Given his busy schedule the past two months, you can forgive prime minister-designate Justin Trudeau for not having had the time to watch the first episode of season 5 of Homeland, the intense television drama about the CIA and the realities of terrorism. He probably also has not had a chance to read Yale University historian Timothy Snyder's new book, Black Earth: The Holocaust as History and Warning. Both should be on his to-do list before he carries through with his decision to withdraw Canadian fighter jets from the mission against the Islamic State. (...)Two months later, during the debate in the House of Commons on extending and expanding the anti-ISIL mission into Syria, Trudeau asserted that "we are all committed to keeping Canadians safe." He argued, as he still does, that Canada "does have a role to play in responding to humanitarian crises and security threats in the world" and "that when we deploy the Canadian Forces - especially into combat operations - there must be a clear mission and a clear role for Canada." Postmedia Network (National Post, A8)

* **C-51, TPP Top List of 'Real Change' Tech Priorities**
Digital policies may not have played a significant role in the just-concluded national election, but the arrival of a majority Liberal government will leave many expecting "real change" on the digital front in the years ahead. Prime Minister-designate Justin Trudeau is likely to focus on key economic promises from his platform once Parliament resumes. However, there will be several digital issues that should command attention during his first 12 months in office. Bill C-51The Liberals voted for the controversial anti-terror law, but the party promised changes to it if elected. In particular, it pledged to establish an all-party review mechanism similar to those found in many other countries that will bring Members of Parliament into the oversight process. TheTyee

* **Des dons de 48 M$ à des groupes islamistes radicaux**
L'organisation Health Partners International of Canada/ Partenaires Canadiens pour la Santé Internationale (HPIC), dont le siège social est à Montréal, aurait fait des dons totalisant près de 48 millions $ à groupes islamistes radicaux, selon des documents obtenus par TVA Nouvelles. L'organisation distribue de l'aide médicale aux pays dans le besoin et lors de crises. Elle se prépare à envoyer de l'aide au Pakistan, qui vient à nouveau d'être ébranlé par un tremblement de terre de forte magnitude, qui a fait plus de 200 morts. De 2004 à 2009, HPIC a donné plus de 17 M$ en aide à IRFAN, aujourd'hui considérée par le Canada comme une organi sation terroriste. En 2003, Mercy International Canada, liée à Al-Qaida, selon le témoignage d'un agent du Service canadien du renseignement de sécurité, a reçu 1,3 M$. La même année, Mercy a versé 1 M$ à IRFAN et a depuis perdu son statut d'organisme de charité. Journal Montreal

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Doer says he'll soon head home from Washington
It's the end of an era for Canada's most important diplomatic post as Gary Doer confirmed Monday that his longer-than-usual stint as ambassador to the United States is about to conclude. The popular former Manitoba premier said he'll help prepare the transition to a new Liberal government and will leave it to the incoming government to pick the specific departure date. (...)The former NDP premier of Manitoba was appointed by Stephen Harper in the hope that his left-of-centre roots and social network might help relations with the then-rookie Obama administration. Much of the media chatter in the last six years has focused on one irritant: the stalled Keystone XL pipeline, which both Harper and Doer have advocated

without success so far. But the era also witnessed a series of major Canadian priorities coming to fruition, including: A sweeping arrangement that would change the way Canadians and Americans cross the border, creating customs points away from the border with the goal of faster crossings.. Canada's entry into the Trans-Pacific Partnership trade negotiations, which happened after considerable lobbying of U.S. politicians and stakeholders. An agreement on a new Detroit-Windsor bridge that bypassed a blockage in the U.S. Congress. Canada will finance the bridge, and also collect tolls on what will become the most important border crossing. Canadian Press (Vancouver Sun, B2, Calgary Herald, Ottawa Sun, London Free Press, Calgary Sun, Winnipeg Sun, Toronto Sun, Edmonton Sun), Canadian Press (Edmonton Sun, Ottawa Citizen, Times Colonist, The Telegram, The Guardian), Presse canadienne (Le Nouvelliste, Acadie nouvelle)

*** Lower loonie hurting cross-border flying, say U.S. airports**

The weak Canadian dollar isn't just hurting cross-border shopping. U.S. airports that enjoyed a surge in the number of Canadian passenger levels when the loonie was valued higher than the American dollar are now seeing the flip side of currency swings. Low ticket prices drew about five million Canadians annually in recent years to fly out of U.S. airports. But the Burlington International Airport in Vermont estimates the number of Montreal passengers is down about 10 per cent so far this year. (...)The number of Canadians travelling south fell by five per cent again in August, marking the 11th monthly decrease in a year. Stateside travelling is 26 per cent lower than a year ago, according to Statistics Canada. Same-day car trips are off 34 per cent while total car trips are down 24 per cent. (...)Canada's airline sector has long called upon Ottawa to lower airport rents, fees and taxes to stem the flow of passengers crossing the border to catch flights. Canadian Press (CTV News, Blackburn News, Cape Breton Post, Daily Courier, Lethbridge Herald, Leader-Post, StarPhoenix, The Province, Montreal Gazette, Chronicle-Journal, Canadian Business, Times Colonist)

Sneaky snowbirds could have financial wings clipped by new security program

Snowbirds beware: The federal government will use its planned border exit-tracking system to avoid paying hundreds of millions of dollars in social benefits now going to people who shouldn't receive them due to absences from Canada. Newly obtained memos say the Canada Revenue Agency and Employment and Social Development Canada expect to save between about $194 million and $319 million over five years once the long-anticipated system is fully in place. Federal officials have been working quietly to satisfy privacy commissioner Daniel Therrien's office that personal information will be properly collected, used and disclosed under the program. Under the 2011 perimeter security pact, Canada and the United States agreed to set up co-ordinated systems to track entry and exit information from travellers. For the moment, the tracking system involves exchanging entry information collected from people at the land border so that data on entry to one country serves as a record of exit from the other. The first two phases of the program have been limited to foreign nationals and permanent residents of Canada and the United States, but not citizens of either country.(...) The initiative's scope prompted the federal privacy commissioner's office to express concern it had expanded "beyond its initial parameters," says one memo. But Canada Border Services Agency officials felt the objectives were "entirely consistent" with the perimeter security pact's commitment, the memo adds. Canadian Press (The Guardian, The Telegram, Daily Courier)

The truth about Brandon's mystery woman uncovered

A mystery woman who lied when she told police she'd been abducted as a child, forced to work in the sex trade and didn't know her true identity has been fined and put on probation for the elaborate story. Before authorities learned the truth - that she'd actually fled Ontario with her daughter in the midst of a custody dispute - the investigation into their identities involved at least four police agencies, the Canada Border Services Agency, Child and Family Services, the Canadian Centre for Child Protection and the Department of Homeland Security in the United States. "This is a highly unusual case," Crown attorney Marnie Evans said in Brandon provincial court on Monday just before the woman was fined $2,000 and put on probation for two years. "It essentially involves a very lengthy investigation which criss-crossed this country and down into the States." The woman can't be named due to a publication ban put in place during Monday's hearing to protect the identity of her daughter who remains in the care of child welfare authorities. Winnipeg Free Press

Belgian leaders tout benefits of EU ties to Canada
Belgium's western Canadian trade mission made an attractive pitch Monday to be Canada's entry point for European free trade, at least for a couple of Vancouver businesses. "I think there are a lot of opportunities (with Canada/European Union free trade) as long as we play nicely together," said Kerry Gibson, president of Vancouverbased EcoCentury Technologies. "That's what I'm doing here (at a morning seminar), checking them out," she said. Selling western Canadian businesses on the idea of using Belgium as a gateway to Europe under the Comprehensive Economic and Trade Agreement, which is expected to be in force as early as 2017, is a significant sub-theme of the Belgian trade mission, which stopped in Vancouver Monday with its delegation of 228, which is being led by royalty. (…)Upon implementation, CETA will mean the elimination of tariffs on more than 90 per cent of goods traded between Canada and the EU zone, as well as the streamlining of many licensing and regulatory regimes (with some exceptions). Vancouver Sun, D2

Hot summer for tourism in Montreal
It was a hot summer for tourism in Montreal. Numbers were up across the board compared to last year, according to Tourisme Montréal. The agency attributed the boost to major events, festivals and attractions, economic conditions and marketing initiatives. Ève Paré, CEO of the Hotel Association of Greater Montreal, said it was a good summer, but not the best ever. (…)Here are some numbers tallied by Tourisme Montréal for June to August or September: 9.8 per cent more American tourists crossed the border. 12.5 per cent more tourists arrived by car. 4.4 per cent more passengers arrived at Dorval airport. Montreal Gazette, B2, Journal de Montréal (Journal de Québec)

Why we shouldn't put provinces in the corner
We think about North America as three sovereign democracies. It's true. But all three nations are also federations, sharing constitutional power with 95 states, provinces and territories. Later this week, Colorado Governor John Hickenlooper will host the first-ever summit of North American governors and premiers in Colorado Springs. Mexican governors will have the best attendance, reflecting that, for now, Mexico is the most enthusiastic about North American collaboration. Yukon Premier Darrell Pasloski and Ambassador Gary Doer will lead the Canadians. (…)As Manitoba premier, Gary Doer included U.S. and Mexican governors at a 2006 Gimli Western Premiers Conference. They joined in the ultimately successful push to use "smart" drivers' licences for cross-border travel. Globe and Mail

Always too soon for a celebratory spliff
An opinion piece states, "I will bet you a sack of weed that Justin Trudeau will not deliver before the next election on his promise to legalize marijuana. This being Canada, we can't just delete marijuana offences from the Criminal Code. That would be too easy. (…)In spite of what some states have done, marijuana remains highly illegal under U.S. federal law, which applies at border crossings. People and products entering the U.S. from Canada would have to be inspected with increased thoroughness, frequency and possibly rubber gloves. Lineups at the Windsor crossing could stretch all the way to back to Toronto. Exports to the U.S. that so many Canadians rely on for their daily bread will be held up for days or weeks." StarPhoenix, A3

*** U.S. Increasing Cross-Border Fees for Some Shipments**
The U.S. Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS) announced it will publish its final rule on Oct. 29 that adjusts the fees the U.S. government charges to recoup the costs of conducting agricultural quarantine inspections (AQI) at U.S. ports of entry for all modes of transportation and many in Canadian trucking are speaking out against the move. According to the Ontario Trucking Association (OTA), the changes take effect on Dec. 28. In the case of trucking, the fees are applied whether or not a truck crossing the border is carrying agricultural products. The USDA argues the fee adjustment, which it says was subject to an evaluation by "a well-respected" accounting firm, is necessary to align the actual cost of providing the services with what the U.S. government charges. In making its announcement, the USDA also said the "AQI fee adjustments are consistent with the United States' international trade obligations" despite concerns to the contrary from both the Canadian Trucking Alliance (CTA) and the Canadian government. (…)The adjustments to the APHIS fee increases are of little consolation to the trucking industry, according to the president and CEO of the Canadian Trucking Alliance, a federation of the provincial trucking associations representing over 4,500

trucking companies. “This is a cash grab and a tax on trade,” said David Bradley. “We’re still looking at increases of 44 percent for non-transponder trucks and 187 percent for trucks with transponders. That is absurd and a complete contradiction of the principles of the U.S.-Canada Beyond the Border Accord.” Today’s Trucking (2015-10-26)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** CSIS spam scam returns**
T here’s a phone scam trying to convince unsuspecting people that Canada’s spy agency has discovered their computers are being used to pump out spam. I know because I got a call Monday from one of the gang. ITWorldCanada.com

*** SecTor 2015: IT pros — Canada’s spooks want you**
Among the trade show booths at this week’s SecTor security conference in Toronto was one for an organization that hadn’t appeared at previous IT or security shows in the area before: The Canadian Security Intelligence Service (CSIS). Usually recruiting at job fairs and universities, the spy agency sent four staffers (two of them literally men in black) plus a media spokesman to this year’s show to make a pitch for those with infosec skills. According to the agency’s Web site, right now it wants an applications analyst/developer, IT analysts, a programmer analyst, a security assessment analyst and a systems analyst. ITWorldCanada.com

*** NSA warns of growing danger of cyber-attack by nation states**
The deputy director of the US National Security Agency (NSA), Richard Ledgett, has warned of the increasing danger of destructive cyber attacks by states. He told the BBC: "If you are connected to the internet, you are vulnerable to determined nation-state attackers." He said nations would need to identify red lines that should not be crossed. He also said agency targets, numbered in "the high hundreds", had discussed leaks by contractor Edward Snowden, with some changing their behaviour. BBC.com

LAW ENFORCEMENT / APPLICATION DE LA LOI

Email bungle frustrates privacy watchdog
A major failure within the B.C. government's email system left up to 48,000 email accounts without a proper backup, potentially losing thousands of messages and frustrating a recent probe by the privacy commissioner into a deletedemail scandal. The government forgot to turn on automatic monthly backups for its email accounts after it migrated to a new Microsoft Exchange server in June 2014. As a result, up to 48,000 email accounts weren't backed up, as per government policy, until the error was discovered Feb. 5. It was a "serious oversight" of a backup system that's supposed to be used for serious internal government investigations, said Information and Privacy Commissioner Elizabeth Denham in a report this week. "Data has been permanently lost that may be needed for myriad investigative purposes, ranging from financial management matters to employee investigations," Denham wrote. As well, the lack of backup emails hindered Denham's probe into an aide within Transportation Minister Todd Stone's office who was accused of improperly deleting emails related to the Highway of Tears so that they would not become public through a Freedom of Information request. Denham's investigators weren't able to restore the emails from the backup, and so had to resort to other less precise forensic techniques. "It would have assisted this investigation," Denham wrote. Nonetheless, the staffer, George Gretes, resigned from government and is now under RCMP investigation for allegedly lying under oath to Denham's staff. Postmedia Network (Vancouver Sun, A6)

'You can't terrorize your son,' child psychologist told father charged with abuse
An Ottawa man accused of horrific abuse, including starvation and assault, of his son told a child psychologist in 2010 that he feared the boy, just eight-years old at the time, would grow up to be a sexual predator. But child psychologist Xavier Plaus testified on Monday that there were absolutely no signs of it, that the boy was bright, and that his father - then an RCMP anti-terrorism officer - was obsessed with

punishing his son for what he believed was abnormal sexual behaviour. The behaviour, in fact, amounted to nothing more than innocently hugging teachers and, in some cases, fellow students who had been bullied at school. Plaus testified that the boy was extremely intelligent, even though he was living in a chaotic, hostile and poisonous environment. The psychologist said the boy's father interrogated his son about his daily school routine and that even after a battery of tests showing otherwise, he could not persuade the man that the boy showed "absolutely no evidence of sexual pre-occupation." He said the father insisted the boy was manipulating him and telling him what he wanted to hear. During one of several visits to the boy's home, the psychologist said, the father said he punished his son by making him sleep in the basement. The psychologist, hired by the father during a custody battle, told court that he became concerned about the boy's punishments - including pushups and cold showers - and said that if it happened again he'd call child-protection workers. "You can't terrorize your son," the psychologist recalled telling the man in 2010. "The parents saw him as a delinquent. I did not," Plaus told court. The psychologist said he interviewed the boy 14 times and concluded that after years of chaos, conflict and hostility at home, the boy had given up on any expectation that anyone in the world would love him. Three years later, in 2013 and after the punishments intensified, the boy escaped the Kanata basement. Now 13, he has detailed horrifying abuse, including starvation and torture, and told the court he thought he was going to die the day his father pointed his service weapon at his head. The boy's hands were often cuffed behind his back and he was kept naked, and chained to a post in the basement while the rest of his family went about their daily routine upstairs. He recalled that his father once left him with a full jar of peanut butter and some pita bread. "He said, 'This should last you weeks.' " The father, since suspended from the RCMP, has confessed to chaining up his son in the suburban basement, torturing him with a barbecue lighter, and rationing his meals. The boy weighed only 50 pounds when he escaped after slipping out of his shackles. Postmedia News (Ottawa Citizen) (2015-10-26); Le Droit, 7 (2015-10-27)

Concerns raised about CSIS accountability

Internal government notes say the Canadian Security Intelligence Service is likely to team up with "trusted allies," such as the American CIA and Britain's MI6, on overseas operations to derail threats - plans that underscore concerns about CSIS accountability under new security legislation. The omnibus bill known as C-51 allows CSIS to engage in joint "disruption" efforts abroad - including covert actions that break foreign laws - something the spy service previously had no authority to do, according to the government notes. "In the international context, CSIS would likely first seek avenues to work jointly with partners in the local jurisdiction or trusted allies before engaging in independent action," the notes say. "In the past, CSIS has been invited to participate in joint operations abroad to disrupt threats or to provide assistance to allies, but has had no mandate to do so." CSIS's new threat-disruption mandate - perhaps the most contentious element of the legislation that received royal assent in June - could include surreptitious meddling with websites, cancelling airline reservations, disabling a car or myriad other schemes. The spy service would be allowed to engage in disruption activities that violate the Charter of Rights and Freedoms so long as a judge sanctions them, a measure critics say perverts the role of the judiciary. CSIS would co-ordinate threat disruption activity with other agencies such as the RCMP, Canada Border Services Agency and Foreign Affairs, and could use its statutory mandate to enlist the technical expertise of the Communications Security Establishment, Canada's electronic spy agency, the government notes say. Canadian Press (Times Colonist, B5)

RCMP officer charged with sexual assault

A Buffalo Narrows RCMP officer is suspended with pay while facing a sexual assault allegation. RCMP said while the charge is concerning, the officer will get no special treatment as his case moves through the courts. In a news release on Monday, RCMP said the charge was laid against Const. Randy McKay on Oct. 21, in connection with an incident inside a private home in Dillon on May 20. Staff Sgt. Ted Munro, with the North District Management Team, said the complaint was made by an adult woman through "internal channels." While she is not a member of the RCMP, she and McKay are known to each other, Munro said. An internal investigation into the incident is underway, while the criminal investigation has been brought before the courts, he said. "It's just like any other Criminal Code investigation with the general public. That will go before the courts and it will be dealt with and deemed just like any other situation. There's no specialized treatment for any type of police or people within the government." He said McKay was not on duty at the time of the incident. The police force is taking the situation seriously,

and RCMP are working to conclude the matter "as quick as possible," he added. Postmedia News (Leader-Post, A2, StarPhoenix, A4); Radio-Canada

Stolen RCMP gun used to shoot teen
Two men are in custody after a Winnipeg teen was shot with a gun allegedly stolen from an off -duty RCMP officer. Deputy Winnipeg police chief Danny Smyth said investigators believe the gun was stolen Friday evening from a marked RCMP vehicle parked outside the officer's home. "The officer's equipment belt including his firearm had been secured in the vehicle," Smyth said Monday. "Police believe the two accused unlawfully entered the vehicle and stole several items including the firearm from the off -duty officer." Just after midnight later that night, the two suspects exchanged words with a group of young people sitting in a vehicle in a convenience store parking lot. Smyth said one of the suspects allegedly approached the car with a gun and took aim at those inside. A 16-year-old girl was shot once in the upper body and rushed to hospital in critical condition. The shooting was "senseless and reckless" without apparent motive, Smyth said. Canadian Press (Edmonton Sun, 36) National Post, A5, Daily Gleaner, B2, Red Deer Advocate, A6); * La Presse Canadienne (Acadie Nouvelle, 18); * Winnipeg Free Press, A3

*** Mountie given conditional discharge in forgery case**
A Mountie who pleaded guilty to forgery will have a clean record if he follows the conditions of a four-month probation period. On Monday, Const. Jonathan Cormier, 36, of Moncton, was given a conditional discharge in Moncton provincial court for posing as a Crown prosecutor in an email. The forgery was discovered when he inadvertently sent the email to the prosecutor he was impersonating. In making his decision Judge Joseph Michaud reviewed several letters attesting to Cormier's character, performance logs and a psychologist's report. These document showed "without a doubt" that Cormier was a man of "exemplary character," Michaud said, in both his professional and private life. They also showed that at the time of the offence the constable was under severe stress and fatigue because of the events of June 4, 2014, in which three Codiac RCMP officers, his colleagues, were killed. The judge reviewed several examples of case law in which members of the judicial system were given discharges. He said he was convinced giving Cormier a discharge was in the best interest of the accused and not contrary to public interest. Cormier will be on probation for four months, and during that time must donate $1,000 to the Friends of The Moncton Hospital Foundation and continues sessions with a psychologist. The Mountie became emotional when the decision was announced, and after was comforted by friends and family who attended the court appearance. Cormier has been a Mountie for seven years. He was suspended when the RCMP learned of the incident. His defence lawyer Bruce Phillips previously told the court Cormier still has an internal RCMP review pending because of his actions. The Crown, Francois Godin, a Quebec prosecutor brought to Moncton for the officer's case, added that it has not yet been decided if the constable will lose his job. Times & Transcript, A3

*** Mounties hunt prisoner who escaped in cruiser**
Alberta Mounties are searching for a prisoner who escaped by fleeing in a marked cruiser. Police say Jason McGinn, 26, jumped into the driver's seat of a cruiser Monday morning near Thorsby as he was being transferred to the Drayton Valley RCMP. McGinn had been taken into custody Sunday for allegedly being in possession of a stolen vehicle. The RCMP cruiser was found abandoned near Warburg. Police say nothing was taken from the police car. McGinn is white, about 5-foot-10 with dark brown hair, green eyes, a missing tooth and a recent scratch on his face. Canadian Press (Calgary Herald, A7, Red Deer Advocate, A3); Edmonton Sun, 6; Postmedia Network (Edmonton Journal, A2)

Le nombre d'incidents explose
Ils font pester les pilotes, inquiètent les autorités et se jouent de la police. Les individus qui s'amusent à braquer des pointeurs laser sur des avions sont de plus en plus nombreux. Et leurs gestes, potentiellement très dangereux, sont dans la ligne de mire de Transports Canada. Lumière sur un phénomène en pleine explosion. Le 23 septembre 2014. Un Boeing 737 de WestJet en provenance de Vancouver entame son approche pour un atterrissage à l'aéroport d'Ottawa. Soudain, les deux pilotes se retrouvent aveuglés par une intense lumière verte. Quelqu'un, au sol, vient de braquer un laser vers la cabine de pilotage. Les pilotes parviennent à faire atterrir l'avion rempli de passagers. Mais l'un d'eux se plaint d'une sensation de brûlure à l'oeil gauche. Les deux hommes seront admis à l'hôpital. «Par chance,

aucun de nos pilotes n'a subi de dommages sérieux aux yeux, indique le directeur des relations publiques chez WestJet, Robert Palmer. Mais c'est très risqué.» Cet incident est loin d'être unique. Une compilation effectuée par La Presse à partir d'une base de données du ministère des Transports montre que les cas de ce qu'on appelle le «brouillage laser» sont en pleine explosion au pays. En 2002, Transports Canada n'avait signalé qu'un cas de brouillage laser. L'an dernier, le Ministère en avait recensé 502 au pays. Cette année, en date du 20 octobre, déjà 524 incidents avaient été signalés. L'année en cours a déjà fracassé un record et, si l'on se fie à la tendance, au moins une centaine d'incidents devraient s'ajouter d'ici la fin de l'année. Ce type d'incident se produit maintenant près de deux fois par jour à l'échelle du pays. Et selon des gens de l'industrie consultés par La Presse, le nombre de cas réels pourrait être encore plus élevé, les pilotes choisissant parfois de ne pas rapporter les cas afin d'éviter d'avoir à remplir des rapports d'incident. Avec l'Ontario, le Québec est la province la plus touchée... La police est presque systématiquement avisée en cas d'attaque laser. «Ou bien le pilote nous donne des coordonnées GPS, ou il nous donne un endroit d'où il croit que l'attaque provient. Nous envoyons toujours une autopatrouille», explique Marie-Claude Dandenault. Ailleurs au pays, la Gendarmerie royale du Canada envoie même des hélicoptères pour repérer les délinquants. La Presse, A2/Front

*** «Pas brillant comme idée»**

Est-ce qu'un avion pourrait un jour s'écraser à cause d'un brouillage laser? «Si ça arrive dans un moment très critique, très près du sol, ça pourrait sérieusement nuire au pilote et, tout dépendant de ce qui se passe, ça pourrait certainement causer un problème», répond le capitaine Joe DePete, premier vice-président de l'ALPA, qui rappelle toutefois que le transport aérien est le mode de transport le plus sûr et que les pilotes sont entraînés à faire face à ce type d'incidents. Devant l'ampleur du problème, Transports Canada a lancé en juin dernier une campagne de sensibilisation pour le grand public intitulée « Pointer un laser vers un aéronef, pas brillant comme idée ». Pour l'instant, cependant, les chiffres montrent qu'elle n'a pas réussi à freiner le phénomène. Mais qui sont ces individus qui s'amusent à braquer des lasers sur des avions? «Mon impression est qu'une grande partie des gens qui font ça ne sont pas conscients des dangers que ça implique», répond Marie-Claude Dandenault, commandante de l'unité aéroportuaire du Service de police de la Ville de Montréal. Les données compilées par La Presse montrent que les incidents se produisent surtout l'été, et souvent la fin de semaine, au petit matin. La police est presque systématiquement avisée en cas d'attaque laser. «Ou bien le pilote nous donne des coordonnées GPS, ou il nous donne un endroit d'où il croit que l'attaque provient. Nous envoyons toujours une autopatrouille», explique Marie-Claude Dandenault. Ailleurs au pays, la Gendarmerie royale du Canada envoie même des hélicoptères pour repérer les délinquants. La Presse (Le Nouvelliste, 33)

Murder suspect detained in New Brunswick extradited to the U.S.

A North Carolina man has been returned home in custody following his extradition from New Brunswick on charges he fatally shot his uncle in the southern U.S. state in April. James Daniel Ball, 34, was delivered by U.S. marshals from New Brunswick to Raleigh, N.C., last week. From there, Camden sheriff's deputies and State Bureau of Investigation agents transported him to the Camden Sheriff's Office, Sheriff Tony Perry said in a statement Friday. Ball, from Manteo, N.C., is charged with murdering his uncle, 65-year-old William Ball in his home in Shiloh, N.C. After William Ball was found dead April 22, his nephew, who had been staying with him, reported his uncle's death as a suicide, according court documentation filed in New Brunswick in support of James Ball's arrest. Authorities determined that William Ball died from a gunshot wound to the head. After investigators concluded William Ball was the victim of a homicide, U.S. authorities alerted Canadian officials a murder warrant had been issued for James Ball's arrest in Camden and that he might be headed to Canada. The suspect's parents live in Miramichi. The RCMP arrested Ball at the port of entry just across from where Interstate 95 ends at the U.S. and Canadian border near Woodstock. Ball was initially released after Canadian police learned they had no authority to arrest him based on the Camden warrant. Canadian police contacted Ball's parents, who were staying at a hotel on the Canadian side of the border, and he was allowed to stay with them following his release. Daily Gleaner, A8

ASIRT investigating after prisoner dies in police custody in Edmonton

An investigation has been launched after a 46-year-old prisoner died in police custody on Monday. Police say six prisoners from an Edmonton Police Service (EPS) cell block were being transported to the Edmonton Remand Centre at 11:52 a.m. Monday. One of the six prisoners was yelling and kicking while

being placed into the prisoner transport van, said police, but while en route, the man suddenly became silent. The officers stopped the van to check on the prisoner, said police, and discovered he was unresponsive and in medical distress. The officers began performing CPR on the prisoner while EMS crews were dispatched. The prisoner was transported by EMS to hospital, where he died. The Director of Law Enforcement has directed the Alberta Serious Incident Response Team (ASIRT) to investigate. The investigation is said to be in its very early stages, and no further information is being released at this time. This isn't the first time a person died in police custody this year. In April, a 25-year-old man died after being arrested by city police at City Centre Mall. ASIRT said police had taken custody of the man and transported him to EPS headquarters, but as they entered the building, the man went into medical distress and became unresponsive. The man was taken by ambulance to hospital where he died. Results of the ASIRT investigation into the case have not been released. Edmonton Sun (2015-10-26)

*** Naufrage à Tofino**
Des plongeurs de la Gendarmerie canadienne sont arrivés lundi à **Tofino**, sur la côte pacifique, pour rechercher le dernier passager disparu lors du naufrage d'un navire de tourisme, au cours duquel cinq Britanniques sont décédés. Cette équipe spécialisée est arrivée lundi matin au port de cette localité prisée des surfeurs, située à l'ouest de l'île de Vancouver, et a repris les recherches. " Nous gardons espoir [de retrouver vivant le passager disparu], mais nous devons nous préparer au pire ", a déclaré Janelle Shoihet, caporale de la Gendarmerie royale canadienne (GRC). A Londres, le ministère des Affaires étrangères avait annoncé plus tôt que les cinq personnes mortes dans le naufrage de ce bateau d'observation de cétacés étaient de nationalité britannique. Il s'agit de quatre hommes et d'une femme, âgés de 18 à 76 ans, ont précisé les services médico-légaux de la province de Colombie-Britannique. Deux d'entre eux résidaient au Canada, les trois autres au Royaume-Uni, et tous les cinq étaient sur le bateau en tant que touristes. La Presse Canadienne (Le Devoir, A5)

*** RCMP issues Canada-wide warrant for suspect in Sexsmith stabbing spree**
Mounties have issued a Canada-wide warrant for a suspect in a stabbing spree that left one dead and three hospitalized in Sexsmith. Four adults were stabbed, one fatally at the Alamo bar in downtown Sexsmith around 1:13 a.m. on Sunday. One adult was taken to hospital by STARS air ambulance and the other three were taken to hospital by ground ambulance. Jordan Joseph Wendland is wanted by RCMP for one count of second degree murder and three counts of aggravated assault Edmonton Sun; Edmonton Journal; CBC News (2015-10-26)

***Suspicious package causes evacuation**
New Glasgow Regional Police evacuated some businesses and apartments after a suspicious package arrived through the mail Monday afternoon. Police gave the all-clear about six hours later when they realized the package contained an illegal drug. The parcel arrived at a business in the Downtown Mini Mall at about 2:20 p.m., said police spokesman Const. Ken MacDonald. A bank, businesses and several neighbouring apartments on Archimedes Street were quickly evacuated. In addition to police, the New Glasgow Fire Department, the Canadian Red Cross and another hazardous response team responded. Apartment residents were relocated to a firehall or with friends and family. The situation continued that way until about 8:10 p.m. MacDonald said the situation changed shortly after the "RCMP chemical, biological, radiological, nuclear, explosive unit" arrived at the scene. "Investigators have secured the scene to be safe and have determined the substance to be a controlled substance: basically an illegal drug." Chronicle Herald, A5

***Nunavut excessive force investigation done; public disclosure pending**
The Ottawa Police Service has completed its external investigation into a case of alleged excessive use of force by Nunavut RCMP officers against a man in Iqaluit police cells last summer. But the details of that investigation, and whether the two officers involved will be disciplined internally, or charged with offences, are still confidential at this point. RCMP Insp. Don Halina said Oct. 26 that the lead RCMP investigator in the case is away and still has to confer with the complainant, Bernard Naulalik, before disclosing the results of the external investigation. That could take a few weeks, Halina said. "We're just working to finalize next steps and part of that is talking to the complainant," Halina said Oct. 26. For several weeks at least, Nunavut RCMP have had the results of an Ottawa Police Service investigation into the conduct of two officers toward Naulalik on July 19, 2014. We have chosen not to publish their names until they have

been disciplined or charged with offences. The alleged assaults against Naulalik made national headlines when *Nunatsiaq News* broke the story in May 2015. According to court documents and lawyers involved, Naulalik had been picked up by police in Iqaluit on three minor infractions July 18, 2015, and found himself in RCMP cells. While there, he had an altercation with two RCMP officers which was captured on closed-circuit video. Nunatsiaq News

***A new crime trend?**
A Charlottetown man is in jail after a violent event at a motel in Stratford Sunday involving a man brandishing a samurai sword. Queens district and Stratford RCMP were called to the Southport Motel just after 5 p.m. on Sunday after two men were reported to be involved in a heated argument. RCMP Const. Dave Ngo says the accused was upset with his daughter's boyfriend and drove to the motel with the sword. "The individual ... threatened to use the samurai sword on the victim, at which point an altercation did occur," Ngo said. The victim managed to take the sword from the 67-year-old alleged offender during the altercation, just before police arrived on scene. The accused man suffered only minor injuries from the incident, thanks in part to the fact the victim successfully prevented the assailant from exiting his vehicle. Frank Trainor, age 67, of Charlottetown, has been charged with assault with a weapon and uttering threats. Curiously, incidents involving samurai swords appear to be on the rise in Stratford. This marks the third use of the swords leading to arrests in the last two years. John Robert Long was sentenced to 30 months in jail for swinging a samurai sword at two RCMP officers in January 2014. In an unrelated incident in October 2013, Stratford RCMP had to Taser a man who rushed officers while swinging two samurai swords. Jonathan Cantelo was banned from possessing weapons for 10 years and served three months in jail after being sentenced in January last year. Guardian, A3

RCMP heroes treated poorly
An opinion piece states ''As the training ground for Canada's national police force since 1885, it's not too much of a stretch to call Regina the spiritual home of the Royal Canadian Mounted Police. Since the days of the RCMP's forerunner, the North-West Mounted Police, all Mounties have begun their career at Depot Division. It's a tradition this province is proud of, and one reason why we are inclined to consider these men and women "our" Mounties, long after they've completed their basic training in Regina. Thus, the force's missteps in recent years have been keenly felt here, particularly the troubling claims of bullying, harassment and even sexual assault of female members across the country that are the subject of a class-action lawsuit by 375 women. These and other complaints from the rank and file - including men - have created the impression of an out-oftouch senior command downplaying the welfare and concerns of the men and women who serve us. RCMP Commissioner Bob Paulson took over the top job four years ago pledging to tackle "the culture of misuse of authority" raising hope a new era of respect and civility would be established. Paulson has done a lot toward that end, but we are puzzled and disappointed that respect seems absent in the treatment of the four brave Mounties who confronted the gunman who attacked Parliament Hill a year ago. After fatally shooting Cpl. Nathan Cirillo as he stood guard at the National War Memorial, his killer ran into the Parliament building. Former sergeant-at-arms Kevin Vickers got most of the praise for helping kill the gunman, and was rewarded by Prime Minister Stephen Harper with a posting to Ireland as Canada's ambassador. But more than a year later, the four Mounties who helped Vickers subdue the gunman - Const. Curtis Barrett, Const. Martin Fraser, Sgt. Rick Rozon and Cpl. Dany Daigle - have still not received the recognition promised them by the RCMP. Paulson said two weeks ago that the awards are still coming, but had been delayed pending a number of reviews of the incident. Really? Vickers was recognized right away, but it takes a year to determine whether the bravery of these officers is worth a medal? Compounding this woeful inaction is the fact the four officers weren't invited to last week's ceremony in Ottawa to mark the one-year anniversary of the attack. CTV reported that since the shooting, one of the officers was even briefly assigned to RCMP car wash duty. While former RCMP deputy commissioner P.Y. Bourduas told CTV that the failure to include the men in the ceremony was a "regrettable oversight," Paulson said he has publicly thanked the officers, and that a ceremony is being planned for the four Mounties to get commendations and bravery awards.'' Postmedia News (StarPhoenix, A6)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Convicted wife killer seeking an early parole
A 76-year-old Calgary man convicted of strangling his commonlaw wife Joanne Kotyk on July 31, 1995, and sentenced to life with no parole for 25 years, is making another attempt at gaining early freedom. Wilfred Oscar Trohan, whose application was stayed last January in his first bid for early parole under the Criminal Code's so-called faint hope clause, again appeared in Court of Queen's Bench on Monday before Chief Justice Nail Wittmann. This time, his lawyer Kim Ross said they are attempting to revive the application. "Correctional Service Canada says we're out of time to apply. There's a 90-day window you have to make your application," Ross said after the brief appearance. "We're trying to revive it." There was some uncertainty when Trohan first applied in June 2014 whether he was aware of legislation introduced in 2011 that gave prisoners serving a life sentence a 90-day window to file the application to have parole ineligibility reduced once they have served 15 years and become eligible. Once an application is made, Correctional Service Canada would produce a report outlining his behaviour while behind bars, which would then appear before a judge to determine its merit. If the offender passes that hurdle, it is put in front of a jury to consider. However Wittmann stayed it at the first stage. Calgary Herald, A8

$10M settlement reached with Malley clients
A settlement topping $10 million has been reached in the class action lawsuit against a financial advisor in jail for the bombing death of a former client. Currently serving a life sentence for a first-degree murder conviction, Brian Andrew Malley, 58, of Innisfail, was also one of the defendants in an $80 million class action lawsuit from his former clients. Malley, his wife Christine and the two companies they administered and directed - Assante Wealth Management and Assante Capital Management, were all the subject of the lawsuit launched in 2012. A recently reached settlement of $10 million is now open for former clients to apply for a share of the money. Red Deer Advocate, A1

* **Cocaine dealer gets full parole**
Sheer greed and gambling fuelled Justin Alexander Corbett's need for quick money and he became a drug dealer. Corbett, 38, was one of three men charged with possession for the purpose of trafficking after police seized 15 kilograms of cocaine from a Dartmouth post office box over two days in August 2007. On Oct. 22, the Parole Board of Canada granted Corbett full parole from his 10-year sentence in federal prison. Upon release, Corbett is permitted to live with a close friend instead of in a halfway house. The parole board has ordered Corbett avoid any establishments where gambling is the primary source of income and not to gamble or associate with other criminals. While previously on full parole in 2011, Corbett returned to the drug trade, was subsequently convicted and received four years consecutive for the new drug trafficking charge. Chronicle-Herald, A6

* **Lawyer slams 'outrageous' Legal Aid denial**
An Edmonton lawyer is bemoaning the state of Legal Aid Alberta after coverage was denied for an appeal of a murder conviction where the Crown was actually conceding. Defence lawyer Deborah Hatch -- who recently argued the successful appeal pro bono -- said Monday she had to go to Alberta's highest court to get an order appointing her as counsel, which was granted last week and now means the Attorney General will have to pay her fees. Hatch says Legal Aid's decision to deny funding for the appeal, based on there being no merit, is "completely outrageous" in the face of the Crown agreeing to the appeal, which led to the murder conviction being quashed. (...)The appeal stemmed from the second-degree murder conviction of Wendy Scott, a 31-year-old woman with an IQ of 50, in the May 2011 killing of Casey Armstrong, 48. The victim was found in the bathtub of his Medicine Hat trailer home with a knife wound to his neck. Scott, who admitted to police she gone to Armstrong's trailer with Connie Oakes, 51, and watched her kill him, pleaded guilty and was a Crown witness against Oakes, who was also sentenced to life in prison after being convicted by a jury of second-degree murder. (...)After quashing the conviction on Oct. 15, the Court of Appeal ordered that a new trial be held for Scott. She is slated to be back in court in Medicine Hat on Nov. 19. Meanwhile, Oakes has also appealed her conviction. Edmonton Sun, 26

* **All charges in fatal shooting of robber have been resolved**
The final chapter has been written in a killing last year near Baden. Eight people were charged after three robbers were shot - one fatally - by the robbery victim's son, Crawford Lamka. The only outstanding charges in the case were withdrawn this summer, court records show. Claude Ouellette, 53, of Kitchener,

had been charged with being an accessory after the fact to manslaughter and unauthorized possession of a firearm. Ouellette was not one of the robbers. Rather, police had alleged he disposed of the handgun used to kill the robber, Henry Jarsch. (…)In October 2014, Lamka was sent to prison for four years after pleading guilty to manslaughter for using excessive force in self-defence. With credit for time already served, today Lamka has two years in custody remaining Lamka was initially charged with second-degree murder and two counts of attempted murder. Defence lawyer Brennan Smart said Lamka, who has a form of autism and an attention-deficit disorder, may have overreacted in part because he found his father badly beaten after an attack with a baseball bat when he was a boy. Waterloo Region Record, B1

*** 'Sleepwatcher' released from prison, will reside in community**
The man many have called the 'Sleepwatcher' has been granted conditional parole, and will reside in the Community Correctional Centre during statutory release. Barry Edward Sinclair, 52, was sentenced to five years in prison in 2013 for breaking into several apartments where young women lived. Sinclair has a lengthy criminal history, dating back 30-years. He has prior convictions for break and enter, sexual assault, indecent exposure and trespassing at night. Parole documents obtained by Global News say most of Sinclair's crimes are a continuation of '"sexually motivated offences," which date back to 1980, and consist of him entering homes of randomly selected females that are believed to be alone or single. The documents also state Sinclair began "sexually deviant behaviour" as a young teenager. The Parole Board of Canada believes Sinclair is a moderate risk to re-offend in general and a high risk to re-offend in a sexual manner given the lack of progress in his correctional plan. Global News (OR-Politics) (2015-10-26)

*** Courts shouldn't make up facts to kill off new laws**
An opinion piece states, "Section 12 of the Canadian Charter of Rights and Freedoms states: "Everyone has the right not to be subjected to any cruel and unusual treatment or punishment." It's hard to argue against this principle. (…) But I expect judges to make the determination using reasonable criteria, based on the facts before the court. However, the Supreme Court of Canada has given our courts the power to make this determination without any regard to the facts before the court. As a result, courts are considering hypothetical or made-up situations that have never occurred and may never occur when deciding on the issue of cruel and unusual punishment. In an April 2015 decision, the SCC struck down the mandatory minimum three-year sentence for illegal gun possession by a vote of 6-3. But it wasn't that the imposition of minimum sentences on the two people in the case was cruel and unusual. They were, in fact, reasonable sentences. However, the imposition of a mandatory three-year sentence would have been cruel and unusual in a far-fetched hypothetical situation, a made-up situation that had never been before the court. So the Supreme Court justices struck down the mandatory minimum sentence law." The Province

*** Canada-wide warrant**
The Repeat Offender Parole Enforcement (ROPE) Squad is requesting the public's assistance in locating a federal offender known to frequent the Cornwall area, who is wanted on a Canada-wide warrant as result of a breach of parole. Paul Ouderkirk is described as an aboriginal male, 33, 5' 6" (167 cm), 180 lbs (82 kg). He has a tattoos of Tribal Flames and a naked woman with wings on his left arm, buck shot and Tribal Flames on his right forearm. He also has a surgical scar on his upper chest area. Ouderkirk is serving a three-year sentence for Robbery (four counts), Carry a Concealed Weapon, Possession of Weapon for a Dangerous Purpose and Fail to Comply with Probation Order. Cornwall Standard-Freeholder, Seaway News (2015-10-26)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Toutes ces larmes ignores
Un article d'opinion déclare, « Comme bien des gens, j'ai été bouleversée par les témoignages de femmes autochtones de Val-d'Or présentés dans l'excellent reportage d'Enquête, la semaine dernière. J'ai été choquée par les allégations d'abus et d'agressions sexuelles. J'ai aussi été choquée de voir que les autorités, au courant de certaines allégations depuis le mois de mai, aient attendu que le scandale

soit médiatisé pour se réveiller. Fallait-il vraiment cinq mois pour établir que les allégations étaient suffisamment graves pour que les policiers visés soient suspendus le temps de l'enquête? Fallait-il cinq mois pour réaliser qu'il était mal avisé de confier à la Sûreté du Québec une enquête sur la Sûreté du Québec? (...)Avant que la ministre Thériault ne verse une larme, il y a eu des décennies de vies volées, de larmes ignorées et d'histoires étouffées. Des décennies d'impunité et d'indifférence. Et pourtant, on savait. Depuis 15 ans, les rapports au sujet de la discrimination et de la violence contre les femmes autochtones se multiplient. Amnistie internationale, Femmes autochtones du Québec, Association des femmes autochtones du Canada, Human Rights Watch... Tous ces groupes et plusieurs autres encore ont documenté une situation tragique sur laquelle on ferme les yeux depuis trop longtemps. » La Presse, A5/Front

*** Time for inquiry**
An editorial states, "The timing, it seemed, was worthy of a top-notch Hollywood movie. No sooner had the keys to Parliament been handed to a party that has promised a national inquiry into Canada's missing and murdered indigenous women when news broke last week Quebec provincial police face allegations they have taken aboriginal women for rides out of town and demanded sex. The aboriginal communities' distrust of police across Canada is like a poison infecting efforts on both sides to battle the violence plaguing indigenous girls and women. Yet, the coincidence is not so remarkable: on any given day, Canadians can hear of yet another tragedy, heinous crime or grave offence against an aboriginal person. This is a sad reflection on the reality in this country. And Justin Trudeau's Liberal government has now assumed the prime responsibility of addressing the historical, complex factors that feed into a shameful state of affairs." Cape Breton Post, A8, Toronto Star (Hamilton Spectator)

*** How deep is culture of erasing public records?**
An opinion piece states, "Last week's bombshell report on the Christy Clark government's destruction of records related to the Highway of Tears was shocking enough. But here's the question that's even more disturbing: Just how deep does this government's culture of recordshredding and coverup really go? That's what the NDP is trying to find out at the legislature, where more evidence emerged Monday of high-level document destruction in Clark's government. (...)This all follows last week's stunning report from Elizabeth Denham, the independent information and privacy commissioner. Denham found a senior government insider erased emails related to the murders and disappearances of aboriginal women along Highway 16 - the Highway of Tears - in northern B.C., and then lied about it under oath. Denham also found similar email mischief going on in Clark's office and in the office of the Ministry of Advanced Education. So is the record-destruction confined to just three offices?" The Province, A6

Objectif: déstabiliser les autorités
A la fin des années 90, alors que les attentats contre les gardiens de prison secouaient la région de Montréal, les Hells Angels de Sherbrooke ont mené - sans jamais être inquiétés - leur propre entreprise visant à déstabiliser les autorités, révèle le délateur Sylvain Boulanger. Ennuyés par l'attention que la police leur portait, les Hells de Sherbrooke ont commandé une série d'incendies criminels visant des bâtiments de la Ville, allant même jusqu'à mettre le feu à une maison de jeunes, affirme le motard qui a retourné sa veste. Sylvain Boulanger est à l'origine de l'opération SharQc, la plus vaste opération antimotards au Canada. Plus de six ans après le début des procédures judiciaires, la majorité des accusés ont plaidé coupables à une accusation de complot de meurtre en échange de l'abandon par la poursuite des accusations les plus graves. La Presse (La Tribune, 15/Front)

Pour faire bouger les choses
Victime de violence conjugale au point où son ex-conjoint a attenté à sa vie, Roxane Trépanier-De La Bruyère veut faire bouger les choses pour aider non seulement les femmes qui vivent dans ce terrible silence, mais l'ensemble des victimes d'actes criminels. La Sherbrookoise de 29 ans souhaite que les victimes soient représentées par leur propre avocat lorsqu'elles décident de prendre leur courage à deux mains et de dénoncer leur agresseur. Elle vient de lancer une pétition sur Internet pour la défense des droits des victimes d'actes criminels qu'elle veut déposer aux députés de Sherbrooke Luc Fortin et de Richmond Karine Vallières. (...)Dans son cas, l'agresseur c'est Michaël Asselin, le père de son garçon, qui vient d'être condamné à 35 mois de prison à Thetford Mines pour l'avoir braquée, elle et ses enfants,

avec une arme à feu prohibée, chargée. Asselin avait aussi été reconnu coupable de menaces de mort sur ses enfants et de possession d'arme prohibée avec des munitions. La Tribune, 3/Front

Police service looking for budget hike
The Regina Police Service is looking to the city for more money in 2016. Although we know how much RPS wants and what they intend to use it for thanks to documents presented at Monday's city council meeting, no police representatives visited City Hall for additional comment. Council tabled the matter for budget deliberations in December, as is customary. When asked, Mayor Michael Fougere said it is too early to comment on the document. The proposed gross operating budget is 5.1-percent higher, or $3.9 million more, than this year, for a total of $80.8 million. Staffing forms nearly 90 per cent of the gross operating budget, including $2.66-million worth of salary increases planned for 2016. If approved, residents will see eight more patrol officers on the street. RPS is also planning on converting two sworn positions to civilian ones to offset that cost. In addition, the heftier budget covers costs related to a new radio system, improvements to the 9-1-1 call centre, and conducted energy weapon (Taser) cartridges and ammunition. Revenues are expected to increase, too, by 3.2 per cent, or $282,500, to $9.15 million. Leader-Post, A1

* **Ontario police chiefs 'disappointed' with safety minister's stance on carding reforms**
Ontario's police chiefs are "disappointed" with how the province is handling its plans to regulate police street checks and worry officers will be "handcuffed" by new rules expected this fall. J.P. Moczulski for National PostProtesters partially block the intersection of Yonge and Bloor Streets prior to the start of the Ontario Street Checks hearings on carding in Downtown Toronto on Tuesday, September 1, 2015. The comments come days after reports minister of community safety Yasir Naqvi suggested he would ban the practice of "arbitrary carding" with a regulation expected to be released later this fall. Naqvi has maintained since June that the practice of seemingly random, often racially biased stops by police must end. Though the minister hasn't really changed his tone since, his participation in an opposition motion to fully ban carding last week was interpreted by some as a sign he would outright ban street checks, more commonly known as carding. On Monday, Naqvi clarified that he will be regulating, not banning, the controversial practice. "Our principle has been the same all throughout (the consultation process): one there is no room for any discrimination or racial profiling... the second thing we've said and we've been saying it quite consistently, is that any kind of carding or street checks predicated on any race or bias without any reasonable cause for stopping somebody is absolutely unacceptable and we will put an end to that through regulation," Naqvi said. He also said the province is looking at how to handle "other kinds of voluntary interactions with police." National Post

* **Carding ban unhelpful, sensible rules needed**
An opinion piece states, "Police services across Ontario - including in Hamilton - are probably not troubled by the news that the provincial government plans to outlaw arbitrary and random police carding. Can you name one service that will admit it does random and arbitrary carding to begin with? In Hamilton, police refer to "street checks" as opposed to carding, but the difference is semantic. And Hamilton police would vehemently deny they conduct the checks for random or arbitrary reasons, and certainly never because of ethnicity (skin colour) alone. They would argue they only do checks when they have legitimate investigative reasons for doing them. So the province is planning to ban a practice that Hamilton police, and probably all police across the province, insist they don't do anyway. What good is the ban, then? To be fair, the province has only so far announced its intent, and says the rules and regulations that go along with the ban are still in development and should be rolled out by this fall. So maybe there will be adequate substance there by the time implementation rolls around. Let's hope so, because a simplistic ban will not be helpful." Hamilton Spectator

* **Police chiefs unveil how media partners help heal violent extremist tragedies**
At IACP 2015, a distinguished group of police leaders gathered to discuss a wide range of issues related to preparing and responding to violent extremists and their attacks. The panel — consisting of Charleston Police Chief Gregory Mullen, Chattanooga Police Chief Fred Fletcher, Ottawa Police Service Chief Charles Bordeleau, and Jean-Jacques Colombi, the chief of international relations for the French National Police — was moderated by Pierre Thomas, the Senior Justice Correspondent for ABC News. Each of

these law enforcers held key leadership positions during four recent attacks by radicalized individuals. Police One

Netherlands won't pursue international charges
Dutch authorities have dropped international child pornography production charges against Aydin Coban, the Dutch man accused of extorting B.C. teen Amanda Todd, whose 2012 suicide galvanized international efforts to stamp out cyberbullying. In a press release last year, the Dutch Public Prosecution Service accused Mr. Coban of producing and distributing child pornography, with victims in the Netherlands, Canada, Britain and the U.S. One of those alleged victims was Ms. Todd. On Monday, however, Dutch prosecutors told Mr. Coban's lawyer and Dutch media that it would solely pursue child-pornography production charges where there was a Dutch victim. Globe and Mail, A5

*** Human trafficking victim shares story**
Several years ago, Taylor left her homeland and came to Canada with her husband and children looking for a better life. "I had the idea that we were going to start over, maybe go to school, that sort of pretty dream," said Taylor, who didn't use her real name or any identifying details out of concern for her safety. Instead of chasing a dream, she fell into a nightmare of torment and abuse. Her husband physically abused her and eventually started pimping her and two other girls out for sex. "He had always been abusive," the 32-year-old said. "He set me on fire once. The abuse was so terrible that escorting was minor." Eventually, Taylor and the other two victims fled her husband and the city they lived in and headed to Windsor where they heard the rates for sex were higher. Her life took a turn when she "got into issues with the police and they took us to a shelter." Last week, police forces from Windsor, LaSalle and Amherstburg took part in a massive North American investigation into human trafficking. Operation Northern Spotlight resulted in the arrests of 47 people from across the province who are now facing 135 human-trafficking related charges. None of the arrests were made locally but a number of women identified by authorities as sextrade workers were offered safety plans and resources to exit their lifestyle. Taylor's personal journey out of darkness began when she met Shelley Gilbert, the co-ordinator of social work services with Legal Assistance of Windsor. Postmedia News (Windsor Star, A8)

*** Canada's climate boy scout**
An opinion piece states, "As the Paris climate summit approaches activists are gearing up for the final push through November and into December, although the movement suffered a bit of a downer over the weekend. Hurricane Patricia, building as a major hurricane of unprecedented proportions, fizzled as a climate mega-disaster into a mere tropical storm, leaving behind no opportunities for media and negotiators to use it as a pre-Paris PR bonanza. As news of Patricia reached Europe at a climate change negotiating session in Bonn on Friday, the head of the Mexico delegation, Roberto Dondisch, said Patricia was evidence the frog was already in the boiling water. A reporter for Climate House quoted

Dondish saying "I don't think I need to say more about the urgency to get this deal done.'" Postmedia Network (National Post, FP, 9)

*** Death toll reaches 311 in quake-hit Pakistani, Afghan areas**

Rescuers were struggling to reach quake-stricken regions in Pakistan and Afghanistan on Tuesday as officials said the combined death toll from the previous day's earthquake rose to 311. According to Afghan and Pakistani officials, 237 people died in Pakistan and 74 in Afghanistan in the magnitude-7.5 quake, which was centered deep beneath the Hindu Kush mountains in Afghanistan's sparsely populated Badakhshan province that borders Pakistan, Tajikistan and China. Afghan authorities were scrambling to access the hardest-hit areas near the epicenter, located 73 kilometers (45 miles) south of Fayzabad, the capital of Badakhshan province. In Pakistan, the Swat Valley and areas around the Dir, Malakand and Shangla towns in the mountains of Khyber Pakhtunkhwa province were also hard-hit in the quake. The Pakistani town closest to the epicenter is Chitral while on the Afghan side it is the Jurm district of Badakhshan. More than 2,000 people were injured in Monday's temblor, which also damaged nearly 2,500 homes in Pakistan, officials said. ChicagoTribune.com; UPI.com

*** Taliban urge rescuers 'not to hold back' on Afghan quake relief**

The Taliban urged aid agencies on Tuesday to push ahead in delivering emergency relief supplies after a major earthquake hit remote mountainous regions of northern Afghanistan and Pakistan, killing at least 300 people. Relief groups' efforts to assess the damage were hindered by an unstable security situation that has left much of the affected areas unsafe for international aid workers and government troops. But the Taliban, which have stepped up their Islamist insurgency against the Western-backed government in Kabul this year, indicated they would not stand in the way of aid efforts. Reuters.com

MINISTER / MINISTRE

Goodale eyes C-51 as newly minted public safety minister
Ralph Goodale admits a job as Canada's **public safety minister** was ***"not something (he'd) given a lot of thought about"*** - until he learned he'd be getting it in the new federal government. Now, the veteran Regina MP is ''***impressed by the magnitude in that ministry." "It's a very big file, "*** he said in a wide-ranging interview Wednesday***. "It's the Canadian equivalent of Homeland Security,"*** referring to the massive agency in the U.S. ***"There's nothing more important than it to the proper functioning of the country."*** His ''leading priority'' will be overhauling the Conservatives' controversial Bill C-51, which covered surveillance and counterterrorism work by federal agencies. **Goodale** said the Liberals had been ***"highly critical"*** of C-51 during the election campaign and have already done ***"extensive work***'' on how they'll change it, now plugging into the advice of the public safety ministry itself and the federal department of justice. ***"Canadians repeatedly said that they expect the government to keep them safe - and also expect their***

government to respect civil liberties," he said. **Goodale** specifically mentioned revitalizing the Security Intelligence Review Committee by putting onto it sitting politicians who'd be sworn to lifetime secrecy on security details, but could report the big picture back to Parliament. He acknowledged the reported leaks from parallel bodies in other western countries, but ***said Canada could learn from them what to do and not to do. He said a reinvented SIRC could do two things: Make sure security agencies are doing a "good, competent job" and "appropriately respect civil rights and civil liberties."*** C-51 was passed by Stephen Harper's Conservative government in the wake of two murders of Canadian soldiers last autumn. It was defended by the Tories - and just as determinedly attacked by the NDP and civil libertarians. As Liberal leader, Justin Trudeau steered a middle course, supporting C-51, but also stating he'd quickly change it to reflect concerns about government intrusions into privacy. The appointment of **Goodale**, with 27 years of experience as an MP, illustrates the importance Trudeau attaches to reconciling these opposing views. The Liberal platform also sought a mandatory threeyear review of C-51, balanced by more resources for security work - a reference to the 2014 transfer of 600 RCMP investigators from fraud and drug cases to counterterrorism. Colleen Bell, an assistant professor at the University of Saskatchewan, advised **Goodale** to scrap C-51 entirely and replace it with tighter supervision of security agencies, plus more regard for how Canadian foreign policy might be creating terrorists overseas. Postmedia News (StarPhoenix, A4, Leader-Post, A1)

Trudeau unveils diverse cabinet 'that looks like Canada'

Prime Minister Justin Trudeau and his 30 new ministers started tackling thorny issues within hours of forming government, including two ambitious priorities by year-end: a shift of the tax burden from the middle class to the rich and the resettling of 25,000 Syrian refugees. On a sunny day in Ottawa, Mr. Trudeau and his team walked up to the entrance of Rideau Hall to be sworn in, applauded by thousands of supporters who watched the ceremony on large screens set up outside. Mr. Trudeau promised a government that would "get things done," pointing out his team includes representatives from all provinces and features members from a variety of ethnic origins. "It's an incredible pleasure for me to be here today, before you, to present to Canada a cabinet that looks like Canada," Mr. Trudeau said to cheers from the crowd. All ministers spoke to the media about their new portfolios, quickly setting a different tone than the previous Conservative government. There were few concrete details, but the Minister of Immigration, Refugees and Citizenship vowed to meet the promise to welcome 25,000 asylum seekers displaced by the war in Syria in less than two months. "It remains our firm objective," John McCallum said, vowing to work with other federal departments, the provinces and various NGOs. **Public Safety Minister Ralph Goodale**, whose department will screen the refugee claimants, added: ***"We are going to bend every effort to get this job done, get it done right and properly, and fulfill the commitment the Prime Minister made."*** Globe and Mail, A1

A look at some issues facing Justin Trudeau's first cabinet

The new federal cabinet has a lot of issues to tackle, and not a lot of time to learn their files. Here is an idea of what each new minister faces**: Minister of Public Safety and Emergency Preparedness Ralph Goodale**: The new public safety minister must tackle the reversal of some of the more contentious anti-terrorism provisions contained in Bill C-51, and oversee a promise from the Liberals to have more parliamentary oversight of Canada's national security agencies. Canadian Press (Daily Gleaner, B3, Times & Transcript)

Trudeau sworn in

Justin Trudeau has launched a new Liberal era with a 30-member cabinet that features predominantly fresh faces, an equal number of men and women and probably the most diverse line-up of ministers in Canadian history. The newly minted prime minister emerged Wednesday from the formal swearing-in ceremony boasting that he's put together a cabinet "that looks like Canada." ... The rookies will be backstopped by seven veterans with previous federal or provincial cabinet experience, including: **Ralph Goodale** in **Public Safety**; Stephane Dion in Foreign Affairs; John McCallum in Immigration, Refugees and Citizenship; Carolyn Bennett in Indigenous and Northern Affairs; Canadian Press (Kingston Whig-Standard, B1/Front, Record, Edmonton Journal, Spectator, Windsor Star); Le Devoir, A1; Guardian; Chronicle Herald; Telegram; Sun Media Corporation (London Free Press); Postmedia Network (Vancouver Sun, Ottawa Citizen); Postmedia News (Ottawa Citizen); La Presse, A3

Guards union 'welcomes' new government

The national vice-president of the Union of Canadian Correctional Officers says he's "cautiously optimistic" that relations with the new Liberal government will be better than it was with the previous Conservative government. On Wednesday, Prime Minister Justin Trudeau was sworn in and **Ralph Goodale**, a cabinet minister in previous Liberal governments, was appointed **public safety and emergency preparedness minister**. "Certainly we welcome the new government, welcome the new minister, and we want to sit down with him and certainly talk about correctional issues," said Jason Godin in an interview Wednesday. "Unlike the previous government, we hope this government has an open-door policy and will sit down and have conversations with us." Godin hopes the lines of communication, which were shut down when Vic Toews was the Conservatives' public safety minister, will be open with Goodale. "He brings a lot of experience, obviously, to the government and hopefully he'll sit down with us in the very near future to discuss some of our issues." While the Conservatives were in power, they closed Kingston Penitentiary, shut down the prison farms and came in with anti-labour

and anti-union legislation. The Conservatives changed the definition of danger in the Canada Labour Code, which concerned correctional officers a great deal, Godin said. "There wasn't any warning or consultation when they changed the definition of danger and we're hopeful this government will act fairly expeditiously to bring things back to where they were to resolve our health and safety issues for correctional officers." TRUDEAU, TEAM OF 30 CABINET MEMBERS SWORN IN TO KICK OFF NEW LIBERAL ERA

Justin Trudeau kicked off a new Liberal era Wednesday with a 30-member cabinet that features predominantly fresh faces, an equal number of men and women and probably the most diverse lineup of ministers in Canadian history. The newly minted prime minister emerged Wednesday from the formal swearing-in ceremony boasting that he's put together a cabinet "that looks like Canada." Fully 18 of the newly minted ministers are rookies who won election for the first time last month, including the all-important finance minister, multimillionaire Toronto businessman Bill Morneau. The cabinet includes two aboriginal ministers, two disabled ministers, one openly gay minister, a refugee from Afghanistan and four Sikhs - one of whom was once wrongly accused of terrorism, tortured and detained without trial for almost two years in India. "The diversity that is reflected around the cabinet table and in the House of Commons is incredibly empowering," said Jody Wilson-Raybould, Canada's first indigenous justice minister. "(It) brings new voices to the table for substantive discussions and debate and dialogue and different perspectives from backgrounds but ultimately working together to move forward in terms of solutions." Wilson-Raybould will be one of the most powerful of Trudeau's ministers, responsible for a raft of priority issues, including the promised legalization of marijuana, a new law governing medically assisted dying, new prostitution legislation and the promised rewrite of controversial anti-terrorism legislation. Canadian Press (Red Deer Advocate, A1, A2)

New justice minister faces some of Canada's biggest legal challenges

British Columbia aboriginal leader Jody Wilson-Raybould is a newcomer to government but not to the law, and as Justin Trudeau's newly named justice minister she faces several of the country's biggest legal challenges ever. Drafting an assisted suicide law to conform to a Supreme Court of Canada ruling last February immediately falls to Wilson-Raybould, a lawyer, former provincial Crown prosecutor and treaty commission adviser. Her other big agenda items include Trudeau's pledge to legalize marijuana, and whether to defend a number of Conservative government laws and policies that face constitutional or legal challenges in the courts. Those include: The niqab ban at citizenship ceremonies. The law that allows terrorists holding dual citizenship to be stripped of their Canadian passport. Mandatory minimum sentences for people convicted of growing small amounts of marijuana Arbitrary curbs on sick leave provisions for public servants. Amending the national security scheme under Bill C-51 to meet the Liberal campaign pledge of more parliamentary oversight and ensuring CSIS respects Charter rights. Wilson-Raybould will doubtless be a key hand on legal issues involving aboriginal communities as well. Toronto Star; 1

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Un ex-prisonnier de Guantanamo interdit d'entrée au pays

Un ex-détenu français à la prison américaine de Guantanamo qui est aujourd'hui un militant pacifiste a été arrêté mardi à sa descente d'avion à Toronto, pour des motifs de sécurité nationale. Il pourrait bien être renvoyé chez lui, selon son avocat. Mourad Benchellali, de Lyon, est connu pour son travail en matière de «déradicalisation» chez les jeunes islamistes et il devait donner une série de conférences sur le sujet au Canada. Il a été détenu dès mardi soir comme un prisonnier à sécurité maximum à l'Aéroport de Toronto après que les agents de l'immigration eurent refusé qu'il puisse retirer sa demande d'entrée au Canada et rentrer volontairement en France. Selon son avocat, Hadayt Nazami, les autorités auraient maintenant changé d'avis et seraient prêtes à le laisser regagner son pays - dès mercredi soir, semble-t-il. L'Agence des services frontaliers du Canada a refusé de commenter. (…). Selon son avocat, M. Benchellali s'est appliqué depuis à combattre la radicalisation des jeunes Français. Me Nazami soutient que le Service canadien du renseignement de sécurité et la Gendarmerie royale du Canada avaient tous deux autorisé sa visite de cinq jours au Canada. M. Benchellali avait gagné le Canada via l'Islande, pour éviter de survoler les États-Unis, où son nom figure toujours sur la liste d'interdiction de vol, selon son avocat français. La Presse Canadienne (Acadie Nouvelle, 17, La Presse, 13); Canadian Press (Red Deer Advocate, C2, Times Colonist); Canadian Press (Times & Transcript, B5); London Free Press, B1/FRONT

Woman involved in murder case denied bid to appeal sentence
A foreign national who pleaded guilty to being an accessory after the fact to a Halifax murder will be deported back to her homeland of Saint Vincent. In a written decision released Wednesday, the Nova Scotia Court of Appeal dismissed Debra Jane Spencer's motion to extend time to file a notice of appeal of her sentence. On March 9, 2014, Bradford Eugene Beals murdered David William Rose, 65, in a south-end Halifax rooming house. Spencer, Beals's girlfriend at the time, was at the scene of the murder. Beals and Spencer were arrested two days later. In May 2014, Spencer pleaded guilty and was sentenced to two years in a federal prison. (…)"Ms. Spencer makes it clear that the only objective of her appeal is to avoid deportation," Justice Joel Fichaud wrote in the decision. "To succeed with her objective, Ms. Spencer would have to persuade a panel of this court to reduce her sentence from two years to six months." In Spencer's case, Fichaud said, such a reduction would drop her sentence "far below the range of sentences for being an accessory to murder." "There is no possibility that a panel of this court would order that reduction," the judge wrote. "In my view, her submission is not an arguable ground of appeal." Fichaud dismissed Spencer's motion. Chronicle-Herald, A7

10 % plus d'Américains à Québec cet été
La dépréciation de la devise canadienne a été bénéfique pour l'industrie touristique dans la région de Québec dont les activités ont progressé de 2,1 % au cours de l'été. L'augmentation des principaux indices a été encore plus significative en septembre avec 11,5 % d'augmentation globale, selon les chiffres dévoilés hier par l'Office du tourisme de Québec. En détail, pour l'été 2015, on note une hausse de 3,4 % de l'achalandage dans les hôtels et de 0,6 % dans les restaurants. En ce qui concerne les attraits et les boutiques, l'achalandage a crû de 2 %. Les données observées en septembre sont encore plus spectaculaires. Selon le directeur général de l'Office, André Roy, il s'agit des meilleurs résultats pour septembre depuis le 400e anniversaire de la ville de Québec, en 2008. (…) Historiquement, le mois de septembre attire principalement des touristes hors Québec. Les entrées en provenance des États-Unis à la frontière sont en nette progression (+9,8 %) pour les mois de juin à août 2015. «C'est sûr qu'il y a une corrélation directe entre la valeur du dollar canadien et le nombre de visiteurs américains.» Journal de Quebec, 19

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

LAW ENFORCEMENT / APPLICATION DE LA LOI

Law prof will oversee Val-d'Or probelt might sound like mission impossible.
On Wednesday Quebec's premier thrust Fanny Lafontaine into the centre of the country's most highly publicized police brutality scandal. Her task is to ensure that Quebecers can trust an investigation in which cops from the Montreal police force delve into claims that their colleagues at the Sûreté du Québec physically and sexually abused aboriginal women while on the job. First Nations leaders have already expressed reservations about Lafontaine's ability to pull it offand the SQ's rank-and-file say there shouldn't be an investigation to begin with. Furthermore, Premier Philippe Couillard says he offered the job to other candidates, who turned it down. But Université Laval professor Lafontaine says she wouldn't have accepted to be named the civilian observer of this controversial police probe if she doubted its mandate. Before her appointment, Lafontaine says she received written assurances from the government that she would have full access to the case's chief investigator, to police files, interview transcripts and receive first-hand knowledge of how interrogations are conducted. If she sees anything remotely off base, Lafontaine has the authority to denounce it to the Minister of Public Security. Gazette, A7

Affaire Michel Vienneau
Annick Basque, la compagne de Michel Vienneau, abattu par un agent de la police municipale de Bathurst, a retiré sa demande en cour visant à recevoir les échanges électroniques d'Échec au crime. Elle garde cependant le cap pour la divulgation de toute la documentation entre les mains de la GRC de la Nouvelle-Écosse et les dossiers du coroner. Dans une communication du 31 octobre, l'avocat de Mme Basque avise le tribunal de Bathurst des changements(…)Ils exigeaient également d'avoir tous les documents en possession de l'organisme de la prévention du crime relatifs à Michel Vienneau. Comme l'Acadie Nouvelle le révélait en primeur, c'est une information anonyme à Échec au crime qui a déclenché la surveillance policière du couple Vienneau-Basque à la gare VIA Rail de Bathurst. Une ou plusieurs balles ont atteint M. Vienneau alors qu'il quittait le stationnement à bord de son véhicule. La source affirmait que le couple aurait un chargement de drogues, des pilules, à son arrivée en train. Il revenait de Montréal. Échec au crime ne révèle jamais l'identité des dénonciateurs, ni toute information qui pourrait les identifier. Cette garantie est protégée par la Cour Suprême. Néanmoins, la compagne de l'homme d'affaires de Tracadie insiste pour que la GRC lui fournisse tous les documents pertinents de son enquête sur les circonstances du drame. Elle veut également les fichiers d'autopsie et de toxicologie du coroner. Acadie Nouvelle, 6

When protecting privacy means protecting scum of society

Toronto police Det. Paul Krawczyk is posing as a pedophile in an online chat forum where anonymous men are sharing some of the most troubling thoughts the mind can fathom - from luring young children for sex to feeding them rape drugs. "This person has told me . . . they're interested sexually in 3-year-olds to 9-year-olds," says Krawczyk, a senior child exploitation investigator, reading a message sent on a "boy love" chat forum. The online posters trade technical tips on how to hide their identities from police throughout. "He's saying to use a particular chatting program that is known for its encryption." A joint Toronto Star/Scripps News investigation has detailed how post-Snowden privacy measures - including highly advanced encryption and added search-warrant requirements - have allowed child molesters, drug dealers and organized crime members to hide their crimes from police. While stronger privacy measures have addressed concerns about authorities snooping into our lives, police say they have had unintended consequences: the likelihood that criminals can evade justice because evidence is unattainable. It raises an unanswered question of the digital age: how do we balance protecting personal privacy with the ability of police to investigate crime? On the one hand, police warn that crimes can now unfold before them as they stand by handcuffed by time-consuming judicial bureaucracy or unbreakable encryption. On the other, privacy advocates say we are all better protected from criminal threats posed by everything from tyrannical governments to sophisticated criminals. "Is the public ready to accept that there is a wall too high and a moat too deep . . . for law enforcement and security agencies in Canada to access information that is a security concern to all of us?" asks Scott Tod, Ontario Provincial Police deputy commissioner. Toronto Star, A1

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Correctional officers assaulted

Two Collins Bay Institution correctional officers were injured after being assaulted in the maximum security unit on Tuesday morning, Correctional Service Canada reports. The assault occurred at approximately 8:45 a.m., and the two male officers were evaluated and treated at an outside hospital. Wayne Buller, assistant warden of management services at Collins Bay, told the Whig-Standard Wednesday that there was only one offender accused of the assault. "It was just during the normal day-to-day activities," Buller said. "(During day-to-day activities), they could be going to programs, they could be going to appointments in health care, so when they are moving they could be moving offthe range, or within the range itself. "In this particular case, it was contained in the range itself." The two living units at Collins Bay are broken up into secured ranges for 96 offenders with 12 cells per range. "(Offenders) move within the range, and outside the range from time to time," Buller said. The institution and the joint forces penitentiary squad are investigating the assault. "There may be more information released possible pending charges," Buller said. The correctional officers were advised to attend the hospital but were not admitted. "Normally that's what we do if any staffare injured, and would need medical attention, we would absolutely send them to hospital," Buller said. Kingston Whig-Standard, A3

Mafioso who died wasn't suicidal: report

A report obtained by the Montreal Gazette through the Access to Information Act reveals Correctional Service Canada staffsaw no signs that Mafioso Giuseppe De Vito was suicidal before he died of cyanide poisoning inside a federal penitentiary. The report, prepared by a committee assembled to examine the 46-year-old's death, on July 8, 2013, is another sign De Vito, one of the leaders behind a failed attempt to replace the Rizzuto organization at the top of the Mafia in Montreal, was murdered. A Quebec coroner who investigated De Vito's death found cyanide in his body. Two months before he died, De Vito told a jury he blamed himself for the death of his two daughters at the hands of their mother, Adele Sorella. The girls - Sabrina, 8, and Amanda, 9 - were murdered in 2009 by Sorella. At the time, Sorella was under a great deal of stress generated, in part, by De Vito's absence. In 2006, De Vito went into hiding to try and avoid arrest in Project Colisée, an investigation into the Mafia in Montreal. De Vito was arrested in 2010 and was later convicted of taking part in a conspiracy to smuggle massive amounts of cocaine into Canada through Pierre Elliott Trudeau International Airport. At the time of his death, De Vito was serving a sentence of 11 years and seven months at the Donnacona Institution, a maximum-security penitentiary near Quebec City. The sentence would have expired on Jan 19, 2024. Sorella was convicted of murdering the couple's daughters just two weeks before De Vito was found dead. Despite the bleak circumstances of his life at the time, the committee assigned by Correctional Service Canada to investigate his death reported there were no signs that he was suicidal. Montreal Gazette, A6

Via terror plotter to appeal

A man accused of plotting to derail a passenger train between Canada and the U.S. intends to appeal his conviction on terrorism charges at Ontario's highest court. Raed Jaser has filed a notice of appeal with the Ontario Court of Appeal in which he indicates he will be asking for a new trial. In the document, which is an initial step in the appeals process, Jaser argues that the judge who presided over his eight-week jury trial made several errors. Jaser and his co-accused, Chiheb Esseghaier, were found guilty in March on a total of eight terror-related charges between them. They were sentenced to life in prison in late September, with no chance of parole until 2023. Canadian Press (The Guardian, B5, Whitehorse Daily Star, Toronto Sun)

Ex-jail guard convicted of sexual assault has day parole extended

Day parole has been extended for three months for a former jail guard who sexually assaulted and severely choked a young woman with his hands. Robin Mitchell Smyth, 44, is serving a 3-year sentence for sexual assault, sexual assault causing bodily harm and careless use of a firearm. Smyth committed the offences in his home over a seven-month period. The Lower Sackville man was granted day parole in April. He previously worked at the Dartmouth jail. On Oct. 20, the Parole Board of Canada extended Smyth's day parole after concluding that he is a low risk to reoffend and his reintegration potential is consistently high. Before his day parole release, Smyth participated in an intensive sex offender program. He also has continued support in the community, the decision said. Chronicle-Herald, A9

Inquest to begin Dec. 7 into disabled man's starvation death
An inquest into the starvation death of an intellectually and physically disabled man will begin in Dec. 7 in Brockville, the province announced Wednesday. Jamie Hawley, 41, weighed just 57 pounds and his body was covered in 33 bed sores when he died at Brockville General Hospital in May 2008. His brother Jerry Hawley is serving a 20-year prison sentence for manslaughter for Jamie's death. Police initially charged Jerry Hawley was with first-degree murder in what they believed was a deliberate attempt to starve Jamie to benefit from his disability cheques without having to provide him with adequate care. That charge was later reduced to second-degree murder. In February 2013, a jury found Jerry Hawley guilty of manslaughter. Ottawa Citizen

Class-action lawsuit seeks end to solitary for juvenile offenders
Seeking an end to solitary confinement for juvenile criminals, lawyers filed a class-action lawsuit Wednesday against the Ontario government, saying the practice is always cruel and harmful. The $125-million lawsuit is the latest in a growing legal fight against the practice of segregation in Canada. It alleges that youth-justice centres regularly violate Ontario policies meant to limit the use and duration of solitary, and advocates to give youths access to legal help to stay out of segregation. It also says children as young as 12 are being placed in solitary. Solitary "will always fly in the face of the purpose of youth justice, which is to rehabilitate children," James Sayce, a Toronto lawyer who is involved in the lawsuit, said in an interview. (…)The case follows a lawsuit brought in January by the B.C. Civil Liberties Association and the John Howard Society alleging that the federal government's use of solitary confinement leads to the deaths of prisoners, discriminates against mentally ill and aboriginal inmates and is unconstitutional. Mr. Sayce filed a separate class-action lawsuit in Ontario in July, saying the federal use of solitary violates the rights of the mentally ill. The federal government has kept the practice in widespread use, with some changes in response to the 2007 death of Ashley Smith, who at age 19 had spent nearly a year in solitary before dying from self-inflicted strangulation. Globe and Mail, A1, Canadian Press (Ottawa Sun)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

OPERATION SYRIAN REFUGEES / OPÉRATION RÉFUGIÉS SYRIENS

Consultations first on refugee promise
Newly-minted Immigration Minister John McCallum says a campaign promise to resettle 25,000 Syrian refugees remains the Liberal government's goal. And McCallum, who served as the Liberals' immigration critic in the last Parliament, says he's not backing away from Jan. 1 as the target date for fulfilling that promise. With only eight weeks remaining, McCallum says he is waiting to be briefed intensely on the file. He says he'll be reaching out quickly to different levels of government, non-governmental organizations and other federal departments, including the federal ministries of Defence, Health and Public Safety, which he says all have a role to play. McCallum's new portfolio, Immigration, Refugees and Citizenship, was announced earlier Wednesday at a colourful swearing-in ceremony for the new Liberal cabinet. Canadian Press (Red Deer Advocate, C2)

Syrian influx key 'objective'
Even before John McCallum was named immigration minister, members of Prime Minister Justin Trudeau's inner circle were working on one of the new government's most time-sensitive promises: to resettle 25,000 Syrian refugees by the end of the year. A former Royal Bank of Canada chief economist who previously served in cabinet under Jean Chrétien and Paul Martin, McCallum was confirmed as Canada's minister of Immigration, Refugees and Citizenship during Wednesday's cabinet swearing-in ceremony at Rideau Hall. His appointment wasn't wholly surprising. With the clock already ticking, it was widely acknowledged that Trudeau would need an experienced hand who knew how government and the bureaucracy worked in order to start moving quickly on the Syrian refugee crisis.(…) Some refugee groups have warned over the past week that the new government won't be able to keep its promise to accept 25,000 Syrians by the end of the year. Asked for an update Wednesday, Trudeau would only say he had taken "a big step toward it by appointing the kind of cabinet that gets things done." (…)Sources said Trudeau's transition team had already met senior officials to discuss a way forward. While no decisions had been made, deploying more immigration officers to screen

asylum seekers and using military aircraft to ferry refugees to Canada were among the options on the table.The Syrian refugee file is one of the government's top priorities and Trudeau is expected to order that no effort be spared to get the refugees to Canada, in part because he doesn't want to start his time in government by breaking a promise. Postmedia News (Ottawa Citizen, A3, Leader-Post)

Afghan vet takes on Defence
In 2009, Jon Vance, then a brigadier general, asked Harjit Singh Sajjan to go to Afghanistan as a special adviser to the Canadian mission in Kandahar. Six years later, Sajjan will be working again with Vance, albeit in a significantly different role. Sajjan, a 44-year-old combat veteran who served in Bosnia and in Afghanistan on three deployments, was named the country's defence minister on Wednesday. The Vancouver South MP takes on one of the most difficult portfolios in the federal government. "The list of issues the new minister will have to grapple with is very extensive," said Martin Shadwick, who teaches strategic studies at York University in Toronto. "And some of the major ones will have to be dealt with almost immediately." (...) At the same time, the Canadian Forces could be called on to provide help in transporting and supporting the 25,000 Syrian refugees the Liberal government wants to bring into Canada by the end of December. Kingston Whig-Standard, B2

Consultations first on refugee promise

Canadian anti-ISIL fighter reported killed by suicide bomber
A Canadian volunteering with Kurdish forces in northern Syria was reportedly killed in a suicide bombing on Wednesday, and an Ontario mother said she was trying to verify it was her son, a Canadian Forces veteran. "A Canadian fighter was martyred by a terrorist suicide bomber who detonated an explosives belt during fighting in Hasakeh," Talal Ali Sello, spokesperson for the Syrian Democratic Forces coalition, told Agence France-Presse. Thehead of the Syrian Observatory for Human Rights, meanwhile, said the Canadi-an's passport showed he was a 32-year-old born in Toronto. The name and profilematched a former Canadian infantryman who left for Iraq on April 30. Postmedia News (London Free Press, B1/Front); Postmedia News (Windsor Star, A1); La Presse, A15

Quiet spy inspired Bond
One of the world's greatest spies was an operative for England with an affinity for martinis, a suave rapport with elite power players, and an uncanny ability to infiltrate and eliminate threats. This isn't the fictional James Bond we're talking about, but the real-life Sir William Stephenson - a quiet **Canadian** code-named Intrepid who many believe inspired author Ian Fleming to create his over-the-top British spy hero. "Without doubt, Fleming's idea of James Bond is based on Sir William," says Cord Hart, a former CIA operative and U.S. Army colonel who got to know Stephenson through intelligence circles in the early '80s. With the latest instalment in the bombastic 007 franchise, Spectre, hitting theatres Friday, descendants and admirers of the late Winnipeg-born war hero say Stephenson's impressive exploits are too little known. "I always tell people he's the most famous Winnipegger of all time," says Heartland Travel and Tours owner Don Finkbeiner, whose tours include a stop at a bronze life-size statue of Stephenson near the Manitoba legislature. "Nobody even comes close. And I would suggest he's the most famous Canadian of all time." Canadian Press (Red Deer Advocate, C4)

MINISTER / MINISTRE

Vancouver Island officer killed in crash with pickup
The RCMP has confirmed a police officer with West Shore RCMP was killed in a crash Tuesday morning in Langford on Vancouver Island. **Federal Public Safety Minister Ralph Goodale** relayed his condolences to the family, friends and colleagues of RCMP Const. Sarah Beckett. ***"The death of a police officer is a stark reminder of the sacrifices and bravery of our policewomen and men who put themselves in harm's way each and every day to keep our communities safe,'*** **Goodale** said in a statement Tuesday. In the statement, RCMP commissioner Bob Paulson extended the department's full support to Beckett's family and to personnel of the force as they grieve for their colleague. B.C. solicitor general Mike Morris announced in the legislature that a member of the RCMP had been killed. "The member was on duty at a traffic stop and was unfortunately struck and killed on duty," he said. "She's a mother of two young children and my condolences go out to her, her family, her workmates in the RCMP and the police in general." The crash happened at Goldstream Avenue and Peatt Road at about 3:30 a.m. between a police cruiser and a pickup truck. There is no word on charges, and the incident remains under investigation. BC Ambulance said two people were transported to hospital in serious condition. The

intersection was expected to be closed much of the day and motorists were advised to avoid the area. Vancouver Sun, A9; Canadian Press (Red Deer Advocate, A7, Guardian, Telegram, Chronicle-Herald, Cape Breton Post, Calgary Sun, Edmonton Sun, Province); Times Colonist, A1; CBC; *Press Canadienne (Le Droit, 37); *Global News

How to mourn friends and reassure people
A minister's disaster handbook: **Public safety minister** prepped with talking points on everything from hostage-takings to major terrorist attacks. Bureaucrats have prepped **Public Safety Minister Ralph Goodale** on how to talk to the public after tragedies, even prescribing "no comment" responses to hypothetical scenarios, according to ministerial briefing books. When they take office, Canada's **public safety ministers** are offered a "ministerial handbook for responding to events." Embassy obtained the most recent copy with an access-to-information request, part of a series of briefing books given to **Mr. Goodale** after he was sworn in as **public safety minister** early last November. It's a look at the pragmatism of the department in delivering potentially disastrous news to Canadians. (…) The **public safety minister** is expected to provide "national leadership" across the government and co-ordinate a response to "events in the national interest," in concert with Foreign Minister Stéphane Dion if the events occur outside of Canada. (…) If a terrorist attack happens in Canada, **Mr. Goodale** is advised to tell the public "a tragic event has taken place in [city or town] and our heartfelt sympathies are with those directly affected and their families." He's supposed to reassure the public that he's in close contact with provincial and territorial officials, Royal Canadian Mounted Police and national security partners. (…) 'Very sad day for all Canadians' Incidents involving the agencies that fall under **Public Safety Canada** are also addressed in the handbook. (…) Similar language has already been used by **Mr. Goodale** in responding to terrorist attacks in Brussels and Paris, and the recent death by suicide of an RCMP officer near Parliament Hill. The wording isn't exactly the same. The department does, after all, employ dozens of communications staffers. The tone of statements made by **Mr. Goodale's predecessor, Steven Blaney,** are similar. Embassy; *Hill Times

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** National Energy Board orders pipeline firms to post emergency manuals online**
Canada's energy watchdog is ordering pipeline companies to post their emergency response plans online as part of a broader effort to build public trust. The National Energy Board believes it's the first regulator in North America to have that requirement. Companies must have their emergency procedures manuals available on their websites by the end of September, according to the order issued Tuesday. Some information may be excluded, such as personal information and details that may jeopardize security or harm traditional indigenous sites or at-risk species. Canadian Press (Financial Post, FP4; National Post, Globe and Mail, Red Deer Advocate, Times Colonist, Telegraph-Journal); Calgary Herald

*** Report on avalanche death calls for more training, gear**
A report into the death of a Canadian Forces member who was buried under metres of snow during an exercise is recommending more avalanche training for search-and-rescue technicians. Sgt. Mark Salesse, 44, was swept off a narrow mountain ledge by an avalanche on Feb. 5, 2015, in Banff National Park. His funeral drew hundreds of people to 442 Transport and Rescue Squadron at 19 Wing Comox, where he had become a SAR technician in 2005. The military board of inquiry report also recommends that troops use proper rescue and communications equipment when taking part in ice climbing and backcountry skiing training in terrain with an avalanche hazard. Salesse wasn't wearing an avalanche transceiver, a device that allows rescuers to home in on a signal to locate buried victims. Canadian Press (Times Colonist, A2; Edmonton Journal, Times & Transcript); Calgary Herald; Calgary Sun

*** 3.1 earthquake off Victoria**
Victoria got a light shaking and an emergency-preparedness reminder on Tuesday morning. A magnitude-3.1 earthquake struck just south of Orcas Island, about 36 kilometres from Victoria, at 11:06 a.m., said Taimi Mulder, an earthquake seismologist with Natural Resources Canada. The quake was felt in Victoria, Sidney, the Gulf Islands and the San Juan Islands. No damage was reported. Times Colonist, A4

*** Vancouver sets up disaster support hubs**
Within minutes of city staff announcing a network of disaster support hubs around Vancouver Tuesday, a 3.1-magnitude earthquake rattled nearby Squamish and the Sunshine Coast. The earthquake did no damage, according to Natural Resources Canada, but it was a timely nudge for Vancouver residents to take stock of their emergency plans - in part because the city is looking for residents themselves to play a big role in disaster response. After a 6.3-magnitude earthquake shook Christchurch, New Zealand, flattening buildings and killing scores of people, residents banded together to recover and rebuild. That relief effort all started with citizens connecting on social media and gathering at community sites to see how they could help out. In a bid to enable that type of response when disaster strikes Vancouver, staff have designated 25 locations around the city for residents to gather, Daniel Stevens, Vancouver's director of emergency management, told city councillors. "When we looked at what happens during an earthquake, we realized ... that community - the people around you - are really the people that provide the most support," Stevens said. "Our first responders will be prioritizing response to life saving incidents. The capacity will be stretched." Vancouver Sun

*** First responders will receive PTSD compensation**
Ontario unanimously passed legislation Tuesday recognizing post traumatic stress disorder as work-related illness for police, firefighters and paramedics. Under the old rules, first responders had to prove their PTSD was related to their job to be eligible for coverage under the Workplace Safety and Insurance Act. Labour Minister Kevin Flynn beamed as legislation that assumes PTSD is work-related for first responders passed third and final reading by a vote of 96-to-0. "It was gratifying to look around the House and realize that by an action of this legislature, in a unanimous manner, we're able - I think - to change and affect lives in a really meaningful way," Flynn said. "I think over the years we haven't dealt with those issues properly - and I don't mean us as a government, I mean society just hasn't paid enough attention to mental health issues in general." Flynn said first responders are at least twice as likely as the general population to suffer from PTSD, and that the condition results in more suicide attempts than all other anxiety disorders. Canadian Press (Waterloo Region Record, A5)

*** Tofino whale-watching capsizing: Leviathan II survivors file potential class-action lawsuit**
Two German brothers who survived the capsizing of a whale-watching boat off Tofino, B.C., last fall are suing, claiming the capsizing was "preventable" and alleging negligence by the company, owner and captain. Christian Barchfeld and Dirk Barchfeld were passengers on the Leviathan II, owned by Jamie's Whaling Station Ltd., when it capsized on Oct. 25, killing six of the 27 people on board. They have filed a potential class-action lawsuit, on behalf of all passengers, which details their own physical and psychological trauma, with one brother saying he was tossed from the ship and the other describing being trapped inside. CBC News

*** 36 of 58 cars removed**
Ontario Northland crews are on site tonight responding to this morning's derailment near Peninsula Road. An incident command post has been set up on site with an emergency response team comprised of rail experts, Transport Canada and a dangerous goods expert from the Railway Association of Canada. There were no injuries reported Tuesday morning when 25 tanker cars of the northbound 58-car train derailed. The highway was closed for a few hours after the 5:30 a.m. incident. The cars usually transport sulphuric acid. They were empty at the time of the derailment and there appeared to be no breach of any of the cars, Deputy Fire Chief Greg Saunders reported from the scene. As of Tuesday evening, 36 cars had been removed from the area and equipment had been mobilized to facilitate re-railing of the remaining cars and repair of infrastructure. North Bay Nugget (2016-04-06)

*** Missing man's body found**
Police have recovered the body of a missing man. On Monday, RCMP in Port Alice and Port Hardy received a report that a car was down a steep embankment on a remote logging road outside Port Alice. The steep terrain made it impossible for investigators to get to the car, said Staff Sgt. Gord Brownridge. It was recovered with the assistance of Campbell River Search and Rescue and the LeMare Logging Company. Inside, police found the body of Marc Regimbal. Times Colonist, A4

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Ottawa fines bank $1.1M, but keeps its name secret**

The federal anti-money laundering agency has levied a $1.1-million penalty against an unnamed Canadian bank for failing to report a suspicious transaction and various money transfers. It is the first time the Ottawa-based Financial Transactions and Reports Analysis Centre of Canada, known as Fintrac, has penalized a bank - and it's being billed as a warning to thousands of other businesses. Generally, the centre tracks cash flows linked to terrorism, money laundering and other crimes by sifting through millions of pieces of data annually from banks, insurance companies, securities dealers, money service businesses, real estate brokers, casinos and others. In this case, Fintrac spokesman Darren Gibb said he cannot legally discuss details of the bank's infractions, and the federal agency is keeping secret the identity of the financial institution, which recently paid the penalty of $1,154,670. But Fintrac wants to send a strong message that it will take whatever measures are needed to encourage compliance with the Proceeds of Crime (Money Laundering) and Terrorist Financing Act. The agency depends on a steady flow of reports about suspicious dealings, electronic fund transfers and large cash transactions to produce needed intelligence, Gibb said in an interview. "The reporting to us is absolutely critical. Without those reports, Fintrac is out of business," he said Tuesday. "We're going to be extra-diligent to ensure that entities are submitting suspicious transaction reports when they should be." About 31,000 businesses across the country must furnish Fintrac with reports. The agency, in turn, provided 1,260 disclosures of financial intelligence to police and national security partners in 2014-15. Canadian Press (Toronto Star, A1, Guardian, Red Deer Advocate, Telegram, Cape Breton Post, Chronicle Herald, Ottawa Sun, Record, Hamilton Spectator, Times Colonist, National Post, Globe and Mail, Times & Transcript); Globe and Mail, A10

*** Les gouvernements font déjà "tout ce qu'ils peuvent"**

Depuis le début des révélations des Panama Papers, de nombreuses voix s'élèvent pour réclamer des actions plus vigoureuses de la part des gouvernements nationaux dans la lutte contre l'évitement et l'évasion fiscale. Mais selon l'expert en fiscalité internationale Jean-Pierre Vidal, les États impliqués dans cette bataille, y compris le Canada, ont déjà fait ce qui est en leur pouvoir. " Les gouvernements font déjà beaucoup. En fait, je pense qu'ils font déjà tout ce qu'ils peuvent ", affirme le professeur au Département des sciences comptables de HEC Montréal en entrevue au Devoir. " Le défi, c'est surtout d'obtenir les informations pour prendre les gens qui sont en défaut, précise-t-il. Tant que les gens sont capables de cacher ce qu'ils font, on ne peut pas les atteindre. Et même si on engageait des dizaines de milliers de vérificateurs, ça ne changerait rien. " Selon M. Vidal, les gouvernements ont fait des progrès considérables en matière d'échange d'informations depuis le début des années 2000. Sous l'impulsion de l'OCDE, de nombreuses juridictions se sont engagées à échanger des renseignements fiscaux : 132 se sont jusqu'à maintenant dites prêtes à le faire " sur demande " et 96 ont promis d'échanger des informations de manière " automatique ", dans un délai de deux ans... L'Agence du revenu du Canada a réitéré mardi son intention de donner suite aux révélations des Panama Papers. " L'Agence cherche activement la collaboration de ses partenaires signataires de convention et du Consortium international des journalistes d'investigation pour obtenir tous les dossiers divulgués qui concernent des résidents canadiens ", a-t-elle déclaré par voie de communiqué. Dans son dernier budget, le gouvernement Trudeau a consacré 444 millions de dollars sur cinq ans à la lutte contre l'évasion et l'évitement fiscaux. Ce nouvel effort permettrait, selon Ottawa, d'aller chercher 2,6 milliards sur cinq ans. L'agence fédérale de lutte contre le blanchiment d'argent a imposé une pénalité de plus de 1 million de dollars contre une banque canadienne non identifiée pour avoir omis de rendre compte d'une transaction suspecte et de divers transferts d'argent. C'est la première fois que le Centre d'analyse des opérations et déclarations financières du Canada (CANAFE), établi à Ottawa, sanctionne une banque. L'agence retrace les fonds liés au terrorisme, au blanchiment d'argent et à d'autres crimes. Le porte-parole du CANAFE a affirmé ne pas pouvoir discuter des détails des infractions, et l'agence exerce son droit discrétionnaire de ne pas divulguer l'identité de l'institution financière, qui a payé récemment la pénalité. La Presse canadienne (Le Devoir, A4)

*** Snowden says Panama Papers show whistleblowers 'vital' to society**
Edward Snowden, the former U.S. National Security Agency contractor responsible for the release of thousands of classified documents detailing the American government's use of mass surveillance, says the Panama Papers show the role of the whistleblower in a free society has become "vital." Mr. Snowden, who is living in Russia under political asylum, made the comments via video link during a sold-out event hosted by Simon Fraser University on Tuesday night. Mr. Snowden said the Panama Papers reveal "the most privileged and the most powerful members of society are operating by a different set of rules."
"I think that this shows, more than ever, the role of the whistleblower in a free society has become not only desirable but vital," he said. (...) At the same time, through programs of mass surveillance revealed in recent years, we, the private citizens, are increasingly transparent to government. The relationship between the governing and the governed has become inverted. And rather than those who represent us in our government being accountable to us, we are now accountable to them." Mr. Snowden, when asked about Canada's new anti-terror legislation, cited its connection to the United States and the Five Eyes intelligence alliance. "You put everything in one big, giant bucket. I would suspect this is what C-51 is really about," he said. "It's about broadening that bucket and making sure we put more Canadian information in that sharing bucket, so that it's more easily shared. Now I don't want to say that it's absolutely what's happening, but ... this is how it works, this is what we do for every other country." Globe and Mail; HuffPost BC

*** Sharing of intelligence required for our safety**
An opinion piece states "Information is vital currency in the war against terrorism. So, too, is the willingness and ability of authorities to act on it. It came to light this past week that the FBI had warned Belgium about two of the men who carried out suicide bombing attacks that killed more than 30 people last month in Brussels. That fact evokes a sad and bloody history in the West, in which terror attacks have repeatedly come on the heels of failures in intelligence sharing. Such failures date back notably to the Sept. 11 terrorism attacks against the United States, as subsequent reviews and 2004's 9/11 Commission's report found. While this latest incident may or may not have been preventable, the fact remains that the sharing of intel in a timely and co-operative manner is the best tool at the disposal of the governments, police and spy agencies working to protect us from a very real threat. It is not just between allies that information should be shared. It must also be co-ordinated inside our own borders. There is a recent report that authorities are bridging divisions between the Canadian Security Intelligence Service and its counterpart, the Communications Security Establishment, which is not permitted itself to spy on Canadians. Their co-operation, including apparently through the CSE-CSIS Collaboration Office, is obviously essential to our security safety network. They need to be working hand in glove." Kingston Whig-Standard, A4

*** Terrorists defile Islam**
A letter to the editor states, "With the rise of recent extremism in the world, critics are continuously pointing fingers at Islam for being the catalyst of much of terrorism by fringe terror groups. At this time it is essential that we remember just like guns don't kill people, people kill people; Islam does not promote violence, people do. They misconstrue the peaceful teachings of Islam to justify their hatred acts. As a young Canadian Muslim, I invite you to reach out to a fellow Muslim and discuss the real teachings of Islam, rather than judging the sensationalized propaganda as your average Muslim belief." Waterloo Regional Record, A6

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

*** CBSA officers kept 36 suspected criminals out of Canada in Feb.**
The Canda Border Services Agency (CBSA) refused entry to 55 foreign nationals in the month of February this year, including 36 who had a criminal history and were attempting to enter Canada. At the Carievale border crossing, officers turned back a United States male who had been convicted of sexual assault of a child, as well as a woman who had been convicted on six counts of conspiracy to distribute methamphetamines. They also arrested a man from North Dakota on grounds of his involvement in organized crime. An immigration and refugee board hearing found the man inadmissible due to his membership in the Varrio Norwalk gang, so a deportation order was issued. At the Northgate border

station, officers refused entry to a North Dakoa man on Feb. 18 after it was learned he had been convicted of making terrorist threats. That same man attempted to seek entry into Canada at the North Portal border crossing station six days later and was again refused entry. North Portal officers also refused entry to a man convicted of sexual assault. On Feb. 23, North Portal officers intercepted and arrested an impaired driver and turned him over to the RCMP. At the Oungre, Sask., crossing, officers refused entry to an American male who had been convicted of conspiracy to distribute methamphetamines. Estevan Mercury

Turtle smuggler slapped with $25,000 fine
A Toronto seafood supplier has been fined $25,000 after he was nabbed smuggling 40 live turtles into Canada at the Queenston-Lewiston Bridge in Niagara-on-the-Lake, Ont. Jie Hua Shen, owner of Marine Seafood Inc., pled guilty March 26 in St. Catharines court to importing Florida soft-shell turtles into Canada illegally. The case stemmed from a joint Environment Canada and U.S. Wildlife Service operation launched in December 2013 focusing on the trade in the turtles. Florida soft-shell turtles are prized for their meat, which has led to a decline in their numbers. In response, Florida has banned the commercial fishing of the turtles. The turtles seized in this case were found to have fish hooks buried in their throats. In May 2015, Shen was found guilty in federal court of contravening the Customs Act. National Post

An 'Unfair And Perverse Legal Restriction'
An opinion piece states, “Canada, the great liberal state, can take in refugees from strange lands by the thousands, spend $1 billion providing them with health care, housing and welfare, put them up in hotels and provide prime ministerial greetings at its airports. Welcome to Canada - land of big hearts and abundant resources. Hell, we' ll even renew the citizenship of a terrorist as a matter of the highest principle. But heaven help the individual or family that might want to quietly settle in Canada, in contravention of some heavy-handed entry barriers embedded in the Immigration and Refugee Protection Act. Indeed, a family of 10 can arrive as a part of mass transfer of 250 refugees on a plane from Jordan, regardless of how much they might cost taxpayers; yet regular immigrants face tougher, sometimes insurmountable, barriers. When Felipe Montoya applied three years ago to become a permanent resident of Canada with his wife and two children, he ran into those barriers. One of Montoya's children, his son Nicolas, has Down syndrome, a condition that prompted Citizenship and Immigration Canada (CIC) to determine that Montoya and family may be inadmissible on health grounds. Montoya, a native of Costa Rica, has been a professor of environmental studies at York University for the past four years. As numerous news stories have reported, on March 3 he received a letter from CIC - signed, "Sincerely, DO877" - saying that "it appears that you or your family member may not meet the requirements for immigration to Canada." (...)The reason: "Your family member, Nicolas Montoya, has the following medical condition: Down's syndrome." (...)Montoya also sees his family's rejection as a breach of the Canadian Charter of Rights and Freedoms. But his only option may be to appeal to the minister.” National Post, A9

'Speed it up,' refugee sponsors tell minister
Responding to public outrage over delays in bringing Syrian refugees to Canada, Immigration Minister John McCallum will meet with private sponsorship groups on Thursday to explore options. "What I can say to you right now is I'm doing everything in my power to speed the process up as much as we can to admit as many Syrian refugees as possible, as quickly as possible," he told dozens of protesters on his way to a luncheon hosted by the C.D. Howe Institute Tuesday. "We have to do it as quickly as possible and I know you want to help. I appreciate that. So many people are out here, saying we want our refugees quickly. I will be meeting with (former Toronto mayor) John Sewell to talk about it in more detail." It was the first faceoff between the embattled McCallum and members of private sponsorship groups since Ottawa quietly stopped making it a priority to process Syrian sponsorship applications, shortly after meeting its goal of bringing in 25,000 Syrian refugees by the end of February. Last week, the government did briefly extend the deadline for community and faith groups to submit new applications, but refugee sponsors were further angered by the 24-hour notice they had to finish incomplete applications. Toronto Star, GT2

*** Worldpac Canada v. CBSA: Blanket B2 authorization requests do not affect time limits to file refund requests under the Customs Act**

In its February 18, 2016 ruling in *Worldpac Canada v. CBSA*[1], the Canadian International Trade Tribunal (the "CITT") clarified several key issues of prescription and recourses to appeal in the context of the *Customs Act* (the "Act"). In particular, the CITT addressed the so-called "blanket authorization" process (or Blanket B2 adjustment), which allows an importer to apply to the Canada Border Services Agency (the "CBSA") for an authorization to file several adjustment or refund requests at once in order to reduce both the paper burden and processing time. The CITT held that this procedure is purely administrative and does not affect the statutory time limits provided for under the Act. In addition, it held that neither the CBSA nor the CITT has jurisdiction to consider refund requests filed outside the statutory time limit. Worldpac Canada is an importer of original equipment and automotive parts. Between 2011 and 2013, the company submitted a total of three blanket authorization requests to the CBSA with respect to refund requests for erroneously classified importations that occurred between March 1, 2008 and December 21, 2009. Between February 28, 2012 and July 12, 2013, the CBSA issued blanket authorization letters with respect to Worldpac's requests (although one authorization was cancelled by the CBSA in March 2013). In its letters, the CBSA clearly informed Worldpac that the blanket authorizations "... in no way remove or extend [...] the four-year time limits to file a refund under section 74 [of the Act]" Lexology (2016-04-05)

Liberal, Tory, NDP MPs pan protectionist talk by Trump, Sanders
MPs from all three major parties say they reject the protectionist positions of leading United States presidential candidates on free trade, warning that a thicker US border would harm businesses and workers in both countries. However, a few NDP and Liberal MPs expressed similar concerns over free trade agreements to those raised by Hillary Clinton, Bernie Sanders and, of course, Donald Trump over the past year. Free trade is a rare subject on which Mr. Sanders, Ms. Clinton and Mr. Trump appear to agree, or at least to hold common concerns. Mr. Trump pledged in September to force a renegotiation of the North American Free Trade Agreement between Canada, the United States and Mexico, or else to "break" it. Mr. Sanders said earlier this year he picketed against the NAFTA while it was under negotiation in the early 1990s. Ms. Clinton has in the past criticized and expressed support for the deal. Both Democratic candidates have said they opposed the Keystone XL pipeline from Alberta's oilsands to the US Gulf Coast, and all three candidates-as well as Republican candidate Ted Cruz-have said they oppose the Trans-Pacific Partnership agreement, which would supercede many parts of the NAFTA if it were ratified. (...)Liberal MP Ken Hardie, another member of the interparliamentary group, warned that a more protectionist United States could put even more pressure on forestry workers in his Fleetwood-Port Kells riding in British Columbia, while former Conservative MP and envoy to the US Congress Rob Merrifield said Canada's energy sector would be particularly vulnerable to a thicker border, given Canada's inability to sell to other markets. Embassy, Edmonton Journal

*** Manifestation contre l'importation de lait diafiltré en Montérégie**
Des producteurs laitiers de la Montérégie réunis à Delson mardi ont lancé un cri d'alarme et demandé à Ottawa de bloquer la route à l'importation de lait diafiltré. Le lait diafiltré, qui provient des États-Unis, est un lait ayant été filtré à plusieurs reprises pour obtenir un produit ultra protéiné. Au Canada, il est utilisé dans la fabrication de yogourt ou de fromage. Les producteurs laitiers qui manifestaient ont soutenu que l'importation du lait diafiltré cause des pertes partout au pays, dont en Montérégie. «Sur ma ferme, je dois perdre environ un 9000 $ à 10 000 $ par mois. Dans le fond, les coûts de production restent les mêmes, le 9000 $ à 10 000 $, c'est le profit qu'on perd», a déploré Mario Parent. Son fils Michel, qui souhaite reprendre l'entreprise familiale, ne voit également pas ces importations d'un bon il. «Si ça continue de même, il va y avoir de plus en plus de lait diafiltré qui va rentrer, alors la marge de manuvre va devenir bien plus mince», a-t-il dit dans le stationnement d'une place d'affaires de Delson, où les producteurs avaient amené des vaches pour marquer le coup. Les Producteurs de lait du Québec ont récemment réclamé une solution «rapide» et définitive au problème d'importation du lait diafiltré et des isolats de protéines laitières (IPL). L'organisation a ainsi dénoncé l'importation au pays d'ingrédients laitiers qui ne sont pas assujettis aux tarifs douaniers en raison de «failles du classement tarifaire» permettant de «contourner les limites d'importation». Agence QMI (Journal de Montréal)

*** The race is on at Cornwall's RAD**
The first couple of hundred local Grade 6 students completed a lap Tuesday of education and awareness at the 19th Racing Against Drugs. "We want the students to know five things after today," said RCMP Const. Jean Juneau, a key organizer of RAD, held at the Cornwall Armoury. "To know what a drug is; the

consequences surrounding drugs; how to say 'no'; healthy alternatives; and what is a healthy lifestyle and why is this important?" Communicating these messages were a number of organizations which staged interactive demonstrations and workshops for eight French-language schools: Cornwall Community Police Service, RCMP, Club Optimiste Club Octogone, Emergency Management Services Cornwall SDG, Canadian National Railway, Partir d'un bon pas, Ministry of Natural Resources, Ontario Provincial Police, Canada Border Services Agency, Centre de sante communautaire de l'Estrie, Eastern Ontario Health Unit and Patenaude Martial Arts. (…)Some other booths concentrated on imparting knowledge of specific participating groups, such as the work of Canada Border Services Agency officers at two separate kiosks. At one, the students learned of the many types of drugs, paraphernalia and weapons that cannot be legally brought across the border in Canada. Cornwall Standard-Freeholder (2016-04-05)

CYBER SECURITY / CYBERSÉCURITÉ

*** WhatsApp adds end-to-end encryption: Why app is showing yellow bubble to tell people information is secure**

WhatsApp has added end-to-end encryption, and announced it with a little yellow pop-up that reads: "Messages you send to this chat and calls are now secured with end-to-end encryption". But it's been much less clear about what exactly that means. The new technology is intended to ensure that messages can't be intercepted, and stay secure. While there are some concerns about exactly how private those messages are, it is a huge new development in the ongoing argument about how private our communications should be (…)The site has had a form of end-to-end encryption since the end of 2014. But it just announced that every message — not just texts, as before, but also voice calls, pictures, videos and other files, on every platform. The company said that it had done so simply to make the site more secure — by forcing itself to be unable to give up information to hackers or to oppressive governments (it didn't say which ones). Independent UK

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Calgary man claims RCMP beat him**

Elbows raining down from the police officer on top of him, Christian Duckchief's orbital bone came apart, along with his cheek and nose, his fiancée says. Chantel Stonechild said Duckchief, 23, was dragged from the house naked except for handcuffs. "They treated him worse than an animal," she said. Duckchief and Stonechild were asleep, in bed in her Siksika Nation home when Gleichen RCMP came for him Friday morning — Stonechild believes their eight-year-old daughter let the Mounties in. Calgary Sun (Canoe News, Edmonton Sun); 660 News; (2016-04-06); Calgary Herald

In mourning, community thanks RCMP

Someone else had already left flowers outside the West Shore RCMP when Bonnie Brannstrom showed up with her bouquet on Tuesday morning. The Langford woman had heard about Const. Sarah Beckett's death and couldn't stop thinking about the 32-year-old mother of two, so she drove to the detachment. "I lost my father at a young age. I know how painful it is to lose a parent," she said after leaving her flowers by the bronze sculpture - a young female Mountie kneeling beside a little girl - outside the police station. Above her, a bitter wind snapped a flag that was already lowered to half-mast. "It's senseless," Brannstrom said, her voice choked with emotion. "These officers do such a wonderful job. They don't get enough credit for what they do. All you see in the headlines is the odd one who makes a mistake." Brannstrom's sorrow was palpable. (…) Such deaths are, thankfully, rare. The last time a police officer died on duty on Vancouver Island was Sept. 28, 1991. RCMP Const. Chris Riglar was directing traffic at the scene of a fatal crash on the Trans-Canada Highway near Thetis Lake when he was struck and killed by a drunk driver. Riglar, a 37-year-old native of Nanaimo, was in full uniform, wearing a reflective vest and carrying a flashlight when he was hit from behind by a car that crossed into his lane. He was from the Colwood RCMP, now known as West Shore - the same detachment as Beckett. Times Colonist, A3

Un employé voit son licenciement annulé
Est-ce le prélude à un changement des mœurs au sein de la police ? Un tribunal du travail fédéral vient d'annuler le licenciement d'un employé civil de la Gendarmerie royale du Canada (GRC) qui s'était vu montrer la porte parce qu'il fumait occasionnellement du cannabis. « Pour être content, je suis content ! J'ai vraiment vécu ça comme si l'employeur voulait juste se débarrasser d'un employé de plus », a commenté David Féthière lorsque joint par La Presse hier. Jusqu'à son licenciement, M. Féthière travaillait comme commis au sein de l'unité d'enquête sur les fraudes par télémarketing de Montréal : son rôle en était un de soutien administratif aux policiers. Il transcrivait leurs entrevues, tenait les dossiers à jour, entrait des données dans le système informatique... Le sergent-major de son équipe, Jacques Rainville, avait organisé une fête chez lui, au bord d'un lac. En plus des employés de la GRC, il avait invité ses voisins ainsi que des policiers de la Sûreté du Québec et du Service de police de la Ville de Montréal (SPVM). David Féthière a trop bu ce jour-là, de l'avis de tous. Ivre, il a demandé à son patron s'il pouvait fumer un joint. Il a évidemment essuyé un refus catégorique et irrité de la part du policier. Le commis s'est ensuite essayé avec une autre policière et a essuyé un nouveau refus. Il est finalement allé fumer seul, à l'écart, mais serait revenu en traînant l'odeur distinctive du cannabis... L'incident est tout de même pris au sérieux. Dès le lundi, le sergent-major de l'équipe rédige un rapport, et deux procédures sont mises en branle : une enquête disciplinaire, qui mènera à une sanction de 10 jours de suspension pour le fonctionnaire, mais aussi une enquête de sécurité, pour déterminer s'il peut conserver sa cote de fiabilité, essentielle pour avoir accès aux locaux et aux informations de la GRC. La Presse, 9

* **Bullet hole found at station**
Police are investigating after a bullet hole was discovered in a window of the Surrey RCMP's Guildford station. According to Cpl. Scotty Schumann, the bullet hole, about the size of a quarter, was discovered Tuesday morning by a maintenance worker. Schumann said the hole does not seem fresh and it's not known exactly when the damage was caused. The discovery follows a recent string of shootings in Surrey. So far this year, there have been 31 shootings in Surrey. Province, A12

* **Variety of topics covered during student research day**
The 14th Annual Student Research Day at St. F.X. took place March 24 at the conference rooms in the Keating Centre and, as has been the case with all previous years, a variety of fascinating topics were explored by students who were on-hand to talk about their work. Amongst the many, Courtney Campbell, a BSc. human nutrition with honours student, displayed a project with the long title of The Lipid Composition of Pastured Eggs from Wild Orchid Farms Versus Conventional Eggs in Antigonish. She noted the local farm (North Grant) contacted the university and that set her research in motion. "We were contacted by the farmer actually and she wanted to know more information about her eggs so she could provide more information for her consumers," Campbell said. "So when people asked what was different about her eggs she could provide more information on that." Campbell talked about a finding. "The eggs from Wild Orchid Farm actually have more oleic acid," she said. "Oleic acid is omega-6 which is something that is always advertised on the market, so I thought it was a very good thing these free range eggs - these pastured eggs - had the more abundant omega-6." Emma van Reekum's research dealt with post-traumatic stress disorder (PTSD) with Canadian veterans and RCMP. She noted the research she was displaying was still a work-in-progress. "I only have pre-intervention data ... my thesis is going to evaluate the ethicacy of interpersonal group process for Canadian veterans and RCMP officers with PTSD," she said. " Chronicle-Herald, L3

* **Advocacy centre will bring people together to combat child abuse**
Former NHLer Sheldon Kennedy plans to help set up a child advocacy centre in Red Deer. Kennedy, lead director of the Calgary-based advocacy centre that bears his name, was in Red Deer on Tuesday to deliver the keynote speech at the Alberta Common Ground Alliance's Dig Safe Conference. Since Kennedy brought to light the sex crimes of former junior hockey coach Graham James, he has become a tireless advocate for children who have suffered abuse or who are at risk. His centre pulls together numerous government agencies, police forces and others in a collaborative model for investigating and treating child abuse. About 125 investigations a month are handled through the centre. Mayor Tara Veer, who joined Kennedy at an event to promote Dig Safe on Tuesday morning, said a group of local concerned citizens have applied for funding to establish a Central Alberta version of the centre. "We're working as an affiliate of the Calgary centre," said Veer, who said more details about the plans are

expected in June. Red Deer city council was joined by Central Alberta mayors and MLAs for a tour of the advocacy centre earlier this year. (...) The centre has been a celebrated success. It has 120 employees, including RCMP, 30 social workers, 25 child psychologists, pediatricians, as well as the entire Calgary Police Service child abuse unit. In his conference address, Kennedy focused on the importance of speaking up - a message that can be applied to victims of abuse, but also in the workplace when unsafe practices may be happening. Red Deer Advocate, A1, A8

* **No ink needed for new fingerprint machine**
The Fredericton Police Force has a new high-tech electronic fingerprint machine and the days of taking old fashioned ink and paper fingerprint records are gone forever. You slide your hand into the machine, it takes a picture of your fingerprints, makes sure the prints are clear, and the results can be sent to the RCMP crime data base in Ottawa at the push of a button. The machine is called LiveScan and it, and the licence to operate it cost Fredericton $36,000, the city's public safety committee was told Tuesday. "We consider this a definite business improvement," April Doyle, assistant manager of administrative support at the Fredericton Police Force, told the committee. "It has quality control, it has time savings and efficiencies for officers." "It actually tells you if you have a good print. There is an opportunity to retake it again if it's not good." The electronic fingerprint system integrates with the city's electronic mug shot system and all the images can be viewed on police desktop computers and the laptops in patrol cars, she said. In 2015 Fredericton police took 552 sets of fingerprints using ink and paper, said Doyle. But those fingerprints use to sit around for a month or two at the police station until they were mailed to the RCMP, she said. Using the new LiveScan machine, the police have already processed 110 sets of fingerprints and sent them to Ottawa in the first two months of 2016, she said. Daily Gleaner, B3

* **Police crack down on fentanyl**
Fentanyl, marijuana, cocaine and a substance believed to be heroin were seized as an RCMP federal investigations unit carried out six drug raids Monday. "It's a significant seizure," said RCMP spokesperson Const. Elenore Sturko in a brief interview Tuesday, adding police were still going through what was seized to calculate total quantities. Police arrested 14 people after carrying out the search warrants in Yellowknife, Ndilo and Dettah. They seized what is described as "a significant quantity of illicit drugs and cash," according to a news release from Sturko. Charges were expected to be laid Tuesday afternoon, Sturko said, but no further information was available at press time. No names have been released so far. The busts came at the end of what Sturko stated was a "lengthy investigation targeted the trafficking of fentanyl and other illicit drugs in Yellowknife and surrounding communities." Approximately 1,000 fentanyl pills were seized. (...) Monday's raids began with a vehicle en route to Yellowknife from B.C. that was stopped near Fort Providence where a man was arrested. The searches at six separate sites in the three communities were then carried out Monday evening. The warrants were carried out concurrently to ensure they could make arrests at the same time. More than 30 RCMP officers were involved in the operation, the news release states. Yellowknifer

* **Man dies after crashing into Rogersville home**
A man is dead after a driver who refused to stop for police crashed into a house in Rogersville Monday night. Sgt. Pat Tardif of Southeast RCMP confirmed Tuesday that a car left Route 126, the main road through the village, shortly after 8 p.m. Monday and crashed into a home that was occupied at the time. No one was in the part of the home that was struck by the car, however. The vehicle caused significant damage, coming to a stop with only a bit of the back end of the car protruding from the building. Tardif identified the victim as a 23-year-old man from Alberta. The officer said a Mountie on patrol tried to pull over the vehicle at approximately 8:15 p.m. on Route 126 in the village but the driver sped away. "The police officer followed the vehicle briefly, but stopped when the suspect's vehicle accelerated to excessive speeds, in the interest of the safety of the public and the police officer," Tardif said in a news release issued Tuesday afternoon. "A few minutes later, police received a report that the suspect's vehicle had collided with a power pole then crashed into a house on Route 126. The driver died at the scene." Telegraph-Journal, A3 (Times & Transcript); Canadian Press (Guardian, A8); Acadie-Nouvelle, 5

* **'They're becoming quite defiant'**
A veteran Yellowknife security contractor, who has been in the business for a quarter-century in the city, said he has recently noticed a dramatic change for the worse in behaviour from the city's downtown

population. Brian Carter said homeless people have become more bold now that it is known RCMP may not arrest them for being intoxicated in public. The change in policy came last fall after police announced it would only take intoxicated people to RCMP cells if there was a public safety threat. RCMP explained at the time that policy change came, in part, as an effort to shift police resources to other areas, such as drunk driving and drug investigations. An access-to-information request later revealed, however, RCMP are also concerned about complaints resulting from picking up intoxicated people that lead to public inquiries and internal investigations. Yellowknifer

Police find duffel bag of weapons, arrest two boys near Sackville school
It may have been "a drug deal gone wrong" that led to a Middle Sackville high school going into lockdown mode Tuesday. That was the suggestion being passed among students via text messages as police investigators scoured classrooms and hallways inside Millwood High School and RCMP patrol cars cruised surrounding neighbourhoods. Nearby Millwood Elementary School was put into "hold and secure" mode during the search. "We started getting texts from my friends saying that it was a drug deal gone wrong," Grade 12 student Alex Billard, 17, said following the lunch hour scare. "A fight, weapons," he said of what students had been hearing. "I don't think there was anyone injured and ... two people are in custody.'" Police responded to the weapons complaint at Millwood High shortly before noon, Halifax RCMP spokeswoman Cpl. Jennifer Clarke confirmed. Cape Breton Post; * Cape Breton Post; * Chronicle-Herald, A1; * Canadian Press (Guardian, A8, Telegram)

*** Nunavut's polar bear problem growing in Hudson Bay communities**
The hamlet of Chesterfield Inlet, Nunavut, says it has a serious polar bear problem and is looking for help by reaching out to other coastal communities along Hudson Bay. Last week representatives from the hamlet attended a workshop in Churchill, Man., to learn from experts on polar-bear human conflicts. This was the first time that people from Nunavut, northern Manitoba and northern Quebec came together to address this issue. Chesterfield Inlet is on the migration route of polar bears who travel along the western coast of Hudson Bay. Barnie Aggark, mayor and the chair of the local hunters and trappers organization, says each day three to five bears are spotted near the community. A few even walk into town. "There was just one three weeks ago that was looking in through the windows of a couple of homes, going into porches, the back of the pick-up trucks," said Aggark. "It's kind of tense, especially at night when the kids are heading home."... Chesterfield Inlet is now hoping to get money for a polar bear patrol and the tools needed for the job. "Right up to ice freeze-up we have quite a few polar bears come by our community and we don't really have paid bear watchers," said Aggark. For now it's up to local hunters, the conservation officer as well as the local RCMP to help keep the bears out of town. CBC News

*** Surrey RCMP investigate fourth shooting in four days**
Surrey RCMP are investigating a targeted shooting that sent one man to hospital Tuesday evening. The shooting happened around 11:10 p.m., near a home in the 7700 block of 155th Street. When officers arrived, they found an injured man who was later transported to hospital in stable condition. This incident marks the fourth shooting in Surrey in just four days. CBC News

*** Man with knife sparks lockdown at Nanaimo school**
Woodlands High School was locked down Tuesday morning while Nanaimo RCMP officers searched for a man armed with a knife. At 9:20 a.m., police received reports that a man was trying to use a stolen credit card at Home Hardware in the Brooks Landing Mall. When employees confronted him, the man pulled out a knife and ran away. Because the incident was so close to the high school, it was locked down. Officers and a police dog tracked the man for 10 minutes. A 32-year-old man was arrested behind a home on Giggleswick Drive. He was bitten several times by the police dog and was taken to hospital for treatment of his bites. The man faces charges of possession of a dangerous weapon, breach of probation and fraudulent use of a credit card. The investigation is continuing, said Nanaimo RCMP Const. Gary O'Brien. Times Colonist (2016-04-05)

Québec élargit le mandat du SPVM à toute la province
Le Service de police de la ville de Montréal (SPVM) pourra désormais enquêter sur toutes les plaintes criminelles de femmes autochtones contre tous les corps policiers du Québec, partout dans la province, a annoncé le gouvernement québécois mardi. L'automne dernier, un reportage troublant de Radio-Canada

avait mis en lumière des allégations graves d'agressions sexuelles et d'abus de pouvoir qui auraient été commis par des policiers de la Sûreté du Québec (SQ) contre des femmes autochtones à Val-d'Or. Québec avait mandaté le SPVM pour mener l'enquête sur la SQ. Mardi, le gouvernement québécois a annoncé qu'il élargit le mandat du SPVM en lui donnant tout le territoire du Québec et les agents de tous les corps policiers, si ceux-ci sont accusés de gestes inadmissibles de nature criminelle envers les femmes autochtones. De plus, toutes les enquêtes actuellement menées par la Sûreté du Québec (SQ) à ce sujet seront transférées au SPVM - sauf lorsque le SPVM est visé, évidemment, a fait savoir en conférence de presse le ministre de la Sécurité publique, Martin Coiteux. Québec ajoute aussi une ressource pour les femmes autochtones qui veulent dénoncer des policiers: une nouvelle ligne téléphonique sera à leur disposition. Elle sera gérée par l'organisme Services parajudiciaires autochtones du Québec qui reçoit aussi pour mandat de les accompagner dans leur processus de dénonciation auprès du SPVM. Des membres de l'organisme les dirigeront ensuite vers le centre d'aide aux victimes d'actes criminels (CAVAC) où elles pourront recevoir des soins et de l'aide. Une ligne téléphonique existait déjà pour elles auprès du SPVM, mais cette «seconde porte d'entrée» peut être nécessaire pour celles qui hésitent à dénoncer un policier à un autre policier, reconnaît M. Coiteux. La Presse Canadienne (Le Droit, 37, Voix de l'Est, Le Devoir); 1

*** Police body cameras show promise, but raise questions**

As Canadian police forces complete pilot projects assessing whether officers will wear video cameras on their uniforms, experts in both civil rights and policing say they see value in the practice but urge proceeding with caution. "The 'how' is extremely important," Laura Berger, acting director of the public safety program at the Canadian Civil Liberties Association, told CBC News. "This an area where the devil is absolutely in the details." The Toronto Police Service wrapped up the 10-month test phase of a pilot project that equipped about 100 officers with body-worn cameras on March 31. The evaluation process is expected to be completed by June 30, police spokesman Mark Pugash said.The idea of using body-worn video cameras gained momentum in the U.S. and Canada over the last few years amid concerns from both the public and the police about use of force and misconduct allegations. In 2014, U.S. President Barack Obama pledged millions of dollars for 50,000 body cameras to be distributed to police departments across the country. In Canada, Calgary is the city closest to outfitting all of its front-line uniformed police officers with the cameras - something the police force has announced it will do by 2017. "This is the future," said Kevin Brookman, spokesman for the Calgary Police Service, told CBC News. "Everybody from, you know, elementary school right up to adults have smartphones or cameras. How is it that a policing agency in the ... 21st century has no capability of recording what we're doing?" CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Dangerous offender won't be released

A serial spouse batterer serving an indeterminate prison sentence isn't ready for release into the community, the Parole Board of Canada has decided. James Richard Standingwater, 43, was declared a dangerous offender and sent to prison indefinitely in 2010, following his latest convictions for beating and confining his wife on the Thunderchild First Nation. An indeterminate sentence still carries with it a chance for parole. However, while Standingwater has made gains during his incarceration, his risk for violent reoffending is too high to make day parole feasible, the parole board found. Standingwater's criminal record includes 10 serious assaults against his common-law wife, including a horrific incident in 2005 when he broke into her home - while on court-ordered conditions to have no contact with her - and "hit and punched her, pushed her head into a wall, pulled her hair, pulled her around, dragged her down wooden steps and outside, kicked her in the chest, head and face with hard boots, and then choked her until she lost consciousness," according to the parole board decision. StarPhoenix, A3

*** Tobby Carrier : pas de décision cette semaine de la Cour suprême**

La Cour suprême ne décidera pas cette semaine si elle entendra l'appel de la Couronne dans l'affaire Tobby Carrier. La décision a été reportée. La Cour suprême devait annoncer jeudi si elle acceptait de revoir la décision de la Cour d'appel qui avait ordonné la tenue d'un nouveau procès en juillet dernier. Tobby Carrier, de Matane, a été reconnu coupable du meurtre non prémédité de son frère, Ismaël, et de tentative de meurtre sur ses parents, Nelson Carrier et Chantal Michaud, en mars 2009. Benjamin d'une

famille de trois garçons, Tobby Carrier avait 19 ans au moment des faits. Il a été condamné à la prison à perpétuité avec un minimum de 14 ans de détention avant une possible libération conditionnelle en février 2013. En juillet dernier, la Cour d'appel du Québec a annulé les verdicts de culpabilité, dont celui de meurtre au deuxième degré, ainsi que la peine d'emprisonnement à perpétuité prononcés à l'endroit du Matanais Tobby Carrier en 2013. (…) Tobby Carrier qui est détenu à la prison de Port-Cartier devait revenir en cour, à Rimouski, le 12 avril prochain, pour connaître, si tel était le cas, la date de son nouveau procès. Radio-Canada

Dennis Oland demeure incarcéré
La Cour d'appel du N.-B. a rejeté pour une deuxième fois la demande de libération sous caution de Dennis Oland, qui contestera en octobre le verdict de culpabilité prononcé contre lui pour le meurtre non prémédité de son père. Dans une décision écrite rendue publique lundi, un comité de trois juges de la Cour d'appel, dont le juge en chef, confirme ainsi la décision d'un juge du même tribunal rendue en février. Dennis Oland, âgé de 48 ans, avait été condamné le 11 février à la prison à perpétuité, sans possibilité de libération conditionnelle avant 10 ans, pour le meurtre de son père, l'homme d'affaires Richard Oland, commis en juillet 2011. Il est extrêmement rare au Canada qu'un condamné pour meurtre - même non prémédité - obtienne sa libération sous caution en attendant l'audition de son appel. Presse canadienne (Acadie Nouvelle, 2)

* **Man who killed Calgary doctor granted day parole**
The man convicted in the shocking murder of a Calgary doctor more than two decades ago has been granted day parole. The silence of a mid-September 1992 night was broken by the sounds of a break-in. It awoke Dr. Geoffrey Cragg, who chased the offender down the stairs. During an ensuing struggle, Sheldon Klatt stabbed the 45-year-old several times, with Cragg's wife and four kids looking on. Klatt was convicted of second-degree murder and sentenced to life in prison. He was granted several unescorted passes in 2014. And in documents obtained by News Talk 770, the Parole Board of Canada granted the now-46-year-old day parole this past March 16th, which will be reviewed in six months. News i880 AM (2016-04-05)

* **25 mois de prison pour avoir publié une image intime de son ex-conjointe**
C'est parce qu'il «voulait récupérer son chien et la bague laissée en héritage par son père» que Shane-Charles Macintosh a publié une image intime de son ancienne conjointe sur les réseaux sociaux, en plus de trouver un moyen particulier pour que cette dernière se fasse harceler. Cela lui a valu une peine d'emprisonnement de 25 mois, de laquelle a été retranchée la période de détention provisoire, ce qui veut dire qu'à compter d'aujourd'hui, il lui reste une peine de 14 mois à purger. Au début de 2015, Macintosh, qui s'est déjà fait «connaître» par le passé pour avoir entretenu une relation amoureuse avec une agente des libérations conditionnelles pendant qu'il était détenu au pénitencier de Donnacona, a rencontré Chantal (prénom fictif), de qui il est tombé amoureux. Radio-Canada (2016-04-05)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

* **The 'inward emptiness' of social media**
An editorial states, "In 1925, English novelist and outcast Virginia Woolf wrote about what happens to a person when she spends her entire life trying to fit in. "Once conform, once do what other people do because they do it," Woolf wrote in The Common Reader, a collection of essays, "and a lethargy steals over all the finer nerves and faculties of the soul. She becomes all outer show and inward emptiness; dull, callous and indifferent." (…) For proof, look no further than the University Of Pittsburgh School Of Medicine, where researchers recently determined via a large study (the first of its kind in the United States) that social media use is "significantly associated with increased depression." The study, conducted in 2014 and published this year, sampled nearly 1,800 American millennials - 19 to 32 years old - and concluded that more than a quarter had high indicators of depression. (…) And what do you know: Those who used social media most frequently were 2.7 times more likely to be depressed than their less-active peers. This result surprised the researchers. "We had expected a U-shaped curve, with a higher risk of depression being correlated with no social media use at all or excessive use," says Dr.

Brian Primack, senior author of the study and director of the University of Pittsburgh Center for Research on Media, Technology and Health. (…) Primack suggests the usual suspects: "Highly idealized representations of peers on social media may elicit feelings of envy and the distorted belief that others lead happier, more successful lives." There's also cyberbullying, he says (though it is much less prevalent among adults), "and other similar negative reactions."" Toronto Star, A7

*** Pas un geste «haineux»**

«Je ne suis pas raciste.» L'un des individus accusés de voies de fait contre un sikh de la région de Toronto en visite à Québec pendant la fin de semaine de Pâques se défend d'avoir commis un geste «haineux». Gabriel Royer Tremblay, 21 ans, n'essaie pas «d'excuser son geste», écrit-il lors d'un échange réalisé mardi avec Le Soleil. «J'ai énormément honte de moi en ce moment, car c'est en voyant la vidéo comme tout le monde que j'ai pris conscience de ce qui s'est passé.» Cependant, il refuse de passer pour raciste. Une étiquette qui «l'écoeure au plus haut point». (…)Les images de la vidéo ont circulé dans tout le pays après la diffusion d'un reportage par CTV News. L'affaire a pris des proportions politiques lorsque le premier ministre du Canada, Justin Trudeau, et la ministre de l'Immigration du Québec, Catherine Weil, eurent dénoncé ce geste «d'intolérance», vendredi, à la lumière des informations disponibles à ce moment. Le plaignant dans cette histoire, Supninder Singh Khehra, a raconté au journaliste de la chaîne anglaise qu'il cherchait un taxi lorsque des individus l'ont attaqué vers 3h45 dans la nuit du 26 mars près du parc de la Francophonie, rue D'Artigny. «C'était surtout des insultes en français, mais ils disaient également certains mots anglais», raconte l'homme lors de l'entrevue. «Ils pointaient ma tête, mon turban.» (…) Mardi après-midi, la police de Québec a corroboré, en partie, les témoignages obtenus par Le Soleil. Par voie de communiqué, elle a dit rejeter l'idée que l'agression sur M. Khehra «ciblait une communauté religieuse spécifiquement». L'enquête de la police démontre «qu'un des suspects avait été impliqué dans deux autres événements auparavant» sans que des accusations ne soient portées, explique l'agente Marie-Eve Painchaud. Question d'enlever un peu de pression médiatique sur la question du crime racial, la police souligne qu'étant donné la «concentration élevée de gens sous l'influence de l'alcool dans ce secteur, un plan d'action en partenariat avec les tenanciers de bars a été mis en place en 2014 pour réduire les incivilités et comportements inappropriés, qui ont chuté de 42 % depuis.» Le Soleil, 3

*** Deux fois plus d'agressions sexuelles rapportées à Gatineau**

L'activité criminelle est demeurée stable en 2015, à Gatineau, si ce n'est qu'une légère hausse de 1% par rapport à l'année passée. Une donnée détonne cependant plus que les autres dans le bilan annuel des activités policières de Gatineau présenté mardi en comité plénier. Le nombre d'agressions sexuelles rapportées a bondi de 40% dans la seule dernière année. Un total de 245 personnes derrière ces statistiques ont choisi de dénoncer leur agresseur à la police de Gatineau. Le chef du Service de police de la Ville de Gatineau (SPVG), Mario Harel, affirme que la situation a même obligé la direction à changer les affectations de certains enquêteurs afin de faire face à cette croissance imprévue. «Il y a eu en 2015 le même nombre de cas d'agression sexuelle qu'habituellement dans une année, par contre plusieurs victimes sont venues pour des cas provenant du passé, précise-t-il. On avait vécu la même chose quand il y avait eu l'histoire de Nathalie Simard. Il y a des phénomènes qui font que les gens viennent dénoncer, même si c'est une vieille histoire et c'est exactement ce qu'on souhaite que les gens fassent.» (…) L'une des grandes préoccupations pour le SPVG dans les années à venir sera la cybercriminalité qui oblige les forces de l'ordre de partout à revoir leurs façons de faire. «On patrouille sur le terrain, mais maintenant nous avons aussi un monde virtuel à patrouiller et où les gens sont aussi victimes d'actes criminels, explique M. Harel. C'est un défi et nous devrons nous organiser pour répondre là aussi aux besoins des gens.» La Presse, Zone 911 (2016-04-05)

*** Surrey violence: NDP MLAs demand "immediate and effective action" from Clark government**

NDP Surrey MLAs Harry Bains, Sue Hammell and Bruce Ralston on Tuesday demanded "immediate and effective action" from the Christy Clark government in light of the escalating violence in Surrey. They said in a statement: "There were too many shootings in Surrey last year, and this year we're seeing more than double the number. In 2015, there were 60 shootings in Surrey, and as of yesterday the 2016 count is at 31, several of which were in broad daylight and near school grounds. "What's even more worrying is the fact that there is currently no effective strategy in place from the Christy Clark government to reduce and eliminate gun violence in Surrey. Children and families are feeling terrorized, and many are too scared to

leave their home in the evening. “People in Surrey deserve to feel safe, they deserve real and immediate solutions to the violence their communities are facing, and they deserve better than the lack of support that they are getting from the Christy Clark government.” Voice Online (2016-04-05)

*** Opioid related deaths on the rise in Ottawa**
Health care professionals are raising the alarm as opioid related deaths continue to rise in Ottawa. Data obtained by the Ontario Coroner's Office shows 26 people died in Ottawa in 2014 due to opioid related deaths compared to 16 in 2012. Two highly addictive prescription painkillers, Fentanyl and Morphine, were the most dangerous drugs in 2014. Both accounted for nine deaths. "We definitely, over the past year have received reports from clients and other harm reduction partners about the increased use of fentanyl in the city," said Kira Mandryk the supervisor of Ottawa Public Health's harm reduction unit. In addition to a rise in fentanyl use Ottawa Public Health is seeing powdered fentanyl on the streets for the first time. It's a more potent and dangerous version of the narcotic. CTV News (2016-04-05)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** UNB honours residential school survivors with traditional powwow**
Driving past the large farm field just outside Indian Brook First Nation, Ashley Julian says you'd never know the piece of land was home to Shubenacadie Indian Residential School, where her mother resided for six years. "It's not something many residential school survivors talk about," said Julian, who grew up in the First Nation community in Nova Scotia. (…)To celebrate their lives and what they've been through, Julian will be taking part in the University of New Brunswick's second annual powwow, Dancing Towards Reconciliation, where she will be performing the womens' fancy shawl dance, a modern powwow dance. The powwow aims to emphasize the importance of working towards implementing the Truth and Reconciliation Commission's recommendations and calls to action, a 386-page report that aims to help residential school survivors heal and reconcile. Some residential school survivors are expected to attend this year's event. (…) The event will also honour missing and murdered aboriginal women, another topic that hits close to home for Julian, whose aunt, Anna Mae Pictou Aquash, was killed in 1976 in South Dakota. She was a leader in the American Indian Movement, an advocacy group for Native American civil rights. Daily Gleaner,

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Marijuana**
An opinion piece states, “New Brunswick's acting Chief Medical Officer of Health Dr. Jennifer Russell related in a news story Monday how she is doing necessary research into what sort of regulations ought to be required once Ottawa legalizes marijuana. Her work, which will involve talking to authorities in other jurisdictions where 'pot' is already legal, her counterparts across Canada, and consultation with other relevant groups, reports and studies is necessary if the provincial government is to make wise decisions. It needs the best information it can get. It's also crucial because there are so few places that have legalized marijuana. Experience elsewhere is extremely limited. Canada, including New Brunswick, is blazing new trails. But we're getting hints that pot legalization could become hotly debated, creating political headaches for Ottawa and the provinces. But ironically, such controversy would arise from the devilish details, not legalization itself. The Liberal election promise proved highly popular and remains so. Marijuana is not totally harmless, but it's way down the list and less risky than alcohol. Criminalizing people for use, possession, sale and growing the drug - an effort that costs more than $1 billion annually in Canada - makes no sense. (…) And while Ottawa's legislation hasn't been released yet, New Brunswick just assisted the producer with almost $1 million to enable it to expand. But the same government is showing signs of simultaneously riding off in opposite directions at once. It wants the taxes, profits and jobs but Public Safety Minister Stephen Horsman also says he favours a 'legal age' for marijuana of 21.” Times & Transcript, A8

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Millennials and the PS**
A editorial states, **"**The Treasury Board president wants to hire more millennials, pumping new blood into the public service and ushering in a golden age. But it raises the rather large question: How?Scott Brison argues that hiring millennials is a twofold boon to the public service. First, the greying of the public service presents a long-term logistical problem. The average age of new hires is 37. Second, the government needs people to step up with new approaches as others retire. Millennials would bring in new skills and diverse values. Sounds reasonable. But what do young people actually want from their employer? According to numerous studies and surveys, millennials seek meaningful work, less hierarchy, fewer rules, flexible work schedules, support for risk-taking and so on. Many young people want to make a difference in the world. Brison says government is where people can really move the needle. This can be done, he says, if government gives them the tools to do that. Can he and the public service actually offer this? And if they can, should they? Government is cumbersome to reform. So far, there doesn't seem to be a clear plan to make the public service more millennial-friendly (which can't be a straightforward process). So Brison has a lot of work ahead. It means, fundamentally, making the government as attractive a place to work as tech start-ups or change-the-world NGOs. This is a tall order, especially when briefing documents suggest there are too many decision-making layers and a toxic work environment in the bureaucracy." Vancouver Sun

* **Forging provincial consensus on CPP reform easier said than done**
Unless there is a breakthrough at a June meeting of finance ministers, pension reform may become the biggest Liberal election promise that never comes to pass. On April 19, if the polls can be trusted, Progressive Conservative Leader Brian Pallister will win the Manitoba election, further dimming the Trudeau government's hopes for pension reform. Unless there is a breakthrough at a June meeting of finance ministers - which is possible but shading toward unlikely - pension reform may become the biggest Liberal election promise that never comes to pass - a depressing prospect for those in need of help with their retirement. "Confused," is how Keith Ambachtsheer, director emeritus of the Rotman International Centre for Pension Management at University of Toronto, describes the state of play between Ottawa and the provinces on bolstering the Canada Pension Plan. Although the election platform promised to "work with the provinces and territories, workers, employers and retiree organizations to enhance the Canada Pension Plan," and last month's budget set a "goal of being able to make a collective decision before the end of 2016," getting the required consent of seven provinces representing two-thirds of the population is proving elusive. Globe and Mail

OTHER / AUTRE

* **The first casualty: Iceland's PM resigns after secret offshore firm is exposed by document leak that's igniting a global firestorm**
Within 48 hours, the largest leak of confidential documents in history has shaken the foundations of power around the world, triggering the resignation of Iceland's prime minister and sending political shock waves from Pakistan to Argentina to Ukraine. Prime Minister Sigmundur David Gunnlaugsson relented to withering public pressure Tuesday, stepping down as Iceland's leader one day after thousands gathered outside parliament in protest over revelations he held a secret offshore company. (…) The files contain evidence of offshore companies controlled by the presidents of Argentina and Ukraine, and the King of Saudi Arabia. They also include 128 other politicians and public officials, and at least 33 people and companies blacklisted by the U.S. government because of evidence they've done business with Mexican drug lords, terrorist organizations such as Hezbollah or pariah nations such as North Korea and Iran. (…) The Canada Revenue Agency issued a statement in response to the investigation, saying that it "continues to pursue audits related to offshore tax evasion including some Canadian clients associated with law firm Mossack Fonseca." (…) On Tuesday, information contained in the leak prompted France to put Panama back on its "black list" of tax havens, which puts a withholding tax on financial transactions

between the countries. Panama had been taken off the list in 2012. Here are some leaders whose secret offshore financial dealings have come under scrutiny. Toronto Star, A1

*** Arms deal by Canadian firm raises issues about Ottawa oversight**
A new UN panel report says a shipment of armoured personnel carriers to Libya from a Canadian-owned company's Mideast facilities several years ago violated an international arms embargo - an incident that raises questions about how extensively Ottawa should be policing the defence and military trade conducted by its citizens abroad. The March 2016 report, which flagged a transfer of armoured vehicles produced by Streit Group, a company first established in Ontario in the 1990s, was drawn up by experts monitoring global compliance with the United Nations Security Council arms embargo against Libya in place since 2011. Streit is owned by Guerman Goutorov, a Canadian citizen who lives in the United Arab Emirates. His Canadian-based company is Streit Manufacturing in Innisfil, Ont. The UN panel's reporting on what it calls an "illicit transfer" of armoured personnel carriers comes amid a growing debate in Canada over the military and defence goods that Canadians sell to Mideast countries - including a $15-billion deal with Saudi Arabia - and increasing concern that Ottawa is not doing enough to monitor, control and shine a light on this flourishing business. Libya has been engulfed in civil war since dictator Moammar Gadhafi lost power in 2011. The top U.S. general in Africa last month described Libya as a "failed state." Globe and Mail, A1

*** Canadiens condamnés pour des liens avec le Hezbollah**
Un tribunal des Émirats arabes unis a condamné «un groupe composé d'Arabes et de Canadiens» à six mois de prison pour leurs liens présumés avec le Hezbollah libanais. Selon l'agence de presse officielle du pays, les personnes condamnées lundi seront plus tard déportées. Ni l'identité ni le nombre des inculpés n'a été précisé. Affaires mondiales Canada, à Ottawa, n'avait toujours pas commenté mardi. Ni les autorités libanaises ni le Hezbollah n'ont voulu non plus commenter l'affaire. Le Hezbollah, soutenu par l'Iran (chiite), est de plus en plus contesté dans le golfe Persique, notamment par l'Arabie Saoudite (sunnite wahhabite). Associated Press (le Soleil, 22); Journal de Montreal, 27 (Journal de Quebec)

INTERNATIONAL

*** West should adopt Israeli security systems to stay safe**
An opinion piece states "When it comes to airport security, Israel is regarded as the gold standard. On a daily basis, Israel is forced to deal with strategic, tactical and existential terror threats, while facing constant scrutiny from the international community and our media for efforts that every nation is obligated to take to ensure the safety of its citizenry. Given the tragedies that have taken place in Paris and Brussels, the world searches to find answers as to why individuals would commit such atrocious and ghastly acts of violence against innocents. (…) Cameras with constant surveyors keep a close watch on any suspicious activity. Before entering the terminal, another checkpoint has security guards who analyze and inspect passersby in an attempt to draw any sort of suspicion a terrorist might conceal." Province, A14

*** Kim Jong-il's ex-bodyguard seeks asylum**
For more than a decade, Lee Young-guk was a bodyguard for the man who would go on to become one of the world's most brutal dictators. After a failed attempt to flee North Korea in 1994, when the Communist regime rewarded a smuggler in China for forcibly returning him to Pyongyang, Lee finally escaped to South Korea where he became a citizen - and a vocal critic of his former boss, Kim Jong-il. Now, Lee is on the run again. On March 13, the now-53-year-old arrived in Toronto with his wife and two young children. He once again became an asylum seeker, this time fleeing what he claims are threats and persecution by South Korea for his outspoken criticism of their neighbour to the north. "I was arrested in a demonstration. Police beat me and tortured me. They released me but continued to follow me and threaten me," said Lee, who changed his name to Lee Young-dae after his defection to Seoul. "They are very sensitive to any criticism against the North. I feared they would send me back to Pyongyang," said Lee. Kim Jong-il ruled North Korea with an iron fist, with thousands imprisoned, tortured or dying of starvation during his 17-year reign that ended when he died of an apparent heart attack in 2011. Waterloo Regional Record, B6

*** What would a Syrian peace deal look like?**

After the Syrian army recaptured the city of Palmyra from Islamic State a week ago, United States State Department spokesman John Kirby admitted that the liberation of the ancient city was a "good thing." But he could not resist adding: "We're also mindful, of course, that the best hope for Syria and the Syrian people is not an expansion of [President] Bashar al-Assad's ability to tyrannize the Syrian people." This was entirely in line with the long-standing US policy of seeking to destroy both Islamic State (also known as ISIS, ISIL and Daesh) and the Syrian government (i.e. the Assad regime) at the same time. But that was never more than wishful thinking, especially as the United States was quite sensibly determined not to commit its own ground troops to the conflict. If the Syrian army actually had collapsed (as was looking quite likely before the Russians intervened to save it last September), nothing could have prevented Islamic State and the rival Islamist forces of the Nusra Front from taking the whole country. They might then have fought each other for control, but all of Syria would have ended up under extreme Islamist rule. Hill Times (Embassy)

*** Oil spill fears remain one year after bunker fuel fouled Vancouver beaches**
When the MV Marathassa leaked at least 2,700 litres of bunker fuel into Vancouver's harbour one year ago, the effects of the spill reached far beyond the city's picturesque waters and beaches. Delays in clean-up and notification of the city sparked public outrage, drew attention to Conservative cuts to the Canadian Coast Guard and prompted a flurry of campaign promises from the New Democrats and Liberals. The miscommunication and uncertainty of roles that caused the delays were revealed months later in an independent report, which made a number of recommendations that the coast guard says it is implementing. But city manager Sadhu Johnston says despite improvements made by the federal government including reopening the Kitsilano coast guard base and working toward a regional response

plan fears about oil spills still loom large. "Not a ton has changed since last year," he said. "There's been planning and engagement together, but we're still not there yet. We're still not ready for a major tanker spill in this region." The spill on April 8, 2015, while relatively small, happened when concerns were running high in Vancouver about increased tanker traffic that would be caused by Kinder Morgan's proposed Trans Mountain pipeline expansion. St. John's Telegram

*** Wildfire hazard high near Rocky**
The wildfire hazard was raised to high in the Rocky Mountain House Forest Area on Thursday. Existing permits have been cancelled and no new fire permits will be issued. Safe campfires are still allowed. A wildfire advisory for the Rocky forest will remain in effect until conditions improve. As of Thursday afternoon, the Rocky forest had three smaller wildfires burning, all under control. The cause of these fires is still under investigation. Across Alberta, in the 24 hours to Thursday afternoon, there were four new wildfires. Red Deer Advocate, A3

*** River 'finds a way' - Renfrew landslide left lasting damage**
The floodwaters and debris have receded in Horton Township near Renfrew, but Steve Osipenko hasn't forgotten the frightening speed of last week's massive landslide, and the flooding it caused. Ten hectares of land slid into the Bonnechere River downstream from Renfrew on the night of March 28 to 29, clogging the fast-running river with trees and clay. With the river blocked by trees and debris, water backed up behind the blockage. It rose more than seven metres near the landslide, and about five to six metres upstream in Renfrew. Osipenko, who heads the Renfrew County Paramedic Service, could only watch and wait. Sooner or later, he said, "the river always finds a way through." But first the muddy floodwaters washed away a cottage, damaged a small hunting camp, poured water seven feet deep into a house, submerged the Renfrew sewage plant and got into the basement of the hydroelectric plant. Then, after seven to eight hours, the blockage finally broke loose, releasing all the debris into the Ottawa River. As long as trees and mud blocked the river, a gauge downstream showed the rate of flow as zero. When the blockage burst, the flow jumped to 250 cubic metres of water per second - two and a half times the normal rate for a spring runoff. The river is flowing almost normally now. Ottawa Sun, A6 (Ottawa Citizen)

*** Nova Scotia Power investigating about 9,000 outages - The utility says high winds and heavy rain are pushing trees onto power lines**
About 9,000 homes and businesses are starting the day without electricity due to power outages stretching from the South Shore to Pictou County. Nova Scotia Power says it is investigating the cause of the outages, which range from Digby and Shelburne to Amherst and Stelllarton. "We have very strong winds across the province and in some areas we also have pockets of very heavy rain. The wind and a number of areas, combined with the rain, is causing trees and branches to come down onto the lines," said spokeswoman Bev Ware. She says crews were working through the night. With winds coming from the west, Ware says parts of the Annapolis Valley and the South Shore have been hardest-hit so far, but outages are starting to pop up in northern parts of the province as well. CBC News

*** Rain, wind warnings for west coast; snow coming to Labrador**
Environment Canada has issued rain and wind warnings for the west coast of Newfoundland, and is forecasting another spring snowfall for parts of Labrador Friday. The west coast of Newfoundland, from Port Saunders and the Labrador Straits down to Burgeo-Ramea should expect rainfall through Friday. In Bay St. George, Burgeo, Port aux Basques and Corner Brook, Environment Canada says rain heavy at times is expected to develop Friday afternoon. That rain will fall ahead of an approaching cold front, and spread northeast Friday night into Saturday. An expected 25 to 35 millimetres of rainfall is expected on the west coast, and Environment Canada warns of up to 70 mm in some coastal areas through Saturday. CBC News

*** Grief continues a year after tragic Makwa Sahgaiehcan First Nation fire left 2 children dead - 2-year-old Harley and 18-month-old Haley died in Feb 2015**
More than a year after the death of their two children, Martin Cheenanow and Hazel Ochuschayoo are still processing their grief. "We've had a lot of heartbreaking moments, as we keep thinking about [the loss]. It never left me. Still today, I still think about it lots. We still get lonely for them," says Cheenanow. On Feb. 17, 2015, the couple's children, two-year-old Harley and 18-month-old Haley, died when their

house on the Makwa Sahgaiehcan First Nation went up in flames. The tragedy in the community, located 300 kilometres northwest of Saskatoon, attracted a lot of attention because the volunteer fire service of the neighbouring village didn't answer the 911 call. The fire service attributed its lack of response to an unpaid bill, saying that its firefighters wouldn't have been insured. The controversy has gone away but the grieving continues. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Secrecy a disservice to banking industry
The federal anti-money laundering watchdog's secrecy over the name of the first bank ever fined for breaching its standards has smeared the reputation of the entire industry, a financial sector advocate said Thursday. Janet Ecker, president of the Toronto Financial Services Alliance, is calling on the Financial Transactions and Reports Analysis Centre of Canada to identify the bank recently fined $1.1 million for failing to report a suspicious transaction and various other transfers. "They should make the name public rather than tarring everyone," she said. "Our industry has an excellent reputation globally," she said. "So clarity is important to ensure we don't suffer needless reputation risk." The failure to name the offending institution is a disservice to the industry because it paints an unfairly dubious picture of all players, said Ecker, who is in China on a trade mission. Ecker also wants the government agency, better known as Fintrac, to release more information about the nature of the breach so the public can judge whether the bank committed a serious infraction or a simple oversight. Fintrac said it exercised discretion in deciding not to release the name of the bank in Tuesday's announcement - though it has for many other businesses - in order to send a message of deterrence swiftly rather than wait out a potentially lengthy appeal process before releasing the name. Hamilton Spectator, A1; Toronto Star, A1; * La Presse, 2

La Cour suprême n'entendra pas l'appel d'Asad Ansari
La Cour suprême du Canada n'entendra pas l'appel de l'un des membres du groupe terroriste surnommé les «18 de Toronto». Asad Ansari cherchait à en appeler de sa condamnation datant de 2010. Il avait été trouvé coupable d'avoir participé ou d'avoir contribué aux activités d'un groupe terroriste. Il avait reçu une peine de six ans et cinq mois de prison, mais avait aussitôt été libéré, parce qu'il avait déjà complété sa peine en détention préventive. Le groupe a été accusé d'avoir comploté pour commettre des actes terroristes, incluant un stratagème pour prendre d'assaut le Parlement et décapiter le premier ministre Stephen Harper. M. Ansari avait aussi participé à un camp organisé par les meneurs du groupe. Comme cela est toujours le cas, la Cour suprême n'a pas donné de raisons pour son refus. La Presse canadienne, 19

*** Big Data, surveillance and Privacy 2.0 after Snowden**
An opinion pieces states “Edward Snowden's analysis of the largest leak yet - the Panama papers - did what Shane Pointe of the Musqueam Nation intended: lift up the heart and minds of very brave truthtellers. While Snowden's public conversation terrified many, he also pointed the way to hope in the era of Big Data and the Internet of Things. When talking about Big Data and Surveillance, focus on the information and knowledge that comes from the data, and the power matrix in which that unfolds. That is the real message from the Snowden event held in Vancouver last Tuesday. Value can be positive or negative: information, knowledge and understanding can be used for good or bad purposes. To make Big Data constructive, we need more than just the technological advances and industrial developments - the key component is keeping sight of the rights to human privacy and personal security. Advances in Big Data offer huge potential benefits and risks when we bring different data resources together. (...) "Big" should be just big enough data collection to serve the intended purpose. Second, reform to Canada's Anti-Terrorist Act (C-51) and the Federal Digital Privacy Act should include stronger parliamentary oversight and further empower the Privacy Commissioner with financial penalties over private-sector security breaches, proportional to risk and consequential harms. There are provincial privacy laws that could also use revision and renewal.” Vancouver Sun

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Child porn seizures up at borders
The number of seizures of suspected child pornography at Saskatchewan border points this year is above recent yearly averages - despite the fact this year has only passed its first quarter. According to information provided last month by the Canada Border Services Agency (CBSA), officers in the province averaged five suspected child porn seizures per year between 2010 and 2015. This year, so far, the number of such seizures sits at six. StaffSgt. Scott Lambie with the Saskatchewan Internet Child Exploitation (ICE) unit said seizures at border points, including airports, are "becoming more regular." "What we're seeing is an increase," he said, although he was unable to say what was leading to that increase. "We get the calls from CBSA and we just attend to verify what they've found." One man, an American resident, was arrested this week at Regina International Airport after suspected child pornography in the form of animation was allegedly found on his iPhone. Carlos Melendez appeared at Regina provincial court the next day, facing charges of possession and importation of child porn. StarPhoenix, A3 (Leader-Post)

First Nations groups criticize tobacco smuggling bust
The Mohawk Council of Kahnawake and the Elected Council of Six Nations of the Grand River say the recent tobacco smuggling bust, Project Mygale, led by the Quebec provincial police is an infringement on aboriginal rights. "It's disheartening to read statements, like the one recently issued in the Mygale project, attempting to criminalize our tobacco industry," Six Nations Chief Ava Hill said in a statement. "Tobacco is a historical trade that supports the growth and economic prosperity of our communities. As sovereign nations, the federal and provincial governments have no jurisdictional right to tax and regulate tobacco on our territories." Hill could not be reached Thursday to elaborate on her comments. A spokesperson for the Sûreté du Québec would not comment on the statement. A 38-year-old Ohsweken man is wanted on fraud-related charges for allegedly being one of 21 main players of a criminal organization with links to biker gangs and organized crime that extended to the United States, South America and Europe. He was on holidays out of the country when the bust took place last week, and remains outside of Canada, a spokesperson for the Sûreté du Québec says. Two million kilograms of tobacco were bought in North Carolina and illegally imported in trucks at the Lacolle, Que., Lansdowne, Ont. and Fort Erie border crossings between August 2014 and March 2016. The tobacco was processed mostly on reserves, police say. The statement from the two First Nations organizations argued that "tobacco is not an illegal activity" and "any attempt to regulate or restrict a First Nation from manufacturing and participating in inter-nation trade within the tobacco industry is an attack on this inherent indigenous right." Hamilton Spectator, A6

Une «brèche» qui coûte cher aux producteurs
Une «brèche» dans le système de l'importation de protéines de lait au Canada prive actuellement les producteurs québécois de 15 000 $ à 16 500 $ par année, affirment des associations de l'industrie, qui déplorent l'inaction du gouvernement fédéral dans le dossier. Considéré comme un ingrédient par l'Agence des services frontaliers lorsqu'il est exporté des États-Unis vers le Canada, le lait diafiltré change de statut dès qu'il traverse les douanes. L'Agence canadienne d'inspection des aliments (ACIA), qui assure le suivi des produits, le considère alors comme du lait. Conséquence? Les transformateurs peuvent utiliser la quantité de lait diafiltré qu'il désire, au détriment du lait frais, dans leur recette de fromage, puisqu'il est considéré comme du lait, explique Richard Bouchard, président des Producteurs de lait de Capitale-Nationale-Côte-Nord. Si le lait diafiltré était considéré comme un ingrédient, les entreprises auraient un maximum de quantité - selon la réglementation en vigueur - qu'elles pourraient utiliser dans leur production de fromage, poursuit-il. Rappelons qu'en 2007, afin de limiter les dommages liés à l'importation de concentrés de protéines laitières (IPL), le gouvernement avait mis en place des normes de composition des fromages. Ces normes limitaient l'ajout d'ingrédients laitiers dans les recettes de fabrication. Afin de maintenir un équilibre dans le marché, l'importation des produits laitiers au Canada est également limitée par des tarifs douaniers. Ayant le statut d'un ingrédient, le lait diafiltré est toutefois exempté de tarifs, ce qui en fait une option alléchante pour les grands transformateurs. Le Soleil, 25, Journal de Québec (Journal de Montréal)

Franchisee suing McDonald's following 'negative publicity'
A former McDonald's franchisee who says he was forced to give up control of three restaurants is suing the fast-food chain's Canadian arm, alleging it cost him millions of dollars even though a government review of his use of temporary foreign workers ultimately cleared him of wrongdoing. Glen Bishop has filed a lawsuit in B.C. Supreme Court against McDonald's Restaurants of Canada Ltd. The company has not yet filed its response. Mr. Bishop's notice of civil claim says an April, 2014, report by CBC's Go Public news segment accused his Victoria restaurants of giving more shifts to temporary foreign workers than Canadian workers. He said he was delivered a letter by McDonald's representatives that same day that said he could not continue as an owner and operator. He said he was told he would not get any compensation if he did not immediately sign a letter agreeing to transfer the restaurants over to McDonald's. Mr. Bishop said a January, 2015, letter from the then-minister of employment Jason Kenney said its review was complete and the suspension against Mr. Bishop and his company, Nasib Services Inc., had been lifted. But he said McDonald's formally terminated its agreements with him in March, 2015, causing him major losses. Globe and Mail, S1

Job vacancy rate highest in B.C.
British Columbia has the highest job-vacancy rate among provinces, a survey of small businesses shows, with smaller employers - particularly restaurants and retail stores - having a harder time filling positions. It is another sign that B.C.'s economy is growing, but a signal that some businesses are hitting limits in their ambitions to expand, said Aaron Aerts, B.C. economist for the Canadian Federation of Independent Business. Aerts said it is smaller businesses, those with fewer than 20 employees, experiencing a harder time finding candidates where "having a vacant position empty for months on end can (put) a real drag on a business' growth." B.C.'s private-sector employers had a three per cent job vacancy rate, generally speaking, according to the federation's latest quarterly Help Wanted report, released Thursday, which translates to 50,000 positions. (…)"That is very consistent with what we're hearing," said Ian Tostenson, CEO of the B.C. Restaurant and Food Service Association, with kitchen jobs among the hardest to fill. (…)Instead, Tostenson thinks that a declining number of young people going into the cooking trades is a bigger factor, along with changes to the federal government's temporary foreign workers program, which eliminated a large pool of unskilled labour for restaurants. Vancouver Sun, C2

Syrian program to get staff boost
Additional staff are being sent back to Canadian visa offices in the Middle East for faster processing of Syrian refugees, part of a Liberal promise to bring 10,000 privately sponsored Syrians to Canada by early next year. Sponsorship groups have given Immigration Minister John McCallum and other Liberal MPs an earful in recent weeks after efforts to resettle Syrians were scaled back following the end of the government's program to get 25,000 to Canada by the end of February. Staffing cuts and limits on applications meant people who had raised money, rented apartments and amassed clothes, furniture and volunteers would likely not meet their refugees until well into next year. McCallum responded to some of those concerns last week, saying the 10,000 people whose applications were in by March 31 would be in Canada by the end of this year or early in 2017. Canadian Press (Waterloo Region Record, A3, Hamilton Spectator), Toronto Star, Globe and Mail

DSW n'est pas pressée d'entrer au Québec
Ceux et celles qui raffolent des chaussures et qui voyagent aux États-Unis connaissent les magasins DSW Designer Shoe Warehouse. Depuis deux ans, ce géant de la vente au détail, coté en Bourse, prend de l'expansion partout au Canada_ sauf au Québec. L'entreprise torontoise Town Shoes, qui exploite l'enseigne DSW au Canada, vient d'annoncer l'ouverture de six magasins l'automne prochain. Ceux-ci s'ajoutent aux quatre autres déjà prévus cette année. Résultat : il y aura 23 DSW d'un bout à l'autre du pays d'ici Noël. Les nouveaux points de vente seront notamment situés en Ontario (Ancaster, Burlington, Vaughan), en Colombie-Britannique (Tsawwassen Mills et Richmond) et à Edmonton. Dans l'est du pays, un magasin s'apprête à ouvrir à Halifax (qui s'ajoute à celui de Moncton). L'entreprise est également présente à Ottawa. Et le Québec dans tout ça ? (…)En raison des tarifs douaniers (18 % au Canada comparativement à 8 % aux États-Unis), les prix ne sont pas les mêmes dans les DSW du Canada qu'au sud de la frontière, convient Bruce Dinan. « Mais nous offrons les meilleurs prix au Canada », jure-t-il. DSW possède aussi un site web canadien. La Presse +

* **Canada faces Tuesday EU visa deadline in long-running Romania, Bulgaria spat**
Canada and the European Union are racing towards a Tuesday deadline to avoid triggering a process that could result in Canadian travellers having to obtain a visa to travel to 26 European countries. It is part of an ongoing dispute in which the EU has pushed Canada to lift its requirement on travellers from its member countries, Romania and Bulgaria. The issue has raised concerns that the dispute could adversely affect the mammoth Canada-EU free trade deal, which still has yet to be ratified. The 28-member bloc says Canada's visa violates the spirit of reciprocity, but the Immigration Department disagrees. Representatives from Canada, the EU, and Bulgaria and Romania have met four times since then including a session this past Wednesday but no progress has been made, said one source familiar with the efforts but not authorized to discuss them publicly. Tuesday's deadline raises the possibility of igniting a nasty public spat in a year when Canada and the EU are celebrating 40 years of relations and hoping to finally ratify their landmark free trade deal. The Telegram

* **Lure Of Canada: Favorable exchange rate brings Americans across the border**
Residents of Detroit and Windsor, its Canadian neighbor to the south, have long enjoyed a close relationship on many levels — entertainment, shopping, dining out. Before the 9-11 terrorist attack, it was common for Downtown Detroit office workers to have lunch in Windsor and suburbanites often visited the Canadian city to shop, eat at an ethnic restaurant or try their luck at the casino. After 9-11, long backups sometimes occurred at the two Detroit-Windsor border crossings as security ratcheted up. Quick, fun trips to Canada were no longer so appealing. "Before 9-11, 30 percent of our customers were from the U.S.; after, it dropped to 10 to 12 percent," said Dan Orman, co-owner of Freed's, a popular clothing store in downtown Windsor for 86 years. But, in recent years, traffic flow has improved, based on reports from individuals who travel to Windsor regularly and official websites that track border crossing times. Orman says he commutes to Windsor from his West Bloomfield home in about 30-35 minutes as long as it's not rush hour. But it's the favorable currency exchange rate that is once again luring more U.S. citizens to Canada. (…)While traffic backups are rare during non-rush-hour border crossings, Allan Gale of West Bloomfield recommends that visitors avoid the trip on Saturday nights when traffic is heavier because American young adults often visit Windsor bars and the casino. Unlike the U.S., Canada's legal drinking and gambling age is 19. For many Detroiters, a trip to Windsor to celebrate a 19th birthday is a rite of passage. Jewish News (2016-04-07)

* **Drug dealers get 17 and 15 years in jail after 112 kilograms of cocaine found in Mississauga**
Two men have been jailed 17 and 15 years respectively for their roles in a cocaine smuggling operation that saw close to $9 million worth of the drug make its way by sea from Guyana to St. John, New Brunswick, and then to a public storage facility in Mississauga. Justice Peter Daley found James Buttazzoni, 45, of Mississauga, and Rampersaud Ramlall, 40, of Whitby, guilty in Brampton court of conspiracy to import cocaine and possession of cocaine for the purpose of trafficking. "The impact of cocaine upon our citizens cannot be underestimated. It is a plague on our community and impacts on all aspects of society by destroying the lives of those involved in its use as well as their families," the judge said in sentencing the pair. Daley acquitted both men however, of importing cocaine, ruling Buttazzoni only became involved with the cocaine when it arrived in Ontario. Evidence showed that Ramlall had communication with people in Guyana, who were involved in the exportation of the cocaine to Canada, but the judge ruled "his conduct, on the evidence, does not constitute importing." (…)Canada Border Services Agency (CBSA) officers opened the container and located 112 kilograms of cocaine with a purity of 74 per cent, which was hidden in the wooden pallets located in the container. The container also held quantities of hot sauce, Chinese sauce, seasonings and noodles, court heard. Mississauga (2016-04-07)

* **$200k in U.S. cash seized from man on river shore**
A police patrol on the St. Lawrence River has netted $200,000 (U.S.) seized from an Akwesasne, N.Y. man. While on patrol during the late evening hours of March 31, members of the Cornwall Regional Task Force (CRTF) observed a vessel with two occupants heading north on the St. Lawrence River to a shoreline dock in the city's east end. Upon arrival at the dock, police a male passenger disembark the vessel, walk up to the roadway and proceed east carrying a black sports bag. CRTF members stopped to question the individual. (…)The CRTF is a joint forces partnership that includes the Royal Canadian Mounted Police, Ontario Provincial Police, Canada Border Services Agency, and the Ontario Ministry of Finance. Cornwall Seaway News (2016-04-07)

*** GOP Congressman Mike Bishop lies about promising vote on bridge to Canada, wants to eliminate the Dept. of Education**
An opinion piece states, "It's well-known that MI-08 Republican Congressman Mike Bishop is a bought-and-paid-for lapdog of the Moroun family. The patriarch of that family, Manuel "Matty" Moroun, is the billionaire owner of the Ambassador Bridge that spans the Detroit River between Detroit and Windsor. Although there is a desperate need for an additional bridge to facilitate truck traffic that now backs up for miles on busy days, Moroun is equally desperate that no additional bridge be built unless he is the one that builds it and profits from it. He went so far as to attempt to get voters to pass a ballot initiative back in 2012 that would assist him in maintaining his monopoly. Voters rebuffed him but he has never given up hope. He has fought another bridge proposal, one that is now a done deal and will be called the Gordie Howe International Bridge, tooth and nail and nobody has been more helpful along the way, exploiting his government position and political connections, than Mike Bishop. (…)Last week, in an interview with WHMI, Bishop suddenly revised history, claiming he never promised a vote on the bridge his benefactor Matty Moroun has spent the past decade trying to stop: (…)What IS clear is that Moroun is still very much politically active and intent on stopping the Gordie Howe International Bridge so he can build one of his own." Eclectablog (2016-04-07)

*** Think tank: Private investment needed to fill infrastructure spending gap locally, nationally**
There are unexplored opportunities for the private sector to invest in the nation's $2 trillion worth of deteriorating infrastructure – and get a return on investment – in coming years via a broad expansion of public-private partnerships. That's the message from a report released Thursday by the Bipartisan Policy Center, a Washington, D.C.-based think tank whose executive council on infrastructure toured Detroit for two hours Thursday morning prior to a meeting and panel event at the Westin Book Cadillac Detroit hotel. Public-private partnerships, in which private companies agree to build and sometimes operate public infrastructure for a fee or other payments, are increasingly common overseas and in Canada (which is using a P3 to building the $2.1 billion Gordie Howe International Bridge between Windsor and Detroit), but the United States has lagged in its implementation. Michigan is allowing more than two dozen states that lack the sort of enabling legislation to more easily allow P3 projects. Crain's Detroit Business (2016-04-07)

CYBER SECURITY / CYBERSÉCURITÉ

*** Adobe issues emergency update to Flash after ransomware attacks**
Adobe Systems Inc issued an emergency update on Thursday to its widely used Flash software for Internet browsers after researchers discovered a security flaw that was being exploited to deliver ransomware to Windows PCs. The software maker urged the more than 1 billion users of Flash on Windows, Mac, Chrome and Linux computers to update the product as quickly as possible after security researchers said the bug was being exploited in "drive-by" attacks that infect computers with ransomware when tainted websites are visited. Ransomware encrypts data, locking up computers, then demands payments that often range from $200 to $600 to unlock each infected PC. Reuters (Yahoo! News)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Motorcade today, candlelight walk Sunday to honour RCMP constable killed in crash
Crowds of people lined the streets to offer their support and condolences as officers from police departments across southern Vancouver Island solemnly escorted the body of one of their own. Const. Sarah Beckett, an 11-year member of the West Shore RCMP, was killed in a two-vehicle crash in Langford early Tuesday. Thursday's motorcade wound its way from the Victoria General Hospital to the Victoria airport, at one point driving beneath a large Canadian flag hung between the extended ladders of two fire trucks. Other emergency personnel were on hand to pay their respects, including representatives from BC Ambulance Service, BC Sheriff Services and various fire departments. RCMP spokeswoman Cpl. Janelle Shoihet says police are conducting a criminal investigation, and Saanich police have confirmed they are responsible for looking into the crash that killed Beckett. The other driver involved in

the collision was taken into custody on Tuesday but was released a day later without charges. A candlelight walk is planned for Sunday. A Facebook page called "Candle light walk to remember Sarah Beckett" says the memorial walk will begin at 8:30 p.m. Sunday and go from Peatt Road to Veterans Memorial park off Aldwynd Road. Vancouver Sun (Toronto Sun, Guardian, Telegram, Ottawa Sun, Edmonton Sun, Calgary Sun, Winnipeg Sun); * Truro Daily News; * Brandon Sun; * Times Colonist, A3)

Dashboard video shows intense police takedown in North Battleford
An intense RCMP takedown at an intersection in North Battleford that was captured video is being shared widely online. The footage, captured by a citizen's dashboard video camera, shows a police takedown of a suspected criminal who was fleeing police on a bicycle. The video shows an unmarked police minivan speeding through an intersection to intercept the suspect on the bike. A plainclothes police officer then jumps out of the van and tackles the suspect on the bike. Soon, a second unmarked police car and another marked RCMP vehicle arrive at the scene. In a news release, RCMP said they were searching for a suspect believed responsible for "numerous complaints" of criminal activity in the North Battleford area. They eventually located the suspect, but he fled police on a bike, the release said. RCMP said the suspect was not injured during the takedown, but one officer sustained a minor injury to his shoulder. RCMP said they are now reviewing the footage for "investigative purposes." Star Phoenix

Accusations contre la GRC
Accusée de violations au Code du travail lors de la fusillade du 4 juin 2014, la GRC a obtenu un nouvel ajournement. La conférence préparatoire de procès est reportée au 12 mai. L'avocat représentant la force policière, Ian Carter, s'est rendu en Cour provinciale jeudi à Moncton, pour répondre aux accusations portées contre le corps policier à la suite de la fusillade. Les deux parties ont indiqué que plus de temps serait nécessaire pour examiner certains éléments. Les plaidoyers sont donc remis au mois prochain. La GRC est accusée de ne pas avoir pris les mesures adéquates pour assurer la sécurité de ses employés et d'avoir commis quatre violations du Code canadien du travail lors des évènements. Les accusations concernent l'équipement, la formation et la supervision des policiers. C'est à la suite d'une enquête de la GRC sur les circonstances entourant la fusillade qu'on a pu constater que les agents sur place avaient alors été confrontés à une série de problèmes dans le cadre de leur intervention, parmi lesquels l'accès à des armes plus sophistiquées, l'utilisation d'équipement de protection adéquat et des problèmes dans leurs communications. En mai 2015, le Service des poursuites pénales du Canada a recommandé d'intenter une poursuite contre la GRC en invoquant des contraventions au Code du travail, plus particulièrement aux clauses touchant la santé et la sécurité au travail. Acadie-Nouvelle, 6

* **New inspector to oversee administration at Kelowna RCMP**
Kelowna RCMP welcomed a new inspector in town this week. Insp. Paul McDougall arrived from the Maritimes with his wife and daughter to become the Kelowna RCMP's corporate and client services officer. "He occupies a newly created administrative position, responsible for looking after a variety of administrative duties for the detachment," said Const. Jesse O'Donaghey. Inspector is the RCMP rank directly below superintendent, the rank held by Nick Romanchuk at the Kelowna detachment. Kelowna Daily Courier

Shining the light on police mental health
On Nov. 8, 2008, Jean-Michel Blais stood in front of a collapsed primary school in Haiti, watching as 93 bodies, most of them children, stacked up in front of him. The United Nations police team bore through the rubble in search of survivors, and found a girl trapped between the bodies of two other children. As deputy commissioner of the UN mission, it was Blais who gave the order to cut one of the bodies in half to pull the surviving girl out safely. More than to serve and protect, Blais says police work is about confronting the problems that people would not, should not and could not deal with. But sometimes, he can't either. Blais, who became Halifax Regional Police Chief in 2012, recently revealed he has post-traumatic stress disorder. It has become a hallmark of his leadership atop the Halifax force, where he has made officers' mental health a priority. By next month, every Halifax cop will complete a half-day Road to Mental Readiness workshop. "Day in, day out, these officers have to show up at the doors and deal with the challenges that are there," Blais said in a recent talk at Mount Saint Vincent University, "Spat upon. Shot at. Cut. Yelled at You think that doesn't leave them with a lasting stress?" Blais wants to start a discussion about mental illness within the force. He says in a "suck-it-up" police culture, officers have

been more likely to grab a 40-ouncer than reach for help. He's trying to change that. "(Officers) have to realize that they have to take care of themselves before they can take care of others," Blais said in an interview. When he talks publicly about his PTSD, Blais makes a point of wearing his uniform, to show that mental illness can happen to anyone. Canadian Press (Chronicle-Herald, A3, Toronto Star, Telegraph-Journal, Times & Transcript)

Inconduites sexuelles - L'ONU fait face à un combat complexe
Les suspensions de cinq et neuf jours imposées à deux policiers du Service de police de la Ville de Montréal (SPVM) pour inconduite sexuelle en Haïti ne font rien pour diminuer l'impression d'un système qui favorise l'impunité devant de tels actes, estime un expert. L'affaire révèle en filigrane la complexité de la lutte contre l'exploitation sexuelle dans les missions de paix. En coulisses, le SPVM reconnaît que les peines imposées aux deux policiers qui ont eu des enfants avec des Haïtiennes ne sont " d'aucune commune mesure " avec le geste posé. Mais il n'y a pas eu de plainte quand les policiers étaient en poste en Haïti, et la seule sanction possible en était une de discipline, dit-on : une manière de ne pas laisser le geste impuni. En vingt ans de collaboration avec Haïti, c'est la première fois que le SPVM fait face à une telle situation. Mais ce n'est pas d'hier que différents cas d'agressions sexuelles touchent les Casques bleus, notamment en Haïti. L'ONU a lancé en 2005 une stratégie pour lutter contre ces agressions... seulement pour constater dix ans plus tard que les cas demeuraient " répandus et pas assez dénoncés ". Dans un rapport interne publié en 2015, l'ONU répertoriait 231 femmes haïtiennes affirmant avoir eu des relations sexuelles avec des Casques bleus, souvent en échange de biens matériels -- chaussures, vêtements --, ou carrément contre des produits de première nécessité et des médicaments. (...) " A titre de policier canadien affecté à une mission de paix internationale, vous occupez un poste qui entraîne une différence quant au pouvoir, à l'autorité et au statut réels ou perçus entre vous et les membres de la collectivité locale ", rappelle la GRC aux policiers. Toute contravention à ces règles sera punie, ajoute le guide. Le Devoir, A5

*** Shooting suspect caught after Portage lockdown**
RCMP have a suspect in custody after two people were shot on a southern Manitoba reserve. Police locked down the Dakota Tipi community near Portage la Prairie for hours Thursday searching for a 31-yearold man. RCMP blocked all roads around the reserve and urged residents to remain indoors. RCMP say Tyson Pashe, who is known to police, was arrested mid-afternoon. A man and a woman were shot in separate homes in the community and were taken to hospital in serious condition. RCMP say officers will remain in the community for "an extended period of time" as the investigation continues. Truck amok Drunk driving charges have been laid against a Winnipeg man after a truck crashed into a house. The wreck occurred just before 10:30 p.m., at a home near the corner of Arlington Street and Sargent Avenue. Police said the truck had been driving south on Arlington when it left the road, went through a fence and continued through two yards before driving off. The home was damaged, said police. When officers arrived, police said bystanders directed them to a nearby business on the 700-block of Sargent Avenue, where the vehicle was located and the alleged driver arrested. Canadian Press (Winnipeg Sun, A10, Times Colonist); Winnipeg Free Press

*** Drug network centered in city: police**
Police are calling Monday's drug bust the largest in a decade as they released the names of 11 people charged Wednesday. Six separate search warrants were carried out Monday, resulting in 14 arrests, including 20-year-old Todd Dube of Yellowknife, who police accuse of being the leader of a drug-dealing criminal network centered in Yellowknife. Two others, Vitaline Lafferty, 76, and Marie-Anne Lafferty, 55, of Ndilo were arrested outside of Fort Providence on March 18. Eleven people have been charged so far with a variety of mainly drug-related offences. Two of them remain on the lam and arrest warrants have been issued. (...) Dube has been in and out of custody over the past year after being charged with other drug-related offences. He was charged last year in another major RCMP drug raid which yielded fentanyl, cocaine and about $200,000 in cash. He is scheduled to be sentenced on charges related to that bust in territorial court May 25. (...) Mayor Mark Heyck said the city is grateful for the work of the RCMP. He noted RCMP in collaboration with the city had made gangs and drugs one of the force's top three policing priorities for the year. LeSage said the ability to closely monitor this drug network provided "incredible insight into the extent of the drug abuse in the community." He said he is extremely proud of the

investigation and thanked officers involved. He added there are still many long hours of police work to prepare the evidence for court. Yellowknifer

*** Man dies in custody**
A 45-year-old man was pronounced dead in hospital Wednesday shortly after being arrested by Chilliwack RCMP. The B.C. Coroners Service said Lindsey Harvey Gauthier went into medical distress after being arrested at a restaurant. He was transported to hospital, but could not be resuscitated. The coroners service and the Independent Investigations Office are investigating. Province, A4; Canadian Press (Times Colonist, A6)

Gun scare suspects in court
Two teens charged in connection with a gun scare and lockdown at Millwood High School will appear in court Friday. The pair, aged 17 and 15, will be in Halifax Provincial Court Friday afternoon for a bail hearing. Tuesday's lockdown ended with the two facing 19 charges, including theft, two counts of possession of a weapon for the purpose of trafficking and several other weapons-related charges. Police believe the two got off the #82 Halifax Transit bus in front of the school dressed in camouflage, one dropping a gun on the ground. Police quickly set up a perimeter around the school and arrested one youth. Another was apprehended offsite. The RCMP seized a small hockey bag containing two long-guns and two BB guns from the woods behind the school. Cpl. Jennifer Clarke says the youth were neither selling guns, nor was this drug-related. Chronicle-Herald, A5

As home burns in early-morning hours, police capture escaped murder suspect Braidy Vermette near P.A
Family members of Troy Napope are finally feeling some relief after his accused murderer, who made a daring escape from jail guards in Prince Albert, is back behind bars. Braidy Chase Vermette and his girlfriend, Tristen Smith, were taken into custody shortly after 1 a.m. Thursday, RCMP said in a release. Vermette, one of the men accused of killing Troy Napope in 2015, had been on the run since March 30, when he escaped - with the help of two people armed with bear spray and a gun - from two jail guards who were escorting him to hospital for treatment of a self-inflicted wound. "I'm feeling relief. My family is feeling relief," said Christie Napope, Troy's sister, shortly after learning of Vermette's arrest. Provincial officials said inmates at the Prince Albert Correctional Centre helped Vermette plan the escape. Police are still searching for the two suspects who allegedly helped him get away. "Our investigation has shown that Mr. Vermette was receiving help from inside his unit (at the jail)," Justice Ministry spokesman Drew Wilby said at a press conference Thursday in Regina. Braidy Chase Vermette, 28, is charged with first-degree murder in the May 2015 death of Troy Napope. The RCMP's emergency response team was called to a home in the RM of Buckland near Redwing after police received a tip about Vermette's location Wednesday around 4:30 p.m. StarPhoenix

VPD say no connection between 4 attacks on women in same East Van neighbourhood
An attack on a woman in East Vancouver Wednesday evening is at least the fourth stranger assault in as many months in a small area of the Hastings Sunrise neighbourhood.In the latest incident, a 41-year-old woman was surprised and grabbed by a man as she sat in her car near Nootka Street and East Broadway. She managed to fight off the attacker and call for help.Less than four block away near East 7th Ave. and Windermere Street, another woman was attacked and sexually assaulted as she was getting into her parked car in January. (…) Burnaby RCMP recently formed a special task force after a fifth sexual assault in just over a month in North Burnaby. Police there say there are some commonalities in all five attacks. Both clusters of attacks - in East Vancouver and in Burnaby - have occurred not far from SkyTrain stations along the Millennium Line. CBC

A request for comment from the Burnaby RCMP was not returned
2 men arrested in Inuvik after firearms incident. Two men have been arrested in Inuvik and are facing charges after police responded to a firearms call Tuesday night. RCMP say the incident continued into Wednesday morning. Police say no one was injured in the incident and both men remain in custody. CBC

*** RCMP recapture escaped suspect**

A man facing charges in connection with the death of Troy Napope has been taken into custody again after escaping on March 30. Braidy Vermette is facing a charge of first-degree murder, and was receiving medical treatment in Prince Albert when he escaped police custody. On Wednesday afternoon, police received a tip about Vermette's location. On Thursday they deployed an emergency response team to a residence in the R.M. of Buckland, where Vermette and a woman wanted by the Prince Albert Police Service were hiding. According to RCMP, both suspects were taken into custody as they exited the building after it caught fire. The incident occurred shortly after 1 p.m. No serious injuries to the suspects, police or the general public were reported. Buckland Fire and Rescue responded to the fire, but were unable to save the building. It is expected to be a total loss. There is currently no risk to public safety, but RCMP say there may be road restrictions in the area for the rest of Thursday. They also ask the public to stay away from the residence while investigators and fire crews work on the scene. At the request of the RCMP, another police service has been asked to conduct an independent external investigation into the matter. RCMP have also asked the provincial government to assign an independent observer to the case. Prince Alberta Daily Herald

*** Woman accused of defrauding family of London-area crash victim found dead in British Columbia**

A woman being investigated for defrauding the grieving family of a London-area man killed in a crash has been identified as the victim of a grisly homicide in British Columbia. Her friends, meanwhile, are outraged by the media's focus on the fraud allegation -- her death made headlines across Canada -- and want her to be remembered as a devoted mother, skilled mechanic and lover of the outdoors. Police say a motorist discovered a burned body by a service road near Mission, B.C., east of Vancouver, on March 29. Homicide investigators haven't released the victim's name, but family and friends identified her as Victoria (Vikki) Heppner. Heppner, 28, made national headlines last fall after more than $24,000 went missing from an online fundraiser she had set up for Roger Belanger, a fellow truck driver killed in a single-vehicle crash south of Woodstock on July 28. More than 170 people donated to the Gofundme account for Belanger's widow and two young sons, but the family said they never received a penny. Belanger, 29, had met Heppner through a Facebook group for truck drivers, his family said. Mounties in Wood Buffalo, near where Heppner had lived in Fort McMurray, launched an ongoing fraud investigation, Cpl. George Cameron said Thursday, adding he hadn't received confirmation of Heppner's death. London Free Press

*** N.S. politician says blackmail letter threatened to reveal call to male escort**

A municipal councillor in Nova Scotia says someone tried to blackmail him into resigning by threatening to reveal a call made from his hotel room to a male escort service. Steve Sampson, a member of Richmond County council, said he received an unmarked envelope in the mail Tuesday at his home containing a photocopy of a hotel bill from February, 2014, incurred while on county business in Seattle, Wash. "The bill included a phone call to a male escort agency," Sampson told a news conference Thursday in Halifax. The anonymous letter-writer told him he would publicize the expense unless Sampson resigned by Friday and agreed never to run for office again, he said. Sampson said he instead decided to take the letter to RCMP, and asked them to investigate "this attempt to blackmail a public official." He said he is disturbed that various scandals that are roiling Richmond County council have produced such a toxic threat. "It has never been my practice to mix private, personal matters with public life. But in these circumstances, I don't believe I have a choice," he said in a statement to reporters. As warden until 2014, Sampson led a successful fight to reduce county council to five seats from 10. "The blackmailer apparently believes I can be embarrassed or shamed into resigning my seat, but I will not be blackmailed into leaving public office. Unlike the blackmailer, I have complete faith in the fairness and good judgment of the people of Richmond County. I trust them to weigh the motives of the blackmailer against my conduct over many years." An RCMP spokesman could not be reached late Thursday to discuss any investigation. Telegram (Guardian, Cape Breton Post, Toronto Sun)

*** Nanaimo police investigating racist graffiti again**

Police are investigating a case of racist graffiti after ads featuring real estate agents of Asian descent were defaced in Nanaimo this week.The graffiti appeared on three bus-stop bench advertisements, according to police. "Just terrible, senseless graffiti," said said Const. Gary O'Brien, with Nanaimo RCMP.

"They have since been cleaned up and we have no idea who is responsible for it." One community organization says it was shocked to see the hateful messages. CBC

*** Surrey mayor calls for new prosecution rules after recent shootings**
A wave of gang-related shootings in Surrey has prompted the city's mayor to propose changing the rules for criminal prosecution to get more accused gunmen before the courts. Linda Hepner's suggestion Thursday came amidst a wave of drug-related shootings in British Columbia's second-largest city - more than 30 for 2016 - that have alarmed the public. At least nine people have been injured in the shootings and one killed, according to media reports. "We have become so overburdened with process requirements," Ms. Hepner said in an interview. Globe and Mail

*** Break-in sexually motivated: RCMP**
A violent home invasion against an elderly Selkirk couple last weekend appears to have been a random, sexually motivated attack, according to court documents. RCMP previously released information an 88-year-old man and his 85-year-old wife were found Sunday evening suffering from serious injuries. Both were taken to hospital, where they remain in stable condition. Police also disclosed earlier this week they had arrested a 22-year-old Selkirk man, whom they found walking in the area shortly after the incident and charged him with multiple counts of assault and break-and-enter. However, the court information sworn out against the accused, Justin Bannab, reveals additional details about what allegedly happened. Bannab is charged with aggravated sexual assault and break-and-enter with the intent of committing aggravated sexual assault against the female victim. He is also charged with aggravated assault and break-and-enter with the intent of committing aggravated assault against her husband. Bannab appeared briefly in a Winnipeg courtroom Thursday, where the Crown obtained an order banning him from having any contact with the two victims. He remains in custody at the Winnipeg Remand Centre and has not yet made a bail application. Winnipeg Free Press, B2

*** Près de 400 arrestations en six mois**
L'opération policière à l'origine des troubles qui secouent de nouveau Montréal-Nord s'inscrivait dans une vaste offensive contre les gangs de rue, frappés par près de 400 arrestations depuis six mois. La recrudescence des meurtres et des crimes violents liés aux gangs d'allégeances rouge et bleue, en 2015, a incité la police de Montréal à accentuer la pression sur cette forme de criminalité avec le «projet Accalmie». Depuis septembre dernier, ce blitz d'opérations a mené à plus de 380 arrestations pour trafic de stupéfiants, crimes violents et possession illégale d'armes à feu. C'est dans ce contexte qu'est survenu le décès de Jean-Pierre Bony, atteint d'une balle de plastique à la tête alors qu'il tentait de fuir les policiers lors d'une rafle au quartier général d'un réseau de trafiquants des Rouges, rue Arthur-Chevrier, le 31 mars. Une douzaine de suspects ont alors été arrêtés, dont Dany Villanueva, frère du jeune Fredy Villanueva, abattu en 2008 lors d'une intervention policière qui avait provoqué des émeutes à Montréal-Nord et dont l'anniversaire de naissance coïncidait avec la manifestation qui a tourné au saccage, mercredi soir. Il faut remonter à 2007 pour trouver pareille offensive à l'encontre des gangs de rue à Montréal. Journal de Montréal, 15 (Journal de Quebec)

*** Per capita costs downin 2015:police board**
The per capita cost of operating the Winnipeg Police Service last year was below the national average for police forces across the country, a Statistics Canada report shows. Don Norquay, executive director of the Winnipeg Police Board, said the service's per capita costs in 2015 were $363.43, while the national average - according to a recent Statistics Canada report - was $391. Norquay told councillors on city council's finance committee Thursday the board is in the process of comparing the WPS per capita costs with those of police forces across the country. In a comparison with three other Prairie cities, Norquay said the WPS's costs were lower than those of police in Calgary and Edmonton but higher than those in Saskatoon. Norquay said the board will be continuing its research and hopes to have a more comprehensive comparison ready at a later date. He said the police service's per capita costs in 2015, when adjusted for inflation, decreased "slightly" from the costs in 2014. While the police board and the WPS were stung by criticism from Mayor Brian Bowman and several councillors over the increase in the police budget for 2016, Norquay said the fourth-quarter financial report for 2015 paints a positive picture of the police service's financial situation. While the police budget overall climbed 6.32 per cent, Norquay said a comparison of actual expenses from 2014 to 2015 showed an increase of 1.87 per cent - and most

of that was driven by salary increases that totalled three per cent. Norquay said the mill rate contribution to the WPS budget - those funds paid for by property taxes - increased 1.98 per cent. "All in all, it's a fairly positive fiscal picture for the police service," he said. Winnipeg Free Press

*** Une tragédie nationale**
La mort de Sandy Michel, survenue mercredi soir à Lac-Simon, en Abitibi, n'est pas qu'un simple fait divers. C'est une catastrophe. Pire : une tragédie nationale. En moins de six mois, c'est la troisième fois que cette communauté algonquine de quelque 2000 habitants, située près de Val-d'Or, est au c_ur d'un drame humain. En octobre 2015, il y a eu des allégations d'agressions sexuelles et d'abus de pouvoir qui auraient été commis par des policiers contre des femmes autochtones. Puis la mort, le 13 février, du policier Thierry LeRoux, tué lors d'une intervention qui a mal tourné dans une résidence de la communauté, suivie du suicide du meurtrier, Anthony Papatie. Et avant-hier, la mort de Sandy Michel, tombé sous les balles d'un policier en pleine rue. L'homme de 25 ans, qui avait consommé de la drogue et était sans doute en proie à une psychose, était armé d'une machette. Il a été happé par une voiture de police avant d'être atteint par balle. Son frère est mort dans des circonstances semblables en 2009, lui aussi abattu par un policier. La mort de Sandy Michel risque d'augmenter d'un cran la tension entre les policiers autochtones et les membres de la communauté. Mais, au-delà des tensions, elle montre à quel point cette communauté autochtone est malade et les problèmes sont criants : pauvreté, violence, chômage, surconsommation, drogue et alcool, problèmes de logement, de santé mentale, décrochage scolaire, agression sexuelle, suicide, etc. La population de Lac-Simon est en explosion. Dans tous les sens du terme. On assiste à un baby-boom. Jusqu'à 60 naissances par année sur un territoire d'un kilomètre carré. Mais le nombre de maisons est nettement insuffisant pour héberger tout le monde. Dans certaines maisons, on retrouve plus de 15 personnes de la même famille. Et la situation s'aggrave d'année en année. Il n'y a pas d'espace, pas d'oxygène. Ça crée des situations propices à la violence. La Presse, 3

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prison locked down
Bath Institution, a medium-security facility, was locked down at approximately 1 p.m. on Thursday so staff members could conduct an exceptional search. A news release from Correctional Service Canada did not say what type of contraband staff were looking for or for how long they expect the institution to be in lockdown. The search was ordered to ensure the safety and security of the institution, its staff and inmates, said the release. Normal operations will resume as soon as it is considered safe to do so. Regularly scheduled visits may be affected. Visitors who have already planned a visit are asked to contact the institution directly, said the release. Kingston Whig-Standard, A3

Donald Trump 'homosexual' Wikipedia edits made from Corrections Canada computer
Edits to an online page on Donald Trump, calling him transgender and homosexual, were made using a computer with an IP address belonging to the Correctional Service of Canada (CSC). The changes were made Mar. 16 to the Wikipedia page Political Positions of Donald Trump. The page lists his history and his views on everything from trade policy to abortion. (…) A page showing the Wikipedia revisions made by the IP address lists hundreds of edits to pages on a variety of topics including firearms, football, a beer concoction called the michelada, gender dysphoria and the CSC's own page. (…) In January 2015 a warning was posted that the IP address was being watched by the press and the CSC after it had been linked to "homophobic" Wikipedia contributions in an Ottawa Citizen article. CSC officials told the Citizen whoever made the edits could face disciplinary measures for posting "offensive and inappropriate" comments. Global News reached out to the CSC regarding the Trump page changes but did not receive official comment by time of publication. Global News (2016-04-07)

*** Province adds them to the ranks of first responders, recognizes post traumatic stress disorder as a work-related illness**
The national vice-president of the Union of Canadian Correctional Officers is applauding legislation passed at Queen's Park declaring that correctional officers are now considered first responders -- along with police, firefighters and paramedics -- and sees post-traumatic stress disorder as a work-related

illness. Jason Godin said the legislation will allow correctional officers to receive treatment for PTSD much faster. "They categorized in the bill whom they considered first responders and it actually included correctional officers. We've been long arguing and fighting to get governments to recognize us as first responders," Godin said. Bill 163 was passed unanimously in the legislature this week. It covers both federal correctional officers working in Ontario and their provincial counterparts. North Bay Nugget

«Rambo» rattrapé par son passé
Bernard «Rambo» Gauthier se retrouve avec un casier judiciaire pour des gestes posés il y a 18 ans. La Commission des libérations conditionnelles du Canada a révoqué le pardon octroyé au leader syndical de la Côte-Nord en 2007, a appris Le Soleil. En novembre dernier, Bernard Gauthier apprenait que la Commission révisait sa décision d'il y a presque 10 ans évoquant l'article 7 de la Loi sur le casier judiciaire, qui lui permet de révoquer un pardon s'il «existe des preuves convaincantes» que l'individu visé a «cessé de bien [se] conduire». (...) Un représentant de la FTQ-Construction a d'ailleurs confirmé qu'une demande d'appel sera déposée au plus tôt vendredi devant la Cour fédérale pour «contester la décision» rendue le 7 mars.(...) Bernard «Rambo» Gauthier a été au coeur de plusieurs démêlés avec la justice depuis les dernières années. En décembre 2014, le représentant de la section locale 791 de l'Union des opérateurs de machinerie lourde a été reconnu coupable d'intimidation dans un chantier de construction, une condamnation pour laquelle il a été absous conditionnellement. «Les comportements [...] liés à votre condamnation pour intimidation, de même que ceux liés à la profération de menaces en 2009 où vous avez été acquitté et ceux liés à du harcèlement criminel où il y a eu un arrêt des procédures en 2014 [...] sont contraires aux critères légaux de bonne conduite de la Loi sur le casier judiciaire», peut-on lire. (...) En 1998, Bernard Gauthier a été condamné pour avoir proféré des menaces et un an plus tard, en 1999, il était reconnu coupable d'avoir enfreint la Loi réglementant certaines drogues et autres substances. Sans pardon, ces deux infractions figurent maintenant à son casier judiciaire. Le Soleil, 7

Court rejects Tang appeal
The Supreme Court of Canada will not hear an appeal from a selfstyled Chinese Warren Buffett who was convicted in a multimillion-dollar fraud. Weizhen Tang was convicted in 2012, sentenced to six years in jail and ordered to pay a $2.8-million fine within five years of his release. Tang operated an investment fund called the Overseas Chinese Fund, which defrauded investors from Canada, the U.S. and China of millions in a Ponzi scheme. Canadian Press (Times Colonist, B2, Toronto Star, National Post Red Deer Advocate)

*** The six jailed Bandidos hoped the Supreme Court of Canada would let them appeal their eight murder convictions**
It was the bloodiest mass murder in Ontario's modern history, and the horrific crime in London's backyard was revealed to the world a decade ago today. April 8, 2006, has gone down in infamy as the day when the bodies of eight bikers were discovered on a lonely dirt road near Shedden. The slayings would collectively come to be known as the Bandidos Massacre. (...) Eight members of the Bandidos motorcycle club, the "No Surrender Crew" from Toronto, were murdered at Wayne Kellestine's Dutton-Dunwich farm. Kellestine and his Winnipeg crew had been instructed to "pull the patches" of the Toronto bikers, effectively kicking them out of the club. All were shot, their bodies found stuffed in abandoned vehicles dumped a few kilometres away from Kellestine's address. Thursday morning, one day before the 10-year anniversary of the discovery of the bodies, the Supreme Court of Canada said it would not hear the appeals of three of the six men convicted of killing their fellow bikers, bringing the long legal saga to a close. (...)Wayne Kellestine, 65, Frank Mather, 41, Brett Gardiner, 30, Marcelo Aravena, 38, Dwight Mushey, 47, Michael Sandham, 45, convicted on Oct. 29, 2009 after seven-month jury trial in London. Kellestine, Mushey and Sandham each convicted of eight counts of first-degree murder. Mather and Aravena found guilty of one count of manslaughter and seven counts of first-degree murder. Gardiner found guilty of two counts of manslaughter and six counts of first-degree murder. London Free Press (2016-04-07)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Whalen wavers on cyber law

Four months after a judge struck down the pioneering cyberbullying law inspired by the death of teenager Rehtaeh Parsons, Nova Scotia's justice minister confirmed Thursday she has yet to decide whether to rewrite the act or appeal the decision. Diana Whalen said the absence of the law has created a quandary for the justice system because the province's groundbreaking CyberScan unit no longer has the tools it needs to combat cyberbullying. "We're well aware of the need for something to take the place of that act because it has really left a void," the minister said after a cabinet meeting. "We know that the last act was written in haste. It was passed in about three weeks. We need to make sure that what we write this time will withstand a constitutional challenge . . . (But) I haven't committed to a bill yet." Whalen said the five-member CyberScan unit was working with the province's schools to educate students about cyberbullying. However, she said the unit has been stripped of the enforcement tools it used to deal with 800 cyberbullying cases over the past two years. Whalen said the province may turn to other means to deal with online harassment, which could include making amendments to existing acts and introducing new policy tools and training. Canadian Press (Chronicle-Herald, A1, The Guardian, Cape Breton Post, Daily Gleaner, Times & Transcript)

No sanctions issued in first year under Sask. stripper law

The Government of Saskatchewan says it has not issued a single sanction under new legislation prohibiting strip shows in the province. The law is aimed at keeping patrons safe. One bar owner says it has all but bankrupted his business. "They got me pretty well shut down here," said Don Verstraeten, who owns and operates the Codette Hotel, which used to hold weekly strip shows before the law was in place. (...)The province banned strip shows in April 2015, except for events held once a year for charitable causes. The intention was to increase patron safety in bars, deter organized crime and protect people who may be vulnerable to exploitation. (...) David Morris, a spokesman for the Saskatchewan Liquor and Gaming Authority (SLGA), said no sanctions have been issued under provincial legislation specific to strip shows. However, the SGLA has fielded numerous questions, he said. (...)When asked about the challenges faced by the Codette Hotel, Morris said the legislation was meant to help eliminate the potential for establishments to profit from activities that "involve the sexual exploitation of vulnerable individuals," like human trafficking. "For a lot of permittees, they understand that following the rules is within their best interest, especially issues related to public safety," he said. Postmedia Network (StarPhoenix, A1, Leader-Post)

Vigilante 'Creep Catchers' target online predators

Members of a loosely affiliated band of vigilantes who use covert social media accounts to expose and publicly shame alleged online predators have emerged in Medicine Hat. Police in the southern Alberta city said Thursday they recently met two people who called themselves "Creep Catchers" and claimed to have recently met one of their targets. They told officers they baited their target by posing online as a teenage girl to arrange a meeting, which they claimed to have recorded on video and threatened to post it on social media. "Individuals who engage in vigilante activity are putting themselves at considerable risk of defensive or retaliatory harm from the people they are confronting," Medicine Hat police said in a statement. Creep Catchers pose a growing concern for law enforcement across North America, including in Calgary, where Dawson Raymond wages a similar public shaming campaign. Raymond told Postmedia last fall he poses as a young teenage girl on online dating sites, where he claims a surprising number of men request to meet, despite the fact the fictitious girl is a minor. He later confronts these men in person as a friend captures video footage, which he posts to his website. The Calgary man's website says Creep Catchers helps prevent the exploitation of children and young adults. "We are building our presence across Canada to catch and expose online child/teen predators as well as similar topics of interest," the site says. Calgary police say they do not condone Raymond's vigilante tactics, though they are investigating complaints that have emerged from his video-recorded confrontations. Officers warn vigilante acts could interfere with police investigations and the collection of evidence, which could mean suspects are not charged or convicted. Postmedia Network (Calgary Herald, A1, Edmonton Journal)

*** Deadly drug finds market in Sudbury**

Greater Sudbury Police are concerned about the growing problem of fentanyl abuse in the city, but encouraged to know nearly 300 patches won't make it to the city after an alleged trafficking ring was broken up in the York region earlier this week. Two Sudbury residents, 30-year-old Sean Holmes and 26-year-old Alexandra Boudreau, and a Toronto family doctor are among several people who were arrested and charged by York Regional Police following a six-month investigation, during which Greater Sudbury Police played a key role. "Our drug enforcement unit worked collaboratively with the drug enforcement and intelligence officers from the York region on this, so it's a joint partnership," said Staff Sgt. Marc Brunette, from the Greater Sudbury Police. "The drugs in question were in fact fentanyl and they were trafficked from the York region and destined for this area." (...) Opioid abuse accounted for 108 deaths in Greater Sudbury from 2008 to 2014, according to information supplied by Sudbury and District Health Unit. Of those, 23 were fentanyl related. "That's a lot of people, so when these drugs are coming into our community, it does pose a huge public health risk," said Brenda Stankiewicz, a public health nurse at the health unit. "We know folks that are addicted will misuse the drug, and we are aware there are times when people pick up the patch, not knowing its potency, and become ill from that, as well." Greater Sudbury has a community drug strategy, co-chaired by the health unit and local police and endorsed by city council, part of which is a patch-for-patch program, where people who legitimately get a prescription from a physician and have it filled by a pharmacist, must return used patches to the pharmacy in order to get new ones. Sudbury Star

*** Marlies' Bibeau is his own harshest critic**

Toronto Marlies goaltender Antoine Bibeau is too hard on himself, and he knows it. Part curse of his position, part curse of his nature. "Sometimes you have a bad game, you think it's the end of the world," Bibeau said after practice on Thursday. "It doesn't matter what kind of goal I give up, it's always my fault." (...)On his off-day Wednesday, Bibeau spoke to students at Kennedy Public School about bullying and told about his own feelings as an outsider. Knowing no English at all, he was drafted at age 16 into the QMJHL and ended up playing in P.E.I., 10 hours from home. "I was scared at first to talk," he said, "because I felt I was going to say something that's not perfect and they were going to laugh at me." In a warning about cyber bullying, Bibeau relayed a personal story about the negative comments he heard after the Maple Leafs passed him up until the sixth round of the 2013 NHL entry draft, No. 172 overall. Toronto Star, S2

*** Per capita costs down in 2015: police board**

The per capita cost of operating the Winnipeg Police Service last year was below the national average for police forces across the country, a Statistics Canada report shows. Don Norquay, executive director of the Winnipeg Police Board, said the service's per capita costs in 2015 were $363.43, while the national average — according to a recent Statistics Canada report — was $391. Norquay told councillors on city council's finance committee Thursday the board is in the process of comparing the WPS per capita costs with those of police forces across the country. In a comparison with three other Prairie cities, Norquay said the WPS's costs were lower than those of police in Calgary and Edmonton but higher than those in Saskatoon. (...)While the police board and the WPS were stung by criticism from Mayor Brian Bowman and several councillors over the increase in the police budget for 2016, Norquay said the fourth-quarter financial report for 2015 paints a positive picture of the police service's financial situation. While the police budget overall climbed 6.32 per cent, Norquay said a comparison of actual expenses from 2014 to 2015 showed an increase of 1.87 per cent — and most of that was driven by salary increases that totalled three per cent. Norquay said the mill rate contribution to the WPS budget — those funds paid for by property taxes — increased 1.98 per cent. Winnipeg Free Press (2016-04-07)

*** Hamilton Police carding/street checks plummeted to 30 last year**

Hamilton Police say they did just 30 street checks in 2015, compared to nearly 200 in 2014 and thousands in previous years, according to numbers obtained by CBC Hamilton under a Freedom of Information request. It's a stunning near-disappearance of a practice that police have publicly defended as a crucial part of their job, but Thursday just described as part of a "downward trend." Senior police have said limiting the tool will make Hamilton less safe. They stood by that argument in the face of criticism from communities of colour and anti-poverty advocates who say the practice of being stopped and asked for ID even when not under investigation is unconstitutional. The province has come up with

new rules governing when police ask people for ID in street stops. But this sharp decline happened even before these new rules take effect. CBC News (2016-04-07)

*** Ontario's profiling rules hurt small-town policing, chief says**
Ontario's new racial profiling regulations will hinder small-town police forces from doing their job, according to Gananoque Police Chief Garry Hull. Hull said the new regulations are a Toronto-centric response to perceived or real racial profiling issues that don't exist in small-town Ontario. In such communities as Gananoque, Brockville and Smiths Falls, there are no problems with racial profiling nor any complaints from citizens, the chief said. If metro Toronto has problems with profiling, or "carding" as it is sometimes called, then the city and province should take actions there to solve them, he said. Instead, small police forces are being swept "into the vortex that is Toronto" by the government's one-size-fits-all approach to policing. Under the new regulations that are effective on Jan. 1, 2017, police officers must go through a cumbersome protocol before talking to someone on the street. The officer must first inform the citizen that the conversation is voluntary and that they have the right to walk away. The police officer must also provide a reason for the stop, identify themselves, inform the citizen that they are taking notes and let the citizen know how he or she can file a complaint against police for the stop. Hull said the regulations will make conversations between his officers and the public awkward and that the rules will prevent the types of friendly chats common between citizens and small-town cops. Gananoque Reporter (2016-04-07)

*** Could a gun amnesty help curb Surrey's shooting problem?**
Surrey's violent crime rate is continuing to climb with another stabbing overnight, which comes on the heels of a shocking escalation in shooting incidents. And yet ideas on how to solve the crisis continue to be discussed with little success. Conservative MP and former Surrey mayor Dianne Watts says she thinks all option should be on the table, but does appear to be supporting an amnesty model. "There's a multitude of different opportunities. One of those would be having a finite amount of time to return weapons to the police, and move forward from there." But when it comes to the idea of a gun buyback, she expressed less enthusiasm. "I don't necessarily have an issue with it if it's going to get the guns off the street, but again we have to determine what does that look like," The model for gun buy-back scheme usually involves people turning in their guns for money. It's also been announced there'll be more talking from our politicians; BC Public Safety minister Mike Morris and mayor of Surrey Linda Hepner will be making a public statement about gun violence tomorrow. iNews880 (2016-04-07)

*** Police Deny Racism And Demand Data (That They Won't Collect)**
An editorial states, "Want to know what's more offensive than a months-old tweet by a Black Lives Matter Toronto co-founder? How about something even more outrageous than attempts to use that tweet, however ill-advised it was, to discredit an entire social justice movement fighting anti-black racism and police violence? Here you go: Toronto Police Association president Mike McCormack is fiercely attacking Ontario Premier Kathleen Wynne for the crime of acknowledging systemic racism exists. "But what I want to ask the premier is for her to show us the data that she is referring to when she says we still have systematic racism in our society," McCormack told the Toronto Sun. "We want this clarified. If she has data to show there is such a racism problem in policing or any of her departments, then the question I have is what is she doing about it?" "It's not true," he said regarding claims of systemic racism in the police force, despite the lack of data he had literally just mentioned, "and it's not acceptable to suggest it." Why is this demand for data so offensive and outrageous? That's because McCormack is well aware that his police force doesn't collect racial data. (…)That 2012 Toronto Star series Known to Police revealed some shocking data. In the city's Entertainment District, where young people of all races used to gather due to the areas then-prevalent nightclubs, "for young black males, the ratio of individuals documented to the population there is 252:1. For brown young males, it is 65:1. For young white males, 23:1." Across the city as a whole, blacks were three times more likely to be carded than whites. This ratio was later revealed to be mirrored in other Ontario cities like Mississauga, Brampton and London. It was even higher in Ottawa, where blacks made up 20 per cent of people street-checked over the last five years despite being only five per cent of the population." Huffington Post (2016-04-07)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Racism, sexism taint murdered and missing cases, minister says
Federal Indigenous Affairs Minister Carolyn Bennett told a global audience in New York that racism and sexism in Canada have tainted the way some investigators handle homicide and missing-person cases involving indigenous women. On stage Thursday at the Women in the World Summit, Dr. Bennett said there is at times an "uneven application of justice" in cases involving indigenous women. "You end up with people who have been told that it was an overdose, or a suicide or an accident," she said. (…) When confronted by the moderator with the title of the panel, Canada's Shame: The Murdered and Missing, Dr. Bennett said bluntly: "It's the truth. Without the truth we will never fix this problem. ... We've got to deal with the issues around poverty, violence and education, and the racism and sexism that mean that when somebody who happens to be indigenous goes missing or is murdered, [the case] doesn't receive the same treatment as a non-indigenous person." The minister and her three copanelists - relatives of two victims, and a former Vancouver detective who worked on the investigation of serial killer Robert Pickton - laid bare the historic and modern social ills that render indigenous women vulnerable to crime in a country that is often on the international stage espousing human rights elsewhere. In a phone interview with The Globe and Mail shortly before the panel began, the minister said she has little confidence in the RCMP's widely cited finding, released in 2014, that 1,181 indigenous women were killed or went missing across the country between 1980 and 2012. "We don't believe that the data is of a high quality," she said. (…)Dr. Bennett reiterated the government's intent to launch a national inquiry into the violence by the summer, telling The Globe she expects it to be under way before the House of Commons breaks for the summer toward the end of June. Long before then, she said, the cabinet will approve the terms of reference and the choice of commissioner or commissioners. Asked whether the government has a short list, Dr. Bennett said a "very, very long list" emerged from preinquiry consultations that wrapped in mid-February. "We have heard, from coast to coast to coast, that the leadership should be, or should include, indigenous women," she said. Globe and Mail, A1

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Les bonnes raisons de réglementer la marijuana au Canada
Un article d'opinion d'un expert note, « Fort de l'appui de 65% de la population canadienne sur ce plan, le premier ministre Justin Trudeau a confié le dossier de la légalisation de la marijuana à son député Bill Blair, ancien chef de la police de Toronto. Présentement, seul l'usage médical de la marijuana est légal au pays. L'usage récréatif, la vente, la possession, la culture ou le transport de marijuana ne le sont pas - tout comme aux États-Unis, d'ailleurs. On sait cependant que le gouvernement de Barack Obama a laissé les différents États légiférer depuis quelques années, à condition qu'un système de réglementation soit mis en place. Le Colorado, l'Alaska, le District de Columbia, l'État de Washington et l'Oregon ont légalisé la marijuana à des fins récréatives. L'accès est limité aux adultes de 21 ans et plus, et d'ici quelques années, une douzaine d'autres États devraient eux aussi légaliser son utilisation - ou à tout de moins assouplir leurs politiques. Il y a aussi ce petit pays de l'Amérique du Sud, l'Uruguay, qui aura été le premier pays du monde à légaliser la production et la distribution de marijuana, en décembre 2013, dans le but de contrôler le marché et de le soustraire au crime organisé. Après quelques années, la difficile application de cette loi donne des résultats intéressants, mais mitigés, surtout sur le plan de la distribution dans les pharmacies locales, qui collaborent plus difficilement. » La Presse

PUBLIC SERVICE / FONCTION PUBLIQUE

L'AFPC demande de reporter la mise en oeuvre de Phénix
En raison des nombreux problèmes liés à l'implantation du nouveau système de paye Phénix, l'Alliance de la fonction publique du Canada (AFPC) demande au gouvernement fédéral de repousser son déploiement. Au début mars, 124 000 fichiers d'employés avaient été transférés à Phénix, mais les

nombreuses plaintes reçues jusqu'à maintenant ont poussé l'AFPC à intervenir pour demander qu'on reporte la phase deux, et le transfert de 170 000 comptes additionnels prévu le 21 avril. « Nous avons reçu plus d'une centaine de plaintes de nos membres, travaillant dans différents ministères, disant qu'ils n'ont pas été payés correctement depuis la mise en oeuvre du système en mars. Pour nous, la situation sera aggravée si l'on poursuit avec la deuxième phase tel que prévu », a indiqué au Droit Chris Aylward, vice-président exécutif national de l'AFPC. « Le ministère ne semble pas voir les choses de la même façon que nous, et ne voit pas pourquoi il reporterait la phase deux. Tout ce qu'on nous a dit, c'est qu'on ajouterait 40 personnes pour répondre aux appels de plaintes », a indiqué le dirigeant syndical après sa rencontre avec les représentants du ministère des Services publics et de l'Approvisionnement, responsable de Phénix. Le syndicat souligne qu'il a sommé le gouvernement d'embaucher plus de personnel au Centre des services de paye de Miramichi, s'il ne peut retarder le transfert de nouveaux fichiers. Selon M. Aylward, il y aurait présentement un cumul de 120 000 comptes ou fichiers qui n'ont pas encore été traités. Le Droit, 4

The liberals and the PBO

In an irony so sharp it must have been almost physically painful, analysts in the Parliamentary Budget Office laid their hands on federal-budget costing for the next five years - but weren't permitted to share the final three years of that data with the public. Instead, the PBO had to release a report based on only two years' worth of information, ignoring the other numbers in its possession. This is inexcusable behaviour from the Liberal government. Not only was it exercising selective secrecy about the numbers - such costing has routinely been made public by predecessor governments - but it placed the PBO in an untenable position: aware of the full story, but unable to make use of it on behalf of the parliamentarians it supposedly serves. What was the government thinking? Given the PBO's long and frustrating history of trying to pry facts from federal departments under the Conservatives, Liberal ministers would be well aware of the optics if they did not provide data to their budget watchdog. Rather than hold back information, however, they have now made the PBO part of their secrecy. Six months into a government's tenure is early to speak of patterns emerging, but, well, patterns are emerging. Just last week, for instance, Treasury Board President Scott Brison launched an "open by default" government initiative but said an overhaul of the ossified Access to Information Act - legislation many taxpayers depend on to help them obtain key information about the programs they fund - won't take place for another two years. For all of their "sunny ways" rhetoric, the Liberals still reign over a system in which information is hoarded. Some examples: When the government's anti-money-laundering agency, FinTrac, this week fined a Canadian bank $1.1 million, it wouldn't identify the bank. Ottawa Citizen, A10

Brussels Airlines launches direct Toronto flights

Belgium's biggest airline launched direct flights to Toronto Thursday, days after resuming operations following the deadly attacks (http://www.thestar.com/news/world/2016/04/07/belgian-police-launch-appeal-to-find-man-in-hat-terror-suspect.html) that killed 32 people. "It was a very important sign for us to show that we are looking ahead, looking at the future," said Kim Daenen, Brussels Airlines spokesperson. The first flight landed in Toronto Thursday afternoon, she said. It will connect the two cities five times a week. The airline announced the service in December and launch March 27, but the airport was closed. It reopened Sunday. The flight is its first connection to Canada and is part of the Brussels Airlines expansion of international flights, Daenen said. It launched flights to New York and Washington in 2011. Most North American flights to Africa stop in Brussels, so the carrier added frequencies to the 18 African countries it flies to as a result, Daenen said. The only other company with flights between Toronto and Brussels was Indian carrier Jet Airways, for which flights then went on to India. But it moved those connections to Amsterdam instead on March 27, as planned before the attacks. Brussels Airlines is part of the Lufthansa group, an Air Canada partner, so passengers will be able to book flights - and connecting flights to several countries - with the Canadian carrier. Toronto Star

Belgium intensifies bombing suspect hunt
Belgian prosecutors launched a public appeal Thursday seeking any information on the "man in hat" suspect in the Brussels Airport suicide bombings that killed 16 people. Belgian federal prosecutor Eric Van der Sypt said authorities were especially interested in people who might have filmed or photographed the man. He was seen at the airport with two suicide bombers before they died in the March 22 attacks. A subsequent explosion at Brussels' Maelbeek subway station killed another 16 people the same morning. Photos released by prosecutors showed the "man in hat" leaving the airport on foot, walking to the nearby town of Zaventem and then into Brussels, where all traces of him were reportedly lost. The suspect also wore a white jacket but discarded it at some point, prosecutors said. The appeal for public assistance more than two weeks after the suicide bombings indicated that investigators have hit a standstill. Three bombers, two at the airport and one in the subway, also died in the attacks, which were claimed by Daesh, also known as ISIS and ISIL. Associated Press, A14

* **Radicalization of a Belgium Student Turned Bomb Maker Was Invisible**
He attended Catholic school and studied electrical engineering. His immigrant family valued education and discipline. His brother carries the Belgian flag as a national martial arts champion. But none of that stopped Najim Laachraoui from being drawn to the Islamic State, or from turning the technical skills that could have provided a bright future to building the bombs that, the authorities suspect, were used in the recent attacks in Paris and Brussels. Mr. Laachraoui wheeled his handiwork into Brussels Airport on March 22 and, at age 24, blew himself up along with 15 bystanders, the authorities concluded after finding his DNA. Another attacker exploded a bomb nearby, and a third man detonated explosives on a subway, killing 17. The authorities suspect that bomb had also been made by Mr. Laachraoui. Until that day, Mr. Laachraoui was an unseen yet central player and a key link between the cell that carried out the Paris attacks, organized by Abdelhamid Abbaoud, and the bombers in Brussels. New York Times

* **FBI debates sharing hack with Apple**
The FBI has not decided whether to share with Apple Inc. details about how the bureau hacked into an iPhone linked to a California terrorism investigation. FBI Director James Comey discussed the situation during a speech Wednesday at Kenyon College in Ohio. He called it a "technological corner case" and said the flaw the FBI exploited in Apple's software works only on a "narrow slice of phones" - the iPhone 5C, running version 9 of Apple's mobile operating system, not on newer or older models. "If we tell Apple, they're going to fix it and we're back where we started," Comey said. "As silly as it may sound, we may end up there. We just haven't decided yet." Associated Press (Times Colonist, B3)

MINISTER / MINISTRE

L'opposition rejette la prison à vie sans libération conditionnelle
Le plan du gouvernement fédéral qui viserait à imposer la prison à vie sans possibilité de libération conditionnelle rendrait le milieu carcéral plus dangereux, selon les partis d'opposition à Ottawa. Les porte-paroles du Nouveau Parti démocratique (NPD) et du Parti libéral du Canada (PLC) en matière de sécurité publique ont affirmé mardi qu'une telle mesure aggraverait l'état des criminels, mettant en danger le personnel des prisons. Lors du discours du Trône, en 2013, le gouvernement fédéral s'était engagé à adopter une telle politique, ce qui avait suscité une levée de bouclier chez les criminalistes. Selon eux, les lois actuelles prévoient déjà des mesures spéciales pour les détenus qui ont commis des délits graves - dont les meurtres en série et des agressions sexuelles sur des enfants.Privilégier la réhabilitation
Le NPD et le PLC croient que le gouvernement devrait plutôt se concentrer sur la réhabilitation des détenus. « C'est un gouvernement qui ne fait que punir, punir et punir. L'objectif de notre système correctionnel est pourtant de rendre plus sécuritaires les communautés en réhabilitant les prisonniers », a affirmé le député néo-démocrate Randall Garrison. Il a ajouté que les criminels qui purgeaient une peine de prison à vie seraient surveillés le reste de leur vie, même s'ils réussissent à sortir de prison.[…] Le **ministre de la Sécurité publique Steven Blaney** a indiqué que le projet de loi serait déposé avant la fin de la session parlementaire, au mois de juin. « ***Ceux qui commettent des crimes graves et violents à plusieurs reprises constituent une menace pour le public. Le premier objectif est de protéger le public*** », a expliqué M. **Blaney**, mardi, après la réunion d'un comité de la Chambre des communes. Le Devoir, A6 (Acadie Nouvelle, Le Quotidien)

Opposition MPs slam plan for life sentences

The government's long-promised plan to lock up some criminals and throw away the key will only make prisons more dangerous, opposition MPs say. Denying any chance of parole to the worst violent offenders will increase the chances of prison guards being attacked, the NDP and Liberal public safety critics said Tuesday as the government signalled legislation would come before summer. Opposition MPs want a greater emphasis on rehabilitating inmates. Criminologists denounced the life-behind-bars initiative after it was announced in the October 2013 speech from the throne, saying there are already legal provisions to ensure the most heinous offenders never get out. At the time, the government said those convicted of the worst crimes - such as multiple murders or sex assaults on children - could spend the rest of their lives in prison. **Public Safety Minister Steven Blaney** says legislation will be tabled before Parliament rises in June. "***People who commit serious and violent crimes in a repetitive manner constitute a menace to society***," **Blaney** said Tuesday after a House of Commons committee meeting. "***The premier objective is to protect society***." When the plan was first outlined, Justice Minister Peter MacKay said the provisions would be applied very narrowly. Chronicle Herald, A9 (Cape Breton Post, Hamilton Spectator, Times&Transcript, Times Colonist, Red Deer Advocate, Whitehorse Daily Star)

Prison watchdog pushes Ottawa on plans for solitary confinement
Canada's corrections investigator is pressing Ottawa to detail its plans to address solitary confinement in federal prisons amid growing pressure to place limits on the controversial practice. Howard Sapers says he sent a letter to Correctional Service Canada commissioner Don Head and **Public Safety Minister Steven Blaney** seeking details on more than a dozen initiatives the CSC suggested it would undertake in response to a coroner's inquest on the death of Ashley Smith. Ms. Smith died of self-inflicted strangulation in 2007 after a lengthy period in solitary confinement. A recent Globe and Mail report detailed how another inmate, Eddie Snowshoe, killed himself after spending 162 days in solitary. The CSC's response to a coroner's inquest into Ms. Smith's death included references to an effort to identify offenders at risk of segregation and a pledge to consult on the practice with other jurisdictions. The agency did not offer a detailed response to many of the jury's 104 recommendations, and rejected some, including new limits on solitary. Mr. Sapers said last month's letter requests more information on 13 initiatives that were mentioned as part of the CSC's 26-page response, including several dealing specifically with solitary confinement. Globe and Mail, A1

Feds outline more details of upcoming anti-terror bill
Public Safety Minister Steven Blaney assures the government's new terror bill expected Friday will be in "***full compliance with Canadian law***." The bill is expected to include provisions to allow "***preventative arrests***" and criminalize the "***promotion of terror***" -- measures law enforcement has indicated would help detain potential terrorists before a crime is actually committed. Asked to explain how the government will criminalize the promotion of terrorism, Blaney said the Criminal Code already contains provisions on "supporting hatred or violence." "It is really criminal to incite terror, to support terrorism or to encourage to use violence to achieve your means," Blaney said. Liberal public safety critic Wayne Easter says it's worth examining whether Canada actually needs new laws or whether it could simply make use of what already exists. "One key question is why have current laws not been utilized to the full extent we think they ought to be," Easter told reporters Tuesday, following a meeting of the House public safety committee. QMI Agency, 30 (Edmonton Sun, Calgary Sun, Kingston Whig-Standard, London Free Press); Le Droit (Le Devoir); La Presse

*** Disaster costs to triple after formula change**
The amount of money Manitoba will have to spend on natural disasters before the federal government will come to the table will almost triple next week when Ottawa changes the formula for the first time in more than four decades. **Public Safety Minister Steven Blaney** announced the changes earlier this month, as he promised also to roll out the promised $200-million, five-year flood-mitigation program promised in last year's federal budget. "***To strengthen Canada's emergency-management approach, we are shifting from a reactive model to one that allows us to better identify, plan for, and prevent flood risks and the costs for Canadians that comes with them,***" **Blaney** said in a Jan. 16 news release. However, as part of the program, he is also changing the formula for disaster financial assistance that has the federal government help provinces pay for major disasters. Since 1971, Ottawa's assistance has kicked in when the cost of a disaster reaches the equivalent of $1 per person in a province. In Manitoba, currently, that

would be $1.272 million. As of Feb. 1, the formula is going to be set at $2.92 per person, which Blaney says is equivalent to half the impact of inflation since 1971. In Manitoba, it means the province will have to cover 100 per cent of the costs of disasters up to $3.71 million. After that, Ottawa's share will be up to 90 per cent. Manitoba NDP MP Niki Ashton said Tuesday the government is once again off-loading costs onto the provinces. "This will have a huge impact in Manitoba," said Ashton. "In the last five years, we have had three major floods, as well as other disasters. Under the new rules, the current government is upping the threshold, leaving municipalities and the province with no relief." Winnipeg Free Press, A7

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fierce storm delivers as promised
A blizzard wrapped much of New Brunswick in its icy grip on Tuesday, grounding flights, closing schools and leaving many hunkered down all day long, waiting for the storm to blow away. But if the weather forecast holds true, that's going to take a while. Nearly all of the province was still under a blizzard warning by 6 p.m. on Tuesday, with another five to 15 centimetres set to fall during the night. Periods of falling and blowing snow, caused by wind expected to gust as high as 90 kilometres an hour, was expected to continue into Wednesday afternoon. "We'll still be under very strong winds for the rest of today, tonight and during the overnight period," Environment Canada meteorologist Claude C... told Brunswick News on Tuesday afternoon. "So even by daybreak on Wednesday, we'll still have brisk and strong northerly winds and some flurry activity. So there will still be some reduced visibility, but not to the magnitude of what we're getting right now." That means the drive to work on Wednesday might not be much better than it was on Tuesday. "Although conditions are expected to improve over the next 12 hours, cleanup in the wake of the storm will take some time," the province's Emergency Measures Organization warned in a news release issued late Tuesday afternoon. "Roads will remain hazardous while crews work to clear them." The provincial EMO issued a no-travel advisory for all of southern New Brunswick, including the highways that link the province's major cities, on Tuesday afternoon. The stretch of Trans-Canada Highway linking Moncton and the Nova Scotia Border, along with Route 11 between Shediac and Kouchibouguac, was closed to traffic for part of Tuesday. The Associated Press, (The Daily Gleaner, The Telegraph Journal), Times & Transcript, L'acadie Nouvelle,

*** La tempête effleure New York, frappe les Maritimes**
Des vols ont été annulés et des écoles, des bureaux gouvernementaux et des universités un peu partout dans les Maritimes ont été fermés mardi, alors qu'une violente tempête hivernale a déclenché des vents puissants et apporté de fortes chutes de neige sur la région. La tempête était déjà responsable de la fermeture d'écoles et d'entreprises dans le nord-est des États-Unis, et des milliers de vols y ont été annulés. Environnement Canada a émis un avertissement de blizzard pour l'Ile-du-Prince-Édouard, le sud-est du Nouveau-Brunswick, presque toute la Nouvelle-Écosse et pour le secteur extrême est de la Gaspésie, avec un mélange de pluie verglaçante, de vents et de neige pour Terre-Neuve-et-Labrador. Presse Canadienne (Le Devoir, A2) ; Canadian Press (Red Deer Advocate, A5; The Record, A5; Daily Star, 12; Cape Breton Post, A7; Times Colonist, A7); Associated Press (Windsor Star, A9; Vancouver Sun, B2; Ottawa Citizen, C3; Calgary Herald, D2; Edmonton Journal, A9)

*** La neige qui ne tombe pas**
Dimanche, le maire de New York avait sorti ses trémolos angoissés des grands jours de cataclysme pour annoncer, d'un ton prophétique, la tempête du siècle à venir. Ne manquaient que les trompettes de l'Apocalypse. A l'entendre, cette tempête était possiblement la plus colérique que les États-Unis connaîtraient depuis celle du Créateur qui a chassé du paradis terrestre papi Adam et sa concubine, une dénommée Eve, parce qu'elle refusait de lui donner la recette de sa fameuse tarte aux pommes américaine. Évidemment, devant cette tempête devenue historique avant même d'avoir eu lieu, CNN n'allait pas rater l'occasion d'étaler ses prouesses infographiques et «journalistiques». L'Acadie Nouvelle, 13 ; Agence QMI (Journal de Montréal, 11 ; Journal de Québec, 17) ; La Presse, A2; Associated Press (The Record, A5); QMI Agency (Ottawa Sun, 25; Toronto Sun, 56)

*** Snow on the way Thursday for Waterloo Region**

Keep watch Thursday for something unusual this winter in Waterloo Region: a steady, all-day snowfall. At least five centimetres of snow is expected across southern Ontario, with up to 10 centimetres in some areas, said Geoff Coulson, a meteorologist at Environment Canada. "Any way you slice it, it's a normal January snowfall," he said. The Record, B4

*** Des employés d'Hydro-Québec «au coeur de la tempête»**
Des employés d'Hydro-Québec basés en Estrie ont pris le chemin des États-Unis afin de prêter main-forte aux équipes américaines devant faire face à des pannes causées par l'importante tempête de neige. Une douzaine d'équipes de la région Estrie-Montérégie de la société d'État ont été dépêchées au nord de Boston et attendaient les ordres, mardi matin. « Nos employés sont au coeur de la tempête », reconnait Louis-Olivier Batty, porte-parole d'Hydro-Québec. La Tribune, 4

*** Study finds companies lag in flood preparation**
A Calgary Chamber of Commerce report on the flood of 2013 has found many city businesses remain ill-prepared for future emergencies. Its survey, released Tuesday, says 40 per cent of flood-impacted businesses still do not have off-site storage for critical documents, the ability to operate remotely or an emergency communications strategy. Calgary Herald, D2

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Limits on free speech are risky business
An opinion piece states, "When the Harper Conservative government introduces its anti-terror legislation later this week, it will walk a fine line. The legislation is needed, because the threat of terror, especially homegrown terror, is all too real, as we have seen first hand. Most of the omnibus anti-terror bill builds on existing frameworks, giving police and security officials expanded powers and making it easier to share information - including about all citizens, not just those suspected of terror links. But there is new ground here as well, and that's what we should be watching. A key feature of the new law is a measure that draws a line between free expression and endorsing terrorism. Simply put, people who verbally promote or glorify terrorism could be charged under the act. It's easy to see how this will work in extreme cases, for example, where someone praises terror attacks like the ones that happened in Canada last year. But what about in more subjective cases? Any time we limit free speech, even for a good reason, we need to tread carefully. This is no exception." Hamilton Spectator.com

Let's see the video
It's an old tradition for terrorist groups to retrospectively embrace perpetrators of attacks against innocents as their own. Al-Qaeda and Islamic State both claim involvement in the Paris attacks. Now IS seems - at least tangentially - to be linking itself to the Parliament Hill shooting via comments one militant has made in a new online recording. The RCMP, meanwhile, has a video made by the Ottawa assailant himself before the attack that may outline his motivations. It was always in the public interest for that footage to be released. The IS glorification of the attack adds to the need to do so. In the immediate aftermath of the Ottawa attack, in which Corporal Nathan Cirillo was killed, RCMP Commissioner Bob Paulson indicated the video would be made public. Then he quickly reversed himself. The Mounties contend the video constitutes important evidence. As the months roll by with no arrests of putative accomplices or facilitators, the assertion seems more like a hope than an aspect of an investigation. Globe and Mail, A12

CSE tracks millions of downloads daily: Snowden documents
Canada's electronic spy agency sifts through millions of videos and documents downloaded online every day by people around the world, as part of a sweeping bid to find extremist plots and suspects, CBC News has learned. Details of the Communications Security Establishment project dubbed "Levitation" are revealed in a document obtained by U.S. whistleblower Edward Snowden and recently released to CBC News. Under Levitation, analysts with the electronic eavesdropping service can access information on about 10 to 15 million uploads and downloads of files from free websites each day, the document says. "Every single thing that you do - in this case uploading/downloading files to these sites - that act is being archived, collected and analyzed," says Ron Deibert, director of the University of Toronto-based internet

security think-tank Citizen Lab, who reviewed the document. In the document, a PowerPoint presentation written in 2012, the CSE analyst who wrote it jokes about being overloaded with innocuous files such as episodes of the musical TV series Glee in their hunt for terrorists. CBC analyzed the document in collaboration with the U.S. news website The Intercept, which obtained it from Snowden. The presentation provides a rare glimpse into Canada's cyber-sleuthing capabilities and its use of its spy partners' immense databases to track the online traffic of millions of people around the world, including Canadians. That glimpse may be of even greater interest now that the Harper government plans to introduce new legislation increasing the powers of Canada's security agencies. CBC.ca

*** Lutte au terrorisme: les policiers et les espions n'ont pas assez de ressources, selon le NPD**
Alors que le gouvernement conservateur continue de dire que les policiers et agents du Service canadien du renseignement de sécurité (SCRS) ont besoin de plus de pouvoirs pour stopper les terroristes, l'opposition est d'avis que les policiers et les espions ont seulement besoin de plus de moyens. «On a entendu parler de policiers qui savaient qu'il y avait des individus qui se radicalisaient, mais ils n'avaient pas les ressources nécessaires pour effecteur de la surveillance», a expliqué Rosane Doré-Lefebvre, porte-parole du NPD en matière de sécurité publique. L'opposition demande plus d'argent pour le SCRS et la GRC, au moment où le gouvernement peine à équilibrer son budget. Alors que certains s'inquiètent des ressources allouées aux agents de renseignements, le réseau Global a mis la main sur les frais de déplacement du directeur du SCRS, Michel Coulombe. «Ça n'a pas de bon sens que les voyages du directeur du SCRS coûtent plus cher que ceux du ministre. Une chambre d'hôtel à 750 $ la nuit, c'est un peu exagéré», s'est indignée Mme Doré-Lefebvre en Chambre. Le président du Conseil du trésor, Tony Clement, a déjà demandé une révision des dépenses du directeur du SCRS. Journal de Montréal.com

*** Links probed**
One of the country's largest Muslim organizations gave hundreds of thousands of dollars to a Hamas-linked charity, and vocally supported an Egyptian Islamist group, QMI Agency has learned. The Muslim Association of Canada (MAC), based in the Toronto suburb of Mississauga, Ont., owns or operates at least 20 Islamic schools and 15 mosques in Ontario, Alberta and Quebec. MAC's website says the group is centred around "holistic educational and spiritual development" and "has no organizational link or affiliation with other organizations." However, QMI obtained an RCMP search warrant linking the group to IRFAN-Canada, a banned charity group and a listed terrorist organization also based in Mississauga. The Mounties, citing Canada Revenue Agency disclosure, say: "The Muslim Association of Canada (MAC) provided $296,514 between 2001 and 2010" to IRFAN-Canada. The Conservative government declared IRFAN-Canada a terrorist group on April 29, 2014 -- one day after the Mounties raided the charity. The government said "between 2005 and 2009, IRFAN-Canada transferred approximately $14.6-million worth of resources to various organizations associated with Hamas." Hamas's charter calls for the destruction of Israel. IRFAN-Canada's Ottawabased lawyer, Yavar Hameed, had no comment on Tuesday. The group is fighting its terrorist designation in Federal Court. The Mounties obtained their warrant as part of Project Sapphire, involving surveillance, wiretaps and undercover operatives in the Toronto and Montreal area. The warrant led to a raid on IRFAN's Mississauga headquarters and a Montreal apartment on April 28, 2014. Invest igators seized computer files, donation forms, and promotional videos that "demonize Israel." London Free Press, B2 (Calgary Sun, Edmonton Sun, Kingston Whig-Standard, Toronto Sun, Ottawa Sun)

*** Couillard combattra la radicalisation**
Philippe Couillard ne veut plus parler de lutte contre l'intégrisme, mais bien de lutte contre la radicalisation, axant son discours identitaire sur la sécurité. Au cours de la conférence de presse qui clôturait le caucus présessionnel des députés libéraux, Philippe Couillard a tenu à signifier ce changement de vocabulaire. Ainsi, la ministre de l'Immigration, de la Diversité et de l'Inclusion, Kathleen Weil, qui fut chargée par le premier ministre de définir un plan d'action contre l'intégrisme, s'évertuera plutôt à contrer la radicalisation. Lundi, Philippe Couillard avait affirmé que dans la mesure où les droits sont respectés, l'intégrisme " fait partie des choix personnels de chacun ". Mardi, il a cité l'exemple d'un intégriste catholique qui assiste à la messe deux fois par jour, porte un cilice et respecte toutes les prescriptions des Écritures. " Tant que cette pratique ne met pas en jeu les droits des autres, la sécurité des autres, les principes fondamentaux comme l'égalité hommes-femmes, cette pratique-là, à ce que je sache, personne ne songe à l'interdire. Et ça existe dans toutes les religions, c'est une minorité, mais ça

existe '', a-t-il expliqué. L'intégrisme peut toutefois porter atteinte aux droits, aux libertés et devenir '' de l'extrémisme qui peut mener parfois, malheureusement, à la violence '', a-t-il distingué. '' La radicalisation des jeunes et la menace de la violence terroriste, c'est un enjeu qui est distinct en lui-même et qui a ses propres dynamiques. '' Le Devoir, A3

*** New Conservative anti terror bill needs to walk a fine line, Kenney says**
There's a fine line between legitimate religious expression and inciting terrorism, says Conservative cabinet minister Jason Kenney. It's that line the government will be walking - carefully - in its new anti-terrorism bill, expected to be unveiled Friday. The bill is the government's long-awaited legislative response to two attacks carried out on Canadian soldiers last fall by men believed to have been influenced by radical Islam - attacks the government considers acts of terrorism. Though police already have the power to go after those suspecting of being on the verge of committing terrorist attacks, the new bill is partially aimed at stopping the seeds of those attacks from germinating altogether. "Our objective is not to diminish legitimate expression of political or religious views, but rather incitement to terrorism - and there is a fine line there that the legislation will try to draw," Kenney said in an interview Tuesday. "Obviously there are some malevolent religious influences that can add to the process of radicalization towards violent extremism, and we have to be extremely mindful of that." How to effectively combat radicalization is a struggle facing governments and security agencies the world over. The RCMP is currently rolling out its own strategy, which includes working more closely with community groups in order to identify and divert people who may be susceptible to extreme views that could eventually lead to violence. BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Fate of Roma family seeking refuge to be decided Wednesday
The fate of a Roma family seeking refuge in Canada will go down to the wire. The judge expected to rule on a stay of deportation will make a decision hours before the deportation is set to happen on Wednesday. After a Federal Court hearing on Tuesday, the judge said he would sleep on it and make a decision the following morning. Anasztazia Szilagyi, her husband and two children fled Hungary in 2011 to seek asylum in Canada. As members of Hungary's Roma minority, they say they face persecution in the country, which has seen a rise in anti-Roma rhetoric in the past years. According to a 2014 report by the Harvard School of Public Health, mainstream politicians and paramilitary groups openly incite hatred against Roma and other minority groups. Despite the dangers faced by Roma groups in Hungary, the country is on Canada's safe list following reforms to asylum rules in 2012. The family's refugee claim was denied in 2013. The Gazette

U.S.-Cuba thaw unlikely to deter defection
The young midfielder talked about it with close friends on Cuba's national soccer team and almost tried his luck on a few occasions, only to let fear deter him. But when he saw his chance - the night before a World Cup qualifying match in Toronto in the fall of 2012 - there was no hesitation, he said. He and two teammates, Odisnel Cooper and Heviel Cordoves, grabbed their passports and belongings while the rest of their group settled into their hotel rooms. They then slipped out through the fire escape and bolted down the street to avoid being spotted by their coaches. U.S. officials later confirmed the three had crossed the border in Niagara Falls, Ont. "We had to do it if we wanted to play professional soccer. We also had to do it when we were still young," Chang, 23, told The Canadian Press in a phone interview from Charleston, S.C., where he, Cooper and Cordoves play for the Charleston Battery in a lower-tier professional league. "We had already played at all levels in the national team and we realized that there was nowhere else to go," he said in Spanish. Dozens of top athletes - including many from Cuba - have defected during international competitions in an effort to escape persecution or to move up to a larger market. It's too early to tell whether the thawing relations between Cuba and the U.S., which will ease travel restrictions and may affect immigration policies, will reduce the incentive for Cuban athletes to defect while playing abroad, experts said as Ontario prepares to welcome thousands of athletes for the Pan Am and Parapan Games this summer. When Canada last hosted the Games in 1999, eight members of the Cuban delegation defected, stirring tensions between the two countries as Cuban officials accused Canadian media of inciting athletes to jump ship. When Winnipeg first staged the

Games in 1967, a Cuban boxer defected shortly after winning a gold medal. Two players from the Cuban women's soccer team defected in 2011 after facing off with the Canadian team in Vancouver in an Olympic qualifying match. They crossed into the U.S., where they were reunited with relatives. "It is fairly common given that these events bring people from different places in the world. ...They may be persecuted due to their sexual orientation, due to their political opinion and other grounds," said Jamie Liew, an Ottawa lawyer specializing in immigration and refugee law. (…)Athletes seeking to stay in Canada rather than head south of the border will have to go through the same process as any other asylum-seekers, Canadian officials said. "Canada's refugee policies are applied consistently regardless of any special event," a spokesman for Citizenship and Immigration Canada said in an email. In the past, there were allegations that Ottawa - or NGOs acting with federal approval - actively encouraged defection, Kidd said, more to embarrass its political rivals than to bolster Canadian teams. More recently, he said, Canada "has not gone out of its way to recruit defectors, it has simply considered and supported those who have asked for refugee status." The Canadian Press (Times & Transcript)

Cross-border shopping drops

The Canadian dollar is down, but a Port Huron official says Canadian visitors haven't disappeared from the community on the Michigan side of the Blue Water Bridge. The loonie traded at 81 cents US Tuesday, according to the Bank of Canada's website, and Statistics Canada says same-day car trips to the U.S. dropped more than 2% in November." People tend to come over here and shop from Canada for a number of different things," said Thelma Castillo, president of the Blue Water Area Chamber of Commerce in Port Huron. "They come over here for gas; they come over here for entertainment. "They come over here just to come over here, so I don't really think the dollar really impacts their spending habits. "John Elliott, chief executive of the Canadian side of the Blue Water Bridge, said overall traffic on the crossing tends to be consistent year to year, but car traffic into Michigan has been down about 3% recently, and dropped 6% in December. "That has to do with the exchange rate, to one degree or another," he said. The London Free Press

Canadians can sort out CETA

In the early 1980s, Canadians witnessed the sorry spectacle of provinces roaming around Westminster, cap in hand, lobbying British politicians to save them from their own federal government in its move to patriate the Constitution. It was a sad chapter in Canadian political history, provinces invoking Britain's role as colonial master, asking Britain to save them from their own federal government because the provinces couldn't settle internal differences with Ottawa by their own means. This time, it's Newfoundland and Labrador complaining about a fisheries compensation deal with Ottawa that's supposed to help ease adjustment once the Canada-EU trade agreement (CETA) comes into effect. (…)The CETA, of course, provides tariff-free access to the huge EU market and many other benefits for exports of Canadian goods and services. This includes seafood and other exports from Newfoundland. So in the end, Newfoundland would be the big loser. Globe and Mail

Wine retail policy changes violate NAFTA, California vintners say

Some of British Columbia's liquor policy changes violate Canada's international trade obligations, such as the North American free-trade agreement, says a U.S. wine industry group. The Wine Institute, which represents more than 1,000 California wineries and associated businesses, has sent a letter to B.C. Premier Christy Clark requesting that the revisions be withdrawn or modified. The institute says the changes, announced last month, will further disadvantage imported wines. (…) Max Cameron, a political science professor at the University of British Columbia who has also written a book on NAFTA, said in an interview that the Wine Institute appears to have a point. "This looks like a classic example of a non-tariff barrier that would essentially discriminate against a product from another NAFTA member. And, I think on the face of it, it looks to me like they've got a pretty compelling case," said Prof. Cameron, author of The Making of NAFTA: How the Deal Was Done. Globe and Mail

$35 million tunnel plaza upgrades unveiled in Windsor

It's been fully serviceable since November, but federal and provincial government officials on Tuesday unveiled the $35-million tunnel plaza improvements in downtown Windsor. "This is going to be a real asset for Windsor and Detroit," said Neal Belitsky, CEO of the Detroit-Windsor tunnel. "It's important in terms of esthetics, efficiency, convenience and security. "This should be the model for all border

crossings between Canada and the U.S." The tunnel improvement effort has been in the works for several years and includes a new commercial customs and bus inspection building, improved employee parking and an expanded footprint to help take traffic lineups off city streets. Funding for the project came out of the $300-million Lets Get Windsor-Essex Moving commitment made by the federal and provincial governments over a decade ago. The Windsor Star

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Small businesses must address privacy**
Imagine finding out that a stranger has received highly sensitive information about you because a company has sent your mail to the wrong person. Or asking to look at your own personal information for the sake of fixing a suspected error, only to be denied access to it by the company that collected it. As privacy commissioner of Canada, it's these kinds of things I want to draw attention to on this Data Privacy Day. About a third of private-sector privacy complaints to my office under the Personal Information Protection and Electronic Documents Act, Canada's federal private-sector privacy law, involve smaller businesses that employ fewer than 100 people. Winnipeg Free Press, A9

*** Kenya's Christian-owned Hope FM radio hijacked**
Suspected hackers briefly hijacked a popular Christian radio station in Kenya, and played Islamic verses before it went off air. Hope FM said on its Facebook account that a "foreign signal" had interfered with its broadcast on Tuesday night. It resumed transmission about three hours later. BBC News

*** Taylor Swift se moque de son hacker**
La chanteuse Taylor Swift s'est moquée hier du hacker qui a brièvement pris possession de ses comptes sur les réseaux sociaux et menacé de publier des photos de la star nue, affirmant qu'elles n'existent pas. Les comptes Twitter et Instagram de Taylor Swift avaient été piratés par au moins un hacker qui a menacé de publier des photos nues d'elle si ses fans ne le payaient pas avec suffisamment de bitcoins, une monnaie virtuelle. «Un hacker qui dit avoir des photos de moi nue"?» a écrit la star lorsqu'elle a pu reprendre le contrôle de son compte Twitter. «Pfff tu aimerais bien mais tu ne peux pas! Amuse-toi bien sur Photoshop parce que tu n'as RIEN.» Taylor Swift, très active sur les réseaux sociaux, est l'une des quatre seules célébrités à être suivie par plus de 50 millions d'utilisateurs sur Twitter. Associated Press (Le Soleil, 36)

*** Facebook paralysé**
Facebook est tombé en panne pendant une cinquantaine de minutes tôt, hier, dans plusieurs pays. La panne a notamment affecté les abonnés du Canada, des États-Unis, du Royaume-Uni, de l'Australie et de pays d'Asie. Peu après la reprise des activités, une multitude d'abonnés asiatiques ont rapporté que les fonctions étaient lentes et incomplètes. Le réseau Instagram a aussi été affecté. Facebook a publié un communiqué assurant que la panne s'était produite lors de mises à niveau techniques, non pas à cause d'une cyberattaque. Cette panne a été la plus longue à toucher Facebook depuis celle du 24 septembre 2010 qui avait duré 90 minutes. Associated Press (Le Soleil, 19 ; The Record, E3)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Police probe shooting in Langford
West Shore RCMP were investigating after reports of a shooting in Langford on Tuesday night. There are reports a man was shot and that police are looking for the shooter, but RCMP have not yet confirmed that information. The condition of the victim was unknown. Sooke Road between Jacklin and Anders roads was blocked off as police investigated. Times Colonist, A1; 1 ; Postmedia News (The Province)

Painkiller linked to rising number of Alberta deaths
highly potent drug often fashioned to appear like a prescription painkiller has caused a big spike in fatal overdoses in Alberta - with dozens of deaths in the past two years - as emergency rooms grapple with an influx of affected patients. Authorities believe this rise in abuse of fentanyl, a potentially lethal narcotic, is

linked to the release of a prescribed painkiller designed to deter illegal abuse. OxyNeo was introduced to the Canadian market in 2012 as a new version of OxyContin, pills that addicts crushed, injected and snorted, leading to a spate of overdoses and deaths. OxyNeo pills contain the same painkilling drug, oxycodone, but they are designed to be more difficult to abuse: they squish when pressed and turn to gel when dissolved in water. The move may have served as a deterrent, but it also led to the spread of replacement drugs such as fentanyl. Fentanyl is often sold to drug users as oxycodone, according to medical and law enforcement authorities... Investigators with the Alberta Law Enforcement Response Teams (ALERT), a provincial umbrella organization, believe organized crime is responsible for bringing fake OxyContin tablets containing fentanyl into the province. Since April 2014, ALERT has seized nearly 3,200 of these pills across Alberta, including more than 2,000 in Grande Prairie, 800 in Medicine Hat, more than 100 in Calgary, about 90 in Edmonton and roughly 35 in Red Deer. ALERT investigators believe the pills are made in clandestine labs, but they don't know where, said Staff. Sgt. Rod Klassen. A separate investigation by RCMP and Saskatoon police led to a series of raids in Saskatchewan and Alberta earlier this month that yielded more than $8 million worth of drugs. The seizures included more than 3,000 fentanyl pills with the same chemical composition as narcotics linked to three overdose deaths in Saskatoon. Thirteen of the 14 people charged in the bust are members of the Hells Angels or the Fallen Saints, another motorcycle gang, police say. Postmedia News (Edmonton Journal, A1, Calgary Herald, A1))

Shot RCMP officer recovering, wife says

It's been almost two months since an RCMP officer was shot during a traffic stop in Kamloops and now his wife says they're confident he will overcome his substantial injuries. Colleen Michaud says her husband, Cpl. Jean-Rene Michaud, was shot several times and critically wounded in a senseless and unforgivable act of violence. She says her family has suffered a great deal and she is deeply saddened and angry that two more RCMP families are experiencing similar pain after two Mounties were shot in Alberta. Michaud says her husband has endured many surgeries, countless complications and setbacks and has a long road to recovery, but he has shown courage and strength at every step. She says she, their two young children and the rest of their family has received overwhelming support from across the country and that she's thankful for the encouragement and thoughtfulness. Postmedia News (Vancouver Sun); Canadian Press (Times Colonist, Daily Gleaner)

Eight banks robbed in eight weeks, three provinces

Mounties are searching for a man who they say has leapfrogged between British Columbia, Alberta and Saskatchewan robbing banks at gunpoint. At a news conference in Kelowna on Tuesday, Mounties said the man has robbed eight banks over an eight-week period. The first robbery police recorded was Dec. 1 in Princeton, B.C. Eight days later the same man was 200 kilometres to the north where he held up a Vernon financial institution. Between Dec. 19 and Jan. 21, the same suspect jumped between the three provinces, holding up banks in High River, Alta.; Merritt; Swift Current, Sask.; Lethbridge, Alta.; Claresholm, Alta., and finally Langley. RCMP Const. Kris Clark said the sheer number of robberies by the same suspect concerns police. "We have a series in the past, but nothing necessarily to this extent, with the number of robberies that have occurred and crossing multiple jurisdictions and multiple provinces." No one has been hurt in the robberies, Clark said. "It's also very concerning that a firearm has been involved in all incidents either the mention [of a weapon] or produced and obviously we're concerned for public safety." Canadian Press (Times Colonist); Postmedia News (StarPhoenix, Leader-Post, Calgary Herald); QMI Agency (Edmonton Sun, Calgary Sun)

'We're no good to anybody if we don't arrive safely,' says RCMP officer

Emergency response officials say they were prepared to answer the call during Tuesday's blizzard. Insp. Dan Goodwin, West District operations officer for the RCMP in New Brunswick, said the challenge on such days is being able to get to a call in a timely manner. Goodwin said the force has a fleet of four-wheel drive vehicles and the patrol cars have all-wheel drive. "We can respond; we're prepared to respond," Goodwin said. District wide, Goodwin said members told him that the roads are bad and visibility is terrible. "It's the blowing snow and there's going to be drifting involved so just take precautions," he said. "Our members, we are talking to them and they're urging people to make sure they have their headlights on and their full headlights. "Sometimes the running lights are on and the taillights don't come on unless you activate the full headlight." As of mid-morning, Goodwin said the force hadn't

responded to many accidents, as motorists were apparently heeding warnings to stay off the roads. On days like this, Goodwin said, the RCMP will look at the nature of a particular situation and react accordingly. Daily Gleaner, A3

Moncton shootings RCMP bill nearing $4M, says city councilor
The provincial government, the federal public safety department and the RCMP all deny they are in negotiations with the Codiac Regional Policing Authority to cover the extra costs related to RCMP operations following last June's murder of three constables in Moncton. The authority functions as a police commission and its role is to set the budget for the communities of Moncton, Dieppe and Riverview - communities that are patrolled by the Codiac RCMP detachment. In October, chairperson Nick LeBlanc wrote a letter to the provincial public safety department asking it to cover 100 per cent of the cost of bringing in hundreds of officers from across the country for several weeks. In the letter, he noted the provincial government had declared this event a provincial emergency. LeBlanc isn't saying much about where things stand now. "I won't discuss the negotiations until it is settled," he said. Public Safety Minister Stephen Horsman said in December that any other municipalities in the province would have had its costs covered by the province. However, that rule did not apply to the Codiac detachment. Horsman says that's because the Codiac policing contract was signed with the federal government. "The responsibility for Codiac's costs incurred during the the emergency is a matter for discussion between the parties," he wrote. CBC.ca

10 arrested as RCMP bust grow-op in 'very large' Langley barn
Several thousand marijuana plants were seized and more than 10 arrests made during a massive grow-op bust in Langley Tuesday. The investigation began four weeks ago, centring on a sevenacre rural property in Langley on Zero Avenue and 264th Street, according to Sgt. Laurie White of the RCMP's federal serious and organized crime unit. "The focus is on a very large barn - and by large, I mean it's 51,000 square feet," White said. The property features many access points and is located close to the Aldergrove border crossing. White said the barn posed a "huge safety risk" because the electrical system was wired improperly to allow for extra lights. Many rooms held what was estimated to be several thousand marijuana plants. Postmedia News (The Province, A13)

Mountie killer proves legal system broken
An editorial states, "Canada's legal system has lost its way and now a good man is dead. Enough is enough. The more we learn about Shawn Matthew Rehn, the more we're in disbelief that the system let this man walk the streets. He should have never had the chance to be in that Alberta casino last Saturday, where he shot two RCMP officers. One of them, Const. David Wynn, died in hospital. He leaves behind a wife and three children. If you look at the facts, Rehn was clearly a danger to society. He had 98 convictions and outstanding charges against him. The list runs the gamut: domestic violence, home invasion, armed robberies, drug offences. Sure, he'd never been imprisoned for murder before. But to say this guy was an accident waiting to happen is an understatement. His offences included violating parole conditions and skipping bail. What judge would release someone after he's proven that he not only has total disregard for the laws of the land, but that he's not even going to follow his bail conditions? Yet judges continued to let him out. He was before a judge in December 2013 for multiple offences including resisting a peace officer. Then, just this past September, he faced eight charges. In October he was taken in again for driving without a licence and evading an officer, among other charges. RCMP Assistant Commissioner Marlin Degrand told the media: "We're very concerned about the fact that an individual with his criminal history came into contact with our officers." You don't say..." Sun Media (London Free Press)

System is detached from society
An editorial states, " On Monday, the RCMP family and the community of St. Albert laid to rest Const. David Wynn (42), a husband and father of three. Wynn, of course, died from a gunshot wound to the head inflicted by serial criminal Shawn Rehn while Wynn was investigating a stolen vehicle at a casino in suburban Edmonton in the early morning hours of Sat., Jan 17. Thousands of police officers from across the country gathered in St. Albert to honour Const. Wynn. Thousands more attended services across the country to remember their colleague. It was truly moving. But one thing kept coming to mind during the regimental funeral: Const. Wynn didn't have to die. No justice system will ever be perfect. There is no

guarantee that even if Canada's criminal justice system was tougher that Shawn Rehn would have been behind bars on Jan. 17 rather than roaming free to kill Dave Wynn. But making it harder for repeat offenders to get bail couldn't hurt. That would better protect frontline police officers and the public from sociopaths like Rehn. The numbers in Rehn's rap sheet bear repeating. He had 98 convictions or outstanding charges against him. And yet, somehow he kept being released on bail... Let's just admit it. In important ways our justice system is broken. It has become detached from the society it is supposed to protect. And Const. Wynn is a victim of that disconnect. Stop studying the system and start tightening it up." QMI Agency (Edmonton Sun, Kingston Whig Standard, Winnipeg Sun, Toronto Sun, Ottawa Sun, Calgary Sun, London Free Press)

Wynn's death must lead to change

An opinion piece by Howard Burns, president of the Calgary Police Assoc. states, Re: "Final farewell to fallen Alberta Mountie," Jan. 27. RCMP Const. David Wynn is the latest Canadian police officer to be gunned down in the line of duty by a career criminal whose history causes us to question why he was free to commit this horrendous act. Justice Minister Jonathan Denis has ordered a full review into the matter. That is a good start, but a review with no meaningful change is futile. Federal Justice Minister Peter MacKay has rejected a full-blown examination into Wynn's death. With an election on the horizon, MacKay may be reluctant to direct public attention to Canada's failing justice system. In 2005, James Roszko murdered four RCMP officers in Mayerthorpe. The justice minister ordered a full review of his criminal prosecutions. Before Mayerthorpe, there was the 1990 murder of Edmonton police Const. Ezio Faraone. He was viciously mowed down with a sawed-offshotgun after cornering career criminals Albert Foulston and Jerry Crews, after a bank robbery. Foulston received a statutory release from prison in 2009 and has been in and out of jail ever since. Time will tell on that one, but our justice system seems bent on providing the opportunity. Canada's justice system is in desperate need of significant parole and bail reform. The Alberta Federation of Police Associations and the Canadian Police Association have lobbied for meaningful changes for several years now, such as making parole something that is earned and increasingly more difficult to achieve for those who demonstrate a disregard for the law. How many more lives need to be lost before significant changes are made? We are playing Russian roulette with Canadian lives and it is more difficult to act surprised when the gun goes off. " Calgary Herald, B5

*** Drunk driving message slow to sink in, says Prince District RCMP**

Statistics from all three RCMP districts in Prince Edward Island show that there continues to be problems with impaired drivers in every county of the province, say Prince District RCMP, which released its 2014 numbers recently. As was the case in both Kings and Queens districts, Prince District RCMP laid a number of charges for impaired driving-related offences. Prince County laid 57 charges relating to impaired driving, compared with 44 in Kings District and 60 charges in Queens. Queens and Prince district numbers do not include charges laid by Charlottetown, Kensington and Summerside police. The Prince District statistics present a fairly even distribution across the age groups: 33 of 57 charges were laid on drivers 31 and older, while the remaining 24 were 30 and younger. "It's hard to imagine that adults are unable to grasp the simple 'don't drink and drive' philosophy," the RCMP said in a statement. "Sadly, many are hurt, killed or hurt and kill others before the message sinks in." Prince District also handed out 15 roadside suspensions in 2014. The Guardian, A4

*** Judge decides RCMP justified in shooting**

An Alberta judge has concluded RCMP officers reacted as they were trained in the shooting death of a man in Sherwood Park in 2011. The fatality inquiry, held in November 2013, into the death of William Francis McCoy, 56, made no recommendations for the prevention of similar deaths. Provincial Court Judge Bruce Garriock concluded the actions of McCoy left the RCMP with no other choice, but to use lethal force. McCoy phoned the RCMP the morning of Jan. 16, 2011, saying he was on the road outside his home in Sherwood Park and was going to shoot himself. Police established a perimeter around McCoy, who was discovered carrying a shotgun. Police asked some nearby residents to leave their homes for their own safety. In total, 37 RCMP personnel, two Edmonton police and three emergency medical staff spent eight hours trying to negotiate with McCoy to put his weapon down. RCMP officers testified McCoy was "very distraught, verbally abusive, highly agitated and very angry," and made repeated threats to kill himself and anyone he saw. He did not respond rationally to RCMP efforts to assist him and it appears he "intended to engage the police in a confrontation to end his life." McCoy

refused repeated requests to drop his weapon. One of the RCMP officers said McCoy began raising the barrel of his gun toward officers. It was at that point that four RCMP members shot McCoy. "I am satisfied that the RCMP members and the ERT (emergency response team) members who were involved did all that was reasonably possible to achieve their goal ... to contain, isolate and encourage McCoy to arrive at a peaceful resolution through negotiation," Garriock wrote. Edmonton Journal, A5

*** UFC's Sheldon Westcott puts fight thoughts aside, focuses on fundraiser for slain RCMP officer**
While Sheldon Westcott has begun preparing for his next Ultimate Fighting Championship bout, one that will take place halfway around the world in April, much of his immediate focus is on a tragedy that hit close to home. The UFC prospect is pitching in to contribute to a fundraiser in memory of Const. David Wynn, the 42-year-old RCMP officer, husband and father of three, who died Jan. 21, four days after he was shot while checking on a stolen vehicle at the Apex Casino in St. Albert. Money raised through a silent and live auction, donations and more will go to Wynn's family and to help support Aux. Const. Derek Bond, who was injured during the shooting. Westcott, a 30-year-old native of St. Albert, said it is a privilege to have any role - big or small - in an event honouring the slain officer and his partner. Star Phoenix

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Corrections workers made 'offensive' edits
Federal correctional workers who have been using government computers to make Wikipedia edits may face disciplinary measures for posting "offensive and inappropriate" comments on the site, an agency spokesperson says. The edits range from homophobic remarks to commentary about Correctional Service Canada to apparent inside jokes between employees. In some instances, names of current correctional officers were also posted on the online encyclopedia. "CSC employees are expected to act according to the highest legal and ethical standards," spokeswoman Veronique Rioux said in an email. "The content (the Citizen) highlighted is indeed offensive and inappropriate. CSC is examining this matter and disciplinary measures will be taken as appropriate." In January 2014, someone using the CSC network wrote that Fenbrook Institution in Gravenhurst, Ont. - now amalgamated with Beaver Creek Institution, a medium-and minimum-security prison - "operates quite differently than other institutions" by allowing "protective custody" inmates to "operate as if they were 'Free Men,' allowing them to shop, cook and court as if they were in Canadian Society." The editor cited "Facebook" as the reference. The edit goes on to say: "While the Correctional Service of Canada does not have an official position or statement, Fenbrook is known to house the largest concentration of Homosexual Inmates in the entire Ontario Region." Ottawa Citizen, A1

Parole board puts restrictions on violent offender
A man who stabbed and bit one man and kicked another in the head 10 times will be under several restrictions when he is released from prison next month. Mathieu Terrence Myers has been serving two years, four months and 17 days in prison on several charges, including uttering threats, aggravated assault and assault causing bodily harm. Myers broke into his former girlfriend's apartment, stabbed a man who was with her, bit him and accidentally cut her. While in jail he assaulted another inmate, kicking him in the head 10 times. The victim was unconscious after the first blow. Myers is eligible for statutory release on Feb. 14 and in its report, the parole board imposed eight conditions, including that he not have any contact with the victims or their family members. (...) The report said Correctional Service Canada was of the opinion some of Myers' behaviour was the result of "grandstanding" and trying to impress other offenders. The Guardian, A1

Opposition rejects life-in-prison plan
The government's long-promised plan to lock up some criminals and throw away the key will only make prisons more dangerous, opposition MPs say. Denying any chance of parole to the worst violent offenders will increase the chances of prison guards being attacked, the NDP and Liberal public safety critics said Tuesday as the government signalled legislation would come before summer. Opposition MPs want a greater emphasis on rehabilitating inmates. Canadian Press (The Guardian, A5, Waterloo Region

Record); * Presse canadienne (Le Quotidien, Le Droit, La Tribune), * QMI Agency (London Free Press, Kingston Whig-Standard, Calgary Sun, Edmonton Sun)

Solitary confinement legal challenge filed
The federal government is facing a second court challenge to the use of solitary confinement in prisons. The Canadian Civil Liberties Association and Canadian Association of Elizabeth Fry Societies have filed a petition in Ontario Superior Court. The petition seeks to challenge the constitutionality of isolation, which the groups call cruel and inhumane. Last week, the B.C. Civil Liberties Association began a similar action in British Columbia. Toronto Star, A6

*** Murderer found dead in his cell**
A man serving an indeterminate sentence for the 1986 slaying of his brother's estranged wife and her pregnant friend was found dead in his cell at the Drumheller Institution. Earl William Davenport, 56, was discovered unresponsive Monday in the medium security unit northeast of Calgary. "Inmates are counted several times during the course of the day. It was slightly before noon when staffwere doing their count and noticed him," said JeffCampbell, regional communications manager with Correctional Service Canada. "He was in his cell and he was unresponsive at that time, so they made efforts to resuscitate him. But unfortunately, they were unsuccessful." The cause of death has yet to be determined, but there is no indication of foul play, Campbell added. Davenport had been at the Drumheller Institution since Nov. 27, 1987, for the first-degree murder of Laura Ann Davenport, 31, and the second-degree murder of Susan Joy Hornbeck, 30, in Hamilton, Ont. (...) The police and coroner have also been called, a standard procedure in all cases involving the death of an inmate, and Correctional Service Canada has launched a review. "This is something we take very seriously, when there's a death in custody," Campbell said. "Certainly, we want to determine all the circumstances around his death." Calgary Herald, A13, Calgary Sun

*** Cruel and unusual**
An editorial states, “For three-and-a-half years - over half the time she spent behind bars - Bobby Lee Worm lived in a woodshedsized cell for 23 hours a day. Some days, the only human contact she would have was when a small slot in the door opened and a guard passed her a tray of food. "Being locked up like that you start to feel like you're losing your mind. The only contact with another human is through a food slot. Days turn into nights turn into days - and you have no idea whether you will ever get out," Ms. Worm told the Vancouver Sun in 2013. "If you're not broken when they put you into a hole, you're broken when they take you out." Ms. Worm was not incarcerated in some benighted country with no respect for human rights; she was a ward of the Canadian state. Luckily for her, the B.C. Civil Liberties Association (BCCLA) took up her cause and got her released from solitary confinement. But unfortunately, her experience is all too common: One quarter of prisoners in Canadian jails have spent time in solitary. At any given time, approximately 1,850 prisoners are being held in segregation in federal and provincial prisons across the country. Many of them are not told when they can be expected to be released from solitary, or what they need to do to get out, the BCCLA points out. Nor do prisoners have access to any administrative procedure to try to contest their confinement before a third party. The results of this system of administrative segregation, as it is known in the prison system, are less than favourable. Numerous studies have shown that solitary confinement can exacerbate or even cause mental health issues, including psychosis, hallucinations and insomnia. And as the case of Ashley Smith - who spent more than 1,000 days in solitary before taking her own life - highlighted, it also increases the risk of suicide, which is seven times higher in the penal system than it is for the country as a whole, with close to half of deaths occurring in solitary confinement. Following Ms. Smith's tragic death, a coroner's inquest recommended that "indefinite solitary confinement ... be abolished," and that the use of administrative segregation be limited to a maximum of 15 days. In December, Corrections Service Canada dismissed the coroner's recommendations outright. This was not the first time the government has ignored calls for reform: Previous reports written by former Supreme Court justice Louise Arbour (who called for limits on the amount of time prisoners can spend in solitary) and Canada's prison watchdog (who called for a prohibition on putting mentally ill inmates in solitary confinement) were also ignored. In fact, while other Western countries are reducing their reliance on solitary confinement, Canada has increased its use by 6% over the past five years.” National Post, A8

*** Murrell's death a mystery**
An autopsy on the body of John Murrell did not disclose a cause of death, his aunt said Tuesday. 'They don't know why he died, said Vera Stortz, saying the medical examiner's office is now "waiting for (toxicology) tests.' Murrell, 37, was found dead early Sunday in his room at an Edmonton halfway house apartment he shared with other parolees. Murrell was released about a month ago from a B.C. prison after spending most of his adult life in prison. He told the Sun just days before he died that he was working full-time and was trying to make a fresh start. Murrell was five-years-old when his sister, Tania, 6, vanished without a trace while walking the two-blocks home from a city school on Jan. 20, 1983. Edmonton Sun, 8

*** Parole must stay**
An editorial states, "One of the most distinctive things that sets Canada apart, for the better, from the U.S. is its far more humane attitude toward incarceration, as manifested by the provision for parole for even the most heinous crimes. We need to keep it that way. That's why news that the federal government is planning legislation that would deny some killers any chance of parole is both alarming and disheartening. The justice system must not lose its inherent belief in human redemption. Some criminals, deservedly, will never be paroled. Paul Bernardo is one. And Clifford Olson was in prison for life. We're pretty sure ex-Col. Russell Williams isn't ever getting out either. The new law, however, would mean that people with first-degree murder convictions who have killed prison guards or police officers, along with anyone who commits murder while sexually assaulting their victim, and anyone convicted of kidnapping, terrorism, or other as yet undefined vicious murders, will never be eligible for a parole review. Sentencing right now for first-degree murder is life, with the chance of parole after 25 years. That doesn't mean everyone automatically gets parole, and it shouldn't mean that, of course. However, to take away an offender's access to parole forever, from Day 1, is to ignore the fact that people change, that they can be rehabilitated, that they can redeem themselves, and that a 30-year-old who has murdered someone is not necessarily that same individual 25 years later at age 55. Removing any possibility of parole also removes any hope and any incentive for an offender to walk down that path to rehabilitation. There can be no possible motivation for change when one is sentenced to spend the rest of one's life behind bars with no chance of getting out." Calgary Herald, B4, Globe and Mail

*** De la poudre... de lait dans les prisons**
Fini le lait frais dans les pénitenciers fédéraux. Les prisonniers passent à la poudre. Afin d'économiser, le Service correctionnel du Canada a décidé de moderniser ses services d'alimentation, notamment en centralisant ses achats. Ainsi, depuis août, les établissements de l'Ontario, du Québec et des Maritimes passent au lait en poudre, comme cela prévalait déjà dans l'Ouest. Mais le Bloc québécois considère que cela conduit à des incohérences. Ainsi, les pénitenciers de Cowansville et de Drummondville, situés près de fermes laitières, reçoivent désormais de la poudre provenant... de Winnipeg. " La Laiterie Chagnon livrait depuis des décennies 12 000 berlingots de lait par semaine " à ces deux endroits, a rappelé le député Louis Plamondon. Il a demandé au gouvernement de revoir cette " décision aberrante " qui entraînera des pertes d'emplois au Québec. Le Devoir, A2, La Presse (Voix de l'Est)

*** Why the prison farm issue won't go away**
An opinion piece states, "During a day of protest on Parliament Hill in 2010, farmer Jeff Peters -- along with Pauline Lally of the Sisters of Providence -- spoke alongside a donkey bearing a sandwich board that read, "Conservative Prison Farm Consultant." The government's decision to shutter prison farms had provoked the rally. Later, Peters got a call from CBC Radio's The House, a show on Canadian politics hosted by Evan Solomon. "We want the farmer, the nun and the donkey," the Ottawa producer said. Somehow the farmer coaxed Stormy the donkey up the stairs at the Sparks Street broadcast centre, across a wide expanse of carpeting, into the studio and down the stairs again without, um, incident. Peter, who farms near Kingston, got a good laugh telling that story at a recent showing in The Screening Room of Til the Cows Come Home, a gripping, one-hour documentary film about the controversial decision to close two prison farms in Kingston (and four others across Canada). Peters is seen in the film being arrested by Kingston Police during a two-day-long sit-down protest in August 2010 aimed at blocking cattle trucks from carting away 150 dairy cows that, along with some 2,000 chickens, were the mainstay of the farm at Frontenac Institution (beside Collins Bay Institution). When arrested, Peters was wearing his trademark tan ball cap and green T-shirt with white lettering that read, "Save Our Prison Farms." The

one he wore to the screening read, "Restore Our Prison Farms," and on the back, "Your Vote Matters." (…)Two aspects of the prison farm story are remarkable: its location and its longevity. The blockade drew 200 people and saw 24 arrested for civil disobedience -- the youngest a 14-year-old girl, the oldest an 87-year-old woman. Margaret Atwood had earlier led more than 1,000 Kingstonians in an unprecedented march on the regional headquarters of the Correctional Service Canada. All this in a conservative bastion where John A. Macdonald practised law and is buried." Kingston Whig-Standard, B5

* **Criminal psychopaths don't understand punishment**
The worst criminals, from serial murderer and rapist Ted Bundy to fictional characters such as the cannibalistic serial killer Hannibal Lecter, share distinct personality traits: they're callous and glib; manipulative and cold; pathological liars yet quite charming. Not only do their brains appear to function differently from run-of-the-mill violent criminals, but they may also be resistant to punishment, new research suggests. "This is the first information we have that shows they don't understand the consequences of punishment. And like most of us, they are driven by reward," said Université de Montréal professor Sheilagh Hodgins, who led the study at King's College London with a local team of researchers. According to data, one in five jailed violent criminals is a psychopath, compared with about one per cent in the general population. What the study set out to do was to understand the difference between the usual anti-social, aggressive criminal and the psychopath. (…) Called Punishment and the Psychopath, the study, to be published Wednesday in the journal Lancet Psychiatry, could help inform intervention programs for violent offenders who do not benefit from rehabilitation programs. Also, the study's findings could help in the development of prevention programs for children with "conduct problems" who repeatedly break the rules despite sanctions from parents and teachers and incarcerations in youth protection. Postmedia News (StarPhoenix, A7, Leader-Post, National Post, Calgary Herald, Montreal Gazette)

* **Giant Mine bomber's parole conditions changed**
The Parole Board of Canada has changed Roger Warren's parole conditions so that he can spend an extended period away from his halfway house for medical treatment. Warren, 71, was sentenced to life in prison in 1995 after confessing to planting a bomb that killed nine men during a bitter labour dispute at Giant Mine in 1992. An e-mail from the parole board, dated Jan. 13, indicates it authorized the leave because Warren was in hospital being treated for pneumonia and his file indicates more hospitalization will be needed for further testing. Yellowknifer

* **Ex-prison guard guilty of smuggling contraband**
A former correctional officer accused of smuggling contraband into a medium security prison in Ontario has pleaded guilty to a breach of trust charge. Darrell Fairman, 54, of Trenton entered the guilty plea during a court hearing in Cobourg, Ont., on Monday. He did not enter a plea for a second charge of possession of contraband. Fairman was working as a correctional officer at Warkworth Institution, near Campbellford, Ont., when police conducted a search following suspicions that a staff worker was smuggling items into the facility. The OPP said that during the search they discovered unidentified contraband in Fairman's possession. Metroland Media (Mississauga News) (2015-01-27)

Cruel and unusual: why 'tough on crime' agenda may cost Canadians
When he looked out his window in January 2010, Jeffrey George Ewert claims he thought the nation must be at war. Men holding automatic weapons patrolled the halls. He was forced from his room at gunpoint, strip-searched and denied a shower, a phone call and fresh air in the days that followed The twist in the 52-year-old's claim — his room was a cell and his hallway a corridor in B.C.'s Kent Institution. But Ewert says the prison is his home nonetheless. "I was denied basic human rights," he claims in a BC Supreme Court affidavit. "I could not get my mind off the thought that at any moment, amidst all this tension, yelling of orders and aggression, that something was going to go terribly wrong and my head would get blown off." The tension between incarceration and human rights is at the centre of a precedent-setting proposed class action lawsuit related to a violent lockdown at Kent. Ewert is the lead plaintiff, and his lawyer will make final arguments for certification on Friday. By any stretch of the imagination, the 220 potential complainants make for unsympathetic plaintiffs: violent men, sex offenders and murderers scattered in institutions across Canada. But they're the same type of inmates the BC Civil Liberties Association and John Howard Society seek to represent in another lawsuit launched last week against Canada's attorney

general. They claim the government's use of solitary confinement amounts to cruel and unusual punishment. (...) Ewert's lawsuit followed a scathing report on the Kent lockdown by federal Correctional Investigator Howard Sapers. CBC News (2015-01-27)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Grieving Vancouver mothers speak out about gang life**
Two Metro Vancouver mothers who lost their children to gang violence six years ago say they hope a new anti-gang video campaign will help steer youth away from the deadly lifestyle. Carol Kinnear, who's featured in six videos created by the Combined Forces Special Enforcement Unit and Odd Squad Productions, says she wants to spare other parents from the devastating pain that has rocked her family. Kinnear's daughter Brianna - who had been dating gangster Jesse Margison - was shot to death in Coquitlam on Feb. 3, 2009. No one has been charged in her death. She was 22. "We live with this tragedy every single day and it is just a heartache that I don't really want any other parent to go through," Kinnear said in an interview. "I don't want any other child to put their parents through it. So I thought maybe it's time for me to try to put a message out there." Postmedia News (The Vancouver Sun, A5)

*** Big bucks going to fight gangs**
The city is poised to add $250,000-$350,000 to its fight against gangs, specifically to help extract gangsters from the criminal underworld, the Sun has learned. The 2015 draft budget will be tabled next week with an anticipated cash injection for programs reintegrating former gang members into society. It's the so-called "exit strategy" needed to complement police enforcement. Nothing would be final until council votes on the budget in March after a month of public consultation. Stittsville Coun. Shad Qadri, the chairman of Crime Prevention Ottawa, didn't want to say how much more he thinks council should spend on gang programs, even though the draft budget is a week away. QMI Agency (Ottawa Sun, 4, 1)

*** Ne pas faire bande(s) à part**
Un article éditorial déclare, « Répression, arrestations, concertation, interventions et prévention: la crainte d'une balle perdue lors d'une fusillade entre bandes de rue rivales à Ottawa est enfin parvenue à convaincre les divers intervenants de faire rimer leurs intentions. Les souliers en grappe sur les fils électriques pour marquer les territoires d'un gang ou d'un autre, dans différents quartiers de la capitale, ne sont pas apparus hier. L'Unité des bandes de rue du Service de police d'Ottawa (SPO) est en place depuis 2001. Son Équipe d'intervention directe existe depuis 2007. Le phénomène, loin d'être nouveau, est documenté, suivi de près. Les plus récents chiffres rendus publics par la police font état d'une quinzaine de gangs répertoriés sur le territoire de la Ville. Ils réunissent entre 400 et 500 membres ou associés. Si les Crips et les Bloods s'affrontaient à une certaine époque, les groupes d'aujourd'hui sont plus éclatés, indépendants, nombreux et mouvants, y compris jusque du côté de Gatineau. Ils ont aussi plus facilement accès aux armes de poing de contrebande (qui représentent plus de 50% de la cinquantaine d'armes à feu liées à un crime saisies par le SPO en 2014), et sont plus décidés à en faire usage pour régler leurs comptes. L'explosion du nombre de fusillades liées aux bandes de rue d'Ottawa, passé de 30 en 2013 à 49 l'an dernier, a donc de quoi inquiéter. D'autant que cette augmentation notable pourrait notamment refléter les aspirations de quelques «alphas» d'ici d'établir leur réputation à l'approche de la remise en liberté de membres des **Hells Angels** incarcérés à la suite de l'opération SharQc. » Le Droit, 16

*** Young honour lost women**
New artwork on permanent display at Sir John Franklin High School encourages students, staff and visitors to reflect on the unfinished lives of missing and murdered indigenous women and children in Canada. A team of nine young women in grades 10 through 12 sewed two pairs of beaded moccasin uppers to memorialize the women's lives and to represent the children who never returned home from Canadian residential schools. "It hits me hard because I'm aboriginal and I'm a woman so I wanted to make it known to more people," said Grade 12 student Kyla LeSage. "It meant a lot that I could have a part in something like that." Yellowknifer

*** Waking up to cyber abuse**

Other than online, the dark underbelly of the internet is perhaps nowhere better exposed than in the eye-opening pages of Extreme Mean: Trolls, Bullies and Predators Online. Paula Todd's far-reaching investigation into cyber abuse takes us inside the stories of victims and the minds of cyber bullies. An investigative journalist for over 20 years, Todd tells it like it is. This so-called interpersonal terrorism is more disturbing than we imagined. Online luring, extortion, cyber mobbing, tormenting, grief tourism and revenge porn are everyday occurrences. Anonymity and a lack of consequences create a fertile playing field for bullies looking to get a high from the control they exert. The resulting mental anguish has in some cases led to suicide. When did it become okay to tell someone, "Go kill yourself?" "The motivations behind cyber abuse include such things as immaturity and copycatting, especially for young people, mental illness, drug and alcohol use, frustration, anger and something called strain," says Todd. The 'strain' theory holds that those under pressure, struggling at work or school, in a failed relationship, experiencing economic difficulty, and other strains of living are more likely to act out. Some bullies are sadistic: they enjoy causing pain. Other tormentors insist they're just joking, trying to get a reaction. Young people are easy targets. Like Amanda Todd, disenfranchised youth are looking for affirmation online. Other targets can include people who are grieving, good Samaritans, children targeted by other parents, people with a vindictive "ex," and more. Sexual cyber abuse reflects a different dynamic. StarPhoenix, N18

*** Canada has moral obligation to the Badawis**

An opinion piece by Liberal MP Marc Garneau states, "While Stephen Harper's government is lauding its zero tolerance for barbaric cultural practices bill, Saudi Arabian free speech advocate Raif Badawi was given on Jan. 9 the first 50 of the 1,000 lashes that he has been sentenced to receive over 20 weeks. Badawi, whose family has found refuge in Sherbrooke, has been in a Saudi jail since June 2012. He was fined $300,000 and sentenced to 10 years in prison by the Criminal Court in Jeddah on charges of "blasphemy" and of "adopting liberal thoughts." The Liberal Party of Canada strongly condemns this inhumane sentence and urges the Saudi Arabian government to reconsider its stance on Badawi, whose only crime was to peacefully exercise his freedom of speech and his support for freedom of religion. As the Liberal foreign affairs critic, I wrote to Saudi Arabia's ambassador in Ottawa in early January to request a meeting with him so I could express my party's concerns regarding Badawi's sentence. I am disappointed that the ambassador has not yet followed up on my request. Canada has political, economic and social relations with many countries, including Saudi Arabia. When disagreements occasionally arise between our country and others on certain issues, our government has an obligation to speak up. Canada has always promoted human rights and voiced its concerns about humanrights violations through respectful and open dialogue. Montreal Gazette, A17, Le Devoir

INTERNATIONAL / INTERNATIONAL

*** Anti-terror chief urges rehabilitation**

The European Union's anti-terror chief called Tuesday for countries to rehabilitate rather than punish returning jihadists with no blood on their hands, saying that some prisons have become "incubators of radicalization." EU counter-terrorism co-ordinator Gilles de Kerchove said in an interview that "if we can avoid prison, let's avoid prison." At a time when EU nations are still shocked by the attacks in France earlier this month, many are pushing for swift, repressive measures for anyone who has gone offto join the jihad in Syria or Iraq. And even if true criminals among the returnees need to be punished with jail time, "I don't advise to bring them all to court because it would be a mistake," de Kerchove said. Since the

Jan. 7 to 9 Paris attacks that killed 20 people, including the three gunmen, dozens of people have been charged in France with defending terrorism. Inciting terrorism can bring a five-year prison term - or up to seven years for inciting terrorism online. "We know how much jails are major incubators of radicalization. Much better, provided they accept to do that, they undertake major rehabilitation," de Kerchove said. France recently expanded prison terms for terrorism-related offences, but the country was still caught off-guard when a member of a jihadist network worked in tandem with his brother and a former jailhouse acquaintance during three days of attacks in the Paris region. Calgary Herald, B2 (Ottawa Citizen, Montreal Gazette, Edmonton Journal, StarPhoenix, Vancouver Sun, Windsor Star)

MINISTER / MINISTRE

Secrecy surrounds attack that fuelled anti-terror bill
An opinion piece states, "Was Michael Zehaf-Bibeau a terrorist? Canadians still don't really know. In the three months since the attack on the National War Memorial and Parliament Hill, government leaders have repeatedly declared Zehaf-Bibeau to be a violent jihadist. Prime Minister Stephen Harper mentioned it again during a campaign-style speech in Orléans on Sunday. "Jihadist terrorism is not a future possibility, it is a present reality," he said, referring to October's attacks in Ottawa and Saint-Jean-sur-Richelieu, Que. "Violent jihadism is not simply a danger somewhere else. It seeks to harm us here, through horrific acts like .... shooting a soldier from behind as he stands guard at a war memorial." Yet politicians and police have tendered no clear evidence to underpin their claims. On Friday, the question becomes more important. The Conservatives are set to table anti-terrorism legislation directly inspired by the events of Oct. 22. Harper has said the new laws will increase the state's powers to monitor, arrest and detain suspected terrorists. Knowing whether Zehaf-Bibeau, 32, was a terrorist driven by Islamist rage would help in understanding whether the proposed laws are necessary or wise - or, as the opposition NDP charges, whether the legislation is more about political opportunism in an election year. Q What have authorities said about Zehaf-Bibeau and terrorism? On the afternoon of Oct. 22, in the first public briefing on the attack, RCMP Assistant Commissioner Gilles Michaud, commanding officer of the RCMP National Division, said the investigation into the day's events was "dynamic and unfolding" and that it was "way too early to be able to determine motive." Hours later, in a televised speech to the nation, Prime Minister Stephen Harper linked the assault to international terrorism. [...] In the three months since, the prime minister, **Public Safety Minister Steven Blaney** and other Conservative politicians have repeatedly cast Zehaf-Bibeau as a terrorist." Ottawa Citizen, A1 (Leader-Post, Edmonton Journal)

Le projet conservateur divise
Les chefs de l'opposition à Ottawa ne sont pas sur la même longueur d'onde en ce qui a trait au projet d'instaurer la peine de prison à vie sans possibilité de libération conditionnelle : tandis que Justin Trudeau se montre intéressé, Thomas Mulcair y voit une vaine aventure politique.En point de presse au parlement, hier, le chef du Parti libéral du Canada a déclaré que la population canadienne s'attendait à ce que « quelqu'un qui est condamné pour un crime sérieux ait des conséquences sérieuses ». M. Trudeau a précisé que des criminels comme Paul Bernardo, qui a écopé en 1995 d'une peine d'emprisonnement à perpétuité pour une série de crimes sordides, ne devraient être libérés « sous aucune condition ».
De son côté, le chef du Nouveau Parti démocratique (NPD), Thomas Mulcair, fait remarquer qu'il existe déjà, dans le Code criminel, des dispositions concernant les délinquants dangereux, lesquelles permettent à un juge de conclure si un détenu devrait être libéré ou pas. Il accuse ainsi les conservateurs d'inventer un problème qui n'existe pas dans la réalité. « Trop souvent, depuis qu'ils sont là, les conservateurs ont eu tendance, pour des raisons purement politiques, à inventer un problème », a laissé tomber M. Mulcair dans le foyer des Communes. « Ils sont dans leur dixième année au pouvoir. Si c'était si grave que ça, ils n'ont qu'eux-mêmes à blâmer », a-t-il ajouté. Le premier ministre Stephen Harper avait promis dans son discours du Trône, en octobre 2013, qu'Ottawa modifierait la loi « afin qu'une sentence à vie soit bel et bien un emprisonnement à vie ». Le projet est revenu à l'ordre du jour. Le **ministre de la Sécurité publique**, **Steven Blaney**, a d'ailleurs signalé mardi qu'un projet de loi en ce sens serait déposé d'ici le mois de juin. Il a fait valoir que l'objectif des conservateurs était de protéger la société « ***des individus qui commettent des crimes graves et violents de manière répétitive*** ». La Voix de l'Est, 20 (L'Acadie Nouvelle)

Tories to tighten rules for statutory release
The Conservative government is set to announce that it will make violent, repeat criminals wait longer to get the near-automatic ticket out of jail known as "statutory release." Few prisoners in Canada serve their full sentence. Most, if they do not receive parole, are set free with conditions at the twothirds mark under statutory release. But the government intends to keep offenders with a violent history behind bars until they have just six months left in their sentence. The government will bring those changes to Parliament next month, a source said. They will be introduced around the time the Conservatives table a new law, revealed in The Globe and Mail this week, that would end the possibility of parole for some convicted killers. The two proposed changes would reinvigorate the government's tough-on-crime agenda as an election approaches next fall. Both plans focus on a public perception that sentences judges impose do not do what they say they do: life does not mean life, and a nine-year term means three years (with parole) or six years (with statutory release). [...] Jason Tamming, a spokesman for **Public Safety Minister Steven Blaney**, declined to answer specific questions about the new rules, but said in an e-mail: "***Our Conservative Government is keeping dangerous criminals behind bars where they belong. We are always interested in new ideas to keep our communities safe***." Globe and Mail, A1

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Manque de surveillance d'Ottawa, selon le BST**
Malgré les mesures mises en place par le gouvernement fédéral à la suite de la tragédie de Lac-Mégantic, d'importantes lacunes demeurent pour s'assurer qu'Ottawa ait véritablement à l'oeil les compagnies ferroviaires, signale le Bureau de la sécurité des transports (BST). Le Bureau, chargé d'enquêter sur l'accident survenu le 6 juillet 2013, s'est dit préoccupé hier que Transports Canada n'ait pas encore mis en place un programme de "surveillance efficace" garantissant que toutes les sociétés ferroviaires feront l'objet de vérification d'envergure et de fréquence suffisantes pour que les problèmes de sécurité soient corrigés à temps. Le BST a fait valoir que jusqu'à ce que les systèmes de gestion de la sécurité (SGS) fassent partie de la culture des sociétés ferroviaires du Canada et que Transports Canada s'assure qu'ils ont été mis en oeuvre de manière efficace, "les avantages en matière de sécurité escomptés des SGS ne seront pas entièrement réalisés". Le BST recommande donc au ministère d'effectuer des vérifications des SGS des sociétés ferroviaires assez poussées et suffisamment fréquentes pour confirmer que les processus nécessaires sont efficaces et que des mesures correctives

sont mises en oeuvre pour améliorer la sécurité. Journal de Montréal, 24 (Journal de Québec); QMI Agency (Edmonton Sun; Toronto Sun; Kingston Whig-Standard; London Free Press; Calgary Sun)

*** Les citoyens de Lac-Mégantic plus dépressifs**
Un an et demi après la tragédie ferroviaire de Lac-Mégantic, la population est encore très affectée au niveau psychologique, révèle une nouvelle étude dévoilée hier. Selon cette étude, pas moins de 50 % des gens de la MRC du Granit qui ont été exposés à la tragédie ont souffert de symptômes dépressifs depuis 12 mois, contre 23 % pour les gens qui n'ont pas été touchés par le drame qui a fait 47 victimes en juillet 2013. Les gens qui ont été exposés de près ont aussi une consommation excessive d'alcool quatre fois plus grande que ceux qui ne l'ont pas été. L'enquête démontre aussi plus de symptômes anxieux et une consommation plus grande de médicaments tels les sédatifs et les tranquillisants chez la population de la MRC du Granit qu'ailleurs en Estrie. Journal de Montréal, 24 (Journal de Québec); Presse canadienne (Le Droit); La Tribune (La Voix de L'Est; Le Soleil); La Presse; Le Devoir

*** Indemnisation des victimes - une séance d'informations**
La population de Lac-Mégantic sera informée des développements dans le dossier de la Montreal, Maine et Atlantic (MMA) et du plan d'indemnisation des victimes à la suite de la tragédie ferroviaire du 6 juillet 2013. Le contrôleur Richter organisera des séances d'information qui se dérouleront entre le 1er février et le 31 mars 2015. Le plan d'arrangement avec les créanciers qui doit être déposé à la Cour supérieure au cours des prochaines semaines prévoit un fonds d'indemnisation qui s'élève présentement à 207,8 millions $. Les victimes, qui font partie des créanciers de la MMA, seront appelées à se prononcer sur l'acceptation ou le rejet lors de l'assemblée des créanciers de la MMA qui devrait se dérouler en mars ou avril 2015. La Tribune, 5

*** CLEAN BILL OF HEALTH - City water tests negative for E. coli; officials hope boil advisory will be lifted today**
Winnipeg remained under a boil-water advisory Wednesday, but city officials were hopeful it could be lifted by Thursday afternoon. The advisory was issued late Tuesday after E. coli and coliform bacteria were found in samples during routine testing of the city's water. By Wednesday, extensive retesting was done and Mayor Brian Bowman announced it had all come back negative. However, the advisory remains in effect until further tests are complete. "I am pleased to advise that the testing that we've conducted over the last 24 hours has come back negative, which means according to our experts ... they were false positives," said Bowman. "Ultimately we have to respect the fact this is a provincial decision, as soon as we receive the green light, believe me, we want to give you the news we were hoping to give you today." The decision to lift the advisory is in the hands of the province and under Health Canada guidelines, the tests must come back negative twice in 24 hours before the city gets the all-clear. Winnipeg Sun, 3; Canadian Press (CTV News)

*** Winnipeg power outage adds insult to injury on day 2 of boil water-advisory - Nearly 9,000 in Winnipeg's Garden City and River East neighbourhoods affect by outage, says hydro**
Not only is the entire city slick after freezing rain and still without drinkable tap water, but thousands were also left without power after an outage swept through Winnipeg's Garden City and River East neighbourhoods Wednesday night. On the second night of the citywide boil water-advisory, many households like Doug Palmer's were suddenly unable to follow the advisory. "It feels like you're going back maybe 40, 50 years where there's no running water," said Doug Palmer. He and his wife Barb lost power Wednesday night. Luckily, they had pre-boiled water before the outage. "I was lying in bed and then all of a sudden I saw a flash," said Barb Palmer. "Then after that the power went off. I went, 'great, no roads, no water, no power." The pair are among 9,000 hydro customers who were left in the dark for hours Wednesday night. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Standing with Israel, again
Once again Israel is under attack. Last summer it was from Hamas. This time it's Hezbollah. On Wednesday the Islamist terrorist group fired missiles at an Israeli military convoy that was near the Israel-

Lebanon border. The missiles killed two Israeli soldiers and a Spanish United Nations peacekeeper. Israel has so far responded with artillery fire and airstrikes. Hezbollah would like you to believe this is all tit-for-tat. Their PR campaign will tell you that this is a game of equals and they're just firing back. Their excuse for this is that the attack is in retaliation for a Jan. 18 airstrike Israel conducted in southern Syria that saw several Hezbollah members die. But it's important to put all of this into context. When we describe Hezbollah as an Islamist terrorist group, that's not spin. We're just plainly echoing how many governments describe the Lebanese militant and political group. Canada has officially labelled Hezbollah a terrorist group since 2002. Here's how the Public Safety Canada website describes it: "One of the most technically capable terrorist groups in the world, Hezbollah is a radical Shia group ideologically inspired by the Iranian revolution. Its goals are the liberation of Jerusalem, the destruction of Israel, and, ultimately, the establishment of a revolutionary Shia Islamic state in Lebanon, modelled after Iran." In other words, whenever they act against Israel, it's not about being tit-for-tat. It's about utterly annihilating the Jewish state. They have the same modus operandi as Hamas." QMI Agency, 8 (Winnipeg Sun, Ottawa Sun, Toronto Sun, Edmonton Sun, Calgary Sun)

Federal bill expected to criminalize act of encouraging a terrorist attack

The Conservative government wants to make it a criminal offence to encourage someone to carry out a terrorist attack. The Canadian Press has learned that legislation to be tabled Friday is expected to create a new Criminal Code provision against advocating an act of terrorism. A government source says an internal federal review of fatal assaults on Canadian soldiers last October identified the absence of a measure to prosecute extremists who encourage others to wage terrorism. The provision would stop short of criminalizing the glorification of terrorism for instance simply posting an Internet video of a bomb going off. But if the video also called for a similar attack on Canadians, that would fall under the planned new measure. "This is not a glorification offence. This is about encouraging those kinds of terrorist acts," said the source, who spoke on condition of anonymity because they were not authorized to discuss the federal review. "The test that is applied is, is this advocating or promoting terrorism or a terrorist act?" On Oct. 22, a rifle-wielding Michael Zehaf Bibeau shot Cpl. Nathan Cirillo, an honour guard at the National War Memorial, before he died in a hail of gunfire inside Parliament's Centre Block. Charlottetown Guardian.ca (Hamilton Spectator); * The Province

Spies zero in on file sharing services as part of terrorist hunt

A new report says Canada's electronic spy agency sifts through millions of videos and documents downloaded every day through file-sharing services as part of its bid to find terrorists. CBC News says details of the Communications Security Establishment project, called Levitation, are revealed in a 2012 PowerPoint presentation obtained by former U.S. intelligence contractor Edward Snowden. The document says that under Levitation, CSE analysts can access information on about 10 to 15 million uploads and downloads of files from free websites each day. CSE says it takes strict measures to protect the privacy of Canadians. Whitehorse Daily Star, 10

New anti-terror bill could put chill on freedom of speech

Prime Minister Stephen Harper said last weekend that new anti-terror legislation to be introduced on Friday will, among other things, "criminalize the promotion of terrorism." Such a move, however, could have a chilling effect on freedom of expression in Canada and would not necessarily contribute to effectively fighting domestic extremism, according to legal experts. The new bill aimed at combating domestic threats was promised by the federal government in the weeks following the October attacks in Quebec and Ottawa that left two members of the Canadian Forces dead. Justice Minister Peter MacKay suggested that the measures would, among a host of other consequences, allow authorities to target materials that may be contributing to the radicalization of Canadians, particularly online. The new bill, however, is largely a knee-jerk response to October's attacks and Canada already has the necessary laws on the books to pursue and prosecute people promoting hatred or inciting violence, says Kent Roach, a professor at the University of Toronto who specializes in constitutional and terrorism law. "The government has the burden before they introduce new laws to demonstrate why it's not possible to prosecute these kinds of offences under existing Canadian law," he says. "There's a real danger when we make laws in reaction to events with the assumption that those laws will help prevent tragedies from happening again." CBC.ca; * Globe and Mail

*** Loi pour contrer le terrorisme: les vidéos menaçantes contre le Canada deviendront criminelles**
Le gouvernement Harper déposera vendredi un projet de loi qui criminalisera la diffusion de vidéos menaçantes incitant à perpétrer des attaques contre le Canada. Une vidéo comme celle où l'on voit le djihadiste canadien John Maguire en appeler aux armes contre le Canada, sera maintenant spécifiquement visée par le droit criminel. Une source conservatrice a indiqué qu'en vertu des mesures actuelles, il est impossible d'accuser un individu si la nature des attaques n'est pas précisée. «La loi actuelle prévoit une infraction de terrorisme dans des cas précis, par exemple lorsqu'on suggère à quelqu'un de tuer une autre personne dans un but politique, religieux ou idéologique.» Déjà, au lendemain des attentats à Ottawa, le ministre de la Justice faisait part de son intention de criminaliser les individus qui faisaient l'apologie du terrorisme. Journal de Montréal.com (Journal de Québec, L'Acadie Nouvelle, Le Soleil)

*** Police to be briefed on anti-terror legislation**
Canada's privacy watchdog is expressing early concerns about information sharing provisions expected in the Conservatives' new anti-terror laws, as Prime Minister Stephen Harper meets with Toronto police chiefs to win support for the new measures. Daniel Therrien said he's been briefed on the government's new anti-terror bill, to be tabled in Parliament on Friday, and will be closely watching the wording of provisions aimed at increasing information sharing among government agencies. "Information sharing regarding whom? Regarding people who are suspected of terrorist activities, or the sharing of information about other Canadians who are not suspected of anything in order to identify a national security threat?" Therrien asked. "Travellers crossing the border, ordinary Canadians crossing the border. Will there be greater information sharing about them from the border agency to the secret service?" The anti-terror measures are expected to improve the ability of security agencies to share information and allow security officials to take "proactive measures" much earlier in a terror investigation - if they perceive a threat. As well, amendments are coming to the Criminal Code to deter the promotion to terrorism and make it easier for law enforcement officials to get peace bonds. It is expected there will also be changes to "enhance" no-fly rules. The government has expressed concern about Canadians travelling abroad to fight with extremists. The measures will likely provoke backlash from civil libertarians and privacy advocates. Harper is scheduled to meet with police leaders from across the Greater Toronto Area on Thursday to brief them on the new anti-terror laws, and to seek their support for the measures. Toronto Star, A6

*** Conservatives defend spy agency's actions**
The Conservatives defended Ottawa's electronic spy agency Wednesday in the wake of revelations of a massive surveillance program targeting file-sharing websites. Working with the journalist in possession of a cache of documents from whistleblower Edward Snowden, the CBC reported Wednesday that the Communications Security Establishment was running a massive surveillance program tracing traffic on file-hosting websites. The program, dubbed Levitation, tracked between 10 million and 15 million downloads and uploads to file-sharing websites. According to documents, the search was meant to flag access to suspicious files, and turned up around 350 "interesting download events" each month. The revelations brought renewed questions from opposition critics about the legality of CSE's operations, and whether or not the secretive spy agency is picking up Canadian citizens' private information. "No one is questioning the need to go after those who download terrorism-related material," NDP defence critic Jack Harris said in the House of Commons. "However, what we are concerned about is the potential that the Communications Security Establishment may again be going beyond its mandate and monitoring Canadians." Associate defence minister Julian Fantino defended the agency, but did not address the specifics of the program. Toronto Star, A6 (Waterloo Region Record)

*** Canadian spy program raises Internet anonymity concerns**
Revelations about a Canadian spy program that can sift through 15 million downloaded files a day are raising concerns that Ottawa's fight against terrorism is eroding Internet anonymity. But Canadian spies claim to have used this technique to unearth a specific intelligence lead - the "hostage strategy" of an al-Qaeda offshoot, before passing it along to U.S. intelligence. A top-secret Communications Security Establishment document about its "Levitation" program was leaked by U.S. contractor Edward Snowden and published by the CBC and online publication The Intercept on Tuesday. Some of the spying described in the document closely matches what a federal official has suggested is one of Canada's most valued spying stratagems. "Let's imagine there is a hostage situation unfolding," the CSE's signals-

intelligence director said in a 2013 interview with The Globe. Drawing a diagram of three terrorist hostage takers talking on their phones, he said that "the solution to this, for us, is metadata." Metadata is information about an electronic communication excluding the spoken or typed words. Leaders of electroniceavesdropping agencies, such as CSE, have convinced the executive branches of government that they need an unfettered ability to collect, log and search this material - in bulk. Past leaks have shown that CSE analysts have a continually collected trove of metadata at their fingertips, through a database known as "Olympia," which allows Ottawa to scour all manner of covertly collected telecommunications traffic. Globe and Mail, A12

*** Sécurité nationale - Les espions en ligne du gouvernement inquiètent les Canadiens**
Alors qu'Ottawa se prépare à modifier certaines lois au nom de la sécurité nationale et de la lutte contre les extrémismes, une majorité de Canadiens envoie un message clair au gouvernement : la quête de la loi et de l'ordre ne doit pas se faire au mépris de la vie privée des citoyens, indique un sondage national mené à la fin de l'année dernière pour le compte du Commissariat à la protection de la vie privée du Canada. Sondage qui, plus d'un an après les révélations de l'ex-espion de la NSA Edward Snowden, met en lumière des préoccupations croissantes au pays face aux intrusions de toutes sortes dans l'intimité des gens. Le document a été dévoilé mercredi, à l'occasion de la Journée de la protection des données. En substance, 57 % des répondants y font part de leur inconfort face à la collecte de renseignements personnels par des ministères et organismes gouvernementaux auprès de compagnies de télécommunication, et ce, sans mandat judiciaire. Pis, 78 % des 1520 personnes passées à la question, entre le 21 octobre et 10 novembre derniers, d'un océan à l'autre, se disent également très inquiets par l'utilisation par le gouvernement, à des fins de surveillance, de données personnelles en ligne les concernant. Ce niveau de préoccupation est en croissance au pays depuis 2012, soulignent les auteurs du sondage. Le Devoir, A5; Le Devoir

*** Hot property**
A Muslim umbrella organization that allegedly funnelled money to a Hamaslinked charity is buying up property from Quebec to Alberta. QMI Agency conducted land-register searches that show the Muslim Association of Canada (MAC), based in the Toronto suburb of Mississauga, has bought at least 11 buildings in Ontario, Quebec and Alberta since 2006. They're being converted into mosques, community centres and schools as the group's financial dealings catch the attention of the RCMP. The group was named in a search warrant related to Project Sapphire, a probe into terrorist financing. Warrants indicates MAC sent nearly $300,000 in the 2000s to IRFAN-Canada, a group that raised millions for Hamas. The Canadian government considers both IRFAN-Canada and Hamas to be terrorist organizations. The Muslim Association of Canada remained a registered charity as of this week, having reported $16.1 million in revenues, and a nearly $5.8 million payroll, in 2013. The group says its mission is to "establish an Islamic presence in Canada that is balanced, constructive, and integrated, though distinct." Establishing that presence has included buying up more than $30 million of land and buildings across the country. Two mosques in north-end Montreal were donated for free. The MAC Islamic Centre of Cold Lake, Alta., was purchased in November 2013 and assessed the following year at $220,900. QMI Agency, 9 (Calgary Sun, Ottawa Sun, Winnipeg Sun, London Free Press, Kingston Whig-Standard, Edmonton Sun, Toronto Sun)

*** Un adolescent pourrait écoper d'une peine pour adulte**
S'il est reconnu coupable, l'adolescent montréalais de 15 ans qui est devenu en décembre le premier Canadien accusé d'avoir tenté de quitter le pays pour participer à une activité terroriste en vertu de la nouvelle Loi sur la lutte contre le terrorisme pourrait écoper d'une peine pour adulte. Lors du passage du jeune homme au Tribunal de la jeunesse, ce matin, la procureure de la Couronne fédérale a annoncé au juge qu'elle «considérait faire une demande» à la cour pour que l'accusé, que la loi nous interdit d'identifier parce qu'il est mineur, soit assujetti à une peine pour adulte. Rappelons que le garçon est détenu dans un centre jeunesse depuis qu'il a été arrêté au mois d'octobre après avoir volé 2000$ dans un dépanneur de L'Ouest-de-l'Ile armé d'un couteau et le visage couvert d'un foulard. Inquiet de son comportement de plus en plus radical, c'est son père qui l'avait dénoncé. La police lui a mis la main au collet alors qu'il était à son école, un prestigieux collège privé de Montréal. La Presse, A8

*** Don't curtail freedoms the jihadists hate**

An opinion piece states, "Any society that would give up a little liberty to gain a little security will deserve neither and lose both"--Benjamin Franklin. We live in frightening times. Terrorists gun down cartoonists in Paris for the imaginary crime of blasphemy. A solider is murdered in Ottawa by a domestic jihadist while merely standing on guard at a war memorial. ISIS. Boko Haram. Al-Qaida. The list goes on. Islamic terrorism is real. We have to deal with it both at home and abroad. But in doing so we cannot let fear override our reason and sacrifice our freedoms in the name of security. Prime Minister Stephen Harper has now revealed some details of a new antiterrorism bill he intends to introduce in Parliament. He talked about enacting a law that would make illegal speech that promotes terrorism. We sort of knew this was coming. After the Ottawa shooting, Justice Minister Peter MacKay mused about giving police the power to remove Internet posts that authorities deem could be "poisoning young minds". Both Harper and MacKay would benefit by reading a little Ben Franklin. The rationale is that given the rare, but real phenomenon of "home-grown" terrorism, if you limit speech that promotes terrorism, it's harder for terrorists to recruit." QMI Agency, 17; ipolitics.ca (Hamilton Spectator)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Human trafficking awareness should live on

Too often, what happens in January stays in January. Just think of our New Year's resolutions. On Jan. 1, we implement them with such excitement and alacrity, but as the month whittles away, so do our resolutions. This cannot and should not be the fate of human trafficking awareness. Human trafficking is indeed a global problem with international victims, but we Windsorites need to understand that human trafficking is also a Windsor problem with victims right here in our own backyard. Legal Assistance of Windsor is the lead organization in assisting survivors of human trafficking in Windsor and Essex County. Shelley Gilbert, social work services co-ordinator at LAW and chair of Windsor-Essex Fights the International Growth of Human Trafficking, known as WEFiGHT, says Windsor is indicative of other cities across Canada.There is sex trafficking, forced marriage and forced labour. Often, victims of human trafficking are threatened with deportation and experience physical and sexual violence. The Windsor Star

5 charged after drugs, gun turn up in raid

Ottawa police have charged five people - including two Bloodsrelated shooting victims in December - after a raid on a Draper Avenue apartment Friday turned up a loaded handgun and crack cocaine. Officers executed a search warrant at a highrise at 2600 Draper Ave., near Pinecrest and Baseline roads, around 11:30 p.m. Friday. (...) Grace M'Pemo, 18, charged by police with drug-and firearms-related offences as a result of the raid, was driving a white sedan near Bloomsbury Crescent and Regency Terrace in the final days of 2014 when he was shot at repeatedly in a driveby shooting. M'Pemo was hit once in the arm, abandoned his vehicle, which was crashed into a Dumpster, and took a taxi to the hospital. (...) In the raid, police seized a Turkish-made Girsan Yavuz 9-mm handgun - one of four crime guns seized by police so far in 2015 - 10 rounds of ammunition, 45.6 grams of crack cocaine, four grams of cocaine and 10.5 grams of marijuana. Nearly $3,200 in cash was also seized. (...) M'Pemo, Affat, Richard Wallace, 31, James Gerrior, 46, and his sister Margaret Gerrior, 45, were all charged with drug possession and possession for the purposes of trafficking, along with various weapons charges Wallace was charged with possession of marijuana and violating undertakings. Police said Wallace is in Canada illegally and was placed on an immigration hold for the Canadian Border Services Agency. The Ottawa Citizen

YVR heroin seizure sparks B.C. probe that leads police to drugs and guns

Mounties say the seizure of heroin at Vancouver's airport has sparked an investigation that led to weapons and drug charges against a 31-year-old man from the Okanagan. Vernon RCMP spokesman Gord Molendyk says the Canadian Border Services Agency intercepted a large quantity of heroin from Thailand at the airport Jan. 8. He says border agents alerted police who obtained a warrant and searched a Vernon home on Jan. 13. Molendyk says police seized four loaded handguns, more than $10,000 in cash and prescription and non-prescription drugs. Ronald Learning is facing 17 charges related to weapons offences, possession of stolen property and breaches of court orders. Molendyk says the police

recently warned local drug users about overdoses and the city is safer now that illicit drugs have been taken off the streets. (CKFR, CHNL) The Vancouver Sun

Deportation stay denied for Roma family
The last hope of a Hungarian Roma family seeking refuge in Canada was dashed when a Federal Court justice denied a stay of deportation on Wednesday morning. They were deported in the evening. Anasztazia Szilagyi, husband Deszo Nemeth and their two children fled Hungary in 2011 to seek asylum in Canada. As members of Hungary's Roma minority, they say they face persecution in the country, which has seen a rise in anti-Roma rhetoric in the recent years. The Gazette

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Privacy watchdog seeks reports of major breaches**
B.C.'s independent privacy watchdog called on the provincial government Wednesday to start reporting all major privacy breaches to her office. Elizabeth Denham issued a 60-page report showing that the government investigated more than 3,700 suspected privacy breaches and confirmed 2,700 between April 2010 and December 2013. Yet, she said, fewer than 45 of those cases were reported to her office. "I'm concerned that we only heard about one per cent of the breaches that the government investigated over a four-year period," she said. Denham said the government is not even telling her about confirmed breaches caused by malicious viruses, hacking or phishing. There were seven such breaches from 2010 to 2013, her report says. "We're not hearing about some of the cyberattacks," she said. "We're not hearing about the numbers of people that were affected. Times-Colonist, A5

LAW ENFORCEMENT / APPLICATION DE LA LOI

Mom wants serial killer Robert Pickton charged with killing daughter
The mother of a woman whose DNA and bones were found on Robert Pickton's property says her daughter's remains should result in another murder charge for the convicted serial killer. In January 1997, Michele Pineault's daughter Stephanie Lane disappeared. It would be many years later when her family learned some of her skeletal remains were found on Pickton's Port Coquitlam, B.C., pig farm. Pickton was first charged with killing 26 women, but later convicted of six while 20 charges were stayed and an additional six cases, including Lane's, never resulted in charges. In 2003, Pineault was told her daughter's DNA, from bodily fluid, was found on the Pickton farm in a deep freezer, and if more of her daughter's remains were found, Pickton would face a murder charge. But it wasn't until last August when the BC Coroners Service informed Pineault they had Lane's partial skeletal remains, which had been kept in storage. The RCMP had them until 2010, when they were turned over to the coroner's office. Pineault got the remains last September. "I was told that they found two pieces of my daughter's vertebrae on the farm," she said. "It remained in a storage locker and the only explanation was -- none. "The only thing they could say was, 'It was an oversight.'" Pineault is calling on the B.C. Coroners Service to re-examine the remains to confirm the identity of the bones, and wants police and Crown prosecutors to reopen the case and charge Pickton with her daughter's death. QMI Agency (Edmonton Sun, Calgary Sun, Ottawa Sun, Toronto Sun, Winnipeg Sun); Canadian Press (The Telegram, B3)

Barton case goes to appeal
An appeal court was described as Gerald Barton's last chance at justice Wednesday by a lawyer who argued RCMP negligence contributed to his client's wrongful conviction on a statutory rape charge 45 years ago. "This is probably Gerry Barton's final stop on his quest for justice and I hope you will entertain arguments on his behalf," Dale Dunlop told the five-judge panel of the Nova Scotia Court of Appeal. Dunlop argued that a Nova Scotia Supreme Court judge erred last April when he cleared the RCMP of wrongdoing and ruled there was nothing wrong with the way police investigated the case against Barton, who is now 64. Justice James Chipman should have found Barton's confession in 1969 was false and caused by some form of police coercion when the then 19-year-old gave a statement in Digby, he said. Since the woman recanted her story in 2008 and blamed her brother for causing her pregnancy, Dunlop said the confession must be both false and improperly obtained. "Why did Gerry Barton say he had sex

with someone when he didn't? There was no sex," he said. "The onus is on the other side to explain how they got this through correct police methods." He urged the judges to award Barton significant damages in his lawsuit against the Mounties. Canadian Press (Chronicle Herald, A6, Whitehorse Star, Times & Transcript, Cape Breton Post)

Missing mental patients pose 'threat'

Police in North Bay, Ont., say they believe a man and a woman missing from a local mental health facility are believed to be in New Brunswick and pose a "significant threat to public safety." In a news release on Wednesday, the North Bay police say that Cara Duval - who also goes by the last name Donnelly - and Joseph Pepin did not return to the North Bay Regional Health Centre's Mental Health and the Law program on Thursday of last week. The police release states that the two patients were believed to be in Hanwell earlier this week, on Tuesday. The RCMP released photos of the duo from an in-store camera at a convenience store and gas station on the Hanwell Road. The photos of the woman, man and the Volkswagen Jetta car they are travelling in were taken at 2:30 p.m. on Tuesday. "Concern for their well-being and safety continues," the North Bay police say in the release. "Without ongoing monitoring and supervision, both pose a significant threat to public safety." Daily Gleaner, A1

Stolen goods seized from notorious residence

A man faces additional charges after police seized drugs, weapons and stolen tools and equipment from a notorious Penhold residence. Innisfail RCMP Staff Sgt. Chris Matechuk said a search warrant on Saturday netted the stolen goods, including a replica firearm and rifle reported stolen from Three Hills. The charges came after a two-week investigation. Since July, police received 70 complaints about suspicious people, vehicles and incidents at the residence. Police say the suspect is linked to 40 of those complaints. "The community is very frustrated," said Matechuk. "They are seeing all this activity. ... We have received a lot of positive comments from the community and relief that we were able to make an arrest." Police will continue to keep an eye on the property. Matechuk told reporters that the suspect has been arrested four times and charged five times since July. The most recent warrant was issued for his arrest on Jan. 5. His charges related to stolen property, failure to comply, driving without a valid licence and other offences. Matechuk said the criminal activity at the home was not limited to Penhold. The investigation was conducted by the newly-formed regional Property Crimes Tasks Force and the Safer Communities and Neighbourhoods Act, a division of ALERT. Red Deer Advocate, A1

Police were at house before man was shot

Two hours before a 38-year-old man was shot several times in a house in Langford Tuesday night, West Shore RCMP were there responding to a disturbance. One man was told to leave but no arrests were made. By 8:30 p.m., officers were back at the white bungalow at 2639 Sooke Rd. after the shooting. Debbie England, who grew up in the bungalow and whose nephew now owns the property, said her husband went to the house about 6 p.m. because he had keys to let police into the rental suite. "[Police] removed someone," she said. "And two hours later that person came back and shot [the tenant's] boyfriend or ex-boyfriend." After a 13-hour manhunt, a 22-year-old Victoria man was arrested Wednesday at a home in the 3200 block of Quadra Street. Acting on a tip, Saanich police entered the home about 10 a.m. and took the suspected gunman into custody without incident. Saanich police also arrested the 21-year-old resident of the Quadra Street home, who faces charges of accessory after the fact for allegedly helping the wanted man hide from police. Police were waiting to obtain a search warrant for the Saanich residence to look for a handgun. Both men were being held at West Shore RCMP detachment. Their names have not been released pending charge approval. West Shore RCMP has recommended charges of attempted murder against the 22-year-old. Times Colonist, A1

Officer arrested

An off-duty Vancouver police offi cer has been arrested following allegations of domestic assault and unlawful confinement. The Vancouver Police Department says the member with 10 years' experience was arrested Friday night by Mounties in Maple Ridge. They say a woman went to the Ridge Meadows detachment earlier that day and reported the allegations. Vancouver police say they were advised and the office of the Police Complaint Commission informed. The officer has been removed from front-line duties. His identity has not been released, and Vancouver police say the RCMP is in charge of the investigation. Postmedia News (Vancouver Sun, A2, The Province)

City council split on $5M handout for new police building
Hamilton police are banking on the city to pony up $5 million for a new investigative services building they say will alleviate a space crunch. But with the city facing a $3-billion infrastructure backlog, there's no consensus among councillors that the project should make the cut in this year's municipal budget. "It's hard to say this one goes ahead of everything else without knowing what the list looks like in its entirety," Coun. Chad Collins said after Wednesday's general issues committee meeting. But police officials say provincial and federal funds for the $15-million project, which includes a cutting-edge forensics lab, hinge on the city's commitment. "In the 2015 capital for this facility, I would like to see approval of the $5 million so that we can continue to advance our planning and our work," police Chief Glenn De Caire said after his budget presentation at City Hall. Dan Bowman, assets manager for the police, told councillors the service is short 53,000 square feet of space. This has put evidence at risk of cross-contamination in a cramped and outmoded forensics lab, and split investigators among four sites. Hamilton Spectator

Placentia stabbing prompts 'precautionary' school lockdowns
The victim of a reported stabbing in St. Bride's Wednesday morning is in the Health Sciences Centre with serious injuries, and the 46-year-old suspect in in police custody. According to a news release from the RCMP sent Wednesday night, police eventually caught up with the suspect and arrested him. They expect to lay several charges, including aggravated assault, assault with a weapon, driving while prohibited and breaches of court orders. The RCMP alerted the Royal Newfoundland Constabulary to lock down two schools in Mount Pearl after the stabbing. Fatima Academy implemented a secure-school protocol as well, a school board spokesman said. The lockdowns ended when the suspect was arrested. Both St. Peter's Junior High and O'Donel Junior High in Mount Pearl were locked down for about an hour and a half Wednesday morning. It caused some tense moments for students at St. Peter's Junior High, who had to get on the floor for close to half an hour during the lockdown before things were cleared. The Telegram

Surrey RCMP search for 'high-risk' missing woman
Surrey RCMP are asking the public to help track down a "high-risk" missing woman. Chelsea Hagen was reported missing on Jan. 24, and has not been heard from since. Her last known residence was in Surrey's Newton neighbourhood. "Family and police are concerned about her current well-being as she lives a high-risk lifestyle," read a police statement. Hagen is a 21-year-old white woman, about 5-foot-8 tall, about 135 pounds. Hagen has brown hair and hazel eyes, and has tattoos on her left wrist and right forearm. There is no information about what she was wearing at the time of her disappearance. Postmedia News (The Province)

RCMP cleared of wrongdoing in Tofield-area shooting
Mounties who opened fire on a wanted man during a Tofield-area confrontation that left two officers injured have been cleared by the province's cop watchdog. The Alberta Serious Incident Response Team (ASIRT) was directed by the Director of Law Enforcement to investigate the Jan. 6, 2014, RCMP officer-involved shooting near Township Road 524 and Range Road 192. Earlier that day, two rural homes were broken into and guns were stolen. The investigation led five Mounties to the rural home of a man associated with the suspect. Edmonton Sun ; Edmonton Journal

Retention pay, banked sick days first targets in curbing police cost
A long-standing perk that allows Toronto police employees to bank up to 18 sick days a year and potentially collect a payout of tens of thousands of dollars will be a key issue in looming contract negotiations. So, too, will lucrative "retention pay" bonuses that have been in place for more than a decade and reward officers for not quitting their jobs. On Thursday, the budget committee takes its first detailed look at the proposed 2015 police budget. Toronto Star, GT2

Halifax passes $77m police budget
Halifax councillors signed off Wednesday on a $77-million regional police budget. But while the 2015-16 budget is only a slight increase over last year, it doesn't include wage increases for some unionized workers - one of the biggest single cost pressures for the force. The current collective agreement with Halifax Regional Police Association, the union that represents sworn officers and some civilian staffers, is

set to expire March 31. "One of the things that you will not see (in the budget) is the additional pressures from wages," Police Chief Jean-Michel Blais said during a presentation to committee of the whole. "The amount proposed does not include any wage increases for the collective bargaining unit that is represented by the (association)," he said, adding that it would be "premature to even speculate how much that number will be." Wages for both the union's sworn officers and civilian staffers is set at $65.14 million for 2015-16, about 85 per cent of the total police budget. The Chronicle-Herald, A6

A dozen arrested, 116 charges in illegal tobacco case in metro
A five-month investigation into illegal cigarette sales in the Halifax area led to 116 charges against 12 people, Halifax RCMP and Service Nova Scotia said Wednesday. Police allege the cigarettes were first purchased, legally, by the owner and another person from Bridgeview Grocery on the Bedford Highway but were then illegally resold to 11 local convenience stores, which sold them to the public. The couple from Bridgeview Grocery face 47 charges, mostly for selling contraband cigarettes. If convicted, they could face several fines that go as high as $100,000, but no jail time. The other people face charges of purchasing, possessing or transporting contraband tobacco. "We had retailers that were not buying tobacco from a licensed wholesaler," said Bernie Meagher, director of audit and enforcement at Service Nova Scotia. "There's only licensed wholesalers that are responsible for collecting the taxes." The Chronicle-Herald, A4

Windsor, LaSalle police chiefs to meet
The next step in talks over regional policing will be a future meeting between Windsor and LaSalle's police chiefs, according to Windsor Mayor Drew Dilkens. Dilkens said Wednesday morning's "very hearty twohour meeting" with Amherstburg Mayor Aldo DiCarlo and LaSalle Mayor Ken Antaya focused mainly on LaSalle's concerns about blending their municipal police forces into a regional service. Now, it's about crunching the numbers. "Where we ended up at the end of the day was the mayor of LaSalle said 'have your chief meet with our chief, figure out what the level of service being provided is so that we can do an apples-to-apples comparison,"' Dilkens said. "And then provide us with a costing." Dilkens said it will take months to provide information to both Amherstburg and La-Salle on what police services could cost if a regional service was formed - either between Windsor and Amherstburg or Windsor, Amherstburg and La-Salle. Amherstburg is looking to reduce costs and is also seeking an OPP costing but the OPP have placed a moratorium on providing costings until the fall. The Windsor Star, A3

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Ottawa gruge 6,3 M$ dans l'assiette des détenus
Les criminels détenus dans les pénitenciers devront se serrer la ceinture. Ottawa ne leur servira plus que des menus congelés et le lait frais sera remplacé par du lait en poudre. Au total, Ottawa compte épargner plus de 6,3 M$ grâce à ces nouvelles mesures. Les repas seront dorénavant préparés dans un centre de production avant d'être congelés et transportés dans les pénitenciers où ils seront réchauffés et servis aux détenus. Ottawa prévoit ainsi épargner 3,2 M$ par année en ne préparant plus les repas directement dans les prisons. Certains établissements à sécurité minimum où les détenus préparent eux-mêmes leur repas ne sont pas touchés par ces mesures. Les services correctionnels ont aussi l'intention de revoir le menu des détenus en centralisant les achats et en choisissant des produits à faible coût. Par exemple, le lait frais sera remplacé par le lait en poudre, comme c'est déjà le cas dans plusieurs prisons aux États-Unis et dans l'Ouest canadien. "L'utilisation du lait en poudre est plus rentable que le lait liquide et répond également aux exigences du Guide alimentaire canadien", a indiqué la porte-parole des services correctionnels, Véronique Rioux. Journal de Montréal, 10 (Journal de Québec), 1

1,9 million$ pour une maison de transition vide
Une maison de transition construite à grands frais sur la Côte-Nord accueille un seul prisonnier. D'une capacité de 20 lits, le centre Kapatakan Gilles-Jourdain, situé sur la réserve innue de Mani-Utenam, n'a toutefois qu'un seul «client», a appris Le Journal. Le centre, bâti en 2012 pour 1,9million$, coûte malgré tout 680000$ en frais annuels. Le centre transitoire, qui accueille les «adultes innus et les autres

membres des Premières Nations» en processus de libération conditionnelle, offre des «services diversifiés et adaptés selon les valeurs et les traditions des peuples autochtones.» «Pour l'instant, notre mission est d'accueillir des personnes autochtones. Les besoins sont là. Mais on n'est pas assez connus», es-time le directeur général du centre, Robert St-Onge. Pour remplir ses lits, le directeur général doit trouver des prisonniers autochtones qui purgent des peines dans des établissements provinciaux. Lorsqu'ils reçoivent la bénédiction de la Commission des libérations conditionnelles, ils peuvent suivre un «programme de rétablissement avec la guérison autochtone pour inspirer un nouveau mode de vie et pour la consolidation de l'identité et des valeurs autochtones. » Le «stage» dure 12 semaines. Pour l'instant, l'option n'est pas très populaire puisque 12 personnes seulement sont passées par le Centre depuis son ouverture, en mars 2013. Journal de Québec, 5 (Journal de Montréal)

Quand la prison rend fou
Un article d'opinion déclare, « Au début du XIXe siècle, les quakers ont développé la détention en isolement. Seuls dans le silence, les prisonniers devaient cheminer vers Dieu et la réhabilitation. Mais la plupart n'y ont trouvé que l'enfer. Comme plusieurs États américains ont commencé à le faire, le Canada devrait restreindre cette pratique. Le gouvernement conservateur est resté insensible aux rapports critiques de l'enquêteur correctionnel, du vérificateur général et de l'ONU. Le seul espoir qui reste : que les deux poursuites intentées dans les dernières semaines forcent une réforme. Selon la bureaucratie carcérale, il existe deux motifs pour l'isolement : disciplinaire ou « administratif ». La première catégorie vise les détenus qui violent certains règlements (drogue, bataille, etc.). Ce volet ne compte que pour 2 % des cas d'isolement. La punition est limitée à un mois et un système indépendant révise les décisions. C'est dans le volet « administratif » que se trouve le problème. Les gardiens peuvent isoler les détenus s'ils font l'objet d'une enquête ou s'ils posent un danger pour eux-mêmes ou les autres (pédophile menacé, caïd qui complote un meurtre, etc.). La durée de la réclusion n'est pas limitée. Il faut toutefois prouver qu'il n'existe pas d'autre solution. L'isolement doit donc, en théorie, servir de dernier recours. Mais il est devenu un simple outil de gestion pour régler les troubles quotidiens causés par le surpeuplement carcéral et la désinstitutionnalisation en santé mentale. Plusieurs études ont démontré que quelques semaines d'isolement suffisent pour exacerber une maladie mentale ou en causer une nouvelle. Lorsqu'on est enfermé dans une cellule 23 heures sur 24, les murs se rapprochent, et la paranoïa s'installe. » La Presse

Home invaders leave lasting scars
Ante Maglic knew the death threat wasn't idle - he'd been beaten, stabbed and tortured with a cordless drill - but he didn't have what the home invaders wanted. When four men started torturing Maglic for drugs and money, before realizing they burst into the wrong Ellrose Avenue home, his first instinct was to fight back. "I threw one of them off me," Maglic recalled Wednesday. "That's when they put the gun to my head. I didn't do anything except take a beating." Maglic and his girlfriend, Sheri Meloche, received a total of $26,525 in compensation Wednesday for physical and mental suffering after enduring a night of terror at the hands of intruders. Basil Percy Scott, 37, Maurice Geramine Heptbourne, 24, and William Charles Langdon, 21, were each sentenced to nine years in prison for the February 2013 attack. Jalen Lloyd Elliott-Strain, 22, was sentenced to five years after testifying against the others. Maglic and Meloche told of how the attack has affected their lives during separate hearings before Ontario's Criminal Injury Compensation Board. Maglic was awarded $12,000 for pain and suffering, $1,900 for loss of income and $1,200 for more counselling. Meloche received $9,000 for pain and suffering, $25 for half a day of lost pay and $2,400 for counselling. Windsor Star, A1

*** Life behind bars: the politics of despair**
An opinion piece states, "Stephen Harper wants to bring back the death penalty. Not the quick kind, by poison or electrocution. The slow kind - life imprisonment without parole. A *living* death. The proposed legislation - news of which was opportunistically leaked on the day slain RCMP officer Const. David Wynn was buried - would remove any possibility of parole for the killing of a police officer or jail guard, for a murder that occurred during a kidnapping, a sexual assault or "terrorist" act, and for especially brutal homicides. It's the apotheosis of the Conservatives approach to criminal law: simplistic, short-sighted, vengeful and purely political. Probably doomed, too. Some history: In 1967 the death penalty was temporarily suspended under Prime Minister Lester B. Pearson for all homicides apart from those involving the deaths of police officers and prison guards. During this trial period, all death sentences for

murder were automatically commuted. In 1976, Pierre Trudeau's government introduced Bill C-84, abolishing the death penalty. The noose was replaced with a life sentence accompanied by a period of parole ineligibility (and the "faint hope" of an even earlier release - a safety valve that later would be abolished by the Harper government). A life sentence is just that - a life sentence. A conviction for first degree murder carries an automatic 25 year sentence of incarceration. Only after a quarter century has passed can a first degree killer apply for full parole. Release from prison is only granted when a federally-appointed parole board determines that the public's safety will not be placed at risk. It's not automatic. It's not a revolving door. After release from prison the sentence continues; any breach of parole, any offence - no matter how small - results in an immediate return to prison. The supervision is intense. And the system *works*. The rate of recidivism for those released on parole is low (despite the fact that the government axed effective reintegration programs)." iPolitics

*** Still fighting shadows**

An editorial states, "There he goes again. Prime Minister Stephen Harper has never met a criminal law he didn't want to torque, and he's planning to tighten the screws again ... just in time to burnish his tough-on-crime credentials for the federal election. His latest targets are reportedly some of Canada's most notorious: Multiple murderers, cop-killers, jail guard killers and those who kill during a terrorist attack, sex assault or kidnapping. Under legislation the government plans to bring in they would face an automatic sentence of life without parole, meaning they'd die in prison. Currently the maximum is a life sentence without parole eligibility for 25 years, then possible release under supervision for life. The Tories are banking, rightly, that few Canadians will lose sleep over the fate of the very worst. Even so, this is the latest instance of Harper cynically pandering to his right-wing base by passing "tough" laws that have driven up the criminal justice system's cost by $5 billion and jammed the federal prisons with 15,000 inmates, a 25-per-cent increase - without making the country any safer. The need for harsh new laws is far from apparent. As Statistics Canada reported this week, crime is at its lowest point in 45 years. Homicide rates peaked in 1975 and have steadily if unevenly declined ever since; they're now at 1966 levels. That's nearly a half-century low. Attempted murder is down to the 1971 level. And this trend began long before Harper's first crime bill. As the Star has written before, the Conservatives are wringing their hands over a crime wave that isn't sweeping the country. They're tilting at shadows for political gain, posturing as defenders of law-abiding folks and victims. On Harper's watch they have sought repeatedly to tie judges' hands and to stiffen sanctions by bringing in more mandatory minimum sentences, reducing conditional sentencing (house arrest) options, curbing credit for pre-sentence custody, curbing parole eligibility and making pardons harder to get. Their latest fixation - throwing away the key - is yet another solution to a problem that doesn't exist." Toronto Star, A14

*** Certains criminels méritent une vie en prison, juge Trudeau**

Le chef libéral Justin Trudeau ne s'insurge pas contre la volonté du gouvernement conservateur de retirer aux personnes condamnées pour meurtre la possibilité d'un jour sortir de prison. A son avis, les crimes les plus odieux devraient être punis d'une peine proportionnelle. " Le Parti libéral et les Canadiens s'attendent à ce que quelqu'un qui est condamné pour un crime sérieux ait des conséquences sérieuses. Nous allons regarder le projet de loi quand il sera déposé, mais les gens s'attendent à ce que des gens comme Clifford Olson et Paul Bernardo ne soient libérés sous aucune condition ",a déclaré M. Trudeau. Le gouvernement avait indiqué, dans le dernier discours du Trône, son intention de faire en sorte que l'emprisonnement à perpétuité signifie rester en prison jusqu'à ce que mort s'ensuive. Le premier ministre est revenu à la charge avec cette promesse dimanche. Tout indique qu'un projet de loi sera déposé d'ici juin, juste à temps pour les élections. Les cas Olson et Bernardo cités par Justin Trudeau sont mal choisis, car tous deux ont été déclarés " délinquants dangereux ". Cette étiquette permet d'imposer une peine à durée indéterminée. Le tueur en série Clifford Olson est mort derrière les barreaux en 2011, après 30 ans d'incarcération. Ses deux demandes de libération conditionnelle lui avaient été refusées. Le violeur et assassin Bernardo est en prison depuis 20 ans. Le chef du Nouveau Parti démocratique, Thomas Mulcair, a évoqué cette disposition pour expliquer sa tiédeur devant l'initiative à venir. " Je vais attendre de voir le texte de leur loi, mais les dispositions existent déjà. Trop souvent, depuis qu'ils sont là, les conservateurs ont eu tendance, pour des raisons purement politiques, à ériger un homme de paille qu'ils vont faire tomber eux-mêmes. " (...) Une étude de 2012 du Service correctionnel du Canada, menée auprès de 1129 condamnés à perpétuité et remis en liberté entre 1995 et 2005, a démontré que seulement 3,5 % d'entre eux ont commis une nouvelle infraction. Le Devoir, A2

*** What about public safety?**
A letter to the editor states, "Re: Cruel And Unusual, editorial, Jan. 28. I read with interest your editorial on solitary confinement of prisoners and believe I have the solution: capital punishment. I do not say this in jest. I truly believe if people have trouble envisioning prisoners being in solitary confinement for whatever heinous crime they have committed, it would be much easier for all involved if the prisoners no longer existed. If someone has been tried and convicted of a serious crime such as murder, the public should not have to worry about them being paroled early for good behaviour or convincing some weak-kneed judge they have found religion and therefore are no longer a threat to anyone. How many people do you think would mourn Paul Bernardo if he were to be executed? People just want guarantees that dangerous criminals have no chance of being released and ever threatening anyone again." National Post, A9

*** Paroled too soon**
A letter to the editor states, "The article Tories Seek Tougher Penalties For Killers (Jan. 27) led me to reflect again on the recent passing of Francis Simard, an admitted kidnapper and murderer of Pierre Laporte in 1970. He was sentenced to life imprisonment but was paroled after only 11 years. Such an early parole can certainly be seen as a solid argument to legislate a stricter system. While a total end to parole for capital crimes may be excessive for Canada, the family of the victim - and indeed society at large - has a right to know that convicted killers will be held to serve a term of long duration." Globe and Mail, A14

*** Life with no parole**
A letter to the editor states, "The number of Mounties Canada has lost recently is appalling and our government of any stripe can do better in helping to strengthen our laws. I do not believe a prison term without parole is applicable in all situations except for the killing of law enforcement officers. They are entitled to have the best protection the government can bring. They take on dangerous careers to keep our communities safe. We owe them a certain duty of assurance." Edmonton Journal, A16

*** Powdered milk is good enough**
An opinion piece states, "Powdered milk will soon be served to prisoners in all federal institutions. The savings, however, estimated at $3.1 million by Correctional Service Canada, does not impress the official opposition in Ottawa. New Democratic Party MP Rejean Genest was quoted in the latest edition of La Terre de Chez Nous as saying he hates the taste of dried milk so much he doesn't even put it in his coffee. He finds it lacks "decency" to serve it to criminals. How can he be sorry or even care that a pedophile, a murderer or a crook doesn't like the taste of his milk? Contrary to Thomas Mulcair's party, what I find lacks decency is that as taxpayers we pay more, per meal, to feed prisoners than patients in hospitals or residents in senior housing. Genest adds that fresh milk is not a luxury but a basic product on anyone's table. What does the NDP say to a 15-year-old or his single mom earning minimum wage who has never been able to afford more than dried milk for her family? Criminals certainly don't deserve better than that mother and her kids." QMI Agency (Winnipeg Sun, 9, Toronto Sun, Ottawa Sun, Edmonton Sun, Calgary Sun)

*** Notorious Ottawa killer found dead in Alberta prison**
Ottawa's gas bar killer, Martin Pinkus, was found dead in his Drumheller jail cell on Wednesday. Drumheller Institution staff members discovered Pinkus unresponsive in his medium-security cell, immediately tried to perform CPR and then called 911. He was taken to the Drumheller Health Centre where he was later pronounced dead. Pinkus, 47, had been serving an indeterminate sentence since Dec. 20, 1999, for the shotgun slaying of Ottawa's Danny Jones outside Namers Convenience Store, a Gloucester gas bar. (...) Local police and a coroner have been notified, while Correctional Service Canada are reviewing the circumstances of the incident. Pinkus' death marks the second in three days at the Drumheller jail. Ottawa Sun, 9, QMI Agency (Edmonton Sun, Calgary Sun)

*** Double murderer Earl Davenport dies in prison**
Hamilton man who committed a 1986 double murder that a judge described as "barbaric" and "savage" has been found dead in an Alberta prison. Earl William Davenport, 56, was found unresponsive in his cell

at Drumheller Institution, 110 kilometres northeast of Calgary. Correctional Service Canada reported he was found Monday during a regular check at about noon in his cell in the medium-security unit. Staff members performed CPR and emergency services were called, but Davenport could not be resuscitated. Davenport was convicted on Nov. 27, 1987, of stabbing to death his sister-in-law Laura Ann Davenport, 31, and her friend Susan Joy Hornbeck, 30, who was seven months pregnant. He was sentenced to life in prison with no eligibility for parole for 25 years. The Crown said the Aug. 23, 1986 killings were based on Davenport's "intense hatred" for his sister-in-law. He was the brother of her estranged husband, David Davenport. The couple separated in 1985 and had two daughters. Correctional Service spokesperson Jeff Campbell told The Calgary Herald there is no indication of foul play in the death of Davenport. The police and coroner were called and Correctional Service will conduct a review. Hamilton Spectator, A6

*** Inmate charged after prison rampage**

A federal inmate is accused of causing thousands of dollars in damage while running amok with a metal pipe. Terrance Joseph Keleher, 28, was supposed to appear in Moncton provincial court Wednesday morning, but his case was set over until the afternoon. Because of the weather, no prisoners were transported to court in the morning, but they were expected to be brought to the Moncton Law Courts Wednesday afternoon. But when his case was called in the afternoon, there was confusion over whether or not he's still in custody. The judge adjourned the matter for a couple of weeks. Keleher is charged in relation to incidents that occurred at medium-security Dorchester Penitentiary on Aug. 23. He's accused of uttering threats to cause bodily harm to guard Timothy Wellman, interfering with property by causing a false alarm of fire and doing more than $5,000 worth of damage to the prison. The RCMP allege guards responded to an inmate's cell on the day in question and encountered an intoxicated inmate armed with a shank and a needle. The emergency response team was called in but before they arrived, the inmate got out of his cell. Police allege the inmate used a metal pipe to smash eight cell-door windows, four other windows, a toilet, a sink and a camera, and also tried to incite a riot. The damage was estimated at more than $5,900. The inmate finally surrendered and was handcuffed and taken to segregation. Times & Transcript, A4

*** Return of daughter's remains triggers call for Pickton trial**

The mother of a woman whose DNA was found on Robert Pickton's property says the serial killer should be charged with murder, arguing human remains returned to her represent new evidence. Michele Pineault said an official with the B.C. Coroners Service met with her last September and gave her fragments from two vertebrae belonging to her daughter, Stephanie Lane, who was 20 when she vanished in January 1997. Lane is among six women whose DNA was found on Pickton's farm but whose cases did not result in charges. Pineault said prosecutors told her at the time that Lane's DNA was found in a freezer, which wasn't enough to proceed with charges. She said she was never told about the bone fragments' existence. "I was told that ... if there had been more [than DNA], it would have been enough to charge him," Pineault hold a news conference in Vancouver, holding a pair of small plastic bags containing her daughter's remains. "I want Robert Pickton charged with my daughter's murder." The B.C. Coroners Service said in a statement that the remains were known to police during the original investigation and "do not represent new evidence." Crown spokesman Neil MacKenzie said prosecutors also knew about Lane's remains when they made their decisions about charges. He repeated the criminal justice branch's long-standing position that Pickton will not be prosecuted for additional murder charges. Canadian Press (Times Colonist, A7, Whitehorse Daily Star, Waterloo Region Record, The Province, The Telegram, 24Hrs Vancouver), Globe and Mail, Postmedia News (Vancouver Sun, National Post)

*** Sentence too light**

If it were up to Alberta's top court, drunk driver Ryan Jordan Gibson would have been handed a prison term of at least four years. But in rejecting Gibson's appeal of his 32-month sentence on Wednesday, a three-m ember Alberta Court of Appeal panel said they were bound by the punishment imposed. "A fit sentence here would be no less than four years," the judges said, noting the Crown had not given notice of and intention to contend the original sentence. "Recent authorities from other jurisdictions have seen fit to impose four-and-a-half or five years imprisonment where less egregious driving patterns were present," they said in a written ruling. Because the Crown did not give such notice, it cannot now seek to appeal the sentence to the Supreme Court, despite the judges' comments a greater punishment would have been appropriate. Gibson had appealed the 32-month sentence imposed by provincial court Judge Karim Jivraj

who rejected a Crown and defence joint submission for a two-year term. The appeal court judges said Jivraj was correct to find the two-year sentence proposed was outside the proper range considering Gibson's conduct in killing Cochrane teen Brandon Thomas. Calgary Sun, 7, Calgary Herald

*** Some of the others charged in Project Axe**

EMMANUEL ZÃPHIR, 42, MONTREAL Pasquale Mangiola drew the attention of police when ZÃ©phir, considered a leader among Montreal street gangs for nearly two decades, agreed to buy a kilogram of cocaine from him. Project Axe was centred on ZÃ©phir and many members of the Syndicate, a street gang ZÃ©phir took control of early in 2006, when he left a federal penitentiary after having serving an eight-year prison term for having killed a rival gang member who stabbed him first, in 1999, during a party in Montreal. In December 2010, ZÃ©phir pleaded guilty to several charges related to Project Axe - notably drug trafficking, conspiracy to traffic drugs and gangsterism. He was sentenced to an overall seven-anda-half-year prison term. He was left with 34 months to serve when his case came to an end.(…) CURTIS RODNEY, 41, POINTE-CLAIRE A longtime friend of Mangiola's who delivered the kilogram of cocaine Mangiola sold to ZÃ©phir. He was also convicted of possessing 600 Cialis pills, designed to treat erectile dysfunction, with intent to traffic. He is currently serving a sentence of 40 months, which he received in November. Montreal Gazette, A3

*** Inquest to be held into death by starvation**

A 41-year-old man, abused as an infant into physical and intellectual disability and starved to death by his brother, will be the subject of a coroner's inquest, the province announced Wednesday. Jamie Hawley weighed just 57 pounds and his frail body was covered in 33 bedsores when he died at Brockville General Hospital in May 2008. (…) Hawley's official cause of death was listed as starvation, pneumonia and infected bedsore. Experts testified at trial that these were preventable ailments that could have been treated before they became fatal. Ontario Superior Court Justice Lynn Ratushny sentenced Jerry Hawley to 20 years in prison for circumstances she said were "nearmurder" carried out by a man "primarily interested in working, partying, beer and drugs" and not the responsibility of caring for his brother. "It is a tale of a young man with serious physical and mental disabilities who was taken in by his brother for his disability benefits and who ended up being ignored, neglected, degraded, tortured and starved," Ratushny said in her decision. "It is a harrowing account of extreme neglect that should never have happened." The inquest will attempt to determine how exactly it did happen and a jury will be tasked with making recommendations to prevent similar deaths. Inquests do not lay blame or find fault. Inquests are not typically called until all criminal charges have been resolved. Jerry Hawley had filed a notice for leave to appeal both his conviction and his sentence but has since abandoned the conviction appeal, his lawyer Sam Scratch confirmed to the Citizen. A date to appeal his sentence has not been set but will not run counter to the inquest. Ottawa Citizen, A6

*** Psychopathic criminals learn differently from punishment cues**

Criminal psychopaths learn to respond differently to punishment cues than others in jail and may need more reward-focused treatments, new research suggests. Criminals such as Paul Bernardo, Ted Bundy and Clifford Olson, who scored high on psychopathy checklists, were known to be callous and unemotional. Psychopaths derive pleasure from being manipulative and use premeditated aggression to get what they want with no regard for those who are hurt. The search for what makes them tick has shown some physical differences in their brains such as reductions in grey matter. (…)The findings could have implications both for treating incarcerated psychopaths and to prevent children showing callous tendencies from progressing to psychopathy. In Canada, psychopathy occurs in about one per cent of the population. In federal prisons, it's about 25 per cent, said Michael Woodworth, a psychologist at the University of British Columbia Okanagan, who has worked on research projects with Correctional Service Canada. CBC News, Le Devoir

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Strip-search challenge to proceed**

A charter legal challenge alleging that level-three strip searches by Toronto police discriminate against aboriginal people is going ahead, after a judge denied an attempt by the Toronto Police Services Board and four officers to dismiss portions of the claim. In a decision released Monday, Judge Paul Perell rejected the defendants' argument that claims of discrimination by Toronto resident Megan Anoquot should be excluded because the allegations are "a disguised class action." And Perell dismissed the notion that previous searches conducted on Anoquot - who has been arrested several times for petty theft - aren't relevant to the case. Natalie Kolos, the lawyer for the board and police, had argued they should be excluded because officers conduct the searches on a "case-by-case basis." "With respect, the Defendants seem oblivious to the nature of the claim that Ms. Anoquot is making, which is that the Defendants employ a stereotypical approach and systemically strip search Aboriginals rather than engaging in a case-by-case basis," wrote Perell in his ruling. Toronto police conducted invasive strip searches in 60 per cent of all arrests, according to statistics from 2010 that were quoted in the ruling. Toronto Star, GT1

*** Sex ed called out of step in digital age**

While the province works on a new curriculum, schools in Ontario are teaching sex education based on guidelines developed in the digital dark ages - or at least a time before sexting was part of the vocabulary. Not only is the 15-year-old sexeducation curriculum out of step with technology, said Sara Mison, of Ophea, a lobby group that advises the Ontario government on physical and health education, it hasn't kept up with physical changes in children. A few decades ago, the average age of puberty was 10 or 11. Now, many girls and boys go through puberty at nine or 10, a trend not recognized in the way sex education is currently taught. Educators and others say teachers should talk to students about puberty in Grade 4 - a year earlier than they do now. That change was included in curriculum introduced by the Ontario government in 2010, but it was later scrapped amid criticism. Since then, Ontario schools have continued to teach sex education based on curriculum developed in 1998. Proposed changes are, once again, proving controversial in Ontario. Ottawa Citizen, A12

*** Battling gangs through city budget**

There's a chance antigang funding will become a fixture in the city budget. "We'll see how that first year goes and then if there's a requirement for additional funds, which I suspect there will be, then we'll look at that in context of the 2016 budget," Mayor Jim Watson said Wednesday. As reported first by the Sun, the city is looking to spend $250,000-$350,000 on an exit strategy for gangsters in the 2015 budget. Watson wouldn't discuss the numbers, saying they will be revealed when the draft budget is released next week. The money would eventually go to Crime Prevention Ottawa via the social services department. In other words, the city would have control over releasing the funds to CPO each year. There are questions about whether a quarter-million dollars is enough money to help mostly young men leave gangs. The city money would be spent on working with outside agencies that have expertise in getting criminals to turn their lives around. QMI Agency (Ottawa Sun, 5)

PUBLIC SERVICE / FONCTION PUBLIQUE

Les dirigeants syndicaux du secteur public fédéral sont inquiets

Plus que les chiffres, l'incertitude entourant le prochain budget fédéral et l'intransigeance manifestée par le premier ministre Harper n'ont rien pour apaiser les craintes des dirigeants syndicaux du secteur public fédéral. «Nous sommes très nerveux. Nous sommes comme dans une tempête, alors que le vent tourne continuellement», observe le vice-président exécutif de l'Alliance de la fonction publique du Canada (AFPC) pour la capitale nationale, Larry Rousseau. Selon lui, l'analyse du directeur parlementaire du budget de l'impact de la baisse des prix du pétrole a peut-être réussi à mettre les pendules à l'heure au niveau budgétaire. Mais il reste encore trop d'inconnus pour savoir comment le gouvernement réagira à ces turbulences, alors qu'il est déjà en pleine ronde de négociations avec l'ensemble des employés du secteur public fédéral. «C'est comme si on nous avait dit que les freins de notre char étaient très usés, illustre M. Rousseau. Nous roulions à 40km/h pour éviter le pire. Mais là, c'est comme si on était obligé de passer à 100km/h et qu'on ne sait pas si on va pouvoir éviter l'obstacle en avant.» A l'Institut professionnel de la fonction publique du Canada (IPFPC), la présidente Debi Daviau déplore que le

gouvernement ait des services publics «pour appliquer le programme de réduction d'impôt tordu». Le Droit, 9

Parliament watchdogs fear disclosure bill could trigger 'witch hunt' among staff
Parliament's watchdogs used terms like "witch hunt," and "metaphorical tattoo" to argue against a bill that would require their employees and potential hires to disclose any past political positions. Four agents of Parliament who appeared before a Senate committee Wednesday night said that Bill C-520 appears to be trying to fix a problem that doesn't exist, but could create new ones. "Candidates for positions in the offices of agents of Parliament must declare their past political activities, but what are agents to do with this information?" said Privacy Commissioner Daniel Therrien, who said political preference is considered by law sensitive personal information. "Or put another way, it is not clear for what specific problem is this legislation a remedy?" Conservative MP Mark Adler's private member's bill obliges anybody applying for a job with an agent of Parliament to declare prior political work. Current and future employees would have to post their political histories for the decade before their hire on the Internet. Canadian Press (CTV News)

*** France wants Canada on UN Security Council**
Canada should try again for a seat on the United Nations Security Council despite its historic loss in 2010, because it is a "global player," says the French ambassador to Canada. Envoy Philippe Zeller said he's noticed that the Harper government has drifted away from engagement with the UN, but as one of the permanent five on the Security Council, France would value having Canada back at the table. In October 2010, Canada lost to Portugal in a bid for a two-year council term. The defeat came after six successful campaigns for a seat over the previous six decades. Analysts have variously attributed the defeat to the Harper government's controversial foreign policies in the Middle East and Africa, or to Europe closing ranks to support one of its own. Zeller, who leaves Ottawa next week after a three and half years in Ottawa, said Canada and France see eye-to-eye on 90 per cent of issues, but on UN relations it has noticed that Canada under the Conservatives seems to have less time for the institution. He cited Canada's withdrawal from the Kyoto Protocol and the Convention to Combat Desertification. Zeller said all countries have to regularly review their foreign policies. "But when it's such a question as to how to deal with desertification, well it's difficult to accept, to see a leader like Canada, countries that are known for having developed aid policy since the 1960s, to decide to go out. But we have to respect that." Daily Gleaner, B1

INTERNATIONAL / INTERNATIONAL

*** The (good) problem with Ebola - Just a few months after the epidemic in West Africa peaked, doctors worry a dramatic reduction in cases could imperil hopes of having vaccines and treatments ready for the future. 'It is a concern,' one public health official says, 'but it's a good concern to have'**
Earlier this week, Medécins Sans Frontières (Doctors Without Borders) reported something that might have seemed unimaginable at the zenith of the Ebola epidemic, when the aid agency had to turn dying patients away from its teeming treatment facilities. Only 50 or so of the 650 isolation beds at MSF's eight Ebola treatment centres in West Africa are now occupied. The empty beds are a tangible sign of the steep decline in new cases in Guinea, Sierra Leone and Liberia, a development that is being greeted with cautious optimism - and warnings against complacency - in the international public health community. Beneath the optimism is a growing acknowledgment that what is undoubtedly good for the people of West Africa is very likely bad for the quest to bring Ebola vaccines and treatments to market. Case counts are plummeting just as the first large-scale trial of experimental Ebola vaccines is about to get under way in Liberia, where only 29 new cases have been confirmed in the past four weeks, down from a high of 367 in a single week in September. The phase three trial of two vaccine candidates, including one made in

Canada, needs to have enough Liberians at risk of Ebola exposure to determine if either shot shields people from the virus. Globe and Mail, A10

MINISTER / MINISTRE

The language of terrorism
Following the terrorist attacks in Paris earlier this month, Prime Minister Stephen Harper cranked up his rhetoric. "We will not be intimated by jihadist terrorists," said Harper during an appearance in a Vancouver suburb, adding that "the international jihadist movement has declared war" on Canada and its allies. Now, just a few weeks later, the term "jihad," or "jihadi" has become a routine part of the government's speaking notes. This vocabulary - along with terms such as "Islamist" which the prime minister has also used, and even "war" - is one method politicians use to try to frame the often-complex debate around terrorism policy. "I'm guessing it's a way that they want to simply capture that very broad, very diff use set of actors," says Jeremy Littlewood, a senior research affi liate with the Canadian Network for Research on Terrorism, Security and Society, and a Carleton University international aff airs professor. Groups such as al-Qaida now have multiple spinoffs or rivals, such as the Islamic State (ISIL), and it's easier for politicians to lump them together than to focus on their diff erences. [...] And while recent internal CSIS documents identified suspects in recent terrorist plots as "Islamist extremists," the agency has stopped using the term in its public annual reports. Similarly, Public Safety's annual terror threat reports have avoided all terms relating to jihad and Islam, though the agency's minister, **Steven Blaney**, uses terminology similar to that now employed by Harper. Conservative Sen. Lynn Beyak took the agency to task for its selective wording last fall when officials testified at the national defence committee. Ottawa Citizen, A9

Terrorism bill worries privacy experts
The Conservative government will redefine free speech Friday as it tables a new bill to criminalize the promotion of terrorism. The bill was drawn up after the attacks against soldiers in Quebec and Ottawa last

fall. It is widely expected to grant police new powers to arrest people who are suspected of supporting terrorist organizations but have not made explicit threats. Prime Minister Stephen Harper said Sunday the bill will "criminalize the promotion of terrorism and prevent terrorists from travelling and recruiting others." This has privacy experts worried. Police can already arrest people for planning a crime, so these new arrest powers could extend to people who have committed no wrongdoing, said Josh Paterson, executive director of British Columbia Civil Liberties Association. Criminalizing the mere expression of support for a terrorist group is likely unconstitutional, Paterson said. "Expanding the government's power to detain people without any charge, without having committed any crime, is a very serious matter and really runs against the principles of fundamental justice." Harper is scheduled to publicly unveil the bill early Friday afternoon in Richmond Hill, Ont., with Justice Minister Peter MacKay and **Public Safety Minister Steven Blaney**. The government hasn't revealed the details of what is in the bill, but there are signs it will include broad changes. The tentative title of the bill shows it will make changes to Canada's spy agency, immigration rules and to who is allowed on a plane. Chronicle Herald, A10

Sweeping new powers on the way for spy agencies
Minister Stephen Harper will unveil Friday details of an omnibus public safety bill to bring in a raft of new anti-terror powers, including authority to knock terrorist propaganda offline and new protections for secret evidence gathered by spies. Broader powers for CSIS to disrupt terror activities, such as air travel or bank transactions by suspects, are among some of the details reported by media outlets Thursday evening - a big expansion of the agency's role that was strictly limited to intelligence gathering since its creation of 30 years ago. The bill will enact two new laws and make amendments to the Criminal Code, the CSIS Act, the Immigration and Refugee Protection Act among a host of others. It's not clear whether the Conservatives are prepared to boost the budgets of national security agencies, a key focus of opposition criticism. The government put the Commons on notice that funding will attach to the measures, but a senior government official said it shouldn't be interpreted as new funding, rather is intended to provide authority to spend for a new purpose. However, the official Opposition NDP insists the question of resources is the main one and is skeptical of the need for new laws it fears will further erode civil liberties and privacy rights. Harper has chosen the riding of Richmond Hill to make the long-awaited announcement, flanked by **Public Safety Minister Steven Blaney** and Justice Minister Peter MacKay at the same time the bill itself is tabled in Parliament. Toronto Star, A4

Premiers to debate disaster funding - Federal-aid changes top meeting agenda
It's unfair of Ottawa to unilaterally tell the provinces they have to shoulder millions more of the cost when a natural disaster strikes, Premier Greg Selinger said Thursday. "It's a fairly significant download," said Selinger, who arrived in Ottawa Thursday for a premiers' meeting where disaster-aid changes will be a prominent item on the agenda. "It's a concern to all the premiers." Until this weekend, Ottawa's aid following a disaster kicked in after costs hit the equivalent of $1 per capita in a province. In Manitoba, the threshold for Ottawa's help starts at about $1.3 million, Selinger said, and Ottawa would begin paying 90 per cent of the costs when the bills exceeded $6.5 million. The new formula, which kicks in Feb. 1, means Ottawa won't start paying until the costs hit $3.9 million, and won't begin covering 90 per cent until the bills exceed $20 million. Selinger said many smaller emergencies may never qualify for federal aid now, and added the formula will be indexed to inflation so the provinces will continue to share larger portions of the bills in years to come. He said he was first told there was a change coming to the formula a couple of weeks ago. Federal **Public Safety Minister Steven Blaney** put out a release Jan. 16, and the formula will change this Sunday. "It was a unilateral decision, and it's come fairly rapidly," said Selinger. "It puts a lot more pressure on the provinces." In 2013-14, a briefing package from the Department of Public Safety identified the rising costs associated with the disaster financial assistance program as the biggest risk facing the department and noted it was being reviewed for sustainability. Winnipeg Free Press, A10

Gouvernement Harper - Punir, punir, punir
Un éditorial déclare, “Il y a des indices qui ne trompent pas. La multiplication des lois par le gouvernement de Stephen Harper pour resserrer les conditions de détention des prisonniers nous confirme que nous serons bientôt en élections. Qu'il s'agisse de terrorisme ou de criminalité, les conservateurs s'assurent de faire comprendre aux électeurs qu'avec eux la loi et l'ordre régneront au Canada.\r\nLe premier ministre Harper en avait fait la promesse dans le dernier discours du trône. " Trop longtemps, la voix des victimes a été réduite au silence, pendant que le système dorlotait les criminels ",

avait-il dit en octobre 2013. Il ne l'a pas oublié. D'ici la fin de la session, des projets de loi seront adoptés, d'une part pour rendre caduque la pratique de mise en liberté anticipée et automatique aux deux tiers de la peine dans le cas des multirécidivistes, d'autre part pour faire en sorte qu'une sentence à vie soit bel et bien un emprisonnement à vie. [...] Ces mesures ont eu pour effet d'augmenter la population carcérale et le temps passé en prison où, à en croire les préjugés courants, ce serait un peu la vie d'hôtel. Pour s'assurer qu'il n'en est plus ainsi, les détenus sont désormais souvent deux par cellule (comme les étudiants au collège, a déjà fait valoir le **ministre Steven Blaney**), le service des aumôniers a été réduit, tout comme l'accès à des cours de formation. Puis, on apprenait cette semaine que désormais il n'y aura plus de cuisine en prison : on servira des plats congelés. Quant au verre de lait frais, il sera remplacé par du lait en poudre. Il n'y a pas de petites économies, comme il n'y a pas de petites peines de prison." Le Devoir, A8

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Second Lower Mainland bird-flu case confirmed**
A Lower Mainland man has been confirmed as Canada's second case of H7N9 bird flu. The unidentified man and his wife are believed to have contracted the virus during a recent trip to China. They are the first North Americans known to have been infected with this virus. Bonnie Henry, B.C.'s deputy provincial health officer, said the positive test result was confirmed late Thursday by the National Microbiology Laboratory in Winnipeg. Both patients have recovered, and no other cases have been reported. Canadian Press (Times-Colonist, A6; VancouverProvince.com; CTV News)

*** Flu vaccine a bust this year: study - Shot offers little protection against most common strain in Canada**
This year's flu vaccine offers little or no protection in Canada against becoming sick enough to require medical care, a study published Thursday suggests. The research, based on data from British Columbia, Alberta, Ontario and Quebec, found the vaccine offers most people virtually no protection against the strain that's causing the lion's share of the illness this year, H3N2. There weren't enough cases of flu caused by H1N1 or influenza B viruses to assess whether the vaccine would have been more protective against them. That may change as the flu season progresses - it is not uncommon to see late-season surges of influenza B illness. But for now, this year's shot's performance looks pretty dismal. Canadian Press (Times-Colonist, C11); Edmonton Sun; Edmonton Journal

*** Winter storm could blanket New Brunswick with 35 cm of snow**
Another winter storm is heading toward New Brunswick and could dump 35 centimetres of snow on parts of the province by Saturday. Environment Canada has issued a winter storm warning for most of the province and a winter storm watch for the northwest parts of New Brunswick. Snow is expected to start on Friday afternoon and up to 35 cm is expected to fall by the end of Saturday, according to Environment Canada. The agency is advising people to consider postponing non-essential travel and to take extra care when walking or driving in affected areas. CBC News; Radio-Canada; Times and Transcript

*** Group uses Winnipeg boil water advisory to highlight First Nation water woes**
A group is using Winnipeg's boil-water advisory to highlight the ongoing struggles of the First Nation that supplies the city with its drinking water. Shoal Lake 40 First Nation, which provides Winnipeg with water through an aqueduct, has been under a boil-water advisory for 17 years. Chuck Wright said it's time Winnipeg residents learned more about the cost of their drinking water. "I really hope that the inconvenience of only a day and a half of an E. coli scare that it will create more empathy for the many, many First Nations, not just Shoal Lake 40, that have been under boil-water advisories and without adequate drinking water for so many years, sometimes decades," he said. Wright and a few others handed out bottled water Thursday in downtown Winnipeg, plastered with the label "Boil Water Advisory Day Count - Winnipeg: 1.5, Shoal Lake 40: 6,205+" to raise awareness about the reserve. Canadian Press (Cape Breton Post, A9; Charlottetown Guardian)

*** La ligne comptable Lac-Mégantic**

Autant de dévastation ne pouvait pas faire autrement que de causer de sévères dommages aux citoyens de Lac-Mégantic. Encaisser un pareil choc, ça fait aussi dérailler des vies! Au-delà des 48 pertes de vie (un suicide est recensé avec les 47 victimes déclarées), les blessures psychologiques sont profondes et il faudra des années pour les guérir, a dépeint mercredi la Direction de la santé publique de l'Estrie. On n'a pas lésiné sur les moyens pour décontaminer les sols souillés par le pétrole. On a calculé les volumes de terre à déplacer et à traiter, une première estimation de 200 M$ a été avancée, et on est parti avec ça. Advienne que pourra. Même chose pour le nettoyage des cours d'eau. Il faut ce qu'il faut. Le premier politicien qui agira en trésorier plutôt qu'en gardien de l'environnement finira dans le goudron et les plumes. Combien de temps et d'argent faudra-t-il encore pour faire disparaître toute trace de « contamination » chez les humains? Selon les données compilées par l'Agence de la santé et des services sociaux, les services de santé associés à la tragédie de Lac-Mégantic se chiffraient à 4,5 M$ à la mi-décembre. De cette somme, 1,8 M$ sont imputés au Centre des services sociaux de la MRC du Granit, dont le personnel a évidemment été le plus sollicité. Québec a compensé 100 pour cent de la facture de 2,8 M$ présentée pour les services rendus au cours des sept mois et demi ayant suivi le déraillement, durant l'exercice financier 2013-2014. La Tribune, 6

*** SaskAlert to spread word in emergencies**

Saskatchewan finally has its own emergency alert system. The testing phase for SaskAlert will begin on Feb. 1 in the western part of the province, through the Weather Network's smartphone app, website, Twitter feed and TV station. By the time it's fully online - emergency management commissioner Duane McKay hopes within about a month - it will disseminate emergency information through smartphone apps and the media. Saskatchewan has seen "a significant increase in emergency events" over the past several years, and SaskAlert will plug a good chunk of the communication gap when danger approaches, McKay said. Alerts will be split into Level 1 and Level 2, depending on the immediate threat to lives and property. A tornado, destructive storm cell or train derailment in which an entire community needs to be evacuated, for example, would be a Level 1 warning. Leader-Post (Star-Phoenix, A6)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

The dark sophistry of CSEC

'Levitation" might suggest a matter of levity, but the project of the Communications Security Establishment Canada that goes by that name is another unsettling example of "tradecraft" disclosed by Edward Snowden. The objective of the program is detecting terrorists, but Levitation appears to do this by broadly surveilling Canadians - just what CSEC is not allowed to do. Mr. Snowden found a deck of CSEC slides explaining how Levitation sweeps up vast quantities of files from upload sites, searching for suspicious videos or other electronic documents that, for example, provide instructions to terrorists on how to make a gas bomb. The Levitation presentation uncovered by Mr. Snowden is businesslike, and has a relaxed and often jocular language. For example, it explains how, in searching through millions of uploaded files, Levitation is able to filter out episodes of the musical-comedy television show Glee. If uploaded episodes of TV programs and enormous quantities of other data are being searched and accessed, it suggests that CSEC is collecting huge libraries of files and signals from millions of Canadians. Which, again, is not what CSEC is supposed to be doing. The CSEC presentation says that it sees 10 to 15 million free file uploads (FFU) per day from around the world. The presentation says that out of all of this trawling, CSEC is "finding about 350 interesting download events" a month. One example of success was finding a hostage-taking strategy for al-Qaeda in the Islamic Maghreb, which the CIA and other agencies then shared. Globe and Mail, A10

Canada needs to watch the watchers

An opinion piece in the Times Colonist states…."Quis custodiet ipsos custodes? While Latin might have gone the way of the dinosaurs, the meaning behind that ancient Roman phrase couldn't be more relevant: Who watches the watchers? A peculiar situation has emerged in this country since 9/11: Intelligence gathering has become more important while the review process for these activities has been diminished. Our security officials haven't had as free a hand to carry out their business since the cavalier days of the RCMP Security Service, which was found to have been involved in barnburning and other illegal activities in the 1970s. Once almost the exclusive turf of the Mounties, intelligence gathering is now conducted by

14 different federal agencies, including the Canadian Security Intelligence Service, the Department of National Defence, Canada Border Services Agency and the Communications Security Establishment. There are numerous ways to hold these agencies accountable. The most far-reaching is an oversight system, where an independent body is granted leverage over an agency's management, such as by holding some purse strings. Another option is to have a review process, where the agency is examined after the fact to ensure they have behaved in a legal manner. Canada has generally followed the latter approach with respect to CSIS and CSE, but has no review system in place for any of the other agencies. Times Colonist, Hamilton Spectator, The Guardian, Postmedia News (Vancouver Sun)

Stephen Harper expected to unveil new anti-terror bill, with expanded powers for CSIS, on Friday
Prime Minister Stephen Harper is expected to unveil on Friday details of a bill that would provide Canada's government with new powers to fight terrorism, according to several news reports. The powers will include protections for evidence gathered through espionage, and the ability to remove terrorist propaganda from the Internet, according to a report in the Toronto Star. As part of the legislation, the Canadian Security and Intelligence Service - Canada's spy agency - would get new powers to help prevent radicalized Canadians from travelling overseas or funding suspected terrorist activity, according to a CBC News report, citing sources familiar with the legislation. The Toronto Star reported that the Conservative omnibus safety bill would include amendments to the Criminal Code, CSIS Act and the Immigration and Refugee Protection Act. Related Conservatives will introduce new security legislation aimed at stopping lone-wolf terrorist attacks: Harper. Give all-party watchdog the power to oversee Canada's new anti-terror measures, Justin Trudeau urges PM. National Post.com (Ottawa Citizen, Edmonton Journal, Calgary Herald, Leader-Post, StarPhoenix, Windsor Star, Vancouver Sun)

*** The critical tool of skepticism**
An opinion piece states, "Canada's recent experience with terrorism is not unique. Nor is its government alone in seeking to introduce fresh counterterrorism laws and powers. Across the Atlantic, Britain is debating new legislation that would, among a range of changes, allow the government to block the return of Britons suspected of involvement in terrorism while abroad, require Internet providers to keep records of IP addresses so computer users could be identified, and legally require a variety of state institutions, including universities, to "prevent individuals being drawn into terrorism." As such, there are cautionary aspects of the British experience, both with the current legislation and with past efforts at reform, that should inform debate over the Canadian government bill being tabled Friday. Top among the lessons is that skepticism about the need for new powers or laws should be the default reaction from parliamentarians, news media and the wider public. Over the past decade, and across seven significant counterterrorism bills introduced since Sept. 11, 2001, various British governments have preached that the counterterrorist sky would come crashing down without the introduction of new, supposedly essential measures. Mandatory identity cards were needed to prevent terrorism, Tony Blair's government warned. David Cameron's government killed off this proposal in 2010." Globe and Mail, A11

*** CSIS to be given new anti-terror powers**
Canada's spy agency will be granted the authority to intervene and disrupt threats to national security in a massive expansion of its powers as the federal government tries to make it easier to thwart terror plots at home and abroad, sources say. The Canadian Security Intelligence Service's role is currently restricted to collecting intelligence, analyzing and reporting on dangers to Canada, but new anti-terror legislation to be unveiled Friday is expected to rewrite its mandate to allow CSIS agents to take action to foil security threats. The new role for CSIS is one of a series of measures in the legislation promised after deadly attacks on Canadian soldiers last October that also saw a gunman storm Parliament Hill. Ottawa is building in judicial oversight for this new CSIS power, however, and will require the agency to obtain a court warrant to flex its new muscles. As long as a judge approves, CSIS agents would be able to cancel someone's travel reservations, for instance, or disrupt a banking transaction or electronic communications. The new power would lift a fundamental restriction on CSIS's activities and gives the agency a measure of authority that's currently reserved for police forces. CSIS, a civilian agency, was created in the early 1980s after an inquiry into the RCMP security service's illegal activities and civil-rights abuses recommended that policing be separated from intelligence gathering. Globe and Mail.com

Analyst: Schools present a problem

Islamist ideology that's taught in Canadian mosques and Islamic schools is the biggest challenge facing investigators, a security expert tells QMI Agency. Former CSIS manager Michel Juneau-Katsuya said police don't have resources to deal with "the sheer number of young minds being radicalized." He was reacting to QMI Agency's investigation into the expanding national real-estate footprint of the Muslim Association of Canada (MAC). QMI obtained an RCMP document indicating MAC donated nearly $300,000 to a Hamas-linked group before the federal government revoked its charity status. Juneau-Katsuya, without naming any specific groups, says law enforcement must always remain vigilant, adding that such organizations "capable of deploying a phenomenal amount of resources and influence, need to demonstrate to the authorities that they do not represent a risk." He said anti-terror investigators need help from Muslim leaders, such as the unnamed Toronto imam who reportedly tipped off police in 2013 to an alleged Via Rail bombing plot that led to two arrests. A noted critic of Islamic extremism says not everyone is so willing co-operate. QMI Agency, 30 (Edmonton Sun, Toronto Sun, Calgary Sun, Kingston Whig-Standard, Ottawa Sun)

Group denies funding

The Muslim Association of Canada (MAC), accused of funnel-ling money to a Hamas-linked charity, said it hasn't supported the group since IRFAN-Canada's charity status was revoked in 2011. A QMI Agency investigation found the Toronto-area-based Muslim nonprofit was named in an RCMP probe into terrorist financing. Warrants indicate the association sent nearly $300,000 in the 2000s to IRFAN-Canada, a group that raised millions for Hamas, a listed terror group. The RCMP raided IRFAN locations in Montreal and Mississauga last April 28 and declared it a terrorist organization on the following day. RCMP documents obtained by QMI Agency suggest the force might still be investigating possible ongoing links between MAC and IRFAN. MAC said in a statement it is "opposed to ter rorist activity of any kind" and hasn't supported IRFAN since 2011. "When specific allegations of IRFAN's relationship with groups that are inconsistent with MAC's values arose, we immediately stopped all donations to that group." QMI Agency, 30 (Edmonton Sun, Calgary Sun, Toronto Sun, Ottawa Sun)

Djemila Benhabib est troublée par des propos de Philippe Couillard

L'ex-candidate péquiste et militante pour la laïcité Djemila Benhabib se dit troublée de voir que le premier ministre Philippe Couillard tolère l'intégrisme religieux. Mme Benhabib a affirmé hier que le terrorisme est un produit de l'intégrisme, qui est par essence antidémocratique. « Montrez-moi un intégrisme qui respecte le droit des femmes, ça n'existe pas, a-t-elle dit hier. [...] L'intégrisme est une idéologie abjecte qui porte en soi la discrimination, la haine de l'autre et la détestation. » Lors d'une conférence en compagnie d'une journaliste de Charlie Hebdo, Zineb El Rhazoui, Mme Benhabib a réagi à de récents commentaires de M. Couillard. « Un premier ministre qui considère qu'il n'est pas de son devoir de combattre l'intégrisme religieux, je trouve ça quand même troublant », a-t-elle dit. Plus tôt cette semaine, M. Couillard a affirmé que l'intégrisme doit être considéré comme un choix personnel qui peut être toléré tant qu'il ne s'attaque pas aux droits de la personne. La Presse.ca (La Tribune)

*** ISIS sympathizer's road to jihad - from Canada to Syria to Iraq - tracked one Tweet at a time**

The Toronto woman who Tweeted so sympathetically about ISIS probably had no idea that, when she left Canada late last year, she was being tracked by researchers following her movements using geocoding. But every time she posted a Tweet, she was inadvertently giving away her location, allowing the researchers to map her as she travelled from the ISIS capital in Raqqah, Syria to the front lines in Kobani and Mosul. "I did not see in their actions anything but the utmost of respect for me as a sister," she wrote in Arabic from Kobani on Dec. 25. In another Tweet, she wrote: "God bless those who live on His path and who die on His path." By failing to turn off the locator on her cellphone, she not only left an incriminating electronic trail, she also highlighted a disturbing trend: Canadian women are increasingly involved in supporting the Islamic State of Iraq and al-Sham. While most of the Canadians who have either left to join ISIS or who have been stopped by police en route are men, some are women. ISIS prohibits women from taking part in combat, so their roles are limited to serving as "jihadi brides." .Every time a Toronto woman who Tweeted sympathetically about ISIS posted a Tweet, she was inadvertently giving away her location. A report released Wednesday by the London-based Institute for Strategic Dialogue said that about 550 of the 3,000 Western citizens in ISIS territory are women. The study looked at the social-media profiles of several women in ISIS, one of them a Canadian. Edmonton Journal, A16

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Ruling cuts sentences for date-rape drug smugglers
The B.C. Court of Appeal has reduced the sentences of three men convicted of trying to traffic more than 1,000 kilograms of the date-rape drug ketamine that had been smuggled into Canada. The province's highest court ruled the trial judge was wrong to find the three men - Yiu Tim Kwok, 62, Hin Cheung Lau, 46, and Wing Kee Ng, 62 - belonged to a criminal organization, earning them a longer sentence. The appeal court reduced Kwok and Ng's sentence to 12 years from 16 years for smuggling the ketamine into Canada with the intention of trafficking it. And the three appeal judges cut Lau's term from 10 years to six years for his conviction for possession for the purpose of trafficking. All three also got extra credit for the time they served in pre-trial custody. Appeal Court Judge Elizabeth Bennett said "the Crown did not prove beyond a reasonable doubt that they formed a criminal organization." "In my respectful view, the sentencing judge erred when she found as an aggravating factor that these appellants fit into the definition of criminal organization," said Bennett in her reasons, released Thursday. Judges David Frankel and Edward Chiasson concurred. In December 2010, the Canada Border Services Agency intercepted the ketamine - worth up to $50 million. Border agents were suspicious of Kwok when he entered Canada that month with "documents relating to the shipment of coffee mugs," Bennett noted. "As a result, the shipment was intercepted, the drugs were found and sugar was substituted for the ketamine. A controlled delivery was performed, and the shipment of coffee mugs was delivered." Postmedia (The Vancouver Sun, The Province)

Boarding with bullets
Machetes and maple syrup, police batons, bullets (real and fake) and peanut butter: these items don't fly at Toronto's largest airport. But that doesn't mean some people don't try, which is why they're among the objects recently confiscated from Pearson International Airport's nine security checkpoints. Anything brass-knuckle-related - the latest trend in phone cases and purse handles - is taken away. Finding the weapon itself merits a call to the Peel Regional Police airport division; so does the seizure of illegal throwing knives, another treasure in the chest. Have you heard of a stun gun concealed in a cellphone case? Mathieu Larocque, spokesperson for the Canadian Air Transport Security Authority (CATSA), has. They're not found at security ever day, but he's seen a few. Lately, Larocque said, blenders are growing in popularity as a carry-on item. The blender jar, he said, can go through. The blades are a no-go. A normal bin of seized items brims with scissors, lighters and small knives, said Larocque; security checks at Terminal 1 on Monday and Tuesday filled two of them. The bins don't include liquids, aerosols or gels, which get tossed right away. "Water bottles are by far the most popular interception, but they're just thrown away," Larocque said. He's not exaggerating; at least a dozen people threw out water bottles at one of Pearson's designated pitching stations in less than an hour Wednesday. A third-party waste management company is in charge of gathering and disposing of the seized objects. The Toronto Star

Tannous to lead border logistics hub at airport
Local lawyer and former border customs officer Laurie Tannous has been appointed CEO of the Institute for Border Logistics at Windsor's Airport. Her mandate will be to help business better navigate trade through the border and attract greater economic investment to the Windsor area.
"It feels like my life's work has culminated with this job," Tannous said. "I'm looking forward to working with the business community to expand trade for this region." The IBLS is a partnership that was formed between the University of Windsor and City of Windsor to create a facility to respond to the needs of companies involved in logistics and movement of trade in both directions across the Windsor-Detroit border. Funding of $20 million for the initiative was supplied by Federal Economic Development Agency for Southern Ontario with another $3 million coming from the city. The plan includes the opening of a FedEx facility at the airport. The university will be part of the operation where training will be made available on logistics for local businesses and students are to be involved conducting research. "The

hope is for Windsor and Essex County is to be known as world-class leaders as it relates to customs and border issues," said Tannous, who will retain her role as vice-president of government relations at Farrow. The biggest winners are likely to be local small-and medium-sized business owners who have no idea how to export goods outside the region, she said. "We will provide education and training at no cost," she said. "We will connect them with individuals outside Canada and make connections happen." The Windsor Star

***Canadians still went south in 2014 despite drop in dollar**

More Canadians crossed at southern Saskatchewan border crossings in 2014 than in 2013, even as gas prices and the Canadian dollar dropped late in the year. "This is a sign of our wealth. We can afford to go on holidays a lot more than we used to," said Doug Elliott, publisher of Sask Trends Monitor, on Thursday. Last year, according to the Canadian Border Services Agency, a total of 388,170 returning Canadians crossed Southern Saskatchewan borders, up more than 60,000 from 2013's totals. Elliott said the high number of Canadians shopping and vacationing south of the border over the past few years can be attributed to the high value of the loonie. In December, the Canadian dollar dropped to 86 cents US. "There's no doubt this will slow with 80-cent dollars," Elliott said. He projected the number of Canadians heading to the U.S. will drop this year. "If you own a condo in Arizona, an 80-cent dollar isn't going to change anything. You're still going to go there, but some of the trips to Mexico may get curtailed. People may decide to go to B.C. or someplace instead," Elliott said. From December 2013 to December 2014, B.C. bordercrossing numbers at one location dropped 7.6 per cent and another border location saw a decline of 11 per cent. "If you think B.C., I usually think of Vancouver and it's right on the border there so that probably is a whole bunch of people going into Seattle to shop. So, it will have been hit harder by the dollar than we are. We mostly go to escape the weather; I think they go to shop," Elliott said. Leader Post

***New Nexus card processing facility opens in Blaine, Washington**

A new Nexus card facility opening just south of the U.S. border crossing from B.C. is expected to drastically speed up the process of getting that coveted card.The card is designed to expedite the border clearance process for low-risk travellers into Canada and the U.S. once they go through a screening interview process. But it can be a lengthy process.But the new Trusted Traveller Enrollment Center in Blaine, Wash. will be able to handle more than 300 Nexus interviews a day — more than double of what was processed at the old building at Peace Arch. "We can process the applications faster, interview the individuals so that we can approve the application at a faster rate than we used to in the past," said Michele James, director of field operations at U.S. customs and border protection. It is the biggest facility of its kind. Ironically, the facility's grand opening comes as new Canada Border Services Agency statistics show a 12.5 per cent drop in Canadians crossing over to the U.S. from this time last year — thanks in large part to the falling loonie. But officials say the demand for Nexus cards is still high."The thing about the falling dollar one way or another, whether it's Canadian or American, is these things are cyclical," said Lynne Platt, the U.S. Consul General Vancouver. "It may feel like, from the Canadian side, the dollar doesn't go as far down here. But on the other hand, it attracts more Americans to go the other direction." CBC (2015-01-29)

***Border hassles can't stop young bluesman**

The way our border cops treat Taylor Scott and his band, it's a marvel he keeps coming back to play Edmonton."It was our worst experience yet," says the 21-year-old frontman. "They literally tore our van apart," adds keyboardist Jon Wirtz. They're talking after a set at Blues on Whyte this week – the band's third appearance at the club since the band formed just a year ago.For any US band subjected to Canadian border crossings, having your van torn apart is no surprise. What's a bigger shock is that the Denver-based quartet has spent a significant amount of their touring time playing in Canada, away from home. Following his last tour dates here in June 2014, supporting their full-length album Lonelier With You, Scott put the band on hiatus to tour overseas as lead guitarist in Chicago great Otis Taylor's band, touring four months throughout virtually every country in Western and Northern Europe. The audiences may be different, he says, but it's the same warm reception they get in North America. Gigcity.ca

***Trade tribunal slaps duties on cheap foreign steel**

British Columbia supports helping to build the national Canadian economy in theory, but apparently not if it means driving up construction costs in B.C. by treating companies in other provinces fairly.Headed into

this week's meeting of Canadian premiers and territorial leaders in Ottawa, B.C. Premier Christy Clark was quoted by The Canadian Press stressing the importance of internal trade: "We should be trading freely between our own provinces. That's the best way, the quickest way to be able to strengthen the national economy. "But those words seem to be at odds with a position the province took this week when it attacked a Canadian International Trade Tribunal ruling aimed at levelling the playing field for manufacturers of steel rebar in Alberta, Ontario and Quebec. Rebar is used to reinforce concrete in construction projects. The case began last April with a complaint from three steel manufacturing companies -- ArcelorMittal LCNA in Quebec, Gerdau Long Steel North America in Ontario and AltaSteel Ltd. in Alberta -- to the Canada Border Services Agency about cheap or subsidized rebar from China, South Korea and Turkey being dumped in Canada. Dumping refers to a predatory pricing practice where a good is sold in a foreign market at a price that is either below what it would be in the home market or lower than what it costs to produce.The CBSA initiated an investigation that led to preliminary duties and an inquiry by the CITT. The tribunal found evidence that the Chinese goods were subsidized at home and that the cheaper rebar from all three countries was being dumped in Canada, threatening to harm the Canadian rebar industry. The Tyee

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Pierre Karl Péladeau victime d'une cyberattaque**
Des pirates informatiques se sont attaqués au site Internet de Pierre Karl Péladeau, le député de Saint-Jérôme et favori dans la course à la direction au PQ. Les agressions virtuelles ont rendu inaccessible «pkp2015.quebec». Elles ont débuté mardi soir, vers 20 h, confirme l'entourage de l'élu du Parti québécois. Elles se poursuivent depuis, en provenance du Québec, mais en grand nombre aussi de pays européens, principalement de l'Allemagne. Jusqu'à hier soir, les conseillers politiques de M. Péladeau n'excluaient pas que celui-ci soit une victime collatérale. Les manoeuvres virtuelles ne le visaient peut-être pas directement, a évoqué pendant la journée l'attaché de presse Marc-André de Blois. C'est tout le serveur Internet, hébergeant celui du politicien, mais également ceux de 29 autres clients, qui était alors paralysé. En début de soirée, «pkp2015.quebec», «pkp» pour les initiales du politicien et actionnaire de contrôle de Québecor, a été transféré vers un nouveau refuge virtuel ne comprenant qu'une seule adresse «IP», donc réservée à Pierre Karl Péladeau. LAW ENFORCEMENT / APPLICATION DE LA LOI

'Blooding' stirs civil rights concerns
Police in Windsor, Ont., have ordered hundreds of DNA testing kits and are going door to door in a residential neighbourhood asking everyone to provide a blood sample to rule themselves out as a suspect in the murder of a pregnant woman. The unusual mass request for a blood sample prompted more than 500 residents to agree and a "handful" to refuse. It also has stirred warnings from civil libertarians about a police technique increasingly turned to when murder probes falter. "The extraction of a DNA sample without a warrant is concerning. It is inherently coercive," said Sukanya Pillay, executive director and general counsel of the Canadian Civil Liberties Association. "There is no guarantee that doing wide sweeps of DNA collection is going to produce the killer, but there is a guarantee it will create potential privacy violation and erosion of standards." On Dec. 11, Cassandra Kaake, 31, seven months pregnant, was found dead in her home on Benjamin Avenue after firefighters extinguished a blaze. An autopsy found she died of blood loss - not the fire - and a veteran police investigator described it as "the most disturbing" crime scene he had seen. Postmedia News (Vancouver Sun, A1 National Post, A1, Edmonton Journal)

Health Canada puts medical marijuana firm under further RCMP review
Health Minister Rona Ambrose is concerned about the controversy surrounding CEN Biotech, and the company's application to become Canada's largest medical marijuana producer is being sent back to the RCMP for further investigation, her office said. "The allegations against this company are deeply concerning," Ms. Ambrose's spokesman Michael Bolkenius said in an e-mailed statement to The Globe and Mail on Thursday. "This application is with the RCMP," he added. "And it won't be going anywhere until all these issues are addressed." The statement comes on the heels of a Globe investigation that revealed the Ontario company had misrepresented itself to the public, the government and shareholders on numerous occasions and - in an unusual twist - was caught inventing a fake employee to dispute the allegations. All applicants are vetted by the RCMP initially. But the pattern of false claims by CEN Biotech over the past 14 months has called for further investigation. The concerns include misleading investors about its licence status with Health Canada and suggestions that CEN was being favoured by the government. Some of these claims helped push the company's shares up more than 2,000 per cent in the loosely regulated penny stock market. Meanwhile, its chief executive officer, Bill Chaaban, was selling off millions of shares for more than $4.6-million. Globe and Mail, A1

On Patrol
Shawn Schofield and Trevor MacKinnon are bringing an extra level of security to P.E.I.'s Confederation Trail this winter. The two conservation officers with the Department of Environment, Labour and Justice will be assisted by RCMP and members of the P.E.I. Snowmobile Association to conduct safety stops at various locations along the 400-plus kilometres of the trail. The association is the leaseholder of the Confederation Trail during the winter months, which allows permit holders access to the trail from one tip of P.E.I. to the other. Schofield and MacKinnon won't be advertising where they're going to be but promise to do their best to make their presence known. "We pick our spots," Schofield told The Guardian on Thursday. "If there's going to be a lot of people around we'd make sure that we were there to show our presence."... RCMP Sgt. Leanne Butler said Schofield and MacKinnon will be checking for the proper permits but also for any signs of impairment of drivers, noting that the same rules apply on the trail as they do on the province's highways. "Snowmobiles are no different than a car," Butler said, adding that the presence of the two conservation officers will strengthen the enforcement effort and make the whole trail system safer and more enjoyable for all users. The Guardian, A1

Police use Taser to arrest man holding knife to own neck
Regina Police used a conducted energy weapon (CEW), commonly called a Taser, to arrest a man in a downtown business Wednesday night. Police said a 27-year-old male will face charges following an incident in the 2100 block of Albert Street. Around 8:50 p.m. that night, police went to the business over a report of a male exhibiting signs of intoxication by drugs and behaving irrationally. Officers found the man, who'd locked himself in a bathroom stall, and attempted to negotiate with him. "After repeatedly stating he would not co-operate with police, the suspect opened the stall door, holding a knife to his own neck. He ignored police demands to drop the weapon," said a police news release. It added that an officer discharged her CEW and the suspect was taken into custody without further incident. Under the police service's policy, EMS went to the scene and took the suspect to hospital for assessment. "Further investigation found the suspect to be in breach of a court-ordered condition of no contact with (not to attend the workplace of) his former partner," it said, adding the male has been medically cleared and criminal charges will follow. Postmedia News (Leader-Post, A3, Leader Post)

Bank robber strikes again
A serial bank robber has struck again, this time in northeastern B.C. Police and RCMP issued a warning on Tuesday, saying that the man had robbed eight banks over an eight-week period in Alberta, Saskatchewan and Manitoba. On Thursday, RCMP in Dawson Creek said a man fitting the description walked into a bank on Wednesday, produced a firearm and demanded money. He left with an undisclosed amount of cash. The first robbery police recorded was on Dec. 1 in Princeton. Eight days later, the man was 200 kilometres to the north, where he held up a Vernon financial institution. Between Dec. 19 and Jan. 21, the same suspect is believed to have held up banks in High River, Alta., Swift Current, Sask., Lethbridge, Alta., Claresholm, Alta., Merritt and Langley. RCMP have released photos of the man entering the banks he robbed and in every one, he's dressed in black, wears dark glasses and either a hoodie or a tuque. Canadian Press (Times Colonist); QMI Agency (Calgary Sun, Ottawa Sun,

London Free Press, Toronto Sun, Edmonton Sun, Kingston Whig Standard, Winnipeg Sun)

Police seize firearms
Five Red Deer residents were arrested and face more than 200 criminal charges following the police seizure of 16 firearms in the city. A variety of rifles and a couple of handguns believed to be stolen from area homes were found in two locations: in a vehicle pulled over by police in north Red Deer; and during a Jan. 23 search of a downtown Red Deer residence that's close to Central Middle School and the temporary location of Annie L. Gaetz School. "We consider this a significant seizure," said acting Insp. Chad Coles, of the Alberta Law Enforcement Response Team (ALERT), on Thursday. He believes that police diverted the guns from being used to commit crimes. "It's important to get them off the street," added Coles, who noted the trade in stolen firearms is increasing in the province and "it's a concern for law enforcement and public safety." Acting on a tip, a dozen officers from Red Deer City RCMP, K-Division and ALERT obtained a search warrant for a residence. They found a stash of weapons in the home, as well as ammunition, 28 grams of methamphetamine and other stolen property. Red Deer Advocate

Member of Bountiful community asks court for passport to shop in the U.S
One of four B.C. residents accused of polygamyrelated charges is asking a court to return her passport so she can travel to the United States. Emily Crossfield is accused along with two others of unlawfully removing a child from Canada with the intent that an offence of a sexual nature would be committed. She asked provincial court Judge Ron Webb on Thursday to have her passport returned so she can shop in the U.S. Crossfield said she has taken a herbal practitioner course at a local college and would be buying mostly herbs. Crown lawyer Tom Arbogast opposed return of her passport, telling the court the RCMP believes she is a flight risk. Crossfield, her husband Brandon Blackmore and James Oler all face the same charges, Arbogast noted. It is believed they have an "extensive network of contacts in Utah and Arizona," he told the court. Crossfield replied that she has responsibilities in Canada, adding: "I'll return." Postmedia News (The Province); Canadian Press (Times Colonist); Globe and Mail

East Hants RCMP leader hails opening of detachment
The RCMP presence in the western part of the Municipality of the District of East Hants is official and permanent. "This brings a smile to my face," Staff Sgt. Joe Marando, district commander for East Hants RCMP, said Thursday after the ribbon cutting to open the Upper Rawdon detachment, which has been operational since earlier this month. "Really happy that we had this day today and that this detachment is now open." Marando, who took over command in November, said the new detachment will have six officers and a detachment assistant. Warden Jim Smith described a "long, hard journey" for East Hants to acquire the new detachment. "I don't know how many meetings I've been to, but we pushed the boulder uphill," said Smith, adding that the idea for a new detachment had been kicking around for more than six years. Years of stops, starts and long location debates later, the detachment is a reality. The Chronicle-Herald, A8

Cop, force sued for rape in custody
There was plenty of drinking in Tasiujaq that weekend in 2011, just as there was whenever a shipment of alcohol arrived in the isolated village in Quebec's far north. The lone police officer on duty on the night of Sept. 19 had her hands full. Fresh out of police school, she had been on the job less than a month and was not even authorized to carry a sidearm. But as she apprehended a 17-year-old girl who had become heavily intoxicated, Const. Danielle Gallant made a decision that would come back to haunt her. According to court documents, she handcuffed the girl and placed her in the back of her Kativik Regional Police Force vehicle. Already in the back seat for having caused a disturbance - but not handcuffed - was Joe Kritik, who at age 24 already had four convictions for sexual assault and was listed on the national sex offender registry. As the officer made a third stop, she left the two detainees alone, and Kritik pounced on the girl. "When Constable Gallant came back to her vehicle after a short period of time, she observed Mr. Kritik with his pants down while on top of the plaintiff," a statement of claim filed by the victim states. "The plaintiff was unable to defend herself, being handcuffed in her back and unable to leave the vehicle, the doors being locked." Despite the assault, the girl was kept in a police cell overnight and was not given medical attention, the lawsuit says. Her parents were not contacted. Kritik pleaded guilty to sexually assaulting the girl in 2012 and was sentenced to 39 months in prison. A lawsuit filed last

year in Quebec Superior Court against Gallant, the Kativik Regional Police Force (KRPF) and the Kativik Regional Government is seeking $400,000 in damages for the victim, who cannot be identified. Postmedia News (Leader-Post, A7, Star Phoenix, Vancouver Sun, Edmonton Journal, Montreal Gazette, National Post)

Police budget may creep up
Toronto Police Services are proposing a 0% budget increase for 2015 but that may not last. In an appearance before the city budget committee Thursday, TPS board chairman Alok Mukherjee said the service is currently in negotiations with its officers and any increase in police compensation costs would be added directly to the budget. The rising cost of policing is becoming unsustainable for taxpayers, he said, so the board is looking at how services are delivered to control the budget. QMI Agency (Toronto Sun, 8); Toronto Star

Costs of June 4 manhunt and aftermath still being discussed
New Brunswick's minister of public safety, Stephen Horsman, says the door is certainly still open for the province to help the Codiac Regional Policing Authority with extraordinary costs incurred in Moncton last June. Sheila Lagace, a department spokeswoman, clarified the matter after media reports appeared this week suggesting otherwise. The murder of three RCMP members and wounding of two other Mounties in north end Moncton resulted in one of the largest police operations in Canadian history to capture the killer, investigate the crimes and police the tri-community while many local RCMP members were stood down for mandatory counselling and debriefings. Local constables Fabrice Gevaudan, Dave Ross and Douglas Larche were killed, and constables Darlene Goguen and Eric Dubois were wounded. Justin Bourque was given five life sentences with no chance of parole for 75 years for his crimes at the end of October. As reported in the Times & Transcript in November, how much the federal government would pay to help the Codiac Regional Policing Authority is largely set through existing contract agreements and commitments already made. Canadian Press (Telegraph-Journal, A3)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Got milk? Only the powdered kind in prison
Inmates at all of Canada's federal institutions will have access to only powdered milk as part of the government's cost-cutting efforts, officials confirmed Thursday. Phasing out fresh milk in prisons will save an estimated $3.1 million a year, Veronique Rioux, a spokeswoman for the Correctional Service of Canada, said. Powdered milk has been used for a few years in prisons in Western Canada, Rioux said. Now, prisons in Ontario, Quebec and the Atlantic region are making the transition. Laiterie Chagnon, a Waterloo, Que., dairy company, had been delivering milk to institutions in Drummondville and Cowansville for the past 10 to 15 years, sales director Jean Robidoux said. The last delivery to Drummondville was Jan. 12 and the last delivery to Cowansville is Feb. 2. The contracts brought the company about $275,000 annually. "For a small business like us, $275,000 is a lot of money. We have to get on and find new customers," he said. Robidoux said he was told the powdered milk would be shipped to the province from a supplier in Winnipeg. Francois Dumontier, spokesman for the Federation of Milk Producers of Quebec, said he found this choice strange. (…)The correctional service said all prison menus are reviewed and approved by registered dietitians and must meet appropriate nutrition standards. "The use of powdered milk is more cost-effective than the use of liquid milk and meets nutritional requirements in accordance with Canada's Food Guide," Rioux said. Postmedia News (Vancouver Sun, Canada.com, StarPhoenix, Ottawa Citizen, Leader-Post, Edmonton Journal, National Post)

Mort d'un détenu de Port-Cartier à Québec
Un détenu de l'Établissement de Port-Cartier est décédé jeudi à l'hôpital de l'Enfant-Jésus à Québec, a fait savoir Service correctionnel Canada. Sylvain Hamel était âgé de 44 ans. Il purgeait une peine de prison de 8 ans pour vols qualifiés et évasion de garde légale depuis le 25 juin 2008. La police et le coroner ont été prévenus et une enquête sera menée pour comprendre les circonstances de la mort du prisonnier, a souligné Service correctionnel Canada. Agence QMI (Journal de Montréal, Journal de Québec)

*** Second inmate dies at Drumheller Institution**
For the second time this week, an inmate has died at a southern Alberta prison. The Correctional Service of Canada says Martin Pinkus was discovered unresponsive in his cell Wednesday at Drumheller Institution. Staff tried to resuscitate the 47-year-old man and emergency services were called, but he was pronounced dead at the local health centre around noon. Pinkus had been serving time since December 1999 for seconddegree murder, aggravated assault and assault causing bodily harm. There was no immediate word on the cause of death. On Monday, Drumheller staff found a convicted murderer, Earl William Davenport, unresponsive in his cell and could not revive him. A Correctional Service spokesman says foul play is not suspected in Davenport's death. Edmonton Journal, A6, CBC News

*** 81-year-old inmate dies in Kingston, Ont., hospital**
Officials say an inmate who spent the last several decades in prison has died in a Kingston, Ont., hospital. A spokeswoman for Warkworth Institution, a medium-security facility in Campbellford, Ont., says 81-year-old James Butt died Wednesday. Assistant warden Cindy Herrington says Butt had been serving "an indeterminate sentence" for second-degree murder since 1988. His next of kin have been notified. The Correctional Service of Canada says it will look into the circumstances of his death. Canadian Press (CTV News, My Kawartha) (2015-01-29)

N'abolissez pas la liberation
Un article d'opinion déclare, « Comme souvent quand ce gouvernement parle de criminalité, ça commence par un mensonge. «Les Canadiens ne comprennent pas pourquoi les criminels les plus dangereux pourraient être libérés un jour», disait le ministre de la Justice Peter Mackay en 2013. Lundi, le leader conservateur en Chambre, Peter Van Loan, a annoncé qu'une loi serait bientôt déposée pour faire en sorte qu'une peine d'emprisonnement à perpétuité «soit juste ça: une peine à perpétuité». Le mensonge, c'est que les criminels «les plus dangereux» recouvrent la liberté. Des meurtriers obtiennent parfois une libération conditionnelle. Mais seulement s'ils ont démontré qu'ils ne sont plus dangereux. Une condamnation pour meurtre entraîne une peine automatique d'emprisonnement à vie. S'il s'agit d'un meurtre au deuxième degré (non prémédité), le juge fixe entre 10 et 25 ans le nombre d'années pendant lesquelles le délinquant n'aura pas droit à une libération conditionnelle. S'il s'agit d'un meurtre au premier degré, le meurtrier est inadmissible à la libération pendant 25 ans. Le meurtre au premier degré recouvre les meurtres prémédités, les meurtres de policiers et de gardiens de prison, les meurtres commis pendant un kidnapping ou une agression sexuelle et les meurtres commis lors d'un acte terroriste. On n'a pas encore le projet de loi, mais il semble que ce soit pour cette catégorie que la libération conditionnelle pourrait être abolie. » La Presse, A5/Front (Le Quotidien)

Life without parole is a solution without a problem
An opinion piece states, "Canada's criminal justice system faces many challenges. For example, provincial prisons contain more people who are legally innocent while awaiting trial than they do offenders who are serving prison sentences. Our sentencing structures are becoming more and more incoherent with each passing bill, such that it is becoming increasingly impossible for judges to follow a simple and almost universally accepted principle: that the sentence should be proportionate to the gravity of the offence and the degree of responsibility of the offender. We faces other challenges - economic and international ones, for example. But instead of addressing these difficult problems, Prime Minister Stephen Harper's government has picked an easy target. The Conservatives are promising to create a new sentence of "life without parole" for certain categories of people found guilty of first-degree murder. The question is "Why?" As Globe and Mail justice reporter Sean Fine pointed out this week, it's not because of crime - the homicide rate has been decreasing for decades. Contrary to recent statements by Mr. Harper, the decreases have nothing whatsoever to do with his crime policies. And the life-without-parole proposal has nothing to do with current sentencing laws. First-degree murderers get automatic life sentences. E ven if paroled - after a minimum of 25 years - they are supervised for life. Canada's parole boards are already tough on offenders. If all parole boards stopped granting full parole to those serving sentences other than life, the prison population would increase by just 2.7 per cent. And offenders on parole commit very few offences. About 150,000 adults a year are charged with violent offences, but just 16 federal parolees are convicted of such offences each year. The government's view is that some murderers should never be released, and most people would probably agree. The question is when that decision should be made: right after someone is convicted, or decades later, when the parole board can

see whether they have changed and whether the public interest is served by releasing them? The Harper government opposes policies based on the assumption that people can change." Globe and Mail, A11

*** Don't remove hope for parole**
An editorial states, "The Harper government is considering making a life sentence without parole automatic for certain crimes. While that is consistent with the Conservatives' get-tough-on-crime agenda, it is not consistent with a fair and effective justice system. The government should not take away from judges and parole boards the flexibility to examine each case on its merits. The ability to make decisions based on humaneness and common sense should not be removed from the justice system. The Conservative government plans to introduce legislation that would make a life sentence without parole automatic for killers of police officers and jail guards, as well as anyone who kills during a kidnapping, terrorist act or sexual assault. It could apply to other particularly brutal killings, if a judge so decides. "Canadians do not understand why the most dangerous criminals would ever be released from prison," Gov.-Gen. David Johnston said in the speech from the throne in October. "For them, our government will change the law so that a life sentence means a sentence for life." First-and second-degree murder convictions in Canada already automatically result in life sentences, but with the possibility of parole after 25 years in the case of firstdegree murder. Minimum parole eligibility for seconddegree murder convictions is 10 years. This isn't a plea to go soft on killers. While convictions are based on guilt being proved beyond reasonable doubt, those who have murdered should prove to a parole board, beyond any doubt at all, that they can be safely released. While one of the aims of the justice system should be rehabilitation, it's a distant second to public safety." Times Colonist, A11

*** Life, no parole**
A letter to the editor states, "Re We Don't Need Life Without Parole (editorial, Jan. 28): First, the Harper government implemented a series of amendments to the Criminal Code imposing mandatory minimum sentences. It appeared that they didn't trust the discretion of judges, many of whom they appointed. Now they want to take away the discretion of the federally appointed National Parole Board to determine whether an offender serving a life sentence for firstdegree murder may be released on parole after having served 25 years in the penitentiary. Don't they trust anybody?" Globe and Mail, A10

*** How Pierre Poilievre is keeping me safe from bad people**
An opinion piece states, "A few days ago, I opened up my mailbox to find a householder pamphlet from my MP, Pierre Poilievre. Normally, I do my part for the environment and chuck these things straight into the blue box - but this one caught my eye. In big, bold letters, it read, "What's being done to help keep my family safe?" Good question. Poilievre's probably the least-qualified guy on the planet to answer it. Remember what he had to say in the immediate wake of the Boston Marathon bombing? "The root cause of terrorism is terrorists." Brilliant. In other news, scientists now say the root cause of rain is water. Only Poilievre could make his boss, Stephen "Let's Not Commit Sociology" Harper, look thoughtful. (…)There's nothing in the bill that does anything to enhance public safety - but it does make for good headlines. If the Conservatives were truly interested in the threat posed by mentally ill offenders, they'd begin to properly fund mental health services in federal prisons for offenders who will soon be released into the community. (…)There was no third option - so I decided to add one: "None of the above. I *do* want the federal government to protect my family by doing what makes actually makes us safe, not what makes us feel safe. I want the government to fund things like restorative justice programs that have been shown to reduce the risk of high-risk sex offenders re-offending, to invest in preparing offenders to return to my community. I am worried about politicians with simple solutions to complex problems who want to exploit my desire to protect my family and my fear that something bad may happen to them.'" iPolitics

*** Abusive segregation of inmates**
An opinion piece states, "Edward Snowshoe was a 24-year-old prisoner at Edmonton's maxiumum security prison when he hanged himself. He had been at Stony Mountain Institution first and then was transferred. His time behind bars included 162 days in segregation; 134 of them at Stony. The reason? He threatened guards with a juice box. Mr. Snowshoe had also repeatedly attempted suicide, and he was described as paranoid and vulnerable by staff. Mr. Snowshoe fits the profile of many dumped into solitary confinement in Canada's federal prisons. There is a high rate of mental illness among prisoners. Prisons have a much higher rate of suicides than the general population, and half occur in segregation units. Mr.

Snowshoe's story is reminiscent of that of New Brunswick teenager Ashley Smith, who killed herself after more than 1,000 days in segregation. Their sad odysseys have triggered a rising demand for major reform of how Canada uses segregation." Brandon Sun

"On ne peut pas continuer avec ces dépenses"
La maison de transition qui accueille un seul prisonnier sur la Côte-Nord est un "éléphant blanc", estime l'opposition officielle, qui exige un plan d'action. "Dans le contexte d'austérité, on ne peut pas continuer avec ces dépenses. La ministre Lise Thériault doit présenter un plan d'action pour attirer davantage de prisonniers ou carrément fermer l'établissement", croit Pascal Bérubé, porte-parole péquiste en matière de sécurité publique. D'une capacité de 20 lits, le centre Kapatakan Gilles Jourdain, situé sur la réserve innue de Mani-Utenam, n'a toutefois qu'un seul "client". Le centre, bâti en 2012 pour 1,9 M$, coûte 680 000 $ en frais annuels. Le centre transitoire accueille les "adultes innus et les autres membres des Premières Nations" en processus de libération conditionnelle et offre des "services diversifiés et adaptés selon les valeurs et les traditions des peuples autochtones." Journal de Montréal, 20 (Journal de Québec)

Un ex-bras droit de Rizzuto demande sa libération
Un criminel notoire au parcours tumultueux, ancien associé du parrain de la mafia Vito Rizzuto, se bat pour obtenir sa libération conditionnelle, dans le but, assure-t-il, de mener une vie rangée et honnête. D'emblée, le nom de Christian Deschenes ne dit peut-être rien aux lecteurs, mais il a été l'un des acteurs majeurs de la plus importante tentative d'importation de cocaïne par voie aérienne de l'histoire du Canada. C'est en effet lui et ses hommes qui, le matin du 18 novembre 1992, ont quitté trop tôt la piste de Casey, laissant en plan le pilote de brousse Raymond Boulanger et les 4000 kg de cocaïne qu'il transportait. Au fil des ans, Deschenes a gravi les échelons du crime organisé, si bien qu'on le retrouvait à la droite de Vito Rizzuto. A la fin des années 80, il a été arrêté pour importation de 14 tonnes de haschisch. C'est lui qui était responsable du transport. «Si un camion ne s'était pas renversé, je n'aurais jamais été pris», analyse-t-il. En juillet 2001, il a été de nouveau appréhendé pour avoir comploté l'enlèvement de lieutenants de la mafia et le meurtre de Vito Rizzuto, après que l'un de ses complices eut éventé le projet et fut devenu un agent source de la police. Les enquêteurs ont saisi un véritable arsenal dans cette sordide affaire. Tous ces crimes commis alors qu'il était en libération conditionnelle font que Deschenes purge une peine accumulée de 45 ans de pénitencier. Aujourd'hui, il en a assez, dit-il, et jure qu'il n'a plus de liens avec le crime organisé et qu'il veut tourner la page. La Presse, A6

* **Day passes granted to paraplegic's killer**
Nearly 15 years removed from the "crackhead mode" that prompted him to choke, stab and then drown a paraplegic family friend who refused to lend him $10, a former Calgary resident will take his first steps toward freedom with day passes from prison. The Parole Board of Canada granted Tyler Preston Agate's application for escorted temporary absences, which will allow him to leave Bowden Institution for community service outings under the supervision of a prison guard. Agate, who is in his mid-40s, is serving a life sentence for killing Douglas Arthur Klein in the victim's southwest Calgary home in July 2000. Calgary Herald, A11

* **Parole board denies passes for man who killed stepsister**
Blacking out from alcohol and pills may have prevented Nathan Pelletier from remembering how he killed his 12-year-old stepsister in 1998, but the Parole Board of Canada said his own lack of insight is keeping him from explaining why he did it. For that reason, the parole board rejected Pelletier's application Thursday for unescorted temporary passes from prison to visit his father, saying he poses too much of a risk to be in the community without the presence of a prison guard. "You have had a long time to think about it," said parole board member Ron Kuban, who delivered the two-member panel's decision following a hearing at Bowden Institution in central Alberta. "You need to understand ... what was going on inside you and in your environment so you don't repeat it." Calgary Herald, A6

* **Appeal denied for convicted murderer in cousin's death**
A man found guilty of first-degree murder in the 2009 death of his 16-year-old cousin has had the appeal of his conviction dismissed by the New Brunswick Court of Appeal. Curtis Bonnell asked the court to overturn the conviction and order a new trial after he was sentenced to life in prison with no parole eligibility for 25 years in the death of Hilary Bonnell. Defence lawyer Peter Corey argued last April that

the trial judge in his instructions to the jury should have related the evidence they heard to a possible finding of manslaughter. Corey also said the trial judge erred by allowing text messages Hilary Bonnell sent before she died to be entered as evidence. The jury was shown two text messages that she sent to Haylie Bonnell, the accused's sister, on the morning she disappeared. They read, "Please answer me I'm scared," and "OMF text me I'm scared." Corey argued there was nothing in the messages to identify who she was with or what scared her. In a written decision released Thursday, the court dismissed the argument. Telegraph-Journal, A3 (Times & Transcript)

* **Suspect from Guelph asks for adjournment**
The suspect in an early morning police chase that ended with a crash at Reversing Falls Bridge on Jan. 7 was back in court on Thursday morning. Michael Samuel French, 28, of Guelph, Ont., was to set a trial date on a charge of failing to stop his vehicle in attempt to evade a police officer, but instead he requested an adjournment of one week. French said he wanted to talk to his family, "and then I'll plead," he said from the prisoner's dock wearing the same Roots hoodie he was wearing during his first appearance. At the time of his arrest, police said French was wanted on a Canada-wide warrant. His parole has since been revoked for the unrelated matter, and he's now being held at Atlantic Institution in Renous. French will return to set a trial date on Feb. 5. Telegraph-Journal, B2

* **Men charged with more robberies after they were sentenced**
Two men who were handed stiff sentences for an armed robbery are facing additional 2013 robbery charges that weren't dealt with when they were sentenced. Eric Douglas Squires appeared in provincial court in St. John's Thursday, while William Peter Edwards'case was called Wednesday. They've been charged with three counts each of armed robbery, having their faces masked, possessing a weapon dangerous to the public and breaching probation. The charges stem from robberies that happened in October 2013 at an Ultramar gas station, a Marie's Mini Mart and an Orange Store. They were laid Wednesday, the day after Squires was sentenced to 5 1/2 years in prison in Newfoundland Supreme Court. Edwards was sentenced to three years in jail last year after he pleaded guilty. Both were sentenced in connection with an armed robbery at a Marie's Mini Mart store on Elizabeth Avenue in October 2013. The men will have their cases called in provincial court again Feb. 11 to deal with the new charges. The Telegram, A3

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

An appeal to Facebook, a jail term cut short
Call it trial by Facebook. When justice wasn't served inside a Sarnia courtroom this month, an unconventional appeal was spontaneously mounted in a much less hallowed hall: an online comment thread. On Jan. 15, James Trevor Munroe, 23, was slapped with a year in jail after pleading guilty to possessing just over three ounces of marijuana for trafficking, a relatively small amount that typically garners a 30- or 60-day sentence. But the federal prosecutor, Munroe's lawyer and even the judge, who called the sentence "extremely harsh," said their hands were tied: Canada's new mandatory minimum sentencing laws dictated the penalty must be one year in jail. "This is mandatory. Not much I can do," the Sarnia Observer quoted Munroe saying afterwards. But within days, a ragtag team of Toronto lawyers and prosecutors serendipitously assembled on Facebook, at first decrying the steep penalty before discovering the amount of marijuana did not even qualify for mandatory minimum sentencing. After the mistake was brought to the attention of a federal prosecutor in charge of Ontario's criminal appeals unit - again on Facebook - Munroe was released on bail, just over a week into his year-long stint. Toronto Star, A1

Leniency on leases proposed for victims of domestic violence
Victims of family violence will be better equipped to protect themselves from debt if proposed changes to the territory's Residential Tenancies Act pass. Bill 42, which is currently being reviewed by a standing committee, includes a provision that would allow a victim of physical or psychological abuse at the hands of someone who is sharing a lease with them to cancel their tenancy agreement without facing a financial penalty. "It's just an additional avenue for safety once a person has been assaulted or family violence has

been acted upon them," said Lorraine Phaneuf, executive director of the Status of Women Council of NWT, which supports the amendments to the act. The Protection Against Family Violence Act already provides significant protection to victims of domestic violence, including a provision that allows them to take over a lease from an abusive partner, according to Mark Aitken, assistant deputy minister for the attorney general's branch of the Department of Justice. Aitken said the proposed amendments in the Residential Tenancies Act provide a companion to existing legislation by allowing victims the opportunity to get out of tenancy agreements that may cease to be affordable. Yellowknifer

*** Exposure to violence increases PTSD risk**

An Ottawa psychiatrist who developed post-traumatic stress disorder after watching videos of sex killer Russell Williams assaulting two women is warning that members of the public are increasingly vulnerable to emotional harm from exposure to graphic video. In a digital age, when disturbing video images are just a mouse-click away and nearly everyone has a video camera on their smartphone, members of the public risk developing vicarious trauma or the more serious PTSD from exposure, said Dr. John Bradford, a renowned forensic psychiatrist and an Order of Canada recipient. His concerns come at a time when ISIL has been posting videos of beheadings and other graphic video imagery is readily available online. "There is clearly significant risk with exposure to graphic video such as beheadings," said Bradford. A former skeptic, Bradford was diagnosed with acute, chronic PTSD after working on the Williams case, in which the evidence included high-quality, graphic videos. Williams, a disgraced former colonel in the armed forces, was sentenced to life behind bars in 2010 after pleading guilty to the murder of the two women, other sexual assaults and a series of break-ins in Ottawa involving women's lingerie. Bradford, who has spent a career studying the kind of evidence that many would find disturbing, said it never bothered him until he was exposed to high-quality video. He had earlier suffered similar symptoms after watching video from the Paul Bernardo trial. For months after working on the Bernardo case, Bradford was unable to shake certain images and sounds from his head, he said. That eventually faded, but after watching video from the Williams case in 2009, Bradford was hit with an "emotional storm" that spiralled into severe depression, personality changes and suicidal thoughts until he received treatment and began taking medication. Ottawa Citizen, A7

*** Manitoba 'one of worst places for natives'**

Federal government documents show Manitoba is one of the worst places for First Nations people to live in Canada. Internal reports from Aboriginal Affairs and Northern Development show Manitoba natives are more likely to grow up in poverty, drop out of school, live off social assistance in dilapidated housing and suffer family violence. Their life expectancy is also eight years shorter than that of other Manitobans. The 10 regional updates spanning 2012 to 2014 lay out the poor living conditions on Manitoba reserves but offer little concrete action on the part of the government. Canadian Press (The Daily Gleaner, B1)

*** Hate mail highlights Winnipeg's racism**

Inside a card decorated in a field of flowers and trees, Thelma Favel - the great-aunt of slain aboriginal teenager Tina Fontaine - received a seething message of hate: "You guys are nothing but a bunch of drunken Indians." The handwritten, unsigned note, delivered Wednesday to her rural Manitoba home, is an anomaly among the hundreds of letters of support and prayer she has received since Tina's lifeless body was pulled from Winnipeg's Red River in August. But the note is piercing, going on to allege that 15-year-old Tina was not a nice person, got drunk in back alleys and was following in her dead father's footsteps. Her father was beaten to death in 2011. "This is not right what they did," Ms. Favel said of the card after relaying its contents over the phone Thursday. "All the hatred seems to go to the First Nations people," she added. "I know the truth. I know Tina and they didn't." Although the card is an aberration in Ms. Favel's pile of condolences and well wishes, its sentiment is not incongruous with comments and behaviour that Ms. Favel and other indigenous people have encountered in Canada. Last week, Maclean's magazine branded Manitoba's capital as the nation's most racist city. Winnipeg's mayor and other community leaders responded in an unexpected address. The Globe and Mail, A5

*** RCMP report fewer crimes**

The final RCMP statistics for 2014 show an overall decline in crime in the city, with 16,940 complaints reported, down from 18,176 in 2013. RCMP Cpl. Donnie Duplissea presented the report to council Monday, adding that while crime has decreased over all, the last few months of the year were busy for

the detachment. "As a man who works in uniform, policing Yellowknife was pretty colourful," Duplissea said, giving as an example, the recent standoff at the Northern Lites Motel. Assaults of all kinds dropped to 853 reports, down from 1,254 last year, as did break-and-enters, of which 98 were reported, down from 172 in 2013. "It is striking, the difference between this year and last," said Coun. Adrian Bell. "Is there anything we can draw from this?" One possible explanation Duplissea gave for the general decrease in crime was the increase in the number of people jailed, keeping offenders off the street. In 2014, 6,034 prisoners were reported, up from 5,450. As well as imprisonment, Duplissea said the fully-staffed detachment, assistance of municipal enforcement and enhanced patrols could also be the reason. He said it could "also just be dumb luck." There were some increases in crime reported, including motor vehicle theft, which rose to 84 from 71. Mischief, including public intoxication, also saw a steep increase to 5,393 occurrences in 2014, up from 4,055 the previous year. Yellowknifer

PUBLIC SERVICE / FONCTION PUBLIQUE

Consultants brought in to screen FOI requests

The federal government has spent about $57 million on outside consultants over the past nine years to help decide which government records Canadians are allowed to obtain. About 60 per cent of that spending, to handle what are called "access to information" requests, have occurred during the last four years of Conservative rule. The spending is above and beyond that allocated to full-time staffwho handle such requests in each department. The spending figures are contained in an order paper question from NDP MP Charlie Angus, although the data are not complete. Some agencies and Crown corporations, such as the CBC and the Public Service Commission, didn't provide numbers in the response, instead directing recipients to the annual reports each files on access to information spending. Under the access to information regime, Canadians can request federal government records and information - which their taxes pay for - although the law allows some information to be withheld, such as data that could compromise national security or breach someone's privacy. "This is extremely sensitive information," Angus said. "You need specialists in your department to handle this. You don't ... put an ad in the paper. We don't know who is doing the review." Ottawa Citizen, A10

Wife of Saudi blogger asks for Harper's help

The wife of the imprisoned Saudi blogger Raif Badawi says her husband can't endure another flogging. Ensaf Haidar, now a refugee living in Quebec, joined an all-party coalition of MPs on Parliament Hill on Thursday urging Prime Minister Stephen Harper to intervene personally with the Saudis. They want the prime minister to push for the release of Badawi, who is set to receive 50 more lashes on Friday. It is part of Badawi's ongoing punishment of 1,000 lashes, a 10-year prison sentence and heavy fines for criticizing Saudi clerics on a blog he founded. The 32-year-old father of three was lashed 50 times on Jan. 9, but his second scheduled beating was postponed last week for medical reasons. "Raif's health condition is getting worse and worse," Haidar said through a translator during a press conference on Parliament Hill. She said that was the conclusion of several doctors who examined her husband in the last week. "I am very concerned about him. It is impossible for a human being to be able to withstand 50 lashes weekly." Liberal MP Irwin Cotler, a long-time human rights advocate, said Saudi Arabia must live up to its international obligations as signatory to the United Nations convention banning torture. Canadian Press (Cape Breton Post, Montreal Gazette, The Guardian, Whitehorse Daily Star, Times Colonist, Telegraph-Journal, Times & Transcript, Daily Gleaner, Vancouver Sun, The Telegram), * Globe and Mail, * Presse canadienne (Voix de l'Est, La Presse, La Tribune, Le Droit, Le Soleil)

*** Canada to maintain pressure on Ebola**

The Ebola treatment centre where Canada's military medics are working is now nearly empty, but Canada has no immediate plans to scale back its mission to Sierra Leone in response to the steep decline in cases. Lieutenant-Colonel Gary O'Neil, the task-force commander for Canada's deployment to the Ebola zone, said Thursday that just one suspected Ebola patient was at the British-run Kerry Town Treatment Unit, where 37 Canadian military health-care workers and support staff have been on the ground since December. More patients were en route to the centre on Thursday night, he added. The unit has treated 36 confirmed and suspected Ebola patients since the Canadians arrived. Globe and Mail, A8

* **Ebola - L'épidémie ralentit dans les pays les plus touché - Moins de 100 nouveaux cas ont été recensés en une semaine, une première depuis juin**

Le nombre de contaminations hebdomadaires par le virus Ebola est passé sous le cap de 100 pour la première fois depuis sept mois, signe que l'épidémie ralentit, mais elle " n'est pas encore endiguée ", a averti jeudi l'ONU. L'Organisation mondiale de la santé (OMS) a fait état jeudi d'un " ralentissement " de l'épidémie dans les trois pays les plus touchés par la fièvre hémorragique -- Guinée, Liberia, Sierra Leone -- où, pour la première fois depuis fin juin 2014, moins de 100 nouveaux cas au total ont été recensés en une semaine. Cette baisse est particulièrement marquée au Liberia, qui n'a rapporté que quatre nouveaux cas dans la semaine du 25 janvier (contre huit la semaine précédente), et en Sierra Leone, qui a recensé 65 nouveaux cas (contre 117). En Guinée, le nombre de contaminations, qui baissait jusqu'ici, est resté stable dans la même semaine, avec 30 nouveaux cas contre 20 la semaine précédente. Depuis son apparition en décembre 2013 en Afrique de l'Ouest, l'épidémie de fièvre hémorragique a fait au moins 8810 morts, essentiellement dans ces trois pays, et contaminé plus de 22 000 personnes, selon l'OMS. " La réponse à l'épidémie d'Ebola est actuellement entrée dans une deuxième phase, mettant l'accent non plus sur le ralentissement, mais sur la fin de l'épidémie ", a expliqué l'OMS, qui avait averti le 23 janvier que la situation restait néanmoins " extrêmement préoccupante " et qu'une recrudescence de l'épidémie ne pouvait être exclue. MINISTER / MINISTRE

Tories move to limit study of terror bill
The Conservatives are seeking to limit testimony on their wide-ranging terrorism bill to just four days, sources say, with Prime Minister Stephen Harper urging MPs to pass the bill "as quickly as possible." The parliamentary committee studying Bill C-51 met for several hours behind closed doors Tuesday to discuss potential witnesses and schedule meetings. Because the discussion was held in secret, MPs are prohibited from speaking publicly about the debate. But several sources told the Star the government wants only three meetings to hear expert witnesses, plus one appearance from **Public Safety Minister Steven Blane**y and Justice Minister Peter MacKay. That would amount to only four days to study the most dramatic changes to Canada's security legislation since 2001. No decisions were made on Tuesday, and Blaney's office said it's up to the committee - on which the government enjoys a majority - to determine how many meetings they'll hold. In the House of Commons, NDP Leader Thomas Mulcair demanded that the bill be given a full study. "Ramming C-51 through without improved oversight is reckless," Mulcair said, urging the government to listen to human rights and security experts. Harper dismissed Mulcair's criticisms as "ridiculous" and argued the measures have the support of the majority of the Canadin public. "The bill is before committee and I would urge the committee to study this bill as quickly as possible in order to ensure the adoption of these measures to ensure the security and safety of Canadians," Harper told the House. The Conservatives introduced Bill C-51 in January, suggesting the Canadian Security Intelligence Service needs expanded powers to combat terrorist threats to Canada. Toronto Star, A1 (Globe and Mail); Ottawa Citizen; La Presse (Le Quotidien, La Tribune, La Voix de l'Est)

Leader's words should strengthen, not scare, the nation

An opinion piece states, "A new catchphrase is spreading through the rhetoric of Stephen Harper and his ministers. It is only four words - they hate our values - but it packs an emotional wallop. The prime minister road-tested it on an audience in Richmond Hill in January. "Canadians are targeted by jihadi terrorists for no other reason than that we are Canadians," he warned. "They hate our society and the values it represents." He used it in a different context in Quebec City 10 days ago. This time, he lashed out at employees of Radio-Canada. "I remain convinced that Quebecers are not leftists, contrary to the image conveyed by some media or the opposition parties," he said. "I understand that there are many at Radio-Canada who hate these values but I think that these values are the true values of a large percentage of Quebecers." **Public Safety Minister Steven Blaney** echoed the mantra as he headed to an international security summit in Washington last week. "***Canadians are being targeted by jihadi terrorists simply because these terrorists hate our society and the values it represents***." In some ways this epithet is like previous Tory terms: soft on crime, Taliban sympathizer, defender of child pornography. It is simple, spiteful and calculated to whip up strong feelings." Toronto Star, A13

La guerre, yes sir
Un article d'opinion déclare, "Henri Bourassa doit se retourner dans sa tombe. Les Québécois, dit un récent sondage, sont à 60 % favorables à la mission en Irak. De tout temps, les Québécois se sont farouchement opposés aux expéditions militaires canadiennes outre-mer. A la toute première excursion, en 1899, au moment de la guerre des Boers, pourfendue avec ardeur par Bourassa, à la conscription en 1917 et encore en 1944, et jusqu'à la guerre en Afghanistan en 2001. La supposée tradition pacifiste du Québec vient d'en prendre pour son rhume. Pour la première fois depuis longtemps, Québécois et Canadiens se retrouvent sur la même longueur d'onde. Et Jean-François Lisée qui croyait le fossé entre les deux solitudes désormais infranchissable... Ah, niqab, quand tu nous tiens ! Ou devrais-je dire, nous étouffes ? [...] Qui sont parfois bien méchants, bien sûr, mais quel rebond quand même ! Quelle habileté pour l'amalgame dont nous mettait en garde François Hollande à la suite des attentats à Charlie Hebdo. Le ministre Jason Kenney qui, hier encore, s'en prenait au projet québécois d'interdiction des signes religieux, aujourd'hui retourne sa veste en promettant de porter en appel la décision permettant à une musulmane de prêter serment et de porter un niqab en même temps. **Steven Blaney**, lui, ne rate pas une occasion de brandir la " ***menace islamique*** " tout en gardant secrète la vidéo trouvée chez Michael Zehaf-Bibeau, responsable de l'attentat à Ottawa. La vidéo devait fournir une preuve de plus du danger qui nous guette, mais curieusement, on n'en entend plus parler." Le Devoir, A7

*** Le terrorisme et le «gros bon sens»**
Un article d'opinion déclare, « Jean Leclair Professeur titulaire à la Faculté de droit, Université de Montréal Une majorité de Québécois, à l'instar d'une majorité de Canadiens, se réjouit à l'idée du renforcement éventuel des pouvoirs policiers destinés à contrer les «menaces à la sécurité du Canada», sans trop se soucier de la nature ou de l'étendue de ces pouvoirs. Les politiciens, quant à eux, font dire au projet de loi C-51 ce qu'il ne dit pas (Mulcair), mentent (Kenney), taisent et dissimulent ce qu'il dit effectivement (**Blaney** et Harper) ou encore préfèrent reconnaître ses lacunes tout en promettant toutefois de l'approuver (Trudeau). En outre, tout argument un tant soit peu rationnel en défaveur du projet de loi est immédiatement associé par le gouvernement à une manifestation de poltronnerie. Le «gros bon sens» triomphe de tout. Tout cela dans un contexte où le débat démocratique sera malheureusement presque impossible, puisque le projet de loi ne fera pas l'objet d'une étude circonstanciée, étant donné que, quoi qu'il arrive, le PLC appuiera le PC, déjà majoritaire en chambre. Il faut bien admettre que quand la population elle-même s'enthousiasme pour la répression, les politiciens pusillanimes trouvent peu d'intérêt à s'y opposer et ceux qui ont le courage de le faire risquent gros. A quel endroit pourra-t-on alors exiger du gouvernement qu'il fasse la démonstration rationnelle de la pertinence, de l'urgence, et du caractère mesuré de son intervention? Devant les tribunaux, ces assassins de la démocratie - aux dires de plusieurs -, ces censeurs du «gros bon sens.» La Presse, A17

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Production d'anticorps contre l'Ebola à Québec**
Medicago, une société de biotechnologie implantée à Québec, vient de décrocher un contrat pour la production d'anticorps destinés à lutter contre le virus Ebola. « Nous sommes ravis de contribuer aux

efforts internationaux contre le virus Ebola. Notre but est d'améliorer la capacité mondiale de production de traitements. Nous travaillons depuis plusieurs mois déjà sur Ebola et la fabrication d'anticorps », signale le président et chef de la direction de Medicago, Andy Sheldon. Journal de Québec, 18 (Journal de Montréal); Le Soleil; Cape Breton Post

*** Rail safety rules still don't go far enough**
Even with rail safety a priority for Ottawa, two reports into train derailments by the Transportation Safety Board this week suggest the new standards still aren't high enough. The TSB said Tuesday that its investigation found numerous rail fractures and undetected defects led to a fiery train wreck west of Edmonton in October 2013, a day after it reported a derailment and fire in northern Ontario last week revealed flaws with supposedly upgraded tanker cars. The unsettling reports came just days after federal Transport Minister Lisa Raitt introduced the third tranche of legislation to bolster rail safety in Canada since the deadly crash of a train carrying crude oil at Lac-Megantic in eastern Quebec in July 2013. A series of spectacular derailments in North America have coincided with a surge in crude oil moving by train in Canada and the United States in recent years and raised public concern over the capacity of an aging rail system to safely handle large volumes of dangerous goods. The Lac-Megantic crash killed 47 people. The TSB said last week's derailment "demonstrates the inadequacy" of the new rules. Any confidence that might have been inspired by Ottawa's most recent announcement on enhancing rail safety was quickly undone by the facts on the ground revealed by the TSB. Calgary Herald, D1

*** La Cour supérieure suspend le jugement en recours collectif**
La Montreal, Maine & Atlantic (MMA), avec l'accord du contrôleur au dossier ainsi que les avocats des victimes, ont obtenu hier une ordonnance visant à retarder le jugement dans le dossier du recours collectif de la tragédie de Lac-Mégantic. Cette ordonnance permettra à MMA de compléter son plan d'arrangement avec ses créanciers ainsi que la constitution d'un fonds d'indemnisation pour les victimes qui pourrait atteindre près de 500 M$ US, selon certaines sources. Hier, le juge Gaétan Dumas de la Cour supérieure a émis l'ordonnance demandée par la MMA, ce qui a pour effet de suspendre le prononcé du jugement en autorisation de recours collectif que devait prononcer son collègue Martin Bureau. Les parties opposées à cette requête en suspension de jugement avaient jusqu'à midi hier pour manifester leur opposition. L'ordonnance du juge Dumas s'étend jusqu'au 20 mars. D'ici là, la MMA et ses représentants poursuivront leurs démarches auprès des compagnies tiers qui n'ont pas encore manifesté leur intention de contribuer au fonds d'indemnisation. La Tribune, 38

*** Fake quake tests local response team**
The fake earthquake hit just outside of Windsor around 12:30 a.m. on Tuesday, creating chaos throughout the region. Imagine the quake, registering at 6.5 on the Richter scale, knocking out power to thousands of homes and toppled buildings. The city's hospitals are running on backup generators and the integrity of the Ambassador Bridge is questionable. The majority of residents no longer have Internet and cellular phone connections. It's a disaster like the city has never seen and, hopefully, never will, said fire prevention officer John Lee, who hosted a news conference at the Windsor Public Library. The emergency simulation brings together a host of emergency responders, including the province's Heavy Urban Search and Rescue Team, as all groups update plans for dealing with such a disaster. The scenario will play out over multiple days before wrapping up on Thursday. Windsor Star, A2

*** Emergency response tested with 'disaster' - Simulation will be largest and most complex conducted in the province**
Alberta's emergency response is being tested this week in a mock disaster exercise to rescue civilians trapped in a collapsed building. The test - simulating the collapse of a mall in Elliot Lake, Ont., - will be the largest and most complex conducted in the province, according to Shane Schreiber, director of Alberta's Emergency Management Agency (AEMA). "It's important for us to set the bar high so that Albertans know that we're ready to respond," he said. "Exercises like the one we're conducting over the next three days are critical to ensuring Alberta, its communities and its government are well prepared for future emergencies." Calgary Herald, A7; Edmonton Sun

*** Pas d'autres Lac-Mégantic**

Un éditorial dit «Il va falloir faire mieux, beaucoup mieux pour que le transport ferroviaire devienne vraiment sécuritaire et réponde aux attentes légitimes de la population nord-américaine. Deux déraillements majeurs survenus coup sur coup dans le nord de l'Ontario et en Virginie-Occidentale il y a quelques jours démontrent qu'un autre Lac-Mégantic demeure une trop forte probabilité pour ne pas exiger un nouveau resserrement des règles pour le transport de produits dangereux. Il y a eu un bon premier pas de la part du gouvernement fédéral à la suite de la tragédie survenue au Québec en juillet 2013. L'ajout d'un deuxième employé pour accompagner les convois de matières dangereuses, la limitation de vitesse des trains à risque et une sécurité accrue autour des trains laissés en attente allaient de soi. Évidemment, la décision la plus importante était celle d'interdire, dans le cas des matières inflammables, l'utilisation des wagons trop fragiles devenus bombes incendiaires au coeur de la ville estrienne. Malheureusement, le remplacement de ces DOT-111 par des CPC-1232 au revêtement d'acier plus épais et comportant des caissons pour protéger les valves n'a nullement empêché la déflagration dans les deux nouveaux cas évoqués ci-dessus. Heureusement, cette fois, il n'y a pas eu de victimes. Mais qui peut être rassuré, sachant que quelque 140 000 wagons-citernes transportant du pétrole brut devraient circuler sur les rails du pays cette année? En 2009, il y en avait 500... » Le Soleil, 24

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Mysterious tunnel eyed with caution

"There's no criminal offence for digging a hole," Toronto's Deputy Police Chief Mark Saunders told a packed news conference Tuesday morning. That 10-metre hole - tunnel, bunker, call it what you will - dug apparently by hand near a venue for this summer's Pan Am Games is getting international attention at a time when the public is jittery with repeated terror warnings. But there's no indication of terrorism. Or drug operations. Or a smuggling ring. If there was some nefarious purpose suspected, police aren't saying. Saunders did indicate that certain items found in the bunker were held back so that if anyone came forward, police would be able to verify their claims. And there was evidence of people eating, drinking and recently spending time in the bunker, so perhaps they have DNA - should that matter. The most intriguing detail released Tuesday was the discovery of a rosary and Remembrance Day poppy. "This was found inside the actual tunnel itself and it was nailed on the wall," Saunders said holding up a large photo of the poppy and rosary, sparking a cacophony of camera shutters... Reports stated that the case was referred to the national security agencies, and sources said both the RCMP and CSIS were briefed on the case. But that is standard, given the location and mysterious nature of the tunnel, and no alarm bells went off in either agency, nor were formal investigations launched, which means unless more evidence comes to light following Tuesday's news conference - as police hope - this is not the #TerrorTunnel that was trending on Twitter. Waterloo Record, A1 (Hamilton Spectator, A1)

RCMP red-flagged Almalki after 9/11, despite doubts

Newly released documents show that an RCMP national security team described Ottawa's Abdullah Almalki as an imminent threat and an "important member" of al-Qaida to foreign agencies even as investigators expressed serious doubts about the veracity of those claims. Other documents reveal that the RCMP team, despite its misgivings, shared details of Almalki's international travel plans with the U.S. Central Intelligence Agency in December 2001, during the highly charged aftermath of 9/11. "The available information clearly confirms the intent of Canadian investigators in sharing the travel information was, if possible, to arrange for or assist in his detention before he could return to Canada," Almalki's lawyers charge in a written submission to the Federal Court of Canada. The new documents have been released to Almalki's legal team as part of the disclosure process in his $100-million civil suit against federal officials for his detention and torture in Syria. Almalki, a Carleton University graduate and father of six, spent 22 months in Syrian custody after his arrest at the Damascus airport in May 2002. He has never been charged with a crime in Canada. A federal inquiry has already found that Almalki was inaccurately labelled by the RCMP in letters to foreign intelligence agencies. The new documents disclosed by the government suggest that RCMP officers, in labelling Almalki an imminent threat, also ignored evidence to the contrary. Postmedia News (Ottawa Citizen, A1, Edmonton Journal)

*** Crainte d'acte terroriste d'un Montréalais, selon la GRC**

Bien qu'aucune accusation criminelle ne pèse contre lui, Merouane Ghalmi, 22 ans, pourrait ainsi devenir le premier Québécois à se voir imposer des conditions spéciales par le tribunal, à la suite d'une enquête de la GRC en matière de sécurité nationale. Ni la Couronne ni la GRC n'ont voulu révéler le moindre détail au sujet de ce dossier. La Couronne cherche à obtenir l'émission d'un mandat de paix à l'endroit du jeune homme, selon un document judiciaire signé lundi par le juge Louis A. Legault et dont Le Journal a obtenu copie. Merouane Ghalmi devrait alors s'engager à garder la paix et à ne pas commettre d'infraction criminelle pendant un an. «C'est arrivé à moins d'une dizaine de reprises ailleurs au pays qu'on obtienne une telle ordonnance pour des motifs liés au terrorisme. Mais ce serait un précédent au Québec», a mentionné Daniel Brien, porte-parole du Service des poursuites fédérales du Canada.
De plus, le tribunal pourrait ordonner à Ghalmi de respecter des conditions, telle l'interdiction de communiquer avec certaines personnes et de posséder des armes ou explosifs. «C'est l'un des outils mis à la disposition de la GRC pour tenter d'éviter des atrocités comme celle survenue à Saint-Jean-sur-Richelieu, le 20 octobre dernier», a fait remarquer Pierre-Yves Bourduas, l'ex-commandant de la GRC au Québec. L'aspirant djihadiste Martin «Ahmad» Rouleau avait alors happé deux militaires avec sa voiture, causant la mort du caporal Patrice Vincent. L'ancien haut gradé de la police fédérale a rappelé qu'une telle mesure judiciaire aurait pu être prise à l'endroit de Rouleau, avant qu'il ne passe aux actes. Journal de Québec.com (Journal de Montréal)

Made here?
An inquest into the attack on an Algerian gas plant, set to release its findings Thursday, has painted a chilling picture of two young terrorists from London. The inquest also sends a clear message to this city and the rest of the country: the terrorism was born here. Xristos Katsiroubas and Ali Medlej met in London and "both were introduced to a radical form of Sunni Islam through associates in the community," concludes a British police counterterrorism unit, based in part on an RCMP investigation, quoted at the inquest. Katsiroubas became a leader of the attack and the main negotiator to the outside world, pleading for a peaceful solution and perhaps saving some hostages, but threatening violence, perhaps making a list of those to kill, and ending communications with a prophetic threat: "You need to stop the Algerians so we can deal with this or everybody's going to be dead, we're going to blow up the factory." The inquest into the 2013 terrorist attack on a gas plant near In Amenas, Algeria, has received little media attention in Canada. Muslim leaders in London said they were unaware of the inquest, but have been working to prevent radicalization of their youths. London Free Press, A1

Little new money for agencies that fight terrorism: main estimates
While Prime Minister Stephen Harper says Canada is at war with violent jihadism, his government's spending estimates for the coming year show little increase in the amount of money going to some of the key organizations responsible for fighting terrorism. Main estimates tabled Tuesday by Treasury Board Minister Tony Clement show that many of those organizations, such as the Canadian Security Intelligence Service (CSIS) and the Canada Border Services Agency are slated to receive only small increases in their budgets to keep Canada safe. Others, like the RCMP, the Public Safety Department and National Defence are being asked in the main estimates to spend less in the coming year than Parliament gave them to spend last year. The main estimates call for the Communications Security Establishment - which got a very large increase in its budget last year to fund its new, state of the art headquarters - to spend 35 per cent less than it got last year. That is still 21 per cent more than it received in 2013/14. While the budgets provided for each department can be increased through the budget tabled by the finance minister or supplementary estimates voted by Parliament, government officials did not respond Tuesday when asked whether they plan to inject more money into the government effort to battle terrorism. Ipolitics.ca

Small spending increases for security, even less for security watchdogs
The government plans only modest spending increases for key national security agencies in the coming year despite proposed legislation to dramatically expand their powers and scope, according to federal spending estimates released Tuesday. What's more, as the Conservatives continued their weeklong defence of anti-terror Bill C-51 in the Commons Tuesday by insisting that rights and freedoms will be protected by robust, independent oversight, Treasury Board revealed that Canada's two national security oversight agencies are to receive a combined total of just $16,358 in additional funding in the next fiscal year. By comparison, Canada's "human" spy agency, the Canadian Security Intelligence Service (CSIS),

and the electronic spy agency, the Communications Security Establishment (CSE), are to get a combined total of almost $37 million more in annual net spending for 2015-16. CSIS is to see a net $20.8 million, or 3.8 per cent, boost, bringing planned spending to $537 million for 2015-16. The CSE is to get $16.1 million, or 3 per cent more, for total spending of $538.2 million. The Canada Border Services Agency's (CBSA) net spending is to rise $37 million, or 2.2 per cent, to $1.78 billion. The RCMP, which has responsibility for criminal national security investigations, is to see a $4.1-million, or 0.2 per cent, spending increase. The limited increases are surprising, given the government's relentless warnings since October that Islamic extremists now threaten Canada like never before. Ottawa Citizen.com

Harper urges swift passage of terror bill

Prime Minister Stephen Harper is urging a House of Commons committee to study the government's anti-terror bill as quickly as possible, in spite of accusations the Conservatives are using their majority to rush the legislation onto the books. NDP Leader Tom Mulcair told the Commons on Tuesday it is essential to scrutinize the bill, and asked Harper to ensure that security and human rights experts are not only heard, but also heeded. The Conservatives brought in the bill - which would significantly expand the powers of Canada's spy agency - following the murders of two Canadian soldiers last October. The bill would also make it easier for authorities to control the movements of terror suspects, expand no-fly list powers, crack down on extremist propaganda and outlaw encouraging someone to commit a terrorist act. The NDP opposes the legislation, saying it threatens civil liberties and fails to make Canadians safer. Harper dismissed Mulcair's criticisms and said the public strongly supports the proposals. Waterloo Region Record, A3

*** Senate grills Muslim leader over alleged radical ties**

A Muslim social services leader made an anti-radicalization submission to a Senate committee then faced tough questions about her own alleged association with radicals. Shahina Siddiqui, of the Winnipeg-based Islamic Social Services Association, appeared before the Senate committee on national security and defence in Ottawa on Monday. She called on Muslims and non-Muslims to work together to combat ISIS and al-Qaida but also cautioned against "religious bigotry by Islamophobes." Committee chairman Sen. Daniel Lang and member Sen. Lynn Beyak questioned Siddiqui about her work as a board member with the National Council of Canadian Muslims (NCCM), formerly known as CAIR-CAN. Senator Beyak asked Siddiqui about the connections between CAIRCAN and CAIR-USA. The U.S. group is an unindicted co-conspirator in a US$12-million Hamas financing trial that led to guilty verdicts in Texas in 2008. "How can we trust community organizations to help us develop a counter-radicalization narrative when they themselves are affiliated with organizations with known ties to terrorism?" Beyak asked. Siddiqui told senators that CAIR-USA and CAIR-CAN/ NCCM are not related. But, in fact, Canada's trademarks database indicates CAIR-USA applied for, and was granted, the trademark on the CAIR name in Canada in 2005. QMI Agency, 32 (Edmonton Sun, Ottawa Sun, Winnipeg Sun)

*** FINTRAC looks to banks to monitor clients' social media activities**

The federal agency responsible for monitoring potential money laundering and terrorist financing is encouraging financial institutions to go as far as analyzing their clients' public social media activity when investigating suspicious transactions. A 2014 presentation prepared by FINTRAC for financial institutions contains a hypothetical scenario in which a bank examines the social media activity of its own client to assess a potential case of terrorist financing. "We are disclosing a [suspicious transaction report] relating to Heinrich TRAVELLER and based on adverse information revealed through our open-source research and activity in his account that does not correspond to his profile," reads a fictional bank report to FINTRAC. The scenario is part of a presentation titled "Financial Intelligence and Counter Terrorism in Canada," obtained by Embassy through an Access to Information request. "Mr. TRAVELLER has been one of our clients since June 20, 2012," the mock correspondence goes on to state. "He is a 25-year-old retail sales clerk. At the time of this statement, the balance of his portfolio was $9,356.53. An online search using the client's name revealed adverse information about the client pertaining to the promotion of terrorism, anti-Semitism and acts of martyrdom." Financial institutions are required to report any suspicious client activity to FINTRAC under the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, but the guidelines for determining suspicious activities are open-ended. Institutions are to report any activities that they have "reasonable grounds to suspect" are money laundering or terrorist

financing offences. The legislation applies to a range of financial players, including life insurance companies, accountants, real estate dealers, casinos and money transfer agents. Embassy

*** Britain's intelligence committee controversy backs Ottawa's system**
In Canada, the opposition is holding up the British Intelligence and Security Committee (ISC) as a model for increased parliamentary oversight of the country's security agencies, especially given the proposal to beef up anti-terrorism legislation. Critics rail that Canada's current oversight agency – the Security Intelligence Review Committee (SIRC) – has been filled with patronage appointees, including former chair Arthur Porter who is currently fighting against extradition to Canada in a Panamanian cell. Mr. Porter, a former hospital administrator in Montreal, has been at the heart of a massive RCMP probe into allegations of kickbacks involving engineering firm SNC-Lavalin. He was active in Conservative circles when he was approached by the PMO to sit on SIRC in 2008. In his recent autobiography, he said he underwent a minimal security check before joining the body where he was given access to classified intelligence. He left in a storm of controversy in 2011. The ongoing controversy in Britain involving former ISC chair Malcolm Rifkind plays to Ottawa's argument that it's better to have a non-political oversight system. The government has defended SIRC as a made-in-Canada success, arguing that oversight bodies such as the ISC open the door to political interference in national-security matters. Globe and Mail.com

*** Don't sacrifice liberty for security**
An opinion piece states, "Four former Canadian prime ministers (including a Conservative) and five former Supreme Court justices have warned Conservative Prime Minister Stephen Harper that protecting the security of Canadians and their most important freedoms is not a zero-sum game. In their own words criticizing his anti-terrorism legislation, Bill C-51, they warn: "Protecting human rights and protecting public safety are complementary objectives, but experience has shown that serious human rights abuses can occur in the name of maintaining national security." Harper has already said he will ignore this historically unprecedented collective advice, even though it warns that key security agency review bodies will not have enough power to provide critical oversight of new government security activities. (Contrast that with the views of our closest allies in the U.S., U.K., Australia and New Zealand who have established that democratic oversight is a key aspect of national security.) The reason for the prime minister's refusal to listen can be found in the fact that he announced his sweeping anti-terrorism legislation not in Parliament, but in an election campaign-style presentation in an Ontario riding. Ignoring the most effective way to protect both our security and liberties to win the fear vote on terror is a Faustian bargain of selling the soul of your democratic principles for power. Could it be that his refusal is also based on the need for maximum opposition to the legislation so those who disagree with the bill can be slammed as "soft on terror"?" Toronto Star, A13

*** Leak reveals spies chase more activists than terrorists**
Despite popular belief that they are chasing terrorists and master criminals, the world's spy agencies spend much of their time pursuing environmentalists, opposition leaders, dissidents and even airline staff, leaked documents show. The intelligence agencies, including Canadian spies, are interested in civilian targets that go far beyond terrorism, according to the latest batch of South African intelligence agency reports, leaked to Al Jazeera. Many spy agencies are more preoccupied with political activists than with terrorism, the reports show. One document revealed that the Canadian Security Intelligence Service (CSIS) was strongly interested in whether the Israeli airline, El Al, might have any guntoting Israeli spies among its staff in international airports. It questioned whether El Al staff might have illegally obtained firearms. South Korea's spy agency wanted a "specific security assessment" of Greenpeace International's director, Kumi Naidoo, before the G20 summit in Seoul in 2010, while Cameroon's espionage agency sought an intelligence report on an opposition politician before an election in 2011. The Rwandan government wanted the authority to spy on "negationists" - anyone who questioned its version of the Rwandan genocide. And Sri Lanka wanted information on Tamils from Canada and elsewhere who were allegedly attending "military training" in South Africa. South Africa rejected the requests from Cameroon, Rwanda and Sri Lanka, and it is unclear whether it spied on Mr. Naidoo. Globe and Mail, A17

*** La peur et la réplique**

Un éditorial déclare, "Que quatre Canadiens sur cinq soient d'accord avec le projet de loi antiterroriste du gouvernement Harper ne surprend pas. Dans le climat international actuel et sa forte médiatisation, avec les décapitations du mouvement État islamique qui sèment la terreur, les attentats perpétrés chez nous l'automne dernier, les menaces diffusées sur Internet, le récent complot terroriste déjoué par la police concernant un déraillement de train passager de Via Rail sur la ligne Toronto-New York qui aurait fait un lot de victimes, et puis la découverte inquiétante d'un mystérieux tunnel à Toronto, pas étonnant, donc, que le public applaudisse à une démarche du gouvernement qui promet de lutter encore plus efficacement contre le terrorisme. Évidemment, on ne peut pas présumer du fait que tous ceux qui ont répondu au récent sondage avaient lu de A à Z le projet de loi C-51 et étaient donc parfaitement informés de ses tenants et aboutissants. Mais il y a des spécialistes, des juristes, d'anciens ministres de la Sécurité publique et quatre ex-premiers ministres canadiens qui l'ont lu. Et bien qu'ils soient d'accord avec les objectifs poursuivis et le resserrement des mesures de contrôle qu'il prévoit, n'en sont pas moins inquiets du manque de balises qui pourrait, selon eux, mener à un abus de pouvoir et à une violation des droits de la personne. Leurs préoccupations méritent qu'on s'y arrête." Le Nouvelliste, 14

*** Edmonton mall terror threat must be heeded**
An opinion piece states, "Of course a mall is a good terror target. It's so open to the public that it's hard to secure perfectly. It's also a goal of terrorists to make ordinary people feel unsafe in their daily lives. So what better place to carry out an attack than where we buy our clothes or groceries, get our hair done or go to a movie? On top of that, the al-Qaida affiliate from Somalia -- al Shabaab -- which called on supporters to attack malls in Canada, the U.S. and Britain (including West Edmonton Mall) has a history of attacking malls near its base in Africa. They carried out the September 2013 attack on the Westgate Mall in Nairobi, Kenya in which Islamic extremists sealed off the mall then spent three days executing ordinary shoppers who were unable to recite basic Muslim prayers. Of course an Edmonton mall is also a terror target. Even though the war with terrorists seems far away (and it is, for the most part), the Edmonton Garrison sent more soldiers to Afghanistan than any other base in the country. We may see Edmonton as a sleepy little oil-service burg on the northern fringes of the Prairies with a hardworking population and pro hockey team, but terrorists see it as home to an army of crusaders who have invaded Islam's homelands. They would be happy for some retribution." Kingston Whig-Standard, A4 (London Free Press, Toronto Sun, Calgary Sun, Ottawa Sun, Edmonton Sun, Winnipeg Sun)

*** ISIS recruited Canadian woman to join fight in Syria**
The family of a young Canadian woman who travelled to Syria after being radicalized say losing her was the most "shocking thing in the world" and that they wish CSIS had done more to prevent the 23-year-old's departure. The woman, whom CBC News is calling Aisha to protect her identity, made the journey to Syria to join up with ISIS last summer, after taking an online course to study the Qur'an taught by a woman based in Edmonton, says her older sister Rabia (whose name has also been changed). "We all went to work, came home, all her stuff was gone. She had packed all her winter clothes, took her computer and left," Rabia says. "It was the most devastating, most scary, most shocking thing in the world." Over the past several months, Rabia has been speaking to CBC News about her family's ordeal. Some details, such as names and the family's location, are being withheld for security reasons. The Canadian Security Intelligence Service declined to comment on the specific case, but said in an emailed statement that terrorism "including radicalization of Canadians and terrorist travel remains the most prominent threat to Canadian interests and our national security." CBC News

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Moncton couple accused of conspiring to import cocaine
A Metro Moncton couple has been charged in relation to a massive cocaine seizure at the U.S.-Mexico border two years ago. Luc LeBlanc, 42, and Michelle LeBlanc, 37, were charged in late January with conspiring with others to import cocaine into Canada. Times & Transcript, A3

Fighting for medical care as deportation looms

An Ottawa-born man ordered deported to India after a stint behind bars is now fighting for access to OHIP. In September 2014, Deepan Budlakoti, 25, lost a bid to have a federal court judge declare him a Canadian citizen which he vowed to appeal. In addition, the man's legal woes have denied him access to provincially-funded health care. QMI Agency (Ottawa Sun, 4)

Chris Brown barred at Canadian border
R&B singer Chris Brown says he's been barred from entering Canada. The "Forever" singer tweeted Tuesday that the "good people of the Canadian government" wouldn't let him into the country for shows in Montreal and Toronto. Canadian Press (Toronto Star, A3, Cape Breton Post)

*** CBSA finds 162 ammunition magazines on Kentucky man**
The Canada Border Services Agency (CBSA) released the first report of 2015 from Saskatchewan's port of entries in the southern part of the province. On January 18, officers at North Portal seized a record 162 magazines from a Kentucky man en route to Alaska. He declared five firearms and 15 magazines, which were overcapacity rifle clips. Upon closer examination, officers noted one of the guns was a restricted assault rifle that wouldn't be allowed to cross the border. When officers began the vehicle search, they found more than what they were looking for: 162 military-grade magazines (including 147 prohibited) valued at over $5,000. The man was issued a $1,000 penalty and returned to the U.S. In the beginning of January, officers in southern Saskatchewan made several seizures of prohibited weapons and devices. Estevan Mercury

*** Drugs, weapons, cash and child porn seized at Niagara border crossings**
Border agents in Niagara seized a cache of weapons, drugs, cash and child porn over the last four months. They also reunited two missing children with their families and arrested a woman who opted to cross the border using a raft instead of a bridge. The Canada Border Services Agency on Tuesday released information on enforcement highlights at Niagara border crossings between Oct. 1, 2014 and Jan. 31. Niagara Falls Review

*** American gets 90 days in jail for smuggling child porn into Halifax, arrested on boat**
An American citizen has been sentenced to jail time for smuggling child pornography after he was arrested in December on a boat in Eastern Passage. The Canada Border Services Agency (CBSA) announced Tuesday that Brian Scott Long, 51, of Washington pleaded guilty to smuggling child pornography in Dartmouth provincial court on Monday. The release said Long was sentenced to 90 days in jail. Cape Breton Post

*** Will Matt DeHart be the next victim of the war on leaks?**
A blog post states, "The case of Matt DeHart, a former U.S. drone pilot turned hacktivist, is as strange as it is disturbing. The 29-year-old was recently denied asylum in Canada, having fled there with his family after — he claims — he was drugged and tortured by agents of the FBI, who accused him of espionage and child pornography. Last week the Canadian Border Services Agency said he will be deported to the U.S. to stand trial "in very short order," after a Canadian Immigration and Refugee Board ruling earlier this month denying his request for refugee status. He is being denied access to two thumb drives that he says contain evidence of illegal acts perpetrated by a U.S. government agency. Now after three unsuccessful attempts to gain political asylum, he fears that he and the files will be delivered to the very government he sought to escape." Aljazeera

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** CSE monitors millions of Canadian emails to government - Critics question how long data is stored and what it's used for**
Canada's electronic spy agency collects millions of emails from Canadians and stores them for "days to months" while trying to filter out malware and other attacks on government computer networks, CBC News has learned. A top-secret document written by Communications Security Establishment (CSE) analysts sheds new light on the scope of the agency's domestic email collection as part of its mandate to protect government computers. CBC analyzed the document in collaboration with U.S. news site The

Intercept, which obtained them from U.S. National Security Agency whistleblower Edward Snowden. Canada's electronic spy agency watched visits to government websites and collected about 400,000 emails to the government every day, storing some of the data for years, according to the 2010 document. Today's volume is likely much higher given online traffic growth. CBC News

*** Government computers subject to 'millions' of 'probing attempts' daily: Fantino**
Junior defence minister calls out "foreign countries or companies" as well as "criminal organizations," "activists with political or social agendas" and "terrorists" as possible cyber threats. Cyber security concerns were top of mind at this year's Ottawa defence conference, as revelations continue to come out about the extent of international electronic eavesdropping by allied nations and Canada.United States National Security Agency director Admiral Michael S. Rogers spoke at the Ottawa Conference on Security and Defence, lamenting the loss of public trust exacted by the exposure of top secret files gathered by former US security contractor-turned-whistleblower Edward Snowden. Associate Minister of National Defence Julian Fantino also chose to spend half his Feb. 20 speech at the event talking about cyber security, suggesting that "millions of Canadians" will "fall victim to cybercrime," and "millions of probing attempts are detected daily of government systems." Some of those Canadians are inside Mr. Fantino's own government. A financial update tabled in Parliament on Feb. 19 showed the "unauthorized cyber intrusion" on the computer systems of a national research organization last year will cost the government $32.5 million. Hackers broke into the National Research Council's computers in July 2014, and Canada's chief information officer, Corinne Charette, blamed a "highly sophisticated Chinese state-sponsored actor"-an allegation a spokesperson for the Chinese Embassy called "groundless" on CBC News. In his speech, Mr. Fantino called out "foreign countries or companies" as well as "criminal organizations," "activists with political or social agendas" and "terrorists" as possible cyber threats. Embassy

*** U.K.-U.S. spy hacking 'probably happened,' SIM card maker admits**
Gemalto, the world's largest maker of mobile SIM cards, said a preliminary company probe of sophisticated attacks against it in 2010 and 2011 showed British and U.S. intelligence services "probably" hacked into its office networks. Gemalto said the suspected attacks by the U.S. National Security Agency and Britain's Government Communications Headquarters "probably happened," but said the intrusions "only breached its office networks" and "could not have resulted in a massive theft of SIM encryption keys." The Franco-Dutch company was responding to a report by investigative news site The Intercept, which last week published documents it said showed that U.S. and British spies hacked into Gemalto, potentially allowing them to monitor the calls, texts and emails of billions of mobile users around the world. Reuters (Globe and Mail)

*** Companies unprepared for cyberattacks, report finds**
Organizations that oversee sensitive information remain woefully unprepared to fend off increasingly clever and sophisticated data raiders, according to a sobering new study. Nearly 70 per cent of those hit by data breaches in 2014 found out about the infractions from outsiders such as police or customers, according to a report issued Tuesday by Silicon Valley security software firm FireEye Inc. Data breach victims took a median of 205 days - almost seven months - to realize they had been hit, giving "attackers ... a free rein in breached environments far too long before being detected," the report said, while "run-of-the-mill cyber criminals" out to steal creditcard data are becoming harder to distinguish from state-sponsored attackers due to advanced camouflaging tools and tactics. Despite increasing awareness of cyberthreats and investments to protect sensitive data, including personal customer information and corporate secrets, corporations appear to be falling behind in their efforts to counter hackers. Many companies are better prepared for fires, floods and ice storms than data breaches, which "are more likely, and likelier to have a more significant business impact" than other emergencies, said John Proctor, vice-president of global cybersecurity with Montreal information technology services firm CGI Group Inc. Globe and Mail

*** US announces $3 million reward for accused prolific cyber criminal believed to be in Russia**
The U.S. government has announced a $3 million reward for information leading to the arrest of a man American authorities call one of the world's most prolific computer hackers. Evgeniy Bogachev, who is believed to be in Russia, was indicted in Pittsburgh last year on charges including bank fraud and conspiracy. His picture has been plastered on "Wanted" signs distributed by the FBI. Bogachev is

accused of acting as ringleader for a massive hacking operation in Russia and Ukraine that installed malicious software on victims' computers to capture bank account numbers, passwords and other sensitive information. CharlottetownGuardian.ca

*** Anthem says hack may affect more than 8.8 million other BCBS members**
Health insurer Anthem Inc, which earlier this month reported that it was hit by a massive cyberbreach, said on Tuesday that 8.8 million to 18.8 million people who were members of other Blue Cross Blue Shield plans could be victims in the attack. Anthem, the second-largest U.S. health insurer, is part of a national network of independently run Blue Cross Blue Shield plans through which BCBS customers can receive medical services when they are in an area where BCBS is operated by a different company. It is those Blue Cross Blue Shield customers who were potentially affected because their records may be included in the database that was hacked, the company said. Anthem does not know the exact number of Anthem versus non-Anthem customers affected by the breach because of those incomplete records, which prevent it from linking all members with their plan, Anthem spokeswoman Kristin Binns said. Yahoo! News

LAW ENFORCEMENT / APPLICATION DE LA LOI

SIU refuses to name man shot by police
The name of a 49-year-old man who was shot dead by Toronto police a week ago remains secret, though the province's police watchdog knows who he is. Due to a fairly recent policy change at the Special Investigations Unit, the public may never know the man's identity - a troubling thought, say observers, who point out that the name is crucial to scrutinizing a shooting by police and ensuring transparency. The SIU, which investigates all police-related deaths, decided in 2012 to release names of people killed by officers only with the consent of the family. The new policy stands in contrast to police force practice, which is to routinely release the names of homicide victims regardless of the family's wishes. In the case of last Wednesday's police shooting near Dupont St. and Spadina Rd., "investigators are continuing to work diligently to locate next of kin," SIU spokeswoman Jasbir Dhillon said. Toronto Star, A1

House blast sends six to hospital
An explosion that destroyed a house in Nova Scotia's Annapolis Valley was caused by a combination oil and wood-burning furnace that overheated and ruptured, the provincial fire marshal says. The explosion was originally thought to be gas related, but Harold Pothier ruled that out after completing his assessment of the explosion that happened shortly after 1 a.m. Tuesday in Westville. Six people were taken to hospital and all but one of them has been released, the provincial government said in a news release. RCMP Const. Kelli Gaudet said a 63-year-old man remained in hospital with non-life-threatening injuries. Canadian Press (The Guardian, A1, Daily Gleaner)

Sûreté du Québec: des coupures de 30 millions $ annoncées
Exceptionnellement, tous les cadres de la SQ dans la province ont été conviés à se rendre à l'École nationale de police du Québec (ENPQ), à Nicolet, pour assister en personne à l'annonce de leur directeur général. De plus, la direction leur a demandé de faire leur trajet aller-retour en covoiturage, à trois policiers par véhicule, afin d'économiser sur les frais de transport. Autant de mesures symboliques pour contribuer à la cure minceur imposée à la SQ par le gouvernement Couillard et dont la mise en uvre reviendra à cet ancien sous-ministre associé à la Sécurité publique. Nommé à la tête de la SQ en octobre dernier pour remplacer Mario Laprise, Martin Prud'homme devrait notamment confirmer l'abolition de 150 de ses 400 postes d'officiers. Une telle réduction des postes de cadres se concrétisera par une vague de départs à la retraite que l'organisation ne comblera pas. Martin Prud'homme entend également soumettre la police provinciale à une restructuration majeure. On promet une refonte des 10 districts administratifs actuels de la SQ, de sorte que le territoire desservi par les policiers de la SQ serait dorénavant réparti en quatre ou cinq régions élargies. Le nombre d'escouades régionales mixtes de lutte au crime organisé, qui est présentement de huit, sera lui aussi réduit, selon nos sources. Agence QMI (Journal de Quebec, Journal de Montreal)

Police watchdog 'limited' by hiring policy
The head of the Independent Investigations Office said having more freedom to hire former police officers who have worked in B.C. in the past five years would allow the office to attract more highly skilled investigators who can pass their expertise to civilian employees. Richard Rosenthal said hiring former police officers doesn't affect the long-term goal of having the organization, which investigates serious injuries or deaths involving police officers, fully staffed by civilians. "It's a one step back, three steps forward [strategy] and ... it gives us the opportunity to have people with current major crime experience in policing in B.C. who can train our people and make sure that we're operating according to best current practices," Rosenthal said Tuesday. The IIO's chief civilian director was responding to one of the key recommendations in a report released Monday by a special legislative committee. The committee looked into the organization and the feasibility of having it staffed fully by civilians by 2017. The hiring rule was a key recommendation laid out by retired judge Thomas Braidwood, who led the inquiry into the RCMP investigation into the 2007 death of Tasered Polish immigrant Robert Dziekanski at the Vancouver airport. His report led to the creation of the civilian-led oversight body in September 2012. The IIO can hire former police officers from outside the province regardless of when they retired. Times Colonist, A3

Four Mounties face assault charges
Four Mounties on Vancouver Island face assault-related charges in connection with alleged jail-cell incidents at two RCMP detachments. The charges come after investigations into two separate incidents by the Independent Investigations O ce. The Criminal Justice Branch says one alleged incident occurred last June at the Nanaimo RCMP detachment and resulted in Const. Tim Bedard facing one charge of assault causing bodily harm. In the second case, three Mounties are charged with assault with a weapon after the alleged use of pepper spray at the Parksville detachment in June 2013. Constables Scott Jones, and Mick White, and Cpl. Michelle Lebrun, are to appear in court in Nanaimo on March 17. Postmedia News (Vancouver Sun, A2); Canadian Press (The Province, , Times Colonist)

Woman assaulted on UBC campus
Police are warning the public to be vigilant after an 18-year-old was assaulted on campus at the University of B.C. Mounties say the woman was walking alone on Sunday night when a man grabbed her from behind. RCMP say the woman was not hurt and was able to break free from the man's grip, who then ran away. The suspect is described as an 18-to 20-year-old man with olive skin, spiky short black hair, and a medium build. Police say the incident is probably isolated and not related to a string of on-campus assaults in 2013. But Cpl. Brenda Winpenny says the public should stay aware of their surroundings, especially while walking alone late at night or early in the morning. Postmedia News (Vancouver Sun, A2)

*** Senate committee will ask RCMP to show Michael Zehaf-Bibeau video**
The Senate's national security committee is asking the RCMP to make public a video that Michael Zehaf-Bibeau reportedly recorded before the Oct. 22 shootings in Ottawa. Committee chairman Sen. Daniel Lang told senators this week he will draft a letter to RCMP commissioner Bob Paulson, asking the top Mountie to release the video Zehaf-Bibeau made before he killed Cpl. Nathan Cirillo at the National War Memorial, then died in a shootout inside the Centre Block. MPs on the House of Commons' public safety committee made the same request on Feb. 17. The Commons committee also wants Paulson to release the video at his "earliest convenience," and speak to the committee about the investigation. Lang is asking for the video to be released when the RCMP investigation into Zehaf-Bibeau was over. "Mr. Zehaf-Bibeau applied for a visa to go to Libya just weeks before and was denied. Mr. Zehaf-Bibeau had taken a tour of Parliament Hill prior to the attack, and he also went out to obtain a rifle just days before the attack. His name was also found on a computer of a known terrorist," Lang said Monday. "Given what we know, I would like to advise the committee that I'll be writing to the commissioner to have the video released as soon as the investigation by the RCMP has concluded." Postmedia News (Ottawa Citizen)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Don't interview Khadr**

A letter to the editor states, “Let us interview Khadr: media outlets - Feb. 10 The problem with letting the media and the public get hold of Omar Khadr before he is released from prison is that they will put him in a place where he feels he is not welcome in Canada. Many people from other countries already feel they are not welcome here and get looked at differently then the average Caucasian male or female. Of course Canada should have the "right to understand" what this man is capable of, but they cannot do anything about him being released. Therefore, putting Khadr through an interview and asking him questions where half the nation will not believe his answers seems unfair.” Waterloo Region Record, A6

*** Man on federal parole charged with attempted bank robbery**
A 34-year-old man appeared in provincial court Tuesday charged with attempting to rob the Royal Bank on Lansdowne Avenue Monday around 10:30 a.m. Marc LeBlanc was asked if he wished to have a judge and jury trial or deal with the charge in provincial court. Duty counsel Margaret Gallagher said LeBlanc did not wish to choose at this time. Prosecutor Kelly Winchester objected to his release and Gallagher said LeBlanc is a federal inmate on parole who wants to serve his remand time in a federal penitentiary rather than a provincial jail. Winchester said that would be up to the correction system, but said she has no reason to keep LeBlanc in jail in Saint John. Provincial court Judge Andrew LeMesurier asked LeBlanc where he thought he would go. "Renous," Leblanc replied. Telegraph-Journal, B2

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Looking for some solutions
How can violence against indigenous women and girls be eliminated? That is the question First Nations leaders and community organizations are hoping Saskatchewan citizens can answer. On Tuesday, a forum hosted by the Federation of Saskatchewan Indian Nations (FSIN) in partnership with Regina Treaty Status Indian Services (RT SIS) was held at the First Nations University of Canada (FNUniv). "We are going around the province right now in order to get as many viewpoints as we can," said Erica Beaudin, manager of RT SIS. "We have been in Saskatoon and next month we hope to be in Prince Albert and other areas. We feel that every voice counts and every voice matters." During the event, participants were asked to discuss and complete a survey about violence and what needs to be done to address it from the community level all the way up to the national level. "The way toward a solution is to get as many people discussing and ready to move on the issue of eliminating violence in our lives," said Beaudin. FSIN plans to take the community suggestions and present them at the roundtable on missing and murdered indigenous women happening in Ottawa on Friday. "We have collected data from over 100 people, thus far, and that includes men, women, children and elders," said Beaudin. "What we are seeing is that the solution is one the family and strengthening the family, supporting the family, prevention rather than intervention and when intervention is needed then the necessary supports are there and they are adequate and they are relevant." Beaudin has been working in the area of missing and murdered women for years and said it's great to see others like Mayor Michael Fougere and his councilmen standing up and supporting a call for a national inquiry. Leader-Post, A1

Student cyberbullying on rise as teachers, police work to keep up
Cyber-bullying is growing exponentially in schools as teachers and police work to keep up with the massive proliferation of social media sites and the anonymity that youth believe they offer. "We're at the point where the way that kids communicate with each other now, it's electronically," said Const. Brad Bulman, a student resource officer at Centennial High School who is dealing with a cyberbullying incident at least once every two weeks at the school. "We're seeing boys organizing fights after school, we're seeing kids sharing photos that they really shouldn't be. "But there's a lot going on that we don't know about, that the kids probably aren't even telling us. That's the scary part." More than 1,500 students gathered at Centennial High School Tuesday for the Who's Frank event, on the eve of Pink Shirt Day, to raise awareness around bullying. Frank, a life-size pink elephant at the centre of the campaign partnering Calgary high schools with Mount Royal University, is meant to kick-start the discussion around bullying as the "elephant" in the room. Students and teachers at Tuesday's event said that cyber-bullying is a large elephant, a monster of sorts in the lives of many young teens, particularly those in the 13 to 15 year age group who are still discovering social media yet are most vulnerable to it. "It's a bit of an ogre really," said

Matt Christison, principal at Centennial High School. '"We're seeing females versus females, or males versus males, most often, or those who are in a relationship and then break up. There are a lot of terrible words, it can be relentless, very harmful, and for some individuals who are susceptible, the pain can go very deep." Calgary Herald, A1

*** So many victims, so little change**

An editorial states, "Given the tragic shadow cast over Saskatchewan by the murders of dozens of aboriginal women and the disappearance of many others, it is good to see this province speaking with a strong, united voice for a national inquiry into what's become a shameful issue across the country. On Monday, Regina city councillors added their unanimous call for "an inquiry or round table into missing and murdered indigenous women" to similar declarations by Saskatoon city council, the Saskatchewan Urban Muncipalities Association and numerous aboriginal groups. Saskatchewan Justice Minister Gord Wyant heads to Ottawa Friday for a meeting of First Nations leaders and federal and provincial politicians to discuss the issue. Canada's premiers and territorial leaders all support an inquiry and Wyant says the Conservative government should drop its resistance to the idea and take a leadership role in addressing "why there is so much violence against aboriginal women and girls." An RCMP report last year identified 1,017 female aboriginal victims of homicide in Canada between 1980 and 2012. It said an additional 164 were "missing". The RCMP said the numbers exceeded previous public estimates and added that aboriginal women were almost three times more likely to be victims of violence than non-aboriginal women. Saskatchewan had the highest proportion of female aboriginal homicide victims - 55 per cent - among the provinces during the studied period, despite aboriginal women comprising just 15 per cent of our population. Between 1980 and 2012, 153 aboriginal women were murdered in this province, compared with 116 non-aboriginal women. Manitoba (49 per cent female aboriginal victims) and Alberta (28 per cent) were the next-highest provinces." Leader-Post, A8

*** 'Every voice counts and every voice matters,' say native groups**

First Nations leaders and community organizations hope Saskatchewan citizens can help answer the question of how to eliminate violence against indigenous women and girls. The Federation of Saskatchewan Indian Nations (FSIN) and Regina Treaty Status Indian Services (RTSIS) hosted a forum Tuesday on the subject at the First Nations University of Canada (FNUC). "We are going around the province right now in order to get as many viewpoints as we can," said Erica Beaudin, manager of RTSIS. "We have been in Saskatoon and next month we hope to be in Prince Albert and other areas. We feel that every voice counts and every voice matters." Participants at Tuesday's event were asked to discuss and complete a survey about violence and what needs to be done to address it from the community level to the national level. The FSIN plans to present their suggestions at the roundtable on missing and murdered indigenous women in Ottawa on Friday. StarPhoenix, A9

*** Mettre fin au massacre**

Des millions de civils se font tuer, amputer, blesser, torturer, déplacer sous les yeux d'une communauté internationale qui n'intervient pas pour mettre fin à la boucherie. C'est ce dur constat qui ressort du nouveau rapport annuel d'Amnistie internationale, rendu public aujourd'hui partout dans le monde. «La réponse internationale est une honte. Pourtant, nous ne sommes pas impuissants», dit le secrétaire général de l'organisation, Salil Shetty. Résumé des points saillants de ce document de plus de 500 pages en sept recommandations. (…)Le rapport d'Amnistie n'épargne pas le Canada, notamment à l'égard des droits des autochtones. «Il faudrait écouter ce que le rapporteur spécial des Nations unies a à dire là-dessus. Il parle d'une crise. Il faut mettre en place une commission d'enquête sur les disparitions de femmes autochtones. Il y a un vrai problème de violence contre les femmes autochtones. On leur doit au moins de les écouter !», fait valoir Béatrice Vaugrante. La Presse (Le Quotidien, 40, Le Soleil)

*** The power of pink**

Feb. 25 is Pink Shirt Day, a day when everyone is encouraged to wear something pink to show a united front against bullying. Pink Shirt Day originated with Nova Scotia high school students, who organized a protest to wear pink in sympathy with a Grade 9 boy who was being bullied for wearing a pink shirt. At least 1 in 3 adolescent students in Canada have reported being bullied recently. 47% of Canadian parents report having a child who is a victim of bullying. 7% of adult (18+) Internet users report they have

experienced cyber-bullying at some point in their life. QMI Agency (Winnipeg Sun, 25, Calgary Sun, Edmonton Sun, Kingston Whig-Standard)

*** Premier Greg Selinger gets earful from First Nations leaders**
Manitoba Premier Greg Selinger faced sharp criticism on Tuesday at the Assembly of Manitoba Chiefs' annual general assembly of chiefs at Brokenhead Ojibway First Nation. Selinger was there for three hours to talk about the province's progress implementing the recommendations from the Phoenix Sinclair inquiry and to take questions from the First Nations leaders. But some chiefs were unhappy Selinger limited the number of questions chiefs could ask. ?O-Pipon-Na-Piwin Cree Nation Chief Chris Baker of South Indian Lake said he was not happy the premier was there for such a short period of time. He said he would have liked Selinger to hear more of what the chiefs had to say at the general assembly, but he also wanted a separate meeting over a full day or two with the premier and his cabinet to discuss poverty, social issues, and Manitoba Hydro concerns. "The resources that are being extracted and taken away from us, and the opportunities, the training and the education that we talk about - why can't we sit down and get a commitment from the province?" Baker said at the meeting. Selinger agreed to further meetings with the chiefs involving his cabinet. Manto Sipi Cree Nation Chief Michael Yellowback voiced his concerns about the province taking over the band constable program. Federal funding for the program runs out in April. CBC News

Canadian military trainers ordered to leave region threatened by Boko Haram
Canadian special-forces soldiers providing counterterrorism training in Niger have been forced to pack up from a border region and relocate to another part of the African country in order to stay out of the way of fighting between Boko Haram extremists and government troops. At the same time, the Canadian military says it stands ready to step up its role in Niger if Ottawa decides to send aid. The government of Niger, a poor desert country, recently declared a state of emergency in the border region of Diffa after a number of attacks by Boko Haram, an Islamist terror group. Troops from Canada are training African counterparts in shooting, communications and mission planning - skills they could use in order to combat groups such as Boko Haram, which controls more than 50,000 square kilometres of territory in western Africa and is destabilizing the region. The operations are being conducted as part of an annual U.S.sponsored military exercise called Flintlock, which this year began in February and runs until March 9. Globe and Mail, A3

INTERNATIONAL / INTERNATIONAL

Extremists kidnap at least 70 Christians in Syria
The Islamic State militants struck before dawn, staging house-to-house raids in a cluster of villages nestled along the Khabur River in northeastern Syria. They abducted at least 70 Christians - many of them women and children - while thousands of others fled to safer areas. The captives' fate was unclear Tuesday, a day after they were seized, and relatives said mobile phone service was cut off and land lines also were not going through, adding to the fear and uncertainty about their loved ones. Heavy fighting was reported in the area. The Islamic State group has a history of killing captives, including foreign journalists, Syrian soldiers and Kurdish militiamen. Most recently, militants in Libya affiliated with the extremist group released a video showing the beheading of 21 Egyptian Christians. The group's bloody campaign in Syria and Iraq, where it seeks to form a self-styled caliphate, has repeatedly targeted religious minorities since it took control of a third of both countries. The United States and a coalition of regional partners are conducting airstrikes against the group. Associated Press (Chronicle-Herald, A14,

MINISTER / MINISTRE

Debate urged on changes to secretive 'no-fly list'
Much of the recent analysis of the Conservative government's controversial anti-terror legislation has focused on extending investigative powers to Canada's spy agency. But critics say there's another part of Bill C-51 that has been largely overlooked, though equally troubling: the overhaul of the secretive "nofly list." Here's a look at how someone gets flagged under the Passenger Protect Program, how the process would change under Bill C-51, and why some observers are sounding the alarm. Q: How does someone get on the list now? A: A person is added to the list if there are "reasonable grounds to suspect" they pose a threat to aviation security. According to internal guidelines, this could include someone who is believed to be involved in a terrorist group that has threatened aviation security in the past or may do so in the future, as well as someone who is believed to be capable of violence and may have a motive to harm people on a plane. Senior police, intelligence, border and transportation officials meet every 30 days to review names and make recommendations to the **public safety minister**, who has the final say over the list. The list is passed on to air carriers. If someone on the list tries to board a plane, the transport minister (or designate) is notified. If the person is deemed to pose an "immediate threat," the minister can issue an emergency direction to stop that person from boarding. That person can challenge the decision by writing to the Office of Reconsideration, which will review the case and make a recommendation to the **public safety minister**. Q: What would change under Bill C-51? A: People don't necessarily have to pose a threat to the plane itself. They can be added to the list if there are reasonable grounds to suspect they are travelling to commit a terrorist act abroad. (This criterion was likely added in response to the many Canadians who have gone overseas to join ISIL militants). If they show up at the airport, it now falls on the **public safety minister** (or designate) to decide whether to stop them from boarding or have them

undergo extra screening. There is no mention of having to determine whether they pose an "immediate threat." Postmedia News, A15 (Edmonton Journal, National Post, Leader-Post, Windsor Star, Montreal Gazette, The Province, Vancouver Sun)

Ottawa seeking new prison watchdog
Ottawa is searching for a new prison ombudsman after refusing to extend the contract for the current Correctional Investigator for Canada beyond one year. Howard Sapers, who has held the position for eleven years and been a vocal critic of the Harper government's treatment of mentally ill and Aboriginal inmates, as well as the use of solitary confinement, was recently told he would remain on the job only until a replacement was found. Sapers had told **Public Safety Minister Stephen Blaney** over a year ago that he would like to remain in his role for another term, which is typically three or four years. Canada's prior ombudsman held the position for 25 years. But Sapers' fate was unknown with just hours to go before his term expired on March 31, when **Blaney** made a recommendation that he would stay on - but only temporarily. "Reappointing me for up to one year without giving me, or my organization, any certainty about the length of the term is a little destabilizing," Sapers said in an interview with the Toronto Star. "It's very hard to be a small, independent agency trying to hold a large government department to account. The role of this agency should be nurtured and supported and this is not the way to support that role." Liberal Public Safety Critic Wayne Easter said keeping Sapers "in limbo" will impact the work of his department and accused the Harper government of playing politics with a vital oversight role. "He's absolutely right. When your chief executive officer, so to speak if you're talking about a business, is in limbo, it doesn't only effect the person, it effects your whole establishment," Easter said. Toronto Star, A6

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Lac-Mégantic revit à La petite séduction**
Lac-Mégantic a vécu pire que l'enfer le 6 juillet 2013. L'émission La petite séduction qui y a été tournée l'automne dernier pour ouvrir la 10e saison n'est pourtant pas la plus larmoyante que j'ai vue de cette série. On ne se remet pas aussi vite d'une telle tragédie, mais on sent un tel sentiment de reconnaissance et ce besoin de revivre chez les citoyens. C'est d'ailleurs pour remercier le Québec tout entier que les Méganticois ont voulu recevoir l'équipe de Dany Turcotte, dans cette émission diffusée mercredi à 20h sur ICI Radio-Canada Télé, mais déjà accessible dans une version allongée sur ICI Tou.tv. A cette occasion, on a ramené cinq invités vedettes, accompagnés de citoyens des villes et des villages qui les avaient reçus lors de précédentes émissions de La petite séduction. «Je ne peux même pas m'imaginer qu'il y avait là un centre-ville», affirme Pénélope McQuade en marchant le long de l'immense trou où se trouvait le coeur de Lac-Mégantic, il y a à peine deux ans. Guylaine Tremblay, Anne Casabonne, Rémy Girard et Vincent Vallières ont aussi voulu apporter leur appui à la population. Le Soleil, 32

*** L'assemblée des créanciers remise**
L'assemblée des créanciers pour la faillite de la Montreal, Maine & Atlantic (MMA) sera retardée. Initialement prévue pour le 27 mai prochain dans la requête qui avait été déposée au dossier de la cour, cette assemblée cruciale pour la mise en place du plan de dédommagement de 293 millions $ des victimes du déraillement du 6 juillet 2013 à Lac-Mégantic sera remise à plus tard. « La date du 27 mai prochain devient très difficile pour la tenue de l'assemblée avec les créanciers. Les réunions d'information seront aussi retardées. Nous espérons que le débat supplémentaire ne retardera pas le processus de plus de deux semaines », explique l'avocat de la MMA, Me Patrice Benoit qui tient à ce que l'assemblée des créanciers de la MMA se déroule avant les vacances estivales. Les avocats du recours collectif, qui font partie des créanciers de la MMA, se sont opposés hier au palais de justice de Sherbrooke au plan d'arrangement avec les créanciers déposé par le contrôleur de la faillite Richter. Les représentants des victimes du 6 juillet veulent déposer un plan d'arrangement avec les créanciers alternatif à l'offre faite par le contrôleur de la faillite de la MMA. La Tribune, 5

*** Grosse foule pour le recours collectif**
Il aurait fallu une salle deux fois plus grande que celle du Pavillon Fernand-Grenier, du parc de l'OTJ de Lac-Mégantic, où avait lieu, mardi soir, la réunion d'information sur l'état de situation du recours collectif

des victimes de la tragédie du 6 juillet 2013. Les 150 chaises prévues ont en effet été occupées très rapidement et à peu près le même nombre de personnes ont dû rester debout ou n'ont pu pénétrer dans la salle bondée. L'avocat Daniel Larochelle a animé la rencontre, à l'aide d'un montage PowerPoint, flanqué de ses avocats associés au recours collectif, Joel Rochon et Jeff Orenstein. Il a commencé par l'énumération des démarches effectuées depuis septembre 2013, soit les recherches pour identifier une quarantaine de compagnies parties prenantes à la poursuite, l'entente avec une majorité de ces compagnies qui ont décidé de contribuer dès maintenant dans le cadre du plan d'arrangement de la MMA, plutôt que d'être poursuivies au Canada et aux États-Unis ultérieurement, puis les comparutions à la Cour supérieure du Québec, à Sherbrooke. La Tribune, 4

*** Des Méganticois encore affectés**

Les avocats responsables du recours collectif ne veulent pas minimiser les dommages psychosociaux subis par les citoyens de Lac-Mégantic et encore ressentis, plus de 21 mois après la tragédie de juillet 2013. « J'émets certaines réserves concernant le plan d'arrangement proposé : les sommes allouées pour les personnes souffrant de troubles psychologiques sont limitées et ma crainte est que le plan sous-estime grandement l'ampleur des dommages de ce groupe très vulnérable », a déclaré Me Daniel Larochelle lors de la réunion d'information. D'ailleurs, à la période de questions, un pompier de Lac-Mégantic a témoigné de son besoin récent de consulter l'Équipe psychosociale de rétablissement, sur le tard, et se questionnait sur la possibilité d'une réévaluation de son état de santé, car il n'avait pas présenté de demande de dédommagement plus tôt après la tragédie. « On travaille encore régulièrement dans la zone rouge, nous avons encore les images de la tragédie dans la tête, je la vis encore à tous les jours », a-t-il avoué. La Tribune, 4

*** Surveillance du fleuve - l'OMU sur un pied d'alerte**

L'Organisation des mesures d'urgence du Nouveau-Brunswick (OMU) a haussé d'un cran la surveillance des différents cours d'eau de la province en raison des températures chaudes et des averses enregistrées à travers la province au cours des derniers jours. Selon l'OMU, les températures prévues, combinées aux récentes précipitations, demeurent propices à la fonte de la neige accumulée et à une détérioration des glaces dans toutes les régions. Les débits et les niveaux d'eau devraient augmenter dans l'ensemble du bassin, et les risques de mouvement des glaces seront élevés le long du fleuve Saint-Jean, et dans les autres réseaux au cours des prochains jours, indique l'OMU. Toujours selon l'organisation, le mouvement des glaces pourrait provoquer des embâcles et ainsi causer des inondations. «On vient de franchir une autre étape dans la saison de surveillance du fleuve», admet Sheila Lagacé, porte-parole de l'organisation des mesures d'urgence. L'Acadie nouvelle, 8; Telegraph-Journal; CBC News

*** Resident fights to save home from flooding**

Of all the properties in the RM of Cupar dealing with spring flooding, Bill McCallum's has been hit the hardest. McCallum, who has lived in the area for 21 years, is now doing everything he can to keep the water from reaching his house alongside Highway 6 just south of the town of Southey. Clay has been brought in to build berms all around the home, and an additional line of sandbags has been put in place - but some of the damage has already been done, and the water is four feet deep in one area outside the temporary wall surrounding his home. "I own out to that north tree line," McCallum said, pointing to a group of trees a few feet away from his house. "We're going to wind up, I suspect, with that entire tree line gone ... It's kind of devastating, actually." Around him, bulldozers moved dirt and clay to increase the height of the berms surrounding his land from five feet to seven feet. "Hopefully it will remain safe, but we don't know at this point," he said. Most of the flooding is occurring along a 50-kilometre stretch of Highway 22 from Earl Grey to Dysart. Star-Phoenix, B6

*** Spill response not 'world class'**

An opinion piece states "When is an oil spill not merely an oil spill? When it happens in English Bay, that's when. The debacle last week in Vancouver's harbour, caused by a foreign grain carrier, will have huge implications for billions of dollars in proposed pipeline investments as well as Ottawa's strategy for exporting the country's energy resources. The future of the Northern Gateway pipeline and expansion of the Trans Mountain line depend on their respective sponsoring companies gaining social licence for such infrastructure, which was elusive even before the MV Marathassa spewed bunker fuel into the waters

around Vancouver. The mishap occurred next to an urban area that is action central for this country's environmental movement. B.C. is home base for a huge posse of environmental activists and the only province that has elected Green party politicians. It is a place where seabirds and wildlife have exalted status, and where livability is king... With so much riding on British Columbians having confidence in both industry and government to be prepared and fully equipped for an oil spill, it is unfortunate that last week's accident caught all parties with their pants down. The public, for the most part, has no idea about respectable emergency response times and practices for an oil spill, so it was left to authorities to put on a competent, co-ordinated and reassuring display. Everyone has known for some time how much is riding on such a professional response. And while it might be a challenge to demonstrate alacrity and efficiency on a remote stretch of B.C. coastline, a quick and able response would be absolutely expected right in Vancouver's harbour. Yet the feds, the province and the city of Vancouver blew it, in unison." Vancouver Sun (Calgary Herald, C4)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Deux jeunes arrêtés

Deux jeunes ont été arrêtés à Montréal par la police canadienne qui craignait qu'ils ne commettent une infraction liée au "terrorisme", a annoncé mercredi la chaîne publique Radio-Canada. El Mahdi Jamali, jeune homme de 18 ans, et Sabrine Djaermane, elle aussi du même âge, ont été incarcérés à la suite de l'opposition du ministère public à leur remise en liberté. La Gendarmerie royale du Canada n'a pas dévoilé les motifs de leur arrestation, mais l'enquête se poursuit et pourrait mener à leur inculpation. La GRC "craint qu'ils ne commettent une infraction liée au terrorisme", a rapporté la radio-TV publique canadienne sur son site. Selon la chaîne, El Mahdi Jamali et Sabrine Djaermane étudient au Collège de Maisonneuve à Montréal. C'est ce même lycée que fréquentaient cinq des sept jeunes, issus de la seconde génération de l'immigration, qui ont embarqué ces derniers mois pour Istanbul afin de rallier les combattants du groupe État islamique en Syrie, selon les témoignages de certains parents. Une responsable de l'institution scolaire n'a pas été en mesure de confirmer si les jeunes se connaissaient. Le Quotidien, 36; La Presse (Le Soleil, Le Nouvelliste, La Voix de l'Est, Le Devoir); Journal de Montréal (Journal de Québec) Toronto Star

Slamming the door on the snoopers

The first thing revealed by U.S. National Security Agency (NSA) contractor-turned-whistle blower Edward Snowden was a government program that collects records of every single phone call made in the United States. That program could soon come to an end, unless both houses of Congress vote to reauthorize Section 215 of the Patriot Act before the June 1 deadline. But given that we now know the U.S. government, and its "Five Eyes" allies (including Canada), have also been vacuuming up just about every piece of information that's sent over the Internet, allowing Sec. 215 to expire will barely make a dent in the massive surveillance state that Snowden revealed. Interestingly, recent polling data suggests that people have changed their online behaviour after learning that Big Brother is watching everything they do. Y et most people have still not adopted the technologies that would actually prevent governments from spying on them. According to a recent poll conducted by Amnesty International, 19 per cent of Canadians, and 21 per cent of Americans, say they are less likely to search for "personally sensitive or confidential information" online, since they learned about the surveillance programs. Another poll conducted by the Pew Research Center in the U.S. reveals that 25 per cent of those who were aware of the surveillance programs had changed the way they use computers and mobile phones. Others have taken some steps to increase the security of their online communications, such as using more secure passwords. National Post, A12

'Terrorism has no borders'

India's prime minister says last October's attack on Parliament Hill was a violation of a "temple" of democracy that was felt by free countries around the world. Narendra Modi made an impassioned plea for greater international co-operation in the fight against terrorism, standing next to Prime Minister Stephen Harper not far from the corridor where the attack took place. Modi called on the United Nations to use its 70th anniversary this year to adopt a draft treaty, several years in the works, which would formally criminalize terrorism, and deny access to money and weapons. Harper says Canada and India will

continue to deepen their partnership on matters of national security. Remarks about the Oct. 22 attack are becoming a regular feature for visiting foreign leaders after they and Harper stroll the Hall of Honour, where gunman Michael Zehaf Bibeau died in a hail of gunfire. The pair addressed the media in the grand Reading Room, the spot where the prime minister and his Conservative caucus took refuge while the gunfight raged outside the door. "We have been victims of this, and now the whole world is undergoing this, and everyone feels now that terrorism has no borders, it has no form," Modi said. "This attack on the temple of democracy was not just against Canada, it was an attack on human values. We have to come together, and we have to fight against terrorism." Cape Breton Post, A9 (Charlottetown Guardian, Times Colonist)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

American man to be deported again
An American man who has repeatedly snuck across the border into Canada is to be deported once again after being sentenced Wednesday in an Edmonton court. Giovanni Stoll, 33, was handed a nine month jail term, which was deemed already served by time spent in pre-trial custody, after pleading guilty to two offences under the Immigration and Refugee Protection Act (IRPA). Provincial Court Judge Donna Groves said it is frustrating that Stoll keeps sneaking across the Canadian border and she joked "tongue-in-cheek" that maybe a tracking chip should be implanted inside his body. Federal prosecutor Moira Vane told court that Stoll was nabbed by the RCMP while driving a stolen car in Evansburg, 100 km west of Edmonton, on Sept. 27, 2014. Court heard the Mounties contacted the Canada Border Services Agency (CBSA) and learned Stoll had actually been deported back to the U.S. from Quebec 11 days earlier and he was here yet again without being granted entry. Vane said Stoll's fourth deportation order was issued on Sept. 30, 2014, and the CBSA have been waiting for his court case to end so they can remove him back to the U.S. QMI Agency (Edmonton Sun, Calgary Sun)

Online pharmacy firm targeted by U.S. prosecutors
A mysterious RCMP raid, a secret court file and the latest in a string of multimillion-dollar convictions against U.S. doctors for buying its drugs have thrust a Canadian cross-border pharmacy back into the legal spotlight. The Mounties' recent search of Canada Drugs Ltd. offices comes two years after U.S. authorities accused the Winnipeg firm of organizing a shipment of fake cancer drugs south of the border. The bogus Avastin affair continues to reverberate, as the latest in a string of physicians prosecuted for buying it and other "misbranded" products from Canada Drugs was convicted this month. Robert Walker, a Joplin, Mo., oncologist paid $2 million in fines and restitution. Earlier, U.S. regulators prosecuted one of Canada Drugs' American associates for his part, seizing $4.5 million in land, cash and an Aston Martin sports car, calling the Montana resident a "predatory opportunist." U.S. authorities have never taken legal action against the Canadian company or its lowprofile owner, Kris Thorkelson. But it is almost certain the raid on Canada Drugs' premises last month stemmed from the cancer-drug affair, said Jim Dahl, a retired assistant director of the U.S. Food and Drug Administration (FDA) criminal investigations unit. "I don't think there's any question about it," said Dahl, a director of the pharmaceutical industry-funded Partnership for Safe Medicines. "Their entire business model ... is in violation of U.S. law." It wouldn't be the first time American officials have pursued a Manitoba-based Internet pharmacist, he noted. Andrew Strempler, who sold his RxNorth to Thorkelson, was jailed in 2013 for four years for marketing unapproved and allegedly counterfeit drugs to Americans. A Canada Drugs spokesman could not be reached for comment. The RCMP investigation is the latest twist for a surprising boom-and-bust industry that emerged on the Prairies in the early 2000s. By the middle of the past decade, Internet pharmacies based largely in Manitoba earned hundreds of millions a year, selling cheaper products to Americans, who face the world's highest prices for prescription drugs. The boom eventually waned, partly because of supply problems. Postmedia (Vancouver Sun, B2, Windsor Star, Leader-Post, Montreal Gazette, Calgary Herald, Ottawa Citizen, Edmonton Journal, National Post, The Province)

Accused fraudster denied bail
A man accused of defrauding a Regina business of more than $800,000 has been denied bail. Richard Dale Johnston launched a bail application at Regina Provincial Court last week. Judge Anna Crugnale-Reid reserved her decision until Wednesday, when she ordered the 55-year-old held in custody until his

charges are dealt with. Details of evidence heard at the hearing, as well as the reasons for the judge's decision, can't be reported because of a publication ban, which is routinely imposed at bail hearings. Johnston faces charges of fraud over $5,000, theft over $5,000 and laundering proceeds of crime. (…)Charges were officially laid last April, although Johnston was not immediately arrested since he was reportedly living in the Dominican Republic. An arrest warrant was issued and by working with Interpol, RCMP were able to obtain authorization that allows authorities to locate an accused person and secure an arrest for the purposes of extradition. Johnston was subsequently arrested by members of Interpol last month in the Puerto Plata area and deported back to Canada. Postmedia (Star Phoenix A7, Leader-Post)

U.S. officials, Royal Canadian Navy to announce details of record drug seizures from recent operation

A news conference is planned for Thursday morning in San Diego, California to outline the amount of drugs seized by U.S. Navy and Coast Guard vessels and Royal Canadian Navy ships. (…)Coast Guardsmen operating from cutters, U.S. Navy ships and Royal Canadian Navy coastal defence vessels have seized more than 56,000 pounds of cocaine worth over $848 million wholesale and apprehended more than 101 suspected smugglers making this the most successful fiscal year for counter drug operations in the Eastern Pacific since 2009. (The U.S. government's fiscal year runs from Oct. 1 to Sept. 30.) Numerous U.S. agencies from the Departments of Defense, Justice and Homeland Security are involved in the effort to combat transnational organized crime including the Coast Guard, U.S. Navy, Customs and Border Protection, FBI, DEA, ICE, U.S. Attorney's Offices in California, Florida and Puerto Rico, and U.S. intelligence agencies. The Royal Canadian Navy also continues to play an important role in counter drug operations. The fight against transnational organized crime networks in the Eastern Pacific requires interagency and international unity of effort in all phases from intelligence to detection and monitoring to interdiction and to prosecution. Ottawa Citizen

40 years since end of Vietnam War, U.S. draft dodgers left their mark in Canada

When 22-year-old Bill King returned home to Indiana in 1968 to visit his parents after a stint as Janis Joplin's music director, the FBI was there waiting for him. King's father, a Second World War veteran who landed at Normandy, helped negotiate a deal with the agents, who had been travelling around the United States looking for Vietnam War draft dodgers. "If I agreed to go in the military, (the FBI) agreed to drop the charges of draft evasion," King, 68, said in an interview from Toronto ahead of the 40th anniversary of the end of the war on April 30. King spent the next 10 months at two army bases before fleeing the night before he was to be sent off to Vietnam. He then hitchhiked to Canada, joining thousands of other draft dodgers between 1965 and 1975 who made the journey north of the border. While it is still unclear how many men and women sought sanctuary in Canada the country labelled draft dodgers as immigrants, as opposed to refugees the federal government estimates up to 40,000 made the journey. Most stayed after the war, "making up the largest, best-educated group this country ever received," says an archived report on the Citizenship and Immigration website. The Guardian

*** Teen forced into sex trade**

Two men are facing a string of charges following a human trafficking investigation in which police continue to look for a third suspect. Police say that a 17-yearold girl was allegedly forced into the sex trade and taken to hotels throughout the Greater Toronto Area where she was forced to work in the sex trade over about three months. Police say when the girl tried to dissociate herself from those people, they threatened her family's safety. Deshawn Holmes, 19, has been arrested and faces six charges that include trafficking in persons under 18 by exercising control, and criminal harassment. Nathan Turnbull, 19, has been arrested and faces four charges that include procuring a person under 18 years and uttering threats. Postmedia (Vancouver Sun, B7)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Cyberattaque au Conseil de recherches**

Le temps ne s'arrête pour personne, mais des pirates informatiques ont tenté mettre en panne le service du Conseil national de recherches (CNRC) qui synchronise les horloges des ordinateurs. Le service NTP, pour Network Time Protocol, ou protocole de diffusion du temps en réseau, du conseil fédéral a été visé

par deux attaques par déni de service distribué l'an dernier, révèlent des documents obtenus en vertu de la Loi sur l'accès à l'information. Une note interne blâme «les Chinois» pour au moins une des tentatives d'attaque. Ces attaques ont été révélées moins d'un an après que le CNRC a été victime d'une cyberintrusion qui a paralysé durant des mois le système de technologie de l'information principal de l'agence. Le Canada avait alors, pour une rare fois, blâmé un groupe hautement sophistiqué soutenu par l'État chinois d'avoir perpétré cette attaque en juillet 2014. Pékin a nié toute implication et reproché au Canada de faire des accusations irresponsables. Malgré cela, le Conseil national de recherches a tout de même relié l'attaque informatique de son horloge à la Chine. Presse canadienne (Le Droit, 16)

*** Governments must join fight against digital spying, think tank says**
An elite international group dedicated to preserving the Internet's free and unfettered qualities is calling for "a new global social compact" to counter the growing threats of digital spying and large-scale data theft. "It is now essential that governments, collaborating with all other stakeholders, take steps to build confidence that the right to privacy of all people is respected on the Internet," said a report released Wednesday by the Global Commission on Internet Governance, an independent body led by former Swedish prime minister Carl Bildt and whose members include former U.S. Homeland Security secretary Michael Chertoff and Angel Gurria, secretarygeneral of the Organization for Economic Co-operation and Development. The report by the commission - formed a year ago by two independent think tanks, Chatham House of Britain and Waterloo, Ont.-based Centre for International Governance Innovation - is intended to influence an ongoing global debate about how to counter the threats of an increasingly interconnected world. Data thieves have consistently kept ahead of companies and governments in fettering out confidential data, while government-sponsored cyberspying has been exposed as a widespread practice. Meanwhile, many individuals are still not heeding basic warnings for how to protect themselves online from data raiders. A report this week by Verizon Enterprise Solutions found nearly one in four people open "phishing" messages intended to trick them into revealing confidential information such as their passwords, while one in nine click on attachments inside the e-mails that can wreak havoc on their computer systems. Globe and Mail, B6

LAW ENFORCEMENT / APPLICATION DE LA LOI

Metro police swamped by gun calls
Several times each month, Codiac Regional RCMP respond in a "robust manner" to calls where someone thinks someone else is carrying a gun and a grudge. The spike in gun calls and the extraordinary police responses took root in the days following the murders of three Codiac members and the wounding of two others last June. And as long as the calls continue, a senior officer said Wednesday, police will respond to them in great numbers and with all of the resources at their disposal. "We have had, I would estimate, about 15 calls in the last three or four months where young people are walking the streets with either real guns or imitation guns," Insp. Jamie George told the monthly meeting of the Codiac Regional Policing Authority. The Mounties' responses to these calls have attracted a lot of attention in Metro Moncton, with neighbourhoods blockaded, police dogs brought in, most if not all officers on duty rushing to the scene clad in superior body armour and toting rifles or shotguns, all followed by a meticulous operation to bring the person of interest under police control until officers can sort out the situation. Only sometimes is a real firearm is involved, but as authority chairman Nick LeBlanc pointed out in an interview outside the meeting, that's never obvious to officers until after the fact. "So you have to (properly) answer every one of those calls," LeBlanc, a retired career officer, explained. The consequences of not doing so could prove ominous, he said, should the call turn out to be a disturbed individual with an agenda to create mayhem. Times & Transcript, A1

Ex-Saskatchewan police chief in running for Toronto's top job
A trailblazing former police chief from Saskatchewan is the wildcard contender to become Toronto's next chief, The Globe and Mail has learned. Dale McFee may not be a household name in Canada's largest city, but he is nationally recognized and respected in law enforcement. Four years ago, Mr. McFee transplanted a community-based policing model from Glasgow, Scotland, to his force in Prince Albert, Sask. The results have been dramatic, and the program is being replicated across the country - including in Toronto. A source with knowledge of the process said Mr. McFee is being offered as a viable

alternative to the current front-runners, Toronto's Deputy Chief Peter Sloly and Deputy Chief Mark Saunders. Mr. McFee retired from the Prince Albert force to become Saskatchewan's deputy minister of corrections and policing in 2012. He is a past president of the Canadian Association of Chiefs of Police, president of a WHL team and a Métis with strong support in the aboriginal community. That backstory has intrigued Toronto's seven-member civilian oversight board. Chief Bill Blair's contract is up at the end of next week. About half a dozen contenders have been interviewed, and the board hopes to name a successor before the chief's departure. Globe and Mail, A1

NDP wants Dunphy inquiry

Don Dunphy's daughter supports a call for a commission of inquiry into the death of her father, lawyer Erin Breen said Wednesday afternoon. Breen has been representing the Dunphy family after the 59-year-old Mitchells Brook resident was shot in his home by an RNC officer on Easter Sunday. The officer was investigating a perceived threat based on something Dunphy posted on Twitter two days earlier. According to the RCMP, which is investigating the matter, after the RNC officer was invited into the home, Dunphy became agitated and pointed a rifle at the officer, and the RNC officer shot and killed Dunphy. In the 10 days since the shooting, calls for some sort of inquiry have been mounting, and on Wednesday afternoon NDP Leader Earle McCurdy told reporters his party is calling on the government to initiate a commission of inquiry. Breen said Dunphy's daughter is generally supportive of that call, although up until now they're primarily focused on the criminal investigation being conducted by the RCMP. McCurdy said there are questions the police investigation simply cannot answer. "Among other things, it would need to look into the protocols and decision-making processes of the protective security unit, and the relationship between and among that unit, the premier's office, the RNC, the RCMP and the general public," McCurdy said. The Telegram, A1

11 charged in alleged Richmond dial-a-dope ring

Three men are being sought by Richmond RCMP under arrest warrants for their part in a 'dial-a-dope' drug distribution group busted by the detachment's organized crime unit. A total of 11 people were charged with multiple offences, including possession of a controlled substance for the purpose of trafficking and trafficking in a controlled substance. But still at large are: Andrew Weir, 30, of Surrey; Jason Requena-Hurlburt, 21, of Vancouver; and Geoffrey Ambridge, 30, of Calgary. Others charged as members of a drug line that operated in Richmond and Surrey, allegedly selling cocaine, heroin and methamphetamine, are: Patrick Befus, 39, of Victoria; Clay Sidney Crawford, 35, and Jo-Ann Spencer, 51, of Delta; Catherine Jane Pepper, 37, and Travis Pete, 24, of Richmond; and Surrey residents Ashneel Prasad, 30, Alvin Kumar Sharma, 37, and Christopher Lance Silva, 32. The eight-month investigation of the group began in June 2014. Police said deliveries of drugs were made throughout Richmond and Surrey, at locations ranging from residential neighbourhoods to shopping malls and other public venues. Search warrants were executed Jan. at two locations in Richmond and one in Surrey, with officers making eight arrests and seizing drugs packaged for street sale, a single-barrelled shotgun, about $56,000 in Canadian currency and three vehicles, one of which was equipped with a hidden compartment. Postmedia News (the Province)

Four arrested in drug bust near Markerville

Three men and a woman were arrested on Wednesday after police descended on a rural property near Markerville as part of a month-long drug operation. Led by the Priority Crimes Task Force, RCMP from Red Deer, Sylvan Lake and Innisfail detachments and other specialized units executed a search warrant at a property six km north of Markerville about 9 a.m. Police seized undisclosed quantities of drugs, firearms and stolen property during a search of the 130-acre property and various out buildings. RCMP officers remain on scene cataloguing and analyzing seized items. A witness said about 20 police vehicles, including an armoured vehicle, gathered early in the morning and tactical team officers wearing camouflage could be seen going into the property. "They were armed for bear these guys. There's no kidding about that." The property is a quarter section with a large house and several quonset buildings. It has been the scene of numerous suspicious comings and goings over the last couple of years, especially in the last few months. Police said more details on what and how much was seized and the scope of the investigation are expected to be released this afternoon. The names of the suspects and their charges have not yet been released. Priority Crimes Task Force includes officers from Red Deer RCMP general investigative section and Innisfail and Sylvan Lake detachments. Red Deer Advocate, A2

Man accused of posting child porn on Twitter
An 18-year-old Windsor male is facing multiple charges for allegedly uploading child pornography images to his Twitter account. Najm Najm has been charged with eight counts of unlawfully possessing child pornography, eight counts of making child pornography available, and eight counts of unlawfully accessing child pornography. Windsor police said their Internet Child Exploitation unit has been investigating Najm since February, after they were contacted by the RCMP's national co-ordination centre on child exploitation. The RCMP informed ICE members that someone in Windsor was allegedly posting child pornography images on a Twitter account. The ICE unit were eventually able to identify a suspect. The Windsor Star, A2

Tweet results in charge
Andrew Abbass says he is being charged with uttering threats by the RCMP. Abbass met with officers on Tuesday in relation to a post on his Twitter account last week that was seen as a potential threat. The post made on April 6, which was directed at Premier Paul Davis, said, "I'm going to bring down Confederation and have politicians executed. Ready to have me shot, coward?" The next day, he was visited by members of the Royal Newfoundland Constabulary (RNC) and subsequently detained at Western Memorial Regional Hospital under the Mental Health Care and Treatment Act. He was released on Monday, but maintains the detention was unlawful. The Telegram, A5

Man arrested in chase faces list of charges
A 24-year-old man accused of stealing a vehicle and leading police on a lengthy chase through Highlands and the Saanich Peninsula is facing a host of charges, including resisting arrest, assaulting a police officer and carrying a concealed weapon. Kenneth Johannes Donald Brens was arrested Tuesday after he allegedly stole a bright green Jeep Cherokee from a home on York Ridge Place in Highlands, then escaped as police tried to stop him. Four police departments - West Shore RCMP, Sidney/North Saanich RCMP and Saanich and Central Saanich police - were involved in the chase around Willis Point and Ross Durrance roads. Times Colonist, A4

Lacombe adds $400,000 to police station project
Lacombe city council has dipped into last year's surplus to cover a nearly $400,000 increase in cost of building a new police station. The city had set aside $8 million in its budget for the new facility. But after detailed design work was done, the bill came in at about $8.9 million. About $537,000 was trimmed by the police facility design committee and its architectural and cost consultants to leave $391,600 unfunded. On Monday night, city council approved transferring that amount from the surplus and to go ahead with tendering the station. Red Deer Advocate, C2

*** Yellowknife RCMP officer touts benefits of out-of-court system**
A Yellowknife RCMP member is touring various detachments in the N.W.T. to encourage other members to use an alternative method of policing, one designed to keep certain cases out of the court system and keep people from getting criminal records. "Charging offenders is not the only option out there," says Cpl. Jason Doucet, a restorative justice officer with the RCMP. "We should also be about second chances." Doucet is a practitioner of alternative justice, a system in which, in lieu of court proceedings, an offender meets a justice committee made up of residents from the offender's community. The committee members, as well as the victim, speak out about how the offender's crime has affected the community. Then the committee recommends a remedy for the offender, which can range from a letter of apology to community service. "Let them deal with the problems and some of the offences and try to find a result so that it doesn't happen anymore - that's the road we're onto," says Doucet. It's a system that Doucet admits has been met with some skepticism from other officers who fear offenders are being let off easy, and is not as well known among senior officers. But the method does not override the usual investigative process, Doucet stresses. "We have to investigate the matter right to the end, need to have enough information to take it to court before we can do a diversion," he says. "And the offender has to agree to the diversion process." CBC News

*** RCMP needs to be more visible, Codiac policing authority told**
A retired member of the the Codiac RCMP thinks more needs to be done to improve police visibility,

staffing, and transparency in the region. Terry McKee appeared in front of a monthly meeting of the Codiac Regional Policing Authority, which oversees policing in Moncton, Dieppe and Riverview. McKee used the five minutes allotted to him as a member of the public to detail issues he has with policing in the Codiac region. A lack of police visibility in the region is one of his concerns. "No one sees a patrol car in their neighbourhood, unless the police are tending to a call," said McKee, pointing out many people he knows have echoed his concerns. McKee said he thinks the lack of visibility is a result of inadequate staffing and that it gives people more opportunities to commit crimes. However, Moncton Coun. Charles Leger, who is a member of the policing authority, said that just because someone isn't seeing RCMP patrols, it doesn't mean they're not there. "I do believe there is a difference too as I mentioned between visually seeing something, versus not knowing whether or not a police vehicle for example was in my community," said Leger. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Coroner's inquest makes recommendations to Correctional Services Canada**
Nearly two years after an in-mate committed suicide at a BC prison, we're learning more about how his death may have been prevented. Jesse Lahn was serving time for kidnapping and armed robbery when he hanged himself in May of 2013. The 33-year old was only a few months shy of completing his sentence at Agassiz's Kent Institution. A three-day inquest in Burnaby has wrapped up with the coroner's jury making four non-binding recommendations to Correctional Services Canada. They include more frequent checks on prisoners, better designing cells to prevent hangings, improving mental health support and increased video surveillance. CKNW

Pointe-Claire pedophile has parole revoked
A Pointe-Claire man who was recently released to a halfway house while he continues to serve a 10-year sentence for sexually assaulting a young girl and posting images of the abuse on the Internet has been returned behind bars, in part because he corresponded with other pedophiles during his parole.
The Parole Board of Canada revoked Richard Reber's day parole after a recent hearing. According to a written summary of the decision, Reber was given warnings to be more transparent with his parole officers and to find a more positive social network before being returned to a penitentiary. (...) Within three weeks of his release, Reber visited a relative's home and three girls happened to be present at the same time. Nothing happened but one of the conditions Reber was ordered to follow required that he not be in the presence of minors unless they were accompanied by an adult aware of his criminal record and authorized by Correctional Service Canada. Montreal Gazette, A5

Cuts hurt victims and offenders
An editorial states, "When it comes to crime, the federal Conservatives have tried to carve out a moral high ground. Victims and public safety must be defended at all costs, they insist. Conservatives have championed mandatory minimums and made dozens of changes to the Criminal Code. Life should mean life, they've insisted, ignoring experts who worry about an inflexible, retributive justice system. That's why it's frustrating the feds quietly withdrew funding last month for Circles of Support and Accountability, a volunteer program targeting high-risk sex offenders released after their sentences expire. Studies have shown the model is remarkably effective. The latest federally commissioned evaluation estimates CoSA reduces rates of sexual offences by 92.8 per cent in the first three years, 74.5 per cent over five and 67 over 10 years. For every tax dollar invested, roughly $4.60 is saved in costs to emergency services and justice." Vancouver Sun, B8

Crash sends paroled murderer back to jail
A man sentenced to life in jail for shooting dead the flamboyant owner of the Penthouse strip club 32 years ago in one of Vancouver's most sensational murder cases has been sent back to jail after drinking alcohol and driving while impaired. Scott Forsyth, 56, was convicted of firstdegree murder and jailed in 1984 for shooting Joe Phillipponi, 70, in the head after drinking with him at the nightclub's Seymour Street office on Sept. 18, 1983. Forsyth had stolen $1,084 from the club's safe. At trial, he confessed and testified that Sid Morrisroe, a Burnaby plumber and close friend of Phillipponi, had hatched the murder and robbery plot and supplied the gun. The safe was supposed to contain $1 million. Morrisroe, now 80, who

has always maintained his innocence, was also convicted of first-degree murder and sentenced to life. He was released on full parole in 2002 after serving 19 years. The Province, A12

The Supremes got it right
A letter to the editor states, "Re: Supreme Court's Cunning Rejection, John Ivison, April 15. Yes, mandatory minimums are dumb because they don't deter crime but swell prison populations, especially for youth and minority groups. Our Supremes did the right thing, but unfortunately, the hypothetical example they used was weak. After all, Prime Minister Stephen Harper has granted repeated amnesties to long-gun owners who failed to renew their licences or to register all their weapons, even the owners of semi-automatic rifles, and advised such remiss gun owners to graduate up to restricted gun licences." National Post, A11

* **The Supremes got it right**
A letter to the editor from former MP Inky Mark states, "I've been preaching the same sermon for many years - C-68 criminalizes the lawful gun owner. Harper has broken his election promise to repeal this law many times. Therefore, he sees lawful gun owners as criminals in waiting, and refuses to change the breach of law from felon to misdemeanour. It is cruel and unusual punishment to treat law-abiding gun owners as criminals. Under Section 92 of the Criminal Code, if your paper possession licence is not valid and you are in possession of a gun of any type, you are deemed a felon and have broken the law. The penalty for such a breach could land you in jail for up to 10 years. Lawful gun owners pose zero danger to the public. If this isn't cruel and unusual, then what is?" National Post, A11

Gun ruling misses mark
An editorial states, "Once again, when it comes to gun issues, it feels like the good guys are the villains and the bad guys are the victims. Responsible gun owners are getting sick of it. Heck, average Canadians in general are sick of it. On Tuesday the Supreme Court of Canada ruled that mandatory minimum sentences for gun possession are unconstitutional. The Conservatives instituted a new law that provides a three-year sentence for anyone convicted of unlawfully possessing a prohibited or restricted gun that's loaded or for which ammunition is lying around nearby. That rolls up to a five-year sentence for repeat offenders. Basically, it's a way to lock up the thugs who keep illegal guns handy. Aren't those the people we want to target?" QMI Agency (Ottawa Sun, 14, Toronto Sun, Winnipeg Sun, Calgary Sun)

* **'Judicial activism' isn't killing Harper's crime agenda - Harper is**
An opinion piece states, "If a foolish consistency is the hobgoblin of small minds, the Harper government has been very, very consistent - at least when it comes to crime. The federal Conservatives have reduced criminal justice policy to a simple flow chart. Step one: Promise 'tough on crime' legislation that's easy to sell to the Conservative base. Step two: Table the bill while ignoring the advice of experts (both inside and outside the Justice department) arguing the new law would be both ineffectual *and* unconstitutional. Step three: Cling like grim death to the talking points, at least until step four - when the Supreme Court strikes the law down. Step five: Cry 'judicial activism', then refer to step one. The pattern is always the same; only the bills change. The results speak for themselves - for the Harper government, one defeat after another in the nation's highest court. They've been in power since 2006. They really should be getting better at this by now. This week, the SCC struck down a 2008 law that imposed mandatory minimum sentences for the unlicensed possession of prohibited or restricted firearms." iPolitics

* **Targeting gun law**
A letter to the editor states, "When clearing my late mother's house, I came across an army officer's 45-calibre six-shooter revolver, complete with ammunition, from the Second World War. When I told our daughter, a Crown prosecutor, that I planned to take it to our local police station for disposal, she insisted that I not dare exit the house with it, but instead immediately tell the police and ask them to collect it. She explained that carrying the unlicensed gun in public could well result in a lengthy visit to a prison. After a call to the police, two very polite officers very promptly arrived at our front door and departed with the gun and bullets, leaving me behind I'm pleased to say. So I was relieved our Supreme Court has struck down mandatory minimum sentences for gun possession, such that carrying an army six-shooter to the police for disposal would no longer risk an automatic jail term." Globe and Mail, A16

*** Supreme Court did its job killing a sloppy law**
A letter to the editor states, "In typical fashion, some Canadians are reacting with outrage to the Supreme Court's decision striking down the Harper government's mandatory minimum sentencing law relating to gun crimes. The critics should be thanking the top court. Left alone, the badly crafted legislation could ensnare lawful gun owners or those who commit minor infractions such as allowing a licence to lapse. They may have broken the law but they're not armed robbers, gangsters or drug dealers. This legislation was sloppy and deserved to be shot down." Hamilton Spectator, A12

*** Time to concede to charter's trump**
An editorial states, "In yet another monumental slap-down to the Harper government's law-and-order agenda, the Supreme Court has ruled the government's mandatory minimum sentences for gun crimes are unconstitutional. Slapping three- or five-year terms on anyone who transgresses firearm laws risks unfairly, cruelly penalizing some, the court said. It was a clear message to the Tories, who have a penchant for minimum sentences, it's time to curb the enthusiasm for laws that trample core rights in this country." Winnipeg Free Press

*** Unconstitutional mandatory minimums and the role of pandering progressive politicians**
An opinion piece states, "In the wake of the great news that the Supreme Court had ruled that the gun related mandatory minimum sentencing provisions of the Tackling Violent Crime Act were unconstitutional, the decision was widely heralded as a blow to the Harper government's reactionary "get-tough-on-crime": agenda by both the media and progressives. And it is. But it is also a lesson in how reactionary agendas are often built with the aid of pandering "progressives" who capitulate to these narratives out of what are purely cynical and crass electoral considerations." Rabble.ca

Inmate dies at Stony Mountain Institution
A 32-year-old inmate serving time at Stony Mountain Institution for sexual assault and sexual interference has died. Prison officials said Dwayne Mervin Flett was found unresponsive in a living unit at the medium-security jail. Prison staff immediately began performing CPR on Flett upon his discovery and emergency services were called, but prison officials said he could not be resuscitated. Flett had been servince a nearly five-year sentence since May 31, 2011, for sexual assault and sexual interference. Prison officials did not release the cause of death. Winnipeg Sun

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Valley police appeal to community leaders to help quell violence
Police are appealing to Fraser Valley ethnic community leaders and families in an attempt to deal with a new wave of criminalized youth committing acts of violence and turning to the drug trade. Both Surrey RCMP and Abbotsford police have taken the unusual step of issuing public warnings and releasing photographs of some of those involved in an effort to stem the violence. There was more gunfire in Surrey early Wednesday that RCMP believe may be part of the conflict between two groups of young drug dealers of South Asian and Somali descent who have been involved in 20 shootings in the past six weeks. And Abbotsford police are concerned that local gangsters have recruited young men involved in a petty dispute which over several months has escalated to a more serious level of criminality. Abbotsford police co-hosted a forum with the local school board Wednesday night for Punjabi-speaking parents to warn of the risk of gang recruitment in the city. Const. Ian MacDonald said the problem has grown since police first intervened last year between two feuding groups of youth. "It started pretty low-end with property damage, mischief, that sort of thing and then has been escalating to the point where we've got shots fired, stabbings, pretty serious incidents," Mac-Donald said Wednesday. "And now what we've seen over the last few months - which is what we feared - is recruitment of young South Asian men, in particular, into gang lifestyle." ... The Abbotsford forum came a day after Surrey RCMP and Delta police released another eight photographs of young men involved in the conflict who are refusing to cooperate with police even after they've been shot. One of those men contacted The Sun Wednesday, claiming he was being unfairly treated by police and wanted to be interviewed. But he failed to show up at the scheduled meeting. Postmedia News (Vancouver Sun, A1, Edmonton Journal)

Shooting in Surrey fits pattern
Police say public safety is their top concern after another shooting in Surrey, hours after officers revealed that gang rivalry prompted similar incidents. Surrey RCMP received several calls about 1 a.m. Wednesday from witnesses who saw occupants of a red pickup and a grey SUV shooting at each other while driving westbound near a secondary school. Cpl. Bert Paquet said it's too early to say whether the shooting is linked to a recent spate of gunfire in Surrey and nearby Delta, but it's certainly along the same lines. "It's very fortunate that there have been no injuries suffered by innocent bystanders," he said. Mounties said a turf war between groups of people of South Asian and Somali descent is responsible for 11 of the 19 shootings that have unleashed bullets into homes and vehicles in the region east of Vancouver. No one has died in the shootings. Paquet said there were no reports of injuries from the latest round of gunfire and officers are still looking for the vehicles involved. About 12 hours before Wednesday's shooting, Surrey RCMP released the names and photos of victims in some of the shootings. None of the victims is co-operating with police. Police have arrested one person, Delta resident Arman Dhatt, and charged him with 12 firearms and drug trafficking offences. Canadian Press (Times Colonist, A7, The Province, National Post)

Youth, Police hash it out
Students from all across Regina gathered Wednesday to find solutions for some of the issues they're facing every day. Chelsea Almojuela, a Grade 12 student, was one of the 80 attending the Speak Out Regina youth forum at the Campus Regina Public. She said she was excited to be there and share her ideas on how to make schools in the city better. "The school is a really safe place," she said. "It's actually fun and more studying and pursuing your goals or dreams in your life." Still, she admits she has seen bullying take place at her school and it isn't always a stress-free place. "Right now I'm experiencing pressure because I'm going to university (and applying)," she said. Students were given an opportunity to ask questions to representatives from the city, province, school boards and police. Students bravely approached a microphone in a room full of their peers to ask questions such as: "How are schools planning to explore self-identity and help students feel more comfortable with themselves?" and "How are schools dealing with gangs?" Some students raised concerns over how some schools had better reputations than others, while others wanted to know what was being done to help students with mental illnesses. Postmedia News (Calgary Herald, A16, Leader-Post)

*** True crimes, faulty statistics and Aboriginal women**
An opinion piece states, "How the heck did Bernard Valcourt get himself into a fix like this? In a March 20 closed-door meeting with a group of western First Nations band and region chiefs, the federal Aboriginal affairs minister apparently got defensive when the issue of missing and murdered Aboriginal women came up. Valcourt pointed out that an estimated 70 per cent of murders of indigenous women are perpetrated by indigenous men. The chiefs knew that there was no such finding in the RCMP's "operational overview" of the topic issued last year. It was, indeed, a noticeable gap in the report. The RCMP had strongly disavowed any ability or desire to make factual assertions about the racial demographics of a subset of murderers. So the chiefs very understandably asked Valcourt where this number had come from, and the minister was left babbling that he would come up with something. Whatever goodwill had been present in the room was gone. A cynic would say Valcourt had committed a breach of the delicate manners that prevail in face-to-face talks between a minister and the leadership of his clientele. It would be equally valid to say he had failed to show sufficient respect." Maclean's

*** 'Relationships' program for new arrivals could include all NBers**
Let`s talk about healthy relationships and avoid abusive ones. I recently had the opportunity to learn more about a project led by Centre d'accueil et d'accompagnement francophone des immigrants du sud-est (CAFi). This is the 'immigrant settling' service for francophone immigrants arriving in South-East New Brunswick. It's called 'engager les hommes et les garçons à la promotion des relations saines,' or in English 'involving men and boys in the promotion of healthy relationships.' This initiative, which began in February 2013 and was funded by Status of Women Canada, aims to educate and involve men and boys in promoting healthy relationships dynamics between men and women as well as between boys and girls. This project recognizes and tries to address some of the root causes of unhealthy gender dynamics in

relationships that can lead to violence. It makes men and boys part of the solution, discussing, debating and mentoring other men towards healthier relationships. Times & Transcript, A11

*** Crimes decrease in Chatham-Kent**
Chatham-Kent's crime statistics are experiencing a downward trend overall, the police board has been told. Among the numbers for 2014, there were zero murders; one attempted murder, which is up from zero in 2013; 59 sexual assaults, down from 65; 374 assaults, down from 403; 19 robberies, down from 26; 24 weapons cases, down from 37. Criminal harassment cases dropped to 52 from 135. London Free Press, A6

PUBLIC SERVICE / FONCTION PUBLIQUE

L'AFPC lance un message en prévision des élections fédérales de 2015
L'Alliance de la fonction publique du Canada (AFPC) vient de publier une liste de huit enjeux qui devraient influencer le vote de ses 175000 membres, leur rappelant que les élections fédérales de 2015 donnent «une excellente occasion de remettre le pays sur la bonne voie». «Lorsque vous irez voter cette année, n'oubliez pas les compressions imposées par le gouvernement conservateur à nos précieux services publics», lit-on sur le site de l'AFPC. «Il y a eu tellement d'attaques, qu'on ne pourrait pas toutes les nommer. Mais il y a un consensus au niveau syndical à travers le pays. Il n'est pas question de maintenir la tendance» explique Larry Rousseau, vice-président exécutif de l'AFPC pour la région de la capitale nationale. Son syndicat n'a pas l'intention de dire à ses membres comment voter. «Nos membres sont assez intelligents pour tirer la bonne conclusion. On entend ad nauseam que les syndicats disent à leurs membres quoi faire. Mais ce que nous faisons, c'est informer nos membres», a nuancé le dirigeant syndical. Les huit enjeux touchent l'abolition d'emplois et les compressions dans les services publics, les services de garde d'enfants, les modifications à l'assurance emploi, la sécurité de la retraite, les soins de santé, les droits de la personne, l'environnement et les anciens combattants. Le Droit, 31

*** The public's right to know more**
When Canada's Information Commissioner Suzanne Legault tabled her most recent report in Parliament, she must have figured it would be unlikely to be acted upon in the final run of this government. That's in part because we're at a point in the life of this government where it's now a near certainty that no new legislation or law amendment is likely to progress through Parliament that hasn't been promised by the Stephen Harper Conservatives. It's also because this government has demonstrated a lack of commitment to broadening Canada's Access to Information Laws, which Legault was recommending in her latest report, issued last month. In fact, the Harper government's track record on even fostering a greater spirit of access to government information has been awful. This is a government, after all, that pulls things like no-questions-permitted media events such as the one this week in which it disclosed that Canada would be sending military trainers into Ukraine. It's a government that refers Canadians seeking information to try to obtain it through Access to Information requests - seemingly as a matter of policy. Then, it handles those requests in such a way that sees sky-high rates of formal complaints being filed. The complaints are over such things as delays in releasing materials, fees being charged, purportedly unreasonable requests for time extensions and alleged abuse of the exclusion granted to materials deemed "confidential advice to cabinet." Finally, it has impaired the Information Commissioner's ability to handle these complaints by reducing that person's budget by more than 10 per cent. Waterloo Region Record, A12

*** Canadian detained at Cairo airport**
After 558 days in a Cairo jail and three months anxiously awaiting papers that would allow his exit from Egypt, Canadian resident Khaled Al -Qazzaz thought he was flying home to Toronto Thursday. "We have our passports, our clearances and we're trying not to look back, only forward. We want to get our lives

back together," his wife, Sarah Attia, said in a phone interview from Cairo Wednesday. Instead, the family's dream of going home turned into an airport nightmare. When Al-Qazzaz, his wife Sarah Attia and four children aged 4 to 8 arrived at the Cairo airport later in the day, they were stopped by the airport security services, barred from leaving the country, and held without explanation. Toronto Star, A18

MINISTER / MINISTRE

Did Stephen Harper just find his Falklands moment?
An opinion piece statess, "In 1982, the Conservative government of British Prime Minister Margaret Thatcher was in trouble. Three million Britons - one in every eight workers - were out of work. Manufacturing firms shut their doors and the economy slid into a deep recession. Trade unions demanded wage increases and engaged in acts of violence. Critics, including members of Thatcher's own party, accused the PM of being obsessed with cutting public spending instead of supporting ailing industries. Her party was trailing in the polls, an election was looming, and most pundits predicted Thatcher and the Tories would be out of government before long. [...] In response, the office of **Public Safety Minister Stephen Blaney** issued this statement: "***The international jihadist movement has declared war on Canada and our Allies ... No Canadian government should ever stand on the sidelines while our Allies act to deny terrorists a safe haven - an international base - from which they would plot violence against us.***" The remarks echo those issued by Harper after the terrorist attacks on Charlie Hebdo in Paris: "The international jihadist movement has declared war. They have declared war on anybody who does not think and act exactly as they wish they would think and act ... They have declared war on any country like ourselves that values freedom, openness and tolerance." Ipolitics.ca

' Alberta Mountie's sister urges mourners to live life to fullest
The sister of an Alberta Mountie told mourners at his funeral Monday that he would want them to live life the way he did - with joy, with passion and with every effort to make the world a better place. "Over the past 10 days, there has been such an outpouring of stories about Dave and obvious love for him from the

people that he has touched that I have realized he was far more than I ever imagined," Mona Wynn said in her eulogy before thousands at a recreation centre in St. Albert, Alta. "Dave was an ordinary man with an extraordinary capacity to make the world a better place for everyone around him." Const. David Wynn, 42, died last Wednesday, four days after he and auxiliary Const. Derek Bond were shot during a struggle with a suspected car thief at a casino in St. Albert. He was shot in the head and never regained consciousness before he died. An RCMP officer lays the hat of slain RCMP Constable David Wynn, on his casket during his funeral in St. Albert. The shooter, career criminal Shawn Rehn, killed himself hours later. Prime Minister Stephen Harper, left to right, Public Safety Minister Steven Blaney and Health Minister Rona Ambrose attend the funeral for slain RCMP Constable David Wynn, in St. Albert, Alta. Canada.com

Militant calls for attacks on Canadians
Three months after attackers espousing Islamist extremist beliefs killed two Canadian Forces members, Islamic State held them up as role models on Monday in a speech that called for more killings in western countries. In a nine-minute audio clip distributed on Twitter, Islamic State spokesman Abu Muhammad al-Adnani once again urged his followers to attack Canadians over the government's decision to join the anti-Islamic State military coalition. The release came shortly before the Armed Forces acknowledged that Canadian special forces had engaged in two more gun battles against Islamic State. Canadian CF-18s also destroyed Islamic State "fighting positions" on Saturday and Sunday. An apparent attempt to rally his fighters and weaken western resolve, Adnani's speech referred to attacks in Canada, including the Oct. 22 shootings on Parliament Hill, and warned that "what lies ahead will be worse - with Allah's permission." He encouraged extremists in Europe and other "disbelieving" western countries to "target the crusaders in their own lands and wherever they are found." He said to use explosives, guns, knives, cars, rocks "or even a boot or a fist." [...] Asked about Adnani's threat, **Public Safety Minister Steven Blaney** confirmed the government would put legislation before Parliament on Friday that would, among other things, criminalize the promotion of terrorism. "***The international jihadist movement has declared war on Canada and our allies***," said **Blaney**. Postmedia News, A1 (National Post, Calgary Herald, Edmonton Journal, Leader-Post, Vancouver Sun, Montreal Gazette, StarPhoenix, The Province)

Le tireur d'Ottawa glorifié par les djihadistes dans un enregistrement
Un porte-parole du groupe armé État islamique (EI) a glorifié le tireur qui a tué un soldat au Monument commémoratif de guerre du Canada, à Ottawa, en octobre dernier. Dans un enregistrement audio d'une durée de neuf minutes publié hier, Abou Mohammed Al-Adnani a couvert d'éloges les auteurs des récentes attaques en Australie, en Belgique, en France et au Canada. Michael Zehaf Bibeau avait abattu un soldat, avant de se rendre à l'édifice du Centre du Parlement, où il était tombé sous les balles des forces de sécurité. Le porte-parole du groupe extrémiste a encouragé ses auditeurs à prendre exemple sur celui qui s'est attaqué à ce «parlement infidèle», selon lui. Les événements d'Ottawa étaient survenus seulement deux jours après qu'un autre homme ayant des liens avec les djihadistes, Martin Rouleau-Couture, eut tué l'adjudant Patrick Vincent, à Saint-Jean-sur-Richelieu. [...] Réagissant à ce message du groupe EI, le **ministre de la Sécurité publique**, **Steven Blaney**, a affirmé que le mouvement djihadiste international avait déclaré la guerre au Canada et à ses alliés, et que c'est pourquoi le gouvernement avait décidé de participer à la coalition aérienne. Le ministre a aussi mentionné les projets de loi du gouvernement contre «***la promotion du terrorisme***». Le Soleil, 18 (Le Nouvelliste, La Voix de l'Est, La Tribune)

Blaney condamne Les nouvelles menaces de l'ei
Le **ministre de la Sécurité publique**, **Steven Blaney**, a condamné hier les nouvelles menaces du groupe armé État islamique proférées contre l'Occident. Dans un message audio mis en ligne hier, les djihadistes de l'EI appellent leurs partisans en Europe et en Occident à cibler des Occidentaux en se servant de n'importe quelle arme, "que ce soit une bombe artisanale, des balles, un couteau, une voiture piégée, ou le poing", a rapporté l'agence Reuters. Ils ont aussi salué les attentats perpétrés au Canada, en France, en Australie et en Belgique. "Vous n'avez encore rien vu", a prévenu Abou Mohammad al-Adnani, porte-parole de l'EI, dans le message audio, a indiqué l'AFP. Le gouvernement conservateur déposera vendredi aux Communes un projet de loi visant à accroître les pouvoirs des autorités en leur offrant de meilleurs outils pour traquer et stopper les terroristes. Journal de Montréal, 22

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** PREMIER CAS CONFIRMÉ EN COLOMBIE-BRITANNIQUE**
Une femme de Colombie-Britannique a reçu un diagnostic de grippe aviaire H7N9. Elle aurait contracté le virus lors d'un séjour en Chine, dont elle est revenue le 12 janvier dernier, a fait savoir la ministre de la Santé, Rona Ambrose, par voie de communiqué hier. La femme serait hors de danger et récupérerait chez elle, en isolement volontaire. Il n'a pas été nécessaire de l'hospitaliser. Les contacts étroits de la personne ont été identifiés, et leur santé est suivie par les autorités provinciales de santé publique. C'est le premier cas de virus de grippe aviaire de ce type recensé en Amérique du Nord. Selon l'Agence de la santé publique du Canada, le virus H7N9 ne se transmet pas entre humains. Une personne peut cependant le contracter lorsqu'elle entre en contact avec des volailles d'élevage ou sauvages. Journal de Québec, 22 ; Agence France-Presse (Le Nouvelliste, 23) ; Presse Canadienne (La Presse, A10; Voix de l'Est, 20) ; Canadian Press (Hamilton Spectator, A8; Red Deer Advocate, A6; Charlottetown Guardian, A5); Postmedia News (National Post, A5; StarPhoenix, C8; Ottawa Citizen, C1); QMI Agency (Edmonton Sun, 22; Ottawa Sun, 10)

*** « Ce n'est pas une tempête typique »**
Vols suspendus, spectacles annulés, transports en commun arrêtés au moins pour la nuit, New York tournait au ralenti hier soir, frappée par une tempête de neige accompagnée de vents violents affectant des millions d'Américains dans le nord-est des États-Unis.La neige tombait dru hier soir à New York où des centaines de chasse-neige étaient mobilisés contre le blizzard. Le maire Bill de Blasio a appelé la population à sortir le moins possible, et a interdit la circulation de tous les véhicules - sauf véhicules d'urgence - à partir de 23 h, une mesure rarissime. Selon la météo nationale, on prévoyait que la neige tombe durant la nuit au rythme de 5 à 10 cm par heure, avec une accumulation attendue de 60 cm à New York, voire plus en certains endroits, et des bourrasques de 72 à 88 km/heure. « La tempête va s'aggraver durant la nuit », avait annoncé en fin d'après-midi le gouverneur de l'État de New York Andrew Cuomo. Il a annoncé la fermeture du métro, qui fonctionne à New York 24 heures sur 24, à partir de 23 h, pour une durée indéterminée. Agence France-Presse (Voix de l'Est, 2 ; Le Nouvelliste, 10) ; Associated Press (Le Droit, 5 ; Charlottetown Guardian, B4; Chronicle Herald, A14; Hamilton Spectator, A1; National Post, A14; Red Deer Advocate, D3)

*** L'Acadie se prépare à affronter le blizzard**
Une combinaison d'abondantes chutes de neige, de vents de 70 à 90 km/h et une visibilité réduite vont compliquer la vie des Néo-Brunswickois au cours des prochains jours alors qu'une importante tempête hivernale devrait frapper le Nouveau-Brunswick mardi. Selon les avis de blizzard émis lundi matin par Environnement Canada, des accumulations de 15 à 30 centimètres de neige sont attendues sur une large partie de la province. Le tout sera accompagné de forts vents. Ces avis épargnent, pour l'heure, le Nord-Ouest et le Restigouche. L'Acadie Nouvelle, 3

*** Two Vancouver flights cancelled due to eastern storm**
Just two flights from Vancouver were cancelled Monday due to a winter storm that is walloping cities in the Maritimes as well as U.S. cities such as New York, Boston and Philadelphia. Chou said that on Monday, two flights were cancelled out of YVR: an Air Canada flight to Newark, N.J., Monday morning, and a Cathay Pacific flight Monday evening from Vancouver to New York. Vancouver Sun, A6

*** Des répercussions à l'aéroport d'Ottawa**
Une dizaine de vols en provenance ou à destination de New York et de Boston ont été annulés ou retardés à l'aéroport d'Ottawa, en raison d'une tempête de neige qui s'annonçait historique, hier, dans le nord-est des États-Unis. L'Outaouais et l'Est ontarien seront épargnés par ce système météorologique, alors que la région sera toujours frigorifiée, avec des températures atteignant les -27°C, avec le facteur éolien. Selon Environnement Canada, cette tempête ne touchera que les provinces maritimes. La Nouvelle-Écosse, le Nouveau-Brunswick et l'Ile-du-Prince-Édouard s'attendent à recevoir de 15 à 30cm avant que la neige se transforme en pluie dans certains secteurs, en soirée. Le Droit, 5 ; Ottawa Citizen, A3

*** Déneigement «made in USA»**
Des camions à ordures pour déneiger, des citoyens forcés de pelleter les trottoirs: les pratiques de déneigement diffèrent grandement aux États-Unis. Et si les tempêtes de neige y sont moins fréquentes qu'au nord de la frontière, elles sont aussi beaucoup moins coûteuses. Alors qu'une tempête s'annonçant historique souffle sur la côte est américaine, La Presse en profite pour dresser un portrait du déneigement «made in USA». Le déneigement pèse peu sur le budget des villes américaines. La Ville de New York dépense en moyenne à peine 7$ par habitant chaque hiver pour déneiger ses rues. La métropole américaine reçoit toutefois beaucoup moins de neige que Montréal, qui en reçoit près de quatre fois plus. Les quantités de neige tombant sur New York varient énormément d'une année à l'autre. En 2012, la Grosse Pomme avait reçu à peine 25 cm de neige. L'année précédente avait pourtant marqué un record avec des précipitations totalisant 152 cm. A Montréal, il tombe rarement moins de 150 cm. La Presse, A3

*** Island in store for 'long, painful' blizzard**
It was inevitable. A blizzard warning is in effect for Prince Edward Island today as Islanders get set for the first real big blast of winter. Environment Canada's Linda Libby said Monday the system was moving in the Maritimes a lot faster than they thought it would. "It's going to be a long, slow, painful kind of storm," Libby said. Snow is expected to be heavy at times, beginning between 4 a.m. and 6 a.m. today. Charlottetown Guardian, A1; Daily Gleaner, A1; Telegraph-Journal, A1

*** Hydro-Québec envoie 180 employés à Boston**
Hydro-Québec a envoyé près de 180 employés dans la région de Boston afin de donner un coup de main aux équipes américaines qui se préparent à affronter une tempête hivernale possiblement historique. La société d'État a indiqué que la demande était venue de la société américaine National Grid. Les 150 monteurs ainsi que des membres du personnel logistique et technique sont en route vers la grande région de Boston, où les équipes et les véhicules seront déployés. L'aide accordée est prévue par le North Atlantic Mutual Assistance Group, un groupe de collaboration dont fait partie Hydro-Québec. La société d'État avait également envoyé des équipes aux États-Unis en novembre 2014, lors d'une autre importante tempête sur la côte Est. Un avertissement de blizzard a été lancé pour une section d'environ 400 kilomètres du nord-est des États-Unis, et les météorologues affirment que la tempête pourrait laisser de 60 à 90 centimètres de neige dans la région allant du New Jersey au Connecticut. Presse Canadienne (Voix de l'Est, 2)

*** Des pertes de 250 M$ par jour**
Les tempêtes de neige ne font pas qu'entraîner la grogne. Elles coûtent 250 millions $ us à l'économie locale. Dans une étude sur l'impact économique d'un phénomène météo, la société de recherche IHS Global Insight a compilé des données sur la côte est américaine en incluant le Québec et l'Ontario, en raison de leur climat. Le Québec voit ainsi un 250 millions $ d'activité économique directe et indirecte disparaître lors d'une tempête, en raison des déplacements limités et des fermetures temporaires. Agence QMI (Journal de Québec, 51 ; Journal de Montréal, 35)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

ISIL praises attack on Parliament Hill
The spokesperson for the Islamic State group has praised the man who killed a Canadian soldier at the National War Memorial in October and is calling on Muslims living in western countries to carry out attacks. The spokesperson says any loyalist who has the opportunity to "shed a drop of blood" should do so. Abu Mohammed al-Adnani, in a nine-minute audio recording released Monday, praised recent attacks in Australia, Belgium and France - where 12 people were shot and killed in the Paris office of Charlie Hebdo magazine. He also praised the man who killed an unarmed sentry at the War Memorial in Ottawa on Oct. 22 and then stormed the Parliament Hill's Centre Block before being killed by security forces, saying: "You all saw what one Muslim did in Canada and its infidel parliament." Michael Zehaf Bibeau's killing of Cpl. Nathan Cirillo came just two days after another attack by a man with known jihadist sympathies who ran down a soldier in Quebec, Warrant Officer Patrice Vincent. The attacks ignited a debate on homegrown terrorism in Canada. The Canadian government is expected to introduce

legislation soon to crack down on suspected terrorists and those who openly encourage them. Waterloo Region Record.com (Charlottetown Guardian, Toronto Star, Times&Transcript, Times Colonist)

Canadians urged to join fight against fundamentalism
When she heard there had been a shooting at the satirical French magazine Charlie Hebdo, journalist Zineb El-Rhazoui imagined a gunshot and maybe some broken glass - so inured were she and her colleagues to the risks on the front lines of the free-speech fight. They had grown used to threats and lawsuits after publishing a controversial caricature of the Prophet Muhammad in 2006. Their offices had been firebombed in 2011. Editor-in-chief Stéphane Charbonnier, or Charb, was on the Al Qaeda terror group's most wanted list. But she had not envisioned the massacre carried out on Jan. 7 by French-born brothers Saïd and Chérif Kouachi, apparently acting on orders from Al Qaeda in Yemen. Twelve people were dead. Nine were El-Rhazoui's colleagues at the magazine. There was a stunned silence as she watched the news reports from her native Morocco, where she was vacationing. Grief was followed by anger. Now the 33-year-old has found resolve. Under the watchful eye of two strapping bodyguards, El-Rhazoui has brought that determination to Quebec in a tour that is a fundraiser and show of solidarity for her cash-strapped magazine. Her tour is also an activist campaign that touches on a raging debate in this province, and throughout Canada, about how to tackle radical Islam. In Ottawa this week, Prime Minister Stephen Harper is to introduce legislation to crack down on terrorism and give authorities greater powers to track radicalized Canadians who may be plotting attacks at home or trying to join the fight abroad. Toronto Star, A8

Proposed anti-terror bills' legality questioned
With the government's latest in a long string of anti-terror bills expected this Friday and slated to include such measures as allowing "preventative arrests" and outlawing the "promotion of terror," security and legal experts are expressing concerns about the bill's constitutionality. Though the details of the proposed law have yet to be seen, information leaked to media indicates it would make it easier for law enforcement to detain without arrest and is expected to outlaw the nebulously phrased "promotion of terror." Asked about that fine line between charter-guaranteed freedoms and national security, Justice Minister Peter MacKay was vague Monday, saying only the government had "examined this." "But we believe, given concerns and elevated threat assessment, this is something we have to do," MacKay said. National security expert and former CSIS operative, Mubin Shaikh would like to see more nuance in the feds' view of terrorism, domestic and international. "Will we use the label of terrorism given by despot regimes to their opposition? What about groups like the PKK (Kurdish Workers Party) in Syria who are a terrorist organization but whose interests in fighting ISIS join with our own? Shaikh asked. University of Ottawa security law Prof. Craig Forcese said that while the devil will be in the details, laws don't solve problems. Edmonton Sun, 22 (Kingston Whig-Standard)

*** Jihadists seek 'to harm us here:' PM**
Warning that Canada faces real threats from "violent jihadism," Prime Minister Stephen Harper says his government will move this week to introduce new legislation to help halt attacks and bar terrorists from travelling and recruiting. Spurred by the October attacks in 2014 here in Canada, as well as attacks abroad, Harper said the threat facing Canada is real. "Jihadist terrorism is not a future possibility, it is a present reality. Violent jihadism is not simply a danger somewhere else. It seeks to harm us here," Harper said in a speech Sunday. Harper used a speech to party loyalists to signal that security and the economy will be the priorities as Parliament returns for what's expected to be the final session before Canadians go to the polls in October. Harper said the legislation, expected Friday, would have measures to ensure police and security agencies "have the tools they need to meet evolving threats." "These measures are designed to help authorities stop planned attacks, get threats off our streets, criminalize the promotion of terrorism and prevent terrorists from travelling and recruiting others," the prime minister said. Harper said the legislation would respect rights of free speech, freedom of association, religion "and all the rest." "Notwithstanding the threats, we will not overreact. But neither will we underreact, because the big picture ... is very worrisome," Harper told the crowd in a high school gym in suburban Ottawa. Waterloo Region Record, A5

*** Time-consuming war on terror**

An opinion piece states, "We all knew this would be coming. After years of predictions about how Canada would succumb to so-called lone-wolf terrorist attacks, we were struck with two shocking incidents within days in October, killing two Canadian soldiers in Saint-Jean-sur-Richelieu, Que., and Ottawa. Meanwhile, we appear to be observing a stream of radicalized young adults spirited away from across Canada by the so-called Islamic State, whose violence, rooted in religion-inspired hate, has been repeatedly referred to as a "death cult" by world leaders. Late last week, QMI Agency reported two Montreal women declared missing by their families in November are believed to have gone to Syria to join ISIS. This follows the reported death of a former Ottawa man who fought with Islamic State. Earlier in January, three Ottawa men were arrested on terrorism-related charges, one among them stopped as he tried to fly out of the country. Before that, we learned three men from Edmonton were killed last fall while fighting for Islamic State. And previously, an apartment complex in downtown Calgary came under heavy scrutiny after several of its inhabitants ended up travelling to the Middle East to join jihadist fighting factions. It's therefore no surprise the federal government would move to strengthen Canada's laws in an attempt to stop this sort of activity. After the October attacks, the feds moved to give more muscle to Canada's spy agency, CSIS. It signalled at the time more change would be coming." Calgary Sun, 15

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Duo fined in tunnel incident

Two Michigan men have pleaded guilty to possession of prohibited weapons and set free after they prompted a dramatic three-hour shutdown of the Windsor-Detroit tunnel. Kyle Martens, 29, pleaded guilty to possession of brass knuckles. He received three years probation and a $100 victim find surcharge. Ernest Edwards, 18, pleaded guilty to possession of brass knuckles and two butterfly knives. He received three years probation and a $500 fine plus a 30 per cent victim find surcharge. The men, who initially faced multiple weapons charges, spent two days in pre-trial custody. They were arrested around 5 p.m. Jan. 20 after officers with Canada Border Services Agency found two knives, brass knuckles and a smoke bomb in the sport utility vehicle they were driving into Canada from Detroit. The officers called for an immediate evacuation of the Windsor-Detroit Tunnel and the border crossing complex after finding the weapons inside the 2004 Dodge Durango. When officers looked into a bag and found a cardboard cylinder with a fuse attached, they didn't initially realize it was a smoke bomb. After the area was evacuated and the two men were arrested, the Windsor police bomb squad went in to inspect the device. The tunnel was reopened shortly before 9 p.m. The Windsor Star, A5

Ontario changes policies on transgender inmates

Transgender inmates in Ontario will now be dealt with based on their own gender identity, not their physical sexual traits, a policy Ontario's corrections minister is calling the most progressive of its kind in North America. Previously, inmates were put in institutions based on a person's "primary sexual characteristics." Now, they will be housed according to their self-identified gender and referred to by their chosen name rather than their legal name and their preferred pronoun. "This is the most progressive policy on the treatment of trans inmates in North America," Correctional Services Minister Yasir Naqvi said Monday. "No other jurisdiction in Canada has such policy." Last year there were 25 inmates that self-identified as transgender in provincial correctional facilities, the ministry says. The policy builds on interim guidelines that were put in place last April, Naqvi said. The case of a trans woman from England who was detained by the Canada Border Services Agency last February pushed the issue to the forefront as she tweeted her experiences before being detained in a men's facility, despite travelling on a passport identifying her as female. Avery Edison was eventually transferred to a women's facility, but filed a human rights complaint about her treatment. The Canadian Press, (The Record, A3 National Post, Hamilton Spectator),Red Deer Advocate, The Toronto Star (2015-01-26)

Sex doll case due back in court in February

The case of a man suspected of sending a child-like sex doll in the mail was called in provincial court in St. John's Monday. Kenneth Harrison, who is not in custody, was not in court. St John's defence lawyer Bob Buckingham appeared in court via teleconference. Buckingham requested a postponement until next month, at which time, he said, he would be in a better position to advise the court whether or not colleague Kier O'Flaherty will stay on as Harrison's lawyer. He and prosecutors Natalie Payne (provincial

Crown) and Bill Howse (federal Crown) agreed to reschedule the case for Feb. 19. Harrison faces four counts, including two criminal charges - possessing child pornography and mailing obscene matter - including a sex doll depicted as a child. Two charges of smuggling and possession of prohibited goods contrary to sections 159 and 155 of the Customs Act were laid by Canada Border Services Agency (CBSA). The 49-year-old made his first appearance in court April 23, 2013. He was arrested in relation to a child pornography investigation. On Jan. 30, 2013, CBSA officers at the International Mail Centre in Toronto intercepted a package that was found to contain suspected child pornography. On March 12, 2013, members of the RNC criminal investigation division and the CBSA's criminal investigations division searched a home in St. John's and arrested Harrison. The Telegram, A3

A risques élevés, paies augmentées
Des camionneurs qui ont passé à répétition la frontière américaine avec des centaines de kilos de cocaïne au début des années 2010 n'ont pas hésité à demander de fortes «augmentations de salaire» à leurs patrons, en raison des risques subis. L'appât du gain est l'un des facteurs qui ont joué contre Serge Étienne Boyer la semaine dernière, alors que l'homme de 29 ans, qui avait été arrêté au cours de l'importante opération Loquace en novembre 2012, a été condamné à une peine de huit ans et demi de pénitencier. L'enquête Loquace, menée par la Sûreté du Québec, a visé un consortium composé d'individus liés notamment au crime organisé irlandais et aux Hells Angels, qui auraient tenté de prendre le monopole de l'importation et de la distribution de cocaïne au Canada. Boyer travaillait pour le propriétaire d'une entreprise de transport, Éric Brochu, déjà condamné à 11 ans de pénitencier dans cette affaire. L'entreprise de Brochu était spécialisée dans le transport de roulottes fabriquées aux États-Unis et vendues au Canada. Ses camionnettes, qui franchissaient continuellement la frontière, avaient été modifiées et équipées d'une cache dans laquelle les suspects pouvaient importer jusqu'à 100 kg de cocaïne chaque fois. La Presse

Not knowing import rules comes with steep price
As the world becomes a smaller place and commerce becomes more global, more and more businesses are sourcing products outside of Canada. Whenever a business starts importing goods, it needs to be aware of and keep an eye on import duty issues. While it might not seem urgent to a company just starting to import products, the cost of incorrectly classifying goods brought into Canada can compound as the stream of imports grows and, if not spotted in time, end up costing them in overpaid duty they can't recover or penalties for underpaid duty. (...)Problems also can arise when importers don't question ruling classifications by U.S. Customs. Canada Customs does not accept these classification rulings, although they can still be useful to help determine the correct tariff classification. For example, one Canadian company relied on a U.S. ruling that classified parts for a coffee maker as duty free. When Canada Customs examined the transaction, they changed the classification, resulting in a rate of 6.5 per cent being applied to four years of imports, resulting in duty owing of more $300,000 plus interest. (...) Documenting your procedures with respect to classification and valuation of imported goods is essential so you're ready to show the Customs authorities you're fulfilling your obligations, especially if you import certain targeted goods. Each year, the Canada Border Services Agency singles out specific imported products for audits to verify compliance with tariff classification, valuation and other rules. These audits can result in re-assessments going back four years. For 2014, these targeted products include batteries, footwear, machinery for public works, special purpose motor vehicles, bedding and related party transactions. With all your procedures in place, you may want to consider opportunities to reduce the import duty you pay. For example, do your imported goods originate in a country that has a free-trade agreement with Canada, such as NAFTA? Canada also has free-trade agreements with Chile, Costa Rica, Colombia, Israel, the European Free Trade Association and several others and is negotiating agreements with many more. You can often import goods duty-free from these countries, but you'll need the appropriate documentation to prove where they originated. Incorrect or false country of origin claims can result in Canada Customs denying the preferential duty treatment and penalties being assessed. Telegraph Journal, D1

Delray wrestles with uncertainty
Residents in Delray, Mich., remain worried that those in charge of the planned Windsor-Detroit bridge will do little to help mitigate damage to their community or provide jobs during the massive construction effort. The $2.1-billion Detroit River International Crossing project is in the planning phase with property

acquisition already underway in the southwest Detroit industrial community to make room for the bridge, plaza and feeder roads. But community leaders are frustrated because nobody overseeing the project is providing guarantees the community's concerns will be addressed, that people will simply be displaced and their neighbourhoods turned into a giant trucking plaza. "There have been hundreds of meetings, a lot of talk, but nothing in writing on community benefits," said former state Rep. Rashida Tlaib, a leader in the fight to ensure Delray's residents are treated fairly during bridge construction. "The constant pushing back has people starting to distrust the process." Nobody from Detroit has a seat at the table with the Windsor-Detroit Bridge Authority, which will oversee construction, or the six-member International Authority it reports to on the project. "It sends a message to the community that no one wants to hear from them," said Tlaib, who herself has reached out several times and been unable to get direct answers. She wants to see in writing some form of job guarantees, community greening plans and how exactly residents are to be treated in regards to relocation. "We are eager to see this move forward, but in a way where the community is at the table," Tlaib said. "This community has learned so much from dealing with the Ambassador Bridge and Matty Moroun that it's critical to have promises in writing." WDBA officials indicated Monday they are paying attention to the community concerns being expressed in Delray. The Windsor Star

Pour un équilibre budgétaire durable
Le problème des finances publiques du Québec ne réside pas dans le salaire de ses employés. Les Québécois sont les plus taxés au Canada et le Québec reçoit près de 10 milliards en péréquation du fédéral. En plus, le Québec est la province la plus endettée. En retour de leurs taxes et impôts, les Québécois ont des systèmes de santé et d'éducation qui ne répondent pas aux attentes et des infrastructures qui ne sont pas à niveau.Cette politique de petits salaires n'incite pas l'État du Québec à vraiment faire le ménage dans les finances publiques. Ce ménage viserait notamment les subventions à l'agriculture - les producteurs d'ici sont déjà largement subventionnés par les consommateurs à l'aide de tarifs douaniers variant de 175 à près de 300 % qui les mettent à l'abri de toute concurrence, à l'exception d'une petite quantité que l'on peut importer sans payer le tarif douanier. La Presse

Oberlander prosecution enters third decade
Retired developer Helmut Oberlander plans another court appeal, 20 years to the day after Canada began prosecuting him for serving as a low-ranking interpreter with a Nazi death squad. The government launched its case on Jan. 27, 1995, aiming to strip Oberlander of his citizenship and then deport him, without presenting evidence that he personally committed a war crime. Since then, lawyers have retired or moved on. A judge who delivered a key ruling has died. Governments have changed. Court decisions have piled up, with 13 rulings archived at the Federal Court of Canada or the Supreme Court of Canada. What hasn't changed is that Oberlander, 90, is still in Canada and still fending off deportation, while the government is still making mistakes in its case against him, according to the latest court ruling made this month. As the battle enters its third decade, frustration is mounting among organizations demanding that Oberlander face justice. "The system (in Canada) makes it very difficult," historian Efraim Zuroff said, from Jerusalem in Israel. He's the chief Nazi hunter for the Simon Wiesenthal Center, a Jewish human rights organization. Zuroff has asked the German government to seek Oberlander's extradition, so that he may be tried in Germany as an accessory to war crimes. The Record

*** B.C. could pick up business from backed-up ports on U.S. west coast**
Transportation analysts believe B.C. ports such as Prince Rupert stand to benefit from chronic congestion plaguing the U.S. west coast, as shippers begin looking for alternative routes to get their goods to market. A prolonged labour dispute coupled with structural and resource considerations related to accommodating larger container ships have resulted in months of gridlock at two of the U.S. west coast's busiest ports, Los Angeles and Long Beach, which account for an estimated 40 per cent the country's trade with Asia. The delays have prompted calls for the White House to get involved, reported the Financial Times, as retailers fight to get their goods off-loaded and other key sectors of the economy, such as agriculture, begin to feel the pinch. Some shippers, meantime, are posting loses in the millions of dollars, according to other reports. "It's a mess, to be honest with you," said Cathy Roberson, a senior analyst at Transport Intelligence Ltd. "There is one issue after another, it just keeps building. At last count, I think there were ... 25 ships waiting to dock at the port of L.A." The gridlock, however, could be a boon for B.C., said Roberson, who will be one of several speakers at an upcoming conference at the

Vancouver Convention Centre on global trade trends. Some freight already has been diverted north of the border to B.C., she said, while other container ships have headed to Mexico to off-load. "Your ports are noting some nice increases," she said. "Canadian west coast ports are very highly competitive and very friendly." While acknowledging the labour unrest south of the border has caused changes to the supply chain, a spokesman for the Vancouver Port Authority noted there are other factors behind the recent bump in container traffic Vancouver has experienced. While at least some of the recent increase in traffic can be attributed to the natural peak in the shipping season - back to school, Thanksgiving and Christmas - Vancouver is also experiencing an ongoing surge in shipping volume, said John Parker-Jervis, the media and government affairs adviser for Port Metro Vancouver. Last year traffic increased by an estimated four per cent, and overall volume is expected to double within the next 10 to 15 years, he said. The Province

* **Thumbs down, boss**

Airports are highly secured environments; there are ample reasons why Big Brother ought to look over various shoulders. However, in requiring baggage handlers in Montreal, Toronto and Halifax to use fingerprints to clock in and out of work, Air Canada is treading on treacherous privacy terrain. Employees with access to "air-side" areas should be subjected to stringent security controls, if only to police would-be smugglers. But workers in this case claim fingerprinting was introduced primarily to address so-called "buddy-stamping" of time cards. The policy is heavy-handed, even if you believe clock-punching chicanery amounts to theft. The union representing the employees has filed a grievance and a raft of privacy complaints; the matter has yet to be adjudicated. It's not clear if others in the company will be affected. Union officials say members don't object to giving their fingerprints to the RCMP or Transport Canada. They contend having an employer demand it - and then threatening disciplinary measures up to and including dismissal, as company-issued letters obtained by Montreal's La Presse appear to do - is a bridge too far. We agree. An Air Canada spokeswoman told La Presse the technology is widely used in the industry and simply aims to bolster security and replace obsolete equipment. It's not clear the airline is doing anything illegal. In 2008, Alberta's privacy commissioner concluded fingerprint-based attendance controls can be a reasonable intrusion, although employee privacy rights there are limited by provincial statute (and airlines generally fall under federal law).The federal privacy commissioner set out broad criteria for biometric workplace measures a decade ago in rulings on voiceprint and GPS tracking technology. An employer must demonstrate necessity; it must collect the minimum information required; data cannot be used for any other purpose and must be carefully safeguarded. Employees should be notified and allowed access to their data. In other words, biometrics should be used sparingly. Some might argue fingerprinting is relatively non-intrusive. It's also used by police to keep track of criminals. But companies have less invasive options to track employees' comings and goings and audit their hours. Privacy rights matter, even in a dysfunctional workplace. The Globe and Mail

* **Police say 400 – 500 gang members in Ottawa**

The numbers don't lie. According to the Ottawa Police Guns and Gangs Unit, there are between 400 and 500 gang members in the capital. Staff Sgt. Ken Bryden revealed the numbers in a presentation to the Police Services Board on Monday night (...) Hundreds of charges were also laid in the past 12 months, most of them drug related." By far the drug trade, in particular cocaine in both powder and rock form, is the driving factor behind...the criminality," says Bryden. Guns are the other main issue. Bryden refused to even guess the number of firearms on the streets of the capital. But he did say that 60% of them are smuggled into the country, mostly from the United States. They're hoping to shrink that number. "In 2014, two arrested members involving gang activities were deported out of Canada," says police chief Charles Bordeleau. "That's why it's important we continue to work with CBSA (Canada Border Services Agency) on that work."That work has also led to the police seizing four guns since the beginning of January. CTV News (2015-01-26)

* **Drummon Island Ice Bridge to open**

It is that time of year again when the "Ice Bridge" forms between Canada and the United States.The ice bridge is scheduled to be marked with signs and the tree line on Saturday, January 24, 2015. Once the ice bridge is established, CBP will begin staffing the reporting station on Friday, January 30, 2015. The opening and closure of this reporting station is subject to change contingent on weather and ice conditions. Travelers entering from Canada must report directly to the reporting station on Drummond

Island during the established hours of 2 p.m. to 10 p.m. Friday through Sunday. The number of days that the reporting station is open has been reduced due to the low volume of people using the ice bridge. The Drummond Island reporting station will be closed this year Monday through Thursday.The official CBP Reporting Station is located at the Drummond Island Yacht Haven Dock. Entering at any other location or outside of these hours is prohibited and violators could be assessed a $5,000 fine. SooToday.com (2015-01-26)

* **CBSA Celebrates International Customs Day**
Today, the Canada Border Services Agency (CBSA) joins counterparts around the world in celebrating International Customs Day. This year's theme is Co-ordinated Border Management - an inclusive approach for connecting stakeholders. The CBSA supports the World Customs Organization (WCO)'s decision to highlight the importance of partnerships in meeting the trade and border security demands of the 21st century.Border management is a shared international responsibility, and threats and opportunities arising from global migration and trade are dealt with most effectively by working together. The CBSA is considered a leader in global border management and currently chairs the "Border Five," an informal group of representatives from Australia, Canada, New Zealand, the United Kingdom and the United States. Recognizing the importance of strong partnerships with stakeholders, the CBSA maintains a robust international network. Currently, the Agency has over 60 employees working in 47 locations around the world. The CBSA has also signed Customs Mutual Assistance Agreements with 10 international partners to date.In 2015, the CBSA will continue to work collaboratively with external partners to support our common goals of international security, public safety and the facilitated flow of legitimate people and goods. Likewise, the Agency will continue to share best practices and lessons learned with other customs organizations, as well as enforcement partners around the world. Market Wired. (2015-01-26)

* **Facebook's outage exposes our digital fragility**
OMG Facebook is down! Down too went Instagram. It was just for an hour this morning, but the tweets screamed "Do I have to talk to someone real?" In a manner of speaking, yes. Despite the hackers of Lizard Squad claiming credit, it is now clear that an outage at Facebook's HQ was responsible. But the confusion was understandable after Lizard Squad had in recent weeks variously hit Sony executives and Microsoft products. It brought down PlayStation and Xbox platforms over Christmas. Guardian UK

* **Un "méga-hacker" sera extradé vers les USA**
La justice néerlandaise a autorisé aujourd'hui l'extradition vers les Etats-Unis d'un hacker russe soupçonné d'avoir dérobé plus de 160 millions de numéros de cartes de crédit en pénétrant les systèmes de sociétés américaines et européennes. Ce piratage informatique est un des plus importants jamais réalisés contre des sociétés américaines et européennes. Le Figaro

* **Apple preparing fix for Thunderstrike malware in upcoming OS X 10.10.2 release**
It's long been said, both by Apple and independent security experts, that Apple's computers are more secure than those running Windows. That does not mean, however, that Macs are invulnerable to malware threats. One particularly terrifying example is called Thunderstrike. It allows a malicious actor to

replace the firmware in Macs with something much more nefarious. The firmware controls extremely low-level functions of the computer, everything that happens from the moment the power button is pressed. Yahoo! News

LAW ENFORCEMENT / APPLICATION DE LA LOI

Thousands attend funeral for Mountie slain during struggle
The sister of an Alberta Mountie told mourners at his funeral Monday that he would want them to live life the way he did - with joy, with passion and with every effort to make the world a better place. "Over the past 10 days, there has been such an outpouring of stories about Dave and obvious love for him from the people that he has touched that I have realized he was far more than I ever imagined," Mona Wynn said in her eulogy before thousands at a recreation centre in St. Albert. "Dave was an ordinary man with an extraordinary capacity to make the world a better place for everyone around him." Const. David Wynn, 42, died last Wednesday, four days after he and auxiliary Const. Derek Bond were shot during a struggle with a suspected car thief at a casino in St. Albert. He was shot in the head and never regained consciousness before he died... RCMP Insp. Kevin Murray called him "the finest example of a front-line police officer." Deputy Commissioner Marianne Ryan, responsible for the Alberta RCMP, addressed Wynn directly: "Constable David Matthew Wynn, you have served this province and your country well. It is soon time for you to grab your fishing rod and head for the Miramichi, where I know your father will be waiting for you once more. We wish you Godspeed and tight lines." It was standing room only as more than 7,000 people came to pay their respects. The mourners included more than 2,100 Mounties, police officers, military members and first responders from communities across Canada. Canadian Press (Red Deer Advocate, A1, Chronicle Herald , A1); Postmedia News (Edmonton Journal, A1, Vancouver Sun, A1, Calgary Herald, A1)

High-risk takedown at Schlumberger site ends peacefully
A man caught up in a police incident just south of Red Deer on Monday afternoon said it began for him when he was told to stay indoors. "I says, 'What's going on? ' and I looked out in the front lot there was a half dozen RCMP vehicles, the officers were vesting up, they were getting out their high-powered rifles." The incident occurred outside at Schlumberger Ltd.'s pressure pumping base in McKenzie Industrial Park, located on McKenzie Road between 30th and 40th Avenues. Blackfalds RCMP responded to a call of an attempted truck theft and firearm complaint. It ultimately ended peacefully with the arrest of one 17-year-old male suspect. Blackfalds and Innisfail RCMP, ALERT, Police Dog Services and the RCMP helicopter were involved. RCMP said the firearm turned out to be a replica pistol. The man who was there when it happened, and whom the Advocate is not identifying, said a lockdown for safety purposes quickly began at about 2 p.m., when about 75 people who were working outside in the yard were told through company loudspeaker to come inside. A suspect was sitting in a large black crewcab truck in the parking lot on the east side of the Schlumberger facility. Red Deer Advocate, A1

Police use 'blooding' to hunt killer
Last week police detectives went door to door in a Windsor neighbourhood asking individuals to voluntarily provide a DNA sample in an effort to find the killer of Cassandra Kaake, who was brutally murdered in December. It is the first DNA sweep on record in Windsor. DNA sweeps, or blooding, as it is provocatively called, are more common than you might think. The practice dates back to 1987 when English police decided to find the killer of two young women using a new technology of genetic, or DNA, fingerprinting. Thousands of men had blood drawn using syringes, hence the term blooding. None, however, turned out to be the killer. The real killer was a local baker, Colin Pitchfork. He had briefly evaded detection by paying a co-worker to give his blood pretending to be Pitchfork. The police eventually found out and Pitchfork became the first person to be convicted using DNA evidence. The case led to the novel The Blooding by Joseph Wambaugh. Not long after DNA technology made its way to Canada in the 1990s, there were reported instances of blooding across Canada, including a sweep of 300 men in Vermilion, Alta., in search of a serial rapist. Windsor Star, A6

Prince George police say case of missing man is homicide
There is no body, but RCMP in Prince George, say they're treating the disappearance of a 24-year-old

man as a homicide. Jordan McLeod was reported missing a week ago and was last seen in Prince George and Vanderhoof three days earlier. RCMP issued a news release last week saying they believe McLeod's disappearance may have been linked to a report of shots fired near Highway 16 and Upper Fraser Road in Prince George. Police say their investigation into McLeod's case involved more than 100 officers from three different communities. Investigators are looking for his burgundy 2006 Chevrolet Malibu with the licence plate 163 RNA. Mounties believe the vehicle he was driving is an important piece of evidence and they are asking anyone who spots the car to call police. Canadian Press (Vancouver Sun)

Moncton suspect toujours recherché

Les policiers sont toujours à la recherche d'un jeune homme qui aurait été aperçu marchant dans les rues de Moncton dimanche et possiblement armé. Après une imposante opération policière qui aura tenu en haleine pendant plusieurs heures les résidents d'un grand quartier résidentiel au coeur de Moncton, la GRC poursuit son enquête. Le suspect recherché par la GRC, un jeune homme aux cheveux foncés et de taille moyenne, aurait été vu une seule fois sur la rue Katherine. Il portait un pantalon foncé, un manteau gris avec des barres rouges sur les manches, ainsi qu'une tuque foncée en tricot. Après avoir établi un périmètre de sécurité, passé au peigne fin les voisinages ciblés et cogné aux portes de nombreux résidants, les policiers n'ont pas trouvé l'arme ni le suspect. Le périmètre a été levé vers 20 h 30. Néanmoins, la GRC poursuit son enquête et demande à quiconque possédant de l'information sur cette affaire de communiquer avec la police au 506-857-7400. L'Acadie Nouvelle; Postmedia News (Telegraph-Journal, A3, Times & Transcript)

Mounties set in Upper Rawdon

It has been a long and sometimes bumpy ride, but the RCMP have arrived in Upper Rawdon. "Officers will work out of that detachment seven days a week," said Const. Tammy Lobb, an RCMP spokeswoman. Officers have been working out of the new sub-detachment at 2945 Highway 14 for the past few weeks, but the grand opening, originally set for Tuesday, has been rescheduled for Thursday at 11 a.m. The initial plan was to have the building open last summer, but delays pushed the opening to 2015. A revamped East Hants policing model had been designed to bring all of the municipality's officers within the borders of the Municipality of the District of East Hants. In the past, the municipality shared several officers who were stationed in West Hants. East Hants council decided on an Upper Rawdon detachment to serve the rural, western side of the municipality, but the provincial Justice Department recommended in 2011 that a Mount Uniacke office would better suit the municipality's needs because of the area's growing population. Council requested another meeting with the RCMP and the province and was pleasantly surprised to see that the police and the Justice Department had done an about-face by the summer of 2012 and agreed to the Upper Rawdon location. Chronicle Herald, A5

RCMP seek man who exposed himself

Police are looking for a man who exposed himself to four eight-year-old girls while they were playing outside in a Red Deer neighbourhood Saturday afternoon. Red Deer RCMP say the girls were in the front yard of a home on Northey Avenue when the incident occurred shortly before 2 p.m. When one of the girls walked away from her friends to go inside to get a drink, a man appeared in the yard, picked her up and took her toward a shed in the backyard. The other three girls followed their friend and the man directed them to the shed. He blocked their exit and then exposed himself to them. He began to touch himself, refusing to allow the girls to leave, police said in a news release. He left a short time later and was last seen running south down the alley behind Northey Avenue. The girls were not physically harmed, police said. RCMP officers and police dog services swept the area but were unable to locate the suspect. Edmonton Journal, A2 (Red Deer Advocate)

Police officers fired after two prisoners escape cells

Several Edmonton police officers were fired after two separate jail breaks proved the cells were more sieve than se cure. Two of those escapers were re captured only to be involved in a second break out the same week from RCMP barracks. It's not known if the Mountie involved in that incident lost his job too. City Const. Sylvester was let go after an internal investigation found his carelessness was to blame for the escape of Fred Palmer and Ed Young. Sgt. Lang, the officer in charge at the time, also lost his job.

Palmer and Young were facing charges for the separate thefts of fur coats and were awaiting trials. Edmonton Journal, A2

Deadly pills still out there
The potentially lethal pills that killed three young people in Saskatoon are still on the street. In two separate cases, police arrested three people - all of them accused of selling fentanyl. "As long as the pills are there and people are buying them there is a potential for another tragedy," said Staff Sgt. Donovan Fisher Monday. Police say two men from British Columbia turned themselves in to Saskatchewan authorities after they were charged as part of a large scale investigation into guns and drugs targeting two local biker clubs. The pair - 29-year-old Ruslan Jamal Bakuridze and 30-year-old Adam Harada - are also charged with dealing cocaine, heroin and methamphetamine in addition to the lethal fentanyl pills. They are the latest of more than a dozen people charged in the wake of police raids targeting the Hells Angels and the Fallen Saints as a result of an investigation known as Project Forseti. The Jan. 15 raids in several Saskatchewan and Alberta cities, uncovered more than 3,000 fentanyl pills and large amounts of cash and guns. Officers also seized over $8 million of cocaine, methamphetamine and heroin. Saskatoon police said fentanyl pills are responsible for one overdose death earlier this month and two in September. Postmedia News (Leader-Post, A4)

* **Alleged Regina identity fraudsters face similar charges in Alberta**
An apparent victim of identity fraud in Regina wonders why the man charged, with a long history of fraud, was released on bail just two weeks before the Regina incidents began. Marino Vecchioli is one of 23 alleged victims of James Donald Provost, of no fixed address, who is facing 58 charges related to mail theft, forgery, impersonation and identity fraud. Vecchioli said in mid-November he was buying a car which required him to get a credit check… The former director of the RCMP's proceeds of crime unit, Garry Clement, said this story highlights a problem with the way Canada treats fraud. "Canada has to start treating white collar criminals with some severity because the unfortunate part is there isn't any respect of the damage they are doing to these individuals (victims) and in some cases it's life changing for some of these people," he said. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Tories seek tougher penalties for killers
The Conservative government is developing legislation that would mean some murderers will have no hope of release from prison. The new penalty would apply to several categories of those convicted of first-degree murder: killers of police and jail guards, anyone who kills during a sexual assault, kidnapping or act of terrorism and for especially brutal murders. The current penalty for first-degree murder is an automatic life sentence with the first chance for a parole review after 25 years, and the supervision of parole authorities for life. The planned legislation has yet to be approved by cabinet, a source said. The departments of Public Safety and Justice, which are working together on the new bill, were told to speed up their work after a man shot two Mounties in St. Albert, Alta., on Jan. 17, killing one. The bill is expected to be introduced within a couple of weeks of a new terrorism bill coming on Friday, the source said. The change would reshape the Canadian legal landscape in an area seen as distinguishing this country from the United States. It sets the stage for the government's tough-on-crime policies to be a centrepiece of the federal election campaign expected next fall. A spokesperson for Justice Minister Peter MacKay declined to comment directly on the categories outlined by The Globe, but quoted the Throne Speech of October, 2013, saying: "Canadians do not understand why the most dangerous criminals would ever be released from prison. We are currently reviewing options to ensure that a life sentence actually means life." (…) In recent years, the website of Correctional Service Canada has described those serving life sentences as "the most likely to succeed on parole." A spokesperson said on Monday the agency could not identify, for privacy reasons, the last first-degree murderer released on parole who killed again, nor how many have done so since 1976. Globe and Mail, A1

Du lait en poudre pour les prisonniers
Du lait en poudre sera désormais servi dans les prisons fédérales. Une mesure administrative qui représente des économies de l'ordre de 3,1 M$, a-t-on confirmé de la part du Service correctionnel du

Canada. L'entreprise laitière Chagnon, implantée à Waterloo depuis 60 ans, écope de cette directive. « Je viens d'apprendre la nouvelle. On est devant le fait accompli. Le 12 janvier dernier, j'ai fait ma dernière livraison de lait au pénitencier de Drummondville », explique le président Denis Chagnon à *La Terre de chez nous*. Depuis 10 ans, l'entreprise livrait 6 000 berlingots de lait par semaine destinés à la prison de Drummondville qui compte 415 détenus. La laiterie Chagnon dessert aussi la même quantité depuis 15 ans aux 666 détenus du pénitencier de Cowansville. « À cet endroit, durant la même période, on a perdu une seule fois l'appel d'offres », précise M. Chagnon. Dorénavant, une compagnie de Winnipeg va transporter la poudre par camion en direction des établissements du Québec. Les pénitenciers doivent s'équiper d'un appareil servant à la fabrication du lait à base de poudre. « Quand les fonctionnaires font leurs calculs, tiennent-ils compte de l'impact régional? » s'interroge M. Chagnon qui perd ainsi un contrat de 275 000 $. (...) Le Service correctionnel du Canada (SCC) a refusé notre demande d'entrevue. Toutefois, on nous a fait parvenir par courriel une note explicative. « Le 1er novembre 2012, le SCC s'est engagé à moderniser son modèle de prestations des services d'alimentation aux détenus. Cette initiative s'inscrit dans les efforts consacrés au gouvernement afin d'améliorer l'efficacité des services et de réduire le déficit », précise Julie O'Brien, conseillère en relations avec les médias au SCC. La Terre (2015-01-26)

Leave extended for mine bomber
A man granted day parole two decades after being convicted of planting a bomb that killed nine miners in Yellowknife will be getting extended leave privileges. Roger Warren has been granted permission by the national parole board to spend more time away from his halfway house for medical treatment. The board says its decision was made after 71-year-old Warren was hospitalized for pneumonia and doctors said he needed to stay longer for tests. Warren was imprisoned for setting off an explosion deep inside the Giant Mine during a bitter strike in 1992, when nine replacement workers were killed as their ore car went over a trip wire. Documents from the board say Warren must follow a series of conditions and a parole supervisor may revoke his release if there's a risk to the public. Warren was being held at the Mission Minimum Institute, east of Vancouver, when he was granted day parole last June, when he was transferred to a halfway house at an undisclosed location. Canadian Press (Times & Transcript, A4, The Province, Winnipeg Free Press, Metro News, Revelstoke Times Review, Vancouver Sun, Kelowna Daily Courier, Medicine Hat News, Victoria News), Resource Clips

* **Solitary confinement creates problems for the community, says John Howard Society of Canada**
Prison isolation up to 23 hours per day for weeks at a time is cruel and unusual punishment, says the John Howard Society of Canada. The society, along with the B.C. Civil Liberties Association, started a lawsuit against the federal government's use of solitary confinement in prisons. The two human rights groups said they want reforms around the use of segregation in prisons and don't see it as suitable for individuals with mental health issues. Solitary confinement is increasingly being used to house prisoners with mental health issues, even though studies have shown that isolation worsens mental illness, the John Howard Society said. Catherine Latimer, a spokeswoman for the organization, said the John Howard Society of New Brunswick proposed a resolution at the national annual general meeting last fall that a stand be taken against solitary confinement. "New Brunswick was the home of Ashley Smith, so it understands the harms caused by solitary confinement." Smith committed suicide while in isolated confinement in 2007. Latimer said had the federal government responded to the coroner's report in the Smith case by limiting solitary confinement in a manner that was consistent with the John Howard Society's resolution, it wouldn't have needed to take the matter before the courts. Daily Gleaner, A5

* **In the courts, Kingston**
A compilation of offences from Kingston's Ontario Court of Justice for the period of Jan. 12 to 15, 2015. Only sentences that involved a large fine, probation or incarceration are included. (...)Destiney J. Meyler, 22, was convicted on three counts of possessing drugs for the purpose of trafficking. He had two years added to the federal penitentiary sentence he's already serving. Kingston Whig-Standard

* **Religion et philo en maison de transition**
Converti à la religion et à la philosophie, un membre influent des Hells Angels récemment libéré du pénitencier devra approfondir ses nouvelles valeurs en maison de transition. La Commission des libérations conditionnelles du Canada (CLCC) vient de confirmer que Richard "Dick" Mayrand devra résider dans une maison de transition, où il sera sous surveillance jusqu'à nouvel ordre, plutôt que dans

un appartement. Le motard de 51 ans contestait cette condition spéciale imposée il y a deux mois, en affirmant qu'il ne fait plus par-tie des Hells Angels et qu'il ne désire plus avoir de contacts avec des membres de cette organisation criminelle. Membre du défunt chapitre d'élite "Nomads" des Hells, Mayrand dit vouloir "poursuivre (son) implication dans la religion et la philosophie". Mais son souhait d'aller vivre dans un logement voisin d'un bar appartenant à un autre membre des Hells mettrait en péril les progrès qu'il a réalisés au cours de ses deux dernières années de bagne, d'après la CLCC. Journal de Montréal, 10

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Cyberbullying policy a bust with kids

Zero-tolerance cyberbullying policies have made kids less likely to go to adults for help for fear that police will become involved, a survey of Canadian children's lives online suggests. Parents and teachers need to act less like online cops and more like mentors, found the survey by MediaSmarts, Canada's think-tank for digital and media literacy. "We don't believe that surveillance, in particular covert surveillance, is particularly effective. We all know teens are masters of avoiding surveillance," said Matthew Johnson, director of education at MediaSmarts. "Teens feel like they're guilty until proven innocent and they're more covert about what they're doing and less likely to seek help if something goes wrong." MediaSmarts spoke to 5,400 students from grades 4 to 11 in every Canadian province and territory, and had four focus groups with different age groups and with parents, between 2012 and 2013. Many of the children and teens feel adults overreact to conflict online, the survey found. London Free Press, A1

Joint policing isn't easy

Windsor and Amherstburg are so enthusiastic about maybe saving money by combining **police** forces that LaSalle has been reluctantly drawn into the discussions this week. You can't blame LaSalle Mayor Ken Antaya for being independently minded. He knows his town and says the residents don't want to be covered by somebody else's police department. He's probably right. But Antaya pretty much has to be at the table with Windsor and A'burg anyway for appearances - and just in case there is real money to be saved. Creating a regional police force is inevitable for Windsor and some of its suburbs. Eventually. But there are a few things all the parties need to know before any rush to the altar: sometimes arranged marriages don't work. Also, there are some downright stupid provincial regulations governing such departmental marriages. After all, this is Ontario. Take the City of Peterborough and the former Village of Lakefield northeast of Toronto. Their arrangement ended in bitter acrimony on Dec. 31 after years of fighting and public hearings. Their saga has played out in hundreds of stories in the Peterborough Examiner newspaper since the 1990s. Like Windsor and Amherstburg, Peterborough and Lakefield don't share a border. There is a gap of about 20 kilometres between them. The city and the village decided to amalgamate their police departments during the 1990s. By Ontario statute, they first had to disband their own forces, then incorporate a new one. They did so in 1998. Windsor Star, A3

Still have lots of questions

Worried about the marked increase in guns and gangs in Ottawa, city councillors arrived at Monday night's police board meeting looking for answers. But hard and fast answers on the city's strategy still appear somewhat illusive. How many officers have been reallocated? What is this costing the city? And how long will resources for guns and gangs be diverted from other police departments? No definitive answers. That doesn't mean of course that the police are being evasive. In fact, it is as Staff Sgt. Ken Bryden told the board -- and many of the city councillors on hand -- it's a very fluid situation. "I came to get some answers, some of what I heard was a little bit vague. There's still a little bit of vagueness with the allocation of resources. That's what concerns us, we want to ensure we're properly staffing the police to do their job," said Gloucester-Southgate Coun. Diane Deans, whose ward has had problems with guns and gangs. "We heard from Chief (Chuck Bordeleau) that they're moving resources around, that's it's a fluid situation. I was looking for some firm answers on whether there was a permanent allocation of resources. He didn't give a lot of details about where exactly those resources are coming from," Deans said following the presentation. Despite those concerns, Deans said in her ward, she believes the police

have worked pro-actively in keeping pressure on the problem along with community partners. QMI Agency (Ottawa Sun, 3);* Ottawa Citizen; CTV News

International commission puts the Oppal Inquiry in context
The report of the Inter-American Commission on Human Rights, which was released earlier this month, puts the Oppal Inquiry into its proper context, by clarifying what the Oppal Inquiry did and did not do. The Inter-American Commission calls for the full implementation of the Oppal recommendations, but says that this will be a starting point for reforms in one area only. The Inter-American Commission on Human Rights, which is an arm of the Organization of American States, launched an investigation into the murders and disappearances of indigenous women and girls in B.C. in 2012. This investigation was requested by the Native Women's Association of Canada and the Canadian Feminist Alliance for International Action. In its groundbreaking report, the commission states clearly that Canada has an obligation under international human rights law to ensure that the response of the police, prosecutors and judges to the murders and disappearances of indigenous women and girls is swift, diligent, effective and unbiased - which it has not been so far. But the commission is also clear that the scope of Canada's obligations is broader. Governments must address the risk factors that cause and perpetuate the violence. Specifically, the commission tells Canada that it must combat the poverty of indigenous women, improve education and employment, guarantee adequate housing and address the disproportionate application of the criminal law. Postmedia News (The Vancouver Sun, B4)

* **Report on murdered girl may bring more transparency**
The Manitoba government will this week release a much-anticipated independent report on how to implement the remaining recommendations from an inquiry into the 2005 murder of Phoenix Sinclair, a five-year-old aboriginal girl who died in provincial care. The roughly 200-page report, which could be released online as early as Tuesday, is expected to propose legislative changes that may lead to greater transparency at the Office of the Children's Advocate, an independent body tasked with protecting children and youth in Child and Family Services (CFS) care. The report comes at a time when the province's child-welfare system is under intense scrutiny after the August killing of Tina Fontaine, a native teen who died after going missing from her foster-care placement at a downtown Winnipeg hotel. Her death has also reignited calls for a national inquiry into Canada's more than 1,180 murdered and missing aboriginal women. The Globe and Mail, A5

MINISTER / MINISTRE

The threat behind our bars
An opinion piece states, "As France mourns the recent attacks, another conversation is taking place. We now know one of the brothers involved in the terrorist attack spent some time in a French prison for a terrorism-related crime. Media reports suggest incarceration contributed to his further radicalization. Many Muslims are incarcerated in France. It is a fact of life that this population is at risk of being radicalized while incarcerated. In Canada we also have men incarcerated for terrorism-related offences. In addition, there are a significant number of inmates, Muslim or otherwise, who could potentially be radicalized. What is the Correctional Service of Canada (CSC) doing about it? Well, according to a recent CBC story by reporter Kathleen Harris, the spokeswomen suggests CSC is hard at work. The piece was prompted after an access to information request that revealed a briefing note from the CSC Commissioner, Don Head, to the **Minister of Public Safety, Steven Blaney**. In the May 2014 note, the commissioner requests funding ($63,000) to fly experts in from around the world for a roundtable. The minister agreed with the allocation. In the story, a CSC spokeswoman stated, "CSC is reviewing the most effective interventions and management practices for radicalized offenders that are used nationally and internationally." National Post, A10

* **Keeping Canadian Families and Communities Safe**
A blog post states, The **Honourable Steven Blaney, Canada's Minister of Public Safety and Emergency Preparedness**, recently highlighted two outstanding successes by the Canada Border Services Agency (CBSA) that will help keep Canadian families and communities safe. The Harper

Government has reached a major program milestone with successful removals of more than 50 individuals on the CBSA Wanted List; many with criminal activities that have been linked to drugs and organized crime. Additionally, Canadian border authorities have reached a new intelligence milestone with more than 150 convicted U.S. sex offenders denied entry to Canada. Together, these milestones reflect the important work our Government is undertaking to help keep our streets and communities safe by ensuring that foreign criminals are turned away from our borders, and removed once found by authorities." My Steinbach (2015-01-18)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

* **Kinder Morgan wins battle to keep emergency plans secret**
The full details of Kinder Morgan's emergency management plans for the Trans Mountain pipeline will remain secret. The National Energy Board (NEB) has rejected a demand from the B.C. government for Kinder Morgan to fully disclose the plans. The province had argued they needed to see the entire plan to determine if the company could adequately respond to a spill for its proposed $6.5-billion expansion of the pipeline. The expansion project will twin the pipeline and triple capacity to open access to new Asian markets for bitumen from the oilsands in northern Alberta. Vancouver Sun, A1

* **$1-M dike gives peace of mind to residents of 30 Reston homes**
In 2013, Dallas Williamson had two metres of water in his basement after a torrential downpour hammered Reston in western Manitoba. Today, provincial Municipal Government Minister Drew Caldwell and Brandon-Souris Conservative MP Larry Maguire will announce funding for a dike that will protect 30 Reston homes, including Williamson's. The project, which will cost about $1 million, is being shared by the three levels of government: the RM of Pipestone will pay 10 per cent and the remaining 90 per cent being will be shared by the federal and provincial governments. Winnipeg Free Press, A5

* **Campobello mayor hopeful after province asks for details on cellphone service issue**
A decision could possibly come soon from Fredericton bringing Canadian cellphone service a step closer to Campobello Island. The provincial government asked for "as much information as possible" by the end of business hours on Thursday, Mayor Stephen Smart said in an interview on Friday. He hopes this means the cabinet will decide in favour of expanding the Public Safety Radio Network, which would lower the cost of extending cellphone service to this Canadian island off the coast of Maine. Expanding the PSRN, allowing emergency communications when telephone service goes down, would roughly double the number of towers to about 70 including one on Campobello Island. Telegraph-Journal, B4

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Oversight of military intelligence limited
National Defence has been looking at ways to introduce more stringent oversight of its intelligence operations, but "fiscal restraint" may prevent the department from implementing the preferred option. A series of internal documents and slide presentations, obtained by The Canadian Press under access-to-information legislation, show the head of defence intelligence ordered the exhaustive, independent review - which was conducted in the wake of the scandal involving navy sub-Lt. Jeffery Delisle, who was convicted of spying for the Russians. Unlike the Canadian Security Intelligence Service and the Communications Security Establishment, there is no direct civilian oversight body to review the actions and operations of military agents, who conduct investigations into possible threats against the Forces both overseas and on Canadian soil. The powers of intelligence services have come under the microscope following allegations of National Security Agency eavesdropping in the U.S., and the bombshell revelations of former contractor Edward Snowden. Canadian Press (The Chronicle-Herald, A8, Cape Breton Post, The Gazette, Ottawa Citizen, Times & Transcript)

* **What is the public entitled to know about threats?**
The more security agencies grapple with terrorist threats, the less they appear to be telling Canadians. Focusing on current examples of secrecy, Postmedia News reporter Dylan Robertson spoke with experts

about what the public should be entitled to know. Postmedia News (Leader-Post, A5, The Province, Vancouver Sun, Star Phoenix)

*** Canada's anti-radicalization programs lacking against domestic terror recruitment**
St. Jean-sur-Richelieu, Ottawa, Sydney, Paris — cities under siege by attackers on killing sprees. The killers weren't sophisticated soldiers sent from terrorist networks abroad, but emerged from within the same country, in Canada, Australia and France. The attacks have created a heightened urgency for governments to combat the threat of homegrown terrorism and radicalization. In Canada, the federal government is set to table new anti-terror legislation by the end of the month, which is expected to strengthen the country's intelligence and surveillance programs. It includes giving CSIS new powers to track homegrown extremists abroad and the ability to share information with other spy and enforcement agencies. But some say these proposed measures, which will be unveiled when MPs return to Parliament, don't get to the heart of dealing with the radicalization that leads to terror attacks, especially as ISIS and other groups grow more sophisticated with their recruitment campaigns. Michael Zekulin, a researcher with the Centre for Military and Strategic Studies at the University of Calgary, says the legislation might even be playing into the hands of jihadist groups. CBC News

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Federal government defends move to deport Hamilton man to Zimbabwe
Ottawa is defending its decision to deport a 21-year-old man to Zimbabwe who came to Canada to be reunited with his mother and ran afoul of the law. Family, friends and supporters of Farai Chigogora say he is a bright, young man who was a victim of circumstances and should not have been returned to the country he left when he was 14. Chigogora said he pleaded guilty in 2012 to theft under $5,000 in connection with a Cayuga home invasion because of the financial and emotional strain the case put on his family. (…) Anna Pape of the Canada Border Services Agency (CBSA) said the decision to remove someone from Canada is not taken lightly, but that Chigogora had been issued a deportation order for "serious criminality" on July 3, 2014 by the Immigration and Refugee Board. "Protecting the safety and security of Canadians is a priority for the CBSA," Pape said in a statement to The Spectator. "The CBSA places highest priority on removal cases involving national security, organized crime, crimes against humanity and criminals." The Hamilton Spectator

LAW ENFORCEMENT / APPLICATION DE LA LOI

Wounded Mountie not expected to survive
An Alberta Mountie severely wounded on Saturday was not expected to live, the RCMP said Sunday as the force's commissioner expressed dismay over the criminal background of the man police believe responsible for the shooting. Const. David Wynn had not regained consciousness more than a day after the shooting, Asst. Commissioner Marianne Ryan, in charge of the RCMP in Alberta, told a news conference in Edmonton. "He sustained a life threatening injury to the head at close range, we do not expect him to survive," said Ryan, who visited Wynn's bedside on the weekend. "He is being treated and looked after in the hospital, but it is not optimistic he'll survive," added Ryan, who was joined by RCMP Commissioner Bob Paulson. Wynn, 42, and Derek Walter Bond, an auxiliary constable, were shot in a casino northwest of Edmonton while investigating a suspicious vehicle. Bond was shot in the arm and torso, but was released from hospital on Saturday. Mounties in Alberta identified a suspect on Sunday who was found dead in the hours following the shooting. Police said that Shawn Maxwell Rehn, 34, was the person whose body they found in a home, not far from the Apex Casino in St. Albert where the two officers were shot. Paulson said Rehn had an "incredibly complex criminal history" that included

overlapping firearms bans. Paulson and other officials declined to go into detail about that criminal history, but Paulson noted it may provoke an examination of the police and justice system that allowed Rehn to be free. "I've been policing for 30 years and I've never seen anything the likes of this," Paulson said. Canadian Press (Red Deer Advocate, A1, Leader-Post, A1, Toronto Star, The Guardian, Times & Transcript, MacLean's); Chronicle Herald, A1; Postmedia News (Calgary Herald, A1, Edmonton Journal, A1, StarPhoenix, A1); Globe and Mail, A1; Postmedia News (Edmonton Journal, A1); QMI Agency (Calgary Sun, Edmonton Sun, Winnipeg Sun); Daily Gleaner (Telegraph-Journal); QMI Agency (Toronto Sun, Winnipeg Sun, Ottawa Sun, London Free Press, Kingston Whig Standard, Edmonton Sun, Calgary Sun, Ottawa Sun); * L'Acadie Nouvelle; * Presse Canadienne (La Presse); * QMI Agency (London Free Press);* Agence QMI (Journal de Quebec, Journal de Montreal)

Shooter 'very well known to police'

RCMP say the man who shot two Mounties in St. Albert on Saturday morning was "very, very well known to police". On Sunday, RCMP identified Shawn Maxwell Rehn, 34, a resident of the greater Edmonton area, as the deceased gunman who left two RCMP officers in hospital -- one of whom is not expected to survive. Prior to Saturday's shootings, RCMP say Rehn had an extensive history of firearms related offences and was prohibited from possessing firearms for life. "Rehn represents a significant accumulation of criminality and behaviours that I think will require the RCMP and other stakeholders in the criminal justice system to examine very closely as to how it is this person was walking amongst us," said RCMP Commissioner Bob Paulson. "I think many of us would be surprised to have an individual facing the accusations that he was facing, having the criminal record that he did have, having the unresolved issues that he did have in the community. "There will be a direct and in depth analysis of how it is this individual came to be free." Paulson said the injured officers -- Aux. Const. Derek Walter Bond, 49, and Const. David Matthew Wynn, 42 -- were not aware of the possible danger they faced by confronting Rehn inside the Apex Casino, 24 Boudreau Rd., just outside St. Albert. " They were doing what officers in what every other police force in this country do 24 hours a day -- they investigate suspicious occurrences," said Paulson. "They had no idea who this person was, none whatsoever. There's no way you could expect these officers would know the kind of threat that was going around inside that casino." QMI Agency (Calgary Sun, Edmonton Sun)

'They love' Const. Wynn

Elementary students at a St. Albert school will resume classes Monday without their beloved RCMP liaison officer, after Const. David Wynn was shot in the head Saturday. Wynn, 42, has worked with Keenooshayo elementary school for more than five years, where he delivers the Drug Abuse Resistance Education (DARE) program among other duties. "They love him. He's got a great rapport with the students and he's just a great presence in the school," said St. Albert Public Schools spokesperson Paula Power. "They really all look up to him." Wynn is currently in hospital on life support after a gunman opened fire on him and Const. Derek Walter Bond, 49, at Apex Casino early Saturday morning. Bond was shot in the arm and has been released from hospital. Counselling services will be made available for students and staff on Monday. Power said the district's throughts are with Wynn's family and colleagues. "It's going to be a difficult day tomorrow and a difficult week, for sure. Not only with the students but with the staff too," Power said. "He's part of their school family." QMI Agency (Edmonton Sun, Calgary Sun, Ottawa Sun)

Shooting of auxiliary officer raises safety concerns

The shooting of an auxiliary RCMP officer in Alberta on Saturday is raising questions about whether more could be done to protect the safety of such officers who don't carry firearms. Auxiliary Const. Derek Walter Bond, 49, was shot in the arm and torso when he and a regular RCMP officer - Const. David Matthew Wynn - walked into a casino just north of Edmonton while on a routine investigation. Bond was released from hospital on Saturday evening, while Wynn remains in grave condition and police said he was not expected to survive a gunshot wound to the head. As an auxiliary officer, Bond did not carry a gun though normally auxiliary officers carry pepper spray and a baton. The dramatic events that unfolded in the community of St. Albert on Saturday are thrusting the role of such officers into the spotlight. Rob Creasser, spokesman for the Mounted Police Professional Association of Canada, said there's good reason why auxiliary officers do not carry guns. "They don't have near the training that a regular member does," he said. "They're really not trained in situational use of guns, like when do you pull it and when do

you shoot." He said auxiliary officers are civilians who volunteer part-time to do jobs that free up regular police officers, such as traffic control. They also ride along with officers, as long as they're under the direct supervision of a regular member of the RCMP. There are over 2,000 auxiliary constables in the RCMP across the country. Creasser said they typically wear a RCMP uniform with a small patch on the shoulder that distinguishes them as an auxiliary officer. Canadian Press (Red Deer Advocate, A3)

Police and terror

The more security agencies grapple with terrorist treats, the less they appear to be telling Canadians. Focusing on four current examples of secrecy, the Citizen spoke with security experts about what the public should be entitled to know. The RCMP held a detailed press conference after arresting suspects in an April 2013 plot to derail a Via Rail train. The force did the same on Oct. 20, when a radicalized man killed a soldier in Quebec. It also held an initial press conference after Michael Zehaf-Bibeau attacked in downtown Ottawa Oct. 22. But the force has released only the names and charges in the recent arrest of two twin brothers and a third man, providing no details of what they are alleged to have done. The RCMP said last Wednesday it had no current plans to update the public. Why the secrecy on an issue of such public importance? "The fact that they arrested a third person that was linked to the two brothers could mean their investigation isn't over and they could want to arrest more people," said Michel Juneau-Katsuya, a former senior intelligence officer at the spy agency Canadian Security Intelligence Service (CSIS). But former RCMP superintendent Garry Clement says the public ought to understand what the men are accused of doing. "The one thing I find with the RCMP is, I don't think they do a good job of handling media and they never have," he said, adding that the national capital division tends to be "a lot more conservative" than other divisions, such as the one covering Toronto. Postmedia News (Ottawa Citizen, A1, Windsor Star, StarPhoenix, Leader-Post, Montreal Gazette, The Province, Edmonton Journal)

Bizarre attack lands suspect in lockup

A bizarre series of events left a resident of Happy Valley-Goose Bay scratching his head Friday night. Not only did the man have to deal with an allegedly unprovoked attack by a man he knows, he later had to watch as the Happy-Valley Goose Bay fire department extinguish a blaze at his home. Around midnight, a resident said he was bear-sprayed outside his home by a man he knows. He went inside, and moments later, the man allegedly broke into his home. The resident managed to get him out, according to a news release from the RCMP, but soon he saw the same man lighting his house on fire before running away. The home was left with significant damage. Nobody was injured in the fire. The RCMP says the suspect was found quickly and arrested with no incident. He was charged with arson and assault with a weapon among other offences. The Telegram, A1

Trappers continue to decry exploration

A handful of First Nations trappers continue to camp along a highway in northeast Saskatchewan to protest oil and mineral exploration in the north. "The land is very important to us. It's our store and our drugstore, it's the water that we drink and we're trying to protect that," said Nancy Scanie, an elder from Cold Lake who travelled seven hours to join her colleagues at the camp site over the weekend. The group, dubbed the Northern Trappers Alliance by members, set up a blockade on Highway 955 north of La Loche in late November. Bobby Montgrand, a spokesman for the group, said the RCMP asked them to dismantle the roadblock last month, but that trappers remain in the area. Instead of blocking the road, they're now camping alongside it and waving signs at the trucks that pass by on their way to work sites. "Save the wildlife," reads one. "Save our water," says another. The camp has been manned continuously by about a dozen people for the last two months and Montgrand said no one has any plans to leave. "We're not really worried about the cold because we've got enough work, we've got a fire, we've been living off the land," he said. Clearwater First Nation Chief Ted Clark, who owns a contracting company that's doing exploration work in northern Saskatchewan that was blocked from using Highway 955 in November before the blockade was lifted, said the trappers "are going to be there for a long time." StarPhoenix, A1

RCMP needs three years to implement all changes

The RCMP has accepted all recommendations from an independent review into the police response to the June 4 shootings. But how long it will take to implement each recommendation varies greatly. "There

are 64 recommendations, many of which can be adopted in the short term," said RCMP Commissioner Bob Paulson in the RCMP's response to the MacNeil Report. "Some recommendations have already been implemented, and work is being done on many others. A few of the recommendations will require a more complex response and substantial followup." Paulson said they have prepared an action plan that lays out the response to each recommendation and they will track progress towards implementation. The RCMP's written response to the MacNeil Report contains a response and target date for each of the 64 recommendations, though four of the recommendations have been redacted from the public document because they relate to officer safety equipment. A couple of the recommendations have already been acted upon are listed as complete, while some will be done within three months. Most are targeted to be completed in 2015 and 2016, with a small handful to be completed in 2017. Only one is targeted for completion in 2018. Telegraph-Journal, A1; Times & Transcript, A1

Night of shootings described as 'chaotic'

RCMP Const. Darlene Goguen's experience the evening of June 4 illustrates the chaos that engulfed the police response to an active shooter in Moncton's north end. Goguen, of the Southeast RCMP District, was racing to the scene of the shooting to offer aid to her Codiac RCMP colleagues, according to the independent review of that night prepared by retired RCMP assistant commissioner Alphonse MacNeil. She knew shots were being fired but didn't have a full understanding of the situation. Southeast RCMP uses a different radio frequency than Codiac, so those officers weren't getting the same information. They are also dispatched through Fredericton, so the Operational Communications Centre in Metro Moncton didn't realize she was on her way to the Hildegard Fire Station to offer assistance. "Const. Goguen unknowingly drove directly to the shooter's location as (Justin) Bourque was in the process of firing multiple rounds at police vehicles parked at the intersection of Hildegard and Mailhot," said MacNeil in his report. She heard the shots, started to turn her car around and was hit several times. MacNeil said her quick reaction to reposition her vehicle was a factor in saving her life. She was injured but drove a few blocks to Penrose Street, and another officer eventually got her to hospital. But as MacNeil learned in preparing his report, no one on Codiac's radio channel knew she'd been shot because of the different radio frequency. "Codiac's OCC only learned she had been under fire when someone found her bullet riddled car," says the report. "They mistakenly believed and shared that she had been shot on Penrose Street where her car was parked, adding to the confusion regarding the gunman's movements." Times & Transcript, A1

*** Bourque a 'lone wolf' extremist, says report**

Mountie killer Justin Bourque was a "lone wolf" extremist whose lack of planning made his shooting spree impossible to detect in advance. His actions on the night of June 4 were also looked at as a possible terrorist act but eventually treated as a multiple homicide. That information about the shooting investigation is contained in the independent review into the RCMP response to the June 4 murders of three police officers and shooting of two others, which was released on Friday. The report's author, retired RCMP assistant commissioner Alphonse MacNeil, looked at potential indicators that might have tipped police off to the fact Bourque planned to go on a killing spree. In the end, he determined there was little advance notice of what the killer was going to do. "There was no indication of Bourque planning anything specific until late on the afternoon of June 4; therefore, there was no planning to detect," wrote MacNeil. Bourque is described as a "lone wolf," a term defined as a person who engages in criminal activity who does not belong to an organized terrorist group, acts without the influence of a leader or hierarchy and uses tactics conceived by him or herself. MacNeil said that definition is accepted by several institutions and is used within the RCMP's National Security program. Daily Gleaner, B1

*** Sadly outgunned**

An editorial states, "Justin Bourque outgunned every one of the 24 Mounties who first confronted him when he terrorized Moncton last year. He was hunting for cops with a high-powered M305 Winchester .308 semi-automatic rifle with 20-round magazines. The Mounties had only their handguns, and three shotguns. Moreover, front-line RCMP supervisors didn't have an overall grasp of events on June 4, there were communications breakdowns, and there was no coherent plan to deal with the emergency. What emerges is a picture of chaos in the opening hours of a crisis that dragged on for more than a day. Amid the confusion three brave Mounties were killed that day and two were wounded. It's a credit to their grit that officers went up against Bourque with just their service pistols, given the risk, and a credit to their

restraint that he was finally taken alive to be tried for murder and jailed for 75 years. This tragedy should spur RCMP Commissioner Bob Paulson to rethink the force's crisis training. And Prime Minister Stephen Harper's government should spare no cost equipping the RCMP with high-powered, rapid-fire Colt C8 patrol carbines - short-barrelled assault rifles, essentially. This has been a pressing issue ever since the slayings in Mayerthorpe, Alta., in 2005 of four heavily outgunned Mounties... While the RCMP has been quick to endorse MacNeil's findings, and his many recommendations, this report is a stinging rebuke. Canada deserves better than a national police force that fields poorly supervised, ill-armed, undertrained officers. It has taken a decade to learn Mayerthorpe's lessons. We can only wonder why." Toronto Star, A10

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Solitary confinement faces test**

The first comprehensive legal challenge to Canada's use of solitary confinement in federal prisons will be launched by the British Columbia Civil Liberties Association and John Howard Society of Canada Monday. Even as many countries, including the United States, rein in use of segregation in prisons, Canada's Correctional Investigator says this country has ramped up solitary confinement by 6% in the past five years. The legal challenge to be filed Monday with the Supreme Court of British Columbia argues that administrative segregation is unconstitutional, amounting to "cruel and unusual punishment" that discriminates in particular against mentally ill and aboriginal inmates. The suit comes a month after Correctional Services Canada published its response to the inquest into the death of teenage prisoner Ashley Smith, who spent more than 1,000 days in solitary confinement before killing herself in 2007. In its response, CSC rejected any new limits on the use of administrative segregation and said it could not support the changes "without causing undue risk to the safe management of the federal correctional system." CSC claims segregation is used in limited circumstances when there are no reasonable alternatives and for the shortest time necessary. Critics suggest that is not the case, that on any given day 1,800 prisoners in the federal and provincial system are in solitary confinement; that one in four prisoners spends some time being segregated; and that 16% of inmates are in solitary for more than four months. Carmen Cheung, senior counsel for the BCCLA, said the organization has been calling for reforms since former Supreme Court justice Louise Arbour released a report on Kingston's women's prison nearly 20 years ago that recommended prisoners not spent more than 30 consecutive days in solitary and not more than twice a year. "We hope this lawsuit will force a change where no political change has happened," said Ms. Cheung. Canada has been under increasing pressure at home and abroad over its use of solitary confinement. A UN Special Rapporteur has said being placed in segregation for more than 15 days amounts to torture. Postmedia News (National Post, A4)

Final resolution to triple homicide

A Cambridge Bay man who has spent eight years in custody in different prisons across Canada pleaded guilty to three counts of manslaughter and two counts of attempted murder Jan. 14 at the Nunavut Court of Justice in Iqaluit. The years of incarceration came as a result of earlier convictions, which were overturned on appeal. Chris Bishop's guilty pleas come as a result of a plea bargain between the Crown and defence counsel, accepted by Justice Robert Kilpatrick, who is expected to render a written sentencing decision in a few weeks, completing a dark chapter that has traumatized the community of Cambridge Bay. (...) Bishop was convicted of three counts of second degree murder and two counts of attempted murder in a trial by jury in 2010, and sentenced to life imprisonment. The decision was overturned in the Nunavut Court of Appeal in January 2013 and a new trial was ordered. The plea bargain presented Jan. 14 means a new trial is not necessary but allowed the opportunity for victim impact statements to be made toward sentencing. NWT News/North

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

À quand un programme de déradicalisation chez nous?

"Le Canada est en retard et il doit se doter d'un programme de déradicalisation, c'est la clé du succès", affirme Jocelyn Bélanger, qui s'interroge sur l'absence de mesures chez nous pour réhabiliter les jeunes radicaux. Le professeur au département de psychologie de l'UQAM a fait partie d'un groupe de chercheurs financé par le Département de la défense américaine pour comprendre les processus de radicalisation et de déradicalisation sur plusieurs années et dans plusieurs pays. Selon lui, les programmes de déradicalisation présents aux États- Unis, au Royaume-Uni, dans certains pays du Moyen-Orient et de l'Asie représentent une stratégie très efficace de lutte contre le terrorisme. Le Journal de Montreal, 35

* **IACHR report echoes need for federal inquiry into missing and murdered indigenous women**
Last week the Inter-American Commission on Human Rights (IACHR), an international body and an arm of the Organization of American States, released a report highlighting the grim reality in Canada for many indigenous women and called for a national inquiry or action plan into missing and murdered aboriginal women and girls in Canada, echoing what many domestic and international bodies have been calling for. Being noted on the international stage as a country with a continuing human rights issue is not something the Canadian government should dismiss as not being on its "radar," as Prime Minister Stephen Harper put it in his year-end interview with the CBC's Peter Mansbridge: "You know, our ministers will continue to dialogue with those who are concerned about this. They're studying it. But we have an awful lot of studies and information on the phenomenon and an awful good indication of what the record is in terms of investigation and prevention of these sorts of things." The report issued in Washington, D.C. Jan. 12 rebuts the well-trodden government sentiment that further study isn't needed. It says that to get to the root of the problem there is still "much more to understand and to acknowledge in relation to the missing and murdered indigenous women." The IACHR reiterates that Canada still needs to address the root causes and history of violence against women and systemic racial discrimination as seen through the Indian Act and residential schools, which has made generations of indigenous women more vulnerable to high levels of violence. It points to the lack of due diligence on the part of the police and the state in cases of violence against indigenous women in implementing measures to address the social and economic inequalities that perpetuate it. Hill Times

* **Canada's gang hotspots - are you in one?**
In Atlantic Canada, the Bacchus outlaw motorcycle club runs the drug trade, according to police biker crime specialists. In oil-rich Alberta, bullets fly when the Red Scorpions clash with the United Nations crew. In the Prairies, the White Boy Posse's migration east from Edmonton has spilled blood in Saskatchewan. Gang activity even blights Ottawa, one of the world's safest cities. The capital logged a record 49 shootings in 2014, prompting police to address concerns about gangland disputes. Among those incidents was a targeted Boxing Day shooting that wounded one man during what investigators called "infighting" between members of the Crips. Although Canada's crime rate is trending down, organized crime hotspots still seethe - often outside the urban hubs of Toronto, Montreal and Vancouver. Saskatoon averaged two gang-related homicides a year between 2003 and 2012, according to Statistics Canada. Its annual average rate of 0.89 gang-related murders per 100,000 population more than doubles the per capita rates in Montreal, Toronto and Calgary. "Let's not put blinders on and think this isn't happening in our smaller cities," said Toronto author Jeff Pearce, whose 2009 book Gangs in Canada is used as a textbook in B.C. criminology courses. Whether it's Alberta's oil or Saskatchewan's potash, boomtowns are not immune. (...)The latest national figures cited by **Public Safety Canada** date back to 2002. They put the number of "youth gangs" at 434, representing some 7,000 members. Ontario harboured the most youth gangsters with 3,320; Saskatchewan followed with 1,315 gang members. Abbotsford-Mission in B.C.'s Fraser Valley takes the title of gangland murder capital of Canada. It averaged 1.02 gang-related slayings per 100,000 population between 2003 and 2012, a figure likely elevated by 11 mostly gang-related murders in 2009. CBC News

PUBLIC SERVICE / FONCTION PUBLIQUE

Sick females a PS 'crisis'
Women in the public service go on disability leave at almost twice the rate of men, a problem some experts say should be addressed as part of the government's new disability management scheme. The

federal disability insurance plan, managed by Sun Life Financial, is the biggest in Canada. A Sun Life report obtained by the Citizen shows women have ended up on long-term disability at rates vastly disproportionate to their numbers in the public service for more than a decade, especially for mental health conditions. "It's a crisis, a toxic mix of gender, age and work strata ... and it can no longer go unnoticed. The government has an obligation and duty to care," said Joseph Ricciuti, president of SEB Benefits and HR Consulting. "In the meantime, the poor disability-claims numbers speak for themselves and will continue to impact women in the workforce, who are the hardest-hit and paying the socio-economic price." Ottawa Citizen, A1

Ex-PS worker wins battle for back pay
Doug Nicol's six-year battle with the federal government cost him his livelihood, his health and his marriage. The 55-year-old former public servant in Edmonton was forced to rely on food banks and scrounge for empty bottles for cash. Twice he almost lost his house. Last month, Nicol got his best Christmas present ever: An adjudicator awarded him three years' pay and $38,000 in damages after finding that his employer, Service Canada, made no real effort to accommodate his disabilities and engaged in discriminatory practices "wilfully and recklessly." The Public Service Labour Relations and Employment Board upheld a June 2008 grievance by Nicol, a former EI claims assessor with Service Canada who took medical retirement in December 2011. Nicol alleged that Service Canada denied him accommodation for physical and mental disabilities, causing him "serious financial, physical and psychological damages." He also alleged his employer discriminated against him on the basis of his disability. Ottawa Citizen, A7

MacIntosh arrested on child sex charges
A former Cape Breton businessman has been arrested in Nepal on charges he lured a nine-year-old boy to his hotel room and had sex with him, a police official said Saturday. Ernest Fenwick MacIntosh, 71, was arrested at a hotel in Lalitpur, a suburb south of the capital, Kathmandu. He was ordered detained by the district court until the charges could be further investigated, Lalitpur's police chief Pushpa Ranjit said. MacIntosh arrived in Nepal on a tourist visa in August 2014, and was a frequent visitor to the children's shelter where the boy lived, and they met there, police said. They also said that Macintosh has been accused of threatening the boy. The Himalayan Times quoted a spokesperson with the Metropolitan Police Range in Jawalakhel as saying the alleged incident at the hotel occurred on Dec. 13. The newspaper report said police received a complaint from the family of the alleged victim on Dec. 19 that a Canadian tourist lured him into a room at a guest house. Police declined to provide further details because the case involves a minor, however, they said they were trying to determine whether there might be other alleged victims. Cape Breton Post, A1

Canada must aid flogged prisoner
An opinion piece states, “There are many reasons the Canadian government should condemn Saudi Arabia more strongly than it has for torturing a blogger (issuing only a "concerned" public request for clemency), and many reasons it should have condemned the torture much sooner than it did (making its request five days after the first 50 lashes of 1,000, and only after the Globe and Mail pressed it about apparent trade meetings with Saudi royals). But three reasons are so compelling that they deserve emphasis, although they're so obvious that they shouldn't need it. First, the Canadian government has a stronger relationship with liberal blogger Raif Badawi - and a greater responsibility to convince Saudi Arabia to stop torturing him - than any other government. But because the blogger isn't Canadian, the Canadian government claims it can't do much. That's transparently craven wishful thinking. While Badawi can't assert the consular rights of a Canadian citizen, his wife and children live in Canada.” Ottawa Citizen, C4, Le Devoir

*** Baird's moral laryngitis**
A letter to the editor states, “Fahmy remains in jail despite Baird's visit, Jan. 16 Foreign Affairs Minister John Baird's "very long and in-depth discussion" was "constructive and fruitful." I suspect this is "diplomat-speak" for a nice lunch where nothing meaningful was said or heard. But then, why should we expect

Egypt to hear complaints from a country that rounds up protesters and bystanders like cattle (dip-speak, "kettles"), that detains foreigners for years without charge or trial (dip-speak, "security certificate") and that keeps the mentally ill in solitary confinement for months on end (sorry, no euphemism available). Our government has contracted moral laryngitis and can no longer speak for our citizens at home or abroad. Perhaps Mr. Fahmy remains in jail because, not in spite, of this intervention." Toronto Star, A10

INTERNATIONAL

France releases three terror suspects

French police have released three female suspects from questioning, but will keep nine other people in custody as part of an anti-terror investigation connected to last week's attacks in Paris that have put Europe on high alert, officials said Sunday. Amid the heightened European vigilance, a far-right rally in Germany planned for Monday was cancelled over a terrorism threat, Italy said it had expelled nine suspected jihadis since late December and Britain's home secretary called for new action to fight anti-Semitism in the wake of the Paris attacks. AP (The Guardian, The Chronicle-Herald, Toronto Star, Cape Breton Post, The Province, Leader-Post, The Gazette, Windsor Star, Calgary Herald, Ottawa Citizen, Vancouver Sun, Edmonton Journal)

Islamic State frees hundreds of captives

The Islamic State group released about 200 Yazidis held for five months in Iraq, mostly elderly, infirm captives who likely slowed the extremists down, Kurdish military officials said Sunday. Almost all of the freed prisoners are in poor health and bore signs of abuse and neglect. General Shirko Fatih, commander of Kurdish peshmerga forces in the northern Iraqi city of Kirkuk, said it appears the militants released the prisoners because they were too much of a burden. "It probably became too expensive to feed them and care for them," he said. Tens of thousands of Yazidis fled in August when the IS group captured the northern Iraqi town of Sinjar. Hundreds were taken captive by the group. Globe and Mail, A5 (Chronicle-Herald), * Associated Press (Acadie nouvelle, Le Devoir, National Post, Waterloo Region Record, Toronto Star, Canada.com)

MINISTER / MINISTRE

Ontario revamps efforts to name unidentified dead
When the federal government created a national missing-persons centre in 2011, the presumption was it would supplant siloed provincial and territorial online efforts and serve as a better tool for matching the vanished with the anonymous dead. But the RCMP-led National Centre for Missing Persons and Unidentified Remains (NCMPUR) hasn't progressed fast enough for Ontario, the province with the most anonymous dead. A Globe and Mail investigation has found that Canada's strategy falls far short of the U.S. model, considered the gold standard. The Ontario chief coroner's office and forensic pathology service are now working with the provincial police to revamp their digital outreach to help identify the nameless and bring some closure to families of the disappeared. In some cases, identifications could breathe new life into stalled police investigations and help bring killers to justice. (…) Jean-Christophe de Le Rue, a spokesman for **Public Safety Minister Steven Blaney,** said the government is committed to ensuring the data bank is effective. He said DNA analysis will be consistent with international practices. There are 697 anonymous dead in Canada, according to a Globe survey of the country's coroners and medical examiners. One third of those remains are in Ontario. Globe and Mail A1

Chill sets in over anti-terror laws - Filmmaker concerned he'll be labelled terrorist
Winnipeg filmmaker says he fears the government's anti-terror legislation could ensnare him as he works to produce and promote a miniseries based on a book about an attack on Canada by indigenous fighters. Jeremy Torrie, president and head of distribution for Bandwidth Digital Releasing and High Definition Pictures, said he is working on an eight-part miniseries based on Douglas Bland's book Uprising. The

novel, published in 2009, is a fictional account of the attacks on Canada's military bases and power stations by disgruntled indigenous youth who have found a modern-day revolutionary leader. He hopes to establish a social media campaign when the miniseries is released to foster a real discussion of the issues facing aboriginal youth and why the book and miniseries are not farfetched. Torrie fears provisions in Bill C-51, which makes it a crime to knowingly advocate or promote terrorist offences, could make him a target. "Just me posting some of my ideas for this drama series would be enough for them to throw me in jail and not charge me until they determine they've taught me a lesson, and perhaps even try to dissuade me from producing the series," Torrie said. "Literally freedom of speech, of expression is at stake here." The new law says it can apply to someone who purposely tells someone else to commit terrorism but also to someone whose comments might lead someone to do so, regardless of whether that was the intention, and regardless of whether the comments result in a terrorist activity. It is punishable by up to five years in prison. Jean-Christophe de Le Rue, director of communications for **Public Safety Minister Steven Blaney**, said the bill is clear. "It does not include lawful advocacy, protest, dissent and artistic expression," said de Le Rue. "This bill targets those who advocate, promote or would commit acts of terrorism against Canadians." Winnipeg Free Press, A2

Leader's words should strengthen, not scare, nation
A new catchphrase is spreading through the rhetoric of Stephen Harper and his ministers. It is only four words - they hate our values - but it packs an emotional wallop. The prime minister road-tested it on an audience in Richmond Hill in January. "Canadians are targeted by jihadi terrorists for no other reason than that we are Canadians," he warned. "They hate our society and the values it represents." He used it in a different context in Quebec City two weeks ago. This time, he lashed out at employees of Radio-Canada. "I remain convinced that Quebecers are not leftists, contrary to the image conveyed by some media or the opposition parties," he said. "I understand that there are many at Radio-Canada who hate these values but I think that these values are the true values of a large percentage of Quebecers." **Public Safety Minister Steven Blaney** echoed the mantra as he headed to an international security summit in Washington last week. **"Canadians are being targeted by jihadi terrorists simply because these terrorists hate our society and the values it represents."** In some ways this epithet is like previous Tory terms: soft on crime, Taliban sympathizer, defender of child pornography. It is simple, spiteful and calculated to whip up strong feelings. The Guardian, A7

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Winter not ready to relinquish icy grip, says meteorologist**
The eye of the snowy storm is passing the city, but now Saint John will have to deal with colder-than-average temperatures. Last month, the province experienced some of the coldest temperatures on record. Environment Canada... said the city was unusually chilly in February. And colder temperatures mean more snow... [I]t's likely the city will be hit with at least one late winter storm, although any system tracks are as yet undetermined. An early-March sprinkling of snow has already caused minor issues in the city, with a handful of collisions due to slippery road conditions, including one that closed a highway on Monday morning. Telegraph-Journal, B3

*** Emergency response could improve, report says**
The ice storm of 2013 saw two years worth of freezing rain fall in two days, the weight of which snapped off branches and toppled trees. Power lines were brought down in their wake with the result that more than 400,000 Toronto Hydro customers - at least a million people - went without electricity and heat, some for days and weeks. The province jumped in to offer support to municipalities across Ontario and a new report by the Office of the Fire Marshal and Emergency Management has given the government's response a passing grade. The review, called the 2013 Southern Ontario Ice Storm report, also contains two dozen recommendations to improve communications and co-ordination efforts when future emergencies occur. Toronto Star, GT2

*** Power outages in Sydenham District**
Kingston Hydro will be conducting repairs to the underground electric lines in the Sydenham District that will require some planned power outages on Wednesday. Customers in the Sydenham District areas

listed below will experience power outages ranging from 15 minutes to two hours. Kingston Whig-Standard, A6

*** City studying ways to help frozen pipe victims**
The city will study the prospect of compassionate grants and other aid for homeowners struggling to repair frozen water lines after a record February deep freeze. The coldest February in Hamilton's history was mostly to blame for a record 700 calls to the city about frozen water lines this winter. That exceeds last year's record of around 570 in what had been considered a winter anomaly. But the city can't afford to ignore the possibility of a troubling new trend, councillors said at a public works meeting Monday. Hamilton Spectator, A6

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Disclosing dangerous goods risks terror: CP
Terrorism poses a greater risk to railways and the communities they pass through than derailments do, and notifying public officials of dangerous-goods shipments may actually increase the risk of attacks, says the CEO of Canadian Pacific Railway Ltd. "I will notify every public official every day of what's on that train if they want to know it," Hunter Harrison said Monday in a speech to the Canadian Club of Toronto. "But if you want to give someone the opportunity to break that custody chain and look at the list and say, 'Here's what that car's got in it and here's the location and here's all the bad things I could do' - I don't think we want that." Mr. Harrison told reporters after his speech that he fears terrorism more than derailments "because it can be planned to do the worst possible damage." Following the Lac-Megantic disaster in 2013, Transport Canada introduced new regulations that require Class 1 railways, including CP and Canadian National Railway Co., to provide a quarterly breakdown of the nature and volume of dangerous goods they transport through each municipality. Some critics have called for even more disclosure. Postmedia (National Post FP1/ Front, Calgary Herald Ci/ Front, Vancouver Sun, Ottawa Citizen, Star Phoenix, Montreal Gazette, Edmonton Journal, Financial Post), Globe and Mail; * Canadian Press (The Chronicle-Herald, La Tribune, Times Colonist); Le Devoir

Kenney soldier tweet upset guards
Internal emails show a minister's tweet sparked confusion, frustration and anger as Cpl. Nathan Cirillo's comrades learned about the Canadian soldier's death on Oct. 22 from news reports rather than through official military channels. Cirillo was standing guard with another soldier in front of the National War Memorial shortly before 10 a.m. that morning when a lone gunman shot him in the back. The gunman then drove to Parliament Hill and rushed through the main doors of the Centre Block, where he was killed in a shootout with RCMP officers and Hill security staff. The unprecedented attack prompted an immediate lockdown of military and federal institutions across Canada, amid fears of a coordinated assault on Ottawa and an absence of concrete information. At 1:24 p.m., nearly four hours after Cirillo was shot, a message went out to military commanders across the country providing a brief update on the situation. "There will be no public release of his name or condition until it is certain all information is accurate and the family has agreed to do so," the message added. But 15 minutes later, at 1:40 p.m., then-employment minister Jason Kenney became the first to confirm that the 24-year-old reservist had died, tweeting: "Condolences to family of the soldier killed, prayers for the Parliamentary guard wounded." Kenney has since been named defence minister. The minister's comment sparked a flurry of news reports. In response, Sgt. Tim Perry of the Canadian Forces' Ceremonial Guards emailed his commanding officer, Maj. Michel Lavigne, at 1:53 p.m., saying: "I need a padre and confirmation if Cpl. (Cirillo) is dead or not. My guys are learning from CBC on his status." Postmedia (Ottawa Citizen A1/ Front)

Islamic researcher delves conversion ties to terror
Converts are overrepresented among those few western Muslims who have committed acts of terror. Dr. Scott Flower, an Australian researcher completing a federally funded study of Canadian converts, tells the Ottawa Citizen's Dylan Robertson why we know so little about converts. Q. Imams are concerned by a spike of coverts to Islam after the attacks last October in Ottawa and St-Jeansur-Richelieu, Que. Have you seen spikes in converts? A. For sure, and the Sept. 11, 2001, terror attacks are probably the biggest

example. A lot of the converts I've talked to said that before 9/11, people hadn't really heard of Islam or knew what Muslims believe, and it sent them on a quest for knowledge. Some of the people on that quest eventually convert. I wouldn't say it's necessarily causal, but certainly there's a relation between these big events and increases in conversion. And we likely see that with the onset of ISIL (Islamic State) on the world stage in the last 10 months. Obviously there's also a much, much smaller group of people who are drawn for other reasons. Like, they might have a mental-health problem and have been looking for some ideology to mobilize their grievance. Those individuals seek a more extremist form of Islam, but they're very much a black swan. The statistics on conversion in most western countries are very poor, even non-existent, and that's what our project is trying to do, get some hard statistics. Edmonton Journal, C11

If you're so sure of C-51, debate it
An opinion piece by Tom Mulclair states..."Justice Minister Peter MacKay is out of touch with reality when he pretends the official Opposition is on "the sidelines" of Bill C-51 ('Freedom and security, hand in hand,' Feb. 28). In fact, New Democrats have been on the front line - leading the charge - opposing Conservative schemes to ram it through Parliament at all costs. If the minister and his government were really serious about security, they wouldn't shy away from meaningful study and debate of this sweeping new bill. (...) As New Democrats oppose C-51 and the Liberals vote for it, more than a hundred of Canada's brightest legal experts from institutions across the country sent an open letter to all members of Parliament expressing their "deep concern" about C-51. They call the Conservative bill a "dangerous piece of legislation in terms of its potential impacts on the rule of law, on constitutionally and internationally protected rights, and on the health of Canada's democracy." The NDP believes we need responsible approaches to protecting Canadian values and freedoms, as well as our personal safety." National Post, A9

*** Nuttall was obsessed about leaving DNA evidence, trial hears**
In surveillance video shown to a jury Monday, an agitated-looking John Nuttall is seen pacing around a motel room, giving orders to his wife, Amanda Korody, and obsessing about not leaving traces of DNA for police. Nuttall and Korody have pleaded not guilty to four terrorism-related charges alleging they conspired to explode bombs at the B.C. legislature in Victoria on Canada Day 2013. Monday's video showed the Surrey couple back at a Delta motel room where they have assembled items to build the pressure-cooker bombs they plan to use in the terror attack. Postmedia (The Province, A9, Vancouver Sun); Canadian Press (National Post A6); Times Colonist, A2

*** Muslim group aims to create 'united front' against terrorism**
Hundreds of Muslim families across Canada are opening their doors to their neighbours in an effort to "dispel myths" and "stand united" against terrorism. The program, called Meet A Muslim Family, is spearheaded by Ahmadiyya Muslim Jama mosques from coast to coast. "This campaign comes at a unique time, especially here in Canada given everything we've seen in the past few months, the various terrorist-related activities and various international headlines that have turned a lot of heads towards the Muslim community," spokesman Safwan Choudhry said. "Surely, our fellow Canadians must be scratching their heads and saying, 'What exactly is going on and where is this sudden rise in radicalization coming from?' "Choudhry said terrorist organizations of all stripes have "one thing in common, which is to create fear, which leads to division." QMI Agency (Kingston-Whig Standard B2, Ottawa Sun, Calgary Sun, Edmonton Sun, Toronto Sun, Winnipeg Sun)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

The spies next door
New figures show Canada has turfed out five spies in the past decade from a surprising source country - its best friend and ally, the United States. From 2004 to 2014 Ottawa sent back to the U.S. five of a total of 21 of those barred from Canada "on security grounds for engaging in an act of espionage that is against Canada or that is contrary to Canada's interests," according to a document produced by Canada Border Services Agency. It's not clear if the espionage was by foreign government agents or if it was industrial espionage - that is, spying to obtain state secrets, intellectual property or corporate secrets. A document released under access to information laws shows the suspected spies were permanent

residents or foreign nationals deemed inadmissible on security grounds, but doesn't break down them down by citizenship. Rather, it indicates the country the spies were sent back to. Still, the fact that the U.S. is the origin of the most espionage cases is surprising, especially given the emphasis put by federal politicians - including two former CSIS directors, one of whom is now national security adviser to Prime Minister Stephen Harper - on China as a suspected source of espionage. Toronto Star, A1, La Presse, A2/ Front (Le Quotidien 14/ Front, * Le Soleil, La Voix de l'Est)

Canada's DeHart decision 'shameful'

While Matt DeHart appeared briefly inside a Buffalo courtroom after his deportation from Canada where he had sought political asylum, outside, a prominent international whistleblower support group hailed him for his courage. Mr. DeHart, 30, was turned over to U.S. authorities by Canada Border Services Agency on Sunday and on Monday he was named the third beneficiary of the Courage Foundation, an international organization. Mr. DeHart joins two previous beneficiaries, both wellknown newsmakers: Edward Snowden, the former National Security Agency analyst who leaked documents revealing large-scale global surveillance, and Jeremy Hammond, serving 10 years in a U.S. prison after hacked email from security think-tank Stratfor was published through WikiLeaks, the whistle-blowing organization. "Canada's actions are shameful. It may as well not have a border," said WikiLeaks founder Julian Assange in a statement. (WikiLeaks is linked to the Courage Foundation through its founder, Sarah Harrison, who is a WikiLeaks editor.) "The abuse of the law in DeHart's case is obvious, shocking and wrong," said Mr. Assange. In a tweet, WikiLeaks referred to Mr. DeHart as an "alleged WikiLeaks middleman." Mr. Assange remains in exile in Ecuador's London embassy where he took refuge against extradition to Sweden where he is wanted for questioning on sex-crime allegations. Questions about Mr. DeHart's treatment were revealed in a long investigation by the National Post in May. National Post, A6

Child porn smuggler has prison sentence reduced

Border officials hailed it as one of the harshest sentences ever of its kind. Now a truck driver convicted of smuggling child pornography across the border has won a court fight to reduce his 30-month prison sentence. In a decision released last week, the Manitoba Court of Appeal ruled the sentence unfit and replaced it with a sentence of 20 months. Denys Valeriyovych Basov, 38, was arrested May 7, 2013 in Emerson after border officials found over 300 images and six videos depicting child pornography on his laptop computer. Didn't consider record Vasov argued on appeal the sentencing judge placed undue weight on the number of images found on his computer and failed to take into account that he was a first-time offender. The appeal court ruled the sentencing judge was entitled to consider the number of images as an aggravating factor, but erred in not properly considering Basov's clean prior record. "Generally speaking, the presence or absence of a criminal record is a significant factor in determining an appropriate sentence," Justice Holly Beard wrote. Winnipeg Sun, 4

Dead man believed to be drug trafficker's brother

A man found dead in a vehicle in Surrey on Friday is believed to be the brother of a convicted B.C. drug trafficker. Surrey RCMP were called just after 10 a.m. to the 9500-block 139th Street, where the dead man was found. The death was deemed suspicious and the Integrated Homicide Investigation Team joined the investigation. Police sources say the victim, who is believed to have been shot, is Mike Russell, brother of Edward "Skeeter" Russell. Using social media, Edward Russell wrote that his brother had passed away. Integrated Homicide Investigation Team spokeswoman Sgt. Stephanie Ashton was unable to confirm the dead man's identity, however she said an update on the investigation is expected in the next day or two. In 2011 Edward Russell was sentenced in U.S. District Court in Seattle to four-and-a-half years in prison after pleading guilty to charges related to the operation of a Hells Angelsconnected drug smuggling ring that was busted in 2008. Marijuana, cocaine and cash crossed the border in hollow logs, wood chips and secret compartments in tractor-trailers. Russell admitted to helping arrange for marijuana to be smuggled across the border. Edward Russell's name also came up in testimony during the Surrey Six trial. The Province, A3

Lawyer admits to negligence

A Toronto lawyer who represented hundreds of Roma Hungarian refugees has admitted to professional misconduct for failing to adequately prepare some of his clients' claims for asylum. At a disciplinary hearing Monday, Viktor Hohots filed an agreed statement of facts with a Law Society of Upper Canada

panel relating to allegations made by 13 complainants, all Roma refugees from Hungary, between August 2009 and February 2012. In his submission, Hohots said he "failed to assume complete professional responsibility for his practice and that he failed to directly and effectively supervise the non-lawyer staff of his law office to whom he delegated the preparation of refugee claims." Supporters of the complainants - most of whom were denied asylum and have been deported - hope Immigration Minister Chris Alexander can reopen their files, given Hohots's admission. They include a Roma family who sought sanctuary in a Toronto church for three years, hoping their claim would finally be accepted. Both Hohots and Mitchell Worsoff, his lawyer, said they would reserve their comments until his penalty hearing on May 11. Hohots could face suspension, supervised practice or lose his licence. Refugee lawyers and advocates hailed Hohots's admission of misconduct, saying it exonerates people who had claimed substandard work on his part had led to their asylum - and justice - being denied. Toronto Star, GT1

BSE case prompts U.S. calls for COOL

A handful of U.S. farm groups are using Canada's newest BSE case to prop up arguments in favour of mandatory country-of-origin labelling, or COOL. Among the organizations attempting to draw a link between the labelling law and the latest infected cow is R-CALF - the Ranchers-Cattlemen Action Legal Fund - the same U.S. lobby group that became the bane of the Canadian beef industry during the height of this country's BSE crisis more than a decade ago. But John Masswohl, director of government and international relations for the Canadian Cattlemen's Association, said he doesn't expect the rumblings of a few extreme protectionists to have an impact on Canada's efforts to get the controversial U.S. labelling law repealed. "We always expect the usual suspects to provide the usual spin. We're pretty confident that nobody in the States really pays attention to R-CALF, a Montana-based cattle producers' lobby group, became infamous in Canada in 2004 when it successfully obtained a court injunction blocking the planned reopening of the U.S. border to Canadian beef products. The ensuing legal wrangling lasted more than a year and was one of the reasons bovine spongiform encephalopathy became such a costly and difficult episode in Canadian agriculture history. Now, R-CALF is again raising alarm bells about Canada's food safety system. Last week, the organization's CEO Bill Bullard said the discovery of a new case near Spruce Grove is proof the U.S. Congress should not repeal COOL - even though the law has been successfully challenged at the World Trade Organization by Canada and Mexico for being discriminatory and violating trade agreements. Calgary Herald, C1; Edmonton Journal

Whale meat shipped through port

Canada is opposed to the hunting of the endangered fin whale, but apparently can't do anything about being used as a conduit for the animal's meat. NDP MP Don Davies on Monday used the fact World Wildlife Day is Tuesday to highlight that Canada is being used to facilitate trade in whale meat. Canada is part of an agreement, the Convention on International Trade in Endangered Species of Wild Fauna and Flora, that bans commercial hunting of endangered species. The fin whale, which is the second-largest creature, after the blue whale, remains at risk. But one shipment of fin whale meat from Iceland was sent to Halifax in January 2014 and shipped by rail to Vancouver for export to Japan. Another shipment of an unknown type of whale meat was sent from Nova Scotia in March 2014 to Iceland, according to export data from Statistics Canada. "Canada's marine mammal regulations prohibit the commercial export of any cetacean species," said Davies. "I'm calling on the government to take their international obligations seriously, to quit breaking the law and to protect endangered species." Davies asked Canada Border Services Agency why they allowed shipment of an illegal substance. "They felt they couldn't intercept this shipment because it was in 'bond'," said Davis. "What if we found there were narcotics involved - heroin, cocaine? I don't think any federal government department would be saying they couldn't do anything." The CBSA passed responsibility for the whale meat shipment to Environment Canada, which did not provide a response by press time Monday. The Province, A7

Canada customs launches tool to fight counterfeit

Many U.S. brand owners already work with U.S. Customs and Border Protection (CBP), a division of the U.S. Department of Homeland Security, to keep counterfeit products out of the U.S. CBP examines cargo at more than 300 ports of entry into the U.S., and seizes goods that appear to infringe registered trademarks and copyrights on record with CBP. CBP also has the authority to seize any goods entering the United States, even if the goods are not intended for the U.S. market and the shipment is simply passing through the United States to another country. CBP can also issue monetary fines, request that

the U.S. Attorney's Office criminally prosecute the offenders, and/or coordinate and participate in raids on international counterfeit production facilities. Customs Today.com

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** 'Human error' blamed for Rogers breach**
Rogers Communications Inc. says that a security breach it is attributing to "human error" has resulted in outsiders gaining access to information associated with dozens of its medium-size business accounts. The intruders appear to have used a technique known as "social engineering" - which relies on manipulating people into volunteering confidential information - to trick an IT support agent into handing over an employee's confidential details that were then used to gain access to Rogers's internal records. Globe and Mail, B3; Windsor Star (Edmonton Journal); Canadian Press (National Post, Toronto Star)

*** Canada Revenue Agency warns of email and phone scams**
The Canada Revenue Agency is warning Canadians to beware of telephone calls or emails that claim to be from the CRA but are not. In a media release, the national agency explained that these are phishing and other fraudulent scams that could result in identity and financial theft. Some of these scams ask for personal information directly, and others - such as the email scams - refer to a website resembling the CRA's, where visitors are asked to confirm their identity by entering personal information. People are strongly advised not to click on the links to these websites if they receive such an email. Email scams may also contain malicious software that can harm your computer and put your personal information at risk. Daily Gleaner, A8

*** Shared Services Canada plans data centre expansion in Ottawa**
The federal government is moving ahead with plans to refurbish a data centre in Ottawa — a project that could take years to complete, and possibly cost more than $100 million. The plan is to refurbish an existing data centre by the airport to be a second "development" data centre, which is essentially a space to test programs before they go live, making it one of the seven data centres the government wanted to keep open as part of a massive IT overhaul that the government is undertaking to reduce costs, tighten cyber-security, and help make the public service more nimble. When work to consolidate 485 data centres into seven is complete — sometime around 2020 — the government expects to save about $100 million a year in operating costs. OttawaCitizen.com

*** Computer expert warns Canadians: Watch out for 'Superfish'**
A Whitehorse computer expert is warning Canadians about a computer vulnerability — and he's mentioning one computer brand by name. Martin Lehner is a security expert at Orange Technology in Whitehorse. He says users of Lenovo computers should get their computers checked for pre-installed software. Lehner says many Lenovo computers have software called, "Superfish", which is installed at the factory. The software is designed to wedge sponsored advertising into web sites, but in doing so opens a door to hackers. CBC.ca

LAW ENFORCEMENT / APPLICATION DE LA LOI

Candlelight vigil to mark 'horrible day'
A candlelight vigil will be held in Mayerthorpe today to commemorate the fallen four RCMP officers on the 10th anniversary of their deaths. In Red Deer, Keith and Colleen Myrol will gather with friends and family to remember their son Brock Myrol, 29, who was slain along with Constables Anthony Gordon, Leo Johnston and Peter Schiemann. "It's a strange day because it's not a celebration," said Keith. "It's the marking of a day that actually was a horrible day. "So we'll just work our way through the day." Myrol said their daughter and her husband and grandchildren all live in town and some friends are also stopping by. "We won't be alone. That's the main thing." There have been many events over the years to remember

the sacrifices of the four young RCMP officers and the Myrols are grateful for the thoughts and messages from other Canadians. Red Deer Advocate, A1

'I put my forehead against his ... It was just me and him'
When RCMP Const. Leo Johnston was shot dead in Mayerthorpe 10 years ago, Lee Johnston lost half of himself. That's how the identical twin, also an RCMP officer, describes the murder of his brother, killed alongside three other RCMP officers in an ambush at a Mayerthorpe farm. Lee Johnston is now a corporal in Ottawa, working in tactical training. Ten years ago, he was a constable in Surrey, B.C.; Leo a constable in Mayerthorpe. The brothers were born nine minutes apart - Leo first, then Lee - and had always been close, growing up on a farm near Lac La Biche. The night before Leo died, he and Lee had written back and forth on MSN Messenger, as they often did, chatting until after midnight. On the morning of March 3, 2005, around the time of the killings in Alberta, Lee woke suddenly from a deep sleep. He soon dozed off, unsure what had woken him. Around 11:30 a.m., as he was driving to work, his mom called, wondering if he had heard what was going on in Mayerthorpe. "I just started crying," Lee remembers. "I couldn't help it. I almost never cry. But I just had a feeling." Confirmation that Leo had been killed didn't come for hours. But by then, shock had settled in. Postmedia News (Edmonton Journal, A1)

From Devastation to Forgiveness
A decade ago, Rev. Don Schiemann felt like his arm was ripped off. It's the starkest way the 63-yearold can describe the 10 years since his son, Const. Peter Schiemann, was killed in the line of duty. His grief began with the shock and pain of a sudden, vicious wound, followed by rough years of scars and scabs. He's lived through months of pain and recovery. "Over time, the wound heals, but you always miss that arm," Schiemann says. "It gets better, to a point, but that arm never comes back." In March 2005, RCMP Const. Peter Schiemann - just two months shy of his 26th birthday - was killed with three fellow officers on James Roszko's farm north of Mayerthorpe. The enraged Roszko, known as the town bully and a renowned police-hater, ambushed Schiemann and constables Leo Johnston, Anthony Gordon and Brock Myrol during an investigation at his property. Roszko then shot himself. Since then, Don Schiemann has lived in a world of emotional triggers. Violent news reports - including the June 2014 shooting of RCMP officers in Moncton and the January murder of St. Albert Const. David Wynn - bring pain, as do the holidays and birthdays other families take for granted. Schiemann, a Lutheran minister, cherishes the memory of his son's surprise Sunday morning visits at church in Stony Plain during his drives between Edmonton and Mayerthorpe. The smiling officer would slide into a seat beside his family before anyone knew he was there. "That was Peter," Schiemann remembers fondly. Sitting near an empty pew on a recent Sunday, just for a moment, Schiemann still expected his son to pop by. Postmedia News (Edmonton Journal, Calgary Herald)

* **Fallen 4 Marathon gives back**
A memorial marathon set up after four Mounties were slain in Mayerthorpe on March 3, 2005, continues to improve lives in the community. Since it was created six years ago, the Fallen 4 Marathon Society has raised $178,000 for Whitecourt and Mayerthorpe -- with $29,000 handed out in 2014 from the 1,400 who participated in the two-day event. The four constables -- Anthony Gordon, Lionide Johnston, Brock Myrol and Peter Schiemann -- were gunned down by cop-hater James Roszko, who then turned a gun on himself, at his farm near Mayerthorpe. Tina Prodaniuk, Whitecourt Crime Prevention Coordinator and chairwoman of the Fallen 4 Memorial Society, says the marathon has been a chance to pay homage to the constables. EMS and most of the RCMP, peace officers and fire department are volunteers. "They come out because they want to help with the event," she said. The Fallen Four Marathon starts at the Mayerthorpe Fallen Four Memorial Park and ends up in Whitecourt, connecting the communities where the officers were from. Part of the proceeds also go towards the Fallen Four Memorial Society. QMI Agency (Calgary Sun, Edmonton Sun)

* **Town rises above its grim legacy**
In a once-vacant lot on the south edge of Mayerthorpe stand four life-size bronze statues of constables Brock Myrol, Anthony Gordon, Leo Johnston and Peter Schiemann. The solemn figures surround a monument topped with skyward doves, honouring all Canadians who have died while wearing a uniform. Each officer stands on guard in a different position according to his length of service and faces a different direction, toward his hometown or his first posting. The Fallen Four Memorial Park commemorates the

RCMP officers shot dead on March 3, 2005, on James Roszko's farm north of Rochfort Bridge, a tiny community about 130 kilometres northwest of Edmonton. For 10 years, the shooting has cast a shadow on nearby Mayerthorpe, where three of the four officers were based. The town of 1,500 people has become synonymous with one horrible act. "I feel bad for the town of Mayerthorpe, but you say the word Mayerthorpe and the RCMP and it only means one thing," said Deputy Commissioner Marianne Ryan, the head of Alberta's Mounties. "It means tragedy." In the years since the massacre, the Fallen Four Memorial Park has become Mayerthorpe's reminder of what happened, and its way to redefine the legacy, says Albert Schalm, who was the mayor of Mayerthorpe in March 2005. Postmedia News (Montreal Gazette, StarPhoenix, Leader-Post, Calgary Herald, Edmonton Journal)

Buchanan urges city council to revisit crime map debate

Red Deer city Coun. Buck Buchanan is not giving up the fight to have the city's crimes plotted on a map. Buchanan filed a second notice of motion asking for the city to collaborate with the RCMP to explore the concept of crime mapping as a tool in the overall safety strategy on Monday. His initial motion died on the floor on Jan. 19 because there was no seconder. Buchanan initially proposed working with the Central Alberta Crime Prevention Centre but city administration recommended changing the motion to working with the RCMP. "It's about awareness," said Buchanan. "It's not like it isn't being done in other places or other jurisdictions with the RCMP (such as Kelowna and St. Albert)." He said it is just a matter of releasing the information and the RCMP are not going to release the information unless they are advised by the city. "The Crime Prevention Centre is going out in the communities and the things that are constantly coming up is 'Can you tell us what is happening in our neighbourhood?'" he said. "And unfortunately we can't." Buchanan was not part of the Jan. 19 discussion because there was a perceived conflict of interest. Buchanan said, in fact, some paperwork was mistakenly filed that put him on the Central Alberta Crime Prevention Centre board. Red Deer Advocate, A1

Doctor's findings not vital to case: RCMP

When The Telegram published a set of articles on the Dana Bradley murder investigation in March 2014, much of the information centred around the recovered memories of a man The Telegram referred to as "Robert" - a pseudonym used to protect his identity. Was the incredible story he told of witnessing the December 1981 murder based on real memories or false memories? If real, how can they be corroborated? If false, how did they develop? Robert claims he was in the back seat of the car when 14-year-old Dana was picked up hitchhiking in the west end of St. John's. He describes the murder in graphic detail. The man who committed the murder, Robert alleged, had also sexually abused him as a young boy. The RCMP investigated his claims and say things did not match up. In fact, as reported in Part 1 on Saturday, the RCMP says there are vast differences between the known, hard facts of the case and Robert's account, and Robert's story changed over time. After the RCMP made its determination on Robert's account of the murder, they asked Robert if he would like to meet with Dr. Peter Collins, an expert in forensic psychiatry. Collins believed Robert was suffering from false memories, and the term "false memory syndrome" was noted. According to a police document, Collins advised Robert he was not suffering from post-traumatic stress disorder (PTSD), but was experiencing false memory syndrome. The Telegram, A3 Front

Destruction et poursuite policière à Moncton

Un individu est accusé d'avoir causé plus de 60 000 $ de dégât chez un concessionnaire de voitures Mitsubishi dans la nuit de dimanche à Moncton. Après avoir foncé à vive allure avec un camion dans des véhicules stationnés sur la rue Main, l'homme de 33 ans a poursuivi sa course folle jusqu'à la route Salisbury, où il a finalement été intercepté par les policiers. Pare-chocs arrachés, débris de verre et de métal parsemés sur le trottoir enneigé, Mike Raby a eu une bien mauvaise surprise en rentrant au travail lundi matin. Cinq véhicules neufs du concessionnaire, tous des années 2014 et 2015, ont été fortement endommagés par un chauffard dimanche soir. Selon des informations de la GRC, Christopher Lambke circulait à bord de son camion en direction ouest sur la rue Main quand il aurait mal négocié un virage peu après 20 h. Il aurait ensuite violemment percuté cinq véhicules détruisant les pare-chocs des deux premiers et entassant les trois autres. L'homme fait maintenant face à quatre accusations, dont conduite avec facultés affaiblies. «A regarder les traces dans la neige et l'étendue des dégâts, il devait rouler assez vite, merci. Il a tout fait ça sans même s'arrêter», explique M. Raby, directeur des ventes au concessionnaire. L'Acadie Nouvelle, 4 Front

RCMP respond to another toy gun false alarm

As they battle what seems to be a local trend of terrible judgment, the Codiac Regional RCMP is urging the public to take proper precautions when carrying replica guns or toy guns that may be mistaken for real weapons. Codiac is speaking out after yet another in what has been a long string of frightening incidents in the city since a real gunman rampaged through northwest Moncton last June 4. And most disturbing of all, the incident police responded to on Sunday night involved a young man carrying a replica weapon on Mailhot Avenue, where three local RCMP constables were murdered and two were wounded last June. Just before 11 p.m. on Sunday, police officers were dispatched to Mailhot Avenue. A man with his face covered had been seen waving what appeared to be a toy gun at vehicles passing by and at residences. The street was closed off while police searched the area. The suspect, a 19-year-old man from Moncton, was located at around 11:30 p.m. at a residence on McCoy Street, just metres from where two police officers died last summer. The gun was determined to be a toy. "We take these calls very seriously," said Staff-Sgt. Maurice Comeau in a statement issued Monday afternoon. "All types of firearm calls are treated as if it is a real firearm. Anyone with these types of guns need to understand how important it is to take proper precaution and carry these types of weapons in a case and not to display or use them in public places. We don't want to see anyone hurt, including the public, police officers or the person carrying the gun." Comeau said police officers have only seconds to determine whether or not a weapon is real. He also said the RCMP also urges the public to always follow the commands of police should they be approached by an officer. Times & Transcript, A1

RCMP investigate fatal house fire near Hartland

A fatal structure fire between Hartland and Florenceville-Bristol on Monday is being treated as a crime scene by police. Const. Derek Black, a spokesman for the RCMP, confirmed members of the Woodstock detachment are investigating after the body of a person was found inside a residence in Peel, north of Hartland. He said emergency crews were called to the scene at approximately 4:45 a.m. Monday. He said the house was completely engulfed in flames when crews arrived. "Police are currently working at trying to identify the victim, and the investigation is continuing," Black said. Hartland fire Chief Mike Walton told the Bugle-Observer on Monday morning that the department had been at the scene since shortly after 4 a.m. He said the homeowners are Joseph and Phyllis Roy. Daily Gleaner, A1

Mountie cleared in case involving tot

An unidentified Mountie has been cleared after an investigation of alleged sexual touching involving a three-year-old girl. Nova Scotia's Serious Incident Response Team handled the file from October and released its findings in a written decision Monday. In July, the girl was said to have made two comments to her parents that suggested an officer allowed her to touch his genitals. The officer's wife worked as a caretaker inside their home and watched the girl for a few days a week between September 2013 and July 2014. The mother watched additional children at times. According to the decision, the girl was playing with her father at home when she touched him in the genital area. He told her not to do so, but she said the officer had let her do that. She repeated the statement when her mother entered the room. The girls' parents asked her for more information but did not get any more details. As well, the release said her comments could have had another interpretation. The RCMP contacted the team about the matter in October, when it began the investigation. Chronicle Herald, A5

Police arrest eight in dial-a-dope bust

Eight men face 30 drug charges after police dismantled a Saskatoon dial-adope operation. Officers seized 208.5 grams of hard cocaine, 5.6 grams of soft cocaine, and $70,000 in cash after searching four Saskatoon homes on the weekend, police stated in a news release. The men, who range in age from 20 to 36, are charged with possession for the purposes of trafficking and possession of the proceeds of crime. Two are also charged with breaching court-ordered conditions from Alberta. Police described the Saskatoon Integrated Drug Enforcement Street Team's investigation as "lengthy." Integrated Organized Crime North, which includes city police and RCMP, along with several other city police units, helped with the investigation. The raided houses were in the 900 block of 15th Street East, the 100 block of St. Lawrence Court, the 700 block of Hart Road, and the 300 block of Pendygrasse Road. All eight men were scheduled to appear in court Monday. Postmedia News (StarPhoenix, A7)

RCMP financial crime unit moving in with Ontario Securities Commission
A Toronto-based RCMP contingent of white collar crime investigators is moving in to the offices of the Ontario Securities Commission, a move intended to help the two agencies to work together more closely. The Integrated Market Enforcement Team was launched by the RCMP in 2003 to investigate major fraud cases and protect the integrity of the country's stock markets. The unit consists of teams in Toronto, Montreal, Vancouver and Calgary. The Toronto branch of the Integrated Market Enforcement Team already works with the OSC, but moving the two agencies under one roof is expected to strengthen that partnership. "The goal is to bring all of our collective resources, skills and expertise together in one location," RCMP assistant commissioner Stephen White told reporters Monday. All 28 of the Toronto unit's fulltime staff are expected to be moved in to the OSC's headquarters by April 1. Having both organizations working in the same building will make it easier for them to review cases together to determine whether they fall within the RCMP's mandate, the OSC's mandate or require a joint investigation, said White. In Quebec, the RCMP's team of financial crime investigators already shares an office with the province's securities regulator. White said he is unsure whether IMET's teams in Alberta and British Columbia have plans to move in to their provincial regulators' offices. Canadian Press (The Guardian, B14) ; Toronto Star

Senators call for unedited terror vids
Two influential senators have joined the growing chorus of federal politicians calling on the RCMP to release the unedited video recorded by gunman Michael Zehaf- Bibeau before he killed a soldier at the National War Memorial then stormed Parliament last October. Zehaf-Bibeau, 32, made the video to explain his motives for his Oct. 22 rampage. The RCMP seized the shooter's video as part of its criminal investigation but have kept the recording under wraps, saying its release would interfere with their ongoing criminal probe. During a closed session last month, the Commons public safety and national security committee voted to invite RCMP Commissioner Bob Paulson to screen the video publicly "at his convenience and as soon as possible." The motion emphasized the independence of the commissioner, who will decide whether to accept the invitation. QMI Agency (Winnipeg Sun, 6, Edmonton Sun, Calgary Sun)

Accused killer re-arrested
Travis Vader -- accused of killing two St. Albert seniors who vanished nearly five years ago -- is back in custody after breaching conditions for the second time in less than a month. Vader, 42, was arrested after a call to a rural Edson home around 10:30 p.m. on Feb. 28. RCMP Cpl. Sharon Franks, spokeswoman for K-Division in Edmonton, says a resident of Carrot Creek was at home when a truck pulled into his driveway and stayed in the yard for an extended period of time. "He didn't know who it was; he didn't recognize the vehicle," Franks said. Vader is now charged with six counts of breach of recognizance and one count of dangerous operation of a motor vehicle in that case. After a bail hearing he was remanded into custody. The Edson arrest comes not even a month after St. Albert RCMP arrested Vader Feb. 12 at his residence in the community. He was charged in that case with assault and failing to comply with a condition on his recognizance to keep to peace and be of good behaviour. QMI Agency (Calgary Sun, Kingston Whig Standard, Edmonton Sun, Ottawa Sun, Winnipeg Sun, Toronto Sun, London Free Press); * Postmedia News (Edmonton Journal, A3)

* **Drugs, cash seized by Grande Prairie RCMP**
Grande Prairie RCMP charged two men with a variety of drug offences following a nine-month investigation. Police said search warrants were executed at two apartments. In addition, police searched two motor vehicles. RCMP seized more than $412,000 in Canadian currency, 915 grams of cocaine, 507 fentanyl pills, 10 ounces of crystal methamphetamine and two ounces of heroin. Police have arrested and charged 36-year-old Abdikarim Farha of Grande Prairie with possession of proceeds of crime over $5,000 and breach of a recognizance. An arrest warrant has been issued for 35-year-old Arte Abdillie Jama of Grande Prairie. Jama, who goes by the street name Fresh, has been charged with possession of a controlled substance for the purpose of trafficking and possession of proceeds of crime over $5,000. Edmonton Journal; Edmonton Sun

* **Man in stolen pickup faces 36 charges**
An Alberta man who rammed three unoccupied police vehicles with a stolen pickup truck while trying to

escape Whitecourt RCMP last week faces 36 charges. No one was injured in the incident. "Our officers' assessment of the situation, coupled with a swift and measured response, protected them from a potentially fatal situation," Chief Superintendent Brenda Lucki, district commander for the western Alberta district, said in a news release Monday. The incident began about 6:20 a.m. Feb. 26, when RCMP were dispatched to a call about a possible impaired driver. Officers located the vehicle, a pickup truck later determined to be stolen, with a snowmobile in the back, also stolen, and the truck's lone occupant, a 29-year-old wanted man from the Grande Prairie area. An altercation ensued and the man sped away, RCMP said. The truck and driver were later located in a remote area. Whitecourt RCMP officers set up a perimeter, with help from the police helicopter and canine unit. Postmedia News (Edmonton Journal, A8); QMI Agency (Edmonton Sun, Ottawa Sun, Toronto Sun, Kingston Whig Standard, Calgary Sun, London Free Press)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Accused CSC employees married

The two Correctional Service Canada employees from Kingston charged with offences related to Project Batlow are married to each other, the Whig-Standard has learned. Andrea De Laat, 33, was charged by the Ontario Provincial Police with conspiracy to traffic marijuana and conspiracy to traffic hashish, while Christopher D'Cunha, 44, was charged with possession of marijuana for the purpose of trafficking. The couple, who have two children, live on a quiet residential street in Kingston's west end. Sources have told the Whig-Standard that De Laat is a clerk at the Regional Treatment Centre at Millhaven Institution. De Laat's mother, Janet De Laat, now retired, is the former deputy warden at the Prison for Women, Pittsburgh and Frontenac Institutions. D'Cunha is currently an acting staff training officer at the regional staff college in Kingston. In his current role, D'Cunha trains officers in firearms, self-defence, how to use breathing apparatus and how to deal with chemical agents. (...) Kyle Lawlor, media relations and outreach officer for the CSC, couldn't confirm if the couple have been suspended due to its own internal investigation, which is underway. "It would be inappropriate for the Correctional Service of Canada to comment on matters under investigation," he said. "Due to the Privacy Act, the Correctional Service of Canada cannot comment on specific cases of staff misconduct." According to CSC's code of discipline, If the couple are convicted criminally, it appears there are grounds for disciplinary sanctions against De Laat and D'Cunha. Under conduct and appear-a nce, the code states: "An employee has committed an infraction, if he/she commits an indictable offence or an offence punishable on summary conviction under any statute of Canada or of any province or territory, which may bring discredit to the service or affect his/her continued performance with the service." Lawlor said the employment status of De Laat and D'Cunha may be released once the internal investigation is complete. "CSC does not tolerate any breach of its policies, and all allegations, regardless of the source, are thoroughly investigated by CSC," Lawlor added. Kingston Whig-Standard, A1

Queen of the North navigator seeks review of criminal conviction

A former ferry navigator who was convicted of criminal negligence in a fatal sinking off the B.C. coast is asking the Supreme Court of Canada to review his case. Karl Lilgert was convicted of two counts of criminal negligence causing death and sentenced to four years for his role in the 2006 sinking of the Queen of the North. He is currently in prison, serving his sentence. The ferry struck Gil Island in Wright Sound and sank during an overnight voyage from northern B.C. to Vancouver Island, killing passengers Gerald Foisy and Shirley Rosette. Lilgert asked the B.C. Court of Appeal to overturn his conviction because of alleged errors in the judge's instructions to the jury, but the province's highest court rejected his appeal. Canadian Press (Times Colonist, A5, The Guardian)

*** Killer who sparked faint-hope debate denied full parole**

The man who touched offnational debate on Canada's faint-hope clause - when he reoffended more than a decade ago while out on early parole despite having killed a police officer - recently saw his day parole extended as he again struggles with life on the outside. The Parole Board of Canada recently decided that Randall Tabah, 67, a man who killed a Longueuil police officer during a bank robbery in 1981, is still not ready for full parole as he continues to serve the life sentence he received in 1983. The board decided Tabah should instead continue residing at a halfway house as he has for most of the past five

years. In 2002, Tabah generated headlines across Canada when he was arrested for a break-in in an apartment in Victoria, B.C., and police there learned he was out on full parole despite having been convicted of killing Constable Michel Vincent during the bank robbery in Longueuil. The conviction came with an automatic life sentence and, initially, Tabah was not supposed to be eligible for full parole until 2006. But Tabah's parole eligibility date was reduced to 17 years through the so-called fainthope clause, a part of Canada's Criminal Code from 1976 until the Conservative government had it repealed in 2011. Through it, offenders who had served 15 years of a life sentence could apply to have a jury hear arguments that they were rehabilitated enough to merit an earlier release. Less than a week after news of Tabah's arrest in 2002 spread, the Canadian Police Association began a petition calling for the faint-hope clause to be repealed. The federal Conservatives, who were in opposition at the time, made it part of their election platform while promising tough-on-crime legislation before winning the 2006 election and forming a minority government. Following his arrest, Tabah spent seven more years behind bars before the Parole Board of Canada granted him day parole in 2009. An addiction to gambling and a lack of transparency has prevented the board from granting Tabah a full release since then. His day parole has been suspended three times and was even revoked once, prompting a brief return to a penitentiary in 2013. Montreal Gazette, A6

*** Wiretaps reveal banality of life**

The wiretaps thus far played for the jury in the Mark Moore multiple homicide trial may shed some light on Mr. Moore's reaction to a Toronto Police "stimulation" plan to flush him out of the weeds, and even more on how the prison system runs, but what they really speak to is human nature. Mr. Moore is pleading not guilty to four counts of firstdegree murder in the 2010 slayings of Jahmeel Spence, Courthney Facey, Mike James and Carl Cole. All were gunned down in different parts of Toronto within a 75-day period that fall. Police didn't link the four killings until early 2011, Detective Sergeant Hank Idsinga, the officer in charge of what became one large investigation, told Ontario Superior Court Justice Michael Dambrot and the jurors Monday. Mr. Moore was identified as a "prime suspect" in all the slayings, and by August that year, when police got judicial authorization to tap his phone, he was in custody at the Toronto (Don) Jail on an unidentified matter. (The jurors haven't been told why he was in jail, but on one of the wires, Mr. Moore himself suggested it was a drug charge.) The range in the jail where he was being held had only four phones, so police tapped those and the visitor phones. By Sept. 30, or just 56 days later, Mr. Moore had made 7,500 calls on just two of the prison phones. Postmedia News (National Post, A2, Ottawa Citizen, Montreal Gazette, Vancouver Sun, Leader-Post, StarPhoenix, Calgary Herald, Edmonton Journal, Windsor Star)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Crime of passion**

It's a scam that invokes intense emotional pain in addition to a heavy financial loss. A heartless criminal posts a photo of an attractive person on an online dating site and pretends to be that person. Once they have a target, they'll say and become whatever it takes to draw their victim in, building a relationship or eventually professing love. The next step is to ask for money -- a plane ticket for a visit, help a struggling loved one, or a loan to help resolve some financial problems. The trap's been set and the unsuspecting victim is now ensnared. "These perpetrators are criminals," said Edmonton city police Insp. Mark Neufeld. "Edmontonians have lost hundreds of thousands of dollars to such criminals. Entire life savings have been wiped out and lives have been ruined." Edmonton police and partners in government, law enforcement and business kicked off Fraud Prevention Month on Monday with advice to help citizens avoid becoming victims of eco-nomic crimes, Throughout the month, police will highlight common frauds such as romance and grandparent scams, homeowner, renovation and mortgage swindles, identity and payment card thefts, business and charity deceits, as well as email and online schemes. And Neufeld says that overall fraud is on the rise in Edmonton. Last year, the economic crimes section reviewed more than 3,000 frauds compared to 2,600 the previous year, for an increase of 16%. General frauds are on the rise by about 9%, and cheque frauds are up 20%. Identity theft had the biggest increase at 86% and identity fraud was up 26%. Edmonton Sun, 2, Calgary Herald

*** Roundtable included many emotional moments**

Kwanlin Dun Chief Doris Bill said she was "disappointed" with the federal response to Friday's first-ever roundtable on missing and murdered indigenous women, and called for more leadership and financial commitment from Ottawa. The meeting, which saw premiers, aboriginal leaders and two federal cabinet ministers convene in the nation's capital, aimed to find solutions to grossly disproportionate levels of violence against First Nations women and girls. "Overall, I think the federal government should be right in the lead on this," Bill told the Star this morning. "I think they should be right up there with the Assembly of First Nations and the Native Women's Association and the Sisters in Spirit. They should be helping the families of the missing and murdered women and girls." Bill highlighted the government's longstanding resistance to a national inquiry into the issue, returned to the fore with Prime Minister Stephen Harper's denial of the problem as a "sociological phenomenon" in Whitehorse last August. "The fact that it took the provinces to take the lead on this says volumes about the federal government," Bill said. The government has pledged $25 million over five years as part of a federal action plan. Whitehorse Daily Star, 3

*** The solutions at hand for aboriginal women**

An editorial states, "The common knock against the Conservatives' position on missing and murdered aboriginal women is that they don't see the problem as "a sociological phenomenon" - as Stephen Harper put it in August - but as "crime." Conservative ministers' engagement with the issue does not reflect this simplistic approach, however. Last week, in advance of Friday's National Roundtable on Missing and Murdered Indigenous Women and Girls in Ottawa, Status of Women Minister Kellie Leitch highlighted several measures her government had taken or proposed: Money for shelters, "preventative actions, particularly focused on men and boys," and "empowering" aboriginal women by making them "economically independent," including through matrimonial property rights. At the roundtable itself, Aboriginal Affairs Minister Bernard Valcourt mentioned "community-driven projects to engage men and boys" in an "effort to denounce and prevent violence." Few reasonable people would find fault with these ideas with respect to any non-aboriginal community. Yet the ministers took heavy fire for them last week. Linking violence against women to male attitudes is 110% politically correct. But here it is verboten because it reflects a "racist" assumption that perpetrators of domestic violence against aboriginal women must be aboriginal men, according to Dawn Harvard, interim president of the Native Women's Association of Canada. The government was accused of "victim-blaming." It's proof of how unhelpfully muddled the thinking at work here is that women's rights activists actually seem willing to view the perpetrators of violence as victims. They might well be: Violent childhoods often beget violent adulthoods. But generally speaking, men are not afforded such sympathy." National Post, A8

*** Premiers, PM missing in action**

An editorial states, "What is to be said of premiers who demand a national inquiry into the abhorrent levels of violence suffered by aboriginal women in Canada, but then do not show up at a one-day meeting to talk about solutions? Dereliction of duty tops the list. With Prime Minister Stephen Harper also absent, it's not surprising that Friday's roundtable on missing and murdered indigenous women and girls produced little. Cabinet ministers and bureaucrats do not have the political clout to sign up for projects that cost money. So what did we get? Premier Greg Selinger promised to bring the families of Manitoba victims together with police and justice officials. Not a bad idea, given this is one of the top complaints from relatives. Many have stated police leave them out of the loop, investigations move too slowly and police don't seem committed to their cases. Ontario Premier Kathleen Wynne called for an ambitious to-do list, a national effort that, conveniently, would fall primarily on the federal government's tab. Her "socio-economic action plan" to improve housing, child care and education for aboriginal women, would be a multi-billion dollar (federal) effort. No wonder the two ministers Mr. Harper sent to the roundtable refused to join in the premiers at a press conference Friday. The roundtable was not entirely useless. It was a small step forward in the work that must be done in this country to cut the rate at which aboriginal women are victims of violence. And Perry Bellegarde, national chief of the Assembly of First Nations, took some hope in the fact pledges were made to focus on prevention, and improving the response of police and justice officials to crimes against aboriginal women and girls." Winnipeg Free Press, A6

*** Undelivered justice**

A letter to the editor states, "Re Missing And Murdered (March 2): Stephen Harper boasts that "Our government has made standing up for victims of crime a priority." But based on his government's refusal

to cover the costs associated with DNA testing of missing persons and unidentified remains, we can only conclude that the pledge comes with a qualification. If you're a living victim of crime, you're a priority. If you're a missing or dead victim of crime, your family must lower its expectations of the government and its near-endless promises of justice for the innocent." Globe and Mail, A10

*** Making women's equality a reality**
An opinion piece states, "International Women's Day is a time for celebration, reflection, and action. Since the day was first observed on March 8, 1909, progress and achievements toward women's economic, political, and social equality have undoubtedly been made - this we must celebrate. However, significant barriers still remain in almost every country, and for that we must continue to reflect and urge our governments and communities to act. Even in wealthy countries like Canada, violence against women continues, equal pay is elusive, and women are significantly under-represented in positions of decision making and leadership. When you look closer at the progress of aboriginal women, women with disabilities and racialized women the picture becomes even less rosy. So when will this change? Apparently by 2030." The Guardian, A7

PUBLIC SERVICE / FONCTION PUBLIQUE

*** Parliament lost in a fog of spending**
The Magna Carta will visit Canada this year as part of the 800th anniversary celebrations of the charter that provided the foundation for individual freedom against arbitrary despotism. Parliaments have used the Great Charter as a guide for their role, chief among which has been the task of reviewing and authorizing government expenditure of public funds. Yet scrutiny of public spending is slipping away from Canada's parliament. The average MP's ignorance of how governments spend taxpayers' money is encyclopedic. This is not surprising. The system is stacked against any meaningful review of spending, at least until the Public Accounts of Canada are tabled, 200 days after the fiscal year they cover. MPs are left like the proverbial bald men fighting over a comb - inconsequential jousts over trivia in the House of Commons - while the real business of government is carried out elsewhere. One recent case reveals how Parliament is little more than a ceremonial rubber-stamp. The recent supplementary spending estimates for 2014-15 revealed the federal government is writing off $295 million in uncollected Canada Student Loans. This was no doubt news to MPs who, in all likelihood, were never asked to authorize the loans in the first place. National Post, A4

*** Shared Services to refurbish data centre**
The federal government is moving ahead with plans to refurbish a data centre in Ottawa - a project that could take years to complete, and possibly cost more than $100 million. The plan is to refurbish an existing data centre by the airport to be a second "development" data centre, which is essentially a space to test programs before they go live, making it one of the seven data centres the government wanted to keep open as part of a massive IT overhaul that the government is undertaking to reduce costs, tighten cybersecurity, and help make the public service more nimble. When work to consolidate 485 data centres into seven is complete - sometime around 2020 - the government expects to save about $100 million a year in operating costs. Ottawa Citizen, A6

OTHER

*** Canada hints at Iraq mission extension**
Foreign Affairs Minister Rob Nicholson has given France every indication the Conservative government will move to extend the current Canadian military mission against Islamic State, also known as ISIL, in Iraq. Nicholson, on his first trip abroad since taking over his new portfolio, discussed the fighting in Iraq against ISIL extremists with his French counterpart, Laurent Fabius, in Paris on Monday. "I indicated that we are examining all our options but that we are committed to degrading ISIL, and I made that very clear to my French counterpart and indicated to him that the government would be making a decision on this in the next few weeks," Nicholson told the Star in an interview from France, which is among the allies

fighting ISIL. "We recognize that ISIL is a threat in this part of the world," Nicholson said. "But we believe it is a direct threat to Canada." Toronto Star, A6

*** Lack of diplomatic ties snarls search for Toronto pastor missing in North Korea**
Some time in the last two days of January, Hyeon-soo Lim crossed the land border from China into the north-eastern corner of North Korea. This was nothing particularly special for Mr. Lim, the senior pastor of one of Canada's largest Korean churches. He had been to the Hermit Kingdom more than 100 times before. He was expected to call home on Feb. 4. When he did not, the church initially did not panic: North Korea has in recent months quarantined visitors for up to 21 days to ensure they do not have the Ebola virus. But more than a month has passed with no word, and his church is worried Mr. Lim has been detained in a country that has jailed several foreign Christians in recent years. "There has never been this length of delay before," said Lisa Pak, a pastor at Toronto's Light Presbyterian Church, where Mr. Lim is a senior pastor. From the perspective of the church, he has vanished, and has been reported missing to Canadian Foreign Affairs officials. "We have no information," she said. "He's not a tourist that wandered off. He knows the language, he knows how to behave in a way that's not offensive to the government." Canada and North Korea have no obvious current tiffs, meaning Pyongyang would have little to gain diplomatically by taking a Canadian. It is possible the bureaucracy of a secretive state has magnified something trivial. Globe and Mail, A9

*** Family says Badawi may face death penalty**
The family of imprisoned blogger Raif Badawi says the 31-year-old is facing a major setback in his legal fight - one that could eventually lead to the death penalty. Badawi's wife, who was granted political asylum and has been living in Sherbrooke with the couple's three children since 2013, sent out a desperate plea over the weekend after she was informed by "reliable sources that there are attempts within the Penal Court to retry (Badawi) on apostasy charges again." Charges of apostasy - or renouncing Islam - carry the death penalty in Saudi Arabia, where Badawi is being held. The execution is usually carried out by beheading. Ensaf Haidar has been fighting for her husband's release for months. In her statement, she called on the public and government officials to step in, saying that she fears Badawi will be "dragged" to his death by "bigots." Badawi's situation has received international attention, with hundreds of thousands of people signing various online petitions demanding his release. Montreal Mayor Denis Coderre recently called on Prime Minister Stephen Harper to lobby Saudi officials to free the imprisoned blogger. Harper has said there is little that can done beyond applying diplomatic pressure, as Badawi is not a Canadian citizen. Montreal Gazette, A3

*** Raif Badawi: l'ambassadeur du Canada est intervenu**
L'ambassadeur du Canada à Riyad a récemment discuté du cas de Raif Badawi avec le ministre saoudien des Affaires étrangères, a appris La Presse, alors que les proches du blogueur condamné à 1000 coups de fouet s'inquiètent de la possibilité qu'il soit à nouveau accusé d'apostasie, un crime passible de la peine de mort par décapitation en Arabie saoudite. La rencontre entre l'ambassadeur Tom McDonald et le prince Saoud al-Fayçal, ministre des Affaires étrangères de l'Arabie saoudite, a eu lieu «à la fin du mois de février», a indiqué sans plus de précision une porte-parole du ministère canadien des Affaires étrangères, Amy Mills. La porte-parole n'a pas précisé combien de temps la rencontre a duré ni quel accueil a reçu l'ambassadeur McDonald, venu «réitérer encore une fois [les] préoccupations [du Canada]» à l'égard de Raif Badawi. C'est la première fois qu'un représentant canadien s'entretient avec un membre du gouvernement saoudien au sujet de Raif Badawi, condamné à 1000 coups de fouet, 10 ans de prison et plus de 300 000 $ d'amende pour insulte à l'islam et violation de la loi sur la cybercriminalité. La Presse (Le Nouvelliste, 24, Le Soleil, La Tribune)

INTERNATIONAL

Obama, Netanyahu clash on Iran
A mid rising U.S.-Israeli tensions, a defiant Prime Minister Benjamin Netanyahu said Monday he will not back down from a planned speech to the U.S. Congress the White House says is a deliberate attempt to scuttle a nuclear deal with Iran. Addressing members of the American Israel Public Affairs Committee, the most powerful Israeli lobby group in the U.S., Netanyahu said he intends to deploy technical arguments

Tuesday to persuade U.S. lawmakers negotiations are fruitless because Iran cannot be trusted. Iran is "threatening to destroy Israel, devouring country after country in the Middle East, exporting terrorism and developing capacity to make nuclear weapons - lots of them," he said. As the "prime minister of the one and only Jewish state, I plan to use that voice," he continued to substantial applause. In a sort of pre-emptive strike, U.S. President Barack Obama chastised Netanyahu and Israel in an interview with Reuters Monday, saying they were detouring around accepted protocol in an attempt to reshape U.S. foreign policy. "Ultimately the interaction with foreign governments runs through the executive branch," he said. "That's true whether it's a Democratic president or a Republican president, and that's true regardless of how close the ally is." The White House was furious Republican House Speaker John Boehner did not consult the president before inviting Netanyahu, thereby breaking protocol. Right-wing groups take root
An ugly confrontation unfolded on the streets of Newcastle, England, last weekend. On one side were approximately 2,000 people of all colours and creeds who had assembled under the banner of Newcastle Unites. On the other, a group of just under 400 people who came together to protest what they perceive as the Islamization of the western world; a "Muslim tide" they claim threatens the fabric of British society and its traditional values. The latter group was an apparent offshoot of the far-right organization Pegida - or Patriotic Europeans Against the Islamization of the West. Since its formation in Germany last year, the group has managed to draw thousands into the streets in various European cities with what many perceive as a divisive and racist message. In January, with little fanfare and even less media coverage, Pegida landed in Quebec. A Facebook page set up by the group, featuring photos from Pegida demonstrations around the world, had attracted just under 600 "likes" as of Wednesday, and their first official rally is set to take place on March 28 in St-Leonard. The Montreal Gazette reached out to the organizers behind the page on Wednesday, but they did not respond to a request for comment. (…) The Canadian Press reported on Tuesday that Canada's spy agency (CSIS) recently advised the office of **Public Safety Minister Steven Blaney** of its concerns during a secret September briefing, noting that Canada's burgeoning anti-Islam movement poses an "ongoing risk, particularly as its proponents advocate violence." Postmedia (Montreal Gazette, A1/ Front, Ottawa Citizen C1/ Front, Star Phoenix, Vancouver Sun, Edmonton Journal, Calgary Herald)

Tories to table life-without-parole bill

The Conservative government will introduce life without parole for some killers, in what would be the biggest change to the Criminal Code since the abolition of capital punishment in 1976. Prime Minister Stephen Harper said that, because of constitutional concerns, those sentenced to life without parole would have the right to petition the **public safety minister**, but not before 35 years have elapsed. The policy would revive a routine role for cabinet in release decisions that had ended in 1959 with the creation of the National Parole Board. (…) Rick Sauvé, a lifer in Ontario who has been on parole since 1995, and who works with other lifers for the St. Leonard's Society, said he doubts inmates will receive a fair shake when they petition the **public safety minister** for release. "They would just act on emotion," he said of the minister. And "if you take all sense of hope, people can become desperate. It could create more violence in the prisons." Legal observers called the 35year review by the **public safety minister** a new "faint-hope clause" - an ironic reference to the 1976 law that gave convicted killers a chance after 15 years to apply to a jury for a chance at early parole. The Conservative government killed the 15-year review in 2011. Several lawyers and academics interviewed said the 35-year review at the political level may not be enough to make life without parole pass muster with the courts. Globe and Mail, A1, Toronto Star, A1; Presse Canadienne (Le Quotidien 22, La Tribune, L'Acadie Nouvelle)

The problem with life sentences

An opinion piece states, "On past form, the Conservatives' latest piece of tough-oncrime legislation will come with some sort of folksy name attached, of a kind suitable for use in Tory ad campaigns. The Life Means Life Act, perhaps? The Throw Away the Key Act? The Hanging's Too Good For Them (And What If It Wasn't) Act? Under the legislation, to be introduced in Parliament next week - Wednesday's announcement, as usual, took place hundreds of miles away - would raise the maximum penalty in Canadian law from the current 25 years without eligibility for parole, to a sentence that is often referred to as "life" but is in fact rather closer to "death." Prisoners convicted of particularly "heinous" crimes - for example, murders involving sexual assault, or kidnapping, or the killing of police officers or prison guards, or terrorism (high treason is also on the list) - would be obliged to serve, as a government background document put it, "the rest of their natural lives" in prison, with no possibility of parole, ever. They would be kept locked up until their bodies were actually discovered in their cells. There would be one, grudging exception. After 35 years, prisoners could apply, not for parole, but for "exceptional release," and not to some dogooding parole board, but directly to the **Minister of Public Safety**. This is intended to allay, as the background paper puts it, "legitimate constitutional concerns," what might be called the Keeping The Supreme Court Off Our Backs provision. So life would not quite mean life. It would mean life or the readiness of an elected politician to personally authorize the release of one of Canada's "most heinous criminals." If there were any likelihood of that you may be sure the Conservatives would not have included it in the legislation." Postmedia News (National Post, A1, Ottawa Citizen, Leader-Post, StarPhoenix, Montreal Gazette, Calgary Herald, Edmonton Journal, Vancouver Sun, Windsor Star)

Public safety vs. the politics of payback

An opinion piece states, "These days, if Stephen Harper isn't warning people about the terrorists lurking around every street corner, he's stoking fears about violent crime and child sex predators. For the PM, fear is the object, not the effect; statistics show Canada is getting safer, so you know this isn't about keeping people safe. If it were, Harper wouldn't be allowing funding to lapse for one of the most successful community-based sex offender prevention programs in the world. Harper and **Public Safety Minister Steven Blaney** like to talk about keeping bad people locked up. Which works fine … as long as the bad people stay locked up. Once they're released - as the vast majority of them are, eventually - all bets are off. **Blaney** knows this. He knows that Circles of Support and Accountability (COSA) works, because his government's own research tells him so. He knows that COSA - which uses trained volunteers to re-integrate sex offenders back into the community - reduces their risk of re-offending. He knows that every dollar invested in COSA saves taxpayers more than $4 in policing and prison costs. Blaney knows COSA can and has prevented men from hurting children. But he's going to let its funding expire at the end of the month anyway." iPolitics; Edmonton Journal

Parliament shooter's video to be released

A video made by gunman Michael Zehaf-Bibeau that explains his motives for killing a soldier at the National War Memorial and storming Parliament in October will be released Friday, RCMP confirm.

Commissioner Bob Paulson will appear before the Commons public safety and national security committee (SECU) to show and discuss the video. "At that time, committee members will be provided an update on the investigation arising from the events of Oct 22, 2014, in Ottawa," RCMP spokesman Sgt. Greg Cox said via e-mail Wednesday. (…) **Public Safety Minister Steven Blaney** is "pleased" with the decision, according to ministry spokesman Jean-Christophe de Le Rue."This terror attack remains a significant example of why we need to pass our Anti-Terrorism Act -- to ensure police and our national security agencies have the tools they need to keep Canadians safe," said de Le Rue. QMI Agency (Toronto Sun 8, London Free Press, Kingston Whig-Standard, Edmonton Sun, Calgary Sun, Ottawa Sun), Presse Canadienne (Le Quotidien, Le Devoir, La Voix de l'Est, La Tribune, Acadie Nouvelle, Whitehorse Daily Star), Toronto Star, A3

Ottawa police won't get more than $10M
Ottawa's police force is likely to receive $10 million in federal funding to help cover the costs of policing the capital, but an additional request to pay the costs of policing downtown on Oct. 22, 2014, is likely to fall by the wayside. When the city sent its recent letter to **Public Safety Minister Steven Blaney** asking for the funding to be renewed, it cited the costs to police events such as Canada Day, demonstrations, protests, and visits from foreign leaders, as well as keeping an eye on 118 embassies. In all, there are about 700 events directly related to the federal government that Ottawa police must keep an eye on annually, with the costs borne by municipal taxpayers. "It should be a no-brainer," said local NDP MP Paul Dewar. **Blaney**'s office wouldn't put a timeline on when a decision will be made. Jordan Press (Ottawa Citizen, A7)

La loi C-51 n'enchante pas le PQ
(…) De passage en banlieue de Toronto, hier, le premier ministre Stephen Harper s'est montré peu ouvert à amender le projet de loi, dont l'étude en comité parlementaire débutera la semaine prochaine. «Évidemment, on va écouter, mais le gouvernement a fait beaucoup de délibérations sur le contenu de ce projet de loi et nous sommes tout à fait déterminés à l'adopter», a-t-il déclaré. Face aux craintes que suscite C-51, le **ministre fédéral de la Sécurité publique, Steven Blaney**, a pour sa part assuré que «les activités pacifiques de protestation ne sont pas incluses» dans le projet de loi. Le Journal de Quebec, 20

*** Popular security bill could put lid on voices of dissent**
An opinion piece states, "On Wednesday, I joined a small group of Canadians who have actually read Bill C-51, the Conservatives' bill designed to toughen up Canada's terrorism laws. The merits, or lack thereof, of Bill C-51 have consumed lots of attention in Ottawa, with **Public Safety Minister Steven Blaney** saying (over and over) that Canadians want more protection from terrorists, Opposition Leader Thomas Mulcair arguing the bill goes too far and has inadequate oversight of security agencies, and Liberal Leader Justin Trudeau saying he'll support the bill, but wants better oversight and a mandatory review of C-51 in future. The bill forbids "changing or unduly influencing a government in Canada by force or unlawful means" and prohibits "interference with critical infrastructure." Democratically elected governments shouldn't be changed or influenced "by force," but how can protests or civil disobedience campaigns change laws if they can't "influence" the government? That's the whole point. And who gets to decide when such influence is undue? That section is likely to raise flags among groups like First Nations, student and labour activists and environmentalists, who sometimes break the law (i.e., block roads, stage sit-ins, etc.) in order to try to change policy." The Chronicle-Herald, A13

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE
NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Canadian Pacific weighs shift away from crude by rail**
Canadian Pacific Railway Ltd. wants the power to refuse to haul dangerous goods, a signal it has grown weary of the risks and regulations that accompany the business of hauling oil. Globe and Mail, B1

*** Canada's railways are committed to safety**
Re: "Federal rail-safety measures remain inadequate" (Opinion, Feb. 25)

A letter to the editor states, “Mark Winfield's article suggests Canada's railways are "self-regulated." Railways have to comply with dozens of regulations and hundreds of rules, in addition to the Railway Safety Act - a modern piece of legislation that has been regularly reviewed and updated. By law, each federally regulated railway must also have a Safety Management System (SMS) in place that is approved by Transport Canada. SMS frameworks have not replaced regulation. These safety systems serve as an additional layer of oversight and best practices on top of Canada's robust regulatory regime for rail safety...” The Gazette, A14

Saskatchewan's government is spending close to $1 million to avoid the muchhigher costs connected to flooding in the northern village of Cumberland House and Cumberland House Cree Nation. StarPhoenix, A4

* **Toronto Hydro says 500 homes still without power after storm**
Toronto Hydro said around 500 homes were still cut off from power on Thursday, more than 24 hours after a weather system did serious damage to power infrastructure in the city. The power company’s online outage map shows several neighbourhoods are still in the dark, with Etobicoke and North York appearing to be hardest-hit. CBCNews.ca

* **Rogers expands wireless coverage across Sask**
Rogers has expanded its wireless coverage in Saskatchewan. Rogers said it is also rolling out LTE for faster speeds and giving more people in Saskatchewan access to 700 MHz spectrum for improved signal quality in basements, elevators and buildings with thick concrete walls. StarPhoenix, D1

NATIONAL SECURITY / SÉCURITÉ NATIONALE

RCMP to show Oct. 22 shooter's video Friday
After weeks of speculation, members of Parliament will get a chance Friday to see the video Michael Zehaf Bibeau made last October before he killed a Canadian soldier and stormed Parliament Hill. RCMP Commissioner Bob Paulson will use an open meeting of the House of Commons public safety committee to provide a 'detailed update' of the investigation into Zehaf Bibeau's deadly attack on Cpl. Nathan Cirillo, said a source familiar with the matter. The source, who wasn't authorized to discuss the issue publicly and therefore spoke on condition of anonymity, confirmed the video would be shown to the committee. Pressure has been mounting on the RCMP - and the Conservative government - to release the video to give people a first-hand glimpse into Zehaf Bibeau's state of mind on the eve of his assault. Last month, the public safety committee, while affirming the RCMP's operational independence, invited Paulson to appear at his earliest convenience to display and discuss the video. Asked about the matter on Wednesday, Prime Minister Stephen Harper said it's up to the RCMP whether to release the video, since it's part of an ongoing police investigation. "It's not my decision one way or the other," Harper told a news conference in Toronto. In the days following the attack, Paulson said he wanted people to see what he described as footage of Zehaf Bibeau explaining his actions in a deliberate and lucid manner, which were rooted in his religious beliefs and opinion of Canada's foreign policy. Canadian Press (Red Deer Advocate, Whitehorse Star, The Guardian, Times Transcript, Telegraph-Journal, Chronicle Herald ,Waterloo Record, Hamilton Spectator, iPolitics, Cape Breton Post); QMI Agency (Toronto Sun, London Free Press, Kingston Whig Standard, Edmonton Sun, Calgary Sun); Presse Canadienne (Le Quotidien, Le Droit, La Voix de L’Est, La Tribune, Le Soleil); * Le Devoir; * La Presse; * Globe and Mail; * Toronto Star; * Agence QMI (Journal de Montreal, Journal de Quebec)

Hill gunman's video invokes jihad, slams foreign policy
Michael Zehaf-Bibeau sat in the front seat of his car minutes before his shooting rampage on Oct. 22, 2014, and spoke to the camera. He spoke just long enough to talk about the actions he was soon to take, and put them into the context of "jihad," the Arabic word for struggle that is associated - moderate Muslims argue wrongly - with a struggle against non-believers. He took aim at Canada's foreign policy, threatened the Canadian military and invoked "Allah." Those words, captured on a cellphone video less than a minute long, have been in the hands of the RCMP since the day of the shooting, and every frame

of the short video has been examined as part of a criminal investigation... The details of how the video came to be, and how it fell into the hands of the RCMP, have been largely shrouded in mystery. The Citizen has pieced together the details from multiple sources with knowledge of the video that has yet to be shown publicly. On Friday, a more than fourmonth wait to see the video will come to an end when RCMP Commissioner Bob Paulson walks into a House of Commons committee room and briefs MPs and Canadians about Zehaf-Bibeau's final message, and the Mounties' criminal investigation into the Oct. 22 shootings in Ottawa. The video could answer lingering questions about Zehaf-Bibeau's actions that day - when he killed Cpl. Nathan Cirillo at the National War Memorial, then stormed Parliament Hill before dying in a shootout inside the Centre Block - including whether he acted alone, or had any help planning or carrying out the shootings... The RCMP declined Wednesday to say whether it has shown the video, or described it in any way, to Zehaf-Bibeau's mother, Susan Bibeau or other members of his family. However, the Citizen confirmed that Susan Bibeau had not seen the video or been contacted by the RCMP as of Wednesday morning. Postmedia News (Ottawa Citizen, A1)

RCMP briefing on Zehaf-Bibeau video raises questions, say opposition
RCMP Commissioner Bob Paulson's decision to comply with a government-worded committee motion to release a video recorded by the gunman who shot a Canadian reserve soldier and attacked Parliament last Oct. 22 has sparked speculation and questions about Conservative motives with a general election on the horizon. Mr. Paulson, in response to a motion passed unanimously on Feb. 17 at the Public Safety and National Security Committee, has agreed to air the video in a public meeting Conservative chair Daryl Kramp (Prince Edward-Hastings, Ont.) scheduled for Friday at 11 a.m.-the last day of a Commons March recess before Parliament resumes next Monday. The video could be crucial to longstanding opposition claims that Prime Minister Stephen Harper (Calgary Southwest, Alta.) branded the attack and shooting death of Cpl. Nathan Cirillo, as well as the murder of a Canadian soldier in Saint-Jean Sur Richelieu only a few days earlier, as an organized terrorist attack against Canada before he had the evidence. The long delay in releasing the cell phone video Mr. Zehaf-Bibeau recorded shortly before his attacks has puzzled MPs since Mr. Paulson first disclosed its existence shortly after the day of the attack. "The RCMP has identified persuasive evidence that Michael Zehaf-Bibeau's attack was driven by ideological and political motives," Mr. Paulson said in a statement, referring to terms in the Criminal Code that in part define terrorism, as distinct from other criminal offences. "Zehaf-Bibeau had prepared a video recording of himself just prior to conducting this attack," Mr. Paulson said. "The RCMP is conducting a detailed analysis of the video for evidence and intelligence. You must understand that we cannot release this video at this time and I would ask for your patience in this regard." Hill Times

* **Parliament Hill security incidents few and tame before Oct. 22 shooting**
A nonsense letter. A wayward cube van. A threatening voicemail. A tractor with the key left in the ignition. These were the infrequent and minor incidents recorded by the RCMP's parliamentary detachment as threats to the security of VIPs during the two years leading up to the tragic shooting on Oct. 22. Through the Access to Information Act, CBC News obtained a dozen "occurrence reports" documenting these relatively tame security challenges on Parliament Hill — tame, that is, until gunfire erupted inside the Centre Block last fall, putting the prime minister and many MPs in real and imminent danger. The mundane incidents in the months leading to the tragedy provide context to last fall's attack in which a lone gunman surprised RCMP officers as he ran, drove and darted up steps with a loaded rifle in hand. Since the traumatic episode, the Harper government has warned of future threats in the capital and across Canada, and introduced legislation to give security agencies more power. CBC News

* **Bill C-51 could violate rights, lawyers say**
The federal government's anti-terrorism bill gives government agencies too much unchecked power, say Saskatoon legal scholars who added their signatures to an open letter to parliamentarians, urging them to vote against the controversial law. "This new legislation will not make Canadians safer, but rather gives government agencies many new and unchecked powers to intrude on the rights of Canadians who are not at all involved in terrorist activities," said Sarah Buhler, an assistant professor at the University of Saskatchewan's college of law. Powers granted under the proposed legislation could be used by the Canadian Security Intelligence Service (CSIS) against groups such as environmental groups and First Nations, Buhler said. "The wording is so broad that it could potentially threaten to criminalize legitimate dissent," she said. Her colleague, assistant professor Clayton Bangsund, noted the Criminal Code

already contains terrorismrelated offences, which leads him to wonder what purpose the new law would serve. Bangsund said wording in the bill is "broad and ambiguous." The bill would authorize CSIS to "engage in intervention activities and disruptive measures," such as "wiping information from a target's computer or fabricating information to discredit a target," Bangsund said. It would also allow CSIS to ask a judge for a warrant to pre-authorize actions that contravene the charter, he said. Postmedia (Star Phoenix, A4)

* **Ex-Tory senator questions spy powers**
A former Tory senator says the new powers proposed for Canada's spies under the Conservatives' new terror law are "unprecedented" in peace time. But Hugh Segal wonders if what Canadians are living through can properly be called "peace time." "I think the question is what we now face with ISIS, and what we face with networked, digital recruitment ... whether this is a different threat than what we faced 10 or 15 years ago," Segal said in an interview earlier this week. "And I would argue that it is." Bill C-51 would give the Canadian Security Intelligence Service police-like powers to "disrupt" threats to Canada. CSIS would be able to use those powers to address terrorist threats, but also threats to Canada's infrastructure or economic stability. Both opposition parties and security experts have criticized the Conservatives for drastically expanding CSIS's powers, while declining to include more independent oversight over Canada's spies. Segal, who retired from the Senate last year and currently holds the post of master at Massey College, has long championed increased oversight for Canada's intelligence agencies. Unlike our closest security partners, Canada has no parliamentary oversight of the country's various spy agencies. The review bodies Canada does have are dwarfed by the agencies they're supposed to monitor. For instance, the Security Intelligence Review Committee - with 17 employees and a budget of under $3 million - is tasked with reviewing the operations of CSIS, with a projected budget of $537 million. The Communications Security Establishment - Canada's answer to the NSA, employing more than 2,000 - has a review body with an annual budget of around $2 million. Toronto Star, A8

* **Tories under fire for using terrorist propaganda to promote C-51**
An Edmonton MLA is blasting the federal Conservatives for an "irresponsible" social media post about terrorist threats to West Edmonton Mall. On Monday, the federal Conservative Party of Canada shared a screengrab on Facebook from a video by al-Shabaab, a Somalia-based terror group that attacked Kenya's Westgate Mall in September 2013, killing 67 people and wounding more than 175 others. A portion of the video encourages attacks on several other malls, including West Edmonton Mall. "Jihadi terrorists are threatening Canada -- we need to give our police and security forces the tools they need to protect us from the threat of terrorism. Add your name if you agree," read the post from the Conservatives, linking to a petition supporting the federal government's Anti-Terrorism Act (Bill C-51). The post didn't sit well with Edmonton-Castle Downs MLA Thomas Lukaszuk, who said the message runs contrary to police assertions that the threat isn't imminent and politicizes national security issues better handled by the federal government. "As an elected official, I don't want Edmontonians to live with some undue fear and avoid public venues like West Edmointon Mall," he said, adding the post suggests that Canada's law enforcement agencies are under-resourced. "Oddly enough, they're asking us to petition the very same government of that same party to give more money to police. I would ask them to petition themselves...It tells Edmontonians to 'nevermind what the police say, they're underfunded. There is a threat and they're not in a position to protect you' and that's just irresponsible." QMI Agency (Edmonton Sun, London Free Press B2, Edmonton Sun, Calgary Sun)

* **Muslim library in hot water over books**
Concordia's dean of students will meet with leaders of the university's Muslim Students Association regarding a television report that suggested the association's library contains books and videos by "extremist preachers." The library "is in a modest setting but nonetheless has cutting-edge software that allows users to consult online books, (among which) TVA news found dozens of works by radical imams," said the report which aired last Friday. In related news, Premier Philippe Couillard said Wednesday a Quebec Liberal member of the legislature should not have advertised on an Islamic community centre website that includes texts extolling violence against women. Postmedia (Leader-Post, C10, Edmonton Journal, Star Phoenix, Calgary Herald)

The spies next door

New figures show Canada has turfed out five spies in the past decade from a surprising source country - its best friend and ally, the United States. From 2004 to 2014 Ottawa sent back to the U.S. five of a total of 21 of those barred from Canada "on security grounds for engaging in an act of espionage that is against Canada or that is contrary to Canada's interests," according to a document produced by Canada Border Services Agency. It's not clear if the espionage was by foreign government agents or if it was industrial espionage - that is, spying to obtain state secrets, intellectual property or corporate secrets. A document released under access to information laws shows the suspected spies were permanent residents or foreign nationals deemed inadmissible on security grounds, but doesn't break down them down by citizenship. Rather, it indicates the country the spies were sent back to. Still, the fact that the U.S. is the origin of the most espionage cases is surprising, especially given the emphasis put by federal politicians - including two former CSIS directors, one of whom is now national security adviser to Prime Minister Stephen Harper - on China as a suspected source of espionage. The U.S. actually tops this list, followed by China, India and Sweden with two expulsions each in 10 years. The only two ousters of suspected spies to China are listed in 2014, with no earlier expulsion for the nine years prior. Russia accounts for just one expulsion - in 2004 - in the decade covered by the search. In a joint project, the Toronto Star and La Presse sought further information from CBSA, the U.S. embassy, former American ambassadors, former diplomats and Canadian officials, but none shed any light on the specifics of any case. Wendy Atkin, a media spokeswoman for Canada's border agency, declined to provide any details on specific cases but in a written statement clarified that Canada may not have been the sole target of the espionage. Toronto Star, A1; Le Journal de Quebec

*** Evidence is overwhelming' in terror plot to derail train**

A Crown lawyer is telling a jury "the evidence is overwhelming" in the case of two men accused of plotting to derail a passenger train between Canada and the U.S. Raed Jaser and Chiheb Esseghaier face multiple terror-related charges in connection with their alleged plot to target a Via Rail train travelling from New York to Toronto. Neither men called evidence or witnesses in their defence. Jaser pleaded not-guilty and Esseghaier, who is self-represented and does not want to participate in his trial, had a not-guilty plea entered for him by the judge presiding over the case. Canadian Press (Guardian, B5, Whitehorse Daily Star, Times & Transcript), Toronto Star, Presse Canadienne (Le Quotidien 16), QMI Agency (Edmonton Sun, Winnipeg Sun, Calgary Sun, Kingston Whig Standard, London Free Press, Toronto Sun, Ottawa Sun, Journal de Montreal, Journal de Quebec); Postmedia (Windsor Star A7, Leader-Post, Star Phoenix, Montreal Gazette, Ottawa Citizen, National Post, Edmonton Journal, Calgary Herald)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Human smuggling ship to be scrapped

Almost five years after a derelict cargo ship with 492 Sri Lankan migrants arrived off the B.C. coast, prompting a change in Canada's immigration laws, the government has failed to find a buyer for the vessel. Now, the MV Sun Sea, on which Ottawa has spent at least $600,000 to store and maintain, is headed for the scrap heap. "Because a buyer did not come forward, the CBSA will commence a judicial process to obtain the legal authority for its disposal," Stefanie Wudel, a spokeswoman for the Canada Border Services Agency, the ship's custodian, said Wednesday. Just two months ago, CBSA awarded a $157,697 contract to a Victoria company to carry out extensive work to remove potential environmental hazards and ensure the stability of the rusting ship, which is parked at a Fisheries and Oceans dock on the tip of Annacis Island, southeast of Vancouver. The work included: a "hot water wash" to remove oil and other pollutants from engine-room bilges; repairs to the hull; testing surface paint for lead; and removing from tanks all "deleterious material" or "fluids that could harm the environment." The agency said Wednesday the "necessity" of the repairs delayed the disposal process. There have been no reports of spillage of any pollutants, Wudel said, nor has any lead over the specified limit been detected. Representatives of Intercon Marine, which carried out the cleanup, declined to comment. After the Sun Sea's arrival in August 2010, the ship spent two years docked at a private shipyard in Nanaimo, before being towed to its current home in the lower arm of the Fraser River. A CBSA official previously told CTV News about $400,000 had been spent on moorage, security and towing during those first two years. Quebec man charged for not giving up phone password at border
A law professor in Halifax says the case of a Quebec man charged with obstructing border officials raises a new legal question in Canada. The accused, 38-year-old Alain Philippon of St. Anne-des-Plaines, Quebec, refused to divulge his smart phone password to Canada Border Services Agency during a customs search. Philippon arrived in Halifax Monday night on a flight from Puerto Plata in the Dominican Republic. Rob Currie is the director of the Law and Technology Institute at the Schulich School of Law. He says under the law, travellers crossing the Canadian border have a reduced expectation of privacy. He says border officials have wide-ranging powers to search travellers and their belongings. "Under the Customs Act, customs officers are allowed to inspect things that you have, that you're bringing into the country," he said. "The term used in the Act is 'goods', but that certainly extends to your cellphone, to your tablet, to your computer, pretty much anything you have." Currie says the issue of whether a traveller must reveal a password to an electronic device at the border hasn't been tested by a court. "This is a question that has not been litigated in Canada, whether they can actually demand you to hand over your password to allow them to unlock the device," he said. "One thing for them to inspect it, another thing for them to compel you to help them." Currie says the obstruction case hinges on that distinction. CBC.ca

Un médecin radié 18 mois
Le Dr Jean-François Coupal, qui exerçait la médecine familiale dans la région de Gatineau, voit son droit de pratique suspendu 18 mois pour avoir été reconnu coupable de possession de pornographie juvénile. Le médecin de 53 ans ne pourra également plus soigner de patients de moins de 18 ans, ne pourra plus utiliser l'internet pendant cinq ans et devra constamment se trouver en présence d'un autre membre du personnel sur son lieu de travail, a tranché le conseil de discipline du Collège des médecins, le 26 février. Le Dr Coupal avait été arrêté en 2011 alors qu'il revenait d'un voyage en Thaïlande. Les douaniers avaient trouvé sur une clé USB 200 photos et 195 vidéos de jeunes enfants ou d'adolescents impliqués dans des actes sexuels. Le Dr Coupal a été reconnu coupable de possession de pornographie juvénile en avril 2014. Radié depuis l'été de façon préventive, il devra purger 12 mois supplémentaires de radiation. La Presse, A12

Le «citoyen souverain» livré à la police de Québec
Le «citoyen souverain» Alain Painchaud a finalement été livré au Service de police de la Ville de Québec (SPVQ) hier par la Gendarmerie royale du Canada, a appris Le Soleil. Il fera face à un juge aujourd'hui au palais de justice de Québec. Il a passé la nuit dernière au poste de police du parc Victoria. «L'individu a effectivement été arrêté ce soir [hier]», confirme le porte-parole du SPVQ, Pierre Poirier. «Il va comparaître demain pour divers mandats d'arrestation.» Au mois de décembre, un mandat d'arrestation contre l'ingénieur avait été lancé par le tribunal, puisqu'il n'avait pas été en mesure de se présenter au palais de justice de Québec, étant détenu aux États-Unis. Le juge Michel Babin, qui préside le procès de l'accusé, devait alors rendre les résultats de l'évaluation psychiatrique de M. Painchaud. Le «citoyen souverain» a été arrêté aux États-Unis au mois de novembre en tentant d'entrer à l'aéroport O'Hare de Chicago sans passeport valide, afin de trouver l'asile politique. L'homme de 45 ans, qui a fondé sa propre république rue Sasseville dans Sainte-Foy en 2013, se disait entre autres persécuté par les autorités canadiennes. Il est notamment accusé d'importation illégale de médicaments, d'avoir eu des armes mal entreposées et d'entrave au travail des agents frontaliers qui ont procédé à son arrestation à l'Aéroport international Jean-Lesage, en mars 2014. Le Soleil, 15

Child exposed to bedbug pesticide improving
A child in hospital after being exposed to a pesticide his parents used to kill bedbugs has been taken off a ventilator and moved to a recovery room. Family spokesman Taj Mohammed said the boy, Zain Hasan, is expected to be discharged from an Edmonton hospital later this month. "It is good news," said Mohammed, the principal of Fort McMurray Islamic School where Zain attends kindergarten. "He is offof the ventilator. He is in the recover section of the hospital and he will be two to three weeks before he is discharged." Funerals for Zain's two-year-old brother, Zia, and eight-month-old sister, Zara, were held in Edmonton last week. Mohammed said Wednesday that it is too soon to know whether Zain suffered any permanent injuries. Aluminum phosphide can emit phosphine gas, which can cause long-term damage to a body's liver, heart and kidneys. The family had recently brought a type of aluminum phosphide back from a trip to Pakistan to kill bedbugs in their apartment in Fort McMurray. Two other children, aged four

and seven, were released from a hospital in Fort McMurray last month. The father, Syed Habib and the mother, Nida Habib, remain in Edmonton. It is not clear how the family managed to bring the pesticide into Canada. The Canada Border Services Agency and RCMP have said they are investigating. Calgary Herald, A10 (Red Deer Advocate)

Libyan national to stay in jail
A Libyan national is in custody while he awaits trial in Halifax on immigration charges. Mohamed Zagruba was living on Chelmsford Place in Halifax when he was arrested last month for allegedly giving misleading information in immigration documents. Zagruba, 33, faces three charges of misrepresentation under the Immigration and Refugee Protection Act. The Canada Border Services Agency alleges that Zagruba failed to disclose in visa applications in November 2013 and September 2014 that he had belonged to a militia in Libya. He's also accused of failing to mention in the 2014 application that he and his wife had separated. Lawyer Kai Glasgow appeared in Halifax provincial court Wednesday on behalf of Zagruba, who chose to stay in a holding cell. Glasgow said his client was consenting to remain behind bars for another three weeks while a release plan is formulated. Judge Michael Sherar scheduled the case to return to court March 25 for a bail hearing. He remanded Zagruba back to the Central Nova Scotia Correctional Facility in Dartmouth. The Crown proceeded by indictment, so each charge carries a maximum penalty of a $100,000 fine and five years in prison. Chronicle Herald, A6

Has Detroit's mayor worked out deal with Moroun?
Political leaders are questioning whether Detroit Mayor Mike Duggan has agreed to a deal with Ambassador Bridge owner Matty Moroun over a vital piece of city-owned land needed for Moroun's twin-span proposal. Riverside Park, which sits on the riverfront underneath the bridge in Detroit, is needed by Moroun before he can get U.S. environmental approvals for his "enhancement project" - a new six-lane cable-stayed bridge to Windsor that would run parallel to the existing bridge. Former Michigan state representative and community leader Rashida Tlaib is concerned Moroun has convinced Duggan to either agree to a deal that gives the park to Moroun or at least provide air rights over the park. She's concerned the cash-strapped city may be looking to profit from the asset. Detroit Mayor Mike Duggan speaks with the media at the North American International Auto Show in Detroit, Michigan on Thursday, January 8, 2015. Duggan's office told The Star Wednesday it would be "several weeks" before the mayor's office would respond to questions of a possible Moroun deal. "This is something we hope to arrange soon, but unfortunately right now the mayor's schedule doesn't allow for it for the next several weeks," an official with the mayor's office said in an email. "He is booked." Any potential deal would still need approval from Detroit's city council. Bridge company president Dan Stamper did not respond Wednesday to a message from The Star. Ambassador Bridge president Dan Stamper appears Thursday, Mar. 22, 2012, in the Wayne County Circuit court in Detroit, MI. Windsor Star, A5

LAW ENFORCEMENT / APPLICATION DE LA LOI

OPP confirms Ferguson investigation
Coun. Lloyd Ferguson said he expects a "second vindication" from an Ontario Provincial Police investigation into an alleged assault on a journalist at city hall last year. The OPP was contacted by Hamilton police at the end of February, requesting they investigate a complaint of a historic assault, Sgt. David Rektor confirmed Wednesday. The news came shortly after Ferguson publicly announced he would "penalize" himself over an integrity commissioner report that found he violated council's code of conduct by grabbing and pushing journalist Joey Coleman. Ferguson said he would donate $1,000 to an Ancaster charity and step down from a council committee to recruit a new integrity commissioner. Coleman, who accepted an apology from the Ancaster councillor last year, posted a statement online Wednesday indicating the OPP were investigating. He didn't respond to questions from the Spectator Wednesday.

Ferguson said he was "puzzled" by the investigation and hadn't been contacted by police, but added he welcomes the opportunity to end the controversy. Hamilton Spectator, A1

Ministry calls off RCMP probe into researchers

Wrongly fired Health Ministry employees who have had the threat of an RCMP investigation hanging over them since 2012 have been told the ministry is not pursuing a police investigation. B.C. Health Minister Terry Lake directed his deputy to write to six employees with whom the government has settled wrongful dismissal cases and grievances to say the Health Ministry is not pursuing an investigation by the RCMP. On Sept. 6, 2012, Margaret MacDiarmid, then the minister of health, said the government had asked the RCMP to investigate allegations of inappropriate conduct, contracting and datamanagement practices involving ministry employees and drug researchers. The alleged privacy breach involved large amounts of health data downloaded onto unencrypted flash drives and shared with unauthorized people. MacDiarmid said the ministry provided the RCMP with interim results of its investigation. Seven drug researchers were eventually fired and one contractor lost his job. The government has since settled with six employees and apologized for its "heavy-handed" approach, but had left the threat of an RCMP investigation dangling. "I've asked my deputy to write a letter to the employees with whom we have settled, and to the family of Mr. MacIsaac, to let them know that the ministry is not pursuing any action by the RCMP," Lake said. Times Colonist, S1 Front

Langford attacker hunted by police

West Shore RCMP are looking for a man who attacked a woman, knocked her out and took her cellphone and money while she was jogging on a trail near Glen Lake Beach Park in Langford. The 23-year-old woman was jogging near Shoreview Drive about 7 p.m. Tuesday, when a man asked her for the time. She was then knocked unconscious and robbed. The woman regained consciousness and ran for help to a house where she called 911. West Shore RCMP rushed to the area. The attacker was described as wearing black gloves with thick wristbands and a dark-coloured windbreaker with a patch of red under the arm. The trail was cordoned off by police tape Wednesday. West Shore RCMP major crime investigators and the Vancouver Island district forensic identification section continue to investigate. Times Colonist, A1

Man charged after sex attacks

RCMP say DNA evidence has led to criminal charges, including sexual assault, against a 22-year-old Langley man. Kevin Adelmo Sharp is charged with break and enter, two counts of sexual assault with a weapon, theft of a motor vehicle and assault causing bodily harm. In the first of two similar incidents, a woman told Langley RCMP on Oct. 3 that she had been sexually assaulted. She said she was picked up by a man and they agreed to have sex in exchange for money. After a payment dispute, he then he sexually assaulted her. A second allegation refers to a Surrey incident where a man assaulted and robbed a Langley woman on Oct. 7. Then in May, a woman was grabbed by the neck and sexually assaulted in her home by a man who then stole personal items before fleeing. Postmedia News (Vancouver Sun, The Province); Canadian Press (Times Colonist)

Tip alerted police to potential mall threat

Halifax police say their decision to warn a local shopping mall about a potential threat and the later arrest of three people were based on an anonymous Crime Stoppers tip. Const. Pierre Bourdages said Wednesday that one of those arrested learned he was with the subject of the tip because one of the officers making the arrests at a Halifax apartment inadvertently left behind details from Crime Stoppers. Bourdages declined to say what was in the document, except that it included a photo of the suspect and was part of the search warrant that was supposed to be left behind at the residence. He said anyone offering a tip to Crime Stoppers is guaranteed anonymity, which is why the document contained no information about who alerted police. Police would not identify any of those involved because no charges were laid against the two men and one woman who were arrested on Tuesday and released a few hours later. The investigation at the Mic Mac Mall comes a little more than two weeks after two people were charged with conspiracy to commit murder at the Halifax Shopping Centre in an alleged Valentine's Day plot that police say could have resulted in mass casualties. RCMP have said their investigation and the arrests in that case were prompted by a Crime Stoppers tip. Canadian Press (Waterloo Record, Times Transcript)

Sex trafficking will be part of Pan Am Games, says church officer
Cities that host international sporting events put on their best face for the world to see, but they ignore an ugly reality behind the spectacle: the exploitation of women and children shipped in to cater to the sexual proclivities of spectators, says the general secretary for the Canadian Council of Churches. "Human sex trafficking goes with national and international sporting events," Rev. Karen Hamilton said Wednesday in one in the series of Stuart Ivison Memorial Lectures sponsored by Ottawa's First Baptist Church on Elgin Street. "And it will be coming to my city, because Toronto is hosting the Pan Am Games this summer." Canadians - and the politicians and government agencies who serve them - need to face the reality of both human trafficking and sex trafficking, Hamilton said, suggesting that many of those who attend will be as interested in illicit sex as in the athletes, if not more so. Hamilton said she has drawn the attention of David Peterson, chairman the board organizing the games, to the issue, but to date isn't satisfied it is being taken seriously... Within Canada, the RCMP estimate 600 women and children are trafficked into this country each year for sexual exploitation, and at least 800 are trafficked into Canada for all domestic markets, including the drug trade, domestic work, or labour for garment and other industries. Another 1,500 to 2,000 are trafficked through Canada into the United States. Ottawa Citizen, A5

RCMP assessment ideological
An editorial states, "The RCMP's recently disclosed Critical Infrastructure Intelligence Assessment of Criminal Threats to the Canadian Petroleum Industry might be dismissed as a joke if its implications weren't so disturbing. Given the sweeping nature of proposed antiterror legislation, what does this assessment reveal of attitudes about the environmental movement inside government? The RCMP assessment lists several incidents of criminal activity directed at the petroleum industry. Fair enough. We all likely agree those involved in actual crimes, such as bombings and threats of violence, should be prosecuted. But the police force then launches into a propetroleum polemic that tars the "broadly based anti-petroleum opposition" - hundreds of thousands, if not millions of Canadians - with the same brush as it does a handful of violent criminals. The RCMP's assumption that it's somehow "anti-Canadian" to oppose the expansion of fossil fuel infrastructure is simply wrong. It is also wrong that Canada's police force should indulge in an ideologically based critique of a legitimate social movement. Its job is to enforce laws, not take ideological positions... We actually pay people to churn out this nonsense? If using social media is a sin, I guess the propetroleum movement will be cast into hell along with the greens. Any university instructor who receives a paper of this quality would give it a failing grade. Let's hope this nonsense is not used as justification to impose Canada's growing security apparatus on a legitimate environmental movement. If this is what passes for intelligence, Canada is in danger." Postmedia News (StarPhoenix)

*** Police argue their case in ads**
The Winnipeg Police Association has purchased television advertising to make sure everyone knows its officers are nice people who care about the community and risk their lives every day. Why would the police union spend money on such a campaign, and why now? Two reasons: Crime is trending downward; and, cities are looking for ways to cut costs. The new realities have forced police forces everywhere to defend their salaries and benefits and their staffing levels. The advertising campaign, called Protecting What Matters, is what the military might call shaping the battlefield. The police union wants the public on its side at a time when hard questions are being asked about whether the city has too many police officers, many of whom are drawing six-figure salaries and large pensions. With cities struggling to contain costs, police budgets are a natural target, since they represent the largest single expense for any municipality. Even former public safety minister Vic Toews, now a Court of Queen's Bench judge, said there was a need to curb police costs or eventually face sudden and drastic cuts. Winnipeg Free Press

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Tories seek 'a sentence for life'
The Tory government's latest tough-on-crime initiative to make a life sentence a sentence for life without parole appears to be aimed at scoring political points rather than protecting the public, some critics and

legal experts said Wednesday. Prime Minister Stephen Harper told a Toronto crowd his government will introduce new legislation next week to ensure that what he called the country's "most dangerous, violent offenders," could not be allowed back on the streets. The new bill will "ensure that for the most heinous offenders and the most horrific crimes a life sentence in Canada will henceforth mean exactly that - a sentence for life," Harper announced in front of a crowd that included families of murder victims. The legislation would apply to those convicted of first-degree murder involving: the killing of police officers or correctional officers; terrorism; kidnapping or sexual assault; and crimes "of a particularly brutal nature." It would also apply to those who commit high treason. While hesitant to judge the proposed changes until the bill is tabled, some critics and legal experts said the announcement raises several red flags. "Most dangerous killers are already denied parole and held for life," NDP justice critic Françoise Boivin said in a statement. "Sentencing reform should be focused on improving public safety, not on scoring political points. Decisions about who is released should be based on the risk an individual poses to the community and how to best protect public safety," she said. Benjamin Berger, a criminal law expert at York University's Osgoode Hall law school, said the announcement comes across as "political sleight of hand." (...) According to the latest Correctional Service of Canada data on recidivism available, 658 convicted murderers were released on full parole between January 1975 and the end of March 1990. Of those, five were convicted of committing a second murder - three of first-degree and two of second. Canadian Press (Vancouver Sun, B1/Front, Hamilton Spectator, A1, Red Deer Advocate, Chronicle-Herald, The Province, Windsor Star, StarPhoenix, Leader-Post, Calgary Herald, Montreal Gazette, Ottawa Citizen, Edmonton Journal, Whitehorse Daily Star, Times Colonist, Maclean's, Times & Transcript, Telegraph-Journal, The Telegram, The Guardian, Waterloo Region Record, Cape Breton Post), * Presse canadienne (Le Droit, Voix de l'Est, La Tribune, Acadie nouvelle), * Winnipeg Free Press, * La Presse (Le Nouvelliste, 31), Journal de Québec (Journal de Montréal),

En prison jusqu'à ce que mort s'ensuive

La mesure annoncée pourrait s'avérer inconstitutionnelle, selon un juriste. Le gouvernement fédéral veut qu'une peine d'emprisonnement à perpétuité en soit réellement une. Le premier ministre Stephen Harper a annoncé mercredi que son gouvernement ira de l'avant son projet de loi controversé et présentera dès la semaine prochaine une mesure législative pour que de telles peines n'incluent pas de possibilité de libération conditionnelle. Le projet de loi va s'appliquer à ceux qui sont condamnés pour meurtre prémédité d'un policier ou d'un agent correctionnel, condamnés pour terrorisme, kidnapping ou agression sexuelle ainsi que pour des crimes " d'une nature particulièrement violente ". Il concerne aussi les personnes condamnées pour haute trahison. " Notre gouvernement déposera un projet de loi pour s'assurer que pour les criminels les plus haineux et pour les crimes les plus horribles, une peine de prison à vie au Canada va vouloir dire exactement cela -- une peine à vie ", a annoncé le premier ministre devant une foule qui incluait les familles de victimes de meurtre réunies à Toronto. Actuellement, ceux qui sont condamnés pour meurtre prémédité se voient infliger automatiquement une peine de prison à perpétuité sans possibilité de libération avant 25 ans. Considérations constitutionnelles Pour Hugo Cyr, professeur de sciences juridiques à l'Université du Québec à Montréal et spécialiste en droit constitutionnel, cette nouvelle mesure législative est " une solution qui cherche un problème ". " Il ne faut pas croire qu'il est facile de sortir de prison après 25 ans. Présentement, c'est difficile d'obtenir une libération conditionnelle. Cette annonce semble être davantage une mesure pour plaire à un certain électorat que la réponse à un problème réel ", estime-t-il. Le Devoir, A1; * National Post

*** Life sentence will mean life**

In a few weeks the Conservatives are going to table a bill to make a life sentence be what it actually sounds like. This measure will seal the deal on the 2013 throne speech commitment that the "government will change the law so that a life sentence means a sentence for life." Currently, a life sentence in Canada means no eligibility for parole until 25 years is served. But on Wednesday, speaking at an event in Scarborough, Ont., Prime Minister Stephen Harper announced that some categories of individuals convicted of first-degree murder will receive life with no parole. The PM said that while "we want rehabilitation for all criminals," there are certain criminals who should never be allowed to walk the streets. These include first-degree murders that involve terrorism, kidnapping or forced confinement, sexual assault and the killing of police or corrections officers. Also added to the list is "any first-degree murders that are found to be of a particularly brutal nature." It will be interesting to see how the proposed legislation outlines what brutal nature means and how much judicial discretion is granted. Not only was

this legislation expected, but it's also not a huge change. (...)Also, it's not like true life in prison isn't possible right now. The corrections system already has the ability to keep someone locked up forever. Many of "the most heinous offenders," as the PM refers to them, would likely face a true life sentence regardless. For instance, while Paul Bernardo is eligible for full parole beginning in 2018, most legal observers don't think he'll ever receive it. Eligibility does not guarantee freedom. QMI Agency (Kingston Whig-Standard, B1, London Free Press, Winnipeg Sun, Toronto Sun, Edmonton Sun, Calgary Sun, Ottawa Sun)

Convicted murderers who have gained some form of freedom
Four murderers who might still be in prison if convicted under the 'life without parole' measures: Harold Smeltzer Convicted in 1980 of abducting and drowning five-year-old Kimberly Thompson in the bathtub of his parents' Calgary home. Admitted to attacking and raping at least 40 more women and girls upon his arrest. He received day parole in 2008 and a recent Parole Board report confirmed he was spotted lurking around playgrounds as recently as last summer. Steven LeClair In 1980, LeClair shot and killed three random patrons at a Vancouver bar, then drove to Richmond RCMP headquarters to murder the front desk officer. Last year, he began receiving unescorted absences from prison. Craig Munro Monro shot and killed 30-yearold Toronto police Const. Michael Sweet during a botched robbery in 1980. He was granted unescorted leaves from prison in 2010 despite the protests of then-OPP commissioner Julian Fantino. Bill Nichols At the peak of a lengthy 1976 crime spree, Nichols murdered Calgary police officer Staff. Sgt. Keith Harrison in a shootout before taking four hostages at a Calgary home. Despite public protests, he was freed 17 years later under the faint hope clause. Postmedia News (Vancouver Sun, B1/Front, Leader-Post, StarPhoenix, Montreal Gazette, Calgary Herald, Edmonton Journal)

* **Harper's found his own wedge issue**
An opinion piece states, “Life means life. Vote Conservative. On Wednesday, Prime Minister Stephen Harper announced that the government will introduce legislation to keep criminals "too cruel and dangerous to be put back into freedom" locked up permanently, with no possibility of parole. "Our Government believes in standing up for victims of crime and their families, putting their rights and interests ahead of those of criminals, and that a prison sentence should mean what it says. ... [A] life sentence in Canada will mean exactly that: a sentence for life." Politically, the announcement's optics were picture-perfect. Harper delivered his message at a Chinese cultural centre in Scarborough, a part of Toronto that sees more than its share of crime. Six Toronto-area MPs were in attendance, including Citizenship and Immigration Minister Chris Alexander and the PM's Parliamentary Secretary, Paul Calandra, as well as Justice Minister Peter MacKay, whom Harper pointedly credited with helping craft the legislation. The enthusiastic crowd reflected the diversity of Canada's biggest city, and the votes the Tories hope to get there in the upcoming election. But Harper's message wasn't just intended for Toronto, or its ethnic communities. It was intended for Edmonton, a city reeling from the killing in January of policeman Matthew Wynn by Shawn Rehn, an offender with a lengthy criminal record and a history of domestic violence. And for Vancouver, where a parole board is weighing whether killer Allan Schoenborn, found "not criminally responsible" for stabbing and smothering his three children in 2008, should be granted supervised day passes, despite posing "a significant risk of causing physical or psychological harm." And for Winnipeg, where just days ago, it was announced that Vince Li, a schizophrenic who gruesomely beheaded and cannibalized fellow passenger Tim McLean on a Greyhound bus in 2008, will be getting unsupervised day passes, to the horror of Mc-Lean's mother and many citizens in the community.” National Post, A11

* **Canada doesn't need a 'life-means-life' law**
An opinion piece states, “Canada does not need a so-called "life-means-life" law. But we're getting one anyway, courtesy of the always-ideological Harper Conservative government. This law, mandating sentences of life in prison with no parole, will target those who murder police or prison officers, commit terrorist acts, carry out kidnapping or sexual assault resulting in murder, or commit crimes that are "of a particularly brutal nature." Canada's most dangerous killers - the Paul Bernardos - are never getting out of prison. They won't be granted parole. They are not a threat. And this law won't deter the next heinous criminal. There's no difference in that sort of mind between no parole for 25 years and no parole ever. The death sentence isn't a deterrent, and neither is life in prison without parole. Here's another reality: This law will be challenged under the Constitution and will probably be struck down. And another: The

country's violent crime rate is low and dropping. And another: Housing the few inmates this will affect will simply cost more and not result in better or different outcomes. This is all about optics and partisanship in an election year. Period." Hamilton Spectator, A12

*** Throwing away the key just throws away justice**
An opinion piece states, "Prime Minister Stephen Harper is most definitely a man of his word. Even if keeping that word will have the effect of setting back Canada's justice system decades, if not centuries. On Wednesday, the prime minister kept a 2013 promise to eliminate parole for murderers who employ sexual assault, kidnapping and confinement, terrorism, the killing of police or corrections officers in their crimes, and first-degree murders found to be "of a particularly brutal nature." Harper had been warned by federal lawyers last year taking away any hope of parole would be constitutionally untenable. So, the Conservative government will give those sentenced to life in prison a chance to apply for clemency after serving 35 years. Harper argued Wednesday the responsibility to assess the parole eligibility of convicted murders should not rest with an appointed board. Instead, it will rest with "the federal cabinet; men and women fully accountable to their fellow citizens and to the families of the victims of these crimes." This one aspect, in and of itself, is particularly troublesome. It has been nearly 40 years since federal politicians had the power to make decisions on who was paroled or, in the period before 1972, sentenced to death. Politicizing that process again, and trying to dress it up as accountable government, is a long bow for the Tories to draw. For much of the time since, we have allowed the Parole Board of Canada to assess the suitability of parole candidates, and on the whole the system has worked well. Recidivism rates among offenders of all violent crimes are low; among murderers, they are even lower. Just a fraction of one per cent." Winnipeg Free Press

*** La prison à vie a peu d'effet sur le taux d'homicides**
Épreuve des faits - Le premier ministre Stephen Harper fait fi des critiques et va de l'avant avec son projet d'imposer l'emprisonnement à vie à certains meurtriers, sans possibilité de libération. Il promet qu'un projet de loi en ce sens sera déposé aux Communes la semaine prochaine. Pour lui, plus question d'obtenir de libération conditionnelle après 25 ans, comme c'est le cas présentement. Mais cette mesure va-t-elle vraiment faire réduire le taux d'homicides au Canada? Vérification faite : c'est difficile à dire. Les données de Statistique Canada sur les homicides démontrent que le taux d'homicides au pays est en nette régression depuis 1983. Le taux le plus récent disponible est celui de 2013 à 1,44 meurtre par 100 000 habitants. C'est le taux le plus faible depuis 1966. La pire année, en 1983, ce taux atteignait 2,69. Des experts consultés attribuent en grande partie cette baisse au vieillissement de la population, et non à la nature des peines imposées. Selon eux, le groupe le plus susceptible de commettre des meurtres est celui des hommes de 18 à 40 ans, dont la proportion diminue depuis 1983. D'autres l'attribuent aux actions policières ciblant le crime organisé, y compris les bandes de motards criminels, mais préviennent qu'il ne s'agit que d'un cycle. Radio-Canada

« Mom » serait actif en prison
Maurice «Mom» Boucher ne semble pas avoir pris sa retraite du milieu criminel même s'il purge une peine d'incarcération à perpétuité et qu'il a été expulsé des Hells Angels. Le Journal a appris que le nom de l'ancien chef du gang de motards a refait surface du-rant une enquête policière menée à l'encontre d'un réseau de trafic de stupéfiants, dans la grande région de Montréal. Selon nos sources, l'homme de 61 ans tirerait encore des ficelles dans le monde interlope, à partir du pénitencier à sécurité maximum de Sainte-Anne-des-Plaines où il est gardé soit dans l'Unité spéciale de détention (USD). Les policiers soupçonnent l'ex-Nomads d'avoir obtenu l'aide d'un membre de sa famille pour mener ses affaires à l'extérieur des barreaux de sa cellule. Aucune accusation n'a encore été portée relativement à cette enquête. «Mom» a été condamné à la prison à vie, en 2002, pour avoir commandé les meurtres des gardiens de prison Diane Lavigne et Pierre Rondeau. Il ne pourra faire sa première demande de libération conditionnelle qu'en 2022. Depuis sa condamnation, il est incarcéré à l'USD, comme 70 codétenus nécessitant des mesures de sécurité accrues. Plus de 50 caméras permettent aux gardiens d'assurer «une surveillance complète» des lieux, selon le Service correctionnel du Canada. Journal de Québec, 5 (Journal de Montréal)

Ernest Fenwick Macintosh and justice

It was just a matter of time and opportunity before Ernest Fenwick MacIntosh sexually abused another boy, says Bob Martin, one of his victims from more than 40 years ago. "What upset me was when Dr. Angela Connors got on the stand and said there was less than a 20 per cent chance that Mr. MacIntosh would reoffend," said Martin, who was sexually abused by MacIntosh in the early 1970s. "We were going, 'Hell no. He's serial. He needs this.' We were always concerned that he would go out there and do it again." When MacIntosh, who turns 72 this month, did it again, Martin, a photographer now living and working in Port Hood, was watching from afar. During two 2010 trials, MacIntosh was convicted on 18 charges of gross indecency and indecent assault against Martin and five other boys in the Port Hawkesbury area in the '70s. He was sentenced to 5 years in prison. But those convictions were later overturned by the Nova Scotia Court of Appeal because it took too long to bring MacIntosh to trial. Since MacIntosh won his appeal in 2013, Martin has been keeping tabs on him through Google and any other means available. MacIntosh posted a video of his affiliation with a spice company in Sri Lanka and then moved on to Nepal. "You see this guy all the time, the smirks," Martin said. "I'm not a pedophile vigilante. I'm not this guy that wants to harm this man, but I just don't want him to harm other people." But it seems that Martin was right. MacIntosh could not stop harming others, specifically prepubescent boys. (...) Correctional Service Canada regulations make it unlikely that MacIntosh will be transferred to Canada to serve his time. Veronique Rioux, with Correctional Service, said in an email Wednesday she couldn't comment on a specific case, but she added that all transfers from other countries are done under the International Transfer of Offenders Act and are carried out only between Canada and countries with which it has a valid transfer agreement. Nepal is not on that list of countries. Chronicle-Herald, A4

Scumbag on the loose

A violent sex offender who was just freed from Grande Cache Institution and planned to call Edmonton home is already wanted on a Canada wide warrant. Ashton Dennis Natomagan -- born Nov. 21, 1981 -- is serving a five-year sentence for sexual assault causing bodily harm. He was freed from the medium-security prison 435 km west of Edmonton on March 2 and was to live in Edmonton but failed to report to authorities as required and is now wanted on the warrant. Even if Natomagan had reported to authorities, Edmonton city police were prompted to issue a warning to the public about his release. Edmonton police said Wednesday that Natomagan is considered to be a sexual offender who poses a risk of significant harm to the community and that he was to be closely monitored by Correctional Services Canada. Natomagan's rap sheet also includes 46 criminal convictions, including multiple cases of failing to report/comply with conditions, break and enters, property related offences, driving offences, five counts of escaping lawful custody, being unlawfully at large, thefts, drug related offences, and an additional sexual assault causing bodily harm conviction. Edmonton Sun, 3; * Edmonton Journal, * CBC News

*** Violent offender released**

City police are issuing an alert after a violent offender who plans to live in the Edmonton area was freed from Grande Cache Institution. In the interest of public safety, police say that Michael Wayne Beauchamp was released Tuesday from the medium-security prison 435 km west of Edmonton after completing a six-year sentence for robbery, overcome resistance by attempting to choke, suffocate or strangle another person, and failure to comply with recognizance. Beauchamp is considered by police to be a violent offender who poses a risk of significant harm to the community. He will be living in the Edmonton area and will be closely monitored by the Edmonton Police Service Behavioural Assessment Unit. Edmonton Sun, 3, Edmonton Journal

Sarah Cousineau Denis fait appel

Près d'un mois après avoir été condamnée à passer deux ans et demi derrière les barreaux, Sarah Cousineau Denis interjette appel de sa sentence. « Sarah n'a pas demandé de remise en liberté [d'ici à ce que la Cour d'appel rende sa décision], a indiqué hier à La Voix de l'Est sa mère, Josée Denis. On souhaite juste que le jugement corresponde à la fourchette normalement consentie pour ce genre de cause. » La dame, elle-même avocate, n'a toutefois pas voulu commenter au sujet de la durée d'une peine « convenable », s'en remettant uniquement à l'avis d'appel déposé le 20 février par le procureur qui représente de la jeune détenue, Me Pierre Poupart. La femme de 21 ans a écopé de 30 mois d'incarcération, le 4 février, au palais de justice de Granby. A cela s'ajoute une interdiction de conduire de cinq ans à sa sortie de prison. Rappelons que la Mercedes de Sarah Cousineau Denis a fait une violente embardée, le 12 novembre 2012 dans le chemin Bondville à Lac-Brome, après qu'elle en a perdu la

maîtrise en roulant à plus du double de la vitesse maximale permise dans une zone de 50 km/h. Voix de l'Est, 5/Front

*** Federal offender unlawfully at large**
The OPP Repeat Offender Parole Enforcement (ROPE) Squad is asking for the public's assistance locating a federal offender. Jamaal Jackson, 30, is serving a seven-year, seven-month sentence for several robbery related offences, and now has a Canada-wide warrant for breaching parole. "Robbery is a theft with violence," det.-Sgt. Brett Anderson, from the ROPE Squad, said. "Could have been an assault or weapon involved. There are several robbery offences he is serving time for." Anderson said Jackson is not at his hal fway house in Toronto. "He's unlawfully at large, so he would have failed to return," Anderson said. "It's either a fail to show up at the halfway house or a fail to return by curfew." Kingston Whig-Standard, A6

*** High court upholds killers' first-degree murder terms**
Manitoba's highest court has ruled a deadly ambush inside an Elmwood house was a cold-blooded act and not something less. Blake Whiteway and Tyler Sutherland were each convicted of two counts of first-degree murder and one count of attempted murder for the December 2009 attack that left two teens dead and another seriously injured. The men, just 16 and 17 at the time, were given adult sentences of life in prison with no chance of parole for at least 10 years. Whiteway and Sutherland both appealed the verdicts, saying they were "unreasonable" and should be overturned. Whiteway was seeking a second-degree murder conviction, while Sutherland wanted a new trial. As well, Sutherland claimed he should not have received an adult penalty. The Court of Appeal, in a decision released this week, dismissed all grounds of appeal. Winnipeg Free Press, A8

*** Court upholds sentence for church counsellor**
The province's highest court has upheld a 14-year prison sentence for a man who used his position as a counsellor for two church youth groups to sexually abuse six boys and amass one of the largest collections of child pornography ever found in Canada. The Alberta Court of Appeal also dismissed the appeal by Roderick Kyle Janssen to overturn the subsequent 10-year period of community supervision as a long-term offender. Calgary Herald, A9

*** La famille d'une victime se dit abandonnée par le système**
Les parents d'une jeune femme tuée par une chauffarde déplorent que les commissaires n'aient pas tenu compte de leurs craintes en libérant celle qui a embouti la voiture de leur fille. Condamnée à 50 mois de pénitencier en mai 2013, Irina Mysliakovskaia n'aura passé qu'un an derrière les barreaux et huit mois en maison de transition. Elle a causé la mort de Katherine Beaulieu, 21 ans, en conduisant en état d'ébriété en sens inverse sur l'autoroute 55, près de Trois-Rivières, en mai 2010. Hier, la Commission des libérations conditionnelles du Canada lui a accordé une libération totale. "C'est aberrant, tonne la mère de la victime, Lise Lebel. Elle a quand même enlevé la vie de quelqu'un, pas volé un fromage dans une épicerie." Journal de Montréal, 11

*** Un rabais de 50% la renvoie en prison**
Poser un autocollant de rabais de 50% sur un article qui n'était pas en réduction a coûté cher à Stivia Clermont. Celle qui avait été condamnée à la prison à vie pour meurtre, en 1998, a vu sa libération conditionnelle suspendue pour ce larcin. L'incident s'est produit dans un commerce de la région de Québec, le 6 novembre dernier. Mme Clermont, maintenant âgée de 50 ans, a été interceptée à la caisse. Elle a été arrêtée et s'est avouée coupable de fraude dès sa comparution, le lendemain. Elle a reçu une peine de 15 jours, à purger concurremment à sa peine de prison à vie. Mme Clermont purgeait sa peine à l'établissement carcéral pour femmes de Joliette. Mme Clermont avait fait plus de trois mois de prison quand, le 19 février dernier, au terme d'une audience, la Commission des libérations conditionnelles a accepté d'annuler la suspension de sa libération conditionnelle. La Commission a considéré que le «geste malhonnête de faible envergure» était un incident de parcours irréfléchi, dans un cheminement jusque-là très positif. Mme Clermont devra cependant rencontrer son équipe de gestion de cas plus souvent. Une libération conditionnelle totale signifie que la personne purge le reste de sa peine sous surveillance dans la collectivité. «Vous avez compris que vous devrez, en raison de votre statut, maintenir un comportement sans reproche», lit-on dans la récente décision de la Commission des

libérations conditionnelles. Mme Clermont avait été condamnée à la perpétuité, pour le meurtre prémédité de Rocco Racaniello, assassiné à coups de couteau, dans son abri Tempo, en janvier 1995. La Presse, A12

*** Supreme Court to rule on conviction in Candace Derksen slaying**
The Supreme Court of Canada will rule today in the case of Mark Edward Grant, whose conviction in the 1984 abduction and murder of Winnipeg teenager Candace Derksen was overturned. The country's highest court must decide whether to reinstate Grant's murder conviction or side with the Manitoba Court of Appeal, which ordered a new trial for him in 2013. The provincial appeal court said the original trial judge did not consider some evidence that could have cast doubt on Grant's guilt. Manitoba prosecutors appealed the decision to the Supreme Court, which heard arguments in November and will issue its ruling on Thursday morning. Derksen was 13 years old when she disappeared on her way home from school on Nov. 30, 1984. Her body was found six weeks later, bound and frozen, in a storage shed not far from her family's home in Winnipeg's East Kildonan neighbourhood. Grant was not charged until 2007, after numerous tests on a piece of twine used to bind the teen. A jury found him guilty of second-degree murder in February 2011, and he was sentenced to life in prison with no parole eligibility for at least 25 years. Grant has repeatedly denied killing Derksen. CBC News

*** Nova Scotia Court of Appeal rejects application for government-funded lawyer**
The Nova Scotia Court of Appeal has denied a request for legal assistance to a 31-year-old New Glasgow man convicted in connection with a brutal sexual assault in Port Hawkesbury. Justin Christopher Miller was sentenced to 12 years in prison in 2012 after pleading guilty to aggravated sexual assault that occurred Aug. 28, 2010, in Port Hawkesbury. After credit for time served, Miller's sentence equalled nine years, seven months and four days. In a decision released Tuesday, Justice Joel E. Fichaud ruled he was not satisfied it was in the interest of justice that Miller be provided with government-funded counsel for his appeal and was dismissing Miller's application. Miller appealed his sentence, contending the amount of time imposed exceeded the upper limit of the appropriate range for such a crime. He applied for legal aid to represent him at an appeal but after a review his request was denied. He then appealed to the appeal committee of Nova Scotia Legal Aid, which also dismissed his application. He then applied for an order under a section of the Criminal Code that provides for government funding of an appeal, which Fichaud dismissed. At the time of sentencing, the court was told that Miller and the female victim were at a friend's home, and after the victim left, Miller followed her and then attacked her near the courthouse in Port Hawkesbury. Cape Breton Post, A3

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** University, premier deal with Muslim controversies**
Concordia's dean of students will meet with leaders of the university's Muslim Students Association regarding a television report that suggested the association's library contains books and videos by "extremist preachers." The library "is in a modest setting, but nonetheless has cutting edge software that allows users to consult online books, (among which) TVA news found dozens of works by radical imams," said the report, which aired Friday. In related news, Premier Philippe Couillard said Wednesday a Quebec Liberal member of the legislature should not have advertised on an Islamic community centre website that includes texts extolling violence against women. A photo of Marc Tanguay, his contact information and the logo of the national assembly appeared on the FATH community centre website. Couillard called for the ad to be withdrawn and Tanguay complied. "It's not a question of freedom of expression," Couillard said. "Freedom of expression allows people to say stupidities and that's why it exists." But the premier said public funds should not be used to help spread such opinions. Postmedia News (Vancouver Sun, B3, Montreal Gazette, Edmonton Journal, StarPhoenix, Windsor Star, Ottawa Citizen, Calgary Herald), Canadian Press (The Guardian, National Post, Chronicle-Herald, Toronto Star, Globe and Mail), Presse canadienne (Le Quotidien, La Tribune, Le Devoir, Le Nouvelliste, Le Droit, Montreal Gazette, Mississauga News), Journal de Québec (Journal de Montréal)

*** Focus on schools**

A letter to the editor states, "Re: 'Money alone won't solve First Nations' problems,' Susan Martinuk, Opinion, Feb. 27. With the debate around the need for an inquiry into missing and murdered aboriginal women, we should keep in mind that murder statistics for aboriginal men are worse. While only three to four per cent of the population is aboriginal, 17 per cent of murdered men in Canada in 2010-2011 were aboriginals. This is not a gender issue, it is a broader issue affecting all First Nation peoples. With or without an inquiry, all sides must agree that some necessary actions are apparent, such as reforms to funding of First Nations' education. Both sides should get back to the table to negotiate changes that get Bill C-33 passed. A First Nations' education bill that establishes adequate and sustained funding, appropriate quality standards and First Nations control, would do more to address systemic issues than inquiries and political rhetoric." Calgary Herald, A22

*** Why Harper will never call an inquiry into missing/murdered women**
An opinion piece states, "Last week, indigenous leaders and families, together with representatives from all provinces, territories and the federal government, met to draft an action plan to address the issue of missing and murdered indigenous women. When the talking was over, two groups formed behind two podiums in two separate locations and gave two very different versions of events. Both groups heard the same heart-wrenching accounts of murdered and missing women and girls, the same calls for action - yet came to very different conclusions about the nature of the problem. At one podium, presenters voiced their frustration over Ottawa's refusal to call a national inquiry. Across the street, Minister of Aboriginal Affairs Bernard Valcourt and Kellie Leitch, minister for Status of Women, put their emphasis on the criminal aspects of the issue - making it clear that a national inquiry is still off the table. Prime Minister Stephen Harper began defining his government's position on missing and murdered indigenous women some time ago while discussing the murder of 15-year-old Tina Fontaine. He dismissed the sociological aspects of these deaths and insisted his government views them as crimes, plain and simple - a position that has kept them in conflict with indigenous communities ever since. Why have Harper and his ministers stuck so tenaciously to the idea that these deaths and disappearances are crimes without social elements? Because it keeps things simple and takes a potential political liability and forces it to contribute to the government's tough-on-crime narrative. By pushing the discussion into a law-and-order setting it shifts the burden of responsibility from the federal government to local communities and law enforcement. At the same time, it strengthens their argument against a national inquiry." iPolitics

*** Hells ontariens et mafia montréalaise font équipe**
Les Hells Angels ontariens de la section Nomads et la mafia montréalaise ont formé une alliance pour combler le vide causé par l'incarcération d'une centaine de Hells au Québec depuis six ans, constatent les policiers. Selon nos sources, Gregory Wooley, chef du gang Syndicates, aurait joué un rôle clé dans ce partenariat d'affaires, ayant lui-même orchestré une alliance entre les gangs de rue Bleus et Rouges, à Montréal, depuis 2012. Wooley, un ex-membre des Rockers, le défunt club-école des Hells, a déjà compté parmi les hommes de confiance de Maurice «Mom» Boucher avant de devenir un allié du clan Rizzuto. Lui et le nouveau chef présumé des Hells, Salvatore Cazzetta, ont été vus aux funérailles du parrain Vito Rizzuto, mort en décembre 2013. Les policiers constatent présentement une «forte présence» au Québec des Hells Angels de la section Nomads de l'Ontario. Plusieurs de leurs membres sont originaires du Québec et certains y sont toujours établis. Journal de Québec, 5 (Journal de Montréal)

*** Online database of leaked Edward Snowden documents now available in Canada**
The first online database of classified documents leaked by former U.S. National Security Agency contractor Edward Snowden has been created in Canada. The Snowden Archive is a joint project between Canadian Journalists for Free Expression and the Politics of Surveillance Project at the Faculty of Information at the University of Toronto. It is the first time hundreds of leaked documents have been

indexed and made fully searchable online. It is the first time hundreds of leaked documents have been indexed and made fully searchable online. CJFE says the archive is a resource for journalists, researchers and concerned citizens to learn more about government surveillance practices. The database will be unveiled at Ryerson University in Toronto on today after a live video discussion with Snowden, followed by a panel discussion. Canadian Press (Whitehorse Daily Star, 10, Telegraph Journal, Times & Transcript)

* **Snowden warns of anti-terror law perils**
Free countries should not pass laws that limit liberties because they are afraid of terrorist threats, warned U.S. whistleblower Edward Snowden on Wednesday during a live web chat. In a sobering online talk sponsored by Canadian Journalists for Free Expression at Ryerson University, Snowden spoke briefly about Ottawa's controversial new anti-terror law, Bill C-51, and the erosion of public rights. The former National Security Agency employee said only Canadians can decide on whether C-51 is a good or bad bill, but "Canadian intelligence has one of the weakest oversight frameworks out of any western intelligence agency." In Canada, terrorism kills fewer people than lightning strikes and it is extraordinarily rare, Snowden said. "No matter what we do, no matter what laws we pass, we cannot throw away all of our rights, all of our liberties, all of our traditional freedoms because we are afraid of rare instances of criminal activity," he said. Toronto Star, A16, QMI Agency (Toronto Sun, Edmonton Sun, Winnipeg Sun, Calgary Sun, Ottawa Sun), Canadian Press (The Record A5, Ottawa Citizen, Hamilton Spectator, Chronicle Herald)

MINISTER / MINISTRE

Des canadiens sous surveillance
Le SCRS pouvait déjà mener des activités à l'étranger afin de contrer les menaces terroristes au pays, mais les nouvelles dispositions faciliteraient l'obtention de mandats pour mener de telles enquêtes. Le **ministre de la Sécurité publique, Steven Blaney**, a indiqué lundi, devant un comité sénatorial, que le projet de loi permettrait de suivre à la trace plus efficacement les Canadiens partis à l'étranger pour suivre un entraînement ou combattre aux côtés d'organisations terroristes. Selon un rapport fédéral publié l'an dernier, le gouvernement savait que 130 personnes ayant un lien avec le Canada se trouveraient à l'étranger pour soutenir une activité terroriste, et que 80 d'entre elles seraient depuis rentrées au pays. Même s'il l'avait déjà fait dans le passé, le directeur du SCRS, Michel Coulombe, a refusé lundi de mettre à jour ces chiffres, pour ne pas dévoiler d'informations sur le déploiement de ses agents. Il s'est contenté de dire que le nombre de Canadiens qui tentent de joindre les groupes terroristes à l'étranger augmente progressivement. «On ne parle pas de milliers», a-t-il simplement admis. Le **ministre Blaney** a abondé dans le même sens, indiquant qu'une telle divulgation exigerait que l'on détermine si ces personnes se trouvent à l'étranger ou s'ils sont au pays. Presse Canadienne (L'Acadie Nouvelle, 18)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

River-watch season underway

The threat of floodwaters has Dan Dionne up at night. In the wake of unparallelled St. John River levels in recent past, the chief administrative officer of Perth-Andover now receives an email alert from a gauge at the water's edge if there's a noticeable rise. "In the middle of the night, if you're wondering what the water levels is, it's easy to monitor," Dionne said. "I'm the one waking up to check it normally." It's river-watch season, and those that line the province's tributaries are back on edge. The Daily Gleaner, A1 (Telegraph-Journal, A1)

* **Long-term effects feared after CN derailment - Groups say it will take time to reveal environmental impact of crude oil spill**

It could take weeks or even months to understand the real environmental impact of the crude oil spill from a derailed CN train near the town of Gogama, Ont., on Saturday, activists say. "Everything goes somewhere ... The vast majority of what has already leaked or burned will never be recovered," said Keith Stewart of Greenpeace Canada. The crude oil will end up in the environment around Gogama, a tiny town about 100 kilometres south of Timmins, and "will affect that area for a long time to come," Stewart said. "Long after this initial spotlight fades away, we'll still see impacts in the local ecosystems." Some crude will end up in the soil, some in the water and the crude that burned "will deposit toxins in the area which will eventually get into the ecosystem," he added. Thirty-eight cars of a 94-car train derailed near Gogama at 2:42 a.m. on Saturday, triggering a massive blaze that burned furiously until it was extinguished Monday evening. Two cars plunged into the Matagami River. At least one ruptured and leaked crude into the water. The two rail cars were removed from the river on Monday evening. The train was carrying synthetic crude oil, an intermediate product produced when bitumen is upgraded to make it transportable. It is then shipped to a refinery where it is turned into a finished product. It's not yet known how much crude was spilled or how the train derailed, in part because it has been impossible for its investigators to get close to the actual site, a spokesperson for the Transportation Safety Board of Canada said. Toronto Star, A8; Le Devoir

* **Ottawa defends rail-safety efforts after another derailment in Ontario**

The federal government on Monday defended its efforts to boost rail safety in the wake of a fiery derailment in northern Ontario that has stoked concerns over the transportation of crude oil by train. Saturday's derailment of a CN train near Gogama was the second such incident near the community about 80 kilometres south of Timmins in less than a month, and the local member of provincial parliament said it left residents on edge. "For the people of Gogama, it was a very close one," said NDP MPP France Gelinas, who represents the Nickel Belt area. "They all said, 'What if it had been two kilometres this way, we wouldn't be there [anymore],' " she said. "This is a what-if that will be hard for a lot of people to forget and we need to have substantive changes so that people in Gogama and throughout the northeast can feel safe again." Federal Transportation Minister Lisa Raitt said the government has already made several changes to improve rail safety in the two years since the deadly derailment in Lac-MÃ©gantic, Que., including upgrading standards for the tanker cars involved in that incident. The government is also working to replace the Class 111 cars in the next few years, Raitt said during question period. "We are working with the United States on what a new system will be in terms of a new tank car standard," she said. Canadian Press (Times Colonist, B5; Daily Gleaner)

* **Transport ferroviaire - Un moratoire s'impose**

Quatre nouveaux déraillements impliquant des dizaines de wagons-citernes remplis de pétrole explosif se sont produits depuis moins d'un mois dans l'est du continent. Le temps est venu d'exiger un moratoire sur le transport de pétrole brut par rail dans les zones habitées du Canada. Au moment d'écrire ces lignes, lundi, le pétrole brûlait toujours à Galena, en Illinois, et à Gogama, dans le nord de l'Ontario. Dans ce dernier cas, le convoi du CN qui provenait d'Alberta se dirigeait vers Lévis, au Québec. C'est le quatrième incident du genre à survenir en un mois, dont deux dans la même région de Timmins, en Ontario. Les employés du CN étaient d'ailleurs toujours sur place, à Gogama, pour poursuivre les travaux de nettoyage rendus nécessaires par l'accident du 14 février. Selon les premières constatations, le train du CN ne transportait pas du pétrole de schiste de la formation de Bakken reconnu pour être très explosif, mais du pétrole conventionnel. Voilà qui rend cet accident encore plus inquiétant. On ne connaît pas la cause de chacun de ces déraillements, mais on ne peut que constater l'incapacité des autorités et des compagnies ferroviaires à empêcher qu'ils ne se reproduisent à un rythme alarmant. Dans tous les cas récents, les wagons éventrés sous le choc de l'impact étaient du modèle CPC-1232, que l'on disait plus

solide que les tristement célèbres DOT-111 impliqués dans la catastrophe de Lac-Mégantic. Le Devoir, A6; Financial Post (Vancouver Sun; Leader-Post; Calgary Herald)

*** Mégantic: Not the last such explosion**
An editorial states "When the federal government announced bulked-up rail-safety measures last fall, Transport Minister Lisa Raitt said, 'Canadians are never going to forget what happened in Lac-Mégantic.' The oil-fuelled fireball that claimed 47 lives in 2013 scarred our national consciousness, but Ms. Raitt's words would carry more heft if oil-ferrying trains didn't keep exploding on her watch. On Monday, firefighters wrestled with burning cars after a derailment near Gogama, Ont., about 600 kilometres north of Toronto. The rest of us are grappling with questions, such as: Weren't updated safety requirements for tanker cars and a stouter inspections regime supposed to make the booming oil-by-rail trade vastly safer for Canadian communities? They haven't, apparently. The weekend accident is the second major derailment in the Gogama area in three weeks. It adds to harrowing post-Mégantic conflagrations in Plaster Rock, N.B., and Gainford, Alta., and a slew of other calamities all over North America. Ms. Raitt said she's very concerned by the latest mishap; perhaps she'll heed the appeals from the Ontario government, among others, to move more boldly. The federal government can't be charged with inaction - Ms. Raitt and her department have worked diligently - but that doesn't mean there has been sufficient action." Globe and Mail, A10

*** Inondations - les mesures d'urgence en mode «attente»**
A l'approche du printemps, le gouvernement du Nouveau-Brunswick procédera sous peu au lancement de son programme annuel de surveillance du fleuve. Comme à l'habitude, le mouvement des glaces sera scruté à la loupe par les autorités provinciales qui évalueront les risques d'inondations à partir du 16 mars. «La date du 9 mars avait été évoquée pour procéder au lancement du programme de surveillance du fleuve, mais les températures froides ont fait en sorte de le reporter d'une semaine», a indiqué Paul Bradley, porte-parole de l'Organisation des mesures d'urgence du Nouveau-Brunswick. Difficile pour l'instant de prédire les impacts qu'auront eus les températures froides qui ont touché cet hiver le nord de la province et les importantes chutes de neige enregistrées dans les régions du sud de la province. L'Acadie Nouvelle, 13; Telegraph-Journal

*** Extra run-off not seen as major flood risk**
The Saskatchewan Water Security Agency is projecting above-normal spring run-off for central and east parts of the province, including Regina and Saskatoon. But that doesn't mean this area should expect to see any major flooding events from the run-off. "Even though it's above-normal, we're not saying it's high or extreme or anything like that," John Fahlman, associate executive director of hydrology and groundwater services, said Monday. "We're not expecting it to be as bad as the past few years. There is still a chance that we can get some pretty big rains. Again, this is just the snowmelt aspect of it." A forecast last month projected the spring run-off in the southcentral area ranging from Meadow Lake and Prince Albert to Weyburn as near-normal. But Fahlman explained the revised rating to above-normal is due to the amount of snow that fell in February. The recent snow survey also found more water in the snowpack than previously believed. Leader-Post, A5 (Star-Phoenix)

*** Officials mum on user-pay flood model**
Alberta is borrowing an Ohio conservancy district's engineering innovations to protect Calgary's flood vulnerable communities, but so far it has not adopted the organization's financing model that requires landowners who benefit from massive mitigation projects to bear most of the cost. As the province grapples with declining revenues, Finance Minister Robin Campbell has said new roads may be financed by tolls. But the minister's press secretary would not confirm Monday whether they are also considering a levy on the thousands of homeowners and businesses that would be protected by a planned $310-million Springbank off-stream storage project upstream of the city on the Elbow River. "Many revenue options have been considered and suggested," Kevin Zahara said. "Details on what has been decided in regards to (this project) will be provided when budget 2015 is tabled." In the aftermath of the 2013 floods, provincial officials and their consulting engineers visited the Miami Conservancy District where a series of dry dams and levees was constructed nearly a century ago by the people of the Dayton area in the wake of floods that caused the current equivalent of $2 billion in damages. Calgary Herald, A3

*** Study of aftershocks sheds light on temblor - Hydraulic fracturing suspected as cause of quake near Fox Creek**
University of Calgary researchers have determined they recorded four small aftershocks at the epicentre of a magnitude 4.4 earthquake near Fox Creek that is believed to have been triggered by hydraulic fracturing. The largest aftershock they measured was at a depth that would indicate the Jan. 22 earthquake was induced by human activity, U of C geophysicist David Eaton said Monday. Following the earthquake 33 kilometres west of Fox Creek, Eaton and two other researchers measured four aftershocks with estimated magnitudes ranging between 1.4 and 2.3 on the Richter scale. Such aftershocks are expected following a moderate earthquake, whether induced or naturally occurring, Eaton said Monday. Edmonton Journal, B2 (Calgary Herald)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Terror bill could target activists
A prominent human-rights group says the Conservative government's anti-terrorism bill could be used to target environmental activists and aboriginal protesters. In a brief made public Monday, Amnesty International Canada adds its voice to those who say the bill would go beyond genuine security threats to ensnare those who mount demonstrations that fall outside the strict letter of the law. The Conservatives brought in the bill - which would significantly expand the Canadian Security Intelligence Service's mandate - following the murders of two Canadian soldiers last October. Canadian Press (Cape Breton Post, A9/ Front, Times & Transcript, Telegraph-Journal); Le Devoir; * Toronto Star; * Presse Canadienne (La Voix de l'Est, L'Acadie Nouvelle)

Funding fears cited for CSIS watchdog
Without additional money, the watchdog for Canada's spy service questioned on Monday whether it would be able to sustain its current purview under looming legislation to expand and strengthen the reach of the Canadian Security Intelligence Service. "We would be seeing over time a smaller slice of their activities on a yearly basis," Michael Doucet, executive director of the Security Intelligence Review Committee (SIRC), testified before the Senate's national security committee. The panel is studying the government's proposed Bill C-44, which would amend the 31-year-old CSIS Act by confirming the Federal Court of Canada has jurisdiction to grant surveillance warrants to the agency that have effect outside Canada. That would clarify contradictory Federal Court rulings related to spying by CSIS on Canadians overseas suspected of terrorist activities. It also would give greater protection to CSIS informants. In addition to C-44, the government's contentious Bill C-51 is also moving through Parliament. It would, among other measures, give CSIS power to actively disrupt threats to national security, a significant expansion from its current chief mandate of producing security intelligence for government. Ottawa Citizen, A6

City targets radicalization
It'll be tough for Mayor Denis Coderre to prove that he isn't targeting Muslims with his announcement on Monday that the city will create a "radicalization prevention" centre, a race-relations expert and representatives of Muslim groups said. The city and the Montreal police have created a committee that will set up the centre, the mayor announced at a news conference at city hall with Montreal police chief Marc Parent and representatives of CEGEPs and public schools. The centre, which they called a first in North America, will aim to prevent violence and to develop expertise on the phenomenon of radicalization, notably among youth, Coderre and Parent said. The Gazette, A1; * La Presse (Le Quotidien); Toronto Star; Canadian Press (National Post)

Islamic group claims credit for hacking Bloc website
A group calling itself the United Islamic Cyber Force took credit for a cyber-attack on the Bloc Quebecois website and many other sites Monday. The Bloc's home page was replaced with a paragraph in a red font on a black background under the heading "United Islamic Cyber Force, Salami Ala Aqsha." The message describes an invasion of the Arabian Peninsula and Rome, among other things. "For now there is nothing confirming that it's the Bloc specifically that was targeted," said the Bloc's director of communications, Simon Charbonneau. He added that the Bloc didn't receive any threats that would suggest that the party's

staff members are at risk. The party's IT team replaced the black page with a "site under construction" message shortly after noon. Postmedia News (Ottawa Citizen, C1)

*** Tories stoking fear, prejudice against Muslims, says Trudeau**
Justin Trudeau is accusing the Harper government of deliberately stoking fear and prejudice against Muslim Canadians - employing the same kind of rhetoric that led to some of Canada's most shameful displays of racism in the past. The Liberal leader drew a parallel Monday between the current government's rhetoric about Muslims and other "dark episodes" in Canada's history: the internment of Ukrainian, Japanese and Italian Canadians during the two world wars, the turning away of boatloads of Jewish and Punjabi refugees and the imposition of residential schools for aboriginal children. Since two Canadian soldiers were murdered by men with radical Islamist sympathies last October, Trudeau said the government has been blurring the line between the genuine threat terrorism posed to national security and "simple prejudice." Canadian Press (The Record, A3, Hamilton Spectator, Times Colonist); The Globe and Mail

*** Tories getting bad rap with Muslims**
A senior Conservative senator says the heat her government is getting over its messaging around Islam isn't justified. But Sen. Marjory LeBreton says she does regret the fact it's creating a view among Muslim Canadians that they aren't welcome in the country. LeBreton was placed in the hot seat over the issue by Sheema Khan, one of many women who gathered today at an event to honour the three women running the election campaigns for the federal parties this year. Khan said encouraging her daughters to be involved in politics is difficult when they feel their religion is suspect and their presence not fully welcome. She asked LeBreton whether the government would consider changing its tone. Canadian Press (Cape Breton Post, A9, Times & Transcript); Winnipeg Free Press

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Man may be deported over alleged terror links
Federal immigration officials arrested a Pakistani man in the Toronto area on Monday and are attempting to deport him for alleged connections to terrorism, a government source confirmed. Jhanzab Malik was being held at a local detention centre while the Canada Border Services Agency took steps to have him declared inadmissible to Canada on terrorism-related grounds. His lawyer, Anser Farooq, confirmed Malik had contacted him following his arrest but he had no details. He said Malik had been questioned by the Canadian Security Intelligence Service in the past. He was expected to appear before the Immigration and Refugee Board, possibly on Wednesday, to determine whether he should remain in custody pending his inadmissibility hearing. The CBSA declined to comment. The arrest comes almost five months after another landed immigrant from Pakistan, Mohammed Aqeeq Ansari, was picked up in Toronto following an RCMP investigation called Project Seashell. A hearing to decide whether to deport Ansari concluded last week with Ansari insisting he was innocent and the CBSA claiming he had "long-standing involvement" in terror group Sipah-e Sahaba Pakistan. Postmedia (Ottawa Citizen C1/ Front, Gazette, Vancouver Sun, Windsor Star, Leader-Post, National Post, Star Phoenix,)

Local imam wanted in U.S. on sexual assault charges
A lawyer representing a Calgary imam facing outstanding criminal charges in the United States says there has been a "rush to judgment" against his client that is based on stale, years old warrants. Imam Abdi Hersy, 46, is wanted in connection to sexual assault allegations that surfaced in 2006 when he worked as a respiratory therapist at Woodwinds Health Campus in Woodbury, Minn. Hersy was accused of fondling the breasts of two female patients recovering at the hospital. He subsequently lost his licence and lost his job. Prosecutors in Washington County charged Hersy with six counts of criminal sexual conduct. Hersy claims he was unaware of the allegations until 2009, three years after he arrived in Canada, where he sought refugee status. Hersy claimed his life would be at risk in his home country of Somalia because of his minority status there. His claim was approved by the Refugee Board of Canada in 2008, a decision it tried to repeal five years later. Postmedia (Calgary Herald, A6)

Refugee settles long-running lawsuit against Ottawa

An Algerian refugee who was shipped to the United States one day after the 9/11 terrorist attacks has settled his long-standing lawsuit against the Canadian government. Benamar Benatta fought to be compensated for spending almost five years in U.S. custody in grim conditions and allegedly being beaten by guards. Benatta's lawyer, Paul Champ, says terms of the "mutually satisfactory" settlement are confidential. The arrangement appears to close a little-noted chapter in the story of the Sept. 11, 2001, attacks on New York and Washington. Benatta defected from the Algerian military while on training in the United States. In early September 2001, he made his way to the Canadian border at Fort Erie, Ont., where he told officials he intended to claim refugee status. Canadian Press (Times & Transcript), La Presse Canadienne (La Voix de l'Est 33), Globe and Mail

City cop faces new drug charge

A Windsor police officer previously accused by U.S. authorities of drug smuggling is facing a new drug trafficking charge - this time on the Canadian side of the border. Const. David Bshouty, 32, was arrested by the Windsor Police Service on Monday on a charge of trafficking a controlled substance. The arrest is the latest result of an ongoing internal investigation by WPS into Bshouty. At the time of the arrest on Monday, Bshouty was already on paid suspension stemming from a previous charge of possession of a controlled substance. Police haven't named the substance that Bshouty is now accused of trafficking. On April 12, 2014, Bshouty was arrested by U.S. Homeland Security for allegedly carrying crack cocaine as he attempted to cross the Ambassador Bridge and enter Detroit. U. S. authorities were acting on information provided by Windsor police. However, the stop at the border only turned up three grams of "questionable material" in Bshouty's vehicle. The U.S. charges against Bshouty were eventually dropped when it was determined that the material was, in fact, not cocaine. Postmedia (Windsor Star A2)

Un remboursement de la TPS proposé

Le nombre de touristes états-uniens au Canada continue de chuter, selon le Frontier Duty Free Association. Pour les encourager à remettre le cap au nord, l'organisme propose qu'on leur rembourse le 5 % de taxe sur les produits et services qu'ils se procurent. Depuis 2002, le Canada a vu le nombre de visiteurs provenant des États-Unis diminuer de 23,9 %, d'après les données du FDFA. L'Association calcule que le nombre d'excursionnistes d'un jour au pays est en baisse de 55,9 % et qu'il a reculé de 26 % pour ceux qui passent au moins une nuit au Canada. La force du dollar canadien ces dernières années est au coeur de la réticence de nos voisins du sud à venir visiter le Canada, estime le maire de Cowansville, Arthur Fauteux. Il a constaté lui-même que les Américains sont moins nombreux qu'avant. «On le voit. Ils venaient ici quand notre dollar était en bas de 90 ¢. Ils allaient au Canadian Tire, au Walmart. Ces magasins sont de bons indicateurs parce que les Américains les connaissent bien ; ils achètent des pneus et toutes sortes d'affaires. Mais on ne les voit plus tellement.» La Voix de l'Est, 4/ Front.

Temporary foreign workers cap will hurt B.C.

B.C. will be one of the hardest-hit provinces as a result of the Harper government's reforms to the controversial temporary foreign workers program, says the Canada West Foundation. But the loss of access to lowwage overseas workers will be partly offset for B.C. employers because returning workers from the Alberta oil and gas industry can help fill the void, the thinktank said Monday in a report. The release of the report, which lends weight to Premier Christy Clark's argument that the federal reforms are "tragically misdirected," coincided with the political fallout of a comment by Conservative MP John Williamson. The New Brunswick MP, a former media spokesman for Prime Minister Stephen Harper, apologized after telling a gathering of conservatives that it makes no sense for "whities" to be displaced 3 with "brown people" coming in under the foreign workers program. B.C. New Democratic Party MP Jinny Sims rose in the House of Commons to call the comment "disgusting." The report said B.C. and especially Alberta have been among the heaviest users of the program, mainly to feed the needs of the resource and service sectors, while Ontario and Quebec employers have been least likely to use the program. The report's conclusions are expected to be raised March 26 to 28 by the Canada West Foundation at the Metropolis conference in Vancouver. Postmedia (Vancouver Sun, A5)

Temporary Foreign Worker program changes will hit Sask. Hard

It is a report confirming exactly what the provincial government said last year when the federal government changed the temporary foreign worker program - the new rules won't work for Saskatchewan. Authored by Farahnaz Bandali of the Canada West Foundation, Work interrupted: How federal foreign worker rule changes hurt the West paints a gloomy picture, warning that "the impact of the changes could be severe." "Without enough workers, businesses could be forced to have shorter hours, service will suffer, workers will be stressed and businesses could shrink. Some may be forced out of business altogether," Bandali wrote. In a bitter twist of irony, it's Saskatchewan's exceptionally low unemployment rate - lowest in the country at 4.1 per cent in 2013 - which puts the Land of the Living Skies right in the firing line.During some "boom periods," Bandali told the Leader-Post Monday, temporary foreign workers "became a lifeline for some employers." Without them, "there's not a lot of alternative labour supply, not a lot of other options for employers," so a reduction in those workers will hurt the province. Postmedia (Leader-Post)

Welcome stance on BSE case

In May 2003, the first reported case of mad cow disease in an Alberta-born animal set in motion events that devastated Canada's beef industry. Canadian exports were banned almost immediately in 40 countries, including the U.S. The American response was most crippling, given that 70 per cent of Canada's exported beef lands there. Bovine spongiform encephalopathy (BSE) surfaced again in 2010, 2011 and last month, when a beef cow on a Spruce Grove farm tested positive. So far, the U.S. border has remained open to Canadian beef shipments, and rightly so, since no part of the infected cow reached either the human food chain or animal feed system. Over time, the U.S. government's reaction to outbreaks of BSE in Canada - the latest case is the 19th overall - has been tempered by common sense, research and belief in the industry safeguards that were instituted in the wake of the 2003 disaster. In 2007, Canada imposed new rules on cattle feed formulas to prohibit ingredients that may have transmitted BSE. The government also bolstered tracing mechanisms. Postmedia (Star Phoenix)

Get the state out of my smartphone

An editorial by the executive director of the Canadian Constitutional Foundation states... "While I was shuffling along in an airport security line last week, I had my phone out and was reading about the case of a Quebec man who refused to give his Blackberry password to border agents in Halifax. The traveller, 38-year-old Alain Philippon, was coming home from a trip to the Dominican Republic at the time. He has since been charged with hindering a customs official. And if he is found guilty of the offence, he could spend a year in jail and be fined $25,000. (...)I'm (reluctantly) willing to concede to border agents the ability to rifle through my underwear to make sure I haven't smuggled in an illegal substance, but I'm not willing to allow them the ability to check whether the last thing I Googled before approaching them was a strident libertarian manifesto or cute Tom Hiddleston photos. Or both. Nor do I think Section 8 of the Canadian Charter of Rights and Freedoms is ready to grant border agents that ability either. Section 8 states: "Everyone has the right to be secure against unreasonable search or seizure." When parsing what that means, courts have explained that Canadians have a reasonable expectation of privacy in information that tends to reveal intimate details of their lifestyles and personal choices". Postmedia (National Post)

MP slams colleague for racist comment

A veteran Conservative MP who spent years in outreach with cultural communities is accusing one of his colleagues of undoing the party's gains with "racebased comments." Deepak Obhrai, parliamentary secretary to the foreign affairs minister, lashed out at John Williamson on Twitter. Obhrai, an Indo-Canadian born in Tanzania, was once a key figure in the party's quest to make links with Canada's various cultural communities. "Very disturbed by Williamson's race-based comments," wrote Obhrai, a Calgaryarea MP. "Foolish statement damages all of us. Years of hard work down the drain." Canadian Press (Times Colonist)

*** Feds got the foreign-worker situation wrong**

An editorial by a professor of food distribution and policy at the university of Guelph states... "Rural Canada is expecting a massive exodus of foreign workers, which can potentially become a losing situation for everyone. As of April 1, temporary foreign workers who have been in Canada at least four

years will be forced to leave the country. Since Canadian agriculture employs more than 50,000 foreign workers to support farming and processing facilities across the country, losses to this labour force will be considerable and are really coming at the wrong time. For many commodities, current high prices are making market conditions favourable to more supply. So in essence, agriculture could face a severe, sudden labour shortage. ome groups are pushing for a moratorium and a reprieve. In the past, before rules changed in 2011, foreign workers could simply reapply to continue working in Canada for their employer. The new rule limits working-permit durations to four years. Workers now have to wait four years after their working permit expires to reapply. A number of workers are at risk of leaving Canada after working in the country for more than a decade. Some might suggest that the current situation stems from poor strategic planning. Perhaps, but human capital is a very thorny issue in the agrifood sector. It has always been challenging to attract and retain local talent in agriculture due to seasonality and working conditions. Some have been attracted to agriculture, but regrettably, it is more an exception than the norm." Times Colonist

*** Zeyha sentenced on possession charge**

A Grande Prairie man will serve 18 months of probation and pay a $1,000 fine following a joint submission sentence on a single charge of possessing a substance banned by the Controlled Drugs and Substances Act. The possession charge was in replacement of two CDSA charges originally laid: Importing a banned substance into Canada and possession of a banned substance for the purpose of trafficking. On July 23, 2014, Trenton William Zeyha was arrested by local RCMP in relation to a package containing Oxycodone pills, which were seized by the Canadian Border Services Agency at the Edmonton International Airport. On Monday morning, Grande Prairie Provincial court heard that Zeyha, who turns 40 this month, had fallen into a 'significant addiction issue' and the drugs were solely intended for his own use. The 275 pills were concealed in a package labelled as five 'cross-stitch patterns' and had originated in China. Zeyha was the package's intended recipient. Daily Herald Tribune

*** Stewart, B.C./Hyder, Alaska border closure puts security at risk, says border guard union**

The president of the union representing Canada's border guards says reducing the hours at the Stewart, B.C./Hyder, AK border is a hypocritical move for a federal government that says it places a priority on national security."The government right now is about to pass a bill, C-51, in regards of the concerns that the government has with the terrorists and the people who are going off-seas to get training, and meanwhile they're reducing the hours at the border," said Jean-Pierre Fortin, president of the customs and immigration union. He's been told the reduction in hours at the northwestern B.C. border crossing is one of several such moves being undertaken by the Canadian Border Services Agency (CBSA) in other parts of the country. "There are concerns we have that when you're closing customs or you're reducing the hours you're reducing the security that goes with that," he said. "It's not a matter of traffic, it's a matter of having a presence – defending the first line of defence of this country."Two weeks ago, it was announced that the border which connects the small communities of Hyder, AK and Stewart, B.C. would see its hours reduced beginning April 1 and would be blocked between midnight and 8 a.m. Terrace Standard

*** Toronto's North Koreans face deportation**

Just one North Korean requesting refugee status was granted asylum in Canada in 2014, according to statistics from the Immigration and Refugee Board of Canada. This figure follows a sharp decline over the past two years that has seen the number of North Koreans granted asylum drop from a high of 222 in 2012 to 21 in 2013. Canada has tightened its screening of North Korean refugee applications since it has come to light that most seeking asylum in Canada had first resettled in South Korea following their defection. South Korea not only offers defectors refuge, but claims citizenship over all North Koreans. NOW

*** Focus: Court chides practice of using affidavits by staff**

Refugee lawyers say they won't shy away from filing affidavits from their employees in legal proceedings despite a Federal Court judge's criticism of the practice as he rejected a bid by a failed refugee claimant to defer his deportation to Sri Lanka. Federal Court Justice Peter Annis made his comments in the case of Peter v. Canada (Public Safety and Emergency Preparedness), a judicial review of the Canada Border Services Agency's refusal to postpone Emilian Peter's removal from Canada following his failed refugee

claim. Peter fled his northern Sri Lankan home in 2010, leaving behind his wife and five children to seek asylum in North America. He arrived in Canada in April 2011 via the United States and made a claim for inland refugee protection. A year later, the refugee protection division of the Immigration and Refugee Board of Canada had rejected his claim and by August 2012, he had exhausted all of his appeals. Law Times

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Le Bloc ciblé par des pirates**
Un groupe de pirates islamique soutient s'être attaqué au site Internet du Bloc québécois en raison de la récente prise de position du parti contre le port d'un voile lors des cérémonies de citoyenneté. Le piratage a été revendiqué par un groupe appelé United Islamic Cyber Force, selon le message en anglais qui était visible sur la page d'accueil de la formation politique fédérale. Plusieurs sites hébergés par le même serveur informatique que le Bloc québécois ont été victimes de la même cyberattaque, hier matin. Mais le groupe de pirates, qui a précisé être basé en Albanie, assure que c'était bel et bien le parti qu'il avait dans sa mire. Presse canadienne (Le Droit, 17; La Voix de L'Est); La Presse (La Tribune); Le Devoir; Montreal Gazette (Windsor Star; National Post); Canadian Press (Times and Transcript)

*** CIA sought to hack Apple iPhones from earliest days: The Intercept**
CIA researchers have worked for nearly a decade to break the security protecting Apple phones and tablets, investigative news site The Intercept reported on Tuesday, citing documents obtained from NSA whistleblower Edward Snowden. The report cites top-secret U.S. documents that suggest U.S. government researchers had created a version of XCode, Apple's software application development tool, to create surveillance backdoors into programs distributed on Apple's App Store. It said the latest documents, which covered a period from 2006 to 2013, stop short of proving whether U.S. intelligence researchers had succeeded in breaking Apple's encryption coding, which secures user data and communications. Efforts to break into Apple products by government security researchers started as early as 2006, a year before Apple introduced its first iPhone and continued through the launch of the iPad in 2010 and beyond, The Intercept said. Reuters (Yahoo! News)

*** Hackers attack reporters**
Hackers who attacked a U.S. employee of Ethiopian Satellite Television in 2013 have recently launched a new round of attacks against the broadcaster, an Internet watchdog group said in a report published Monday that links the spyware to the Ethiopian government. Citizen Lab, which is based at the University of Toronto's Munk School of Global Affairs, says the hackers used upgraded espionage software to send out booby-trapped emails in November and December. The broadcaster's general manager, Neamin Zeleke _ one of those targeted by the malicious messages _ says it didn't take a genius to figure out the same actors were at work. "They didn't even bother to change the email address," he said. Associated Press (Cape Breton Post, A11)

*** 'ISIS' hack hits church website - North Douglas Pentecostal one of many targets in reported hoax**
The pastor of North Douglas Pentecostal Church in Saanich says he does not feel threatened after the church's website was hacked by purported supporters of the Islamic State terrorist organization. Rev. Rod Fair said an associate pastor discovered a message reading "Hacked by Islamic State (ISIS) We Are Everywhere" accompanied by an emoticon, Arabic script, music and a banner on top of the website's template. There was also a Facebook address and a flag. The hackers posted their banner over the church website template, so no matter what page visitors tried, the banner was at the top. Times Colonist, A3

LAW ENFORCEMENT / APPLICATION DE LA LOI

OPP union targeted in criminal investigation
Three senior Ontario Provincial Police union officials - one a former Liberal candidate - have stepped aside in the wake of an RCMP criminal probe. The dramatic move Monday followed a raid Friday by the

Mounties, who swooped into the OPP Association headquarters in Barrie with a search warrant. Sources close to the association told the Star that RCMP investigators are examining financial matters at the union. RCMP Const. Jean Juneau said the search warrant has been ordered sealed by an Ontario Superior Court judge. That means details of evidence sought by the Mounties cannot yet be made public. But Juneau emphasized "no charges are imminent" in an investigation that began only recently. He would not comment further on the warrant, saying officers were searching for "evidence that could help in our investigation. We'll see later on if charges are deemed necessary." Association president Jim Christie, vice-president Martin Bain, and chief administrative officer Karl Walsh "have taken voluntary leaves of absence," the union said in a statement. Walsh, who was the provincial Liberal candidate in Barrie during the 2011 election, has been placed on administrative leave by the OPPA's board of directors. "The RCMP is conducting a criminal investigation and believed that evidence to support its investigation could be found in the OPP Association Head Office as well as the offices of president Christie, vice president Bain and CAO Walsh," the OPPA said. Toronto Star, A1; Postmedia News (Ottawa Citizen, C1 Front)

Wallin Jetted Off For Dinner With Ex And You Paid For It, RCMP Says

The RCMP says Pamela Wallin committed fraud and breach of trust by billing the Senate for travel expenses related to her work on corporate boards, with court documents alleging she described an echocardiogram as networking and a meeting with an ex-lover as parliamentary business. According to the RCMP documents released by an Ottawa courthouse Monday, the ongoing police investigation into Wallin's travel expenses involves 150 "suspicious" travel expense claims filed over three years, including 24 trips to Toronto for board-related activities. The documents - filed by the RCMP to obtain more information about Wallin's expense claims - detail $27,493 worth of allegedly fraudulent expense claims the suspended Conservative senator from Saskatchewan made for travel related to her former role as a director on the boards of Porter Airlines Inc. and Gluskin Sheff + Associates Inc. Wallin, who has repaid $154,191 in expense claims, including interest, has not been charged and none of these allegations has been proven in court. Her lawyer said Monday any expenses claimed for travel related to her board activities were done erroneously. RCMP Cpl. Rudy Exantus alleges in the documents that when confronted about these travel expenses - which would have been covered by the corporate boards as part of her compensation package - Wallin "misrepresented the nature of these trips to Toronto" during an external audit conducted by Deloitte, at times even "fabricating meetings which the RCMP was able to determine (through interviews) to have never taken place." Toronto Star, A1; Canadian Press (Waterloo Record, A1, National Post, A1, Leader-Post, A1, Red Deer Advocate, The Guardian, Times Colonist); Postmedia News (Ottawa Citizen, A1, Montreal Gazette , Vancouver Sun, Edmonton Journal, Windsor Star, The Province, Calgary Herald, Leader-Post); Presse Canadienne (L'Acadie Nouvelle, La Voix de L'Est); * Le Devoir; * Globe and Mail, A3

Petition aims to save A'burg police

Amherstburg council received a petition Monday bearing the signatures of more than 1,000 residents who want to keep the town's local police force. Lifelong resident Darlene Meloche, accompanied by her husband Kevin Meloche, appeared before council Monday to formally deliver the list of those opposing the idea of a regional force developed in conjunction with Windsor and LaSalle. "It's not that we hate the other police departments, it's not that at all," Darlene Meloche said. "We're just trying to keep stuff local. We're just trying to run our own little town." The petition had 1,010 signatures when it was originally submitted for consideration last week. Since then, Darlene said the total grew by another 155 signatures. "I'm going right through to the fall," she said of a campaign to save the force of 31 officers. "If we can get a thousand signatures in the worst February ever, imagine how many we can get when the weather turns nice?" Windsor Star

Answers to Church Avenue explosion could take months, RCMP say

Despite having happened a couple of weeks ago, the full details of an explosion and fire that sent two to hospital and left a family of four without a home remains a mystery. The explosion at 123 Church Ave., in Sussex happened late in the night of Friday, Feb. 20. RCMP, with the help of RCMP clandestine lab experts, were investigating the possibility of the explosion being linked to the production of illegal drugs, Sussex RCMP Sgt. Dale Morgan said. "We have to wait for results from our lab before we decide what charges will be laid. It could take a couple of months," Morgan said. Police were investigating reports of suspicious activity near the apartment building immediately after the explosion. The family that lived in the

apartment beside the one where the explosion happened has been given emergency lodging, food, clothing and other items from Canadian Red Cross. Telegraph-Journal, B5

Jogger attacked in park was sexually assaulted
The woman who was attacked while jogging near Glen Lake Park last week was sexually assaulted, say West Shore RCMP. Police continue to look for the attacker. "As the investigation progressed, evidence suggested a sexual assault took place," said West Shore RCMP spokesman Const. Alex Berube. The 23-year-old woman was jogging on a trail near Shoreview Drive on March 3 around 7 p.m. when a man asked her for the time. The woman was knocked unconscious and robbed of her cellphone and money, police said. When she regained consciousness, she ran to a home to call 911. West Shore RCMP have not said why there was a delay in confirming that the woman was sexually assaulted. She is being assisted by victims' services. West Shore RCMP major crime detectives and Island district RCMP forensic identification officers continue to investigate. Times Colonist, A3

RCMP crisis teams assist with P.E.I. gun incident
RCMP emergency response teams, a crisis negotiation team, and police dog services from New Brunswick aided its counterparts on P.E.I. for a gun scare incident early Saturday morning. East Prince RCMP were called to a firearms complaint shortly before 1 a.m. in a residence on Route 119 Fernwood Road in Fernwood, according to a police news release. As a result of the initial response, the teams from the province, along with an ERT unit on P.E.I., were called into assist East Prince RCMP with the investigation. The 23-year-old male suspect was arrested around 9:30 a.m. without incident and remains in RCMP custody. Sgt. Leanne Butler, media relations officer for the P.E.I. RCMP, said charges will be laid within 24 hours of the arrest, so there will be an update on the case tomorrow. "The ERT have completed their tasks and they are no longer here," she said on Saturday afternoon. "The East Prince detachment are continuing the investigation." Butler said the New Brunswick teams often supplement the P.E.I. units in such emergency calls. There were no injuries stemming from the incident, and Butler said she cannot say whether there were others in the residence at the time of the standoff. Times & Transcript, A10)

Show us entire video
An editorial states, "Canadians should have seen the video made by Michael Zehaf-Bibeau months ago. Even now, astoundingly, the RCMP won't show us the whole thing. Commissioner Bob Paulson had better have a sound investigative or ethical reason for censoring the video, because Canadians have been treated like children long enough. Paulson said 18 seconds had been edited out, for "operational" reasons he would not disclose. Presumably, if the reasons truly are "operational," we'll be able to see the edited parts eventually. In the video, Zehaf-Bibeau says that his actions are "in retaliation for Afghanistan and because Harper wants to send his troops to Iraq." He includes himself among the "mujahedeen of this world." He rambles about Canadian society, although he was born and raised in this country: "It's a disgrace you guys have forgotten God and have you let (sic) every indecency and things running your land. We don't, we don't go for this." In other words, vague Islamist boilerplate. The long wait, the dramatic buildup and the mysterious edits imbued this video with political significance it would not have had if the RCMP had simply shown it to Canadians in the days after the attack. This is convenient for the government, which uses the Oct. 22 attack as a justification for its terrorism legislation..." Postmedia News (Leader-Post, A6)

The erosion of our right to protest
An editorial states, "It is one thing to disagree with one's government. It is another to fear it. Here, in the world's most polite nation, we aren't used to looking over our shoulder at government. The history of the public's relationship with our federal governments has long been characterized by the usual ire we reserve for bureaucracy. We have always trusted it to do the wrong thing. But fear? That's something new. Maybe in B.C. we've had more reason to feel that unease. The demonizing of opponents to its pipeline plans, the use of its ministries to chill the campaigns of environmentalists - we've seen the worst of the Conservatives' heavy-handedness. But more troubling is the government's erosion of the boundary between protest and terrorism... Maybe, but maybe not. Critical infrastructure has been on the mind of the RCMP, too - most vividly in the RCMP memo Critical Infrastructure Intelligence Assessment: Criminal Threats to the Canadian Petroleum Industry. The document was dated Jan. 24, 2014. Obtained by

Greenpeace Canada and leaked to the Quebec newspaper La Presse in mid-February, the RCMP paper was "in support of the Government of Canada's strategy to ensure critical infrastructure." It all but predicted armed insurrection against Big Oil. (Sorry, my mistake. It did.) Some key passages: "There is a growing, highly organized and well-financed, anti-Canadian petroleum movement, that consists of peaceful activists, militants and violent extremists, who are opposed to society's reliance on fossil fuels." "Research and analysis done in support of ongoing RCMP criminal investigations shows those involved in the anti-Canadian petroleum movement have an interest in drawing public attention to, and in building recognition of, the perceived (italics mine) environmental threat from the continued use of fossil fuels."... " Vancouver Sun

Denial won't make the T-word go away
An editorial states, "Some people are allergic to the T-word. After a lone gunman stormed Parliament Hill last fall, killing a soldier at the National War Memorial, they said it was not possible to conclude that this was terrorism. More likely, the guy just had mental problems. "I think that we're not in the presence of a terrorist act in the sense that we would understand it," said NDP Leader Thomas Mulcair. "I don't think we have enough evidence to use that word." In the Vancouver Sun, Ian Mulgrew argued that Michael ZehafBibeau was no terrorist. He was a victim. "The vast amount of tax money devoted to his petty crimes would have been far better spent providing him with appropriate psychiatric and social care," he wrote. As for the two people who plotted to bomb the B.C. Legislature, "They, too, seem more sad sack than Satanic." Now we know better. Mr. Zehaf-Bibeau's self-made martyrdom video, released by the RCMP last week, is chillingly clear about his motives. "This is in retaliation for Afghanistan and because Harper wants to send his troops to Iraq," he said... Maybe so, but they are missing an important point. The moose does not want to become a martyr for the caliphate. A disturbing number of young Westerners do. The number of extremists is growing across Canada, according to RCMP Commissioner Bob Paulson. So far, we've done a pretty good job of catching the stupid ones. I only hope we catch the smart ones, too. We shouldn't be spooked by terror threats. But we shouldn't be in denial that they're real." Globe and Mail, A11

* **Supt. Paul Cook named Calgary police chief until Hanson's replacement hired**
Paul Cook, a superintendent and 25-year veteran of Calgary Police Service, will serve as interim chief once Rick Hanson resigns on Friday. The fact the Calgary police commission had to select the interim chief from the superintendent ranks - the third-highest tier of command - signals that all three deputy chiefs will vie to be Hanson's permanent replacement. Cook, who used to work with the police canine unit, currently serves as executive officer to Hanson. As interim boss, he'll offer continuity while the commission and a headhunting firm conduct an international search for a new chief, said Coun. Diane Colley-Urquhart, a longtime police commissioner. The police commission will select the next chief. Council only rubber-stamps the decision, as it did with the oversight body's choice of an interim department head. "He knows how the executive suite works, he is connected to the members, and he is an exceptionally accomplished senior officer and respected leader," chairman Rodney Fong said about Cook, in a statement. Calgary Herald

* **Digby awaits RCMP review of policing levels**
The town of Digby is waiting for an RCMP review of its policing levels. "It's just part of an overall review the town is looking at," Mayor Ben Cleveland said. "We're looking at all of our services that we provide to taxpayers to see whether or not we're getting fair bang for our buck." Cleveland said he thinks the community is happy with policing levels in the town, and council doesn't have any issues either. "We've had a contract with the RCMP for about 30 years now, and we're certainly satisfied with that. But dollars are tight, so we'll look at it, and if staffing levels need to stay the same, that's great. If we can offer good service at another level, then we'll look at it." Staff Sgt. Rocky Calhoun of Digby District RCMP said the issue of adequate staffing does come up from municipal councils, and he's fine with the review taking place. "Then we can move forward from there." Calhoun said there are 12 officers besides him working out the Digby office, which covers the town and Municipality of the District of Digby. The municipality has also requested the review, as has the Municipality of the District of Clare, which is partly in Digby County but policed by Meteghan RCMP. Chronicle Herald, A8

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Long line of support for Khadr's bail bid**

Professors, doctors, businessmen and even a former senior member of the U.S. military have put their names - and reputations - on the line to support the bail application of a man the Canadian government and other detractors have branded a dangerous jihadi terrorist. Foremost among those backing Omar Khadr are his longtime lawyer Dennis Edney and his wife Patricia, who have offered to take him into their home if he wins bail. "I just think he's an extraordinary young man," Patricia Edney, a manager with Alberta Health Services, said in an interview from Edmonton. "We see him as more than a client: We see him as somebody who's been abandoned by his government and suffered greatly for it." Edney, who has met the Toronto-born Khadr in prison, says she finds him gentle, articulate and gracious. Khadr's application for bail - to be heard over two days later this month by Court of Queen's Bench - aims to get him out of Bowden Institution in Innisfail while he appeals his conviction on five war-crimes charges by a U.S. military commission for incidents that occurred in Afghanistan when he was 15 years old. He pleaded guilty in 2010 to murder in violation of the law of war in the death of an American special forces soldier, attempted murder, conspiracy, spying and providing material support to terrorism as part of a deal to be repatriated to Canada from Guantanamo Bay. Despite the backing of numerous legal experts and even rulings from U.S. courts, the commission appeal court has so far put his case on hold, raising the possibility that Khadr, 28, won't get a hearing before his eight-year sentence runs out - in October 2018. Canadian Press (Edmonton Journal, A8, Waterloo Region Record, Whitehorse Daily Star, Globe and Mail, Le Devoir)

Inmate gets 7 years

An inmate at Kent Institution in Agassiz has been sentenced to an additional seven years for slashing a female corrections officer across the face and neck. Kevin Beaulieu pleaded guilty last month to aggravated assault for the unprovoked attack in June 2012. Court heard that Beaulieu walked up to Charmaine Weiss, asked her to explain something and, when she looked down, used a razor blade to slash her across the face. Weiss was transported to hospital where she underwent a three-hour surgery. B.C. Supreme Court Judge Murray Block sentenced Beaulieu, who is already serving a 7½-year term, to an additional seven years. Canadian Press (The Province, A4, Times Colonist, Vancouver Sun, 24Hrs Vancouver)

Litany of disgrace

A letter to the editor states, “It was obvious long ago things were terribly, desperately wrong with Canada's prisons, specifically in regard to the use of solitary confinement ('We Can Only Do So Much As An Institution' - March 6). But this story about what happened to Edward Snowshoe adds to the litany of disgrace. In addition to the long list of failures due to bureaucratic bungling, laziness and sheer ignorance, the fact a health-care professional should have to conduct an assessment through a "food slot" is as grotesque today as something from the Middle Ages. And that a parole officer should have to be concerned about being "perceived as a con lover" by the guards shows the tail is wagging the dog in regard to prison management. Guards are employees and required to follow the orders of management, like all other employees. Their feelings about their job should not come between them and their duties.” Globe and Mail, A10

Accused killer vouched for himself

The voice on the phone is hesitant but straining for helpfulness, just wants to help cops out. That "Mark" fellow, the one who's on the front page of Toronto newspapers, charged with four murders? "A good friend of mine," the caller tells the Crime Stoppers hotline tips-taker. "I know that that person did not do those murders. That guy they arrested for those murders is not the guy that did the murders." Indeed, the man continues, "I heard through the grapevine who did those murders, right?" There were two shooters, one with the nickname Slinky and the other known as Reds. Not this "Mark" dude at all. Cops got it all wrong. "He's not that type of guy who do something like that ... 'cause he's a really, really nice guy. Like I know it's not him, almost put my life on it that it's not him." The suspect charged by police with four counts of first-degree murder was Mark Moore. And the guy on the line is ... none other than Mark Moore, giving himself an exculpatory character reference. That Oct. 21, 2011, call was made from the phone range at the Don Jail, captured on a police intercept and played for the jury Monday at Moore's trial for first-degree

murder times four. Even the defendant in the dock grinned when the audiotape started unspooling in court. Oops. The caller had identified himself as Christopher Parker. Toronto Star, A2; * Postmedia News (Vancouver Sun, National Post, Edmonton Journal, Windsor Star, Montreal Gazette, StarPhoenix, Leader-Post, Calgary Herald, Ottawa Citizen), * CBC News

*** Gladue report sought for violent man**

The defence lawyer for a man awaiting sentencing on two significant assaults is looking into whether a "Gladue" report might be a possibility. Richard Daniel Wolfe pleaded guilty on Monday at Regina Court of Queen's Bench to sexual assault and assault with a weapon in relation to an incident from April 6, 2014, in Fort Qu'Appelle. After pleas were entered and brief facts heard, defence lawyer Kim Stinson told Justice Lian Schwann he intends to ask that a Gladue report ordered that would examineelements of Wolfe's First Nations background that might have helped contribute to his offending. While Gladue factors have been canvassed in the past as part of pre-sentence reports, stand-alone Gladue reports are relatively new for offenders in this province. Because of that, there was uncertainty on Monday as to how to go about ordering the report, which is expected to take at least a couple of months to prepare. The case was set over to March 26 so Stinson can look further into the matter. A date for sentencing has yet to be determined. At 39 years of age, Wolfe is no stranger to the courts, nor to violence. One of the founders of the Indian Posse street gang (along with his brother Daniel Richard Wolfe, who was killed in prison three years ago), Wolfe, in 1996, received close to two decades in prison for attempted murder, robbery and a weapons offence from Winnipeg. While in prison on those charges, Wolfe added to his record with convictions for assault causing bodily harm and disguise with intent, resulting in a further two-year term. It was while Wolfe was out on statutory release that he committed the latest offences, which took place early in the morning of April 6. Court heard that a woman had been drinking at a Fort Qu'Appelle house with a number of people, including Wolfe, and had eventually gone to the bedroom to sleep. Leader-Post, A4

*** Sex offender agrees to conditions prior to release**

Convicted sex offender Brian Keith Solberg told the court he welcomes the range of strict conditions placed on him as he prepares to return to the community this week. "I agree to them (the conditions) very much ...," the 64-year-old told Regina Provincial Court Judge Bruce Henning on Monday. "It gives me some good structure and it will help me behave myself." Solberg is considered a high risk to reoffend, leading the Crown to apply for a two-year recognizance that imposes hefty conditions on his freedom once his most recent sentence comes to an end on Wednesday. (...)The sentence that is expiring is a two-year term imposed in March 2013 after Solberg pleaded guilty to breaching his recognizance - one similar to the one he is about to be released on - by driving through an area of Regina known to be frequented by sex-trade workers. Solberg asked for and received the maximum two years for that offence, stating he wanted to go to the federal penitentiary to take cognitive and sex offender programming. Solberg's criminal history includes a number of sex offences, the most recent earning him a 10-year sentence for a brutal attack on a woman in British Columbia. That sentence ended in 2004 and Solberg has been on various forms of release conditions since then. While Solberg hasn't been charged with further sex offences since his release from prison on the B.C. conviction, he has landed back in custody a number of times for breaching court-ordered conditions. Leader-Post, A4

*** Lifers law a new kind of extremism**

An editorial states, “Prime Minister Stephen Harper is selling his proposed "life means life" law, the details of which are to be made public this week, on the fear ticket - insisting he is correcting flaws in the Criminal Code that will spring those who commit heinous crimes from prison early, where they can walk unchecked on the streets and threaten the safety of ordinary Canadians. Independent courts give any Canadian accused or convicted of crime faith they will be treated impartially under the law. Mr. Harper's proposed law would overturn that cornerstone of the justice system. The only hope that lifers would have of getting out of prison is by an appeal to the federal cabinet. That's a hope so faint as to be cruel. Contrary to some belief, when a Canadian gets life, they are never released from their sentence. If released from prison after 25 years (two-thirds of those on a life sentence are behind bars), the individual is on parole for the rest of their life. Slipping up on the terms of release or the commission of another crime lands them behind bars again. The rate of reoffending is very low for the one-third of first-degree murderers released to the community, notes Howard Sapers, Canada's correctional investigator.” Winnipeg Free Press, A6

*** Harper aims to bait Supreme Court**
An opinion piece states, "Between an imperious federal government and a runaway Supreme Court, we are headed for a legal and constitutional imbroglio. The Harper government, it is widely observed, has taken with increasing frequency, if not glee, to stuffing the bills it presents in Parliament with measures that are in self-evident violation of the constitution. Not only is the government making no apparent effort to "charter-proof" legislation, that is by seeking the advice of Justice department lawyers on its constitutionality in advance of its introduction, as it is required by law to do, it seems if anything to be taking advice on how to offend it. It is impossible to read the several dubious provisions of Bill C-51, the Conservatives' anti-terrorism legislation - allowing the police to detain people on suspicion an act of terrorism "may" be about to occur; permitting intelligence officers to break the law, bizarrely, with the permission of a judge; banning the promotion of terrorism "in general" - in anything but this light. Still more blatant is the bill, still to be introduced but already popularly known as the Throw Away the Key Law, requiring those convicted of certain crimes to be jailed until they are dead, without chance of parole. The inclusion of a right to appeal for clemency to the Minister of Public Safety after 35 years, supposedly in response to "legitimate constitutional concerns," must be regarded as something of a flip of the finger in the direction of the Supreme Court. How they must have laughed in the Prime Minister's Office as they drafted it. But if the government has seemed to go out of its way of late to insert rights violations in legislation, the court has seemed equally determined, in its recent decisions, to find violations of rights that aren't there. The issue, as I've written before, isn't that the court has been overturning laws with greater frequency, or to more radical effect. If the legislation under challenge plainly contradicts the constitution, that is its job - the job Parliament assigned it to do. Rather, it is the shoddy reasoning, the slapdash approach to precedent, the curiously selective research, that has many legal scholars, not necessarily given to court-bashing, raising the alarm." Postmedia News (Vancouver Sun, B7, Edmonton Journal, Windsor Star, StarPhoenix, Montreal Gazette, Leader-Post, Calgary Herald, Ottawa Citizen)

*** Good reasons for life sentences**
A letter to the editor states, "Re: Difficult to see what is accomplished by 'life', March 5. Columnist Andrew Coyne seems to have difficulty seeing what is accomplished by keeping murderers, rapists and terrorists in jail for life (until they die). When the Liberals abolished the death penalty, 72 per cent of Canadians were opposed to eliminating it. The Liberals assured Canadians that these people would spend the rest of their lives in prison. What good does it do to keep people in jail for real life? There are several good reasons: They will not get the chance to reoffend; people who have lost a loved one will get a better measure of "justice" (call it revenge if you will); and criminals will reconsider doing the crime if they really have to do the time. Some penalties given out now are a joke." Ottawa Citizen, C3

*** Open the prison door on entry and on death**
A letter to the editor states, "Kudos to Harper for life-means-life law (March 7) In defence of Harper's life-means-life law, I do not feel that the writer went far enough with his opinion. At one time Canada's laws upheld the death penalty for capital crimes such as murder, treason, etc., then along came Liberal prime ministers who changed it all. The new law abolished the death penalty except for the killing of police or corrections officers who were murdered in performance of their duties, and no one has been executed in Canada since the change. How many law enforcement officers have been murdered in the line of duty, not to mention other citizens, particularly children and the elderly?" Hamilton Spectator, A12

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Judge doesn't buy tale of biker's bounty
The federal government has won a major legal battle against the former president of the Manitoba Hells Angels over property seized under proceeds-of-crime legislation. Court of Queen's Bench Justice Rick Saull ruled Monday five items were legally taken from Dale Sweeney following his 2012 arrest in Winnipeg. They include a Harley-Davidson motorcycle, a Corvette, a Silverado, a boat and a trailer. One of Sweeney's friends had stepped forward and claimed he was the rightful owner of that property and should have it returned immediately. He filed a motion stating he purchased the items, with cash, without

any influence from Sweeney. "That simply doesn't hold any water," Saull said Monday. Several days of trial were held, including evidence from the man and investigating officers, along with an examination of financial records. Winnipeg Free Press

*** Men are victims, too: CAFE group**

Calling the Ontario government's campaign against sexual violence "sexist," a men's issues group unveiled a new billboard in downtown Toronto Monday in an attempt to draw attention to male victims of domestic abuse. "HALF of domestic violence victims are men," reads the billboard, paid for by the Canadian Association for Equality (CAFE). "NO domestic violence shelters are dedicated to us." The billboard comes after Ontario Premier Kathleen Wynne released a three-year, $41-million plan to combat sexual violence last week. The campaign, spurred in part by the high-profile sex assault allegations against Jian Ghomeshi, includes a video ad with staggering scenes of women being sexually assaulted and harassed. In a news release Monday, CAFE accused Premier Wynne of forgetting "half the victims of violence." "Premier Kathleen Wynne's violence against women initiative reinforces sexist stereotypes that ignore violence against men, gays and lesbians, and endanger children with abusive mothers," the statement reads. But declaring that men make up half of domestic violence victims risks oversimplifying a complex set of statistics, as one women's advocate noted. "If service providers were finding that there was such a need for men's shelters, there would be men's shelters," said Penny Krowitz, executive director of Act to End Violence Against Women. "If we had enough men coming forward saying, 'I need shelter from this abusive woman' or 'I need shelter from this situation,' do you not think that we would have provided those services to men?" Statistics CanadaA graph from a 2014 Centre for Justice Statistics report showing the victims of police reported intimate partner violence in Canada in 2013 (by gender and age). In backing up its claim, CAFE cites a 2009 Statistics Canada survey that found an estimated 601,000 Canadian women and 585,000 men experienced spousal violence. That study, however, also notes that women are twice as likely to be physically injured during spousal abuse than men; and almost seven times as likely to fear for their lives. National Post, A3

*** Indigenous men dealing with violence want more resources in Quebec**

Martin Hervieux, an Innu man from Pessamit, Quebec, wishes resources would have had existed for his father decades ago when his violent behaviour dominated their family life. "I would have liked it if a house for men had been accessible to my father when I was young. He was beating my mom," said Hervieux, 59. "Also, I could have used help later in my life." Hervieux is now part of the Napeuat (men's) Committee and is among a small but growing number of men involved in efforts to address family violence in Quebec's aboriginal communities. When the Napeuat Committee decided three years ago it was time to build an indigenous men's shelter, to provide a haven and support for violent men, they turned to the Women's Shelter Network for guidance. (...)But Quebec has the dubious distinction of lagging far behind other provinces and territories, in terms of providing services to aboriginal men; this, according to criminologist and professor Renée Brassard from Laval University. "We are in a punitive system," she says, "no crime, no services for men." Brassard will publish a new study in spring 2015. She and her research team met with several First Nations and Inuit men of Quebec in prison. CBC News

*** Men vital to anti-violence awareness, intervention**

The Regina Sexual Assault Centre wants to partner with local sports teams to increase awareness about violence against women, and it's hoping the Saskatchewan Roughriders will get on board. At the centre's 40th anniversary breakfast on Monday, attendees learned about the Be More Than a Bystander campaign. A partnership between Ending Violence Association of B.C. and the B.C. Lions, it has players use their public profile to raise awareness about violence against women and encourage other men to speak out. "I think it would be absolutely awesome to bring that here," said Debbie House, the sexual assault centre's administrator. She said the person-power needed to get it up and running, though, would be "challenging" for the organization and, "would be much easier if we had the Riders on board and we hope that that can happen." The B.C. campaign involves public service announcements featuring Lions players, a provincewide school education program delivered by players, a training program for amateur football coaches, and a film. "What we're trying to do is make it cool to respect women and girls," said Tracy Porteous, executive director of the Ending Violence Association of B.C. While she said that public awareness of violence against women has increased, "what's been missing until recently is the

interventions by men." Jamie Taras, director of community relations with the Lions, said, "It's tremendous to me how the kids have embraced this topic." Leader-Post, A3

*** Districts say bullying stats show greater awareness**

School superintendents say greater awareness and the fact that kids are more willing to blow the whistle on bullies are among the reasons for the high numbers of bullying cases revealed in newly released statistics. Officials in New Brunswick school districts reacted on Monday to concerns raised by an anti-bullying organization that has released numbers indicating that kids tormenting kids remains a significant problem in many of the province's schools. The statistics for the last school year obtained by Bullying Canada Inc. through a right to information request show that hundreds of cases of taunting, intimidation, cyberbullying and physical bullying were documented in the school districts. One district, Anglophone West, had 904 reported cases of bullying in the 2013-14 school year and just under 180 suspensions. The Anglophone South School District had 704 cases and 123 suspensions. David McTimoney, superintendent of Anglophone West, said the numbers released by Bullying Canada do not paint an accurate picture of what is happening in the province's schools. He said there are other surveys and reports that make it clear most students feel safe in the province's school system. Times & Transcript, B1 (Daily Gleaner, Telegraph-Journal)

*** Parents need help to address bullying**

An editorial states, "Depending on your point of view, the statistics are either encouraging or exasperating. Either way, the bullying numbers from schools around the province are enough to make a parent cringe. In the Anglophone West School District, for example, there were 904 reported cases of bullying in 2013-14, leading to 179 suspensions. What the suspensions number adds up to over the course of an academic year is, on average, one student being suspended every day the schools are open. A single elementary school in Perth Andover had 212 bullying incidents reported, well more than one a day on average. A middle school in the Fredericton area had 103 bullying reports. Our neighbours in the Anglophone South School District didn't have much to brag about with 704 reports and 123 suspensions. How students fared in the Anglophone East School District is anyone's guess. District Supt. Gregg Ingersoll says it doesn't keep a record of bullying statistics, a strange choice given the Education Act stipulates principals are required to report all bullying incidents to their district's superintendent." Daily Gleaner, A6

*** Parsons' father speaks at UN about cyberbullying**

The father of Rehtaeh Parsons says he delivered a statement to the United Nations on Monday, telling the commission on the status of women how his daughter's death after a suicide attempt in 2013 was directly related to cyberbullying. Glen Canning confirmed in an email that he delivered the statement during a panel discussion entitled Violence in the Digital Age. Parsons' family says the girl was 15 years old when she was sexually assaulted in November 2011 and bullied for months after a digital photo of the alleged assault was passed around her school in Cole Harbour. In his prepared statement, which appears on his website, Canning says he and the girl's mother have been advocating for victims of sexual assault and cybercrime, roles that have led to the realization that their daughter's case is far from unique. The statement says that for many women and teenagers suffering from online abuse, reporting such incidents can be heartbreaking and the results are often futile. Canadian Press (Chronicle-Herald, A6, Cape Breton Post, Globe and Mail, Brandon Sun, Western Star, Truro Daily)

*** Plan to boost police brass slammed**

A councillor is questioning a shuffle of Halifax Regional Police top brass that will see the force's senior ranks swell. Under a reorganization in the works, the municipality's police force is set to grow from nine managers - a chief of police, deputy chief and seven superintendents - to 13 - a chief, deputy chief, three superintendents and eights inspectors. Although that's an increase of four positions, only two are new, while two are vacancies set to be filled. But Coun. Steve Adams (Spryfield-Sambro Loop-Prospect Road) said Monday that any wiggle room in the budget should go toward fighting cybercrime, not hiring more managers. "In this day and age, I can't justify more management positions," said Adams, who is also on the Halifax Board of Police Commissioners. Chronicle-Herald, A6

Le sergent Doiron «avait le coeur à la bonne place»
Combattre le terrorisme était un objectif de longue date pour le sergent Andrew Joseph Doiron. Un de ses anciens enseignants à l'école secondaire Mathieu-Martin de Dieppe se souvient de lui comme d'un «gars avec le coeur à la bonne place». «On se reverra dans quelques mois», voilà les derniers mots que le sergent Doiron a dit à Bernard Melanson, la journée même où il s'est envolé pour l'Irak. Enseignant à l'école secondaire Mathieu-Martin depuis plus de 23 ans, il a vu passer beaucoup d'élèves dans sa classe de physique. M. Melanson se souvient particulièrement du passage d'Andrew Doiron. L'Acadie Nouvelle, 3/Front

Iraq mission extension likely
The deployment of more Special Forces advisers to Iraq is being considered as the federal government weighs its options to continue Canada's contribution to the Iraq war. Military officers say they fully expect the government to extend the Iraq mission. The expansion of the Special Forces training contribution makes the most sense, they added. What is unclear at this point is the effect of the recent friendly fire death of a Canadian Special Forces soldier, Sgt. Andrew Doiron, on the government's plans. Foreign Affairs Minister Rob Nicholson said last week Canada would be in Iraq for the long term, even though the government hasn't officially announced an extension to the mission yet. Postmedia News (Ottawa Citizen, A1, The Vancouver Sun); * The Record; * Ottawa Citizen

* **État islamique**
Le nouveau ministre de la Défense a publié sur Twitter des photos mettant en scène des femmes enchaînées et une fillette censément mariée de force qu'il a faussement associées au groupe armé État islamique (ÉI) - et utilisé pour mousser la mission militaire du Canada en Irak. Dans le message qui accompagnait les trois photos, Jason Kenney félicitait les troupes canadiennes pour leur lutte contre l'ÉI et ses velléités de réduire les femmes à l'esclavagisme. Il souhaitait ainsi souligner la Journée internationale des droits des femmes. Les images publiées sur le fil de M. Kenney sont cependant trompeuses, comme l'a fait remarquer lundi Mohamed Ourya, chercheur associé à l'Observatoire sur le Moyen-Orient et l'Afrique du Nord de la Chaire Raoul-Dandurand de l'UQAM. Presse Canadienne (L'Acadie Nouvelle, 20); Ottawa Citizen

* **Fahmy in legal limbo after retrial postponed**
An Egyptian court postponed proceedings in the retrial of two Al Jazeera English journalists after key prosecution witnesses failed to appear at a session where they had been slated for cross-examination on Sunday. Defence lawyers for Canadian journalist Mohamed Fahmy and Egyptian producer Baher Mohamed had expected on Sunday to cross-examine the security officers whose testimony is central to the prosecution's case against the journalists. "It's unprecedented legal limbo," Mr. Fahmy told journalists after he emerged from the the courtroom inside Cairo's Tora Prison complex. This is the second time the prosecution's witnesses have failed to attend the retrial, the latest in a prolonged judicial ordeal for the two journalists as well as five students and an NGO worker swept up in the same case. "We come here and we respect the court. It's very unusual that the witnesses don't come twice in a row. I see it as an insult to the judiciary here," Mr. Fahmy said. Judge Hassan Farid demanded that the missing officers attend the next session of the trial "even if I have to arrest them." He also fined two of the witnesses the equivalent of $80. A note of exasperation in his voice, the judge adjourned the trial until March 19, after a session lasting less than 15 minutes. The Canadian government said on Sunday that Ottawa would continue to call for Mr. Fahmy's immediate release. Globe and Mail, A4

INTERNATIONAL

Minister suggests new devil's island in France
Dangerous jihadists should be kept on an island to stop them spreading extremism, a former French interior minister has suggested, amid warnings up to 10,000 Europeans could be waging jihad in Iraq and

Syria by the end of this year. Charles Pasqua, 88, made the controversial suggestion in response to government plans to "isolate" dangerous Islamists in French jails to stop them becoming a breeding ground for radicals. Asked during a radio interview whether that meant creating a "French Guantanamo," he replied, "We should put them on an island, and that means putting them somewhere far away. I don't see why we don't reinstate forced labour." France has a history of placing criminals on island prisons - Devil's Island off French Guiana was the most notorious lockup. Daily Telegraph (National Post, A12)

MINISTER / MINISTRE

'Mr. Khadr, you're free to go': judge
After spending more than a decade in prison, Omar Khadr says he'll show Canadians - and Prime Minister Stephen Harper - that he's worthy of their trust. Speaking publicly for the first time since his release on bail, the former Guantanamo Bay inmate thanked Canadians on Thursday for giving him a chance. "I will prove to them that I'm more than what they thought of me, I'll prove to them that I'm a good person," he said outside his lawyer's home. "Give me a chance, see who I am as a person not as a name, and then they can make their own judgment after that." As for the prime minister, whose government has consistently branded him an unrepentant terrorist, Khadr said: "I'm better than the person he thinks I am." The 28-year-old had his first taste of freedom in almost 13 years earlier in the day after an Alberta judge rejected a last-ditch attempt by the federal government to block his release. Supporters in the courtroom gasped in joy and Khadr smiled broadly as Appeal Court Justice Myra Bielby delivered her decision. (…) The government, which said it would fight his release every step of the way, expressed disappointment at the latest turn of events. "***(We) regret that a convicted terrorist has been allowed back into Canadian society without having served his full sentence***," **Jeremy Laurin, a spokesperson for Public Safety Minister Steven Blaney**, said in a statement. Canadian Press (The Record, A1, Chronicle-Herald, A1, Hamilton Spectator, Red Deer Advocate, Times Colonist, L'Acadie Nouvelle, La Voix de l'Est, Telegraph-Journal, The Daily Gleaner, Times & Transcript); Postmedia News (Edmonton Journal, A1, Calgary Herald, A1, Star Pheonix, Windsor Star, Vancouver Sun, National Post, The Province, Leader-Post, The Gazette); * Postmedia Network (Toronto Sun, Winnipeg Sun, Ottawa sun, London Free Press, Calgary Sun, Kingston Whig Standard); Toronto Star, A1,2; Le Devoir, A1; CBC News

Khadr veut prouver sa bonne foi
En dépit de l'opposition déterminée du gouvernement conservateur, Omar Khadr a été libéré hier. L'homme de 28 ans, qui a passé près de la moitié de sa vie derrière les barreaux, est apparu souriant et serein devant les caméras. Une juge de la Cour d'appel de l'Alberta a opposé une fin de non-recevoir à Ottawa, qui demandait au tribunal d'intervenir de toute urgence pour empêcher sa libération sous caution. En rendant son verdict au palais de justice d'Edmonton, la juge Myra Bielby a relevé que le gouvernement n'avait pas réussi à démontrer qu'une telle décision causerait un préjudice " irréparable " au Canada. L'ex-prisonnier de Guantanamo, qui était en détention depuis près de 13 ans, a été photographié dans les heures suivantes à la sortie de l'établissement. Il s'est adressé aux médias en soirée, devant le domicile de son avocat Dennis Edney, chez qui il réside durant sa libération conditionnelle. Omar Khadr souhaite étudier et éventuellement travailler dans le domaine de la santé. (…) M. Edney espère qu'en découvrant Monsieur Khadr, les Canadiens connaîtront les " mensonges " véhiculés par le gouvernement à son égard. L'avocat a accusé au passage le premier ministre Stephen Harper d'être un " fanatique " qui " n'aime pas les musulmans ". Le principal intéressé lui, espère que le premier ministre saura voir en lui un bon citoyen. " Je suis une meilleure personne que ce qu'il (Stephen Harper) pense ", a dit Omar Khadr. Ces critiques n'ont pas infléchi la position du **ministre fédéral de la Sécurité publique, Steven Blaney**, qui a rapidement dénoncé le verdict dans un communiqué. "***La décision rendue aujourd'hui nous déçoit et nous regrettons qu'un terroriste reconnu coupable puisse réintégrer la société canadienne sans avoir purgé toute sa peine***", a-t-il déclaré. Le ministre a ajouté qu'Omar Khadr s'était reconnu coupable de "crimes odieux ", dont le " meurtre " de Christopher Speer, un infirmier de l'armée américaine tué en Afghanistan en 2002 lors d'un affrontement ayant mené à l'arrestation du Canadien. La Presse (Le Quotidien, 16, Le Nouvelliste); Presse Canadienne (Le Droit, 15/Front)

*** Let's do better next time**
An editorial states, "(…) Things didn't go that way on Aug. 6, 2002. That's the day that a United States Army unit fighting in Afghanistan entered the ruins of a building that had been bombed by U.S. aircraft. In that building waited 15-year-old, Toronto-born Omar Khadr. A grenade was thrown - probably by Khadr, though some doubt the veracity of his confession. Whoever threw it, it killed U.S. army Sgt. Christopher Speer. In the resulting exchange of fire, Khadr was grievously wounded. But, thanks to rapid medical aid, he did not die. Thus began the long legal odyssey that had its latest chapter on Thursday, when a judge for the Alberta Court of Appeals in Edmonton ruled that Khadr would be released on bail pending an appeal of his conviction. Khadr was not serving a life term; he was always going to get out eventually. But the federal government had hoped to keep him behind bars for the rest of the prison term he was sentenced to by an American military tribunal. Critics of this ruling, and that includes the federal government, call this a disgrace. A terrorist will now walk freely in Canada, the **public safety minister** grumbled in a statement. Many, however, are relieved, if that's the right word: Khadr is a child soldier, they've long argued. He never should have been imprisoned and sentenced in the first place, and Canada should have done more to bring him home for rehabilitation sooner. Both sides are right." National Post, A10

Ottawa cracking down on passports for would-be terrorists or sex offenders
Ottawa says it is introducing passport measures to prevent people it calls would-be terrorists and sex offenders from travelling abroad. The changes would allow authorities to cancel, revoke or refuse passports for national security or terrorism purposes. **Public Safety Minister Steven Blaney** and Citizenship Minister Chris Alexander made the announcement on Thursday. The measures were included in the Conservatives' budget bill, which was introduced Thursday. **Blaney** and Alexander also said people who have their passports revoked or cancelled will have to wait 10 years before applying for another. The ministers added the changes would allow Federal Court justices who preside in passport cases to protect information from being disclosed but to be able to use that information in reaching their decisions. Canadian Press (Hamilton Spectator, A16, Red Deer Advocate, The Guardian, Cape Breton Post, Red Deer Advocate, The Telegram, Times Colonist, The Daily Gleaner, Times & Transcript)

Pardons

Le **ministre fédéral de la Sécurité publique et de la Protection civile, Steven Blaney**, assure que la Commission des libérations conditionnelles du Canada (CLCC) dispose du financement adéquat pour composer avec une impressionnante pile de demandes de pardon pour des crimes graves. Devant un comité des Communes, jeudi, M. **Blaney** a affirmé que l'organisation atteignait ses objectifs en matière de gestion du retard accumulé qui remonte aussi loin qu'à 2012, moment où le gouvernement conservateur a révisé le système de réhabilitation. M. **Blaney** a avancé qu'à ce stade-ci, il resterait «un peu plus de 5000 demandes à traiter». Il a ajouté que le président de la CLCC, Harvey Cenaiko, et son équipe lui avaient confirmé qu'ils disposaient des ressources suffisantes pour s'attaquer à cet épineux problème. Les propos du ministre ont fort probablement étonné les quelque 5800 personnes qui attendent, depuis des années déjà, que leur demande de pardon soit traitée pour pouvoir reprendre une vie normale. Presse Canadienne (L'Acadie Nouvelle, 19, La Voix de l'Est, Le Droit, Le Soleil); La Presse (La Voix de l'Est, Le Nouvelliste)

* **Rules on pot dispensaries pragmatic - and overdue**
An opinion piece states, "Sooner or later, it was bound to happen. With the marijuana trade recently legalized in some U.S. states and British Columbians long toking in parks and on street corners, the policing of pot use was eventually going to become less rigorous in Vancouver. (...) Pot dispensaries in the city that sprung up initially to serve customers with prescriptions for the substance have, since 2012, proliferated, from 20 dispensaries to 80 - a chaotic situation arising from the City of Vancouver's failure to act. It did nothing to curb their growth nor establish any monitoring system to oversee to whom the dispensaries are selling, let alone where they are obtaining their supplies. Having allowed the situation to get out of hand, the city now needs to get a handle on the dispensaries, and at least manage their locations. To that end the city appropriately has proposed a licensing system that would restrict their presence to arterial streets, away from places where youngsters gather, and impose an annual administration fee of $30,000. Vancouver city council has voted to have its provisions go to public hearings at the end of May with a view to having a regulatory system in place by October. The Harper Conservatives, meanwhile, are aghast at the city's plan, and sticking to their line that marijuana use is a criminal activity. Health Minister Rona Ambrose and **Public Safety Minister Steven Blaney** are urging Vancouver council and the police department to close all the dispensaries which, they insist, are illegal operations. The Vancouver Sun, B6

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

New campaign hopes to cut non-emergency calls
Thousands of non-emergency calls reach 911 dispatchers every year, but a new government video is hoping to change that statistic. On Thursday, the provincial government launched a new 911 awareness campaign through the Emergency Management Office (EMO) that shows first responders like police, RCMP, firefighters, paramedics and call takers in action while emphasizing the 911 service should be used when there's "immediate" danger to one's life or property. "Every accidental 911 call must be treated as a legitimate call," Mary Furey, minister responsible for EMO, said during the launch at Province House. "In many cases that ties up a tremendous amount of resources, when we could parallel have a true emergency." Cape Breton Post

* **Controlled burn near Fortress Louisbourg scheduled for today**
A controlled burn will happen on Parks Canada land near the Fortress of Louisbourg, beginning at 1 p.m. today. It's expected the fire will "restore cultural landscapes" and protect buried archeological objects from risk of wild fires in the future, according to a news release issued by Parks Canada on Thursday. The controlled fire will take place along the north shore of the historic site. The Fortress of Louisbourg National Historic Site will remain open to the public. The Old Town Trail will be temporarily closed to the public during the burn for the public's safety. Parks Canada says the burn, while controlled, could see smoke drift toward homes and businesses in Louisbourg. Cape Breton Post, A3

*** Oil in train wreck treated, company says**
A shipment of oil involved in an explosive train derailment in North Dakota had been treated to reduce its volatility, a company official said Thursday. Hess Corporation spokesperson John Roper said the company's oil complied with a state law that requires propane, butane and other volatile gases to be stripped out of crude before it can be transported. That conditioning process lowers the vapour pressure of the oil to reduce the chance of an ignition during a crash. The state volatility standard, which went into effect last month, came in response to a string of fiery train accidents, including a 2013 derailment in Lac-Mégantic, Que., that killed 47 people. Despite the treatment of the oil, six cars caught fire in Wednesday's derailment about three kilometres from the town of Heimdal. The town was evacuated but no one was hurt. Members of Congress have called for a stricter, national volatility standard for crude moved by rail. Associated Press (Waterloo Region Record, A4; Hamilton Spectator; Times-Colonist)

*** Sherbrooke travaille à un plan d'intervention**
La Ville de Sherbrooke est à réaliser un plan d'intervention particulier pour les situations de déraillement de train. Le directeur général adjoint à l'optimisation et à la sécurité publique Gaétan Drouin estime qu'il faudra plusieurs mois avant de terminer le plan. « Nous avons donné le mandat. Mais après les événements de Mégantic, il a fallu plusieurs mois à nos services pour qu'ils s'en remettent. C'est sans compter que nous avions encore les deux mains dans les événements de Neptune Technologies. Au travers de ça, nous avons dû refaire un plan d'action pour le verglas à la suite de la tempête de décembre 2013 et il y a eu les inondations au printemps de 2014. L'équipe de la sécurité civile a été particulièrement sollicitée », explique M. Drouin. Il ajoute qu'il est très difficile de dresser un plan d'intervention spécifique. La Tribune, 3

*** Still trapped - Four years and $115 million later, some flood evacuees no closer to home**
Many evacuees from Manitoba's 2011 flood remain stranded in temporary accommodations. The Canadian Red Cross continues to pay rent for 1,914 people. The total cost of the evacuation, as of January, was $115.6 million and rising. That's more than the estimated $100-million cost of rebuilding the Lake St. Martin reserve. Even after four years, two levels of government and four First Nations can't agree on how to get the people home. For the displaced people, it wasn't supposed to be this way. Winnipeg Free Press

*** Open-air fires banned across southern Quebec**
Open-air fires either in or close to forests have been banned in certain areas across southern Quebec because of current weather conditions. The ban was put in place on Wednesday by Quebec's ministry of forests, fauna and parks. Areas from Quebec City to the Outaouais region and everything south of that fall under the ban, including Montreal, Laval and parts of the Eastern Townships. The ban was expanded Thursday to include all areas of the province south of the 47th parallel. The ban was announced at the same time as a fire ripped through six hectares of forest in Mont St-Grégoire Wednesday. Montreal Gazette, A5

*** St. George forest fire destroys two barns - No burning order remains in place for all of New Brunswick**
Two barns were destroyed Thursday by a forest fire in the St. George area, says a local resident. Cheryl McKinley says the fire started in Bonny River and jumped the river spreading into the trees. McKinley says it was about six houses away from her home in Canal. She says her family had packed their bags and was ready to leave, but that wasn't necessary. McKinley says she saw four water bombers pass overhead. She says two barns were lost but no homes. The entire province remains under a no burning order from the Department of Natural Resources. The provincial forest fire centre reports 18 fires burning on Friday, including four that were still considered out of control as of 6:40 a.m. To date this spring there have been 102 forest fires which have burned 120 hectares. The 10-year average is 124 fires with 212 hectares burned by this time of year. CBC News

*** Manitoba infrastructure won't withstand climate change, expert says**
A water security expert says climate change will have dire consequences on Manitoba's infrastructure and consequently its economy, unless something changes. Bob Sandford, EPCOR Water Security Research Chair at United Nations University, began working to help solve water-related climate issues in

Manitoba a decade ago. His first focus was on Lake Winnipeg - now his focus is the province's infrastructure. "You see that there are larger changes to the hydrologic cycle that are causing more frequent flooding, greater storms and causing greater infrastructure damage. We are of the view that this could have serious economic consequences for the province, so our meeting today is about how we deal with those matters," Sandford told CBC's Radio Noon Thursday. Sandford spoke to the Threatened Infrastructure conference Thursday in Winnipeg, hosted by the Manitoba Capital Region. Sandford explained that the hydrologic cycle he mentioned refers to how water is naturally redistributed across the planet, through evaporation primarily from the oceans, and then distributed globally through weather patterns. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Ottawa sending wrong message: Hamdani
Hamilton lawyer and Muslim community spokesperson Hussein Hamdani says his suspension from a national security roundtable last week sends the wrong message to Canadian Muslim youth. Hamdani says youth he's been working with to prevent radicalization have been calling him and saying: "If what they (did) to you, is what they can do to us - why should we partner with them?" That suspension, Hamdani told the Rotary Club of Hamilton Thursday, plays into the "grievance" mentality present in youth in danger of radicalization: a notion that the West is at war with Islam and Muslims. "For the past week I've been spending half my time with young people explaining there is no war against Islam, there's discrimination, there's bigotry, but we're not the only ones to experience that and we must rise above it." The Hamilton Spectator, A4

*** New integrated police force for the Hill**
Six months after an Islamist gunman stormed Parliament, the Hill is getting a new integrated police force and $39 million more in protective muscle. The 400 members of the current and separate House and Senate security services will be integrated under the operational command of the RCMP and a director reporting to the Speakers of each house. The operation gets a new name, too - the Parliamentary Protective Service. The shakeup has been openly discussed for months. Details were formally made public Thursday in the Conservatives' budget bill tabled in the House of Commons, which proposes amending the Parliament of Canada Act to allow the change. The parliamentary precinct's current fragmented security operation has been criticized for years. Responsibility is divided among three agencies: The House of Commons' security handles buildings under House jurisdiction, while Senate Protective Service is responsible for East Block and the east side of Centre Block. The RCMP is responsible for the grounds. (Ottawa police is responsible for streets in the broader parliamentary precinct beyond Wellington Street.) The system's shortcomings became evident in December 2009 when 19 Greenpeace activists climbed onto the roofs of both West Block and Centre Block and unfurled climate-change protest banners. Then, on Oct. 22, 2014, Michael Zehaf-Bibeau, armed with a rifle and knife, easily sprinted past RCMP perimeter security and a House of Commons guard before dying in a hail of bullets deep in the Hall of Honour. The reorganization is not expected to encounter political opposition. MPs of all stripes, including Prime Minister Stephen Harper, were in nearby caucus rooms during the attack. The security shakeup may encounter some turbulence from organized labour. Although all current House and Senate security jobs and collective bargaining agreements will be protected, the proposed enabling legislation suggests the workplace transition for the security staffs will take time to hammer out. As well, there is speculation the parliamentary guards may seek salary parity with their higher-paid RCMP counterparts. Postmedia News (Ottawa Citizen, A10)

*** Le controversé C-51 adopté**
Le projet de loi antiterroriste controversé du gouvernement Harper a été adopté, mercredi, à la Chambre des communes. La Loi antiterroriste, aussi connue sous le nom de projet de loi C-51, a été adoptée facilement en troisième lecture par 183 voix contre 96, grâce à la majorité gouvernementale conservatrice et au soutien des libéraux, troisième parti aux Communes. La loi accorde plus de pouvoirs au Service canadien du renseignement de sécurité (SCRS) pour contrecarrer les présumés complots terroristes, et pas seulement pour recueillir de l'information. Elle accroît aussi l'échange d'information de sécurité entre organisations et agences fédérales, élargit la portée des interdictions de vol et crée une nouvelle

infraction criminelle d'encouragement à commettre un acte terroriste. En plus, la loi facilite l'obtention par la GRC d'une ordonnance de garder la paix pour restreindre les mouvements d'un suspect et prolonge les détentions préventives. L'Acadie Nouvelle, 20

* **Les conservateurs déposent un "petit" projet de loi mammouth**
La 41e législature canadienne prend peut-être fin dans un mois, mais il semble que cela laisse assez de temps pour déposer un nouveau projet de loi mammouth... et l'adopter. Le gouvernement conservateur a en effet présenté jeudi un projet de loi budgétaire qui modifie ou édicte près d'une trentaine de lois, dont certaines traitant de terrorisme, de droit d'auteur, d'immigration, de régime de retraite, de congé de maladie et de sécurité sur la colline parlementaire. Entre autres. Le projet de loi C-59 ne compte cette fois-ci " que " 157 pages. Il édicte notamment la Loi sur la prévention des voyages terroristes, qui instaure un mécanisme d'appel lorsqu'une personne voit son passeport saisi par décret ministériel. Cette personne pourra, dans les 30 jours, demander une révision judiciaire. Celle-ci pourra se dérouler à huis clos et en l'absence du principal intéressé si le juge estime que la divulgation de la preuve pourrait porter atteinte à la sécurité nationale. Le juge devra alors veiller à ce qu'un résumé de la preuve soit fournie au plaignant. L'autre loi édictée par C-59 instaure, comme promis, un régime de sanctions contre tout futur gouvernement déposant un budget déficitaire. Si le déficit est " justifié " par une récession, les ministres et sous-ministres verront leurs salaires gelés. Si le déficit n'est pas " justifié ", alors ces gens écoperont d'une réduction salariale de 5 %. Justifiés ou pas, les déficits entraîneront chaque fois une interdiction de hausser les budgets de fonctionnement des ministères pour financer des hausses salariales des fonctionnaires. Le Devoir, A2; Windsor Star (National Post, Vancouver Sun, Star Phoenix, The Gazette, Leader-Post)

* **Canada to provide anti-terror support for Philippines**
Canada will provide counterterrorism and anti-crime support to police in the Philippines, part of an effort to boost security and commercial ties with one of Asia's fastest-growing economies. Prime Minister Stephen Harper is expected to announce three new security initiatives on Friday during a visit with Philippine President Benigno Aquino in Ottawa. The leaders will also discuss ways to promote trade and investment during a meeting on Parliament Hill, a government source said. The Philippines has fought a lengthy battle against Islamic and communist insurgents in Mindanao, a region that is composed of the country's southern islands. Earlier this year, 44 Philippine police officers were killed in a botched anti-terrorism operation in the region, an event that has raised questions about Mr. Aquino's leadership. A senior Canadian government source said Ottawa's support would focus on both regional and global security concerns, including the threats of terrorism and transnational organized crime. The federal government will offer support from its counterterrorism capacity-building program to bolster maritime security at trading ports in the region, the source said. The program is intended to help Philippine authorities provide more information to Interpol, a global organization that's meant to facilitate international police cooperation. In addition, the government will offer a "train the trainers" style program to help Philippine authorities deal with improvised explosive devices in the country, the source said. The program will involve between five and seven Canadian Forces trainers. Ottawa will also provide assistance to police in the Philippines to help them combat transnational organized crime, the government official said. It was unclear on Thursday whether a specific type of crime would be targeted by the new initiative, but priority issues for Manila include drugs and human trafficking. Globe and Mail, A4

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Burning bridges
A letter to the editor states, "Last week's deal between the Ambassador Bridge and the City of Detroit was interesting but insignificant. The Ambassador Bridge Company is facing a serious political problem after their relentless attack on the new international crossing. Their lobbying efforts forced Canadians to fund Michigan's $550 million share of the freeway connect. Their lobbying forced Canadians to fund the $300 million U.S. Federal Customs Plaza. If the Ambassador Bridge Company wants a privately owned twin span, Canadians will rightfully expect them to fund the Canadian Custom's Plaza and the freeway connection to the 401. Funding will not come from Michigan or U.S. federal governments. They wouldn't

spend it on their own infrastructure. Funding will not come from any sane politician on this side of the border. They've already spent billions on a public crossing and have no reason to spend another billion to support a hostile private company." Windsor Star, A6

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

LAW ENFORCEMENT / APPLICATION DE LA LOI

City courthouses targets for 2 suspicious parcels
The federal courthouse building in downtown Fredericton was briefly locked down on Thursday morning after police received a report of a suspicious package. Alycia Morehouse, the city's public safety spokeswoman, said police were called to the courthouse, located at the corner of Westmorland and Queen streets, at around 9:30 a.m. "The package does appear to be from outside Canada," she told The Daily Gleaner at the scene. "We are actively investigating, and we have been in contact with the National Security Enforcement Section. There have been a number of similar packages that have been received at courthouses in other jurisdictions," she said. The courthouse wasn't evacuated, but no one was allowed to enter or leave the building while police conducted the investigation. The fire department and ambulance services were also on scene as a precaution, Morehouse said. The building was deemed safe at around 11 a.m., and a parcel was removed from the building by police. Morehouse said she couldn't comment on the nature of the package, directing requests to the RCMP's National Security Enforcement Section. Daily Gleaner, A1

New weapons training facility coming to Hanwell
The Fredericton area is getting a new state-of-the-art weapons training centre. The $3.5-million facility, set to open next year in the Hanwell Business Park, will be designed to meet the specific needs of law enforcement and specialized security force organizations. Cary Baker, who speaks for the project, said the centre will allow users to conduct firearms training day and night on a 24-7 basis. "We're hoping to officially break ground with the foundation (in the) July-August time frame," said Baker, a former special operations major in the Canadian Armed Forces. "The intent is to open early 2016." Baker said the facility, dubbed the Iron Sights Training Centre, represents investments from him as well as several other individuals from within and outside the province. The 20,000-square-foot indoor complex will be constructed near the Maritime Case dealership on Timothy Drive. The facility is expected to create as many as 20 full- and part-time jobs during its first year of operation, with that number jumping to as many as 30 once capacity is reached. Baker said the unique thing about the complex is that it will be geared toward tactical shooting. "What that basically means is part of the range is designed and set up so that police officers can actually do what we call walk and shoot - more dynamic type shooting training," Baker said. "It basically falls in line with the RCMP report from the Moncton shootings last year that defined a requirement for better tactical training facilities so that police officers can train in a realistic environment - a live fire environment - using simulation systems that can re-enact or provide what we call active shoot threat scenario." Daily Gleaner, A1

Two charged in Sharif Said slaying
Two people who were in a car that confronted 21-year-old Sharif Said minutes before he was gunned down are now behind bars - one an elusive suspect known to police who is alleged to have pulled the trigger, another a man with a lengthy criminal history accused of driving the getaway car. Police have arrested Khalid Mohammad, 26, and charged him with second-degree murder. Authorities contend he didn't plan to kill Said, but that a sign of what was perceived as disrespect at a house party Saturday night led to an altercation between two vehicles Sunday morning on Tremblay Road, where the victim was gunned down. Police also arrested 28-year-old Abdulaziz Abdullah in connection with the homicide. Police allege he was an accessory after the fact, helping Mohammad to escape. Both men appeared in court briefly Thursday by video and were formally charged. They were ordered not to contact a long list of people, including each other, neighbours in the area where Said was killed and the slain man's parents.

The alleged gunman Mohammad, who goes by "AJ," is well-known to police and was a suspect in multiple shootings in 2014, a year that set a record for reported gun violence in the capital. Ottawa Citizen, A3

Returning To The Uniform

On a Sunday evening one year ago, 24-year-old David Charles Sandaker was shot dead in a busy residential neighbourhood by a member of the Edmonton police tactical team. The gunfire erupted from both police and Sandaker as officers were attempting to place him under arrest. One member was hit in the leg, receiving non-life-threatening wounds. Despite the critical incident debriefing that typically follows a case such as this, a fatal shooting can be hard on the mental health of the officer who pulled the trigger. That's where Sgt. Glen Klose and Const. Colleen Mooney enter the picture. In 2009, an officerinvolved shooting prompted city police to recognize a formal program was needed to help members involved in critical incidents return to their job. Working with the Workers Compensation Board (WCB), the reintegration team has now worked with more than 40 members involved in critical incidents such as shootings, Taser deployments or bad collisions. The team also continues to work with seven long-term members either diagnosed with PTSD or struggling with other psychological issues... . Edmonton Sun, 7

Senate staff resisted coverup

A group of senators worked behind the scenes to "kill" an internal audit of senators' housing claims, and were stopped only when two officials from the red chamber threatened to take legal action if the review was quashed, according to newly released court documents. Instead, the audit was allowed to quietly continue and, indeed, will be the subject of intense legal arguments between the Senate and suspended senator Mike Duffy's defence team, who believe the document should be introduced as evidence at his trial. The internal study could also be damaging for the Senate itself, as its findings could identify senators who improperly claimed housing expenses when their main residence was in Ottawa. The documents, filed in court this week, outline how Gary O'Brien, who was at the time the Senate clerk, raised an objection in 2013 to senators "wanting to kill the internal audit" that outlined issues with the Senate's housing allowance policy. O'Brien told RCMP investigators in September 2013 that he had informed the senators he "wasn't going to go along" with the plan. The internal audit had been written by Jill Anne Joseph, then the director of internal audit and strategic planning for the Senate. "I know I'm their servant, but on the other hand I have a professional obligation with respect to stewardship of public funds and appropriateness of procedures and all of that business," O'Brien told the investigators, according to a transcript of his RCMP interview the court released Thursday. Instead, emails quoted in the court documents suggest O'Brien and Joseph "threatened legal action if the full original audit report was not released." Conservative senators even felt Joseph "would leak the report." O'Brien told the RCMP that latter claim "was bullshit." He spoke highly of Joseph, calling her work "professional." SNC-Lavalin «n'est pas coupable» selon son PDG

Le grand patron de sNC-Lavalin, robert Card, assure que la firme d'ingénierie québécoise «n'est pas coupable» des accusations de corruption et de fraude, portées par la GrC dans le cadre des activités de l'entreprise en Libye. «Et nous n'avons pas l'intention de plaider coupable», a poursuivi avec aplomb M. Card devant les journalistes, en marge des résultats financiers présentés lors de l'assemblée des actionnaires tenue à Montréal. En février dernier, la GRC a déposé des accusations contre la firme. Elle allègue notamment que SNC et deux de ses entités ont versé plus de 47 millions $ en pots-de-vin, de 2001 à 2011, à des représentants du régime de Mouammar Kadhafipour des projets d'ingénierie dans ce pays d'Afrique du Nord. Selon la GRC, cet argent servait à «convaincre ces derniers d'utiliser leurs positions pour influencer les actes ou les décisions» de l'État libyen». SNC-Lavalin aurait ainsi pu frauder l'État libyen, ainsi que d'autres entités libyennes, pour un montant de près de 130 millions $. Agence QMI (Journal de Quebec, Journal de Montreal); Globe and Mail

Hells Angels, associates guilty of murder conspiracy

Fourteen Hells Angels, or associates of the gang, have avoided a trial set to begin next week by pleading guilty to taking part in a general conspiracy to murder rival members of criminal organizations during an

eight-year period. With jury selection set to begin Monday, the 14 men - 13 were tied to the gang's Trois-Rivières chapter - pleaded guilty on Thursday to a murder conspiracy charge, while any first-degree murder charges they also faced were placed under a stay of proceedings. The guilty pleas recorded on Thursday brought the number of men who have pleaded guilty in Operation SharQc to 101. Operation SharQc was a lengthy investigation led by the Sûreté du Québec that saw almost every member of the Hells Angels based in Quebec arrested in April 2009. No one arrested in Operation SharQc has had an actual trial yet, but almost all of the men who pleaded guilty Thursday were supposed to be part of a larger group whose trials are set to begin Monday with jury selection. The large group has been reduced to 10. Another two men are expected to have a trial in English at a later date, which means only 12 of the 156 people originally charged in 2009 still have cases pending. According to the SQ's website, another nine men have yet to be arrested in Operation SharQc. Besides the guilty pleas, the prosecution obtained the court's permission on Thursday to destroy two of the gang's bunkers - one in Trois-Rivières and another near Quebec City - which were significant symbols of the biker gang's defiance, especially from 1994 to 2002, the time frame referred to in the murder conspiracy charge. The men who pleaded guilty on Thursday admitted they were part of a plot the Hells Angels hatched to go after other organized crime figures who opposed their goal to monopolize drug trafficking across the province. Besides being allowed to level the buildings, the provincial government will take ownership of the land the Trois-Rivières chapter once considered its headquarters. Discussions are underway to determine which level of government will take control of the land near Quebec City. Remaining suspects in killing of Pelican Narrows teen in custody

All seven suspects in the killing of a 17-year-old Pelican Narrows boy on a northern reserve are now in police custody. Hilliard Sewap Jr. died Saturday on the Peter Ballantyne Cree Nation. Pelican Narrows RCMP were called to a home around 6:30 a.m. after a report of a disturbance. They rushed the injured teen to Angelique Canada Health Centre, but he was declared dead. Five men and two boys were charged with second-degree murder; some of them face additional charges. An RCMP news release issued on Wednesday said three of the men were in custody and arrest warrants had been issued for the other two men - Robbie Lambert Creed Custer and Brandon Lee Matt McCallum - and two male youths. On Thursday, RCMP said Custer, McCallum and the two boys are now in custody. Postmedia News (StarPhoenix, A2)

Man wanted in killing arrested

A 30-year-old man wanted in connection with the slaying of a man in Grande Prairie, Alta., was arrested Wednesday in Nanaimo. Tommy Vernon Paul was spotted by plainclothes officers from Nanaimo RCMP as he rode a bike along Haliburton Street. He was arrested without incident. Arrangements are being made to send Paul back to Alberta, Nanaimo RCMP said. Grande Prairie RCMP issued an arrest warrant for Paul on Tuesday in connection with the killing of Adrian Snider, 25. Snider was reported missing March 31 and human remains found outside Grande Prairie on Monday are believed to be related to his death. Times Colonist, A4

*** Dziekanski's mom has say at Mountie's hearing**

When Zofia Cisowski immigrated to Canada she saw the RCMP as the symbol of democracy and trust, but that impression has been destroyed in the years since officers jolted her son with a Taser, a court has heard. "My faith in the honesty of the RCMP has forever been shaken," said the mother's letter, read at a sentencing hearing for RCMP Const. Kwesi Millington on Thursday. Millington was convicted of perjury for lying under oath during a public inquiry into Robert Dziekanski's death at Vancouver International Airport in October 2007. His defence lawyer opposed allowing Cisowski to read her victim-impact statement into the record. But B.C. Supreme Court Justice William Ehrcke rejected the argument that Cisowski didn't qualify as a victim because Millington's crime was against the "administration of justice." "It is difficult to put into a few or any words how the perjury of Mr. Millington has impacted me," Ehrcke read from Cisowski's letter. "When I came to Canada I saw the RCMP as the main symbol of Canada and what it stood for, a democracy where people could always trust the police," she wrote. Crown prosecutor Scott Fenton told the hearing that the disgraced Mountie, convicted of lying about the death of Dziekanski,

should spend up to three years in prison. Perjury carries a maximum sentence of 14 years. Canadian Press (The Province, A8, Vancouver Sun, Times Colonist)

*** Quelques crises qui ont marqué son mandat**
En froid avec le directeur général de la Ville, le chef Marc Parent partira à la fin de son contrat en septembre, après un des mandats les plus houleux de l'histoire du service de police de la Ville de Montréal. Toutes nos sources maintiennent que la relation entre le chef Marc Parent et le directeur général (DG) Alain Marcoux se serait détériorée au cours des derniers mois. Au point où le chef de police, après une courte période de réflexion, aurait refusé de signer un éventuel contrat de travail en vue d'un second mandat à la tête du Service de police de la Ville de Montréal (SPVM). Encore faut-il qu'il y ait un contrat à signer. Nos sources au gouvernement affirment que Montréal aurait tardé à demander le renouvellement du chef Parent. Après l'annonce-surprise de son départ hier, toutes les entrevues officielles donnaient à penser que tout était au beau fixe entre le DG et le policier, même si dans les faits une retentissante prise de bec les aurait opposés au début de l'année. Journal de Montreal, 4

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

'Freedom is way better than I thought'
On his first evening of freedom since he was 15 and threw a grenade at U.S. soldiers in Afghanistan, a smiling, relaxed Omar Khadr said he hopes Canadians will try to get to know who he is now. "I would like to thank the Canadian public for trusting me and giving me a chance. I will prove to them I am more than what they thought of me. I will prove to them I'm a good person. I'm excited to start my life." Eight hours earlier, an Edmonton judge ordered Mr. Khadr, now 28, released on bail, rejecting a last-ditch attempt by the Canadian government to keep him in prison, and releasing him under the supervision of Dennis Edney, his long-time lawyer. After his release, the former Guantanamo detainee went for lunch, then returned to the courthouse for some paperwork. There, he encountered some government officials. "I was surprised. Some of the sheriffs went out of their way to be kind and buy me some drinks," he told reporters who gathered to meet him at Mr. Edney's comfortable Edmonton home. (...)The bail release order from Justice Myra Bielby of the Alberta Court of Appeal was yet another major legal defeat for the Conservative government, which has seen the courts strike down its efforts to fight drugs and gun crime, reject plans for Senate reform and even say no to the Prime Minister's choice of a judge for the Supreme Court. Globe and Mail; Edmonton Sun, 1; * Maclean's, * Journal de Montréal (Journal de Québec)

Mr. Khadr, you're free to go
There are two famous photographs of Omar Khadr. (...)To the government, which vigorously fought his release on bail and expressed disappointment at a judge's decision to grant it on Thursday, he is an incorrigible terrorist in the mould of his father, Ahmed, an al-Qaida financier who enlisted his notorious family in the cause. Lying half-dead amid the rubble of a compound in the Khost district of Afghanistan, approached by U.S. soldiers clearing a cache of bombs, Omar Khadr deserves on this view to be blamed as an adult for tossing the grenade that killed U.S. Sergeant 1st Class Christopher J. Speer, then 28, a combat medic. (...) "I don't think the government is worried that Omar Khadr is a terrorist. I think the government is more worried that he is not," said Audrey Macklin, a professor and chair of human rights law at the University of Toronto, and a prominent advocate for Khadr. For the Conservative government, he has been a symbol of its counterterrorism agenda, but he also has relevance to other political goals, she said, such as its "tough on crime" platform and its effort to redefine Canadian citizenship more as a privilege than a right, something to be protected against abuse by foreigners. National Post, A1 (Windsor Star, Vancouver Sun, Leader-Post, Edmonton Journal), Associated Press (Seattle Times, Yahoo! News), Edmonton Sun, * Presse canadienne (Le Soleil, La Tribune)

Khadr's education has been built on kindness of strangers
For the past 12 years, in between interrogation sessions and working in prison factories, Omar Khadr has been trying to learn beyond his Grade 8 education. Khadr, now 28, has always known the day would come when he would finally leave prison and have to adjust to everyday life. While governments, circumstance and his parents, each in their own way, have failed Khadr, strangers have stepped into the void to help educate him. Nine Alberta university professors, most of them from The King's University in

suburban Edmonton, have spent years visiting Khadr in prison and tutoring him. Since Khadr was transferred to Alberta in May 2013, the professors have worked with him at least once a week. There are also those who offer Khadr a schooling of another kind - not in books but in the benefits of socializing and shooting the breeze. These socially adept university students and recent graduates write him letters and visit him in prison. Seven women from various countries have even started the online campaign, Free Omar Khadr Now. Toronto Star, A14

*** Omar Khadr's odds of winning U.S. appeal look good, legal expert says**

Just hours after his release, Omar Khadr told the media, "Freedom is way better than I thought." Although he is free on bail, Khadr faces legal proceedings ahead of him that could last for years. He was released in connection with the pending appeal of his conviction by a military commission in 2010 at the notorious Guantanamo Bay detention camp. In the next couple of months, Khadr also has a hearing at the Supreme Court of Canada in the federal government's appeal of an Alberta court ruling that he should be treated as a juvenile offender. He was 15 years old when he was taken into custody by American forces in Afghanistan. And on June 25, he has his first parole hearing. He has been eligible for full parole since July 1, 2013. In her initial decision granting bail release, in April, Alberta Justice June Ross cited the work of law professor David Glazier in connection with Khadr's U.S. appeal. (…) Glazier tells CBC News that Khadr's U.S. appeal will likely take at least several more years. The case is now before what's called the court of military commission review, with little progress to report after 18 months. And Glazier says the really significant rulings won't happen until the case reaches the federal court of appeals. The key merit of Khadr's appeal, Glazier says, "is that he's being tried in a military court system which, as a matter of law, should only have jurisdiction over actual war crimes' allegations, and none of the charges that have been levied against him constitute war crimes, as recognized by international law." Khadr's prosecution in 2010 "has no credible legal foundation," he adds. CBC News

*** Khadr 'forever a murderer'**

You'll have to forgive Tabitha Speer for not sharing the same excitement and enthusiasm as some in Canada seem to be feeling about the release of "child soldier" Omar Khadr. In her house in North Carolina, the child soldier left her children --Taryn, 15, and Tanner, 14 -- without a father. Omar Khadr got to walk out of prison after almost 13 years Thursday. Her husband, Sgt. Christopher Speer, will never come home. Still, the always classy Tabitha did not dare step into the media fray Thursday or lower herself into the snake pit by saying something in anger. In fact, she made special point of not commenting. Ottawa Sun, 5 (Toronto Sun)

*** No longer the demon he's made out to be?**

An opinion piece states, "Mixed feelings greet the release of Omar Khadr on bail. Torn between pangs of anger and sympathy, from the need for punitive justice to the need for compassion, vacillating from the visceral desire to see a killer justly punished to the recognition that he was a kid who has already served more time than any juvenile would serve in this country. No, I can't muster the jubilation that erupted at the decision by an Alberta judge to release the 28-year-old on bail after 12 years and nine months behind bars for killing U.S. Sgt. Chris Speer during a firefight in Afghanistan in 2002. (…)If the murder had occurred in this country, Khadr would have been tried under the Young Offender's Act of the time and faced a maximum decade of incarceration. His eight years of presentence custody in a horrific hell-hole where there are allegations he was water-boarded would have surely been double-or triple-timed to be the equivalent of 16-24 years. So enough already." Toronto Star, 5 (Ottawa Sun, Calgary Sun, London Free Press)

*** Omar Khadr - Libre, enfin!**

Un article d'opinion déclare, « Pour comprendre toute la hargne des conservateurs envers Omar Khadr, enfant-soldat en qui le gouvernement Harper refuse de voir autre chose qu'un terroriste, il vaut la peine de s'arrêter à une autre nouvelle. Howard Sapers, qui occupe présentement le poste d'enquêteur correctionnel du Canada, vient de se faire montrer la porte par le **ministère de la Sécurité publique**. La raison n'est pas claire, seule la longévité à son poste ayant été évoquée. Mais M. Sapers, ombudsman des détenus, s'est aussi souvent heurté au gouvernement..., notamment en défendant Omar Khadr en tant que détenu exemplaire. Quelle coïncidence donc que, dans la même semaine, M. Khadr sorte enfin vainqueur de l'incroyable guerre que le gouvernement lui livre depuis des années ! » Le Devoir, A8, Winnipeg Free Press

*** A week of blows for Harper**
An opinion piece states, "Even when you are prime minister of all you survey, there are times that people and events simply refuse to march in the direction you'd prefer. In a week he won't look back fondly on, Stephen Harper has now suffered two such blows in rapid succession. First, his sense of entitlement to eternal political support from his conservative home province was shattered by Tuesday's election of a solid NDP majority. What, he must wonder, are similar folks in Saskatchewan and British Columbia thinking now? And are Albertans enjoying the figurative taste of Tory blood enough to come back for seconds? And now, in what must be almost as profound a blow, Ottawa's long refusal to release its almost pathological grip on former Guantanamo Bay child inmate Omar Khadr has been rejected by an Alberta court of appeal. Khadr is not home free, mind you. Rather, he is out on bail under strict conditions as he awaits the results of appeals against American convictions for war crimes. But the fact that he has been released at all undermines the federal government's dogged insistence that the young man was virtually an existential threat to the Canadian way of life." Edmonton Journal, A20

*** Bienvenue, Omar Khadr**
Un article d'opinion de la directrice d'Amnistie internationale déclare, « Bienvenue dans un monde qui n'a pas été bienveillant avec vous. Bienvenue dans un monde où la justice sera enfin plus forte que les jeux politiques qui se sont construits sur votre personne. Encore une autre juge au Canada qui vous donne raison. En fait, il devient difficile de les compter. Cour suprême du Canada deux fois, Cour d'appel fédérale, cours fédérales de nombreuses fois, Cour d'appel de l'Alberta. Celles-là ont en fait surtout donné tort au gouvernement pour non-respect de ses engagements internationaux et nationaux. Et maintenant, la Cour du banc de la reine de l'Alberta, jugement fort conséquent celui-là pour vous : il vous donne le goût de la liberté qui vous a été niée pendant 13 ans. » Le Devoir, A8

*** Freeing Khadr is a risky business**
An editorial states, "The allegation by Omar Khadr's lawyer, Dennis Edney, that Prime Minister Stephen Harper is an anti-Muslim "bigot" is absurd. Harper is concerned about protecting Canadians from terrorism. That's his job and in Khadr's case it's perfectly understandable why the Canadian government opposed Khadr's bail application, while he appeals his U. S convictions for war crimes. In freeing Khadr Thursday, Alberta Court of Appeal Justice Myra Bielby acknowledged Khadr poses a risk to the public. But not enough, she said, that the potential harm to the public outweighed the potential harm to Khadr of keeping him imprisoned." Ottawa Sun

*** Khadr's no child**
A letter to the editor states, "If our courts have swallowed the line that Omar Khadr was a child at the time of his alleged crime, then how can Melissa Todorovic's sentence stand? Todorovic, who committed the crime of counselling to commit murder at age 14, was sentenced as an adult to life --with which I totally agree. She was well past the age of forming intent. Khadr was almost two years older than Todorovic and a young man." Toronto Sun, 16, Winnipeg Sun

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Haunted by gang violence
Theresa McCuaig has pretty much seen it all when it comes to the underbelly of the nation's capital. McCuaig is the grandmother of Sylvain Leduc, the 17-year-old tortured and murdered by a group calling themselves Ace Crew. The murder took place almost 20 years ago, and Ace Crew was considered the first real gang in Ottawa. McCuaig threw herself into the court system--fighting at the federal level for changes to the Young Offenders' Act; and also became an ardent defender of victims' rights. So when

she hears Sharif Said, 21, found dead Sunday morning, might be the victim of a local gang, she's not fazed by the news. "I'm not surprised," McCuaig said in an interview with the Sun on Thursday. Major crime detectives have charged two men in the city's third homicide of the year. Khalid Mohammad, 26, is charged with second-degree murder. Abdulaziz Abdullah, 28, is charged with accessory after the fact for allegedly helping Mohammad flee. Both made a court appearance Thursday. Said's bullet-riddled body was found in the middle of Tremblay Rd. at about 8 a.m., Sunday. Police said this week it was too early to determine whether the slaying had any ties to gang activity, though investigators said it had all the hallmarks of a drug-related slaying. Ottawa Sun

PUBLIC SERVICE / FONCTION PUBLIQUE

Budget bill lets government set sick leave terms for PS
The Conservative government gave itself the power in the latest budget bill to override federal labour law and impose a contentious new sick-leave and disability regime for Canada's public servants at any time. The budget bill allows Treasury Board president Tony Clement to set aside parts of the Public Service Labour Relations Act, which governs collective bargaining in the public service, to impose new terms and conditions for sick leave and introduce a new short-term disability plan. The timing for such a move will be left up to cabinet to decide. The measures, expected to be challenged in court when passed, give the government the tools it needs to ensure the agreement it wants on sick leave and disability is implemented. The proposed measures are another shot at the labour rights of the 17 federal unions, which the government had already eroded leading up to this controversial round of bargaining over sick-leave benefits. Ottawa Citizen, A1

*** Military didn't review videos of troops**
Promotional videos of Stephen Harper's tour of Iraq and Kuwait that revealed faces of Canadian Armed Forces members were not reviewed by the Department of National Defence before they were first posted to the Internet, contrary to what the Prime Minister's Office initially said, The Globe and Mail has learned. On Tuesday, media raised security concerns over two of the videos produced by the PMO's in-house public-relations team - footage the Conservatives quickly uploaded to the Internet to advertise Mr. Harper's Mideast trip. Initially, the PMO had assured reporters the military vetted the videos before they were published online. Senior government officials told the media that the Forces had raised no objections to what had been uploaded, statements that left the impression the military was in part responsible for the fact the videos made it online. Sources say it was only after journalists drew attention to the videos that the Canadian military had an opportunity to scrutinize the footage and to conclude, as it did later that day, that the material represented a risk to soldiers, leaving them vulnerable to attack by extremists. The Globe and Mail, A1

*** Soldier puts DART on map**
When Master Cpl. Denis Carriere heard he was headed to Nepal to provide relief after an earthquake hit the country, killing more than 7,000 people, he knew he had to work quickly. For the first time in his four-year career as a geomatics technician with Canada's Disaster Assistance Response Team (DART), he was headed overseas. He said he was excited to be part of a specialized team that provides relief in the world's most deadly natural disasters, but also knew he only had two days to make a lot of maps. "It's an art. You leave really fast and you have to figure out everything on a day's notice," Carriere said via phone from Nepal. "It's about giving people a situational awareness. If you're in the field in Nepal, there's no Wi-Fi, there's no Internet, so that mapping support when you're in a remote area is really essential for your awareness." Ottawa born and raised, Carriere has called Kingston home for the past four years. He's one of two military men from the city who were deployed as a part of DART to Nepal, where the capital city of Kathmandu and surrounding areas were devastated by the 8.1 magnitude quake. Kingston Whig Standard, A1

INTERNATIONAL

La NSA a agi illégalement avec ses collectes massives
La collecte massive de données téléphoniques opérée par l'Agence de sécurité nationale américaine (NSA) est illégale, a jugé jeudi une Cour d'appel américaine, estimant qu'elle outrepassait le cadre fixé par le Congrès. Les lois sur lesquelles s'est appuyée la NSA pour mettre en place cette collecte « n'ont jamais été interprétées pour autoriser quelque chose qui s'approche de l'ampleur de la surveillance généralisée en question ici », a estimé un tribunal de New York dans un document de 97 pages. La plainte avait été déposée par l'association de défense des libertés ACLU (American Civil Liberties Union) contre la NSA, l'agence de renseignement chargée de l'interception des communications, et le FBI après les révélations faites en juin 2013 par l'ancien consultant de la NSA, Edward Snowden. Les millions de métadonnées téléphoniques collectées par la NSA comprennent des numéros de téléphone, la durée des conversations téléphoniques ou leur localisation mais pas leur contenu. L'ACLU estime en outre que ce programme constitue une violation massive de la vie privée sans aider outre mesure à contrer le terrorisme. Le Devoir.com; Waterloo Region Record; Assocaiated Press (Calgary Herald, Montreal Gazette, Vancouver Sun, Windsor Star, National Post, Edmonton Journal, Times Colonist)

* **Floods, tornadoes cause destruction, injuries in Oklahoma**
Authorities are investigating the damage left behind by spring storms carrying more than a dozen suspected tornadoes that swept across the southern Plains, bringing floods, forcing the evacuation of an international airport and destroying homes near Oklahoma City. At least 12 people were injured, but no deaths were immediately reported from the twisters that also hit rural parts of Texas, Kansas and Nebraska on Wednesday night. The Oklahoma City area seemed to be the hardest hit. A twister destroyed homes in Grady County, southwest of the city, and it appeared another tornado touched down in the area later Wednesday evening when a second storm came through. Canadian Jihad
An east-end Montreal college is gaining a reputation as a breeding ground for jihadis after four of its students were arrested at the airport Friday, allegedly on the verge of taking off to join an overseas terror group. The latest arrests bring to 11 the number of Collège Maisonneuve students who since January have either left to join jihadi groups overseas or have been arrested on suspicion of planning to leave. The four were among 10 students from various CEGEPS - post-secondary institutions unique to Quebec - and high schools arrested at Pierre Elliott Trudeau Airport Friday, the college confirmed. They are "suspected of wanting to leave the country to join jihadist groups," the RCMP said in a statement. They had their passports confiscated and were released without charge. The police said they spoke to the families and friends of those arrested and the investigation is ongoing. (…) **Federal Public Safety Minister Steven Blaney** announced Wednesday that he will invite his provincial counterparts to an early summer meeting to discuss terrorism and radicalization. "***There is no profile of terrorists. You can come from whatever (income), whether Canadian-born or foreigner, the profile of a terrorist is very diverse***," he told CBC News Network. "***What we need to work on is the motive. We need to be able to identify at an early stage those individuals who are being radicalized and, more importantly, we have to work on the radicalizers***." Postmedia News (National Post, A1, Windsor Star, Vancouver Sun, Leader-Post, Star Phoenix, The Gazette, Edmonton Journal, Ottawa Citizen, Calgary Herald); Postmedia Network (Kingston Whig Standard, B1, London Free Press, B1, Calgary Sun, Toronto Sun, Edmonton Sun, Ottawa Sun); * La Presse (Le Quotidien)

La GRC arrête dix Québécois cherchant à joindre les djihadistes
La Gendarmerie royale du Canada a confirmé mardi soir l'arrestation de dix jeunes citoyens montréalais soupçonnés de vouloir se joindre à des groupes djihadistes. L'équipe intégrée sur la sécurité nationale a mené en fin de semaine l'opération qui a permis de «perturber les intentions» des individus arrêtés, a fait savoir le GRC dans un communiqué. Selon la GRC, l'ensemble des Montréalais interceptés par les forces policières l'ont été à l'aéroport Pierre-Elliott-Trudeau. Les suspects sont soupçonnés d'avoir eu l'intention de quitter le pays pour rallier les rangs de groupes djihadistes. La police confirme avoir rencontré les familles et les proches des jeunes arrêtés. La GRC fait savoir qu'aucune accusation n'a pour l'instant été déposée et que l'enquête est toujours en cours dans cette affaire. Les passeports des 10 jeunes leur ont tous été retirés, ajoute les autorités policières. Dans son communiqué, la GRC se montre solidaire avec les familles des individus arrêtés. (…) Le **ministre de la Sécurité publique et de la Protection civile du Canada, Steven Blaney**, a réagi aux arrestations effectuées au cours de la fin de semaine à Montréal. Il a d'entrée de jeu félicité la Gendarmerie royale du Canada et l'Équipe intégrée de la sécurité nationale pour leur vigilance continue en vue de « ***protéger nos rues et nos collectivités contre la menace terroriste continue*** », fait-il savoir dans un communiqué envoyé aux médias. Presse Canadienne (L'Acadie Nouvelle, 19); Le Devoir

Projets à venir contre la radicalisation
"Il s'agit de jeunes nés chez nous, qui sont allés dans nos établissements d'enseignement. C'est préoccupant au plus haut point. On va présenter une politique très large sur cette question qui comprendra des éléments de prévention et de détection", a lancé le premier ministre hier avant la période de questions. La ministre de la Sécurité publique, Lise Thériault, s'est elle aussi dite troublée par l'interception à l'aéroport de Montréal d'une dizaine de jeunes qui tentaient de quitter le pays pour rejoindre les rangs des djihadistes. Les mesures que Mme Thériault présentera "prochainement" permettront d'ailleurs de mieux former les premiers intervenants, comme les professeurs, pour détecter les "signes de radicalisations." "Les professeurs et les parents doivent être à l'affût", a-t-elle lancé. Le **ministre fédéral de la Sécurité publique, Steven Blaney**, a annoncé qu'une rencontre au sommet avec ses homologues provinciaux aurait lieu au début de l'été pour mettre en commun leurs ressources en matière de prévention de la radicalisation et du terrorisme. Le Journal de Montreal, 16 (Le Journal de Quebec); La Presse; * Presse Canadienne (La Tribune, Le Soleil, La Presse, Le Droit, La Voix de l'Est, Le Nouvelliste)

Radicalization concerns in Quebec on rise
Following the arrests of another 10 youths allegedly on their way to Syria, concern about radicalization in Quebec has reached a new high, both in the upper echelons of government and by parents worried about their own children joining a terrorist group abroad. Premier Philippe Couillard said Wednesday he was worried to the "highest degree" about the situation, and promised to have new measures to prevent radicalization in place "soon" - though he couldn't say when. The new strategy would involve helping parents and educators detect signs of radicalization. "These are youths who were born here and educated in our schools - it's extremely worrisome," Couillard said. (…) The RCMP seized all of their passports but has not laid any charges against them, said Const. Erique Gasse. "The investigation is ongoing - things can change," Gasse said. Neither the RCMP nor the Public Prosecution Service of Canada would say exactly how old or what gender the youths were, or how they were discovered at the Pierre Elliott Trudeau Airport, though **Federal Public Safety Minister Steven Blaney** confirmed it was thanks to a tip from parents. "***This time, thanks to the support of the parents, we were able to prevent (them from leaving)***," **Blaney** said. The RCMP met with all of the families and pleaded on their behalf for privacy. Postmedia News (The Gazette, A4)

*** Stephen Harper makes his way to Montreal for King David Award gala**
As the Victoria Day parliamentary recess draws to a close, Prime Minister Stephen Harper is set to spend the day in Montreal, starting with a midday appearance at the Pierre Elliott Trudeau International Airport, where he'll deliver an announcement alongside Quebec cabinet ministers **Steven Blaney** and Denis Lebel. CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Alberta wildfire sparked by burning truck expands**
Fire crews were busy fighting a large wildfire Wednesday after an angry man set his truck on fire in a ditch near Red Earth Creek, RCMP say. Mounties still don't know exactly why the man was so upset, but the fire tripled in size Wednesday and was still growing. It was burning across 338 hectares, about twice the size of Edmonton's Terwillegar Park. Duncan MacDonnell, spokesman for Alberta's Sustainable Resource Development, said 60 firefighters are now fighting the blaze, which was the largest out-of-control fire in the province Wednesday. Edmonton Journal, A11

*** Environnement Canada va s'ajuster**
Environnement Canada et le ministère de la Sécurité publique doivent ajuster le système Québec en alerte pour éviter " de le brûler " auprès de la population et qu'il ne perde de son efficacité. Ce constat survient au lendemain du tout premier message envoyé par la plateforme depuis sa mise en application. Plusieurs auditeurs de la radio et téléspectateurs devant la télévision ont trouvé plutôt intenses les alertes émises pour Québec, mardi, informant la population qu'une menace de tornade était imminente dans certains secteurs. Voix robotisées incompréhensibles, volume assourdissant et répétition abusive du message ont été des motifs de plaintes envoyées aux diffuseurs, obligés par le Conseil de radiodiffusion et des télécommunications canadiennes de transmettre les alertes. Le Quotidien, 22

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Grown-up countries take out own trash
At first blush, the news this week might give Canadians serious pause over Ottawa's anti-terror strategy. The RCMP says officers intercepted 10 young Montrealers on the weekend on suspicion they were jetting off to join ISIL, something of a trend - at least eight junior jihadis have left Quebec since January, many connected to a single college. And then there's Jahanzeb Malik, a 33-year-old from Toronto, who police allege planned a car bombing in downtown Toronto in lieu of jetting off to join ISIL. Ironically enough, police allege, he feared that would get him busted. This too could be part of a pattern. Martin Couture-Rouleau, who in October mowed down two Canadian soldiers in Saint-Jean-sur-Richelieu, killing Warrant Officer Patrice Vincent, had reportedly wanted to travel to the Middle East to join ISIL - but had been stopped at the airport. It's understandable some are wondering why we're implementing these de facto exit controls on people determined to bring down the West and all for which it stands. If they want to leave, should we not thank them and wish them a speedy demise? Would we not prefer these people wreak their havoc overseas? In a word: no... But evidence suggests we are being vigilant, and that it's working. In a world with ISIL in it, that's about all you can hope for. Among the many knocks against the Conservatives' anti-terrorism legislation is that it could actually impede frontline anti-terror efforts: speech restrictions could deter terrorists from helpfully sharing their plans online, or an imam from inviting the RCMP's counter-violent extremism team to interact with a parishioner who's going off the rails. The successes we see this week highlight just what's at stake. Postmedia News (National Post, A1)

Integrated anti-radicalization effort key to defusing threat, experts say
A counterterrorism catch-and release campaign by Canada's national police force may have prevented 10 aspiring *jihadis* from heading off to war, but the roundup at Montréal-Trudeau airport is raising worries about what comes next for radicalized youth. On Wednesday, while federal and provincial political leaders applauded the police work, antiradicalization experts said only an integrated effort involving civilians and police can deal with youth fixated on taking up arms in the Middle East or joining terrorist groups. In Montreal, which has become a *jihadi* recruiting hotbed, the only tool appears to be handcuffs. In the past six months alone, at least seven youth have left the city to join the Islamic State in Syria or Iraq. At least 15 other teenagers and young adults have been arrested pre-emptively. Some have volunteered to be monitored, while others, such as those arrested at the Montreal airport on the weekend, were simply released after having their passports confiscated. Acting on a tip from one or more parents, the RCMP arrested the 10 youth at the airport but have released few other details. An 11th teenager was captured on video being led away from a Montreal home by investigators. None of the teenagers have been identified publicly and no charges were laid. The government may opt not to pursue a criminal case for fear that any public trial could force it to reveal sensitive intelligence methods - a chronic issue in

Canadian counterterrorism cases. The passport confiscations recalled last fall's terror attacks in which two lone-wolf assailants each killed Canadian soldiers after they were thwarted in attempts to travel abroad and possibly join jihadi groups. Officials provided no answer when asked how they might prevent similar backlash in the latest cases. Observers are increasingly asking whether the threat to Canada can be contained if the ranks of extremists and thwarted jihadis continue to grow. The RCMP's terrorism prevention program is designed to intervene before suspects mobilize toward violence, but the details of the program remain murky. In Quebec, Premier Philippe Couillard has promised oft-delayed legislation to deal with radicalization. He said a new law will be presented within weeks, meaning it will be months before any new program is enacted. Globe and Mail, A1

'The kids don't come to us and speak about joining ISIS,' Montreal imam says
For leaders of the Muslim community, news of 10 youths being intercepted while allegedly on their way to Syria is deeply troubling, says imam Salam Elmenyawi, pictured. "In a situation like this, we have no knowledge whatsoever," said Elmenyawi, president of the Muslim Council of Montreal. "The kids don't come to us and speak about joining ISIS, and we have no information from the police or RCMP or CSIS." He said all the imams have spoken against youth travelling abroad to fight, but now they want to know more. The RCMP was to introduce a prevention strategy in December 2014 that would include Muslim leaders. If a youth showed signs of radicalization, he or she would be surrounded by faith leaders, social workers and teachers to work them through it. For reasons unknown, however, the launch has been delayed until the end of 2015. Postmedia News (National Post, A5)

* **Stemming jihadi recruitment**
In the wake of the arrest of 10 young Montrealers suspected of wanting to join jihadist groups overseas, experts say more needs to be done to educate and counter the extremist rhetoric some Canadian youth have been eager to embrace. (...) One expert says it's too soon to say if the arrests in Quebec this year mean the province is a more fertile hotbed for jihad recruiting than other Canadian jurisdictions. Stéphane Leman-Langlois, a professor at Universite Laval in Quebec City, says what is particular about Quebec is the increased surveillance by authorities since two terror attacks last fall with ties to the province. Another factor may be what he calls an anti-Muslim sentiment in the province. "The one thing that stands out is the way the Muslim community is becoming more and more ostracized in Quebec ... " Leman-Langlois said. Educating youth is one key, but so is a clear strategy to fight Islamic State online propaganda, says a Concordia University religion professor. "The best way is to provide a different narrative," said André Gagné, who speaks on religious extremism. "We need as a society to give hope to people, to help them find their meaning and their way." Canadian Press (Hamilton Spectator, A10, The Record, Chronicle-Herald, Red Deer Advocate, Telegraph-Journal, Times & Transcript)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

U.S. border agent was right to shoot B.C. man
A prosecutor in Washington state says a U.S. Border Patrol agent was justified in fatally shooting a 20-year-old Prince George man who crossed the U.S.-Canada border illegally in March and sprayed the agent with bear spray. Whatcom County prosecutor Dave McEachran said the agent retreated as far as he could from Jamison Childress, and warned him that he would have to shoot if the bear spray was deployed. Alberta RCMP in Alberta said Childress was being sought on a murder charge in the killing of 18-year-old Brando Walker. Walker's partially burned body was found on the Tsuu T'ina Nation reserve near Calgary on March 7, although RCMP said he was killed in a Calgary home. The Whatcom County sheriff's office took the lead in investigating the March 19 shooting. Associated Press (Times Colonist, A6, Times & Transcript, Red Deer Advocate)

Un individu de Dixville intercepté avec 80 grammes de cannabis aux douanes
Un jeune homme de Dixville, près de Coaticook, aurait profité de sa double citoyenneté pour transporter de la drogue sur son lieu de travail en territoire américain. Mardi, en avant-midi, les douaniers américains ont interpellé le suspect de 21 ans aux douanes de Norton au Vermont alors qu'il était en possession de 80 grammes de cannabis. De plus, à la suite d'une courte enquête lancée à partir d'informations reçues du public, les policiers du poste de la MRC de Coaticook, de la Sûreté du Québec (SQ), ont pu effectuer

une perquisition en après-midi à son domicile situé sur la route 147. A cet endroit, ils ont trouvé plus de 560 grammes de cannabis, quelques comprimés de méthamphétamines et plus de 1600 $ en liquide. La Tribune

*** Deportation hearing told of alleged terror plot**
A Pakistani man accused of plotting bomb attacks on downtown Toronto lied during his testimony, his deportation hearing was told Wednesday. In closing submissions, government representative Jessica Lourenco called Jahanzeb Malik a terrorist sympathizer bent on committing terrorism in Canada. Malik's lawyer, Anser Farooq, called it suspicious that a police officer's secret recording equipment apparently failed during a key interaction with Malik. Farooq said the government provided no audio and called some of the officer's testimony "fanciful." The government, which wants to deport him, maintains Malik, 33, is an Islamic extremist who tried to recruit the officer for a plot to bomb the U.S. consulate and financial district buildings. Canadian Press (Whitehorse Daily Star, Red Deer Advocate, Times and Transcript, L'Acadie Nouvelle, The Guardian, Cape Breton Post); Postmedia News (National Post, A1, Gazette, Ottawa Citizen, Calgary Herald, Province, Windsor Star, Vancouver Sun, Leader-Post, Edmonton Journal, Star Phoenix); Toronto Star, GT3, Postmedia Network (London free Press, Kingston Whig Standard, Ottawa Sun, Toronto Sun)

*** Four-year sentence imposed for violent sexual assault**
A man who violently raped a woman will serve a four year prison sentence, then faces deportation from Canada. Olabode Abayolmi Olotu, 36, was sentenced Wednesday in Saskatoon provincial court for sexual assault causing bodily harm. The married father of two young children was convicted after a trial earlier this year of raping the 44-yearold woman, whose identity is subject to a publication ban, in the back of his car on April 20, 2014. He and the woman were in a clandestine relationship, but on that occasion, the judge found Olotu forced anal sex on the woman without her consent, leaving her bleeding and bruised. On Wednesday, Crown prosecutor Cory Bliss argued for a sentence of 4 1/2 years in prison. Olotu, originally from Nigeria, is a permanent resident of Canada - but that will change with this conviction. "He's facing deportation as soon as his sentence expires, with no chance of appealing that removal order," Mitchell said in court. "He's the sole breadwinner for the family and it's obviously going to have a massive impact on the entire family." Judge Barry Singer said the Crown was correct that the sentencing range for this offence, because of the injuries and psychological harm, should be higher than three years. He sentenced Olotu to four years in prison. Postmedia Network (Star Phoenix, A7)

*** Man faces lengthy jail term after drugs found in mail**
A Toronto man and Nigerian national is facing a lengthy prison sentence after what looked like a parcel of air valves in the mail instead turned out to be more than $250,000 worth of heroin. The shipment, intercepted by Canada Border Services Agency officers at the International Mail Processing Centre in Mississauga, was replaced by the RCMP as part of a controlled delivery to a home in Etobicoke on July 25, 2011 which led to the arrest of Peter Ukwuaba. He was convicted by Justice Casey Hill last week of importing heroin, conspiracy to import heroin and possession of heroin for the purpose of trafficking. Mississauga News (2015-05-20)

*** Un avantage compétitif pour Domtar**
La papetière obtient son accréditation au programme d'autocotisation qui facilitera son passage aux douanes Domtar fait désormais partie du Programme d'autocotisation des douanes de l'Agence des services frontaliers du Canada (ASFC), un privilège qui simplifiera l'importation de fibres de bois en provenance des États-Unis. L'usine de Windsor devient ainsi la première installation de l'industrie forestière canadienne à obtenir cette accréditation. La Tribune

*** Warn truckers of traffic circle tipping hazard**
An editorial states "Sign, sign, everywhere a sign. The designers of the Herb Gray Parkway should embrace such rock 'n roll lyrics from the 1970s because trucks are doing exactly that - rocking and rolling - as they try to negotiate the traffic circle en route to Highway 401. Yellow hazard signs warning truckers of tipping dangers - used on winding roadways throughout the United States - should be sprinkled liberally along all entrances to the parkway roundabout. In the U.S., they are sometimes referred to as "dancing truck" signs - a whimsical name, but one that truckers understand to mean slow down or find

yourself lying helplessly on your side. The dangers posed by tipping trucks are formidable for vehicles driving alongside transports on the roundabout. The latest truck to tip over there was a tanker carrying 48,000 pounds of grape concentrate. Imagine that landing on the roof of your car. It was the third truck rollover on the roundabout in six weeks. Miraculously, no one has been seriously injured or killed." Postmedia News (Windsor Star)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Spy agencies target mobile phones, app stores to implant spyware**
Canada and its spying partners exploited weaknesses in one of the world's most popular mobile browsers and planned to hack into smartphones via links to Google and Samsung app stores, a top secret document obtained by CBC News shows. Electronic intelligence agencies began targeting UC Browser — a massively popular app in China and India with growing use in North America — in late 2011 after discovering it leaked revealing details about its half-billion users. Their goal, in tapping into UC Browser and also looking for larger app store vulnerabilities, was to collect data on suspected terrorists and other intelligence targets — and, in some cases, implant spyware on targeted smartphones. The 2012 document shows that the surveillance agencies exploited the weaknesses in certain mobile apps in pursuit of their national security interests, but it appears they didn't alert the companies or the public to these weaknesses. That potentially put millions of users in danger of their data being accessed by other governments' agencies, hackers or criminals. CBC News analyzed the top secret document in collaboration with U.S. news site The Intercept, a website that is devoted in part to reporting on the classified documents leaked by U.S. whistleblower Edward Snowden. The so-called Five Eyes intelligence alliance — the spy group comprising Canada, the U.S., Britain, Australia and New Zealand — specifically sought ways to find and hijack data links to servers used by Google and Samsung's mobile app stores, according to the document obtained by Snowden. Over the course of several workshops held in Canada and Australia in late 2011 and early 2012, a joint Five Eyes tradecraft team tried to find ways to implant spyware on smartphones by intercepting the transmissions sent when downloading or updating apps. CBC.ca

LAW ENFORCEMENT / APPLICATION DE LA LOI

Gangs top police survey concerns
Gang activity was at the top of the list of concerns expressed by Saskatoon residents who took part in a survey conducted on behalf of city police. Insightrix Research Limited gathered the most recent data for 2014 and compared the results to surveys conducted in prior years. The city police force hires an independent company to conduct a community satisfaction survey every three years. Overall, the survey found public satisfaction with the police has increased. Under the category of "social disorder" - one of the many different areas measured by the survey - the most common concern was gang activity, at 26.4 per cent. Police chief Clive Weighill said he wasn't surprised. "People are watching what's going on," he said, noting police have responded to 14 shootings so far this year. In 2003, concern about gangs was measured at only five per cent, he said. Police recently formed a "gun and gang" unit by shuffling resources in the criminal investigation division. Weighill said the staff level was increased to look specifically at dismantling and disrupting local gang activity. He declined to go into specifics about the unit's strategy for dealing with gangs, but said its members will continue to work closely with community partners, adding they are "staunch supporters of Str8 up," a program that assists people leaving gang and criminal street lifestyles. Postmedia News (StarPhoenix, A1)

Costly waiting game
Red Deerians are on the hook for $100,000 every year the former RCMP building sits empty. The ex-RCMP site on 49th Street is earmarked for a new provincial courthouse to replace the crowded 1980s-built one just a block away. The previous Progressive Conservative government indicated a new courthouse in Red Deer is a priority and the city's choice for a site might be suitable. But nothing has been set in stone and the change in government has forced the City of Red Deer to step up its advocacy efforts. The city outlined some of the pressing issues in Red Deer, including the need for a new

courthouse, in a letter penned to premier-elect Rachel Notley. The city pays for basic maintenance and heating costs to keep the former police station up and running. The RCMP moved out of the building in April 2011. Red Deer Advocate, A1

RCMP memorial to be at centre of new park

Blacksmith Paul Fontaine of MacDougall Settlement considers it a great honour to be fabricating a steel monument that will be placed in a church park in honour of the three RCMP officers killed in Moncton last year. "I usually make railings and fences, so this is a real dream job for me. It's a chance to do something really meaningful and different," Fontaine said Wednesday as he and his son Luc continued working on the sculpture, which will be unveiled in the new Honour Park at Glad Tidings Church on Mountain Road in Moncton on Sunday, June 7. The steel sculpture has been taking shape at Fontaine's shop, Heritage Wrought Iron Works, for several weeks. It will stand about two metres tall and features three abstract human forms reaching up to the sky. "The three abstract human forms represent the three fallen officers, but they also represent how people in the community look out for each other," Fontaine said. "I think the problems with our society are not economic or political, but spiritual. This sculpture represents a community reaching for the heavens, reaching for the sky." This sculpture is not associated with the official monument to the fallen officers, which is now being designed for the City of Moncton and will be placed on the Riverfront Park. The sculpture was designed by Fontaine and Pastor Paul Pattison of Glad Tidings Pentecostal Church. It is made of steel that has been cut to shape and welded together for a three-dimensional shape. The three human figures stand back-to-back and face in separate directions as they reach toward the heavens. Pattison says the sculpture will be the centrepiece of the church's new Honour Park, a public park dedicated not only to the three RCMP officers but also the Metro Moncton community. The dedication ceremony will be held on Sunday, June 8, immediately following the Sunday service at 10:30 a.m. Pattison said officials from the RCMP and the City of Moncton have been invited to attend. Times & Transcript, A1

City of Moncton unveils design proposals for RCMP monument

The first thing you need to know is nothing unveiled at Moncton City Hall Wednesday night looks exactly like the memorial to three fallen Codiac RCMP members that will ultimately stand on Moncton's riverfront. The second thing you should know is every artist on the short list for the commission to create the memorial expects community input to be a key part of what the final piece will be. The City of Moncton held a public consultation regarding the memorial project Wednesday night, filling the sixth-floor meeting room of city hall to capacity. The five artists who have been shortlisted travelled to Moncton from as nearby as Sussex and as far away as Victoria to present their proposed concepts to the general public, members of city council and the widows of the three police officers. Constables Fabrice Gevaudan, Dave Ross and Douglas Larche were murdered last June 4, as they joined in police efforts to stop a man shooting up a residential neighbourhood in Moncton's northwest end. Two other police officers, Southeast RCMP Const. Darlene Goguen and Codiac RCMP Const.Eric Dubois, were wounded in two other ambushes that night. Mounties and municipal police officers from across the region ultimately captured the gunman 29 hours after the shooting began. Moncton's Justin Bourque is now serving five life sentences for the crimes. Each artist was given somewhat specific instructions of what the monument should include. Times&Transcript, A1; CBC.ca

Report urges better training, tracking use of force by police

Most Canadian police forces still do not collect the right kind of in-depth data on when they resort to pulling their weapons or using force, nor do they receive sufficient mental-health training to de-escalate confrontations that may turn deadly, a new report says. The Star obtained a copy of the research report commissioned by the federal public safety department after the Toronto police shooting of Sammy Yatim in 2013. It takes a comprehensive look at how police forces in Canada and the U.S. track their officers' use of force in encounters between police and the public. Its main conclusion is that despite years of high-profile and critical inquiries into police actions in, for example, the Yatim shooting, the Vancouver police shooting of Paul Boyd, or the RCMP tasering of Robert Dziekanski, a consistent national approach is needed toward documenting when and why officers use force against citizens... Ian McPhail, chairman of the RCMP's civilian watchdog body, said in an interview that a consistent national approach would absolutely be beneficial, but may be seen as too costly to implement. Yet, he said it may lead to a reduction in use of force, pointing to how Taser use by Mounties dropped during the commission's three-

year review of RCMP policies and practices after Dziekanski's death in 2007. The latest report, written by independent consultants John Kiedrowski, Ronald-Frans Melchers, Michael Petrunik and Christopher Maxwell, explores what it says are two of the best approaches to documenting use of force. The goal of both is to provide a 360-degree look at a subject's behaviour as well as the officer's response, and to use consistent definitions of what constitutes "force" to collect narrative data as well as statistics that could be analyzed for trends. In Canada, such analysis could reveal whether use-of-force injury suffered by an officer or a suspect is related to demographic factors such as race or ethnicity, or tied to a police officer's work shift, stress levels or other indicators such as sleep deprivation, it says. Toronto Star, A6

Police seek son of woman found dead

Homicide detectives are searching for the son of a woman found dead in a Richmond home on Tuesday. Richmond RCMP were called at around 3:30 p.m., after family members found the body of 62-year-old Redelma Belisario. The Integrated Homicide Investigation Team says an autopsy is needed to determine the cause of death, but foul play is suspected. IHIT spokeswoman Sgt. Stephanie Ashton said finding the woman's son, Darwin Lescano, 38, is a priority, calling him a suspect in her death. Postmedia News (Vancouver Sun); The Province

Police pursue 30-year-old mystery - RCMP chase new leads in Interlake man's death

Candace Derksen. Steven Pelletier. Myrna Letandre. Derek Kembel. Heather Mallett. Divas Boulanger. All of these Manitoba slaying victims share a common trait - police arrested their accused killers years after the crimes occurred. Now RCMP are hoping to add another name to the list, believing they've made a breakthrough in one of the coldest cases in their files. Michael Kalanza, 80, vanished from the Interlake community of Faulkner in 1985. His remains were found at an old limestone quarry in nearby Spearhill in 1997. A group of Ashern Central School Grade 9 students on a field trip made the discovery. Investigators believe Kalanza was the victim of foul play, although no arrests have been made. But the search for justice isn't finished. RCMP returned to the scene Wednesday, saying officers in the historical case unit recently took a fresh look at the 30-year-old mystery and now have grounds to conduct a renewed search of the site. Nearly two dozen uniformed and civilian members are involved. "These cases are never closed. They don't go into a box in the basement," RCMP spokeswoman Tara Seel said Wednesday. RCMP say they've discovered "new investigate pathways" that are largely based on advances in forensic techniques that weren't available in the late 1990s. Existing DNA samples have been resubmitted for testing, and RCMP hope this week's search might unearth some additional clues to be analyzed. "We've advanced a long way in forensic analysis," said Seel. "We're hoping to find supporting evidence to coincide with the new information we've received." Winnipeg Free Press

Cost of catching senators: $21M

It cost $21 million to find out 10 senators claimed more than $100,000 worth of ineligible expenses, CTV News reports. Auditor General Michael Ferguson's sweeping audit of the Senate has employed 142 auditors, some of them private contractors, according to the broadcaster. The auditors were commissioned to look into the expense claims of 117 current and former senators and reportedly found 10 had committed "serious spending abuses." The CTV report says the findings will be referred to the RCMP for investigation, as they were in the cases of Mike Duffy, Pamela Wallin, Patrick Brazeau and Mac Harb. The audit found problematic claims from about 30 others, but they weren't considered serious enough to warrant police involvement, according to CTV. The senators will be required to repay the money. Ferguson's complete report, due for release the first week of June, is reportedly the most expensive audit ever conducted on Parliament Hill. Postmedia News (Winnipeg Sun, Toronto Sun, Calgary Sun, Ottawa Sun, Edmonton Sun)

Pair charged in series of shootings

B.C.'s gang task force has arrested and charged two men believed to be connected to a series of shootings in Surrey. The Combined Forces Special Enforcement Unit searched a home in Surrey and seized marijuana, four rifles and a handgun. Eighteen-year-old Chandanjot Singh Gill faces several firearms charges and one count of trafficking, while 21-year-old Munroop Hayer has been charged with possession for the purpose of trafficking. Both men are from Surrey. Police say the arrests come a month after a dedicated tip line was launched. Postmedia News (Vancouver Sun, A3); The Province

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Long-term offender sent to halfway house
A designated long-term offender who stabbed a 60-year-old woman outside a Kamloops hospital has been ordered to live in a halfway house. The Parole Board of Canada has ordered Robert Semchuk to live under seven strict conditions after his prison sentence expired Tuesday. The board's written decision says the 51-year-old remains at a high risk to reoffend. Semchuk will be bound by conditions that require him not to consume drugs and alcohol and avoid people involved with criminal activity. In 2009, a B.C. Supreme Court judge named Semchuk a longterm offender and sentenced him to a nine-year prison term, which was shortened to six years with credit for time served. Canadian Press (The Province, A16, Times Colonist)

* **Un homme qui aurait menacé de tuer un gardien veut sortir de prison**
Un criminel récalcitrant qui aurait menacé de trancher la gorge d'un gardien de prison espère recouvrer sa liberté très bientôt. Dès qu'il recevra sa sentence pour avoir tué un homme en 2005. L'avocat de Marc Charrette compte bien faire sortir dès que possible son client, qui a passé presque la moitié de sa vie en prison pour divers délits. L'homme de 51 ans est incarcéré depuis 2005 pour avoir tiré à bout portant sur Jocelyn L'Écuyer dans le stationnement du Motel Oscar à Longueuil, le tuant sur le coup. (...)La Couronne, représentée par MeSylvie Villeneuve, a demandé à la juge Sophie Bourque d'imposer à Charrette une peine de 20 ans pour l'accusation réduite d'homicide involontaire à laquelle il a plaidé coupable en octobre dernier. Compte tenu du temps que l'accusé a déjà passé en détention préventive qui compterait en double, il ne lui resterait que deux ans à purger. (...) Ainsi, une gestionnaire des Services correctionnels canadiens est venue raconter à la cour les séjours tumultueux du quinquagénaire au pénitencier. Marc Charrette est un "cas exceptionnel ", selon la témoin Dominique Dulac. Menacer de trancher la gorge d'un officier, lancer un liquide inconnu en direction des agents correctionnels et couvrir d'excréments le hublot de sa cellule d'isolement ne sont que quelques exemples du "comportement problématique" de M. Charrette entre 2008 et 2010. Il a eu pas moins de 80 rapports d'in-fractions majeures pendant cette période. (...) En 2008, un jury avait condamné Marc Charrette à la prison à vie pour meurtre non prémédité. La Cour d'appel avait ordonné un nouveau procès en 2010. Journal de Montréal, 9 (Journal de Québec)

* **In the courts**
A compilation of offences from Kingston's Ontario Court of Justice for the period of May 4 to 8, 2015. Only sentences that involved a large fine, probation or incarceration are included. (...)Paul Michael Desbien, 30, was convicted of having illegal possession of marijuana while serving a federal sentence at Joyceville Penitentiary. He's since been transferred to Collins Bay Penitentiary and 45 days have been added to the five-year sentence he was already serving for aggravated assault. Federal Crown prosecutor Rachel Stephenson said Desbien was smoking marijuana in his cell in early February and a correctional officer smelled it and searched him, recovering 12.3 grams of it hidden inside his clothes. Defence lawyer Courtney Cottle said Desbien was using the weed for pain relief. She told Justice Allan Letourneau the inmate still suffers the after effects of having previously sustained burns over 65% of his body. But he was not receiving pain medication in prison, according to the defence lawyer. Desbien asked the judge to order **Correctional Service Canada** to provide medication. But Justice Letourneau said that's outside his powers. Kingston Whig-Standard

Un tueur à gages repentant
Un tueur à gages rongé par les remords pour un meurtre commis en 1996 renonce à voir sa peine de prison être réduite de huit ans parce qu'il veut épargner les proches de sa victime. "Si mon père avait été assassiné, je voudrais au moins que le tueur fasse son temps. On ramène cette histoire-là dans les médias ces jours-ci et c'est à cause de moi, parce que j'ai décidé de faire une révision judiciaire. À cause de moi, la famille a à vivre ça. Ça n'a pas de bon sens. Je ne peux pas accepter ça", a lancé André Vincent en Cour hier au palais de justice de Montréal. Dans une volte-face inattendue, l'homme de 44 ans a ainsi mis fin à une procédure qui visait à le libérer de détention huit ans avant la fin de sa peine. Reconnu coupable en 1999 du meurtre de Donald Duval, un homme d'affaires et père de famille sans

histoires, Vincent avait été condamné à la prison à vie sans possibilité de libération conditionnelle avant 25 ans. Or, le Code criminel a déjà prévu qu'après 15 ans de détention, il était possible de demander que cette date de libération soit devancée. Journal de Montréal, 7 (Journal de Québec), * 1, * La Presse (Voix de l'Est, 9)

No pass for killer mom
A murderous stepmother convicted in what the parole board called "Canada's worst case of child abuse" was denied escorted day passes, the Toronto Sun has learned. Marcia Dooley last Wednesday "accepted more responsibility for the violent injuries" she inflicted on her seven-year- old stepson, Randal, the Parole Board of Canada decision stated. Dooley, now 45, said her own childhood abuse "played a significant role" in the killing of Randal, yet she applied for escorted, temporary passes to visit her ailing mom in Scarborough, the board decision stated. "The brief (four-hour) confines of an escorted visit with family -- where Marcia could express her anger--could lead to a very difficult situation," the parole board said. Dooley's bid for escorted, temporary absences for an anger management course was also refused. (…) Marcia and Tony Dooley, now 49, were convicted of second-degree murder in the boy's Sept. 25, 1998, death. Both are now serving life sentences and Marcia -- as the main culprit--was denied parole until 2020, while Tony could apply this year but hasn't so far. Toronto Sun, 3

* **Parole granted in kidnap try**
Aaron Patrick MacDonald has been given full parole for his 2014 conviction for an attempted abduction. In 2012, MacDonald was caught with an imitation assault rifle hiding in the multimillion-dollar home of a mining executive. MacDonald was granted day parole in November 2014 with conditions that he follow psychological counselling, take the medication he has been prescribed and not have contact with the victim or member of the victim's family. His "actions had negative impacts on (the family's) lives, and they have the right to live without fear of any further contact," the Parole Board of Canada wrote in a document announcing the decision. The conditions of his day parole have been upheld for his full parole. Chronicle-Herald, A9

* **DeYoung granted parole**
Jason Kyle DeYoung has been released on parole with renewed special conditions. In 2008, DeYoung was sentenced to seven years in prison in connection with a high-speed chase through Halifax in October 2007. He was convicted of three counts of assaulting police with a weapon, robbery, uttering threats and breach of a recognizance. He was given a statutory release in September 2014 but was back behind bars in February because of failed drug tests and a fight outside a methadone clinic. "(DeYoung's) use of substances and resulting impulsive behaviours contributed directly to the current serious and violent offences, endangering public safety on the busy streets of the city," the Parole Board of Canada wrote in outlining its decision. Chronicle-Herald, A9

Arrêtée pour alcool au volant
L'ancienne agente des services correctionnels audrey Corneau est de retour devant les tribunaux après avoir été sentenciée, en décembre 2013, à une peine de trois ans et demi pour trafic de drogue à la prison de Chicoutimi. (…)L'ancienne agente a fourni un échantillon d'haleine de 217 milligrammes d'alcool par 100 millilitres de sang et a été détenue la nuit suivante sous une accusation de garde et contrôle d'un véhicule automobile avec les facultés affaiblies par l'alcool. Audrey Corneau a comparu cet avant-midi devant le même juge qui l'avait envoyée au pénitencier en décembre 2013. Au moment de l'arrestation, elle bénéficiait d'une libération conditionnelle totale depuis le 22 février après avoir purgé 14 des 42 mois de sa sentence. Elle ne s'expose pas à une révocation de sa libération parce que le délit de garde et contrôle n'est pas punissable d'incarcération, à la première offense. Journal de Québec, S2

Take your sights off gun owners, Mr. Harper
A letter to the editor by former Conservative MP Inky Mark states, "Re: last month's Supreme Court of Canada rejection of Prime Minister Stephen Harper's tough on crime agenda is good for the lawful gun owner. The top court of Canada struck down Harper's mandatory minimums for gun offences. Harper's law was deemed unconstitutional, labelled cruel and unusual. The top court stated that the law "could ensnare people with little or no moral fault" and who pose little danger to the public. Supreme Court Justice Beverley McLachlin wrote: "There exists a cavernous disconnect between the severity of the

licensing-type of offence and the mandatory minimum three-year term of imprisonment." You may ask: how does this decision affect the lawful gun owners of Canada? I've been preaching the same sermon for many years that Bill C-68 criminalizes the lawful gun owner. Harper has broken his election promise to repeal this law many times." Whitehorse Daily Star

*** We are all to blame for Omar Khadr's mistreatment**
An opinion piece states, "The term "Kafkaesque" crossed the threshold into cliché years ago, but at times the word is sorely needed. For a situation to be Kafkaesque, it must be menacingly incomprehensible, with a lone individual thrown into a dangerous but confusing situation. Omar Khadr's ordeal certainly fits that definition. The trial of Omar Khadr - Omar K. in a Kafka work, or an "alien unprivileged enemy belligerent" in Guantanamo code - is a permanent stain on Canada's record. Khadr was raised by a family with ties to Al Qaeda, trained to take up arms, accused of lobbing a grenade at a U.S. soldier at age 15, thrown into a secret prison without adequate legal assistance, beaten and tortured, forced to choose between an unjust plea deal and an unfair trial, until finally, one day 13 years later, he was released on bail. (…)The Conservatives, meanwhile, went to extraordinary lengths in refusing to assist Khadr, interfering with the judicial process and classifying him as an adult offender - all on the Canadian taxpayers' dime. When the Conservatives finally repatriated him, they did so not on principle, but because the U.S. government pressured them to. The Tories' cruelty surplus is more revealing than their fiscal one. But the blame for Khadr's mistreatment rests ultimately with us, the Canadian public. It was a democratically elected government that assisted the torturers, and a repeatedly re-elected government that tried to keep him in the penal colony." Toronto Star, A21

*** Khadr comparison insulting**
A letter to the editor states, "Regarding the letter Bomber must have Canada envy, Comparing the actions of Omar Khadr to those of Dzhokhar Tsarnaev is absolutely ludicrous. But even worse, to state that Elizabeth May, Thomas Mulcair, and the Supreme Court of Canada would support and condone Tsarnaev's killing of innocent citizens is an incredible insult to them all." London Free Press, A7

Don't forget Khadr's victim
A letter to the editor states, "I would suggest those supporting Omar Khadr spend a few minutes talking with the widow of the soldier killed by the grenade (reportedly) thrown by Khadr. Then they could ask her if it matters that he was 15, 25, or 95 years old when the grenade ended her husband's life. If Khadr and his lawyer manage to fleece the Canadian government for wads of cash, they should turn around and give the proceeds to the widow of the American soldier that died of his actions." Winnipeg Free Press, A12

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Eisenberger wants a gun ban after 'wild west' violence
Mayor Fred Eisenberger wants the city to ban guns in urban areas after a brazen "wild west" shootout in downtown Hamilton over the weekend. Eisenberger asked city lawyers Wednesday to report back to council about what the city can legally do - if anything - to curtail gun violence. He later acknowledged he hadn't "fleshed out the constitutional issues." "I think anything we can do to make guns less accessible is a positive step. We ban a lot of things in the city. My question would be 'Can we ban guns?'" he said after a general issues committee meeting. "Most reasonable people would wonder, why are people carrying guns in the first place?" While some U.S. jurisdictions allow citizens to openly carry handguns, Canadian law prevents most people from doing so. Collectors and target shooters must follow strict rules for transporting and storing the weapons. (…)Hamilton police spokesperson Catherine Martin said the service "would support any crime prevention strategy that may be available to the municipality," but didn't specifically comment on the idea of a municipal gun ban. Hamilton Spectator, A1

Changing the conversation
It did not take a sexual harassment scandal on his own turf to focus Concordia University president Alan Shepard's attention on the issue. For one thing, Shepard, who has been president and vice-chancellor of

Concordia since 2012, had ordered a review of Concordia's policies on sexual harassment and sexual assault in December, months before a Concordia student leader took her harassment case to the Quebec Human Rights Commission. And for another, Shepard has been sensitive to issues surrounding sexual assault and consent since his own undergraduate days. (...)Melissa Kate Wheeler, a former president of Concordia's Student Union, is among those pushing for better support for victims at the school. One of her main frustrations is that the Sexual Assault Resource Centre, for which she advocated during her term as president, has not been given the resources it needs to meet its mandate of educating, raising awareness, providing support and crisis intervention. Montreal Gazette, A1

*** Sex assault is a burden for the young**
Here's a fact you'll never forget once you hear it: The peak age for becoming a victim of sexual assault is 15. (...)According to crime expert Wayne Morris, who spoke to the provincial select committee on sexual violence and harassment in Kitchener on Wednesday, sex assault in North America is primarily a young person's burden. Sixty-one per cent of victims of rape, most of them young women, are 17 or younger. Eighty-three per cent are 24 or younger. They tend to have problems perceiving risk in a dangerous situation, said Morris. Perhaps because of that difficulty, they "seem to be especially vulnerable to further attack," he said. Meanwhile, most perpetrators are under 25, likely have a criminal record, and have the idea that men should be dominant and women should be submissive. Waterloo Region Record, B1

*** Power and Control: Sexual Assault Reflects Social Norms**
Canadian society was founded on a colonialist model that supported patriarchy. Men, especially men of privilege, developed a sense of entitlement to exert power and control over certain groups, one of which included girls and women. The basis of rape culture is men believing it's their inherent right to use power and control over girls and women. Historically, predominant ideas, social practices, media, government, schools, religious institutions, employers, the various levels of law enforcement and justice were established by privileged white men. All of these institutions play a role in condoning sexual assault. They accomplish this by normalizing violence against women and reinforcing the myth that the survivor is to blame. Conversely, these institutions can choose to make a difference by supporting women's rights - which, quite simply, are basic human rights. Raise the Hammer

*** 'I kind of feel sick': Teen targeted by cyberbullies speaks out after alleged sexual assault**
A young girl in Atlantic Canada is speaking out along with her parents about cyberbullying and an alleged sexual assault, urging others in similar situations to do the same. CTV News is not identifying the 15-year-old girl because she says she is a victim of sexual assault at the hands of a woman 10 years older than her. "I didn't know what she was doing to me 'cause I was like in shock, I was like frozed," the girl said. "She asked me out, and I said, 'I don't want to date you 'cause I'm not a lesbian,' and she didn't take that for an answer," the girl said. "So like then she grabbed my waist and then she was kissing me and like sticking her tongue down my throat and then she was choking me. And then she grabbed my butt." It took a couple of weeks before the girl told her parents, who immediately reported the alleged assault to police. The family says that's when things got worse. CTV News (2015-05-20)

*** Better police training, reporting on use of force needed, report urges**
Most Canadian police forces still do not collect the right kind of in-depth data on when they resort to pulling their weapons or using force, nor do they receive sufficient mental health training to de-escalate confrontations that may turn deadly, a new report says. The Star obtained a copy of the research report commissioned by the federal **public safety department** after the Toronto police shooting of Sammy Yatim in 2013. It takes a comprehensive look at how police forces in Canada and the U.S. track their officers' use of force in encounters between police and members of the public. Its main conclusion is that, despite years of high-profile and critical inquiries into police actions in, for example, the Yatim shooting, the Vancouver police shooting of Paul Boyd, or the RCMP tasering of Robert Dziekanski, a consistent national approach is needed towards documenting when and why cops use force against citizens. It also urges more substantial mental health training for frontline officers who confront troubled individuals, too, saying the research clearly shows officers who receive extensive training successfully de-escalate tensions and are less likely to use deadly force. The report concludes it's not merely a matter of public safety, but officer safety as well, because police officers often suffer injuries when situations turn violent. Toronto Star

*** Twitter fight partly to blame for Etobicoke students shooting deaths: Report**
A report into the deadly shooting last fall outside Don Bosco Catholic Secondary School blames a Twitter fight among students and a Toronto Community Housing complex nearby for having "drug-activity and gun-related issues." But the report stops short of recommending metal detectors be installed in Toronto Catholic schools, citing "practical, social and legal reasons." The Safe Schools Inquiry Panel Report will be presented Thursday night to TCDSB trustees. But CBC News has obtained an advance copy. The report contains 33 recommendations, some of which include teaching students how to use social media responsibly, reviewing students' use of electronic devices in school and investigating "the feasibility of developing a smartphone-based application that would permit students to anonymously report school-related safety concerns." The report says the mother of one of the slain students proposed the installation of metal detectors and implementation of random searches of students as ways to ensure school safety, but added that "Toronto Police Service and many student representatives appearing before the Panel argued that this not be part of the recommendations, for practical, social and legal reasons." CBC News

*** Coquitlam teen admits to swatting**
A Coquitlam teen who prompted numerous “swatting” incidents last year on families around Canada and the U.S. pleaded guilty last week to a dozen more charges. The 17-year-old, who cannot be identified under a publication ban because of his age, has now admitted to a total of 23 offences of extortion, public mischief and criminal harassment. In a day-long sentencing hearing at Port Coquitlam provincial court last Friday, Crown prosecutor Michael Bauer outlined how the teen had terrorized mostly young, female gamers and their parents, in B.C., Minnesota, Utah, Arizona, Ohio and California. He had a consistent pattern of trying to connect with the online gamers — many of them fans of the game League of Legends. But when they denied his requests, he shut down their internet access, posted their personal information online, repeatedly called them late at night and contacted the police in their hometown, posing as someone else. Often, he would tell the police he was holding a family hostage, had napalm bombs or had killed someone in the house. He would demand a ransom, order a SWAT (Special Weapons and Tactics) team — hence the term "swatting" — to show up with a police helicopter, or say he would kill any law enforcement official who intervened, Bauer said. Tri-City News

INTERNATIONAL

*** ISIL victory at Palmyra threatens ruins**
Islamic State of Iraq and the Levant extremists seized almost full control of the ancient Syrian town of Palmyra after government defence lines there collapsed on Wednesday, though it remained unclear how close to the famed archeological site the extremists advanced, activists said. Syrian state TV acknowledged that pro-government forces have withdrawn from Palmyra. The fall of the town to ISIL is a stunning defeat for President Bashar Assad's forces, days after the militants launched their offensive against Palmyra in central Syria. It is also an enormous loss to the government, not only because of its cultural significance, but because it would open the way for extremists to advance to key government-held areas, including Homs and Damascus. National Post, A9; The Globe and Mail

*** BIN LADEN LETTERS SHINE LIGHT INTO INNER WORKINGS OF AL-QAEDA**
The quest to understand Osama bin Laden continues, four years after his death. The U.S. government on Wednesday released a trove of documents allegedly collected from the compound in which the world's most well-known terrorist hid and was killed in 2011. The dump of more than 100 letters, directives and miscellaneous reports (including a partial list of the titles that graced the al-Qaeda leader's bookshelf)

paints a picture of a man simultaneously inhabiting two worlds: one atop a sprawling terror organization; the other a decidedly normal, suburban existence. The Globe and Mail, A10

MINISTER / MINISTRE

Canadian Jihad
An east-end Montreal college is gaining a reputation as a breeding ground for jihadis after four of its students were arrested at the airport Friday, allegedly on the verge of taking off to join an overseas terror group. The latest arrests bring to 11 the number of Collège Maisonneuve students who since January have either left to join jihadi groups overseas or have been arrested on suspicion of planning to leave. The four were among 10 students from various CEGEPS - post-secondary institutions unique to Quebec - and high schools arrested at Pierre Elliott Trudeau Airport Friday, the college confirmed. They are "suspected of wanting to leave the country to join jihadist groups," the RCMP said in a statement. They had their passports confiscated and were released without charge. The police said they spoke to the families and friends of those arrested and the investigation is ongoing. (…) **Federal Public Safety Minister Steven Blaney** announced Wednesday that he will invite his provincial counterparts to an early summer meeting to discuss terrorism and radicalization. "***There is no profile of terrorists. You can come from whatever (income), whether Canadian-born or foreigner, the profile of a terrorist is very diverse***," he told CBC News Network. "***What we need to work on is the motive. We need to be able to identify at an early stage those individuals who are being radicalized and, more importantly, we have to work on the radicalizers***." Postmedia News (National Post, A1, Windsor Star, Vancouver Sun, Leader-Post, Star Phoenix, The Gazette, Edmonton Journal, Ottawa Citizen, Calgary Herald); Postmedia Network (Kingston Whig Standard, B1, London Free Press, B1, Calgary Sun, Toronto Sun, Edmonton Sun, Ottawa Sun); * La Presse (Le Quotidien)

La GRC arrête dix Québécois cherchant à joindre les djihadistes
La Gendarmerie royale du Canada a confirmé mardi soir l'arrestation de dix jeunes citoyens montréalais soupçonnés de vouloir se joindre à des groupes djihadistes. L'équipe intégrée sur la sécurité nationale a mené en fin de semaine l'opération qui a permis de «perturber les intentions» des individus arrêtés, a fait savoir le GRC dans un communiqué. Selon la GRC, l'ensemble des Montréalais interceptés par les forces policières l'ont été à l'aéroport Pierre-Elliott-Trudeau. Les suspects sont soupçonnés d'avoir eu l'intention de quitter le pays pour rallier les rangs de groupes djihadistes. La police confirme avoir rencontré les familles et les proches des jeunes arrêtés. La GRC fait savoir qu'aucune accusation n'a pour l'instant été déposée et que l'enquête est toujours en cours dans cette affaire. Les passeports des 10 jeunes leur ont tous été retirés, ajoute les autorités policières. Dans son communiqué, la GRC se montre solidaire avec les familles des individus arrêtés. (…) Le **ministre de la Sécurité publique et de la Protection civile du Canada, Steven Blaney**, a réagi aux arrestations effectuées au cours de la fin de semaine à Montréal. Il a d'entrée de jeu félicité la Gendarmerie royale du Canada et l'Équipe intégrée de la sécurité nationale pour leur vigilance continue en vue de « ***protéger nos rues et nos collectivités contre la menace terroriste continue*** », fait-il savoir dans un communiqué envoyé aux médias. Presse Canadienne (L'Acadie Nouvelle, 19); Le Devoir

Projets à venir contre la radicalisation
"Il s'agit de jeunes nés chez nous, qui sont allés dans nos établissements d'enseignement. C'est préoccupant au plus haut point. On va présenter une politique très large sur cette question qui comprendra des éléments de prévention et de détection", a lancé le premier ministre hier avant la période de questions. La ministre de la Sécurité publique, Lise Thériault, s'est elle aussi dite troublée par l'interception à l'aéroport de Montréal d'une dizaine de jeunes qui tentaient de quitter le pays pour rejoindre les rangs des djihadistes. Les mesures que Mme Thériault présentera "prochainement" permettront d'ailleurs de mieux former les premiers intervenants, comme les professeurs, pour détecter les "signes de radicalisations." "Les professeurs et les parents doivent être à l'affût", a-t-elle lancé. Le **ministre fédéral de la Sécurité publique, Steven Blaney**, a annoncé qu'une rencontre au sommet avec ses homologues provinciaux aurait lieu au début de l'été pour mettre en commun leurs ressources en matière de prévention de la radicalisation et du terrorisme. Le Journal de Montreal, 16 (Le Journal de Quebec); La Presse; * Presse Canadienne (La Tribune, Le Soleil, La Presse, Le Droit, La Voix de l'Est, Le Nouvelliste)

Radicalization concerns in Quebec on rise
Following the arrests of another 10 youths allegedly on their way to Syria, concern about radicalization in Quebec has reached a new high, both in the upper echelons of government and by parents worried about their own children joining a terrorist group abroad. Premier Philippe Couillard said Wednesday he was worried to the "highest degree" about the situation, and promised to have new measures to prevent radicalization in place "soon" - though he couldn't say when. The new strategy would involve helping parents and educators detect signs of radicalization. "These are youths who were born here and educated in our schools - it's extremely worrisome," Couillard said. (…) The RCMP seized all of their passports but has not laid any charges against them, said Const. Erique Gasse. "The investigation is ongoing - things can change," Gasse said. Neither the RCMP nor the Public Prosecution Service of Canada would say exactly how old or what gender the youths were, or how they were discovered at the Pierre Elliott Trudeau Airport, though **Federal Public Safety Minister Steven Blaney** confirmed it was thanks to a tip from parents. "***This time, thanks to the support of the parents, we were able to prevent (them from leaving)***," **Blaney** said. The RCMP met with all of the families and pleaded on their behalf for privacy. Postmedia News (The Gazette, A4)

*** Stephen Harper makes his way to Montreal for King David Award gala**
As the Victoria Day parliamentary recess draws to a close, Prime Minister Stephen Harper is set to spend the day in Montreal, starting with a midday appearance at the Pierre Elliott Trudeau International Airport, where he'll deliver an announcement alongside Quebec cabinet ministers **Steven Blaney** and Denis Lebel. CBC News

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Alberta wildfire sparked by burning truck expands**
Fire crews were busy fighting a large wildfire Wednesday after an angry man set his truck on fire in a ditch near Red Earth Creek, RCMP say. Mounties still don't know exactly why the man was so upset, but the fire tripled in size Wednesday and was still growing. It was burning across 338 hectares, about twice the size of Edmonton's Terwillegar Park. Duncan MacDonnell, spokesman for Alberta's Sustainable Resource Development, said 60 firefighters are now fighting the blaze, which was the largest out-of-control fire in the province Wednesday. Edmonton Journal, A11

*** Environnement Canada va s'ajuster**
Environnement Canada et le ministère de la Sécurité publique doivent ajuster le système Québec en alerte pour éviter " de le brûler " auprès de la population et qu'il ne perde de son efficacité. Ce constat survient au lendemain du tout premier message envoyé par la plateforme depuis sa mise en application. Plusieurs auditeurs de la radio et téléspectateurs devant la télévision ont trouvé plutôt intenses les alertes émises pour Québec, mardi, informant la population qu'une menace de tornade était imminente dans certains secteurs. Voix robotisées incompréhensibles, volume assourdissant et répétition abusive du message ont été des motifs de plaintes envoyées aux diffuseurs, obligés par le Conseil de radiodiffusion et des télécommunications canadiennes de transmettre les alertes. Le Quotidien, 22

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Grown-up countries take out own trash
At first blush, the news this week might give Canadians serious pause over Ottawa's anti-terror strategy. The RCMP says officers intercepted 10 young Montrealers on the weekend on suspicion they were jetting off to join ISIL, something of a trend - at least eight junior jihadis have left Quebec since January, many connected to a single college. And then there's Jahanzeb Malik, a 33-year-old from Toronto, who police allege planned a car bombing in downtown Toronto in lieu of jetting off to join ISIL. Ironically enough, police allege, he feared that would get him busted. This too could be part of a pattern. Martin Couture-Rouleau, who in October mowed down two Canadian soldiers in Saint-Jean-sur-Richelieu, killing Warrant Officer Patrice Vincent, had reportedly wanted to travel to the Middle East to join ISIL - but had been stopped at the airport. It's understandable some are wondering why we're implementing these de facto exit controls on people determined to bring down the West and all for which it stands. If they want to leave, should we not thank them and wish them a speedy demise? Would we not prefer these people wreak their havoc overseas? In a word: no... But evidence suggests we are being vigilant, and that it's working. In a world with ISIL in it, that's about all you can hope for. Among the many knocks against the Conservatives' anti-terrorism legislation is that it could actually impede frontline anti-terror efforts: speech restrictions could deter terrorists from helpfully sharing their plans online, or an imam from inviting the RCMP's counter-violent extremism team to interact with a parishioner who's going off the rails. The successes we see this week highlight just what's at stake. Postmedia News (National Post, A1)

Integrated anti-radicalization effort key to defusing threat, experts say
A counterterrorism catch-and release campaign by Canada's national police force may have prevented 10 aspiring *jihadis* from heading off to war, but the roundup at Montréal-Trudeau airport is raising worries about what comes next for radicalized youth. On Wednesday, while federal and provincial political leaders applauded the police work, antiradicalization experts said only an integrated effort involving civilians and police can deal with youth fixated on taking up arms in the Middle East or joining terrorist groups. In Montreal, which has become a *jihadi* recruiting hotbed, the only tool appears to be handcuffs. In the past six months alone, at least seven youth have left the city to join the Islamic State in Syria or Iraq. At least 15 other teenagers and young adults have been arrested pre-emptively. Some have volunteered to be monitored, while others, such as those arrested at the Montreal airport on the weekend, were simply released after having their passports confiscated. Acting on a tip from one or more parents, the RCMP arrested the 10 youth at the airport but have released few other details. An 11th teenager was captured on video being led away from a Montreal home by investigators. None of the teenagers have been identified publicly and no charges were laid. The government may opt not to pursue a criminal case for fear that any public trial could force it to reveal sensitive intelligence methods - a chronic issue in

Canadian counterterrorism cases. The passport confiscations recalled last fall's terror attacks in which two lone-wolf assailants each killed Canadian soldiers after they were thwarted in attempts to travel abroad and possibly join jihadi groups. Officials provided no answer when asked how they might prevent similar backlash in the latest cases. Observers are increasingly asking whether the threat to Canada can be contained if the ranks of extremists and thwarted jihadis continue to grow. The RCMP's terrorism prevention program is designed to intervene before suspects mobilize toward violence, but the details of the program remain murky. In Quebec, Premier Philippe Couillard has promised oft-delayed legislation to deal with radicalization. He said a new law will be presented within weeks, meaning it will be months before any new program is enacted. Globe and Mail, A1

'The kids don't come to us and speak about joining ISIS,' Montreal imam says
For leaders of the Muslim community, news of 10 youths being intercepted while allegedly on their way to Syria is deeply troubling, says imam Salam Elmenyawi, pictured. "In a situation like this, we have no knowledge whatsoever," said Elmenyawi, president of the Muslim Council of Montreal. "The kids don't come to us and speak about joining ISIS, and we have no information from the police or RCMP or CSIS." He said all the imams have spoken against youth travelling abroad to fight, but now they want to know more. The RCMP was to introduce a prevention strategy in December 2014 that would include Muslim leaders. If a youth showed signs of radicalization, he or she would be surrounded by faith leaders, social workers and teachers to work them through it. For reasons unknown, however, the launch has been delayed until the end of 2015. Postmedia News (National Post, A5)

* **Stemming jihadi recruitment**
In the wake of the arrest of 10 young Montrealers suspected of wanting to join jihadist groups overseas, experts say more needs to be done to educate and counter the extremist rhetoric some Canadian youth have been eager to embrace. (...) One expert says it's too soon to say if the arrests in Quebec this year mean the province is a more fertile hotbed for jihad recruiting than other Canadian jurisdictions. Stéphane Leman-Langlois, a professor at Universite Laval in Quebec City, says what is particular about Quebec is the increased surveillance by authorities since two terror attacks last fall with ties to the province. Another factor may be what he calls an anti-Muslim sentiment in the province. "The one thing that stands out is the way the Muslim community is becoming more and more ostracized in Quebec ... " Leman-Langlois said. Educating youth is one key, but so is a clear strategy to fight Islamic State online propaganda, says a Concordia University religion professor. "The best way is to provide a different narrative," said André Gagné, who speaks on religious extremism. "We need as a society to give hope to people, to help them find their meaning and their way." Canadian Press (Hamilton Spectator, A10, The Record, Chronicle-Herald, Red Deer Advocate, Telegraph-Journal, Times & Transcript)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

U.S. border agent was right to shoot B.C. man
A prosecutor in Washington state says a U.S. Border Patrol agent was justified in fatally shooting a 20-year-old Prince George man who crossed the U.S.-Canada border illegally in March and sprayed the agent with bear spray. Whatcom County prosecutor Dave McEachran said the agent retreated as far as he could from Jamison Childress, and warned him that he would have to shoot if the bear spray was deployed. Alberta RCMP in Alberta said Childress was being sought on a murder charge in the killing of 18-year-old Brando Walker. Walker's partially burned body was found on the Tsuu T'ina Nation reserve near Calgary on March 7, although RCMP said he was killed in a Calgary home. The Whatcom County sheriff's office took the lead in investigating the March 19 shooting. Associated Press (Times Colonist, A6, Times & Transcript, Red Deer Advocate)

Un individu de Dixville intercepté avec 80 grammes de cannabis aux douanes
Un jeune homme de Dixville, près de Coaticook, aurait profité de sa double citoyenneté pour transporter de la drogue sur son lieu de travail en territoire américain. Mardi, en avant-midi, les douaniers américains ont interpellé le suspect de 21 ans aux douanes de Norton au Vermont alors qu'il était en possession de 80 grammes de cannabis. De plus, à la suite d'une courte enquête lancée à partir d'informations reçues du public, les policiers du poste de la MRC de Coaticook, de la Sûreté du Québec (SQ), ont pu effectuer

une perquisition en après-midi à son domicile situé sur la route 147. A cet endroit, ils ont trouvé plus de 560 grammes de cannabis, quelques comprimés de méthamphétamines et plus de 1600 $ en liquide. La Tribune

*** Deportation hearing told of alleged terror plot**
A Pakistani man accused of plotting bomb attacks on downtown Toronto lied during his testimony, his deportation hearing was told Wednesday. In closing submissions, government representative Jessica Lourenco called Jahanzeb Malik a terrorist sympathizer bent on committing terrorism in Canada. Malik's lawyer, Anser Farooq, called it suspicious that a police officer's secret recording equipment apparently failed during a key interaction with Malik. Farooq said the government provided no audio and called some of the officer's testimony "fanciful." The government, which wants to deport him, maintains Malik, 33, is an Islamic extremist who tried to recruit the officer for a plot to bomb the U.S. consulate and financial district buildings. Canadian Press (Whitehorse Daily Star, Red Deer Advocate, Times and Transcript, L'Acadie Nouvelle, The Guardian, Cape Breton Post); Postmedia News (National Post, A1, Gazette, Ottawa Citizen, Calgary Herald, Province, Windsor Star, Vancouver Sun, Leader-Post, Edmonton Journal, Star Phoenix); Toronto Star, GT3, Postmedia Network (London free Press, Kingston Whig Standard, Ottawa Sun, Toronto Sun)

*** Four-year sentence imposed for violent sexual assault**
A man who violently raped a woman will serve a four year prison sentence, then faces deportation from Canada. Olabode Abayolmi Olotu, 36, was sentenced Wednesday in Saskatoon provincial court for sexual assault causing bodily harm. The married father of two young children was convicted after a trial earlier this year of raping the 44-yearold woman, whose identity is subject to a publication ban, in the back of his car on April 20, 2014. He and the woman were in a clandestine relationship, but on that occasion, the judge found Olotu forced anal sex on the woman without her consent, leaving her bleeding and bruised. On Wednesday, Crown prosecutor Cory Bliss argued for a sentence of 4 1/2 years in prison. Olotu, originally from Nigeria, is a permanent resident of Canada - but that will change with this conviction. "He's facing deportation as soon as his sentence expires, with no chance of appealing that removal order," Mitchell said in court. "He's the sole breadwinner for the family and it's obviously going to have a massive impact on the entire family." Judge Barry Singer said the Crown was correct that the sentencing range for this offence, because of the injuries and psychological harm, should be higher than three years. He sentenced Olotu to four years in prison. Postmedia Network (Star Phoenix, A7)

*** Man faces lengthy jail term after drugs found in mail**
A Toronto man and Nigerian national is facing a lengthy prison sentence after what looked like a parcel of air valves in the mail instead turned out to be more than $250,000 worth of heroin. The shipment, intercepted by Canada Border Services Agency officers at the International Mail Processing Centre in Mississauga, was replaced by the RCMP as part of a controlled delivery to a home in Etobicoke on July 25, 2011 which led to the arrest of Peter Ukwuaba. He was convicted by Justice Casey Hill last week of importing heroin, conspiracy to import heroin and possession of heroin for the purpose of trafficking. Mississauga News (2015-05-20)

*** Un avantage compétitif pour Domtar**
La papetière obtient son accréditation au programme d'autocotisation qui facilitera son passage aux douanes Domtar fait désormais partie du Programme d'autocotisation des douanes de l'Agence des services frontaliers du Canada (ASFC), un privilège qui simplifiera l'importation de fibres de bois en provenance des États-Unis. L'usine de Windsor devient ainsi la première installation de l'industrie forestière canadienne à obtenir cette accréditation. La Tribune

*** Warn truckers of traffic circle tipping hazard**
An editorial states "Sign, sign, everywhere a sign. The designers of the Herb Gray Parkway should embrace such rock 'n roll lyrics from the 1970s because trucks are doing exactly that - rocking and rolling - as they try to negotiate the traffic circle en route to Highway 401. Yellow hazard signs warning truckers of tipping dangers - used on winding roadways throughout the United States - should be sprinkled liberally along all entrances to the parkway roundabout. In the U.S., they are sometimes referred to as "dancing truck" signs - a whimsical name, but one that truckers understand to mean slow down or find

yourself lying helplessly on your side. The dangers posed by tipping trucks are formidable for vehicles driving alongside transports on the roundabout. The latest truck to tip over there was a tanker carrying 48,000 pounds of grape concentrate. Imagine that landing on the roof of your car. It was the third truck rollover on the roundabout in six weeks. Miraculously, no one has been seriously injured or killed." Postmedia News (Windsor Star)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Spy agencies target mobile phones, app stores to implant spyware**
Canada and its spying partners exploited weaknesses in one of the world's most popular mobile browsers and planned to hack into smartphones via links to Google and Samsung app stores, a top secret document obtained by CBC News shows. Electronic intelligence agencies began targeting UC Browser — a massively popular app in China and India with growing use in North America — in late 2011 after discovering it leaked revealing details about its half-billion users. Their goal, in tapping into UC Browser and also looking for larger app store vulnerabilities, was to collect data on suspected terrorists and other intelligence targets — and, in some cases, implant spyware on targeted smartphones. The 2012 document shows that the surveillance agencies exploited the weaknesses in certain mobile apps in pursuit of their national security interests, but it appears they didn't alert the companies or the public to these weaknesses. That potentially put millions of users in danger of their data being accessed by other governments' agencies, hackers or criminals. CBC News analyzed the top secret document in collaboration with U.S. news site The Intercept, a website that is devoted in part to reporting on the classified documents leaked by U.S. whistleblower Edward Snowden. The so-called Five Eyes intelligence alliance — the spy group comprising Canada, the U.S., Britain, Australia and New Zealand — specifically sought ways to find and hijack data links to servers used by Google and Samsung's mobile app stores, according to the document obtained by Snowden. Over the course of several workshops held in Canada and Australia in late 2011 and early 2012, a joint Five Eyes tradecraft team tried to find ways to implant spyware on smartphones by intercepting the transmissions sent when downloading or updating apps. LAW ENFORCEMENT / APPLICATION DE LA LOI

Gangs top police survey concerns
Gang activity was at the top of the list of concerns expressed by Saskatoon residents who took part in a survey conducted on behalf of city police. Insightrix Research Limited gathered the most recent data for 2014 and compared the results to surveys conducted in prior years. The city police force hires an independent company to conduct a community satisfaction survey every three years. Overall, the survey found public satisfaction with the police has increased. Under the category of "social disorder" - one of the many different areas measured by the survey - the most common concern was gang activity, at 26.4 per cent. Police chief Clive Weighill said he wasn't surprised. "People are watching what's going on," he said, noting police have responded to 14 shootings so far this year. In 2003, concern about gangs was measured at only five per cent, he said. Police recently formed a "gun and gang" unit by shuffling resources in the criminal investigation division. Weighill said the staff level was increased to look specifically at dismantling and disrupting local gang activity. He declined to go into specifics about the unit's strategy for dealing with gangs, but said its members will continue to work closely with community partners, adding they are "staunch supporters of Str8 up," a program that assists people leaving gang and criminal street lifestyles. Postmedia News (StarPhoenix, A1)

Costly waiting game
Red Deerians are on the hook for $100,000 every year the former RCMP building sits empty. The ex-RCMP site on 49th Street is earmarked for a new provincial courthouse to replace the crowded 1980s-built one just a block away. The previous Progressive Conservative government indicated a new courthouse in Red Deer is a priority and the city's choice for a site might be suitable. But nothing has been set in stone and the change in government has forced the City of Red Deer to step up its advocacy efforts. The city outlined some of the pressing issues in Red Deer, including the need for a new

courthouse, in a letter penned to premier-elect Rachel Notley. The city pays for basic maintenance and heating costs to keep the former police station up and running. The RCMP moved out of the building in April 2011. Red Deer Advocate, A1

RCMP memorial to be at centre of new park

Blacksmith Paul Fontaine of MacDougall Settlement considers it a great honour to be fabricating a steel monument that will be placed in a church park in honour of the three RCMP officers killed in Moncton last year. "I usually make railings and fences, so this is a real dream job for me. It's a chance to do something really meaningful and different," Fontaine said Wednesday as he and his son Luc continued working on the sculpture, which will be unveiled in the new Honour Park at Glad Tidings Church on Mountain Road in Moncton on Sunday, June 7. The steel sculpture has been taking shape at Fontaine's shop, Heritage Wrought Iron Works, for several weeks. It will stand about two metres tall and features three abstract human forms reaching up to the sky. "The three abstract human forms represent the three fallen officers, but they also represent how people in the community look out for each other," Fontaine said. "I think the problems with our society are not economic or political, but spiritual. This sculpture represents a community reaching for the heavens, reaching for the sky." This sculpture is not associated with the official monument to the fallen officers, which is now being designed for the City of Moncton and will be placed on the Riverfront Park. The sculpture was designed by Fontaine and Pastor Paul Pattison of Glad Tidings Pentecostal Church. It is made of steel that has been cut to shape and welded together for a three-dimensional shape. The three human figures stand back-to-back and face in separate directions as they reach toward the heavens. Pattison says the sculpture will be the centrepiece of the church's new Honour Park, a public park dedicated not only to the three RCMP officers but also the Metro Moncton community. The dedication ceremony will be held on Sunday, June 8, immediately following the Sunday service at 10:30 a.m. Pattison said officials from the RCMP and the City of Moncton have been invited to attend. Times & Transcript, A1

City of Moncton unveils design proposals for RCMP monument

The first thing you need to know is nothing unveiled at Moncton City Hall Wednesday night looks exactly like the memorial to three fallen Codiac RCMP members that will ultimately stand on Moncton's riverfront. The second thing you should know is every artist on the short list for the commission to create the memorial expects community input to be a key part of what the final piece will be. The City of Moncton held a public consultation regarding the memorial project Wednesday night, filling the sixth-floor meeting room of city hall to capacity. The five artists who have been shortlisted travelled to Moncton from as nearby as Sussex and as far away as Victoria to present their proposed concepts to the general public, members of city council and the widows of the three police officers. Constables Fabrice Gevaudan, Dave Ross and Douglas Larche were murdered last June 4, as they joined in police efforts to stop a man shooting up a residential neighbourhood in Moncton's northwest end. Two other police officers, Southeast RCMP Const. Darlene Goguen and Codiac RCMP Const.Eric Dubois, were wounded in two other ambushes that night. Mounties and municipal police officers from across the region ultimately captured the gunman 29 hours after the shooting began. Moncton's Justin Bourque is now serving five life sentences for the crimes. Each artist was given somewhat specific instructions of what the monument should include. Times&Transcript, A1; CBC.ca

Report urges better training, tracking use of force by police

Most Canadian police forces still do not collect the right kind of in-depth data on when they resort to pulling their weapons or using force, nor do they receive sufficient mental-health training to de-escalate confrontations that may turn deadly, a new report says. The Star obtained a copy of the research report commissioned by the federal public safety department after the Toronto police shooting of Sammy Yatim in 2013. It takes a comprehensive look at how police forces in Canada and the U.S. track their officers' use of force in encounters between police and the public. Its main conclusion is that despite years of high-profile and critical inquiries into police actions in, for example, the Yatim shooting, the Vancouver police shooting of Paul Boyd, or the RCMP tasering of Robert Dziekanski, a consistent national approach is needed toward documenting when and why officers use force against citizens... Ian McPhail, chairman of the RCMP's civilian watchdog body, said in an interview that a consistent national approach would absolutely be beneficial, but may be seen as too costly to implement. Yet, he said it may lead to a reduction in use of force, pointing to how Taser use by Mounties dropped during the commission's three-

year review of RCMP policies and practices after Dziekanski's death in 2007. The latest report, written by independent consultants John Kiedrowski, Ronald-Frans Melchers, Michael Petrunik and Christopher Maxwell, explores what it says are two of the best approaches to documenting use of force. The goal of both is to provide a 360-degree look at a subject's behaviour as well as the officer's response, and to use consistent definitions of what constitutes "force" to collect narrative data as well as statistics that could be analyzed for trends. In Canada, such analysis could reveal whether use-of-force injury suffered by an officer or a suspect is related to demographic factors such as race or ethnicity, or tied to a police officer's work shift, stress levels or other indicators such as sleep deprivation, it says. Toronto Star, A6

Police seek son of woman found dead

Homicide detectives are searching for the son of a woman found dead in a Richmond home on Tuesday. Richmond RCMP were called at around 3:30 p.m., after family members found the body of 62-year-old Redelma Belisario. The Integrated Homicide Investigation Team says an autopsy is needed to determine the cause of death, but foul play is suspected. IHIT spokeswoman Sgt. Stephanie Ashton said finding the woman's son, Darwin Lescano, 38, is a priority, calling him a suspect in her death. Postmedia News (Vancouver Sun); The Province

Police pursue 30-year-old mystery - RCMP chase new leads in Interlake man's death

Candace Derksen. Steven Pelletier. Myrna Letandre. Derek Kembel. Heather Mallett. Divas Boulanger. All of these Manitoba slaying victims share a common trait - police arrested their accused killers years after the crimes occurred. Now RCMP are hoping to add another name to the list, believing they've made a breakthrough in one of the coldest cases in their files. Michael Kalanza, 80, vanished from the Interlake community of Faulkner in 1985. His remains were found at an old limestone quarry in nearby Spearhill in 1997. A group of Ashern Central School Grade 9 students on a field trip made the discovery. Investigators believe Kalanza was the victim of foul play, although no arrests have been made. But the search for justice isn't finished. RCMP returned to the scene Wednesday, saying officers in the historical case unit recently took a fresh look at the 30-year-old mystery and now have grounds to conduct a renewed search of the site. Nearly two dozen uniformed and civilian members are involved. "These cases are never closed. They don't go into a box in the basement," RCMP spokeswoman Tara Seel said Wednesday. RCMP say they've discovered "new investigate pathways" that are largely based on advances in forensic techniques that weren't available in the late 1990s. Existing DNA samples have been resubmitted for testing, and RCMP hope this week's search might unearth some additional clues to be analyzed. "We've advanced a long way in forensic analysis," said Seel. "We're hoping to find supporting evidence to coincide with the new information we've received." Winnipeg Free Press

Cost of catching senators: $21M

It cost $21 million to find out 10 senators claimed more than $100,000 worth of ineligible expenses, CTV News reports. Auditor General Michael Ferguson's sweeping audit of the Senate has employed 142 auditors, some of them private contractors, according to the broadcaster. The auditors were commissioned to look into the expense claims of 117 current and former senators and reportedly found 10 had committed "serious spending abuses." The CTV report says the findings will be referred to the RCMP for investigation, as they were in the cases of Mike Duffy, Pamela Wallin, Patrick Brazeau and Mac Harb. The audit found problematic claims from about 30 others, but they weren't considered serious enough to warrant police involvement, according to CTV. The senators will be required to repay the money. Ferguson's complete report, due for release the first week of June, is reportedly the most expensive audit ever conducted on Parliament Hill. Postmedia News (Winnipeg Sun, Toronto Sun, Calgary Sun, Ottawa Sun, Edmonton Sun)

Pair charged in series of shootings

B.C.'s gang task force has arrested and charged two men believed to be connected to a series of shootings in Surrey. The Combined Forces Special Enforcement Unit searched a home in Surrey and seized marijuana, four rifles and a handgun. Eighteen-year-old Chandanjot Singh Gill faces several firearms charges and one count of trafficking, while 21-year-old Munroop Hayer has been charged with possession for the purpose of trafficking. Both men are from Surrey. Police say the arrests come a month after a dedicated tip line was launched. Postmedia News (Vancouver Sun, A3); The Province

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Long-term offender sent to halfway house
A designated long-term offender who stabbed a 60-year-old woman outside a Kamloops hospital has been ordered to live in a halfway house. The Parole Board of Canada has ordered Robert Semchuk to live under seven strict conditions after his prison sentence expired Tuesday. The board's written decision says the 51-year-old remains at a high risk to reoffend. Semchuk will be bound by conditions that require him not to consume drugs and alcohol and avoid people involved with criminal activity. In 2009, a B.C. Supreme Court judge named Semchuk a longterm offender and sentenced him to a nine-year prison term, which was shortened to six years with credit for time served. Canadian Press (The Province, A16, Times Colonist)

* **Un homme qui aurait menacé de tuer un gardien veut sortir de prison**
Un criminel récalcitrant qui aurait menacé de trancher la gorge d'un gardien de prison espère recouvrer sa liberté très bientôt. Dès qu'il recevra sa sentence pour avoir tué un homme en 2005. L'avocat de Marc Charrette compte bien faire sortir dès que possible son client, qui a passé presque la moitié de sa vie en prison pour divers délits. L'homme de 51 ans est incarcéré depuis 2005 pour avoir tiré à bout portant sur Jocelyn L'Écuyer dans le stationnement du Motel Oscar à Longueuil, le tuant sur le coup. (...)La Couronne, représentée par MeSylvie Villeneuve, a demandé à la juge Sophie Bourque d'imposer à Charrette une peine de 20 ans pour l'accusation réduite d'homicide involontaire à laquelle il a plaidé coupable en octobre dernier. Compte tenu du temps que l'accusé a déjà passé en détention préventive qui compterait en double, il ne lui resterait que deux ans à purger. (...) Ainsi, une gestionnaire des Services correctionnels canadiens est venue raconter à la cour les séjours tumultueux du quinquagénaire au pénitencier. Marc Charrette est un "cas exceptionnel ", selon la témoin Dominique Dulac. Menacer de trancher la gorge d'un officier, lancer un liquide inconnu en direction des agents correctionnels et couvrir d'excréments le hublot de sa cellule d'isolement ne sont que quelques exemples du "comportement problématique" de M. Charrette entre 2008 et 2010. Il a eu pas moins de 80 rapports d'in-fractions majeures pendant cette période. (...) En 2008, un jury avait condamné Marc Charrette à la prison à vie pour meurtre non prémédité. La Cour d'appel avait ordonné un nouveau procès en 2010. Journal de Montréal, 9 (Journal de Québec)

* **In the courts**
A compilation of offences from Kingston's Ontario Court of Justice for the period of May 4 to 8, 2015. Only sentences that involved a large fine, probation or incarceration are included. (...)Paul Michael Desbien, 30, was convicted of having illegal possession of marijuana while serving a federal sentence at Joyceville Penitentiary. He's since been transferred to Collins Bay Penitentiary and 45 days have been added to the five-year sentence he was already serving for aggravated assault. Federal Crown prosecutor Rachel Stephenson said Desbien was smoking marijuana in his cell in early February and a correctional officer smelled it and searched him, recovering 12.3 grams of it hidden inside his clothes. Defence lawyer Courtney Cottle said Desbien was using the weed for pain relief. She told Justice Allan Letourneau the inmate still suffers the after effects of having previously sustained burns over 65% of his body. But he was not receiving pain medication in prison, according to the defence lawyer. Desbien asked the judge to order **Correctional Service Canada** to provide medication. But Justice Letourneau said that's outside his powers. Kingston Whig-Standard

Un tueur à gages repentant
Un tueur à gages rongé par les remords pour un meurtre commis en 1996 renonce à voir sa peine de prison être réduite de huit ans parce qu'il veut épargner les proches de sa victime. "Si mon père avait été assassiné, je voudrais au moins que le tueur fasse son temps. On ramène cette histoire-là dans les médias ces jours-ci et c'est à cause de moi, parce que j'ai décidé de faire une révision judiciaire. À cause de moi, la famille a à vivre ça. Ça n'a pas de bon sens. Je ne peux pas accepter ça", a lancé André Vincent en Cour hier au palais de justice de Montréal. Dans une volte-face inattendue, l'homme de 44 ans a ainsi mis fin à une procédure qui visait à le libérer de détention huit ans avant la fin de sa peine. Reconnu coupable en 1999 du meurtre de Donald Duval, un homme d'affaires et père de famille sans

histoires, Vincent avait été condamné à la prison à vie sans possibilité de libération conditionnelle avant 25 ans. Or, le Code criminel a déjà prévu qu'après 15 ans de détention, il était possible de demander que cette date de libération soit devancée. Journal de Montréal, 7 (Journal de Québec), * 1, * La Presse (Voix de l'Est, 9)

No pass for killer mom
A murderous stepmother convicted in what the parole board called "Canada's worst case of child abuse" was denied escorted day passes, the Toronto Sun has learned. Marcia Dooley last Wednesday "accepted more responsibility for the violent injuries" she inflicted on her seven-year- old stepson, Randal, the Parole Board of Canada decision stated. Dooley, now 45, said her own childhood abuse "played a significant role" in the killing of Randal, yet she applied for escorted, temporary passes to visit her ailing mom in Scarborough, the board decision stated. "The brief (four-hour) confines of an escorted visit with family -- where Marcia could express her anger--could lead to a very difficult situation," the parole board said. Dooley's bid for escorted, temporary absences for an anger management course was also refused. (…) Marcia and Tony Dooley, now 49, were convicted of second-degree murder in the boy's Sept. 25, 1998, death. Both are now serving life sentences and Marcia -- as the main culprit--was denied parole until 2020, while Tony could apply this year but hasn't so far. Toronto Sun, 3

* **Parole granted in kidnap try**
Aaron Patrick MacDonald has been given full parole for his 2014 conviction for an attempted abduction. In 2012, MacDonald was caught with an imitation assault rifle hiding in the multimillion-dollar home of a mining executive. MacDonald was granted day parole in November 2014 with conditions that he follow psychological counselling, take the medication he has been prescribed and not have contact with the victim or member of the victim's family. His "actions had negative impacts on (the family's) lives, and they have the right to live without fear of any further contact," the Parole Board of Canada wrote in a document announcing the decision. The conditions of his day parole have been upheld for his full parole. Chronicle-Herald, A9

* **DeYoung granted parole**
Jason Kyle DeYoung has been released on parole with renewed special conditions. In 2008, DeYoung was sentenced to seven years in prison in connection with a high-speed chase through Halifax in October 2007. He was convicted of three counts of assaulting police with a weapon, robbery, uttering threats and breach of a recognizance. He was given a statutory release in September 2014 but was back behind bars in February because of failed drug tests and a fight outside a methadone clinic. "(DeYoung's) use of substances and resulting impulsive behaviours contributed directly to the current serious and violent offences, endangering public safety on the busy streets of the city," the Parole Board of Canada wrote in outlining its decision. Chronicle-Herald, A9

Arrêtée pour alcool au volant
L'ancienne agente des services correctionnels audrey Corneau est de retour devant les tribunaux après avoir été sentenciée, en décembre 2013, à une peine de trois ans et demi pour trafic de drogue à la prison de Chicoutimi. (…)L'ancienne agente a fourni un échantillon d'haleine de 217 milligrammes d'alcool par 100 millilitres de sang et a été détenue la nuit suivante sous une accusation de garde et contrôle d'un véhicule automobile avec les facultés affaiblies par l'alcool. Audrey Corneau a comparu cet avant-midi devant le même juge qui l'avait envoyée au pénitencier en décembre 2013. Au moment de l'arrestation, elle bénéficiait d'une libération conditionnelle totale depuis le 22 février après avoir purgé 14 des 42 mois de sa sentence. Elle ne s'expose pas à une révocation de sa libération parce que le délit de garde et contrôle n'est pas punissable d'incarcération, à la première offense. Journal de Québec, S2

Take your sights off gun owners, Mr. Harper
A letter to the editor by former Conservative MP Inky Mark states, "Re: last month's Supreme Court of Canada rejection of Prime Minister Stephen Harper's tough on crime agenda is good for the lawful gun owner. The top court of Canada struck down Harper's mandatory minimums for gun offences. Harper's law was deemed unconstitutional, labelled cruel and unusual. The top court stated that the law "could ensnare people with little or no moral fault" and who pose little danger to the public. Supreme Court Justice Beverley McLachlin wrote: "There exists a cavernous disconnect between the severity of the

licensing-type of offence and the mandatory minimum three-year term of imprisonment." You may ask: how does this decision affect the lawful gun owners of Canada? I've been preaching the same sermon for many years that Bill C-68 criminalizes the lawful gun owner. Harper has broken his election promise to repeal this law many times." Whitehorse Daily Star

*** We are all to blame for Omar Khadr's mistreatment**
An opinion piece states, "The term "Kafkaesque" crossed the threshold into cliché years ago, but at times the word is sorely needed. For a situation to be Kafkaesque, it must be menacingly incomprehensible, with a lone individual thrown into a dangerous but confusing situation. Omar Khadr's ordeal certainly fits that definition. The trial of Omar Khadr - Omar K. in a Kafka work, or an "alien unprivileged enemy belligerent" in Guantanamo code - is a permanent stain on Canada's record. Khadr was raised by a family with ties to Al Qaeda, trained to take up arms, accused of lobbing a grenade at a U.S. soldier at age 15, thrown into a secret prison without adequate legal assistance, beaten and tortured, forced to choose between an unjust plea deal and an unfair trial, until finally, one day 13 years later, he was released on bail. (…)The Conservatives, meanwhile, went to extraordinary lengths in refusing to assist Khadr, interfering with the judicial process and classifying him as an adult offender - all on the Canadian taxpayers' dime. When the Conservatives finally repatriated him, they did so not on principle, but because the U.S. government pressured them to. The Tories' cruelty surplus is more revealing than their fiscal one. But the blame for Khadr's mistreatment rests ultimately with us, the Canadian public. It was a democratically elected government that assisted the torturers, and a repeatedly re-elected government that tried to keep him in the penal colony." Toronto Star, A21

*** Khadr comparison insulting**
A letter to the editor states, "Regarding the letter Bomber must have Canada envy, Comparing the actions of Omar Khadr to those of Dzhokhar Tsarnaev is absolutely ludicrous. But even worse, to state that Elizabeth May, Thomas Mulcair, and the Supreme Court of Canada would support and condone Tsarnaev's killing of innocent citizens is an incredible insult to them all." London Free Press, A7

Don't forget Khadr's victim
A letter to the editor states, "I would suggest those supporting Omar Khadr spend a few minutes talking with the widow of the soldier killed by the grenade (reportedly) thrown by Khadr. Then they could ask her if it matters that he was 15, 25, or 95 years old when the grenade ended her husband's life. If Khadr and his lawyer manage to fleece the Canadian government for wads of cash, they should turn around and give the proceeds to the widow of the American soldier that died of his actions." Winnipeg Free Press, A12

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Eisenberger wants a gun ban after 'wild west' violence
Mayor Fred Eisenberger wants the city to ban guns in urban areas after a brazen "wild west" shootout in downtown Hamilton over the weekend. Eisenberger asked city lawyers Wednesday to report back to council about what the city can legally do - if anything - to curtail gun violence. He later acknowledged he hadn't "fleshed out the constitutional issues." "I think anything we can do to make guns less accessible is a positive step. We ban a lot of things in the city. My question would be 'Can we ban guns?'" he said after a general issues committee meeting. "Most reasonable people would wonder, why are people carrying guns in the first place?" While some U.S. jurisdictions allow citizens to openly carry handguns, Canadian law prevents most people from doing so. Collectors and target shooters must follow strict rules for transporting and storing the weapons. (…)Hamilton police spokesperson Catherine Martin said the service "would support any crime prevention strategy that may be available to the municipality," but didn't specifically comment on the idea of a municipal gun ban. Hamilton Spectator, A1

Changing the conversation
It did not take a sexual harassment scandal on his own turf to focus Concordia University president Alan Shepard's attention on the issue. For one thing, Shepard, who has been president and vice-chancellor of

Concordia since 2012, had ordered a review of Concordia's policies on sexual harassment and sexual assault in December, months before a Concordia student leader took her harassment case to the Quebec Human Rights Commission. And for another, Shepard has been sensitive to issues surrounding sexual assault and consent since his own undergraduate days. (...)Melissa Kate Wheeler, a former president of Concordia's Student Union, is among those pushing for better support for victims at the school. One of her main frustrations is that the Sexual Assault Resource Centre, for which she advocated during her term as president, has not been given the resources it needs to meet its mandate of educating, raising awareness, providing support and crisis intervention. Montreal Gazette, A1

*** Sex assault is a burden for the young**
Here's a fact you'll never forget once you hear it: The peak age for becoming a victim of sexual assault is 15. (...)According to crime expert Wayne Morris, who spoke to the provincial select committee on sexual violence and harassment in Kitchener on Wednesday, sex assault in North America is primarily a young person's burden. Sixty-one per cent of victims of rape, most of them young women, are 17 or younger. Eighty-three per cent are 24 or younger. They tend to have problems perceiving risk in a dangerous situation, said Morris. Perhaps because of that difficulty, they "seem to be especially vulnerable to further attack," he said. Meanwhile, most perpetrators are under 25, likely have a criminal record, and have the idea that men should be dominant and women should be submissive. Waterloo Region Record, B1

*** Power and Control: Sexual Assault Reflects Social Norms**
Canadian society was founded on a colonialist model that supported patriarchy. Men, especially men of privilege, developed a sense of entitlement to exert power and control over certain groups, one of which included girls and women. The basis of rape culture is men believing it's their inherent right to use power and control over girls and women. Historically, predominant ideas, social practices, media, government, schools, religious institutions, employers, the various levels of law enforcement and justice were established by privileged white men. All of these institutions play a role in condoning sexual assault. They accomplish this by normalizing violence against women and reinforcing the myth that the survivor is to blame. Conversely, these institutions can choose to make a difference by supporting women's rights - which, quite simply, are basic human rights. Raise the Hammer

*** 'I kind of feel sick': Teen targeted by cyberbullies speaks out after alleged sexual assault**
A young girl in Atlantic Canada is speaking out along with her parents about cyberbullying and an alleged sexual assault, urging others in similar situations to do the same. CTV News is not identifying the 15-year-old girl because she says she is a victim of sexual assault at the hands of a woman 10 years older than her. "I didn't know what she was doing to me 'cause I was like in shock, I was like frozed," the girl said. "She asked me out, and I said, 'I don't want to date you 'cause I'm not a lesbian,' and she didn't take that for an answer," the girl said. "So like then she grabbed my waist and then she was kissing me and like sticking her tongue down my throat and then she was choking me. And then she grabbed my butt." It took a couple of weeks before the girl told her parents, who immediately reported the alleged assault to police. The family says that's when things got worse. CTV News (2015-05-20)

*** Better police training, reporting on use of force needed, report urges**
Most Canadian police forces still do not collect the right kind of in-depth data on when they resort to pulling their weapons or using force, nor do they receive sufficient mental health training to de-escalate confrontations that may turn deadly, a new report says. The Star obtained a copy of the research report commissioned by the federal **public safety department** after the Toronto police shooting of Sammy Yatim in 2013. It takes a comprehensive look at how police forces in Canada and the U.S. track their officers' use of force in encounters between police and members of the public. Its main conclusion is that, despite years of high-profile and critical inquiries into police actions in, for example, the Yatim shooting, the Vancouver police shooting of Paul Boyd, or the RCMP tasering of Robert Dziekanski, a consistent national approach is needed towards documenting when and why cops use force against citizens. It also urges more substantial mental health training for frontline officers who confront troubled individuals, too, saying the research clearly shows officers who receive extensive training successfully de-escalate tensions and are less likely to use deadly force. The report concludes it's not merely a matter of public safety, but officer safety as well, because police officers often suffer injuries when situations turn violent. Toronto Star

*** Twitter fight partly to blame for Etobicoke students shooting deaths: Report**
A report into the deadly shooting last fall outside Don Bosco Catholic Secondary School blames a Twitter fight among students and a Toronto Community Housing complex nearby for having "drug-activity and gun-related issues." But the report stops short of recommending metal detectors be installed in Toronto Catholic schools, citing "practical, social and legal reasons." The Safe Schools Inquiry Panel Report will be presented Thursday night to TCDSB trustees. But CBC News has obtained an advance copy. The report contains 33 recommendations, some of which include teaching students how to use social media responsibly, reviewing students' use of electronic devices in school and investigating "the feasibility of developing a smartphone-based application that would permit students to anonymously report school-related safety concerns." The report says the mother of one of the slain students proposed the installation of metal detectors and implementation of random searches of students as ways to ensure school safety, but added that "Toronto Police Service and many student representatives appearing before the Panel argued that this not be part of the recommendations, for practical, social and legal reasons." *** Coquitlam teen admits to swatting**
A Coquitlam teen who prompted numerous “swatting” incidents last year on families around Canada and the U.S. pleaded guilty last week to a dozen more charges. The 17-year-old, who cannot be identified under a publication ban because of his age, has now admitted to a total of 23 offences of extortion, public mischief and criminal harassment. In a day-long sentencing hearing at Port Coquitlam provincial court last Friday, Crown prosecutor Michael Bauer outlined how the teen had terrorized mostly young, female gamers and their parents, in B.C., Minnesota, Utah, Arizona, Ohio and California. He had a consistent pattern of trying to connect with the online gamers — many of them fans of the game League of Legends. But when they denied his requests, he shut down their internet access, posted their personal information online, repeatedly called them late at night and contacted the police in their hometown, posing as someone else. Often, he would tell the police he was holding a family hostage, had napalm bombs or had killed someone in the house. He would demand a ransom, order a SWAT (Special Weapons and Tactics) team — hence the term "swatting" — to show up with a police helicopter, or say he would kill any law enforcement official who intervened, Bauer said. INTERNATIONAL

*** ISIL victory at Palmyra threatens ruins**
Islamic State of Iraq and the Levant extremists seized almost full control of the ancient Syrian town of Palmyra after government defence lines there collapsed on Wednesday, though it remained unclear how close to the famed archeological site the extremists advanced, activists said. Syrian state TV acknowledged that pro-government forces have withdrawn from Palmyra. The fall of the town to ISIL is a stunning defeat for President Bashar Assad's forces, days after the militants launched their offensive against Palmyra in central Syria. It is also an enormous loss to the government, not only because of its cultural significance, but because it would open the way for extremists to advance to key government-held areas, including Homs and Damascus. National Post, A9; The Globe and Mail

*** BIN LADEN LETTERS SHINE LIGHT INTO INNER WORKINGS OF AL-QAEDA**
The quest to understand Osama bin Laden continues, four years after his death. The U.S. government on Wednesday released a trove of documents allegedly collected from the compound in which the world's most well-known terrorist hid and was killed in 2011. The dump of more than 100 letters, directives and miscellaneous reports (including a partial list of the titles that graced the al-Qaeda leader's bookshelf)

paints a picture of a man simultaneously inhabiting two worlds: one atop a sprawling terror organization; the other a decidedly normal, suburban existence. The Globe and Mail, A10

MINISTER / MINISTRE

Longer waits for parole disadvantage aboriginal offenders
The vast majority of aboriginal offenders in federal prison are held long past the date they become eligible for parole, giving them less time under supervised release and - by the government's own calculations - shrinking their chances of success at living a free life again. Almost 85 per cent of aboriginal inmates are held until federal authorities have little choice but to release them, according to a new report from the **Public Safety Ministry**, which is responsible for corrections. Under federal law, inmates must be released, under supervision, at the two-thirds point of their sentence, unless authorities believe there is a high likelihood those offenders will commit a violent crime. For non-aboriginal inmates, the corresponding figure is 69.3 per cent. The report did not explain why the figures are so much higher for aboriginals. The difficulties for aboriginal offenders in obtaining their release echo the situation at the front end of the system. A disproportionate number of aboriginals arrive in federal prison each year, despite a federal sentencing law that requires judges to consider alternatives to custody for native people. Aboriginals make up 23.2 per cent of federal inmates, but only about 4 per cent of the Canadian population. A **spokesman for Public Safety Minister Steven Blaney** commented on the report Sunday: "***Our Conservative government believes that criminals belong behind bars***," **Jeremy Laurin** said. The Globe and Mail, A1

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Crews use burns to control blaze**
Crews are fighting fire with fire as they try to contain the aggressive wildfire burning south of Lytton. The Cisco Road fire is 20 per cent contained and was last mapped at 12.7 square kilometres in total size. Rain on Friday helped slow the blaze's progress, but the area is beginning to dry out again and there are concerns that continuing hot weather could cause the flames to flare up again. Vancouver Sun, A2

*** Lac-Mégantic - Le CP tentera d'annuler l'indemnisation de 431 millions**
La Cour supérieure commencera à entendre lundi la cause des victimes de la tragédie de Lac-Mégantic pour déterminer si elles pourront recevoir plus de 431 millions de dollars en indemnisation, mais le juge pourrait en décider tout autrement en invalidant le processus de règlement. La Presse Canadienne (Le Devoir, A4); Canadian Press (The Gazette, A5)

*** MERS outbreak: 3 lessons Canada learned from SARS**
As South Korea faces an outbreak of Middle East respiratory syndrome, or MERS, Canadian health officials are staying vigilant in case the virus makes it inside our borders. It's more than a decade since severe acute respiratory syndrome, or SARS, infected 8,000 people and killed 774 around the world. Experts say that based on lessons learned from dealing with SARs, the Canadian health system is much better equipped to handle any potential outbreaks — even if the risk of MERS coming to Canada is still very low. CBC.ca

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Human Rights Watch raises concerns over B.C. terrorism trial
A terrorism trial underway in British Columbia runs disturbingly parallel with an emerging trend in U.S. anti-terror efforts targeting some of society's most vulnerable people, says an international human rights group. Human Rights Watch members have been observing the case of John Nuttall and Amanda Korody, two Vancouver-area residents found guilty earlier this month of plotting to decimate the provincial legislature with pressure-cooker bombs. Andrea Prasow, the organization's deputy Washington director, says the case resembles U.S. authorities' post-9/11 undercover operations to thwart terror attacks before they happen. "What we've seen allegations of (in B.C.) are at least similar practices to what we've seen in the U.S.," said Prasow. "Federal law enforcement authorities targeting in sting operations people who are particularly vulnerable." A B.C. Supreme Court jury convicted the pair of conspiring to commit murder and possessing explosives for the benefit or on behalf of a terrorist organization. The attack was planned for Canada Day in 2013. Canadian Press (Red Deer Advocate, A2, Star Phoenix, Vancouver Sun)

*** ISIL Fighter's mother offers new approach**
There's another side to Islamic extremism, one filled with tears, not hate. The heart-wrenching documentary film of Christianne Boudreau, mother of a dead 22-year old Islamic State fighter from Calgary, arrived in Ottawa on the weekend, part of a cross-country tour by the Extreme Dialogue project aimed at reducing the appeal of all forms of extremism among teens and young adults. A second slick film explored the hate-filled radicalization of Daniel Gallant, a former white supremacist. The effort is led by the Institute for Strategic Dialogue in Britain, with funding from the federal Kanishka Project. Packages of educational resources to accompany the films and other details are at extremedialogue.org. Ottawa Citizen, A6

*** Watch mosques, Islamic schools for radicalization**
The violent doctrine of extreme Islam is spreading in Canada through the foundation of mosques, Islamic centres and Islamic schools by wealthy Gulf state investors with radical goals, a controversial U.S. commentator is warning. Ayaan Hirsi Ali, a former devout follower of the Muslim Brotherhood, bestselling author, ex-politician and now a fellow at Harvard University's JFK School of Government, was the final witness recently at the national security and defence committee, which is preparing a report on threats to national security. "You should be looking out for the sprouting of mosques and Islamic centres. You should be looking out for the establishment of Islamic schools and anything that costs money," she said via a video link from Boston. "Countries like Saudi Arabia and the oil-wealthy Gulf countries that have

absolutely everything that money can buy, yet many of them choose, for their philanthropy, radical Islamic goals, institutions, activities, jihad." Ottawa Citizen, A6

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Residents on edge as search for escapees drags on
Residents in rural New York, unaccustomed to locking their doors, day or night, were on edge as the manhunt for two killers who cut themselves free from a maximum-security prison with power tools stretched into a ninth day. More than 800 law enforcement officers in the search for David Sweat and Richard Matt scoured the fields and Adirondack woods several miles around the Clinton Correctional Facility in Dannemora near the Canadian border. The search continues to focus on the area surrounding the prison after the jail worker accused of helping the men escape backed out of a plan that could have had the men hundreds of miles away, a prosecutor said. The now-jailed prison worker had planned to pick the men up after they cut themselves out of the prison and drive about seven hours to an unknown destination, District Attorney Andrew Wylie told CNN. But prison tailor shop instructor Joyce Mitchell backed out of the plan at the last minute, Wylie said. "One of the reasons that she didn't show up was because she did love her husband and didn't want to do this to him," Wylie said. Searchers continued to focus on an area east of the prison, which is about 30 kilometres from the Canadian border... Associated Press (Cape Breton Post, B5, Guardian); Associated Press (The Record, Chronicle-Herald) (2015-06-15); CBC News (2015-06-14)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

*** Internet of Things a playground for hackers**
When it comes to the security of the Internet of Things, technology companies are thinking about it all wrong. "Privacy is not the main problem," Ted Harrington, executive partner with Baltimore-based Independent Security Evaluators (ISE), told a room of IT professionals at the annual SC Congress digital security conference in Toronto last week. "Why would I care about my connected light bulb getting hacked? At worst, someone gets information about how often I turn on or off my lights. Maybe an adversary could even annoy me by turning off my lights. How bad is that?" Mr. Harrington asks. But think of that "smart" light bulb as a chink in the armour of digital security. Mr. Harrington's research has found that makers of connected devices have failed to design strong protections against attackers: He's seen everything from unchangeable hard-coded passwords to unencrypted data connections. And there is a growing number of connected devices showing up in homes, cars, businesses and on our bodies. Globe and Mail, B3

LAW ENFORCEMENT / APPLICATION DE LA LOI

'I lay on the floor crying, saying thank you'
Amanda Lindhout was so anxious about a scheduled call with her National Security contact that she forgot to eat dinner. It was 8 p.m. MT last Thursday night - the eve of her 34th birthday - and Lindhout had just returned home to Canmore, Alta., from a string of speaking engagements for her bestselling memoir, A House in the Sky, which chronicles the 460 days she spent being starved, beaten, sexually assaulted and held for ransom in Somalia. She knew the caller would bear important news, namely whether a Crown prosecutor felt there was enough evidence to charge the man who led the negotiations on her capture, who terrorized her mother for months with phone calls demanding money and who had been the subject of a lengthy, covert RCMP investigation. Lindhout prepared herself for the worst; that the investigation would be closed and it would all be put to rest. In what turned out to be a conference call with more RCMP officials than she could count, she learned the opposite was true. "It never crossed my mind that they had already arrested the guy," she told the National Post in an interview Sunday. One officer who had stuck with the case over the past five years asked her "Are you sitting down?," Lindhout recalled Sunday on social media. "There were several RCMP officials on the line as he delivered the news. I was stunned that they'd made the arrest. I was even more stunned that the accused kidnapper

was in my home country." Lindhout said she fell to her knees and sobbed as the panel of officials and investigators waited on the other line... Though she had participated in the investigation for more than 5 ½ years, the freelance journalist-turned-philanthropist never shared the RCMP's confidence that Ali Omar Ader would be charged in connection with her kidnapping in Mogadishu, Somalia, on Aug. 23, 2008 when she entered the country with photojournalist Nigel Brennan in pursuit of a story. Richmond County woman's remains identified

Human remains found in a wooded area last month have been identified as those of Michelle Marie Demers-Kennedy, who was killed by her son two years ago. The 57-year-old woman was reported missing from her Framboise residence on Mother's Day in 2013. Last month, her oldest son, Merlin Demers-Kennedy, 32, of Framboise, pleaded guilty to manslaughter in her death. He remains in custody until his sentencing Friday in Port Hawkesbury Supreme Court. There is a broad range of sentences for manslaughter, with the maximum being life in prison. In late May, investigators with the RCMP's Northeast Nova Major Crimes Unit identified a burial site in a wooded area off North Framboise Road and human remains were located and exhumed on May 27. With the assistance of the Nova Scotia Medical Examiner's Office, the RCMP were then able to identify the remains. Merlin Demers-Kennedy was arrested on Jan. 15, 2014, and in a statement to the RCMP he admitted to killing his mother... Cape Breton Post, A1

'She's not just taken away from me'

For two months, Kirk Babiak has been replaying the scenes in his head: The frantic phone call, the house surrounded by police, the devastating, unbelievable news that the woman he loved had been murdered. "To have this happen just makes no sense," said Babiak, whose girlfriend, Paula Stiles, was found dead inside her Sherwood Park home on the morning of April 15. "She's not just taken away from me, she's taken away from everybody - her friends, and her family and her beautiful girls. There's so many people that are just devastated and at a loss of knowing what to do next, because she filled such a big role in so many people's lives." Stiles, 44, a mother with three daughters, worked as a training supervisor at Enbridge Pipelines. She was found dead inside her house at 40 Foxhaven Court. No arrests have been made, and the cause of her death has not been released by RCMP. RCMP spokeswoman Josee Valiquette said Friday that the case remains under active investigation. RCMP previously appealed to the public for video and photographs shot in public areas in or around Sherwood Park between the night of Tuesday, April 14, and the morning of Wednesday, April 15. Investigators were also looking for two teenage skateboarders who had been in the area, and were considered to be potential witnesses. Valiquette said she did not know if the skateboarders had been located, but that investigators were still looking for tips and information in the case. Postmedia News (Edmonton Journal, A1)

Waterloo Region watching OPP talks

Ontario municipalities are keeping a close eye on provincial police contract negotiations to see if the province can whittle out years-of-service bonuses that communities say are difficult to afford. The benefit, known as retention pay, began in Toronto a little over a decade ago. The Ontario Provincial Police followed suit soon after, and over the years it found its way into most police and firefighter contracts across Ontario - including Waterloo Region - as recognition or service pay. It gives an extra three-per-cent pay after about eight years of service, six per cent after about 17 years and nine per cent after about 23 years. In Toronto, the base pay of a first-class constable is $92,433. The provincial government does not control the deals municipalities reach with their police services. But it can set trends with the agreements it strikes with the Ontario Provincial Police. As the Liberal government tries to eliminate a $10.9-billion deficit it has said any public-sector contracts must have "net zero" increases, so any small compensation boosts would have to be offset. Neither the government nor the Ontario Provincial Police Association would say if retention pay - also known as 3-6-9 - is on the table as they bargain a new deal.

But most police service boards are hoping it is, says their provincewide association. Canadian Press (Waterloo Record, A1)

Pan Am Games will test security budget
The Pan American Games will rack up police overtime; the question is how much. With years to prepare and examples from other cities to look to, organizers have dreamed up ways to leave Toronto police officers free to staff the event. That includes shutting down the city's police college and certain courtrooms for all of July, as well as nearly halving the amount of vacation officers can take that month. Those measures will limit costs to the province, which is responsible for paying officers' overtime. But they will also be a test of success for streamlining police costs, if Toronto or other major cities hope to host big events more often. "One of the most expensive things at these types of international events now is security," said Christian Leuprecht, a professor at Queens University and the Royal Military College who has written extensively on the costs of policing. Some overtime is inevitable, he said. But he will be looking to see, after the Games, how real costs stacked up against the province's $239-million security budget. "If Canada and Toronto want to be competitive in bids for these types of large events, they will need to find efficiencies," he said. "This is all plan-able and manageable." Ontario Provincial Police and thousands of private security staff will work with municipal police, including Toronto's, at the Pan Am and Parapan Games, which will last 26 days in total. Of the amount the province plans to spend, $101.5-million is slated to cover various municipal police services, $81-million for contracted private security and $57-million for the OPP, according to an Auditor-General's report on those costs from last fall. The Games' organizers have budgeted an additional $8-million for security. Toronto municipal police are budgeted for $72.7-million, overtime included, said Toronto Police Staff Sergeant Devin Kealey, a community liaison for the Games. However, those are estimates, and staffing will depend on attendance, weather and other factors, he said. Globe and Mail, A8

OPP officer arrested again
An Ottawa OPP officer has been arrested for the second time in 12 months and charged with cocaine possession and a gambling-related offence after being found in an illegal gaming house. Const. Dennis Hill, a 14-year veteran, was arrested Thursday night when OPP organized crime investigators raided a home on Snowden Street in Alta Vista to break up a common gaming house. Ten others also were charged. Officers seized marijuana, cocaine, oxycodone hash, morphine and cash. Hill, 38, has been on leave from the force, the OPP said in a statement. Last June, his own force arrested him while he was on medical leave for rehabilitation. Postmedia News (Ottawa Citizen); Postmedia News (Kingston Whig Standard)

Un appel vidéo de la GRC dans un cas de cybercrime produit des résultats
Une vidéo de la GRC du Nouveau-Brunswick lançant un appel à l'aide pour faire avancer l'enquête sur un homme de Moncton accusé d'avoir leurré jusqu'à 2000 garçons en ligne a été vue 750 000 fois et donne des résultats, rapporte la GRC. L'agente Jullie Rogers-Marsh a affirmé que la vidéo avait été partagée sur les médias sociaux par des corps policiers de plusieurs pays. La police a bel et bien reçu de l'information, mais elle n'en a pas précisé la nature ni la quantité. L'homme de 24 ans, qui ne peut être nommé en raison d'une ordonnance de non-publication, fait face à plusieurs chefs d'accusation de nature sexuelle pour avoir prétendu être une adolescente en ligne pour attirer des garçons âgés entre 10 et 16 ans. Les crimes auraient été commis entre le 12 janvier et l'automne dernier. L'accusé pourrait avoir pris au piège des victimes au Canada, aux États-Unis, au Royaume-Uni, aux Pays-Bas, en Australie et en Russie. Presse Canadienne (L'Acadie Nouvelle)

Edmonton mourns Woodall
Slain city Const. Daniel Woodall was remembered as a warm person and a joker who could always lighten the mood. Edmontonians paid respects to the slain officer during a public visitation arranged by his family Sunday at First Memorial Funeral Services in Old Strathcona. Police honour guards stood by Woodall's casket, which was draped in a Canadian flag and a police hat and photograph of Woodall on top. Next to the officers stood a framed photograph of Woodall with his smiling wife and two children, as well as a British flag to represent his home country. Denver Poburan, who trained in kung fu with Woodall, saw the officer two days before he was gunned down at a west Edmonton home while trying to serve an

arrest warrant. "I saw him on the Saturday before he died and he said, 'I'll see you on Tuesday,' and he never did," Poburan said, holding back tears. "He was a great guy. He always had a joke to lighten the mood. He took his training seriously, but he was also just a fun guy to be around." Poburan said Woodall had just earned his green belt. An aspiring officer himself, Poburan had many reasons to admire his "kung fu brother." "He was someone the class could really look up to. He was also a big inspiration for me because I want to get into policing too, and he was always encouraging for me to do that." Postmedia News (Kingston Whig Standard, London Free Press, Calgary Sun, Edmonton Sun, Winnipeg Sun, Ottawa Sun, Toronto Sun, London free Press)

La drogue «roulette russe»
Il s'avère révélateur que certains consommateurs croient que la Molly soit une nouvelle drogue, puisque les consommateurs connaissent rarement la réelle composition des comprimés et des capsules qu'ils achètent. Selon les forces policières, même les distributeurs ne sont pas toujours conscients de ce qu'on retrouve dans leurs produits. Non seulement il ne s'agit pas d'une nouvelle drogue, mais même le nom Molly - dérivé du mot «molécule» - n'est pas nouveau. Il est associé à la MDMA depuis plusieurs années. Généralement, ce qui est vendu comme étant de la Molly est une drogue à base de MDMA, mieux connue comme étant de l'ecstasy. Or, la concentration de MDMA est régulièrement réduite par un mélange avec divers produits chimiques et drogues. «Il n'y a aucune façon qu'on puisse savoir d'avance ce que le comprimé contient réellement [...] on peut se retrouver avec n'importe quoi. Ça peut être de la méthamphétamine ou d'autres drogues qui imitent les effets de la MDMA», soutient Mélanie Terrier, caporale au Service de sensibilisation aux drogues et au crime organisé (SSDCO) de la Gendarmerie royale du Canada (GRC). Autrefois, il était nécessaire d'avoir un contact rapproché avec les producteurs des comprimés pour devenir un vendeur d'ecstasy. La distribution s'est toutefois «démocratisée» et cette drogue est désormais accessible en vrac sur le Web. Le produit, conçu outre-mer, est alors expédié à l'acheteur. La Presse (Le Droit)

RCMP review of 30 flagged Senators' expenses would become a 'hell of a problem'
Senators on both sides of the aisle are concerned the Mounties will review the files of all 30 Senators flagged in Auditor General Michael Ferguson's explosive report, which would become a "hell of a problem" for the embattled Upper Chamber's image. "I've heard that the RCMP were going to take a look at all 30. Now, what that means, I don't know. You'd have to get that confirmed from them. Certainly, that's a story that's floated around, there's no question about it," said Ontario Conservative Sen. Bob Runciman, a former provincial minister of public safety and security and chair of the powerful Senate Legal and Constitutional Affairs Committee. Of the 30 flagged expenses, Mr. Ferguson referred the cases of nine Senators to the RCMP and the other 21 to the Senate's Internal Economy, Budgets and Administration Committee. Sen. Runciman and other Senators interviewed for this article said the federal police force could decide to investigate all 30. "They [the RCMP] can take a look at the findings and if they think there's something of concern, they have the ability to investigate," Sen. Runciman told The Hill Times. Liberal Sen. Céline Hervieux-Payette (Bedford, Que.) echoed Sen. Runciman's view that the RCMP could start an investigation of all 30 Senators. "We were told that the RCMP said that they will investigate, whoever they want, whenever they want and for the amount of time they want." One Senator who spoke on condition of anonymity said Senate backrooms are concerned that the RCMP is reviewing the AG audit report, monitoring media reports and, should they go ahead with an investigation, they would go back five years. Hill Times

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Bath Institution placed in lockdown
Bath Institution is in lockdown, Correctional Service Canada reported on the weekend. At approximately 9 p.m. Friday night, the lockdown was put in place at the medium-security federal institution to enable staff members to conduct an exceptional search. Normal operations will resume as soon as it is safe to do so, according to a news release. "A search would be to find any unauthorized items that offenders are not allowed to have," Shannon Mills, media relations with CSC, said in an email. "We cannot provide details as it might compromise the search." A release from CSC said the search was ordered to ensure the

safety and security of the institution's staff and inmates. The institution has a rated capacity of 340 inmates. "CSC is committed to preventing the entry of contraband into its institutions," The release states. "CSC also works in partnership with the police to take action against those who attempt to introduce contraband into correctional institutions." Kingston Whig-Standard, A3

*** Parole board rejects day passes for killer of ex-NHLer's parents**
A request for six unescorted day visits to a Sudbury halfway house from the man who killed the parents of an ex-NHL player was rejected by the parole board. Former NHL goalie Don Edwards -- whose parents Arnold and Donna were killed in 1991 by George Harding Lovie, then 32, in a small town south of Hamilton, Ont. -- said in an interview Sunday he and his family are elated with the board's decision, which took only 10 minutes following a five-hour hearing Thursday. "We're happy and we are also happy for the people in Greater Sudbury as well," said Edwards, who played 10 seasons in the NHL with the Buffalo Sabres, Calgary Flames and Toronto Maple Leafs. "People just don't realize how dangerous this guy is. "The sad thing about it is St. Leonard's (halfway) House in Sudbury had approved it, but he failed to meet any of the four requirements with the extended temporary absences such as risk and behaviour." The parole board hearing was held at the Beaver Creek correctional facility in Gravenhurst, Ont., where Lovie is serving his time. Lovie, who is considering living at the halfway house should he ever be granted parole, was convicted of two counts of first-degree murder and one count of attempted murder. He was sentenced to 25 years to life on each count. Postmedia Network (Toronto Sun, Edmonton Sun, Ottawa Sun, Winnipeg Sun, Calgary Sun, London Free Press, Kingston Whig-Standard, Cornwall Standard Freeholder, Sault Star, CNews, 24 Hours Vancouver)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Missing, murdered aboriginal women inquiry findings would be more shocking than residential school report
A letter to the editor states, “Re: "Three reasons why inquiry into extraordinary number of missing, murdered aboriginal women isn't the answer," (The Hill Times, June 8, p.12). Thank you for writing about aboriginal issues. Even when I disagree with the writer I am usually grateful for the issues being kept in the minds of your readers, most of whom are not aboriginal and judging from the comments section do not even agree with the existence of aboriginals. You say you want to have these crimes investigated as crimes. I would suggest that underneath that lies a social prejudice that you have yet to uncover. If crimes are only crimes and demographics are not important, then I look forward to your column suggesting that no money should be put into investigating abuse of seniors, ending funding to women's groups, cancelling funding for fighting gang crimes or other demographic-based initiatives. If that somehow feels uncomfortable to you please examine that reaction. My mom was Mohawk and my dad was white. I look white, was kidnapped by the government during the '60s scoop; they thought I would fare better in foster care than residential school. I was raised by decent, kind people, worked fairly steadily in various industries, never fell into addiction, married for almost 20 years and have three grown children who also work (and have avoided addiction) and a lovely new charming healthy grandson.” Hill Times.com

*** Why is the city of Vancouver regulating an illegal activity?**
An opinion piece states, “As the City of Vancouver consults with the public on its proposal to license marijuana retailers, I expect many people are not asking themselves about the details – for example, should pot shops be allowed at transit malls – but about the bigger question: What is the city doing regulating an illegal activity? Yes, storefront marijuana sales are still against the law. Marijuana can be distributed legally for medical purposes, but several conditions must be met. Among them, the patient needs a doctor’s prescription, and the purchase must be from one of a very small number of producers licensed by Health Canada. If these and other conditions are not satisfied, then possession and sale of cannabis is a criminal offence, and possession of as few as six marijuana plants carries the risk of prosecution and up to 14 years in prison. Or not. Because in Vancouver, the police have made it clear they will not enforce medical marijuana laws against store operators except when there are other public order considerations. (…)Some may still believe the best response to the reality that is marijuana in our society is to criminalize it, but it is a shrinking minority. A large and growing consensus of Canadians

understands that cannabis prohibition has failed. It has not reduced use, and it has instead encouraged the spread of organized crime gangs whose members fight over market share." Globe and Mail

* **La drogue, le crime numéro un**
En forte hausse depuis cinq ans, les infractions liées aux drogues arrivent en tête du «top 10» des crimes commis au Québec. C'est ce que permettent d'établir des données compilées par le ministère de la Sécurité publique sur les crimes commis par les 5000 détenus qui se retrouvent chaque jour dans les 19 prisons québécoises. Le trafic, la production et la possession de stupéfiants totalisaient 2173 des quelque 14 000 infractions criminelles de ces prisonniers, au 31 janvier 2015. Soit un crime sur sept. La drogue arrive loin devant le non-respect d'ordonnances du tribunal, les voies de fait et les vols. Journal de Québec, 26 (Journal de Montréal)

* **Activists looking to put Hamilton Police 'street checks' onto public agenda**
The mayor of Toronto recently called for an end to that city's controversial "carding" policing tactic. The mayor of Hamilton said a few days later the issue of "carding" or "street safety checks" hasn't come across his radar. "I'm not hearing any kind of a conversation on it at all," said Mayor Fred Eisenberger. That's set to change later this month.An activist who fears the street stops that Hamilton police acknowledge they do, leads to disproportionate targeting of racial minorities will push for answers in front of the chief and elected officials, including Eisenberger, at the next Hamilton Police Services Board meeting, June 25. That appearance will set the stage for Hamilton to enter a public debate that has been growing around the province for months. Not everyone shares the mayor's belief carding or "street stops" are not an issue here. CBC News

* **Former sex worker claims MLAs, judges, police officers, lawyers, and doctors have been clients of prostitutes**
At yesterday's Red Umbrella march in Vancouver, a former sex worker condemned federal legislation that criminalizes clients. Sheryl Kiselbach, the violence-prevention coordinator at the PACE Society, said that she and other current and former sex workers in the crowd have "dated" doctors, police officers, lawyers, judges, and MLAs. Kiselbach didn't name names, and instead emphasized the importance of supporting current sex workers who face greater dangers because of legislation passed last year by the Conservative government. "We need to help them stay safe and we need to support them," she said. The red umbrella has long been a symbol of sex workers' safety, which explains the name of yesterday's protest. Kiselbach told the crowd on the south side of the Vancouver Art Gallery that she became a plaintiff in a charter challenge against prostitution laws because she didn't want sex workers to suffer the same injustices that she endured. Straight

* **SlutWalk Demonstrators Call for Better Education on Respect, Consent**
The first ever St. John's SlutWalk drew a large crowd for a rally and march through the capital city's downtown. The event yesterday afternoon was intended to discuss sexual violence and victim blaming as socially and culturally entrenched issues that need to be addressed. Lawyer and activist Lynn Moore is trying to convince the province to bring in a course for K-12 students on respect, equality, and consent. Moore said that teaching our kid not to rape, and to get consent, is as important as teaching them math. VOCM

PUBLIC SERVICE / FONCTION PUBLIQUE

Public Service Week gets political ahead of election
The week to celebrate the hard work of Canada's public servants will take a political turn as federal unions begin a pre-election advertising campaign that accuses the Conservatives of undermining the integrity of public services. National Public Service Week kicks off Monday with the Professional Institute of the Public Service of Canada launching the release of its pre-election ads for print, online and radio to coincide with the week-long activities. "We believe the best way to mark National Public Service week is to speak out and defend the integrity of public services our members deliver, and our advertising will make sure it will be an issue in the election campaign," said Debi Daviau, PIPSC president. The 17

federal unions signed a solidarity pact to ensure they present a common front in this round of contentious bargaining over the Conservative government's plans to scrap existing sick-leave benefits that are a long-standing part of employees' contracts. Ottawa Citizen, A8

Trekkers believed back on home soil
Two Saskatchewan trekkers deported from Malaysia are believed to be back in the province. It is believed 23-year-old Lindsey Petersen and his 22-year-old sister Danielle arrived in Regina on a flight from Vancouver late Sunday afternoon. At about 4 p.m., two people believed to be Floyd and Joanne Petersen - the parents of the siblings walked to the arrivals area of the Regina airport. The man, wearing a pink visitor's tag, was promptly escorted to another location in the airport and the woman joined him shortly after. When asked by media, the woman denied being Joanne Petersen. There was no sign of either Lindsey or Danielle Petersen with other passengers who got off the Vancouver flight, suggesting they were taken through to another area to leave the airport. Postmedia News (Star Phoenix, A1, Leader-Post, A1)

INTERNATIONAL

U.S. airstrike in Libya targets terrorist behind Algerian attack
The United States carried out an airstrike in Libya early Sunday against the mastermind of the 2013 terrorist seizure of an Algerian gas plant that left 38 foreign hostages dead, U.S. and Libyan officials said on Sunday. The Libyan government said in a statement Sunday night that the airstrikes killed the terrorist leader, Mokhtar Belmokhtar, and "a number" of other Libyan terrorists in the eastern part of the country. "The Libyan government announces that American planes undertook action that resulted in the death of the wanted terrorist Mokhtar Belmokhtar and a number of Libyans belonging to one of the terrorist groups in Eastern Libya, after consultation with the Libyan interim government to take action on terrorist leadership present on Libyan soil," according to a statement released by the government. U.S. officials confirmed that Belmokhtar was the target of the strike by at least one U.S. warplane, but they expressed caution about his fate, saying that they needed forensic proof to declare with certainty Belmokhtar's death. That could take some time unless terrorist websites issue a statement of mourning. New York Times (The Hamilton Spectator, A14, The Record, Toronto Star); * Associated Press (National Post)

MINISTER / MINISTRE

RCMP refugee screening a $16M flop, says internal report
A $16-million RCMP project to help keep dangerous refugees out of Canada has turned out to be an expensive security flop. An internal evaluation says the screening project delivered information too late, strayed beyond its mandate, and in the end did almost nothing to catch refugees who might be linked to criminal or terrorist groups. Meanwhile, 30 Mounties were tied up for four years on duties that did little to enhance Canada's security. "The current approach does not appear to provide much by way of relevant information to support the admissibility screening of refugee claimants," concludes the Sept. 29, 2015, report, obtained by CBC News under the Access to Information Act. The report on the anemic results was completed at about the same time as then prime minister Stephen Harper said Canada had to proceed cautiously in accepting Syrian refugees so that Canada's screening process could weed out terrorists. "When we are dealing with people that are from, in many cases, a terrorist war zone, we are going to make sure that we screen people appropriately and the security of this country is fully protected," Harper told a 2015 election rally in Welland, Ont. "We cannot open the floodgates and airlift tens of thousands of refugees out of a terrorist war zone without proper process. That is too great a risk for Canada." (…) A spokesman for **Public Safety Minister Ralph Goodale**, who is responsible for the RCMP, ***said the***

government welcomes the evaluation's feedback. "We believe in evidence-based policy and in ensuring that government resources are being used effectively and responsibly," Scott Bardsley said in an email. RCMP Commissioner Bob Paulson has said the force's new responsibilities for anti-terrorism have drained resources away from other key activities, such as fighting organized crime and market fraud. CBC

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Tornado Touches down**
Calgary Environment Canada confirmed that a tornado - the first for Alberta this year - touched down Wednesday afternoon near the intersection of Hwy. 1 and Stoney Tr., east of Calgary. Meteorologist Kirk Torneby said the tornado touched down around 3:50 p.m. but did not cause any damage and it was difficult to determine the length and width of its track. "This was driven by daytime heating, winds converging at the surface and causing a rotation, sucked up by the updraft of, in this case, rain moving through," Torneby said, adding winds reached as high as 105 to 137 km/h. "It was basically developing from the ground up to the cloud." On the 1 to 5 Fujita scale used to rate the intensity of tornadoes, this one was rated a zero since it had no impact, the agency said. Edmonton Sun, A34 (Calgary Sun); Calgary Herald

*** Heavy rain heading for northwestern Ontario, Environment Canada says**
Environment Canada is issuing a special weather statement for parts of northwestern Ontario because of significant rainfall expected to begin Friday night. A low pressure system from the upper plains states could bring heavy rain to Red Lake, Sioux Lookout, Kenora, Dryden and Pickle Lake through the weekend, says meteorologist Geoff Coulson. Rainfall amounts of 25 to 50 millimetres are possible by Sunday morning and that's a problem because of the area's delayed spring, he said. CBC News

*** Climate, flooding, devastation: Why no national strategy?**
Climate change has moved from future threat to present danger. Extreme weather events are increasing in frequency and severity. The Parliamentary Budget Officer (PBO) recently estimated that the financial cost of natural disasters driven in part by climate change will, over the next five years, be far greater than previously estimated. Policy makers must fully accept and swiftly adapt to this new reality – even as they continue with efforts to combat climate change over the longer term. The numbers are harrowing: The PBO predicts that storms, hurricanes and floods linked to climate change will cost the federal disaster fund $900-million annually over the coming five years. That compares to an average of just $54-million a year (in adjusted 2014 dollars) for the period between 1970 and 1994. That $900-million-a-year estimate is well in excess of what the federal government has currently set aside to deal with such events. Globe and Mail (2016-04-11)

*** Forest-fire season begins April 18**
The 2016 forest-fire season in New Brunswick begins on April 18. Each year, the season begins on the third Monday of April and continues through until Oct. 31 unless otherwise indicated. Anyone igniting a Category 1 fire (fires with a diameter of three metres or less) should ensure burning is allowed in that area. This can be done by calling the toll-free burn line at 1-866-458-8080 or by visiting the Department of Natural Resources' website. Category 2, 3 and 4 fires require a written permit. Applications are available at the department's regional offices. Burning grass is considered a Category 4 fire that requires a written permit. To many people, burning grass is a safe and helpful way to renew the growth of new grass in the spring. However, the reasons for spring grass burning are largely unfounded and rather than being beneficial, it is destructive and dangerous. A list of myths and facts surrounding grass burning is available online. Sackville Tribune Post

*** Déversement de mazout aux Îles : 29 documents saisis par le ministère de l'Environnement**
Le ministère de l'Environnement a dû effectuer une perquisition chez Hydro-Québec pour obtenir des documents importants dans le cadre de son enquête sur le déversement de 100 000 litres de diesel dans le port de Cap-aux-Meules en 2014. Ces documents ont contribué à l'enquête du ministère qui a conclu

que l'oléoduc était ravagé par la corrosion au moment du déversementet et qu'Hydro-Québec a manqué à ses devoirs en ne prenant pas les mesures de prudence pour l'entretien de ses équipements. Radio-Canada (2016-04-14)

*** Ontario Fire Marshal review results in 27 recommendations for Amherstburg**
The Ontario Fire Marshal issued 27 recommendations to improve service after an extensive review of Amherstburg's fire department. Town council received a report from the Office of the Fire Marshal and Emergency Management (OFMEM) at Monday's meeting. Recommendations focused primarily on administrative issues such as shoddy record keeping, a lack of prevention programs, public safety education and emergency planning. The review also concluded "a current and validated mechanism to measure fire risk within the municipality does not exist." Windsor Star, SR8

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Documents shed a little light on what spy Jeffrey Delisle sold to Russians**
The U.S. Naval Criminal Investigative Service (NCIS) has shed a little light on the information Canadian spy Jeffrey Paul Delisle was selling to the Russians. The former Canadian naval intelligence officer pleaded guilty in 2012 to spying and selling secrets for about $3,000 a month. Delisle, 45, a Halifax native and former sub-lieutenant, was the first Canadian to be convicted of spying in decades. The type of information Delisle sold to the Russians did not come out in court, but CBC News made more than a dozen freedom of information requests to various U.S. government departments. Most of the responses were heavily — if not totally — redacted, but some details were contained in documents from the NCIS. Details included the kind of threat assessments of foreign destinations that are routinely prepared for visiting American troops and officials. CBC News

Daesh targets Toronto imam on their hit list
Just days after celebrating cultural bridges, a Toronto imam has been targeted in a Daesh hit list. Daesh, also known as ISIS or ISIL, named Shaykh Abdullah Hakim Quick along with other Muslims in the West, urging followers to kill them for speaking out against the group and betraying their interpretation of Islam. Quick works with the Canadian Council of Imams, which hosted its first annual dinner on Monday night, honouring political leaders and community members. "It was a really good vibration that came out of that meeting, a lot of unity between people of different faiths," Quick told the Star. "So here comes the devil, as we would say, screaming out against us the next day." Quick first learned of the threat on Wednesday from a fellow imam in the council, but though he says he has contacted law enforcement and is taking precautions, he will not be intimidated. "I will continue to do what I have to do," he said. "Putting my trust in God. This is what Muslims do when they find themselves in difficulty, and continue on to do what's right." Michael Zekulin, a terrorism researcher at the University of Calgary, says the threat is typical of Daesh's propaganda tactics, but not necessarily legitimate. Daesh has implored its followers to go after others in the past, he said, such as Calgary-based cleric Syed Soharwardy and UFC fighter Tim Kennedy. "It never resonated," Zekulin said. More than anything, he said, the threat demonstrates the sophisticated, extensive nature of Daesh's communication network. Quick said he has never personally confronted Daesh, but the council has spoken out against the radical group. The article naming Quick appeared in Dabiq, an English-language magazine published by Daesh. Toronto Star, GT2

Victoria terror couple drop CSIS demand
A Surrey, B.C., couple convicted of a plot to bomb the Victoria legislature have abandoned an application they filed seeking further disclosure of documents from the Canadian Security and Intelligence service. Marilyn Sandford, a lawyer for the defence, Thursday told B.C. Supreme Court Justice Catherine Bruce recent delays in pursuing the matter in the Federal Court of Canada have displeased John Nuttall and Amanda Korody. "My clients have been in custody for a long time. They are anxious to proceed and they are anxious that there not be any further delay." The abandonment of the CSIS application is expected to bring an end to evidence being called by the defence in a bid to stay the charges on grounds the couple were entrapped by police. National Post, A6; * Vancouver Sun, A7 (The Province)

Get serious on crime at casinos
An editorial states, "British Columbia plans to crack down on money laundering at casinos. We hope the government's heart is truly in its task, given that total government revenues from commercial gambling in 2013-14 totalled $1.17 billion. The move is long overdue. The government has made it easier for organized crime to use B.C. casinos for money laundering and loan-sharking since it ditched the gambling-crime investigative task force seven years ago. Finance Minister Mike de Jong said Monday 22 officers with the Combined Forces Special Enforcement Unit will be dedicated to investigating groups that use gaming facilities to legalize proceeds of crime. He said police will work with the B.C. Lottery Corp. and the Gaming Policy Enforcement Branch as part of the Illegal Gaming Investigation Team. One of the challenges of being a criminal with wads of illegal money is how to make all that dirty cash seem legitimate. No problem - bring in $8,000 or $9,000 from drug deals and use it to buy gambling chips. Make a few small bets, then cash in your chips. You get a casino cheque that indicates your money is legal winnings from gambling." Times Colonist

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Sixth suspect arrested in gangland slaying
A sixth suspect in the fatal gangland shooting of Mohamed "Magic" Najdi was to face charges of first-degree murder and kidnapping at a court appearance Friday on the heels of his arrest in the Toronto area. Nedeljko Borozan, 26, was arrested Thursday and brought to Ottawa where homicide detectives were to interview him for what they allege is his role in the Jan. 10 kidnapping-turned-killing of Najdi. Borozan's arrest comes after five others have already been charged with first-degree murder and kidnapping. (…) An immigration ruling calls Borozan a "stateless person" who was born in 1989 in Yugoslavia. Borozan failed to appear in court in 2013 and a warrant was issued for his arrest. Borozan then failed to report to the Canada Border Services Agency, as he was required to do. According to a December 2008 newsletter from St. Thomas the Apostle Anglican Church, Borozan came to Canada in 1996 from Yugoslavia with his mother and brother on a "special ministerial permit" because his brother had cerebral palsy, At that time he had graduated from high school and was working full-time to earn money for university tuition, the newsletter said. In 2013, a CBSA officer and members of the Ottawa police Direct Action Response Team - the anti-gang suppression unit that is no longer operating in the city - went to his home, but his mother said he was probably at his girlfriend's house. His mother promised to personally take him to the police station the next day to turn himself in, but that didn't happen. Ottawa Citizen, A6 (Ottawa Sun)

*** Local authority calls RFP for Peace Bridge Duty Free contract**
The Buffalo and Fort Erie Public Bridge Authority, owner and operator of the land border crossing at Peace Bridge, is seeking proposals from potential tenants to run the 28,000sq ft duty free shop. The contract runs for 15 years with a five-year renewal option. The Authority owns and operates the Peace Bridge which is located at the Niagara River Crossing between Buffalo, New York and Fort Erie, Ontario. Peace Bridge is the second busiest border crossing between Canada and the USA with around 5.5 million vehicles crossing each year. Sales at the duty free shop have been between C$20 million and C$25 million a year in the past five years. A duty free shop on the Canadian side of Peace Bridge first opened for business in 1986 and was one of the earliest land border duty free shops in Ontario. The current duty free shop has parking for 146 cars, 24 trucks and ten buses. (…) The successful candidate must obtain a license to operate a duty free shop from the Canada Border Services Agency (CBSA). Moodie Report, DFNI Online

*** Lait diafiltré : le gouvernement Trudeau cherche une solution à « long terme »**
Le gouvernement Trudeau reste de marbre devant la grogne des producteurs laitiers qui réclament des mesures concrètes dans le dossier du lait diafiltré. Interpellé à plusieurs reprises sur ce sujet, jeudi, le secrétaire parlementaire du Commerce international, David Lametti, a répondu qu'il était au courant des enjeux. « Nous travaillons avec l'industrie afin de trouver une solution à long terme », a-t-il affirmé. La porte-parole du NPD en matière d'Agriculture, Ruth Ellen Brosseau, a demandé au gouvernement de cesser l'importation de ces protéines ou de compenser les producteurs qui perdent d'importantes

sommes d'argent. Elle a créé une pétition à ce sujet, qui a récolté plus de 4000 signatures en deux jours. (…) Mercredi, l'Assemblée nationale a voté à l'unanimité une motion de la députée caquiste de Mirabel, Sylvie d'Amours, pour harmoniser la définition du lait diafiltré. Québec exige que l'Agence canadienne d'inspection des aliments applique son règlement sur la composition fromagère et considère le lait diafiltré comme un concentré de protéines, à l'instar de l'Agence des services frontaliers du Canada. À l'heure actuelle, une brèche à la frontière permet à ces protéines liquides des États-Unis d'échapper aux tarifs douaniers imposés au lait, aux œufs et à la volaille. Les transformateurs les utilisent dans la production de fromage, par exemple. Huffington Post Québec (2016-04-14)

*** José Figueroa awaiting Canada work permit**

It's been a three and a half months since José Figueroa got his first taste of freedom after spending two years in sanctuary at his Walnut Grove church. Since then, Figueroa has spent his days with his wife and three kids, adapting to life without fear of being arrested by the Canadian Border Services Agency. But the Langley City man's struggles aren't over yet. Figueroa has been waiting for a work permit so he can return to his job and provide for his family. When he was granted a ministerial exemption of his deportation order at the end of December, Citizenship and Immigration Canada (CIC) indicated it would expedite the work permit, saying it should take about 45 days. Figueroa filed the required documents in early February but, still, no work permit has arrived. Langley Times (2016-04-14)

*** Bridge work could complicate international crossings**

Just as the busy travel season begins, two big bridges have major construction underway. The Peace Bridge continues building ramps to the Niagara section of the Thruway while work gets underway at the Lewiston-Queenston Bridge. "We're doing Phase One of the Lewiston plaza," said Niagara Falls Bridge Commission General Manager Lew Holloway. "We built a new duty-free which is now operational. It was operational in August. We're re-aligning I-190 as it crosses the plaza to the north to free up more space on the plaza so we can free up more space for Phase Two. We're working with GSA right now to sign a lease so that we can proceed with Phase Two." Holloway says phase two will be a $60 million project for a new headquarters and processing point for Customs and replacement of ten inspection lanes with 16 inspection lanes and a bus lane. The Ontario end of the span was completely re-built several years ago in a much larger project. WBFO 88.7

Belligerent woman may not be criminally responsible

An Edmonton woman who admitted she attacked several people, bit a woman and tried to strangle a dog, could be found not criminally responsible. Danh Thi Nguyen, 41, pleaded guilty Dec. 15, 2015, to charges of assault causing bodily harm, assault and causing distress to an animal. A judge, however, struck down her guilty plea Thursday as a result of a recent psychiatric assessment. Provincial court Judge James Wheatley then adjourned the case to June 20 for a hearing to determine whether Nguyen is not criminally responsible because of a mental disorder at the time of the attack. A psychiatric assessment says Nguyen suffers from a major depressive disorder with psychotic features. Court heard Nguyen is also subject to a deportation order and must leave Canada and return to Vietnam. Edmonton Journal, A3 (Edmonton Sun)

Cocaine courier Learning convicted, bail revoked

Almost five years after a lone courier collected a cocaine shipment in the pitch darkness of a prairie night near the remote Saskatchewan-Montana border and hauled it to B.C., he has reached the end of the road. Ronald Charles Learning, who had been on bail, left court in handcuffs Thursday after Regina Provincial Court Judge Marylynne Beaton convicted him of possession of cocaine for the purpose of trafficking. "The Crown will be asking for a significant period of incarceration," Crown prosecutor Doug Curliss said. He referred to a recent ruling in which a drug courier who moved two kilograms of cocaine got a seven-year prison sentence - and noted this case involves 30 kilos worth between $1 million and $2.3 million depending how it was packaged for sale. (…) Learning was a one-offcourier in a large-scale drug shipping network that moved 1.3 tonnes of cocaine from California, across the remote Sask.-Montana border and into B.C. between late 2009 and October 2011. Known as Project Faril, the investigation uncovered the largest drug smuggling case in Saskatchewan. Leader-Post, A3

Eliminating the barriers

Marie Antoinette Pangan doesn't want to see other immigrants forced to take the same pathway she did in becoming a permanent Canadian resident. Pangan, who is originally from the Philippines, came to P.E.I. in 2010 through the Temporary Foreign Worker Program (TFWP) with a group of about 30 others to work at a fish plant in Bloomfield. Today, the 33-year-old is a permanent resident finishing up her first year of nursing at UPEI while also working part-time at a Charlottetown nursing home. However, the journey wasn't without challenges. In particular, Pangan said finding a full-time job and saving up settlement funds were two barriers that still plague many foreign workers. "There's not always a full-time job you can apply for, that's the number one barrier," said Pangan. "Number two is the low wages from temporary jobs. In order to gain permanent residency, you have to have savings. Especially for me, my son was in the Philippines at the time, so I needed more savings than other temporary foreign workers to bring him here." Granting permanent residency to temporary workers upon arriving in Canada was one of the key recommendations proposed during a forum on migrant workers' rights at UPEI last weekend. The forum was put on in partnership by the Cooper Institute, KAIROS Canada, the Canadian Labour Congress, The Canadian Union of Public Employees and several other community groups. It brought together nearly 100 individuals, including many migrant workers, to discuss recommendations for the federal government's current review of the TFWP. The Guardian, A4

Family demands answers about man's suicide in jail

The family of an inmate who killed himself in solitary confinement at Ottawa's jail is worried he was placed in the cell and locked up for 23 hours a day as punishment for refusing a transfer to another jail. The niece of Yousef Hussein said that when her mother tried to visit her younger brother on Friday at the Ottawa-Carleton Detention Centre, she was turned away, even as other prisoner visits continued as scheduled. (...) Hussein had been in the jail for the past two years and was expecting to spend another year there awaiting trial on allegations he was a serial sex predator. Hussein was charged in May 2014 after a months-long police operation to track a man who had been sexually assaulting women across the city since 2012. Hussein was accused of choking and sexually assaulting five women and an attempted attack on a sixth. Some of the attacks occurred in the victims' homes, and police had DNA evidence allegedly linking Hussein to at least three of the attacks. Hussein maintained his innocence but was frustrated by the slow progress of the case through the criminal justice system, according to lawyers Michael Johnston and Leonard Shore. Hussein, a Jordanian national who was in Canada on an expired student visa, was also subject to a deportation order. Ottawa Citizen, A4

OCI considering temporary foreign workers for Fortune plant

Ocean Choice International (OCI) has job openings at its fish plant in Fortune but apparently no takers. Ocean Choice International placed a province-wide ad for trimmers for the company's plant in Fortune recently but didn't get much response. Karen Caines, president of the Fish, Food and Allied Workers (FFAW) union at the facility, confirmed Wednesday the possibility of bringing in temporary foreign workers has been raised in recent weeks. "The company has discussed it with the workers and with myself, but there's nothing definite," she said. "I'm waiting now for to hear back from the company to see what the position is on it." The fish plant hasn't operated since December, Caines said, and there isn't a firm date to re-open yet. (...) Temporary foreign workers have been utilized at other fish plants in the province, but should OCI do so in Fortune, it would be a first for the Burin Peninsula. The region once had numerous fish plants, but there are currently just three left. OCI has another plant in St. Lawrence and Clearwater Seafoods operates a facility in Grand Bank. Last month, the federal government approved a one-year change that will allow fish processing plants to bring in an unlimited amount of temporary foreign workers for a maximum of six months. St John's Telegram (2016-04-14)

Reverse migration is a good thing

A letter to the editor states, "Could it be that 'Sunny Ways' and the federal Liberals are on a different path than 'Happy Days' and the P.E.I. Liberals? Recently, the federal government changed the rules to allow Island processors to hire an "unlimited number" of temporary foreign workers to work in P.E.I. plants. In the throne speech, the MacLauchlan government announced plans to 'repatriate young Island workers' who have left P.E.I. for rosier employment pastures. Seems to me, even with a new initiative, the number of available jobs here is going to be minimal at best, and non-existent at the least. P.E.I. lost 2,200 jobs last year, so the task of even getting back to square one is going to be monumental. It would, however,

be good to see Islanders migrating this way for a change, and not just as 'old' people my age who want to retire here. I wish the government much luck in its endeavor; they will need it. Perhaps they should ask Justin to back off, just a bit." The Guardian, A6

CYBER SECURITY / CYBERSÉCURITÉ

*** Microsoft suit is latest tech clash with US over privacy**
As we live more of our lives online, the companies we trust with our digital secrets are increasingly clashing with authorities who want access to the messages, pictures, financial records and other data we accumulate in electronic form. Microsoft opened a new front in the battle over digital privacy this week, suing the Justice Department over its use of court orders requiring the company to turn over customer files stored in its computer centres often without notifying the customer involved. It's the latest in a series of legal challenges brought by Microsoft and some of its leading competitors. Apple recently fought a high-profile battle over the FBI's demand for help unlocking an encrypted iPhone in San Bernardino, California, and it's continuing to challenge similar demands in other cases. Other companies, including Google, Facebook and Yahoo, have increased their use of encryption. They've also sued for the right to report how often authorities demand customer information under national security laws, after former National Security Agency contractor Edward Snowden leaked details of government data-gathering efforts. Privacy advocates have applauded those moves, while authorities complain they could stymie legitimate investigations. Associated Press (Telegram, Guardian, Waterloo Region Record)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Four men charged for alleged sexual assault of teen
Four men have been charged after a 14-year-old girl said she was sexually assaulted at a house party. Police say the men - two Nova Scotians, two from Ontario, all in their 20s - were arrested after the girl reported that she had been sexually assaulted at a party in Bible Hill, N.S. "To me, it's quite unusual for us to investigate something of this seriousness with that age of a victim," said Cpl. Jennifer Clarke, spokesperson for Nova Scotia RCMP. All four men are charged with sexual assault and sexual interference. The girl went to Colchester District RCMP on Dec. 18. Police say the two Nova Scotians, both from Colchester County, ages 21 and 23, were arrested in January. A 27-year-old Sarnia, Ont., man was arrested on March 31, and a 25-yearold Cornwall, Ont., man was arrested in Ottawa on April 12. Both were returned to Nova Scotia by the RCMP, with help from the Canada Border Services Agency. Red Deer Advocate, B4 (Times Colonist)

Bail a work-in-progress for man accused of shooting at Red Deer RCMP detachment
Bail terms are still being worked out for a young Red Deer man accused of shooting BB rounds at the Red Deer RCMP detachment. Police allege that two windows were hit and damaged by pebble-sized shots on the afternoon of March 14. A suspect vehicle was pulled over shortly afterward. Cory Daniel Picard, 21, was arrested on charges of possessing a weapon for a dangerous purpose, using an imitation firearm to commit an offence, mischief causing less than $5,000 in damages and uttering threats. Now in custody at the Calgary Remand Centre, Picard appeared via video feed in Red Deer provincial court on Wednesday, represented by Red Deer defence counsel Brad Mulder. Mulder advised the Court that he is working out bail terms, but needs to secure a suitable housing arrangement for his client, who has been diagnosed with autism. Mulder said he is also awaiting additional disclosure before he can take further instructions on behalf of his client. Red Deer Advocate

Many came together after RCMP officer's death
A letter to the editor by Const. Roz Guineau states, "Tuesday, the day of RCMP Const. Sarah Beckett's funeral, was both horribly sad and bittersweet. As I waited in formation, for hours, with hundreds of my fellow first responders, I had a chance to reunite with co-workers and friends. The sharing of our stories about Sarah and our past exploits, both humorous and macabre, seemed to release a bit of the hard knot inside our hearts. When the hearse arrived, however, not a sound was heard except the catch in our

throats. As we started to march, the sky opened up and it poured down rain. It was like the heavens themselves could no longer keep the grief in. I have always held the belief that funerals are not for the departed but for those left behind. It is like a salve on the open wounds of our hearts, soothing the ache and allowing for the start of healing. The coming together and celebrating the life of our loved ones screams out to the universe that they were loved, that their life meant something and that they will not be forgotten. I believe we accomplished that Tuesday." Times Colonist, A13

RCMP has global encryption key for BlackBerrys

If you're used a BlackBerry at some point in the last six years, you're probably going to want to know about this. On Thursday, Canadians discovered that the Royal Canadian Mounted Police has had access to a global encryption key for Black-Berry devices since 2010. According to Vice, the revelations were contained in court documents that were made public after Montreal mobsters pleaded guilty to their roles in a 2011 murder. Dur ing an inves tigation into Montreal's criminal underworld, the RCMP intercepted about one million PIN-to-PIN BlackBerry messages. Government lawyers then spent almost 48 months trying to keep this fact from the public record. This global key means that Canada's federal policing agency has the ability to break the encryption on almost any message sent between BlackBerry devices. In a technical report filed with the Superior Court of Quebec, the RCMP called the key a tool "that would unlock the doors of all the houses of the people who use the provider's services, and that, without their knowledge." Toronto Sun, A17

No quick fix to Surrey's issues: RCMP

Prevention and intervention - in addition to enforcement - are key to solving Surrey's problems with drugs and gun violence, according to assistant commissioner Bill Fordy. "We will arrest the people involved in these issues, but in the long term we will not arrest our way out of this issue," Fordy, the officer in charge of Surrey RCMP, said during a Surrey Board of Trade lunch on Thursday. "I believe we will educate our way out of this issue." So far this year, there have been 32 shootings in the city related to a dial-a-dope turf war between two unnamed, low-level groups. It's similar to the turf war that played out on Surrey streets last year, however the groups involved are different. "The individuals involved in the drug trade may change, but the problem remains the same," Fordy said. "Young people are being lured into the lifestyle with illusions of money and power, but the reality is much, much different." Fordy said they're driven by greed and the issue goes beyond the police and involves the entire community, parents, extended family and friends, schools, business owners and prevention programs. Surrey RCMP are working with the school district and the city to come up with more early intervention programs - such as the Wrap Project, Code Blue and Youth Intervention Program - for young people so they can avoid getting into a criminal lifestyle in the first place, and Fordy said police are more engaged and visible in schools than ever. Province, A4 (Vancouver Sun)

Surrey shootings: where they took place - and when

Surrey RCMP are dealing with 33 instances where shots were fired this year, many of them targeted shootings. Police have confirmed information on the 23 incidents outlined in this interactive map. They will not provide details on the other 10 reports of shots fired. "There have been and will be times when it is not in the public's interest for the police to disclose a shooting," assistant commissioner Bill Fordy said at a news conference. The majority of the shootings in Surrey are linked to conflict caused by the drug trade. CBC News

RCMP not fooled by scheme to cover up car crash

Turning the ignition and putting the Nissan Versa into gear on the evening of Nov. 24, 2014, Richard James Ouimette tipped the first of several dominos that led to multiple guilty pleas on Thursday morning. Just before midnight on that November 2014 night, the Grand Bay-Westfield RCMP detachment received a call from Ouimette, 47, about a break-in and theft at his Nerepis home. This was uncanny, since officers had been at the same home looking for Ouimette a little more than an hour earlier. They found his place on Brittain Road dark, and no one home. Now, Ouimette was saying someone had smashed some glass, entered his home, taken a set of car keys and made off with the 2007 Nissan Versa he'd been fixing up for someone. That same car was what had brought police to Ouimette's home in the first place. They had received a call earlier that evening from Fredericton Police about a vehicle that had rolled over off the road. The driver had fled the scene, and when they called the owner, he said it had been in Ouimette's

care for repairs - the Versa. Ouimette said he had been in Saint John for dinner that night. The rouse was someone else must have stolen the car, crashed it in Fredericton and ran off. The RCMP officer wasn't buying it. Telegraph –Journal, B3

RCMP investigate man's body in woods

The RCMP is investigating the discovery of a man's body on a trail in the Fredericton area. Cpl. Marc Fortin said a hunter, who was checking his deer stand and game cameras, came upon the man's remains in Hanwell on Wednesday evening. He said that shortly after 5:15 p.m., police received a call from the hunter who said that while he was in the wooded area he stumbled upon the remains that appeared to have been there for a while because of the decomposition of the body. "It was confirmed when we arrived with the coroner," Fortin said. He said foul play isn't suspected. An autopsy will be conducted within the next couple of days to confirm the identity of the man as well as approximately when and how he died, he said. He said after the autopsy there will be more information available. "We have some identification for the person, but there is more that needs to be ascertained." Daily Gleaner, A3 (Times & Transcript, B2)

Mountie acquitted of assault charges

An RCMP officer on Vancouver Island has been acquitted of aggravated assault at his second trial. A B.C. Supreme Court judge in Nanaimo acquitted Const. David Pompeo Wednesday, 18 months after the B.C. Court of Appeal ordered a new trial after a September 2009 shooting. William Gillespie was pulled over south of Nanaimo on suspicion of driving while prohibited, and Pompeo testified he fired because he believed the man was armed and going for a gun. In throwing out the original conviction and its sentence of 24 months probation and 240 hours of community service, B.C.'s highest court ruled the trial judge compromised the appearance of fairness during questioning. Vancouver Sun, A12 (Province)

Fredericton police officers fired, suspended and/or facing criminal charges

Jeffrey Smiley and Cherie Campbell, former constables with the city police force, were fired after arbitration decisions to dismiss both following separate complaints of misconduct. They have filed separate applications for judicial review with the Court of Queen's Bench. The applications have been tentatively scheduled to be heard in June. Const. Darrell Brewer is scheduled to stand trial for two days this month on a charge of impaired driving, stemming from an incident Aug. 23. Cpl. Louis Lafleur will stand trial June 21 on alternate counts of having care and control of a car when impaired and having care and control of it with an elevated blood-alcohol level in connection with a July 8 incident in the city . Sgt. Tim Sowers will be sentenced June 6 on a summary charge of uttering threats to cause death and/or bodily harm and on a charge a charge of summary assault. The incidents occurred June 25 and July 11 of last year. All officers face complaints under the Police Act once their court cases are concluded. Another officer is under investigation by the RCMP in connection with an allegation of misappropriated funds while serving on the executive of the New Brunswick Police Association, an organization representing unionized municipal police officers in the province. Daily Gleaner, A7

Man faces murder charge in break-in

Late at night last Saturday, two men entered a small home in the 3,000-person town of Botwood, N.L. One would flee. The other would be fatally shot. And Gilbert Budgell, the 53-year-old man whose home they were allegedly invading, is now in police custody facing the unusually severe charge of second-degree murder. RCMP are not releasing any more details, but as is typical when police lay charges against a homeowner in a suspected self-defence scenario, the Budgell case has provoked a sharp response from across Canada. "If someone invaded my home while we were inside putting my family at risk they'd be full of bullet holes too," reads a typical post. "I'm glad he shot him. He is a hero in my book," reads a post on the Facebook page of a fellow Botwood resident. Generally, Canadian law gives residents a wide latitude to legally use violence to defend their home. As is specified in the criminal code, violence is entirely legal if someone has "reasonable grounds" to believe that the "threat of force is being made against them or another person." StarPhoenix, N3 (Province, Leader-Post)

Bomb threat closes Nanaimo school

Nanaimo District Senior Secondary, attended by more than 1,000 students, was cleared for reopening about 11:30 a.m. Thursday after Nanaimo RCMP investigated a bomb threat. Police evacuated both the school and the nearby Nanaimo Ice Centre after being called about 8 a.m., said Nanaimo RCMP Const.

Gary O'Brien. Police are not saying how the threat was received. A search using an explosivessniffing dog turned up nothing. "It was decided in consultation with the school, based on our opinion, that it was safe to go in," O'Brien said. Times Colonist, A3

Man admits being party to assault
A Moncton man will be sentenced next week after admitting to his role in an assault. Meneka Weva, 40, appeared in court on Thursday and pleaded guilty to being party to the assault of Matthew Saulnier on Oct. 13, 2015. Other charges, including break and enter, were withdrawn. Sentencing will take place April 20 and the court was told a recommendation will be made for time served. Weva has been in custody since Oct. 16. Codiac RCMP said in a news release at the time that shortly after 11 a.m. on Oct. 13, police responded to a report that a 50-year-old woman had been abducted from her Gordon Street home in Moncton and driven to Sackville. She was released by her abductors without injury. The perpetrators later returned to her home, where a 26-year-old man was threatened and assaulted during a home invasion. The man sustained serious injuries and was treated at the hospital. Times & Transcript, A12

Weapons call leads to two arrests
A weapons call near West Kings High School on Wednesday led to the charging of two youths on Wednesday night. Three boys and one man were arrested by police at the scene. After further investigation, the man and one of the boys were released without charge. "We just know there were individuals in the area, and we released two because after investigation, they didn't appear to be involved," said Cpl. Jennifer Clarke with the RCMP. A 17-year-old boy from Kingston is facing two counts of careless use of a firearm and unauthorized possession of a firearm. A 15-year-old boy from Auburn is facing two counts of careless use of a firearm, one count of pointing a firearm, unauthorized possession of a firearm, and failure to comply with conditions. "He was under court-ordered conditions," said Clarke, who didn't elaborate further. Early in the afternoon on Wednesday, police responded to an incident that occurred near the school in Auburn, Kings County. RCMP seized a .22 calibre rifle and ammunition from a residence near the school. The school was placed in a hold and secure while police responded to the weapons call. Chronicle Herald, A6

RCMP ask for help locating missing Windsor teen
Windsor District RCMP is appealing for public assistance to locate Windsor teenager Alicia Michelle Nicole McInnis, who has been missing since early March. McInnis is described as a 5'8" tall Caucasian female with a thin build, long brown hair and brown eyes. She was last seen wearing black leggings, a grey hoodie, a white sweater and boots. She has a red lip ring on the right side of her bottom lip. She has the word 'fighter' tattooed on her left wrist and the word 'and beyond' tattooed on her right wrist. McInnis has been in contact with a friend on Facebook, but both her family and police have expressed concern for her safety and want to know her whereabouts. She has been known to go for extended periods of time without contacting friends or family. Chronicle-Herald

Bones found near Hwy 2 are human
The Calgary Medical Examiners office has determined the bones found in a wooded area near Innisfail are human. The bones were found west of Hwy 2, north of Antler Hill around 7 p.m. on April 5. Innisfail RCMP detachment is working with the Calgary Major Crimes office and the Medical Examiners office to determine the sex, age, identity and length of time the remains were there. Red Deer Advocate, A5 (Calgary Sun); * Calgary Herald

*** DNA testing used to determine identity of Japanese woman who vanished in 2014**
"Scant" human remains found in the woods near Giant Mine last summer were those of Atsumi Yoshikubo, a Japanese tourist who went missing in October 2014. RCMP spokesperson Const. Elenore Sturko stated in a news release Thursday that DNA forensic analysis of bone fragments confirmed her identity. The cause of death remains unclear. The 45-year-old woman had come from Japan to visit the city and was reported missing when she didn't check out of her hotel. Extensive searches by RCMP as well as search and rescue volunteers in the area around the Ingraham Trail, the former mine site and Yellowknife Ski Club failed to find her remains. Then in November of 2014, police mysteriously announced Yoshikubo planned to disappear into the wilderness and took steps to avoid being found. Police haven't disclosed their reasons for that statement. Two Japanese media outlets reported she wrote

a suicide note before leaving Japan. On Aug. 31 last year, a resident hiking near Giant Mine called police to report what were believed to be human remains. The exact location of where the scattered bone fragments were found has not been publicly disclosed. Yelllowknifer

Atcon probe with federal investigators, says woman who filed initial complaint
A complaint filed with the RCMP over the Atcon bankruptcy is now in the hands of the police force's federal investigators, says the woman who originally brought forward the grievance over the disgraced Miramichi company. But there are also now questions as to whether some of the documents can be used. The Progressive Conservative Opposition handed over Atcon's backup computer servers in December to the RCMP after revealing that the party purchased them at a bankruptcy auction in 2013. The servers did not launch a new complaint with the RCMP, but instead supported an existing one filed by Marie-Paule Martin. It was Martin who launched an initial complaint last November, believing questions remain as to where all the Atcon loan money went. The Miramichi company's bankruptcy cost taxpayers close to $70 million. Martin now says she has been visited by RCMP federal operations Sgt. Michel Boissonnault. "He told me that he has formed a crew," Martin said. "They have brought people from all over the place, including from outside of the province, to Fredericton. "These are people who are going through all the documents." She added: "It's moving forward." Martin said specialists in accounting are a part of the team. But she added that there is also the question of whether the Atcon servers can be used as evidence, stating that Atcon officials could contend that accessing the remaining information is a break of privacy. "They have to study if those computer servers have been legally acquired," Martin said. "That's the catch." RCMP spokeswoman Const. Jullie Rogers-Marsh told the Telegraph-Journal that there "is no update" to provide on the Atcon complaint. "We're still looking at the information," Rogers-Marsh said. Times & Transcript, B1 (Daily Gleaner, Telegraph-Journal)

'I'm so ashamed,' ex-Mountie talks about assault of former spouse
Telling a court he is very ashamed of his actions, a retired RCMP officer was handed a conditional discharge and ordered to pay $1,000 to a women's shelter for assaulting his former spouse. "I am so ashamed of myself," Timothy Coxon, 47, told a judge of the domestic violence court in Regina Thursday. "I am appalled with myself. No abuse is acceptable. None whatsoever." According to information provided to the court, on different times over the course of several months from late 2011 and 2012, Coxon assaulted his former spouse in different ways. In one incident, she was pushed hard into a table. Another time he slapped her on the throat. While the incidents took place on different dates, Coxon was allowed to plead guilty to a single count of assault. He was employed with the RCMP at the time of the incidents, which took place during off-duty hours. After court, Coxon's former spouse expressed some relief that the case was concluded. "I am grateful it's over," Colette Beliveau said. Earlier, in her victim impact statement to the court, Beliveau said her life has been immeasurably changed by what happened. "I will not forgive Tim Coxon for what he robbed me of," she said, fighting back tears. "Tim Coxon used his position of authority with the RCMP to wreak havoc on my world." She said she now suffers from depression, anxiety, headaches and panic attacks. Coxon has no criminal record and successfully completed a domestic violence treatment program. CBC News

Mountie gains fame after helping Lewisporte youngsters
An RCMP officer in Lewisporte gives youth a lesson in safety and a helping hand. Constable Andre Sparkes of the Lewisporte detachment of the RCMP helped some local youth out of a tough spot today. Kim Moyles of Lewisporte is amazed that a video and photos she posted to Facebook of an RCMP officer helping her son and daughter, and their friend, get her son's dirt bike out of the mud had been viewed more than 26,000 times just hours after the post. The Telegram

Yellowknife's 4/20 event has been moved to April 24.
The marijuana celebration is normally held on the 20th day of the fourth month but Yellowknife organizer Kim McNearney said it's being moved to the following Sunday to allow more people to attend. The event will be held at Somba K'e Civic Plaza beside city hall beginning at 3:30 p.m. and includes a march through the downtown passing by RCMP headquarters and the courthouse. Yellowknifer

* **Criminals Now Getting Their Guns In Canada**
Langley resident Christina Stover obtained a firearms acquisition licence just last year, which entitled her

to buy weapons at any gun store in Canada. Within a matter of months, the 40-year-old former security guard had legally purchased 19 firearms. in March 11, police allege Stover, who had no prior criminal record, delivered a cache of guns to two men at their rented Surrey home on 192nd Street. All three were arrested the same day. Ridge Meadows Supt. David Fleugel said the "investigation has resulted in police seizing a number of firearms that were being stored illegally, and may have been destined for a criminal element in a number of communities." Police seized nine firearms, including handguns, rifles and shotguns, he said. Sources confirm that several firearms bought by Stover since last year have not been located. The investigation continues. Police see a disturbing shift in how B.C. criminals are getting their guns. They now obtain most of their illicit firearms within Canada, either by stealing them from legal owners or using straw purchasers who have licences to buy them. According to the most recent data available from the RCMP's National Weapons Enforcement Support Team (NWEST), 61 per cent of crime guns in the province were domestically sourced. "And the balance, about 39 per cent, were believed to be smuggled from the United States or elsewhere. The source was not domestic," said Insp. Chris McBryan, the officer in charge of NWEST's western region. Vancouver Sun, A1 (Province)

* **Senior robbed as she slept**
Pieces of valuable heirloom jewelry, including wedding bands, were stolen from a 102-yearold woman after someone broke into her southern Albert a home Sunday while she was sleeping. Turner Val-ley RCMP were called Sunday to a home about a break-in. Police said the culprits got into the senior's home through an unlocked window and made off with a "sizable amount" of heirloom jewelry, including a unique golden wedding band. The items were of "significant sentimental value" to the woman and her family, police said. It's believed the senior, who was home alone, may have been specifically targeted. Ottawa Sun, A17

* **Lawyers argue over cop's punishment**
The lawyer for the Toronto police officer found guilty of misconduct after ordering the "kettling" of hundreds of people during the G20 says docking him no more than 10 banked days is plenty of punishment for his actions during the summit. Supt. Mark Fenton was found guilty last year of two counts of unlawful arrest and one count of discreditable conduct under the Police Services Act for ordering the kettling of people in a rain storm during the 2010 G20. Hundreds of innocent people were swept up in two mass arrests - one at Queen St. and Spadina Ave., one near the Novotel Hotel on the Esplanade. His sentence is being determined at an ongoing police tribunal hearing. The prosecution argued for a one-year demotion in rank and lawyers representing people detained during the arrests said he should be dismissed. Fenton's lawyer, Peter Brauti, argued Thursday that the prosecution's call for demotion was "too harsh" and the complainants' call for dismissal "patently unreasonable," and would not respect the principle of progressive discipline. Instead, he is arguing Fenton should be docked no more than 10 banked days owed to him and/or receive a reprimand. Brauti said the 56-year-old cop had already paid a personal and professional price for his actions six years ago, and the hearing has had a direct result on his health and contributed to the end of his 20-year marriage. He argued Fenton has an "exemplary police record" and is a "highly dedicated officer." Toronto Star, GT3

* **A message needs to be made with police officer's sentencing for G20 'kettling'**
Superintendent Mark Fenton took charge of police on June 27, 2010 when people had taken to the streets of Toronto to protest the G20 meeting of world leaders, which led to the chaotic affair. When Mark Fenton took charge of a police command centre on June 27, 2010, Toronto was in a state of nervous disarray.The day before, thousands of people had taken to the streets to protest the G20 meeting of world leaders. A militant minority had roamed all but unchecked through downtown, smashing windows, burning police cars and hurling projectiles at police officers. Police were worried about a crowd that had reached the intersection of Queen and Spadina, a few blocks from City Hall. Reports came in that militants might assault the security fence protecting G20 dignitaries. Superintendent Fenton, a veteran commander who had immigrated to Canada from Ireland in 1982, took a fateful decision. He ordered police at the scene to surround the crowd. What followed became the most controversial episode of the G20 weekend: the "kettling." Within five minutes of Supt. Fenton's order, the crowd was boxed in, or kettled, in the centre of the intersection, with walls of police on all four sides. Then the weather started to change. The sky grew dark as rain clouds moved in. The temperature dropped, turning the warm air chilly. It started pouring. Globe and Mail

*** More funds to fight crime**

A 10-year-old organization that fights crime by uniting municipal police forces, Alberta Sheriffs and the RCMP received a boost in Thursday's provincial budget. The 2016-17 budget provides $2.6 million in new funding for the Alberta Law Enforcement Response Teams. The non-profit umbrella organization will receive $29.1 million in provincial funding under this budget, compared with $26.5 million in 2015-16. "That will support ALERT to continue doing the good work that they are doing," said Minister of Justice and Solicitor General Kathleen Ganley. "We've certainly heard from a number of partners, both in the policing world and various municipalities, that this program is really important for them." In addition, $2 million is being spent to transfer 40 sheriffs from both the Safe Communities and Neighbours (SCAN) team and the Surveillance unit back to the department. The officers will continue to preform the same duties they do now, but they'll do some with money under the Justice and Solicitor General budget instead of the ALERT budget. "It's about $4.6 million overall that came in," Ganley said. Created by the government in 2006, ALERT is a 280-member agency that brings together teams from across Alberta to investigate fugitives, grow ops, child pornography, cybercrime and other large cases. The group disrupts and dismantles serious and organized crime across the province. Calgary Herald, A7 (Calgary Sun)

*** RCMP has global encryption key for BlackBerrys**

If you're used a BlackBerry at some point in the last six years, you're probably going to want to know about this. On Thursday, Canadians discovered that the Royal Canadian Mounted Police has had access to a global encryption key for Black-Berry devices since 2010. According to Vice, the revelations were contained in court documents that were made public after Montreal mobsters pleaded guilty to their roles in a 2011 murder. Dur ing an inves tigation into Montreal's criminal underworld, the RCMP intercepted about one million PIN-to-PIN BlackBerry messages. Government lawyers then spent almost 48 months trying to keep this fact from the public record. This global key means that Canada's federal policing agency has the ability to break the encryption on almost any message sent between BlackBerry devices. In a technical report filed with the Superior Court of Quebec, the RCMP called the key a tool "that would unlock the doors of all the houses of the people who use the provider's services, and that, without their knowledge." *** Fired police officer, spouse sue city, federal government over assault investigation**

A fired police officer and his commonlaw spouse are suing the City of Fredericton and the federal government over an investigation into alleged domestic violence that ultimately led to his dismissal. Formerly Fredericton Police Force member Jeff Smiley and his partner Kimberly Burnett filed a statement of claim with the Court of Queen's Bench in Fredericton last week, naming the city and the Attorney General of Canada as defendants in the lawsuit. It notes those defendants are the employers of relevant members of the Fredericton Police Force and RCMP, respectively. Smiley was investigated, initially by the Fredericton police and then by the RCMP, in February 2014 for a suspected instance of domestic violence. He was later charged with assault and with breaching a police undertaking he signed after his initial arrest. When the matter went to trial in the fall of 2014, the assault charge was dismissed, as it was found to have occurred outside of New Brunswick, and a judge acquitted Smiley of the breach allegation. However, after a Police Act hearing into the allegations, an arbitrator ordered Smiley's dismissal in December 2015, finding he engaged in domestic abuse and other acts of misconduct. Among the allegations the couple makes in its statement of claim are that Fredericton police Chief Leanne Fitch offered Smiley an $80,000 settlement to resign from the force or she would proceed with a Police Act disciplinary process against him. "The plaintiffs say that this conduct constitutions extortion and malfeasance in public office, as Fitch knew that such conduct was likely to harm the plaintiffs," the document states. None of the allegations in the lawsuit has been proven in court. (…)The court document contends further that the RCMP investigation into his case was carried out improperly and negligently, and that the subsequent prosecution was malicious. Furthermore, the statement of claim alleges RCMP Const. Nicholas Steeves threatened and intimidated Burnett when she refused to provide an incriminating statement against Smiley in the assault investigation. Daily Gleaner, A2 (Times & Transcript)

*** Overdoses prompt public emergency**

An alarming number of drug overdose deaths in recent months has prompted B.C.'s chief health officer to declare a public health emergency. The declaration, typically reserved for a contagious disease outbreak,

is the first in Canada, where a rash of fentanyl overdoses has claimed hundreds of lives. Provincial health officer Dr. Perry Kendall on Thursday cited more than 200 overdose deaths in B.C. during the first three months of 2016, a pace that would lead to 800 deaths this year if it continued. The move is aimed at quickly gathering information on all incidents of drug overdoses - not just deaths - in order to warn users and provide help. That could include more opiate substitution programs like methadone and suboxone and wider distribution of antidote kits. First responders, emergency room staff and the B.C. Coroners Service will now provide the time and place of overdose, which drug was used, how it was taken, along with the age and sex of the patient. That would be shared with provincial health authorities and compiled at the B.C. Centre for Disease Control and ultimately made public. "We can look at where the overdose happened to see if there are hot spots or danger zones or places where we'd want to send harmreduction outreach," Kendall said. Fatal overdoses have steadily increased in B.C. since 2010, when 211 people died, reaching 474 deaths in 2015, Kendall said. Fentanyl - an opioid 100 times more powerful than morphine - was associated with a third of the deaths. People who work on Vancouver's Downtown Eastside say they're witnessing the health emergency each day. Coco Culbertson, housing manager for the Portland Hotel Society, said the number of overdoses began rising dramatically at the end of 2014. "I would say it's probably been a state of emergency for some time," she said. "We haven't seen overdoses and deaths at this level since the late '90s, pre supervised injection sites." Data gathered during the health emergency will not be used for law enforcement. The Province, A6 (Vancouver Sun)

*** Bay Roberts, Harbour Grace now separate RCMP detachments**

Bay Roberts and Harbour Grace now have separate detachments following a reorganization of the former Trinity Conception RCMP service. In the mid-1990s, the RCMP amalgamated local detachments across the province to form 11 new policing districts. The Trinity Conception detachment came into existence as a result, with offices in Bay Roberts and Harbour Grace used to serve a regional police unit ever since. A review started in the fall of 2013 to look at the state of the Trinity Conception detachment. According to Supt. Jamie Zettler, eastern district director for the RCMP's B division in Newfoundland and Labrador, the police force recognized changing demographics in the area and was aware specifically of Bay Roberts interest in having its own detachment. After reviewing a report, the RCMP's B division decided a year later that the Bay Roberts satellite office would reopen as its own detachment. Following a one-year transitional period, the Bay Roberts detachment became operational as of April 1. "That work has led to a smooth transition, ensuring public safety is not compromised," said Zettler. Grand Falls-Windsor Advertiser (2016-04-14)

*** RCMP Staff Sgt. Darren Simons receives 25-year Long Service Award**

Staff Sgt. Darren Simons of the Carlyle RCMP detachment received his 25-year Long Service Award in Carlyle on Thursday, April 7, in the presence of his wife, Tracy, his son, Nathan, and his fellow RCMP members and co-workers. Assistant Commissioner Brenda Butterworth-Carr of “F” Division in Regina, said it was “a privilege” to present Simons with his Long Service Award and praised his “leadership, investment in community and dedication throughout his career in each of his postings. Thank you for your service and for your leadership.” Carlyle Observer

*** Ridge Meadows RCMP investigate gun trafficking case that's part of disturbing trend**

Langley resident Christina Stover obtained a firearms acquisition licence just last year, which entitled her to buy weapons at any gun store in Canada. Within a matter of months, the 40-year-old former security guard had legally purchased 19 firearms. Then, on March 11, police allege Stover, who had no prior criminal record, delivered a cache of guns to two men at their rented Surrey home on 192nd Street. All three were arrested the same day. Ridge Meadows Supt. David Fleugel said the “investigation has resulted in police seizing a number of firearms that were being stored illegally, and may have been destined for a criminal element in a number of communities.” Police seized nine firearms, including handguns, rifles and shotguns, he said. Sources confirm that several firearms bought by Stover since last year have not been located. The investigation continues. Police see a disturbing shift in where B.C. criminals are getting their guns. Maple Ridge Times

*** WeeMedical the second dispensary raided in Campbell River**

RCMP in Campbell River, British Columbia executed their second search warrant in a week when they raided WeeMedical, today. On April 6, RCMP raided Trees Dispensary, confiscating product and arresting

branch manager Ben Hinton before later releasing him without charge. No charges were laid in today's raid at WeeMedical. RCMP say this is part of an ongoing investigation, and that dispensaries like these are not legal. "Campbell River RCMP is committed to ensuring local businesses are abiding by federal and provincial law, and will continue to investigate any businesses believed not to be following these laws," said Const Sara Clark, Media Relations officer for the Campbell River RCMP. The City of Campbell River also announced this week that they are seeking to craft a bylaw amendment outlawing marijuana business that are not sanctioned by Health Canada. While these business are already illegal, the city says they want to ensure there is clarity for those seeking to open a dispensary. Lift Cannabis News Magazine (2016-04-14)

*** Homeless take over Nanaimo man's backyard**
Wayne Schmidt couldn't believe his eyes when he woke up this morning. "I look out my back window and there's a camp in my backyard so in disbelief I looked there for a little bit and tried to process what's going on then phoned the police," says the Pine Street resident. A number of homeless people had moved in with their shopping carts and tents overnight, laying claim to his backyard that resembles an empty lot. "And I wake up and look out there and go whoa holy cow," he says. When asked to move, he says they refused. "What do you do? I don't know. So I can't leave the property. I'm just sort of who are these people it's pretty brazen." So his neighbour asked them again while waiting for police, who were held up on other calls. "That is private property it's not fine," yells his neighbour to the campers still inside the tent. "Look what's happened in Victoria. Is this the same scenario? It ain't happening," says Schmidt. "And are other people having this problem? Does the city need to deal with homeless?" Nanaimo City bylaws says year to date there have been 15 calls about squatters in residential neighbourhoods and they are quickly addressed and people are told to move on. (…)So there's relief when about 4 hours after his first call, RCMP arrive and order the campers to move out. Where they've gone though RCMP say could well be someone else's property. CHEK News (2016-04-14)

*** GRC : « Une des plus importantes saisie de drogue aux TNO depuis les 10 dernières années »**
La Division G de la Gendarmerie royale du Canada de Yellowknife a marqué un grand coup aux Territoires du Nord-Ouest le 4 avril dernier en procédant à l'arrestation de 14 individus et en saisissant une importante quantité de drogue et 75 000 $. L'opération nommée « Green Manalishi » s'est déroulée en soirée, le lundi 4 avril dernier, à N'Dilo, Yellowknife et Dettah. Plus de 30 agents ont été déployés pendant cette soirée de perquisition sur laquelle la GRC travaillait depuis le milieu 2015. « C'est une saisie importante, certainement une des saisies en frais de volume les plus importantes des 10 dernières années aux Territoires du Nord-Ouest. Par contre, chaque saisie a un certain impact. Nous sommes heureux d'avoir pu enlever ces quantités de stupéfiants de nos communautés », a commenté le sergent de la Division G de la GRC de Yellowknife, Alexandre Laporte. Quatorze personnes ont été arrêtées dans la soirée du 4 avril, dont plusieurs ont été relâchées depuis. Aquilon (2016-04-14)

*** La GRC dit être plus efficace à Moncton : contraventions en hausse de 35 %**
Le nombre de contraventions décernées par la GRC dans la région de Moncton, au Nouveau-Brunswick, a augmenté de 35 % comparativement à 2015. Le surintendant Paul Beauchesne, du détachement Codiac de la GRC, a présenté ces données à l'Autorité policière régionale de Codiac mercredi soir. M. Beauchesne a précisé que les agents ont décerné 369 contraventions en mars, contre 212 durant le même mois l'année dernière. Il explique ces résultats par des méthodes policières plus efficaces grâce aux renseignements reçus du public. Les policiers resserrent ensuite leur surveillance aux endroits où les automobilistes ont tendance à commettre des infractions. Paul Beauchesne ajoute que la GRC encourage tous ses agents à surveiller la circulation automobile. Il n'est plus question d'une seule unité spécialisée en ce domaine. En janvier dernier, les policiers ont décerné 295 contraventions, contre 264 durant le même mois en 2015. Le nombre de contraventions en février dernier (307) était deux fois plus élevé qu'en février 2015 (150). Radio-Canada (2016-04-14)

Taypotat loses bid for reduced prison sentence
Deadly drunk driver Blaine Thomas Taypotat will get no break on his sentence from the Saskatchewan Court of Appeal. Delivering the court's decision Thursday, Justice Maurice Herauf said the judge who sentenced Taypotat to 9 1/2 years in prison for manslaughter and impaired driving causing death made no error. (With credit for time already served, there were 6 1/2 years remaining at the time of his sentencing in June). Three years ago, Taypotat was driving with a blood-alcohol level three times the legal limit when he "gunned it" after initially stopping at an RCMP roadblock, drove through a crash scene south of Saskatoon, and struck Justin Knackstedt, a 23-year-old conservation officer who was helping to direct traffic. Taypotat then raced offand crashed his own vehicle. Herauf said the Supreme Court noted in a recent decision that courts can consider the prevalence of such offences in one's jurisdiction in determining a fit sentence. "Here we note that Saskatchewan has one of the highest incidences of injury and death caused by impaired driving," he said. That prevalence combined with the fact manslaughter and fatal drunk driving offences can carry life sentences "reinforce our view that there's simply no basis for this court to intervene," he added in a decision made unanimous by Justices Georgina Jackson and Peter Whitmore. StarPhoenix, A11 (Leader-Post)

Dylan Dingwell pleads not guilty
Two New Minas, N.S., residents have entered not guilty pleas to a joint charge of possessing cocaine for the purpose of trafficking. Dylan Alexander Dingwell, 28, formerly of P.E.I., and co-accused Maria Paredrakos-MacCumber, 28, entered pleas in Kentville provincial court April 11 and elected a trial by provincial court judge alone. The April 11 appearance included a bail hearing for Dingwell, who was ultimately released from custody on a $25,000 surety with the Crown's consent. Paredrakos-MacCumber was released on conditions following her arrest. (...) Dingwell was convicted of manslaughter for killing his brother in Charlottetown in 2011. He was released from custody on full parole in 2014. Guardian, A4

*** Rapist's appeal denied by court**
Manitoba's highest court has refused to interfere in a case in which a career criminal went on a random rampage that involved four separate attacks - including the rape of an eight-year-old boy. Peter Laporte was convicted of eight charges following a lengthy trial in 2012 that included 65 witnesses. He was then branded a dangerous offender and given an indefinite prison sentence with no guarantee of ever being released. Laporte, 41, filed an appeal of his conviction, claiming the trial judge shouldn't have allowed so-called similar-fact evidence to be used against him, should have permitted his charges to be severed into separate trials and should have screened out "hearsay" evidence that was used against him. Winnipeg Free Press

*** Inmates used shirts to sop up blood of victim, inquest told**
A Stony Mountain Institution corrections officer found it "bizarre" inmates leaving the prison's recreation hall were wearing jackets over their bare chests. But it didn't take long for Vincent Larouche to realize what happened when he found inmate David Tavares lying on the ground after following a blood trail. "His head was in a pool of blood," Larouche told an inquest Thursday looking into Tavares' death. "We started CPR... I had noticed a lot of (the other inmates) had no shirts on under their jackets. I thought it was bizarre. "I guess a lot of them used their personal shirts to mop up the blood." Tavares, 40, of Thunder Bay, Ont., died March 20, 2005. The cause was later determined to be blunt-force trauma. Four inmates were later charged in his death, with three being convicted. Winnipeg Free Press, B3 (2016-04-15); CTV News (2016-04-14)

*** N.S. plans new legislation to replace cyberbullying law**
Nova Scotia will draft new legislation to replace its pioneering cyberbullying law inspired by the death of teenager Rehtaeh Parsons. Supreme Court of Nova Scotia Judge Glen McDougall struck down the original CyberSafety Act in December, saying it violated the Charter of Rights and Freedoms. Justice

Minister and Attorney General Diana Whalen said Thursday that the province accepts the act was too broad, and will not appeal the decision. Whalen said "targeted consultations" will take place over the next several months to ensure the new law protects the public and addresses the concerns raised in the court decision. The original law was passed in May 2013 in response to public outrage over Parsons' death less than a month earlier. Canadian Press (Chronicle-Herald, A3)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Pharmacists, pot producers in smouldering dispensing dispute**
Canada's pharmacists and medical marijuana producers are engaged in a brewing dispute over how pot should be distributed to patients. If they can't reach an agreement, it could leave Ottawa with a tough decision as it crafts new regulations for the sector. The pharmacists believe they are the only ones who can provide proper clinical advice and oversight over the growing use of medical pot, and think they should control distribution. The marijuana producers, on the other hand, believe the current mail-order system is a resounding success, though they are open to involvement from pharmacies. "By any metric, the medical cannabis system in Canada is working exceedingly well," said Cam Battley, chair of the advocacy committee at the Canadian Medical Cannabis Industry Association (CMCIA). (…) Phil Emberley, the CPhA's director of professional affairs, said pharmacists still think more evidence is needed around marijuana's use as medicine. But as Canadians use the product in increasingly large numbers, he said pharmacists are needed to ensure patient safety. "We know that there are side effects with marijuana, and potential drug interactions as well," he said. "We feel that a lot of patients are accessing medical marijuana without being protected from some of those concerns." The pot companies want to increase patient access to marijuana, so they are broadly supportive of pharmacies playing a role in distribution. They recognize that some patients will always prefer to get their medicine from a pharmacist. But they oppose the outright takeover of their direct-mail distribution system by pharmacies. *** Aboriginal protesters occupy federal offices across Canada, demanding Trudeau visit Attawapiskat**
Several groups of indigenous activists have occupied the offices of Indigenous and Northern Affairs Canada in Toronto and staged a sit-in in Winnipeg, demanding that Justin Trudeau visits a northern Ontario community struggling with a recent spate of suicide attempts. A group of about 30 people first occupied the Toronto building around 10 a.m. on Wednesday morning, police said. More than 30 hours into the protest, it continues to be peaceful, police said. A second group of activists staged a sit-in in the Winnipeg INAC office Thursday evening. Maanii Oakes, a protester in the group occupying the office said the group is disappointed to not have received a response from the federal government. Protesters staged a "die-in" in the INAC

office and hung up Attawapiskat First Nation and Mohawk Warrior Society banners on Wednesday. National Post

*** The government's Saudi hypocrisy**
An editorial piece states, "The Liberal government had until recently tried to have it both ways on the deal to sell LAV armoured fighting vehicles to Saudi Arabia. On the one hand, it displayed its moral qualms about the sale, negotiated by the previous Harper government. On the other hand, it claimed that it had to honour the agreement because, well, a done deal is a done deal. Remember when John Turner insisted, "I had no option"? He did. And as documents released this week show, so did the Trudeau government. The contract was signed in 2014, back when a Liberal government was a distant prospect. But it was revealed this week, final approval of the deal from Foreign Affairs Minister Stéphane Dion only took place a few days ago, on April 8. That ministerial approval, including a review of the potential for human rights violations by Saudi Arabia, was necessary to give the contract effect and allow the sale of billions of dollars' worth of armoured fighting vehicles to go forward." Globe and Mail, A10; iPolitics

INTERNATIONAL

EU passes airline info sharing law
European Union lawmakers approved Thursday a scheme to share airline passenger information that nations hope to use to track foreign fighters travelling to and from conflict areas like Syria and who might pose a danger in Europe. The move ends years of wrangling over how to balance security needs and privacy rights. Lawmakers came under great pressure to adopt the scheme in the wake of the Nov. 13 attacks in Paris that killed 130 and last month's suicide bombings in Brussels, which left 32 dead. The so-called Passenger Name Record law was approved at the European Parliament in Strasbourg, France, by 461 votes to 179, with nine abstentions. "PNR will be a precious tool for boosting the security of European citizens by helping to detect early the movement of jihadi terrorists that take air transport throughout Europe, but also between Europe and other regions of the world, to prevent them taking action," Interior Minister Bernard Cazeneuve said. Critics say that many of those linked to the attacks were already known to the authorities, and that the scheme will needlessly collect private information about ordinary citizens, as well as be costly and cumbersome to operate. Chronicle-Herald, B4; Le Devoir

Illegal gold now more lucrative than cocaine in Peru, Colombia
In Peru and Colombia, the world's biggest producers of cocaine, illegally mined gold is now a more valuable export than the drug, according to a new study. Organized criminal groups have moved into this sector, leaving workers vulnerable to labour exploitation, human trafficking and sexual offences, the study says. (…) Once gold is laundered, it becomes indistinguishable from legal gold and can be easily moved across borders. The study estimates that 28 per cent of gold mined in Peru is illegal, earning criminals $3.3 billion a year. In Colombia, it estimates 80 per cent of gold production is illegal, worth between $1.9 billion and $2.6 billion a year. That makes illegal mining more lucrative than cocaine production: Organized crime groups in Peru produce about 295 tonnes of the drug a year, earning about $1.9 billion, and Colombia's drug cartels earn a similar amount in wholesale proceeds from both heroin and cocaine, according to the United Nations World Drug Report. The Revolutionary Armed Forces of Colombia, commonly known as FARC, receives as much as one-fifth of its funding from illegal mining, the gold study says. The guerrilla group is currently negotiating a peace deal with the Colombian government. Toronto Star, A1

Neuf morts et des centaines de blessés

Un puissant séisme de magnitude 6,5 a fait neuf morts et plus de 800 blessés, jeudi, au Japon, en plus de détruire plusieurs maisons dans le sud du pays. Parmi les blessés, 53 sont dans un état grave. Les neuf victimes étaient âgées de 29 à 94 ans, mais la plupart étaient des personnes âgées. La secousse a frappé à 21 h 46, heure locale, à une profondeur de 11 kilomètres près de la ville de Kumamoto, sur l'île de Kyushu, selon l'Agence météorologique du Japon. Le porte-parole du chef du gouvernement, Yoshihide Suga, a dit que le premier ministre visiterait la région vendredi pour évaluer les dommages. Quelque 1600 soldats ont été dépêchés sur les lieux, selon le porte-parole. Des images présentées à la télévision montrent les militaires, remettant des couvertures aux milliers de personnes qui ont dû évacuer leurs résidences. Quelque 44 000 personnes ont été hébergées dans des refuges, mais certaines d'entre elles ont pu réintégrer leur domicile en matinée. Au moins 19 maisons se sont effondrées, et les autorités ont reçu des milliers d'appels témoignant de résidences écroulées et de victimes prisonnières des décombres. Associated Press (Le Droit, 19)

*** Five arrested in UK after inquiry linked to Brussels and Paris terror attacks**

Four men and a woman were held in Birmingham and at Gatwick airport following joint investigation with authorities in Belgium and France. Counter-terror police in the West Midlands have arrested five people on suspicion of preparing terrorist acts following an investigation that involved Belgian and French authorities. West Midlands police said it had been working with Belgian and French authorities to "address any associated threat to the UK following the attacks in Europe". Four people – three men aged 26, 40 and 59 and a 29-year-old woman – were arrested in Birmingham on Thursday night and a 26-year-old man was arrested at Gatwick airport in the early hours of Friday. Assistant chief constable Marcus Beale, who leads on counter terrorism for the West Midlands, said: "This action forms part of an extensive investigation by West Midlands counter terrorism unit, together with the wider counter terrorism network, MI5 and international partners including Belgian and French authorities to address any associated threat to the UK following the attacks in Europe." The arrests were pre-planned and intelligence-led, Beale added, and there was no risk to the public at any time and there is no information to suggest an attack in the UK was being planned. The Guardian

MINISTER / MINISTRE

BlackBerry and Apple divided over encryption
BlackBerry Ltd. prides itself both on its reputation for security and close relationships with many of the world's most powerful governments. In an era where consumers are increasingly aware of surveillance from law enforcement and spy agencies, those two points of pride may start coming into conflict. A report by Vice News on Thursday, citing court documents, details how the Royal Canadian Mounted Police obtained a key to unlock messages sent between BlackBerry phones as early as 2010. The situation stands in stark contrast to the clash that erupted between Apple Inc. and the U.S. government earlier this year when the U.S. tech firm refused to redesign its software to let the FBI bypass encryption on an iPhone used by a shooter in the San Bernardino attacks. BlackBerry chief executive John Chen stepped into the encryption debate in December. "We are indeed in a dark place when companies put their reputations above the greater good," Chen said in a blog post. A spokeswoman for BlackBerry declined to comment on the Vice story. Harold Pfleiderer, a spokesman for the RCMP, declined to comment on the specifics of the case, saying the force's investigations are governed by Canadian law and court orders. **Canada's Minister of Public Safety Ralph Goodale**, which oversees the RCMP, declined to comment on the specifics of the case but said he welcomes a public debate on encryption. ***"Canadians need to reflect on this new and emerging area of law, privacy and crime prevention,"* Goodale** said in an emailed statement. Bloomberg (Vancouver Sun, C3; Waterloo Region Record, Hamilton Spectator, Windsor Star, Ottawa Citizen, Calgary Herald)

Pas de promesse sur la vente d'armes
Le Journal s'est entretenu avec le ministre Dion quelques jours avant que celui-ci ne donne son feu vert, cette semaine, à la vente de 900 véhicules blindés à l'Arabie saoudite. Le ministre des Affaires étrangères Stéphane Dion ne peut promettre que le Canada ne vendra plus d'armement à des régimes totalitaires comme l'Arabie saoudite. Mais le gouvernement fera preuve de plus de rigueur à l'avenir, s'engage-t-il (…) Il faut regarder les intérêts du Canada et de ses alliés. Si on est en guerre avec un pays, on ne lui vendra pas quoi que ce soit. Si on est en guerre avec un pays, on ne lui vendra pas quoi que ce soit. La raison pour laquelle on ne peut employer le terme de guerre est que, sur le plan politique, l'État islamique veut prétendre qu'il est un État. Et le mot guerre veut dire un conflit armé entre deux États (…) C'est pourquoi nous avons établi un nouveau plan que nous jugeons beaucoup plus efficace afin de non seulement combattre Daesh, mais aussi empêcher qu'un autre groupe terroriste renaisse de ses cendres (…) Le Canada n'est pas immunisé. Ça nous est déjà arrivé d'ailleurs. **Le ministre de la Sécurité publique** travaille de très près avec toutes nos forces policières. Moi-même, j'ai des responsabilités à ce sujet avec nos groupes de recherche d'informations. On essaie de protéger le mieux possible la population. Il n'y a pas d'objectif plus important pour le gouvernement. Le Journal de Montréal, 53 (Journal de Québec)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Sparse snowfall reduces spring flooding risks
Just as Yukon temperature records fell left and right over the past winter, it's been another below-average season for snowfall across much of the territory. In the Whitehorse area, for instance, the snowpack conditions were 42 per cent below normal as of April 1, according to the snow survey bulletin and water supply forecast published this week. Given normal spring and summer conditions from here on, the bulletin is forecasting the spring runoff in the Whitehorse area will be down 20 per cent. Meanwhile, the flow of the Yukon River coming out of Marsh Lake will be down 25 per cent. The water content of the snowpack in the Pelly River basin has diminished 21 per cent, 20 per cent in the Liard River basin, 18 per cent in the Stewart River basin and 22 per cent in the Southern Lakes. "The potential for flooding in these basins is quite reduced," hydrologist Ric Janowicz of Environment Yukon pointed out in an interview this week. Whitehorse Daily Star, 10

*** Fuel spill reported in English Bay near Vancouver's False Creek**

The Canadian Coast Guard says a small amount of diesel fuel was spilled into English Bay near False Creek Friday but has caused no environmental damage. Investigators were not able to trace where the diesel originated from, but was it was first observed near the boat launch docks in front of the Kitsilano Coast Guard station, according to Coast Guard information officer Michelle Imbeau. "The pictures are dramatic but the spill is not serious," she said. "The spill was determined to be diesel and was deemed to be not recoverable. It will evaporate." The company that cleans up oil spills on Canada's west coast says it has not been activated and doesn't expect it will be called in. Vancouver Sun; Canadian Press (News 1130, CFJC Kamloops); Global News; CTV News; Georgia Straight;

* **Fuel spill caused by overturned truck blocks Highway 2 near Meacham, Sask.**
A fuel spill caused by an overturned diesel fuel truck is causing delays on Highway 2, about three kilometres south of the village of Meacham, Sask. Part of the highway had to be blocked off while Sask Environment coordinated the spill clean up Friday afternoon. CBC News

* **B.C., Alberta, differ on school utilization rate**
The B.C. Education Ministry is forcing the province's school districts to have their schools 95-percent full before they can get funding for seismic upgrades. But next door in Alberta, the Calgary district is working on a plan to reduce its capacity, from the current level of 85 per cent, down to 80 per cent (...) In Vancouver, the board is looking at closing as many as 21 schools to get to a 95-per-cent utilization rate, as mandated by the ministry of education, and required before schools will be upgraded for earthquake safety. Vancouver Sun, A5

How to avoid the 'silent killer'
For many young families, it's a familiar sound that requires attention but seldom spells life-threatening danger: a toddler crying in the night. But for Kamloops, B.C., resident Monique Ruppel, having heard it at 3 a.m. for the second time one night in January, it was a different story when she went to see what was troubling her daughter, Celia. Her husband, Kyle, also woke immediately and they both realized they were dizzy, and felt headaches, nausea and burning eyes. When they reached the crib, Celia began vomiting. The family was in the throes of carbon monoxide (CO) poisoning, but because they didn't have a CO alarm, they hadn't been alerted to the danger. Protection from CO poisoning should not hinge on the cries of a child or luck, say safety experts. And steps have been taken in recent years to make safeguards - the proper installation of CO alarms in residences - the law of the land (...) In the one year since all Ontario homeowners have had to be in compliance with the law, director/deputy, prevention and risk management of the Ontario Office of the Fire Marshal and Emergency Management, Al Suleman, has seen positive changes. "Ever since we've introduced the regulation and compliance has kicked in, almost on a weekly basis, we're seeing families holding their CO alarms and saying, 'It saved our lives,' " says Suleman. Toronto Star, L11

* **Frozen berry mix sold at Costco recalled over possible hepatitis A contamination**
The Canadian Food Inspection Agency has issued a recall for a frozen berry mix sold exclusively at Costco due to possible hepatitis A contamination. The federal agency is recalling 1.5kg bags of Nature's Touch Organic Cherry Berry Blend with best-before dates up to and including March 15, 2018. The bags are sold at Costco warehouse locations in Ontario, as well as Quebec, New Brunswick, Nova Scotia and Newfoundland and Labrador. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

* **«Des attaques il y en aura toujours, mais on est mieux préparé»**
Les 325 spécialistes de la Sûreté du Québec, de la GRC et provenant de différents milieux sont rassemblés au Collège militaire royal, lui même théâtre d'un drame lié au terrorisme il y a un peu plus d'un an. Des gens venus en apprendre un peu plus sur les menaces qui pèsent ou encore pour poser des questions sur les solutions à adopter. Dire les vraies choses, les appeler par leur nom: c'est ce que prône Fatima Houda-Pepin, elle-même musulmane. «C'est en arrivant au Canada, moi, il y a 40 ans, que j'ai découvert l'islamisme radical. Je n'ai pas amené ça avec moi. C'est ici que j'ai découvert les cercles d'endoctrinement. C'est ici que j'ai découvert les discours haineux, les plus virulents, à l'égard des

mécréants, les juifs, les chrétiens, même les musulmans. C'est ici que j'ai découvert que le Canada, c'est le paradis des islamistes, finalement.» Ils ont notamment discuté de la délicate question de la sécurité dans les aéroports. Cette discussion tombe à point, moins d'un mois après les attentats de Bruxelles qui ont coûté la vie à 32 personnes (...) Le spécialiste croit effectivement que c'est en se préparant qu'on réussit à diminuer les risques. «De plus en plus aussi, l'Organisation de l'aviation civile internationale tente d'être un pas ou deux en avant des gens. Des attaques terroristes il y en aura toujours, le risque zéro n'existe pas, mais on est beaucoup mieux préparé», ajoute M. Duchesneau.
Selon le SCRS, une soixantaine de Canadiens qui ont joint des organisations terroristes à l'étranger sont revenus chez nous. «C'est sûr, avec ce qui se passe en Europe, c'est désolant de voir qu'il y a des pertes de vies humaines. Mais, au Québec et au Canada, on demeure encore une place ou un pays qui est très sécuritaire par rapport à d'autres pays», explique le sergent Hakim Bellal de la GRC. TVA Nouvelles (2016-04-15)

Radicalisation - Les programmes de prévention sont-ils efficaces?
Très peu d'études ont mesuré l'efficacité réelle des programmes de prévention de la radicalisation auprès des jeunes. Certains programmes pourraient avoir l'effet contraire à celui recherché, en relayant le discours délétère du groupe État islamique (EI), pensent certains experts. Des chercheurs ont réfléchi à cet enjeu lors d'un colloque tenu cette semaine à l'Université Concordia. Réflexions sur une question complexe. Une mère pleure la mort de son fils de 22 ans, un jeune épris de justice parti combattre aux côtés des chevaliers de l'Islam. En arrière-plan, le drapeau noir du groupe État islamique flotte au ralenti, tandis que l'écran recrache les images de jeunes djihadistes fiers et victorieux, brandissant leurs armes devant les bombes qui réduisent la Syrie en ruines. Tiré d'Extreme Dialogue, une vidéo visant à contrer la radicalisation diffusée dans les écoles albertaines et financée par le gouvernement fédéral, ce bombardement d'images par moments similaires aux films d'action concoctés à Hollywood laisse plusieurs spécialistes de la prévention de la radicalisation perplexes. Ces images racontent la triste histoire d'une mère albertaine, Christianne Boudreau, et de son fils, Damian Clairmont, tué en Syrie lors de combats en 2013. Converti à l'islam à l'insu de sa mère, le jeune décrocheur dépressif a fui le Canada en 2012 pour se joindre au groupe EI, en dépit de la surveillance dont il faisait l'objet par le Service canadien du renseignement et de la Sécurité (SCRS). " Ce programme part d'une bonne intention, mais le message est erroné. Si on veut éviter la radicalisation ou déradicaliser, ne parlons pas de ça, ne leur donnons pas le mode d'emploi. Par moments, cela ressemble à un cours de base sur le groupe EI et sur comment se rendre en Syrie ", soutient Khaled Nour, de Queens University, qui a étudié les réactions de plusieurs adolescents exposés à cette vidéo. Le Devoir, B1

Perspectives - Anti-extrémisme extreme
Les parents d'enfants qui fréquentent une garderie au Royaume-Uni ont reçu récemment une lettre hors de l'ordinaire : les éducatrices doivent désormais enseigner les " valeurs britanniques " et surveiller les signes de radicalisation des petits d'âge préscolaire. Il n'est jamais trop tôt pour prévenir l'extrémisme, semble-t-il. Le mois dernier, un service de garde de la ville anglaise de Luton -- où vit une importante minorité de 50 000 musulmans --, a pris au sérieux la directive du gouvernement : l'établissement a menacé de signaler aux autorités un " suspect " âgé de quatre ans qui avait dessiné son père en train de couper un concombre. Les éducatrices avaient compris que le garçon dessinait non pas un concombre, mais un engin explosif artisanal appelé " cooker bomb ". Scandalisée de passer pour une terroriste, la mère du garçon a diffusé une vidéo où elle montre un concombre à son enfant. Qu'est-ce que c'est ? demande-t-elle. " A cuker-bum ", répond-il comme un bambin de quatre ans. Un autre garçon, de 10 ans celui-là, a eu le malheur d'évoquer en classe des mots qui ressemblaient à " maison terroriste ". Son père a été interrogé par la police (...) Le professeur britannique avait un message pour les gouvernements, comme ceux du Québec et du Canada, qui cherchent des moyens de combattre la radicalisation : il existe un danger d'aller trop loin. De chercher des signes d'extrémisme partout (...) Le gouvernement britannique se défend d'aller trop loin. Après tout, les écoles ont vraisemblablement servi de base à la radicalisation de jeunes dans l'histoire récente. Au moins trois attentats d'al-Qaïda au Royaume-Uni (en 2003, 2005 et 2006) ont impliqué des jeunes, dont un de 15 ans, qui sont devenus extrémistes quand ils fréquentaient l'école. Le Devoir, B1

Alberta's new Islamophobia hotline receives dozens of calls
An Alberta-wide hotline to help people report incidents of vandalism or discrimination related to

Islamophobia has received 53 calls since it was launched about three weeks ago. The organization behind the hotline says it is difficult to gauge whether that represents a high number of calls. "We'll consider it successful when we don't get any calls," said Mustafa Farooq, vice-president of public policy at the Alberta Muslim Public Affairs Council (…) AMPAC is investigating "roughly 30" of the calls received, Farooq said. Five callers have been encouraged to file reports with police in either Calgary or Edmonton, or with the RCMP, he said. CBC News

B'ys and spies
If you see small groups of members of the United States Navy walking back-to-back down George Street in a circular formation, it's apparently for their own safety. In fact, if you take the U.S. Navy's advice, you'll never walk down George Street alone, and if you do visit the area, you'll be wary of drugs, prostitution and motorcycle gangs. That information was actually sold to the Russians by a Canadian spy. It's well past April Fool's Day, so you can stop looking for the punchline. The story is both bizarre and true. CBC Nova Scotia reported Friday that some of the information a Canadian spy was selling to Russians was about a warning the U.S. Navy gave to any of its crews who were in port in St. John's. St. John's Telegram, A1

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Ottawa hits back over Oberlander
Stung by a legal defeat, the federal government wants the Supreme Court to rule that politicians acted within the law in revoking the citizenship of Helmut Oberlander, 92, for serving in a Nazi death squad. In Waterloo on Friday, Prime Minister Justin Trudeau said his Liberal government is committed to prosecuting immigrants such as Oberlander who lie about their past to become citizens. "There is one condition in which citizenship can be revoked, and that is when it was acquired based on fraud, misinformation and not representing clearly who one was," Trudeau said (…) The government said it wants the Supreme Court's "direction and guidance" on issues around the depth of Oberlander's involvement in the death squad, his level of complicity in its murders, and the threats that the Nazis might have made against him to make him comply. This is after the Federal Court of Appeal ruled in February that the federal cabinet, in revoking his citizenship in 2012, failed to properly consider "the extent to which (Oberlander) made a significant and knowing contribution" to the death squad. That ruling restored Oberlander's citizenship (…) Jewish groups who are clamouring for Oberlander's deportation applaud the government for not abandoning the Oberlander prosecution despite a string of legal defeats (…) Oberlander supporter Ernst Friedel said that by not abandoning its prosecution, the government is unjustly targeting a man who committed no war crime, and is wasting public money pursuing a case it has lost three times and can't win. "It's laughable," said Friedel, a director with the German-Canadian Congress, which opposes the government's bid to deport Oberlander. Waterloo Region Record, A1

Mugesera condamné à la prison à vie
Le Rwandais Léon Mugesera, qui a lutté pendant 16 ans pour éviter sa déportation du Canada, a été condamné à la prison à vie au Rwanda pour avoir incité ses compatriotes à commettre un génocide. L'homme de 63 ans aurait déjà porté la décision en appel, ont rapporté plusieurs médias, vendredi. L'ancien résidant de la ville de Québec était accusé d'avoir livré un discours enflammé devant un millier de personnes au Rwanda en 1992 dans lequel il traitait les Tutsis de coquerelles, suggérant qu'ils devaient être exterminés. La Presse Canadienne (Le Droit, 31; La Voix De L'Est, Le Soleil, L'Acadie Nouvelle, Le Devoir, *Le Nouvelliste); La Presse; Canadian Press (Montreal Gazette)

CYBER SECURITY / CYBERSÉCURITÉ

Microsoft suit latest tech clash with government over privacy
Microsoft opened a new front in the battle over digital privacy this week, suing the Justice Department over its use of court orders requiring the company to turn over customer files stored in its computer centres - often without notifying the customer involved. It's the latest in a series of legal challenges brought by Microsoft and some of its leading competitors. Apple recently fought a high-profile battle over

the FBI's demand for help unlocking an encrypted iPhone in San Bernardino, Calif., and it's continuing to challenge similar demands in other cases. Other companies, including Google, Facebook and Yahoo, have increased their use of encryption. They've also sued for the right to report how often authorities demand customer information under national security laws, after former National Security Agency contractor Edward Snowden leaked details of government data-gathering efforts. Associated Press (Toronto Star, B5)

LAW ENFORCEMENT / APPLICATION DE LA LOI

Province adding $23 million to tackle gun and gang violence

The B.C. government will spend $23 million more for police, prosecutors and programs to combat the province's gangs and gun problem. Premier Christy Clark announced the new funding in Surrey Friday, where there have been 32 shootings so far this year, primarily over drug-trade turf wars. But she stressed that B.C.'s gang problem is not isolated to one community because gangsters are like "cockroaches" who move frequently to ply their illegal trade. "The frequency and public nature of recent gang shootings is unacceptable and demands this additional, strategic deployment of resources. People deserve to feel safe no matter where they live in B.C.," Clark said. "This needs to be a provincewide initiative (…)" RCMP Deputy Commissioner Craig Callens, the top RCMP officer in B.C., welcomed the news. "We appreciate the additional funding and support being provided to the RCMP, CFSEU-BC and our law enforcement partners, who are all working together to target, investigate, prosecute and disrupt those individuals and groups that pose the highest risk to public safety in our province," Callens said. "As part of B.C.'s guns and gangs strategy, we will be heightening our enforcement activities, increasing the level of information and intelligence-sharing and enhancing our prevention and community engagement programs." B.C. will look at whether laws need to be changed to better deal with gangsters and gun crimes, Clark said. "Gangs evolve. Criminals come up with new ways to commit crimes," she said. Vancouver Sun, A13; Canadian Press (Guardian, Times Colonist, Cape Breton Post)

Drugs And Guns In Surrey

It was just after 9 p.m. on March 11 when Ishaan (Lucky) Dhanoa's white sedan struck a tree near 79th Avenue and 123 Street in Surrey. Passersby ran to his aid, but the 21-year-old died in hospital a short time later. At first, police just called his death "suspicious." Later, the Integrated Homicide Investigation Team was called in and police confirmed he'd been shot - the only fatality so far this year from Surrey's frequent gun violence. Few details have emerged about the unsolved slaying. Dhanoa had not amassed any criminal charges or convictions in his short life. But sources say he was involved in the low-level drug trade, like others linked to the public gunplay that has plagued Surrey. Dhanoa's grandmother Amarjit Shant spoke briefly to The Vancouver Sun this week. She said the family is struggling with the tragedy, but has no idea why it happened (…) Surrey RCMP say most of those involved in the gun violence are typically young and working on the front line of the local drug trade, meaning they take calls from customers, package drugs for street sales and make deliveries for the city's numerous dial-a-dope lines. The violence comes from their battles over turf, personal disputes and the fact they have ready access to firearms even at the lowest rung of the drug business. Several of the 2016 shootings have been linked to two warring groups. The Sun has looked into the background of several of those charged this year, searching for common threads in their life stories. Vancouver Sun, A12

La GRC obtient la clé de cryptage des BlackBerry

La Gendarmerie royale du Canada (GRC) a obtenu la clé unique de cryptage des téléphones BlackBerry des particuliers, demandée pour les besoins d'une enquête et permettant un accès aux conversations privées, selon des médias. «C'est une question qui à l'évidence préoccupe beaucoup de personnes», a déclaré vendredi le premier ministre Justin Trudeau en déplacement à Waterloo, là où est basé le siège social de BlackBerry. La révélation a été faite dans des documents judiciaires obtenus par les sites d'information Vice News et Motherboard, où il est question de la surveillance entre 2010 et 2012 d'une organisation mafieuse de Montréal soupçonnée du meurtre d'un homme. La GRC a intercepté et décrypté près d'un million de messages BlackBerry dans le cadre de son enquête, a indiqué Vice News. Agence France-Presse (Le Soleil, 52; Gadgets 360, NDTV)

Police tried to stop truck before it hit Mountie's cruiser in fatal crash
Police tried to stop a pickup truck minutes before it struck West Shore RCMP Const. Sarah Beckett's police cruiser, killing her, the RCMP said Friday. The crash is now being investigated by the Independent Investigation Office of British Columbia. "On Friday, IIO confirmed they will be conducting an independent investigation into the events leading up to the fatal collision and whether the actions or inactions of any police officer may have been a contributing factor," said Staff Sgt. Rob Vermeulen. Beckett, a 32-year-old mother of two, died April 5 when her police car was struck in the intersection of Peatt Road and Goldstream Avenue in Langford. The driver of the pickup truck that hit the cruiser was taken into custody and released the next day without being charged. A criminal investigation into the crash is being led by the RCMP Island District General Investigations Section. The Saanich Police Department is overseeing the collision-scene investigation. Times Colonist, A1/FRONT; Canadian Press (Vancouver Sun, Waterloo Region Record, *StarPhoenix); *Global News

RCMP won't share details on Tisdale murder-suicide
As the one-year anniversary of the shocking deaths of a mother and her three young children in Tisdale approaches, RCMP say they will soon be done their investigation - but will not share any information with the public. "Investigations such as this take an emotional toll and has a lasting impact on investigators," StaffSgt. Murray Chamberlin of the RCMP's major crimes unit said in a statement issued to media on Friday. "We see and hear things throughout the course of investigation and are not immune to the effects a tragedy such as this has on families and communities as a whole. We thank the Tisdale community who reached out to RCMP members to offer support; your gestures are appreciated." StarPhoenix, A2; Canadian Press (Leader-Post, Guardian, National Post, Red Deer Advocate, *Waterloo Region Record, *Hamilton Spectator)

RCMP use Taser on disabled veteran with electronic surgical implant
A disabled veteran from Lunenburg County says an encounter with RCMP in February left him so traumatized he's scared to open his front door. "I'm staring out the windows now. If the wind blows, I jump," says Bruce Webb, who lives with his fiancée Lori Fuller above the Purple Leprechaun Roadhouse, a restaurant she owns in Bayport, N.S. Webb, 53, faces charges of assaulting a police officer and resisting arrest, but believes he was the victim in a late night encounter with police on Feb. 28. Webb says when the Purple Leprechaun Roadhouse is closed, he uses the space as a living room. He says he'd fallen asleep watching TV in an assisted-lift chair when RCMP arrived. Video from security cameras inside the restaurant show RCMP officers banging on doors and shining lights through the windows. It was the second time that night police had been at the location (…) Security video shows Webb refusing to let police in while blues music blares in the empty restaurant. Webb tells the officer he's calling 911. The officer then forces his way in by breaking down the door. There's an immediate physical confrontation. CBC News; *Windsor Star

*** RCMP investigating shooting in North Preston**
RCMP are investigating a shooting that happened early this morning in the community of North Preston. Police say they were called to Cain Street after shots rang out around 5 a.m. It appears a home and a vehicle were struck by bullets. Police confirm there were no injuries as a result of the shooting. Global News; CBC News

RCMP looking for Alberta woman wanted for murder
RCMP are asking the public for help finding 28-year-old Florencine Leandra Potts, who is wanted for second-degree murder. After being released from custody by a judge, Potts failed to appear in Wetaskiwin Provincial Court and an arrest warrant was issued. RCMP said they recently received information that she is on the Samson First Nation and is believed to be “avoiding apprehension.” Global News

*** Remains identified as missing local man**
RCMP have identified human remains found last week near Innisfail as those of a missing 42-yearold Edmonton man. On April 5, RCMP officers were called to a wooded area at around 7 p.m. after someone discovered human bones. On Friday, the Calgary Medical Examiner's Office identified the remains as Dwayne Demkiw, 42, who disappeared May 31, 2015. He was last seen leaving his workplace in the

area of 149 Street and 128 Avenue at around 4 a.m. Family members said he worked at Saint Pete's as a DJ. Several hours later, the 42-year-old's black four-door 2002 Acura 3.2 TL was found on fire near 86 Avenue and Bonaventure Drive in Calgary. Edmonton Journal, A11 (Edmonton Sun)

*** Woman's death still puzzles**
One year after the discovery of the body of Paula Stiles in her Sherwood Park home, RCMP are still searching for her killer. Stiles, 44 , had three daughters and worked as a training supervisor at Enbridge Pipelines. She was found dead April 15, 2015, inside her house at 40 Foxhaven Court. No arrests have been made in the case. RCMP have not released the cause of her death. At a press conference Friday, Strathcona County RCMP Supt. Gary Peck said police hope someone will come forward to aid the investigation. Postmedia Network (Edmonton Sun, A4; Edmonton Journal)

*** Missing teen sought**
Codiac Regional RCMP are asking for the public's help in locating a 17-year-old girl from Moncton. Police say Felicity Mae Strutt was reported missing after she left her home in Moncton on April 9. She was last seen in the Moncton area that evening. Police have been making efforts to locate her, but so far have been unable to do so. It is believed she may be with acquaintances in the Moncton area and police want to confirm her well-being. Times & Transcript, A10

*** Edmonton man arrested in Yellowknife drug bust**
An Edmonton man was one of eight people arrested after Yellowknife RCMP searched five properties and seized drugs, guns, cars and cash. Around 30 officers from across the Northwest Territories executed search warrants at five locations within Yellowknife Thursday evening. Officers seized fentanyl pills, crack cocaine, cocaine, psychedelic mushrooms, marijuana, anabolic steroids and a large quantity of cash that investigators believe may be the proceeds of illegal drug sales. Postmedia Network (Edmonton Sun, A8; Edmonton Journal)

Police boat untied in North Van
Police are looking for two men suspected of untying an RCMP boat in North Vancouver, causing it to drift into the path of other vessels. North Vancouver RCMP were called early Friday morning when the Canadian Coast Guard reported that the patrol vessel Inkster was adrift and had floated into the path of the SeaBus, a commuter ferry that travels Burrard Inlet. Police and the coast guard got the 20-metre vessel back undamaged, but North Vancouver RCMP Cpl. GeoffHarder said in a release that the mischief could have been extremely dangerous. Vancouver Sun, A18; Canadian Press (Vancouver Province, *Times Colonist)

RCMP say cyber criminals are getting better
The RCMP has received several complaints regarding businesses having their emails spoofed. Cyber criminals are creating new email addresses that are very similar to legitimate business emails and sending requests for money transfers that appear to be from persons of authority in the company. The differences in the email addresses are very subtle with only a letter or a period changed. Some of these attempts appear to be as simple as criminals finding a target's email addresses online and others appear to be as a result of compromised email accounts. Unlike the usual spam messages, with spoofing the cyber criminals will take the time to study a targeted business. This allows the fraudster to identify vulnerabilities and to add details to their email messages making them appear legitimate. Guardian, A4

Let first responders know they're appreciated
An comment piece states “Following the death of Const. Sarah Beckett, we as a community were given the opportunity to experience a full regimental funeral to honour her sacrifice in the line of duty. Life can change in an instant. First responders (police officers, firefighters, ambulance crews and military personnel) put their lives on the line for us, every shift, every day. The outpouring of support for Beckett's family, the RCMP and police in general was unprecedented. What will it take for all of us to appreciate the services they provide to us before one of them dies in the line of duty?” Times Colonist, A13

Métro video filming suspects arrested
The video was posted publicly online on March 26 by an account that was created that same day and

hasn't shown any activity since. Titled "Lowest Point in Montreal," it showed three men running around Montreal's métro system, and has since garnered more than 150,00 views. On Thursday, Montreal police arrested three men in connection with the video, ages 22, 28 and 53. They were released after promising to appear in court in early May, and are expected to face charges of breaking and entering, public mischief and possibly possessing tools for breaking and entering, Montreal police said. If convicted, police said they could face up to 10 years in prison. Montreal Gazette, A7

Fingerprint system gets thumbs up

The phrase "book 'em" has gotten a whole lot easier for the Fredericton Police Force.
Since the introduction earlier this year of a electronic fingerprint scanner, members of the department can now move with a newfound efficiency. Gone are days when a suspect's finger had to be dabbed in ink and then stamped on a paper. Sgt. David Cooper, who heads up the department's forensic identification section, said there's no doubt the new system is a time saver. Telegraph-Journal, A4

* **Why can't report be made public?**

The names of the victims and the officers involved. Testimony from civilian and police witnesses. Photo and video evidence. The director's report produced at the conclusion of a probe by the Special Investigations Unit (SIU) contains the key evidence relied upon by the top civilian police watchdog when making the serious decision whether to criminally charge a police officer or clear them of wrongdoing. Importantly, it may also include the weight given to each piece of evidence, valuable information in cases where witness accounts may vary or information conflicts. But the report prepared by the director of the SIU, the agency that probes deaths, serious injuries and allegations of sexual assault involving police in Ontario, goes straight to the desk of the attorney general - and nowhere else. Toronto Star, GT1

* **What the SIU usually keeps behind doors**

The subject officer is the focus of the investigation. In the case of a fatal shooting, the officer who pulled the trigger (there is sometimes more than one subject officer). The SIU does not release the identity of this officer unless the officer is criminally charged, citing a policy based on the Freedom of Information and Protection of Privacy Act (FIPPA) protecting the personal information of every individual involved in an SIU investigation. The argument for why you should know: Secrecy means the public cannot know if the officer in question has a history of misconduct or prior involvement in another incident where a civilian was injured or killed. It also limits the ability of the public to come forward with information about the officer that could be relevant to the investigation. Toronto Star, GT2

* **Lock-ups found scrimping on meal plans to cut costs**

Jenny Reid never worried much about her clients' dietary wellbeing before she started practising law in Woodstock, Ont. Over a 27-year career in seven jurisdictions across the country, Ms. Reid had seen some gloomy variations of the generic bologna sandwich and apple served to most inmates in police custody, but nothing that ever caused alarm. That changed when she began working in the 40,000-person seat of Oxford County last year. At one case meeting, she met a group of accused Toronto men who seemed more concerned with their own hunger than the serious counterfeiting charges filed against them, so she asked what they had eaten in police lock-up. "And they told [me] they weren't given a meal, just a granola bar and apple juice," she said. "I'd never heard of that before. ... When I raised it at a local bench and bar meeting, they tried to say it was an anomaly." Over a number of subsequent cases, Ms. Reid learned that passing off granola bars as balanced meals was anything but an aberration - it was part of a detainee meal plan endorsed by the local public-health department (...) Police in Vancouver, Halifax, Saint John and elsewhere have turned to prepackaged snacks to feed inmates despite domestic law and international agreements stating that prisoners must be fed three square meals a day (...) Unlike provincial and federal jails, police lock-ups generally keep inmates for less than 72 hours. For example, the average stay of an inmate at Woodstock Police Station is 7.34 hours, according to a 2015 audit. The shorter terms do not reduce the state's legal obligations, however. The United Nations Standard Minimum Rules for the Treatment of Prisoners states that every prisoner should be fed food "of nutritional value for health and strength, of wholesome quality and well prepared and served." Globe and Mail, A9

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Killer wants earlier shot at parole**
The heartless killer whose hail of gunfire outside the Duke of York Tavern in 2008 killed Bailey Zaveda and seriously injured four others says his aboriginal heritage should get him a shorter sentence. Kyle Weese, now 31, is safely behind bars, serving a life term at Millhaven with no possibility of parole for 22 years. But he has filed an appeal, scheduled to be heard next month, where he contends the sentencing judge didn't give enough weight to his First Nations background -- and that should shave six years off the time he must wait before applying for release. It's a terrifying thought. Weese was a career criminal with a frighteningly long history of gun violence. At the time of the Duke of York shooting, he had 31 convictions and had only been out of prison a few months for opening fire and wounding a man over a petty dispute (...) Convicted of second-degree murder and four counts of aggravated assault, Weese faced an automatic life term with a minimum of ten years before he'd be eligible for parole. Justice Mary Lou Benotto ruled Weese would have to wait 22 years -- one of the stiffest parole ineligibility terms on record for his crime. "Mr. Weese has left a swath of destruction behind. He disregards court orders and has shown no possibility of rehabilitation," the judge said in sentencing him in 2011. "He is a dangerous person who must be separated from society." Before sentencing an aboriginal offender, the courts are mandated by Section 718.2(e) of the Criminal Code -- the so-called Gladue principles -- to take into consideration the unique circumstances of their colonial heritage and to find alternatives to their over-representation in the nation's prisons. Postmedia Network (Toronto Sun, Edmonton Sun, Ottawa Sun, Winnipeg Sun)

*** Man who convinced kids to try to drown mom deserves more time in jail, prosecutor says**
Kitchener man who convinced his children to try to drown their mother should spend more time in jail, despite already serving almost eight years, the prosecutor says. Calling it a horrific crime, general Crown counsel Fraser Kelly said on Friday he is seeking an "upper reformatory sentence," which would be in the range of 15 months to two years (...)The man, who can't be named to protect the identity of his children, was convicted in December of attempted murder and conspiracy to commit murder for encouraging his children to try to drown their mom - his ex-wife - in the bathtub. He convinced his children their mother was possessed by the devil and planned to poison them, the trial heard (...) His children, who are now 24, 22 and 19, testified their dad was livid after getting divorce papers in the mail. "I was brainwashed. I was young, naive and foolish," the youngest son said. Both sons were charged and received absolute discharges. It was the second time the man was convicted for the same crimes. He was sentenced to 12 years in prison in 2010. The convictions were overturned last year by the Ontario Court of Appeal, which said the first trial moved into dangerous territory when the father was depicted as a "Jesus nut." Waterloo Region Record

*** Dangerous sex offender has appeal denied**
A convicted sex offender has had his appeal refused after being denied parole last August. Richard Norman Ryan has had both day and full parole denied since being incarcerated in 2001. He is serving his second federal sentence. The Parole Board of Canada in 2015 said Ryan still denies the crime he was convicted of, whereby he held a 26-year-old university student against her will in a motel in the late 1990s. He was convicted of sexual assault, uttering threats and unlawful confinement in connection with the incident. He was on statutory release at the time of the crime. While awaiting the hearing, he was escorted by a correctional officer on a visit to see his dying mother. He snuck out a bathroom window and was at large for 25 days, setting up camp in a tent near Long Harbour before being found by police. Ryan was sentenced to an indeterminate period of time after being designated a dangerous offender.St. John's Telegram, A7

*** Prison term for repeat child porn offender**
A 35-year-old repeat child porn offender will be prohibited from using the Internet, save for a limited number of circumstances, for the rest of his life after flouting a recognizance intended to reduce his risk to children. Judge Carol Snell said she considered a pair of breaches to be at the "highest level of seriousness" when she handed down a four-year prison sentence to Wade Lyle Ellingson for those and for an additional charge of accessing child pornography. Leader-Post, A6

Accused gang murder conspirator granted bail
A Calgary man accused of being part of a conspiracy to murder the notorious B.C. Bacon brothers seven years ago has been ordered released on $200,000 bail. Reasons for the release of Billy Ly, 31, cannot be reported due to a publication ban that was imposed at the bail hearing in B.C. Supreme Court in Vancouver. Justice Catherine Bruce, who impwosed the ban, said Thursday that the recognizance bail will consist of $50,000 cash and $150,000 in sureties. Ly, who was arrested in Calgary in January, will be subject to strict bail conditions (...) Jamie Bacon is awaiting trial in the Surrey Six murders. Jarrod Bacon was convicted of conspiracy to traffic in cocaine and sentenced to 14 years in prison. Postmedia Network (Calgary Sun, A16; Calgary Herald)

Top Court strikes down two crime laws
The Supreme Court of Canada has struck down two federal laws from the previous Conservative government's tough-oncrime agenda, ruling both to be unconstitutional. The decisions put an end to rules for minimum sentences for specific drug crime convictions and limits on credit for pre-trial detention in certain conditions where bail is denied, giving trial judges more leeway. The top court said Parliament has the right to set laws to maintain public safety, but the rules should not be so broad that they capture offenders whose incarceration would benefit neither themselves nor the public. Prime Minister Justin Trudeau said his government is reviewing the laws around mandatory minimum sentences. "There are situations where mandatory minimums are relevant," Trudeau said. Canadian Press (London Free Press, N5; Vancouver Sun, Montreal Gazette, Ottawa Citizen, Toronto Star, Waterloo Region Record, *Telegrapjh-Journal, *Guardian, *Chronicle-Herald, *Times & Transcript, *Ottawa Sun, *Toronto Sun, *Edmonton Sun, *Times Colonist); *Globe and Mail; *La Presse Canadienne (La Tribune, Le Soleil, La Voix de l'Est, Le Droit); Journal de Québec (Journal de Montréal)

B.C. inmates win bid for addiction therapy
Prisoners struggling with opiate addictions in British Columbia jails have gained the same right to medical treatment as people outside the corrections system. B.C. Corrections has implemented a new policy after four men who alleged they were denied opiate replacement therapy launched a charter challenge last month. The men, who are addicted to opiates and range in age from their 20s to late 40s, are now under the care of doctors after a settlement that will also give other prisoners access to timely therapy. "We know, regrettably, there are drugs in provincial and federal institutions," their lawyer, Adrienne Smith, said Friday. "The fentanyl epidemic doesn't stop at the prison gate." "This is a step in the right direction to keep people well, particularly when they're at a good place being able to ask for medical support." Canadian Press (Times Colonist, A4; *Vancouver Sun, Red Deer Advocate)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Inside Insite: B.C.'s supervised injection clinic
Before there was fentanyl, the highly addictive opioid at the centre of an ongoing national crisis, there was OxyContin, another drug that took the lives of vulnerable populations. And before Oxy, there was heroin. In Vancouver's impoverished Downtown Eastside, heroin's ravages helped tip the province into a public-health crisis in the late 1990s. Born of necessity 13 years ago, Insite, a supervisedinjection clinic that remains the only one of its kind of North America, persevered under the former Conservative government's tough-on-crime anti-drug strategy, which ran counter to such treatment models. After successfully battling the government in a series of court cases, the facility has emerged as a model in harm reduction, representing a new approach to addiction treatment that the federal Liberal government has embraced - and one many communities, including Toronto, are trying replicate. Federal Health Minister Jane Philpott has publicly voiced support for harm-reduction facilities and, in January, visited Insite, describing the experience as "extremely moving." Globe and Mail, A14

* **Put community safety first, not addicts**
An open letter states "For or against a safe injection sites in Sandy Hill matters little. What does matter is safety. What perimeter around the community centre would police be authorized to patrol, or not, in order to maintain safety for its residents? What would constitute a "no go" zone for police around an SIS?

Would police simply have to ignore offences committed by those having just safely injected in a"no go zone"? Who would compensate the dozens of nearby residences for a likely devalued property at a moment of sale? Would an SIS be more feasible near the ByWard Market/Sussex Avenue area, where there are fewer residents?" Ottawa Citizen, B7

Race relations remain tense in Montreal North

Ricardo Lamour says he's afraid Quebecers won't remember why people marched on that snowy April 6 evening in Montreal North. He fears they won't recall those peaceful hours, when hundreds sang songs, chanted protest slogans and paid homage to two men who were shot by police in the neighbourhood. Instead, he's worried our collective memories will be punctuated by that brief flurry of violence, by the sound of broken glass and images of thick smoke plumes billowing above a pair of smouldered cars (...) Other witnesses interviewed by the Montreal Gazette corroborated this version of events, claiming that after hours of peaceful marching, the event was hijacked by "outsiders in masks." Further complicating matters are conflicting accounts from within the Montreal police department (...) Though the march was originally slated as a vigil for friends and family of 18-year-old Fredy Villanueva, who died in 2008, recent events added a layer of tension to the proceedings. Last month, police shot Jean-Pierre Bony with a rubber bullet during a drug raid at a Montreal North apartment building (...) Though they died in vastly different circumstances, both Bony and Villanueva were men of colour. Residents of Montreal North - one of the city's most ethnically diverse neighbourhoods - see the police intervention that led to Villanueva's death as a clear cut example of racial profiling. Montreal Gazette, A3

How a week of horror unfolded

Robert Sutherland was heading to bed last Saturday night when there was an urgent knock on his door. "We need you at the hospital for security," the 27-year-old man was told. Sutherland hopped in his truck and raced the few gravel blocks from his clapboard home to the reserve's small hospital, not sure what he would find. What he saw has turned the eyes of the world to this beleaguered fly-in reserve near James Bay in Northern Ontario, where raw pain and defiant pride exist in equal measure, where young people have no memory of ever drinking water from a tap at home, where housing is in short supply and often mould-ridden, where drug and alcohol abuse are rampant and almost everyone has been touched by suicide. Before last Saturday, Attawapiskat, population 2,000, was already in the midst of a suicide epidemic. More than 100 residents, children and adults, have attempted to kill themselves since last fall - 28 in March alone. As the number of suicide attempts mounted, a group of students, desperate to turn things around, walked for three days onto a winter road to convince their peers that suicide is not a solution. They walked in the tradition of other First Nations. They walked because it was a way to move forward - because the living can walk and the dead can't. And then, last weekend, things exploded. National Post, A6

*** Coroner's jury calls for mental-health help in rural B.C**

A coroner's jury in Kamloops has concluded an inquest into the death of 18-yearold Jacob Setah by calling for better mental health services in rural communities. The recommendation was among 15 made by jurors examining Setah's death after he escaped from a psychiatric unit and jumped from the upper floors of the parkade at Royal Inland Hospital in Kamloops in June 2014. During the four-day inquest, jurors heard Setah was being held under the Mental Health Act and had been transferred to Kamloops from his home in Williams Lake against the wishes of his family. Times Colonist, A6

*** Deep Dive Into Violence**

UBC psychology professor Don Dutton, who is about to retire at age 72, has never had a strong desire to be the centre of attention, let alone infamous. To his mind, he just follows the evidence. But the expert on forensic psychology ranks high for controversy, at least in Canada. Dutton has written hundreds of peer-reviewed articles and more than eight books and textbooks. He has won dozens of grants and served as an expert witness in scores of legal cases, including appearing for the prosecution in the 1995 murder trial of former NFL quarterback O.J. Simpson. The more than 250 students who take Dutton's courses each year learn about everything from the reliability of eyewitness accounts to personality disorders, from the roots of genocide to what makes serial killers tick. But on one subject, now known as intimate-partner violence, Dutton has become too hot for many Canadians to handle. Vancouver Sun, G5

*** Canada has a gun problem - and here's why**
Canada has a gun problem. These five words are sure to inflame passions and set off intense disagreement among some Canadians. This is because the words challenge many Canadians' view of themselves and what they believe to be their level-headed approach to firearm ownership.After all, when it comes to guns, Canada is a haven of calm, social liberalism, isn't it? One that stands in stark contrast to the violent world of the neighbouring United States. It's a view firmly laid down by Michael Moore in his film Bowling for Columbine and perpetuated, if nothing else, by the relative absence of debate about gun deaths in Canadian news media. The problem, however, is one born from perspective. From where Canadians stand, their country probably feels safe. After all, according to data from the U.S. Centers for Disease Control and Prevention, there were more than 56,000 gun homicides in the United States between 2009 and 2013. Canada, during that period, tallied 977 firearm homicides, according to Statistics Canada. The difference is so stark, it risks being blinding. Of course, the difference is partly because Canada has far fewer guns. The estimated number of firearms (legal and illegal) in the hands of civilian owners in Canada is about 10 million, about 31 guns per 100 people. The United States has far more guns: about 310 million, almost one gun a person. Globe and Mail, F9

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Annual 4/20 pot protest set to proceed at Sunset Beach**
Vancouver's Sunset Beach is set to get a whole lot greener Wednesday with marijuana activists planning a smoke out at the park for the annual 4/20 pot protest. City staff told activists to find a new venue after last year's protest at the Vancouver Art Gallery drew tens of thousands of smokers, but the park board rankled at their suggestion of a beach venue, where city bylaws prohibit smoking. While the Non-Partisan Association-led park board made political hay of the move and continues to worry about its financial impact, head 4/20 organizer Jeremiah Vandermeer said park staffhave been meeting with him regularly to make sure the protest goes smoothly. "Because of the grey area that marijuana is currently in, it's politically difficult for anybody to accept full responsibility for what happens down there," Vandermeer said in an interview Friday. "They can't come out and say they support us 100 per cent and that we're permitted, but we do everything we can in working with them - just like every permitted event would - and the reason is because we want to make it as safe as possible for everyone." Vandermeer said he and others on his team have been meeting weekly and monthly with "every single person that you can possibly imagine with the park board," from rangers to groundskeepers. They've also been working with the city manager's office, police and other emergency responders, he said. Vancouver Sun, A4 (Ottawa Citizen)

PUBLIC SERVICE / FONCTION PUBLIQUE

PSAC seeks 9% wage hike over 3 years
The largest federal union is seeking a nine-per-cent raise for public servants over three years as part of the first wage proposal tabled since the current marathon round of bargaining began two years ago. The Public Service Alliance of Canada's five bargaining teams tabled the same three-per-centa-year wage hike during its latest bargaining session with Treasury Board negotiators this week. PSAC president Robyn Benson said the union tabled the proposal as a bid to move bargaining forward after two years of making little progress. "We have given the Liberals ample time to reach a fair agreement with federal government workers that will strengthen the public service," said Benson. "We expect the government to respond with proposals that are a real change from the previous government's agenda." The contentious

round of contract talks has dragged on over the hot-button issue of sick leave. The Liberals, like the Conservatives before them, want to replace the existing banked sick leave regime with a new short-term disability plan. That proposal is a non-starter with PSAC and other unions, which have signed a solidarity pact vowing not to make concessions on sick leave. Until now, wages have barely been discussed. Wage increases and the length of a contract are typically the last issues sorted out before reaching a deal. It's unclear whether PSAC negotiators are heading into the final stretch or whether the union is simply trying to change the channel offsick leave. Ottawa Citizen, A13

Hostages make plea for ransom in video

With machetes pressed against their necks, two Canadian men held hostage for more than six months in the Philippines appeared in a video released Friday to make a "final urgent appeal" to Ottawa to comply with their captors' ransom demands. If payment of 300 million pesos ($8.35 million) is not received by April 25, the video message warns, one member of the captured group - which includes a Norwegian man and a Filipino woman - will be beheaded. "We're told that this is the absolute final warning, so this is a final urgent appeal to governments, Philippine, Canadian, and families, if 300 million is not paid for me by 3 p.m. on April 25th, they will behead me," hostage John Ridsdel, a semiretired former mining executive, said in the grainy video. A spokeswoman for Global Affairs Canada said Friday the government was aware of the video but could not comment or release any information that might "compromise ongoing efforts or endanger the safety of Canadian citizens (…)" Their captors belong to the militant Islamist group Abu Sayyaf (…) Formed in the early 1990s with funding from al-Qaida, Abu Sayyaf is a collection of autonomous gangs spread across the jungles of the Sulu Archipelago with poor communications and no centralized leadership. They appear to be taking a page from ISIL's playbook by posting these staged videos and using social media, Abuza said. However, there is no evidence the Islamic State of Iraq and the Levant controls the groups or provides any resources, he said. **Public Safety Canada** listed Abu Sayyaf as a terrorist group in 2003. National Post, A3 (London Free Press, Vancouver Sun, Ottawa Citizen, Kingston Whig-Standard); Reuters (Winnipeg Sun, Toronto Sun, Calgary Sun, Edmonton Sun); Toronto Star; Journal de Montréal

Powerful earthquakes in Japan kill at least 32

Army troops and other rescuers rushed Saturday to save scores of trapped residents after a pair of strong earthquakes in southwestern Japan killed at least 32 people, injured about 1,500 and left hundreds of thousands without electricity or water. Rainfall was forecast to start pounding the area soon, threatening to further complicate the relief operation and set off more mudslides in isolated rural towns, where people were waiting to be rescued from collapsed homes. Kumamoto prefectural official Riho Tajima said the death toll stood at 22 from the magnitude-7.3 quake that shook the Kumamoto region on the southwestern island of Kyushu early Saturday. On Thursday night, Kyushu was hit by a magnitude-6.5 quake that left 10 dead. CBC News

MINISTER / MINISTRE

RCMP settles sex harassment suit with Catherine Galliford
Former spokeswoman went public about her allegations with CBC News: Cpl. Catherine Galliford, whose allegations of sexual harassment in the RCMP sparked widespread attention, has accepted a settlement that ends a four-year legal battle with the national force. The former high-profile British Columbia spokeswoman for the force first went public with her claims of long-term sexual harassment over two decades with the RCMP on the CBC in November 2011. That opened up a flood of similar complaints. (…) In February, Galliford wrote to **Ralph Goodale**, the new **minister of public safety**, saying, "I have been off duty sick from my workplace due to ongoing harassment, sexual harassment, sexual abuse and sexual exploitation." She said she was "an extremely professional, compassionate and capable police officer until I developed health issues due to the ongoing misogyny, harassment, lying and both criminal and sexual corruption which I observed within an organization which I once revered." Galliford was awaiting an eight-week trial in early 2017 after a postponement from early 2015. The letter to **Goodale** said, "I [went] through 11 legal discoveries in rooms full of lawyers (for the various defendants) asking me about my sex life, my childhood, my high school boyfriends, my parental upbringing and whether or not I had my uniform altered to make it 'tighter.'" CBC News

Canadian Red Cross launches new emergency preparedness app
A new app by the Canadian Red Cross aimed at helping people prepare for natural disasters is now available for download. The "Be Ready" app gives users specific tips on how to get ready for emergencies like planning escape routes or having a checklist of necessary items for the home. The Canadian Red Cross said the app should be a must for Canadians. "It's about getting the message out to the people of Saskatchewan and Canada about the importance of being prepared," Canadian Red Cross Provincial Disaster Management Dave Kyba explained. It's a thought echoed by **Public Safety and Emergency Preparedness Minister Ralph Goodale**. ***"It will empower Canadians to take better responsibility for their own personal preparedness,"*** he said. ***The app also has real time alerts for emergencies such as floods, severe weather, and wildfires. Last year was the worst wildfire season on record with blazes ravaging over 17,000 square km of forest in the province.*** (...) **Goodale** also said ***natural disasters and human-caused hazards are increasing in frequency. "These events pose a real threat not only to the safety of our communities but also to our economic stability so it's crucial we focus on prevention and mitigation,"*** **Goodale** said. The app is available in both English and French, and for download on iOS for Iphone and Android devices. Global News; 620 CKRM

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Canadians mark National Emergency Preparedness Week**
Plan, prepare and be aware is the theme of National Emergency Preparedness Week, which is marked across Canada this week. The City of Red Deer encourages all residents and families to follow three easy steps to prepare for emergencies including knowing the risks in your community, making an emergency plan for yourself and your family and obtaining a 72-hour emergency kit. "People who are prepared for emergencies can be less reliant on first responders and other government and non-profit services when disasters occur," said Karen Mann, the city's Emergency Management coordinator. "Preparedness does not have to be costly or take a lot of time. It can be done as a family in ways that are both fun and effective." The theme this year also aims to get residents thinking about how they can access timely, accurate information before, during and after an emergency event. Red Deer Advocate, A3

*** Canadian Red Cross launches app to help prepare for emergencies**
A new app has been designed to help Canadians prepare for emergencies and disasters. The app, called Be Ready, was launched by the Canadian Red Cross across the country on Monday, with the Saskatchewan rollout happening in Regina. Be Ready alerts users about weather conditions that could prompt emergency situations such as floods, forest fires and tornadoes. It uses data feeds collected by the Weather Network (...) According to the Red Cross, the app is important for emergency preparedness because only 47 per cent of Canadians have any type of emergency supply kit in their homes. However, three quarters of Canadians feel confident they would know what to do in an emergency situation. CBC News

*** Drones are the future of search and rescue**
After a 7.8-magnitude earthquake ripped through Ecuador's coastal region last month, Toronto-based GlobalMedic answered the call for aid with a posse of drones, which can survey, map and pinpoint damage as well as the location of survivors. The group's founder, paramedic Rahul Singh, says they're the way of the future for humanitarian aid. GlobalMedic creates pop-up hospitals in war and disaster-struck countries, provides water purification and landmine clearance, and delivers drugs and training to local doctors around the world. Its volunteers are deployed from Eastern Ukraine to Iraq. But, Singh explains, cutting-edge technology is increasingly a vital partner in saving lives, and is expanding its reach. Toronto Star, A2

Sizzling weather stokes wildfire fears
An estimated 500 to 700 people were told they could return to their homes Monday night, after a wildfire threatening the southwest edge of Fort McMurray moved farther away. The fire burned about 1,250 hectares and was about 1-1/2kilometres from the nearest home, a news conference in the city heard

Monday afternoon. Fort McMurray Mayor Melissa Blake lifted a mandatory evacuation order for the Prairie Creek area, imposed Sunday night, though one remained in place for Centennial Park. "We're certainly very happy that no one's had their properties damaged, no one's been hurt, and we hope that continues," Fort McMurray fire Chief Darby Allen said. Bernie Schmitte, provincial wildfire manager for Fort McMurray, said 36 firefighters battled the blaze Monday, assisted by helicopters and water bombers, while 128 firefighters were on standby. A hot, dry spring and a snowpack that pales in comparison to most years means great swaths of Alberta are under high to extreme fire danger, fanning the worry that fires will flare-up across the province. Forty-three counties and municipal districts were under fire bans Monday, including Sherwood Park and Strathcona and Parkland counties. Postmedia (Edmonton Journal, A1; Calgary Herald, Calgary Sun, Edmonton Sun); Canadian Press (Red Deer Advocate, A1; St. John's Telegram, Times Colonist, Times & Transcript, *Whitehorse Daily Star, *Castanet, Maclean's, *Metro News); *CTV News; *CBC News

Edmonton could hit 29 C on Tuesday, melting 50-year-old record for May 3

Edmonton could break several temperature records in the coming days, including a 50-year-old mark for May 3. Temperatures hit 28 C Monday, nearly breaking the previous record of 28.5 C set in 1980 (...) Residents can expect some short-lived respite from the heat Thursday, when a cold front from the north is expected to bring temperatures down to 19 C, but the heat should return by the weekend. "The cold front might bring a little bit of shower activity towards Thursday, but it might just be hit and miss weather," said George Pearce, a forecaster with Environment Canada. It's also causing prime wildfire conditions across Alberta (...) Although the forecast doesn't bode well for wildfire management, Edmonton Fire Rescue Services has not declared a fire ban for the city. Edmonton Journal

*** Wildfire in La Ronge, Sask., prompts call for regional fire ban**

A wildfire in the Town of La Ronge, Sask., has prompted a push for a regional fire ban. On Monday, the La Ronge regional fire department responded to a fire bordering the new Mowery subdivision. The fire originated in a heavily forested area, before spreading to other homes. Nearby homes were proactive, dousing their lawns just in case the fire spread. Firefighters controlled the fire with the help of a water helicopter. La Ronge Mayor Thomas Sierzycki said his town was packed with snow up until about mid-April, but since then they've seen very hot, dry conditions and gusting winds. CBC News

*** Near-record warm weather on the way for Saskatchewan**

Environment Canada' sevenday weather forecast for Regina and area predicts daytime highs of 26 C Tuesday and Wednesday, then a peak of 29 C on Thursday before things cool down - a bit - for the weekend. That's not record-setting for this time of year, but pretty close, says Phillips. The records for early May, set in 1918 and 1992, are in the low 30s. But these temperatures are also a long way from the long-term average for southern Saskatchewan in the first week of May: daytime highs around 17 C and nighttime lows of about 1 C. And because a high-pressure ridge has parked itself atop our region, there's no sign this weather pattern will change in the near future, he added. (...) So that raises a question: will we pay for this with an abnormally dry summer - maybe even a drought? (...) But Phillips pointed out that hot weather means there will be a bigger need for moisture, though there doesn't seem to be any coming over the next week, at least. Nobody knows that better than Sask911, the provincial agency that co-ordinates response to wildfires of all kinds. Leader-Post, A3

Wildfires spark two evacuation alerts in northeast

Unseasonable heat is once again searing northeastern British Columbia, fuelling wildfires that have prompted evacuation alerts around two communities. The Peace River Regional District says residents about 60 kilometres northeast of Fort St. John should be ready to leave on short notice as the Siphon Creek wildfire is uncontained and burns nearby. It has now charred an estimated 40 square kilometres, more than doubling in size since Friday, in part because of temperatures that reached 23 C Sunday and are expected to reach 27 C this week. Winds gusting to 40 kilometres per hour are also forecast, potentially complicating firefighting efforts in the Cecil Lake area about 30 kilometres east of Fort St. John, where two small wildfires threaten a number of homes. Canadian Press (Vancouver Sun, A5)

Heat is on as weather records fall

May is off to a scorching start, with sky-high temperatures Monday shattering records in almost two dozen

municipalities across B.C. At Vancouver airport, the mercury hit 24.7 C, breaking the previous record of 23.9 set in 1945. It was even hotter in downtown Vancouver's Coal Harbour, where temperatures reached 27.2, more than five degrees higher than the previous 22.1 record set in 1998. In the Fraser Valley, Chilliwack sizzled with a high of 29.9 that broke the century-plus old mark of 28.3 set in 1898. Neighbouring Abbotsford and Hope reached 29.6 and 30.4, respectively, surpassing records set in the mid-1940s. Postmedia (Vancouver Province, A3; Vancouver Sun)

Firefighters hope rain brings relief to province's dangerously dry conditions, fearing wildfires
New Brunswick firefighters are worried that the province is headed for a fire season similar to 1986, the worst season in memory, during which hundreds of fires destroyed thousands of hectares. In fact, the amount of forest burned so far this season is 51 per cent higher than the 10-year seasonal average, with more than 200 hectares burned in the province since April 18. The 10-year average is 132 hectares for the whole forest fire season, according to the Department of Natural Resources. The extremely dry conditions have resulted in a continuous provincewide burning ban over the past two weeks, and yet there have been 165 fires across the province in that time. The majority of these have been grass fires. It's not clear what caused most of the blazes, but fire departments are reminding people of the burning ban that's in effect for most of the province. Daily Gleaner, A3; L'Acadie Nouvelle

* **Air search for Nunavut MLA Pauloosie Keyootak cost $339K**
The federal and territorial governments spent a combined $339,139.70 on planes and helicopters in the search and rescue of Nunavut MLA Pauloosie Keyootak and two others this spring. The Government of Nunavut spent just over $75,000 and the rest was spent by the Canadian Armed Forces. Keyootak, his son and nephew left Iqaluit in mid-March on two snowmobiles on their way to Qikiqtarjuaq with a planned stop in Pangnirtung. When the group failed to make it to Pangnirtung, a ground search was started on March 27. Civilian and military air crews joined the search in the following days. The group was found on March 31, 183 kilometres south of Iqaluit on the Hall Peninsula. They had gotten turned around in bad weather and a GPS system on a smartphone led them further astray. They were not carrying a SPOT device or a satellite phone. In an email to CBC News, a Canadian Armed Forces spokesperson said the approximate total incremental cost was $263,632.57 for "CH-149 Cormorant and CC-130 Hercules Search and Rescue aircraft fuel consumption, accommodation and temporary duty allowances for aircrew and aircraft landing fees" from March 29 to 31. CBC News

* **Ottawa verse 75 M$ en douce**
Le gouvernement fédéral a discrètement versé 75 millions $ dans le fonds d'indemnisation pour les victimes et les créanciers touchés par la catastrophe de Lac-Mégantic, une contribution qui l'a mis à l'abri de toute poursuite judiciaire. L'ancienne ministre des Transports Lisa Raitt a déclaré que les négociations pour cette entente, qui concerne aussi 24 autres défendeurs, avaient commencé avant que les conservateurs ne perdent les élections d'octobre. Le nouveau gouvernement libéral a refusé de dévoiler combien il avait déboursé pour le fonds d'indemnisation de 460 millions $, même si au moins deux parties accusées d'actes répréhensibles en lien avec le déraillement et l'explosion d'un convoi de pétrole au coeur de la ville québécoise ont révélé le montant de leurs contributions. Dans une récente entrevue, Mme Raitt a toutefois affirmé que cette somme était publique puisqu'elle figurait dans le budget supplémentaire des dépenses et dans les états financiers trimestriels de Transports Canada sous la rubrique « règlement hors cour ». Le montant indiqué s'élève à 75 millions $. La Presse Canadienne (La Tribune, 7; Le Soleil, Le Nouvelliste); Canadian Press (Kingston Whig-Standard, National Post, Times Colonist, Toronto Sun, Edmonton Sun, Calgary Sun, Ottawa Sun, Globe and Mail)

* **CN Rail struggled with track issues months after resuming operations**
Canada's biggest railway struggled to keep some heavily used track in adequate repair even after a string of derailments last year showed the danger of moving oil on poorly maintained track, documents obtained by Reuters show. Three trains derailed along one 476 km section of Canadian National Railway Co. track in northern Ontario in February and March last year. The third train spilled crude oil in and around a river near the town of Gogama, igniting a fire that burned for days. More than 100 pages of correspondence and inspection reports obtained by Reuters under Canada's freedom of information law show that a March inspection by Transport Canada, the ministry responsible for rail safety, found a number of problems with the track. But the documents also show that during a July inspection, months after normal

operations resumed, inspectors found new track problems, including rail that had been secured with too few bolts, and defective ties. CN brought its trains back up to normal speeds in late May. CN Rail told Reuters the July inspection ultimately uncovered 57 defects, including 10 that required temporary speed reductions. Seven of those 10 were on the main line. CN said the defects found in July were repaired by Sept. 3. Transport Canada lifted its March safety notice on Dec. 15, 2015, signalling that it believed safety problems in the area had been resolved. But the regulator has not conducted a track inspection since July. Reuters (2016-05-02)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Spy agency cagey on privacy breaches: Bureau won't put a number on cyber-snoops since 2007
The Communications Security Establishment is refusing to release the number of privacy breaches the agency has logged since 2007. Documents obtained by the Star state the intelligence and cyber defence agency has maintained a central database for certain privacy violations since 2007. These breaches are categorized as minor "procedural errors" or more serious "privacy incidents," and reviewed by the CSE Commissioner's office every year. "In these files, CSE records any incidents it identifies that put at risk the privacy of a Canadian in a manner that runs counter to (or is not provided in) its operational policies," says a September 2014 letter from former CSE chief John Forster to a senior Treasury Board official. The Star requested just the number of breaches - no details about what actually transpired or the Canadian personal information involved - but was told the agency could not comply due to "operational security concerns." "Releasing the number of (breaches) would provide insight into CSE's capacity to conduct operations, the extent of its capabilities, the degree to which partner organizations benefit from sharing and the reach of the programs," wrote spokesperson Ryan Foreman in an email last week. CSE is one of Canada's most technologically sophisticated agencies, responsible for collecting foreign intelligence and protecting Canadian networks from cyber-attacks. It is forbidden to use its surveillance tactics against Canadian citizens, except under specific circumstances. But disclosures from U.S. whistleblower Edward Snowden have aroused suspicion about CSE's tools and tactics as part of the Five Eyes alliance that also includes the U.S., U.K., Australia and New Zealand. Documents tabled in Parliament last month show CSE logged 13 privacy and information breaches in 2015, affecting at least 630 individuals. The agency did not report any of the privacy breaches to the federal privacy commissioner, as CSE determined that there was "no significant risk" to the individuals involved. CSE further refused to report the activities that led to the breaches. Toronto Star, A2

Ex-CSIS source guilty of fraud
Ontario Superior Court Judge Timothy Ray could not have been clearer Monday in delivering his verdict to former construction boss and CSIS informant Roland Eid. "ICI (Construction) was a sham from early 2007 until its demise," Ray said in delivering a summary of his 89-page decision. ICI was the construction company launched by Eid in 2006. It went bankrupt early in 2008 after Eid transferred $1.7 million from its coffers to a personal account in Beirut. The money was never returned. The judge found Eid guilty of 10 counts of breaching the Criminal Code and the Bankruptcy and Insolvency Act. He found Eid had defrauded ICI creditors, causing them to suffer collective losses of $3.8 million. The judge also found that Eid had "perpetrated a fraud by taking $1.7 million which were trust funds belonging to the subcontractors and suppliers out of Canada and beyond their reach." Eid's defence contended the money was to have been used to finance a new construction project in Lebanon and Syria. He claimed the Syrian government would match the money deposited in his Beirut account - money that Eid said he would return to ICI in Ottawa. Ottawa Citizen, A1 (Ottawa Sun)

*** Going up in smoke: Terrorist financing and contraband cigarettes**
In 2000, the United States authorities caught two Lebanese brothers for running a multimillion-dollar smuggling operation, moving low-tax cigarettes from North Carolina to high-tax Michigan. It was a major coup for the Bureau of Alcohol, Tobacco, Firearms and Explosives. But the bureau was shocked when it realised where the profits of the syndicate were diverted to: designated terrorist organisation Hizbollah. The bureau quickly stepped up its focus on the ties between cigarette smuggling and terrorism (...) A new study from the Macdonald- Laurier Institute in Canada in March addressed the links between illicit cigarettes and terrorism squarely. "Canadian law-enforcement seizures of contraband tobacco routinely

include high-powered weapons, hard and designer drugs, stolen vehicles and other merchandise, and lots of cash," it said in a report. "Globally, money from contraband tobacco and cigarettes is a major source of revenue for the likes of ISIS, Al-Qaeda and Hizbollah." Trading in cigarettes is a popular choice for terrorists because they are easy to smuggle, have low barriers of entry, enjoy a huge market and provide high profits. As a legal product in almost all countries, it does not carry the same risks and draconian penalties as drugs. Straits Times

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Gas station owners guilty of hiring illegal workers

The owners of an Alberta gas station were fined $36,000 Monday, admitting they illegally hired foreign workers. Yoo and Yoo Enterprises Ltd. pleaded guilty in Edmonton provincial court to four offences under the Immigration and Refugee Protection Act relating to employing a foreign national in a capacity in which they were not authorized to be employed. In exchange for the guilty plea involving nine Filipino workers, charges against Soon Sang Yoo and his son, Hyun Suk Yoo, were withdrawn, as well as other charges against the company. According to an agreed statement of facts, the Yoos own and operate the Mundare Esso gas station. They were losing workers in 2013 and having difficulty recruiting Canadian citizens or permanent residents to work for their business. (…) Federal prosecutor Michelle Ferguson told court that Hyun Suk Yoo knew the workers were foreign nationals and that they were not authorized to be employed at the Mundare Esso. Court heard that once they began working, Yoo would have the family friend start the paperwork so the worker could get a new work permit authorizing them to work at Mundare Esso. (…) Four of the workers involved were able to successfully obtain new work permits authorizing them to work at Mundare Esso, but the other five were arrested during a during a Dec. 11, 2013 raid by the Canadian Border Services Agency. Defence lawyer Dan Chivers told court the Yoos are "extremely remorseful and embarrassed" over the workers' situation. Postmedia Network (Edmonton Sun, A17, Edmonton Journal)

Evraz to lay off 90 workers at Regina pipe mill this week

Evraz North America is laying off 90 workers at its pipe operations in Regina later on this week, in addition to about 30 layoffs in its steel mill last month, according to a spokesman for the Chicago-based steelmaker. "I can confirm that we have announced layoffs at our 24-inch pipe mill, effective May 7, impacting approximately 90 employees and expected to last three weeks,' said Christian Messmacher, vicepresident of investor relations and strategy for Evraz North America. "This necessary production adjustment is due to market demand and unfairly traded and subsidized steel pipe imports,' Messmacher said. "Similarly, we have issued layoff notices impacting 49 employees at our Calgary tubular facility effective May 15, subject to be postponed or cancelled as market conditions evolve this week." (…) In February, the Canadian International Trade Tribunal (CITT) found that Canadian producers have been injured due to dumped and subsidized imports of certain line pipe products from China. The decision applies anti-dumping and countervailing duty measures established by the Canada Border Services Agency to restore market-based pricing to Chinese exporters. "Today's decision allows Canadian pipe manufacturers to compete more effectively in an exceptionally difficult oil and gas market," said Conrad Winkler, president and CEO of Evraz North America. "Evraz and other steel operations continue to be impacted by the flood of unfairly traded line pipe imports." Postmedia Network (StarPhoenix, C3, Leader-Post)

Dieudonné revient à Québec

Dieudonné reviendra à Québec le temps de deux spectacles, a appris Le Soleil. Le controversé humoriste défendra sa production En paix le 16 mai, à LaScène Lebourgneuf, dans le cadre d'une tournée qui comporte des haltes à Montréal et à Trois-Rivières. Cette nouvelle visite est orchestrée par les productions de la Plume - gérées par la femme de Dieudonné - en conjonction avec une équipe de coordination québécoise, composée notamment de Gino Sainte-Marie, fondateur du Festival de jazz de Québec, et de Louis Tall. M. Tall est conscient que Dieudonné M'Bala M'Bala a été au coeur de plusieurs controverses. Il a assuré cependant, au nom des productions de la Plume, qu'il n'y a rien de litigieux dans cette nouvelle proposition : «Avec le spectacle En paix, il n'y a eu aucune poursuite. Il joue depuis 2015 et il a joué partout en France. Et c'est pour ça qu'il voulait le présenter au public québécois. Il sait qu'il est beaucoup aimé dans la province.» (…) Une question demeure toutefois : avec «son casier [judiciaire] de

12 pages» et ses «12 condamnations», dont il fait état dans En paix, Dieudonné pourra-t-il se produire au pays ou sera-t-il refoulé à la frontière? A Montréal, le maire Coderre y est allé d'un message sans équivoque dans Twitter, indiquant qu'il n'était pas bienvenu, tandis que la ministre fédérale du Patrimoine, Mélanie Joly, a soutenu qu'il reviendrait à l'Agence des services frontaliers de trancher. Pour sa part, M. Tall affirme que l'équipe de Dieudonné respecte la liberté d'expression du maire de Montréal et se pliera à la décision des autorités. «La production s'en remet aux douanes et à l'immigration canadienne pour prendre la décision sur son entrée ou pas. Ils sont bienveillants des lois. Ils se sont préparés pour donner le plus d'information possible aux douanes.» Le Soleil, 11 (La Presse)

Little bit of U.S. in Manitoba
Take an hours-long drive on a Manitoba gravel road north of the Minnesota border and you'll come across something curious: a piece of the U.S. located well inside Canada's mainland. Minnesota's Northwest Angle in Lake of the Woods touches no other American land. It's just a snippet of Canada that happens to be American. Why? It was apparently a mistake on a map in 1783 that was never corrected. The border was intended to cut through the lake, but the map was wrong, and actually included not just water, but a large peninsula. Only a few dozen people live there - mostly those who run fishing lodges. But for residents who make it home, it's a day-long journey through Canada and back into the U.S. just to go grocery shopping. That includes a stop at a small Canadian border post, a drive through Canada, then another border crossing back into the main United States. "It pretty much takes up your day," resident Jason Goulet told CBS News. Postmedia Network (Winnipeg Sun, A2, Toronto Sun, Calgary Sun, Edmonton Sun)

Trial delayed again
A trial involving the man implicated in B.C. teen Amanda Todd's suicide has been delayed again. Aydin Coban faces charges in the Netherlands, including child pornography and extortion allegedly involving 39 people, but Dutch officials say the case will not go to trial until after summer. Coban also faces extradition to Canada on five charges connected to Todd, who killed herself in 2012 after being bullied over nude photos posted through social media by an online harasser. The Province, A8; Canadian Press (Red Deer Advocate, Whitehorse Daily Star, Times Colonist, Times & Transcript)

Final bidding process for Gordie Howe bridge project stalled
The final step in the bidding process to select the contractor to build the Gordie Howe International Bridge has been delayed by several months, after it was initially scheduled to begin at the start of the year. "I am concerned," said local MP Brian Masse (NDP Windsor-West). "Obviously, there is urgency to move the project along, but we haven't heard anything. "If there is an administrative problem or a political problem, we should know." The Windsor-Detroit Bridge Authority has not released its final request for bids from the three consortiums shortlisted in January. Known as request for proposals, it is the final step in the process to select a contractor for the project. The RFP includes specifications and details for consortiums to follow in order to assemble final design and cost estimates to construct the bridge. (…) Interim chairman Dwight Duncan leads the WDBA board. He previously stated the new Trudeau government remains committed to the project and it remains a high priority. Duncan on Monday said he had no further comment on the status of the RFP process. "Infrastructure developments of the magnitude of the Gordie Howe International Bridge project require a great deal of preparatory work to be completed before actual construction starts," Butler said. "The WDBA is working to move the project forward as soon as possible." WDBA has repeatedly stated a contractor would be in place by the end of this year, but that appears unlikely given the delay in launching the RFP. It also raises questions whether the scheduled 2020 completion deadline for the bridge project can be met. Windsor Star, A3

*** Les producteurs laitiers érigent un barrage devant les bureaux de Parmalat**
Les producteurs laitiers venus d'un peu partout dans la province ont organisé un coup d'éclat en bloquant la rue Saint-Jacques, dans le quartier Notre-Dame-de-Grâce à Montréal, devant les bureaux de la compagnie laitière Parmalat. Le barrage a commencé très tôt ce matin, aux alentours de 4h30. Par cette action, les producteurs de lait veulent notamment dénoncer l'importation de lait diafiltré au pays. Cette substance est un lait ayant été filtré à plusieurs reprises pour obtenir un produit ultra protéiné. Au Canada, elle est utilisée par les grands transformateurs québécois dans la fabrication de yogourt ou de fromage. Non seulement les usines américaines vendent ces sous-produits à des prix très bas pour s'en

débarrasser, mais ils entrent au pays, librement, sans normes de contrôle et surtout, exempts des tarifs douaniers. (…) À la frontière canadienne, le lait diafiltré est identifé comme un ingrédient, ce qui fait en sorte qu'il n'est pas assujetti aux tarifs douaniers imposés pour l'importation de lait, oeufs et volailles. Ces tarifs peuvent s'élever de 200 % à 300 %. TVA Nouvelles (Journal de Montréal, Journal de Québec)

*** Federal MPs Encouraged to Press for Reinstatement of Emergency Swine Transportation Protocol**

Canadian pork producers are being encouraged to urge their Members of Parliament to put pressure on the Canadian Food Inspection Agency to reinstate a swine transportation protocol designed to keep PED out of Canada. The Canadian Food Inspection Agency has terminated an emergency transportation protocol that allowed Canadian swine transport vehicles returning from U.S. farms to be sealed at the border then washed and disinfected at certified Canadian truck washes and, as of May 2, is requiring those transports to be cleaned in the U.S. before re-entering Canada. Harvey Wagner, the Manager of Producer Services with Sask pork, says there is a high risk those trucks will become contaminated in those U.S. truck washes. FarmScape

More tourists have visited New Brunswick cities in February 2016 than July 2015

With the summer tourism season quickly approaching, Saint John tourism operators are preparing for an influx of visitors to the city because of the low Canadian dollar. According to a study done by Statistics Canada, about 28,400 people visited New Brunswick from the United States in February alone, which is about 7,000 more than last July during tourist season. Ellen Tucker, the president of Freedom Tours and Travel, said she expects her tour bookings to increase this summer. "The value of the Canadian dollar is probably the biggest reason. We found there's a big increase in travel to Canada." Telegraph-Journal, B3

*** Labeaume en mission économique à New York**

Le maire Labeaume mènera une délégation de chefs d'entreprise et d'acteurs touristiques de la région de Québec à New York la semaine prochaine, afin de faire rayonner la ville et identifier de nouvelles opportunités d'affaires. Au total, une vingtaine de compagnies, d'hôtels et d'organismes seront du voyage, qui se déroulera du 9 au 11 mai. La mission économique de l'an dernier a eu de telles retombées que le maire de Québec estime important de renouveler l'expérience. (…) Avec l'approche de l'été, le moment est opportun pour vendre Québec comme destination de vacances aux Américains. La valeur du dollar canadien par rapport au billet vert favorise aussi nos voisins du sud, qui sont plus nombreux à traverser la frontière depuis le début de l'année. « Pour janvier et février, on parle d'une augmentation de 26 % aux douanes, donc le timing est très bon d'aller se pointer à New York », estime André Roy, directeur de l'Office du tourisme. Radio-Canada (2016-05-02)

*** He's behind bars for 14th birthday sex try with Canadian girl**

A Garden Grove resident accused of exchanging lewd videos with a Canadian teenager and traveling to that country to have sex with her on her 14th birthday surrendered Monday to face federal charges. Paul Binh Do, 29, was charged in April with one count each of traveling with the intent to engage in illicit sexual conduct and receipt of child pornography, according to Thom Mrozek of the U.S. Attorney's Office.(…) Do met the girl online, and the two exchanged videos of them individually "engaging in sexual conduct," prosecutors allege. On May 2, 2014, Do traveled to Canada to "celebrate the 14th birthday" of the girl and to have sex with her, but Canadian authorities stopped him at the border, according to Mrozek. During his detention in Canada, Do allegedly was found to be in possession of digital devices that contained lewd videos of the victim, according to Mrozek. Do is also accused of calling the girl and asking her to falsely tell authorities that she lied to him about her age, Mrozek said. Authorities in Canada were already investigating Do, prompting his detention in Calgary as he attempted to enter the country, Mittal said. MyNewsLA (2016-05-02)

Employment agency fills hospitality shortages with millennials

An immigration and staffing agency that was once one of the largest recruiters of temporary foreign workers is now looking to millennials to fill vacancies in the tourism, hotels and restaurants in remote locations across Canada, including Fort McMurray, Bonnyville and Banff. The program, called Mobilize Jobs and launched in January 2015, promises young Canadians a chance to explore spectacular parts of Canada and gain work experience as they slog away in low-wage jobs, including housekeeping and

waiting tables. "My long-term goal is to reduce youth unemployment drastically," said Benjamin Guth, program manager of Mobilize Jobs and vice president of Diamond Global Recruitment Inc., the staffing agency to which Mobilize belongs. The program came to fruition after Diamond's clients, especially those in Alberta, were hard-hit by changes to the temporary foreign worker program that started in 2014 with a moratorium on restaurants using the program. It continued with restrictions on the number of temporary foreign workers businesses could hire and the process for hiring them. "We were bringing in about 1,000 people a year for about 100 different employers from about 8 difference countries ... almost overnight, we weren't able to fill a lot of those shortages," recalled Guth. At the same time, the tourism and hospitality business in various parts of the country was struggling with a long-term labour shortage intensified by changes to the TFWP. Calgary Herald (2016-06-02)

Entendre ou pas Dieudonné

Un article d'opinion déclare, « Il y sera. Ou pas. L'humoriste Dieudonné doit entamer le 11 mai à Montréal une tournée québécoise qui se poursuivra jusqu'à Trois-Rivières la semaine suivante. Une dizaine de spectacles prévus dans une petite galerie d'art africain de la rue Ontario affichent déjà complet. Ce sera aux services frontaliers canadiens de déterminer s'il doit ou non être admis au pays. L'humoriste pourrait en effet être refoulé à la frontière, dès son arrivée à l'aéroport Trudeau, en raison de son casier judiciaire français. Et la sempiternelle question de se poser de nouveau : devrait-on _ ou pas _ permettre à un artiste aussi controversé de se produire chez nous ? Il y a bien des arguments valables en faveur et en défaveur de la présence de Dieudonné au Québec. Le maire de Montréal Denis Coderre a déjà statué, sur sa plateforme médiatique préférée, Twitter, que l'artiste était persona non grata en nos terres. « Une personne qui incite en Europe à la haine raciale et qui est un fomenteur de tensions sociales n'est pas le bienvenu à Mtl. Dieudonné OUT », a écrit le maire Coderre lorsque la série de spectacles de Dieudonné a été annoncée, le mois dernier. On comprend aisément son indignation. Depuis 15 ans, le discours public de Dieudonné _ artistique comme citoyen _ n'a eu de cesse de se radicaliser. Ce provocateur-né cherche constamment la confrontation, la controverse et la polémique. Et il l'a le plus souvent trouvée sur son chemin. L'humoriste a été condamné à plusieurs reprises, en multipliant les déclarations ambiguës, les insinuations perfides et les amalgames à propos du peuple juif. (…) Menacer de le refouler à la frontière, c'est ni plus ni moins faire le jeu de cet opportuniste sans scrupules, dont la victimisation est devenue le fonds de commerce. Comment justifier la tentative de musellement d'un humoriste alors que l'on clame partout, en particulier depuis la tragédie de Charlie Hebdo, l'importance du droit à la libre expression des artistes ? » La Presse +

* **Captive to our own barriers**

An opinion piece states, "Populism has dangerous overtones. America's anger over trade agreements and recent European hostility towards immigration are not just matters of intolerance but also isolationism - putting up barriers to trade and mobility. Limiting competition among countries for people, goods, services and capital will have consequences. History teaches us that trade and mobility lead to higher incomes and wealth over time. It is not just consumers who benefit from lowerpriced goods through gains from trade. Economies create new "Silk Roads" that ultimately lead to sharing innovative ideas. When trade and capital flows decline, it is often associated with low growth. (…) Then there are government controls over immigration. Immigrants bring their labour skills to their new home, as well as increased demand for goods and services, enabling businesses to improve productivity and achieve lower unitproduction costs. This, however, is not a widely accepted fact. Many industrialized nations still believe that foreign workers take jobs away from locals and potentially disrupt their "normal" way of life. Despite its good record of integrating immigrants in the economy, even good-natured Canada notoriously limited immigrants after the First World War and, more recently, began imposing stricter limits on temporary foreign workers in the name of "protecting" Canadian jobs. Walls are built quickly whenever populism dominates politics. So let's be honest. Because the latest anti-globalization trend puts up barriers to mobility and trade, it can only make politicians happier, since they have new power to regulate and tax their own markets. And since governments, especially those in an isolationist mood, typically fail to pick wise taxation and regulation policies, it will be workers who end up being the real losers when their incomes only stagnant." National Post, FP7

Mr. Trump, build that wall
A letter to the editor states, "Of the three actors performing for the U.S. Republican presidential nomination, Donald Trump, Sen. Ted Cruz and Ohio Gov. John Kasich, only Trump might build a wall along the U.S.-Canada border. Hopefully, he will. That might stop the U.S.-inspired drug and gun crime crossing into Canada through Surrey and seeping into the Okanagan-Similkameen, which includes Penticton and Princeton." The Province, A12

* **Shooting club opens range for public tours**
It was specifically an open house for the Loyalist Shooting Club (LSC) here on Saturday, but it was also the first opportunity for the public to get a glimpse of a new facility that will be catering to emergency responders. What was once a public school in Tincap, located on County Road 29, is now close to opening as a place used by gun registrants, people looking to complete particular firearm courses, and emergency workers practicing emergency situations. The facility, owned by the security company Reticle Ventures Canada, still has elements of a school, but it is quickly changing. There are still classrooms, but the lessons will be vastly different - with one of the rooms on Saturday housing a shooting simulator. A few feet away from a back entrance was a shooting range with 10 contained bullet paths, purchased from the Canadian government and once used by the Canadian Border Service Agency. Brockville Recorder (2016-05-02)

* **Last chance to see Peace Tower before demolition**
With a demolition date looming, visitors to the International Peace Garden will get one last chance to pay homage to the Peace Tower this summer. The crumbling monument was scheduled to come down last fall, but the garden's board of directors decided to hold off for one more season. It will be demolished in the fall. "We thought the longer the tower is up, the longer it remains in the minds of the people," board president Charlie Thomsen said. The Peace Tower's four concrete columns straddle the Canada-U.S. border and the structure has become an iconic feature of the grounds. Winnipeg Free Press, A8; Radio-Canada (2016-05-02)

CYBER SECURITY / CYBERSÉCURITÉ

Only one way to keep a secret
Secrets are becoming an endangered species. Maybe privacy, too. The FBI has cracked Apple's iPhone, which even Apple apparently couldn't do. In Canada, the RCMP reportedly has cracked Blackberry's supposedly ultrasecure messaging system. This must have come as a disturbing surprise to the world leaders who use a Blackberry, including U.S. President Barack Obama, British Prime Minister David Cameron and the Dalai Lama, among others. Of course, Canadian authorities would never stoop to reading the secret, encoded Blackberry messages exchanged by friendly world leaders like Cameron or Obama, but they wouldn't be human if they didn't wonder what the Dalai Lama was hiding. Quantum computers now in the works supposedly will be fast and powerful enough to quickly decode even the most elaborate encryption. It is beginning to look like we can't keep secret anymore any kind of digital record. We'll have to go back to whispering our secrets. The risk then is that an important message might be misheard: World leader A: "Psst. I am seriously worried about North Korea." StarPhoenix, A3

LAW ENFORCEMENT / APPLICATION DE LA LOI

Searchers locate body of missing teen
17-year-old Natuashish resident Kirby Mistenapeo found 11 km from home. Following an exhaustive two-week search, the RCMP confirmed a body located Monday afternoon outside Natuashish is that of 17-year-old Kirby Mistenapeo. RCMP said that at 10:30 a.m. they were notified searchers had located human remains on the ice approximately 11 kilometres west of the community, in an area known as Little Sango Bay. Kirby had been missing since April 21. A land and air search for the teen was hampered by inclement weather throughout the time he was missing. Three helicopters and an RCMP Twin Otter plane from Happy Valley-Goose Bay were conducting the extensive air search. The ground search saw search and rescue members from Rigolet and Happy Valley-Goose Bay flown into the community to complement

the search team on the ground. The Innu Nation also sent people from Sheshatshiu to assist with the search efforts. RCMP members from Happy Valley-Goose Bay, Makkovik, the Labrador Relief Team and Hopedale were helping with the search as well. Telegram, A6

*** RCMP changes 'outdated' recruitment process**

The RCMP is changing how it recruits new members after being told that the process was "too long, inflexible and outdated." One of the changes will allow people with permanent resident status, who have lived in Canada for the last 10 years, to apply. Physical abilities will no longer be tested as part of the application process and that evaluation will now be assessed at the RCMP training academy in Regina. Under the new rules, applicants from British Columbia, Alberta, Saskatchewan or Manitoba will also be able to select their home province for their first post after graduation. The force says in a news release that the move will help it stay competitive and build a diverse workforce, but also that standards won't be compromised. The RCMP said it will not do interviews on the changes. "We will not be providing any interviews on the modernization of the recruitment process," Annie Delisle, media relations officer for the RCMP, said in an email to The Canadian Press. "We invite you to submit questions in writing if you need any details from the news release." Times & Transcript, B4 (Leader-Post) (2016-05-03); CBC (2016-05-02)

RCMP seek access to Panama Papers for tax probe

RCMP Commissioner Bob Paulson says the Mounties are "hopeful" they will soon get access to the Panama Papers as part of a criminal investigation into income-tax evasion and money laundering by Canadians with assets in offshore tax havens. Commissioner Paulson would not disclose how the RCMP expect to obtain the 11 million leaked documents known as the Panama Papers, which date back four decades and are allegedly connected to the Panamanian law firm Mossack Fonseca, which specializes in the creation of shell companies in tax havens around the world. "Yes, we are interested in getting our hands on them and what criminality it may represent and what investigations that we should pursue," Commissioner Paulson told reporters after testifying before the Senate committee on national security and defence. "We are obviously interested what those papers and the discussions around those papers - what it means and what criminality may be at play." RCMP Deputy Commissioner Mike Cabana had told senators the RCMP have discussed with "foreign partners" how the force could obtain the documents and said they expected to "see the documents in their entirety." Deputy Commissioner Cabana said the RCMP have not been involved in discussions with the government of Panama.When reporters later asked Commissioner Paulson whether the RCMP were planning to obtain the massive records of shell companies and offshore accounts through either judicial warrant or voluntary disclosure, he was circumspect. Globe and Mail, A4; Toronto Star, A4; * HR Reporter (2016-05-02); La Presse Canadienne (L'Actualité)

Organized crime figure gets 15 years

Piccirilli sentenced for trafficking, conspiracy and firearms charges. A well-connected drug trafficker arrested a decade ago received a 15-year sentence in a case that took many twists and turns before finally reaching its end on Monday. "Good luck to you, Mr. Piccirilli," Quebec Court Judge Marie Suzanne Lauzon told Sergio Piccirilli, 56, after reading her decision at the Laval courthouse. With the time he has served offand on since he was arrested in 2006, Piccirilli was left with a prison term of nine years and nine months. When Piccirilli learned how much time Lauzon calculated as the remainder of his sentence, he appeared to be somewhat in a state of disbelief. He turned his head toward two relatives who were seated in the courtroom and let out a sigh. While it might be the end of the case in Quebec Court, Piccirilli's lawyer, Patrice Duliot, filed an appeal of the decision Lauzon made in January in which she found Piccirilli guilty of 23 charges including conspiracy, issuing orders for the benefit of a criminal organization and trafficking in methamphetamine, cocaine and marijuana. Piccirilli was also found guilty of the illegal possession of a powerful automatic rifle he obtained after learning leaders in the Rizzuto organization placed a contract on his head, in 2005, while he was under investigation by the RCMP. Piccirilli was warned by police back then that they had credible information someone wanted him dead. He and members of a Mafia clan based in Granby were at odds with the Rizzuto organization over who was responsible for how a smuggled shipment of marijuana, worth millions of dollars, arrived in the U.S. spoiled and rotten. While Piccirilli argued with leaders in the Rizzuto organization (he even showed up at their hangout in St-Léonard in 2005 armed with a pistol), he was being investigated in Project

Cleopatra, a Combined Forces Special Enforcement Unit investigation led by the RCMP. Montreal Gazette, A7

ASIRT probes shooting
The province's police watchdog is investigating an RCMP-involved shooting in Red Deer Sunday night in which an armed man was injured. The Alberta Serious Incident Response Team or ASIRT said Mounties received a 911 call after 7 p.m. involving a possibly suicidal armed man at a downtown apartment building. "The man advised police that he had a gun and made statements suggesting he was prepared to use it on himself or anyone who attended," ASIRT said in a statement. When three RCMP officers arrived, they found the man on the second floor and a confrontation ensued, resulting in one of the members discharging his service weapon. RCMP say police opened fire "in their efforts to ensure public safety." The 28-year-old man was shot once and was taken to hospital in stable condition. Postmedia Network (Edmonton Sun, A6, Calgary Sun, Calgary Herald)

Human remains found on farm near Brooks
Members of the Brooks RCMP detachment have launched an investigation after a local rancher made a grisly discovery on his property. On the evening of April 28, officers responded to the farm, located approximately 10 kilometers west of Brooks city limits, after the rancher found human remains while tending to his cattle. The RCMP forensic unit and police dog services processed the scene and members of Medicine Hat search and rescue performed a thorough search of the area. An autopsy conducted by the Medical Examiner's office in Calgary confirmed the remains are human but additional testing is required to determine the age, gender and identity of the deceased. Red Deer Advocate, A10 (2016-05-03); CBC (2016-05-02)

Police shoot out-of-control cow
Animal gets loose at cattle sale, injures spectators, charges RCMP officers. An out-of-control cow that got loose and injured several people at Saturday's cattle sale in Lawrencetown was shot by an RCMP officer after police received a 911 call. The distraught animal was being off-loaded and got loose, said Annapolis District RCMP Staff-Sgt. Dan MacGillivray. Police got the call at 10 a.m. and arrived at the scene only to be charged by the animal at one point. "It was, I guess, stressed out, or was acting erratically," said MacGillivray, adding there was a veterinarian at the exhibition grounds and the owner of the animal was close by. "I guess it hurt a couple of people. It appears like this animal was attacking people - (that was) the information our officers had." MacGillivray said the veterinarian was there with a tranquilizer gun, but may not have been able to get in position to use it. "Our officers were there and were trying to control the public," said MacGillvray. "The animal crossed Highway 1. At one point the animal came towards the police car with its head down. Our officers got out of the way." Telegram, A7 (Cape Breton Post)

Polar bear shot and killed by RCMP in Deep Bay, Fogo Island
Release says bear came ashore, approached officers and bystanders. Fogo Island RCMP shot and killed a polar bear that had wandered into the community of Deep Bay Monday morning. The RCMP said in a news release, around 9:30 a.m., officers responded to a call of a polar bear swimming in the harbour at Deep Bay. RCMP and Fisheries and Oceans officers responded and found the bear coming ashore near the community's wharf. RCMP officers moved bystanders back and fired a warning shot in hope of scaring the bear away, but the animal continued to advance, approaching the officers and bystanders. The news release says "an RCMP officer was required to shoot the bear out of safety concerns for those in the area." While en route to the incident, the RCMP said its officers consulted with a conservation officer from the Forestry and Agrifoods Agency. They remained in contact with the conservation officer, by phone, throughout the incident. Canadian Press (Telegram, A5, Guardian, A5, Times & Transcript, Cape Breton Post); National Post, A2

'He wanted help'
Inquiry hears details of soldier's suicide. An Afghan war veteran committed suicide in an Edmonton military cell block on the same day he was told he was being transferred from his regiment to a holding unit for injured or ill soldiers. Testimony pointing to substandard holding cells, ineffective computers, an uncharged defibrillator and inconsistent supervision abilities was given Monday at the start of a public

inquiry into Cpl. Shaun Collins' suicide on March 9, 2011. "The cell block does not meet any Canadian standards," said Warrant Officer James Dean Boyd, the top officer at the guard house and one of the people who found Collins' body. Boyd described the building as a piecemeal combination of four older buildings and including elements such as barred cell doors that have been since identified as hanging risks. He got drunk He said Collins had gone earlier that day to The Junior Ranks, a military-only bar on the base, and gotten drunk. His transfer, from the Princess Patricia's Canadian Light Infantry regiment to the Joint Personnel Service Unit, landed him in a place soldiers go when they are unable, for reasons including injury or mental health, to operate with their home unit. (…) Seven those at the guard house weren't reliable. After putting in the wrong name to begin with, three separate database searches - Edmonton Police, RCMP and military - showed no history for Collins, despite two previous suicide attempts and a history with depression. Postmedia Network (Edmonton Sun, A4, Calgary Herald, Edmonton Journal)

Police watchdog probes shooting at downtown apartment complex

Alberta's police watchdog is investigating after a 28-year-old man was shot by local RCMP on Sunday. Red Deer RCMP responded to a 911 call of an armed man, possibly suicidal, at the River Valley Apartments (5017-49th Street) around 7: 15 p.m. on Sunday. The man told police he had a gun and suggested he was prepared to use it on himself or others, say police. Three police officers entered the building and found the man on the second floor. A confrontation occurred, which resulted in an officer discharging his weapon. The man sustained a non-life threatening single gunshot wound. He was provided with emergency medical attention and transported to Red Deer Regional Hospital Centre where he was admitted and remains in stable condition. No other injuries were reported. Red Deer Advocate, A1

Transportation Safety Board of Canada looking at P.E.I. death

Board deploying team to investigate workplace death of Troy Jeffery on oyster barge Friday. The Transportation Safety Board of Canada (TSB) announced Monday that it is deploying a team to P.E.I. to investigate the workplace fatality of Troy Jeffery. Jeffery, 46, died as a result of injuries sustained during a workplace accident in Poplar Grove on Friday. He was working on an oyster barge on the water at the time of the accident. The TSB is an independent government agency that investigates safety issues in the marine, pipeline, railway and aviation industries. It often recommends changes to safety procedures as a result of its investigations. Jeffery's death is also being investigated by the East Prince RCMP and the provincial Occupational Health and Safety. Guardian

Pas de délais avant de lancer une enquête

Les policiers prennent tous les cas de fugues avec sérieux, assure la constable Jullie Rogers-Marsh. Elle précise qu'il n'y a pas de temps minimum d'attente requis avant de pouvoir signaler la disparition d'un individu. «Aussitôt qu'il y a une inquiétude sur le bien-être d'une personne et qu'elle est introuvable, vous faites bien de contacter les policiers. Nous sommes là pour ça et nous tenterons de la retrouver.» Le travail d'enquête commence dès la réception de l'appel d'urgence. Les policiers tenteront de recueillir le plus d'information possible sur la personne recherchée. Pour ce faire, ils parleront à des membres de sa famille, à ses amis, à son employeur ou à ses enseignants, afin de déterminer où elle a été vue pour la dernière fois. Chaque cas est différent et demande une approche sur mesure, explique l'agente. Les médias d'information ne sont pas systématiquement sollicités dans ces recherches, précise-t-elle. Lorsque les recherches stagnent, et que la GRC a besoin de l'aide du public, un communiqué de presse est rédigé. «On peut parler directement aux gens et avoir des informations très rapidement. En quelques minutes, nous pouvons avertir des milliers de gens sur la disparition d'une personne. Ça nous aide énormément pour nos recherches.» L'Acadie Nouvelle, 5

Mountie fined for lying

A Coquitlam RCMP officer who admitted lying to the Insurance Corp. of B.C. has been fined $3,000. Const. Fareez Vellani pleaded guilty to one count of providing false information material to a claim, an offence under the Insurance (Vehicle) Act. Sentencing took place Friday in provincial court in Port Coquitlam. In addition to being fined, Vellani was ordered to pay $511.88 restitution and a $459 victim surcharge. The offence took place Feb. 13, 2015, in Maple Ridge. According to an RCMP news release from August 2015, the charge related to damage to Vellani's personal vehicle and his subsequent reporting of that damage to ICBC. Province, A8

RCMP changes 'outdated' recruitment process
The RCMP is changing how it recruits new members after being told that the process was "too long, inflexible and outdated." One of the changes will allow people with permanent resident status, who have lived in Canada for the last 10 years, to apply. Physical abilities will no longer be tested as part of the application process and that evaluation will now be assessed at the RCMP training academy in Regina. Under the new rules, applicants from British Columbia, Alberta, Saskatchewan or Manitoba will also be able to select their home province for their first post after graduation. The force says in a news release that the move will help it stay competitive and build a diverse workforce, but also that standards won't be compromised. The RCMP said it will not do interviews on the changes. "We will not be providing any interviews on the modernization of the recruitment process," Annie Delisle, media relations officer for the RCMP, said in an email. "We invite you to submit questions in writing if you need any details from the news release." Red Deer Advocate, A6

Importation d'alcool
la GRC continue de donner des contraventions. Si vous envisagiez aller au Québec faire le plein d'alcool au cours des prochains jours - du moins pour plus qu'une douzaine de «chopines» - risquez-vous d'avoir une mauvaise surprise à votre retour? Cela dépend à qui vous posez la question. Le coordonnateur de l'opération policière ayant mené, en 2012, à la saisie de l'alcool de Gérard Comeau, le caporal René Labbé de Campbellton confirme qu'à ce moment-ci, le statu quo perdure à la frontière. «On attend des consignes de nos supérieurs, mais au moment où l'on se parle, rien n'a changé. On respecte bien évidemment la décision du juge (Ronald) LeBlanc, mais nous n'avons pas reçu de consigne comme quoi nous n'avions plus à nous préoccuper de l'importation d'alcool. Ainsi, on continue à faire appliquer la loi en vigueur jusqu'à ce que l'on reçoive des indications contraires, que la GRC et le gouvernement prennent position», mentionne le policier. Porte-parole de la GRC au niveau provincial, Jullie Rogers-Marsh confirme que son organisation étudie la question en collaboration avec le Bureau des poursuites pénales, question d'avoir l'heure juste dans ce dossier. «On est en train de réviser la décision et les impacts qu'elle aura sur le travail de nos membres. Nous sommes responsables de faire appliquer les lois, mais ce n'est pas nous qui effectuons les changements», indique-t-elle, renvoyant la balle au gouvernement. L'Acadie Nouvelle, 3; * Times & Transcript, A4 (Daily Gleaner, A1, Telegraph-Journal)

It could be a bloody summer
Gun homicides already up by 200% over last year. Just in case you are keeping score, there has been a 200% increase in shooting murders since this time last year. You read it right - 200%. There's no spin. No politics. You can check the statistics on the Toronto Police website yourself. It will show you that by May 3 in 2015, guns were used to kill victims in six homicides. This year, killers armed with guns have so far claimed 18 lives. That's a dozen more shooting murders in 2016 compared to the same time frame the year before. Overall, murders are way up, too - 100% to be precise. At this time in 2015, Toronto had 14 murders. There have been 28 so far this year. Of those 28, 13 have not yet resulted in arrests. Toronto Sun, A4

*** Fatal overdoses in Kamloops already double what they were in 2015**
Following two more overdose deaths on the weekend, Kamloops Mounties are working on a messaging campaign to inform drug users and dealers of the dangers of fentanyl. It likely won't be known for weeks whether fentanyl was involved in Kamloops' most recent overdose deaths - a 44-year-old man and a 36-year-old woman found dead at a house in Rayleigh on Friday night - but the drug has prompted warnings from police, coroners and community groups in recent months. The weekend deaths bring to at least 13 the number of fatal overdoses in Kamloops so far this year - nearly double the tally for all of 2015. Kamloops saw seven deaths last year from overdoses of illicit drugs, which is on par with the annual average of 7.2 for the city going back to 2007. In 2016, however, the numbers are spiking - especially in the Tournament Capital. According to BC Coroners Service data, Kamloops is the only city in the province to have recorded more overdose deaths in the first three months of 2016 than in all of 2015. The only cities with more recorded overdose deaths than Kamloops so far this year are Vancouver, Surrey and Victoria. Kamloops RCMP Cpl. Jodi Shelkie said the risk to drug users is real. "It's a life or death situation every time you choose to use drugs," she said. "Dealing with drugs in our community is an ongoing priority. It's always first and foremost in our minds, but especially now with all these overdoses

and deaths. "We're working at targeting, identifying and arresting the people who are bringing these drugs into Kamloops." Vancouver Sun

*** Surrey RCMP ask for public help in locating missing man**
Surrey RCMP are asking for the public's help in finding a 61-year-old man who has gone missing. Edward Burns was last seen Monday morning at 6 o'clock, near 123rd Street and 82nd Avenue. Police say they and his family are worried about his well-being, and Burns has a medical condition that affects his mobility. CKNW

*** Cocaine, oxycodone, morphine and cash seized in Gander traffic stop**
Two men have been arrested and charged with multiple offences, after police seized cash and drugs from a vehicle in Gander last week. RCMP stopped the vehicle early in the morning of Thursday, April 28. Police seized 28 ounces of cocaine and a "large quantity" of oxycodone and morphine pills. In addition, officers found more than $15,000 in cash. CBC News

*** RCMP hope new system will reduce response times**
Kelowna RCMP could move toward an expanded zone-based model of policing that changes how officers are deployed, city council heard Monday. A sophisticated computer system is helping police managers better understand the frequency and complexity of calls that come from different areas of the city. Within a year or so of compiling the data, RCMP Supt. Nick Romanchuk said, the detachment could be using an expanded zone-based policing model beyond the one currently in use. That system, he said, amounts to dividing Kelowna into two sections: "Rutland and everywhere else." Expanding the zone system, Romanchuk explained, could have significant operational efficiencies that reduce police response time. By way of example, he said it would ensure an RCMP member who happens to be in McKinley Landing wouldn't be the one expected to also respond to a call in Kettle Valley. Kelowna Daily Courier (2016-05-02)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

His hideous crimes, their unceasing anguish
Another year, another victim impact statement. Linda Bright's sisters have had to prepare so many during the 38 years since she was brutally raped and strangled by a man who's now one of Canada's longest-serving prisoners. (…) And dutifully, they'll go to Quebec next week to talk to a parole board about things too painful to discuss with their own families. It's all in an effort to stop Donald Armstrong's latest attempt to get out of St. Anne de Plain maximum security prison, near Montreal, this time, on escorted day passes. (…) Their efforts are not in vain, said Scott Newark, a former Crown prosecutor in Alberta and victims' advocate who attended parole hearings for one of Canada's most notorious serial killers, Clifford Olson. (…)That said, Newark said the presence of families before the National Parole Board adds an important layer of accountability to parole decisions. (…) Armstrong was sentenced to life with no chance of parole for 25 years. But there was no closure for Bright's family. More than six times since then, they've fought Armstrong's attempts to get out or move to minimum-security facilities. Usually, there is advance notice. Nearly every year, Ashley is contacted by Corrections Canada with an update about Armstrong's next move. She also gets calls about his medical appointments and other updates on his status. Once, she learned Armstrong had been moved from a medium-to minimum-security prison. When Ashley balked at the move and complained, he was moved back. (…) "It's always been about the community. We can't bring our sister back. But what we can do is warn the public, let them know what Corrections Canada is thinking of doing," said Ashley. " "Let them know, he will be someone's neighbour, in someone's neighbourhood," she said. "Everybody's a potential victim." London Free Press, A1

*** End of Lockdown and Search at Bowden Institution - Medium Security Unit**
The lockdown put in place at the medium security unit at Bowden Institution on April 28, 2016 has ended. The institution has resumed its normal operations. Correctional Service Canada (CSC) is strengthening measures to prevent the entry of contraband into its institutions in order to ensure a safe and secure environment for everyone. CSC also works in partnership with the police to take action against those who

attempt to have contraband brought into correctional institutions. Visits to the institution have resumed. Marketwired (2016-05-02)

Parole decision today for killer of Reena Virk
Kelly Ellard, convicted of seconddegree murder in the death of Reena Virk in 1997, is expected to find out today if she will be granted day parole from prison. Ellard, who turned 33 in August, was 15 years old when she smashed Virk's head against a tree and then held Virk's head under water until she stopped moving. Virk was a 14-year-old Grade 9 student when she was killed on Nov. 14, 1997, after she was swarmed by a group of teenagers under the Craigflower Bridge. Eight days later, her body was discovered floating in the Gorge during an aerial search conducted in response to rumours of the assault and killing. (...) Ellard is scheduled to attend her first day-parole hearing today, seven years after the Supreme Court of Canada rejected an appeal of her second-degree murder conviction. She waived her right to a full parole hearing four times while serving her life sentence, but remained eligible for day parole and applied for release several months ago. (...) Should Ellard's request for parole be granted, she would be placed under a release plan that includes a requirement that she live in a halfway house, a parole official said. A release plan usually includes conditions such as abstaining from intoxicants and avoiding criminally active peers. Times Colonist, A1; * Huffington Post

* **Trial begins for man accused of injuring cop**
Much of a trial being heard this week at Regina Court of Queen's Bench is expected to turn on five words: "Police! Show me your hands!" "Those words, ladies and gentlemen, are pivotal to this case," Crown prosecutor Kim Jones told the jury hearing the case this week against Jason John Dunlop. During his opening remarks to the jury, Jones said the entire incident from two years ago in which a Regina Police Service plainclothes member was seriously injured took place in a matter of seconds. During those seconds, the Crown alleges the police officer and his partner were trying to arrest Dunlop on a warrant when Dunlop, driving a stolen truck, drove away, pinning the officer between two vehicles. Dunlop, 35, is standing trial on four charges, all dating from May 14, 2014: Criminal negligence causing bodily harm, dangerous driving causing bodily harm, leaving the scene of an accident in which bodily harm occurred, and evading police. While Jones said there is no suggestion Dunlop deliberately hit the officer, the prosecutor suggested to the jury that Dunlop's actions showed a "wanton and reckless disregard" for the other man's safety. In outlining the case the Crown intends to present, Jones said Dunlop, from Red Deer, was on statutory release or parole and was the subject of a warrant for a breach when he ended up in Regina. Leader-Post, A3

* **Tobby Carrier : la Cour Suprême fera part de ses intentions jeudi**
C'est jeudi que la Cour suprême du Canada indiquera si elle accepte ou non de se pencher sur la cause de Tobby Carrier de Matane. La Couronne s'est adressée au plus haut tribunal du pays pour annuler la décision de la Cour d'appel du Québec ordonnant la tenue d'un nouveau procès pour le jeune homme de 26 ans. Tobby Carrier a été reconnu coupable en février 2013 du meurtre de son frère et de tentative de meurtre sur ses parents. Il purge actuellement une peine de prison à vie sans possibilité de libération conditionnelle avant 2023. TVA Nouvelles (2016-05-02)

* **La marijuana en chiffres**
Inoffensive, la marijuana ? Le débat médical est ouvert, mais le débat judiciaire, lui, est entendu. Près de 60 000 cas de possession sont recensés chaque année par la police. La judiciarisation de ces cas coûterait, selon certaines évaluations, jusqu'à deux milliards de dollars par année. Ce qui fait dire à certains que la légalisation pourrait être payante. (...) Un cas de possession ne signifie pas une incarcération. Les données précises sur le nombre de prisonniers derrière les barreaux pour cause de cannabis n'existent pas, mais on sait que 26 % des quelque 15 000 détenus fédéraux y sont pour des raisons de drogue (toutes sortes confondues). Le Devoir, A4

Ellard should show remorse
An opinion piece states, "Out of horrible tragedies can come heartwarming stories of change and redemption. Such is not the case with Kelly Ellard, who killed 14-yearold Reena Virk in 1997. Ellard is scheduled to attend her first day-parole hearing today, seven years after the Supreme Court of Canada rejected an appeal of her second-degree murder conviction. Parole makes sense when a person has

accepted responsibility for her crime, has shown remorse and has embarked upon a better path. The hearing is a chance for Ellard to show she has done these things. Virk, a troubled girl seeking acceptance, had been beaten by a group of teenagers after being lured to the Craigflower Bridge. She extricated herself from her attackers and tried to make her way across the bridge, but was followed by Ellard, 15 years old at the time, and Warren Glowatski, then 16. They dragged her under the bridge and attacked her again; Glowatski watched as Ellard held Virk's head under water. Her body was found nine days later. (...) When the verdict was rendered, Glowatski showed no remorse, offered no apology. He received an automatic life sentence, with the chance of parole in seven years. In the years following his conviction, Glowatski grew and matured. He fully admitted his role in Virk's death and showed remorse. After being given day parole in 2007, he frequently spoke to students and at-risk youth about avoiding a criminal path. Much of his renewal has come through the help of Suman and Manjit Virk, Reena's parents. They took part in a restorative-justice session with Glowatski in 2006. The Virks heard him take responsibility for his actions, and they forgave him. Their support was critical as he has travelled the difficult road from convicted killer to free man. Ellard's is a different story entirely. Virk's parents have said they want to forgive Ellard, who has never publicly admitted killing their daughter, but they say that process can only begin when they see that Ellard has made improvements in her life." Times Colonist, A10

*** A judicial review**

A letter to the editor states, "Your front-page story, Killer's helper appeals (April 29), left me with mixed feelings. On one hand, Loretta Saunders was a beautiful Inuit Canadian woman and I want her murderer(s) punished to the full extent of the law. However, if Victoria Henneberry is not guilty of second-degree murder, as she claims, then I do not want her in jail or punished too harshly if she is guilty of a lesser offense. Henneberry was never tried in court for her part in the crime because she pleaded guilty to second-degree murder last April. She then missed a 30-day deadline to file an appeal of her conviction, but last July was allowed to file a late application. Nova Scotia Legal Aid denied Henneberry's application for a lawyer to handle the appeal. She now is asking Nova Scotia's highest court to appoint a lawyer to handle her appeal. In her letter to the court, Henneberry says her conviction should be overturned and a new trial ordered because she panicked when entering her plea: "I was distraught, under a great deal of stress and panicked." Her being distraught under those circumstances is understandable, but it's important she has chosen to speak directly to the court and say she is not guilty of second-degree murder." Chronicle-Herald, A7

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Which cop shot me?

The Special Investigations Unit investigator was waiting outside the door to the Brampton courtroom, minutes from taking the stand. With him was the complete investigative file on case #15-OFD-046 - information that, so far, had been treated as a state secret. Suzan Zreik's quest for information and justice had come to this: subpoenaing the lead investigator on her case, via a drastic legal manoeuvre. There was no other way, she felt, to know which Peel police officer shot her (...) Last November, the SIU, the civilian watchdog that investigates police incidents involving serious injury or death, ruled the unnamed officers' conduct was legally justified. No charges would be laid in Ekamba-Boekwa's death or in Zreik's shooting. In the words of SIU director Tony Loparco, Zreik was "in the wrong place at the wrong time through no criminal fault of anyone else." Michael Moon, Zreik's lawyer, disagrees. Toronto Star, A1

Will old SIU reports see light of day?

The retroactive release of all Special Investigations Unit directors' reports - including censored details related to the police-shooting death of Andrew Loku - looms as part of a new review of police oversight, Attorney General Madeleine Meilleur said Monday. Under fire from critics outraged that only nine of 34 pages were made public from the SIU probe of Loku's shooting by Toronto police last July, Meilleur said Monday that more information will be forthcoming. That could include the release of the thousands of secret reports prepared by SIU directors since the civilian watchdog was created in 1990 - including the

138 fatal police shootings the agency has probed. But critics say the release of the reports is meaningless if key information, such as evidence provided by witnesses, is kept secret. In an interview Monday, Meilleur said her ministry has asked Justice Michael Tulloch, the judge appointed to review all Ontario police oversight bodies, to make the release of past and future SIU director's reports among the first issues he tackles. Toronto Star, A1

It could be a bloody summer
Just in case you are keeping score, there has been a 200% increase in shooting murders since this time last year. You read it right - 200%. There's no spin. No politics. You can check the statistics on the Toronto Police website yourself. It will show you that by May 3 in 2015, guns were used to kill victims in six homicides. This year, killers armed with guns have so far claimed 18 lives. That's a dozen more shooting murders in 2016 compared to the same time frame the year before. Overall, murders are way up, too - 100% to be precise. At this time in 2015, Toronto had 14 murders. There have been 28 so far this year. Toronto Sun, A4

Police take proactive tack on gangs
Winnipeg police rolled out an anti-gang campaign in three languages Monday in an effort to deter street-gang recruitment this summer. Pamphlets in English, Arabic and Portuguese call for an end to gang violence. They're part of a campaign that includes posters and a public information evening for parents at the Magnus Elias Recreation Centre, 430 Langside St., from 6 p.m. to 8 p.m tonight. "We, as a police service, are being proactive. We're engaging them, the parents, and often it's a one-parent family, to come out," said Insp. Max Waddell, head of the Winnipeg Police Service organized crime unit. "We can arm them with the information so they can get connected with the appropriate social service agency for after-school programming into the summer," Waddell said at a news conference Monday. Winnipeg Free Press, B2

P.E.I. social workers, police learn new strategies to prevent tragedies
The legacy of Nash Campbell is beginning to take shape, as front-line workers on P.E.I. learn new ways to respond to crises before they turn into tragedy, acting on a key recommendation of a coroner's inquest into the tragic 2013 murder-suicide. The four-year-old boy and his mother, Trish Hennessey, were found dead in a burned-out vehicle after a custody battle. "Many, many service providers were significantly affected by that case," said Michele Dorsey, deputy minister of Justice and Public Safety (...) More than a hundred social service workers — including police officers and school officials — met in Charlottetown today to learn about what`s called collaborative risk-driven intervention, a system now used in more than 50 communities across Canada. CBC News

Violence against women needs to end
An opinion piece states "I hate being a man. I wake up every morning and look at myself in the mirror and see the same weight on my shoulders. The weight of being categorized along with the worst of the world's worst. It's something that, according to statistics, half of the planet and I share along with the likes of Paul Bernardo, Russell Williams, and Bruce Allan Wilson - just to name a few of the monsters. These monsters - rapists and predators of violence against women - are all men. I'm a man. A couple of stories in the news this past week made that weight a little heavier. In the first, an Oklahoma court ruled that forced oral sex is not rape if the victim is unconscious from drinking alcohol. The fact that a court made that judgment is absurd in itself. Judge Robert Hudson - a man - made the ruling. The second story was that 80 people were arrested in a province wide child pornography investigation. Three of the arrested are from Kingston. Of the 80 arrested, 63 names were released, 62 were men. This is why the weight gets heavier as a man. Because men are the monsters. The statistics are staggering." Kingston Whig-Standard, A5

* **Breathalyzer ruling will have ripple effect**
Criminal lawyers across Canada woke up Monday to discover that the infallibility of the instrument at the heart of nearly every impaired driving prosecution was as much a myth as a winged insect secreting loonies under the pillows of gap-toothed children. For decades, expert after expert and case after case have entrenched the view that the breath testing machines operating at police detachments from St. John's to Victoria are highly reliable scientific instruments. Nearly every case involving an allegation of

"over 80" (where the concentration of alcohol in a person's blood is alleged to exceed 80 milligrams of alcohol per 100 milliliters of blood) is proven on the basis of a breath test. Although the Criminal Code speaks of blood-alcohol concentration ("BAC"), the intrusiveness and costs associated with blood testing mean that in practice the vast majority of court cases rely on breath-testing as a proxy to determine BAC. The invincibility and infallibility of the police breath instruments has only become more entrenched as forces across the country upgraded from the older Intoxilyzer 5000C model to the shiny new 8000C. London Free Press; Postmedia (Winnipeg Sun, Toronto Sun, Edmonton Sun, Ottawa Sun)

* **Fatal overdoses in Kamloops already double what they were in 2015**
Following two more overdose deaths on the weekend, Kamloops Mounties are working on a messaging campaign to inform drug users and dealers of the dangers of fentanyl. It likely won't be known for weeks whether fentanyl was involved in Kamloops' most recent overdose deaths — a 44-year-old man and a 36-year-old woman found dead at a house in Rayleigh on Friday night — but the drug has prompted warnings from police, coroners and community groups in recent months. The weekend deaths bring to at least 13 the number of fatal overdoses in Kamloops so far this year — nearly double the tally for all of 2015. Kamloops saw seven deaths last year from overdoses of illicit drugs, which is on par with the annual average of 7.2 for the city going back to 2007. Kamloops This Week (Vancouver Province, Vancouver Sun) (2016-05-02)

* **Amount of synthetic drugs in Saskatoon 'almost unparalleled': Weighill**
We are witnessing an "almost unparalleled" amount of synthetic drugs like fentanyl on the street says Saskatoon's police chief. Clive Weighill told Global News it's the demand for drugs that is driving up the rates for crimes like robbery and burglaries. "We've seen crime increasing through the end of 2014, through 2015, and now 2016 again, and it's not just in Saskatoon," said Weighill. "I just had a meeting with the western Canadian chiefs, and it's happening in Edmonton, Calgary, Regina, Prince Albert, Yorkton ... its mainly attributable to methamphetamine, fentanyl type drugs, synthetic drugs where people are getting highly addicted very quickly, and they need money." Global News (2016-05-02)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Inuit voices 'want to be heard'
First it was one niece, murdered just over a decade ago, and then, within a few months, another, both lives cut short before the age of 31. A few years later, a third niece, age 23, was killed. For Levinia Brown, 69, of Rankin Inlet, Nunavut, the pending inquiry into missing and murdered indigenous women means both bringing up painful memories of lost loved ones, and the chance to speak publicly of the pain and grief common to many families in the North. It's also, she hopes, an opportunity for Inuit voices to be heard. "We need to talk about it, and heal from it. But it's a very difficult subject," she said in an interview. "I'm appreciative that it's being paid attention to. At least people are going to have awareness that this has happened, and let's stop it, because we don't want any more hurting families." As attention grows to the issue of violence against indigenous women and the upcoming inquiry, some Inuit family members are concerned their perspective will be overlooked. Inuit represent a minority - 4 per cent, though fast-growing - of the aboriginal population in Canada. On a per-capita basis, however, the North is home to Canada's highest homicide and family violence rates, which many say require urgent action. In a report on its pre-inquiry consultation to be released Tuesday, Pauktuutit Inuit Women of Canada - a national organization - highlighted a need to ensure Inuit priorities will be addressed. Globe and Mail, A3

Review policing during inquiry
Aboriginal women tend to be "underprotected and overpoliced," making it vital that the behaviour of police be examined in the upcoming inquiry on missing and murdered women, advocates said Monday. Indigenous women are grossly overrepresented in the system and commonly suffer from poverty and abuse, said Kim Pate, executive director of the Canadian Association of Elizabeth Fry Societies. Those who end up behind bars often share similar, vulnerable backgrounds with those who are murdered or go missing, she added. "We know that the rates of violence ... against indigenous

women are particularly high, and they are also more likely to not have had support in addressing that violence." Pate said she hopes the inquiry will untangle the issues that make indigenous women vulnerable to becoming victims, as well as those that might make them more likely to end up in the criminal justice system. "If we end up with recommendations for better supports for women . . .we will end up seeing fewer people in all of those situations in my opinion." Dawn Lavell-Harvard, president of the Native Women's Association of Canada, said many of the crimes linked to aboriginal women are related to desperation and circumstance. Canadian Press (Toronto Star, A6; Charlottetown Guardian, St. John's Telegram, Cape Breton Post, Huffington Post)

Missing Persons Week marked with prayer, song

Though it's a long list, the Provincial Partnership Committee on Missing Persons wants families to know their loved ones are not forgotten. At Saskatchewan's fourth Missing Person's Week event, 122 white-covered chairs adorned with yellow and green ribbons were lined up in a silent tribute to the province's missing people. After the formal presentations, the faces of those people were projected onto a screen - the images ranging from very grainy ones to smiling faces from family photo albums. The event began with a prayer and song by elder Lorraine Yuzicapi of the Standing Buffalo Dakota Nation near Fort Qu'Appelle. She told the crowd she can't help but get emotional when she talks about missing persons. Unfortunately, Yuzicapi, like far too many others, knows what it's like to have a loved one go missing. In July 2005, her granddaughter, Amber Redman, disappeared. Leader-Post, A4

How to cover our indigenous communities

Many of us will someday tell our children about this apparent tipping point in our collective nationhood: when "reconciliation" between indigenous and non-indigenous communities came crashing on to the public radar and the news media and government suddenly grew a conscience. We all want to believe that reconciliation is a process that has begun to unfold. Indeed it has, but only just. Prime Minister Justin Trudeau's recent private visit to Shoal Lake 40 First Nation (which straddles the border between Manitoba and Ontario) is indicative of this change, as was the mainstream media appetite to cover it. But VICE Canada was given exclusive access to the trip in order to generate footage for a series it is producing on indigenous youth in isolated reserve communities. VICE has produced a number of investigative works, including a documentary on the lack of water in many reserve communities, and a provocative piece showcasing the work of volunteers searching for bodies in Winnipeg's Red River. One could argue the online publication has paid its dues. So while the PMO could have handled the exclusivity of this visit with more tact, the outrage shown by traditional corporate media at being excluded suggests we have a long way to go on the road to reconciliation. Ottawa Citizen, A9

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Victoria could allow 'edibles' at cannabis dispensaries

The City of Victoria is considering rules for its illegal cannabis dispensaries that would be more permissive than Vancouver's landmark bylaw, permitting the sale of controversial "edibles" and allowing pot shops to be located closer to schools. Medical marijuana advocates in the provincial capital praised the draft rules for the city's 32 existing dispensaries, which will be voted on by council later this week. The new proposal comes as officials in Vancouver began cracking down on dispensaries, handing out tickets to nearly two dozen shops over the weekend. Victoria is poised to become the second Canadian city to regulate dispensaries, which have proliferated in areas where municipal officials and police departments have taken a hands-off approach. Advocates say Canada now has about 300 dispensaries, which operate outside of Ottawa's mailorder medical marijuana system. The changes at the municipal level are taking place as a federal task force prepares to begin crafting legislation to legalize recreational marijuana, which could happen within two years. Victoria's proposed rules would allow dispensaries to sell edibles and operate 200 metres from schools and other pot shops. In Vancouver, city hall adopted rules that keep the shops 300 metres from such sensitive locations and also banned edibles after concluding baked goods and candies infused with cannabis were too attractive to children. Mayor Lisa Helps said her city's rules are not much looser than Vancouver's, despite recommending a business licensing fee of about $5,000 for successful applicants, compared with the $30,000 that for-profit shops in Vancouver must pay. Under provincial law, she said her city can only charge enough to recover the costs

of regulation, while Vancouver has the ability to "charge whatever the heck they want" under its own special charter. CBC

*** Pot shop rules to be discussed by Victoria city council Thursday**
The federal Liberals have said they'll have legislation ready in a year to legalize marijuana in Canada. But some Victoria's city politicians don't want to wait. Councillors will discuss potential regulations on the city's rapidly growing number of pot shops Thursday. Many of the potential bylaws they'll consider will look familiar to anyone who's followed Vancouver's drive to regulate its dispensaries. But not all. "We really have the optimal positioning of being able to watch them and, frankly, learn from some of their mistakes," said Councillor Jeremy Loveday, referring to Vancouver city council, speaking on CBC's All Points West. Loveday has a lengthy wish list for Victoria. He wants to ensure video surveillance is mandatory in all dispensaries, that they're not permitted to advertise to minors, that pot shops follow existing noise and smell bylaws, and that there is a minimum distance of 200 metres between each dispensary, and between dispensaries and schools. CBC News

*** Vancouver bylaws close 22 pot shops, but many owners vow to fight rules**
Vancouver's crackdown on unlicensed medical marijuana dispensaries has begun, with bylaw inspectors issuing 44 tickets to date and confirming that 22 stores have already closed. Vancouver's crackdown on unlicensed medical marijuana dispensaries has begun, with bylaw inspectors issuing 44 tickets to date and confirming that 22 stores have already closed. But many owners are refusing to shut their doors and are mulling legal action, while others are refocusing their business efforts on cities without regulations including Toronto. "It's absurd that these businesses that have laid the groundwork for access and legalization are being punished and shut down when they do no harm," said cannabis activist Jodie Emery. "A lot of Vancouver dispensary owners in the last year have set up plans to move to other jurisdictions like Toronto because the regulations here are too restrictive." Sudbury.com; CBC News

Canada to join anti-torture protocol after years of delay
Canada is prepared to join a key United Nations anti-torture agreement more than a decade after it was first passed. The UN's optional protocol to the convention against torture allows for the establishment of national and international systems for inspecting detention centres where torture often takes place in secrecy. It was first approved by the world body in 2002. Although dozens of countries have signed on, Canada has not ratified the protocol. The Harper government twice promised to do so, but never did. The new Trudeau government will follow through, says Chantal Gagnon, a spokesperson for Foreign Affairs Minister Stephane Dion. "The minister just announced that we agree that the government of Canada should join this important protocol," Gagnon said of what Dion had to say at a private reception earlier Monday. "We are taking the first step towards doing so by beginning formal consultations on the optional protocol with provincial and territorial governments." Mohamed Fahmy, who spent more than a year in a prison in Egypt, welcomed the move on Twitter, calling it history in the making. Activist groups have been pressing for ratification for years Amnesty International Canada retweeted Dion's announcement and has a news conference on the subject scheduled for Tuesday. Supporters of the protocol say it is an important step in freeing the world from the practice of torture. They say Canadian ratification would strengthen the country's ability to press other countries to open detention centres to increased scrutiny. Canadian Press (Toronto Star, A4, Red Deer Advocate, Toronto Sun)

Visit at your own peril
Two Europeans kidnapped in Mindanao in 2012 and taken to Jolo Island to be ransomed were birdwatchers visiting the southern Philippines because they hoped to add a sighting of the rare Sulu hornbill to their life lists. One escaped two years later after a knife fight with his captors; the other is still

missing. Their abductors were the same terrorist gang that last week executed Calgarian John Ridsdel. The Abu Sayyaf group, its allegiance pledged to the Islamic State of Iraq and the Levant, relies on tourist ransoms for much of its funding Despite this Islamist insurgency, which has raged for decades in the country's south, the government tourist office's slogan - "It's more fun in the Philippines" - seems to be working: the number of visitors is up about 20 per cent so far this year. The Philippines has one of the fastest-growing economies in Asia. Most of the country is safe; parts of the south definitely are not. Abu Sayyaf is still holding 11 foreigners in Sulu province, including British Columbian Robert Hall, who was abducted with Ridsdel. Ten Indonesian sailors were released Sunday, with Indonesian and Filipino media reporting the sailors' employer had paid a total of US$1 million to buy their freedom. The Philippine tourist office's website makes no mention of the potential risks for tourists travelling to Sulu. Rather, it describes the province's 400 hundred islands as a "glorious" places of "fabulous beauty" that "nurtures a harmonious coexistence of the two most dominant religions, Catholicism and Islam." National Post, A1

Kurdish battle with Iraqi forces raises questions about military training
Canadian-supported Kurdish fighters fought in a bloody battle with forces allied with Iraq's government, even as the Trudeau government kicked offa new public relations campaign to boost public support for its mission in that volatile country. As defence chief Gen. Jon Vance was in Erbil last week reassuring journalists that Canada's mission to Iraq was designed to strengthen the country, Kurdish troops supported and trained by coalition forces had just finished fighting a Shiite militia aligned with Iraq's government. Ten people were killed in the battle, raising questions about Canadian and coalition training of the Kurds and what will come in the aftermath of the eventual defeat of Islamic extremists in Iraq.
More Canadian special forces are being assigned this summer to train the Kurds in northern Iraq and the Liberal government is sending tens of millions of dollars of aid, equipment, and eventually weapons, to the Kurds. The Kurds have used their training to battle the extremists from the Islamic State of Iraq and the Levant (ISIL) but also have as their ultimate goal the establishment of their own independent state.
In a public relations push, shepherded by Vance and in close cooperation with Prime Minister Justin Trudeau's office, the military is promoting what it is calling a successful training mission by the Canadian Special Operations Regiment from Petawawa, Ont. That mission is to strengthen Iraq, military commanders say. Ottawa Citizen (Kingston Whig-Standard, B1, London Free Press, Vancouver Sun, Calgary Herald)

*** Pakistan fourth most dangerous country for journalists**
According, to the annual report by Freedom Network, titled, Growing Sounds of Silence – The Year of Censorship, in the year 2014, 14 journalists were killed. But, it is the year 2015 that has really proved to be the year of gags and curbs on free speech. Pakistan has been ranked the fourth most dangerous country in the world for journalists, with a total of 115 killings since 1990, according to a report issued by International Federation of Journalists (IFJ). Pakistan is rated “Not Free” in the Freedom of the Press Index 2016, and is ranked 147th out of 195 countries and territories worldwide. According to the Report, journalists in Pakistan experience official attempts to restrict critical reporting, as well as high levels of violence from both State and non-State actors. The Constitution and certain legislations authorize the government to curb freedom of speech on subjects that include the Constitution itself, the armed forces, the Judiciary, and religion. Harsh blasphemy laws have occasionally been used to suppress the media. The News

MINISTER / MINISTRE

Fort McMurray Fires:

To money for thousands of evacuees
Crews are working around the clock to restore power and natural gas to Fort McMurray, Alta., but the chief operating officer of the utility that serves the area says it's impossible to say how soon residents will be able to go home. It's slow and dangerous work. (…) In Ottawa, Liberals are putting all hands on deck with a special cabinet committee to co-ordinate Fort McMurray aid and reconstruction efforts in advance of the prime minister's visit Friday. Justin Trudeau has received an appeal from Notley for enhanced employment insurance benefits for the Edmonton area as a consequence of last week's mass evacuation of more than 80,000 people. But that's just one thread of a multi-government effort that's expected to go on for months or years. Nine different ministries are involved in the federal ad hoc committee, which will be chaired by Calgary MP Kent Hehr, who serves as veterans affairs minister and associate minister of defence. **Public Safety Minister Ralph Goodale** said this week that a dozen federal departments and agencies are involved in the Fort McMurray response. The Red Cross announced that it would distribute $50 million in donations directly to evacuees within the next 48 hours, while the Alberta government is

setting up a debit card system for registered evacuees. The federal Disaster Financial Assistance Arrangements - a 46-year-old program that uses a formula to provide funds to provinces in the case of major natural disasters - will automatically kick in to cover uninsured losses. Canadian Press (Toronto Star, A9, Calgary Herald, Calgary Sun, Waterloo Region Record, Hamilton Spectator, Red Deer Advocate, CBC News); Huffington Post (2016-05-11)

*** Alberta premier says oil city saved from worst of wildfire**
At least two neighborhoods in this oil sands city were scenes of utter devastation with incinerated homes leveled to the ground from a wildfire that Fort McMurray's fire chief called a "beast ... a fire like I've never seen in my life." But the wider picture was more optimistic as Fire Chief Darby Allen said 85 percent of Canada's main oil sands city remains intact, including the downtown district. Alberta's premier declared the city had been saved, adding that officials hope to provide a schedule within two weeks for thousands of evacuated residents to begin returning to their homes. (...) ***"We are now turning our minds more and more to the recovery effort,"*** **Federal Public Safety Minister Ralph Goodale** said. ***"This is going to be a long term endeavor because at the moment there is no power and gas, no palatable water supply. There's dangerous hazardous material all over the place. It's going to take a very careful, thoughtful effort to get that community back in a livable condition,"*** **Goodale** said. Seattle PI

*** Hunk Justin Trudeau Turns Down Russia's Offer To Help**
Trudeau expressed gratitude towards Russia's offer to dispatch water bombers and fire fighting specialists to battle the growing flames, but said he did not need international help. In addition to help coming from different provinces across the country, Trudeau has said that international help will not be required. He added that it is "touching" to see the global community coming together to help and offer support to those affected by the catastrophe. As reported by Global News, countries including the U.S., Russia, Mexico, Australia, Taiwan, Israel and the Palestinian Authority have offered help. (...) Meanwhile, **Public Safety Minister Ralph Goodale** emphasized the need of a break in the weather. ***"The decision was made by the firefighters in the emergency management system that (foreign help) wasn't necessary because of the nature of this blaze,"*** **Goodale** said. ***"This beast is so big the only thing that will fix it is rain."*** Morning News USA

Other:

*** Two-tier pardons fees examined as part of Trudeau government review**
People convicted of minor offences would pay less than those guilty of serious crimes when applying for a pardon under a scenario being studied by the federal parole board. The Parole Board of Canada quietly launched an online consultation this week asking people what they think of the $631 application charge for a criminal pardon - a fee that quadrupled under the previous Conservative government. The consultation, which runs until June 6, is part of a sweeping Liberal review of Harper government changes that made people wait longer and pay more to obtain a pardon, which was renamed a record suspension. (...) The office of **Public Safety Minister Ralph Goodale** says the government will review the waiting period, fee and new name with a view to considering fairness, proportionality and the role that expunging a criminal record plays in rehabilitation. ***"The goal of the corrections system is for offenders to become contributing members of society after their release to make our communities safer,"*** said Scott Bardsley, a spokesman for **Goodale**. ***"Inaccessible pardons cause a major barrier to good employment as many positions require criminal record checks."*** Canadian Press (CTV News, News 1130, CP24)

*** Canada joins alliance to crack down on corruption**
Canada is joining the United States, Britain and three other countries in setting up the International Anti-Corruption Coordination Centre to crack down on global corruption and recover looted assets. The centre, to be based in London, will work with Interpol and law enforcement agencies from around the world. Australia, New Zealand and Switzerland are also helping co-found the organization. It will "provide international co-ordination and support to help law enforcement agencies and prosecutors work together across borders to investigate and punish corrupt elites and recover stolen assets," according to an announcement Thursday by British Prime Minister David Cameron. The announcement came at the start of an anti-corruption summit in London. The conference is being attended by about a dozen Prime

Ministers and Presidents from around the world including Nigerian President Muhammadu Buhari and Afghan President Ashraf Ghani, two countries Mr. Cameron recently described as "fantastically corrupt". The heads of the World Bank, International Monetary Fund and senior members of the International Olympic Committee are also taking part. **Public Safety Minister Ralph Goodale** is representing Canada. Globe and Mail

Politics this morning: Liberals make string of platform promise announcements
Democratic Institutions Minister Maryam Monsef announced yesterday that the Liberals are moving ahead with electoral reform, and are forming an all-party committee that explores possible replacements for the electoral system. However, a majority of the seats on the committee will be Liberal, causing opposition to voice concerns that whatever option the Liberals want will be passed through. The government made a promise in the lead-up to the 2015 election that it would replace the current first-past-the-post system by introducing new legislation within 18 months of taking power. Meanwhile, the Conservatives are still pushing for a national referendum, which the Liberals have maintained they will not call for. Aside from electoral reform, the Liberal government went on an announcement spree yesterday, naming a list of platform promises that they are moving forward with, including a press release from **Public Safety Minister Ralph Goodale** stating that a Canada-US Redress Working Group has been created to rectify issues faced by those whose names have been wrongfully added to the no-fly list. The President of the Treasury Board, Scott Brison, also sent out a press release stating that he would make an announcement this morning at 9:30 regarding government of Canada-related advertising and communications. The Liberal government pledged to make government advertising non-partisan, and appoint an Advertising Commissioner to help the Auditor General oversee government advertising. Hill Times

*** Anti-Semitic French Comic Can't Enter Canada, But He Has a Plan to Do His Montreal Shows Anyway**
The organizers of several sold-out shows for the notorious comic who has faced a litany of hate speech convictions are implementing "plan B" after he was denied entry into Canada earlier this week. Dieudonné M'bala M'bala, known better as just Dieudonné, was supposed to kick off a 10-show series at a small downtown art gallery on Wednesday, followed by two more in Quebec City and one in Trois-Rivières. "There's a little setback, I have to do a round-trip but I'll be coming back ... I'll be in Montreal tonight,"Dieudonné posted in French on his Facebook page, before being forced to get on a flight back to France. His brief stay in Canada occurred the same day he was convicted of hate speech in France, given a two-month suspended jail sentenced, and ordered to pay a €10,000 fine for anti-Semitic speech in a show, according to French media reports. (...) Meanwhile, speaking in the House of Commons on Tuesday, Conservative immigration critic Michelle Rempel asked if the government had used "its power to prevent this man from entering Canada. "Dieudonné M'Bala M'Bala has been convicted many times for hate speech, slander, and glorifying terrorism. This evening, he is supposed to put on a so-called comedy show in Montreal," she said. "Did the government use its power to prevent this man from entering Canada?" **Minister of Public Safety Ralph Goodale** wouldn't answer, saying simply that border guards ***"take all relevant factors into account, including the existence of a criminal record."*** Vice News (2016-05-11)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray Fire

*** Comité ministériel spécial sur les incendies de forêt en Alberta**
Ottawa a mis sur pied un comité spécial de neuf ministres afin de gérer les lendemains des incendies qui ont ravagé le nord de l'Alberta et détruit une partie de la ville de Fort McMurray. C'est le ministre des Anciens Combattants, Kent Hehr, qui présidera le Comité spécial sur les feux de forêt du nord de l'Alberta, regroupant notamment les ministres responsables de la Sécurité publique, de la Santé, des Ressources naturelles, de l'Infrastructure, de l'Assurance-emploi et du Développement social. Le comité spécial tiendra sa première rencontre jeudi. La Croix-Rouge a par ailleurs annoncé mercredi qu'elle

fournirait immédiatement 50 millions de dollars aux milliers de personnes forcées de fuir Fort McMurray. Presse canadienne (Le Devoir; Le Droit)

*** Care must be taken in restoring utilities to Fort McMurray**
Crews are working around the clock to restore power and natural gas to the fire-ravaged city of Fort McMurray, but the chief operating officer of the utility that serves the area says it's impossible to say how soon residents will be able to go home. It's slow and dangerous work. "If you can imagine a charred power line pole that we don't want to take out of service, but we want to reinforce - it's something we obviously want to do with great care," ATCO COO Siegfried Kiefer said Wednesday following the company's annual meeting. "Both of the products we deal with are invisible and both can kill you." More than 80,000 people were forced to flee when a ravenous wildfire attacked several neighbourhoods in the northern Alberta city last week. Red Deer Advocate, A6

*** Workers prep for oilsands return - Oil operations prep for production**
Workers for one of the largest oilsands companies affected by the wildfire that devastated Fort McMurray, Alta., will begin returning to the shuttered facilities on Thursday, a union official said on Wednesday, offering the latest indication that the key petroleum production area was slowly coming back online. Meanwhile, the Alberta Premier Rachel Notley and the head of the Canadian Red Cross announced that residents of Fort McMurray would be offered direct financial aid. Ken Smith, President of Unifor Local 707, a union that represents 3,400 Suncor Energy workers, said the company was starting to fly employees back to its oilsands base plant from Thursday. "It will take a few days to get the plant up and in condition to start handling feed. The mine can get going as soon as the trucks and shovels are ready, but it will take the plant a bit longer to become functional," Smith said. "There are a lot of different units that run to make everything happen up there; it's a very complex work site." Smith said they would be flown to Suncor's Firebag site, about 120 km north of Fort McMurray, and transported by bus to the base plant. Suncor Chief Executive Steve Williams had said a day earlier that none of the company's facilities in the area, which have a production capacity of about 350,000 barrels per day (bpd), had been damaged, and he expected to be able to restart production soon. Reuters (Whig-Standard, B1)

*** Suncor couldn't say it trusted the province's Fort McMurray fire analysts**
Suncor Energy has confirmed it used its own analysts to predict the path of wildfires near its facilities in Fort McMurray, and one source told Metro on background that it did so because it thought the government's fire modelling and predictions were potentially flawed. As wildfires encroached on the city, both the government and Suncor had fire prediction specialists that traced the path of the quickly spreading inferno. Sneh Seetal, spokeswoman for Suncor Energy, couldn't say Suncor trusted the judgement of government analysts. "It's not really a yes or no type answer — I think it's too simplistic and doesn't look at the complexity of the unprecedented situation," Seetal said. Metro News

*** Alberta fires likely won't devastate national economy**
A quick restart of Canadian oil sands production will probably spare the country's economy any significant damage from wildfires that ripped through Alberta this month. Fires that knocked an estimated one million barrels a day offline over the past week will trim 2016 growth by around one-tenth of a percentage point, according to the median forecast in a Bloomberg survey of 10 economists. They see the economy expanding 1.6 per cent this year... There are still risks that production restarts could be slowed by pipeline and power generation outages, shortages of diluent and even problems finding staff. Canadian natural gas producers are also suffering, given oilsands operations are major customers. Another unknown is how the destruction spreads through the economy and affects areas such as consumer spending. "It's a huge shock to Fort McMurray, a sizable shock to Alberta and for an economy of C$2 trillion, in terms of the economic impact, it's a modest hit," said Craig Wright, chief economist at Royal Bank of Canada. The key is "when does it come back on?" Bloomberg (Vancouver Sun, D4)

*** Forestry firms assess the damage- Economic hit will hinge on how wildfires moved through the timber**
The multibillion dollar oilsands facilities around Fort McMurray weren't the only large industrial operations at risk when wildfires tore through the region over the past week. Alberta's $4 billion forest products industry also felt the heat, quite literally. Two industry players in particular - Fort McMurray-based

Northland Forest Products, a big sawmill operator, and Boylebased Alberta-Pacific Forest Industries, one of Canada's top pulp producers - suffered unspecified losses to timberlands that will take months to quantify. Company officials with both firms say they'll start assessing the extent of the fire damage in coming weeks, once smoke from the blaze, which now covers an estimated 220,000 hectares, starts to clear. "As far as we know our homes are OK, but we haven't had any information since Thursday or Friday so we really don't know what's going on," says Howard Ewashko, who co-owns Northland with his brother Craig and also lives on the same street in Fort McMurray. "Right now we're just trying to get our servers online and we're chatting to our customers and our contractors, and assuring them that we're still around. As soon as we can we'll start shipping wood and start harvesting this winter again." The good news? Northland's sawmill north of Fort McMurray, which pumps out about 300,000 board feet of lumber annually, was untouched by the blaze. The company's co-owners remained on site throughout the evacuation. Meanwhile, Alberta-Pacific's huge pulp mill, which is located far to the southwest of the fire's path, was never threatened by the blaze. But Alberta-Pacific's massive Forest Management Agreement (FMA) - which gives it authority over 6.4 million hectares of forested land, or an area nearly 30 times larger than the fire zone itself - was affected. Edmonton Journal, B8

*** 22 pompiers néo-brunswickois en renfort en Alberta**

Une équipe de 22 pompiers a quitté le N.-B. mercredi pour aller combattre les feux de forêt qui ravagent l'Alberta. Andy Soucy, garde forestier basé à Edmundston, s'apprête à passer 14 jours sur la ligne de feu. Il fait partie du groupe de pompiers venus des quatre coins du Nouveau-Brunswick, mobilisés par le ministère des Ressources naturelles pour prêter main-forte. A leur arrivée à Edmonton, ils seront informés de la situation sur place puis envoyés dans l'une des régions touchées. «On va nous donner un plan d'action avant de partir pour Fort McMurray ou ailleurs. On ne va pas aller au coeur du foyer. On va être en action à des endroits stratégiques sur les flancs du feu et orienter l'incendie vers une direction moins dangereuse pour les gens», explique-t-il avant de prendre l'avion. Acadie Nouvelle, 5; Telegraph-Journal

*** Eyes inside the evacuation zone**

As the fires raged, when most everyone else was leaving Fort McMurray, Lou Callan stayed put. Along with a small contingent of residents of the northern Alberta town who refused to leave - or sneaked back in - Mr. Callan stayed in the city for more than three days after the mandatory-evacuation order was issued, when most of an estimated 2,400 houses and buildings burned. The 51-year-old spent his time driving around, trying to avoid the RCMP and doing tasks and chores for people who wanted to be there, but couldn't. His photos and video of the cityscape in the days after the evacuation gave thousands of people an early glimpse of whether their homes were still standing or not. "I was just helping. That's all," he said in an interview from Lamont, Alta., where he and his wife are now staying at a hotel. An eight-minute video he posted from a drive around the town on Thursday last week has garnered more than 74,000 views. In the video, Mr. Callan, with a friend, point out which neighbourhoods and streets are still standing, and which are in better shape than they expected - punctuated by colourful commentary as they travel the empty streets. Globe and Mail, A11

*** 'Speed matters' - Red Cross provides Fort McMurray evacuees with $50M immediately**

The Red Cross is providing an immediate payment of $50 million to evacuees of the Fort McMurray forest fire to add to emergency funds the Alberta government is providing. CEO Conrad Sauve says each adult is to receive $600 and each child will get $300. The money is to be electronically transferred within the next two days. "This is the most important cash transfer we have done in our history and the fastest one,' he said Wednesday at a news conference with Alberta Premier Rachel Notley. "(It's) a combination of both the ability to raise money very fast in Canada and also use electronic means to transfer money directly into the hands of those affected." Everyone has unique needs and giving evacuees cash lets them decide how best to spend the money, Sauve said. "We know already that the damage resulting from the wildfire will be in the billions and it will take years to recover. But we also know that the needs of those affected are immediate." Sauve said $67 million has been donated to the Red Cross so far and much of that will be matched by the provincial and federal governments. Notley reminded people that the Alberta government is also providing immediate monetary assistance. Debit cards are being handed out at evacuee centres and other locations across the province. Canadian Press (St. John's Telegram, B10; Chronicle-Herald)

* **Fort McMurray evacuees on frustrating path to safely return home**
Frustration is mounting among some displaced Fort McMurray residents who are becoming increasingly anxious to get home after last week's wildfires but still have no idea when – or how – that will take place. In her daily media briefing on Wednesday, Premier Rachel Notley reiterated plans to have more information for evacuees in the next two weeks, but stressed that it's not yet safe for people to return to the northern Alberta community. She said the re-entry of residents isn't based on a specific timeline, but on meeting certain criteria to ensure the safety and security of residents. "We are very, very aware of the stress and the anxiety that many evacuees are feeling …," she said. "And we understand, of course, the desire to get back home." Globe and Mail

* **Fort McMurray evacuees in Lac La Biche moved to longer-term housing in Bonnyville - Bus loads of evacuees staying in Lac La Biche are expected to arrive in Bonnyville Wednesday evening**
Some Fort McMurray residents staying at an evacuation centre in Lac La Biche are on the move again, travelling to Bonnyville Wednesday night for longer-term housing. The town of Bonnyville started out as a check-in centre for some of the 80,000 people who fled the wildfires last week. The province has since designated the town of 7,000 people as an official reception centre, offering financial assistance to house evacuees during the upcoming weeks before anyone is allowed back into Fort McMurray. Bonnyville has room for around 300 evacuees, in hotels and work camps, said Chris Cambridge, chief administration officer for the Municipal District of Bonnyville. CBC News

* **Wood Buffalo municipal council meets for first time since fire**
Members of Wood Buffalo's municipal council spent their first meeting since Fort McMurray's evacuation mapping out its role in the recovery effort. All of council was present in the River Valley Room of Edmonton City Hall, the new official meeting place for the coming weeks of government in exile. At issue was how the fire would impact projects, programs and services in the municipality and what role the province would play. Worry about providing a stable, happy community quickly enough for the evacuees was evident during the meeting... Repeated questions by Coun. Lance Bussieres and Coun. Allan Vinni about the province's authority in the rebuilding process and in approving re-entry prompted Larivee to stress the province was looking to help the municipality, not take over. "Sometimes we think we built Fort McMurray in spite of the province," not by working with it, Vinni said. Larivee assured council she respected municipal autonomy, and that didn't change because of the emergency. "What you will be responsible for is the rebuilding of your community when you get there," she said. Shane Schreiber, managing director of Alberta Emergency Management Agency, said the province's powers during the state of emergency were laid out in section 19 of the Emergency Management Act. Edmonton Sun, A7; Calgary Herald

* **How other provinces are offering to help displaced Fort McMurray residents**
Hundreds of people lined up at centres across Alberta Wednesday to get their share of emergency funds being offered to residents of Fort McMurray displaced by the wildfire. People can also apply for Alberta Works, which provides an emergency allowance for things like food, accommodation, replacement clothes and utility bills; but to qualify, you must be in the province of Alberta. So what about those who have sought refuge in other provinces? Fort McMurray has a large population hailing from Newfoundland and Labrador. Spokesman John Tompkins said the Department of Advanced Education and Skills will assist evacuees in that province. "People affected by the wildfires in Alberta who have relocated to Newfoundland and Labrador are encouraged to avail of provincial supports and services, including income support and emergency assistance," he said. In Ontario, a government spokeswoman said people who qualify can get help through Ontario Works Emergency Assistance. Global News

* **Fort McMurray wildfire: Ontario provides $500K to Canadian Red Cross for relief**
The Ontario government is contributing half a million dollars to wildfire relief in Alberta. Premier Kathleen Wynne said in a statement Wednesday that the $500,000 will go to the Canadian Red Cross to help its relief efforts for people displaced by the Fort McMurray forest fire. Ontario has committed to sending up to 119 firefighters and supervisory staff, and 82 of them are currently on the ground in Alberta. "Ontario's fire program is recognized around the world for its ability to respond to risks related to public safety. We will

continue to provide the appropriate personnel and support to the people of Alberta throughout this disaster," Bill Mauro, the province's Minister of Natural Resources and Forestry, said in a statement. CBC News

*** Fort McMurray evacuees line up outside Butterdome for debit cards**
Thousands of evacuees from Fort McMurray lined up outside Edmonton's Butterdome on Wednesday to receive government-issued emergency relief debit cards. The province and the Red Cross announced earlier in the day that electronic transfers and pre-loaded debit cards would be given to those impacted by the wildfire. CBC News; Edmonton Sun; Calgary Sun

*** Harrowing tales from Fort McMurray evacuees - Insurance team hearing stories as it assesses damage**
One family told of driving through neighbours' backyards in a desperate bid to flee their burning city. Others spoke about being separated from loved ones as they escaped the wildfires in Fort McMurray, and of the agonizing wait before being reunited. "The stories are very moving," said Trevor Brick, western regional claims manager for Waterloo-based Economical Insurance. "These are people coming up who have potentially lost everything." Brick and about 20 colleagues are present at three evacuation centres in Edmonton, Calgary and Lac La Biche, about halfway between Fort McMurray and Edmonton. Call centres in Edmonton, Calgary, Vancouver and Mississauga are also fielding questions and claims. In Alberta, Economical staff are providing claims support and much-needed emergency funds to policyholders forced to flee their homes and businesses. But they're also there to listen to their clients' harrowing tales. "For myself, I find it's a very humbling experience," said Brick, who's worked in Alberta for nine years. Economical has already distributed $1 million in emergency funds to affected policyholders, said vice-president of claims Rocco Neglia, who arrived in Alberta Tuesday morning. Waterloo Region Record, A1

***Disaster app could aid in wildfire recovery**
A made-in-B.C. damage assessment tool is being offered to the government of Alberta as it struggles with the damage caused by a wildfire in Fort McMurray. The smartphone-based app allows field workers to send damage assessments and photos to a central command centre in seconds, a process that used to take hours, if not days. "Reporting from the field gives us real-time data," said Steven Bibby, manager of security and emergency services at B.C. Housing, the lead agency for building damage assessment in the province. "It can tell us how many evacuees might be able to return home right away or how many don't have a home to return to, unfortunately. That gives you the opportunity to line up all the additional supports that people need, everything from psycho-social assistance to cleaning kits and financial help." The public safety division of Alberta Municipal Affairs is in the "planning stages" for deployment of the system, says chief fire administrator Kevan Jess. As disasters unfold, field workers are typically dispatched to collect information on long paper forms and to take pictures, which they return for data entry at government command centres. From data collection, travel, data entry and mapping, the process can take up to 24 hours. Vancouver Province, A17

*** Wildfire's climate impact**
In the fight against climate change, forests play a critical role - drawing more greenhouse gases out the atmosphere than they emit. But when they burn, much of those stored gases are released back into the atmosphere. So far, the fires in Fort McMurray have released the equivalent of roughly five per cent of Canada's annual greenhouse gas emissions from all other sectors, said Werner Kurz, a senior research scientist with the Canadian Forest Service in charge of Canada's National Forest Carbon Accounting System. The average emissions from forest fires in the boreal plains, where the northern Alberta fires are occurring, are about 170 tonnes of carbon dioxide equivalents per hectare, Kurz said. Multiply that by 239,390 hectares, the size of the Fort McMurray fire on May 11, and the fire has already released about 41 megatonnes of CO2 equivalents in the form of carbon dioxide, methane, and nitrous oxide. Edmonton Sun, A9

*** Will Alberta fires tip the pipeline debate?**
An opinion piece states "After a week of debate over the link, or lack thereof, between climate change and the Fort McMurray wildfires, another reality emerges. When the economic cost of this tragedy is tallied, Justin Trudeau's Liberal government is going to be under renewed pressure to approve a pipeline

and get oil to market from a province staggering under the weight of historic economic troubles. Oil production in Alberta is down a million barrels a day - this in a province already coping with jobless rates unseen in 20 years, which bled 21,000 jobs last month before the fires, and now must cope with oilpatch shutdowns and international investor nervousness. Beyond Alberta, the fires are going to have a huge impact on the Canadian economy. Instead of a tipping point on the climate change debate - which has been tepid and inconclusive in the face of such suffering - it could be an economic tipping point on the pipeline debate. Just days before the inferno, Alberta Premier Rachel Notley had made what she called her best case for approval of pipelines to Trudeau and his cabinet meeting in Alberta. She used statistics to stress the importance of Alberta to the national economy and she reminded the cabinet, in detail, of measures she is taking to reduce the province's carbon footprint. Tuesday, she was announcing that the oil industry will move as quickly as possible to getting the sector back to work, 'rolling up their sleeves' and doing what they love. It's a small step toward rebuilding the provincial economy and helping the Canadian economy. It was left to her unlikely allies in the House of Commons, the Conservatives, to pivot and push on the pipeline question. But Trudeau gave no quarter. 'The only way to build pipelines in the 21st century is to demonstrate the community's support, the partnerships with indigenous peoples, and the strong science that is going to demonstrate that we understand that environmental protection and economic development go hand in hand,' Trudeau said." Toronto Star (Red Deer Advocate)

Other

*** B.C. snowpack reaches record low for May - Average snow levels around the province are 53% of normal, the lowest for May in 36 years**

Snow in B.C. has melted early and quickly this spring, leaving a record-low amount of snowpack on B.C. mountains for May. Many regions have snow levels less than half of normal for this time of year, according to the latest bulletin from the River Forecast Centre, released this week. The provincial average is 53 per cent of normal — the lowest level since 1980 when record-keeping began... While the low snowpack is record-breaking, it is still difficult to forecast what kind of drought conditions B.C. might be in for this summer, Gardner said. May and June are historically rainier months in the B.C. Interior, so normal or high rainfall there could still make for a typical summer, he said. "If it stays dry ... things are sort of setting up for what could be a potential for drought this summer." A new drought information portal from the B.C. government will provide updated information on streamflow and drought levels around the province this year. CBC News

*** Manitoba fires still growing - Weather changes made little impact on the state of Caddy Lake forest fires**

Cooler temperatures and some rain didn't keep two forest fires along the Manitoba-Ontario boundary from growing in the past day. Manitoba officials said Wednesday afternoon that the fire northeast of Caddy Lake has grown to about 5,800 hectares, up 700 from Tuesday. The Beresford Lake fire, meanwhile, has grown to 73,000 hectares - up substantially from the day before, when it was approximately 56,000 hectares. "While weather conditions have improved, there was little rain in the eastern region over the last 24 hours," a press release from Manitoba Sustainable Development reads. "South winds are expected to continue to affect fire suppression efforts." The fires, which have been burning since late last week, have forced the ongoing evacuation of 61 properties on Wallace Lake and others in the Beresford cottage subdivision in Nopiming Provincial Park. The east shore of Caddy Lake in Whiteshell Provincial Park is also closed until further notice, with an evacuation notice remaining in effect there, and cottagers from Ingolf, Ont., were evacuated last week. In the meantime, fire crews from Manitoba and Ontario have received air support from other jurisdictions. On Tuesday afternoon, two BAE-146 jets from Minnesota dropped fire retardant on flames in an effort to protect hydro lines near Kenora. And a water bomber group from the Northwest Territories - which includes two CL-125 aircraft and a bird dog plane - has joined firefighting efforts in Manitoba. In total, about 100 people are working to protect cabins and property in Manitoba, provincial officials said. Winnipeg Sun, A8

*** Busloads of firefighters race in - Ground crews to supplement water bombers**

Hundreds of firefighters poured into Whiteshell Provincial Park and northwestern Ontario to battle a wildfire that's consumed 14,400 hectares and keeps growing. The additional firefighters will work on the ground, supplementing the water bombers that have fought the fires so far. Until Wednesday, it had been

too hot and dry for crews on the ground, but changing weather conditions allowed the movement to a ground attack. As of Wednesday, no one had been hurt and only a few sheds had been lost. The fire is within a kilometre of Caddy Lake, but it's been that close for a couple of days without getting any nearer, said Gary Friesen, manager of wildfire programs for Manitoba. "It's a favourable weather situation right now - (9620 acres) of that are in Manitoba," Friesen said. "What rain we did have allowed us to get crews in. "We have firefighters coming from the north by busloads. These are emergency firefighters the department hires and certifies" for just such situations, Friesen said. "We have firefighters coming from all over Ontario." Friesen said the wind has pushed the fire to the north. The forecast is for much cooler temperatures, which will help, he said, pointing out that what helps Manitoba has just the opposite effect in Ontario. Winnipeg Free Press, A3

* **N.S. sends firefighters to Manitoba**
More than 20 Nova Scotia firefighters are headed west on May 13 to help fight wildfires in Manitoba. "People across Nova Scotia are concerned about Canadians out west and want to help," said Natural Resources Minister Lloyd Hines. "Our well-trained wildfire fighters are ready to help our western neighbours in their time of need. We wish our crew well while working under tough conditions out west, and a safe return." Hines's ministry has promised to ensure that proper firefighting resources are maintained in Nova Scotia and also remains ready to help its federal and provincial counterparts as needed. The Nova Scotia firefighters were requested for Manitoba through the Canadian Interagency Forest Fire Centre. The province is a member of the Canadian Mutual Aid Resource Sharing Agreement, first established in the early 1980s, which ensures all provinces and territories will receive help if forest fires become too big for them to handle. Chronicle-Herald, A10

* **At least 10 fires in Peace region deliberately set**
Investigators say arson is believed to be the cause of at least 10 wildfires in northeastern British Columbia. The Environment Ministry said fire investigators and conservation officers have found evidence that the fires in the Peace region were deliberately set. Some of the fires have caused property damage, said Chris Postuma with the B.C. Conservation Officer Service. He declined to provide details, saying an investigation is ongoing. The blazes are believed to be connected, and the extra conservation officers brought in to help investigate are asking for tips from the public. Canadian Press (Times-Colonist, A12)

* **Firefighters prepare for dry summer - Territorial firefighters get ready for a season of heat with FireSmarting**
Territorial firefighters in the South Slave and Deh Cho are in the midst of training for another year of wildfires. Richard Olsen, manager of fire operations for the Department of Environment and Natural Resources, said crews in Fort Providence and the Deh Cho were expected to start refresher training this week. In Fort Simpson, that included fitness testing at the recreation centre on May 9. More than 20 firefighters showed up for that testing, which included 31 laps up and down a ramp while carrying weight _ 25 of those laps were done wearing a 54-pound pack. The test also required two laps dragging a simulation of a hose. A re-test is expected to take place in two weeks for firefighters who could not make the fitness testing or whose scores were below the acceptable level. Deh Cho Drum (NWT)

* **Stay fire smart this summer**
In the wake of the Slave Lake fire in 2011 the Alberta Government, through the department of Environmental Sustainable Resources and Development have spent many hours mentoring Albertans about being FireSmart. Initial concentration has been in area that are surrounded by forest. The FireSmart website states that methods can reduce the likeliood of a large uncontrollable forest fire. It also recognizes the benefit of controlled burns to rid than area of old, dying and dry forest. FireSmart will come into different neighborhoods, advice and help the area become FireSmart. Nordegg chose to do the FireSmart program after a fire became close to the town a few years ago. Neighborhoods or individuals that are interested should visit the website http://wildfire.alberta.ca/fire-smart/ documents/FireSmart-HomeownersAssessment-Jun2015.pdf. The website has a number of different assessments available to help people determine how safe their buildings are in case of a fire. Information is also available at ESRD offices. Red Deer Advocate, C3

* **Canadian Pacific Railway train derails east of Saskatoon - Close to a dozen cars have derailed, railway crews surveying the damange**
Canadian Pacific crews were called to an 11-car train derailment east of Saskatoon on Wednesday. At around 3:45 p.m. CST, a westbound train derailed about 16 kilometres east of Saskatoon. Eight of the 11 cars were empty; the other three were carrying cement. Several tank cars appeared to come right off their wheels, leaving the cars lying on their sides and the wheels still on the track. A CP spokesperson said there were no injuries and no reports of any hazardous leaks or fires. The derailed cars were not causing any road blockages. CBC News

* **Comox's coast guard loss Sidney's gain**
At least nine employees are moving their jobs to Sidney after the Canadian Coast Guard closed its marine traffic and services centre in Comox. Scott Hodge, of Unifor Local 2182, which represents the Comox employees, said he and two others have moved and the rest will arrive soon. Another nine people were unwilling to relocate and have lost their jobs. "I'm disappointed," said Hodge, who was part of an effort to stop the closing of the Comox centre. Marine traffic and services centres act as the marine equivalent of air traffic controllers, communicating with ships as they move into, through and out of Canadian waters. The centres also listen for distress calls and pass along information such as weather warnings and navigation alerts. The decision to close the Comox station, along with those in Vancouver and Ucluelet, was made by the previous Conservative government. Comox employees were notified March 29 that the centre would close on May 10. Centres in Sidney and Prince Rupert remain open, and the emergency response station in Kitsilano in Vancouver has since reopened. Critics, including Unifor and Vancouver Island New Democrat MPs, said closing the Comox communications centre was foolish, even dangerous. Some argued that Comox, on the east coast of Vancouver Island, would be sheltered from any tsunamis, while Sidney and Prince Rupert could be at risk. But on Friday, the parliamentary standing committee on fisheries and oceans, which was reconsidering the closing, accepted the Canadian Coast Guard's argument that mariner and public safety wouldn't be imperilled by the move and gave its approval. In a dissenting report, the New Democrats pointed out that of the 6,000 total marine emergency calls handled annually in Canada, the station at Comox handled 1,000. Times-Colonist, A7

* **Lac-Mégantic - La communauté rejette le scénario d'un mur de protection**
La voie de contournement de Lac-Mégantic reste « la seule solution possible ». La communauté n'acceptera jamais le scénario améliorant la sûreté du chemin de fer qui passe au centre-ville en érigeant des murs de béton allant jusqu'à cinq mètres de hauteur, prévient le maire, Jean-Guy Cloutier. « La voie actuelle qui passe au centre-ville, on n'en veut pas. Le scénario qui prévoit des modifications avec des murs de béton de 15 pieds de haut, on ne fera jamais ça, dit le maire de Lac-Mégantic au Devoir. La voie de contournement, c'est ce qu'on veut et c'est ce qu'on dit à nos citoyens. Quand on leur dit ça, ils ont le sourire », ajoute-t-il. La firme AECOM a dévoilé mardi un rapport préliminaire sur la façon d'améliorer la sûreté du transport par train à Lac-Mégantic. Presque trois ans après la tragédie qui a fait 47 morts, la petite ville reste traumatisée par la catastrophe. Plus de 65 % des adultes de Lac-Mégantic présentent des symptômes modérés ou sévères de stress post-traumatique, selon des chiffres de la Santé publique cités par AECOM. Plus du tiers (34 %) souffrent de détresse psychologique et 14 % ont des troubles anxieux -- des proportions nettement plus élevées qu'ailleurs en Estrie. Le Devoir, A4

* **De la parole aux actes**
Une pièce d'opinion dit « Avec la présentation des résultats de la première phase de l'étude de faisabilité de la firme AECOM sur le projet de voie de contournement à Lac-Mégantic, citoyens et élus ont au moins une idée de ce qui s'offre à eux pour placer le centre-ville à l'abri d'une nouvelle catastrophe ferroviaire et retrouver la paix d'esprit. Toutefois, des deux scénarios présentés mardi soir, une voie de contournement de 11,9 km au coût de 115 millions $ ou le maintien du tracé actuel avec l'ajout d'un mur de protection, le second doit être rejeté sans hésitation. Car, appelons cela de la sagesse populaire, le refus exprimé par le maire Jean-Guy Cloutier et de nombreux citoyens au sujet de ce « statu quo amélioré » est tout à fait légitime. Nous comprenons que la firme AECOM a voulu présenter cette option afin de fournir un élément comparatif aux gouvernements. Mais ériger un corridor de béton de près de trois mètres de hauteur pour enclaver la voie ferrée actuelle est une idée digne des années 1960, qui insulte l'intelligence des citoyens. Une telle structure défigurerait le centre-ville, obligerait les personnes qui habitent à proximité

de la voie ferrée à vivre devant un mur et aurait un effet dévastateur sur ce qui fait le charme de la capitale du Granit : une vue imprenable sur le lac Mégantic. » La Tribune, 14

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Clark calls on Ottawa to boost tracking of real estate transactions
B.C. Premier Christy Clark says the federal government needs to step up efforts to track real estate transactions because British Columbians want to be assured that everyone is paying their fair share of taxes. The day after her government launched an initiative to collect citizenship data on home buyers - in response to concerns about foreign ownership driving up real estate prices - the Premier said her province has had to fill the information gap "to help us come up with the right solutions" to the spiralling cost of home ownership, particularly in Metro Vancouver. The gap in federal tracking was exposed in March in records showing that dozens of Vancouver-area real estate firms are failing to comply with federal anti-money-laundering laws that require them to identify who their clients are and where their money comes from. The Financial Transactions and Reports Analysis Centre (FinTRAC), which enforces the legislation, said it found "significant" or "very significant" deficiencies within some five dozen B.C. brokerages in the past year. It decided to step up scrutiny over worries that money primarily from China is being laundered through Vancouver real estate. "I think [FinTRAC] can up their game, I think they are trying to now," Premier Clark told reporters Wednesday. "They would probably tell you they are not where they want to be right now but they have begun that process, so that's great. We're partnering with them to work more closely with them now so that sharing of information is going to make a real difference," she said. "I think now, in Vancouver in particular, people are really seeing the need for that to be tightened up." Globe and Mail, A1

Montréal - Début de l'enquête préliminaire des deux présumés terroristes
Sabrine Djermane et Mahdi El Jamali, ces jeunes Montréalais accusés d'activités terroristes, ont assisté mercredi au début de leur enquête préliminaire, frappée d'un interdit de publication au palais de justice de Montréal. La présence de plusieurs personnes appuyant le couple a forcé les agents de sécurité et même la juge Hélène Morin à intervenir pour assurer la bonne marche des procédures. " Ce n'est pas un lieu pour fraterniser ", a dit la juge à de jeunes hommes qui entraient et sortaient, tout en manifestant les uns avec les autres des signes physiques et verbaux d'entente cordiale. Les agents de sécurité ont aussi demandé à certains d'entre eux de se tenir comme il faut. Toutes les places réservées au public, sauf une, étaient occupées par de jeunes hommes du même âge que les accusés. Certains ont d'ailleurs échangé des sourires complices avec Mahdi El Jamali. Deux de ces jeunes hommes ont pourtant assuré au Devoir qu'ils ne connaissaient pas les accusés, sauf par personnes interposées. " On ne les connaît pas directement. Ce sont des amis d'amis. C'est la première fois qu'on vient ici ", a expliqué un jeune homme à la sortie du palais de justice. Sabrine Djermane et Mahdi El Jamali fréquentaient le collège de Maisonneuve. Alors âgés de 18 et 19 ans, ils ont été arrêtés par la Gendarmerie royale du Canada le 14 avril 2015. Diverses perquisitions s'en sont suivies. Les deux accusés n'ont pas été remis en liberté depuis. Le Devoir, A4; CBC News (2016-05-11)

* **Concordia veut freiner les discours haineux sur internet**
Constatant que les propos haineux sont en hausse sur les réseaux sociaux, des chercheurs de l'Université Concordia ont lancé un portail pédagogique, en anglais pour l'instant, afin de tenter de contrer les discours violents. Le groupe derrière l'initiative SOMEONE (SOcial Media EducatiON Every day) souhaite proposer une approche face à la haine et face aux propos tranchés et radicaux. «Il nous faut aider les communautés de la planète à aborder les propos haineux non seulement d'un point de vue préventif, mais aussi sous un angle pédagogique. Si nous les conscientisons aux dangers de tels discours, alors nous aurons un impact positif sur la société», a expliqué Vivek Venkatesh, professeur agrégé au Département des sciences de l'éducation de l'Université Concordia. (…) Sécurité publique Canada a accordé une subvention de 187 340 $ au projet SOMEONE, qui s'inscrit dans une stratégie de lutte contre le terrorisme et les études sur l'extrémisme violent. Journal de Montréal (2016-05-11)

* **Radicalisation: renforcer l'identité des jeunes**

Des chercheurs du Collège de Maisonneuve estiment que le climat qui régnait au cégep après que des étudiants soient partis pour la Syrie était néfaste pour beaucoup de jeunes et propice à la radicalisation. Dans un rapport rendu public le 10 mai, ils appellent au dialogue entre tous les groupes pour prévenir le phénomène. L'Institut de recherche sur l'intégration professionnelle des immigrants a procédé à l'automne à une enquête où une trentaine d'étudiants et des employés du Collège de Maisonneuve ont été interrogés, à la demande de Québec. Le gouvernement provincial a commandé l'étude en juin 2015, dans le cadre du plan La radicalisation au Québec : agir, prévenir, détecter et vivre ensemble et pour lequel le collège a reçu 400 000$. (…) Pour les chercheurs, les enjeux entourant la radicalisation dépassent les murs du cégep. La présence d'espaces de discussion et l'importance de favoriser les échanges entre les groupes sont primordiaux, puisque très peu d'étudiants immigrants, de première et deuxième générations, s'identifient à la société québécoise, peut-on lire dans le rapport. Journal Métro (2016-05-11)

* **Voile islamique et djihadisme : trajectoires personnelles**
Le port du voile islamique et la radicalisation djihadiste soulèvent au Québec et ailleurs des débats enflammés. Quel que soit son niveau de connaissance du sujet, chacun a un avis sur ces questions mêlant religion et société. Loin de la rumeur médiatique, des chercheurs se penchent sur les personnes qui vivent au cœur de ces problématiques. Les résultats préliminaires de leurs études ont été présentés dans le cadre du plus récent congrès de l'Acfas. (…) Politologue, et codirecteur de l'Observatoire sur la radicalisation et l'extrémisme violent de l'université de Sherbrooke, David Morin questionne quant à lui la place du religieux chez les djihadistes canadiens. Après avoir étudié plus de 80 trajectoires individuelles de jeunes radicalisés, il n'y a pas vu de schéma, mais avant tout une grande part de hasard due au nombre incalculable de facteurs issus de leur environnement. Ainsi, il estime impossible de prédire la trajectoire de radicalisation religieuse d'un individu. Pour ces jeunes, le départ pour le djihad, que ce soit en Syrie, en Irak, au Yémen ou en Afghanistan, peut être vécu parfois comme une quête spirituelle, mais bien souvent comme un retour à leur identité sociale. Ils ressentent alors l'islam en tant que « culture attaquée » plutôt que comme une foi profonde. « Beaucoup de djihadistes croient l'islam menacé par un grand complot occidental » explique le chercheur, soulignant la présence accrue chez ces jeunes, majoritairement des hommes de nationalité canadienne, de théories du complot, et de celle du choc des civilisations. La religion ne devient alors qu'une « esthétique du langage qui vient enrober la radicalisation ». Agence Science-Presse (2016-05-11)

No apparent threat
An opinion piece by Ed Lehman, vice-president of the Regina Peace Council, states, "The following paragraph is from the Defence Policy Review Public Consultation Document - 2016 released by Defence Minister Harjit Sajjan on April 6: "In accordance with its 2005 decision, Canada does not participate in the United States ballistic missile defence system for the defence of North America. Should this decision be revisited given changing technologies and threats? Would a shift in policy in this area enhance Canadian national security and offer an avenue for greater continental co-operation? Or are there more effective areas in which to invest to better protect the North American continent?" Twice, Canadians have clearly spoken out advising our leaders that we want no part of the U.S. anti-ballistic missile system. Twice, our leaders heard our voices. Major world powers have continued to expand their nuclear arsenals. The U.S. alone has announced a trillion-dollar program to upgrade and expand its nuclear weapons. The other major powers are doing likewise. The very existence of these weapons then leads the military to push for additional expenditures for "defence," such as the proposal that Canada join the U.S. antimissile system Canada is under no threat now because we are not the world's bully. More and more weapons are not leading to enhanced national security; in fact the more weapons a country has, the more insecure it is." Leader-Post, A6

* **Cognitive dissonance: Why don't Bill C-51 opponents hate the census, too?**
An opinion piece states, "Yesterday, May 10, was Census Day, the deadline for the completion of the 2016 Canadian census. This year marks the reintroduction of the mandatory long form census, which was made voluntary by the Harper government in 2010. Failure to complete the census could lead you to be fined, imprisoned or both. This move has been celebrated by many in the mainstream media and on social media, with numerous triumphant cries hailing the return to "evidence based policies." This struck me as odd. Since when did giving the government personal and private information become cool? In the

age of Snowden, the NSA, and Bill C-51, isn't handing over piles of information to the government something we're supposed to protest and be scared of? Bill C-51 was an overhaul of Canada's anti-terrorism laws and was met with vehement opposition. One of the biggest criticisms of C-51 had to do with privacy concerns. Opponents feared the prospect of the government collecting personal data like their internet browsing history or travel habits, and sharing it between different departments of government. Yet many of these same individuals welcome the return of the long form census. What could possibly explain this apparent contradiction? The easy explanation is partisan bias. Bill C-51 was a product of the "evil, anti-democratic" Conservative government led by Stephen Harper who is either "Hitler, like Hitler, or worse than Hitler" depending on which Harper-hater you asked." The Rebel (2016-05-11)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Weil «très soulagée»
La ministre de l'Immigration, Kathleen Weil, est «très soulagée» que le polémiste Dieudonné ait été refoulé par l'Agence des services frontaliers du Canada (ASFC). Il représente selon elle un risque pour la paix sociale. «C'est très inquiétant lorsque quelqu'un rentre au pays, rentre ici, donc destiné au Québec, et qu'il sème des propos haineux, a affirmé Mme Weil. Ça dérange les gens.» Dieudonné M'Bala M'Bala prévoyait donner une douzaine de représentations de son spectacle au Québec, dont une dans la capitale le 16 mai. Le controversé personnage a une fiche bien remplie de condamnations par les tribunaux français pour des délits d'injure raciale et de provocation à la haine raciale. Le jour même de son arrivée au Québec, il a été condamné pour des propos antisémites tenus dans l'un de ses spectacles, La bête immonde. «Moi, je connais des gens qui ont participé à des spectacles juste pour voir, pour vivre l'expérience, a témoigné la ministre Weil. Et c'est extrêmement dérangeant. [...] Pour la paix sociale, c'est très bien qu'il n'ait pas pu rentrer au pays. Je suis très soulagée.» Après avoir été refoulé, Dieudonné avait publié un message sur sa page Facebook promettant de revenir dans la métropole dès mercredi. «Petit contretemps je dois faire un aller-retour, mais je reviens... Je serai à Montréal demain.» Le Soleil, 41

Role in drug conspiracy lands jail time
A 26-year-old woman has been sent to prison for three years for her role in a Saint John-based, inter-provincial cocaine trafficking conspiracy. Tamara Jones, formerly of Seeleys Cove, was busted during Operation J-Tornado, an almost three-year-long RCMP-led investigation involving local police agencies, Canadian Border Services and forces in other provinces. Although a target when police executed raids in New Brunswick, Quebec and Halifax on Sept. 10, 2014, Jones wasn't apprehended until early October 2014. She had been working on a pipeline in Alberta at the time of the raids. Jones's part in the conspiracy was as one of the network's lower level dealers. Crown prosecutor Jillian Jordan told the court at Jones's sentencing on Monday that the ring leaders would receive bulk weight of raw cocaine that would be cut with another substance, to increase quantity and profits, before being doled out to lower level dealers for street sale. "A specific pattern of communication and conduct would emerge amongst the lower level dealers each time a fresh supply of cocaine was obtained," said Jordan. Jones was caught conducting 14 transactions between May 30, 2014, and August 2014. Over that time, she purchased between 25 to 35 ounces of cocaine, which is about the weight of one litre of milk. Jones was said to have paid more than $20,000 for the drug. Some "re-ups" would come a day apart, other times she was silent for almost three weeks. Jones, like the rest of those already convicted as part of Operation J-Tornado, was taken down via multiple covert techniques that have become familiar to courts in Saint John. RCMP engaged a police agent in 2014 who Jordan said had "a close relationship with the targets of the investigation." The agent's identity is now protected by a publication ban. Telegraph-Journal, B3

Pro-Israeli group lauds ban on comic: Canada turns away french comedian
Federal border officials "made the right call" this week to turn away a controversial French comic at Montreal's airport, Canada's Centre for Israel and Jewish Affairs said Wednesday. Dieudonne M' bala M'bala, who has been convicted multiple times for inciting racial hatred and anti-Semitism, had been scheduled to perform a series of shows in Montreal starting Wednesday night. "Admissibility to Canada is not a right but a privilege," Rabbi Reuben Poupko, the centre's co-chair, said in a statement. "Dieudonne

forfeited this privilege with his numerous criminal convictions for hate speech, incitement to violence and glorification of terrorism. Border Services Canada agents made the right call yesterday in upholding the specific criteria required for entry into the country." However, it was reported Wednesday afternoon that those who had purchased tickets to see Dieudonne perform might still get to see him. Show promoter Gino Ste- Marie told VICE News that technology would allow ticket holders to see the comedian "virtually." Details could not be immediately confirmed. Marie-Claude Chiasson, a Canada Border Services Agency spokeswoman, said Wednesday she could not speak to specific cases. However, she said those seeking entry into Canada may be deemed inadmissible for a variety of reasons, including involvement in criminal activity and human rights violations. Dieudonne, who invokes what has been described as a Nazi-like salute in his shows, has courted controversy for years. In 2012, Belgian authorities reportedly forced Dieudonne to stop mid-performance after determining his act contravened local laws. In 2014, Britain banned the comedian from entering the country. Ottawa Citizen, N6 (National Post); La Presse+; Le Nouvelliste; Le Soleil; Journal de Montreal;

What are they smoking?: Plain packaging laws for cigarettes benefit criminals
In late March, nearly 120,000 pounds of tobacco were seized in Quebec, the biggest tobacco smuggling bust in North American history. Seven-hundred police officers conducted 70 raids, arresting nearly 60 people to break up a vast cross-border tobacco smuggling ring accused of using profits to purchase cocaine and launder money as far away as Europe, while defrauding the Canadian government of half a billion dollars in lost tax revenue. The sheer size and scope of this criminal enterprise, and the police operation required to break it up, grabbed headlines across North America. In the 30 years of my career that I have spent on global investigations - the last 10 focused exclusively on the links between tobacco smuggling and criminal groups, a common theme has emerged: If there is money to be made selling something, organized criminal groups will sell it. Each year, more than 400 billion cigarettes are sold illegally across the globe, making cigarettes the most widely smuggled legal product in the world. Why? No other commodity is as easy to smuggle, or carries such light legal penalties in exchange for such massive profit. This month, 'plain packaging' laws initiated in Australia about one year ago come into force in most of Europe. Australia was the first country to introduce plain packaging, which bans the use of all trademarks on tobacco packs and requires that all tobacco products be sold in drab, virtually identical, government designed packaging. The objective: Reduce smoking. The results so far: A win for criminals. Here in Canada, after the massive police raid in March, the Trudeau government announced it will also introduce plain packaging - music to the ears of those recently handcuffed by Canadian police. Toronto Sun, A58 (Calgary Sun)

* **An attack on his father-in-law could mean deportation for one Mexican man**
Assaulting his father-in-law could mean a federal jail term and possible deportation for a Mexican immigrant convicted Wednesday in the attack. Defence counsel Brad Popovic told provincial court Judge Eugene Creighton his client is in Canada on a work visa and his status, and that of his Calgary wife, are up in the air. Creighton convicted Luis Garcia Chavez in connection with a Nov. 17, 2014, attack on Kelly Allan at the victim's Keoma home northeast of Calgary. Garcia Chavez got into an argument with Allan over his treatment of the victim's stepdaughter, Sarah Fergusson, after a dinner party at his in-law's home. The offender and Fergusson had left the residence, but got into an argument on their way home to Calgary. Garcia Chavez told her to get out of the car in -27C weather, with no footwear or jacket, before she was able to get someone to take her back to her parents' residence. When Garcia Chavez returned to the house, Allan, who had been drinking, came outside to confront him, Creighton noted. But the judge did not believe the offender's version of how Allan suffered facial fractures that hospitalized him for 15 days and required three separate surgeries on his face. Calgary Herald

* **Two South Asians acting as immigration consultants in Montreal accused of immigration fraud**
The Canada Border Services Agency (CBSA) announced on Tuesday that Rajinder Singh and Resham Singh, acting as immigration consultants, were summoned to appear in court and are facing three charges under the Immigration and Refugee Protection Act (IRPA) and two charges under the Criminal Code. Rajinder Singh was arrested and appeared on Tuesday morning at the Montreal court house, and Resham Singh received a summons to appear on June 9 at the same court house. Rajinder Singh and Resham Singh are accused of counselling persons to misrepresent information in their immigration applications and refugee protection claims, as well as forging and using counterfeit documents. They are

also accused of having acted as immigration representatives in return for compensation, when in fact they were not authorized. Benoit Chiquette, Regional Director General, Quebec Region, CBSA, said: "The CBSA conducts investigations and prosecutes immigration offenders with the full force of the law. Immigration frauds are criminal acts. Do not be a victim of fraud. Dishonest consultants can take advantage of people who want to come to Canada, and they represent a serious threat to the integrity of Canada's immigration system. This is why the CBSA acts to prosecute those responsible in the courts." Voice; La Presse; Radio Canada

Liberals stick to their guns on Saudi arms agreement: PM fears for Canada's business reputation despite videos of armoured vehicles being used on dissidents

Canada is obliged to uphold its reputation for honouring business deals and therefore must sell $15-billion of armoured vehicles to Saudi Arabia, Justin Trudeau said on Wednesday when asked about video footage that shows the Saudis using similar machines against civilians in the Mideast country. "We need to be able to project [to] the world that when Canada agrees to something, it sticks to its word," the Liberal Prime Minister told MPs in the Commons. Footage published by The Globe and Mail on Wednesday shows armoured vehicles being used against minority Shia Muslim dissidents. (…) John Packer, director of the University of Ottawa's Human Rights Research and Education Centre, said the Liberals should put the Saudi deal on hold and reassess the risks Canadian vehicles may be deployed against civilians. "Evidently, the export-control process didn't quite look at everything or not closely enough ... the export should at least be put on hold pending close scrutiny and evaluation. This is an opportunity to get it right and avoid making a terrible mistake contrary to both the letter and spirit of Canadian law and to good sense."The Saudis' use of combat machines against its Shia population goes to the very heart of the controversy over whether the Trudeau government is breaking Canada's weapons export-control rules. The export-control regime clearly stipulates that Ottawa must not issue export permits for weapons sales to countries with poor human-rights records "unless it can be demonstrated that there is no reasonable risk that the goods might be used against the civilian population." Globe and Mail, A1

Don't use Clement products: Health Canada

Health Canada is warning people to stay away from a controversial line of American alternative medicine products. The warning comes a day after the government announced it was investigating the LifeGive line of products being sold by controversial alternative medicine guru Brian Clement. "These products are not authorized for sale in Canada," the department said. "LifeGive health products have not been reviewed by Health Canada for safety, quality or effectiveness. "Health Canada is working with the Canada Border Services Agency to stop the importation of any shipments of LifeGive health products from entering Canada. Should this company continue to sell unauthorized health products, Health Canada will take appropriate action," the department said. In public appearances and videos Clement claims to cure cancer and other diseases with wheat grass suppositories and a diet of raw vegan foods through his Hippocrates Health Institute. Clement gained notoriety in Ontario in 2014 and 2015 when two Aboriginal girls were taken off chemotherapy for leukemia in favour of Clement's treatments and traditional native medicine. One girl died and the other has returned to chemotherapy. Clement appeared last weekend at a health and wellness fair on the Six Nations reserve. He declined to be interviewed. Hamilton Spectator, A4

If anything, 'better in than out' underestimates our TPP gains

In the fractious politics of trade, a recent, supportive C.D. Howe Institute report on Canada's stake in the Trans-Pacific Partnership made a welcome contribution. For Canada and its 11 partners, the TPP promises market-oriented rules for industries unknown two decades ago and a stronger gateway to the Asia-Pacific, the world's fastest-growing region. But even that positive study understates the benefits of the agreement. The study does not discuss geopolitical gains, which may be the TPP's most important contribution - as eight former U.S. secretaries of defence pointed out recently. The TPP will strengthen links across the Pacific and reinvigorate a rules-based approach to global trade. (…) Global negotiations have mostly won the war against tariff barriers; in the United States, they are now 78-percent lower than after the Second World War. But regulatory obstacles - non-tariff barriers - have mushroomed. The World Trade Organization and others now see such barriers as the main bottleneck; the Peterson Institute estimates they are five times as restrictive as tariffs for TPP trade. The new, authoritative Elsevier Handbook of Commercial Policy concludes that accords such as the North American free-trade

agreement have increased trade as much as five times more than could be expected from tariff cuts alone because they reduce non-tariff barriers and uncertainty about future trade relations. Globe and Mail, B4

*** Dispute over speeding led to man getting shot three times**
Yelling at a speeding motorist to slow down almost got a Calgary-area man killed, court heard Wednesday. Crown lawyer Ron Simenik said Charlemangne Literato was shot three times by Mathew Van Schaik after asking the driver of an SUV who passed him to lay offthe gas. Simenik, reading from a statement of agreed facts, said Literato was leaving Anytime Fitness in Airdrie in the early morning hours of last Sept. 27, when he saw Michael Sharman drive past at what he felt was a high rate of speed. "Literato ... yelled at the Mercedes SUV to 'slow down,' (...) Literato was hit in his upper right thigh, in his right wrist and in his lower back. The third bullet remains in the victim's buttocks, Simenik said. In a victim impact statement, read in by the prosecutor, Literato, a temporary foreign worker employed as a cook, said he has had difficulty in his job since the shooting since he can't stand for more than two hours. Calgary Sun, A3; Edmonton Journal; Calgary Herald

*** Foreign workers program worked**
An opinion piece states, "Re: In review of Temporary Foreign Worker program, don't forget the farmers, May 9. Edward Dunsworth argues that temporary foreign workers (TFW), as well as seasonal agricultural workers (SAWP), must be granted permanent residency upon arrival. He seems to think failure to do so undermines Canada's reputation as an inclusive multicultural democracy. But he fails to understand that the key to the success of these programs rests on the word "temporary" or "seasonal." The fastest way to bring these programs to an end would be to grant the workers permanent residency upon arrival. In the case of SAWP, it would be to terminate one of the most successful programs ever designed to help Canadian farmers and at the same time put desperately needed money in the hands of Caribbean and Mexican farm workers. The key was to get unskilled workers to do the hard work of picking fruit and other crops when the harvest was ready. The employer had to pay the workers' return transportation, pay the prevailing wage rate, and provide satisfactory accommodation. The larger part of the earnings was held back until the workers returned home, to ensure the money was available to be spent in their own country." Ottawa Citizen, A10

*** Parkway pointless without new bridge**
An opinion piece states, "We have just built a new parkway to lead up to a new bridge, the Gordie Howe International Bridge. Being a dual citizen of the U.S. and Canada, it really aggravates me when I have to wait an hour to cross the river. It seems like every time that I am on the Ambassador Bridge, there is construction. The Ambassador Bridge has two lanes - one for trucks and one for cars and SUVs. Everyday, around 68,000 travellers cross the Ambassador Bridge - 10,000 of those travellers are trucks, leaving the other 58,000 people congested in one lane. We need to make Windsor great again and build the new bridge. However, we have shown no progress in starting it, making the new parkway merely pointless." Windsor Star, A8

'Make dating great again'
A new dating website is offering to pair americans with Canadian singles to save them from a Donald Trump presidency. MapleMatch.com promises love and a U.S. escape plan if Trump becomes commander-in chief. The website promises to "make dating great again," parodying the presumptive republican presidential nominee's slogan. "It's easy to say, 'This is just about americans trying to find a way to get residency in Canada," CEO Joe Goldman said in an interview. "I think ... many americans may be frustrated by the community that they're in or the dating pool they've had access to. "Why not seek something different? Why not seek something Canadian?" The Texas-based Goldman acknowledges that american have cried "We're moving to Canada" before, but he says Trump's divisive policy proposals - like building a wall along the Mexican border and creating a national database of Muslims - make the call of the north all the more real. "The idealization of Canada by americans has happened for a long time," he said. "I guess americans might be excited about the potential of meeting someone who likes hockey and doesn't mind a little maple syrup in their pancakes." Canadian Press (Toronto Sun, A2, Winnipeg Sun. Edmonton Sun, Ottawa Sun)

CYBER SECURITY / CYBERSÉCURITÉ

*** IBM and eight universities join fight against cyber crime**
IBM wants its Watson computer system to learn how to fight cybercrime and it's asking eight leading universities, including three in Canada, for help. Watson - IBM's question answering computer system - was originally designed to compete (and win) on the television quiz show Jeopardy, but the technology has since been used on other problem-solving projects. Now IBM is launching Watson for Cyber Security - a cloud-based version of their cognitive technology - that will be trained over the next year to examine threats of cybercrime. Caleb Barlow, vice-president of IBM Security, said it is becoming increasingly difficult for security staff to deal with the growing number of cyber threats. Canadian Press (Red Deer Advocate, C4)

*** Roadmap for cybersecurity - Liberals must ensure police have right tools, writes Pierre-Yves Bourduas**
An opinion piece states "The reported recent cyberattacks on the National Research Council time signal served as a reminder that the proposed review of cybersecurity by the Liberal government should be welcome news. Three components will be considered in the review: securing government systems, partnering to secure vital cybersystems outside the federal government, and helping Canadians to be secure online. Considering that information technologies and the Internet provide criminals with innovative and highly sophisticated ways to commit a plethora of new crimes - and old crime in new ways - the government review should be broadened to determine whether or not law-enforcement agencies have the necessary tools to detect, deter, investigate and prosecute cybercriminals. In 2014, the Canadian Anti-Fraud Centre received more than 14,000 complaints of cyber-related fraud for more than $45 million in reported losses. During the same year, the RCMP National Child Exploitation Co-ordination Centre received nearly 8,500 reported incidents concerning online child sexual exploitation. These statistics only provide a partial picture of the magnitude of the problem." Ottawa Citizen, A11

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Cocaine bust nabs 13**
Thirteen people were arrested on Wednesday after police busted what they called a well-structured organized crime network that imported and trafficked cocaine. Talks were ongoing with another suspect located in Italy, while a 15th person was also being sought, the RCMP said. The alleged Montreal based ring imported a total of 1.4 tonnes of the drug, the Mounties said. American and Canadian authorities seized 220 kilograms of cocaine during Project Clemenza, a three phase investigation that began in 2010. Authorities said they also confiscated $2 million that was to be used to help import the drugs from the U.S. Most of the accused are from the Montreal area, although one lived in Ottawa and another was already detained in Kingston. Quebec provincial police, the Montreal and Laval forces, the Canada Border services agency and the Canada revenue agency also took part in the investigation. Canadian Press (Toronto Sun, A57, Calgary Sun, Edmonton Sun, Waterloo Region Record); Journal de Québec, 36 (Journal de Montréal); Postmedia Network (Montreal Gazette, A3, Winnipeg Sun, Calgary Sun, Ottawa Sun, Edmonton Sun, Toronto Sun); La Presse, 10; CBC News (2016-05-12); CBC News; National Post; CTV News; CFRA News; Montreal Gazette; Presse canadienne (Actualité); Hebdo Rive Nord; Métro; Journal de Montréal (Journal de Québec); Le Devoir (2016-05-11)

*** Auxiliary Mounties sidelined**
They're a highly trained army of law enforcement volunteers ready and willing to help in the wildfire-ravaged city of Fort McMurray. But hundreds of auxiliary Mounties from Alberta are being left on the sidelines. As Canada's national police force conducts a review of the volunteer constabulary, some 300 trained members of Alberta's auxiliary, as well as those from other provinces, have been benched, even as the same number of sworn RCMP officers have been flown into the province from as far away as Newfoundland to help. (…) One auxiliary member, whom Postmedia has agreed not to identify, said he has been ready to go since the first call came out, and questions why RCMP's K Division isn't willing to take advantage of a group of trained individuals ready to do whatever is needed to pitch in. "I've literally

had my uniform, my duty belt and my equipment sitting in the trunk of my car for the last week," said the member, who volunteers with a rural Alberta detachment. "We all know what we signed up for." Listed among the duties of auxiliary constables in their charter for Alberta's K Division is the potential to be called in to help deal with disasters, such as the one in Fort McMurray, which is likely to become Canada's costliest natural disaster. "Auxiliary candidates recruited into the program are registered as emergency services workers through Alberta Transportation Utilities, Disaster Services, and as such, may sometimes be called upon to assist the RCMP in an emergency," the charter reads. In January, all 1,600 members of Canada's RCMP auxiliary were informed of immediate changes to the program, including an end to ride-alongs and firearms familiarization training, as well as more clearly distinguishable uniforms. The review was sparked by the slaying of RCMP Const. David Wynn, who was gunned down at a St. Albert Casino last year. Edmonton Journal, A5 (Calgary Sun, Calgary Herald)

Mounties busy in Fort McMurray

RCMP officers in Fort McMurray are investigating 100 cases of forcible entry into evacuated homes after authorities finished canvassing the city Tuesday morning. Of those, 91 were discovered by initial canvass teams, while others are being reported as officers continue to patrol the area. All cases of forcible entry are being treated as criminal investigations. However, police are cautiously optimistic most did not involve criminal activity. "Our investigators have observed many cases where valuables were clearly visible within the home, which would indicate something other than a criminal act had occurred," said RCMP Insp. Kevin Kunetzki said Wednesday at a press conference at RCMP K Division, 11140 109 St. "We will followup, starting by contacting the homeowners to see if they can explain the incident." Canvassing efforts, which included Anzac and neighbouring rural homes, also resulted in 29 cases where police discovered occupied homes. Police could not confirm how many people were removed from their homes, but said none were forcibly removed. "It was only a very small, handful of people who refused to leave," Kunetzki said. "The vast majority of residents in those areas were very cooperative and understood the safety concerns, and evacuated the area without incident. Police also provided cellphones and vehicles to those who did not have any so they could evacuate safely. "They wanted the assistance they just didn't have the means, so we were able to provide that," Kunetzki said. Postmedia Network (Edmonton Sun, A6, Calgary Herald, Edmonton Journal, Calgary Sun)

No flood of gun seizures

RCMP have seized some guns following the fire in Fort McMurray, but won't be a conducting a mass seizure of firearms like they did after the flood in southern Alberta. Sgt. John Spaans said Tuesday that officers have taken one or two guns found in public places, but are not going into homes looking for more. He said he's not sure if the decision had anything to do with what happened in high river during the floods. Flood water forced thousands of people from their homes in high river in June 2013. as Mounties searched for people who were stranded in the town, they kicked in doors and took firearms. Canadian Press (Toronto Sun, A56, Ottawa Sun,)

Six males charged in multiple sexual assaults

Six males, including a youth, have been charged with multiple sexual assaults on the University of B.C. campus in Vancouver and in at least two other communities. RCMP detachments at UBC, in North Vancouver and Burnaby, along with the Vancouver Police Department and Transit Police, joined forces to investigate the offences. Vancouver Police Supt. Mike Porteous says a number of brave women came forward to report the difficult and horrific details of the surprise attacks, in some cases after an assailant broke into their homes. RCMP Chief Supt. Jodie Boudreau says only two of the individuals who have been charged are connected and both are alleged to have been involved in the same assault. Canadian Press (Telegram, B10, Cape Breton Post, Guardian, Waterloo Region Record, Times Colonist); * Globe and Mail; Vancouver Sun, A2

*** Gabriola man faces child porn charges**

A 70-year-old Gabriola Island man has been charged with one count of possession of child pornography after a search of his property stemming from information out of England. Douglas Densley Green has been released on a number of court-imposed conditions, including that he stay away from any location where children younger than 16 might reasonably be expected to attend. More than 40 items were seized in March during a search of Green's residence and other residences on the property. Preliminary forensic

examinations have been carried out on computers and electronic media. The investigation developed after the Kent Police Department in England obtained information in December that a Canadian resident was allegedly involved in an offence linked to children younger than 16. B.C.'s Integrated Child Exploitation Unit was contacted and a criminal investigation was started. After tracing a computer address, investigators believed that the suspect was on Gabriola Island, and the case was forwarded to the Gabriola Island RCMP. Gabriola officers continue to investigate and are working with Crown counsel to decide whether further charges could be filed. "This type of crime doesn't really have borders, in a sense, so unfortunately, a lot of this type of stuff has Internet communities or Internet groups that are from various countries, potentially," said Cpl. Markus Muntener, Gabriola Island detachment commander. He said this sort of case is rare for Gabriola. "It's a small island with a fairly small population, obviously, and small police detachment, so we don't really deal with these types of cases very often, thankfully." Times Colonist, A6

*** Man, teen arrested after shooting face drug, firearm charges**
Two people arrested after a shooting in Kent County last month appeared in provincial court on Wednesday to face a series of drug and firearm charges. Frank Hannay, 44, of Clairville, is charged with 12 offences while and Emma Lirette, 18, of Moncton, is facing 10 charges. Both accused return to court Thursday to set bail hearing dates. Hannay and Lirette are both charged with producing marijuana between April 15 to 22 in Clairville, possessing more than three kilograms of marijuana for the purpose of trafficking and possessing methamphetamine. Hannay is also charged with four separate counts of violating four separate court orders banning him from possessing firearms. He's also charged with possessing a prohibited firearm - a sawed-off shotgun - unlawful storage of a firearm, possessing a prohibited firearm with readily available ammunition, attempting to obstruct justice by concealing evidence and breach of probation. Lirette is accused of obstruction, two counts of breaching probation, unlawful storage of a firearm, possession of a prohibited firearm - the shotgun - and possessing a prohibited firearm with available ammunition. Richibucto RCMP arrested two men and a woman on April 26 as a result of a shooting investigation in Clairville, 43 kilometres northwest of Moncton. Police said in a news release that on April 21 at around 2 a.m., they received a 911 call from the Adamsville area regarding a person suffering from a gunshot wound. It was determined the individual was the victim of a shooting that occurred earlier in the night at a residence in Clairville. Along with Hannay and Lirette, the RCMP also arrested Jamie Melanson, 21, of Moncton, and charged him with careless use of a firearm, assault with a weapon and pointing a firearm. Times & Transcript, A5

*** Le déraillement près de Plaster Rock a été provoqué, conclut la GRC**
Le déraillement survenu lundi à Sisson Ridge, près de Plaster Rock, au Nouveau-Brunswick, est le résultat d'un acte délibéré, selon la GRC. Huit wagons ont quitté les rails, mais aucun ne s'est renversé. Un porte-parole de l'Organisation des mesures d'urgence avait alors déclaré que la sécurité du public n'était aucunement menacée, même si l'un des wagons contenait du pétrole. La GRC et le CN mènent une enquête conjointe, a indiqué la porte-parole de la police fédérale, Jullie Rogers-Marsh. Les policiers demandent à toute ayant des renseignement sur cette affaire de communiquer avec eux. Radio-Canada

*** RCMP pleas scheduled on 4 Labour Code charges**
The RCMP is expected to enter pleas Thursday on charges the force violated four health and safety provisions of the Canada Labour Code in connection with the 2014 Moncton Mountie shootings that left three officers dead and two others wounded. There is also the chance a "possible resolution" could be reached between the national police force and the Crown. The RCMP was scheduled to enter pleas on the charges on April 7, but Crown prosecutor Paul Adams told the court then that ongoing discussions were taking place between the parties to work on a possible resolution and more time was needed. Adams didn't elaborate on what he meant by "possible resolution." The Crown prosecutor did say he expects to have a clear idea of where the case is going at Thursday's court appearance. Lawyer Ian Carter, who represented the RCMP in court on April 7, said at that time they were working at "narrowing the issues" and would be in a position to tell the court what the RCMP would be doing at the next court appearance. CBC News; Radio-Canada

Racial bullying case handled properly - Casey

Provincial Education Minister Karen Casey says she is confident that reports of racially targeted actions against a teacher at Forest Heights Community School in Chester Basin are being dealt with effectively. News that a Forest Heights teacher was the subject of racial bullying at the school first surfaced last week on LighthouseNow.ca. Witnesses said they saw a Confederate flag attached to a vehicle parked at the school several times and that a snare was hung over the door of a classroom bent into the shape of a noose. "The incident occurred some time ago and I have been in touch with the South Shore Regional School Board," Casey said in a statement to the Chronicle Herald. (...) RCMP spokeswoman Jennifer Clarke said an incident was reported to Lunenburg District RCMP on Feb. 24. "We can't confirm whether the investigation involved a group of students or a single one, because our investigation did not lead to any charges being laid." She said no further details could be disclosed because there was insufficient evidence to lay charges. Chronicle-Herald, A4

Fausse intervention policière dans une école de Shippagan
Les grands moyens ont été déployés mercredi après-midi à l'école Marie-Esther de Shippagan. Pas d'urgence cependant. Policiers, pompiers et ambulanciers mobilisés participaient à un exercice d'entraînement en conditions réelles. Pendant une heure et demie, les forces en présence ont simulé «une menace active dans l'école», décrit Patrice Ferron, agent de programmes communautaires pour la GRC. Pour des questions de confidentialité, il n'en dira pas plus. Le personnel et les enseignants ont également été mis à contribution. Aucun élève n'a participé. Cet exercice a permis aux forces de l'ordre de vérifier leurs techniques d'intervention et l'efficacité de leurs systèmes de communication. Une fois le dispositif levé, tous tiraient un bilan positif. «Nous sommes satisfaits. Nous avons respecté les délais impartis», commentait Patrice Ferron, aussitôt l'école à nouveau accessible au public. (...) La GRC organise régulièrement ce genre d'opération à grande échelle. La précédente s'est déroulée l'année dernière à Campbellton. Acadie-Nouvelle, 8

Police use of tasers on rise
With more and more weapons on the streets, it's no wonder police are using Tasers more often, Saskatoon's police chief says. In 2015, city police used Tasers 17 times - 10 more than in 2014. "It gives our officers an extra option," Chief Clive Weighill said outside the board of police commissioners meeting on Wednesday. Weighill said several cases of officers using Tasers involved people threatening harm to themselves. He said in cases like that, Tasers provide a way for officers to subdue the person without using firearms or other types of more violent or deadly force. In that way, a spike in the use of non-lethal Tasers to stun rather than seriously injure suspects is a good thing, he said. Officers pointed their guns nine times in 2015 - four fewer times than the previous year. There were also fewer cases of take downs and "joint locks," according to a report received by the board. An officer discharged a firearm in one additional case. Coun. Darren Hill, who is a member of the police board, said he's OK with seeing Tasers used more if it means a reduction in other types of force. "I had no problem with tasers being up at 17, seeing the decreases in other areas," he said at the meeting. StarPhoenix, A1

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Matsqui Institution in lockdown while search conducted**
A lockdown has been in place in Matsqui Institution in Abbotsford since 10:30 p.m. Tuesday. Correctional Service Canada said Wednesday the lockdown, which involves prisoners being confined to their cells, was implemented to enable staff to conduct what was described as an exceptional search. "The search was ordered to ensure the safety and security of the institution, its staff and inmates," CSC said in a news release. "Normal operations will resume as soon as it is considered safe to do so." No other information was available, although CSC said it's committed to preventing the entry of contraband into its institutions. Vancouver Sun

*** A look at CORCAN**
Collins Bay Penitentiary is now considered one of the largest prisons in Canada — with three security levels and over 500 staff members. The prison offers up a range of programs for inmates — including schooling and more hands-on training. Newswatch's Morganne Campbell takes a closer look at one program that's making a difference. You're looking at the old prison farm grounds on the southwest

corner of Collins Bay Institution. The buildings that once housed livestock have either been shuttered or are being used by CORCAN — a rehabilitation program.... that provides inmates with job skills. Chris Stein / CORCAN Operations Manager: "Right now seven individuals are involved in the apprenticeship program with Ministry of Colleges and Universities and there are an additional 30 offenders that are receiving skills training in various trades." (...)Craig Chinnery/CORCAN Operations Manager: "Employment is tracked with the inmates that leave and up until warrant expiry we've had a 74 percent success rate in employment in welding and related fields." (...)Curtis Jackson: "The Correctional Service of Canada continues to assess you know the feasibility and what is required so that is still in the process of you know in terms of costs and what initiatives need to be taken so that's currently under review." CKWSTV (2016-05-11)

*** Judge leaves sentencing option open for man convicted of drug offences**

A judge often has various sentencing options to choose from, but it is rare for a judge to give a convicted person a choice regarding their sentence. That is what happened in the Surpreme Court of Newfoundland and Labrador in Corner Brook when Justice David Hurley delivered his decision to sentenced Jordan Butler Wednesday afternoon. (...)Crown attorney Adam Joyce had asked Hurley to give Butler three years in jail, since Butler had prior convictions for drug charges. Butler's lawyer, Robby Ash, had requested a sentence in the range of two years. (...)Hurley told Ash and Butler that they could accept a full two-year sentence, if Butler would rather serve his time at a federal facility where programs might be of a higher quality than in a provincial prison setting. A straight two-year sentence would mean no probation as federal sentences use the parole system and are never accompanied by probation orders, which fall under provincial jurisdictions. (...)After court had adjourned, Ash consulted with Butler and with Corrections Canada. The matter was recalled and Ash informed Hurley the defence would actually go with the federal option of a two-year sentence with no probation. Western Star

Police seek help with murders, Dechamp remains in custody

Tyrell Peter Dechamp remains in the Ontario corrections system awaiting his fate after his capture on a Canadawide warrant in April. Dechamp, 26, was sought by Halifax police after he skipped curfew at a halfway house he was residing in on Gottingen Street on April 19. He was found and apprehended April 28 in Ottawa, three days after the warrant was issued. Dechamp was arrested without incident for being unlawfully at large. No weapons or drugs were found at the scene. At the time, police said he was going to be returned to Halifax. Detective Constable Steve Sermet, who was a part of the arrest, previously told the Chronicle Herald the process Dechamp might go through. "There'll probably be a parole officer speaking with him and at that point after the interview, he'll probably be taken back to Halifax," said Sermet. He said the interview would be conducted within five business days. He's been in the custody of Canada's Correctional Services for two weeks, and the transfer has yet to take place. Though privacy law kept Correctional Service Canada from discussing specifics, they did say Dechamp was under their jurisdiction. "He is being supervised by us," said Kyle Lawlor, spokesman for Ontario. "When conditions are breached, the parole board often assesses things and can revoke parole. Even if he was out in the world, he may still be under our jurisdiction. Things may have to be reassessed now." He referred questions about the specifics of Dechamp's case to the Parole Board of Canada. Chronicle-Herald, A3

Long-term offender gets another jail term

A man with a long history of alcohol-related crimes - including 14 impaired driving convictions - has been sentenced to 15 months in jail for violating orders not to drink. Robert Samuel Noseworthy was sentenced in provincial court in St. John's Wednesday, shortly after he pleaded guilty to breaching a long-term supervision order (LTSO). With 1.5 times credit given for time served, it leaves about nine months left on his term. (...)The 66-year-old had recently been released from prison after serving a seven-year term for charges of driving while disqualified and impaired driving causing bodily harm. That sentence was handed down in March 2011. At that time, Noseworthy was declared a long-term offender, which means that when his jail term expires, he will be closely supervised in the community for 10 years. He was the first convicted drunk driver to be declared a long-term offender in the province. Noseworthy was released in August 2015 to serve the rest of his term in the community. The Telegram, A5

Hells Angels associate abandons appeal

A Hells Angels associate who was convicted in the manslaughter of a Kelowna man has abandoned an appeal of his jail sentence. In October 2014, B.C. Supreme Court Justice Mark McEwan sentenced Anson Schell to three years in prison for his role in the fatal beating of Dain Phillips, 51, in 2011. Schell had an appeal of his conviction dismissed in January and Crown counsel John Gordon told a B.C. Court of Appeal judge Wednesday Schell had dropped his sentence appeal. Phillips was severely beaten by men wielding baseball bats and hammers and left bleeding in the middle of a road. He never regained consciousness and was later taken off life support. Norman Cocks and Robert Thomas, two members of the Hells Angels, pleaded guilty to manslaughter and received 15-year jail terms. They admitted they wielded the weapons during the fatal assault. Four others - brothers Daniel and Matthew McRae, Schell and Robert Cocks, the father of Norman Cocks - were also charged and went to trial. The Province, A12 (Vancouver Sun)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

* **Dozens of Aboriginal women pick up phone to complain about Quebec police abuse**
It's been just a month since Quebec Public Security Minister Martin Coiteux invited Aboriginal women across Quebec to call a new toll-free line if they'd been assaulted by police. In that short time, 44 women have reached out. Coiteux said the new line was an alternative to calling the Montreal police force, which is in charge of investigating allegations against eight Sûreté du Québec officers that surfaced last fall in a Radio-Canada *Enquête* report. Calls to the new hotline are being directed to an existing paralegal counselling service for aboriginal people – Services parajudiciaires autochtones du Québec. (…)Patricia Bouchard, a community worker at the Sexual Assault Prevention Centre in Val d'Or, says it's "appalling" the number is so high. CBC News

* **Child abuse up: Study**
More children are being sexually abused and exploited than ever before, according to a new study. The disturbing conclusion comes from a two-year study by ECPAT International, which took a look at child sexual exploitation in travel and tourism. U.S.-based Ernie Allen, former president of the International Centre for Missing and Exploited Children, served on the study's task force. "I had a police commanding officer say to me, 'The only way not to find this problem in any community is simply not to look for it,'" Allen pointed out. Here's what Allen had to say ahead of the study's release on Thursday: "We've made great progress but the problem's actually worse. It's different, it has changed in its nature, more kids are being harmed today than ever before, and the quality and level of services to help those children is really poor in most of the world." On human trafficking and exploitation in Toronto: "I think it is a phenomenon that is really no different than any other major metropolitan area. One of the big challenges that all of us face now is that this is a problem that has migrated from the streets to the Internet. so today there are mechanisms, websites, for example, that advertise sexual services and some of those are kids. so that what we have seen happen is that the risks are less to the provider of the service, the risks are less for the prospective customer, and we simply have to address that." Toronto Sun, A62

* **Saskatoon police service missing its response goals for serious calls**
A report presented to Saskatoon's police board says the city's police department isn't hitting its target for responding to the most serious calls. Police have a goal of making it to 80 per cent of priority one calls within 12 minutes, but according to the service's annual report card, they only hit the mark 61 per cent of the time last year. Police Chief Clive Weighill says he's concerned the statistics are being skewed because several new types of calls were added to the "priority one" category over the last two years. In the past, Weighill says only three or four types of calls such as homicides or officers needing assistance got the most serious ranking, but now he says assaults have been added to the list. Weighill says the service is undergoing a full independent review of its operations, which is expected to wrap up before the end of the year. He says he expects the review will uncover whether the response time issue is a statistical anomaly, or the result of other factors. The report card showed overall crime down in Saskatoon, particularly violent crimes against individuals. Canadian Press (The Telegram, Cape Breton Post); CKOM (2016-05-11)

*** Quarterly crime report: Overall crime has decreased so far this year in Maple Ridge and Pitt Meadows**
Overall crime has decreased in Maple Ridge and Pitt Meadows, according to Ridge Meadows RCMP's recent crime statistics for the beginning of 2016. The number of property related crimes in Maple Ridge and Pitt Meadows during January to March were lower than the year before, whereas crimes against persons increased, Ridge Meadows RCMP reported. Mounties released its Crime Statistics for the First Quarter of 2016 on Wednesday. Maple Ridge Times

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Liberals in action: task force here, policy review there**
An opinion piece states, "Public Services Minister Judy Foote announces the creation of a task force to conduct a sweeping review of Canada Post, including whether door-to-door delivery should end, as the Conservatives authorized and the Liberals opposed. The task force will report in 2017 with government action to follow. (…) Indigenous and Northern Affairs Minister Carolyn Bennett announces the forthcoming creation of a commission to examine the issue of missing and murdered aboriginal women. Consultations with native communities are already under way, the commission will be appointed in mid-2016 and it will take up to two years to offer conclusions and recommendations. (…) Election campaign promises are one thing; doing something sensible with them turns out, predictably, to be much harder." Globe and Mail, A13

*** Indigenous men murdered at an alarming rate, but no inquiry?**
A letter to the editor states, "I understand why the Liberal government has decided to hold a federal inquiry into missing and murdered Indigenous women. What I don't understand is the lack of concern or attention by the government and the media to the fact that the rate of homicides among Indigenous men is about three times the rate of homicides for Indigenous women. According to Maclean's Magazine, the homicide rate for Indigenous women is 3.6 per 100,000 population, compared to an appalling 10.8 homicides per 100,000 for Indigenous men. Why has the government and the media not addressed nor even discussed this startling statistic?" Sudbury.com (2016-05-11)

Bugs in new PS pay system being worked out, staff told
Federal officials say the government's pay centre was swamped with a record number of calls about payroll problems last week, but they're confident they've worked out most of the bugs plaguing the rollout of the new automated pay system. Brigitte Fortin, assistant deputy minister at Public Services and Procurement, said Wednesday the second phase of the $300-million Phoenix pay system that rolled out earlier this month processed 293,000 paycheques on May 4, the first payday after 190,000 new files were added to the system. But the Public Service Alliance of Canada doesn't think the rollout is going as smoothly. PSAC president Robyn Benson said Tuesday the union has taken its concerns about the Phoenix rollout, which she called "seriously flawed," to the department. She said public servants are still not getting paid properly, or not at all, and pay centre employees are swamped. "The stress continues to mount for employees in Miramichi (N.B.) who are working on the new system. ... We have been sounding the alarm on this for months." (…) Debi Daviau, president of the Professional Institute of the Public Service of Canada, said the union fielded twice the number of complaints in the second rollout compared

with the first, but that it had been braced for more. The problem, she said, is that it went ahead before the system was ready. "I do see them do the right things, but when you have one person not being paid that is a problem. But when thousands aren't paid, it is catastrophic, so no effort would be too much effort in fixing this." Ottawa Citizen, A4

Kin fear for ex-Londoner being held in Pakistan
The last nine months have been "absolute hell" for the family of a former Londoner who became a high-rankingpolitician in Pakistan, but now languishes in jail there, says one relative. Human Rights Watch has waded intothehigh-profile case, callingthe allegations against Asim Hussain, a former government minister and close ally of Pakistan's oustedpresident, politically motivated. Hussain , 63, has been detained in Pakistan since he was arrested on Aug. 26, 2015, on allegations of financing terrorism. His supporters say his health has been steadily deteriorating - he's had kidney failure and a heart attack while in custody - and are demanding he be granted bail and a fair and speedy trial. "It's just been absolute hell," Hussain's relative, who asked not to be named out of fear of retribution, said Wednesday by phone from Karachi, Pakistan. The chairperson of a board overseeing five hospitals, Hussain was initially accused of financing terrorism and treating terrorists at one of his Karachi hospitals - all claims he denies. (…) An orthopedic surgeon back home, Hussain hoped to practise in Canadabut couldn't get the necessary certifications. He moved his family back to Pakistan six years later and resumed his career in surgery Hebecame the chairperson of the Ziauddin Group of Hospitals, five Karachi hospitals named after his grandfather, Dr. Ziauddin Ahmed, a prominent figure in Pakistan's independence movement. While many of his colleagues from the Zadarari government fled the countryfollowingthe Pakistan People's Party loss in the 2013 election, Hussain chose to stay in Pakistan. The party had been in power since 2008. The relative said Canadian government officials have been helpful so far, keeping in communication and attending one of Hussain's hearings. London Free Press, A1

*** Arabie Saoudite - Des blindés utilisés contre des dissidents n'alarment pas Dion**
Le gouvernement Trudeau a encore dû défendre mercredi le contrat de vente de véhicules blindés conclu avec l'Arabie saoudite après la diffusion de vidéos montrant que le régime utilise vraisemblablement ce type d'équipement pour réprimer des dissidents. Mais Ottawa ne s'en formalise pas puisque les véhicules en cause ne sont pas canadiens. Les images obtenues et analysées par le Globe and Mail datent de 2012 et de 2015. Elles montrent que des véhicules semblables à ceux que le Canada vendra à l'Arabie saoudite ont été utilisés dans des affrontements avec la minorité chiite dans l'est du pays. " Notre équipe d'experts regarde toujours ce genre d'information et les scrute à la loupe, a réagi en matinée le ministre des Affaires étrangères, Stéphane Dion. Si jamais ça devait être un équipement canadien [qui est utilisé contre les civils], on réagirait. Mais comme l'article le dit lui-même, pour le moment ce ne sont pas des équipements canadiens. " (…) Les révélations de mercredi ont relancé le débat sur la décision du gouvernement Trudeau d'honorer le controversé contrat de 15 milliards. En vertu d'une loi canadienne de 1947, un fabricant de matériel militaire doit obtenir l'aval du gouvernement fédéral avant d'exporter ses produits vers les pays où les droits de la personne font l'objet de violations graves et répétées de la part du gouvernement, à moins " qu'il puisse être démontré qu'il n'existe aucun risque raisonnable que les marchandises puissent être utilisées contre la population civile ". Le gouvernement a évalué que l'Arabie remplissait cette condition. Mais plusieurs organismes jugent précisément le contraire, vu le bilan du pays en matière de respect des droits de la personne. Ottawa fait d'ailleurs l'objet d'une poursuite en Cour fédérale visant à invalider le contrat. Le Devoir, A2

Will Canada give Iran a free pass?
An editorial states, "Canadians can be forgiven for missing Iran Accountability Week on Parliament Hill last week. Between the tragic fires in northern Alberta, Justin Trudeau's celebrity meet-andgreets with Prince Harry and Alex Trebek, and startling ethical revelations about Kathleen Wynne's Liberal government in Ontario, Iran Accountability Week was easy to miss. Conservative foreign affairs critic Tony Clement and Conservative Senator Linda Frum hosted the program in hopes of bringing greater awareness to the problematic elements of re-engaging with Iran. They aimed to shine a light onto the nefarious activities carried out by the Iranian regime. Greater attention should be given to the world's

biggest state sponsor of global terrorism. Financing is the lifeblood of any terrorist organization, and Iran is notorious for enabling jihadists and aiding their capacity to carry out murderous attacks. In 2012, the Harper government designated the Islamic Republic of Iran as a statesponsor of terror and expelled I ranian diplomats f rom Ottawa - regime members suspected of spying in North America. The feds named Iran's Islamic Revolutionary Guards Corps, known as the Qods Force, as being instrumental in creating, training and arming terrorist organizations including the Taliban, Hezbollah, Hamas, and Palestinian Islamic Jihad, among others. (...) But that was then and this is now. Prime Minister Justin Trudeau is taking a different approach. Trudeau's global affairs minister, Stephane Dion, implied Harper was wrong to stand up to Iran's terrorism and announced Canada will soon re-open diplomatic ties. As a part of this re-engagement, Canada may have to withdraw its designation of Iran as a state sponsor of terrorism. Calgary Sun, A15 (Edmonton Sun, Toronto Sun, Ottawa Sun, Calgary Sun)

*** Hard evidence of soft hypocrisy**

An editorial states, "The Saudi arms deal, and the Liberal government's handling of it, keeps looking worse. After inheriting from the Harper Conservatives the $15-billion sale of light-armoured vehicles, the Trudeau government did the necessary thing, and vowed to carry through with the contract. A deal is a deal, after all, argued the government. Canada can't be a reliable global partner if a new government tears up the sales agreements of the previous one. And there were hundreds of jobs at stake in the Ontario factory where the LAVs will be built. But it was a controversial deal, one that drew more criticism in January when the Saudis executed 47 "terrorists" - another word for dissidents. The mass killing refocused Canadians' attention on the country's toxic human rights ecology. Ottawa pressed on, though. A confidential Liberal government review of the deal, released in response to a lawsuit, argued that Saudi Arabia was a key Canadian ally in the region, a partner in the fight against terrorism and a bulwark against an expansionist Iran. Those realpolitik arguments, along with the threat to Canadian jobs, Canada's reputation and the benefits of Canada currently hosting thousands of Saudi university students, were used by Minister of Foreign Affairs Stéphane Dion to justify the export permits. Now The Globe has published solid evidence that the Saudis have on at least two occasions used LAVs to control and kill dissidents inside its borders. Not Canadian-built LAVs, mind you, but similar vehicles made in other countries." Globe and Mail, A12

INTERNATIONAL

Attacks kill at least 77 in Baghdad

Daesh spread carnage across the Iraqi capital on Wednesday, killing scores in bombings at two checkpoints and a busy market in what appeared to mark an escalation in attacks on civilians as the group loses ground on the battlefield. At least 77 people were killed, according to health officials. The tally is expected to rise as several people are critically wounded. The Associated Press, citing medical and security officials, said the death toll reached at least 88, the bloodiest day in the capital in several years. Daesh, also known as ISIS and ISIL, asserted responsibility for the blasts in posts distributed on social media. Toronto Star, A3

Islamic State brand losing power in U.S., FBI director says

Fewer Americans are travelling to fight alongside the Islamic State and the power of the extremist group's brand has significantly diminished in the United States, FBI director James Comey said Wednesday. The FBI encountered "6, 8, 10" Americans a month in 2014 and the first half of 2015 who travelled to the Middle East or tried to go there to join the Islamic State, but that number has averaged about one a month since last summer in a sustaining downward trend, Comey said. "There's no doubt that something has happened that is lasting, in terms of the attractiveness of the nightmare which is the Islamic State to people from the United States," he told reporters during a round-table Wednesday. He did not offer an explanation for the decline, though the FBI has worked aggressively in the last year to identify and intercept Americans who might be determined to reach Syria. One other possibility is that the Islamic State has encouraged more of its followers to carry out violence at home. The FBI still has "north of 1,000" cases in which agents are trying to evaluate a subject's level of radicalization and potential for violence. "There's still a presence online, and troubled people are still turning to this and at least being

interested in it," Comey said. "But they've lost their ability to attract people to their caliphate from the United States in a material way." Waterloo Region Record, A5

*** Migrants - L'accord UE-Turquie en danger**

L'accord sur les migrants conclu entre l'Union européenne et la Turquie traverse " un moment très dangereux ", a mis en garde mercredi à Strasbourg un ministre turc, soulignant que son pays se refusait à modifier sa loi antiterroriste comme l'exigent les Européens. " Tous les accords que nous avons conclus jusqu'à présent, basés sur la confiance, la bonne volonté, la responsabilité et la prise de risques politiques, font face à un moment très dangereux ", a estimé le ministre chargé des Affaires européennes, Volkan Bozkir, lors d'une visite au Parlement européen. M. Bozkir faisait référence aux exigences européennes pour accorder une exemption de visas aux Turcs dans l'espace Schengen. La Commission européenne a ouvert la voie le 4 mai à cette exemption, dont Ankara a fait une condition pour continuer d'appliquer son accord migratoire controversé avec l'UE. Mais l'exécutif européen a assorti son avis favorable de réserves, estimant qu'Ankara devait encore remplir cinq critères parmi les 72 fixés pour l'obtenir, dont une révision de sa législation antiterroriste, au champ trop large selon Bruxelles. Le Parlement européen, ainsi que les États membres, devront donner leur aval à l'exemption de visas, une fois qu'Ankara aura rempli tous les critères. La loi turque antiterroriste " est conforme aux standards européens ", et la modifier " est complètement impossible ", a prévenu M. Bozkir, insistant sur le fait que son pays devait faire face au " terrorisme du PKK " (Parti des travailleurs du Kurdistan) et avait subi récemment au moins cinq attentats suicide. Le Devoir, B6

MINISTER / MINISTRE

Des gestes « inacceptables » condamnés par le gouvernement
Le gouvernement a condamné hier les gestes « inacceptables » d'agents de la Gendarmerie royale du Canada (GRC) qui ont espionné deux journalistes de La Presse sans en avoir l'autorisation il y a neuf ans, dans l'espoir de découvrir qui leur avait révélé les plans terroristes attribués à Adil Charkaoui. À la fin du mois de juin 2007, les journalistes Joël-Denis Bellavance et Gilles Toupin avaient dévoilé dans La Presse le contenu d'une étude confidentielle du Service canadien du renseignement de sécurité (SCRS). Les espions canadiens y relataient notamment une conversation du Montréalais Adil Charkaoui, qui évoquait un plan pour détourner un avion. M. Charkaoui a toujours nié l'existence de cette conversation. La GRC avait déterminé que le document ultraconfidentiel obtenu par La Presse était authentique. Elle voulait identifier la source qui l'avait remis aux journalistes. Une enquête criminelle avait été déclenchée. Hier, le réseau CBC a fait état de nouveaux documents obtenus grâce à la Loi sur l'accès à l'information, qui révèlent que les policiers ont filé les reporters pendant neuf jours, au mois d'août 2007. Les règles d'enquête de la GRC exigent pourtant d'obtenir une autorisation spéciale pour espionner des sujets « sensibles » comme des professeurs d'université, des journalistes, des leaders religieux, des syndicats ou des politiciens. Les policiers ont lancé leur filature sans obtenir cette autorisation. Après neuf jours,

lorsqu'ils ont finalement demandé l'autorisation, elle leur a été refusée par l'officier responsable, Bob Paulson, qui est depuis devenu le grand patron du corps policier. (…) Le premier ministre Justin Trudeau a déclaré hier que la conduite des enquêteurs était « inacceptable ». Le **ministre de la Sécurité publique, Ralph Goodale**, a pour sa part répondu en Chambre à une question du Nouveau Parti démocratique (NPD) en condamnant fermement le comportement des policiers. ***« La liberté de la presse est une valeur canadienne fondamentale qui est inscrite dans la Charte. La surveillance non autorisée était entièrement inacceptable. Elle était en contradiction avec une directive ministérielle. Elle était en contradiction avec les politiques de la GRC. Elle a été stoppée quand le quartier général de la GRC en a été informé, et les enquêteurs ont été réprimandés »***, a-t-il expliqué. Interrogé par les journalistes au Parlement, le **ministre** a ajouté que le commissaire Paulson avait déjà offert personnellement ses excuses à La Presse. ***« S'il y a le moindre doute à ce sujet, le commissaire Paulson tiendra une nouvelle rencontre »***, a ajouté **M. Goodale**. ***« Nous devons travailler très fort pour nous assurer que ça n'arrive plus jamais. »*** La Presse +, 12; Canadian Press (Kingston Whig-Standard, Chronicle-Herald, Ottawa Sun, Times & Transcript, The Guardian, Cape Breton Post, Global News); Le Devoir

Mulcair veut une enquête

Le chef du Nouveau Parti démocratique (NPD), Thomas Mulcair, demande l'ouverture d'une enquête publique sur la filature dont deux journalistes ont fait les frais. Il a ainsi réagi au reportage de la CBC, qui a rapporté mercredi que des enquêteurs de la Gendarmerie royale du Canada (GRC) ont pris en filature les journalistes Joël-Denis Bellavance et Gilles Toupin, du quotidien montréalais La Presse, pendant neuf jours en août 2007. Les agents ont exercé une surveillance physique des reporters à la suite de la parution d'un article sur Adil Charkaoui, selon ce qu'a rapporté la société d'État, qui tient ces informations d'une note de breffage préparée à l'intention du **ministre de la Sécurité publique**. Le chef néo-démocrate juge que l'actuel titulaire du ministère, **Ralph Goodale**, doit déclencher une enquête publique pour faire la lumière sur cette affaire, qui représente selon lui rien de moins qu'un «scandale d'État». «Ce n'est pas quelqu'un qui a fait un petit mauvais coup là! (...) **M. Goodale** doit commander une enquête publique immédiatement», s'est exclamé M. Mulcair en point de presse dans le foyer des Communes. «Sans permission judiciaire en flagrante contravention de la loi, des agents de la GRC en train de traquer des journalistes, c'est un scandale d'État», a-t-il enchaîné. Dans un communiqué publié en après-midi, le **ministre Goodale** a semblé écarter l'idée, signalant au passage que ***«les agents responsables ont été réprimandés»***. ***«Cette surveillance a contrevenu à la directive ministérielle sur les enquêtes délicates du secteur adoptée en 2003 par le gouvernement libéral précédent (...) Les dirigeants de la GRC ont réaffirmé la politique existante, laquelle n'a pas été suivie»***, a-t-il expliqué. (…) Pour la Fédération professionnelle des journalistes du Québec (FPJQ), ces pratiques sont tout simplement inadmissibles, a écrit dans un courriel sa présidente, Lise Millette. «Cette situation n'est qu'un exemple de plus démontrant la fragilité de la protection des sources qui doit faire l'objet d'une affirmation claire de la part du **ministère de la Sécurité publique** responsable de la GRC», a-t-elle insisté. Presse canadienne (Le Nouvelliste, 39, Le Droit, La Tribune, Voix de l'Est, Huffington Post Québec); * CBC News (2016-05-18)

Security agencies flag possible pitfalls of heightened scrutiny

As the Liberals prepare to bolster a review of national spy services, two federal security agencies have flagged serious headaches that might come with more scrutiny, internal documents show. The RCMP fears more eyes looking over its shoulder could compromise criminal investigations, while the electronic spies at the Communications Security Establishment warn against creating a super-watchdog with its associated "burden and costs," say notes obtained under the Access to Information Act. The Trudeau government plans to usher in a national security committee of parliamentarians, whose members would have access to classified records. It is also studying gaps in the current web of watchdogs that monitor intelligence services to ensure a comprehensive system is in place. Existing review bodies cannot look at issues beyond their specific agency of focus, and have "limited authority" to collaborate with one another, say briefing notes prepared for **Public Safety Minister Ralph Goodale**. It means the Civilian Review and Complaints Commission, which oversees the RCMP's national security activities, might be barred from exchanging notes on an alleged scandal with the watchdog that keeps an eye on the Communications Security Establishment. (…) The watchdog who monitors the Communications Security Establishment has called for legislative changes to encourage and authorize more co-operation between his office and

the watchdog that oversees the Canadian Security Intelligence Service. Talking-point notes prepared for CSE chief Greta Bossenmaier's use last year at a Senate committee say that "changes to our review regime are ultimately a policy question and it would not be appropriate for me to comment." "I would note, however, that before moving to a 'super-bureaucracy' — with its associated burden and costs — existing review bodies should be optimized and their collaboration should be further facilitated." The notes prepared in November for **Goodale** point out that some departments and agencies involved in national security activities lack external review. The most "noticeable omission" is the Canada Border Services Agency, which has a "high number of public complaints that are currently triaged by internal mechanisms," the briefing materials say. Other federal agencies that have security responsibilities but no external review bodies are Global Affairs Canada, National Defence, the Privy Council Office, **Public Safety Canada**, and Immigration, Refugees and Citizenship Canada, the notes add. Canadian Press (Times Colonist, Sudbury, Maclean's, Metro News, Winnipeg Free Press)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

*** Evacuee re-entry possible June 1**
The Alberta government says people from the fire-ravaged city of Fort McMurray could start going home starting June 1 if conditions are safe, but warned there will only be basic services and a partially open hospital. "Remember, many hazards remain in Fort McMurray," Premier Rachel Notley said Wednesday. Canadian Press (Red Deer Advocate, A3; Chronicle Herald; The Telegram; Charlottetown Guardian; Cape Breton Post; Times Colonist; Ottawa Sun; Hamilton Spectator, Whig-Standrad); Reuters (Toronto Sun, A56); Calgary Sun, A4; StarPhoenix, A8; Calgary Herald, A1/Front; Journal de Montréal, 7; Postmedia Network (Ottawa Sun, Toronto Sun, Edmonton Sun, Winnipeg Sun)

*** Cities should stop building in disaster-prone areas, says insurance bureau head**
The head of the Insurance Bureau of Canada says local governments need to stop developments on flood plains or near fire-prone boreal forests to prevent widespread damage from future natural disasters. Don Forgeron says the devastating Fort McMurray fire will be the costliest natural disaster in Canadian history, costing insurers somewhere between $3 billion and $9 billion. Canadian Press (The Telegram, B5; Vancouver Sun; Calgary Herald)

*** Evacuees relieved, wary over re-entry plans**
Most Fort McMurray wildfire evacuees, many of them scattered across the country, were relieved Wednesday to hear that they will be allowed to return home earlier next month. But others were wary. "We were actually evacuated on Tuesday, May 3, and we had our baby on May 4 in Edmonton, so we aren't going to be going anywhere until we're sure of what the emergency services and the critical services look like," said Stefan Sophr, a technical manager for SGS Canada. Postmedia Network (Edmonton Sun, A3; Edmonton Journal); Calgary Herald, A2

*** As fires burn, oil companies weigh profit and safety**
Major oil sands operators, bleeding cash as massive production facilities sat idle, said conditions appeared favourable enough last week to send thousands of workers back to remote camps as wildfires raged in northern Alberta's boreal forest. But within days, legions of tradespeople were packed on to buses and sent to isolated lodges north of the Fort McKay First Nation. For many, it was their first stop in a two-part evacuation - the second in as many weeks - as shifting winds and tinder-dry conditions pushed flames closer to industrial plants run by Suncor Energy Inc. and Syncrude Canada Ltd. Globe and Mail, B1

*** 'We Will Rebuild Our City'**
The massive operation to return residents to Fort McMurray is set to begin June 1, nearly a month after 88,000 people were forced to flee a wildfire still burning up much of northeastern Alberta. Premier Rachel Notley outlined her government's longawaited re-entry plan Wednesday, saying residents will soon be

allowed to return to their homes in a phased, multi-day process starting with the least damaged areas. Edmonton Sun, A3

* **Alberta Wildfires**
Re-entry to Fort McMurray and other communities will take place only when key conditions are met, including: The wildfire is no longer an imminent threat; Air quality is safe; Emergency services have been fully restored; Safe transportation to and within the community has been restored; Emergency medical care and transport, and mental health support, is available. Calgary Herald, A5

* **Step up and support Alberta wildfire victims at Zumbathon**
Three women in Fredericton have decided to dance their way to the Red Cross in support of Fort McMurray. The Fort Mac Zumbathon charity event will be held on Friday evening at the Barkers Point Elementary School gym. Daily Gleaner, A2

* **Woman who survived Alberta wildfires grateful for hot showers, clean clothes**
Erin Scott will never take hot showers and clean clothes for granted again. The Harvey woman, who was evacuated from her Fort McMurray home on May 3, flew into Fredericton early Tuesday morning. Daily Gleaner, B4

* **Wind, low humidity, help northern Alberta wildfire make big one-day jump**
There has been a dramatic increase in the size of a northern Alberta wildfire that has already destroyed hundreds of structures in Fort McMurray and is now licking close to the boundary with Saskatchewan. An overnight report from Alberta Sustainable Resource Development says the blaze has now covered more than 4,200 square kilometres. Canadian Press (Daily Star, 10)

* **Shaw Charity Classic to help Fort Mac kids**
Some of the biggest names in golf had Fort McMurray on their minds. Shaw Charity Classic executive director Sean Van Kesteren happened to be in Houston two weeks ago for a PGA Tour Champions stop in that city, and several of the senior stars mentioned to him that they had been following the gut-wrenching wildfire news from northern Alberta. Calgary Herald, B12

* **Des Acadiens disent être forcés de travailler malgré la fumée et le feu**
Les incendies de forêt qui ravagent le nord-est de l'Alberta font craindre le pire à plusieurs travailleurs de Fort McKay, qui estiment être pris au piège alors que l'immense brasier se trouverait à moins de 40 km de leur lieu de travail. «C'est insensé de devoir travailler alors que le feu qui vient de détruire le camp BlackSand n'est qu'à 38 km d'ici», déplore un travailleur d'origine acadienne qui s'est confié mercredi à l'Acadie Nouvelle. L'Acadie Nouvelle, 3

* **Ford gives $500K fore fire relief**
Ford Motor Company of Canada and Canadian Ford dealers are donating more than $500,000 to the Canadian Red Cross for relief and recovery efforts related to the severe wildfires in Fort McMurray and surrounding areas, the company announced Tuesday. Windsor Star, SR2

* **Fort Mac refugees have trucks, belongings stolen**
Two people fleeing the wildfire that ravaged Fort McMurray, alta., have had their belongings stolen in saskatoon. Police say the couple's two pickup trucks were taken over the weekend from a hotel parking lot. Canadian Press (Ottawa Sun, A5); StarPhoenix, A2

* **Shaw Classic among golf entities helping Fort McMurray relief**
Some of the biggest names in golf had Fort McMurray on their minds. Shaw Charity Classic executive director Sean Van Kesteren happened to be in Houston two weeks ago for a PGA Tour Champions stop in that city, and several of the senior stars mentioned to him that they had been following the gut-wrenching wildfire news from northern Alberta. Calgary Sun, S2

* **Feux hors de contrôle à Fort McMurray Les habitants devront encore attendre**

Le retour progressif des dizaines de milliers d'habitants évacués de Fort McMurray, au coeur d'une région ravagée par les feux de forêt, a été repoussé au 1er juin en raison de foyers d'incendie toujours actifs mercredi autour de la ville pétrolière. Agence France-Presse (Le Droit, 25)

*** Researcher tracking health of firefighters**
A researcher has started tracking the health of firefighters helping battle the massive wildfire in Fort McMurray, Alta. Nicola Cherry, an occupational epidemiologist at the University of Alberta, is taking blood, urine and breath samples of firefighters as they return from northeastern Alberta in a mobile laboratory she received two weeks ago. Red Deer Advocate, A3; Postmedia Network (Edmonton Journal, A1/Front; Calgary Herald)

*** B.C. premier says climate change is sparking need for national forest fire plan**
Climate change is leading to more wildfires and the country needs a national forest firefighting strategy, says B.C. Premier Christy Clark. While the country has been transfixed by the raging fires around Fort McMurray in northern Alberta, British Columbia's interior is experiencing similar fire conditions this spring that have received far less attention. Canadian Press (Red Deer Advocate, A3; Times Colonists; Globe and Mail)

*** Wildfire fails to torch Ewashko family's spirit**
The fire came in waves at Howard Ewashko's family business: once on Tuesday afternoon, again in the evening. Both times, Ewashko, his brother Craig, and a small band of workers at the sawmill north of Fort McMurray saw the "beast" of a wildfire threaten their operations, before it turned back. Calgary Herald, B1/Front

*** Winnipeg musicians expect to raise $10K for Fort Mac, other wildfire victims**
Winnipeg musicians, including members of Harlequin, Doc Walker and Slow Motion Walter, will be rocking out Thursday night at Nashville's Bar Winnipeg on Regent Avenue in support of those affected by the Fort McMurray wildfires. CBC News

*** In Fort McMurray, a struggle to keep the phone lines open**
As wildfires ripped through Fort McMurray, telecom providers in the city have grappled with power outages, fuel shortages and the threat of losing key pieces of infrastructure as they worked to keep communications services online for emergency responders and the eventual return of their customers. Telus Corp. and Shaw Communications Inc. are the two main operators in the area and both have crucial structures in the heavily damaged Beacon Hill neighbourhood. With widespread power outages in the area, they have been forced to rely on generators and faced challenges refuelling, especially during the height of the blaze. Globe and Mail, B1

*** Wildrose leader unsung hero in Fort McMurray**
An opinion piece states, "If you think Premier Rachel Notley has done a good job reacting to the Fort McMurray fire, spare some applause for an overlooked political player in this drama: Wildrose Leader Brian Jean..." Edmonton Journal, A12

*** Climate and Wildfires**
A letter to the editor states, "I've been accused of being insensitive for writing about the climate irony of the Fort McMurray wildfire, which continues to dominate the news in Canada. Many people have argued that now is not the time to discuss global warming and climate change. I insist that now is precisely the right time to make the link between epic wildfires and climate change..." Winnipeg Sun, A12

*** "It's just the weather, not climate change**
A letter to the editor states, "Re: "Alberta government preparing for climate related disasters," May 17. There seems to be some confusion between "weather" and "climate." Climate is defined as the long-term weather, so any impending climate-related disasters will emanate from solar hibernation causing the Earth to cool for at least 20 to 30 years..." Calgary Herald. A17

Other / Autres

* **Flood plan lacking: audit - Feds' effort to rebuild flooded First Nations communities disorganized**
The federal government's effort to rebuild four communities so evacuees from flooded First Nations could return home is disorganized, poorly resourced and plagued with delays, an audit of the program found late last year. The audit of Operation Return Home paints an unflattering portrait of how Indigenous and Northern Affairs Canada stepped up after thousands of indigenous Manitobans were forced out of their homes in May 2011. The audit reviewed INAC's response to the flooding between April 1, 2013 and Sept. 30, 2015. Winnipeg Free Press, A3

* **Nuclear is the missing link in our climate debate**
An average-sized nuclear plant produces roughly the same amount of electricity from 4,000 wind turbines. So reports the International Energy Agency. A few dozen windmills, let alone a few hundred, can often be counted on to create a public furor in the area where they are built. Just ask the mayors in eastern Ontario where the provincial government is approving windmills over furious local objections. Globe and Mail, A13

* **Lifeline to Safety**
A helicopter whipping wind and water hovers directly above your boat, lowering a rescue basket while raising your adrenalin. And you can't help but think: Welcome to a day at the office, coast guard-style. The Canadian and U.S. coast guards conducted a joint medicalevacuation training session in the western base of Lake Erie this week, creating awareness for water safety just ahead of Safe Boating Awareness Week, which begins Saturday. Windsor Star, A2

* **Plenty of campsites left for May long weekend, province says**
Roll out your sleeping bags and pack the marshmallows. The unofficial kick off to summer camping season in Manitoba looks to be a good one...The Mantario hiking trail remains closed due to the wildfires in the area. CBC News

* **Forest fire evacuation alert cancelled**
Residents of a town northwest of Edmonton are no longer under immediate threat of a forest fire. Alberta Emergency Alert cancelled a two-hour evacuation alert for people in Fox Creek and those who live south of the hamlet of Little Smoky. Red Deer Advocate, A3

* **Thick smoke forces cancellation of La Loche culture camps**
Dozens of La Loche youth are disappointed that forest fire smoke has caused the cancellation of their cultural camps. "Obviously the kids are bummed. They were looking forward to it, but it's the safest thing," said Leanne Gailey, assistant principal of La Loche Elementary School. StarPhoenix, A3

* **Dawson-area blaze remains active**
No new wildfires were reported Tuesday in the territory. The lightning-caused fire near Hunker Creek, 24 kilometres southeast of Dawson City, remains active, Yukon Wildland Fire Management officials reported today. Daily Star, 5

* **Man pinned under truck for 32 hours**
A B.C. man has survived a 32-hour ordeal pinned under a pickup truck on a remote road north of Kamloops. Simpcw First Nations elder Roy Lampreau left his Barrierearea home on Monday morning to look for firewood...Search and rescue crews from Kamloops and Merritt also arrived before a band member found Lampreau on a remote road with his leg pinned under one of his truck's tires. Lampreau is recovering from the ordeal, Matthew said. Canadian Press (Times Colonist, A5)

* **Poll suggests Calgarians oppose Springbank dam**
It's not just landowners in Springbank opposed to a dry reservoir on rural land west of Calgary, a new poll suggests. The survey commissioned by the group Don't Damn Springbank reached out to Calgary residents for their opinions, and found 55 per cent of respondents prefer a dry dam in McLean Creek over the Springbank proposal as the best option to prevent future flooding in the city. Calgary Herald, A8

*** New faces sought for important work**
The people you hope to never need are looking for new recruits. The local branch of the Canadian Coast Guard Auxiliary is looking for new volunteer members for the upcoming season according to local unit leader and district training co-ordinator for Nunavut and the NWT Paul MacDonald. Inuvuk Drum

*** Search continues for missing Red Deer woman (MIGHT BE DUPLICATE IN LE)**
Police are continuing to search for a Red Deer woman who has been missing for three months. Police have also undertaken ground searches in Red Deer over the past three months with support from search and rescue teams, Police Dog Services and the RCMP helicopter. Red Deer Advocate, A5

*** If disaster strikes, would you be ready?**
An editorial states, "Picture this. You're at work when Mother Nature begins throwing a tantrum. Maybe it's a winter storm of historic proportions. Maybe it's torrential rain, enough that local creeks and rivers flood their banks and streets are flooded. Maybe it's violent hail, power outages and transportation gridlock. Maybe it's an ice storm…" Canadian Press (Cape Breton Post, C1)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Liberals expected to take summer to consult on Bill C-51 changes**
The Liberals have yet to repeal controversial anti-terrorism law C-51 seven months after taking office, and are now poised to carry out consultations over the summer to see what changes Canadians are looking for. Global News (2016-05-18)

*** Wanted: One spy agency whistleblower**
An opinion piece states, "Canada's digital spy agency, the CSE, has refused to release to *The Toronto Star* the number of privacy violations they've incurred since 2007. *The Star* only requested the number of privacy violations. No personal details, no details at all. Just "How many times did you guys mess up?" And the CSE refused because they said it would "provide insight into" its operations. What possible insight can you get from the number of privacy violations? Is that number the missing link in the terrorists' plan to blow up the parliament buildings? Is it the code they need to hack into the mainframe? More likely, the CSE is afraid of the one actual insight you could get from the number of privacy violations, which is "Wow, that's a lot of privacy violations. Maybe we should do something about that." This comes shortly after the revelation that the CSE shared an unknown number of Canadians' internet activity records with foreign countries for a "number of years." Which is barely a bigger outrage than the fact they mass collect our internet activity records. But the outrages will keep coming, because this huge, secret agency has no meaningful oversight. And when powerful people act with impunity, injustice predictably follows. So if there's a Canadian Edward Snowden and you're watching this, it's time to blow the whistle. And if you do, I will reward you with this coupon for 100 free foot massages. You can be a guy or a girl, doesn't matter. But it expires in 2017, so… clock's a-tickin." Rabble (2016-05-18)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

It's simple: Migrants don't belong in jail
Canada, stop jailing innocent migrants. Just stop. It's not hard. The Canadian government may not resettle another 25,000 Syrian refugees in coming years. It might disappoint many Canadians, but even if the difficulty of an important undertaking isn't sufficient reason to forego it, difficulty is at least a reason. Canada could easily, however, stop habitually detaining immigrants and refugees, including children. There is no reason not to quit. Every year, Canada throws a large town's worth of migrants in maximum- and medium-security prisons and in prison-like "holding centres." It held 7,300 people in 2013 and 8,500 in 2014, on average for a few weeks. It can jail a child. It can jail her for as long as it likes. It decrees that under certain circumstances, it must jail her. And it need not recognize her as "innocent until proven guilty" - she is charged with no crime, after all - but can force her to prove that she deserves to be released from her cell. It should stop doing that. Just stop it. Knock it off. It's so easy. Other countries

don't do this. The Global Detention Project has called Canada an outlier on detention for immigrants and refugees among industrialized democracies. Most countries that Canada might want to be compared to, it notes, somehow manage not to routinely jail migrants or create mandatory detention laws. Kingston Whig-Standard, A4 (London Free Press)

Skimpy Savings
Offering to accept the Canadian dollar at par, Bellis Fair Mall in Bellingham hopes to persuade Canadians to make a cross-border shopping trip during holiday long weekends. It's easy to understand why: Southbound crossings at Blaine, Lynden and Sumas were down about 12 per cent in March 2016 compared with the same month in 2015 and retail sales in Bellingham have slumped. We'd like to help out, but is it worth the trip? A $500 purchase in the U.S. would cost $613.88 at the current exchange rate. Because Bellis Fair is giving our 77-cent US dollar equal standing with the U.S. currency, you save $113.88. However, for a single day trip, there are no personal exemptions on duty and taxes on returning to British Columbia. And bear in mind that duty is based on where products are manufactured, not where they were purchased. Also, both duty and taxes are calculated in Canadian dollars. So, if that US$500 is spent on apparel manufactured outside NAFTA, duty and taxes amount to $197.42, more than offsetting any exchange rate savings. Vancouver Sun, A12

*** Canada Border Services Reminds Legal Permanent Residents Travelling to Canada by Air of eTA Requirements**
The Canada Border Services Agency ("CBSA") issued a reminder to Lawful Permanent Residents ("LPRs") of the United States regarding new guidance for travelling to Canada by air. The Electronic Travel Authorization ("eTA") is a new Canadian entry requirement for visa-exempt foreign nationals travelling to Canada by air, which went into effect on March 15, 2016. Visa-exempt foreign nationals who fly to or transit through Canada are expected to have secured eTA first. Exceptions to this requirement include U.S. citizens and travelers with a valid Canadian visa. LPRs of the United States need an eTA before boarding a flight to Canada as of March 15, 2016. Until September 29, 2016, travelers who do not have an eTA can board their flight, as long as they have appropriate travel documents, such as a valid passport. The Border Services officers can admit travelers without an eTA into the country, but they will remind travelers of the new requirement. LPRs travelling to Canada should apply for an eTA, which costs $7 Canadian. In most cases, an eTA is granted within minutes of applying. National Law Review

*** La mairesse de Syracuse reçoit l'UMQ**
La délégation de la mission économique organisée par l'Union des municipalités du Québec (UMQ) dans l'État de New York a effectué un premier arrêt à Syracuse, en fin de journée mercredi, où la mairesse Stephanie Miner a brièvement expliqué les raisons qui devraient favoriser le développement de relations d'affaires entre les deux régions. Avocate spécialisée en droit du travail, l'élue démocrate a entrepris sa carrière politique comme conseillère municipale en 2001. Elle se retrouve à la tête d'une ville qui affiche le plus haut taux de pauvreté chez les populations noires et hispaniques. Entre 2009 et 2013, plus d'une personne sur trois à Syracuse vivait sous le seuil de la pauvreté. Par contre, cette région est favorisée par de nouvelles occasions d'affaires, témoigne la mairesse. «Les infrastructures et les échanges commerciaux sont des enjeux constants pour nous, en raison de notre situation géographique, à mi-chemin entre le Canada et la ville de New York, la porte d'entrée du monde. Au moment où s'ouvre le canal de Panam [les nouvelles écluses], où de plus en plus de biens traversent notre pays et de plus en plus de biens transigent aux ports à New York et au New Jersey, des endroits tels que Syracuse, Rochester et Buffalo observent différentes façons pour introduire les biens vers les marchés. Gardez cela en tête, quand vous vous demanderez de quels biens avez-vous besoin ou comment pouvez-vous en envoyer plus rapidement.» Le Soleil, 27 (Le Quotidien, Le Nouvelliste)

*** American 'cheese glut' could impact Canada's dairy farmers**
"Save your country, eat three more pounds of cheese!" It's a rallying cry every American needs to get behind if they want to consume the country's surplus of the good stuff. With America's dairy industry expected to produce a record 212.4 billion pounds of milk this year – the most, ever – that overflow is funneling towards cheese makers who have clinched their own record: 1.19 billion pounds of cheese in commercial cold storage.Unfortunately, as attractive as guilt-free patriotic cheese munching sounds to our neighbours to the south, that surplus could spell trouble for Canada's dairy farmers, says Sylvain

Charlebois, dean of the faculty of management and professor in food distribution and policy at Dalhousie University. The potential issues centre around something called diafiltered milk, a U.S. protein used as a stand-in for milk in cheese. On the one hand, the Canadian Border Services Agency classifies diafiltered milk as a protein ingredient, whereas the Canadian Food Inspection Agency considers diafiltered milk as milk. "Canada has been importing a lot of diafiltered milk into [the country] – that could actually put some pressure on the dairy industry in Canada, enticing processors to import even more," says Charlebois. In late April, NDP agriculture critic Ruth Ellen Brosseau took to the Parliamentary steps with 200 Quebecois dairy farmers (the province is home to nearly half of the country's dairy farms) to protest the importation of diafiltered milk, calling on the house to "recognize the magnitude of the economic losses to Canadian dairy producers from the importation of diafiltered milk, which totaled $220 million in 2015." Yahoo Finance

*** Only Toronto, Ottawa accept more Syrians than London**

Health care. Insurance. Junior hockey. Those are some of the things London does well. But as a new city hall report outlines, we're also really good at something else - taking in refugees. London, according to a staff report headed to a city council committee, has accepted the third largest number of Syrian refugees of any Ontario municipality. Only Toronto and Ottawa have taken in more newcomers from the war ravaged nation. "We have infrastructure, we have quite a number of community organizations, social service supports, and we mobilized quickly," said Valerian Marochko, head of the Cross Cultural Learner Centre, a resettlement agency that's taken a leadership role in the local response to the refugee crisis. "It doesn't surprise me London accepted a great bulk of the refugees. We've always been a caring community," said Coun. Virginia Ridley, who chairs the community and protective services committee getting the report next Wednesday. "It's just a reflection of what kind of community I know London to be." Canada began receiving its first 25,000 Syrian refugees in December, hitting that target in March. In raw numbers, 1,110 refugees have arrived in London. Another 381 are in the pipeline - their applications are in progress. On top of those, another 661 Syrian refugees will be here by the end of this year, counting individuals and families fr om all the different refugee categories. "The community has responded very positively," the report says. Dhira Ghosh is events co-ordinator for the London Arts Council and the London Heritage Council, both of which teamed up with the Cross Cultural Learner Centre to help refugees get used to London's cultural environment. She says the city's size - not too big, not too small - may have worked in its favour. "I think London was a little bit more nimble-footed" than larger centres, Ghosh said. London Free Press, A3

Windsorites need to embrace and invest in bicycling now: With change today comes opportunity, Lori Newton, Tom and Sue Omstead write

Once the hub of all things to do with motorized vehicles, Windsor-Detroit has a chance to be the same for non-motorized vehicles. Windsor can no longer afford to continue to operate the way it did 40 years ago. Change is here and with change comes opportunity. We must take advantage of the global movement to reduce our carbon footprint and create pedestrian and bicycle friendly communities connected through green corridors. The future is neighbourhoods where everyone - from 8 to 80 - can enjoy a healthier, more independent lifestyle that doesn't depend on owning a car. Canada and the U.S. are investing heavily in cycling. The Trans Canada Trail is a 24,000-kilometre network that will link over 1,000 communities and the Atlantic, Pacific and Arctic oceans by the end of 2017. The U.S. already has over 18,000 km of interconnected bike routes in 23 states, including Michigan. (…) Windsor could tap into that movement. Instead, local bicyclists riding a 200-km loop of Essex County to raise funds for the ALS Society in June will have to bypass Windsor because organizers couldn't find a safe, efficient cycling route through the city. Opportunity lost. Where to begin? Support a bike lane on the Gordie Howe International Bridge and the pedestrian/bicycle ferry proposal to connect downtown Detroit to downtown Windsor. Connect the missing link between the Ganatchio Trail and Windsor's beautiful waterfront so cyclists can safely travel the full length of Riverside Drive. Windsor Star, A8

Canada: Beware the Trump Doctrine

An opinion piece states, "Needless to say, Republican presidential nominee Donald Trump is a polarizing figure. Having just returned from the U.S., the contorted body language of everyday citizens spoke volumes as I carefully asked them about their thoughts on The Donald. Many of the expletive-filled replies are not suitable for print in a reputable newspaper. The operative words were "America first" and

"American exceptionalism." "My foreign policy will always put the interests of the American people and American security above all else. It has to be first. Has to be. That will be the foundation of every single decision that I will make," he explained. (…) Still, it would not be a stretch to suggest that the Trump doctrine could have important repercussions for Canada and the Trudeau government. Reading between the lines, you could expect a Trump White House to push Canada hard on its lack of defence spending and its non-commitment to ballistic missile defence for North America. His administration would no doubt be difficult to deal with on the trade front (get ready for a rough ride on softwood lumber and the NAFTA trade pact), on securing U.S. engagement in the world generally and the United Nations specifically (particularly given Trump's isolationist proclivities), and, most significant, on matters involving the thinning out of the Canada-U.S. border (no wall perhaps, but a further thickening of the border space)." Guardian, A7

*** Let's raise the bar for New Canadians: It's hard to understand the Liberals' rationale for changes to citizenship**

An opinion piece states, "Welcome to Canada! Now, here's what we expect. We expect you to at least have the intention of living here and not treat a Canadian passport as an insurance policy. We expect that your commitment to Canada includes paying your fair share of taxes. We expect that if you can't speak one of Canada's two official languages that you will do all you can to gain a working knowledge of it, regardless of your age. That means more than just taking language classes. We expect you to try to speak English or French whenever you can so you're not exiled into a language ghetto or complicit in building one. Because you can vote here, we expect that you'll pay at least as much attention to the local news as you do the news from your homeland. And we do not expect, but we hope, that your interest in your homeland will diminish as the years go by. We expect that you learn more about Canada than the minimum required to pass the citizenship test. Canada is no more the place that you came from than it is the United States or even the Canada you might think you know from television and the movies. We expect you to recognize the falsity of the notion that Canada is a young nation. It is not. It is now one of the world's oldest nations. Since its founding 149 years ago, millions of Canadians have forged a distinct culture through hard work and idealism. A mosaic is the symbolic way we express that Canada is a country of immigrants. But it is not a blueprint for a society where each different cultural, religious or ethnic community lives side-by-side but without touching. The mosaic symbolizes the respect Canadians have for diversity that's been codified in the Charter of Rights and Freedoms. But being part of a mosaic also means recognizing that individual citizens and even particular groups are only part of the larger whole." Vancouver Sun, A3

*** Lay blame where it rightly belongs**

An opinion piece states, "Re: Blame Ottawa for Nicola's deception, by Jennifer Shabo, May 11. Jonathan Nicola is not a child. He is a 30-year-old man who plotted, planned and cajoled his way into Canada. He lied again when he completed immigration forms requesting money for assistance. Money to which he was not entitled and that is fraud. He continued to lie until he got caught at the U.S. border. If Jennifer Shabo thinks that Ottawa is to blame, she should sit through the thousands of fraudulent applications such as Jonathan Nicola's who are very accomplished liars and frauds. There are many legitimate immigrants who are waiting for their final documents so that they can begin the process of becoming Canadian citizens. I have such a friend and it angers me that frauds like Jonathan Nicola make it more challenging for the immigration workers to process the legitimate applications. I commend Citizenship and Immigration Canada for its hard work. The liars and fraudsters are to blame, not that department." Windsor Star, A8

U.S. officials seize $4,000 fraud cash

U.S. customs officers have intercepted $4,000 mailed to fraudsters by a Canadian senior who fell victim to a phone scam. "Every year, thousands of people lose money to telephone scams - from a few dollars to their life savings," said David Beculheimer, acting port director with U.S. Customs and Border Protection. "Scammers will say anything to cheat people out of their money. Everyone's a potential target." Officers working at the Fort Street cargo facility found a parcel on April 26 that was sent through United Parcel Service. It contained $4,000 in Canadian cash. It was destined for Kentucky. But officers determined the address listed wasn't real and had links to previous fraudulent activity. RCMP investigated and determined the person who shipped the package lives at a nursing home in Canada. Customs and

Border Protection said the person fell victim to a criminal organization that preys on the elderly. Customs and Border Protection seized the cash and the book. The RCMP will help get it back to the victim. Windsor Star, SR2

CYBER SECURITY / CYBERSÉCURITÉ

*** Tax deadline gaffe cost Canada Revenue Agency estimated $1.5 million**
The taxman had to forgo as much as $1.5 million in interest when the Canada Revenue Agency extended last year's tax filing deadline after mistakenly giving the wrong date. Agency officials estimated that moving the income-tax returns deadline to May 5, from the usual April 30 midnight deadline, meant $1.43 million in lost interest from Canadians who filed their taxes late over those five days, according to documents released under the Access to Information Act. The information comes more than a year after the Star first requested details about the error that likely resulted from repeating an old message, or possibly copying and pasting information from 2014, when a five-day extension was granted to taxpayers due to a hacking incident. The $1.43-million figure assumes all tax payments - totaling $2.09 billion - were late by five days, based on a five-per-cent interest rate, but the CRA said it has no way of knowing what the true financial impact was. By May 6, it had received 24.7 million individual tax returns, in line with projections. The $1.43-million estimate was provided to show "a worst-case scenario," CRA spokesman David Walters said in an email. "It is not possible to determine the exact cost as we do not know when individuals would have filed and paid their taxes, if the extension had not been granted," Walters said. Last April, the agency did not disclose cost implications, stating that "given the extended period is short, and most taxpayers filed by April 30, the costs resulting from the filing extension will be negligible." Toronto Star

*** LinkedIn: Hacker stole more user passwords**
LinkedIn said Wednesday a 2012 breach resulted in more than 100 million of its users' passwords being compromised - vastly more than previously thought. The business social network said it believes to be true a purported hacker's claim that 117 million user emails and passwords were stolen in the breach, up from the 6.5 million user credentials that the company originally said were compromised. Those 6.5 million passwords were reset in 2012 and the company advised the rest of its users to change passwords, too. The hacker, who goes by the name "Peace," was trying to sell the passwords on the dark web for five bitcoin, or about $2,200 US, according to a Forbes report. Times Colonist, D9; London Free Press (Kingson Whig-Standard, Cape Breton Post, Telegram)

*** U.S. intelligence: Foreign hackers spying on campaigns**
The United States sees evidence of hackers, possibly working for foreign governments, snooping on the presidential candidates, the nation's intelligence chief said Wednesday. Government officials are assisting the campaigns to tighten security as the race for the White House intensifies. The activity follows the pattern set in the last two presidential elections. Hacking was rampant in 2008, according to U.S. intelligence officials, and both President Barack Obama and Mitt Romney were targets of Chinese cyberattacks four years later. Nevertheless, cyber experts say Donald Trump and Hillary Clinton's campaign networks aren't secure enough to eliminate the risk. "We've already had some indications" of hacking, James Clapper, director of national intelligence, said Wednesday at the Bipartisan Policy Center in Washington. He said the FBI and the Department of Homeland Security were helping educate the campaigns. Of the attacks, Clapper predicted, "we'll probably have more." The revelation comes after Clapper's office released a document this month saying foreign intelligence services tracked the 2008 presidential election cycle "like no other." The document was in a slide show used to warn incoming Obama administration officials that their new jobs could make them prey for spies. Times & Transcript, B4 (ChronicleHerald)

*** Bangladesh Bank official's computer was hacked to carry out $81 million heist: diplomat**
A Bangladeshi central bank official's computer was used by unidentified hackers to make payments via SWIFT, and carry out one of the biggest-ever cyber heists, a Bangladeshi diplomat said on Thursday at the end of a Philippine Senate inquiry. There were certain indications about who the hackers were, Bangladesh Ambassador John Gomes told a panel looking into how the $81 million in stolen money

ended up in the Philippines, citing information shared by the U.S. Federal Bureau of Investigation. Gomes said the hackers were neither in the Philippines nor in Bangladesh, but he had no other information. Yahoo Canada News (Yahoo Tech News)

*** Hong Kong launches fresh plan to fortify cyber security after SWIFT heist**
Hong Kong's central bank has a launched a new program to strengthen lenders' ability to protect their critical technology systems after recent attacks by unidentified groups on a global messaging system used by the financial community. The Hong Kong Monetary Authority's latest measure, known as the "Cybersecurity Fortification Initiative (CFI)," plans to raise the level of cybersecurity at banks in Hong Kong through a three-pronged approach and follows similar steps taken by its counterparts from London to Vietnam. The FBI, authorities in Dhaka and private forensic experts are investigating the February cyber heist in Bangladesh where thieves raided a central bank account kept at the Federal Reserve Bank of New York, stealing $81 million. Yahoo Tech News (Times of India)

*** TeslaCrypt no more: Ransomware master decryption key released**
TeslaCrypt's master key has been released to the public, shutting down the ransomware for good in an unexpected twist in the malware's story. TeslaCrypt, which often targets gamers, lands on systems through malicious downloads, web domains which load exploit kits and phishing campaigns. As ransomware, TeslaCrypt will infect systems and encrypt user files, sticking up a landing page and removing access to the PC until a ransom is paid, usually in virtual currency Bitcoin. What made TeslaCrypt a particularly severe case is that the developers behind the malware were very active, and researchers found it difficult to crack the software before new, even more sophisticated versions were released into the wild. After posing as a victim of the ransomware, an ESET researcher used the support chat system on the payment website to ask if they would consider releasing the master TeslaCrypt decryption key. While you might expect the cybercriminals to laugh at such an idea, they did not -- and instead they agreed to do so and posted it on the website for all to use, closing the payment system on the website in the process. ZD Net

*** Flaws in networking devices highlight tech industry's quality control problem**
Security flaws discovered in common networking equipment could give malicious hackers a direct pipeline into data centers and business applications, even allowing them to remotely turn off power to critical information systems and industrial machinery. Researchers at the Georgia cybersecurity firm BorderHawk revealed to Passcode that vulnerabilities in a widely used type of business hardware known as remote power managers (RPM) may affect thousands of companies across the country. BorderHawk would not reveal the name of the company that makes the flawed hardware. But it is advising businesses, which often rely on these kinds of network-connected devices to remotely manage equipment, to ensure they aren't accessible from the Internet and to make sure they have been updated with newer software and firmware. Christian Science Monitor

LAW ENFORCEMENT / APPLICATION DE LA LOI

Call public inquiry over Mountie monitoring of journalists
NDP Leader Tom Mulcair says a public inquiry should be called after it was revealed Mounties monitored two journalists in 2007. Mulcair's comments come after CBC News reported a rogue group of RCMP officers investigating a leak of a secret document spied on the two for more than a week without authorization. The report, based on a government briefing note obtained by the broadcaster, says Mounties placed two Ottawa-based journalists, Joel-Denis Bellavance and Gilles Toupin, under physical surveillance for nine days in 2007. CBC also says the surveillance was carried out without the required permission of Bob Paulson, an acting assistant commissioner at the time. Paulson is now the commissioner of the RCMP. Red Deer Advocate, B5; Toronto Star, A9; Journal de Montréal, 26

*** Bust cost hundreds of thousands for drug buys, covert agent**
Over the final four months of Operation J-Tornado in 2014, RCMP spent $104,000 buying drugs from two Saint John-based drug distribution networks, according to one of the RCMP sergeants in charge of the operation. The expense was just a fraction of what was needed from taxpayers to execute what lead to

what investigator Sgt. Marco Vachon said was an unprecedented infiltration of previously impenetrable criminal organizations. The covert police agent who made everything possible was paid more than a half a million dollars, Vachon said. Details about the cost of the operation were presented during Vachon's testimony at the trial of two men alleged to be part of one of the networks - Shane Stephen Williams, of Smithtown, and Joshua Eldon Kindred, of Saint John. Vachon took the stand on Tuesday afternoon and spent the entirety of Wednesday continuing with his evidence. Revealing his version of how the RCMP infiltrated the networks that resulted in the arrest of dozens in September 2014, Vachon gave many details not yet heard at trial, including that the agent's contract was for $525,000 and the price expensed for drugs. Vachon said the agent opened a door to the organizations that, between the start of the investigation in November 2011 and the late winter of 2014, police hadn't been able to pry open. Police could conduct surveillance and build covert sources, Vachon said, but specially encrypted Blackberry devices kept them from getting any dirt they could take to court on the heads of the networks. "It was two-and-a-half years of probing, two-and-a-half years of trying to figure out what's going on. It was frustrating, because we had intelligence the group was using communication devices the RCMP could not intercept," said Vachon, providing what he called the "Reader's Digest" of 2011 to early 2014. Telegraph-Journal, B1

Accused admitted role in Edmonton slaying during first meeting, undercover Mountie testifies
The very first time he met him, accused killer Shawn Wruck revealed to an undercover RCMP officer that he had been involved in the slaying of his former girlfriend, court heard Wednesday. Testifying at Wruck's first-degree murder trial, the officer identified as C said Wruck and his current girlfriend had come for dinner and drinks at the Kelowna, B.C., condo where he and another undercover officer were staying as part of a Mr. Big sting operation. The officer testified he told Wruck a story about having a former girlfriend who had caused him lots of grief and said Wruck responded by saying "he had one and got rid of her." C told court he asked Wruck what he meant and said Wruck replied "Dead," then explained that he had two women who belonged to the Redd Alert native street gang come over and choke the woman to death, and then he "dumped the body." The officer testified Wruck pantomimed the killing using a choking motion with his hands and then rolling his eyes to the back of his head and then said he watched "her life leaving her." The officer cannot be named under a court-ordered publication ban and the courtroom itself was closed to the public, with only accredited media being allowed in by sheriffs guarding the entrance. Edmonton Journal, A4 (Edmonton Sun)

Man arrested after 911 call of rifle near school
A 21-year-old Digby man was arrested Tuesday after a 911 call about a person carrying an assault rifle and duffel bag near Digby Elementary School. Officers responded at 2 p.m. and the school's doors were locked as a precaution. An unarmed man was quickly located by police on the trails near the school and arrested without incident. Police also located a semi-automatic rifle, ammunition and a bag in woods close to where he was arrested. The man is facing several firearms-related charges and will appear in Digby Provincial Court at a later date. RCMP spokeswoman Cpl. Jennifer Clarke said the man was unarmed at the time of his arrest. She also downplayed any risk to the children. "There was no harm intended but it was in proximity to the school," said Clarke. Any gun sighting near a school is treated seriously. Clarke said several officers responded and a police dog unit was called. Tri-County school board superintendent Lisa Doucet said the incident was short-lived. "We are always cautious in any situation, so our students and staff practise the protocols around hold-and-secures and lockdowns." She said staff handled the situation, followed protocol, worked with the RCMP and communicated with parents. Chronicle-Herald, A4; * Truro Daily

Les proxénètes et les clients, eux ?
On dirait qu'on a passé l'hiver à chercher des adolescentes qui avaient fugué de leur maison, d'un centre jeunesse, Et qu'elles disparaissent comme ça, pour rien. Enfin, on sait à peu près comment ça se passe. La séduction d'un « ami » lié à un gang de rue ; le party pendant quelques jours(…) Ainsi vont les budgets de police, ainsi vont les statistiques. Comme les budgets sont limités, on concentre les ressources sur les priorités. Tantôt, c'est le crime organisé italien, tantôt les motards, tantôt les crimes économiques, tantôt les agressions sexuelles, tantôt le trafic de stupéfiants ou les vols de banque, selon les époques. La semaine dernière, un officier de la GRC déplorait publiquement l'assèchement des budgets contre la lutte au crime organisé : tout va à la lutte contre le terrorisme, disait-il. Plusieurs autres escouades se plaignent exactement de la même chose. (…) On n'a jamais vu un corps de police déclarer

qu'il avait suffisamment d'argent, c'est entendu. Il n'y a pas de limite à la lutte contre le crime. Dans le cas des fugues des centres jeunesse, un rapport commandé par le gouvernement cet hiver indique une augmentation des cas. La Presse +, 14

Montreal police to try out cameras on 30 officers
Smile, you could be on candid camera the next time you encounter a Montreal police officer. The introduction of portable cameras, or body cams, was announced Wednesday by Mayor Denis Coderre and Montreal police chief Philippe Pichet, who both hailed the pilot project as a step forward in modern policing practices. The pilot project will involve about 30 officers who will be identified with a "Camera" badge on their uniforms. The first phase of the project will see cameras worn by officers patrolling the métro and those doing traffic duties in the southern district of the city. A second phase, in the fall of 2016, will see cameras introduced at two or three stations, where police interventions could possibly take place in private spaces. The impact of body cams on police/citizen relations, program costs, privacy issues and other concerns, will be evaluated in March 2017 by the city, followed by a public consultation. The decision whether to expand the use of body cams across the Montreal police department will come after recommendations are presented to the city in May 2017. Coderre said the use of body cameras is nothing new in the modern North American context, and Montreal now becomes the first city in Quebec to experiment with the technology. "Boston, our neighbour, is about to launch its own pilot project. Montreal is headed in the same direction," he said. "We have the same thing in Toronto and Calgary ... We need to be in tune with the times. And the times, as we can see, have clearly changed." Coderre said the two main objectives of the project are to provide greater transparency in public security matters and, by doing so, inspire public confidence in the police department. Montreal Gazette, A1 (2016-05-19); Cape Breton Post (2016-05-18)

* **Out of the shadows: A night in the life of 'kickass' undercover RNC team**
"I got the money. I just want to see the goods, that's all." A rough-looking man, with a big brown beard, hood up, wearing dark clothes talks on his cell phone on Jensen Camp Road in St. John's. He's grabbed the attention of the group of young men hanging around the neighourhood. What they don't know is that he's a cop, looking for a missing teen wanted on a warrant. Forget everything a police officer typically looks like — the crisp uniform, the clean-shaven face — and you'll find Sgt. Alex Brennan. He's coming out from undercover and has agreed to speak with CBC. A 20-year veteran of the Royal Newfoundland Constabulary and colonel in the military, Brennan projects a friendly authority, but heads up what he calls a "kickass" team within the RNC. Brennan's departure from his clean-cut image as a military leader to gruff undercover cop is startling. But he and the other three men on his team need to blend into places the average cop would never go undetected. CBC News (2016-05-18)

* **No to corruption abroad, but yes to ensuring fair trial**
An opinion piece states, "Foreign governments and civil society have frequently criticized Canada's lax enforcement of its anti-corruption law, the Corruption of Foreign Public Officials Act (CFPOA). Just three weeks ago, however, the Supreme Court of Canada released World Bank Group v. Wallace, a precedent-setting decision on the CFPOA that paves the way for increased enforcement of Canada's anti-corruption laws. It also creates interesting challenges for the right to a fair trial when that enforcement results in a criminal prosecution. (…) The project, however, was to be funded in part by the World Bank, which has a keen interest in ensuring that its projects are free from corruption. In 2012-2013, the RCMP laid charges against three SNC-Lavalin executives over an alleged bribe concerning the Padma bridge project in Bangladesh. Interestingly, the World Bank conducted the original investigation and shared its information with the RCMP. This raised a host of complex legal issues. In the resulting prosecution (which is continuing), the defence sought access to those parts of the World Bank's investigative file that had not been turned over to the RCMP. The trial judge granted the defence request. The World Bank then appealed this ruling directly to the Supreme Court on the basis that the World Bank, as an international organization, enjoys immunity from such court orders. The Supreme Court agreed. The Supreme Court's ruling will have ramifications for all CFPOA prosecutions in the future. International organizations such as the World Bank are uniquely positioned to investigate allegations of transnational corruption. A number of these organizations intervened in the Supreme Court case to support the World Bank's position, including the European Bank for Reconstruction and Development, the African Development Bank Group and the Asian Development Bank. All of them suggested that they might have to stop sharing information with

domestic law enforcement authorities if a court could force them to turn over all of their documents." Globe and Mail, B4

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prison locked down
The medium-security Bath Institution west of Kingston was put in lockdown mode Wednesday morning. At about 10:30 a.m., the lockdown was put in place to enable staff members to conduct an exceptional search. A news release from Correctional Service Canada didn't reveal what they were searching for. The release did say the search was ordered to ensure the safety and security of the institution, its staff and inmates. Visits have been suspended until the search is completed, and normal operations will resume as soon as it is considered safe to do so. Kingston Whig-Standard, A3

*** Nurses fear more attacks**
Graphic security camera video caught the moment a violent, severely mentally ill patient attacked a nurse in the forensic unit of the Brockville Mental Health Centre in October 2014, stabbing her four times in the neck with a pen. In the video, the patient, Marlene Carter, is walking alongside her nurse escort in the hallway of the hospital's forensic unit when she pulls a pen from her pants pocket and strikes the nurse without warning about her head and neck. The attack lasted just seconds before staff overpowered Carter as another staff member helped the victim to safety. The video was played Wednesday on the first day of a trial of the Royal Ottawa Health Care Group, which operates the Brockville hospital. The ROHCG is charged with five violations of Ontario's Occupational Health and Safety Act, meant to keep workers safe from workplace violence. Carter, now 44, was a federal prisoner transferred to Brockville in August 2014 because no institution in her home province of Saskatchewan had been able to deal with her. She had spent 28 years in custody - virtually her entire adult life - and had a history of suicide attempts, repeatedly banged her head so hard that she suffered permanent brain damage, and had a long list of assaults on correctional officers and caregivers. (…) Carter was charged with aggravated assault for the attack but was found not criminally responsible. In January she was transferred back to Saskatchewan to be closer to her family and her Cree culture. The Crown argues that the ROHCG should have done more to prepare staff for Carter's arrival in Brockville and had inadequate equipment, procedures and training in place to deal with such a violent patient. Ottawa Sun, A12 (Ottawa Citizen)

*** Appeals court asked to overturn conviction of child-killer Cyr**
Wearing a T-shirt emblazoned with a photo of her young daughter in happier times, Amanda Trevors returned to a Regina courtroom for the appeal launched by the man convicted of killing the girl. "It is difficult to sit through again," she conceded Wednesday after the Saskatchewan Court of Appeal reserved decision on a bid by Adam Riley Cyr to overturn his conviction and win a new trial. "Difficult" was also a word used by Cyr's lawyer Marianna Jasper to describe the case. (…)Cyr, who sat quietly in shackles throughout the proceeding, is serving a life sentence without parole eligibility for 12 years. Leader-Post, A4

Family of boy stabbed by mother 'lived in fear'
He was six years old when his mother took him into the bathtub and stabbed him repeatedly in the neck and stomach. Three years later, the physical wounds have healed, but time has not erased the pain inflicted on "Neil" and his family. Although his mother pleaded guilty to aggravated assault and was sentenced on April 19 to five and a half years in prison, Neil, his father and brother say they "lived in fear" for nearly three years while the criminal charges dragged through court. "We are not getting any degree of closure out of the process," said his father, "Jason". (…) Jason said for the first time in years he and his kids feel safe speaking publicly about the case that has consumed them. They want to speak out victim's experiences with the court system so often go unreported, they said. Postmedia Network (StarPhoenix, A1, Leader-Post, National Post, Edmonton Journal, Calgary Herald)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Ontario, Ottawa expand free access to overdose antidote
Ontario and the federal government are rushing to close policy gaps that medical experts say have contributed to the deadly toll wrought by opioid addiction and the rise of bootleg fentanyl across the country. On Wednesday, both governments launched massive expansions in free access to naloxone, a cheap, life-saving antidote to opioid overdoses. Ontario Health Minister Eric Hoskins announced that his province - the country's largest per capita consumer of prescription opioids - would join B.C. and Alberta in dispensing free naloxone to anyone through community pharmacies, no prescription required. The federal government, meanwhile, added naloxone to the list of drugs covered under the Non-Insured Health Benefits, the national pharmaceutical program for aboriginals, a group that has faced disproportionate numbers of opioid-related deaths in some regions. Both Ontario and Ottawa have faced criticism that their response to the crisis has been slow. Taken together, the new initiatives add a much-needed sense of urgency to tackling the opioid crisis, medical experts say, and address the fact that a potentially life-saving drug is reaching a small minority of people in the country's largest province and in aboriginal communities. (…) In Ontario, opioid overdoses killed 663 people in 2014, 173 linked to fentanyl, a powerful painkiller that has become a lucrative source of income for organized crime. In 2015, Alberta and British Columbia recorded 418 overdose deaths related to fentanyl, a 10-fold increase over the previous three years. Globe and Mail, A1

* **Crime prevention week**
Terry Lee Ropchan wants to put the power back in people's hands. The Central Alberta Crime Prevention's executive director said more people are getting an understanding of how they can get involved and what are the things that they can do to promote safety in their communities. "Graffiti is one of those things that affect our neighbourhoods or affect how we feel in our neighbourhoods," said Ropchan. "When you drive into a neighbourhood and you see graffiti, you instantly have a negative reaction to it. We just want to put the power back in the people's hands." There's lots of things that you can do if you are frustrated or you don't feel safe in your neighbourhood, she said. "Come and talk to us because it could be some resource or some information that we have," said Ropchan. "It could be a connection to start a meeting or it could be some community project that needs to be developed. We can be that catalyst to work with the city or whoever they need to get their project up and going. We are excited. We want people to come and talk to us." As May is Crime Prevention Month, there are several events planned throughout the month. Red Deer Advocate, C5

* **Sudbury's crime rate drops**
Hydro and food prices might be going up, along with temperatures across the globe, but residents may take heart in the announcement that thefts, assaults and arsons are all on the decline. "It's a good news story for Sudbury," said Chief Paul Pedersen at a police board meeting on Wednesday. "The trend, as we've seen for a number of years, is that crime is going down." Pedersen shared numbers crunched annually as part of a crime tracking process that is uniformly applied across the province. They show that overall offences in 2015 were 434 fewer than the previous year, while the service's ability to lay charges, expressed as the clearance rate, improved by 3.9 per cent. "Total criminal offences have gone down by 5.3 per cent," said Pedersen. "But what's really good is that our ability to solve the crime that's left is going up." The positive trend isn't unique to Sudbury, although neither is the city lagging behind others of a comparable size. Sudbury Star; Sudbury.com (2016-05-18)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Pot shop proponents set for city hall showdown today**
Marijuana activists are planning to show up at a meeting of the city's licensing and standards committee today to voice their concerns over Mayor John Tory's move to crack down on the growing number of pot shops across Toronto. Last week, Tory wrote a letter to Tracey Cook, municipal licensing and standards executive director, asking the committee to review the operations of marijuana dispensaries in the city and make recommendations for changes. These would include whether it's possible to licence them, or control where they set up operations near schools, community centres and other dispensaries. "Over the past few months, residents and businesses in different parts of Toronto have raised concerns about the rising number of marijuana dispensaries opening in their neighbourhoods," Tory said in the letter. "The speed with which these storefronts are proliferating, and the concentration of dispensaries in some areas of our city, is alarming." This week, some dispensary owners received letters from the city that say they're operating in violation of bylaws. "They just basically said there's an infraction on a bylaw," said Tania Cyalume, co-owner of the Queens of Cannabis dispensary on Bloor Street West. "They're basically just trying to scare dispensary owners into closing down." CBC News; Toronto Star; Radio-Canada (2016-05-19); Globe and Mail; CTV News; CP24 (2016-05-18)

Canada's move to legalize marijuana violates international law, experts say
The Trudeau government has plans to introduce legislation next year that will legalize marijuana across the country. But this violates three international drug control conventions, according to an international lawyer. In an opinion piece published in the *Canadian Medical Association Journal* (CMAJ) on Monday, authors Steven J. Hoffman and Roojin Habibi claim that allowing possession of pot would violate three separate conventions: the Single Convention on Narcotic Drugs of 1961 as amended by the 1972 Protocol, the Convention on Psychotropic Substances of 1971 and the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988. Marijuana is considered a Schedule 1 narcotic as classified by the World Health Organization (WHO). Schedule 1 narcotics are considered to pose a serious health risk to the public and are some of the most strictly regulated substances which include LSD and ecstasy. Global News (2016-05-18)

*** Pot activist Larsen's supporters hold rally after court appearance**
Pedestrians cheered, car drivers honked and even a bus driver showed support by blasting the horn as marijuana users banded together to march for marijuana legalization, and to support pot activist Dana Larsen during his first court appearance in Calgary. Larsen, known for his "Overgrow Canada" campaign in which he vowed to give out a million marijuana seeds countrywide, was arrested in Calgary last month during one of his giveaway events. (…) Larsen pledged not to take a plea bargain or deal, and said he will take the case to the highest court that will hear it. "If they persist, then I feel like we might get the laws against cannabis seeds overturned. That would be my goal, assuming they want to go forward with this." Larsen's supporters, some of whom were smoking from bongs and joints as they marched through downtown, were equally optimistic about his case. Some were annoyed that city police charged Larsen. "The police are wasting our expensive resources, and the courts are wasting law enforcement resources," said Keith Fagan, one of the organizers of the rally, who also attended Larsen's seed handout event last month. "I think this case will be thrown out, I really do." Larsen says he believes Canada's impending legalization of marijuana will be the ultimate reason for his case being dropped. Calgary Herald, A14

*** Some area mayors want cut from legal pot, Bradley says**
Mayor Mike Bradley said some Southwestern Ontario mayors believe municipalities should receive a cut of the federal government's income from legalizing and regulating recreational marijuana. He made those comments as a standing committee of Lambton County passed a motion Wednesday asking county council to support the Simcoe Muskoka District Health Unit's call for the federal government to consider public health issues as it moves to legalize marijuana use. Ottawa has said it will introduce legislation in 2017 to legalize recreational marijuana. London Free Press, A8

Search under way for EgyptAir plane with 66 aboard that crashed into Mediterranean
An EgyptAir flight from Paris to Cairo with 66 passengers and crew on board crashed in the Mediterranean Sea early Thursday morning, Egyptian aviation officials said. Egyptian Prime Minister Sherif Ismail said it was too early to say whether a technical problem or a terror attack caused the plane to crash. "We cannot rule anything out," he told reporters at Cairo airport. EgyptAir Flight 804 was lost from radar at 2:45 a.m. local time when it was flying at 37,000 feet, the airline said. It said the Airbus A320 had vanished 16 kilometres after it entered Egyptian airspace, around 280 kilometres off the country's coastline north of the Mediterranean port city of Alexandria. The aviation officials later said the plane crashed and that a search for debris was now underway. The "possibility that the plane crashed has been confirmed," as the plane hasn't landed in any of the nearby airports, said the officials, who spoke on condition of anonymity because they were not authorized to speak to the media. Egyptian armed forces were searching for the plane, which was carrying 56 passengers, including one child and two babies, and 10 crew. The pilot had 6,000 flight hours. Earlier, the airline said 69 people were on board. In addition to the unidentified Canadian, EgyptAir said passengers included 30 Egyptians, 15 French citizens and others from Britain, Belgium, Iraq, Kuwait, Saudi Arabia, Chad, Portugal and Algeria. Global Affairs Canada said it was "aware of the possibility that a Canadian may have been on board the flight" and that the department was "monitoring the situation closely." The statement added that Canadian officials in Cairo and Paris are working with local authorities to confirm this information. Associated Press (National Post, StarPhoenix, St John's Telegram, The Guardian, CTV News, CBC News); Vancouver Sun; * Agence France-Presse (Journal de Montréal)

Dion to discuss human-rights issues during Saudi visit
Foreign Affairs Minister Stéphane Dion will travel to Saudi Arabia next week for talks on how to thwart the expansion of Islamic State and al-Qaeda in the region and government insiders say he will use the visit to speak out about human-rights abuses against women and Shia minorities. Mr. Dion is seeking a tête-à-tête with 30-year-old Deputy Crown Prince Mohammed bin Salman, the powerful son of the Saudi King, who is the also the Defence Minister and head of the country's economic council. Canada's Foreign Affairs Minister was invited to the Red Sea port of Jeddah for a meeting on Tuesday of the Gulf Cooperation Council, whose members are Saudi Arabia, Bahrain, Kuwait, Oman, Qatar and the United Arab Emirates. The Arab Gulf states have provided large sums of money and arms to Western-backed rebels fighting the Syrian government and Islamic State extremists and are part of a Saudi-led coalition fighting Shia Houthi militants in neighbouring Yemen who are aligned with Iran. The United Nations has accused the Saudi-led coalition of being responsible for twice the number of civilian deaths in Yemen as all other combatants and for having triggered a severe humanitarian crisis in an already poor country that has led to an expansion of alQaeda in the Arabian Peninsula. "Let's not forget these are allies we are talking to about security, but it doesn't mean we will be shy about raising our own concerns and that includes human rights across the board," a government insider told The Globe and Mail. The Saudis are using Canadianmade combat vehicles in Yemen right now to fight Houthi rebels - machines very similar to those Canada will be shipping to the House of Saud under a $15-billion deal brokered by Ottawa. Globe and Mail, A3

SNC-Lavalin reçoit un prix pour un projet controversé en Algérie
Les Grands Prix du génie-conseil québécois ont honoré SNC-Lavalin pour un projet en Algérie que la firme pourrait avoir décroché avec le concours d'une société secrète établie aux îles Vierges britanniques dont le nom vient d'apparaître dans les Panama Papers. Lors d'un gala organisé lundi par l'Association des firmes de génie-conseil (AFG), SNC-Lavalin a reçu le prix dans la catégorie « international » pour le complexe Koudiat Acerdoune, lequel comprend notamment une usine de traitement de l'eau et un réseau de conduites de 75 kilomètres. Le projet de 327,4 millions CAN, réalisé en 46 mois, alimente aujourd'hui en eau potable quelque 880 000 personnes. Le chantier avait toutefois été entaché par la mort, en 2008,

de 12 travailleurs algériens de SNC lors d'un attentat terroriste. C'est l'Agence nationale des barrages et transferts d'Algérie qui avait attribué ce contrat à SNC-Lavalin en novembre 2006. En janvier 2005, le même organisme étatique avait donné à la multinationale québécoise un contrat semblable, mais d'une valeur de plus de 700 millions, pour le transfert d'eau du barrage de Taksebt. Ce projet a remporté l'un des Grands Prix du génie-conseil québécois en 2009. Grâce à la base de données des Panama Papers, Radio-Canada et le Toronto Star ont révélé hier que SNC avait versé près de 22 millions à Cadber Investments, une entité des îles Vierges britanniques, pour décrocher des contrats en Algérie, y compris 4 millions US pour celui de Taksebt. Les fonds ont transité par un compte de la succursale de la Banque Royale du Canada à Genève, en Suisse. La Presse +, 4

*** United Arab Emirates jailed my father for months without anyone knowing**
An opinion piece by Marwa Alaradi states, "The United Arab Emirates arbitrarily detained my father, and now they're neglecting his health. My father disappeared off the streets of Dubai two years ago and was locked up in the U.A.E.'s notorious secret prison system by state security agents. My father's name is Salim Alaradi, and he is a 45-year-old Canadian-Libyan citizen, a family man and determined businessman who has a record of international humanitarian philanthropy. For over a year now, Canadian and international media have followed the developments of my father's case. On May 30, a court's final verdict will be given with no right to appeal. His jailers have failed to treat him with basic dignity, and, whatever direction the legal process takes, it will be a longtime before my father recovers from the dehumanizing conditions under which he's been kept. My father's case, and our campaign to free him, has brought worldwide attention to these issues, and various organizations - from the UN Human Rights Council to Amnesty International - have criticized the UAE for human rights violations committed against my father and his co-accused, Kamal and Mohamed Eldarat (U.S. nationals). My father was jailed for months without anyone knowing his whereabouts or why he was being detained. His health is failing and, as observers and investigators from the UN, the Canadian government and numerous human rights organizations have reiterated again and again, my father has been mistreated. In other words, the detention and torture he endured has destroyed his health physically and mentally." Windsor Star, A8

INTERNATIONAL

Gains against Daesh harbingers of future terror
Another day brought another horrible set of headlines out of Baghdad: On Tuesday, four bombings, one after another, killed dozens of people and left streaks of blood and strewn body parts across public markets. As familiar as the last week of violence in Baghdad - more than 200 killed since last Wednesday - might seem to those who have watched Iraq over the years, this is not business as usual here. The U.S. history in Iraq tells us that successful bombings in Baghdad are not to be taken lightly. The official talking points say the new wave of bombings is a sign that Daesh is losing. The terrorists are lashing out in Baghdad because they are abandoning territory to pro-Iraqi ground forces and U.S.-led airstrikes. They're "on the defensive," as Brett McGurk, U.S. President Barack Obama's special envoy here, said. There is truth to that line. Daesh, also known as ISIS and ISIL, is losing territory in Iraq and Syria. And the recent wave of bombings is out of the very first page in the group's playbook, back when Daesh was Al Qaeda in Iraq. But this is not the group's final death throes - not yet. Since their beginnings, the Sunni extremists of Daesh have been driven by the desire to wage a sectarian holy war, and have been amply willing to barter their lives in return for terrorizing and inciting the Shiite population. The Iraqi capital has been its most fertile ground for sowing fear. Toronto Star, A15

*** La France «clairement » dans le viseur de l'État islamique**
La France est «clairement visée» par le groupe État islamique (ÉI), qui pourrait mener «une campagne terroriste caractérisée par le dépôt d'engins explosifs dans des lieux où est rassemblée une foule importante», a déclaré le patron de la Direction générale de la Sécurité intérieure (DGSI). «Nous savons que Daech (acronyme arabe de l'ÉI) planifie de nouvelles attaques – en utilisant des combattants sur zone, en empruntant les routes qui facilitent l'accès à notre territoire – et que la France est clairement visée», a expliqué Patrick Calvar, auditionné le 10 mai par la Commission de la défense nationale et des forces armées de l'Assemblée nationale, dont le compte-rendu a été rendu public hier. «Daech se trouve dans une situation qui l'amènera à essayer de frapper le plus rapidement possible et le plus fort possible:

l'organisation rencontre des difficultés militaires sur le terrain et va donc vouloir faire diversion et se venger des frappes de la coalition», a-t-il estimé. Agence France-Presse (Journal de Montréal)

'Some of them pray, some of them don't pray. But all of them kill'
Clutching her daughter tightly to her chest, Zarah Ali leans close to the visitor and whispers her story.She doesn't want the nearby camp guard to hear. If he learns that her 22-month-old daughter was fathered by a Boko Haram fighter, the gossip could sweep across the refugee camp, bringing her the stigma and ostracism that afflicts many women who were forced into "marriage" with the Islamist radicals. Ms. Ali, the 20-year-old daughter of a Muslim farming family in northeastern Nigeria, knows more about Boko Haram than most. She was its captive - twice. She escaped once, fled across the border to Cameroon and was captured again. She spent months under Boko Haram's control. And despite the group's Islamist ideology and its claims of allegiance to the Islamic State movement, she scoffs at its professions of faith. "Some of them pray, some of them don't pray," she says. "But all of them kill." In her months of captivity, she remembers how Boko Haram would gather the people of the occupied villages and preach to them about how to "slaughter" their enemies. In contrast to their religious pretenses, they often recruited followers with offers of money and threats of violence, she says. "They are unbelievers and thieves," she says. "They kill Christians, but they also kill many Muslims. They kill people and take their property." New studies of Boko Haram are confirming what Ms. Ali has witnessed. The group was founded by a charismatic Islamic preacher, but religious beliefs are no longer the driving force behind the group. Many of its followers today are instead motivated by economic factors or anti-government grievances. Mercy Corps, a United Statesbased humanitarian aid agency, recently interviewed 47 former Boko Haram members in northeastern Nigeria. Its study gives fresh insight into the brutal militia that has killed and abducted thousands of people in Nigeria and neighbouring countries. Globe and Mail, A11

*** West plays waiting game in ongoing Libyan mess**
An editorial states, "When "Prime Minister" Fayez al-Sarraj of the "Government of National Accord" (GNA) arrived in Libya a month ago, U.S. Secretary of State John Kerry said it was "not the time for obstructionists to hold back progress." A noble sentiment, but it does make you want to ask Kerry: When would be the right time for obstructionists to hold back progress? Next Tuesday? It was one more slice of the meaningless waffle when Western politicians discuss what to do about the Libya mess. The country has collapsed into violence and chaos since NATO bombers drove longruling dictator Moammar Gadhafi from power in 2011, and Kerry has no good plan for dealing with it. Sarraj's GNA merely adds a third contender to the rival governments that already claim to rule the country, and not one of them actually controls much territory. It is the hundreds of militias that really control Libya's territory, and the fortunes of the contending governments rise and fall depending on how many militias will agree to back them (in return for favours and subsidies, of course). Western governments are finally paying attention to Libya mainly because ISIS (Islamic State) fighters are active there, and because refugees are flowing into Europe from Libya again now that the route through Turkey and Greece has been blocked. The Italian, British and French governments have been talking of sending 6,000 troops into Libya to train a Libyan army that could take on ISIS and defeat it. There are already American, British, French and Italian special forces teams in the country, and there have been at least four American air strikes against ISIS camps in Libya since December. It all sounds like a full-scale Western military intervention in Libya is imminent - except it has been sounding like that for the past six months, and the intervention still hasn't happened." Kingston Whig-Standard, A4 (Red Deer Advocate, London Free Press)

MINISTER / MINISTRE

Shooting victim known to police: Toronto Police say man was targeted
Toronto Police and the family of a man shot dead earlier this week are both issuing public appeals for help in solving the city's 33rd homicide of the year. Det. Sgt. Joyce Schertzer is asking people to come forward if they have information on the shooting death of Sukh Deo, or knowledge of a black Honda Civic believed to be involved. Deo's family is echoing that call and asking the public not to judge their relative by media accounts they say are untrue. Deo, 35, was gunned down on Tuesday in the typically peaceful midtown neighbourhood of Yonge Street and Eglinton Avenue. Media reports have said Deo was from Vancouver and allegedly had ties to gang activity there. Schertzer confirmed that Deo was not from Toronto and said his shooting was targeted, but would not comment further. She said he was known to police, but not to the local police service. Other media reports have said Deo and his family lived in a luxury Oakville home. The Oakville Beaver reports that the Oakville home was raided by tactical officers in early 2014 and it is alleged investigators seized a Bentley, Rolls-Royce and Land Rover at the time. (…) Deo's death comes in a year that has seen a dramatic spike in gun violence throughout the city. Toronto Police Chief Mark Saunders and Mayor John Tory have both spoken out on the need for public support to end the spate of shootings. In a letter to federal **Public Safety Minister Ralph Goodale** and

his Ontario counterpart Yasir Naqvi, Tory linked the rise in gun violence to firearms from the United States, saying about half of illegal guns seized by police have been smuggled across the border. Canadian Press, A4 (The Record, Hamilton Spectator)

New committee to keep spies in line
Federal spying and other clandestine national security activities will face new and unprecedented parliamentary scrutiny under long-promised Liberal legislation to be unveiled within days. The Grits will introduce a bill creating an all-party committee of parliamentarians, chaired by Ottawa Liberal MP David McGuinty, to keep a dedicated eye on the effectiveness, legality and strategic direction of the country's expanding national security apparatus. The move fulfils a key Liberal election promise, but also renews questions about the status of the government's much-promised overhaul of the controversial Antiterrorism Act of 2015, otherwise known as Bill C-51, rushed through Parliament last spring under Conservative majority rule. (...) The office of **Public Safety Minister Ralph Goodale**, responsible for Canada's chief spy agency and the RCMP, confirms the proposed legislation will be tabled before MPs start their summer break June 23. Details remain under wraps. Canada is the only nation among major western allies that does not allow parliamentarians access to classified security and intelligence information about spying, policing and other sensitive national security operations. Ottawa Citizen, B3

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

* **Fort McMurray: Rachel Notley Promises South African Firefighters Will Get A Pay Bump**
South African firefighters who joined the battle against the Fort McMurray blaze will get every penny they were promised, Alberta Premier Rachel Notley said Thursday. "I can say right now that every hour that every firefighter from South Africa — or anywhere else — has worked on these fires will be compensated in accordance with our laws in this province," Notley said in Calgary.The South African group that employs the 300 workers said they would be leaving after only a week on the job because of a pay dispute. The organization Working on Fire said senior managers were coming to Canada to address concerns and oversee the return. Canadian Press (Huffington Post); Globe and Mail; CBC News; Independent Online

* **Heavy rain in Fort McMurray could lead to flash flooding**
After weeks of worrying about a massive wildfire and smoke, people in the Fort McMurray area have a new concern - rain. Environment Canada has issued a warning of heavy rain in the region and possible flash floods. The warning says up to 66 millimetres of rain could result in washouts nears rivers, creeks and culverts. The Alberta government says the rain is increasing hazardous conditions by eroding soil around damaged trees. The province says trees with weakened roots could easily fall without any wind and slopes will be slippery. Despite the rain the government says people must continue to follow the ban on fires and off-highway vehicles as the forest is expected to dry out again. Canadian Press (CTV News, St. John's Telegram, Charlottetown Guardian); Global News; CBC News

* **Commercial flights scheduled to return Friday to Fort McMurray airport, but expect delays**
While the Fort McMurray International Airport will reopen to commercial flights Friday, passengers will have to be patient as airlines work around emergency responders still using the skies above the city. "The situation is evolving right now," said Fort McMurray International Airport spokesperson Jillian Phillipp. "We are scheduled to open (Friday), but the (provincial government) and Agriculture and Forestry is still using the air space for emergency response to the wildfire." According to Chris Chodan, spokesperson for the Edmonton International Airport, one flight scheduled for Friday between Edmonton and Fort McMurray, taking off at 8:35 a.m. Friday, has already been cancelled. As firefighters continue to battle the wildfire still raging near Fort McMurray - which as of Thursday night was around 71-per-cent contained, covering an estimated 586,707 hectares - anyone flying in or out of Fort McMurray on a commercial flight should be prepared for changes or cancellations. "We are working to get back to a full schedule," said Phillipp, "but it's just going to take a bit of time." Edmonton Journal

*** Airlink brings relief team to aid Fort Mac recovery**
A U.S. non-profit has linked up with Air Canada to fly in volunteers who are sifting through toxic debris in Fort McMurray. Airlink, a rapid-response disaster and humanitarian relief organization in Washington, D.C., that links non-profits with partner airlines, has flown in at least 19 Team Rubicon volunteers into Fort McMurray on donated flights from Air Canada, Alaska Airlines and United Airlines since June 7. Team Rubicon is an American non-profit working to provide incident, volunteer and debris management in support of residents returning to homes destroyed in the Fort McMurray wildfire. Calgary Herald, A12

*** Defaults on rise in Alberta, ratings agency warns**
However you slice it, Alberta consumers are feeling the ripples of the oil and gas downturn at home, on the road and in the shopping aisle. The recent wildfires in Fort Mc-Murray and the impact of weak pricing in the oil and gas industry are putting stronger pressures on the province's economy than was previously known, according to a report by DBRS released Thursday. The ratings agency said it expects Alberta will suffer a contraction in real GDP of 1.5 per cent in 2016 - and warns that this estimate does not fully factor in the extended shutdowns of oil operations north of Fort McMurray. Calgary Herald, B1/FRONT

*** Fort McMurray shops and restaurants slow to spring back to life**
Ten days after residents started trickling back into Fort McMurray, much of the city has begun to look and sound like itself. Highway 63 is buzzing with trucks. More workers are back on the job at oilsands sites. The city's waste disposal service is preparing to resume a normal collection schedule. The Miskanaw Golf Club on MacDonald Island Park has started taking tee times. But most of Fort McMurray's small business sector remains closed. While cleaning crews are busy vacuuming, wiping and spraying inside some retail outlets, other businesses look as if they haven't been touched since the May 3 evacuation. Postmedia (Edmonton Journal, A2)

*** Lives pulled from the ashes**
In the grips of final stage cancer, all Quentin Thomas wanted to do was to spend his last few days at home in peace. Fort McMurray's wildfire wouldn't give him that peace, forcing the bed-ridden 48-year-old to be evacuated with the rest of the city. "They had to take him out in a bed sheet," said his brother Sheridan Thomas. "He died three days later in the Lac La Biche hospital." That same day he died, his family received confirmation that Thomas' home in Stone Creek had been destroyed. On Wednesday, his son and brother returned to the home on Prospect Drive for the first time to look for any mementos of their relative. But rather than fumble around in the hazardous debris themselves, the Thomases had help from a group of specially trained volunteers. Postmedia (Edmonton Sun, A10; Edmonton Journal, Calgary Herald)

*** Cenovus, CNRL restore production as fire threat eases**
Operations are returning to normal in the Wabasca area of northern Alberta after a wildfire prompted two companies to cut back heavy oil production earlier this week. Cenovus Energy Inc. said Thursday it was bringing about 50 staff back on-site and was in the process of restarting oil production at its Pelican Lake facility. The company removed 118 staff from the facility and shut down about 23,000 barrels a day of production after a wildfire was discovered about a kilometre away from the site Tuesday. Canadian Press (Calgary Herald, B4; Red Deer Advocate, Times Colonist); Globe and Mail

Other / Autres

*** Canada's forest ministers call on feds to do more in fight against wildfires**
An already devastating wildfire season has prompted forest ministers across the country to call for a more national focus on battling big blazes. The Canadian Council of Forest Ministers has released the *Canadian Wildland Fire Strategy: A 10-year Review and Renewed Call to Action* in which they say more needs to be done. "Recent wildfire seasons in British Columbia and the devastating situation in Fort McMurray have shown all of us that no province can go it alone when fighting wildfires," B.C. Forest Minister Steve Thomson said. "We need a cohesive, national strategy to ensure we are all better prepared (...)"While the goals still exist, the ministers say progress over the past 10 years has been slower and more costly than anticipated. "The federal, provincial and territorial governments must

recommit to the strategy as partners and effectively support its continued implementation to ensure that Canada is able to meet the challenges that lie ahead," the report says. CBC News

*** YARMOUTH COUNTY: Residents stirred, not shaken by small quake**
Residents of the Pubnico area took to social media Thursday afternoon, asking each other if what they had just felt was an earthquake. "We didn't know what it was at first," said Rosette d'Entremont of Lower West Pubnico. "We thought maybe it was a big truck going by or thunder but it didn't stop. The noise kept going." The seismogram on the Natural Resources Canada website recorded several small spikes of activity around the time of the rumbling that was felt throughout eastern Yarmouth County. Natural Resources seismologist Stephen Halchuk confirmed that a 3.0 magnitude earthquake happened at 5:43 p.m. 20 kilometres north of Yarmouth. Chronicle-Herald, A4; CBC News

*** Severe thunderstorm warnings in effect for parts of southwestern Manitoba**
A tornado warning was downgraded to severe thunderstorm warnings in parts of southwestern Manitoba Thursday evening, and residents took to social media to document #mbstorm. Environment Canada has issued severe thunderstorm warnings for Melita to Boissevain, including Turtle Mountain Provincial Park, from Minnedosa to Riding Mountain National Park and from Virden to Souris. Severe thunderstorm watches have also been issued for much of southwestern Manitoba. Winnipeg Free Press; CBC News

*** Super-sized El Nino over**
This year's monstrous El Nino, nicknamed Godzilla by NASA, is dead. It heated up the globe, but didn't quite end California's four-year drought. In its monthly update Thursday, the National Oceanic and Atmospheric Administration said the El Nino has ended, 15 months after its birth in March 2015. El Nino is a natural warming of parts of the central Pacific that changes weather worldwide. "There's nothing left," NOAA Climate Prediction Center deputy director Mike Halpert said. "Stick a fork in it, it's done." Halpert said this El Nino triggered droughts in parts of Africa and India and played a role in a record hurricane season in the Pacific. It also added to man-made warming, as Earth has had 12 straight record hot months and is likely to have its second straight record hot year. Associated Press (Chronicle-Herald, A10)

*** 2013 Calgary floods spawned 'increased demand' for services from non-profits: World Conference on Disaster Management speaker**
Non-profit organizations need to be prepared for natural disasters so they can help deliver public services, speakers suggested Tuesday at the World Conference on Disaster Management. From research conducted after the floods in affecting southern Alberta in 2013, the Calgary Chamber of Voluntary Organizations found that fewer than 50% of non-profit organizations "actually had business continuity plans in place," said Matt Sawatsky, emergency preparedness coordinator for CCVO. One part of a CCVO project involves helping non-profits prepare themselves for an emergency, Sawatsky suggested during a presentation Tuesday at the World Conference on Disaster Management. Canadian Underwriter (2016-06-09)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Iran loses key court battle to terror victims
The Iranian government lost a key court battle Thursday when an Ontario judge ordered the Islamic republic's non-diplomatic assets in Canada to be handed over to victims of terrorist groups sponsored by Tehran. The long-awaited ruling by the Ontario Superior Court dismissed every argument Iran's lawyers had made at a trial held in Toronto in January, leaving Tehran financial responsible for the actions of the terrorists it has backed. "Terrorism is one of the world's greatest threats," Justice Glenn Hainey wrote. "The broad issue before the court is whether Iran is entitled to immunity from the jurisdiction of Canadian courts for its support of terrorism." Iran's diplomatic buildings in Ottawa remain unaffected, but several nondiplomatic properties and the contents of a list of bank accounts were awarded to the victims of the Iraniansupported terror groups Hamas and Hezbollah. The $13-million case was the first challenge of the Justice for Victims of Terror Act. The 2012 law allows victims to collect damages from state sponsors of terror groups. Canada has designated Iran and Syria state sponsors of terrorism. "The JVTA continues to do its job in holding Iran - the world's most egregious state sponsor of terror - accountable for its terrorist

crimes," said Danny Eisen of the Canadian Coalition Against Terror, which represents victims and lobbied for the law. "As Canada seeks to re-engage Iran it is critical that Iran continue to be held to account in Canadian courts for its terrorism and human rights abuses." Postmedia Network (National Post, A1, Vancouver Sun)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

La F1 crée 4 fois plus d'offres d'escortes

Le nombre d'annonces d'escortes offrant des services sexuels sur le «Kijiji du sexe» a quadruplé à l'approche du Grand Prix de Montréal, d'après un outil d'analyse créé par un ex-policier. Pas moins de 1000 annonces ont été placées pour la grande région de Montréal dans la seule journée d'hier sur ce site dont nous tairons le nom pour ne pas nuire aux enquêtes policières. (...)«On a déjà identifié des cibles. Plusieurs dizaines de policiers surveilleront tous les endroits où il est possible d'acheter des services sexuels», explique l'inspectrice-chef du SPVM Johanne Paquin, responsable du plan d'action sur la prostitution et la traite de personnes. (...)La frontière canado-américaine et l'aéroport de Montréal seront aussi plus surveillés qu'à l'habitude. «Nos agents peuvent déceler si une voyageuse se trouve sous l'emprise d'une autre personne qui l'accompagne. On va mettre l'accent là-dessus», rapporte Dominique McNeely, porte-parole de l'Agence des services frontaliers du Canada. Des dizaines de policiers de la GRC seront aussi présents «dans des lieux stratégiques» pour appuyer le SPVM. «On va chercher des infos sur le terrain, pour remonter ensuite jusqu'à ceux qui font le trafic humain. Et on veut vraiment faire réaliser aux consommateurs qu'ils encouragent l'exploitation sexuelle. Même s'ils font quelque chose une fois pour le plaisir, c'est criminel», souligne la caporale Camille Habel, porte-parole de la GRC. Journal de Québec, 27 (Journal de Montréal)

Désengorger les frontières

Vous avez déjà poireauté de longues minutes à la frontière en cuisant dans la voiture, tout en rageant contre l'inefficacité des douanes ? Vous n'êtes pas seul. La frontière terrestre vers les États-Unis est franchie chaque année à 47 millions de reprises par des (...) Ottawa veut donc s'inspirer du système de prédédouanement des aéroports. Un projet-pilote sera mis en place dans les gares ferroviaires de Vancouver et de Montréal et devrait être élargi aux gares d'autocars, puis aux autoroutes. (...) Selon une étude du Congrès, l'économie américaine perd 116 millions de dollars pour chaque minute de retard dans les couloirs d'inspection de la frontière sud. Ce qui représente des milliards de dollars et des milliers d'emplois. Parce que chaque dollar investi est multiplié dans le commerce interfrontalier, il y aura lieu de songer à un programme 560 pour les points d'engorgement de la frontière canado-américaine. Il suffit de rappeler que 2,5 millions de camions de marchandises franchissent chaque année la frontière entre Détroit et Windsor. L'actualité, 35

B.C. man admits leading cross-border drug-smuggling operation, knows 'how bad it looks'

A B.C. man being sentenced in Seattle Friday for leading a major drug-smuggling ring says he's turned his life around since the charges were laid against him in 2009. Sean Doak wants U.S. Federal Court Judge Robert Lasnik to consider how far he's come in his rehabilitation despite years of involvement in the B.C. drug trade. "I have chosen to live a different life and have lost all interest in criminal activity," Doak, 42, said in a letter to the judge filed this week. "I recognize how bad it looks and is that I reoffended while on parole. This was a relapse in my criminal addiction and I am sorry for this." His lawyer Michele Shaw is asking Lasnik to sentence Doak to seven years in jail. But the U.S. Attorney wants a sentence that is six months longer, noting that Doak "fought extradition tooth and nail" before the Supreme Court of Canada refused to hear his appeal last October. "Mr. Doak was the leader and organizer of this group because he was the one with experience, connections, money and knowledge of the Canadian drug trafficking world," Asst. U.S. Attorney Susan Roe said in her sentencing memo. Vancouver Sun, 761 (The Province)

Travellers facing longer security lines at airports

Canadians risk flight delays and even longer airport security lines unless Ottawa boosts screening funding to address growing passenger levels, industry experts are warning. "It is on the cusp of being a real problem, with serious, serious delays," says John Gibson, chairman of the Canadian Airports

Council. Canadian airports aren't currently facing the chronic disruptions that are increasingly angering U.S. passengers. Still, lines have steadily grown over the last few years as Canadian funding hasn't kept pace with the 21 per cent increase in passenger growth over the last five years. The Canadian Air Transport Security Authority (CATSA) says, on average, it screens 85 per cent of passengers within 15 minutes. But waits can be much longer at some large airports during peak travel times, with additional pressure potentially coming during the rush of summer travel - and the number of passengers is growing by 3.5 per cent each year. If nothing is done to address the bigger volumes, Gibson said, passenger waits could regularly reach an hour. Red Deer Advocate. C3

Why can't our airport screening be better?
An opinion piece states, "Chuck Strahl was a well-liked and respected minister in the Harper government. One day, as minister of transport, he held a photo op-cum announcement at the Ottawa airport. He promised measures to speed up screening at airports. A good news announcement if ever one existed. Except that shortly after, a new test appeared. Selected passengers would now be required to show the palms of their hands and be checked for powder residue, in case they had been making bombs or other explosives. Agents for the Canadian Air Transport Security Authority (CATSA), when asked how this new test jibed with the minister's declaration, delivered their usual blank stares. We are only administering Transport Canada's policies, the agents correctly replied. (…)In Canada, for reasons no CATSA officer has ever been able to explain to an inquiring traveller, the Nexus card gets the traveller into a shorter line but then he or she is given the same scrutiny as everyone else - despite having been prescreened to get the Nexus card." The Globe and Mail, A13

Report highlights foreign worker abuse
Changes made to the Temporary Foreign Worker Program by the Harper government since 2014 increase the risk that low-wage migrant workers who come to Canada will be abused, according to a report released Wednesday afternoon by the Metcalf Foundation, a charitable organization in Ontario. "We've seen a rise in concern about the widespread exploitation of workers under the program, but what we know well is that those experiences of exploitation are a product of the system we've created," said Fay Faraday, the report's author and a human rights lawyer. With the federal government's review of the TFWP, the report, entitled "Canada's Choice," says that Canada is at a crossroads with respect to immigration. "Are we going to choose decent work? Or are we going to choose entrenched exploitation?" said Faraday, who advocates for a system that offers working class migrants a chance to lay down roots. Calgary Herald, A3

CYBER SECURITY / CYBERSÉCURITÉ

*** Why the meaningless hack attacks?**
An opinion piece states "On Monday, Drake was hacked. On Tuesday, Lana Del Rey was hacked. This followed a spate of social media hijackings, including virtual violations of Katy Perry, Kylie Jenner, the NFL and Chelsea Handler. As the Huffington Post noted: "It Appears Every Celebrity Twitter Account Is Being Hacked Right Now." It does. But to what end? Before we go any further, let me be clear: Hackers, I am not making fun of you. I'm not. Since I can barely recall my passwords - remind me to change my Star email to xd7wg43sasd+jgs68#?s after this column - I respect your ability to unearth ones you never created. So please do not steal my identity or pilfer my meagre RRSP or commandeer my texts unless you have time to send long overdue replies to distant relatives, in which case I'll give you the damn password. I'm just trying to understand your motivation. Toronto Star, E3

LAW ENFORCEMENT / APPLICATION DE LA LOI

*** Beef up number of Mounties abroad or lose ground on terrorism, organized crime**
As the threat from terrorism and organized crime becomes more global, Canada's national police force is facing questions over whether to send more of its members abroad - in other words, take the fight to the bad guys before they land on our shores. A newly released internal report says the RCMP's "international footprint" is relatively small compared to its allies. While the RCMP has 55 liaison officers and criminal

analysts abroad, Britain and Australia each have roughly twice as many. Unless the RCMP's international presence is beefed up, it runs the risk of being "unable to fully respond" to terrorism, drug trafficking, money laundering, illegal migration and cyber crime, the report warns. "The fact that combating criminality and instability in other countries leads to safer homes and communities in Canada should by now be beyond question, and ought to be both a cornerstone and raison d'etre of and for Canada's international policing efforts," says the report, completed by an RCMP analyst in late 2014 and obtained under access-to-information legislation. In an interview, RCMP Chief Supt. Eric Slinn said the number of deployments is constantly being evaluated. He noted the 55 personnel stationed abroad today are a "significant improvement" from the 38 members the force had just a few years ago. The fact that combating criminality and instability in other countries leads to safer homes and communities in Canada should by now be beyond question. "Quite candidly, I don't think we take a second seat behind anybody," he said. "We do in terms of numbers, but in our capabilities and our relationships and what we can leverage and get done, I feel very strongly we've got some solid people and we're doing a good job for Canadians." The release of the report comes at a time when public safety and intelligence officials are trying to keep tabs on roughly 180 people who left Canada and are suspected of engaging in terrorist activities abroad. Postmedia Network (National Post) (2016-06-09)

RCMP's BlackBerry-cracking methods could be revealed in Quebec court

A Quebec court could today pull back the curtain on secretive police techniques, including how the RCMP intercepted BlackBerry text messages to prove a murder conspiracy plot, as a judge considers whether to lift a publication ban in a case involving the Montreal Mafia. The case stems from Project Clemenza, a police operation that resulted in scores of organized crime arrests in 2014. At the time, police announced they had intercepted more than one million BlackBerry messages tied to allegations of drug trafficking, kidnapping, arson, weapons and other violent offences. (…) Chief Supt. Jeff Adam, who oversees the RCMP's Technical Investigations Services, declined to discuss with CBC News the specific methods used. But given rapid changes in technology and public concern in the post-Snowden era, as mobile developers move toward more secure "end-to-end" encryption, he says investigators are finding their jobs increasingly difficult. "What we're seeing now is … the best evidence of people conspiring to commit a crime is lost to us. And that's what we call 'going dark,'" Adam said. CBC News

Complaint against RCMP in limbo

A young woman who went to the police station in search of an acquaintance was struck in the face and legs by RCMP officers while in handcuffs, a year-old complaint alleges - one that remains unresolved to this day. The Jan. 7, 2015 incident, which was captured on video, prompted her lawyer Gary Wool to file a complaint on the woman's behalf with the Civilian Review and Complaints Commission for the RCMP, which investigates allegations from the public of Mountie wrongdoing. The woman was charged with assault causing bodily harm to a police officer, a charge withdrawn after the Crown prosecutor viewed the video at her lawyer's request. The Lethbridge Regional Police Service in Alberta was called in to carry out a criminal investigation. The complaint filed in May of last year is based on surveillance footage because the woman doesn't have a clear memory of what happened. The complainant, who Yellowknifer has been unable to contact and whose name has been withheld in records obtained, went to the city's RCMP building on 49 Avenue after being told someone she knew was being held by police. (…)She was handcuffed and taken to the booking area. Her shoulders were being held by Const. Miranda Porr and Const. Cory Wallace and her face was about three inches from a wall. (...)Three years ago Wallace admitted to a March 2013 assault against a prisoner in courthouse cells. However, the charge was stayed in court by the Crown after the officer attended a community justice hearing. (…)The complaint was taken seriously by the complaints commission. A cover page on the report sent to RCMP Commissioner Bob Paulson in Ottawa states the allegations "may require a code of conduct or criminal investigation." Yellowknifer

ASIRT looks into gunfire, alleged bid to ram into officer's car

An investigation is underway into the circumstances surrounding an RCMP officer firing his weapon Wednesday after a police vehicle was allegedly rammed. The Alberta Serious Incident Response Team, or ASIRT, said Thursday it was conducting an investigation into the events that unfolded when Spirit River RCMP responded to a report of a suspected impaired driver. RCMP said that an officer caught up with the vehicle, a black Ram 3500, on Range Road 61 on Wednesday afternoon. The driver allegedly

turned and sped toward the officer's Chevy Tahoe. The officer got out and the pickup accelerated toward the officer. ASIRT said only that an "incident occurred" that led to the police officer firing his gun. RCMP made no mention Wednesday of the officer firing his weapon. The suspect was later arrested without injury, ASIRT said. He has not been formally charged. Edmonton Journal, A11

Relatives grateful for RCMP's work
Family and friends of a little girl who died from a devastating brain injury 12 years ago says no matter what a jury decides about the man accused of killing her, they'll finally have closure. The jury began Thursday deliberating in the case of James Paul Turpin, 37, who's accused of killing two-year-old Kennedy Corrigan in Central Blissville in April 2004. Deliberations will continue Friday. He was charged last year with second-degree murder, and his trial has unfolded over the past four weeks in a Fredericton courtroom. Turpin claimed Kennedy slipped in the bathtub while he had sole care of her the morning of April 2, 2004, and she struck her head. He had been dating Kennedy's mother, Connie Corrigan, in early 2004, which is why he was alone with the girl and his own three-year-old daughter in the Corrigan home on the date in question (...)Tracy O'Toole, Connie's best friend, said the family was relieved the case finally went to trial after so long. "This is what we wanted and so much more," she said. O'Toole read a brief statement from Connie Corrigan, who thanked the RCMP, witnesses and prosecutors for the work they put into Kennedy's case. Daily Gleaner, A5

* **Edmonton holds inaugural First Responders Day to show appreciation**
When bad things happen, they're the first to step up. They walk into burning buildings, while others run away. They face down dangerous criminals, pull people from twisted car wrecks, rush them to hospital. On Thursday, Edmonton said thank you by commemorating June 9 as the city's first ever First Responders Day. (...)First responders with Edmonton police, emergency medical services, fire rescue, sheriffs, peace officers, the military fire department, corrections and the RCMP were all acknowledged. CBC News (2016-06-09)

* **Opération Malaise sur l'exploitation sexuelle d'enfants: 2 arrestations vendredi**
Deux autres suspects ont été arrêtés jeudi lors d'un nouveau volet de l'opération policière baptisée Malaise qui lutte contre l'exploitation sexuelle des enfants sur Internet. La Sûreté du Québec (SQ) rapporte que Jean Simoneau, 73 ans, de Magog, et Ross Perrin, 62 ans, de Montréal, qui faisaient l'objet de mandats d'arrestation, comparaîtront au tribunal vendredi au Palais de justice de Montréal. Ces deux hommes devront faire face à des accusations en lien avec des contacts sexuels qu'ils auraient eu avec des gens d'âge mineur et pour de l'exploitation sexuelle. (...) L'Équipe d'enquêtes sur l'exploitation sexuelle des enfants sur internet (ESEI), qui a procédé aux arrestations, regroupe des enquêteurs de la Sûreté du Québec et de la Gendarmerie royale du Canada. Presse canadienne (L'Actualité, Huffington Post, La Presse)

Historical gravestones vandalized
Vandals toppled over and broke historical gravestones marking early Island settlers in a Cowichan Valley cemetery last week, RCMP say. "It's inexcusable," said Cpl. Krista Hobday from the North Cowichan/Duncan RCMP. "These are historical items dating back to the mid-1800s." Sometime between June 6 and 8, vandals pushed over 13 gravestones at the Pioneer Cemetery on the corner of Pioneer and Herd Roads, Hobday said. Two of the markers were broken. The cemetery holds the graves of the earliest settlers in the area, she said. Unfortunately, it is also known to be a party spot. "In other cemeteries, family or someone might replace the gravestones, but who is going to replace these ones? They're a piece of our history." Times Colonist, A5

Battleford RCMP warn of attempted child abduction
Battleford RCMP are investigating a report of an attempted abduction of a child from a school yard in Battleford. The alleged incident was reported to have occurred some time between 2 to 2:15 p.m. on Thursday June 9th. Police says a 10-year old child was grabbed by an arm and directed to come with the suspect to a nearby vehicle. The child screamed and the man was reported to have let go of the child and fled in the vehicle. The child was not injured during this incident. 620 CKRM

* **RCMP arrest and charge third teen in brutal assault north of Winnipeg**

RCMP say they have arrested a third suspect in the violent assault of two workers at an addictions centre north of Winnipeg. During the May 29 attack Jackie Healey, a 23-year-old work placement student, suffered a fractured skull, broken teeth and blindness in her left eye. The other victim, a support worker at the facility, has extensive damage to her face, jaw and eye. Two youths, aged 16 and 17, were charged late last month with aggravated assault and robbery. Police say a third teen has been arrested and charged, but declined to provide further details. The Manitoba government has said it will conduct a workplace safety investigation into the attack at the Behavioural Health Foundation in Selkirk. Canadian Press (Brandon Sun), CBC News (2016-06-09)

* **Quatre carabines et 500 plants de marijuana saisis**
Un homme âgé de 33 ans a été arrêté à la suite d'une perquisition qui a mené à la saisie de quatre armes à feu et d'une importante quantité de plants de marijuana. Lundi, des agents de la GRC ont exécuté un mandat de perquisition dans une résidence de Bairdsville, près de Perth-Andover. La police affirme avoir saisi plus de 500 plants de marijuana à diverses étapes de croissance, ainsi que de l'équipement pour faire pousser de la marijuana, à l'intérieur comme à l'extérieur. Selon la GRC, une fois à maturité, le nombre de plants saisis aurait pu permettre de produire plus de 250 000 cigarettes de marijuana. La police a aussi saisi quatre carabines. Acadie nouvelle, 5

* **Muskrat Falls entrance blocked by protesters**
A group of protesters stopped traffic at the gate to the Muskrat Falls construction site Thursday. "[We] are trying to protect our people, our culture and our land," Jerome Jack told the CBC. Jack says he has been working for the Innu First Nation as an impact benefit agreement coordinator, but his phone has been cut off and he's uncertain of his employment. "A lot of deals were going on behind closed doors without my knowledge, without my people's knowledge, without my elders' knowledge." Jack says the First Nation was recently presented with an environmental assessment, including a caribou study, which he says was conducted by a private organization hired by Nalcor. (...)The protesters eventually let traffic out but say they will not be letting people in. "It seems to be a very peaceful protest." said Hubert Loder, who represents the project's unionized workers. RCMP were on site to monitor the protest. CBC News (2016-06-09)

Justice dept. pledges to save money
Manitoba's most popular baby names these days are Liam and Emily, Justice Minister Heather Stefanson revealed Thursday morning. Stefanson announced the information as the minister responsible for vital statistics, as she and critic Andrew Swan kicked off a civil and relatively tame first hour of committee hearings into Stefanson's departmental budget. (...)Stefanson said the province is spending $325,000 for three RCMP officers to serve as provincial police on Sioux Valley First Nation near Brandon, after that community opted out of Dakota-Ojibway policing. Justice is spreading an additional $232,000 among five agencies providing services to victims of crime, and $44,000 will allow retired justices of the peace to help clear up backlogs in traffic court. Winnipeg Free Press, A4

Mountie trades gun for horse
The face of the RCMP in the NWT has left her post in Yellowknife to join the iconic RCMP Musical Ride. Const. Elenore Sturko's last day on the job in Yellowknife was June 3. She had been the Mounties' media liaison officer for Yellowknife and the NWT since September 2014. Sturko lived in Yellowknife back in 2004 when she worked for CBC North. In 2010, she left the media organization to join the RCMP and began her policing career in Langley, B.C. She was posted back in Yellowknife in 2012. The musical ride, based in Ottawa, is performed by a full troop of 32 riders and their horses. Their performance consists of intricate figures and drills choreographed to music. Sturko said she had to go on a five-week course to determine whether she is suitable for the musical ride. (...)It is not clear who, if anyone, is going to replace Sturko as media relations officer. Yellowknifer

* **Smoke shops not helping Dakota First Nations**
An editorial states, “Earlier this week, several Dakota First Nation members who were charged for selling contraband tobacco lost a legal bid to have the case tossed out on the grounds that their people have no official treaty with Canada, and therefore the courts have no jurisdiction. As the Winnipeg Free Press reported, the two accused, - smoke shop owner Craig Blacksmith and employee Tammy Walters – were

arrested during a 2014 raid by RCMP on Dakota Plains near Portage la Prairie. RCMP, the Dakota Ojibway Police Service and Manitoba Finance taxation officials seized 4,800n cartons, which amounted to 951,225 cigarettes. More than 1,840 tins of chewing tobacco, six firearms, one vehicle and an unspecified amount of cash were also seized. All told, finance officials calculated $292,572.68 of tax was avoided. (...) For anyone who has been following the ongoing and controversial issue of the non-treaty Dakota in western Manitoba, this argument – that Dakota Plains has no official treaty status in Canada, and therefore should not be subject to Canadian law – is a familiar refrain, one that has not seen much traction in our federal or provincial courts." Brandon Sun

*** Quebec will soon have registry**

Bill 64, which requires the registration of long guns, was adopted on Thursday at the National Assembly, on the eve of the adjournment of the current parliamentary session. Since its filing last December, the bill to provide Quebec with a firearms registry did not have unanimous approval among the population, particularly in rural areas where there are many hunters. The bill passed with 99 votes in favour and eight against. There were no abstentions. About a third of the Coalition Avenir Québec (CAQ) caucus, seven MNAs, voted against the bill, as well as Sylvie Roy, a former CAQ member from Arthabaska, who became an independent. Premier Philippe Couillard imposed party discipline on his MNAs in order to pass the bill, but not the CAQ; their caucus was divided on the issue. Some Liberals and members of the PQ had reservations, but all rallied in the end, passing the bill. The bill was tabled last December by Public Safety Minister Pierre Moreau, and it was his successor, Martin Coiteux, who brought it to fruition. The gun registry, once in place, probably in 2018, will replace the federal firearms registry that was abolished by former prime minister Stephen Harper. His decision triggered concerns in Quebec. Under Bill 64, any firearm on Quebec territory must be registered with a unique number, and shall be listed in a file. Montreal Gazette, A10; Presse canadienne (Voix de l'Est, Le Quotidien, Le Soleil, La Tribune); Agence QMI (Journal de Québec); CBC News (2016-06-09)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Segregation used most in Manitoba jails

Nearly one in 10 prisoners in Manitoba's jail system is kept in segregation, believed to be the highest proportion in the country and significantly higher than the rate recorded in the federal system. But as the federal government, Ontario and Saskatchewan have announced they are reviewing their policies on solitary confinement, Manitoba says it will not follow suit. Manitoba's new Justice Minister, Heather Stefanson, said through a spokeswoman that the province does not plan to review its policy. "There are no plans to review segregation policies at this time," Amy McGuinness said. Just less than 9 per cent of the inmates held in Manitoba's provincial jails are kept in segregation, on average, according to the province's ministry of justice. That's the highest rate in Canada, based on an array of single-day figures gathered from across the country by The Globe and Mail, and much higher than the estimated 5 per cent in the federal correctional service. (...) The neighbouring province of Saskatchewan said this week that it is reviewing its segregation policy. The Globe recently reported that Richard Wolfe, an indigenous man who co-founded the Indian Posse street gang, spent 640 straight days in solitary confinement at a Saskatchewan provincial jail from 2014 to 2016. Mr. Wolfe died of an apparent heart attack at the penitentiary in Prince Albert on May 27. Saskatchewan joins Ontario, which announced a wholesale review of solitary confinement policy last year, and the federal Correctional Service Canada, which has ushered in a series of reforms to its solitary confinement regime. The CSC changes came in the wake of a damning coroner's inquest into the suicide of an isolated teen inmate, Ashley Smith, as well as a Globe and Mail investigation into the death of Edward Snowshoe, who took his own life after languishing in a solitary cell. Studies have found that prolonged spells in solitary confinement can lead to a range of health problems, including hallucinations, anxiety, loss of impulse control, severe depression, heart palpitations and reduced brain function. In many cases, according to one study, the damage is irreversible. Globe and Mail, A1

Parolee ditches ankle monitor

A federal inmate released on parole earlier this month had no intention of following any of the conditions attached to his release. "I told them right from the start, I wasn't going [to Saint John] and I didn't want to

leave the institution," said Andrew Donald MacKenzie in Moncton provincial court on Thursday. MacKenzie was arrested Wednesday on a charge of being unlawfully at large while serving a sentence and pleaded guilty. Prosecutor Eric Lalonde said the federal inmate was released on parole from a prison in the region on June 3 and he was wearing an ankle monitor to track his movement. MacKenzie was supposed to take a specified route to Saint John where he had to live while on parole. Instead, he came to Moncton and ditched his tracking device Times & Transcript, A3

Escaped inmate
An escaped Joyceville Institution inmate has been recaptured by Ontario Provincial Police in Amherstview. Det. Const. Steve Sermet of the provincial Repeat Offender Parole Enforcement (ROPE) Squad confirmed that Roger Strome was arrested near the intersection of County Road 6 and Taylor-Kidd Boulevard on Thursday. During the 4 p.m. inmate count on Wednesday, Strome, 44, was unaccounted for. Strome started his 10-year, three month, 15-day sentence on Jan. 8, 2008, after being convicted of 74 counts of theft of property-related offences, including break and enter and possession of property obtained by crime and theft. His sentence was scheduled to end on April 22, 2018. Kingston Whig-Standard, A3; Peterborough Examiner (2016-06-09)

Drunk driver loses appeal
After losing an appeal of his nine-year sentence for a deadly drunk driving crash, Brian Okemahwasin insisted he still needs to set the record straight and may head to a higher court. "I just took off at the wrong time," he told the Saskatchewan Court of Appeal on Thursday, describing the crash that claimed the life of an elderly Regina man almost two years ago to the day. "I wasn't looking for a lesser sentence. I just didn't want to sound like a monster," added Okemahwasin. During his submissions, several times - seemingly struggling for words - Okemahwasin alluded to his treatment and abuse in an Indian residential school as a child. "I'm not trying to sound like a victim here. ... Being 10 years old, who do I go to? How do you tell someone that?" he said. "My life was ruined. It was taken. ... Alcohol was the only ah - ," he said, his voice trailing off. On June 8, 2014, Garry Tatham left home early that Sunday morning to go wash his wife's car. Around 7 a.m., he was stopped at a red light on Albert Street at 6th Avenue North when a Ford F-150 driven by Okemahwasin slammed into the rear of the car. The then 41-year-old Saskatoon man had been spotted driving recklessly on Highway 11 earlier that morning. (…) In May 2015, Regina provincial court Judge Jeff Kalmak off sentenced Okemahwasin to nine years in prison after he pleaded guilty to impaired and dangerous driving causing death. With credit for time already served, seven years and seven months remained on the sentence. Postmedia Network (Leader-Post, A1, StarPhoenix)

*** Vancouver court to hear appeal in Armstrong teen's murder**
The man found guilty of murdering an Armstrong teen in 2011 will have his appeal heard tomorrow in Vancouver. Matthew Foerster was sentenced to 25 years in prison after a jury found he had beaten and killed 18-year-old Taylor Van Diest on Halloween of 2011. Her body was discovered along some train tracks. Foerster was given no chance of parole after he was convicted. The now 30-year-old was found guilty in 2014. 640 Toronto; Global News

*** Disgraced fire official paroled**
Robb Kidd, a former top-ranking officer with the Kingston Fire Department, is back in the news tonight. He's appealing his sentence on sex-related crimes. But C-K-W-S news has learned that while waiting for a July court date — Kidd has been released from custody. Here's Newswatch's Morganne Campbell. He spent three decades as a rising star within Kingston's Fire Service, acting as the assistant to the Fire Chief and director of fire prevention. That was until Robb Kidd's dramatic fall from grace. Convicted of making and possessing child pornography, indecent exposure and voyeurism in March of last year. And after serving only one sixth of his nearly four year prison term…..Kidd is free on parole — and is residing at his home in Battersea. Kidd was granted full parole last week under a former policy which was abolished in 2014, but still applied to Kidd because his case was grand-fathered. Holly Knowles: "Accelerated Parole Review is a review that takes place by the Parole Board of Canada for first time offenders who are convicted of non-violent offences." (…) The parole board has also advised Kidd not contact any of his victims or their families, and must continue treatment for sexual deviancy. CKWS (2016-06-09)

'Violent sexual offender' faces new charges
A man Yellowknife RCMP previously warned the public about and called a "violent sexual offender" now faces 10 new charges, including sexual assault, in Pangnirtung, Nunavut. Jonah Keyuajuk was subject of the rare public warning that said he poses "a risk of significant harm to the public" in August of last year when he was being released at the end of a jail sentence. Police applied to have a judge place strict conditions on his freedom after release. Within a day of being released here last summer, he was charged with and later convicted of violating his conditions. (…) Keyuajuk returns to court June 14 in Iqaluit. He has numerous violent and sex-related crimes on his record. A 2014 psychological assessment diagnosed him as a psychopath. A Parole Board of Canada report about Keyuajuk from 2014 states the man had denied committing crimes and claimed he was wrongfully convicted. The report states during an interview with a psychologist he denied he required treatment for sexual offences, that he has an anger problem and he minimized his offences against women. Yellowknifer

Sentence hearing looms for men who worked together to kill mobster
Six of eight men implicated in the Nov. 24, 2011 murder of Salvatore Montagna are scheduled for a sentence hearing Friday. The six pleaded guilty March 30 to being part of the conspiracy to murder the mobster. Here is a breakdown of those involved: Paul Cherry writes. (…) CALOGERO MILIOTO, 45: Prior to his arrest in connection with Montagna's murder, Milioto had been arrested twice before in Quebec but the charges never stuck. One of those cases involved Project Crosière, an investigation into how several criminal organizations based in Quebec were purchasing cocaine from a Mexican drug cartel and smuggling it into Canada. More than 60 people were arrested in the investigation in 2008 including Milioto and Antonino Milioto, who was reported to be Calogero's father. A search warrant at Antonino Milioto's home turned up 10 kilograms of cocaine and he ended up serving a 66-month prison term. According to decisions made by the Parole Board of Canada while he served that sentence, Antonino Milioto was considered by police to be a member of the Mafia in Montreal. Montreal Gazette, A5

*** Top court may examine dangerous offender law**
A fight over the constitutionality of the dangerous offender law is headed for the Supreme Court of Canada. Vancouver lawyer Gary Botting is seeking leave to appeal to Canada's highest court a recent B.C. court ruling that upheld the law following an earlier ruling that struck it down as unconstitutional. Botting, who represents dangerous offender Donald Boutilier, says that if the Supreme Court agrees to hear the appeal, a lot will be riding on it, since at least a dozen other cases have agreed to await the outcome of the case in which he is involved. In May 2012, Boutilier pleaded guilty to two counts of robbery, assault with a weapon, two counts of use of a firearm in the commission of an offence and dangerous driving. The Crown sought to have him declared a dangerous offender, but Botting argued in court that the law was unconstitutional because it had removed the discretion of judges to consider prospects of treatment at the "designation" stage of the process, leaving it for the sentencing stage. In declaring the law unconstitutional, Justice Peter Voith found provisions of the law to be overbroad and capable of including a category of offender who might not actually be dangerous, such as people who were mentally unwell or drug addicted and might have prospects for treatment. The judge suspended his declaration of invalidity of the law for a year to give Parliament a chance to amend the dangerous offender legislation. However, he refused to grant Boutilier an exemption and declared him a dangerous offender. Vancouver Sun, A13

*** Guides finish week of training ahead of KP tours**
It's the hottest ticket in town this summer. Tens of thousands of tickets have already been sold to take a tour of Kingston Penitentiary. Guided tours of the notorious prison start on Tuesday. But as Newswatch's Paul Soucy found out, tour guides were getting their training today. This is how most summer student jobs start – with orientation. But this summer job – is anything but ordinary. These 31 students are training to be tour guides at Kingston's newest attraction. CKWS (2016-06-09)

*** This Is Not My Life: A Memoir of Love, Prison, and Other Complications**
An opinion piece states, "I once managed a local museum where, occasionally, individuals charged with misdemeanours would work off their community service hours. One of them, call her "Wanda," was an intelligent and capable single mother. She and I were the same age, and often discussed personal

relationships. I talked about my lack thereof, and she talked about her boyfriend, incarcerated at the Atlantic Institution, a federal corrections facility for repeat and violent offenders in Renous, New Brunswick. One day, when Wanda was chatting about a recent visit there, she asked, "Why don't you come up with me some weekend? There's lots of really nice guys in there." I politely turned down her suggestion, but what if I had seriously considered it as an opportunity for romance? Perhaps I'd now have a story similar to that of Diane Schoemperlen, a Governor General's Literary Award–winning Canadian novelist and short-story writer whose five-year relationship with an inmate of the former Frontenac Institution in Kingston, Ontario, has resulted in her latest book, the memoir *This Is Not My Life*. It's an often frustrated – and frustrating – account of how Schoemperlen, damaged, needy, and full of romantic notions, allows her life and well-being to become secondary to that of "Shane," equally damaged and needy – but also inherently dangerous. (…)Self-examination aside, Schoemperlen recounts the quotidian details common to the partner of a prison inmate, including the intense inventory of self, clothing, and driver's licence in preparation for visits, writing letters to parole officials, psychologist appointments, frantic middle-of-the-night phone calls, delays, and disappointments. She also describes her relationships with other inmates and their families, the prison employees, and the inner workings of the carceral system, and becomes something of a prisoners' rights crusader, denouncing Bill C-10, the Conservatives' "tough on crime" legislation." Quill and Quire (2016-06-09)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Criminalité en baisse et accidents routiers en hausse**
Avec 14 078 infractions au Code criminel en 2015, la ville de Laval a connu son plus bas nombre en 5 ans, apprend-on dans le rapport déposé par le Service de police de Laval (SPL) devant le conseil municipal, le 7 juin. Pierre Brochet, directeur du SPL, rappelle que cette tendance est observée un peu partout en Amérique de Nord. «Chez nous, il faut tout de même souligner l'ajout de nouvelles techniques d'enquête où nous nous attaquons directement aux réseaux, ce qui amène nécessairement une telle diminution», mentionne-t-il. Les crimes contre la propriété et la personne ont notamment connu une baisse respective de 6 et 12 % par rapport à l'an dernier. Courrier Laval (2016-06-09)

*** Crime, collisions were up in Timmins in 2015**
Timmins Police Service processed roughly 25% more criminal charges last year than the year before. That was just one of the facts revealed Thursday as police chief John Gauthier presented the 2015 annual report to the police services board. Timmins Press (2016-06-09\0

*** Fentanyl-related fatalities up 200% in Fort St. John –**
Fentanyl-related fatalities are up 200 per cent in Fort St. John and the North Peace so far this year, according to new data released Thursday by the BC Coroners Service. In the first four months of the year, there have been six fatal fentanyl-related overdoses in Fort St. John, Pink Mountain and Wonowon -- a sharp increase from the two deaths reported in all of 2015. The numbers were updated from the Coroners Service's last report on May 13, when just two fentanyl fatalities were reported so far in 2016. "The revised data has been updated to reflect more final toxicology reports," said spokesperson Barb McLintock. In each of the deaths, fentanyl was detected either alone or in combination with other drugs, the Coroners Service says. Alaska Highway News (2016-06-09)

*** Illicit drugs overtake car accidents as the number-one cause of unnatural deaths in B.C.**
So many people have died of overdoses in B.C. this year that illicit drugs are now killing more people than automobile accidents. That's according to the province's chief coroner, who was in Vancouver today (June 9) for a meeting about the problem that was hosted by the B.C. Centre for Disease Control. "Last year, there were 300 deaths in motor vehicle incidents, and this year, as the minister said, we've had 308 deaths already from illicit drug overdoses," Lisa LaPointe said at a news conference. "If this trend were to continue, we'd be looking at about 750 deaths this year. So it's hugely significant. The number of people dying from illicit drug overdoses is higher than any other unnatural category." Straight (2016-06-09)

*** Alberta fentanyl-death data to be more detailed: government**

Alberta's fentanyl-related death data will be more detailed so that information will better target prevention efforts, according a spokesman with Alberta Justice. In late May, Alberta Health issued a release saying it's taking immediate steps to strengthen surveillance measures at the Office of the Chief Medical Examiner, after W-18 was linked to an overdose death. Dan Laville, spokesman for Alberta Justice, said the new surveillance measures will also include reporting fentanyl-related deaths on a quarterly basis and assigning someone to a director level to oversee other duties. "We're looking at the type of information that will target prevention efforts," Laville said. Metro News (2016-06-09)

*** La police en Ontario parle Arabe? C pas vrai!**
Des images de voitures du service de police de la ville de London, en Ontario, ont été largement reprises et partagées sur les réseaux sociaux au cours des dernières semaines. La raison de l'intérêt des internautes pour ces photos? Le texte en arabe sur les voitures de police qui a suscité énormément de commentaires, questions et appels adressés au Service de police de London. (…) Les réactions négatives liées à l'arabe peuvent sans doute être attribuées à la propagation sur internet d'un discours islamophobe qui va de pair avec l'augmentation des incidents à caractère islamophobes à travers le monde. Un sondage mené par Angus Reid Public Opinion en 2013 et dont les résultats avaient été publiés par la revue Maclean's, faisaient état d'une détérioration de la perception de l'Islam à travers le Canada au cours des quatre années précédentes. La façon dont les Canadiens voyaient les autres grandes religions — le christianisme, le judaïsme, le sikhisme, l'hindouisme et le bouddhisme — n'avait quasiment pas changé alors que l'islam était perçu négativement par une majorité des Canadiens Le maire de London, Matt Brown, a fait part de son outrage concernant un présumé incident raciste. La victime, un étudiant du nom de Mohammad Sharifi, a déclaré à la CBC que les deux agresseurs lui auraient crié plusieurs insultes racistes avant de le frapper à plusieurs reprises au visage. Il s'agit là du troisième incident impliquant des insultes raciales au cours des huit derniers mois à London, poussant ainsi le maire de la ville à prendre position contre la discrimination et la xénophobie. Il a déclaré : « Nous devons faire de notre communauté un environnement sûr et inclusif pour tous, indépendamment de la race, le sexe, l'orientation sexuelle — quoi que ce soit, » a-t-il dit. « Les crimes haineux ne seront absolument pas tolérés à London. Ils ne devraient être tolérés nulle part dans la province ou le pays. » Radio-Canada (2016-06-09)

*** Tight cop budget slowing response times: union**
A tight Winnipeg police budget has sparked longer emergency response times this year, according to the head of the Winnipeg Police Association. "To prevent layoffs, they've had to sacrifice safety," said Moe Sabourin, the union's president. Sabourin notes police tweeted warnings about long wait times due to high call volumes that exceeded resources twice in late May. "Our calls for service are right off the (chart). Where we are today, the calls for the services are 10,000 more than they were at this point last year," said Sabourin. On May 28, for example, police noted there were more than 150 calls in the queue throughout much of the previous night. Sabourin believes that's why he personally had to wait 30 minutes for backup after making an off-duty theft arrest on May 27, a top priority call he said would usually trigger a response within about five minutes. "It is a safety concern ... Thirty minutes is completely unacceptable," said Sabourin. Winnipeg Sun (2016-06-09)

*** There are perverts everywhere, but we needn't tolerate them**
An opinion piece states, "The perverts: We brush them off, most of the time. That guy on the sardine-packed subway rubbing his groin against your bum and you're just not sure if it's unavoidable proximity or deliberate pressing of the flesh. Because females are socially engineered to just let it ride. (…) From the police blotter in recent weeks: A 13-year-old girl followed through Fairview Mall by a male who took photographs "deemed sexual in nature"; a man videotaping women in the washroom of a downtown business; another man caught by a mall security guard using the phone on his camera to videotape under the door of a changing stall; a man arrested after aiming his cellphone up a woman's skirt on the subway; the pounce-and-run sex assaulter at the Finch station; a 36-year-old charged with four counts of sex assault on the Bloor-Danforth line; 46 counts of voyeurism laid against a Brantford man who allegedly used electronic surveillance devices to surreptitiously record three females when they showered. The Sûreté du Québec cop accused of spying on couples in a Quebec City hotel - by appropriating a security camera from the National Assembly. (…) Last year, the TTC reported 56 sexual assaults on Toronto's subway system - any type of touching of a sexual nature - down 16 per cent from 2014. The crime,

however, is largely under-reported and, in crowded subway cars, a passenger might not even realize she (or he) has been targeted or touched." Toronto Star, A2

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Justice dept. pledges to save money**
Manitoba's most popular baby names these days are Liam and Emily, Justice Minister Heather Stefanson revealed Thursday morning. Stefanson announced the information as the minister responsible for vital statistics, as she and critic Andrew Swan kicked off a civil and relatively tame first hour of committee hearings into Stefanson's departmental budget. Former NDP justice minister Swan repeatedly pressed Stefanson to say whether the Pallister government has established a cabinet committee on healthy children - which the NDP contends it is required to do by legislation - and whether it has constituted an aboriginal issues committee. Stefanson repeatedly answered that both are important issues, but such committees are not within her jurisdiction. Stefanson acknowledged she and Municipal and Indigenous Relations Minister Eileen Clarke will have the lead roles in Manitoba's involvement in the national inquiry on murdered and missing indigenous girls and women. Said Swan: "She's making the case that the aboriginal-issues committee needs to be constituted as quickly as possible." Winnipeg Free Press, A4

*** Despite progress, domestic violence rates still high**
Maria Hendrika has a penchant for sticking things through. If her long tenure with Regina Transition House wasn't enough, she has also been involved in the Provincial Association of Transition Houses and Services of Saskatchewan (PATHS) since its inception 30 years ago. The group was formed to provide a single voice for shelters, share best practices and set standards. (…) Saskatchewan has the "dubious distinction," as Hendrika called it, of having the highest rates of domestic violence and sexual assault as well. She wants to ensure that reports of assault are taken seriously and that there are safe ways for women to report. She would also like to see more attention paid to missing and murdered indigenous women. "This is a huge issue. People talk about murdered and missing like it's just a thing. No, these are people," said Hendrika. "These are daughters; these are wives." StarPhoenix, BR10

*** Iskwe draws from identity in her art**
With her face masked in geometric shapes, singer Iskwe appears like an abstract painting. She at first gives the impression that she is an upbeat R&B singer before quickly showing her art goes much deeper than that by moving to spoken word and songs that reflect her Dene-Cree and Irish background. Going only by her stage name, which translates to "woman" in Cree, Iskwe is bringing her chameleon-like performance to Yellowknife this summer for Folk on the Rocks. (…)While it certainly took time to raise enough money for the studio space, Iskwe explained she needed those extra years to grow into the singer she is today. Her first album touches on the usual subjects of love, loss and self reflection but her most well-known track titled Nobody Knows picks up on a more serious topic. After the 15-year-old indigenous girl Tina Fontaine was murdered in Winnipeg, Iskwe was both devastated and touched to see her community gather and share their sadness. The song is an ode to the 1,500 missing and murdered indigenous women across the country. "I had been hearing from a lot of people that have been impacted directly and it had been very much around me and this one acted as that tipping point," Iskwe said. "The numbers are so high and it came at that moment where it was like, 'That's enough. No more of this.'" Yellowknifer

*** Not Completely Happy**
An opinion piece states, "Not sure if you should be celebrating National Aboriginal Day on Tuesday, June 21?? Me either. Sure, I love an Indian Taco (the messier, the better) just as much as the next person. I absolutely *adore* a loud and colourful powwow outdoors on a summer day, and I most *certainly* am thrilled to celebrate the wide array of indigenous artists, authors, academics and awesome community builders across Turtle Island on a year-round basis. But if we're talking history, we can almost guarantee it's not all calories and colourful culture. (…) Saskatchewan has been a leader in missing persons for quite some time. According to CBC's database, there are 32 indigenous women who called Saskatchewan home

before they vanished. In January 2015, Nadine Machiskinic was brought to the hospital at four in the morning after being found injured at the bottom of a laundry chute of the Delta Hotel in Regina. Police issued a statement saying the "death of Machiskinic revealed no indication of foul play."A coroner's report, on May 20 says the 29-year-old mother of four's death was "accidental". "A young aboriginal woman, who lived a high-risk lifestyle in the sex trade, ends up at the Delta Hotel at 4 a.m. CST, and falls down a laundry chute and it's not anything to be considered suspicious?"Delores Stevenson, aschiskinic's aunt, told CBC. Machiskinic's death is just another story with details that barely skim the surface of Saskatchewan's dark, complex problems rooted in the ongoing effects of colonialism. Cases like Machiskinic's are common across the country. Within the past year, indigenous people are, yet again, faced with a system that continues to fail them." Planet S (2016-06-09)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Liquor board bosses, RCMP take part in planning for legalized marijuana market
Liquor board heads from across the country have quietly been meeting in New Brunswick with government officials from each province over the future sale of marijuana. The private gathering in Saint Andrews included a presentation from a top federal enforcement cop, panel discussions with industry growers, and research from policy experts in preparation for the sale, distribution and regulation of pot - now that Ottawa is moving toward legalization. The result of the multi-day meeting will now see liquor bosses move to brief their respective governments on the best practices they discussed at length with North America's top marijuana authorities. "Attendees were from the liquor boards, the Departments of Public Safety from each province and senior leaders from the beverage alcohol industry," said NB Liquor president and CEO Brian Harriman in an email. The Telegraph-Journal reported earlier this year that the NB Liquor boss has been heading research by liquor boards from across the country to prepare for legalized pot. The annual summer meeting of the Canadian Association of Liquor Jurisdictions was then slated for New Brunswick, stretching from this past weekend until Wednesday, with an entire roster of marijuana players lined up to speak. That included RCMP Cpl. Shane Holmquist, a supervisor on the Federal Serious Organized Crime Section's marijuana enforcement team. (…)Harriman said the meeting had more than 200 attendees from across Canada. Provincial government spokeswoman Elaine Bell said it was actually the Department of Public Safety that hosted the Association of Liquor Administrations of Canada at the annual conference. "While the legalization of marijuana is a federal decision, the working group of officials from multiple departments and agencies continues its work in anticipation of legislation to be tabled by the federal government in the future," Bell said. The working group is gathering research and assessing policy implications, with a balanced focus on examining health and safety risks and identifying job and revenue-generation opportunities for the province." Prime Minister Justin Trudeau has proposed legalizing and regulating pot, also pledging to work with local authorities to come up with distribution methods, which could vary from province to province. Times & Transcript, A1 (Telegraph-Journal, Daily Gleaner)

*** Despite the crackdowns, marijuana entrepreneurs are betting on "edibles"**
Virginia Maria Vidal started medicating with marijuana in 2003, after the birth of triplets left her with post-natal discomfort. She ran into trouble over the years, once being arrested, charged, and eventually acquitted of possessing 19 grams of pot. Even after obtaining a licence to use medical marijuana, the 45-year-old mother of six and caregiver to a grandparent with dementia found the smoke to be a nuisance and embarrassing. So she ground it into tea instead. (…) Ms. Vidal says the crackdowns aren't having a big impact on revenue – she also sells her product online and says demand is growing – but she's still worried. "It's going to be quite the battle," she says. "We need our Prime Minister to stand with us." Producing edibles in any form is illegal, however jurisdictions such as Vancouver and Victoria have chosen to ignore the law and regulate them instead. The federal laws are rarely enforced because the framework of regulations governing marijuana for medical purposes is evolving, and unlicensed producers continue to sell in stores or by mail. Last year, a Supreme Court judgment ruled that licensed patients couldn't be limited to consuming cannabis in smoking form only, but did not comment on the legality of edibles. Further, in February a federal court struck down restrictions preventing licensed patients from growing their own medical marijuana, giving the government six months to rewrite the laws. Canadian imprisoned: 'She won't be able to cope': Retired professor was studying women's role in Iranian Politics
Homa Hoodfar, the recently retired Concordia University professor detained in Iran, was researching women's participation in political life in Tehran when she was arrested and held for interrogation by Iranian security forces this week. She has not been permitted to leave Tehran's Evin prison since Monday, and has been denied access to both legal counsel and consular assistance. The prison is notorious around the world for its housing of political prisoners, and in Canada because of the 2003 torture death within its walls of Montreal-based photographer Zahra Kazemi. There are fears Hoodfar is being used by hardline leaders of the Revolutionary Guard to pressure the more conciliatory President Hassan Rouhani, under whose rule Iran has agreed to nuclear regulation in exchange for the easing of sanctions. Hoodfar, 65, who has Iranian, Canadian and Irish passports, was first arrested in March as she was preparing to leave Iran to celebrate Nowruz, the Iranian new year, with her family in Britain. Her computer, books, passport and personal effects were seized. Freed on bail, she was interrogated at various times over the weeks since, largely over her research during Iran's recent election, in which 17 women were elected, most aligned with Rouhani. Postmedia Network, A1 (National Post, London Free Press, Windsor Star, Montreal Gazette, Ottawa Citizen, Vancouver Sun, Calgary Herald, StarPhoenix); Globe and Mail

* **Clock is ticking on Canadian hostage Robert Hall's life**
Robert Hall may have just about 72 hours left to live. The family of John Ridsdel knows that the murderous, ISIS-inspired thugs known as Abu Sayyaf meet their deadlines. Ridsdel was beheaded April 25. Unless they get somewhere between $8 million and $16 million, the radicalized Islamic group that has terrorized the province of Mindenoa in the Philippines have set the date for fellow Canadian Hall's turn. June 13 — this Monday — at 3 p.m. they say they will kill him. Those close to Hall don't believe Abu Sayyaf are bluffing and are hoping for a movie-style saviour mission for the one-time Calgarian, held with his Filipina girlfriend, Marites Flor, and Norwegian Kjartan Sekkingstad. Winnipeg Sun

* **An international anti-corruption court is a fine idea, but not necessary**
An opinion piece states, "Managing partner of Martin Kenney & Co., Solicitors, a specialist investigative and asset-recovery practice focused on multijurisdictional fraud and grand corruption cases. He is co-chair of ICC FraudNet's Task Force India. As a Canadian I find it encouraging that my compatriots could be at the forefront of the attack on grand corruption and its perpetrators. But while the idea of Canadian backing for an international anti-corruption court is commendable, I believe the world already has existing systems in place to deal with these issues. For example, it is likely that the nature of the criminal offences described in a recent Globe and Mail op-ed by Harvard University's Robert Rotberg already fall within the remit of the existing International Criminal Court (ICC). This court, based in The Hague, has the power to try war crimes, genocide and crimes against humanity under the Rome Statute. Grand corruption should be considered a crime against humanity under Article 7(1)(k) of the Rome Statute, which punishes "other inhumane acts ... causing great suffering, or serious injury to body or to mental and physical health." Adopting such an understanding of grand corruption, as advocated by many human-rights organizations and commentators, would place its prosecution under the remit of the ICC. If criminals effectively suck the financial lifeblood out of a country, it leaves the country devoid of infrastructure and denies children education and the populace basic medication and health care. It leads, over all, to a torturous existence. This undeniably causes great suffering and serious injury to mental and physical health. This is why grand corruption is a slow, painful and degrading crime against humanity." Globe and Mail, B4

* **Coup de filet contre le trafic de faux médicaments**

Un vaste coup de filet mondial contre le trafic de faux médicaments a permis l'arrestation de 393 suspects et la saisie de millions de produits potentiellement dangereux, d'une valeur estimée à 67,5 millions de dollars canadiens, a annoncé Interpol jeudi. La neuvième opération Pangea, qui a rassemblé les polices de 193 pays, du 30 mai au 7 juin, a permis la saisie d'environ 12,2 millions de faux médicaments et la suspension de 4932 sites Internet proposant ces produits délictueux. Près de 700 enquêtes ont été lancées à travers le monde, précise l'organisation policière internationale basée à Lyon (est de la France), dans un communiqué. Agence France-Presse (Le Devoir, A5)

*** Increase police funding, former Canadian officer says**
A former senior Canadian police officer has advised that funding be increased to train the local police force to investigate money laundering and other financial crimes. The advice comes from former National Director of the Royal Canadian Mounted Police Proceeds of Crime programme Garry Clement who will participate in the 8th Annual Anti Money-laundering and Financial Crimes Conference in July. Speaking on Thursday's OBSERVER AM programme, Clement said, "I think we've done a great job of putting in regulations requiring our financial institutions to have stringent standards and a lot of reporting. But governments don't put the commensurate amount of requirements on law enforcement." Speaking of the Americas in general, Clement said, "I think there is probably an erosion of ability because they haven't put as much money into it as they probably should." The former national director's advice was to increase law enforcement cooperation to tackle financial crimes. "When you look at the Caribbean islands, there's probably some value at law enforcement looking at partnership taskforces... sort of a white collar crime task force," Clement said. Antigua Observer

INTERNATIONAL

Suicide bombings kill 31 in, around Iraqi capital
Two suicide attacks in and around the Iraqi capital on Thursday killed at least 31 people and wounded dozens, officials said. The deadliest attack took place in a commercial area of a majority Shiite neighbourhood in Baghdad. At least 19 civilians were killed and 46 wounded, police said. Another suicide bomber rammed his explosives-laden car into an Iraqi army checkpoint north of Baghdad, killing at least 12 people, police said. Seven civilians and five troops were killed in the attack in the town of Taji, about 20 kilometres (12 miles) north of the capital, a police officer said. At least 32 people were wounded, he added. Medical officials confirmed the casualty figures. All officials spoke on condition of anonymity as they were not authorized to brief the media. In an online statement, the Islamic State group claimed responsibility for the attack in the New Baghdad neighbourhood, saying it targeted Shiite militia members. It later claimed responsibility for the Taji bombing in a second online statement, saying it was targeting the Iraqi army. The Associated Press could not verify the authenticity of the statements, but they were posted on a militant website commonly used by the extremists. Associated Press, B6 (Telegram)

*** Kurdish militant group says it was behind Istanbul bombing**
The Kurdistan Freedom Hawks (TAK), an offshoot of the outlawed Kurdistan Workers Party (PKK) militant group, said on Friday it carried out a suicide bombing in Turkey's biggest city Istanbul this week that killed 11 people. A car bomb ripped through a police bus in central Istanbul during the morning rush hour on Tuesday near the main tourist district, a major university and the mayor's office. Reuters (CBC News)

MINISTER / MINISTRE

Saskatchewan reeling after Orlando shooting
Dan Shier, co-chair of Regina Pride, was celebrating Saskatchewan Pride Month in Saskatoon when he heard the news: Fifty people died and another 53 were injured after a shooting in a gay nightclub in Orlando, Fla. "Obviously, kind of shock and some remorse with the news, and some heavy hearts," Shier said. The Queen City is gearing up for its own pride celebrations, kicking off on June 18, 2016. And while the shooting will be on everyone's minds, the festivities will continue as planned. (…) **Ralph Goodale**, **Minister of Public Safety and Emergency Preparedness**, also spoke about the shooting. "***We have to make sure that we are doing everything we can do to make sure Canadians are safe,"*** **Goodale** said in a phone interview. ***"As Canadians in this month celebrate pride in many ways, it's extremely important now that those celebrations go forward, and go forward with a sense of determination and safety and security."*** CTV News (2016-06-12); 620 CKRM; * CBC News

*** Regina's LGBTQ community and religious group 'condemn' deadly shooting in Orlando**
Regina residents described their shock when they heard the news about the deadliest shooting in U-S history where 50 people were killed at a popular gay nightclub in Orlando. "I'm shaking, not sure if you

can tell, but I'm shaking because of all of it," Lisa Phillipson said. Phillipson is the contracts director with Queen City Pride. She said the shooting hate crime shows there's a need for more public education. "And the fact that this shows that reinforces the need that we need to have more activism and more parades and more marches," Phillipson said. **Public Safety Minister Ralph Goodale** said there's no immediate threat to Canada at this time. He noted that when tragedies like this occur, security detail does increase. ***"Everything is double checked and triple checked,"*** **Goodale** said. ***"There is no immediate connection to Canada in any way."*** – **Goodale**. He also expressed his condolences to the family, calling the shooting a ridiculous and sad brutality. ***"Our thoughts and prayers go out to the victims and their families who are suffering through an absolutely unspeakable and entirely tragic loss,"*** he said. Global News (2016-06-12)

Le Canada condamne la tuerie survenue à Orlando
La classe politique canadienne a condamné le carnage survenu dans une discothèque d'Orlando, en Floride, qui a fait 50 victimes et des dizaines de blessés, dimanche. Le premier ministre Justin Trudeau a publié un communiqué dans lequel il s'est dit « profondément choqué et attristé d'apprendre la nouvelle au sujet de la fusillade à Orlando, en Floride, qui a fait tant de morts et de blessés ». Il a ajouté qu'il « est effroyable de penser qu'au moins 50 vies ont été perdues en raison de cet acte de terrorisme intérieur visant les membres de la communauté LGBTQ2 ». (…) Le **ministre de la Sécurité publique** du **Canada Ralph Goodale** a écrit sur Twitter qu'il était bouleversé par ce qui est considéré comme la pire tuerie par balle de l'histoire des États-Unis et que les Canadiens condamnaient une telle violence. Selon les policiers américains, l'attaque a eu lieu dans la nuit de samedi à dimanche, lorsqu'un tireur a ouvert le feu dans une boîte de nuit gaie. L'assaillant est mort plus tard sous les tirs des policiers. **M. Goodale** a ajouté que ses prières et ses pensées allaient vers les proches des victimes. ***Choqué à la fusillade meurtrière à Orlando. Les Cdns condamnent cette violence brutale. Pensées + prières avec victimes et proches.-*** **Ralph Goodale (@RalphGoodale**) 12 juin 2016. Presse canadienne (Le Devoir, Express Drummondville); Journal de Montréal (2016-06-12)

Akwesasne Mohawks want Canadian government follow-through on independent oversight of border services agency
In light of its longstanding and difficult relations with the Canada Border Services Agency, the Mohawk Council of Akwesasne is supporting creation of an independent oversight mechanism for the operations of the border agency. The Canadian government recently signaled that it is looking for ways to improve transparency and increase public confidence in the CBSA, according to a press release from the MCA. Akwesasne community members routinely cross through the CBSA port in Cornwall, Ontario, sometimes several times a day, while traveling from one part of the community to another to travel to work, attend school, attend health related appointments, visit family, or otherwise meet social, cultural, economic, and recreation needs, the MCA said in a statement. (…) The Canadian **Minister of Public Safety and Emergency Preparedness Ralph Goodale** said the government is examining how to best provide the CBSA with appropriate review mechanisms, particularly after numerous civil rights groups have called for the creation of an independent watchdog to oversee the border agency. On May 26, MCA Grand Chief Abram Benedict wrote to **Minister Goodale** expressing the Mohawk Council's support for the establishment of an independent oversight mechanism for the CBSA. "While we appreciate the importance of ensuring that the border is secure for national security as well as for the safety of all citizens, we expect CBSA to treat people with respect in an open and transparent manner. Law enforcement officials should be held to the highest standard of review and scrutiny in their interaction with the public," the MCA statement said. North Country Now (2016-06-12)

"The Chinese Foreign Minister recently scolded a Canadian journalist for asking about China's human rights record in a press conference in Ottawa and while here demanded a meeting with the PM. Do you think the federal government responded appropriately?"
Mathieu R. St-Amand, Bloc-Québécois strategist: "The Chinese government's difficulty with the concept of a free press is nothing new. By expressing its dissatisfaction to the Chinese about an objectionable statement by one of that country's diplomats, the Trudeau government has done the bare minimum of what would be expected in such a situation. "However, if this government is serious about promoting freedom of the press, it should call an inquiry into the surveillance of two *La Presse* reporters by the RCMP. Beyond **Public Safety Minister Ralph Goodale's** rhetoric, the government should take this direct

attack on the freedom of the press seriously. A public inquiry would shed light on several unanswered questions about RCMP practices. By not calling an inquiry, the government is attempting to cover up one of the most serious attacks on freedom of the press in recent years. "Canada must defend freedom of the press at home in front of countries where this freedom is curtailed. However, the government needs to do more than simply lecture offenders; it must ensure that this freedom is unrestricted here. Justin needs to lead by example instead of talking down to people for once." Hill Times

Canada's surveillance crisis now hiding in plain site
An opinion piece by Michael Geist states, "Three years ago this month, Edward Snowden shocked the world with a series of disclosures that revealed a myriad of U.S. government-backed surveillance programs. (…) While these programs attracted attention for a day or two, it was the Conservatives' introduction of Bill C-51, the anti-terrorism legislation that granted the government a host of new powers, that finally succeeded in generating a sustained focus on Canadian surveillance law. The bill became law with few amendments, but emerged as the public's shorthand for the need for reforms to surveillance activities. **Public Safety Minister Ralph Goodale** and the new Liberal government have promised changes, with expectations that they will focus initially on a new "super" oversight body for security agencies and later open the door to further amendments. Yet despite assurances that improved oversight will provide adequate safeguards against intrusive surveillance, in recent months it has become apparent that weak oversight represents only a small part of the problem. Consider this year's report from the Communications Security Establishment (CSE) Commissioner, who uses legal language to obscure an otherwise clear admission that there are ongoing metadata violations within the CSE. The report notes that metadata activities were "*generally* conducted in compliance with operational policy" and that the "CSE has halted *some* metadata analysis activities" that were the subject of previous criticisms. The use of words like "generally" and "some" are no accident. The CSE Commissioner could have just as easily written that the CSE still does not conduct its metadata activities in full compliance with the law and that it has refused to stop some activities that were the subject of complaints. Yet the soft framing turns what should be a major story and source of concern into something largely ignored by the general public." Hill Times (Toronto Star)

*** Will Liberals defend Charter values on C-51?**
An editorial states, "When did the federal Liberals stop being liberals? In recent weeks we've seen an allegedly liberal government swerve, dodge and obfuscate to justify a bill - C-14 on assisted dying - which some courts and many constitutional scholars agree does not respect the Supreme Court's decision on Charter rights. The Supreme Court gave Trudeau one job to do. They even made it simple by giving him the language to use. Some provinces already had rules he could adapt. (…) Triangulation is the same strategy that, a year ago, lead Trudeau to support Bill C-51, Harper's version of homeland security. As with C-14 , many respected constitutional lawyers and rights groups said sections of C-51 violated the Charter. When an uproar over the moral hollowness of Trudeau's position offended actual liberals, he promised a Liberal government would fix C-51. Recently, the **Minister of Public Security** told the Commons he hopes a C-51 fix-it bill will be tabled ***"before Parliament rises for the summer."*** But will the Liberals fix C-51? Or "balance" it? How will we know? Paul Cavalluzzo - former commission counsel in the Maher Arar inquiry - has done the research on what needs to be fixed to make C-51 Charter-compliant. He's filed an application asking an Ontario court to strike down several provisions of C-51 because they trample Charter rights. His analysis is a valuable scorecard for any forthcoming Liberal bill. "Our main concern is the power C-51 attempts to give a judge to authorize a violation of Charter rights and freedoms if CSIS applies for a warrant to break the Charter," says Cavalluzzo in an interview. "In our view this is totally alien to our constitutional order." He argues the entire idea needs to be scrapped." Winnipeg Sun, A9 (Toronto Sun, Ottawa Sun, Edmonton Sun)

Missing Mountie
An opinion piece states, "Could Bob Paulson's days as top banana of the RCMP be numbered? If he doesn't start showing more cooperation in bringing about fundamental change to the nation's police force, he could be headed for a change in his career path. Some critics would argue it comes not a moment too soon. The organization he runs is more top down than Donald Trump. As the Force evolved in the Harper years, when labour laws were razed like old growth forests, Paulson's Mounties are not exactly members of Dudley Do-Right's RCMP. Paramilitary and politicized, the RCMP is in danger of becoming the fossil

force of law and order in Canada — and far worse, the kept police of the government of the day. Paulson's immediate problem resembles arrogance. As one senator put it to me, Paulson recently "stiffed" a Senate committee by sending deputies — two assistant commissioners — to answer questions regarding Bill C-7, the very controversial RCMP union bill. (…) Despite all that, though, there is a sense amongst his critics that he just doesn't get it. The Chair of the Civilian Review and Complaints Commission of the RCMP, Ian McPhail, testified before the Senate committee that his investigation into workplace harassment, requested by **Public Safety Minister Goodale**, had been impeded by senior Mounties. The Commissioner himself had forbidden McPhail to speak to RCMP members without the members first informing the Commissioner.(…) It is not all on Paulson. Since 2006, the RCMP has acted in such a way as to raise real questions about its independence and its impartiality. That was the year the Mounties weighed in to the federal election in dramatic fashion. Former Commissioner Guiliano Zaccardelli publicly announced an investigation into the then-Liberal government's handling of an income trust tax decision included in the federal budget. The RCMP had two press releases prepared to announce their investigation a month away from the election — one including the minister of the day's name, **Ralph Goodale**, and the other leaving it out. They opted to name, and some might say shame, the minister." iPolitics (2016-06-12)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

*** South African President drawn into firefighters' pay dispute**
As 300 disgruntled South African firefighters prepared to fly home from Alberta on Sunday, questions were mounting over a contract that gave them barely one-third of the daily amount Alberta had allocated for their services. The issue has sparked a political uproar in South Africa that reached the highest levels on the weekend, when President Jacob Zuma ordered his environment minister to find "a solution to the impasse." While some South Africans criticized the firefighters for going on strike just six days after beginning their work in Alberta, many others - including an opposition leader - said their strike was justified by the need to fight for their rights and equal pay. Alberta Premier Rachel Notley and other officials have confirmed that Alberta agreed to pay $170 a day for each of the South African firefighters. Yet the firefighters signed contracts in which they will receive only a "stipend" of $50 a day - far below the Alberta minimum wage of $11.20 an hour. This discrepancy was "disturbing" and "not acceptable," Ms. Notley said last Thursday. The payment of $170 daily to their South African employer was intended to cover the $50 stipend, plus their regular South African pay (as little as $10 a day), along with "payroll burden, administration costs, training and other costs of preparing the firefighters to travel," according to Kim Connors, executive director of the Canadian Interagency Forest Fire Centre, which was responsible for bringing the firefighters to Canada. In addition, Alberta is covering all of their costs for accommodation, travel and meals. Globe and Mail, A16; CBC News

*** Body of missing Corner Brook woman Patricia Boyd found**
A Corner Brook woman who was reported missing two weeks ago has died. The body of 57-year-old Patricia Boyd was found on Saturday. The Royal Newfoundland Constabulary and the Bay Islands Volunteer Search and Rescue Team had been searching places like the North Shore Highway and the Riverside Drive area of Corner Brook in the weeks since Boyd went missing on May 26. CBC News

*** Is another dust bowl coming?**
An opinion piece states "In the 1930s, a bad drought and an economic malaise upended farming systems around North America causing the Dust Bowl. Could climate change and the persistent post-2008 economic doldrums do the same? On one hand, the environmental signals are sobering. The drought in California seems to be long-lasting and even this year's record El Niño, which many had hoped would bring rainfall to the Southwest, seems to have done little. In Africa and India, hundreds of millions are facing food insecurity due to a combination of drought and armed conflict. Meanwhile in Canada, the Prairie Climate Centre has recently published an atlas suggesting the wildfires in Fort McMurray are a

taste of things to come. This year's hot, dry weather is consistent with climate change models that project the number of days reaching above 30°C each year will increase by three to four times in the Prairies over the century… Humanity is on the cusp of a major transformation as we come to grips with the necessity of feeding nine to 11 billion people on an increasingly hot and crowded planet. Thanks to climate change, meeting this challenge requires that we be far more thrifty with our resources and create not only productive but also resilient systems. The tools of the digital agricultural revolution are only just now emerging, but they will come to define how humanity feeds itself in the future. Canada, and the Canadian industry, should be at the forefront of this revolution." Hill Times

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Toronto 18 may have been shock for Canada, but it was not harbinger of a path to ruin
An opinion piece by Phil Gurski, president/CEO of Borealis Threat and Risk Consulting, states, "June 2 marks the 10th anniversary of the arrest of 17 men in the Greater Toronto Area in the culmination of a massive terrorism investigation by Canadian authorities. In what came to be known as the "Toronto 18" (the last subject was arrested in August 2006) Canadians were rudely introduced to homegrown terrorism five years after 9/11. For those who have forgotten the details, here is a short synopsis. A group of men in the Toronto area, led by an Afghan immigrant (Fahim Ahmad), attended a "training camp" near Orillia, Ont., in December 2005, chose three targets (the CSIS office in Toronto, the financial district and a military base), built a detonator, and bought fertilizer, all without knowing that their every move was being followed by CSIS and the RCMP. Their arrest saved the lives of thousands. The event was a seminal one for me as a CSIS analyst and I'd like to reflect on what this meant then as well as what is means now. (…) Fourthly, the case showed that CSIS and the RCMP could work hand in glove to successfully stop a terrorist act from occurring. The investigation started with CSIS and was handed over to the Mounties when it was clear a criminal act was being planned. CSIS sources became RCMP agents (not always an easy thing to do) more or less seamlessly and a serious terrorist attack was averted. There is little doubt that the CSIS-RCMP relationship has had its ups and downs but the two do work together well and Canadians are safer as a result. Lastly, despite more foiled plots and two successful ones in the interim, Canada remains in a good position when it comes to homegrown terrorism. We are not in the same league as France or Belgium or the U.K., or even the U.S. Our government has done a much better job at understanding the threat and putting measures into place, both soft and hard, to deal with it. We had the five-year $10-million Kanishka research project which, although many thought it under-delivered (I am among that group), set the stage for a more robust and more mature academic environment to look at terrorism where none existed before. **Public Safety Canada's** Citizen Engagement branch developed a community outreach program that was the envy of all our allies and the creation of the new Office of the Coordinator for Counter Radicalization and Community Outreach will hopefully enhance this effort. There is more work to be done but these are all enviable achievements." Hill Times

*** Des parcours qui sèment la consternation**
Pourquoi des jeunes dont les parents ont choisi de venir s'installer en Occident, comme c'est le cas du tireur du club Pulse, en viennent-ils à la violence au nom de groupes djihadistes ? Les experts interrogés par La Presse avancent plusieurs pistes. Des études ont démontré que les immigrants de deuxième génération, dont Omar Mateen faisait partie, « peuvent être à risque d'épouser des idéologies supportant la violence », note Jocelyn Bélanger, ancien chercheur au centre contre la radicalisation de Montréal et professeur adjoint à l'Université de New York à Abou Dhabi. Bien que ce soit l'exception, plusieurs exemples d'immigrants de deuxième génération qui ont complètement dérogé des valeurs de leur famille pour adhérer au terrorisme peuvent être observés. Les frères Salah et Brahim Abdeslam, l'un cerveau des attentats de Paris, l'autre mort en déclenchant sa ceinture d'explosifs, ont grandi en Belgique dans la commune de Molenbeek dans une famille ouverte. Nés de parents marocains immigrés en France, puis en Belgique, ils ont eu une adolescence parsemée de petits larcins avant d'embrasser l'idéologie de l'EI à l'insu de leurs proches.(…) Il y a aussi la jeune Maha Zibara, ex-élève du collège de Maisonneuve, arrêtée l'an dernier avec une dizaine de jeunes alors qu'elle s'apprêtait à quitter le Canada. Son père, un entrepreneur d'origine libanaise, était démoli. M. Zibara et sa famille sont de confession chiite, un courant minoritaire au sein de l'islam. Un jour, Maha Zibara a rejeté complètement la voie de ses parents. « Elle est venue me dire que les chiites sont des mécréants », avait-il raconté à l'époque. Pourquoi, alors, des

jeunes nés ici et élevés dans des familles qui n'adhèrent pas aux valeurs islamistes se radicalisent-ils ? Certains enfants issus de l'immigration récente sont perdus, hantés par une ambigüité identitaire, répond Mounia Ait Kabboura, chargée de cours à l'Université du Québec à Montréal et experte du radicalisme islamique. « Ils ne se retrouvent nulle part. Ils sont dans la culture religieuse et dans la culture occidentale, et c'est difficile de mélanger les deux », dit la chercheuse, qui a étudié la question auprès de jeunes établis au Québec. LaPresse+, 14

* **PM soft on terrorists**
A letter to the editor states, "It's a shock to see the "Canadian leading Bangladesh branch of ISILstory on Wednesday. Could someone please explain why the Trudeau government refuses to criminally charge citizens who become terrorists and revoke their citizenship? What incentive is their for a would-be terrorist to stay in Canada knowing this country will do nothing to revoke their citizenship if they return to Canada? The Trudeau government is weak when it comes to our citizens becoming terrorists!" The Province

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Border Security reality TV show pulled for privacy concerns
Canada's border agency is pulling the plug on the controversial reality TV program Border Security after the federal privacy commissioner found the agency violated the rights of a construction worker filmed during a raid in Vancouver. Privacy commissioner Daniel Therrien recently informed the British Columbia Civil Liberties Association, which spearheaded a complaint on behalf of Oscar Mata Duran, that the Canada Border Services Agency breached the Privacy Act by allowing production company Force Four to film the agency's examination of the migrant labourer. "As a matter of principle, it is our view that federal government institutions cannot contract out of their obligations under the Act," says the commissioner's 26-page report of findings. In light of the well-founded complaint, Therrien's office recommended the border agency end its participation in the television program, which the agency agreed to do. Agency spokeswoman Esme Bailey confirmed that Border Security: Canada's Front Line would not return for a fourth season. The commissioner also urged the agency to carry out a formal privacy impact assessment before embarking on any significant future initiative involving the use of personal information. Border Security began airing on the National Geographic Channel in 2012, chronicling encounters between border officers and the public. The unscripted series was seen by millions of Canadians and has aired in dozens of other countries. * **Réseau de présumés trafiquants de drogue démantelé dans l'Est ontarien**
La Police provinciale de l'Ontario (PPO) a arrêté mercredi dernier cinq personnes lors de la saisie d'une importante quantité de marijuana dans une résidence d'Alfred-Plantagenet. Sur place, les policiers ont saisi des plants, de la résine et d'autres dérivés dont la valeur totale est estimée à 245 000 $.Des hommes de 18, 19 et 39 ans ainsi que deux femmes de 24 et 54 ans devront répondre, entre autres, à des accusations de production et de possession de drogue et de possession d'armes à feu. L'Agence des services frontaliers du Canada (ASFC) avait mené à une première enquête dans cette affaire après avoir contrôlé des colis destinés à une adresse d'Alfred-Plantagenet. Ceux-ci contenaient de la marijuana.

Canada's choice for migrant workers: decent work or entrenched exploitation?
Canada's Temporary Foreign Worker Program (TFWP) is at a crossroads. After years of escalating concern about employers' growing reliance on, and widespread exploitation of, low-wage migrant workers, the Standing Committee on Human Resources, Skills and Social Development and the Status of Persons with Disabilities (HUMA Committee) is reviewing the controversial program and will report to the minister of Employment, Workforce Development and Labour. At this crucial moment, what will Canada choose: secure status and decent work, or entrenched exploitation for migrant workers? Canada's Choice, my new report published by the Metcalf Foundation maps what is at stake. The findings are troubling. Low-wage migrant workers face deeper insecurity now than before the 2014 "reforms" by the previous government. Hill Times

War resister wants PM to keep his word

* An opinion piece states "Like much of the rest of the world, Rodney Watson has spent a lot of the last week thinking about the world's most famous war resister. But Muhammad Ali's televised memorial service Friday had particular resonance for Watson, who watched it from the room above the First United Church in Vancouver's (…) A new Insights West poll released this week shows a majority of Canadians support the idea of making Iraq War resisters like Watson permanent residents of their adopted country. Watson, 38, said he appreciates the widespread support of "the good and conscientious citizens of Canada" evidenced in the poll results, and he hopes the federal government will notice and take action on behalf of himself and 14 other Iraq War resisters in Canada. "For those same ones shedding crocodile tears and praising Muhammad Ali, who have the power to actually do something, I have to say, 'What about us?'" said Watson, who served in Mosul, Iraq, in 2005 and 2006. He left the U.S. for Canada in 2009 to avoid another deployment to Iraq, and sought sanctuary in the First United Church. The Canadian government ordered him deported in 2009." Vancouver Sun, A8

* **Mother of Sask. overdose victim testifies**

It's perfectly legal to buy the ingredients to manufacture the deadly opioid fentanyl. Anyone with an Internet connection can order the stuffonline. Marie Agioritis, a Saskatoon mom who lost her son Kelly to a fentanyl overdose two years ago, is joining forces with a Canadian senator, hoping a new law making those ingredients illegal will put a dent in the fentanyl trade. Q What is the government doing to combat the spread of this drug? A Agioritis was in Ottawa last week testifying at a Senate committee hearing on a new bill aimed at making the ingredients for manufacturing fentanyl illegal. Sen. White, who introduced Bill S-225, says without making the ingredients illegal it's tough for police and customs agents to crack down on the trade. Leader Post

Don't like the airport security line? Pay to shorten it

Let the users pay! Some airport and airline executives have somehow got it in their heads that airport security is like universal health care, and that if wait times at the airport are too long, then the federal government ought to fix things by spending more public money. But if we want to shorten the lengthening lineups at airports, and the way to do it is to hire more security agents, it only makes sense to raise the money to do this from users: airline passengers. Canada's airports are supposed to be user-pay affairs. You pay an airport improvement fee when you fly, and an airport security fee too, embedded in the price of a ticket. Alternatively, the Canadian Air Transport Security Authority can figure out how to become more efficient, and move more people through screening, faster. The last federal Liberal budget gave an additional $29-million to CATSA, but taxpayers shouldn't be subsidizing air travel. Nor should air travel be subsidizing taxpayers: At the moment, the security tax on air travellers appears to be taking in more money than Ottawa is giving to CATSA and airport security. User-pay makes sense; user-pay-plus-a-little-extra-for-Ottawa does not. Globe and Mail

CYBER SECURITY / CYBERSÉCURITÉ

* **Mafiaboy finds new mission in life**

Mafiaboy is now a man and he's on a mission. As a 15-year-old hacker in 2000, Mafiaboy (real name: Michael Calce) paralyzed the websites of the biggest names in media and e-commerce, including CNN, Amazon and eBay. The RCMP and FBI tracked him down in Île-Bizard. He pleaded guilty to 58 charges and spent eight months in a youth detention centre. Now 31, Calce recently started a cyber-security company - Optimal Secure - focusing on the financial sector in Montreal, Toronto and Vancouver. His specialty: "penetration testing." Companies hire him to try to penetrate their computer defences so they can secure systems before hackers strike. Computer hacking is a constant threat. In recent weeks alone, hackers have broken into some of Facebook's Mark Zuckerberg's accounts; forced the University of Calgary to pay a $20,000 ransom after crippling its computer systems; and stolen $81 million U.S. from the Federal Reserve Bank of New York. The Montreal Gazette sat down with Calce and learned that "spear-phishing email attacks" are among the scary things to fear online today. (This interview has been edited and condensed.) Gazette, A3

* **Massive North Korea cyber attack thwarted after hacking South Korea: report**

North Korea has hacked into more than 140,000 computers at large South Korean conglomerates and government agencies and planted malicious codes that may have been intended for a massive cyber attack that has been thwarted, a news report said on Monday. The hacking originated from an internet address traced to the North Korean capital and targeted a software used by about 160 companies and government agencies to manage their computer networks, Yonhap news agency reported, citing the police. The internet address was identical to the one used in a 2013 cyber attack against South Korean banks and broadcasters that froze their computer systems for more than a week. Reuters (Yahoo! News)

* **After Bangladesh: How a massive hack shook the banking world**
It was the start of a weekend in Bangladesh when an official at the country's central bank checked a printer in a server room. The tray was empty, which was strange. There should have been a sheaf of reports confirming payment instructions sent through the Swift system, the network that connects 11,000 banks around the world. The printer glitch was no accident, but a deliberate strategy by criminals to hide their tracks. A day earlier, cyberthieves had issued instructions to transfer $951-million (U.S.) out of Bangladesh Bank's account at the New York Federal Reserve. Most were declined, but $81-million was transferred to a bank in the Philippines, never to be seen again. The theft in early February sent shock waves through the global banking community. It was not simply enormous in size, but ambitious in its selection of target: the Swift system, the backbone of international finance. The methods deployed were highly sophisticated, involving a combination of technical prowess and intimate knowledge of how Bangladesh Bank interfaced with Swift. Gottfried Leibbrandt, chief executive of Belgium-based Swift, called the Bangladesh cyberattack "a watershed" for the banking industry. "There will be a before and an after Bangladesh," he said last month. What's more, it wasn't an isolated incident: Swift was aware of at least two other cases where cyberthieves used the same modus operandi, albeit with far less success. Four months after the theft, much remains unknown about the perpetrators and their methods. It's not clear, for instance, how the malicious code was implanted into the systems at Bangladesh Bank. And both private firms and law-enforcement authorities are conducting investigations to uncover the culprits. Some signs point to a gang of expert cybercriminals; others point to the possible involvement of a state actor. The theft shows that cybercriminals are growing increasingly audacious. Globe and Mail, B1

* **The G7 and cyberspace: 'give peace a chance'**
An opinion piece states “The G7 summit meeting hosted by Japan May 26-27 issued a document entitled 'G7 Principles and Actions on Cyber.' This cyber policy statement was the most elaborate one issued by the G7 since 2011. The intervening years have revealed continuity on some prominent themes, such as support for the free flow of information and respect for human rights online. However, the increasing use of cyber operations by authoritarian regimes in suppressing dissent and the infringement of privacy rights via mass state-conducted cyber surveillance, has revealed the stress such rights are under. The removal of Russia from the G8 context may have allowed for stronger commitments in the field of human rights, but it also highlights the challenge of achieving international cooperation on cyber security against a backdrop of deteriorating geopolitical relations between leading cyber powers. In this crucial realm of international cyber security, the pronouncements from the G7 summit are not all that reassuring. The goal of a peaceful cyberspace is conspicuous by its absence from the statement. The G7 will promote security and stability in cyberspace, but there is no apparent aspiration to keep cyberspace a realm of peace rather than war. The statement speaks of taking ‘decisive and robust measures in close cooperation against malicious use of cyberspace both by states and non-state actors,’ but these measures are not specified and the tone here suggests they will not be of a diplomatic nature. The G7 appear to be laying the ground for undertaking military responses to cyber operations they deem hostile by affirming that ‘cyber activities could amount to the use of force or an armed attack within the meaning of the UN Charter.’ Suffering ‘an armed attack’ entitles a state under the UN Charter to exercise the right of self-defence, thus this framing of such an eventuality is fraught with serious politico-military consequences. How and by whom such a determination of a cyber attack is made is left unaddressed in the G7 statement and there is clearly wide scope for unilateral (and potentially dangerous) interpretation and action in this regard.” Hill Times

LAW ENFORCEMENT / APPLICATION DE LA LOI

Seeking clues in cold case: Ground search relates to 1982 disappearance of Henrietta Millek
Search crews looked for evidence near Makinsons this weekend after receiving a tip on a decades-old missing-person case. Henrietta Millek, originally from Nain, was living in St. John's at the time of her disappearance in December 1982. She was 25 at the time. Originally, it was believed Millek's last known location was at a club in downtown St. John's. It was reported she may have left the bar against her will. Her belongings, including her purse, were left there, and she never returned for them. RNC Const. Geoff Higdon told reporters Saturday new information led to a ground search in the area of Roaches Line almost 34 years after she disappeared. "Recently we received information that the last known location may have been in the area of the Trans-Canada Highway, and I guess what at that time would have been Roaches Line, as Veterans Memorial (Highway) wasn't here," said Higdon. "We believe she may have been headed towards Makinsons, and we do know that she never made it to her destination, unfortunately, and the information was that her last known location was here on the Trans-Canada Highway, so we're searching the area between those two points." Almost 100 searchers scoured the area in the morning, and they were expected to continue all day. Crews from the RNC, the RCMP, the Rovers - Central Avalon Search and Rescue and the Avalon North Wolverines were involved. Telegram, A1

Police investigate chapter in New Glasgow Gate Keepers gang
Police executed a search warrant at the New Glasgow chapter of the Gate Keepers motorcycle group early Sunday. "Members of the Nova Scotia RCMP executed a search warrant on MacLean Street in New Glasgow in relation to an ongoing investigation," said Corp. Jadie Spence, a media relations officer for Nova Scotia RCMP. "It's a clubhouse for the Gate Keepers motorcycle gang," he said. Spence said there are currently seven chapters of the Gate Keepers in Nova Scotia, including one in Musquodoboit Harbour, where that chapter held a party over the weekend. "They're a support group of the Hell's Angels, who don't have a presence in Nova Scotia at present," Spence said. They were assisted by the New Glasgow Regional Police and Pictou County RCMP. The warrant was executed at about 6 a.m. The street was closed down. On Sunday at 6 p.m., police were still at the scene. There was no word about specifics of the investigation, Spence said. "There are no arrests and no charges at this point in time," Spence said. ChronicleHerald, A6; Cape Breton Post

Canadian officials offer condemnation and sympathy after Florida mass shooting
After a mass shooting on Sunday that killed at least 50 people and injured dozens more at a gay nightclub in Florida, many Canadians were reflecting on what the violence means for the LGBTQ community. Candlelight vigils to mourn the victims were planned in several Canadian cities Sunday night. Hundreds crowded for a candlelight vigil in Toronto in a predominantly gay neighbourhood. (…) The executive director of Pride Toronto, a not-for-profit with the goal of bringing together the city's LGBTQ community, said the massacre was a grim reminder of the setbacks his community faces. "It reminds us that hate and discrimination are still a big part of this society, and that because of this, some of our brothers and sisters this morning lost their lives," Mathieu Chantelois said on Sunday. The organization also runs Toronto's pride month, and Chantelois said Pride Toronto was already working with city police and the RCMP but would see if there were any additional security steps that could be taken. "The main objective of Pride is to create a safe space for our community to gather together and feel comfortable," he said. Spencer Chandra Herbert, a member of the British Columbia legislature, was in Quesnel, B.C., celebrating the small town's second annual pride celebration with his husband when he heard the news. His immediate reaction was disbelief. Canadian Press (Ottawa Sun, A4, Red Deer Advocate, Hamilton Spectator); Canadian Press (National Post); * CBC News

How the quest for cheap beer may change Canada
An opinion piece by former Ontario cabinet minister John Milloy states, “Canadians like to talk about trade. Remember the dust-up over the Trans-Pacific Partnership agreement in the last federal campaign, or earlier passionate debates over the Canada-U.S. Free Trade Agreement and its successor, the North American Free Trade Agreement? There is one exception. When it comes to free trade within Canada, no one ever seems to pay much attention. We better start. A recent New Brunswick court decision, likely to end up at the Supreme Court of Canada, has the potential to radically change our country and its economy. Although Canadians may maintain a fierce loyalty to their province or region, I also like to think we see our nation as a place where citizens are free to travel, live and enjoy life wherever they want. (…) Enter Gerard Comeau, a retired New Brunswick steelworker who went in search of cheap beer across the

border in Quebec. Such an appalling act of bad citizenship does not go unnoticed in Canada. The RCMP immediately stopped him upon his return and fined him for transporting more alcohol across the border than allowed under the modest limit set by the New Brunswick government." Hamilton Spectator

*** Protesters arrested at Muskrat Falls site**
Six people were arrested Sunday during a protest at the Muskrat Falls development site, the Happy Valley-Goose Bay RCMP stated in a news release. Demonstrators began their protest last Thursday at Nalcor's hydroelectric site at Muskrat Falls, blocking the entrance road into the project. On Friday the Supreme Court of Newfoundland issued a court order that directed the protesters to leave Nalcor's property. The RCMP continued to monitor the protest. On Sunday at 11:55 a.m., five protesters refused to comply with that court order and were arrested, the RCMP stated. A short time later, another group of protesters arrived and one protester was arrested for obstruction, police said. All six protesters were to be held overnight in custody and will appear in provincial court at Happy Valley-Goose Bay Monday. Five protesters are charged with breaching a court order and all six are charged with obstruction. The RCMP continues to monitor the situation at the Muskrat Falls site, but no additional incidents have been reported and the on-going protest remains peaceful, police said. Telegram, A5; CBC News

*** HALIFAX: RCMP escort Canada's 911 Ride**
The RCMP escorted Canada's 911 Ride in both the Halifax area and Annapolis Valley over the weekend. The annual police-escorted 911 Ride raises funds for families of fallen emergency service personnel, helps children who are victims of violent crimes, and provides public access to defibrillators in local communities. This year's Atlantic Ride took 70 participants through the South Shore and Peggys Cove areas on Saturday. Riders departed Halifax at 8:30 a.m., headed to Peggys Cove, then on to Lunenburg and Bridgewater. The riders returned to Halifax Saturday afternoon. Chronicle Herald, A5

*** RCMP seize guns in Delburne**
Police seized a number of stolen firearms and took a man and woman into custody at a campground in Delburne on Friday. Three Hills RCMP and the Priority Crimes Task Force launched an investigation in early May after RCMP received intelligence about stolen firearms. The search warrants were executed at two trailers in Barking Fox Campground with the assistance of Police Dog Services and K Division's Emergency Response Team. A man and a woman were taken into custody. RCMP continue to investigate. No other information was released. Red Deer Advocate, A3

*** Larry Tremblay est le nouveau patron de la GRC au N.-B.**
Le commissaire adjoint Larry Tremblay devient le 30e commandant de la Division du N.-B. de la GRC. Il remplace le commissaire adjoint Roger Brown qui prend sa retraite après plus de 35 années au service de la GRC, dont les trois dernières à titre de commandant au N.-B.. Avant de se joindre à la Gendarmerie, Larry Tremblay a fait partie de la Marine royale canadienne pendant près de quatre ans. Il possède une expérience de plus de 30 ans au sein de la GRC à différents postes. Il a débuté sa carrière au N.-B. où il a passé 11 ans. Il a ensuite travaillé à l'Unité mixte d'enquête sur le crime organisé et à la Section antidrogue de la région d'Ottawa et a oeuvré au sein de services spécialisés à Regina et à Milton en Ontario. De 2004 à 2008, il a travaillé au Service canadien du renseignement de sécurité (SCRS) avant de devenir directeur général des Opérations criminelles de la GRC. L' Acadie Nouvelle, 10

*** Woman in witness protection program sues RCMP for negligence**
Woman who helped on drug case says RCMP compromised her identity, which forced her into witness protection A woman in the federal witness protection program is suing the RCMP for negligence and for undermining her trusted relationship with Canada's national police force.The details of her case are contained in a judgment by Ontario Superior Court Justice Patrick Smith, who granted an injunction forcing the RCMP to continue financially supporting the woman, known as Jane Doe, as well as allowing her to expand the scope of her lawsuit against the Mounties. The document tells the story of a woman who did the right thing, only to lose it all — family, friends, a good job and her mental health. The heavily redacted court ruling summarizes the woman's claims, which included that after tipping off police about a drug crime, the RCMP compromised her identity and refused to own up to it. The court ruling states that after happening upon intelligence related to a crime syndicate, she shared what she knew with her

municipal police force. The RCMP then used that information to investigate and prosecute several members of a criminal syndicate on drug-related charges. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prisons paying more for native spiritual services
Federal prisons are paying significantly more each year for indigenous spiritual services than for all other religions combined. Indigenous people make up about 25 per cent of the 14,865 people who are currently incarcerated in federal prison. The Correctional Service of Canada (CSC) is spending $8 million annually on sustaining spiritual services for indigenous offenders - versus $6.75 million for other religions. Spokesperson Avely Serin said "Elder services" help offenders follow a "traditional healing path" and provide advice to the heads of institutions about "access to ceremonial objects and traditional medicines within the institution." As of last October, 85 per cent of indigenous offenders in custody, or 3,156, had undergone an "elder review," Serin said. The cost was about $2,500 per person. (...) The correctional service takes "a lot of criticism for the overrepresentation of First Nations people in the prison system," said Catherine Latimer, executive director at the John Howard Society. She suggested that could be one reason for the extra funding. Indigenous people make up a quarter of the prison population versus 4.3 per cent of the general population, according to Canada's Correctional Investigator. Indigenous offenders do have better outcomes when "reconnected with their spiritual and cultural traditions," said the Correctional Investigator of Canada's annual report for 2014-15. But spiritual services help offenders of other religions, too, said Kate Johnson, a former chaplain at Joyceville Institution in Kingston, Ont. Almost half of offenders are Christian, a majority of those Catholic, and just over five per cent are Muslim. Postmedia Network (London Free Press, NP5, National Post, Leader-Post, Edmonton Journal, Vancouver Sun, Windsor Star, Montreal Gazette, Calgary Herald, StarPhoenix, Province, Ottawa Citizen)

Kingston Penitentiary tours send wrong message
An opinion pieces states, “Three years ago, Kingston Penitentiary was decommissioned and briefly opened its doors to tourists to raise funds for the local United Way. Hugely popular, tickets for the October 2013 "KP" tours quickly sold out, generating more than $180,000 in 15 days. Wanting in on the action, the Correctional Service of Canada (CSC) partnered with Habitat for Humanity to offer another block of tours in November 2013, with proceeds to go toward expanding the construction of affordable housing by federal prisoners in the name of "rehabilitation and reintegration." These tours also sold out fast, fostering further debate in the Kingston, Ont. area about the potential for KP to become a major tourist attraction. This week, tickets went on sale for a new series of guided tours at KP led by students and supported by retired correction service employees. The tours are being sold by project partners - the City of Kingston, CSC and the St. Lawrence Parks Commission - as "a rare and unique opportunity to go behind the walls of Canada's oldest and most notorious maximum security prison." Many from the Kingston area and elsewhere are hoping to enter the facility, which opened in 1835. From late June until the end of October, it is estimated that KP visitors will "pump more than $6 million into the local economy."” Toronto Star, A15

Egale calls for Trudeau apology
The assault on a gay night club in Orlando has cast a shadow over two reports that call for an apology from Justin Trudeau's government and restitution for homosexuals who were prosecuted and persecuted under Canadian policies in the past, and who still suffer discrimination today. One report, prepared by Egale, a national organization that advocates for lesbian, gay, bisexual and transgender Canadians, asks the Prime Minister to acknowledge in principle the need for an apology and redress for homosexuals who were criminally targeted because of their sexuality. Germany and Australia (through its state governments), are already at work on some combination of pardons, apology and redress. Egale said on Sunday that it remains committed to releasing the report after the weekend's tragedy. It will be delivered to Justice Minister Jody Wilson-Raybould on Monday and through her to the Prime Minister's Office. An advance copy was provided to The Globe and Mail. The report proposes that retired Supreme Court Justice Frank Lacobucci be asked to lead a one year study on what shape an apology, restitution and action to prevent future discrimination against sexual minorities should take. The report advocates "a process of 'truth and rehabilitation,' whereby the federal government will acknowledge the wrongs done to

our community and commit to a process to make it right." (…) Gay rights activists hope he will announce that he embraces the recommendations of both reports in principle beforehand. But moving from a pardon to an apology with promise of redress may be more than this government is prepared to embrace, however other countries proceed. Globe and Mail, A17

*** Fraudster released on early parole after seven months in jail**

Unrepentant and still contesting his conviction, former Regina businessman-fraudster Steven Vincent Weeres is now a parolee, mere months into a lengthy prison sentence. As a non-violent offender serving his first federal term behind bars, Weeres, 57, qualified for Accelerated Parole Review and is now out after seven months. "The basic difference is that they're eligible for parole at onesixth of their sentence, rather than one-third," Parole Board of Canada spokesman Patrick Storey explained. (The federal government ended the program in 2011, but courts have since ruled the change doesn't apply retroactively to those, like Weeres, whose crimes predate the revamped law.) "You preyed on unsuspecting individuals and bilked them of thousands of dollars. You impacted your victims' financial well-being, emotional well-being and their credit ratings," states his recent parole decision. "However, the board finds that you do not have a significant history of violence, nor have you been involved in the use of weapons. There is no indication that you have exhibited a pattern of violent behaviour, or that you have risk factors that would likely lead you to commit an offence involving violence," it continues. The board granted Weeres day and full parole on May 6. The Leader-Post has learned he's residing in a B.C. halfway house. Contacted by phone Saturday, Weeres said his appeal of conviction for fraud and money laundering "is still moving forward." He never appealed his sentence. No date for the appeal has been set. StarPhoenix, A7 (Leader-Post)

*** Most Wanted**

A man convicted of killing a fellow inmate at Bowden Institution is one of two most wanted this week. Keith Clinton Sandmaier - born Sept. 9, 1977 - is wanted on a Canada-wide warrant. A February fatality inquiry heard his criminal history includes stabbing to death Tung David Louie with a steak knife over a $30 debt when the pair were inmates at the minimum-security southern Alberta federal prison. Louie, who was serving a 12-year sentence for weapons, drugs and robbery offences, was unarmed when he got into a June 2011 fight with Sandmaier in a common area of Bowden Institution. Sandmaier was armed with a knife, though authorities were unable to confirm where he got it, and he stabbed Louie five times, according to an inquiry report into the homicide. At the time of the killing, Sandmaier had been awaiting a hearing because guards had found a sharp wooden weapon in the cell he shared with another inmate. Prison officials had deemed both inmates suitable to remain in the prison's general population. Parole records previously revealed that Sandmaier was motivated by a $30 debt when he stabbed Louie to death in an outdoor common area in the medium-security prison south of Red Deer. Sandmaier later pleaded guilty to manslaughter and was sentenced to five years. Edmonton Sun, A53

Distillery district for KP, harbour refloated

As the city sets its sights forward - on the future of its waterfront - Robert Kiley looks back. For the Ontario Green party candidate, the project is a chance to make good on last year's promise. During the federal election last November, Kiley was the campaign manager for MP candidate Nathan Townend. Amid federal campaign promises, one of the points in Townend's campaign was focused locally: on Portsmouth Olympic Harbour and Kingston Penitentiary. "Nathan and I put our heads together and said: 'What would be a local, sustainable and livable solution to revitalizing both [sites]?'" Kiley said. When the pair noticed a "budding brewery culture" in Kingston, they concocted a plan. A local distillery district could be built, alongside the often-discussed idea of an international sailing hub. In addition to local beer, the district would be a collective of Kingston artisans, food services and accommodations. "Green values are resiliency in the local economy, resiliency in local food systems, and resiliency in community engagement," Kiley explained. With this idea, all three values came together. When Townend was unsuccessful in his MP race, with 4.46 per cent of the vote in Kingston, the idea was put aside temporarily. Now, Kiley is taking the city's call for ideas as a chance to fulfil their promise anyway. "Currently, the city is hosting one-on-one interviews about the Kingston Pen site, and [this week] they'll be having an information session," Kiley explained. In preparation, he put together an online petition last Tuesday, to measure support and "add a bit of weight" to the idea. As of 6 p.m. Friday, the petition of www.change.org had garnered 121 signatures. Kingston Whig-Standard, A2

*** Un baromètre**
Arrêté, jugé sommairement puis gracié de façon théâtrale au moment où il allait être exécuté, Dostoïevski croupit quelques années au bagne, en Sibérie. Il en rapporte notamment la matière de ses Carnets de la maison morte, vaste récit de ses observations en prison. (…) Depuis que je m'intéresse davantage au sort fait aux prisonniers à l'heure de l'austérité, j'ai croisé sur les chemins de la prison quelques-uns de ces êtres de bonté. (…) Dans les prisons québécoises, un problème de surpopulation et de manque de services de base se pose plus que jamais. Depuis quelques mois, ce problème est illustré de façon éclatante à la suite de la fermeture de la maison Tanguay, une prison pour femmes. Bien qu'elles ne purgent que de brèves peines pour des délits mineurs, ces détenues ont été transférées à l'Établissement Leclerc, un ancien pénitencier fédéral de longue durée pour hommes. Certains, rappelait Dostoïevski, pensent " qu'il suffit que les détenus soient bien nourris, bien entretenus, qu'on suive toutes les prescriptions de la loi pour que les choses aillent bien ". Mais le traitement humain ne tient pas qu'à l'administration du règlement, rappelait-il aussi. La prison est une bête énorme qui écrase physiquement et moralement. On ne réhabilite pas une vie brisée en l'écrasant davantage. La semaine dernière, au moment de répondre à des questions au sujet des traitements douteux subis par les femmes de la prison Leclerc, le ministre Martin Coiteux a eu à peine le temps de dire quelques mots avant que, du milieu de la meute médiatique, on ne s'empresse de lui demander pourquoi certains prisonniers avaient droit à des cours de yoga, de zumba ou à de la zoothérapie. Le Devoir, A2

*** Ministers can't avoid tough issues**
An editorial states, "How long does it take a politician to make the transition from opposition to government? There's no hard and fast rule. Some MLAs who've spent a long time on opposition benches make a seamless transition into government, occupying cabinet portfolios with such ease and comfort it looks as though they have done it before. (…) Last week, a national news report revealed Manitoba's provincial jail system relies more on solitary confinement than any other province. The overuse of solitary is top of mind following the death of Richard Wolfe, a Saskatchewan prisoner who spent 640 consecutive days in a cell, alone, for 23 of 24 hours each day. Wolfe died from a heart attack after being transferred to a federal jail. Solitary confinement has always been prickly for politicians. On the one hand, human rights adocates and prison-welfare experts almost universally decry it. The United Nations has declared it a form of torture. Several provinces are reviewing their policies to ensure no inmate spends inordinate amounts of time segregated from other prisoners. On the other hand, the welfare of convicted criminals has never been a compelling issue for the majority of voters. Some of our least compassionate citizens celebrate the inherent cruelty of solitary. So, perhaps it made sense that, when asked by the *Globe and Mail* whether she was concerned that Manitoba was leading all provinces in the use of solitary, Stefanson said via a spokeswoman the province had "no plans to review segregation policies at this time." That response is simply unacceptable. Stefanson, a long-suffering opposition MLA, is getting a well-deserved first taste of governing. And the reality of government is that you must be ready and willing to respond when an issue such as this arises. Even those not on your personal top-10 list of pressing policy issues. The story required a response of some sort." Winnipeg Free Press, 8

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Gay communities react to targeted hatred**
Eric Pineault says his heart sank Sunday morning when he went on Facebook and learned of a gunman's deadly assault on an Orlando, Fla., gay nightclub. Pineault, the president of Montreal Pride, had visited the Pulse a couple years ago while on vacation. It was a smallish club with the usual Top-40 tunes and thrumming house music. But like all other gay nightclubs, it was a place of comfort - where you could let your guard down. "People can hang out and be themselves. It is not always possible to hold your lover's hand on the street. There, you can kiss and be yourself," he said. "No boundaries." (…) Violence against the LGBT community around the world remains a "grave concern," said a blog post on the Amnesty International website last month. (…) Data from Statistics Canada show that, in 2013, most police-reported hate crimes were non-violent, typically involving mischief, such as graffiti. However, two-thirds of cases motivated by hatred for someone's sexual orientation involved violence. A 2015 Justice Canada

report found that police data were likely to "seriously underestimate" the extent of hate crimes targeting the LGBT community because they were less likely than other victim groups to report incidents to police. "Analysis of calls to a hotline in Toronto run by the 519 Church Street Community Centre shows that a high incidence of hate-motivated incidents directed at gays and lesbians involve physical assault," the report said. "Only a minority of incidents reported to the hotline had been reported to the police." As Pride organizers from Vancouver to Montreal scrambled Sunday to organize vigils to mourn those killed in Orlando, they also said they planned to step up their vigilance and reach out to police to see if any security enhancements were needed at their events. London Free Press, NP4 (National Post, Calgary Herald, Ottawa Citizen, Windsor Star, StarPhoenix, Leader-Post); La Tribune (La Presse)

*** How Tory changed tough approach to keeping city safe**

In June 2003, Toronto mayoral candidate John Tory ran a tough-on-crime campaign that promised to add 400 police officers to the force's roster - even if it meant raising property taxes. The fact was the crime rate had been falling for decades. But just days before Tory released his crime platform, a man was charged with raping and murdering 10-year-old Holly Jones in her west end neighbourhood. "John Tory, 2003 edition, would not have been unlike many, many candidates who try to get elected by seizing the anti-crime agenda," says city hall veteran Councillor Joe Mihevc. That fall, Tory won the controversial backing of the Toronto police union, but lost the election to David Miller. Thirteen years later, Tory is mayor and gun violence has spiked. Twenty-one of the city's 33 homicide victims were killed by a firearm. (Receiving much less attention are the 17 pedestrian deaths on Toronto streets this year.) There is no evidence of an upward trend in the overall crime rate. But the default reaction of the police union and some right-wing commentators is that more cops should be hired. Whether doing that would make a difference is a hotly debated subject. Tory is not among those calling for more police. Instead, when Tory talks about keeping Toronto safe, he refers to better deployment and outsourcing certain policing tasks to ensure more officers focus on gritty crime-fighting, not "monitoring left turns." "A lot of other things have changed, too. I think we've all resolved to make sure that we find different ways to do policing in the city of Toronto," Tory told a recent news conference on gun violence. The mayor is recognizing that "the real task of keeping cities safe ... is complicated," says Mihevc. "There's crime prevention, lighting, making sure young boys are kept busy ... that of course is not a very sexy campaign slogan." This week could be a watershed moment for policing in Toronto - and Tory. On Thursday, his "transformational task force" on policing will unveil an interim report recommending ways to reorganize and modernize the force, while cutting costs. Earlier this year, after Mihevc and other councillors tried to flatline the police budget, which pushed past $1 billion, council voted 41-1 on a motion saying there is an "urgent and abiding" need to restrain policing costs. Tory, who sits on the police board, urged councillors to let the task force do its work. Toronto Star, GT1

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Missing: Annie Yassie was 13 when she disappeared over 40 years ago**

Eva Yassie's dream about her missing baby sister is almost always the same. Annie Yassie is still 13, she is standing in the distance and she is smiling. But when Eva asks her questions, Annie doesn't answer. When Eva tries to touch her, Annie can't be reached. "It really disturbs me, these dreams," Eva Yassie says, taking a long drag on a hand-rolled cigarette. "I call her name and see if she can.... She just looks at me and smiles, and fades away. I can't get no answers." Questions have haunted Eva Yassie for 42 years, since June 22, 1974, when Annie disappeared into the night a few kilometres outside Churchill, Man. She was just a kid, 13, just back to Dene Village from residential school. CBC News (2016-06-12)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Decriminalize marijuana, NDP urges Liberals**

The New Democrats are urging the Liberal government to decriminalize pot before they legalize it. Prime Minister Justin Trudeau campaigned on a promise to legalize, regulate and restrict access to marijuana, and his government plans to get started next spring. Meanwhile, the existing criminal law remains on the books and police are expected to enforce it. The NDP is introducing an opposition day motion on Monday calling on the House of Commons to recognize there is a contradiction in giving people criminal records for something the government has said should not be a crime. The motion also calls on the government to decriminalize simple possession of marijuana for personal use immediately. "Arresting people and giving them criminal records for possession of small quantities just doesn't seem fair, in light of their commitment, apparently, to legalize marijuana," New Democrat MP Murray Rankin said Sunday. Rankin also said the law is being applied inconsistently across the country, which adds to the unfairness. Rankin said one way to decriminalize it without having to wait for legislation to make its way through Parliament would be to have Attorney General Jody Wilson-Raybould issue a directive under the Public Prosecutions Act ordering Crown counsel to avoid proceeding with prosecution for simple possession offences. "I just think the sensible thing to do would be to no longer charge people until we can get the reformed regime in place," said Rankin. Health Minister Jane Philpott formally announced in April the federal government's plan to legalize and regulate marijuana when she spoke to the United Nations General Assembly in New York. Canadian Press (Telegram, A10, Red Deer Advocate, Calgary Sun, Winnipeg Sun, Toronto Sun, Edmonton Sun, Waterloo Region Record, Hamilton Spectator, Toronto Star, Chronicle Herald)

* **'Craft cannabis' growers fight for legal role**

Travis Lane has been growing marijuana since high school, when his first pot plant swiftly withered and died in his bedroom closet. By the time he was 20, he had cultivated a small basement grow-operation. Now in his mid-thirties, Lane owns an online dispensary and runs two 390-plant operations on Vancouver Island. He employs two growers and raises his plants without pesticides or liquid fertilizer. "I don't want to hide what I do. I'm good at what I do. I'm proud of being good at what I do," he said. "I've been proactive my whole life in trying to move towards a time where I can openly be a cannabis professional." Lane holds two Health Canada licences for the grow sites, making his pot production legal for medical purposes. But with the federal Liberals committed to legalizing cannabis for recreational use, Lane is among the smaller-scale growers fighting for a seat at the table. The government is still in the early stages of developing the legislation it plans to introduce next spring. Those behind a budding "craft cannabis" movement warn, however, that if the law favours large-scale commercial producers, then jobs and potential tourism revenues will be lost and the black market will continue to thrive. Canadian Press (Red Deer Advocate, A10, Telegram, National Post)

* **MADD Canada calls for roadside drug-testing equipment for police**

Mothers Against Drunk Driving wants police forces across Canada to be enforcement-ready for people driving while under the influence of legal marijuana. Danielle Cole, president of MADD greater Fredericton chapter, said she met with MPs in Ottawa to start getting prepared for the legalization of marijuana - the drug most likely to be the cause of impairment behind the wheel. MADD Canada is calling for an amendment to the Criminal Code about driving while under the influence of drugs. Cole said there is a strong misconception among young people about the use of marijuana and driving. "If you ask a teenager about this, they'll tell you they drive better [high]," she said. In 2014, MADD reported 2.6 per cent of all impaired driving charges were drug-related. In 2012, New Brunswick had 83 deaths related to traffic accidents of which there were 17 drug-related driving impairments accidents causing death, which is lower than the 22 alcohol-related driving deaths. Five deaths involved both drugs and alcohol. That is more than Prince Edward Island, but less than Nova Scotia and Newfoundland. Daily Gleaner, A2

* **Details on marijuana task force coming, to deal with supply, jurisdiction, retail, taxes**

A marijuana industry official says existing licensed producers could supply just 10 to 15 per cent of what demand will be once recreational use of marijuana is legalized. Insiders say the questions a government task force on marijuana legalization must deal with include how and where consumers will purchase it, how much involvement the provinces will have in its regulation, how adequate supply will be created, and what level of taxes should be applied. Multiple sources have confirmed a report that former Liberal cabinet minister Anne McLellan has been appointed to lead the task force, though this has not been publicly announced yet, and that the whole task force and its mandate will be revealed before MPs break for the summer on June 23. Don Gracey, a partner with the CG Group, which is lobbying the federal

government on behalf of a prospective producer of marijuana, was among the people who said this is true, as did another person who has been in discussions with the government on this matter but asked not to be identified."Anne McLellan has been appointed the chair of this task force," said Mr. Gracey, whose client Georgian Bay Biomed is in the process of building a production facility in Collingwood, Ont., initially planned for medicinal marijuana but which will now also be used for recreational pot. "We understand that the provinces have been asked for and have submitted, I guess what could be categorized as, nominees for provincial representation on the task force." Hill Times

* **Colorado pot retailer advises province on weed**
One of Colorado's largest marijuana retailers says that provinces legalizing pot must educate the public on potency and put in place rules on packaging from the outset. It was a message that liquor board heads and government officials from across the country heard at a private gathering in Saint Andrews last week. The chief information and security officer of Denver's The Green Solution, Nick Speidell, spoke at the conference quietly hosted by New Brunswick's Department of Public Safety in preparation for the sale, distribution and regulation of pot - now that Ottawa is moving toward legalization. Speidell told the Telegraph-Journal in an interview that he spoke on "the good and the bad" of the development of recreational marijuana in Colorado. The state is one of a few U.S. jurisdictions that have already legalized the sale and recreational use of cannabis products. "Colorado was the beta," said Speidell, whose family owned and operated recreational and medical dispensary, boasts the largest selection of marijuana and marijuana-infused products with 11 locations in and around Denver. "We had to learn some lessons, but if you follow some of the best practices and the case studies out here you won't have to make those same mistakes." Speidell's words were directed primarily at edibles - marijuana baked into brownies, cakes, chocolate bars and candy, among other forms - that are becoming a popular alternative to smoking cannabis. Times & Transcript, A10 (New Brunswick Telegraph-Journal)

PUBLIC SERVICE / FONCTION PUBLIQUE

PM to meet young public servants
Prime Minister Justin Trudeau will meet Monday with about 100 public servants, all under age 35, to discuss how their generation will influence policy and change the way the bureaucracy works. Trudeau, also the minister of youth, will be joined by his top bureaucrat, Privy Council Clerk Michael Wernick and Treasury Board president Scott Brison - both of whom have indicated the public service needs a rapid infusion of young blood and new leadership to take over from baby boomers and deliver on the Liberals' agenda. That discussion will be an interactive town hall, which every public servant across the country can watch online, to kick offthis year's National Public Service Week and address the widening generational gulf the Liberals are trying to manage. The annual pat-on-the-back for Canada's 250,000 public servants lost its lustre under the Conservative government. It was during public service week when former Treasury Board president Tony Clement put public servants on notice that he was targeting their sick leave and all but accused them of being malingerers. The lunches and awards to celebrate the work of public servants continued, but the unions boycotted. Last year, the week turned political when the large unions launched pre-election campaigns to get rid of the Conservatives and restore public services. That's all changed with the Liberals. Scientists are unmuzzled, public servants are going to conferences, and diplomats can talk again. The long-form census is back, ministers say they want policy advice and Brison is repealing legislation to restore the old rules for collective bargaining. Not all unions are boycotting this year, but the giant Public Service Alliance of Canada is because of the slow pace of negotiations and the Liberals' failure to "respect public servants." Ottawa Citizen, A5

* **Time to empower next generation of public servants, says Canada's top bureaucrat**
As the annual Public Service Week gets underway today, Canada's top bureaucrat says there's a clear focus this year on empowering the next generation inside the federal bureaucracy. In fact, the Clerk of the Privy Council, Michael Wernick, will lead a virtual town hall Monday morning aimed specifically at young bureaucrats. "I'm pushing for a theme of engaging with our younger cohorts, because this issue of generational renewal is important to me." said Wernick, who himself was headhunted into the federal government 35 years ago this month. Over those decades, Wernick said he has witnessed the many ebbs and flows of the federal government's relationship with its workers. There have "already [been]

changes in tone, for sure" under Prime Minister Justin Trudeau, said Wernick, the man who gave him his current job.(...) Ray Paquette, who works at Public Services and Procurement Canada and is on the negotiating team for the Professional Institute of the Public Service (PIPSC), said the Liberals have made some changes - but not nearly enough. "We have a big problem. The science community is still being muzzled, not being able to openly discuss projects that they're on, [and that] would benefit the people of Canada," he said. "The federal government is still holding them back from being able to do their job properly." (...)Debi Daviau, the president of PIPSC, said at a rally in Ottawa on Friday there's a simple solution to helping the government deliver, and it includes building the right environment. "There was a very difficult and toxic environment created over the past nine years. And from my perspective, something needs to come from the top if they're going to have the capacity to deliver the commitments of this government," said Daviau. CBC News

OTHER / AUTRE

*** Robert Hall, Canadian hostage, executed by Philippine militants Abu Sayyef**
A Canadian man being held hostage by a militant group in the Philippines has been killed. The extremist group Abu Sayyef had warned it would kill Robert Hall today if a multi-million dollar ransom wasn't paid. Sources close to the situation in Jolo, the island where the al-Qaeda-linked group is based, and within Philippine security, confirmed Hall's death early Monday to CBC News. Hall, who was from Calgary, had been held since Sept. 21, 2015 - one of four hostages that included former mining executive and fellow Canadian John Ridsdel, who was killed by the group in late April. Ridsdel and Hall were abducted from a seaside resort along with a Filipino woman and a Norwegian man. An official announcement is expected shortly. The condition of the remaining hostages is not known. CBC News; Globe and Mail; Agence France-Presse (EuroNews)

'There's blood everywhere'
It had been an evening of drinking, dancing and drag shows. After hours of revelry, the party-goers crowding the gay nightclub known as the Pulse took their last sips before the place closed. That's when authorities say Omar Mateen emerged, carrying an AR-15 and spraying the helpless crowd with bullets. Witnesses said he fired relentlessly - 20 rounds, 40, then 50 and more. In such tight quarters, the bullets could hardly miss. He shot at police. He took hostages. When the gunfire finally stopped, 50 people were dead and dozens critically wounded in the deadliest mass shooting in modern U.S. history. Mateen, who authorities said had pledged allegiance to Islamic State in a 911 call shortly before the attack, died in a battle with SWAT team members. Authorities immediately began investigating whether the assault was an act of terrorism and probing the background of Mateen, a 29-year-old American citizen from Fort Pierce, Florida, who had worked as a security guard. At least 53 people were hospitalized, most in critical condition, officials said. A surgeon at Orlando Regional Medical Center said the death toll was likely to climb. "There's blood everywhere," Orlando Mayor Buddy Dyer said. The gunman's father recalled that his son recently got angry when he saw two men kissing in Miami and said that might be related to the assault. Mateen's ex-wife said his family was from Afghanistan but that her ex-husband was born in New York. His family later moved to Florida. A law enforcement official said the gunman made a 911 call from the club in which he professed allegiance to the leader of the Islamic State, Abu Bakr al-Baghdadi. (...) "I am deeply shocked and saddened to learn today so many people have been killed and injured following a mass shooting in Orlando, Florida. While authorities are still investigating and details continue to be confirmed, it is appalling that as many as 50 lives may have been lost to this domestic terror attack targeting the LGBTQ2 community." Prime Minister Justin Trudeau, in a statement. Associated Press (The Guardian, B10); Le Devoir; Canadian Press (Waterloo Region Record); Canadian Press (National Post); Toronto Star; La Presse (2016-06-12)

*** Calgarians show solidarity and vow to take on hate**
Calgarians gathered by the hundreds Sunday night in solidarity with the victims of the worst mass shooting in U.S. history. The attack, which targeted a crowded gay nightclub in Orlando, Fla. , early Sunday morning, left 50 dead and as many wounded. The Olympic Plaza vigil was more noise than silence. The crowd of about 500 people cheered to celebrate the LGBTQ community and made noise to make it known they needed to be strong in the face of hatred. (...) Alberta's premier said she was

repulsed and outraged by "the hatred that fuelled this crime," and she extended thoughts and prayers to the victims and their loved ones "who are suffering this moment." "And we resolve to make sense of these senseless events by re-committing ourselves to building communities where love and solidarity triumph over hatred and division," Notley said in a statement. Calgary Muslim groups condemned the "barbaric" attacks in Florida as they asked people of all faiths to "stand together" and "unite against terrorism and extremism." "Terrorists and extremists want to divide us but we refuse to be divided," Muslims Against Terrorism and the Islamic Supreme Council of Canada said in a release. "We demand that Daesh (ISIS) and its sympathizers should be brought to justice." Calgary Sun, A6

*** L'Iran condamne la décision d'un tribunal canadien**

L'Iran a condamné samedi la décision d'un tribunal canadien de saisir 13 millions de dollars d'actifs non-diplomatiques du gouvernement iranien au profit de familles de victimes d'attentats coordonnés par Téhéran et perpétrés par le Hamas et le Hezbollah, selon la justice canadienne. Le jugement, obtenu vendredi par l'AFP, exige que les familles d'Américains décédés dans huit attentats -- perpétrés entre 1983 et 2002 -- reçoivent les propriétés et les comptes bancaires détenus par le gouvernement iranien au Canada en guise de dédommagements. Le porte-parole du ministère iranien des Affaires étrangères, Hossein Jaber Ansari, a dénoncé cette décision, la jugeant " contraire aux engagements internationaux du gouvernement canadien ", selon l'agence officielle iranienne Irna. " Elle est également contraire aux affirmations du nouveau gouvernement canadien pour normaliser les relations entre les deux pays ", a ajouté M. Jaber Ansari. " Toute normalisation des relations diplomatiques entre les deux pays nécessite une révision des politiques extrémistes et erronées du gouvernement canadien. " Selon les médias canadiens, ces actifs appartenant au gouvernement iranien totaliseraient environ 13 millions de dollars canadiens. Cette poursuite a été déposée au Canada en vertu d'une nouvelle loi, adoptée en 2012, qui permet aux victimes et à leurs familles d'obtenir des dommages et intérêts saisis auprès d'États soutenant des actes considérés comme terroriste. L'Iran est ainsi considéré par le Canada. Agence France-Presse (Le Devoir, B2)

*** Canada needs to probe war crimes in Afghanistan**

An opinion piece states, "Justin Trudeau was only a backbench opposition MP during the Afghan detainee scandal, and spoke just once in Question Period about allegations of Canadian complicity in acts of torture. But what he said on Nov. 29, 2009, was insightful: "We need to get at the truth. The international reputation of Canada and our military is at stake." Trudeau was responding to a story broken by the Star in May 2007, which grew into a scandal that ultimately led to the prorogation of Parliament in December 2009. As one detainee told reporter Rosie DiManno, "They whipped me with rubber hoses. Another time, they used a chain to hang me from the ceiling, my head toward the floor." The same detainee said Canadian officials visited the prison operated by the Afghan National Directorate of Security (NDS), but were never allowed to speak with prisoners. As the late James Travers wrote, also in this newspaper, the story was part of a "long march into twilight" for Canada. The country that "gave the world Lester Pearson's peacekeeping and Brian Mulroney's stand against apartheid" now had to struggle "with Stephen Harper's apparent blindness to compelling evidence of Afghanistan prisoner abuse." (...)Three months later, the Afghanistan Independent Human Rights Commission estimated that "one in three prisoners handed over by Canadians are beaten or even tortured." In March 2007, the U.S. State Department reported that: "Complaints of serious human rights violations committed by representatives of national security institutions, including arbitrary arrest, unconfirmed reports of torture, and illegal detention were numerous."(...) Six years have passed since Justin Trudeau spoke from the backbenches about Afghan detainees. Now, as prime minister, he can put his insight into action. Nothing would do more to strengthen Canada's reputation as a progressive and principled country than investigating possible war crimes by our own soldiers and officials. Nothing would do more to help Canada win a UN Security Council seat. We need to get at the truth, and we need to do so now." Toronto Star, A15

INTERNATIONAL

*** Police had previously interviewed gunman**

The gunman suspected of killing 50 people at a gay Florida nightclub, Omar Mateen, a 29-year-old American, was a person of interest to authorities in 2013 and again in 2014. The FBI says agents twice investigated the man, but closed those cases after interviewing him. FBI agent Ronald Hopper said Sunday that Mateen had been interviewed in 2013 and 2014. Hopper said agents first investigated Mateen after he made inflammatory comments to co-workers alleging possible ties to terrorists. Mateen was interviewed twice and, when investigators were unable to verify the details of his comments, the FBI closed the probe. In 2014, the agency looked into potential ties connecting Mateen to Moner Mohammad Abusalha, the first American to carry out a suicide attack in Syria. Like Mateen, Abusalha lived in Fort Pierce, Florida. Hopper says agents determined that contact was minimal and did not constitute a substantive relationship or a threat at that time. The FBI says he referred to the Islamic State of Iraq and the Levant (ISIL) in a 911 call before the slayings. Mateen's ex-wife, who spoke to the Washington Post on the condition of anonymity, said his family was from Afghanistan but that her ex-husband was born in New York. His family later moved to Port St. Lucie, Fla., where he worked as a security guard. CBS News Justice and Homeland Security correspondent Jeff Pegues reported that an ISIL-related Twitter account has an alleged photograph of Mateen. Pegues also reported that Mateen pledged allegiance to the ISIL at some point. Postmedia Network (Windsor Star, NP3, StarPhoenix, Vancouver Sun, Ottawa Citizen, National Post, Leader-Post, Edmonton Journal, Montreal Gazette, London Free Press, Calgary Herald); The Province; Globe and Mail; Associated Press (Acadie Nouvelle); Toronto Star; La Presse (La Tribune); TVA Nouvelles

*** Daesh, style US**

Ce qui ajoute à l'horreur, c'est qu'on est déjà programmé. On s'attend au pire. On ne sait pas quand, ni où, on ne veut pas vraiment le savoir, mais on sait que ça arrivera. On entre déjà en mode statistique. On compare les chiffres des tués et des blessés. « Ça » quoi, au fait ? On n'avait pas encore identifié les corps qu'il fallait choisir son camp : une autre manifestation du terrorisme islamiste ou une autre tuerie de masse américaine ? C'est les deux, évidemment. La force du groupe État islamique est qu'il s'adapte aux terrains, dans sa guerre. Il peut former des combattants hyper-organisés ou inspirer des individus qui agissent seuls en son nom. Des commandos d'Européens venus dans ses camps qui retournent faire des assassinats coordonnés de type militaire, comme à Paris, à Tunis ou à Bruxelles. Ou un couple comme celui de San Bernardino, qui s'en va descendre 14 collègues dans un party de Noël en Californie, et qui le fait au nom du groupe État islamique. Ou un type (apparemment) seul comme hier. L'ex-femme d'Omar Mateen a dit au Washington Post qu'il était violent, pas vraiment religieux et surtout instable psychologiquement. C'est possible. Ça n'en fait pas moins un candidat excellent. Qu'il tue dans une attaque coordonnée avec un commando ou qu'il tue tout seul, ça change beaucoup de choses dans l'enquête. Ça ne change rien au résultat. Il n'en a pas moins tué 50 personnes au nom du même commanditaire. On n'en sait pas assez long sur l'état mental de Mateen. Mais quoi qu'il en soit, on ne peut pas mettre sur le compte des seuls troubles mentaux un massacre aussi ciblé. Un discours homophobe violent est bien incrusté dans certaines branches de l'islam. La Presse+, 6

*** Time running out to find EgyptAir black boxes**

Egyptian investigators say time is running out in the search for the black boxes from an EgyptAir plane that crashed into the Mediterranean last month, killing all 66 people on board. In a statement Sunday, they say that searches by ships in the area will intensify, given that only around five days remain before the batteries of the flight's data and cockpit voice recorders expire and they stop emitting signals. The boxes could reveal whether a mechanical fault, a hijacking or a bomb caused the disaster. Finding them without the signals is possible but more difficult. Since the plane disappeared from radar en route to Cairo from Paris, only small pieces of debris and human remains have been retrieved from the crash site. No group has claimed an attack. Daily Gleaner, B1

*** One of Lebanon's biggest banks targeted by blast**

A powerful bomb in Beirut destroyed several cars, severely damaged one of Lebanon's biggest banks and injured one person on Sunday. The state-run National News Agency said the bomb was placed under a car. Lebanese Interior Minister Nohad Machnouk, speaking to the private LBC station, confirmed the report but did not say whether anyone was deliberately targeted by the blast, which shook nearby buildings. Associated Press (Toronto Star, A12)

MINISTER / MINISTRE

Saskatchewan reeling after Orlando shooting
Dan Shier, co-chair of Regina Pride, was celebrating Saskatchewan Pride Month in Saskatoon when he heard the news: Fifty people died and another 53 were injured after a shooting in a gay nightclub in Orlando, Fla. "Obviously, kind of shock and some remorse with the news, and some heavy hearts," Shier said. The Queen City is gearing up for its own pride celebrations, kicking off on June 18, 2016. And while the shooting will be on everyone's minds, the festivities will continue as planned. (…) **Ralph Goodale**, **Minister of Public Safety and Emergency Preparedness**, also spoke about the shooting. "***We have to make sure that we are doing everything we can do to make sure Canadians are safe,"*** **Goodale** said in a phone interview. ***"As Canadians in this month celebrate pride in many ways, it's extremely important now that those celebrations go forward, and go forward with a sense of determination and safety and security."*** CTV News (2016-06-12); 620 CKRM; * CBC News

*** Regina's LGBTQ community and religious group 'condemn' deadly shooting in Orlando**
Regina residents described their shock when they heard the news about the deadliest shooting in U-S history where 50 people were killed at a popular gay nightclub in Orlando. "I'm shaking, not sure if you

can tell, but I'm shaking because of all of it," Lisa Phillipson said. Phillipson is the contracts director with Queen City Pride. She said the shooting hate crime shows there's a need for more public education. "And the fact that this shows that reinforces the need that we need to have more activism and more parades and more marches," Phillipson said. **Public Safety Minister Ralph Goodale** said there's no immediate threat to Canada at this time. He noted that when tragedies like this occur, security detail does increase. ***"Everything is double checked and triple checked," Goodale*** said. ***"There is no immediate connection to Canada in any way."*** – **Goodale**. He also expressed his condolences to the family, calling the shooting a ridiculous and sad brutality. ***"Our thoughts and prayers go out to the victims and their families who are suffering through an absolutely unspeakable and entirely tragic loss,"*** he said. Global News (2016-06-12)

Le Canada condamne la tuerie survenue à Orlando
La classe politique canadienne a condamné le carnage survenu dans une discothèque d'Orlando, en Floride, qui a fait 50 victimes et des dizaines de blessés, dimanche. Le premier ministre Justin Trudeau a publié un communiqué dans lequel il s'est dit « profondément choqué et attristé d'apprendre la nouvelle au sujet de la fusillade à Orlando, en Floride, qui a fait tant de morts et de blessés ». Il a ajouté qu'il « est effroyable de penser qu'au moins 50 vies ont été perdues en raison de cet acte de terrorisme intérieur visant les membres de la communauté LGBTQ2 ». (…) Le **ministre de la Sécurité publique** du **Canada Ralph Goodale** a écrit sur Twitter qu'il était bouleversé par ce qui est considéré comme la pire tuerie par balle de l'histoire des États-Unis et que les Canadiens condamnaient une telle violence. Selon les policiers américains, l'attaque a eu lieu dans la nuit de samedi à dimanche, lorsqu'un tireur a ouvert le feu dans une boîte de nuit gaie. L'assaillant est mort plus tard sous les tirs des policiers. **M. Goodale** a ajouté que ses prières et ses pensées allaient vers les proches des victimes. ***Choqué à la fusillade meurtrière à Orlando. Les Cdns condamnent cette violence brutale. Pensées + prières avec victimes et proches.- Ralph Goodale (@RalphGoodale***) 12 juin 2016. Presse canadienne (Le Devoir, Express Drummondville); Journal de Montréal (2016-06-12)

Akwesasne Mohawks want Canadian government follow-through on independent oversight of border services agency
In light of its longstanding and difficult relations with the Canada Border Services Agency, the Mohawk Council of Akwesasne is supporting creation of an independent oversight mechanism for the operations of the border agency. The Canadian government recently signaled that it is looking for ways to improve transparency and increase public confidence in the CBSA, according to a press release from the MCA. Akwesasne community members routinely cross through the CBSA port in Cornwall, Ontario, sometimes several times a day, while traveling from one part of the community to another to travel to work, attend school, attend health related appointments, visit family, or otherwise meet social, cultural, economic, and recreation needs, the MCA said in a statement. (…) The Canadian **Minister of Public Safety and Emergency Preparedness Ralph Goodale** said the government is examining how to best provide the CBSA with appropriate review mechanisms, particularly after numerous civil rights groups have called for the creation of an independent watchdog to oversee the border agency. On May 26, MCA Grand Chief Abram Benedict wrote to **Minister Goodale** expressing the Mohawk Council's support for the establishment of an independent oversight mechanism for the CBSA. "While we appreciate the importance of ensuring that the border is secure for national security as well as for the safety of all citizens, we expect CBSA to treat people with respect in an open and transparent manner. Law enforcement officials should be held to the highest standard of review and scrutiny in their interaction with the public," the MCA statement said. North Country Now (2016-06-12)

"The Chinese Foreign Minister recently scolded a Canadian journalist for asking about China's human rights record in a press conference in Ottawa and while here demanded a meeting with the PM. Do you think the federal government responded appropriately?"
Mathieu R. St-Amand, Bloc-Québécois strategist: "The Chinese government's difficulty with the concept of a free press is nothing new. By expressing its dissatisfaction to the Chinese about an objectionable statement by one of that country's diplomats, the Trudeau government has done the bare minimum of what would be expected in such a situation. "However, if this government is serious about promoting freedom of the press, it should call an inquiry into the surveillance of two *La Presse* reporters by the RCMP. Beyond **Public Safety Minister Ralph Goodale's** rhetoric, the government should take this direct

attack on the freedom of the press seriously. A public inquiry would shed light on several unanswered questions about RCMP practices. By not calling an inquiry, the government is attempting to cover up one of the most serious attacks on freedom of the press in recent years. "Canada must defend freedom of the press at home in front of countries where this freedom is curtailed. However, the government needs to do more than simply lecture offenders; it must ensure that this freedom is unrestricted here. Justin needs to lead by example instead of talking down to people for once." Hill Times

Canada's surveillance crisis now hiding in plain site
An opinion piece by Michael Geist states, "Three years ago this month, Edward Snowden shocked the world with a series of disclosures that revealed a myriad of U.S. government-backed surveillance programs. (…) While these programs attracted attention for a day or two, it was the Conservatives' introduction of Bill C-51, the anti-terrorism legislation that granted the government a host of new powers, that finally succeeded in generating a sustained focus on Canadian surveillance law. The bill became law with few amendments, but emerged as the public's shorthand for the need for reforms to surveillance activities. **Public Safety Minister Ralph Goodale** and the new Liberal government have promised changes, with expectations that they will focus initially on a new "super" oversight body for security agencies and later open the door to further amendments. Yet despite assurances that improved oversight will provide adequate safeguards against intrusive surveillance, in recent months it has become apparent that weak oversight represents only a small part of the problem. Consider this year's report from the Communications Security Establishment (CSE) Commissioner, who uses legal language to obscure an otherwise clear admission that there are ongoing metadata violations within the CSE. The report notes that metadata activities were "*generally* conducted in compliance with operational policy" and that the "CSE has halted *some* metadata analysis activities" that were the subject of previous criticisms. The use of words like "generally" and "some" are no accident. The CSE Commissioner could have just as easily written that the CSE still does not conduct its metadata activities in full compliance with the law and that it has refused to stop some activities that were the subject of complaints. Yet the soft framing turns what should be a major story and source of concern into something largely ignored by the general public." Hill Times (Toronto Star)

*** Will Liberals defend Charter values on C-51?**
An editorial states, "When did the federal Liberals stop being liberals? In recent weeks we've seen an allegedly liberal government swerve, dodge and obfuscate to justify a bill - C-14 on assisted dying - which some courts and many constitutional scholars agree does not respect the Supreme Court's decision on Charter rights. The Supreme Court gave Trudeau one job to do. They even made it simple by giving him the language to use. Some provinces already had rules he could adapt. (…) Triangulation is the same strategy that, a year ago, lead Trudeau to support Bill C-51, Harper's version of homeland security. As with C-14 , many respected constitutional lawyers and rights groups said sections of C-51 violated the Charter. When an uproar over the moral hollowness of Trudeau's position offended actual liberals, he promised a Liberal government would fix C-51. Recently, the **Minister of Public Security** told the Commons he hopes a C-51 fix-it bill will be tabled ***"before Parliament rises for the summer."*** But will the Liberals fix C-51? Or "balance" it? How will we know? Paul Cavalluzzo - former commission counsel in the Maher Arar inquiry - has done the research on what needs to be fixed to make C-51 Charter-compliant. He's filed an application asking an Ontario court to strike down several provisions of C-51 because they trample Charter rights. His analysis is a valuable scorecard for any forthcoming Liberal bill. "Our main concern is the power C-51 attempts to give a judge to authorize a violation of Charter rights and freedoms if CSIS applies for a warrant to break the Charter," says Cavalluzzo in an interview. "In our view this is totally alien to our constitutional order." He argues the entire idea needs to be scrapped." Winnipeg Sun, A9 (Toronto Sun, Ottawa Sun, Edmonton Sun)

Missing Mountie
An opinion piece states, "Could Bob Paulson's days as top banana of the RCMP be numbered? If he doesn't start showing more cooperation in bringing about fundamental change to the nation's police force, he could be headed for a change in his career path. Some critics would argue it comes not a moment too soon. The organization he runs is more top down than Donald Trump. As the Force evolved in the Harper years, when labour laws were razed like old growth forests, Paulson's Mounties are not exactly members of Dudley Do-Right's RCMP. Paramilitary and politicized, the RCMP is in danger of becoming the fossil

force of law and order in Canada — and far worse, the kept police of the government of the day. Paulson's immediate problem resembles arrogance. As one senator put it to me, Paulson recently "stiffed" a Senate committee by sending deputies — two assistant commissioners — to answer questions regarding Bill C-7, the very controversial RCMP union bill. (…) Despite all that, though, there is a sense amongst his critics that he just doesn't get it. The Chair of the Civilian Review and Complaints Commission of the RCMP, Ian McPhail, testified before the Senate committee that his investigation into workplace harassment, requested by **Public Safety Minister Goodale**, had been impeded by senior Mounties. The Commissioner himself had forbidden McPhail to speak to RCMP members without the members first informing the Commissioner.(…) It is not all on Paulson. Since 2006, the RCMP has acted in such a way as to raise real questions about its independence and its impartiality. That was the year the Mounties weighed in to the federal election in dramatic fashion. Former Commissioner Guiliano Zaccardelli publicly announced an investigation into the then-Liberal government's handling of an income trust tax decision included in the federal budget. The RCMP had two press releases prepared to announce their investigation a month away from the election — one including the minister of the day's name, **Ralph Goodale**, and the other leaving it out. They opted to name, and some might say shame, the minister." iPolitics (2016-06-12)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

*** South African President drawn into firefighters' pay dispute**
As 300 disgruntled South African firefighters prepared to fly home from Alberta on Sunday, questions were mounting over a contract that gave them barely one-third of the daily amount Alberta had allocated for their services. The issue has sparked a political uproar in South Africa that reached the highest levels on the weekend, when President Jacob Zuma ordered his environment minister to find "a solution to the impasse." While some South Africans criticized the firefighters for going on strike just six days after beginning their work in Alberta, many others - including an opposition leader - said their strike was justified by the need to fight for their rights and equal pay. Alberta Premier Rachel Notley and other officials have confirmed that Alberta agreed to pay $170 a day for each of the South African firefighters. Yet the firefighters signed contracts in which they will receive only a "stipend" of $50 a day - far below the Alberta minimum wage of $11.20 an hour. This discrepancy was "disturbing" and "not acceptable," Ms. Notley said last Thursday. The payment of $170 daily to their South African employer was intended to cover the $50 stipend, plus their regular South African pay (as little as $10 a day), along with "payroll burden, administration costs, training and other costs of preparing the firefighters to travel," according to Kim Connors, executive director of the Canadian Interagency Forest Fire Centre, which was responsible for bringing the firefighters to Canada. In addition, Alberta is covering all of their costs for accommodation, travel and meals. Globe and Mail, A16; CBC News

*** Body of missing Corner Brook woman Patricia Boyd found**
A Corner Brook woman who was reported missing two weeks ago has died. The body of 57-year-old Patricia Boyd was found on Saturday. The Royal Newfoundland Constabulary and the Bay Islands Volunteer Search and Rescue Team had been searching places like the North Shore Highway and the Riverside Drive area of Corner Brook in the weeks since Boyd went missing on May 26. CBC News

*** Is another dust bowl coming?**
An opinion piece states "In the 1930s, a bad drought and an economic malaise upended farming systems around North America causing the Dust Bowl. Could climate change and the persistent post-2008 economic doldrums do the same? On one hand, the environmental signals are sobering. The drought in California seems to be long-lasting and even this year's record El Niño, which many had hoped would bring rainfall to the Southwest, seems to have done little. In Africa and India, hundreds of millions are facing food insecurity due to a combination of drought and armed conflict. Meanwhile in Canada, the Prairie Climate Centre has recently published an atlas suggesting the wildfires in Fort McMurray are a

taste of things to come. This year's hot, dry weather is consistent with climate change models that project the number of days reaching above 30°C each year will increase by three to four times in the Prairies over the century... Humanity is on the cusp of a major transformation as we come to grips with the necessity of feeding nine to 11 billion people on an increasingly hot and crowded planet. Thanks to climate change, meeting this challenge requires that we be far more thrifty with our resources and create not only productive but also resilient systems. The tools of the digital agricultural revolution are only just now emerging, but they will come to define how humanity feeds itself in the future. Canada, and the Canadian industry, should be at the forefront of this revolution." Hill Times

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Toronto 18 may have been shock for Canada, but it was not harbinger of a path to ruin
An opinion piece by Phil Gurski, president/CEO of Borealis Threat and Risk Consulting, states, "June 2 marks the 10th anniversary of the arrest of 17 men in the Greater Toronto Area in the culmination of a massive terrorism investigation by Canadian authorities. In what came to be known as the "Toronto 18" (the last subject was arrested in August 2006) Canadians were rudely introduced to homegrown terrorism five years after 9/11. For those who have forgotten the details, here is a short synopsis. A group of men in the Toronto area, led by an Afghan immigrant (Fahim Ahmad), attended a "training camp" near Orillia, Ont., in December 2005, chose three targets (the CSIS office in Toronto, the financial district and a military base), built a detonator, and bought fertilizer, all without knowing that their every move was being followed by CSIS and the RCMP. Their arrest saved the lives of thousands. The event was a seminal one for me as a CSIS analyst and I'd like to reflect on what this meant then as well as what is means now. (...) Fourthly, the case showed that CSIS and the RCMP could work hand in glove to successfully stop a terrorist act from occurring. The investigation started with CSIS and was handed over to the Mounties when it was clear a criminal act was being planned. CSIS sources became RCMP agents (not always an easy thing to do) more or less seamlessly and a serious terrorist attack was averted. There is little doubt that the CSIS-RCMP relationship has had its ups and downs but the two do work together well and Canadians are safer as a result. Lastly, despite more foiled plots and two successful ones in the interim, Canada remains in a good position when it comes to homegrown terrorism. We are not in the same league as France or Belgium or the U.K., or even the U.S. Our government has done a much better job at understanding the threat and putting measures into place, both soft and hard, to deal with it. We had the five-year $10-million Kanishka research project which, although many thought it under-delivered (I am among that group), set the stage for a more robust and more mature academic environment to look at terrorism where none existed before. **Public Safety Canada's** Citizen Engagement branch developed a community outreach program that was the envy of all our allies and the creation of the new Office of the Coordinator for Counter Radicalization and Community Outreach will hopefully enhance this effort. There is more work to be done but these are all enviable achievements." Hill Times

*** Des parcours qui sèment la consternation**
Pourquoi des jeunes dont les parents ont choisi de venir s'installer en Occident, comme c'est le cas du tireur du club Pulse, en viennent-ils à la violence au nom de groupes djihadistes ? Les experts interrogés par La Presse avancent plusieurs pistes. Des études ont démontré que les immigrants de deuxième génération, dont Omar Mateen faisait partie, « peuvent être à risque d'épouser des idéologies supportant la violence », note Jocelyn Bélanger, ancien chercheur au centre contre la radicalisation de Montréal et professeur adjoint à l'Université de New York à Abou Dhabi. Bien que ce soit l'exception, plusieurs exemples d'immigrants de deuxième génération qui ont complètement dérogé des valeurs de leur famille pour adhérer au terrorisme peuvent être observés. Les frères Salah et Brahim Abdeslam, l'un cerveau des attentats de Paris, l'autre mort en déclenchant sa ceinture d'explosifs, ont grandi en Belgique dans la commune de Molenbeek dans une famille ouverte. Nés de parents marocains immigrés en France, puis en Belgique, ils ont eu une adolescence parsemée de petits larcins avant d'embrasser l'idéologie de l'EI à l'insu de leurs proches.(...) Il y a aussi la jeune Maha Zibara, ex-élève du collège de Maisonneuve, arrêtée l'an dernier avec une dizaine de jeunes alors qu'elle s'apprêtait à quitter le Canada. Son père, un entrepreneur d'origine libanaise, était démoli. M. Zibara et sa famille sont de confession chiite, un courant minoritaire au sein de l'islam. Un jour, Maha Zibara a rejeté complètement la voie de ses parents. « Elle est venue me dire que les chiites sont des mécréants », avait-il raconté à l'époque. Pourquoi, alors, des

jeunes nés ici et élevés dans des familles qui n'adhèrent pas aux valeurs islamistes se radicalisent-ils ? Certains enfants issus de l'immigration récente sont perdus, hantés par une ambigüité identitaire, répond Mounia Ait Kabboura, chargée de cours à l'Université du Québec à Montréal et experte du radicalisme islamique. « Ils ne se retrouvent nulle part. Ils sont dans la culture religieuse et dans la culture occidentale, et c'est difficile de mélanger les deux », dit la chercheuse, qui a étudié la question auprès de jeunes établis au Québec. LaPresse+, 14

* **PM soft on terrorists**

Could someone please explain why the Trudeau government refuses to criminally charge citizens who become terrorists and revoke their citizenship? What incentive is their for a would-be terrorist to stay in Canada knowing this country will do nothing to revoke their citizenship if they return to Canada? The Trudeau government is weak when it comes to our citizens becoming terrorists!" The Province

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Border Security reality TV show pulled for privacy concerns
Canada's border agency is pulling the plug on the controversial reality TV program Border Security after the federal privacy commissioner found the agency violated the rights of a construction worker filmed during a raid in Vancouver. Privacy commissioner Daniel Therrien recently informed the British Columbia Civil Liberties Association, which spearheaded a complaint on behalf of Oscar Mata Duran, that the Canada Border Services Agency breached the Privacy Act by allowing production company Force Four to film the agency's examination of the migrant labourer. "As a matter of principle, it is our view that federal government institutions cannot contract out of their obligations under the Act," says the commissioner's 26-page report of findings. In light of the well-founded complaint, Therrien's office recommended the border agency end its participation in the television program, which the agency agreed to do. Agency spokeswoman Esme Bailey confirmed that Border Security: Canada's Front Line would not return for a fourth season. The commissioner also urged the agency to carry out a formal privacy impact assessment before embarking on any significant future initiative involving the use of personal information. Border Security began airing on the National Geographic Channel in 2012, chronicling encounters between border officers and the public. The unscripted series was seen by millions of Canadians and has aired in dozens of other countries. * **Réseau de présumés trafiquants de drogue démantelé dans l'Est ontarien**
La Police provinciale de l'Ontario (PPO) a arrêté mercredi dernier cinq personnes lors de la saisie d'une importante quantité de marijuana dans une résidence d'Alfred-Plantagenet. Sur place, les policiers ont saisi des plants, de la résine et d'autres dérivés dont la valeur totale est estimée à 245 000 $.Des hommes de 18, 19 et 39 ans ainsi que deux femmes de 24 et 54 ans devront répondre, entre autres, à des accusations de production et de possession de drogue et de possession d'armes à feu. L'Agence des services frontaliers du Canada (ASFC) avait mené à une première enquête dans cette affaire après avoir contrôlé des colis destinés à une adresse d'Alfred-Plantagenet. Ceux-ci contenaient de la marijuana.

Canada's choice for migrant workers: decent work or entrenched exploitation?
Canada's Temporary Foreign Worker Program (TFWP) is at a crossroads. After years of escalating concern about employers' growing reliance on, and widespread exploitation of, low-wage migrant workers, the Standing Committee on Human Resources, Skills and Social Development and the Status of Persons with Disabilities (HUMA Committee) is reviewing the controversial program and will report to the minister of Employment, Workforce Development and Labour. At this crucial moment, what will Canada choose: secure status and decent work, or entrenched exploitation for migrant workers? Canada's Choice, my new report published by the Metcalf Foundation maps what is at stake. The findings are troubling. Low-wage migrant workers face deeper insecurity now than before the 2014 "reforms" by the previous government. Hill Times

War resister wants PM to keep his word

* An opinion piece states "Like much of the rest of the world, Rodney Watson has spent a lot of the last week thinking about the world's most famous war resister. But Muhammad Ali's televised memorial service Friday had particular resonance for Watson, who watched it from the room above the First United Church in Vancouver's (…) A new Insights West poll released this week shows a majority of Canadians support the idea of making Iraq War resisters like Watson permanent residents of their adopted country. Watson, 38, said he appreciates the widespread support of "the good and conscientious citizens of Canada" evidenced in the poll results, and he hopes the federal government will notice and take action on behalf of himself and 14 other Iraq War resisters in Canada. "For those same ones shedding crocodile tears and praising Muhammad Ali, who have the power to actually do something, I have to say, 'What about us?'" said Watson, who served in Mosul, Iraq, in 2005 and 2006. He left the U.S. for Canada in 2009 to avoid another deployment to Iraq, and sought sanctuary in the First United Church. The Canadian government ordered him deported in 2009." Vancouver Sun, A8

* **Mother of Sask. overdose victim testifies**

It's perfectly legal to buy the ingredients to manufacture the deadly opioid fentanyl. Anyone with an Internet connection can order the stuffonline. Marie Agioritis, a Saskatoon mom who lost her son Kelly to a fentanyl overdose two years ago, is joining forces with a Canadian senator, hoping a new law making those ingredients illegal will put a dent in the fentanyl trade. Q What is the government doing to combat the spread of this drug? A Agioritis was in Ottawa last week testifying at a Senate committee hearing on a new bill aimed at making the ingredients for manufacturing fentanyl illegal. Sen. White, who introduced Bill S-225, says without making the ingredients illegal it's tough for police and customs agents to crack down on the trade. Leader Post

Don't like the airport security line? Pay to shorten it

Let the users pay! Some airport and airline executives have somehow got it in their heads that airport security is like universal health care, and that if wait times at the airport are too long, then the federal government ought to fix things by spending more public money. But if we want to shorten the lengthening lineups at airports, and the way to do it is to hire more security agents, it only makes sense to raise the money to do this from users: airline passengers. Canada's airports are supposed to be user-pay affairs. You pay an airport improvement fee when you fly, and an airport security fee too, embedded in the price of a ticket. Alternatively, the Canadian Air Transport Security Authority can figure out how to become more efficient, and move more people through screening, faster. The last federal Liberal budget gave an additional $29-million to CATSA, but taxpayers shouldn't be subsidizing air travel. Nor should air travel be subsidizing taxpayers: At the moment, the security tax on air travellers appears to be taking in more money than Ottawa is giving to CATSA and airport security. User-pay makes sense; user-pay-plus-a-little-extra-for-Ottawa does not. Globe and Mail

CYBER SECURITY / CYBERSÉCURITÉ

* **Mafiaboy finds new mission in life**

Mafiaboy is now a man and he's on a mission. As a 15-year-old hacker in 2000, Mafiaboy (real name: Michael Calce) paralyzed the websites of the biggest names in media and e-commerce, including CNN, Amazon and eBay. The RCMP and FBI tracked him down in Île-Bizard. He pleaded guilty to 58 charges and spent eight months in a youth detention centre. Now 31, Calce recently started a cyber-security company - Optimal Secure - focusing on the financial sector in Montreal, Toronto and Vancouver. His specialty: "penetration testing." Companies hire him to try to penetrate their computer defences so they can secure systems before hackers strike. Computer hacking is a constant threat. In recent weeks alone, hackers have broken into some of Facebook's Mark Zuckerberg's accounts; forced the University of Calgary to pay a $20,000 ransom after crippling its computer systems; and stolen $81 million U.S. from the Federal Reserve Bank of New York. The Montreal Gazette sat down with Calce and learned that "spear-phishing email attacks" are among the scary things to fear online today. (This interview has been edited and condensed.) Gazette, A3

* **Massive North Korea cyber attack thwarted after hacking South Korea: report**

North Korea has hacked into more than 140,000 computers at large South Korean conglomerates and government agencies and planted malicious codes that may have been intended for a massive cyber attack that has been thwarted, a news report said on Monday. The hacking originated from an internet address traced to the North Korean capital and targeted a software used by about 160 companies and government agencies to manage their computer networks, Yonhap news agency reported, citing the police. The internet address was identical to the one used in a 2013 cyber attack against South Korean banks and broadcasters that froze their computer systems for more than a week. Reuters (Yahoo! News)

* **After Bangladesh: How a massive hack shook the banking world**
It was the start of a weekend in Bangladesh when an official at the country's central bank checked a printer in a server room. The tray was empty, which was strange. There should have been a sheaf of reports confirming payment instructions sent through the Swift system, the network that connects 11,000 banks around the world. The printer glitch was no accident, but a deliberate strategy by criminals to hide their tracks. A day earlier, cyberthieves had issued instructions to transfer $951-million (U.S.) out of Bangladesh Bank's account at the New York Federal Reserve. Most were declined, but $81-million was transferred to a bank in the Philippines, never to be seen again. The theft in early February sent shock waves through the global banking community. It was not simply enormous in size, but ambitious in its selection of target: the Swift system, the backbone of international finance. The methods deployed were highly sophisticated, involving a combination of technical prowess and intimate knowledge of how Bangladesh Bank interfaced with Swift. Gottfried Leibbrandt, chief executive of Belgium-based Swift, called the Bangladesh cyberattack "a watershed" for the banking industry. "There will be a before and an after Bangladesh," he said last month. What's more, it wasn't an isolated incident: Swift was aware of at least two other cases where cyberthieves used the same modus operandi, albeit with far less success. Four months after the theft, much remains unknown about the perpetrators and their methods. It's not clear, for instance, how the malicious code was implanted into the systems at Bangladesh Bank. And both private firms and law-enforcement authorities are conducting investigations to uncover the culprits. Some signs point to a gang of expert cybercriminals; others point to the possible involvement of a state actor. The theft shows that cybercriminals are growing increasingly audacious. Globe and Mail, B1

* **The G7 and cyberspace: 'give peace a chance'**
An opinion piece states “The G7 summit meeting hosted by Japan May 26-27 issued a document entitled 'G7 Principles and Actions on Cyber.' This cyber policy statement was the most elaborate one issued by the G7 since 2011. The intervening years have revealed continuity on some prominent themes, such as support for the free flow of information and respect for human rights online. However, the increasing use of cyber operations by authoritarian regimes in suppressing dissent and the infringement of privacy rights via mass state-conducted cyber surveillance, has revealed the stress such rights are under. The removal of Russia from the G8 context may have allowed for stronger commitments in the field of human rights, but it also highlights the challenge of achieving international cooperation on cyber security against a backdrop of deteriorating geopolitical relations between leading cyber powers. In this crucial realm of international cyber security, the pronouncements from the G7 summit are not all that reassuring. The goal of a peaceful cyberspace is conspicuous by its absence from the statement. The G7 will promote security and stability in cyberspace, but there is no apparent aspiration to keep cyberspace a realm of peace rather than war. The statement speaks of taking ‘decisive and robust measures in close cooperation against malicious use of cyberspace both by states and non-state actors,’ but these measures are not specified and the tone here suggests they will not be of a diplomatic nature. The G7 appear to be laying the ground for undertaking military responses to cyber operations they deem hostile by affirming that ‘cyber activities could amount to the use of force or an armed attack within the meaning of the UN Charter.’ Suffering ‘an armed attack’ entitles a state under the UN Charter to exercise the right of self-defence, thus this framing of such an eventuality is fraught with serious politico-military consequences. How and by whom such a determination of a cyber attack is made is left unaddressed in the G7 statement and there is clearly wide scope for unilateral (and potentially dangerous) interpretation and action in this regard.” Hill Times

LAW ENFORCEMENT / APPLICATION DE LA LOI

Seeking clues in cold case: Ground search relates to 1982 disappearance of Henrietta Millek
Search crews looked for evidence near Makinsons this weekend after receiving a tip on a decades-old missing-person case. Henrietta Millek, originally from Nain, was living in St. John's at the time of her disappearance in December 1982. She was 25 at the time. Originally, it was believed Millek's last known location was at a club in downtown St. John's. It was reported she may have left the bar against her will. Her belongings, including her purse, were left there, and she never returned for them. RNC Const. Geoff Higdon told reporters Saturday new information led to a ground search in the area of Roaches Line almost 34 years after she disappeared. "Recently we received information that the last known location may have been in the area of the Trans-Canada Highway, and I guess what at that time would have been Roaches Line, as Veterans Memorial (Highway) wasn't here," said Higdon. "We believe she may have been headed towards Makinsons, and we do know that she never made it to her destination, unfortunately, and the information was that her last known location was here on the Trans-Canada Highway, so we're searching the area between those two points." Almost 100 searchers scoured the area in the morning, and they were expected to continue all day. Crews from the RNC, the RCMP, the Rovers - Central Avalon Search and Rescue and the Avalon North Wolverines were involved. Telegram, A1

Police investigate chapter in New Glasgow Gate Keepers gang
Police executed a search warrant at the New Glasgow chapter of the Gate Keepers motorcycle group early Sunday. "Members of the Nova Scotia RCMP executed a search warrant on MacLean Street in New Glasgow in relation to an ongoing investigation," said Corp. Jadie Spence, a media relations officer for Nova Scotia RCMP. "It's a clubhouse for the Gate Keepers motorcycle gang," he said. Spence said there are currently seven chapters of the Gate Keepers in Nova Scotia, including one in Musquodoboit Harbour, where that chapter held a party over the weekend. "They're a support group of the Hell's Angels, who don't have a presence in Nova Scotia at present," Spence said. They were assisted by the New Glasgow Regional Police and Pictou County RCMP. The warrant was executed at about 6 a.m. The street was closed down. On Sunday at 6 p.m., police were still at the scene. There was no word about specifics of the investigation, Spence said. "There are no arrests and no charges at this point in time," Spence said. ChronicleHerald, A6; Cape Breton Post

Canadian officials offer condemnation and sympathy after Florida mass shooting
After a mass shooting on Sunday that killed at least 50 people and injured dozens more at a gay nightclub in Florida, many Canadians were reflecting on what the violence means for the LGBTQ community. Candlelight vigils to mourn the victims were planned in several Canadian cities Sunday night. Hundreds crowded for a candlelight vigil in Toronto in a predominantly gay neighbourhood. (…) The executive director of Pride Toronto, a not-for-profit with the goal of bringing together the city's LGBTQ community, said the massacre was a grim reminder of the setbacks his community faces. "It reminds us that hate and discrimination are still a big part of this society, and that because of this, some of our brothers and sisters this morning lost their lives," Mathieu Chantelois said on Sunday. The organization also runs Toronto's pride month, and Chantelois said Pride Toronto was already working with city police and the RCMP but would see if there were any additional security steps that could be taken. "The main objective of Pride is to create a safe space for our community to gather together and feel comfortable," he said. Spencer Chandra Herbert, a member of the British Columbia legislature, was in Quesnel, B.C., celebrating the small town's second annual pride celebration with his husband when he heard the news. His immediate reaction was disbelief. Canadian Press (Ottawa Sun, A4, Red Deer Advocate, Hamilton Spectator); Canadian Press (National Post); * CBC News

How the quest for cheap beer may change Canada
An opinion piece by former Ontario cabinet minister John Milloy states, “Canadians like to talk about trade. Remember the dust-up over the Trans-Pacific Partnership agreement in the last federal campaign, or earlier passionate debates over the Canada-U.S. Free Trade Agreement and its successor, the North American Free Trade Agreement? There is one exception. When it comes to free trade within Canada, no one ever seems to pay much attention. We better start. A recent New Brunswick court decision, likely to end up at the Supreme Court of Canada, has the potential to radically change our country and its economy. Although Canadians may maintain a fierce loyalty to their province or region, I also like to think we see our nation as a place where citizens are free to travel, live and enjoy life wherever they want. (…) Enter Gerard Comeau, a retired New Brunswick steelworker who went in search of cheap beer across the

border in Quebec. Such an appalling act of bad citizenship does not go unnoticed in Canada. The RCMP immediately stopped him upon his return and fined him for transporting more alcohol across the border than allowed under the modest limit set by the New Brunswick government." Hamilton Spectator

*** Protesters arrested at Muskrat Falls site**
Six people were arrested Sunday during a protest at the Muskrat Falls development site, the Happy Valley-Goose Bay RCMP stated in a news release. Demonstrators began their protest last Thursday at Nalcor's hydroelectric site at Muskrat Falls, blocking the entrance road into the project. On Friday the Supreme Court of Newfoundland issued a court order that directed the protesters to leave Nalcor's property. The RCMP continued to monitor the protest. On Sunday at 11:55 a.m., five protesters refused to comply with that court order and were arrested, the RCMP stated. A short time later, another group of protesters arrived and one protester was arrested for obstruction, police said. All six protesters were to be held overnight in custody and will appear in provincial court at Happy Valley-Goose Bay Monday. Five protesters are charged with breaching a court order and all six are charged with obstruction. The RCMP continues to monitor the situation at the Muskrat Falls site, but no additional incidents have been reported and the on-going protest remains peaceful, police said. Telegram, A5; CBC News

*** HALIFAX: RCMP escort Canada's 911 Ride**
The RCMP escorted Canada's 911 Ride in both the Halifax area and Annapolis Valley over the weekend. The annual police-escorted 911 Ride raises funds for families of fallen emergency service personnel, helps children who are victims of violent crimes, and provides public access to defibrillators in local communities. This year's Atlantic Ride took 70 participants through the South Shore and Peggys Cove areas on Saturday. Riders departed Halifax at 8:30 a.m., headed to Peggys Cove, then on to Lunenburg and Bridgewater. The riders returned to Halifax Saturday afternoon. Chronicle Herald, A5

*** RCMP seize guns in Delburne**
Police seized a number of stolen firearms and took a man and woman into custody at a campground in Delburne on Friday. Three Hills RCMP and the Priority Crimes Task Force launched an investigation in early May after RCMP received intelligence about stolen firearms. The search warrants were executed at two trailers in Barking Fox Campground with the assistance of Police Dog Services and K Division's Emergency Response Team. A man and a woman were taken into custody. RCMP continue to investigate. No other information was released. Red Deer Advocate, A3

*** Larry Tremblay est le nouveau patron de la GRC au N.-B.**
Le commissaire adjoint Larry Tremblay devient le 30e commandant de la Division du N.-B. de la GRC. Il remplace le commissaire adjoint Roger Brown qui prend sa retraite après plus de 35 années au service de la GRC, dont les trois dernières à titre de commandant au N.-B.. Avant de se joindre à la Gendarmerie, Larry Tremblay a fait partie de la Marine royale canadienne pendant près de quatre ans. Il possède une expérience de plus de 30 ans au sein de la GRC à différents postes. Il a débuté sa carrière au N.-B. où il a passé 11 ans. Il a ensuite travaillé à l'Unité mixte d'enquête sur le crime organisé et à la Section antidrogue de la région d'Ottawa et a oeuvré au sein de services spécialisés à Regina et à Milton en Ontario. De 2004 à 2008, il a travaillé au Service canadien du renseignement de sécurité (SCRS) avant de devenir directeur général des Opérations criminelles de la GRC. L' Acadie Nouvelle, 10

*** Woman in witness protection program sues RCMP for negligence**
Woman who helped on drug case says RCMP compromised her identity, which forced her into witness protection A woman in the federal witness protection program is suing the RCMP for negligence and for undermining her trusted relationship with Canada's national police force.The details of her case are contained in a judgment by Ontario Superior Court Justice Patrick Smith, who granted an injunction forcing the RCMP to continue financially supporting the woman, known as Jane Doe, as well as allowing her to expand the scope of her lawsuit against the Mounties. The document tells the story of a woman who did the right thing, only to lose it all — family, friends, a good job and her mental health. The heavily redacted court ruling summarizes the woman's claims, which included that after tipping off police about a drug crime, the RCMP compromised her identity and refused to own up to it. The court ruling states that after happening upon intelligence related to a crime syndicate, she shared what she knew with her

municipal police force. The RCMP then used that information to investigate and prosecute several members of a criminal syndicate on drug-related charges. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Prisons paying more for native spiritual services
Federal prisons are paying significantly more each year for indigenous spiritual services than for all other religions combined. Indigenous people make up about 25 per cent of the 14,865 people who are currently incarcerated in federal prison. The Correctional Service of Canada (CSC) is spending $8 million annually on sustaining spiritual services for indigenous offenders - versus $6.75 million for other religions. Spokesperson Avely Serin said "Elder services" help offenders follow a "traditional healing path" and provide advice to the heads of institutions about "access to ceremonial objects and traditional medicines within the institution." As of last October, 85 per cent of indigenous offenders in custody, or 3,156, had undergone an "elder review," Serin said. The cost was about $2,500 per person. (...) The correctional service takes "a lot of criticism for the overrepresentation of First Nations people in the prison system," said Catherine Latimer, executive director at the John Howard Society. She suggested that could be one reason for the extra funding. Indigenous people make up a quarter of the prison population versus 4.3 per cent of the general population, according to Canada's Correctional Investigator. Indigenous offenders do have better outcomes when "reconnected with their spiritual and cultural traditions," said the Correctional Investigator of Canada's annual report for 2014-15. But spiritual services help offenders of other religions, too, said Kate Johnson, a former chaplain at Joyceville Institution in Kingston, Ont. Almost half of offenders are Christian, a majority of those Catholic, and just over five per cent are Muslim. Postmedia Network (London Free Press, NP5, National Post, Leader-Post, Edmonton Journal, Vancouver Sun, Windsor Star, Montreal Gazette, Calgary Herald, StarPhoenix, Province, Ottawa Citizen)

Kingston Penitentiary tours send wrong message
An opinion pieces states, “Three years ago, Kingston Penitentiary was decommissioned and briefly opened its doors to tourists to raise funds for the local United Way. Hugely popular, tickets for the October 2013 "KP" tours quickly sold out, generating more than $180,000 in 15 days. Wanting in on the action, the Correctional Service of Canada (CSC) partnered with Habitat for Humanity to offer another block of tours in November 2013, with proceeds to go toward expanding the construction of affordable housing by federal prisoners in the name of "rehabilitation and reintegration." These tours also sold out fast, fostering further debate in the Kingston, Ont. area about the potential for KP to become a major tourist attraction. This week, tickets went on sale for a new series of guided tours at KP led by students and supported by retired correction service employees. The tours are being sold by project partners - the City of Kingston, CSC and the St. Lawrence Parks Commission - as "a rare and unique opportunity to go behind the walls of Canada's oldest and most notorious maximum security prison." Many from the Kingston area and elsewhere are hoping to enter the facility, which opened in 1835. From late June until the end of October, it is estimated that KP visitors will "pump more than $6 million into the local economy."” Toronto Star, A15

Egale calls for Trudeau apology
The assault on a gay night club in Orlando has cast a shadow over two reports that call for an apology from Justin Trudeau's government and restitution for homosexuals who were prosecuted and persecuted under Canadian policies in the past, and who still suffer discrimination today. One report, prepared by Egale, a national organization that advocates for lesbian, gay, bisexual and transgender Canadians, asks the Prime Minister to acknowledge in principle the need for an apology and redress for homosexuals who were criminally targeted because of their sexuality. Germany and Australia (through its state governments), are already at work on some combination of pardons, apology and redress. Egale said on Sunday that it remains committed to releasing the report after the weekend's tragedy. It will be delivered to Justice Minister Jody Wilson-Raybould on Monday and through her to the Prime Minister's Office. An advance copy was provided to The Globe and Mail. The report proposes that retired Supreme Court Justice Frank Lacobucci be asked to lead a one year study on what shape an apology, restitution and action to prevent future discrimination against sexual minorities should take. The report advocates "a process of 'truth and rehabilitation,' whereby the federal government will acknowledge the wrongs done to

our community and commit to a process to make it right." (…) Gay rights activists hope he will announce that he embraces the recommendations of both reports in principle beforehand. But moving from a pardon to an apology with promise of redress may be more than this government is prepared to embrace, however other countries proceed. Globe and Mail, A17

*** Fraudster released on early parole after seven months in jail**

Unrepentant and still contesting his conviction, former Regina businessman-fraudster Steven Vincent Weeres is now a parolee, mere months into a lengthy prison sentence. As a non-violent offender serving his first federal term behind bars, Weeres, 57, qualified for Accelerated Parole Review and is now out after seven months. "The basic difference is that they're eligible for parole at onesixth of their sentence, rather than one-third," Parole Board of Canada spokesman Patrick Storey explained. (The federal government ended the program in 2011, but courts have since ruled the change doesn't apply retroactively to those, like Weeres, whose crimes predate the revamped law.) "You preyed on unsuspecting individuals and bilked them of thousands of dollars. You impacted your victims' financial well-being, emotional well-being and their credit ratings," states his recent parole decision. "However, the board finds that you do not have a significant history of violence, nor have you been involved in the use of weapons. There is no indication that you have exhibited a pattern of violent behaviour, or that you have risk factors that would likely lead you to commit an offence involving violence," it continues. The board granted Weeres day and full parole on May 6. The Leader-Post has learned he's residing in a B.C. halfway house. Contacted by phone Saturday, Weeres said his appeal of conviction for fraud and money laundering "is still moving forward." He never appealed his sentence. No date for the appeal has been set. StarPhoenix, A7 (Leader-Post)

*** Most Wanted**

A man convicted of killing a fellow inmate at Bowden Institution is one of two most wanted this week. Keith Clinton Sandmaier - born Sept. 9, 1977 - is wanted on a Canada-wide warrant. A February fatality inquiry heard his criminal history includes stabbing to death Tung David Louie with a steak knife over a $30 debt when the pair were inmates at the minimum-security southern Alberta federal prison. Louie, who was serving a 12-year sentence for weapons, drugs and robbery offences, was unarmed when he got into a June 2011 fight with Sandmaier in a common area of Bowden Institution. Sandmaier was armed with a knife, though authorities were unable to confirm where he got it, and he stabbed Louie five times, according to an inquiry report into the homicide. At the time of the killing, Sandmaier had been awaiting a hearing because guards had found a sharp wooden weapon in the cell he shared with another inmate. Prison officials had deemed both inmates suitable to remain in the prison's general population. Parole records previously revealed that Sandmaier was motivated by a $30 debt when he stabbed Louie to death in an outdoor common area in the medium-security prison south of Red Deer. Sandmaier later pleaded guilty to manslaughter and was sentenced to five years. Edmonton Sun, A53

Distillery district for KP, harbour refloated

As the city sets its sights forward - on the future of its waterfront - Robert Kiley looks back. For the Ontario Green party candidate, the project is a chance to make good on last year's promise. During the federal election last November, Kiley was the campaign manager for MP candidate Nathan Townend. Amid federal campaign promises, one of the points in Townend's campaign was focused locally: on Portsmouth Olympic Harbour and Kingston Penitentiary. "Nathan and I put our heads together and said: 'What would be a local, sustainable and livable solution to revitalizing both [sites]?'" Kiley said. When the pair noticed a "budding brewery culture" in Kingston, they concocted a plan. A local distillery district could be built, alongside the often-discussed idea of an international sailing hub. In addition to local beer, the district would be a collective of Kingston artisans, food services and accommodations. "Green values are resiliency in the local economy, resiliency in local food systems, and resiliency in community engagement," Kiley explained. With this idea, all three values came together. When Townend was unsuccessful in his MP race, with 4.46 per cent of the vote in Kingston, the idea was put aside temporarily. Now, Kiley is taking the city's call for ideas as a chance to fulfil their promise anyway. "Currently, the city is hosting one-on-one interviews about the Kingston Pen site, and [this week] they'll be having an information session," Kiley explained. In preparation, he put together an online petition last Tuesday, to measure support and "add a bit of weight" to the idea. As of 6 p.m. Friday, the petition of www.change.org had garnered 121 signatures. Kingston Whig-Standard, A2

*** Un baromètre**
Arrêté, jugé sommairement puis gracié de façon théâtrale au moment où il allait être exécuté, Dostoïevski croupit quelques années au bagne, en Sibérie. Il en rapporte notamment la matière de ses Carnets de la maison morte, vaste récit de ses observations en prison. (…) Depuis que je m'intéresse davantage au sort fait aux prisonniers à l'heure de l'austérité, j'ai croisé sur les chemins de la prison quelques-uns de ces êtres de bonté. (…) Dans les prisons québécoises, un problème de surpopulation et de manque de services de base se pose plus que jamais. Depuis quelques mois, ce problème est illustré de façon éclatante à la suite de la fermeture de la maison Tanguay, une prison pour femmes. Bien qu'elles ne purgent que de brèves peines pour des délits mineurs, ces détenues ont été transférées à l'Établissement Leclerc, un ancien pénitencier fédéral de longue durée pour hommes. Certains, rappelait Dostoïevski, pensent " qu'il suffit que les détenus soient bien nourris, bien entretenus, qu'on suive toutes les prescriptions de la loi pour que les choses aillent bien ". Mais le traitement humain ne tient pas qu'à l'administration du règlement, rappelait-il aussi. La prison est une bête énorme qui écrase physiquement et moralement. On ne réhabilite pas une vie brisée en l'écrasant davantage. La semaine dernière, au moment de répondre à des questions au sujet des traitements douteux subis par les femmes de la prison Leclerc, le ministre Martin Coiteux a eu à peine le temps de dire quelques mots avant que, du milieu de la meute médiatique, on ne s'empresse de lui demander pourquoi certains prisonniers avaient droit à des cours de yoga, de zumba ou à de la zoothérapie. Le Devoir, A2

*** Ministers can't avoid tough issues**
An editorial states, "How long does it take a politician to make the transition from opposition to government? There's no hard and fast rule. Some MLAs who've spent a long time on opposition benches make a seamless transition into government, occupying cabinet portfolios with such ease and comfort it looks as though they have done it before. (…) Last week, a national news report revealed Manitoba's provincial jail system relies more on solitary confinement than any other province. The overuse of solitary is top of mind following the death of Richard Wolfe, a Saskatchewan prisoner who spent 640 consecutive days in a cell, alone, for 23 of 24 hours each day. Wolfe died from a heart attack after being transferred to a federal jail. Solitary confinement has always been prickly for politicians. On the one hand, human rights adocates and prison-welfare experts almost universally decry it. The United Nations has declared it a form of torture. Several provinces are reviewing their policies to ensure no inmate spends inordinate amounts of time segregated from other prisoners. On the other hand, the welfare of convicted criminals has never been a compelling issue for the majority of voters. Some of our least compassionate citizens celebrate the inherent cruelty of solitary. So, perhaps it made sense that, when asked by the *Globe and Mail* whether she was concerned that Manitoba was leading all provinces in the use of solitary, Stefanson said via a spokeswoman the province had "no plans to review segregation policies at this time." That response is simply unacceptable. Stefanson, a long-suffering opposition MLA, is getting a well-deserved first taste of governing. And the reality of government is that you must be ready and willing to respond when an issue such as this arises. Even those not on your personal top-10 list of pressing policy issues. The story required a response of some sort." Winnipeg Free Press, 8

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

*** Gay communities react to targeted hatred**
Eric Pineault says his heart sank Sunday morning when he went on Facebook and learned of a gunman's deadly assault on an Orlando, Fla., gay nightclub. Pineault, the president of Montreal Pride, had visited the Pulse a couple years ago while on vacation. It was a smallish club with the usual Top-40 tunes and thrumming house music. But like all other gay nightclubs, it was a place of comfort - where you could let your guard down. "People can hang out and be themselves. It is not always possible to hold your lover's hand on the street. There, you can kiss and be yourself," he said. "No boundaries." (…) Violence against the LGBT community around the world remains a "grave concern," said a blog post on the Amnesty International website last month. (…) Data from Statistics Canada show that, in 2013, most police-reported hate crimes were non-violent, typically involving mischief, such as graffiti. However, two-thirds of cases motivated by hatred for someone's sexual orientation involved violence. A 2015 Justice Canada

report found that police data were likely to "seriously underestimate" the extent of hate crimes targeting the LGBT community because they were less likely than other victim groups to report incidents to police. "Analysis of calls to a hotline in Toronto run by the 519 Church Street Community Centre shows that a high incidence of hate-motivated incidents directed at gays and lesbians involve physical assault," the report said. "Only a minority of incidents reported to the hotline had been reported to the police." As Pride organizers from Vancouver to Montreal scrambled Sunday to organize vigils to mourn those killed in Orlando, they also said they planned to step up their vigilance and reach out to police to see if any security enhancements were needed at their events. London Free Press, NP4 (National Post, Calgary Herald, Ottawa Citizen, Windsor Star, StarPhoenix, Leader-Post); La Tribune (La Presse)

*** How Tory changed tough approach to keeping city safe**

In June 2003, Toronto mayoral candidate John Tory ran a tough-on-crime campaign that promised to add 400 police officers to the force's roster - even if it meant raising property taxes. The fact was the crime rate had been falling for decades. But just days before Tory released his crime platform, a man was charged with raping and murdering 10-year-old Holly Jones in her west end neighbourhood. "John Tory, 2003 edition, would not have been unlike many, many candidates who try to get elected by seizing the anti-crime agenda," says city hall veteran Councillor Joe Mihevc. That fall, Tory won the controversial backing of the Toronto police union, but lost the election to David Miller. Thirteen years later, Tory is mayor and gun violence has spiked. Twenty-one of the city's 33 homicide victims were killed by a firearm. (Receiving much less attention are the 17 pedestrian deaths on Toronto streets this year.) There is no evidence of an upward trend in the overall crime rate. But the default reaction of the police union and some right-wing commentators is that more cops should be hired. Whether doing that would make a difference is a hotly debated subject. Tory is not among those calling for more police. Instead, when Tory talks about keeping Toronto safe, he refers to better deployment and outsourcing certain policing tasks to ensure more officers focus on gritty crime-fighting, not "monitoring left turns." "A lot of other things have changed, too. I think we've all resolved to make sure that we find different ways to do policing in the city of Toronto," Tory told a recent news conference on gun violence. The mayor is recognizing that "the real task of keeping cities safe ... is complicated," says Mihevc. "There's crime prevention, lighting, making sure young boys are kept busy ... that of course is not a very sexy campaign slogan." This week could be a watershed moment for policing in Toronto - and Tory. On Thursday, his "transformational task force" on policing will unveil an interim report recommending ways to reorganize and modernize the force, while cutting costs. Earlier this year, after Mihevc and other councillors tried to flatline the police budget, which pushed past $1 billion, council voted 41-1 on a motion saying there is an "urgent and abiding" need to restrain policing costs. Tory, who sits on the police board, urged councillors to let the task force do its work. Toronto Star, GT1

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

*** Missing: Annie Yassie was 13 when she disappeared over 40 years ago**

Eva Yassie's dream about her missing baby sister is almost always the same. Annie Yassie is still 13, she is standing in the distance and she is smiling. But when Eva asks her questions, Annie doesn't answer. When Eva tries to touch her, Annie can't be reached. "It really disturbs me, these dreams," Eva Yassie says, taking a long drag on a hand-rolled cigarette. "I call her name and see if she can.... She just looks at me and smiles, and fades away. I can't get no answers." Questions have haunted Eva Yassie for 42 years, since June 22, 1974, when Annie disappeared into the night a few kilometres outside Churchill, Man. She was just a kid, 13, just back to Dene Village from residential school. CBC News (2016-06-12)

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

*** Decriminalize marijuana, NDP urges Liberals**

The New Democrats are urging the Liberal government to decriminalize pot before they legalize it. Prime Minister Justin Trudeau campaigned on a promise to legalize, regulate and restrict access to marijuana, and his government plans to get started next spring. Meanwhile, the existing criminal law remains on the books and police are expected to enforce it. The NDP is introducing an opposition day motion on Monday calling on the House of Commons to recognize there is a contradiction in giving people criminal records for something the government has said should not be a crime. The motion also calls on the government to decriminalize simple possession of marijuana for personal use immediately. "Arresting people and giving them criminal records for possession of small quantities just doesn't seem fair, in light of their commitment, apparently, to legalize marijuana," New Democrat MP Murray Rankin said Sunday. Rankin also said the law is being applied inconsistently across the country, which adds to the unfairness. Rankin said one way to decriminalize it without having to wait for legislation to make its way through Parliament would be to have Attorney General Jody Wilson-Raybould issue a directive under the Public Prosecutions Act ordering Crown counsel to avoid proceeding with prosecution for simple possession offences. "I just think the sensible thing to do would be to no longer charge people until we can get the reformed regime in place," said Rankin. Health Minister Jane Philpott formally announced in April the federal government's plan to legalize and regulate marijuana when she spoke to the United Nations General Assembly in New York. Canadian Press (Telegram, A10, Red Deer Advocate, Calgary Sun, Winnipeg Sun, Toronto Sun, Edmonton Sun, Waterloo Region Record, Hamilton Spectator, Toronto Star, Chronicle Herald)

* **'Craft cannabis' growers fight for legal role**

Travis Lane has been growing marijuana since high school, when his first pot plant swiftly withered and died in his bedroom closet. By the time he was 20, he had cultivated a small basement grow-operation. Now in his mid-thirties, Lane owns an online dispensary and runs two 390-plant operations on Vancouver Island. He employs two growers and raises his plants without pesticides or liquid fertilizer. "I don't want to hide what I do. I'm good at what I do. I'm proud of being good at what I do," he said. "I've been proactive my whole life in trying to move towards a time where I can openly be a cannabis professional." Lane holds two Health Canada licences for the grow sites, making his pot production legal for medical purposes. But with the federal Liberals committed to legalizing cannabis for recreational use, Lane is among the smaller-scale growers fighting for a seat at the table. The government is still in the early stages of developing the legislation it plans to introduce next spring. Those behind a budding "craft cannabis" movement warn, however, that if the law favours large-scale commercial producers, then jobs and potential tourism revenues will be lost and the black market will continue to thrive. Canadian Press (Red Deer Advocate, A10, Telegram, National Post)

* **MADD Canada calls for roadside drug-testing equipment for police**

Mothers Against Drunk Driving wants police forces across Canada to be enforcement-ready for people driving while under the influence of legal marijuana. Danielle Cole, president of MADD greater Fredericton chapter, said she met with MPs in Ottawa to start getting prepared for the legalization of marijuana - the drug most likely to be the cause of impairment behind the wheel. MADD Canada is calling for an amendment to the Criminal Code about driving while under the influence of drugs. Cole said there is a strong misconception among young people about the use of marijuana and driving. "If you ask a teenager about this, they'll tell you they drive better [high]," she said. In 2014, MADD reported 2.6 per cent of all impaired driving charges were drug-related. In 2012, New Brunswick had 83 deaths related to traffic accidents of which there were 17 drug-related driving impairments accidents causing death, which is lower than the 22 alcohol-related driving deaths. Five deaths involved both drugs and alcohol. That is more than Prince Edward Island, but less than Nova Scotia and Newfoundland. Daily Gleaner, A2

* **Details on marijuana task force coming, to deal with supply, jurisdiction, retail, taxes**

A marijuana industry official says existing licensed producers could supply just 10 to 15 per cent of what demand will be once recreational use of marijuana is legalized. Insiders say the questions a government task force on marijuana legalization must deal with include how and where consumers will purchase it, how much involvement the provinces will have in its regulation, how adequate supply will be created, and what level of taxes should be applied. Multiple sources have confirmed a report that former Liberal cabinet minister Anne McLellan has been appointed to lead the task force, though this has not been publicly announced yet, and that the whole task force and its mandate will be revealed before MPs break for the summer on June 23. Don Gracey, a partner with the CG Group, which is lobbying the federal

government on behalf of a prospective producer of marijuana, was among the people who said this is true, as did another person who has been in discussions with the government on this matter but asked not to be identified."Anne McLellan has been appointed the chair of this task force," said Mr. Gracey, whose client Georgian Bay Biomed is in the process of building a production facility in Collingwood, Ont., initially planned for medicinal marijuana but which will now also be used for recreational pot. "We understand that the provinces have been asked for and have submitted, I guess what could be categorized as, nominees for provincial representation on the task force." Hill Times

* **Colorado pot retailer advises province on weed**
One of Colorado's largest marijuana retailers says that provinces legalizing pot must educate the public on potency and put in place rules on packaging from the outset. It was a message that liquor board heads and government officials from across the country heard at a private gathering in Saint Andrews last week. The chief information and security officer of Denver's The Green Solution, Nick Speidell, spoke at the conference quietly hosted by New Brunswick's Department of Public Safety in preparation for the sale, distribution and regulation of pot - now that Ottawa is moving toward legalization. Speidell told the Telegraph-Journal in an interview that he spoke on "the good and the bad" of the development of recreational marijuana in Colorado. The state is one of a few U.S. jurisdictions that have already legalized the sale and recreational use of cannabis products. "Colorado was the beta," said Speidell, whose family owned and operated recreational and medical dispensary, boasts the largest selection of marijuana and marijuana-infused products with 11 locations in and around Denver. "We had to learn some lessons, but if you follow some of the best practices and the case studies out here you won't have to make those same mistakes." Speidell's words were directed primarily at edibles - marijuana baked into brownies, cakes, chocolate bars and candy, among other forms - that are becoming a popular alternative to smoking cannabis. Times & Transcript, A10 (New Brunswick Telegraph-Journal)

PUBLIC SERVICE / FONCTION PUBLIQUE

PM to meet young public servants
Prime Minister Justin Trudeau will meet Monday with about 100 public servants, all under age 35, to discuss how their generation will influence policy and change the way the bureaucracy works. Trudeau, also the minister of youth, will be joined by his top bureaucrat, Privy Council Clerk Michael Wernick and Treasury Board president Scott Brison - both of whom have indicated the public service needs a rapid infusion of young blood and new leadership to take over from baby boomers and deliver on the Liberals' agenda. That discussion will be an interactive town hall, which every public servant across the country can watch online, to kick offthis year's National Public Service Week and address the widening generational gulf the Liberals are trying to manage. The annual pat-on-the-back for Canada's 250,000 public servants lost its lustre under the Conservative government. It was during public service week when former Treasury Board president Tony Clement put public servants on notice that he was targeting their sick leave and all but accused them of being malingerers. The lunches and awards to celebrate the work of public servants continued, but the unions boycotted. Last year, the week turned political when the large unions launched pre-election campaigns to get rid of the Conservatives and restore public services. That's all changed with the Liberals. Scientists are unmuzzled, public servants are going to conferences, and diplomats can talk again. The long-form census is back, ministers say they want policy advice and Brison is repealing legislation to restore the old rules for collective bargaining. Not all unions are boycotting this year, but the giant Public Service Alliance of Canada is because of the slow pace of negotiations and the Liberals' failure to "respect public servants." Ottawa Citizen, A5

* **Time to empower next generation of public servants, says Canada's top bureaucrat**
As the annual Public Service Week gets underway today, Canada's top bureaucrat says there's a clear focus this year on empowering the next generation inside the federal bureaucracy. In fact, the Clerk of the Privy Council, Michael Wernick, will lead a virtual town hall Monday morning aimed specifically at young bureaucrats. "I'm pushing for a theme of engaging with our younger cohorts, because this issue of generational renewal is important to me." said Wernick, who himself was headhunted into the federal government 35 years ago this month. Over those decades, Wernick said he has witnessed the many ebbs and flows of the federal government's relationship with its workers. There have "already [been]

changes in tone, for sure" under Prime Minister Justin Trudeau, said Wernick, the man who gave him his current job.(...) Ray Paquette, who works at Public Services and Procurement Canada and is on the negotiating team for the Professional Institute of the Public Service (PIPSC), said the Liberals have made some changes - but not nearly enough. "We have a big problem. The science community is still being muzzled, not being able to openly discuss projects that they're on, [and that] would benefit the people of Canada," he said. "The federal government is still holding them back from being able to do their job properly." (...)Debi Daviau, the president of PIPSC, said at a rally in Ottawa on Friday there's a simple solution to helping the government deliver, and it includes building the right environment. "There was a very difficult and toxic environment created over the past nine years. And from my perspective, something needs to come from the top if they're going to have the capacity to deliver the commitments of this government," said Daviau. CBC News

*** Robert Hall, Canadian hostage, executed by Philippine militants Abu Sayyef**
A Canadian man being held hostage by a militant group in the Philippines has been killed. The extremist group Abu Sayyef had warned it would kill Robert Hall today if a multi-million dollar ransom wasn't paid. Sources close to the situation in Jolo, the island where the al-Qaeda-linked group is based, and within Philippine security, confirmed Hall's death early Monday to CBC News. Hall, who was from Calgary, had been held since Sept. 21, 2015 - one of four hostages that included former mining executive and fellow Canadian John Ridsdel, who was killed by the group in late April. Ridsdel and Hall were abducted from a seaside resort along with a Filipino woman and a Norwegian man. An official announcement is expected shortly. The condition of the remaining hostages is not known. CBC News; Globe and Mail; Agence France-Presse (EuroNews)

'There's blood everywhere'
It had been an evening of drinking, dancing and drag shows. After hours of revelry, the party-goers crowding the gay nightclub known as the Pulse took their last sips before the place closed. That's when authorities say Omar Mateen emerged, carrying an AR-15 and spraying the helpless crowd with bullets. Witnesses said he fired relentlessly - 20 rounds, 40, then 50 and more. In such tight quarters, the bullets could hardly miss. He shot at police. He took hostages. When the gunfire finally stopped, 50 people were dead and dozens critically wounded in the deadliest mass shooting in modern U.S. history. Mateen, who authorities said had pledged allegiance to Islamic State in a 911 call shortly before the attack, died in a battle with SWAT team members. Authorities immediately began investigating whether the assault was an act of terrorism and probing the background of Mateen, a 29-year-old American citizen from Fort Pierce, Florida, who had worked as a security guard. At least 53 people were hospitalized, most in critical condition, officials said. A surgeon at Orlando Regional Medical Center said the death toll was likely to climb. "There's blood everywhere," Orlando Mayor Buddy Dyer said. The gunman's father recalled that his son recently got angry when he saw two men kissing in Miami and said that might be related to the assault. Mateen's ex-wife said his family was from Afghanistan but that her ex-husband was born in New York. His family later moved to Florida. A law enforcement official said the gunman made a 911 call from the club in which he professed allegiance to the leader of the Islamic State, Abu Bakr al-Baghdadi. (...) "I am deeply shocked and saddened to learn today so many people have been killed and injured following a mass shooting in Orlando, Florida. While authorities are still investigating and details continue to be confirmed, it is appalling that as many as 50 lives may have been lost to this domestic terror attack targeting the LGBTQ2 community." Prime Minister Justin Trudeau, in a statement. Associated Press (The Guardian, B10); Le Devoir; Canadian Press (Waterloo Region Record); Canadian Press (National Post); Toronto Star; La Presse (2016-06-12)

*** Calgarians show solidarity and vow to take on hate**
Calgarians gathered by the hundreds Sunday night in solidarity with the victims of the worst mass shooting in U.S. history. The attack, which targeted a crowded gay nightclub in Orlando, Fla. , early Sunday morning, left 50 dead and as many wounded. The Olympic Plaza vigil was more noise than silence. The crowd of about 500 people cheered to celebrate the LGBTQ community and made noise to make it known they needed to be strong in the face of hatred. (...) Alberta's premier said she was

repulsed and outraged by "the hatred that fuelled this crime," and she extended thoughts and prayers to the victims and their loved ones "who are suffering this moment." "And we resolve to make sense of these senseless events by re-committing ourselves to building communities where love and solidarity triumph over hatred and division," Notley said in a statement. Calgary Muslim groups condemned the "barbaric" attacks in Florida as they asked people of all faiths to "stand together" and "unite against terrorism and extremism." "Terrorists and extremists want to divide us but we refuse to be divided," Muslims Against Terrorism and the Islamic Supreme Council of Canada said in a release. "We demand that Daesh (ISIS) and its sympathizers should be brought to justice." Calgary Sun, A6

*** L'Iran condamne la décision d'un tribunal canadien**

L'Iran a condamné samedi la décision d'un tribunal canadien de saisir 13 millions de dollars d'actifs non-diplomatiques du gouvernement iranien au profit de familles de victimes d'attentats coordonnés par Téhéran et perpétrés par le Hamas et le Hezbollah, selon la justice canadienne. Le jugement, obtenu vendredi par l'AFP, exige que les familles d'Américains décédés dans huit attentats -- perpétrés entre 1983 et 2002 -- reçoivent les propriétés et les comptes bancaires détenus par le gouvernement iranien au Canada en guise de dédommagements. Le porte-parole du ministère iranien des Affaires étrangères, Hossein Jaber Ansari, a dénoncé cette décision, la jugeant " contraire aux engagements internationaux du gouvernement canadien ", selon l'agence officielle iranienne Irna. " Elle est également contraire aux affirmations du nouveau gouvernement canadien pour normaliser les relations entre les deux pays ", a ajouté M. Jaber Ansari. " Toute normalisation des relations diplomatiques entre les deux pays nécessite une révision des politiques extrémistes et erronées du gouvernement canadien. " Selon les médias canadiens, ces actifs appartenant au gouvernement iranien totaliseraient environ 13 millions de dollars canadiens. Cette poursuite a été déposée au Canada en vertu d'une nouvelle loi, adoptée en 2012, qui permet aux victimes et à leurs familles d'obtenir des dommages et intérêts saisis auprès d'États soutenant des actes considérés comme terroriste. L'Iran est ainsi considéré par le Canada. Agence France-Presse (Le Devoir, B2)

*** Canada needs to probe war crimes in Afghanistan**

An opinion piece states, "Justin Trudeau was only a backbench opposition MP during the Afghan detainee scandal, and spoke just once in Question Period about allegations of Canadian complicity in acts of torture. But what he said on Nov. 29, 2009, was insightful: "We need to get at the truth. The international reputation of Canada and our military is at stake." Trudeau was responding to a story broken by the Star in May 2007, which grew into a scandal that ultimately led to the prorogation of Parliament in December 2009. As one detainee told reporter Rosie DiManno, "They whipped me with rubber hoses. Another time, they used a chain to hang me from the ceiling, my head toward the floor." The same detainee said Canadian officials visited the prison operated by the Afghan National Directorate of Security (NDS), but were never allowed to speak with prisoners. As the late James Travers wrote, also in this newspaper, the story was part of a "long march into twilight" for Canada. The country that "gave the world Lester Pearson's peacekeeping and Brian Mulroney's stand against apartheid" now had to struggle "with Stephen Harper's apparent blindness to compelling evidence of Afghanistan prisoner abuse." (...)Three months later, the Afghanistan Independent Human Rights Commission estimated that "one in three prisoners handed over by Canadians are beaten or even tortured." In March 2007, the U.S. State Department reported that: "Complaints of serious human rights violations committed by representatives of national security institutions, including arbitrary arrest, unconfirmed reports of torture, and illegal detention were numerous."(...) Six years have passed since Justin Trudeau spoke from the backbenches about Afghan detainees. Now, as prime minister, he can put his insight into action. Nothing would do more to strengthen Canada's reputation as a progressive and principled country than investigating possible war crimes by our own soldiers and officials. Nothing would do more to help Canada win a UN Security Council seat. We need to get at the truth, and we need to do so now." Toronto Star, A15

INTERNATIONAL

*** Police had previously interviewed gunman**

The gunman suspected of killing 50 people at a gay Florida nightclub, Omar Mateen, a 29-year-old American, was a person of interest to authorities in 2013 and again in 2014. The FBI says agents twice investigated the man, but closed those cases after interviewing him. FBI agent Ronald Hopper said Sunday that Mateen had been interviewed in 2013 and 2014. Hopper said agents first investigated Mateen after he made inflammatory comments to co-workers alleging possible ties to terrorists. Mateen was interviewed twice and, when investigators were unable to verify the details of his comments, the FBI closed the probe. In 2014, the agency looked into potential ties connecting Mateen to Moner Mohammad Abusalha, the first American to carry out a suicide attack in Syria. Like Mateen, Abusalha lived in Fort Pierce, Florida. Hopper says agents determined that contact was minimal and did not constitute a substantive relationship or a threat at that time. The FBI says he referred to the Islamic State of Iraq and the Levant (ISIL) in a 911 call before the slayings. Mateen's ex-wife, who spoke to the Washington Post on the condition of anonymity, said his family was from Afghanistan but that her ex-husband was born in New York. His family later moved to Port St. Lucie, Fla., where he worked as a security guard. CBS News Justice and Homeland Security correspondent Jeff Pegues reported that an ISIL-related Twitter account has an alleged photograph of Mateen. Pegues also reported that Mateen pledged allegiance to the ISIL at some point. Postmedia Network (Windsor Star, NP3, StarPhoenix, Vancouver Sun, Ottawa Citizen, National Post, Leader-Post, Edmonton Journal, Montreal Gazette, London Free Press, Calgary Herald); The Province; Globe and Mail; Associated Press (Acadie Nouvelle); Toronto Star; La Presse (La Tribune); TVA Nouvelles

*** Daesh, style US**

Ce qui ajoute à l'horreur, c'est qu'on est déjà programmé. On s'attend au pire. On ne sait pas quand, ni où, on ne veut pas vraiment le savoir, mais on sait que ça arrivera. On entre déjà en mode statistique. On compare les chiffres des tués et des blessés. « Ça » quoi, au fait ? On n'avait pas encore identifié les corps qu'il fallait choisir son camp : une autre manifestation du terrorisme islamiste ou une autre tuerie de masse américaine ? C'est les deux, évidemment. La force du groupe État islamique est qu'il s'adapte aux terrains, dans sa guerre. Il peut former des combattants hyper-organisés ou inspirer des individus qui agissent seuls en son nom. Des commandos d'Européens venus dans ses camps qui retournent faire des assassinats coordonnés de type militaire, comme à Paris, à Tunis ou à Bruxelles. Ou un couple comme celui de San Bernardino, qui s'en va descendre 14 collègues dans un party de Noël en Californie, et qui le fait au nom du groupe État islamique. Ou un type (apparemment) seul comme hier. L'ex-femme d'Omar Mateen a dit au Washington Post qu'il était violent, pas vraiment religieux et surtout instable psychologiquement. C'est possible. Ça n'en fait pas moins un candidat excellent. Qu'il tue dans une attaque coordonnée avec un commando ou qu'il tue tout seul, ça change beaucoup de choses dans l'enquête. Ça ne change rien au résultat. Il n'en a pas moins tué 50 personnes au nom du même commanditaire. On n'en sait pas assez long sur l'état mental de Mateen. Mais quoi qu'il en soit, on ne peut pas mettre sur le compte des seuls troubles mentaux un massacre aussi ciblé. Un discours homophobe violent est bien incrusté dans certaines branches de l'islam. La Presse+, 6

*** Time running out to find EgyptAir black boxes**

Egyptian investigators say time is running out in the search for the black boxes from an EgyptAir plane that crashed into the Mediterranean last month, killing all 66 people on board. In a statement Sunday, they say that searches by ships in the area will intensify, given that only around five days remain before the batteries of the flight's data and cockpit voice recorders expire and they stop emitting signals. The boxes could reveal whether a mechanical fault, a hijacking or a bomb caused the disaster. Finding them without the signals is possible but more difficult. Since the plane disappeared from radar en route to Cairo from Paris, only small pieces of debris and human remains have been retrieved from the crash site. No group has claimed an attack. Daily Gleaner, B1

*** One of Lebanon's biggest banks targeted by blast**

A powerful bomb in Beirut destroyed several cars, severely damaged one of Lebanon's biggest banks and injured one person on Sunday. The state-run National News Agency said the bomb was placed under a car. Lebanese Interior Minister Nohad Machnouk, speaking to the private LBC station, confirmed the report but did not say whether anyone was deliberately targeted by the blast, which shook nearby buildings. Associated Press (Toronto Star, A12)

MINISTER / MINISTRE

Des changements à venir sous peu, promet le PLC
Le drame d'Orlando a une fois de plus relancé le débat sur le contrôle des armes à feu aux États-Unis, mais aussi au Canada. Si les libéraux de Justin Trudeau ne se sont pas engagés à restaurer un registre, ils ont promis d'annuler certains assouplissements apportés par le précédent gouvernement. Ils ne sont pas encore passés à l'action, mais promettent que c'est pour bientôt. ***« Nous travaillons très fort à la mise en oeuvre des propositions incluses dans notre plateforme***, a assuré lundi le **ministre de la Sécurité publique**, **Ralph Goodale**. ***Nous irons de l'avant avec les changements que nous avons suggérés à ce qui était connu comme le projet de loi C-42. »*** C-42 est ce projet de loi conservateur qui a modifié les règles régissant le transport des armes à autorisation restreinte telles que le AR-15 dont s'est servi le tueur d'Orlando ou des armes prohibées. Désormais, un propriétaire peut transporter son arme n'importe où sur le territoire, pas seulement de son domicile à son centre de tir attitré. Les libéraux ont aussi promis d'obliger les acheteurs d'armes à présenter leur permis de possession au moment de la transaction, et les vendeurs, à en vérifier la validité. La Loi sur les armes à feu stipule plutôt, à l'heure actuelle, que le vendeur ne doit avoir « aucun motif de croire » que l'acheteur n'a pas de permis. (…) Les partis d'opposition se sont offusqués d'une pétition parrainée par le député conservateur Bob Zimmer

demandant que le AR-15 soit retiré de la liste des armes à autorisation restreinte au Canada. (…) Le **ministre Goodale** a rappelé que, sous son gouvernement, le pouvoir de classifier les armes est retourné entre les mains des fonctionnaires. ***« Je n'ai reçu aucun avis de la GRC suggérant des changements »,*** a-t-il soutenu. Le Devoir, A3; Journal de Montréal

Tory MP backed petition for easing access to AR-15s
A Conservative MP sponsored a petition last month calling on the federal government to loosen controls around the rifle used in Sunday's mass shooting in Orlando. Bob Zimmer presented the petition in the House of Commons on May 13. The petition, which garnered more than 25,000 signatures, asks the **Public Safety Minister** to reclassify the AR-15 semi-automatic rifle and return it to non-restricted status. "We, the undersigned, lawful firearm owners of Canada, request (or call upon) the **minister of public safety and emergency preparedness** to reclassify the Armalite Rifle-15 back to nonrestricted status so we can once again use this rifle to lawfully participate in the Canadian cultural practices of hunting," the petition reads. Such rifles have been used in a number of mass shootings in the United States, including the attack on a gay nightclub in Orlando early Sunday morning. The AR-15 is capable of spraying dozens of rounds from a single magazine. Speaking in the House last month, Mr. Zimmer said he was "honoured" to present the petition. Globe and Mail, A10

Premier pushes cybersecurity agenda in Ottawa
Premier Brian Gallant says he's asked the federal government to set up its cybersecurity infrastructure in New Brunswick as the province attempts to carve out a new niche as a centre of excellence in the emerging industry. Gallant was in Ottawa on Monday in his role as minister responsible for innovation - a position created by the current Liberal government. The premier met with federal Innovation, Science and Economic Development Minister Navdeep Bains, as part of larger meetings with provincial and territorial counterparts responsible for economic development and innovation. Gallant then met with **Public Safety and Emergency Preparedness Minister Ralph Goodale**. The meetings come as the province attempts to grow its tech sector. "I made it very clear to the **minister** that one of the best things that government could do is actually set up some of their cybersecurity shops in New Brunswick," Gallant said. "They have a lot of cybersecurity within the defence sector or whether it's their IT sector, so we certainly believe that Fredericton, New Brunswick, and especially with [Canadian Forces Base] Gagetown we have a lot to offer. "This would very much further help develop the cluster that we have in cybersecurity [and] would allow for a lot of synergies and collaboration." He added: "I made that pitch to the **minister**." Telegraph-Journal, A1 (Times & Transcript, Daily Gleaner)

* **Canada's Government announces Passenger Protect Inquiries Office**
The **Honourable Ralph Goodale, Minister of Public Safety and Emergency Preparedness**, announced that Canada is launching a new Passenger Protect Inquiries Office (PPIO). As a first step, the Government has created the PPIO to assist travelers who have experienced difficulties related to aviation security lists.This is part of the Government's plans to introduce a domestic redress system to better deal with false name matches against Canada's Secure Air Travel Act (SATA) list under the Passenger Protect Program (PPP). The SATA list identifies individuals who are suspected of posing a threat to transportation security and/or who are attempting to travel by air to commit certain terrorism offences. Unfortunately, innocent individuals who have the same or similar names as individuals on the SATA list or the U.S. No-Fly list can sometimes be delayed in obtaining a boarding pass as a result of false name matches.A redress system will allow individuals whose names closely match those on the SATA list to apply for a unique identification number. They could use this number at the time of a ticket purchase to clear their name in advance and prevent delays at airports. To put this new system in place, important regulatory and data system changes are required. While those changes are underway, it may still take more than 18 months before they can be fully implemented. (…)***"Eliminating false positives in airport security screening is complex, but we are committed to a long-term solution through a domestic redress system. As we work towards that goal, we are taking steps to problem-solve and help those who have been affected, while at same time ensuring that aviation security remains strong and effective in keeping Canadians safe,"*** said **Ralph Goodale**, **Minister of Public Safety and Emergency Preparedness**. Travel Daily News

* **Fixing Surveillance Starts with Spy Agencies Coming Clean**

An opinion piece states, "Three years ago this month, Edward Snowden shocked the world with a series of disclosures that revealed a myriad of U.S. government-backed surveillance programs. The Snowden revelations sparked a global debate over how to best strike the balance between privacy and security and led to demands for greater telecom transparency. The initial Canadian response to the surveillance debate was muted at best. Many Canadians assumed that the Snowden disclosures were largely about U.S. activities. That raised concerns about Canadian data being caught within the U.S. surveillance dragnet, but it did not necessarily implicate the Canadian government in the activities. Within months, it became clear that Canadian securities agencies were enthusiastic participants in numerous surveillance initiatives. Canadians played a lead role in projects focused on tracking travellers using airport Wi-Fi networks, monitoring millions of daily uploads and downloads to online storage sites, aggregating millions of emails sent by Canadians to government officials, and targeting mobile phones and app stores to implant spyware. Moreover, the U.S. collection and mining of "metadata" -- the data about data that covers geographic information and details about social links -- was also at the heart of Canadian activities with a ministerial authorization granting officials the power to capture the potentially sensitive personal information with minimal oversight. While these programs attracted attention for a day or two, it was the Conservatives' introduction of Bill C-51, the anti-terrorism legislation that granted the government a host of new powers, that finally succeeded in generating a sustained focus on Canadian surveillance law. The bill became law with few amendments, but emerged as the public's shorthand for the need for reforms to surveillance activities. **Public Safety Minister Ralph Goodale** and the new Liberal government have promised changes, with expectations that they will focus initially on a new "super" oversight body for security agencies and later open the door to further amendments." The Tyee

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

*** Wildfire no longer growing**
The huge wildfire known as "The Beast" that tore through parts of Fort McMurray and northeastern Alberta is classified as being held for the first time since it became out of control in early May. Wildfire information officer Lynn Daina said the designation means the fire is no longer growing, but is not yet under control. Daina said it's an important day for firefighters who have been battling the blaze for weeks. "It is a big deal. It is like the happy dance day," she said Monday. "There has been so much and so many people on this fire - more than 2,000 at its peak working it daily." The perimeter of the fire, including burned areas, covers just under 5,900 square kilometres. Daina said the work of firefighters combined with recent rainy weather and high humidity checked the fire's growth. The Regional Municipality of Wood Buffalo estimates that about half of the more than 80,000 people who fled the Fort McMurray area on May 3 are back in the community after being allowed to return this month. Canadian Press (Red Deer Advocate, A5; Charlottetown Guardian; St. John's Telegram; Times and Transcript); Globe and Mail

*** Fort McMurray mental health services deal with hundreds of calls per day in wake of wildfire**
Ask people in Fort McMurray to describe the city's character and a common theme emerges. "We're a pretty resilient bunch," business leader Mike Allen says. "There has been a calm," says homeowner Robert Hodder. "Tough as they come," adds oilsands worker Kristen Thomas. Around the city, municipal leaders will proudly announce there is no place more prepared in Canada to deal with a disaster. Safety is a way of life for the blue-collar workforce, locals said. People know how to handle adversity. Yet for all the truth in Fort McMurray's hardy reputation, it's also clear the recent wildfire has taken its toll on the emotions and the psyche. Since the evacuation of the city early last month, Alberta Health Services has received more than 8,700 contacts from people seeking some form of mental health support -- an average of about 225 per day. Ottawa Sun (Toronto Sun; Winnipeg Sun; Calgary Sun; Edmonton Sun; Edmonton Journal

*** Début des livraisons de gaz naturel liquéfié**
Gaz Métro, Stornoway et le gouvernement du Québec ont annoncé lundi le début de l'approvisionnement en gaz naturel liquéfié à la mine de diamant Renard, de Stornoway, dans le Nord-du-Québec. La mine de Stornoway est située à plus de 1000 kilomètres de Montréal. Le gaz naturel liquéfié y sera acheminé par camion. Pour les fins du projet, les partenaires envisagent quelque 800 camions par année - ce qui

semble avoir été bien reçu par les communautés concernées. Patrick Godin, vice-président et chef de l'exploitation chez Stornoway, a fait un parallèle avec la tragédie de Lac-Mégantic, qui a été déclenchée par le transport de pétrole par train. «Le transport du gaz naturel liquéfié offre des opportunités beaucoup plus sécuritaires et, sur de longues distances chez nous, je peux vous dire qu'avec notre partenaire Gaz Métro, lorsqu'on a eu à développer l'acceptabilité sociale de notre projet, tous les maires "impactés", les services d'incendie étaient excessivement heureux de voir leur village traversés par du gaz naturel liquéfié au lieu de le voir avec des énergies comme du diesel», a-t-il dit. Le transport de gaz naturel liquéfié par train n'y serait pas possible, de toute façon, puisque la voie ferrée ne se rend pas aussi loin que la mine Renard, a noté M. Godin. Presse canadienne (Le Quotidien, 18)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

*** Couple who tried to bomb legislature were 'lone-wolf terrorists'**
Some of John Nuttall's plots might have seemed impractical but that's how "lone-wolf terrorists" operate - they start with "crazy ideas" and then settle on one, the Crown told an entrapment hearing Monday. The Crown portrayed Mr. Nuttall and his wife, who were convicted last year in a plot to bomb the B.C. Legislature, as willing terrorists who were not entrapped by undercover police. But the judge on Monday questioned the couple's intellectual capacity - at one point citing an incident in which they tried to mentally will themselves to forget a person's name. Mr. Nuttall and Amanda Korody were found guilty last June of conspiring to murder persons unknown and making or possessing an explosive substance - in both cases for the benefit of or at the direction of a terrorist group. They were arrested on Canada Day, 2013, after they placed potentially explosive pressurecooker devices outside the government building. (…) Prosecutor Peter Eccles told the court Mr. Nuttall and Ms. Korody "planned and committed these terrorist crimes of their own free will" and were not pushed into it by anyone. "They did it because they wanted to," he said. Mr. Eccles said the RCMP had solid grounds to begin investigating Mr. Nuttall. He said a man Mr. Nuttall met at a mosque in 2011 called police and told them Mr. Nuttall had been talking about fighting a holy war in Afghanistan. Mr. Nuttall and his wife had recently converted to Islam. The Canadian Security Intelligence Service also contacted the RCMP in early 2013 to inform them Mr. Nuttall had been attempting to purchase potassium nitrate, which can be used in explosives. Mr. Nuttall's counsel has said that information was not corroborated and argued that while police may have had reasonable suspicion to begin their investigation, it should have become clear Mr. Nuttall was not engaged in terrorist activity and was "all talk." Lawyers for Mr. Nuttall and Ms. Korody have said their clients were isolated and impoverished, rarely venturing far from the Surrey basement suite where they lived. But Mr. Eccles said a person can be radicalized online and does not need a large circle to commit a terrorist act. Globe and Mail, S1; Vancouver Sun, A4 (The Province)

*** La surveillance policière a ses limites**
D'Orlando à Boston, en passant par Saint-Jean-sur-Richelieu ou Paris, le même scénario : celui d'attentats dont les auteurs ont déjà attiré l'attention des milieux policiers, mais qui réussissent néanmoins à passer aux actes. Un constat d'échec des services de renseignement? Non, répondent différents experts. Les médias américains soulignaient tous lundi que le FBI avait déjà eu à l'oeil Omar Mateen, l'auteur de la tuerie d'Orlando. Il avait d'abord été repéré à la suite de propos inquiétants tenus lorsqu'il était garde de sécurité dans un tribunal. Selon ce que précisait lundi matin le directeur du FBI, James Comey, l'enquête du FBI avait alors duré 10 mois, période pendant laquelle son nom est resté dans le fichier des personnes à surveiller. (…) C'est là un problème bien concret des agences de renseignement, note Dave Charland, analyste des questions de sécurité nationale -- et ancien agent de renseignement au Service canadien du renseignement de sécurité (SCRS) : avoir des informations, mais pas suffisamment pour aller plus loin. (…) Pour le grand patron de la Gendarmerie royale du Canada (GRC), Bob Paulson, la tuerie d'Orlando rappelle surtout que la prévention d'attaques par des loups solitaires représente un grand " défi ". Il a d'ailleurs rappelé lundi que la GRC enquêtait sur Couture-Rouleau lorsqu'il a tué un soldat à Saint-Jean. " J'aime penser que les structures que nous avons actuellement sont robustes et que la coordination entre les différentes agences gouvernementales est bonne [pour assurer de pouvoir] intervenir de manière préventive. " Le Devoir, A3

*** Des loups à la fois solitaires et solidaires**

La stratégie des combattants islamistes qui consistait à recruter des sympathisants pour venir leur prêter main-forte sur le théâtre de luttes armées appartient au passé, explique Ray Boisvert, ancien directeur adjoint du Service canadien du renseignement de sécurité (SCRS). " C'est al-Qaïda qui a commencé cela pour diminuer la pression sur les combattants. Ils ont dit : "Ne venez plus. Restez chez vous. Faites quelque chose chez vous." C'était une stratégie pour enlever de la pression sur eux. Et ç'a fonctionné. " Tandis que les regards se retournent sur la scène intérieure, " la pression est soulagée ", au moins symboliquement. Le loup solitaire est " celui qui n'a pas reçu d'ordre formel ", explique Sami Aoun, professeur à l'Université de Sherbrooke et cofondateur de l'Observatoire sur la radicalisation et l'extrémisme violent. " La détermination de la cible et le timing, c'est lui. D'ordinaire, il ne délibère pas au préalable. Il se prépare seul. " Dans la plupart des cas, il s'avère plus difficile d'anticiper son action que celle d'un groupe. (...) Les succès des loups solitaires n'en restent pas moins notables. " Ils ont eu du succès avec ça. Dès la première édition d'Inspire, c'était le ton : "Prenez un pick-up F-150, soudez des lames de métal devant et lancez-vous dans une rue de piétons en attendant qu'on vienne vous tuer." A Victoria, le couple qui voulait faire exploser des bombes lors de la fête du Canada, John Nuttall et Amanda Korody, c'était ça. Les attentats de Boston, la même chose. " A la hache, avec des bombes artisanales, à l'arme de chasse ou au fusil d'assaut, tout est bon pourvu que l'action surgisse de manière à surprendre et à frapper l'imaginaire. Plusieurs documents largement disponibles en ligne donnent des idées pour procéder. Et les relais numériques ne manquent pas. " Ils en arrivent à obtenir les mêmes conseils " de plusieurs sources différentes, dit Ray Boisvert. Le Devoir, A2

*** Le SPVM se dit bien préparé en cas d'attaques comme à Orlando**

Il est impossible d'être entièrement prêts à faire face à un massacre comme celui d'Orlando, mais les policiers de Montréal sont bien formés pour réagir, assure un grand patron du Service de police de la Ville de Montréal (SPVM). «Le réflexe est là», explique le directeur adjoint Fady Dagher. «Depuis la fusillade à Dawson, tous nos policiers de première ligne passent à travers une formation en situation de tireur actif», ajoute-t-il. En octobre 2015, une simulation de grande envergure s'est déroulée à plusieurs endroits à Montréal dans le but de préparer les forces policières à des situations multiples comme celles survenues lors des attentats de Paris. «Les policiers ont dû réagir dans une situation de tireur actif dans les rues du centre-ville de Montréal pendant que dans l'île Sainte-Hélène se déroulait une situation de prise d'otages à la bombe chimique dans un autobus.» Il ajoute que 80 policiers ont récemment été formés afin de reconnaître les comportements de radicalisation pouvant mener à la violence. La Presse

*** Muslims say shooter 'hijacked' their religion**

The Ahmadiyya Muslim Jama'at's motto is "Love for all, hatred for none," and the Islamic movement's imam reiterated that in an interview. "It's not only 50 people that are killed, it's an attack on humanity at large," Khalid Minhas said (gunman Omar Mateen was the 50th fatality). Once again, community members feel as though their religion has been "hijacked," misused and misquoted, he said of the attack and the perpetrator's proclaimed association with the faith. "Such acts of terrorism have no place in Islam," Minhas said. Shamoon Rashid, president of the Saskatoon North branch of Ahmadiyya Muslim Jamaat, said everyone has a right to different views, but it doesn't mean people should be treated differently. "The Quran teaches us that the killing of one innocent person is as if you have killed the whole of humanity," Rashid said. The Ahmadiyya community proactively combats radicalization through community outreach and strives to create a place of belonging for youth. This helps eliminate radicalization at its roots, said Noman Hassan, a spokesman for the group. Daniel Kuhlen, chair of the Islamic Association of Saskatchewan (Saskatoon) media and outreach committee, noted it is the second week of Ramadan, the month that is supposed to represent peace. "It is just astounding for those who observe Ramadan to have to wake up one morning to realize that someone has perpetrated such a heinous crime, such a terrible act of violence during what is the holiest month of the year for Muslims." Both extremism and phobia-driven politics only serve to divide communities, Kuhlen said. "It weakens the social bond between us." StarPhoenix, A3

*** De nouveaux panneaux sensibiliseront les utilisateurs**

Le gouvernement fédéral espère que ses nouveaux panneaux affichant l'inscription « Drones interdits » éloigneront les opérateurs de ces aéronefs sans pilote à bord des aéroports et du trafic aérien commercial en général. Le ministre fédéral des Transports Marc Garneau a dévoilé les panneaux lors d'une conférence de presse, lundi, à l'aéroport d'Ottawa. Cette mesure est annoncée dans le cadre de la

campagne de sensibilisation nationale sur la sécurité alors que le gouvernement s'apprête à proposer une nouvelle réglementation sur l'utilisation des drones - qui prévoira de nouvelles catégories, un processus d'enregistrement simplifié et de nouvelles exigences de marquage. M. Garneau a souligné qu'il était important que les utilisateurs sachent comment faire voler leurs appareils de façon sécuritaire et légale. Presse canadienne (Le Quotidien, 18)

*** What inspires atrocity?**

An editorial by Wesley Wark, expert on terrorism and national security, states, "The massacre at a nightclub in Orlando, frequented by the LGBT community, was another heartbreak for both the community and an American society riven by gun violence and fearful of terrorism. The violent rampage by 29-year-old Omar Mateen, armed with an assault rifle and other weaponry, is bound to cause further deep-seated confusion about the distinctions between terror attacks and other varieties of hate crimes. We have seen this confusion in Canada around the October 2014 attack on Parliament Hill and the Moncton shooting of five RCMP officers in June 2014. Unfortunately, in the world of ISIL-inspired acts, the distinction between terrorism and hate crime vanishes. Just how deeply Mateen was motivated by the ISIL cause remains to be seen and will be a vital part of the now launched FBI investigation(...) Whatever the outcome of investigations into Mateen's background, attack planning, ISIL links, and motivations; whatever we learn about the depth or shallowness of his jihadist connections; whatever we learn about his personal beliefs and mental health, the terrible truth is that terror, hate crime and mental illness all merge in the violent world of ISIL. It is driven by apocalyptic sectarianism, something never before seen in a transnational jihadist terror organization." Ottawa Citizen, A9

*** Orlando was a publicity stunt**

An editorial states, "Forty-nine peaceful clients of a gay nightclub in Orlando, Florida were shot dead and another 53 wounded early Sunday by a terrorist loyal to so-called Islamic State. The city of Orlando had a horrific day. LGBTTQ* folks around the world were reminded of the hatred and mortal danger that stalks them. Wielding a legal AR-15 semi-automatic rifle and a handgun, a 29-year-old American-born Muslim, opened fire at the crowded Pulse Orlando club early Sunday. He was killed in a gun battle with police. Meanwhile, U.S. authorities at the White House and the Federal Bureau of Investigation say the killer was a "homegrown extremist" who espoused support for both Islamic State and Hezbollah. Meanwhile, Islamic State radio called the shooter Omar Matten "one of the soldiers of the caliphate in America." The radio station hailed the attack. (...) Canada has suffered similar attacks and may easily suffer more. One Canadian soldier died and another was wounded when an IS sympathizer drove a car at them in a shopping centre parking lot at St Jean, Quebec in October, 2014. A couple of days later a Montreal drug addict killed an army reservist on guard duty at the national war memorial in Ottawa and then ran into the Centre Block of Parliament where he was shot and killed. Canada mourned its dead and moved on. The damage to the nation went no further. Islamic State appears to rely on these attacks as a way of recruiting new sympathizers to its cause and Canadian police have been keeping a close eye on Canadians who show signs of IS sympathies that could lead to overt acts of terrorism. This is the prudent thing to do, though the Orlando case shows this method is only useful up to a point. The FBI had received tips about the perpetrator of the Orlando attack, interviewed him three times and then closed the file because they found no grounds for further investigation. Police forces and intelligence agencies should continue refining their techniques. It seems unlikely, however, that they will devise sure ways of recognising who will kill and who will not. (...) The bad news for Americans and Canadians out of the Orlando outrage is that our neighbours include a tiny number of people who are listening to Islamic State propaganda. A few of them may attempt terrible crimes, but we cannot tell who they are or where they will strike. This may go on for many years, because the authors of IS propaganda can probably find a new home after they are driven out of Iraq and Syria. Canada, the United States and nations of western Europe should prepare for the continuation of these types of attacks, but recognize they are limited and its citizens remain relatively secure. These democracies will not be brought to its knees by terrorists. Canadians and their police forces should continue to watch for IS sympathizers who may start collecting weapons and explosives. We should not, however, fear that the nation is at risk." Winnipeg Free Press, Z1

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

'Border Security' TV show canned over privacy violation
Canada's border agency is pulling the plug on the controversial reality TV program "Border Security" after the federal privacy commissioner found the agency violated the rights of a construction worker filmed during a raid in Vancouver. Privacy commissioner Daniel Therrien recently informed the British Columbia Civil Liberties Association, which spearheaded a complaint on behalf of Oscar Mata Duran, that the Canada Border Services Agency breached the Privacy Act by allowing production company Force Four to film the agency's examination of the migrant labourer. "As a matter of principle, it is our view that federal government institutions cannot contract out of their obligations under the Act," says the commissioner's 26-page report of findings. In light of the well-founded complaint, Therrien's office recommended the border agency end its participation in the television program, which the agency agreed to do. Agency spokeswoman Esme Bailey confirmed that "Border Security: Canada's Front Line" would not return for a fourth season. The commissioner also urged the agency to carry out a formal privacy impact assessment before embarking on any significant future initiative involving the use of personal information. Times and Transcripts, B4

Cocaine courier gets nine years
A courier hired to move 30 kilos of cocaine - one load of some 1.3 tonnes a drug shipping network moved through Saskatchewan - is now feeling the weight of a hefty prison term. A first-time convicted offender, Ronald Charles Learning was sentenced Monday to nine years in prison for possession for the purpose of trafficking. With credit for time already served, eight years, 204 days remain, plus an additional 30 days for breaching release conditions. "Mr. Learning, you're serving a significant period of incarceration," Regina Provincial Court Judge Marylynne Beaton said. Peering through the glass of the prisoner's dock, the 33-year-old man originally from Golden, B.C., simply nodded. "He was not acting on his own, but rather was part of a larger criminal organization," Beaton noted. Learning is the last of six men - busted in Canada and the U.S. - sentenced for their role in the mega-smuggling ring that moved cocaine from California to B.C. via the remote Saskatchewan-Montana border. As Beaton summarized, between January 2010 and October 2011, the group was responsible for importing 16, multi-million-dollar cocaine shipments. In turn, the group exported 790,000 ecstasy pills south. Leader-Post, A1

G4S defends employee screening practices
The security company that employed both the Florida nightclub gunman and an armoured car guard who killed three co-workers in Edmonton in 2012 has defended its hiring practices, but says it cannot guarantee employees won't commit violent crimes. Communications director Katie McLeod of the Canadian arm of U.K.-based G4S says the global security company does as much as it can to investigate prospective employees before hiring them, using both government and its own checks to screen them. "In Canada, you must have your provincial security licence before you are even considered for employment and that follows all sorts of processes with the different provincial authorities," McLeod said Monday. "It varies from province to province," she added. Omar Mateen, a G4S employee in Orlando, Fla., has been identified as the gunman who killed 49 people and wounded more than 50 others in an attack early Sunday on a gay nightclub in the city. (...) He fled the shootings with more than $300,000 before being apprehended in British Columbia at the Canada-U.S. border two days later. Canadian Press, A10 (Red Deer Advocate); Associated Press (Telegram, Record, Hamilton Spectator, Edmonton Journal)

Human-trafficking trial opens for Round 2
A second trial opened Monday for a Vancouver man who was found guilty at his first trial of human trafficking after luring his Filipina nanny into coming to Canada. In 2013, a B.C. Supreme Court jury found Franco Orr guilty of three counts under the Immigration and Refugee Protection Act. Orr, the first person in Canada to be convicted under the act's human-trafficking provisions, was sentenced to 18 months in prison. His wife, Nicole Huen, was acquitted of the charges. Orr launched an appeal and in March 2015 a three-judge panel of the B.C. Court of Appeal overturned his convictions and ordered a new trial. The Province, A14; (Vancouver Sun)

*** EWN Special Report: Canadian man thought to be Mbuyisa Makhubu spent 12 years in jail**

Eyewitness News has learnt that a Canadian man, suspected of possibly being June 16 icon Mbuyisa Makhubu, was released from detention after 12 years. Victor Vinnetou appeared before a hearing of the Immigration and Refugee Board of Canada (IRB) after refusing to cooperate with authorities there for over a decade. In 2013, the South African government announced that Vinnetou may be Makhubu, but an initial DNA test proved to be inconclusive. The Canadian Border Services Agency says Vinnetou was in detention for 12 years because it could not confirm his country of origin. Spokesperson Travis O'Brien says, "He was detained under the Immigration and Refugee Protection Act, between 11 August 2004 and 16 January 2016, because his identity could not be determined." Eyewitness News

Deux Américains passeront l'été à l'ombre
Détenus dans une affaire d'importation illégale d'armes à feu, deux Américains arrêtés à la frontière canadienne au début juin passeront l'été au Centre de détention de Sherbrooke. Le Californien Jonathon Bryce Darcangelo et Spencer Truesdell du Texas ont réglé leurs comptes avec la justice à Sherbrooke, puis condamnés à une peine de détention de cinq mois. (…) Défendus par Me Patrick Fréchette, les deux accusés ont présenté des excuses aux autorités canadiennes. La juge Hélène Fabi de la Cour du Québec les a condamnés à cinq mois de prison. Elle a retranché le temps de détention provisoire à la suite de la suggestion commune des avocats au dossier. Il leur reste donc quatre mois et demi de prison à purger. Une interdiction de posséder des armes au Canada pour dix ans a été imposée. Les deux Américains s'étaient retrouvés derrière les barreaux après avoir omis de déclarer leurs armes chargées aux douanes canadiennes. Les deux individus s'étaient vu refuser leur remise en liberté sous conditions. La Tribune, 31

Competition Bureau acted on false info, Moose alleges
A former principal of Moose International Inc., who was manufacturing counterfeit jackets on the side, provided false information to the Competition Bureau that triggered an investigation, it was alleged on Monday. The allegations were contained in Moose International's response to Competition Bureau charges that it falsely advertised premium parkas as made-in-Canada. "In 2015, the Bureau received false information from a former principal of Moose who had, in late 2013 or early 2014, organized and carried out the clandestine manufacture, importation and sale of counterfeit Moose Knuckles jackets (conduct which has resulted in criminal charges against him)," according to the response filed by Moose International on June 10 and made public by the Competition Bureau on Monday. The document does not name the principal or say what the charges were. Moose Knuckles CEO Ayal Twik said the company cannot release any further details as it's a pending legal matter. Acting on the false information, the Bureau requested the Canada Border Services Agency stop certain shipments of Moose jackets so they could be photographed, the document goes on to say. Toronto Star, 59

***SNC Rebounds as Trudeau Readies $95 Billion Canada Building Jolt**
SNC-Lavalin Group Inc., the Canadian construction company that spent decades building roads, smelters and power plants from Alaska to Australia, has its sights on a piece of the C$120 billion ($95 billion) infrastructure spending boom planned in its home country. (…) SNC is among the finalists to build the Gordie Howe International Bridge between Detroit and Windsor, Ontario, which may carry a price tag of more than C$4 billion. It's also in the running for the Toronto area's Finch West light-rail transit system, which is valued at about C$1.2 billion by Yuri Lynk, an analyst at Canaccord Genuity. Bloomberg

CYBER SECURITY / CYBERSÉCURITÉ

***China, US hold talks to bridge cybersecurity differences**
Chinese and American officials said Tuesday they're committed to bridging their differences on cybersecurity and moving to implement recent agreements, as they held talks amid complaints over China-based hacking operations that the U.S. says may have already cost U.S. companies tens of billions of dollars. Repeated meetings between the sides on cybersecurity indicate the seriousness with which the Obama administration regards the issue, the U.S. ambassador to China, Max Baucus, said at the start of the two-day talks in western Beijing. U.S. officials have been particularly eager to build on an agreement forged during Chinese President Xi Jinping's visit to the White House in September that says neither government will support commercial cyber-theft. The deal was viewed by Washington as a diplomatic

breakthrough, although U.S. officials have not conclusively determined that it has led to a decline in hacks against U.S. companies. Associated Press (Yahoo! News)

*** Apple's new file system revolves around encryption**
One of Apple's quietest announcements at WWDC might also be its most important. The company has introduced a brand new file system, simply called Apple File System (APFS) that makes security its centerpiece. It offers a unified encryption method for virtually every device Apple makes, ranging from the Apple Watch to the Mac. That includes multikey encryption, which makes it tough to crack even if you have physical access to the storage. In short, the FBI won't be happy: Encryption is now a core part of the operating system, not just something bolted on after the fact. APFS also acknowledges the advances in technology in the nearly two decades since Apple's current file system, HFS+, hit the scene. It's optimized for flash storage, uses extremely fine-grained time stamps (down to the nanosecond) and supports a whopping 9 quintillion files on a single volume. You'll also see "snapshots" (read-only instances of the file system) that make Time Machine-style backups easier. Engadget

LAW ENFORCEMENT / APPLICATION DE LA LOI

Extremist group kills Canadian hostage as ransom bid fails
As military helicopters chattered across the skies of Jolo Island in pursuit of a trio of kidnapped sailors held in the lawless region of the southern Philippines, negotiators frantically tried to strike a ransom deal ahead of a 3 p.m. Monday deadline. Their failure was made clear on Monday evening, when remains were found outside a Catholic cathedral in Jolo City. The Canadian government said it has compelling reason to believe Canadian Robert Hall was killed. But his death has left behind difficult questions about why a kidnap-for-ransom group would turn down a large offer of money and instead kill a high-value hostage. Among the Canadians seeking Mr. Hall's release, everyone knew how high the stakes were. Eight weeks earlier, the extremist criminal group Abu Sayyaf had beheaded Canadian mining executive John Ridsdel, who was seized together with Mr. Hall and two others from a yacht marina in late September. To prevent the same from happening to Mr. Hall, a Calgary born metalworker, pilot, film actor and adventurer, his family and friends had assembled about $1.4-million to pay a ransom. RCMP officers, federal civil servants from departments such as Public Safety, Global Affairs and Justice, and Canadian Security Intelligence Service agents had all sought to win the hostage's release. (…) In Ottawa, Mr. Trudeau defended his government's refusal to pay ransoms, despite the death of two Canadians on his watch at the hands of extremists in the Philippines. "We will not turn the maple leaf worn with pride by over three million Canadians abroad into a target," Mr. Trudeau said as he mourned Mr. Hall's death. RCMP Commissioner Bob Paulson said the Mounties are pursuing those who killed Mr. Hall and Mr. Ridsdel. "We have been working with the authorities there to try and prevent this tragedy, but it illustrates again the terrorist threat throughout the world, in terms of this terrible kidnap and terrible tragedy." In 2014, the RCMP lured to Canada one of the people who had held journalist Amanda Lindhout captive in Somalia. A spokesman for Foreign Affairs Minister Stéphane Dion said Canada tried its best to free Mr. Hall. Globe and Mail, A1; Red Deer Advocate, A7 (Times Colonist, Daily Gleaner); Globe and Mail

Crown bosses probed over gifts: Report turned over to RCMP
Unnecessary travel on the taxpayer's dime, and gifts of booze, theatre tickets and rounds of golf have resulted in the suspension of three top-level executives at an Alberta Crown corporation, and the dismissal of its entire board. An anonymous tip to government in November sparked an investigation by the province's internal auditor, who examined senior executive expenses at the Agriculture Finance Services Corp. The resulting report has been handed over to the RCMP to investigate whether there was criminal wrongdoing. Suspended with pay are the corporation's president and managing director, Brad Klak; its chief operating officer, Merle Jacobson; and its vice-president of innovation and product development, Wayne McDonald. None of them could be reached for comment. Edmonton Journal, A1 (Calgary Herald)

RCMP officer cleared
A former Red Deer Mountie has been acquitted of charges laid against him in connection with the arrest of a Red Deer teenager in the summer of 2012. Const. Eric Pomerleau, 30, went to trial in Red Deer

provincial court on May 10 and 11 of this year on charges of assault with a weapon, common assault and assault causing bodily harm. The charges were laid after a member of the public accused Pomerleau of using excessive force during the arrest of the boy, whose name is withheld because he was a minor at the time. Judge Marilyn Smith, normally based in Leduc provincial court, heard that Pomerleau had pepper sprayed the youth to subdue him while he was in the back of the police car; pushed him to the floor while taking him to his cell, and bloodied his nose after reentering the cell to conduct a second search. In a decision announced from her courtroom in Leduc on Monday, Smith said she found Pomerleau's actions were reasonable in each of the three incidents, given that Pomerleau had been confronted with an aggressive and combative "client" and that there were no other police officers available to provide backup. She also pointed out that he is both smaller and lighter than the boy he had arrested and was not aware until later that day that he was only 16 years old. Red Deer Advocate, A1; Edmonton Journal

Teen's body recovered in Jervis Inlet

Operators of a Christian retreat say they are doing all they can for the family of a South Korean teenager who drowned while attending the camp north of Vancouver. A post on the website of the Malibu Club Young Life camp thanks the RCMP, coast guard and camp staffwho scoured the waters of the Malibu rapids in Jervis Inlet. Searchers using sonar located the body of the 16-year-old on Friday, two days after he fell into the water. The RCMP has confirmed the body was recovered. The victim was an exchange student attending high school in Idaho, and was at the camp with other students. Vancouver Sun, A4 (Times Colonist)

RCMP head's comments on unionization draw fire

RCMP Comm. Bob Paulson came under fire Monday over his proposal to strip Mounties of the right to bargain essential working conditions as they form the first ever RCMP union. Senators, including two former Mounties, a former Quebec police union head and a labour lawyer, grilled Paulson over Bill C-7, the government's proposal to allow Mounties to unionize within strict parameters. At one point, Sen. Larry Campbell, a former Vancouver RCMP member and the bill's sponsor in the senate, told Paulson his arguments were "ludicrous." The bill excludes from the bargaining table any negotiation over law enforcement techniques, transfers and appointments, performance appraisals, discharges or demotions, conduct including harassment, probation, basic requirements for carrying out a Mountie's or reservist's duties and the uniform or equipment provided to RCMP. In testimony to a senate committee, the country's top cop admitted it was senior RCMP managers who proposed listing the no-go zones in order to be transparent "because we thought in this very acrimonious season of an RCMP union drive there would be criticism that we were trying to pull a fast one." Toronto Star, A7; Canadian Press (Red Deer Advocate, A8, Times & Transcript)

Dartmouth opens clinic for veterans: Mental health facility designed for operational stress injuries first of its kind in N.S.

With veterans returning to Nova Scotia from places like war-torn Afghanistan, over 1,300 Veterans Affairs clients are currently being supported with a disability benefit for a mental health condition in the province, according to federal numbers. A new Dartmouth clinic will be available to treat them, along with the province's portion of Canada's 3,816 RCMP former members and and 1,156 Second World War/Korean War veterans also on disability for operational stress injuries (OSI) such as anxiety disorders, depression and post-traumatic stress disorder (PTSD). The Nova Scotia Operational Stress Injury Clinic is the first of its kind in Nova Scotia. "It's more important today than ever before, given that we're tracking numbers of mental health issues coming back from Afghanistan at quite significant rates," Veterans Affairs Minister Kent Hehr told the Chronicle Herald. Chronicle Herald, A5

Mountie accused of stealing guns

A B.C. Mountie has been charged with theft after two guns, "growing nutrients" and a generator were allegedly taken from an evidence locker. A sergeant with the detachment has been charged with four counts of breach of trust and four counts of theft, RCMP said Monday. The sergeant's name was not released. Canadian Press, A4; Vancouver Sun

Online scam targets newcomers, says Winnipeg man who lost nearly $5000

A recent Red River College grad, originally from Hong Kong, is out nearly $5000 after falling victim to an elaborate online job scam. "I'm emotionally hurt because when I know people here are so friendly, and then [someone] uses your trust to scam you, that hurt me so much," said Bart Cheng. Cheng recently finished the business administration program at the college and thought he was accepting an administrative assistant's job with a construction company that was setting up shop in Winnipeg. Cheng says he found the job on the Workopolis job posting site in May. The ad was for a position at an unnamed company, which he contacted through email. A phone interview followed shortly after. (...)Cheng says he fell for the scam because they used legitimate businesses to make it appear as though the job was real. He also feels that the scam targets newcomers to Canada who are eager to find work and aren't familiar with Canadian business practices. (...)The company's CFO, says it has no affiliation with Kiwi Construction or any job posting being advertised as such. He said the company has reached out to both RCMP and WPS. The Winnipeg Police say they are investigating this incident but say that people should always be skeptical when it comes to exchanging information online, especially when that exchange involves the transfer of money. CBC News (2016-06-13)

New Glasgow police search clubhouse after Hells Angels welcome home party
The raid of a Gate Keepers clubhouse in New Glasgow that began the morning after a Hells Angels welcome home party in Musquodoboit Harbour stretched into a second day Monday with police combing the property from top to bottom. The MacLean Street location was the target of search warrant by RCMP, who were armed and had a perimeter set up for more than 24 hours. They arrived at 6:30 a.m. Sunday and remained there even though no arrests were made. RCMP spokesman Const. Mark Skinner offered little information. "All I can say is this is part of an ongoing investigation," he said. He wouldn't draw a connection between the raid and the reported patching in of a number of Gate Keepers as hangaround members of the Hells Angels. "We can confirm this was a Gate Keepers location, but we really can't release any more information at this time about the investigation," he said. The Hells Angels had their party Saturday night, and there has been speculation it might signal a permanent return of the biker club to the area. They have maintained influence through Darksider and Gate Keeper presence in the province. Chronicle Herald; Cape Breton Post (2016-06-13)

Pride Toronto will have more security but not more uniformed police officers
Plans are in the works to increase security for Pride Toronto, but organizers say they do not want more uniformed police officers patrolling Pride events and Toronto police say they understand the concern. Citing the "challenging relationship" some members of the LGBT community have with police, Pride Toronto Executive Director Mathieu Chantelois said an increased presence of uniformed officers is "not ideal." "We have to consider that many marginalized groups of our community have a very challenging relationship with police. So for us the solution is a very sophisticated plan. It's definitely not to just double the amount of police in uniforms," Chantelois said on Monday after meeting with Toronto Police, the RCMP and staff from the Prime Minister's office. Chantelois said the plan to not increase the number of uniformed officers was made mutually with Toronto police, the RCMP and the Prime Minister's Office, which took part in a Pride security review meeting because Justin Trudeau will march in the parade. Tuerie d'Orlando : vaste rassemblement à la mémoire des victimes à Moncton
Plus de 200 personnes se sont rassemblées au parc Riverain de Moncton, au Nouveau-Brunswick, pour rendre hommage aux victimes de la tuerie d'Orlando. Des membres de la communauté LGBT de Moncton ont convié la population à ce grand rassemblement pour pleurer les 49 victimes du tueur, aider à guérir une profonde tristesse, partager des craintes et trouver une forme de réconfort en groupe. « On est tellement soulagé de voir autant de gens appuyer la communauté et les victimes d'Orlando. On fait du bien pour la terre. Il y a des gens partout dans le monde qui se rassemblent comme nous l'avons fait ici et c'est extraordinaire que Moncton contribue à ce mouvement-là », a déclaré le coordonnateur aux relations publiques de l'organisme Rivière de fierté du Grand Moncton, Charles MacDougall. (...)Par ailleurs, un membre de la GRC était présent sur les lieux, ce qui a surpris quelques participants. Ce dernier circulait en périphérie afin d'assurer la sécurité. Les organisateurs affirment ne pas avoir invité la GRC et que ces derniers se sont présentés de leur propre chef. « La GRC était bien gentille, elle restait autour, mais ça créait quand même une ambiance de "ils sont ici". Quand tu vois la GRC, tu réalises que

oui, peut-être qu'il peut se passer quelque chose, mais on ne peut pas vivre dans la peur », soutient Jason McGraw. Radio-Canada (2016-06-13)

Missing teen Montana Disbrowe could be in Winnipeg, RCMP say
Family of a Montana Disbrowe are worried for her well-being, Gimli RCMP say. The missing 17-year-old last contacted her family June 10. She is 5-foot-3 and weighs about 120 pounds. RCMP believe she could be in Winnipeg. Anyone with information that could help investigators is asked to contact Gimli RCMP at 204-642-5106 or Manitoba Crime Stoppers anonymously at 1-800-222-8477. CBC News

Shooting sparks gun laws debate
Every mass shooting in the United States carries another round of political rhetoric regarding gun ownership. While many gun owners cite their right to keep and bear arms as being fundamental to their American citizenship, this line of reasoning does not hold water in Canada. Here, "it's a privilege and not a right," Prince Albert Pistol and Rifle Club member James Brake said, clarifying that gun laws between our two countries are vastly different. It's not perfect in Canada, but it's better, he summarized. During the early morning hours of Sunday, a lone gunman opened fire on an Orlando, Florida, nightclub, killing at least 49 people and injuring 53. The gunman's weapon of choice was an AR semi-automatic rifle similar to a piece the Prince Albert Pistol and Rifle Club shot targets with during a recent open house at their gun range west of Prince Albert. In Canada, AR style rifles -- and any piece outside of regular hunting firearms -- are considered "restricted." Restricted weapons are not as easy to obtain in Canada as they are in the United States, Brake explained. Prince Albert Daily Herald (2016-06-13)

*** Killer's rifle very restricted here**
The semi-automatic rifle used in Sunday's deadly mass shooting in Florida is classified as a restricted weapon in Canada and most people can only use it at a gun range. The AR-15 is a civilian model of the M16 rifle used by the U.S. army and has been used to carry out other mass slayings in the past, including the 2012 killing of 20 children in Newtown, Conn. One of the top-selling rifles in the U.S., the AR-15 is also popular in Canada, according to Ontario provincial police. But while purchasing one doesn't require a licence in Florida, anyone looking to buy one here must have a firearms licence that includes restricted weapons, which involves passing two one-day safety courses. RCMP note that they need "a minimum of 45 days" to process an application. The form includes questions about the applicant's mental and emotional health and an RCMP report said 112 applications were denied last year due to mental health concerns. Authorities can request that someone provide information from their doctor to confirm they are not at risk to themselves or others if police have recorded an incident related to mental health, but privacy legislation makes it otherwise difficult to seek that information, another RCMP report said. "Considering almost three-quarters of the firearm deaths across Canada are attributable to suicide, there is little progress being made in developing better links with the mental health community as far as reporting obligations," said the 2010 report, an evaluation of the Canadian Firearms Program. "The exception being with the province of Quebec ... where more workable arrangements have been made with the mental health services to report on persons of risk." Canadian Press, A5 (Hamilton Spectator); La Tribune

*** Damage claims from RCMP's High River gun grab total $2.3 million**
The long arm of the law has nothing on the big boots of a police force overstepping its mandate to serve and protect. Now, thanks to the dogged persistence of an ex-Mountie and former National Firearms Association director working out of his Airdrie home, we know exactly how much damage those police boots caused, as RCMP kicked in thousands of High River doors in a massive gun seizure since condemned as a shameful abuse of power. "They shouldn't have been inside the homes at all, not even one," says Dennis Young, the former RCMP officer and firearms advocate that's been a massive thorn in the side of his former force, ever since the great flood of 2013, and the great gun grab that followed. "In all, 2,210 homes were left damaged by the RCMP, and they should not have gone into those homes in the first place. People's rights were violated, and that not only upsets me as a former member, I've heard from many RCMP veterans who are upset as well." Young's latest poke at the police force publicly rebuked last year for harming public trust through the improper seizure of 609 firearms from 105 homes, comes via a long list of numbers, all with a dollar sign attached. As Young says, the High River Mounties used the flood and evacuation of the town three years ago this month as an excuse to search most of High River's more than 4,000 homes, kicking in the doors of more than half. The list Young obtained, after

making a Freedom of Information request, shows at least $2.3 million in claims were paid out by the province to residents in High River as direct result of damage caused by the RCMP, with the average payout per home totalling $1,573. Postmedia Network (Ottawa Sun, Winnipeg Sun, Toronto Sun, Edmonton Sun); Canoe (2016-06-13)

*** High number of impaired drivers in Keswick and Nackawic areas arrested**

RCMP say some drivers still are getting behind the wheel after consuming alcohol. Police officers with the Keswick and Nackawic detachments of the West District RCMP stopped seven impaired drivers between Friday afternoon and early Sunday morning. The RCMP said four of the drivers were arrested for impaired driving, and are expected to face charges. It said three other drivers were issued seven-day licence suspensions for having a blood alcohol level of more than 0.05 but not above 0.08. Cpl. Peter Stubbs of the West District RCMP said some of the people were arrested as a result of police check stops that had been set up over the weekend, while others happened after the police received calls from people who reported drunk drivers. "Our main goal is to let people know that impaired driving is never acceptable and that it's easily preventable." He said anyone who's consuming alcohol or other substances needs to plan a safe way home. He said anyone who suspects a driver is impaired should call 911 immediately. The West District RCMP is focusing on reducing the number of impaired drivers on the road and will continue to carry out regular enforcement to find impaired drivers to ensure the public's safety. Daily Gleaner, A3

*** Innu police demand more funds at inquest**

When someone in Uashat takes his or her own life, a local police officer is often the first person at the scene. The frantic calls for help come directly onto their radio and they rush to a house on the Innu territory - walking past panicked, emotional loved ones before reaching the body of a person who, moments earlier, was still alive. "It takes a toll on us," said Raynald Malec, the chief of police in Uashat and neighbouring Maliotenam. "You often have to hold back relatives, to keep them away from the scene while paramedics and first responders do their work." To help fight the rash of suicides that rocked both Innu communities last year, Uashat's band council says police need better funding to keep up with the demands imposed on their officers. That was the first recommendation that the band council put before the Quebec coroner's office Monday during the public inquest into five suicides in Uashat and Maliotenam last year. (...)The department's $1.66 million budget can't keep up with equipment and training costs, according to police chief Malec. Last year, Malec's officers responded to 16 suicide attempts and 122 incidents of a "mentally perturbed" individual (someone in the throes of a psychiatric crisis that requires urgent intervention). Aboriginal police forces in 396 communities across Canada are financed by the First Nations Policing Program, which splits funding between the federal and provincial jurisdictions. Critics in six aboriginal police departments across Quebec told the Montreal Gazette the program can't keep pace with growing First Nations populations and the needs that come with systematic poverty and overcrowded housing conditions. The difficult nature of Uashat's police interventions requires additional training and resources, Malec said. Montreal Gazette, A4

*** Smith murder case remains open**

After nine long years, an investigation into finding the killer of an 89-year-old Westlock man remains ongoing. While technically considered a historical homicide, RCMP say the investigation into the unsolved murder of Doug Smith is active. “It’s quite a long time, but the investigation into any such matter never stops until we have identified a suspect and determined whether or not there is evidence sufficient for charges,” said RCMP ‘K’ Division strategic communications officer Cpl. Hal Turnbull. “Hopefully for the sake of the family and the community we will be able to identify a suspect or suspects in this particular matter.” It was in the early morning hours of June 14, 2007 when firefighters responded to a house fire at Doug Smith’s 108 Street home. As crews battled the blaze, they found a body inside, which was later confirmed to be Smith’s. The fire was immediately deemed suspicious and a homicide investigation was opened — the cause of death has never been publicly released. “Mr. Smith’s death was ruled suspicious and subsequent investigation from the medical examiner gave us definitely the cause and manner of death,” Turnbull said. Investigators determined a number of firearms and an unknown amount of Canadian and U.S. cash were taken from the home. Smith’s daughter Judy Burns said the family remains hopeful the killer will be brought to justice. Westlock News

*** RCMP focusing on domestic violence, chronic offenders**
An RCMP report before city council earmarked traffic offences, chronic offenders and domestic violence as key priorities for next year. Superintendent Warren Brown's presentation Monday showed a sharp dip in break and enters and assaults in the first five months of this year, compared to the two years previous. This year shows 195 break-ins compared to 269 the year before and 319 assaults, down more than 40 from the year before and following a dropping trend from the high of 403 in 2014. While Brown said this year's numbers for break and enters is better "it's an unacceptable number" Prince George has seen an increase in thefts this year. January to May had 945 files compared to 820 in 2014. Sexual assaults were up slightly from last year at 26 between January and May compared to 18 in 2015 over the same period, down from 2014, when there were 36 in the same time frame. The new domestic violence approach involve a safety plan for families and following up with offenders, Brown said. Prince George Citizen

*** Nanaimo RCMP bust "dumping ground" for stolen property**
RCMP in Nanaimo are sorting through a huge haul of stolen property after two raids on problem houses in that community. Police say the homes became "dumping grounds" for criminals with stolen property. Search warrants were executed on a home on the 700 block of Albert Street in Nanaimo's downtown, and the 400 block of Lambert Street in the University area last Thursday. Cst. Gary O'Brien says police recovered dozens of bikes, electric scooters, televisions and diving equipment as well as some property stolen in a recent rash of break and enters to local schools. "These were homes that were basically collecting spots for material across the city. They were causing a lot of distress to neighbours in the community in general. So what we found were about seven dozen bikes. A lot were disassembled. We found electronics, guitars diving equipment. Some of the material was stolen from the local schools. Unfortunately a lot of that is still outstanding." Five men and a woman between the ages of 21 and 56 were arrested on charges related to the stolen property. CHEK News (2016-06-13)

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

*** Harsh prison sentences are harder on women**
An editorial states, "Advocates of harsher criminal sentences commonly invoke the mantra of "truth in sentencing." This turn of phrase is meant to call out the perceived disconnect between the jail term handed down by the justice system and the sentence actually served by an offender. Those who call for "truth in sentencing" want to limit prisoners' eligibility for parole or reduce the time credited to prisoners to offset their time spent behind bars waiting for a trial or a sentencing hearing. So, is there truth in sentencing? No, not at all. There is no truth in sentencing because the criminal justice system does not account for the real, lived experience of time served behind bars. It should come as no surprise that incarceration is experienced differently by different people. Mandatory or prolonged prison sentences work a particular and disproportionate injustice on women. Their impact is harder still on indigenous women, who now appallingly make up over one third of all women in Canada's federal prisons. Tack on any number of intersecting disadvantages - poverty, mental illness, racialization - and the harms are further compounded. Many of us still believe that locking up prisoners and throwing away the key is the only means to a safer society. Yet harsh, one-size-fitsall sentencing comes at a price we collectively cannot afford. It blinds us to the disproportionately severe and harmful impacts of mandatory or prolonged imprisonment on historically disadvantaged groups at our own peril and nowhere is this more apparent than for female offenders. Imprisoned in one of the few prisons for female offenders, a woman will typically serve time far from her home community, leaving her without in-person contact or support from family or friends to aid in her rehabilitation. If she is among the 70 per cent of mothers in federal prison with minor children, her children were likely be apprehended by the state and put into care, severing the bond between mother and child." Province, A18

*** Making a difference by sending kids to camp**
An organization that works to improve the lives ex-cons in the community has another goal: to help kids who have parents who are behind bars, and it does so with its Bar None Camp. But to do so, it's turning to the community for help in the form of a benefit dinner and silent auction later this month. The summer camp, for 80 kids aged 10 to15 who have a mom or dad incarcerated, has been in operation for more than 20 years, says Misty McLaughlin, chief development officer with Bridges of Canada. "It was

recognized that these children didn't have a place to go in the summertime where they could just be kids, away from a stressful home environment where there are issues between Mom and Dad," she says. "A lot of times, [it's] addictions and substance abuse, then add in the fact that one parent is incarcerated, and it doubles the stress." Bridges of Canada founder Monty Lewis worked with inmates from Dorchester Penitentiary to build some of the cabins that are still on site at the camp. "His heart was to open this camp up in Boiestown and have it as a place that kids could come and be kids, and it's free of charge," says McLaughlin. "So all the money we raise on an annual basis goes directly to the operation of the camp." Lewis died in 2013, and up to that point, Bar None was a fun summer camp. It still is, McLaughlin says, but now they have implemented therapeutic community concepts. Daily Gleaner, C1

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Gays at increased risk of violence, stats show

Not only was Sunday's attack on the Pulse nightclub in Orlando the worst mass shooting in U.S. history, it was the deadliest single act of violence perpetrated against gays in modern history. Gay venues have been bombed, set on fire and even targeted by mass shootings before, but the death toll has never come close to the 49 killed at Pulse. What the Orlando attack brings home is that, even in an era of full legal equality and revolutionary HIV treatments, North American gays and lesbians are still disproportionately at risk of suffering a violent or premature death. "Acceptance of the LGBT community has not been universal and violence ... persists as a serious issue in the United States," reads a 2014 study sponsored by the U.S. Department of Homeland Security. (...) Among Canadian minority groups, the gay community remains a consistent target of random violence. In 2013, for instance, Canadian police recorded 186 hate crimes motivated by sexual orientation. Crimes against the LGBTQ community were only onefifth of the Canadian total, but are consistently more brutal. "These hate crimes were more likely to be violent than hate crimes targeting other groups," noted a Statistics Canada summary. Postmedia Network (Vancouver Sun, N4, Leader-Post, Ottawa Citizen, National Post, Edmonton Journal); Calgary Herald

*** Stats show handful commit over half of crimes in Sask**

A new Statistics Canada report shows that a small handful of Saskatchewan people are responsible for a disproportionate amount of crime in the province. The study tracked Saskatchewan offenders over a three-year period starting in 2009 and found that 21 per cent of accused individuals were responsible for more than half of the crimes. According to one of the lead researchers on the project, that is likely because the further along a person moves in the criminal justice system - from being questioned by police to getting arrested to appearing in court and serving a sentence - the more likely he or she is to reoffend. "The further you move through the system, the more likely it is you will have repeated contact with the justice system, particularly if you are an aboriginal person or a young person," said Shannon Brennan, a senior analyst with Statistics Canada. Brennan said the research shows that someone who only has contact with police but does not have to go to court or is not sentenced to any jail time is far less likely to be a repeat offender. On the other hand, those who are repeatedly sentenced to jail or probation are far more likely to reoffend and end up being sentenced again. In real numbers that means a small group - only 7,800 of the 37,054 people who came into contact with the Saskatchewan justice system in 2009-10 - were responsible for 57 per cent of all crimes committed in the province. StarPhoenix, A4 (Leader-Post)

Toronto police services board may overhaul TAVIS unit, sources say
