on himself and ended his life. Next week - as information from a police and coroner's investigation into Leroux's death begins to surface - teachers at Quebec's police academy will get together hoping to determine whether these situations are avoidable or simply an enduring risk of the job. Montreal Gazette, A3

***Changes to auxiliary RCMP role risky to officers: retired Mountie**

The safety of Mounties is at greater risk after sweeping changes to the duties of volunteer RCMP members, a retired RCMP officer says. “Auxiliaries are the extra eyes, ears and muscle if you need it and you certainly need it at times,” says Ret. Const. Paul Christoffersen, who rode with auxiliary constables for 25 years as he worked highway patrol in Banff and Strathcona County before retiring to Fort Saskatchewan in 2002. Once riding shotgun with regular force RCMP officers, the results of a year-long safety review in January saw the national police force halt all ride-alongs and firearms training for auxiliary constables, volunteer police who dedicate more than 160 hours annually to assisting regular RCMP members with community engagement and crime prevention work. Edmonton Journal, A3; Edmonton Sun

Three plead guilty in RCMP drug sting

Suitcases stuffed with millions handed over at a Vancouver hotel. Cryptic text messages about massive cocaine deliveries. Secret meetings from Vancouver to Panama City. Details of a major 2012 undercover investigation into some Hells Angels and associates were revealed at sentencing hearings of suspects who've pleaded guilty in the case. The RCMP "arranged a reverse sting sale of 500 kilograms of cocaine

for $14.8 million," according to an agreed statement of facts at one of the sentencing hearings. "Over a series of meetings with the principal conspirators, the RCMP undercover officers obtained approximately $4 million cash in exchange for 200 kilograms of cocaine." Police announced in August 2012 that two full-patch Kelowna Hells Angels and six others had been arrested on drug charges, plus two counts of working for a criminal organization. Three of the associates - Murray Trekofski, Orhan Saydam and Kevin Van Kalkeren - have since quietly pleaded guilty, but those proceedings were covered by publication bans until Friday. Vancouver Sun, A5

One Woodstock Mountie disciplined, transferred
One of four Woodstock Mounties suspended late last year has been 'severely' disciplined and transferred, while the three other officers remain under criminal investigation. Assistant Commissioner Roger Brown, commanding officer of the RCMP in New Brunswick, said the officer has gone through a conduct hearing and has been moved out of the community. The unnamed officer has received "a pretty severe sanction," Brown said. "I can't get into the sanction because it's an internal process," the assistant commissioner said in an interview. "He took full responsibility, has moved on and is doing a good job." The RCMP announced Dec. 8 that four members of the Woodstock detachment were being suspended for "discreditable conduct" and were also the subject of a criminal investigation, but that no charges had yet been laid. Telegraph-Journal (Daily Gleaner, A1)

***RCMP making strides in battling mental illness**
Battling mental illness continues to be a top priority for the RCMP in New Brunswick. Assistant Commissioner Roger Brown said Friday that significant progress is being made. Brown said over the last year-plus, the force has worked to increase awareness surrounding post-traumatic stress disorder and other mental-health issues while zeroing in on the stigma attached to it. "I see a huge difference in the dialogue," Brown said. "I have seen our numbers drop 50-60 per cent in the last year of people who were off (work)." He said members are talking openly about it and the negative stigma attached to it doesn't seem to be as prevalent. Daily Gleaner, A7

***Missing snowmobiler**
When Will Lapensee's four-year old daughter Mia woke up Friday morning, she told her mom it would be the day Daddy came home. The story of the dream was shared publicly on a Facebook post by Will Lapensee's aunt minutes after the family had received the news. Friday morning RCMP divers found the body of the 26-year old New Ross man, who fell through the ice riding a snowmobile the night of Feb. 13. The snowmobile he was on was a gift for his birthday. Lapensee turned 26 on Feb. 10. RCMP say members of the Underwater Recovery Team located a body in Black River Lake at about 11:20 a.m. Friday, close to where Lapensee's snowmobile was seen to have gone through the ice. Chronicle-Herald, A4; TC Media (Cape Breton Post, A10)

***Red Deer Mounties investigate shooting**
Red Deer RCMP are appealing to the public for help in identifying a man who fired a shot at a passing vehicle last week. Police say shortly before 11:30 p.m. on Feb. 11, the victim was turning to head east onto 19th Street from 50th Avenue when a newer looking green Chrysler 200 or 300 pulled up beside his vehicle. A man in the front passenger seat then leaned out of the window and fired what appeared to be a handgun across the hood of the victim's vehicle. Calgary Herald, A9

***Okotoks RCMP confirm missing man has been found**
An Okotoks man reported missing this week has been found alive, say RCMP. Zachary Lavin, 19, left his residence in Okotoks around 4 p.m. Wednesday bound for work in Blackfalds, north of Red Deer. He never showed up for work and was reported missing by his family. RCMP said Lavin was located in the Kananaskis area on Friday and was receiving medical treatment for exposure and sustained injuries. No further information was provided on the nature of Lavin's disappearance. Calgary Herald

***Rimbey RCMP Recover 70-Year-Old Letters In Stolen Vehicle**
RCMP are trying to find relatives of a woman and a man who wrote letters to each other as far back as the 1940s. Mounties found a bundle of the handwritten letters in a stolen vehicle in central Alberta. The names on the envelopes are Margaret Clark and Mungo Clark, including one that shows he was a gunner

who served in the 40th Battery, 11th Field Regiment, Canadian Army overseas. RCMP Cpl. Laurel Scott said the letters are likely to be of sentimental value to someone. Canadian Press (Huffington Post, National Post)

***RCMP warning public about phone scam**
The RCMP in Newfoundland and Labrador is warning the public about a phone scam where fraudsters are claiming to be from the RCMP and are demanding money. The RCMP said in a news release, the callers are aggressive, saying that the victims have been fined or are in trouble with a federal government agency. They sometimes claim that the victim will be arrested if the money is not paid. "Some of these fraudsters are making themselves seem legitimate by running a program that shows an RCMP phone number on the victim's call display," the release states. "This is a scam. RCMP is advising anyone who receives one of these calls to hang up and to not send money or provide personal information." St. John's Telegram

***Festival and event organizers struggle with rising police fees**
Festival and event organizers are struggling to find ways to cut costs and scrape together enough money to cover ballooning police fees. And the organizer of one of the city's biggest, the Servus Heritage Festival, says they may have to consider an admission fee to make up the shortfall. Jim Gibbon, executive director of the Edmonton Heritage Festival Association, said this July's threeday event at Hawrelak Park is expected to cost a total of $226,000, up $63,000 from the previous year. Seventy-five per cent of that bill is for policing. "We don't charge admission. So my current statement to police is, 'How do I pay you? Where does this money come from to pay you?"' he asked. Police officers provide security oversight and traffic management for hundreds of concerts, sports games, parades, road races and other public gatherings each year. In 2014, police worked 1,314 events. Because such events often take place on weekends and evenings when officers are offduty, those on festival shifts typically earn double time. Edmonton Journal, A2; Edmonton Sun

***Last of the rioters hauled off to jail**
The last two Stanley Cup rioters still standing have fallen. Five years after they dared thumb their noses at Vancouver residents and the rule of law, William Fisher and Jeffrey Milne were taken to the Big House on Friday. They earned the ignominious distinction of being the final two of the riotous 300 dealt with by the legal system. Fisher, who arrived late for sentencing, was given a total of 36 months imprisonment and Milne got 32 months for rioting, masking their faces, inciting others, multiple cowardly assaults and other charges. Vancouver Sun, A4

***City's officers take the de-escalator**
A man has barricaded himself inside a home and is threatening to commit suicide.
He has physically assaulted his ex-girlfriend. She escaped, called 911 and told the dispatcher that her ex-boyfriend was planning to swallow a bottle of pills to end it all. For police arriving on-scene, it's an emotionally charged and volatile situation - and officers are now learning it's one where listening and empathy may go further than force. Every Toronto police officer has to take annual training that specifically tests their negotiation skills, requiring them to demonstrate listening and response strategies to de-escalate tense situations, such as the scenario of the suicidal man barricaded in his home. "Through empathetic listening, we hope to build a rapport with the view to ultimately influencing behaviour in a positive way," Toronto Police College training Const. Stephen Jones told reporters Friday. "This really improves our chances of a peaceful outcome for us and for our folks in the community." Toronto Star, GT1

***How to transform the police force and its budget**
When David Soknacki was first contacted by the mayor's office near the end of last year about sitting on a task force to tackle police reform and rein in the Toronto force's ballooning $1-billion budget, he said no thanks. When Mayor John Tory called again last week, his answer was more or less the same. "I said I would think about it, which was a polite way of saying no," said Mr. Soknacki, the businessman and former Scarborough city councillor who dropped out of the race for mayor in 2014. Mr. Soknacki, who despite his fiscal conservatism served as budget chief in the first term of left-leaning mayor David Miller, said he simply did not feel that Mr. Tory or Toronto Police Services Board chairman Andy Pringle were

serious about their commitment to radical change at the police force. However, after subsequent conversations, he decided to take the pair's assurances at "face value." Chief Mark Saunders has joined Mr. Tory and Mr. Pringle in saying he is ready to reform policing in Toronto. Globe and Mail, M1

***Time to stop clownish attire of police**
An editorial states "Never-ending, purposeless protest gestures are beginning to erode public confidence in Montreal's police force. This casual-looking approach to policing could have unintended consequences as a handful of protesters are blurring the lines between protest and nuisance. As tension mounts between taxi and Uber drivers, the potential for serious violence is obvious. In plain view of reporters, officers "stood by but didn't intervene" as cabbies pelted eggs at their competitors' vehicles. A group of Montreal taxi drivers has also promised to continue deploying roving squads to summon and sequester Uber drivers. Some cabbies, wearing cowboy hats and brandishing fake pistols and badges, have also taken it upon themselves to steal phones being used by unlicensed drivers - in plain view of cameras. "We have seized the device you use as your weapon to transport people illegally." Montreal Gazette, A10

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Christopher Watts' short-lived freedom
Christopher Watts, the convicted sex offender jailed in the 2001 death of a Kitchener teen, was released from prison last November with a sober warning he was at a high risk to reoffend. He lasted only a few weeks before he was back behind bars. Watts was set free last fall after serving a 12-year sentence for manslaughter, sexual interference and sexual assault in the death of 13-year-old Amanda Raymond. The teen died of an overdose after a party at Watts' Somme Island house on Puslinch Lake. A recently released Parole Board of Canada report paints a revealing portrait of Watts - describing him as an unremorseful, sex-obsessed career criminal who consistently sees himself as a victim, a "totally defiant" man without any sense of guilt or remorse. In the Jan. 26 report, the parole board expressed concern that as a free man, Watts is simply too great a threat to the public. "The Board is satisfied there is no appropriate program of supervision that can be established which would adequately protect society from your risk to reoffend," the parole board wrote (...) The parole board wants Watts to be charged with breaching the conditions of his parole, a move that could keep him in prison for up to 10 more years if he's convicted. For now, Watts is back in a federal prison, waiting for the new charge to be processed by the courts. Waterloo Region Record, A1

Transfer of killers like Gregory Despres to less secure facilities postponed
A transfer to a less-secure facility of high-risk offenders deemed not criminally responsible for their actions has been postponed, but that's small comfort to some victims. Gregory Allan Despres, 33, brutally murdered Fred (Papa) Fulton, 74, and Veronica (Verna) Decarie, 70, in their Slope Road home in Minto in April 2005. He was eventually deemed not criminally responsible for his actions after two trials, and he's since been held at the Shepody Healing Centre, a federal health-care facility on the grounds of Dorchester Penitentiary with a secure psychiatric unit. Offenders deemed not responsible for their actions due to mental disorders are the responsibility of the provincial government, and most are held at the Restigouche Hospital Centre, a psychiatric hospital in Campbellton. However, a handful of such offenders are held at Shepody, a federal facility, due to various factors, including higher security risks. The province pays the federal government to house such offenders at Shepody. The arrangement is about to end, as was revealed last year. Shepody was set to transfer those provincial detainees out in the spring, but Correctional Service Canada (CSC) now says the plan has changed. "CSC has been working with the Province of New Brunswick to return patients deemed not criminally responsible (NCR) back under provincial care and responsibility. It was anticipated that this could be completed by April 1, 2016," Correctional Service of Canada spokeswoman Sabrina Nash wrote in an email to The Daily Gleaner. Daily Gleaner, A4

Day parole granted to convicted sex offender
A former high school youth worker who went to prison after committing several sex offences has been granted day parole. Arthur Francis McGuigan was sentenced in October 2014 to five years, four months and four days in prison on charges that included two counts of sexual exploitation, luring and drug

possession for the purpose of trafficking. A recent Parole Board of Canada decision granted McGuigan day parole for six months, during which time he will live in a halfway house. In its report, the board said it was satisfied McGuigan's release plan contains the right level of structure and resources needed to mitigate his risk of reoffending. Charlottetown Guardian, A1/A2

Les détenues paient le prix de l'austérité
Sans qu'on en fasse de cas, les détenues de la prison Tanguay doivent être transférées dans les prochains jours à l'institut Leclerc, qui deviendra ainsi un établissement mixte. Ces femmes privées de leur liberté font ici les frais des mesures d'austérité, pensent plusieurs spécialistes, qui dénoncent d'importants reculs. Construite en 1964, la prison Tanguay a été déclarée désuète par Québec en septembre dernier. Ce n'est pas le cas de la prison Leclerc, pourtant édifiée quatre ans plus tôt, et fermée en 2012 par le gouvernement fédéral pour cause de... désuétude, rappelle la criminologue Sylvie Frigon, de l'Université d'Ottawa. " S'il existe une prison désuète, c'est bien Leclerc (...)" Québec, qui ne cache pas que sa décision est motivée en partie par des " raisons économiques ", fait valoir que les prisonnières de Tanguay seront placées dans une aile séparée, dans une prison ancienne. Prison dont l'aspect austère n'invite guère à la réhabilitation, rétorque Sylvie Frigon. " Je suis perplexe à propos de ce qu'on veut faire ici. On recule, d'une certaine façon. " La criminologue rappelle en effet que, dans l'histoire, les expériences des prisons mixtes n'ont pas fonctionné, un fait qui est non seulement connu, mais bien documenté. " Les femmes ont déjà été dans les mêmes établissements que les hommes. Ça ne marchait pas, parce qu'elles ont besoin de soins particuliers. Mais on revient malgré tout à ça!" Le Devoir, A1

***Inmate gets more jail time for destructive one-man riot**
A Saint John man will spend more time in jail for creating havoc during a drunken rampage at Dorchester Penitentiary in 2014. Terrance Joseph Keleher, 29, was sentenced Friday to 19 months in jail and ordered to pay $5,961.98 in damages to Correctional Service Canada after pleading guilty to a mischief charge related to the Aug. 23, 2014, incident at the medium-security prison. Court heard several inmates had made a brew at the prison that evening and a guard was called to Keleher's cell because he had a shank - a homemade knife - and a needle. When the guard went back to his station to await the arrival of an emergency response team to handle the situation, Keleher managed to get out of his cell and went on a rampage with a lead pipe. Times & Transcript, A8

***De retour en prison pour une histoire de contact sexuel et de leurre d'enfant**
Libéré puisqu'il contestait en Cour d'appel le jugement rendu contre lui dans une histoire de contact sexuel et de leurre d'enfant, un homme de l'île d'Orléans a désormais trois jours pour se constituer prisonnier puisque le banc formé de trois juges a maintenu sa culpabilité. En octobre 2013, Francis Drouin a été trouvé coupable de s'être offert des «soirées de gars» avec un ado de 13 ans où masturbation, fellation, pénétration digitale et pénétration pénienne étaient à l'honneur. En mai 2014, la juge Johanne Roy l'avait condamné à purger une peine de quatre ans de détention en rappelant que, «pendant une longue période et à de nombreuses reprises, vous avez profité de la vulnérabilité de la victime sans vous soucier des conséquences que vos gestes pourraient avoir sur elle». Agence QMI (Journal de Québec, 54; Journal de Montréal)

***Parole given to robber**
A P.E.I. man who was involved in a violent robbery of a drug dealer was recently granted full parole. Chase James Roper, 25, is serving a four-year sentence for several offences, including armed robbery, assault with a weapon and drug trafficking. In a recent report, the Parole Board of Canada said it was satisfied releasing Roper wouldn't result in an undue risk to the community and would help with his reintegration as a law-abiding citizen. Roper has been on day parole since last summer and the board's report said he successfully completed a substance abuse program. He has been participating in a methadone program and all of his urine samples have been clean, the report said. Charlottetown Guardian, A3

***Bring Back the death penalty**
Paul Bernado has applied for day parole. Things have not changed because this man was sent to jail. Crimes of the nature that put him behind bars are still being committed. Victims who lost their lives had no choice given to them after coming into contact with those who ended their lives. We imprison killers,

they get to wake up each day and sleep at night, put in their time and apply for parole. Kristen French, Leslie Mahaffy, Tammy Homolka, Tori Stafford, Noelle Paquette, and Tim Bosma have no such luxuries. London Free Press, E3

***Death of inmate at Collins Bay**
A 29-year-old inmate died at Collins Bay Institution's medium-security unit on Friday. A Correctional Service of Canada release states that Ryan James Henke was found unresponsive in his cell at around 1 p.m. Staff members responded immediately and emergency services were called, but the inmate could not be resuscitated. Kingston Whig-Standard

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

***Les armes longues plus utilisées pour les crimes**
Au moment où le débat fait rage sur la création d'un registre québécois des armes à feu, des données obtenues par Le Journal montrent que près de 80 % des armes saisies par la police après un crime ou un suicide sont des armes d'épaule. Ces statistiques inédites de la Sûreté du Québec révèlent également que pas moins de 20 555 armes à feu liées à un drame ont été confisquées par des corps policiers de la province sur une période de 20 ans, entre 1991 et 2011. Du lot, on compte 16 300 armes longues. Deux mois après le dépôt du projet de loi 64 du gouvernement Couillard visant à implanter un registre québécois des armes à feu, ces données ont de quoi contredire ceux qui s'y opposent. «Ça me surprend, mais il ne faut pas tirer de conclusions hâtives avec ces chiffres», insiste François Picard, président de «Tous contre un registre québécois des armes à feu». Agence QMI (Journal de Québec, Journal de Montréal)

Drug losses rise at small B.C. hospitals
The number of prescription drug thefts and losses has been rising at smaller B.C. hospitals over the years, with opioids most often disappearing, Health Canada data show. Across British Columbia, the units of narcotics lost have more than tripled, from 778 in 2012 to 2,416 in 2014. For the first half of 2015, the most recent statistics available, 1,710 units were lost. The problem, highlighted by the overdose death of Vancouver hospital care aide Kerri O'Keefe last August, has prompted B.C. Health Minister Terry Lake to write to all the province's health authorities and ask them to raise their narcotics security level. Globe and Mail, S1

Student confesses to creating shaming poll
A female student from Marystown Central High School has confessed to creating an online poll discovered last week by students from the school. Sgt. Larry Turner, with the Burin Peninsula RCMP, told The Southern Gazette Friday the student, who cannot be named under the Youth Criminal Justice Act, will not face charges in relation to the matter. The Southern Gazette broke the story about the poll this week. A release issued by the RCMP said the girl was apologetic and embarrassed by her actions. Police say they are satisfied the student understands the impact of what she has done, as well as the potential actions this could have caused. TC Media (St. John's Telegram, A9)

***Unseen but still there**
It was a weekday morning four days before Valentine's Day. Not the time most of us expect to see the street sex trade awake and at work. I was driving along Sargent Avenue, on my way to a news conference announcing the Joy Smith Foundation's launch of a public service campaign to educate us on what human trafficking looks like in Canada. Which, ironically, is when I noticed the first one standing alone on the sidewalk, skimpily dressed at -18 C. Then a second was further along. The first looked young and may not have been a sexually exploited girl. Police will tell you that, these days, it's harder to know for sure at first glance. The second was older, and it wasn't so hard to tell. She gave me a look - an out-of-it, drugged-up look. And a wave. The time was 10:45 a.m. McDonald's drive-thru was still serving breakfast. What police statistics officially categorize as "sex-trade workers" are out even earlier - during and even just before the morning rush hour - servicing men who are on their way to work. The scene on Sargent caused a flashback to a teenage girl I saw working Selkirk Avenue in November 2014. The body

of sexually exploited and slain 15-year-old Tina Fontaine had been found in the Red River just three months earlier. Now another potential Tina. "Where are the police?" I remember asking myself. Winnipeg Free Press

***Reserves need help**
An editorial states "three teenagers take their own lives in an eight-week period. A young police officer is shot dead responding to a domestic call, then the shooter turns the gun on himself. A report by Quebec's ombudsman describes horrific prison conditions, sometimes with seven or more detainees in cells intended for two, limited access to water, and no beds. The news coming out of indigenous communities in Quebec in recent days has been devastating. Immediate action is required. Of course, there is no quick fix. Any effort to bring about meaningful change in remote communities plagued by violence, suicide and substance abuse requires a deep examination of underlying causes, like rampant poverty, housing shortages and the legacy of residential schools. Public Security Minister Martin Coiteux is right to say the province must work with its indigenous peoples to find long-term solutions." Montreal Gazette, A10

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

***Work for reconciliation**
An editorial states "In this critical year of the Truth and Reconciliation Commission 94 Calls to Action for reconciliation among all the nations of peoples who live in Canada, Wilfrid Laurier University sided with, and amplified, the voices of survivors of Indian residential schools and families of murdered and missing indigenous women. The school did so after thoughtful discourse across the university community and wider publics. The real gift of patriots Jim Rodger and Dave Caputo is the resultant learning we've all been exposed to. This real gift of community engagement and learning is in perfect continuity with their legacy as educators who have empowered students, teachers and systems to lean toward informed dialogue with curious, open, hearts and minds. Because they brought the statue project forward there have already been responses to the Calls to Action, unlike the situation after the work of the much-ignored Royal Commission on Aboriginal People of 1996 which first told us these stories that we still are not ready to hear." Waterloo Region Record

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Syrian family anxious for housing
Two rooms with two double beds and suitcases carefully tucked away around a desk in the corner of one room. It looks like an ordinary set of hotel rooms, but this is where a family of six Syrian refugees has lived for almost a month. "We're comfortable here," Aumaima Al Zrikat said through a translator. Her husband, Khaldoun Al Masalmeh, smiled in agreement. She said people in other countries are living in tents, so her family is grateful to be safe in Canada, even if they have been living in hotel rooms since Jan. 24. "It's kind of like a ray of light for our kids," she explained. Waterloo Region Record, A1

***Phone scammers swindle Syrian refugees**
A family of Syrian refugees in New Brunswick has lost about $400 after falling prey to a phone scam offering lessons to teach the English language. Saint John Police Sgt. Lori Magee says the family was contacted Monday by someone seeking money and banking information in exchange for the lessons. She says once the family's interpreter learned of the scam, he called the bank and police, but the money had already been taken from an account. Canadian Press (Chronicle-Herald, A9; Charlottetown Guardian, Ottawa Sun, Winnipeg Free Press, StarPhoenix, Montreal Gazette, Calgary Herald, Ottawa Citizen, Windsor Star, Times and Transcript, Edmonton Journal)

PUBLIC SERVICE / FONCTION PUBLIQUE

PS death benefits are in surplus
Canada's public servants are living so long their death-benefits account has a $2.6-billion surplus. That has some worried that the federal government could use the overage to offset its mounting deficit. The latest actuarial report by the Office of the Chief Actuary into the 60-year-old plan showed it had a $2.6-billion surplus after setting aside $642 million in death benefits obligations for 2014. The plan has been running surpluses for years and the report estimates it will hit $4.3 billion by 2039. The premiums and interest are not set aside, but instead go into the consolidated revenue account, from which the government also pays all benefits. That's one reason why the Professional Institute of the Public Service of Canada, which represents professionals from federal engineers to scientists, has long argued the fund should be transferred from the consolidated revenue account into a segregated fund. PIPSC Vice-President Shannon Bittman said, in a report, that federal unions should "keep close tabs" on the fund to ensure the "government doesn't amend the legislation" to allow them to claim the surplus. Postmedia News (Ottawa Citizen, A1; National Post)

Shared Services' other big problem: Data centres
After the pummeling it received this month from Auditor General Michael Ferguson, Shared Services Canada will be happy to focus on its next big project. Unfortunately, any respite is likely to be brief. The project itself looks pretty straightforward. Sometime in the next few weeks the government's computer services agency is expected to award a $450 million, 25-year contract to expand and maintain a flagship data centre at Base Borden, Ont. It's the context surrounding this procurement that's problematic for Shared Services. Ottawa Citizen, A4

OTHER / AUTRE

Coupes fédérales - Les libéraux publient des données retenues par les conservateurs
Le gouvernement libéral continue de révoquer les décisions qu'il reprochait à ses prédécesseurs. Le fédéral a remis vendredi au directeur parlementaire du budget une ventilation partielle des compressions imposées à l'appareil fédéral par les troupes de Stephen Harper depuis 2012 -- et tenues secrètes jusqu'ici. " C'est une priorité pour nous de rétablir une culture de transparence comme gouvernement, et donc c'était important de rendre publique cette information ", a fait valoir le président du Conseil du Trésor, Scott Brison, vendred (...)Bien que le tableau du ministre Brison distingue les sommes coupées parmi les diverses agences ou divisions des ministères fédéraux, les sous-catégories demeurent vagues. Ainsi, les données montrent que le ministère de laSécurité publique a perdu 687,9 millions par année -- dont 24,4 millions ont été retranchés au Service canadien du renseignement de sécurité, 295 millions à Service correctionnel Canada, 195 millions à la Gendarmerie royale du Canada et 143 millions à l'Agence des services frontaliers. Mais le document se contente d'indiquer que l'Agence a " rationalisé les services internes " pour économiser 63,9 millions, " transformé les services internes " pour économiser 22,6 millions, et " transformé les programmes " pour épargner 31,6 millions. Le Devoir, A2

***Defence chief on defensive**
The country's top military commander was dragged Friday into the long-standing political debate of what constitutes combat in Iraq, even as the Trudeau government comes to grips with the imploding situation in Libya, where U.S. warplanes have struck extremist training camps. The bombings are seen, potentially, as the opening round in a new front against the Islamic State of Iraq and the Levant, which has for months been building up its presence in the civil war-torn North African nation. A year ago, Gen. Jonathan Vance's predecessor struggled to explain to a House of Commons committee how firefights involving special forces troops and guiding airstrikes for Kurdish forces was not considered combat. It was Vance's turn on Friday, as he rejected categorically the suggestion that his definition of combat was made to measure for the Trudeau government's political needs. "I reject that totally," Vance said. "I am the expert in what is and what is not combat." Canadian Press (Chronicle-Herald, A7; Cape Breton Post, Red Deer Advocate, Times Colonist, Telegraph-Journal); Postmedia News (Ottawa Citizen, London Free Press); Globe and Mail

***Middle East's choppy waters**

An opinion piece states "(…) The situation facing the Canadian government today is not necessarily more dangerous, but it is far more complicated than it used to be. Among the factors that make the contemporary Middle East so complex are: (a) the rise of Islamist extremism and terrorism; (b) raging civil wars in Syria and Yemen; (c) the virtual collapse of the Iraqi state; (d) the intensification of the hostile competition between Shia Iran and Sunni Saudi Arabia; (e) the adversarial relationship between the Turkish government and its Kurdish population; and (g) the collapse in the price of oil. All of this makes policy formulation powers to contribute to the peacekeeping forces in the Middle East." Until the early 1970s, the Arab-Israeli conflict remained Canada's main focus in the region. It was why Canada established embassies in Tel Aviv, Cairo and Beirut to monitor the situation. At that time, however, Canada began to broaden its perspectives and interests in the region." Cyclone Winston: Category five system hits Fiji; curfew declared amid fears for those outside cities

Tropical Cyclone Winston has made landfall on Fiji's main island, bringing damaging winds and huge ocean swells towards the capital Suva. "For the next several hours, most of the population around the northern coast of Viti Levu will experience destructive winds," chief meteorologist Ravind Kumar said. He said the rest of the country would also experience "very destructive" winds and "torrential rainfall" as the cyclone continued to move. The Fijian Government issued a curfew for the whole of Fiji, taking effect after 6:00pm local time. ABC

Spy agencies share intelligence

European intelligence agencies plan to boost their fight against Islamic militants by creating a virtual network to share information among up to 30 countries, officials said Friday. The Counter Terrorism Group -a discreet and informal grouping of domestic spy agencies from the 28 European Union countries, Norway and Switzerland-aims to create the new platform by July 1, according to a joint statement by German and Dutch intelligence agencies. The Nov. 13 attacks in Paris by extremists linked to the Islamic State group, which left 130 people dead, prompted renewed calls for greater cross-border intelligence co-operation in Europe. Associated Press (London Free Press, B4; Chronicle-Herald)

BC avalanche claims another life
An avalanche in BC's mountains has killed yet another snowmobiler. The avalanche near Golden on Saturday swept away four snowmobilers. A 30-year-old Calgary man was killed, and a fellow rider from Winnipeg had to be hospitalized. The two others, also from Calgary, did not need treatment. Avalanche Canada had issued an avalanche warning as potentially deadly snow conditions develop on slopes across parts of eastern and southeastern British Columbia. News 1130; Canadian Press (Edmonton Sun, A25; Calgary Sun, Ottawa Sun, Winnipeg Sun, Toronto Sun, London Free Press, Times Colonist, Vancouver Sun, Charlottetown Guardian, St. John's Telegram); Calgary Herald; Vancouver Province

Emergency crews practice rescues at Silver Star
The sun is shining and snow conditions are ideal for Emergency Services Day at Silver Star Mountain Resort, benefiting the Vernon Jubilee Hospital Foundation. Free live showcases will be taking place in the village throughout the day including simulated ski patrol lift evacuations, fire rescue crew rope rescues and jaws of life extrications, search and rescue helicopter winch rescue demos, an RCMP police dog demo and more. Twenty dollars from every lift ticket sold on Saturday will also be donated to the Vernon Jubilee Hospital. Global News

Toronto company using big data to predict the spread of Zika
Wayne Gretzky may be an unlikely inspiration for an infectious disease researcher. Yet here Dr. Kamran Khan is, on a demonically busy Monday evening, referencing the Great One. "Skating to where the puck is going, not where it's been" - this is Khan's goal for himself and his colleagues at BlueDot, the company he launched to help decision-makers prepare for and respond to infectious disease outbreaks. Since January, when the Zika virus sent public health officials in Brazil scrambling, Khan has been deluged with requests - everyone from the BBC to the CDC (the U.S. Centers for Disease Control). Conceived in the wake of Toronto's 2003 SARS outbreak and launched in 2013, BlueDot, housed at St. Michael's Hospital's Li Ka Shing Knowledge Institute, draws on big data to create predictive models of where, when and how an outbreak will spread - not where the puck is, but where it will be. Sports teams, stock markets, climate science and election campaigns have all been transformed by mathematical modelling. Likewise, infectious disease modelling has become a critical piece in the public-health tool kit, especially during epidemics and emergencies. But disease modellers grapple with unique disadvantages. "One of our big challenges is really related to data availability," says Amy Greer, Canada Research Chair in population disease modelling at the University of Guelph. Toronto Star, IN1

Home-made hope
A Winnipeg-based lab is set to begin production on the first Zika vaccine. Scientists at the National Microbiology Laboratory (NML) gained international prominence last year for their Ebola vaccine, which quickly proved a "game-changer" that protected everyone who received it. Now, only days after most people learned the word "Zika," the Winnipeg-based researchers may have done it again. The lab's head of special pathogens said last month they could have a vaccine to combat the mosquito-born illness ready by year's end. "This vaccine is easy to produce. It could be cranked to very high levels in a really short time," Dr. Gary Kobinger told Reuters. Canadian Press (Winnipeg Sun, A6)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Snowden to make cyber visit to Simon Fraser University
A man considered everything from a heroic whistleblower to a traitor is making a cyber visit to British Columbia. Edward Snowden will make the keynote presentation, via web link, as part of a Simon Fraser university program examining the opportunities and dangers of online data gathering. The presentation, at Vancouver's Queen Elizabeth Theatre on April 5, will be followed by a moderated discussion with expert panellists from SFU and the B.C. Civil Liberties association. Snowden is a former employee of the national Security agency in the United States. Canadian Press (Edmonton Sun, A30

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Can caper crushed
An Alberta recycling company is fighting one of the largest administrative penalties ever levied after Alberta Environment slapped it with an $844,778 fine for collecting refunds on out-of-province beverage containers. The massive penalty against Alberta Reclaim and Recycling and owners Johnny Ha and Shawn Diep includes a $769,778 "economic benefits assessment" that is being challenged before the Environmental Appeals Board (EAB) this spring, according to board spokesman Gilbert Van Nes (...) The elaborate plan was uncovered when Canada immigration officials were directed to a warehouse in northwest Edmonton after receiving a tip that illegal immigrants were working there. Immigration officers found several illegal immigrants pulling apart bales of crushed cans and beverage containers and placing

them into plastic garbage bags (…) The penalty against Reclaim and Recycling was levied by Alberta Environment on Feb. 20, 2015, after a two-year investigation that involved Canada Border Services Agency, environmental protection officers, Edmonton police, private investigators and CN Police. Edmonton Sun, A4

Parole-jumping sex offender found guilty in Seattle rape
A former Edmonton man and high-risk sex offender who escaped Canada in 2013 has been found guilty of raping a 69-year-old woman in Seattle. Michael Stanley, 49, triggered a manhunt across Saskatchewan and Alberta when he cut offhis ankle bracelet in Lloydminster on the boundary of the two provinces and made a run for the U.S. border, where he managed to cross unchallenged. At the time, Canadian authorities alerted their U.S. counterparts about Stanley, but they determined he was a U.S. citizen and they had no reason to arrest him, so let him enter the country, while Canadian officials decided not to ask for his extradition. Stanley has a long history of crime, including sexually assaulting disabled children and an 82-year-old woman in Lethbridge, Alta. Canadian Press (Edmonton Sun, A5; Calgary Sun)

An American export Canadians don't want
An opinion piece states "The United States is to Canada what Mexico is to the United States: the reason for border trouble. The U.S. gets illegal immigrants smuggled from Mexico; Canada gets illegal guns smuggled from the U.S. But who, pray tell, gets the worst of it? Much is made about the impact of illegal immigration on states along the southern U.S. border. But what about the impact of illegal weapons making their way into the country to our north? Smuggled firearms from the United States are fuelling bloodshed in Canada. A couple of sentences from a story in The Washington Post this week by William Marsden said it all: "Homicides in Toronto spiked to 80 in 2005, from 64 in 2004, and the majority were shooting-related. About 70 per cent of the guns used were handguns and automatic weapons smuggled from the United States, police say." While the number of shootings has decreased, gun seizures by the Canadian Border Services Agency reportedly are up: 226 illegal weapons were seized in 2012, most of them handguns; there were 316 by 2015. To be sure, gun-violence numbers in the U.S. swamp Canada's: There were 156 gun-related homicides in Canada in 2014, Marsden reported, compared with 10,945 the same year here." Waterloo Region Record

Stop detaining migrants without cause
An opinion piece states "When 16-year-old Mohammed's parents helped their son flee to Canada, they surely could not have imagined that their child would be held in immigration detention and much less that he would be put in isolation for three weeks. But indeed, this is how the Canada Border Services Agency (CBSA) treated the arrival of this unaccompanied and vulnerable youth. Mohammed's family had fled Syria for Egypt and when Mohammed's permit expired, rather than risk deportation to Syria, his parents did what any parent would do: try to protect their child. Mohammed flew to the U.S. and then presented to the Canadian border to make a claim for refugee protection. Unaccompanied minors may claim asylum in Canada, even if they have travelled through the United States, but due to a technicality, the CBSA officer who greeted Mohammed deemed him "ineligible" to claim refugee status and promptly sent him to immigration detention. If only Mohammed (to protect his privacy, we're not using his real name) were an exceptional case. In truth, hundreds of innocent migrant and refugee children find themselves in immigration detention centres each year in Canada, as do thousands of adults. Babies, children and adolescents are held in Montreal and Toronto in what are essentially medium security prisons, surrounded by high razor-wire fences, staffed by guards, where children are denied regular schooling, held to rigid schedules, pervasively understimulated and live with a sense of uncertainty and fear." Toronto Star, A11

Richmond asking residents whether they want a non-RCMP police force
For Richmond residents, twenty cents of every tax dollar they pay the city goes towards paying the RCMP. Now, city council is asking for public input over whether or not to replace the Mounties and adopt an independent municipal police force. The city's mayor admits it's a conversation that's been going on for years. "What I want to know is what people think of making a change and if they're prepared to make a change, are they willing to pay the cost of making that change," said Malcolm Brodie. The city pays $41.5 million every year for the RCMP's services. Making the switch to an independent municipal force would cost about two to four million dollars more, along with a one-time transition cost of $19.6 million. Global News

Hells Angels plead guilty in trafficking conspiracy
Three of eight men charged after police targeted the Hells Angels in an elaborate international sting operation have quietly entered guilty pleas. The pleas of Kevin Van Kalkaren, Murray Elmer Trekofski and Orhan Saydam in connection with a major cocaine conspiracy were initially subject to publication bans imposed by the trial judge, B.C. Supreme Court Justice Carol Ross. But details of the pleas can now be reported. The judge lifted the publication bans after the five remaining accused - David Giles, vice-president of the Hells Angels' Kelowna chapter; Bryan Oldham, sergeant at arms of the Kelowna chapter; and Hells Angels associates James Howard, Michael Read and Shawn Womacks - re-elected to be tried by judge alone on Friday. The most recent plea was entered earlier this year by Van Kalkaren, who played a bigger role in the conspiracy than Trekofski and Saydam, who have both already been sentenced after entering their pleas in 2014. Vancouver Province, A14

Four charged after Chilliwack dial-a-dope sting
Four people have been charged in connection with a Chilliwack diala-dope operation dismantled last year during an undercover police investigation. In the fall of 2014, B.C. Mounties received reports of heroin allegedly being sold by a dial-a-dope organization on a property in the 8100-block Young Street.
Later that year, the RCMP's crime reduction unit launched an investigation that sent undercover officers to buy heroin from a suspect. "As police pursued their investigation, the quantity of drugs sold in each covert sale increased, along with officers also being offered brass knuckles equipped with built in conducted energy weapons for purchase," read a media release announcing the charges. From January to March of 2015, undercover cops conducted six more drug purchases from the suspect, with each transaction captured on surveillance by investigators. As a result, investigators identified two Chilliwack addresses as being connected to the dial-a-dope operation, one in the 10000-block Woods Avenue, the other in the 9300-block Nowell Street. In March and April of 2015, RCMP executed a search warrant on each of the two properties. At the first home, police seized six grams of methamphetamine, more than 490 g of phenacetin, 570 pills containing MDMA and TFMPP, approximately 360 g of TFMPP, four firearms, a conducted-energy weapon, cash and evidence of drug trafficking. Vancouver Province, A13

Fort McMurray RCMP determine abduction report unfounded
Police in Fort McMurray have called off the search for a teenage girl after determining she was not abducted. On Thursday at 8:30 a.m., a witness saw an older man grab and drag a kicking girl into a white SUV outside Fort McMurray's Holy Trinity High School, RCMP Cpl. Wanita Patey said.
No one of the girl's age or description was been reported missing to police or the school, but RCMP began an investigation. Officers began knocking on doors of more than 80 people in the area who own a white Chevrolet Equinox. Edmonton Journal

Threat brings police to school Monday
A threat against an employee scrawled on a bathroom cubicle wall at St. Albert's Paul Kane High School has prompted RCMP to send officers to the school on Monday, police say. A student visiting the school for a sports match Wednesday discovered the threat in the bathroom and told a coach, who alerted school staff, Paula Power, a St. Albert Public Schools spokeswoman, said on Saturday. RCMP spokeswoman Cpl. Laurel Scott said the threat was not signed, and police have not yet identified any suspects. A letter from the school sent to parents Friday said RCMP are coming to the school Monday as a necessary precaution. Edmonton Sun, A6

RCMP to wear pink
Two Penticton RCMP officers will be wearing pink shirts to promote anti-bullying awareness on Feb. 24. Cpl. Jas Johal and Cpl. Don Wrigglesworth will visit local schools and speak to students about the power of speaking out against bullying. In support of National Pink Shirt Day – raising awareness against bullying – RCMP across the province are wearing pink to show their support. "Raising awareness on the issues and standing together in pink with our communities, allows us to take a collective stance and show there is no tolerance for this behaviour," said Deputy Commissioner Craig Callens, commanding officer of the B.C. RCMP. Castanet

Legalizing marijuana: let's get this right
An opinion piece states "the legalization of marijuana in Canada now appears to be a question of when and how, not if. The new federal government has committed to this initiative and is now looking at how to implement it. A large part of our society believes marijuana is a relatively harmless substance, but that isn't entirely true. The impact of marijuana on an adolescent's brain can be severe. In fact, study after study has shown that frequent marijuana use by young people can have a number of negative effects and leave lasting impairments on a brain that is still growing and developing. In a recent report, for example, the Canadian Centre on Substance Abuse states that "early and frequent [marijuana] use can seriously limit a young person's educational, occupational and social development, and some of these adverse effects may be irreversible." Toronto Star

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Halfway house worker attacked by gunmen before fatal shooting, jury hears
The jury in a Vancouver murder trial heard Friday from a halfway house worker who was pistol-whipped just prior to the fatal shooting of a resident at the home. In a videotaped statement, Roger Woelke described how two armed men burst into the halfway house near Cambie Street in Vancouver, both of the men smelling of booze. Woelke, who has since died of natural causes, said the two suspects were dressed head to toe in black and had bandanas or masks covering their faces. The two men screamed, "Where's Randy? Where's Randy?" Woelke told then-Vancouver police homicide Sgt. Laurence Rankin in an interview four days after the September 2009 slaying of Raj Soomel. Woelke said he mistakenly told the men that a resident of the home named Randy Naicker, who had recently been released from prison on parole, had gone to a nearby store. Vancouver Province, A18

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

The invisible dead
Brad Chapman collapsed in the doorway of a Walton St. nail salon in downtown Toronto just before dawn last Aug. 18. Cocaine, opioids and amphetamines coursed through his body; they were the long-time drug user's preferred substances. Homeless, the streets were Chapman's haven for 20 years when he wasn't in jail. Those dire circumstances for the father of three were a world apart from the middle-class comfort of Etobicoke, where Chapman was raised by a loving family, competed in rep hockey, learned French and played piano by ear. A security guard making his rounds shortly before 5 a.m. at the Chelsea Hotel, just steps from the nail salon, noticed a man slumped over in an alcove. To the man's left lay a syringe, spoon and a cigarette lighter; to his right, an empty Crown Royal bottle, a police report would later note. The concerned guard, George Plaier, called 911. The man, later identified as Chapman, was dying. He would soon become part of Ontario's growing ghost population: The uncounted homeless dead. Toronto Star, A1

Country singer helps the PTSD fight with benefit concert series
Music is said to be a healer. But a Canadian singersonger is taking that one step further by using a series of concerts to raise money to fight Post-Traumatic Stress Disorder. Winnipeg-born country singer Jessie Williams, who brings her House Concert Series to Edmonton on March 5, hopes to raise $500,000 for PTSD-related charities during her tour of more than 60 towns and cities across Canada over the year.

"First responders and the military cover a wide range of our nation," said Williams. "So it's imperative that we do something to help them be able to access more programs and provide the resources to them for different therapeutic processes. "Because not one process works for everybody." Edmonton Sun, A7

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Indigenous law could play role in inquiry
Indigenous Affairs Minister Carolyn Bennett says she is considering ways to incorporate indigenous law into the national inquiry on missing and murdered aboriginal women. The Native Women's Association of Canada and the Feminist Alliance for International Action published a list of recommendations for the upcoming national inquiry that argued mainstream Canadian law had failed to adequately address the problem of violence against indigenous women. "Missing and murdered indigenous women are a consequence of state lawlessness created by Canadian law's inability to deal with the ongoing aftermath of colonialism and its attendant violence," says the report, published last week, based on discussions at a symposium on the inquiry that took place at the University of Ottawa last month. "These spaces of lawlessness are also the result of the denial of indigenous laws and legal orders since the arrival of settlers. The inquiry must not perpetuate the undermining and erasure of indigenous laws and legal orders." Toronto Star, A4

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

GOP senator 'a little concerned' about refugees in Canada
Sen. Ron Johnson (R-Wisc.) on Sunday said he is "a little concerned" about radical Islamic terrorists posing as refugees entering Canada. The Wisconsin lawmaker said Canadian Prime Minister Justin Trudeau expedited the process of approving asylum seekers in the wake of the Syrian refugee crisis. "Of course, with Prime Minister Trudeau's announced plan of basically tripling the number of refugees to bring in – we held a hearing about this, actually," Johnson told radio show host John Catsimatidis on AM 970 New York. "And on average, prior to this program, it would take about 62 months for Canada to properly vet a refugee," he added. "Now they're going to triple the number they're going to let in, and they're going to do it in less than 12 months." The Hill

Michigan shootings: At least seven killed in US city
US police have publicly identified a man suspected of driving around the Michigan city of Kalamazoo and randomly shooting people. Kalamazoo department of public safety chief Jeff Hadley named the suspect as Jason Dalton, 45, of Kalamazoo county, the AP news agency reported. Dalton reportedly has no known criminal history. Michigan police earlier launched a manhunt after six people were killed and several others were injured in seemingly-random shootings near a Kalamazoo car dealership and

restaurant late on Saturday night. Al Jazeera English; Associated Press (Toronto Star, CBC News, CTV News)

Fiji super cyclone kills five, raises fears of health crisis
Downed power lines and flooding are hampering relief efforts in Fiji after one of the most powerful storms recorded in the southern hemisphere tore through the Pacific island nation, flattening remote villages and killing at least five people. Harsh winds and torrential rains tore up homes and cut power, water and communications links across the nation of about 900,000 people, although Suva, the capital, escaped the brunt after the storm changed direction at the last minute. Prime Minister Frank Bainimarama confirmed the death toll and declared a 30-day state of emergency, with schools ordered to shut and a nationwide curfew extended until Monday morning. "When we are able we will provide timelines for the return of water and power," he said, adding that electricity supply to some areas had been deliberately cut to avert further damage. Reuters

Syria's Homs hit by deadly twin car bombings
Homs city is largely under government control and has regularly been targeted in bomb attacks, including a deadly double bombing last month that killed at least 22 people and was claimed by the Islamic State of Iraq and the Levant (ISIL). The bombings came as Syrian government forces continued to tighten their grip around Aleppo province, as they push for the Islamic State of Iraq and the Levant's (ISIL) stronghold in Raqqa. The Observatory said on Sunday that government forces backed by Russian air strikes have captured 18 villages in Aleppo's eastern suburbs - giving them access to 40km of the highway between Aleppo and Raqqa. Al Jazeera English

MINISTER / MINISTRE

*** Border crossings getting upgrades**
Border crossings at Carway and Del Bonita will soon be part of a federal $113-million modernization project. MP Jim Hillyer, on behalf of **Steven Blaney**, **Canada's minister of Public Safety and Emergency Preparedness**, announced Thursday that the Harper government will invest the estimated amount to improve infrastructure at ports of entry in the Prairie region. "***By investing in border infrastructure at the Carway and Del Bonita ports of entry, the Harper Government is helping support the economy in Alberta,"*** Hillyer said. The infrastructure investment includes design finalization, site services, geotechnical and environmental assessments, as well as modular building construction, including structural, mechanical, electrical, internal fit-up, commissioning, project management and signage. Construction work is planned to begin in 2017. The $440-million border infrastructure investment, combined with previous Beyond the Border infrastructure commitments, is anticipated to provide a major upgrade to ports of entry. Lethbridge Herald

*** Twenty-eight years since infamous Black Friday tornado**
Friday marks the 28-year anniversary of Black Friday, when a large tornado ripped through southeast Edmonton and Strathcona County on July 31, 1987. The F4 tornado, which was a mile wide at its widest point and brought winds clocked at between 300 and 400 km/h, is known as the second deadliest tornado in Canadian history, behind only the Regina cyclone of 1912, which killed 28. The tornado left 27 people dead and injured 600 others. A further 1,700 people were forced to evacuate their homes. Rivers rose up to eight metres in some areas due to heavy rains. On top of the loss of human life, Black Friday resulted in hundreds on millions of dollars in damage. The most costly damage in dollar terms was caused by the

hail that accompanied it. Estimated total cost to government was $32,748,959. Total damage costs, according to **Public Safety Canada**, was $662.3 million. Edmonton Sun, 4

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

***Drought effects linger, study shows**
New research suggests that Canada's drought-stricken forests will take years longer to recover from dry weather than previously thought. In a study published in Science magazine, William Anderegg of Princeton University said trees feel the lingering effects of a drought for up to four years. "Drought is always (thought of) as a light switch: when it's dry, trees grow slowly, but the moment the rains come back and the soil gets wetter, it's like the trees recover perfectly and almost immediately," he said. "It turns out it doesn't work like that." The study could lead to changes in forest management, Anderegg suggested. Because wildfires are routinely suppressed, many forests are denser than they would naturally be. "That leaves them vulnerable to drought, large forest fires and insect outbreaks. Things like thinning out the density of trees would certainly increase resilience." Canadian Press (Edmonton Journal, A7; Edmonton Sun, Times and Transcript)

***Reservists were ready to help**
I wish to thank the people of Saskatchewan for their support in allowing my soldiers from 38 Canadian Brigade Group the time away from their families and work in support of the forest firefighting north of Prince Albert. 38 Canadian Brigade Group, the army reserves of Saskatchewan, Manitoba and Northwest Ontario, have a proud history of serving in domestic operations, specifically during the floods in Manitoba. Our "citizen" soldiers, train together throughout the year, learning how to work as a team in austere conditions. We come together, prepared because of training that demands sacrifice from the families and employers of reservists. On July 4, the province of Saskatchewan made the request for help to the Canadian Armed Forces. It was not long after that I started receiving requests for the reserve units of Saskatchewan to help supply the much-needed manpower. Within hours, my soldiers - from Prince Albert, Yorkton, Moose Jaw, Regina and Saskatoon - responded to this call for assistance. Col. Geoff Abthorpe, Thunder Bay Abthorpe is commander of 38 Canadian Brigade Group. Leader-Post, A6

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Cairo court delays releasing verdict in Fahmy's trial
Mohamed Fahmy's legal saga was drawn out further on Thursday as an Egyptian court abruptly postponed a much-anticipated verdict in his widely denounced terror trial. The Canadian journalist - who was first arrested 19 months ago - expressed frustration at the delay, which will now see him return to a Cairo court on Aug. 2. "It's just mind-boggling the way they continue to play with our emotions here," Fahmy told The Canadian Press. "It's very hard on everyone." Fahmy said his lawyers have confirmed that the case is expected to be back in court on Sunday, but there was speculation that date could be pushed back as two judicial officials speaking on condition of anonymity said the judge was seriously ill. "I took a bag to court today with towels, a toothbrush, slippers ... just in case I was sentenced," Fahmy said. "This is how our life is so controlled by this ordeal ... it's just really, really stressful." Fahmy added that he and his fiancee, Marwa Omara, had married each other. "We couldn't celebrate because we were very anxious," he said. "I wanted to complete the marriage before the verdict because if we were married, Marwa could easily visit me in prison."... Canadian Press (Windsor Star, D1/Front, Toronto Star, A11, Red Deer Advocate, Ottawa Sun, Leader-Post, Gazette, Ottawa Citizen, C2, National Post, A6, Edmonton Journal, Calgary Herald, Ottawa Sun); Presse Canadienne (Le Droit, 19, Le Devoir, A2); Globe and Mail, A3

*** WikiLeaks says U.S. spied on Japanese government officials**
The WikiLeaks website published documents Friday that it says shows the U.S. government spied on Japanese officials and companies. The documents include what appear to be five U.S. National Security Agency reports, four of which are marked top-secret, that provide intelligence on Japanese positions on

international trade and climate change. They date from 2007 to 2009. A notation on one of the top-secret reports on climate change before the 2008 G8 summit is marked for sharing with Australia, Canada, Great Britain and New Zealand, according to WikiLeaks. It's not clear if it was actually shared. The organization also posted what it says is an NSA list of 35 Japanese targets for telephone intercepts including the Japanese Cabinet office, Bank of Japan officials, Finance and Trade Ministry numbers, the natural gas division at Mitsubishi and the petroleum division at Mitsui. The Japanese government and the two companies had no immediate response to the postings, which went up on the WikiLeaks website late afternoon Japan time. The validity of the documents could not be independently verified, though WikiLeaks has released U.S. government documents many times in the past. Three of the apparent NSA reports deal with climate change, and the other two with agricultural trade issues, including U.S. cherry exports to Japan. WikiLeaks has released similar documents in recent weeks that it said show NSA spying on Germany, France and Brazil. U.S. spying on its allies became an issue in 2013, when WikiLeaks released documents leaked by former NSA contractor Edward Snowden that showed the NSA had been eavesdropping on the cellphone of German Chancellor Angela Merkel. CBC News; BBC News

*** How the UK is countering Islamism**

An editorial states "I recently returned from the UK, where I had the chance to observe Muslim communities and learn about government policies that affect them. These policies may have a bearing on how we handle Islamist extremism and counter- radicalization efforts in Canada. British Prime Minister David Cameron recently outlined a sweeping, five-year deradicalization plan after the terrorist slaughter of British vacationers on a Tunisian beach in June. He explained the major components of the UK's Counter- Terrorism and Security Act to an audience in Birmingham. The overall strategy primarily addresses the disturbing phenomenon of hundreds of British Muslims joining ISIL. The act includes measures to counter the tenets of Islamism, identify people who promote radical ideas, enable "moderate" Muslims and encourage Muslim integration. The five-year plan also seeks to address Muslim grievances with the West. As Cameron put it, when apologists for terrorism, "say that these are wronged Muslims getting revenge on their Western wrongdoers, let's remind them: from Kosovo to Somalia, countries like Britain have stepped in to save Muslim people from massacres. It's groups like ISIL, al-Qaida and Boko Haram that are the ones murdering Muslims." ... Postmedia News (Ottawa Sun, 23, Edmonton Sun, 15, Calgary Sun, 15, Toronto Sun)

Hammer attacker faces deportation

The man who tried to kill a 13-year-old in a hammer attack will likely be sent back to Iraq, the same place he left as a refugee more than a decade ago. Rafid Jihad was convicted of attempted murder in May in the savage attack that left teenager Jacob Mitchell with a fractured skull. Jihad is very likely to lose his permanent residency and subsequently be deported, his defence lawyer Frank Retar said in Superior Court Thursday afternoon. The law says permanent residents lose their status if sentenced to longer than six months, or if convicted of a serious crime that comes with a maximum sentence of 10 years or more. Both the Crown and defence submissions for a sentence are longer than six months. Retar asked the judge for a 44-month jail sentence, less about 21 months of time already served. Assistant Crown Eric Costaris argued for six to eight years in jail. The maximum sentence for attempted murder is imprisonment for life. "I believe he will be deported and return to Iraq," Retar said after the hearing. "Rafid Jihad is looking forward to putting this behind him. He's actually looking forward to - and has said more than once - his intention is to return to Iraq." Retar said Jihad came to Canada in 2002 as a refugee. The Christian Iraqi's mother and two sisters live here. His father died two years ago. Retar said it appears Jihad has no concerns about returning to Iraq. "He has uncles there. He came from there. Since coming to Canada he has returned to visit twice to visit for lengthy periods of time," he said. Mitchell's mother Rosa said she just wants to see a resolution soon, to give closure to her family and the rest of the community. Windsor Star, A3

Le mandat d'arrestation levé

L'ambiance confinée est beaucoup moins oppressante et une aura d'allégresse s'échappe même des lieux. Un poids immense vient de tomber des épaules de la famille kurde réfugiée depuis janvier dans le sous-sol de l'église Saint-Michel, à Rougemont. Ils peuvent enfin sortir marcher, travailler et vivre dans une maison qui sera la leur. Depuis le 23 juillet, le mandat d'arrestation qui pesait contre eux pour les renvoyer dans leur pays d'origine, la Turquie, a été levé par les agents des services frontaliers. Pour ce faire, ils ont eu à se rendre à Sherbrooke pour faire une nouvelle demande d'Examen des risques avant renvoi (ERAR), malgré la crainte d'être arrêté en chemin ou encore sur place. « On avait une crainte, mais au retour, on était très contents », lance Kamber Turk, père de trois filles. Selon lui, l'accueil était plus favorable à Sherbrooke qu'à Montréal. « Les gens de Sherbrooke étaient très gentils et ils se sont bien occupés de nous, renchérit sa femme Ceylan. Je pense qu'on avait peur pour rien. » La première chose que le couple et le frère de Kamber, Orhan, ont faite ? « On a appelé nos proches pour leur dire qu'on était libres. » Dès le lendemain, Ceylan prenait sa première marche avec les enfants. « La journée qu'on est allés à Sherbrooke, j'ai eu mal à la tête. C'était la première fois que je sortais et on était stressés. Le vendredi, j'ai amené les enfants pour prendre une marche. C'était un peu bizarre », dit-elle en riant. Orhan compare la situation à une douche bouillante et difficilement supportable, qui vient de s'arrêter. « On respire mieux. » La Voix de l'Est, 2; La Presse

'Inhumane' to deport bank robber, lawyer says

The lawyer for a Yemenborn convicted bank robber who has been behind bars for more than 20 months plans to take her client's case to Federal Court of Canada for the third time after the Immigration and Refugee Board ruled Thursday he can now be deported to Yemen. Arghavan Gerami, the lawyer representing 26-yearold Ahmed Ali Ahmed, said she plans to ask the Federal Court to order her client's release because there's no way he can be deported given the current security situation in Yemen. Ahmed has been in immigration custody since he finished a two-year robbery sentence and has been deprived of the reconstructive surgery he needs for a torn ligament in his knee, Gerami said. "Even if you're going to try to remove him, it's inhumane in his medical condition to send him to a war zone where he will have no access to medical care," Gerami said. "His continued detention, based on the new medical evidence that we have, constitutes cruel and unusual treatment." Gerami argued that the Canada Border Services Agency's fourth attempt, planned for August, to deport Ahmed to Yemen will likely fail, which would result in his continued detention. Previous attempts to deport him have been thwarted because the airport in Yemen has been closed. It has since reopened, but only for aid to be delivered by military planes, she said. At Ahmed's last detention review on Thursday - he is afforded one every 30 days - the board found he was still a flight risk and a danger to the public. Ahmed's criminal record includes sexual assault, robbery and forgery convictions. Ottawa Citizen, A10

Man jailed in child porn smuggling

A French citizen caught bringing child pornography into the country has been sentenced to 90 days in jail. Nicolas Michel Clement Roux, 25, was arrested July 16 at Halifax Stanfield International Airport after he arrived on a Condor Airlines flight from Frankfurt, Germany. During a secondary customs examination, a Canada Border Services Agency officer found 244 animated images of child pornography on a memory card in Roux's tablet computer. Roux pleaded guilty Thursday in Dartmouth provincial court to a Customs Act charge of smuggling child pornography and a Criminal Code charge of possession. Crown attorney Perry Borden told the court the anime on the memory card featured characters as young as nine being sexually abused. Roux will be deported after he gets out of jail, Borden said. Defence lawyer Ron Pizzo said his client is studying for his master's degree in France and the convictions will affect his career choice and his ability to travel in the future. The incident has been "a wakeup call" for Roux, Pizzo said. "He understands he may need help." Chronicle Herald, A8

Deportation of man found with gun cache in Peterborough stalled

High-level talks are taking place between Canada and Pakistan over the fate of a Pakistani terrorist group member who has been detained at the Central East Correctional Centre in Lindsay for the past nine months after being found with a gun cache in Peterborough in 2012, a federal official says. Mohammed Aqeeq Ansari was to be deported back to Pakistan on July 14 but his removal was called off at the request of Pakistani authorities, the Canada Border Services Agency official disclosed at a hearing in Toronto. Although Ansari holds a valid Pakistani passport, officials have asked to interview him at their

consulate in Toronto. The CBSA said Pakistan was conducting "verifications." Otherwise, it was unclear why they had halted his return. "Honestly speaking I have no idea at all," said Asghar Ali Golo, the Consul General of Pakistan in Toronto. He said he had just returned from Pakistan and was unfamiliar with the case but would be able to answer questions on Monday. The Department of Foreign Affairs and the Pakistani High Commission in Ottawa are now involved, the CBSA said. The head of Canada's mission in Islamabad was to discuss the issue with Pakistan's Ministry of Interior on July 27. "We're trying to move this along locally, national and internationally. The agency is doing everything it can to get approval to remove Mr. Ansari," Jessica Lourenco, a CBSA official, told the Immigration and Refugee Board at a hearing to decide whether he should remain in detention. A landed immigrant, Ansari has lived in Canada since 2007. He was arrested in Toronto on Oct. 27 on the grounds he was a member of the Pakistani terrorist group Sipah-e-Sahaba Pakistan and a danger to Canada's security. Peterborough Examiner

Investigation into security breach at Vancouver Airport has wrapped

The investigation into a major security breach at YVR last month has wrapped up, but the Canada Border Services Agency is refusing to say what action was taken against the airline involved. It was Sunday, June 7, when an Air Canada flight arrived at YVR from Beijing. Almost 350 passengers were misdirected into the domestic area and failed to clear customs. They were quickly rounded up, and processed correctly, but at the time, Canada Border Services said the airline could face fines and possible prosecution. Today, CBSA spokesperson Robin Barcham says the investigation has concluded, and actions were taken to ensure security measures are strictly followed. But she refused to say what that action was. CKNW AM 980

Loonie keeping shoppers here - - Cross-border trip plans down: poll - Trend boosting local economy

A new survey shows the weak Canadian dollar is causing more Canadian residents to decide against cross-border shopping trips and spend their money at home. The data released this week from the RetailMeNot.ca survey showed 58 per cent of the Canadians surveyed said the weak Canadian dollar would stop them from visiting the U.S. while 66 per cent said cross-border shopping wasn't worth it anymore due to how much money they are losing on the exchange rate. Marina James, the CEO of Economic Development Winnipeg, wasn't surprised by the survey's findings. "It stands to reason that kind of burden on a U.S. exchange is just too much for people, adding in gas and hotels, to realize any retail saving in the U.S., so they'll be spending their dollars at home and their entertainment dollars at home," she said. [...] "We've opened up this at-par deal for any room, any day. You can pay with Canadian cash at par, or if you want to pay with a card or American cash, we'll just discount the room as to whatever the exchange rate is that day," Kuntz said. Statistics provided by Canadian Border Services Agency showed fewer travellers in 2015 than last year from Canada to the U.S. at the Emerson border crossing in both April (down by about 19,000) and May (down by about 11,000). However, in June, there was an increase in travellers from Canada to the U.S. (of about 9,000). Winnipeg Free Press, B5

Falling loonie helps drive retail sales

Retailers on both sides of the border are feeling the effects of the falling Canadian dollar, with fewer people crossing into Washington state and an increase in the number of Americans vacationing in B.C. More than 400,000 fewer privately-owned vehicles travelled south through the four land border crossings between the Lower Mainland and Blaine, Lynden and Sumas in the first six months of 2015 compared with the first six months of 2014, according to statistics collected by Western Washington University's Border Policy Research Institute. From January to June of last year, the Canadian dollar was worth between 90 and 92 cents US. During the first six months of 2015 it was worth between 77 and 87 cents. A recent border policy brief published by the institute states that the primary purpose for crossing the border for Canadians is shopping - including buying gas and picking up purchases sent to U.S. mailboxes - while Americans cross primarily for a vacation and recreation. Ken Peacock, chief economist and vicepresident at the Business Council of B.C., said retail sales in B.C. are currently very strong, with the total value of retail sales increasing by 8.3 per cent this May compared with the same month last year. Peacock said a number of factors are contributing to the growth, but a decline in crossborder shopping is "definitely a factor in helping boost retail sales." The Province, A3

Beat the Civic holiday border rush: CBSA
You'll want to plan ahead if you're heading state-side for the Civic Holiday weekend. The CBSA says peak traffic volume times at the Cornwall port of entry will be between 1 p.m. and 5 p.m. on Monday where the wait time could be more than 20 minutes. The agency says you can speed up the process by making sure you have all your documentation ready, including your passport. You're only allowed to bring back $200 after 24 hours in the United States duty-free and $800 after 48 hours. Also a reminder about purchases. Raw poultry, poultry products and by-products not fully cooked, including eggs and raw pet foods from several states are not allowed because of an outbreak of avian flu. Cornwall Newswatch

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

***U of T lab the bane of Italian spyware firm**
A Toronto research lab has caused a lot of grief to an Italian spyware firm allegedly linked to oppressive regimes, leaked files suggest. In emails, the firm Hacking Team was forced to suspend a client after a damning report from University of Toronto's Citizen Lab (CL), a monitor of "political power in cyberspace." After another report by Citizen Lab, the firm's executives were so agitated they wanted to "hit CL hard" through litigation, though they ultimately aborted that plan. The emails' release was the result of an ironic turn of events, in which Hacking Team, a peddler of software that grants unauthorized access to people's computers, was itself hacked. The data corroborated what Citizen Lab - based at U of T's Munk School of Global Affairs - has been reporting for years, embroiling Hacking Team in a storm of controversy. Citizen Lab director Ron Deibert said it is "interesting" to find out his lab's work - seven reports since 2012 - had had an impact on Hacking Team, but the contents of the leaked files were still "very discouraging." In March, Deibert sent an open letter to Hacking Team. The letter accompanied a fresh report on Hacking Team allegedly selling its technology to Ethiopia, which was said to have used it to spy on journalists. According to leaked files, CEO David Vincenzetti forwarded it to senior members, writing, "It's from our dearest friends at the U of Toronto." Later correspondence confirmed that Ethiopia was dropped as a client due to Citizen Lab's report... But according to leaked emails, the firm offered to reinstate Ethiopia about two months later, with strict conditions and a bigger bill. Hacking Team spokesman Eric Rabe told the Star the firm will not speak to the validity of the leaked files, though he said the emails were "part of the discussion." Toronto Star, GT4

LAW ENFORCEMENT / APPLICATION DE LA LOI

RCMP widow says husband was made a 'scapegoat' in Dziekanski death
The wife of an RCMP officer who killed himself two years ago claims that her husband was used by the Mounties a scapegoat in the death of Robert Dziekanski at Vancouver's airport in October 2007. In a statement of claim filed in B.C. Supreme Court, Sheila Lemaitre says her husband, Pierre, was told he would lose his job if he tried to correct misinformation given to the media about the night Dziekanski died. The sergeant was the media relations officer who released information about the incident where the Polish immigrant was jolted with a police Taser and died on the floor of the arrivals area. The lawsuit claims Lemaitre wanted to correct the information, but was ordered not to and as a result was accused by the public as being the "RCMP liar" and the "RCMP spin doctor." The statement says the RCMP knew Lemaitre was under extreme psychological distress caused by the negligence of the force and that it could result in his becoming suicidal. None of the allegations have been proven in court, and no specific dollar figure is mentioned in the lawsuit. Canadian Press (The Guardian, Cape Breton Post, Times Colonist, Vancouver Sun, Edmonton Sun, Calgary Sun, Toronto Sun, Ottawa Sun, Winnipeg Sun, Kingston Whig Standard, London Free Press); Globe and Mail; Postmedia News (The Province)

Calgary homicide victim was coming to Saskatoon to reconnect with family
The day before he was killed at a Calgary house party, Levi Marance was making plans to move to Saskatoon. Marance's biological mother, Marie-Eve Smith, said she was texting with him about plans to set up a new life in the city the day before his murder. He was supposed to get on a bus, and she and her other sons were going to pick him up in Saskatoon, she said. "He wanted more than anything to come here. He wanted to be with us. He would always say 'I'm coming home soon.' " Smith said, recalling one

of her last conversations with him. Marance was raised in a large adopted family in Red Deer, but was couch surfing with friends in Calgary at the time of his death. Smith said she gave him up for adoption to her aunt shortly after his birth, and because Marance was adopted into her extended family, she had regular contact with him. She described him as a fierce protector of his other siblings. "For the last week and half I talked to him every day. He didn't sound messed up. He wasn't drinking. He was just really excited to come here to be with us," she said. The 18-year-old was stabbed at a house party in an apartment complex in northwest Calgary on July 19. He died in hospital from his injuries, police said. In interviews earlier this week, Lynda Marance, Levi's adopted mother, said the teen was addicted to crystal meth at the time of his death. Smith said her son was couch surfing because he was kicked out of the house in Red Deer nearly two years ago. She disputes the claim that he was addicted to drugs, saying she knew him well enough to know he was not an addict. "I really believe he was not addicted to crystal meth. I know he tried it. We were close enough that he told me he tried it." Smith said her son did have runins with the law in Alberta and he had told the family a Calgary-based street gang was trying to "jump him in" against his will when he was killed. She does not know whether the gang has any connection to his death, she said. Postmedia News (StarPhoenix, A1, Leader Post)

Shooting victim had mental illness

One month before he was shot dead by a Peel Regional Police officer, Jermaine Carby was apprehended under Ontario's Mental Health Act after attempting to disarm a Toronto police officer, the Star has learned. After he was taken to hospital following apprehension by police, Carby threatened to commit suicide by hanging or injecting air into his veins through a syringe. Information detailing Carby's mental-health apprehension was provided to his relatives during a meeting with the Special Investigations Unit last week, after the police watchdog ruled the unnamed officer who killed Carby during a traffic stop last September would not face criminal charges. Carby's family recorded the meeting with SIU officials, including director Tony Loparco, and provided the Star with audio from the meeting. The family has also provided the coroner's and toxicology reports. The information sheds new light on Carby's mental health - including suicidal tendencies - and raises fresh questions about how much the Peel officers knew about Carby's background in the moments before he was killed. Carby's family was told at the meeting that the in-car computer Carby's name was run through would have reported that he had "suicidal tendencies," "mental instability" and had previously tried to disarm an officer... Moments after being pulled over, the officer ran Carby's name through the Canadian Police Information Centre (CPIC), a national database that includes criminal files, and discovered Carby had a lengthy criminal record and outstanding warrants from British Columbia. According to the SIU investigation, when the officer questioned Carby about the warrants, he pulled out a knife and moved toward officers, prompting one of two officers who arrived as backup to shoot. But when the officer who made the initial traffic stop ran Carby's name through his in-car computer, CPIC also cautioned the officer, via a warning note, that Carby had previously attempted to disarm a police officer, the family was told in the meeting. Toronto Star, GT1

Privacy and information

An editorial states, “Two recent news stories in New Brunswick create an interesting juxtaposition for the general public, in our view, on where we are headed on the matter of privacy laws as opposed to the right to information. Recently, the RCMP cited federal privacy laws to announce that it will no longer release the names of crime and accident victims to the general public. Subsequently the federal Privacy Commissioner stated "It is up to the RCMP to determine whether the public interest outweighs privacy concerns." In our opinion that gives the RCMP too much latitude in making an arbitrary and potentially dangerous interpretation of privacy laws. The RCMP and all police officers are admirable for the difficult job they have, but aside from fighting crime, part of their job is to protect the rights of citizens, including 'the right to know.' Perhaps that stance can be interpreted as self-serving, coming as it does from an organization that depends on information to stay in business. That might be fair comment, but what is really at stake here is the public's right to information. There may be rare cases where the RCMP should withhold information temporarily if the identity of a crime victim could compromise an ongoing investigation, but a blanket policy to potentially withhold information in all cases and for no reason related to police work is neither necessary nor advisable. Call it an exaggeration, but we see it as the thin edge of the wedge toward a 'blanket policy' of secrecy in police work....” Times & Transcript, A10

Ontario to consult the public on carding
With the Black Lives Matter protest that blocked traffic on the Allen Expressway this week still fresh in the minds of many, the provincial government has announced plans to begin public consultations on street checks, or carding. The consultations - which will be held with community organizations, policing partners, academics, civil liberty organizations as well as asking the general public for online participation - are to begin in August. Toronto Mayor John Tory had pledged in June to reform carding in the city, but then decided to delay any action until the province reviewed the controversial police practice and set up province wide regulations. Community Safety Minister Yasir Naqvi announced in June that the provincial government planned to review the practice often called street checks outside Toronto. "Our government takes the protection of human rights very seriously and has been clear that we have zero tolerance for racism or marginalization, including any form of discrimination based on skin colour, background, religion or gender," said Naqvi in a news release. "We stand opposed to any practice where police stop individuals without reason, cause or for clear policing purposes." The consultations will develop new rules so the practice of street checks is "right-based and properly carried out, protecting individual charter and human rights, strengthening public accountability and allowing for a consistent and clearly defined approach for police," the Ontario government's release said. Toronto Star, GT2

Grande Prairie gets new top cop
RCMP in Grande Prairie have a new boss. Grande Prairie Chief Supt. Brenda Lucki, district commander for the RCMP's Western Alberta District, announced Thursday that the detatchment in Grande Prairie-Beaverlodge will be led by Supt. John Ferguson. "We are pleased to have Supt. Ferguson join our team," says Horacio Galanti, Grande Prairie community safety director. "Grande Prairie is a growing, diverse community and a hub for the region. His extensive background is a great fit, particularly in priority areas such as drug activity." Ferguson, a graduate of Queen's University in Ontario and father of three, has most recently filled roles at "H" Division in Nova Scotia including Federal Policing Officer and District Officer for Northeast Nova District. Edmonton Sun, 8

Mounties charge man with human trafficking
Mounties have charged a 25-year-old man in southern Alberta with human trafficking and prostitution offences. Police say the charges came while investigating a youth reported missing. They say the investigation found evidence that the youth was an alleged victim of human trafficking. A man from Airdrie is facing several charges, including assault, human trafficking and living off the avails of prostitution. Postmedia News (Edmonton Journal, A7); Calgary Herald

Ex-B.C. gangster under arrest after moving to Ontario
A former B.C. gangster has been arrested in Ottawa on drug and weapons charges. Damion Ryan, who is now a prospect for the Ontario Nomads' chapter of the Hells Angels biker gang, was picked up on July 17. Det. Staff Sgt. Len Isnor, of the Ontario Provincial Police, confirmed Ryan's arrest to The Vancouver Sun. Isnor said the investigation by the OPP's Biker Enforcement Unit is continuing. Ryan was associated with the so-called Wolf Pack alliance while he was in Metro Vancouver. It consisted of some Independent Soldiers' gangsters, some members of the Red Scorpion gang and some Hells Angels. The alliance was locked in a bloody gang war that resulted in the slayings of several high profile gangsters like Red Scorpion Jonathan Bacon, Sandip Duhre and brothers Gurmit and Sukh Dhak. Ryan's name surfaced earlier this year in a B.C. Supreme Court ruling in a gun case involving his associate Dean Wiwchar, who is a suspect in the 2012 Duhre murder. Postmedia News (Vancouver)

* **Top cop in Kelowna probing Mountie's confrontational traffic stop, reports say**
A video that shows a Mountie's confrontational encounter with a driver and her passenger is reportedly under investigation by the officer in charge of Kelowna's RCMP detachment. Supt. Nick Romanchuk has told multiple media outlets that he has asked for a review of the video, which was posted on Facebook by a man with the user name Shawn Michaelz and had been shared more than 1,800 times by Thursday evening. Michaelz wrote that the encounter began when he saw the officer make a left turn without signalling. "I throw my hands up in the air in the passenger seat of the vehicle and the cop gets mad and pulls a U-turn in the intersection to pull us over," the post reads. The video shows the Mountie asking, "So, what would you like to say to me, as a police officer?" The female driver responds by asking why she was pulled over. "Any time someone is going to go like that to a police officer, then they're obviously

upset about something," the officer replies. He goes on to say that he was looking for a licence plate, looked down at his computer screen, and lost track of his position on the road. When the car's passenger suggests that could be considered distracted driving, the officer says, "Distracted driving? OK, well, we'll have a look at your paint job, your rims, make sure they're high enough from the ground," before walking away to call for a member of the traffic section. The video is edited, so it's unclear how long the encounter lasted, but it shows the officer checking the driver's licence and insurance and telling her he needs to make sure the vehicle is road-worthy. Postmedia News (Vancouver Sun)

*** Under the influence**
An editorial states, "So, are we winning the war on drunk driving? Some days, you have to wonder. And Wednesday was one of those days, at least as far as the Bay St. George detachment of the RCMP is concerned. During a 24-hour period spanning parts of July 29 and July 30, the Bay St. George RCMP responded to 14 calls for service. Of those, somewhere between one-fourth and one-fifth were drunk-driving complaints. Here's how the first one looked in a Thursday morning news release: "At 10: 27 a.m. police received a report from a Stephenville business indicating that a customer had just driven to their location and appeared to be intoxicated. Police attended and located the 61-year-old male resident of Stephenville and arrested him for impaired driving. The man subsequently provided a breath sample that (was) 2 1/2 times the legal limit. The male will appear in court on Oct. 5th to enter a plea to impaired driving charges." ... Are we winning the war? Some days, you can hope that we are. Other days, like Wednesday, it's pretty clear we're still losing battles." The Telegram, A6

***B.C. groups protest against Kinder Morgan pipeline review**
The National Energy Board (NEB) is facing a fresh round of resistance to its embattled review of the proposed Kinder Morgan Trans Mountain pipeline expansion. Three separate parties - British Columbia's Opposition New Democrats, the city of Burnaby and the Sierra Club - all issued renewed challenges to the process on Thursday. Kinder Morgan hopes to triple the bitumen-carrying capacity of the Trans Mountain line by laying almost 1,000 kilometres of new pipe between Edmonton and Metro Vancouver, increasing the number of tankers in Burrard Inlet to 34 from the current five per month. The strongly-worded letter from B.C.'s opposition party details four major concerns with the NEB process, including that it lacks the public's confidence, doesn't consider climate change, hasn't required Kinder Morgan to disclose its emergency response plans and failed to ensure First Nations were on board. Meantime, the city of Burnaby sent a letter to the NEB refusing to provide extra policing services for the upcoming Trans Mountain hearings in September. The board had asked for seven officers and one supervisor. Burnaby Mayor Derek Corrigan said the city has limited police resources to serve its own needs, and has asked the NEB to make other arrangements with the RCMP's head office in B.C. "We are also extremely concerned that the NEB has come into Burnaby and is doing things that we know are going to be provocative," he said. Canadian Press (Toronto Star, A8; Red Deer Advocate)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Officials mum on CSC headquarters break-in**
Correctional Service Canada officials are tight-lipped as to why a break-in at one of their regional headquarters buildings in April wasn't made public. In the early morning hours of April 22, a burglar broke into the regional staff college at 443 Union St. The suspect gained entry to the building by smashing a window pane at the front entrance. There was no security at the regional headquarters at the time of the break-in. In an email to the Whig-Standard on Thursday, **CSC** confirmed that a break-in took place on April 22, commissionaires and Kingston Police responded to the scene and a letter was sent out to employees the following morning. But **CSC** didn't comment on whether security was increased at the facility since the break-in. "As there is an ongoing investigation, **CSC** cannot comment further," Shannon Mills, a communications officer with CSC, wrote in an email. Mills added that "ensuring the safety and security of institutions, staff, inmates and the public is **CSC**'s priority." According to the website Cancrime, sources said that the facility stores confidential files, a variety of pistols, rifles, shotguns and tear gas guns as well as a large amount of ammunition. The firearms and ammunition were stored in high security vaults, which the burglar didn't have access to. According to an internal memo, also obtained by

Cancrime, all the thief took were keys to a **CSC** staff vehicle but the vehicle wasn't stolen. After the break-in, alarms sounded and the patrol commissionaire and Kingston Police responded. Therese Lalonde, the director of the staff college, wrote in the memo that a walkthrough of the facility took place later that morning to see if anything else was stolen. "No other items were found to be missing and no area was found vandalized," she wrote. Kingston Whig-Standard, A1

*** Collins Bay inmate murdered**

The inmate who died on Monday at Kingston General Hospital after needing medical attention in the medium security exercise yard of Collins Bay Institution on Sunday was murdered, said the Joint Forces Penitentiary Squad in a release. John MacDonald, 55, had been serving a sentence of five years, 10 months and 16 days, since June 8, 2010 for two counts of robbery. A post mortem examination was performed at Ottawa General Hospital this week and the death was deemed to be a homicide. As in all death cases in institutions the Joint Forces Penitentiary Squad was called into investigate MacDonald's death along with investigators from Corrections Canada. The homicide is being investigated under the direction of Det. Insp. Jim Gorry of the Ontario Provincial Police Criminal Investigation Branch. Officials are not releasing anymore information on the death while the investigation is ongoing. Kingston Whig-Standard, A3

*** A way out needed for the held down**

The news Wednesday that 22-yearold inmate Camille Strickland-Murphy was found unresponsive in her cell in Nova Institution for women in Truro could be seen as inevitable. She had been in court many times - once when she held a knife to someone's throat; another when she had written a threatening note to a pharmacy in an attempt to rob it. She suffered from attention deficit hyperactivity disorder, obsessive/compulsive disorder, social anxiety disorder, and panic disorder. That cocktail of mental health issues was garnished with a history of alcohol and drug abuse. It was reported earlier this year that she attempted suicide by stuffing paper in her pant leg and catching herself on fire. Mark Gruchy, a lawyer and president of the local chapter of the Canadian Mental Health Association, says such cases are avoidable tragedies. "When you see an individual who is having problems with addiction and underlying mental-health problems you are seeing the tip of the iceberg of the culmination of usually innumerable personal disasters that have now culminated into this massive social problem," he says. People who find themselves in a position like hers come from a complex place and the remedy to their problems has its complexities, too. It involves engagement in the housing, employment, socializing, addiction and mental - health issues they face, Gruchy argues. "You have people who are already in a weakened state who are having more and more piled on top of them that even an otherwise well-situated person would have difficulty overcoming." That erosion of normalcy and deposition of problems on them makes finding a way out impossible. The result is desperation which, as the saying goes, calls for desperate measures. A big part of the solution, Gruchy says, would be a drug court, such as those that exist in larger Canadian cities. The Telegram, A5

*** Inmate had history of health issues**

A 22-year-old inmate found dead in her cell at the Nova Institution for Women had a history of mental health and substance abuse issues, prior to being sentenced on an armed robbery conviction last November. Camille Strickland-Murphy, who had been serving a sentence of two years, eight months and two days, stemming from last Nov. 10, in St. Johns, NL, was found unresponsive in her cell Tuesday evening at the women's prison in Truro. During her sentencing, according to information published last November in the St. John's Telegram, Newfoundland provincial court judge Pamela Goulding noted that Strickland-Murphy had suffered from attention deficit hyperactivity disorder, obsessive/compulsive disorder, social anxiety disorder and panic disorder, as well as a history of alcohol and drug abuse. '"During her (previous) incarceration (in 2012), the offender was assaulted severely, which resulted in a brain injury. She now has hydrocephalus and experiences headaches, fainting and seizures,"' the Telegram reported last fall, from Goulding's written report. It has also been reported that during the 2012 sentencing, Strickland-Murphy had asked to be housed in a federal institution to get help for her mental health issues. When asked Wednesday by the Truro Daily News whether Strickland-Murphy had been enrolled in any programs to deal with her issues, prison warden Laurie Bernard said she could not provide that information for confidentiality reasons. "I'm not able to comment on that at this time," Bernard said. "What I can confirm, is that as with all deaths in custody, the coroner and medical examiner were

called in to investigate. And as with all such cases, she said, **CSC** will conduct its own investigation as well. Cape Breton Post, A9

*** Camille Strickland-Murphy's death prompts calls for overhaul of N.L. justice system**
Following the death of Camille Strickland-Murphy in a Nova Scotia prison, a local lawyer says there needs to be a major overhaul of how the Newfoundland and Labrador justice system deals with mental health issues and addictions. "Whenever someone ends up in prison, that's the culmination of a disaster," said St. John's defence lawyer Mark Gruchy. Camille Strickland-Murphy died Tuesday night, while serving a three-year sentence at the Nova Scotia Institute for Women. (CBC) "Prison is a disaster. It is not a solution, it's the end of the road. And we can only hope that it doesn't get worse." Strickland-Murphy was a St. John's resident, who was serving a three-year sentence for the armed robbery of a Shoppers Drug Mart in Newfoundland in 2014. She had drug and alcohol addictions as well as mental illness. The provincial correctional system does not offer any treatment options, so Strickland-Murphy chose to go to federal prison on the mainland so she could get help. CBC News

*** More than six years after her child was slain, Tara McDonald is helping bring new life to others**
First, she was Canada's most horrible mother, vilified across the nation. "I was made to be such a wicked, wicked witch," Tara McDonald remembered. "So heartless, evil, cold." Then, the body of her daughter Tori Stafford was found and two strangers charged with her kidnapping, rape and murder. McDonald became Canada's grieving mother, her home filled with stuffed teddy bears and other mementoes sent from sorrowful people across the country. "I still have bad days. There are some days it takes me longer to put on my happy face and get out there to be with people," she said. But now, McDonald is finally starting her new life as the ultimate mother, a doula helping other women bring children into the world. "When I see a newborn baby, I think of life," McDonald said Thursday, setting up a booth for her service, Your Body, Your Birth, at London Ribfest. "Don't get me wrong; if I see a little girl who's eight years old with blond hair and blue eyes, of course I think to myself, that is a beautiful child that looks like Tori, and that tugs at my heart. But Victoria loved life and she would want me to be doing what I love." Rather than make her shy away from children and parents, her daughter's horrific death has brought her closer to them, McDonald said. "I think it has allowed me to be a more compassionate person and a more understanding person. I didn't have any second thoughts at all. It made me stronger to do it." Eight-year-old Tori was kidnapped April 8, 2009, while walking home from her school in Woodstock and killed that same evening in a wooded area of a farm north of Guelph. Two Woodstock residents, Michael Rafferty and Terri-Lynne McClintic, were convicted of first-degree murder, kidnapping and sexual assault causing bodily harm and sentenced to life in prison. London Free Press, A1 (Calgary Herald, Montreal Gazette, National Post, Edmonton Journal, StarPhoenix, Windsor Star, Leader-Post, The Province)

*** Conditions imposed on violent offender's release to halfway house**
A P.E.I. man who has a history of killing animals and said he would feel no distress killing a person was recently granted a statutory release from prison. Bradley Orville Perry was serving a two-year, four-month and twenty-seven day sentence for several offences, including using a firearm to commit theft and possessing an unregistered restricted weapon. Perry was also convicted of careless use of a firearm, possession of property obtained by crime and failing to comply with a condition of an undertaking. It was his second sentence of more than two years. In a recent report, the parole board imposed several conditions on Perry's release, including that he live in a halfway house. The report outlines some of Perry's criminal history and file information collected during a prior sentence. Some of Perry's offences involved the use of weapons, such as knives and a loaded shotgun, which he used during a domestic dispute. Perry's file showed he killed domestic animals, such as pet birds and a former girlfriend's cat. He also admitted to strangling pigeons from his cell window while serving his most recent sentence. Perry said he didn't feel any distress over killing small animals and wouldn't if he killed a person, although the potential of going to prison was a deterrent to killing someone. In imposing the conditions on Perry's release, the board said past issues with his ability to control his emotions led to impulsive and violent behaviour. During an incident involving a family member, Perry hit their head off a coffee table and during another he used a loaded shotgun to threaten a girlfriend. Charlottetown Guardian, A1

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Fund contributes to community projects**

The Yukon government has awarded more than $103,000 to eight Yukon community organizations for projects that support healthy communities. Among the recipients is the Yukon Council on Aging, which has been given $5,796. That group will use its funding to modernize its website to enhance its accessibility and to incorporate a more user-friendly design. "Working with seniors' organizations, the Yukon Council on Aging spearheads the sharing of information of interest to seniors in Yukon," council president Connie Dublenko said in a recent news release. "This project will help us achieve our goal of encouraging respect for the contributions senior citizens have made, and of understanding the aspirations and issues of concern in the lives of Yukon seniors." The Association of Yukon Fire Chiefs will access $15,000 from the Community Development Fund (CDF) to provide training and education tools to firefighters that will focus on community safety and property conservation. "The Association of Yukon Fire Chiefs is grateful and excited to receive CDF support," said president Jim Regimbal, who is also Dawson City's fire chief. "The funding will help us achieve our primary goals of life safety and preservation of property by providing Yukon fire chiefs and senior fire officers with the additional training and educational tools needed to protect their communities." The Copper Ridge Neighbourhood Association was awarded $20,000 to build a playground, install accessible benches and improve landscaping at Lazulite Park. Whitehorse Daily Star, 5

*** Young citizens on patrol**

For the fifth summer, Kingston Police have a few more feet on the ground helping them patrol the city. William Arsenault, 17, and Trevor Kirby, 15, are the newest summer recruits for the Youth in Policing Initiative (YIPI) program. Supervised by Const. Josh Conner, the Kingston Police Youth Officer, the teenagers perform a variety of crime prevention measures, public relations duties and community outreach programs. Duties include foot patrol, bike patrol, check vehicles for valuables inside and give out Lock It Or Lose It forms, attend community barbecues and other community events. Their duties don't include any police business that will put them in harm's way. During Wednesday's searing heat, the the pair were downtown checking on unlocked cars as part of the Lock It Or Lose It program. "It's a crime prevention program to make sure people don't have valuables in their car and make sure their cars are locked," said Kirby, who is going into Grade 10 at Regiopolis-Notre Dame in the fall. As part of the program, both Arsenault and Kirby look in vehicles in city parking lots and along city streets to visually ascertain if the car is locked and if it has any valuables inside. After their inspection, they place a ticket on the car that isn't a fine but advises the car's owner to keep their valuables secure. Last week, they found a laptop, cellphone and keys to the car in an unlocked vehicle. So far this summer they haven't found any dogs or babies left in hot cars. Kingston Whig-Standard, A2

*** $1M will help abuse victims**

A London-based centre that helps survivors of domestic violence and child abuse has received a $1-million infusion to become a national hub for supporting victims. The Centre for Research and Education on Violence Against Women and Children will get slightly more than $1 million from the Public Health Agency of Canada to become a national hub that looks at the health and well-being of trauma survivors. The money means programs and research being done in all parts of Canada will be connected to help agencies and health professionals do the best possible job, said Linda Baker, the centre's learning director. "This is an opportunity to bring together community organizations that are working with survivors with leading researchers and health professionals," Baker said. "Usually, projects are done but they stay in silos, in isolated clumps. For the first time in terms of trauma-informed health promotion, we can maximize the impact. An innovative practice in Nunavut or the Maritimes can be shared." The money will be used to connect the work of community-based projects in Canada for five years. The projects support victims of violence from a health perspective. The knowledge hub will consolidate the data from various projects to better help families affected by violence. London Free Press, A5

PUBLIC SERVICE / FONCTION PUBLIQUE

***Up and down journey for PS**
As of last month, nearly 317,000 people worked for the federal government, its various agencies and the armed forces - just one per cent more than when the Conservatives were sworn in early in 2006. On the eve of a federal election, Prime Minister Stephen Harper now finds himself in the crosshairs of public sector unions concentrating on the last half of the Conservative decade. "This government is cutting public service budgets across the country, without regard for the safety and welfare of millions of Canadians," read the newspaper ads published this week by the Public Service Alliance of Canada, the largest federal government union. PSAC may not have long to make its points: its spending on ads will be limited under the rules that kick in once the election campaign begins. But overall, government workers haven't done badly, certainly in comparison with workers in other industries. The federal government's total payroll last year was $45 billion including benefits, up from $29 billion in 2006 when Stephen Harper was sworn in as prime minister. The rise was not gradual. Pay and benefits across the federal government jumped nine per cent annually from 2006 to 2010, then weakened considerably to two per cent per year during the following four years - reflecting the big drop in the number of employees. Ottawa Citizen, A1

OTHER / AUTRE

État islamique
Peu d'informations ont filtré de la rencontre tenue à Québec jeudi pour faire le point sur la riposte internationale au groupe armé État islamique (ÉI) et planifier les prochaines étapes. Les échanges, sous haute sécurité, se sont déroulés derrière des portes closes dans la salle de bal du Château Frontenac, entre quelque 150 dignitaires, politiciens et militaires provenant d'une vingtaine de pays. Plusieurs enjeux, politiques et militaires, étaient à l'ordre du jour des discussions qui se sont étirées durant environ sept heures, en vue de s'assurer que tous étaient bien sur la même longueur d'ondes au sein de la coalition internationale déterminée à faire cesser les exactions commises par le groupe extrémiste, qui sévit en Irak et en Syrie. La coalition prévoyait notamment s'interroger sur l'efficacité des frappes aériennes dirigées jusqu'à maintenant contre le groupe. Dans un communiqué, le ministre canadien des Affaires Étrangères, Rob Nicholson, qui était l'hôte de la rencontre, a dit que le Canada était prêt à accroître son effort en injectant 8,3 millions $ supplémentaires en vue de soutenir les Irakiens dans différentes actions destinées à contrer le groupe armé, notamment en augmentant les mesures de sécurité aux frontières et en apportant davantage d'aide humanitaire à la population dans le besoin.
Le ministre irakien des Affaires étrangères, Ibrahim al-Jafaari, accompagné de nombreux gardes du corps, était présent à Québec, tout comme le général américain à la retraite John Allen, envoyé spécial du président des États-Unis Barack Obama. Le Canada a profité de l'occasion pour réitérer sa détermination à assumer le leadership de la lutte contre le terrorisme en s'attaquant aux pratiques «barbares» de l'ÉI, une bataille entreprise il y a un an à l'échelle internationale... La Presse Canadienne (Acadie Nouvelle, 18); Agence QMI (Journal de Montréal, 24, Journal de Québec, 7)

INTERNATIONAL / INTERNATIONAL

Debris offer clue to fate of Flight 370
A seacrusted wing part washed up on an island in the western Indian Ocean may be the first trace of Malaysia Airlines Flight 370 since it vanished nearly a year and a half ago, and a tragic but finally solid clue to one of aviation's most perplexing and expensive mysteries. Malaysia's prime minister said Thursday the debris found on the French island of Reunion will be sent for investigation to the French city of Toulouse, hub of the European aviation industry. "We have had many false alarms before, but for the sake of the families who have lost loved ones, and suffered such heartbreaking uncertainty, I pray that we will find out the truth so that they may have closure and peace," Najib Razak said on his personal blog. Najib promised to make any new information public quickly. Air safety investigators - one of them a Boeing investigator - have identified the component as a "flaperon" from the trailing edge of a Boeing 777

wing, a U.S. official said. Flight 370, which disappeared March 8, 2014, with 239 people on board, is the only 777 known to be missing. The piece could help investigators figure out how the plane crashed, but whether it will help search crews pinpoint the rest of the wreckage is unclear, given the complexity of the currents in the southern Indian Ocean and the time that has elapsed since the plane disappeared.
"It's the first real evidence that there is a possibility that a part of the aircraft may have been found," said Australian Transport Minister Warren Truss, whose country is leading the search for the plane in a remote patch of ocean far off Australia's west coast. "It's too early to make that judgment, but clearly we are treating this as a major lead." Flight 370 had been travelling from Kuala Lumpur to Beijing, but investigators believe based on satellite data that the plane turned south into the Indian Ocean after vanishing from radar. If the wing part is from the Malaysian plane, it would bolster that theory and put to rest others that it travelled north, or landed somewhere after being hijacked... Associated Press (Red Deer Advocate, A7, Daily Gleaner, Kingston Whig Standard, London Free Press, Chronicle Herald, A15, Windsor Star, StarPhoenix, Gazette, National Post, A3); CBC News; * Associated Press (Edmonton Journal, A17, Vancouver Sun, B4, Calgary Herald)

MINISTER / MINISTRE

Alberta offering emergency stipends to Ft. Mac evacuees
The 88,000-plus evacuees who fled the catastrophic Fort McMurray wildfire will be getting financial aid from the Alberta government, Premier Rachel Notley said Friday. "One of the key issues facing people displaced by this disaster is immediate challenges: food and shelter," Notley told reporters during a briefing in Edmonton. "As we did after the Slave Lake fire and the southern Alberta flood, cabinet today authorized the government to provide emergency financial assistance to people who have been displaced." Every adult evacuee will receive $1,250 in emergency stipends, Notley said, while dependents will get $500 each. The fire, officials said Friday, has grown exponentially to cover more than 101,000 hectares. Critical infrastructure — including the hospital and the downtown core — remain intact. Responders say they expect the challenging firefighting situation, spurred by a lack of rain and tinder-box conditions, will continue. "***They're dealing with an absolute beast of a fire, one of the worst we've ever seen***," **Public Safety Minister Ralph Goodale** told reporters, Friday. The cause of the fire remains

under investigation, Alberta officials said, adding winds are expected to redirect the fire towards a forested area in the northeast. Mandatory evacuation orders remain in place and it's not safe yet for residents to return, Notley said. iPolitics

Alberta Wildfires Roar on as Evacuee Convoy Drives to Safety
Wildfires ravaging the center of Canada's oil production region in northern Alberta continued to grow, covering more than 1,000 square kilometers (390 square miles) as police shepherd convoys of families to safety through the now-devastated town of Fort McMurray. The fire is spreading north and south, covering an area almost the size of Hong Kong, forcing evacuations from oil camps where Fort McMurray residents had fled earlier this week, police said. The ferocity of the fire was unprecedented, said Chad Morrison, a senior wildfire manager for the Alberta government. "This is an extreme, rare fire event, that is something that is historic for us," Morrison said at a press conference in Edmonton, flanked by Alberta Premier Rachel Notley and a brigadier general from Canada's military. "There is no amount of resources we are going to be able to put on this fire that can hold it." As many as 25,000 of Fort McMurray's 80,000 evacuated residents had gone north to oil-sands work camps before the fires overtook the town, cutting them off from the rest of the country. That area is no longer guaranteed safe, **federal Public Safety Minister Ralph Goodale said**. Police began escorting convoys of 50 vehicles at a time through the fire zone Friday morning, working to get the 10,000 people to safety in towns south of the city. Bloomberg News

Canadians donate millions to Red Cross for Fort McMurray relief effort
People from across the country have banded together in what the president of the Canadian Red Cross says is an unprecedented ``Canadian moment," donating $30 million by Friday morning to help the victims of the massive wild fire in Fort McMurray, Alta. ``Canadians are collectively coming together to show their care and compassion," Conrad Sauve said Friday. ``We have over 100,000 Canadians that have come to us with texts to donate. We're getting offers from every part of the country, including corporate Canada in terms of workplace (fundraising) campaigns." About 14,000 families in need from the Fort McMurray area have registered with the Red Cross and that number is expected to grow. Both the federal and Alberta governments have promised to match all donations to the Red Cross for the relief efforts in Fort McMurray. The money is used to mobilize and provide support Red Cross volunteers who are helping evacuees. The cash is also used to provide basic goods to people fleeing the fire. **Public Safety Minister Ralph Goodale** said the Fort McMurray blaze is ``***an absolute beast of a fire***'' that is one of the worst ever seen. ``***The situation is still evolving. It's still very dangerous***." Canadian Press (Chronicle-Herald); La Presse Canadienne (L'actualité); News Talk 1010; CHQR News Talk 770 AM

CTV News - Power Play interviewed Jim Reiter, Saskatchewan Government Relations Minister regarding the federal, provincial, and territorial ministers responsible for emergency management meeting which took place today with **federal Public Safety Minister Ralph Goodale**. Rough Transcript

CTV News - Power Play interviewed B.C. Premier Christie Clark discussed wildfires. During the conversation, Premier Clark commented that financial assistance to the provinces from the federal government for disasters has typically been slow and says that funds needs to be distributed quicker. Following this, Power Play reported on comments made by **Public Safety Minister Ralph Goodale** earlier today in regards to disaster financial assistance. Rough Transcript

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray fire evacuees get first view of burned city
Displaced Fort McMurray residents got a sobering drive-by view of their burned city Friday in a convoy that was moving evacuees south to reunite with families and friends. Officials said shifting winds were

giving the embattled northern Alberta city a break, but they added the fire that forced 80,000 people from their homes remained out of control and was likely to burn for weeks. In Edmonton, Premier Rachel Notley announced the government will provide debit cards to help evacuees with immediate needs. Adults will receive $1,250 each and dependents $500. The cost to the province is estimated at $100 million. The first convoy of 50 vehicles drove through the oilsands city from the north at about 6 a.m. It was escorted by the RCMP and a police helicopter was monitoring the area in case winds shifted to create a renewed fire danger along the route. Premier Rachel Notley said the plan was to get 500 vehicles out by ground and 5,500 people by air. Another 7,000 were flown out Thursday. More than 20,000 displaced residents had been living in oilsands work camps since Tuesday after the blaze cut the main road through Fort McMurray and sent residents fleeing either north or south. The fire itself stood at just over 1,000 square kilometres. There was no renewed update on number of structures burned, which stood at 1,600 Wednesday, mainly in city neighbourhoods to the south and southwest. Chad Morrison, Alberta's senior wildfire manager, said critical infrastructure - the downtown, the water treatment plant, the hospital and the airport - remained intact. The blaze also hit the evacuated village of Anzac to the south of the city where it destroyed 12 structures. Morrison said winds were moving the blaze away from Fort McMurray toward unoccupied areas to the north and east. Canadian Press (Winnipeg Free Press); National Post; Toronto Star; Edmonton Sun; Daily Mail; Reuters (Huffington Post); The Guardian; NY Times; AFP (TVA Nouvelles); Journal de Montréal; Radio-Canada

Fort McMurray wildfire: P.E.I. man in convoy 'could reach out and touch' fire
A P.E.I. man says fires were so close to his car as he headed out of Fort McMurray on Friday he could reach out and touch them. Vernon Gillespie was relieved to be in the convoy leaving an oil camp in northern Alberta, going through Fort McMurray, and out of the fire zone. But it was more frightening than he expected. Gillespie said there were hundreds of vehicles in front of him, and it was very slow moving. CBC News; Global News

Smoke hits Saskatchewan as Fort McMurray wildfires burn
Saskatchewan is still breathing smoke coming from the wildfires near Fort McMurray, Alta. According to Environment Canada, northwest winds are spreading the smoke from the wildfires in northeast Alberta to western Saskatchewan. As a result, some areas will experience poor air quality and reduced visibility. The weather station has issued a special air quality statements for north-western Saskatchewan, including Saskatoon, Buffalo Narrows, Beauval, Île à la Crosse, La Loche, Clearwater River Provincial Park, Cluff Lake, Martensville, Warman, Rostern, Delisle and Wakaw. The statement is also extended to the communities of Meadow Lake, Big River, Green Lake, Pierceland, Prince Albert, Shellbrook, Spiritwood, Duck Lake, the Battlefords, Unity, Maidstone and St. Walburg. CBC News

Firebreak around Fort McMurray wouldn't have saved city, official says
Building a firebreak around Fort McMurray wouldn't have helped prevent a wildfire from devastating the city this week, says Alberta's top wildfire official. "I want to be clear," Chad Morrison said at a news conference. "With the nature of this fire and the dangerous conditions we have, no size of firebreak would hold this fire from doing anything. This fire jumped the Athabasca River, which is over a kilometre wide." After a wildfire destroyed about one-third of the town of Slave Lake in May 2011, the province commissioned a study that looked for ways to prevent similar disasters. The committee made 21 recommendations, but in its final report concluded there was little that could have been done to save the town, which suffered what was at time the second-costliest disaster in Canadian history, with an estimated $742 million in insurance claims. CBC News

Fort McMurray wildfire: First clear satellite images show deserted streets, burned homes
Early Friday morning, Google released the first clear images of fire-ravaged Fort McMurray taken from space. They show deserted streets and whole neighbourhoods devastated. The space image was taken Wednesday by Terra Bella, a subsidiary of Google that operates satellites. A larger original version can be seen here. (Go to that link to look for a specific home.) Global News

Fort McMurray fire has economists cutting growth forecasts for Canada
Economists trying to gauge the impact of the Fort McMurray wildfire and its disruption of oilsands production are already cutting their outlooks for the Canadian economy. Current estimates are that

anywhere from 900,000 to one million barrels of oilsands production have been suspended due to the fire. "The situation remains fluid, and uncertainty remains about how long production disruptions will persist," economists at Royal Bank of Canada said in an economic comment released Friday. "However, if we assume those shutdowns last for two weeks, they would subtract 0.5 per cent from May GDP." RBC said it expects much of the decline in oilsands production will be reversed in the months to come. "Although the loss of oil production is likely to be the largest factor impacting monthly GDP data, the absence of evacuated residents will also limit retail sales and hours worked outside of the oil and gas production sector," the bank said. CBC News; Globe and Mail

Ottawa et Gatineau se serrent les coudes pour Fort McMurray
Alors que les flammes continuent de faire des ravages à Fort McMurray, des collectes de dons sont organisées à Ottawa et à Gatineau pour venir en aide aux évacués. Vendredi soir, le Centre national des arts d'Ottawa recueillera des dons lors du spectacle de Royal Wood. Les dirigeants des mosquées d'Ottawa et Gatineau ont aussi lancé un appel à la générosité aux membres de leur communauté. Tous sont invités à faire des dons en argent à la Croix-Rouge canadienne. Radio-Canada

Fort McMurray : des travailleurs étrangers pourraient devoir quitter le pays
Des groupes militants affirment que les travailleurs étrangers temporaires forcés de se déplacer en raison de l'incendie qui ravage Fort McMurray courent un risque plus grand encore que les autres résidants qui ont dû fuir la ville du nord de l'Alberta. Ils affirment que plusieurs d'entre eux pourraient se retrouver en véritable situation de crise en ce qui a trait au logement, puisqu'ils n'ont souvent pas de famille ou d'amis pouvant les accueillir dans la région. La Presse Canadienne (La Presse); Radio-Canada

What gives Fort McMurray an edge in overcoming 'beast' of a wildfire
If you're stuck in an epic traffic jam, inching through billows of smoke as a wall of flame devours trees alongside you and you've no idea if your home or anything in it will be there when you get back, you'd be forgiven for freaking out. That didn't happen on Highway 63 this week. If an inferno's going to upend your community and force almost 90,000 people from their homes, Fort McMurray is pretty disaster-resilient — well positioned to cope, and bounce back. As a "nasty, dirty," "beast" of a wildfire tore through Alberta forest like kindling this week, tens of thousands of people and animals made it to safety and almost no one got hurt. That's not to minimize the damage: Two teenage girls died in a fiery car crash on Highway 881 Wednesday afternoon as their family made the trek south. And those 88,000 evacuees are stuck in limbo, not knowing when they'll be able to go home or what will be left of their homes when they do. Many, Wildrose leader Brian Jean among them, already know not much remains. Global News

Fort McMurray wildfire continues to take toll on Alberta oilsands
The wildfire ripping through the Fort McMurray, Alta., area continued to set back Alberta's crude industry Friday as concerns arose that the disaster may have taken out as much as half of Canada's oilsands output. It is difficult to say with certainty how much oilsands bitumen is offline because production levels have fluctuated throughout the week and companies have not disclosed precise figures. But Nick Lupick, an oilsands analyst for AltaCorp Capital, said his latest estimate is that between 1.1 million and 1.25 million barrels of oil per day have been knocked from oilsands production. Global News

Fort McMurray pets rescued by 'rogue' volunteer rescue team
The catastrophic wildfire has made a ghost town out of Fort McMurray. But Wyatt Colquhoun-Rivard and a small group of volunteers broke the smoke-heavy silence temporarily with the sound of breaking glass, as they smashed their way into homes looking for stranded pets. They ignored an evacuation order earlier this week to rescue as many stranded pets as they could, animals left behind by evacuees when they were ordered out of the city. CBC News; Canoë

Fort McMurray man watches his home burn on security cam
As James O'Reilly joined the exodus out of Fort McMurray on jammed Highway 63 on Tuesday, he watched the view from his home's security camera on his iPhone as flames broke through a window and devoured his living room. The video shows flames swirling outside O'Reilly's windows in the Abasand neighbourhood, just minutes after thousands of residents were ordered out of the city. CBC News

New homes spring up for Fort McMurray evacuees
Lac La Biche's newest neighbourhood is rising out of the ground in a matter of hours. Its residents are expected to move in almost immediately. Under the hot, springtime sun, crews are working to place dozens of mobile homes in the soil of the Alberta town, which lies 289 kilometres south of fire-ravaged Fort McMurray. CBC News

Firebreak around Fort McMurray wouldn't have saved city, official says
Building a firebreak around Fort McMurray wouldn't have helped prevent a wildfire from devastating the city this week, says Alberta's top wildfire official. "I want to be clear," Chad Morrison said at a news conference. "With the nature of this fire and the dangerous conditions we have, no size of firebreak would hold this fire from doing anything. This fire jumped the Athabasca River, which is over a kilometre wide." - Convoy of evacuees get 1st glimpse of fire-ravaged city After a wildfire destroyed about one-third of the town of Slave Lake in May 2011, the province commissioned a study that looked for ways to prevent similar disasters. The committee made 21 recommendations, but in its final report concluded there was little that could have been done to save the town, which suffered what was at time the second-costliest disaster in Canadian history, with an estimated $742 million in insurance claims. Air assets play critical role fighting Alberta wildfire from the sky: experts
The image of a helicopter ferrying a small bucket of water through towering plumes of smoke made clear the daunting, seemingly futile, task of fighting the Fort McMurray wildfire from the sky. To observers, it was like flicking water on a raging grass fire. But experts in fire suppression and management say the aircraft play a critical role in a multipronged strategy in containing expansive fires. "It has a target and a usefulness, for sure," said Roger Collet, a wildfire prevention officer with Natural Resources in New Brunswick. Cape Breton Post

False alarm: Tsunami alert sent out in error for B.C. coast, Vancouver Island
Emergency officials in B.C. say an automated tsunami alert for most of B.C.'s coast and Vancouver Island was triggered in error. There is no tsunami threat to B.C. at this time, authorities are assuring residents. Emergency Management BC sent out an email alert Friday just before 2 p.m. incorrectly warning of a large earthquake in the Pacific Basin, including tsunami alerts for Haida Gwaii, Vancouver

Island and B.C.'s north and south coasts. The false alarm was set off during maintenance work on the BC Emergency Response Management System. CTV News

Most MPs endorse Comox coast guard station shutdown
A House of Commons committee gave its conditional nod of approval Friday to the federal government's planned closure next week of a communications station in Comox. Liberal and Conservative MPs on the committee, overriding the objections of the New Democratic Party, accepted the Canadian Coast Guard's argument that mariner and public safety won't be threatened by the move. "The committee has been sufficiently reassured that the capacity of the Canadian Coast Guard to respond to emergency situations has not diminished," stated a news release issued following the tabling of the report in Parliament. However, the committee issued a number of recommendations calling on the government to closely monitor the situation to ensure problems don't develop. Vancouver Sun

NATIONAL SECURITY / SÉCURITÉ NATIONALE

La GRC a saisi des calepins djihadistes troublants
En mai 2015, la GRC arrêtait in extremis huit jeunes soupçonnés de vouloir rejoindre les djihadistes en Syrie, à l'aéroport Pierre-Elliott-Trudeau de Montréal. L'une d'entre eux transportait deux calepins de notes troublants dans ses bagages. Ils détaillaient la marche à suivre pour les jeunes, et les raisons qui les ont poussés à partir en zone de guerre. L'un d'eux contient une lettre d'adieu. La jeune femme y explique qu'elle devait quitter le Québec, une terre des «mécréants», pour aller faire la «hijra», l'émigration dans un pays musulman, souligne une déclaration de la GRC qu'a obtenu notre Bureau d'enquête. Parmi tous les pays où l'islam est majoritaire, elle choisit la partie de la Syrie sous le contrôle de l'État islamique, «puisque c'est là que la charia est appliquée», selon le document, déposé à la Cour du Québec. Elle ajoute que «si un morceau des terres musulmanes est touché, il est obligatoire de faire le djihad pour repousser l'ennemi». «L'auteure dit que si elle tombe en martyre, Allah lui demandera qui sont les personnes qu'elle aime pour qu'ils puissent entrer au paradis», rapportent aussi les enquêteurs de l'Équipe intégrée de sécurité nationale (EISN), l'escouade antiterroriste que dirige la police fédérale. Journal de Montréal

Une ado montréalaise voulait quitter la « terre des mécréants »
C'est ce que révèlent de nouveaux documents judiciaires sur l'interception d'un groupe de jeunes soupçonnés d'avoir voulu rejoindre des djihadistes en mai 2015. Les documents ont été rendus publics aujourd'hui à la demande de plusieurs médias, dont La Presse. Dans la lettre saisie par les policiers, la jeune femme écrit avoir le choix de vivre à « Dar el kufr » (terre des mécréants) ou à « Dar el Islam » (terre de l'islam). Elle dit avoir l'obligation de faire la Hijra (immigration) parce qu'elle vit dans un pays de mécréants. Elle raconte partir vers le « Shaam » (la Syrie) « puisque c'est là que la Sharia, la charte des lois islamiques, est appliquée »... Elle évoque aussi ce que sera sa vie en Syrie. Elle dit que « personne ne lui a promis qu'elle vivra dans le luxe puisque c'est Dar el harb (terre de la guerre) ». Elle raconte qu'elle voulait se marier avec un « frère avec qui elle a fait des plans », mais que sa famille aurait refusé. Les documents ne précisent pas si le « frère » en question devait lui aussi faire partie du voyage. Il est important de préciser que le contenu de ces documents, préparés par la GRC, n'a pas été prouvé devant le tribunal. La Presse

Expert witness based report on accused Mountie's version of events, trial hears
A psychologist testifying at the trial of an Ottawa Mountie accused of severely abusing his son said he accepted the father's version of events as fact, and that those facts formed the basis of the report the clinician wrote for the court. The 44-year-old member of the Royal Mounted Police and his wife, the boy's stepmother, have both pleaded not guilty to aggravated assault, failing to provide the necessaries of life and forcible confinement. The father also faces charges of sexual assault causing bodily harm and assault with a weapon. His 37-year-old wife and step mother of the boy was also charged with assault with a weapon. A publication ban prevents naming anyone in the trial in order to protect the identity of the boy, who is now 14 years-old. The psychologist has treated the Mountie in more than 50 one-hour therapy sessions. CBC News

Eid's counsel mulls strategy for sentencing on fraud convictions
Former construction boss and CSIS informant Roland Eid appeared in court Friday for the first of what could be several sessions before Justice Timothy Ray in connection with the sentencing phase of his criminal fraud proceeding. Eid was convicted on Monday of 10 counts of fraud and other offences related to the 2008 bankruptcy of his firm ICI Construction. Ray ruled that Eid had perpetrated a fraud by shifting $1.7 million in company funds to a personal account in his native Lebanon - funds, the judge said, should have been held in trust to pay for wages and materials at ICI's ongoing projects. Ottawa Citizen

New allies in the war against extremism
Géraldine, in Belgium, learned of her son's death through a text message: "Congratulations," it said. "Be proud of him. He is now a martyr." Karolina Dam, in Denmark, got the same cold news delivered to her by a stranger with links to ISIS on her doorstep. Christianne Boudreau, at home in Calgary, got a call from a Canadian journalist who had seen a Tweet about her son's death in Syria and wanted a photo of him. For the mothers of jihadist recruits, without even a grave to visit, there is no Hallmark card or bouquet of flowers that will make this Mother's Day any easier. But what sets these mothers apart from the thousands of others living a private hell as they mourn their sons and daughters is their determination to spare other parents the same grief. A growing body of research suggests that mothers in Canada and elsewhere, given the knowledge and training, are uniquely well placed to prevent their children from becoming radicalized. In the global fight against extremism, they can be key allies, Boudreau said.(…) In senate hearings this week, RCMP commissioner Bob Paulson revealed that 63 jihadists have returned to Canada. Though alarming, the updated figures might still be low, since they may only include the people governments know about, or who have been reported missing by families and friends. Given the stigma and fear of prosecution for returning fighters, many families don't report them. That means potentially 62,000 parents in distress or mourning (...)Herman Okomba-Déparice, the head of Montreal's Centre for the Prevention of Radicalization Leading to Violence(https://info-radical.org/en/), has come to the same conclusion. "Among those who left for Syria, mothers are at the centre of their identity. If there's one person they will call from Syria, it's their mother - without fail," Okomba-Déparice said. "Radicalization doesn't erase their love for their mother. We have to capitalize on that." Gazette

Mayors are coming together to ignite change
When Mayor Matt Brown headed out to Edmonton in the first week of April with his just concluded Poverty Panel report in hand, he was only one of many politicians marking a change in the landscape of Canadian politics. Indeed, the official moniker of the conference said it all: "Cities Reducing Poverty: When Mayors Lead." It's far too early to tell whether this city's chief elected official will effectively implement the report of the panel (on which I served), but in Edmonton he found himself in dynamic company. Highlighting the conference were Naheed Nenshi (Calgary), Don Iveson (Edmonton), and Brock Carlton, the CEO of the Federation of Canadian Municipalities. Nenshi summed it up when he proclaimed, "It's time to push our conversation further: into our communities, the minds of our decision-makers, our business leaders, and others, and start creating partnerships together." … "Climate Change. Terrorism. Refugees. Inequality. Pandemic disease. In our interdependent 21st century world, nation states and international organizations are finding it ever more difficult to respond to the global challenges facing humanity. At the same time, cities are demonstrating a remarkable capacity to govern themselves democratically and efficiently, both locally and, in networks, globally." Postmedia Network (London Free Press)

Winnipeg man charged with child porn, bestiality offences
A police investigation that began in Switzerland has resulted in sex charges being laid against a Winnipeg man. Winnipeg police said Friday that Swiss investigators in Zurich and Aargau began an undercover investigation relating to child pornography in January. At some point, investigators determined a person utilizing an IP address in Winnipeg was not only in possession of child pornography, but also making it available to other users. Winnipeg's Internet Child Exploitation unit were told of the findings and, on March 22, raided a Renfrew Street house, seizing several electronic devices. Those devices contained numerous child pornography videos and photos, with police saying the kids being between the ages of two and 12. Andrew Harrison, 36, was arrested Thursday morning. He's been charged with possessing child pornography, accessing child pornography, and importing, distributing, selling, or possessing for the purpose of distributing or selling child pornography. Toronto Sun

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Trudeau looking into U.S. war-dodger issue but gives no commitments

The Liberal government is reviewing Canada's stance on American war dodgers that have sought refuge in this country rather than fight in Iraq, Prime Minister Trudeau said Friday. Trudeau, however, gave no commitments that Ottawa might smooth the path to permanent residency for the conscientious objectors, some of whom have been forced to return to the U.S. to face prison terms, but said the issue was a live one. "It's one that we are looking into actively as a government," Trudeau said after a transit-funding announcement in Toronto. He did not elaborate. Outside the transit yard where Trudeau was speaking, a handful of protesters from the War Resisters Support Campaign quietly held up a banner and signs calling on the government to let them stay. Last summer, a campaigning Trudeau criticized the Conservative government under prime minister Stephen Harper for acting in a way he called "lacking compassion and lacking understanding" when it came to U.S. soldiers. "I am supportive of the principle of allowing conscientious objectors to stay," Trudeau said at the time. He called it "problematic" and "disappointing" and unworthy of Canada that Conservative MPs had cheered in the Commons in 2012 amid word that one of the Americans, a mother of four, had been arrested after deportation to the U.S., where she was later court-martialled and gave birth in prison. "I am committed ... to restoring our sense of compassion and openness and a place that is a safe haven for people to come here." However, little appears to have happened since the Liberals took office last fall. In an email to The Canadian Press last month, a spokesperson for Immigration Minister John McCallum said he had "no indication that a decision was made or is about to be made" on the issue. Starting a decade ago, scores of U.S. military personnel who objected to the war in Iraq sought refuge in Canada. They argued the military effort had not been sanctioned by the United Nations and was illegal. Some have been fighting for years to obtain regular status while the government has sought to deport them. Hamilton Spectator

Western premiers call for more health care dollars, immigration, free trade

Canada's western premiers on Friday called on the federal government to increase its share of health care funding, to reduce barriers to immigration, to put more money into roads, rails and ports and to improve international trade access to natural resources. Wrapping up a two-day conference in Vancouver, the premiers struck a somewhat defiant tone as they laid many of the issues on their agenda at the feet of the federal Liberal government. Without changes from Ottawa, Canada's trade in resources and its workforce employment and health care will all suffer, they said. And to underscore their view that much of the country's economic power comes from Western Canada's natural resources, they pointed to the effect the Fort McMurray wildfire is having on the economy. On Friday, some economic analysts downgraded Canada's second quarter GDP growth forecast from 1.5 per cent to zero as a result of the wildfire's effect on Alberta's oil production. "If any Canadian listening today doubts how important Western Canada's natural resources are to this country, they should pay attention to that fact," said B.C. Premier Christy Clark. "As Fort McMurray burns, and as the economic infrastructure that has so long has supported Canadians is threatened, international observers are suggesting our economic growth is going to suffer disastrously." Vancouver Sun

A TPP deal falling victim to U.S. election may be good news for Canada

An opinion piece states "The road to ratification of the massive Trans-Pacific Partnership trade deal was always going to be long and arduous. The fact that trade-bashing Donald Trump is now the presumptive standard bearer of the U.S. Republican Party makes that journey all the more difficult in the months ahead. Oddly enough, the demise or postponement of the TPP just might be a good thing for Canada. Really? Canada is a small, export-oriented economy. Surely, this country should seize every opportunity to advance rules-based trade and break into new markets. Of course. But joining the 12-country TPP was always more of a defensive gambit for Canada, rather than about making substantive and transformative trade gains. New research bears this out. A recent C.D. Howe Institute study was the first publicly available economic modelling of what's in the deal for Canada. The study found that the country stands to make "relatively modest" gains from the TPP, including a 0.08-per-cent boost to GDP by 2035. The benefits are limited because tariffs are already generally low in the region, countries kept their most protected sectors off the table, and some companies won't bother going through the red tape to get the preferential access the deal offers, the study concluded. And besides, Canada already enjoys preferential access to the United States and Mexico through the North American free-trade agreement.TPP was a

rear-guard action for Canada, which came late to the table. The United States was bent on getting the deal done to create a counterweight to China in the region - with or without Canada." Globe and Mail

Taking down the walls to innovation
An opinion piece states "Canada faces an economic "wall" whether protectionists such as Donald Trump and Bernie Sanders win or whether Hillary Clinton does. The wall is a virtual one erected by Canadian governments that have not made emerging technologies a priority as well as the nature of the physical border and free trade agreement itself. Emerging technologies transform exponentially so a trade and taxation refresh is urgent. Historically, this has always been essential. In the 1960s Canada was about to be shut out of auto manufacturing and relegated to importing U.S. cars. That is when Ottawa policymakers invented the Auto Pact, which is a cornerstone of the country's living standards.Now the border has "thickened" again - to autos and oil - so Canadians face tough choices and must reinvent. Related The great fintech debate: Will regulating financial upstarts 'level the playing field,' or stifle innovation? If the Toronto-Waterloo region is to stay competitive it needs a better transportation link. In autos, Canadian taxpayers have been spending a fortune to build a second bridge to link Detroit and Windsor to stay in the auto game. In oil, the Keystone Pipeline XL has been nixed so other strategies are needed. And now Canada must join the new economy of robotics, nanotechnology, biotech, artificial intelligence, computation and energy." National Post

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Nearly three-quarters of firms globally hit by cyber attacks
Information security remains one of the most important concerns for data managers, and for very good reason. A new international study reveals that nearly three-quarters of organizations were the victims of a security incident in the past year alone. The International Trends in Cybersecurity report from CompTIA, the not-for-profit association for the technology industry, finds that nearly three out of four organizations globally have been plagued by at least one security breach or incident in the past year, with about 60 percent of breaches categorized as serious. The report also reveals that organizations are altering security practices and policies because of greater reliance on cloud computing and mobile technology solutions. More than 1,500 business and technology executives in 12 countries were surveyed. The report includes data from Australia, Brazil, Canada, Germany, India, Japan, Malaysia, Mexico, South Africa, Thailand, the United Arab Emirates and the United Kingdom. Health Data Management

LAW ENFORCEMENT / APPLICATION DE LA LOI

REAL SCOOP: Police face tech obstacles in criminal cases
RCMP Commissioner Bob Paulson was in B.C. in late March speaking to the Vancouver Board of Trade, as well as the Vancouver Sun's editorial board. One of the things he stressed was that police face real obstacles in trying to collect evidence from telecommunications companies, even when they have the court orders authorizing them to get the information. He said it's particularly an issue in child exploitation cases where online predators take great care to cover their tracks. I thought this was an interesting story to pursue, especially with the recent U.S. case where the FBI was battling in court with Apple over getting access to data stored on the iPhone of one of the San Bernardino shooters. Vancouver Sun

Coroner's jury finds man died by suicide after escaping RCMP custody
A coroner's jury is recommending more training and oversight of guards at RCMP detachments following an inquest into the death of a Hall Beach man who escaped from police custody. Tommy Anguilianuk died Jan. 21, 2013. Anguilianuk had asked a guard at the local detachment to let him get some fresh air at around 12:45 a.m. That's when he escaped. Bylaw officers found Anguilianuk's body about two hours later under the steps of a house. He had shot himself. Following this week's inquest, the coroner's jury ruled Anguilianuk's death a suicide and issued 13 recommendations, mostly to RCMP and the Government of Nunavut. CBC News

Okanagan men try to run but are arrested on North Thompson logging road
Three Central Okanagan men on parole are facing at least a half dozen charges each after speeding past an officer on Highway 5 south of Little Fort this week. A Clearwater RCMP officer saw two vehicles approaching him rapidly from behind around 1:30 p.m., May 4, Cpl. Dan Moskaluk says in a release. "The officer pulled over to the side of the road and in an attempt to simply slow the vehicles down and carry on with his other duties, he activated his rear emergency lights to get the drivers attention," Moskaluk says. "The two vehicles then increased their speed and sped past him." An RCMP Air Services helicopter, a dog team from Kamloops and back-up from 100 Mile House and Barriere Detachments were called. InfoNews.ca; Global News

RCMP seek suspect in huge 2015 Bobtail Lake, B.C. wildfire
As several major wildfires rage in northeastern British Columbia, Prince George RCMP are still searching for the person, or people, suspected of sparking a forest fire one year ago. The Bobtail Lake blaze was first spotted on May 8, 2015. It charred 240 square kilometres of woodland 50 kilometres southwest of Prince George and forced evacuation of properties at Norman Lake and Naltesby Lake, also known as Bobtail Lake. The fire took weeks to control, and RCMP and Wildfire Management Branch officials confirm it was human-caused. CTV News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Godin named national union president
A former federal correctional service officer with Kingston ties has been acclaimed president of the national union that represents officers working in institutions across Canada. Napanee native Jason Godin, who is also a founding member of the Union of Canadian Correctional Officers, was officially given the position for a three-year term at the union's national general assembly in Quebec City this week. "I'm completely honoured to lead our members over the next few years," said Godin on Friday morning while making his way back to Kingston, where he lives and from where he works. The union represents more than 7,200 correctional officers nationally, with approximately 1,600 working in the Ontario region and 1,000 of those in Kingston-area institutions... Looking forward over the next three years, Godin has a few items he'd like to see dealt with. "Priority No. 1 for us is to settle the collective agreement with the current government that clearly recognizes our distinct working conditions," he said. Godin said he and his executive enjoy a good working relationship with CSC commissioner Don Head. Godin said they meet at least eight times a year. Kingston Whig-Standard

Mark Steven Vandendool, who robbed a bank to get into McGill University, now charged with a dozen holdups
In February 2006, Mark Steven Vandendool desperately wanted to get into McGill University's Schulich School of Music. The Kitchener, Ont. resident was 24 and showed promise as a guitar player. By his own admission his life at that point was heading nowhere (something that would later be attributed to an undiagnosed case of attention deficit disorder) and he figured his passion for classical guitar would provide him with a goal he cared about pursuing. He hoped to audition for the school, but his car wasn't working and he didn't want to ask his parents for help. So on Feb. 20, 2006, he walked into a bank in Plattsville, Ont. — a small town about 20 kilometres southwest of Kitchener — armed with a fake gun. He used it to threaten two bank tellers inside and demanded they give him $50,000... He passed the audition and was accepted to the prestigious McGill school, but that posed another problem for Vandendool. As he would later tell the Parole Board of Canada, he also needed money for tuition. This, according to Vandendool, explains why, on March 2, 2006, he tried to rob a TD branch in New Dundee, Ont., about 10 kilometres southwest of Kitchener, but failed miserably... Vandendool received an overall five-year sentence (which was later reduced to three years through an appeal), but held on to his music dream while serving the prison term at a federal penitentiary in Ontario. He spent his spare time in the penitentiary's chapel, practising classical guitar and providing lessons to other inmates. He worked full-time cleaning the penitentiary and Correctional Service Canada staff later created a position for him as a music coordinator for chapel functions. Montreal Gazette

Hearing for Maurice (Mom) Boucher switched to Montreal for security reasons
A judge has ordered that murder-related proceedings involving former Hells Angels kingpin Maurice (Mom) Boucher be switched to a Montreal courthouse. Boucher is to have a preliminary hearing next week on charges of conspiracy to murder crime figure Raynald Desjardins in prison. The hearing was to be held in Longueuil, but a judge agreed Friday to a Crown request it be moved to the Gouin courthouse. That Montreal facility is linked by a tunnel to a detention centre where Boucher will stay during the hearing. Gazette; La Presse

Seizure of contraband at Dorchester Penitentiary
On April 24, 2016, at 9 p.m., three packages containing drugs and tobacco was seized outside the perimeter of Dorchester Penitentiary, a medium security federal penitentiary. The contraband seized included tobacco, hashish, nicotine patches and fentanyl patches. The total estimated institutional value of this seizure is over $63,000. The Correctional Service of Canada (CSC) has set up a telephone tip line for all federal institutions to receive additional information about activities relating to security at CSC institutions. These activities may be related to drug use or trafficking that may threaten the safety and security of visitors, inmates and staff members working at CSC institutions. Sackville Tribune Post; Global News

'You are at a crossroads,' Judge tells Matthew King as he heads to jail for assault
In sentencing Matthew King to four years for aggravated assault, a judge in St. John's said King has shown no remorse for the vicious attack on his former girlfriend that left her with fractures to her face, two missing teeth, and other injuries. The assault happened in the home King, 26, shared with his girlfriend Julie Summers in the Goulds area of St. John's in April of 2015. CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Provinces 'in the weeds' on how to handle pot shops, Wynne says
Ontario Premier Kathleen Wynne says storefront shops selling marijuana will continue to blur the lines of the law around pot until the federal government clarifies the rules around the use of recreational weed. The federal government plans to unveil new legislation next spring that would legalize cannabis. In the meantime, cities have seen a growing number of marijuana dispensaries open up. Wynne says cities and provinces remain confused over what to do with those pot shops because Ottawa has yet to clarify rules between recreational and medicinal marijuana. CTV News

Pharmacies should be allowed to sell medical marijuana, Loblaw president Galen G. Weston says
Galen G. Weston wants in on the medical marijuana business. Weston, the head of the country's largest drugstore and grocery chain, said Thursday that pharmacists are well-positioned to dispense the drug in a safe manner. "We're an industry that is extremely effective at managing controlled substances," said Weston, Loblaw's president and executive chairman, following the company's annual general meeting Thursday. Canadian Press (National Post)

Medical marijuana dispensaries 'verging on being out of control,' Mayor John Tory says
The proliferation of medical marijuana dispensaries across Toronto neighourhoods is "verging on being out of control," Mayor John Tory said Friday, hinting that city officials may have to find a way to curb the growing number of pot shops. "I don't think it's sustainable for neighbourhoods, and for life in neighbourhoods that we want to be peaceful, quiet and law-abiding, to have 20, 21, 31 medical marijuana dispensaries," said Tory Friday. "You have to do these things in an orderly way that respects public safety and health and access to minors." Tory said he spoke about the issue 10 days ago with Bill Blair, Toronto's former police chief and now parliamentary secretary to the justice minister. Blair is also the Liberal government's point man on pot legalization. CBC News

MINISTER / MINISTRE

Lawyer suspended from security committee
A Hamilton lawyer and former chair of the defunct and scandal-plagued SISO has been suspended by the federal government from his longtime position as a member of the Cross-Cultural Roundtable on National Security. A spokesperson for federal **Public Safety Minister Steven Blaney** said Hussein Hamdani has been suspended from his advisory position pending an investigation into allegations of whether or not he has links to "***radical ideology***." A news report by French-language network TVA of Quebec published Wednesday raised questions about written statements made by Hamdani nearly 20 years ago. The news report also made allegations suggesting Hamdani has been involved in the past with organizations that have provided funding, directly or indirectly, to groups associated with terror. Jeremy Laurin, press secretary for **Blaney**, said in a statement the allegations against Hamdani are "***very concerning***." "***While questions surrounding this individual's links to radical ideology have circulated for some time, it was hoped that he could be a positive influence to promote Canadian values in the Muslim community***," Laurin stated. "***It is now becoming clear this may not have been the case***." Hamdani said in an email that he has no comment at present on either the suspension or possible investigation. "I have not been formally informed that I have been suspended or that there is a review ongoing," Hamdani's statement said. "It would be premature for me to give a comment until I get all the facts from the officials directly." In a subsequent telephone interview, he categorically denied the allegations made in the TVA news report. "I have long denied them and I continue to deny them," said Hamdani. "This is just an attempt to silence a prominent voice in the Muslim community." Hamdani was one of the original 15 people who was appointed to the roundtable when it was created by the federal government in 2005. Hamilton Spectator. A1

Ex-NHL goaltender fears for his family's lives
It was the call former NHLer Don Edwards had been fighting to avoid for 24 years. George Harding Lovie had brutally murdered his parents, stalked and raped his sister, and had a standing threat to murder any other member of the Edwards family he could find, including Don's children. And then, with almost no warning, this month Corrections Canada informed the Edwards family that they had decided to start letting Lovie out on unsupervised work releases. "We have no idea what he's doing or where he is, all we know is that he's in the Gravenhurst area," said Edwards, who is now campaigning hard to get Lovie back behind bars. He's contacting local media, sending out appeals to **Public Safety Minister Steven Blaney** and Prime Minister Stephen Harper and, at the very least, warning residents of Gravenhurst that there's now a killer in their midst. "We're fighting like hell to keep this guy incarcerated," he said. "We honestly feel that our family's lives are in danger; we also feel that other Canadian citizens' lives are in danger." In 1990, Edwards' sister Michele broke offa six-month relationship with Lovie after she found him becoming overly possessive. But Lovie continued to stalk Michele for months, and on Feb. 18, 1991, he broke into her home with a borrowed knife and gun and forcibly confined her for six hours, alternately raping her and threatening to kill her and her family if she told authorities. She reported the crime to Hamilton Wentworth Regional Police, who arrested Lovie but released him after two days. Four weeks after that, he followed through on his threat. Armed with a newly purchased rifle, he surprised Michele near her parents home, and shot at her as she ran inside for protection. He shot Michele's mother, Donna, as she attempted to barricade the doors. Arnold, Michele's father, rushed forward to confront the intruder, and was stabbed multiple times. Ottawa Citizen, C1 (National Post, Calgary Herald, Leader-Post, StarPhoenix, Windsor Star)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Les quelques résidants évacués sur la rue Mathilda, à Middle River, près de Bathurst, attendaient toujours, jeudi, que le niveau de l'eau baisse pour rentrer chez eux. Dans cette localité, située à une douzaine de kilomètres de Bathurst, les familles affectées sont parties d'elles-mêmes, mardi vers 18 h, en raison d'embâcles qui se sont formés sur la rivière Middle. *** Canada, U.S. to announce rail safety standards**
Canadian and U.S. transportation officials will announce new standards for tank cars carrying crude oil and other flammable liquids during a meeting in Washington on Friday morning. The long-awaited deal is expected to outline time frames for phasing out older, less durable tank cars and transitioning to a "next generation" standard with thicker steel and thermal protection. The changes are meant to help the cars better withstand a derailment and collision while limiting the amount of crude that can spill and ignite. Canada has already proposed a 10-year phase-in period for the new tank cars, but regulators in the United States have not yet announced their plans. The Canadian proposal has been criticized by safety experts, who say it will leave weaker tank cars on the rails for too long. Globe and Mail, A4

*** Forest fire season begins today on island, May 15 in Labrador**
Newfoundland residents preparing to burn brush as part of spring clean-up activities around their properties should note that the 2015 forest fire season is now underway. This year's season opened Friday and will run until Oct. 15. For the island, this year's season has been extended by two weeks in the fall, due to above-average temperatures and increased forest fire activity in recent years. In Labrador, the season begins on May 15 and ends on Sept. 30. CBC.ca

Should Canadian military personnel and the country's spies be protected by a whistleblower law?
The Ottawa-based Democracy Watch has raised the issue of ensuring that whistle-blower protection is extended to members of the Canadian Forces and the country's spy agencies. The organization repeated its recommendation in the wake of a report released Thursday outlining numerous cases of sexual

harassment and assault in the Canadian military. Democracy Watch noted that the Canadian Forces are exempt from the federal whistleblower protection law. That means a whistleblower in the military cannot complain to the federal Integrity Commissioner "and instead is forced to file a complaint to people who are in the military and who are not fully independent from the chain of command," the organization pointed out. Democracy Watch recently sent a letter to Prime Minister Stephen Harper and the federal Cabinet calling for key changes to ensure people who work within Canada's spy agencies and military are protected if they blow the whistle on wrongdoing. The federal whistleblower protection law exempts the Canadian Security Intelligence Service (CSIS), Canadian Security Establishment (CSE) and the Canadian Forces from the requirement to have an employee code of conduct, and does not protect people who work at these institutions if they blow the whistle on wrongdoing, Democracy Watch points out. In contrast, Security Intelligence Review Committee (SIRC) - which helps oversee CSIS is required to have a code of conduct and people who work there are covered by the whistleblower protection law, it added. "Conduct codes and independent, effective whistleblower protection are essential to prevent abuses of power and it is extremely dangerous that Canada's spy agencies and military are not required to have these key accountability measures," Duff Conacher, co-founder of Democracy Watch and Visiting Professor at the University of Ottawa said in a statement. * **Privacy? There is tweet irony in that - Even without surveillance cams, our lives are for all to see**
Digital witnesses, what's the point of even sleeping? / If I can't show it, if you can't see me / What's the point of doing anything? Those lyrics come from the St. Vincent song Digital Witness, a comment on our times if there ever was one. Last spring, I had the pleasure of interviewing the singer/songwriter, who also goes by Annie Clark, for this paper. When I asked her about that song, Clark said she was interested in exploring the overlap between surveillance and our increasing tendency toward Internet over-share. She was astonished at how much of ourselves we give away for the consumption of others and how freely we give it. When is TMI actually TMI? "We had a hunch that we were being watched, and thanks to Mr. (Edward) Snowden (the NSA whistleblower), we had our hunch very much confirmed," she said in our interview. "We have the knowledge that the government is looking in on us, and then we have the other side of that, which is this platform on which we can create an idealized version of ourselves that can be as aspirational as we want - but it's two-dimensional. We equate day-to-day minutiae with news. We're all the star of our own show." I was reminded of that interview when reading about downtown surveillance cameras. Footage from one camera proved instrumental in finding John Paul Ostamas who, in a matter of days, was charged with the homicides of three vulnerable men.[...] If you are on the Internet, you're already living under surveillance - by digital companies, certainly, and potentially the so-called "incidental" surveillance by governmental agencies such as the NSA or the Canadian electronic spy agency, the Communications Security Establishment (CSE). But we also surveil each other. We, too, are digital witnesses. The average social-media user isn't doing this in a malicious way - though how "Facebook creeping" became regarded as the cutesy, innocuous cousin of stalking I'll never know. BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Governor General touts border security during Detroit visit
Canada's Governor General completed his Midwest tour of the U.S. with a stop in Detroit Thursday morning after taking a personal tour of the cross-border law enforcement team known as Shiprider. David Johnston addressed members of the U.S. Coast Guard and the RCMP praising them for their work in securing the shared North American border and for sending a strong message to smugglers who have long gone undetected in some of the shared international waters. "The Shiprider program is but one example in a long history of such co-operation on border security between our two countries," he said in his speech during a visit at U.S. Coast Guard Sector Detroit. "This program is so important, because so much of our border runs through waterways." Shiprider, with the official title of Integrated Cross Border Maritime Law Enforcement Operations, is a team of specially trained officers with status to work together in shared international waters along the Detroit River. "Both Canadians and Americans are dedicated to border security," Johnston said. "What could be a better image of this than RCMP, U.S. Coast Guard and other law enforcement officers working together on the same boat?" The governor general then took a tour of the Detroit River on a patrol boat to get a closer look at Shiprider operations. "What struck with me

the most was this enormous willingness to make such a strong relationship between the two countries and see our border as secure as possible," he said later in an interview. The border security program has been touted as a huge success by governments on both sides of the border. What began as a pilot project in 2007, with teams operating in Ontario and B.C., eventually led to temporary Shiprider teams working during special events like the 2010 Vancouver Olympics. Windsor Star, A3

Quebec deplores changes to foreign worker rules

Quebec cabinet ministers warned the province could lose jobs unless Ottawa backs down on recent changes to the temporary foreign worker program. Quebec had asked the federal government to delay the reform until they could reach a compromise, but new restrictions on hiring temporary foreign workers came into effect Thursday. The program allows employers who can't find qualified workers locally to recruit them abroad. Last June, after media reported that some employers abused the program, the federal government tightened the rules. In some job sectors, including retail, businesses can no longer hire a temporary foreign worker in a region where the unemployment rate is above six per cent. Montreal, Laval, Sherbrooke and many other regions' jobless rate was higher than that last year. Many Quebec businesses have complained that the new restrictions will make it harder for them to find the workers they need, Immigration, Diversity and Inclusiveness Minister Kathleen Weil said. They have also told her the new rules could lead them to move some of their activities south of the border. To make matters worse, while the western provinces and Ontario benefit from a growing workforce, Quebec's is in decline, she told the Montreal Gazette. "Our situation is that the shortage is going to get worse," she said. "Immigration, whether it's temporary or permanent, is how we can solve that problem." Quebec is still pressing the federal government to relax some of the new rules. "This is not the end of this exchange (with Ottawa). It can't be," she said. "It's just so irrational that we would somehow hamper the development of our businesses, certain sectors, our regions and our economy." The office of federal Employment Minister Pierre Poilievre said the point of the reform is to ensure that Quebecers are hired before foreign workers. Montreal Gazette, A6

A duty-free duty to travellers - Emerson shop at border the first one in Canada outside an airport

Trivia question: Where was the first duty-free shop in Canada outside of an airport? The place name above gives it away so here's an added question: What year did it open? Mike Resch opened the first "land" duty-free shop in the country in Emerson on Dec. 15, 1982. He still has his original licence with the "No. 1" to prove it. "It was part of a pilot project. There were only six licences issued: in B.C., Alberta, Saskatchewan, Manitoba, Quebec and New Brunswick," explained Resch, 69. "The reason Ontario wasn't given one was because the federal government couldn't come to an agreement with the bridge owners, who wanted their own shops." Resch is originally from Germany, where he was a ski enthusiast, regularly crossing the border into Austria and making purchases at duty-free stores. When he moved to Emerson, he wondered why there were no duty-free shops beyond those in airports. The first duty-free shop in the world opened in Shannon Airport in Ireland in 1947. Resch joined a lobbying effort by the tourism industry in the late 1970s to increase traveller money spent on the Canadian side through duty-free stores, says son Simon, who manages the Emerson Duty Free Shop. But it was a rough start for the duty-free shops in the early 1980s. Canadian travel to the United States quickly fell off when the Canadian dollar plunged to the low 70-cent US level. Winnipeg Free Press, A7

Anger, questions remain over Moroun's deal with Detroit mayor

Some community leaders who have spent over a decade fighting against Ambassador Bridge owner Matty Moroun expressed anger Thursday over a closed-door deal with Detroit Mayor Mike Duggan that moves the billionaire a huge step closer to building a new six-lane span next to his current bridge. What is the proposed agreement? The deal would see glass, grass and $3 million in cash handed over by the Morouns in exchange for the rights to a section of city-owned Riverside Park - the last property required by the bridge owner in Detroit to pave the way for construction of a twin span. Three acres of municipal land - Riverside Park - will go to the Ambassador Bridge. In exchange, the bridge company will provide the city with five acres of other riverfront property it owns, plus $3 million for park improvements. Another $2 million will come after the state of Michigan approves the land transfer. Permits for his twin span on the U.S. side have stalled because Moroun for years had been unable to acquire portions of the park he needs. About five years ago, he fenced off a large section of the park, called it his own and even installed armed security. A community backlash put Riverside Park back in the city's hands. The proposed deal

also calls for 1,050 windows to be installed by Moroun at the Michigan Central Depot - the abandoned train station west of the bridge he has owned for nearly 20 years. Who's upset? "I'm extremely disappointed the mayor would sit down with Moroun before he even talked to residents about this," said former state representative and community activist Rashida Tlaib. "He opened the door to (the Morouns) after we have worked on this for so long." Windsor Star, A2

Vancouver developer says he's innocent of corruption charges he faces in China
A wealthy Vancouver businessman is heading to the Federal Court of Canada in June as part of his lengthy bid to avoid being sent to China to face corruption charges. Mo Yeung (Michael) Ching, also known as Cheng Muyang, was named last week by Chinese state media as being among the country's top 100 fugitives, a list that includes 25 others in Canada. But Ching has alleged that the evidence against him was a product of torture, and he has also suggested the charges were influenced by domestic Chinese politics. He has not been tried or convicted of any crime. Ching has a lot at stake, as he faces a maximum penalty of life in jail on the charge of "misappropriation of public funds, embezzlement [and] transfer and concealment of illegally acquired goods," according to the 2001 arrest warrant obtained by the Vancouver Sun. RCMP boss praises Moncton for resilience in tragedy
RCMP Assistant Commissioner Roger Brown says plans are progressing for a permanent memorial in Moncton for three officers killed in the line of duty last June, but details of what form it will take and where it will be located have not yet been decided. Brown was in Moncton on Thursday to speak to members of the Greater Moncton Chamber of Commerce on the subject of leadership. He praised the citizens of Moncton for their support of the RCMP in the aftermath of last year's shootings and said we all have the capacity within ourselves to become good leaders and make a difference in the lives of others. Brown said the process of planning the monument is underway with input from the federal, provincial and municipal governments, led by the mayor's office. He said federal funding has already been set aside, and artists from across the country have been asked for proposals for a design. "We want a memorial that reflects the lives of these three individuals, not just as police officers but as dads, as community members, and something for the community to reflect on the impact, the input and the like," Brown said. The process is well underway." He said the committee will invite community input on the monument on what it will look like and where it will be located. "We want to come up with a monument that is appropriate to reflect what we all went through together," Brown said. In his speech to members of the Greater Moncton Chamber of Commerce, Brown said the shooting deaths of three RCMP officers last June 4 was a traumatic time for him and all members of the force, but it was also a time when "the community was there for us when we really needed them." Informant pays off in crystal meth probe
So determined to crack down on a drug booming in popularity and wreaking havoc on the streets, London's drug squad used a rare tactic, a police "agent." The agent -- someone already immersed in the city's drug subculture -- was paid as an informant to work with dozens of undercover officers during a three-month probe focused on getting crystal methamphetamine off the streets. It marked the first time investigators have singled out the drug that propelled the Breaking Bad TV series. Outreach workers blame the synthetic drug for ravaging addicts in the city. "It's the one that's making people sick. It's the one that's putting people in the hospital. It's creating addicts. It's weakening our society," said Det. Sgt. Chris McCoy, head of London's guns and drugs unit that headed the joint investigation with the RCMP. "It's a bad drug. There are overdoses all the time," McCoy said. "We were looking to dealers of crystal meth. We wanted to find out how it is coming into our city. We knew primarily who our dealers were but we wanted to learn more about chains of supply." London police rarely use agents in drug probes. In the

last 20 years, agents were used in four joint investigations with RCMP, McCoy said. After the three-month probe that included dozens of undercover officers, police searched 10 residences -- nine in London and one in Waterloo -- arrested 12 people and seized drugs, cash, seven cars and a gun. Though they got some of what they were after -- about 1.7 kilograms of crystal meth valued at $171,100 -- police got a larger quantity of crack cocaine and also seized about 1.4 kilograms of cocaine. London Free Press, A1

Harper security files kept sealed

A judge has ruled that the unusually strict sealing order on a case involving allegations of leaks from the prime minister's RCMP protective detail shall stay in place. Ontario Superior Court Justice Mary Vallee rejected the arguments of media lawyer Brian McLeod Rogers, who applied two weeks ago for her to unseal documents in an affidavit filed in December by a lawyer acting for Sgt. Peter Merrifield, who is suing the RCMP for harassment and bullying, alleging systematic abuse and coverups by senior Mounties. The documents, which are believed to contain information about Prime Minister Stephen Harper's family, were sealed by Vallee in December at the request of lawyers for the federal Justice Department, who have been fighting Merrifield's suit on behalf of the RCMP. Rogers argued in court that Vallee should unseal portions of the documents, which are believed to have been sealed because they contain information that could identify a confidential informant. But Vallee ruled Thursday that none of the information can be made public and she can't say why. "All of the information in those materials and the order relates to a subject matter which must be protected from disclosure," she wrote... Sources say the sealed affidavit in this case is accompanied by four letters sent by private investigator Derrick Snowdy to assistant RCMP commissioner Stephen White. The letters contain allegations about RCMP wrongdoing, including repeated information leaks that threaten the safety of confidential informants, and the leak of private information about Harper's family by officers from the prime minister's protection detail. Postmedia news (National Post, Windsor Star, D1, StarPhoenix, Vancouver Sun, Montreal Gazette, Calgary Herald, Edmonton Journal, Ottawa Citizen); Canadian Press (Times Colonist)

New police chief stands by carding comments

Facing blowback after revealing he has no plans to abolish "carding," new Toronto police Chief Mark Saunders is standing by his statement that crime would increase if the controversial practice halts, saying he can't please everyone. "If I don't get criticism, I don't think I'm doing the job right. I don't expect the entire world to think that what I say is right, and that we're all going to be happy about it," he told reporters Thursday, after a brief appearance at the Young Men's Stand Up conference at George Brown College. Not a week into the job - he took over from outgoing chief Bill Blair on Sunday - Saunders is on the receiving end of criticism for saying on Wednesday that abolishing carding was "not the way in which we are going to say 'everything is going to be better.'" Saunders made the remarks to reporters after his first public appearance as chief at the Second African Canadian Summit, where he assured attendees he was committed to bias-free policing and improving officer training to eliminate "random" street stops. "We are not going to be random at what we record," Saunders said Thursday. But Saunders maintains that ending carding would compromise public safety. Toronto Star

OPP to investigate Vaughan deputy mayor Michael Di Biase

An OPP investigation has been launched into Vaughan Deputy Mayor Michael Di Biase's role in development deals, according to the man who filed the complaint. Richard Lorello alleges Di Biase's cottage is being built with the help of one of the companies that Di Biase may have helped get work from the city. "Today (Thursday) around 2 pm, an OPP officer said the OPP was taking over the investigation," Lorello told the Star. Shortly after, he says, he was also contacted by an OPP detective inspector with the criminal investigations branch. "In the last 48 hours, between the York Regional Police and the OPP, they decided that the OPP would take over the investigation," Lorello told the Star. Lorello has a history of challenging Vaughan council members on issues of transparency and accountability and has unsuccessfully run for council. Earlier Thursday, the Vaughan Citizen reported that, according to its sources, York Region Police had launched an investigation into city contracts signed during Di Biase's 24 years in office, including his time in the mayor's chair from 2002 to 2006 and, more recently, while a local and regional councillor. Officers are also looking into any role he might have played in the city's tendering process to secure municipal contracts for companies, including Maystar General Contractors, the firm that built Vaughan city hall, a source told the Citizen. The Star could not confirm with either the OPP or York police that a formal investigation has been launched. Lorello stated he had been clearly told by the OPP

that an "investigation" is underway. Toronto Star

London costs in line with similar forces

As Brad Duncan moves through his final week as London police chief, he hands the badge to successor John Pare with encouraging news attached. Though the new top cop will face the same financial pressures -- annual raises for officers that drive up the force's ballooning budget -- an audit presented to politicians this week indicates London police spending is in line with other municipal forces. "I think this is a good news story in terms of our performance relative to other communities," Paul Paolatto, a member of the board that oversees London police, told city hall's audit committee. Paolatto was among the police brass uncomfortable when the previous council, led by then-councillor Matt Brown, called on police to follow other city-funded agencies and open their books to an external audit. Last year, London police did so, and a review by PriceWaterhouseCoopers suggests the pressures driving up the London police budget -- it checks in at more than $93 million this year -- are faced by other cities, too. In fact, by some measurements London police are performing better than comparable cities. In a recent interview, Brown, now mayor, applauded police brass for agreeing to the audit. Police have already started reducing costs by cutting jobs and closing their headquarters overnight. "They've worked hard to find savings and efficiencies and we've been able to change the conversation, when we compare what we were seeing a few years ago to the progress we're seeing today," Brown said. For context, today's $93-million police budget was only $59.8 million a little more than a decade ago. London Free Press, A4

Man arrested after two-day armed standoff with police

A two-day armed standoff with police ended without any injuries after a man was taken into custody Thursday morning, RCMP said. Mounties first responded Tuesday afternoon to reports of a "distraught" man, and later said shots were fired from within the home. This prompted police in Iqaluit's Happy Valley neighbourhood to block off the area and shut down a nearby school. "(It's a) volatile situation," RCMP Const. Malcolm McNeil said by phone from Nunavut's capital Wednesday night. The city of Iqaluit and the Red Cross had set up an emergency shelter at Iqaluit's Arctic Winter Games complex on Tuesday for people who didn't have anyone to stay with outside their neighbourhood. Police had closed the nearby Joamie elementary school Tuesday because it was "in view" of the barricaded house, McNeil said, noting that children are often "sledding on the hill and playing" outside the school. RCMP said the blockades would remain for an undetermined length of time Thursday while they investigate. Postmedia Network (Kingston Whig Standard, Edmonton Sun)

Deux conducteurs d'autobus scolaire accuses

Des policiers de la Sûreté du Québec et de la GRC ont procédé à l'arrestation de 11 individus dans le cadre d'une opération visant le démantèlement d'un réseau de vente de méthamphétamine dans la région de Drummondville. Les deux présumées têtes dirigeantes étaient conducteurs d'autobus scolaires. Rocky Robitaille, 48 ans, et France Brochu, 53 ans, travaillaient depuis près d'une dizaine d'années pour Bourgeault et fils, l'un des transporteurs affiliés à la Commission scolaire des Chênes. Leur rôle consistait bien évidemment à amener des élèves vers leur milieu scolaire. Également employé chez Bourgeault et fils, Daniel Côté connaît les accusés depuis quelques années. Rien, selon lui, ne laissait présager tel événement. «Je suis très, très surpris. Ça démontre que parfois les gens ont une vie cachée. Il y a bien eu quelques anicroches au fil des ans, mais ça allait très bien, ils étaient de bons travailleurs», estime-t-il. Lors de son embauche, M. Robitaille n'avait pas d'antécédent judiciaire. Il a bien eu quelques démêlées avec la justice qui ont été source de discussions avec les propriétaires de l'entreprise. Les gestionnaires ont finalement jugé que l'écart de conduite ne justifiait pas un congédiement. Selon la porte-parole de la SQ, Éloïse Cossette, Robitaille, Brochu et au moins une dizaine de complices auraient été impliqués dans le trafic de méthamphétamine à raison de plusieurs milliers de comprimés par semaine. Les policiers ont réalisé huit perquisitions dans des résidences de Drummondville, L'Avenir et Saint-Germain-de-Grantham, ainsi que dans neuf véhicules qui ont tous été saisis comme biens infractionnels. Près de 5000 comprimés, de la cocaïne, du cannabis, 36 000 $ en argent ont été saisis et ces chiffres pourraient être appelés à grimper, l'opération étant toujours en cours. La Tribune, 22

Le fisc québécois en profite

Le nombre de contrebandiers de tabac arrêtés et la valeur des impôts qui leur sont réclamés ont fracassé des records l'an dernier, selon de nouveaux chiffres compilés par la Sûreté du Québec. A cela s'ajoute

l'explosion des taxes de ventes collectées grâce au retour des fumeurs vers le marché légal. Pour le corps policier, la démonstration est faite : la guerre à la contrebande est une excellente façon de renflouer les coffres de l'État québécois. Trois mots pour comprendre : Contrebandiers : A elle seule, la SQ a obtenu le dépôt d'accusations contre 2209 contrebandiers de tabac allégués l'an dernier, à la suite d'environ 2000 enquêtes et 2142 perquisitions. " C'est une année record ! " se félicite l'inspecteur Michel Pelletier, directeur de la lutte à la criminalité contre l'État au sein de la SQ. A ces chiffres s'ajoutent tous les suspects arrêtés par la GRC ou les corps de police municipaux comme le SPVM. Certains se concentrent uniquement sur les cigarettes, mais d'autres, comme des caïds reliés aux motards, au crime organisé asiatique, au crime organisé traditionnel québécois, à la mafia italienne, y voient une façon de diversifier leurs activités criminelles et financer d'autres trafics, comme l'importation de drogue. La Presse (Le Quotidien, 20)

Pan Am Games boss David Peterson says preparations 'in wonderful shape'

Preparing for the Pan Am Games has had its "ups and downs." So says Pan Am Games chair and pitch man David Peterson, who has had to contend with firing former CEO Ian Troop, putting out fires associated with senior officials spending money inappropriately, and going cap in hand to the province for $74 million, bringing the operations budget to $760 million. "It has had its ups and downs along the way but we are on track, we are in wonderful shape," he told a Toronto Star editorial board meeting. Peterson said the truth is "no one really wanted the games anyway," but supporters were steadfast in their determination that it was a surmountable "management challenge." "It will be the only game in town for that period of time," he said. The biggest concern is out of the hands of TO2015 and that's security, which along with transportation is the responsibility of the province. Security has been pegged at $239 million - twice the original estimate - and $61 million for transportations costs. The roughly $300 million is not factored into the $2.5 billion for the Games. The Ontario Provincial Police, which is overseeing security, acknowledges that if there is a verifiable threat against the Pan Am Games that cost could easily balloon. The traffic during the Games is also an unknown. Officials say the transportation plan for the summer games is contingent upon a 20-per-cent reduction in regular traffic. The massive month-long event is expected to draw 250,000 visitors to Toronto and area. Toronto Star

Le procès du projet Kayak fixé en août

Si de nouvelles requêtes ne viennent pas en retarder le début, le procès des individus accusés en marge du projet Kayak devrait finalement se mettre en branle le 24 août prochain. Ce procès d'une durée de huit semaines devait se dérouler au début de l'année, mais des requêtes ont fait en sorte d'en retarder le commencement. Le membre en règle des Hells Angels, Vincent Boulanger, Guy Boucher, Éric Letarte, Serge Pinard, Rock Proulx, Stéphane Rouleau et Dany Ward sont accusés de divers chefs d'accusation en lien avec le trafic de stupéfiants. La défense conteste le dépôt d'un nouvel acte d'accusation présenté hier par la poursuite. A compter du 27 mai prochain, trois semaines de requêtes préliminaires ont été retenues par la juge Julie Beauchesne de la Cour du Québec. Cinq accusés sont détenus pour la durée des procédures dans cette affaire. L'opération Kayak s'est déroulée le 12 juin 2013 à plusieurs lieux de perquisition en Estrie, dont Sherbrooke, Saint-Denis-de-Brompton, Windsor, Dudswell, Stukely Sud, Sainte-Christine et Canton de Cleveland. Plus de 235 policiers de la Sûreté du Québec, du Service de police de Sherbrooke, de la Régie de police Memphrémagog, de la Gendarmerie royale du Canada ainsi que des corps de police de Granby et Bromont avaient participé à cette frappe policière. La Tribune, 20

La présumée pirate plaide la " connerie qui a mal viré "

La présumée pirate informatique accusée mercredi s'excuse d'en avoir effrayé plus d'un en prenant le contrôle à distance de leur ordinateur, ce qu'elle considérait comme une simple blague. "Ce n'était pas dans mon intention de terroriser ou faire du mal à quelqu'un, a assuré, hier, au Journal Valérie Gignac lors d'une entrevue réalisée sur la terrasse de sa maison de Saint-Alphonse- Rodriguez. Je suis désolée, je ne savais même pas que c'était illégal [...] C'était juste une connerie qui a mal viré." La jeune femme de 27 ans a été arrêtée et accusée mercredi puisqu'elle aurait pris possession d'ordinateurs appartenant à des familles. Certains auraient été derrière leur écran lorsqu'elle les espionnait. Bien que la jeune femme était très calme lorsque Le Journal l'a rencontrée, elle a avoué avoir été ébranlée la veille lorsque la Gendarmerie royale du Canada (GRC) "est débarquée" chez elle vers 6 h du matin. Journal de Montreal

Judge acquits RCMP officer in airport taser case

Another RCMP officer who was involved in Robert Dziekanski's death at Vancouver airport has been acquitted of perjury for his testimony at a public inquiry - the last of four verdicts that saw another Mountie acquitted while two others were found guilty. Constable Gerry Rundel was acquitted Thursday in B.C. Supreme Court. The Crown had alleged the four officers who responded to the call involving Mr. Dziekanski colluded on a story to tell homicide investigators and later lied at the public inquiry. Constable Rundel, in a written statement, thanked the judge for "seeing the truth." "In Oct of 2007 four officers answered a 911 call at the airport. We responded as we were trained to. Sadly Robert Dziekanski lost his life," the statement read. Glen Orris, Constable Rundel's lawyer, said the judge found the Crown's theory lacking. "[The judge] basically said, 'on the evidence as I interpret it, the Crown's failed to prove their case,' " he said in an interview. Mr. Orris said the judge also found Constable Rundel's statements at the inquiry to have been credible. Constable Bill Bentley was the first of the officers to stand trial for perjury. All of the cases were heard by a different judge. Constable Bentley was acquitted in July, 2013, with the judge in his case ruling the Crown had "not shown that in any particular [instance] Mr. Bentley made a false statement knowing it to be false and with intent to mislead the inquiry." Globe and Mail, S3; Canadian Press (Toronto Star)

Woman's 911 call was handled properly

The RCMP is defending the way it handled a 911 call from a Nanaimo university student who was reporting that a man had tried to steal her purse and groped her. Cady Brockman, 20, said she was approached by a man wearing a balaclava just before 4 p.m. last Friday on Foster Street and Bruce Avenue in Nanaimo. The man tried to grab her purse, then pulled down her pants and groped her. She pushed the man down and he ran away. Brockman felt violated by the assault and was frustrated that when she called 911 to report the attack, she was told to call Nanaimo RCMP's nonemergency line. "I was frustrated because my emergency wasn't enough," she told the Times Colonist this week. Sally Boxall, operational communication centre manager for Island district RCMP, said she reviewed the 911 recording of the call and is satisfied with how the operator handled it. "In speaking with the caller, the operator confirmed that the incident was no longer occurring and the suspect was no longer present. Speaking in a calm manner, the caller indicated that she did not fear for her immediate safety," Boxall said. Times Colonist, A5

*** Mayor John Tory supports swapping some cops for civilians**

Mayor John Tory (open John Tory's policard) says it's time to explore using lesser-paid civilians to do some duties currently performed by uniformed Toronto police officers. "We've simply got to discuss how we are using these highly trained, expensive police officers and making sure they're being put to the best use ... for real policing matters," Tory said Thursday. For example, trained, non-police personnel could direct traffic as a more cost-effective alternative, the mayor said. "I was in Chicago a year and a half ago and saw their people who had jackets on that said 'traffic supervisor' or some such thing," Tory said. "They were people who the public recognized as having the authority to direct traffic." Across Ontario, cash-strapped municipalities are grappling with escalating policing costs, largely due to labour agreements. Tory and fellow Toronto Police Services Board members recently signed a four-year contract with the police union that gave officers an almost 9 per cent pay increase. This week, the Association of Ontario Municipalities released its "Policing Modernization Report," with recommendations to "ensure that all Ontario communities can afford policing." A key proposal calls on the province "to make legislative changes to permit the greater transfer of specific functions to civilians or other security providers where appropriate." Toronto Star

*** Politics This Morning: RCMP restricting MPs on Hill**

NDP MP Nathan Cullen raised a question of privilege yesterday after the RCMP did not allow the green House of Commons shuttle bus he was on onto the Hill at the East Block entrance, causing him to miss a vote. "They seem to be shutting down the Hill, or access to the Hill, more and more often," Mr. Cullen (Skeena-Bulkley Valley, B.C.) told *The Hill Times*. He noted that he believed the Senate deputy Speaker's motorcade was leaving the Hill precinct "and they shut the whole thing down." Mr. Cullen said that was an inappropriate reason not to allow the House bus on the Hill. "If that's the trigger for when we close off the hill, we're going to have some problems because it's just going to be too often," he said. He raised the issue in the House yesterday saying that he was "denied reasonable, timely access to the Parliamentary Precinct." He said that bells started ringing for a vote in the House when he was in the Finance

Committee meeting in 151 Sparks St. He went outside and took a shuttle back to Centre Block for the vote. The Hill Times

*** Reports of biker clubhouse spark concerns in Langford**
Parents with children at Spencer Middle School are concerned that a biker clubhouse with alleged links to the Hells Angels may be opening just steps from the school. West Shore RCMP has received reports that a Devils Army clubhouse is being constructed in the Langford neighbourhood and said the biker club is not welcome. "I'm scared, to be honest. I really think it could bring more gang violence to the West Shore," said one mother who asked not to be named. Neighbours say renovations began at 2775 Spencer Rd. about a month ago. A tall black fence blocks entry to the building and the number 41 is displayed in large text. The 41 is believed to represent D and A, the fourth and first letters of the alphabet. Hells Angels clubhouses typically display the number 81, for HA. Devils Army has been called a puppet club of the Hells Angels. The Hells Angels have denied an affiliation. A Devils Army presence has previously been reported in Campbell River. Although there's not evidence of criminal activity at the location, the RCMP said it will monitor the situation. "Maintaining public safety remains the top priority of the West Shore RCMP detachment. We will work closely with our neighbouring RCMP, municipal police forces and partner agencies to identify, investigate and disrupt criminal activity and organized crime in our communities," Insp. Larry Chomyn said. Mayor Stew Young said RCMP have informed Langford council there may be "an issue." While the city is concerned about construction happening without a permit, Young said he will leave criminal concerns to the Mounties. Times Colonist, A4

*** Ottawa set to take another step back on gun control**
An opinion piece states, "Last week the federal standing committee on public safety launched its hearings into Bill C-42, the ironically named Common Sense Firearms Licensing Act. The bill, which would loosen controls on possession permits, assault weapons and the transportation of handguns, could hardly be farther from common sense. Astoundingly, the committee is not scheduled to hear a single witness representing police organizations, or for that matter any public safety, crime prevention or legal experts - all people in a unique position to comment on the likely consequences of the proposed legislation. Instead, the hearings consist of only four hours of testimony from nine witnesses: two private groups defending gun control versus seven defending pro-gun interests. Among the many troubling changes C-42 seeks to introduce, one seemingly innocuous measure deserves special scrutiny. The legislation would open the door to regulations that limit the discretionary powers of chief firearms officers (CFO), the provincial public servants who decide on whether or not to issue a variety of licences and authorizations and on what conditions." Toronto Star, A15

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

La réussite de C-10 est un échec
Un article éditorial déclare, « La plupart d'entre nous savent qu'il y a un lien entre une cause et son effet. La criminalité par exemple. S'il suffisait de diviser le monde entre les bons et les méchants, on aurait réglé le problème depuis longtemps, mais la criminalité n'est pas un phénomène aléatoire, indépendant des conditions sociales. Au Canada, environ 12 % de la population n'a pas obtenu son diplôme d'études secondaires. C'est autre chose en prison. En 2014, le Bureau de l'enquêteur correctionnel constatait que 40 % des délinquants admis pendant l'année n'avaient pas étudié au-delà d'une huitième année. Pensez-y. Presque la moitié de ceux et celles qui aboutissent à un établissement fédéral de détention ont à peine terminé leur primaire. Le statut d'emploi, l'âge et le niveau de scolarité «sont les plus importants indicateurs de la récidive», disait aussi l'enquêteur, alors que les programmes visant à améliorer le niveau de scolarité et les compétences professionnelles facilitent la réinsertion. La récidive, comme la criminalité elle-même, n'est pas aléatoire. On peut la prévenir si on prend les bons moyens : éducation et réinsertion progressive. Cette semaine, le vérificateur général du Canada a lui aussi mis le doigt dans cette plaie que le gouvernement Harper croit pouvoir soigner avec du sel. Quand avez-vous vu ou entendu un ministre ou un député conservateur plaider en faveur de la réhabilitation des prisonniers? Jamais, car avec l'adoption du projet omnibus C-10, intitulé trompeusement «sur la sécurité des rues et des collectivités», la réhabilitation a cessé d'être une priorité. » Le Soleil, 23

Drugs seized at Collins Bay Institution
Staff at Collins Bay Institution seized a package containing 39 grams of marijuana and 92 grams of tobacco, according to a news release Thursday. The release states that the contraband was obtained in the perimeter of the medium-security unit at the prison. Correctional Service Canada estimates the institutional value of the seizure to be $5,900. To prevent drugs from entering its institutions, the correctional service uses tools such as ion scanners and drug-detector dogs to inspect buildings, personal property, inmates and visitors. A toll-free number (1-866-780- 3784) has been set up so the correctional service can receive confidential information relating to drug use or trafficking. Kingston Whig-Standard, A3

Supreme Court to hear man's appeal of mandatory minimum sentencing
The Supreme Court of Canada announced Thursday it will hear the appeal of mandatory minimum sentencing for a Vancouver drug dealer. Joseph Lloyd was convicted of possession for the purpose of trafficking after he was arrested by police two years ago for carrying fewer than 10 grams of heroin, crack cocaine and crystal methamphetamine. The amount of drugs considered possession for the purpose of trafficking is more than six grams. At sentencing, Lloyd told the court he was addicted to all three drugs, according to the Pivot Legal Society which intervened in the case at a B.C. Court of Appeal hearing. Pivot argues that mandatory minimum sentences for possession for the purpose of drug trafficking, which was introduced in 2012 as part of Prime Minister Stephen Harper's tough-on-crime agenda, have a disproportionate effect on women, young offenders, aboriginal people and people who are involved in the drug trade because of their addiction. Some people with drug addiction are trading drugs, rather than selling them, and Pivot argues a lengthy jail term for a low-level crime is an unfair punishment. Vancouver Sun, A4, * Presse canadienne (Acadie nouvelle)

Convicted murder's case being appealed to Supreme Court
The lawyer for a convicted murderer is appealing the case to the Supreme Court of Canada. Derek Hogan filed an appeal last week in the case of Steven Neville. On Feb. 1, 2013, a jury found Neville guilty of second-degree murder in the stabbing death of Doug Flynn and the attempted murder of Ryan Dwyer. It stemmed from an incident that happened Oct. 9, 2010, on Carlisle Drive in Paradise, just outside St. John's. Neville was sentenced to life in prison with no possibility of parole for 12 years. The defence appealed the conviction and, earlier this month, the Newfoundland and Labrador Court of Appeal dismissed it. The Telegram, B4

* **Top court turfs N.S. gun sentencing bid**
The Supreme Court of Canada has dismissed an appeal from the province of Nova Scotia that would have restored some mandatory minimum sentences for gun crimes. Earlier this month, the top court struck down mandatory minimum sentences for gun crimes as unconstitutional because they could constitute cruel and unusual punishment. That seemed to settle the case of Erin Lee MacDonald, a Nova Scotia man charged with several gun crimes in 2009 after he opened the door to police while holding a loaded 9-mm Beretta handgun. MacDonald was charged with possessing a loaded, restricted firearm, careless use of a firearm and possessing a weapon for a dangerous purpose. His case had the potential to shape mandatory minimum laws. He was initially sentenced to the mandatory minimum of three years in prison, but the Nova Scotia Court of Appeal struck that down as cruel and unusual punishment. MacDonald's sentence was ultimately reduced from three years imprisonment to a total of 18 days in jail and two years' probation. Chronicle-Herald, A6

* **Zoe undergoes a psychiatric assessment**
A convicted sex offender, facing new charges of break and enter and sexual assault, will be sent to an Edmonton hospital for a 30-day psychiatric assessment. The assessment for Bobby Zoe, 34, was granted in territorial court by Judge Bernadette Schmaltz on Friday. Zoe himself asked for the assessment, said his lawyer Paul Falvo in court. "The psychiatric assessment can help to determine two things," Falvo said. "One is whether the accused was or wasn't criminally responsible for his alleged offence and the second is whether he is mentally fit to stand trial." Falvo said it is the judge that ultimately makes that decision but the report from the hospital will likely be taken into account. Zoe was charged on Feb. 17 after the occupants of a downtown apartment told police they awoke early in the morning to find someone standing in their bedroom. Police say one of them was sexually assaulted and stolen items were also reported to

police. RCMP later charged Zoe with another break and enter and sexual assault that had been reported Feb 1. However, those charges were stayed last month. Zoe was sentenced to 39 months in prison in April 2012 for sexually assaulting and robbing a woman as she walked down 53 Street on Jan. 11, 2011. Yellowknifer

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Violent crime rising sharply, RCMP report says**

A 40 per cent increase in violent crimes in Surrey from the first quarter of 2014 to the first quarter of 2015 included a 46 per cent increase in sexual assaults, Surrey RCMP reports. According to crime statistics released Thursday, there were a total of 1,732 violent crimes committed in the first quarter of 2015, compared with 1,233 in the same period in 2014. That includes an increase in sexual assaults to 57 from 39 over that period, a 14 per cent increase in robberies to 168 from 148, a 29 per cent increase in assaults to 863 from 668, a 175 per cent increase in abductions/kidnappings to 11 from four (primarily due to domestic/custody disputes), a 25 per cent increase in attempted murder to five from four, and a 100 per cent increase in homicides to two from one. "The increase in attempted murder files is directly related to the spate of targeted shootings that have occurred in the city," said the RCMP in a statement. "It is important to note that not all shootings are categorized as attempted murder as intent needs to be established." There have been as many as 23 shootings in Surrey and Delta over the last several weeks, with a number of them linked to a street-level drug-trade conflict. However, the report also showed that property crimes dropped five per cent over the year, although arsons increased 146 per cent to 32 from 13. It was the first decrease in property crime in Surrey in over two years. Total criminal code offences increased seven per cent over the year, to 13,039 from 12,133. Despite the increase year-overyear, RCMP said there has been a 12 per cent drop in violent crime since the last quarter of 2014, but that robberies and assaults continue to be the biggest contributors to the city's violent crime rate. Business break-and-enters also dropped considerably - 26 per cent, to 321 from 436 - while residential break-ins were unchanged, 532 each year. Postmedia News (Vancouver Sun, A8)

*** Keep cops for 'real policing,' Tory says**

Mayor John Tory says it's time to explore using lesser-paid civilians to do some duties currently performed by uniformed Toronto police officers. "We've simply got to discuss how we are using these highly trained, expensive police officers and making sure they're being put to the best use ... for real policing matters," Tory said Thursday. For example, trained, non-police personnel could direct traffic as a more cost-effective alternative, the mayor said. "I was in Chicago a year and a half ago and saw their people who had jackets on that said 'traffic supervisor' or some such thing," Tory said. "They were people who the public recognized as having the authority to direct traffic." Across Ontario, cash-strapped municipalities are grappling with escalating policing costs. Tory and fellow Toronto Police Services Board members recently signed a four-year contract with the police union that gave officers an almost 9 per cent pay increase. This week, the Association of Ontario Municipalities published its "Policing Modernization Report." A key proposal calls on the province "to make legislative changes to permit the greater transfer of specific functions to civilians or other security providers where appropriate." Toronto Star, GT2

*** Two years later, cyberbullying law continues to ignite debate**

An overwhelming majority of complaints filed under Nova Scotia's anti-cyberbullying law have been resolved out of court, proof that it is working despite lingering criticism, supporters of the legislation say. Two years after it was passed in April 2013, the bill still faces criticism from legal experts who say it threatens freedom of expression. The legislation is the first of its kind in Canada. Two challenges aimed at striking down the controversial law are currently before the courts, and in a separate case an order under the Cyber Safety Act was overturned by the Nova Scotia Supreme Court on grounds it violated charter rights. But a member of Nova Scotia's CyberScan unit, which was established under the act to crack down on cyberbullying, said there is a side of the law the public doesn't hear about as much. Of the 559 complaints of cyberbullying filed with CyberScan, only two have proceeded to court, with the rest

resolved through informal negotiations, said Dana Bowden, one of the five investigators with the unit. Canadian Press (Maclean's, CBC News, Brandon Sun, CTV News, CHEK, Truro Daily News)

* **Cyberintimidation dénoncée: «Vous devriez vous lobotomiser avec un Magnum»**
Propos haineux, insultes, incitation à la violence ou au suicide, la militante Sophie Labelle dénonce la cyberintimidation dont sont victimes beaucoup de personnes trans qui prennent la parole sur le web. La semaine dernière, Rachel Bryk, une jeune programmeuse américaine trans très en vue, s'est suicidée après avoir subi des attaques transphobes sur internet. Certaines l'encourageaient à se suicider. Elle avait aussi des douleurs physiques dues à des maladies chroniques. «Ça me touche très personnellement, étant quotidiennement la cible de cyberintimidateurs qui ne font pas dans la dentelle», a indiqué à Métro Sophie Labelle, enseignante au primaire et auteure d'une bande dessinée en ligne traitant d'enjeux trans qui remporte du succès dans plusieurs pays et en plusieurs langues. Journal Métro

* **Canada gives short shrift to important event**
An opinion piece states, "An important gathering is being held this week at the United Nations in New York, but with the Duffy trial and the tragic earthquake in Nepal the event got little coverage in Canada and fell off the news pages. The UN Permanent Forum on Indigenous Peoples met in New York for the past 11 days, and attracted hundreds of delegates who represent 370 million indigenous people around the world. (...)Instead of a political spokesperson, such as the minister of aboriginal affairs or a parliamentary secretary, Canada was represented by an Indian Agent from the Colonial Office. It is embarrassing how backward this country has become under the current federal government. The speech by Ducros to the forum was a one-sided litany of the government's achievements, including a statement that it had "removed obstacles to concluding treaties" when, in fact, several reports have pointed to Ottawa and the Department of Aboriginal Affairs as the main impediments. She went on to state that the government had taken steps to ensure First Nations have access to clean drinking water and that it recognizes the serious issue of murdered and missing aboriginal women. Ducros didn't once mention the controversial call for an inquiry into missing and murdered aboriginal women. This was an important international forum, yet Canada was represented by someone reading a clicheridden speech that no doubt was vetted by the Prime Minister's Office." StarPhoenix, A13

* **Ending violence against aboriginal women focus of action plan**
The Aboriginal Women's Association of P.E.I. hopes an action plan with the province that came out of a roundtable February in Ottawa will make a difference in reducing higher rates of violence against aboriginal women. At the National Roundtable on Missing and Murdered Indigenous Women and Girls, the province and aboriginal groups committed to work together at the community level. Recently, Island aboriginal women's organizations met to begin discussions. Association president Judy Clark was one of six delegates from P.E.I. that attended the roundtable. She says three priority areas were determined at the conference: prevention and awareness, community safety, and policing and justice measures. CBC News

* **Nelson group raises awareness of violence against women**
Do you know this woman? Chances are you do. She is one of three women in Canada who have experienced abuse. She could be your sister, your daughter, your aunt, your mother, your friend, the clerk who often helps you in the store, or the woman across from you in your office. On average, every six days a woman in Canada is killed by her intimate partner. A sobering statistic. Think domestic violence doesn't happen in Nelson? Think again. According to Anna Maskerine, chair of the Nelson Violence Against Women in Relationships Committee, it most certainly does. The Aimee Beaulieu Transition House is often full to capacity. After 20 years of providing service in the community, the problem of violence against women shows no signs of going away. Nelson Star

* **Sexual Assault is rooted in an inherent imbalance of power**
An opinion piece states, "Sexual assault is any unwanted act of a sexual nature forced by one or more persons upon another individual. This includes unwanted touching (also known as sexual harassment) and rape. Drugs or alcohol may be used to intoxicate the victim. This includes alcohol or drugs that the victim has consumed either voluntarily or involuntarily as well as the use of anesthesia during an operation or proceedure. It's clear that men and boys are victims of sexual abuse, but 86 per cent of

victims of sexual assault who reported to police in 2004 were female. This article will focus on sexual assault as a women's and girl's issue. Statistics often bring trends to light and validate the importance of exploring specific issues like the sexual assault of women and girls. Here's well established statistics from the Ontario Women's Directorate: Over the past decade the breakdown of sexual assaults remained unchanged with 81 per cent of incidents involving unwanted sexual touching and 19 per cent involving sexual attacks." Rabble.ca

*** Should sex offenders be banned from transit?**
While judges impose limits to riding the bus by sexual assault suspects as part of release conditions, Transit Police say they don't have the resources to enforce it. Instead, when it comes to prolific offenders, some consideration should be given to either banning them from the transit system itself or imposing a condition limiting their use of transit by having them accompanied, according to Anne Drennan, Transit Police spokeswoman. "But to ban them completely from public transportation, some of the judges feel this is inappropriate," she said. This week, Vancouver man Mukesh Yasarapu was charged with two counts of sexual assault but was released with conditions, including when he's on transit he cannot sit or stand next to a female. "To say you can't stand or sit beside a female when using public transit ... is virtually impossible," she said. "You can liken it to ... handing an alcoholic a drink and saying, 'OK, you can hold this but you can't sip it.'" Drennan said while Transit Police do have a special unit dedicated to these issues, they don't have the resources to deal with it sufficiently across the system. 24 Hrs Vancouver

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Unions fight new federal screening rules on public servants**
As more than a quarter million federal government employees face credit checks and fingerprinting, one of the unions representing them is going to court to stop it. The Professional Institute of the Public Service of Canada is citing a case involving New Brunswick's J.D. Irving Ltd. The individual background checks are among new security screening standards the Treasury Board says are required to ensure the reliability and trustworthiness of civil servants handling sensitive and personal information.The new background checks apply to existing employees as well as to new hires.The Professional Institute of the Public Service of Canada has applied for an injunction to the federal court to halt the added security screening until a full legal challenge can be dealt with."We simply have no evidence from the government that such a broad, blanket application is reasonable in any way," said Isabelle Roy, the general counsel for the union, which represents 55,000 civil servants."We're simply not convinced of the rationale and reasonability for such privacy invasive measures being implemented across the board." Roy says the application for an injunction cites the 2013 Supreme Court of Canada case CEP Local 30 v Irving Pulp and Paper. In that case the top court ruled that privacy rights trump the rights of the company to initiate random alcohol testing on all employees. 'Unwarranted violation of personal privacy' Another union, the Public Service Alliance of Canada, says it also is challenging the credit check requirement. CBC.ca

*** Nepal earthquake death toll hits 6,260 as government plans to compensate families**
Slowly, life edged back toward a semblance of normal in Nepal's quake-hit capital Kathmandu on Friday as residents packed up tents and moved indoors. As rescue workers continued to comb the rubble in the city for survivors, the government said it was handing out the equivalent of $1,000 US to families for each victim killed in Saturday's earthquake, and another $400 for funeral costs, according to state-run Nepal Radio. The death toll from the mammoth quake climbed to 6,260 including those who died in an

avalanche on Mount Everest, plus more than 60 elsewhere in the region. The city got a lift Thursday when two survivors, including a 15-year-old boy, were rescued after being buried in debris for five days. Associated Press (CBC News)

*** Népal - Ottawa se défend de ne pas en faire assez pour les Canadiens**

Le gouvernement canadien martèle qu'il fait tout son possible pour aider les Canadiens pris au Népal à quitter le pays ravagé par un puissant séisme. Y compris les citoyens qui sont coincés dans des régions éloignées, ont indiqué quatre ministres dépêchés au Parlement jeudi pour faire le point sur la situation. Le ministère des Affaires étrangères planche sur un plan d'opération pour localiser les Canadiens bloqués dans des régions montagneuses et qui, de ce fait, n'ont pu rejoindre la capitale népalaise Katmandou. " Nous tentons d'établir des moyens de transport traditionnels pour accéder à ces individus ", a indiqué la ministre d'État responsable des affaires consulaires, Lynn Yelich, en point de presse. Le Devoir rapportait lundi que deux jeunes Québécoises se sont trouvées coincées dans la région montagneuse de Langtang, au nord de Katmandou. Elles ont trouvé refuge en lieu sûr depuis, mais par leurs propres moyens. A ceux qui ont reproché au gouvernement d'avoir mis trop de temps à aider les Canadiens au Népal, le ministre de la Défense a rétorqué que le fédéral avait agi très rapidement. Le Canada n'a jamais eu de Haut-Commissariat dans ce pays, a noté Jason Kenney. "La raison pour laquelle les gens vont au Népal, c'est parce que c'est un petit pays très, très éloigné de la civilisation ", a-t-il fait valoir. C'est aussi pour cette raison que le Canada n'y a pas de grande mission diplomatique et qu'un seul consul honoraire, qui est aussi médecin -- le Dr Buddha Basnyat --, a d'abord fourni de l'aide médicale sur place, a expliqué le ministre. Environ 500 Canadiens se trouvaient au Népal au moment du tremblement de terre de magnitude 7,8 samedi dernier, selon les informations du ministère des Affaires étrangères. Plus d'une centaine ont quitté le pays à bord de vols commerciaux, qui ont repris à Katmandou. Et 96 personnes ont été rapatriées à New Delhi, en Inde, à bord du C-17 canadien qui a livré de l'équipement de secours au Népal. Un second C-17 devrait arriver à Katmandou vendredi matin avec à son bord 51 membres des Forces armées, notamment du personnel médical, et l'appareil pourra rapatrier davantage de Canadiens en Inde. Le Devoir, A5

*** Family worries for St. Albert couple still missing in Nepal**

Family and loved ones of a St. Albert couple unaccounted for in Nepal are holding out hope they will still be found alive. It is believed that Kathy and Bruce Macmillan were nearing the end of a weeklong hike along a trail in Langtang National Park when a 7.8-magnitude earthquake occurred around noon April 25. The Langtang Valley, directly north of Kathmandu, was among the hardesthit areas, with buildings crushed by avalanches and roads blocked. All means of communication in the region have been cut off. CSIS admits losing ground to hackers
Canada's spies admit they can't keep up with daily cyber attacks from state-sponsored hackers, according to an internal report obtained by the Star. A heavily censored "threat overview" prepared by CSIS last September stated hostile "state-sponsored" hackers are targeting everything from political positions and trade strategies to commercial data and personal information. "Hostile state-sponsored actors (are targeting) Canadian public and private computer networks daily to advance their economic, military, (and) political agendas," reads the report, prepared for **Public Safety Minister Steven Blaney**'s office. "Offensive cyber operations (are) employed with more traditional methods in support of strategic and economic objectives." A separate overview of CSIS operations, also prepared for Blaney and obtained under Access to Information law, stated CSIS is being overwhelmed by the sheer number of attacks. CSIS reported the "scale of the threat has fast outpaced (its) capacity," and the agency has been required to "prioritize" its efforts. That document rates cyber security as an "operational pressure," along with terrorist travel. Ottawa recently named China as the state sponsor behind a 2014 hack of the National Research Council's network - an attack that CSIS and Canada's electronic spy agency, the Communications Security Establishment, monitored for some time before quarantining the agency's network from government servers. But while that high-profile attack made headlines, the September 2014 threat overview shows Canada's public and private networks are targeted more often than most people realize. CSIS also identified more traditional methods of espionage in the threat assessment, including "political espionage targeting government officials and systems." Toronto Star, A1

Les services d'espionnage canadiens sont débordés

Les services d'espionnage canadiens n'arrivent plus à contenir la menace que représentent les cyberattaques au pays. Les réseaux informatiques des divers gouvernements ou du secteur privé sont quotidiennement la cible d'attaques, affirment les dirigeants du SCRS dans un document d'information qu'ils ont remis au **ministre de la Sécurité publique, Steven Blaney**, en septembre dernier. Ces cyberattaques sont souvent l'oeuvre de gouvernements étrangers hostiles qui misent sur ces agressions virtuelles pour faire mousser leurs intérêts économiques, militaires ou politiques, peut-on lire dans ce document obtenu par le quotidien Toronto Star en vertu de la Loi sur l'accès à l'information. Le **ministre Blaney** a été mis au courant de l'ampleur de cette menace par les hauts dirigeants du Service canadien du renseignement de sécurité le 18 septembre dernier. «Des acteurs qui sont parrainés par des États hostiles ciblent les réseaux d'ordinateurs publics et privés au quotidien dans le but de faire avancer leurs intérêts économiques, militaires ou politiques», soutient-on dans le document, dont plusieurs passages ont été caviardés. Les cyberpirates tentent ainsi de mettre la main sur des secrets militaires, des informations confidentielles liées à la propriété intellectuelle, des stratégies commerciales, ou encore des informations personnelles. [...] Ce n'est pas la première fois que le SCRS sonne l'alarme quant aux risques de plus en plus élevés liés aux cyberattaques. Au bureau du **ministre Blaney**, on affirme que la cybersécurité est une question prioritaire et que le gouvernement travaille étroitement avec les experts en la matière pour se protéger des intentions malicieuses des cyberpirates avant qu'ils ne frappent. Le porte-parole du ministre, Étienne Rainville, a souligné que le gouvernement a annoncé de nouveaux investissements totalisant près de 300 millions de dollars pour les forces de l'ordre et les agences de sécurité afin de combattre le terrorisme et le cyberespionnage. «***Nous avons fait d'importants investissements dans une stratégie de cybersécurité conçue pour se défendre contre les menaces électroniques, le piratage et le cyberespionnage. Le budget 2015 a réaffirmé l'engagement de notre gouvernement envers la cybersécurité en s'assurant que nos agences disposent des outils dont elles ont besoin pour faire leur travail grâce à un investissement supplémentaire***», a-t-il dit. La Presse, A15

Omnibus bill to clear RCMP of criminal charges

The Harper government moved to retroactively rewrite Canada's access to information law in order to prevent possible criminal charges against the RCMP, The Canadian Press has learned. An unheralded change buried in last week's 167-page omnibus budget bill exempted all records from the defunct long-gun registry, and also any "request, complaint, investigation, application, judicial review, appeal or other proceeding under the Access to Information Act or the Privacy Act," related to those old records. The unprecedented, retroactive changes - access to information experts liken them to erasing the national memory - are even more odd because they are backdated to the day the Conservatives introduced legislation to kill the gun registry, not to when the bill received royal assent. The date effectively alters history to make an old government bill come into force months before it was actually passed by Parliament. A source familiar with the complaint, speaking on condition of anonymity due to its sensitivity, said the government moved out of concern Information Commissioner Suzanne Legault is poised to recommend charges against the Mounties for withholding - and later destroying - gun registry documents while the legislation was still being debated. Indeed, shortly after the story broke Wednesday, Legault's office announced it would be tabling a special report Thursday detailing an investigation into the long gun registry and an access to information request. The government feels no one should face a penalty for being overly eager to enforce the will of Parliament before the legislation had been voted into law. A spokesman for **Public Safety Minister Steven Blaney** would only say the retroactive law will fix a "***bureaucratic loophole***" that allowed citizens to request heavily redacted copies of the gun registry data while the legislation to destroy the data was before Parliament. "***This clearly goes against the will of Parliament that all copies of the registry should be destroyed***," spokesman Jeremy Laurin said in an email response. "***This technical amendment re-enforces this point***." Legault's office refused to discuss any investigations, citing confidentiality provisions, or even to comment on the government's rewrite of the access-to-information law. Canadian Press, B6 (Toronto Star, National Post, Calgary Herald, Leader-Post, The Telegram, Charlottetown Guardian, Cape Breton Post, Windsor Star, Times Colonist, Red Der Advocate, Whitehorse Daily Star)

NDP decries timing of video's release

Internal RCMP documents about the release of gunman Michael Zehaf-Bibeau's video are part of a "hyperpolitical" pattern of government behaviour on its anti-terrorism legislation, the NDP says. The

documents, first disclosed by the Citizen, include an RCMP communication strategy for the public release of the video. In them, the RCMP noted that releasing Zehaf-Bibeau's video on a Friday would ensure "attention on the video will be very high over the weekend, but that the issue will die down early the following week so that the focus can be on the Bill C-51 hearings." Bill C-51 is the government's anti-terror bill, and House of Commons hearings on it started the Monday after the RCMP released the much-anticipated video recorded by Zehaf-Bibeau on his cellphone. The gunman killed a guard at the National War Memorial last Oct. 22 before being killed himself inside the Centre Block. NDP national security critic Randall Garrison said the documents have renewed concerns from opposition MPs that the government was using the video to help make the case for its anti-terrorism bill, even though the RCMP called the release and hearings "unrelated issues." "They're clearly related because the government was saying they were related," Garrison told the Citizen Wednesday. "It's part of a pattern around C-51 where everything becomes hyper-political rather than a policy question." Cabinet ministers, when asked about the timing of the video's release, said no one in the government had directed the RCMP to release the video just ahead of the C-51 hearings. "Certainly not. Never. Absolutely not," Justice Minister Peter MacKay told reporters. "We certainly don't direct the RCMP." In the House of Commons, **Public Safety Minister Steven Blaney** said he has "***full confidence in the judgment of the RCMP***" and respected the "***operational independence***" of the force. Ottawa Citizen, A10

B.C. a 'no man's land' when it comes to pot shops

As Vancouver attempts to control a proliferation of marijuana dispensaries by regulating them, other B.C. cities have taken stringent measures to stop the storefronts from popping up in the first place. Both North Vancouver District and Surrey, for instance, have passed zoning bylaws to prohibit the marijuana dispensaries, while other municipalities say their police forces, particularly the RCMP, have zero tolerance for the illegal facilities and will shut them down. [...] The federal government has handled it so incompetently, it's left the province with no direction to take," Corrigan said. The federal government has put the onus on municipalities to enforce the law around medical pot but has done nothing to crack down as a court case filed by medical pot users continues. The case was launched by medical pot users who were told they could no longer grow pot in their homes, but would have to buy it from central facilities and receive it by mail. Vancouver officials argue the situation has resulted in 80 unlicensed pot shops across the city and is proposing to regulate the storefronts by issuing $30,000 licensing fees and closing shops near schools and community centres, while allowing them in most commercial districts. But Health Minister Rona Ambrose and **Public Safety Minister Steven Blaney** recently warned Vancouver council members and Vancouver police they should crack down rather than regulate, and thereby legitimize, pot dispensaries. Vancouver Sun, A1

Crime de non-achat

Le crime de non-achat n'est pas sur le point d'apparaître au Canada. Malgré la microtempête médiatique suscitée par une interprétation des slogans conservateurs, boycotter Israël ne mènera pas du tout à la prison. A la suite des attentats de Paris en janvier dernier, le **ministre de la Sécurité publique, Steven Blaney**, manifestait au nom de la liberté d'expression. Deux semaines plus tard, un forum spécial sur l'antisémitisme était organisé à l'ONU. **M. Blaney** y affirmait que le Canada avait une politique de «***tolérance zéro***» à cet égard. Le boycottage de produits israéliens serait le nouveau visage de l'antisémitisme, soutenait le ministre. Un reporter de la CBC a demandé ce que signifiait concrètement «tolérance zéro». Une attachée de presse du Ministère lui a récemment répondu en expliquant comment le Code criminel canadien permet de punir sévèrement le discours haineux. Elle n'a pas précisé si cela référait à l'antisémitisme en général ou au boycottage ni ce que le gouvernement entendait faire avec cet arsenal juridique. Malgré tout, certains ont conclu qu'Ottawa pourrait favoriser les poursuites contre les boycotteurs. L'hypothèse a même été relayée par le Haaretz, réputé quotidien israélien, et par Glenn Greenwald, journaliste d'enquête derrière l'affaire Snowden, le scoop de la décennie. Mais cette menace ne sera pas mise à exécution. Même si le Code criminel est fédéral, c'est aux procureurs généraux des provinces que revient la décision d'intenter une poursuite. Or, aucune province n'a manifesté son intention d'aller en ce sens. La raison est simple: il n'existe pas le moindre argument juridique pour le faire. Un discours ne devient pas haineux parce qu'il est déplaisant. Même l'incitation à la diffamation ou au dénigrement ne serait pas forcément haineuse. Cette étiquette criminelle est réservée aux rares cas qui mènent à une forme «extrême» de détestation, rappelait la Cour suprême en 2013. La Presse, A24

What the media missed while it was dumping on Liz May
Dear God, please let this be the last word on Elizabeth May we hear this week: It was a bad speech. It wasn't a funny speech. And while Ottawa's magpie mainstream media outlets were obsessing over a politician's public humiliation like it was Watergate and Robocalls rolled together, actual news was happening. For instance: During the same broadcast of CBC's Power and Politics that devoted two whole segments to the Green Party leader's awkward attempts at humour, Paul Calandra - the prime minister's legendarily lachrymose parliamentary secretary - tried vainly to defend his refusal to answer a question in Parliament about how the government appoints senators ... because the issue is before the courts. [...] My point is this: Politicians say and do stupid things all the time, in professional settings, and the media frequently does little to hold them to account. Here's another example: When asked about Omar Khadr's release on bail - something against which the Harper government has fought tooth and nail, despite serious problems with his detention and prosecution, and despite the lack of any evidence he poses a risk to the public - **Public Safety Minister Steve Blaney** had this to say: "***We are disappointed by the decisions of the court, because we feel that victims should be considered in those decisions***." This statement went unchallenged by journalists. No one asked **Blaney** why, if the government feels it's so important that victims be considered in bail decisions, it did not make an amendment to that effect of the Victims Bill of Rights. The Criminal Code currently requires judges to consider the safety of a victim in bail decisions - but surely even **Blaney** can't argue Khadr poses a risk to the family of the late Christopher Speer. **Blaney**'s parliamentary secretary, **Roxanne Smith**, took up her boss's cudgel in the House. "***While Justin Trudeau refused to rule out special compensation for this convicted terrorist***," she sniped, "***and the NDP actively tries to force Canadian taxpayers to compensate him, we believe the victims of crime, not the perpetrators, are the ones who deserve compensation***." Ipolitics.ca

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Wildfire hazard in the red in Rocky forest area**
When Barry Shellian first saw the wildfire in the distance just west of Nordegg on Tuesday, he realized by the colour of the smoke just how dry it is in the West Country right now. The wildfire ranger, who was the first responder, saw black smoke instead of the often white smoke from forest fires. The seven-acre wildfire, about three km west of Nordegg in a stand of spruce trees, was brought under control. It was the 38th of 39 wildfires in the Rocky Wildfire Management Area so far in the wildfire season that began March 1. It was caused by humans. Red Deer Advocate, A1

*** Conditions ideal as wildfires grow across province**
About 40 firefighters are battling a wildfire burning out of control near Lodgepole in west-central Alberta. Richard Horne, a wildfire information officer with the province, said the fire covers about 700 hectares. On Tuesday, when it was discovered, it had destroyed about two hectares. Air tankers, helicopters and heavy machinery are being used in an attempt to bring the fire under control. Edmonton Journal, A8

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Attentat d'Ottawa et Loi antiterroriste - La GRC a orchestré la diffusion de la vidéo
Ce n'est pas un hasard si la vidéo de Michael Zehaf-Bibeau a été rendue publique à la veille de l'étude du projet de loi antiterroriste des conservateurs. La Gendarmerie royale du Canada a beau être une entité indépendante du gouvernement, elle a soigneusement orchestré la diffusion de cet enregistrement afin de s'assurer, de son propre aveu, qu'elle n'éclipse pas les débats sur C-51. Lorsque la GRC a décidé d'accepter l'invitation d'un comité parlementaire et d'y présenter la vidéo de l'auteur de l'attentat d'octobre dernier au parlement, l'opposition a rapidement soupçonné qu'elle le faisait de manière à promouvoir la rhétorique antiterroriste du gouvernement de Stephen Harper, qui venait de déposer son projet de loi C-51. Le commissaire Bob Paulson a même pris acte de cette impression. " Je sais pertinemment que le gouvernement présente de nouvelles dispositions législatives pour renforcer la lutte contre le terrorisme ", avait-il consenti au Comité de la sécurité publique, en mars dernier. " La diffusion d'une telle vidéo pourrait apparaître comme une tentative d'influencer cette démarche. Je tiens à vous assurer que ce n'est

pas mon intention '', avait souligné M. Paulson aux députés. L'Ottawa Citizen a mis la main sur un document de la GRC préparé en vue de la comparution de M. Paulson. Sa déclaration, récitée au début de la rencontre du comité de la sécurité publique, y est reproduite. De même qu'une '' stratégie de communication ''. La note -- obtenue par le quotidien d'Ottawa en vertu de la Loi sur l'accès à l'information et consultée par Le Devoir -- explique que le commissaire se présentera au comité pour présenter la fameuse vidéo enregistrée le 22 octobre, quelques minutes avant que Zehaf-Bibeau tue le caporal Nathan Cirillo et entre armé au parlement. '' L'approche proposée ci-dessous garantira que l'attention portée à la vidéo soit très élevée au cours de la fin de semaine, mais que l'enjeu se calme en début de semaine pour que l'accent soit sur les audiences du projet de loi C-51 '', stipule le document. Invité à comparaître dès la mi-février, M. Paulson a répondu le 3 mars pour témoigner le 6, soit le vendredi d'une semaine de relâche parlementaire -- alors que le comité ne devait pas se réunir. Le même comité parlementaire a étudié le projet C-51 le mardi suivant. La GRC avait en outre prévu des '' questions-réponses '' pour son patron, vraisemblablement pour le préparer aux interrogations des députés et des médias. La première : pourquoi avez-vous mis tant de temps à rendre publique la vidéo ? Réponse rédigée pour M. Paulson : '' A ce moment-ci de l'enquête, il est désormais possible de rendre publique la majorité de la vidéo pour vous aujourd'hui. J'ai profité de l'invitation de ce comité pour présenter la vidéo au moment où cela était possible et dans l'intérêt supérieur du public. '' Le Devoir, A1

Un cégépien se dit «soldat du califat»

Silencieux depuis leur disparition en janvier, deux élèves du collège de Maisonneuve soupçonnés d'avoir quitté le pays pour aller rejoindre des djihadistes outre-mer viennent de réapparaître soudainement sur les réseaux sociaux, où l'un d'eux semble maintenant s'identifier comme un «soldat du califat». Le compte Twitter d'Imad Rafai montre maintenant qu'il se définit par l'expression Jund Al-khilafah, ou «soldat du califat» en arabe. Il ne donne pas d'explication à ce sujet. Le groupe État islamique, qui se bat en Syrie et en Irak, dit avoir établi un califat, un territoire gouverné par un calife qui se veut le successeur du prophète Mahomet. Mais le nom «soldats du califat» réfère aussi à un groupe terroriste algérien, anciennement affilié à Al-Qaïda, qui a prêté serment d'allégeance l'an dernier au groupe État islamique. Imad Rafai est lui-même d'origine algérienne. En plus de son compte Twitter, le jeune homme a mis à jour son profil Facebook pour la première fois depuis le 11 janvier. Il y évoque en termes vagues son départ du Canada. «Celui qui s'enfuit de la terre de mécréance vers la terre d'Islam pour préserver sa religion en espérant la récompense d'Allah et en voulant donner la victoire à l'Islam va trouver sur terre une subsistance abondante et des bienfaits énormes. Allah, vraiment, ne manque jamais à sa promesse», dit-il, sans plus de précisions. Une des personnes qui ont «aimé» cette publication sur Facebook est Ouardia Kadem, une autre élève du collège de Maisonneuve dont la disparition avait été signalée à la mi-janvier avec une demi-douzaine d'amis de Montréal et de Laval. Depuis, elle n'avait pas donné signe de vie, elle non plus. L'Équipe intégrée de la sécurité nationale, un groupe de policiers chargés de la lutte contre le terrorisme et coordonné par la Gendarmerie royale du Canada, n'a jamais fait le point publiquement sur le sort des jeunes soupçonnés d'avoir voulu rejoindre des combattants considérés comme terroristes par le Canada. La Presse, A3 Front; * Toronto Star

*** Youth or adult?**

The case of former Guantanamo Bay prisoner Omar Khadr returns to Canada's top court for a third time on Thursday, as the federal government fights to have him declared an adult offender for crimes he committed as a 15-year-old. The dispute centres on whether the eight-year sentence a U.S. military commission handed him for war crimes should be interpreted as a youth or adult sentence. However, the arcane technical legal battle has taken on loud political overtones. "This case is another illustration of the heavy-handed approach Canada has consistently taken towards him," said Gillian Hnatiw, who represents the Canadian Civil Liberties Association, which is intervening in the case. Khadr, 28, was released on bail last week after almost 13 years in custody while he appeals his U.S. conviction, which has drawn fierce criticism from legal and human rights experts. Although he was 15 when his crimes occurred in Afghanistan in July 2002, the military commission made no distinction between juveniles and adults in sentencing him in 2010 to a further eight years behind bars. The federal government, which has consistently branded him a hardened terrorist and is separately fighting his bail, argues Khadr was really given five concurrent eight-year terms for each of the five war crimes to which he pleaded guilty. While the government concedes the sentence for the most serious charge - the murder of an American special forces soldier - can only be considered a youth sentence, it argues the other four - including attempted

murder - must be viewed as adult sentences. Telegraph-Journal, A7 (Times&Transcript, Hamilton Spectator, Edmonton Journal)

*** Man convicted in terror plot to undergo psych assessment**
An Ontario judge has ordered a mental health assessment for a convicted terrorist who plotted to derail a passenger train, saying the evaluation could help him determine the man's sentence. Justice Michael Code ordered the assessment Monday after Chiheb Esseghaier told the court he had been created by God to "warn mankind" about "hellfire" if the messages of the Qur'an weren't followed. Esseghaier and his co-accused , Raed Jaser, were found guilty in March of a terror-related conspiracy to commit murder, which carries a sentence of up to life in prison. The jury also found the men guilty of six other terror-related charges between them. Jaser is already undergoing a mental health assessment, but his lawyers will decide how much of that report to present to the court when arguments for his sentence are made. Esseghaier is self-represented, but a court-appointed lawyer who is assisting him through the legal process argued that a similar assessment ought to be ordered for the Tunisian national because his mental health was "a real issue." "This is all about fairness," said Russell Silverstein. "A psychiatrist appointed by the court would... be able to tell you whether these are all the behavioural manifestations of a religious zealot or whether there is an aspect to Mr. Esseghaier that falls under the Mental Health Act." The request was opposed by Crown prosecutors, who argued that the 32-year-old Esseghaier's extreme religious beliefs didn't warrant a mental health assessment, which would prolong the sentencing phase of the case. "Court should be really loathe to order an intrusive psychiatric assessment," Crown prosecutor Croft Michaelson said. "Your decision should primarily be based on what you yourself have observed." Esseghaier - who refused to participate in his trial because he wanted to be judged under the rules of the Qur'an - said he wouldn't mind talking to doctors because he's always eager to share his religious values. BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Everyone's got an opinion on name for new bridge
How does the Good Luck Bridge sound? Or the Gordie Howe Bridge? How about the Windsor Bridge? Those are some of the suggestions made by residents who were asked by The Star to come up with some names for the new international crossing connecting Windsor and Detroit. Prime Minister Stephen Harper is expected to announce the name Thursday. The Windsor Star, A1

Suspected opium found at Hamilton airport
Border officers working at the John C. Munro Hamilton International Airport uncovered two kilograms of suspected opium hidden in a shipment labelled as shoes. In a release Wednesday, the Canada Border Services Agency called the seizure "significant." The suspected drugs were uncovered April 13 as officers inspecting a courier shipment noticed one of the cardboard boxes was "unusually heavy" and had an "earthy smell," the CBSA said. The suspected opium was found hidden in the pleats of the box. The drugs were turned over to York Regional Police, who have arrested one suspect in connection with the case. Details of that arrest, including whether the suspect is facing charges, were not immediately clear. In a statement, CBSA regional director Goran Vragovic praised the expertise of his officers. "Although our officers at all ports of entry are equipped with the latest technology to help prevent illegal narcotics from getting past us, it's their attention to detail that produces results." The Hamilton Spectator, A2

Immigration fraud preliminary set for July
A preliminary inquiry for a Dartmouth businessman facing 56 charges of immigration fraud will get underway this summer. Hector Mantolino, 52, owner and operator of Mantolino Property Services Ltd., is accused of taking advantage of 28 temporary foreign workers. The hearing against Mantolino is expected to take four days beginning July 3 in Dartmouth provincial court. Canada Border Services Agency alleges that Mantolino paid some cleaners from the Philippines as little as $3.13 an hour and told them to lie about their wages if they wanted to stay in the country. Mantolino is accused of violating the Immigration and Refugee Protection Act from July 2009 to April 2013. The Chronicle-Herald, A7

Civil forfeiture office pays cost of destroying ecstasy
B.C.'s Civil Forfeiture office has provided money for the safe destruction of 1,200 kilograms of chemicals used to make ecstasy, chemicals that were discovered recently inside an international shipping container. Agency executive director Phil Tawtel said it was the first time his office has covered the cost of destroying such precursor chemicals. "These chemicals arrived in B.C. via Port Metro Vancouver and the ship came from China," he said. Inside the container, Canada Border Services Agency workers found almost a tonne of methylamine HCL in 33 kegs and about 200 kilograms of helional in a drum. Tawtel said the chemicals "were identified by the authorities as having no legitimate use beyond creating harmful synthetic street drugs. There was no other reason to have it here." The RCMP requested a $7,000 grant to cover the cost of disposal of the chemicals by a private Lower Mainland company, Tawtel said. Postmedia News (The Vancouver Sun, A10)

10 serious crimes that could get permanent residents kicked out of Canada
Impaired driving causing bodily harm, theft over $5,000, cultivation of marijuana — under a new bill, all of these offences could send a permanent resident back to their home country without a hearing. Under the proposed Removal of Serious Foreign Criminals Act, permanent residents convicted of a serious crime will be ineligible for a record suspension — otherwise known as a pardon. The government will also be allowed to bypass the usual admissibility hearing before issuing a deportation. That means that a convicted person would no longer have an opportunity to have their deportation reviewed. A representative from Canada Border Services Agency said that removing the admissibility hearing for permanent residents "significantly streamlines the current process which means faster removals and cost savings to taxpayers." But the definition of a serious crime is broad — if a permanent resident has been convicted of a crime carrying a maximum penalty of ten years or more or has been given a sentence greater than six months, they could be sent straight home. Our Windsor

Tubes pétroliers vietnamiens: le Canada voit encore rouge
L'Agence des services frontaliers du Canada (ASFC) vient de décider d'ouvrir un réexamen afin de mettre à jour les valeurs normales, les prix à l'exportation à l'égard de certaines fournitures tubulaires pour puits de pétrole (FTPP) en provenance de divers pays, dont Vietnam. Le réexamen a été ouvert dans le cadre de l'application continue par l'ASFC des conclusions rendues le 2 avril 2015 par le Tribunal canadien du commerce extérieur à l'égard de certaines FTPP originaires ou exportées du Vietnam à l'issue d'une enquête concernant des allégations de dumping et subventionnement dommageables. Cette enquête découle d'une plainte déposée par des producteurs canadiens qui allèguent que le dumping et le subventionnement ont causé et menacent de causer un dommage à la branche de production nationale qui produit des marchandises similaires. Vietnam Plus

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

* **CRA phishing expedition suggests agency still vulnerable on security**
A security test by the Canada Revenue Agency found thousands of its employees could not resist the lure of a phony e-mail phishing scam, a discovery that suggests vulnerabilities remain at the agency more than a year after it was rocked by a major online security breach. The Globe and Mail has learned that over the first three months of this year, the agency's security and internal-affairs division sent 16,000 employees an e-mail designed to replicate the potentially dangerous messages that are common to anyone with an e-mail account. A phishing scam usually involves an e-mail that encourages a user to click on a link, which could then expose the user's computer to malicious software. The result of the CRA's test was that 78 per cent of employees did not click on the link contained in phishing attempts. However, that means roughly 3,500 employees did fall for the scam, even though they were informed ahead of time that the test would take place. Globe and Mail, A1

* **Malware attack leads GN to block employees' access to web email**
Government of Nunavut workers will no longer be allowed to access their personal web-based email accounts on government computers after a recent malware attack. Martin Joy, who heads the IT department for the Government of Nunavut, said malicious software or malware attacked one GN

computer this month after the user connected to a free web mail account and downloaded a zip file that had the malware attached. CBC.ca

LAW ENFORCEMENT / APPLICATION DE LA LOI

Un réseau de trafic de stupéfiants mis K.-O.
L'Escouade régionale mixte de la Montérégie croit avoir mis fin aux activités de trafic de stupéfiants lié au crime organisé en démantèlement un réseau de distribution et de vente de drogue en Montérégie et dans les Haute-Laurentides. Une vingtaine de personnes ont été arrêtées. Cocaïne, méthamphétamine, cannabis et près de 200 000 $ ont notamment été saisis. Quelque 200 policiers ont participé hier à la vaste opération antidrogue baptisée Mariolle. Ils ont arrêté 21 personnes, dont la p résumée tête dirigeante du réseau, René Raymond, 54 ans, de L'Ascension. Dix-neuf perquisitions ont été réalisées dans une dizaine de municipalités, dont Chambly, Mascouche, Saint-Hubert, Marieville et Terrebonne. L'enquête initiée par l'Escouade régionale mixte de la Montérégie en mai 2014 découle d'une multitude d'informations colligées par la Régie intermunicipale de police Richelieu St-Laurent au sujet d'un réseau de trafic de stupéfiants dans la région de Chambly, explique l'inspecteur Patrick Bélanger, directeur des enquêtes sur le crime organisé à la Sûreté du Québec. L'investigation des agents leur permet de croire que René Raymond agissait comme indépendant et gérait un réseau de distribution et de trafic de stupéfiants en Montérégie et dans les Hautes-Laurentides. Il aurait, toujours selon l'enquête policière, obtenu l'autorisation du crime criminalisé, soit des Hells Angels, pour avoir l'exclusivité de vente et de la distribution sur un territoire moyennant le paiement de redevances, explique l'inspecteur Bélanger. Les membres du réseau se seraient également livrés à des actes d'intimidation et de violence pour contrôler leur territoire de vente de stupéfiants, indique l'inspecteur. Incendie criminel, coups de feu tirés sur des résidences et des véhicules, agression armée, et même une tentative de meurtre auraient été commis. La Voix de L'Est; * La Presse

Fines test legal grey zone
The town of Granby doesn't often make headlines, other than the occasional story about a jogger being chased by a black bear. That all changed last week, however, when news spread of the town council's unanimous decision to make it illegal to insult police and other municipal officers online - a move applauded and panned across the country. As it turns out, however, Granby isn't the only town to make it an offence to insult the police. Sherbrooke, Shawinigan and Quebec City, for example, have similar bylaws on the books, raising the question of why so many feel it necessary to "protect" the police from verbal abuse, and why now? It's not clear just how often the bylaws are enforced and tested in court, and whether they can apply to online insults as well. In Trois-Rivières, after 2006, officers handed out more than 200 tickets per year for swearing at or insulting them. And in at least one case, in the town of Lévis, near Quebec City, a motorist was fined $150 in 2011 for his online diatribe. Antoine Cloutier-Lachance, a South Shore driver, had posted a comment on the Facebook site of a Lévis police officer: "I just wanted to thank you for the ticket the other day - "criss de trou de q !!!!!!" For towns like Granby and Westmount, where a first offence will now trigger a fine of up to $1,000, it's a question of protecting employees, say politicians. "Unfortunately, as much as there are positive aspects to social networks there are negative ones, too," said Robert Riel, deputy mayor of Granby. Montreal Gazette, A1

Cost of policing for June 4 Moncton shootings is $9M
The cost of extra policing in the aftermath of the June 4, 2014, murder of three RCMP officers in Moncton totals $9 million. Most of that will be covered by the federal and provincial governments. The full explanation of the costs and how they will be paid was publicly presented Wednesday night to members of the Codiac Regional Policing Authority. The Metro Moncton communities will be asked to pay a total of $3.5 million. CRPA financial officer Paul Van Iderstine said the authority (which is cost-shared by Moncton, Riverview and Dieppe) should be able to absorb $2 million of this in its $27.5-million annual budget, or $1 million each year for 2014 and 2015. That leaves $1.5 million for special policing costs that would be cost-shared by Moncton ($1 million), Dieppe ($300,000) and Riverview ($200,000). Van Iderstine said he is now in contact with Ottawa to see if the payments can be staggered over a three-year period. CRPA chairman Nick LeBlanc said he and other members of the board were relieved that the numbers are finally out in public view after many months of negotiations with government and police

officials. Codiac Regional RCMP constables Fabrice Gevaudan, Dave Ross and Douglas Larche were shot and killed on the evening of June 4, 2014, while responding to 911 calls of a suspicious-looking man carrying weapons. Constables Darlene Goguen and Éric Dubois were wounded... The federal government is picking up approximately $1 million under the terms of their policing agreement with the province where they share policing costs. $1.5 million worth of costs are not being billed by other jurisdictions who sent officers to Moncton. This was seen as covered under a mutual aid agreement. Van Iderstine said this agreement would mean that if another jurisdiction had a similar crisis, Codiac would be obliged to send assistance. Van Iderstine said this leaves the $3.5 million for the Codiac Region to absorb. This includes $2 million for the crime investigation and $1.5 million or 50 per cent of the overtime, meal and accommodation costs of those officers who backfilled for Codiac's regular officers when they were on leave after the emergency period. Van Iderstine thanked the RCMP, other police jurisdictions and government officials for their co-operation on what was a long process. Times & Transcript, A1 (Telegraph-Journal, A1); Chronicle Herald

Joggins Terrorized by arson

There remain more questions than answers for residents of the small Cumberland County community of Joggins who have been terrorized by arson. "We're looking for something here. Do you see a prosecution in the future?" Brian Hebert, owner of the former Odd Fellows hall that burned on May 5, asked RCMP Staff Sgt. Al Carroll. Over 200 residents who packed into the Joggins branch of the Royal Canadian Legion for a community meeting Wednesday night about the fires then looked from Hebert toward Carroll. "At the end of the day, I would say yes," said Carroll. "But I can't say when that day is." On the night of May 5, Joggins residents awoke to find their community ablaze. Three unoccupied houses, an old garage and the former Odd Fellows hall had been set on fire. The fire spread to the United Church, which was saved by over 60 firefighters from 10 departments who rushed from all over the county. "With that mass of woodwork upstairs in the church - if it had of caught," Mike Carter, fire service co-ordinator for the Municipality of County of Cumberland, told the meeting. "Well, we had a million dollars worth of trucks in close (to the church) and we would have had to make a retreat and try to save the firehall (across the road)." Chronicle Herald, A1

Mayors want regional crime unit restored

Less than six months after the successful regional crime unit folded, the mayors of Colwood, Langford and View Royal want the province to force its resurrection in response to a crime spike in the West Shore. It wasn't long after the regional crime unit - which targeted prolific offenders - disbanded at the end of 2014 that serious crime in the West Shore started to rise, said Langford Mayor Stew Young. "Everything was going great until the last three to six months, when we saw a spike in violent crimes," Young said. "It's doing so much damage to our community because it's not there." On the heels of a meeting with West Shore RCMP Insp. Larry Chomyn, Young, Colwood Mayor Carol Hamilton and View Royal Mayor David Screech will write a letter to the Justice minister and police services division asking for a meeting about West Shore's police resources and the possibility of bringing back the regional crime unit. Despite high-profile arrests of the region's most prolific property criminals, the unit folded after withdrawals by Victoria police in 2008, and Central Saanich police and Sidney-North Saanich RCMP last year. Young said the unit was disbanded without a discussion by the region's mayors to ask: "How are we going to fill this void?" He said it frustrates him that the Integrated Road Safety Unit thrives because of funding from Insurance Corporation of B.C. and traffic-ticket revenue, but a crucial unit targeting prolific offenders can fold because of money problems. In November, the province introduced amendments to the Police Act that would force municipalities to participate in integrated policing units. The change was in response to recommendations by commissioner Wally Oppal in the Missing Women Inquiry regarding better co-ordination across jurisdictions. Times Colonist, S1 Front

Napanee pair arrested in drug bust

A large quantity of crystal methamphetamine has been seized after a lengthy investigation by the Ontario Provincial Police's Organized Crime Enforcement Bureau-drug Enforcement unit. On Monday evening at approx imately 10:20 p.m., OPP and Port Hope Police Service worked together to conduct a search of vehicles parked in a car pool lot on Toronto road in Port Hope. In the vehicle, officers found 523 grams of crystal methamphetamine with an estimated street value of $52,300, more than $10,000 in Canadian currency, a blue 1992 Ford Mustang and a silver 2007 dodge Caliber. Van Phuc Luu, 38, of Toronto and

Kristopher Jerome, 24, of napanee were arrested and charged by police with one count each of trafficking a controlled substance, possession of property obtained by crime over $5,000, and two counts each of possession of a controlled substance for the purpose of trafficking. The two men remain in custody awaiting a bail hearing. The investigation continued in napanee, and, as a result, Jerome's sister, Stephanie Jerome, 26, of napanee was also arrested and charged by police. during the search, the OPP executed a search warrant at an Ann Street residence on Tuesday at approximately 1:50 a.m. Officers seized 26 grams of crystal methamphetamine, steroids and more than $10,000 in Canadian currency. Kingston Whig Standard

Investigation that jeopardizes safety
An editorial states, "Try posing as a police officer and see what happens. But apparently the other way around, cops posing as members of the media, for example, they consider fair game. Provincial police in Ontario say it's a practice they rarely use. But three media organizations, CBC, Canadian Journalists for Free Expression, and RTDNA Canada, have applied to Ontario's Superior Court to have impersonation of journalists by the police force declared a charter violation that can't be justified. A lawyer representing the media organizations claimed the method was not limited to the Ontario Provincial Police. Consider the concerns. From the point of view of the media, knowledge that such a practice exists can put genuine journalists under suspicion - and at risk. Another point is that it compromises their position, possibly making it harder to get information in certain instances... It's been successful. But it's also been criticized because of the chance that the person under investigation might embellish his or her desperate acts to impress the "gang boss." It's fair to say the public wants to see the police have the means they need to carry out successful investigations, to help keep the public safe. But let's keep in mind any investigation that resembles a fishing expedition carries a high degree of speculation - results could be questionable. But the big concern here is investigations that could jeopardize the safety of another group represents an ethical dilemma that should not be a police tool." Cape Breton Post

Trace pen on mark for valuables
Residents now have a new way to mark their possessions in case they are stolen, thanks to a Canadian-made product. Endorsed by the Ontario Association of Chiefs of Police, the Trace pen and program marks personal belongings so they can be identified by police or a pawn shop. Const. Greg Harbec, community programs officer with the Kingston Police's Community-Oriented Response and Enforcement Unit, said the pen, which retails for $39.99 online, can invisibly mark roughly 50 items. "It's cheap insurance to identify a very valuable piece of jewelry, for example, that doesn't have an identifiable mark," Harbec said. "So for a dollar, maybe a $5,000 ring can be identified and returned." Purchasers of the Trace pen register each item online at trace identified.com.If a marked item is stolen, the owner can change the item status to stolen. The same goes if the item is sold. Police and pawn shops can check for a Trace marking using a black light. "(Pawn shops) don't want to deal with stolen property, and they work with police," Harbec said. "They are reputable businesses, so they have a lot to lose." Harbec said vehicle companies have had similar technology for a number of years. He said there are similar products around the world, but Trace is unique to Canada and Ontario, and Kingston Police don't have access to other databases. Kingston Whig Standard, A6

Un réseau de trafiquants violents démantelé en banlieue de Montréal
Un réseau de trafiquants de stupéfiants qui n'hésitait pas à utiliser la **violence** pour éliminer la concurrence et faire respecter son territoire de vente a été mis hors d'état de nuire, hier, dans la grande région de Montréal. Pas moins de 200 policiers ont participé à la vaste opération, qui s'est soldée par l'arrestation de 21 personnes, dont la présumée tête dirigeante de l'organisation criminelle. Selon les autorités, le réseau était principalement actif en Montérégie et au nord de Montréal. L'enquête a également permis d'établir que le chef présumé de l'organisation, René Raymond, 54 ans, payait des dividendes aux Hells Angels afin de pouvoir exercer librement le trafic de stupéfiants sur le territoire. Journal de Montreal, 16

B.C. government wants better electronic method to monitor high-risk offenders
The B.C. government is looking for a new electronic monitoring system that will allow it to keep tabs on high-risk offenders, with the Justice Minister acknowledging the current system is "out of date." The issue came to the fore last September after the killing of 17year-old Serena Vermeersch in Surrey. The man

charged in her death, Raymond Caissie, was a high-risk offender who was not being monitored electronically. The province's monitoring system was revealed as archaic, requiring the use of a home telephone line. Jurisdictions such as Edmonton and Calgary use systems that rely on GPS instead. B.C. Justice Minister Suzanne Anton told a house committee this week that the government will be issuing a request for proposals for a new electronic monitoring system by the end of the month. Though she has defended the current system - and at times continued to do so at the committee meeting - she said the new system will be required to have a GPS component... In an interview Wednesday, Surrey Mayor Linda Hepner said she looks forward to the new system being implemented. "Any system that will allow the tracking of high-risk offenders through GPS is a good thing, in my opinion," she said. Spokesmen with both the RCMP and the Vancouver Police Department declined comment on the new system and referred inquiries to correctional officials. Globe and Mail, S1

Police probe shooting
B.C.'s Independent Investigations Office is investigating after a man was shot by a Mountie in Burnaby. The incident happened at about 1:45 a.m. Wednesday, said Kellie Kilpatrick of the investigations office. RCMP said officers were responding to a call about an intruder at a home who possibly had a knife. When they arrived, they were confronted by a man who would not comply with directions and an officer shot him, police said. The man was taken to hospital with what police said appeared to be non-life-threatening injuries. No other injuries were reported. Police said the investigations office seized a knife from the scene. Postmedia News (Vancouver Sun, A4); Canadian Press (Times Colonist, The Province)

*** Recours judiciaire possible contre la GRC**
La GRC a caché et détruit des renseignements relatifs au registre des armes d'épaule qui étaient réclamés en vertu de la Loi sur l'accès à l'information et un recours judiciaire pourrait être intenté contre le corps policier, conclut la commissaire à l'information du Canada, Suzanne Legault, dans un rapport d'enquête obtenu par La Presse. Ces conclusions pourraient d'ailleurs expliquer des amendements législatifs surprenants inclus dans le projet de loi omnibus de mise en oeuvre du budget, C-59, déposé au Parlement la semaine dernière. Ces amendements prévoient que le registre des armes d'épaule et tout fichier affilié ne seront plus accessibles par l'entremise d'une demande d'accès à l'information, et ce, de manière rétroactive au 25 octobre 2011. Le projet de loi C-59 prévoit également une immunité pour des agents de l'État pour tout acte posé durant cette période relativement à des demandes d'accès à l'information concernant le registre. Au cours des derniers jours, plusieurs personnes se sont questionnées ouvertement sur la raison de ces changements, que certains ont décrits comme une tentative du gouvernement Harper de réécrire l'histoire. La Presse, A14

*** Hells Angels, 'puppet' bikers roll into Langford**
Between 100 and 150 motorcyclists from the Hells Angels and other clubs rolled into Langford on May 2 for the opening of Greater Victoria's first biker clubhouse. The bikers were greeted with a heavy police presence, including West Shore RCMP, the Integrated Road Safety Unit, and regional, provincial and federal units dedicated to outlaw motorcycle gangs. The clubhouse is believed to belong to the Devils Army. According to the Combined Forces Special Enforcement Unit, B.C.'s anti-gang unit, the group is a Hells Angels "puppet club." RCMP Staff Sgt. Andrew Isles of the Island District management team said the opening of the new clubhouse is significant. "We're always interested in who is in our communities as far as outlaw motorcycle gangs go," Isles said. "There are some new faces here we're seeing, and we're also taking stock of who's here and who's invited." RCMP escorted about 90 bikers to Langford from Campbell River, Nanaimo and the Lower Mainland. Several traffic violation tickets were issued. Aside from the opening of the clubhouse, the bikers were also gathering for the Zeke Run. The spring ride is held in memory of Edward (Zeke) Mickle, a Nanaimo Hells Angels member who hasn't been seen since May 1993. Times Colonist, S4

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Top court to decide whether Khadr a youth or adult
The case of former Guantanamo Bay prisoner Omar Khadr returns to Canada's top court for a third time on Thursday, as the federal government fights to have him declared an adult offender for crimes he

committed as a 15-year-old. The dispute centres on whether the eight-year sentence a U.S. military commission handed him for war crimes should be interpreted as a youth or adult sentence. However, the arcane technical legal battle has taken on loud political overtones. "This case is another illustration of the heavyhanded approach Canada has consistently taken towards him," said Gillian Hnatiw, who represents the Canadian Civil Liberties Association, which is intervening in the case. Khadr, 28, was released on bail last week after almost 13 years in custody while he appeals his U.S. conviction, which has drawn fierce criticism from legal and human rights experts. Although he was 15 when his crimes occurred in Afghanistan in July 2002, the military commission made no distinction between juveniles and adults in sentencing him in 2010 to a further eight years behind bars. (...)No provisions exist for an inmate to serve both youth and adult sentences at the same time, so Ottawa classified him as an adult offender when he transferred to Canada from Guantanamo Bay in September 2012 under an international treaty to serve out his punishment. Canadian Press (Red Deer Advocate, Waterloo Region Record, Edmonton Journal, Hamilton Spectator, Telegraph-Journal, Times & Transcript, Brandon Sun), * Presse canadienne (Le Soleil, Radio-Canada)

Commitment hardly foggy
A letter to the editor states, "Re: Fog surrounds Omar Khadr case, Christie Blatchford column, May 12 Ms. Blatchford, if you find the Khadr case foggy, my suggestion is that you turn off the fog machine on which you are clearly seated. The Khadr case is foggy in the same way the case for climate change is in question. The Khadr case is indeed foggy if you persist in pretending that Guantanamo Bay military commissions are real courts and look to pleas made there to find truth. This is a position that the American government and judiciary abandoned long ago but with which our government (and Blatchford) persists. The case is foggy if you quote discredited prosecution psychiatrist Michael Welner's Islamophobic conclusions and ignore the long list of other mental health professionals who have unanimously concluded Omar Khadr does not pose a threat." Edmonton Journal, A18, Toronto Star, * Vancouver Sun, * Windsor Star, * Winnipeg Free Press

*** Khadr no victim**
A letter to the editor states, "I only have two words concerning Omar Khadr ... Convicted murderer!" Calgary Sun, Kingston Whig-Standard

*** What Khadr needs most in his new lease on life**
An opinion piece states, "With his release last week, Omar Khadr, who for so long was a distant embodiment of a heated international justice issue, has now entered our hearts and minds as a flesh and blood young man. After I saw him, I couldn't get him out of my mind. Standing with his lawyer and now host/guardian Dennis Edney, Khadr managed to sound genuine, gracious and even optimistic as he told a press conference he wanted to prove "I'm better than the person he (Stephen Harper) thinks I am." Well, we all want Khadr to be a better person than our vengeful Prime Minister thinks he is. The question is how to help him get there. Much to the displeasure of the Harper government, Khadr, freed by a judge, walked out from an Alberta jail after 12 years a prisoner, many of those years spent being tortured and held without due process at the notorious American prison at Guantanamo Bay. His government-our government-was, to its shame, the only Western nation not to call for the release of a detainee. He is appealing the verdict, claiming he pled guilty under pressure - but whatever the outcome of that appeal, he has already served his time, time that as a minor, he probably should never have served in the first place." Toronto Star

Man arrested on drug charge
A Sydney man has been remanded after he was arrested on a drug charge Wednesday. Police arrested Francis (Frank) John Abbass, 63, of Howe Street on Wednesday afternoon at the intersection of George Street and Brookland Street. He is charged with possession for the purpose to traffic in marijuana and was remanded to the Cape Breton Correctional Centre. Abbass, who was on parole regarding previous drug charges, also had his parole revoked by Correctional Services Canada. He is awaiting a future court date. Cape Breton Post, A3

Court confirms Surrey child molester's dangerous offender designation

A Surrey man who snuck into a young girl's home in the dead of night and molested her in her bedroom has lost an appeal of his dangerous offender classification. That means his sentence has no expiry date. Kyle Wayne Berkson, 40, was sentenced in 2013 in Surrey provincial court. His nine-year-old victim was sexually assaulted in her bedroom while her grandparents slept in the next room. (...)He was designated a dangerous offender in 2013. He appealed that, and lost. The appeal was heard in B.C. Court of Appeal in Vancouver. Vancouver Sun; * The Province

* **Le Canada fait bande à part**
Un article d'opinion déclare, « C'est quand même incroyable. Alors que le gouvernement Harper ne cesse de durcir ses politiques pénales, les États-Unis, pourtant les grands champions du genre, commencent à se rendre compte que les peines de prison trop longues sont contre-productives. (...)A court terme, le Canada risque de devenir, avec les dictatures du tiers-monde, le seul pays au monde à enfermer ses criminels pour la vie sans possibilité de libération conditionnelle. L'Europe avait déjà un système pénal beaucoup plus libéral - avec des peines plus courtes et sujettes à révision périodique. Si les États-Unis remettent en question la philosophie de la répression extrême, le Canada sera bientôt aussi isolé, sur cette question, que sur les enjeux climatiques. » La Presse, A25

* **Son frère lui avait fait vivre l'enfer**
L'un des frères de Chantal Demers, dont le corps a été retrouvé lundi à Saint-Raymond de Portneuf, a fait vivre l'enfer à sa soeur à l'automne 2011. Jean-Marc Demers, qui a été accusé de tentative de meurtre à l'endroit de Mme Demers, a finalement plaidé coupable à une accusation réduite de voies de fait graves en 2012. (...)Après un procès plutôt médiatisé en 2012, Jean-Marc Demers a été condamné à cinq ans de prison et le juge lui a notamment interdit de posséder une arme. Selon nos informations, il est toujours derrière les barreaux dans un pénitencier de la région de Montréal. Le Soleil (Le Nouvelliste, 9)

* **Gladue report ordered for Richard Wolfe**
A Gladue report has been ordered to look into what elements of Richard Daniel Wolfe's First Nations background might have helped contribute to his history of offending. Wolfe is awaiting sentencing on charges to which he pleaded guilty in March: Sexual assault and assault with a weapon, both of which sprang from an incident that took place in Fort Qu'Appelle on April 6, 2014. (...)The offences for which he is now awaiting sentencing arose while he was out on statutory release. A Canadawide warrant was issued (Wolfe eventually turned himself in) after he sexually assaulted a woman and beat her boyfriend with a baseball bat. Leader-Post, A7 (StarPhoenix)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Televised taunting speaks to pervasive 'rape culture'
The confrontation between a television reporter and her on-air tormentors is shining a light on the dark "rape culture" pervasive in today's society, experts say. But it will take much work to eradicate these deeply rooted misogynist beliefs. "Sexual violence against women in our world is normalized and it's excused in the media and pop culture," said Joan Tuchlinsky, public education manager for the Sexual Assault Support Centre of Waterloo Region. "When we're dealing with rape culture, it's going to take a long time to address it." On Sunday, CityNews reporter Shauna Hunt challenged several men at a Toronto FC game after sexually explicit taunts were hurled at her while she was working on-camera. It's an example of a disturbing trend that has seen the same vulgar phrase, "F--- her right in the p----," being shouted at reporters worldwide over the past 18 months. The abusers are almost always men. Their victims are almost always women. Waterloo Region Record, A1; * Globe and Mail, * Winnipeg Free Press

* **Shifting focus to women's safety**
The White Ribbon campaign is in talks with Maple Leaf Sports and Entertainment about working together to come up with strategies to make sports venues "a safe place" for working media. Officials from the campaign -- led by men dedicated to ending violence against women -- approached MLSE Tuesday morning as news spread about CityNews reporter Shauna Hunt confronting a group of male soccer fans

she said conspired to interrupt her newscast by saying "f---her right in the p----" outside BMO Field Sunday after a Toronto FC game. "Our immediate concern was they wanted to get some measures in place to make sure the stadium is a safe place for reporters," White Ribbon executive director Todd Minerson said on Wednesday. "We talked about long-term change and issues and both of us decided, 'Let's let this settle for a couple days and come and have a conversation in the next week.'" Toronto Sun, 4 (Ottawa Sun)

Justice conference explores solutions
It's easy to point a finger at the problem, and quite another to conjure up solutions to said problem. In a nutshell, this is what the three-day, Innovative Strategies in Criminal Justice: From Policy to Practice conference is all about. "All the conferences we go to on criminal justice the conversation centres around 'the plight of,' it's the plight of poor aboriginals in the criminal justice system, poor homeless, poor mentality ill -- everybody is getting screwed by the criminal justice system," said Chris Hay, executive director of the John Howard Society of Alberta, and conference organizing committee member. In total, 33 speakers, including five keynote speakers from around the world, signed on for the conference held at MacEwan University's Robbins Health Learning Centre, from May 12-14. Edmonton Sun, 17

* **Anti-racism activists seek proof of carding's impact**
A group of Toronto professionals and academics who belong to the Anti-Black Racism Network are joining a growing chorus of activists calling for an end to police carding. And the group is searching for answers as to why, in an information age, police have the technology to gather the data but don't have the statistics to defend it. "We have yet to be provided evidence that carding impacts crime in any shape or fashion," Rinaldo Walcott, an associate professor at U of T, said at a press conference Wednesday. "We have yet to be provided evidence that the database developed from carding impacts crime and its resolution in any way or shape. "We find this totally unacceptable in the age of information," Walcott said. "We believe that by ignoring available evidence, that the mayor, the Toronto Police Service and its board have clearly declared black communities collectively a public safety threat. Toronto Star, GT1

PUBLIC SERVICE / FONCTION PUBLIQUE

Clement pressures unions for sick leave deal by fall
Treasury Board president Tony Clement has further turned up the pressure on federal unions by saying he wants to reach a deal on a new sick-leave regime before the election. In an interview, Clement said he is open to further negotiations with the 18 federal unions on his contentious plan to revamp sick leave and disability management, but wants agreement by this fall. Federal election day is Oct. 19. He didn't clarify how long he was willing to continue those negotiations in the run-up to polling day. Whether negotiations fail, hit an impasse or proceed too slowly for his liking, the government is giving itself the power to impose the terms and conditions of a new sickleave regime whenever it wants. The government has been tightening the circle around unions in recent weeks after nearly a year of collective bargaining that has unfolded at a snail's pace. The big issue is accumulated sick leave, which the government wants to replace with a new short-term disability plan. The 18 unions dug in their heels from the start, signed a solidarity pact and refused to make any concessions on sick leave. They claim they're willing to fix any problems or abuses but won't budge on the existing accumulated sick-leave regime that their members want. Ottawa Citizen, A1

MINISTER / MINISTRE

*** Listen up, Canada: You can't advocate free speech and criminalize dissent at the same time**
While Canadian Prime Minister Stephen Harper appears to be auditioning for a lead role in a political bromance with Benjamin Netanyahu in some epic right-wing production, he may well have overplayed his part with his latest move. As the Canadian Senate debates Bill C-51, the Conservative government's "anti-terror" bill that would give Canada's spy agency sweeping new powers and has alarmed civil libertarians, environmentalists, First Nations activists and Muslim Canadians, another frightening aspect of the Harper government's agenda has been revealed. Following the lead of Israel, where a law criminalizing participation or encouragement of BDS was recently upheld by the High Court of Justice, in a majority ruling equating boycotts with "political terror," the Canadian Conservatives are now conflating the advocacy of the boycott, divestment and sanctions campaign with hate speech. [...] But it was Canadian **Public Safety Minister Steven Blaney** who made the link explicit. In a speech at the United Nations a few days after the memorandum was signed, Canada's CBC News reported, **Blaney** linked BDS with anti-Semitic hate speech and even the attack on Charlie Hebdo – which the Conservatives claimed was an attack against free speech. The Canadian government, added **Blaney**, now has "***zero tolerance***" for BDS. Haaretz.com

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** 'Hectic' start to fire season**

Alberta's wildfire season is only three months in and already it has consumed significantly more forest than last year. So far this season there have been 720 wildfires in the province, burning just under 30,000 hectares of forest, compared to 400 fires at this time last year, which burnt about 700 hectares. All evacuation orders related to wildfires raging in Alberta were lifted as of Wednesday afternoon, but 15 wildfires are still burning out of control, including one that has been creeping toward oil and gas infrastructure near Cold Lake, Scott Long from the Alberta Emergency Management Agency told a news conference. Cenovus and CNRL both have operations in the area. As of Wednesday morning, about 250 firefighters and 10 helicopters were fighting the blaze, which is still considered out of control and is expected to keep growing in the days ahead. At least some of 150 extra firefighters coming to Alberta from other provinces are expected to be deployed to the Cold Lake fire. Edmonton Journal, A1

* **Evacuees returning as fires ease**
Thousands of Albertans are returning home as evacuations have been lifted and wildfires brought under control. A 208-hectare fire near Wabasca has been held by perimeter guards and evacuees have been told it is safe to return while 61 firefighters continue battling the blaze. Residents have been advised to listen closely to emergency notifications and be prepared to leave in case the threat returns. Evacuees are also returning to the Mortonville area, near Slave Lake, where 27 firefighters continue to battle a 138-hectare fire. Close to 5,000 people were evacuated due to wildfire threats Sunday and Monday. Calgary Sun, 24; Canadian Press (Times Colonist, Red Deer Advocate)

* **Alberta fires encroaching deeper into the oilsands**
Wildfires in northern Alberta spread farther into the oilsands area Wednesday, keeping about 10 per cent of production offline and pushing Canadian crude prices higher. A fire at Cold Lake Air Weapons Range that started Saturday expanded to cover 17,500 hectares as fire crews worked to prevent the blaze from reaching Cenovus Energy Inc.'s Foster Creek oilsands facilities, Alberta's Environment and Sustainable Resource Development agency said on its website. Another fire near the town of Chard grew to 1,400 hectares and burned in an area with "numerous pipelines and well sites." National Post, FP4

* **Hurricane season likely to be less active, says meteorologist**
There may be fewer storms forming off of Canada's East coast this year, Environment Canada meteorologist Bob Robichaud said during a press event held by Environment Canada today. This does not mean the season will necessarily be less severe, Robichaud said. "Regardless of the number of storms that are forecast, people need to prepare. Even if it's a forecast of a below average season, it only takes one storm to make it a bad season." Robichaud said there will likely be six to eleven storms this season, with up to two developing into hurricanes. Last year there were eight to thirteen storms predicted, four of which made landfall and two reaching hurricane status - hurricanes Arthur and Gonzalo. Times & Transcript, A9; Canadian Press (Cape Breton Post); Chronicle-Herald

* **New Brunswick crew off to Alberta to fight wildfires**
New Brunswick is going to help fight wildfires burning out of control in Alberta. Roger Collet, a provincial fire prevention officer with the Department of Natural Resources, said 21 firefighters are leaving on a flight to Alberta on Thursday. He said the department received a call from officials in Alberta on Tuesday requesting help. Daily Gleaner, B1

* **Fire conditions 'slowed to a steady roar'**
Hot, dry and windy weather persists throughout the province, allowing 19 fires to continue burning throughout Saskatchewan as of Wednesday. Wildfire hazards are still classified as high to extreme across Saskatchewan, provincial fire centre manager Scott Wasylenchuk said. Nine new fires were reported between Tuesday and Wednesday morning, and five are believed to be human-caused, he said. Wasylenchuk said conditions have "slowed to a steady roar," adding crews are making good progress. StarPhoenix, A4

* **West Country on high alert**
The West Country's wildfire hazard has been a good news/bad news scenario this week. Cooler temperatures, higher humidity and some rain took some of the edge off the fire hazard. However, the

unsettled weather came with lightning, which sparked seven wildfires by Tuesday night. Red Deer Advocate, C1

*** Crews foil fire in Emerald Lake area**
It was all hands on deck Tuesday evening for a small bush fire near Emerald Lake caused by a tree falling on a power line running along the highway. Firefighters from Yukon Wildland Fire Management and the volunteer fire departments of Carcross and Mount Lorne responded, along with two helicopters dispatched from Whitehorse to provide aerial support with water buckets. Located 1.5 kilometres north of Emerald Lake, the fire was contained at 0.3 of a hectare. Whitehorse Daily Star, 4

*** Little progress made on preventing wildfires: report**
B.C. hasn't made much progress in recent years on preventing catastrophic wildfires close to homes and businesses, according to a report. In 2010, the Forest Practices Board called on the B.C. and municipal governments to support efforts to remove fuel such as prescribed burns, regular tree pruning and brush removal. A followup report from the board, released Wednesday, suggests little meaningful work has been done since then. Vancouver Sun, A9

*** Derailments involving hazardous cargo raise concerns**
Trains carrying a range of cargo, including hazardous goods such as petroleum products and chemicals, derailed 124 times last year in B.C., according to federal transportation safety board summary reports based on tougher reporting criteria. Derailments involved as many as 24 cars and almost 200 metres of damaged track and occurred for reasons such as collisions with motor vehicles, spillage of coal on the tracks, broken rails or train axles, rail cars moved onto unaligned switches, unwanted emergency brakes, buildup of ice and snow, and rock slides. Some of those derailments involved relatively harmless commodities such as barley, grain, lumber, aluminum and shale, while others have the potential to cause serious human and environmental harm: hydrochloric acid, sodium chlorate, sodium hydroxide, ethanol, crude oil, glycol and diesel fuel. The 124 B.C. train derailments in 2014 compares with 110 in 2013 and a five-year average. Vancouver Sun, A5

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Le projet de loi C-51 approuvé
Le comité sénatorial qui a fait l'examen du projet de loi antiterroriste 2015 au cours des dernières semaines a approuvé le document, mais il soumet des observations au gouvernement pour considération. Le Comité permanent de la sécurité nationale et de la défense a déposé son rapport au Sénat hier. Il recommande, entre autres, de prolonger de 1 à 5 ans la période pour le dépôt d'accusations pour des infractions qui auraient été commises aux termes de la Loi sur la sûreté des déplacements aériens. Le comité propose aussi d'ajouter des photos dans un registre des personnes soupçonnées de menacer la sûreté des transports, ou qui prévoient se déplacer en avion dans le but de commettre un acte terroriste. Journal de Québec, 29

Police played on woman's obedience to pull her into terror plot
A Crown prosecutor says a husband-and-wife duo facing terrorism-related charges is "undeniably, undoubtedly and undisputedly" guilty of scheming to blow up the provincial legislature. However, defence lawyers are adamant that the couple's plot would have had no chance of success had undercover police not propelled it along. A B.C. Supreme Court jury heard closing submissions on Wednesday, which recapped nearly four months of evidence - including more than 100 hours of video and audio surveillance - presented in the trial of accused terrorists John Nuttall and Amanda Korody. They're accused of plotting to detonate homemade pressure-cooker bombs on the crowded front lawn of the B.C. legislature lawn during Canada Day festivities two years ago. They were arrested on July 1, 2013, following an elaborate RCMP sting operation and have each pleaded not guilty. In his address to the jury, Korody's lawyer Mark Jette described his client as the perfect, submissive, Muslim wife who lived an isolated life marred by poverty and drug addiction. He said she became the victim of a controlling husband and an overeager RCMP operation intent on "pulling her into their orbit." Jette asked the jury to question the likelihood that Nuttall and Korody would have been able to accomplish their alleged plot without the support and

guidance of the police. He criticized the operation's primary undercover officer as playing a heavy-handed role in guiding the accused. Red Deer Advocate, A5; The Telegram (Whitehorse Daily Star); Times Colonist

Accused: Targets or terrorists?
Whether the RCMP manipulated a Surrey couple into participating in a plot to turn 2013 Canada Day celebrations into a massacre is irrelevant, the prosecution insists. In B.C. Supreme Court Wednesday, Crown attorney Peter Eccles maintained in his final address that police conduct in the 240-officer sting didn't matter. "They blame the police - 'the police manipulated us into doing it, it wasn't us,' " Eccles mocked. "Entrapment - no, entrapment actually is not a defence that is available here ..." At that point, however, Justice Catherine Bruce interjected: "I have to interrupt you. The jury do not have to concern themselves with any issue regarding entrapment. It's not something that should concern (the jury)." Obviously irked, she said sharply that jurors should also ignore everything Eccles had said about whether the accused were acting under "duress." John Nuttall, 40, and his common-law wife Amanda Korody, 31, have pleaded not guilty to terrorism-related charges in connection with the alleged plan. Their lawyers painted a picture of poor, addicted, recent converts to Islam living on welfare - vulnerable, needy and posing little threat until the RCMP targeted them in the elaborate ruse. Eccles, however, reiterated that jurors have heard and seen everything that mattered during some 100 hours of surveillance footage and wiretaps played during the four-month trial. Vancouver Sun, A6; The Province; Globe and Mail

Military show draws peaceful crowd
The face of war has changed over the past 15 years, but its nature hasn't, say critics of the Cansec military weapons show in Ottawa. "It's the poor of the world that are always the victims of the wars these guys get rich on. That hasn't changed at all," said Matthew Behrens, co-ordinator of Homes Not Bombs, a group of peace activists who held a 10-hour protest in front of the EY Centre Wednesday. Terrorism would be less a threat if the United States and allies like Canada didn't impose military solutions to world problems so frequently, Behrens said. The al-Qaida and Islamic State terrorism launched in recent years against democracies, including Canada, is a backlash against them. If the west were less aggressive, terrorism would wane and there would be no need for a weapons show, Behrens said. This year's Cansec -- billed as Canada's premier defence trade show -- is the first since the ISIS-inspired shooting by Michael Zehaf-Bibeau, the gunman who opened fire at the National War Memorial and Parliament last October and since the discovery of alleged homegrown terrorists who wanted to join ISIS. "As long as you have an ISIS, Cansec will be successful," Behrens said. Canadians think of themselves as peaceful, but Cansec is a reminder Canada is a major manufacturer and exporter of weapons, said protester Richard Sanders. Because the Canadian government subsidies weapons-makers, its people and its government contribute to the misery wars create, Sanders said. Ottawa Sun, 10

We can dismantle the surveillance state. Here's how.
Just two short years ago, if you asked strangers on the street about mass surveillance, you'd likely encounter many blank stares. Some would remember East Germany's Stasi spy agency, or reference China's extensive Internet censorship. But few would express fear that western democratic governments like the U.S., Britain, and Canada were engaged in the mass surveillance of law-abiding citizens. That all changed in June 2013 when Edward Snowden, a contractor at the U.S. National Security Agency (NSA), blew the whistle on the spying activities of the NSA and its Five Eyes partners in Canada, Australia, New Zealand and the U.K. Since then, we've seen a long stream of revelations about how Canada's Communications Security Establishment (CSE) is engaged in extensive spying on private online activities. We learned that CSE spied on law-abiding Canadians using the free Wi-Fi at Pearson airport, and monitored their movements for weeks afterward. We learned that CSE is monitoring an astonishing 15 million file downloads a day, with Canadian Internet addresses among the targets. Even emails Canadians send to the government or their local MP are monitored - up to 400,000 a day, according to CBC News. Just last week we discovered CSE targets widely-used mobile web browsers and app stores. Many of these activities are authorized not by a judge, but by secret ministerial directives like the ones Peter MacKay signed in 2011. Ipolitics.ca

Teen accused of trying to join ISIL denied bail

An Alberta teen charged with planning to leave Canada and join the terrorist group Islamic State, or ISIL, was denied bail Wednesday. The 17-year-old was attentive as he listened to Judge Danielle Dalton's reasons for keeping him in custody. Those reasons, and the evidence presented at the hearing, are under a court-ordered publication ban. The teenager's bail hearing lasted most of last Friday, when he made his first in-court appearance since his arrest in Beaumont in March. Before then, he appeared only by closed-circuit television. It was the second time the teen has been denied bail. The first denial came from a justice of the peace shortly after his arrest. The youth, who cannot be identified, faces two terrorism-related charges after his arrest by the RCMP's Integrated National Security Enforcement Team. He is charged with attempting to leave Canada to join a terrorist group and, on the second charge, to participate in terrorist activity. Once outside the country, the youth intended to commit an offence, "namely murder, in circumstances that constitute terrorist activity," the charges state. The youth returns to court June 17. Edmonton Journal, A2; Edmonton Sun

Le PQ et la CAQ réclament des actions
Le Parti québécois et la Coalition avenir Québec (CAQ) ont demandé hier au gouvernement Couillard d'agir contre le Centre culturel islamique de l'est de Montréal et son dirigeant Adil Charkaoui, dans la foulée du témoignage du père d'une jeune fille arrêtée par la GRC de crainte qu'elle n'aille rejoindre des groupes djihadistes à l'étranger avec des amis. La Presse et le Toronto Star ont publié ce matin une entrevue avec le père de la jeune fille, qui accuse Adil Charkaoui et son centre islamique d'avoir radicalisé son enfant et de l'avoir convertie à une interprétation extrémiste de la religion. Lors de la période des questions à l'Assemblée nationale, la députée caquiste Nathalie Roy a demandé une réaction au «cri du coeur» de l'homme. «Ce que nous dit ce père de famille, c'est le gros bon sens que tous les Québécois voient. Ce père accuse ceux qui endoctrinent les jeunes. Ils ont tous fréquenté le même centre communautaire islamique où oeuvre Adil Charkaoui, et ce n'est pas le fait du hasard [...] Le gouvernement doit agir contre ces agents de radicalisation», a-t-elle lancé. «Qu'est-ce que le gouvernement attend pour agir dans le cas du Centre culturel islamique de l'Est de Montréal et d'Adil Charkaoui? Quand est-ce qu'on va faire de la prévention au Québec?», a demandé de son côté la députée péquiste Agnès Maltais. La Presse, A6 (Le Soleil)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Driver jailed in fatal collision
Audrey Goertzen says she and her five children can now move on with their lives after the man who drove through a rural stop sign and killed her husband Cory more than two years ago has been jailed and slated to be deported back to his native Nigeria. (…) Crown prosecutor Cameron Jose had argued for a three-to five-year sentence. Defence lawyer George Sirois sought a sentence of 90 days, but no more than six months, so his client could appeal any deportation order. Postmedia News (Calgary Herald, A14, Calgary Sun)

Woman who advised au pairs to lie to guards deserves jail
Prosecutors are seeking two years in jail for a Fraser Valley woman who counselled more than 100 foreign au pairs to lie to border guards about their reason for coming to Canada. (…) The Canada Border Services Agency began investigating in 2008, after officers intercepted a young woman coming from France. (…) On Oct. 12, 2010, Canada Border Services Agency officials executed a search warrant at Large's home in Chilliwack. Postmedia News (Province, A19, Times Colonist)

OPP to announce results of gun-trafficking probe
Ontario Provincial Police were expected to announce multiple arrests Thursday morning as a six-month long project targeting gun traffickers comes to an end. Project Harden culminated Wednesday with several search warrants being executed in Ottawa, Cornwall and the Montreal area. (…) The project, which attempted to disrupt a gun-trafficking route from Cornwall to Ottawa, was a joint effort headed by the OPP's organized crime and provincial weapons units and also involved Ottawa police, Cornwall police, Canada Border Services Agency, RCMP and Akwesasne police. Postmedia News (Ottawa Citizen, Standard Freeholder) (2015-05-27)

Newport lance les travaux d'expansion de son aéroport
Pendant que Sherbrooke attend toujours un mécanisme qui lui permettrait d'effectuer des contrôles de sécurité dans son aéroport, la Ville de Newport au Vermont a lancé les travaux d'expansion de son aéroport situé à Coventry. (…) M. Lachance rappelle que Sherbrooke dispose déjà de la présence de douaniers à son aéroport et que le seul point qui achoppe est celui d'offrir des services de sécurité reconnus. Selon lui, les échos laissant croire à une annonce imminente concernant la sécurité dans les aéroports non désignés sont de plus en plus persistants. Sans avoir eu de confirmation, il s'attend effectivement à une annonce avant la fin de la session parlementaire. Tribune, 5

L'aéroport international de... Mont-Joli?
Voyager vers Londres, Paris ou New York à partir de Mont-Joli? C'est le souhait de la candidate à l'investiture du Bloc québécois dans Avignon-La Mitis-Matane-Matapédia, Kédina Fleury-Samson, qui ambitionne d'internationaliser le petit aéroport du Bas-Saint-Laurent. (…) Malgré qu'un projet d'allongement de la piste à 6 000 pieds (1 829 mètres) soit toujours envisagé, ce qui permettrait des départs vers des destinations soleils à partir de Mont-Joli, les avions devraient obligatoirement passer par d'autres aéroports puisque celui du Bas-Saint-Laurent n'offrent pas de véritables services douaniers internationaux, sans compter les dizaines de millions de dollars qu'il faudrait investir dans une telle aventure. Agence QMI (Journal de Québec, Journal de Montréal) (2015-05-27)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

* **U.S. orders probe into IRS security breach**
U.S Congress is demanding answers about how identity thieves were able to steal the personal tax information of more than 100,000 taxpayers from an Internal Revenue Service (IRS) website. Senate Finance Committee Chairman Orrin Hatch has requested a confidential briefing by IRS officials by the end of next week. "It is critical that this committee fully understand what took place, what information was at risk, how this may affect tax administration, and what appropriate legislative responses may be needed to reduce the risk of this occurring again," Hatch said Wednesday in a letter to IRS Commissioner John Koskinen. The information was stolen as part of a sophisticated scheme to claim fraudulent tax refunds, Koskinen told reporters. It was taken from an online system called "Get Transcript," where taxpayers can get tax returns and other tax filings from previous years. In order to access the information, the thieves cleared a security screen that required knowledge about the taxpayer, including Social Security number, date of birth, tax filing status and street address. Associated Press (Toronto Star, B4)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Toronto police halt controversial mental health disclosures
It may have been a suicide attempt from decades ago, or perhaps a mental health crisis that prompted a 911 call. Until this week, the Toronto Police Service would release non-criminal mental health information - such as a suicide attempt that provoked police interaction - to an employer or community group running a police record check on a potential employee or volunteer working with children or vulnerable people. The disclosure of such sensitive personal health information has come under fire for years by civil and mental health rights groups, who say a growing number of Canadians lose employment and volunteer opportunities because of the discriminatory practice - particularly since the demand for police record checks by potential employers has gone up. But Toronto police have now joined the increasing number of law enforcement agencies halting the controversial disclosures, sending the message that a history of mental illness should not be automatically deemed relevant to potential employers. "This step will allow people who may have just had one terrible period of crisis in their life to have the same chance as other people to access education and employment," said Jennifer Chambers, with the Centre for Addiction and Mental Health's Empowerment Council. Toronto Star, A1

A week in, a week under attack: Chief defends carding practices
Mark Saunders jokes that if he were a fruit fly with a brief lifespan, the honeymoon he enjoyed after

becoming chief of Toronto police might seem sufficient. But "from a human perspective, the honeymoon didn't last very long - no, not at all." From the day it was announced that Chief Saunders would take over from Bill Blair, he has been under attack for defending the much-disputed practice of carding - stopping and questioning people who are not under arrest or detention and recording the details of the encounter. He isn't taking it lying down. In an interview with The Globe and Mail a week after he was sworn in on May 20, he complained that his critics are never satisfied. "Every time I've tried to say something, the term 'carding' kind of changes its meaning," he said. "It gets a little frustrating." Chief Saunders also said that while he is committed to halting random police checks of citizens just going about their business, carding suspected gang members is vital to keeping the city safe. "If it's done right, it protects people." To those who say that carding amounts to a form of racial profiling, targeting a disproportionate number of racial-minority residents, Toronto's first black police chief said: "We're not sending officers into areas because people are brown or black. We're looking at the charts. We're looking at where the violence is occurring and it's about 6 per cent of the geographics of the city. And so we're putting officers in there because that's where the violent crimes are occurring." Globe and Mail, A1

Moncton's 3K for 3 Fathers run to fund scholarships

This Father's Day will mark the second annual 3K for 3 Fathers Memorial Run, established last year to honour RCMP constables Fabrice Gevaudan, Douglas Larche and Dave Ross, who were killed in the line of duty on June 4, 2014, by Justin Bourque. On June 21, runners from across the province will gather on the Moncton waterfront. The funds raised will create scholarships for the six high schools that Codiac RCMP serve. The scholarships will be given to students who demonstrate leadership, courage and bravery. "We decided as a group this would be the right way to honour the three fallen, to create a scholarship that had the ideals they represented," said co-director Armand Doucet. "When we talk about courage, leadership and bravery, it's a pretty broad spectrum, but it really represents what they did on that day." Along with the organizing team from last year's run, which included friends and co-workers of the three officers who were killed, this year's event is being organized with the help of Nadine Larche, wife of Const. Doug Larche. "Last year's run meant a lot to all of us," said Nadine Larche in a news release. "It was a way to bring the community together. It was a place for us to be on Father's Day - which was a difficult day for all of us. This run helps us to continue moving forward. We've had our struggles during the past year, and this run is a positive place to focus energy, to focus on the good of the community and to focus on one of our husbands' passions, which is running." Last year, the event garnered a turnout of more than 7,000 runners, many holding their own satellite runs around the world. The organizing team's goal is for 1,000 runners to participate with a fundraising goal of $25,000. The cost to participate in the race is $30 for adults but free for children. Kids T-shirts are $10. Times & Transcript, A1

Body may be slain woman

RCMP say it is unclear how long it will take to determine if human remains discovered in a wooded area near Framboise, Richmond County, are those of Michelle Demers-Kennedy. Orange markers highlighted a trail Wednesday to where a burial site was located in an area off North Framboise Road. Police believe they have exhumed the remains of the 58-year-old Richmond County woman who disappeared May 3, 2013, and was reported missing 10 days later. Her eldest son, Merlin Demers-Kennedy, 32, pleaded guilty to manslaughter last week. He was originally charged with second-degree murder in his mother's death, but a psychiatric assessment later revealed a long history of suffering from paranoid schizophrenia that often went untreated. The 70-page report also indicated that his mental illness may have prevented him from forming the specific intent to commit murder… "It's around seven kilometres from here to her home," Const. Kevin MacDougall of the RCMP said as he stood near the site. RCMP say they identified the burial site earlier this week but would not say what led them there. "It's not information we're going to release. As you can appreciate, it's still before the courts," RCMP spokesman Sgt. Alain LeBlanc said Wednesday. "Whenever we have a missing person's case which turns into a homicide case, that's important for us that we find the body, and also for that family, that is what's important. I'm sure this will bring some closure to the family." Chronicle Herald, A1; Cape Breton Post, A1

Government ignored advice of lawyers: Dix

The B.C. government went against the advice of its own lawyers in 2012 when it publicly referred to RCMP involvement in the case of fired Health Ministry researchers, says NDP MLA Adrian Dix. Just

hours prior to a news conference by then health minister Margaret MacDiarmid on Sept. 6, 2012, Justice Ministry counsel advised the government not to say the RCMP was involved, Dix said Wednesday. While Dix can't provide definitive proof, and the Justice Ministry won't comment, the NDP MLA said the information was confirmed by the Justice Ministry. "People at the Ministry of Justice have told me that's the case - that they advised against [including the RCMP]," Dix said. "I think the evidence supports that that was the advice given." Dix also released previously blacked-out sections of a review of the investigation by independent lawyer Marcia McNeil last December. Those sections show the Justice Ministry provided advice "with respect to the reference to the RCMP in the news release" issued on the firings, though what counsel advised was not included in the report. At the Sept. 6 news conference, MacDiarmid announced the ministry had fired four people and suspended three without pay, and had "asked the RCMP to investigate." In the end, the fired researchers were exonerated - two were rehired, four resolved settlements and just two wrongful dismissal suits remain unresolved. Meanwhile, the RCMP never launched a formal investigation. The government said in February that it no longer wanted the RCMP to look into the issue. One of those fired was a co-op student just three days shy of completing his term. Roderick MacIsaac killed himself in December of 2012. The suggestions of an RCMP investigation increased MacIsaac's frustration and stress around allegations he knew to be wrong about a privacy breach, his family said. The RCMP reference was all propaganda and innuendo, Linda Kayfish, the dead man's sister, said Wednesday. "They wanted to strongly infer something was wrong, while at the same time provide an excuse for not having to provide any facts." Times Colonist, A1

Gun amnesty idea gets support

The city and its police service are on the same page when it comes to holding another buy-back program for illegal guns. Ward 3 Coun. Matthew Green introduced a motion asking Hamilton police to go ahead with another amnesty opportunity following the recent, high-profile exchange of gunfire at the corner of Main Street and East Avenue. Green said he feels his ward sees a troubling amount of gun violence, but added street safety is a concern across the city. Council need to "take leadership" to protect its residents, he said. Coun. Lloyd Ferguson, who is also the police board chair, said he has spoken to Chief Glenn De Caire about the amnesty idea and received a positive response. The service ran a gun amnesty program last year that resulted in 374 guns and almost 20,000 rounds of ammunition being turned over to police. Hamilton Spectator

Privacy concerns the public

Toronto Police will no longer provide information about prior mental health issues when Vulnerable Sector Screening applications are made, the Toronto Sun has learned. The policy change went into effect Monday and applies to the VSS report required from the police force when people apply for certain jobs or volunteer positions, such as teachers, daycare workers, social workers, adoptive parents and coaches for sports teams. One person's privacy can be another's lack of information on just who it is leading their children. If your child's karate instructor, dance teacher, hockey coach or scout leader once had a mental health episode, the organization, and ultimately you as a parent, will no longer be entitled to that information from any police background check. A letter dated May 20 to " stakeholders" on Toronto Police letterhead, signed by Deputy Chief Mike Federico, said the policy change is in accordance with a recommendation made by the Ontario Association of Chiefs of Police last June. So if someone has a suicide attempt in their past or was in contact with police for any mental health issue, police will no longer provide it as part of a reference check letter. Police do not do background checks on behalf of employers or organizations but for the people wanting to coach, teach, work or volunteer, Toronto Police spokesman Megan Gray explained. If in doing the check police discovered incidents with police it would be reported on as part of the letter, she said, adding the service feels it is the best way forward for people had previous mental health issues. Toronto Sun, 4

Drugs seized near Sooke school

Sooke RCMP have arrested five people in what they believe to be a "significant" drug-trafficking operation near Sooke Elementary School. Four men and a 16-year-old girl were arrested after a search warrant was executed at 11:30 p.m. Tuesday at a Lanark Road house. Police seized what they called a "substantial quantity" of illicit drugs - believed to include methamphetamine, psilocybin mushrooms, and GHB, more commonly known as the date-rape drug. Drug-trafficking paraphernalia was also seized, as well as stolen property, including items the RCMP said were linked to a break-in at a commercial

premises in Sooke. A replica handgun, machetes, knives and ammunition were also found. Because police had been alerted that there could be weapons in the house, the RCMP Island District Emergency Response Team was called in to assist in the search. The 16-year-old girl was released to the care of a guardian, while the four men remain in custody, said detachment commander Staff Sgt. Jeff McArthur. Charges have not been filed. Times Colonist, A3

Toronto police say Pan Ams won't be G20 all over again

Const. Craig Brister is standing in front of a small crowd of business owners in the St. Lawrence Centre on Toronto's Esplanade, assuring them that the Pan Am Games will not be another G20 when it comes to policing. "As soon as we start talking about all these extra officers that will be in town and all this extra security, people immediately get this idea of G20 in their mind," says Brister, an officer seconded from 32 Division to serve as the Toronto Police Service's business and community liaison for the Games. "This is a sporting event," he says. "This is family, front row. That's the big thing we're trying to push. But at the same time there needs to be a security component." That means a heightened police presence around venues, not only to secure them but to enforce no-standing zones and street closings. It also means there will be police sweeps, beginning June 26{+ }in areas such as the Pan Am Athletes Village, the 14-hectare fenced-in area in the Canary District - which is next door to the Distillery District, one of the Games' three festival sites. Brister says he hates the term "police sweeps," and it shouldn't be misinterpreted. "Officers are getting trained to do security checks," says Brister. "They tour the venues when we take possession of them. They also tour them during the Games. What they're looking for is the obvious - security problems, gaps in the security, safety issues - anything that's going to affect game play or spectator safety."... The security plan for the Games has local forces policing venues in their own municipalities, removing any confusion - which occurred during G20 planning - about who is in charge. Toronto police have cut the number of officers who can be on vacation during the two weeks of the Games nearly in half to accommodate Pan Am security. Also, 9,000 unarmed private security guards have been hired to provide access control at events. Toronto Star

*** Retroactive-law critic is nitpicking**

Treasury Board President Tony Clement says concerns over a Conservative move to retroactively rewrite the law in order to stop an investigation of alleged RCMP wrongdoing are akin to angels dancing on the head of a pin. The latest omnibus budget bill from the Harper government quietly inserted amendments, backdated to October 2011, that wipe clean any complaints about the handling of long-gun registry data before Parliament passed a bill to end the registry the following year. Clement says that since Parliament did eventually pass a law to end the registry, complaints about when that law took effect are simply arcane legal nitpicking. Federal information commissioner Suzanne Legault issued a report last week calling the move a "perilous precedent" that could be used to retroactively clear government officials of wrongdoing on everything from election fraud to spending scandals. She recommended to the attorney general of Canada in March that an investigation be launched into the RCMP's wilful destruction of registry data that was covered by the Access to Information Act - an investigation that has now been taken on by the Ontario Provincial Police. The Harper government responded by retroactively rewriting the law, backdating the amendments to the day the bill to end the long-gun registry was first introduced in Parliament, and then burying the changes this month in a 167-page budget bill that will be rammed through Parliament before the summer recess. Clement, whose portfolio includes overseeing and enforcing Canada's access-to-information law, brushed off Legault's concerns about a future government using the same after-the-fact tactic to clear itself in the face of an active police investigation. "I don't think it sets any precedent at all," Clement said Wednesday following a Conservative caucus meeting. Canadian Press (Times Colonist, A9, Telegraph-Journal, Times & Transcript); La Voix de L'Est

*** Officer sued for alleged excessive use of force**

A Whitehorse man is suing an RCMP officer for assault and unlawful arrest. Documents filed Tuesday in Yukon Supreme Court allege Stefan Brynjolfsson was punched repeatedly in the face by Whitehorse RCMP Const. Nathan Menard, causing him to fall and hit his head on the ground. He was also "violently restrained" with an armhold, he says. The altercation took place in July 2013. It left Brynjolfsson with a head injury, cuts and bruising on his face, cuts and contusions on his back and soft tissue injuries to his right elbow and shoulder, he alleges. According to the documents, Brynjolfsson and Menard knew each other previously from a Whitehorse gym. They're both trained in Brazilian jiu-jitsu. Whitehorse Star, 2

*** Mountie accused of assault says man tried to grab gun**
A Mountie charged with assault has told a judge that he became scared for his life when a drunken man tried to reach for his gun. Const. Grant Jacobson said he was trying to remove the man from a downtown Kelowna pub at closing time, but he refused to co-operate and swore at him. Jacobson, 32, told court that as he grabbed John McCormick's wrist to handcuff him from behind, the man turned around and caught him off guard. "He was either trying to assault me or trying to escape," Jacobson said Tuesday. "At that point I decided I was going to take Mr. McCormick to the ground to handcuff him." Jacobson said he grabbed McCormick around the head and shoulders and kicked out his foot. He felt a tug on the pistol on his belt and realized McCormick, 61, was going for his gun, the officer told provincial court Judge Greg Koturbash. "It's such a frightening moment ... when you feel someone trying to take your pistol away," the Mountie said. "The only thing I could think of was, 'I'm going to hit him until he stops.' And I hit him until he stopped. And his hands were clearly no longer on my pistol." Postmedia News (Vancouver Sun, Kelowna Daily Courier)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

'I wish that I could just be the next Joe on the street who nobody knows and who nobody gives a second look or thought to. That would be my ideal life'
Omar Khadr is standing in his bedroom looking out at the backyard. It is his second morning of freedom after nearly 13 years behind bars, and he's embarrassed because he doesn't know how to open the window. "Oh there we go. Well, that will come in handy," he says as he's shown where to lift the latch and fresh air fills the room. "It got hot yesterday. So that's one of the basic skills I'm going to learn, is how to open my window." Open a window. Open a bank account. Get a driver's licence. Get a library card. There are so many small skills to be learned by a man who has loomed large since he was shot and captured in Afghanistan at the age of 15 - a man who has never been allowed to speak publicly. For the first time since being granted bail earlier this month, Khadr spoke over two days in exclusive interviews for the Toronto Star and a documentary that will air Thursday on CBC-TV. Until now, Khadr has existed in caricature drawn and defined by others: victim, killer, child, detainee, political pawn, terrorist, pacifist; he has been compared both to South African freedom fighter Nelson Mandela and to serial murderer Paul Bernardo. He has been prosecuted by the Bush and Obama administrations, interrogated by Canadian intelligence agents while the Liberals were in power, vilified by the Conservative government and defended as a child soldier by prominent figures such as retired lieutenant-general Roméo Dallaire and peace activist Desmond Tutu. Toronto Star, A1, La Presse, A6/Front, Reuters (Globe and Mail), Yahoo! News); CBC News, Radio-Canada

Omar Khadr de retour sur les bancs d'école
L'ex-détenu de Guantánamo Omar Khadr a amorcé cette semaine un trimestre d'été à l'Université King's, située à Edmonton, a indiqué au Devoir son avocat, Me Dennis Edney. Le jeune homme a bénéficié de quelques semaines de quiétude, depuis la sortie médiatique suivant sa mise en liberté sous caution. La petite université chrétienne King's avait tissé des liens avec le jeune homme alors qu'il était en prison et l'avait invité, en février dernier, à venir étudier dans son campus, une fois libéré. Chose promise, chose due. Celui qui envisage une carrière dans le domaine de la santé suit actuellement des cours à King's dans le but de terminer sa douzième année scolaire, précise Me Edney. " Son éducation est l'une de ses priorités en ce moment. " La philosophie de cette maison d'enseignement est de former les étudiants à devenir des agents de réconciliation et de réhabilitation dans la société. (...)Au Canada, Omar Khadr poursuit au civil le gouvernement pour 20 millions de dollars. Le gouvernement canadien a quant à lui porté en appel la décision de libérer sous caution Omar Khadr en attendant que sa cause soit entendue aux États-Unis. Advenant une victoire du gouvernement canadien dans cette dernière situation, Omar Khadr ne retournerait pas dans un pénitencier fédéral, confirme l'avocate et titulaire de la Chaire de recherche du Canada sur la justice internationale pénale et les droits fondamentaux, Fannie Lafontaine. Une récente décision de la Cour suprême stipule en effet qu'il doit être traité comme un contrevenant mineur plutôt qu'adulte. Le Devoir, A1

Victim of released sex offender Frank Skani calls for public warnings

A Burnaby, B.C., woman who was viciously attacked in her home is demanding mandatory public warnings be issued when high-risk sex offenders are released. "Kate" - not her real name - says no one warned her a violent offender was being allowed to visit a woman staying in her basement suite. On Aug. 24, 2013, Kate was attacked by Frank William Skani - a man with two dozen convictions, many for violent sexual assault. (...)Skani had been the subject of a public warning by Vancouver police two years earlier, when he had been previously released from prison. He quickly breached his conditions, was imprisoned for a month, then released. But there was no new public warning that he was out on the streets again - and no warning that he had crossed into Burnaby, where he was being allowed overnight stays with his wife in Kate's basement suite. "He was on parole. He was supposed to be watched. Why did it happen? Why wasn't I warned?" asks Kate. "It could have stopped it from happening. Maybe if I had seen his face I wouldn't have opened the door." (...)Burnaby RCMP would only tell CBC News that when it comes to "monitoring and notifications, we would have to defer to Correction Services Canada." But Corrections Canada - responsible for prisons and prisoners - told CBC News it could not discuss the specifics of an offender's case, citing the Privacy Act. CBC News

Dorchester inmate, 33, dies at Moncton hospital
A Sydney man serving a five-year sentence at Dorchester Penitentiary died at Moncton Hospital early Wednesday morning. Matthew Ryan Hines, 33, was found unresponsive in the New Brunswick institution's medium security unit. Hines was transported to hospital by ambulance after staff members performed CPR. Hines was pronounced dead at 12:02 a.m. Nadine Boucher, spokeswoman for Correctional Service Canada, couldn't comment on the possible cause of Hines's death or any other details of the incident, including when the man was discovered unresponsive by staff. "At this time, it's under investigation," Boucher said. "Correctional Service Canada will review the circumstances of the incident. That's all we know at this time." Chronicle-Herald, A12

* **200 000 $ réclamés à ses 4 oncles agresseurs**
Après avoir courageusement dénoncé et envoyé en prison quatre de ses oncles l'ayant agressée sexuellement pendant toute son enfance, une victime décide maintenant d'aller plus loin en les poursuivant au civil pour 200 000 $. Élevées chez leurs grands-parents, dans une famille nombreuse de Grande-Rivière en Gaspésie, Guylaine et Nathalie Lebreux ont été les véritables «objets sexuels» de leurs quatre oncles. Dès l'âge de six ans, et jusqu'à leur adolescence, les deux victimes ont été utilisées pour assouvir les pulsions sexuelles de Raymond, Eudore, Élodien et Carol Lebreux. (...)Si «Raymond, Eudore et Élodien avaient un minimum de reconnaissance», Carol Lebreux a toujours nié les gestes. Ce dernier, le seul toujours en prison après avoir eu cinq ans de détention, s'est rendu jusqu'en Cour suprême pour se défendre. Or, le balancier de la justice entre la sentence et les sévices subis par les deux victimes ne sera jamais égal, selon elles. Ainsi, après plusieurs mois de réflexion, Guylaine a décidé de foncer et de poursuivre les quatre agresseurs au civil pour 50000$ chacun. Journal de Québec, 3 (Journal de Montréal)

* **Donnie Snook's trailer forfeited to the Crown**
The trailer in which disgraced former Saint John city councillor Donnie Snook made child pornography has been forfeited to the Crown. The trailer, a 2004 Starcraft Tent Trailer, was seized by police, along with numerous electronic devices and a vehicle, following Snook's arrest on Jan. 9, 2013. Crown special prosecutions prosecutor Derek Weaver presented an application to Provincial Court in Saint John on Wednesday afternoon seeking forfeiture of the trailer. Neither Snook or any representation on his behalf appeared in court for the hearing. Snook is incarcerated in prison, serving an 18-year term, having pleaded guilty to 49 child sex abuse crimes involving 17 boys, and was sentenced in 2013. The crimes occurred over a dozen years, and the victims included boys as young as five years old. Telegraph-Journal, B2

* **Un ancien Nomad sans moto**
Walter Stadnick, ancien membre des Nomads, défunt groupe d'élite des Hells Angels du Québec, ne pourra enfourcher une moto de sitôt, a tranché la Commission des libérations conditionnelles du Canada. Comme ils le font régulièrement avec les délinquants liés au crime organisé, les commissaires aux libérations conditionnelles lui ont imposé des conditions spéciales, notamment de ne pas posséder ou conduire une moto, de demeurer dans une maison de transition et de respecter un couvre-feu entre 21 h

et 6 h. Stadnick, 62 ans, a été de nouveau libéré d'office en décembre dernier, après avoir purgé les deux tiers d'une sentence de 14 ans et 7 mois pour des affaires de stupéfiants et de complots pour meurtre à la suite de son arrestation dans l'opération Printemps 2001. La Presse +, Hamilton Spectator

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Mental health to be left off background checks
In a step forward for mental-health rights, the Toronto Police Service will no longer release records of non-criminal mental health encounters with police - including suicide attempts or other psychological crises - to employers and community groups requesting background checks on potential employees or volunteers. Effective this week, the Toronto police force joins law enforcement agencies across Ontario and Canada halting a practice that civil rights and mental health groups have long been decrying as discrimination affecting a growing number of Canadians. Rights organizations including the Canadian Civil Liberties Association, the Ontario Human Rights Commission and the Information and Privacy Commissioner of Ontario have increasingly been sounding the alarm that Canadians with a history of mental illness - or even a single mental-health episode that provoked a police response - have lost employment and volunteer opportunities due to the release of non-conviction mental-health records. In a May 20 memo sent to community organizations working with children or vulnerable people, Toronto police announced that effective this week, groups making background checks under the "Vulnerable Sector Screening Program" will no longer receive information about mental-health-related contact with police. Prior to the change, Toronto police released mental-health information when asked for it by groups hiring for positions ranging from teaching to coaching to volunteering and more. Toronto Star, GT1; , * Globe and Mail

*** Men walking the walk to end violence and abuse**
The time has come for men to wake up and reclaim their traditional role as providers and protectors, says the organizer of a walk to raise awareness about abuse and violence against women. Conrad Burns, organizer of the Walk of Hope and co-founder of Rise Up Against Violence, said this year he will finally make the 360-kilometre trek from Prince Albert to Regina, thanks to the support of others along the way. (…)On Wednesday, Burns delivered his message to the chiefs and councillors attending the Federation of Saskatchewan Indian Nations spring assembly. It's time for men to reclaim their traditional role of protectors and providers, he said, adding men also need take a lead role in helping to end violence against women. StarPhoenix, A5 (Leader-Post)

*** Indigenous drumming to the rescue: a beat we might hear a lot this summer**
An opinion piece states, "Too often we are drumming for our women after they are gone. That is what Shanastene McLeod's mom and auntie said to me while they were going house to house in the North End looking for her. They're scared she will end up on the list of missing and murdered indigenous women. Shanastene is 25. Her family says she is addicted to drugs and she bounces between "crack shacks" and doesn't come home. They're scared she's being sexually exploited. Out of desperation the family did something remarkable. They put a call out to the community to bring their drums and call Shanastene home with traditional music. (…)Frustration bubbled over. I guess that's what happens when there are 1,200 missing and murdered indigenous women in Canada. This community has clearly hit their breaking point. You know what, their strategy worked. Shanastene was in the neighbourhood and she came outside." CBC News

Wide-ranging snooper's charter to extend powers of security services
David Cameron is to use the Tories' unexpected parliamentary majority to press ahead with a "turbo-charged" version of the snooper's charter that will extend the powers of the security services in response to the debate that followed surveillance disclosures by NSA whistleblower Edward Snowden. In a surprise move, the government is to introduce an investigatory powers bill far more wide-ranging than expected. The legislation will include not only the expected snooper's charter, enabling the tracking of everyone's web and social media use, but also moves to strengthen the security services' warranted powers for the bulk interception of the content of communications. The extension of the bill to "modernise the law" on tracking communications data, which was agreed within government only this week, came as the prime minister used his fresh majority to challenge the chief source of funding for the Labour party. Federal Court ruling on CSIS retention of associated data / Décision de la cour fédérale sur la conservation des données connexes

2016-11-03 – 2016-11-04
16:00 ET

Table of Contents / Table des matières

Overview / Vue d'ensemble

On November 3, 2016 the Federal Court of Canada released its ruling on the Canadian Security Intelligence Service's (CSIS) handling of associated data. The ruling stated that CSIS had been unlawfully retaining data since the Operational Data Analysis Centre (ODAC) was created in 2006 and criticized the service for failing in its duty to be candid with the court.

In the past 24 hours, the ruling has garnered extensive national media attention, with all major print, online and broadcast outlets reporting it as a top story. The ruling was also covered internationally by wire services including *The Associated Press*, *Reuters*, *Agence France-Presse* and *The Wall Street Journal*.

Visibility was amplified due to recent news events concerning police surveillance of journalists in Quebec, polls showing Canadians see national security as one of the strengths of the Liberal mandate and the public consultation on national security that is underway in parallel. Coverage, while factual, employed highly negative language to describe the ruling, such as "scathing," "hard-hitting," and "blow." Rights groups and journalists expressed frustration at the perceived privacy infringement, particularly on social media and argued that the ruling underscored the need for greater oversight of Canada's national security agencies. Conversely, a key criticism in coverage questioned the effectiveness of an oversight committee due to partisan control. Similar concerns were voiced by NDP Justice Critic Murray Rankin in a press conference this morning.

Yesterday afternoon's technical briefing with CSIS Director Michel Coulombe and Chief General Counsel Robert Frater from the Department of Justice acknowledging the court ruling, explaining

the implications and outlining corrective measures was well-received by media, many of whom recognized the government's swift response.

Volume of coverage declined significantly following Minister Goodale's media availability this morning, when he responded to questions around the timeline of events, potential repercussions for implicated parties, safeguarding of Canadians' privacy and how the ruling could impact the service's ability to do its job. Overall, social media activity stemming from the availability highlighted the Minister's comments that he would be reviewing the issue of candor with CSIS management.

Selected Quotes / Citations choisies

Ralph Goodale - Minister of Public Safety and Emergency Preparedness

"Justice Noel did not dispute the potential value of "associated data" to the important work CSIS does in this challenging world, but he could not find existing legislative authority permitting its retention and use."

"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service."

"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the government of Canada are being effective at keeping Canadians safe, and equally, that they are safeguarding our rights and freedoms."

"The court's insight and guidance are timely, coming in the midst of the public consultations we now have underway about Canada's national security framework."

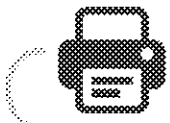
"The CSIS Act is now more than 30 years old and showing its age as global affairs, threat profiles, technology and public expectations have rapidly evolved."

Michel Coulombe - Director of the Canadian Security Intelligence Service (CSIS)

"I'll be honest, we went through our records and we really can't find a good explanation of why the court was not informed."

"That is something I will discuss with officials, (Public Safety Minister Ralph Goodale) and it is a public policy decision that the government and parliamentarians will have to make."

"I deeply regret the court's serious concerns with respect to meeting our duty of candour, and I commit to continuing my efforts, with the deputy minister of Justice, to address this concern."



Goodale says CSIS 'taking steps' to comply after court rules it broke law
The New Democrats are calling for "strong, new oversight" of the Canada's spy agency in the wake of a court decision that has found that the organization illegally kept electronic data about people for 10 years. In a news conference on Parliament Hill on Friday, NDP justice critic Murray Rankin called the judgment "very disturbing" and said it reveals "gross abuse of power by Canada's spy agency." (…) Speaking to reporters on Friday about the ruling, **Public Safety Minister Ralph Goodale** said he is taking ***"very seriously"*** the finding that ***"CSIS had failed in its duty to be candid" with the court. "(CSIS) has confirmed to me that it is taking immediate steps to address the court's decision,"*** **Goodale** said. ***"It has blocked all access to, and analysis of, any associated data while it considers its next steps to comply."*** **Goodale** also said he is asking the Security Intelligence Review Committee (SIRC) to "monitor the situation carefully to ensure compliance." SIRC is an independent review body that reports to Parliament on CSIS operations. In a ruling made public on Thursday, Justice Simon Noel said CSIS illegally held on to potentially revealing electronic data about people over a 10-year time period. The court found that the spy agency breached its responsibility to inform the court of its electronic data collection, given that the information was gathered using judicial warrants. CTV News (2016-11-04)

CSIS metadata breach: Ralph Goodale 'pursuing criticism' with spy agency management - 'I take very seriously the explicit finding … that CSIS had failed in its duty,' public safety minister says
Public Safety Minister Ralph Goodale suggested today that there may be more fallout for the senior management of Canada's spy agency after a Federal Court decision found CSIS broke the law in failing to destroy potentially sensitive information about Canadians. ***"I take very seriously the explicit finding by [Federal Court] Justice Noel that CSIS had failed in its duty to be candid with the court,"*** he told reporters before entering question period. ***"I will be pursuing that criticism with the executive management of the service,"*** he said. ***"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the government of Canada are being effective at keeping Canadians safe, and equally that they are safeguarding our rights and freedoms, including privacy and the rule of law. "From the service and from the department of justice, a strong and timely remedial plan is required to reassure the Federal Court about the issue of candour,"*** he said. CBC News (2016-11-04)

Judge slams spy agency for keeping data illegally
Federal Court Justice Simon Noel sharply criticized the domestic spy agency, CSIS, for illegally keeping electronic data on people even though they posed no security threat. Noel said the intelligence service was not truthful with judges who were called on to authorize warrants for its data-collection program. (…) This is the second time in three years that a judge of the Federal Court has ruled that CSIS did not meet its "duty of candour" in applying for wiretaps. So far, no sanctions have been applied. In a similar ruling in 2013, Justice Richard Mosley wondered whether it would take a contempt of court proceeding to ensure that such decisions are taken seriously. (…) At a news conference, the director of CSIS, Michel Coulombe said the agency had stopped accessing and analysing the data, but did not say they would be destroyed. **Public Security Minister Ralph Goodale** said the court's ruling would not be appealed. He said he would discuss it with the security agency's management and that Canadians need to have confidence that all departments and agencies of the government are safeguarding rights and freedoms. Radio-Canada International (2016-11-04)

Goodale dit que la surveillance du SCRS fonctionne bien et fonctionnera mieux

Dans un jugement rendu public jeudi, la Cour fédérale a statué que le Service canadien du renseignement de sécurité (SCRS) avait manqué à son devoir d'informer le tribunal de ce programme de collecte de données, qui durait depuis 10 ans. Le juge Simon Noël estime que le SCRS aurait dû communiquer ses activités à la cour puisqu'elles ne concernaient pas directement la sécurité nationale. Le **ministre Goodale**, responsable de la Sécurité publique et de la Protection civile, a dit vendredi que le rapport du CSARS et l'intervention de la Cour fédérale sont la preuve que le SCRS est gardé à l'oeil. **M. Goodale** a ajouté que son projet de loi C-22 qui crée un comité de députés et de sénateurs pour surveiller les agences comme le SCRS et la GRC renforcera le système. Ce comité aura accès aux opérations en cours de ces agences alors que le CSARS ne peut que revenir sur le passé du SCRS. Par ailleurs, le **ministre Goodale** a dit avoir rappelé au SCRS son « devoir de franchise » avec les tribunaux. **M. Goodale** n'a pu dire combien de Canadiens ont vu des informations les concernant être stockées pendant 10 ans par le SCRS, mais c'est un nombre « excessif », selon lui. Presse canadienne (Radio-Canada) (2016-11-04)

Le fédéral dit avoir les espions à l'oeil
Ottawa promet d'avoir les espions canadiens à l'oeil à la suite des révélations découlant d'un jugement de la Cour fédérale rendu public jeudi. En point de presse vendredi matin au Parlement, le **ministre de la Sécurité publique Ralph Goodale** a martelé que le Service canadien du renseignement de sécurité (SCRS) a la responsabilité de respecter la loi. «***Cela est absolument fondamental pour garantir la confiance des Canadiens»,*** a-t-il déclaré. Interrogé à savoir si des fonctionnaires seront congédiés, **M. Goodale** s'est toutefois gardé de répondre directement à la question. ***«Je discuterai avec les gestionnaires du SCRS pour savoir comment ils comptent réagir au jugement en consultation avec le ministère de la Justice»***, a-t-il offert. (…) **Ralph Goodale** dit avoir été mis au courant de «l'ampleur du problème il y a quelques semaines», après avoir reçu une version préliminaire du jugement. Le **ministre Goodale** a voulu se faire rassurant, en rappelant que le Parlement souhaite bientôt mettre sur pied un comité pour surveiller les agences de sécurité. Ce comité parlementaire doit toutefois avoir plus de dents que ne le prévoient actuellement les libéraux de Justin Trudeau, a signalé le NPD. «Je pense que les Canadiens devraient être inquiets que l'agence de sécurité nationale ait menti devant la cour. C'est extrêmement préoccupant», a souligné Matthew Dubé. «Quand les agences demandent aux élus d'avoir plus de pouvoirs, le minimum qu'ils doivent faire c'est de gagner la confiance du public, et ils l'ont perdue selon moi avec un tel comportement.» Vendredi, le **ministre Goodale** a confirmé qu'il était ouvert à modifier la loi afin de rendre légal la conservation et l'utilisation des données connexes par le SCRS. TVA Nouvelles (2016-11-04)

Surveillance de journalistes: pas d'assurances sur le passé à Ottawa
Si aucune surveillance de journalistes ne se produit ***«actuellement» au niveau fédéral, le gouvernement Trudeau n'a pas demandé ni obtenu l'assurance de la GRC et du SCRS que les corps policiers fédéraux n'ont pas mis des journalistes sous surveillance au cours des cinq dernières années. «L'enjeu, c'est que ce qui se passe maintenant»,*** a dit le **ministre fédéral de la Sécurité publique Ralph Goodale** en point de presse ce matin à la Chambre des communes. Le gouvernement Trudeau n'a pas l'intention de demander à la Gendarmerie royale du Canada (GRC) et au Service canadien du renseignement de sécurité (SCRS) si des mandats de surveillance ont été émis ou si des journalistes ont été surveillés au cours des cinq dernières années. ***« L'enjeu, c'est que ce qui se passe maintenant, et nous pouvons offrir l'assurance que ce genre d'activités ne se produit pas actuellement. Je n'ai pas connaissance de choses qui se sont produites quand nous ne formions pas le gouvernement du Canada »***, a dit le **ministre Goodale.** Le gouvernement Trudeau a indiqué avoir reçu l'assurance cette semaine qu'aucune journaliste n'est surveillé «actuellement» par les corps policiers fédéraux. En réponse à une question en point de presse ce matin, le **ministre Goodale** a précisé que cette assurance des corps policiers fédéraux comprend seulement la situation actuelle. Au Québec, la Sûreté du Québec a confirmé cette semaine avoir surveillé une demi-douzaine de journalistes au cours des dernières années, certains comme le journaliste Alain Gravel (Radio-Canada) pendant plusieurs années (2008 à 2013 dans son cas). ***«La réponse, autant de la GRC que du SCRS, est que rien de la sorte ne se produit actuellement. L'enjeu au niveau fédéral n'est pas le***

même qu'au Québec, dit le ministre Goodale. [...] C'est la responsabilité du directeur du SCRS de répondre aux questions opérationnelles. Vous allez sur une pente très dangereuse quand vous invitez les politiciens à aller dans ce domaine.» (…) Le **ministre Goodale** qualifie les ***«révélations au Québec»*** sur la surveillance de journalistes de ***« très inquiétantes »*** et a l'intention de ***«réviser [les] balises fédérales en place pour s'assurer qu'elles soient assez fortes et efficaces, et nous sommes plus qu'ouverts à recevoir les représentations et les conseils du public, des organisations journalistiques et le communauté juridique pour savoir s'il faut, le cas échéant, faire des changements à nos lois.»*** La Presse (2016-11-04)

CSIS law-breaking shows need for stronger parliamentary oversight: NDP
The NDP says revelations that Canada's lead spy agency illegally kept sensitive data for years underscores the need for stronger parliamentary oversight. The New Democrats are pushing for changes to a bill that would create a committee of parliamentarians to keep an eye on the Canadian Security Intelligence Service and other spy services. NDP MP Murray Rankin says the proposed model would allow the government to arbitrarily deny crucial information to the committee. A Federal Court judge says CSIS violated the law by keeping potentially revealing electronic data about people who posed no security threat over a 10-year period. Canadian Press (Chronicle-Herald, Metro News, 680 News, Global News, Huffington Post) (2016-11-04)

What Snowden Had to Say at the McGill Videoconference
Thousands of people lined up on the McGill campus Wednesday night waiting hours for a chance to be part of a videoconference with Edward Snowden. (…) We can't trust intelligence officials to respect the spirit of the law; in fact, we can't even trust them to respect the law itself, argued Snowden. Intelligence gathering programs have broken the law more than once, he reminded, often without consequences. "What we can do," he continued, "is put processes in place to ensure that we don't have to." He believes the key of these processes is an independent judicial authority able to oversee intelligence gathering operations and prosecute them when needed. "Canada actually has the weakest intelligence oversight out of any major western country." "Now they're not the most aggressive," he conceded, "they don't have the largest scale, but.... no one is really watching." The powers of the Canadian Security Intelligence Agency (CSIS) have drastically increased in the last 15 years. Law C-51, in particular, allows them to decide under any motive – however far-fetched – who constitutes a threat to national security and can thus be spied on. "The current Prime Minister did campaign to reform [C-51] and has failed to do so," reminded Snowden. The resources to oversee the CSIS, meanwhile, have decreased. The office of the Inspector General, which used to be a major part of it, was simply cut by Stephen Harper. This left the Security Intelligence Review Committee (SIRC) as the sole entity reporting to parliament on intelligence agencies. Its members are politically appointed. CSIS is not the only intelligence gathering agency. The Canadian Border Security Agency, Global Affairs Canada and the National Defense Department all have the power to infringe on the rights of people, including the right to privacy, in certain circumstances and there is no credible authority overseeing them. Retired Deputy Director of Foreign Intelligence Kurt Jensen pleaded for changing this situation in an article published last January. "Remember the old adage of who will watch the watchers? In Canada the answer is no one," he wrote. Forget the Box (2016-11-04)

Three New Scandals Show How Pervasive and Dangerous Mass Surveillance is in the West, Vindicating Snowden
An opinion piece state, 'While most eyes are focused on the presidential race between Hillary Clinton and Donald Trump, three major events prove how widespread, and dangerous, mass surveillance has become in the west. Standing alone, each event highlights exactly the severe threats which motivated Edward Snowden to blow his whistle; taken together, they constitute full-scale vindication of everything he's done. Earlier this month, a special British court that rules on secret spying activities issued an emphatic denunciation of the nation's domestic mass surveillance programs. The court found that "British security agencies have secretly and unlawfully collected massive volumes of confidential personal data, including financial

information, on citizens for more than a decade." (…) On Thursday, an even more scathing condemnation of mass surveillance was issued by the Federal Court of Canada. The ruling "faulted Canada's domestic spy agency for unlawfully retaining data and for not being truthful with judges who authorize its intelligence programs." Most remarkable was that these domestic, mass surveillance activities were not only illegal, but completely unknown to virtually the entire population in Canadian democracy, even though their scope has indescribable implications for core liberties: "the centre in question appears to be the Canadian Security Intelligence Service's equivalent of a crystal ball – a place where intelligence analysts attempt to deduce future threats by examining, and re-examining, volumes of data."" The Intercept (2016-11-04)

CSIS collected data on citizens for past 10 years
Canada's spies for almost a decade illegally kept and analyzed data on people who posed no threat to national security, a federal court judge has ruled. In a scathing ruling, Justice Simon Noël said the Canadian Security Intelligence Service had illegally retained an unknown amount of data on "third party" and "non-threat" individuals since 2006. CSIS fed that data into a powerful database that allowed the agency to draw out "specific, intimate insights into the lifestyle and personal choices of individuals," read the heavily censored court ruling, circulated to journalists on Thursday. (…) The revelations prompted an unprecedented snap press conference by CSIS director Michel Coulombe. Coulombe told journalists the agency believed its actions were legal, from 2006 until October's ruling, but accepts Noël's findings. Coulombe could not, however, explain why CSIS believed it needed to inform the court of ODAC's existence in 2006, but failed to do so for almost 10 years. "I'll be honest, we went through our records and we really can't find a good explanation of why the court was not informed," Coulombe told reporters Thursday evening. Coulombe was clear that CSIS believed the program was useful and effective, and said he would like to keep it in operation. "That is something I will discuss with officials, (**Public Safety Minister Ralph Goodale**) and it is a public policy decision that the government and parliamentarians will have to make," the director said. In a statement, **Goodale** said the government will not appeal Noël's decision. But the minister did leave open the possibility of changing the CSIS Act to allow for such techniques in the future. **Goodale** noted the court ruling found the legislation governing CSIS was beginning to ***"show its age"*** after 30 years, and threats and investigative techniques have changed over that time. **Goodale** said he would be discussing CSIS's failure to tell the court the full truth, however, with the agency's senior management. ***"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the (government) are being effective at keeping Canadians safe, and equally, that they are safeguarding our rights and freedoms,"*** **Goodale** wrote. Toronto Star, A1 (2016-11-04)

Le SCRS a conservé illégalement des données personnelles
L'agence d'espionnage du Canada a agi dans l'illégalité en conservant des données personnelles pendant 10 ans, a tranché la Cour fédérale. Dans un jugement rendu public hier, le magistrat Simon Noël a statué que le Service canadien du renseignement de sécurité (SCRS) avait manqué à son devoir d'informer le tribunal de son programme de collecte de données, qui opérait en vertu d'ordonnances judiciaires. Le juge Noël estime que le SCRS aurait dû communiquer ses activités à la Cour puisqu'elles ne concernaient pas directement la sécurité nationale. Colliger les données permet à l'agence d'identifier des habitudes de déplacements, de communication, de comportements et de liens qui lui seraient sinon inaccessibles, a indiqué hier le directeur du SCRS Michel Coulombe, qui dit « regretter que le SCRS a manqué à son obligation de franchise envers la Cour ». Rappelant « l'efficacité de l'analytique de données », le SCRS a l'intention de poursuivre ce programme dans le respect de la loi. Le **ministre de la Sécurité publique, Ralph Goodale**, a indiqué **« accueillir positivement »** la décision rendue dans cette affaire, et a souligné que le gouvernement n'interjetterait pas appel. Le **ministre Goodale** a dit prendre **« très au sérieux »** les conclusions du juge et a assuré qu'il ferait le suivi avec le SCRS. ***« Lorsqu'il est question de la sécurité et du renseignement, les Canadiens doivent avoir la certitude que tous les ministères et organismes du gouvernement du Canada réussissent efficacement à assurer la sécurité des Canadiens, et ce, en accordant autant d'importance***

au respect de nos droits et libertés », a indiqué le **ministre Goodale** dans un communiqué. La Presse, 10; Journal de Montréal (2016-11-04)

CSIS data program illegal, court rules
The Federal Court of Canada has faulted Canada's domestic spy agency for unlawfully retaining data and for not being truthful with judges who authorize its intelligence programs. Separately, the court also revealed that the spy agency no longer needs warrants to collect Canadians' tax records. All this has been exposed in a rare ruling about the growing scope of Canadian intelligence collection disclosed by the court on Thursday. At issue is how the federal domestic spy service has been pushing past its legal boundaries in the name of collecting data, in hopes of rounding out the holdings of a little-known Canadian intelligence facility dubbed the "operational data analysis centre." Many corporations and government agencies are now gravitating toward so-called big data computer analytics that can predict patterns of future behaviour based upon records about what has happened in the past. Spy agencies are no different, and the centre in question appears to be the Canadian Security Intelligence Service's equivalent of a crystal ball - a place where intelligence analysts attempt to deduce future threats by examining, and re-examining, volumes of data. (…) Following the ruling, **Public Safety Minister Ralph Goodale** released a statement that was equal parts stern and upbeat. ***"I will be pursuing this criticism with the executive management of the service,"*** he said. But **Mr. Goodale** added that the judges mentioned that CSIS's data-analytics program "***has yielded some useful intelligence results."*** He suggested the program could be bolstered with a few legislative changes. ***"The CSIS Act is now more than 30 years old and showing its age as global affairs, threat profiles, technology and public expectations have rapidly evolved,"*** **Mr. Goodale** wrote. Globe and Mail, A15 (2016-11-04)

CSIS broke law by keeping sensitive metadata
A Federal Court judge says Canada's spy agency illegally kept potentially revealing electronic data about people who posed no security threat over a 10-year period. In a hard-hitting ruling made public Thursday, Justice Simon Noel said the Canadian Security Intelligence Service breached its duty to inform the court of its data-collection program, since the information was gathered using judicial warrants. CSIS should not have held on to the information since it was not directly related to threats to the security of Canada, the ruling said. "Ultimately, the rule of law must prevail," Noel wrote, adding, "without it, the actions of people and institutions cannot be trusted to accurately reflect the purpose they were entrusted to fulfil." **Public Safety Minister Ralph Goodale** welcomed the decision and said the government would not appeal. CSIS crunched the data beginning in 2006 using a powerful program known as the Operational Data Analysis Centre to produce intelligence that can reveal specific, intimate details about people the spy service monitors, the judge said. The improperly retained material was metadata - information associated with a communication, such as a telephone number or email address, but not the message itself. Canadian Press (Hamilton Spectator, A8, Calgary Sun, Edmonton Sun, Kingston Whig-Standard, Ottawa Sun, London Free Press, Toronto Sun, Winnipeg Sun, Waterloo Region Record, Fort McMurray Today); Presse canadienne (Le Droit) (2016-11-04); Canadian Press (Mississaugau.com, The Record, Times Colonist, Toronto Star, CBC News) (2016-11-03)

Secret CSIS unit illegally kept data, court rules
A previously unknown unit of Canada's intelligence service has been illegally keeping data unrelated to national security threats, the Federal Court disclosed Thursday. In a hard-hitting ruling that was partly blacked out, Justice Simon Noel rebuked the Canadian Security Intelligence Service for not telling the court about a secret metadata program launched in 2006. The Operational Data Analysis Centre was unknown even to the judges who had been issuing the warrants to collect the information it mined, according to Noel's ruling. (…) **Public Safety Minister Ralph Goodale** said the government would not appeal the decision and would ask the Security Intelligence Review Committee to ***"monitor the situation carefully to ensure compliance."*** **Goodale** said he intended to speak to the CSIS executive about Noel's findings and had taken note of the court's observation that the CSIS Act was ***"now more than 30 years old and showing its age."*** The ruling touched on an issue many governments are struggling to

address: amid fears over terrorism, how far can they can intrude into the lives of citizens in the name of national security? Postmedia Network (National Post, A1/Front (Edmonton Journal, Calgary Herald, StarPhoenix, Windsor Star, Leader-Post, Ottawa Citizen, Montreal Gazette, London Free Press) (2016-11-04); National Post (2016-11-03)

Canadian spy agency put on notice
A Canadian federal court has dealt the country's spy agency a major blow by declaring it illegally kept data collected during investigations over the past decade. It has also threatened sanctions if it happens again. Although judges have previously criticised the Canadian Security Intelligence Service (CSIS) for a lack of openness, the ruling is being seen as particularly uncompromising. Federal Court Judge Simon Noel said CSIS secretly set up a special data analysis centre in 2006 to help track potential terrorism suspects. However, he said it stored and retained electronic information from people not linked to particular threats, which it was not permitted to do."CSIS has a limited mandate which does not permit the retention of associated data ... as it has done so since 2006. Therefore this retention of associated data is illegal," Judge Noel said in the ruling. (...) "The fact that CSIS could go 10 years retaining large quantities of our sensitive private information, yet we're only finding out about this now, and only as a result of a court judgement, is deeply concerning," said David Christopher of OpenMedia, an advocacy group. (...) **Federal Public Safety Minister Ralph Goodale**, who has overall responsibility for law enforcement agencies, welcomed the ruling and said the government would not appeal it. ***"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service," Goodale*** said in a statement. Radio on New Zealand (2016-11-04)

Online national security quiz is not exactly neutral
An opinion piece state, "Making sense of the federal government's online national security quiz is not easy. The Liberal government, which during last year's election campaign had promised to scrap significant portions of the anti-terror law known as Bill C-51, now says it wants to see what Canadians have to say before acting. To that end, according to a spokesperson for **Public Safety Minister Ralph Goodale**, the government has held 27 face-to-face consultation sessions. More are in the offing. But the jewel in the crown for Justin Trudeau's very modern government is an online questionnaire. Here, the Liberal government has received 9,500 individual responses and 9,300 bulk submissions. I'm surprised it got that many. Canada's anti-terror legislation is both complicated and technical. What, for instance, is a lay person supposed to make of this question in the online quiz: "Do the current Section 38 procedures of the Canada Evidence Act properly balance fairness with security in legal proceedings?" Mind you, the online consultation does include a so-called green paper written in passably clear English that purports to describe how the current system works. But like **Goodale** himself, this green paper exudes a soothing, untroubled tone suggesting that - in the end - the law as written is pretty sensible and, at most, needs only a few tweaks." Toronto Star, A13 (2016-11-04)

Canadian Court Rules Spy Agency Illegally Kept Data Unrelated to Threats
A Canadian court issued a strong rebuke to the country's intelligence agency in a ruling released Thursday, saying the Canadian Security Intelligence Service broke the law by holding on to data that wasn't directly related to security threats. Federal Court Justice Simon Noel said CSIS overstepped its mandate when it began retaining and analyzing metadata that wasn't relevant to investigations or prosecution, or to national defense or international affairs. Metadata can include information such as a telephone number or email address but doesn't include the content of a communication. The data was sent to a CSIS program called the Operational Data Analysis Centre for processing, which the court judgment said has the ability to produce "specific, intimate details" on the life and environment of individuals under investigation. The program was launched in 2006, according to the judgment. The issue of data collection has come under greater scrutiny since former U.S. National Security Agency contractor Edward Snowden revealed that agency was conducting surveillance of U.S. citizens. (...) **Canada Public Safety Minister Ralph Goodale** said in a statement that the government doesn't intend to appeal the court's decision. Wall Street Journal (2016-11-03)

Judge raps Canada spy agency for data collection abuse
The head of the Canadian Security Intelligence Service said he agreed with a court ruling that the spy agency had held onto sensitive data beyond the time frame allowed by court warrants. CSIS director Michel Coulombe ordered all access to information dating back as far as 2006 to be denied while the agency assesses the legal impact of the decision and determines how best to move forward. "I regret that we did not meet our duty of candor to the court and I commit to continuing my efforts with the deputy minister of justice to address this concern," CSIS director Coulombe told a press conference. "All associated data collected under warrant was done so legally. The court's key concern related to our retention of non-threat related associated data linked with third party communications, after it was collected," Coulombe said. (...) **Public Safety Minister Ralph Goodale**, meanwhile, welcomed the ruling, saying in a statement that ***"the court's insight and guidance are timely, coming in the midst of the public consultations we now have underway about Canada's national security framework."*** AFP (Yahoo! News) (2016-11-03)

Federal court ruling deems CSIS data mining actions unacceptable
The Federal Court of Canada has handed down a ruling stating that CSIS (Canadian Security Intelligence Service) illegally stored data for over 10 years. Justice Simon Noel reportedly ruled Thursday that, since the information was collected using judicial warrants, the federal agency breached its duty to inform the court of its mechanisms. The *CBC* reports that since the information was not collected to national security threats against Canada, the data should not have been retained by CSIS. CSIS published an statement which conveys that the agency accepts the decision of the court and will take steps to respond. "The Federal Court has recently ruled on the retention of associated data linked to third party information. CSIS fully accepts the Court's decision, and has taken immediate actions to respond. Given the Court's decision with respect to third-party data, CSIS has halted all access to, and analysis of, associated data while we undertake a thorough review of the decision in order to assess potential operational and legal impacts, and determine our way forward," read the letter. When asked about whether Canadians would be able to rebuild their trust in the agency, chief general counsel for Justice Canada Robert Frater told the CBC that CSIS now understands its limits. Mobile Syrup (2016-11-03)

Court says Canada spy agency illegally kept data
A Canadian court ruled Thursday that Canada's spy agency illegally kept phone numbers and email addresses of people they were not directly investigating over a 10-year period and wasn't forthright with judges who authorized the intelligence gathering. Federal Court Justice Simon Noel said the Canadian Security Intelligence Service should not have kept the information since it was not directly related to threats to Canada's security. The data involves the phone numbers, email address or IP addresses of family members or friends of those the spy agency investigates. The spy agency called it "associated data." CSIS said it used metadata — information associated with a communication, such as a telephone number or email address — but not the message itself. It said the program has been in place since 2006. Spy Service director Michel Coulombe said they have halted logging, storing, and analyzing the data in question and said he "deeply" regretted the judge's findings about breach of "duty of candor." Coulombe stressed all data collection was done under warrant. He noted the issue is the retention of non-threat related data. **Canadian Public Safety Minster Ralph Goodale said he** takes it seriously the spy agency was not forthright with the courts and said he would talk to senior executives of the spy agency. **Goodale noted** the laws that govern the spy agency are 30 years old and need to be updated to reflect new technologies. ***"Justice Noel did not dispute the potential value of "associated data" to the important work CSIS does in this challenging world, but he could not find existing legislative authority permitting its retention and use," Goodale said*** in a statement. News of the spy agency program comes as the provincial Quebec government announced they are calling a public inquiry into police surveillance of journalists amid revelations various forces in the province monitored reporters' phones. The province's two largest police forces said earlier this week that they had monitored the phones of six prominent journalists in 2013. Associated Press (Daily Mail UK) (2016-11-03)

Canada court deals blow to spy agency, says it kept data illegally
A court dealt Canada's spy agency a blow on Thursday, declaring it had illegally kept data collected during investigations over the past decade and threatening sanctions if the issue occurred again. Although judges have previously criticized the Canadian Security Intelligence Service, or CSIS, for a lack of openness about its operations, the ruling was particularly uncompromising... **Federal Public Safety Minister Ralph Goodale**, **who** has overall responsibility for law enforcement agencies, **welcomed** the ruling and said the government would not appeal it. ***"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service," Goodale said*** in a statement. Most Canadian security agencies have small individual review bodies, which OpenMedia and others complain are impotent and can only look at old cases. Oversight is more robust in other nations such as Britain and the United States, where special legislative committees monitor the work of security and intelligence agencies. **Goodale**, acting amid global concerns about the reach of security agencies, promised in June to create a similar oversight committee as part of a comprehensive probe into how national security is handled. A scandal erupted this week in the province of Quebec when it emerged that police had secretly tracked phone calls received and made by six reporters. Reuters (2016-11-03)

Les espions canadiens ont outrepassé leur mandat
Le service d'espionnage canadien a outrepassé sa mission en conservant illégalement des informations sensibles recueillies en vertu de mandats, a tranché la Cour fédérale dans un jugement rendu public, jeudi. En point de presse, le patron du Service canadien du renseignement de sécurité (SCRS) a dit prendre acte du verdict. «Le SCRS accepte la décision de la cour et a pris des mesures immédiates pour y répondre», a-t-il déclaré. Je regrette profondément les graves préoccupations de la cour à l'égard de notre manquement quant à l'obligation de franchise.» Durant plusieurs années, le SCRS a caché à la Cour fédérale - qui est chargée de lui délivrer des mandats - l'existence d'un programme de récolte de métadonnées. Cela constitue, pour la cour, un manquement à l'obligation de franchise dont le SCRS doit faire preuve envers le tribunal. Agence QMI (Journal de Québec, Journal de Montréal) ; Vice News; Motherboard; Agence France-Presse (L'Orient le Jour) (2016-11-03)

Broadcast Media / Médias télédiffusés

Yesterday's ruling and subsequent reaction garnered significant media coverage on evening political shows, national news programs and led this morning's headlines.

In a panel discussion on *CBC News' Power & Politics*, former Public Safety Minister Stockwell Day was questioned on his knowledge of the service's data retention practices that began in 2006 while he was minister. This question came in follow up to CSIS Director Michel Coulombe's statement during the technical briefing that in 2006 the service wrote to the minister at the time explaining the Operational Data Analysis Centre program and that his successors were also aware of it.

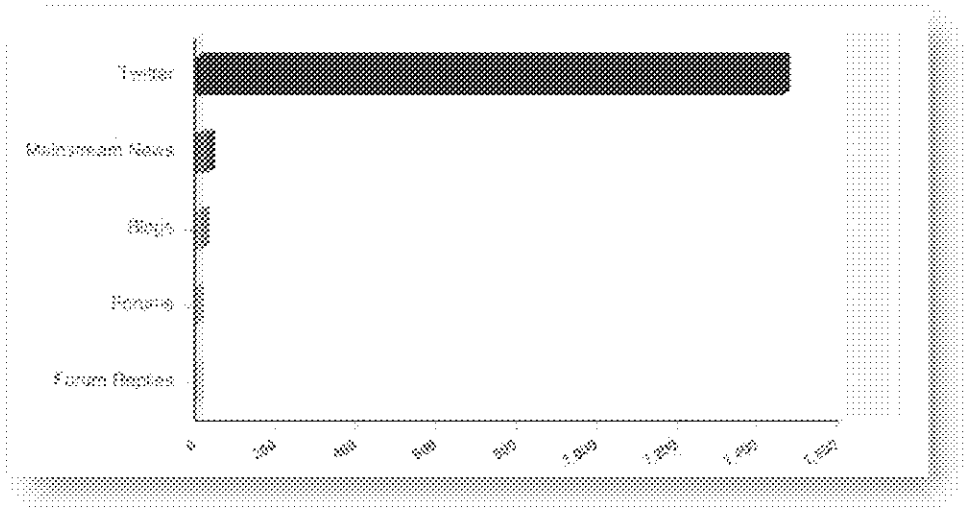
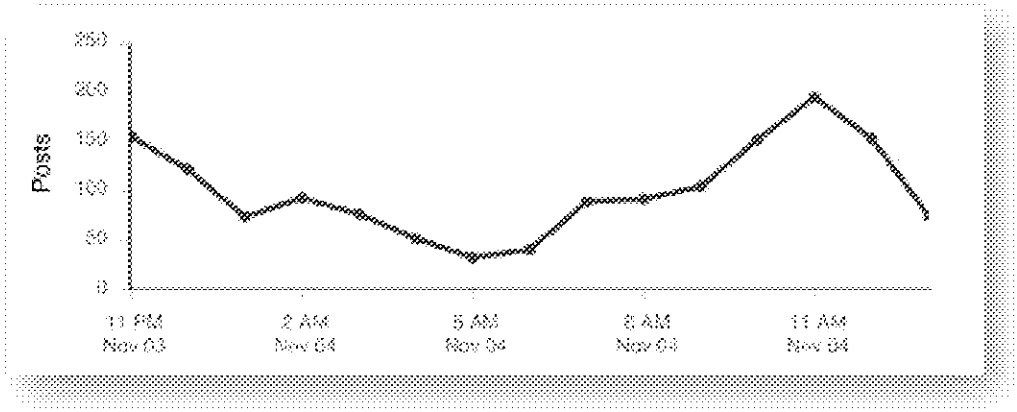
Social Media / Médias sociaux

Social media coverage regarding the ruling was extensive over the past 24 hours. There were a total of 1508 social media posts, with the vast majority on Twitter.



Social media coverage was consistent last night and throughout the day today, with noticeable spikes at 10:00 ET, coinciding with NDP Justice Critic Murray Rankin's press conference, and 11:00ET, coinciding with Public Safety Minister Ralph Goodale's media availability that numerous reporters live-tweeted.



Several social media users and journalists argued that CSIS cannot be trusted with the expanded powers afforded under bill C-51 and that an oversight committee is not a sufficient safeguard due to partisan control. Some posts accused Minister Goodale of defending CSIS' data retention practices under the guise of national security and demanded consequences for the government's actions, with many users calling for responsible parties to be fired.

See below for a word cloud highlighting the language used in connection with the ruling.

Federal Court ruling on CSIS retention of metadata / Décision de la cour fédérale sur la conservation des métadonnées

2016-11-03 – 2016-11-04

Table of Contents / Table des matières

Overview / Vue d'ensemble

Online, print, broadcast and social media coverage regarding the Federal Court ruling on CSIS' retention of metadata was heavy over the specified time period of November 3, 2016 – November 4, 2016. The tone of coverage was negative and factual, and was amplified by recent news events concerning police surveillance of journalists in Quebec in the lead up to yesterday's ruling.

The Federal Court ruling also garnered national and international coverage from sources such as Reuters, Wall Street Journal, Associated Press, and Agence France-Presse.

Coverage stemming from Minister Goodale's statement and comments made by the Director of the Canadian Security Intelligence Service at the technical briefing on the evening of November 3, 2016 was picked up by most media outlets.

The tone of social media coverage was negative, with many social media users expressing frustration at the perceived infringement on privacy rights. Social media users also emphasized the magnitude of the report, with many describing the decision as scathing and CSIS as unaccountable. Many privacy rights groups used the recent court decision as leverage for their case against Bill C-51.

Selected Quotes / Citations choisies

Ralph Goodale - Minister of Public Safety and Emergency Preparedness

"Justice Noel did not dispute the potential value of "associated data" to the important work CSIS does in this challenging world, but he could not find existing legislative authority permitting its retention and use."

"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service."

"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the government of Canada are being effective at keeping Canadians safe, and equally, that they are safeguarding our rights and freedoms."

"The court's insight and guidance are timely, coming in the midst of the public consultations we now have underway about Canada's national security framework."

"The CSIS Act is now more than 30 years old and showing its age as global affairs, threat profiles, technology and public expectations have rapidly evolved."

Michel Coulombe - Director of the Canadian Security Intelligence Service (CSIS)

"I'll be honest, we went through our records and we really can't find a good explanation of why the court was not informed."

"That is something I will discuss with officials, (Public Safety Minister Ralph Goodale) and it is a public policy decision that the government and parliamentarians will have to make."

"I deeply regret the court's serious concerns with respect to meeting our duty of candour, and I commit to continuing my efforts, with the deputy minister of Justice, to address this concern."

Print and Online Media / Médias imprimés et en ligne

CSIS collected data on citizens for past 10 years

Canada's spies for almost a decade illegally kept and analyzed data on people who posed no threat to national security, a federal court judge has ruled. In a scathing ruling, Justice Simon Noël said the Canadian Security Intelligence Service had illegally retained an unknown amount of data on "third party" and "non-threat" individuals since 2006. CSIS fed that data into a powerful database that allowed the agency to draw out "specific, intimate insights into the lifestyle and personal choices of individuals," read the heavily censored court ruling, circulated to journalists on Thursday. (…) The revelations prompted an unprecedented snap press conference by CSIS director Michel Coulombe. Coulombe told journalists the agency believed its actions were legal, from 2006 until October's ruling, but accepts Noël's findings. Coulombe could not, however,

explain why CSIS believed it needed to inform the court of ODAC's existence in 2006, but failed to do so for almost 10 years. "I'll be honest, we went through our records and we really can't find a good explanation of why the court was not informed," Coulombe told reporters Thursday evening. Coulombe was clear that CSIS believed the program was useful and effective, and said he would like to keep it in operation. "That is something I will discuss with officials, (**Public Safety Minister Ralph Goodale**) and it is a public policy decision that the government and parliamentarians will have to make," the director said. In a statement, **Goodale** said the government will not appeal Noël's decision. But the minister did leave open the possibility of changing the CSIS Act to allow for such techniques in the future. **Goodale** noted the court ruling found the legislation governing CSIS was beginning to ***"show its age"*** after 30 years, and threats and investigative techniques have changed over that time. **Goodale** said he would be discussing CSIS's failure to tell the court the full truth, however, with the agency's senior management. ***"In matters of security and intelligence, Canadians need to have confidence that all the departments and agencies of the (government) are being effective at keeping Canadians safe, and equally, that they are safeguarding our rights and freedoms," Goodale*** wrote. Toronto Star, A1 (2016-11-04)

Le SCRS a conservé illégalement des données personnelles

L'agence d'espionnage du Canada a agi dans l'illégalité en conservant des données personnelles pendant 10 ans, a tranché la Cour fédérale. Dans un jugement rendu public hier, le magistrat Simon Noël a statué que le Service canadien du renseignement de sécurité (SCRS) avait manqué à son devoir d'informer le tribunal de son programme de collecte de données, qui opérait en vertu d'ordonnances judiciaires. Le juge Noël estime que le SCRS aurait dû communiquer ses activités à la Cour puisqu'elles ne concernaient pas directement la sécurité nationale. Colliger les données permet à l'agence d'identifier des habitudes de déplacements, de communication, de comportements et de liens qui lui seraient sinon inaccessibles, a indiqué hier le directeur du SCRS Michel Coulombe, qui dit « regretter que le SCRS a manqué à son obligation de franchise envers la Cour ». Rappelant « l'efficacité de l'analytique de données », le SCRS a l'intention de poursuivre ce programme dans le respect de la loi. Le **ministre de la Sécurité publique, Ralph Goodale**, a indiqué **« accueillir positivement »** la décision rendue dans cette affaire, et a souligné que le gouvernement n'interjetterait pas appel. Le **ministre Goodale** a dit prendre **« très au sérieux »** les conclusions du juge et a assuré qu'il ferait le suivi avec le SCRS. ***« Lorsqu'il est question de la sécurité et du renseignement, les Canadiens doivent avoir la certitude que tous les ministères et organismes du gouvernement du Canada réussissent efficacement à assurer la sécurité des Canadiens, et ce, en accordant autant d'importance au respect de nos droits et libertés »,*** a indiqué le **ministre Goodale** dans un communiqué. La Presse, 10; Journal de Montréal (2016-11-04)

CSIS data program illegal, court rules

The Federal Court of Canada has faulted Canada's domestic spy agency for unlawfully retaining data and for not being truthful with judges who authorize its intelligence programs. Separately, the court also revealed that the spy agency no longer needs warrants to collect Canadians' tax records. All this has been exposed in a rare ruling about the growing scope of Canadian intelligence collection disclosed by the court on Thursday. At issue is how the federal domestic spy service has been pushing past its legal boundaries in the name of collecting data, in hopes of rounding out the holdings of a little-known Canadian intelligence facility dubbed the "operational data analysis centre." Many corporations and government agencies are now gravitating toward so-called big data computer analytics that can predict patterns of future behaviour based upon records about what has happened in the past. Spy agencies are no different, and the centre in question appears to be the Canadian Security Intelligence Service's equivalent of a crystal ball - a place where intelligence analysts attempt to deduce future threats by examining, and re-examining, volumes of data. (…) Following the ruling, **Public Safety Minister Ralph Goodale** released a statement that was equal parts stern and upbeat. ***"I will be pursuing this criticism with the executive management of the service,"*** he said. But **Mr. Goodale** added that the judges mentioned that CSIS's data-analytics program "***has yielded some useful intelligence results."*** He suggested the program could be bolstered with a few legislative changes. ***"The***

CSIS Act is now more than 30 years old and showing its age as global affairs, threat profiles, technology and public expectations have rapidly evolved," **Mr. Goodale** wrote. Globe and Mail, A15 (2016-11-04); Globe and Mail (2016-11-03)

CSIS broke law by keeping sensitive metadata

A Federal Court judge says Canada's spy agency illegally kept potentially revealing electronic data about people who posed no security threat over a 10-year period. In a hard-hitting ruling made public Thursday, Justice Simon Noel said the Canadian Security Intelligence Service breached its duty to inform the court of its data-collection program, since the information was gathered using judicial warrants. CSIS should not have held on to the information since it was not directly related to threats to the security of Canada, the ruling said. "Ultimately, the rule of law must prevail," Noel wrote, adding, "without it, the actions of people and institutions cannot be trusted to accurately reflect the purpose they were entrusted to fulfil." **Public Safety Minister Ralph Goodale** welcomed the decision and said the government would not appeal. CSIS crunched the data beginning in 2006 using a powerful program known as the Operational Data Analysis Centre to produce intelligence that can reveal specific, intimate details about people the spy service monitors, the judge said. The improperly retained material was metadata - information associated with a communication, such as a telephone number or email address, but not the message itself. Canadian Press (Hamilton Spectator, A8, Calgary Sun, Edmonton Sun, Kingston Whig-Standard, Ottawa Sun, London Free Press, Toronto Sun, Winnipeg Sun, Waterloo Region Record, Fort McMurray Today); Presse canadienne (Le Droit) (2016-11-04); Canadian Press (Mississaugau.com, The Record, Times Colonist, Toronto Star, CBC News) (2016-11-03)

Secret CSIS unit illegally kept data, court rules

A previously unknown unit of Canada's intelligence service has been illegally keeping data unrelated to national security threats, the Federal Court disclosed Thursday. In a hard-hitting ruling that was partly blacked out, Justice Simon Noel rebuked the Canadian Security Intelligence Service for not telling the court about a secret metadata program launched in 2006. The Operational Data Analysis Centre was unknown even to the judges who had been issuing the warrants to collect the information it mined, according to Noel's ruling. (…) **Public Safety Minister Ralph Goodale** said the government would not appeal the decision and would ask the Security Intelligence Review Committee to ***"monitor the situation carefully to ensure compliance."*** **Goodale** said he intended to speak to the CSIS executive about Noel's findings and had taken note of the court's observation that the CSIS Act was ***"now more than 30 years old and showing its age."*** The ruling touched on an issue many governments are struggling to address: amid fears over terrorism, how far can they can intrude into the lives of citizens in the name of national security? Postmedia Network (National Post, A1/Front (Edmonton Journal, Calgary Herald, StarPhoenix, Windsor Star, Leader-Post, Ottawa Citizen, Montreal Gazette, London Free Press) (2016-11-04); National Post (2016-11-03)

Canadian spy agency put on notice

A Canadian federal court has dealt the country's spy agency a major blow by declaring it illegally kept data collected during investigations over the past decade. It has also threatened sanctions if it happens again. Although judges have previously criticised the Canadian Security Intelligence Service (CSIS) for a lack of openness, the ruling is being seen as particularly uncompromising. Federal Court Judge Simon Noel said CSIS secretly set up a special data analysis centre in 2006 to help track potential terrorism suspects. However, he said it stored and retained electronic information from people not linked to particular threats, which it was not permitted to do."CSIS has a limited mandate which does not permit the retention of associated data ... as it has done so since 2006. Therefore this retention of associated data is illegal," Judge Noel said in the ruling. (…) "The fact that CSIS could go 10 years retaining large quantities of our sensitive private information, yet we're only finding out about this now, and only as a result of a court judgement, is deeply concerning," said David Christopher of OpenMedia, an advocacy group. (…) **Federal Public Safety Minister Ralph Goodale**, who has overall responsibility for law enforcement agencies, welcomed the ruling and said the government would not appeal it. ***"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid***

with the court. I will be pursuing this criticism with the executive management of the Service," **Goodale** said in a statement. Radio on New Zealand (2016-11-04)

Online national security quiz is not exactly neutral
An opinion piece state, "Making sense of the federal government's online national security quiz is not easy. The Liberal government, which during last year's election campaign had promised to scrap significant portions of the anti-terror law known as Bill C-51, now says it wants to see what Canadians have to say before acting. To that end, according to a spokesperson for **Public Safety Minister Ralph Goodale**, the government has held 27 face-to-face consultation sessions. More are in the offing. But the jewel in the crown for Justin Trudeau's very modern government is an online questionnaire. Here, the Liberal government has received 9,500 individual responses and 9,300 bulk submissions. I'm surprised it got that many. Canada's anti-terror legislation is both complicated and technical. What, for instance, is a lay person supposed to make of this question in the online quiz: "Do the current Section 38 procedures of the Canada Evidence Act properly balance fairness with security in legal proceedings?" Mind you, the online consultation does include a so-called green paper written in passably clear English that purports to describe how the current system works. But like **Goodale** himself, this green paper exudes a soothing, untroubled tone suggesting that - in the end - the law as written is pretty sensible and, at most, needs only a few tweaks." Toronto Star, A13 (2016-11-04)

Canadian Court Rules Spy Agency Illegally Kept Data Unrelated to Threats
A Canadian court issued a strong rebuke to the country's intelligence agency in a ruling released Thursday, saying the Canadian Security Intelligence Service broke the law by holding on to data that wasn't directly related to security threats. Federal Court Justice Simon Noel said CSIS overstepped its mandate when it began retaining and analyzing metadata that wasn't relevant to investigations or prosecution, or to national defense or international affairs. Metadata can include information such as a telephone number or email address but doesn't include the content of a communication. The data was sent to a CSIS program called the Operational Data Analysis Centre for processing, which the court judgment said has the ability to produce "specific, intimate details" on the life and environment of individuals under investigation. The program was launched in 2006, according to the judgment. The issue of data collection has come under greater scrutiny since former U.S. National Security Agency contractor Edward Snowden revealed that agency was conducting surveillance of U.S. citizens. Judge raps Canada spy agency for data collection abuse
The head of the Canadian Security Intelligence Service said he agreed with a court ruling that the spy agency had held onto sensitive data beyond the time frame allowed by court warrants. CSIS director Michel Coulombe ordered all access to information dating back as far as 2006 to be denied while the agency assesses the legal impact of the decision and determines how best to move forward. "I regret that we did not meet our duty of candor to the court and I commit to continuing my efforts with the deputy minister of justice to address this concern," CSIS director Coulombe told a press conference. "All associated data collected under warrant was done so legally. The court's key concern related to our retention of non-threat related associated data linked with third party communications, after it was collected," Coulombe said. (…) **Public Safety Minister Ralph Goodale**, meanwhile, welcomed the ruling, saying in a statement that ***"the court's insight and guidance are timely, coming in the midst of the public consultations we now have underway about Canada's national security framework."*** AFP (Yahoo! News) (2016-11-03)

Federal court ruling deems CSIS data mining actions unacceptable
The Federal Court of Canada has handed down a ruling stating that CSIS (Canadian Security Intelligence Service) illegally stored data for over 10 years. Justice Simon Noel reportedly ruled Thursday that, since the information was collected using judicial warrants, the federal agency breached its duty to inform the court of its mechanisms. The *CBC* reports that since the

information was not collected to national security threats against Canada, the data should not have been retained by CSIS. CSIS published an statement which conveys that the agency accepts the decision of the court and will take steps to respond. “The Federal Court has recently ruled on the retention of associated data linked to third party information. CSIS fully accepts the Court’s decision, and has taken immediate actions to respond. Given the Court’s decision with respect to third-party data, CSIS has halted all access to, and analysis of, associated data while we undertake a thorough review of the decision in order to assess potential operational and legal impacts, and determine our way forward,” read the letter. When asked about whether Canadians would be able to rebuild their trust in the agency, chief general counsel for Justice Canada Robert Frater told the CBC that CSIS now understands its limits. Court says Canada spy agency illegally kept data
A Canadian court ruled Thursday that Canada's spy agency illegally kept phone numbers and email addresses of people they were not directly investigating over a 10-year period and wasn't forthright with judges who authorized the intelligence gathering. Federal Court Justice Simon Noel said the Canadian Security Intelligence Service should not have kept the information since it was not directly related to threats to Canada's security. The data involves the phone numbers, email address or IP addresses of family members or friends of those the spy agency investigates. The spy agency called it "associated data." CSIS said it used metadata — information associated with a communication, such as a telephone number or email address — but not the message itself. It said the program has been in place since 2006. Spy Service director Michel Coulombe said they have halted logging, storing, and analyzing the data in question and said he "deeply" regretted the judge's findings about breach of "duty of candor." Coulombe stressed all data collection was done under warrant. He noted the issue is the retention of non-threat related data. **Canadian Public Safety Minster Ralph Goodale said he** takes it seriously the spy agency was not forthright with the courts and said he would talk to senior executives of the spy agency. **Goodale noted** the laws that govern the spy agency are 30 years old and need to be updated to reflect new technologies. ***"Justice Noel did not dispute the potential value of "associated data" to the important work CSIS does in this challenging world, but he could not find existing legislative authority permitting its retention and use," Goodale said*** in a statement. News of the spy agency program comes as the provincial Quebec government announced they are calling a public inquiry into police surveillance of journalists amid revelations various forces in the province monitored reporters' phones. The province's two largest police forces said earlier this week that they had monitored the phones of six prominent journalists in 2013. Associated Press (Daily Mail UK) (2016-11-03)

Canada court deals blow to spy agency, says it kept data illegally
A court dealt Canada's spy agency a blow on Thursday, declaring it had illegally kept data collected during investigations over the past decade and threatening sanctions if the issue occurred again. Although judges have previously criticized the Canadian Security Intelligence Service, or CSIS, for a lack of openness about its operations, the ruling was particularly uncompromising... **Federal Public Safety Minister Ralph Goodale**, **who** has overall responsibility for law enforcement agencies, **welcomed** the ruling and said the government would not appeal it. ***"I also take very seriously the explicit finding by Justice Noel that CSIS had failed in its duty to be candid with the court. I will be pursuing this criticism with the executive management of the Service," Goodale said*** in a statement. Most Canadian security agencies have small individual review bodies, which OpenMedia and others complain are impotent and can only look at old cases. Oversight is more robust in other nations such as Britain and the United States, where special legislative committees monitor the work of security and intelligence agencies. **Goodale**, acting amid global concerns about the reach of security agencies, promised in June to create a similar oversight committee as part of a comprehensive probe into how national security is handled. A scandal erupted this week in the province of Quebec when it emerged that police had secretly tracked phone calls received and made by six reporters. Reuters (2016-11-03)

Les espions canadiens ont outrepassé leur mandat

Le service d'espionnage canadien a outrepassé sa mission en conservant illégalement des informations sensibles recueillies en vertu de mandats, a tranché la Cour fédérale dans un jugement rendu public, jeudi. En point de presse, le patron du Service canadien du renseignement de sécurité (SCRS) a dit prendre acte du verdict. «Le SCRS accepte la décision de la cour et a pris des mesures immédiates pour y répondre», a-t-il déclaré. Je regrette profondément les graves préoccupations de la cour à l'égard de notre manquement quant à l'obligation de franchise.» Durant plusieurs années, le SCRS a caché à la Cour fédérale - qui est chargée de lui délivrer des mandats - l'existence d'un programme de récolte de métadonnées. Cela constitue, pour la cour, un manquement à l'obligation de franchise dont le SCRS doit faire preuve envers le tribunal. Broadcast Media / Médias télédiffusés

Yesterday's federal court ruling and the subsequent government response garnered significant media coverage on evening political shows and national news programs. Tone of coverage was negative and was amplified by recent news events concerning police surveillance of journalists in Quebec in the lead up to yesterday's ruling.

CBC News' Power & Politics held a panel discussion with former Public Safety Minister Stockwell Day, who was questioned on his knowledge of CSIS' associated data retention practices that began while he was minister. Extensive broadcast coverage continued into the morning of November 4, with all major Canadian cable news networks airing yesterday's technical briefing with CSIS Director Michel Coulombre.

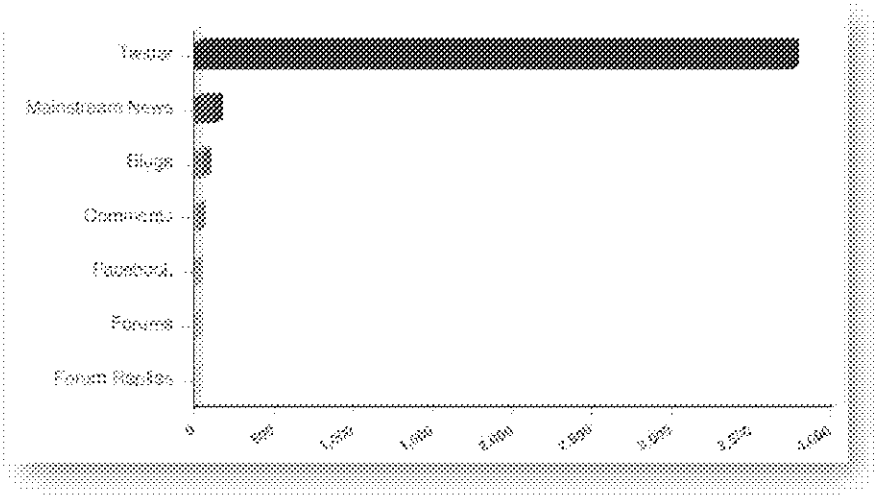
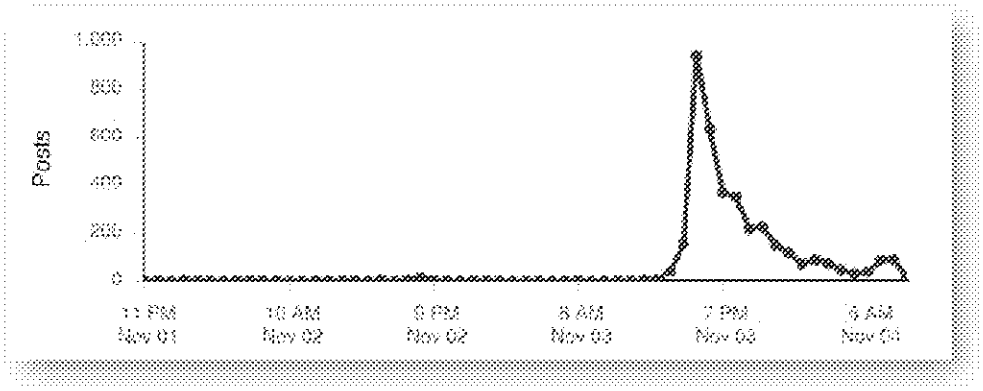
Social Media / Médias sociaux

Social media coverage regarding the CSIS court decision was extensive over the past 48 hours. There were a total of 3963 social media posts regarding the decision, with 3,730 of those posts coming from Twitter.



Social media coverage regarding the CSIS court decision spiked considerably at 5 p.m. on November 3rd, 2016, coinciding with the release of the court decision. Approximately ¼ of all social media posts regarding the court decision occurred at this time (943 posts). Social media coverage has appeared to be declining steadily since the release but a subtle uptick in social media coverage is observed around 7:00 ET on November 4th, 2016, coinciding with the publication of online and print newspapers.



The tone of social media coverage is negative, with many social media users expressing outrage at the perceived infringement on privacy rights. Several social media users drew parallels between the illegal collection of metadata by CSIS and the surveillance of journalists by the SPVM, which has consistently garnered media attention throughout the week. Social media users also emphasized the magnitude of the report, with many describing the decision as scathing and CSIS as unaccountable. Many privacy rights groups used the recent court decision as leverage for their case against Bill C-51. See below for a word cloud indicating the words most commonly used in conjunction with social media posts regarding the CSIS court decision:
