Column - **Moles--that is, long-term penetration agents--are every intelligence service's worst nightmare. T**hough rarer in reality than in spy movies and novels, moles exist and can do enormous damage to a country's secrets and espionage capabilities. They're what keep counterintelligence experts awake at night. The recent appearance on the Internet of top secret hacking tools from the **National Security Agency** has shined yet another unwanted spotlight on that hard-luck agency, which has been reeling for three years from Edward Snowden's defection

to Moscow after stealing more than a million classified documents from **NSA**. As I explained, this latest debacle was not a "hack"--rather, it's a clear sign that the agency has a mole. Of course, I've been saying that for years. It's not exactly a secret that NSA has one or more Russian moles in its ranks--not counting Snowden. Now the mainstream media has taken notice and we have the "another Snowden" meme upon us. Viewing NSA as the head of the Western intelligence alliance, the core of which are the Anglosphere **"Five Eyes" countries (America, Britain, Canada, Australia, and New Zealand), and which dates to Allied victory in World War II, there was no point during the Cold War where the Five Eyes system wasn't penetrated somewhere by Soviet intelligence**. There are other indications of Russian penetration of NSA that had nothing to do with Snowden. An espionage case that got too little attention was that of **Jeffrey Delisle**, a Canadian navy junior officer who was arrested in 2012 for passing secrets to Moscow. He admitted his guilt, specifically that for almost five years beginning in 2007, he regularly sold secrets to **GRU**, that is Russian military intelligence. Upset over his wife's infidelity and short of cash, the sad-sack Delisle, who was assigned to a Canadian intelligence center in Halifax, simply downloaded secrets on a thumb-drive, which he passed to GRU every month or so. Most of what Delisle gave Moscow wasn't Canadian information but belonged to Five Eyes, much of which came from NSA. Yet the most interesting part of the Delisle case is what GRU did not want from him. Note: John Schindler is a security expert and former National Security Agency analyst and counterintelligence officer. A specialist in espionage and terrorism, he's also been a Navy officer and a War College professor.

UK threat to cut security ties as Calais crisis grows
London Times, Michael Savage, Charles Bremner, 2016 08 30
London - **Britain is threatening to review security co-operation with France should it try to shift the Calais border back across the Channel**. Senior government sources issued the warning after leading French politicians called for the unravelling of a 2003 deal under which British border checks take place in Calais. The agreement stops thousands of potential migrants from crossing into Britain. Amber Rudd, the home secretary, will fly to Paris today for talks with Bernard Cazeneuve, her French counterpart. Nicolas Sarkozy, one of the leading contenders to be the next French president, has said that Britain should be forced to handle on its soil the asylum claims of about 9,000 people who have gathered at the Calais camp known as the Jungle.

The secret life of 'C'
The Sunday Times, Max Hastings, 2016 08 28
Book review: **SPYMASTER The Life of Britain's Most Decorated Cold War Spy and Head of MI6,** Sir Maurice Oldfield by MARTIN PEARCE Bantam Press £20 pp400. When Alec Guinness was debating whether to accept the role of the spymaster George Smiley in the BBC adaptation of John le Carré's Tinker Tailor Soldier Spy, the author arranged for him to lunch with Maurice Oldfield, newly retired as the head of MI6. Guinness later said: "I was told he would be extremely reticent, very, very shy." In reality, he reported, he had "rarely met a more garrulous, informative, un-shy person". Many intelligence chiefs lack colour, but this could never be said of Oldfield, the dancer, church organist, global networker, yet pillar of Derbyshire farming society.A Manchester University contemporary gave a description of this renowned "C" that would not

change much until his death: "Maurice was short and fat, pale and pasty, with full lips and a mop of unruly dark auburn hair. He wore an ill-fitting dark pinstriped suit, whose collar seemed to be there for the sole purpose of catching dandruff. Visually, he put me very much in mind of the actor Charles Laughton." Martin Pearce, Oldfield's great-nephew, always regarded him with an affection that, he said, moved him to write this book because he felt no previous writer has got Oldfield quite right. That is unsurprising: in the nature of secret services, none of us, including the author, knows much about Oldfield's professional achievements. All that is for sure is that he commanded much respect among his peers in MI6 (who overcame their institutionalised snobbery to acknowledge his talents) and the politicians whom he served.

The police chief battling cybercriminals from Russia and Ukraine
The Guardian (London), Patrick Collinson, 2016 08 27
London - **Half of online fraud comes from abroad, says Ian Dyson, commissioner of the City of London police,** who has enlisted the help of Google and Microsoft to fight it. Last Christmas Ian Dyson got a call from his bank. Was he really in a Travelodge, ordering takeaway pizzas? No, was his answer, he was at home with his family. Like millions of others, Dyson had fallen victim to card fraudsters stealing from his account. But Dyson is not like everyone else - he is the commissioner of the City of London police, with the job of protecting not just London but the whole country from fraud. And the depressing reality is, like so many other frauds, the criminals got away with it. **The City of London police have a specialist officer permanently stationed in Wall Street, and worked with the Spanish police to swoop on 110 conmen operating a "boiler room" fraud targeting elderly investors. But Russia? Do the London police receive any help from their counterparts in Moscow? "No, not at all. Ukraine is limited too**. You'll be aware of the limitations of some foreign jurisdictions." Another limitation is budgets. "Policing has taken a 20% hit in its budget so I've got to do what I can with what I've got," he says, while noting that virtually everyone else in the public sector has faced similar cuts.

Australia unveils "how-to" guide to fight militant propaganda
Reuters, Matt Siegel, 2016 08 30
Canberra - **Australia on Tuesday released what the government says is the world's first ever how-to-guide for combating radical Islamist propaganda in Southeast Asia**, which it hopes will help disrupt local recruitment efforts by groups such as Islamic State. Australia, a staunch U.S. ally, has been on heightened alert for attacks by home-grown Islamist radicals since 2014 and authorities say they have thwarted a number of plots. The 43-page document, entitled "**Undermining Violent Extremist Narratives in South East Asia**", will be accessible online and aims to provide tools to disrupt the winding path to radicalisation, said Justice Minister Michael Keenan. "The process of radicalisation to violence is an incredibly complex issue. Terrorist propaganda affects each individual's state of mind, their thoughts and emotions differently. There is no single pathway to radicalisation," Keenan told a conference in Canberra, according to an advanced copy of his remarks shared with Reuters.

Secret security review: special forces to get call if terrorists strike at home
The Australian, Paul Maley, 2016 08 29

Canberra - **Army special forces could be called out to resolve deadly Lindt cafe-style sieges as part of a wideranging secret review aimed at streamlining the so-called "call-out" powers that allow the military to operate on domestic soil**. Almost two years after Lindt cafe gunman Man Haron Monis brought Sydney's CBD to a standstill, resulting in the deaths of two hostages and raising serious questions about the ability of local police to handle major terrorist attacks, The Australian can reveal moves are afoot to fast-track the procedures via which the army can be used to fight terrorists. The Australian understands the Defence Department has initiated a nationwide review of the call-out powers, widely considered archaic and ill-suited to the fast-moving pace of modern terrorism. The review is part of a more - aggressive approach to counter- terrorism strategy, spurred by the Lindt cafe siege as well as last year's shooting attacks in Paris and Brussels, which were carried out by Islamic State terrorists intent on killing as many people as quickly as possible. Taken together, the attacks have rendered much of the thinking around responding to terrorism redundant, in particular the so-called "contain and negotiate" strategy favoured by police. Instead, specialist police are being retrained to engage terrorists quickly and with deadly force.

Government computer networks breached in cyber attacks as experts warn of espionage threat
ABC (Australia), Linton Besser & Jake Sturmer, 2016 08 29
Canberra- **Sensitive Australian Government and corporate computer networks -- including those holding highly confidential plans for a privately financed geostationary communications satellite -- have been penetrated by sophisticated cyber attacks**, a Four Corners investigation has established. **Austrade and the Defence Department's elite research division, now named the Defence Science Technology Group, both suffered significant cyber infiltrations in the past five years by hackers based in China**. Intelligence sources say they suspect the attackers in these cases were sponsored by Beijing. Four Corners has also confirmed Newsat Ltd, an Australian satellite company whose assets were sold off last year after the company went into administration, was so comprehensively infiltrated three years ago that its entire network had to be rebuilt in secret. But these incidents, revealed for the first time, are only a fraction of the cyber attacks being waged against Australian governments and companies. The **Prime Minister's cyber security adviser, Alastair MacGibbon, told the program the Australian Government was "attacked on a daily basis".** "We don't talk about all the breaches that occur," he said. Government and industry sources said the true targets for the cyber attack may have been defence assets linked to the BoM and its vast data-collection capabilities. **One was the Australian Geospatial-Intelligence Organisation, an intelligence agency within the Department of Defence** which provides highly detailed mapping information for military and espionage purposes.

ASIO push to 'streamline' judicial safeguards criticised by legal groups
Australian Broadcasting Corporation, Francis Keany, 2016 08 27
Canberra - A **push by domestic intelligence agency ASIO to reduce the level of judicial safeguards in terrorism investigations has been criticised by a peak legal group.** Special warrants currently allow ASIO to question and detain people for up to a week without charge. Under the proposal only the Attorney-General, and not a judge, would be needed to issue those warrants. **Director General of ASIO Duncan Lewis** told an inquiry into the Government's detention powers his agency would support amendments that made the current process "more efficient and effective". "ASIO has made a number of recommendations in our submissions to this review on how the current authorisation process could be streamlined for our questioning powers," he said. "This would make them more efficient in responding to the current fast paced threat environment." **Law Council of Australia director Arthur Moses said the move could set a dangerous precedent and politicise investigations**. "Ministers can and do get things

horribly wrong in the heat of the moment as they straddle a number of competing issues including how their decisions may be received by the press or how it may be politically detrimental to the government," Mr Moses said.

ASIO seeks detention without a judge's warrant
Sydney Morning Herald, David Wroe, 2016 08 27
Canberra- **ASIO has proposed scrapping the need for judge-approved warrants to detain and question Australians for up to a week without charge in terrorism investigations**, a watering down of safeguards that has alarmed lawyers and rights advocates. The power to grant the security agency a controversial "questioning and detention warrant" would rest instead with the Attorney-General, a situation the **Law Council of Australia** has branded "unprecedented". The changes requested by ASIO would also remove a separate requirement that an independent legal authority such as a retired judge be present when a person was being questioned. Rather, oversight of questioning would rest with the intelligence watchdog, the Inspector-General of Intelligence and Security. Under laws passed after the September 11 and Bali bombing attacks, ASIO has the power to hold someone for up to seven days and question them during a terrorism investigation. **ASIO head Duncan Lewis** told a review inquiry last week into the laws that the process could be "more efficient and effective". Mr Lewis told the hearing these powers were "fundamental to ASIO's work in responding to the terrorism threat that we face". Police and intelligence agencies say terrorism plots in the Islamic State era are increasingly rudimentary and fast-moving, which means processes such as obtaining warrants need to be streamlined as much as possible.

Megaupload's Dotcom argues extradition appeal should be livestreamed
Reuters, 2016 08 30
Wellington— An **appeal by flamboyant German tech entrepreneur Kim Dotcom over a decision to extradite him to the United States began in New Zealand on Monday**, with the Megaupload founder's legal team arguing the hearing should be livestreamed on YouTube. The High Court hearing opened in Auckland nine months after a lower court ruled Dotcom could be sent to the United States to face copyright infringement and money-laundering charges over the operation of file-sharing website Megaupload. U.S. authorities say Dotcom and three co-accused Megaupload executives cost film studios and record companies more than $500 million and generated more than $175 million by encouraging paying users to store and share copyrighted material, such as movies and TV shows. Years of legal wrangling followed Dotcom's arrest in New Zealand police raid in 2012, and it **emerged that the Government Communications Security Bureau had illegally spied on him before the raid.**

First counter-terror fines issued to hotels ahead of G20 summit
Global News, Staff reporter, 2016 08 30
Beijing - A **hotel in Nanjing, East China's Jiangsu Province - which neighbors the G20 host city - was fined by police for failing to register its guests' personal information accurately, becoming the first business in Nanjing to face such punishment since China's Counter-terrorism Law took effect in January**. During an inspection of the hotel on August 10, police found that personal information of guests in one room was not registered properly and instructed the hotel to rectify the problem, the Yangtze Evening Post reported Monday. However, the hotel had not registered travelers' information for another four rooms when police returned on Wednesday.

China's Covert Weapons Procurement Revealed in Florida Case
Washington Free Beacon, Bill Gertz, 2016 08 24
Washington - **China's government covertly tried to obtain advanced U.S. fighter jet engines and a Reaper drone** in a high-technology spying operation uncovered by federal authorities in Florida. A Chinese-born woman, **Wenxia Man**, was sentenced to 50 months in prison on Friday following her conviction for conspiracy to export restricted American defense articles, namely engines for F-35, F-22, and F-16 jets, and the Reaper, a front-line unmanned aerial vehicle used by the military and intelligence agencies. Court papers in the case stated that Man, a naturalized U.S. citizen residing in California who is also known as Wency Man, worked with a Chinese government procurement agent, Xinsheng Zhang, in trying to purchase the military items. The **Chinese planned to reverse-engineer the U.S. military goods to avoid the costs and time required for indigenous development**.

Anti-graft body: no relief for fugitives overseas (Canada)
China Daily, Zhang Yi, 2016 08 24
Beijing - **One-third of the people listed by Interpol as China's 100 most-wanted corrupt officials and businesspeople have returned to the country to face justice and atone for their crimes.** Zhang Yi reports. "I feel ashamed of what I did, stealing public funds and fleeing to Singapore to avoid jail time in China. I don't deserve to be a Chinese citizen. I realize there is no point living a miserable life in a foreign country, because the rest of my days would be a mere existence on earth." Those words, from a confessional letter written by **Li Huabo, No 2 on a list of arrest warrants for China's 100 most-wanted economic fugitives published by Interpol** last year, were made public for the first time at the weekend. Li returned to China in May last year, after serving 15 months in a Singaporean jail for depositing stolen money in bank accounts in the island state. The 55-year-old former official at the finance bureau in Poyang county, Jiangxi province, is suspected of embezzling 94 million yuan ($14 million) in government funds. In the confession, he said he felt relieved when he agreed to return to China and turn himself in. He is just one of 33 people on the Interpol list who have returned to China to face the music. Thanks to a global dragnet, the country's most-wanted economic fugitives are discovering that they can run, but in the end, they will be brought to justice. Last year, the CCDI started "Skynet", a program to coordinate efforts to bring errant fugitives to justice. "Suspected government officials and crooked businesspeople in the private sector are on the Interpol list. Those **who worked for State-run departments or enterprises have chosen to hide in**

economically advanced countries, such as the US, Canada and New Zealand, because they can access a favorable living environment and a well-rounded legal system which they believe will favor their interests," said Huang Feng, a professor of international criminal law at Beijing Normal University.

Des « privés » russes engagés sur le front syrien
Le Figaro, Pierre Avril, 2016 08 29
Moscou-Le nom du musicien romantique allemand qui lui est accolé ne doit pas faire illusion. Le **« groupe Wagner »** est devenu le centre d'attention de la communauté militaire russe depuis la publication, le 25 août, par le journal RBK d'une longue enquête consacrée aux compagnies militaires privées opérant en Syrie**. Sous ce pseudonyme artistique se cacherait Dmitri Outkin, un ancien officier des renseignements militaires russes (GRU) qui aurait donné son nom à ce qu'il convient d'appeler une compagnie de mercenaires, à l'image des Blackwater et KBR**, ces fameux « chiens de guerre » américains ayant combattu en Irak. Selon une source interrogée par RBK , près de 1 600 employés du groupe Wagner auraient déjà simultanément servi en Syrie en 2016, leur nombre variant au gré des combats, pour un salaire plafonnant à environ 300 000 roubles mensuels (4 100 euros). Plusieurs d'entre eux se seraient distingués lors de la libération de Palmyre, alors contrôlée par l'État islamique. Depuis 2015, ils disposeraient d'une base militaire destinée à leur préparation, située à Molkino dans la région de Krasnodar (Sud) et placée sous le contrôle du GRU. Dmitri Outkin lui-même aurait déjà servi au Proche-Orient sous les ordres d'une compagnie russe baptisée

Russia Says Chinese Hackers Are Getting More Aggressive
Bloomberg News, Stepan Kravchenko, 2016 08 26
Moscow - **While the West sees Russia as a cyber predator, hackers in the East increasingly view it as prey, according to online security company Kaspersky** Lab, which says there's been a sharp spike in attacks from China. Cases of Chinese hacking of Russian industries including defense, nuclear, and aviation rose almost threefold to 194 in the first seven months of this year from 72 in the whole of 2015, according to Alexander Gostev, the Moscow-based company's chief security expert. **Proofpoint**, a California- based cyber security company, also reported an increase in Chinese attacks on Russia. The hacking is going on "despite the officially promoted friendship between **Russia and China and accords on cyber security, cooperation and non-aggression" between the two governments**, Gostev said in an interview. "I don't see them working."

Why are Russian hackers going after US news organizations?
Christian Science Monitor, Ben Rosen, 2016 08 24
Boston - **Hackers linked to Russian government agencies targeted The New York Times this month in an apparent effort to extract intelligence about US political system**, CNN first reported Tuesday. The FBI has started an investigation into the attempted breach of the Times and other US news organizations. But, Eileen Murphy, a spokeswoman for the newspaper, said Tuesday the hackers were not successful. "This is what cyber conflict actually looks like," James Lewis, a senior fellow at the **Center for Strategic and International Studies**

(CSIS), a Washington think tank, told The Christian Science Monitor earlier this month. "The problem in the US is we're very militarized, so we tend to think about attacking infrastructure. The Russian approach is much more political and about trying to manipulate public opinion." The spotlight the leak has thrown on Russia - warranted or not - underscores how different countries have different targets with their spying. Russia comes under suspicion partly because the DNC case reflects the Kremlin's global campaign to influence political outcomes - as opposed to say, **China's focus on hacking as an economic tool."China is all about its global rise based on its economy, and we can see that fixation in the cases we've seen"** of hacking into corporations and focusing efforts on accessing corporations' intellectual property, says Fiona Hill, director of the Brookings Institution's Center on the US and Europe.Russia's cyber focus has evolved."The Russians at one point a number of years ago were also focused on their economic aspirations," she adds, "but now they're back to the old political space and are very much working from the playbill of the **KGB** in the cold war days."

FBI investigating Russian hack of New York Times reporters, others
CNN.com, Evan Perez, Shimon Prokupecz, 2016 08 24
Washington - **Hackers thought to be working for Russian intelligence have carried out a series of cyber breaches targeting reporters at The New York Times and other US news organizations,** according to US officials briefed on the matter. The intrusions, detected in recent months, are under investigation by the FBI and other US security agencies. Investigators so far believe that Russian intelligence is likely behind the attacks and that Russian hackers are targeting news organizations as part of a broader series of hacks that also have focused on Democratic Party organizations, the officials said. The Times said email services for employees are outsourced to Google. CNN requested comment from Google but didn't receive comment. The FBI declined to comment. Times spokeswoman Eileen Murphy said the company had seen "no evidence" that any breaches had occurred of the Times's internal systems. CNN's report didn't say that the Times internal systems were breached, but that reporters were targeted.

New York Times's Moscow Bureau Was Targeted by Hackers
New York Times, Nicole Perlroth, David E. Sanger, 2016 08 24
New York - The N**ew York Times's Moscow bureau was the target of an attempted cyberattack this month.** But so far, **there is no evidence that the hackers, believed to be Russian, were successful.** "We are constantly monitoring our systems with the latest available intelligence and tools," said Eileen Murphy, a spokeswoman for The Times. "We have seen no evidence that any of our internal systems, including our systems in the Moscow bureau, have been breached or compromised." On Tuesday, citing United States officials briefed on the matter, CNN reported that The Times, along with other news organizations it did not identify, had been the victims of computer breaches by hackers thought to be working for Russian intelligence. The **Federal Bureau of Investigation** is looking into the attempted attack on The Times, a government official briefed on the inquiry said, but has no investigations underway of such episodes at other news organizations.

Italy expels Russian accused of inept bid to buy Nato secrets
London Times, Tom Kington and Deborah Haynes, 2016 08 30

London— **Italy has handed a suspected Russian spy back to Moscow two months after he was allegedly caught buying Nato secrets from a Portuguese agent.** European security sources said that the detention of **Sergei Pozdnyakov** would have embarrassed and enraged Moscow at a time of tension between Russia and the West. *"This was a counter-intelligence coup for the Italians and the Portuguese,"* one source said.Court documents suggest that the Russian had already got his hands on Nato secrets from the same alleged agent. Mr Pozdnyakov, suspected of **being a senior member of Russia's Foreign Intelligence Service**, had allegedly travelled to Italy without obtaining diplomatic immunity — a basic error of tradecraft. Paying an official for secret information is illegal, although unspoken diplomatic rules usually mean that a foreign intelligence officer caught running agents is expelled within 48 hours. On this occasion the Russian was freed only last month, without fanfare, after eight weeks behind bars. His alleged occupation was never proved and the Russian embassy described him as a diplomat.

Germany's Spy Agency Offers Rare Glimpse Inside Its New Gates
Wall Street Journal, Zeke Turner, 2016 08 29
Berlin - **Germany's top-secret spy service, the Federal Intelligence Agency, invited the public this weekend for the first--and only--time to visit inside the gates of its new billion-euro campus in the center of Berlin**. The **Bundesnachrichtendienst--or the BND for short, Germany's answer to the Central Intelligence Agency--is marking its 60th anniversary**, and next year will leave its reclusive headquarters in a Munich suburb for its new Berlin office. It is the biggest, and one of the most expensive, buildings the postwar German government has ever built. An advanced group of 170 workers are already on site, BND officials said. Many of them are setting up computer networks and phones for the rest of the agency's 4,000 workers, who will move to Berlin next year. At that point, it will be impossible to visit inside the agency's gates. The move into prominent, centrally located new headquarters comes as Germany is putting evermore emphasis on its spy operations. Last week, **Chancellor Angela Merkel said that gathering and sharing intelligence was among the most important things European Union countries could do to justify the bloc's existence.** Faced with fears of another imminent terror attack on German soil,

« La loi sur le renseignement est liberticide »
Le Temps, Bernard Wuthrich, 2016 08 29
Berne-- **Conseiller national durant 24 ans, cofondateur du GSsA, le socialiste Andreas Gross a tourné la page de la politique**. Mais il **s'engage résolument contre la nouvelle loi sur les services secrets, qu'il considère comme « trop vague » et inefficace.** Avant de quitter le Conseil national, où il a siégé de 1991 à 2015, Andreas Gross (PS/ZH) a encore eu le temps de **voter contre la loi sur le renseignement (LRens).** Cet ancien fiché y voit un danger pour les citoyens. Que reprochez-vous à la LRens? Cette loi exprime une mentalité de soupçon envers les citoyens. Elle met la protection de l'Etat au centre, pas celle de la liberté individuelle. La preuve? Dans son message, le Conseil fédéral dit que les droits des citoyens sont « pris en compte », ce qui signifie qu'ils ne sont pas la préoccupation première de la LRens. La loi permet de s'introduire dans la sphère privée des gens: lire le courrier postal, écouter les discussions téléphoniques, s'infiltrer dans les ordinateurs.

«Ne rien faire, c'est indirectement se rendre complice d'un attentat»
Le Matin Dimanche (Suisse), Philippe Castella et Fabian Muhieddine, 2016 08 28
Berne--**Guy Parmelin défend son premier objet devant le peuple dans un mois, un renforcement de la loi sur le renseignement, dans un contexte marqué par la multiplication des attentats terroristes.** Interview. **Avez-vous peur d'un attentat terroriste en Suisse? Peur, ce n'est peut-être pas le mot, mais nous devons nous préparer à toutes**

les éventualités. Avant même les attentats de cet été, toutes les analyses parlaient déjà de menace élevée. Nous continuons à mener ces évaluations. Le risque d'attentat a même augmenté. Vous êtes-vous déjà retrouvé au milieu d'une fête populaire avec des images d'attentat vous venant à l'esprit? Pas à titre personnel, mais j'ai rencontré des gens qui m'ont clairement dit qu'ils avaient renoncé à tel ou tel événement, où ils se rendaient régulièrement avec leurs enfants....Les menaces se sont diversifiées, c'est juste. Elles n'émanent plus seulement de groupes structurés avec une stratégie et un but bien déterminés. Il faut s'y adapter avec de nouveaux instruments et des collaborations internationales pour anticiper les situations. Mais, avec nos moyens, nous resterons dépendants des services secrets étrangers. C'est presque toujours eux qui nous avertissent, comme dans l'affaire d'espionnage de RUAG. C'est un échange**. Nos services de renseignement donnent aussi des informations aux autres pays.** En Suisse, nous cherchons à adapter nos instruments à l'évolution en matière de terrorisme et de cyberattaques. Mais nous voulons le faire de manière proportionnée, avec un rapport coût- efficacité adéquat.

Ecoutons les agents de terrain dans la lutte contre le terrorisme!
Le Monde, Isaac Getz avec Erwin Van Waeleghem, 2016 08 26
Non identifié - **Nos agents de liaison, en contact direct avec la menace terroriste, sont très efficaces pour collecter des données, mener des enquêtes préventives et partager les informations**. Las, **ils sont trop rarement entendus par leur hiérarchie** Il est trop tôt pour tirer les leçons des déficiences des services de sécurité concernant les attaques terroristes de 2015-2016 en Europe. Il en va autrement des attentats de 2001 aux Etats- Unis. Examiner ces manquements, autant que les meilleures pratiques organisationnelles de centaines de structures, nous fournit des leçons uniques sur la façon d'améliorer nos services pour mieux combattre le terrorisme. Devinez où a été écrite cette note de service d'une salariée destinée à son directeur : " Les agents sur le terrain et leur manageur de proximité seraient mieux à même de mettre en place des solutions rapides et efficaces (...) pour prévenir des (...) risques. Bien que le personnel du siège ait (...) été d'une aide incommensurable (...) , j'ai beaucoup de mal à penser à des cas résolus par eux et je peux en nommer plusieurs qu'ils ont " foirés " ! La prise de décision est intrinsèquement plus efficace et plus rapide quand elle est décentralisée plutôt que concentrée. " Les **dysfonctionnements du FBI Vous pourriez penser que c'est une salariée d'une grande entreprise qui en est l'auteure, mais il s'agit en fait de Coleen M. Rowley, agent du FBI à Minneapolis.** Elle a exposé des -dysfonctionnements du FBI, lesquels, s'ils avaient été traités plus tôt, auraient pu prévenir les attentats du 11 septembre 2001. Voici un exemple de sa propre expérience : " Les agents à Minneapolis - étant - (...) dans la meilleure position afin d'évaluer la situation sur place, - ils - ont pleinement pris conscience du risque terroriste posé par Moussaoui et ses possibles co-conspirateurs, même avant le 11-Septembre. (...) Cependant, l'agent spécial de surveillance au siège du FBI (...) semble avoir constamment, presque délibérément, contrecarré les efforts des agents du FBI de Minneapolis. " Rowley cite aussi l'expérience de Kenneth Williams, un agent du FBI pour l'antiterrorisme à Phoenix qui a envoyé une note de service au siège le 10 juillet 2001. Elle s'ouvrait par la mise en garde contre les plans de Ben Laden d'envoyer des étudiants aux Etats-Unis pour apprendre à piloter. Williams n'a jamais reçu de réponse réelle. Des dysfonctionnements similaires existent en Europe. En **Belgique, par exemple, le chef d'une police locale n'a pas partagé avec les services antiterroristes à Bruxelles l'information de son agent de terrain sur le locataire de l'éventuelle planque du terroriste belge Abdeslam**. Après quatre mois, grâce à un témoignage spontané, Abdeslam sera arrêté précisément dans ce lieu. Quant à l'agent en question, il a fini en burn-out ...

Turkey accused of 'systematic spying' in Austria
The Local (Austria), Staff report, 2016 08 25

Vienna - An **Austrian politician has accused Turkish authorities of spying on people living in Austria who are opposed to the Turkish leader President Tayyip Erdogan**. It follows similar accusations made in recent days in Germany and the Netherlands regarding possible networks of thousands of Turkish spies in Europe. The security spokesperson for Austria's Green party, Peter Pilz, announced on Wednesday that "systematic spying" is being carried out of people living in Austria who are against the Turkish government. Pilz claims information about opposition supporters is being gathered by organisations affiliated with the AKP, the ruling party in Turkey formerly led by Erdogan before he became president.

Youth novel explores real causes of terror in Germany
Deutsche Welle, 2016 08 25
Berlin-- A **German-Turkish teen joins the 'IS' and plans a terror attack in Germany. While that's the basis for a new work of youth fiction, it's disturbingly close to the reality in Germany**, writes DW's Rolf Rische. "Allahu akbar!" shouts the 16-year-old in front of the St. Paul soccer stadium in Hamburg. He's about to blast himself and hundreds of innocent people to bits. The young man is a native German, a soccer fan and, as of recently, a religiously motivated terrorist. The scene is both frightening and absurd at the same time. But tragically, it's also all too reminiscent of things that have really happened in Germany this past year. The novel "Kadir, der Krieg und die Katze des Propheten" (Kadir, the War and the Prophet's Cat), **by Peter Mathews und Benno Köpfer,** opens with this scene. The book traces the path of German-Turkish youth Kadir from an inconspicuously, relatively well adjusted teenager to a jihadist. What Kadir experiences and how he is treated corresponds to reality, according to the book's authors. **Benno Köpfer has worked for many years as an analyst for the Federal Office for the Protection of the Constitution**. His mission is to fight Islamist terrorism. Köpfer studied Muslim Studies in Freiburg, Cairo and Sana'a. As an archaeologist, he participated in excavations in Yemen and Syria and has traveled the Islamic world from Mauretius to Pakistan. Köpfer **aims to help his colleagues at the Federal Office for the Protection of the Constitution understand what leads young men in Germany to become terrorists**. "Islam as a religion is only part of what draws young people into the jihad for the 'IS,'" he says.

Le cryptage des messageries, casse-tête de Cazeneuve
Le Figaro, Lucie Ronfaut, 2016 08 24
Bruxeles - Le **chiffrement des communications n'a pas fini d'embarrasser les autorités. Bernard Cazeneuve, ministre de l'Intérieur, et son homologue allemand Thomas de Maizière souhaitent proposer à la Commission européenne une loi soumettant les services de messagerie en ligne aux mêmes obligations que les opérateurs télécoms**, afin de les forcer à collaborer dans le cadre d'enquêtes antiterroristes. L'idée n'est pas neuve. La semaine passée, l'agence Reuters affirmait que la Commission européenne voulait étendre aux applications de messagerie les règles de sécurité et de confidentialité appliquées aux opérateurs télécoms. En **France, ces derniers doivent permettre l'interception des données de leurs utilisateurs dans le cadre d'enquêtes judiciaires ou sur demande des services de renseignement.** Dans cette lignée, Cazeneuve a affirmé mardi vouloir obliger les services en ligne « non coopératifs » à « retirer des contenus illicites ou déchiffrer des messages dans le cadre d'enquêtes judiciaires, que leur siège soit en Europe ou non » .

CIA declassified intel files reveal briefings on Israel
Jerusalem Post, Staff Report, 2016 08 26
Jerusalem - The **day before the Yom Kippur War broke** out on October 6, 1973, **US intelligence assessments reported large-scale military exercises in Egypt,** but that "they do not appear to be preparations for an offensive against Israel." The **assessment was found in one of about 2,500 documents released by the CIA on Wednesday, containing the US government's intelligence analysis on key national security issues** during the presidencies of Richard Nixon and Gerald Ford, from January 1969 to January 1977. The release took place at an event at the Nixon Presidential Library & Museum in Yorba Linda, California. Another document from the day the war began said that neither side seemed inclined to start hostilities.

Minister says overseas intelligence agencies try to make Iran insecure
Iranian Young Journalists' Club website, via BBC Monitoring Middle East, 2016 08 25
Tehran— **Iran's Intelligence Minister Mahmoud Alavi has US, UK, Israeli and Saudi intelligence services are funding groups who aim to make the country** insecure. According to the **semi-official Young Journalists' Club** (YJC), which is run and funded by the country's state broadcaster, Alavi said: "Behind all of this we see evidence proving coordination between intelligence services of hostile countries, with **US, UK and Saudi intelligence and the Mossad at the helm.** "We find their traces in the southeast and beyond our borders. They form teams of 10 to 12 people and spend 500,000 dollars on every operation to challenge the safety and security of our country."

Iran's Revolutionary Guard targets 450 social media users
Associated Press, 2016 08 24
Tehran - The **cyber-arm of Iran's powerful Revolutionary Guard says it has summoned, detained and warned some 450 administrators of social media groups in recent weeks**. The announcement Tuesday, carried on a website affiliated with the Guard's cyber arm, says those detained used social media like the messaging app Telegram, which is popular in Iran. The announcement says those detained or summoned made posts that were considered immoral, were related to modeling, or which insulted religious beliefs. It says the Guard only took action after "judicial procedures" were completed, without elaborating. In May, authorities announced an operation targeting those involved in modeling on Instagram.

S. Korean Embassy in China warns against possible N. Korea terror attacks, abduction
Yonhap News Agency, Staff reporter, 2016 08 29
Seoul - The **South Korean Embassy in Beijing has warned South Koreans in China about possible terrorist attacks or abduction attempts by North Korea in the wake of the recent defection of a senior diplomat**, sources said Monday. The embassy urged South Korean residents and travelers in China to refrain from visiting the North Korea-China border areas or coming in contact with North Koreans in a message recently conveyed to South Korean expatriate groups and other associated organizations in China, according to the sources. "Given

the recent defection of a high-level North Korean official and North Korea's threats of provocations, there seem to be high possibilities of terrorist attacks and abductions of our citizens," the embassy message said. "South Koreans are advised to pay special attention to their personal safety," it said. South Koreans in China are also advised to abstain from trips to the border areas and meeting with any suspected North Koreans, the message also said, urging them to constantly check safety information updates from the embassy.

Japan gov't to submit revised conspiracy bill citing terrorist threat
Kyodo News, Staff reporter, 2016 08 26
Tokyo - **The Japanese government plans to submit a revised bill criminalizing conspiracy to the Diet in September to strengthen counterterrorism measures before Tokyo hosts the 2020 Summer Olympics**, sources close to the matter said Friday. Earlier versions of the bill have been submitted three times but all were scrapped due to concerns over intrusive state surveillance and the granting of arbitrary powers to investigators as the act of conspiracy would be a punishable offence even when a crime is not committed. **Senior lawmakers of the ruling Liberal Democratic Party led by Prime Minister Shinzo Abe have stepped up calls for the introduction of a conspiracy charge in the wake of the deadly terror attacks in Paris** last November. "It is an important responsibility of the government to secure the public's safety," Chief Cabinet Secretary Yoshihide Suga told a press conference, commenting on the need for the legislation. In the new bill targeting organized crime, the government plans to specify that to face the charge, individuals must have been involved not only in conspiring to commit a crime but also in preparatory acts such as fundraising, they said.

N.K. resumes encrypted numbers broadcast after 2-week hiatus
Yonhap News Agency, Staff reporter, 2016 08 26
Seoul - **North Korea's state radio station on Friday resumed the broadcast of mysterious numbers after a two-week hiatus, which some experts say are coded messages to its agents in South Korea**. A female announcer at Radio Pyongyang read numbers for more than four minutes starting at 12:45 a.m., calling out numbers, such as "No. 68 on Page 509." The announcer said she is "giving review works in basic information technology lessons of the remote education university for No. 27 expedition agents." Since June, North Korea has now carried out encrypted numbers broadcasts five times. Broadcasts of mysterious numbers were used by North Korea to give missions to spies operating in South Korea during the Cold War era. **Spies could decode numbers to get orders by using a reference book.**

North Korea Unveils Netflix-Like Service With Propaganda on Demand
New York Times, Patrick Boehler, Choe Sang-Hun, 2016 08 26
Hong Kong - Days before North Korea's leader, **Kim Jong-un**, successfully tested a ballistic missile that he said could hit parts of the continental United States, his reclusive regime unveiled another technical triumph: a **Netflix-like streaming service. Called Manbang, the service delivers on-demand videos to televisions through a set-top box**, Korean Central Television said in a report last week. In the report, a narrator says that Manbang is further proof of North Korea's "socialist cultural power," which will allow its people to watch their country "make a leap forward every day, every hour." Very few of the country's roughly 25 million citizens are permitted access to the actual internet. Content that can be streamed is largely restricted to state-run television and propaganda-filled movies.

No 'technical traces' about varsity attack found, Kabul told
Dawn (Pakistan), 2016 08 26
Islamabad— Pakistan informed the Afghan government on Thursday that **no "technical traces" of telephonic contacts between the Kabul university attackers** and people on its

side of the border could be found, and sought more evidence. This was conveyed during a telephonic conversation between Afghan President Ashraf Ghani and Army Chief Gen Raheel Sharif, according to a security source. **Pakistani intelligence agencies are, however, continuing with the evaluation of the intelligence shared by Afghanistan after the attack. Absence of an operational intelligence-sharing mechanism between the two countries makes such cooperation between the two countries complicated**. There have been several attempts to establish intelligence sharing arrangement, but all efforts have been unsuccessful because of Afghan intelligence agency NDS' opposition to it. Pakistani intelligence agency ISI and NDS last year signed a cooperation agreement, but it was scuttled by the Afghan side.

Japan, Australia agree to beef up security ties amid China's rise
Kyodo News, Staff reporter, 2016 08 25
Tokyo - The **Japanese and Australian defense ministers agreed Thursday to strengthen security cooperation** amid China's growing maritime assertiveness and North Korea's repeated ballistic missile launches, including one fired the previous day. "I have been clearly instructed by Prime Minister Shinzo Abe to promote defense cooperation between Japan and Australia. I would like to deepen the relationship," Defense Minister Tomomi Inada said at the outset of the talks with her Australian counterpart Marise Payne in Tokyo. Payne also noted the importance of the two countries' cooperation for regional peace and safety amid growing security challenges.

Terror intelligence unit to double number of staff
Japan News, Hirotaka Fukaya, 2016 08 25
Tokyo - The **government plans to double the number of officials assigned to the Counterterrorism Unit-Japan (CTU-J) to improve its ability to collect and analyze information**, sources said. The staff increase, which could occur this year, would increase the unit's personnel to about 40 people. Also, the number of officials stationed overseas, who are not part of the unit, will be increased from about 20 to about 40. In total, about 80 officials at home and abroad will be in charge of information-gathering. **One objective is to bolster the nation's ability to prevent terrorist attacks during the 2020 Tokyo Olympics and Paralympics**. The unit was created in December after incidents including the simultaneous attacks in Paris the month before. Organizationally, it is part of the Foreign Ministry. Its original staff of about 20 officials were from the Defense Ministry, the National Police Agency, and other related ministries and agencies. All the unit's members are concurrently posted to the Cabinet Secretariat, which essentially puts it directly under the prime minister and chief cabinet secretary.

N. Korea dispatches defector kidnapping agents to China
Dong-A Ilbo Daily, Staff reporter, 2016 08 24
Beijing - **Following defection to South Korea of 13 employees at a North Korean state-run restaurant in China and Thae Yong Ho, a top North Korean diplomat at the embassy in London, North Korea has pledged revenge and has massively dispatched members of national security department and North Korea's Reconnaissance General Bureau to China** to strengthen supervision of North Korea-China borders. These North Korean officials are staying in major Chinese airports to monitor any movements of defections. "North Korean officials monitor at the exit at Shenyang Airport in Liaoning when a plane arrives from South Korea," a North Korea source said Tuesday. "They are special agents dispatched from North Korea to kidnap defectors visiting China after the defection of 13 waitresses.

Another Japanese indicted over spying allegations in China
Kyodo News, Staff reporter, 2016 08 24

Beijing - **One of four Japanese who were arrested by Chinese authorities from last year to early this year over alleged involvement in spying activities has been indicted, sources privy to Sino-Japan relations** said Tuesday. The man from Kanagawa Prefecture was detained in May last year in Liaoning Province, close to China's border with North Korea. He is the third of the four known to have been indicted. It is not clear what the charges against him were or at which court he will stand trial. A former defector from North Korea, the man could have been indicted for dealing with sensitive North Korea-related information. Chinese authorities took the four into custody separately from May to June last year over the alleged involvement in spying. China said last month that another Japanese man is under investigation on suspicion of "endangering China's national security."

Somali intelligence said proactive following appointment of new chief
Somali Shabelle Media Network, via BBC Monitoring Africa, 2016 08 30
Mogadishu— **Appointment of General Abdullahi Gafow Mahmud as the Director of the Somali National Intelligence Agency has made a difference to security in Mogadishu** which has been stepped up. The appointment of the new director of the Somali National Intelligence has helped address issues of insecurity in Mogadishu with security forces foiling a number of suicide attacks which al-Shabab has been planning to carry out in the capital. **The new leadership at the national intelligence agency** has put in place measures to detect vehicles being used in attacks and safely removed explosives before they were used to cause harm.

Mandelas want answers about CIA's involvement
New Age (South Africa), 2016 08 29
Midrand, South Africa— **The Mandela family has upped the ante in demanding answers from the American government regarding the involvement of the country's intelligence agency in the arrest of Nelson Mandela in 1962**. Inkosi Mandla Mandela, Nelson Mandela's grandson who is also the chief of Mvezo, yesterday urged the Americans to shed more light regarding their involvement. This comes after a retired CIA officer, Donald Rickard, who was based in Durban at that time, publicly said they helped the apartheid government to arrest Madiba because they viewed him as "the world's most dangerous communist". This is according to a report published by the Washington Post earlier this year.

Venezuela accuses US, opposition of planning coup
Buenos Aires Herald, 2016 08 30
Caracas— Venezuela once again accused the United States and the country's political opposition of planning a coup, alleging that this Thursday — the day that government opponents have called for a march to demand a recall vote against President Nicolás Maduro — has been

pencilled in. The Foreign Ministry's North America agency issued a statement yesterday protesting US State Department spokesman John Kirby's call for the release of the jailed former mayor of San Cristóbal, **Daniel Ceballos, who was taken from his home early Saturday by state intelligence agents** and moved back to prison in central Guárico state. He had been under house arrest.

Five Eyes/Groupe des cinq

Canada

New DND facility falls short on security
Globe and Mail, Robert Fife, 2016 09 02
Ottawa - The **new $1-billion headquarters of the Department of National Defence is not secure enough to house top-secret intelligence work and sensitive military operations** because the facility at the old Nortel campus does not meet the exacting security standards of Canada's international intelligence allies. After years of delay, the first wave of 3,400 military and civilian employees will begin the move into the 10- building complex in an Ottawa suburb in November. DND will eventually transfer 8,500 employees to the 148-hectare site by 2020. Despite extensive work on the complex, including clearing it of listening devices planted by corporate spies in its Nortel days, the new headquarters falls short of the rigorous security requirements of Canada's Five Eyes intelligence partners: the United States, Britain, Australia and New Zealand. "The **bottom line is that we made a decision that we are not going to spend the money** to replicate the physical infrastructure and the information systems and all the other technologies that are required to support intelligence and operations," **ViceAdmiral Mark Norman, the vicechief of the defence staff in charge of overseeing the relocation**, told The Globe and Mail. Canada's cyberspy agency, the **Communications Security Establishment**, met those standards when it recently moved into a new $1.2-billion headquarters in Ottawa.

La GRC veut contrer une éventuelle attaque par drone contre Trudeau
Radio-Canada Nouvelles, Bahador Zabihiyan, 2016 09 01
Montréal--La **GRC craint que des individus mal intentionnés se servent d'un drone pour s'en prendre aux personnalités publiques, à commencer par Justin Trudeau**. Les policiers fédéraux se penchent ainsi sur des solutions pour contrer de telles attaques, a appris Radio-Canada. Les drones, ces appareils volants qui peuvent être télécommandés, sont de plus en plus populaires dans de nombreux secteurs. Faciles à manipuler, certains de ces appareils peuvent représenter une menace pour la sécurité des personnalités au Canada, à commencer par le premier ministre Justin Trudeau.

Ex-spy boss urges Ottawa to prepare for 'cyber war'
Toronto Star, Alex Boutilier, 2016 09 01
Ottawa - The **former chief of Canada's electronic spies is calling on Ottawa to develop an arsenal of cyber weapons - and give defence and intelligence agencies the green light to attack.** "Cyber war" is still in its infancy, **John Adams** argued in a July paper, but computer viruses could soon cause as much damage to a country as conventional bombs and bullets. Canada has traditionally - at least officially - focused cyber efforts on defending against espionage and attacks from both hostile states and hackers. But Adams, the **chief of the Communications Security Establishment between 2005 and 2012, is calling on the federal Liberals to rethink that approach and allow Canada to go on the offensive.** "Some people think that cyber war will sooner or later replace kinetic war. More frequently, cyber war is presented as a new kind of war that is cheaper, cleaner and less risky for an attacker than other forms of armed conflict," Adams wrote in a paper published by the Canadian Global Affairs Institute. "In either case, the Canadian Armed Forces have a responsibility not only to protect their own systems but they also need to have the authority to direct offensive action . . . if that is what it takes to blunt an ongoing catastrophic attack on critical infrastructure." Adams argued that if a hostile state were attacking Canada's networks, Canada should be able to respond in

kind to stop that attack. But in an interview with the Star on Tuesday, Adams was clear that he's envisioning a much wider range of actions for Canada's defence agencies.

Canada's Border Agency Saying Little About Its 15 Employees Accused of Sex Assault
Vice News, Hilary Beaumont, 2016 08 31
Toronto—**Fifteen Canada Border Services Agency (CBSA) employees have been accused of sexual assault in the last decade through the agency's internal investigation mechanism**, VICE News has learned. And at least five of those accused employees still work for the CBSA, according to documents obtained through an access to information request. In the cases included in the access to information request, women and men reported allegations of sexual assault through the agency's internal investigation mechanism, the Security and Professional Standards Analysis section, which looks into the allegations and determines if they are founded, unfounded or inconclusive. The CBSA says it fully investigated and found the case inconclusive, but police in Quebec found enough evidence to lay charges.

United States / États-Unis

Air Force, Short of Drone Pilots, Uses Contractors to Fight Terror
New York Times, Michael S. Schmidt, 2016 09 06
Washington - The **American military's extensive use of drones against the Islamic State and other terrorist groups has resulted in a shortage of Air Force pilots and other personnel to operate the aircraft, leading the Pentagon to rely more on private contractors for reconnaissance missions in Afghanistan and Iraq.** Since the Sept. 11, 2001, attacks, the Pentagon has used contractors to perform many duties traditionally carried out by uniformed personnel, like protecting military bases and feeding service members. The contractors who are now serving as drone pilots are based in the regions where the drones are flown, and they are legally prohibited from being "trigger pullers" and firing weapons, Air Force officials said. But there is no limit on the type of reconnaissance they can perform, and they are providing live video feeds of battles and special operations.

Inside Menwith Hill
The Intercept, Ryan Gallagher, 2016 09 06
Washington - The narrow roads are quiet and winding, surrounded by rolling green fields and few visible signs of life beyond the occasional herd of sheep. But on the horizon, massive white golf ball-like domes protrude from the earth, protected behind a perimeter fence that is topped with piercing razor wire. **Here, in the heart of the tranquil English countryside, is the National Security Agency's largest overseas spying base. Once known only by the code name Field Station 8613, the secret base -- now called Menwith Hill Station -- is located about nine miles west of the small town of Harrogate in North Yorkshire. Originally used to monitor Soviet communications through the Cold War, its focus has since dramatically shifted, and today it is a vital part of the NSA's sprawling global surveillance network.** For years, journalists and researchers have speculated about what really goes on inside Menwith Hill, while human rights groups and some politicians have campaigned for more transparency about its activities. Yet the British government has steadfastly refused to comment, citing a longstanding policy not to discuss matters related to national security. Now, however, top-secret documents obtained by The Intercept offer an unprecedented glimpse behind Menwith Hill's razor wire fence. The files reveal for the first time how the NSA has used

the British base to aid "a significant number of capture-kill operations" across the Middle East and North Africa, fueled by powerful eavesdropping technology that can harvest data from more than 300 million emails and phone calls a day. Over the past decade, the documents show, the NSA has pioneered groundbreaking new spying programs at Menwith Hill to pinpoint the locations of suspected terrorists accessing the internet in remote parts of the world. The programs -- with names such as **GHOSTHUNTER and GHOSTWOLF** -- have provided support for conventional British and American military operations in Iraq and Afghanistan. But they have also aided covert missions in countries where the U.S. has not declared war. NSA employees at Menwith Hill have collaborated on a project to help "eliminate" terrorism targets in Yemen, for example, where the U.S. has waged a controversial drone bombing campaign that has resulted in dozens of civilian deaths.

Intelligence community investigating covert Russian influence operations in the United States
Washington Post, Multiple reporters, 2016 09 05
Washington - **U.S. intelligence and law enforcement agencies are probing what they see as a broad covert Russian operation in the United States to sow public distrust in the upcoming presidential election and in U.S. political institutions**, intelligence and congressional officials said. The aim is to understand the scope and intent of the Russian campaign, which incorporates cyber-tools to hack systems used in the political process, enhancing Russia's ability to spread disinformation. The effort to better understand Russia's covert influence operations is being spearheaded by James R. Clapper Jr., the director of national intelligence. "This is something of concern for the DNI," said Charles Allen, a former longtime CIA officer who has been briefed on some of these issues. "It is being addressed." A Russian influence operation in the United States "is something we're looking very closely at," said one senior intelligence official who, as others interviewed, spoke on the condition of anonymity to discuss a sensitive matter. Officials are also examining potential disruptions to the election process, and the FBI has alerted state and local officials to potential cyberthreats. **The official cautioned that the intelligence community is not saying it has "definitive proof" of such tampering, or any Russian plans to do so.** "But even the hint of something impacting the security of our election system would be of significant concern," the official said. "It's the key to our democracy, that people have confidence in the election system."

Obama Met With Putin, Said Hackers Shouldn't Create a Cyber 'Wild Wild West'
ABC News, Jordyn Phelps, 2016 09 05
New York - President Obama addressed his tense, 90-minute-long meeting with Russian President Vladimir Putin on the sidelines of the G20 in a press conference on Monday. The two leaders apparently held fast to their positions on hot button issues like cyber-security and brokering a cease- fire in Syria. Russian hackers having been implicated in some current cyber threats and security issues was a key topic. Though Obama didn't identify specific instances, **he said "we have had problems with cyber intrusions from Russia in the past" and that the goal is to not to duplicate a "cycle of escalation" that has occurred in arms races of the past.**

U.S. Spy Agency Tweets, Deletes, Then Apologizes
The Wall Street Journal, Damian Paletta, 2016 09 04
Washington— Whoever had the Labor Day weekend shift on **the Defense Intelligence Agency's Twitter account** may have been feeling a little punchy. On Saturday afternoon the "verified" account, which has 83,400 followers, likely including foreign spies, sent a pointed and sarcastic message aimed at the Chinese government. "**Classy as always China," the tweet read, linking to a New York Times article about a heated verbal kerfuffle that almost**

escalated into something serious between U.S. and Chinese officials after President Barack Obama landed in China aboard Air Force One. The **Twitter message was quickly deleted, but not before its pointed snark was noticed by a number of people.** "The guy or gal who runs @DefenseIntel's Twitter feed over the weekend needs a medal & raise right now," tweeted **Aki Peritz**, a former Central Intelligence Agency official. It is unclear what prompted the DIA to delete the tweet. The Defense Intelligence Agency is one of the government's most-secretive arms, a spy agency within the Pentagon that is involved in some of the country's most-sensitive missions. Its Twitter feed tends to be one of the tamest in Washington, highlighting public speaking engagements and similar events.

F.B.I. Email Inquiry Reveals Some of Secretary's Habits
New York Times, Michael S. Schmidt, 2016 09 03
Washington - **Documents released by the F.B.I. on Friday revealed new details about the Justice Department's yearlong investigation into Hillary Clinton's use of a private email server and whether she and her aides mishandled classified information**. Among the documents was an 11-page summary of an interview F.B.I. agents conducted with Mrs. Clinton on July 2. Two days later, the F.B.I. director, James B. Comey, said the bureau had recommended to the Justice Department that neither Mrs. Clinton nor her aides should be charged with a crime. Here are six highlights from those documents: According to the F.B.I., in December 2014 a top aide to Mrs. Clinton told the company that housed her server to delete an archive of emails from her account. The company, Platte River Networks, apparently never followed those instructions.

F.B.I. Files on Email Inquiry Show Grilling on Clinton's Judgment
New York Times, Eric Lichtblau, 2016 09 03
Washington - **F.B.I. officials questioned Hillary Clinton extensively about her judgment in using her private email system to discuss classified drone strikes and in allowing aides to destroy large numbers of emails, before ultimately deciding she should not face criminal charges, according to investigative documents released Friday**. The documents provided a number of new details about Mrs. Clinton's private server, including what appeared to be a frantic effort by a computer specialist to delete an archive of her emails even after a congressional committee had requested they be preserved. In a 3½-hour interview with the Justice Department's top counterintelligence officials on July 2, Mrs. Clinton defended her handling of the private email system by repeatedly saying she had deferred to the judgment of her aides, an F.B.I. summary of the interview showed. Mrs. Clinton's use of the private server has shadowed her presidential campaign for a year and a half.

Leaked Catalogue Reveals a Vast Array of Military Spy Gear Offered to U.S. Police
The Intercept, Sam Biddle, 2016 09 02
Washington - A **confidential, 120-page catalogue of spy equipment, originating from British defense firm Cobham and circulated to U.S. law enforcement, touts gear that can intercept wireless calls and text messages, locate people via their mobile phones, and jam cellular communications in a particular area**. The catalogue was obtained by The Intercept as part of a large trove of documents originating within the **Florida Department of Law Enforcement,** where spokesperson **Molly Best** confirmed Cobham wares have been purchased but did not provide further information. The document provides a rare look at the wide range of electronic surveillance tactics used by police and militaries in the U.S. and abroad, offering equipment ranging from black boxes that can monitor an entire town's cellular signals to microphones hidden in lighters and cameras hidden in trashcans. Markings date it to 2014.

Security Debate Draws Attention to U.S. Border With Canada
Wall Street Journal, Chster Dawson, 2016 09 01
Westby, Montana - The **U.S. border with Canada is attracting greater scrutiny as debate rages in the U.S. presidential campaign about security on its southern border with Mexico, and concern grows over global terrorism and vulnerability to illegal crossings**. The U.S. government has been steadily beefing up surveillance of the northern border with new technology designed to help monitor areas too remote for round-the-clock patrols by field agents. Much of the change comes from the gradual rollout of new technologies that were promised in the aftermath of a security reassessment following the 2001 terrorist attacks. Sen. Heidi Heitkamp (D., N.D.) this year called on the Department of Homeland Security to pay closer attention to the northern border and not view it as an "afterthought." Last year, she co-sponsored a bill with Sen. Kelly Ayotte (R., N.H.) to step up funding for recruiting more border agents to specifically target more remote areas along the border with Canada. Some lawmakers in northern border states cite Canada's greater willingness to accept refugees. "A threat to one country is a threat to the other," said **Christine Constantin**, a spokeswoman for the Canadian Embassy in Washington, adding that Canada has a "zero tolerance" policy for refugees with security concerns. **"No terrorists have been successful in attacking the homeland coming through America's northern border,"** she said.

Former Anti-Terror FBI Employee Now Finds Himself a Target
The Intercept, Trevor Aaronson, 2016 09 01
Washington - As **an FBI surveillance employee, Ray Tahir spent the last decade tailing Muslims in counterterrorism cases**. Among the investigations whose surveillance Tahir led were those of the charity Holy Land Foundation for Relief and Development in Texas and North Carolina's Daniel Patrick Boyd, who with others was convicted of conspiracy to provide material support to terrorists and conspiracy to commit murder, maiming, and kidnapping overseas. Both FBI cases had their critics. The American Civil Liberties Union described the prosecution of Holy Land Foundation as "discriminatory enforcement of counterterrorism laws." In the Boyd case, as in other informant-led FBI stings, there are questions about whether the men convicted would have done anything at all were it not for the FBI's involvement. As the FBI targeted Muslims in the United States following the 9/11 attacks, Tahir was among the front-line employees who made some of these cases possible. Now, he alleges, he has **become a target himself**. Tahir, who had been called for a hearing at the **FBI's Office of Professional Responsibility**, was accused of making personal charges on his covert credit card, unauthorized gasoline purchases, and lack of candor.

Democrats' Email and a Murky Trail
New York Times, Eric Schmitt, 2016 09 01
Washington - **American intelligence agencies believe that the Russian government was behind the theft of emails and documents from the Democratic National Committee**, but many questions remain about how the documents made their way to WikiLeaks, which released them. Before the WikiLeaks release, a large sampling was published by several news organizations and a hacker called **Guccifer 2.0**, who investigators now believe was an agent of the G.R.U., Russia's military intelligence service. American intelligence agencies say the earlier leaks from Guccifer and the WikiLeaks material have the same bits of code and telltale metadata traced to previous intrusions attributed to the **G.R.U. or the F.S.B.**, another Russian spy agency. However, **Julian Assange**, the editor of WikiLeaks, makes a distinction between the Democratic National Committee material he released and the earlier releases by Guccifer and others, saying there is no proof that the Russians gave him the documents. In recent weeks, Mr. Assange has threatened to take his revelations to a new level. In August, some of the National Security Agency's source code for breaking into foreign computer systems -- the

holy grail of the **N.S.A.'s Tailored Access Operations** unit -- was revealed on a website, with the announcement of an auction for the remainder of it.

Democrats ask the FBI to investigate Trump advisers' Russia ties
Washington Post, Josh Rogin, 2016 08 31
Column - **Several leading Democratic lawmakers are asking the Federal Bureau of Investigation to investigate senior Trump campaign advisers for collusion in the suspected Russian hacking of American political organizations and election systems**. It's the most serious set of allegations to date about deep connections between the Trump team and the Kremlin, though the case is largely circumstantial. On Monday, The New York Times broke the story of **Senate Minority Leader Harry Reid's August 27 letter to FBI Director James Comey asking the bureau to investigate alleged Russian interference in the U.S. presidential election**, which followed new reports that foreign hackers penetrated two state election databases. In the same letter, without naming them directly, Reid pointed Comey to two specific Trump advisers, each of whom is allegedly connected to Russia, according to Reid and the Clinton campaign. Reid's letter implicitly asks Comey to look into the dealings of Roger Stone, the longtime Trump friend who has claimed to be in touch with Wikileaks founder Julian Assange, and Carter Page, a Trump foreign policy advisor who traveled to Moscow in July.

FBI Director: Americans Never Had 'Absolute Privacy'
Nextgov.com (US), Frank Konkel, 2016 08 31
Washington - **FBI Director James Comey said his agency is preparing for a renewed conversation on encryption by collecting information regarding how "widespread default encryption"** has affected law enforcement at the federal level. Comey said default encryption--especially on mobile devices-- in the post-Edward Snowden era has fundamentally impacted law enforcement agencies at the local, state and federal levels, providing a near "absolute privacy" he argued had never occurred before in history. Comey said the FBI has been unable to collect evidence from 650 of 5,000 devices, including mobile phones and tablets, received from state and local governments this year. The **FBI is tallying that data and other statistics, Comey said, for a public conversation on encryption**--specifically the balance between security and privacy--sometime after the Nov. 8 election.

FBI Director Has High Expectations for New Cyber Security Agents
NBC News, Marianna Sotomayor, 2016 08 31
New York - **Federal Bureau of Investigations Director James Comey has high expectations when it comes to recruiting agents for their cyber security team.** He says the perfect applicant would be intelligent, have integrity and the perfect dose of physicality to work competitively at the FBI. But he knows that finding the trifecta of talent in one person can be rare, especially when strict rules can keep top recruits from applying. "We may find people of great technical talent who want to smoke weed on the way to the interview," Comey said at the Symantec Government Symposium in Washington, D.C. on Tuesday. Though the joke was welcomed by laughs in the audience, **Comey made a point to say that even though a candidate for the job may not be perfect, the FBI is trying to find people they could "grow" and mold in other areas where they lack skills.**

FBI head: We're taking suspected political hacks 'very seriously'
The Hill, Julian Hattem, 2016 08 30
Washington - The **FBI is "very seriously" examining alleged hacks at two state election offices, director James Comey said Tuesday**. "We take very seriously any effort by any actor -- including nation states but especially nation states -- that moves beyond the collection of information about our country, and then offers the prospect of an effort to influence the conduct

of affairs on our country, whether that's election or something else," Comey said at a conference in Washington hosted by Symantec, a digital security company. "Don't want to comment on the particular, but those kinds of things are something that we take very, very seriously and work very, very hard to understand so that we can equip the rest of our government with options for how to deal with it."

The CIA's Venture-Capital Firm, Like Its Sponsor, Operates in the Shadows
Wall Street Journal, Damian Paletta, 2016 08 31
Washington - **Forterra Systems Inc., a California startup focused on virtual reality**, was in need of money and its products didn't have much commercial appeal. Then **funds came in from a source based far from Silicon Valley: In-Q-Tel Inc., a venture-capital firm in Virginia funded by the Central Intelligence Agency**. One catalyst for the 2007 infusion, according to a former Forterra executive and others familiar with it, was a recommendation by a man who sat on the board of the venture-capital firm-- and also on the board of Forterra. In-Q-Tel pumped in cash, Forterra developed some tools useful to the military, and government contracts started coming in. Like the agency that founded it, **the CIA-funded venture- capital firm operates largely in the shadows.** In-Q-Tel officials regard the firm as independent, yet it has extremely close ties to the CIA and runs almost all investment decisions by the spy agency. The firm discloses little about how it picks companies to invest in, never says how much, and sometimes doesn't reveal the investments at all. Even less well-known are potential conflicts of interest the arrangement entails, as seen in this Forterra example and others continuing to the present.

Parliament's back for Snoopers' Charter. Former head of GCHQ talks to El Reg
The Register (UK), Alexander J. Martin, 2016 09 05
London - **Parliament has returned from recess (only for a fortnight before conference season begins) and the House of Lord's committee stage examination of the Investigatory Powers Bill will resume this afternoon**. The upper chamber had been waiting for the publication of a review of the bill's bulk powers, which had been led by the independent reviewer of terrorism legislation, David Anderson QC. Bulk hacking missions were addressed last week at a panel convened by the Chartered Institute of IT. **Academics, National Crime Agency representatives, and Sir David Omand -- the former director of GCHQ and visiting professor at KCL -- discussed the difficulties that traditional law enforcement techniques encountered when attempting to tackle cybercrime.** Corresponding with The Register, Sir David explained how in his experience such bulk hacking powers were necessary for law enforcement purposes on the internet, rather than just being necessary for national security reasons. Omand wrote: "The recent serious rise in global cybercrime by organised criminal groups...has only reinforced the importance of having the specialist techniques and international liaisons of the secret agencies available to support the investigations of law enforcement."

Page 3 girl flirts with joining punk mum in jihadist brides brigade
Sunday Times, 2016 09 04

London— **Anti-terrorist police fear that a former glamour model from West Yorkshire who has secretly embraced Islam is being groomed online by Isis to become a jihadist bride.Kimberley Miners,** who has posed topless for The Sun, has been using Facebook to communicate with a British fighter in Syria who is urging women to leave the UK and join the Isis "caliphate". The Sunday Times has discovered that Miners, 27, from Bradford, appears on social media under the alias Aisha Lauren al-Britaniya and has posted images of Muslim women brandishing rifles and other weapons. Pictures show her fully veiled or with only her blue eyes on display, but in public she wears skinny jeans and leaves her long blonde hair uncovered. She says she was abused when she went out in Islamic dress. Miners revealed on Friday that she had travelled to Turkey — the most common springboard for Syria — on two previous occasions and planned to visit the country again this autumn, although she denied wanting to marry a jihadist. It is understood that her activities, which include "liking" and sharing Isis videos, have triggered an **investigation by anti-terrorist police and MI5**. They have spoken to her up to four times and referred her to an anti-radicalisation programme. She has been warned that she faces arrest if she continues to engage in extremism.

State spying helps to create extremists. My father was one of them
The Guardian (London), Francis Beckett, 2016 08 31
Op-ed - When you lock people up without trial, "whether it is in Belmarsh or Guantánamo Bay, you recruit more terrorists than you contain", warned Shami Chakrabarti earlier this year. She has said that senior intelligence officials made a successful bid for enormous power post-9/11, particularly in government surveillance. And appalling attacks in France and Belgium have made us more likely to give the security services the power to curtail our liberties. But should we? I claim some special insight. **For at least the first 10 years of my life, from 1945 to 1955, my childhood home was under constant MI5 surveillance. My parents knew it, though I did not; and I have spent a lot of the past two years with recently released MI5 records at the National Archives, reading verbatim my parents' telephone conversations from 60 years ago and the spies' reports on their movements.** I recognise a few of the people described as the adults who peopled my childhood, and I can picture in my mind where the watcher's car was parked when he reported on my family's movements. My father, John Beckett, was a leading fascist. He was in prison for nearly four years during the second world war, then under a sort of house arrest, not allowed to live within 20 miles of London or to travel more than five miles from his home. When these restrictions were lifted, the surveillance continued, masterminded by Graham Mitchell, who became deputy director of MI5 in 1956. It is mostly Mitchell's memoranda I have been reading. They betray a deeply unhealthy pleasure in the secret power his position gave him over the life of another man.

PM's stance on China worries experts
The Australian Financial Review, Aaron Patrick, 2016 09 03
Canberra - **The government's top intelligence experts are concerned Prime Minster Malcolm Turnbull isn't taking their warnings about the security threat posed by China seriously enough and the former banker is relying on advice from outside experts.**
Despite vetoing a Chinese bid for Sydney's electricity network this month, Mr Turnbull and some other cabinet ministers are reluctant to act on or receive warnings that China is engaging in

spying on an "industrial scale" and that business secrets are among its top targets, three sources with senior contacts in the security services said. "It is far more ambitious and better resourced than ever before," said Paul Monk, an intelligence and foreign affairs expert who headed China analysis for the Defence Intelligence Agency. "It's notorious with politicians that they find intelligence to be a new thing when they go into politics. It's things they would prefer not to know or suggest actions that can be embarrassing." Security experts say China has a well-resourced effort that uses cyber-espionage and human agents to steal Australian commercial secrets and obtain sensitive government information.

Domestic spy chief sounded alarm about donor links with China last year
ABC (Australia), Chris Uhlmann, 2016 09 01
Canberra - **Australia's domestic spy chief warned the nation's major political parties last year that some of their donors had strong links to the Chinese Government**. The revelation comes as pressure grows for a ban on foreign donations to Australian politics. Australia's domestic spy chief warned the nation's major political parties last year that some of their donors had strong links to the Chinese Government. The **ABC has confirmed that the director-general of the Australian Security Intelligence Organisation (ASIO), Duncan Lewis, personally briefed former Liberal federal director Brian Loughnane, outgoing Labor secretary George Wright and the Nationals' federal director Scott Mitchell on the national security risks posed by foreign-linked donations.** The verbal briefing included naming donors his agency believed were acting on behalf of the Chinese Government. None of the party leaders would comment on the meetings. It comes as pressure grows for a ban on foreign donations to Australian political parties. Labor frontbencher Stephen Conroy has called on the Prime Minister to commit to electoral donation reform. "Ban foreign companies from actually being able to donate at all," Senator Conroy said. "We're one of a very small number of countries who actually don't ban this practice." The security warning to party chiefs is another indicator of the growing concern in intelligence agencies about the use of "soft power" in Australia.

Canadian only foreigners likely to show in Ausgrid contest
The Australian, Staff reporter, 2016 08 31
Sydney - A **raft of Canadian funds are expected to be the only foreign groups lining up for a potential acquisition of NSW electricity distributor Ausgrid**, ahead of a revised sale process run by Deutsche and UBS. The Canadian Pension Plan Investment Board and Caisse de depot et placement du Quebec are believed to be the two foreign parties interested in buying a 99-year lease of a 50.4 per cent interest in Ausgrid. CDPQ is being advised by the Royal Bank of Canada, while the likely advisers for CPPIB would be Morgan Stanley or Goldman Sachs. While bidders are yet to receive any assurance on the terms in which foreigners can participate in the sales process, it is understood China's State Grid has abandoned any hope of an acquisition, while Hong Kong's Cheung Kong Infrastructure is unlikely to participate. It comes after both bidders were blocked from buying the asset in the last process after Treasurer Scott Morrison flagged concerns about an acquisition by the parties on the grounds of national security. The **thinking now is that the government may argue an investment by the Canadians can be justified because it is among the countries that form the so-called Five Eyes intelligence alliance that already share sensitive information.**

People urged not to give in to demands of cyber criminals
Radio New Zealand News, Staff reporter, 2016 08 31
Wellington - **People who fall victim to ransomware attacks are being urged not to give in to the demands of cyber criminals**. The executive director of Netsafe, Martin Cocker, says his organisation deals with a handful of people each week who are wondering what to do after finding their computer files locked up. Mr Cocker says those people are discouraged from paying a ransom. He says cyber criminals use whatever money they get to fund further crime and even if a ransom is paid, there is no guarantee someone will get their files back. **The electronic spy agency, the GCSB, has raised concerns that these sorts of cyber attacks are becoming more common.**

American student kidnapped by Kim Jong Un 'was arrested in China for helping North Korean refugees escape oppressive country'
Mail Online, Kelly Mclaughlin and James Wilkinson, 2016 09 02
London— A US **student who thought to have been kidnapped by Kim Jong Un's secret agents was actually arrested in China for helping defectors escape the North Korean dictator's oppressive regime, it** has been claimed. **David Sneddon** of Brigham Young University was just 24 when he disappeared in Yunnan Province. Chinese police have said that Sneddon likely disappeared in a hiking accident. South Korea's Abductees' Family Union claimed he was abducted by North Korea to teach English to Kim Jong Un.The union's chief Sung-Yong Choi said Sneddon is now living in the North Korean capital of Pyongyang, where he has a wife and two children. But new evidence has emerged which suggests he was arrested in China on charges of helping illegal residents travel through the country. A document revealed to DailyMail.com by Sneddon's family claims **the Ministry of State Security of the People's Republic of China (MSS)** then handed over to North Korea officials in 2004. According to the report from the National Association for the Rescue of Japanese Kidnapped by North Korea (NARKN) from May 2012, Sneddon was arrested in August of that year.

Hong Kong authorities 'attacked by Chinese hackers'
Agence France-Presse, Staff reporter, 2016 09 02
Beijing - **Mainland Chinese hackers have attacked two Hong Kong government departments**, a US-based security firm said Friday, as the city prepares for a crucial election. The attack occurred in August, in the run- up to parliamentary elections Sunday, as fear of Beijing's tightening grip on semi-autonomous Hong Kong creates unprecedented social and political divides. **California-based security firm FireEye** said Friday a China-based group they have been tracking since 2011 attacked at least two Hong Kong government agencies early last month. The firm's Asia Pacific chief technology officer Bryce Boland believes the group carrying out the attacks, known as APT3, "is sponsored by the People's Republic of China". "Typically when we see government attacks on other governments, it's about intelligence gathering and trying to gain access to information they can't get via other means," Boland told AFP.

American Is Facing Spy Trial in China, and Husband Seeks Obama's Help
New York Times, Chris Buckley, 2016 08 31

Beijing - An **American businesswoman faces trial in China on spying charges dating back 20 years,** including that she tried to recruit Chinese in the United States to spy against their homeland, her husband said on Tuesday. He urged President Obama to raise the case with President Xi Jinping of China at a Group of 20 summit meeting in eastern China beginning over the weekend. The businesswoman, **Phan Phan-Gillis, widely known as Sandy, was indicted last month on the espionage charges after having been detained while visiting China last year.** But her husband, Jeff Gillis, said he had held off revealing the indictment while new lawyers for his wife tried to come to grips with the case. "The time really is critical for Sandy, with the imminent meeting between President Obama and Xi Jinping," Mr. Gillis said by telephone from the couple's home in Houston.

Putin Says DNC Hack Was a Public Service, Russia Didn't Do It

Bloomberg News, 2016 09 02

Vladibostok-- **Vladimir Putin said the hacking of thousands of Democratic National Committee emails and documents was a service to the public, but denied U.S. accusations that Russia's government had anything to do with it.** "Listen, does it even matter who hacked this data?" Putin said in an interview at the Pacific port city of Vladivostok on Thursday. "The important thing is the content that was given to the public." U.S. officials blame hackers guided by the Russian government for the attacks on DNC servers earlier this year that resulted in WikiLeaks publishing about 20,000 private emails just before Hillary Clinton's nominating convention in July. The documents showed attempts by party officials to undermine her chief Democratic rival, Bernie Sanders, and led to the resignation of the head of the DNC, Representative Debbie Wasserman Schultz of Florida. "There's no need to distract the public's attention from the essence of the problem by raising some minor issues connected with the search for who did it," Putin said of the DNC breach. "But I want to tell you again, I don't know anything about it, and on a state level Russia has never done this."

How Russia Often Benefits as Assange Reveals Secrets

New York Times, Multiple reporters, 2016 09 01

New York - **Julian Assange** was in classic didactic form, holding forth on the topic that consumes him -- the perfidy of big government and especially of the United States. Mr. Assange, the editor of WikiLeaks, rose to global fame in 2010 for releasing huge caches of highly classified American government communications that exposed the underbelly of its wars in Afghanistan and Iraq and its sometimes cynical diplomatic maneuvering around the world. But in a televised interview last September, it was clear that he still had plenty to say about "The World According to US Empire," the subtitle of his latest book, "The WikiLeaks Files." From the cramped confines of the Ecuadorean Embassy in London, where he was granted asylum four years ago amid a legal imbroglio, Mr. Assange proffered a vision of America as superbully: a nation that has achieved imperial power by proclaiming allegiance to principles of human rights while deploying its military-intelligence apparatus in "pincer" formation to **"push" countries into doing its bidding, and punishing people like him who dare to speak the truth. Notably absent from Mr. Assange's analysis, however, was criticism of another world power, Russia, or its president, Vladimir V. Putin, who has hardly lived up to WikiLeaks' ideal of transparency.** A **New York Times examination of WikiLeaks' activities during Mr. Assange's years in exile found a different pattern: Whether by conviction, convenience**

or coincidence, WikiLeaks' document releases, along with many of Mr. Assange's statements, have often benefited Russia, at the expense of the West. Among United States officials, the emerging consensus is that Mr. Assange and WikiLeaks probably have no direct ties to Russian intelligence services. But they say that, at least in the case of the Democrats' emails, Moscow knew it had a sympathetic outlet in WikiLeaks, where intermediaries could drop pilfered documents in the group's anonymized digital inbox.

Suspected spy sentenced to three years after plea agreement
Hina-Croatian News Agency, 2016 09 06
Zagreb— The **High Court in Belgrade has upheld a plea agreement with Cedo Colovic, charged with spying for Croatian intelligence services, sentencing him to three years in prison**, the court said Tuesday. Colovic, who has dual Serbian and Croatian citizenship, was arrested outside Belgrade on September 2 and the plea agreement was reached with the Public Prosecutor's Office on September 4. He had lived and worked in Croatia until 1990 when he moved to Serbia. According to Belgrade media, Colovic served as an officer in the army of the self-proclaimed Republic of Serb Krajina and came to Serbia as a refugee in August 1995 at the time of Operation Storm. He was suspected of providing confidential military and intelligence information to a Croatian intelligence service.

Allemagne : le gendarme de la vie privée étrille les services de renseignement
Le Monde, Journaiste maison, 2016 09 06
Berlin - Une **inspection menée sur une installation des services de renseignement allemands a débouché sur 12 plaintes formelles**. En Allemagne, les révélations d'Edward Snowden sur les activités de surveillance des Etats-Unis n'en finissent pas de faire des vagues. **La très grande proximité et la collaboration entre la National Security Agency américaine (NSA) et le Service fédéral de renseignement (BND) a notamment déclenché une enquête du commissaire fédéral pour la protection des données (BfDI).** Il a pu se rendre dans l'une des installations conjointes de la NSA et du BND, à Bad Aibling, dans le sud du pays. Il en a tiré une analyse juridique, classifiée, que s'est procurée le site allemand spécialisé Netzpolitik . Une analyse au lance-flammes Cette analyse est extrêmement sévère pour le BND: le commissaire a dénombré 18 violations sévères de la loi, et a adressé 12 plaintes formelles liées à ces manquements. Netzpolitik note qu'il s'agit du nombre de plaintes adressé par le commissaire sur une année entière pour tout l'appareil fédéral allemand. Selon le BfDI, le BND a créé et utilisé au moins sept bases de données sans aucun fondement légal. Ces bases, écrit-il, doivent être détruites immédiatement.

Loi sur le renseignement: les cantons latins unis
Tribune de Genève, Lafargue, 2016 09 06
Genève - **Les chefs des Départements de justice et police des six cantons romands et du Tessin étaient hier à Genève Les membres de la Conférence latine des chefs des départements de justice et police (CLDJP) ont fait part de leur soutien unanime à la nouvelle loi sur le renseignement,** hier à Genève. Ils espèrent qu'elle recueillera « l'assentiment franc et massif de la population » lors des votations du 25 septembre. « Cette conférence de presse est exceptionnelle, la CLDJP ne prend pas position habituellement » , a déclaré Pierre Maudet, conseiller d'Etat PLR genevois et président de la CLDJP. Provenant de

partis différents, les sept membres de la conférence soutiennent la nouvelle loi, a-t-il précisé. Selon eux, elle placera la Suisse au même niveau que les pays européens et donnera les moyens d'agir au **Service de renseignement de la Confédération (SRC).**

DGSE L'espion qui parlait trop
Le Monde, Journaliste maison, 2016 09 05
Paris - **Lors d'une anodine réunion d'anciens élèves d'une grande école d'ingénieurs, Bernard Barbier, personnage central de la DGSE durant dix ans, a livré en public, dans une intervention filmée, quelques secrets d'Etat, notamment sur la guerre cybernétique**. Comment les Etats-Unis ont espionné l'Elysée, par le biais des logiciels malveillants glissés sur Facebook par la NSA. Comment la France a monté ses équipes de " hacking " et créé son propre logiciel malveillant, baptisé " Babar ". Comment Bernard Barbier a proposé une fusion entre la DGSE et son homologue allemand, qui a été rejetée pour des raisons politiques. Comment les révélations d'Edward Snowden ont aidé la France à se protéger de l'espionnage " ami " des Américains.

Les confessions d'un maître de l'espionnage (Canada)
Le Monde, Jacques Follorou, 2016 09 05
Paris - **Bernard Barbier, personnage-clé de la DGSE pendant dix ans, a levé le voile sur plusieurs secrets d'Etat**. C'est une intrusion inespérée dans un monde interdit aux regards extérieurs, celui du renseignement et des guerres secrètes. Espionnage et cybersécurité, Bernard Barbier reçu par Symposium Centrale Supélec: **M.Barbier, qui fut de 2006 à 2014 l'homologue du directeur de l'Agence nationale de sécurité (NSA) américaine, en tant que chef de la direction technique de la Direction générale de la sécurité extérieure (DGSE),** a commencé sa carrière au Commissariat à l'énergie atomique (CEA). Au sein de la DGSE, il obtient, en2008, une enveloppe de 500millions d'euros et 800 nouveaux postes pour l'une des plus formidables révolutions du renseignement français: créer un système de collecte massive de données replaçant la France dans la course à l'espionnage moderne. Au cours de cette causerie, il a ainsi fait oeuvre de transparence sur certaines des principales affaires d'espionnage récentes ayant touché la France. Il **a brisé des tabous, notamment en relatant l'attaque chinoise sur Areva et en confirmant la responsabilité de la France derrière une attaque informatique mondiale détectée par les services canadiens.**

Head of Turkey's intelligence expected to resign
Trend News Agency, 2016 09 02
Istanbul— **After the recent resignation of Turkey's Interior Minister Efkan Ala, head of the country's National Intelligence Organization Hakan Fidan is also expected to step down from his position,** the Milligazete reported Sept.2. Fidan's resignation is being discussed in Ankara's political circles, according to the newspaper. Hakan Fidan was appointed head of the National Intelligence Organization in May 2010. It was earlier reported that a number of reforms will be held in this structure. It was planned that the National Intelligence Organization will have two divisions: foreign and domestic intelligence.

German spies 'systematically violating constitution'
The Local (Germany), Staff report, 2016 09 02
Berlin - The **BND**, Germany's version of the CIA, **has been accused of massive breaches of the constitution in a leaked report by the government's representative for data protection**. "The BND [Bundesnachrichtendienst] systematically lifted and used personal data without a legal basis to do so," wrote Federal Data Protection Commissioner Andrea Voßhoff in a report seen by public broadcasters NDR and WDR. Voßhoff is responsible for ensuring that government agencies do not infringe on German citizens' legal rights when using their personal

data. In this capacity she carried out a study of how the BND monitor telecommunications data. In the 60-page report, Voßhoff listed how the BND "systematically and regularly" violates the constitution and used the word "unlawful" 30 times, according to the broadcasters.

German spy agency systematically broke the law: report
Deutsche Welle, Staff report, 2016 09 02
Berlin - **Germany's data protection commissioner, Andrea Vosshoff, has issued a scathing review of the country's Federal Intelligence Service (BND), accusing the agency of egregiously abusing its mandate and breaking the law**. The revelations emerged from a secret 60-page report that was initially published in March of this year. The document was leaked to the German broadcaster NDR, which revealed its findings on Thursday. "Without any legal basis, the BND collected personal data and continued to systematically use them," Vosshoff wrote, using the German acronym for intelligence agency. As Germany's highest-ranking protector of data security, Vosshoff had been tasked with evaluating the intelligence agency's surveillance of telecommunications data.

Ukraine's SBU Answers Illegal Detention, Torture Accusations With Meme
Radio Free Europe, Anna Shamanska, 2016 09 02
Prague - The **Ukrainian Security Service (SBU) has posted images from a Hollywood blockbuster film on Twitter in an apparent effort to mock serious allegations led by two respected international rights watchdogs of secret detentions and torture**. Three stills from the 2016 movie Suicide Squad -- in which jailed villains are coerced by a secret government agency into becoming covert antiheroes to save the world -- appeared in the September 1 tweet by the Security Service (@ServiceSsu) with a caption that read "Prisoners of SBU secret jail." The post was subsequently deleted. The message appeared to be aimed at bolstering the Ukrainian Security Service's denial of accusations by Amnesty International and Human Rights Watch (HRW) in a report in July titled "You Don't Exist" Arbitrary Detentions, Enforced Disappearances, And Torture In Eastern Ukraine.

Le retour en grâce des services secrets
Le Temps, Sylvain Besson, 2016 09 01
Berne--**Longtemps ridiculisés et ignorés par ceux qui comptaient à Berne, les espions helvétiques sont à nouveau pris au sérieux**. Ils devraient triompher le 25 septembre, lors de la votation sur le renseignement. Histoire d'une résurrection C'est un renouveau après des années de déboires. Lors de la votation du 25 septembre, les services secrets suisses devraient opérer un retour en grâce remarqué dans l'opinion publique. Les sondages anticipent un soutien massif à la nouvelle loi sur le renseignement, qui doit leur donner des pouvoirs étendus de surveillance et d'enquête. Après un long purgatoire, marqué par des scandales retentissants et des réformes difficiles, le **Service de renseignement de la Confédération (SRC) semble enfin inspirer confiance.** Y compris dans l'administration fédérale, où l'on apprécie à nouveau son travail après une période d'indifférence glaciale. «Le service est infiniment meilleur qu'il a quinze ans, atteste un fonctionnaire qui lit fréquemment les rapports du SRC. Dans la coopération avec le reste de l'administration, il y a eu des efforts énormes. Dans la coopération avec l'étranger aussi. Pour tous ceux qui reçoivent ses informations [diplomates, procureurs, policiers fédéraux], la qualité de son travail est bien meilleure. Il y a vingt ans, c'était abyssal. Aujourd'hui, ça correspond à ce que doit faire le service d'un pays de notre taille, avec les moyens qui sont les siens.» **Une partie du crédit en revient à son directeur, Markus Seiler.** Un pur bureaucrate, très politique, choisi à ce poste parce qu'il n'était ni du SAP, ni du SRS. Et qu'il était trop libéral- radical pour Ueli Maurer, qui n'en voulait plus comme secrétaire général du Département de la défense.

Czech spy agency warns of a threat of attack by militants
Associated Press, 2016 09 01
Prague— **Islamic radicals could carry out an attack on Czech territory, The Czech Republic's counter-intelligence agency said on Thursday**. The **agency, known as BIS, said in its annual report** that such a threat comes from militants linked to the Islamic State group and also from the Nusra Front. The announcement comes after a wave of attacks in Western Europe. BIS said that according to its information, seven Muslims who were in the Czech Republic for an unspecified period of time left in 2015 with the aim of joining extremist groups in Syria, especially the Islamic State movement and Nusra — which has renamed itself Jabhat Fatah al-Sham since announcing its split from al-Qaida.

Russian intelligence wages information war, says Czech security service
Reuters, 2016 09 01
Prague— **Russian intelligence services are conducting 'an information war' in the Czech Republic, building a network of puppet groups and propaganda agents** that could be used to destabilize the country, the **BIS counterintelligence service** warned on Thursday. Czech security services have long focused attention on a Russian presence that remains significant a quarter century after the country of 10.6 million broke from Moscow's orbit and became a member of NATO and the European Union. In its annual report, the BIS said Russian and Chinese intelligence remained the most active operating in the Czech Republic, and Russia particularly sought to influence Czech media over its role in the Ukrainian and Syrian conflicts.

Sweden: Anti-terror strategy has existed for one year
Esmerk Swedish News, 2016 08 31
Stockholm— The **Swedish government's strategy against terrorism has now existed for one year.** Many of the measures have already been taken, such as the criminalization of terrorism trips. Sweden's Minister of the Interior, Anders Ygeman (S), says that the strategy will not be changed following the terror attacks this summer as it is incredibly difficult to protect oneself against a lone perpetrator who is prepared to die.
On 31 August, a proposal was submitted for consideration, and according to this proposal, the **Swedish Security Service (Säpo),** the military intelligence service Must and the National Defence Radio Establishment (FRA) are to be able to exchange information digitally when making terror threat estimates.

Counterterrorism Taskforce Established in Aden
Asharq Al-Awsat, Bassam al-Qadi, 2016 09 06
Aden - As governorates are freed from militia-hold in **Yemen**, they self repair- a major number of security and judicial institutions in southern Yemen have been reinstated and are operational. Brigadier General Saleh Mohammed Al Qamli, head of the Aden criminal investigations unit told Asharq Al-Awsat newspaper that local police **have launched a special investigations counterterrorism unit, a first for the country**. The task force's chief mission is to pursue suspects believed to be affiliated with the hardline terror groups such as al-Qaeda or ISIS. Qamli explained that the counterterrorism force will also be involved with case files of criminal fugitives and will account to 80 percent of crime prevention.

Foreign Ministry reasons away spy in nuclear team claims
Tehran Times, 2016 09 02
Tehran - The **Iranian Foreign Ministry has snubbed allegations by critics of the nuclear deal who keep saying there has been a spy in the country's nuclear negotiations team.** Deputy Foreign Minister Hamid Baidinejad tried to reason away the allegations as "hasty" and "misinformed" in a message he published on Telegram on Wednesday. The allegations are made to imply that the Joint Comprehensive Plan of Action (JCPOA) is faulty in structure, the diplomat noted, adding, "This approach seems a bit naïve since the process of the nuclear talks was more complicated than to allow a fault to the JCPOA even if such claims were true." Numerous accounts emerged in Iran in the past few weeks over the arrest of one of the country's nuclear negotiators, one contradicting the other.

Iran, Russia Widening Cooperation against Terrorism
Fars News Agency, 2016 09 01
Tehran - **Tehran and Moscow are intensifying efforts to destroy terrorism in the region based on their increasingly strategic relations and cooperation**, a prominent Russian analyst said as Russia's special envoy and deputy foreign minister arrived in Iran on Wednesday. "There is no doubt that the relations between Iran and Russia are strategic. This type of ties is naturally long-term and even permanent and pursue multi-dimensional and complicated goals," Alexnader Paranjiov, a professor at Plekhanov Russian University of Economics, told FNA on Wednesday. Noting that Iran and Russia's second target is settlement of the regional differences and helping the establishment of peace and stability in the region, Paranjiov said that another important goal pursued by both countries is maintaining their national security.

Former Mossad Chief: Israel's Greatest Threat Is Internal Division, Not Hezbollah
Haaretz, Noa Shpigel and Jonathan Lis, 2016 08 31
Jerusalem - **Former Mossad chief Tamir Pardo said on Tuesday that the greatest danger Israel faces isn't external, but rather the divisions within Israeli society**. Speaking at a press conference ahead of an event commemorating fallen Druze soldiers, Pardo said that "If a divided society crosses a certain threshold, you can reach phenomena such as civil war, in extreme cases," adding that the distance between the present-day situation in Israel and a civil war is growing smaller. "I'm afraid we're in that direction," he added. Pardo made his comments in response to a question regarding the threats facing Israel. "Threats to countries today are internal and not external. What you have in Syria, in Iraq, in Libya and in Yemen and in a lot of countries - you see the daily statistics of attacks."

BIN Chief Candidate to Undergo Fit and Proper Test on Wednesday
Tempo.co, 2016 09 05
Jakarta— The **Indonesian National Police deputy chief General Budi Gunawan is scheduled to undergo a fit and proper test to take up the State Intelligence Agency (BIN) chief position** replacing Sutiyoso on Wednesday, September 7, 2016. “If all goes well, Budi Gunawan will undergo a fit and proper test at the House's Commission I,” said the House's Commission III speaker Bambang Soesatyo in a written statement, Sunday, September 4, 2016. Bambang noted the Commission III knows Budi Gunawan very well.

Controversial police general tapped to become spy chief
The Jakata Post, 2016 09 03
Jakarta— It appears that **President Joko "Jokowi" Widodo could no longer avoid the pressure of having to make a quick decision regarding the career of controversial police general Com. Gen. Budi Gunawan.** It took Jokowi one year before he decided to name Budi the deputy national police chief after he declined to inaugurate him in the chief's position in February 2015 over allegations that he was involved in a graft case. Facing pressure for Budi to take over as National Police chief when Gen. Badrodin Haiti retired in July, Jokowi again resisted and instead appointed Budi's junior, Gen. Tito Karnavian. When Jokowi decided to undertake another Cabinet reshuffle in July, speculation was rife that Budi would be given a ministerial position, but the prediction did not come to pass. **Jokowi finally relented and on Friday he officially nominated the senior police general to head the National Intelligence Agency (BIN), replacing current BIN chief Sutiyoso.** In his letter Jokowi claimed that the appointment of Budi was part of a regeneration of the intelligence agency, but many saw the decision as Jokowi finally caving into demands from the Indonesian Democratic Party of Struggle (PDI-P), which nominated him for the 2014 presidential election.

Japan doubles size of counterterrorism intelligence unit
Kyodo News, Staff reporter, 2016 09 02
Tokyo - The **Japanese government decided Friday to double the number of personnel serving in an intelligence-gathering unit aimed at preempting and preventing terror attacks**, as Tokyo gears up to host the Olympics and Paralympics in 2020. The unit, under the control of the office of Prime Minister Shinzo Abe, will be expanded to around 80 people from the existing roughly 40 following the decision at a Cabinet meeting. The move reflects the loss of seven Japanese who were among the 20 killed in an attack on a cafe in the Bangladeshi capital Dhaka in July, the government's top spokesman said after the decision. Around half the unit is made up of personnel from the foreign and defense ministries, police and others gathering intelligence region-by-region on Southeast Asia, South Asia, the Middle East and North and West Africa, and the other half consists of those with regional expertise who are dispatched to diplomatic missions.

Egypt and India must cooperate on terror
The Hindu, Suhasini Haidar, Kallol Bhattacherjee, 2016 09 02
New Delhi - **Visiting Egyptian President Abdel Fattah Al Sisi has said India and Egypt must work towards greater cooperation on terrorism**, even as he told External Affairs Minister Sushma Swaraj that he wished to take anti-terror cooperation to a "whole new level." "Egypt and India are stabilising forces in their regions," President Al Sisi, who landed in Delhi on Thursday, said in exclusive comments to The Hindu. "There is a mutual keenness to further enhance our cooperation in this important aspect of our bilateral relations, particularly in light of the emerging threats our respective regions are facing," he added.

India, UK cybersecurity watchdogs sign pact for cooperation (Canada).
Press Trust of India, 2016 09 01
New Delhi - **State-run cybersecurity bodies of India and the UK have signed a Memorandum of Understanding for close cooperation on counter cyberattacks these countries face**. "The Union Cabinet under the Chairmanship of Prime Minister Narendra Modi has been apprised of the MoU signed on May 20, 2016, between Indian Computer Emergency Response Team (CERT-In) and Ministry of Cabinet Office, UK, as represented by CERT-UK, a unit of the Cabinet Office on Cyber Security," an official statement today said. The MoU intends to promote closer cooperation between India and the UK for exchange of knowledge and experience in detection, resolution and prevention of security-related incidents, it added. Earlier

CERT-In signed MoUs with counterpart/similar organisations in about seven countries - Korea, **Canada**, Australia, Malaysia, Singapore, Japan and Uzbekistan. Ministry of External Affairs has also signed MoU with Cyber Security as one of the areas of cooperation with Shanghai Cooperation Organisation.

"Babar", la taupe française qui espionne l'Algérie depuis 2009 (Canada)
Le Matin (Algérie), Yacine K., 2016 09 05
Alger - La **France espionne l'Algérie. Les Etats-Unis espionnent la France. Tout le monde s'espionne. Même si les chefs d'Etat et de gouvernement jouent les vierges effarouchées, cette information est une réalité connue de tous. Surtout sur le volet économique où l'espionnage des entreprises et laboratoires ignore les pays amis. La nouveauté ce sont ces révélations confiées par Bernard Barbie**r, un ancien cadre des services d'espionnage français, Bernard Barbier, rapportés lors du Symposium central supélec. Cet ancien espion confirme les révélations faites déjà par Le Monde en mars 2014. Le quotidien vespéral français avait révélé que les services secrets français espionnait l'Algérie, le Canada, la Côte d'Ivoire, l'Iran grâce à un logiciel. Bernard Barbier a abondé dans le même sens que les anciennes révélations, rappelant que c'est grâce à un logiciel malveillant du nom de code Babar que la Direction générale des services extérieurs (**DGSE**, espionnage extérieur français) espionne un certain nombre de pays, dont l'Algérie. Selon cet ancien limier, le logiciel "Babar" a été détecté par les services canadiens qui ont retrouvé des traces dudit logiciel dans plusieurs pays, comme l'Iran, l'Espagne, la Grèce, la Côte d'Ivoire ou l'Algérie.

DGSN: liens avérés entre le Polisario et les membres du réseau de trafic de drogue démantelé
La Relève (Maroc), Journaiste maison, 2016 09 04
Boujdour, Maroc - **DGSN: liens avérés entre le Polisario et les membres du réseau de trafic de drogue démantelé près de Boujdour** . Les premiers éléments de l'enquête menée par la Brigade nationale de la police judiciaire (BNPJ) sur le réseau de trafic international de drogue, démantelé jeudi, ont démontré l'existence de ramifications régionales de ce réseau dans les camps de Tindouf et le nord du Mali. Les premiers éléments de l'enquête ont également permis d'établir des liens avérés de ses membres avec des responsables du Polisario et leur collusion avec des activités terroristes, indique **la Direction générale de la sûreté nationale (DGSN).** Ces investigations ont prouvé que le propriétaire de la drogue saisie, originaire du nord du Mali, a passé un accord avec l'un des trafiquants connu dans les camps de Tindouf sous le nom de "Robio" en vue de garantir l'opération de transport et d'acheminement de la drogue au Mali en contrepartie d'une importante somme d'argent, précise vendredi la DGSN dans un communiqué.

Brazil terror suspects considered chemical attack in Rio
Brazilian daily Folha de Sao Paulo via BBC Monitoring Americas, 2016 09 02

Rio de Janiero— The **group arrested in July by the Federal Police [PF] within the framework of Operation Hashtag under suspicion of planning terrorist attacks in Brazil thought of using chemical weapons during the Olympic Games**. The plan was to contaminate a water supply station. "A great opportunity to kill Americans, Iranians, Shi'is, Saudi Arabians, etc," said a member of the group. The plans were discussed by email and the Telegram application, among the members of the closed group Jundallah (Soldiers of God, in Portuguese), upholding the Islamic State. Fifteen suspects were arrested between 21 July and 11 August. Spread out in seven states, the group started to be monitored in March with the infiltration of an informant in the discussions of the group, after the PF received an alert from the FBI. Alisson Luan Oliveira, whose profile user name is Allison Musab, posted on Telegram the mass extermination proposal. Alisson suggested a pogrom based on a provocation by another member of the group, Mujahid Joelson Abdu-Salvador, possibly from Angola, according to the PF. "Won't there be any present for the kuffar [infidels] in these Olympics?" he wondered. "Your possibility of reaching Allah's paradise is in those Olympics," Abdu-Salvador insisted. If the biochemical attack did not work, Hortencio Hioshitake, who identifies himself as Teo Yoshi, suggests instead an attack similar to the one perpetrated in the United States in 2013, which left three dead and 264 injured. "Or do like the Chechens did during the Boston Marathon." "You guys know how to make homemade bombs, right?" Mara Salvatrucha (name of a gang that operates in the US and Central America) wondered. In response, Teo Yoshi says that these things have to be done secretly and warned that they are being watched by the **ABIN (Brazilian Intelligence Agency) and the PF.**

Government use of surveillance devices must be restricted: privacy experts
Globe and Mail, Colin Freeze, 2016 09 13
Toronto - **Canada must acknowledge, and then constrain, the government's use of portable surveillance devices** that can indiscriminately dredge data from people's smartphones without them knowing, privacy experts say. Everything that is known or suspected about the government's use of these machines - called "**IMSI catchers**," "cell-site simulators" or "Stingrays" - is chronicled in a comprehensive, first-of-its-kind, 130-page report written by privacy experts and released to The Globe and Mail. Federal police have used these devices for more than a decade, but the practice was confirmed only this year in a series of stories in The Globe. Now, researchers Christopher Parsons and Tamir Israel say it's time for civil society to debate the pros and cons of IMSI catchers, even if many government agencies still won't discuss them. "This ongoing secrecy has the effect of delaying important public debates," the report says. The report was commissioned by the Telecom Transparency Project and the Canadian Internet Policy & Public Interest Clinic. The **report follows Public Safety Minister Ralph Goodale's announcement last week that he is soliciting the public's views on the powers of police and spy agencies**. Other countries, such as Germany, have been more open about their use of IMSI catchers. An "IMSI," which stands for "international mobile subscriber identity," is a unique serial number now affixed to every smartphone's chip set. It is one of several digital identifiers that police build modern investigations around if they can tie a specific number to a specific suspect.

Fonctionnaires fédéraux en voyage : attention aux espions
Radio-Canada - Nouvelles (site web), Catherine Lanthier, 2016 09 12
Ottawa - « **La menace qui pèse sur vous en tant que fonctionnaire canadien en voyage officiel est bien réelle. » Le Service canadien du renseignement de sécurité (SCRS) vient tout juste de mettre à jour ses directives sur les voyages à l'intention des fonctionnaires fédéraux**. Obtenu par Radio-Canada Ottawa-Gatineau, ce document interne d'une quarantaine de pages insiste sur l'importance pour les employés du gouvernement d'être extrêmement prudents à l'étranger. Le SCRS soutient que « la menace terroriste qui pèse sur les Canadiens a changé » depuis les attaques survenues à Saint-Jean-sur-Richelieu et au Parlement canadien en octobre 2014.

Why the former CSIS director says the Liberals shouldn't touch Bill C-51
Global News, Monique Muise, 2016 09 12
Ottawa—The **former director of Canada's Security Intelligence Service says Bill C-51 should remain untouched**. He does, however, support the government's plan to re-examine the controversial piece of anti-terror legislation. "I would leave it as it is, but as a Canadian, I'm glad the government's carrying through on its promise to review things," **Richard Fadden** told the West Block's Tom Clark this weekend. "(Bill C-51) has been in effect for a while now, so Parliamentarians and others will be able to see the good, the bad and the ugly." Last week, the Liberals formally announced a review of the law as part of an overall consultation on national security. Fadden said he is aware that many Canadians have concerns about parts of the law that allow agencies and government bodies to share information. Privacy is an important consideration, he acknowledged, but it must be balanced with security.

Protocoles de partage d'informations entre le SCRS et ses partenaires
TVA Nouvelles, Michelle Lamarche, 2016 09 10
Ottawa - **Les espions du Service canadien du renseignement de sécurité (SCRS) ont peut-être la possibilité de perturber des actes terroristes potentiels, mais ils ont aussi l'obligation de partager l'information avec leurs partenaires**. Depuis que la loi antiterroriste confère aux espions le pouvoir d'interrompre des actes criminels, le SCRS a mis en place des protocoles pour informer les agences fédérales, comme la Gendarmerie royale canadienne (GRC) et Affaires mondiales Canada.. Des documents obtenus par le «Globe and Mail», grâce à l'accès à l'information, indiquent qu'à l'instar de la GRC, Affaires mondiales Canada et le SCRS ont ratifié un protocole facilitant le partage de l'information. La loi antiterroriste permet aux espions du SCRS d'intervenir pour arrêter un acte terroriste. Ils peuvent, par exemple, geler des avoirs, intercepter des biens, stopper des déplacements, interrompre des communications. La loi C-51 est entrée en vigueur en juin 2015. En mars dernier, le directeur du Service canadien de renseignement de sécurité, **Michel Coulombe**, expliquait que son département avait utilisé ces pouvoirs de perturbation à plus d'une vingtaine de reprises.

CSIS to brief other agencies on operations
Globe and Mail, CSIS to brief other agencies on operations, 2016 09 09
Ottawa - A **controversial law that allows Canada's spies to engage in terrorism-disruption campaigns may pose problems for federal police and diplomats**. For this reason, they are being given a peek at some CSIS operations - and even allowed to challenge them. Newly released records suggest that Bill C-51, the controversial 2015 omnibus bill that overhauled the Canadian Security Intelligence Service, has sent ripples throughout the federal-security bureaucracy. CSIS's so-called "threat-reduction activities" (or TRAs) have prompted fears of unintended fallout. To mollify concerns, the spy agency has committed to giving potentially affected agencies a heads up about what it is doing, according to records recently released to The Globe and Mail via access to information laws. For example, an "enhanced consultation memo" was recently signed between CSIS and Global Affairs Canada. While much is redacted in the undated document, CSIS promises to loop in foreign-affairs functionaries about things it is doing. "The Service will provide intelligence assessments ... of TRA measures which have a foreign policy component." On Nov. 24, 2015, **CSIS Director Michel Coulombe and RCMP Commissioner Bob Paulson cosigned a memo where they agreed to have their lieutenants brief each other on counterterrorism probes**. CSIS's "new mandate to reduce threats" could potentially increase the likelihood of the agencies "adversely affecting each other." Mr. Coulombe, the spy chief, told Parliament in March that such powers have been exercised only a couple of dozen times since the bill passed. Prior to that, he once testified that C- 51 could allow CSIS to "go into disrupting a financial transaction," or "disabling a mobile device" or "tampering with equipment."

Anti terror revamp to stretch into next year as Liberals launch consultation
Canadian Press, Jim Bronskill, 2016 09 08
Ottawa - The **Liberal government's promised changes to a controversial anti-terrorism law likely won't come until next year**, once officials have digested an array of public suggestions on revamping national security. The government opened an online consultation Thursday, soliciting feedback on everything from sharing information and **preventing attacks to conducting surveillance and ensuring intelligence agencies are accountable**. Public Safety Minister **Ralph Goodale** told a news conference in Edmonton the government also hopes House of Commons and Senate committees will hold public hearings on the national security framework. It means any legislation flowing from these reviews would not be tabled until December at the earliest and more likely in late winter or spring 2017. In the 2015 election campaign, the Liberals promised to repeal ``problematic elements'' of omnibus security

legislation, known as Bill C-51, ushered in by the previous Conservative government. The bill gave the **Canadian Security Intelligence Service** explicit powers to disrupt terrorist threats, not just gather information about them. The Trudeau government has committed to ensure all CSIS warrants respect the Charter of Rights and Freedoms, preserve legitimate protest and advocacy and define terrorist propaganda more clearly.

Obama to be urged to split cyberwar command from the NSA
Washington Post, Ellen Nakashima, 2016 09 13
Washington— The **Pentagon and intelligence community are expected to recommend soon to President Obama that he break up the joint leadership of the National Security Agency and U.S. Cyber Command to create two distinct forces for electronic espionage and cyberwarfare**. The potential move is driven by a sense that the two missions are fundamentally different, that the nation's cyberspies and military hackers should not be competing to use the same networks and that the job of leading both organizations is too big for one person. Obama was on the verge of ending the "dual-hat" leadership in late 2013, but was persuaded to hold off when senior officials, including then-NSA Director Keith B. Alexander, argued against it on the grounds that **CyberCom** was still too dependent on NSA's capabilities to succeed on its own. Three years later, Defense Secretary Ashton B. Carter and Director of National Intelligence James R. Clapper are pressing for the split, with Carter seeking to build Cyber Command into a full-fledged fighting force that has its own network accesses to conduct attacks. Clapper, officials said, supports the idea in part to reduce tension over which force gets to use the networks — the spooks or the warfighters.And with the White House apparently eager to get it done before Obama's term ends, officials said that the decision appears all but certain.

Former CIA chief who urged Iraq war signs on as Trump adviser
Reuters, 2016 09 13
Washington--**Former CIA Director James Woolsey**, a vocal advocate of the 2003 U.S.-led invasion of Iraq who promoted allegations that Saddam Hussein harbored illegal weapons, **will serve as a senior national security adviser to Republican presidential candidate Donald Trump**, the campaign announced on Monday. Woolsey's hiring contrasted with Trump's repeated assertions that he was a stalwart opponent of the invasion, although he initially supported it. In the announcement, Woolsey said he supports Trump's plan to expand the U.S. military, which calls for ending Pentagon budget caps and spending billions of dollars for additional troops, ships and aircraft. "Mr. Trump's commitment to reversing the harmful defense budget cuts signed into law by the current administration, while acknowledging the need for debt reduction, is an essential step toward reinstating the United States' primacy in the conventional and digital battlespace," Woolsey said.

CIA director: Country is safer from large-scale terror attacks than on 9/11
CBS News, Emily Schultheis, 2016 09 12
Washington--As the **United States commemorates the 15th anniversary of the 9/11 terror attacks Sunday, CIA Director John Brennan said the country is far more secure today against large-scale terror attacks than it was that day in 2001**. "We've learned a lot, we've

done a lot," he said on CBS' "Face the Nation, citing increased cooperation on intelligence and national security issues. "And that's why today I believe it's much more difficult for these groups to carry out the type of attack that they did 15 years ago." Speaking about the fight against ISIS, Brennan said the U.S. and its allies have made significant inroads in the fight against the terror network. He pointed to territorial gains over the last "six to nine months" in the Middle East, as well as efforts to combat ISIS' spread in regions like West Africa or Asia, as proof that there's progress being made.

U.S. Adds New Task in Hostage Talks: Caring for the Families (Canada)
New York Times, Adam Goldman, 2016 09 12
Washington--When the United States became aware late last month of a **video showing an American woman and a Canadian man pleading to be saved from their Taliban captors**, the government did something it had not done well in the past. Before the video became public, a new hostage team led by the Federal Bureau of Investigation quickly alerted the couple's families to brace for the chilling footage. **The effort reflected a sweeping change in how the government handles hostages, a shift ordered last year by President Obama after hostages' families complained of officials' callousness and poor communication**. The new hostage team faces no small task as Americans continue to move through the world's many war zones. Officials say that more than 70 hostages who are Americans or legal permanent residents of the United States have been freed since the revamped effort came together at the F.B.I. headquarters, but it is unclear whether there has been any change in the rate that captives have been rescued. Members of the F.B.I.-led team and their counterparts at the State Department are still trying to bring home more than a dozen people, officials said.

FBI's directive quickly switched to cover terrorism
USA Today, Kevin Johnson, 2016 09 12
London--Five separate times during a short car ride with the two men he thought were his confederates, James Medina left little doubt about his resolve to bomb a south Florida synagogue as a bloody expression of his support for the Islamic State. "You know," the 40-year-old Hollywood, Fla., man allegedly said earlier this year. "It's my call of duty. And whatever happens, it's for the glory of Allah!" The subsequent criminal complaint outlined a now-familiar plot line in which government informant and undercover agent infiltrate an alleged criminal network and win the confidence of a suspected terrorist whose journey now ends more often than not in shackles. **Sting operations always have been a staple of FBI criminal investigations, dating to the federal government's earliest infiltration of the mafia and other organized crime networks. But its broad and controversial application in terror inquiries is the manifestation of a daunting directive issued in the aftermath of 9/ 11 attacks and a reflection of the evolving threat.** Pondering the very existence of the FBI in the post- 2001 world, the 9/11 Commission, created by Congress in the aftermath of the catastrophic assaults, urged the bureau to find its way into the then- unfamiliar culture of a new enemy embracing radical Islam that continues to represent an unparalleled threat.

Crafty world of cyberespionage
Washington Post, Dina Temple-Raston, 2016 09 11
Book Review: Not long ago, **a former National Security Agency director sat down with a mathematician who had come to work for him - and a pop quiz quickly ensued. "What's the most important thing about encryption?"** the mathematician asked the head of the NSA. "Scrambled text," his boss replied, thinking that preventing the enemy from reading a coded message was paramount. "Wrong," the visitor said. "The single most important thing is attribution." Attribution is so important, he continued, because only one person can give the order to fire nuclear weapons - the president - so it is critical to know that the order is coming

from him and no one else. "What's the second most important thing about encryption?" the mathematician continued. "Scrambled text," the director said hopefully. "No. It is the integrity of the data." That's because, he explained, a corrupted message, with a single digit wrong, could cause a nuclear missile to be launched at the wrong target. So begins just one of the fascinating episodes that appear in **BBC journaist Gordon Corera's terrifically engrossing new book, "Cyber Spies: The Secret History of Surveillance, Hacking, and Digital Espionage."**

FBI agent climbed the ranks but chose to end his career back in a field office
Washington Post, Ellen Nakashima, 2016 09 11
Baltimore - **Kevin Perkins, a 30-year-veteran of the FBI, says he's lucky to have been shaped by "two different organizations" -- the old-school bureau of J. Edgar Hoover and the one that grew out of the horrific terrorist attacks of Sept. 11.** The 2001 al-Qaeda assault changed the FBI into the agency we know today, focused not only on busting crime but also on using intelligence to prevent terrorist attacks. It also marked the midway point of Perkins's 30-year career that took him from investigating banking fraud in the 1980s to running the bureau's criminal investigative division to serving as associate deputy director -- the third-highest ranking official. And finally, to reassuming the leadership of the Baltimore field office. "The guys who taught me the ropes in the mid-'80s had all been hired by Hoover, working everything from bank robberies to Cosa Nostra and Mafia cases," he said. When he reached the management ranks, he said, "I had a front-row seat as a straphanger, sitting and watching bureau leadership make decisions after 9/11."

No looking back: the CIA torture report's aftermath
The Guardian (London), Spencer Ackerman, 2016 09 11
Analysis: "I want to be absolutely clear with our people and the world. The United States does not torture," said George W Bush on 6 September 2006. Bush was, for the first time, acknowledging the existence of the program that Senate intelligence committee staff investigator **Daniel Jones** would later expose as taking power drills to the heads of captured men; making them stand with their arms stretched above their heads for days at a time; leaving at least one of them naked until he froze to death; waterboarding them to the point of catatonia as bubbles rose from their open mouths; and inserting pureed food into their rectums while claiming it was necessary for delivering nutrients. **Details of those procedures were outlined in the 525 pages which CIA director John Brennan, Barack Obama and White House chief of staff Denis McDonough allowed to become public.** The CIA's response to Jones's report was split into two corps, one official and one not. The agency itself would no longer defend torture outright because that would contradict the Obama White House's position on the unacceptability of torture. Instead, the agency would say that tortured men produced valuable intelligence, just not necessarily as the result of torture, and that the Senate could not definitively prove the torture did not produce valuable intelligence. Brennan gave a press conference following the release of the report in December 2014. It began with him spending five minutes reciting the unfolding developments of the 9/11 **terrorist attacks and crescendoed with him calling the relationship between torture and useful intelligence " unknowable** ". Jones' boss, the driving force behind the report, California Democratic Senator Dianne Feinstein unexpectedly live- tweeted responses to Brennan's press conference as it progressed, creating the hashtag #ReadTheReport.

NSA's early Cold War struggles
Washington Post, David E. Hoffman, 2016 09 11
Book Review: The "one-time pad" is a simple but secure way to encipher a message. The text of the message is converted into numbers using a page of code. When the recipient gets the message, it is deciphered using the identical code. The page of code is used only once and

then torn from the pad and discarded, never to be used again. It is nearly impossible to break and was used effectively by the Soviet Union in the final years of World War II and just after. Code-breakers in the U.S. Army and Navy despaired at the difficulty of cracking it. "If the standard work of a codebreaker was looking for the proverbial needle in a haystack, the Russian problem required finding a wisp of straw in a haystack," **Stephen Budiansky writes in "Code Warriors," his richly detailed look at the rise of the National Security Agency and its long struggle to penetrate Soviet communications in the Cold War. Budiansky does an admirable job of depicting the early years of the NSA, but he runs up against walls of secrecy that still surround the history of code-breakers and snoops in the final stages of the great confrontation between East and West.** After using one-time pads successfully during World War II, the Soviet communications people got careless. They used some a second time, "an astonishing and monumental security blunder," Budiansky recalls.

A DC mystery behind a 9/11 newspaper column
CNBC News, Eamon Javers, 2016 09 11
Washington - On Wednesday, an alarming headline appeared on the website of **USA Today atop an opinion column written by former Homeland Security Secretary Tom Ridge. "15 years after 9/11, a gaping security gap,"** it said. The column was perfectly timed, coming just four days before the anniversary of the attack on the United States -- a moment when the tragedy was certain to be on the minds of millions of Americans. And Ridge, a former governor of Pennsylvania, had a tough message for his readers: America is not safe. "There remains a gaping hole in our national security preparedness, coming from a largely ignored source," Ridge wrote. The threat on Ridge's mind doesn't come from ISIS-inspired killers inside the United States, as in the recent attacks in Orlando and San Bernardino. Instead, the threat Ridge wrote about comes from the post office. Parcels coming into the United States are not adequately screened for threats from overseas, Ridge argued, leaving a dangerous security gap that could be exploited by terrorists. In the column, **Ridge said he was joining a new group called "Americans for Securing All Packages." That's something of a mystery**. But a little digging reveals a small example of the way money, power, and national security interact in Washington 15 years after the Sept. 11, 2001, attacks. On its website, Americans for Securing All Packages features a "Who We Are" section explaining that the group is a "coalition of families, health care advocates, security experts, businesses and non-profits who believe it is time to close a dangerous security gap that leaves our nation vulnerable to foreign attacks and invites illegal and toxic drugs into our communities." The group -- a nonprofit that does not have to disclose its donors -- officially debuted on the same day Ridge's column appeared.

The Time U.S. Spies Thought Al Qaeda Was Ready to Nuke D.C.
The Daily Beast, Shane Harris, 2016 09 10
Washington - On Christmas Eve 2003, **Gen. Michael Hayden, the director of the secretive U.S. National Security Agency, made a secure phone call to his British counterpart, David Pepper, the director of the Government Communications Headquarters. "Happy Christmas, David," Hayden said, speaking to Pepper from NSA headquarters at Ft. Meade, Md., about 20 miles from the Capitol in Washington, DC. Such social calls weren't unusual.** The **NSA and GCHQ** were the closest of allies in a global hunt for the phone calls, emails, and other electronic communications of spies and terrorists. But Hayden had more on his mind than season's greetings. In recent days, the NSA had been collecting what Hayden would later describe as a "massive amount of chatter"--phone calls and emails from terrorists--that suggested al Qaeda was planning multiple attacks inside the United States, timed to the holidays. "One more thing, David," Hayden said after the two men exchanged pleasantries. "We actually feel a bit under threat here. And so I've told my liaison to your office that should there

be catastrophic loss at Ft. Meade, we are turning the functioning of the American [signals intelligence] system over to GCHQ."

Intelligence Community 'Quite Upset' Over Donald Trump's Comments About Briefing, Says Retired Col. Steve Ganyard
ABC News, Liz Stark, 2016 09 10
Washington - **Former Deputy Assistant Secretary of State Col. Steve Ganyard said Donald Trump's comments about his classified intelligence briefing this week troubled some in the intelligence community**, saying, "Our friends in the intelligence community were quite upset to hear that sort of talk." "I think if there was any discomfort, it was not signaling any personal preference or policy. It was more because they understood that what they were saying might be used against them in a way that was untrue," he said, in response to Trump's claim that his briefers' body language revealed their frustration with President Barack Obama's leadership. Ganyard, who attended classified briefings while working at the State Department, joined this week's episode of the "Powerhouse Politics" podcast with ABC News White House correspondent Jonathan Karl and ABC News political director Rick Klein to discuss Trump's inflammatory comments about his latest intelligence briefing and possible ties to the Russian government.

Lunch with the FT: Edward Snowden, the world's most famous whistleblower
Financial Times, Alan Rusbridger, 2016 09 10
London - **Edward Snowden** has rounded on his hosts, attacking the Kremlin's human rights record and implicating Russia in two of the US government's latest major security hacks. In a Lunch with the FT -- carried below -- he complained Moscow had "gone very far, in ways that are completely unnecessary, costly and corrosive to individual and collective rights" and added that his greatest loyalty was still to the US. He **described the leak last month of NSA espionage tools, potentially by Russia as an "implicit threat" to the US government**. Efforts by hackers called the Shadow Brokers to auction off NSA computer code used to break into foreign networks were an attempt to show Washington how vulnerable it was, he added. Edward Snowden is not the easiest lunch date. The former National Security Agency operative doesn't fancy talking in a Moscow restaurant so -- via an intermediary -- we settle on meeting in my hotel and risk the room service. He will present himself at the agreed time. That's all I need to know. In the end he's 20 minutes late, dressed casually in black jeans and black V- neck, buttoned-up T-shirt carrying a pair of unbranded dark glasses. He eyes up the small, dimly lit room 203 of the Golden Apple "boutique" hotel -- half an hour's gentle stroll from the Kremlin -- with the look of a man who has spent too much time in such places. How does it compare with room 1014 of the Mira Hotel in Hong Kong, where in June 2013 -- having shared many of the NSA's most closely guarded secrets with a few handpicked journalists -- Snowden spent a week as the most wanted man in the world? "A bit smaller, but not dissimilar," he says.

CIA Chief: IS Likely to Remain in Iraq, Syria for Years
Voice of America, Elizabeth Cherneff, 2016 09 09
Washington - **Despite the shrinking of Islamic State-held territory in Iraq and Syria, the head of the Central Intelligence Agency is stressing that the group's influence is not going away anytime soon.** "I think ISIL [Islamic State] will remain a presence inside Iraq and Syria for quite a while," **CIA Director John Brennan** said Thursday during a national security summit in Washington. Brennan also highlighted the lasting impact of foreign fighters attempting to return to their home countries.

Spy games meet word games as officials warn Russia against election meddling
Baltimore Sun, Ian Duncan, 2016 09 09

Washington - **When some of the nation's top spies joined each other on stage at a conference Thursday, the question of whether Russia was behind the hacking of the Democratic National Committee and state elections systems soon came up**. The spies carefully skirted the question. We're working with our partners on it, **CIA director John Brennan said. It's really a policy question, NSA director Adm. Michael Rogers** said. "I'm going to continue the streak of not talking about that," FBI director James Comey said. Then he went on to talk about it in a rather backhanded way. The intelligence officials' comments Thursday mirrored those of other top government leaders this week as the United States tries to figure out what to do about what is widely suspected to be Russian meddling in the upcoming election without saying publicly the Kremlin is behind the attacks.

U.S. Voting System So 'Clunky' It Is Insulated From Hacking, FBI Director Says
Wall Street Journal, Devlin Barrett, 2016 09 09
Washington - The **head of the Federal Bureau of Investigation sought to calm fears that Russians or others could electronically sabotage** the nation's election in November, saying the 50-state voting system is so dispersed and "clunky" it would be difficult for hackers to affect the outcome. Appearing at a panel with other senior U.S. intelligence officials Thursday, **FBI Director James** Comey was asked about the concerns that hackers acting on behalf of the Russian government might try to manipulate the presidential election. "The beauty of the American voting system is that it is dispersed among the 50 states, and it is clunky as heck," said Mr. Comey. "A lot of people have found that challenging over the years, but the beauty of that is it's not exactly a swift part of the internet of things, and so it is hard for an actor to reach our voting process."

What Really Happened at Donald Trump's Intelligence Briefing
NBC News, Ken Dilanian, Robert Windrem, 2016 09 08
Washington - **As U.S. officials cast doubt on Donald Trump's claim he read the "body language" of intelligence officials at a recent briefing, NBC News has learned exclusive details of what unfolded in the room -- one of Trump's advisers repeatedly interrupted the briefers until Chris Christie intervened,** sources said. The Aug. 17 briefing is attracting fresh scrutiny after Trump said at NBC's Command-in-Chief Forum that he divined that intelligence officials were "not happy" with President Obama. However, a U.S. official pointed out that intelligence officers don't give policy advice, so it would be inaccurate to say that Obama failed to follow the advice of the intelligence community. A second U.S. official said analysts are trained not to allow their body language to betray their thinking. Meanwhile, four people with knowledge of the matter told NBC News that one of the advisers Trump brought to the briefing, **retired general Mike Flynn**, repeatedly interrupted the briefing with pointed questions. Two sources said Christie, the New Jersey governor and Trump adviser, verbally restrained Flynn -- one saying Christie said, "Shut up," the other reporting he said, "Calm down."

It's unlikely Trump briefers disparaged Clinton or Obama, ex- intelligence officials say
Washington Post, Greg Miller, 2016 09 09
Washington - **Did U.S. intelligence analysts betray disdain for President Obama and Hillary Clinton during recent classified briefings with Donald Trump, as the GOP candidate claimed Wednesday? Doing so would represent an almost inconceivable violation of training and tradition, former U.S. intelligence officials said**. They added, however, that those accused briefers may be quietly muttering and shaking their heads about at least one of the presidential candidates now. "Those selected for this task would have been the most professional of an elite corps of intelligence officers," said Paul Pillar, a former high-ranking CIA analyst. "One of the last things they would do is express either verbally or through body- language preferences" about candidates or policy. **Michael Morell**, a former deputy CIA

director who has endorsed Clinton, put it more bluntly, saying that Trump's comments "show that he's got zero understanding of how intelligence works." Trump was accompanied during his initial Aug. 17 briefing by New Jersey Gov. Chris Christie (R) and retired U.S. Army Lt. Gen. Michael Flynn, both avid supporters.

Men who allegedly hacked top government officials arrested
Washington Post, Rachel Weiner, Ellen Nakashima, 2016 09 08
Washington - **U.S. authorities have arrested two North Carolina men accused of hacking into the private email accounts of high-ranking U.S. intelligence officials**. Andrew Otto Boggs, a.k.a. "INCURSIO," 22, of North Wilkesboro, N.C., and Justin Gray Liverman, a.k.a. "D3F4ULT," 24, of Morehead City, N.C., were both arrested Thursday morning and will be extradited next week to the Eastern District of Virginia, where federal prosecutors have spent months building a case against a group that calls itself Crackas With Attitude. Along with Boggs and Liverman, authorities say the group included three teenage boys. One, a 17-year-old Briton, was arrested in February. The hacking collective has claimed to have gained access to the **private email accounts of CIA Director John O. Brennan and Director of National Intelligence James R. Clapper Jr**. The group regularly bragged about its escapades to reporters, explaining its methods and providing evidence of its activities. According to U.S. officials, the group also hacked into the accounts of former FBI deputy director Mark Giuliano; Amy Hess, the FBI executive assistant director for science and technology; Gregory Mecher, who is married to White House communications director Jen Psaki; and Harold Rosenbaum, chief executive of the CIA contractor Centra Technology.

DHS secretary: Ballot counts are largely safe from cyberattack
Politico, Jennifer Scholtes, 2016 09 08
Washington - **Homeland Security Secretary Jeh Johnson said Thursday it would be very difficult for hackers to alter Election Day ballot counts**. "It is so decentralized and so vast," the secretary said during a forum hosted by The Atlantic. "You've got state governments, local governments, county governments involved in the election process. It would be very difficult to alter the count." Johnson said federal officials are generally concerned, however, about the potential for state actors, hacktivists or cyber criminals to manipulate or interfere with online state election systems.

A View from the CT Foxhole: An Interview with John Brennan, Director, CIA
Combating Terrorism Center at West Point, Paul Cruickshank, Brian Dodwell, 2016 09 07
Interview - **Combating Terrorism Center: What is the intelligence picture with regard to al-Qa`ida attempting to move back into Afghanistan on the coattails of the Taliban? CIA Director John Brennan: Well I think if we believe that a lot of al-Qa`ida migrated into Pakistan over the last 15 years, they haven't done too well there**. And I think they are still searching for a place where they can feel more secure, and there are areas inside of Afghanistan that they believe may provide greater security because the Taliban may control certain areas. I think it's only going to be a temporary respite from the counterterrorism pressures that they're feeling. We see the number of Afghan forces that have died in combat going up. Yes, that's a reflection of increased fighting, but it also shows that it's Afghans who are fighting for their country once again. So if al-Qa`ida decides to move over into Afghanistan, I think they do so with some trepidation as well as uncertainty about what their future's going to hold. CTC: What's the current assessment of the Islamic State's capability to put together international terrorist attacks? Brennan: I think what they have demonstrated is the ability to put together a diversified investment portfolio, for lack of a better term. So it runs the gamut in terms of types of things that they're trying to gain traction with.

FBI, DHS issue advisory to law enforcement on possible terror targets
CBS News, Staff report, 2016 09 08
New York - The **FBI and the Department of Homeland Security (DHS) have issued a joint bulletin to law enforcement nationwide advising vigilance of civilian facilities as possible targets by ISIS inspired terrorists**, CBS News senior investigative producer Pat Milton reported. The bulletin, sent out on Aug. 31, said analysis indicates that homegrown violent extremists, and ISIS inspired terrorists, appear to have shifted their focus to target attacks on civilian venues. These sorts of venues include places like restaurants, theaters, churches, and sports arenas, with less focus on law enforcement, military and government facilities. The bulletin said that according to analysis, more than 75 percent of homegrown violent extremists disruptions and attacks over the last 12 months have focused on civilian targets, Milton reported.

Trump says intelligence officials' 'body language' showed they were unhappy with Obama
Washington Post, Karen DeYoung, 2016 09 08
Washington - **Donald Trump said Wednesday that he could tell from the "body language" of intelligence officials** who gave him two separate briefings on U.S. national security in recent weeks that they were "not happy" with what he described as the failure of President Obama and others in the administration to "follow what they were recommending." Trump said he "didn't learn anything" from the briefers that would change his views on how to defeat the Islamic State. He said earlier this week that he would task senior military officials with giving him a plan to deal with the militants within 30 days after he takes office. " **Timothy Barrett, spokesman for the Office of the Director of National Intelligence, which has briefed both Trump and Democratic presidential nominee Hillary Clinton, declined to comment on Trump's remarks.**

DHS secretary Johnson vows 'no stone unturned' on election security
Politico, Nick **Gass, 2016 09 06**
Washington - Faced with the potential threat of an election compromised by foreign hackers, Homeland Security Secretary Jeh Johnson on Tuesday sought to reassure Americans, pledging to "leave no stone unturned" when it comes to ensuring the integrity of the process. "Well first, we have a lot of confidence in the integrity of the election process itself," Johnson told MSNBC's "Andrea Mitchell Reports." "There are some 9,000 state and local jurisdictions that are involved in the election process, including national elections, we've looked at a fair amount of it. We've looked at what states and cities do." Johnson went on to say that "we have a lot of confidence in the process itself, we're in the mode now of wanting to leave no stone unturned, and so, what DHS, my department, has been going over the last several weeks is contacting state election officials to say, we want to leave no stone unturned."

Rendition victims challenge decision not to prosecute MI6 officer
The Guardian (London), Ian Cobain, 2016 09 12
London--**Lawyers representing a Libyan husband and wife who were kidnapped and flown**

to one of Muammar Gaddafi's prisons are seeking to overturn a decision that there was insufficient evidence to prosecute a former MI6 officer for his alleged role. Mark Allen, the head of counter- terrorism at the agency at the time of the so-called rendition operations, had set out his role in a letter to the Gaddafi government that came to light during the 2011 Libyan revolution. However the Crown Prosecution Service decided earlier this year that Allen - now Sir Mark - should face no criminal charges, a ruling that the victims said reflected poorly on British justice. Lawyers for the couple are now seeking a judicial review of the CPS decision, which they have denounced as a "see no evil, hear no evil" ruling that has put the government and its intelligence agencies above the rule of law.

British spy uncovered Hitler's secret war deal with Franco
London Times, Graham Keeley, 2016 09 12
London--An **MI6 spy discovered a secret deal between Hitler and General Franco about Spain entering the Second World War, prompting Churchill to bribe Spanish generals and business leaders to stay loyal to Britain**, a new book reveals. The spy, known as **Agent T,** was able to disclose what had been agreed between the Führer and Franco when they met in Hendaye in southwest France, in 1940. The meeting was to discuss the terms on which Spain might join Germany in the war against Britain.

'Met ignored extremism among my fellow Muslim officers'
Sunday Times (UK), Richard Kerbaj, 2016 09 11
London - A **former counterterrorism sergeant has attacked the Metropolitan police for failing to tackle extremist views among some of its Muslim officers for fear of being labelled "Islamophobic". Javaria Saeed**, a practising Muslim who worked in Scotland Yard's counterterrorism division, complained to her bosses after she witnessed a fellow Muslim officer saying female genital mutilation (FGM) -- illegal in the UK since 1985 -- was a "clean and honourable practice " and "shouldn't be criminalised". The same officer, a Muslim constable in the SO15 counterterrorism unit, also said female Muslim victims of domestic violence should not appeal to the police for help, but resolve their cases in a sharia court, except in "serious violent cases", according to Saeed.

Brexit won't harm UK security, says US former spy chief
The Scotsman, 2016 09 11
London - **Brexit will not make "one bit of difference" to Britain's intelligence relationship with the rest of Europe and the US, according to a former senior official with the National Security Agency. William Binney**, a technical director for the US intelligence agency turned whistleblower, said **GCHQ will continue to share data and resources with organisations around the world** following Britain's retreat from the EU. In an interview with Scotland on Sunday, Binney also warned that the UK Government's Investigatory Powers Bill is a guarantee of "failure" that will overlook intelligence about future terror attacks. The veteran intelligence official will be in Edinburgh this week for the UK premiere of A Good American, a documentary about his time in the NSA, which he believes could have prevented the 11 September, 2001, terror attacks. He spearheaded the development of ThinThread, a selective surveillance programme which, he says, would have flagged up the perpetrators of 9/11, but the system was jettisoned in favour of Trailblazer, a "bulk data" collection scheme that left analysts overwhelmed.

Rampage sparks terror tips surge
Adelaide Advertiser, Simon Benson, 2016 09 13
Adelaide - **Intelligence officials have revealed that calls from the public to the national security hotline spiked 50 per cent in the 24 hours after the alleged ISIS-inspired lone wolf terrorist attack at the weekend**. The **deluge of tip-offs to ASIO and the Australian Federal Police has also risen about 40 per cent since April, to almost 70 a day**, The Advertiser can reveal. As the Government grapples with the rising terrorism threat, frightening CCTV footage has captured knife-wielding suspect Ihsas Khan on his bloody rampage - and how victim Wayne Greenhalgh, 59, didn't stand a chance. Mr Greenhalgh was stabbed repeatedly, losing some fingers and suffering deep puncture wounds to his chest and neck, as he walked his dog in the Sydney suburb of Minto on Saturday. He remains in a serious condition in hospital. Taken from inside a Minto hair salon, the footage shows Khan, 22 - who friends say was "lost in his own world" - hunt down Mr Greenhalgh.

United we stand: intelligence ties 'key to safety'
The Australian, David Crowe, 2016 09 08
Vientiane - **Australia will seal a major defence alliance with Singapore next month** by giving the city-state's leader a rare invitation to address federal parliament, cementing a $2 billion agreement as terror attacks and China's maritime claims fuel anxiety over regional security. Malcolm Turnbull has asked his Singaporean counterpart, Lee Hsien Loong, to address the joint sitting of parliament in early next month during an official visit that will formalise the deployment of 14,000 troops from Singapore to Australia every year. **The Prime Minister will also tighten security co-operation with another key neighbour today, offering Indonesian president Joko Widodo more access to valuable intelligence on foreign fighters who pose threats to the region** -- and warning that Asia should learn from the failure in Europe to share information. The security initiatives come as Mr Turnbull meets leaders at the East Asia Summit in Laos against the backdrop of North Korean missile tests off the coast of Japan and a push by China to dissuade the gathering from rebuking it about its militarisation of the South China Sea. The summit includes the Association of South East Asian Nations members, Australia and major regional powers such as China, Japan and the US. This year's meeting concludes tonight.

"Flaws" in govt anti-terror funding round
Australian Associated Press, Rashida Yosufzai, 2016 09 07
Canberra - **Federal Labor has seized on a scathing audit outlining flaws on how the federal government picked organisations to help prevent radicalisation**. Only 21 of the 42 programs awarded almost $1 million in funding as part of a **counter-terrorism strategy** should have been successful, the Australian National Audit Office said. That's if the Attorney-General's Department had picked those that properly met the criteria needed for funding. The initiative was about backing community-based and non-government groups to help people steer away from violent extremism. But the department pushed through 46 of the 59 applications that did not properly meet the criteria - which led to 10 of those being fully approved. The report said the process through which applications were given funding was flawed in "significant respects". As well, many of the funded organisations have yet to indicate whether they'll register onto a directory connecting people at risk of radicalisation with help - a key requirement.

ASIO evidence at siege inquest kept secret
Australian Associated Press, Daniel McCulloch, 2016 09 07

Sydney - **Could Australia's intelligence agency have done more to stop gunman Man Haron Monis before the fatal Sydney Lindt Cafe siege?** A coronial inquest has been examining what the **Australian Security and Intelligence Organisation (ASIO)** knew about Monis and whether it should have taken action against him before he staged the December 2014 siege. All evidence relating to ASIO has been gathered in private, and the information may never be made public, it has been revealed. The inquest has examined whether Monis should have been detected, kept under surveillance or on a security watch list. It has also looked at whether Monis should have been predicted to commit a politically motivated attack, and what role ASIO played during the Martin Place siege.

Govt sets defence innovation priorities
Australian Associated Press, Staff reporter, 2016 09 07
Canberra - The **government has spelled out priorities for improving defence capabilities through clever ideas, with boosting intelligence, surveillance, electronic warfare and cyber heading the list.** Defence Industry Minister Christopher Pyne says the new $640 million Defence Innovation Hub to be launched later this year will drive growth in defence industry innovation. The government has set six areas for research and innovation, with three given top priority for 2016-17. "In the intelligence, surveillance, reconnaissance, electronic warfare, space and cyber capability stream we will focus on improving intelligence collection, analysis and dissemination," he said in the keynote address to the Land Forces conference dinner in Adelaide. Mr Pyne said that would include biometric data and cyber innovation to support intelligence capability development. Next priority is capabilities to better enable defence operations, including command and control systems, satellite communication and simulation.

Spy bill lacking some robust privacy protection
New Zealand Herald, Gehan Gunasekara, 2016 09 07
Op-ed: The **much-anticipated New Zealand Intelligence and Security Bill** is before a Parliament select committee. **There is unlikely to be loud applause from Edward Snowden, however, as the bill does little to address the concerns regarding mass surveillance he exposed in 2013** and the subsequent mischiefs that have come to light including the GCSB spy agencies spying on New Zealand residents. The bill follows the recommendations of the independent Cullen-Reddy Report as to how these should be addressed and it does implement many of them. The devil, however, is in the detail. On the one hand the bill strengthens privacy protections by expanding the number of the Privacy Act's rules that now apply to the intelligence agencies. Thus an individual may complain that information about them that was used, say, in a security clearance, was out of date, inaccurate or misleading, and another may complain that information about them was retained longer than necessary by the intelligence agency. Note: Gehan Gunasekara is an associate professor in commercial law at the University of Auckland and researches and teaches privacy law.

China, Canada pledge to boost security cooperation
Xinhua News Agency, Staff reporter, 2016 09 13
Beijing - **China and Canada on Monday pledged to strengthen security cooperation at a high-level dialogue held in Beijing**. It was the first **China-Canada High-Level National Security and Rule of Law Dialogue**, a mechanism established during Canadian Prime minister Justin Trudeau's visit to China from late August to early September. According to a joint statement released after the meeting, the two sides exchanged views on fighting terrorism, cyber crime, organized crime, consular affairs and other issues. The two sides have confirmed their future cooperation framework. Some common goals are expected to be reached under the framework, such as initiating a discussion on an extradition treaty and finalizing an agreement on sharing and returning recovered assets. The dialogue was co-chaired by Wang Yongqing, secretary-general of the Commission for Political and Legal Affairs of the Communist Party of China (CPC) Central Committee, and Daniel Jean, National Security Advisor to the Canadian Prime Minister.

Beijing, Ottawa to work out an extradition treaty
China Daily, 2016 09 13
Beijing— **China and Canada agreed on Monday to start discussions on a bilateral extradition treaty** that would facilitate the return of corrupt fugitive Chinese officials who remain at large in Canada. The agreement was reached at the China-Canada High-Level National Security and Rule of Law Dialogue in Beijing, where discussions were held on ways to improve cooperation on issues such as law enforcement, combating transnational organized crime, judicial cooperation and exchanges on the rule of law.In depth talks of an extradition treaty and the signing of an agreement on sharing the recovered stolen assets will occur in the coming months, while negotiations are finalized on a yearlong memorandum of understanding on a pilot project in which Chinese experts will be invited to help identify Chinese immigrants who use fraudulent means to enter Canada. In recent years, the United States, Canada, Australia and Singapore have become popular destinations for corrupt fugitive Chinese officials. **They lack bilateral extradition treaties and have legal differences with China, complicating their return, according to the Ministry of Public Security.**

Rising Uighur militancy changes security landscape for China
Associated Press, 2016 09 09
Beijing— They have been praised by the leader of al-Qaida and wooed by the head of the Islamic State group. They have distinguished themselves on battlefields in Syria and are accused of carrying out a devastating bombing in Thailand. In **the past two years, militants belonging to the Uighur ethnic group native to the vast Xinjiang region in western China have shown signs of becoming a force in Islamic extremism globally**, a development that is reshaping both the ground war in Syria and Chinese foreign policy.The predominantly Muslim, Turkic-speaking people — ethnically distinct from China's Han majority — have chafed for decades under Beijing's heavy-handed rule. Uighur separatists belonging to the **East Turkestan Islamic Movement (ETIM),** a militant group based in the rugged tribal areas of nearby Afghanistan and Pakistan and allied with al-Qaeda, have been blamed for attacks in Chinese cities, often using crude but effective weapons such as knives, Molotov cocktails and speeding vehicles. **Chinese anti-terrorism expert Li Wei** said the extremist threats that China faces domestically and from abroad are now "inextricably linked, just like with other countries,"

leading China to expand its dealings in Syria and Afghanistan. I think the international community would agree that Syria is a nexus of global jihad that does threaten the entire world," said Li, **director of the anti-terrorism research center at the China Institute of Contemporary International Relations, a think tank under the Ministry of State Security, China's main intelligence agency.**

Russian Investigative Committee official Nikandrov subjected to pressure in detention facility – lawyer

Interfax News Agency, 2016 09 12

Moscow— **Denis Nikandrov, deputy chairman of the Russian Investigative Committee's Main Directorate for Moscow, who is charged with corruption, is being subjected to pressure in a detention facility,** Nikandrov's lawyer said. "**Russian Federal Security Service [FSB] operatives constantly visit Nikandrov** in the detention facility and pressure him into self-incrimination," the lawyer said in court, where the extension of Nikandrov's arrest it being considered. In turn, Nikandrov also said that FSB officials threatened him with illegal criminal prosecution. "The FSB officials requested that the article under which FSB official Budantsev [former FSB official, defendant in the case of a shootout on Rochdelskaya Street] was charged be re-classified, but I refused. They threatened me with criminal prosecution for that," he said.

Kremlin blocks leading pollster amid spy claims

London Times, Marc Bennetts, 2016 09 07

Moscow - **Russia has clamped down on the country's only independent pollster, the Levada Centre, days after it published an opinion poll indicating declining support for President Putin's party before this month's parliamentary elections**. The Moscow-based pollster was officially blacklisted as a "foreign agent" after a justice ministry inspection discovered that it had received £94,000 in funding from the US defence department in the past three years. **The label, which has clear connotations of espionage in Russia,** was introduced in 2012 for non-governmental organisations that receive funding from abroad and are engaged in "political" activities. It has been previously been used to put pressure on human rights organisations and independent election monitors, as well as other groups that fail to toe the Kremlin's line. Lev Gudkov, director of the Levada Centre, told The Times that the justice ministry's ruling would make it impossible for the organisation to maintain the trust of respondents and that it could be forced to close down.

Russian Security Services Say 'Spy Pen' Found in Pokemon Go Player's Home

Moscow Times, Staff report, 2016 09 06

Moscow - **Russian security services say they found a "spy-pen" in the home of video blogger Ruslan Sokolovsky**, who was recently detained for filming himself playing Pokemon Go in a Yekaterinburg cathedral. Police have charged Sokolovsky with committing an extremist act and offending religious sensitivities. If convicted, he could face several years in prison. Russia's Investigative Committee said the pen could be used to receive illegal information from abroad. Other potentially incriminating items in the suspect's apartment include a video camera, a tripod, and a professional microphone. Police are also investigating magazines published by the video blogger, which they say contain illustrations which incite religious hatred. Earlier this year, Sokolovsky launched a self-titled magazine for atheists.

Non à la surveillance de masse

24 Heures (Suisse), Journaliste maison, 2016 09 13

Berne - Au nom de la sécurité, de **nombreux États renforcent leurs dispositifs de surveillance.** Cela semble particulièrement justifié dans une perspective d'efficacité numérique et face à la menace terroriste. Mais on oublie ou on admet trop facilement que certaines mesures de surveillance piétinent plusieurs droits humains fondamentaux. **La nouvelle loi sur le renseignement (LRens),** sur laquelle nous votons le 25 septembre prochain, n'échappe pas à cette tendance. Parmi la palette de mesures que la loi met à disposition du **Service de renseignement de la Confédération (SRC),** deux sont particulièrement problématiques. L'exploration du réseau câblé permettra au SRC d'enregistrer tous les flux de données et de les analyser au moyen de mots-clés. Le service de renseignements aura ainsi accès à une quantité énorme de données et au contenu de communications électroniques telles que les e-mails, la téléphonie ou les recherches via Internet. Toutes les personnes se trouvant en Suisse seront touchées par ces mesures de surveillance.

Isis Operatives Learn Tricks of Spycraft

Wall Street Journal, Sam Schechner and Benoit Faucon, 2016 09 12

Paris--In recent months, **Europe has been convulsed by a string of simple yet lethal attacks**. Some were committed by people who appear to have received little direct training from Islamic State. The suspects in a failed plot in France last week were "remotely controlled" from Syria by the group, prosecutors said Friday. **Officials worry such attacks could be a way to distract intelligence services while militants prepare more complex plots**. The Paris attackers communicated sparingly -- electronic silences sometimes lasted weeks -- as they crossed the continent in September and October en route to their deadly rendezvous in Paris, security officials said. When they did communicate, they at times called or sent text messages on disposable cellphones they used once and tossed. "Try to make it so that even if the idolatrous dogs intercept and decrypt your messages . . . the only information they will be able to find is your username and password," advised Islamic State's French-language magazine Dar Al Islam this spring. **Patrick Calvar, head of France's main domestic intelligence agency**, told French parliament investigators in May that Islamic State had become a hierarchical, militarized organization, drawing expertise from experienced jihadists and veterans of Iraqi security forces.

15.000 radicalisés en France selon Valls

Charente Libre, Journaliste maison, 2016 09 12

Paris - **Lors de son passage hier à l'émission le «Grand rendez- vous» Europe 1/iTELE/Les Echos, le Premier ministre a revu à la hausse le nombre de personnes radicalisées en France** Le Premier ministre **Manuel Valls** a comparé Nicolas Sarkozy à l'ex-président américain George W. Bush, lors de sa participation hier à l'émission le «Grand rendez-vous» Europe 1/iTELE/Les Echos. Dans une interview au Journal du Dimanch e, le président du parti Les Républicains (LR) prône notamment d' «adapter l'Etat de droit à la réalité de la menace» . «Nous sommes le 11 septembre (quinzième anniversaire des attentats d'Al Qaïda qui ont fait près de 3.000 morts). La réponse à l'époque (du) Patriot Act (...) n'a pas mis à l'abri les Etats-Unis de la menace et des actes terroristes» , a-t-il dit. Pour le chef du gouvernement, l'ancien chef de l'Etat «se trompe sur la forme en faisant croire aux Français, et

de manière terrible, qu'avec lui, au fond, il n'y aurait plus d'attentats» . Parlant d'une menace «maximale» , avec des **attentats déjoués «tous les jours» et environ 15.000 radicalisés**, Manuel Valls a insisté sur les mesures déjà prises et amorcé l'annonce d'un plan pénitentiaire, avec la création de «10.000 places dans les dix ans» en prison, notamment pour des cellules individuelles et «unités dédiées» pour les radicalisés.

Poroshenko expecting from intelligence stepping up cooperation with NATO, EU
Interfax News Agency, 2016 09 10
Kyiv— **Ukrainian President Petro Poroshenko congratulated intelligence officers on professional holiday on September 7 and described the tasks intelligence officers have**. "As for the future expectations from the military intelligence in the framework of the implementation of the provisions of the National Security Strategy of Ukraine, the President stressed the need to bring the structure of military intelligence into conformity with NATO standards taking into account the experience of hostilities in eastern Ukraine. It is also necessary to expand human intelligence capabilities, build capacity of electronic, space and geospatial intelligence, primarily in the temporarily occupied territories of Ukraine, strengthen analytical activities and establish cooperation with special services of the countries-members of NATO and the European Union," the press service of the head of state has reported. Poroshenko visited the Technical Intelligence Center of the Chief Intelligence Directorate of the Ministry of Defense of Ukraine that processes information on the activities of the Armed Forces of the country-aggressor in Crimea and the occupied territories of Ukraine. The president examined new intelligence means. New facts of violation of the Minsk agreements revealed by modern means of intelligence have been shown to the president. **According to Poroshenko, the establishment of the center is a significant contribution to the development of the unified system of state intelligence.**

Nazarbayev cites economy, security as reasons behind cabinet reshuffle
EFE News Service, 2016 09 09
Astana— **Kazakh President Nursultan Nazarbayev on Friday said security concerns and a sluggish economy were behind his decision the previous day to reshuffle his cabinet and name his prime minister as the new head of the country's national intelligence agency**. "There is a need to strengthen and enhance the level of security," Nazarbayev told a full session of his cabinet a day after **naming Prime Minister Karim Massimov to the post of Chairman of the National Security Committee,** or NSC. The decision follows several shooting attacks over the summer blamed on religious extremists, the recent arrest of several jihadist cells in the Muslim nation and the Kazakh government's promise to crack down on violent religious extremism.

Terrorisme: 260 personnes interpellées depuis le début de l'année (Cazeneuve)
Agence France-Presse, Journaliste maison, 2016 09 09
Paris - **Deux-cent soixante personnes, en lien avec des filières ou opérations terroristes, ont été interpellées depuis le début de l'année, indique le ministre de l'Intérieur Bernard Cazeneuve** dans un entretien au quotidien La Presse de la Manche paru vendredi. "Depuis le début de l'année, plusieurs attentats ont été déjoués et 260 individus en lien avec des filières ou opérations terroristes ont été interpellés", annonce Bernard Cazeneuve. "A l'heure actuelle, 689 français ou résidents habituels en France sont actuellement présents sur le théâtre des opérations terroristes en Syrie et en Irak", ajoute-t-il.

Germany to pour cash into mass surveillance
Deutsche Welle, Staff report, 2016 09 08

Berlin - **Germany's spies will be working with significantly increased resources next year, if a budget report leaked to three media outlets is approved. The federal domestic intelligence agency, the Verfassungsschutz (BfV) is bidding for** an 18-percent budget boost in 2017, up to 307 million euros ($345 million), while the **foreign intelligence agency BND will get a 12-percent rise to 808 million euros**, according to a report released Thursday by the "Süddeutsche Zeitung" along with public broadcasters NDR and WDR. A special parliamentary committee must now approve the increase - which, like all secret service budgets, are classified - but opposition parties have already voiced their concern. The majority of the increased funds are expected to be plowed into mass surveillance - particularly decrypting what the report calls "non-standardized telecommunications" - meaning widely-used messaging services, such as WhatsApp. Such online services appear to be a particular concern to the BND. "Encryption means that of the more than 70 available communication services ... only less than ten can be gathered and the content read," the budget plan read. The BND says it needs much of the extra money - some 73 million euros over the next few years - to set up "Panos," a new project specifically aimed at decrypting such messaging systems by finding weaknesses in the apps. The **leaked plan also says the intelligence agencies need extra money to buy expertise from "external companies and service providers**." In the leaked plan, the BfV said it needs extra money because its own resources are currently inadequate to fulfill its mission.

How Hungary's intelligence agency tried to intimidate a journalist into becoming an informant
Hungarian Free Press, Christopher Adam, 2016 09 08
Ottawa - A **Hungarian journalist, known only as "G,"** was heading to work in December 2015. As he approached the offices of his media firm, two men suddenly came up to him and flashed identifications indicating that they **were agents of the Constitution Protection Office (Alkotmányvédelmi Hivatal - AH). The internal intelligence agency, which bears an uncomfortable resemblance in name (and apparently in practice as well) to the dreaded communist era AVH,** was established in 2010, shortly after Prime Minister Viktor Orbán returned to power. It replaced the Office of National Security, which operated from 1990 until 2010. The two men informed "G" that they had to speak with him privately about a matter that concerned his personal safety. The journalist asked the men to explain to him what was going on, but the agents insisted that this must be done privately and at a different location. The journalist obliged, but when they arrived at their destination, the agents attempted to pressure the journalist into signing a declaration, in which he agrees to keep everything disclosed confidential. "G" had no choice but to sign the document. Note: Christopher Adam received a B.A. in history from Concordia University, an M.A. in East/Central European and Russian-Area Studies from Carleton University and a PhD in history from the University of Ottawa. His research focuses on the history of the Hungarian diaspora during the postwar period. Christopher is the founding editor of the Hungarian Free Press, as well as the founder and editor-in-chief of the Kanadai Magyar Hírlap Hungarian-language paper, which won Hungary's 2015 Free Press (Szabad Sajtó) Award. Christopher resides in Ottawa, Canada.

German Intelligence Plans 12% Budget Increase for Communications Monitoring
Sputnik (Russia), Staff report, 2016 09 08
Moscow - **Germany's Federal Intelligence Service (BND) plans a 12 percent increase in spending on communications monitoring, including the deciphering of encrypted communications**, in 2017, Der Spiegel reports. The 2017 BND budget for the purpose is projected to be 808 million euros (about $909 million), the news magazine said on Wednesday citing secret budget documents. The twelve percent increase over the current year comes amid BND plans to boost its response to the widespread use of messenger services such as WhatsApp, Der Spiegel explained. The services encrypt the messages of its users making it

difficult for intelligence services to capture the content. **BND** is planning to overcome this difficulty, which is necessary amid the rise of cybersecurity and terrorism threats. (Full report).

Iran spy head welcomed by German officials
Jerusalem Post, Benjamin Weinthal, 2016 09 08
Berlin - **German intelligence authorities met with Iran's Minister of Intelligence Mahmoud Alavi in Berlin on Tuesday**, according to the Tasnim News Agency in Tehran, a paper with close links to the Revolutionary Guards Corps. Dr. Kazem Moussavi, an Iranian exile in Germany, said on Wednesday Alavi is in the Federal Republic is to lay the groundwork for a visit by President Hassan Rouhani this month. "**The Iranian regime is planning to intensify the monitoring and cracking down on members of the opposition in Germany in order to prevent protests against the visit of Hassan Rouhani**, Iran's president of executions. It would be a huge scandal if German security authorities collaborated in these efforts. Alavi should be brought to justice rather than enjoying an official reception," Moussavi said. In **July, a Berlin court convicted an Iranian man of espionage on behalf of Iran's regime.**

3.000 euros d'amende pour un commissaire de la DGSI soupçonné d'avoir giflé une avocate
Agence France Presse, 2016 09 06
Paris— Un **commissaire de police a été condamné mardi à 3.000 euros d'amende pour avoir giflé une avocate lors d'une garde à vue au siège de la Direction centrale du renseignement intérieur (DCRI, devenue DGSI),** une sanction dont il va faire appel. Le tribunal correctionnel de Nanterre l'a déclaré coupable de "violences volontaires par une personne dépositaire de l'autorité publique sur un avocat dans l'exercice de ses fonctions", en acceptant que cette condamnation ne figure pas au bulletin numéro 2 de son casier judiciaire. Le policier de 58 ans, qui nie les faits, est en outre condamné à verser près de 9.000 euros de dommages et intérêts à l'avocate pour son préjudice - douleur, arrêt de travail, dépenses de santé - et un euro à l'ordre des avocats des Hauts-de-Seine, également partie civile. **Le commissaire, dont l'identité est protégée en raison de ses fonctions à la DGSI, "va faire appel du jugement",** a réagi auprès de l'AFP son avocat, Me Thibault de Montbrial. Le conseil de l'avocate n'a pas souhaité faire de commentaires.

Un commissaire condamné pour avoir giflé une avocate dans les locaux de la DGSI
Le Parisien, 2016 09 06
Paris— Un **commissaire de la Direction générale de la sécurité intérieure (DGSI) a été reconnu coupable** ce mardi, par le tribunal correctionnel de Nanterre, **d'avoir giflé une avocate au cours d'un interrogatoire dans les locaux des services de renseignements.** Il a été condamné à une peine d'amende de 3 000 € et au versement de 10 000 € de dommages et intérêts à l'avocate. Une sanction très inférieure à celle que le procureur avait requise à l'audience, le 28 juin dernier, puisque le magistrat avait demandé deux mois d'emprisonnement avec sursis contre le policier, en plus de la peine d'amende. L'avocat du policier, Me Thibault de Montbrial, annonce déjà qu'il fera appel. Il n'avait pas réussi à faire parler le client de l'avocate, soupçonné de liens avec un terroriste Tandis que le commissaire avait nié la gifle, donnée dans les locaux mêmes de la DGSI, à Levallois le 1er avril 2014, le procureur s'est notamment appuyé sur le « témoignage direct » du client de l'avocate alors interrogé dans les sous-sols du bâtiment. L'homme était questionné sur ses éventuels liens avec un kamikaze impliqué dans un attentat commis en Bulgarie en 2012, mais n'avait pas livré la moindre réponse.

German daily interviews former Saudi intelligence chief

Die Welt via BBC Monitoring Europe, 2016 09 10

[Interview with the former chief of Saudi Arabia's intelligence service, Prince Turki bin Faisal al Saud, by Sascha Lehnartz; place and date not given: "For Me, Democracy Is a Problematic Term"] The **former chief of Saudi Arabia's intelligence agency, Prince Turki, discusses the political vision of his country - and the problems with Syria and Iran**. Biography: Prince Turki bin Faisal al Saud, aged 71, studied political science (among others, in Georgetown with [former US President] Bill Clinton), Islamic law, and law in Princeton and Cambridge. He is one of the founders of the King Faisal Foundation. Prince Turki bin Faisal al Saud is a member of the Saudi royal family and served as head of the intelligence agency of the Kingdom of Saudi Arabia from 1977 to 2001. He was later appointed ambassador, among others, to the United States. [Lehnartz] Your Royal Highness, in Geneva, the United States and Russia are once again struggling to reach agreement on a ceasefire in Syria. Would Saudi Arabia support such a scheme? [Prince Turki] I am not an official representative of the Saudi Government. Hence, I cannot give an official answer as to whether Saudi Arabia will support such an initiative. What I can tell you is that the Kingdom is in the vanguard of countries that are seeking a peaceful solution for Syria. It has supported all UN Security Council efforts, Geneva 1 and 2, the latest initiative for a ceasefire that was agreed in Geneva. Hence, I would not be surprised if the Kingdom were to support every new attempt to end the fighting in Syria.

Soviet documents 'show Abbas was KGB agent'

Times of Israel, Tamar Pileggi, 2016 09 08

Jerusalem - **Palestinian Authority President Mahmoud Abbas was a Soviet spy in Damascus in the 1980s, Israel's Channel 1 television reported** Wednesday, citing information it said was included in an archive smuggled out of the USSR. According to Channel 1's foreign news editor Oren Nahari, the famed Mitrokhin archive, kept by **KGB defector Vasily Mitrokhin**, revealed that Abbas was a Soviet mole in Damascus in 1983. The documents -- obtained by Israeli researchers Isabella Ginor and Gideon Remez -- purportedly show that Abbas, code-named Krotov (mole), worked under Mikhail Bogdanov, who was then stationed in Damascus and is today Vladimir Putin's envoy to the Middle East. Bogdanov was caught in a diplomatic tussle earlier this week after trying to broker a summit between Abbas and Prime Minister Benjamin Netanyahu in Moscow, who both claimed a willingness to meet while decrying the other for allegedly refusing.

Soviet Document Suggests Mahmoud Abbas Was a K.G.B. Spy in the 1980s

New York Times, Peter Baker, 2016 09 08

Jerusalem - **Mahmoud Abbas, the president of the Palestinian Authority, and President Vladimir V. Putin of Russia** may have more in common than an interest in Middle East peace talks. According to a newly discovered Soviet document, **Mr. Abbas may have once worked for the K.G.B., too**. The possibility, trumpeted by the Israeli media on Wednesday night and just as quickly dismissed by Palestinian officials, emerged from a document in a British archive listing Soviet agents from 1983. A reference to Mr. Abbas is tantalizing but cryptic, just two lines identifying him by the code name "Mole." At the end of his entry are two words: "K.G.B. agent." The suggestion that Mr. Abbas may have been on Moscow's roster more than three decades ago might have been just a historical curiosity but for the fact that it comes at the same time that Mr. Putin has been trying to organize new talks between Mr. Abbas and Prime Minister Benjamin Netanyahu of Israel.

Ibrahim meets Iraqi ambassador, British Official
National News Agency, 2016 09 08
Beirut— **General Security Chief General Abbas Ibrahim** welcomed on Thursday before noon at his office the Defence Senior Advisor for Middle East Affairs at the UK Ministry of Defence Thomas Beckett accompanied with Britain's Ambassador to Lebanon Hugo Shorter. Discussions reportedly featured high on security issues in Lebanon and the region as well **as the existing cooperation between the British Embassy and the General Security.**

Iran intelligence minister travels to Germany
Press TV, 2016 09 07
Tehran - **Iranian Intelligence Minister Mahmoud Alavi has made an unannounced trip to Germany**, with observers describing the unprecedented trip -- about which little detail has been made public -- as highly significant. According to a brief press release that appeared on the website of the **Iranian Intelligence Ministry** on Tuesday, Minister Alavi and his accompanied delegation traveled to the Federal Republic of Germany at the invitation of "pertinent authorities" in the European country. The timing of the trip was not made available. In Berlin, Alavi "met with German intelligence officials and discussed issues of mutual interest," according to the press release. The minister also met with personnel at the Iranian Embassy in Berlin. The unprecedented visit by the Iranian intelligence minister to the heart of Europe comes at a sensitive juncture when the Takfiri terrorist group of Daesh has been posing a growing threat to countries worldwide.

South Korea spy agency seen concerned over North's advances in miniaturizing warheads
Reuters, Staff reporter, 2016 09 09
Seoul - **South Korea's intelligence agency is concerned that North Korea is advancing faster to miniaturize warheads on missiles**, a lawmaker said after receiving an agency briefing on the North's latest nuclear test. Kim Byung-kee, a member of the South Korean parliament's intelligence committee, cited the spy agency as saying the North's nuclear test was intended to project a strong image of its leader, Kim Jong Un, on the anniversary of the country's 1948 foundation as a republic, as well as defy international sanctions.

Challenges ahead for new spy chief
The Jakarta Post, 2016 09 09
Jakarta— The **House of Representatives unanimously approved Thursday President Joko "Jokowi" Widodo's nomination of National Police deputy chief Comr. Gen. Budi Gunawan as the National Intelligence Agency (BIN) chief, replacing Sutiyoso**. Budi's nomination for the spy agency's top post surfaced after Jokowi appointed Tito Karnavian National Police chief in June. Indeed, the nomination of Budi, a 1987 graduate of the Police Academy, may give a boost to the regeneration process within the police force. On the other hand, this decision might pose a risk of politicization to the BIN, as Budi is known for his close ties to the ruling Indonesian Democratic Party of Struggle (PDI-P). In fact, there is nothing new with the politicization issue because Sutiyoso was chairman of the minority Indonesian Unity and Nationhood Party (PKPI).In general, there are three causes for concern related to politicization of the intelligence agency.

Budi Gunawan vows to improve spy agency
Jakarta Post, Marguerite Afra Sapiie, 2016 09 08
Jakarta - **Budi Gunawan vows to improve spy agency National Police deputy chief Comr. Gen. Budi Gunawan delivers his plans during a confirmation hearing over his nomination as the new chief of the National Intelligence Agency (BIN)** at the House of Representatives' Commission I overseeing defense and foreign affairs on Sept. 7. The sole candidate for the spy chief position, Comr. Gen. Budi Gunawan, vows to improve State Intelligence Agency (BIN) performance in order to optimize the agency's role in the protection of national security. The National Police deputy chief said during the confirmation hearing at the House of Representatives' Commission I overseeing security and foreign affairs that he aimed to improve BIN's professionalism, objectivity and integrity should he take helm of the agency as the country's coordinator of intelligence affairs. He also wants to improve some aspects of BIN so that the agency could play a greater role in facing new global challenges.

FBI wants to interrogate Bangladesh militants
Dhaka Tribune, Sheikh Shahariar Zaman, 2016 09 07
Dhaka - The **Federal Bureau of Investigation has expressed interest to work closely with the Bangladeshi investigators dealing with recent militant attacks**, a Foreign Ministry source says. As part of the process, the FBI wanted to let its members interrogate militant suspects arrested in recent months. However, the Bangladesh government has not shown any interest in this regard. "They [the FBI] have told us that they have much knowledge and expertise in this matter and that they want to understand the militants' psychology. But the government has not yet responded positively," a Foreign Ministry official said, declining to be named. According to the official, who was not authorised to talk to media on the matter, the West believes that the Islamic State or other foreign terrorist groups are directly involved in the recent terror attacks in Bangladesh.

Afghan MPs blame recent attacks on weak intelligence
Afghan Ariana TV via BBC News South Asia, 2016 09 07
Kabul— [Presenter] A **number of MPs believe that weakness in the security bodies has resulted in an escalation of insecurity in the country, adding that despite all the measures in place, terrorists can achieve their goals.** The MPs have said that senior security officials have failed to prevent attacks, suggesting fundamental changes in the fight against terrorism. The MPs stressed that currently the country is in need of ministers who can value each drop of the bloodshed by the security forces. Rafi Sediqi with more details: [Correspondent] The upsurge in insecurity has raised many concerns and one of the reasons for the worsening security situation is said to be **weakness in the management of security bodies**. A number of MPs have said that currently the country is in need of security ministers who can stand firmly against terrorists' attacks. [MP Ramazan Bashardost, captioned] In this country and in the current situation, **we need the ministers of defence, interior and head of the National Directorate of Security to go to the most remote areas with a gun and fight along with the security forces**. They should defend their land but they are more concerned about their land cruisers, bodyguards, palaces and other privileges. I am sorry to say that this [sort of] minister could never represent the people.

Mkhwebane a step closer to protector's office

Business Day (South Africa), 2016 09 08
Cape Town— **Advocate Busisiwe Mkhwebane** cleared a crucial hurdle on Wednesday night, when an overwhelming majority of the National Assembly gave her the nod to succeed Thuli Madonsela. It is now up to **President Jacob Zuma to confirm her as the country's next public protector**. Once that is done, Mkhwebane will begin her seven-year term in two months' time.The **DA objected to her candidacy, raising concerns about her links with the country's intelligence agencies**. Among other jobs listed on her CV, **Mkhwebane worked in the State Security Agency (SSA).**

Edo 2016: Don't undermine Nigeria's democracy, group tells Police, SSS
The Premium Times, 2016 09 08
Abuja— A **Civil Society Organisation has condemned the attempt by the Police and State Security Service (SSS) to force the postponement of the Edo State Governorship Election** scheduled for Saturday. In a statement issued to journalists in Abuja, the Youth Initiative for Advocacy, Growth and Advancement, YIAGA, warned the two agencies against undermining Nigeria's democracy and the sovereignty of the Independent National Electoral Commission, INEC. The **Police and the SSS had on Wednesday issued a joint statement asking INEC to postpone the election**. The security operatives said the call was to prevent alleged attack planned by insurgents on the state during the election. The call has been condemned by various stakeholders including the People Democratic Party, PDP, who described the move as bizarre and shocking.

Mkhwebane denies she was a spy
Sowetan, 2016 09 07
Cape Town—**Proposed public protector Busisiwe Mkhwebane has denied DA allegations that she was a spy on behalf of the State Security Agency (SSA) while working as a South African immigration officer in China.** "I never worked for SSA. I only joined the SSA on July 4, 2016," Mkhwebane said in reply to a question yesterday afternoon. Mkhwebane's appointment is scheduled to be proposed to President Jacob Zuma by Parliament this afternoon. The National Assembly will debate the proposed appointment of Mkhwebane, who at this stage, has the support of all political parties except the DA, after a parliamentary ad hoc committee proposed her appointment.

Mexico's Finance Minister Resigns in Wake of Trump Visit
The Wall Street Journal, David Luhnow, 2016 09 07
Mexico City— Donald Trump's recent visit to Mexico, widely seen in the country as a humiliation, claimed a high-profile political victim on Wednesday with the resignation of Finance Minister Luis Videgaray, President Enrique Peña Nieto's closest adviser. Mr. Videgaray, who played a key role in helping orchestrate the Trump trip, was succeeded by José Antonio Meade, the country's social development minister and former finance chief, Mr. Peña Nieto told a news conference. Mr. Videgaray's departure is a blow to the president. The former investment banker was widely seen as the brains behind the Mexican president and the driving force behind a series of high-profile overhauls in the past few years, including opening Mexico's closed oil industry to private investment for the first time since 1938. The cabinet reshuffle is the first step by the president in trying to limit the damage from the Trump visit, said **Guillermo Valdés, a**

former head of Mexico's intelligence agency. "It's the least he could do to try to recover some credibility given that he has 27 months left in power," he said.

Brazil Rio Paralympics will have less security than Olympics
Folha de Sao Paulo via BBC Monitoring Americas, 2016 09 07
Rio de Janiero— **Despite official denials. the 2016 Paralympics will open in the Brazilian city of Rio de Janeiro today amid a "climate of demobilisation of the security forces"**, with a reduced security contingent protecting the event compared to the Olympic Games in August, Brazilian newspaper Folha de Sao Paulo reported on 7 September. "Officially, the bodies responsible for the vigilance of the event are denying it, but the reduction in the force for the event shows that the [security] risks are considered less this time [compared to the Olympics]," the newspaper said in an article written by a correspondent in Rio. Folha said one of the first decisions taken after the closing of the Rio Olympics on 21 August was to reduce the size of the National Force security contingent protecting the sports arenas and the athletes' village in the city to 4,200 members from the 6,000 that were there for the Olympic Games. Less competition arenas were being used for the Paralympics. In addition, **the numbers of Federal Police and members of the Brazilian Intelligence Agency (Abin) were reduced by nearly 20 per cent for the Paralympics,** the newspaper said.

Ministerial directive on use of evidence obtained from torture still on books
CBC News, Nazim Baksh and Terence McKenna, 2016 09 20
Even as Ottawa remains locked in a decade-long legal battle with three Canadians who were tortured in Syria in a post-Sept. 11 crackdown on terror suspects, Canada's intelligence service is still allowed to act on information obtained through torture. Public Safety Minister Ralph Goodale could rescind the ministerial directive that one of his predecessors, Conservative Vic Toews, issued in 2009. **But in a statement to CBC's the fifth estate, Goodale said he "continues to assess ministerial directives to ensure that they both protect our rights and freedoms, and keep Canadians safe."** The original directive was updated in 2010 to specify that **CSIS is only allowed to use information derived from torture in "exceptional circumstances where CSIS may receive urgent, perishable information from a foreign agency linked to a specific and imminent security threat to Canada or Canadians**." When the directive made headlines in 2012, interim Liberal Leader Bob Rae called it "unprecedented in our history." "It, I think, reflects a complete breach of our international obligations with respect to torture," he said. "And I think it shows a government which has simply lost its way in terms of Canadian values. "This is not how we do business in Canada." **Abdullah Almalki, Ahmad Elmaati and Muayyed Nureddin** were never arrested in Canada for suspected terror offences, but all three were targeted by CSIS and the RCMP and eventually detained and tortured in Syria. Documents obtained by the fifth estate and The National show CSIS and the RCMP not only knew the men would be tortured, but co-operated with Syrian officials in their interrogations.

Appel à une enquête sur la torture de Canadiens en Syrie
Le Devoir, Philippe Orfali, 2016 09 20
Ottawa--Le **Canada doit faire " toute la lumière ", une fois pour toutes, sur le rôle joué par le gouvernement fédéral et ses agences de sécurité dans la torture de certains de ses citoyens, a exigé lundi le Nouveau Parti démocratique** (NPD), au premier jour de la rentrée parlementaire, alors qu'émergeaient de nouveaux détails sordides concernant la torture de trois Canadiens par la Syrie. Une commission d'enquête avait conclu dès 2008 que **le Service canadien du renseignement de sécurité (SCRS) avait joué un rôle " indirect " dans la torture d'Abdullah Almalki, Muayyed Nureddin et Ahmad El Maati,** trois ressortissants canadiens soupçonnés de liens avec al-Qaïda, arrêtés par le renseignement militaire syrien et détenus jusqu'en 2004. Mais des milliers de documents classés secrets obtenus par les avocats des trois hommes et transmis au réseau anglais de Radio-Canada établissent désormais que le SCRS et la Gendarmerie royale du Canada (GRC) ont coopéré de près avec Damas et les tortionnaires syriens des trois hommes.

Prepare for threat of quantum computing to encrypted data, Canadian conference told
IT World Canada, Howard Solomon, 2016 09 20
Toronto— The **race to create new cryptographic standards before super-fast quantum computers are built that can rip apart data protected by existing encryption methods isn't going fast enough,** two senior Canadian officials have warned a security conference. "I think we are already behind," **Scott Jones, deputy chief of IT security at the Communications Security Establishment (CSE), responsible for securing federal information systems**, told

the fourth annual international workshop on quantum-safe cryptography in Toronto on Monday. Quantum computing – or more accurately, computers that use quantum mechanics – is not a dream, Jones and others told the conference of business executives, crypto academics, IT companies and government officials. One prediction is there's a one in seven chance that by 2026 a quantum computer will exist that can break RSA-2048 encryption. It may take longer — or, if there's an advance, shorter. "Quantum represents a fundamental change and challenge to encryption for all of us," Jones said, noting that encrypted transactions are the backbone of security and trust on the Internet. **His comments were backed by David Sabourin, CSE's manager of cryptographic security**, who said that if the 2026 prediction is right "we're in trouble." Speaking on a panel of government experts, Sabourin noted the U.S.-based National Institute of Standards and Technology (NIST) will close its call for proposed new and more quantum-secure public key encryption algorithms next year.

The Torture Files: Documents show CSIS and RCMP's role in post- 9/11 torture of 3 Canadians in Syria
CBC News, Nazim Baksh and Terence McKenna, 2016 09 19
Thousands of pages of secret files obtained by CBC reveal how Canada's police and intelligence service not only knew three Canadians were being tortured in Syrian jails in a post-Sept. 11 crackdown, but co-operated with Syrian officials in their interrogations. **The files also show a Canadian ambassador helped deliver questions the RCMP and CSIS wanted put to the Canadians imprisoned in Syria**, a country with a dismal human rights record. The revelations are featured in "The Torture Files," a joint investigation by The National and the fifth estate that airs this week. Abdullah Almalki, Ahmad Elmaati and Muayyed Nureddin were never arrested in Canada for suspected terror offences, but to this day there is a cloud of suspicion hanging over them. Ten years ago, they each filed $100-million lawsuits against the government. Maher Arar, another Canadian arrested and tortured in Syria in the wake of al-Qaeda's deadly attacks on New York and Washington, received an apology and a $10.5-million settlement from the federal government in 2007. Lawyers representing Almalki, Elmaati and Nureddin fought and eventually won a lengthy court battle with the RCMP and CSIS to gain access to thousands of heavily redacted files, amounting to hundreds of thousands of pages.

Media groups push to intervene in Vice Media fight with RCMP
Canadian Press, Colin Perkel, 2016 09 18
Ottawa - **Forcing journalists to act as investigators for police would undermine the critical role news outlets play in a free society, a coalition of media organizations argue** in documents filed with Ontario's top court. Journalists, the group argues, must be able to gather news by communicating with citizens who are in an adversarial relationship with the state. "If journalists or media organizations are too easily conscripted into serving as the de facto 'investigative arm of the police,' they will be unable to perform their vital societal role," they say. "Important stories will go untold." The **filings with the Court of Appeal come in support of a coalition request to intervene in a case involving an RCMP demand for Vice Media to turn over materials related to a terrorism investigation.** The information is related to stories journalist **Ben Makuch wrote about accused terrorist Farah Shirdon**.

PM urged China to free Garratt: source
Globe and Mail, Nathan Vanderklippe, 2016 09 17
Ottawa - **Prime Minister Justin Trudeau insisted in several meetings with China's top leaders that a new relationship would be difficult to forge between the two countries without the release of a Canadian man held for two years on suspicion of being a spy**, a senior government source says. By the time Mr. Trudeau's first official visit to China was over, the release of **Kevin Garratt** seemed all but guaranteed, according to the official who had

knowledge of the Prime Minister's discussions with Chinese President Xi Jinping and Premier Li Keqiang. But the assurances Mr. Trudeau received in return cast his visit to China in a new light. Instead of leaving Beijing with only relatively small gains, his doggedness allowed him to achieve one of his central ambitions - even if critics say the deportation of Mr. Garratt is a minor achievement next to more serious concerns about China's treatment of foreign investors and its own people. Mr. Trudeau's insistence was reflected in a visit from **Michel Coloumbe, director of the Canadian Security Intelligence Service, who in an unusual step was dispatched to meet his Chinese counterpart** four months ago to personally attest that Mr. Garratt was not a spy for Canada. Co-ordinated efforts from Foreign Minister Stephane Dion and Canada's ambassador to China, Guy SaintJacques, on top of previous attempts by Stephen Harper in 2014, helped to secure the release of a man whose lengthy detention in China on questionable charges had raised questions among Canadians, and anger in Ottawa.

Canada goes extra mile to secure Kevin Garratt's release from China
Globe and Mail, Nathan Vanderklippe & Laura Stone, 2016 09 16
Ottawa - The **sudden release of a Canadian held for two years in China on suspicion of spying** comes after a high-stakes campaign to secure his freedom, **including an unusual and unannounced visit four months ago by the director of the Canadian Security Intelligence Service,** who met with Chinese officials to try to persuade them that **Kevin Garratt** wasn't a spy. On Thursday, a bearded Mr. Garratt landed in Vancouver and embraced his family, a free man. He had been accused by Chinese authorities of stealing military and defence research secrets and charged with espionage. His release puts a sudden end to a major irritant between Canada and China less than a week before Premier Li Keqiang arrives in Ottawa for an official visit, and caps an extraordinary effort by the government of Canada, its embassy in Beijing and two prime ministers to push for Mr. Garratt's release. **The visit to China by CSIS director Michel Coulombe, Canada's top spy, was one element of that effort, according to multiple sources with knowledge of the meeting.** When Mr. Garratt was indicted in January, China's state media said investigators had found evidence he had accepted tasks to gather intelligence for Canada. Mr. Coulombe met with Geng Huichang, the minister in charge of China's powerful state security apparatus, to deliver the message in person that Mr. Garratt, a Pentecostal pastor, did not work for CSIS.

Canadian Held Two Years on Spy Charges in China Returns Home
New York Times, Ian Austen, 2016 09 16
Ottawa - A **Canadian man who worked with a charity that provided food to North Koreans returned to Canada on Thursday after being held in China on espionage charges** for just over two years. The family of the man, Kevin Garratt, who is from Vancouver, British Columbia, said in a brief statement that he was deported after a court hearing in Dandong, China, on Tuesday. "The Garratt family thanks everyone for their thoughts and prayers, and also thanks the many individuals who worked to secure Kevin's release," the statement said. Mr. Garratt's detention dampened relations between Canada and China, particularly under the previous Conservative government. Early this month, Prime Minister Justin Trudeau raised Mr. Garratt's case during a visit to China. Mr. Garratt and his wife, Julia Dawn Garratt, were operating a coffee house in China near the border with North Korea as part of a Christian aid mission when they were both arrested in August 2014. **Chinese officials later said that they were being held on "suspicion of stealing and spying to obtain state secrets."**

Dutch police to get Canadian BlackBerry data
National Post, Joseph Brean, 2016 09 16
Ottawa - After a police raid on a Toronto technology company, **Canada has agreed to share a massive stash of encrypted BlackBerry Ltd. messages with Dutch police investigating an**

underworld conspiracy involving robberies, drug trafficking, attempted murder and assassinations. But rather than simply hand over the messages, from 20,000 different users, an Ontario judge this week imposed restrictions designed to prevent a "fishing expedition" by police in the Netherlands or any other country. The ruling ensures the data will remain under Canadian control, and not be shared further without a court's approval. The fear is that unfettered disclosure would expose innocent people to the unjustified attention of police, just because they used an encrypted Black-Berry. "Canada remains the home of this data," Judge Ian Nordheimer wrote.

Goodale to host UK terror watchdog, national security committee
iPolitics.ca, Amanda Connolly, 2016 09 16
Ottawa - **Public Safety Minister Ralph Goodale will host the U.K.'s terrorism legislation watchdog and members of its Intelligence and Security Committee (ISC) next week in Ottawa** for a meeting that will include discussion about the government's new national security committee of parliamentarians. The meeting will come as Parliament resumes from its summer sitting and is expected to dive into debate on Bill C-22, which was tabled on June 16 and announced the framework for the government's nine- member committee of appointed parliamentarians who will "review and scrutinize" the **activities of national security agencies**.

Everything We Know About Canada's Efforts to Track Would-Be Terrorists
Vice News, Tamara Khandaker, 2016 09 15
Despite being hailed as a powerful tool to stop would-be terrorists from committing violence or leaving to fight abroad, just one person in Canada is currently on a terrorism-related peace bond. According to a list provided to VICE News by the **Public Prosecution Service of Canada, police are pursuing peace bonds against nine others**, all of whom were arrested and are currently out on bail, living with varying degrees of limited freedom. Prior to August, there was one more name on the active peace bond list: **Aaron Driver**, who was shot to death by police while allegedly attempting to carry out a terrorist attack. The rarity of the bonds' application, and Driver's death, raise a number of questions about the efficacy of peace bonds to keep watch over people deemed at high risk of committing acts of terror. VICE News has spent weeks gathering details of the peace bonds process, obtaining bail conditions, interviewing lawyers assigned to these cases, and tracking down individuals who have come in contact with the regime. In many cases, even as the Crown proceeds with the peace bond process--before a judge hears the application and before the prosecution can prove their case--the court orders strict and limiting bail conditions.

Cyberattacks could cause border chaos, officials say
Toronto Star, Alex Boutilier, 2016 09 15
Ottawa - **Border officials warn a cyberattack on their facial recognition or fingerprints databases could result in barring innocent travellers from Canada** - or letting the wrong people in. In documents prepared for **Public Safety Minister Ralph Goodale in November, Canada Border Services Agency (CBSA)** officials said they need to "keep pace with emerging security vulnerabilities" to systems governing who can enter the country. The agency's growing use of "biometric" data - such as fingerprints, facial recognition and retinal scans - was cited as an example. "A malicious cyberattack, for example, could infiltrate the back-end of a biometric identification system and produce false acceptances and/or rejections," reads the document, obtained by the Star under access to information law.

Canada given lukewarm grade on anti-money laundering efforts
Globe and Mail, Christina Pellegrini and David Berman, 2016 09 15

Canada's anti-money laundering efforts have improved in recent years but significant gaps leave the country open to illicit financial activities, according to an evaluation from an organization that develops policies to protect the global financial system. The importance of anti- money laundering efforts has risen in recent years, as authorities attempt to cut the financial lifelines to criminals and terrorists. The **Financial Action Task Force** (FATF), an intergovernmental body that develops standards for combating money laundering around the world, gave Canada a lukewarm assessment - its first since a 2007 evaluation.

United States / États-Unis

Extradition for FBI Asperger's hacker

The Advertiser, Martin Robinson, 2016 09 18

Washington - An **accused British superhacker should be extradited to the US to face trial where he could be jailed for 99 years**, a judge has ruled. **Asperger's sufferer Lauri Love, 31, allegedly hacked huge amounts of data from US agencies, including the FBI and NASA**, between 2012 and 2013. Judge Nina Tempia yesterday agreed with the American authorities and ruled Love, who lives with his parents in Suffolk, should face a cyber-hacking trial in the US. Love, who will appeal to the High Court, said after the judgment: "If you have come for justice, then you have missed it." His case is "almost identical" to that of fellow hacker Gary McKinnon, whose extradition was blocked by **then Home Secretary Theresa May** in 2012.

Inside the fight to reveal the CIA's torture secrets

The Guardian (London), 2016 09 18

Analysis - **Daniel Jones** had always **been friendly with the CIA personnel** who stood outside his door. When he needed to take something out of the secured room where he read mountains of their classified material, they typically obliged. An informal understanding had taken hold after years of working together, usually during off-peak hours, so closely that Jones had parking privileges at **an agency satellite office not far from its McLean, Virginia, headquarters**. They would ask Jones if anything he wanted to remove contained real names or cover names of any agency officials, assets or partners, or anything that could compromise an operation. He would say no. They would nod, he would wish them a good night, and they would go their separate ways. After midnight in the summer of 2013, **Jones deliberately violated that accord. Jones, a counter-terrorism staffer, had become the chief investigator for the Senate intelligence committee, the CIA's congressional overseer, on its biggest inquiry**. For five years, he had been methodically sifting through internal CIA accounts of its infamous torture program, a process that had begun after the committee learned - thanks to a New York Times article, not the agency - that a senior official had destroyed videotapes that recorded infamously brutal interrogations. The subsequent committee inquiry had deeply strained a relationship with Langley that both sides badly wanted to maintain.

'A constitutional crisis': the CIA turns on the Senate

The Guardian (London), Spencer Akerman, 2016 09 18

Analysis - It was 11pm, in the chill of January, but **Daniel Jones** needed a run around the Capitol. During the winter of early 2014 Jones's only chance for serenity was these late hours. The CIA was demanding his boss, **Senate intelligence committee chairwoman Dianne Feinstein**, fire him. Feinstein's Republican colleagues, once supportive of Jones, were

demanding he testify. Testimony was treacherous. Sheldon Whitehouse, a Rhode Island senator and former federal prosecutor, warned Jones that asserting his rights against self-incrimination or seeking a lawyer's counsel could give committee Republicans a political lever against his highly controversial work. The CIA would soon formally insist that the US justice department actually prosecute Jones, the Senate staffer who had devoted over six years of his life to investigating the CIA's infamous post-9/11 torture program. **Jones, a former FBI counter-terrorism analyst**, wanted to testify. The CIA had pushed him past the point where he could back down. Its lies, documented in a 6,700-page secret report which Jones was constantly rewriting that winter, were compounding: to Congress, to Barack Obama, to George W Bush, to the press, to the public. The lies were not random misstatements…The CIA had gone "into war mode" with its congressional overseers, Jones told the Guardian. There was no choice but to work deeply into the night, leaving Capitol Hill at 3 or 4 in the morning, with breaks only for a run, and then back to work by 8 or 9 to repeat the cycle. Less than a year had passed since the CIA had communicated to the Senate that its exhaustive torture report, drawn from millions of the agency's own documents, was significantly incorrect.

Edward Snowden characterized as 'serial exaggerator' in House intelligence committee report
Washington Times, Andrea Noble, 2016 09 16
Washington - A **House intelligence committee report on Edward Snowden characterizes the former National Security Agency contractor not as a whistleblower but as a "serial exaggerator"** whose theft of 1.5 million classified government documents has done **tremendous damage to national security**. A 4-page summary of the classified report released by the House committee on Thursday says the bulk of the documents taken "have nothing to do with programs impacting individual privacy interests" but rather pertain to military, defense and intelligence programs. "A review of the materials Snowden compromised makes clear that he handed over secrets that protect American troops overseas and secrets that provide vital defenses against terrorists and nation-states," the report states. "Some of Snowden's disclosures exacerbated and accelerated existing trends that diminished the IC's capabilities to collect against legitimate foreign intelligence targets, while others resulted in the loss of intelligence streams that had saved American lives."

House Intelligence Committee Urges Obama Not to Grant Snowden Pardon
New York Times, Charlie Savage, 2016 09 16
Washington - **Lawmakers on the House Intelligence Committee unanimously signed a letter to President Obama on Thursday asking him not to pardon Edward J. Snowden**, the former intelligence contractor who leaked troves of information about **National Security Agency surveillance and data collection in 2013**. "We urge you not to pardon Edward Snowden, who perpetrated the largest and most damaging public disclosure of classified information in our nation's history," the bipartisan letter said. "If Mr. Snowden returns from Russia, where he fled in 2013, the U.S. government must hold him accountable for his actions." The committee also said it had completed a 36-page report summarizing the results of its multiyear investigation into the leaks and their effect. The report was classified, but the panel released a three-page executive summary that portrayed Mr. Snowden as a "serial exaggerator and fabricator" who is "not a whistle- blower."

Polygraph panic: CIA director fretted his vote for communist
CNN.com, Tal Kopan, 2016 09 16
Washington - At his **first polygraph test to enter the CIA**, the future director had a secret. John Brennan on Thursday recalled being asked a standard question for a top security clearance at his **early CIA lie detector test: Have you ever worked with or for a group that**

was dedicated to overthrowing the US? "I froze," Brennan said during a panel discussion about diversity in the intelligence community at the Congressional Black Caucus Foundation's annual conference. "This was back in 1980, and I thought back to a previous election where I voted, and I voted for the Communist Party candidate," Brennan was responding to a question about barriers to recruiting diverse candidates for the intelligence fields, including whether past records of activism could hurt someone applying for a clearance later in life.

U.S. gives 'no free pass' to Russia, other nations on cyberespionage, Justice official warns
Washington Post, Ellen Nakashima, 2016 09 16
Washington - A **senior Justice Department official this week issued a thinly-veiled warning to Russia that significant acts of cyberespionage** will not be ignored. That would include the Democratic National Committee hack, which would be considered an act of political cyberespionage of the sort the United States traditionally has not publicly attributed to a culpable foreign spy agency. That set of intrusions, disclosed by the DNC in June, has been **linked to the Russian government by FBI investigators**, though the U.S. government has not publicly acknowledged that. Nonetheless, said Assistant Attorney General for National Security John Carlin, if Russia or any other country thinks "there's going to be a free pass, that we can't figure out what they're doing in cyber-enabled espionage, I think the message should be clear: You're wrong. You can and will be held accountable."

As Russia reasserts itself, U.S. intelligence agencies focus anew on the Kremlin
Washington Post, Greg Miler, 2016 09 15
Washington - **U.S. intelligence agencies are expanding spying operations against Russia on a greater scale than at any time since the end of the Cold War**, U.S. officials said. The mobilization involves **clandestine CIA operatives, National Security Agency cyberespionage** capabilities, satellite systems and other intelligence assets, officials said, describing a shift in resources across spy services that had previously diverted attention from Russia to focus on terrorist threats and U.S. war zones. U.S. officials said the moves are part of an effort to rebuild U.S. intelligence capabilities that had continued to atrophy even as Russia sought to reassert itself as a global power. Over the past two years, officials said, the United States was caught flat-footed by Moscow's aggression, including its annexation of Crimea, its intervention in the war in Syria and its suspected role in hacking operations against the United States and Europe. U.S. spy agencies "are playing catch-up big time" with Russia, a senior U.S. intelligence official said. Terrorism remains the top concern for American intelligence services, the official said, but recent directives from the **White House and the Office of the Director of National Intelligence (ODNI)** have moved Russia up the list of intelligence priorities for the first time since the Soviet Union's collapse.

Comey: US could respond to Russia out of public view
The Hill, Joe Uchill, 2016 09 14
Washington - **FBI Director James Comey on Wednesday pushed back on claims the U.S. was not doing enough to fend off Russian hackers**, noting his agency can respond outside of the public eye. Comey was asked at a Center for Strategic and International Studies event in Washington why there was no visible response to Russian cyber threats and whether that meant the government was unable to handle them. "We have a variety of tools that we as a government can use to deter behavior on the internet outside of norms -- and that can involve a variety of things, only some of which could be visible to the public," he said, quickly clarifying he was speaking in broader terms than just Russia.

FBI's Comey: Twitter fuels 'monster of a bias'
Politico, Louis Nelson, 2016 09 15
Washington - **FBI Director James Comey lamented on Wednesday the loss of public trust in government institutions like the one he runs and blamed "echo chambers" like Twitter for making his job more difficult.** "My children, again, discipline me not to go on Twitter because apparently people say bad things about me on Twitter. But **things like Twitter offer us the opportunity only to encounter views consistent with our own, 24 hours a day,**" Comey explained at a Center for Strategic and International Studies event Wednesday. "There's an opportunity to feed that monster of a bias, that confirmation bias, all the time. So it accelerates that fractionalizing of our society, and it makes it much harder for people like me, like you, like the people in here, to speak reason to folks about our institutions." Comey, a Republican once appointed deputy attorney general by President George W. Bush, and the bureau he helms have been a regular target of GOP attacks over the FBI's decision to recommend against charges following the investigation into Hillary Clinton's use of a personal email server as secretary of state.

CIA Director John Brennan to Birmingham students: 'I don't want the agency to just look like me'
Alabama.com, Ivana Hrynkiw, 2016 09 14
Birmingham, Ala. - **The Director of the Central Intelligence Agency visited Birmingham high school students today to discuss what working for the agency is like and the possibility of starting a CIA ambassador program** at Ramsay High School. Brennan stressed that character and integrity are two of the most important things he looks for in potential officers. "Make sure you're taking care of how you're doing on the personal front... integrity can be quashed in a matter of minutes."

DNI Declines Required Damage Assessment of Clinton's Leaked Email Secrets
Washington Free Beacon, Bill Gertz, 2016 09 14
Washington - The **U.S. intelligence community declined to conduct a required assessment of the damage to national security caused by former secretary of state Hillary Clinton** sending and receiving secrets on a private email server. **"ODNI is not leading an [intelligence community]-wide damage assessment and is not aware of any individual IC element conducting such formal assessments," Joel D. Melstad, a spokesman for the of the Office of the Director of National Intelligence, said**. The most sensitive classified information leaked and possibly obtained by foreign intelligence services included ultra-secret information on U.S. drone strikes, according to American intelligence officials. James Clapper, the director of national intelligence, agreed with security officials who argued against the need to carry out the damage assessment.

Pardon for former NSA contractor Snowden seen unlikely
Reuters, Staff report, 2016 09 14
Washington - The **U.S. government will not budge on its demand that former National Security Agency contractor Edward Snowden return** to face prosecution for stealing thousands of classified intelligence documents, despite new calls for President Barack Obama to pardon him, U.S. officials said on Tuesday. The officials said they expect Snowden's supporters to use the Thursday release of "Snowden" - directed by veteran filmmaker Oliver Stone - to mount a public campaign demanding a pardon before Obama leaves office in January.

Spy agencies concerned about possible U.S. election hacks: NSA chief
Reuters, Staff report, 2016 09 13

Washington - **American intelligence agencies are concerned about reports that foreign governments may be attempting to undermine the Nov. 8 U.S. elections through cyber attacks, Admiral Mike Rogers**, the **director of the National Security Agency, said** on Tuesday. "We continue to be actively concerned," Rogers told a Senate hearing, responding to a question from Senator John McCain, chairman of the Senate Armed Services Committee. Marcel Lettre, Under Secretary of Defense for Intelligence, testified that the government is taking any such activities "quite seriously" and said an "aggressive investigation" is under way. Rogers said he could not provide specifics about spy agencies' current assessment of the alleged hacking in a public setting. But he added, "I will say this, that it continues to be an issue of great focus ... for the **foreign intelligence community**, attempting to generate insights into what foreign nations are doing in this area." Under further questioning, Rogers declined to characterize the activity as by a foreign nation-state.

U.S. Spies Think China Wants to Read Your E-Mail
Bloomberg View, Eli Lake, 2016 09 13
Column - **For more than a decade, the U.S. military and intelligence community has quietly warned that the world's largest telecom equipment manufacturer, Huawei, is an arm of the People's Liberation Army** and that its phones, circuits and routers are instruments of Chinese eavesdropping. Now **these agencies are starting a formal review, led by the FBI and the NSA, examining the national security implications of Huawei's potential participation** in building the U.S. 5G wireless network, according to current and former U.S. intelligence officials. These officials told me that while the two largest U.S. telecom providers -- AT&T and Verizon -- have yet to join up with Huawei on this project, the prospect of such a partnership is real and alarming. They spoke on condition of anonymity because the intelligence assessment was ongoing and classified.

Spies will join fight against slavery gangs, May declares
London Times, Francis Elliott, Fiona Hamilton, 2016 09 20
New York - **Britain's intelligence agencies are to pursue slavery gangs alongside terrorists and drug traffickers**, Theresa May has announced. **MI6 and GCHQ will be given extra resources to disable networks in the countries most involved in the modern slave trade,** such as Albania, Vietnam and Nigeria. MI5, the domestic intelligence agency, is to work with police to free those trafficked to Britain for exploitation in brothels, nail bars, carwashes and elsewhere. The new anti-slavery taskforce, which will begin work next month, is intended to serve as a model for other countries. The prime minister called on world leaders to do more to "rid our world of this evil" as she brought one of her key priorities as home secretary into Downing Street. Home Office figures suggest that between 10,000 and 13,000 immigrants have been lured to Britain or smuggled in illegally to live in slum conditions and work for low wages. Globally, 45 million people are exploited as part of a trade in humans estimated to cost the world economy $150 billion.

MI6 failed to check on torture claims by Lee Rigby killer
London Times, Fiona Hamilton, 2016 09 16

London - **MI6 has been criticised for "serious failings" in its response to allegations that one of the killers of Lee Rigby had been tortured by Kenyan authorities**. **Sir Mark Waller**, the intelligence services commissioner who scrutinises **MI6, MI5 and GCHQ**, spoke out after investigating the handling of claims by **Michael Adebolajo**, who killed Fusilier Rigby outside the army barracks in Woolwich, southeast London, in May 2013 with fellow extremist Michael Adebowale. After the murder it emerged that Adebolajo had been arrested in November 2010 in Kenya where he was believed to have been en route to fight with al-Shabaab, the Somali terrorist group. He later claimed that he was mistreated before being deported on suspicion of terrorism.

GCHQ's 'Great British Firewall' raises serious concern - privacy groups
The Guardian (London), Ewan MacAskill, 2016 09 14
London - **Privacy groups have expressed serious concern at the prospect of a "Great British Firewall" proposed by the surveillance agency GCHQ** to protect major British companies against malicious hackers. They said they were worried that it could be used to deny freedom of speech, with the government potentially able to designate sites they disapprove of as "malware". There is also concern about the prospect of handing over such power to GCHQ, given its track record of intrusion working in tandem with the **US National Security Agency (NSA)**. Thomas Falchetta, a legal officer for Privacy International, said: "Given the broad scope of GCHQ's hacking operations both domestically and abroad, this seems like the fox protecting the chicken." GCHQ insisted that privacy concerns would be "hardwired" into the project and companies would have a choice about whether to participate or not.

GCHQ blocks 58,000 scam emails from government addresses every day
London Daily Telegraph, Cara McGoogan, 2016 09 13
London - The **UK's intelligence agency GCHQ has stepped up the fight against online scammers** and created a tool that blocks malicious emails that appear to be sent from government addresses, but are in fact run by cyber criminals. The blocking system can identify when "gov.uk" emails are being sent from IP addresses not associated with an official government computer and block them. GCHQ has been testing the system on emails from the fake "taxrefund@gov.uk" address, which was sending 58,000 messages a day.

Spymasters plan to build 'Great British Firewall'
Financial Times, Sam Jones, 2016 09 13
London - **Ambitious new plans are being drawn up by GCHQ to create a "Great British Firewall"** to block malicious websites countrywide and combat a doubling of serious cyber attacks threatening national security over the past year. Though still in its infancy, the scheme is intended to be a flagship project for the new National Cyber Security Centre -- a public-facing arm of GCHQ which will open next month to better co-ordinate the UK's digital defence efforts. The NCSC plan envisions private-sector internet service providers, such as BT, Sky or Virgin Media, voluntarily complying with its proposals, circumventing any need for legislation. Consumers will be able to opt out of the censorship should they wish in order to allay concerns over civil liberties.

Intelligence agencies to be reviewed New era Security reshaping plan (Canada)
Canberra Times, David Wroe, 2016 09 18
Canberra - The **Turnbull government is set to embark on a major independent review of the nation's intelligence agencies** as Australia faces an unprecedented array of security challenges ranging from terrorism to the rise of China and cyber-spying. **Prime Minister Malcolm Turnbull's department has confirmed that it is putting in place arrangements for the first major intelligence review since 2011** and the third since the September 11, 2001 terrorist attacks on the US, which prompted a reshaping of intelligence efforts in Australia and among its allies. The review is expected to tackle the unprecedented need for the nation's six intelligence agencies to balance immediate security intelligence requirements to combat terrorism including "lone wolves" with longer-term considerations about geo-strategic changes flowing from the shift in power and wealth to the Indo-Pacific region. A spokeswoman for the Department of Prime Minister and Cabinet, which is setting up the review, told Fairfax Media: "We are working through a proposal for a periodic review and the details involved. It is expected that these considerations will take at least several weeks." It will **be headed by a senior retired intelligence official**. Sources have raised the name **of Allan Gyngell, who led the Office of National Assessments - the agency that collates intelligence into briefings for the Prime Minister and the national security committee of cabinet - from 2009 until 2013.** Dr Blaxland, a senior fellow at the Australian National University's Strategic and Defence Studies Centre, said cyber security was a major organisational challenge because intelligence agencies needed to co-operate on capabilities that were usually top secret with a wide range of organisations including other government departments and critical industries.Australia's intelligence community is made up of **ASIO, ONA, foreign intelligence outfit ASIS, the Defence Intelligence Organisation, the Australian Geospatial Organisation and the Australian Signals Directorate**. Australia's international intelligence co- operation will also likely be scrutinised in the review. The "five-eyes" arrangement in which Australia shares intelligence with the US, Britain, **Canada** and New Zealand is considered by insiders more vital than ever with each country constrained by resources amid a growing workload. Co-operation with regional democracies such as Japan and South Korea has also grown strongly in recent years.

PM talks up counter-terror collaboration
Australian Associated Press, Jennifer Rajca, 2016 09 18
Canberra - **Malcolm Turnbull intends talking up international collaboration in the battle against terrorism** during meetings in the US. The prime minister arrived in New York on Saturday ahead of the 71st session of the United Nations General Assembly, making his first stop the 9/11 memorial and museum with wife Lucy. Later reflecting on the attacks 15 years ago which were many months in the making, he warned the nature of terrorism continues to "mutate". "We have to ward ourselves against attacks like (9/11) in the future," Mr Turnbull told reporters. But there is also the threat of lone wolves, who are rapidly radicalised. "That's why we have to be relentless in our defence of our freedom," he said. Countries have to be ever vigilant in the face of the evolving threat.

Intelligence agencies recruiting hackers
Canberra Times, Henry Belot, 2016 09 17
Canberra - **Federal intelligence agencies are hiring hackers to test the security of government infrastructure and to attack foreign targets**. The recruitment drive, which offers recruits "a licence to hack", comes after a number of attacks on government agencies including the Department of Human Services during the census collection period. Other **targets include Austrade, the Defence Science Technology Group and the Bureau of Meteorology**, which was breached last year by Chinese-based hackers. Another 97 federal departments have

reportedly been told to encrypt more data amid hundreds of attempted intrusions every month. A Defence spokesman said the recruitment of hackers - termed "penetration specialists" -- was not a response to the census attack but a long-term commitment to boost capabilities. Earlier this year, Prime Minister Malcolm Turnbull announced a $230 million cyber security plan to "deter and respond to malicious cyber activities". Recruitment material calls on candidates to "be a force for good and defend Australia from the dark side", or to "go covert" and "catch Australia's phishing foes". The **Australian Signals Directorate** has been scouting schools, universities and technical colleges for talented students, with many now working for the intelligence agency. Professor Austin, an executive with the Australian Centre for Cyber Security, has also called for a national cyber security college to bolster the intelligence workforce.

Terror teams seek data access to identify threats
The Australian, Paul Maley, 2016 09 14
Sydney - **Counter-terrorism authorities could be given greater access to intelligence on criminals,** local police reports, medical data and welfare information to better identify potential terrorists. The government is examining ways information that might help identify people with extremist tendencies could be cross-checked with other data bases to home in on potential terrorists. The work was announced by **Malcolm Turnbull** in July and spearheaded by then counter-terrorism co-ordinator Greg Moriarty, who since has become the Prime Minister's foreign policy adviser. Since then, work has focused on examining the personality and behavioural traits of terrorists or extremists with a view to identifying potential markers, The Australian has been told.

Australia to extend money laundering laws
Reuters, Staff reporter, 2016 09 14
Sydney - The **Australian government is reviving long-stalled plans to extend anti-money laundering and counter-terrorist financing laws** to capture lawyers, accountants, real estate agents and jewellers, Justice Minister Michael Keenan said. The law reforms have been repeatedly shelved since mid-2007 after opposition from some of the affected sectors - most notably the legal profession. The first tranche of the anti-money laundering laws were put in place a decade ago to compel banks, fund managers and casinos to report the source of their money flows, but the anticipated follow-up to cover other sectors did not eventuate. The Australian government is preparing to release proposals to the public for consultation.

MPs' emails continue to be monitored by Parliamentary Service until issue resolved
Stuff.co New Zealand, 2016 09 14
Auckland— Parliament has five options for dealing with Parliamentary Service's blocking and screening of MPs emails **- one of which is to scrap the encrypted system used by MPs altogether**. Speaker of the House, David Carter, addressed MPs concerns about their emails being monitored by Parliamentary Service on Wednesday after an investigation was called for on Tuesday. The issue was revealed when Labour MP Chris Hipkins had an email he was trying to send to a Fairfax journalist blocked on Monday night… An MP who had fallen victim to Parliamentary Service's snooping before was "shocked" by revelations it was up to its old tricks. **UnitedFuture leader Peter Dunne** had his email conversations with then-Fairfax journalist

Andrea Vance wrongly handed over to a ministerial inquiry by Parliamentary Service in 2013. The then-head of Parliamentary Service, Geoff Thorn, resigned amid the fallout. **Dunne had already quit as a minister prior to the ministerial inquiry after refusing to hand over his emails for an investigation into the leaking of a Government Communications Security Bureau (GCSB) report.**

China says Canadian man it released treated 'based on law'
Agence France-Presse, Nomaan Merchant and Rob Gillies, 2016 09 16
Beijing - **China said Friday that a Canadian citizen it detained for two years over spying allegations was allowed to leave the country after a local court issued a verdict in his case**, but it refused to say what the verdict was or why he was detained at all. **Kevin Garratt's** return to Canada was announced Thursday by Prime Minister Justin Trudeau, who said he had pressed Garratt's case with top Chinese officials. Garratt had been indicted by prosecutors in Dandong, a city on the North Korean border where he and his wife ran a popular coffee shop and conducted Christian aid work for North Koreans. He and his wife, Julia, were arrested in August 2014 by the state security bureau. While his wife was released on bail, Garratt remained in custody. China's Ministry of Foreign Affairs, in a faxed statement Friday, said Garratt had been treated "according to law." It said China "fully guaranteed all kinds of procedural rights of Kevin Garratt, and fully respected and implemented the consular rights of the Canadian side," the ministry said. But the ministry declined to say what investigators found or what the outcome of the trial was.

FSB warns 2 Russians trying to sell fake military secrets to CIA
ITAR-TASS World Service, Staff report, 2016 09 20
Moscow - **Two residents of a remote Siberian town Borzya in the Zabaykalsky region tried to feed the U.S. Central Intelligence Agency (CIA) with fabricated "secret information"** in exchange for money, a source in the regional directorate of Russia's **Federal Security Service (FSB) told TASS on Sept. 20**. "In 2015, a Borzya resident born in 1993, left a message on the CIA website suggesting to pass some secret information on the Russian military to the U.S. intelligence. He soon got an answer as the CIA took this proposition seriously and went for it," said the source. "In particular, the agency started inquiring about the military facilities' routine. However, the CIA representatives chose to avoid the topic of money at the time," said the source. Then the adventurous young man, who was working as programmer and could not know any military secrets, turned to a 20-year-old friend who was doing compulsory military service in one of the local bases.

Putin forms super-spy agency just like Stalin's
London Times, Tom Parfitt, 2016 09 19
Moscow - **Russia is to create a new spy ministry that unites several agencies into one powerful structure reminiscent of the Soviet KGB**. President Putin wants to strengthen control over the country's disgruntled elites and dampen flashes of protest despite a resounding win in parliamentary elections yesterday for the pro-Kremlin United Russia. With deep symbolism, the new **Ministry of State Security** (MGB) will carry the same name as the Stalin-era intelligence agency which existed between 1946 and 1953, before the creation of the KGB (Committee for State Security). The new mega-spy agency will combine domestic and overseas espionage operations under one roof. The plan was reported by Kommersant newspaper citing anonymous state officials. **Dmitry Peskov**, Mr Putin's spokesman, said that he could not confirm it, but he did not issue a denial.

Russia 'to revive the KGB' after Putin wins biggest majority
London Daily Telegraph, Marc Bennetts, 2016 09 20
Moscow - **Russia plans effectively to revive the KGB under a massive shake-up of its security forces**, a respected business daily has reported. A State Security Ministry, or MGB, would be created from the current Federal Security Service (FSB) , and would **incorporate the foreign intelligence service (SVR) and the state guard service (FSO), under the plans**. It would be handed all-encompassing powers once possessed by the KGB, the Kommersant newspaper said, citing security service sources. Like the much-feared KGB, it would also oversee the prosecutions of Kremlin critics, a task currently undertaken by the Investigative Committee, headed by Alexander Bastrykin, a former university classmate of President Putin. **The Kremlin has not commented.**

Law Enforcement; State Security Ministry may be established in Russia after extensive law enforcement reform – newspaper
Interfax News Agency, 2016 09 19
Moscow— A **state security ministry may be formed on the basis of the Federal Security Service and the Foreign Intelligence Service** as a result of the pending extensive reform of law enforcement and security agencies in Russia, while the Russian Investigative Committee may again become a part of the **Prosecutor General's Office** that currently supervises its activity, and functions of the Emergency Situations Ministry will be divided between the Defense Ministry and the Interior Ministry, the newspaper Kommersant said on Monday. Preparations for the reform started shortly after the president liquidated the Federal Migration Service and the Federal Drug Control Service and assigned their functions to the Interior Ministry, while the Interior Ministry Forces and some other police units were merged into the Russian National Guard, sources told the newspaper. "In fact, the **Federal Security Service** is planned to regain functions of the Soviet State Security Committee. The new entity is due to acquire the status of a state security ministry," the newspaper said with the reference to its source.

Russia May Create Ministry for State Security and Close Emergencies Ministry
Sputnik (Russia), Staff report, 2016 09 19
Moscow - **Russia may create the Ministry for State Security at the premises of the FSB that would gain the powers of the Foreign Intelligence Service (SVR)** and the majority of the Federal Guard Service's (FSO) departments, the Russian Kommersant newspaper reported, citing its sources. The Russian Investigative Committee could be returned to the Prosecutor General's Office, the newspaper added. According to the media outlet, the Ministry of the Russian Federation for Civil Defense, Emergencies and Elimination of Consequences of Natural Disasters could be closed down and its powers could be transferred to both the Defense Ministry and the Interior Ministry.

Russian hacking an issue of revenge and respect
Washington Post, Andrew Roth, 2016 09 17
Moscow - The **recent spate of embarrassing emails** and other records stolen by **Russian hackers is President Vladimir Putin's splashy response to years of what he sees as U.S. efforts to weaken and shame him on the world** stage and with his own people, according to Russia experts here and in the U.S. intelligence world and academia. Putin is seeking revenge and respect, and trying to reassert Russia's lost superpower status at a time of waning economic clout and an upcoming Russian election, according to interviews with specialists here and in Washington, with a senior U**.S. intelligence official**, recently retired CIA operations officers in charge of Russia, and the last three national intelligence officers for Russia and Eurasia analysis in the **Office of the Director of National Intelligence**. "He's saying, if you think you have the chops to do this - well, we do, too!" said Fiona Hill, a national intelligence officer for Russia during the George W. Bush and Obama administrations who is now at the Brookings Institution.

Filières lyonnaises en Syrie : un suspect de Meyzieu sur les vidéos de l'État islamique
Le Progrès (Lyon), R.S., 2016 09 20
Lyon, France - **Plusieurs individus sont récemment apparus dans les procédures antiterroristes, suspectés d'avoir emprunté des filières de djihadistes depuis la région lyonnaise**. Les **enquêteurs de la DGSI** estiment avoir notamment identifié Brahim Nejara sur une vidéo de l'État islamique (EI), diffusée le 24 novembre 2015. Intitulé Paris s'est effondré , le film salue les attentats du 13 novembre et promet de nouvelles attaques. Plusieurs témoins ont confirmé la corpulence et le bégaiement de cet homme originaire de Meyzieu, qui se vante d'entraîner des troupes de Daesh au "free fight", qu'il pratiquait dans une salle de boxe de la région lyonnaise. Selon l'enquête de la DGSI, il serait parti en Syrie en décembre 2013, dans un 4X4 à 27 400 , achetés par des crédits à la consommation.

Les espions tchèques en Suisse se font pincer
24 Heures (Suisse), Gilles Simond, 2016 09 20
Berne - Le **Conseil fédéral rend publique une nouvelle affaire d'espionnage « Les services secrets tchèques, comme d'ailleurs ceux d'autres pays de l'Est, vouent un intérêt tout particulier à notre pays »** , constate la **Feuille d'Avis de Lausanne**,ce 20 septembre 1961. « Ce dernier, fort heureusement, reste vigilant et perfectionne sans cesse ses moyens de contre-espionnage » , rassure Jean-Pierre Chuard, correspondant à Berne du quotidien. La preuve? Une grave affaire impliquant des ressortissants tchécoslovaques - la quatrième depuis 1954 - a été révélée le jour précédent par le Conseil fédéral, à l'issue d'une séance extraordinaire. Ce dernier « a décidé de protester énergiquement auprès du gouvernement tchécoslovaque contre l'activité d'espionnage exercée par deux fonctionnaires de la légation de Tchécoslovaquie à Berne » . Jaroslav Lis, fonctionnaire de chancellerie, et Vaclav Smisek, attaché culturel, avec statut de diplomate, « ont incité un ressortissant tchécoslovaque occupé comme employé de laboratoire dans une grande entreprise suisse à travailler pour le **service d'espionnage tchécoslovaque** et à livrer sans interruption des informations sur les recherches faites dans les domaines de la physique et de la chimie, ainsi que sur les travaux de développement » , écrit le Département fédéral de justice et police.

Renseignement Impossible de savoir combien de personnes seront espionnées
24 Heures (Suisse), Arthur Grosjean, 2016 09 20
Berne - La **nouvelle loi permettra d'intercepter les données numériques**. Reste à savoir qui sera sur la liste C'est le jour et la nuit. Quand on pose la question du nombre des personnes qui seront espionnées avec la nouvelle loi sur le renseignement, soumise au vote le 25 septembre, les réponses divergent du tout au tout. Ce ne sera que quelques dizaines de cas par année, clament les partisans. Ce seront au contraire des millions, s'émeuvent les opposants. Pourquoi une telle différence de chiffres? C'est ce que nous avons voulu savoir. D'abord, une question de base. Combien de personnes sont surveillées par année par **le Service de renseignement de la Confédération (SRC)? Impossible de le savoir, car l'information est classée confidentielle**. Il apparaît cependant, dans le rapport de gestion du Conseil fédéral 2015, que le Département de la sécurité établit une liste détaillée des opérations secrètes et des groupements soupçonnés de menacer la sûreté intérieure ou extérieure. La liste est soumise pour approbation au Conseil fédéral, et à la Délégation des commissions de gestion pour information.

German prosecutors charge man with spying for Indian intelligence
DPA News Agency, 2016 09 20
Karlsruhe, Germany (dpa)--**German prosecutors have charged a 58-year-old civil servant with espionage on behalf of India's foreign intelligence** agency. The German national is suspected of "occupation as a secret service agent and disclosure of official secrets in 45 cases," the federal prosecutor's office in Karlsruhe said in a statement. The man is accused of spying on Indian nationals in Germany - mainly political dissidents and **Sikh extremists** - while working at a foreigners' registration office in the western state of North Rhine-Westphalia. He was apprehended by German authorities in February and has been in custody since. The date of the trial - set to take place in Berlin - has yet to be announced.

Dutch security service calls for end to chat app encryption
NL Times, Janene Pieters, 2016 09 19
The Hague - **Dutch intelligence service AIVD wants to restrict encryption on chat services like WhatsApp and Telegram as much as possible, head of the service Rob Bertholee said** in an interview with the Volkskrant. According to him, being able to read suspected person's communication is essential for "protecting the legal order". With this position, the AIVD is standing counter to the government. Dutch politics find strong encryption very important for protecting privacy and calls restricting its availability "undesirable". Bertholee does not understand this position. "Then you as government also have to accept that we are no longer able to read the communication of terrorists." **The AIVD head also does not understand why companies and privacy organizations** so strongly hammer on the privacy of users of chat services. "I also think that privacy protection is very important, but would the people who set privacy as an extreme goal be just as enthusiastic in pursuing it if they were the victims of an attack?" According to him, the threat towards the Netherlands has "never been this big".

Germany's intelligence agency illegally gathered data
Irish Times, Derek Scally, 2016 09 19
Berlin - **Germany's foreign intelligence agency (BND) illegally collected and stored masses of data from innocent German citizens who were unwittingly dragged into mass surveillance dragnets.** A leaked, classified report by the Federal Data Protection Commission (FDPC) found that, for every **BND** targeted surveillance operation, the intelligence agency was sucking up and storing data of 15 citizens not part of any investigation. "These infringements of constitutional rights are conducted without any legal basis and thus harm the constitutional right of informational self- determination of [innocent] people," the FDPC report adds.

Shouting at Americans: A Peek Into French Signals Intelligence (Canada)
Council on Foreign Relations, Alex Grigsby, 2016 09 16
Comment: Something remarkable happened a few months ago. **Bernard Barbier, the former head of signals intelligence (SIGINT) between 2006 and 2014 at France's foreign intelligence agency (DGSE),** gave a speech at one of France's top engineering schools in which he reflected on his career and **imparted some of his wisdom to students**. He also **said some things that he probably shouldn't have, like confirming that France was behind the Animal Farm advanced persistent threat, commenting on the SIGINT capabilities of European allies, and reacting to the revelation that the U.S. National Security Agency (NSA) had compromised the networks of the French presidency**. Last week, Barbier's speech surfaced on YouTube but was quickly taken down (UPDATE: A new version of the video is up here. H/T Boing Boing). However, it was up long enough for French daily Le Monde to transcribe some of the highlights. Here they are, paraphrased and translated from the original French. 1. "I got the order from Mr. Sarkozy's successor [current President Hollande] to shout at the Americans ... it was a great moment in my professional career" Barbier recalls that he was first informed of a possible compromise at the Élysée palace in 2012, when a former colleague working IT security at the palace reached out for analysis on a piece of malware. With the help of a new metadata capability the French obtained in 2012 and Edward Snowden's revelation of the NSA's QUANTUM capability in 2013, Barbier's staff concluded that the attack on the Élysée was the work of the United States. Barbier recalls: 2. "And yes, it was a Frenchman" In 2014, Le **Monde published documents from the Snowden archive revealing that Canada's SIGINT agency, the Communications Security Establishment (CSE), suspected that Paris was behind a cyber espionage campaign that began in 2009 targeting Iran's nuclear program but also targeting computers in Canada**. CSE was able to attribute the campaign to the French based on some reverse engineering revealing that the malware developer used references to a French children's cartoon character, Babar the Elephant.. (Note: Alex Grigsby is the assistant director for the Digital and Cyberspace Policy program at the Council on Foreign Relations.)

SBU to be reformed in line with NATO standards
Ukrinform, Staff report, 2016 09 15
Brussels - The **Security Service of Ukraine (SBU) will be included in the program of Ukraine-NATO cooperation on defense reform and security. Acting Head of Mission of Ukraine to NATO Yehor Bozhok said in an exclusive interview** with own Ukrinform correspondent in Brussels. "We include the SBU reform in the course of our cooperation with NATO," the diplomat said.

German intelligence agency says terror perpetrators are 'controlled from afar'
Deutsche Welle, Staff report, 2016 09 14
Berlin - After the arrest of three Syrian terror suspects residing in northern German refugee shelters, **Hans-Georg Maassen** has sounded the alarm. **"We are concerned about the new type of perpetrator who seems to be acting alone," the head of Germany's domestic intelligence agency, the Federal Office for the Protection of the Constitution (BfV),** told journalists in Berlin on Wednesday. Maassen said these potential attackers are presumably given orders by foreign terror leaders through encrypted instant messaging services. "This scenario is especially challenging for security authorities - as is the uncovering of sleeper cells," he stressed.

Bulgaria's Security Agency Deemed 181 Asylum Candidates 'Dangerous' in 2015
Sofia News Agency, Staff report, 2016 09 14

Sofia - The deputy head of Bulgaria's domestic security and counter-intelligence agency has said as many as 181 asylum candidates were considered a "threat to national security" last year. The State Agency for National Security (DANS) also took steps for the expulsion of 29 foreign nationals, its deputy chairman Oleg Petkov has told daily 24 Chasa. As many as 17 300 migrants were interviewed over the same period, Petkov has explained. (Profilers from DANS, the State Intelligence Agency, and the State Agency for Refugees are to hold interviews with all asylum candidates). His organization barred three foreign nationals from traveling via Bulgaria last year on suspicion they were willing to join a terrorist organization.

L'espion qui parlait trop
L'Express, E. Pa., 2016 09 14
Paris - **Les propos tenus par Bernard Barbier, l'ex-directeur technique de la sécurité extérieure (DGSE)**, devant les élèves de l'école Supélec, **ont déplu dans son ancienne maison**, tenue au secret. Diffusée sur YouTube, la conférence dans laquelle l'espion confirme le piratage de l'Elysée par les Américains (L'Express du 20 novembre 2012) a été retirée à sa demande. Mais elle a été copiée et rediffusée, suscitant des remous à Washington.

Le poste très stratégique du " dernier " commissaire européen britannique
Le Monde, Cécile Ducourtieux, 2016 09 14
Strasbourg - **En attendant le Brexit, l'ex-ambassadeur du Royaume- Uni en France, Julian King, sera chargé des questions de sécurité** Si l'on m'avait dit, il y a quelques mois encore, que je serais présent ici parmi vous, je ne l'aurais probablement pas cru. La situation est tout à fait singulière. " C'est par ces mots que Julian King, le probable futur commissaire britannique, a entamé son audition au Parlement de Strasbourg, lundi 12 septembre. M. King n'a pas hérité d'un portefeuille insignifiant, ridicule ou humiliant. Certains avaient évoqué pour lui, brièvement, le rôle de gestionnaire en chef des bâtiments de la Commission... Mais, à 52 ans, ce diplomate de carrière, pur produit du Foreign Office, s'est vu attribuer un tout nouveau maroquin, sur un **sujet stratégique : la sécurité.** Le poste a été créé sur mesure pour celui qui était encore, au début de l'été, ambassadeur du Royaume-Uni en France. Parmi ses priorités, renforcer les moyens financiers et humains d'Europol (l'agence des polices européennes) ou s'assurer que les décisions prises en matière de sécurité sont appliquées.

Résistances islamiques au Renseignement
Le Temps (Suisse), Valérie de Graffenried, 2016 09 14
Berne - **Nicolas Blancho et son Conseil central islamique suisse s'opposent à la loi sur le renseignement**. Le conseiller fédéral Guy Parmelin s'en est étonné. Le propre service d'analyse et de prévention du CCIS a été très peu sollicité « Dans cette campagne, je suis étonné de l'opposition du Conseil central islamique suisse. Je constate que l'organisation de Nicolas Blancho combat cette loi et c'est un signal plutôt inquiétant. » Cette petite phrase, le conseiller fédéral **Guy Parmelin l'a récemment lâchée dans Le Matin Dimanche, à propos de la loi sur le renseignement (LRens),** soumise en votation le 25 septembre. Avant d'ajouter: « Je ne vais pas aller jusqu'à dire que son organisation a quelque chose à se reprocher, car ce n'est certainement pas le cas. Mais cette campagne était aussi l'occasion pour certains milieux de prouver qu'ils condamnent le terrorisme et les risques de dérives en la matière. » Entrer dans les mosquées Nicolas Blancho et ses camarades combattent effectivement la **LRens**. Parce qu'ils se sentent dans le viseur du **Service de renseignement de la Confédération (SRC)** Cette loi permettra aux collaborateurs du SRC de procéder à des écoutes téléphoniques, d'infiltrer des ordinateurs grâce à des mouchards, de poser des caméras dans des appartements privés ou encore de pénétrer des mosquées.

Volkswagen Teams Up With ex-Shin Bet Chief on Cyber Security
Haaretz, 2016 09 15
Jerusalem - **Volkswagen is forming a company with the former head of Israel's Shin Bet intelligence agency to develop cyber security systems for internet-connected cars** and self-driving vehicles, the partners said in a statement on Wednesday. The new company, CyMotive Technologies, will be 40 percent owned by the German automaker and 60 percent by **Yuval Diskin and two former colleagues who also had senior posts in the Shin Bet**. The statement did not say how much Volkswagen would invest in the venture, which has an office in a suburb of Tel Aviv and will also open one in Wolfsburg, Germany. Building on its expertise in technology, Israel has emerged as a leader in the race to keep cars secure and prevent the nightmare scenario of a hacker commandeering your vehicle. International groups including Harman International Industries and IBM have already bought local companies or invested in research centers.

Israel suffers serious blow to intelligence gathering abilities
Jerusalem Post, Yaakov Lappin, 2016 09 15
Jerusalem - Unless operators succeed in stabilizing the systems onboard the **advanced Ofek-11 military satellite, launched on Tuesday from Palmahim Air Base, the defense establishment faces a real disappointment in its hopes to move forward Israel's space-based intelligence capabilities.** Little is known about the Ofek-11 satellite, other than the fact that it carries a payload of an advanced Elbit Systems-made electro-optic camera, and has a sophisticated propulsion system made by Rafael Advanced Defense Systems, which runs on hydrazine fuel. The satellite orbits the Earth every 90 minutes, and would have given IDF Military Intelligence, as well as other defense agencies, advanced visual intelligence abilities, enabling Israel to keep close tabs on developments in areas controlled by its enemies near and far..

Romanian ex-secret service agent held over plot against anti-graft chief
Times of Israel, Raoul Wootliff, 2016 09 15
Jerusalem - A **former Romanian secret service agent has been arrested for allegedly masterminding an operation that used an Israeli private intelligence firm** to intimidate a key anti-corruption official, prosecutors said on Wednesday. Daniel Dragomir is accused of trying to target people "he considered responsible" for his prosecution in 2015 on charges including money laundering. He is alleged to have asked a representative of Israeli firm Black Cube to hack the email of people including **Laura Kovesi, head of the National Anti-corruption Directorate (DNA),** in the hope of finding compromising information, prosecutors said. Kovesi, a 42-year-old former professional basketball player, is spearheading an unprecedented anti-corruption drive in one of Europe's poorest and most graft-prone nations. Probes by the DNA have cost a string of prominent Romanians their jobs in recent years.

Shortage of security professionals hindering UAE's cyber crime fight
The National (UAE), Jennifer Bell, 2016 09 14
Abu Dhabi - The **UAE must invest in training its own security professionals as a priority in the war against cyber crime**, as the global pool of skilled workers is shrinking, experts say. The Arab Gulf States Institute in Washington said **cyber attacks in the region cost US$1**

billion (Dh3.67bn) a year – an amount predicted to grow. The institute said the Middle East was fertile ground for cyber crime, with its wide use of technology and high-value targets. Mike Weston, vice president of Cisco Middle East, said that although there were more than a million cyber security positions available worldwide, the shortage of professionals to fill them was likely to grow rapidly.

NICA: 170 job vacancies up for grabs

The Philippine Star, 2016 09 20

Manila— The **National Intelligence Coordinating Agency (NICA) is set to fill 170 job vacancies to perform its mandate and carry out its operations**. The agency is hiring analysts, researchers, information technology (IT) and technical personnel, lawyers and medical and dental staff, an advertisement published yesterday in The STAR showed.The advertisement said those who would be hired would be “part of the change” and would “contribute to national development.” NICA is looking for 10 analysts, 10 junior analysts, and 20 senior analysts. Analysts will be tasked to process and analyze information on national security concerns as well as prepare, review and update reports for policy makers, according to a job description posted on the NICA website.

Expert urges Korea to step up fight against money laundering

Korea Herald, Song Su-hyun, 2016 09 19

Seoul - The **head of a new international educational institute on anti-money laundering urged Korea to upgrade its legal system to better combat illegal financial transactions and terrorism financing.** Kevin Stephenson, the inaugural director of the Training and Research Institute under the **Financial Action Task Force**, or FATF TREIN, slated for official launch in Busan on Tuesday, acknowledged the efforts the Korean government has made so far to root out illegal financial transactions, but asked for more to be done. "Korea has done a great job by joining FATF as a full member in 2009 and successfully completing the FATF presidency," Stephenson said at a press conference Monday in Seoul. "However, since the FATF standards have been enhanced, Korea needs to upgrade its legal system and put more focus on effectiveness. Korea should focus on achieving more money laundering convictions and confiscating more proceeds of crime

Film Shines Light on South Korean Spy Agency's Fabrication of Enemies

New York Times, Cho Sang Hun, 2016 09 18

Seoul - They were beaten and forced to make false confessions. Many spent years in prison. Some were executed. Most were forgotten for decades. **Over six decades, scores of people were arrested by the South Korean authorities and accused of spying for North Korea, only to be exonerated**, sometimes decades later, long after many of them had served lengthy prison sentences. There has never been an official tally of the exact number of people affected, but a new film has documented almost 100 cases, some of which involved alleged spy rings with multiple people. The cases have mainly disappeared from public memory, but the new documentary, by the investigative journalist Choi Seung-ho, is lifting a veil on what he sees as one of the most shameful legacies of **South Korea's counterintelligence authorities**. Just before the closing credits of the film, **"Spy Nation**," a list of the names of the falsely accused scrolls down the screen. It is an eloquent indictment of the abuse of power engaged in by South

Korea's counterespionage agencies, especially the National Intelligence Service, in the name of fighting the Communist threat from North Korea.

La menace terroriste est "plus préoccupante" au niveau de la bande sahélo-sahélienne
All Africa, Journaliste maison, 2016 09 19
Paris - La **menace terroriste** est "plus préoccupante" au niveau de la bande sahélo-sahélienne qui **nécessite la poursuite du dialogue et la coopération entre l'Algérie et la France**, a indiqué lundi à Paris le président du Conseil de la nation, Abdelkader Bensalah. "Force est de constater que la menace terroriste est encore plus préoccupante au niveau de la bande sahélo-sahélienne, objet de nos discussions d'aujourd'hui", a-t-il précisé, soulignant que la situation est aggravée par "la prolifération de la criminalité organisée sous toutes ses formes, ainsi que par des actions subversives d'organisations terroristes transnationales visant la déstabilisation aussi bien de cette région, que celles de l'Afrique du Nord et du bassin occidental de la Méditerranée".

Spies use C 51 to gather intelligence from Canadians detained overseas
Canadian Press, Jim Bronskill, 2016 10 04
Ottawa - **Canada's spy agency is using controversial powers under the C-51 anti-terrorism legislation to gather intelligence from Canadians held in foreign prisons,** a newly released memo reveals. **Amnesty International Canada and the NDP are expressing concerns about the potential pitfalls of the previously unknown information-sharing arrangement between the Canadian Security Intelligence Service and Global Affairs Canada**. In the House of Commons, **Public Safety Minister Ralph Goodale** stopped short of defending the arrangement Monday, saying a federal national security review would ensure the government's approach is consistent with ``what Canadians want.'' The spy service and Global Affairs made the sharing deal this year through the Security of Canada Information Sharing Act _ part of the omnibus security legislation known as C-51, says a secret May memo to Goodale from **CSIS director Michel Coulombe.** The provisions, ushered in by the previous Conservative government, expanded the exchange of federally held information about activity that ``undermines the security of Canada.'' ``Information collected by (Global Affairs Canada) through the provision of consular services can be directly relevant to investigations of threats to the security of Canada,'' says the heavily censored CSIS memo, obtained by The Canadian Press under the Access to Information Act. The sharing arrangement between CSIS and Global Affairs underscores the concerns raised by the privacy commissioner and reaffirms the NDP's desire to see C-51 repealed, said Matthew Dube, the party's public safety critic. ``The appropriate safeguards aren't in place.'' Neither Global Affairs Canada nor CSIS would discuss the sort of information the spy service hoped to obtain through the new sharing arrangement. Both agencies say they carry out their duties in accordance with relevant legal and privacy obligations.

The darker side of Intelligence
The Province (Vancouver), Dana Gee, 2016 10 04
Column: **The Romeo Section** Oct. 5, CBC 9 p.m. For its second season, creator Chris Haddock has planted the espionage thriller The Romeo Section firmly against the veiled landscape of dark government activity. **Set in Vancouver, the CBC-produced series' central storyline has operative Wolfgang McGee (Andrew Airlie) investigating an alleged terrorist incident. In doing so, he opens doors into the shadowy side of intelligence**. "I think there has been a lot of effort over the years by government agencies to keep the public's prying eyes off what is going on," said Haddock about the show's focus. To some, the government involved in shady, below-the-radar activities is the currency of conspiracy theorists. But a truly functioning democracy demands that the citizenry question authority. "Everyone treats conspiracy as a nasty word, but really, that is what we humans do," said Haddock, who has a long list of credits including DaVinci's Inquest, Intelligence and Boardwalk Empire. "If somebody is a conspiracy theorist, they might just be a good thinker. You can't just automatically dismiss them. "They said Edward Snowden was a conspiracy theorist until he comes up with the evidence," added Haddock from the set during the shooting of Season 2's eighth episode. "This is a guy who has done wet work in the field," said Airlie. "He's served some real time in some very dangerous scenarios and done things that most Canadians would like to believe that we don't do. **Sure, the CIA does stuff like that but CSIS doesn't do things like that**."

Balancing rights and security
National Post, Ralph Goodale, 2016 10 03
Op-ed: **Last week, the House of Commons began debate on Bill C-22 - a measure which is "long overdue" according to Wesley Wark, a national security professor at the University of Ottawa.** This legislation creates a special committee of members of Parliament and senators with extraordinary access to classified information, and a mandate to ensure that the government is effective at keeping Canadians safe, while equally safeguarding their rights and freedoms. It's a major boost in the accountability of those responsible for our collective security. The committee will be independent and non-partisan. Only four of its nine members (seven MPs and two senators) will be from the government. Ministers and parliamentary secretaries are not allowed. It will have the resources to get the job done. It will set its own agenda and report when it sees fit. **Unlike existing national security review bodies, it will not be siloed to one agency - the committee will be able to examine any department or agency responsible for any aspect of national security or intelligence, going wherever the evidence takes them.** It fills a major gap. Canada is the only "Five Eyes" country (Canada, the U.S., Britain, Australia and New Zealand) without a parliamentary review mechanism. Such a mechanism has been recommended repeatedly over the past decade - in two parliamentary reports, by two independent inquiries and by the auditor general. We've tried to learn from the experience of others, while crafting an approach for Canada that best suits our circumstances. The University of Ottawa's Craig Forcese - an expert on national security law - says the model in Bill C-22 " ... will be a stronger body than the U.K. and Australian equivalents." It will set a new standard. Note: Ralph Goodale is Canada's minister of public safety.

Canada's CIA Had No Policy for Collecting and Using Massive Amounts of Data
Motherboard Blog, Jordan Pearson, 2016 10 01
Ottawa- The **Canadian Security Intelligence Service** (CSIS), the country's CIA equivalent, **used large datasets to track and identify persons of interest without a policy to guide their collection, retention, or use, according to a new report from Canada's intelligence watchdog.** CSIS is tasked with tracking terror suspects within and outside of Canada, and the investigation was undertaken in the context of new, and incredibly broad, powers bestowed upon the spy agency by the controversial Bill C-51. The **Communications Security Establishment**, CSIS' sister organization and Canada's answer to the NSA in the US, **stopped sharing metadata with foreign spying partners under similar circumstances last year** when an internal review concluded that the agency had handled data improperly. The new report also suggests that CSIS employed overly generous interpretations of the law in order to collect more data than it was supposed to.

Mali: le Canada planifie son soutien aux opérations françaises
45eNord.ca, Nicolas Laffont, 2016 10 01
Ottawa - Le **ministère de la Défense nationale a indiqué** à 45eNord.ca dans un courriel que même si ce n'est pas encore finalisé «**les Forces armées canadiennes travaillent actuellement sur des plans pour assurer la continuité du transport aérien soutien stratégique aux efforts antiterroristes français dans la région du Sahel**. Comme ce fut le cas avec la récente contribution des FAC en 2015, les avions de transport aérien seront probablement utilisés pour le transport de troupes et de matériel français».

CSIS suspends some bulk data mining programs pending new guidelines
Globe and Mail, Colin Freeze, 2016 09 30
Ottawa - **Canada's domestic spy service has halted its "bulk collection" of data after criticisms were raised within government about the lawfulness of such technique**. A watchdog agency's new report about the Canadian Security Intelligence Service speaks of

littleknown CSIS data- mining programs, and of how some have recently been suspended because of a lack of clear rules and guidelines surrounding them. CSIS is said to have wanted to leverage big pools of data "to identify previously unknown individuals of interest by linking together types of information that have mirrored threat behaviour," according to the report. But after concerns raised in the report, "CSIS agreed to halt ingesting bulk data sets pending" new rules. **These findings are from the Security Intelligence Review Committee (SIRC), the watchdog agency that tabled its annual report in Parliament on Thursday**. The cryptic discussion of CSIS's "data management and exploitation activities" is intriguing on several levels. Talk of spies "ingesting" data in "bulk" has had connotations of intelligence officials indiscriminately amassing citizens' telecommunications records. Yet CSIS officers, who work to track terrorists within Canada, are generally understood to handle cases one wiretapping warrant at a time. This makes them more like conventional police detectives than the foreignfocused signals-intelligence - or "sigint" - spies who deal in volume. This week, the federal Privacy Commissioner called for Parliament to pass new laws after finding Canada's other intelligence agency had been careless with records about the logged telecommunications of Canadians. **Communications Security Establishment** (CSE), a foreignfocused "sigint" agency, says that whenever it collects Canadians' telecommunications trails, it does so only "incidentally." That's because it is pursuing foreign records in enormous volumes. While CSIS and CSE have vastly different mandates, they also have adjacent headquarters.

Military will bolster French counterterror operation
Canadian Press, Lee Bethiaume, 2016 09 30
Ottawa - As the Liberal government contemplates which United Nations peacekeeping mission to join, the **Canadian military is gearing up to support a major French counterterrorism operation in northern Africa.** Defence officials say planning is underway for Canada to send military transport aircraft to help France in its fight against Islamic militant groups in five countries: Mauritania, Mali, Burkina Faso, Niger and Chad. About 3,000 heavily armed French troops have been hunting al Qaedalinked fighters in the region, called the Sahel, since August 2014. Code-named Operation Barkhane, the mission has also been recently tasked with supporting UN peacekeepers in Mali if required.

New Democrats want Trudeau government to rescind torture directive
Canadian Press, Jim Bronskill, 2016 09 29
Ottawa - The **NDP is calling on the Liberal government to immediately rescind a directive that allows security agencies to use information that may have been obtained through torture**. The Liberals _ who opposed the ministerial directive while in opposition _ say it will be reviewed as part of a sweeping examination of national security policy. "The input of all Canadians, including all members of Parliament, is most welcome," said Scott Bardsley, a spokesman for Public Safety Minister Ralph Goodale.. The **policy applies to the Canadian Security Intelligence Service, the RCMP, the Canada Border Services Agency, the Communications Security Establishment and National Defence.** Human rights advocates have roundly criticized it as effectively condoning the torture of people in overseas prisons, contrary to international law and Canada's United Nations commitments.

C-51: de l'information échangée sans garde-fou
Le Devoir, Hélène Buzzetti, 2016 09 28
Ottawa - Sitôt adoptée, sitôt utilisée. **L'appareil gouvernemental a eu recours à la Loi antiterroriste (C-51) dès les premiers mois de son entrée en vigueur, mais les ministères fédéraux n'ont pas pris les précautions qui s'imposaient**, déplore le **commissaire à la protection de la vie privée du Canada, Daniel Therrien.** Le projet de loi C-51, adopté dans la controverse en 2015, n'a pas seulement accordé de nouveaux pouvoirs aux forces policières et

au Service canadien du renseignement de sécurité (SCRS). Il a aussi autorisé les 128 institutions fédérales (ministères, agences, Gendarmerie royale du Canada, etc.) à s'échanger des informations qu'elles détiennent sur des citoyens canadiens. **Dans son rapport annuel déposé mardi, Daniel Therrien révèle que, au cours des six premiers mois d'application de la loi, de l'information a été communiquée à 58 reprises.**

Canada's anti-terrorism legislation is a failure, says visiting professor
New Brunswick Telegraph Journal, John Chilibeck, 2016 09 28
Fredericton - **Ottawa's anti-terrorism legislation that was quickly put together following deadly attacks in 2014 has always bugged Kent Roach**. The University of Toronto law professor has spent much of his career working on terrorism cases, including as director of research for the inquiry into the **Air India bombing of 1985** that killed 329 people, most of them Canadians.. **Roach and Craig Forcese, a law professor at the University of Ottawa, both testified to House of Commons and Senate committees before the bill was passed, but their advice was largely ignored**. They have since published the book False Security: The Radicalization of Canadian Anti-Terrorism, in which they argue the law was hastily and poorly drafted, with the government making no transparent attempt to learn from the security failures that might have led to the two October 2014 attacks. Justin Trudeau's Liberal government has promised to revise the anti-terrorism legislation next year and provide more oversight, but based on a green paper released last week that sets the stage for more debate and discussion, the two professors have little faith the right changes will be made. Another major flaw, he says, is the legislation gives Canada's spy agency, the Canadian Security Intelligence Service, too many powers to withhold evidence from police. He says this could lead to fewer prosecutions of terrorists. "**We want CSIS and the RCMP sharing information and working together,**" he said. "If there's one thing we've learned in Canada, we are not very good at terrorism prosecutions."

Privacy watchdog urges Ottawa to pass 'metadata' legislation
Globe and Mail, Colin Freeze, 2016 09 28
Toronto - **Canada's privacy czar is calling on the Liberals to fulfill a promise to pass laws constraining the federal spies who are allowed to capture records of Canadians' phone and Internet activities.** The **Communications Security Establishment needs new legislation because it has not been careful enough in handling such material, says Daniel Therrien, the Privacy Commissioner of Canada.** "The National Defence Act should be amended," he said in an interview. "I would want some clarity around the standards used to collect and share 'metadata.' Right now, the act is completely silent on this." "Metadata" is the name federal officials give to phone logs, Internet exchanges and similar activity that spy agencies can electronically intercept in bulk. The substance of the underlying communications and the identities of communicators are not known. CSE has been tasked with providing intelligence about foreigners to the Canadian cabinet since the 1940s.

Feds failed to assess privacy implications of C-51 info-sharing: watchdog
Canadian Press, Jim Bronskill, 2016 09 28
Ottawa - The **government hasn't done enough to protect the privacy of "law-abiding Canadians" from new information-sharing powers in the omnibus security legislation known as C-51, says a federal watchdog. Privacy commissioner Daniel Therrien** said Tuesday he was surprised that many federal agencies did not examine the effect the powers in the controversial Conservative bill would have on people's personal information. In his annual report, Therrien recommended agencies carry out formal privacy impact assessments _ a key tool required under government policy when departments set up any new program or activity involving personal information. The **Security of Canada Sharing Information Act**, part of C-

51, expanded the exchange of federally held information about activity that "undermines the security of Canada." Therrien also **called** Tuesday **for amendment of the National Defence Act to clarify the powers of Canada's cyberspy agency, the Communications Security Establishment, along with specific legal safeguards to protect the privacy of Canadians.**

Watchdog warns terror bill threatens privacy
Toronto Star, Alex Boutilier, 2016 09 28
Ottawa - **Law-abiding Canadians are at risk of having their personal information scooped up by broad new powers granted to Canada's security agencies**, according to a new report. **Privacy commissioner Daniel Therrien** said Tuesday that the federal government failed to assess the privacy implications of the new information-sharing powers granted to 17 departments and agencies under Bill C-51.. Under Bill C-51, the controversial terrorism laws brought in by the previous Conservative government, several security and law enforcement agencies can share information on "activities that undermine the security of Canada." The broad powers were granted to security agencies such as CSIS and the RCMP, but also to departments handling immigration, health, foreign affairs and transportation. Therrien's office found the powers had been used a total of 110 times over six months.

Ex-CSIS official backs Canada's attempt to get cyber promise from China
It World Canada, Howard Solomon, 2016 09 28
For several years **Western governments have blamed official Chinese or Chinese-government backed groups for hacking into databases of public and private organizations**. But a year ago the U.S. president Barack Obama and Chinese president **president Xi Jinping** signed an agreement not to direct or support cyberattacks that steal corporate data for economic benefit. Now **Canada wants to do the same**. A spokesman for Public Safety minister Ralph Goodale told the Globe and Mail that this country will try to get a similar agreement, which has also been negotiated between China and the United Kingdom. **The idea has the support of Ray Boisvert**, a former assistant director for intelligence at the **Canadian Security Intelligence Service** (CSIS) who now has his own security consulting company. "I do support this type of approach," he said in an email to ITWorldCanada.com.

U.S. intelligence community opposes limits to privacy watchdog: memo
Reuters, Dustin Volz, 2016 10 04
Washington - The **U.S. intelligence community does not support pending congressional legislation that would curtail the authority of a privacy watchdog that advises the president on government surveillance programs, according to an unclassified memo** seen by Reuters. The position amounts to a rare show of support for the Privacy and Civil Liberties Oversight Board, or PCLOB, from the spy agencies it is designed to oversee. It came in a letter to the leaders of congressional intelligence committees that outlined opposition to several sections of an annual intelligence funding bill awaiting action in Congress. President Barack Obama's senior advisers would recommend a veto of the bill if Congress does not address the concerns raised, the letter said. The intelligence community "strongly opposes" part of the proposed legislation seeking to limit the jurisdiction of PCLOB to the privacy rights of Americans, and not foreigners, the letter, signed by Director of National Intelligence James Clapper, reads.

Keith Gartenlaub, Target in China Spy Probe, Appealing Porn Sentence
Newsweek, Jeff Stein, 2016 10 03
New York - A **former Boeing engineer who was convicted on a controversial pornography possession charge after the government failed to make a Chinese espionage case against him says he is appealing his sentence. Keith Gartenlaub**, a senior computer systems manager at Boeing's Long Beach, California facility, came under suspicion in 2013 after an FBI agent read a magazine article suggesting China had a spy inside the aerospace company. The agent's concerns were heightened when he learned that Gartenlaub and his Chinese-born wife made frequent visits to Shanghai, according to court documents. Armed with a secret warrant from the **Foreign Intelligence Surveillance Court**, which authorizes highly classified investigations, **FBI agents** obtained Gartenlaub's emails and phone records, broke into his house to copy his computer files and began following the couple around. But after 21 months the agents could not make a case that either was involved with spying for China. They did, however, find caches of child pornography on four of Gartenlaub's hard disks, two of which came from a beach house he previously shared with friends.

Tunisian men detail CIA black site torture involving electric chair and more
The Guardian (London), Spencer Ackerman, 2016 10 03
New York - **Two Tunisian men held in secret CIA prisons for more than a year have told a leading human rights organization they were tortured with gruesome and previously unknown techniques**. The men, who were released to Tunisian custody in 2015, described being threatened with placement in an electric chair at a black site prison in Afghanistan in 2002; being beaten with metal batons while their arms were suspended by a bar above their heads; and having their heads pushed into barrels of water. One of the men, Ridha al-Najjar, was a pivotal detainee for the CIA, which believed him to be a bodyguard for Osama bin Laden. Najjar was the first man taken by the CIA to the black site, which was code-named Cobalt and was where at least one detainee is known to have died. His interrogation became a template for others at the site, according to the CIA inspector general. Najjar said the interrogators forcibly inserted something into his anus. According to a footnote in the 2014 Senate intelligence committee's investigation into torture, John Brennan, now CIA director, was among the senior CIA officials briefed in the summer of 2002 on the interrogation plan for Najjar. According to the Senate report, the plan included isolation, "'sound disorientation techniques', 'sense of time deprivation', limited light, cold temperatures, and sleep deprivation".

Pentagon Paid for Fake 'Al Qaeda' Videos
The Daily Beast, Crofton Black & Abigail Fielding-Smith, 2016 10 02
Washington - The **Pentagon gave a controversial UK PR firm over half a billion dollars to run a top secret propaganda program in Iraq**, the Bureau of Investigative Journalism can reveal. **Bell Pottinger's** output included short TV segments made in the style of Arabic news networks and **fake insurgent videos which could be used to track the people who watched them,** according to a former employee. The agency's staff worked alongside high-ranking U.S. military officers in their Baghdad Camp Victory headquarters as the insurgency raged outside. Bell Pottinger's former chairman Lord Tim Bell confirmed to the Sunday Times, which has worked with the Bureau on this story, that his firm had worked on a "covert" military operation "covered by various secrecy documents." Bell Pottinger reported to the **Pentagon, the CIA and the National Security Council on its work in Iraq**, he said. Bell, one of Britain's most successful public relations executives, is credited with honing Margaret Thatcher's steely image and helping the Conservative party win three elections. The **agency he co-founded has had a roster of clients including repressive regimes and Asma al-Assad, the wife of the Syrian president.**

Shadow Brokers' Whine That Nobody Is Buying Their Hacked NSA Files
Motherboard Blog, Joshua Kopstein, 2016 10 02
Washington - The **hacking group responsible for stealing a large cache of National Security Agency hacking tools is very upset that no one seems to be bidding on their pilfered** files. Early Saturday morning, the person or group which calls itself **"TheShadowBrokers"** authored another bizarre rant, expressing their annoyance at the seeming lack of interest in ponying up bitcoins to release the full set of stolen files. "Peoples is having interest in free files ...

U.S. spies finally embracing iPhones, wireless connections
Bloomberg, Nafeesa Syeed, 2016 10 02
Washington - **U.S. spies are catching up to the masses in their gradual embrace of 21st-century technology,** from installing wireless connections in secure facilities to wielding iPhones and tablets, according to an official with the **U.S. National Geospatial-Intelligence Agency**. "We'd be cutting off our noses to spite our faces by denying us those kinds of tools," Matt Conner, deputy chief information security officer of the agency, said in an interview. The NGA provides intelligence to other parts of the government from battlefield maps to satellite imagery of national disasters. It's among agencies that are working with the Director of National Intelligence to study how to maximize the use of secure wireless networks and devices, while still maintaining the cover that spies need.

Extremist Imam Tests F.B.I. and the Law's Limits
New York Times, Scott Shane, 2016 10 01
Washington - For more than a decade, **Suleiman Anwar Bengharsa** has served as a Muslim cleric in Maryland, working as a prison chaplain and as an imam at mosques in Annapolis and outside Baltimore. An **affidavit filed in federal court by the F.B.I. says that Imam Bengharsa, 59, supplied $1,300 in June 2015 to a Detroit man who used it to expand his arsenal of firearms and grenades**. The man, Sebastian Gregerson, 29, a Muslim convert who sometimes calls himself Abdurrahaman Bin Mikaayl, was arrested in late July and indicted on explosives charges. Nearly a year ago, in fact, the F.B.I. said in a court filing -- accidentally and temporarily made public in an online database -- that **agents suspected the two men were plotting terrorism.** "Based on the totality of the aforementioned information and evidence, there is reason to believe that Bengharsa and Gregerson are engaged in discussions and preparations for some violent act on behalf of" the Islamic State, an agent wrote.

Effort to recognize World War II spies hung up in Congress
Associated Press, 2016 10 01
McLean, Va— **Spies don't work for fame or acclaim.** But **after 75 years, the men and women who served behind the enemy lines in Nazi Germany and the Pacific theater during World War II wouldn't mind some recognition**. Legislation to award the spies the Congressional Gold Medal has passed the Senate and has more than 300 sponsors in the House, yet the bill is being held up by House Republicans, who recently enacted rules that require a special waiver to grant the medal to groups of people. "I would be extremely proud to get a gold medal for what we did for our country," said Frank Gleason, 96, **one of the few remaining veterans of the Office of Strategic Services,** the World War II-era forerunner to the CIA. "What we did was a little exciting." The holdup frustrates a group of veterans whose numbers continue to dwindle as time marches on. "We're all in our mid 90s," said Irv Refkin, 95, who was recruited by OSS because of his German language abilities, which he used to gather intelligence. "We're not going to be here that long."

FBI files reveal how Clinton server was created in K Street lab
Fox News, Catherine Herridge & Pamela K. Browne, 2016 10 01
Washington - If Hillary Clinton's 'homebrew' server ever got the Mary Shelley treatment, **IT specialist Bryan Pagliano** would make a fine Dr. Frankenstein - **FBI documents reveal new details about how he painstakingly created the machine over a series of months while working in a room along Washington's storied K Street**. According to files released last Friday evening, Pagliano worked to design and build the now-infamous server inside a room once used as part of Clinton's campaign headquarters. On the street known as Washington's power corridor, Pagliano even used computer remnants from Clinton's failed 2008 presidential bid, where he had worked as an **IT specialist**. Pagliano was one of five people who received limited immunity from the Justice Department, has taken the Fifth and refused to testify before Congress.

FBI partly blames Snowden for reduction in email, phone surveillance
Washington Times, Andrea Noble, 2016 09 30
Washington - The **FBI's use of a surveillance statute to collect Americans' phone and email records has declined since details about the program were leaked by Edward Snowden in 2013, a watchdog report has found**. The FBI's use of Section 215 of the Patriot Act to obtain "business records" as part of national security investigations peaked in 2012, with the **Foreign Intelligence Surveillance Court approving 212 orders** seeking records, according to a report released Thursday by the Justice Department's inspector general's office. The program was publicly disclosed in June 2013 after the **former National Security Agency contractor** leaked information to the press. That year, the number of orders authorized by the court dropped to 179. The number of orders approved by the court has continued to decrease annually, with 142 orders approved in 2015.

New U.S. 'secret' clearance unit hires firm linked to 2014 hacks
Reuters, 2016 09 30
Washington— A **U.S. government bureau set up to do "secret" and "top secret" security clearance investigations has turned for help to a private company whose login credentials were used in hack attacks that looted the personal data of 22 million current and former federal employees,** U.S. officials said on Friday. Their confirmation of the hiring of **KeyPoint Government Solutions** by the new **National Background Investigations Bureau (NBIB)** comes just days ahead of the bureau's official opening, scheduled for next week. Its creation was spurred, in part, by the same hacks of the Office of Personnel Management that have been linked to the credentials of KeyPoint, one of four companies hired by the bureau. The officials asked not to be named when discussing sensitive information. KeyPoint representatives did not respond to requests for comment sent by email and left on the company CEO's voice-mail.

Lawmakers Aim to Narrow Terror-Victims Bill
Wall Street Journal, Kristina Peterson, Carol E. Lee, 2016 09 30
Washington - **Leading lawmakers said Thursday they were working on ways to mitigate possible unintended consequences of legislation letting Americans sue foreign governments over terrorist attacks**, just one day after both the House and Senate soundly overrode President Barack Obama's veto of the bill. Some lawmakers expressed buyer's remorse over the legislation, which would enable victims of the Sept. 11, 2001 terror attacks and their families to sue Saudi Arabia, worrying that the bill could spark reciprocal lawsuits and put Americans abroad in the legal crosshairs of foreign governments.

Ex-CIA, FBI Official to Head New Background Check Agency

CQ Today, 2016 09 29
Washington— The **Obama administration on Thursday named a former senior security official with the FBI and CIA to lead the newly created agency to handle federal background checks** as the government overhauls a system that has been plagued by delays and plundered by hackers. **Charles S. Phalen Jr. will head the new National Background Investigations Bureau**, which the White House began setting up in January in an effort to streamline the clunky security clearance process and prevent security breaches like the one that compromised millions of files at the Office of Personnel Management. The NBIB takes over responsibility for handling federal background checks from the Federal Investigative Services. That transition will officially begin on Oct. 1. Phalen, who most recently worked as vice president for corporate security at Northrop Grumman, said his top priority was accelerating the pace of background investigations.

The FBI Wanted to Target Yemenis Through Student Groups and Mosques
The Intercept, Cora Currier, 2016 09 29
Washington - The **FBI envisioned infiltrating mosques and Muslim student associations to look for young Yemenis to serve as informants**, according to an internal presentation obtained by The Intercept. The document suggests that agents scour Facebook "to find individuals who are dramatically increasing their levels of piety -- that's the demographic you want." "Since we're looking for young people re-engaging with their Islamic faith," it continues, "the local MSA [Muslim Student Association] is a great place to start." The 24-slide presentation, prepared for a Source Development Unit in the **FBI's Directorate of Intelligence**, is titled "Responding to the Yemeni Threat: Scenarios for CHS Development," using the bureau's lingo for informants, which it calls "confidential human sources." The document is undated, but from references in the text, it appears to have been prepared around 2010 or 2011 by **Centra Technology Inc**., a company selling intelligence services. Centra Technology has had regular contracts with the FBI since 2008, including for training courses vaguely described in contract records as "analytic tools and techniques." Centra did not respond to a request for comment.

Veteran CIA man to lead new background investigations bureau
Washington Post, Joe Davidson, 2016 09 29
Column - If the **new National Background Investigations Bureau (NBIB)** needs a director who has suffered the onerous process of getting permission to know Uncle Sam's secrets, **Charles Phalen** fits the bill. He is the first director of NBIB, announced in January to strengthen and modernize a clearance process that has suffered from backlogs, cheating by a major contractor and high-profile lapses. Phalen's resume depicts him as natural for the gig. He joined the CIA in 1981 and left 30 years later as director of security. During that period, he also had stops of about three years each at the FBI and the National Reconnaissance Office. "Personnel security has been in my blood," said Phalen, 65, a Fairfax County, Va., resident, by telephone. He takes office Thursday.

CIA Director Calls 9/11 Legislation 'Badly Misguided'
The Atlantic, Claire Foran, 2016 09 29
Washington - **CIA Director John Brennan warned against the national security risks of legislation that would allow families of victims of the September 11, 2001 terror attacks to sue the government of Saudi Arabia** on Wednesday. "I think the legislation is badly misguided and doesn't take into account the negative impact on U.S. national security," Brennan told Jeffrey Goldberg at the Washington Ideas Forum presented by The Atlantic and the Aspen Institute. Brennan added: "We all recognize that the emotions associated with 9/11 are still quite palpable [and] .... the victims' families are still seeking justices, but the 9/11 commission report said that there was no evidence that the Saudi government as an institution or senior Saudi

officials, individually, were responsible for the 9/11 attack." The CIA director cautioned that the implications of the legislation extend far beyond potentially damaging the relationship between the United States and Saudi Arabia.

Donald Trump proves he is unfit, unserious and unprepared on national security
Washington Post, Michael Vickers, Michael Morell, 2016 09 29
Op-ed - **Donald Trump showed again during Monday's presidential debate the many ways in which he is unfit to be president**. But nowhere did he reveal himself to be as temperamentally unfit, unserious, **unprepared and incoherent as he did on the topic of national security**. Trump continued to question the global alliance system that has served U.S. national security interests so well since World War II. He continues to see our relationships with our closest allies and partners solely in terms of cost -- who is paying how much of the bill. He does not see all the benefits that have accrued to the United States from this system, including the stability of Europe and East Asia that has made this a more secure and prosperous nation.. Note: Michael Vickers was undersecretary of defense for intelligence from 2011 to 2015 and assistant secretary of defense for special operations, low- intensity conflict and interdependent capabilities from 2007 to 2011. Michael Morell was deputy director of the CIA from 2010 to 2013, and twice served as acting director during that time. They have both endorsed Democrat Hillary Clinton for president.

Pentagon's 5,000-Strong Cyber Force Passes Key Operational Step
Bloomberg News, Nafeesa Syeed, 2016 09 29
Washington - A 5,**000-person Pentagon force created to bolster military computer networks and initiate cyber attacks against terror groups should be ready to carry out its mission by the end of the week**, a key step in improving the U.S.'s ability to respond to hacks by overseas adversaries. The **Cyber Mission Force** will reach "initial operational capability" by Friday, said Colonel Daniel J.W. King, a Cyber Command spokesman, in an e- mail.

The Legend of Saint Comey
Wall Street Journal, Editorial Board, 2016 09 29
Editorial - **No one has cultivated an image of public virtue better than FBI director James Comey**, so he was in high dudgeon Wednesday when mere mortals like elected Member of Congress challenged his investigation of Hillary Clinton's email violations as Secretary of State. "You can call us wrong, but don't call us weasels. We are not weasels," Mr. Comey declared Wednesday at a House Judiciary Committee hearing. Weasels or not, Mr. Comey did little to rebut the suspicion that he handled the Clinton probe with tender loving political care. Recall that in July Mr. Comey held a remarkable press conference in which he announced that Mrs. Clinton shouldn't be prosecuted for mishandling classified information. But it isn't his job to make prosecutorial decisions. That's the duty of Justice Department prosecutors.

Hackers have attempted more intrusions into voter databases, FBI director says
Washington Post, Matt Zapotosky, 2016 09 28
Washington - **Hackers have attempted more intrusions into voter registration databases since those reported this summer, the FBI director said** Wednesday, and federal officials are urging state authorities to gird their systems against possible other attacks. Testifying before the House Judiciary Committee, FBI director **James B. Comey** said that the bureau had detected scanning activities -- essentially hackers scoping out a potential attack -- as well as some actual attempted intrusions into voter registration databases. He said those attempts were beyond what had been made public in July and August, likely referring to hacking efforts in Illinois and Arizona, though he offered no other specifics. "

CIA Director: We 'have to assume' terrorist activity in the U.S.
CNN.com, Tom Kludt, 2016 09 28
Washington - The **director of the CIA said Wednesday despite the government's best efforts, the likelihood of terrorist activity in the United States is strong**. "So I think we have to assume there's something here in the states," said **John Brennan**, in an interview for CNN's "Erin Burnett OutFront" that will air Wednesday night. "We have to be relentless in terms of going after them." Brennan, who was appointed to lead the CIA shortly before President Barack Obama's second term, said "it's impossible to say" whether ISIS has operatives or cells in the United States, and he credited the "tremendous advances in information sharing and interaction between federal officials" in making it difficult for terrorists to operate in the country.

FBI defends prior reviews of terror suspects
USA Today, Kevin Johnson, 2016 09 28
Washington - **FBI Director James Comey defended the bureau's pre- attack reviews of operatives in recent U.S. terror strikes** - including the gunman in the Orlando massacre and the suspect in the bombing campaign in New York and New Jersey - **telling a Senate panel Tuesday that the agency has the resources to keep pace with the threat**. Questioned at one point about whether the bureau could have thwarted the Orlando attack and the recent New York bombing by pushing harder when agents were alerted to prior suspicious behavior by suspects in both cases, Comey repeatedly told Sen. Rand Paul, R- Ky., that the lawmaker's descriptions of the FBI's actions were "wrong."

FBI probes hacks targeting phones of Democratic Party officials: sources
Reuters, Mark Hosenball, 2016 09 28
Washington - The **FBI is investigating suspected attempts to hack mobile phones used by Democratic Party officials as recently as the past month**, four people with direct knowledge of the attack and the investigation told Reuters. The revelation underscores the widening scope of the U.S. criminal inquiry into cyber attacks on Democratic Party organizations, including the presidential campaign of its candidate, former U.S. Secretary of State Hillary Clinton. U.S. officials have said they believe those attacks were orchestrated by hackers backed by the Russian government, possibly to disrupt the Nov. 8 election in which Clinton faces Republican Party candidate Donald Trump. Russia has dismissed allegations it was involved in cyber attacks on the organizations. The more recent attempted phone hacking also appears to have been conducted by Russian-backed hackers, two people with knowledge of the situation said.

Fewer than one in five State Dept employees with security clearance completed classified info training
Fox News, Catherine Herridge, 2016 09 28
Washington - **Fewer than one in five employees with a security clearance at the State Department has completed the mandated training for handling classified information as required** by a 2009 Executive Order signed by President Obama, according to a new report from the government watchdog with oversight. "Based on training records obtained from the Foreign Service Institute, the OIG (Office of the Inspector General) found that less than 14 percent of security-cleared employees had completed the required training within the timeframe considered in this review. Moreover, only 20 percent had completed the training even one time since the outset of the training program," the report said.

Senior national security official to leave Justice Department
Reuters, Staff report, 2016 09 27
Washington - A **senior U.S. Justice Department official who oversaw efforts to prosecute Islamic State sympathizers and pursue cyber criminals is leaving the Obama**

administration next month, he told Reuters on Tuesday. **Assistant Attorney General John Carlin, chief of the national security division at the Justice Department, is departing on Oct. 15,** less than a month before the U.S. presidential election. Carlin, 43, confirmed his departure, expected to be announced later on Tuesday, in an interview with Reuters. The departure comes as the Obama administration has struggled to develop clear guidelines on how to pursue hacking amid growing threats posed by foreign nation-states and criminal groups. He declined to say where he was headed next. **Carlin said he intended to spend time with his family before starting a new job, likely involved in cyber security.**

Islamist terrorists tried to kill MI5 spy
London Daily Telegraph, Ben Farmer, 2016 10 03
London - A **former MI5 spy has revealed he was nearly kidnapped and beheaded by Islamist extremists who had plotted to kill a British intelligence operative**. The spy narrowly escaped being lured into a trap by fanatics he was following and it was later discovered they had made preparations to film his execution. The incident is recalled in a new book by the former intelligence officer who spent years carrying out street surveillance on Islamist, **IRA, Russian and Chinese targets in the UK**. The author, writing under the pen name **Tom Marcus**, said he was now so worried about his son's safety that his clothes and sleeping back were fitted with tracking devices. According to his book, Soldier Spy, which has been vetted by MI5 to prevent security breaches and is published later this week, he was nearly killed while following an Islamist terrorist cell. Unknown to him, the extremists had used counter surveillance techniques to watch who was following them and had lured him into an alleyway. When his controllers realised what was happening the operation was quickly abandoned.

MI5 missed chance to foil Paris and Brussels terrorists: Undercover operation was halted three months before meeting between ringleader and British extremists
Daily Mail (UK), Rebecca Camber, Duncan Gardham, 2016 10 04
London - **Police and MI5 could have prevented the Paris and Brussels terrorist atrocities after a secret operation targeting British suspects linked to the plot was launched months before the attacks.** But senior officers decided to halt the undercover probe three months before one of the coordinators of the Paris attacks crossed the Channel to meet extremists in Britain, it can now be disclosed. The decision meant that investigators missed a key meeting between a group of alleged Islamic State supporters in Britain and Mohamed Abrini last summer - which could have led them to the Brussels-based cell before they carried out a wave of shootings and bombings, killing 130 people in Paris last November. Dubbed the 'man in the hat', Abrini was later caught on camera fleeing Brussels airport after the bombing in March and he is accused of coordinating both the Paris and Brussels attacks.

National Cyber Security Centre HQ operational
SC Magazine (UK), Staff report, 2016 10 03
London - The **UK's new National Cyber Security Centre (NCSC) officially opens for business today as a public-facing part of GCHQ that acts as a focal point for the government to deliver authoritative advice on tackling cyber-security issues**. It will be based in the Nova office and shopping complex near Victoria Station in London, not in

Cheltenham at GCHQ, as originally announced last year, though it will also have offices there.. While this operational centre will focus on defensive work, it will be able to call on offensive capabilities developed by GCHQ and the Ministry of Defence. According to Evening Standard reports, the NCSC will have a staff of 700, more than half of whom will be based in the new HQ, moving in to the building later this year and in early 2017. It is **led by CEO Ciaran Martin who was director general cyber at GCHQ, with Dr Ian Levy, former technical director of cyber-security at GCHQ, becoming technical director at the NCSC**. The NCSC's website is scheduled to go live tomorrow (4 October).

The MI5 spy who saved children from a UK bomb attack
BBC News, Monica Soriano, Justin Parkinson, 2016 10 03
London - Tom Marcus is still jittery three years after retiring as a spy, he tells the BBC's Victoria Derbyshire programme. Walking down the street, he sometimes sees suspicious behaviour where there is none - shady people lurking in doorways; unusual bulges in coats; nervous, furtive glances. **Tom - not his real name, it can't be used for security reasons - saw plenty during his eight years as an MI5 surveillance officer to make him suspicious**. In the end, the job caught up with Tom. He **suffered nightmares about being attacked and was diagnosed with post-traumatic stress disorder (PTSD), returning to civilian life in 2013**. He feels he's recovered now. He also struggled to find another job. Because of the anonymity required by MI5, Tom, who joined the Army at the age of 16 before moving on to the security services, has a large gap in his CV. "It's been hugely difficult to get a job," he says. "Working as an MI5 surveillance officer is seen as a job for life - so when you have to come out it's very difficult to figure out what job you can do. "You can't answer the question about what you've been doing for the last 10 to 15 years in a job interview properly because you'd be breaking the Official Secrets Act."

Met set to lose anti-terror job to 'British FBI'
Sunday Times (UK), Tom Harper & Richard Kerbaj, 2016 10 02
London - **Scotland Yard may be stripped of responsibility for counterterrorism in a shake-up of policing after Sir Bernard Hogan-Howe's departure as commissioner of the Metropolitan police**. The Sunday Times understands that Theresa May is considering handing control of counterterrorism to the **National Crime Agency (NCA),** which she created as home secretary in 2013. According to a senior source familiar with her views on police reform, the change could come "within this parliament". The potential loss of about 2,000 Met officers and a significant chunk of its budget would represent a huge blow to Scotland Yard "The NCA job is going to be the premier job in policing. It is the British FBI and will get counterterrorism, probably sooner than some people think." A senior Home Office source said the move was not imminent, but was "likely to happen in this parliament".

MOD tries to halt book about undercover ops
Sunday Times (UK), John Mooney, 2016 10 02
London - The **Ministry of Defence has asked the Dublin-based publisher of a book by a former soldier about his involvement in clandestine spying operations in Northern Ireland to halt its sale and distribution.** The MoD has told **Merrion Press**, publisher of **Charlie One**, that it knows the identity of "**Seán Hartnett**", the pseudonym used by the author, who **gives details about classified surveillance operations involving undercover soldiers and MI5 in 2001.** It said Hartnett would be arrested should he enter the UK and would no longer receive his army pension. The MoD, through its solicitors, last week wrote to Merrion Press to say it was assessing the damage caused to Britain's national security by the book. It accused Hartnett, who works as a security consultant in Ireland, of breaching his special forces

confidentiality agreement, disclosing details of covert operations in which he participated. It also accused him of breaching **Britain's Official Secrets Act**.

Cyber crime unit opens amid surge in online attacks
Daily Telegraph, 2016 10 01
London - **Britain's first national centre for combating cyber criminals will open next week, amid rapid growth in the number of online attacks**. Terrorists, hackers and online gangs will be targeted by intelligence experts at the new National Cyber Security Centre in Victoria, central London. A team of around 700 people will help to advance the Government's war against cyber crime. The threat is growing, with 200 major incidents a month, double the rate last year. The centre will be led by Ciaran Martin, formerly the director general for cyber security at **GCHQ**. At a cyber security conference in Washington DC earlier this month, Mr Martin outlined plans to create a firewall that could protect government agencies and internet users against cyber attacks.

Drive to shake up UK's terror laws for benefit of victims is launched (Canada)
Belfast Telegraph, Rebecca Black, 2016 10 01
London - **London-based law firm McCue & Partners is behind the initiative, acting on behalf of Northern Ireland-based group Innocent Victims United**. The group said it was seeking to raise £25,000 to bring about **"much-needed and long-overdue change to the law to allow UK victims and survivors of terrorism to bring terrorists and their supporters to justice".** "Too often, the State fails, is unable or chooses not to do so," the campaigners said in a statement. "The laws of other countries provide their victims with such essential support. It's time the UK did too." The campaigners also claimed that the UK falls "far behind other Western countries, such as the **USA and Canada**, in providing adequate access to justice to UK citizens who are victims and survivors of terrorism".

National Cyber Security Centre to lead digital war from new HQ in the heart of London
London Evening Standard, staff reporters, 2016 09 30
London— **Britain's war against the soaring number of cyber attacks is to be led from a new HQ in the centre of London**, the Standard reveals today. **The National Cyber Security Centre**, close to Victoria station, will be tasked with bolstering security against the growing online threats from around the globe. It will be the front line in the UK's battle to protect itself from cyber attacks emanating from countries including China and Russia as well as from terrorists and criminal gangs. Some of Britain's best technological minds will break new ground in the bid to develop defences for the Government to block malware and phishing emails automatically. The HQ will be located in property giant Land Securities' ultra-modern Nova development — including offices, shops, restaurants and bars — off Victoria Street and close to Buckingham Palace. Specialist teams for the City, Whitehall, intelligence and security services, energy, telecoms, other parts of the critical national infrastructure and businesses will help them fight against and respond to general and more specific threats to their sectors. **NCSC chief executive Ciaran Martin, who moves from being GCHQ's director general of cyber security**, said: "Our role is helping to make the UK the safest place to live and do business online. So we'll tackle the major threats from hostile states and criminal gangs.

The danger was worth it, says IRA infiltrator
London Times, Sean O'Neill, 2016 09 30
Dublin - An **FBI spy who infiltrated the Real IRA said he felt vindicated now that a £1.6 million ruling against the alleged perpetrators of the Omagh bombing has been upheld by the European Court of Human Rights**. **David Rupert**, an American businessman who worked on behalf of the **FBI**, said that yesterday's ECHR decision showed that "the truth shall

overcome". He was reacting to the court's rejection of an attempt by Michael McKevitt and Liam Campbell, two convicted Real IRA members, to overturn the landmark civil ruling that found them and two others responsible for the Omagh bombing that killed 29 people in August 1998.

The spy who liked me: Britain's changing secret service
Financial Times, Sam Jones, 2016 09 29
London - **Behind the closed doors of British intelligence, the era of Smiley's People is giving way to a future of Smiley's Facebook friends. Digital disruption is sweeping through the world's second-oldest profession -- spying** -- and the UK is repurposing its intelligence services with a **£1.5bn annual top-up** for security available for the first time this year. For the **Secret Intelligence Service, or MI6, which supplies foreign intelligence**, this translates into its biggest ever recruitment drive, with as many as 1,000 new staff over the next four years, a 40 per cent rise. British security officials, in conversations with the Financial Times over the past few months, have painted a consistent picture of their trade: technology that empowered spooks for the past two decades is changing their business profoundly. Last week, **Alex Younger, the chief of MI6**, still known by the moniker "C" (with which, in green ink, he traditionally signs all his correspondence), spelt out the shift in a rare public speech with fellow spymasters in Washington. "The information revolution fundamentally changes our operating environment," said Mr Younger. "

Double agent's wife threatened suicide during WWII, previously top-secret files reveal
Toronto Star, Peter Edwards, 2016 09 28
Toronto - The **wife of one of Britain's top double agents turned on the gas outlets in their home and threatened to kill herself out of despair in the midst of World War II**. Her husband was Juan Pujol-Garcia, codenamed "Garbo," "Bovril" and "Immortal," according to newly-released **British MI5 intelligence** files, that were stamped "Secret" and "Most Secret." The previously-closed Security Service files say Pujol-Garcia wove Toronto, Ottawa and Montreal into a complex web of deception to trick the Nazis about plans for the massive D-Day invasion of Normandy, France on June 6, 1944. Other newly-released MI5 files deal with Soviet Intelligence agents and suspected agents from 1934 to 1959 and communists and suspected communists from 1920 to 1961.

Data delays thwart counter-terrorism
Sydney Morning Herald, Rachel Olding, 2016 09 28
Sydney - **Counter-terrorism police fear crucial information may slip through the cracks in major investigations because a national case- management system has not been rolled out,** despite repeated requests for almost a decade. The number of terrorism investigations in Australia is rising, yet officers say some are being jeopardised because each state police force uses a different system for managing investigations. Fairfax Media understands that counter-terrorism police have picked up an increasing amount of communication between terror suspects in Sydney and Melbourne in recent months. Both cities remain the overwhelming focus of investigations.

Dotcom's appeal against extradition to U.S. winds up in New Zealand, ruling likely weeks away
Reuters, Staff reporter, 2016 09 28
Wellington - Lawyers for German entrepreneur **Kim Dotcom**, wanted in the United States on copyright infringement and money-laundering charges over his file-sharing website Megaupload, argued on Wednesday there was not enough evidence to show he conspired to commit a crime. The Auckland court heard closing arguments in Dotcom's four-week appeal against a lower court's decision to extradite him to the U.S., the first New Zealand court proceedings to be broadcast live on the internet. Years of legal wrangling followed **Dotcom's arrest in the police raid in 2012 and it emerged that the Government Communications Security Bureau had illegally spied on him before the raid**. While the main arguments have now been heard, a few technical matters have yet to be argued in court. Lawyers said a decision was likely to be weeks away - and it was unlikely to be the final word.

China / Chine

Inside China's Big Brother HQ
Mail on Sunday, George Knowles, 2016 10 01
Hangzhou, China— **Hikvision, a company controlled by the Chinese government, was recently revealed to be Britain's biggest supplier of CCTV equipment**, raising fears its internet-linked cameras could be hacked from Beijing at the touch of a button. Last week, undercover Mail on Sunday reporters posed as businessmen to infiltrate its headquarters in the 'surveillance city' of Hangzhou in eastern China, to investigate its activities. What they found will raise fresh cause for concern about a company whose growing influence in the UK has already been questioned by former MI6 officers and Security Ministers. Far from being the independently run business it claims to be in its customer-friendly marketing, **Hikvision is controlled by China's ruling Communist Party**. Hikvision is central to the government's Orwellian programme to spy on its 1.3 billion citizens, and is inextricably linked to the totalitarian crackdown on those considered 'enemies of the state'. More worryingly, Hikvision vice-president Pu Shiliang, 38, is also technical leader of a key laboratory at the **Ministry of Public Security**, the feared body that has been accused of the extrajudicial arrest and detention of thousands of lawyers, activists and perceived government opponents within China every year.

China cyber espionage continues
Washington Times, Bill Gertz, 2016 09 29
Washington - **U.S. Cyber Command recently reported within secret government channels that China is continuing aggressive cyber espionage against American companies**. An intelligence report disseminated earlier this month stated that one of China's biggest cyber spying operations involved the theft of 1.65 terabytes of sensitive proprietary data from a major U.S. software company, according to a defense official familiar with the report. The U.S. company was not identified by name. But the hacker group behind the data theft is part of the

Ministry of State Security, China's main police and intelligence service. The hacking operation by the MSS was carried out from at least October 2015 and contradicts the U.S.-China agreement on cyber espionage reached between President Obama and Chinese President Xi Jinping in September 2015.

Russia's FSB Detains Ukrainian Spy Collecting Military Secrets
Sputnik, Staff report, 2016 10 03
Moscow - Russia's **Federal Security Service (FSB) detained a member of the Ukrainian Defense Ministry's chief intelligence directorate it accused of collecting state secrets on the Russian military,** the FSB said Monday. "**Roman Sushchenko**... purposefully collected state secret information on the activities of the Russian Armed forces and the National Guard troops, which could have harmed state defense capabilities if leaked abroad," the FSB said in a statement. It added that it launched a criminal case against Sushchenko on charges of espionage.

Russian Intelligence Says It Detained Ukrainian Spy Suspect
Associated Press, Staff report, 2016 10 03
Moscow - The **Russian intelligence agency FSB said on Monday it has arrested a Ukrainian journalist who is suspected of spying in** Russia. The FSB claimed in a statement that **Roman Sushchenko** is an officer with the Ukrainian military intelligence who has been collecting information about the Russian Armed Forces. The arrest, confirmed by a Moscow court on Monday, comes amid an almost complete breakdown in relations between the two neighbors, triggered by Russia's annexation of Crimea and its support for separatist rebels in eastern Ukraine.

Putin Has Finally Reincarnated the KGB
Foreign Policy, Andei Soldatose, 2016 10 02
Analysis: This past Sunday, as most of Russia focused its attention on parliamentary elections, the country's most popular daily, Kommersant, broke news of a story that, if true, could have consequences that last far beyond this latest round of Duma reshuffling. **Russian President Vladimir Putin,** according to Kommersant, **is planning a major overhaul of the country's security services**. The Russian daily reported that the idea of the reforms is to merge the Foreign Intelligence Service, or SVR, with the Federal Security Service, or FSB, which keeps an eye on domestic affairs. This **new supersized secret service will be given a new name: the Ministry of State Security**. If that sounds familiar, it should -- this was the name given to the most powerful and feared of Joseph Stalin's secret services, from 1943 to 1953. And if its combination of foreign espionage and domestic surveillance looks familiar, well, it should: In all but name, we are seeing a resurrection of the **Committee for State Security** - - otherwise known as the **KGB**. The **KGB, it should be remembered, was not a traditional security service in the Western sense -- that is, an agency charged with protecting the interests of a country and its citizens. Its primary task was protecting the regime**. Its activities included hunting down spies and dissidents and supervising media, sports, and even the church. It ran operations both inside and outside the country, but in both spheres the main task was always to

protect the interests of whoever currently resided in the Kremlin. With this new agency, we're seeing a return to form -- one that's been a long time in the making.

Russia steps up trolling attacks on the West, U.S. intel report finds
Yahoo News, Michael Isikoff, 2016 09 29
New York - A **new U.S. intelligence report says the Russian government is conducting a wide-ranging and "opportunistic" campaign to expand its political influence in Europe by deploying Internet "trolls and other cyber actors"** to challenge pro-Western journalists and spread pro- Kremlin messages in social media forums. Yahoo News obtained a **declassified summary** of the report, which also describes the role of two state-owned media outlets, RT and Sputnik, in what some experts say is an increasingly aggressive "information warfare" campaign. According to the report, the outlets promote Russia's political aims with programming targeted to "activist" audiences including "far-right and far-left elements of European society." It adds that the RT channel gives "disproportionate coverage and airtime to the European Parliament's more extreme factions." The **report, by the office of Director of National Intelligence James Clapper,** was originally requested by congressional intelligence committees late last year. The panels also asked for a separate report on Russia's use of political assassination. Classified versions of both documents were delivered by Clapper's office to Capitol Hill in July.

Russian hackers went after journalists investigating the downing of MH17
Washington Post, Ellen Nakashima, 2016 09 29
Washington - **Russian government hackers began targeting a British citizen journalist in February 2015,** eight months after he began posting evidence documenting alleged Russian government involvement in the shoot- down of a Malaysian jetliner over Ukraine. And then in February 2016, a group that researchers suspect is a propaganda mouthpiece of the Russian government - **CyberBerkut -** defaced the home page of Eliot Higgins's citizen journalism website, Bellingcat.com. That same month, CyberBerkut hacked the email, iCloud and social-media account of a Bellingcat researcher in Moscow, then posted online personal pictures, a passport scan, his girlfriend's name and other private details. Russia's information operations against Bellingcat are a taste of what may be in store for other media organizations whose reports anger the Kremlin, said a cyber-research firm that has extensively documented the effort. .

Were the Russians Behind the Massive Yahoo Email Hack?
NBC News, Chris Francescani, 2016 09 28
New York - The **hack of more than a half billion Yahoo email accounts was motivated by espionage, not profit, according to an independent cybersecurity firm report** released Wednesday, which contends that an **Eastern European state-sponsored actor** appears to have ordered the massive hack as part of a coordinated effort to infiltrate the email accounts of U.S. military, diplomatic and political figures. The findings by the cyber security firm **InfoArmor** are consistent with Yahoo officials' claim last week that a state-sponsored actor was behind one of the largest corporate breaches in U.S. history. Yet InfoArmor's version of events, if accurate, provides significant new details about how and why the company was hacked. Minor league hackers who were peddling. In an interview with NBC News prior to the release of his firm's findings, InfoArmor's chief intelligence officer Andrew Komarov described the Yahoo breach as part of a larger, ongoing campaign to break in to the email accounts of prominent officials from the U.S. and across the globe.

L'affaire Squarcini embarrasse la Direction du renseignement intérieur
Le Monde, Simon Piel et Joan Tilouine, 2016 10 04
Paris— La **DGSI a été perquisitionnée, son directeur Patrick Calvar, et des agents ont été entendus.** M. **Calvar fait partie des personnes que M. Squarcini avait tenté de solliciter pour recueillir des informations confidentielles**. Les déflagrations de l'affaire Squarcini continuent de résonner dans les couloirs de la Direction générale de la sécurité intérieure (DGSI) à Levallois-Perret (Hauts-de-Seine). Plusieurs personnes en poste à la DGSI – dont deux policiers – ont été entendues, entre lundi26 et mercredi 28septembre, pour s'expliquer sur les contacts qu'ils avaient continué à entretenir avec leur ancien patron. L'un des deux policiers a été mis en examen pour «violation du secret professionnel», «collecte frauduleuse de données à caractère personnel», «détournement de la finalité d'un traitement de données à caractère personnel» et «compromission du secret de la défense nationale». Son contrôle judiciaire lui interdit jusqu'à nouvel ordre de travailler à la DGSI ainsi que dans tout service de renseignement. L'autre a, pour sa part, été placé sous le statut de témoin assisté pour avoir notamment effectué des traductions de revues de presse à destination de M. Squarcini. Le 27septembre, les locaux de la DGSI situés à Levallois avaient été perquisitionnés dans l'objectif de préciser les éléments que ces fonctionnaires avaient pu transmettre à M.Squarcini. Un acte d'enquête rarissime, compte tenu du fait que le siège des services de renseignement intérieur sont protégés par le secret-défense. **Trois assistantes de Patrick Calvar, l'actuel directeur de la DGSI, qui y travaillaient déjà sous l'ère Squarcini, ont été entendues la semaine dernière et leurs ordinateurs examinés par les enquêteurs de l'IGPN.**

Reforms underway mull a divided, better-controlled intelligence
Daily Sabah, Staff report, 2016 10 04
Istanbul - **Decades after its foundation, the National Intelligence Directorate (MIT), Turkey's highly discreet intelligence service, will undergo a major makeover**, that may or may not turn it into its American counterpart, the Central Intelligence Agency (CIA). The government's plans for a complete reformation of intelligence services will divide intelligence into two: external and internal. The MIT will focus on external intelligence while a new agency will be established to handle homeland intelligence. More importantly, new reforms call for a tighter monitoring on intelligence services' activity by the presidency in an effort to prevent a weakness in the intelligence as witnessed at the time of the July 15 coup attempt by the Gülenist junta. The MIT was criticized for an intelligence failure and being late to inform authorities about the putsch attempt afoot. Still, intelligence services will keep their liaison with the Prime Ministry that appoints MIT's directors. New reforms will be a part of statutory decrees regularly issued during the state of emergency following the coup attempt.

Turkey suspends 12,800 police, tightening clampdown after failed coup
Reuters, Staff report, 2016 10 04
Istanbul - **Hours after announcing a three-month extension of a state of emergency, Turkey suspended 12,801 police officers on Tuesday**, saying they had suspected links to U.S.-based cleric Fethullah Gulen, whom Ankara blames for orchestrating July's failed coup. In a statement, Turkey's national police headquarters said 2,523 of those suspended were police chiefs. The overall number represents more than 5 percent of Turkey's entire police force. They "have been assessed to have communications or links to the Gulenist Terror Organisation, identified as a **threat to national security**," the written police statement said. Turkey lists the

religious movement led by Gulen as an illegal terrorist network, though he has denied having any link to the uprising. State-run Anadolu Agency said 37 people working in the Interior Ministry's headquarters had also been removed from their posts. It was not clear if both measures were linked.

Reshuffles at Bulgaria's National Security Service
Sofia News Agency, Staff report, 2016 10 03
Sofia - A **reshuffle within the leadership of the National Security Service (NSO) enters into force on Monday**, the second one in two weeks. **Krasimir Stanchev is the second deputy head of the National Security Service** to be removed from office, the State Gazette's October 04 edition will say, according to information from BGNES wire service. Col Rosen Todorov will take over from Stanchev. The reasons for the reported reshuffle, if confirmed, are not immediately clear. In the summer, Col Yulian Haralampiev was replaced by Lt Col Emil Tonev, with NSO citing Col Haralampiev's lack of a minimum of 5-year experience on a managerial position.

Pourquoi Bernard Squarcini a été mis en examen
Le Monde, Simon Piel et Joan Tilouine, 2016 09 30
Paris - **L'avocat de l'ex-patron de la DCRI dénonce " l'hypocrisie " des accusations**. A l'issue de 48 heures de garde à vue dans les locaux de l'Inspection générale de la police nationale (IGPN), **l'ancien patron de la Direction centrale du renseignement intérieur (DCRI, aujourd'hui DGSI), Bernard Squarcini a été mis en examen mercredi 28 août par des magistrats du pôle financier pour de nombreux chefs parmi lesquels le trafic d'influence**, la violation du secret de l'enquête, la compromission ou encore l'entrave aux investigations. Cette décision a été assortie d'un contrôle judiciaire très strict qui interdit à M. Squarcini de paraître dans les locaux de la DGSI à Levallois-Perret (Hauts-de-Seine), d'entrer en contact avec les autres protagonistes de l'affaire mais aussi avec tout fonctionnaire de la direction centrale de la police judiciaire et des services de renseignement.

SBU chief, director of NATO Office of Security sign classified information treaty
Interfax (Ukraine), Staff report, 2016 09 29
Kyiv - An international treaty - Administrative Arrangements on Protection of Classified Information - between the Ukrainian government and NATO was signed as part of a visit of a NATO delegation headed by Director of the NATO Office of Security Todd Brown The press center of **Ukrainian Security Service (SBU)** reported on Wednesday that SBU Head Vasyl Hrytsak signed the document on behalf of the Ukrainian government. The **tool is aimed at specifying the procedure for mutual protection of the classified information set in the general agreement on security between Ukraine and NATO (1995**) and bringing the national mechanisms in line with the NATO standards.

5 pct of hacker attacks threaten Lithuania's natl security – chief
Baltic News Service, 2016 09 29
Vilnius— **Lithuania's state institutions are subjected to thousands of attempted cyber attacks on a daily basis,** including hundreds constituting a medium threat and at least 5 percent constituting a serious threat, says Ri**mtautas Cerniauskas, director of the National Cyber Security Center.** In the framework of Lithuania's first national cyber exercise Cyber Shield 2016, over 100 specialists from more than 40 of the country's institutions learned to respond to emerging cyber threats and coordinate their work in the face of cyber attacks. The week-long exercise involved over 30 scenarios, for instance, simulation of a power blackout, blocking of websites during elections, etc. The exercise was held in a virtual infrastructure to avoid hardware damage.In addition to specialists from the **National Cyber Security Center**, the

police, prosecutor's offices and the **State Security Department**, the exercise involved representatives of the Seimas, the government and the President's Office, the Communications Regulatory Authority, the Vilnius University and the Kaunas University of Technology, as well as other agencies and institutions.

Deux anciens grands flics en garde à vue
Le Figaro, Christophe Cornevin, 2016 09 28
Paris - **Bernard Squarcini et Christian Flaesch étaient entendus mardi par l'IGPN pour trafic d'influence.** Justice Une chape de plomb, plus lourde encore que celle pouvant couvrir une opération antiterroriste, pèse sur les gardes à vue entourant une trouble affaire de trafic d'influence présumé au coeur de laquelle se trouverait Bernard Squarcini. Depuis lundi, **l'ex-directeur central du renseignement intérieur, réputé proche de Nicolas Sarkozy et évincé de ses fonctions après l'arrivée des socialistes au pouvoir en 2012**, est aujourd'hui inquiété sur la base d'interceptions téléphoniques remontant, semble-t-il, à plus de trois ans.

Le renseignement géospatial français dans la guerre contre l'EI
Le Monde, Nathalie Guibert, 2016 09 28
Mossoul - Alors que la bataille de Mossoul se précise, la **France a renforcé ses capacités sur le terrain, notamment dans le renseignement.** Cliquer sur un bloc d'immeubles de Mossoul pour visualiser aussitôt tout ce qui s'y trouve en 3D, dévoiler les parties " aveugles " de la ville qui ne ressortent pas de l'observation humaine, ou encore simuler les capacités de nuisance d'une attaque sur les canalisations urbaines. Ces informations constituent une partie, discrète, du soutien militaire que la France apporte aux combattants irakiens en guerre avec l'organisation Etat islamique (EI). La décision d'accroître cette aide a été prise à Washington, lors de la réunion du 21 juillet des ministres de la défense les plus impliqués dans la coalition - anti-EI.

State Security Service to send petitions regarding the released secret recordings to respective countries
Prime News (Georgia), 2016 09 28
Tbilsi— The State Security Service will send petitions regarding the released secret recordings to the respective countries, - Nino Giorgobiani, spokesperson for the State Security Service, said at a briefing. "Petitions for legal assistance will be sent to all the countries that are in the interests of the investigation. The State Security Service will not allow any destabilization in the country, and in case of revelation of a crime, offenders will be strictly punished, "- Nino Giorgobiani said. The **Counterintelligence Department of the State Security Service** has launched an investigation into the released secret recordings.

Les réseaux Squarcini dans le viseur de la justice
Le Monde, Simon Piel et Joan Tilouine, 2016 09 28
Paris - Des **policiers auraient informé l'ex-patron du renseignement au profit de LVMH et du clan Sarkozy**. Certains de ses anciens collègues lui donnaient toujours du " chef " et continuaient de lui livrer des informations confidentielles, malgré sa reconversion dans le privé. Lundi 26 septembre, **Bernard Squarcini, ancien patron de la Direction centrale du renseignement intérieur (DCRI, aujourd'hui DGSI), a été placé en garde à vue dans les locaux de l'inspection générale de la police nationale (IGPN)** dans le cadre d'une information judiciaire ouverte notamment pour " violation du secret de l'instruction ", " entrave aux investigations ", " compromission ", " violation du secret professionnel " et " trafic d'influence ". Sa garde à vue se poursuivait mardi matin.

Military intelligence shared in targeted assassinations
NL Times, Janene Pieters, 2016 09 27
The Hague - The **Dutch military intelligence service MIVD shared information that could be used in so-called "targeted killings" by other countries**. While the service complied to the rules in this, the rules are insufficient to remove the risks of the MIVD inadvertently contributing to the unlawful use of force, the CTIVD concludes in a report published on Monday, ANP reports. The CTIVD is the committee responsible for overseeing and supervising the **Dutch intelligence services.** For this report, the committee looked at the MIVD's actions in the period 2013 to 2015. According to the report, the MIVD contributed to "targeting" in two military missions in which the Netherlands also participated.

National Intelligence agency MIT dismisses 87 FETÖ-linked personnel
Daily Sabah, Staff report, 2016 09 27
Istanbul - The **National Intelligence Agency (MIT) has dismissed 87 personnel for their links to the Fetullah Terrorist Group (FETÖ),** according to an intelligence agency source on Tuesday. 141 MIT personnel were suspended following the July 15 coup attempt and investigations into 100 of those suspended personnel have been completed. 87 out of them have been dismissed and 52 of them will face criminal complaints, the source said. The Turkish state has taken steps to dismiss anyone with suspected ties to FETÖ after the failed coup attempt on the night of July 15. MIT is one of the state institutions, alongside others, that the Gülenists have targeted for infiltration in order to carry out their intended plans in Turkey.

General Security chief inaugurates new center in south Lebanon
Lebanon Daily Star, Staff Report, 2016 10 03
Beirut - **General Security head Maj. Gen. Abbas Ibrahim Saturday inaugurated a new agency center in the town of Shebaa** during a tour of south Lebanon. "This accomplishment is the best means to respond to the dangers imposed by the Israeli enemy and its ongoing threats against the Lebanese and the residents of the south in particular," Ibrahim said. He called the center a fulcrum in confronting "sabotage and criminal networks and in revealing enemy agents ... seeking to destabilize [the country] and spreading sedition." Ibrahim also praised the ongoing cooperation between the General Security and UNIFIL, which provided "the logistic aid necessary to establish the center." The high-ranking security official had also said Friday during a visit to a farmer's union rally in east Lebanon that the government was searching for a "serious" mediator to help secure the release of the nine servicemen held hostage by ISIS.

Iran's Top Security Official: West Lying About Its Role in Middle East's Security
Fars News Agency, 2016 10 03
Tehran— Secretary of Iran's **Supreme National Security Council** (SNSC) **Ali Shamkhani** dismissed as untrue the claims by the western countries that they are contributing a positive role in the security of the regional countries. "The claim about the West's contribution to the establishment of regional security is a big lie and its bloody and costly results can be seen in many countries in the region," Shamkhani said in a meeting **with Head of Iraqi National Intelligence Service Mustafa Kadhimi** in Tehran on Sunday. He said that the Iraqi army backed by popular forces has managed to make continued achievements in the fight against terrorism and the elimination of ISIL terrorists from many areas in the country.

Iranian spymasters 'running covert war' in Syria
Jerusalem Post, Staff Report, 2016 09 30
Jerusalem - **Iranian spymasters are commanding a large-scale clandestine war from Damascus in order to support Syrian President Bashar Assad**, The Daily Mail reported Thursday. The National Council of Resistance (NCRI) of Iran has claimed that Iranian Supreme Leader Ayatollah Ali Khamenei has spent billions to bolster its ally Assad in the last five years, including running operations from a five-floor building dubbed the "Glasshouse" near the airport in the country's capital.

Intelligence minister: Threats posed by terrorists under control
Islamic Republic News Agency, 2016 09 30
Tehran - **Threats by the enemies against the Islamic Republic are under control, Minister of Intelligence Mahmoud Alavi said** on Thursday. Iran has intelligence dominance over terrorists and the enemies have so far failed to conduct even a single successful terrorist operation inside the country, Alavi said during a meeting with the judiciary officials. He also said that nobody has the right to pressure judges and judiciary officials for issuing decrees against the regulations.

Notorious Aleppo intelligence chief moved from post
Now Lebanon, Albin Szakola, Amin Nasr, 2016 09 28
Beirut - The **powerful head of Syria's feared Air Force Intelligence in Aleppo has been moved from his post in an eyebrow raising** move, only days after Damascus started a massive bombardment campaign against the opposition-held half of the strife-stricken city. On Sunday, pro-regime outlets announced that **Major General Adib Salameh**, an officer notorious for his considerable influence and alleged corruption, was reassigned as the new deputy director of the **Air Force Intelligence Directorate** in Damascus. Meanwhile, General Iyad Mindo, the head of Air Force Intelligence at Damascus International Airport, was promoted to take up the posting in Aleppo, which Salameh held since 2012..

ISIL Appoints Saddam's Army General as 'New War Minister'
Fars News Agency, 2016 09 28
Tehran - A **senior commander of Iraqi popular forces revealed on Tuesday that ISIL has appointed a Saddam-era army commander as its 'new war minister'** to replace the terror group's notorious former war minister, Abu Omar al-Shishani, who was killed early in Summer. "ISIL leaders in a meeting held in the vicinity of Iraq's Anbar province selected former senior Iraq Army officer Yaseen al-Muadhidi, nom de guerre Abu Taha, as the terror group's new war minister," Senior commander in Iraq's Popular Mobilization Forces, locally known as Hashd al-Sha'abi, Colonel Nazem al-Chuqaifi said on Tuesday. **Abu Taha is among the most senior commanders and Emirs** within the hierarchy of the ISIL terrorist group, and has fought with the group, after pledging allegiance to the group some five years ago.

Presidential office dismisses claim over Park's retirement residence
Yonhap News Agency, 2016 10 04
Seoul— The **presidential office Cheong Wa Dae on Tuesday dismissed an opposition politician's claim that President Park Geun-hye's close aide has directed the state intelligence agency to prepare a new home for her retirement**. Calling the claim "totally

groundless," presidential spokesman Jung Youn-kuk told reporters that Park plans to return to her old house in Samseong-dong, southern Seoul after her term ends in February 2018. During a parliamentary audit, Rep. Park Jie-won, the interim leader of the minor opposition People's Party, raised the claim that Lee Jae-man, the president's secretary for general affairs, has instructed the National Intelligence Service (NIS) to prepare a home for her after she leaves her presidential post.

Indian intelligence hired fake crowd to back Brahamdagh
The International News, 2016 10 04
Karachi - **Baloch separatist leader Brahamdagh Bugti is playing in the hands of Indian intelligence Research and Analysis Wing (RAW),** evidence gathered by Geo News showed on Tuesday. The **Indian intelligence agency was behind the recent protests held against Pakistan in Geneva**, which Brahamdagh Bugti led to push his agenda of vilifying Pakistan. The Indian media used the Bugti-led protest to hoodwink the people of India in an effort to divert attention from the atrocities being carried out by Indian army in held Kashmir. Shahzeb Khandaza, senior journalist and host of Pakistan's most popular show, produced evidence that Indian intelligence brought "paid demonstrators" from a refugee camp to the protests led by Bugti and Mehran Murri. He said usually the refugees are paid 100-150 Francs to take part in protests called Silent Solidarity Protests. Geo News research shows the demonstrators chose to remain silent in these protests as they could not speak foreign languages.

Pak spy balloons, pigeons, boat captured
The International News, 2016 10 03
Islamabad - A **frightened India on Sunday claimed to have got hold of suspected balloons with sentences written in Urdu** on them in the Gurdaspur area, media reports said. After the flop drama of a **pigeon's** custody, India has come up with the balloons case and claimed to have "detained them" with a message for Modi.According to the Indian media, sentences giving warning to India and taking revenge of surgical strikes were written on them. As revealed, the message read: "Modi, do not consider us the same people as we were during 1971. Now each and every child is ready to fight against India." Earlier, the Indian police detained another pigeon that flew into a village near the heavily-militarised border with **Pakistan on suspicion of being a 'spy'.** The **state intelligence and army officers inspected the pigeon** which might have flown across border from Pakistan and landed in Punjab's Hoshiarpur district with some words in Urdu inscribed on its wings.

Embassy mum on CIA plot's 'kill Rody'
Manila Standard, 2016 10 01
Manila— The **US Embassy in Manila refused to comment on President Rodrigo Duterte's remarks in Vietnam that he had received reports that the US Central Intelligence Agency wanted him dead**, saying his staff should clarify his statement. "We [US Embassy] would want to refer you to President Duterte for clarification on his statement," US embassy press attache Molly Koscina said in a text message. Before Filipinos living and working in Hanoi, Duterte said that the CIA was planning to kill him. "That's the situation. They said, the CIA is planning to kill me. Susmaryosep, ginoo," Duterte said.

N. Korea combines 2 units managing leader's coffers into one: Seoul
Yonhap News Agency, 2016 09 29
Seoul— **North Korea is presumed to have combined the ruling party's two units handling its leader Kim Jong-un's governing funds into one**, a Seoul government official said Thursday. North Korea is projected to have kept intact Office 39 of the Workers' Party of Korea (WPK) as the special unit managing state coffers while eliminating Office 38, according to an

official at Seoul's unification ministry. Office 38 is known to raise money within the country to run North Korean leader Kim Jong-un's private coffers, while Office 39 is believed to manage hard currency earned from overseas. **Seoul said North Korea's three key security-related ministries are presumed to be controlled by a newly created state apparatus named the State Affairs Commission (SAC)**, but more information is needed for confirmation. The three ministries are the **Ministry of State Security, North Korea's intelligence agency**, the Ministry of the People's Armed Forces, the North's defense ministry, and the Ministry of People's Security, which is the North's police agency.

RAW tasked to carry out covert strikes against Pakistan
The International News, Ansar Abbasi, 2016 09 29
Islamabad - **Pakistan's intelligence establishment has got the information that RAW has been tasked by the Modi government to execute covert strikes against Pakistan** that includes terrorist activity, targeting of ISI or MI offices and assassination of Hafiz Saeed and Masood Azhar. According to a senior security official source, after the Indian military command advised Modi against any surgical strike or going for war with Pakistan, the option of covert strike against Pakistan has been approved. "RAW has been tasked to plan and execute a covert strike which should speak by itself being an Indian response to Uri," the source said, adding that RAW has been asked to select as target intelligence establishment of Pakistan. Besides this, it is said that RAW has been asked to speed up execution of its plans to assassinate Hafiz Saeed and Masood Azhar.

Somalia: Grande explosion in Kismayo
Garowe Online, 2016 10 04
Kismayo-- **Somalia's National Intelligence and Security Agency (NISA) base was targeted in a grenade attack on Tuesday**, in Kismayo city, regional capital of Jubaland, Garowe Online reports. Unidentified armed men thought to be Al Shabaab militants have tossed grenade bomb at the base located at Guul Wade neighborhood in Kismayo, according to an eyewitness.

Somalia: NISA chief fires over 1000 Intelligence personnel
Garowe Online, Staff report, 2016 10 03
Mogadishu - **Somalia's Intelligence Agency chief has fired 1,500 intelligence staff on Sunday, in a new shakeup of the Intelligence agency following intensified attacks by Al Shabaab group** in the capital of Mogadishu, Garowe Online reports. **Somali National Intelligence and Security Agency (NISA) chief General Abdulahi Gafow** said that the officers were sacked over incompetence to perform their duties, and will carry out major reforms to the agency to bring more competent officers to counter insurgency in the Somali capital of Mogadishu. Caretaker President Hasan Shaikh Mahmoud also has officially replaced Abdi Hakim Fareey with Mohamed Hasan Farah as the new head of NISA in Banadir region, through a presidential decree, yesterday.

Lutte antiterroriste dans le Sahel Le Canada appuie la France au Mali
Liberté (Algérie), Lyès Menacer, 2016 10 02
L'armée canadienne compte venir en aide aux forces françaises qui opèrent dans le Sahel dans le cadre de l'opération Barkhane, a révélé le journal spécialisé canadien

45eNord. "Les Forces armées canadiennes travaillent actuellement sur des plans pour assurer la continuité du transport aérien, **soutien stratégique aux efforts antiterroristes français dans la région du Sahel**", lit-on sur le site de ce journal qui reprend des extraits d'un courriel du ministère canadien de la Défense. "Comme ce fut le cas avec la récente contribution des FAC en 2015, les avions de transport aérien seront probablement utilisés pour le transport de troupes et de matériel français", a ajouté la même source, soulignant toutefois que "cette fois, l'appui serait différent, puisque l'Opération Barkhane sert également de support à l'opération des Nations unies au Mali et que le Canada envisage très sérieusement d'y prendre part, dans le cadre de son retour aux opérations de soutien de la paix".

Former Peru spy chief given another jail sentence for 1993 forced disappearances
The Guardian (London), Dan Collyns, 2016 09 29
Lima - **Peru's former spy chief Vladimiro Montesinos has been sentenced to 22 years in jail** for the forced disappearance of two students and a university professor, whose bodies were burned in the basement of the country's intelligence agency. The students, Kenneth Anzualdo and Martin Roca, and professor Justiniano Najarro were tortured, interrogated then executed in 1993, the court found. Montesinos, 71, who is already serving multiple sentences for human rights crimes, corruption and arms and drugs trafficking, is widely regarded to have been the éminence grise to the former president Alberto Fujimori, who is himself serving a 25-year sentence for corruption and authorising death squad killings. Nicolas Hermoza, the jailed former head of the Peruvian army, was also sentenced at the hearing.

Canada

'Follow us,' spy agency tweet urges
Ottawa Citizen, Jon Willing, 2016 10 11
Ottawa - **Canada's spy agency developed a new external communications plan and kicked around ideas for its first tweet before stepping out of the cyber-shadows, on Twitter**, in July. Internal documents obtained by the Citizen through access to information legislation show how the **Canadian Security Intelligence Service spitballed some options for the agency's first tweet, on July 13, before settling on, "Yes, we're on Twitter. Now it's your turn to follow us."** It notched more than 1,000 retweets and 1,400 likes. The agency had four options for cheeky tweets ready to roll, according to a Twitter game plan. The three that were left on the cutting room floor were: So, we're on Twitter. #WhatWe-DoWednesday may be a challenge for us. (redacted) Yes (redacted) (redacted) we're (redacted) on (redacted) (redacted) Twitter. #LearningCurve ¦¦ In honour of Twitter launching 10 years ago this month, we suddenly decided to join. #LateTo- TheParty There was some talk in emails about potentially crowdsourcing recommendations for the first tweet from all CSIS staff. One staffer served up 13 suggestions, including "Terrorists shaken, spies stirred." Names of CSIS staffare redacted in the documents. As reconnaissance, staffchecked out the first tweets **by the Communications Security Establishment, Central Intelligence Agency in the United States and Government Communications Headquarters in the United Kingdom**. The agency higher-ups approved a list of the initial 16 Twitter accounts to follow, which included the Federal Bureau of Investigation, CIA, Canadian Border Services Agency, RCMP and Privy Council clerk Michael Wernick, plus other national and international agencies. CSIS started thinking about exposing more of itself to the public earlier this year. A 16-page social media strategy dated April 2016 set the foundation for the agency's baby steps into the cyber-spotlight. As one might expect, CSIS noted that establishing "complex passwords" was key for its social media accounts. While posting stuffin error was identified as a risk, the social media strategy recommends "multiple sets of eyes" reviewing any content before it goes live. As well, the agency says it will need a "comprehensive exit strategy," with a heads-up to the clerk of the **Privy Council**, if it decides to close a social media account.

CSIS, Bill C-51 and Canada's growing metadata collection mess
CBC.CA, Steven Zhou, 2016 10 11
Opinion: **Much has been made over whether the Canadian Security Intelligence Service, Canada's spy** agency, should be armed with broader powers to "disrupt" what it perceives as terrorist plots. A report tabled this month by the **Security Intelligence Review Committee**, which watches over CSIS's work, notes that while the spy agency hasn't abused its new powers of disruption, its bulk data collection program needs to be scaled back. It's easy to think of CSIS and other spy agencies as shadowy organizations that carry out James Bond-like "missions" involving cool gadgets and high-tech weaponry, but the Snowden leaks, among other revelations, have shown the public that metadata collection (online communications, phone logs and other electronic exchanges that can be intercepted in enormous amounts) now constitutes the state's primary instrument of control. **Privacy Commissioner Daniel Therrien** recently called upon legislators (the Liberals in particular) to amend certain aspects of Canada's national security laws in order to address the issue of metadata collection. In particular, Therrien referred to the Communications Security Establishment, which seems to get a lot less public scrutiny

than CSIS. (Note: Steven Zhou is a Toronto writer who has experience in human rights advocacy. He has worked for Human Rights Watch, OXFAM Canada and other NGOs.)

RCMP boss admits his force 'failed' women
Toronto Star, Tonda MacCharles, 2016 10 07
Toronto - The **RCMP will settle two massive class-action harassment lawsuits for up to 1,000 female Mounties with a $100-million fund and new promises to change a workplace it now admits was toxic for them**. The landmark move comes with a historic admission: The RCMP is a workplace marked by systemic gender-based discrimination, bullying and sexual harassment. It is the first settlement of a systemic workplace harassment claim in Canada, according to the two law firms that negotiated the deal. Janet Merlo, 53, one of the lead plaintiffs, called it "a turning point. I have total faith this is the beginning of a new era. Hopefully a better era." RCMP Commissioner *Bob Paulson* personally made an emotional apology, his voice cracking, to Merlo and Linda Davidson, the two who filed the class actions, and to the hundreds of women he said they "courageously" represented. "To all the women who have been impacted by the force's failure to have protected your experience at work, and on behalf of every leader, supervisor or manager, every commissioner: I stand humbly before you today and solemnly offer our sincere apology," Paulson said.

What led up to the RCMP apology
National Post, Douglas Quan and Ian Macleod, 2016 10 07
Analysis: The **issue dogged Bob Paulson from the day he was appointed RCMP commissioner in 2011: how to stamp out pervasive allegations of harassment and discrimination against women in the force**. Despite taking several steps - developing a "Gender and Respect" action plan, inviting the RCMP civilian watchdog to investigate how the force handled workplace harassment, setting new hiring and promotion targets and revising the force's harassment policy - it seemed like it was never enough. In July 2013, several of his senior advisers suggested bolder action: a public apology. They presented him with a briefing document titled "Regimental Apology: Advice to the Commissioner." But after talking it over with senior staff, Paulson shelved the idea. He felt the timing wasn't right. There was still the matter of a proposed class-action lawsuit that was drawing hundreds of women. He wanted the apology to be paired with a resolution on compensation. **"It was about being in the right place, the right mindset," said Angela Workman-Stark, a former chief superintendent** who was involved in the discussions.

Espionage bill will allow PM to muzzle watchdog, report says
Globe and Mail, Colin Freeze, 2016 10 06
Toronto - **Canada's new spy-accountability legislation will create a parliamentary watchdog that prime ministers can keep on a short leash, or even muzzle, a report on the bill by the Library of Parliament** says. The Liberal government has said the national-security legislation will create an independent committee of MPs that will have regular briefings from government spy agencies on their activities. However, a report on Bill C-22 suggests the national security and intelligence committee of parliamentarians could end up "in effect, accountable to the Prime Minster alone." The report, done by the nonpartisan Library of Parliament and released this week, is a synopsis of the bill for parliamentarians. Such reports are among the information services the staff of the library provide to MPs and senators. The Library of Parliament's report points out that the bill would allow prime minsters and cabinet to shape, block or censor the committee's work. This hits a decidedly different tone from an essay published this week by **Public Safety Minister Ralph Goodale, who said Bill C-22 creates a committee that "will set its own agenda and report when it sees fit."** Every democracy has to determine how far legislators should be able to go to act as a check on government spies,

who typically work under secret orders from presidents and prime ministers. Canada gives its elected politicians less information about and fewer review powers over the security agencies than most governments do. And, unlike its closest allies, Canada has not cleared any parliamentarians to hear state secrets. Under C-22, that would change. The prime minister would pick nine lawmakers, mostly MPs but up to two senators, who would receive regular briefings on the activities of national security agencies such as the **RCMP, the Canadian Security Intelligence Service and the Communications Security Establishment**.

Members of dormant national security roundtable seeking answers
CBC News, Alison Crawford, 2016 10 06
Ottawa—A **group of Canadians who advise the federal government on national security issues are in the dark about the future of a 16-member roundtable they were appointed to**. Members of the **Cross-Cultural Roundtable on Security** are supposed to meet in-camera at least twice a year, yet the group hasn't met since October 2014. The roundtable was set up in 2005 to act as a sounding board for cabinet ministers and other high-ranking federal executives on how security matters and government policies affect different ethnic communities. Over the years, it has covered topics such as countering violent extremism, migration and cyber-security. Tories turfed anti- radicalization specialist, but can't prove they investigated him Federal study disputes claim diaspora communities breed extremists Federal security officials meet local Somali-Canadians "I feel I'm in limbo," said Farzana Hassan, a newspaper columnist and past-president of the Canadian Muslim Congress who was appointed to the roundtable in June 2015. "It seemed like a very good fit and I jumped on the idea and I accepted the appointment, but I have not heard anything," she told CBC News. This past spring, Hassan and several other members contacted by CBC received a letter informing them that the government is re-thinking the roundtable's activities and composition. Myrna Lashley, a psychologist, was appointed to the roundtable in 2005 and has been the group's chairperson since 2007. But after receiving the letter in March, Lashley suspects her involvement has come to an end. "Effectively when you get that letter, you have been told 'thank you,'" Lashley said. In the meantime, Lashley is concerned the federal government is not communicating as effectively on national security issues with Canada's ethnically diverse communities, such as Syrian refugees. In the past, Lashley says the group met with and advised ministers of public safety and justice as well as senior executives from the **RCMP, CSIS and Canada Border Services Agency** on all sorts of issues that could or would affect an array of cultural groups.

China tries to block visits of Canadian diplomats to Tibet, says Dion
Canadian Press, Mike Blanchfield, 2016 10 06
Ottawa - **China has for years tried to block Canadian diplomats from Tibet,** banning some of them from visiting aid projects once funded by Canadian taxpayers, says Foreign Affairs Minister Stephane Dion. While China has never denied a request by a high-level diplomat to visit Tibet, Dion says, it has put up roadblocks, including delays in approving travel requests and shadowing Canadians while there. Dion describes the problems in a written response to questions from New Democrat MP Randall Garrison that was recently tabled in the House of Commons.

National security review must look beyond terrorism, expert tells MPs
Canadian Press, Jim Bronskill, 2016 10 05
Ottawa - An intelligence expert says a federal review of national security shouldn't be fixated solely on terrorism. **Wesley Wark, who teaches at the University of Ottawa, says Canadians need to have a discussion about other dangers, including cyberthreats and problems that could arise from climate change.** He told the Commons public safety committee that terrorism is just one of a number of security threats _ and it may not be the most serious one

society faces. Wark was among the first witnesses as the committee kicked off hearings that will help shape the Liberal government's security policy. The government also recently opened an online consultation soliciting feedback on issues ranging from sharing information and preventing attacks to **conducting surveillance and ensuring intelligence agencies** are accountable. In last year's election campaign, the Liberals promised to repeal "problematic elements" of omnibus security legislation, known as **Bill C-51,** ushered in by the previous Conservative government. The bill gave the Canadian Security Intelligence Service explicit powers to disrupt terrorist threats, not just gather information about them. The legislation also created a new offence of promoting the commission of terrorist offences and broadened the government's no-fly list powers. In addition, it expanded the sharing of federally held information about activity that "undermines the security of Canada."

FBI Hacked Computers in Australia as Part of Global Child Porn Sting
Motherboard (Vice Magazine), Joseph Cox, 2016 10 10
New York - In early 2015, **the FBI hacked thousands of computers across the world, based on a single, arguably illegal, warrant.** Now, Motherboard has learned that as part of the same operation, the FBI also hacked computers in Australia, highlighting how law enforcement agencies are increasingly using malware to remotely search computers outside of their jurisdiction. The case, codenamed Operation Pacifier, revolves around the FBI's investigation into one of the largest ever dark web child pornography sites, called Playpen. When the FBI seized the site in 2015, instead of shutting it down, the agency briefly ran Playpen from a government server in order to deploy a network investigative technique (NIT)--the agency's term for a piece of malware--in an attempt to identify its visitors. The agency's malware used a Tor Browser exploit, and then grabbed a suspected Playpen user's IP address, MAC address, and other technical information.

Spy fraud
Vice Magazine, Jason Leopold, 2016 10 09
New York - **When contractors and employees who work for America's most powerful intelligence agencies get bored at work, they sometimes kill time by viewing pornography on their classified government computers**, browsing online dating services, engaging in "sex chats" with minors, and playing games on **Facebook. And they charge U.S. taxpayers millions of dollars for it. Between 2013 and 2015, the Intelligence Community's Inspector General,** the watchdog entity overseeing 16 federal intelligence agencies, investigated dozens of instances of employee misconduct and crimes based on referrals it received from intelligence agencies. **Many of them centered on widespread contracting fraud involving individuals who worked on highly classified intelligence programs for the NSA, the CIA, and the Office of Director of National Intelligence (ODNI)** on behalf of well-known contractors such as IBM, Booz Allen Hamilton, Boeing, and General Dynamics. That's according to hundreds of pages of top-secret internal watchdog reports that were declassified and released to VICE News in response to a Freedom of Information Act lawsuit.

How U.S. Torture Left Legacy of Damaged Minds (Canada)
New York Times, Matt Apuzzo & Sheri Fink, 2016 10 08

Analysis: **Before the United States permitted a terrifying way of interrogating prisoners, government lawyers and intelligence officials assured themselves of one crucial outcome**. They knew that the methods inflicted on terrorism suspects would be painful, shocking and far beyond what the country had ever accepted. But none of it, they concluded, would cause long lasting psychological harm. Fifteen years later, it is clear they were wrong. Today in Slovakia, Hussein al-Marfadi describes permanent headaches and disturbed sleep, plagued by memories of dogs inside a blackened jail. In Kazakhstan, Lutfi bin Ali is haunted by nightmares of suffocating at the bottom of a well. In Libya, the radio from a passing car spurs rage in Majid Mokhtar Sasy al-Maghrebi, reminding him of the C.I.A. prison where earsplitting music was just one assault to his senses. And then there is the despair of men who say they are no longer themselves… In several cases, their mental status has complicated the nation's long effort to bring them to justice. **Omar Khadr,** a Canadian citizen, had been wounded and captured in a firefight at age 15 at a suspected terrorist compound in Afghanistan, where he said he had been sent to translate for foreign fighters by his father, a Qaeda member. Years later, he would plead guilty to war crimes, including throwing a grenade that killed an Army medic.

U.S. Says Russia Directed Hacks to Influence Elections
New York Times, David E. Sanger & Charlie Savage, 2016 10 08
Washington - The **Obama administration on Friday formally accused the Russian government of stealing and disclosing emails from the Democratic National Committee and a range of other institutions and prominent individuals,** immediately raising the issue of whether President Obama would seek sanctions or other retaliation. In a **statement from the director of national intelligence, James Clapper Jr., and the Department of Homeland Security, the government said the leaked emails that have appeared on a variety of websites "are intended to interfere with the U.S. election process."** The emails were posted on the well-known WikiLeaks site and two newer sites, DCLeaks.com and Guccifer 2.0, identified as being associated with Russian intelligence. "We believe, based on the scope and sensitivity of these efforts, that only Russia's senior-most officials could have authorized these activities," the statement said. It did **not name President Vladimir V. Putin of Russia**, but that appeared to be the intention. The statement from Mr. Clapper and the Department of Homeland Security, which is primarily responsible for defending the country against sophisticated cyberattacks, said the intelligence agencies were less certain who was responsible for "scanning and probing" online election rolls in states around the country. It said that those "in most cases originated from servers operated by a Russian company," but stopped short of alleging the Russian government was responsible for those probes.

Russia's Senior-Most officials' Ordered DNC Hack
The Daily Beast, Shane Harris and Nancy Youssel, 2016 10 08
Washington - **The Obama administration has concluded that "Russia's senior-most officials" ordered hackers to break into the computer networks of American political organizations in order "to interfere with the U.S. election process," intelligence and security agencies said** in a joint statement Friday. The statement was the administration's first public attribution of the hacks against the Democratic National Committee and a second political institution to the Russian government. Privately, officials had said for the past few months that all signs pointed to an operation being directed by Moscow intended to meddle with the November election. That evidence mounted as law enforcement and intelligence agencies sifted through technical details about the hack and eventually reached a consensus that Russia was to blame, a senior administration official told The Daily Beast.

3 Arrested in Alleged Bid to Export US Technology to Russia
Reuters, Staff report, 2016 10 07
Washington - A **U.S. citizen and two Russian nationals were arrested Thursday on charges relating to the alleged illegal export of sensitive military technology from the United States to Russia,** the Justice Department said. The department said **Alexey Barysheff** of Brooklyn, New York, a naturalized U.S. citizen, was arrested for illegally exporting controlled technology. Russian nationals Dmitrii Aleksandrovich Karpenko and Alexey Krutilin were simultaneously arrested on charges of conspiring with Barysheff, it said. All three were scheduled to appear in court Thursday afternoon. In its complaint, the government alleged the defendants had engaged in a conspiracy to obtain microelectronics from manufacturers and suppliers in the United States and export them to Russia while evading government controls on high-tech exports.

Accused Contractor Was on Hacking Team
Wall Street Journal, Damian Paletta, Scott Calvert, 2016 10 07
Washington - **Harold "Hal" Martin, the former National Security Agency contractor charged this week with stealing government secrets, spent parts of the past decade on a government hacking team**, sought funding for research into post-traumatic stress disorder, and tried to rally internet users to wage digital warfare against computer "commandos." Investigators are still trying to determine why Mr. Martin, a former employee of consulting firm **Booz Allen Hamilton** who worked on projects at the NSA and the Pentagon, took classified documents containing computer-spying tools to his home in Glen Burnie, Md. But as the probe continues, more details of his background are coming into focus. A former academic mentor of Mr. Martin described him as focused, and burdened by a sense that his insights weren't appreciated.

After latest NSA breach, does agency do enough to protect classified data?
Associated Press, Staff report, 2016 10 07
Washington - The **arrest of a National Security Agency contractor accused of stealing classified information represents the second known case of a government contractor being publicly accused of removing secret data from the intelligence agency since 2013**. The latest arrest came despite efforts to reform security after the Edward Snowden disclosures, especially in regard to insider threats. **Harold Thomas Martin III**, 51, of Glen Burnie, Maryland, was arrested by the FBI in August, after federal prosecutors say he illegally removed highly classified information and stored the material in his home and car. A defense attorney said Martin did not intend to betray his country. "One key thing we don't have visibility into now is how he was caught, because that would provide some insight into whether the reforms that were put in post-Snowden were effective or not, or their relative efficacy," said Rajesh De, who was the NSA's general counsel when the Snowden story broke and remained there until last year. Snowden's 2013 theft of documents that were leaked to journalists revealed the NSA's bulk collection of millions of Americans' phone records.

Another Security Breach Shines a Light on Booz Allen's Ubiquitous Spy Business
New York Times, Matthew Rosenberg, 2016 10 07
Washington - In the six weeks since federal agents raided a suburban Maryland home and arrested **Harold T. Martin III** on suspicion of stealing classified information from the National Security Agency, **another organization has quietly prepared to face the fallout: Booz Allen Hamilton**, Mr. Martin's employer. Booz Allen, a consulting firm that earns billions of dollars by working for American intelligence agencies, has been called the world's most profitable spy organization. News this week of Mr. Martin's arrest in August could renew scrutiny of the firm's operations and, more broadly, the lucrative contracting business that American intelligence now

relies on to run its vast, global surveillance operations. Mr. Martin's arrest is the second time in three years that a Booz Allen contractor has been **accused of stealing potentially damaging material from the N.S.A**. The company also employed Edward J. Snowden, who spirited out a cache of documents that, in 2013, exposed the extent of American surveillance programs in the United States and around the world. Tens of thousands of contractors are believed to work for American intelligence agencies (the exact number is not known). They do everything from helping secure the military against cyberattacks and plan intelligence operations, to training spies and running war games for NATO generals.

Arrest of NSA contractor highlights growing concern over insider threats
Washington Post, Christian Davenport, 2016 10 07
Washington - The **arrest of a National Security Agency contractor charged with stealing highly classified material is the latest example of a trend that officials say can be every bit as dangerous as an outside hacker: the insider threat**. The federal government has been increasingly concerned about the ability of its own employees and contractors to use their positions to walk away with troves of sensitive information. And it has tried to implement new safeguards to not only better secure important data but also monitor the people with access to it. Fears over insider threats intensified after the breach by former Army Pfc. Chelsea Manning and Edward Snowden, an NSA contractor working for Booz Allen Hamilton. But with the revelation that **Harold Thomas Martin III** was arrested in August and charged with theft of government property and unauthorized removal and retention of classified materials, there will be even greater scrutiny of how the nation protects its secrets, officials said.

N.S.A. Suspect Is a Hoarder. But a Leaker? Investigators Aren't Sure.
New York Times, Scott Shane, David E. Sanger, 2016 10 07
Washington - **On a half-dozen occasions in the last three years, top-secret information has leaked from the National Security Agency and appeared on the web.** Government analysts concluded with alarm that the documents, including intercepted communications from Europe and Japan and the computer code for the N.S.A.'s hacking tools, had not come from the huge collection taken by **Edward J. Snowden**. That meant there was at least one more leaker still at large, and when F.B.I. agents found in August that a former agency contractor had been taking home top-secret material, they thought they might have the culprit. Now they are not so sure. **Harold T. Martin III,** the contractor arrested by the F.B.I. on Aug. 27, brazenly violated basic security rules, taking home a staggering quantity of highly classified material. He had been doing this undetected, agency officials were chagrined to learn, since the late 1990s. But, officials say, they have not been able to definitively connect Mr. Martin, 51, a Navy veteran, to the leaked documents.

NSA Director Denies Mass Scanning of Yahoo Emails
Boston Herald, Jordan Graham, 2016 10 07
Boston - **Top U.S. intelligence officials denied a blockbuster Reuters report claiming Yahoo built special software to scan emails to hundreds of millions of accounts**, while a subsequent New York Times report claims the snooping was limited to suspected members of a terrorist organization. "That would be illegal. We don't do that, and no court would ever grant us the authority to do that. We have to make a specific case. And what the court grants is specific authority for a specific period of time for a specific purpose," said **Adm. Michael Rogers**, director of the **National Security Agency**, speaking at the Cyber Security Summit at Massachusetts Institute of Technology Oct. 5. "We have a legal framework in this nation that enables the government ... ?for specific reasons, under specific conditions, to make a case before a judge in which we're able to show a judge we have reason to believe that there is threat here to the United States associated with specific individuals and a judge grants,

simplistically, authority for a specific purpose for a specific period of time to access data." On Tuesday, Reuters reported Yahoo had built custom software for the U.S. government that scanned incoming emails to millions of accounts. "I've read this real quickly and I thought, well, this is a little speculative," Rogers said. In a statement, Yahoo called the story "misleading."

N.S.A. Contractor Arrested in Possible New Theft of Secrets
New York Times, Multiple reporters, 2016 10 05
Washington - The F**.B.I. secretly arrested a National Security Agency contractor in recent weeks and is investigating whether he stole and disclosed highly classified computer code developed to hack into the networks of foreign governments**, according to several senior law enforcement and intelligence officials. The theft raises the embarrassing prospect that for the second time in three years, an insider has managed to steal highly damaging secret information from the N.S.A. In 2013, **Edward J. Snowden**, who was also a contractor for the agency, took a vast trove of documents that were later passed to journalists, **exposing N.S.A. surveillance programs in the United States and abroad**. The contractor was identified as **Harold T. Martin III,** 51, of Glen Burnie, Md., according to a criminal complaint filed in late August. He was charged with theft of government property, and unauthorized removal or retention of classified documents. During an F.B.I. raid of his house, agents seized documents and digital information stored on electronic devices. A **large percentage of the materials found in his house and car contained highly classified information**. At the time, F.B.I. agents interviewed Mr. Martin, and he initially denied having taken the documents and digital files. The agency later said he had stated that he knew he was not authorized to have the materials. According to the complaint, he told the agency that "he knew what he had done was wrong and that he should not have done it because he knew it was unauthorized."

NSA Thief Worked With Elite Hacker Squad
The Daily Beast, Multiple reporters, 2016 10 06
Washington - **The retired Navy officer arrested for allegedly removing highly classified information from the National Security Agency worked with the organization's elite computer hackers,** who specialize in using computer code to penetrate the systems of foreign nations, according to a former colleague and the man's online resume. **Harold Thomas Martin, III,** who goes by Hal, was also enrolled in a PhD program at the University of Maryland Baltimore County. The university has a partnership with the NSA, in which the agency helps develop curriculum for the school and agency employees can take classes there. Martin worked with **NSA's Tailored Access Operations unit,** sources with knowledge of his background told The Daily Beast. In his LinkedIn resume, Martin says he worked as a "cyber engineering advisor" supporting "various cyber related initiatives" in the Defense Department and intelligence community. Allen was employed by NSA contractor Booz Allen Hamilton. Former intelligence officials, who said they aren't familiar with Martin's case, suggested he may have brought the material home to use as research for his PhD studies.

Obama Admin Hiding Secret Hostage Docs Signed With Iranian Intel Officials
Washington Free Beacon, Adam Kredo, 2016 10 06
Washington - **Key documents relating to the Obama administration's secret negotiations with Iran, including a $1.7 billion cash payment, are being stored at a highly secure site on Capitol Hill,** preventing the public and many in Congress from accessing them, according to multiple sources who described the situation to the Washington Free Beacon. The documents are not technically classified but are being kept in a "secure reading space" where the majority of congressional officials cannot access them. Those cleared are forced to relinquish their cellular devices and are barred from taking notes, undermining the ability of staffers to brief their lawmakers on the contents, according to the sources. Sources further disclosed that joint U.S.-

Iranian signatures across the three documents add up to a package deal between Washington and **Iran's Intelligence Ministry**, the country's internal spy agency. Sources familiar with a closed-door January briefing by senior Obama administration officials told the Free Beacon they were informed the United States negotiated with "the Iranian intelligence apparatus."

Revealed: The FBI's Secret Methods for Recruiting Informants at the Border
The Intercept, Cora Currier, 2016 10 06
Washington - Think about arriving at the airport from a foreign country. You are tired from a long flight, anxious about your baggage, and thinking about meeting your family in the arrivals area. You may not have seen them in years. Perhaps it is your first time in the United States. Perhaps you do not speak English well. Perhaps you plan to ask for asylum. Perhaps you are coming from a country where interactions with people in uniform generally involve bribery, intimidation, or worse. The **FBI and U.S. Customs and Border Protection work closely together to turn these vulnerabilities into opportunities for gathering intelligence**, according to government documents obtained by The Intercept. **CBP assists** the FBI in its efforts to target travelers entering the country as potential informants, feeding the bureau passenger lists and pulling people aside for lengthy interrogations in order to gather intelligence from them on the FBI's behalf, the documents show. In one briefing, CBP bills itself as the "GO TO agency in the Law Enforcement world when it comes to identifying individuals of either source or lead potential."

Top CIA officers to face questions about brutal interrogations in civil suit
Washington Post, Greg Miller, 2016 10 06
Washington - **Two former high-ranking CIA officials will be compelled to answer questions under oath about the agency's brutal interrogations of terrorism suspects**, a federal judge ruled Tuesday as part of a lawsuit brought against former CIA contractors by the American Civil Liberties Union. The ruling would require **Jose Rodriguez, who was the head of the CIA's Counterterrorism Center** after the Sept. 11, 2001, attacks on the United States, and **John Rizzo, the agency's former acting general counse**l, to submit to depositions about a program that used methods widely condemned as torture. "This ruling is a critical step towards accountability, and it charts a way forward for torture victims to get their day in court," ACLU attorney Dror Ladin said in a statement released by the organization after the ruling in federal court in Spokane, Wash.

NSA has lost some terrorists because of encryption, its top lawyer says
CNBC, Harriet Taylor, 2016 10 05
Cambridge - The **NSA has lost some terrorists because of their adoption of strong encryption, but the agency is supportive of the use of the technology**, it's top lawyer said Wednesday. **Glenn Gerstell**, general counsel of the National Security Agency, made the comments at the Cambridge Cyber Summit at MIT in Cambridge, Massachusetts. "We are big supporters of encryption," said Gerstell. "Encryption is more of a law enforcement issue." He said the NSA sees ISIS terrorists using end-to-end encryption, and that has prevented the agency from finding out the key information about those bad actors.

The Aspen Institute's Walter Isaacson Interviews Admiral Michael S. Rogers from the Cambridge Cyber Summit Today
CNBC website, Walter Isaacson, 2016 10 05
WALTER ISAACSON: Thank you. Thank you very much, Michael, for being with us today. The latest of these is Yahoo, in which supposedly a lot was just read because they were ordered to do so. I just got a statement from them, an email, saying, no, no it wasn't really that way. We did not open up all of the emails. It was a much narrower complying with orders. Talk to us about the type of things you need to do and have industry cooperate with you, why that's legal and

where you think we have to draw the line. **ADMIRAL ROGERS: So clearly we have a legal framework in this nation that enables the government under specific -- for specific reasons, under specific conditions, to make a case before a judge in which we're able to show a judge we have reason to believe that there is threat here to the United States associated with specific individuals and a judge grants, simplistically, authority for a specific purpose for a specific period of time to access data.** And the court order is then given to the private sector to execute. This is done -- phone records, bank records, this is a long- standing mechanism in our nation for how does the government access information using a lawful mechanism to do that. Cyber and intelligence, in this aspect, is no different then. WALTER ISAACSON: Let me make sure I heard you correctly. That means you couldn't get one that would just blanket look at all emails. ADMIRAL ROGERS: No. I was going to say, that would be illegal. We don't do that, and no court would ever grant us the authority to do that. We have to make a specific case. And what the court grants is specific authority for a specific period of time for a specific purpose. It's not a blanket, A, just everything. WALTER ISAACSON: So we shouldn't believe the stories that we read? ADMIRAL ROGERS: I've read this real quickly and I thought, well, this is a little speculative.

Homeland Security Deputy Secretary stepping down
Federal News Radio, David Thorton, 2016 10 06
Washington - **Department of Homeland Security Deputy Secretary Alejandro Mayorkas announced that he is stepping down effective Oct. 28**. Mayorkas announced his departure and thanked the department in a staff email sent out Oct. 5 and obtained by Federal News Radio. "I began my government service as a federal prosecutor, a position I held for nearly twelve years, and I have been a member of our department for nearly seven years," he said. "I have cherished every moment of public service. Thank you for making it so."

Yahoo secretly scanned customer emails for U.S. intelligence - sources
Reuters, Joseph Menn, 2016 10 04
San Francisco - **Yahoo Inc last year secretly built a custom software program to search all of its customers' incoming emails for specific information provided by U.S. intelligence officials,** according to people familiar with the matter. The company complied with a classified U.S. government directive, scanning hundreds of millions of Yahoo Mail accounts **at the behest of the National Security Agency or FBI,** said two former employees and a third person apprised of the events. Some surveillance experts said this represents the first case to surface of a U.S. Internet company agreeing to a spy agency's demand by searching all arriving messages, as opposed to examining stored messages or scanning a small number of accounts in real time. It is not known what information intelligence officials were looking for, only that they wanted Yahoo to search for a set of characters.

Police use snooping devices on phones
London Times, Fiona Hamilton, 2016 10 11
London - A **string of police forces have secretly purchased surveillance technology that enables large amounts of phone data to be collected from passers-by**, it has emerged. At least seven forces in England and Wales are now thought to be using IMSI Catchers that can collect and identify call and message data from mobile phones within a given area. They mimic

mobile-phone towers and act as a "dummy", sending out signals that trick devices into automatically trying to connect to them. Police find the Catchers useful to track suspects and uncover their phone activity, but they can capture information from other mobiles within a radius of up to five miles. It is believed that there is no automatic deletion of the gathered material from police systems, meaning that forces could be harvesting information about tens of thousands of members of the public.

Pour se protéger contre l'espionnage russe, le gouvernement britannique bannit l'Apple Watch
FranceTv Info (site web), Journaliste maison, 2016 10 11
Londres - **Pour se protéger contre l'espionnage russe, le gouvernement britannique bannit l'Apple Watch des ministères** En Grande Bretagne, la montre connectées d'Apple est désormais interdites lors des réunions ministérielles. Les services de sécurité pensent que la Russie pourrait y placer un mouchard. La montre connectée d'Apple n'est pas la bienvenue au sein du gouvernement britannique. Le gadget est désormais banni des ministères. Motif ? Un risque d'espionnage. Des hackers pourraient se servir de ces montres pour écouter les conversations de leurs propriétaires.

Apple Watches banned from Cabinet after ministers warned devices could be vulnerable to hacking
London Daily Telegraph, Peter Dominiczak, 2016 10 09
London - **Ministers have been barred from wearing Apple Watches during Cabinet meetings amid concerns that they could be hacked by Russian spies**, The Telegraph has learned. Under David Cameron, several cabinet ministers wore the smart watches, including Michael Gove, the former Justice Secretary. However, under Theresa May ministers have been barred from wearing them amid concerns that they could be used by hackers as listening devices. Mobile phones have already been barred from the Cabinet because of similar concerns. One source said: "The Russians are trying to hack everything."

Female spy spills MI6 secrets including details over agency's 'Q'
The Express (UK), Zoie O'Brien, 2016 10 05
London - **Thousands of listeners tuned in to hear the agent discuss what life is like for a real James Bond.** The agent given the name "**Emma**" has her vice distorted as she chatted to Radio 2 host Chris Evans on Tuesday morning. "Emma" revealed similarities in her life to the 007 films - like calling her bosses by just one letter. "Everyone has massive misconceptions they think it's all cars with spike things coming out the side and motorbikes with parachutes on. It's nothing like that. We have lots of gadgetry, lots of people who are really creative, really technical and have a fantastic time thinking about things and inventing things. It's not what people think."

Muslims see Prevent programme as spying scheme, watchdog admits
The Independent (UK), Joseph Watts, 2016 10 07
London - The **UK's terror law watchdog has said Muslim communities see the Government's anti-extremism strategy as a "spying programme"** and called for it to be overhauled. **David Anderson** QC claimed many people believe the programme targeted the "practice of Islam" as opposed to the spread of radical beliefs. He urged ministers to conduct an independent review of the scheme, which is designed to help officials spot individuals who are becoming radicalised. Mr Anderson said: "There is a strong feeling in Muslim communities that I visit, that Prevent is, if not a spying programme, at least a programme that is targeted on them. In some cases, it is even felt it is targeted not just at Islamist terrorism or extremism, but at the practise of Islam. People who pray or who wear the veil, for example, are sometimes felt to be

under suspicion." He added: "Now, I'm sure those fears are exaggerated, and they are certainly not what the programme is supposed to be about, but the fact is that they are very real. So it is frustrating for me to see a programme whose ideals are so obviously good, falling down on the delivery to the point where it is not trusted in the community where it principally applies."

Australians want tougher terror measures

Australian Associated Press, Staff Writer, 2016 10 11

Canberra - A m**ajority of Australians want the government to do more to prevent terrorist attacks on home soil a**nd are happy to give up some personal freedoms to help the cause, new research shows. But many are concerned that Muslims are being singled out for increased surveillance and monitoring. The Australian National University poll found 71 per cent were worried about the rise of Islamist extremism in Australia while nearly as many felt Muslims shouldn't be subject to additional scrutiny based on their religion. "People are obviously concerned whether it's the faith of Islam that gives rise to these things," co-author Katja Theodorakis told reporters on Monday. "That's something that warrants further study because that could have political ramifications and divisions - and it's not good for social cohesion in a multicultural society."

Anti-terror plan for domestic thugs

The Australian, Amos Aikman, 2016 10 07

Canberra - The **Northern Territory's top cop wants to deploy "counter-terrorism-like" tactics against violent and alcoholic thugs who repeatedly bash their families**, warning that recidivists pose a danger to society at large and tougher measures are needed to control them. While no details have been announced, The Australian understands the proposals would see police apply to courts for "prohibition orders" targeting the nastiest offenders when they leave jail. A person subject to such an order would have to report to police regularly and keep away from certain individuals and areas -- similar to the rules applied to some sex criminals -- and could be sent to prison for up to a further five years if they did not comply. Consideration is also being given to seeking wider legislative reform that would allow police to apply for a prohibitive order against a person not convicted of any crimes, where there is evidence doing so would significantly improve community safety.

Spark seeks details on US email scans

New Zealand Herald, Nicholas Jones, 2016 10 06

Wellington - **Kiwi telco Spark is seeking clarification from Yahoo as to whether any of its customers had email searched at the behest of United States intelligence agencies**. According to an investigation by Reuters, Yahoo last year used a software program to search its customers' incoming email for specific information provided by US intelligence agencies. That happened after the Yahoo complied with a classified US government demand, it was reported.

Spark is seeking more information, including whether Spark's Xtra Mail customers could have been affected. Yahoo hosts more than 800,000 accounts on behalf of Spark. "At this time we are still seeking clarification from Yahoo if any Spark Xtra email customers are involved," a spokeswoman told the Herald. **Privacy Commissioner John Edwards** said Spark was right to be making its own inquiries. "I would be concerned if these kinds of arrangements were occurring without a clear legal authority. But we haven't seen enough in the Reuters report to know the basis of it."

China says anti-terrorism cooperation should follow int'l law
Xinhua News Agency, 2016 10 11
Beijing - **China on Monday said international anti-terrorism cooperation should follow international law** and basic norms and principles of international relations. "No domestic law shall be above international law," Foreign Ministry spokesperson **Geng Shuang** said at a daily press briefing in response to a question concerning the Justice Against Sponsors of Terrorism Act (JASTA) recently passed by the U.S. Congress. China maintains that international anti-terrorism cooperation should allow the United Nations the leading role, accord with the purposes and principles of the Charter of the United Nations, and follow international law and basic norms of international relations, including the doctrine of sovereignty equality, he said.

Half of Chinese Favorable Toward U.S., but Many See a Threat, a Survey Finds
New York Times, Edward Wong, 2016 10 06
Beijing - With tensions between the United States and China on the rise over issues such as the South China Sea and **cyberespionage**, one might think the citizens of the two nations have an increasingly hostile view of the other. Yet, **Chinese have a more favorable view of the United States than they did a year ago, according to the results of a global survey released by the Pew Research Center on Wednesday.** They hold that perspective even as many cite the United States as a major threat to China, Pew said. The report also said that although three-quarters of Chinese say their country is playing a larger role in the world than it did a decade ago, most want their government to focus on domestic issues rather than helping other nations. And more than three-quarters say their way of life needs to be protected from foreign influence -- a 13 percentage-point increase from 2002.

Foreign Intelligence Service to preserve continuity, follow rich traditions of Soviet and Russian agents - new chief
Interfax News Agency, 2016 10 06

Moscow—The **new director of Russia's Foreign Intelligence Service (SVR), Sergei Naryshkin, has pledged to preserve continuity within the organization and attain its goals**. Naryshkin said this to reporters after being introduced to the staff by Russian President Vladimir Putin at the SVR headquarters. "The Foreign Intelligence Service is one of the best prepared and efficient agencies in the world," Naryshkin said. "I think that in its work, it is necessary to preserve continuity and follow the rich traditions formulated by many generations of Soviet and Russian intelligence officers, and I intend to ensure this continuity," the new SVR director said, adding that herein lies the guarantee "of successful resolution of those very serious and large-scale problems that face the Service's personnel."

Naryshkin worked well in intelligence, politics, 'goes home' – Putin
Interfax News Agency, 2016 10 05
Moscow—Russian President **Vladimir Putin has visited the Moscow headquarters of the Russian Foreign Intelligence Service to introduce Sergei Naryshkin to employees as its new head**. The former State Duma speaker took the position of Foreign Intelligence Service director on Wednesday. "Dear colleagues, I am officially introducing Sergei Yevgenyevich Naryshkin as the new Service director," the president told the service staff."As you know, he worked well in the intelligence service, when he was with it, and in politics. In this sense, Sergei Yevgenyevich is coming home," Putin said.

Putin: Russia's Foreign Intelligence Service Must Be Proactive, Innovative
Sputnik, Staff report, 2016 10 05
Moscow - The **Russian Foreign Intelligence Service (SVR) should be proactive by taking innovative steps and identify key tendencies of development of the international situation, Russian President Vladimir Putin said** Wednesday. "Today the situation in the world makes special demands to the quality and effectiveness of the SVR work. It is necessary to be proactive, use innovative, unconventional decisions," Putin said. He also stressed the importance of identifying and analyzing "the whole spectrum of external threats, identifying key strategic trends in the development of the international situation, contributing to the strengthening of economic, technological and military potential of Russia. " "Of course the safety of our citizens should be under special control, especially in regions such as the Middle East, Africa, as well as in certain Central Asian countries," Putin said at a ceremony formally appointing Sergei Naryshkin to lead the SVR.

Russia denies drugging US diplomats
CNN.com, Jamie Crawford, 2016 10 05
Washington - A **top Russian official strongly denied Wednesday a report that Moscow may have been behind the alleged drugging of two US diplomats in St. Petersburg** and suggested instead that the pair may simply have been drunk. "We are outraged," Russian **Deputy Foreign Minister Sergey Ryabkov** said in a statement posted on the Russian Foreign Ministry website, adding the claim may have been the work of the US State Department seeking "revenge" for the collapse of talks between the two counties to address the situation in Syria. Russia's denial came after a report two days ago by **Radio Free Europe/Radio Liberty** that the diplomats -- a man and a woman who were not senior officials -- allegedly had their drinks spiked with a date- rape drug while attending a United Nations convention on corruption last November. The report, attributed to anonymous sources, said the State Department quietly protested the incident to Russian officials. The story also said one of the diplomats had been treated at a "Western medical clinic" - which Russia said was not true.

Two U.S. Diplomats Drugged In St. Petersburg Last Year, Deepening Washington's Concern
Radio Free Europe, Mike Eckel, 2016 10 03
Washington - **Two U.S. officials traveling with diplomatic passports were drugged while attending a conference in Russia last year**, and one of them was hospitalized, in what officials have concluded was part of a wider, escalating pattern of harassment of U.S. diplomats by Russia. The incident at a hotel bar during a UN anticorruption conference in St. Petersburg in November 2015 caused concern in the **U.S. State Department**, which quietly protested to Moscow, according to a U.S. government official with direct knowledge of what occurred. But it wasn't until a dramatic event in June, when an accredited U.S. diplomat was tackled outside the U.S. Embassy in Moscow, that officials in Washington reexamined the November drugging and concluded they were part of a definite pattern. According to the U.S. government official, and another former official also knowledgeable about the case, the drugged diplomats were part of a delegation of Americans attending the Conference of the States Parties to the United Nations Convention against Corruption, held on November 2-6 in St. Petersburg.

Is Vladimir Putin Poisoning U.S. Diplomats?
The Daily Beast, Anna Nemtsova, 2016 10 05
Moscow - A **sensational report about drugged U.S. diplomats published by the U.S. government funded Radio Free Europe/Radio Liberty on Monday has met with a certain irony, and even skepticism among veteran correspondents here**. According to the report, last year two mid-level U.S. officials visiting St. Petersburg for a conference were drugged in the bar of an upscale hotel, which was not named. The effect of the poison was so dramatic that one of the visitors was hospitalized, a U.S. government official told RFE/RL. When the victim was taken to an independent clinic, the power went out so no samples could be taken. All this was part of pattern of harassment, the article noted, that included creepy poltergeist- like incidents where American diplomats would open the doors of their apartments to discover faucets inexplicably turned on, or a cigarette left burning, or human excrement on the floor. Way back in 2013, when relations between Moscow and Washington were relatively civil, the State Department inspector general complained that U.S. employees in Russia were facing "intensified pressure by **the Russian security services** at a level not seen since the days of the Cold War." But, then, Washington generally kept quiet. That the story is coming out now is just one more sign that relations are no longer civil at all. And this week the Cold War vituperation between Moscow and Washington sounded especially bad.

Lawyer files appeal against arrest of Sushchenko charged with espionage in Russia
Interfax (Ukraine), Staff report, 2016 10 05
Moscow - A **lawyer has challenged the arrest of Ukrainian citizen Roman Sushchenko, who is under arrest in Russia on espionage charges**, the press service of Moscow's Lefortovsky District Court told Interfax. "We have received an appeal from a lawyer against the court resolution on the preventive measure against Sushchenko in the form of custody. The lawyer requests [the court] to cancel its resolution and select a softer preventive measure against his client," Yekaterina Krasnova, spokesperson for the court, said. **Russia's Federal Security Service (FSB)** reported on October 3 that "Ukrainian military intelligence career officer Col. Sushchenko had been detained in Moscow when gathering intelligence."

Ukrainian journalist detained in Russia, accused of espionage
Kyiv Post, Yuliana Romanyshyn, 2016 10 05
Kyiv - **Ukrainian journalist Roman Sushchenko was placed in detention for two months by Lefortovo District Court in Moscow on Oct. 3** after being arrested by Russia's Federal Security Service on charges of spying. Sushchenko worked as a foreign correspondent in Paris,

France, for Ukrainian online news agency Ukrinform. He was in Moscow in personal business, Ukrinform said. Ukrinform rejected the charges against their employee, and said the FSB violated the law while arresting him. According to Ukrinform, the federal security agents officially informed neither his employer nor his wife of his arrest, although his relatives in Moscow were aware he had been detained.

Europe

Danish security agency files charges against former boss
The Local (Denmark), 2016 10 11
Copenhagen—The **Danish Security and Intelligence Service (PET) reported its former director Jakob Scharf to the police on Tuesday for violating a confidentially agreement**. Scharf is the subject of journalist **Morten Skjoldager's new book 'Seven Years for PET'**, the release of which the intelligence service blocked through an injunction last week. On Monday, it was revealed that Scharf had signed an agreement with PET stating that he would seek the agency's prior approval before participating in a book project or any other activity that could entail the dissemination of sensitive information. Copenhagen City Court blocked the book without PET even having read it. The injunction was filed solely based upon publicity material distributed by publisher People's Press. **PET's attempt to block the book's release was met by defiance in some quarters.** Politiken newspaper published the book in its entirety as a special section in its Sunday edition and some booksellers sold copies of the book despite the injunction. Broadcaster Radio 24syv also covered the contents of the book. PET formally rescinded the ban request, but said on Tuesday that it has now filed police charges against Scharf.

German spy chief says Syrian suspect targeted Berlin airports
Reuters, Staff report, 2016 10 11
Berlin - The **head of Germany's domestic intelligence agency (BfV) said a Syrian suspect arrested on Monday was building a bomb and probably planned to attack one of the airports in Berlin. Hans-Georg Maassen** told public broadcaster ARD that intelligence leads had suggested in early September that militant group Islamic State (IS) was planning an attack on Germany's transport infrastructure. Spies managed to track down and identify the suspect in the eastern state of Saxony last Thursday and started a round-the-clock observation, Maassen said. "We found out that he then bought hot glue in a discount shop on the following day. And then we immediately put all measures into place to start a raid because we assumed this can basically be the last missing chemical for him to build a bomb."

Faut-il limiter la loi sur le renseignement ?
La Provence, Journaliste maison, 2016 10 11
Paris - La **loi sur le renseignement permet-elle de surveiller toutes les communications sans fil "sans cadre contraignant" au nom de la sécurité?** C'est ce qu'affirment trois associations, qui attaquent aujourd'hui au Conseil constitutionnel un article de la loi votée en juin 2015. Cette loi avait été adoptée six mois après les attentats djihadistes contre l'hebdomadaire satirique Charlie Hebdo et contre le magasin Hyper Cacher. Ce n'est pas la première fois que la Quadrature du Net, le fournisseur d'accès French Data et la Fédération des fournisseurs d'accès à internet (FFDN) dénoncent des "définitions tellement vagues de la défense des intérêts nationaux que tout peut y correspondre". Le Conseil constitutionnel a déjà validé à deux reprises cet été des dispositions contestées, portant sur la surveillance des

données de connexion des usagers d'internet (loi de programmation militaire) ainsi que la majeure partie de la loi renseignement, dont le volet sur les "interceptions administratives".

SBU arrests Russian spy in Rivne
Interfax (Ukraine), Staff report, 2016 10 10
Kyiv - A **spokesperson for the Ukrainian Security Service (SBU) said that a Russian intelligence agent has been held in the town of Rivne**. "The spy, a Ukrainian citizen who permanently resides in Russia, was to recruit a senior officer from the headquarters of the Ground Force of the Ukrainian Armed Forces," the SBU spokesperson said in a statement on Sunday. "In exchange for passing documents classified as 'secret' and 'top secret' concerning the military training, armament, mobilization deployment and military cooperation between the Ukrainian Armed Forces and foreign partners, the GRU [Russian military intelligence] agent was to offer to a Ukrainian officer and his family Russian citizenship and money.

Pourquoi l'affaire Squarcini inquiète la DGSI (et le sommet de l'Etat)
Marianne2 (site web), Frédéric Ploquin, 2016 10 10
Paris - **L'enquête que mènent deux juges d'instruction parisiens, Serge Tournaire et Aude Buresi, autour de Bernard Squarcini est une bombe à retardement. Notamment pour son successeur, Patrick Calvar.- Sipa « Pourquoi les fonctionnaires de la DGSI continuent-ils à vous appeler 'chef' » ?** demande un enquêteur de la police des polices à Bernard Squarcini, placé en garde-à-vue pour 48 heures, le 28 septembre dernier. « Ils m'ont toujours appelé chef », réplique l'ancien espion préféré de Nicolas Sarkzoy, désormais à la tête de la société privée de conseil en sécurité Kyrnos (le nom que les Grecs anciens donnaient à la Corse). L'enquête que mènent deux juges d'instruction parisiens, Serge Tournaire et Aude Buresi, autour de Bernard Squarcini est une bombe à retardement. Ce n'est pas tant l'ancien président de la République qu'elle fait trembler, mais les actuels dirigeants de la **Direction générale de la sécurité intérieure (DGSI)**, fer de lance de la lutte contre le terrorisme. A commencer par son patron, Patrick Calvar, un homme qui a toujours pris soin de ne s'affilier à aucune écurie politique.

Affaire Squarcini: le directeur de la DGSI Patrick Calvar bientôt réentendu?
L'Express, Journaliste maison, 2016 10 10
Paris - **D'après Marianne, l'actuel patron de la DGSI risquerait d'être poursuivi pour "complicité de compromission du secret défense" dans le cadre de l'enquête qui vise son prédécesseur Bernard Squarcini.** L'affaire Squarcini serait "une bombe à retardement", pas tant pour Nicolas Sarkozy que pour **Patrick Calvar**, l'actuel directeur de la DGSI, selon les informations de Marianne . Ce dernier, qui a déjà été entendu comme simple témoin dans la plus grande discrétion le 29 septembre, serait sous la "menace de poursuites pour complicité de compromission du secret défense", écrit l'hebdomadaire ce lundi matin.

Danish paper to defy court ban and publish book on ex-spy chief
The Peninsula (Denmark), 2016 10 09
Copenhagen: A **Danish newspaper said Sunday it will defy a court ban and publish excerpts of a book about the country's former intelligence chief to protest censorship**. "This ban directly attacks the fundamental liberties on which our open society and free press depends," said Christian Jensen, editor-in-chief of Politiken, the country's paper of record. The **Danish Security and Intelligence Service (PET)** had obtained a provisional injunction Friday from the Copenhagen district court against the publication of the book, fearing it could contain secrets. The book, called "Seven Years for PET -- **Jakob Scharf's Time" is based partly on interviews with the former spy chief and was due to go on sale from October 17** and be serialised in Politiken on Monday. "The summary of the book on the site of (publisher) People's

Press gives the impression that the book might contain confidential information, the disclosure of which might endanger lives or hamper the PET's capacity to prevent crimes... like terrorism," said the agency. Jensen said that "if the PET, without concrete evidence, can exert control on books, or media articles, then this suggests we have effectively accepted an intelligence agency as an authority on publication, which would hamper the freedom of the press. There is another word for that: censorship".

Ukraine says catches Russian military intelligence spy red-handed
Reuters, 2016 11 09
Kiev—**Ukraine's State Security Service (SBU) said on Sunday it had caught red-handed a Ukrainian working as a spy for Russia's military intelligence agency**, just days after a Ukrainian journalist was arrested on espionage charges in Russia. The unnamed suspect had come to SBU's attention after he offered a senior Ukrainian military official Russian citizenship and money in exchange for top secret documents on Ukraine's military capabilities and work with foreign partners, it said. "He was caught by SBU officers red-handed while receiving a flash drive containing misinformation that he believed to be secret documents of a military nature," a SBU statement said. There was no immediate comment from Russian authorities.

France to invest $47 mln in Sahel counter-terror training
Reuters, 2016 10 08
Paris - **France plans to invest 42 million euros ($47 million) to help countries of Africa's Sahel region prepare to face extremists attacks** similar to those that killed dozens in Paris in 2015, an interior ministry official said on Friday. The Sahel, a politically fragile region whose remote desert spaces host a medley of extremists groups, is seen as vulnerable to further attacks after strikes on soft targets in Burkina Faso and Ivory Coast earlier this year. Nearby Senegal, a Western security partner with a long history of stability, has so far been spared. "In future we will train all the countries of the G5 Sahel and Senegal with 42 million Euros in financing, including 24 million Euros for equipment," said a spokeswoman for Interior Minister **Bernard Cazeneuve** during his visit to Dakar on Friday. G5 Sahel is a regional security organization composed of Chad, Niger, Burkina Faso, Mali and Mauritania. The investment period is 2017-2022, the spokeswoman added.

Lutte contre le terrorisme : l'état des lieux de Georges Fenech
La Dépêche du Midi, Romain Gruffaz, 2016 10 07
Aveyron, France - Geo**rges Fenech, député Les Républicains du Rhône, a été invité par son homologue aveyronnais Yves Censi à animer, hier soir, une conférence à propos des moyens mis en oeuvre par l'État pour lutter contre le terrorisme**. « Il faut aller au contact des gens, les rencontrer et répondre à leurs questions », a souligné l'ancien juge d'instruction, qui a présidé la commission d'enquête sur les attentats de Paris, à l'issue de laquelle un rapport pointant les erreurs commises, et contenant quarante propositions pour tenter d'y remédier, a été rendu. « La réorganisation du renseignement a été l'un des points centraux, a-t-il expliqué. Le problème est que l'on n'a pas tiré toutes les conséquences de ce qui a été présenté, par les responsables de **la DGSI et de la DGSE** eux- mêmes, comme "un échec de leurs services". En ce qui nous concerne, nous sommes pour la création d'une agence nationale antiterroriste, sur le modèle du **National Counterterrorism Center américain**, dont la coordination se ferait au niveau du chef de l'État et non pas du ministre de l'Intérieur, qui n'a pas autorité sur ses homologues. Il faut également accroître la coopération à l'échelle européenne, même si cela nécessite de céder un peu de sa souveraineté.

La Suisse plus restrictive
Le Temps (Suisse), Sylvia Revello, 2016 10 06

Berne - Expert en droit des médias et des nouvelles technologies, Nicolas Capt analyse l'affaire Yahoo! du point de vue juridique suisse Peut- on envisager un accord similaire à celui de Yahoo! entre les autorités et des fournisseurs suisses? Au-delà du caractère illégal, cette situation me paraît peu probable. Le **cadre helvétique est bien plus restrictif, y compris avec la nouvelle loi sur le renseignement,** qui pose de nombreux garde-fous. De la part des autorités pénales comme du **Service de renseignement de la Confédération (SRC),** l'observation des données privées reste limitée et surtout ciblée. La vraie différence réside dans une certaine opacité de la surveillance du SRC qui officie, par principe, hors de toute procédure pénale. La **NSA** avait-elle vraiment besoin que Yahoo! lui fournisse ses données, connaissant sa puissance de frappe? Il n'est pas absolument certain que la NSA soit capable de procéder seule à une surveillance aussi large.

German intelligence faces new cover-up claims in neo-Nazi case
Daily Sabah, Staff report, 2016 10 06
Istanbul - **Germany's intelligence services are once again subject to allegations of a cover-up with regards to the neo-Nazi National Socialist Underground (NSU)** gang that is implicated in the racist murders of Turks in the country. Lawyers for the family of Mehmet Kubasik, killed by the NSU in 2006, filed a criminal complaint against Lothar Lingen, a senior official in the Federal Office for the Protection of the Constitution (BFV), Germany's domestic intelligence agency. Lingen, who was in charge of the BFV's division monitoring the far-right scene, is accused of destroying documents that could have shed light on the NSU's murders. Speaking to Anadolu Agency after filing the complaint against Lingen, Carsten Ilius, lawyer for the family of Kubasik, said new revelations on the case added to suspicions that the BFV destroyed paperwork that might be related to the NSU in 2011.. He said Lingen's statements during the legal process concerning the NSU showed intelligence officials were concerned about facing an inquiry if it was revealed that the **BFV** did not act though it knew about the neo-Nazi gang thanks to its informants in the far-right scene.

Les renseignements n'ont pas vu venir le 22 mars
La Libre, 2016 10 06
Bruxelles— **Nous avons fait tout ce que nous devions faire" : le patron du service de renseignements militaires (SGRS) l'a dit sans ciller**. Son service ne disposait d'aucune information qui aurait permis d'éviter les attentats de Paris et de Bruxelles. Et pourtant, a dit le général **Eddy Testelmans** au cours de son audition devant les députés de la commission d'enquête sur les attentats du 22mars, ils collaboraient avec une vingtaine de services de renseignements étrangers. Interrogé sur le pourquoi, il a indiqué qu'il n'avait pas "d'explication mathématique". Mais il voit bien l'un ou l'autre facteur : tout d'abord la complexité de ces dossiers de "Foreign Terrorist Fighters". Ceux-ci peuvent circuler sans entraves dans l'espace Schengen et même en Turquie. Il est dès lors très difficile de suivre leurs traces, surtout, a-t-il expliqué, s'ils ont reçu une formation. Le **SGRS** ne travaillait à l'époque que sur une vingtaine de djihadistes partis en Syrie qui étaient alors considérés comme prioritaires.

Lutte contre le terrorisme - Le patron de la Sûreté de l'Etat demande le doublement de ses effectifs
Agence Belga, 2016 10 05
Bruxelles— **L'administrateur de la Sûreté de l'Etat, Jaak Raes, a demandé mercredi le doublement à terme de ses effectifs.** Le **service civil de renseignement** dispose actuellement de 571 personnes pour un budget de 45 millions d'euros. "On ne peut presser éternellement le citron", a-t-il fait remarquer devant la commission d'enquête sur les attentats du 22 mars. Le patron de la Sûreté a comparé la situation de son service avec les pays proches et semblables à la Belgique. Au Pays-Bas, l'AIVD dispose de 1.500 agents pour un budget de 200

millions d'euros. En Suède, le **SAEPO** dispose de 1.100 agents pour un budget de 123 millions d'euros. Au Danemark, le **PET** dispose de 780 agents pour un budget de 75 millions d'euros. La Sûreté, comme le **Service Général du Renseignement et de la Sécurité (SGRS - militaire),** dit également éprouver des difficultés de recrutement dans le circuit traditionnel du Selor. La procédure complique la recherche de profils inhabituels, disposant de compétences particulières, et débouche trop souvent sur des profils "standard". M. Raes a plaidé en faveur d'un statut particulier pour les agents de la Sûreté, du SGRS et de l'Organe de Coordination et d'Analyse de la Menace (OCAM), qui permettrait notamment de faire face à des besoins temporaires.

Turkey detains 55 military, intelligence personnel over attempted coup – media
Reuters, 2016 10 05
Ankara—**Turkey detained 55 military and intelligence agency personnel on Wednesday** over suspected links with U.S.-based cleric **Fethullah Gulen** and his network, accused by Ankara of orchestrating a failed coup in July, media reports said. In the latest of a stream of raids targeting those suspected of ties to the putsch, police carried out operations in 31 provinces after prosecutors issued detention warrants for a total of 101 suspects, state-run Anadolu Agency reported.

26 detained over Gülen links in army, intelligence in coup attempt probe
Hurriyet Daily News, Staff report, 2016 10 05
Ankara - **Police detained a total of 26 suspects on Oct. 5 in an operation targeting the members of the Gülen movemen**t, which has been blamed for the July 15 coup, in Turkey's army and intelligence services. The Ankara Public Prosecutor's Office issued detention warrants for 101 suspects, the organization's alleged imams in the Turkish Armed Forces (TSK) and the **National Intelligence Organization (MIT),** during the operation that was conducted in 31 provinces. "Imam," which traditionally refers to a religious public worker, is a term used by the Gülenist organization to mark local leadership.

Les fonctionnaires face à la radicalisation
Midi Libre, Lola Cros, 2016 10 05
Non identifié - **Plus de 130 agents du département ont suivi une formation sur le phénomène et les moyens de l'affronter**. Parce qu'ils sont en première ligne face au public, parce qu'ils représentent l'État et ne sont ainsi « pas des citoyens comme les autres » , plus de **130 agents territoriaux du département étaient invités, jeudi, à suivre une formation sur le thème : « La radicalisation : quels enjeux pour les collectivités locales, quelles pistes d'action ?** » Une formation proposée nationalement par le **Centre de la fonction publique territoriale (CNFPT**) et relayée par ses antennes locales. « Choisir la radicalisation comme thème de formation, ou plutôt de sensibilisation, est une décision politique de notre établissement , explique Gérard Chaubet, chargé de mission au CNFPT. Elle ne découle pas d'une demande explicite des agents, mais le nombre exceptionnel d'inscriptions prouve que c'est une vraie préoccupation pour les fonctionnaires.

Georgian security services blamed for attack on MP
UK Times, Tom Parfitt, 2016 10 05
Moscow— A **leader of Georgia's main opposition party has accused the country's security services of being behind an apparent assassination attempt on one of its MPs days before parliamentary elections. Givi Targamadze**, an MP with the United National Movement, and his driver escaped injury when their car blew up in the capital Tbilisi, injuring five passers-by. Giorgi Bokeria, one of the leaders of the UNM, blamed state security agents acting on behalf of the governing Georgian Dream party. David Usupashvili, the parliamentary

speaker, suggested that the attack was a Russian plot to undermine Georgia before the elections on Saturday. Mr Bokeria said: “There are no illusions in Moscow that a pro-Russian force will be victorious in these elections, so if it has a chance to destabilise Georgia then it won’t turn it down.” He claimed “everyone” knew that Mr Targamadze had a “political stand-off” with the **State Security Service** and its boss, Ioseb Gogashvili. “All of us have a reason to suspect them,” he said.

Mossad and IDF both conclude Ron Arad died in captivity

Jerusalem Post, Zack Pyzer, 2016 10 11

Jerusalem - 30 years after Israeli navigator Lt.-Col. Ron Arad ejected from his Mirage plane over Lebanon, Channel 2 reported on Monday that two new intelligence reports have been compiled in an attempt to uncover the enduring mystery of his fate. Having been officially listed as missing in action since the incident 1986, few if any had realistic hopes that the airman was still alive. The reports confirmed the fears, indicating that Arad had indeed died in captivity, and earlier than previously estimated by the authorities. Both of the reports, compiled separately by the **IDF's Military Intelligence Directorate (AMAN) and Mossad,** included a comprehensive examination of new intelligence, in addition to previously obtained information throughout the years. Arad's family were kept informed throughout the process. Arad and his pilot evacuated their plane due to a technical malfunction during a mission to hit terror targets in the Lebanese city of Sidon as part of the First Lebanon War.

Bahrain security chief vows zero tolerance towards Ashura abuses

Gulf News, Habib Toumi, 2016 10 05

Manama - **Bahrain's Public Security has warned a zero-tolerance policy would be applied towards those who "misuse the religious occasion of Ashura to engage in criminal activity".** Ashura is the anniversary of the death of Imam Hussain, the grandson of Prophet Mohammad (PBUH), and the occasion is publicly commemorated by Shiites through emotional marches, rallies and speeches. Ashura commemorations will peak on the tenth of Muharram (October 12), and Public Security chief Tariq Al Hassan said that the police were coordinating with those in charge of the rituals to prevent the exploitation of the occasion and to ensure the safety of all participants.

Spymaster Stanikzai calls for shifting military tactics

Pajhwok Afghan News, Khwaja Basir Ahmad Fitri, 2016 10 11

Kabul - The spymaster on Monday said Afghanistan has been a victim of war over foreign interests and due to its strategic location, asking the security forces to change their tactics. National Directorate of Security (NDS) chief Masoom Stanikzai called for a tactical shift while briefing the Wolesi Jirga, lower house of parliament, on the current security situation. Defence MinisterLt. Col. Abdullah Khan Habibi and Interior MinisterTaj Mohammad Jahidalso informed lawmakers on steps being taken to stabilize the security environment. “The current war here is

not a war of Afghans,; outsidersare interfering and supporting militants in Afghanistan," Stanikzai alleged, saying the conflict was driven by the interests of foreign countries. "Afghanistan is a victim of its strategic location; we should change our tactics," Stanikzai believed, stressing the need for unity. He asked the people yo support their security forces.

Pak ISI Director General likely to be replaced soon
Asian News International, 2016 10 08
Karachi - **Pakistan media has reported that Lt. General Rizwan Akhtar, the Director General of the Inter-Services Intelligence Directorate (ISI) is likely to be replaced within the next few weeks**. Lt. General Akhtar was appointed as the head of ISI in September 2014 and took office in November 2014. Quoting official sources, the Nation states that a security official privy to the development, confirmed the impending change of command and said that preparations were underway for the changes. However, he may be leaving the position earlier than the typical three-year tenure of a ISI DG. The report further states that the corps commander of Karachi, Lt General Naveed Mukhtar, is most likely to replace him.

Myanmar prepared for anti-terrorism attack: official
Xinhua News Agency, Staff reporter, 2016 10 07
Nay Pyi Taw - **Myanmar is prepared for possible anti-terrorism attack in the country, Deputy Minister of Home Affairs Maj-Gen Aung Soe told the parliament**, official media reported Friday. The readiness includes surveillance of suspected terrorists and specially-trained anti-terrorist combatants. Collaborating with local, regional and international organizations in fight against terrorism, Aung Soe said the government has been working to respond speedily to destructive elements by carrying tasks which include organizing operation missions, **deploying specially- trained anti-terrorism combat groups in Nay Pyi Taw, Yangon and Mandalay**, and guarding of dignitaries under a special security program. Besides, exchange and collection of terrorist attack information and linking with INTERPOL, ASEANAPOL, neighboring countries and allied organizations and other sources are to be carried out.

PM vows to bolster anti-terrorism capabilities
Yonhap News Agency, Staff reporter, 2016 10 06
Seoul - **Prime Minister Hwang Kyo-ahn said Thursday the country will focus its efforts to improve its anti-terrorism capabilities amid rising threats from extremist groups** around the globe. "International terrorists' groups, including the Islamic State of Iraq and the Levant (ISIL), have been conducting indiscriminate attacks on various locations like stadiums and streets to claim more lives," Hwang said.

Senate blocks move to summon SSS boss over raids on judges
The Premium Times, 2016 10 11
Abuja— The **Senate has stood down a proposal to invite the Director General of the State Security Service, Lawan Daura, over the ongoing clampdown on suspected corrupt judges**. In a motion brought as matter of urgent national importance by Joshua Lidani (PDP-Gombe), the Senate was asked to look into the action of the SSS which led to arrest of seven judges in the early hours of Saturday. One of the resolutions canvassed by Mr. Lidani was that

the Senate should invite Mr. Daura to explain why his agency carried out the action the way it did without deference to the constitutional responsibility of the National Judicial Council. When Mr. Saraki called for vote to uphold Mr. Lidani's prayer, Senators yelled "ayes" and later "nay" in somewhat equal proportion.

Nigerians object as judges detained, suspected of corruption
Associated Press, 2016 10 10
Abuja— **Nigeria's chief justice on Monday criticized the arrest of several senior judges in weekend sting operations that intelligence services said were part of a crackdown on corruption.** Officials announced that more than $800,000 had been seized in raids targeting judges from the country's high courts. The State Security Service said it had been monitoring the judges' "expensive and luxurious lifestyle" amid complaints they had accepted bribes. It did not specify how many judges were in custody. "It is indeed very saddening and deeply regrettable," Chief Justice Mahmud Mohammed said in brief comments to reporters Monday. He said an emergency meeting of the National Judicial Council would take place Tuesday to investigate the incident.

Spy agency acts against 'drug envoy'
The Sunday Times (South Africa), 2016 10 09
Johannesburgh— The **State Security Agency has revoked the security clearance of South African high commissioner to Singapore Hazel Francis Ngubeni**. The Sunday Times **exposed Ngubeni as a convicted drug trafficker** who had served time in a US prison. Ngubeni returned to South Africa on Monday and is facing an internal probe, which might end in her possible recall. She failed to declare her 1999 drug-trafficking conviction for smuggling cocaine into the US while working as a cabin crew member for SAA. Arthur Fraser, the director-general and accounting officer of the SSA, wrote to International Relations Minister Maite Nkoana-Mashabane on Friday informing her about the agency's decision to revoke Ngubeni's clearance.

Les «agents de la France» et les jeux de pouvoirs
El Watan, 2016 10 06
Alger— Après un silence qui aura duré plusieurs semaines, voire des mois, voilà que **Amar Saadani, secrétaire général du FLN, tire à boulets rouges sur ses détracteurs**. Il commence par **l'ancien patron du défunt Département du renseignement et de la sécurité (DRS), le général Toufik,** son ancien parrain. Celui auquel il doit sa promotion au sein du parti jusqu'à devenir président de l'APN et finir secrétaire général du vieux parti, est présenté comme «la tête des agents de la France» et, mieux encore, comme rédacteur de la lettre des 14 anciens cadres de l'ALN, demandant son départ de la direction du FLN.

Head of Central African Republic armed forces assassinated
Associated Press, Staff report, 2016 10 05
Bangui - The **head of Central African Republic's armed forces has been shot dead and his teenage son injured in an attack in the capital, Bangui**, a family member said. Marcel Mombeka was shot twice in his car in the PK5 neighborhood, said his sister Kevine Mombeka. The mostly Muslim enclave was visited by Pope Francis last year in an effort to urge calm in a country shaken by deadly violence between Christians and Muslims. "Shots rang out, creating panic among the population. I fled like everyone else," Kevine Mombeka said. "A young man then stopped me to say my older brother had been killed by Muslims." Marcel Mombaka's 14-year-old son, who was in the car, was shot and was being treated at a hospital, she said. She had been in the car as well but got out before the attack. The minister of public security, Jean Serge Bokassa, denounced what he called acts to destabilise the nation, warning "they will not

go unpunished". The United Nations peacekeeping mission condemned the attack, saying it would assist with investigations.

Report Finds Loose Laws on Data and Surveillance In Latin America

The Intercept, Cora Currier, 2016 10 10

Washington - The **laws in many Latin American countries haven't kept pace with the increasing power of surveillance technology, creating the potential for serious abuses**, according to a new report from a privacy watchdog. Despite recent revelations of widespread use of spyware capable of infiltrating phones and computers by many governments in the region-- including in some instances, against political opposition and journalists-- not a single Latin American country surveyed in the report has specific laws on the use of such invasive technology. Many countries, including Brazil, Colombia, Chile and Mexico, require companies to log detailed data on their customers and give law enforcement access to the information on demand. Colombia has a ban on encryption, and El Salvador requires communications providers to decrypt traffic at the government's demand. The report, written by researchers for the San Francisco-based Electronic Frontier Foundation, looked at surveillance laws in 12 countries in Central and South America. It opens with a stark reminder of what is at stake: A history of the collaboration among military dictatorships in Argentina, Chile, Paraguay, Bolivia, Uruguay and Brazil in the 1970s and 80s known as "Operation Condor." Files discovered later documented torture, disappearances, imprisonment and executions, enabled through a regime of informants and surveillance. **Many intelligence agencies in the region were formed under these military dictatorships,** and even after transitioning to democratic rule, most Latin American countries maintained strong executive branch powers "without well-placed controls or public oversight mechanisms." Given the power vested in many presidents in the region, the report says, "intelligence agencies in Latin America have been powerful tools in presidential politics, specially used to spy on dissident groups, opposition politicians or independent journalists."

Renewed Bill C-51 questions: Balancing national security with civil liberty
Globe and Mail Online, Kent Roach and Craig Forcese, 2016 10 18
Op-ed: The **police are presently intercepting private communications in search of speech that they think may promote "terrorism offences in general." That is the conclusion to be drawn from last week's government report on wiretaps authorized under Canada's criminal law**. To be sure, the report cites only two wiretaps seeking evidence of this new speech crime, introduced by **Bill C-51**. This may be because C-51 only came into force half way through 2015. But since the new speech crime is breathtaking in its scope, normalizing investigations of it would draw police into surveillance of an even broader range of speech. Such practices raise clear free speech and privacy concerns. There is also still the unanswered question about how the new speech crime will dovetail (or not) with the government's promised new program to counter violent extremism. An essential ingredient of any such program is speaking to those with extremist views, if only to dissuade. But if voicing views in the wrong place is a crime, those practising counter-extremism must worry that their efforts will become a stalking horse for a police investigation. And so the dilemmas raised by C- 51 remain: new powers with definite civil liberties costs incurred for doubtful security gains. **This is a recurring issue. CSIS has employed its new so-called threat-reduction powers about 24 times**, but we have no detail about what it has actually done.. **And while the Green Paper helpfully raises the issues of accountability neglected during the C-51 debates, its consideration of accountability gaps** – the need to fix the lack of expert, specialized review for most of Canada's security and intelligence sector – is perfunctory. It can also be criticized for a glaring omission: discussing revamped oversight for Canada's signals intelligence service, the **Communications Security Establishment**. Note: Kent Roach and Craig Forcese are professors of law at the University of Toronto and the University of Ottawa, respectively, and authors of False Security: The Radicalization of Canadian Anti-terrorism.

The mystery of the listening devices at DND's Nortel Campus
Ottawa Citizen Online, David Pugliese, 2016 10 18
Column: My colleague Jim Bagnall and I recently wrote a feature on **the move by the Department of National Defence to the former Nortel campus** in west end Ottawa. More than 8,000 military and civilian staff will make the move. **One of the issues that emerged when we were researching and writing the article had to do with the mystery of listening/spy devices that were planted at the Nortel Campus.** So what happened? Were listening devices found at the Nortel Campus or not? The Department of National Defence keeps changing its story on that issue. In 2013 the Citizen reported that workers preparing the former Nortel complex as the new home for the DND had discovered electronic eavesdropping devices. It shouldn't have come as a big surprise. The year before it had been revealed that Nortel was the target of industrial espionage for almost a decade, with the main culprits thought to be based in China. An internal security study by Nortel suggested that hackers had also been able to download research and development studies and business plans as far back as 2000. The hackers also placed spyware into some employee computers. **Michel Juneau-Katsuya, a former senior officer with the Canadian Security Intelligence Service, said the spy agency also determined that Nortel had been targeted.** "We knew it was well penetrated," he told the Citizen at the time. "When I was the Chief of Asia-Pacific we warned Nortel." But after the Citizen article was published, Julie Di Mambro, spokeswoman for then Conservative Defence Minister Rob Nicholson, noted in a statement that, "security officials have assured us that they

have not discovered any bugs or listening devices." Government documents, however, obtained by the Citizen through the Access to Information law, showed that the year before concerns had already been raised about security at the former Nortel campus.

Better to pass Bill C-22 now - and modify it later
Globe and Mail online, Reid Morden, 2016 10 13
Op-ed: On Oct. 7, The Globe and Mail weighed into the debate on **Bill C-22**, which proposes to establish a parliamentary committee on security and intelligence. Its editorial, citing a recent report by the Library of Parliament, points out some of the weaknesses of the bill and counsels, in a lukewarm fashion, patience and common sense. On Sept. 12, The Globe also published a **column by Ron Atkey, Craig Forcese and Kent Roach** on this important and controversial issue of accountability and oversight of Canada's security agencies. All three are eminent voices in the relatively new and evolving area of security law. The authors deal briefly but starkly with some of the controversial provisions in Bill C-51, passed by the previous government but focus mainly on what they perceive as the shortcomings of the proposed legislation of the current government as embodied in its Bill C-22. **There is much to agree with in their expressed views.** The authors draw critical attention to one of C-51's most egregious provisions, which permits the **Canadian Security Intelligence Service** to act in violation of the Charter of Rights and Freedoms. Check. They note the gaps in Canada's oversight system, especially the silos and stovepipes that inhibit a truly seamless oversight throughout our security agencies. Check. They judge that a parliamentary oversight body will be best suited to the examination systemic questions of whether Canada's security agencies are acting efficiently and effectively. Check. They are clear that no parliamentary oversight body can hope to function effectively without relying on expert review and complaints bodies to scrutinize the day to day operations of the security agencies. Check. Back to C-22: I do not sense any general resistance to the concept of parliamentary oversight by the security agencies. The **managements of organizations such as CSIS, the RCMP and the Communications Security Establishment have moved beyond that and today are primarily concerned with finding a model that will accommodate Parliament while not impairing their ability to carry out their responsibilities**. Finding the appropriate degree of intrusiveness is, in part, the nub of the problem. Note: Reid Morden is a former director of the Canadian Security Intelligence Service and a former deputy minister of foreign affairs.

RCMP block harassment claim
Ottawa Citizen, Andrew Seymour, 2016 10 13
Ottawa - It was a **dream come** true for **Caroline O'Farrell** to pull on the red serge and climb atop the majestic horses of the RCMP's Musical Ride. At 25 years old, the young Mountie couldn't believe she was going to be paid to ride in front of adoring crowds on the 100th anniversary of the RCMP's training depot in Regina, the Calgary Stampede and the Musical Ride's first performance in the Northwest Territories. Her face appeared on promotional posters for the RCMP's iconic travelling equestrian show. But the **dream quickly became a nightmare for O'Farrell, who alleges she was subjected to humiliating and demeaning hazing**, bullying and sexual abuse at the hands of her male colleagues in 1986 and 1987 as one of the first female members of the Ride. The abuse reached such heights that at one point her co-workers allegedly launched a suicide pool and took bets on when she would kill herself. Following last week's historic apology to all female members of the RCMP for decades of abuse and harassment and the announcement of a **$100-million settlement to right the wrongs suffered by women within the ranks of Canada's national police force**, O'Farrell is questioning why the RCMP and Canada's attorney general have blocked her own attempts to seek damages. O'Farrell launched a multimillion-dollar lawsuit in 2013, but after three years of motions by the government seeking to end her civil action, she feels revictimized.

Spy culture hasn't come home to roost
National Post, John Ivison, 2016 10 12
Column: **Remember how the Conservative antiterror legislation was going to usher in a new era of omnipresent government surveillance? Well, it hasn't happened** - at least not according to the scraps of information that are publicly available. The latest figures made available were on electronic surveillance, released by the **Department of Public Safety**. As part of the anti-terror bill, it became a crime to "knowingly" advocate or promote the commission of a terrorism offence. Critics claimed there would be a rash of wiretap authorizations, as police sought to crack down on speech crimes. But the **numbers for 2015 suggest there were precisely two cases where the authorities were given authorization to listen in on people suspected of promoting terrorism.** We don't know how many prosecutions resulted from the authorizations but it's a good bet there were none. For one thing, prosecutors would be aware that they would be guaranteed to face a constitutional challenge - many of the critics of Bill C-51 suggest that the definition of "the commission of terrorism offences in general" was too broad, and therefore unconstitutional. For another, the maximum penalty on conviction was five years in jail, hardly worth the effort for busy prosecutors. The speech-crime provision was not the only part of C-51 that constitutional scholars believed would never pass muster if challenged. **CSIS, Canada's spy agency, was given wide-ranging powers to disrupt suspected terrorist plots, rather than just gathering information about them.** The new law gave CSIS the power to ask judges to approve warrants, even if its preventive measures breached rights or freedoms otherwise protected by law. When he was before a Senate committee last March, CSIS chief **Michel Coulombe** said the agency had used the disruption powers nearly two dozen times but had not sought judicial approval in any of the cases.

Former CBSA boss lays out grievances at tribunal
Toronto Star, Alicja Siekierska, 2016 10 12
Toronto - The **former director of Canada's busiest immigration centre began testifying Tuesday as he pursues grievances against his former employer, the Canada Border Services Agency (CBSA). Reg Williams** was the director of immigration enforcement at the CBSA's Greater Toronto enforcement centre, the largest in the country, from 2004 until his retirement in May 2012. Williams said he retired after the CBSA abruptly reassigned him from his post in April 2012 because of an investigation into him at the time. Williams filed two grievances against the CBSA that are currently before the Public Service Labour Relations and Employment Board.

Agencies Split on Classifying Clinton Emails
New York Times, Eric Lichtblau, Steven Lee Myers, 2016 10 18
Washington - **Documents released Monday in the Hillary Clinton email investigation show intense disagreement last year between the State Department and the F.B.I. over whether some of Mrs. Clinton's emails should be considered classified**, including a discussion of a possible "quid pro quo" to settle one dispute. The new batch of documents indicated that in one particular case, a senior State Department official, Patrick F. Kennedy, pressed the F.B.I. to agree that one of Mrs. Clinton's emails on the 2012 Benghazi attack would be unclassified -- and not classified as the bureau wanted. What remained unclear from the documents was

whether it was Mr. Kennedy or an F.B.I. official who purportedly offered the "quid pro quo": marking the email unclassified in exchange for the State Department's approving the posting of more F.B.I. agents to Iraq.

Official: you can still trust the NSA
FCW.com, Sean D. Carbery, 2016 10 18
Washington - It might not be as momentous as knocking down the Berlin Wall, but **tearing down the barriers between Signals Intelligence and Information Assurance inside the National Security Agency is revolutionary, an NSA official in the thick of those efforts contends**. The NSA is six weeks into "NSA21," which the agency calls the most substantial organizational reform in its 60-year history. Announced earlier this year, NSA21's primary change is flattening the organization and moving it from a mission-based construct to a functional model. **Curtis Dukes had been until recently the deputy director of NSA's Information Assurance directorate**. Now, he's deputy national manager of national security systems in charge of the IA portfolio of the new operations directorate. NSA's reputation in the information assurance business took a hit from leaks by former contractor Edward Snowden that included confirmation that an NSA-approved cryptographic algorithm was deliberately compromised. Still, Dukes said that there has been trust in the past, and that should continue under the new system.

Retired general pleads guilty to lying to the FBI in leak probe
Washington Post, Spencer S. Hsu, Ellen Nakashima, 2016 10 18
Washington - A **retired four-star Marine Corps general who served as the nation's second-ranking military officer pleaded guilty Monday to a federal felony charge of lying to the FBI** in a probe of a leak of classified information about a covert U.S.-Israeli cyberattack on Iran's nuclear program. **James E. "Hoss" Cartwright**, who served as deputy chairman of the Joint Chiefs of Staff before he retired in 2011, entered his plea before U.S. District Judge Richard J. Leon of Washington hours after the charge was announced by the office of U.S. Attorney Rod Rosenstein of Maryland. A senior Obama administration official in June 2013 acknowledged that Cartwright was the target of a Justice Department investigation into a leak to New York Times reporter David E. Sanger of details about a highly classified operation to hobble Iran's uranium-enrichment capability through cybersabotage - an effort not acknowledged by Israel or the United States. In court documents, **Cartwright admitted to falsely telling FBI investigators he did not provide or confirm classified information to Sanger for a June 2012 newspaper article and his book, "Confront and Conceal."**

Secret Law Is Bad Law
New York Times, Elizabeth Goitein, 2016 10 18
Op-ed - The Central Intelligence Agency's torture of detainees, and the National Security Agency's **warrantless wiretapping of Americans' international communications, were two of the most controversial programs our government implemented after Sept. 11. Both are now widely considered to have been illegal**, even though both were authorized by official legal analyses that were withheld from the public -- a phenomenon known as "secret law." The notion of secret law is as counterintuitive as it is unsettling. When most of us think of law, we think of statutes passed by Congress, and we take for granted that they are public. Statutes, however, are only one kind of law. When the secret surveillance panel known as the **Foreign Intelligence Surveillance Court, or FISA** court, construed the Patriot Act to allow bulk collection of Americans' phone records, that interpretation became part of the statute's meaning. When President Obama issued procedures and standards for using lethal force against suspected terrorists overseas, agency officials were bound to follow them. In the realm of national security, where Congress tends to tread lightly, other sources of law predominate -- and

a new study by the Brennan Center shows that they are frequently withheld from the public. Intelligence agencies routinely issue rules and regulations without publishing them in the Federal Register, exploiting what are intended to be narrow exceptions to the publication requirement. Most presidential directives addressing national security policy are not made public. Note: **Elizabeth Goitein co-directs the Brennan Center for Justice's Liberty and National Security Program and is author of the center's report "The New Era of Secret Law."**

Senate intel chair caught between Russian hacking and Donald Trump
Foreign Policy, Molly O'Toole, 2016 10 18
Hamlet, N.C. - When **Richard Burr**, the **Senate Intelligence Committee chairman**, is home in North Carolina, he's never more than a 90- minute drive from a secure phone line on which he can discuss secretive security issues facing the United States. But the tie that binds Burr to Washington is tripping him up in his tough re-election race this year. The senior senator is not only torn between Republican officials who want him constantly on the campaign trail and the very duties he's fighting to keep, but also Donald Trump, the GOP presidential nominee. Burr has maintained his support for Trump even as the increasingly erratic real-estate-magnate-turned-politician threatens down-ballot Republicans. **Burr has been careful to the point of reluctant to discuss the alleged Russian hacking -- a case of potential state espionage that falls squarely into his committee's oversight.** "I have yet to see anything that would lead me to believe that's the case," Burr told FP on Oct. 3, when asked whether he believes Russia has been interfering explicitly to benefit Trump. He called his congressional colleagues' warnings "probably incorrect," adding, "They give the impression there's one cyber-problem in the world: Russia and the elections, and that's a huge understatement." He said he couldn't speak to the DNC hack because the Obama administration hadn't yet declassified its findings.

Etats-Unis Relents de guerre froide dans le cyberespace
Le Monde, Martin Untersigner, 2016 10 17
Washington - **L'administration Obama vient d'incriminer officiellement la Russie dans la cyberattaque** qui avait ciblé, en juin, le Parti démocrate. Une accusation qui a encore envenimé les relations russo- américaines La Russie tente " d'interférer avec le processus électoral américain " . Vendredi 7 octobre, après maintes tergiversations, l'administration Obama a officiellement confirmé, par la voix de son directeur du **renseignement national (DNI) et de celle du département de la sécurité intérieure (DHS),** l'implication de Moscou dans l'attaque informatique visant le Parti démocrate. Cette accusation, au parfum de guerre froide et à un mois de l'élection présidentielle américaine, marque un tournant. Depuis des semaines, la Russie est suspectée d'orchestrer une série de piratages visant les Etats-Unis. Mais c'est la première fois que le gouvernement de Barack Obama incrimine directement Moscou dans " la récente compromission de courriels de citoyens et d'institutions américains, y compris d'organisations politiques " .

Slow implementation of insider threat programs not the cause of latest incident
Federal News Radio, Jason Miller, 2016 10 17
Washington - **Agencies continue to struggle to establish insider threat programs**. Many missed the deadline to hit initial operating capability in December 2015, and many still will miss the December 2016 deadline to hit full operational capability. The most recent data from the Obama administration on the Performance.gov portal doesn't provide specifics on how many or which agencies, but the **National Insider Threat Task Force (NITTF)** says a combination of "organizational culture, legal questions and resource identification" are among the obstacles preventing agencies from meeting the White House goal. The Coast Guard is one of the few agencies that met the full operational capability goal around insider threats. All of these delays

and challenges with creating an insider threat program would seemingly point to yet another reason why **Harold Thomas Martin III**, 51, of Glen Burnie, Maryland, allegedly was successful in taking classified materials from the National Security Agency over a two-year period. Experts, however, say the insider threat program is neither the problem nor the answer. Instead, experts say, reducing the risk of federal employees or contractors becoming threats goes back to security clearances. "To effectively counter the inside threat, we have to take advantage of the technology and implement the processes that continuously evaluate the behavior of employees to flag suspicious activities," said Larry Hanauer, vice president of policy for the **Intelligence National Security Alliance (INSA).**

Donald Trump stuns experts by refusing to accept intelligence on Russia
The Independent, Shehab Khan, 2016 10 16
Washington— A **former senior US national security official has said Donald Trump's refusal to accept information from intelligence professionals about Russia "defies logic".** US intelligence agencies claim Russia stole files from Democratic National Committee (DNC) computers in an attempt to influence the presidential election. Mr Trump received a classified briefing on the subject, where he was told intelligence officials were "confident" Moscow was responsible for the hack – something he has seemingly ignored. During the first presidential debate, Mr Trump asked if Russia was involved in the attack and in the second debate he questioned if there had been a hacking. "I don't think anybody knows it was Russia that broke into the DNC," he said in the first debate. "I mean, it could be Russia, but it could also be China. It could also be lots of other people. It also could be somebody sitting on their bed that weighs 400 pounds, okay?"**John MacLaughlin**, the **former acting CIA director**, said Mr Trump was using the information for his own benefit. "[Trump] is playing politics. He's trying to diminish the impression people have that [a Russian hack of the DNC] somehow helps his cause," Mr MacLaughlin said, according to Chicago Tribune.

CIA Prepping for Possible Cyber Strike Against Russia
NBC News, staff reporters, 2016 10 14
Washington— The **Obama administration is contemplating an unprecedented cyber covert action against Russia in retaliation for alleged Russian interference in the American presidential election,** U.S. intelligence officials told NBC News. Current and former officials with direct knowledge of the situation say the CIA has been asked to deliver options to the White House for a wide-ranging "clandestine" cyber operation designed to harass and "embarrass" the Kremlin leadership. The sources did not elaborate on the exact measures the CIA was considering, but said the agency had already begun opening cyber doors, selecting targets and making other preparations for an operation. Former intelligence officers told NBC News that the agency had gathered reams of documents that could expose unsavory tactics by Russian President Vladimir Putin. **Retired Admiral James Stavridis told NBC News' Cynthia McFadden that the U.S. should attack Russia's ability to censor its internal internet traffic and expose the financial dealings of Putin and his associates.** Two former CIA officers who worked on Russia told NBC News that there is a long history of the White House asking the CIA to come up with options for covert action against Russia, including cyber options — only to abandon the idea. "We've always hesitated to use a lot of stuff we've had, but that's a political decision," one former officer said. "If someone has decided, `We've had enough of the Russians,' there is a lot we can do. Step one is to remind them that two can play at this game and we have a lot of stuff. Step two, if you are looking to mess with their networks, we can do that, but then the issue becomes, they can do worse things to us in other places."

C.I.A. Director talks ISIL, next president and Augusta University's role in Cyber Security education
WJBF TV (Augusta Ga.), Stefany Bornman, 2016 10 14
Augusta, Ga. - The Director of the Central Intelligence Agency spoke at Augusta University's Cyber Summit. **John Brennan discussed ISIL, the upcoming change of presidential administration and Augusta University's role in educating the next generation of cyber warriors**. The C.I.A. Director says the future president has to hit the ground running on day one. The digital world is uncharted territory and presents daunting challenges for both the president and Central Intelligence Agency. "I must say ISIL is exceptionally sophisticated," he said. "Right now we are fighting against ISIL's External Operations efforts, that we've seen such horrific consequences, in places like Paris or Brussels."

FBI, DOJ roiled by Comey, Lynch decision to let Clinton slide by on emails, says insider
Fox News, Malia Zimmerman, Adam Housley, 2016 10 12
Washington - The **decision to let Hillary Clinton off the hook for mishandling classified information has roiled the FBI and Department of Justice, with one person closely involved in the year-long probe telling FoxNews.com that career agents and attorneys on the case unanimously believed the Democratic presidential nominee should have been charged**. The source, who spoke to FoxNews.com on the condition of anonymity, said FBI Director James Comey's dramatic July 5 announcement that he would not recommend to the Attorney General's office that the former secretary of state be charged left members of the investigative team dismayed and disgusted. More than 100 FBI agents and analysts worked around the clock with six attorneys from the **DOJ's National Security Division, Counter Espionage Section,** to investigate the case. "No trial level attorney agreed, no agent working the case agreed, with the decision not to prosecute -- it was a top-down decision," said the source, whose identity and role in the case has been verified by FoxNews.com.

NSA contractor thought to have taken classified material the old- fashioned way
Washington Post, Ellen Nakashima, Matt Zapotosky, 2016 10 12
Washington - **Harold T. Martin III is accused of stealing mounds of classified information from the government for at least a decade**, and investigators also believe some of the information was taken the old- fashioned way -- by walking out of the workplace with printed-out papers he had hidden, according to U.S. officials. The case against Martin, which was unsealed last week, raises new questions about whether the **National Security Agency** and other agencies are doing enough to detect and prevent their sensitive data from leaving the secure confines of government offices. While investigators believe much of Martin's material was removed before stringent controls were imposed in the wake of 2013 disclosures linked to former NSA contractor **Edward Snowden**, some feel the system still failed. When investigators searched Martin's home, they seized several terabytes of data, which Martin stored on dozens of computers and other devices, and thousands of pages of documents, according to the officials, who spoke on the condition of anonymity to discuss an open case. Investigators are still exploring whether he was connected in any way to the online leak of some of the NSA's most powerful hacking tools in August. "Someone was able to walk out the front door with a whole bunch of stuff from NSA," said one congressional aide. "That's not supposed to happen."

Russia May Be Hacking Us More, But China Is Hacking Us Much Less
NBC News, Ken Dilanian, 2016 10 12
New York - In a rare bit of good cyber security news, **Chinese hacking thefts of American corporate secrets have plummeted in the 13 months since China signed an agreement with the Obama administration to curb economic espionage,** U.S. officials and outside experts say. Analysts say the success may hold lessons for how the U.S. should deal with

Russia, which at the same time has stepped up a different sort of hacking campaign that officials says is aimed at undermining confidence in the American election. The change in China's behavior "has been the biggest success we've had in this arena in 30 years," said Dmitri Alperovitch, co-founder of Crowdstrike, a cyber security firm that tracks computer network intrusions. "And it wasn't anything we did in cyber space -- it was the threat of sanctions and the impact on their economy." Alperovitch said his firm has observed a 90 percent drop in commercial hacking against U.S. firms attributable to Chinese government actors. **U.S, intelligence agencies** also have reported a sharp falloff, according to officials briefed on the matter.

Security fears over FBI contracting out highly sensitive surveillance documents
The Guardian (London), Spencer Ackerman, 2016 10 12
New York - The **FBI has contracted out with a private firm to handle, distribute and monitor highly sensitive surveillance documents**, in an arrangement veteran FBI agents consider a potential privacy and counterintelligence risk. Since 2015, the FBI has entrusted a national- security professional services contractor, Aveshka, to prepare, organize, courier and disseminate surveillance materials, including documentation leading to court orders under the **Foreign Intelligence Surveillance Act (Fisa),** the legal wellspring of domestic national-security surveillance. Neither the company nor its employees have been accused of any wrongdoing, but national security has come under renewed scrutiny in the wake of the arrest last week of a Booz Allen Hamilton employee on suspicion of stealing **National Security Agency** computer code. FBI veterans and other surveillance experts consider the bureau to be effectively inserting a private firm as a middleman in surveillance, which they consider an inherent and seemingly unnecessary security vulnerability.

Democrats Say WikiLeaks Is a Russian Front; U.S. Intelligence Isn't So Sure
The Daily Beast, Nancy A. Youssef, Shane Harris, 2016 10 12
Washington - The **Hillary Clinton campaign and the Democratic National Committee are publicly accusing WikiLeaks of being a front for the Russian government** and an ally in efforts to help elect Donald Trump, but **U.S. intelligence officials aren't so sure.** On Monday, Clinton's spokesman called WikiLeaks "a propaganda arm" of the Kremlin and accused the site's founder, Julian Assange, of "colluding with [the] Russian government to help Trump" by leaking embarrassing emails taken from the Democratic National Committee and from the account of Clinton campaign chair **John Podesta**. "**Our Intelligence Community** has made it clear that the Russian government is responsible for the cyberattacks aimed at interfering with our election, and that WikiLeaks is part of that effort," **Donna Brazile** said in a statement. But four U**.S. military and intelligence officials** told The Daily Beast that the relationship between Russia and WikiLeaks is not so clear cut. Undoubtedly, the group has benefited from the work of Russian hackers, who passed purloined emails to WikiLeaks. But does that mean that WikiLeaks is taking orders from Vladimir Putin and doing his bidding? "For Russia, WikiLeaks is more like a useful idiot because they [the Russians] are too cowardly and dumb to be in on the master plan," one U.S. intelligence official told The Daily Beast, describing the website as essentially giving cover to Russian hackers.

U.S. Military Operations Are Biggest Motivation for Homegrown Terrorists, FBI Study Finds
The Intercept, Murtaza Hussain, Cora Currier, 2016 10 11
Washington - A **secret FBI study found that anger over U.S. military operations abroad was the most commonly cited motivation for individuals involved in cases of "homegrown" terrorism**. The report also identified no coherent pattern to "radicalization," concluding that it remained near impossible to predict future violent acts. The study, reviewed

by The Intercept, was conducted in 2012 by a unit in the **FBI's counterterrorism division** and surveyed intelligence analysts and FBI special agents across the United States who were responsible for nearly 200 cases, both open and closed, involving "homegrown violent extremists." The survey responses reinforced the FBI's conclusion that such individuals "frequently believe the U.S. military is committing atrocities in Muslim countries, thereby justifying their violent aspirations."

Boney M singer's brother who ran a mosque and had military-grade explosives and ammunition at his home 'had spurned MI5's advances'
Daily Mail (UK), Paddy Dinham, 2016 10 18
London - A **Boney M singer's brother who was found with half a pound of military-grade plastic explosives at his home near Wembley Stadium had spurned the advances of MI5**, he has told a court. Khalid Rashad, a Muslim convert and mosque director whose garage was also found to contain ammunition, was approached by the Security Service but refused to become a 'secret agent.' 'I don't think they were too happy with it,' he told the Old Bailey. 'I know many young men who frequented the centre and told me they had been approached and asked to spy within the organisation.'

The Snoopers' Charter 'should terrify us all' says former MP
International Business Times (UK), Jason Murdock, 2016 10 18
London - A **former MP who previously sat on the Home Affairs Select Committee has spoken out against the incoming Investigatory Powers Bill - called the Snoopers' Charter** by critics - which he brands a deeply intrusive piece of surveillance legislation "that should terrify all of us." **Dr Julian Huppert**, a lecturer at the University of Cambridge and former Liberal Democrat politician, claimed the bill has avoided any real public debate or scrutiny and slammed its proposals as a "real threat" to technology firms operating in the UK. "Some of the powers in the Bill are deeply intrusive, and with very little possible justification. All of us want to be safe, and protected from terrorists and the like - but the evidence that these powers are all needed is thin indeed. However, the cost to all of our privacy is huge," he wrote on OpenDemocracy. The **Investigatory Powers Bill (IPBill)** contains a number of proposals aimed at bulking up surveillance powers open to the **UK intelligence agencies MI5 and GCHQ,** while allegedly increasing the oversight regime available to the politicians at Whitehall.

UK security agencies unlawfully collected data for 17 years, court rules
The Guardian (London), Alan Travis, 2016 10 17
London - **British security agencies have secretly and unlawfully collected massive volumes of confidential personal data, including financial information, on citizens for more than a decade**, top judges have ruled. The investigatory powers tribunal, which is the only court that hears complaints against **MI5, MI6 and GCHQ**, said the security services operated secret regimes to collect vast amounts of personal communications data, tracking individual phone and web use and large datasets of confidential personal information, without adequate safeguards or supervision for more than 10 years. The ruling said the regime governing the collection of bulk communications data (BCD) - the who, where, when and what of personal phone and web communications - failed to comply with article 8 protecting the right

to privacy of the European convention of human rights (ECHR) between 1998, when it started, and 4 November 2015, when it was made public. It said the holding of bulk personal datasets (BPD) - which might include medical and tax records, individual biographical details, commercial and financial activities, communications and travel data - also failed to comply with article 8 for the decade it was in operation until its public avowal in March 2015.

GCHQ branded as "barbaric" by Oscar-winning director Oliver Stone at Cheltenham Literature Festival
Cheltenham Echo, Phil Norris, 2016 10 17
Cheltenham - Oscar-winning director **Oliver Stone launched an extraordinary attack on GCHQ while appearing at the Cheltenham Literature Festival** tonight. The JFK, Platoon and Wall Street director was speaking in the Town Hall to promote a book, The Oliver Stone Experience, about his many award-winning movies. And after a bit of joking along the lines of **'GCHQ is listening'** from host Mark Lawson, Stone said: "GCHQ is one of the most barbaric agencies around, very cold, very smart. "And likely to arrest anybody at any time, on any thing on any cause. So hello!" There was laughter at the time, but Stone was later questioned about his use of the word "barbaric" from the floor during the question and answer section. When challenged, Stone appeared to not understand and asked in what context he had described GCHQ as barbaric.

Chinese link as smart meters spook GCHQ
Sunday Times (UK), Jon Ungoed-Thomas, 2016 10 16
London - **Chinese electronic companies are manufacturing smart meters to install in millions of Britain's homes despite warnings by the intelligence agency GCHQ** that the technology poses a potential threat to national security. Two of China's biggest electronics companies -- one controlled by the Beijing government -- are providing some of the meters and software for the £11bn programme to install the technology in almost every home in the UK by 2020. One has already signed a deal with one of the "big six" energy companies and the other has been on an official list for trials. The vetting of the Chinese manufacturers is set to be among the first tasks of the **National Cyber Security Centre** (NCSC), which opened in London earlier this month. Nigel Inkster, a former director of operations and intelligence at MI6, said it was important the role of any Chinese firm was subject to a proper risk assessment. "A Chinese corporation is always going to have to do what the state tells it when the crunch comes, although these corporations really do want to be proper international corporations and operate on this basis," he said. Experts have expressed concern that the meters -- which communicate wirelessly with energy companies -- feature a switch that can be used to remotely turn off power, potentially blacking out homes and risking dangerous electricity surges at power stations.

'We don't do it for medals or glory': MI5 agent who helped foil Arndale bomb plot on risking life every day to protect us
The Mirror UK, 2016 10 15
London - A **former MI5 agent who helped foil a plot to blow up Manchester's Arndale Centre has revealed how he was paid just £30,000-a-year over a decade of risking his life to save ours**. "I realise now it's not a lot of money. It was never about the money for us. It's just about dealing with it," **Tom Marcus** matter-of-factly told the M.E.N. during a revealing interview about the ups and downs of life as a secret agent. Considered too bolshy while in the Army, his boss 'volunteered' him for MI5 where he started on £26,500-a-year, rising to a touch over £30,000 by the time he left ten years later after being struck down by Post Traumatic Stress Disorder (PTSD). The former officer spoke frankly about his remarkable life as an MI5 agent during an enthralling hour-long interview with the M.E.N. at a secret Manchester location. Tom,

from the north, spoke candidly about what it was like to risk his life on a daily basis, although he took care not to avoid incidents not covered in his book **'Soldier Spy'**, each line of which was okayed by the secret services prior to publication last week. The book covers how he helped the security services foil the 2009 Al Qaeda plot to blow up Manchester's Arndale Centre and how he stopped another outrage when terrorists planned to kill 60 London schoolkids by detonating a pipe-bomb. Tom revealed he worked an average 80 or 90 hours each week, and sometimes 18 in a day, during more than a decade with MI5.

Man who rejected MI5 convicted of terror charge after semi-secret trial
The Guardian (London), Owen Bowcott, 2016 10 13
London - A **Somali-born man who spurned MI5 efforts to recruit him as an informant has been found guilty - following a partially secret trial - of preparing to join Islamic State fighters in Syria.** Anas Abdalla was discovered hiding behind canisters in the back of a lorry in Dover as he tried to smuggle himself out of the UK in April 2015. He claimed he was escaping from years of harassment by anti-terrorism officers. His final movements had been closely tracked by an undercover "law enforcement" agent. It is the fourth time the former computer technology student, who holds British citizenship, has been put on trial for the same terrorist offence at the Old Bailey on London. He was convicted after the prosecution shifted from its previous position of neither confirming nor denying (NCND) Abdalla's allegations of "oppressive treatment" by the security service. In order to contest details of Abdalla's dealings with MI5, evidence was given in secret by counter-terrorism officers.

UK to have rapid armed police unit to respond to terror attacks
Financial Times, Helen Warrell, 2016 10 12
London - **Downing Street is planning to establish the UK's first national armed police unit for rapid deployment in the event of a Paris- style terror attack**. The proposal, currently under review by police chiefs, would combine firearms officers from the British Transport Police, the Civil Nuclear Constabulary and the Ministry of Defence Police to create a 4,000- strong armed force under one central command. The **new unit, known as the Armed Infrastructure Constabulary, is expected to be a highly-mobile team** with unified systems and communications. Its brief would be to protect national infrastructure as well as responding quickly to marauding attacks such as the recent terror incidents in Paris, Nice and Munich. To broaden its reach, the force would seek strong links with European partners at the Channel tunnel and ports around the country.

World faces cold-war-era threat levels, says former MI6 chief
The Guardian (London), Patrick Wintour, 2016 10 12
London - The **world faces cold-war-era threat levels, Sir John Sawers, the former head of MI6, has said**, due to the west vacating the stage in Syria and failing to recognise that the growth of Russian military power over the past 15 years required the development of a new strategic relationship with Moscow. "We are moving into an era that is as dangerous, if not more dangerous, as the cold war because we do not have that focus on a strategic relationship between Moscow and Washington," Sawers told the BBC on Wednesday. He said the west needed to recognise that the balance of power had changed in the world because of an increase in Russian military power, and its willingness to use that power. "We are not treating Russia and China as major powers that can cause us a great deal of damage," he said.

Cabinet has 'never' disclosed sensitive material on WhatsApp
Sydney Morning Herald, James Massola, 2016 10 18
Sydney -**Attorney-General George Brandis says confidential material has "never, ever" been communicated by cabinet ministers on WhatsApp** - but he won't be releasing the proof. And testy officials from the Department of Prime Minister and Cabinet dismissed security experts' concerns about the use of WhatsApp, insisting that the security clearances given to ministers and their staff were sufficient to protect sensitive information. Those officials said that to the best of their knowledge, **Defence's cyber security agency, the Australian Signals Directorate, had not approved the use of WhatsApp for classified or sensitive communications**. Fairfax Media reported last week that cabinet ministers, MPs, ministerial chiefs of staff and media advisers are using WhatsApp to hold confidential discussions about government business. That prompted Labor's legal affairs spokesman, Mark Dreyfus, to warn the arrangement was a "national security risk". But Senator Brandis told a Senate hearing yesterday that using the app did not pose a security threat. "I can assure you, having communicated with the Prime Minister and other cabinet colleagues on WhatsApp, there has never been an occasion, ever, in which the material on WhatsApp has been other than extremely routine, of an extremely routine nature," he said.

Terror laws to be tested in court
Australian Associated Press, Belinda Merhab, 2016 10 17
Canberra--**Pauline Hanson wants laws stripping dual-national terrorists of their citizenship to go further, calling for their families to be deported as well**. A dual-national terrorist is set to become the first to be stripped of citizenship after the controversial laws cleared federal parliament last year but an immediate High Court challenge is expected, News Corp Australia reported on Monday. The One Nation leader says the immediate family of anyone stripped of their citizenship should be deported as well. "It has to be a real deterrent to get these people out of the country," she told the Seven Network.

Labor queries Brandis over intel committee
Australian Associated Press, Paul Osborne, 2016 10 15
Canberra - **Labor has accused the attorney-general of misleading the parliament's intelligence and security committee over controversial 2015 laws stripping terror suspects of Australian citizenship**. Shadow attorney- general Mark Dreyfus said Attorney-General George Brandis had told the committee he had received advice from Solicitor-General Justin Gleeson that the laws would survive a High Court challenge. But Mr Gleeson told a Senate committee on Friday he had only provided advice on an earlier draft of the laws and not the final bill introduced to parliament by Immigration Minister Peter Dutton in June last year. "My concern in relation to the citizenship bill was that I had provided a lengthy advice in respect to that proposal in 2014 and apparently ... in the first half of 2015 a substantial change was made to that proposal," Mr Gleeson said.

ASIO boss fears wave of attacks too big to stop
The Australian, Brendan Nicholson, 2016 10 14
Canberra - The **scale of the terrorist threat faced by Australia is such that ASIO cannot guarantee it will uncover and prevent attacks, the key counter-terrorism agency has warned. ASIO director-general Duncan Lewis has warned** in his annual report that he fears his staff will be singled out for terrorist attacks. "It is an unfortunate reality that the changes to the security environment have resulted in an increased threat to the personal safety of ASIO

staff," he said. "My officers are operating in an environment that puts their personal safety at risk from spontaneous or opportunistic attack using readily acquired weapons and relatively simple tactics. "In today's environment, regardless of resourcing and expertise, we cannot provide complete assurance that all terrorist attacks or high harm espionage activities affecting Australia and Australians will be identified and prevented." Mr Lewis said the principal threat came from a small number of individuals in Australia who remained committed to anti-Western, violent and extremist Sunni Islamist ideology.

PM's 'favourite thing': WhatsApp chat raises security fears
Sydney Morning Herald, James Massola, 2016 10 13
Sydney - **Prime Minister Malcolm Turnbull and his most senior cabinet ministers are using a third-party messaging application to conduct confidential discussions**, prompting cyber security experts to warn the innovation could actually pose a security risk. The use of WhatsApp is not limited to senior ministers; private chat "groups" exist for government chiefs of staff, ministerial media advisers, the frontline economic team, and a defence-focused "broadcast group" used by Defence Industry Minister Christopher Pyne to communicate with MPs and staff. Fairfax Media has spoken with four cyber security experts who have each flagged potential security issues with the widespread use of WhatsApp by the Turnbull government - particularly at a cabinet level - in place of secure, government email servers from platforms approved by the **Australian Signals Directorate (ASD),** Australia's cyber intelligence agency. Craig Searle, the founder of security consultancy firm Hivint, pointed out WhatsApp was not an approved platform on the ASD list of Evaluated Products or Certified Cloud Services, whereas Apple's iOS operating system and Blackberry's operating system were.

The bungling spies like us
Adelaide Advertiser, Peter Jean, 2016 10 13
Unknown placeline - **Spy agency ASIO tapped the wrong phone by mistake, illegally hacked a computer and had to pay for professional carpet cleaning in a home its agents raided**. And its sister intelligence agency the **Australian Secret Intelligence Service** passed information about Australians to a "foreign liaison" without applying privacy rules. A series of stuff-ups by **Australia's intelligence organisations** have been made public in Inspector-General of Intelligence and Security's Margaret Stone's annual report. Most were reported to Ms Stone's office by the agencies themselves after they realised they had made mistakes. The report reveals ASIO tapped the wrong phone because it had an "incorrect number" and a telco mistakenly sent the agency wrongly intercepted SMS messages. An "administrative "oversight" also led to a computer being accessed without a warrant from the Attorney-General. And a woman whose home was raided **by ASIO agents** executing a search warrant complained to the Inspector-General that the property had been left in a "disordered state" at the end of the search.

Aust authorities warn on cyber security
Australian Associated Press, Roje Adaimy, 2016 10 12
Canberra - The **Australian government warns the prospect of terrorists launching a significant cyber attack on one of its secure networks is real and serious**. A new report by the **Australian Cyber Security Centre** ranks the current threat level as low, with terrorist groups more likely to embarrass governments and exploit the internet for propaganda purposes. But it predicts that within three years, they could have the ability to compromise a secure network with "disruptive and destructive effect". "Of course they're developing their wherewithal when it comes to this area and they're looking to see 'ok, can we use cyber as an offensive weapon?'," Dan Tehan, the minister assisting the prime minister for cyber security, said. "The

real danger is if they're able to recruit and get the right people, then they will be able to use cyber as an offensive weapon and that's what we've got to be aware of."

Bureau of Meteorology hacked by foreign spies in massive malware attack, report shows
ABC (Australia), Andrew Greene, 2016 10 12
Canberra - A **foreign power managed to install malicious software - - known as malware -- on the Australian Bureau of Meteorology's computer system** to steal sensitive documents and compromise other government networks, an official cyber security report has revealed. The **2016 Australian Cyber Security Centre Threat report**, to be released today, provides new details on , which also breached sensitive systems across the Federal Government. It is not known what the motivation for the attack was, but experts have suggested it could be commercial, strategic or both. The bureau is considered a critical national resource, and another state would place a high value on its intellectual property and scientific research. According to the **Australian Cyber Security Centre (ACSC)** report, the **Australian Signals Directorate (ASD)** last year detected suspicious activity from two computers on the bureau's network. "On investigation, ASD identified the presence of particular Remote Access Tool (RAT) malware popular with state-sponsored cyber adversaries, amongst other malware associated with cybercrime," the report stated.

Foreign spies hacked Australian agency, report says
Agence France-Presse, Staff reporter, 2016 10 12
Sydney - **Foreign spies installed malicious software on an Australian government agency's computer system, stealing an unknown number of documents,** an official report revealed Wednesday, stopping short of naming the country involved. The security breach on the Bureau of Meteorology's system, which has connections to the defence department, was detected in 2015 and initial media reports linked it to China. China has previously been accused of hacking websites run by the US government and by private firms. In 2013 Chinese hackers were accused of stealing the top- secret blueprints of Australia's new intelligence agency headquarters. The government's **Australian Cyber Security Centre** report released Wednesday attributed "the primary compromise to a foreign intelligence service" but did not name any country as responsible. "We don't narrow it down to specific countries, and we do that deliberately," said **Dan Tehan, who assists Prime Minister Malcolm Turnbull on cyber security.**

Threat of cyber terror closes in
The Australian, Cameron Stewart, 2016 10 12
Sydney - Terrorists could be able to break into secure Australian government networks to wreak significant disruption or destruction within three years, according to a major government report on cyber security. The wide-ranging report identifies foreign powers as the most serious and rising threat to the security of government networks, which suffered 1095 serious cyber assaults from all sources, including foreign espionage, in the 18 months to June 30 this year. The 2016 Threat Report -- to be released today by the government's peak cyber agency, the Australian Cyber Security Centre -- highlights the growing prevalence and threat of cyber assaults across government, business and society. It warns that the danger of a single major cyber attack on the government has increased after a recent series of brazen attacks against other countries and major organisations. The report comes as Russia and China step up their cyber assaults and espionage against the West, such as Russia's recent hacking of the US Democratic National Committee and the World Anti-Doping Association. "Behaviour by a number of countries is demonstrating a willingness to use disruptive and destructive cyber operations to seriously impede or embarrass organisations and governments -- equating to foreign interference or coercion," it says. "The employment of the tactic in such a brazen manner against high-profile

entities has almost certainly lowered the threshold of adversaries seeking to conduct such acts." The report says the cyber threat to Australia from terrorists is currently limited to the ability to hack websites, social media and personal information, but this will change as they develop more sophisticated cyber-terror capabilities.

New Zealand / Nouvelle-Zélande

Foreign spies hack NZ phones, laptops

New Zealand Herald, Matt Nippert, 2016 10 15
Wellington - **New Zealand government officials travelling abroad had their mobile phones and laptops containing classified information hacked by foreign agents** after their hotel room safe was broken into, government **cyber security officials** have revealed. According to an account of the incident prepared by the Government that does not name either the department involved nor the foreign power believed responsible, the incident occurred when two trade negotiators attended an overseas conference. Precautionary efforts by the pair to delete sensitive materials from their devices prior to departure proved ineffective in protecting classified information. A cloned copy of hard drives allowed foreign agents to "recover not only deleted protectively marked documents, but also intellectual property and sensitive information pertaining to trade negotiations", according to the account. Following their return to New Zealand, malware designed to log all electronic activity was also found to have been installed on the devices. **Paul Ash, director of the national cyber policy office at the Department of Prime Minister and Cabinet**, said the incident showed New Zealand's geographic isolation was no firewall.

Public hearings are starting today on the new law to govern New Zealand's two spy agencies.

Radio New Zealand News, Staff reporter, 2016 10 13
Wellington - **Parliament's Foreign Affairs, Defence and Trade committee will hear submissions on the legislation establishing a fresh set of rules for the Government Communications Security Bureau and the Security Intelligence Service**. The legislation removes the restriction on the **GCSB** intercepting New Zealanders' communications. But that would have to be signed off by the Attorney General, the Commissioner of Warrants, and could only be for the purposes of 'national security', as defined in the bill. The legislation creates a two tier system for all of the agencies' activities, and requires them to follow the same warranting and compliance regime. (Full report)

Ban on spreading extremism among children in line with law: experts

Global Times, Yang Sheng, 2016 10 13

Beijing - A **new regulation, which encourages people to call the police if they find parents or guardians organizing, luring or forcing their children into religious activities** is in accordance with the country's law on religious freedom, experts said on Wednesday. The regulation, released by the **Xinjiang Uyghur Autonomous Region** on Wednesday and to be effective on November 1, says that parents and guardians should neither promote extremist beliefs in children, nor force them to wear extremist clothing and symbols. "Any group or individuals have the right to stop such behavior and report them to the public security authorities," Article 9 reads. The regulation also bans any form of religious activities in schools. Article 16 stipulates that schools must guide students away from separatism, terrorism and extremism, to create a healthy environment that "respects science, refuses ignorance and opposes superstition." Xi Wuyi, an expert on Marxism and religious studies at the **Chinese Academy of Social Sciences,** told the Global Times that this regulation conforms to the Constitution which protects the freedom of religion, because separation of education and religion is a key principle of China's education and religious activities.

Putin confidant denies plans for new KGB in interview

DPA News Agency, 2016 10 18

Moscow— The **KGB secret service is not being revived in Russia, former Kremlin chief of staff Sergey Ivanov said** in an interview published Tuesday. Ivanov, a close confidant of Russian President **Vladimir Putin,** said reports that a new ministry of state security was being set up along the lines of the much-feared Soviet-era body were false. Different bodies would continue to work separately on investigations, counter-espionage and security, Ivanov told Komsomolskaya Pravda daily. "I don't see any sense in having a super ministry," said Ivanov, who in August switched portfolios to transport and the environment after working for four years as chief of staff of the presidential administration.

Kremlin Has No Plans to Create More Security Agencies

Sputnik News Service, 2016 10 17

Moscow—Media reported in September that the government planned to **create a State Security Ministry based on the Federal Security Service (FSB)**, the main security agency. The new ministry would reportedly take over inquiries into high-profile criminal cases and act as an internal oversight body. "It is a one-hundred-percent fake! There is no state security ministry under consideration and never will be, I assure you," Ivanov told the Russian Komsomolskaya Pravda online newspaper. **"There are enough security agencies." According to reports, an alleged reshuffle of security and law enforcement agencies was to be completed by the time of the next presidential elections in March 2018**. It would also merge the service protecting the president and high-level state officials with the intelligence agency, which Ivanov said did not have any sense.

Putin to Kremlin journalists: US is watching you

Associated Press, 2016 10 16

Moscow - **Russian President Vladimir Putin has told journalists in the Russian press corps that they are possibly being watched by American intelligence agencies**. Putin made the comments Sunday in Benaulim, India, where he was attending the summit of the BRICS group of emerging economies. Putin told journalists covering his visit that ``the United

States listens to everything and looks at everything. All of you are objects of exploitation for the special services."

Russian Spycraft: How the Kremlin Hacked Its Way Into a Crisis
Moscow Times, Vladimir Frolov, 2016 10 11
Column - Last Friday the U**.S. Intelligence Community (USIC) publicly named the Russian government for directing "the recent compromises of emails from U.S. persons and institutions, including from U.S. political organizations."** It claimed that the disclosures of hacked emails "on sites like DCLeaks.com and WikiLeaks and by the Guccifer 2.0 online persona are intended to interfere with the U.S. election process", while "only Russia's most senior officials could have authorized these activities." President Vladimir Putin in a recent interview to Bloomberg denied that Russia on a state level had anything to do with the email hacks, but his claim that "the important thing is the content that was given to the public, and not the search for who did it" suggested more than a cursory knowledge of the matter. His further claim that the Russian government did not possess the kind of sophisticated sense of U.S. domestic politics to pull off such a tricky game sounded lame. The **Russian Foreign Ministry** maintains a granular understanding of the intricate details of U.S. presidential and party politics. The Russian Embassy in Washington keeps about a dozen diplomats on the beat. It is not, as some claim, that the Russians suddenly discovered the DNC last year. While the publicly available evidence linking Russian intelligence to the hacks is inconclusive and may even suggest a false flag operation to entangle Moscow in a brawl with Washington, **the U.S. Intelligence Community** had a high degree of confidence in Russian involvement even in July and the fact that they publicly named Russian intelligence as perpetrators suggests that they have definitive proof.

Europe

Les espions, au service du pays
L'Est Républicain, 2016 10 17
Paris—**James Bond, OSS 117, Kim Philby, George Blake, Jeanne Bohec… Qu'ils soient de fiction ou bien réels, les agents secrets renvoient souvent une image de surhomme**. «Un espion est un homme ou une femme qui travaille dans un service, pour un pays et ses intérêts, sa population», explique Emmanuel Ranvoisy, l'un des commissaires de l'exposition **«Guerres secrètes», au Musée de l'armée, à Paris**, qui retrace l'histoire de l'espionnage pendant les grands conflits du Second Empire jusqu'à la guerre froide. Le travail des agents se révèle primordial durant les guerres ouvertes (Première et Seconde guerres mondiales), mais aussi pendant les guerres fermées (guerre froide). «L'action des espions est un moyen vital pour assurer la sûreté du système de défense et l'expression de la stratégie d'un pays et la souveraineté de l'État», précise Emmanuel Ranvoisy. «Les agents travaillent au plus proche du pouvoir, de la haute administration.

François Hollande révèle avoir ordonné l'exécution d'au moins quatre terroristes par la DGSE, tout en dévoilant des conversations qui mettent le Grec Tsipras en difficulté
L'Opinion, Jean-Dominique Merchet, 2016 10 17
Paris— Soixante-dix pages du livre «Un président ne devrait pas dire ça» de Gérard Davet et Fabrice Lhomme (Stock) sont consacrées à la diplomatie et au renseignement. Elles aussi contiennent quelques bombes à retardement...**Avec François Hollande, pas besoin de WikiLeaks ! Il raconte lui-même, avec une légèreté confondante, ce qui en principe devait**

rester secret... Sur l'international, la lecture du livre de Gérard Davet et Fabrice Lhomme contient son lot de révélations, principalement dans deux domaines : l'action des services secrets français et la crise grecque. « J'en ai décidé quatre au moins », répond le chef de l'État alors que les deux journalistes l'interrogent, le 9 octobre 2015, sur le nombre d'opérations « Homo », c'est-à-dire d'assassinats ciblés confiés au **Service Action de la DGSE**. « D'autres présidents en ont fait davantage » ajoute-t-il, comme pour se justifier. Un mois plus tard, il semble revenir sur ces propos, estimant que tout cela est « totalement fantasmé ». Mais, l'année précédente, le 7 mars 2014, n'avait-il pas montré aux journalistes une liste de dix-sept responsables terroristes à « neutraliser » ? Toutes ses informations sont évidemment couvertes par le secret de la défense nationale et leur divulgation relève du Code pénal. N'importe quel fonctionnaire ou militaire qui livrerait de telles informations s'attirerait de sérieux problèmes. À l'Élysée, on est visiblement au-dessus de cela. Toujours dans le domaine du renseignement, le chef de l'État indique qu'il souhaitait « écarter » le patron de la DGSE, Erard Corbin de Mangoux, nommé par Nicolas Sarkozy, parce qu'il « retenait des informations », mais que la guerre du Mali a retardé cette décision. **Revenant sur l'échec, en 2013, de la libération de Denis Allex, un agent de la DGSE retenu en otage en Somalie**, le président de la République confirme les récits qui avaient alors filtré. Le chef de l'État fournit des informations sur l'identité de Denis Allex, jusqu'alors soigneusement préservée par la DGSE.

A Terrorist, Three Heroes and a Bumbling Judiciary
Spiegel Online, 2016 10 14
Berlin—**Jaber al-Bakr was allegedly planning a terrorist attack in Berlin**. But then he was captured, tied up and turned into the police by three Syrian refugees. SPIEGEL spoke with the trio and with al-Bakr's brother to learn more about the case -- one which ended with al-Bakr's suicide and questions about the German judiciary. At the end of each week, Hans-Georg Maassen, the president of **Germany's Federal Office for the Protection of the Constitution (BfV), receives several rolls of paper from his staff.** They look not unlike rolls of wallpaper -- and are full of tables with information about the domestic intelligence agency's current investigations. Changes from the previous week are color-coded to make it easier to see how operations are progressing. The multitude of colorful blotches indicates how seriously the agency takes signs of possible terror attacks in Germany. Last week, a case depicted on Maassen's tables suddenly triggered extreme concern. A tip received from American intelligence agencies led German officials to Jaber al-Bakr, a Syrian citizen born on Jan. 10, 1994 in Saasaa, a town near Damascus. He was thought to be living at Usti nad Labem Street 97 in Chemnitz, though that wasn't his officially registered place of residence. And there were indications that he was planning a bomb attack on an airport in Berlin, perhaps in just a few days.

Sur la piste du magot des services secrets
Le Parisien, Éric Pelletier, 2016 10 13
Paris—Á la Piscine, **le siège des services secrets français (DGSE), on attend avec un brin d'appréhension le 18 octobre, date à laquelle tombera la décision du tribunal de commerce de Paris.** Rien à voir avec une affaire d'otages ou un risque d'attentat. **Au cœur du litige : de (très) gros sous, en l'occurrence le reliquat du patrimoine amassé à l'étranger par des générations d'espions français.** Une cagnotte destinée à « assurer la continuité de l'Etat » en cas de coup dur. Les agents récupèreront-ils leur mise de départ, estimée à plus de 25 M€, ou vont-ils tout perdre ? Quitte ou double. C'est l'enjeu de cette procédure qui ferait passer un roman de John Le Carré pour une bluette. Pour se garantir en cas d'invasion du territoire, que l'ennemi soit prussien, allemand ou soviétique, les gouvernements successifs ont confié au service de renseignement extérieur la gestion d'un trésor de guerre à l'étranger. En

1995, pour faire fructifier ces sommes, la **DGSE** place une partie de cet argent dans plusieurs sociétés, notamment au Luxembourg.

Denmark unveils new anti-radicalization measures
The Local (Denmark), Staff report, 2016 10 12
Copenhagen - The **Danish government on Tuesday presented a list of measures to combat radicalization,** including a "corps of digital voices of reason" to challenge extremist views on the internet. Part of the new plan was for the **Danish Security and Intelligence Service (PET)** to form a "national alliance against online radicalization" including authorities and people from civil society, to which the new "voices of reason" project would be linked. "A civil society-driven corps of digital voices of reason will be established," the Ministry of Justice said in a presentation of the anti- radicalization plans. The group would "systematically be present in social media and engage critically in relevant forums, take part in dialogue and challenge extremist views," it said. A **new unit would also be formed within PET to identify and remove extremist material from the internet.**

Scandinavian Security Forces Step Up Surveillance
Sputnik News Service, 2016 10 14
Helsinki—A **Finnish working group has proposed amendments to the Constitution in order to drastically widen the scope of Finland's Security Intelligence Service (Supo)**. Accordingly, Supo's intelligence-gathering power is to be expanded both domestically and abroad. At present, Supo is already authorized to track people, tap phones and monitor other communications on suspicions of terrorism, espionage and treason. According to the suggestions by the civilian working group, Supo should be granted the right to conduct intelligence without requiring any suspicion of crime. Accordingly, Supo will be allowed to secretly intervene in citizens' post and communications to obtain information about clandestine military activities or anything that "seriously threatens public safety." According to Finnish daily Helsingin Sanomat, the proposal marks a departure from Supo's traditional role of revealing, preventing and investigating crime to the proactive collecting of intelligence about potential national security risks.

La menace "prise au sérieux" par le Renseignement
Valeurs Actuelles, Louis de Raguenel, 2016 10 13
Paris - « Nous sommes au bord de la guerre civile. » Mais qu'a bien voulu dire **Patrick Calvar, le patron de la DGSI, lors de son audition à huis clos le 24 mai dernier par la commission d'enquête parlementaire sur les attentats du 13 novembre ?** Ce n'est pas la première fois que ce Breton, qui n'a jamais accordé d'interviews depuis sa nomination à la tête du Renseignement intérieur, tient des propos qui détonnent. Déjà le 10 mai 2016, devant la commission de la défense nationale et des forces armées, sa parole heurte. Attendu pour disserter sur la lutte contre le terrorisme islamique, il retourne son auditoire et prévient : « L'Europe est en grand danger. » Explication : « Les extrémismes montent partout et nous sommes [...] en train de déplacer des ressources pour nous intéresser à l'ultradroite qui n'attend que la confrontation. » Sans langue de bois, il conclut : « Vous vous rappeliez que je tenais toujours un langage direct; eh bien, cette confrontation, je pense qu'elle va avoir lieu. » Les députés qui écoutent le patron du Renseignement intérieur sont stupéfaits. Quand ? Qui ? Où ? Pas le temps de respirer. Avec sang-froid, Calvar donne le coup de grâce : « Encore un ou deux attentats et elle adviendra. »

Les secrets bien gardés des espions dévoilés dans une exposition à Paris
Agence France-Presse, Journaliste maison, 2016 10 12
Paris - Du parapluie bulgare empoisonné à la célèbre machine à chiffrer allemande Enigma, **400 objets et documents d'archives, rassemblés pour la première fois lors d'une**

exposition à Paris dessinent à petites touches l'univers très secret de l'espionnage mondial. Dans un décor aussi sombre que le sujet, une galerie de photos légendées rappelle d'entrée le destin d'espions de légende: l'officier-écrivain britannique Thomas Edward Lawrence, dit "Lawrence d'Arabie", dont le sabre et le poignard au fourreau doré sont exposés; Vladimir Vetrov alias "Farewell", taupe du **KGB** qui a livré au début des années 80 une liste d'espions soviétiques en Europe et aux Etats-Unis ; la Britannique Violette Szabo, exécutée à 24 ans par les nazis à Ravensbrück.

Morocco tipped off Israeli intelligence, 'helped Israel win Six Day War'
Times of Israel, Sue Surkes, 2016 10 18
Jerusalem - **Israel largely has Morocco to thank for its victory over its Arab enemies in the 1967 Six Day War, according to revelations by a former Israeli military intelligence chief**. In 1965, King Hassan II passed recordings to Israel of a key meeting between Arab leaders held to discuss whether they were prepared for war against Israel. That meeting not only revealed that Arab ranks were split -- heated arguments broke out, for example, between Egypt's president Gamal Abdel-Nasser and Jordan's king Hussein -- but that the Arab nations were ill prepared for war, **Maj. Gen. Shlomo Gazit** told the Yedioth Ahronoth newspaper over the weekend. On the basis of these recordings, as well as other intelligence information gathered in the years leading up to the war, Israel launched a preemptive strike on the morning of June 5, 1967, bombing Egyptian airfields and destroying nearly every Egyptian fighter plane.

Syria intelligence chief in Cairo for security talks
Now Lebanon, Albin Szakola, 2016 10 18
Beirut - A **top Syrian intelligence official has discussed security coordination with his Egyptian counterpart amid** warming ties between the two countries. Syria's state news agency reported Monday that Syrian National Security Bureau chief Ali Mamlouk "made an official visit to Cairo," where he met with General Khaled Fawzy, the head of Egypt's General Intelligence Directorate, as well as other "senior security officials." "The two sides agreed to coordinate political stances," SANA claimed, adding that they also decided to "strengthen coordination in the fight against terrorism."

The Yom Kippur War Came as a Surprise to the Egyptians as Well, Documents Show
Haaretz, Amir Oren, 2016 10 13
Jerusalem - **"We had a report in the CIA in late May 1973** that said, 'Egypt and Syria will start **war against Israel** on the 6th of October,'" **CIA Deputy Director Gen. Vernon Walters** said in a lecture to the U.S. Army Security Agency Training Center and School a year and a half after the Yom Kippur War. "We duly reported this," Walters continued. "But one of my experiences with the intelligence business has been that the analysts generally shrink from telling you something really unpleasant, and even after we try to fit every piece of intelligence in to show that it wasn't going to happen on the 6th of October.

Pakistani agents making calls to executives at oil installations to extract key details
The Economic Times, Sanjeev Choudhary, 2016 10 18
New Delhi—Indian oil installations are on Pakistan's radar. The **Intelligence Bureau has advised the oil ministry to step up safety and information shield at important energy installations after it intercepted a conversation in which a Pakistani spy was heard extracting information from an oil industry executive**.Since the September 18 terror attack in Uri and the retaliatory surgical strikes by the Indian Army on terror camps across the Line of Control in Pakistan-occupied Kashmir, there have been fears of an escalation of conflict on both sides of the border prompting defence forces and intelligence agencies to be on high alert. IB recently intercepted a conversation in which a Pakistani operative, posing as an officer of India's external intelligence agency, **the Research & Analysis Wing**, engaged on phone an executive managing a sensitive hydrocarbon pipeline in Rajasthan and sought finer details about the facility, sources with direct knowledge of the matter said.

Create National Counter-Terrorism Centre to fight terror: Experts
Times of India, Bharti Jain, 2016 10 17
New Delhi - As the Modi government mulls **revisiting UPA's proposal for a National Counter-Terrorism Centre (NCTC) to track and fight terror,** experts feel the idea may be stillborn without a constitutional amendment to separate common 'law and order' duties from intra-state, transnational offences like terrorism and cyber crime, and bringing the latter under the Union or concurrent list. Chief ministers, who have been opposing NCTC, saying its powers to arrest and search suspects anywhere in the country would encroach upon their turf.

Supreme Court ruling over KakaoTalk wiretapping sparks controversy
Korea Herald, Sohn Ji-young, 2016 10 17
Seoul - The **South Korean Supreme Court's latest ruling over the legality of wiretapping the country's dominant mobile messenger KakaoTalk** for investigative purposes is igniting controversy between the prosecution and related stakeholders. Last Thursday, the Supreme Court of Korea ruled that conversations taken from KakaoTalk severs cannot be recognized as **wiretapped evidence**, as they were not seized in real time as mandated by the legal definition of "wiretapping." The ruling over what constitutes as "wiretapped evidence" came as the court was reviewing various evidence alleging that a leftist civic group violated the National Security Law. Up to now, Kakao has been handing over personal conversation records saved on its servers during selected time periods as requested by the prosecution.

Two held for 'spying' for Pakistan: ISI agent honey trapped one accused
The Indian Express, 2016 10 14
New Delhi—A day after two **Bhuj residents were arrested for allegedly spying for Pakistani intelligence agency ISI, officials of the Gujarat Anti-Terrorism Squad (ATS)** on Thursday said they suspect "one accused was honey trapped by a 17-year-old ISI agent and later trained by a handler" to pass on information about the movement of Army and BSF troops, besides inputs on vital installations in the region. **Alleged spy Alana Hamir Sama** (40), resident of Kukma village in Bhuj taluka of Kutch district, and **his associate Shakoor Sumra** (38), resident of nearby Sumrapor village, were arrested Wednesday by the ATS from Bhuj bus station. According to senior officials, following high alert after the Army's surgical strike along the LoC, the ATS was scanning the movement of people visiting Pakistan when it came to know about Sama's frequent visits to the neighbouring country.

'Spy' pigeon's wings clipped to stop it flying back to Pakistan: Indian police
Pakistan Dawn, 2016 10 14
Islamabad - The **wings of a 'spy' pigeon taken into custody by Indian police** earlier in October have been clipped, an Indian Punjab police official told The Telegraph India on Wednesday. The 'spy' pigeon was found carrying what officials said was a warning note to Indian Prime Minister Narendra Modi near the heavily-militarised border as Pak-India tensions simmered following the Uri attack, subsequent ceasefire violations and an Indian 'surgical strike' - a claim Pakistan has rejected.

Japan gov't widens counter-cyberattack protection to more entities (Canada)
Kyodo News, Staff reporter, 2016 10 12
Tokyo - The **Japanese government decided Wednesday to extend its counter-cyberattack monitoring of key government agencies** to include nine government-affiliated bodies, including the national pension operator that saw more than 1 million sets of personal information leaked in a high- profile attack. The government's cybersecurity strategy task force selected the bodies for monitoring by the **National Center of Incident Readiness and Strategy for Cybersecurity, or NISC**, in line with an amended cybersecurity law that came into force this month following its enactment in April. Previously, the scope of monitoring was only government ministries and agencies. "The government must steadily administer the amended law to thoroughly deal with cyber measures for these organizations," Chief Cabinet Secretary Yoshihide Suga said at a meeting of the task force Wednesday. The nonbinding guidelines call for institutions to clarify their personnel's roles and responsibilities in dealing with the attacks, share information on attacks and threats with stakeholders in a timely manner and review cybersecurity strategy regularly. The G-7 comprises Britain, **Canada**, France, Germany, Italy, Japan and the United States.

N.K. spy agency official defected to S. Korea last year: source
Yonhap News Agency, Staff reporter, 2016 10 12
Seoul - A **senior official at North Korea's spy agency defected to South Korea last year, a source said Wednesday**, pointing to a rise in defections by North Korean elites **disillusioned with the repressive regime**. An unidentified official who worked for the Ministry of State Security escaped to the South last year, the source familiar with Pyongyang's affairs said, in an unusual defection by a North Korean in charge of gathering intelligence and cracking down on ordinary people. The source said that North Korean leader **Kim Jong-un** is believed to have been upset by the growing number of elite members defecting. Seoul's unification ministry said it has no specific information on the defection by the North Korean spy agency's official. More North Korean elites, including diplomats, have deserted their country in search of freedom, which Seoul says points to signs of cracks in the North's regime.

'Power of Sudan's Security Apparatus to Be Restricted' – PCP
All Africa, 2016 10 17
Khartoum— The recommendations of **Sudan's National Dialogue stipulate the restriction of the powers of the National Intelligence and Security Service (NISS) to the collection and analysis, says the Popular Congress Party**. The National Consensus Forces coalition rejects the outcomes of the Dialogue. In early January, the Sudanese parliament passed a number of amendments to the 2005 Interim Constitution. An important amendment concerned the

extension of the NISS competences, by which the institution became a full part of Sudan's regular forces. According to the chairman of the parliamentary Popular Congress Party (PCP) block, Dr Ismail Hussein Fadlallah, the "sinful" amendments would convert Sudan into a full-blown police state.

Bernard Cazeneuve appelle à la coopération contre le terrorisme et la lutte contre la radicalisation
All Africa, Noël Ndong, 2016 10 13
Dakar, Sénégal - En visite à Dakar au Sénégal dans le cadre de la coopération bilatérale, le ministre français de l'Intérieur, **Bernard Cazeneuve, a rencontré son homologue sénégalais, Abdoulaye Daouda Diallo. Au centre de leur entretien: la lutte contre le terrorisme et la radicalisation.** Une nouvelle convention a été signée. "L'islamisme radical est enkysté dans certains territoires, il faudrait du temps pour l'éradiquer. La propagande sur internet agit sur les plus vulnérables, bien que de plus en plus empêchée par les mesures que nous avons prises", a reconnu Bernard Cazeneuve.

Venezuela's intelligence chief accuses opposition of terrorist acts, assassination
United Press International, Staff report, 2016 10 12
Caracas - The **head of Venezuela's Bolivarian Intelligence Service, or SEBIN, has accused some opposition members of terrorist acts and assassination in efforts to remove President Nicolas Maduro from power**. **SEBIN Director Gustavo González López**, formerly the minister of interior and justice, said on Tuesday Carlos Ocariz, a mayor of the Sucre municipality in the Miranda state, is one of those being investigated over alleged terrorist acts. González López spoke about two incidents: a video released by the Justice First opposition party which González López said incites military rebellion, and the launch of a grenade at a Venezuelan National Guard post in the Sucre municipality.

Why security shouldn't be left only to security services
Toronto Star, Michelle Shephard, 2016 10 24
Analysis: The depressing reality first. Our terror years since Sept. 11, 2001, will continue for more to come. Syria's slaughter and other regional conflicts will persist. The refugee crisis is beyond staggering. In early 2015 when I pitched my Atkinson Fellowship "Generation 9/11" to study why young Canadians are attracted to groups such as Daesh, the situation was grim. Much has deteriorated since and we cannot ignore how it is all related. No politician should talk about counterterrorism efforts without also condemning state terrorism. Bashar Assad's regime, with Russia's support, is committing war crimes against Syrian civilians with impunity. Meanwhile groups like Daesh (also known as ISIS or ISIL) push their narrative of a world war against Muslims, even as they kill thousands of Muslims in their own war. Every country needs to help ease the refugee crisis. If Daesh was able to recruit from the disenfranchised of Generation 9/11, what will become of this next generation? In early 2012, I travelled with videographer Randy Risling to report on the thousands of children fleeing Syria's war. We called our series "Childhood Interrupted." Those children, who were in refugee camps in Turkey, are now teenagers and adults. Their childhood wasn't just interrupted, but lost. If we ignore their futures, we not only turn our backs on a humanitarian crisis, but we have handed terrorists a rich hunting ground for recruits. **Privately, the RCMP and CSIS say they are overwhelmed, and I have sympathy for their position. Not everybody can be monitored, or should be.** Aaron Driver appeared to be moving on until he was shot dead, armed with an improvised explosive device, in Strathroy, Ont. Michael Zehaf-Bibeau, who stormed Parliament Hill in 2014, was low on a list of Canadians that may pose a threat. **But if the federal agencies are grappling with the workload, why waste resources on the case of the B.C. couple John Nuttall and Amanda Korody?** In throwing out the charges against the former drug addicts, a judge blasted the RCMP for "abuse of power" in entrapping them. B.C. Supreme Court Justice Catherine Bruce said in her July verdict: "They were clearly overzealous and acted on the assumption that there were no limits to what was acceptable when investigating terrorism. "We do not need the police to create more (terrorists) out of marginalized people who have neither the capacity nor sufficient motivation to do it themselves." This case cries for an examination of RCMP misconduct, but also stresses the need to bolster community services that could have helped Nuttall and Korody before they fell prey to terrorist ideology (or a police sting). Zehaf-Bibeau was so desperate for help that he robbed a McDonald's with a stick so he could go back to jail and clean up.(Note: Michelle Shephard, the Star's national security correspondent, travelled to a half-dozen countries and interviewed foreign fighters, security experts, policy makers and religious leaders for this year's series. This is the final column in her series "Generation 9/11" that explored the issue of Daesh's foreign members and how Canada and the world should respond. Read the stories at www.thestar.com/news/atkinsonseries/generation911)

RCMP's counterterrorism centre in Ottawa serves as intersection of information
The Globe and Mail, Colin Freeze, 2016 10 24
Ottawa - **The Mounties have created a permanent place for counterterrorism detectives to work shoulder-to-shoulder - and database to database - with federal border guards, immigration officials and spy-agency analysts**. The RCMP's **national-security joint-operations centre (NSJOC)** in Ottawa is a "real-time and rapid information-sharing" crossroads where federal agents can **efficiently swap files, according to recently released records**. However, critics fear it will go places no watchdog can follow. The counterterrorism centre was largely unknown until RCMP Commissioner **Bob Paulson** made a brief reference to it in Parliament earlier this year. The Globe and Mail has acquired the centre's terms of reference under Access to Information laws. The centre brings federal agents of all stripes together in an RCMP facility in Ottawa where they can talk to each other and exchange information as part of the fight against terrorism. It formally came into existence in October, 2014, the same month two men inspired by the Islamic State killed two Canadian Forces soldiers. The next spring, executives at the **Communications Security Establishment, the Canadian Security Intelligence Service**, the **Canada Border Services Agency** and **Citizenship and Immigration Canada** signed the centre's terms of reference, under which they agree to embed at least one staff member with the RCMP at all times. Today, federal-security agencies are under renewed pressure to amass and share records. Recent disclosures indicate CSIS, the domestic spy agency, has been "ingesting bulk data sets " in hopes of predicting patterns of terrorism, and its foreign-focused counterpart, CSE, is mapping out "contact chains" of global communications to discern where threats lie. It's not clear how police would use such deductions. The records about the RCMP-led centre say that sharing information, early and often, can minimize the risk that federal police and spies trip over each other, and head off future problems.

Snowden says Trudeau afraid to kill anti-terrorism bill
It World Canada, Howard Solomon, 2016 10 19
Toronto - Whistleblower. Hero. Traitor. Patriot. These words and more have been used to describe former cybersecurity contractor **Edward Snowden**, who in 2013 copied and distributed thousand of documents to reporters and whose stories of Western intelligence agencies -- including **Canada's Communications Security Establishment (CSEC)** -- shook the world. This morning **Snowden told the annual SecTor cyber security conference in Toronto that Prime Minister Justin Trudeau want to amend the controversial Bill C-51 anti-terrorism law and not repeal it because he "is afraid of being attacked for being soft on terrorism."** Speaking by video from Russia, where he fled to avoid prosecution by U.S. authorities, Snowden said the legislation, needs three fixes: First, a judicial body should have oversight over federal intelligence agencies that has the power to prosecute authorities that have broken the law. Second, because intelligence agencies are trading personal information of citizens "like baseball cards" citizens should be told if the data sharing hasn't led to an arrest for criminal activity. And finally, what Snowden called the criminalization of speech through vague definitions of terrorism should be taken out of C -51. A lot of what police call terrorism is the activity of what he called "common criminals" or those who are trying to make a political point but don't constitute a "super criminal threat."

Obama Says U.S. Has No Idea Who Carried Out Cyberattack
Wall Street Journal, Carol E. Lee, Damian Paletta, 2016 10 25
Los Angeles - **President Barack Obama said the U.S. doesn't know who launched an online attack Friday that rendered more than 1,200 websites unreachable, including Netflix and Twitter**. "We don't have any idea who did that," Mr. Obama said during a taped appearance Monday for the late-night show hosted by Jimmy Kimmel. U.S. officials and cybersecurity experts believe attackers controlled a vast collection of internet-linked devices such as cameras, video recorders and routers, to essentially overwhelm parts of the internet and make dozens of popular websites unreachable. **The Department of Homeland Security on Monday said it was still "monitoring events" tied to the attack.** It said that following the incident, it held a conference call with 18 telecommunications service providers to discuss what happened, adding "at this time, we believe the attack has been mitigated." DHS said "one type of malware potentially used in this incident" is known as Mirai and targets devices such as cameras and entertainment systems that have internet links. DHS is working to develop rules to address these types of attacks, but the timing of such a move is unclear.

Ex-CIA director says 'Fox News has jumped the shark' and abandoned 'conservatism'
Washington Times, Douglas Ernst, 2016 10 24
Washington - **George W. Bush's former director of the NSA and the CIA likened Fox News' Sean Hannity to a Soviet-era apparatchik over the weekend**. Brookings Institute senior fellow Benjamin Wittes shared a scathing statement by Michael Hayden on Sunday in response to Mr. Hannity's support for WikiLeaks. The Fox host has cheered the group's release of stolen documents belonging to Hillary Clinton campaign chairman John Podesta. **U.S. intelligence agencies have blamed Russian state actors for the theft. "Fox News has almost entirely jumped the shark,"** Mr. Hayden wrote. "They have given up any semblance of conservatism and focused on an almost visceral hatred of all things Clinton and Obama." The former CIA head said that some exceptions to the rule include Chris Wallace, Megyn Kelly and Brett Baier.

Plans to send heavier weapons to CIA-backed rebels in Syria stall amid White House skepticism
Washington Post, Greg Miller, Adam Entous, 2016 10 24
Washington - As rebel-held sections of Aleppo crumbled under Russian bombing this month, **the Obama administration was secretly weighing plans to rush more firepower to CIA-backed units in Syria.** The proposal, which involved weapons that might help those forces defend themselves against Russian aircraft and artillery, made its way onto the agenda of a recent meeting President Obama held with his national security team. And that's as far as it got. **Neither approved nor rejected, the plan was left in a state of ambiguity that U.S. officials said reflects growing administration skepticism about escalating a covert CIA program that has trained and armed thousands of Syrian fighters over the past three years**. The operation has served as the centerpiece of the U.S. strategy to press Syrian President Bashar al-Assad to step aside. But U.S. officials said there are growing doubts that even an expanded version could achieve that outcome because of Moscow's intervention. Obama, officials said, now seems inclined to leave the fate of the CIA program up to the next occupant of the White House.

Military Warns Chinese Computer Gear Poses Cyber Spy Threat (Canada)
Washington Free Beacon, Bil Gertz, 2016 10 24

Washington - **The Pentagon's Joint Staff recently warned against using equipment made by China's Lenovo computer manufacturer amid concerns about cyber spying against Pentagon networks**, according to defense officials. A recent internal report produced by the **J-2 intelligence directorate** stated that cyber security officials are concerned that Lenovo computers and handheld devices could introduce compromised hardware into the Defense Department supply chain, posing cyber espionage risks, said officials familiar with the report. The "supply chain" is how the Pentagon refers to its global network of suppliers that provide key components for weapons and other military systems. **The J-2 report was sent Sept. 28, and also contained a warning that Lenovo was seeking to purchase American information technology companies in a bid to gain access to classified Pentagon and military information networks.** The report warned that use of Lenovo products could facilitate cyber intelligence-gathering against both classified and unclassified--but still sensitive--U.S. military networks. The cyber spying concerns are not limited to the Pentagon. The Australian Financial Review newspaper reported in 2013 that all of the **"Five Eyes" intelligence services--those in the United States, Britain, Australia, Canadian, and New Zealand**--strictly prohibit the use of Lenovo computers over concerns about the potential for cyber espionage.

Pentagon Expects Mosul Push to Unlock Trove of ISIS Intelligence
New York Times, Eric Schmitt, 2016 10 23
Washington - **The Pentagon is sending dozens of additional intelligence analysts to Iraq to pore over a trove of information that is expected to be recovered in the offensive to recapture Mosul from the Islamic State, data that could offer new clues about possible terrorist attacks in Europe**. The analysts will have several immediate priorities: Share with the Iraqi military any information crucial to the unfolding fight in Mosul; pass along insights useful to American officials planning an attack on Raqqa, the Islamic State's de facto capital in eastern Syria; hunt for clues about the location of the group's shadowy leader, Abu Bakr al- Baghdadi; and search for any information about terrorist cells in Europe and any attacks they may be plotting. Maj. Gen. Gary J. Volesky, the commander of American ground forces in Iraq, has called Mosul the Islamic State's Iraqi "crown jewel." Noting that the militants had been entrenched there for more than two years, he added on Wednesday, "Clearly, there's going to be intelligence that will be able to be exploited."

F.B.I. Is Fighting a Return to an Old Boys' Club
New York Times, Adam Goldman, 2016 10 23
Washington - When the call came in that a bomb had exploded in Manhattan, **Amy Hess quickly got to work. She helped direct teams of F.B.I. agents to New York to collect evidence, set up secure command posts in the streets so agents could discuss classified information, and alerted the digital forensics, fingerprint and facial recognition experts she manages in Quantico, Va., site of the F.B.I. academy and its lab**. By the next day, she and her team had played a crucial role in identifying Ahmad Khan Rahami, the man charged with planting the bomb in Chelsea along with a second, unexploded device. "We pulled out all the stops," said Ms. Hess, who as head of the bureau's science and technology branch oversees more than 6,000 F.B.I. employees. Inside the F.B.I., women in particular look up to Ms. Hess, and not just because they have nicknamed her the "rocket scientist" with a degree in aeronautical and astronautical engineering from Purdue University. She is also the first woman to head the science branch -- one of few female agents commanding such an important job at the F.B.I., a clubby agency where men are more predominant in senior positions than they were even three years ago. Ms. Hess, 50, put it simply: **"There is a lack of women in leadership roles."** Today at the F.B.I., women hold 12 percent of 220 senior agent positions, including nine who run field offices in places like Los Angeles; Oklahoma City; Louisville, Ky.; and Knoxville,

Tenn. That is a decline from 2013, when women held about 20 percent of senior agent jobs and 15 women ran field offices.

Homeland Security struggles to detain rising numbers of undocumented people
Wall Street Journal, Devlin Barrett, 2016 10 22
Washington - **Homeland Security officials are quietly scrambling to find 5,000 more prison and jail beds to handle a record number of undocumented immigrants being detained in the U.S.**, according to officials familiar with the discussions. **Homeland Security Secretary Jeh Johnson** met Tuesday with senior leaders at the **Immigration and Customs Enforcement agency** and the **Customs and Border Protection agency** -- both of which are in his department -- so officials could review their plans to handle **thousands more people expected to cross the border with Mexico in coming weeks**, the officials said. ICE is holding more than 40,000 people in detention centers -- more than it has ever had in custody before -- and has warned budget officials that it needs a quick infusion of $136 million more just to keep running detention centers until early December, according to internal Department of Homeland Security documents and officials. A spokeswoman for the Department of Homeland Security declined to comment on internal agency discussions. The agency is "committed to continuing to ensure that individuals are detained in a safe, secure and humane manner in line with our detention standards and our values as a nation," she said.

Man Who Took Trove of N.S.A. Data Has Court Date
New York Times, Scott Shane, 2016 10 22
Baltimore - **The intelligence contractor accused in the largest- ever breach of classified information was portrayed by his lawyer in court on Friday as a patriot and a dedicated worker who became compulsive about taking work home**. An unlocked garden shed, stuffed with more classified documents than the contractor, **Harold T. Martin III,** could ever read, might be a symptom of a mental disorder, the lawyer said. Mr. Martin, a rotund man with glasses whose striped gray jail garb stood out in an ornate federal courtroom here, sat silently during his first public appearance as his lawyer, James Wyda, argued that he should be released while awaiting trial. The prosecution, opposing the request, described Mr. Martin, 51, in starkly different terms: as a serial lawbreaker of staggering audacity. Over two decades as a contractor for the **National Security Agency and other government units, it said, he took home masses of secrets in full knowledge that it was illegal to do so.** And, the prosecution added, there is no way to be certain what he has done with the information, or whether he might be hiding more.

Theft by former NSA worker much worse than thought, prosecutors allege
Christian Science Monitor, Zhai Yun Tan, 2016 10 22
Washington - **A former National Security Agency contractor accused of stealing hoards of top secret government information is set to face more serious charges than previously announced**, with prosecutors hoping to prevent him from being released on bail. According to the federal prosecutors' court filing on Thursday, Harold T. Martin III committed a theft that was "breathtaking in its longevity and scale," **stealing enough material to fill up to 200 laptop computers**, according to the Associated Press. The information includes "specific operational plans against a known enemy of the United States," and handwritten notes with explanations that the government says is intended for an "audience outside of the Intelligence Community." "Given the nature of his offenses and knowledge of national secrets, he presents tremendous value to any foreign power that may wish to shelter him within or outside of the United States," prosecutors said. Prosecutors argue that Mr. Martin should not be released on bail because he is "a risk to the nation and to the physical safety of others," The Washington Post reports.

Ex-NSA contractor deemed flight risk in theft case
Washington Post, Ellen Nakashima, 2016 10 22
Baltimore - **A federal judge found Friday that a former National Security Agency contractor accused of carrying out what is thought to be the largest theft of classified secrets in U.S. history posed a flight risk and ordered that he continue to be held in jail.** U.S. Magistrate Judge A. David Copperthite ruled that Harold T. Martin III should not be released pending trial, despite the impassioned arguments of his defense attorney that the computer technology expert is a patriot who intended no harm to his country and suffered from a "compulsive disorder" that led him to steal classified material over a 20-year period. Defense attorney James Wyda conceded that Martin took the material, but he stressed that "there's no evidence that Hal shared this information with anyone" or that he intended to pass it to a foreign government. "There is nothing to indicate that Hal Martin is a traitor," Wyda told the judge, as Martin, a heavyset man wearing gray- striped jail garb, sat quietly at the defense table. "What we see is an individual who is a collector." He told the court that his client is not like **Edward Snowden, the former NSA contractor who gave classified material on U.S. surveillance programs to journalists**, or **Aldrich Ames, a onetime CIA officer who was recruited by the Soviet Union and betrayed agents working for the United States**. Wyda portrayed Martin, 51, as a "voracious learner committed to being excellent at his work" who gathered information to improve his knowledge. "What began as an effort to be better at his job," Wyda said, became over the years a compulsion. "Frankly," he said, "the mental health component is the only explanation."

Case of Former N.S.A. Contractor Escalates as Espionage Act Charges Loom
New York Times, Scott Shane, 2016 10 21
Baltimore - A **former intelligence contractor stole the equivalent of 500 million pages of government documents over two decades of work at seven companies, including top-secret plans for an operation against a hostile country**, prosecutors said in papers filed in Federal District Court here on Thursday. The prosecutors also said that the former contractor, **Harold T. Martin III**, who worked for the **National Security Agency** and other military and intelligence agencies, kept an "arsenal" of 10 firearms at home in Maryland, including an assault-style rifle and a loaded handgun that he kept illegally in his car. Mr. Martin was initially charged with theft of government property and mishandling of classified information, violations carrying a maximum sentence of 11 years. But the new filing said prosecutors planned to charge him with violating the Espionage Act and committing other felonies, crimes that could put him in prison for decades if he is convicted. He is scheduled to appear at a hearing in federal court on Friday afternoon for arguments about whether he will remain in detention. The government's filing deepens the mystery surrounding Mr. Martin's grand-scale compilation over decades of a home library of top-secret material, some of which F.B.I. agents found lying in the open in his car and home office. The new details in the government's filing paint a darker picture, offering hints -- though no proof -- that he might have taken the material to give it to others, conceivably even to a foreign nation. Prosecutors said he **had communicated with others in foreign languages, including Russian,** and downloaded information about the Russian language.

Did Hillary Clinton reveal classified intel at debate?
CNN.com, Jamie Crawford, 2016 10 21
Washington - The **Twitterverse was aflame in the hours after Wednesday night's debate with questions about whether or not Hillary Clinton divulged classified information about the country's nuclear arsenal. "There's about four minutes between the order being given** and the people responsible for launching nuclear weapons to do so," Clinton said, explaining the quick decision-making required of a commander in chief and questioning Donald Trump's

fitness for the job. "And that's why 10 people who have had that awesome responsibility have come out and, in an unprecedented way, said they would not trust Donald Trump with the nuclear codes or to have his finger on the nuclear button," she continued. But questions soon began to emerge about whether Clinton was too specific in her description of nuclear launch times and had perhaps revealed something she learned in a classified setting. **A Clinton campaign aide said the information didn't come from a classified briefing**, pointing to multiple instances when similar information has been disclosed in public or through open source material.

NSA Can Access More Phone Data Than Ever
ABC News, Lee Ferran, 2016 10 20
Washington - One of the reforms designed to rein in the surveillance authorities of the **National Security Agency has perhaps inadvertently solved a technical problem for the spy outfit and granted it potential access to much more data than before, a former top official told ABC News.** Before the signing of the **USA Freedom Act in** June 2015, one of the NSA's most controversial programs was the mass collection of telephonic metadata from millions of Americans -- the information about calls, including the telephone numbers involved, the time and the duration but not the calls' content -- under a broad interpretation of the Patriot Act's Section 215. From this large "haystack," as officials have called it, NSA analysts could get approval to run queries on specific numbers purportedly linked to international terrorism investigations. The problem for the NSA was that the haystack was only about 30 percent as big as it should've been; the NSA database was missing a lot of data. As The Washington Post reported in 2014, the agency was not getting information from all wireless carriers and it also couldn't handle the deluge of data that was coming in. On the technical side, **Chris Inglis, who served as the NSA's deputy director until January 2014, recently told ABC News that when major telecommunications companies previously handed over customer records, the NSA "just didn't ingest all of it."**

NSA chief: Cyber adds 'whole other dimension' to Russia's attempts to manipulate U.S. affairs
Baltimore Sun, Ian Duncan, 2016 10 20
Baltimore - The **head of the NSA said Thursday that Russia's hack of Democratic Party emails is consistent with its history of trying to manipulate and influence affairs in other countries** -- but the scope of such operations has changed dramatically. "Cyber adds a whole other dimension to this because it now enables individuals, actors, groups, nation states to acquire data at massive scale and then divulge that," **Adm. Michael S. Rogers** told cyber professionals at the sixth annual Cyber Maryland Conference in Baltimore. The job now for the National Security Agency and other parts of the government, Rogers said, is to make sure that Americans continue to have confidence in the electoral system. "As we work our way through this particular issue, that's always at the forefront of our minds," he said.

U.S. vote authorities warned to be alert to Russian hacks faking fraud - officials
Reuters, David Rohde, Mark Hosenball, 2016 10 21
Washington **- U.S. intelligence and law enforcement officials are warning that hackers with ties to Russia's intelligence services could try to undermine the credibility of the presidential election** by posting documents online purporting to show evidence of voter fraud. The officials, who spoke on condition of anonymity, said however, that the U.S. election system is so large, diffuse and antiquated that hackers would not be able to change the outcome of the Nov. 8 election. But hackers could post documents, some of which might be falsified, that are designed to create public perceptions of widespread voter fraud, the officials said. They said

that they did not have specific evidence of such a plan, but state and local election authorities had been warned to be vigilant for hacking attempts.

NSA: Hackers find an easy path to U.S. systems
FCW.com, Sean D. Carberry, 2016 10 20
Washington - For all the concern about zero-day exploits, a **senior NSA official said that the high-profile hacks of U.S. networks in the last two years show there are far easier ways for cybercriminals to infiltrate government systems**. Speaking at the American Enterprise Institute on Oct. 18, **Curtis Dukes, deputy national manager for national security systems at the NSA**, said that none of the high-profile government hacks the NSA responded to -- Office of Personnel and Management, the White House, State Department, Department of Defense -- used zero-day exploits. "Basically the adversary took advantage of poorly secured, poorly patched systems," said Dukes. "Once they had that initial foothold they the elevated privileges and then moved to mission objective," which ranged from stealing data to (in the case of the Sony hack) destroying it.

Trove of Stolen Data Is Said to Include Top-Secret U.S. Hacking Tools
New York Times, Multiple reporters, 2016 10 20
Washington - **Investigators pursuing what they believe to be the largest case of mishandling classified documents in United States history have found that the huge trove of stolen documents in the possession of a National Security Agency contractor** included top-secret N.S.A. hacking tools that two months ago were offered for sale on the internet. They have been hunting for electronic clues that could link those cybertools -- computer code posted online for auction by an anonymous group calling itself the Shadow Brokers -- to the home computers of the contractor, **Harold T. Martin III**, who was arrested in late August on charges of theft of government property and mishandling of classified information. But so far, the investigators have been frustrated in their attempt to prove that Mr. Martin deliberately leaked or sold the hacking tools to the Shadow Brokers or, alternatively, that someone hacked into his computer or otherwise took them without his knowledge. While they have found some forensic clues that he might be the source, the evidence is not conclusive, according to a dozen officials who have been involved in or have been briefed on the investigation. In **interviews, officials described how the Martin case has deeply shaken the secret world of intelligence**, from the N.S.A.'s sprawling campus at Fort Meade, Md., to the White House.

US, UK Cybersecurity Officials: Destructive Hacks Are Coming
Associated Press, Staff report, 2016 10 20
London - The world should brace itself for more physically destructive hacks, two senior cybersecurity officials said Wednesday, warning that a more dangerous era of hacking was already upon us. **Paul Chichester, the director of operations at Britain's new National Cyber Security Center, told an event hosted by British defense think tank RUSI that electronic intrusions were on their way to becoming more "destructive, disruptive and coercive**." "That will be our future," he told a crowd of officers, academics and industry experts gathered for a two-day symposium in central London. Chichester was seconded by Air Force Lt. **Gen. James K. McLaughlin, deputy commander at U.S. Cyber Command**, who told attendees that infrastructure-wrecking attacks were being seen "right now in the environment." Neither official went into specifics about what they'd seen or why they felt the threat was intensifying, although McLaughlin invoked a cyberattack in Ukraine which knocked out three separate power distribution companies last year. The Dec. 23 incident, believed to have been pulled off by a team of hackers using stolen passwords, left 225,000 people without electricity, according to a U.S. Department of Homeland Security bulletin published two months later.

Yahoo calls for greater transparency from intelligence services
Financial Times, Hannah Kuchler, 2016 10 20
San Francisco - **Yahoo is demanding US intelligence services reveal how they monitor online services,** after a report said the internet company secretly scanned customer emails. In a **letter to James Clapper, the US director of national intelligence**, Yahoo said citizens in a democracy require more information to understand and debate how the US uses legal authorities to obtain private data. Yahoo said it found itself unable to respond in detail to the accusations in a Reuters article earlier this month, which claimed that the company had secretly built custom software to scan users' incoming emails for specific information requested by US intelligence officials.

Media vulnerable to Election Night cyber attack
Politico, Darren Samuelsohn, Hadas Gold, 2016 10 19
Washington - **Despite spending hundreds of millions of dollars on security upgrades, U.S. media organizations have failed to properly protect their newsrooms from cyberattacks** on their websites, communications systems and even editing platforms -- opening themselves up to the possibility of a chaos-creating hack around Election Day. In just the past month, BuzzFeed has been vandalized, and both Newsweek and a leading cybersecurity blog were knocked offline after publishing articles that hackers apparently didn't appreciate. Federal law enforcement is investigating multiple attacks on news organizations, and journalists moderating the presidential debates say they've even gotten briefings from the FBI on proper cyber hygiene, prompting them to go back to paper and pens for prep work. "We do a lot of printing out," said Michele Remillard, an executive producer at C-SPAN, the network home to the backup moderator for all the debates.. Senior U.S. officials, current and former lawmakers and cybersecurity pros told POLITICO the threat against the media is real -- and they fret the consequences. Specifically, the **security community is worried The Associated Press' army of reporters could get hacked and the wire service** -- the newsroom that produces the results data on which the entire media world relies -- inadvertently starts releasing manipulated election tallies or that cybercriminals penetrate CNN's internal networks and change Wolf Blitzer's teleprompter.

Politics keeps the U.S. from securing private-sector networks, says former CIA chief Robert Gates
Computerworld, Patrick Thibodeau, 2016 10 19
Orlando - A person who had access to the nation's deepest secrets, **Robert Gates, the former CIA chief and U.S. Secretary of Defense from 2006 to 2011, is lot more open in retirement**. Gates had the crowd at the Gartner Symposium/ITxpo laughing over his observations about IT and applauding at some of the things he believes in. Gates divided cyber threats into four areas. There is the collection of data for national security purposes, something the U.S. has been doing since the Civil War when it tapped into telegraph lines. The second threat is acquiring information for economic advantage.

America's election is giving the world some serious anxiety
Washington Post, David Ignatius, 2016 10 19
Column - Making predictions three weeks before the U.S. election is risky, but the likeliest bet right now is that the center will hold in American politics and Hillary Clinton will be elected president. That's important for lots of reasons, the biggest of which is that it could begin to stabilize a very unsettled world. **To many analysts, Vladimir Putin's Russia has seemed on the march while the United States and its allies are in retreat**. The danger of U.S.-Russian conflict was described by **Rolf Mowatt- Larssen, a former senior CIA officer**, in a recent

article. "As a life-long observer of Russia, I have never been as concerned as I am now on the state of Russian-American relations," he wrote. "A dangerous zero sum game pattern has emerged as US and Russia make moves and countermoves that mimic practice during the Cold War."

Ex-CIA chief: Russian hackers trying to 'mess with our heads'
CNN.com, Nicole Gaouette, 2016 10 19
Washington - A **former head of the CIA said Tuesday that Russian hacking of US political groups is intended to "mess with our heads"** and shake confidence in the American electoral system -- rather than influence the outcome on Election Day. **Retired Gen. Michael Hayden** said that he doesn't believe Russian President Vladimir Putin is trying to sway the election in favor of Republican nominee Donald Trump, but using the hacked information to disrupt the electoral process. "This is too much of a carom shot for Putin to think he knows where that ball's going to end," Hayden said, speaking at the Heritage Foundation in Washington. "I think they're doing this to mess with our heads, to erode confidence in our political process."

Ex-F.B.I. Official Acknowledges Role in a New Clinton Email Controversy
New York Times, Eric Lichtblau, Steven Lee Myers, 2016 10 19
Washington - A **former F.B.I. official at the center of the latest controversy over Hillary Clinton's private emails acknowledged on Tuesday that an offer to swap favors with a State Department counterpart on an email classification issue had originated with him** -- until he realized the deal involved Mrs. Clinton and the 2012 attack in Benghazi, Libya. "When I found that out, all bets were off; it wasn't even negotiable," the **former F.B.I. official, Brian McCauley,** said in a telephone interview. Republicans have seized on the episode to accuse the State Department of trying to protect Mrs. Clinton, but Mr. McCauley's account could undercut those attempts because he said he, not the State Department, had suggested the "quid pro quo." Mr. McCauley recounted in the interview that Patrick F. Kennedy, a senior State Department official, called him in spring 2015 looking for help in getting the F.B.I. to agree not to classify the disputed email. Mr. McCauley said he had agreed to try to help him if Mr. Kennedy would help him get the State Department to restore two spots that the F.B.I. had lost recently in the Baghdad embassy.

Feds need clarity on cyber structures
fed scoop.com (US), Shaun Waterman, 2016 10 19
Washington - The federal government needs to get its act together on cybersecurity, and there needs to be a public debate about the proper role for agencies like the **Department of Homeland Security and the National Security Agency**, public and private sector leaders said Tuesday. "We really need to define what we want our government to do in cybersecurity, former **Rep. Mike Rogers** told an audience at FedScoop's FedTalks. "We have lots of capability. The NSA has lots of capability," he told a packed auditorium in Washington at the annual event. By giving DHS, rather than NSA, the lead in defending civilian government networks and working with the private sector to protect the nation's vital industries, the U.S. had "take[n] our best players off the field," complained Rogers, who chaired the House Permanent Select Committee on Intelligence. "Candidly," Rogers said, that decision "was politically driven and not policy driven. People were a little nervous about having NSA ... dealing directly with them" and their networks -- even companies that had a prior relationship with the NSA or the Pentagon were nervous.

CIA's In-Q-Tel Invests In Data Analytics Company MapD
Wall Street Journal, Carl Zakrzewski, 2016 10 19

Washington— The **venture-capital arm of the Central Intelligence Agency, In-Q-Tel, said on Tuesday that it has invested in MapD Technologies Inc**., a database and visualization startup.MapD Chief Executive Todd Mostak built the database powered by a graphics-processing unit when he was doing research at the Massachusetts Institute of Technology and needed to visualize social-media posts for a thesis he was writing about the Middle East. The CPU-powered systems that were available to him weren't powerful enough, so Mr. Mostak built his own GPU-powered system. Now a U.S. government agency, a large social media company and Verizon Wireless are also relying on his company to help them quickly visualize large data sets. The tool can query billions of records in milliseconds, eliminating delays for the people who use them.

Rogers: 'We're working our way through' process to split NSA- CYBERCOM roles
Inside Defence (US), Marjorie Censer, 2016 10 18
Washington - **Adm. Mike Rogers, the chief of U.S. Cyber Command and the National Security Agency, said today he is thinking through the "right time" and "right process" to split the roles he hold**s. Speaking at a FedTalks event in Washington, Rogers said the idea behind the shared role was for **CYBERCOM**, in its early days, to harness the "insight, capabilities and knowledge" of NSA. Now, he's asking: "Are the assumptions that we made still accurate? Have things changed? Is the environment different?" The challenge in splitting the roles, Rogers added, is "what's the right time, what's the right process so that we do it in a way that enables both organizations to fulfill their missions with minimal risk? "So we're working our way through that process," he continued. "In the end, this is a decision that the president of the United States is going to make, and we'll see where that process takes us."

Half of Ukip supporters think MI5 is out to get them, poll shows
The Independent (UK), Ben Kentish, 2016 10 24
London **- Almost half of UKIP members think MI5 is trying to destroy their party, according to a new poll**. The YouGov survey found 46 per cent of members agreed with the statement **"Intelligence services like MI5 have been working to undermine UKIP". The poll echoes an earlier finding that almost a third of Ukip supporters believed MI5 was involved in a plot to rig the EU referendum result**. Other conspiracy theories are also popular among party activists. More than half (55 per cent) think some UKIP members have been planted by Conservative strategists to undermine the party, while 40 per cent believe the EU referendum was the subject of electoral fraud, with officials rubbing out and changing votes. Almost nine in 10 (89 per cent) believe the media is being deliberately biased in its coverage of their party.

GCHQ using cyber attacks on Isil to aid battle to take Mosul
Daily Telegraph, Ben Farmer, 2016 10 22
London - **GCHQ is using cyber warfare for the first time against Isil militants as part of the campaign to retake Mosul**, the Defence Secretary has said. The cyber attacks are understood to have targeted the communications of Islamic State of Iraq and the Levant to disrupt co-ordination in the Iraqi city. Sir Michael Fallon told a conference organised by the Royal United Services Institute, a think tank on cyber warfare: "We are conducting military operations against

Daesh [Isil] as part of the international coalition, and I can confirm that we are using offensive cyber for the first time in this campaign."

US firms could make Ireland terrorist target, says CIA head
Irish Times, Colin Gleeson, 2016 10 21
Dublin - The **director of the CIA has suggested the Republic may be a target for Islamic terrorism due to the prevalence of US multinationals there. John Brennan**, who succeeded David Petraeus as the head of the United States intelligence agency in 2013, said it was important for Irish authorities to be "vigilant" of the threats posed. "I don't think any country should feel immune from the reach of these terrorist organizations," he said in an interview with Irish-American website Irish Central. "Ireland first of all is an open and welcoming country, and also there are also a lot of Americans there and American businesses. "I was in Ireland last August and I **met with the Irish intelligence heads** and talked to them about the importance of sharing information. If there is anything that looks or seems a bit off putting, those pieces of the puzzle need to be put together," he said.

GCHQ using cyber attacks on Isil to aid battle to take Mosul
London Daily Telegraph, Ben Farmer, 2016 10 21
London - **GCHQ is using cyber warfare for the first time against Isil militants as part of the campaign to retake Mosul**, the Defence Secretary has said. The cyber attacks are understood to have targeted the communications of Islamic State of Iraq and the Levant to disrupt co-ordination in the Iraqi city. Sir Michael Fallon told a conference organised by the Royal United Services Institute, a think tank on cyber warfare: "We are conducting military operations against Daesh [Isil] as part of the international coalition, and I can confirm that we are using offensive cyber for the first time in this campaign." He said £265 million is being pumped into "rooting out cyber vulnerabilities" in military and wider cyber- systems.

Can governments really keep us safe from terrorism without invading our privacy?
Wired (UK), Ruby Lott-Lavigna, 2016 10 20
London - **GCHQ has many negative connotations attached to it - including illegally collecting data from the UK public** - but **David Omand, former head of GCHQ** and now professor at Kings, is hoping for a change in the way governments deal with our private information. Referring to new legislation that is currently going through parliament - the **'Investigatory Powers Law' -** he explained how regulation is being implemented to create transparency in the way the UK government deals with cybersecurity. "What is going on, as we speak, is a phase change in the relationship between the secret state and parliament," explained Omand. "One way of looking at this is that the secret activity of the state is now being fully bought under the modern rule of law." So where does the line stand with mining data for security reasons? Is there a balance to be reached between privacy and security? According to Omand, "2017 is the year of reconciliation, in which we recognise as a mature democracy, it is possible to have sufficient security and sufficient privacy." "The key to that is rule of law. Courts have to have comprehensible, black letter law."

Hackers are not as 'sophisticated as they think they are'
Wired (UK), Matthew Levy, 2016 10 20
London - The **way we talk about cyberattacks** has created a culture of fear around online security, said **Ian Levy, technical director at the National Centre for Cyber Security. The newly-formed offshoot of GCHQ** will be responsible for coordinating UK cybersecurity efforts and keeping the UK safe from online threats. "The context in which you judge something also influences how you interpret it," he told the audience at WIRED Security in London. Media coverage of cyberattacks is crammed full of scary buzzwords. Cyberattacks - invariably

represented by a lone hooded teenager in a dark room - are described as 'sophisticated' and 'unprecedented.' Levy pins at least part of the blame for this language on the cybersecurity industry itself. "There is no other bit of public policy where the tone is set by a group of massively incentivised people," he said.

UK spies infiltrated Isis leadership, ex-jihadis claim
The Independent (UK), Kim Sengupta, 2016 10 20
Urfa, Turkey - "They are afraid of a lot of things now. They are afraid of the bombing, they are afraid of the attack that's coming and they are also really afraid of the foreign spies who are among them". This was Rashid's description of what was going on inside Isis. **And the Western intelligence agency that has infiltrated Isis the most, claimed the Belgian jihadi, was the British. Rachid is one of the thousands of foreign fighters who had gone to join Syria's jihad**, graduating in extremism among rebel groups to two years serving with Isis. But disillusioned, he says, with the Islamists and fearing what lay ahead, he has fled across the border to Turkey. Rachid, a mechanic before he took up the gun in the name of Islam, was part of a small but steady flow of fighters leaving Isis as it faces an assault on Mosul, its last stronghold in Iraq and waited for the coming offensive against Raqqa, the capital of its "caliphate" in Syria. The contact with Rachid came through an intermediary in Turkey after I wrote an article in The Independent last month about thousands of jihadis from who, with Isis facing defeat, will be seeking to return.

Ireland to follow UK in setting up national cyber security centre
Computer Weekly (UK), Warwick Ashford, 2016 10 19
Dublin - **Ireland plans to set up a national cyber security centre**, according to **Denis Naughten, the country's communications minister**. The news comes less than a month after the **UK's National Cyber Security Centre (NCSC)** officially opened for business, combining all the government's cyber security agencies under one roof. "I will bring a memorandum to cabinet next week to establish a national cyber security centre that will focus on securing government networks," Naughten told the (ISC)2 EMEA Congress 2016 in Dublin. The centre will also cover the security of critical national infrastructure as well as assist industry and individuals to protect their digital assets.

Keeping Britain safe: how GCHQ's new cyber security agency will protect us from hackers
Wired (UK), Matthew Reynolds, 2016 10 18
London - The Doughnut - **GCHQ's vast, Cheltenham-based nerve centre - is a building straight from the pages of a spy novel. Its imposing circular walls are surrounded by fences topped with razor wire and multiple vehicle checkpoints. Visitors are seldom allowed inside the building which, Edward Snowdon's NSA leaks**, is the centre of government mass surveillance in the UK. The intelligence agency's latest spin-off, the National Cyber Security Centre, couldn't look more different. Occupying two floors of a commercial office block in Victoria, London, the NCSC is shedding its parent agency's secretive persona in favour of a more collaborative approach. There's even going to be a Shake Shack on the ground floor. "NCSC as an organisation is going to be open by default," says Ian Levy, the NCSC's technical director. The fledgling agency only opened its doors on October 3, but it's already started its task of keeping the public and the UK's critical national infrastructure safe from cyberattacks launched by states, organised crime gangs and lone-wolf hackers. For Levy, partnerships with the UK's cyber security community will be key to keeping the country safe online.

Army kit in eye-spy conspiracy (Canada)
The Advertiser, Charles Miranda, 2016 10 21
Canberra - The **Chinese military could "track" Australian soldiers after a firm in China was given the contract to make dress uniforms for the Defence Force**. That was the claim made by Labor senator Kim Carr at a parliamentary review into the Defence portfolio yesterday. It could have focused on armaments procurement and the war in the Middle East. Instead, Senator Carr fired conspiracy theory-style questions about the formal dress of officers, including those worn by officers giving evidence. While combat uniforms are made in Australia, a 2015 tender for dress uniforms saw no Australian company with the capacity to make them locally. The contract was awarded to Bendigo-based **Australian Defence Apparel**, which subcontracted it to a Chinese firm.Senator Carr said ADA's parent company in Canada, Logistik Unicorp, conceded it had radio frequency identification technology to track goods.

Ex-spy chief warns of net threats
Sydney Morning Herald, Deborah Snow and David Wroe, 2016 10 20
Sydney - The **task of being an intelligence chief has become tougher with the rise of cyber threats and terrorism, according to the former head of the Australian Security Intelligence Organisation, David Irvine**, who says he would like to see a "much stronger" national cyber industry. Speaking during a rare interview in Canberra, Mr Irvine said "when you put cyber on top of [terrorism], it takes a bit of time off your sleep at night. The two issues have grown exponentially within a couple of decades and while the nature of the threats is the same, the vector has changed. And cyber is a new and very potent vector." Mr Irvine, who led Australia's overseas spy agency ASIS before he headed up ASIO, said he'd been "horrified" at the revelations of Edward Snowden, the subcontractor to the National Security Agency who exposed vast top- secret US government programs for monitoring global communications. "People say, well nobody lost their lives as a result of Snowden, but how do you know that? You run through your mind all the possible consequences of having your capabilities, which are there to defend the country, exposed ..."

Kids of Aussies exposed to extremism: ASIO
Australian Associated Press, Roje Adaimy, 2016 10 19
Canberra - **Up to 70 children of Australians have been exposed to extremist groups in the battlefields of Syria or Iraq, the country's security chief has revealed. Duncan Lewis, director-general of the Australian Security Intelligence Organisation**, said these children either travelled to the conflict zones with their Australian parents or were born there. He told a Senate committee late on Tuesday night that ASIO is investigating around 190 people in Australia who are actively supporting groups like IS through recruiting, fundraising or wanting to join themselves. That includes about 40 Australians who have returned from Syria or Iraq. "The long-term impact of the returnees will be a security issue for this country's intelligence and law enforcement agencies for many years to come," he said. Mr Lewis confirmed up to 68 Australians are believed to have been killed in the conflicts - 11 of them since May. Around 110 people are still fighting or engaged with terrorist groups in Syria and Iraq.

Radical right-wing groups a threat: ASIO
Australian Associated Press, Staff reporter, 2016 10 19
Melbourne - **Reclaim Australia says it has never condoned violence but national intelligence bosses say radical anti-Islamic groups are a growing threat to Australia's security. ASIO director-general Duncan Lewis said Reclaim Australia,** in particular, was of interest to intelligence agencies. Authorities charged a member of the right-wing group under federal terror laws for the first time in August for allegedly collecting or making documents to prepare for terrorist acts. Mr Lewis said Reclaim Australia has "offered violence" in the past and expects they will continue to when they confront pro-Islamic groups. "To the extent that there is a possibility of violence, or there is indeed violence being offered, that is of interest to us. That is business for ASIO," he told a Senate committee late on Tuesday night. "It is a real problem and it is something that we're very, very acutely aware of and I have people working that particular issue." **But Reclaim Australia said it does not condone violence**. "

Chinese police officials study Belarus' experience of public order maintenance
BelaPan, 2016 10 20
Minsk— A delegation of **China's Ministry of Public Security** stayed in Minsk on October 19 and 20 to study Belarus' experience of **public order maintenance**, said the Belarusian interior ministry's press office. Deputy Interior Minister Mikalay Melchanka reportedly told the delegation that law enforcement agencies in Belarus and China shared years-long friendly ties, and that bilateral relations had reached a "high level of strategic constructive partnership."

Lawmaker raises fears about Russian satellites
Washington Post, Christian Davenport, 2016 10 22

Washington - In a letter to the Pentagon on Friday, **Rep. Duncan D. Hunter** said he was concerned that a **contract to provide Internet service to deployed soldiers could allow the use of Russian satellites, jeopardizing troops' privacy and security.** Previous service at bases' Internet cafes had "stringent security measures," Hunter wrote to Army Lt. Gen. Alan Lynn, the head of the **Defense Information Systems Agency (DISA**). But he said he is worried that the "contracting arrangement creates unnecessary security risks, given that our deployed warfighters could be exposed to transmitting their personal information over unprotected networks that are controlled by foreign and potentially hostile entities." In an interview, Hunter (R- Calif.), who served three tours as a Marine, said: "This is one of the dumbest things we could do. Why give the Russians the ability to basically spy on American military personnel when there are so many other options?" A DISA spokesman said the agency could not discuss the provisions of the contract or which companies may have submitted offers.

How Russia Pulled Off the Biggest Election Hack in U.S. History
Esquire, Thomas Rid, 2016 10 21
New York - On an April afternoon earlier this year, Russian president **Vladimir Putin** headlined a gathering of some four hundred journalists, bloggers, and media executives in St. Petersburg. Dressed in a sleek navy suit, Putin looked relaxed, even comfortable, as he took questions. About an hour into the forum, a young blogger in a navy zip sweater took the microphone and asked Putin what he thought of the "so- called Panama Papers." When Putin heard the blogger's question, his face lit up with a familiar smirk. He nodded slowly and confidently before reciting a litany of humiliations that the United States had inflicted on Russia. Putin reminded his audience about the sidelining of Russia during the 1998 war in Kosovo and what he saw as American meddling in Ukraine more recently. **Returning to the Panama Papers, Putin cited WikiLeaks to insist that "officials and state agencies in the United States are behind all this."** The Americans' aim, he said, was to weaken Russia from within: "to spread distrust for the ruling authorities and the bodies of power within society." Though a narrow interpretation of Putin's accusation was defensible--as WikiLeaks had pointed out, one of the members of the Panama Papers consortium had received financial support from USAID, a federal agency--his swaggering assurance about America's activities has a more plausible explanation: Putin's own government had been preparing a vast, covert, and unprecedented campaign of political sabotage against the United States and its allies for more than a year. The Russian campaign burst into public view only this past June, when The Washington Post reported that "Russian government hackers" had penetrated the servers of the Democratic National Committee. The hackers, hiding behind ominous aliases like **Guccifer 2.0 and DC Leaks**, claimed their first victim in July, in the person of Debbie Wasserman Schultz, the DNC chair, whose private emails were published by WikiLeaks in the days leading up to the Democratic convention.. But in many ways, the DNC hack was merely a prelude to what many security researchers see as a still more audacious feat: the hacking of **America's most secretive intelligence agency, the NSA**.

Digital Trail Betrays Identity Of Russian 'Hacker' Detained In Prague
Radio Free Europe, Dmitry Treshchanin, Nick Shchetko, 2016 10 20
Prague - An investigation by RFE/RL's Current Time TV has determined that the **Russian national accused by American officials of hacking U.S. targets and arrested earlier this month in the Czech capital is 29-year-old Moscow resident Yevgeny Nikulin**. Czech authorities this week said the suspect was detained in downtown Prague on October 5 in response to an Interpol warrant requested by the United States and now faces a Czech extradition hearing. Czech police and local media have identified him only as "Yevgeniy N," and the Russian and U.S. governments revealed only that he was a Russian citizen. Current Time's investigation uncovered Nikulin's Instagram account under the handle "i.tak.soidet," displaying a taste for luxury cars and jewelry and a digital trail that led through Belarus and Poland to the

Czech Republic in the weeks before the Prague arrest. It is unclear exactly what role Nikulin is suspected of playing in the alleged U.S. website hacks or even which websites were involved. A spokesperson from the U.S. Embassy in Prague confirmed that a Russian had been detained who was "suspected of hacking U.S. targets."

Wheels within wheels
The Economist, Staff report, 2016 10 20
London - MYSTERY, MIRACLE AND authority are three powers alone able to hold the conscience of people captive, explains Fyodor Dostoyevsky's Grand Inquisitor in "The Brothers Karamazov". Mr Putin has mastered all three. Yet none of these is as important as secrecy, the main tool of a good spy. Nobody really knows what goes on behind the Kremlin's thick walls, or inside Mr Putin's head. But several things are becoming clearer. Mr Putin's rule is turning increasingly personal; a generational shift is taking place within his entourage; **and the FSB, the successor organisation to the KGB, is emerging as the main mechanism for exercising power, often at the expense of all other security services**, including the police. Mr Putin had always relied heavily on his former KGB colleagues, but after the annexation of Crimea the expansion of the FSB gained new momentum and greater public legitimacy. It now openly wields political and economic power. Mr Putin has recently appointed three members of his security detail and one former KGB officer as regional governors. After Stalin's death in 1953, the KGB was a "combat division" of the Communist Party, tightly controlled by its central committee, which did not want to see a repeat of Stalin's purges. When the party collapsed in 1991 the KGB lost its lustre, but the new rulers never dismantled it. Though the party could not survive without ideology, the KGB could. Today the FSB is personally overseen by Mr Putin. "There is no political control over the FSB.

Moscow says still no evidence from US proving alleged Russian hacker attacks
ITAR-TASS World Service, Staff report, 2016 10 18
Moscow - **Moscow has received no evidence from the United States proving Russia's alleged hacker attacks on US institutions**, Russian Foreign Ministry Spokeswoman Maria Zakharova said on Tuesday. "There have been no proof, do data, no passwords, no hyperlinks. Nothing," she said. Washington's inability to provide any proof can only mean that such allegations target domestic audience and are part of the presidential campaign, she said, adding that attempts at reducing the presidential campaign to accusations against Russia are inglorious for a great power. "It is a global disgrace," she said.

Malte : cinq morts dans le crash d'un avion de reconnaissance de la défense française
La Matinale du Monde, Journaliste maison, 2016 10 25
Malte - **Un avion effectuant des missions de reconnaissance en Méditerranée pour le ministère français de la défense s'est écrasé, lundi 24 octobre dans la matinée à Malte, tuant les cinq hommes se trouvant à son bord, ont annoncé des responsables**. L'appareil a décollé vers 7 h 20 de l'aéroport international de Malte mais a piqué vers le sol quelques secondes plus tard, s'écrasant dans une boule de feu. Enquêtes ouvertes A Paris, le ministère de la défense a refusé de préciser la destination de l'avion ou l'objet de sa mission de reconnaissance. Plusieurs enquêtes ont été ouvertes, dont une interne « pour déterminer les causes de l'accident, en coordination avec les autorités locales » , a ajouté le ministère, qui n'a

pas précisé si les victimes étaient toutes françaises. Le gouvernement maltais a cependant annoncé dans un communiqué que les dépouilles de cinq hommes français avaient été retrouvées sur le lieu du drame. Parmi les cinq personnes à bord, trois relevaient « du ministère de la défense » - elles travaillaient pour la **Direction générale de la sécurité extérieure (DGSE) -** et deux étaient des salariés d'un contractant privé**, la société luxembourgeoise CAE Aviation**, qui détenait l'appareil, a précisé le ministre. **Les trois employés de la DGSE intervenaient notamment en Libye lors de missions de renseignement**.

German Terrorism Case Highlights Europe's Security Challenges
New York Times, Alison Smale, Melissa Eddy, 2016 10 25
Berlin - **The warning came to the German security authorities in early September from "our best partners," as they euphemistically refer to the American intelligence agencies: A terrorist assault might be in the works**. In the weeks that followed, the Germans identified a suspect, a refugee from Syria. They unearthed evidence that he had been casing a Berlin airport for an attack, and they recovered powerful explosives from his apartment, only to see him slip through their fingers. When they eventually captured him, the suspect promptly hanged himself in his jail cell. The case was notable for its dramatic turns. But it also underscored two central challenges facing the Continent: getting a handle on the security risk related to the arrival of more than a million migrants last year, and addressing the continued reliance of European governments on intelligence from the United States to avert attacks. Both issues have been plaguing Europe since the high-profile attacks in France and Belgium over the past two years. Governments have scrambled to counter the threat even as migrants, many with little or no documentation of their identity or country of origin, came over their borders in previously unheard-of numbers. The challenge has become more pressing in Germany in recent months after a spate of arrests and attacks, some linked to migrants. **"In a way, we have outsourced our counterterrorism to the United States," said Guido Steinberg, a terrorism expert at the German Institute for International and Security Affairs. "The Germans are not ready to build up their intelligence capabilities for political reasons, so this will continue."** The **recognition of how reliant Germany remains on the United States for its safety stands in contrast to Germany's hostile reaction in 2013, when Edward J. Snowden revealed the extent of United States surveillance programs, including one that extended to Chancellor Angela Merkel's cellphone.** "American agencies are Europe's best counterterrorists," said Peter Neumann, a terrorism expert at King's College London. "That is the big secret that no one wants to talk about."

Bavarian agency increases surveillance of anti-government extremists

Deutsche Welle, 2016 10 22
Munich - **Authorities in the German state of Bavaria are due to increase surveillance of anti-government extremists following a deadly shooting last Wednesday, the head of the state's intelligence agency has told dpa**. The shooting, which saw a 49-year-old fire at four policemen, killing one, took place in the small town of Georgensgmuend near Nuremberg. "Surveillance of the Reich Citizens' Movement was already intensified in the last months, but now we will increase it again," Burkhard Koerner, the head of Bavaria's Office for the Protection of the Constitution, said. "In this scene there are people who become increasingly radicalised and their irritation at the state of things can grow into real hatred of the state," Koerner said. "That's why I have said it many times in the last months: it may not all be extremism, but there are people involved here who are dangerous." Koerner's agency says that 30 to 40 members of the Reich Citizens' Movement are also part of the state's right-wing extremist scene, but the

total number of people in the movement remains unknown. "We particularly want to look at how many people involved have gun licences," Koerner said.

NATO Adds New Chief of Intelligence
Wall Street Journal, Julian E. Barnes, 2016 10 22
Brussels— The **North Atlantic Treaty Organization appointed its first intelligence chief, a post designed to help the alliance improve information sharing and counterterrorism coordination**.Officials said Friday that alliance **Secretary-General Jens Stoltenberg** was appointing longtime **German diplomat Arndt Freytag von Loringhoven** as assistant secretary-general for intelligence and security. Mr. von Loringhoven **served as vice president of Germany's Federal Intelligence Service** from 2007 to 2010. Officials have said the post will focus initially on improving intelligence sharing on Russia's military buildup, as well as addressing duplication in civilian and military intelligence efforts. The new post could also help improve counterterrorism intelligence sharing -- pushing NATO into an area often left to bilateral cooperation.

Un article de la loi renseignement censuré
Le Monde, Jean-Baptiste Jacquin, 2016 10 22
Paris— C'est un petit article de loi en vigueur depuis vingt-cinq ans que le Conseil constitutionnel a censuré dans une décision rendue vendredi 21 octobre. Cet **article permettait tout bonnement aux services de renseignement de procéder sans le moindre contrôle à la surveillance de communications par voie hertzienne**. Les gardiens de la Constitution le déclarent contraire à l'article 2 de la Déclaration des droits de l'homme et du citoyen de 1789 en portant " une atteinte manifestement disproportionnée au droit au respect de la vie privée et au secret des correspondances ". Ils le déclarent inconstitutionnel et demandent au législateur d'élaborer un nouveau texte d'ici au 31 décembre 2017. " Un trou législatif béant "C'est en invoquant cette disposition particulièrement floue que **Bernard Squarcini**, l'ancien patron de la **Direction centrale du renseignement intérieur (DCRI),** avait pris la liberté de procéder à des écoutes dans l'affaire des fadettes du Monde. Lors du débat sur la loi renseignement de 2015, quelques mois après les attentats contre Charlie Hebdo et l'Hyper Cacher, personne ne semblait s'être intéressé à cet article introduit par la loi de 1991 sur le secret des correspondances. Cette dernière avait elle-même été votée après le scandale des écoutes de l'Elysée où François Mitterrand avait fait écouter des personnalités, dont le journaliste du Monde Edwy Plenel.

Le Conseil constitutionnel dit non à la surveillance de masse sans contrôle
Le Monde, Jean-Baptiste Jacquin, 2016 10 22
Paris - C'est un petit article de loi en vigueur depuis vingt-cinq ans que le Conseil constitutionnel a censuré dans une décision rendue vendredi 21 octobre. **Cet article permettait tout bonnement aux services de renseignement de procéder sans le moindre contrôle à la surveillance de communications par voie hertzienne**. Les gardiens de la Constitution le déclarent contraire à l'article 2 de la Déclaration des droits de l'homme et du citoyen de 1789 en portant « une atteinte manifestement disproportionnée au droit au respect de la vie privée et au secret des correspondances . Ils le déclarent inconstitutionnel et **demandent au législateur d'élaborer un nouveau texte d'ici au 31 décembre 2017**. **Au nom de « la défense des intérêts nationaux » , les pouvoirs publics pouvaient ainsi surveiller les déplacements de sous-marins étrangers ou les mouvements de troupes sur un théâtre d'opération, mais également des communications par téléphone mobile entre particuliers, des échanges par Wi-Fi ou Bluetooth**. Rebaptisé article L. 811-5 dans la loi renseignement de juillet 2015, cet article permettait aux services de renseignement de s'affranchir des contrôles que cette loi imposait, en précisant, par exemple, que la surveillance de particuliers ne peut être autorisée

par le premier ministre qu'après avis de la **Commission nationale de contrôle des techniques de renseignement (CNCTR).** C'est en invoquant cette disposition particulièrement floue que Bernard Squarcini, l'ancien patron de la **Direction centrale du renseignement intérieur (DCRI),** avait pris la liberté de procéder à des écoutes dans l'affaire des fadettes du Monde . Lors du débat sur la loi renseignement de 2015, quelques mois après les attentats contre Charlie Hebdo et l'Hyper Cacher, personne ne semblait s'être intéressé à cet article introduit par la loi de 1991 sur le secret des correspondances. Cette dernière avait elle-même été votée après le scandale des écoutes de l'Elysée où François Mitterrand avait fait écouter des personnalités, dont le journaliste du Monde Edwy Plenel.

Germany reforms its main intelligence service
Deutsche Welle, Staff report, 2016 10 21
Berlin - **Germany's lower house of parliament, the Bundestag, has passed a comprehensive reform of the country's main intelligence service, the BND**. The new legislation strengthens government monitoring of intelligence activities while explicitly allowing the BND to **carry out certain types of surveillance activities**. The reform comes in the wake of the 2013 revelations by American whistleblower Edward Snowden that a number of national intelligence services, including the BND, had spied on behalf of the **US National Security Agency (NSA)** and that the NSA had spied on its allies. That prompted the formation of a German parliamentary committee to draft intelligence agency reforms. The new legislation subjects the BND to monitoring by an "independent panel" of two judges and a federal prosecutor and a "permanent commissioner" from the Interior Ministry. It stipulates that surveillance of international communications networks must be authorized by the Chancellor's Office rather than by the BND itself and explicitly prohibits economic and industrial espionage. The new laws also provide for better protection for whistleblowers within intelligence services and subjects the BND to annual public hearings instead of private ones, as has been the case. The reform permits the BND to cooperate with foreign intelligence services like the NSA if it serves specific purposes, including fighting terrorism, supporting the German military on foreign missions or collecting information concerning the safety of Germans abroad.

German parliament agrees to new security service controls
DPA News Agency, 2016 10 21
Berlin— The **German parliament on Friday agreed on tougher governmental controls of the nation's foreign intelligence agency BND**, following allegations that the BND aided the United States' intelligence service in spying on Berlin's European allies. Opposition parties Die Linke and the environmentalist Greens voted against the new rules, which were passed in the Bundestag by a majority of Chancellor Angela Merkel's conservative political bloc and its junior coalition partner, the Social Democrats. Under the legislation agreed by the lower house of the German parliament, a three-member independent panel comprising two judges and a federal prosecutor will oversee the BND's activities. The legislation stipulates that the chancellor's office will in future have to authorize the BND's surveillance of international telecommunications.

Foreign intel agencies behind Gülenists: former minister
Hurriyet Daily News, Staff report, 2016 10 20
Ankara - A **former police chief and interior minister, Mehmet Agar**, has told a parliamentary commission investigating the July 15 coup attempt that all illegal organizations, like the Gülenist network, **have had links with foreign intelligence services**. "Every secret organization in Turkey has foreign links. Usually, those links involve foreign intelligence services," Mehmet Agar told the commission on Oct. 20. Agar did not detail which foreign services were behind the Gülenist network blamed for the July coup attempt. Attending the commission, Agar indicated

that while struggling against illegal organizations, mistakes could cause sympathizers to become militants.

Slovak Finance Ministry drafts country's first cyber-security law
SC Magazine, Jaroslaw Adamowski, 2016 10 20
Bratislava— **Slovakia is in the process of drafting its first cyber-security law** which will address not only the security of finance and health but also critical utilities infrastructure. Slovakia's Ministry of Finance is currently drafting the country's first cyber-security law, according to Slovak deputy prime minister for investments and information Peter Pellegrini."Right now, in cooperation with **the National Security Authority**, we are finalising works on a new law on cyber-security," Pellegrini told local news site Tablet.tv. "One thing is to protect banks' data assets and medical records, but we must also talk about how the country will respond if a cyber-attack is performed on its grids or water supply systems."Meanwhile, local observers say that, due to the lack of a comprehensive cyber-security law, whenever Slovak companies have their data stolen, local police investigate such instances as simple acts of theft. Slovakia's decision-makers started to streamline more efforts to cyber-security in the wake of Russia's military intervention in Ukraine.

Czechs Arrest Man Wanted by the F.B.I. for Hacking
New York Times, Rick Lyman, Hana de Goeij, 2016 10 20
Prague - A **man identified as a Russian hacker suspected of pursuing targets in the United States has been arrested in the Czech Republic**, the police announced Tuesday evening. The suspect was captured in a raid at a hotel in central Prague on Oct. 5, about 12 hours after the authorities heard that he was in the country, where he drove around in a luxury car with his girlfriend, according to the police. The man did not resist arrest, but he had medical problems and was briefly hospitalized, the police said in a statement. David Schön, a police spokesman, said on Wednesday that the arrest of the man, whose name has not been released, was not announced immediately "for tactical reasons." The Russian Embassy in Prague called for the man to be released. Jakub Janda, who studies the Russian government and is a deputy director of the European Values Think- Tank in Prague, said that the arrest served as confirmation that "the Czech Republic is so far considered a safe base for Russian intelligence and influence activities focused on Western targets." He added, "Prague is unofficially considered to be a springboard for some Kremlin activities inside Europe, also using huge Russian diplomatic presence of approximately 140 staff." Mr. Janda also said that the arrest showed that "Western governments are waking up and finally **considering hostile Russian intelligence and disinformation operations** to be an open and urgent threat, even at the level of the U.S. administration."

Dragan accuser spied for Croatia
The Australian, Jacquelin Magnay and Ivica Profaca, 2016 10 20
Split, Croatia - An **international war crimes trial** against Australian citizen and Serbian paramilitary commander **Dragan Vasiljkovic** exploded into an angry war of words as one of his main accusers was revealed to have been working for **Croatian intelligence**, raising questions about the use of his testimony. In a second setback, a key prosecution witness, a Serbian cook named Pero Dragisic, was one of three who failed to turn up to give evidence yesterday. But the testimony that ignited controversy was that of Velibor Bracic, 48, who told the international court sitting in Split that he was kicked in the head while on the ground by Mr Vasiljkovic shortly after being captured on June 16, 1991. Mr Vasiljkovic, better known as Captain Dragan in the Balkans and as Daniel Snedden in Australia, became agitated as he cross-examined Mr Bracic, telling the judge that he had waited 11 years for this moment. During the cross-examination Mr Bracic admitted: "I did some work for our **(Croatian) intelligence."** Mr Bracic refused to directly

answer whether at the time of his arrest he was working as a spy. He said he had been caught on the Bosnia and Croatia border, north of Knin, while undertaking reconnaissance as a reserve in the Croatian police force.

Turkey takes on a new anti-terror strategy, Erdogan says
Daily Sabah, Staff report, 2016 10 19
Ankara - **President Recep Tayyip Erdogan said Wednesday that Turkey has employed new understanding when it comes to counterterror operations**, stressing that the government will take necessary steps to eliminate all terror threats before terror groups take action. Addressing village headmen at the Bestepe Presidential Complex in Ankara, the president said that Turkey will no longer follow what he called the "wrong security approach," saying that "From now on, we will not wait for troubles to come knocking on our doors." Underlining that Turkey has been through difficult times both politically and economically, the president said that the Turkish people have suffered for many years due to internal conflicts which he referred to as "brothers killing brothers." "We have lost thousands of our people due to brothers fighting each other. We do not want to pay a price anymore. I am announcing this today; from now on, Turkey has left its wrong understanding of security behind." Erdogan highlighted that **Ankara's new counterterrorism approach** will tackle the problem at its source rather than dealing with the consequences of the terror threat.

« Vengeance » française
L'Express, Boris Thiolay, 2016 10 19
Paris - Les derniers assassinats ciblés ordonnés par les autorités françaises contre des ennemis d'Etat visent en priorité « les commanditaires et les planificateurs des attentats de Paris, qui se trouvent en Syrie », confie à L'Express un expert en sécurité de premier plan. Dans le livre Un président ne devrait pas dire ça... (Stock), publié la semaine dernière, François Hollande reconnaît avoir décidé, avant octobre 2015, « quatre au moins » de ces opérations « Homo » (homicide). **Ces exécutions sont menées par la Direction générale de la sécurité extérieure (DGSE) ou les services d'un pays allié,** Etats-Unis en tête. Notre expert poursuit : « Depuis janvier 2016, l'élimination des djihadistes responsables des massacres du 13 novembre [photo] est devenue systématique. Il s'agit à la fois d'une vengeance assumée par la France et d'un signal envoyé à tous les individus impliqués. » Parmi ces derniers, se trouvent plusieurs djihadistes français.

Intelligence agency warns of ISIL attacks in five Turkish provinces
Hurriyet Daily News, Staff report, 2016 10 18
Ankara - The **National Intelligence Agency (MIT) has issued warnings against imminent attacks by the Islamic State of Iraq and the Levant (ISIL) in five Turkish provinces**. MIT sent a warning to all 81 provinces of Turkey, saying jihadists could launch attacks in Istanbul, the southeastern province of Gaziantep, Ankara, the southern province of Antalya and the western province of Izmir. According to the MIT report, public transport is among ISIL militants' targets, daily Cumhuriyet reported on Oct. 18. The warning dated Oct. 12 and coded "urgent" said the aforementioned five provinces were among the high-risk areas.

Security agencies avert suicide attacks in Beirut's southern suburbs
Lebanon Daily Star, Staff Report, 2016 10 24
Beirut - **A joint security investigation has paved the way for security agencies to avert a number of attacks in Beirut's southern suburbs,** a media report said Saturday. A security report published in As-Safir newspaper said that **Lebanese Army Intelligence** and **General Security had busted a terror network and clamped down on members planning to carry out attacks during Ashoura commemorations in Beirut's southern suburbs**. Sources told the daily that General Security detained one of the group's members in Beirut's Cola area, who allegedly admitted to planning a suicide attack using an explosive belt in Al-Rasoul Al-Azam Hospital. The sources added that investigations had revealed that extremists had provided the alleged suicide bomber with logistical support. Three suspects were handed over to the Army Intelligence.

Pentagon chief in Irbil for closer assessment of Mosul fight
Associated Press, Lolita C. Baldor, 2016 10 23
Irbil - **U.S. Defence Secretary Ash Carter visited Irbil on Sunday for a closer assessment of the fight against the Islamic State group in northern Iraq and to hear from Kurdish leaders whose forces launched a new offensive in the operation to wrest Mosul from the militants' control**. Carter met with Kurdish leader Masoud Barzani, as well as U.S. service members who are not far from the battle. The Pentagon chief praised the efforts of the Kurdish forces, known as peshmerga, and acknowledged their battle losses. ``They fight extremely well. But because they're fighting hard, they suffer ... casualties,'' said Carter, who spent Saturday in Baghdad getting updates from his military leadership and meeting with Iraqi Prime Minister Haider al-Abadi. The U.S. is prepared to provide additional support for the fight if requested by Iraq and U.S. commanders, Carter said in the capital. Peshmerga Brig. Gen. Halgord Hekmet, a spokesman for the Kurdish forces, told reporters that 25 of their troops have been killed since the battle to retake Mosul began and a ``large number'' had been wounded. Speaking through an interpreter, he said the peshmerga have had good coalition air support, but could use more military resources, especially armoured vehicles.

Russia preparing to spy on Syria internet, activists warn
Now Lebanon, Albin Szakola, 2016 10 21
Beirut - An activist group dedicated to ensuring safer online communication for Syrians has warned that maintenance work being conducted on an undersea cable providing internet to the country is part of a **Russian espionage effort**. SalamaTech Project issued a statement Wednesday that Syrian Telecom's announcement of repairs on the fiber-optic cable off Syria's Mediterranean coast "confirms" that a **Russian** deep sea exploration vessel spotted sailing in the area "is either **already spying on this internet cable or will be in the future**." The organization cited an unnamed security expert as saying that the Russian ship will likely route the maritime cable through the Russian naval base in Tartous, allowing Moscow "to eavesdrop on internet communications between Syria and the rest of the World Wide Web." Questions have been raised over the presence of the Russian oceanographic research vessel Yantar near an undersea fiber-optic cable providing internet to Syria.

Singapore using cyber diplomacy as weapon against cybercrimes
Straits Times, Lim Yan Liang, 2016 10 24
Singapore - What more can Singapore do in a digital world where dependence on technology trades security for greater efficiency and connectivity? With more countries using technology as a component of military response, the first thing to do is to treat the threat as seriously as a conventional one. To this end, **Singapore has been deploying 'cyber diplomacy' - building alliances with other countries, both to swop expertise, such as the latest in attack methods**, and to regularly exercise and test its defences. **Singapore's Cyber Security Agency (CSA) has signed bilateral cyber agreements with five countries: France, the UK, India, the Netherlands and the US.** The agreement with the US, signed in August, is the first cyber agreement between an Asean nation and the US. This opens the door to regular exchanges on cyber issues and effectively gives Singapore a voice when the larger countries try to shape global cyber norms, according to experts.

Intelligence wing in State needs to be strengthened
The Hindu, Special Correspondent, 2016 10 21
Bengaluru - Chief **Minister Siddaramaiah said the intelligence wing of the State needs to be strengthen for better law and order maintenance**. Addressing the investiture ceremony at Rajbhavan on Thursday, Mr. Siddaramaiah said the staff deputed to the intelligence wing are not trained to gather and analyse intelligence inputs. Merely collecting media reports is not intelligence, he said, adding that the staff should analyse and update the State about what could happen rather than focussing on what has already happened. He directed the Home department to provide exclusive training to selected staff for the job. Many police personnel who were not fit or trained were deputed to the intelligence wing.

'Attacks' test coordination of security agencies
Straits Times, Tiffany Fumiko Tay, Danson Cheong, 2016 10 20
Singapore - Under cover of darkness, the "terrorists" sneaked into Singapore on speedboats on Monday night and launched multiple attacks. Armed with rifles, grenades and explosive vests, they hit the Marina Country Club in Punggol first before fanning out across the island. They later struck almost simultaneously at shopping malls in Tampines and Bishan, killing civilians at will. These attacks set the scene for the **simulated terror incident faced by security agencies** over the last two days, in the largest counter-terrorism exercise held here so far. Led by the police, the 18-hour islandwide operation that began on Monday morning involved almost 2,500 officers from the **Home Team, 660 Singapore Armed Forces** (SAF) soldiers and about 60 community volunteers. The officers responded to attack scenarios at six different locations.

House agrees to expand military role in terror fight
The Jakarta Post, Nurul Fitri, 2016 10 21
Jakarta— After months of debate over a plan to strengthen military involvement in **counterterrorism measures**, the House of Representatives on Thursday **approved six conditions under which soldiers could step in and arrest assailants**. The new role, which will be included in the Terrorism Law revision, will go beyond what is mandated in the **Indonesian Military (TNI) Law**, which only allows soldiers to assist terrorism operations under the command of the National Police. If the proposal goes to the plenary session for passage in the next sitting session next month, the TNI will be allowed to launch their own operations in terrorism attacks involving the president, vice president and their families; Indonesian citizens

abroad; Indonesian Embassies; Indonesian ships and airplanes and foreign ships and airplanes in the country's territory. It will also allow the military to step in if a terrorist act extends beyond the country's territory but threatens national sovereignty and security. Another major proposal in the bill is to **assign the National Counterterrorism Agency (BNPT) to handle and coordinate all institutions**, including the TNI and police in the operations, from preventive measures, operations and rehabilitation.

Indian, Afghan intelligence agencies supporting terrorism in Pakistan: IB chief
Pakistan Dawn, Sanaullah Khan, 2016 10 19
Islamabad - **Intelligence Bureau (IB) Director General Aftab Sultan**, while speaking in the Senate standing committee meeting on Tuesday, said a large number of terrorists arrested during the last three years had connections with and were **working for the Indian and Afghan intelligence agencies.** "Out of the 865 terrorists arrested during the last three years, a significant number had connections with India's RAW and the Afghan NDS," said the chief of intelligence agency. The IB chief also said that China- Pakistan Economic Corridor (CPEC) is endangered by foreign intelligence agencies and anti-state elements. Replying to a question regarding missing persons during the Senate sub-committee's meeting, Sultan stated that the IB was conducting 478 inquiries for missing persons, out of which 427 inquiries have been completed.

Allegations surrounding ex-opposition chief seem true: spy chief
Yonhap News Agency, Staff reporter, 2016 10 19
Seoul - **Lee Byung-ho, the head of the National Intelligence Service (NIS)**, said Wednesday he believes the memoir written by an ex- foreign minister that is fueling fresh controversy related to Moon Jae-in, former head of the main opposition Minjoo Party of Korea, is based on facts. Moon has been accused by the ruling bloc of allegedly playing a part in contacting Pyongyang and getting feedback that was reflected in Seoul's decision-making process as revealed in the book. Lee said he can "neither confirm nor deny" that there is evidence that backs up the claims made in the book. "It is not the right time to speak on the matter, considering the case's impact on national security," **the NIS head** was quoted as saying by lawmakers during the parliamentary audit which took place at its headquarters.

This Former C.I.A Official Thinks North Korea Could Be A Big Threat To The U.S.
Fortune, Madeline Farber, 2016 10 19
New York - After spending more than 20 years in the **Central Intelligence Agency, Jami Miscik** knows a thing or two about foreign relations. During an interview at Fortune's Most Powerful Women Summit on Tuesday, she gave a harsh warning to whomever is sworn in as president in January: Don't underestimate North Korea's nuclear power. "North Korea is one of the issues that we aren't paying enough attention to," she said.

Top spy to head telecoms regulator
The Zimbabwe Independent, 2016 10 20
Harare— In a move calculated to control cyberspace and facilitate spying on citizens, government has consolidated its grip on the telecommunications sector by appointing a senior

Central Intelligence Organisation (CIO) officer as the director-general of the Postal and Telecommunications Regulatory Authority of Zimbabwe (Potraz). Potraz this week announced that **Gift Kallisto Machengete**, who is a director of finance and administration in the President's Office, has been appointed head of the telecommunications regulatory body. The development comes at a time the government has been desperately trying to control the use of the internet and social media in the wake of growing discontent over deepening socio-economic hardships.

L'Algérie plaide en faveur d'une convention internationale globale pour éradiquer le terrorisme
All Africa, Journaliste maison, 2016 10 19
Tachkent, Uzbekistan - **L'Algérie a plaidé, par la voix du secrétaire général du ministère des Affaires étrangères, Hassane Rabehi, mercredi à Tachkent, en faveur de l'adoption d'une convention internationale "globale" afin d'éradiquer le terrorisme**. Intervenant à l'occasion de la 43ème session du Conseil des ministres des Affaires étrangères de l'Organisation de la Coopération islamique (OCI), dont les travaux ont débuté mardi dans la capitale ouzbek, M. Rabehi a insisté sur "l'importance d'adopter des mécanismes de lutte efficaces, à savoir une convention internationale globale ainsi que la mise en oeuvre des instruments déjà existants, notamment la convention de l'OCI sur le terrorisme et la stratégie internationale des Nations unies en la matière.

Microsoft to show code in Brazil to calm fears about spy 'back doors'
Reuters, Staff report, 2016 10 20
Brasilia - Microsoft Corp, still stung by accusations that it installed "back doors" for the U.S. government to access customers' communications, opened a center in Brazil on Wednesday where officials will be able to inspect its programming code, in an attempt to allay suspicions in the region that its software programs are **vulnerable to spying**. Behind reinforced walls and with strict security settings, the world's biggest software company showed off its fourth 'Transparency Center' in Brasilia, where experts from Latin American and Caribbean governments will be able to view the source code of its products. The effort to build trust follows heightened suspicions in the region after former **U.S. National Security Agency** contractor **Edward Snowden** leaked documents in 2013 that showed the agency was capturing massive amounts of data from emails handled by major U.S. technology companies, including Microsoft. The leak, in addition to another Snowden disclosure that the United States had been spying on communications including those of former Brazilian President Dilma Rousseff, prompted Brazil and other governments around the world to reconsider how much they could trust U.S. technology companies not to install back doors at the request of **U.S. intelligence agencies**. At the new site, visited on Wednesday by officials including the speaker of Brazil's Congress, no electronics will be allowed into the secure viewing room.

New anti-terrorism bill abandons Liberal call for real-time parliamentary 'oversight' into CSIS operations
Ottawa Citizen, Ian McLeod, 2016 10 30
Ottawa - The **cornerstone of the Liberals' promised national security reforms -- parliamentary "oversight" of federal spy activities - would not allow lawmakers to scrutinize the most potentially troubling of those actions until after they're completed, if at all**. The criticism is one of several expected to be voiced this week over **Bill C-22**, which will set up a committee of MPs and senators to monitor the country's spooks. The panel - - whose members will have to pass security checks -- is **intended to police the Canadian Security Intelligence Service (CSIS) and 16 other federal entities with national security responsibilities**, many of which now operate without independent scrutiny. Its mandate also extends to examining the "legislative, regulatory, policy, administrative and financial framework for national security and intelligence." The Commons public safety committee begins public hearings on the bill Tuesday. While national security experts praise C-22 for seeking to make spies more accountable, the New Democratic Party is expected to call for at least five significant amendments, starting with the removal of eight exemptions the government can claim to deny committee requests for information.

Extremism 'motivated by jihadist beliefs' top source of Canadian terrorism since 2010, study says
National Post, Stewart Bell, 2016 10 30
Toronto - **Religious extremism has become the top motive for Canadian terrorism, replacing environmentalism, according to an academic study prepared for Public Safety** Canada. While environmentalist causes were the main driver of Canadian terrorist incidents in the 1990s and 2000s, religious motives have taken over the lead since 2010, the study found. Between 2010 and 2015, 29 per cent of terrorist incidents were religiously motivated while 7 per cent were categorized as "anarchist," and 3 per cent were "supremacist." The motives for 61% were unknown. All "religious" terrorism dating back to 2001 was "motivated by jihadist beliefs," said the March 2016 study, obtained by the National Post under the Access to Information Act. The **Canadian Network for Research on Terrorism, Security and Society** conducted the study for the government for officials preparing the **2016 Public Report on the Terrorist Threat to Canada**. "Since their emergence in the 1980s, environmentalist-motivated incidents have been slowly increasing as a proportion of overall terrorist activity," said the study. "This trend shifted, however, in 2010-2015, when religious attacks emerged as the most prominent type of terrorism, along with pockets of anarchist and supremacist activity." The 2010 Ottawa plot to conduct bombings for al-Qaida, the 2013 plot to attack a Toronto-bound passenger train and the 2014 killings of Canadian Forces members by ISIL-inspired terrorists all occurred during that time frame.But in a separate report that was also submitted to Public Safety officials preparing the 2016 threat report, the **federal government's Integrated Terrorism Assessment Centre singled out the Islamic State of Iraq and the Levant**. The de-classified document said that in Canada, Australia, the United States and Western Europe, "the greatest threat comes from individuals inspired and directed by ISIL

Media Coalition and Civil Liberties Groups Granted Say in VICE Case Against RCMP
Vice News Canada, Tamara Khandaker, 2016 10 28

Ottawa - An **Ontario judge ruled Thursday that a media coalition and two civil liberties organizations can intervene on behalf of a VICE Canada journalist, as he fights a production order filed by the RCMP**. VICE will be back in court in February, fighting a previous ruling that ordered national security reporter **Ben Makuch** to hand over Kik messenger chat logs between him and an alleged ISIS fighter. Thursday's ruling means that they'll have back-up. The judge granted intervener status for all three parties, despite opposition from the Crown, which argued that they were duplicating arguments and raising new issues that would shift the focus away from VICE's appeal. But Justin Safayeni, lawyer for the coalition, argued the case would have a broad impact on the rights of all media in Canada. Safayeni is representing eight organizations including the CBC, the Canadian Media Guild, and Canadian Journalists for Free Expression.

Canada, US Top Border Officials Meet to Discuss Security
Sputnik, Staff report, 2016 10 28
Washington - Top **Canadian and US security officials met in Ottawa to discuss information sharing to protect the join border while promoting trade, Canadian Minister of Public Safety and Emergency Preparedness Ralph Goodale said** in a news release. US **Secretary of Homeland Security Jeh Johnson** and Goodale claimed the US-Canadian border has achieved significant progress on a wide range of initiatives to facilitate trade and travel. "We talked about progress on...initiatives such as Entry/Exit and information sharing for the purposes of national security," Goodale said in the release on Thursday.

RCMP launches new "terrorism awareness guide"
Montreal Gazette, Catherine Solyom, 2016 10 27
Montreal - With a level of detail unheard of from law enforcement, **the RCMP's new "Terrorism and Violent Extremism Awareness Guide (www.rcmp- grc.gc.ca) " tackles everything from how to see whether your kids are becoming radicalized online,** to how to check for signs of explosive testing: look for dead plants and unusual corrosion in the sink. Destined for parents, teachers, colleagues and friends of people at risk of becoming radicalized to violence, the guide includes a whole section on "indicators" of radicalization for police use as well, whether it's of the right-wing, left-wing or Islamist variety. Among things to look out for: Suspicious use of the Internet. The guide asks: "Does my child have several accounts on social media and does he/she use different identities in a specific network?" Signs he or she may be planning to travel to a conflict area: Accessing information on obtaining multiple passports, selling personal belongings.

Terrorisme et radicalisation La GRC lance un guide de prévention
La Presse canadienne, Stéphanie Marin, 2016 10 27
Montréal - La **Gendarmerie royale du Canada (GRC) a lancé mercredi un guide de prévention du terrorisme et de la radicalisation menant à la violence, destiné aux parents, aux enseignants et aux proches des personnes à risque**. Le guide, intitulé «**Guide de sensibilisation au terrorisme et à l'extrémisme violent»,** vise à les aider à mieux comprendre et à reconnaître le phénomène de la radicalisation. «Il n'existe aucun profil type du terroriste», prévient-on d'emblée. Mais pour identifier les personnes à risque, il énonce, entre autres choses, les signes avant-coureurs de radicalisation et ceux de la planification d'un attentat. Il discute également du rôle de l'internet et de la propagande. «En plus de diffuser de la propagande haineuse, internet donne accès à des conseils tactiques pour déjouer la sécurité. Il devient un camp d'entraînement virtuel et peut aider à la préparation d'attentats», est-il expliqué dans le guide de 135 pages.

RCMP crafts strategy for returning terrorists
National Post, Stewart Bell, 2016 10 27
Ottawa - Foreseeing a possible "flood of foreign fighters" from Syria, the **RCMP has circulated a strategy that involves trying to understand the returning fighters' intentions and working with communities.** The plan calls for monitoring the social media activity of the returnees, placing them on the no-fly list and asking Passport Canada to revoke their travel documents and flag their future passport applications. The RCMP has also compiled a list of indicators to ascertain the "future posture" of returning fighters that includes whether they are employed, married, "raising funds linked to a little-known charity" or "proselytizing." The "range of responses" for dealing with returnees who have received terrorist training abroad or taken part in foreign conflicts is outlined in a report obtained by the National Post under the Access to Information Act.

A Veteran Spy Has Given the FBI Information Alleging a Russian Operation to Cultivate Donald Trump
Mother Jones, David Corn, 2016 11 01
San Francisco - On Friday, **FBI Director James Comey** set off a political blast when he informed congressional leaders that the bureau had stumbled across emails that might be pertinent to its completed inquiry into Hillary Clinton's handling of emails when she was secretary of state. On Sunday, **Senate Minority Leader Harry Reid upped the ante. He sent Comey a fiery letter saying the FBI chief may have broken the law and pointed to a potentially greater controversy**: "In my communications with you and other top officials in the national security community, it has become clear that you possess explosive information about close ties and coordination between Donald Trump, his top advisors, and the Russian government...The public has a right to know this information." A **former senior intelligence officer for a Western country who specialized in Russian counterintelligence tells Mother Jones that in recent months he provided the bureau with memos, based on his recent interactions with Russian sources, contending the Russian government has for years tried to co-opt and assist Trump--and that the FBI requested more information from him.** Does this mean the FBI is investigating whether Russian intelligence has attempted to develop a secret relationship with Trump or cultivate him as an asset? Was the former intelligence officer and his material deemed credible or not? An FBI spokeswoman says, "Normally, we don't talk about whether we are investigating anything." But a senior US government official not involved in this case but familiar with the former spy tells Mother Jones that he has been a credible source with a proven record of providing reliable, sensitive, and important information to the US government. In June, the former Western intelligence officer--who spent almost two decades on Russian intelligence matters and who now works with a US firm that gathers information on Russia for corporate clients--was assigned the task of researching Trump's dealings in Russia and elsewhere, according to the former spy and his associates in this American firm.

FBI's Comey opposed naming Russians, citing election timing: Source
CNBC, Eamon Javers, 2016 11 01
Washington - **FBI Director James Comey argued privately that it was too close to Election Day for the United States government to name Russia as meddling in the U.S. election and ultimately ensured that the FBI's name was not on the document that the U.S.**

government put out, a former bureau official tells CNBC. The official said some government insiders are perplexed as to why Comey would have election timing concerns with the Russian disclosure but not with the Huma Abedin email discovery disclosure he made Friday. In the end, the Department of Homeland Security and The Office of the Director of National Intelligence issued the statement on Oct. 7, saying: "The U.S. intelligence community is confident that the Russian Government directed the recent compromises of emails from U.S. persons and institutions, including from U.S. political organizations. ... These thefts and disclosures are intended to interfere with the U.S. election process."

Investigating Donald Trump, F.B.I. Sees No Clear Link to Russia
New York Times, Eric Lichtblau, Steven Lee Myers, 2016 11 01
Washington - For **much of the summer, the F.B.I. pursued a widening investigation into a Russian role in the American presidential campaign**. Agents scrutinized advisers close to Donald J. Trump, looked for financial connections with Russian financial figures, searched for those involved in hacking the computers of Democrats, and even chased a lead -- which they ultimately came to doubt -- about a possible secret channel of email communication from the Trump Organization to a Russian bank. **Law enforcement officials say that none of the investigations so far have found any conclusive or direct link between Mr. Trump and the Russian government.** And even the hacking into Democratic emails, F.B.I. and intelligence officials now believe, was aimed at disrupting the presidential election rather than electing Mr. Trump. Hillary Clinton's supporters, angry over what they regard as a lack of scrutiny of Mr. Trump by law enforcement officials, pushed for these investigations. In recent days they have also demanded that James B. Comey, the director of the F.B.I., discuss them publicly, as he did last week when he announced that a new batch of emails possibly connected to Mrs. Clinton had been discovered.

Hackers reveal apparent targets of NSA cyber espionage
The Hill, Joe Uchill, 2016 10 31
Washington - The **hacker or hackers who stole National Security Agency-built cyber tools have dumped new files in what appears to be yet another change of plans in monetizing the heist**. The new files provide some insight into the targets of the NSA-affiliated hacking team called The Equation Group. Those targets include government servers in China and universities in Pakistan and Saudi Arabia. This is the second dump of files that came from the group The **ShadowBrokers**, who in August released sample files containing previously unknown hacking techniques used to circumvent popular security hardware. The August files also contained a tracking code used by the NSA that matched previously unreleased Edward Snowden documents, appearing to confirm the breach's provenance. In August, the group offered the complete cache of documents for auction. Not seeing the bidding totals they wanted, the group changed to a crowdfunding approach, saying it would release all files publicly if enough people donated money to a bitcoin address.

South African Spy Company Used by Gadaffi Touts its NSA-Like Capabilities
The Intercept, Jenna McLaughlin, 2016 10 31
Washington - The **South African company best known for selling Muammar Gaddafi's regime spy equipment used to monitor millions of Libyans' international phone calls is now claiming it can intercept communications on a scale that rivals a government spy agency**, according to a company brochure obtained by The Intercept. In a 2016 pamphlet produced by VASTech SA Pty Ltd., the company outlines its current capabilities for governments, militaries, and law enforcement agencies around the world, claiming it can conduct "passive detection" of communications transmitted from satellites, fix-and-mobile phones, and fiber optic cable.

When the FBI Has a Phone It Can't Crack, It Calls These Israeli Hackers
The Intercept, Kim Zetter, 2016 10 31
Washington - Earlier this year, at the height of a very **public battle between the FBI and Apple** over whether the computer maker would help decrypt a mass murderer's locked iPhone, it appeared that a little-known, 17-year-old Israeli firm named **Cellebrite Mobile Synchronization** might finally get its moment in the spotlight. After weeks of insisting that only Apple could help the feds unlock the phone of San Bernardino killer Syed Rizwan Farook, the Justice Department suddenly revealed that a third party had provided a way to get into the device. Speculation swirled around the identity of that party until an Israeli newspaper reported it was **Cellebrite. It turns out the company was not the third party that helped the FBI**. A Cellebrite representative said as much during a panel discussion at a high-tech crimes conference in Minnesota this past April, according to a conference attendee who spoke with The Intercept. And sources who spoke with the Washington Post earlier this year also ruled out Cellebrite's involvement, though Yossi Carmil, one of Cellebrite's CEOs, declined to comment on the matter when asked by The Intercept. But the attention around the false report obscured a bigger, more interesting truth: Cellebrite's researchers have become, over the last decade, the FBI's go-to hackers for mobile forensics.

Agents Cleared to Scrutinize Email Cache
New York Times, Multiple reporters, 2016 10 31
Washington - **Federal investigators have obtained a warrant to begin searching a large cache of emails belonging to a top aide to Hillary Clinton**, law enforcement officials said on Sunday, as prosecutors and F.B.I. agents scrambled under intense public pressure to assess their significance before **Election Day**. **It remains unclear whether they can finish their work by then.** "The process has begun," a federal law enforcement official said. The hurried pace at the Justice Department and the F.B.I. raises the prospect that law enforcement officials will again publicly discuss a continuing investigation involving a presidential candidate in the final days of the campaign. The F.B.I. director, **James B. Comey**, has faced extraordinary criticism since he sent an ambiguous letter to congressional leaders telling them that agents had discovered new emails. Agents in an unrelated investigation of Anthony D. Weiner, the disgraced former congressman, found the emails, belonging to his estranged wife, Huma Abedin, the aide to Mrs. Clinton, this month.

FBI agents waited weeks to tell Comey about emails possibly relevant to Clinton probe
Washington Post, Multiple reporters, 2016 10 31
Washington - **FBI agents investigating Hillary Clinton's use of a private email server while secretary of state knew early this month that messages recovered in a separate probe might be germane to their case, but they waited weeks before briefing the FBI director**, according to people familiar with the case. Director **James B. Comey** has written that he was informed of the development Thursday, and he sent a letter to legislators the next day letting them know that he thought the team should take "appropriate investigative steps designed to allow investigators to review these emails." That missive ignited a political firestorm less than two weeks before the election. Almost instantly, Comey came under intense criticism for his timing and for bucking the Justice Department's guidance not to tell Congress about the development. And his announcement means that Clinton could have to contend with the news that the FBI has resumed its investigation of her use of a private email server -- without any clarity on whether its investigators will find anything significant -- up to and beyond Election Day.

Inside Evan McMullin's 10 years undercover in the CIA
Washington Post, Josh Rogin, 2016 10 31

Column - Conservative independent presidential candidate **Evan McMullin** is rising in the polls and stands a fair chance of stealing the red state of Utah from GOP nominee Donald Trump. So it's no surprise that pro- Trump Republicans and others are raising questions about his record as an undercover CIA officer. **Vetting a former spy for the nation's highest office isn't easy, considering the classified nature of his government service**. This has left McMullin vulnerable to attacks he cannot publicly address. But I interviewed six former CIA officers who worked with McMullin during his 10 years inside the agency. What emerged was a picture of a young case officer who volunteered for duty in the world's most dangerous places and had a unique talent for recruiting members of extremist organizations as assets. Kevin Hulbert, a former senior CIA official in the directorate of operations who worked with McMullin overseas, told me that McMullin's steady personality, honesty and work ethic reassured potential intelligence sources who were risking their lives to help the United States. "People who would be assets were drawn to that type of person. They needed to trust that he wouldn't get them killed," Hulbert said. "There were a lot of people who took an easier route at the agency. Evan was always in the middle of the fight."

Why FBI director James B. Comey was able to defy Justice bosses on Clinton email announcement
Washington Post, Sari Horwitz, 2016 10 31
Washington - **Justice Department officials could have overruled FBI Director James B. Comey's surprising decision to notify Congress about the renewed investigation into Hillary Clinton's email server, but they stopped short of ordering him to back down**. Their decision partly reflected the institutional power of the FBI director, Comey's personality and the political realities they were facing, according to current and former Justice officials. In this case, officials said Comey put the department in an untenable position by informing them that he was sending a letter to Congress because he had an obligation to lawmakers or they would feel misled. "At the end of the day, if you have the FBI director telling Justice that he has an obligation to tell Congress, there is no way you can direct the FBI to do otherwise," said one official, who spoke on the condition of anonymity. "That's too fraught. You can't direct someone to withhold information from Congress. That's not a prudent way to do things."

James Comey is a good man, but he made a serious mistake
Washington Post, Former Attorney General Eric Holder, 2016 10 31
Op-ed - I began my career in the Justice Department's Public Integrity Section 40 years ago, investigating cases of official corruption. In the years since, I have seen America's justice system firsthand from nearly every angle -- as a prosecutor, judge, attorney in private practice, and attorney general of the United States. I understand the gravity of the work our Justice Department performs every day to defend the security of our nation, protect the American people, uphold the rule of law and be fair. That is why **I am deeply concerned about FBI Director James B. Comey's decision to write a vague letter to Congress about emails potentially connected to a matter of public, and political, interest**. That decision was incorrect. It violated long-standing Justice Department policies and tradition. And it ran counter to guidance that I put in place four years ago laying out the proper way to conduct investigations during an election season. Indeed, except in exceptional circumstances, the department will not even acknowledge the existence of an investigation. The department also has a policy of not taking unnecessary action close in time to Election Day that might influence an election's outcome. These rules have been followed during Republican and Democratic administrations. They aren't designed to help any particular individual or to serve any political interest. Instead, they are intended to ensure that every investigation proceeds fairly and judiciously; to maintain the public trust in the department's ability to do its job free of political influence; and to prevent investigations from unfairly or unintentionally casting public suspicion on public officials who

have done nothing wrong. Director Comey broke with these fundamental principles. I fear he has unintentionally and negatively affected public trust in both the Justice Department and the FBI. **I served with Jim Comey and I know him well. This is a very difficult piece for me to write. He is a man of integrity and honor. I respect him. But good men make mistakes. In this instance, he has committed a serious error with potentially severe implications**.

The FBI Director's Unworthy Choice
Wall Street Journal, Former Attorney General Michael B. Mukasey, 2016 10 31
Op-ed - We need not worry unduly about the factual void at the center of the FBI director's announcement on Friday that the bureau had found emails -- perhaps thousands -- "pertinent" in some unspecified way to its investigation into Hillary Clinton's handling of classified emails while she was secretary of state. True, **we don't know what is actually in the emails of Huma Abedin, Mrs. Clinton's close aide, but we can nonetheless draw some conclusions about how FBI Director James Comey came to issue his Delphic notice to Congress**, and what the near-term future course of this investigation will be. Regrettably, those conclusions do no credit to him, or to the leadership of the Justice Department, of which the FBI is a part. Friday's announcement had a history. Note: Mr. Mukasey served as U.S. attorney general (2007-09).

The spy who couldn't spell: how the biggest heist in the history of US espionage was foiled
The Guardian (London), Yudhijit Bhattacharjee, 2016 10 30
Washington - One Monday morning in December 2000, **FBI Special Agent Steven Carr** hurried out of his cubicle at the bureau's Washington DC field office and bounded down two flights of stairs to **pick up a package that had just arrived by FedEx from the FBI's office in New York**. Carr was 38, thoughtful and intense, meticulous in his work. Carr raced back to his desk and laid out the contents of the package in front of him: a sheaf of papers running into a few dozen pages. They were from three envelopes that had been handed to the FBI by a confidential informant at the Libyan consulate in New York. The envelopes had been individually mailed to the consulate by an unknown sender. Breathlessly, Carr thumbed through the sheets. Based on directions sent from New York, he was able to sort the papers into three sets, corresponding to the three envelopes. All three had an identical cover sheet, at the top of which was a warning in all caps. "THIS LETTER CONTAINS SENSITIVE INFORMATION." In the first envelope was a four-page letter with 149 lines of typed text consisting of alphabets and numbers. The second envelope included instructions on how to decode the letter. The third envelope included two sets of code sheets. One set contained a list of ciphers. The other, running to six pages, listed dozens of words along with their encoded abbreviations: a system commonly known as brevity codes. Together, the two sets were meant to serve as the key for the decryption. Carr flipped through the letter, skimming the alphanumeric sequence. It looked like gibberish. There was no way to make sense of it without the code sheets and the decoding instructions. By mailing the three separately, the sender had sought to secure the communication against the possibility that one envelope might get intercepted by a US intelligence agency. **Carr had never seen anything like it before. The sender of the envelopes was no doubt a bona fide member of the US intelligence community, with access to "top secret" documents, intent on establishing a clandestine relationship with a foreign intelligence service.** The person had, in fact, already committed espionage by giving classified information to an enemy country. Carr might as well have been looking at a warning sign for a national security threat flashing in neon red.

James Comey broke with Loretta Lynch and Justice Department tradition
The New Yorker, Jane Mayer, 2016 10 30

Washington - On Friday, **James Comey, the director of the Federal Bureau of Investigation, acting independently of Attorney General Loretta Lynch, sent a letter to Congress saying that the F.B.I. had discovered e- mails that were potentially relevant to the investigation of Hillary Clinton's private server.** Coming less than two weeks before the Presidential election, Comey's decision to make public new evidence that may **raise additional legal questions about Clinton was contrary to the views of the Attorney General, according to a well-informed Administration official. Lynch expressed her preference that Comey follow the department's longstanding practice of not commenting on ongoing investigations**, and not taking any action that could influence the outcome of an election, but he said that he felt compelled to do otherwise. Comey's decision is a striking break with the policies of the Department of Justice, according to current and former federal legal officials. Comey, who is a Republican appointee of President Obama, has a reputation for integrity and independence, but his latest action is stirring an extraordinary level of concern among legal authorities, who see it as potentially affecting the outcome of the Presidential and congressional elections. "You don't do this," one former senior Justice Department official exclaimed. "It's aberrational. It violates decades of practice."

The NSA deputy chief on Edward Snowden's true motivations
Washington Post Magazine, Joe Heim, 2016 10 30
Interview - **Richard Ledgett Jr., 58, has worked at the National Security Agency since 1988**. He and his wife live in Maryland and have three children. Washington Post: If (Edward) Snowden were sitting across from you, what would you say? Richard Ledgett: I'd ask him, Why did you do what you did? The narrative that he's told publicly about this actually doesn't track if you parse the timelines. **He says he was motivated by Jim Clapper's remarks to Senator Wyden and the revelation that those remarks weren't accurate**. If you look at the timeline, Snowden was actually stealing material and in contact with reporters eight months before that, so that doesn't track. Q: So even if the timeline doesn't scan, do you question his motivation? A: I do. I know a lot about this. I probably spent more time than anybody but our chief investigator on the actual investigation on this. I know a lot that I still can't talk about because it's sensitive investigational stuff. And if he does ever come back to the United States it will be part of the government's case against him. The things that I can say, I think a lot of what was in the House Intelligence Committee's report where they talk about him actually being mad about being disciplined -- I think that actually tracks more with motivation. Q: Do you think history will ultimately decide what Snowden did helped the country? A: That's a really hard one. I think if you weigh the benefit and the harm, the balance comes out pretty far on the harm side. That doesn't mean that there was absolutely no good to what he did. And I think that's an important nuance. It's heavily weighted towards harm. The little bit of good is forcing a conversation that we probably should have had earlier. And for me that was a lesson learned. That we should have talked about the particular authority, the Patriot Act authority, earlier in the process

N.S.A. Appears to Have Missed 'Big Red Flags' in Suspect's Behavior
New York Times, Scott Shane, 2016 10 30
Washington - **Year after year, both in his messy personal life and his brazen theft of classified documents from the National Security Agency, Harold T. Martin III put to the test the government's costly system for protecting secrets**. And year after year, the system failed. Mr. Martin got and kept a top-secret security clearance despite a record that included drinking problems, a drunken-driving arrest, two divorces, unpaid tax bills, a charge of computer harassment and a bizarre episode in which he posed as a police officer in a traffic dispute. Under clearance rules, such events should have triggered closer scrutiny by the security agencies where he worked as a contractor. Yet **even after extensive leaks by Pfc. Bradley Manning in 2010 and Edward Snowden in 2013 prompted new layers of safeguards, Mr.**

Martin was able to walk out of the N.S.A. with highly classified material, adding it to the jumbled piles in his house, shed and car. A federal judge in Baltimore ruled on Friday that Mr. Martin, 51, must remain jailed on charges of stealing government documents and mishandling classified information over two decades. Prosecutors say they will add new charges under the Espionage Act. Mr. Martin, whose arrest in August was disclosed by The New York Times this month, has admitted to taking the material but denies giving secrets to anyone else.

Judge denies request to release ex-NSA contractor accused of stealing data
Washington Post, Ellen Nakashima, 2016 10 29
Baltimore - An **attorney for the former National Security Agency contractor accused of stealing unprecedented amounts of classified government data** said at a hearing Friday that his client has a compulsive hoarding habit that runs in the family and should not continue to be detained. But **U.S. District Judge Richard D. Bennett declined a request that Harold T. Martin III be released from jail,** ruling that he was a flight risk. Bennett affirmed a magistrate judge's ruling from last week that Martin continue to be detained pending an eventual trial or resolution of the case. The former contractor was arrested Aug. 29 at his home in Glen Burnie, Md., and charged in a sealed complaint with felony theft of government property and the unauthorized removal of classified materials, a misdemeanor.

F.B.I. Chief James Comey Is in Political Crossfire Again Over Emails
New York Times, Multiple Reporters, 2016 10 29
Washington - **James B. Comey, the director of the F.B.I., faced a dilemma on Thursday when deputies briefed him about a new trove of emails**, discovered in the course of an investigation of former Representative Anthony D. Weiner, that they said might be connected to the dormant inquiry into Hillary Clinton's private email server. Mr. Comey, who had cleared Mrs. Clinton of any criminal wrongdoing in the email affair this summer, could let Congress know about the new developments immediately, bureau officials said, an unusual step that would risk accusations that he was unfairly harming Mrs. Clinton's presidential campaign less than two weeks before the election. Or he could delay any announcement and examine the new emails more closely, risking criticism that he had suppressed important new information if it came out after the election, despite his pledges of "transparency" in the investigation. Mr. Comey, a Republican appointed by President Obama three years ago, decided that he could live with criticism of his judgment, aides said. So **on Friday morning, the F.B.I.'s congressional liaison emailed a letter from the director to the chairmen of eight congressional committees -- virtually ensuring that it would be quickly publicized by eager Republicans**.

Booz Allen Hamilton hires former FBI director to review its security measures
Baltimore Sun, Ian Duncan, 2016 10 28
Baltimore - **Booz Allen Hamilton**, a major intelligence community contractor, **said Thursday that it has hired a former FBI director to review its security measures after one of its employees was with charged with stealing reams of classified documents. Harold T. Martin III**, who used to work for the NSA, was arrested in August, accused of a two-decade theft spree and stashing data that could amount to the equivalent of half a billion pages at his Glen Burnie home. Craig Veith, a spokesman for Booz Allen, said former **FBI director Robert Mueller had started a review of its "security, personnel, and management processes and practices"** on Oct. 19. In a federal court filing on Thursday, prosecutors said classified information stolen by Martin included the names of covert intelligence officers. In arguing that Martin should remain locked up, federal prosecutors said in their filing that a "substantial portion" of the 50 terabytes of digital information seized from Martin at his home was "highly classified." That information included the names of intelligence officers who operate "under

cover outside the United States" and could endanger their lives, the safety of those they work with and could **compromise American intelligence operations**.

How Snowden Smartened Up Our Spying
Newsweek, Jack Goldsmith, 2016 10 28
Column - At **the dawn of the Snowden revelations, many wondered whether the U.S. intelligence community would be destroyed**. Some hoped that it would. But the opposite has happened: Despite **undoubted intelligence losses**, new collection barriers and diplomatic embarrassments, the community has emerged as a stronger organization despite, indeed because of, Snowden. Snowden forced the intelligence community out of its suboptimal and unsustainable obsession with secrecy. "Before the unauthorized disclosures, we were always conservative about discussing specifics of our collection programs, based on the truism that the more adversaries know about what we're doing, the more they can avoid our surveillance," **Director of National Intelligence James Clapper** said in 2013. Post-Snowden, the intelligence community operates on the principle that secrecy is not an absolute value, but one that needs to be traded off for other values, including domestic legitimacy. Snowden made it realize that, in the words of **former NSA Director Michael Hayden**, "although the public cannot be briefed on everything, there has to be enough out there so that the majority of the population believe what they are doing is acceptable.". Note: Jack Goldsmith is a senior fellow at the Hoover Institution and the Henry L. Shattuck professor of law at Harvard University. From 2003 to 2004, he served as the assistant attorney general, Office of Legal Counsel. From 2002 to 2003, he served as the special counsel to the general counsel of the Department of Defense.

When CIA and NSA Workers Blow the Whistle, Congress Plays Deaf
The Intercept, Patrick G. Eddington, 2016 10 27
Comment - **Do the committees that oversee the vast U.S. spying apparatus take intelligence community whistleblowers seriously?** Do they earnestly investigate reports of waste, fraud, abuse, professional negligence, or crimes against the Constitution reported by employees or contractors working for agencies like the CIA or NSA? **For the last 20 years, the answer has been a resounding "no." My own experience in 1995-96 is illustrative**. Over a two-year period working with my wife, Robin (who was a CIA detailee to a Senate committee at the time), we discovered that, contrary to the public statements by then-Chairman of the Joint Chiefs Colin Powell and other senior George H. W. Bush administration officials (including CIA Director John Deutch), American troops had in fact been exposed to chemical agents during and after the 1991 war with Saddam Hussein. While the Senate Banking Committee under then-Chairman Don Riegle, D-Mich., was trying to uncover the truth of this, officials at the Pentagon and CIA were working to bury it. At the CIA, I objected internally -- and was immediately placed under investigation by the CIA's Office of Security. That became clear just days after we delivered the first of our several internal briefings to increasingly senior officials at the CIA and other intelligence agencies. In February 1995, I received a phone call from CIA Security asking whether I'd had any contacts with the media. I had not, but I had mentioned to CIA officials we'd met with that I knew that the CBS newsmagazine "60 Minutes" was working on a piece about the Gulf War chemical cover-up. This call would not be the last I'd receive from CIA Security about the matter, nor the only action the agency would take against us.

CIA to share 11 million declassified documents through agency's website
Washington Times, Andrew Blake, 2016 10 27
Washington - The **CIA this week said it will make more than 11 million declassified documents searchable on the agency's website**. The sizable collection of previously privileged documents currently **resides on a database called the CIA Records Search Tool, or CREST**, and for years has only been accessible by using computers at the National Archives

and Records Administration in College Park, Md. Ryan Trapani, a spokesman for the intelligence agency, told the Federal of American Scientists on Tuesday that CREST documents will soon be uploaded to the CIA's official website, CIA.gov. "When loaded on the website they will be full-text searchable and have the same features currently available on the CREST system at NARA," he said.

Congress: Cuba to Share Critical U.S. Intel With Iranian Spies
Washington Free Beacon, Adam Kredo, 2016 10 27
Washington - **Obama administration efforts to bolster the sharing of critical intelligence data with Cuba is likely to benefit Iran**, which has been quietly bolstering its foothold in the country with the communist government's approval, according to conversations with members of Congress and other sources familiar with the matter. A little noticed Obama administration directive on Cuba, released Oct. 14, instructed the U.S. director of national intelligence to assist and cooperate with Cuba's intelligence services. The directive has raised red flags on Capitol Hill, where some lawmakers are concerned that Cuba will pass along critical U.S. intelligence to the Iranians, who have made moves in recent years to extend their influence in the communist country and other Latin American countries hostile to the United States. The Obama administration's move to share intelligence with Cuba is likely to be celebrated by Iran, according to congressional sources tracking the matter.

Report: Chinese Spies Stole Pentagon Secrets
Washington Free Beacon, Bill Gertz, 2016 10 27
Washington - **Chinese spies repeatedly infiltrated U.S. national security agencies, including official email accounts**, and stole U.S. secrets on Pentagon war plans for a future conflict with China, according to a forthcoming congressional commission report. "The United States faces a large and growing threat to its national security from Chinese intelligence collection operations," states the late draft report of the U.S.-China Economic and Security Review Commission. "**Among the most serious threats are China's efforts at cyber and human infiltration of U.S. national security entities**." Chinese intelligence activities have "risen significantly" in the past 15 years and are conducted through several spy services, including the Ministry of State Security (MSS), the People's Liberation Army (PLA), and Communist Party military organizations such as the PLA General Political Department and the Party's United Front Work Department. A copy of the draft annual report for 2016 was obtained by the Washington Free Beacon. The final report will be released Nov. 16. The report identified repeated infiltrations by Chinese spies of U.S. national security entities, including the FBI and the U.S. Pacific Command.

U.S. has secretly expanded its global network of drone bases to North Africa
Washington Post, Adam Entous, Missy Ryan, 2016 10 26
Washington - The **Pentagon has secretly expanded its global network of drone bases to North Africa, deploying unmanned aircraft and U.S. military personnel to a facility in Tunisia to conduct spy missions in neighboring Libya.** The Air Force Reaper drones began flying out of the Tunisian base in late June and have played a key role in an extended U.S. air offensive against an Islamic State stronghold in neighboring Libya. The Obama administration pressed for access to the Tunisian base as part of a security strategy for the broader Middle East that calls for placing drones and small Special Operations teams at a number of facilities within striking distance of militants who could pose a threat to the West. U.S. officials, speaking on condition of anonymity to discuss an operation that has not been acknowledged, said the drones being flown out of Tunisia were currently unarmed and were principally being used to collect intelligence on Islamic State targets in Sirte, Libya, where the United States has conducted more than 300 airstrikes since August. U**.S. officials said they sought access to**

the air base in Tunisia to close a critical "blind spot" for U.S. and Western intelligence services in North Africa, which has become the Islamic State's largest base of operations outside Syria and Iraq. The region is also home to al-Qaeda-linked fighters.

Denuclearizing N. Korea a 'lost cause,' US intel chief says
Agence France-Presse, Staff report, 2016 10 26
Washington - **Convincing North Korea to abandon nuclear weapons is a "lost cause," America's top intelligence official said**, causing concern in the State Department and ally South Korea over an issue of long-standing US policy. The United States has always maintained it cannot accept North Korea as a nuclear state and, under President Barack Obama, has made any talks with the North conditional on Pyongyang first making some tangible commitment towards denuclearisation. But in remarks to the Council on Foreign Relations think-tank, **US Director of National Intelligence James Clapper** on Tuesday suggested such a policy was based on wishful thinking. "The notion of getting the North Koreans to denuclearize is probably a lost cause.

WikiLeaks 'sowing the seeds of its own destruction' says former NSA chief
International Business Times (UK), James Murdock, 2016 10 26
London - A **former deputy director of the US National Security Agency (NSA), John C Inglis, believes that WikiLeaks - the whistleblowing platform led by Julian Assange - has become "internally confused" in recent years and that "natural forces" may soon wipe it out**. "WikiLeaks might be in fact be sowing the seeds of its own destruction," Inglis told IBTimes UK in an exclusive interview on 25 October, indicating the organisation has overstepped a boundary by leaking material which has the potential to influence the upcoming US presidential election. The US government has namechecked Assange's organisation as being complicit in a Russian-led plot to influence the elections and - allegedly after a close word from US Secretary of State John Kerry - the government of Ecuador, which is hosting Assange under political asylum, was forced to step in.

FBI, Justice Dept. prep for Election Day security concerns
Associated Press, Staff report, 2016 10 26
Washington - The **Justice Department and FBI say they will have officials ready on Election Day to respond to potential crimes, with monitors at select polling places and lawyers and agents who will field complaints regarding voter intimidation, fraud and other problems**. In addition, a centralized command post at FBI headquarters will monitor specific threats reported across the country. A Justice Department statement Tuesday outlining its Election Day response said attorneys from the civil rights and criminal divisions would work to ensure that voters have their ballots "counted free of discrimination, intimidation or fraud in the election process."

Rep. McCaul: I told Trump Russia was behind the hacks, but he thinks there's no proof
Politico, Brent Griffiths, 2016 10 25
Washington - A **top Republican on national security said he advised Donald Trump that Russia was using hacked information to influence the election process, but the GOP presidential nominee didn't appear to believe him**. "I think he has in his mind that there's not the proof," **House Homeland Security Chairman Mike McCaul** said Tuesday during a Texas Tribune event in Austin. "Now he hasn't had the briefing I had, but I made it clear that in my judgment it was a nation-state." McCaul, a Trump supporter, told Tribune CEO Evan Smith that he was brought in to brief Trump on national security after the first presidential debate -- a topic the Texas Republican conceded is "not [Trump's] strength."

'There will be terrorist attacks in Britain,' says MI5 chief
The Guardian (London), Paul Johnson, Ewen MacAskill, 2016 11 01
London - Sitting in the office of the president of the Royal Society, where he has just been the surprise guest speaker at its annual diversity conference, (**MI5 director Andrew**)Parker, who has made speeches and appeared once on the BBC Today programme, **has a worldview that centres on three areas of threat.** The **first is Islamic-inspired terror,** which he calls enduring and generational. "International terrorism in its latest shape, based on twisted ideology, brings terror to our streets and most of the developed world, including North America, Australia and Turkey," he says. "Currently, the flavour of it is Daesh, or Isil [Islamic State], and we still have the al-Qaida brand. This is something we have to understand: it's here to stay. It is an enduring threat and it's at least a generational challenge for us to deal with." He says the number of terror plots thwarted in the past three years stands at 12. "That sort of tempo of terrorist plot and attempts is concerning and it's enduring. Attacks in this country are higher than I have experienced in the rest of my career - and I've been working at MI5 for 33 years. The reality is that because of the investment in services like mine, the UK has got good defences. My expectation is that we will find and stop most attempts at terrorism in this country." He lets the word "most" sink in before adding: **"There will be terrorist attacks in this country. The threat level is severe and that means likely."**

MI5 head: 'increasingly aggressive' Russia a growing threat to UK
The Guardian (London), Ewen MacAskill, Paul Johnson, 2016 11 01
London - **Russia poses an increasing threat to the stability of the UK and is using all the sophisticated tools at its disposal to achieve its aims, the director general of MI5** has told the Guardian. In the first newspaper interview given by an incumbent MI5 chief in the service's 107- year history, **Andrew Parker said that at a time when much of the focus was on Islamic extremism, covert action from other countries was a growing danger**. Most prominent was Russia. "It is using its whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways - involving propaganda, espionage, subversion and cyber- attacks. Russia is at work across Europe and in the UK today. It is MI5's job to get in the way of that." **Parker said Russia still had plenty of intelligence officers on the ground in the UK, but what was different now from the days of the cold war was the advent of cyberwarfare**.. Said that budget increases would see MI5 expand from 4,000 to 5,000 officers over the next five years. . Rejected criticism that the investigatory powers bill, due before parliament this week, was going too far in enabling intrusive surveillance, arguing that it correctly balances privacy and security. . Dismissed claims that Brexit would affect cooperation with European intelligence services. . Said his aim was to equalise the gender balance in MI5 and recruit many more operatives from ethnic minority backgrounds.

L'espionnage britannique met en garde contre une Russie "agressive"
Le Figaro avec l'Agence France-Presse, Journaliste maison, 2016 11 01
Londres - Le chef **du service de renseignement britannique MI5, Andrew Parker, met en garde, dans une interview au Guardian contre les méthodes "de plus en plus agressives" de la Russie** et son recours aux cyber- technologies pour s'opposer à l'Occident. Moscou, a-t-il expliqué, "s'appuie sur toute sa gamme d'organes étatiques et toute sa puissance pour faire avancer sa politique étrangère de façon de plus en plus agressive, et cela comprend la propagande, l'espionnage, la subversion et les cyber-attaques". "La Russie est à l'oeuvre dans toute l'Europe et au Royaume-Uni. La tâche du MI5 est de lui barrer la route", a-t-il poursuivi. Ces déclarations surviennent une dizaine de jours après qu'une flotte navale russe de huit navires, en route pour les côtes syriennes, a fait l'objet de surveillance en mer du Nord de la part d'une frégate britannique.

Why do we still accept that governments collect and snoop on our data?
The Guardian (London), Scarlet Kim, 2016 10 30
Comment: In recent weeks, the **Hollywood film about Edward Snowden and the movement to pardon the NSA whistleblower have renewed worldwide attention on the scope and substance of government surveillance programs**. In the United States, however, the debate has often been a narrow one, focused on the rights of Americans under domestic law but mostly blind to the privacy rights of millions of others affected by this surveillance. Indeed, just last week, a British court held that **British intelligence agencies acted unlawfully by concealing bulk spying programs from the public for over a decade**. Soon, in a lawsuit brought by Privacy International, the ACLU and eight other organizations, the influential European court of human rights will also weigh in on surveillance programs revealed by Snowden, and the result could have implications far beyond Europe. Although the debate in the US has led to some piecemeal reforms - including the USA Freedom Act and modest policy changes - many of the most intrusive government surveillance programs remain largely intact. These include programs conducted not just by the NSA, but also by its close partner in the United Kingdom, called the **Government Communications Headquarters (GCHQ),** with whom the NSA swaps vast sets of private data. This bulk surveillance violates rights to privacy and freedom of expression - rights that are guaranteed not only under US domestic law, but also under international human rights law. That latter legal framework speaks a universal language, enumerating fundamental rights that every person enjoys by virtue of our common humanity.

'Abandoned' IRA supergrass lay dead in his flat for up to a week
The Belfast Telegraph, Suzanne Breen, 2016 11 01
Belfast— IRA **informer Raymond Gilmour has been found dead in his flat in Kent, where he had been lying abandoned and alone,** for up to a week. An autopsy is being carried out but friends believe that Gilmour (55), who was an alcoholic with serious psychological problems, died from natural causes. He was on disability benefit at the time of his death. His friend and fellow agent, Martin McGartland, last night said: **"It is disgraceful that Ray died in these circumstances. He spent years begging MI5 for financial and psychological help**. Instead, they turned their back on him. He was a broken man, a wreck of a human being, and they left him to die in the Gilmour gave evidence against 31 men and women in one of Northern Ireland's best known republican supergrass trials. After the case collapsed in 1984, he was resettled in England by MI5 and given a new identity.

Confessions of an MI5 agent: 'Isil were planning to behead me - the butcher's knives were ready'
The Telegraph, Tom Ough, 2016 10 29

Analysis: **I'd been in MI5 for a few years when I found myself on the most dangerous mission of my career. I was sent to follow a potential Islamist terrorist in Camden Market**, north London, as part of a surveillance operation. He started on foot, then got into a car. We had planted an eavesdropping device in it, which should have been live-monitored back at Thames House, MI5 headquarters, but there was an incident going on elsewhere and resources had been diverted. What we didn't realise was that the target had guessed he was being followed. He and his friends had planned a snatch - to **kidnap an MI5 agent**. I didn't know it at the time but they had set up a room, in a house they used, with plastic sheeting on the floor, black flags, video cameras and butcher's knives - I believe they wanted to try the kidnappee under Sharia law, then behead him online.

EU security intelligence critical to fighting terror, says senior police officer
The Independent (UK), Ashley Cowburn, 2016 10 27
London - **Access to information in Europe-wide security databases, including the European Arrest Warrant, is "mission critical" in fighting terrorism**, one of Britain's most senior policewomen has said. **Helen Ball, the deputy assistant commissioner at the Metropolitan Police, also indicated that citizens in Europe would be at a greater threat from terrorism if Britain failed to work with its allies on the continent after Brexit**. Ms Ball, who has been with the police force for over two decades, also ranked the European Arrest Warrant as ten out of ten in combating international terrorism. When asked by the Lords' EU Home Affairs sub-committee about the importance of the European Arrest Warrant (EAW) on a scale of 1-10, Ms Ball replied: "At the moment we have very low usage of the European Arrest Warrant and there are very good reasons for that and as I look to the future I suspect we will have greater use of it.

James Bond would fail grade at MI6, says head of intelligence service
Press Association, Staff report, 2016 10 26
London - **James Bond would fail to make the grade if he tried to become a spy today, the head of MI6 has said**. Although the suave fictional secret agent is tenacious and patriotic his morally dubious character would see him rejected by the intelligence service, **Alex Younger** said. In a rare question and answer session, the spy chief insisted that a strong ethical core is one of the main qualities potential recruits need. He told the Black History Month website: " We know that it we undermine British values, even in the name of defending them, then we have failed. Our staff are not from another planet. "They are ordinary men and women operating in the face of complex moral, ethical and physical challenges, often in the most forbidding environments on earth. "**In contrast to James Bond, MI6 officers are not for taking moral shortcuts. In fact, a strong ethical core is one of the first qualities we look for in our staff**. "It's safe to say that James Bond wouldn't get through our recruitment process and, whilst we share his qualities of patriotism, energy and tenacity, an intelligence officer in the real MI6 has a high degree of emotional intelligence, values teamwork and always has respect for the law... unlike Mr Bond."

Australia and China agree to share financial crime intelligence
Reuters, Staff reporter, 2016 11 01

Beijing/Sydney - **Australia and China agreed on Tuesday to share intelligence about potential financial crime as part of a crackdown on cross-border money laundering and terrorism financing**, as Australian Justice Minister Michael Keenan visits Beijing. Keenan told reporters during his visit that he had also raised concerns with Chinese officials over four Australian citizens detained for "gambling crimes" in connection with Crown Resorts but said he did not discuss specifics of the charges. The intelligence sharing agreement between Australian financial intelligence agency **AUSTRAC and its Chinese counterpart CAMLMAC** would allow both countries to target and disrupt organised criminal networks. "The more granularity we can get on the intelligence and the more information that we can share together, the more likely we're able to find the needle in the haystack essentially, which is the bad financial transaction," Keenan said.

Deputy Commissioner Cath Burn keeps control of counter-terrorism operations after NSW police shakeup
ABC (Australia), Jessica Kidd, 2016 11 01
Canberra - **Deputy Police Commissioner Catherine Burn has retained control of counter-terrorism operations as part of a major restructure of the NSW Police Force**. It comes as the number of deputy commissioners is increased from three to five under . Ms Burn previously had responsibility for Specialist Operations, which included Counter Terrorism and Special Tactics, the Special Services Group, Traffic and Highway Patrol Command and the Police Transport Command. Today, a spokeswoman for Commissioner Andrew Scipione confirmed Ms Burn had been appointed the Deputy Commissioner for Counter Terrorism and Investigations. She also confirmed that Deputy Commissioner Dave Hudson would head Specialist Support. The spokeswoman said recruitment was underway for the remaining deputy positions. "An internal recruitment process has started today across NSW Police Force to the roles of Deputy Commissioner Metropolitan Field Operations and Deputy Commissioner Regional NSW Field Operations," she said.

Soviet spy infiltrated ASIO, book reveals
Associated Press, 2016 10 26
Canberra - The **authors behind the official history of Australia's security agency threatened to quit if they weren't allowed to reveal the organisation had been infiltrated by Soviet spies**. Academic John Blaxland and researcher Rhys Crawley were given unfettered access to **ASIO's archives for The Secret Cold War**, the third volume of the series covering 1975 to 1989. But the pair had to fight to include evidence that suggested at least one mole from the **Russian intelligence service** had penetrated the agency for many years, and ASIO's inability to identify it. "This is the part of the story that is, arguably, the most embarrassing to ASIO," Dr Blaxland said following the book's launch at ASIO's Canberra headquarters on Wednesday. "This is a demoralising story. This is a story of failure. This is a story of people spending their life's work and seeing it go to the sand effectively. "But to the credit of ASIO, particularly the director-general, they decided to keep the story of penetration in and explain what happened as best we could up to 1989." They did, however, prevent names and specific details - including the number of suspected moles - from being published for legal and operational reasons.

India-New Zealand can be partners in security, stability: Prez
Press TV News (India), 2016 10 28
New Delhi - **President Pranab Mukherjee has said India and New Zealand can become partners for promoting security**, stability and prosperity in their regions and beyond, as he welcomed visiting **Kiwi Prime Minister John Key**. Key called on the President at RashtrapatiBhavan yesterday. Mukherjee, while welcoming the PM and his delegation, said India values its relationship with his country and the sustained momentum of high level contacts reaffirms the growing strength and dynamism of bilateral engagement between India and New Zealand.. "India and New Zealand can be partners in promoting security, stability and prosperity in the region and beyond. The two countries can work together in areas such as maritime security and ensuring freedom of navigation and in **countering terrorism**," he said.

Cyber law aimed at foreign hackers
South China Morning Post, Viola Zhou, 2016 11 01
Beijing - **Beijing has proposed a revised internet law to punish foreigners who hack Chinese websites as it steps up its campaign against cyberattacks it blames on the West.** Although it was hard for governments to identify those behind cybercrimes, the move paved the way for China to take legal action against other states, analysts said. The proposed **cybersecurity law changes** would let the government freeze assets of foreign individuals or groups if they damaged China's key information infrastructure, Xinhua reported. Police would apply "other necessary punishment" to those outside the country who attacked, intruded, disrupted or harmed Chinese websites, according to the revised draft quoted in the report. The draft had been sent to the Standing Committee of the National People's Congress for approval, Xinhua said. China claims to be a victim of global cybercrimes, reporting growing numbers of attacks from overseas every year.

China's draft cybersecurity law gets 3rd reading
Xinhua News Agency, Staff reporter, 2016 10 31
Beijing - **China's draft cybersecurity law was submitted to legislators for its third reading at the bimonthly session of the National People's Congress (NPC) Standing Committee**, which began Monday. The draft allows police and other law enforcers to take measures including freezing assets, against overseas individuals or organizations that "attack, intrude, interfere with or sabotage the nation's key information infrastructure."

Kremlin says British spy chief's claims of Russian threat 'unfounded'
Agence France-Presse, 2016 11 01
Moscow— The **Kremlin on Tuesday dismissed as baseless claims by a British intelligence agency chief that Russia is acting in "increasingly aggressive ways" and using new**

technologies against the West. The **head of Britain's MI5 intelligence agency Andrew Parker, on Monday said Russia is "using its whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways** -- involving propaganda, espionage, subversion and cyber-attacks." **Kremlin spokesman Dmitry Peskov told reporters Tuesday that Russia "could not agree" with Parker's claims**. "We have repeatedly commented on cyber-attacks: as long as someone does not provide evidence, any statements -- be they by the head of MI5, the president of the United States and other decision-makers -- we will consider unfounded and baseless," Peskov said.

Putin's Top Security Advisor Lays Out Vision of Global Security in 5 Easy Steps
Sputnik, Staff report, 2016 11 01
Moscow - The **Security Council is charged with working out the president's decisions on national security affairs**. In this light, Sputnik asked Secretary Patrushev to lay out his views regarding the security situation in the world today, and the regions which he sees as the most problematic. "The situation in the world is not becoming any easier," the official admitted. "There is a growing competition for global influence and the use of global resources." **Other threats Moscow takes seriously include the "unprecedented threat" of global terrorism, represented first and foremost by the Daesh (ISIL/ISIS) terrorist group.**

Putin says Russia is successfully countering terrorism, extremism
ITAR-TASS World Service, Staff report, 2016 10 31
Astrakhan - **Russian President Vladimir Putin has stated that Russia is successfully confronting terrorism and extremism**, but urged to remain vigilant to prevent such threats. "Russia is successfully countering global threats. These are extremism and terrorism," he told a meeting of the **Council for Interethnic Relations**. Putin pointed to the need to pay close attention to preventing extremism and interethnic tensions. "The more so since there are growing trends in today's world to erode traditional values, while interethnic and interreligious discord and animosities are being fomented," he said, adding that "of course, we must and will counter these destructive trends."

Les hommes neufs de Vladimir Poutine
Le Monde, Isabelle Mandraud, 2016 10 28
Moscou - En vue de l'élection présidentielle de 2018, **le président russe se débarrasse de sa vieille garde, pour placer une équipe plus jeune qui « ne tutoie pas le chef ».** Un renouvellement qui accentue la personnalisation du régime. La garde prétorienne de Vladimir Poutine a changé. En l'espace de quelques semaines, plusieurs proches du chef de l'Etat russe ont été écartés et remplacés par d'autres collaborateurs, plus jeunes, souvent peu connus, comme **Anton Vaïno, 44 ans, promu chef de l'administration présidentielle; Sergueï Kirienko, 54 ans, chargé de la politique intérieure; ou Viatcheslav Volodine, 52 ans, nommé président de la Douma, la chambre basse du Parlement**. Tous partagent un point commun qui les différencie de leurs aînés, «ils ne tutoient pas le président», ainsi que le souligne le politologue Andreï Kolesnikov, mais ils ont, surtout, une mission bien précise devant eux: préparer l'élection présidentielle de 2018. L'été, au Kremlin, est souvent une période propice au ménage. Le 12août, l'un des personnages les plus influents du pays, Sergueï Ivanov, 63 ans, qui régnait depuis décembre2011 sur l'administration présidentielle, a été débarqué tout comme, un an auparavant, à la même période, Vladimir Iakounine, 68 ans, le puissant patron des chemins de fer russes pendant dix ans. **Ces deux proches de Vladimir Poutine étaient issus du même sérail que le président, le KGB, et faisaient partie d'une génération parvenue en même temps au pouvoir.**

In Russia's cyberscene: Kremlin desires, private hackers, and patriotism
Christian Science Monitor, Fred Weir, 2016 10 27
Moscow - **While much is known about US cyber-war and -espionage capabilities thanks to the massive data leaks of former NSA contractor Edward Snowden, Russia's capacity for such is much more obscure**. But the experience of **Alexander Vyarya**, which came to light virtually without notice last year, may offer a few telling glimpses of it. Mr. Vyarya, a young Russian programmer, was a team member at Qrator, a leading Russian cybersecurity company that specializes in mitigating the effects of distributed denial-of-service [DDoS] attacks. According to his account, given to the **independent Russian online news service Medusa**, the company was approached by an intermediary from Russia's Ministry of Communications looking for a specialist to help with a particular problem. Vyarya was "loaned" on an unofficial basis to Rostek, the Russian state technology conglomerate, in early 2015, and sent to an office in Sofia, Bulgaria. There, he was asked to help develop software not to block, but to amplify DDoS attacks. He did - and he was appalled when the program was "tried out" before his eyes on targets like Ukraine's Defense Ministry and the liberal Russian magazine Slon, he later told Medusa.

How the Kremlin Handles Hacks: Deny, Deny, Deny
Bloomberg View, Leonid Bershidsky, 2016 10 26
Column - The **U.S. presidential election has made "Russian hackers" a powerful brand**. There is, however, another that surpasses it: **Ukrainian hackers**. And the story of their most recent hack contains valuable lessons for U.S. politicians, particularly Hillary Clinton and the Democrats. A **Ukrainian hacker collective calling itself CyberHunta -- a mocking reference to Russian propaganda outlets'** moniker for the Kiev government, the junta -- claimed on Oct. 23 to have broken into an electronic mailbox that belongs to VladislavSurkov, President Vladimir Putin's adviser for dealing with former Soviet breakaway regions. The purported hacked e-mails supposedly contain sensitive information, including, for example, a lengthy plan of "urgent measures for the destabilization of the situation in Ukraine." Unlike Clinton's allies after their e-mails were published, the Kremlin immediately denied the authenticity of the leaked communications. Putin's press secretary, Dmitri Peskov, told reporters that Surkov didn't use e-mail, so those who claim to have broken into has mailbox "must have had to sweat quite a lot" to forge messages.

Hacked: Putin's Aide's Emails Detail Alleged Detailed Plot To Destabilize Ukraine
Foreign Policy, Reid Standish, 2016 10 25
Washington - A **Ukrainian hacker group claims to have obtained emails from VladislavSurkov, a top aide to Russian President Vladimir Putin, that detail a purported Kremlin plan to destabilize Ukraine in the coming months**. **CyberJunta**, the group behind the alleged hack, released late on Sunday email exchanges belonging to Surkov, a scan of passports belonging to Surkov and his family, and 22 pages from documents outlining a plan to support nationalist and separatist politicians and to encourage early parliamentary elections in Ukraine, all with the aim of undermining the government in Kiev. "It is necessary to create favorable conditions for controllable political forces to enter the new parliament," said a report released by the hacking group. **OleksandrTkachuk, the chief of staff to the head of the SBU, Ukraine's intelligence service,** said on TV Tuesday that experts from the agency examined the documents released by CyberJunta, and believe them to be real. Speaking to reporters on Tuesday, Kremlin spokesman Dmitry Peskov denied Surkov's involvement in any plot to foment unrest in Ukraine, and said that the documents released by the hacking group were not real.

Des employés du SRC peu discrets sur Internet
Tribune de Genève, Caroline Zuercher, 2016 10 31
Berne - Des **collaborateurs du Service de renseignement se présentent sur des réseaux sociaux professionnels Certains collaborateurs, actuels ou anciens, du Service de renseignement de la Confédération (SRC) ne font guère preuve de discrétion**. Ils se dévoilent sur des plates-formes Internet, **LinkedIn ou Xing**, et y décrivent leurs compétences et leur cahier des charges, révèle Schweiz amSonntag. Le dominical mentionne notamment le cas d'un employé qui explique travailler comme spécialiste ComCenter - un service qui réceptionne, classe et transmet les informations en Suisse et à l'étranger. Un autre, externe, a été impliqué dans le développement d'un système de base de données dont il donne quelques informations. Et le journal d'ajouter que le **directeur du SRC, Markus Seiler**, **possède un profil LinkedIn.**

Les « espions » suisses font leur pub sur le Net
Le Matin (Suisse), Ph. C., 2016 10 31
Berne - Il **semble bien loin le temps où les James Bond du pays de Tell n'avaient même pas le droit de dire à leur femme en quoi consistait leur job**! Aujourd'hui, nous révèle laSchweizamSonntag, il suffit de surfer sur LinkedIn ou Xing pour voir d'anciens ou d'actuels **employés du Service de renseignement de la Confédération (SRC)**vanter leurs mérites et leurs compétences. Des qualités - et donc des noms - visibles et accessibles à tout un chacun. Ainsi, un ex-employé décrit-il comment il a pris part au développement d'une nouvelle base de données contenant des informations ultrasensibles sur la sécurité de l'Etat. Un autre parle de son travail au sein d'une unité de renseignement stratégique, chargée de fournir des analyses au chef de l'armée.

Enquête sur le 13 Novembre : le patron de la DGSE interrogé par un juge antiterroriste
Le Parisien, Thibault Raisse, 2016 10 29
Paris - **La justice a tenté de connaître auprès de la Direction générale de la sécurité extérieure (DGSE) le nom du commanditaire des attentats de Paris**. Un refus poli lui a été opposé... Qui ne tente rien n'a rien. Selon nos informations, l'un des juges antiterroristes en charge des investigations sur les attentats du 13 Novembre a interrogé **Bernard Bajolet**, le patron de la Direction générale de la sécurité extérieure (DGSE), le 29 juillet. Une initiative inédite et osée, puisque la DGSE, rattachée au ministère de la Défense, n'a aucun compte à rendre à l'institution judiciaire. Le chef des services de contre-espionnage français a néanmoins subi un interrogatoire en tant que témoin après ses propos tenus en mai devant la commission parlementaire sur les attaques de Paris et Saint-Denis. « Il est vrai qu'Abaaoud était un coordinateur mais pas le commanditaire. Nous connaissons le commanditaire mais je resterai discret sur ce point », avait-il indiqué. Une déclaration qui a manifestement suscité l'intérêt du juge d'instruction venu questionner le haut fonctionnaire à l'hôtel des Invalides (Paris VIIe). Après avoir rappelé cette confession faite aux parlementaires, le magistrat met les pieds dans le plat. « Pouvez-vous, dans ces conditions, donner le nom du commanditaire des attentats du 13 novembre 2015 ? » interroge-t-il « La demande de déclassification mettrait en danger nos sources », prévient le chef du renseignement extérieur, qui ajoute qu'en matière de terrorisme la **DGSE travaille en collaboration avec la DGSI, le renseignement intérieur**, avec qui les juges antiterroristes sont habilités à échanger des informations.

Serbian daily says Russian security chief extracts agents
Serbian daily Blic, via BBC Monitoring Europe, 2016 10 29

Belgrade— **Nikolai Patrushev, Russia's main intelligence official, has paid a visit to Serbia in order to bring back to Moscow three Russian spies**, suspected of involvement in the developments in **Montenegro**, Blic has learned. During his two-day stay, Patrushev, known as the boss of all of the Russian secret services, had several bilateral meetings with top Serbian officials. His main goal was to iron out the situation after the exposure of three Russian operatives. As Blic has learned, they were discovered in the past 10 days during the actions of the Serbian security services related to the developments in Montenegro on the eve of the election there, when, as Podgorica claims, there was an attempted coup.
After his two-day visit, the Russian spies departed with Patrushev for Moscow. As Blic has learned, they had stayed in Belgrade. **"Handing over spies is not unusual, so neither is this case**. They withdraw, and if they are really valuable, their services send them to another country," Blic's source said.

Bosnian ministry denies forming new intelligence agency
Bosnia-Herzegovina Federation public TV via BBC Monitoring Europe, 2016 10 28
Sarajevo— The **Bosnia and Hercegovina [B-H] Defence Ministry has reacted following the media reports concerning procedures to amend the Defence Law and to form of a new intelligence agency within the B-H Armed Forces with powers to observe civilians**. The Ministry said that the legislative amendments did not mention a new agency, observing citizens, or extending powers of the **Military Intelligence Department** beyond the army barracks. The proposed amendments are related to specific improvements in the work of Military Intelligence Department in the areas of data exchange and cooperation with security agencies. [Teletovic] At the end of last year, the B-H Defence Ministry launched an initiative to amend certain provisions concerning intelligence and security work, that is, Article 9, in order to allow the Military Intelligence Department to seek all strategic information and data from intelligence-security agencies, which has not been the case so far. This does not involve any transfer of powers, but the aim is to make sure that the existing powers are defined better, B-H assistant defence minister said. He added that the media uproar was aiming at abolition of the military intelligence battalion, which would be impermissible.

Lithuanian State Security Department introduces hotline to boost national security
Lithuanian News Agency, 2016 10 27
Vilnius— The **State Security Department of the Republic of Lithuania (VSD) has launched a hotline and begun a public awareness campaign. VSD Director Darius Jauniskis** says that the anonymous hotline will enable Lithuanian citizens to more actively contribute to enhancing the country's security. According to Jauniskis, military experts, journalists, politicians and public figures widely discuss military, hybrid, propaganda and information threats. Meanwhile, the public rarely addresses the threat against national security posed by hostile intelligence agencies. Yet they pose no less of a threat and may target any Lithuanian citizen, which has rarely been discussed. The **first intelligence agency of independent Lithuania was established under the military on 27 October 1918.** At the time the Armed Forces was the only guarantee of Lithuania's national security and the secret service that operated under the military gradually became a well organised intelligence agency.

L'antiterrorisme belge
Le Soir, Ludivine Ponciau, 2016 10 27
Bruxelles - Un **rapport d'experts évalue l'efficacité des mesures antiterroristes**. La **Belgique** a **sous-estimé l'intérêt de la lutte contre le financement du terrorisme**. Au-delà des sommes en jeu, ces données financières auraient pu faire avancer bien des enquêtes. Près d'un an après les attentats de Paris, l'Institut Egmont publie une évaluation des mesures préventives et répressives prises en matière de lutte contre le terrorisme depuis les attentats de

Charlie Hebdo par sept experts issus du monde académique. Un rapport assez sévère pour le gouvernement Michel et dont Le Soir a pu prendre connaissance. L'un des volets du rapport pointe l'inertie dont a fait preuve la Belgique en matière de lutte contre le financement du terrorisme alors que « la quête de l'argent est vitale pour les terroristes », souligne France Lemeunier, coauteure du rapport.

La piste des services secrets se confirme
Le Quotidien (Luxembourg), 2016 10 26
La Valette, Malte— **Parmi les cinq occupants qui ont trouvé la mort dans le crash d'un avion de la compagnie luxembourgeoise CAE Aviation, lundi à Malte, trois étaient des membres de la direction technique de la DGSE (Direction générale de la sécurité extérieure), les services secrets français,** ont rapporté des médias français hier, dont Le Monde. L'information n'a pas été officiellement confirmée par les autorités françaises qui s'étaient contentées lundi de reconnaître que l'appareil effectuait des missions de reconnaissance en Méditerranée pour le compte du ministère de la Défense. Les deux autres victimes de l'accident, pilote et copilote, étaient des salariés de CAE Aviation. La société, fondée en 1971, est établie au Findel et possède également une implantation à Lapalisse, dans le département français de l'Allier, où elle assure l'entraînement au parachutisme des forces spéciales de plusieurs armées européennes.

Le crash de Malte lève un coin de voile sur les vols de la DGSE
Le Monde, Jacques Follorou, 2016 10 26
Malte - **Un avion ALSR (avion léger de surveillance et de reconnaissance), loué par la Direction générale de la sécurité extérieure (DGSE) à la société CAE aviation, s'est écrasé**, lundi 24 octobre au matin, à Malte, juste après le décollage. Les cinq occupants, trois personnels de la direction technique de la DGSE et deux pilotes de CAE, sont morts dans l'embrasement de l'appareil, après avoir tenté, en vain, de revenir vers l'aéroport. Les autorités maltaises pensaient qu'il s'agissait d'un aéronef utilisé, depuis cinq mois, par les douanes françaises " pour surveiller les trafics " . Mais le **ministère de la défense français a dû finir par reconnaître, laconique, que l'avion " effectuait des missions de reconnaissance en Méditerranée " et que trois victimes appartenaient à son effectif.**

Montenegro investigating Russian role in alleged election coup plot
The Guardian, Julian Borger, 2016 10 25
London— **Montenegro's prime minister has said his government is investigating a possible Russian role in an alleged 16 October coup plot aiming at derailing the country's elections**.Milo Djukanovic said that there was a " strong connection of a foreign factor" in the alleged conspiracy to take over the Montenegrin parliament on election day, adding that the country's authorities would investigate the extent of involvement of both Russia and Serbia. **Twenty people, including the former commander of special police in neighbouring Serbia, were arrested on the day of the would-be coup attempt**. The Serbian prime minister, Aleksandar Vucic, announced on Monday night that Serbian police had made more arrests of people suspected of following Djukanovic and planning unspecified crimes in Montenegro. **Russia's security chief, Nikolai Patrushev, was expected in Belgrade to hold talks with Serbian leaders in the wake of the arrests**, according to reports from the Serbian capital. Those reports said Patrushev had come to discuss terrorism, the migrant crisis in Europe, and alleged extremism in Kosovo. Adding to the febrile atmosphere, the Serbian government announced that an **interior ministry official had been arrested for contacts with western intelligence.** The interior minister, Nebojsa Stefanovic, said the authorities had "neutralized this person through effective action" but gave no further details.

Intelligence minister says military diplomacy is important
Tehran Times, 2016 10 31
Tehran - The **Iranian intelligence minister on Sunday said military diplomacy is important in international calculations. Mahmoud Alavi** made the remarks while addressing a conference featuring Iran's military attachés and defense and police representatives of the armed forces. "Military attachés, as well as defense and police representatives of the Islamic Republic of Iran, play an important role in preserving the achievements and national interests of the country," Alavi noted. He added, "They also use every opportunity and seek to reduce regional threats against our country."

The KGB's long history of running agents in Israel
Jerusalem Post, Yossi Melman, 2016 10 28
Jerusalem - Researchers, historians, **Shin Bet counter-espionage operatives and even the broader public did not need Israeli daily newspaper YediotAharonot's exposé this week about Israeli Soviet spies in order to know that Soviet intelligence** tried and succeeded in penetrating into the heart of Israel's diplomatic-security-intelligence establishment. The depth of the penetration by the Soviet Union's **KGB and GRU** (military intelligence), or of the intelligence services of communist satellite states, has been testified to by a long line of agents who were convicted in Israel from the 1950s through to the 1990s. It is a long and impressive list of "moles," quality agents that penetrated every important department in Israel. These are the serious and important spies that caused the most damage to the **Israeli defense and intelligence establishment**. I

Secret Files Expose KGB Spies in Israel's Top Political and Military Echelon
Haaretz, OferAderet, 2016 10 27
Jerusalem - The **KGB**, Russia's espionage organization, **recruited and ran spies among Israel's Knesset members, senior army officers and intelligence community**, as well as lower-level workers on classified projects, according to an investigation by journalist Ronen Bergman. The first part of his investigation will be published by YediothAhronoth on Friday. The report is based on secret KGB documents copied over decades by an archivist at the spy organization, VasiliMitrokhin, from the 1960s to the 1980s. He defected to Britain in 1992 and gave the documents to British intelligence. Some were published in books and the press over decades, triggering an international uproar as KGB agents operating in the United States, Britain and other countries were outed by name. Mitrokhin died in Britain in 2004. Half a year ago, the British espionage agency MI6 agreed to the publication of additional parts of the archive Mitrokhin left behind, in which Bergman found material on KGB activity in Israel.

Iran spy chief questioned after letting gay US politician into country
Jerusalem Post, Benjamin Weinthal, 2016 10 27
Jerusalem - **Iran's top spymaster was harshly criticized by the country's parliament on Wednesday after it was discovered that he secretly invited an openly-gay American politician to the Islamic Republic,** according to Al-Arabiya. Under questioning, Intelligence Minister **Mahmoud Alavi** confirmed that Democratic Utah State Senator **Jim Dabakis** had traveled to the country last month and "was kept under full surveillance during his secret visit." Homosexuality in Iran is against the law and is punishable by imprisonment, corporal

punishment, or by execution. Alavi also noted that no one had objected to Dabakis' previous visit to Iran in 2010, when former president Mahmoud Ahmedinejad, whose government was supported by hardliners, was in power, Al-Arabiya reported.

Agents Trail Utah Senator Who's Gay on Iran Visit
New York Times, Rick Gladstone, 2016 10 26
New York - **Iran's intelligence minister normally does not find himself on the receiving end of criticism by fellow hard-liners asking how he could possibly have overlooked a visit by a gay state legislator from the United States**. But that is what happened on Tuesday in Iran's Parliament, where the minister, **Mahmoud Alawi, faced tough questioning about a six-day visit this summer by Jim Dabakis, a state senator** from Utah and the Democratic Party's state chairman, who is gay. Mr. Alawi's answer: His agents knew the visitor's every move. "The minister made it clear that the American politician was kept under surveillance by the intelligence forces during his stay in Iran," the official Tasnim News Agency said in its report about Mr. Alawi's parliamentary testimony. Tasnim made no reference in its report to Mr. Dabakis's sexual orientation. Tasnim said the minister had "assured the lawmakers that all schemes with the aim of making inroads into Iran are under control of the intelligence forces." Mr. Alawi's disclosure was news to Mr. Dabakis, an art dealer in Salt Lake City who has advocated cultural exchanges between the United States and Iran to ease the countries' decades-old estrangement. He also visited Iran in 2010. **"I'm just surprised that Iranian intelligence doesn't have anything better to do,"** Mr. Dabakis said in a telephone interview.

Seoul, Tokyo hold talks on intelligence-sharing pact
Yonhap News Agency, Staff reporter, 2016 11 01
Seoul - **South Korea and Japan held working-level talks in Tokyo Tuesday to reach an understanding on an intelligence-sharing pact that could allow the neighbors to better cope with North Korea's evolving nuclear and missile threats**, the defense ministry said. "The two sides resumed talks based on the terms they tentatively agreed to in 2012 and discussed a wide range of issues such as future meeting schedules and agendas," the Ministry of National Defense said in a statement. The next gathering will be decided through consultations with Japan, it said. Last week, the two neighbors agreed to reopen talks on a bilateral General **Security of Military Information Agreement** (GSOMIA), with the goal of concluding the pact by the end of the year. The U.S. welcomed the decision, saying the potential deal between its two Asian allies would bolster cooperation amid growing threats posed by Pyongyang. The communist regime has escalated saber-rattling with its nuclear and missile development programs. It conducted two nuclear tests and launched a series of missiles this year.

Samajwadi MP's aide was spying for Pakistan
Press Trust of India, 2016 10 31
New Delhi - **Samajwadi Party's Rajya Sabha MP MunavvarSaleem's personal assistant Farhat Khan, who was arrested on Saturday in connection with the espionage racket**, was in touch with **Pakistani intelligence operatives** for the last 18 years and **was leaking sensitive documents and information, police** said. "Farhat Khan was in touch with Pakistani intelligence operatives for the last 18 years. He used to be paid Rs. 20,000 for the information

and documents he shared with them," said a senior police officer. Farhat had worked with other SP leaders before he became Mr. Saleem's PA around 10-11 months back, the officer said. Since he was working with a Rajya Sabha MP, he was privy to a lot of information pertaining to Government of India and documents, he said.

Al-Qaeda leader targeted in Afghanistan kept low profile but worried spies
Washington Post, Wesley Morgan, 2016 10 30
Kabul - When Army Capt. Hugh Miller heard a group of police officers trading stories about a militant called **Farouq al-Qahtani** at their base in Afghanistan's Konar province one day four years ago, he didn't know what all the fuss was about. "I don't think I even sent a report up about it," Miller, who was deployed as a combat adviser at the time, said in a recent interview. "I didn't know the guy was a big deal." **Qahtani, a Saudi native with a Qatari passport whose real name was Nayef Salam Muhammad Ujaym al-Hababi, was targeted on Oct. 23** in an airstrike in Konar's remote Helgal valley, the Pentagon announced Wednesday. Little-known outside **counterterrorism circles**, he was indeed a big deal: Though only in his mid- 30s, Qahtani was thought to be the senior al-Qaeda operative remaining in Afghanistan at a time when many of the group's bigwigs had decamped for Syria, and U.S. government documents suggest he may have been involved in plotting attacks abroad. Konar and neighboring Nuristan, which blend together in the jagged 12,000-foot mountains that Qahtani has frequented for the past six years, have been the scene of some of the costliest and most publicized episodes of the American war in Afghanistan: **Operation Red Wings**, where 19 Special Operations members were killed; the many firefights in the infamous Korengal valley, where the documentary "Restrepo" was filmed; the battles of Wanat and Ganjgal, which led to both acrimonious investigations and high-profile awards for combat heroism.

Information minister relieved of his office
Dawn, Amir Wasim, 2016 10 30
Karachi— **Senator Pervaiz Rashid has been relieved of his responsibilities as the federal minister for Information, Broadcasting and National Heritage**. According to a handout issued by the PM Office on Saturday, the information minister **was held responsible for a "lapse"** following the controversy in the wake of a news report published in Dawn, which both the government and the military termed a breach of national security. There has been an uproar in the country since the publication of the story 'Act against militants or face international isolation, civilians tell military' in Dawn on Oct 6, which gave details of an undisclosed meeting attended by a large number of civilian officials, including the prime minister, three chief ministers, the foreign secretary and officials from civil and military intelligence agencies. Saturday's handout noted that the minister was "directed to step down from office to enable holding of an independent and detailed inquiry". "**An inquiry committee including senior officers of Inter-Services Intelligence (ISI), Military Intelligence (MI) and Intelligence Bureau (IB) is being formed by the government to clearly apportion blame**..", the statement said. However, it was not clear who from within the government is going to head the committee.

Rajnath Singh asks Home Secretary to closely monitor spying case
Web India News, 2016 10 29
New Delhi - **Union Home Minister Rajnath Singh has ordered Home Secretary Rajiv Mehrishi to closely monitor the case in which Delhi Police have arrested ISI agents spying for Pakistan** in India and to report the Minister accordingly. These spy agents have developed a big nexus in the country and have been carrying out espionage activities in India by passing defence secret documents and maps to ISI. Intelligence sources said that their arrest has revealed that very vital documents and maps have reportedly been leaked to Pakistan

intelligence agency ISI which could be dangerous for Indian security system at borders. Seeing the gravity of the situation, the Home Ministry has ordered to increase the deployment of more battalions across Indo-Pak borders in Rajasthan as well.

Pak govt sacks minister over news report on rift with army
Press Trust of India, 2016 10 29
Lahore— The **Pakistan government today sacked Information Minister Pervaiz Rashid over the recent "leaked" media report about a rift between the civilian and military leaderships** on support to militancy. The Prime Minister's spokesman Musadiq Malik confirmed that "initial evidence" was against Rashid in the **leak of sensitive information of a high profile national security meeting**. "Investigation into controversial story is in the final stage and it will be shared with media in a couple of days. Who was responsible for the leakage of sensitive information to the Dawn reporter will be known soon," Malik said adding "investigation is still underway". Rashid is a close aide of Prime Minister Nawaz Sharif and reports suggest that the anti-army information could not have been leaked to the media without his consent.

Espionage case: Pak official held, expelled for spying; ties take another hit
Times of India, Staff Report, 2016 10 28
New Delhi - The already dim prospects of any improvement in India- Pakistan relations were dealt another blow on Thursday with **Delhi Police busting an espionage ring whose 'kingpin' is a Pakistan high commission official.** The government declared Mehmood Akhtar persona non grata after he was nabbed buying classified documents from **two men from Rajasthan at the Delhi zoo.** Indian officials found that Akhtar enjoyed immunity even though he wasn't a diplomatic passport holder. Besides **MaulanaRamzan Khan and SubhashJangid** who were nabbed from the zoo, Akhtar was in touch with Shoaib from Rajasthan. An FIR under Sections 3 and 5 of the Official Secrets Act has been registered against the accused, joint commissioner (crime) Ravindra Yadav said.

India Says Visa Officer Was a Spy for Pakistan
New York Times, Ellen Barry, 2016 10 28
New Delhi - **India** announced on Thursday that it was **expelling a Pakistani officer at the country's diplomatic mission in New Delhi**, accusing him of using his consular position to develop an **espionage ring**, a move likely to worsen tensions between the nuclear-armed neighbors. The Delhi police said the officer, Mehmood Akhtar, had served for more than two years in the mission's visa section, which they said had allowed him to recruit Indian citizens to spy for Pakistan. A statement from the Pakistani Foreign Ministry rejected the accusations as "false and unsubstantiated." In a tit-for-tat announcement Thursday evening, Pakistan announced it would expel an Indian official posted in Islamabad, giving his family 48 hours to leave the country.

S. Korean opposition party voices against intelligence sharing with Japan
Xinhua News Agency, YooSeungki, 2016 10 28
Seoul - **South Korean main opposition Minjoo Party on Friday expressed its strong objection to the resumption of talks with Japan to share military intelligence on the Democratic People's Republic of Korea (DPRK).** Woo Sang-ho, floor leader of the party, said at a supreme council meeting that it can never be accepted to militarily join hands with Japan which has yet to sincerely repent over its past atrocities during the World War Two and its colonization of the Korean peninsula from 1910 to 1945. He said the adoption of the military intelligence-sharing accord between Seoul and Tokyo will prop up Japan's militaristic ambition, urging the South Korean government to stop the talks which will make people enrage again.

South Korea Plans to Revive Talks With Japan on Sharing Intelligence
New York Times, Choe Sang-Hun, 2016 10 28
Seoul - **South Korea said on Thursday that it would restart talks with Japan about a military intelligence-sharing pact**, four years after a similar agreement was canceled in the face of a domestic furor. Officials at the Defense Ministry said in a news briefing on Thursday that such an agreement would allow South Korea to better address the growing nuclear and missile threats from North Korea. The South hopes to sign a deal by the end of the year, the officials said. The United States has also pressed Japan and South Korea, its allies, to increase military cooperation so that the three countries could more effectively work together to monitor and confront the military threats from the North.

Seoul, Japan to resume talks on exchange of military intelligence
Yonhap News Agency, Staff reporter, 2016 10 27
Seoul - **South Korea and Japan have agreed to resume talks for the exchange of military intelligence on North Korea's nuclear development programs**, their foreign ministries said Thursday. "The decision came to resume talks that would allow the two countries to exchange military intelligence in the face of unprecedented nuclear and missile threats from North Korea," **Seoul's Vice Foreign Minister Lim Sung-nam** said in a press conference in Tokyo. His **Japanese counterpart Shinsuke Sugiyama** said Tokyo will sincerely respond to the decision. "Military threats posed by North Korea (to neighboring countries) are now entering another elevated level. We need to make a response different from previous ones," he said. Chief Cabinet Secretary YoshihideSuga stressed the need for Seoul and Tokyo to increase security-related cooperation to better counter the North's increasing threats.

Draft of new counter-terror law triggers old fears in Sri Lanka
The Hindu, Meera Srinivasan, 2016 10 27
Colombo - **Even as Sri Lanka drafts a new law to counter terrorism, human rights activists and lawyers here fear it might be worse than the Prevention of Terrorism Act (PTA)** they want repealed and replaced. One of the key demands around regime change in Sri Lanka in January 2015 -- when former President Mahinda Rajapaksa was unseated --was to repeal the PTA. "After the new government came to power, all of us expected a shift, but now people are disappointed," says senior human rights lawyer K.S. Ratnavale.

RAW, NDS patronising terror groups in Afghanistan, national security adviser tells US envoy
Pakistan Dawn, Sanaullah Khan, 2016 10 27
Islamabad - **Pakistan on Wednesday conveyed to the United States that India's Research and Analysis Wing (RAW) and Afghanistan's National Directorate of Security (NDS) are patronising terrorists groups to attack soft targets in the country**. **National Security Adviser Lt Gen (retd) Nasser Khan Janjua** conveyed the message to **US ambassador David Hale** in a meeting today, said the statement released by the office of the NSA. The meeting was held to discuss the terrorist attack on Police Training College Quetta, counter-terrorism operations and cross-border attacks. Janjua also emphasised on the need to break the nexus between terrorists groups operation under the **supervision of NDS and RAW**. Pakistan has asked for US assistance to tackle the situation. The NSA informed the ambassador that the terrorists who attacked the police training college were constantly in contact with their leadership and handlers in Afghanistan.

Efforts to get N. Korea to denuclearize 'probably a lost cause': U.S. intelligence chief
Yonhap News Agency, Chang Jae-soon, 2016 10 26

Washington/Seoul - **Any effort to get North Korea to give up its nuclear program "is probably a lost cause"** and putting a cap on the regime's nuclear capabilities is the "best we could probably hope for," the U.S. intelligence chief said Tuesday. "I think the notion of getting the North Koreans to denuclearize is probably a lost cause. That is their ticket to their survival. I got a good taste of that when I was there about how the world looks from their vantage and they're under siege and they're very paranoid," **Director of National Intelligence James Clapper said during a Council on Foreign Relations discussion**. He was referring to his 2014 visit to Pyongyang to win the release of two detained Americans. "So the notion of giving up their nuclear capability, whatever it is, is a nonstarter with them ... The best we could probably hope for is some sort of a cap, but they're not going to do that just because we ask them. There's going to have to be some significant inducements," he said during the event in New York that was live-streamed on the CFR's website.

Lancement à Tunis du centre Tunisien de recherches et d'études sur le terrorisme
African Manager (Tunisie), Journaliste maison, 2016 10 26
Tunis - Le **forum tunisien pour les droits économiques et sociaux (FTDES) a annoncé, mercredi, le lancement du Centre Tunisien de Recherches et d'Etudes sur le Terrorisme (CTRET).** Lors d'une conférence organisée à Tunis pour présenter cette nouvelle structure et annoncer les résultats de sa première étude, Abderra**hmane Hedhili**, président du FTDES a souligné que le centre aura pour mission la réalisation des études visant à analyser le phénomène du terrorisme et à connaître ses différents mécanismes et son développement afin de réfléchir à des solutions anticipées pouvant réduire la prolifération de ce fléau à long terme. Hedhili a indiqué que depuis la révolution à ce jour, des milliers de jeunes sans emploi ont émigré clandestinement alors que d'autres ont été attirés par les réseaux terroristes et de contrebande. "

Venezuelan business owner denounces gov't "harassment" of his family
EFE News Service, 2016 11 01
Caracas— **Lorenzo Mendoza, president of Empresas Polar, the largest private food company in Venezuela, denounced Monday what he considered the "harassment" by the government intelligence service** of himself, his family and the more than 30,000 employees of his company. "I wish to reject as strongly as possible the harassment and persecution of which I am the victim - I, my workers and my family - by the political police of the **Sebin" national intelligence service**, Mendoza told reporters at Polar headquarters on the east side of Caracas. The statement came four days after a group of Sebin agents, armed with assault rifles and wearing ski masks, were stationed outside the company's headquarters and around his home. According to Polar, they are still there. Mendoza believes the agents' presence is unjustified and, to the contrary, is part of an organized intimidation process that the government has been developing against him "for several years now."

Venezuela food company Polar denounces harassment by intelligence agents
Reuters, 2016 11 01
Caracas— **Venezuelan food company Polar, the South American nation's largest private firm, on Monday denounced harassment by state intelligence agents** who have been stationed at the gates of its headquarters since late last week. Lorenzo Mendoza, owner of the conglomerate, said armed and masked officers from the **Sebin intelligence agency** have also been stationed outside his residence for no apparent reason. "I simply wanted to make this statement to reject the persecution and harassment that my workers, my family, and I have been subjected to by the political police," said Mendoza, surrounded by cheering workers, in comments to reporters. The agents were stationed outside the company's headquarters after the opposition coalition announced a one-day strike for Friday to demand a recall referendum on the rule of Maduro, who is struggling to control an unraveling socialist economy. **Reuters was unable to obtain comment from the office of the vice presidency, which oversees Sebin**

La GRC et la surveillance des journalistes: rien de rassurant
L'Actualité, Alec Castonguay, 2016 11 08
Ottawa - Est-ce que la GRC a déjà espionné des journalistes, à l'image du SPVM et de la SQ? À Ottawa, depuis une semaine, c'est le festival du faux-fuyant pour ne pas répondre. Depuis les révélations sur la surveillance des journalistes par la police de Montréal et la Sûreté du Québec, la réaction du gouvernement Trudeau a de quoi rendre perplexe. Et inquiet. Même si le premier ministre et ses ministres répètent que la liberté de la presse est un pilier «essentiel pour une démocratie qui fonctionne bien et une société libre», et qu'ils suivent cette situation de près, ils se comportent davantage comme un gouvernement qui souhaite que la controverse ne franchisse pas la rivière des Outaouais. Le ministre de la Sécurité publique, **Ralph Goodale, qualifie la surveillance des journalistes au Québec de «très inquiétante», mais il ne cherche pas à faire toute la lumière sur les agissements passés de la GRC et du Service canadien du renseignement de sécurité (SCRS), qui sont sous sa responsabilité**. En août 2007, des policiers de la GRC ont pris en filature pendant neuf jours le journaliste de La Presse, **Joël-Denis Bellavance**, afin de tenter de coincer la source qui lui avait remis un document secret du **SCRS** concernant **Adil Charkaoui**. Les enquêteurs s'étaient toutefois fait refuser l'interception des numéros entrants et sortants de son téléphone cellulaire, une mesure jugée trop intrusive dans sa vie et son travail.

More than 10,000 document security incidents in Trudeau government's 1st year
CBC News, Staff reporter, 2016 11 08
Ottawa - **There have been more than 10,000 incidents of classified or secure documents being improperly left or stored since Prime Minister Justin Trudeau's government came to office.** According to a document quietly tabled in the House of Commons, the highest number of incidents took place in Public Services and Procurement Canada, which reported 2,912 cases of documents not handled according to the security level dictated for the documents between Nov. 4, 2015, and Sept. 19, 2016. The Global Affairs Department was a close second with 2,712 incidents. The **Canadian Security Intelligence Service, Canada's spy agency, came third with 659 cases.** The agency said 12 of the incidents were sent for further investigation. It is not known whether any of the incidents led to security or privacy breaches.. Public Safety Minister Ralph Goodale's office had six cases during the time frame covered by the government's answer. In total, the **Public Safety Department had 272 incidents**. While the **Communications Security Establishment**, which conducts electronic monitoring and surveillance, reported 491 incidents, it was quick to point out that its operations are carried out in a high-security zone and none of the documents left the building.

RCMP intelligence centre compiled list of 89 Indigenous rights activists considered "threats"
APTN National News, Jorge Barrera, 2016 11 08
Ottawa—Rattled by Idle No More and Mi'kmaq-led anti-shale gas demonstrations, the **RCMP compiled a list of 89 individuals considered "threats" as part of an operation aimed at improving the federal police force's intelligence capacity when facing Indigenous rights demonstrations, according to an internal intelligence repor**t. The operation, dubbed **Project SITKA**, was launched in early 2014 to identify key individuals "willing and capable of utilizing unlawful tactics" during Indigenous rights demonstrations, according to the RCMP report, obtained under the Access to Information Act by two researchers working on a book about state

surveillance of Indigenous peoples. The intelligence report was to provide a "snapshot of individual threats associated to Aboriginal public order events" for that year. The report, completed in 2015 by the **Mounties' National Intelligence Coordination Centre**, recommended the RCMP remove Indigenous rights activism from the terrorism-extremism umbrella and instead create a new category for intelligence gathering on the issue. The report also recommended the RCMP maintain updated profiles on identified Indigenous rights activists in police databases. The researchers obtained the RCMP report in an Access to Information request package from the **Canadian Security Intelligence Service** (CSIS). The RCMP did not provide comment on the report as of this article's posting. CSIS did not respond to a request for comment.

MPs question PM's power over upcoming National Security Committee
Hill Times, Rachel Aiello, 2016 11 07
Ottawa - The **government's bill proposing the establishment of a new National Security and Intelligence Committee of Parliamentarians needs to be amended to give its members more access to information and lessen the prime minister's ability to interfere**, Parliamentarians heard last week. The proposed committee under Bill C-22 is mandated to review activities carried out by any department that relates to national security or intelligence and report annually on its reviews and findings. Unlike other parliamentary committees, this one would report directly to the prime minister, members would require a security clearance, and all meetings would be held in private. In addition, the chair--who the PMO announced in January to be Liberal MP David McGuinty (Ottawa South, Ont.)--would receive a $42,000 "additional annual allowance" and the up to eight members will be paid an extra $11,900, which is the going rate for chairs of House of Commons committees. As it's drafted, the new committee would have less teeth than other federal security expert bodies, have a narrower scope of access to information, and the prime minister would be able to veto studies or redact the committee's reports at his discretion if there's something judged to be potentially jeopardizing national security. During the first two days dedicated to Bill C-22 at the House Public Safety and National Security Committee, members heard from Public Safety and National Security Minister Ralph Goodale (Regina-Wascana, Sask.), Government House Leader BardishChagger (Waterloo, Ont.); their top advisers; **the heads of Canada's security agencies, the RCMP, CSIS, CBSA, and CSE; and top experts and past watchdogs**.

CSIS claims it has been transparent with ministers about data collection
Globe and Mail, Colin Freeze, 2016 11 07
Ottawa - **Facing fallout from judges complaining of being kept in the dark over some of its activities, Canada's domestic spy agency says its officials always keep CSIS's political masters and watchdogs aware of what it is doing**. In a rare public statement, the director of the **Canadian Security Intelligence Service** says that his predecessors briefed ministers several times over the past decade about the kinds of data collection done within what CSIS calls its "Operational Data-Analysis Centre." "The creation of **ODAC** ... was presented to the Minister of Public Safety in July, 2006, explaining the requirement for advanced analytics and the ability of ODAC to retain data, including metadata, for extended periods of time," **Michel Coulombe** said in a statement released Sunday. "The minister was also briefed on the program in March, 2010." His remarks come days after the Federal Court released a scathing ruling faulting CSIS for unlawful data retention and not being forthright with judges. CSIS's current minister, Ralph Goodale, has also since complained of lax record keeping by the spy agency. Most Canadians had never heard of the ODAC intelligence facility until last week. While much remains murky, it appears to be a repository of all kinds of data that federal intelligence analysts can study in attempts to predict, or better understand, security threats.

Head of CSIS argues data was collected legally, but accepts Federal Court ruling
The Canadian Press, Joanna Smith, 2016 11 06
Ottawa - The **head of the Canadian Security Intelligence Service says he wants to make sure everyone understands the spy service did not deliberately do anything wrong when it kept potentially revealing electronic data about people who posed no security threat**. ``CSIS recognizes the importance of maintaining public trust and confidence in its activities," its director, **Michel Coulombe**, said in a statement issued Sunday. The statement was an unusual step for the head of the spy agency, which characterized it partly as a response to the media coverage that followed a Federal Court decision released publicly last week, when Justice Simon Noel ruled CSIS had violated the law by keeping the personal data over a 10-year period. Coulombe said he wanted to reiterate that the data was collected legally using warrants and that the spy agency, in consultation with the Justice Department, had interpreted the CSIS Act in a way that allowed them to retain the data in the way they did. ``The Federal Court has disagreed with this interpretation and we accept their decision. I would like to make it clear that the Service was not knowingly exceeding the scope of the CSIS Act," Coulombe wrote. The judge said that in 2006, CSIS began processing the data, using a powerful program known as the Operational Data Analysis Centre to produce intelligence that is able to reveal specific, intimate details about people.

Federal security review to examine CSIS powers in the digital age, Goodale says
Canadian Press, Jim Bronskill, 2016 11 05
Ottawa - A **federal review of national security will consider whether Canada's spy service should be able to sift through the kind of personal data it kept illegally for years, says Public Safety Minister Ralph Goodale**. Goodale said Friday the notion that the Canadian Security Intelligence Service should avoid stashing away information about innocent people is a ``fundamental principle of Canadian privacy." But the minister appeared to leave the door open to one day giving CSIS the legal authority to keep and analyze electronic data about individuals who do not pose a security threat. He indicated the federal security review already under way would be a good forum to explore the matter. ``I want to hear the professional advice on both sides," Goodale told a news conference in the foyer of the House of Commons. ``I'm not pre-empting the consultation." A Federal Court judge says CSIS violated the law over a 10-year period by keeping potentially revealing electronic data about people who were not targets of investigation. In a pointed ruling made public Thursday, Justice Simon Noel said CSIS breached its duty to inform the court of its data- collection program, since the information was gathered using judicial warrants. In a hastily assembled news conference Thursday after the decision become public, **CSIS director Michel Coulombe** said the spy service had halted all access to, and analysis of, the data in question while it thoroughly reviews the court decision. Goodale said he became aware of the ``full scope of the issue" when the court judgment was made available to him in preliminary form a couple of weeks ago.

Espionnage de journalistes - Ottawa ferme les yeux sur le passé
Le Devoir, Guillaume Bourgault-Côté, 2016 11 05
Ottawa - **Aucun journaliste n'est actuellement surveillé par la GRC et le SCRS... mais Ottawa n'a pas idée si cette situation a pu se produire dans un passé récent. Le ministre de la Sécurité publique, Ralph Goodale**, ne l'a pas demandé. Et il n'a pas l'intention de le faire : c'est le présent qui compte, dit-il. Pour M. Goodale, " la question porte sur ce qui se passe maintenant et nous pouvons offrir l'assurance que ce genre d'activité n'a pas lieu. Je ne sais rien sur les événements qui se sont produits lorsque nous [les libéraux] ne formions pas le gouvernement ", a indiqué le ministre en point de presse. Questionné à savoir s'il demanderait directement au patron du Service canadien du renseignement de sécurité (SCRS) si des mandats de surveillance ont pu être lancés dans les cinq dernières années, Ralph Goodale a

répondu que c'était précisément la " responsabilité du directeur de répondre aux questions opérationnelles ". Or, interrogé la veille à savoir si le SCRS a pu mettre des journalistes sous surveillance dans les dix dernières années, le directeur en question -- **Michel Coulombe** - - avait répondu : " Ce qui s'est passé au Québec ne se produit pas au niveau fédéral. Je ne commenterai pas plus que cela et je ne commenterai pas des questions opérationnelles. " Il avait ajouté qu'à " cause des mesures en place au niveau fédéral, une situation comme on voit présentement au Québec ne s'est pas produite et ne se produira [pas] ".

Civilian watchdog defends CSIS and embattled director over 'metadata'
Toronto Star, TondaMacCharles and Alex Boutilier, 2016 11 05
Ottawa - **Michel Coulombe, Canada's top spy, is in deep trouble with the courts and his political boss, Public Safety Minister Ralph Goodale, over revelations CSIS kept a decade's worth of data on Canadians who are no threat to national security. But Pierre Blais, head of the civilian watchdog agency over CSIS, says Coulombe "acted in good faith" and should not lose his job over the affair.** "He's doing a good job. And that's a difficult issue, that we have to act as big girls and big boys and we look at this and we should do the best for the future," said Blais, chair of the Security Intelligence Review Committee (SIRC). Blais came to Coulombe'sdefence Friday, saying CSIS and its director did not deliberately lie to the court about a practice that SIRC red-flagged in an annual report tabled in January. That was the first time the Federal Court learned that CSIS had created an Operational Data Analysis Centre in 2006. CSIS and its lawyers were hauled before a panel of all Federal Court judges who handle national security warrants and cases last spring to explain.

Animal Rights Groups, the KKK, and ISIS--the RCMP's New Guide To Extremism
Vice News Canada, Justin Ling, 2016 11 05
Ottawa - For the past few years, the Canadian government has faced accusations that it's been asleep at the switch when it comes to stopping youth from being programmed by violent extremist groups. The **Royal Canadian Mounted Police are striking back at that notion with a 140-page guide to radicalization, extremist groups operating in Canada, and terrorist groups abroad. The agency's Terrorism and Violent Extremism Awareness Guide, which was officially unveiled in October,** "is intended for first responders, parents, colleagues or friends of persons at risk alike and is meant to help the reader to better understand and recognize the growing phenomenon of radicalization to violence." A large chunk of the report is just compiling resources on radicalization, offering different models that try to explain how someone might come around to violence and extremism based on their social, religious, and political beliefs. But the report also sheds light on exactly which domestic groups the RCMP are keeping an eye on. The report's language borrows heavily from internal security and intelligence assessments prepared by groups like the **Canadian Security Intelligence Service and the Integrated Terrorism Assessment Centre**. The federal police break those organizations down by three groups: right-wing extremists, left-wing extremists, and "sole motivation" ideologies.

Quebec Mounties seek to launch discrimination lawsuit against RCMP
iPolitics.ca, Amanda Connolly, 2016 11 05
Ottawa - The **association that represents RCMP members in Quebec is seeking to certify a class action lawsuit against the force on behalf of members across the country, alleging systemic harassment and discrimination against members by superiors**. "There's some cases that have been done privately but on behalf of all members, this has never been done," said Frederic Serre, media officer for the Quebec Mounted Police Members Association. "You're looking at power trips and unfortunately there's a lot of it within the force ... That's what we're trying to point out with this action." Serre said that although it's an association

representing Quebec Mounties that's seeking to launch the suit, the class action is meant to represent all RCMP members across Canada -- not just those in Quebec or francophones.

CSIS broke law by keeping sensitive metadata, Federal Court rules
Canadian Press, Jim Bronskill, 2016 11 04
Ottawa - A **Federal Court judge says Canada's spy agency illegally kept potentially revealing electronic data about people over a 10-year period.** In a hard-hitting ruling made public Thursday, **Justice Simon Noel** said the Canadian Security Intelligence Service breached its duty to inform the court of its data-collection program, since the information was gathered using judicial warrants. CSIS should not have retained the information since it was not directly related to threats to the security of Canada, the ruling said. ``Ultimately, the rule of law must prevail," Noel wrote, adding, ``without it, the actions of people and institutions cannot be trusted to accurately reflect the purpose they were entrusted to fulfil." CSIS crunched the data beginning in 2006 using a powerful program known as the Operational Data Analysis Centre to produce intelligence that can reveal specific, intimate details about people the spy service investigates, the judge said. The improperly retained material was metadata _ information associated with a communication, such as a telephone number or email address, but not the message itself. However, it is difficult to determine the precise nature of the metadata involved due to heavy redactions to the 126-page court ruling. At a hastily arranged news conference late Thursday, **CSIS director Michel Coulombe said the spy service had halted all access to, and analysis of, the data in question while it thoroughly reviews the court decision**. ``I deeply regret the court's serious concerns with respect to meeting our duty of candour, and I commit to continuing my efforts, with the deputy minister of justice, to address this concern," Coulombe said. Mosley said CSIS breached its duty of candour by failing to disclose that **CSE's foreign counterparts in the Five Eyes intelligence network _ the United States, Britain, Australia and New Zealand _** could be called upon to assist.

In scathing ruling, Federal Court says CSIS bulk data collection illegal
Globe and Mail, Colin Freeze, 2016 11 04
Ottawa - The **Federal Court of Canada faulted Canada's domestic spy agency Thursday for unlawfully amassing data, for misusing its surveillance warrants and for not being forthright with judges who authorize its intelligence programs**. The court is also revealing that CSIS no longer needs warrants to collect Canadians' tax records because of changes wrought by Bill C-51. The matter was said to involve the decade-long collection of volumes of data within the **Canadian Security Intelligence Service's little- known Operational Data Analysis Centre,** which the judges who scrutinize CSIS are characterizing as a hidden and unlawful repository of data amassed by the spy agency. The centre and the data within it are so secret that the Federal Court - which authorizes CSIS wiretapping bids - had no idea they existed. "The Court had never before been fully informed of the existence of the program. The Court, during the hearings, learned that the program had been in existence since 2006 yet it had never heard nor seen any evidence on the matter," reads a partly redacted new ruling from Federal Court **Judge Simon Noël**.." Public Safety Minister Ralph Goodale is currently consulting with Canadians on whether he needs to change the laws under which CSIS operates. He is also pitching Parliament on a new committee of MPs who could be given powers to investigate intelligence agencies. The Federal Court has now signalled it disagrees with this assessment. In recent years, CSIS's collection capabilities are thought to have been vastly increased by co- operation warrants that exist with the **Communications Security Establishment,** a federal spy agency that dredges global telecommunications data in bulk.

Les espions canadiens ont outrepassé leur mandat
TVA Nouvelles avec l'Agence QMI, Journaliste maison, 2016 11 03

Ottawa - **Le service d'espionnage canadien a outrepassé sa mission en conservant illégalement des informations sensibles recueillies en vertu de mandats, a tranché la Cour fédérale dans un jugement rendu public**, jeudi. En point de presse, **Michel Coulombe, le patron du Service canadien du renseignement de sécurité (SCRS) a dit prendre acte du verdict**. «Le SCRS accepte la décision de la cour et a pris des mesures immédiates pour y répondre», a-t-il déclaré. Je regrette profondément les graves préoccupations de la cour à l'égard de notre manquement quant à l'obligation de franchise.» Durant plusieurs années, le SCRS a caché à la Cour fédérale - qui est chargée de lui délivrer des mandats - l'existence d'un programme de récolte de métadonnées.

Feds hold Twitter consultation on national security
CTV.CA, Laura Payton, 2016 11 04
Ottawa - **Public Safety Canada held a Twitter chat Thursday night to hear what Canadians think about national security and its responsibility to Canadians**. The department in charge of the **RCMP, the Canadian Security Intelligence Service and its oversight body, and the Canada Border Services Agency** asked people to tweet them using the hashtag #YourNatlSec starting at 8 p.m. ET to discuss accountability in national security. The social media discussion comes the same week the House public safety committee is starting its review of bill C-22, which will amend some of the laws changed under the Conservatives' highly contentious C-51. The review also comes hours after a shocking revelation that CSIS held on to 10 years of electronic data it wasn't allowed to have. The metadata, which includes information like a telephone number or email address but not the content of a communication, wasn't directly related to national security threats. The Federal Court released a decision Thursday rebuking CSIS for keeping the information. **Public Safety Minister Ralph Goodale** didn't participate in the Twitter chat. New Democrat justice critic Murray Rankin says he wanted as many people as possible to participate.

Hillary Clinton was warned in 2010 that U.S.-Canada intelligence sharing 'may be controversial for Canadians'
Postmedia News, Zane Schwartz, 2016 11 04
Ottawa - **Huma Abedin warned Hillary Clinton in 2010 that cables from the U.S. Embassy in Ottawa could cause problems for Stephen Harper's government, emails released** Thursday show. "Two cables set for release contain especially sensitive information on counterterrorism and intelligence sharing. The depth of bilateral cooperation detailed in the cables may be controversial for Canadians," said longtime Clinton-advisor Abedin. Abedin's email was sent on Nov. 27 2010. On Nov. 29 the New York Times published a story detailing a 2008 **conversation between the former head of the Canadian Security Intelligence Service Jim Judd and senior State Department counsellor Eliot Cohen**. The story details a conversation where Judd told Cohen that Canada received warning the Taliban was planning an explosion at Sarpoza Prison in Kandahar but was unable to "get a handle on the timing." 'Everything we do is reviewed': Canadian security agency defends activities amid spying allegations This seemed to contradict a statement made by former chief of defence staff General Rick Hillier that: "Obviously we would have liked to have known so we could have pre-empted or helped, more accurately, the Afghans pre-empt that kind of thing." The significance of Canada's role in the Five Eyes alliance became clearer in 2013 when leaked information from whistle blower Edward Snowden showed that **Canada's Communications Security Establishment** set up covert spy posts in about twenty countries on behalf of the United State's National Security Agency .

In wake of Quebec incidents, PM has verified no reporters under watch at federal level
Toronto Star, Bruce Campion-Smith and TondaMacCharles, 2016 11 04

Ottawa - Revelations of police surveillance of journalists are "troubling" and could spark further measures to better safeguard the rights of the press, **Prime Minister Justin Trudeau** says. Trudeau **said he has verified no journalists are under surveillance "at the federal level" by the RCMP or CSIS,** and said Canadians are following "with concern" reports that Quebec's two largest police forces had been tracking the phones of several reporters in that province in recent years. "Not only is freedom of the press important, but it's one of the foundational safeguards of a free democracy, of a free society," Trudeau told a news conference Thursday. "This government understands that and understands how important it is to respect the media and the press," he said. Asked about Quebec police justifying the intrusive technique on the basis they sought to plug leaks, Trudeau said the "troubling" revelations of police snooping will lead to "reflection" on how governments can better ensure the protection of the press and the rights of journalists.**CSIS director Michel Coulombe** later echoed Trudeau's comments but refused to directly say whether Canada's spy agency has undertaken court-warranted interception of any Canadian journalist's communications, saying he would not talk about operational matters.

La GRC et le SCRS ne surveillent pas les journalistes, dit Trudeau
La Presse+, Joel Denis Bellavance, 2016 11 03
Ottawa - Se **disant préoccupé par les révélations au sujet des activités de surveillance menées par le Service de police de la ville de Montréal et la Sûreté du Québec auprès de journalistes, le premier ministre Justin Trudeau affirme avoir obtenu l'assurance de la part des patrons de la GRC et du SCRS qu'ils ne se livrent pas à de telles activités**. En mêlée de presse, jeudi, M. Trudeau a indiqué avoir pris l'initiative de communiquer avec le commissaire de la GRC, **Bob Paulson**, et le directeur du Service canadien du renseignement de sécurité (SCRS), **Michel Coulombe**, afin de s'assurer que les règles et les lois fédérales qui s'appliquent à ces deux organisations soient respectées.

Des francophones de la GRC intentent une action collective
Journal de Montréal, Michaël Nguyen, 2016 11 04
Westmount - Des **francophones de la Gendarmerie royale du Canada (GRC) veulent intenter une action collective contre leur employeur qu'ils accusent de discrimination**. Des membres et ex-membres francophones de la GRC, dont Paul Dupuis (en mortaise), veulent intenter une action collective contre la discrimination qu'ils disent avoir vécue. La plupart des policiers concernés viennent de la Division C, basée à Westmount. «Les opportunités d'avancement sont de beaucoup diminuées pour des policiers francophones, alors que dans l'autre sens, un unilingue anglophone peut accéder à un haut grade», s'insurge Paul Dupuis, un retraité de la police fédérale, à l'origine de ce recours.

Surveillance de journalistes : mutisme à la GRC et au SCRS
La Presse+, Vincent Brousseau-Pouliot, 2016 11 02
Ottawa - Alors que la SQ et la Ville de Montréal ont confirmé avoir mis des journalistes sous surveillance, **la GRC et le Service canadien du renseignement de sécurité (SCRS), les deux corps policiers fédéraux, ne veulent pas confirmer s'ils ont déjà adopté de telles pratiques**, et le cas échéant à quelle fréquence. La GRC précise seulement que «les cas où des enquêtes de la GRC concernant des journalistes ont eu lieu sont extrêmement rares». Le commissaire de la GRC Bob Paulson a dit mercredi «ne pas être au courant que nous avons des enquêtes actives ou de la surveillance à l'égard de journalistes», mais la GRC n'a pas voulu confirmer si des journalistes ont été surveillés dans le cadre de ses enquêtes. Un cas de filature avait été rendu public il y a un an, celui du journaliste de La Presse Joël-Denis Bellavance qui a été pris en filature en 2007.

Goodale ducks question about journalists under surveillance
iPolitics.ca, Staff reporter, 2016 11 02
Public Safety Minister **Ralph Goodale won't say how many Canadian journalists might be under police surveillance.** In question period today, NDP leader Tom Mulcair raised the case of Montreal journalist Patrick Lagacé -- who learned recently that police had been monitoring his phone calls and location through GPS in his cellphone as part of an internal police probe. At least 24 warrants were issued on Lagacé's phone. "'It's disgusting', as one of my colleagues said," Mulcair told the Commons, also citing the case of La Presse journalist Joel-Denis Bellavance, who has been tailed by police. Mounties followed Bellavance for nine days in 2007 in an attempt to track down a leak of classified documents. **"Can the minister of public safety tell us whether other journalists are being spied upon either by the police, the RCMP or CSIS?" Mulcair asked Goodale. Goodale skirted the question, saying only that the issue is "entirely in the jurisdiction of Quebec,** and this morning the premier of Quebec has made a very import pronouncement in that regard.

Cybersecurity talent shortage on the radar of government, business
CBC News, Julie Ireton, 2016 11 02
Ottawa--An **international shortage of cybersecurity talent is expected to grow over the next few years, according to the Information and Communications Technology Council**. The council's vice-president of talent innovation, **Sandra Saric**, said there's an expected need for more than 1.5 million people to work in cybersecurity globally by 2020. Solving the talent shortage was one of the challenges emphasized by government and private industry executives at a cybersecurity forum at the GTEC conference in Ottawa on Tuesday. It's an annual technology event that brings together business and government. "Getting more people to take science, technology, engineering and mathematics courses and degree programs, and also training them to be cybersecurity savvy is probably the first challenge," said **Scott Jones, assistant deputy minister responsible for the information technology security program with Communications Security Establishment Canada (CSEC).**

Ottawa falls short of real oversight for C-51 powers
The Province (Vancouver), Murray Rankin, 2016 11 02
Op-ed: Last year, former prime minister Stephen Harper's **Bill C-51** brought in controversial new security powers, despite the opposition of hundreds of thousands of Canadians and the advice of legal scholars and civil liberties organizations. Resisting calls from the NDP and others to repeal the law, the Liberal government has kept C-51 on the books. Under the legislation, the sharing of personal information between government agencies was **expanded, the Canadian Security Intelligence Service was given unprecedented powers to disrupt terrorist plots and a range of perceived security threats**, the right of police to preventively arrest people was expanded, and urging others to commit terrorism became a criminal offence. Now, Parliament is debating a proposal to plug a long-standing gap in our security architecture: Canada today stands alone among our closest allies in lacking independent, elected oversight of security and intelligence agencies. Unfortunately, **the government's plan falls short of giving Canadians a real watchdog for their rights and safety. Bill C-22 would create a committee without the powers, the independence and the public trust needed to get the job done**.

Chinese spies in a field of dreams; Seed case shows difficulty of fighting espionage
Los Angeles Times, Del Quentin Wilber, 2016 11 08
Washington - It was a chilly spring day when an Iowa farmer spotted something odd in his freshly planted cornfield: a short, bald Asian man on his knees, digging up seeds. Not just any seeds -- special inbred seeds, the product of years of secret research and millions of dollars in corporate investment, so confidential that not even the farmer knew exactly what he was growing. The farmer approached the trespasser, who grew flush and nervous, stammering something about being from a local university. When the farmer diverted his attention briefly to take a phone call, the stranger bolted to a waiting car and sped away. That curious encounter eventually led to an **exhaustive five-year federal investigation and prosecution into one of the most brazen examples of Chinese economic espionage against the U.S., a crime that annually costs American companies at least $150 billion**. The **FBI** pulled out all the stops to catch the spies. Agents obtained surveillance warrants from the nation's secret intelligence court, planted GPS-tracking devices on cars, trailed operatives from airplanes and bugged their phones. The investigation culminated last month with a three-year prison sentence for Mo Hailong, 47, a Chinese citizen and U.S. legal resident who works for a Chinese conglomerate. Even though the scheme was exposed, Chinese companies almost certainly got their hands on some of the lucrative seeds.

How the F.B.I. Reviewed Thousands of Emails in Eight Days
New York Times, Adam Goldman, Matt Apuzzo, 2016 11 08
Washington - Out of hundreds of thousands of emails seized last month from disgraced former Representative Anthony D. Weiner, a substantial number turned out to be copies of documents already reviewed by F.B.I. agents and analysts, allowing the agency to wrap up in days a review that some had feared would take weeks, if not longer. The F.B.I. discovered approximately 650,000 emails on a computer that agents had seized while investigating Mr. Weiner on allegations of sexual improprieties. Some of those emails belonged to Huma Abedin, Mr. Weiner's estranged wife and a top aide to Hillary Clinton. As **it turned out, law enforcement officials said, there was no need to review all of the emails, only Ms. Abedin's. Those emails numbered in the thousands, and even many of those were duplicates of messages that had been looked at previously, officials said. That allowed the F.B.I. to sort through the emails faster than many, including some at the agency, had expected.**

Amid Clinton Controversy, FBI Documents Show Why Americans Should Worry About Intelligence Gathering
The Intercept, Cora Currier, 2016 11 07
Washington - Two **internal policy documents obtained by The Intercept make clear that, whatever (FBI director James) Comey's motivations, his critics are right to worry about the bureau's mounting ambition and about the widening scope of its intelligence gathering**. Under Comey and the previous director Robert Mueller, the bureau has transformed its domestic intelligence operations in the name of fighting terrorism, building up an army of some 15,000 informants and deploying those informants in recent years not only for aggressive sting operations but also to collect intelligence not tied to any particular criminal case. The documents, one of which dates to August 2013, just before Comey was sworn in, clearly illustrate this transformation as they make the case that the FBI should maintain and expand its

human intelligence (or "**HUMINT**") efforts. They also show the FBI jostling for "primacy" with the CIA and other intelligence agencies. One memo, a "Domestic HUMINT Vision Proposal" from an advisory council to the FBI's Directorate of Intelligence, states that the FBI's "policies and procedures need to mirror those under which US Intelligence Community (USIC) partners operate." The advisory council stood up in 2011, according to the FBI's 9/11 Review Commission report, and the vision proposal, from references in the text, appears to date to some time after 2012.

F.B.I. Says Review Clears Clinton in Email Inquiry
New York Times, Multiple reporters, 2016 11 07
Washington - The F.B.I. director, **James B. Comey, told Congress on Sunday that he had seen no evidence in a recently discovered trove of emails to change his conclusion that Hillary Clinton should face no charges over her handling of classified information**. Mr. Comey's announcement, just two days before the election, was an effort to clear the cloud of suspicion he had publicly placed over her presidential campaign late last month when he alerted Congress that the F.B.I. would examine the emails. "Based on our review, we have not changed our conclusions that we expressed in July with respect to Secretary Clinton," Mr. Comey wrote in a letter to the leaders of several congressional committees. He said agents had reviewed all communications to and from Mrs. Clinton in the new trove from when she was secretary of state.

The Democratic National Committee Has Told the FBI It Found Evidence Its HQ Was Bugged
Motherjones, David Corn, 2016 11 05
Washington - In an episode reminiscent of Watergate, the **Democratic Party recently informed the FBI that it had collected evidence suggesting its Washington headquarters had been bugged, according to two Democratic National Committee officials who asked not to be named.** In September, according to these sources, the DNC hired a firm to conduct an electronic sweep of its offices. After Russian hackers had penetrated its email system and those of other Democratic targets, DNC officials believed it was prudent to scrutinize their offices. This examination found nothing unusual. In late October, after conservative activist James O'Keefe released a new set of hidden-camera videos targeting Democrats, interim party chairwoman Donna Brazile ordered up another sweep. There was a concern that Republican foes might have infiltrated the DNC offices, where volunteers were reporting to work on phone banks and other election activities.

The FBI looks like Trump's America
Politico.com, Josh Zeithz, 2016 11 05
Washington - The **typical Federal Bureau of Investigation special agent is white, male, and middle-aged, often with a military background -- in short, drawn from the segment of the U.S. population most likely to support GOP nominee Donald Trump**. That demographic reality explains much of the heat **FBI Director James Comey** is taking from his own work force at the moment for his handling of the Hillary Clinton email investigation and inquiries into the Clinton Foundation. Days before the presidential election, FBI finds itself at the center of a political maelstrom, with Comey being sharply criticized by Democratic presidential nominee Hillary Clinton and even President Barack Obama, who've faulted the FBI director for going public with word of new evidence in the Clinton email probe. That furor has exposed dissension in the FBI's ranks, prompting a flurry of leaks about alleged efforts to impede the Clinton-related inquiries and exposing lingering anger among agents about Comey's July decision not to recommend any charges in the email probe.

'He's got to get control of the ship again': How tensions at the FBI will persist after the election
Washington Post, Multiple reporters, 2016 11 04
Washington - **Deep divisions inside the FBI and the Justice Department over how to handle investigations dealing with Hillary Clinton will probably fester even after Tuesday's presidential election** and **pose a significant test for James B. Comey's leadership** of the nation's chief law enforcement agency. The internal dissension has exploded into public view recently with leaks to reporters about a feud over the Clinton Foundation, an extraordinary airing of the agency's infighting that comes as the bureau deals with an ongoing threat of terror at home and a newly aggressive posture from Russia. Comey, meanwhile, has come under direct fire for his decision to tell Congress that agents were resuming their investigation of Clinton's use of a private email server - a revelation that put him at odds with his Justice Department bosses and influenced the presidential campaign. **"He's got to get control of the ship again," said Robert Anderson, a former senior official in the FBI** who considers Comey a friend. "There's a lot of tension in the organization, and there's a lot of tension in Congress and the Senate right now, and all that counts toward how much people trust the FBI."

FBI examining fake documents targeting Clinton campaign: sources
Reuters, Staff report, 2016 11 04
Washington - The **FBI and U.S. intelligence agencies are examining faked documents aimed at discrediting the Hillary Clinton campaign as part of a broader investigation into what U.S. officials believe has been an attempt by Russia to disrupt the presidential election**, people with knowledge of the matter said. U.S. Senator Tom Carper, a Democrat on the Senate Homeland Security Committee, has referred one of the documents to the FBI for investigation on the grounds that his name and stationery were forged to appear authentic, some of the sources who had knowledge of that discussion said. In the letter identified as fake, Carper is quoted as writing to Clinton,

'The FBI is Trumpland': anti-Clinton atmosphere spurred leaks, sources say
The Guardian (London), Spencer Ackerman, 2016 11 03
New York - **Deep antipathy to Hillary Clinton exists within the FBI, multiple bureau sources have told the Guardian, spurring a rapid series of leaks damaging to her campaign just days before the election.** Current and former FBI officials, none of whom were willing or cleared to speak on the record, have described a chaotic internal climate that resulted from outrage over director James Comey's July decision not to recommend an indictment over Clinton's maintenance of a private email server on which classified information transited. "The FBI is Trumpland," said one current agent. The currently serving FBI agent said Clinton is "the antichrist personified to a large swath of FBI personnel," and that "the reason why they're leaking is they're pro-Trump."

Russia may be wounded, but it can still bite
Washington Post, David Ignatius, 2016 11 04
Column - **Whoever wins Tuesday's presidential election will face an assertive, aggrieved Russia whose risk-taking behavior under President Vladimir Putin is increasingly worrisome to U.S. experts**. Today's pushy, headstrong Russia presents a paradox: By most measures, it is a country in decline, with a sagging economy, an underdeveloped technology base and a shrinking population. Corruption pervades nearly every sector. The collapse of the Soviet Union is still an open wound, and many Russians blame the United States for taking advantage of them during their years of decline. Yet this inwardly weak Russia displays the cockiness of a street fighter. It is waging war in Syria, Ukraine and cyberspace with a seeming disdain for U.S. power. **According to Director of National Intelligence James R. Clapper Jr.,**

Russian hackers sought to "interfere with the U.S. election process," on authority of the highest levels of the Russian government. "Putin's definition of risk-taking has evolved in the direction of greater boldness and less attention to how it will affect the U.S.," argues Dimitri Simes, president of the Center for the National Interest. "Putin thinks that American positive inducements are next to nonexistent, and that the penalties are minimal, and will be imposed whatever he does."

U.S. officials warn of Russian mischief in election and beyond
Washington Post, Greg Miller, Adam Entous, 2016 11 04
Washington - U**.S. intelligence agencies do not see Russia as capable of using cyberespionage to alter the outcome of Tuesday's presidential election, but they have warned that Moscow may continue meddling after the voting has ended to sow doubts about the legitimacy of the result**, U.S. officials said. The assessment reflects widespread concern among U.S. spy agencies that a months-long campaign by Russia to rattle the mechanisms of American democracy will probably continue after polls close on one of the most polarizing races in recent history, extending and amplifying the political turbulence. U.S. security officials have not ruled out Russian-sponsored disruption on Election Day. In recent weeks, officials at the Department of Homeland Security have collected evidence of apparent Russian "scanning" of state-run databases and computer voting systems. "Whether they were really trying hard to get in, it's not clear," a U.S. official said. Still, the decentralized nature of U.S. polling would make it extraordinarily difficult to subvert a nationwide race.

John Brennan's attempt to lead the CIA into the age of cyberwar
Reuters, David Rhode, 2016 11 02
Washington - **When America goes to the polls on Nov. 8, according to current and former U.S. intelligence officials, it will likely experience the culmination of a new form of information war**. A months-long campaign backed by the Russian government to undermine the credibility of the U.S. presidential election - through hacking, cyber attacks and disinformation campaigns - is likely to peak on voting day, the officials said. Russian officials deny any such effort. But current and former U.S. officials warn that hackers could post fictional evidence online of widespread voter fraud, slow the Internet to a crawl through cyber attacks and release a final tranche of hacked emails, including some that could be doctored. "Don't underestimate what they can do or will do. We have to be prepared," said Leon Panetta, who served as CIA director and defense secretary in President Barack Obama's first term. "In some ways, they are succeeding at disrupting our process. Until they pay a price, they will keep doing it." **John Brennan, the current CIA director, declined to comment on the Russian efforts.** But he said Russian intelligence operatives have a long history of marrying traditional espionage with advances in technology. More broadly, Brennan said, the digital age creates enormous opportunities for espionage.

Obama Faults F.B.I. on Emails, Citing 'Incomplete Information'
New York Times, Multiple reporters, 2016 11 03
Chapel Hill - **President Obama threw the power of the White House behind Hillary Clinton on Wednesday. He faulted how the F.B.I. director, James B. Comey, handled new emails related to the investigation into Mrs. Clinton's private server**, and then shouted out to college students here in a pivotal battleground state that it was crucial that they vote because the "fate of the world is teetering." Mr. Obama's comments about Mr. Comey, broadcast early in the day as recent polls showed a tightening race, were striking for a president who has insisted he does not comment on F.B.I. investigations. But Mr. Obama appeared to be doing exactly that in implicitly criticizing Mr. Comey's decision to send a vague letter last week to Congress -- and by extension, the public -- informing lawmakers about a discovery of new emails related to Mrs.

Clinton's use of a private server as secretary of state. "We don't operate on incomplete information," Mr. Obama said in an interview with NowThis News.

The politics of espionage in the Obama-Brennan era
Reuters, David Rhode, 2016 11 03
Washington - **Supporters hail CIA director John Brennan as a devoted public servant with a strong moral core and a tenacious work ethic. He has increased the recruitment of minority intelligence officers and promoted women to senior posts. He wears a lanyard around his neck every day that celebrates LGBT diversity at the CIA**. But **some former covert operatives say Brennan is too cautious and political**. Liberals accuse Brennan of protecting the CIA instead of forcing it to become more accountable to Congress. In particular, they blame Brennan for convincing President Barack Obama to oppose the release of the full 6,000-page U.S. Senate report detailing torture by the CIA during the presidency of George W. Bush. In private hearings, they said, Brennan bristled at questions from senators regarding the report. After CIA officials searched the computer of a Senate staffer investigating torture, an outraged Sen. Dianne Feinstein accused Brennan's CIA of provoking a "constitutional crisis" by thwarting Congress' ability to perform its mandated right to oversee the executive-branch agency. Two other Democratic Senators called for Brennan's resignation.

Turmoil in the FBI
CNN.com, Multiple reporters, 2016 11 03
Washington - **Among the casualties of the 2016 presidential campaign is the mystique of the FBI. Behind the scenes over the past 15 months**, infighting among some agents and officials has exposed some parts of the storied bureau to be buffeted by some of the same bitter divisions as the rest of American society. This account is based on interviews with more than a dozen officials close to the matter who spoke anonymously because they've been ordered not to speak to the news media. Tensions have built in particular over the handling of matters related to Hillary Clinton. Some of the sharpest divides have emerged between some agents in the FBI's New York field office, the bureau's largest and highest-profile, and officials at FBI headquarters in Washington and at the Justice Department. Some rank-and-file agents interpreted cautious steps taken by the Justice Department and FBI headquarters as being done for political reasons or to protect a powerful political figure.

Clinton Emails Could Help ex-NSA Contractor Who Took Terabytes Home, Attorneys Say
US News and World Report, Steven Nelson, 2016 11 01
Washington - In **the four years Hillary Clinton sent and received State Department correspondence using a private and insecure email system, Harold T. Martin III allegedly stockpiled classified information inside his Maryland home** and an unlocked shed. Martin faces charges for alleged theft of government documents and mishandling classified information that carry up to 11 years in prison, and he's been behind bars since his August arrest, with prosecutors saying they intend to file more serious Espionage Act charges, often used by the Obama administration to go after leakers and whistleblowers. Though prosecutors have not alleged the now-fired **Booz Allen Hamilton contractor** -- who worked for the **National Security Agency** six years before a transfer to the Pentagon last year -- is a spy or that he shared the information or allowed it to be accessed by a third party, they do allege he could be responsible for one of the largest security violations ever and knowingly mishandled classified records working various jobs over two decades. Defense attorneys for prominent whistleblowers, accused leakers and careless clearance-holders say that unless more damning evidence emerges they could see Martin making a successful plea for leniency by pointing to the Justice Department's decision this summer not to prosecute Clinton.

Evan McMullin Says He Was Aware Of CIA Torture Program, Cites "Gray Areas"
BuzzFeed News, Ali Watkins, 2016 11 02
Washington - **Evan McMullin, the former CIA officer running for president, told BuzzFeed News Tuesday that he was aware of -- but never participated in -- the agency's controversial torture program and would not wholly rule out the future use of tactics like waterboarding**. "I was aware of it by virtue of where I was," McMullin said. "I was serving in a place that was the kind of place where people entered that program from that place, but I never participated in it, I never went to a black site, never met with a detainee." McMullin said he opposes the use of torture, but also declined to clearly qualify what he considered torture, and whether CIA tactics like waterboarding crossed the line.

FBI faces high bar in Clinton case; Legal scholars say charges are unlikely, partly because of Comey's past remarks.
Los Angeles Times, Del Quentin Wilber, 2016 11 02
Washington - **Even if FBI agents discover classified information on a newly seized laptop, Hillary Clinton is unlikely to face criminal charges, according to legal experts and former federal prosecutors.** That's largely because the Justice Department and FBI Director James B. Comey have already declined to prosecute based on a legal conclusion that there was no evidence that Clinton and her aides intended to violate laws governing the handling of classified information, a key element of such a criminal offense. To change the calculus, the FBI would have to find correspondence that clearly demonstrates Clinton or her aides knowingly broke the law, exchanged materials they knew to be classified or attempted to interfere with the investigation by withholding or destroying evidence, according to former federal prosecutors and legal scholars. "Such an email itself would have to be one of those things you would be saying, 'I can't believe you wrote that down,' " said Roscoe Howard Jr., a former federal prosecutor and U.S. attorney for the District of Columbia during the George W. Bush administration.

United Kingdom / Royaume-Uni

Now in charge of UK spies, gaffe-prone Boris Johnson surveys their domain
Reuters, Staff report, 2016 11 08
London - **Foreign Secretary Boris Johnson has ventured into the headquarters of the MI6 foreign intelligence service for the first time**, praising Britain's spies for stealing secrets in an increasingly unpredictable world. A former journalist and mayor of London known for often outlandish comments and comical behaviour, Johnson gained oversight of the spy service upon his appointment as foreign secretary in July. In a rare statement issued on Tuesday, MI6 said Johnson had paid his first visit to the agency's headquarters at Vauxhall Cross, by the River Thames in London, on Oct. 20. It did not make clear why he had not visited sooner. **MI6 Chief Alex Younger hosted Johnson, who discussed threats ranging from terrorism to the spread of nuclear weapons and cyber attacks.** He also addressed MI6 staff and had an informal question and answer session with spies, according to the statement. "Whether it's combating terrorism or keeping our nation one step ahead of our adversaries, the brave men and women who work for MI6 do a great job in gathering the crucial intelligence the government needs," Johnson was quoted as saying by MI6.
GCHQ wants internet providers to rewrite systems to block hackers
Sunday Telegraph (UK), Cara McGoogan, 2016 11 06

London - **GCHQ is urging internet providers to change long-standing protocols to help prevent computers being used to set off large-scale cyber attacks**. The Government's cyber-defence arm said it plans to work with networks such as BT and Virgin Media to rewrite internet standards to restrict "spoofing" - a technique that allows hackers to impersonate other computers and manipulate them to carry out anonymous attacks. "Distributed denial of service" (DDoS) attacks, which employ this method, have been used in numerous high-profile incidents in the past fortnight, including an unprecedented hack that brought down Netflix, eBay and hundreds more popular websites. "We think we can get to a point where we can say a UK machine can't participate in a DDoS attack," **Ian Levy, GCHQ's National Cyber Security Centre, told The Sunday Telegraph. "We think that we can fix the underpinning infrastructure of the internet through implementation changes with ISPs and CSPs [communications service providers]."** The plan would involve changes to the Border Gateway Protocol (BGP) and Signalling System 7 (SS7) standards that are widely used for routing traffic.

SAS in Iraq gets kill list of British jihadis
Sunday Times (UK), Mark Hookham, 2016 11 06
London - **British special forces operating in Iraq have been issued with a "kill or capture" list containing the names of up to 200 British terrorists fighting alongside Isis**. The Sunday Times understands that the SAS is under orders to target UK terrorist suspects **using intelligence supplied by MI6, MI5 and GCHQ**. Those captured will be handed to the Iraq authorities with the prospect of execution if they are found guilty in trials. The security services and the police have previously spoken of their fear of a so-called "Raqqa scatter" that could see British nationals abandon Isis strongholds, such as the group's de facto capital in the Syrian town of Raqqa, and return to the UK to establish terrorist cells. Senior sources say any surviving Isis terrorists will be "hardened, highly radicalised fighters" who have endured months and sometimes even years of fighting. In a reference to last year's co-ordinated attacks in France which killed 130 people, one source described the terrorists as "highly effective and extremely dangerous guerrilla fighters more than capable of conducting Parisstyle attacks".

Jihadist who fled UK in lorry to join ISIS claimed 'MI5 were making his life intolerable
Daily Mirror, James Carteledge, 2016 11 05
London - A **jihadist who fled the UK in the back of a lorry in a bid to join Islamic State, claiming MI5 had made his life "intolerable"**. **AnasAbdalla** was arrested along with **MahamuudDiini and Gabriel Rasmus** - who talked of launching a terror attack in Birmingham - when they were found hiding in a truck at the Kent port of Dover on April 3 last year. Rasmus, 30, of Sparkhill, admitted preparing for terrorist acts but Somalia-born Abdalla, 27, of Acocks Green, denied it and was found guilty after a retrial. The pair, who are in custody, will be sentenced at the Old Bailey by Judge Richard Marks QC. The retrial was heard partly in secret because the case was said to involve matters of "an extremely sensitive and confidential nature" It can now be reported that the judge's order under Section 11 of the Contempt of Court Act 1981 barred the public from being present when any evidence was called by the prosecution which "confirm or deny" allegations made in Abdalla'sdefence statement. **They were the allegation of contact or attempted contact with MI5 and his claim that "he would not be allowed by MI5 to live and progress normal expectations and achievements in life"** The court was closed during parts of Abdalla's evidence in the witness box, closing speeches by lawyers and the judge's summing up, reports the Birmingham Mail.

Kremlin pours cold water on MI5 chief's claims of Russian threat
The Guardian (London), Shaun Walker, 2016 11 01

Moscow - The **Kremlin has brushed off claims made to the Guardian by the head of MI5 that Russia is taking various hostile measures against Britain**, which together pose a threat to the country. "Those words do not correspond to reality," said Kremlin spokesman Dmitry Peskov on Tuesday. **Andrew Parker, the head of MI5**, told the Guardian that despite widespread fears of Islamic extremists, hostile state actors were a growing threat, and Russia was the main concern. Peskov said: "Until someone produces proof, we will consider those statements unfounded and groundless." Elsewhere in Moscow, there was an acerbic reaction to the Parker interview. "I would like to ask the head of MI5 if he also sees the hand of the Kremlin in the appointment of Boris Johnson as head of the Foreign Office," said Maria Zakharova, spokeswoman for Russia's foreign ministry. She declined to comment further.

MI5 has been caught on the back foot once again
London Times, Sean O'Neill, 2016 11 02
Column - **Russia, the head of MI5 warned yesterday, is using the "whole range of state organs and powers to push its foreign policy in increasingly aggressive ways".** A decade after the state-sponsored murder of the anti-Putin dissident Alexander Litvinenko in London, **Andrew Parker** used the first newspaper interview given by a serving MI5 director-general to deliver this statement of the blindingly obvious. Perhaps it would have been better if Mr Parker had admitted that the Security Service has been largely barking up the wrong tree for the past ten years and underestimated the threat from Putin's regime. Over that period, MI5 has put pretty much all of its resources into spying on Islamists. That, of course, was a threat it also discovered late. **One problem is that MI5 is perpetually led by insiders who have spent their entire career inside the organisation**. Such people have a tendency to focus on the future of the institutions they love and engage in a constant quest for more staff, money and powers.

UK must build cyber-attack capability, chancellor says
The Guardian (London), Jessica Elgot, 2016 11 01
London - The **UK must strike back at hostile states in cyberspace and be capable of mounting sophisticated cyber-attacks of its own in place of military strikes**, the chancellor has said. **Philip Hammond** said that unless the UK could match the cyber-attack abilities of foreign rogue states, the alternatives would only be to ignore digital attacks on Britain's infrastructure or use military force. Launching the government's £1.9bn national cybersecurity strategy, Hammond said the UK had to develop "fully functioning cyber-attack capability".

Australia/ Australie

Intelligence probe
Herald Sun, Annika Smethurst, 2016 11 08
Melbourne - **Former UK spy boss Sir Iain Lobban will join a review into Australia's intelligence agencies. Prime Minister Malcolm Turnbull last night announced he had commissioned the probe, which will assess whether our current intelligence services are "best placed" to meet future security challenges**. Sir Iain, the **former director of the UK's Government Communications Headquarters, will work on the review with Australia security expert and Howard government bureaucrat Professor Michael L'Estrange and former Australian Defence Signals Directorate boss Stephen Merchant**. Mr L'Estrange has

held several senior public service positions including secretary of the Department of Foreign Affairs and Trade and was also the head of the National Security College at the Australian National University. Mr Merchant served as the deputy secretary responsible for the three Defence intelligence agencies and has extensive experience in defence strategy and capability and international policy. It will be the first major review of intelligence services since 2011 and the third report since the September 11 terrorist attacks, which led to an overhaul of intelligence efforts in Australia. Sir Iain, who headed up the UK equivalent of **Australia's Signals Directorate -- which monitors communications between people and agencies** -- was also a member of the Australian Government's expert panel on cyber security.

PM announces intelligence services review
Australian Associated Press, Max Blenkin, 2016 11 08
Canberra - **Australia's intelligence agencies are to be reviewed to ensure structures and mechanisms are able to meet current and future challenges**. **Prime Minister Malcolm Turnbull says, like earlier reviews in 2004 and 2011**, it will assess how the intelligence community serves national interests and consider the ongoing suitability of legislative and oversight provisions. "This is an opportunity to assess whether our current intelligence arrangements, structures and mechanisms are best placed to meet the security challenges we are likely to face in the years ahead," he said in a statement. Mr Turnbull said the review would be conducted by **former top government officials Professor Michael L'Estrange and Stephen Merchant, who will report in the first half of 2017**. He said they were eminently qualified. Prof L'Estrange has held senior public service positions, including secretary of the Department of Foreign Affairs and Trade and High Commissioner in London. He was the inaugural head of the National Security College. **Mr Merchant has held senior defence and intelligence positions including director of the Defence Signals Directorate and the deputy secretary responsible for the three Defence intelligence agencies**. Mr Turnbull said he had also asked the former head of the Government Communications Headquarters, the UK counterpart of the Australian Signals Directorate, to assist the reviewers. The Australian intelligence community comprises the Office of National Assessments, Australian Security intelligence Organisation, Australian Secret Intelligence Service, **Australian Signals Directorate, Defence Intelligence Organisation and Australian Geospatial-Intelligence Organisation**.

National security impact if 18C scrapped
Australian Associated Press, Staff reporter, 2016 11 08
Canberra - A **counter-terrorism expert turned federal MP has warned tinkering with race hate speech laws could have an impact on national security**. Egyptian-born Anne Aly praised former prime minister Tony Abbott for abandoning suggested changes to a contentious section of the **Racial Discrimination Act**. But the Labor MP is scathing of Malcolm Turnbull's willingness to play politics with the issue after the prime minister flagged support for a parliamentary review. "I think this latest backflip is particularly extraordinary when you consider that even Tony Abbott ... recognised the value of not alienating certain sections of the community in the interests of our national security," Dr Aly told reporters in Canberra on Tuesday. She said sections 18C and 18D of the Act - which make it an offence to offend, insult, humiliate or intimidate a group of people based on their race, and provide a defence for fair comment - had served Australians well. "

Spy fear over China link to NBN Component builder linked to Party
Canberra Times, Richard Baker and Nick McKenzie, 2016 11 06
Canberra - **More than 1 million Australian homes and businesses have been connected to the National Broadband Network by components made in a Shanghai factory controlled**

by China's Communist Party. The revelation comes at a time when **China is suspected of mounting massive cyber-espionage attacks on Australia** and after successive Labor and Coalition governments banned Chinese company Huawei from NBN involvement on security grounds.

Asio 'special intelligence operation' not reported to watchdog for 10 days
The Guardian (Australia), Paul Farrel, 2016 11 04
Canberra - **Australia's domestic intelligence agency failed to notify the intelligence watchdog of a controversial "special intelligence operation" for 10 days in what is the first official confirmation of highly secretive missions that give intelligence officers immunity from prosecution**. In 2014 the government passed controversial national security laws that allow the creation of "special intelligence operations" that must be approved by the attorney general, George Brandis. The operations grant **Australian Security Intelligence Organisation** affiliates immunity from prosecution. The new powers also contained a sweeping gag law that news organisations said would stifle legitimate public interest reporting on intelligence operations. A review by the independent national security monitor, Roger Gyles, found that the move could be unconstitutional, and recommended limited changes to the law. The government has put forward a bill to amend the scope of the offence. But a vexed question has been whether these operations had even occurred. Last year the intelligence watchdog declined to respond to Guardian Australia's queries about whether or not they had taken place. **But the inspector general of intelligence and security (Igis), Margaret Stone, has finally confirmed that at least one of the operations has been authorised by the attorney general and executed by Asio.**

Parliamentary committee backs call to keep terrorists in jail after sentences expire
ABC (Australia), Henry Belot, 2016 11 04
Canberra - A **parliamentary committee has endorsed new laws allowing convicted terrorists to be kept in jail once their sentences expire**, provided a court rules they pose a threat to society. The strengthening of Australia's counter-terrorism laws was recommended by Prime Minister Malcolm Turnbull earlier this year after high-profile terror attacks in Orlando, Nice and Paris. On Friday, the Parliamentary Joint Committee on Intelligence and Security recommended the laws be introduced along with 23 amendments. The committee, chaired by Liberal MP Michael Sukkar, called for Attorney-General George Brandis to be able to apply for an extension 12 months before a sentence expires, rather than six months as originally proposed. Other amendments include the exclusion of officers convicted of treason and those publishing recruitment material.

Cabinet warned of cyber threats
The Australian Financial Review, Fleur Anderson, 2016 11 03
Canberra - **Cabinet ministers have been told to improve the cyber security of their departments after it was found inadequate safeguards risked government agencies becoming the "honey pots" of secret information in cyber espionage**. Dan Tehan, the minister assisting Prime Minister Malcolm Turnbull on cyber security, will tell his senior colleagues they need to appoint top bureaucrats to be responsible for cyber security after a study by the Australian National University's National Security College found smaller government agencies and medium-sized business were the weakest link, or "honey pots", in Australia's cybersecurity defences because they are not vigilant enough about "low-level" threats like malware and denial of service attacks.

Government agencies the new 'honey pots' for cyber spies
The Australian Financial Review, Fleur Anderson, 2016 11 02

Canberra - **More than 40 per cent of Australia's government agencies have inadequate awareness of cyber security risks and could become the new "honey pots" of state-sponsored online espionage and cybercrime,** a new investigation by private-sector cyber security experts has found. The Australian National University's National Security College found smaller government agencies and medium-sized business were the weakest link in Australia's cyber security defences because they are not vigilant enough about "low-level" threats like malware and denial of service attacks. Lead researcher Dr Tim Legrand, working in partnership with Macquarie Telecom Group, found it was very likely many attacks were not being reported to the federal government's Computer Emergency Response Team.

Terrorist lockup laws get go ahead
Adelaide Advertiser, Simon Benson, 2016 11 02
Adelaide - The **Turnbull Government has been given the green light for controversial national security laws that would keep convicted terrorists detained after their jail sentences expire if they were deemed to pose an ongoing risk**. The Advertiser understands that the Parliamentary Joint Committee on Intelligence and Security yesterday agreed to back the laws but with the condition that it include a 10-year sunset clause on the legislation. Its final report will go to the government by the end of the week. The committee heard evidence from the Australian Federal Police that more than 180 suspected terrorists across the country were now under investigation by the AFP. But of equal concern was the potential post- sentence risk posed by 14 jailed terrorists already currently in Australian prisons, the first being due for parole next year. Labor had originally sought to delay the committee's final report on the High Risk Terrorist Offenders' legislation until next year.However, it is believed that the Opposition caved in to pressure following a heated exchange last week between the committee Chair Liberal MP Michael Sukkar and Labor's shadow Attorney general Mark Dreyfus. (Full report)

New Zealand/Nouvelle-Zélande

Evidence of terror-attack plan
The Daily Post (New Zealand), David Fisher, 2016 11 04
Wellington - **Concrete evidence has emerged that there has been an actual attempt to carry out a terrorist attack on New Zealand soil**. The security services will release no details of how the plot was foiled or when it emerged, although the system which was activated to deal with it has only been in existence for two years. The existence of the threat came from the newly released **National Security System** handbook. It stated the system - which triggers a special set of protocols - had been activated for a "threat of a domestic terrorist incident". The National Security System is New Zealand's highest-level response to the most serious threats against our country. It is led by a committee chaired by the prime minister and brings together key officials from intelligence services, police, the military and other departments - depending on the threat - to co-ordinate a response. No further information on the nature of the threat was forthcoming from **Prime Minister John Key and Security Intelligence Service (SIS) director Rebecca Kitteridge**. The Department of Prime Minister and Cabinet, which co-ordinates responses, also would not supply details. A spokesman for Mr Key's office said: "As the prime minister has said, New Zealand is not immune from the threat of terrorism, although the threat to New Zealand remains low.

Watchdog raises concern over SIS
New Zealand Herald, Nicholas Jones, 2016 11 04
Wellington - The **intelligence agency watchdog has flagged "significant concern" about how long the Security Intelligence Service (SIS) has taken to respond to her about whether some of its activities were lawful. Inspector-General of Intelligence and Security (IGIS) Cheryl Gwyn** has revealed her displeasure in her office's annual report. In June last year, Gwyn queried whether certain SIS activity was lawful and, if not, how it could be remedied. "The **NZSIS provided its first substantive response to the questions raised in March-April 2016**," Gwyn wrote in the annual report, out today. While she appreciated the issue was complex, Gwyn said the "time taken to engage with and resolve this significant issue is in itself a matter of concern". "To ensure it operates lawfully, the NZSIS must be able to deal with such issues in a more timely way. I will report fully on this issue as soon as possible." Minister Responsible for SIS Chris Finlayson said he was satisfied with the agency's response. "It was largely a result of my instruction. I said, if we are going to change long-standing practice, I want to be absolutely certain that things are done properly.

New Zealand, Australia cooperate on Asia-Pacific cyber security
Xinhua News Agency, John Macdonald, 2016 11 03
Wellington - **New Zealand and Australia have begun working together on initiatives to strengthen trans-Tasman cyber security**, New Zealand Communications Minister Amy Adams said Thursday. Adams said she had recently held talks in Sydney with Australian Minister Assisting the Prime Minister for Cyber Security Dan Tehan, and they had agreed to work together on a range of initiatives that would benefit both countries. Areas of interest included boosting cyber skills, building the cyber capability of small and medium-sized businesses, and cooperating on joint awareness-raising campaigns. The initiatives would bolster the government's approach to cyber security issues, and further align Australia and New Zealand's public- private awareness initiatives and workforce readiness to reduce the cyber threat in the Asia-Pacific region.

The Government won't confirm whether there's been one or two terrorist threats
Radio New Zealand News, Staff reporter, 2016 11 03
Wellington - The **Government won't confirm whether there's been one or two terrorist threats in New Zealand.** In her annual report, the Inspector-**General of Security and Intelligence** confirms the SIS responded to a suspected terrorist act in the second half of last year. They got an urgent authorisation to carry out surveillance without a warrant. At the same time, the Prime Minister's department has released the National Security System handbook which says there was a domestic terrorist threat but it gives no further details. Chris Finlayson, the minister responsible for the SIS, will not confirm whether this threat is the same as the one SIS responded to last year. (full report)

The Prime Minister is dismissing calls to make it harder for the GCSB and SIS to access personal information held by other organisations.
Radio New Zealand News, Staff reporter, 2016 11 03
Wellington - The **Prime Minister is dismissing calls to make it harder for the GCSB and SIS to access personal information held by other organisations**. New legislation requires them to abide by Privacy Act principles, but not have a warrant, when seeking or accessing information from government departments and private companies. The telecommunications company Spark and the Privacy Commissioner have told MPs the bill should have stronger safeguards, including a warrant for sensitive information. John Key says there are bigger privacy concerns than the spy agencies.

Asia financial body says China cyber security law could make risk management harder
Reuters, Michelle Price, 2016 11 08
Hong Kong - **The chief of one of Asia's most prominent financial trade bodies on Tuesday said new cyber security rules in China could make it harder for foreign companies operating in the country to manage risk as cyber threats become increasingly cross-border**. Speaking at the Thomson Reuters Pan-Asian Regulatory Summit in Hong Kong, Mark Austen, chief executive of the Asia Securities Industry and Financial Markets Association (ASIFMA), said the rules marked a "worrying" development because regulators globally have to work together to address cyber risks rather than attempt to isolate their jurisdictions. China adopted a **cyber security law** on Monday to counter what the government said were growing threats such as hacking and terrorism. Foreign business and rights groups expressed concern that the law could, for instance, bar foreign companies from certain sectors. The legislation, set to take effect in June 2017, includes requirements for security reviews and for data to be stored on servers in China.

Citing Security, China Will Add Internet Limits
New York Times, Paul Mozur, 2016 11 08
Hong Kong - In August, business groups around the world petitioned China to rethink a proposed **cybersecurity law** that they said would hurt foreign companies and further separate the country from the internet. On Monday, China passed that law -- a sign that when it comes to the internet, China will go its own way. The new rules, which were approved by the country's rubber-stamp Parliament and will go into effect next summer, are part of a broader effort to better define how the internet is managed inside China's borders. Officials say the **rules will help stop cyberattacks and help prevent acts of terrorism, while critics say they will further erode internet freedom.** Business groups worry that parts of the law -- such as required security checks on companies in industries like finance and communications, and mandatory in-country data storage -- will make foreign operations more expensive or lock them out altogether. Individual users will have to register their real names to use messaging services in China.

CY makes pitch for another security law push
South China Morning Post, Jeffie Lam and Gary Cheung, 2016 11 08
Beijing - **Chief Executive Leung Chun-ying made his strongest stand yet on the need to put controversial national security legislation back on the government agenda**. Leung had previously pledged not to touch on the contentious subject during his five-year term. But yesterday, speaking an hour after Beijing had handed down its interpretation, he said the city **would enact the national security law** on its own based on Article 23 of the Basic Law, which would prohibit any act of treason, secession, sedition or subversion. "I believe the central government would no longer regard the legislation of Article 23 as an unfinished constitutional responsibility in the wake of the pro-independence and separatist drive, but instead a [matter of] practical significance," Leung said. "Hongkongers have not seen anyone in the city advocating Hong Kong independence in the past, but now they see it. This indeed deserves our attention."

Government attempts to enact the law in 2003 saw 500,000 people, fearful for their rights and freedoms, take to the streets.

NPC passes cybersecurity law
Global Times, Leng Shumei, 2016 11 08
Beijing - **China's first Cybersecurity Law, which allows authorities to take action against overseas individuals or organizations that will harm China's national interests, will not affect foreign firms' development in China,** experts said. Authorities in China are allowed to take action against overseas individuals or organizations that "attack, intrude, interfere with or sabotage the nation's key information infrastructure," read the **Cybersecurity Law**, which was adopted at the bimonthly session of the National People's Congress Standing Committee on Monday. Operators of key information infrastructure should store important business data and personal data they collect during their operation in China, read the law. In response to questions on whether the law would affect foreign companies's development in China, Foreign Ministry spokesperson Lu Kang said at a regular news briefing on Monday that the law was essentially the same as similar laws in other countries and it treated involved companies, no matter Chinese or foreign, equally without discrimination.

Beijing Tightens Its Control Over Internet With New Law
Wall Street Journal, Josh Chin, Eva Dou, 2016 11 07
Beijing - **China's government approved a broad new cybersecurity law aimed at further tightening and centralizing state control over the internet**, including the role foreign companies play in Chinese cyberspace. The law, passed by the standing committee of China's legislature and issued publicly on Monday, tasks agencies and enterprises with improving their ability to defend against network intrusions while demanding security reviews for equipment and data in strategic sectors.

China adopts law on cybersecurity
Xinhua News Agency, Staff reporter, 2016 11 07
Beijing - **China's top legislature on Monday adopted a Cybersecurity Law to safeguard sovereignty on cyber space, national security and the rights of citizens**. The government will take measures to "monitor, defend and handle cybersecurity risks and threats originating from within the country or overseas sources, protecting key information infrastructure from attack,intrusion, disturbance and damage," the law reads. Efforts will also be made to punish criminal activities online and safeguard the order and security of cyberspace. Individual users and organizations are not allowed to jeopardize security on the Internet or use it to "damage national security, honor and interests," according to the provisions.

Senior graft-buster appointed Chinas new spy chief amid leadership reshuffle
South China Morning Post, Nectar Gan, 2016 11 07
Beijing— A **key ally of Wang Qishan, the Chinese Communist Party's anti-corruption tsar, has been appointed China's top spy master, taking over one of the most secretive ministries** that is undergoing a shakeup after senior officials were accused of graft. **Chen Wenqing** started his career as a policeman in Sichuan province and was Wang's deputy at the Central Commission for Discipline Inspection when it investigated Zhou Yongkang, the former national security chief who oversaw the country's police force, courts and part of its spy operations. He is serving a life sentence for corruption and abuse of power. Chen, 56, who became the Communist Party chief at the Ministry of State Security last year, was officially named as minister of the department by the nation's legislature on Monday. He **will replace his retired predecessor Geng Huichang.**

China Replaces Finance Minister Lou Jiwei in Surprise Reshuffle
Dow Jones Newswire, 2016 11 07
Beijing— China replaced its finance minister and two other top officials in a major reshuffle that comes ahead of a Communist Party congress next year. Finance Minister Lou Jiwei, who was widely seen as a voice for reform of China's fiscal system, was abruptly removed from his position and, according to party officials briefed on the matter, is expected to become head of China's national pension fund. **In another high-profile move, Minister of State Security Geng Huichang was also replaced. He will be succeeded by Chen Wenqing**, an appointment that was widely expected as Mr. Chen was made party secretary of the ministry last year in what was seen as a move by President Xi to strengthen his control over the country's security services.The **Ministry of State Security, or MSS**, is responsible for foreign intelligence and counterespionage. Mr. Geng had been in the post since 2007 and headed the ministry during a period in which the police and intelligence agencies were seen to have become excessively powerful under the leadership of the party's then security czar, Zhou Yongkang.

China approves law to tighten control on internet use
Associated Press, Staff reporters, 2016 11 07
Beijing - **China's legislature approved a cybersecurity law on Monday that human rights activists warn will tighten political controls and foreign companies say might hamper access to Chinese technology markets.** Chinese authorities say the law is required to prevent crime and terrorism. It also prohibits activity aimed at "overthrowing the socialist system," a reference to challenges to the ruling Communist Party's monopoly on power. Chinese leaders promote internet use for business and education but try to block access to material deemed subversive or obscene. The country has the biggest population of Internet users at 710 million, according to government data. The latest measure approved by the National People's Congress requires companies to enforce censorship and aid in investigations and imposes standards for security technology. It tightens controls on where Chinese citizens' data can be stored. Human rights groups complain it will extend controls on a society in which media are controlled by the ruling party and the internet has provided a rare forum for individuals to express themselves to a large audience.

Information sharing key to capturing corrupt officials (Canada)
China Daily, Zhou Wenting, 2016 11 04
Shanghai - **Information sharing has played a key role in bringing back corrupt officials who fled abroad to avoid trial, Ding Guping, director of the anti-corruption bureau at the Shanghai People's Procuratorate**, said on Thursday. Anti-graft officers have analyzed big data collected from various sources to learn about the movements of suspects, Ding said during a media briefing on the hunt for such fugitives since the launch of operation "Sky Net" in March last year. Sky Net was launched by the Chinese government, aimed at tracking down corrupt officials hiding abroad and confiscating their ill-gotten assets. A total of eight corrupt officials have been brought back to face trial from six countries - the **United States, Canada, Australia, Thailand, Japan and Singapore** - and more than 15 million yuan ($2.22 million) in illegal funds has been seized, according to the bureau. Ding said it cooperated with the police department, the state security bureau and the immigration inspection authority to obtain information, such as conversation and transaction records from popular messaging app WeChat and mobile payment service Alipay.

China, Australia sign MOU on anti-money laundering information sharing
Xinhua News Agency, Staff reporter, 2016 11 03
Beijing - **China and Australia have signed a Memorandum of Understanding on sharing information on money laundering, terrorist financing and other crimes**, said the Chinese

Foreign Ministry on Thursday. The MOU was signed on Tuesday in Beijing between Chinese Anti-Money Laundering Monitoring and Analysis Center (CAMLMAC) and Australian Transaction Reports and Analysis Center, said Foreign Ministry spokesperson Hua Chunying at a routine press briefing. The MOU will enable cooperation between the two countries on the collection, analysis and exchange of crime- related financial information. This is the 41st cooperation agreement CAMLMAC signed with counterparts overseas,

Cybersecurity law to enhance State security
Global Times, Deng Xiaoci, 2016 11 03
Beijing - **China's draft cybersecurity law, which stipulates that foreign technology firms should store important business data and personal data related to their operation within China, is aimed at effectively safeguarding State security as well as protecting people's privacy**, an expert said. The comment came after Reuters reported that short-term rental company Airbnb told Chinese users that it will store their personal data locally "as foreign tech companies operating in China respond to increasing regulatory pressure." A spokesperson with the Airbnb China confirmed with the Global Times on Wednesday on condition of anonymity that its parent company is moving Chinese mainland-based users' information including the guest bookings in China and Airbnb listings to local servers for greater localization.

Spy chief to take up advisory role on Hong Kong
South China Morning Post, Li Jing, 2016 11 03
Beijing - The **county's security chief is expected to stand down soon after being appointed to a senior role on an advisory panel for Hong Kong and Taiwan affairs**. Geng Huichang, the minister of state security, was on Tuesday named deputy director of the Chinese People's Political Consultative Conference (CPPCC) national committee's panel on Hong Kong, Macau, Taiwan and Overseas Chinese affairs, state-run Xinhua reported yesterday. The CPPCC is the country's top political advisory body. The advisory role for Geng, who has reached the mandatory retirement age of 65, was announced alongside new appointments for two other top officials. CaiFuchao, former head of the State Administration of Press, Publication, Radio, Film and Television, was named deputy director of the CPPCC committee for education, science, culture and health; and Liu Peng, former director of the State General Administration of Sports, was named deputy director of the CPPCC foreign affairs committee..

New Report Lifts Curtain On Russia's Construction Of Powerful "Cyberarmy"
BuzzFeed News, Sheera Frenkel, 2016 11 07
San Francisco - An **investigation published early Monday on the eve of the US election details how Russia built one of the largest and most aggressive "cyberarmies" in the world.** As Russia's cyberoperations have risen in global prominence (and notoriety), the independent Russian news site Meduza has detailed how Russia built its current cyberabilities. While US officials recently took the unprecedented step of accusing Russia of trying to influence the upcoming vote in the US by hacking and leaking emails in an effort to damage the campaign of Democratic presidential nominee Hillary Clinton, cybersecurity experts claim that Russia has been meddling in the affairs of European states for years. The report reveals a system in which Russia's top political leadership is tasked with recruiting hackers and blackmailing criminals to

do their bidding, all the while testing the limits of their cyberabilities on eastern European states before, ultimately, turning their attention to the US this year. BuzzFeed News was given an early look at the report, authored by journalist Daniil Turovsky, and is publishing some of its findings here. Meduza found that: - **Russia's Ministry of Defense focused some of its earliest efforts on recruiting both from academic institutions and from hackers who may have arisen from the criminal underground. -** The teams were organized into groups known as "research squadrons," many of which lay within various Russian ministries and military units.

Hackers Release More E-Mails They Say Tie Putin Aide To Ukraine Crisis
Radio Free Europe, Staff report, 2016 11 03
Kyiv - **Ukrainian hackers claim to have broken into a second e-mail account linked to VladislavSurkov, a senior aide to Russian President Vladimir Putin**, releasing documents they say add to mounting evidence of the Kremlin meddling in Kyiv's affairs. The new e-mails were obtained by RFE/RL from the hackers in advance of their public release on November 3. If authentic, they provide detail about the extent to which Surkov's office worked to set up separatist enclaves in eastern Ukraine in 2014. The e-mails include plans that ostensibly show how associates of Surkov plotted to destabilize Ukraine's eastern Kharkiv region, researched Ukrainian politicians who openly supported weakening central power in a bid to exploit the country's political divisions, and helped establish the leadership of separatist groups in the Donetsk and Luhansk regions.

Moscow's Aggression, Source of Concern for the West
Asharq Al-Awsat, Taha Abed alWahed, 2016 11 04
Moscow, London - **Relations between London and Moscow have deteriorated after Russia's rising role in hot spots like Ukraine and Syria. but the tension began with the case of Alexander Litvinenko, the former KGB officer who was killed in London in 2006**. According to **Andrew Parker, head of Britain's internal intelligence agency MI5**, Russia had been a covert threat for decades, but what differs now from the Cold War era is that more sophisticated tools are at its disposal to pursue its anti-Western agenda. Speaking to the Guardian newspaper, Parker said that Russia "is using its whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways, involving propaganda, espionage, subversion and cyber-attacks.

Hackers leak Putin plan to carve up Ukraine
London Times, Maxim Tucker, 2016 11 03
Kyiv - **Leaked Kremlin emails reveal how Russian operatives botched an attempt last year to foment an uprising in Kharkiv, the second largest city in Ukraine**. The emails, obtained by The Times, were apparently hacked from the inbox of Maria Vinogradova, an adviser to VladislavSurkov, President Putin's point man on Ukraine. The civilian intelligence analysis group Inform Napalm said that it had traced the adviser to an office in central Moscow used by the **FSB spy agency**. Three of the Ukrainian hackers involved in the leak met The Times on condition of anonymity, carrying concealed weapons but rejecting suggeserntions that the hack had been carried out with the help of Ukrainian or US intelligence services. Last month NBC News reported that the **CIA** had vowed to retaliate against Russia for a series of intrusions targeting American political institutions.

Le logo des renseignements ukrainiens a de quoi déplaire à Moscou
La Tribune (France), Jean-Christophe Catalon, 2016 11 03
Berlin - Ce blason multiplie les symboles anti-russes et entretient la rivalité entre les deux pays, alors qu'aucune porte de sortie n'a été trouvée lors du dernier sommet, à Berlin, le 19 octobre. Les relations entre l'Ukraine et la Russie ne sont pas près de se réchauffer. La semaine

passée, le président **Petro Porochenko a présenté le nouveau chef de la direction des renseignements du ministère de la Défense (GUR-MOU), VasylBurba**. Si l'événement a fait parler de lui, c'est moins pour la nomination que pour le logo des services de renseignements, affiché en grand derrière le chef de l'État. De la **CIA américaine à la DGSE française, en passant par le GRU russe, tous affichent un symbole international neutre**. - Le hibou : le choix du volatile n'est pas anodin. Le blason du GRU russe arbore une chauve-souris, animal dont l'un des prédateurs naturels est... le hibou.

Former director of Russian foreign intelligence to chair board of directors at Almaz-Antei
TASS News Agency, 2016 11 02
Moscow— **Mikhail Fradkov, a former Prime Minister and director of the Russian foreign intelligence service SVR, will chair the board of directors at the air defense systems manufacturing company Almaz Antei** and will simultaneously stand at the head of the **Russian Institute for Strategic Studies (RISS)**. President Putin took a decision of Fradkov"s appointment there after a meeting with the latter man and with the president of Rostech state corporation Sergei Chemezov. Earlier, Fradkov was supposed to become chairman of the board of trustees at the Russian state railway corporation RZD.

Last-Intance Court Revokes Sentence of Bulgaria Ex-Spy Chief
Sofia News Agency, Staff report, 2016 11 08
Sofia - The **Supreme Court of Cassation (VKS) on Tuesday overturned a 10-year imprisonment sentence ruled for former intelligence head Kircho Kirov, BGNES wire service reports. Kirov, who headed the National Intelligence Service** (renamed last year to **State Intelligence Agency**) between 2002 and 2012, became the first high-profile official to be sentenced to jail time in Bulgaria's most recent history. He was found guilty of embezzlement over the misappropriation of BGN 4.7 M in public money. The VKS, however, handed the case to a lower-instance court on Tuesday, arguing a number of procedures in evidence assessment had been violated.

Pas de surveillance généralisée des mosquées
Le Matin (Suisse), Journaliste maison, 2016 11 08
Berne - Pas **question de surveiller préventivement les mosquées et les imams en Suisse, dit le patron du Service de renseignement (SRC) dans un entretien**. La base légale n'existe pas, même avec la nouvelle loi sur le renseignement. Et il ne voit aucune raison de le faire. « Il n'y a pas de base légale qui permette au SRC d'opérer une surveillance généralisée des mosquées et des imams en Suisse » , affirme le **directeur du SRC Markus Seiler** dans une interview au quotidien Aargauer Zeitungpubliée hier. De plus, « les mosquées, leurs imams et les organisations ne sont pas en eux- mêmes le problème » . La menace viendrait « le plus souvent de l'entourage » , poursuit M. Seiler. Le SRC peut agir préventivement lorsque des indices concrets d'une telle menace sont établis.

Germany fears UK may quit spy programme because of Brexit
The Guardian (London), Phillip Oltermann, 2016 11 07
Berlin - **Germany fears Britain may pull out of a key intelligence- sharing programme in May next year, a move that it says would create a "moment of weakness" in the fight against terrorism and jeopardise security across the EU**. As the continent remains on alert

for terrorist attacks, Berlin is understood to view intelligence as Britain's primary contribution to European collaboration, and fears it could use future cooperation as a bargaining chip in Brexit negotiations. According to documents seen by the Guardian, Germany is already lobbying the British government to renew its role in Europe's law enforcement agency, Europol, before its current collaboration runs out on 1 May 2017. In a response to a parliamentary question submitted by Germany's Left party, Angela Merkel's government confirmed that it believed the European commission should encourage the UK to remain in Europol.

Renseignement: comment Squarcini a utilisé la DCRI au bénéfice du camp Sarkozy
Radio France Internationale, 2016 11 05
Paris - En **France, l'enquête sur Bernard Squarcini, ex-patron de la Direction centrale du renseignement intérieur (DCRI) sous la mandature de Nicolas Sarkozy, révèle que l'ancien maître espion a gardé de nombreuses entrées dans la police**. Nos confrères du journal «Le Monde» ont eu accès au dossier de l'instruction. Il apparaît que Bernard Squarcini a privatisé la DCRI au bénéfice du camp Sarkozy. Bernard Squarcini fait partie de ces hauts fonctionnaires ouvertement sarkozystes mis sur la touche en 2012. Pourtant après ce départ forcé, Bernard Squarcini, dit le « squale », a continué à s'activer dans l'ombre du renseignement intérieur. L'enquête des juges Tournaire et Buresi jette une lumière cru sur ses agissements peu orthodoxes.

Bernard Squarcini, l'ange noir de la Sarkozy
Marianne, Marc Endeweld, 2016 11 04
Paris - Ancien grand patron du renseignement intérieur et homme de l'ombre de Nicolas Sarkozy, **Bernard Squarcini est désormais sous le coup d'une kyrielle de mises en examen.** Comme nombre d'autres proches de l'ex- président... Portrait du "Squale". La scène se déroule début octobre, une semaine après sa garde à vue conclue par une mise en examen pour «violation du secret de l'enquête», «trafic d'influence» et «détournement de fonds publics». Ce soir-là, Bernard Squarcini, le patron de la **Direction centrale du renseignement intérieur (DCRI)** sous Nicolas Sarkozy, s'affiche sans complexes dans les salons des Invalides où Valeurs actuelles, le magazine de la droite de la droite, fête son 50e anniversaire. La réception a lieu précisément au musée de la Chasse, ce qui n'est pas pour déplaire à ce flic, chasseur dans l'âme.

Former spy chief to head DFB ethics commission
Associated Press, 2016 11 04
Frankfurt— **Klaus Kinkel, a former spy chief and later Germany's justice and foreign minister, has been named the president of the newly created ethics commission of the German soccer federation**. Kinkel was elected at a federation congress in the eastern city of Erfurt. The commission is part of the DFB's declared drive for more transparency and integrity in an organization still reeling from the fallout of a financial scandal around the 2006 World Cup it hosted. The congress also extended the mandate of DFB president Reinhard Grindel until 2019. **Kinkel served as the head of West Germany's intelligence agency from 1978-82** and became the justice minister of a newly reunited Germany in 1991.

Malware used to spy on Iran talks in Geneva
The Local (Switzerland), Staff report, 2016 11 04
Geneva - A **large number of computers at a Geneva hotel that hosted delicate Iranian nuclear talks last year were infected with malware used for espionage**, Swiss prosecutors said on Thursday. The **Swiss Attorney General's office** (OAG) however said it had closed its investigation, since it had failed to determine who was behind the spying. Swiss investigators launched a probe in May last year based on "suspicion of illegal intelligence services operating

in Switzerland," searching a hotel that hosted the nuclear talks and seizing computer equipment. Those talks, which were held at a range of luxury hotels in Switzerland and Austria, concluded on July 14th 2015 with a landmark deal to rein in Iran's nuclear programme in exchange for the lifting of international sanctions.

Security police lobbies Parliament to defend funding
Yle (Finland), Staff report, 2016 11 04
Helsinki - **Parliament's Administration Committee is considering a statement tabled by Finland's security and intelligence police Supo**, in which the agency warns of dramatic consequences if its funding is not secured. The statement references the government's draft budget for next year, in which projected spending cuts targeting the police force are expected to have the effect of **reversing planned additional funding for Supo**, amounting to two million euros annually from 20017 to 2020. The statement was signed by Supo chief Antti Pelttari, and conformed to years of budget tactics as practiced by the Defence Forces. However instead of asking the question, "What part of the country should we not defend?" Supo laid out specific individual programmes that could face the chopping block if the agency were under-funded.

Former spy chiefs call for EU-US intelligence hub (Canada)
EU Observer, Andrew Rettman, 2016 11 03
Bratislava - **Europe and the US need an "intelligence hub" to fight terrorism**, with French and German ideas on EU military integration unlikely to bear fruit, Germany's former spy chief has said. The counter-terrorism hub, to be based in The Hague, would start out like the Schengen zone, the EU's passport-free travel area. It would involve a core group of trusted states such as **Canada, France, Germany, Switzerland, the UK, and the US**. Their intelligence services would form "operational task forces" and, as with Schengen's IT security system, would have access to each other's data. They would also create a "centre of excellence" to reform other EU states' services, which could join down the line. "I was one of the fathers of the Schengen agreement in the 1990s.

Les petites combines d'un maître espion
L'Obs, Violette Lazard avec Caroline Michel, 2016 11 03
Paris - Le **dessous des cartes L'enquête sur l'ex-patron du renseignement révèle que Bernard Squarcini n'a jamais coupé les ponts avec son ancienne maison**, tout en travaillant pour LVMH Juste avant d'être présenté aux juges, Bernard Squarcini a tenté de s'expliquer. « Je suis parti contraint et forcé, a déclaré l'ex-patron de la DCRI (le renseignement intérieur, devenu la DGSI en 2014). J'ai changé d'activité, mais j'ai gardé un état d'esprit identique à celui qui m'accompagnait en ma qualité de haut fonctionnaire. » Une défense bien maladroite. Entendu comme témoin (une situation inédite), **Patrick Calvar** reconnaît avoir accepté de faire la démarche, mais à titre exceptionnel. Qui sont ces deux Russes, résidant à Nice ? Des proches d'Alexandre Djouhri, un homme d'affaires lié aux plus gros contrats de la République, et qui se trouve aujourd'hui au centre d'une enquête sur le supposé financement libyen de la campagne de Sarkozy en 2007. Pourquoi protéger ces deux femmes, membres de la belle-famille de Djouhri ?

Didier Le Bret : « Daech va probablement retourner à la clandestinité »
Le Figaro, Marie-Amélie Lombard-Latune, 2016 11 02
Paris - **L'ex-coordonnateur national du renseignement livre son analyse sur les prochains défis de la lutte antiterroriste**. De juin 2015 à septembre 2016, en pleine période terroriste, **Didier Le Bret a été chargé par l'Élysée de veiller à la bonne coopération des services de renseignement français**. Un poste qu'il a choisi de quitter pour se présenter, en 2017, à la députation dans la 9e circonscription des Français établis hors de France (Afrique de l'Ouest,

Maghreb). Auparavant, ce diplomate, largement apprécié, a notamment travaillé à la Mission permanente de la France à l'ONU, a été ambassadeur en Haïti et a dirigé le Centre de crise du Quai d'Orsay. LE FIGARO. - Vous avez côtoyé les grands spécialistes du renseignement pendant un an. Quel principal enseignement en avez-vous retiré ? Didier LE BRET. - Il est frappant de voir à quel point nos services de renseignement - **DGSE, DGSI, Tracfin, DNRED** (1) - ont évolué. Ils ont pris le virage technologique. La DGSE a une longueur d'avance sur la DGSI qui est en phase de rattrapage. Ils se sont ouverts à tous les talents, ont su recruter des ingénieurs, des linguistes, des gens qui viennent du privé.

Tabloid: Supo suspects Russia of buying up Finnish property for military personnel
Yle (Finland), Staff report, 2016 11 02
Helsinki - **Finnish Security and Intelligence Police Supo has speculated that Russia could use property it has purchased in Finland as accommodation for its military**, according to the tabloid Iltalehti. In a report to presented to Parliament in September on threats facing Finland, Supo noted that a foreign power could make use of property purchased without any commercial or conventional real estate value. Supo speculated in the report that such real estate could be used for preparations to wield influence in a crisis situation. In practice, as a landowner, a foreign state could shut down road access or provide accommodation for troops, the agency said in the report.

Senior intelligence official: There's a basis for a deal with the Palestinians
Jerusalem Post, Herb Keinon, 2016 11 02
Jerusalem - A **senior Israeli military intelligence officer said that Palestinian Authority President Mahmoud Abbas is a legitimate peace partner, and that he has "consistently kept the peace and quiet,"** according to channel 10. Speaking to MKs and ministers recently, Brig.- Gen. Dror Shalom said "I know some of you might not like to hear this, but since 2004, there is a leader, Abu-Mazen (Abbas), who has generated quiet and opposed terrorism." He added that "there is a basis for a solution to the conflict." Shalom added that "it is true that we are not the world's problem, but we are an easy target." In early September, there was talk of a Russian- arranged meeting between Abbas and Prime Minister Benjamin Netanyahu, either in Moscow or in Luxembourg. "We'll see, either one - or any other place," Netanyahu had said, reiterating that Israel is "always ready for direct negotiations without preconditions." However, the meeting did not come to fruition.

Shin Bet denies torturing UK citizen over Hamas ties
The Jerusalem Post, Yonah Jeremy Bob, 2016 11 02
Jerusalem— The **Judea Military Court recently ordered the release of a British citizen facing charges of assisting terrorists, due to issues with Shin Bet (Israel Security Agency) interrogation methods leading to a confession,** Walla News reported Tuesday. **Faiz Mahmoud Ahmad Sharawi** will still face charges for helping terrorists smuggle funds and cellphones for Hamas in the West Bank as well as charges dating back to 2005. But if the court decision stands, he will be freed from custody throughout the trial procedure....Subsequently, The Jerusalem Post acquired a copy of the October 27 decision by Judge Lt.-Col. Azriel Levi and learned that the IDF prosecution has appealed the decision to the West Bank Military Appeals Court, which is set to hear the appeal Sunday. Painful handcuffing and threats are a

common method used in Shin Bet interrogations with the purpose of causing a detainee grave pain and suffering and to break his spirit." In contrast, the **Shin Bet denied any wrongdoing and emphasized the still pending allegations against Sharawi** for terrorism were "grave" as well as the IDF prosecution's pending appeal. It said, "the claims that torture were used during the interrogation... are baseless and groundless.

Syria Intelligence Chief: Aleppo Conflict will End in 10 Days if West Stops Supporting Militants
Fars News Agency, 2016 11 02
Tehran - **Syrian Air Force Intelligence Directorate head said that violence in the war-torn Syrian city of Aleppo could be ended within 10 days if the United States and the European Union end their practice of applying double standards to Syria** and supporting militants in the country. "It is solely US and European double standards, which are the reason behind terrorist activity in Aleppo. If they stop financing the militants for 10 days in a row, the Aleppo problem will be resolved and the militants will take their weapons and depart to join their friends in Turkey," Said **Syrian Air Force Intelligence Directorate head Jamil Hassan**, RIA Novosti reported. The intelligence officer, who is also a close aide to Syrian President Bashar Assad, stressed that international politics should not determine the course of the battle for Aleppo and that the United States continued to back terrorists at the highest diplomatic levels.

Three Indian 'undercover agents' leave Pakistan
Pakistan Dawn, Syed Sammer Abbas, 2016 11 08
Islamabad - **Three out of eight Indian High Commission officials suspected of involvement in terrorist and subversive activities in Pakistan left for India on Tuesday**. Anurag Singh, Vijay Kumar Verma and Madhavan Nanda Kumar, allegedly members of the **Research and Analysis Wing (RAW)**, left for India earlier today on flight EK613 via Dubai. Rajesh Kumar, Amerdeep Singh Bhatti, Dharmendra Sodhi, who are also alleged members of RAW, are still in Pakistan, along with Balbir Singh and Jayabalan Senthil, who are said to be **Indian Intelligence Bureau** (IB) operatives. The FO during a press briefing last week revealed details of the eight Indian 'diplomats' in Pakistan, saying that a number of "Indian diplomats and staff belonging to **Indian intelligence agencies RAW and IB** have been found involved in coordinating terrorist and subversive activities in Pakistan under the garb of diplomatic assignments."

India, UK need to cooperate more on counter-terrorism: President
Press Trust of India, 2016 11 08
New Delhi - **India and the United Kingdom need to cooperate more on countering terrorism** which is the "biggest menace" to world peace and tranquillity, President Pranab Mukherjee has said. Talking to British Prime Minister Theresa May, who called on him last evening, the President said India sees the UK as a key partner in its growth and economy. "India would encourage more companies from the UK to partner in its national programmes like Make in India, Skill India, Digital India etc," the President was quoted as saying by the Rashtrapati Bhawan spokesman in a statement today.

S. Korea, Japan to hold talks on intelligence-sharing
Yonhap News Agency, Staff reporter, 2016 11 08

Seoul - **South Korea and Japan will hold their second round of talks in Seoul on Wednesday to discuss the signing of an intelligence- sharing pact that could allow the neighbors to better counter North Korea's growing threats**, the defense ministry said. "The two sides are expected to reach an agreement soon as the talks are under way based on the terms they tentatively agreed to in 2012," Moon Sang-gyun, spokesman for the Ministry of National Defense, said in a regular press briefing. In late October, the two agreed to reopen talks on a bilateral General Security of Military Information Agreement (GSOMIA), with the goal of concluding the pact by the end of the year. The United States welcomed the decision, saying the potential deal between its two Asian allies would bolster cooperation amid evolving nuclear and missile threats posed by Pyongyang. The first talks were held in Tokyo on Nov. 1. This year alone, the communist regime carried out two underground nuclear tests and some two dozen ballistic missile tests. Such developments have escalated global fears that the North is approaching its stated goal of developing a nuclear-tipped long-range ballistic missile that can hit parts of the U.S. mainland. Related to the GSOMIA, the two neighbors almost inked a deal, but the negotiations fell through due to negative public sentiment in South Korea about signing such a pact with its former colonial master. Korea was a colony of Japan from 1910 to 1945.

Indonesia calls for greater intelligence cooperation against terrorism at Interpol forum
Straits Times, Arlina Arshad, 2016 11 07
Jakarta - **Indonesian Vice-President Jusuf Kalla on Monday (Nov 7) urged top international security officials to increase intelligence sharing between nations to fight the threat of terrorism**. "Terrorism is an extraordinary crime, and countering it requires Interpol member countries to cooperate and focus on intelligence," he said. "Without same and accurate information in every member state, we will have difficulty in tapping the Interpol network nationally and globally." Mr Kalla was speaking at the opening of the 85th International Police (Interpol) General Assembly, which runs to Thursday in Nusa Dua, Bali. The forum, attended by **Interpol president Mireille Ballestrazzi**, secretary general Jürgen Stock, and some 1,360 police chiefs and other delegates from 167 Interpol member countries, is expected to discuss terrorism, cybercrime and drug and people smuggling.

Indian diplomats have contacts with Taliban
The International News, 2016 11 04
Islamabad - **Pakistan on Thursday took a step forward to internationalise and reached out to foreign capitals regarding the activities of Indian state-sponsored subversive and terrorist activities inside Pakistan** -- having contacts with Taliban and aiming at sabotaging the China Pakistan Economic Corridor -- which has led to nine Indian officials including diplomats at the Islamabad Mission found involved in promoting terrorist activities and terror financing. The government says it has pursued a policy of restraint, patience and sobriety which has been appreciated the world over.

India, China likely to sign anti-terror pact
Times of India, Dipanjan Roy Chaudhury& Rahul Tripathi, 2016 11 04
New Delhi - **India and China are likely to sign a major security cooperation agreement, which would enhance their efforts to jointly fight terrorism and international crime**, when New Delhi hosts Chinese Communist Party's influential politburo member MengJianzhu next week. Meng is likely to visit India on November 8, when the two sides are expected to seal the umbrella security cooperation pact. The terms, which are currently being negotiated, will also include a mutual legal assistance treaty mechanism, according to people familiar with the matter.

Indian diplomats in Pakistan handled TTP factions: Foreign Office
Pakistan Dawn, Syed Sammer Abbas, 2016 11 03
Islamabad - The **Foreign Office (FO) on Thursday said eight Indian diplomats in Pakistan - allegedly members of the Research and Analysis Wing (RAW) and Indian Intelligence Bureau (IB) - are suspected of involvement in terrorist and subversive activities including the handling of Tehreek-i- Taliban Pakistan (TTP) factions in Pakistan**. FO Spokesman NafeesZakaria during a weekly press briefing in Islamabad said, "As you are aware, a number of Indian diplomats and staff belonging to Indian intelligence agencies RAW and IB have been found involved in coordinating terrorist and subversive activities in Pakistan under the garb of diplomatic assignments." Zakaria provided details of the activities of the 'undercover agents', alleging that the suspected RAW and IB operatives handled TTP factions, fueled secatarianism in Pakistan and created unrest in Balochistan, Sindh, and Gilgit-Balistan (GB).

Pakistan may expel two Indian diplomats in Islamabad for spying
The Express Tribune, Kamran Yousaf, 2016 11 03
Islamabad - **Two Indian diplomats in Islamabad have been caught spying for India's premier spy agency, Research and Analysis Wing (RAW), and may be expelled**, sources told The Express Tribune on Wednesday. According to sources, Rajesh Kumar Agnihotri has been identified as RAW station chief, while Balbir Singh has been identified as an officer of the Indian Intelligence Bureau (IB). Both officers were working at the Indian High Commission office in Islamabad. A source said both Agnihotri and Balbir were involved in terrorist activities in the country.

Pakistan accuses eight Indian diplomats of espionage, terrorism
Reuters, 2016 11 03
Islamabad— **Pakistan on Thursday named eight Indian diplomats it accuses of espionage and terrorism**, as tension mounted between the nuclear-armed rivals following days of artillery duels and skirmishes on the border dividing the disputed Kashmir region. The foreign ministry said six Indian embassy staff worked for **New Delhi's Research & Analysis Wing (RAW) intelligence agency**, while two were operatives for the Intelligence Bureau agency. Their names were leaked to Pakistani media overnight. In response, India said it "completely rejected the baseless and unsubstantiated allegations" leveled by Pakistan against officials at its high commission in Islamabad. The foreign ministry statement gave an eight-point list of the diplomats' espionage activities.

Four officers likely to be called back from India
Pakistan Dawn, BaqirSajjad Syed, 2016 11 02
Islamabad - **The government is considering pulling out from India four of its officers posted in Pakistan's High Commission in New Delhi, days after Indian authorities declared one official persona non grata.** "This is under consideration. A final decision would be taken shortly," a source at the Foreign Office said on Monday. The names of the officers -- commercial counsellor Syed Furrukh Habib and first secretaries Khadim Hussain, Mudassir Cheema and Shahid Iqbal -- were made public after Indian officials released to media a recorded statement of a high commission staffer Mehmood Akhtar, who was expelled from India after being declared persona non grata.

New leak shows Pakistani ISPs may have been hacked by the NSA
The Express Tribune, Tech Desk, 2016 11 02
Islamabad - A **group called the Shadow Brokers has released a new cache of data purporting to be taken from the NSA in a Medium post titled "Trick or Treat" -- revealing hundreds of IP addresses apparently compromised by the NSA as part of its operations**.

Interestingly, the majority of the nodes are located overseas, including compromises in China, Russia, India, or Pakistan, presumably to make it difficult for targets to attribute any attack launched through the network. At least four Pakistani Internet Service Providers (ISPs) are also part of the leaked list.

Dawn report suggests bigger spy ring, names 4 diplomats
The Hindu, Kallol Bhattacherjee, 2016 11 02
New Delhi - The **diplomatic battle between neighbours heated up on Tuesday after a media report from Pakistan said Islamabad was considering withdrawal of four of its diplomats from India**. The report suggesting that the diplomats were allegedly engaged in espionage in India drew a strong response from Pakistani diplomatic sources, who dismissed the charges as baseless. Government sources termed the episode an "internal" matter of Pakistan. Citing sources in the Ministry of Foreign Affairs in Islamabad, the Karachi-based Dawn reported that Mehmood Akhtar, the diplomat who was expelled by India on October 29 for spying, had named the four officials in a recorded statement in Delhi.

Sudan arrests more opposition activists over fuel prices
Agence France-Presse, 2016 11 06
Khartoum— **Sudanese security agents have arrested several opposition politicians over the past two days** to prevent protests against Khartoum's decision to hike fuel prices, their parties said on Sunday. **Sudan's all-powerful National Intelligence and Security Service (NISS)** arrested on Friday the deputy chief of the opposition Sudanese Congress Party, Khaled Omar, from his home in Khartoum. Omar was arrested after he delivered a speech criticising the hike in prices of petrol and diesel by about 30 percent. Since then threee other members of Omar's party were also arrested, a senior member of their party, Bakri Youssef told AFP.

Ten people on top spook shortlist
Pretoria News, 2016 11 02
Pretoria— The **joint standing committee on intelligence wants to speedily appoint the new inspector-general of intelligence in the coming weeks after it shortlisted 10 people for the position**. The committee wants to conclude all processes before the end of the year with Parliament left with effectively four weeks to finish its business for the year. The appointment of the IG for Intelligence has been delayed for several months after fights in the National Assembly on the candidate to be backed by all parties. Former ANC MP Cecil Burgess was initially picked for the job in March but his appointment fell through after he did not secure the support of all parties. He was not on the list of the 10 people shortlisted for the job. The **new inspector-general will keep a watch on the conduct of intelligence agencies, including State Security Agency spooks.**

Journalists reporting on Venezuelan crisis risk temporary and prolonged detentions
Journalism in the Americas blog, 2016 11 04

Unidentified Placeline— **Covering protests, photographing food lines or taking video inside a hospital can be risky for journalists working in Venezuela** today. Various reporters and photojournalists working in the country have been subjected to temporary and prolonged detentions in the process of carrying out their jobs in recent months. Recently, **agents with Venezuela's Bolivarian Intelligence Service (Sebin) detained Matt Gutman, a correspondent for U.S. network ABC News,** on Oct. 24 while he was reporting on conditions at a hospital in the state of Carabobo. Gutman, and a cameraman and a Venezuelan doctor who were also detained with him, was kept in custody until the night of Oct. 26. ABC News confirmed the detention on Oct. 27 and said Gutman "was released without incident. The Press and Society Institute (IPYS for its acronym in Spanish) of Venezuela told the Knight Center that it recorded 22 instances of arbitrary detentions of directors, journalists and photojournalists between Jan. 1 and Sept. 30 of this year. According to the organization, a majority of the detentions were carried out by state police (8). The other entities behind the detentions have been: National Armed Forces (7), the **Bolivarian National Intelligence Service** (Sebin) (3), courts (2) and airport authorities (2).

Canada

Police, Power and Privacy
Toronto Star and CBC News, Staff reporters, 2016 11 15
Ottawa - The **RCMP has provided unprecedented access to the Toronto Star and the CBC in an effort to make its case that antiquated law**s and diminished police powers in the digital age are allowing suspected terrorists, drug gangs and child abusers to operate beyond the law. Journalists from the two media outlets have reviewed the details of 10 high- priority cases after clearing RCMP security checks for access to "top- secret" information. In each case, investigators were stonewalled by legal and technical obstacles in accessing digital evidence, the Mounties say. Most of the suspects remain at large. These cases stand at the centre of an emerging national debate. Police argue they are on the losing side of a digital divide, while on the other side are tech-savvy criminals who are shielded by impenetrable encryption, telecommunication companies and technology manufacturers. **Privacy advocates argue that police have never before had such powers of surveillance** and that they have failed to provide evidence that the public's safety is in jeopardy. **They are equally alarmed by the recent Federal Court ruling that denounced the national spy agency, CSIS, for illegally gathering the private information of Canadians**, and by news that Quebec police forces intercepted and tracked the cellphones of as many as 10 journalists to discover their sources. "We need a public debate," said RCMP Chief Supt. Harold O'Connell, the force's director general of national security investigations. "We can influence, we can tell you what we think the lay of the land is, and then you, as Canadians and legislators, decide where you want us to be."

Inside RCMP's file room
Toronto Star, Robert Cribb, 2016 11 15
Ottawa - The **RCMP shared details of 10 ongoing "high-priority" investigations with the Toronto Star and CBC News to begin a public debate on expanding police capabilities while investigating crimes involving digital and online evidence**. This coincides with a federal review of **Canada's Anti-Terrorism Act (Bill C-51)** and a public consultation on the government's **Green Paper on National Security**, which includes proposals to enhance police digital capabilities. To allow access to the investigations, the RCMP conducted security screening and granted top-secret clearances to Robert Cribb of the Toronto Star and Dave Seglins of CBC News. The RCMP provided summaries and interviews on the cases but withheld names, locations and key details that could compromise ongoing investigations, prosecutions and secretive police techniques.

Canada's energy sector braces for rising threat from activists
Globe and Mail, Shawn McCarthy, 2016 11 14
Ottawa - **Canadian security experts are increasing their vigilance against activists' threats to the country's energy infrastructure**, as civil- liberties advocates worry about the use of improper surveillance on peaceful opponents to major projects. In what is billed as a training workshop, **Carleton University's Infrastructure Resilience Research Group** is playing host to a closed-door conference on Monday and Tuesday for lawyers, police, regulators and industry representatives on "the challenges of dealing with natural resource development projects and activism." One of the organizers, professor emeritus Martin Rudner, said there are significant threats from "domestic extremists" to Canada's energy infrastructure, including pipelines, generating stations and transmission lines. Prof. Rudner is active on several industry-

government-academic networks that consult on protection of critical infrastructure, including the energy and utilities- sector network managed by Natural Resources Canada. But critics argue police and intelligence agencies are armed with overly broad definitions of national security and critical infrastructure, which include projects that are in the planning and construction phase, in addition to assets that are operational and delivering energy across the country. "A lot of these concerns are overblown," Ottawa lawyer **Paul Champ** said. He is **a board member of the British Columbia Civil Liberties Association that has alleged RCMP and the Canadian Security Intelligence Service (CSIS) engaged in illegal surveillance of Canadians protesting against Enbridge Inc.'s proposed Northern Gateway pipeline.** Mr. Champ said the RCMP and CSIS became more active in natural-resources development under the former Conservative government, which defined national-security threats to include actions that could affect the economic stability of the country, and then defined resource development as essential to the health of the Canadian economy.

RCMP tracked 89 indigenous activists considered 'threats' for participating in protests
National Post, Sarah Craig, 2016 11 14
Toronto - The **Trudeau government says Canada's national police force respects the right to peaceful demonstrations by indigenous activists**, after it was revealed the **RCMP compiled a list and distributed profiles of indigenous protesters** it deemed "threats" who it determined were potentially willing and capable of criminal activities. Dubbed Project SITKA, the RCMP began soliciting information on indigenous activists who could be perceived "to have committed or commit" crimes from all of its divisions and local police departments across the country in March 2014. Using the information it received and data collected from social media, the Mounties identified 313 activists -- attendees of protests on issues ranging from natural resource development to missing and murdered indigenous women -- who potentially posed a "criminal threat to Aboriginal public order events." The RCMP did not reply to a request for comment.

How much data retention is reasonable in counter terrorism?
Hill Times, Phil Gurski, 2016 11 14
Column - A new salvo has been fired in the continual contest that pits national security vs. privacy rights in Canada. A **Federal Court judge has ruled that the Canadian Security Intelligence Service illegally held on to data that was not threat-related for an unnecessary period of time**. The judicial decision was announced the same week that news broke of several Quebec journalists whose call logs had been monitored by police. All in all a bad week for those we expect to protect us and our freedoms. Not surprisingly, the CSIS story is getting a lot of attention. Also not surprisingly, some of the facts are being twisted and the story is being manipulated to fit various agendas. This issue is an important one and needs a fuller explanation. I would like to try to provide that explanation. Where the controversy lies is in the retention of the data collected, more accurately the "metadata" (essentially data about data, i.e. phone numbers or email addresses but not content). The law states that CSIS should only collect what is strictly necessary for its investigations and that information that does not meet this definition must be destroyed. **Judge Simon Noel** ruled that CSIS acted illegally by retaining the metadata that was not threat-related in a section called **ODAC--the Operational Data Analysis Centre. Why would CSIS do this?** The answer is very simple. Today's threat, at least as far as terrorism goes, is constantly shifting and requires more tools and more resources to counter. Terrorists use the panoply of social media and communications technology available to them and security services are having a hard time keeping up. Most importantly, terrorists are social animals, much the opposite of the current mythological "lone wolves" paradigm that unfortunately now dominates the discourse.

Spies in new glass houses: Ottawa's electronic espionage agency budget blows past CSIS, tops $600 million
Ottawa Citizen, Ian MacLeod, 2016 11 12
Ottawa - The **federal government is spending more than half a billion dollars on its electronic spying service this year, six times its pre-9/11 budget and a reflection of how the Internet has morphed into a juicy intelligence target**. The **Communications Security Establishment, or CSE, is to receive $605.6 million, according to supplementary estimates tabled in Parliament.** That's $22 million more than originally planned, much of it carried over from CSE's 2015-16 budget. In 2000, by comparison, the agency's annual spending stood at $97 million. What's more, the looming U.S. presidency of Donald Trump is already prompting leading national security experts Wesley Wark and Craig Forcese to suggest Canada consider enhancing its foreign intelligence capacity to be better able to resist "the gravitational pull of the U.S. alliance relationship" should it move in "an unpalatable direction," says Forcese. Their main preoccupation is counter-terrorism, though Russian expansionism is rekindling targeting not seen since the end of the Cold War. Though the CSE received no new powers under the **2015 Anti-terrorism Act** (formerly Bill C-51), its mandate includes providing electronic spying assistance to other security agencies and law enforcement. Security intelligence experts suspect much of whatever assistance **CSE renders is for the Canadian Security Intelligence Service, or CSIS, Canada's human spy service. (CSIS funding is pegged at $593.9 million for 2016-17.)** Earlier this year, the independent watchdog agency monitoring the legality of CSE activities disclosed the agency had for years been unlawfully sharing with the Five Eyes metadata associated with Canadians' private communications. The practice was halted in 2014. The 11-member Office of the Communications Security Establishment Commissioner operates on $2.2 million in annual funding and is headed by Jean-Pierre Plouffe, a former military and Quebec court judge. William Galbraith, its executive director, said current funding is sufficient and that the office is considering adding another full-time review expert to the eight now employed.

Surveillance: Mulcair veut que Goodale et Wilson-Raybould s'expliquent
La Presse canadienne, Pierre Saint-Arnaud, 2016 11 09
Ottawa - Le **chef néo-démocrate, Thomas Mulcair, demande aux ministres de la Sécurité publique, Ralph Goodale, et de la Justice, Jody Wilson-Raybould, de rendre des comptes devant le Comité permanent de la sécurité publique sur la surveillance des citoyens et des journalistes**. De passage à Montréal, mercredi, M. Mulcair a exigé que les deux ministres s'expliquent sur la **tentative du ministère de la Justice d'empêcher que ne soit rendue publique l'information voulant que le Service canadien de renseignement de sécurité (SCRS)** ait illégalement recueilli et conservé des données personnelles de citoyens canadiens pendant une décennie. «Comment se fait-il que le ministère de la Justice se soit battu en Cour très récemment à Ottawa pour empêcher qu'on dise la vérité aux Canadiens sur le fait que le SCRS a maintenu et gardé pendant des années, complètement illégalement, un ensemble de renseignements sur des particuliers au Canada, sur des citoyens canadiens?», a demandé M. Mulcair.

Want to move to Canada? Well, their spy agency is involved in mass surveillance too
International Business Times (UK), Mary-Ann Russon, 2016 11 09
London - The US is not the only country to have grave problems relating to government mass surveillance - the **Federal Court of Canada recently ruled that the Canadian Security Intelligence Service (CSIS)'s practice of collecting and retaining data on citizens for over a decade is unlawful.** US citizens who voted for Hillary Clinton in the US presidential elections have been taking to Twitter to announce that they intend to move to Canada in the wake of business entrepreneur Donald Trump's victory, but it might be worth noting that although

Canada has Justin Trudeau as prime minister, it doesn't mean the country doesn't have some similar problems. Intriguingly, the Canadian federal court found that the judiciary had no idea that bulk surveillance was being carried out at all, despite the fact that judges are required to sign off on warrants and intelligence programmes.

'Knife fight' as Trump builds an unconventional national security cabinet
CNN.com, Multiple reporters, 2016 11 15
Washington - **Donald Trump's transition is being marked by sharp internal disagreements over key cabinet appointments and direction, both for internal West Wing positions and key national security posts**, sources involved in the transition team tell CNN. One source with knowledge of the transition described it as a "knife fight." The divisions are being played out as Trump considers key appointments in the national security and diplomatic sectors, including secretary of state, with mainstream conservatives supporting John Bolton against Rudy Giuliani, who is seen as a loyalist to Trump. On other key national security appointments, there is more agreement. Sen. Jeff Sessions is now the leading contender for attorney general, and is in the mix for secretary of defense as well, say multiple sources with knowledge of the transition. **Retired Lt. General Ron Burgess, former director of the DIA, is a leading contender for director of national intelligence.** Retired General Michael Flynn is leading candidate for national security adviser. Pete Hoekstra, a long-serving former congressman from Michigan who chaired the House Intelligence Committee from 2004-2007 is thought to be in the running for the same role or director of the CIA.

How Trump Can Gut Obama's National Security Policies on Day One
NBC News, Ken Dilanian, 2016 11 15
New York - **President Obama made aggressive use of the CIA and Special Operations Forces to hunt and kill al Qaeda, ISIS and other terror groups**. But he also imposed a set of rules designed to regulate the conduct of U.S operatives -- banning torture, for example, and minimizing the risk of civilian casualties in drone strikes. President-elect Trump, who campaigned against those rules, would be able to undo most of those rules in his first hour in office. In fact, if he chooses to do so, Trump can quickly reshape large swaths of American national security policy, much of which is governed by executive orders and presidential policy guidance that can be overridden by the president's signature. That includes U.S. sanctions on Russia, and its recent rapprochement with Cuba. "The range of unilateral presidential authority is astonishingly broad," said **Steven Aftergood, who directs the project on government secrecy at the Federation of American Scientists**. "If you look at the presidential policy directives issued by Obama, they cover topics as diverse as biological weapons, nuclear weapons policy, intelligence surveillance policy, cyber operations, maritime security, arms-transfer policy, and on and on. And because it is based on presidential authority, it can also be revised and reshaped by a new president."

Snowden warns of increase in U.S. domestic spying after Trump victory
Reuters, Staff report, 2016 11 15
Buenos Aires - **Donald Trump's election as U.S. president raises concern that Washington may increase the intrusiveness of domestic intelligence gathering, former U.S. spy agency contractor Edward Snowden said** on Monday, warning that democratic checks and

balances were losing ground to authoritarianism. Snowden lives in Moscow under an asylum deal after he leaked classified information in 2013 that triggered an international furor over the reach of **U.S. spy operations**. He spoke at a teleconference hosted by Buenos Aires University's law school. "We are starting to substitute open government for sheer authoritarianism, a government based not upon the principle of informed consent granted by people who understand its activities but rather a trust in personalities, a trust in claims, a trust in the hope that they will do the right thing," Snowden said.

Trump's most important new partner: The intelligence community
Washington Post, Michael Hayden, 2016 11 14
Op-ed **- I don't envy the president-elect's intelligence briefers. Candidate Donald Trump stormed through the election as a primal force of dystopia, anger and accusation. More often than not, there was little effort to back up accusations with fact. Many of them were, in fact, not true. With that record, a fair question is: What role will facts and fact-bearers play in the Trump administration.** What happens when he is told that Syrian refugees are already extremely vetted? Or when his intel briefer dishes up that the Russians really aren't targeting the Islamic State? What controls - - new data or preexisting mythology? For many authoritarian populists (think the leaders of Turkey, Venezuela and Russia), it's the latter. The intelligence community sometimes makes mistakes, but it strives to create a fact-based, inductive view of the world. From as much data as it can acquire, it works to create general conclusions. Not surprisingly, there are often tensions with policy makers who tend to be deductive, trying to apply their vision to specific situations. For its part, the intelligence community needs to understand how the president-elect learns and how contrarian ideas are best served up to him. Not an easy task. And the intelligence community needs to stand its ground, even, or especially, when it is irritating the client in chief. Simply writing down an unwelcome assessment or saying it once is not enough.

Trump Backer Pushes for New CIA 'Enhanced Interrogation'
The Daily Beast, Kimberly Dozier, 2016 11 14
Column - The **former senior CIA officer who championed waterboarding hopes President-elect Donald Trump will bring harsh interrogation methods--and bring the CIA back into the business of interrogating terrorist suspects**. "We have to be able to capture terrorists. We have to be able to interrogate them. We don't do that anymore," said **Jose Rodriguez**, who led the CIA's clandestine service during the Bush administration. A Trump supporter, Rodriguez said he didn't want to lead the CIA, though he has been named as a possible pick. But he does want to bring back some form of now-illegal interrogation measures, like waterboarding, sleep deprivation, and other so-called "enhanced interrogation methods" approved by the Bush White House to question terrorist suspects in the wake of the al-Qaeda attacks of 9/11.

3 slain troops worked for CIA in Jordan
Washington Post, Thomas Gibbons-Neff & Joby Warrick, 2016 11 13
Washington - The **three Army Special Forces soldiers killed at a Jordanian military base this month were working for a CIA program to train moderate Syrian fighters when they were shot at a checkpoint under still- unclear circumstances**, U.S. officials said. The Nov. 4 attack is thought to be the deadliest single incident involving a CIA team since December 2009, when seven officers and contractors were killed in a suicide bombing in Khost, Afghanistan. The three soldiers - all members of the 5th Special Forces Group based at Fort Campbell, Ky. - were killed by a Jordanian soldier at an entry control point to Prince Faisal Air Base near Jafr, in the southern desert about 150 miles south of the capital, Amman, according to the officials. The shooter also was wounded in what was described by U.S. and Middle Eastern sources as an exchange of gunfire. The soldiers, identified as Staff Sgt. Matthew Lewellen, Staff Sgt. Kevin

McEnroe and Staff Sgt. James Moriarty, were among about 2,000 U.S. troops working in Jordan while participating in the U.S.-led campaign fighting the Islamic State.. The **CIA declined to comment on the shooting incident or on the soldiers' possible role in agency programs**.

Hillary Clinton Blames F.B.I. Director for Election Loss
New York Times, Amy Chozick, 2016 11 13
Washington - **Hillary Clinton on Saturday cast blame for her surprise election loss on the announcement by the F.B.I. director, James B. Comey, days before the election that he had revived the inquiry into her use of a private email server**. In her most extensive remarks since she conceded the race to Donald J. Trump early Wednesday, Mrs. Clinton told donors on a 30-minute conference call that Mr. Comey's decision to send a letter to Congress about the inquiry 11 days before Election Day had thrust the controversy back into the news and had prevented her from ending the campaign with an optimistic closing argument. "There are lots of reasons why an election like this is not successful," Mrs. Clinton said, according to a donor who relayed the remarks.

Inside the mind of Trump's national security guru
CNN.com, Peter Bergen, 2016 11 13
Analysis: One is the son of a multimillionaire real estate developer from New York City who avoided service in Vietnam and whose experience and knowledge of the military and the national security realm are close to zero. The other is a retired three-star general -- one of nine children who grew up in a small house in Middletown, Rhode Island. He went on to run intelligence for the US Joint Special Operations Command, which includes SEAL Team 6 and Delta Force. Later he commanded the Defense Intelligence Agency, the US military's overall intelligence organization. But **riding on a wave of ultranationalistic rhetoric, Donald Trump and his top adviser on national security, retired US Army Lt. Gen. Michael Flynn, have now catapulted from political outsiders to the White House. On Friday, Trump appointed Flynn as one of five vice chairs of his transition team**. NBC reports that Flynn is being considered as either Trump's national security advisor or secretary of defense. The latter position would require a waiver to allow a former military officer to assume a Cabinet position. Understandably, a request for a comment from Flynn about what his future role in the Trump presidency might be did not yield a response. **Flynn's advice to the President-elect is all the more important because he is the only person on Trump's team with any significant experience in America's post-9/11 wars that continue to grind on in Afghanistan, Iraq, Libya, Pakistan, Somalia, Syria and Yemen.**

President-elect Donald Trump is about to learn the nation's 'deep secrets'
Washington Post, Bob Woodward, 2016 11 13
Washington - **One of the most important phases of the transition to power for President-elect Donald Trump includes briefings on U.S. intelligence capabilities and secret operations as well as separate descriptions of the extraordinary powers he will have over the military**, especially contingency plans to use nuclear weapons, according to officials. Though Trump has been given some intelligence briefings on threats and capabilities, there are a series of separate briefs scheduled for the president-elect into what Obama has called "our deep secrets." First is a detailed look at technical and human intelligence sources and methods that provide critical information on **Special Access Programs** -- the most sensitive top-secret undertakings -- for drone strikes and other intelligence operations. This would include the disclosure, if Trump wants the names, of the dozens of officials abroad paid by the **CIA**, to the tune of millions of dollars. Though entitled, presidents normally have not asked for names unless the secret relationship involves a particularly important CIA asset. A second briefing will

be on the covert actions undertaken by the CIA that are designed to change events abroad without the hand of the United States being revealed publicly..

Trump now has access to nation's most valuable intelligence
Fox News, Catherine Herridge, 2016 11 12
Washington - **President-elect Donald Trump will now have access to the most authoritative and highly classified intelligence produced by the U.S. government**, Fox News has learned. Two intelligence sources confirmed that the President's Daily Brief, or PDB, is now available to Trump - after the White House, before Tuesday's election, had directed that the winner have full access to the material, to ensure a smooth transition. The sources told Fox News they do not anticipate the briefings will begin until next week at the earliest. The PDB is like a highly classified newspaper for the president, and now the president-elect. It is significantly different than the information provided in briefings for candidates; those briefings act as primers to help bring candidates up to speed on topics like China, Iran and the Islamic State.. Fox News has also learned that, **because the briefing itself must be done in a secure facility, the White House has a dedicated transition space nearby that can be used by the president-elect to receive the PDB**. If Trump were to receive the brief in New York City, the president-elect would need to travel to a secure federal facility, such as the FBI office.

Concerns raised over Trump accessing global surveillance network
The Guardian (London), Ewen MacAskill, 2016 11 12
London - **Privacy supporters criticise Obama for failing to change legislation following Edward Snowden's NSA revelations**. Privacy and human rights campaigners have expressed fears over the prospect of Donald Trump gaining access to the vast global US and UK surveillance network.They criticised Barack Obama's administration for being too complacent in the wake of the 2013 revelations by the NSA whistleblower, Edward Snowden, and making only modest concessions to privacy concerns rather than carrying out major legislative changes. The concern comes after Snowden dismissed fears for his own safety if Trump, who called him "a spy who has caused great damage in the US", was to strike a deal with Vladimir Putin to have him extradited.. The UK surveillance agency **GCHQ is so tied up with America's NSA, often doing work on its behalf,** it could find itself facing a series of ethical dilemmas. On the campaign trail, Trump made an ambiguous remark about wishing he had access to surveillance powers.

Donald Trump May Select an Architect of Bush's Torture Program to Run CIA
The Intercept, Lee Fang, 2016 11 12
Washington - **Donald Trump may select Jose Rodriguez, one of the primary architects of the George W. Bush torture program, to run the Central Intelligence Agency**, according to a law firm with close ties to Trump. Rodriguez, the **former director of the National Clandestine Service, helped developed the CIA black sites, secret prisons operated in foreign countries where interrogators used a range of torture tactics**, including the use of "waterboarding," the simulated drowning technique once used by the Khmer Rouge and Nazi agents to glean information from detainees. At least 136 individuals were detained and tortured by the CIA. Interrogation tactics also included forced nudity, sleep deprivation while being vertically shackled, and confinement in a small box. Rodriguez is unapologetic about his role in the program, telling 60 Minutes that "we did the right thing for the right reason," even if it meant "going to the border of legality." The **suggestion that Rodriguez may head the CIA was made in a post-election prediction document published by Dentons**, a law and lobbying firm where Trump confidant Newt Gingrich serves as a senior advisor.

'Black Swan' Exercise to Give Trump's Team Practice for Security Crisis
ABC News, Alexander Mallin, 2016 11 12
Washington - **Donald Trump's transition team is getting a helping hand from the Obama administration on national security matters**. The **administration is giving the president-elect and a select few of his top advisers sensitive intelligence briefings**. And, in addition, Trump and his team will take part in two so-called 'black swan' exercises that simulate a domestic or national security emergency. The exercises are intended to help an incoming administration learn how to manage a crisis in real time in case there is some kind of global or domestic emergency in the first days of a Trump presidency. A **black swan exercise would, for example, ensure that a fledgling Trump administration knows how to activate the proper federal agencies to maintain stability.**

'Fearful' national security officials prepare for major shift in US policy
The Guardian (London), Spencer Ackerman, 2016 11 12
Washington - A **US intelligence officer operating in a dangerous part of the world prepared this week for Donald Trump's presidency by making a pact with a colleague: they resolved to disobey any order to commit torture**. The two officers' pledge reflects a wider debate within the national security bureaucracy, as some officials - concerned by Trump's authoritarian inclinations - debate whether to quit in protest at his electoral victory or to remain at their post in the hope of checking impulses they consider dangerous. Officials in the US military, **intelligence services**, diplomatic corps and federal law enforcement have told the Guardian that Trump's suggestions represent such a departure from the norms of American governance that they are contemplating internal resistance or a career change.

Comey faces complicated path under Trump administration
Associated Press, Staff report, 2016 11 10
Washington - **FBI Director James Comey faces a complicated path under a Donald Trump administration.** Does he try to serve out the remaining seven years of his term under a president who has publicly questioned the FBI's integrity? Or does he stay on as a safeguard against executive power and a guide for a novice president on complex national security matters? The term of the FBI director is set at 10 years as an affirmation of the bureau's political independence, and some other chiefs including Robert Mueller, Comey's predecessor, have served presidents of both parties. But Comey would be in the delicate position of working with a president who lobbed occasional criticisms from the campaign trail against the nation's premier law enforcement agency. Though attention had centered on whether Comey could have co-existed with a Hillary Clinton presidency, given the FBI's investigation into her email practices and his own public statements about the probe, that question applies at least equally to a Trump administration.

Team Trump Struggling to Fill National Security Jobs
The Daily Beast, Kimberly Dozier, Shane Harris, 2016 11 10
Washington - **President-elect Trump is scrambling to line up senior officials to run the government's sprawling intelligence and homeland security bureaucracy**. Team Trump is struggling to fill numerous key slots or even attract many candidates because hundreds have either sworn they'd never work in a Trump administration or have directly turned down requests to join, multiple current and former U.S. officials with direct knowledge of the transition efforts told The Daily Beast. Team Trump didn't expect to win until the campaign's internal polling a month before the election signaled a possible victory.

Trump will soon be working with an FBI director he attacked
Washington Post, Sari Horwitz, Ellen Nakashima, 2016 11 10

Washington - **Donald Trump will enter the White House with an awkward relationship with the FBI director after attacking the bureau over its handling of the investigation into former secretary of state Hillary Clinton's private email server**. **James Comey**, who is in the third year of a 10-year term, is unlikely to go anywhere. Unlike the attorney general, the FBI director does not change with the administration. And officials close to Comey say he has no plans to leave, despite the political turmoil around the bureau since his surprise announcement last month on the Clinton investigation. Comey's handling of the Clinton matter drew withering criticism from current and former Justice Department officials, including former attorney general Eric H. Holder Jr. Nearly 100 former senior law enforcement officials from both parties censured Comey for sending his letter, which they said amounted to influencing the election in violation of long-standing Justice Department policy.

U.S spy agencies to begin top secret Trump briefings within days
Reuters, Mark Hosenball, 2016 11 10
Washington - U.S**. intelligence agencies will soon begin giving President-elect Donald Trump the same top secret national security briefings they give President Barack Obama, current and former intelligence officials said Wednesday**. The briefings by veteran career intelligence analysts, which will begin in the next few days, will include some of the government's most closely-guarded secrets, including details of undercover espionage operations and classified intelligence collection methods, including the National Security Agency's controversial eavesdropping operations, the officials said. The **Office of the Director of National Intelligence (ODNI), which will be in charge of Trump's briefings, had no immediate comment.**

CIA launches Signature School Program at UNM
Albuquerque Business First Online, 2016 11 11
Albuquerque --The **Central Intelligence Agency announced Thursday it will launch its Signature School Program at the University of New Mexico. CIA Director John Brennan spoke about the future intelligence and security challenges and previewed the new program** during a speech and visit to the UNM campus. "The CIA-UNM Signature School Program, the first of its kind in the nation, rests on two important factors: the rich academic programs at UNM across disciplines and fields of study, and the diversity of UNM students," said Emile Nakhleh, director of UNM's **Global and National Security Policy Institute**, in a news release. "It's win-win for our students and faculty because the program will strengthen the students' competitive edge in their search for careers in the federal government and in global and national companies and organizations." The program will deepen cooperation between the CIA and UNM and provide opportunities for students and faculty to engage CIA officers and learn about employment opportunities.

CIA announces student recruitment at UNM
Albuquerque Journal, Maggie Shephard, 2016 11 11
Albuquerque—The **CIA has taken a special interest in the University of New Mexico, announcing Thursday that the school is its first of five American colleges and universities that will be targeted for student recruitment into the intelligence agency. CIA Director John Brennan** made the announcement in person to about 300 people on campus before fielding questions from Emile Nakhleh, head of the school's new **Global and National Security Policy Institute**, and members of the audience. The other four schools have yet to be announced, making UNM the testing ground for the CIA's recruiting effort intended to "cultivate an applicant pool" that is as diverse as America is. "Improving diversity at CIA is not just a moral imperative, but a mission imperative ... to collect on a target anywhere around the world." Brennan told the crowd. Nakhleh said after the announcement that the school is not paying or

providing the CIA with an office or any funds, only working with it to allow the CIA to offer experiences and recruiting information to students to make them more hireable for federal security jobs.

Trump's torture support could mean the end of GCHQ-NSA relationship
The Register (UK), Alexander J. Martin, 2016 11 09
Column - If **comments made on the campaign trail by Donald Trump were sincere, then today's British government will need to do some serious soul-searching very soon**. Trump, who was today announced as the president- elect of the United States of America, has been controversially outspoken while seeking to be nominated as the Republican Party's presidential candidate, and while campaigning to be elected as President. The constitution may ostensibly be amended, and a UN convention might be derogated from, but a US decision to legalize torture would very probably prohibit the greater part of the intelligence-sharing aspects of the UK and US's special relationship - a relationship that already is substantively about the **collaboration between GCHQ and the NSA (US National Security Agency).**

Gen. Michael Hayden: Trump Won on Anger and May Act on Beliefs
Newsmax (US), Sandy Fitzgerald, 2016 11 09
Washington - **Donald Trump became the president-elect by "showing anger and being accusatory," and unless he has a meaningful conversation with the "fact-based" world's people, former CIA and National Security Agency Director Michael Hayden fears the worst**. "I fear he will act on the other set of beliefs, and that is going to be very bad for America and the world," Hayden, who was among a group of security experts opposing Trump's campaign, told CBS News anchor Charlie Rose on the "CBS This Morning" program early Wednesday. Trump won by "not being all that fact-based and scapegoating real and imagined enemies," said Hayden, and "none of that fits into the intelligence picture.

US official: Security controls 'working' despite NSA theft
Associated Press, Staff report, 2016 11 09
Washington - The **top U.S. counterintelligence official announced that secret government data is vulnerable to thieves, such as the National Security Agency insider accused of working undetected for more than 20 years to steal a large trove of classified material**, even as he defended the security controls put in place after the Edward Snowden theft. "I believe the reforms are working very well. I think we've done an amazing job in the intelligence community and across the government in executing our reforms," said Bill Evanina, the chief counterintelligence and security adviser to the national intelligence director. "However, I will say that if someone wakes up tomorrow and they make a decision that they're going to steal data from the government, they will be successful at it." Evanina told The Associated Press in a recent interview that no matter how good security controls are, they will never catch every insider or hacker -- and they must be continually improved because of technological advances. His extensive comments followed the August **arrest of former NSA contractor Harold Thomas Martin III, 51,** of Glen Burnie, Maryland. Martin remains in custody after a judge deemed him to be a flight risk.

UK opts in to new Europol intelligence-sharing programme
Financial Times, Helen Warrell, 2016 11 14
London - The **UK will opt in to a new intelligence-sharing programme with EU law enforcement agency Europol, in an effort to boost cross-border action against terrorism and cyber crime ahead of Brexit. Brandon Lewis, policing minister, said** on Monday that while it was still "too early to speculate" on whether security co-operation would continue after Britain leaves the EU, the government had decided to join the updated Europol framework in the short term. It is UK's first significant opt-in decision since the June referendum. Britain's collaboration in Europol was due to expire in May 2017 because the last government initially rejected the new programme, fearing it would reduce the operational independence of UK policing and increase the obligation to **share intelligence data**. Ministers have now secured concessions that do not extend the agency's powers over member states. Historically, Europol has been able to gather and disseminate intelligence, but its officers have no executive powers such as the right to make arrests. Following the terrorist attacks in Paris last year, some European interior ministers have called for more power for the agency. **Charles Michel, Belgium's prime minister, even suggested the EU should set up a "European CIA".** The new agreement falls far short of this, giving a "clear mandate" only to the EU's internet referrals unit, which tackles online terrorist propaganda, and allowing Europol to initiate investigations together with member states.

Britain's plan to tame Trump
London Times, Tim Shipman, 2016 11 13
London - A **secret memo from the British ambassador to the United States has laid bare how the UK plans to shape Donald Trump's presidency so he helps to boost Britain's national interests**. In a leaked telegram, written just as Trump was surging to victory last week, Sir Kim Darroch boasted that the UK is the best placed of any nation to steer the new president's foreign policy and encourage his more extreme ideas to "evolve". Darroch describes Trump as "open to outside influence" from Britain if Theresa May launches a diplomatic offensive to win him over. Whitehall sources say ministers, generals and intelligence chiefs are drawing up plans to influence Trump on such issues as Nato, Iran, Russia and immigration in an effort to help the UK exploit his victory and curb his more extreme views.

McCartney asks police to probe MI5 'bugging'
Sunday Times (UK), John Mooney, 2016 11 13
London - **Raymond McCartney a Sinn Fein MLA, has asked the Police Service of Northern Ireland to investigate the alleged bugging of his home in 2002 by the army and MI5**. McCartney, who lives in Derry, has been unable to locate an eavesdropping device which he believed was planted in his home. Its existence was exposed when an operations log book was accidentally left on the kitchen table by a "ghost team" comprised of army surveillance officers and an MI5 technician, who is said to have disarmed the alarm system on McCartney's house. The request by the former IRA hunger striker follows the publication of Charlie One, a book by a former army intelligence officer who used the pseudonym Sean Hartnett and revealed details about classified surveillance operations in Northern Ireland.

EX MI6 Boss: Nuclean War More Likely Under Trump
Daily Mail (UK), Dan Martin, 2016 11 12
London - **Donald Trump's unpredictable temperament has made nuclear war more likely, the former head of MI6 warned last night. John Sawers** said the president-elect's 'fierce' reactions when he feels he has been insulted could prove dangerous. The world has become far more perilous over the past few years, he said, with an increased threat of a nuclear clash between the US and China or Russia. Sir John told BBC Radio 4 that Barack Obama must take

some blame for the increased nuclear threat because his administration did not bolster relations with Russia. But he added: 'I don't think Donald Trump quite yet knows what the pressures will be on him when he becomes president.

Brazilians suspected as GCHQ investigates Tesco cyberattack
London Times, Multiple reporters, 2016 11 09
London - The **cyberattack on 40,000 Tesco Bank accounts "looks unprecedented", the chief City watchdog said yesterday, as it emerged that GCHQ is helping to investigate the crime**. Reports from victims pointed to Brazil as the origin of the biggest hack to strike a British bank, but the country's authorities have not yet been contacted by their British counterparts. Tesco said that it had been hit by "a systematic, sophisticated attack" with 20,000 customers having an estimated £17 million drained from their accounts. The bank has frozen all online transactions and many customers have had their debit cards blocked. Andrew Bailey, chief executive of the Financial Conduct Authority, told MPs that he was worried about weaknesses in banks' IT systems. He said: "The heart of the concern is what is the root cause of this and what does it tell us about broader threats." The **National Cyber Security Centre, a new part of GCHQ that tackles online crime, confirmed that it was providing "on-site assistance" to Tesco**. It is working alongside the National Crime Agency to investigate. Several customers said that fraudulent transactions were made in Rio de Janeiro.

No 10 source dismisses emergency MI5 meeting 'nonsense' as Jeremy Corbyn says Donald Trump win is 'unmistakable rejection of establishment'
London Daily Telegraph, Michael Wilkinson, 2016 11 09
London - **Theresa May has congratulated Donald Trump on being elected as the 45th president of the USA**, promising to remain "strong and close partners". In a statement she said: "I would like to congratulate Donald Trump on being elected the next President of the United States, following a hard-fought campaign. "Britain and the United States have an enduring and special relationship based on the values of freedom, democracy and enterprise. "We are, and will remain, strong and close partners on trade, security and defence. "I look forward to working with President-elect Donald Trump, building on these ties to ensure the security and prosperity of our nations in the years ahead." The **statement came as Number 10 sources described as "nonsense" claims that the head of MI5 has gone in for an emergency meeting,** insisting it was a long-scheduled meeting and that he always uses the back door.

Govt appoints new cyber affairs ambassador
Australian Associated Press, Staff reporter, 2016 11 10
Canberra - **Australia has appointed its first-ever ambassador for cyber affairs. Dr Tobias Feakin** will fill the inaugural position from January as part of the federal government's $230 million cyber security strategy. The academic, who has been the director of national security programs at the Australian Strategic Policy Institute since 2012, will work with other countries to strengthen the region's response to cybercrime and advocate against state censorship of the internet. (Full report)

Don't believe anything you hear, Canberra was no nest of spies
The Australian Financial Review, Brian Toohey, 2016 11 09
Column: John **Blaxland's enthusiastic sales pitch for his new book suggests Canberra residents must have found it hard not to trip over Russian spies doing battle with Australian spy catchers in the 1970s and '80s.** Blaxland, co-author of the latest volume of the **official history of the Australian Security Intelligence Organisation** told The Canberra Times last week, "It was on for young and old" in shops, restaurants, cafes and bars in Manuka, Kingston, Deakin, Yarralumla, Red Hill and parks near the Soviet and Chinese embassies. Blaxland said Russian spies were waiting for "a pre- arranged contact to turn up to drop something off or have a 'brush-past' [jargon for quick handover]". But not everyone is convinced it occurred, not least because it is not in the official history itself, The Secret Cold War. When asked to confirm that the Russian spies met their Australian contacts in shops, cafes etc in each of the locations Blaxland named, a **spokesman for ASIO referred this column to the official history - a book it knows doesn't confirm these details**. On the contrary, it says ASIO hadn't managed to detect a KGB officer meeting an agent. This might explain the gently sceptical comment from a former senior defence official, Patrick Gourley, who told this column, "Millers of Manuka was a hotbed for the spy trade.

The spy agencies watchdog is calling for the proposed warrants regime in new spy legislation to be tightened.
Radio New Zealand News, Staff reporter, 2016 11 10
Wellington - The **spy agencies watchdog is calling for the proposed warrants regime in new spy legislation to be tightened. MPs are considering a new law for the GCSB and the SIS setting up a common warranting and compliance regime**. The Inspector-General of Intelligence and Security, Cheryl Gwyn, says some of the new provisions are too broad, lack safeguards, or weaken conditions in the current law. She told a select committee this morning she supports more ministerial policy statements on what agencies can do without warrants. (Full report)

Cybersecurity bill to rank agencies by data sensitivity
Taipei Times, Lee Hsin-fang, 2016 11 13
Beijing - A **new draft cybersecurity bill that aims to protect sensitive government information is to rank government agencies on a three- tier system according to the data they handle**, sources said. A total of 123 key government institutions, including the Presidential Office, **the National Security Council**, the Executive Yuan, the Ministry of National Defense and the National Security Bureau, have been identified by the Executive Yuan as tier-A organizations in terms of information security interests, a source who declined to be named said. The institutions would be required to conform to semiannual inspections, as well as

conduct cyberattack response drills at least once a year. While relations between China and Taiwan seemingly thawed during former president Ma Ying-jeous tenure, former premier Simon Chang had previously acknowledged that attacks on Taiwans computer systems by Chinese hackers were still frequent at that time.

More talks needed with Japan on military intelligence pact: S. Korea
Kyodo News, Staff reporter, 2016 11 10
Seoul - **South Korea and Japan will hold further discussions before reaching a final agreement on signing a pact to share military intelligence**, South Korea's Defense Ministry spokesman said Thursday. "We are not in the (stage) for final agreement yet. Additional discussions are being arranged," the spokesman told a regular press conference, a day after officials from the two sides held a second round of talks in Seoul with an eye on concluding the General Security of Military Information Agreement by the end of the year. Meanwhile, South Korea's opposition camp, which holds majority in the National Assembly, is demanding the suspension of the talks and submitted a resolution to the parliament on Wednesday to that end.

Chinese official named head of Interpol, drawing criticism
Associated Press, Christopher Bodeen, 2016 11 10
Beijing - A **top Chinese police official was elected president of Interpol on Thursday, setting off alarm bells among rights advocates over abuses and a lack of transparency within China's legal system,** as well as the potential misuse of the police organization to attack Beijing's political opponents. **Vice Public Security Minister Meng Hongwei was named as the first Chinese to hold the post** at the organization's general assembly on the Indonesian island of Bali, Interpol announced in a press release. The Lyon, France-based International Criminal Police Organization has 190 member nations and has the power to issue "red notices." It's the closest instrument to an international arrest warrant in use today. Interpol circulates those notices to member countries listing people who are wanted for extradition.

China says "no grace period" for foreign NGOs under tough new law
Reuters, Staff reporter, 2016 11 09
Beijing - **There will be no "grace period" for the implementation of new regulations limiting the activities of foreign non-governmental organisations (NGOs) in China that are slated to come into effect in 2017, according to the Ministry of Public Security**. Western governments have lambasted the foreign NGO law passed in April, saying it treats the groups as a criminal threat and would effectively force many out of the country. "China is a country with the rule of law - no law has a 'transition period' or 'grace period' after it takes effect," a representative from the Ministry of Public Security's Foreign NGO Management Bureau told consular officials from 11 countries at a briefing in Shanghai on Tuesday.

Former SVR chief Fradkov heads up Almaz-Antey board of directors
Interfax News Service, 2016 11 14
Moscow—**Mikhail Fradkov, former head of the Russian Foreign Intelligence Service (SVR)**, has headed up the board of directors of Concern VKO Almaz-Antey, the concern said on its website.It was reported on November 9 that Fradkov had been nominated by Prime Minister Dmitry Medvedev for the post of board member of Concern VKO Almaz-Antey. Until recently,

the board of Concern VKO Almaz-Antey was headed by Sergey Chemezov, the head of the state corporation Rostec.

How Two Russian Defectors Helped the FBI Nab European Mobsters Then Wound up Stranded in Oregon
Newsweek, Bryan Denson, 2016 11 12
Analysis: As an **intelligence officer in Russia's Federal Security Service, Jan Neumann** knew the weight of a loaded Makarov 9 mm. When he later worked for a Moscow bank that laundered money for the mob, he also knew the weight of $1 million packed into bricks. But on a spring night in 2008, as he headed home to his wife, he could scarcely comprehend the weight of his impending troubles.,,Jan also downloaded an electronic file on several government-affiliated banks, a rare glimpse inside the criminal Cerberus of financial big shots, mobsters and **FSB officers**. The Neumanns drove half the night to see a friend, then switched cars and headed back to Moscow. Victorya booked three flights set to depart from airports around the city--decoys to confuse pursuers. In the final hours before their departure, Victorya purchased tickets for the flight they intended to board, bound for Frankfurt, with a connecting flight to the Dominican Republic, a Caribbean nation that requires no visas.

Russian State Duma ratifies China-Russia anti-terrorism agreement
Xinhua News Agency, 2016 11 12
Moscow - The **Russian State Duma, or the lower house of parliament, ratified an agreement on Friday between China and Russia on cooperation in fighting against terrorism, separatism and extremism**. Russian President Vladimir Putin submitted the agreement to the State Duma for parliamentary ratification on Sept. 28. The agreement, signed in Beijing on Sept. 27, 2010, is aimed at developing bilateral cooperation in combating terrorism, separatism and extremism by taking joint measures to prevent and stop terrorist attacks. The two countries will exchange information in fighting criminal activities of terrorists and extremists, hold regular meetings and consultations, and work together to prevent and suppress crimes in the border regions between China and Russia.

Germany does not have to hand over NSA list of spying targets
DPA News Agency, 2016 11 15
Berlin—A **list of spying targets given to German intelligence by the United States does not have to be made available to a parliamentary committee investigating the affair**, the country's Constitutional Court ruled Tuesday. The list of so-called "selectors" - telephone numbers, email and IP addresses - was handed to **Germany's foreign intelligence agency BND by the National Security Agency (NSA)** with the aim of spying on German and other European targets. Making the sensitive information public could threaten national security and the work of Germany's intelligence agencies, the court in Karlsruhe said in a decision issued last month but made public on Tuesday.
Quand Israël tentait d'espionner la sécurité intérieure
Le Monde, Jacques Follorou, 2016 11 15
Paris - En **2011-2012, le Mossad a essayé de faire acheter au renseignement intérieur et à la direction de la police des moyens techniques piégés** Les affaires d'espionnage entre les Etats ne se règlent quasi jamais au grand jour. L'évocation dans une procédure judiciaire visant Bernard Squarcini, ex-patron de la sécurité intérieure, d'une tentative d'espionnage de la

Direction générale de la police nationale (DGPN) et de la **Direction centrale du renseignement intérieur (DCRI) par le Mossad**, les services secrets israéliens, est une première. Soupçonné de plusieurs faits, dont certains relevant du trafic d'influence, l'ancien chef de la DCRI, de 2008 à 2012, a en effet révélé, fin septembre, l'existence d'une opération du Mossad contre des intérêts français, après avoir été sommé de s'expliquer sur le placement sur écoute d'un policier en 2011. Suspecté d'avoir pu détourner les moyens de la DCRI pour régler des comptes personnels, M. Squarcini s'est défendu en dévoilant l'enquête de contre-espionnage ciblant les services secrets israéliens dans laquelle ce fonctionnaire a été écouté.

Court rejects case to reveal more on US spies in Germany
The Local (Germany), Staff report, 2016 11 15
Berlin - A **case brought by opposition parties to shed light on the spying collaboration between Germany and the American NSA was rejected by Germany's highest court in a decision made public on Tuesday**. Die Linke (Left Party) and the Green party politicians from a parliamentary committee currently investigating German-American spying activities had launched the case in an effort to have **intelligence agency BND release a so-called "selectors list" of targets provided by the US National Security Agency (NSA) to Germany**. The list contains identifiers such as IP addresses, phone numbers and email addresses used to search for specific people. The committee members had wanted to view the list, but the German government refused, instead appointing a "trusted person" to evaluate the list and then inform the committee. The **Constitutional Court** ruled on Tuesday that the BND could keep the list classified, arguing that the government's interest in confidentiality was more important than the interests of the parliamentary committee to receive more information. The court further explained that publishing the list of selectors without the consent of the US could affect the **functioning of intelligence agencies and therefore Germany's security capacity**.

Enquête Squarcini, ex-chef de la DCRI, aurait mis ses réseaux au service de LVMH
L'Humanité, P. Du., 2016 11 15
Paris - On en sait un peu plus sur les **activités troubles de Bernard Squarcini, chef du renseignement intérieur (DCRI)** jusqu'en mai 2012. Mis en examen le 4 novembre pour « violation du secret de l'enquête », « trafic d'influence » et « compromission du secret-défense », ce proche de **Nicolas Sarkozy** est soupçonné d'avoir utilisé ses contacts au sein de la justice et de la police pour servir des intérêts privés, au sein de l'officine Kyros. De nouvelles informations, publiées hier par Mediapart, **montrent comment il a contribué à l'espionnage, pour le compte de LVMH, des héritiers de la famille Hermès** après avoir sollicité un magistrat encore en poste dans le but d'obtenir des informations sur une procédure opposant les deux groupes du luxe. Bernard Squarcini aurait aussi fait appel à un agent de la DGSI pour glaner des informations sur un opposant kazakh.

EU Struggles With Security Gaps
Wall Street Journal, Matthew Dalton, 2016 11 14
Paris - Shortly after the terror attacks here a year ago, **European leaders pledged to close a legal loophole that militants could exploit to pass through border crossings without security checks**. A year later, negotiators in Brussels are still quarreling over how to change the problematic law, which forbids border guards from conducting systematic security checks on European citizens. France and some other governments, fearing the return of European-born jihadists from Syria, have grown increasingly exasperated. "We have been quite irritated at the pace," said one European diplomat involved in the talks. Faced with repeated attacks by Islamic State and its sympathizers, the European Union is struggling to find decisive fixes for its myriad security vulnerabilities. Efforts have been hamstrung by the bloc's complex decision-making

procedures, **privacy concerns and a cumbersome counterterrorism apparatus** that relies on coordination among theregion's 28 governments.

Attack on Dutch elections possible warns counter-terror boss
NL Times, Taylor Moore, 2016 11 14
The Hague - **With European citizens becoming more polarized when it comes to integration, Islam and asylum, the Netherlands must prepare for a possible attack during the parliamentary elections in March, cautions Dick Schoof, the National Coordinator for Counterterrorism and Security.** Radicalized loners, both ultra nationalists and religious fanatics, could be particularly dangerous, he told radio station BNR. He added that the ISIS propaganda machine is relentlessly targeting "vulnerable, impressionable people who are not on the radar screens of security authorities." These online messages are calling on disillusioned people to carry out attacks on behalf of the militant group. But the primary danger is from the alleged jihadists who return to the Netherlands from Iraq and Syria. It is one reason why the Dutch threat level is at its second-highest level. There are European arrest warrants out for about 190 Dutch people who fought in the Syrian Civil War, and whose whereabouts are not known.

Renseignements 3.000 à 5.000 potentiels « returnees »
Le Soir, Journaliste maison, 2016 11 14
Bruxelles - Les **services de renseignement européens travaillent sur l'hypothèse d'une « vague » de milliers de combattants de Daech qui pourraient rentrer en Europe**, a indiqué dimanche le ministre de l'Intérieur. « On voit que l'État islamique est sous pression avec les attaques à Raqqa et Mossoul. Soit les combattants belges restent là-bas pour aider à la défense de l'État islamique. L'autre hypothèse, c'est que l'État Islamique renvoie ces combattants. Et pas seulement les 200 Belges sur place, mais les 3.000 à 5.000 Européens qui s'y trouvent » , a affirmé M. Jambon (N-VA) sur la RTBF.

Renseignement, prison, police... Ce qui a été fait depuis ces attaques
Le Figaro, Paule Gonzalès et Christophe Cornevin, 2016 11 12
Paris - Le **gouvernement s'y est repris à plusieurs fois avant de proposer, avec l'aide du Sénat, un dispositif légal renforcé. La loi du 13 novembre 2014 a introduit l'interdiction de sortie du territoire et créé le délit de préparation individuelle d'une entreprise terroriste**. La répression des faits d'apologie et de provocation au terrorisme a été durcie et de nouveaux outils administratifs permettent de bloquer ou de déréférencer des sites Internet. La loi du 3 juin 2016 entérine le renforcement de la lutte contre le trafic d'armes, la lutte contre le blanchiment d'argent, le renforcement du renseignement pénitentiaire et des pouvoirs d'enquête pour les magistrats, ainsi que l'usage des armes facilité pour les forces de l'ordre. Les enquêteurs pourront aussi utiliser les Imsi-catchers, permettant le recueil des données sur de larges zones d'écoutes.. Dans le cadre du **renforcement des services de renseignement, 500 agents supplémentaires sont appelés à étoffer la Direction générale de la sécurité intérieure (DGSI) d'ici à fin 2017,** en plus des 432 déjà prévus. « Des analystes techniques, des informaticiens, des linguistes sont notamment recrutés pour renforcer ses capacités d'analyse, de détection et de prévention des risques terroristes » , a annoncé Bernard Cazeneuve, qui a par ailleurs alloué 500 postes de plus - 350 policiers et 150 gendarmes - au **Service central du renseignement territorial (SCRT)**, tandis que 100 recrues vont rejoindre la Direction du renseignement de la Préfecture de police.

Poland honours CIA spy with posthumous award
Agence France-Presse, 2016 11 11

Warsaw— **Poland gave a posthumous honour Friday to a former Polish army colonel who for years gave the CIA precious information on the Warsaw Pact**, the Soviet military alliance. **Colonel Ryszard Kuklinski**, who died in Florida in 2004 and is buried in Warsaw, was declared by President Andrzej Duda to be a "knight of our independence," and promoted to the rank of general. Kuklinski, a brilliant officer in the Soviet-era Polish army, decided to change sides after the Communist regime brutally crushed a workers' revolt in 1971 and he learned of Kremlin plans for military aggression. Between 1972 and 1981, he handed some 35,000 secret documents to the US Central Intelligence Agency (CIA).

Aleksandre Tabatadze appointed as Deputy Head of State Security Service
Prime News, 2016 11 11
Tbilisi— **Aleksandre Tabatadze has been appointed as Deputy Head of the State Security Service of Georgia. Vakhtang Gomelauri is the head of the service**. As Prime-News has been informed from the State Security Service the PM has already signed the corresponding decree. Aleksandre Tabatadze worked as the Deputy Minister of Justice. Earlier he was the Deputy Interior Minister of Georgia.

Cabinet Endorses Order Of Application Of Funds By Foreign Intelligence Service
Ukrainian News, 2016 11 11
Kiev— The **Cabinet of Ministers has endorsed the order of application of state budget funds assigned for the Foreign Intelligence Service** to implement measures to enhance the nation's defensive capacity and security. Ukrainian News Agency learned this from Government Resolution 798 of November 9. The Foreign Intelligence Service is the chief controller of the budget funds and the executive manager of the budgetary program. This order regulates budget spending on the purchase and upgrades of weapons and military hardware, technical reconnaissance equipment, information protection equipment and for the development of information systems.

La DGSE s'inquiète d'une enquête sur l'accident d'avion à Malte
Le Monde, Jacques Follorou, 2016 11 10
Paris - Une **information judiciaire pourrait dévoiler des activités clandestines**. Le parquet de Paris a ouvert, dans la plus grande discrétion, une procédure après l'accident ayant coûté, le 24octobre, à Malte, la vie à cinq Français dans la chute d'un avion loué par la **Direction générale de la sécurité extérieure (DGSE).** Mise en oeuvre quand des nationaux perdent la vie dans des conditions inexpliquées, elle est jointe à celle ouverte, sur place, par les autorités maltaises. Elle est conduite en parallèle des investigations du Bureau enquêtes et accident rattaché au ministère de la défense (BEA-D). **La DGSE a, par ailleurs, diligenté, avec ses propres moyens, des recherches, par principe**, sur une éventuelle implication étrangère parmi les causes de l'accident.

Les espionnes sortent de l'ombre
L'Obs., Vincent Jauvert, 2016 11 10
Non identifié - **Espionnes, doubles vies sous haute tension, par Dalila Kerkouche**, Flammarion, 300 p., 21 euros. Il ne faut pas se fier au titre de cet ouvrage beaucoup plus important qu'il n'y paraît. Certes, il y est question de la vie difficile des femmes qui occupent des postes élevés dans les sept services de renseignement français, dont la **mythique DGSE** : le machisme insupportable, la séparation d'avec la famille et les amis, la lourdeur d'une tâche devenue hautement stratégique en ces temps de terrorisme Mais le livre de Dalila Kerchouche (photo), grand reporter à « Madame Figaro », est avant tout un document exceptionnel sur l'espionnage français. Jamais autant d'officiers en activité, des dizaines, n'avaient témoigné

(anonymement) sur leurs façons de travailler, de recruter et de manipuler les sources, remonter des filières, les démanteler.

Quand Hollande se renseigne sur le Renseignement
Le Point, A.Z., 2016 11 10
Levallois-Perret, France - **Le 2 novembre, François Hollande s'est rendu discrètement, en fin d'après-midi, à Levallois-Perret, au siège de la Direction générale de la sécurité intérieure (DGSI)**. Une visite non mentionnée sur l'agenda présidentiel. **Patrick Calvar , le patron du renseignement intérieur, a rendu compte au chef de l'Etat des opérations secrètes en cours** - avec le président, on n'est jamais sûr qu'elles le restent longtemps... Calvar lui a également exposé les défauts du système de lutte antiterroriste à l'échelon de l'Union européenne. Dans le but de lutter contre le terrorisme, l'accord Swift 2 donne en effet aux autorités américaines l'accès aux données bancaires stockées sur le réseau Swift, qui gère les transactions financières internationales de près de 200 pays... mais pas à la France.

Germany tries civil servant accused of spying for Indian intelligence
DPA News Agency, 2016 11 10
Berlin— A 59**-year-old former civil servant was set to go to trial in Germany Thursday on charges of espionage on behalf of India's foreign intelligence agency**. The German national is suspected of "occupation as a secret service agent and disclosure of official secrets in 45 cases," according to the federal prosecutor's office in Karlsruhe. The man is accused of spying on Indian nationals in Germany - mainly political dissidents and Sikh extremists - while working at a foreigners' registration office in the western state of North Rhine-Westphalia.

German cabinet approves cyber security strategy
Deutsche Welle, 2016 11 09
Berlin— **Germany's cabinet has approved a new cyber security strategy** amid a growing number of attacks. Many of the cyber attacks are directed from China and Russia. The German cabinet on Wednesday adopted a new cyber security strategy to counter a rising number of threats targeting government institutions, critical infrastructure, businesses and citizens. The strategy calls for the creation of a mobile **Quick Reaction Force housed within the Federal Office for Information Security (BSI**), as well as similar teams within the federal police and domestic intelligence agency that are able to respond to cyber threats against government institutions and critical infrastructure. **Germany's Cyber Defense Center** will fall under the authority of the Interior Ministry, which will seek to foster inter-agency coordination and cooperation.

Gülenists sabotaged reconciliation process with the PKK, former Turkish intelligence official says
Daily Sabah, Staff report, 2016 11 09
Istanbul - **Former National Intelligence Organization (MIT) official Emre Taner said Wednesday that the government's 2009 talks with the PKK terrorist organization had aimed for reconciliation and put a halt to 40 years of bloodshed**, but the whole peace process was sabotaged by foreign powers and the Gülenist terror cult (FETÖ). In a meeting with the Turkish Parliament's commission investigating the July 15 Gülenist coup attempt, he said that the talks with the terrorist group was not "treason" but only an effort to stop PKK terrorists. "We started the Oslo talks to prevent foreign powers from using the PKK as a tool. Many of them are in affiliation with the terrorist group," he said.

Quand Ceausescu espionnait les Français
L'Express, Charles Haqyet et Iulia Badea-Gueritée, 2016 11 09

Paris - **Pendant plus de quarante ans, les agents roumains en poste dans l'Hexagone ont surveillé des hommes politiques**.Et les ont parfois recrutés.Plongée dans des archives tout juste déclassifiées de la Securitate. « Stanica » : cet alias a caché, durant quatre ans, un membre du premier cercle de François Mitterrand. Son nom? **Claude Estier. Ancien résistant, député, président de la commission des Affaires étrangères, ce politicien habile a joué un rôle clef dans l'appareil socialiste jusqu'au début des années 2000.** Mais il avait un autre visage. De 1982 à 1986, Claude Estier a entretenu des relations suivies avec la Securitate, la police secrète de Nicolae Ceausescu, comme le révèlent des documents inédits (voir page 66), récemment déclassifiés, que L'Express a pu consulter. Depuis la chute du communisme, à la fin des années 1980, des centaines de chercheurs ont décortiqué les archives de ce service d'espionnage naguère omni - présent. Durant plus de quarante ans, la Securitate a tout vu, tout entendu, en Roumanie et parfois au-delà. **Ses espions ont écrit des millions de rapports, dont une grande partie dort aujourd'hui sur des étagères**, témoins poussiéreux d'une époque de terreur et de chantage.

Terrorisme: Interpol dénonce le manque de partages de données biométriques entre Etats
Agence France-Presse, Journaliste maison, 2016 11 09
Lyon - Le **secrétaire général d'Interpol Jürgen Stock a dénoncé mercredi l'insuffisant partage entre Etats de données biométriques susceptibles de permettre d'identifier plus efficacement les terroristes.** L'organisation de coopération policière estime qu'"environ 15.000 combattants se trouvent dans les zones de conflit et qu'un nombre indéterminé d'entre eux pourrait rentrer dans leur pays d'origine pour (...) s'engager dans des opérations clandestines". L'assemblée générale d'Interpol, qui était réunie à Bali (Indonésie), a souligné "l'urgence à traiter cette menace", écrit-elle dans un communiqué. "Bien que le partage d'information via Interpol ait permis aux organisations nationales de maintien de l'ordre d'empêcher des terroristes et des candidats terroristes de voyager, le manque de données biométriques reste un maillon faible", déclare M. Stock, cité dans un communiqué de l'organisation.

Intelligence Minister: Iran Most Secure Country in Middle East Despite Massive Terrorist Attempts
Fars News Agency, 2016 11 09
Tehran - **Iranian Intelligence Minister Seyed Mahmoud Alavi underlined that despite all attempts made by various terrorist groups, Iran is the most secure country in the region due to its powerful defensive and military forces**. "The security index in Iran shows improvement on a daily basis," Alavi said. He reiterated that security in most of the countries is deteriorating, but it is improving day by day in Iran. The Iranian intelligence minister said that Iran owes its stable security conditions to the efforts made by the country's intelligence forces who nip any plot in the bud and carefully watch any suspicious move right from the beginning.

Iran's security index rising on daily basis: Intelligence minister
Press TV, 2016 11 09
Tehran - **Iran's Intelligence Minister Mahmoud Alavi says the country's security index is increasing on a daily basis**, while most parts of the world are witnessing a downward trend in

the same field. “The level of security governing our country is, as in the words of Leader of the Islamic Revolution [Ayatollah Seyyed Ali Khamenei], unparalleled,” Alavi said on Monday. “The increase in our country’s security index comes as we are witnessing the deaths of people in countries here and there, which shows how the security index is low in most countries of the world,” the Iranian intelligence minister said..

Failure of deradicalization blamed on poor coordination
Jakarta Post, Haeril Halim and Nurul Fitri Ramadhani, 2016 11 15
Jakarta - The **effectiveness of the country's deradicalization program has been put under scrutiny** in the wake of the attack at a church in Samarinda, East Kalimantan, on Sunday, the chief suspect in which is a former terrorism convict. The **National Counterterrorism Agency (BNPT) has blamed poor coordination among related institutions for the failure to monitor terrorism convicts in society** after they have finished their prison sentences. The BNPT has become the subject of criticism since it became known that Johanda, the suspected perpetrator of the Samarinda attack, which claimed the life of a toddler and left three others injured, had returned to join radical groups after he was released on parole in July 2014.

India, Israel to intensify defence, anti-terror cooperation
Press Trust of India, 2016 11 15
New Delhi - Reflecting their growing proximity, **India and Israel on Tuesday decided to further "broad-base" their already close defence partnership and intensify cooperation in combating radicalisation and extremism, while calling upon global community to act tough against terror networks and States harbouring them**. The two countries also agreed to deepen their cooperation in a variety of areas including trade and investment, agriculture, water resources and cyber crime during extensive talks between Prime Minister Narendra Modi and Israeli President Reuven Rivlin, who is on his first visit to India.

S. Korea to put intel-sharing pact with Japan up for Cabinet approval
Yonhap News Agency, Staff reporter, 2016 11 15
Seoul - **South Korea will put the military intelligence-sharing pact it reached with Japan up for final Cabinet approval this week**, the foreign ministry said Tuesday, as Seoul is moving to finalize the controversial deal despite local objections. South Korea and Japan tentatively signed the **General Security of Military Information Agreement (GSOMIA)** on Monday, which would allow the South to share its sensitive military intelligence on North Korea with Japan. The Ministry of Government Legislation has checked the deal and "upon the completion of screening, the deal may get introduced to the next vice ministerial meeting on Thursday," ministry spokesman Cho June-hyuck said in a press briefing. Approval at the vice ministerial session will allow it to be forwarded to a Cabinet meeting, the spokesman said. The next Cabinet meeting after Thursday is set for Nov. 22.

Japan, South Korea agree to sign military intelligence pact
Kyodo News, Staff reporter, 2016 11 14
Tokyo - **Japan and South Korea agreed Monday to sign a pact to share military intelligence, Japan's Foreign Ministry said**, as the two neighbors seek to strengthen security ties in the face of a growing threat from North Korea. The two governments aim to sign the

General Security of Military Information Agreement as soon as this month after completing domestic procedures, Japanese government sources said. Earlier Monday, South Korea's main opposition parties threatened to dismiss the country's defense minister if the government signs the intelligence sharing agreement. The agreement to sign the pact was reached following the third round of working- level talks between foreign and defense ministry officials in Tokyo on Monday. The two countries resumed the talks on Nov. 1 after a lapse of four years.

Pakistan won't be able to copy new notes: Intelligence agencies
Times of India, Neeraj Chauhan, 2016 11 10
New Delhi - **Intelligence agencies vetted the new denominations of Rs 2,000 and Rs 500 notes asserting that its security features will be next to impossible to replicate** for Pakistan and organised criminal networks for some time to come. A top government official without going into the details, told TOI that external intelligence agency Research and Analysis Wing, Intelligence Bureau and the DRI examined the features on the notes being secretly printed for the past six months. The official refused to reveal the number of security features on the notes but said they were difficult to forge.

Two more Indian 'undercover operatives' leave Pakistan
Pakistan Dawn, Syed Sammer Abbas, 2016 11 10
Islamabad - **Two more Indian 'undercover operatives' among eight 'diplomats' suspected of involvement in terrorism and subversive activities in Pakistan left the country on Thursday**, Foreign Office officials confirmed. Indian High Commission First Secretary Press Balbir Singh and Staff Officer Jayabalan Senthil, allegedly members of the **Indian Intelligence Bureau**, left Pakistan for Dubai via flight EK 615, the FO officials said. Three Indian High Commission officials left Pakistan earlier this week. Anurag Singh, Vijay Kumar Verma and Madhavan Nanda Kumar, were suspected of being member of **Indian spy agency Research and Analysis Wing (RAW).** The FO during a press briefing last week revealed details of the eight Indian 'diplomats' in Pakistan, saying that a number of "Indian diplomats and staff belonging to Indian intelligence agencies RAW and IB have been found involved in coordinating terrorist and subversive activities in Pakistan under the garb of diplomatic assignments."

Three of eight Indian diplomats accused of spying leave Pakistan
Gulf News, Mohsin Ali, 2016 11 09
Islamabad - **Pakistani officials say three of eight Indian diplomats accused by Islamabad of spying have left the country for New Delhi**. A security official and a government official insisted the three were part of an alleged network of spies. The two officials said the three Indians left Pakistan on Tuesday and another five "undercover agents" will also leave Islamabad soon. The officials spoke on condition of anonymity because they were not authorised to talk to the media. Pakistan has withdrawn six diplomats from its embassy in New Delhi after their names were released to Indian media. **Islamabad reciprocated by revealing names of eight Indian diplomats, claiming they were spies.**

FG Reads Riot Act to Defence, Intelligence Agencies on National Security
This Day (Nigeria), 2016 11 15

Abuja—The **federal government has charged the defence, security and intelligence agencies to either come up with novel, actionable and effective strategies on sustainable solution to the burgeoning security challenges in the country or be sanctioned**. The Minister of Defence, Brig-Gen. Muhammad Mansur Dan-Ali (rtd), gave the riot act yesterday while declaring open the 2016 Defence Advisers/Attaches (DAs) Annual Conference tagged: Harnessing the Potentials of Defence Attache System for improved **National Security in Nigeria", at the Defence Intelligence Agency (DIA)** Headquarters, Abuja. To this end, Dan-Ali warned the DAs and concerned authorities that the federal government would no longer tolerate any form of shoddiness and lack of creativity in handling of national security matters. He called for innovation, noting that given the complexity and uncertainty of today's security environment, our defence architecture and thought process would have to significantly to provide sustainable military and political outcomes.

Terrorisme: ouverture à Grand-Bassam de la 8è réunion des chefs des services de renseignement
Agence de Presse Africaine, Journaliste maison, 2016 11 14
Grand-Bassam, Côte d'Ivoire - La **huitième réunion des chefs des services de renseignement des pays Sahélo-sahariens s'est ouverte, lundi, à Grand-Bassam**, ville balnéaire ivoirienne située àquelque 20 km au Sud d'Abidjan et ayant subi une attaque terroriste en mars dernier, a constaté APA sur place. L'ouverture s'est déroulée en présence du ministre ivoirien de l'intégration africaine et des Ivoiriens de l'extérieur Ally Coulibaly et de l'ancien président du Burundi, Pierre Buyoya, chef de la Mission africaine pour le Mali et le Sahel (Misahel). Cette rencontre, la huitième du genre, s'inscrit dans le cadre du processus de Nouakchott mis en marche en mars 2013. Selon le Commissaire Paix et sécurité de l'Union Africaine, Chergui Smaïl, elle permettra de passer en revue la situation sécuritaire de la région, à faire l'état de la mise en oeuvre du processus de Nouakchott et à faire un point des activités de l'Unité et de liaison de l'UA.

South African spy chief linked to rhino horn trade
London Times, Stuart Graham, 2016 11 14
Johannesburg - **South Africa's intelligence minister has been linked to the illegal trade in rhinoceros horn after being photographed at a massage parlour with a Chinese crime boss who claims to be a smuggler**. The allegations are contained in a documentary, broadcast yesterday, that was filmed by the television station Al Jazeera over six months. Footage secretly recorded by an undercover investigator shows a man identified as Mr Guang, the massage parlour owner, swiping through photographs on his phone that appear to show him and the minister, **David Mahlobo**. "He came to my massage parlour every week, or at least twice a month," Mr Guang says in the documentary. "I know him well." One of the photographs appears to show Mr Mahlobo with a young woman, whom Mr Guang refers to as "one of my manicure girls". The State Security Agency, headed by Mr Mahlobo, is mandated to provide the government with intelligence on security threats, including organised crime.

Interviews heat up for top intelligence post
Cape Times, 2016 11 10
Capetown, SA—**Interviews for the new inspector-general of intelligence continued yesterday** as members of the joint standing committee grilled one candidate, to such an extent he was almost brought to tears. **Andile Kilifele** said he studied at UCT and Wits, where he obtained his LLB before he started working, but the ANC's Dumisani Gamede wanted him to account for a gap in his CV between November 2003 and April 2004, and his frequent "job-hopping". "The longest you have served was in your last job, where you worked from 2008 to 2014, but with the rest it was hardly a year?" asked Gamede. Kilifele quit his job as a **divisional**

head within the National Intelligence Agency to seek pupillage with a law firm and return to legal practice, but was now a stay-at-home dad after his application was rejected.

Spooks 'without guidance'
The Times, 2016 11 09
Cape Town—For the past 20 months, **the office of the inspector-general (IG) of intelligence has been unable to conduct any oversight**. Interviews to fill the senior **State Security Agency** position yesterday painted a bleak picture of an organisation hamstrung by a lack of leadership. Three of the five candidates interviewed are employees in the IG office and also sit on the executive committee. The interviews further revealed that, while the agency was limping along administratively, it faced court actions and had been barred from conducting any oversight work of certain services. It is also unable to fill any vacant posts. The IG position has been vacant for 20 months after opposition parties blocked the appointment of ANC favourite Cecil Burgess. The successful candidate needs to be confirmed by a two-thirds majority of parliamentarians.

Mauritanie : Nouakchott appelé à relancer la coopération sécuritaire
El Moudjahid, Journaliste maison, 2016 11 09
Nouakchott, Mauritanie - **Les experts sécuritaires des pays du G5 du Sahel ont appelé, mardi soir à Nouakchott, à la relance du système de coopération dans le domaine sécuritaire entre les pays de cette région** et à l'élaboration d'une stratégie globale qui prenne en compte les défis transfrontaliers. Les experts des pays du G5 du Sahel (Mauritanie, Mali, Niger, Burkina Faso et Tchad) ont indiqué, lors d'une réunion tenue mardi au Tchad, que les défis sécuritaires auxquels la région est confrontée «impliquent la relance du système de coopération sécuritaire entre les pays du Sahel», soulignant les répercussions dangereuses de l'insécurité dans cette région sur le plan international. Un système de coopération sécuritaire a été développé par le G5 depuis sa création à Nouakchott en mai 2014, lors de la première réunion des ministres de l'Intérieur de ces pays, avec l'aide technique de **l'Office des Nations unies contre la drogue et le crime (ONUDC)**, a précisé un expert auprès du secrétariat permanent du G5 du Sahel, précisant que ce système avait été ratifié par le sommet du G5 en novembre 2015 à N'djamena au Tchad.

Anaya counters critics, publishes own 3 of 3
Mexico News Daily, 2016 11 08
Mexico City— In response to the accusations for leading what some have described as a "luxury lifestyle," the leader of the National Action Party (PAN), Ricardo Anaya Cortés, has published on his personal website his own "3 of 3" report, detailing his income, expenses and savings. The party boss said if there were any irregularities in his financial situation he would not be able to denounce "so strongly and bluntly the corruption of the Institutional Revolutionary Party [PRI]." "**They have control over the Attorney General's office, the Financial Intelligence Unit, the federal taxation administration SAT, the Center for Investigation and National Security (CISEN)**. If I had committed any irregularity, I can assure you it would be public knowledge by now," said Anaya during an interview.

Public Safety agencies, CRA lead pack for revoking security clearances
iPolitics.ca, Staff reporter, 2016 11 22
Ottawa—**Most of the government employees who have seen their security clearances revoked for bad behaviour since January 1 work at the Canada Revenue Agency and agencies under the purview of Public Safety Canada -- including the RCMP, Correctional Services Canada and CSIS.** An order paper question filed by Conservative MP Jim Eglinski on October 3 asked the government to provide a breakdown by department of all employees who have had their security clearances cancelled or revoked, excluding retiring employees or employees whose terms of employment had ended. It also asked how many of those employees with revoked clearances were terminated as a result and what the reasons for the revocations were. While **Public Safety Canada** itself hasn't had to revoke or cancel the security clearances of any department- specific employees, the same can't be said for several agencies that fall under its purview. Two employees at the **Canadian Security Intelligence Service** (CSIS) had their security clearances revoked and were terminated as a result. The documents tabled by the government don't give reasons for those revocations. "For reasons of national security and to protect employee safety, CSIS does not disclose the reasons or rationales as to why security clearances were cancelled or revoked," the documents say.

Un nouveau métier au sein des forces armées pour se protéger des cybermenaces
Radio-Canada (Nouvelles), Raphaël Bouvier-Auclair, 2016 11 21
Ottawa - La **menace de cyberattaques est de plus en plus présente et les Forces canadiennes veulent mieux y répondre.** Radio-Canada a appris qu'à partir de l'année prochaine, un nouveau corps de métier totalement consacré à la cyberdéfense sera créé au sein de l'armée. Le risque de cyberattaques a de nouveau été exposé au grand jour la semaine dernière. Même si l'origine du problème demeure inconnue, le site de recrutement des Forces canadiennes a été ciblé jeudi. **L'ancien directeur du Service canadien du renseignement de sécurité (SCRS) Richard Fadden** y est favorable, mais croit qu'il faut avoir une discussion nationale sur le sujet puisque, selon lui, mener des cyberattaques vient avec son lot de risques. Au Canada, il n'y a pas que la Défense nationale qui est responsable d'assurer la cybersécurité. Le ministère de la Sécurité publique et des agences comme le Centre de la sécurité des télécommunications ont aussi un rôle important à jouer.

Moscow, Beijing targeting Canada's secret info and technology, spy agency warns
Canadian Press, Jim Bronskill, 2016 11 21
Ottawa - **Canada's spy agency is openly warning that Russia and China are out to steal the country's most prized secrets. The Canadian Security Intelligence Service**, which rarely identifies security threats by name, makes the frank statement in briefing notes prepared for service director **Michel Coulombe**. While Canada grapples with the problem of jihadi-inspired extremists, the long-standing threat of espionage is also a worrisome preoccupation, the spy agency says in the notes. ``Russia and China, in particular, continue to target Canada's classified information and advanced technology, as well as government officials and systems.'' The Canadian Press used the Access to Information law to recently obtain the briefing materials, intended for use by Coulombe at a March meeting of the Senate committee on national security and defence. CSIS spokeswoman **Tahera Mufti** declined to elaborate on specific aspects of investigations, but she emphasized the spy service's broad concerns. ``Canada remains a target for the traditional espionage activities of a number of foreign states,

which continue to gather political, economic, and military information in Canada through clandestine means," she said. `

Government gamers warned of Pokemon security threat
Toronto Star, Alex Boutilier, 2016 11 21
Ottawa - **Canada's spies are guarding against a new threat to operational security: Pokemon**. Canada's electronic spy agency issued guidelines for spooks and employees playing **Pokemon Go,** a popular augmented reality game for mobile devices based on the hit 1996 Nintendo game. The game uses a phone's GPS and camera to catch and battle Pokemon in the real world; players collect, train and fight Pokemon at "Poke-stops" and "gyms" attached to locations such as churches and parks. But because the game requires location and camera data to play, it poses a risk to people who would rather not be tracked: like employees of the **Communications Security Establishment (CSE),** Canada's powerful electronic spying agency. The guidelines, obtained by the Star through an access to information request, were circulated by CSE's American counterpart, the National Security Administration (NSA). They recommend a number of steps for spooks to avoid detection while training to be the very best Pokemon master. " When asked for comment, a spokesperson for CSE said the agency takes the "operational and personal security" of its employees seriously. "With this is mind, CSE takes advantage of every opportunity, including the rise in popularity of Pokemon Go, to share security information and reminders to help ensure that our employees conduct their activities in a manner that does not put themselves or CSE at risk," **Ryan Foreman** wrote in an email last week. "We would also like to point out that we are confident that Team Rocket would never pass a CSE security clearance process."

Canadian Forces recruitment data not accessed during website hack: DND
Global News, 2016 11 19
Ottawa - The **Department of National Defence (DND) says it has re- established "positive control" over its recruitment website**, which was apparently hacked Thursday, redirecting users to the official Chinese state portal. People trying to get on forces.ca were instead directed to gov.cn, the landing page of the Chinese central government's website. Forces.ca was taken down soon after the problem was discovered. There were concerns that the personal information of military recruits may have been stolen or compromised, but authorities say that there is no evidence that this occurred.

Can you keep a secret? Going to ComicCon might help you break into Canada's spy business
National Post, Marie-Danielle Smith, 2016 11 19
Ottawa - Do you enjoy going to ComicCon? What about giveaway sunglasses or free popcorn? More importantly: can you keep a secret? Then a job as a digital spy might just be for you. Or, at least, that's what the **Communications Security Establishment (CSE)** has in mind as it **seeks the best and brightest techies**. An old-fashioned popcorn machine and free pairs of CSE-branded shades were part of the display at a government job fair Thursday at Ottawa's Shaw Centre. At the event, where the hashtag #secureyourfuture was prominently displayed, **other agencies -- including Public Safety Canada, the Canadian Security Intelligence Service (CSIS), the Canadian Forces, the Correctional Service of Canada and the Canada Border Security Agency -- competed to woo curious job-hunters**, more than one of whom was spotted eating a banana. Though the Royal Canadian Mounted Police displayed Batman-like combat gear on a mannequin, it was, subjectively, hard to compete with CSE's popcorn and shades. A CSE rep explained the agency had tried recruiting at a ComicCon event for the first time in Montreal this summer -- you know, because a lot of, uh, tech-savvy people attend ComicCon. The recruiters weren't allowed to dress up like the other cosplayers, she said, so

that's why they ordered a bunch of pairs of sunglasses. (Wearing sunglasses indoors is a good way to look like you're the Men in Black, so that's kind of like dressing up.) Applying for a job at CSE takes nine to 12 months, according to a recruiter who gave prospective applicants a PowerPoint presentation.

De nombreux candidats attirés par l'espionnage et la sécurité
TVA Nouvelles, Michelle Lamarche, 2016 11 18
Ottawa - Les **organismes de sécurité publique au Canada doivent recruter des milliers de personnes et ils semblent exercer un certain pouvoir d'attraction, comme on a pu le constater à un événement qui avait lieu ce jeudi à Ottawa**. Ils **étaient nombreux à attendre au kiosque du Service canadien de renseignement de sécurité (SCRS).** Le SCRS a besoin d'espions canadiens. Il utilise d'ailleurs les médias sociaux pour attirer les candidats. «Il y a un grand futur en sécurité», estime Hugo Caza-Levert, qui assistait au salon. «Je préfère quand ça bouge et qu'il y a de l'action dans le fond, dit pour sa part Hicham Essoltani. J'aime ça quand ça change chaque jour.» La **Gendarmerie royale du Canada doit recruter un peu moins de 1500 personnes**. «C'est dur, mais ça dépend de votre volonté, estime Audrey Jacob, étudiante en techniques policières. Nous, on veut vraiment, donc on se pousse et on le fait.» «Et à l'école, en plus, ils nous préparent super bien avec nos cours de droit, on fait aussi du conditionnement physique», soulève Alexandra Boivin, qui étudie dans le même domaine.

Hackers target Canadian government's energy and resource departments
Globe and Mail, Colin Freeze, 2016 11 18
Ottawa - **Hackers hit the Canadian government's "natural-resources, energy and environment" sector almost as much as they do all other sectors combined**, newly released numbers show. Statistics released to Parliament this week show that government systems in this sector suffered 2,078 "system compromises" in 2016. This compares with 2,493 such compromises against all other federal government sectors during the same period. These first-of- their-kind numbers were publicly released this week by a federal intelligence agency, the **Communications Security Establishment (CSE),** after a question asked in the House of Commons this fall. The **release of the statistics coincided with a mysterious, and mischievous, breach at the Department of National Defence**. On Thursday afternoon, traffic from the "Forces.ca" recruiting site was routed to one of the Chinese government's main Web pages. "It is a serious situation on the surface of it," **Public Safety Minister Ralph Goodale told reporters in Ottawa, adding that he didn't yet know precisely how it happened**.

Surveillance watchdog says C-22 not likely to be abused
iPolitics.ca, Amanda Connolly, 2016 11 17
Ottawa - The **man in charge of overseeing Canada's electronics surveillance agency says there is no reason to believe the government would abuse controversial provisions in its national security committee legislation** that give ministers the power to refuse to disclose requested information. "I don't see why they would do that unless they are in bad faith, and I assume that everybody is in good faith unless the contrary is proven to me," said **Jean-Pierre Plouffe, commissioner of the Canadian Security Establishment.** "The fears we have are seldom realized to the same extent we had thought. Yes, it is a restriction, but it is a reasonable one." Bill C-22, currently being studied at the House of Commons public safety committee, would create a nine-member committee of parliamentarians tasked with monitoring and scrutinizing the activities of all government departments and agencies that engage in national security activities. While it would bring Canada up to speed among the Five Eyes intelligence allies (we are currently the only one without such a committee), opposition critics have raised red flags over several key components of the bill. The creation of a committee tasked with national security oversight was a key campaign promise by the Liberals and also part of their

plan to reform national security in light of the controversial bill C-51, passed by the former government. That bill sparked a huge public backlash after it was perceived as going too far in allowing for expanded information sharing among government departments, enhancing the powers of the **Canadian Security Intelligence Service**, and lowering the legal threshold for who can be surveilled by law enforcement.

Spy agency kept court in the dark about data
Toronto Star, Alex Boutilier, 2016 11 16
Ottawa - **Canada's electronic spies were asked to brief the Federal Court on their intelligence-gathering activities, the Star has learned. But the Communications Security Establishment (CSE) declined to meet with federal judges earlier this year**, saying an ongoing constitutional challenge prevented them from doing so. The request came from the same judge that found CSE's partner agency, the **Canadian Security Intelligence Service (CSIS), illegally kept information on innocent people for almost a decade.** In a strongly worded ruling released this month, **Justice Simon Noël found CSIS kept the court in the dark about a program to retain and analyze data about innocent people between 2006 and 2016**. The ruling gave an unprecedented look at CSIS's Operational Data Analysis Centre, which for years had been storing data about "non-threat" individuals. While the information was intercepted legally, the court ruled it was illegal for CSIS to keep and analyze it indefinitely. The ruling came out of a briefing on the program by Noël for judges who approve CSIS warrants. In documents obtained by the Star, **CSE chief Greta Bossenmaier** was told that Noël requested a general educational briefing from her agency around the same time. But because of a constitutional challenge launched by the B.C. Civil Liberties Association (BCCLA) against CSE's intelligence activities, currently before the court, the agency declined Noël's invitation.

The RCMP Is Using the Media to 'Create Moral Panic' About Encryption
Motherboard, Jordan Pearson, 2016 11 16
The Royal Canadian Mounted Police has turned to two of the country's top media outlets to make their case for new surveillance capabilities in what critics say is a PR play orchestrated to sow public worry about privacy-boosting technology. Police in Canada have long pushed for broadened surveillance powers that would force people to unlock their phones, for example, or force telecommunication companies to provide real- time access to subscriber information. No such laws currently exist, but to show why the police believe they need them to do their jobs, the country's federal force worked with two of Canada's most respected media entities. The RCMP gave the CBC's David Seglins and the Toronto Star's Robert Cribb security clearance to review the details of 10 "high priority" investigations--some of which are ongoing--that show how the police is running into investigative roadblocks on everything from locked devices to encrypted chat rooms to long waits for information. The Toronto Star's headline describes the documents as "top-secret RCMP files."

ISIS, ISIL or something else? Declassified documents reveal struggle over what to call terrorists
National Post Online, Stewart Bell, 2016 11 16
Toronto--**When a federal bureaucrat circulated a map depicting "the Islamic State's regional spread," an email soon followed from the Foreign Affairs Department saying the document had to be changed**. "We do not recognize the group as 'The Islamic State' and it is important it not be suggested that we do," read the email, which proposed amending the wording to " 'the global ambitions of ISIL' or something similar." Declassified documents released under the Access to Information Act show how Canadian officials struggled with language as they drafted a key report on terrorism in the age of the Islamic State of Iraq and the Levant. Planning for the latest annual Public Report on the Terrorist Threat to Canada began in

April 2015, during the final months of the Conservative government. But the process dragged on for so long it was not released until August 2016. An RCMP analyst said the report failed to recognize the "wide-ranging nature" of the terrorist threat, particularly the danger posed by " 'lower-risk' activities such as the perpetuation of violent ideologies, recruiters, facilitators and fundraising." **Michel Coulombe, director of the Canadian Security Intelligence Service**, was concerned about the report's reference to the roughly 180 Canadians overseas taking part in terrorist activities - including about 100 in Syria and Iraq.

Mounties lobbying for more power
Toronto Star and CBC News, Robert Cribb and CBC staff, 2016 11 16
Ottawa - The **RCMP is lobbying Prime Minister Justin Trudeau for more powers - including access to digital information without warrants** - to investigate suspects who are hiding behind uncrackable encryption on their digital devices, a Toronto Star/CBC investigation has found. "I can safely say that there's criminal activity going on every day that's facilitated by technology that we aren't acting on," RCMP Commissioner Bob Paulson told the Toronto Star and CBC in an exclusive interview. "We're losing our ability, if we haven't lost it entirely, to bring the traditional investigative response to technologically facilitated crime because of the misunderstanding, in my view, of the privacy threat." The RCMP has reached a point, Paulson said, that Canadians should "think about where you go with that complaint because I don't know that we can help you." Two weeks ago, a **Federal Court judge denounced the Canadian Security Intelligence Service's monitoring and retention of information on thousands of Canadians'** and, in Quebec, police forces admitted to intercepting and tracking cellphones belonging to at least 10 journalists. "I can't sit here and say that it's going to be a perfect," Paulson said.

Hackers get leeway to report Pentagon bugs
Washington Post, Ellen Nakashima, 2016 11 22
Washington - The **Defense Department on Monday became the first U.S. government agency to launch a policy enabling researchers to report bugs or flaws they discover in its websites without fear of prosecution**. Calling it a "see something, say something" policy for the digital domain, Defense Secretary Ashton B. Carter said the program is aimed at improving the security of the Pentagon's unclassified, public-facing networks. The Army also opened registration Monday for Hack the Army, a challenge in which researchers and hackers scour Army sites for software flaws and compete for thousands of dollars in bounty rewards. The Army contest explicitly authorizes researchers to try to hack a limited set of Army systems to find weaknesses.

Muslims at the Pentagon Brace for Trump Administration
The Daily Beast, Nancy A. Youssef, 2016 11 22
Washington - **Donald Trump's inauguration may be 58 days away, but for the Muslim officials once welcomed into the U.S. government's war on terrorism, the change already has** begun. Four U.S. officials who spoke to The Daily Beast said **fear is pervasive among Muslims inside the halls of the Pentagon, the CIA, and the Department of Homeland Security** in anticipation of a Trump administration. Already, the officials said, they are seeing

colleagues who are less willing to share their thoughts about national security. They fear they will no longer be seen as an asset to confronting terrorism but rather suspect members of the government they serve. It is, one U.S. official explained, a climate of "anticipatory freakout." Will Muslim CIA agents be asked to register? Will the next commander in chief ban the family of Muslim troops from visiting this country? Will Muslim members of the Department of Homeland Security face increased scrutiny based on their faith?

Trump's CIA pick would reinstate US collection of phone data
San Francisco Chronicle, Bob Egelko, 2016 11 22
San Francisco - The **federal government's long-hidden authority to sweep up records of all phone calls made in the U.S. was repealed last year in a bipartisan vote of Congress**. But **President-elect Donald Trump's choice to head the CIA has called for reinstatement of the data haul and said its elimination was part of "Edward Snowden's vision of America."** Snowden, a former National Security Agency contractor, revealed in 2013 that the NSA had been collecting bulk data on U.S. phone calls without a warrant for more than a decade. President George W. Bush's administration had ordered the collection unilaterally after the terrorist attacks of Sept. 11, 2001, then obtained approval from a secret intelligence court in 2006. The records contain so-called metadata, showing the numbers called and duration of the calls, but not the content of the messages. The law that President Obama signed in June 2015, called the USA Freedom Act, leaves the records with the phone companies but allows the National Security Agency to request data on individual customers without a court order. Rep. **Mike Pompeo**, R-Kan., whom Trump named Friday as his choice for CIA director, was among a minority of House Republicans who opposed the change. In a December 2015 column in the National Review magazine, he attacked Republican presidential candidates who supported the new law.

Trump spokesman declines to back FBI Director James Comey
Washington Post, Multiple reporters, 2016 11 21
Washington - A **spokesman for President-elect Donald Trump pointedly declined to back embattled FBI Director James Comey on Monday**, saying Trump would meet with the nation's top law enforcement officer "at some point." "There hasn't been any official statement with regard to Director Comey," Trump spokesman Jason Miller said during the transition team's daily briefing. Asked if Trump would seek the resignation of Comey, who played a controversial role in the presidential campaign's final days, Miller said only: "I would imagine that at some point, the two will meet." Trump, who at times assailed the FBI and called Comey corrupt during the campaign, told "60 Minutes" after his election victory that he had not decided whether to ask Comey to step down.

Panetta: At CIA, Pompeo will have to deliver the bad news to Trump as well as the good
McClatchy News Service, Curtis Tate, 2016 11 21
Washington - **Former CIA Director Leon Panetta said that Donald Trump's choice to lead the agency will have the task of telling the president things he doesn't want to hear**. If he's confirmed by the Senate, **Kansas Republican Rep. Mike Pompeo** will lead the agency's 21,500 employees worldwide. Panetta, who led the CIA from 2009 to 2011 under President Barack Obama, said Pompeo should get to know and trust the professionals who work for the agency. "The most important thing is to respect those who are doing the job at the CIA," Panetta said in a phone interview with McClatchy. "They're not Democrats. They're not Republicans. They're good Americans who are trying to do a very tough job." Panetta said good intelligence was "absolutely critical" when the country is facing a number of flashpoints around the world. Overall, Panetta said Pompeo is "a pretty good choice" to lead the CIA.

NSA chief defends record at Halifax forum amid rumoured calls for his ouster
Canadian Press, Staff report, 2016 11 21
Halifax - The **director of the U.S. National Security Agency defended his record at the Halifax International Security Forum as rumours swirl about calls for him to be ousted from his current post** and a potential promotion in president-elect Donald Trump's administration. At a panel Sunday, **Admiral Mike Rogers** refused to address media reports saying America's top defence and intelligence officials recommended his dismissal. "Just let me cut to the chase, because I'm interested in saving us all some time," Rogers said in response to a question from the audience. "I am just not going to go down this road."

NSA Head Rogers on His Recommended Firing: 'I'm Accountable for My Actions'
US News and World Report, Paul D. Shinkman, 2016 11 21
Halifax - **Navy Adm. Mike Rogers, chief of U.S. Cyber Command and the National Security Agency, said he was "accountable for his actions"** following a report published during a security conference he attended here this weekend that senior administration officials have recommended President Barack Obama remove him amid concerns with his performance and the possible splitting of command duties for the two secretive organizations he leads. "I'm not going to go down that road," Rogers said, interrupting a journalist who asked about The Washington Post story during a forum where the admiral was speaking. Meanwhile, the 57-year-old admiral's recent trip to New York to meet with President-elect Donald Trump on Thursday also caused "consternation" for the Obama administration, the Post said, in part because it appears unprecedented for an officer like Rogers to conduct such a meeting and not inform his superiors.

Obama Is Considering Removing N.S.A. Leader
New York Times, Julie Hirschfeld Davis, David E. Sanger & Eric Schmitt, 2016 11 20
Washington - **President Obama is considering removing Adm. Michael S. Rogers from his posts as leader of the National Security Agency and United States Cyber Command after top officials expressed frustration over the speed at which Admiral Rogers had moved to combat the Islamic State and over the agency's repeated loss of closely guarded secrets**, administration and intelligence officials said Saturday. President-elect Donald J. Trump is considering Admiral Rogers, who is responsible for surveillance and the growing arsenal of cyberweapons, for a top post in his administration, including director of national intelligence overseeing all 16 intelligence agencies. Admiral Rogers met with Mr. Trump on Thursday, apparently without the White House's knowledge. The recommendation to remove Admiral Rogers, a career intelligence officer who was promoted to his posts by the Obama administration two years ago, came last month from **Defense Secretary Ashton B. Carter and the current director of national intelligence, James R. Clapper Jr. Administration and intelligence officials, who insisted on anonymity to detail the private discussions**, said the recommendation that Admiral Rogers be removed was not related to Mr. Trump's interest in hiring him.

Pompeo's reputation is as a partisan student of national security issues
Washington Post, Greg Miller, 2016 11 19
Washington - **President-elect Donald Trump's pick to lead the CIA is a Kansas congressman who is widely respected for his intelligence but also seen as a fierce partisan on polarizing issues including the deaths of U.S. personnel in Benghazi, the leaks of Edward Snowden and the email controversy that engulfed Hillary Clinton. Rep. Mike Pompeo** (R-Kan.) has used his perch on the House Intelligence Committee to attack major pillars of President Obama's foreign policy agenda, including the nuclear deal with Iran. Just hours before his name surfaced as Trump's CIA nominee, Pompeo tweeted that he looked

forward to "rolling back this disastrous deal with the world's largest state sponsor of terrorism." In closed-door briefings on Capitol Hill, Pompeo, who had previously supported efforts to oust Syrian president Bashar al-Assad, has been an intense critic of a covert CIA program to train and arm moderate rebel forces in Syria, according to U.S. officials. They said that dismantling the program - or at least subjecting it to a major reevaluation - would likely be at the top of his agenda if he is confirmed. Pompeo, 52, has no meaningful experience in espionage issues beyond his relatively brief stint as a member of the House Intelligence Committee. But he **has earned a reputation as a serious student of national security issues** who finished first in his class at the U.S. Military Academy at West Point, served as a cavalry officer in the Army and earned a law degree from Harvard.

Trump Turns to His Right Flank to Fill National Security Posts
New York Times, Julie Hirschfeld Davis, 2016 11 19
Washington - **President-elect Donald J. Trump moved quickly on Friday to begin filling national security posts at the top echelons of his administration**, selecting a group of hawks and campaign loyalists who reflect the hard-line views that defined his run for president. Mr. Trump said he would nominate as **attorney general Senator Jeff Sessions** of Alabama, who has been a fierce supporter of a crackdown on undocumented immigrants. The president-elect also **moved to install Michael T. Flynn, a retired lieutenant general who has said that Islamist militancy poses a global existential threat, as his national security adviser**. And as **director of the C.I.A., Mr. Trump selected Representative Mike Pompeo** of Kansas, who harshly criticized Hillary Clinton during the House investigation of the 2012 attack on the United States diplomatic compound in Benghazi, Libya. All three are regarded, in some ways, as outliers from conventional Republican thinking, shunned at times for strident statements, controversial positions or highly partisan moves. The flurry of announcements indicated that Mr. Trump was gaining control over a transition operation that had been entangled in infighting during its early stages.

America's Top Spy Talks Snowden Leaks and Our Ominous Future
Wired, Garrett M. Graff, 2016 11 19
Analysis: Public appearances don't come easily to **James Clapper, the United States director of national intelligence**. America's top spy is a 75-year-old self-described geezer who speaks in a low, guttural growl; his physical appearance--muscular and bald--recalls an aging biker who has reluctantly accepted life in a suit. Clapper especially hates appearing on Capitol Hill, where members of Congress wait to ambush him and play what he calls "stump the chump." As he says, "I rank testimony--particularly in the open--right up there with root canals and folding fitted sheets." One of the things Clapper does profess to enjoy about his job is meeting with the men and women who make up his covert empire of 17 agencies, which range from brand names like the **CIA, NSA, DEA, and FBI to lesser-known units like the Treasury Department's Office of Intelligence and Analysis.** As he has traveled the country and the world over his six years in office, he has hosted scores of town hall meetings with intelligence officers, analysts, and operatives. The events are typically low-key, focusing less on what's in the news than on the byzantine and, to Clapper, almost soothing minutiae of the military-intelligence bureaucracy. And so it was that he found himself in late August in an auditorium at US Strategic Command near Omaha, Nebraska, headquarters of the nation's nuclear forces, taking questions from a group of 180 civilian and military personnel.

Donald Trump hopes to abolish intelligence chief position, CIA reforms
The Intercept, Matthew Cole & Jenna McLaughlin, 2016 11 19
Washington - **Donald Trump's National security team is discussing plans to dismantle the Office of the Director of National Intelligence**, the organization that was created in response

to the 9/11 attacks, according to an adviser to the president-elect and a former senior intelligence official. The news comes as the current director of national intelligence, James Clapper, announced his resignation Thursday. The **Trump national security team has been meeting in recent days, planning the removal of the cabinet- level position and assessing how to fold parts of the organization into the 16 federal intelligence agencies it oversees, according to both people with knowledge of the plans**. If the restructuring is accomplished, it would undo legislation passed by Congress in 2004, dismantle the biggest American intelligence bureaucracy created since the end of World War II, and roll back a key recommendation of the 9/11 Commission. The national security team believes the effort will be "long and messy" but is confident it will be successful, according to the former senior U.S. intelligence official who is consulting with those involved in the transition. Both sources asked for anonymity because they are not authorized to speak publicly about confidential plans. The former senior intelligence official, who supports the proposal, said the DNI was never a solution to the 9/11 attacks. "It was always a naive idea that American intelligence can be 'fixed.' You'll never get it all correct," the former official said. "You can never have 100 percent intelligence, never stop every terror plot or penetrate every terrorist cell. There will always be gaps." **The Office of the Director of National Intelligence declined to comment,** but a source close to Clapper said the director was not aware of the Trump transition team's plans.

Clapper: US collects and analyzes more intelligence on jihadi groups now than ever
Long War Journal, Thomas Joscelyn, 2016 11 18
Washington - **Director of National Intelligence (DNI) James Clapper announced his retirement during a hearing held by the House Permanent Select Committee on Intelligence (HPSCI)** earlier today. In his written testimony, Clapper offered this assessment: "Violent extremism, which has been on an upward trajectory since the late 1970s, has generated more IC collection and analysis against groups, members, and safe havens than at any other point in history. These include: the Islamic State of Iraq and the Levant; al-Qa'ida with its nodes in Syria, Pakistan, Afghanistan, and Yemen; al-Shabaab, al- Qa'ida's affiliate in East Africa; and Iran, the foremost state sponsor of terrorism, which continues to exert its influence in regional crises in the Middle East through the Islamic Revolutionary Guard Corps - Qods Force, its terrorist partner Lebanese Hizbollah, and proxy groups."

NI Clapper: Russia has 'curtailed' cyber attacks
USA Today, Eliza Collins, Kevin Johnson, 2016 11 17
Washington - **Russian government hackers "curtailed" their cyber espionage against U.S., political institutions after the Obama administration formally blamed the nation last month for breaching the computer systems of the Democratic National Committee and other entities, Director of National Intelligence James Clapper told a House panel** Thursday. "That activity seemed to have curtailed," Clapper told the House Intelligence Committee. "I can't say what the impact of a new (Trump) administration will have on Russian behavior." The previous breaches and recent scanning of some states' voter registration data bases prompted intelligence authorities to ramp-up cyber defenses in advance of the general election earlier this month.

TITANPOINTE
The Intercept, Ryan Gallagher, Henrik Moltke, 2016 11 16
New York - For many New Yorkers, **33 Thomas Street -- known as the "Long Lines Building" -- has been a source of mystery for years.** It has been labeled one of the city's weirdest and most iconic skyscrapers, but little information has ever been published about its purpose. It is not uncommon to keep the public in the dark about a site containing vital telecommunications equipment. But 33 Thomas Street is different: An investigation by The

Intercept indicates that the skyscraper is more than a mere nerve center for long-distance phone calls. It **also appears to be one of the most important National Security Agency surveillance sites on U.S. soil -- a covert monitoring hub that is used to tap into phone calls, faxes, and internet data.** Documents obtained by The Intercept from the NSA whistleblower Edward Snowden do not explicitly name 33 Thomas Street as a surveillance facility. However -- taken together with architectural plans, public records, and interviews with former AT&T employees conducted for this article -- they provide compelling evidence that 33 Thomas Street has served as an NSA surveillance site, code-named TITANPOINTE. Inside 33 Thomas Street there is a major international "gateway switch," according to a former AT&T engineer, which routes phone calls between the United States and countries across the world. A series of top-secret NSA memos suggest that the agency has tapped into these calls from a secure facility within the AT&T building.

La CPI veut enquêter sur les prisons secrètes de la CIA
Le Monde, Stéphanie Maupas, 2016 11 16
Washington - Des **Américains auraient eu " recours à des méthodes constitutives de crimes de guerre " L'enquête à venir de la Cour pénale internationale (CPI) sur les crimes commis en Afghanistan devrait notamment porter sur les crimes commis par l'Agence centrale de renseignement (CIA)** américaine dans les prisons secrètes installées en Pologne, en Roumanie et en Lituanie. Dans un document rendu public lundi 14 novembre et portant sur les dix examens préliminaires menés actuellement par ses services, dont l'un porte sur la guerre en Afghanistan, la procureure Fatou Bensouda indique qu'elle pourrait enquêter sur les crimes commis par la CIA dans les prisons secrètes en Europe où " des membres présumés d'Al-Qaida ou des talibans auraient été transférés " depuis l'Afghanistan. Le bureau de la procureure avait ouvert un examen préliminaire - une étape préalable à l'ouverture d'une enquête - en 2007, et répertorié de nombreux crimes contre l'humanité et crimes de guerre commis par les talibans, par la police, par les services secrets afghans et par les forces armées américaines.

NSA Chief: 'Uneven' Cooperation Between Public, Private Sectors Impedes Cyber Defenses
Wall Street Journal, Alan Cullison, 2016 11 16
New York - The **head of the U.S. National Security Agency said "uneven" cooperation between the government and private sector has hampered the fight against a "literal onslaught" of cyber attacks from criminal and state-supported hackers**. Speaking at The Wall Street Journal CEO Council, **Adm. Michael S. Rogers** said the host of hackers is "so large and so diverse" that perpetrators are difficult to identify. About two-thirds are criminals or criminal groups looking to steal personal information for financial gain, and the balance are state-sponsored hackers, he said. He said company leaders need to take a personal interest in cyber security, which has become too important a matter to be delegated entirely to network security specialists.

U.S. Officials Fear Trump Is Playing Into Terrorists' Hands
The Daily Beast, Shane Harris, Nancy A. Youssef, 2016 11 16
Washington - **U.S. officials who've been working to refute terrorist propaganda and blunt recruitment by ISIS and other groups are bracing for a Donald Trump administration, fearing that he and his advisers could set back their efforts by years and play into terrorists' hands**. Three U.S. officials told The Daily Beast that President-elect Trump's campaign rhetoric, combined with the names now surfacing as potential top national security advisers in the next administration, signal a dramatically different approach that could give ISIS ammunition to claim that the United States is engaged in a religious war. In fact, ISIS

commanders have already begun to make that argument. "This guy [Trump] is a complete maniac," Abu Omar Khorasani, an ISIS leader in Afghanistan, told Reuters. "His utter hate towards Muslims will make our job much easier because we can recruit thousands." Equating radical terrorism with Islam was not only inaccurate, it was "not very helpful if we are talking about a lasting ISIS defeat," one defense official told The Daily Beast, adding that it allows the terror group to claim that it is defending Muslims everywhere. "They will say, 'Join us. America has declared war on Islam.'"

Why Mike Rogers's departure from the Trump team is alarming
Washington Post, David Ignatius, 2016 11 16
Column - The **ouster of former congressman Mike Rogers (R-Mich.) from Donald Trump's transition team is a worrisome sign of continuing internecine battles in the GOP and the ascendancy of Trump's personal political allies in shaping the president-elect's agenda**. Rogers, a widely respected former FBI agent who headed the House Intelligence Committee, had been seen as a figure of stability and continuity in intelligence matters. He was mentioned as a possible next director of the CIA or director of national intelligence.. Rogers had angered House GOP hard-liners when his committee issued a bipartisan report in 2014 clearing Hillary Clinton of personal wrongdoing in the 2012 Benghazi incident. That report was characteristic of the way Rogers chaired the committee, in a working partnership with then-ranking Democrat, Rep. C.A. Dutch Ruppersberger (Md.). (Rogers added "additional views" that criticized "senior State Department officials" for dismissing threat warnings, denying requests for extra security in eastern Libya and other errors.)

United Kingdom / Royaume-Uni

Elite police unit to guard airports and nuclear sites
London Times, Francis Elliott, 2016 11 22
London - **Theresa May is to approve plans for an elite armed police force to protect Britain's most sensitive infrastructure from a Paris-style terrorist attack**. The new force would merge existing bodies including the **British Transport Police, Civil Nuclear Constabulary and Ministry of Defence Police.** Mrs May, as home secretary, said there was a need for a central command because of the targeting of transport hubs and civil nuclear sites by Islamist terrorist groups in Europe last year. Whitehall sources said that ministers were determined to end so-called "blue light races" in which forces competed to respond first to incidents. Protocol usually grants overall control of the response to an incident to the first force that arrives.

Parliament hands police and Government sweeping spying powers with new bill
The Independent (UK), Andrew Griffin, 2016 11 19
London - The **House of Lords has passed the Investigatory Powers Bill**, putting the huge spying powers on their way to becoming law within weeks. The bill - which forces internet companies to keep records on their users for up to a year, and allows the Government to force companies to hack into or break things they've sold so they can be spied on - has been fought against by privacy campaigners and technology companies including Apple and Twitter. But the Government has worked to continue to pass the bill, despite objections from those companies that the legislation is not possible to enforce and would make customers unsafe. The House of

Lords's agreement to the text now means that it just awaits Royal Assent, at which point it will become law.

SAS favourite ready to take on world
London Times, Deborah Haynes, 2016 11 19
London - The **man wanted by Donald Trump as his national security adviser has a close relationship with Britain's special forces** (Deborah Haynes writes). **Lieutenant-General Michael Flynn is highly regarded by SAS soldiers who worked with him against al-Qaeda in Iraq after the invasion in 2003 and in covert operations against the Taliban in Afghanistan**. "He is one of the brothers from another mother," a former SAS officer said. "He is a legend. It will make the bond between UK and US special forces even stronger with Mike in the White House. He has killed a lot of bad guys one way or another. He is good news." An outspoken maverick, General Flynn, 57, joined the army as an intelligence officer in the 1980s. He was director of intelligence for Joint Special Operations Command from 2004 until 2007. He was credited with helping to develop a powerful fighting machine, using **American and British special forces and spy agencies**, that fused intelligence with lethal force to break al-Qaeda's Iraq network.

'Extreme surveillance' becomes UK law with barely a whimper
The Guardian (London), Ewen MacAskill, 2016 11 19
London - A **bill giving the UK intelligence agencies and police the most sweeping surveillance powers in the western world has passed into law with barely a whimper**, meeting only token resistance over the past 12 months from inside parliament and barely any from outside. The **Investigatory Powers Act**, given royal assent on Thursday, legalises a whole range of tools for snooping and hacking by the security services unmatched by any other country in western Europe or even the US. The security agencies and police began the year braced for at least some opposition, rehearsing arguments for the debate. In the end, faced with public apathy and an opposition in disarray, the government did not have to make a single substantial concession to the privacy lobby. US whistleblower Edward Snowden tweeted: "The UK has just legalised the most extreme surveillance in the history of western democracy. It goes further than many autocracies." Snowden in 2013 revealed the scale of mass surveillance - or bulk data collection as the security agencies prefer to describe it - by the US National Security Agency and the **UK's GCHQ**, which work in tandem. But, against a backdrop of fears of Islamist attacks, the privacy lobby has failed to make much headway.

Controversial terror laws clear parliament
Australian Associated Press, Roje Adaimy, 2016 11 22
Canberra - **Authorities will soon be able to impose control orders on children as young as 14 after controversial counter-terrorism laws cleared parliament. A bill that included a suite of measures passed the lower house** on Tuesday after changes were made in the Senate earlier this month. Aside from reducing from 16 the age a person can be subject to a control order, the legislation creates a new search, telecommunications interception and surveillance regime for those under the orders. Courts will be required to appoint a lawyer to act for minors under 18 if they don't already have one in proceedings relating to a control order. It also makes advocating genocide illegal.

Chinese spies in Australia on the rise, former diplomat Chen Yonglin says
ABC (Australia), Andrew Greene, 2016 11 20
Canberra - A **former Chinese diplomat who sensationally quit his job in 2005 breaks a lengthy silence to warn of a growing number of spies and agents working for Beijing in Australia**. Chen Yonglin, the Chinese diplomat who sensationally quit his job more than a decade ago, has broken a lengthy silence to warn of a growing number of spies and agents working for Beijing in Australia. In 2005, Mr Chen caused global headlines when he claimed China was operating a network of "over 1,000 Chinese secret agents and informants in Australia". The former diplomat, who now works as a businessman, has warned the number of secretive Chinese operatives has steadily grown since he stopped working for China's foreign service. "

Buyer beware of sending data overseas: former spy boss
Canberra Times, David Ellery, 2016 11 18
Canberra - **Australia's former top spy has warned companies doing business with foreign call centres and data storage providers to do their homework before sending sensitive information offshore. David Irvine, a former head of both ASIO and ASIS**, said once information left Australia it was no longer protected by Australian sovereign law. This made it possible for Australians' private details, including phone records, sourced through call centre workers in India and elsewhere, to be offered for sale by Al Solutions, a Mumbai security firm. "If you lose control of your data, that sort of thing is entirely possible," he said. "It relates to your ability to have suitable arrangements and controls in place with your external suppliers." The shift towards cloud computing and the storage of sensitive corporate and government data in commercial data centres had been going on for almost a decade.

Telcos face questions as black-market data prompts warnings
Sydney Morning Herald, Lucy Battersby & Nick McKenzie, 2016 11 18
Canberra - The **Australian Information and Privacy Commissioner is investigating allegations personal information held by telcos can be bought on the black market from overseas call centres**. "I am concerned about allegations that personal information of Australian telecommunication customers is being offered for sale online. My office is making inquiries with Optus, Telstra and Vodafone to determine what further action I may take in this matter," Timothy Pilgrim said on Thursday. Meanwhile, the **former head of both ASIO and ASIS, David Irvine, warned the industry that once information left Australia, it was no longer protected by Australian sovereign law.** "If you lose control of your data, that sort of thing is entirely possible," he said at the Association of Corporate Counsel National Conference in Canberra on Thursday.

PM calling for answers overdamaged city buildings
New Zealand Herald, Matthew Backhouse, 2016 11 17
Wellington— Modern **buildings in central Wellington should never have been so badly damaged in Monday's earthquake** and only lucky timing prevented any deaths, a seismic engineer says. The Prime Minister is now calling for answers after two government buildings,

both built within the past decade, were among the worst hit in the magnitude 7.8 quake. Wellington council inspectors have so far found 60 buildings of concern with signs of structural damage, and 28 at risk of part of the building falling down. Wellington Mayor Justin Lester yesterday said the city's most badly damaged building, the tower at 61 Molesworth St, would need to be deconstructed. An **exclusion zone** was yesterday widened to include Pipitea House, built in 2011, because of concerns with its facade in high winds. The building houses the **Government Communications Security Bureau and the Security Intelligence Service**.

Defence plan outlines major New Zealand military spending program
Xinhua News Agency, John Macdonald, 2016 11 16
Wellington - The New **Zealand government Wednesday unveiled details of a major military spending program to align its forces' capabilities with those of Australia and other defense partners**. The **Defence Capability Plan 2016** detailed spending of 20 billion NZ dollars (14.19 billion U.S. dollars) on the **New Zealand Defence Force (NZDF)** out to 2030 equal to 1 percent of gross domestic product each year. The plan said New Zealand sought to maintain interoperability with Australia, so the two countries could coordinate peace and security operations in the South Pacific.

China doubles down on internet control after tough new law
Associated Press, Gerry Shih, 2016 11 17
Beijing - **China's leaders and official media are pushing for greater control of the internet and technology products as tensions surrounding a far-reaching Chinese cybersecurity law** loom over a gathering this week of the world's leading tech firms and Chinese officials. The Communist Party's mouthpiece People's Daily warned in an editorial on Thursday that China must break monopolies over core technologies and standards and remain untethered to other countries' technology supply chains. The commentary, aimed apparently at Silicon Valley in unusually stark terms, comes one day after **President Xi Jinping called for "more fair and equitable" governance of the internet at the opening of the state-run World Internet Conference.**

Threats from cyberspace 'pressing and vital' in China: top State secret official
Global Times, Staff reporter, 2016 11 17
Beijing - **Security threats coming from cyberspace are pressing and vital and China must increase its efforts to improve security technology to safeguard national interests, said a top official from the State secret administration**. "A series of Internet leaks in China and other countries show the threats coming from cyberspace are pressing and vital, and the technology to safeguard information security needs to be reliable, self- developed and controllable," **Tian Jing**, director of the **National Administration for the Protection of State Secrets**, told the People's Daily in an interview that was published on the newspaper's website on Wednesday..

President Xi stresses int'l cooperation in cyberspace governance
Xinhua News Agency, Staff reporter, 2016 11 16
Beijing - **Chinese President Xi Jinping on Wednesday called for increased international cooperation in cyberspace governance and the building of a cyberspace community of common destiny.** Noting that Internet development has no boundaries, Xi said **China is willing to work with the international community for the common welfare for all people**, to uphold the concept of cyberspace sovereignty and to make the global cyberspace governance system fairer and more reasonable. Xi made the remarks while giving a speech via video at the opening ceremony of the third World Internet Conference (WIC) in the riverside town of Wuzhen, east China's Zhejiang Province. Liu Yunshan, a member of the **Standing Committee of the Political Bureau of the Communist Party of China (CPC) Central Committee**, attended the opening ceremony of the WIC and delivered a speech.

Ukraine blames Russian security service for prank call to president
Reuters, 2016 11 17
Kiev— **Ukraine on Thursday blamed the Russian state security service for orchestrating a prank call to Ukrainian President Petro Poroshenko from someone pretending to be the president of Kyrgyzstan.** Earlier in November, Poroshenko's office announced a conversation with Kyrgyz leader Almazbek Atambayev, only for the latter to issue a statement saying the call had not taken place.A recording of the call was subsequently published online, but Kiev said parts where Poroshenko was critical of Russia and its President Vladimir Putin were cut. Russia annexed the Crimean peninsula from Ukraine in 2014 and supports separatist rebels in Ukraine's eastern Donbass region. "Now I understand why the so-called pranksters waited for so long. They were doctoring the conversation and had to wait even longer to get approval from their supervisors in the Kremlin and the **FSB**," said Svyatoslav Tsegolko, Poroshenko's spokesman.

L'étrange arrestation d'un ministre russe
Le Figaro, Pierre Avril, 2016 11 16
Moscou - Le **ministre de l'Économie a été interpellé, alors qu'il recevait un pot-de-vin de 2 millions de dollars**. C'est un séisme dans le monde politique russe. Pour la première fois depuis la chute de l'URSS, il y a vingt-cinq ans, un haut membre du gouvernement russe a été arrêté pour corruption. Le **ministre de l'Économie, Alexeï Oulioukaïev, en personne a été interpellé par le FSB (ex-KGB) dans la nuit de lundi à mardi**, alors qu'il recevait un pot-de-vin de 2 millions de dollars. Il a ensuite été conduit devant un juge qui a délivré un mandat d'arrêt à domicile. Ce pilier du gouvernement, considéré comme un libéral, est officiellement accusé d'avoir monnayé son soutien au rachat, par le géant pétrolier mondial Rosneft, de son concurrent Bashneft, entreprise publique classée au sixième rang du secteur. Détail piquant, l'entreprise accusée d'avoir corrompu le haut fonctionnaire - Rosneft - est la même qui aurait dénoncé le scandale auprès des autorités judiciaires, à travers son responsable de la sécurité, lui- même un ancien du FSB.

Un attentat « déjoué » rappelle la persistance de cellules organisées en France
Le Monde, Elise Vincent, 2016 11 22
Strasbourg, France - Le **ministère de l'intérieur a annoncé l'arrestation à Strasbourg et Marseille de sept personnes, soupçonnées d'avoir planifié des attaques terroristes en France**. C'est un important projet d'attentat, possiblement fait d'attaques simultanées, qui a été «déjoué» suite à une vague d'interpellations à Strasbourg et à Marseille, dans la nuit du samedi 19novembre au dimanche 20novembre. Le ministre de l'intérieur, Bernard Cazeneuve, l'a annoncé lui-même, lundi 21novembre. Une série d'arrestations qui s'ajoute à d'autres et à la vingtaine d'attentats «déjoués» depuis le début de l'année, selon la place Beauvau, et vient rappeler que des cellules très structurées sont toujours dormantes, en France. Alors que le dernier attentat sur le sol français, le 26juillet, à Saint-Etienne-du-Rouvray (Seine-Maritime), a mis au jour l'existence d'un djihad «low cost», sans argent, et sans plan prévu très en amont, les interpellations réalisées dans le cadre de cette **vaste opération conduite par la Direction générale de la sécurité intérieure (DGSI), prouvent l'existence parallèle d'un modèle inverse.**

Finland: Centre to counter hybrid warfare to be established in Helsinki
Esmerk Finnish News, 2016 11 22
Helsinki— **Several Nato and EU countries plan to establish a centre in Finland to counter hybrid warfare.** The structure of the centre will be light and it will consist of networks. Head of Department Mikko Saarelainen of **Finnish Security Intelligence Service (Supo)** has been appointed Project Manager of the centre. Representatives of 11 countries including the USA and Baltic countries participated in the constituent meeting in Helsinki in Finland. The centre will begin its operations in spring 2017 in Helsinki. It will employ 4-6 persons. The costs will be approximately EUR 2mn, of which Finland probably will cover the majority.

Renseignement : l'autorité de contrôle des écoutes passe à l'offensive
Le Monde, Jacques Follorou, 2016 11 22
Paris - La **CNCTR vient de mettre au jour un pan entier des interceptions, celles par voie hertzienne, qui lui étaient jusqu'ici interdites d'accès.** C'est une ligne de front invisible pour le grand public, où se parle une langue indigeste. C'est pourtant là que se défendent les frontières de l'Etat de droit. Après avoir subi quelques revers, la **Commission de contrôle des techniques de renseignement (CNCTR)** repart à l'offensive, profitant de la censure, le 21 octobre, par le Conseil constitutionnel, de l'article du code de sécurité intérieure consacré à la surveillance des communications circulant par la voie hertzienne.

Nucléaire: les services belges n'ont rien trouvé dans le "darknet"
Agence Belga, 2016 11 22
Bruxelles— **Ni les services de sécurité, ni une société privée n'ont trouvé sur le "darknet" des documents relatifs aux installations nucléaires belges** qui auraient mis en péril la sécurité de celles-ci, a indiqué mardi le directeur du Centre de cybersécurité, Miguel De Bruycker, devant la sous-commission "sécurité nucléaire" de la Chambre. Les journaux de SudPresse ont relaté le mois passé la façon dont ils avaient trouvé sur le "darknet" (des réseaux de partage anonymes utilisés en général par des criminels) des plans des centrales nucléaires de Tihange. Le **Centre de cybersécurité en a immédiatement référé à la Sûreté de l'Etat et aux renseignements militaires (SGRS) afin** de savoir si des documents mettant

en jeu la sécurité des installations nucléaires se trouvaient dans le "darknet". Une société privée a également été consultée et un "pirate éthique" a proposé ses services.

Alleged CIA prison in Lithuania on international prosecutors' radar screen
Baltic News Network, 2016 11 21
Vilnius— **Lithuania may face additional international pressure over suspicions that Americans operated a secret prison for terror suspects near Vilnius** a decade ago as prosecutors of the International Criminal Court (ICC) are considering launching a full-scale investigation into allegations that prisoners were tortured at the **Central Intelligence Agency's secret detention facilities.** Law experts think that investigators may ask for information from Lithuania, but add that Washington's refusal to cooperate may bring the case to a halt. Fatou Bensouda, the chief prosecutor of The Hague court, released last week a preliminary report on allegations that US troops and CIA agents might have tortured terror suspects.

L'affaire Squarcini ravive les tensions LVMH-Hermès
Le Monde, Simon Piel, 2016 11 19
Paris - Selon nos informations, **Hermès a décidé, après avoir reçu un avis à victime de la part des magistrats instructeurs, de se constituer partie civile le 12 octobre dans l'affaire qui vise l'ancien directeur de la Direction centrale du renseignement intérieur (ex-DCRI, aujourd'hui DGSI), Bernard Squarcini**. Une décision qui n'a rien d'anodin. Selon le code de procédure pénale, cela signifie que l'entreprise Hermès considère qu'elle a pu être " lésée par un délit " . Elle va désormais pouvoir suivre l'instruction en ayant accès au dossier et éventuellement faire des - demandes d'actes.

Le procès du vol de données des services secrets s'ouvre à Bellinzone
Le Temps, 2016 11 19
Zurich— **Le Service de renseignement de la Confédération (SRC) a frôlé la catastrophe en 2012, lorsque l'un de ses collaborateurs a dérobé une masse de données**. Quatre ans plus tard, l'informaticien à l'origine de l'une des plus graves crises de confiance qu'aient **connu le renseignement helvétique, comparaît devant le Tribunal pénal fédéral de Bellinzone**. Entre-temps, C. B., 48 ans, a quitté la banlieue bernoise où il vivait au moment des faits, pour retrouver sa région d'origine de Salerne, en Italie. Il réside depuis 2014 avec sa femme sur cette côte napolitaine. Se présentera-t-il à son procès mercredi prochain? L'homme est au bénéfice d'un saufconduit, comme l'indiquait le Tages-Anzeiger jeudi. Ce document, délivré par le tribunal, permet à un accusé résidant à l'étranger de se rendre librement à son procès en Suisse, sans risquer d'être arrêté. Selon son avocat, contacté par Le Temps, il a fait part de son intention de se présenter devant la cour, à Bellinzone. C. B. répond des chefs d'espionnage politique aggravé et de tentative de violation du secret de fonction. Des crimes passibles tous les deux de peines allant jusqu'à trois ans de prison au plus.

German intelligence agency reconsiders surveillance of right-wing 'Reichsbürger'
Deutsche Welle, 2016 11 19
Berlin - A month on since a so-called "Reichsbürger" fatally shot a policeman near the southwestern city of Nuremberg, **Germany's intelligence agency - the "Verfassungsschutz" - may be one step closer to tightening surveillance on the right-wing group**. This was the latest development on Saturday, according to information presented to the German Press Agency (DPA). In a reply to a question submitted by the Green party, the German Interior Ministry said it has asked Germany's intelligence agency to review its previous assessment of the Reichsbürger scene. The review has not yet been finalized, however. The Reichsbürger movement has gained greater attention since October, after one member in Nuremberg wounded three police officers and killed another in a shootout. Responding to the possibility of

stricter surveillance on Saturday, Green party politician Irene Mihalic told DPA: "This terrible event in Bavaria wasn't necessary to recognize that the Reichsbürger are a dangerous right-wing movement."

Sécurité du mégafichier : les sénateurs très inquiets
Le Figaro, Jean-Marc Leclerc, 2016 11 17
Paris - La **droite sénatoriale demande la suspension du décret visant à rassembler les données personnelles des Français**. Sous l'impulsion du président les Républicains de la commission des lois du Sénat, Philippe Bas, la droite sénatoriale a réclamé, ce mercredi, la « suspension » du décret de **Bernard Cazeneuve** visant à instaurer un mégafichier national d'identité. Ce décret avait été publié dans la torpeur des vacances de la Toussaint, le dimanche 30 octobre, sans même un débat préalable au Parlement. Le ministre de l'Intérieur l'a maintenu malgré une vive polémique, tout en acceptant finalement d'en débattre à l'Assemblée et au Sénat. Rappelons que ce **fichier TES (titres électroniques sécurisés)** ajoute au fichier des demandeurs de passeports celui des cartes d'identité. Il doit rassembler à terme les données personnelles et biométriques (identité, couleurs des yeux, domicile, photo, empreintes digitales...) de 60 millions de Français.

Germany alarmed about potential Russian interference in election: spy chief
Reuters, Staff report, 2016 11 16
Berlin - **Germany is alarmed that Russia may seek to interfere in its national elections next year, the domestic intelligence chief said**, echoing concerns raised in the United States before Donald Trump's presidential election victory. German officials have accused Moscow of trying to manipulate German media to fan popular angst over issues like the migrant crisis, weaken voter trust in moderate mainstream government under Chancellor Angela Merkel and breed divisions within the European Union so that it drops sanctions against Moscow. Intelligence officials have also pointed to Russian support for eurosceptic, anti-immigrant parties in Germany and across the EU. Last week, Merkel said she could not rule out Russia interfering in Germany's 2017 election through Internet attacks and misinformation campaigns. Hans-**Georg Maassen, head of the domestic BfV intelligence agency, cited the high-profile case last year of a German- Russian girl who Russian media said was kidnapped and raped by migrants in Berlin,** a claim later refuted by German authorities. "

Un ancien néonazi est nommé à la tête de la police ukrainienne
Le Figaro, Stéphane Siohan, 2016 11 16
Kiev - **Khatia Dekanoidze, une réformiste géorgienne, a démissionné et a aussitôt été remplacée par Vadim Troyan, un proche du ministre de l'Intérieur.** Un an après son arrivée à la tête de la police ukrainienne, Khatia Dekanoidze, 39 ans, a démissionné lundi de son poste en dénonçant la corruption et le blocage des réformes qu'elle avait engagées. En attendant la validation du cabinet des ministres, c'est son adjoint, Vadim Troyan, au profil extrême et inquiétant, qui va prendre la tête de la police, alors que cet ancien commandant du bataillon Azov a autrefois évolué dans la mouvance néonazie.

Fichier TES : la défense hasardeuse de Bernard Cazeneuve
L'Humanité, Aurélien Soucheyre, 2016 11 16
Paris - Après avoir oeuvré en catimini, **le gouvernement se retrouve sous le feu des projecteurs sur la question de ce gigantesque fichier qui compile les informations d'identité de 60 millions de Français.** Le ministre de l'Intérieur a tenté hier de minimiser les risques liés à ce projet. Sans convaincre. Bernard Cazeneuve est un bon défenseur. D'abord, le tacle glissé en douce, l'air de rien. Dimanche 30 octobre, paraissait dans le Journal officiel un décret signé de sa main prévoyant la création d'un gigantesque fichier informatique TES (titres

électroniques sécurisés) rassemblant les données personnelles et biométriques de plus de 60 millions de Français (l'Humanité du 3 novembre).

German court's ruling on mass spying is a victory for the BND and NSA
Deutsche Welle, Staff report, 2016 11 16
Berlin - In June 2013, media reports based on documents provided by whistleblower **Edward Snowden revealed the extent of global surveillance programs conducted by the US National Security Agency (NSA).** The leaks had a massive impact in Germany, especially after it was found that the **NSA was spying on European leaders and heads of government**, including German Chancellor Angela Merkel. The findings prompted the **"Bundesnachrichtendienst" (BND),** Germany's foreign spy agency, to deactivate around 40,000 of several million "selectors" - a collection of search parameters, including telephone numbers, keywords, URLs and addresses. On Tuesday, Germany's constitutional court ruled that the government was not obliged to transfer this secret list of selectors to a special parliamentary fact-finding commission on the NSA revelations. Tuesday's verdict proved to be a setback for politicians trying to get to the bottom of the BND's activities. "The ruling is a blow for any clarification on the activities of the BND and the NSA and for the entire parliamentary monitoring of secret services," Biselli told DW.

German domestic spy chief rejects Turkey's allegation it harbors PKK militants
Reuters, Staff report, 2016 11 15
Berlin - The **head of Germany's domestic spy agency on Tuesday rejected as "completely unjustified" Turkey's accusation that Germany is harboring militants tied to the banned Kurdistan Workers Party (PKK**). "That accusation is completely unjustified. We have been working for many years to ensure that the PKK in Germany poses no danger to Germany or Turkey," **Hans- Georg Maassen** told Reuters in an interview late on Tuesday. He said Germany had a good exchange of information with Turkey and that generally the countries worked well together on that issue. Turkish Foreign Minister Mevlut Cavusoglu on Tuesday said there were outstanding legal cases against 4,500 PKK members in Germany, but only three suspects had been sent back to Turkey so far. Asked if ties between the intelligence services of Germany and Turkey had deteriorated after Turkey's failed July 15 military coup, Maassen said only that cooperation was often difficult because of the different priorities set by the Turkish intelligence services.

Intelligence Minister: Enemies Unable to Distort Security in Iran
Fars News Agency, 2016 11 21
Tehran - **Iranian Intelligence Minister Seyed Mahmoud Alavi underlined that the country's armed and security forces are capable of safeguarding tranquility and security of the people**, and said the enemies are not able to harm Iran. "Thanks to Iran's skillful and professional security forces no anti-security agent dares to approach the Iranian borders," Alavi said on Friday. The Iranian intelligence minister underlined that security in Iran is higher than other regional countries and one of the highest in the entire world. In relevant remarks in July, Lieutenant Commander of the **IRGC Brigadier General Hossein Salami** underlined that Iran is the most secure country in the region.

Intelligence Minister: No anti-security agent dares to approach Iranian borders
Islamic Republic News Agency, 2016 11 18
Tehran - **Intelligence Minister Mahmoud Alavi said on Thursday that no anti-security agent dares to approach Iranian borders thanks to the skillful and professional security forces** of the country. He made the remarks in Shalamche border point in Khuzestan province southwest of Iran where he went to visit the process of Iranian pilgrims crossing the border into Iraq to attend the Arabaeen mourning ceremony in that country, IRNA reported.

Iran arrests 12 officials on spying charges (Canada).
Al Arabiya, Saleh Hamid, 2016 11 18
Dubai - **Iranian MP Hussein Ali Haji Degana has revealed that at least 12 top officials holding dual citizenship have been arrested in Iran on spying charges**. The MP added that among the 12 detained were officials who played key roles in the Iran nuclear deal signed last year. The MP demanded that the judiciary apparatus delivers its rulings with transparency, and that the officials' identity also be made public. Some of the officials who were arrested simply for holding dual citizenships.

Man Accused of Spying for Israel Referred to Judiciary
Naharnet Newsdesk, 2016 11 18
Beirut - A **Lebanese man was referred to the judiciary on Thursday on charges of spying for Israel,** the army said. "The **Intelligence Directorate** has referred Lebanese citizen Suheil Hussein Qaddoura to the relevant judicial authorities over his ties to the Israeli enemy," an army statement said. Qaddoura provided Israel with "information about the infrastructure in the Bekaa region," the statement added. Lebanese authorities had launched a national crackdown on Israeli espionage rings in 2009 which resulted in the arrest of more than 100 people. Lebanon and Israel remain technically in a state of war and convicted spies can face the death penalty.

Israeli accused of spying convicted of 'harassing' Romanian official
Jerusalem Post, Staff Report, 2016 11 17
Jerusalem - **Romania has sentenced an Israeli national accused of alleged espionage to a suspended prison term of two years and eight months on charges of harassing the country's anti-corruption czar**, according to local media. After pleading guilty to attempting to intimidate the director of Romania's National Anti-corruption Directorate, Laura Kovesi, a Bucharest court also ordered David Geclowicz to serve 80 days of community service. Geclowicz, an employee of the **private Israeli intelligence firm Black Cube**, allegedly admitted to targeting three people close to Kovesi, Romania's Agerpres reported.

Cyber concerns attract experts from around the world to Tel Aviv confab
The Jerusalem Post, Anna Ahronheim, 2016 11 16
Jerusalem—Thousands of top decision-makers, along with senior government and law enforcement officials from 80 countries, gathered in **Tel Aviv this week for the fourth International Homeland Security and Cyber Conference.** The conference, which runs November 14 to November 17 at Tel Aviv's Convention Center, focuses on the **ever-changing challenge of protecting data from the merging of physical and cyber crime**. Israel is a leader in cyber security. **Former chief of Shin Bet Yoram Cohen** talked about the large number of third-generation Muslim immigrant youths who did not integrate into European society and "underwent an identity crisis which caused them to become disenfranchised with the state."

S. Korea, Japan to sign intel-sharing pact Wednesday
Yonhap News Agency, Staff reporter, 2016 11 21
Seoul - **South Korea and Japan plan to sign a military intelligence-sharing pact this week to better counter mounting threats from North Korea**, the defense ministry said Monday. The two countries signed a provisional General Security of Military Information Agreement (GSOMIA) last week, less than a month after they resumed discussions on Oct. 27. "We are planning to formally sign the GSOMIA on Wednesday upon approval by President Park Geun-hye after it is passed by the Cabinet on Tuesday," a ministry official said. Defense Minister Han Min-koo and Japanese Ambassador to Seoul Yasumasa Nagamine are expected to sign it at the defense ministry in Seoul, he said.

Centre, State joint mechanism to block conversion of terror funds
Daily Excelsior, 2016 11 18
Sanjeev— The **Government of India has set up high level joint team to unearth attempts to convert hawala money and terror funds into white by exchanging notes in the banks and in the process reach to the real sources of the funds in Jammu and Kashmir** especially the Kashmir valley. The decision followed a high level meeting chaired today by Union Home Minister Rajnath Singh in New Delhi with top **officials of the Ministry Research and Analysis Wing (RAW) Intelligence Bureau (IB) and other Intelligence agencies** exclusively on effectively blocking terror funding postdemonetization of big notes on November 8. Official sources told the Excelsior that top officials of Union Home Ministry Incharge Jammu and Kashmir desk Enforcement Directorate Finance Ministry etc would jointly monitor the postdemonetization impact on terror funding by staying in regular touch with Chief Secretary BR Sharma Director General of Police K Rajendra Kumar and Banking officials and taking inputs from the concerned agencies.

Our intelligence agency is similar to a militant group: Former spy
Indo-Asian News Service, 2016 11 18
New Delhi— He started off as a taxi driver, went on to become **a spy for an Indian intelligence** agency, spent 11 years in a Pakistan jail and is now running an association for the welfare of unsung heroes. Disappointed by the lack of support from the Indian government, **Vinod Sawhney says there is no difference between a militant organisation and India's intelligence agency**. Sawhney, now 66, was a taxi driver a few decades ago before an intelligence official boarded his taxi as a passenger. "He (the official) brainwashed me. He said it was a government job and spoke about patriotism. So, I got lured to become a spy without knowing my actual job."

Mossad, RAW cooperation deepens
The International News, 2016 11 17
Islamabad - **Indian intelligence and Israeli secret service are in alliance together with extensive military cooperation as** they take on extremist Muslims groups. RAW stands for **Research and Analysis Wing** is the intelligence gathering agency of the government of India like the CIA. This was set up in 1968 at the behest of the then Indian prime minister Indira Gandhi. Right from its inception, RAW realized the importance of cooperation with the Israeli secret service MOSSAD. Initial contacts were established through the Israeli consulate in Mumbai. Over the years the bonds between the two agencies have strengthened with a

common threat of Islamic terrorism and fundamentalism. **MOSSAD is one of the top spy agencies in the world and can rank as equivalent to the Soviet NKVD, German Gestapo, and the CIA**.

India and Israel reaffirm cooperation against terrorism and extremism
Times of India, Indrani Bagchi, 2016 11 16
New Delhi - **India and Israel reaffirmed their current cooperation against terrorism and extremism** as Israel president Reuvin Rivlin kicked off a week-long visit to India. After talks with Prime Minister Narendra Modi, Rivlin said, "Nothing can justify terror... Israel and India are threatened by terror because we uphold the values of freedom. We stand together in defending our people and values," Rivlin said. In his statement, Modi said, "We recognize that terrorism is a global challenge, knows no boundaries and has extensive links with other forms of organized crime. We agreed that the international community must act with resolve and determination against terror networks and States that harbour them. Failure to act and silence of speech only encourages the terrorists."

Des espions parmi nous
L'Expression (Algérie), Wahida Bahri, 2016 11 21
Alger - Les investigations se sont soldées par des interpellations et des mises en examen Ils se faisaient passer pour des membres de la **Commission nationale de lutte contre la corruption**. Les éléments de la brigade de recherche et d'investigation, relevant du groupement de la **Gendarmerie nationale ont démantelé un réseau national d'espionnage**, apprend-on de source judiciaire. Le pot aux roses a été découvert suite à l'arrestation de trois individus, accusés d'usurpation d'identité, escroquerie, faux et usage de faux et falsification de visas, ainsi que l'imitation des sceaux des ministères, dont la griffe du Premier ministre Abdelmalek Sellal, et espionnage pour le compte de parties étrangères, a rapporté la même source. Sont impliqués dans cette affaire, un greffier en chef du tribunal d'Oum El Bouaghi, en retraite qui se faisait passer pour le secrétaire général de la Commission nationale de lutte contre la corruption, un patriote AA. A et AA.K, son fils spécialisé dans la programmation informatique.

Changing the name of ministry of intelligence was a real stroke of genius by the government
Sunday World (South Africa), Vusi Nzapheza, 2016 11 20
There was a time when we had a **ministry of intelligence**. There were also ministries of housing and foreign affairs. Until some bored bureaucrat yawned and decided the names had to change. Where there was housing, we now have human settlements even though the mandate is still to build RDP houses. International relations has replaced foreign affairs despite the job remaining the same. **The one department whose name change I agree with is intelligence. No one can accuse State Security Minister David "Rhino Horn" Mahlobo of intelligence**. The one task he executed with aplomb was jamming the signal last year to prevent the broadcast of chaotic parliamentary proceedings. This week we learnt he also has cabinet's most perfectly manicured nails from frequent visits to a Chinese spa in Mbombela. The massage parlour was exposed in a TV documentary as the haven of self-confessed rhino poacher Guan Jiang Guang, who claims to be the minister's friend.

Senior Venezuelan Diplomat Detained Under Unclear Circumstances
Venezuelan Analysis, Lucas Koerner, 2016 11 18
Caracas— A leading Venezuelan diplomatic official has been taken into custody by authorities following a raid on his Caracas office last week. **Ricardo Moreno, North America director for the Venezuelan Foreign Ministry, was detained by agents of the National Bolivarian Intelligence Service (SEBIN)** on November 10. A resident in the United States for 20 years, Moreno is a widely respected Chavista activist with a long organizing track record in solidarity with the Bolivarian Revolution. As founder of the Los Angeles-based Simon Bolívar Association following the 2002 US-sponsored coup against the late former president Hugo Chávez, Moreno appeared widely in US Hispanic media debating with leading anti-Chavista figures, such as FEDECAMERAS President Carlos Fernandez and former US Under-Secretary of State Otto Reich.

Security shouldn't trump privacy, watchdogs to tell Trudeau government
Canadian Press, Jim Bronskill, 2016 12 06
Ottawa - **Privacy commissioners from across the country will tell the Trudeau government today to make respect for personal information a cornerstone of its revamped national security policy**. Federal privacy commissioner **Daniel Therrien** and all of his provincial and territorial counterparts are signing a joint submission to the government's security review. Therrien and privacy czars from two provinces _ Ontario's Brian Beamish and Jean Charter of Quebec _ will appear in Ottawa today to discuss the submission. Therrien's office says it will address key issues including information sharing, encryption and the collection and use of metadata by national security agencies and law enforcement. In October, Therrien told a House of Commons committee it is crucial that there be more transparency about national security so that Canadians can better understand the issues. The **Trudeau government has committed to ensure all CSIS warrants respect the Charter of Rights and Freedoms**, to preserve legitimate protest and advocacy and to define terrorist propaganda more clearly. The Liberals say they say will do a better job of balancing collective security with rights and freedoms. Just last month a Federal Court judge ruled that CSIS violated the law by keeping potentially revealing electronic data over a 10-year period about people who were not targets of investigation. CSIS processed the data beginning in 2006 through its **Operational Data Analysis Centre** to produce intelligence that can reveal specific details about individuals. The improperly retained material was metadata _ information associated with a communication, such as a telephone number or email address, but not the message itself.

Canadian security agencies 'consulting' with U.S. Homeland Security to vet Syrian refugees coming to Canada
The Hill Times, Abbas Rana, 2016 12 06
Ottawa—**Canadian security agencies responsible for vetting the thousands of Syrian refugees who have been arriving in Canada since late last year have been using a "robust" and "multi-layered" security check process that includes consulting U.S. Homeland Security databases**. "On the Syrian refugee decisions, we consulted with the Americans on everyone to make sure there was not somebody identified as a security risk," said **Gary Doer**, former Canadian ambassador to the U.S. from October 2009 to March 2016, at a panel discussion organized by The Literary Review of Canada, on its 25-year anniversary gala in Toronto on Oct. 13. "We had an agreement with Homeland Security and the United States, and a protocol of what we were going through. Asked for a comment last week, Public Safety and Emergency Preparedness Minister **Ralph Goodale's** (Wascana, Sask.) office referred The Hill Times to a press conference Mr. Goodale held in Ottawa last year held to explain the process of bringing in the Syrian refugees. Mr. Goodale told reporters the security mechanism used by Canadians to screen Syrian refugees was designed by the Departments of Immigration and Refugees Canada, the **Department of National Defence, the Canada Border Services Agency, CSIS and the RCMP.** He added that the security screening system included "checking against Canadian and U.S. databases." "It includes the identification of vulnerable applicants to come to Canada soon," Mr. Goodale said on Nov. 24, 2015, at the National Press Theatre.

Not Mounties' 'full-time job'
Toronto Star, Michelle Shephard and Mitch Potter, 2016 12 05

When a Canadian is kidnapped abroad, some **RCMP** officers go the distance and beyond, putting their families second to better serve a hostage's terrified relatives. They answer their phones any hour of the day and night, fly far away, provide comfort and assurance when they can. Then there are those who clock in and out. Families can call them after quitting time to flag sudden news about a hostage half a world away, but they learn not to expect a shared sense of urgency. The desperation will go to voice mail. Relatives of Canadian hostages who spoke with the Star for this series report varying experiences with the frontline Mounties who acted as **Family Liaison Officers (FLOs) - the crucial point of contact between the family and the government - and as investigating officers**. Some were astonished at the indifference they encountered as they scrambled to get answers. More than one relative said they were impatiently rebuffed with excuses along the lines of officers having "to get back to their full-time jobs."

Canada should appoint kidnapping czar as part of hostage approach, says ex-CSIS expert
CBC.CA, Lisa Laventure, 2016 12 03
Ottawa - **Canada should consider appointing a kidnapping "czar" and adopt a more standardized approach when Canadians are kidnapped abroad, says a former senior member of CSIS** who now heads up a private security firm. A permanent government point person directing efforts to free Canadians held for ransom would bring continuity to the federal government's approach to resolving hostage takings, said **Andy Ellis**, a former assistant director of operations at Canada's national intelligence agency. Ellis is currently doing pro bono work on two kidnapping cases involving Canadians. In an interview with CBC's Power & Politics Thursday, Ellis said the role would help streamline efforts between the departments responsible for responding to kidnappings. The government should also be prepared to turn to the private sector for input and assistance in kidnapping cases, he said. "As kidnapping becomes an industry, I think it requires an industrial response," Ellis told host Rosemary Barton. The recommendation comes after CBC's special report on the abductions and killings of Canadians Robert Hall and John Ridsdel in the Philippines by the militant group Abu Sayyaf.

New president of Canada Border Services Agency selected
Ottawa Citizen Online, Kathryn May, 2016 12 03
Ottawa - **Prime Minister Justin Trudeau has appointed a new president of the Canada Border Services Agency** in his latest shuffle of the top ranks of Canada's public service. **John Ossowski,** deputy commissioner of the Canada Revenue Agency, steps into the top job at the border agency with years of experience in security and safety. He was previously the associate deputy minister at **Public Safety** and also did stints in senior jobs handling security issues at Treasury Board and at the **Communications Security Establishment**. Ossowski's appointment comes on the heels of his predecessor at CBSA, **Linda Lizotte-MacPherson**, announcing her retirement.

Canada's hostage 'war room' is more like a leaderless boardroom
Toronto Star, Michelle Shephard and Mitch Potter, 2016 12 01
Toronto - **Canada's war room is more like a boardroom -- where a leaderless, interdepartmental committee of good people with good intentions meet and deal not only with kidnappers' demands but also with bureaucratic and political inertia**. Interviews with more than 50 people, including government and security officials, past and present, and former hostages and their relatives, reveal a range of obstacles, including lack of leadership, lack of continuity, unnecessary secrecy and political paralysis. Problems with Canada's approach were flagged eight years ago when Stephen Harper was prime minister and Ottawa was overwhelmed by five overseas abductions in five months: freelance journalist Amanda Lindhout

in Somalia; CBC reporter Mellissa Fung in Afghanistan; aspiring filmmaker Beverly Giesbrecht in Pakistan; and Canadian diplomats Robert Fowler and Louis Guay in Niger, where they were working for the United Nations. **John Proctor, who worked on the Canadian effort as a senior intelligence adviser with the Department of National Defence, confirmed that a comprehensive policy was ready to go when Parliament was prorogued in December 2009**. "There was a very serious effort to put together all the pieces -- and it died completely," Proctor, now a vice-president of global cybersecurity for the Ottawa-based firm CGI, told the Star. Bob Rae, former MP and lawyer, says if changes have been made, he hasn't seen them. The attacks of Sept. 11, 2001, proved a key turning point for Western governments grappling with abductions overseas, sparking a rise in the number of hostage-takings and the political risk. "What happened after 9/11 was that everybody's budgetary dollars became so focused on terrorism," says **Gary Noesner, who spent the last 10 years of his career as chief of the FBI Crisis Negotiation Unit** before retiring in 2003. "Everybody wanted a piece of pie. So now you had 20 cooks in the kitchen and nobody knew what anyone was making." Among the gaps in Canada's hostage response system, multiple sources told the Star, are a lack of support and expertise in handling the very specific and evolving challenge of overseas kidnapping. "I don't think it's resourced enough," says **Andy Ellis**, who retired this year as assistant director of operations at the **Canadian Security Intelligence Service**.

U.S.-style 'fusion cells' among recommendations for improving Canadian policy on hostages

CBC News, Lisa Laventure and Rosemary Barton, 2016 12 01

Ottawa—The **government is facing calls to review its approach to supporting families of Canadians kidnapped abroad and address alleged shortcomings in its response to the cases of two men abducted in the Philippines** in 2015. Among the recommendations is establishing a U.S.-style "fusion cell" that would improve co-ordination between government departments in the hopes of resolving hostage situations. "Every Western country is moving towards a fusion cell approach," says **Lee Humphrey**, a former Canadian soldier who now works as an international security consultant. He believes Canada hasn't done enough to adapt to an increase in international kidnappings. "Canada does not seem to get it, and perhaps it's because there's been no political blowback, but there is no emphasis on fixing [our approach to kidnappings], despite the numerous cases during the last few years of very public hostage takings of Canadians internationally." Humphrey says Canadian families have complained for years that the government lacks a cohesive strategy to support and communicate with relatives of kidnapped Canadians. The U.S. review resulted in a presidential directive and executive order. Announced in June 2015, it ensures that families would no longer be threatened with criminal prosecution if they attempted to pay ransoms to terrorist groups. The presidential directive also ordered the creation of a Hostage Recovery Fusion Cell, which is a specialized unit staffed by people from the departments of defence, state, justice and treasury, the FBI and the intelligence community with expertise in kidnapping. A **fusion cell** is meant to literally bring experts from each department together in the same room. Led by the FBI, the cell aims to better share information and improve how the government develops hostage recovery plans. Humphrey says Canada should strongly consider establishing a similar model. He says a **Canadian fusion cell should be led by the RCMP and would bring together experts from the departments of National Defence, Global Affairs, Justice and CSIS** to form a single, specialized hostage recovery team that would speak with one voice.

Inside the RCMP's plan for a 'new public narrative' on cyber surveillance

Vice News, Justin Ling, 2016 11 30

Toronto—A four-page memo obtained by VICE News sheds light on how the **Royal Canadian Mounted Police intends to lobby the public for new surveillance powers**. As the Trudeau

government contemplates new powers for the federal police force, the documents call for the RCMP to push for "the creation of a new public narrative around why police need judicially authorized and timely access to online information." The memo was prepared by the RCMP in advance of a February meeting in Washington, D.C., where Public Safety Minister Ralph Goodale sat down with his American, British, Australian, and New Zealand counterparts in the Five Eyes intelligence partnership. The previous Canadian government tried to sell to the public mandatory decryption powers and more expansive communication interception technology in Bill C-30, in 2012. Then-Public Safety Minister Vic Toews employed the euphemistic tagline of "lawful access," only to have that phrase pick up negative connotation as public opinion turned against many of those legislative proposals. The bill was later shelved and, ultimately, killed. The RCMP is not looking to make the same mistake. "It will be important for the Public Safety Portfolio to reframe 'lawful access' as broader 'going dark' digital evidence challenges," the February memo reads. The **Public Safety Portfolio includes everyone from Minister Ralph Goodale to the Canadian Security Intelligence Service and the Canadian Border Services Agency.**

Border plan comes up short
Toronto Star, Bruce Campion-Smith, 2016 11 30
Ottawa - A **high-profile strategy to ease the flow of travellers and trade to the United States and boost border security has had little impact, a new report** says. The **"Beyond the Border Action Plan"** was unveiled in December, 2011 to much fanfare to boost trade and eliminate border bottlenecks that had worsened due to heightened security in the wake of the 2001 terror attacks. But five years later, an audit of the initiatives launched by federal departments and agencies to implement the plan found little evidence that any of them had improved security or made life easier for travellers. "We concluded that the selected departments and agencies achieved limited results towards the objectives ... of enhancing security and accelerating the legitimate flow of travel and trade," says a report prepared by the auditor general. While the departments and agencies met the commitment laid out by the plan, "they faced many challenges in carrying out the initiatives and lacked performance indicators to assess results," said the report.

Appeals Court to Examine Ex-CIA Officer's Leak Conviction
Associated Press, Staff report, 2016 12 06
Richmond, Va. - The **case of former CIA officer convicted of leaking classified details of an operation to thwart Iran's nuclear program is heading to a federal appeals court**. The 4th U.S. Circuit Court of Appeals will hear arguments in **Jeffrey Sterling's case** Tuesday. Sterling was sentenced to 3 1/2 years in prison after being convicted in 2015 of leaking details of a CIA mission to New York Times journalist James Risen. The leaked mission involved giving flawed nuclear blueprints to Iran in the hopes that they would spend years trying to develop a product that would never work. Sterling maintains that he wasn't Risen's source.

Obama to tout counterterror legacy, even as Trump threatens changes
CNN.com, Kevin Liptak, 2016 12 06
Washington - **President Barack Obama plans to provide a final summation of his national security record Tuesday, reaffirming his counterterrorism strategy** even as his successor

has threatened to reverse course on many of Obama's priorities. During a speech at MacDill Air Force Base, the Florida headquarters of US Central Command and Special Operations Command, Obama plans to again argue for closing the naval prison at Guantanamo Bay and maintaining a ban on torture -- both areas where President-elect Donald Trump says he'll change course. **Ben Rhodes, Obama's deputy national security adviser, told reporters Monday that Obama was not attempting to send a message directly to Trump through his speech**. But he said there would be important takeaways for the next commander-in-chief included in Obama's remarks..

Panel Backs Warrantless Collection of Email
New York Times, Charlie Savage, 2016 12 06
Washington - A **federal appeals court on Monday upheld the 2013 conviction of a Somali-American man for trying to detonate a bomb at a Christmas tree lighting ceremony in Portland**, Ore., rejecting his arguments that the F.**B.I. had entrapped him** and that the government had unconstitutionally intercepted his emails without a warrant. The ruling -- by a three-judge panel of the Court of Appeals for the Ninth Circuit, in San Francisco -- was particularly important because it upheld the government's use of emails gathered without a warrant under the **FISA Amendments Act** of 2008. The law permits the government, on domestic soil, to collect phone calls and emails of noncitizens abroad, even when they are communicating with an American. The case centered on Mohamed Mohamud, who was 19 when he tried to blow up what he thought was a bomb.

Security Adviser and Son Share Penchant for Spreading False Stories About Clinton
New York Times, Matthew Rosenberg, 2016 12 06
Washington - For **Lt. Gen. Michael T. Flynn**, who is President-elect Donald J. Trump's choice for national security adviser, **pushing conspiracy theories about Hillary Clinton is a family affair: Both he and his son, Michael G. Flynn, have used social media to spread fake news stories linking Mrs. Clinton to underage sex rings and other serious crimes, backed by no evidence.** The Twitter habits of both men are attracting renewed attention after a man fired a rifle on Sunday inside Comet Ping Pong, a Washington pizza restaurant that was the subject of false stories during the campaign tying it and the Clinton campaign to a child sex trafficking ring. Well before he joined the Trump campaign, the elder Mr. Flynn, 57, a former director of the **Defense Intelligence Agency**, pushed unsubstantiated claims about Islamic law's spreading in the United States and about the attack on the American diplomatic compound in Benghazi, Libya. But in his emergence this year as the angry former general out to help Mr. Trump clean up Washington, Mr. Flynn added wild stories about Hillary Clinton to his stock of unproven tales.

Obama Has a Plan to Fix Cybersecurity, But Its Success Depends on Trump
Wired (US), Andy Greenberg, 2016 12 05
New York - The **Obama White House has had to reckon with cybersecurity like no other presidential administration in history**, from China's 2009 hack of Google, to the Office of Personnel Management breach, to the rise of botnets built from dangerously insecure "internet-of-things" devices. Now, in the waning days of Obama's presidency, **his team has a new plan to shore up America's protections from digital threats. Whether any of it happens, though, is up to Donald Trump**. Late Friday afternoon last week, the White House's Commission on Enhancing National Cybersecurity released the results of a nine-month study of America's cybersecurity problems. Its recommendations, in a hundred-page report, cover a lot of ground. It proposes fixing the shambolic security of internet-of-things consumer devices like routers and webcams, re-organizing responsibility for the cybersecurity of federal agencies, and fostering a new generation of skilled American cybersecurity experts, among other actionable

steps. But as President Obama acknowledged in a statement accompanying those recommendations, actualizing them is largely out of his hands. He asked the cybersecurity commission to brief President-elect Trump's transition team on its work as soon as possible.

Face-to-face with Edward Snowden in Moscow on Trump, Putin and dwindling hopes of a presidential pardon
Yahoo News, Michael Isikoff, 2016 12 05
Washington - **In an exclusive interview in Russia with Yahoo Global News Anchor Katie Couric, Edward Snowden**, the fugitive whistleblower who leaked information about U.S. surveillance activities, **says he is "kind of encouraged" by the idea that Russian President Vladimir Putin might return him to the U.S. to stand trial because that would show the world he's not a spy and Russia "doesn't own me."** But he also acknowledged he isn't eager to return home to face U.S. justice, saying such a prospect "would be a threat to my liberty and to my life." Speaking for 90 minutes in a Moscow hotel room, Snowden -- calm and completely unrepentant -- also took new swipes at top U.S. intelligence officials, claiming they have accused him of damaging national security only because they were "embarrassed" by his disclosures of classified **National Security Agency** documents and worried about their "reputations." Those comments drew an angry rebuke Sunday from the Obama administration's former top counterterrorism official. "Snowden is delusional," said **Matt Olsen, the former director of the National Counterterrorism Center**, when read excerpts of the interview. "It wasn't so many years ago that people were saying, 'This guy's a Russian spy,'" said Snowden when asked by Couric how "nervous" he was about the possibility of losing his Russian sanctuary and being sent home to face criminal charges of theft of government property and violations of the Espionage Act.

Into the dark world of espionage
The Jerusalem Post, Geroge Medovoy, 2016 12 03
Washington— The shiny green Jaguar XKR greeted me in the lobby of the **International Spy Museum,** which is housed in a restored 19th-century building in downtown Washington. The prized car, driven by the villain of the 2002 James Bond movie Die Another Day, looked as striking as it did in the film, but it had a new role now: building curiosity about the dark world of espionage. As the greeting on the lobby wall announced: For your eyes only. Entry beyond this point is on a need-toknow basis. Who needs to know? All who would understand the world, all who would glimpse the unseen hands that touch our lives...." Within the museum is a **large collection of international espionage artifacts**, and there are special exhibits, too, like Exquisitely Evil: 50 Years of Bond Villains," which was on display during my visit. Also among the museum's offerings are spy workshops like Surveillance 201," a scenario in which participants look for secrets, and a summer spy camp" for children that ends with a mission-accomplished cake." The **museum's advisory board is composed of real-life espionage veterans** like Oleg Danilovich Kalugin, who was a major-general in the 1st Chief Directorate of the KGB, where he conducted espionage as a Radio Moscow correspondent with the United Nations, and R. James Woolsey, Jr., the former director of the Central Intelligence Agency.

James Mattis, Trump's Choice for Defense, Favors Working With Allies
New York Times, Helene Cooper & Eric Schmitt, 2016 12 03
Washington - President-elect **Donald J. Trump's selection of Gen. James N. Mattis as defense secretary signals a more assertive American posture in the Middle East** -- one that people close to him say would most likely include more American troops on the ground in Iraq and Afghanistan, more Navy patrols in the Persian Gulf and more fighter jets in the Middle East. "The closest thing we have to Gen. George Patton," Mr. Trump said in announcing his selection on Thursday night. At first glance, the similarity is there: Like General Mattis, General

Patton, who led American troops into Nazi Germany during World War II, was a colorful, hard-charging advocate of aggressive offensive action. But officials who know General Mattis caution that he views a tough American posture overseas as something to deter war with potential foes like Iran, not to start one. And although he was so hawkish on Iran as head of United States Central Command from 2010 to 2013 that the Obama administration cut short his tour, General Mattis has since said that tearing up the Iran nuclear agreement, as Mr. Trump has vowed to do, would hurt the United States. General Mattis now favors working closely with allies to strictly enforce the deal.

U.S. Bars Chinese Deal for Tech Firm
Wall Street Journal, William Mauldin, 2016 12 03
Washington - **President Barack Obama took the rare step of forbidding a foreign company from buying a firm with U.S. assets**, telling a **Chinese investment fund** that it cannot complete a deal for German technology company **Aixtron SE**. Mr. Obama's move, only his second outright ban on a foreign acquisition, shows the increasing suspicion the U**.S. harbors toward Chinese acquisitions of certain U.S. firms,** even before the arrival of President-elect Donald Trump, who made criticism of Beijing a cornerstone of his campaign. The Treasury Department on Friday said Mr. Obama had issued an order barring **Fujian Grand Chip Investment Fund LP, part-owned by the Chinese government,** from buying Aixtron. The ban follows a recommendation from the Committee on Foreign Investment in the U.S., or CFIUS, which confidentially reviews foreign acquisitions solely on national-security grounds.

US spy agencies fight Congress over plan for probe of covert Russian influence campaign
Reuters, Mark Hosenball and Jonathan Landay, 2016 12 03
Washington - The **top U.S. intelligence officer has asked Congress to drop a provision in a pending bill that would create a special committee to combat Russian efforts to exert covert influence abroad,** saying such a panel would duplicate current work and hinder cooperation with foreign allies. **Director of National Intelligence James Clapper** laid out the objections of the U.S. intelligence community in a Sept. 9 letter to the chairmen and top Democrats on the House of Representatives and Senate intelligence committees. He charged that parts of the bill amounted to "micromanagement" of the intelligence community. The intelligence bill, an annual measure that provides broad Congressional authorization for a wide range of U.S. intelligence activities and agencies, has already been approved by both intelligence committees and the House of Representatives.

Diplomacy in the Age of Covert Surveillance --- Robin Raphel was a Pakistan expert -- the FBI thought she was a spy
Wall Street Journal, Adam Entous and Devlin Barrett, 2016 12 03
Washington - Just before 8 on the morning of Oct. 21, 2014, **Robin Raphel** climbed into her Ford Focus, put her purple briefcase on the passenger's seat and began the 20-minute drive from her house in Washington to her office at the **State Department**. It was a routine Tuesday. The main event on her schedule was a staff meeting. Raphel swiped her badge at the revolving security door. Later, as she joined her colleagues in a conference room to discuss office schedules, her mobile phone, which she had left at her desk, began to ring. It was Slomin's Home Security. When she didn't pick up, the operator called her daughter Alexandra, who raced to the house to check the doors and windows. When Raphel returned, the phone rang again. It was Alexandra, in a panic. Burglars hadn't set off the alarm. It was the **Federal Bureau of Investigation**. Raphel grabbed her purse and ran out. As she pulled up to her house, she saw agents going in and out, walking across the oriental rugs she had trundled back from South Asia. They boxed up everything electronic. In the basement, they opened the drawers of a

mahogany file cabinet. They pulled out a stack of files. Two FBI agents approached her, their faces stony. "Do you know any foreigners?" they asked. Raphel's jaw dropped. She had served as a diplomat in six capitals on four continents. She had been an ambassador. Knowing foreigners had been her job. "Of course," she responded, "Tons . . . Hundreds." Three weeks before the FBI raided her house, Raphel had touched down at Benazir Bhutto International Airport in Islamabad. The city was in an anxious state. All summer, **U.S. intelligence agencies had been intercepting rumors about a possible coup.** Alarm bells were ringing in the State Department's office of the Special Representative for Afghanistan and Pakistan, where Raphel worked, and went all the way to the White House. At a dinner party at the home of an American diplomat in Islamabad's elite E-7 sector, Raphel and a group of Pakistani politicians pulled their seats into a circle.

U.S. to Delay NATO Center
Wall Street Journal, Julian Barnes, 2016 12 02
Brussels - The U.**S. Congress is ready to approve legislation aimed at delaying the relocation ofa North Atlantic Treaty Organization intelligence center**, possibly providing the incoming Trump administration with leverage to prod the alliance into expanding its counterterrorism work. President-elect Donald Trump has said he wants NATO to focus more on fighting terrorism, a shift many allies oppose as either outside the alliance's remit or as a distraction from its traditional focus on countering Russia. The final version of the Defense Authorization Act, set for a vote by the Houseon Friday and the Senate next week, blocks any funds from being spent to move the so-called **NATO Intelligence Fusion Cell from the Molesworth Royal Air Force base, in central England, to the Croughton base, about 50 miles southwest**.

Bill to help ID threats, challenges at northern border heads to Obama's desk (Canada)
Dickinson Press (North Dakota), April Baumgarten, 2016 12 01
Washington - A **bill U.S. lawmakers hope will help identify threats and challenges facing federal agents at the northern border is going to President Barack Obama's desk**. The House of Representatives unanimously passed the **Northern Border Security Review Act** on Tuesday without objection, meaning there were no changes to the bill. Obama has 10 days from when the bill was passed by Congress to decide whether he will sign the bill into law, but Sen. Heidi Heitkamp, D-N.D., expects the president will put his signature on the document. "This bill will give us an excellent opportunity to have a strategy that we all can evaluate and review in our oversight responsibilities," she said. She added the U.**S. is lucky to have Canada as a friendly, trusted ally**. There are Canadian border officials at the Pembina port aiding Border Patrol agents, and there could be a bill to further facilitate relationships with border forces from Canada.

Bill to combat foreign propaganda advances in Congress
Washington Post, Craig Timberg, 2016 12 01
Washington - **Congressional negotiators on Wednesday approved an initiative to track and combat foreign propaganda amid growing concerns that Russian efforts to spread "fake news" and disinformation threaten U.S. national security**. The measure, part of the National Defense Authorization Act approved by a conference committee, calls on the State Department to lead governmentwide efforts to identify propaganda and counter its effects. The authorization is for $160 million over two years. If approved by the full House and Senate, the measure could reach President Obama in December.

Michael Flynn, a Top Trump Adviser, Ties China and North Korea to Jihadists
New York Times, Edward Wong, 2016 12 01

Analysis - **President-elect Donald J. Trump's pick for national security adviser, retired Lt. Gen. Michael T. Flynn, has been much more outspoken about militant Islamists than he has about China and North Korea, the two main strategic concerns of the United States in Asia**. That has left scholars and analysts looking for clues about his views on Asia. A book published in July for which he was a co-author, "The Field of Fight: How We Can Win the Global War Against Radical Islam and Its Allies," offers some tea leaves. The **half-dozen mentions of China and North Korea are couched in generalities**, but there are glimpses into what the general thinks of the two nations. General Flynn wrote that the United States needed to confront a global "alliance" between "radical Islamists" and the governments of China and North Korea, as well as Russia. China and North Korea are officially secular Communist states, and China has blamed religious extremists for violence in Muslim areas of its Xinjiang region. In the book, General Flynn acknowledges that people may find the idea of an alliance between the Communist nations and jihadists to be strange, but asserts that it exists. He does not go into details on the alliance. **By appointing General Flynn, a former Army intelligence officer, Mr. Trump has signaled that he intends to prioritize policy on the Middle East and jihadist groups,** though the Obama administration seems to have stressed to Mr. Trump the urgency of dealing with North Korea's nuclear program.

Just one Trump transition aide for U.S. spy agencies - officials
Reuters, Jonathan Landy, Mark Hosenball, 2016 12 01
Washington - **Only one member of President-elect Donald Trump's transition team is dealing with the CIA and the 16 other offices and agencies that make up the U.S. intelligence community**, four U.S. officials said Wednesday. Geoffrey Kahn, a former House intelligence committee staffer, is the only person named so far to Trump's intelligence community "landing team," they said. As a result, said one senior career intelligence officer, briefing books prepared by the **Office of the Director of National Intelligence, the National Security Agency, the National Counterterrorism Center, and 13 other agencies** and organizations are "waiting for someone to read them." "It seems like an odd time to put issues like cyber security and international terrorism on the back burner," said the official, who spoke on the condition of anonymity. Trump on Tuesday received only his third intelligence briefing since he won the Nov. 8 presidential election, despite an offer from President Barack Obama of daily briefings, three of the officials said.

FBI to gain expanded hacking powers as Senate effort to block fails
Reuters, Staff report, 2016 11 30
Washington - A **last-ditch effort in the Senate to block or delay rule changes that would expand the U.S. government's hacking powers failed** Wednesday, despite concerns the changes would jeopardize the privacy rights of innocent Americans and risk possible abuse by the incoming administration of President-elect Donald Trump. Democratic Senator Ron Wyden attempted three times to delay the changes which, will take effect on Thursday and allow U.S. judges will be able to **issue search warrants that give the FBI the authority to remotely access computers in any jurisdiction, potentially even overseas**. His efforts were blocked by Senator John Cornyn of Texas, the Senate's second-ranking Republican. The changes will allow judges to issue warrants in cases when a suspect uses anonymizing technology to conceal the location of his or her computer or for an investigation into a network of hacked or infected computers, such as a botnet. In an effort to address concerns, U.S. Assistant Attorney General Leslie Caldwell wrote a blog post this week arguing that the benefits given to authorities from the rule changes outweighed any potential for "unintended harm."

Internet Archive looks to take digital collection to Canada
ZD Net (US), Jonathan Chadwick, 2016 11 30

San Francisco - **The Internet Archive is looking to replicate its database in Canada in the face of potentially increased surveillance powers under a Donald Trump presidency in the United States.** The San Francisco- based organisation said in a blog post that it is seeking donations for an "**Internet Archive of Canada**", which had been set as a goal in response to the November 9 election result and the greater web restrictions that will likely follow. "[The election result] was a firm reminder that institutions like ours, built for the long term, need to design for change," the post says. "For us, it means keeping our cultural materials safe, private, and perpetually accessible. It means preparing for a web that may face greater restrictions ... government surveillance is not going away; indeed, it looks like it will increase." Despite Internet Archive looking to back up its data in Canada, one Snowden document revealed the close collaboration between the NSA and the country's **Communications Security Establishment Canada (CSEC).**

CIA's Brennan says tearing up Iran deal would be 'folly'
Reuters, Staff report, 2016 11 30
Washington - **Outgoing CIA Director John Brennan has said it would be the "height of folly" for U.S. President-elect Donald Trump to tear up Washington's deal with Tehran because it would make it more likely that Iran and others would acquire nuclear weapons**. "It could lead to a weapons program inside of Iran that could lead other states in the region to embark on their own programs," Brennan said in an interview with the BBC aired on Wednesday. "So I think it would be the height of folly if the next administration were to tear up that agreement." Brennan also said that in dealing with the Syrian crisis, Trump should be cautious in trying to work with Russia.

Elite U.S. Special Operators Build Center for Perpetual War on Terror
The Daily Beast, Kimberly Dozier, 2016 11 29
Washington - **Preparing for a multi-generational, international fight against terrorists, U.S. special operations chiefs are launching a new counterterrorist nerve center at an undisclosed location in the Middle East to fight the so-called Islamic State, al Qaeda, and any other terrorist actor.** The **Joint Special Operations Command**, the U.S. military's premier counterterrorist strike force, is expanding its existing targeting nerve center in the region to make space for more American terror hunting personnel from three-letter agencies like the **CIA, NSA, and FBI to foreign partners like Britain, France, Iraq and Jordan**. The Obama administration is enshrining the strike force's role of gathering multiple points of view on who to kill and capture, as it did in Iraq and Afghanistan into a permanent information sharing platform, two U.S. officials tell The Daily Beast, speaking anonymously because they were not authorized to discuss the secret task force publicly. "This has been going on," said a senior U.S. official briefed on the expanded mission. "We're just putting it on steroids."

FBI may have also been investigating Trump
VICE News, Jason Leopold, 2016 11 29
Washington - **Eleven days before the election, FBI director James Comey wrote a letter to Congress letting them know that the agency had found additional emails that "appear to be pertinent" to the bureau's investigation of Hillary Clinton's private email server**. Now, three weeks after the election, the **FBI has responded to a longstanding VICE News Freedom of Information Act lawsuit, revealing that the bureau may very well have been investigating Donald Trump as well.** In September, VICE News and Ryan Shapiro, a doctoral candidate at MIT and research affiliate at the Berkman Klein Center for Internet & Society at Harvard University, filed the lawsuit against the FBI demanding documents connected to a pair of incendiary comments Trump made on the campaign trail over the summer. In July, he called upon Russia to track down "30,000 emails [from Hillary Clinton's private email server] that are

missing." We asked the FBI to grant us expedited processing because there was an urgent need to inform the public before they went to the polls on November 8. But the FBI refused to respond to our request before the election. "The nature of your request implicates investigative records the FBI may or may not compile pursuant to its broad criminal and national security investigative missions and functions," said the bureau's response, which is embedded at the end of this story. **"Accordingly, the FBI cannot confirm or deny the existence of any such records about your subject as the mere acknowledgment of such records existence or nonexistence would in and of itself trigger foreseeable harm to agency interests."**

United Kingdom / Royaume-Uni

British anti-terror advisers sent to Gulf
London Daily Telegraph, Laura Hughes, 2016 12 06
London - **Britain will spend millions helping Middle East countries beef up security at their airports to help detect terrorists**, Theresa May will pledge as she says, "Gulf security is our security". At a meeting of the **Gulf Cooperation Council (GCC)** in Bahrain, Mrs May will announce plans for a joint taskforce to increase counter terrorism financing and training in the region. British experts will help improve traveller screening systems at airports in the Middle East, in light of growing fears of Isil plots targeted at airlines. Mrs May will today become the first British Prime Minister - and the first woman - to attend the annual gathering. She will announce a series of additional security measures, including the establishment of a new joint **UKGCC Working Group on Counter-Terrorism and Border Security**.

Former spy sues after MI5 'hid' his stress disorder
Sunday Times (UK), Sean Rayment, 2016 12 04
London - A **former MI5 agent who developed post traumatic stress disorder (PTSD) after infiltrating al-Qaeda is suing the British government for £1m**, The Sunday Times can reveal. The **former agent, who cannot be identified for security reasons, is now serving life for a murder he claims was committed as a direct result of his mental condition**. He has told The Sunday Times that after years of therapy he now believes the crime would never have been committed if he had received treatment for the illness. Legal papers have been served on MI5. The former agent's lawyers are in negotiations with Treasury solicitors, who are acting on behalf of the security service. He has told The Sunday Times that he spied for both **MI5 and MI6**, undertaking missions in Britain, Pakistan and Egypt.Targets included members of his local community, university students, worshippers at his mosque and British jihadists attempting to join al-Qaeda. He claims MI6 medical files reveal that he developed the illness after witnessing the beheading of a family in Pakistan.

Our spies need to be better molecatchers
London Times, Ben Macintyre, 2016 12 03
Column: The **German equivalent of a mole in spy jargon is U- boot: an unidentified threat lurking just below the surface, unseen, silent and lethal**. This week, Germany's domestic intelligence agency discovered a U-boat in its midst that has already inflicted huge reputational damage -- an Islamist convert who infiltrated the agency to gather secrets and alert his "religious brothers" to impending danger, and who may have been planning an attack on its headquarters. Unbeknown to them the mole, a married father of four, had acted in gay pornographic films and secretly converted to Islam in 2014. A proper vetting procedure would

have brought this to light and set off every alarm bell. Instead, the German authorities admitted, he remained "inconspicuous during the application process, training and at work". The **case has prompted much sniggering but before we indulge in schadenfreude it is worth recalling that Britain has suffered the worst mole infestation of any western power**. We have been penetrated like this before, we may well be penetrated now, and we may not discover it for years. The mole, U-boat, or "sleeper agent" is every spy agency's nightmare: the spy who makes himself eligible for employment by his foe's intelligence service, lies low, and then destroys the machine from within by passing on its secrets, warning its targets, and betraying its agents. The most successful moles in history were the Cambridge spies of the 1930s, the communist converts working for the **KGB who infiltrated MI5, MI6 and** the Foreign Office. Britain used the same techniques to undermine German intelligence during the Second World War.

UK security officials to discuss Iran nuclear deal with Donald Trump's camp
The Independent (UK), Joe Watts, 2016 12 01
London - **British security officials are set to discuss the Iran nuclear deal with Donald Trump's advisors after the President-elect signalled he would "tear up" the agreement**. Downing Street said the UK placed a great deal of importance on the pact and had put "substantial diplomatic effort" into securing it. It comes after the director of the **CIA** issued a stark warning against dumping the deal, something Mr Trump has pledged, claiming it would be "the height of folly" and "disastrous". A Downing Street spokesperson said: "Most Americans know what our position is on the Iran deal given that we've played such a part securing that agreement.

All western spy agencies , including MI5 , are vulnerable to infiltration by Islamists . Here's why
London Daily Telegraph, Nigel West, 2016 11 30
Column - The **news that the German security service BfV may have been penetrated by an Islamic terrorist organization will come as no surprise to western counter-intelligence analysts**. In fact it will serve only as an unpleasant reminder of the vulnerability of such agencies when entrance and vetting standards are compromised in an effort to acquire language skills. At the heart of the **continuing challenge of countering so- called "hostile penetration"** is the balance that has to be struck in the acquisition of intelligence staff with foreign dialects - which are essential if a security apparatus is to monitor the communications of terror suspects speaking in their own patois, or to maintain physical and technical surveillance on extremists from the Middle East. Such language skills are of supreme importance when it comes to interrogation, where an interviewee's every nuance may be significant, and must be recognised for what it is. However, in the rush to embrace native-speaking interpreters and even case officers, many Western security services have reduced their standards and limited their background screening of candidates. Combined with the new policy of open recruitment, which amounts to an invitation to terrorist groups to try their luck, the problem of bad apples has been exacerbated. Most **security authorities acknowledge the problem - which was graphically illustrated by Nada Prouty, who infiltrated the FBI and then the CIA**. She was convicted in November 2007 of gaining illegal access to the files of both American agencies, but the subsequent investigation showed that she should never have been given a job in the first place. She had succeeded because of a desperate shortage of language skills, and ended up in Iraq as an interrogator. Note: Nigel West is the author of Tradecraft Secrets.

'Snooper's charter' bill becomes law, extending UK state surveillance
The Guardian (London), Alan Travis, 2016 11 29

London - The **"snooper's charter" bill extending the reach of state surveillance in Britain was given royal assent and became law on Tuesday** as signatures on a petition calling for it to be repealed passed the 130,000 mark. The home secretary, Amber Rudd, hailed the Investigatory Powers Act 2016 as "world-leading legislation" that provided "unprecedented transparency and substantial privacy protection". But privacy campaigners claimed that it would provide an international standard to authoritarian regimes around the world to justify their own intrusive surveillance powers. The new surveillance law requires web and phone companies to store everyone's web browsing histories for 12 months and give the police, security services and official agencies unprecedented access to the data.

'A national security risk': Australian Border Force warns illegal tobacco trade may be fuelling terrorism
ABC (Australia), Nick McKenzie, 2016 12 05
Canberra - **Senior border security officials warn that illegal tobacco smuggling may be fuelling drug trafficking and terrorism fundraising**. Australians may not equate illegal tobacco smuggling with drug trafficking or terrorism fundraising, but senior border security officials are warning it may be fuelling both and posing a national security risk. In an exclusive interview with the ABC's 7.30 program and Fairfax Media, Australian Federal Police assistant commissioner Wayne Buchhorn -- who has been seconded to **Australian Border Force (ABF)** -- said he had "significant" concerns that some of the proceeds of the booming illicit tobacco smuggling trade into Australia were flowing to extremist groups overseas. "We are seeing crime gangs here in Australia, oftentimes Middle Eastern organised crime gangs, and the connections back into the Middle East ... [are] a significant concern for us in the current environment," he said.

Australia introduces new laws to keep terrorists in jail
Australian Associated Press, Claire Bickers, 2016 12 02
Canberra - **New counter-terrorism laws will allow the Federal Government to keep convicted terrorists in jail once their sentence expires if they are still deemed a threat**. The laws passed yesterday evening on the final sitting day of 2016. Several amendments were made to the original proposal to improve safeguards and oversight following recommendations by a parliamentary committee. "The scheme is a necessary response to the serious threat that terrorism poses to Australia and its people," Justice Minister Michael Keenan told MPs. It was the third **national security Bill** to pass in the final sitting fortnight of the year. Malcolm Turnbull announced the new measures in July, shortly after terror attacks in Nice. At the time, the Prime Minister said Australia could not be complacent in the wake of increasing terror attacks around the world.

ASIO boosts ranks with spies like us
Daily Telegraph (Australia), Charles Miranda, 2016 12 01
Melbourne - The **ranks of Australia's domestic intelligence agents have spiked to their biggest level in history and many of the new recruits are spies like us, with ASIO specifically targeting tradies.** The spy agency has confirmed it has hit a milestone in personnel numbers with a focus specifically on the recruitment this year of surveillance agents

for the ever present threat of terrorism but also to combat an alarming rise in "espionage and foreign interference by clandestine actors" in Australia. **ASIO now has 1800 personnel many of whom are tasked with combating terror but also a noted increased incursion of foreign agents** targeting the private and government sector's critical infrastructure, in the latter case notably the defence, intelligence and science industries. As the Telegraph exclusively revealed in February, it has been confirmed many of those recruited are ordinary citizens including lawyers, accountants and IT gurus but also surprisingly tradies. ASIO has specifically targeted tradies including electrical, mechanical, lock-smithing and building services to convert them into surveillance officers with "several thousand" trade- related applications from all over Australia received.

Federal Government's new counter-terrorism measures pass the Senate
ABC (Australia), Henry Belot, 2016 12 01
Canberra - The **Federal Government passes new counter-terrorism measures allowing convicted terrorists to be kept in jail once their sentences expire, should they be deemed a risk to society.** The Federal Government has passed new counter-terrorism measures allowing convicted terrorists to be kept in jail once their sentences expire, should they be deemed a risk to society. Prime Minister after high-profile terror attacks in Orlando, Nice and Paris. The legislation allows Attorney-General George Brandis to be able to apply for an extension 12 months before a sentence expires, rather than six months as originally proposed.

New Zealand / Nouvelle-Zélande

The director of the Government Communications and Security Bureau says the level and complexity of cyber threats to New Zealand organisations is increasing.
Radio New Zealand News, Staff reporter, 2016 12 06
Wellington - The **director of the Government Communications and Security Bureau says the level and complexity of cyber threats to New Zealand organisations is increasing**. The Intelligence and Security Committee held its annual review of the GCSB and the Security Intelligence Service in Parliament today. In the last year, there have been 338 cyber threat incidents, compared with 190 in the previous year. The **GCSB's director, Andrew Hampton**, says New Zealand is being targeted by a growing range of international threats for financial gain. (Full report)

New Zealand Surprised as Prime Minister John Key Stands Down (Canada)
Wall Street Journal, Rhiannon Hoyle and Rachel Pannett, 2016 12 05
Sydney - **New Zealand Prime Minister John Key said Monday he would step down**, likely ending the political career of one Asia-Pacific's longest- serving conservative leaders and a key U.S. ally in the region. Mr. Key's support also held steady **amid allegations by former U.S. intelligence employee Edward Snowden that the government engaged in mass surveillance of its citizens**, a charge Mr. Key has strongly denied. **New Zealand is also part of the Five Eyes intelligence alliance with Australia, Canada, Britain and the U.S. Under the alliance**, the five countries have committed to sharing intelligence. Mr. Key said he would leave parliament before the next election. He has no immediate plans, although he said he would likely be interested in board positions in Australia and New Zealand, as well as across Asia and the U.S.

Kim Dotcom wants to know - is he being spied on again?
New Zealand Herald, David Fisher, 2016 12 04
Wellington - **Kim Dotcom wants to know - is he being spied on again?** The question came after the discovery of a surveillance camera in the penthouse suite of the Hilton on Auckland's Princes Wharf. And it turns out the answer might be "yes". The camera belongs to NZ Customs and is being used by the **NZ Defence Force** - although both agencies say any surveillance of Dotcom's home was accidental. The latest instalment in Dotcom's complicated relationship with New Zealand **government agencies** came one evening last month as the former Megaupload owner was looking across from his penthouse apartment towards the neighbouring Hilton.

The Commissioner of Security Warrants says he rejects very few warrants sought by the government's intelligence agencies, but some have to be 'tweaked' to comply with the law
Radio New Zealand News, Staff reporter, 2016 12 01
Wellington - The **Commissioner of Security Warrants says he rejects very few warrants sought by the government's intelligence agencies**, but some have to be 'tweaked' to comply with the law. The Commissioner, **Bruce Robertson**, and the Prime Minister jointly issue interception warrants for New Zealand residents or citizens. Mr Robertson appeared before a parliamentary committee considering a new law to set up the same warranting and compliance regime for both agencies. He told MPs the the Government Communications Security Bureau and the Security Intelligence Service know which warrants will get his sign-off.

China / Chine

Xi calls for downsized military
Global Times, Deng Xiaoci, 2016 12 05
Beijing - **President Xi Jinping on Saturday called for a smaller military with better combat capability and optimized structure, a step further, experts said, toward mobilizing senior officers to conduct grass- roots military reform** after it was regrouped into five theater commands in February. Citing rapid changes to the global military environment, Xi, who is also chairman of the Central Military Commission and head of a leading group for deepening reform on national defense and the armed forces, spoke about the modern informationized warfare, noting that joint operations have grown to be the basic form of combat, reported the Xinhua News Agency. The president said at a two-day conference on military reform, which ended Saturday, that the military's structure must be adjusted and optimized, new types of forces developed, the ratios between different types of forces should be rationalized, and the number and the scale of the military should be downsized.

China takes censorship to sophisticated new level
Globe and Mail, Nathan Vanderklippe, 2016 12 01
Beijing - **China appears to have massively upgraded its powerful online censorship apparatus, using it to more severely block sensitive topics in group conversations while allowing freer rein in private chats** - a sign, one expert says, of a dramatic leap in the use of artificial intelligence to silence speech that falls afoul of the Communist Party. The growing sophistication of China's Internet blocking, uncovered by researchers at the University of

Toronto, offers a window into how the country's authoritarian regulators are growing savvier at choking out what they see as undesirable speech - while limiting the anger their deletions stir both domestically and abroad. **Researchers with U of T's Citizen Lab at the Munk School of Global Affairs studied the app WeChat, the principal artery of digital communication in China and owned by one of the country's largest Internet firms, Tencent Inc. They found evidence of a complex WeChat management system that alters degrees of censorship according to the situation.**

Microsoft, Intel, IBM Push Back on China Cybersecurity Rules
Dow Jones Newswire, Eva Dou, 2016 12 01
Beijing— **Tough new Chinese cybersecurity rules are providing a rare, behind-the-scenes look at a regulatory skirmish between U.S. technology companies and Beijing**. China is moving to require software companies, network-equipment makers and other technology suppliers to disclose their proprietary source code, the core intellectual property running their software, to prove their products can't be compromised by hackers. Tech companies are loath to offer up their source code, saying this will heighten the risk of their code falling into the hands of rivals or malefactors--and may not guarantee it is hack-proof. Microsoft Corp., Intel Corp. and International Business Machines Corp. are among those filing objections. **Chinese authorities have said these measures are necessary to guard against foreign espionage tools** being embedded in software used here. They frequently cite claims by former U.S. National Security Agency contractor Edward Snowden that such back doors were routinely built into U.S. technology products sold overseas. Beijing maintains that its security rules apply to domestic and foreign companies equally. When China passed the cybersecurity law last month, a spokesman for the internet regulator said foreigners who thought the law would favor domestic firms had a "misunderstanding, a biased view." But in Technical Committee 260's discussions, certain government officials argued for the standards to be drafted to favor domestic companies. "The big trend is called shifting to domestic production," wrote **Guo Qiquan, chief engineer at the China Ministry of Public Security's Network Security Bureau, in a suggestion that the committee marked "approved."**

China military says it's seriously concerned by Japan-South Korea pact
Reuters, Ben Blanchard, 2016 11 30
Beijing - **China's Defence Ministry on Wednesday expressed serious concern about South Korea and Japan signing a military intelligence pact** to share sensitive information on the threat posed by North Korea's missile and nuclear activities. The signing of **the General Security of Military Information Agreement had originally been expected in 2012, but South Korea postponed it due to domestic opposition**. The case for the neighbours to pool intelligence has increased, however, as North Korea has been testing different types of missiles at a faster rate, and claims it has the capability to mount a nuclear warhead on a missile.

FSB reports foreign special services preparing massive cyber attacks
ITAR-TASS World Service, Staff report, 2016 12 02
Moscow - **Foreign special services are preparing to carry out massive cyber attacks starting from December 5 aimed at destabilizing** Russia's financial system, the Federal Security Service said on its website on Friday. The goal of the cyber attacks is also to destroy

the activity of "a range of major Russian banks," according to the FSB. The servers and command centers for carrying out these cyber attacks are located in the Netherlands and are owned by Ukraine's hosting company BlazingFast.

Major Russian banks say unaffected by cybersecurity threats
ITAR-TASS World Service, Staff report, 2016 12 02
Moscow - **Russia's leading financial group VTB and the biggest lender Sberbank said on Friday cyber threats have not affected their activities. Earlier in the day, Russia's Federal Security Service (FSB)** announced that foreign special services were plotting a series of cyber attacks starting from December 5 aimed at destabilizing the country's financial system, including the activity of major Russian banks. "The security systems of the group's banks meet all the latest requirements and guarantee full protection of our clients' operations," the press service of the VTB Group told TASS. Sberbank, the third largest bank in Europe, said it is "working in a normal mode."

La Russie dit avoir déjoué une cyberattaque contre ses banques
Reuters, Christian Lowe avec Elena Fabrichnaya et Kira Zavialova, 2016 12 02
Moscou - La **Russie a annoncé vendredi avoir mis en échec un complot ourdi par des espions étrangers pour semer le chaos dans le système bancaire russe par des cyberattaques** coordonnées et la diffusion de fausses informations sur l'état de ses banques sur les réseaux sociaux. Le **Renseignement intérieur russe (FSB)** précise dans un communiqué que les serveurs qui devaient servir à lancer les cyberattaques sont situés aux Pays-Bas et qu'ils sont enregistrés auprès de BlazingFast, une société ukrainienne d'hébergement de sites internet.

Foreign intelligence head: West's 'compulsory globalization' policy sparks public backlash
ITAR-TASS World Service, Staff report, 2016 11 30
Moscow - The **West's zealous policy of "compulsory globalization" has generated a natural resistance in some countries including the US, Russia's Foreign Intelligence Service Director Sergei Naryshkin** said at the Primakov Readings international conference in Moscow. He pointed out that a candidate encouraging the public to cherish national traditions had won the recent US presidential election. Naryshkin also said that a while ago many swore by an unshakable unipolar world forever, but now the number of countries guided by their national interests, has started to grow.

Government finalizes draft work for restructuring of Turkish intelligence
Daily Sabah, Staff report, 2016 12 06
Ankara - As **part of the constitutional change to switch from a parliamentary system to a presidential one, the government has finalized its draft work on the restructuring of Turkey's intelligence unit.** In that respect, once the system of governance has shifted to a presidential system, the head and coordinator of the intelligence unit will be the Presidency, with the unit referred to as the "**National Security Directorate**." The restructuring of the intelligence unit was brought to attention by Prime Minister Binali Yildirim shortly after the Gülenist Terror Group's (FETÖ) July 15 coup attempt. Prime Minister Yildirim had initially said that the National

Intelligence Organization (MIT) would be restructured and domestic intelligence would be handled by a separate unit, putting foreign intelligence under the MIT umbrella. Explaining that MIT monitors intelligence sharing between the police, gendarmerie and other institutions, Yildirim said, "Today's need is the compilation of domestic intelligence under one entity. Foreign intelligence will continue to be compiled under the MIT." Furthermore, the National Security Directorate will have similar features to the U.S. national intelligence unit, with the directorate under the Presidency and the national security director appointed by the Presidency as well. The **intelligence unit**, in that respect, will not only serve as the overseer of the aforementioned gendarmerie, local police and intelligence units but also function as coordinator among them. However, if the system is not changed to a presidential one, the directorate will operate under the Prime Ministry.It is almost definite that domestic and foreign intelligence are going to be separated into two different units while the MIT will be in charge of foreign intelligence, like the **Central Intelligence Agency (CIA) in the U.S. The Signal Intelligence Division** which was formerly under the control of the General Staff of Electronic Systems' Command and is currently operating under the MIT. That will change with a presidential system, in which the division would be operated under the National Security Directorate.

Pas de postes supplémentaires au SRC pour l'instant
Agence Télégraphique Suisse, 2016 12 06
Genève— **Les moyens prévus pour le Service de renseignement de la Confédération (SRC) sont pour l'instant suffisants**. Fort de cette conviction, le Conseil des Etats a enterré mardi tacitement une motion du National qui réclamait plus de personnel. Depuis le dépôt du texte en septembre **2015, 86 postes supplémentaires ont été créés dans le domaine de la lutte contre le terrorisme, dont 23 pour le SRC, a** rappelé Isidor Baumann (PDC/UR) au nom de la commission. L'application de la nouvelle loi sur le renseignement s'accompagnera par ailleurs de la création de 19,5 emplois. Le SRC ne peut actuellement justifier le besoin d'autres postes, en a conclu la commission, suivie à l'unanimité par le plénum ainsi que par le ministre de la défense Guy Parmelin. Si le niveau de menace devait augmenter, la Chambre des cantons encourage toutefois le Conseil fédéral à soumettre sans tarder au Parlement des propositions d'augmentation des effectifs.

Un suivi à la fois sécuritaire et social
Tribune de Genève, S.R., 2016 12 06
Genève - Conscient des risques liés à la radicalisation, **Genève maintient ses efforts en matière de sécurité et de prévention.** Des mesures d'accompagnement de personnes radicalisées ont notamment été annoncées hier, lors de la troisième conférence de presse du genre organisée en un an, suite aux attentats de Paris. « La Suisse n'est pas un îlot et la menace reste élevée ici aussi » , rappelle **Paul Zinniker, vice-directeur du Service de renseignement de la Confédération (SRC),** devant les médias. « Nous prenons très au sérieux les menaces, sans céder à la terreur, livre Pierre Maudet, chef du Département de la sécurité et de l'économie (DSE). Nous avons plus un coup d'avance qu'un coup de retard désormais. En un an, nous avons développé une prise en charge globale des phénomènes de radicalisation. »

Genève affine sa stratégie pour lutter contre la radicalisation
Le Temps (Suisse), Laure Lugon Zugravu, 2016 12 06
Genève –. Le **canton réagit face aux phénomènes de radicalisation**. Si l'outil de prévention est désormais opérationnel, une approche éducative a été mise en place pour prendre en charge les voyageurs du djihad qui rentreront. A Genève, **340 cas de radicalisation ont été signalés depuis 2014 par le Service de renseignement de la Confédération (SRC), soit 19 de plus qu'en juin.** Parmi eux, 35 sont suivis car ils présentent un danger pour la sécurité

intérieure. Ces gens ne résident pas forcément à Genève, mais y travaillent ou y ont une vie sociale, note Monica Bonfanti, cheffe de la police. Genève n'a pas enregistré de nouveau départ depuis juin, où cinq départs étaient recensés. « Cette fois, nous avons un coup d'avance et non un coup de retard comme l'an dernier! »

Dutch Secret Service Investigated Far-right Leader's Ties to Israel
Haaretz, Shlomo Papirblat, 2016 12 05
Brussels - **Geert Wilders, leader of Holland's far-right anti- Muslim Party of Freedom, was investigated in the past by the country's General Intelligence and Security Service (AVID)** over his "ties to Israel and their possible influence on his loyalty." Wilders, whose party is leading the polls ahead of the upcoming election in March, is likely to be a key figure in the next government. The undercover investigation was exposed over the weekend by the veteran daily De Volkskrant. According to the article, AVID agents conducted the investigation from 2009 to 2010, with its existence and results remaining unknown until now.

Lithuanian police searching for suspected spy
Baltic News Service, 2016 12 05
Vilnius—**Vilnius police is searching for a suspected spy,** the Vilnius County Central Police Commissariat said. **Vladimir Sokolov, 50, is suspected of seizing, buying and otherwise collecting information that constitutes a Lithuanian state secret or any other information that may be interesting to foreign intelligence**. Under Lithuanian laws, the punishment for the crime is between three and 15 years in prison. According to information available to the police, the man is suspected of spying in an organized group. **Aurelija Katkuviene, strategic communications chief at the State Security Department,** told BNS that all information in connection to the search was part of a pre-trial investigation, adding that the department would not provide any information.

Jean-Marc Gadoullet. Un agent très special
LePoint.fr, Hubert Coudurier, 2016 12 04
Paris - C'est **un ancien du 11e Choc, le bras armé de la Direction générale de la Sécurité extérieure (DGSE). Dans son livre (*), Jean-Marc Gadoullet évoque son expérience d'agent secret au service de la France sur les théâtres d'opération africains comme dans les Balkans.** Et surtout au Sahel, lors d'une libération d'otages controversée pour laquelle il donne sa version. 6.000 personnes, 600 millions d'euros de budget : la **DGSE, dont le siège est situé boulevard Mortier dans le 20e arrondissement de Paris, reste encore mystérieuse, même si son directeur, le très discret Bernard Bajolet, a autorisé le tournage de la série de Canal plus « Le bureau des légendes »**, dont l'acteur principal, Mathieu Kassovitz, lui donne enfin une incarnation que la CIA a conquise depuis longtemps grâce à Hollywood. À l'heure où le chef de l'État est stigmatisé pour avoir révélé son ordre de procéder à quatre opérations « Homo » (pour homicides) alors que la politique de liquidations ciblées de terroristes est presque devenue une routine, cette plongée dans le monde du renseignement que propose Gadoullet tombe à pic. Ce n'est ni la première ni la dernière. On se souvient des mémoires **d'anciens directeurs de la DGSE, comme Claude Silberzahn, confessé par notre chroniqueur Jean Guisnel, ou encore d'Alexandre de Marenches (patron de l'ancêtre de la DGSE, le Service de documentation extérieure et de contre-espionnage (SDECE),** qui lui, s'était confié à Christine Ockrent.

Western spy agencies face nightmare as moles thrive online

Canberra - The **German equivalent of a mole in spy jargon is U-boot (U-boat): an unidentified threat lurking just below the surface, unseen, silent and lethal. Germany's**

domestic intelligence agency discovered a U- boat in its midst last week that has already inflicted huge reputational damage -- an Islamist convert who infiltrated the agency to gather secrets and alert his "religious brothers" to impending danger, and who may have been planning an attack on its headquarters. Unknown to them the mole, a married father of four, had acted in gay pornographic films and secretly converted to Islam in 2014. A proper vetting procedure would have brought this to light and set off every alarm bell. Instead, the German authorities admitted, he remained "inconspicuous during the application process, training and at work". The mole, U-boat, or "sleeper agent" is every spy agency's nightmare: the spy who makes himself eligible for employment by his foe's intelligence service, lays low, and then destroys the machine from within by passing on its secrets, warning its targets, and betraying its agents. The most **successful moles in history were the Cambridge spies of the 1930s, the communist converts working for the KGB who infiltrated Britain's MI5, MI6 and the Foreign Office**. Britain used the same techniques to undermine German intelligence during World War II. Today the deep penetration agent is back to haunt the intelligence services.

Europol: 'IS' likely to target EU in 'near future'
Deutsche Welle, Staff report, 2016 12 02
Berlin - **The so-called "Islamic State" group is likely to carry out terror attacks in the European Union in the near future, Europol said in a report** on Friday. The Sunni extremist group has "both the will and the capability" to strike both soft and hard targets in Europe, especially those countries participating in the anti-IS coalition, the EU police agency said. "EU Member States that participate in the anti-IS coalition are regarded by IS as legitimate targets," it said, pointing to particular risk in France, Belgium, Germany, the Netherlands and the United Kingdom. The report warns that as IS is weakened and defeated in Syria and Iraq, foreign fighters may return to Europe with their families, posing a long-term security challenge.

French poll warning over Russian hacking threat
London Times, Adam Sage, 2016 12 02
Paris - **France's political parties have been summoned to a meeting by the country's top spy agency and told to strengthen their defences against cyberattacks amid fears that Russian hackers could seek to influence the presidential election next year**. French intelligence agencies endorse claims that the Kremlin tried to sway the US presidential race, and believe that similar tactics might be deployed in France. Germany's spy chief expressed concern this week that Russia would use cyberattacks to spread misinformation before the German elections next autumn. The issue is particularly sensitive in France given President Putin's support for right- wing presidential election candidates. He is an admirer of François Fillon, of the Republican party, and has close ties with Marine Le Pen, leader of the far-right National Front.

Wikileaks releases 2,420 documents from German government NSA inquiry
Deutsche Welle, Staff report, 2016 12 02
Berlin - The **documents contained 90 gigabytes of information including many classified documents, according to the statement on the Wikileaks website on Thursday**. They are the property of government agencies such as the **Federal Intelligence Service (BND, pictured above) and the Federal Office for the Protection of the Constitution (BfV).** The published materials had been submitted last year as part of a German parliamentary inquiry into the surveillance activities of the BND and its cooperation with the NSA. "The collection contains early agreements between the BND and the NSA and internal processes at the BND, but also more recent details on the close collaboration between the two agencies," Wikileaks announced, adding: "This substantial new collection of primary source documents provides significant new evidence (of their collaboration)." The documents, Wikileaks claimed, contain the

answers to questions posed by the inquiry committee as well as administrative documents, correspondence, agreements and press reactions.

Communist spies behind the Iron Curtain kept 'top secret' file on Donald Trump when he married Ivana - and interrogated her father about him
Mail Online, 2016 12 02
London— Top **secret intelligence files on US president-elect Donald Trump have emerged in the Czech Republic where he was kept under observation for years by Communist-era spies.**Trump came under scrutiny following his marriage to Czechoslovakian-born Olympic skier Ivana Zelnickova in 1977. Now the **long buried documents - marked 'Top Secret' - have emerged in the Czech media after nearly 40 years**. The files - often written in the language used by the feared **StB secret police** - describe Trump as 'the most successful young man of America' and a 'political influencer.' They go on to say how Trump 'totally s*** himself' when he first met Ivana. They offer insight into the astonishing naivete of the Communist secret police about the West. The Communist secret police investigated Ivana and how she rose from humble beginnings to become the star of American high society.

What we know about the 'gay porn star turned Islamist spy'
The Local (Germany), Staff report, 2016 12 01
Berlin - News this week that a member of the **BfV was a suspected Islamist** was already strange enough, but then both the Washington Post and Bild reported that the suspect of Spanish origin had starred in gay porn videos, found while investigators searched his home. The case has raised questions about security flaws in the intelligence service and it will perhaps take some time before all the answers are revealed, but here's what we know so far. **The suspect was arrested on November 17th after chatting online with a man posing as another Islamist - who the suspect didn't realize was actually a colleague at the intelligence agency.** The suspect made "Islamist remarks online under a false name", according to the BfV. He also offered internal information during the chat. According to information obtained by DPA and other news outlets, the man had also told his chat partner that he could give other like-minded people access to the headquarters of the BfV in Cologne.

Belgium Employs Private Security Companies in Operations of Surveillance, Inspection
Asharq Al-Awsat, Abdullah Mustafa, 2016 12 01
Brussels - The **Belgian Interior Minister, Jan Jambon, said that security guards in the country will be allowed to practice some of the police missions like participating in questioning people to verify their identities or to inspect their bags as part of the new regulations adopted by the government concerning the work of private companies**. Discussions took place in the Parliament of Brussels on new solutions to reduce the burden of policemen after the last terrorist attack that took place in Brussels, which targeted an airport and a train station in the capital, killing 32 people and wounded 300 others.

Ces espions qui traquent les terroristes
L'Obs, Violette Lazard, 2016 12 01
Paris - **Alors que la menace terroriste demeure et qu'un nouvel attentat vient d'être évité, "l'Obs" a pu partager pendant plusieurs semaines le quotidiendes hommes du renseignement territorial chargés de surveiller les personnes radicalisées**. Une tâche aux allures de mission impossible De loin, les schémas accrochés aux murs ressemblent à des arbres généalogiques avec des traits noirs, en pagaille, et des petites photos à chaque extrémité. De près, on y décrypte rapidement les noms des principaux terroristes qui ont frappé la France ces derniers mois. Abdelhamid Abaaoud. Salah Abdeslam. Fabien Clain. Il y a là l'organigramme du 13 novembre. Juste à côté, celui des principales filières françaises. Cette

funeste décoration a été accrochée il y a quelques mois entre deux insignes de police et des décorations militaires dans les bureaux de la cellule chargée de l'évaluation de la radicalisation, dans ce **service du renseignement territorial (le SCRT, ex-RG.)** Pile à la hauteur du regard. Ce soir-là, la plupart des bureaux sont vides. Il est 19 heures. Marc a allumé une loupiote au-dessus du sien.

La Sûreté de l'État ne contrôle son personnel que tous les cinq ans
L'Avenir, Emmanuel Huet, 2016 12 01
Bruxelles— **Un islamiste infiltré dans les services de renseignement belge, est-ce possible?** La question mérite d'être posée après l'arrestation d'un des agents du renseignement intérieur allemand. Converti depuis 2014, il semble que l'islamiste présumé envisageait de mener un attentat au sein des services de renseignement allemand. En Belgique, **la VSSE (Sûreté de l'État) confirme que le risque zéro n'existe pas. Ni chez eux ni dans un autre service.** Du personnel d'entretien à la direction en passant par les analystes, les informaticiens… ce sont près de 550 personnes qui travaillent dans le bâtiment du North gate à Bruxelles. Et pour y rentrer, un bon CV ne suffit pas. Il faut montrer patte blanche… Un contrôle pour la personne et les membres de sa famille Au sein de la VSSE, on considère que chaque employé peut ou pourrait avoir accès à des informations classées «très secrètes». Dès lors, l'ensemble du personnel dispose d'une habilitation de sécurité de ce niveau. **L'habilitation est valable pour une période de 5 ans**. Et donc, une nouvelle enquête sera réalisée de manière périodique pour le personnel en place. Cette enquête complète porte aussi sur l'ensemble des personnes majeures qui composent le ménage. Car il ne s'agit pas de faire entrer n'importe qui à la Sûreté de l'État.

Un nouveau Vigipirate face au terrorisme
Le Figaro, Alain Barluet, 2016 12 01
Paris - **Validé mercredi par l'Élysée, ce plan rénové crée un troisième niveau d'alerte inédit : « urgence attentat »** . Défense La prolongation, à un niveau élevé, de la menace terroriste en France conduit l'État à s'adapter. Comme jamais auparavant, cette menace est évaluée en permanence et les « postures » de sécurité fréquemment ajustées, depuis les attaques survenues en 2015. Mais la « rupture stratégique » illustrée par les attaques de janvier et novembre 2015 impliquait, non plus une simple adaptation, mais une révision en profondeur du plan Vigipirate, supervisé par le premier ministre, et dont la première mouture remonte à 1978. Un Conseil de Défense, réuni mercredi à l'Élysée, a validé un plan renforcé, qualifié de « Vigipirate plus » , que Le Figaro a pu consulter. Cette même réunion, autour de François Hollande, a décidé la mise en place de mesures spécifiquement adaptées aux fêtes de Noël - vingt-septième « posture » de sécurité pour l'année 2016, là où, naguère, Vigipirate n'était adapté que trois ou quatre fois par an. Le **nouveau plan Vigipirate prévoit la création d'un système à trois niveaux de menace : « vigilance » , « sécurité renforcée/risque d'attentat » et « urgence attentat » , le plus élevé.**

Met a friendly stranger? Call us, say Lithuania's spyhunters
Reuters, 2016 11 30
Vilnius— A single mother takes a kindly man into her confidence. A student is plied with beer by a smiling stranger. Beguiling scenes. But **Lithuanians are being urged in TV adverts to be wary of the kindness of strangers and call a new 'spyline' to check if they aren't, perhaps, being lured into espionage by foreign agents.** By foreign agents, **Lithuania means the Kremlin.** Ties have always been tense with former imperial master Moscow. But since the annexation of Crimea, Russia is seen in Vilnius as a threat to Lithuania and the other Baltic states of Estonia and Latvia. "People don't even think that information is being squeezed out of them until it's too late," **Darius Jauniskis, the 48-year-old head of Lithuania's State Security**

Department, told Reuters. "So to prevent this, we are going public and we are explaining all this." The **Russian Foreign Ministry and the FSB security service did not immediately respond to written requests for comment**.

German domestic spy agency denies security lapse after Islamist mole
Deutsche Welle, Staff report, 2016 11 30
Berlin - **The head of the Office for the Protection of the Constitution (BfV), Hans-Georg Maassen, said that the body maintained all security standards and had no way of knowing that a 51-year-old employee, hired last April, was a follower of the radical Salafist movement**. "We carried out a thorough background check in which we interviewed five references and looked at the entire spectrum [of information]," Maassen told reporters. "He was the father of a large family from a solid economic background who did good work. He apparently radicalized himself." According to news magazine "Der Spiegel," the man, who was tasked by the BfV with observing the Salafist scene, had himself converted to Salafism in 2014 unbeknownst to the Office or even to his own family. He was uncovered after another BfV employee found him revealing confidential information on an Internet chat room and offering to help get a radical Islamist into BfV headquarters in Cologne, ostensibly for the purposes of a terror attack.

Arrested German spy was a onetime gay porn actor -- and a secret Islamist
Washington Post, Souad Mekhennet, Anthony Faiola, 2016 11 30
Berlin - Two weeks ago, **German intelligence agents noticed an unusual user in a chat room known as a digital hideout for Islamic militants. The man claimed to be one of them -- and said he was a German spy**. He was offering to help Islamists infiltrate his agency's defenses to stage a strike. Agents lured him into a private chat, and he gave away so many details about the spy agency -- and his own directives within it to thwart Islamists -- that they quickly identified him, arresting the 51-year- old the next day. Only then would the extent of his double life become clear. The German citizen of Spanish descent confessed to secretly converting to Islam in 2014. From there, his story took a stranger turn. Officials ran a check on the online alias he assumed in radical chat rooms. **The married father of four had used it before -- as recently as 2011 -- as his stage name for acting in gay pornographic films**. Authorities on Tuesday said they had arrested him on suspicion of preparing to commit a violent act and for violating state secrecy laws.. **One senior BfV official, who discussed the matter on the condition of anonymity because he was not authorized to speak to the media defended the agency, said it was virtually impossible to protect against a breach like this**.

Reports: German domestic spy agency finds Islamist amongst its own
Deutsche Welle, Staff report, 2016 11 29
Berlin - **Germany's domestic intelligence agency (BfV) has discovered an Islamist working within its own ranks**, according to domestic media reports on Tuesday. The case allegedly surrounds a 51-year-old German who planned to bomb the BfV headquarters in Cologne. According to Der Spiegel, the man was active on extremist websites. Using a pseudonym, he gave away secret information, allegedly gathering information on the times and details of raids against extremists. The news outlet wrote that the man's family was not even aware he had converted to Islam in 2014. Having previously worked at a bank, the man joined the BfV in April 2016 - joining a new task force monitoring the ever-growing Salafist scene in Germany.

Iran creates 'Cyber Brigades' for online war
Al Arabiya, Staff Writer, 2016 12 06
Dubai - The **commander of students' Basij militias, Ali Sabir Hamani, announced the formation of 'Cyber Brigades' comprising school students with the aim of taking part in cyber warfare launched against the Islamic Republic**. This would be in parallel to the 'Joint Cyber Army' of the Iranian Intelligence whose main task is to focus on monitoring online hostilities. According to the semi-official news agency, the committee has organized training programs attended by 200 of the 'elite' students from different Iranian provinces, trained on how to handle conflicts in cyberspace.

Syrie : le chef du renseignement sort de sa réserve pour prôner la fermeté
Le Monde, Madjid Zerrouky, 2016 12 05
Damas - **Le général Hassan regrette la " modération " du régime au début du soulèvement.** Si nous avions été plus fermes au début, nous n'en serions pas là aujourd'hui. " Cette phrase, le général syrien **-Jamil Al- Hassan, qui dirige les -redoutés services de renseignements de l'armée de l'air,** l'a répétée trois fois en moins d'un mois, en novembre. Cette notion de manque de " fermeté " laisse songeur au sujet d'un conflit qui a fait 300 000 morts, mais la -parole d'un chef de la machine répressive du régime syrien est rare. Elle prend aujourd'hui un relief particulier alors que les -lignes de défense rebelles dans la ville d'Alep s'effondrent.

Intelligence Minister: Iranian nation will never bow to terror attacks
Islamic Republic News Agency, 2016 12 01
Ahvaz - **Intelligence Minister Mahmoud Alavi said that Iranian nation will never surrender to terror attacks, as martyrdom is part of its religious culture**. Addressing the funeral procession of martyrs of the terror attack in Hilla, Iraq, on Wednesday, he added that Shia Muslims are ready for martyrdom and making sacrifices for the sake of God and Imam Hossein (AS), grandson of Prophet Mohammad (PBUH). Noting that Shia Muslims have never been alien to martyrdom and have always welcomed death for the sake of God, intelligence minister said that they will never succumb to the enemies, as Imam Hossein (AS) considered dignified death better than humiliated life.

Canadian envoy lauds Bangladesh role in curbing terrorism
Bangladesh Sangbad Sangstha, 2016 12 06
Dhaka - **Canadian High Commissioner to Bangladesh Benoit-Pierre Laramee today lauded the Bangladesh's stand on fighting terrorism and religious extremism**. He made the remarks while he paid a courtesy call-on Road Transport and Bridges Minister and Awami League General Secretary Obaidul Quader at his office in the ministry. The Canadian high commissioner assured Quader that Canada will extend its cooperation to Bangladesh to curb trans-boundary terrorism. Laramee greeted the road transport minister for being elected as general secretary of Awami League. "Bangladesh's achievements in women empowerment, poverty alleviation, reducing dropout rate at educational institutions and gender equity are praiseworthy," the high commissioner said.

Cyber attacks on gov't agencies, ransomware programs to rise in 2017: report
Yonhap News Agency, Staff reporter, 2016 12 05
Seoul - **More cyber attacks on key government agencies and social infrastructure-related facilities, coupled with increased ransomware programs for mobile and desktop computers, are likely to take place next year, a state-run agency** said Monday. According to the **Korea Internet & Security Agency (KISA),** a series of cyber attacks may occur with the aim of stirring increased political and social instability in the country. In particular, military and North Korea-related sites would be the targets of their attacks, it said. Also, software and mobile devices will remain vulnerable to ransomware programs, it said.

Delhi, Dhaka to talk on terrorism, intel-info sharing
Times of India, Staff Report, 2016 12 05
New Delhi - **Anti-terror cooperation, sharing of intelligence inputs and how to jointly check cross-border smuggling will dominate the discussions between home secretaries of India and Bangladesh** which begin on Monday. Home secretary Rajiv Mehrishi and his Bangladeshi counterpart Mozammel Haque Khan and their teams will engage in intense discussions for two days to strengthen the anti-terrorism mechanism and sharing of information about terrorists.

Countdown begins for spy chief posts
The Telegraph (India), 2016 12 04
New Delhi— The **government is likely to pick the new heads of the Intelligence Bureau and the Research & Analysis Wing by mid-December**. The chief of external spy agency RAW, **Rajinder Khanna, and his internal intelligence counterpart Dineshwar Sharma of the IB are due to retire on December 31.** Home ministry sources said the contenders for the coveted IB director's post included two of the agency's special directors, S.K. Sinha and Rajiv Jain, and Mumbai police commissioner Dattatray Padsalgikar. "Sinha is an expert on Kashmir issues and counter-terrorism. He is a strong contender considering Prime Minister Narendra Modi's continuous focus on Kashmir and terror," a senior ministry official said.

24 ISI agents arrested in 2016: Govt
Kashmir Images, 2016 11 30
New Delhi— As **many as 24 ISI agents have been arrested for spying for the Pakistani intelligence agency** so far this year, the Lok Sabha was informed today. "In addition to these 24 agents, one Pakistani spy agent detected in October 2016 was Pakistan High Commission, New Delhi based intelligence officer Mehmood Akhtar," Minister of State for Home Hansraj Ahir said replying a written question. Of those, who were arrested so far this year, nine were detected in Rajasthan, six in Punjab, two in Gujarat, two in Jammu and Kashmir, one in Uttar Pradesh and four in Delhi. Ahir said some of the staff posted in Pakistan High Commission in New Delhi is suspected to be involved in running espionage network.

S. Korea vows full support for anti-money laundering body
Yonhap News Agency, Staff reporter, 2016 11 30
Seoul - **South Korea's financial authorities on Wednesday reaffirmed their commitment to fully support a global organization, based in the country, on anti-money laundering and counter -terrorism financing.** Jeong Eun-bo, vice chairman of the Financial Services Commission (FSC), delivered the message to Kevin Stephenson, head of the Training and Research Institute (TREIN) affiliated with the Financial Action Task Force (FATF). They met here on the sidelines of the inaugural regular consultation session between the FSC's Korea Financial Intelligence Unit and TREIN.

Security Agents, Informants Protection Bill Passes Second Reading
This Day (Nigeria), 2016 12 04
Abuja— A **bill seeking to guarantee the identity of national security agents, sources and informants from unlawful disclosure has passed through second reading in the House of Representatives**. The bill, sponsored by **Hon. Oluwole Oke**, named: 'a bill for an Act to Provide for the Protection of the **Identities of National Security Agencies Officers, Agents**, Sources, Informants and Operational Methods from Unlawful Disclosure and to Protect their Establishments, Facilities and Equipment against Unauthorised Access, as well as Provide for the Promotion and Engagement of **Nigeria's External Security** and for other related matters." The bill, however, prohibits the disclosure of the identity of an intelligence officer and criminalises any unlawful disclosures..He added that Nigerians are also wary of giving information to security agencies as the confidentiality of such disclosures cannot be guaranteed, therefore putting the informants at risk. The section equally proceeds to protect the facilities, installations and equipment of an **intelligence agency**.

Nigerian court rules security agency should release Shi'ite leader
Reuters, 2016 12 02
Abuja— The **leader of Nigeria's largest Shi'ite Muslim sect should be released after being held without charge for nearly a year by the country's security agency**, a court ruled on Friday. **Sheikh Ibrahim Zakzaky, leader of the Islamic Movement in Nigeria (IMN),** has been detained since mid-December 2015 after his followers clashed with the army in the northern city of Zaria. A judicial inquiry in August said 347 IMN members were killed and buried in mass graves after the violence. Security analysts have drawn parallels between IMN -- a minority sect in the mainly Sunni Muslim north -- with Boko Haram, the Sunni Muslim jihadist group whose insurgency began in 2009 after security forces killed hundreds of its members and its leader Mohammed Yusuf died in custody. A judge at the federal court in the capital, Abuja, said the IMN leader should be released. The judge rejected the argument by the **State Security Service** (SSS) that it was holding him for his own protection from locals in his home city of Zaria.

Sudanese Security continues crackdown on press, journalists strike
Sudan Tribune, 2016 12 02
Kthartoum— **Sudan's National Intelligence and Security Service (NISS) on Thursday has continued its mass confiscation of newspapers print-runs for the successive fourth day**, which coincided with the call for civil disobedience. On Wednesday, two dailies went on strike and did come out in protest against NISS crackdown on newspapers. Mass confiscation has emerged as a new technique of punishment by the NISS which tends to accuse the press of disseminating news that adversely impact on national security. On Thursday morning, NISS has confiscated the print-runs of Al-Tayyar, Al-Youm Al-Tali and Al-Watan for the third successive day without any explanation.

Chile court OK's extradition in 1976 car bombing in US
Associated Press, 2016 12 05
Santiago, Chile— **Chile's Supreme Court ruled Monday that the government can file an extradition request to the United States for two former secret police agents** wanted for a 1976 car bombing in Washington that killed a former Chilean ambassador and a U.S. citizen. In a unanimous decision, the court said the Foreign Ministry should begin the procedures needed to seek the extradition of U.S. citizen Michael Townley and Chilean Armando Fernandez Larios. They served under Gen. Augusto Pinochet's 1973-1990 dictatorship.The decision came after a request by Chilean Judge Mario Carroza, who specializes in human rights crimes. Declassified U.S. intelligence documents that came to light last year revealed that Pinochet directly ordered Letelier's assassination. One document includes an **assertion by the former head of Chile's intelligence agency, Manuel Contreras,** that "he authorized the assassination of Letelier" on "direct orders from Pinochet." In 2005, Contreras and his second in command were convicted in Letelier's death. Contreras died last year.

Five Eyes/Groupe des cinq

Canada

Review: A chilling cautionary tale
Calgary Herald, Eric Volmers, 2016 12 20
Superficially at least, there may be a rich irony to Justin **Pemberton's intriguing interactive documentary I Spy With My Five Eyes.** The New Zealand-Canadian coproduction is a **chilling cautionary tale about the changing nature of surveillance, making a convincing case that our daily actions are leaving glaring digital footprints that government spy agencies can easily access.** I Spy With My Five Eyes is also interactive - visitors are encouraged to share their views on this controversial topic. So, in essence, aren't people being asked to go online and share their views about the dangers of sharing too much online? Apparently, it's not the first time the New Zealand filmmaker has had this pointed out to him. **"Certainly, if you are someone who is of interest to the NSA or the Canada wing of Five Eyes or the New Zealand one or whatever, they would love to see that you have visited this website,"** says Pemberton, in an interview from his home in Auckland… Pemberton and his crew travelled to all of the Five Eye nations to interview a wide array of subjects. There are the usual lineup of activists, investigative journalists, political scientists, futurists and anthropologists. But the filmmaker also talks to figures such as Rhys Ball, a former spy with New Zealand's Security Intelligence Service; General Michael Hayden, former director of both the CIA and National Security Agency; and NSA employee turned whistleblower William Binney. Note: **To watch I Spy With My 5 Eyes, visit ispydoc.com.**

Perdus par les services secrets
Journal de Montréal, Sarah-Maude Lefebvre, 2016 12 19
Ottawa - **Six téléphones cellulaires et un ordinateur portable appartenant à des employés du Service canadien du renseignement de sécurité ont été volés ou perdus depuis quatre ans, a appris notre Bureau d'enquête. et le SCRS ne peut pas garantir que des informations sensibles ne sont pas tombées entre de mauvaises mains**. Le nombre d'appareils électroniques égarés par l'organisme chargé de lutter contre l'espionnage et le terrorisme au Canada peut sembler peu élevé à première vue. Mais les conséquences peuvent être cruciales pour la sécurité nationale, affirme l'ancien agent du SCRS **Michel Juneau-Katsuya**. «Nous ne pouvons pas élaborer davantage. Ce que je peux dire, c'est que le SCRS fonctionne conformément à la Loi sur le SCRS, aux directives ministérielles et à un système solide de politiques et de procédures internes», a indiqué le porte-parole **Tahera Mufti**.

Mis en garde, le SCRS n'a toujours rien fait
Journal de Montréal, Sarah-Maude Lefebvre, 2016 12 19
Ottawa - **Même s'il a été mis en garde il y a un an sur les dangers liés à la perte d'informations classifiées, le SCRS n'a toujours pas renforcé ses politiques de sécurité à ce jour**. En décembre 2015, le **Comité de surveillance des activités de renseignement de sécurité (CSARS)** avait rappelé à l'ordre l'organisme fédéral sur la nécessité de se protéger contre les fuites ou la perte de documents secrets. Le porte-parole **Tahera Mufti** a confirmé à notre Bureau d'enquête que les services secrets étaient toujours «en train de réviser ses politiques de sécurité interne connexes à la suite de l'examen du CSARS et ses recommandations ».

Canada's military too vulnerable to cyber attacks: documents
Global News, Monique Scotti, 2016 12 17
Ottawa - The **Department of National Defence and the Canadian Armed Forces are looking to improve their ability to defend against cyber attacks**, with newly released documents suggesting the current system remains woefully inadequate. DND/CAF published a request for "industry feedback" on Friday morning, stating that the Canadian military wants to develop a new system "that will enable a reliable, near-real-time analysis of its Information Technology Infrastructure (ITI) to detect and identify malicious activities and then provide decision aids and tools" to defend against those attacks. The initiative has been dubbed the **"Defensive Cyber Operations Decision Support Project"** and it's expected to set taxpayers back between $50 and $99 million. Friday's documents were released less than a month after the department's main webpage was hacked. Canadians trying to learn about career opportunities with the military at forces.ca instead found themselves staring at the **landing page of the Chinese central government's official web portal.** Details of the upgrade plan made public on Friday describe the project as a "complex multi-year requirement" that is still in its infancy. The final delivery date is slated for 2024.

Crossed wires hampered terrorism investigation
Ottawa Citizen, Gary Dimmock, 2016 12 16
Ottawa - In **2013, while the RCMP were still investigating how a suspected terrorist had quietly left Canada to join ISIL the previous year, Canada's spy agency informed the Mounties they had in fact already known the intimate details of the terrorism suspect's final hours before he boarded a plane for Syria, new court records reveal**. John Maguire left Canada in December 2012 to join ISIL in Syria, where he was featured in a propaganda video declaring religious war on his home country. The Islamic State reported Maguire died fighting in 2015, though his death has never been confirmed. Before he left for Syria, Maguire was the alleged star terrorism recruit of **Ottawa's Awso Peshdary**, 26. Peshdary was charged in February 2015 with recruiting, financing and facilitating terrorism. And the RCMP's case against Peshdary is where new details have emerged about the Mounties' investigation into an alleged Ottawa terror network.

Operation Picnic was secret phone-tapping feast for RCMP, historian discovers
Canadian Press, Jim Bronskill, 2016 12 15
Ottawa - The **federal government secretly gave RCMP security officials the authority to tap telephone calls without court oversight during the Cold War,** newly unearthed archival documents show. The surveillance program, codenamed **"Picnic,"** began as an emergency effort during the Korean War, but federal agencies collaborated with telephone companies in 1954 to continue the wiretaps, says Dennis Molinaro, who teaches history at Ontario's Trent University. Molinaro's research indicates the RCMP security branch was listening in on the embassies of East Bloc countries, "certain unfriendly organizations" and individuals suspected of disloyalty. It has long been known the Mounties kept an eye on a wide array of people and organizations - from church and gay rights groups to Quebec separatists and Communists - in the name of national security, amassing hundreds of thousands of dossiers. Mountie scandals in the **1970s led to a royal commission, the demise of the RCMP security service and creation in 1984 of the civilian Canadian Security Intelligence Service. Molinaro believes the documentation he has uncovered with the help of tenacious staff at Library and Archives Canada** helps flesh out how the RCMP surveillance of Canadians took place and implicates federal politicians and bureaucrats in making it happen. The issue of when - and how easily - police and intelligence services should be allowed to intercept personal communications continues to play out today, fuelled by former U.S. spy contractor Edward Snowden's revelations of widespread surveillance.

Surveillance de journaliste Le SCRS renie son engagement... et maintient le flou
La Presse+, Joël-Denis Bellavance, 2016 12 14
Ottawa - Les **dirigeants du Service canadien du renseignement de sécurité (SRCS) font volte-face : après s'être engagés devant un comité du Sénat le mois dernier à préciser si des journalistes avaient fait l'objet d'une enquête de leur part dans le passé**, ils reviennent sur leur parole dans une réponse écrite qui a été envoyée au sénateur conservateur Cl**aude Carignan.** Dans leur réponse écrite, les dirigeants du SCRS justifient cette volte-face en affirmant qu'ils pourraient « compromettre l'intégrité des opérations » de l'organisation et « nuire à sa capacité d'exercer le mandat que le Parlement lui a confié » s'ils confirmaient que le SCRS avait déjà eu un journaliste dans sa ligne de mire dans le passé. « Ainsi, le SCRS est au regret de ne pas pouvoir confirmer si des journalistes ont fait l'objet d'une de ses enquêtes, et ce, même si son représentant s'était engagé à donner une réponse spécifique », affirme le SCRS dans sa réponse écrite, obtenue par La Presse.

CSIS now says it will not report media surveillance
Toronto Star, Tonda MacCharles, 2016 12 14
Ottawa - **Canada's spy agency has backtracked on its promise to reveal to a Senate committee how many Canadian journalists it spied on in the past, citing operational security**. The **Canadian Security Intelligence Service** said while it "appreciates the importance of the question" to Canadians and the Senate committee on national security and defence, **"we regret that we cannot confirm whether journalists have been the subject of any CSIS investigation."** Conservative Sen. Claude Carignan called it a "bizarre response" and a "serious" breach of an undertaking to a parliamentary committee. He suggested it implies that surveillance of journalists is either still ongoing or has been recently suspended. "How can it harm operations if you don't have any operations ongoing?" he said in an interview. Carignan, who has tabled a private member's bill to protect journalists' sources, wondered if there had been surveillance operations of media that are currently suspended, especially after the controversial practice surfaced in Quebec where provincial and Montreal police were revealed to have spied on several top investigative reporters and columnists, apparently in search of police leaks. Last month, **Brian Rumig**, assistant director of CSIS operations, **conceded it was possible CSIS had in the past spied on reporters, although it has publicly said no reporters are currently under surveillance.**

Ray Boisvert named new Ontario provincial security advisor
iPolitics.ca, Amanda Connolly, 2016 12 14
Ottawa - The **former assistant director of intelligence at CSIS has been named to a newly-created post -- Ontario's provincial security advisor. Ray Boisvert will start in the new role on January 2, 2017,** and will be tasked with providing advice and intelligence on national security matters that fall under provincial responsibility, including efforts to build critical provincial infrastructure resilience and engaging with provincial security partners. The position is a new associate deputy minister position within the Ministry of Community Safety and Correctional Services. Boisvert will report to the deputy minister of the portfolio while also supporting the cabinet secretary and other senior leaders across the department. Boisvert has more than 30 years of experience in the national security field, including as assistant director of intelligence and director general of the counter-terrorism program at CSIS. Prior to joining CSIS he worked with the RCMP.

Could hackers knock out the power grid? (Canada)
USA Today, Bill Loveless, 2016 12 20
Washington - **Worries over cyberattacks on the USA are increasing in the aftermath of a presidential election in which the CIA alleged that Russia used such means to influence our electoral process**. For the moment, the vulnerability of polling and political operations to hacking gets most of the attention. But this week will mark the one-year anniversary of the first publicly acknowledged cyberincident to take down portions of a power grid, one of the most critical components of a nation's infrastructure. On Dec.23, 2015, about 225,000 customers of three electric distribution companies in western Ukraine lost power as a result of computer breaches and malware plants that investigations indicate began six months before. "The chain of events there is very unlikely to happen here," said Marcus Sachs, the senior vice president and chief security officer at the North American Electric Reliability Corp. (NERC), a non- profit industry organization that **oversees generation and transmission facilities and their control systems in the USA and Canada**."

Ex CIA Officer: Here's What Will Happen if Trump Doesn't Stop Scorning the CIA
Fortune, J.C. Carleson, 2016 12 19
Comment - As a novelist and screenwriter--someone who gets paid to entertain with my words--I can almost sympathize with President-elect Donald Trump's assessment that the **daily intelligence briefings the CIA keeps trying to foist on him might seem a bit dry and repetitive at times**. **Too much policy wonk and too little James Bond**, compliments of a team of analysts who do their work immune to the tyranny of page view metrics and click through rates. In a world where Breitbart headlines can create lurid stories out of thin air, the daily brief's stubborn reliance on facts and expert analysis might seem positively archaic. But I'm also a former CIA officer. From 2001 to 2011, I've worked on many of the issues that appear in those briefings, and I've traveled, lived, and worked in some of the places that pop up again and again, including Iraq and Afghanistan. More importantly, I have worked with many of the people who continue to quite literally risk their lives to obtain the information contained in those reports, whether or not Trump chooses to grant them an audience. And while we've heard a number of impassioned, highly persuasive pleas from senior- ranking intelligence and elected officials for Trump to reconsider his current brush-off of the CIA, I have not yet seen anyone address the issue on a more personal, individual level: the perspective of an actual spy on the ground. Note: J.C. Carleson is a former undercover CIA officer turned author.

Trump private security force 'playing with fire'
Politico, Kenneth Vogel, 2016 12 19
Grand Rapids - **President-elect Donald Trump has continued employing a private security and intelligence team at his victory rallies, and he is expected to keep at least some members of the team after he becomes president**, according to people familiar with the plans. The arrangement represents a major break from tradition. All modern presidents and presidents-elect have entrusted their personal security entirely to the Secret Service, and their event security mostly to local law enforcement, according to presidential security experts and Secret Service sources. But Trump -- who puts a premium on loyalty and has demonstrated great interest in having forceful security at his events -- has opted to maintain an aggressive and unprecedented private security force, **led by Keith Schiller, a retired New York City cop and Navy veteran who started working for Trump in 1999 as a part-time bodyguard, eventually rising to become his head of security**. Security officials warn that employing private security personnel heightens risks for the president-elect and his team, as well as for

protesters, dozens of whom have alleged racial profiling, undue force or aggression at the hands of Trump's security, with at least 10 joining a trio of lawsuits now pending against Trump, his campaign or its security.

Dismissing C.I.A. Findings Is an Insult to Hard-Working Intelligence Officers
New York Times (Room for Debate), Vicki Divoll, 2016 12 19
Comment - The **C.I.A. has concluded, with F.B.I. concurrence, that Russia engaged in a covert action operation to influence the 2016 election of the president of the United States. As you read this, awards are likely being bestowed on the Russian officers who designed and implemented one of the most important and successful operations in the history of their intelligence apparatus. So how has our president-elect reacted?** He has attacked the C.I.A. and dismissed its conclusions. He and his named national security adviser have angrily accused the agency of being incompetent and politically motivated. Trump darkly states, with no actual evidence of which we are aware, that the C.I.A. is wrong. We can only draw two possible conclusions from his bold assertions. Either he is willing to dismiss the work of the C.I.A., with no basis for doing so, because he is personally and politically embarrassed by their conclusions. Note: Vicki Divoll is a former C.I.A. assistant general counsel and former Senate Intelligence Committee general counsel.

Hussein, the C.I.A. and Me
New York Times, James Risen, 2016 12 19
Book Review - **Most C.I.A. memoirs are terrible -- defensive, jingoistic and worst of all, tedious. Others are doomed by the C.I.A.'s heavy-handed and mandatory censorship. There are exceptions, and that list includes the refreshingly candid "Debriefing the President: The Interrogation of Saddam Hussein" by John Nixon**. Mr. Nixon, the first C.I.A. officer to interrogate Hussein after his capture in December 2003, reveals gobsmacking facts about that deposed Iraqi leader that raise new questions about why the United States bothered to invade Iraq to oust him from power. These details will likely appall Americans who have watched their nation's blood and treasure wasted in Iraq ever since. More broadly, Mr. Nixon offers a stinging indictment of the C.I.A. and what he sees as the agency's dysfunctional process for providing intelligence to the president and other policy makers. The agency, he writes, is so eager to please the president -- any president -- that it will almost always give him the answers he wants to hear.

FBI agent quizzed over insider-trading-case leaks
Bloomberg News, 2016 12 18
Washington - An **FBI agent is under Justice Department scrutiny after federal prosecutors said they found "incontrovertible evidence" that he leaked confidential information about an insider-trading probe of Las Vegas gambler Billy Walters and golfer Phil Mickelson**. Walters, who was charged in May, has asked the judge in his case to determine whether prosecutors or FBI agents were behind the leaks published in news reports in 2014 and should be punished. While prosecutors initially said there was no leak, they reversed course Friday. The disclosure comes as the agency is under fire for its handling of an investigation into then-Democratic presidential candidate Hillary Clinton's use of a private email server. In a speech to donors **Thursday, Clinton said FBI Director James B. Comey's decision to disclose a fresh investigation of her emails less than two weeks before the election contributed to her defeat, according to a recording of the event obtained by the New York Times**. "The agent admitted that he disclosed confidential information about the investigation to the New York Times and Wall Street Journal reporters who wrote the articles," Assistant U.S. Attorney Joan Loughnane wrote to the judge about the Walters case. Jim Margolin, a spokesman for

Preet Bharara, the U.S. attorney for the Southern District of New York, declined to comment on the government's letter.

Henry Kissinger says "I hope we're doing some hacking" in Russia
Face the Nation (CBS), Rena Flores, 2016 12 18
Washington - **Former Secretary of State Henry Kissinger, responding to intelligence reports that Russia directed hacks to interfere with the U.S. election, is hoping that the American government is retaliating against the Kremlin with cyberattacks of its own.** "I don't doubt that the Russians are hacking us," Kissinger told CBS' "Face the Nation" in an interview that aired Sunday. "And I hope we're doing some hacking there." "Everybody has a hacking capability. And probably every intelligence service is hacking in the territory of other countries," he said. "But who exactly does what? That would be a very sensitive piece of information. But it's very difficult to communicate about it. Because nobody wants to admit the scope of what they're doing."

Priebus: Trump ready to accept Russia hacking report, if CIA, FBI get on same page
Fox News Sunday, Staff report, 2016 12 18
Washington - **Incoming White House Chief of Staff Reince Priebus suggested Sunday that President-elect Donald Trump will accept that Russia is behind the hacking of Democrats' email accounts during the 2016 White House race if the leaders of the U.S. intelligence community draft a report with that consensus agreement**. "I think he would accept the conclusion if they would get together, put out a report and show the American people they are on the same page," Priebus said on "Fox News Sunday." He suggested that the Trump team accepts CIA Director John Brennan's statement that Russia was involved. However, it remains wary about news media reports that **FBI Director James Comey** agrees. "Not when you have multiple people saying different things through third parties and media reports," Priebus told "Fox News Sunday." "It would be nice to hear from everybody."

Too much is labeled 'top secret'
Washington Post, Dianne Feinstein, 2016 12 18
OpEd: **We cannot expect to keep our nation's secrets secure - or provide meaningful oversight for our intelligence agencies - if proper classification of our country's secrets is as likely as a coin flip. Yet, according to the most recent review of classified documents by the Information Security Oversight Office (the office responsible for oversight of the government's classification system)**, improper classification markings were found on half of all classified documents. The rate was as high as 70 percent in certain agencies. That even seasoned national security professionals frequently fail to properly classify documents suggests that the system is broken. That's why the incoming administration must update its methods to protect classified national security information to reflect the realities of the digital era.

US 'got it so wrong' on Saddam Hussein, says CIA analyst who interrogated dictator
The Independent on Sunday (UK), Will Worley, 2016 12 18
Washington - **The US "got it wrong" about Saddam Hussein and Iraq, the CIA analyst who interrogated the former dictator has said. John Nixon** had numerous conversations with the deposed leader and now says that America was critically mistaken about their intervention Iraq in a number of ways. In particular, he claims, the CIA's view of Hussein's attitude to using chemical weapons was wrong. They were also mistaken about his health, personal habits and his involvement in running Iraq. Mr Nixon also criticised the conduct of George W Bush, under whose leadership America invaded Iraq, saying the former president heard "only what he wanted to hear" on the topic.

How a Putin Fan Overseas Pushed Pro-Trump Propaganda to Americans
New York Times, Mike McIntire, 2016 12 18
Washington - The **Patriot News Agency website popped up in July, soon after it became clear that Donald J. Trump would win the Republican presidential nomination**, bearing a logo of a red, white and blue eagle and the motto "Built by patriots, for patriots." Tucked away on a corner of the site, next to links for Twitter and YouTube, is a link to another social media platform that most Americans have never heard of: VKontakte, the Russian equivalent of Facebook. It is a clue that Patriot News, like **many sites that appeared out of nowhere and pumped out pro-Trump hoaxes tying his opponent Hillary Clinton to Satanism, pedophilia and other conspiracies, is actually run by foreigners based overseas**. But while most of those others seem be the work of young, apolitical opportunists cashing in on a conservative appetite for viral nonsense, operators of Patriot News had an explicitly partisan motivation: getting Mr. Trump elected. Patriot News -- whose postings were viewed and shared tens of thousands of times in the United States -- is among a constellation of websites run out of the United Kingdom that are linked to **James Dowson**, a far-right political activist who advocated Britain's exit from the European Union and is a fan of President Vladimir V. Putin of Russia. A vocal proponent of Christian nationalist, anti-immigrant movements in Europe, Mr. Dowson, 52, has spoken at a conference of far-right leaders in Russia and makes no secret of his hope that Mr. Trump will usher in an era of rapprochement with Mr. Putin. While it is easy to overstate the influence of fringe elements whose overall numbers remain very small, the explosion of **fake news** and propaganda sites and their possible impact on the presidential election have ignited alarm across the American political spectrum.

Trump national security pick Monica Crowley repeatedly pushed conspiracy theory about Clinton aide
CNN.com, 2016 12 17
Washington - **Fox News analyst Monica Crowley, Donald Trump's pick to be senior director of strategic communications for the National Security Council, repeatedly pushed an unfounded conspiracy theory that claimed Hillary Clinton's aide Huma Abedin has ties to Islamic extremists**. The claim, which circulated among far-right websites, has been labeled as false and unfounded by fact-checkers from the Washington Post, Politifact, and Snopes. Claims Abedin was tied to the Muslim Brotherhood are based on flimsy connections tying together people and events from decades ago. An email seeking comment sent to a Trump transition spokesperson, Trump national security adviser Michael Flynn, and Crowley was not immediately returned. In a 2013 exchange on Fox News's "Hannity," Crowley responded to another panelist who claimed ties between Abedin and the Muslim brotherhood by saying, "That's the real Huma Abedin story. It's not about Weiner's Weiner. It's about Huma Abedin and her ties to Islamic extremists."

What Was James Comey Thinking?
Esquire Magazine, Tim Weiner, 2016 12 17
Analysis: As the United States attorney for the Southern District of New York, **James B. Comey gave a speech to every new prosecutor he hired. Founded in 1789, the Southern District is the most prestigious post in the Justice Department outside Washington**. Wall Street titans and crooked politicians go down to the federal courthouse in lower Manhattan, they go on trial, and they go to prison. The power of a prosecutor is awesome, as Comey well knew. (There's a reason that the statue of Justice holds a sword along with a scale.) He told the young hotshot lawyers who were joining his team that when they stood up in court and proclaimed, "'I represent the United States of America,' people believe the next thing you say."..**Comey's reputation for integrity and independence led Barack Obama to make him the seventh**

FBI director in the nation's history. He was sworn in on September 4, 2013. Three years later, the man known as the straightest of straight shooters shot himself in the foot. The ricocheting bullet scarred his reputation, wounded the American body politic, and lodged in the heart of Hillary Clinton's presidential campaign. **On July 5, 2016, Comey sent an email from the J. Edgar Hoover Building in Washington to every FBI agent in the world. "I am about to walk downstairs to deliver a statement to the media about our investigation of Secretary Clinton's use of a personal email server during her time as Secretary of State,"** he said. He was going to "provide more detail about our process" than was usual, and he was doing so to satisfy the public's interest....If **he serves through the end of his statutory term, Comey will rise before dawn, read through overnight reports about threats to the United States, ride a black car to the White House, and brief the president, if the president will listen. He will report to congressional committees on life-and-death issues of national security**. The FBI is fighting battles across the nation and the world, surrounded by real and imagined enemies everywhere you look, and in places you can't see. There are terrorists and cyberwarriors. There are crooks and thieves. There are two houses of Congress. And then there's the White House. Our new president has a history of bending the law nearly to the breaking point. Trump might not like the cut of Jim Comey's jib. **But the FBI director must stand up and say no to a president when the Constitution requires it. It's the law, and it's a tradition. We could do worse than having Comey in charge.**

Obama Says He Told Putin: 'Cut It Out' on Hacking
New York Times, Mark Landler and David E Sanger, 2016 12 17
Washington - **President Obama said for the first time on Friday that he had held back before Election Day from retaliating against Russia for meddling in the presidential race for fear of inciting further hacking** "that could hamper vote counting." But he said he was weighing a mix of public and covert actions against the Russians in his last 34 days in office, actions that would increase "the costs for them." Mr. Obama said he was committed to sending the Kremlin a message that "we can do stuff to you," but without setting off an escalating cyberconflict.

FBI agrees with CIA that Russia aimed to help Trump win
Washington Post, Ellen Nakashima & Adam Entous, 2016 12 17
Washington - **FBI Director James B. Comey and Director of National Intelligence James R. Clapper Jr. are in agreement with a CIA assessment that Russia intervened in the 2016 election in part to help Donald Trump win the White House**, officials disclosed Friday, as President Obama issued a public warning to Moscow that it could face retaliation. New **revelations about Comey's position could put to rest suggestions by some lawmakers that the CIA and the FBI weren't on the same page on Russian President Vladimir Putin's intentions.** Russia has denied being behind the cyber-intrusions, which targeted the Democratic National Committee and the private emails of Hillary Clinton's campaign chairman, John Podesta. Trump, in turn, has repeatedly said he doubts the veracity of U.S. intelligence blaming Moscow for the hacks. "I think it's ridiculous," Trump said in an interview with "Fox News Sunday," his first Sunday news-show appearance since the Nov. 8 election. "I think it's just another excuse. I don't believe it. ... No, I don't believe it at all." At a "thank you" event Thursday night with some of her top campaign donors and fundraisers, Clinton said she believed Russian- backed hackers went after her campaign because of a personal grudge that Putin had against her. "Earlier this week, I met separately with FBI [Director] James Comey and **DNI Jim Clapper**, and there is strong consensus among us on the scope, nature, and intent of Russian interference in our presidential election," Brennan said, according to U.S. officials who have seen the message.

RNC Security Foiled Russian Hackers
Wall Street Journal, Julian E. Barnes, Devlin Barrett, 2016 12 16
New York - **Russian hackers tried to penetrate the computer networks of the Republican National Committee, using the same techniques that allowed them to infiltrate its Democratic counterpart, according to U.S. officials who have been briefed on the attempted intrusion.** But the intruders failed to get past security defenses on the RNC's computer networks, the officials said. And people close to the investigation said it indicated a less aggressive and much less persistent effort by **Russian intelligence** to hack the Republican group than the Democratic National Committee. Only a single email account linked to a long-departed RNC staffer was targeted. The disclosures came as a political furor grows over suspected Russian hacking of U.S. political organizations. The **Central Intelligence Agency has concluded that Russian hackers, whom analysts say work for that country's military and intelligence apparatus**, stole emails from the DNC, as well as another Democratic organization and the chairman of Hillary Clinton's presidential campaign, to harm her candidacy and boost Republican Donald Trump's chances of winning. Russia has denied the allegations. The possibility that Russians tried and failed to infiltrate the RNC doesn't necessarily conflict with the CIA's conclusion.

Russian hack almost brought the U.S. military to its knees
CBS News, David Martin, 2016 12 16
Washington - **Russian hackers struck at the heart of the U.S. military in August 2015 by seizing the e-mail system used by the Joint Chiefs of Staff, CBS News has learned**. Then-**Chairman of the Joint Chiefs Martin Dempsey was alerted to the attack by an early-morning phone call from the Director of the National Security Agency, Admiral Mike Rogers**. Now retired, Dempsey told CBS News in an exclusive interview that the attack was proceeding at an alarming speed. Within an hour, hackers had seized control of the unclassified e-mail system used by the Pentagon's Joint Staff, the organization of some 3,500 military officers and civilians who work for the Chairman. The attack, which officials now blame on Russia, began with 30,000 e-mails sent to a West Coast university. Of those 30,000, four were forwarded to members of the Joint Staff and one was opened -- allowing the hackers in. Since it was an unclassified network, the attack had no real intelligence value..

Something is broken at the FBI
Washington Post, John Podesta, 2016 12 16
Op-ed - **The more we learn about the Russian plot to sabotage Hillary Clinton's campaign and elect Donald Trump, and the failure of the FBI to adequately respond, the more shocking it gets**. The former acting director of the CIA has called the Russian cyberattack "the political equivalent of 9/11." Just as after the real 9/11, we need a robust, independent investigation into what went wrong inside the government and how to better protect our country in the future. As the former chair of the Clinton campaign and a direct target of Russian hacking, I understand just how serious this is. So I was surprised to read in the New York Times that when **the FBI discovered the Russian attack in September 2015**, it failed to send even a single agent to warn senior Democratic National Committee officials. Instead, messages were left with the DNC IT "help desk." As a former head of the FBI cyber division told the Times, this is a baffling decision: "We are not talking about an office that is in the middle of the woods of Montana." What takes this from baffling to downright infuriating is that at nearly the exact same time that no one at the FBI could be bothered to drive 10 minutes to raise the alarm at DNC headquarters, two agents accompanied by attorneys from the Justice Department were in Denver visiting a tech firm that had helped maintain Clinton's email server. This trip was part of what **FBI Director James B. Comey** described as a "painstaking" investigation of Clinton's emails, "requiring thousands of hours of effort" from dozens of agents who conducted at least

80 interviews and reviewed thousands of pages of documents. Note: John Podesta served as chair of Hillary Clinton's presidential campaign.

Trump's Dispute With CIA Puts Pompeo in a Bind
Roll Call, Ryan Lucas, 2016 12 16
Washington - In the **extraordinary public dispute between Donald Trump and the CIA, one man finds himself in a particularly tricky position: the president-elect's nominee to lead the agency, Rep. Mike Pompeo.** The tea party Republican from Kansas, who is expected to win Senate confirmation, **will have to repair a relationship between Trump and the CIA that has been battered by the president-elect's repeated disparagement of the agency's capabilities and competence.** "I think that we've never quite seen a moment like this in agency history where an incoming president was so openly critical and questioning of the agency's integrity," said Dennis Wilder, a former senior CIA official who retired this year. **John McLaughlin**, a **former deputy director and acting director of the CIA, said Pompeo should focus on the basics to win the agency's trust and confidence**. "All a CIA director needs to do to succeed is to approach the issues dispassionately, make sure all the evidence is taken into account, lay out what is actually known, what is less certain, and what conclusions logically come out of that," McLaughlin said in an email.

Trump in Denial as Evidence Grows Spymaster Putin Behind Election Hacks
ABC News, Multiple reporters, 2016 12 16
New York - **With intelligence officials convinced that Russian spook-turned-president Vladimir Putin personally directed cyber-attacks aimed at interfering with the U.S. election, President-elect Donald Trump continues to downplay and dismiss growing hacking concerns as politically motivated**. The hacks saw the systems and accounts of political organizations and figures like the Democratic National Committee breached, and private data - in the most notable cases, emails - spilled out into public view. "The primary goal of this attack on our election system was to sow chaos and apparently to help the candidate Donald Trump," Matt Olsen, an ABC News consultant and the former director of the National Counterterrorism Center, said. But Trump is having none of it. **"If Russia, or some other entity, was hacking, why did the White House wait so long to act?" Trump tweeted on Thursday. "Why did they only complain after Hillary lost?"**

Where is Trump getting his cybersecurity advice?
Christian Science Monitor, Aliya Sternstein, 2016 12 15
Washington - **Amid the growing controversy over intelligence reports that Russian hackers meddled in US elections to aid Donald Trump's campaign, it's unclear who the president-elect is listening to on matters of cybersecurity right** now. **Michael Flynn** may have the most sway over the president-elect on issues of cybersecurity. He's a member of Trump's transition team and the president-elect's incoming national security adviser. Among the people around Trump, the retired Army lieutenant general and former Defense Intelligence Agency head may be the most knowledgeable when it comes to the current state of digital espionage and how a country such as Russia operates in cyberspace. **"It appears that Gen. Flynn, his advice to the president, specifically about cybersecurity will probably be taken very seriously," says Dale Meyerrose, a retired Air Force major general**, who knows Flynn and served in the Bush administration as the first- ever intelligence community chief information officer. Flynn's expertise and association with cybersecurity issues stretches back more than a decade, back to when he was in uniform, says Mr. Meyerrose.

Why Didn't Obama Do More About Russian Election Hack?
NBC News, Multiple reporters, 2016 12 16

New York - The **Obama administration didn't respond more forcefully to Russian hacking before the presidential election because they didn't want to appear to be interfering in the election and they thought that Hillary Clinton was going to win and a potential cyber war with Russia wasn't worth it,** multiple high-level government officials told NBC News. "They thought she was going to win, so they were willing to kick the can down the road," said one U.S official familiar with the level of Russian hacking. The administration did take action in response to the hack prior to the election. In September, President Obama privately confronted Vladimir Putin about the hacks at the G-20 summit in China.

Obama On Russian Hacking: 'We Need To Take Action. And We Will'
NPR Morning Edition, Scott Detrow, 2016 12 16
Washington - **President Obama says the United States will respond to Russian cyberattacks that the intelligence community has concluded were part of an effort to influence the 2016 presidential election**. In an interview with NPR's Steve Inskeep that will air Friday on Morning Edition, Obama said, "I **think there is no doubt that when any foreign government tries to impact the integrity of our elections ... we need to take action**. And we will -- at a time and place of our own choosing. Some of it may be explicit and publicized; some of it may not be." With the question of Russia's ultimate motivation for the hack becoming increasingly divisive, Obama was careful to not endorse a CIA assessment, reported by NPR and other news outlets, that asserts that Russia's goal was to elect Trump. "There are still a whole range of assessments taking place among the agencies," **Obama told NPR, referring to an order he has given the U.S. intelligence community to conduct a full review of the cyberattacks before Inauguration Day**.

Kremlin Calls NBC Report Putin Directed Hack 'Laughable Nonsense'
NBC News, Ken Dilanian, 2016 12 15
New York - The **Kremlin on Thursday disputed an exclusive NBC News report that U.S. intelligence has documented Vladimir Putin's personal involvement in a Russian intelligence operation to interfere in the U.S. presidential election**. Putin spokesman **Dmitry Peskov told the AP the report was "laughable nonsense."** Maria Zakharova, a spokeswoman for the Russian Foreign Ministry, accused "Western media" of being a "shill" and a "mouthpiece of various power groups." NBC News reported Wednesday that the U.S. has information that Putin personally directed how material hacked by Russian intelligence agencies was used during the campaign. Anthony Scaramucci, a senior Trump transition team official, did not dispute Russia's involvement in an interview Thursday night with MSNBC's Brian Williams. "I don't think anybody thinks that you're wrong," he said of the NBC News report. "Our position right now is that we're waiting for more information...we reject the notion that people would cyberattack our institutions...We are very upset about it."

Afraid to Politicize Intelligence, Obama Delayed Blaming Russia for Hack
New York Times, Gardiner Harris, 2016 12 15
Washington - The **Obama administration spent months deliberating whether to blame Russia for a cyberattack on the Democratic National Committee, with action delayed in part because President Obama did not want to be blamed for politicizing intelligence**, the White House said on Wednesday. **Josh Earnest**, the White House press secretary, said that "it would've been inappropriate for White House figures -- including the president of the United States -- to be rushing the intelligence community to expedite their analysis of the situation." In particular, he described White House concerns that any statement by Mr. Obama would be viewed as using intelligence to meddle in the election on behalf of the president's preferred candidate, Hillary Clinton.

Comey to Trump: The Russians Didn't Influence the Election
Town Hall, Ed Klein, 2016 12 15
Washington - In **telephone conversations with Donald Trump, FBI Director James Comey assured the president-elect there was no credible evidence that Russia influenced the outcome of the recent U.S. presidential election by hacking the Democratic National Committee and the e-mails of John Podesta, the chairman of Hillary Clinton's presidential campaign**. What's more, Comey told Trump that **James Clapper**, the director of National Intelligence, agreed with this FBI assessment. The **only member of the U.S. intelligence community who was ready to assert that the Russians sanctioned the hacking was John Brennan, the director of the CIA**, according to sources who were briefed on Comey's conversations with Trump. "And Brennan takes his marching orders from President Obama," the sources quoted Comey as saying.

Donald Trump risks damaging intelligence agencies, warns former CIA chief
The Guardian (London), Julian Borger, 2016 12 15
Washington - **Donald Trump's public disparagement of US intelligence agencies would have a discouraging effort on the country's spies and undermine the moral authority of their leaders to send them "into harm's way",** a former CIA director said on Wednesday **Michael Hayden**, who served as both director of the CIA and NSA in the George W Bush administration, entered the growing controversy over the president-elect's attitude towards the US intelligence community, questioning its conclusion that Russia had hacked the Democratic National Committee and the CIA's finding that Moscow had meddled in the presidential election in Trump's favour. It also emerged that Trump had only met intelligence officials to receive what is normally a daily briefing, four times since the election. "I get it when I need it," he said. **An aide said on Wednesday that he would from now on receive a presidential daily brief three times a week instead of just once.** Hayden said that missing the daily briefing would be discouraging "but may not be catastrophic" if he was well briefed by top aides.

Intel agencies reject request for House committee briefing, citing larger probe
The Hill, Katie Bo Williams, 2016 12 15
Washington - The **Intelligence Community (IC) is refusing to provide the House Intelligence Committee with a requested Thursday briefing on Russian interference with the U.S. election, citing an ongoing review of the matter requested by President Obama**. According to a statement, the IC will not be offering comment to Congress until it completes that review, which will cover foreign interference in the electoral process since 2008. **"Once the review is complete in the coming weeks, the Intelligence Community stands ready to brief Congress -- and will make those findings available to the public consistent with protecting intelligence sources and methods," the Office of the Director of National Intelligence (ODNI) said in a statement.** The Obama review is scheduled to be completed by the time Donald Trump takes office on Jan. 20. Chairman Devin Nunes (R-Calif.) had asked the FBI, NSA, Office of the Director of National Intelligence and CIA to meet with committee members on Thursday, and called their refusal "unacceptable.".

James Clapper Has a Classified Blog. It's Called "Intercept."
The Intercept, Jeremy Scahill, 2016 12 15
Washington - **During his tenure as the Director of National Intelligence, James Clapper has maintained a classified blog. It's called "Intercept," and is only accessible to people within the intelligence community with clearance to access the government intelink site. It even offers a secret RSS feed so analysts will never miss a post**. Clapper's Intercept blog has no relationship to The Intercept, except that he hates pretty much everything we stand for. In one of his posts, written in May 2013 and obtained by The Intercept, Clapper posted a

handwritten letter he says he received from "a constituent in Nevada." It's unclear what makes this person a constituent since Clapper was not elected to any office. In any case, this constituent "discusses supporting the IC's [Intelligence Community's] position on civil liberties" in the aftermath of the Boston Marathon bombing. "If the american [sic] people are not willing to release some freedoms, they cannot blame the IC when they can't stop" domestic terror attacks because of the intelligence agencies "having their hands tied by Law [sic] & policy," the "constituent" wrote. He adds that Americans "cannot have your cake and eat it too," and then offers what has become a dangerous cliche in the post-Snowden mentality of the intelligence community: "So if one has nothing to hide why would a little government watching for mass protection be such a big question." The letter ends: "WE SUPPORT YOU."

Stolen Yahoo Data Includes Government Employee Information
Bloomberg News, Jordan Robertson, 2016 12 15
New York - **More than 150,000 U.S. government and military employees are among the victims of Yahoo! Inc.'s newly disclosed data breach, and their names, passwords, telephone numbers, security questions, birth dates, and backup e-mail addresses are now in the hands of cybercriminals**. It's a **leak that could allow foreign intelligence services to identify employees and hack their personal and work accounts, posing a threat to national security**. These employees had given their official government accounts to Yahoo in case they were ever locked out of their e- mail. The government accounts belong to current and former White House staff, U.S. congressmen and their aides, FBI agents, officials at the **National Security Agency, the Central Intelligence Agency, the Office of the Director of National Intelligence**, and each branch of the U.S. military. The list includes an FBI division chief and multiple special agents working around the U.S.; current and former diplomats in Pakistan, Syria and South Africa; a network administrator at NSA's Fort Meade headquarters; the chief of an Air Force intelligence group; and a human resources manager for the CIA. On Wednesday, Yahoo revealed the second major breach of its systems, following the September disclosure of a widespread hack.

U.S. Officials: Putin Personally Involved in U.S. Election Hack
NBC News, Multiple reporters, 2016 12 15
New York - **U.S. intelligence officials now believe with "a high level of confidence" that Russian President Vladimir Putin became personally involved in the covert Russian campaign to interfere in the U.S. presidential election,** senior U.S. intelligence officials told NBC News. Two senior officials with direct access to the information say new intelligence shows that Putin personally directed how hacked material from Democrats was leaked and otherwise used. The intelligence came from diplomatic sources and spies working for U.S. allies, the officials said. **Putin's objectives were multifaceted, a high-level intelligence source told NBC News.** What began as a "vendetta" against Hillary Clinton morphed into an effort to show corruption in American politics and to "split off key American allies by creating the image that [other countries] couldn't depend on the U.S. to be a credible global leader anymore," the official said.

Trump's national security adviser shared secrets without permission, files show
Washington Post, Craig Whitlock, Greg Miller, 2016 12 14
Washington - A **secret U.S. military investigation in 2010 determined that Michael T. Flynn, the retired Army general tapped to serve as national security adviser in the Trump White House, "inappropriately shared" classified information with foreign military officers in Afghanistan,** newly released documents show. **Although Flynn lacked authorization to share the classified material, he was not disciplined or reprimanded** after the investigation concluded that he did not act "knowingly" and that "there was no actual or potential damage to

national security as a result," according to Army records obtained by The Washington Post under the **Freedom of Information Act**. Flynn has previously acknowledged that he was investigated while serving as the U.S. military intelligence chief in Afghanistan for sharing secrets with British and Australian allies there. But he has dismissed the case as insignificant and has given few details.

Newly Uncovered Site Suggests NSA Exploits for Direct Sale
Motherboard (Vice), Joseph Cox, 2016 12 14
New York - The **Shadow Brokers--a hacker or group of hackers that stole computer exploits from the National Security Agency--has been quiet for some time**. After their auction and crowd-funded approach for selling the exploits met a lukewarm reception, the group seemingly stopped posting new messages in October. But a **newly uncovered website**, which includes a file apparently signed with The Shadow Brokers' cryptographic key, **suggests the group is trying to sell hacking tools directly to buyers one by one, and a cache of files appears to include more information on specific exploits**.

Past CIA director, British premier say Trump needs spy data
Associated Press, Staff report, 2016 12 14
Dubai - A **former CIA director and a former British prime minister offered simple advice on Wednesday for U.S. President-elect Donald Trump: Have daily intelligence briefings**. Both **Leon Panetta**, a former American spymaster and defense secretary, and Britain's former Prime Minister **David Cameron emphasized the point after Trump suggested he didn't need them.** "I have never seen a president who has said, 'I don't want that stuff.' Never seen it," Panetta said at the Arab Strategy Forum in Dubai. Cameron said: "It won't last." Panetta added: "It can't last."

Harry Reid Says Electors Should Have Intelligence Briefing
BuzzFeed News, Ben Smith, 2016 12 14
Washington - **Sen. Harry Reid told BuzzFeed News Tuesday that members of the Electoral College should receive an intelligence briefing on Russian interference in the US election before they vote on Dec. 19.** The Senate's minority leader was interviewed at a BuzzFeed Brews event, where the retiring Nevada lawmaker also reflected on the state of the US Senate. "I think this is as big a deal as Watergate, as 9/11. I think they should have a 9/11-type commission. I know that [US Sens.] Dianne Feinstein and Ben Cardin and others are calling for that. I think it's a step in the right direction," Reid said.

Trump's hostility to intelligence community enters the spotlight
The Hill, Katie Bo Williams, Julian Hattem, 2016 12 14
Washington - **Donald Trump's hostile approach to the critically important relationship between the White House and the U.S. intelligence community is unnerving officials and national security scholars**. The president-elect has signaled that he intends to treat intelligence with little attention to precedent. Former officials are concerned that the agencies on which Trump will rely to give him a decisionmaking advantage simply won't trust the president-elect -- with dire consequences. **"Intelligence officials are always worried about whether the president will have their back, particularly when the world they operate in is dangerous," said Amy Zegart, a co-director of the Center for International Security and Cooperation at Stanford University who studies the intelligence community. "This president is now knifing them from the front."**

Trump Feud Over Russia Intel Raises Deeper Concerns, Experts Say
NBC News, Benjy Sarlin, 2016 12 14

New York - **President-elect Donald Trump's ongoing feud with U.S. intelligence agencies over alleged hacking by Russia is unnerving outside national security experts, some of whom fear the frosty relationship could impact Trump's ability to govern**. Of course Trump -- who said in August the intelligence community's performance has been "catastrophic" -- wouldn't be the first president to have a strained relationship with his own agencies. But what separates Trump, some experts say, is his unusually harsh public criticism of the intelligence community's basic worth and and a lack of clarity on how he plans to gather facts if he refuses their counsel. "No presidents have been perfectly happy with intelligence assessments because intelligence assessments often bring bad news," **David Priess, author of "The President's Book of Secrets" and a former CIA officer and daily briefer to President George W. Bush**, told NBC News. "

Trump is playing a risky spy game
Washington Post, David Ignatius, 2016 12 14
Column - **Intelligence officers like to distinguish between knowable secrets that spies can steal and fuzzier mysteries that have to be assessed without final, definitive proof**. The intent of Russia's covert meddling in the 2016 U.S. presidential election is probably somewhere between the two. But after conversations with a half-dozen knowledgeable sources, here are two simple judgments: Russia's secret hacking against Democratic Party officials threatened the integrity of the U.S. political system. And President-elect Donald Trump shouldn't have criticized the CIA after its analysts told Congress about the Kremlin's efforts. Trump, unbelievably, seemed to be taking a potential adversary's side against his own nation's intelligence professionals. The evidence that led CIA analysts to conclude that Moscow's aim in 2016 was to help Trump -- rather than simply spread confusion -- was based on a variety of sources. One indication was that the Russians didn't disseminate information from their snooping into Republican files, as they had with the product of hacking against Democrats; the Russians also didn't disseminate material after Trump's victory. ...**Perhaps the trickiest task will fall to Rep. Mike Pompeo (R-Kan.), Trump's nominee to head the CIA**. He must reassure a battered agency workforce that the next administration values its own intelligence officers and is vigilant against machinations by foreign spies.

Former CIA Analyst: Russian Hacking Allegations of US Election Don't Add Up
Sputnik, Staff report, 2016 12 13
Moscow - The **Central Intelligence Agency has claimed that Russia interfered in the US election to help President-elect Donald Trump win, but one of their former officers has detailed why the agency's claims do not add up**. Speaking to Brian Becker on Sputnik Radio's Loud & Clear program, **former CIA analyst Ray McGovern asserted that it appears that the email releases from the Democratic Party are not hacks, but leaks**. "Today they are talking about having 'overwhelming circumstantial evidence.' Now we have overwhelming technical evidence. We have the former technical director of the National Security Agency that tells us that this is really just drivel," McGovern said of Bill Binney, a former highly-placed intelligence official with the NSA, turned whistleblower.

The Perfect Weapon: How Russian Cyberpower Invaded the U.S.
New York Times, Multiple reporters, 2016 12 13
Washington - When **Special Agent Adrian Hawkins of the Federal Bureau of Investigation** called the Democratic National Committee in September 2015 to pass along some troubling news about its computer network, he was transferred, naturally, to the help desk. His message was brief, if alarming. At least **one computer system belonging to the D.N.C. had been compromised by hackers federal investigators had named "the Dukes," a cyberespionage team linked to the Russian government.** It was the cryptic first sign of a

cyberespionage and information-warfare campaign devised to disrupt the 2016 presidential election, the first such attempt by a foreign power in American history. What started as an information-gathering operation, intelligence officials believe, ultimately morphed into an effort to harm one candidate, Hillary Clinton, and tip the election to her opponent, Donald J. Trump. Like another famous American election scandal, it started with a break-in at the D.N.C.

GCHQ asked to step up action against cyber-attack threat to financial services
The Guardian (London), Jill Treanor, 2016 12 19
London - **More action may be needed to protect the financial services industry from a devastating cyber-attack**, the head of the Treasure select committee has suggested. Andrew Tyrie MP wrote to **Ciaran Martin, head of the new cybersecurity centre of UK surveillance agency GCHQ, saying the lines of responsibility and accountability for reducing cyber-threats are opaque.** Tyrie's letter to Martin, who is leading the Cheltenham-based National Cyber Security Centre (NCSC), uses last month's incident at Tesco Bank to illustrate the vulnerabilities of the financial system. In November, the banking arm of supermarket chain Tesco admitted that £2.5m had been stolen from 9,000 accounts in an incident which raised fresh concerns about the methods used by financial services firms to detect cyber-attacks.

'I was a Russian spy. So what?' Former double agent says Britain does work with Kremlin amid Cambridge concerns
London Daily Telegraph, Lydia Willgress, 2016 12 19
London - **It is a question that has rocked the academic world in Cambridge; are Russians trying to infiltrate the town's seminars on intelligence?** The whispers of espionage and double bluffs have reportedly been enough to make three experts resign from their positions as conveners of the academic forum - with many more arguing over the alleged links. But the public and academics need to move away from "the old John le Carré days" because in certain areas British and Russian intelligence services collaborate, a Cambridge academic and former double agent has now claimed. **Dr David Gosling, who worked as a spy for the Russians in the 1990s, told The Daily Telegraph** that it did not matter if operatives were targeting the **Cambridge Intelligence Seminar (CIS)** as the Russians often used "clandestine methods" to gain information that was not significant or secret. He insisted he had seen no evidence of proceedings or funding being influenced, and added that academics should be more worried about the Chinese attempting to infiltrate university labs. His comments came after Sir Richard Dearlove, the former MI6 chief, Stefan Halper, a former policy adviser at the White House, and leading espionage history Peter Martland all allegedly resigned from their positions amid concerns about Kremlin-backed funding.

MI5 'offered £30,000' to terror suspect
Sunday Times (UK), Tom Harper, 2016 12 18
London - A **businessman on trial for an alleged terror offence worked for MI5 and recorded an intelligence officer offering him £30,000 to spy for the British government**, a court was told last week. **Pervez Rafiq** is accused of taking part in a plot to smuggle money to jihadists in Syria using charity aid convoys. He denies arranging funds or property for the purposes of terrorism. His lawyer, Hossein Zahir, told the Old Bailey in London that Rafiq, 46,

from Birkby, Huddersfield, West Yorkshire, recorded a conversation with an MI5 officer called "Ben" after he was found guilty of a minor fraud in July 2013. Zahir told the jury: "MI5 jumped on this [the conviction]. Work with us and we will pay you ... Ben is offering him £30,000. Why would MI5 offer a man who is funding terrorism £30,000?" He said a transcript of the conversation also showed Ben advising Rafiq to get his lawyer to raise his previous co-operation with the authorities before he was sentenced.

Undercover SAS troops will be deployed to protect Christmas shoppers and New Year's Eve revellers against ISIS as hundreds of fighters return home to the UK
The Daily Mail Online, Rory Tingle, 2016 12 18
London- **SAS anti-terror troops will mingle with Christmas shoppers and New Year's Eve revellers to counter the threat from returning ISIS fighters**. Elite troopers will operate undercover in major British cities including London, Birmingham, Manchester and Leeds. They will work closely with **MI5 intelligence officers** to identify terror suspects, while Army bomb disposal experts will also be on hand to deal with suspicious devices. Expert snipers trained to kill suicide bombers moving through crowds will also be on hand to boost security. A source told the Star: 'MI5 believes hundreds of Britons who fought with Islamic State in Syria and Iraq will be returning to the UK in the next few months.

Cambridge spy forum splits over Moscow
London Times, George Sandeman, 2016 12 17
London - A **former head of MI6 is among a group of intelligence experts who have stepped down from their roles at a Cambridge University forum over fears of Kremlin influence**. **Sir Richard Dearlove**, the former head of the Secret Intelligence Service, was one of several academics who convened the **Cambridge Intelligence Seminar** -- a forum that brings together former practitioners and researchers of western spycraft. Stefan Halper, a senior foreign policy adviser who served in the White House during three Republican presidencies, and Peter Martland, a leading espionage historian, have joined Sir Richard in relinquishing their positions because of concerns regarding what they believe to be a Kremlin-backed operation to compromise the group, according to the Financial Times. The Cambridge Intelligence Seminar was established by Christopher Andrew, the official historian of MI5 and former chairman of the history faculty at the university. **Recent guests at its discussions include Mike Flynn, Donald Trump's choice as US national security adviser.**

Ex-MI6 boss 'leaves Cambridge over Russia'
Daily Telegraph (Australia), Lydia Willgress, 2016 12 17
London - The **former head of MI6 is one of three intelligence experts who have cut ties with Cambridge spy seminars amid claims about Russian funding. Sir Richard Dearlove**, who was head of the British secret service for five years from 1999, is believed to have resigned as convener of the **Cambridge Intelligence Seminar (CIS),** alongside Stefan Halper, a former policy adviser at the White House, and historian Peter Martland. Mr Halper reportedly said his decision to step down was due to "unacceptable Russian influence" on the group, which holds Friday seminars at Corpus Christi college. It comes after suspicions were raised that a new digital publishing house, Veruscript, which will help cover some CIS costs, may be linked to Russian intelligence services, the Financial Times reported.

German spies 'can't be trusted'
Daily Mail (UK), Allan Hall, Ian Drury, 2016 12 16
Berlin - **Relations between British and German spy chiefs have hit rock bottom because London says its counterparts in Berlin cannot be trusted to keep** secrets. At a time of escalating Islamic terror threats across Europe, **Germany's spy agency BND is being frozen**

out by GCHQ and the National Security Agency in the US. Both London and Washington believe insecure German data servers have contributed to the leaking of tens of thousands of classified documents to Wikileaks. And they have infuriated Berlin by refusing to hand over secret intelligence data demanded by left wing and Green politicians which they fear will be aired in the German parliament. It is understood that in November 2014 there was a meeting in Berlin between **Sir Simon McDonald**, the then British ambassador to Germany, together with Patrick **McGuinness, Deputy National Security Adviser for Intelligence, Security, and Resilience at the Cabinet Office,** and high security officials in Angela Merkel's government. The British made it plain at the meeting that co-operation between Britain and Germany was becoming increasingly problematic because of leaks. A source familiar with the meeting said: 'They stressed that a secret service is just that and that its workings and operations must remain secret and they felt that Germany was leaking them like a sieve." Britain fears a 'big debate' in the German parliament which would lay open secret sources and intelligence gathering techniques.

Police used spying powers 'unlawfully' to track down leaks
London Times, Fiona Hamilton, 2016 12 16
London - A **police force unlawfully spied on a string of journalists, a solicitor and two police officers** in an attempt to uncover leaks including the existence of a damning racism report, a tribunal has heard. Cleveland police used wide-ranging surveillance powers to trawl through four months of billing and call data related to five people, including a national newspaper journalist who had nothing to do with any of the leaks.

ASIO spies infiltrate jihadist terror cells
The Australian, Paul Maley, 2016 12 19
Canberra - **Australia's domestic spy agency is running secret operations against Islamic State, inserting covert operatives into terrorist cells in a bid to thwart domestic attacks**. The Australian understands **ASIO has begun running a small number of so-called "special - intelligence operations"** as part of a broader push by police and security agencies to make full use of new far-reaching powers that have been codified in successive waves of national security legislation reform. Before the passage of the new laws, ASIO operatives could be vulnerable to prosecution for engaging in such operations. Since September 2014, the government has passed eight separate tranches of national security legislation that have either amended existing offences, created new ones or extended far- reaching surveillance, arrest and control powers to security agencies. Beyond secret intelligence operations, figures from the **Australian Federal Police** show police have arrested more than 40 suspected terrorists under changes to the law that lower the threshold for arrest in terrorism cases. Australian Federal Police and South Australian Police detectives on Thursday charged an Adelaide man for advocating terrorism after the 50-year-old allegedly uploaded extremist videos to social media. It was the first such case of its kind and **AFP Commissioner Andrew Colvin** said the creation of the offence had had a demonstrable effect on the level of extremist rhetoric in the community.

Debate grows over role of US-Australia intel facility
Straits Times, 2016 12 18

Canberra - In the Australian outback, a strange series of dome structures and vast antennas has protruded from the flat desert landscape for almost 50 years, but it remains shrouded in secrecy. The site, just outside the city of Alice Springs, is the **Joint Defence Facility Pine Gap, a United States-Australian intelligence facility which was built during the Cold War in the 1960s, and has since been used - according to analysts - to monitor Chinese and Russian missiles, eavesdrop on the Islamic State in Iraq and Syria (ISIS)** and order drone strikes in Pakistan. Pine Gap would provide the first signal to the US of a nuclear attack and is regarded as one of the most important US intelligence facilities outside its territory. The 20,000 sq km site employs about 800 people, roughly half are Americans and the rest Australians. Despite the **secrecy surrounding the facility**, analysts believe it continues to expand, and its role in intercepting signals intelligence has become ever more extensive in the age of mobile phone interception and drone attacks.

Blunder hits security of NZ spy base
New Zealand Herald, David Fisher, 2016 12 17
Wellington - **Details of the construction of the top secret spy base at Tangimoana were filed with Archives New Zealand with no security rating, allowing the contents of the file to be copied**. The Archives NZ file which contains the details has now had access restricted for 100 years after the Weekend Herald told the **Government Communications Security Bureau** it had a copy. The construction file included details about the security system protecting the spy base. The Weekend Herald came across the file and other GCSB information while reviewing files about the security services held by Archives NZ, the national repository for public records. Built in the early 1980s, Tangimoana, 30km west of Palmerston North, was a signals link for Western powers during the Cold War.

China / Chine

Respect our security, Beijing tells Seoul
South China Morning Post, Jane Li, 2016 12 16
Beijing - The **Ministry of National Defence has called for China and South Korea to "respect each other's security interests"** after media reports that China ignored a request by a South Korean naval ship to visit Shandong province. In a post on its website yesterday, the ministry said it attached great importance to developing **military-to-military relations with South Korea and was willing to carry out exchanges and cooperation in defence**. The statement came as media outlets, including Arirang News, cited the South Korean navy as saying one of its ships received no response to a request for entry to the port of Qingdao. The South Korean government has reportedly labelled the incident as a "punishment" for its planned deployment of the US Terminal High Altitude Area Defence (THAAD) missile system. Beijing and Moscow both strongly object to the deployment, saying the system's powerful radar could be used to spy on them. China's ambassador to South Korea has also said that THAAD's installation would destroy the bilateral relationship in "an instant". South Korean media have

reported that some China-South Korea business deals have been put on hold without explanation and Beijing has hinted that even cultural imports such as K-pop may suffer if THAAD goes ahead.

Beijing, Paris agree to more efficient pursuit of corrupt fugitives (Canada)
China Daily, Zhang Yan, 2016 12 15
Beijing - **Beijing and Paris will strengthen joint investigations of corrupt officials who have fled China, and also improve systems for the return of ill-gotten assets illegally transferred to France, a senior anti- graft official from the Ministry of Justice** said. Chinese judicial officers and their French counterparts will expand intelligence-sharing and evidence-collecting in major cases, said **Zhang Xiaoming**, deputy director-general of the Judicial Assistance and Foreign Affairs Department at the Ministry of Justice. They will set up a work team and work closely on investigating, freezing and confiscating the illicit money. They also will establish a quick-response procedure to combat cross-border economic crimes such as telecom fraud, he said. Zhang said that during a recent meeting in Beijing, law enforcement officers from both countries exchanged views on tracking down fugitives and returning their ill-gotten funds. "It's more than necessary to share information with our Chinese counterparts in a timely manner and, after obtaining intelligence, such as indications of money laundering or other economic fraud, access our system to continue the investigation," said Robert Gelli, head of the Directorate for Criminal Matters and Pardons of the Ministry of Justice of France. **In recent years, Western countries, including the United States, Canada and some European countries, have become popular destinations for corrupt officials because an absence of bilateral extradition treaties** and differences in legal systems make it harder to secure their return, according to the **Ministry of Public Security**.

Foreign NGOs on back foot as new Chinese law looms
Reuters, Christian Shepherd, 2016 12 15
Beijing - **Foreign organisations including social and environmental advocacy groups fear they could inadvertently break broadly defined new rules that take effect in China next month**, with some even shutting up shop to avoid such pitfalls. **Chinese President Xi Jinping's administration** has made sweeping changes to Chinese law in the name of boosting national security, including **a controversial cybersecurity law passed** last month and another targeting foreign non-governmental organisations (NGO), slated for Jan. 1. China says the NGO law, which grants broad powers to police to question NGO workers, monitor their finances and regulate their work, is necessary to regulate an unruly sector and that only those operating illegally have anything to fear.

China confirms official met with Trump adviser in New York
Global Times, Zhao Yusha, 2016 12 14
Beijing - The **Chinese foreign ministry said on Monday a Chinese State Councilor met a senior adviser of US President-elect Donald Trump as part of China's efforts to establish connections with Trump.** State Councilor Yang Jiechi met **Michael Flynn, Trump's choice for national security adviser**, during a recent stopover in New York on his way to Latin America, Geng Shuang, a spokesperson for Chinese foreign ministry, told a daily briefing on Monday. The two sides exchanged views on China-US relations and major issues of common interest, said Geng, without mentioning when exactly they met. Flynn is a retired US Army Lieutenant General, who until 2014 was head of the **Defense Intelligence Agency**, CNN reported. This is China's attempt to build connections with Trump's team, and paves the way for the next meeting, Wu Xinbo, director of the Center for American Studies at Fudan University told the Global Times on Tuesday, who declined to say whether the next meeting will involve other top officials from both sides.

Russia / Russie

Les ressorts de la nouvelle cyber-guerre froide
Le Figaro, Pierre Avril, 2016 12 16
Moscou - **GUCCIFER 2.0, Fancy Bear, ATP 28, Cozy Bear Strontium... tels sont les nouveaux visages de la menace russe pesant sur l'Occident, selon les services de renseignement**. Derrière ces noms de code, se cachent des hackers russes menant des attaques contre des chaînes de télévision, contre des opérateurs téléphoniques, des fournisseurs de système de sécurité informatique et des partis politiques occidentaux. Selon le New York Times , ces spécialistes auraient attaqué les serveurs du Parti démocrate américain, avant de faire fuiter des informations confidentielles dans le but de favoriser Donald Trump face à Hillary Clinton. Fancy Bear ou APT 28 (« Advance Persistant Threat ») seraient liés aux **services de renseignement militaires russes, le GRU**. Selon des sources judiciaires françaises, ce groupe, connu sous ces deux noms d'emprunt, serait à l'origine de l'attaque dont a été victime la chaîne d'information française TV5 en avril 2015. À un an des **élections législatives allemandes,** scrutées de près par Moscou, **les services de renseignement intérieurs (BND)** ont annoncé une « hausse spectaculaire » des tentatives d'hameçonnage de la part de Fancy Bear, une technique consistant à infiltrer un réseau après l'envoi de mails servant d'accroche. Le même groupe serait impliqué dans le piratage du Parlement allemand en 2015.

Russian spies adopt new tactics to battle old enemy
Financial Times, David J. Lynch, 2016 12 14
Washington - **Russia's hacking during the US presidential campaign marks a significant escalation of a cold war-style espionage offensive aimed at recruiting spies, acquiring financial secrets and siphoning off advanced technologies**, according to court records and interviews. The resurgent espionage operation -- a reminder of Russian **President Vladimir Putin's lineage as a former KGB officer** -- is testing short-handed Federal Bureau of Investigation counter-intelligence units and challenging traditional spying norms. More than 100 **agents of Russia's SVR foreign intelligence service are believed to be operating in the US, according to a former FBI counter- intelligence official. Joel Brenner, US national counter-intelligence executive from 2006 to 2009**, says the "ramping up" of Russian spying is continuing as Moscow seeks to undermine US strength through information warfare and cyber attacks. "Russian efforts in the US are intense now," he said. "The Russians know they have to play jiu jitsu with the US instead of taking us on directly." Moscow's standard espionage operations in the US have long concentrated on ferreting out secrets and cultivating well-placed contacts.

Europe

La Suisse pas plus menacée après le drame de Berlin
Agence Télégraphique Suisse, 2016 12 20
Berne— La **Suisse n'est pas davantage menacée après le drame du marché de Noël à Berlin. Le Service de renseignement de la Confédération (SRC) analyse la situation en**

permanence, a-t-il indiqué mardi à l'ats. Le SRC n'a pas attendu l'attaque au camion contre un marché de Noël à Berlin pour prendre des mesures. D'autres événements ont impliqué un renforcement de la sécurité, et ce type de mesures ne sont pas exclues à nouveau. L'attaque dans la capitale allemande montre en revanche que la menace terroriste reste élevée pour les pays européens, voire s'accroît, écrivent le SRC, l'Office fédéral de la police (Fedpol), le Département fédéral des affaires étrangères et les polices cantonales dans un communiqué conjoint.

PM says no signals of increased threat of terrorism in Lithuania
Baltic News Service, 2016 12 20
Vilnius— **Prime Minister Saulius Skvernelis on Tuesday called on Lithuanians not to panic in the wake of Monday's deadly truck attack in Berlin, saying that there are no signals of an increased threat of terrorism in the country**. "There is no need for panic or worry, at least for now. The situation is under control and there are no signals of an increased terrorism threat in Lithuania," he told reporters. When asked about the security situation in the country, the **prime minister underlined that an improved draft budget earmarks more funds for the State Security Department compared with that drafted by the previous government. "**The **initial 2017 budget provided for cutting funding for the State Security Department.** You understand that timely intelligence information can help prevent such attacks. We have found the means to step up the SSD's intelligence capabilities and this is my answer," he said. The previous government proposed to cut funding for the SSD by 54,000 euros next year compared with 2016, but 1.5 million euros were later added to the department's 2017 budget, raising it to over 26 million euros in total. **Darius Jauniskis, the department's director, has said that the state security agency will use the extra funds to develop its IT technologies and train its staff.**

Lukashenko congratulates Belarusian security service on professional holiday
Belarus Daily News, 2016 12 20
Minsk— **Belarus President Alexander Lukashenko has sent greetings to the senior staff, other personnel and veterans of the state security service as they celebrate their professional holiday – Day of Security Service Personnel**, BelTA learned from the press service of the Belarusian leader. “Since its foundation, the Belarusian security service has been protecting the lives and creative labor of our citizens. Today it is doing its best to promote the implementation of the state policy in the social sector, economy, and politics by solving crucial tasks to protect the constitutional system, prevent extremism and foreign interference in the internal affairs of the country,” the message of greetings reads.

Commandos du CPA 10, des soldats de l'ombre au coeur de l'armée de l'Air
Agence France-Presse, Journaliste maison, 2016 12 20
Base Orléans-Bricy, France - Sur la base aérienne d'Orléans-Bricy (France) "La spécialité de mon groupe d'action, c'est le terrorisme, la libération d'otages et la capture de chefs insurgés, de cibles importantes". **Pour raconter son expérience, ce soldat d'élite du "CPA 10" (Commando Parachutiste de l'Air no 10) témoigne cagoulé. Comme lui, tous les membres des forces spéciales (3.000 hommes au total), fer de lance de l'armée française, ne déclinent jamais leur identité et n'aiment pas faire parler d'eux. Contrairement aux agents de la DGSE, ils n'agissent jamais dans la clandestinité.** Ce sont des soldats de l'armée française. Mais leurs actions relèvent du secret défense et leurs modes opératoires impliquent discrétion et fulgurance. Les hommes du CPA 10 - composante Air des forces spéciales - sont derrière nombre d'opérations périlleuses, libérations d'otages, infiltrations en territoire ennemi, renseignement. Ils en paient aussi le prix fort, du Sahel à l'Irak.

Services secrets français - Enigma, la géniale machine dont la France n'a pas voulu
Le Point, François-Guillaume Lorrain, 2016 12 20

Paris— Dès 1931, la France possédait toutes les clés pour fabriquer la crypteuse des Allemands. Elle a préféré l'offrir aux Polonais. C'est l'histoire d'une formidable réussite et d'un formidable échec. La preuve que la France eut de l'or entre les mains, sans savoir rien en faire, sinon le transmettre à ses alliés, la Pologne et l'Angleterre. Tout commence un 1er novembre 1931 au Grand Hôtel de Verviers, en Belgique. Un voyageur allemand, Hans-Thilo Schmidt, **vient proposer ses services à un redoutable recruteur du Service de renseignements français**, Rodolphe Lemoine, ex-Rudolf Stahlmann, alias Rex, un Allemand qui est lui-même passé du côté hexagonal dès 1914. Schmidt, frère de l'ancien patron du Chiffre allemand et employé dans cette section, a contacté l'ambassade de France à Berlin, qui l'a renvoyé à Paris, selon la procédure. Ses motivations ? Faire bombance. Mal payé dans une Allemagne à la dérive, atteint physiquement dans sa chair pendant la Première Guerre mondiale, il est venu offrir à la France des informations stupéfiantes sur le parti nazi, le réarmement de l'Allemagne, son organisation militaire et policière, les intentions de Hitler, ainsi que sur une ancienne machine commerciale, Enigma, dont 70 000 exemplaires équipent tous les services d'outre-Rhin. L'épopée a été révélée en 1972 par le général Bertrand, qui avait créé, en 1930, le service du **Chiffre du Service de renseignements (SR),** puis par Paul Paillole, en 1975, ex-chef de la section allemande du contre-espionnage après 1936.

Services secrets français : les confessions d'un agent à Dakar
LePoint.fr, 2016 12 18
Analyse: **Comment entre-t-on dans les services secrets français ? Dominique Fonvielle* : Par hasard, dans mon cas.** Saint-Cyrien, je n'avais pas envie de végéter dans une garnison. On m'a admis au **SDECE**** sous réserve que je passe en six mois le concours d'entrée à Sciences Po et que je réussisse une licence d'anglais à la Sorbonne. En septembre 1978, j'entre officiellement dans le service. Je suis les cours de l'École de guerre pendant un an, j'effectue quelques missions pour la base de Paris, qui est clandestine. Dès 1979, me voilà « rédacteur-exploitant », c'est-à-dire analyste, pour l'Afrique. Je reçois les télégrammes chiffrés puis déchiffrés et j'en fais la synthèse. En juillet 1985, je deviens « rédacteur-exploitant » à Dakar, un très gros poste qui couvre, outre le Sénégal, le Mali, la Mauritanie, le Tchad, la Guinée, la Gambie, la Sierra Leone. Puis je suis chef du poste sous la couverture de deuxième secrétaire d'ambassade, donc de diplomate... Comment cela se passe-t-il ? C'est une vraie jungle ! On s'est ingénié à diviser les divers départements : renseignement, écoutes, contre-espionnage, conseillers français de la présidence. À **lire : "Mémoires d'un agent secret", de Dominique Fonvielle et Jérôme Marchand (Flammarion).**** Le Service de documentation extérieure et de contre-espionnage.

Services secrets français : sous Sarkozy, les grandes manoeuvres
LePoint.fr, Jean Guisnel et Olivia Recasens, 2016 12 17
Paris - La **réforme du renseignement intérieur voulue par le président n'a pas été guidée par une vision stratégique, mais par un esprit de vengeance**. Devenu président en 2007, **Nicolas Sarkozy n'a pas manqué d'agir rapidement en matière de renseignement extérieur**. Il faut dire qu'il a trouvé en arrivant un plan mis au point de longue date pour réformer ce secteur. Celui d'une équipe d'experts, réunis en 1995 au Secrétariat général de la défense nationale (**SGDN**) par **le préfet et ancien directeur de la DST, Rémy Pautrat**. Autour de lui, Jean-Louis Gergorin (Groupe Lagardère), Philippe Marland (préfet), Bernard Norlain (général), Michel Foucher (géographe), Bernard Esambert (ingénieur des Mines), Xavier de Lussy (contre-amiral). C'est l'ossature de la réforme du renseignement que le candidat Édouard Balladur souhaite mettre en place après son entrée à l'Élysée. Mais le vainqueur, Jacques

Chirac, n'en voudra pas. En 2007, Nicolas Sarkozy ressort donc le plan d'action des cartons et crée, en 2008, un Conseil national du renseignement (CNR), confié à un « coordonnateur ». Ce sera le diplomate Bernard Bajolet, clé de voûte d'une organisation nouvelle inspirée par un objectif exclusif : éviter des attentats sur le sol français. Alors que le quinquennat Sarkozy **est marqué par une baisse considérable des effectifs militaires, les services de renseignement extérieur (DGSE et DRM) voient croître leurs moyens humains et matériels.** En juin 2008, Sarkozy annonce que les services français vont s'engager dans la « lutte informatique offensive ». Si cette ambition a été confirmée par son successeur, l'une des idées maîtresses qui la sous-tendaient, le rapprochement des appareils de défense extérieure et de sécurité intérieure, connaît encore aujourd'hui de grosses difficultés de mise au point.

Le renseignement militaire s'allie aux start-up
Les Echos, Anne Drif, 2016 12 16
Creil, France - La **Direction du renseignement militaire veut capitaliser sur la French Tech**. Elle ouvre un campus d'expertise basé à Creil, réunissant start-up, grandes entreprises, écoles et instituts de recherche. La Direction du renseignement militaire (**DRM**) s'intéresse de très près à la French Tech. Elle vient de donner le coup d'envoi au premier « Intelligence Campus Entreprise », à Creil dans l'Oise, son nouveau pôle d'expertise des nouvelles technologies du renseignement.

SANS Agent Accused of Three Crimes
Bulgarian News Agency, 2016 12 16
Sofia— The **Anti-corruption Specialized Unit at Sofia's City Prosecution Office has arrested and is investigating an agent of the State Agency for National Security (SANS), suspected of three crimes.**The **agent, who was head of division in the Counter-intelligence Directorate,** is under investigation for fraud, a documentary offence and for revealing a state secret. The pre-trial proceedings were launched on a SANS alert about an agent who deceived foreign nationals that they would be granted permanent residence in Bulgaria, provided them with forged documents, and revealed a state secret. Documents were seized during a search of the agent's home and office in Sofia on Thursday.

Lithuania's state budget to be approved on 22 December
Lithuanian News Agency, 2016 12 16
Vilnius— Voting on the approval of Lithuania's state budget for 2017 is going to be held on 22 December. Minister of Finance Vilius Sapoka says that government sector expenditure and revenue can be balanced by 2019. "The government sector budget without a deficit will be reached in the medium term, by 2019," the finance minister said at Parliament while presenting the revised draft budget. **Compared with the initial draft budget, appropriations for the Public Procurement Office (VPT) were increased by EUR 0.35 million, the State Security Department (VSD) - by EUR 1.5 million** and the Competition Council - by EUR 0.22 million.

German, foreign secret services aware of PKK activities in EU, PKK leader says
Daily Sabah, Staff report, 2016 12 15
Istanbul - **German and other foreign intelligence services,** as well as European politicians, **have long been aware of the outlawed terrorist organization, the PKK's activities in Europe and have maintained communication, as acknowledged by Abdul Rahman Haji Ahmadi aka Haji Ahmadi, the leader of the PKK's Iranian offshoot Party of Free Life of Kurdistan (PJAK),** while talking to German TV station Westdeutscher Rundfunk (WDR) way back in 2007. Haji Ahmadi, who holds a German citizenship and lives there, told the WDR that he kept in touch with foreign secret services, including **Germany's Federal Intelligence Service or the Bundesnachrichtendienst.** "A young man came and said he was from the

BND. He asked what everyone else asks, and I have given the same answer I've given to you," Ahmedi said, and continued that they knew exactly who he was. "I have been in Europe for more than 43 years, mostly in Germany and they also know who I am. They also know since when I have been leading the PJAK/PKK."

NSA contre DGSE, petites écoutes entre amis (Canada)
Le Point, Jean Guisnel, 2016 12 15
Paris - Siphonnage. **L'espionnage informatique est l'arme fatale du renseignement, et les Français ne sont pas en reste**. Nous sommes en juin 2012. Edward Snowden est pour une année encore l'un de ces bons petits soldats de l'ombre, tapi dans une base secrète de la NSA à Hawaii. A Paris, Nicolas Sarkozy termine son mandat, quand le chef des services informatiques de l'Elysée, un homme de la DGSE, s'inquiète. Les services de renseignement canadiens En 2009, le **Centre de la sécurité des télécommunications du Canada (CSEC)** découvre une vaste opération de cyberespionnage baptisée Snowglobe et l'utilisation de Babar, un programme malicieux (maliciel). Le CSEC soupçonne les services secrets français.

Services secrets français - Moi, président, je permets de tuer
Le Point, Jean Guisnel, 2016 12 15
Paris - Au grand dam des officiers de la "Grande Muette", François Hollande a brisé le culte du secret. Le 31 août 2014, **François Hollande apprend de la DGSE qu'après une traque de vingt et un mois elle a repéré le chef des djihadistes chebabs somaliens, Ahmed Abdi Godane**. Celui-là même qui avait fait enlever deux sous-officiers du service Action de la DGSE à Mogadiscio, en juillet 2009. L'un s'était évadé, mais le second, connu sous l'IF (identité fausse) de Denis Allex, a été martyrisé jusqu'à ce qu'une opération de la DGSE visant à le libérer échoue, le 11 janvier 2013, à Mulo Marer. Le raid raté s'est soldé par la mort de l'otage et de deux de ses camarades du Centre parachutiste d'instruction spécialisée (CPIS) de Perpignan, ainsi que par celle de 17 chebabs. Face à face. A Creil, le 8 janvier 2014. Le président de la République avec le général Christophe Gomart, patron de la DRM, et un soldat français engagé au Mali.

Que valent nos agents secrets ?
Le Point, Rémi Kauffer, 2016 12 15
Paris - Contraste. Excellents en opérations spéciales, très bons en technologie, nos services ont souffert de leurs luttes intestines et de l'attitude de nos présidents. Que valent-ils, en effet ? Difficile de répondre à la question sans se pencher sur leur passé. Une trajectoire qui commence le 4 janvier 1946, quand un décret non publié au JO crée **le Service de documentation extérieure et de contre-espionnage (SDECE), où fusionnent les fidèles de Charles de Gaulle et ceux de son rival vaincu, le général Giraud. Gaulliste de 1940**, le premier patron du SDECE, André Dewavrin, dit le colonel Passy, voulait que son service soit rattaché aux Affaires étrangères, à l'instar du **MI6 britannique**. De Gaulle a tranché : le nouveau- né dépendra du chef du gouvernement. Même si le Général quitte le pouvoir par surprise le 20 janvier, le SDECE, lui, reste sous la tutelle de Matignon.. Autant dire que le savoir-faire que les Français gagnent dans l'action paramilitaire - coups de commando, sabotages, assassinats ciblés, y compris en Europe, implantation de contre- maquis (voir p. 194) -, ils le perdent dans le domaine du Renseignement contre le KGB et ses satellites. Quant au contre-espionnage judiciaire, il est depuis novembre 1944 l'apanage d'une police rattachée au ministère de l'Intérieur, la **Direction de la surveillance du territoire (DST), matrice de l'actuelle DGSI.**

Dans les carnets de Rondot
Le Point, Rémi Kauffer, 2016 12 15

Paris - La singularité de **Philippe Rondot, homme pivot des services français, c'est qu'au cours de sa longue carrière il sera amené à opérer non seulement au Service de documentation extérieure et de contre-espionnage, son affectation de départ, mais aussi à la DST, ancêtre de la DGSI,** à la Direction du renseignement militaire (**DRM**) ou au Centre d'analyse, de prospective et de stratégie du Quai d'Orsay. Une expérience unique qui fera de ce multicartes le conseiller de plusieurs gouvernements aux affaires arabes et aux questions de renseignement. Mais le plongera du coup dans cet univers politique pour lequel il n'était pas fait. Les dirigeants lui demandent tout et n'importe quoi, comme enquêter sur **l'affaire Clearstream** sur requête de Dominique de Villepin, alors Premier ministre, même s'il ne possède aucune compétence financière.

Espionne, lève-toi !
Le Point, Patrick Besson, 2016 12 15
Paris - « **Rainbow Warrior** ». **Dominique Prieur fut la victime collatérale de l'opération de sabordage visant le navire amiral de Greenpeace**. L'écrivain raconte le destin détonant de **la première femme officier de la DGSE.** Le fort de Noisy, à Romainville, est invisible, à moins d'entrer dans l'espionnage : c'est le siège du service Action de la DGSE. On ne voit que de hauts murs blancs surmontés de barbelés et quelques longues portes bleues. Impossible de négocier une visite auprès d'un soldat en faction : il n'y en a pas. Il y a des caméras, qui m'ont sans doute filmé. Le début du XXIe siècle : on passe tous à la télévision de surveillance. J'imagine la fouille au corps avant d'entrer dans le fort : déshabillage complet et toucher rectal. En mars 1985, Dominique Prieur est convoquée à Noisy pour une nouvelle mission. Elle est la première femme officier de la DGSE.

Jean Heinrich : « Nous agissons dans l'illégalité poussée à l'extrême »
Le Point, Jean Guisnel, 2016 12 15
Paris - Décryptage. **Ancien chef du service Action de la DGSE, le général décode le renseignement de l'après-guerre froide. Le Point : Quels ont été les effets de la fin de la guerre froide, pour le renseignement français ? Jean Heinrich : Durant la guerre froide, l'Otan se trouvait face à une menace cohérente et rationnelle : l'URSS et ses alliés. Les membres de l'Otan s'étaient réparti les zones de responsabilités**. A la France revenaient la Tchécoslovaquie et une partie de la Russie. Nous formions de jeunes sous-officiers chargés des écoutes en langues tchèque et russe. Nous partagions les résultats avec nos alliés, ce qui permettait de multiplier nos informations par un facteur quinze ou vingt ! Nous avions des renseignements de grande valeur et quand un pilote tchèque décollait, nous connaissions son nom, son grade, ses heures de vol, ses capacités opérationnelles. Du point de vue du renseignement militaire, on savait tout, d'autant que nous avions de bons contacts en face. Nous nous sommes laissés aller vers une certaine facilité.

La galaxie du Renseignement
Le Point, Journaliste maison, 2016 12 15
Paris - Organismes satellites La CNCTR Président : Francis Delon. **La Commission nationale de contrôle des techniques de renseignement instruit les demandes d'interception et de surveillance électronique présentées par les services.** Son avis est transmis au Premier ministre, dont la décision est souveraine. La DPR Présidente : **Patricia Adam. La Délégation parlementaire au renseignement contrôle l'action du gouvernement en la matière. Elle est bicamérale (trois députés, trois sénateurs) et bipartisane (majorité-opposition). Elle rend un rapport annuel et quatre de ses membres composent la commission de vérification des comptes spéciaux.** La CCSDN Présidente : **Evelyne Ratte**. La Commission consultative du secret de la défense nationale examine les demandes de la justice quand elle souhaite la déclassification d'un document émis par une administration et protégé par le secret de la

Défense nationale. La commission rend un avis que le gouvernement suit, ou pas. L'Académie du renseignement Directeur : **Cyrille Chabauty**. L'Académie assure la formation continue des fonctionnaires appartenant aux six services de renseignement. Elle dépend du Premier ministre et vise à renforcer les liens entre les fonctionnaires et à les doter d'une culture commune.

Le mythe du 2e Bureau
Le Point, Rémi Kauffer, 2016 12 15
Paris - Mise au point **La légende de l'officier du 2e Bureau séducteur, familier des missions périlleuses, des espionnes au regard de mystère et des vols de documents au nez et à la (fausse) barbe de l'ennemi, est tenace**. Née à la Belle Epoque, elle est ensuite véhiculée dans l'entre- deux-guerres par une pléiade de romanciers et de cinéastes. **Or le 2e Bureau n'est pas un organe d'espionnage comme le BCRA et ses modernes successeurs, le SDECE puis la DGSE, mais un service d'analyse des éléments divers collectés de sources soit humaines, soit technologiques, par les structures de renseignement**. Tout état-major d'une grande unité de l'armée française compte plusieurs bureaux spécialisés, le deuxième étant traditionnellement l'apanage d'officiers chargés d'éplucher les informations recueillies et d'en tirer des conclusions pratiques sur l'ordre de bataille de l'armée adverse, ses moyens, son moral, ses plans d'attaque ou de repli. A cette confusion entre renseignement et analyse, la légende ajoute une dimension physique. Ainsi l'homme-fiction du 2e Bureau préfigure-t-il l'espion « james-bondissant » des séries télé ou des films anglo-saxons d'aujourd'hui.

Le plus secret des services
Le Point, Jean Guisnel, 2016 12 15
Paris - **DGSE. Six mille agents servent la Sécurité extérieure. Leurs missions sont multiples, de l'information à l'action. On les imagine galopant pistolet dans une main et poignard dans l'autre, parcourant la planète pour trucider les ennemis de la France.** Cela arrive, mais c'est rare ! Ou alors on se les figure convoyant des sacs de billets de la Banque de France pour verser des rançons d'otages. Ça se produit aussi ! L'un de ces agents désabusés de l'armée des ombres se souvient que la somme (« énorme ! ») transportée pour payer la rançon d'un reporteur enlevé au Moyen-Orient voilà quelques années aurait suffi à remettre à flot son journal en fâcheuse posture. La DGSE, ce n'est pas que cela... C'est aussi, par exemple, le soutien apporté clandestinement, par tous les moyens illégaux imaginables, aux industries françaises dites « de souveraineté », celles qui contribuent à l'indépendance nationale.

Les espions recrutent
Le Point, Marc Le plongeon, 2016 12 15
Paris - Profil. Intéressé par la carrière ? Voici le mode d'emploi. **Pour les générations biberonnées aux James Bond et aux romans de John le Carré, le métier d'espion fait fantasmer, mais ne correspond pas tout à fait à la réalité.** Ajoutez à cela des aspects plus pragmatiques comme les aléas de la carrière, les sacrifices inhérents à la fonction (vie personnelle), le fait de devoir mentir même à ses proches... Au-delà des clichés, la « communauté du Renseignement » accueille des profils de plus en plus variés et aussi pointus que dans le privé : analystes, ingénieurs, agents de terrain, traducteurs (surtout en langues rares). Sur son site Internet, la **Direction du renseignement militaire (DRM) recrute sur CV des interprètes images, des ingénieurs en big data ou encore des spécialistes du renseignement géospatial. S'il est possible de rejoindre la DGSE à l'issue d'une scolarité à l'Ena**, des centaines d'étudiants - qui disposent au minimum d'une licence - tentent chaque année leur chance aux concours de la fonction publique. Pour les postes spécifiques comme des langues étrangères, hors administratif, la DGSE peut également embaucher sur contrat.

Le pionnier de l'antiterrorisme
Le Point, Roger Faligot*, 2016 12 15
Paris - Avant-garde. **Joseph Fourrier prend la tête de la première cellule spécialisée à la DGSE. Alors que l'informatique balbutie dans les années 1970, le colonel Joseph Fourrier utilise fiches en carton et cartes perforées. Une gageure pour cet ancien saint-cyrien blessé en Algérie en 1956, spécialiste de la division contre-espionnage (K)** que de donner naissance à la petite section K-Terro. Forte d'une dizaine de membres, cette cellule se développe en 1972. Une année charnière : en RFA s'illustre la Fraction armée rouge; en Italie, les Brigades rouges et l'Orchestre noir; en Irlande, l'Armée républicaine irlandaise (Ira) intensifie sa campagne militaire. La France se trouve aussi au centre des règlements de comptes entre Septembre noir et le **Mossad**, à la suite du massacre des athlètes israéliens par les Palestiniens lors des JO de Munich. Au Moyen-Orient survient un attentat sanglant à l'aéroport de Lod, à Tel-Aviv-Jaffa, organisé par l'Armée rouge japonaise (Nippon Sekigun) avec le Front populaire de libération de la Palestine.

Parliament Passes Conclusively Counter-Terrorism Act
Bulgarian News Agency, 2016 12 15
Sofia— **Bulgaria's Parliament Thursday passed conclusively the Counter-Terrorism Act, voting through the remaining provisions of the bill.** According to the clauses approved on Thursday, it will be admissible to restrict certain civil rights temporarily in the anti-terrorist operation zone. When requested to do so by the head of the operation, the mass media will have to transmit immediately unedited information needed to keep the public informed. The information that the mass media report during an anti-terrorist operation must not contain any data disclosing special techniques and tactics used in the operation, the identity of the persons involved in the operation, and other data that may impede the conduct of the operation or endanger human life and health. The **Transitional and Final Provisions of the Act amended the State Agency for National Security Act, empowering authorities of the Agency to apprehend persons in specified cases**.

Lithuania's state security agency to provide training for MPs
Baltic News Service, 2016 12 14
Vilnius— The **Lithuanian State Security Department is planning to organize training for newly-elected members of the parliament**. "We have many new members in the Seimas. **We have agreed that we will organize training in individual political groups to give them a better understanding of intelligence activities and to prevent delays in passing some laws** because of a lack of knowledge and to ensure that this process is smooth," Seimas Speaker Viktoras Pranckietis told reporters on Wednesday after meeting with Darius Jauniskis, the department's director. Jauniskis said that parliamentarians **need help to understand what intelligence is.** "There are many new members of the Seimas who are not very much familiar with intelligence and do not always understand the difference between intelligence and criminal intelligence. We must talk and help them understand how things work and it will then be easier to explain to them why certain laws are needed," the director said. He expects that a better understanding of the work of the **state security agency** and national security matters will help lawmakers in their work.

Berlin craint des cyberattaques russes
Tribune de Genève, Journaliste maison, 2016 12 14
Berlin - Les **renseignements soupçonnent Moscou de préparer des opérations de propagande pour influencer la campagne de 2017.** Après les cyberattaques qui ont émaillé la campagne électorale américaine, les Allemands redoutent à leur tour d'être victimes d'une

opération de déstabilisationde la part des services secrets russes. **Selon les services allemands de renseignements (Verfassungsschutz), chargés du contre- espionnage, les responsables politiques risquent fortement d'être visés par des cyberattaques et des opérations de propagande pendant la campagne électorale**. « Selon nos informations, il est clair qu'on cherche à influencer les élections de l'année prochaine en discréditant des responsables politiques » , a affirmé **Hans-Georg Maassen. Le patron du renseignement allemand** estime que les campagnes de désinformation russes ont pris beaucoup d'ampleur depuis la crise ukrainienne en 2014. Moscou aurait engagé « d'énormes moyens » pour financer les médias d'Etat, les instituts politiques proches du Kremlin et surtout les réseaux sociaux afin de brouiller les cartes du discours politique allemand et de créer ainsi un climat de peur au sein de la population.

Intelligence Report Confirms Growing Saudi, Qatari Support to Extremists in Germany
Fars News Agency, 2016 12 14
Tehran - An **intelligence report revealed on Tuesday that support by Saudi Arabia and Qatar for the extremists who follow the Wahabism movement in Germany has grown significantly**. The report pointed out that Riyadh and Doha had sent advocates "to spread the radical version of Islam," Suddeutsche Zeitung reported. According to the report, **the Foreign Intelligence Service (BND) and the Constitution Protection Commission, Germany's Internal Intelligence**, have wrote to the German government that religious organizations from the Persian Gulf have established mosques and educational institutions, as they had also sent advocates to Germany to "Spread the radical version of Islam. They added that "this conclusion is based on the evidence that has been reached so far.

Gulf state groups are 'supporting Salafists in Germany': report
The Local (Germany), Staff report, 2016 12 13
Berlin - Three major German news outlets have reported that **religious groups from Saudi Arabia, Kuwait and Qatar have been increasingly supporting Salafists in Germany, raising concerns among intelligence agencies**. The Süddeutsche Zeitung (SZ) as well as broadcasters NDR and WDR reported on Tuesday that a report by German intelligence agencies shows an increase in support from religious groups in the three Gulf states to Salafists in Germany. The media outlets state that these organizations have helped build school facilities, mosques and sent preachers to Germany to share a fundamentalist version of Islam. SZ reports that **Germany's BND and BfV intelligence agencies are concerned that the intolerant and ultra- conservative form of Islam could spread.** Currently they estimate there to be 10,000 members of the Salafist scene, and believe that refugees could also be drawn into it.

Mossad chief and security delegation meet with Trump team
Ynetnews, Itamar Eichner and Tzipi Shmilovitz, 2016 12 19
Jerusalem - **Director of the Mossad, Yossi Cohen, clandestinely visited the United States to meet with President-elect Donald Trump's staff and brief them on pressing security matters** including the Iranian nuclear deal, the Syrian civil war, terror threats and the Palestinian issue. The security delegation was organized by Prime Minister Benjamin Netanyahu and was led by National Security Council head Yaakov Nagel. The **Israeli ambassador to the United States Ron Dermer was also present during meetings. The** two sides also discussed a regional conference to be hosted by Egypt and other initiatives on the agenda including a UN

initiative put forth by the Palestinians and New Zealand. Additionally, Israeli officials have also reached out to the President-elect to ask him to come out against President Obama and veto a Palestinian bid submitted to the Security Council.

L'ombre du Mossad sur le meurtre d'un islamiste à Sfax
Le Figaro, Cyrille Louis, 2016 12 19
Paris— **Une dizaine de balles tirées à bout portant. Ce mode opératoire ne ressemble guère aux complexes opérations du Mossad**. Mais le profil de la victime a d'emblée orienté les soupçons vers **l'agence de renseignements israélienne**. Cet ingénieur spécialiste des drones, âgé d'une quarantaine d'années, collaborait apparemment avec la branche militaire du Hamas. Son assassinat, vendredi dernier, alors qu'il circulait en voiture dans la ville tunisienne de Sfax, a aussitôt été imputé à l'État hébreu par le mouvement islamiste qui contrôle la bande de Gaza. « **Les Brigades Ezzedine al-Qassam** (la branche armée du Hamas) portent le deuil de leur commandant et **pilote Mohammed Zawari** », ont affirmé ses dirigeants. Selon les médias tunisiens, Zawari avait quitté son pays au début des années 1990 pour fuir la répression anti-islamiste de Ben Ali. Établi à Damas, il s'était rapproché du Hamas palestinien et du Hezbollah libanais, qu'il aurait aidés à se doter de drones militaires utilisables contre Israël. L'ingénieur avait ensuite regagné la Tunisie après la révolution de 2011, mais il continuait à se rendre au Liban.

Tunisia: 'Foreign Elements' Behind Assassination of Hamas Drone Expert
Haaretz, 2016 12 18
Jerusalem— **Mohammed Zawahri was killed last week in assassination attributed to Israel's Mossad.** Eight Tunisians have been arrested, police looking for Belgian suspect. Jack Khoury An undated photo of Mohammed Zawahri Facebook. Foreign elements were behind the assassination of a Hamas drone expert last Thursday, Tunisia announced on Sunday evening, following allegations that the engineer's death was orchesterated by Israel's Mossad. In a statement, the Tunisian government said it will continue to hunt down those involved in the assassination, both inside the country and outside of it.

Iran's Top Security Official, Putin Special Aide Discuss Latest Conditions in Aleppo
Fars News Agency, 2016 12 18
Tehran - Sec**retary of Iran's Supreme National Security Council (SNSC) Ali Shamkhani and Russian President's Special Envoy on Syria Alexander Lavrentiev in a meeting in Tehran on Sunday conferred on the latest situation in Aleppo**. "Liberation of Aleppo once again revealed the policies of the West and its regional backers for creating and sponsoring terrorism and rendering all-out political, media and military aid to the defeated Takfiri terrorists before the eyes and judgment of the world public opinion," Shamkhani said during the meeting on Sunday.

Ex-IDF Intel chief: Keep eye on Iran to prevent nuclear cheating
Jerusalem Post, Yonah Jeremy Bob, 2016 12 16
Jerusalem - The **intelligence needed to keep Iran from getting nuclear weapons is "a puzzle" that constantly needs to be assembled to prevent the Islamic Republic from cheating on the nuclear deal, former IDF Military Intelligence chief Maj.-Gen. (res.) Amos Yadlin** told The Jerusalem Post. Yadlin, currently director of the **Institute for National Security Studies (INSS)** in Tel Aviv, said that obtaining the right intelligence is one of the prerequisites to catching any Iranian attempt to walk across the nuclear threshold during the life of the deal it signed in 2015 or when the agreement's 2023, 2025 and 2030 deadlines expire.

State security officer shot; terror suspects charged
Lebanon Daily Star, Staff Report, 2016 12 16
Beirut - **Shots fired, wounding State Security officerTwo suspects opened fire on a state security officer Thursday in Akkar**, the state-run National News Agency reported. The **State Security Sgt. Mohammad H.** was on the road linking the town of Bibnine with Birqayel when he suffered gunshot wounds to his right thigh. He was admitted to Mazloum Hospital in Tripoli. His condition was reported as stable. Security forces are searching for the suspects, who are still at large.

UK envoy meets Lebanese security chiefs to discuss police program
Lebanon Daily Star, Staff Report, 2016 12 15
Beirut - **Britain's ambassador to Lebanon held his first meeting with the country's security heads to discuss improving the Lebanese police force**, following last week's announcement of a $16.5 million fund for the **Internal Security Forces**. "The U.K. is committed to Lebanon's stability, security and prosperity," Ambassador Hugo Shorter said in a statement after the meeting. "At the heart of this must be a state capable of providing the ultimate guarantee of security." The meeting followed the signing of an agreement in June between the U.K and **Ministry of Interior ISF Director General to create the British Police Support Project (BPSP)**.

Beyrouth, nid d'espions
Le Point, Rémi Kauffer, 2016 12 15
Beyrouth - Duels. **Comment la France s'est retrouvée prise au piège dans la capitale libanaise.** Au Liban, la complexité moyen-orientale a toujours atteint des sommets. Ajoutons les vagues de réfugiés palestiniens, fruits des guerres israélo-arabes, et, dans les années 1960 et 1970, le bourgeonnement de milices armées. Pendant ce temps, à Damas, Hafez el-Assad, officier d'aviation issu de la communauté religieuse minoritaire des alaouites, une branche du chiisme, instaure la dictature. Son objectif : une grande Syrie, dont le Liban ne serait qu'une province. Comme autrefois, au temps de l'Empire ottoman. Le décor est planté pour une tragédie que les services secrets d'une dizaine de pays vont rendre indéchiffrable. Dès les années 1980, Beyrouth remplace Berlin comme centre mondial de la guerre secrète. Une guerre dans laquelle le **SDECE puis son héritière, la DGSE, vont se trouver impliqués**.

Report: Mossad Chief Investigated for Receipt of Mariah Carey Tickets
Haaretz, 2016 12 14
Jerusalem—The **Civil Service Commission has launched an investigation into suspicions that Mossad head Yossi Cohen received free tickets to a Mariah Carey concert worth thousands of shekels from Australian billionaire James Packer**, Channel 10 reported on Wednesday. Channel 10 also reported on Wednesday that Cohen had spent time at Packer's luxury Tel Aviv hotel suite, or had free use of the premises, when Prime Minister Benjamin Netanyahu's son, Yair Netanyahu, was there as well. The commission is investigating whether Packer's gift amounted to receipt of an illegal benefit or favor, the report said. Cohen headed the National Security Council at the time but is now director of the Mossad.

Au coeur des services secrets de Daech
L'Express, Boris Thiolay, 2016 12 14
Raqqa - **L'organisation djihadiste possède ses propres unités de renseignement**. Ce sont elles qui ont planifié les attentats menés en France et Belgique en 2015 et en 2016. Enquête sur un corps d'élite toujours menaçant. L'homme, encagoulé et revêtu d'un uniforme camouflé, parle un français sans accent. Derrière lui, dans un décor de ruines, un prisonnier bâillonné est attaché, les bras en croix. Ce vademecum du terrorisme individuel peut être vu comme une

réplique à un événement survenu en France, cinq jours plus tôt. Le **21 novembre, les policiers de la Direction générale de la sécurité intérieure (DGSI) ont démantelé une cellule djihadiste qui prévoyait de commettre des tueries dans Paris et en Ile-de- France, le 1er décembre**. Ce petit groupe était « téléguidé » depuis la Syrie par un membre francophone de Daech.

Top diplomat defector will take a public role in the South
Korea JoongAng Daily, 2016 12 21
Seoul— **Thae Yong-ho**, the senior North Korean diplomat who defected to the South with his family in August, will begin public activities starting Friday. The former deputy ambassador in London says he wants to dedicate his life to reunification. “Rather than seeking personal success, I want to dedicate my life to enabling a quicker unification — the hope of our people — so that the North Korean people can be freed from oppression and persecution,” Thae was quoted as saying to a group of lawmakers Monday. Various government sources Tuesday say that Thae, the **most senior North Korean diplomat to ever defect, is expected to work as a researcher of North Korea affairs at a state institute affiliated with the National Intelligence Service (NIS).** He is expected to remain in the public eye, unlike other senior North Korean defectors who remain private. That could bring risks to his personal safety Rep. Lee Cheol-woo, chair of the **National Assembly’s intelligence committee**, held a three-hour close-door meeting with Thae in Seoul on Monday with a bipartisan group of lawmakers on the committee.

Rajiv Jain made IB chief, Anil Dhasmana to head RAW
The Times of India, Neeraj Chauhan, 2016 12 19
New Delhi— The **government made two important appointments on Saturday with Jharkhand cadre 1980-batch IPS officer and a J&K hand Rajiv Jain and 1981-batch Madhya Pradesh cadre IPS officer Anil Kumar Dhasmana, an expert on Pakistan, named next chiefs of Intelligence Bureau and Research and Analysis Wing**. The two officers, presently second in command in their respective agencies, who were seen as frontrunners for the two crucial responsibilities, will head India's internal and external intelligence gathering agencies. Sources in the two agencies described Jain and Dhasmana as competent choices with both having significant experience on Jammu and Kashmir, Pakistan and Afghanistan. They will serve as chiefs for the next two years. Jain **takes over from IB chief Dineshwar Sharma** while Dhasmana **succeeds RAW chief Rajinder Khanna**. Jain, presently special director in the IB, joined the agency in 1989 as assistant director and has since worked in different capacities, including chief of Delhi Subsidiary Intelligence Bureau (SIB), considered politically sensitive, apart from Ahmedabad and J&K desks. Officials told TOI that Jain is an expert on J&K and Islamic extremism and has supervised many operations in the recent past.

India appoints new army, air force and intelligence chiefs
The Peninsula, 2016 12 18
New Delhi - The **Indian government has appointed new heads of its army and air force among a series senior military and intelligence appointments**, officials said, two weeks before its two most senior defence force chiefs are due to retire. **Vice Chief of Army Staff Lieutenant General Bipin Rawat was named as the new chief of the army to succeed General Dalbir Singh Suhaag. Air Marshal Birender Singh Dhanoa, a fighter pilot, was**

chosen as the new chief of India's air force to replace Air Chief Marshal Arup Raha. The appointments were announced on Twitter by a defence ministry spokesman late on Saturday. The appointment of Rawat, a counterinsurgency specialist, raised eyebrows among opposition parties because he was given the job ahead of two more senior candidates.

India, Tajikistan to step up anti-terror, defence cooperation
Press Trust of India, 2016 12 17
New Delhi - **Stating that they live in an extended neighbourhood that continues to face multiple security challenges, India and Tajikistan today decided to strengthen defence cooperation and inked a pact to share financial intelligence to counter money laundering and financing of terrorism.** The pact was among three signed by the two countries after comprehensive talks between Prime Minister Narendra Modi and Tajik President Emomali Rahmon on strategic issues including threats posed by radicalisation and extremism, trade and investments. "We assessed the broad progress achieved under different pillars of our bilateral engagement, including our partnership in defence and security. "India and Tajikistan live in an extended neighbourhood that continues to face multiple security challenges and threats.

S. Korea, Japan militaries directly exchange intelligence on N.K. for first time
Yonhap News Agency, Staff reporter, 2016 12 16
Seoul - **South Korea and Japan on Friday directly exchanged classified information on North Korea's nuclear and missile programs for the first time in line with their intelligence-sharing pact** which came into force last month, the defense ministry said. Defense ministry spokesman **Moon Sang-gyun** told reporters that the exchange was made during a meeting between the two countries' senior defense officials held in Seoul in conjunction with a three-way security dialogue which also includes the United States. "Under the recently-signed **General Security of Military Information Agreement (GSOMIA**), Seoul and Tokyo have shared intelligence on Pyongyang's nuclear and missile programs for the first time since the pact's signing last month," he said.

Spy agency produced documents detailing alleged surveillance of justices: sources
Yonhap News Agency, Staff reporter, 2016 12 16
Seoul - A **media executive's bombshell allegation about the state surveillance of senior judicial officials was based on documents written by South Korea's top spy agency**, government sources said Friday. **Cho Han-gyu**, former president of the local daily Segye Ilbo, claimed during a parliamentary panel on Thursday that the Park Geun-hye administration carried out illegal surveillance of senior judicial officials including Supreme Court chief justice Yang Seung-tae. On Friday, the presidential office denied the allegations as groundless. The sources, however, said the documents revealed by Cho carried watermarks used at only a limited number of state organizations, including the **National Intelligence Service**. The testimony came during the parliamentary hearing on corruption involving President Park Geun-hye and her confidante Choi Soon-sil.

N. Korea resumes encrypted numbers broadcast after 4-day break
Yonhap News Agency, Staff reporter, 2016 12 16
Seoul - **North Korea's state radio station resumed broadcasting mysterious numbers Friday after a four-day break that could be some kind of coded message to its agents operating in South Korea**. Radio Pyongyang, the Korea's state-run radio station, started broadcasting messages at 1:15 a.m. (Seoul time), calling out a series of pages and numbers before repeating them one more time. The radio announcer "gave review work in metal engineering to No. 27 expedition agents." The content was different from what has been transmitted this year. Since June 24, 18 of such encrypted numbers broadcasts have been

discovered, with the latest one broadcast Sunday. Broadcasts of mysterious numbers are considered a **kind of book cipher that was often used by North Korea to give missions to spies** operating in South Korea during the Cold War era. Spies could decode numbers to get orders by using a reference book, although **many intelligence officials believe this form of sending orders to be totally outdated**. Many have said the broadcast may be some sort of psychological strategy aimed at sparking internal confusion within South Korea.

FBI team was in Kolkata to get information on IS plan to hit US interests
Times of India, Neeraj Chauhan & Bharti Jain, 2016 12 16
New Delhi - The **Federal Bureau of Investigation (FBI) team's visit to Kolkata last week to question arrested Islamic State (IS) terror group operative Mohammad Masiuddin, alias Musa**, was essentially to gather more information on his Syria-based handler **Shafi Armar**, alias Yousuf al Hindi, and his alleged plans to harm US interests. According to top sources in the Indian security establishment, US agencies have been tracking the activities of Armar, who they suspect is in touch with radicalised American youth either looking to join or already recruited by IS. They also suspect Armar may be planning to target US interests and American citizens in India and elsewhere. After several hours of questioning Musa last Thursday, the seven- member team of expert FBI investigators shared their assessment on the IS operative with the **National Investigation Agency**.

Maj Gen Asif Ghafoor appointed DG ISPR
Pakistan Dawn, Dawn Report, 2016 12 15
Islamabad - **Major General Asif Ghafoor has been appointed as the new director general (DG) for Inter-Services Public Relations (ISPR).** He is presently commanding a division in Swat and will replace Lt Gen Asim Bajwa as DG ISPR. Lt Gen Bajwa was posted as Inspector General Arms at GHQ. Maj Gen Ghafoor was a part of the artillery regiment and also served in the military operations directorate, military sources said. The posting of officers with a track record in internal security and counterterrorism as the CGS and the ISI DG respectively also reinforces this impression.

Why SSS wrote separate reports to Presidency, Senate on Magu
The Premium Times, 2016 12 20
Abuja— The **actual trigger for the State Security Service (SSS) to have written the report upon which the Senate rejected Ibrahim Magu's nomination for the top job at the anti-graft EFCC has been uncovered**. At a hurriedly arranged press conference about the same time the Senate was ending a closed-door session on Thursday, the spokesperson for the Senate, Abdullahi Sabi, announced that Mr. Magu's nomination by President Muhammadu Buhari as EFCC chairman had been rejected. He cited "available security report" for the rejection. On Monday, the Senate Leader, Ali Ndume, claimed the Senate did not reject Mr. Magu's nomination but only suspended discussions on the matter until the SSS' concerns are resolved. PREMIUM TIMES' ongoing investigation into the procedural issues involved in the handling of Mr. Magu's nomination showed **the State Security Service actually turned in two reports on Mr. Magu. Both, though signed by one official, Folashade Ojo, on behalf of the Director General, Lawal Daura**, are contradictory, having different conclusions.

S Sudan spy kicked out of city flat wins right to return

Pretoria News, 2016 12 19
Pretoria—The South Sudanese refugee who had been battling with his country's embassy in Pretoria for more than a year feared for his life after being evicted from his flat. **Valentino Chan** filed an urgent application in the high court in Pretoria to be allowed back into the flat he was renting for his safety after the locks had been changed without his knowledge. In court documents filed on December 9, Chan said he had been living peacefully in the West Park flat since April until he was forced out last month. Chan **was the applicant in the matter lodged against Frans Oupa Makhafola, Little Manhattan Central Development Trust and the ministers of the State Security Agency and Defence**. Chan claimed that since August 2015 he was employed by the South Sudan embassy in South Africa. **He was to go on a secret fact-finding mission to spy on Dr Riek Machar**, the former president of South Sudan and rebel leader seeking asylum in South Africa.

«Le partage du renseignement, clé de la lutte antiterroriste»
El Watan (Algérie), Cherif Lahdiri, 2016 12 18
Oran, Algérie - Faire taire les armes d'ici 2020. C'est objectif de l'Union africaine (UA) pour qui **«le terrorisme est la préoccupation majeure du moment». Tel est le défi exprimé lors du 4e Séminaire sur la paix et la sécurité en Afrique qui s'est ouvert hier à Oran**. C'est la quatrième fois consécutive que ce rendez-vous annuel, qui a été institutionnalisé, il y a deux ans, par le Conseil de sécurité de l'Union africaine, a lieu en Algérie. Oran abrite, durant trois jours, ce séminaire impulsé par l'Algérie qui réunit une soixantaine de participants de 14 pays africains mais aussi des invités venus d'Europe et d'Asie. Dans son allocution d'ouverture des travaux, le ministre d'Etat, ministre des Affaires étrangères et de la Coopération internationale, Ramtane Lamamra, a plaidé pour «une **meilleure coordination des approches et pour davantage de mutualisation des moyens d'autant plus que le nombre de crises et conflits en Afrique représentent les deux tiers des questions à l'ordre du jour du Conseil de sécurité**».

'Assange' Doc Suggests Russia Knew In Advance Ed Snowden Would Spy on NSA
Heat Street website, Louise Mensch, 2016 12 14
New York - **Senior Russian intelligence officers from Cuba visited the head of Ecuadorean intelligence in Quito, days before Edward Snowden stole a tranche of top-secret files from the National Security Agency in the United States**. A classified document held by **SENAIN, Ecuador's spy agency**, in its embassy in London, reveals that Colonel Alexander Kazalupov of the FSB, and his deputy, one Igor Lebedev, were given a letter of credentials by the then Russian Ambassador to Ecuador, Yan Burliay, introducing them to the head of SENAIN in Ecuador's capital. The short letter is dated April 4th, 2013, and confirms a meeting on the same day at ten o' clock in the morning. Diplomatic language is used in the short note, and the Ambassador states the meeting is "in order to address issues of bilateral cooperation". The note is a record of a meeting between Russian and Ecuadorean spies in Quito, Ecuador.

MINISTER / MINISTRE

NIL

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Le ministre Marc Garneau attendu de pied ferme à Lac-Mégantic ce soir
C'est un moment que plusieurs Méganticois attendent avec impatience : le nouveau ministre des Transports du Canada, Marc Garneau, ira à la rencontre des citoyens de cette municipalité grandement éprouvée par une tragédie ferroviaire en 2013. Marc Garneau tient ainsi une promesse faite aux Méganticois dans la foulée du plus récent budget déposé par le gouvernement Trudeau. Le ministre doit rencontrer le maire Jean-Guy Cloutier en après-midi ainsi que la Coalition des citoyens et organismes

engagés pour la sécurité ferroviaire. En soirée, une rencontre publique aura lieu au Centre sportif et la population sera invitée à poser des questions au ministre Garneau. Radio-Canada

Les projets de Barrette inquiètent les ambulanciers
Les ambulanciers paramédicaux de la région de Mégantic craignent que les intentions exprimées la semaine dernière par le ministre Gaétan Barrette n'entraînent de nouveaux délais pour la population.Jeudi dernier, le ministre de la Santé et des Services sociaux a annoncé des mesures de sa réforme des services préhospitaliers d'urgence. Ces nouvelles politiques font suite aux rapports Ouellet, intitulé Urgence d'agir, et Robillard, qui scrutait l'ensemble des programmes gouvernementaux. Le ministre Barrette croit pouvoir récupérer 110 millions $ en appliquant certaines recommandations. La Presse

Salon du commerce à Lac-Mégantic
Le salon du Commerce organisé par Lac en fête Mégantic ce déroulera ce week-end. L'événement a pour but de rassembler les commerçants locaux de la région de différents secteurs tel la rénovation, la construction et l'aménagement extérieur. Il sera de retour dès vendredi au Centre Sportif Mégantic. Les portes ouvriront le vendredi à 18h00 jusqu'à 21h00. Le samedi de 13h00 à 21h00 et le dimanche de 11h00 à 16h00. O97.3

DiNapoli to feds: Strengthen safety measures for oil trains
State Comptroller Tom DiNapoli has written to the head of the federal Department of Transportation urging the feds to increase oil train safety measures. "Any train accident involving crude oil or other hazardous materials creates the risk of significant human trauma and disruption to communities,"DiNapoli wrote in a seven-page letter to USDOT Secretary Anthony Foxx. "The possibility of an accident on the scale of the Lac-Mégantic (Quebec) tragedy is not only a significant hazard to New York residents and environmental resources — it is also a financial threat. Times Union

Time for Quebec to allow pipeline
A letter to the editor states, "TransCanada's Energy East pipeline would be one of the biggest infrastructure projects in Canadian history, crossing six provinces and traversing 4,600 kilometres. Roughly two thirds of it would make use of underused natural gas pipe that's already in the ground, with new pipe being built through Quebec and New Brunswick. Quebec is now having more studies to discover if the energy east pipeline is safe enough to transport oil from Alberta to eastern Canada... Have they forgot the train derailment in Lac Megantic, Que. where this town was nearly destroyed and many lives were lost from exploding oil tankers? Instead of Canada using our own country's oil and supporting our fellow countrymen, they would rather support a dictatorship that treats its people very poorly..." Charlottetown Guardian

Four fires in Northeast Region so far
There is currently one active fire in the region, says the Ministry of Natural Resources and Forestry in a news release. Hearst 1 is under control at five hectares. The forest fire hazard will continue to move north as the snow melts. So far this season we have seen four fires in the Northeast Region, one in Parry Sound and two in North Bay. Sudbury.com

Evacuation order lifted near Fort St. John
A fire 50 kilometres northwest of Fort St. John has calmed down enough for people to go home. On Monday afternoon, at around 2 p.m., the Peace River Regional District lifted an evacuation alert for the Beatton Airport Road fire. The fire is 7,035 hectares in size and 30 per cent contained, but the Beatton Airport Road is now open. Kelowna Now

NATIONAL SECURITY / SÉCURITÉ NATIONALE

PM should lead charge to wipe out killer terrorists
An opinion piece states "They were evil barbarians even before the savage slaying of an innocent Canadian. Prime Minister Justin Trudeau is now "outraged" at the beheading of John Ridsdel in the

Philippines, but what did he have to say a month ago when the radical Islamic killers threatened their hostage. Nothing. In fact, Trudeau was at the White House socializing with President Barack Obama as Ridsdel cried out at gunpoint "to the Canadian prime minister and to the Canadian people in the world: Please, do as needed to meet their demands within one month or they will kill me, they will execute us." They were true to their word. "Canada condemns without reservation the brutality of the hostage takers and this unnecessary death," Trudeau said Monday. "This was an act of cold-blooded murder and the responsibility rests squarely with the terrorist group who took him hostage." The PM needs to explain why he didn't name the terror group or its affiliations. Abu Sayyaf has long been affiliated with al-Qaida and, in recent months, flying ISIS flags. What should have been considered was a military extraction exercise led by Canada's crack JTF2 counter-terrorism team with air support from our now idle CF-18 Hornets. These killers should be wiped out." Postmedia (Toronto Sun, Winnipeg Sun, Ottawa Sun, Edmonton Sun)

Live-tweeting a terrorist attack: How the public's posts can help in an emergency
When she heard about the shooting, Cpl. Wendy Stewart wanted to be on Parliament Hill. She wanted to protect her colleagues, her friends and her city. Like many RCMP members in Ottawa on Oct. 22, 2014, her first thought was to rush downtown.Instead, she got to work. Minutes earlier, the nation's capital had been peaceful. At the National War Memorial, three sentries from the Ceremonial Guard stood watch nearby — among them, 24-year-old Cpl. Nathan Cirillo. The calm was broken with the thunder of bullets. Michael Zehaf-Bibeau, a 32-year-old seeking retaliation for Canada's military involvement in Afghanistan and Iraq, approached Cirillo and fatally shot him twice in the back. Zehaf-Bibeau fled to the Hill only blocks away and ran inside Centre Block, where he exchanged fire with a squad of RCMP tactical officers and the Sergeant-at-Arms of Parliament. Moments later he was dead, ending the most vicious attack on Parliament in more than 50 years. From start to finish, the entire attack lasted less than ten minutes. Stewart's job was to wade through the information deluging social media, hoping to find any information that could help during the attack — watching what police call the open source, everything from Twitter to Instagram. "As soon as we heard about the shooting, we were doing social media searches," says Stewart. "Immediately, we went on the sites to see what we could find — seeing if anyone was talking about it online. Immediately, we were finding information. Before it was on the news, we found it on Twitter." (…) Stewart and Cpl. Judy Montreuil spent hours together poring over the data at the RCMP's Protective Investigation Unit (PIU) — watching the shock and terror of those downtown, scanning through grainy cellphone footage, clicking through graphic images from the war memorial. By using specific hashtags and geolocation tools, analysts were able to build a rough picture of what was happening downtown. Out of the Internet's noise and chaos, they managed to find a handful of important leads — crucial information for the members tasked with securing downtown. RCMP

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Jonathan Nicola to remain in custody, review board determines
Jonathan Nicola will remain in custody as he's considered a flight risk, an Immigration Refugee Board determined Tuesday. His next detention hearing is scheduled for May 24, but he could have an admissibility hearing as early as this week to determine whether he will be allowed to stay in Canada or be sent home to South Sudan. Nicola is accused of entering the country using false information on his passport from South Sudan. Canada Border Services Agency officials allege he came to Canada in November 2015 on a student visa to study in Windsor until January 2017. When he entered the country his passport and visa application listed his birth date as November 1998. But when he applied for a U.S visitor visa in April, his fingerprints matched an individual who'd already applied for a visa with a birth date in November 1986, the CBSA alleges. If the allegations are proved, that would make him 29, not 17, as his documentation suggests. CBC News, CTV News, Windsor Star

Coach of Canadian teen impostor Jonathan Nicola: Doubts overcome by documents
In the aftermath of the Jonathan Nicola scandal, anyone and everyone who has come into contact with the 30-year-old South Sudanese refugee has been put under the microscope as the general public struggles to understand how no one learned Nicola was 13 years older than he claimed to be. No one has received more of that wrath than Catholic Central basketball coach Peter Cusumano, who not only

coached the player but also put him up in his home. In the lone interview the coach has provided since Nicola was detained when trying to cross the U.S. border, Cusumano defended his own role in the incident, insisting that he agreed to help and coach Nicola because he had copious official paperwork stipulating that he was a 17-year-old athlete fleeing South Sudan. "He'd been vetted twice by government officials and arrives with all his documents," Cusumano told The Windsor Star, which held a conversation with the coach. "Is the school supposed to call Canadian Border Services and tell them they got it all wrong? We have over 400 kids here (Catholic Central) who were born outside the country. We don't have the resources to deal with that. "What's been tough to take are the insinuations that I knew his age all along. If that was the case, I'd be an idiot for taking him to the U.S. embassy to get a visa, knowing he had false documents. USA Today

Jacobus Van Nierop, 'horror dentist,' found guilty in France

A French court has found a Dutch dentist guilty of assault and fraud and sentenced him to eight years in prison. Dentist Jacobus Van Nierop, 51, showed no signs of emotion when the court in the central town of Nevers returned its verdict Tuesday. The court barred him from practising dentistry for life. About 100 people had issued complaints against Van Nierop, ranging from having multiple healthy teeth removed, pieces of drills left in their gums and teeth or abscesses and misshapen mouths after he did work on patients. Van Nierop was accused of causing "mutilations" or "permanent disabilities" to scores of patients from 2009 to 2012 and of overcharging patients and billing them for imaginary procedures. (…)The Dutchman eventually fled to New Brunswick, and was arrested in Nackawic, about 60 kilometres west of Fredericton, where he had been living for about eight months. Then the RCMP officers and members of the Canada Border Services Agency arrived, Van Nierop was in the bathroom and refused to come out. The officers forced their way in and found him sitting on the toilet, covered in blood. It appeared he had tried to commit suicide, according to a 2014 immigration decision. He was extradited to the Netherlands and then deported to France. CBC News, Radio-Canada, The Guardian (St. John's Telegram), L'Actualité

Demands for change to Canada's immigration detention system mount in wake of deaths

Nearly 80 detainees at Central East Correctional Centre in Lindsay, Ontario ended a hunger strike over the weekend that was initiated last Thursday April 21. The strike had been an effort to draw attention to indefinite immigration detention and recent inmate deaths. The detainees -- all racialized, undocumented men -- have two main demands: end immigration detention and "end indefinite and maximum security imprisonment, overhaul the judicial review process, and improve prisons conditions." According to the End Immigration Detention Network, the strike concluded after the Canadian Border Services Agency (CBSA) promised to provide updates and answers to these issues in two weeks. There have been at least 13 deaths in Canadian immigration detention since 2000 -- most of which have had minimal explanation or understanding. The most recent death, which occurred on March 13 2016, was of Francisco Javier Romero Astorga, a 39-year-old Chilean father of four. Since his death, Astorga's family has been very active in seeking answers and justice within Canada's immigration system. Rabble

FDFA reports March land border and airport statistics

The Frontier Duty Free Association (FDFA) has released the latest duty-free sales statistics, provided by the Canadian Border Services Agency for March. The national land border duty-free sales figure of C$9.5m ($7.5m) represented a 10.38% sales increase compared to March 2015. Sales between January and March increased around 12% compared to the same period in 2015. Sales at land border duty free shops for January/ March 2016 equaled $25.8m. Airport duty-free store sales for March totalled C$32.7m, an 8% drop compared to March 2015. Sales between January and March rose 7% compared to the same period in 2015. Canadian airport duty-free shops from January to March equalled $96m. DFNI Online, Moodie Davitt Report

Revealed: winners of Canada's senior public service awards

The winners of this year's senior public service awards of excellence in Canada have been revealed today. High-ranking public servants have been recognised for their management skills in four categories, including leadership, innovation and partnership, in an annual competition organised by the Association of Professional Executives (APEX). (…) The career contribution award, which recognises a senior official who has brought recognition to the public service or to their department or agency over a federal public

service career spanning at least ten years, went to Norm Sheridan, executive director, Greater Toronto Area, Canada Border Services Agency. Global Government Forum

Le Canada menace une femme et son fils de les renvoyer en Algérie
Adel, 17 ans, est né à Montréal. Il n'y a jamais vécu. Avec sa mère, Nadia, il a été exilé de force en Algérie en l'an 2000 et abandonné dans des conditions d'extrême pauvreté par un père qui voulait se débarrasser d'eux. Quinze ans plus tard, lui et sa mère viennent enfin de regagner le Canada, mais leur cauchemar n'est pas fini. Nadia a perdu sa chance de vivre ici. Les autorités canadiennes veulent la renvoyer en Algérie. Nadia Chikhi n'avait presque rien mis dans ses valises : des cadeaux pour sa famille en Algérie, deux robes pour elle et deux habits pour son bébé. Et c'est tout. Elle n'avait pas besoin de grand-chose. Elle ne partait que pour une semaine. Puis retour prévu dans son logement de Saint-Léonard avec mari et enfant. Elle devait commencer un nouvel emploi dans une garderie du quartier la semaine suivante. Elle ne s'y est jamais présentée. Il a fallu à la femme, aujourd'hui âgée de 46 ans, et à son fils 15 longues années pour regagner Montréal. (...)Adel est citoyen canadien, mais sa mère est sous le coup d'un interdit de territoire. Elle a perdu sa résidence permanente parce qu'elle n'a pas passé le nombre de jours requis par la loi en sol canadien. Elle s'adresse maintenant à la Cour fédérale en tout dernier recours. (...)En 2008, nouvelle lueur d'espoir : Nadia a reçu une lettre du Canada. « J'ai pensé que j'allais enfin avoir de l'aide. » On lui disait que sa demande de résidence permanente était en voie d'être accordée et qu'elle recevrait bientôt un visa pour le Canada, obligatoire pour les citoyens algériens qui souhaitent venir ici. Le hic : Nadia n'avait pas demandé sa résidence permanente. Elle la détenait déjà. En fait, tout ce qu'elle aurait eu à faire, c'était de demander un titre de voyage. Elle ne le savait pas. (...) La femme fait l'objet d'une mesure de renvoi, une épée de Damoclès au-dessus de sa tête et de celle de son fils. La Presse

U.S. fugitive for more than a decade arrested in Toronto
A man wanted in the United States for more than a decade is under arrest in Toronto. Delroy McGowan allegedly fled from the U.S. in 2004 while facing charges in an investigation involving firearms and serious drug offences, Toronto Police said Tuesday. McGowan was convicted in absentia and faces up to 60 years in prison, police said. Police said they believe McGowan fled to Jamaica, where he is a citizen, before allegedly entering Canada under a false name. A story featuring McGowan as a top 10 wanted fugitive in 2014 generated information that led to his arrest last week, police said. McGowan is being held in custody pending his extradition to the U.S. Canadian Press (Edmonton Sun, Ottawa Sun, Calgary Sun, Toronto Sun, Winnipeg Sun)

Americans flock to Canada, lured by the low-loonie discount
Americans are flocking to Canada at a pace we haven't seen in years, helping to pump up the retail and tourism industries. No, they're not Trump refugees, but rather shoppers enjoying the automatic discount from the low loonie. Over the course of the last two years through to February, noted BMO Nesbitt Burns, the number of American visits north has surged 20 per cent. That's more than two million for the first time in eight years, said BMO senior economist Sal Guatieri. (...) One of the gauges of cross-border shopping are same-day trips, which Mr. Rangasamy's research shows is now on the rise from the U.S. at the fastest pace in six years. Globe and Mail, CTV News

Ex-Kent State professor accused of trying to have sex with boy arrested in Louisiana

A former Kent State University professor accused of meeting a teenage boy for sex in an elementary school parking lot is back in police custody, five months after he was stopped at the Canadian border trying to leave the country. Willie Harrell, 44, was booked in the Summit County Jail about 1:30 a.m. Saturday. He was arrested March 22 in Orleans Parish, Louisiana. He waived his extradition hearing the next day and was sent back to Akron April 15, according to Orleans Parish Magistrate Court records. He is scheduled for a May 2 appearance in front of Summit County Judge Amy Corrigall Jones. Harrell faces a fifth-degree felony charge of importuning (…) Harrell was stopped trying to cross the border of Detroit, Michigan and Windsor, Ontario, according to court records. Harrell told Canadian authorities that he was trying to leave the country to avoid prosecution in his pending case in Summit County Common Pleas Court, according to a court filing by prosecutors. Harrell also had a device in his car that blocked GPS location tracking, according to court records. He was released to U.S. Border Patrol agents several hours later. Cleveland (2016-04-25)

Broadcast media / Médias télédiffusés

Jonathan Nicola, the high school basketball player who may be almost 30 years old, faced his second detention review hearing in front of the Immigration and Refugee Board of Canada. He will remain in custody until his next court date. He remains detained due to the flight risk and he has a history of using fraudulent documents. (CKLW-AM Windsor, 11h01)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Cybersecurity Alliance forms to help Canadian infosec groups work together
IT security professionals in Canada often form groups to share information with members, but rarely outside the group. Now they're coming together in a national network to broaden information sharing and best practices across industries. The Canadian Cybersecurity Alliance was quietly launched earlier this month with a goal of marshalling more resources to stand up to online attackers. So far 50 groups have agreed to participate in the alliance (see below for a partial list). The alliance is led by a 12-person national council co-ordinated by Gilles Racine, a member of Bell Canada's information security response team. IT World Canada (2016-04-25)

The shifting sands of cybersecurity
An ounce of prevention is worth a pound of cure, so the saying goes, and while it may seem trite, for in-house counsel who have to deal with the aftermath of a cyberattack or data breach, that recommendation overwhelms all others. When intellectual property and customer information falls into the wrong hands, how well prepared the organization is for such an eventuality will determine the ramifications. While it would appear that most organizations in Canada have a handle on the technological aspects of cybersecurity, there is still a ways to go when it comes to pre-emptive planning in case of a data breach and involving in-house counsel so they can contribute.. Canadian Lawyer Magazine (2016-04-25)

Spy Chief Complains That Edward Snowden Sped Up Spread of Encryption by 7 Years
On Monday blamed NSA whistleblower Edward Snowden for advancing the development of user-friendly, widely available strong encryption. "As a result of the Snowden revelations, the onset of commercial encryption has accelerated by seven years," James Clapper said during a breakfast for journalists hosted by the *Christian Science Monitor*. The shortened timeline has had "a profound effect on our ability to collect, particularly against terrorists," he said. When pressed by *The Intercept* to explain his figure, Clapper said it came from the National Security Agency. "The projected growth maturation and installation of commercially available encryption — what they had forecasted for seven years ahead, three years ago, was accelerated to now, because of the revelation of the leaks." Asked if that was a good thing, leading to better protection for American consumers from the arms race of hackers constantly trying to penetrate software worldwide, Clapper answered no. "From our standpoint, it's not … it's not a good thing," he said. Intercept; Washington Times

LAW ENFORCEMENT / APPLICATION DE LA LOI

Sask. man wins RCMP contest to name puppies
The RCMP have announced the winners of their national Name the Puppy Contest, and among the winners is Battleford, Sask. man, Lucas Anthony. Of the 16,000 entries, Anthony was one of 13 winners choosing the name Jett for one of the puppies. During this year's contest, all the names were required to start with the letter J. The winning entries include the names: Jango, Jolt, Jade, Jorgia, Jade, Jix, Jett, Jax, Juno, Java, Jinx, Jazz and Jake. The winners will each receive a certificate and a photo of the puppy they named. CBC; StarPhoenix

Quebec's independent investigation unit beset by delays
The Quebec government's planned independent bureau to investigate shootings, serious injuries and deaths involving a police officer is faced with another round of delays. The province approved a proposal three years ago to create the Bureau des enquêtes indépendantes, but it's still not operational. The bureau's latest targeted opening date was April 29. But Madeleine Giauque, a former Crown prosecutor was named its director in late 2014, told a parliamentary committee last week she would need more time to ensure the new unit can also handle allegations of sexual assault against police. The decision to add that investigative element to the bureau was made following allegations of abuse against police in Val-d'Or last year. The most recent delay to the bureuau comes following a string of police shootings, including the death of a 60-year-old man in Hochelaga-Maisonneuve on Monday following an intervention by Montreal police. The Sûreté du Québec, which took over the investigation, said officers were were called to the apartment block to check on someone in psychological distress and that the man had a knife. Provincial police say a stun gun was used in the police operation and the man was also struck by at least one bullet. Earlier this month, Sandy Tarzan Michel, 25, was fatally shot by a member of the local aboriginal police force in Lac-Simon. CBC

Murder charge laid against father after Carbonear fire
Harbour Grace RCMP have charged the father of the five-year-old girl who died in a house fire in Carbonear this past weekend with first degree murder and arson. Trent Butt, 37, will make a court appearance on Tuesday. The girl's body and Butt were found in their burning home early Sunday morning. Butt was transported to hospital, where police say he remains in serious condition but he is expected to survive. Court records show Butt faced three assault charges against his wife in the past, but all were dismissed. RCMP are not releasing the name of his daughter at this time, but will provide an update after Butt's court appearance. CBC News; Guardian; Brandon Sun

La GRC recherche un deuxième suspect armé et dangereux à Steinbach
La Gendarmerie royale du Canada (GRC) est à la recherche d'un deuxième suspect, qui aurait participé à une entrée par effraction à Steinbach, le 18 avril dernier. Jean Pierre Gagnon, 32 ans, est considéré comme étant armé et dangereux. Il fait face à plusieurs accusations liées à des actes violents et à l'utilisation d'une arme à feu. Il est le deuxième suspect qui aurait participé à l'entrée par effraction survenue à l'avenue Brandt, au cours de laquelle une personne a fait feu en se disputant avec l'un des résidents. Personne n'a été blessé lors de l'incident, mais la police croit que ces individus visaient précisément cette résidence et ses habitants. La GRC indique que Jean Pierre Gagnon aurait des contacts à Winnipeg et à Sainte-Anne. Elle demande à quiconque aurait de l'information de communiquer avec elle pour tenter de retrouver l'homme. Les autorités demandent particulièrement aux résidents de Winnipeg et du sud-ouest de la capitale manitobaine d'être à l'affut. L'autre suspect, Harley William Delorme, 24 ans, a été arrêté jeudi dans une résidence de Winnipeg. Radio-Canada

RCMP arrest Caleb Head; man wanted for attempted murder
RCMP say they have arrested Caleb Head after an attempted murder over the weekend near Carrot River. Mounties say Head was wanted on many charges after an alleged assault on the weekend. Mounties were called to the First Nation in the Carrot River area after a woman was found outside a home in the community early Sunday morning. Police says Head was arrested late Monday night in the community of Red Earth First Nation. The investigation is continuing; however, it is anticipated Head will make his first appearance in Provincial Court at 10:00 a.m. on Wednesday, April 27, 2016 in Nipawin, Saskatchewan. 620 CKRM

Mississauga murder victim ID'd as GTA rapper
A Toronto man shot dead in Malton on the weekend is a GTA rapper named Sizzlac who recently released a new video on YouTube, according to friends and fans. Peel Regional Police identified Mississauga's third murder victim of 2016 as Mustafa Omar, 29, of Toronto. Friends have been paying tribute online to Omar, known to many as Sizzlac, saying he was born and raised in "one of the most notorious blocks in Toronto, Jamestown Rexdale." He recently released a video on YouTube called "Realest in the 6." Homicide detectives in Peel continue to investigate the fatal shooting. Omar died early Saturday morning after gunshots rang out at a townhouse complex in the area of Goreway Drive and Morning Star Drive in Mississauga around 5:30 a.m. Omar was shot multiple times, police said. Peel Region Paramedics rushed him to hospital but he was pronounced dead there. Three others were also shot. One has been released from hospital while the other two suffered non-life threatening injuries. Neighbours have identified the home where the shooting occurred as a "party house" and have called police to complain about noise and illegal activity at the home. Hamilton Spectator

Coquitlam RCMP officer's disciplinary hearing may never see light of day
R.C.M.P. have adjourned a disciplinary hearing for an officer seen in online photos wearing his force issued boots and not much else. It has been four years since Coquitlam Corporal Jim Brown was suspended with pay. Now there is new information on why the case may never see the light of day, and what the long-time officer has been up to while collecting a paycheque. Brown's disciplinary matter has been one of several that have left the Mounties with a tarnished image. In 2012, bondage pictures emerged of Brown in sexually explicit poses with a woman. They were posted by Brown on a personal account on the "bondage, BDSM & fetish" community Fetlife, which he believed would be private. The pictures ended up being released to media, which subsequently sparked an internal R.C.M.P. investigation and Brown was put on paid leave. CKNW

White Butte RCMP along with Regina Police investigate B&E in Pense
A break-in in the town of Pense has RCMP looking for two men who made off with compound bows valued at nearly 5-thousand dollars. It happened overnight Sunday when someone reported a B&E at the residence. RCMP say two men forcibly entered a residence around 3:15 a.m. allegedly using a firearm looking for money and property. As well as the two compound bows, the thieves took off with an unknown amount of cash. There were two people inside the home at the time of the offence – a man received minor injuries while a woman was not physically injured. The two individuals are described as First Nations men: one was 5'9" – 5'10", 180 lbs, short brown hair, fair skin, 24 – 28 years old. 620 CKRM; CJME

Sûreté du Québec probe role of stun gun in fatal police shooting
Quebec provincial police are investigating why a stun gun and a firearm were used in an intervention Monday that led to the death of a 63-year-old man. André Benjamin, 63, was pronounced dead in hospital after police were called earlier in the day at an apartment in Hochelaga-Maisonneuve.
The Sûreté du Québec said a stun gun was deployed by an officer and that Benjamin was also struck by at least one bullet. "At this point, it would be irresponsible to come up to a conclusion on if it [the stun gun] did not work, or if there is a problem, or exactly what happened," Allard told CBC Montreal's Daybreak on Tuesday. "I think as we go through the investigation we'll have a lot more details that will follow." Allard said that Montreal police officers were called to the apartment block to check on someone in psychological distress. Benjamin had a knife, he said. Allard wouldn't go into details about what transpired next, saying they are still interviewing witnesses and gathering evidence. Montreal police haven't commented on the incident since it was handed over to the SQ. CBC

RCMP investigate alleged kidnapping west of Edmonton
A suspect has been arrested and RCMP are investigating after a woman was kidnapped near Evansburg, Alberta. On Monday evening, a police presence could be seen at the western edge of Alberta's capital by 103 Avenue and Winterburn Road. RCMP wouldn't say how but did confirm the scene is connected to their investigation. A man was also seen being taken into custody at that location. According to police, the vehicle the suspect was driving in was stopped after a spike belt was deployed on a road in Parkland County. Mounties said they believe the kidnapping incident originated west of Evansburg, which is about

110 km west of Edmonton. They said they believe it involved a man and woman who knew one another. Police said the woman is accounted for and in good health. Global News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Elders use culture to heal Indigenous inmates from sexual violence
Elder Amy Victor of the Stó:lo Nation is no ordinary grandma. Five days a week she drives from the Cheam reserve to Abbotsford. B.C., where she willingly walks through the gates of the Fraser Valley Institution for Women. But the 74-year-old elder is not a prisoner or a guard. Her unique position, spiritual advisor, allows her to help Indigenous women heal the damage wrought by sexual abuse using a simple, potent formula: traditional teachings, Indigenous medicines, indomitable spirit. Indigenous women make up a disproportionate number of federal inmates in Canada. Many are survivors of a history of sexual violence before they arrive in prison. As one prison counsellor put it, "The women didn't even know it was possible not to be abused." (…) Incarceration rates for Indigenous women continue to climb. Canada's correctional investigator stated that the system is failing Indigenous peoples and culturally-appropriate alternatives are needed. Victor guides Indigenous inmates toward "the good path" by reintroducing cultural practices most of the women were denied or never knew due to Canadian assimilation policies. Victor says many women grew up in foster care and don't have a connection to their parents or grandparents. "Being disconnected from the culture caused them to be lost," she says. Only a fraction of Indigenous offenders identified with First Nations spirituality upon entry to the prison, according to a 2000 Corrections Canada study. (…) Despite challenges, some early results show improvements for Indigenous inmates involved in "Aboriginal-specific" programming. Indigenous offenders who participated in Pathways units had a 17 per cent rate of re-offense compared to 35 per cent in standard units. Inmates and staff at Healing Lodge facilities were also less likely to be involved in violent incidents and more likely to complete parole after release. These practices mark a slow shift from standard correction conventions. CBC News

« Je ne suis pas raciste, mais... »
Le 7 avril sur les ondes de CHOI FM (1), l'animateur de radio André Arthur, qui n'en est pas à ses premiers propos controversés, a déclaré que selon lui, Haïti est un pays « sans avenir, peuplé de voleurs, inventeur du sida ». Ses propos racistes faisaient aussi suite à une avalanche de commentaires xénophobes, particulièrement via la section des médias web du Québec, après la mort le 4 avril de Jean-Pierre Bony, Haïtien d'origine tué par une balle de plastique tirée à la tête par un policier de Montréal lors d'une perquisition. Il faut savoir qu'au Québec, dès qu'on ose faire allusion au spectre du racisme, on vous accuse immédiatement de faire du « Québec bashing » ou de jouer à la victime. Nous semblons collectivement plus enclins à nier aveuglément son existence plutôt que d'être fier d'amorcer un dialogue afin de développer des outils pour lutter contre celui-ci (…) Le plus alarmant, comme l'indique une étude réalisée par l'université McGill, c'est que le premier facteur déterminant une plus grande présence policière dans une ville n'a rien à voir avec le taux de criminalité qui y sévit, mais dépend uniquement du nombre de minorités racisées et de populations autochtones qui y vivent. Ces décisions de nos élites politiques non seulement entérinent que la répression policière est justifiée du seul fait de la race, ce qui en soit rend légitime la violence envers les communautés racisées, mais en plus, elles ne peuvent faire autrement que de judiciariser et d'incarcérer massivement des citoyens principalement à cause de la couleur de peau. D'ailleurs, en 2013, le rapport de l'enquêteur correctionnel Howard Sapers révélait qu'au cours des dix dernières années, la population carcérale autochtone a augmenté de 46,4 % ; celle

des Noirs, de 80 % ; tandis celle des femmes a plus que doublé, particulièrement celle des femmes autochtones. Presse gauche

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

La violence en baisse dans les écoles du Québec, selon une étude
Les agressions à caractère violent et l'intimidation sont en baisse dans les écoles du Québec. *L'Enquête nationale sur la violence à l'école 2013-2015*, dont les résultats sont dévoilés mardi à Québec, révèle des changements notables dans les comportements des élèves, particulièrement au primaire. Les insultes, les bousculades, les menaces sur le chemin de l'école et les propos à caractère homophobes étaient moins fréquents chez les élèves du primaire en 2015 qu'ils ne l'étaient deux ans auparavant. Une différence selon le sexe est toutefois observée. La violence sociale et les insultes sont en diminution chez les filles du primaire, mais pas chez les garçons, selon l'étude menée par des chercheurs de l'Université Laval. Au secondaire, les diverses formes de violence subies par les élèves sont restées stables de 2013 à 2015. Les statistiques laissent néanmoins entrevoir un nombre moins élevé d'insultes et de vols, notamment. (…) Même si le phénomène de cyberintimidation n'a subi aucune hausse entre 2013 et 2015, la proportion de jeunes possédant un téléphone cellulaire a augmenté de façon importante. En 2013, 61 % des jeunes du primaire disaient posséder un téléphone cellulaire, comparativement à 76 % en 2015. Au secondaire, l'augmentation est tout aussi importante : 77 % des jeunes possédaient un téléphone en 2013, comparativement à 88 % en 2015. Les élèves du secondaire rapportent aussi être plus nombreux à avoir accès à Internet sans la surveillance d'un adulte, tant à la maison (96 %) qu'à l'école (53). Radio-Canada, Journal de Québec

Region's public health department calls for 'real time' information on drug use
The Region of Waterloo Public Health Department wants access to real time information when it comes to monitoring and surveillance of opioid use, and in particular, overdoses. Right now, region health officials can access numbers from 2014, and the data from 2015 won't be available until later this year or possibly next year. That's a problem for Chris Harold, the manager of information and planning with the region's health department. "We often can't tell challenges or problems sweeping through the community until well after the fact," Harold told CBC's The Morning Edition. "So in many cases … we won't know the roll or if the number of deaths related to drug overdoses in particular opioids is increasing until well after the fact. This consistent, real time monitoring will help us give more relevant information so we can respond in a timely manner." The latest drug of choice and concern for officials is fentanyl. "We are aware that fentanyl is in the community … police issued an alert that fentanyl was present in the local drug supply in March," Harold said. The synthetic opiod narcotic, which is used as a painkiller, comes in pills or patches. The drugs being picked up by officers on the streets include both prescriptions and bootleg versions. CBC News

Stress post-traumatique : les agents des services correctionnels du N.-B. veulent être inclus dans la loi
Les agents des services correctionnels du Nouveau-Brunswick demandent que le stress post-traumatique soit reconnu comme une maladie liée à leur travail. Le gouvernement reconnaît déjà cette maladie pour les pompiers, les policiers et les ambulanciers. Pourtant, les agents correctionnels disent eux aussi vivre des situations parfois très difficiles, qui se comparent à ce que peuvent vivre des policiers ou des ambulanciers. Maurice LeBlanc est agent des services correctionnels et vice-président de la section locale du syndicat canadien de la fonction publique. Il travaille au Centre correctionnel régional du Madawaska depuis de nombreuses années et connaît des confrères touchés par le stress post-traumatique. « On a des gens qui ont découvert des détenus décédés ou qui étaient pendus. Suite à ces incidents, ils ont lâché la "job", explique M. LeBlanc. Ils n'en pouvaient plus, ils ne pouvaient pas revenir au travail, ils ont juste démissionné parce qu'ils ne pouvaient plus faire le travail. » Il souhaiterait que le stress post-traumatique soit reconnu par Travail sécuritaire NB. Radio-Canada (2016-04-25)

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

#MMIW : au nom des femmes autochtones disparues ou assassinées
La création d'une commission d'enquête nationale sur les femmes et les filles autochtones disparues ou assassinées a été l'aboutissement de plusieurs années d'efforts pour Sheila North Wilson. Celle qui a réussi à mobiliser une nation grâce au mot-clic #MMIW connaît bien les défis qui attendent les jeunes filles des réserves autochtones qui partent vers les grandes villes, car elle a dû traverser elle-même de nombreuses épreuves. Sheila North Wilson a grandi à Oxford House, une réserve située à environ 960 km au nord de Winnipeg qui est réputée pour ses conditions de vie déplorables. Or, son enfance est remplie de beaux souvenirs. « Je pensais qu'on était riches, mais c'est juste que nos parents s'occupaient très bien de nous », se remémore-t-elle. Elle a tout de même vécu des moments sombres. À compter de l'âge de six ans, elle a été agressée sexuellement à plusieurs (…). « Les policiers ne prenaient pas les histoires de ces femmes au sérieux ou ils ne poursuivaient pas certaines pistes, explique-t-elle. Je sentais que je pouvais en faire plus si je m'impliquais directement dans la cause. » Elle quitte son poste de journaliste et devient relationniste à l'Assemblée des chefs du Manitoba. Mais elle découvre une réticence chez les chefs - surtout des hommes - d'aborder publiquement la question des femmes disparues. En juin 2012, un événement galvanise la communauté des Premières Nations du Manitoba : un homme se rend à la police et avoue avoir tué trois femmes autochtones. Les leaders autochtones et les intervenants sur le terrain manifestent ensemble. C'est aussi à ce moment que Sheila a créé le mot-clic #MMIW - Missing and murdered indigenous women (femmes autochtones assassinées ou disparues), qui a depuis été repris plusieurs millions de fois sur les réseaux sociaux. « Ce jour-là, nous avons commencé à demander une commission d'enquête nationale. » Mais le gouvernement Harper rejette l'idée d'une telle commission d'enquête. (…) Le 8 décembre 2015, Justin Trudeau annonce la mise sur pied d'une commission d'enquête nationale sur les femmes et les filles autochtones disparues ou assassinées. Pour les familles des victimes, les attentes sont grandes : changer des stéréotypes qui existent depuis des centaines d'années et faciliter l'intégration des jeunes autochtones dans les grandes villes. Sheila North Wilson espère aussi que la commission d'enquête réussira à redonner aux filles et aux femmes disparues leurs voix, au profit des jeunes filles d'aujourd'hui et de demain. Radio-Canada

Windsor Public Library To Honour Missing and Murdered Indigenous Women With Faceless Dolls Product
The Windsor Public Library will be hosting a special project to bring awareness to the cases of close to 1200 missing and murdered Indigenous women and girls in Canada during the week of May 16th to 22nd. In coordination with the Can-Am Indian Friendship Centre and the Métis Nation of Ontario, the project will consist of a series of workshops during which we are inviting community members to help create faceless dolls out of felt. Each doll represents one of the cases of murdered or missing women to help give a voice to these missing mothers, sisters and daughters. Windsorite

'Immense' pressure on Philippine military in manhunt for terrorists who killed Ridsdel

The Philippine military came under increased pressure Tuesday to rescue more than 20 foreign hostages after their Muslim extremist captors beheaded a Canadian man, but troops face a dilemma in how to succeed without endangering the remaining captives. Abu Sayyaf gunmen beheaded John Ridsdel on Monday in the southern province of Sulu. Ridsdel's head, which was placed in a plastic bag, was dumped by motorcycle-riding militants Monday night in Jolo town in impoverished Sulu, a densely forested province about 950 kilometres south of Manila, where the Abu Sayyaf and allied gunmen are believed to be holding 22 foreign hostages from six Western and Asian countries. "The full force of the law will be used to bring these criminals to justice," the Philippine military and police said in a joint statement. About 2,000 military personnel, backed by Huey and MG520 rocket-firing helicopters and artillery, are involved in the manhunt for the militants, who are believed to be massing in Sulu's mountainous Patikul town, military officials said. (…) A large-scale offensive could displace many villagers and draw attention to the longstanding security and social issues in the vote-rich south, homeland of minority Muslims in the largely Roman Catholic nation. INTERNATIONAL

The impact of jihadist beheadings: Is terror propaganda brutalizing us all?
Since the headline-grabbing murder of American journalist James Foley by ISIS militants in August 2014, the world has been regularly confronted with a modern form of an ancient, horrifying method of execution. British and American aid workers, Japanese and American journalists, Kurdish and Syrian soldiers, Egyptian and Ethiopian Christians and an alleged Russian spy were among those who followed in Foley's wake: their gruesome beheadings documented on camera and disseminated as propaganda to a global online audience. Canadian John Ridsdel, held by the Philippines-based, ISIS-allied jihadist group Abu Sayyaf since he was abducted in September, is the latest victim to be murdered in this way. CNN

9 Islamic extremists investigated over plan to kill
German authorities are investigating nine Muslim extremists on suspicion they planned to kill two people over disagreements in their interpretation of Islam. Prosecutors in Bremen say 10 premises in the northern German city were searched early Tuesday following tips about the planned crimes. Some 200 police officers were involved in the morning raids. Associated Press (Metro News, Yahoo! News)

Moment suicide bomber detonates in Paris cafe shown on French TV
French television has shown the moment when one of the suicide bombers detonated in a Paris cafe as part of the multiple attacks five months ago. Ibrahim Abdeslam, 31, was captured on a security camera as he carried out one of the attacks on November 13, which killed 130 people across the French capital. The disturbing footage shows the bomber walking into the busy bar at 9.40pm on the Friday night. Abdeslam walks towards an empty table, before looking down and covering his face with his left hand. There is then a flash behind him and a puff of white smoke as he detonates. Telegraph UK

Iraqis Reportedly Warn Sweden of ISIS Terror Plot
Iraqi intelligence services have reportedly warned Sweden of an ISIS terror plot in Stockholm. "Seven or eight" terrorists are planning an attack in the capital against civilians, according to local newspaper Expressen, citing sources. Swedish police are assessing the information, according to a police statement. "This information is deemed to be of such nature that it cannot be dismissed," police said, adding that they were working closely with national and international partners. The threat level has not been raised in Sweden and remains at "an elevated level." Swedish media are reporting that police are reconsidering security measures for the 70th birthday of Sweden's king next weekend. ABC News

Taxpayer money used to protect Ottawa from Lac-Megantic lawsuits
The federal government used taxpayer money to shield itself from lawsuits related to the deadly Lac-Megantic rail disaster -- but it's refusing to say how much it paid. Ottawa denies any legal responsibility for the fiery 2013 oil-train derailment that killed 47 people, even though it was released from liability by contributing to a $460-million settlement fund for victims and creditors affected by the crash. At least two of the other 24 other settling parties accused of wrongdoing connected to the accident have disclosed

how much it cost them to avoid potential damages and legal fees. So far, the Liberal government is staying mum. "That's a classified amount, but we made a contribution because we felt that it was important," Transport Minister Marc Garneau said Wednesday in Toronto when asked about the settlement. "We don't acknowledge that we had any responsibility; however, we did want to make a contribution because of the impact of this terrible tragedy in Lac-Megantic." Canadian Press (CTV News)

Tragédie de Lac-Mégantic - John Giles se veut rassurant
Le grand patron de la compagnie de chemin de fer a rencontré la population de Lac-Mégantic pour dire que les citoyens n'ont plus à avoir peur. Le président du Chemin de fer Centre du Maine et du Québec, John Giles, comprend l'inquiétude qui hante les citoyens de Lac-Mégantic, mais il croit que leur méfiance va s'apaiser avec le temps. La tragédie de juillet 2013 découle d'une gestion défaillante de la MMA et d'un manque d'application des procédures de sécurité. Plus de dix millions ont été invertis dans la réfection des rails. TVA Nouvelles

Ottawa to consult rail industry on safety recommendations: Garneau
The federal government will consult with industry stakeholders before deciding whether to require railways to install fail-safe train controls, even as carriers in the United States work toward a 2020 deadline to begin using the technology that Canada's transportation investigator says saves lives. Marc Garneau, Canada's Transport Minister, said he will hold discussions with stakeholders before acting on any of the 60 recommendations made in a review of the country's transportation laws commissioned by the previous government. The recommendations include requiring tougher tank car standards for certain dangerous goods, installing in-train video and voice recorders, and taking steps to adopt positive train control (PTC), which can override mistakes by train and track crews. The technology can automatically slow or stop a train in danger of a head-on collision with another train, if a track switch is aligned incorrectly or a train is travelling too fast. Canada's rail investigator, the Transportation Safety Board, said the technology would have prevented the 2012 derailment of a Via Rail passenger train in Burlington, Ont. The train entered a crossover track at 67 miles an hour (108 kilometres an hour), exceeding the speed limit of 15 miles an hour, derailed and struck a building. Three crew members died and 45 people were injured. Globe and Mail

NATIONAL SECURITY / SÉCURITÉ NATIONALE

The propaganda wing of ISIL has recruited several Canadians, former CSIS official says
The propaganda wing of ISIL, known for its gory videos and exploitation of social media, has recruited several Canadians into its ranks, a former senior counter-terrorism official told a security conference Wednesday. Andy Ellis, who recently retired from the Canadian Security Intelligence Service, where he was Assistant Director of Operations, said not all of the roughly 100 Canadians who have converged in the region are active in combat operations. “Many of the Canadians, for example, found their way into the propaganda wing of Daesh,” the 30-year-veteran of CSIS said, using another name from ISIL, in a speech at the Royal Canadian Military Institute in Toronto. “I would argue that would be equally as dangerous, maybe more, than someone who is joining the military wing. A lot of these young Western adherents to Daesh are put on the frontlines and die very quickly. Someone who is working in the propaganda wing can hurt us over and over and over again.” National Post

How Islamophobia is shaping young Canadian Muslims
(…) The majority of young Muslims in Canada feel Muslim first and Canadian second, an Environics Institute survey released Wednesday suggests. Some experts suggest that's because young Muslim Canadians feel a strong societal pressure to have to answer for violence perpetrated by extremists in the name of Islam and are struggling to reclaim their Muslim identity for themselves. Among young respondents who said their citizenship and their faith were important parts of their identity, 61 per cent said being Muslim was the most important part of their identity and six per cent said being Canadian was the most important. Twenty-six per cent said both were important (...) Many young Muslims in Canada feel saddled with a responsibility to have to answer for violent attacks carried out in the name of Islam, said Toronto-based legal scholar Azeezah Kanji. "Being a securitized population under suspicion in Canada is really the dominant experience that we've had," Kanji said. CBC News

Un présumé sympathisant terroriste devra rester détenu
Un homme de 23 ans faisant face à une accusation liée au terrorisme s'est vu refuser une libération sous caution, mercredi, à Brampton en Ontario. Kevin Mohamed devra donc demeurer derrière les barreaux, mais les détails de la décision sont frappés d'un interdit de publication. L'ancien étudiant en génie avait été arrêté le mois dernier parce que l'on craignait qu'il ne commette un acte terroriste. La Gendarmerie royale du Canada (GRC) l'avait alors accusé d'avoir participé ou contribué aux activités d'un groupe terroriste sur une période de deux ans. La police affirme que Kevin Mohamed a commis les offenses en Ontario - notamment à Whitby, Mississauga et Waterloo - entre le 24 avril 2014 et le 25 mars 2016. Presse canadienne (La Presse)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

International emergency system experiment conducted this week
Officials from both sides of the St. Clair River have been taking part in an experiment this week to test technologies designed to help Canadian and U.S. officials communicate during an emergency. Sarnia and Port Huron were chosen for the fourth annual Canada-U.S. Enhances Resiliency Experiment (CAUSE IV) that began Tuesday and was scheduled to be completed at noon Thursday. Philip Dawe, with Defence Research and Development Canada's Centre for Security Science, said 55 participants, on both sides of the border, were involved, along with 20 observers... Locally, the experiment involved Lambton County, the City of Sarnia, Canada Border Services Agency, Bluewater Health and the Blue Water Bridge. Sarnia Observer

Family of Calgary mother isolated in France raising pressure on Ottawa for help
A Calgary man vows to intensify pressure on Ottawa to come to the aid of his sister - known internationally for her stand against homegrown radicalization - who has been exiled in France. Jean-Marc Boudreau said his sister, Christianne, has brought comfort to so many families that have lost children to radical militant groups after her own son, Damian Clairmont, was killed while fighting with terrorists in Syria. But the mother is unable to continue "serving the world for the beautiful cause of peace" because she is stranded in a small town in France after she and her youngest son, Luke, were forced to surrender their passports... The mother suspects the passport dispute has less to do with Luke's application and more to do with her widely publicized criticisms of the Canadian government's efforts to address homegrown radicalization. Calgary Herald

SWIFT confirms additional cyberattacks on its messaging system
The Society for Worldwide Interbank Financial Telecommunication (SWIFT) has issued a warning to its customers that its financial messaging system has undergone repeated attacks similar to those that lead to $81 million from a Bangladesh bank. SWIFT has since issued a mandatory security update for its software that will help customers "identify situations in which attackers have attempted to hide their traces, whether these actions have been executed manually or through malware," according to bankinfosecurity.com. SWIFT would not release any details concerning these attacks or what companies were involved, but the organization did note that the attacks were all similar and that the attackers were able to compromise the targeted banks computer networks and obtain valid credentials to create and send messages, bankinfosecurity.com reported. On April 25 SWIFT confirmed it was aware that malware was targeting its system when $81 million was stolen from a Bangladesh bank in March. SC Magazine

FBI says it won't disclose how it accessed locked iPhone
The FBI says it won't publicly disclose the method that allowed it to access a locked iPhone used by one of the San Bernardino attackers. In a statement Wednesday, FBI official Amy Hess said the FBI does not "have enough technical information" about the software vulnerability that was exploited to make it public. An unidentified third party approached the federal government last month with a method that it said could

get into the phone used by Syed Farook, who along with his wife killed 14 people in the December attacks. The method proved successful. Hamilton Spectator

'I thought the devil's inside him': Mountie in child-torture trial had priest perform exorcism on 'possessed' son

The Mountie on trial for child torture enlisted his brother — a priest — to perform an exorcism on his "possessed" 11-year-old son. "I thought the devil's inside him. I saw his eyes and heard his voice," the Mountie told court Wednesday morning. The chilling detail was revealed under questioning by lawyer Anne London Weinstein, who is defending the Mountie's wife, also on trial for confining the boy and failure to provide necessities of life. It's not clear when the exorcism was performed, but it was sometime before September 2012, and before the Mountie allegedly started torturing and starving his son in their darkened Kanata basement. The Mountie, suspended without pay, has also admitted to burning his shackled, naked son with a BBQ lighter as a form of punishment for misbehaving and refusing to do homework. Postmedia News (National Post)

English-only RCMP officers on Parliament Hill spark complaints

The Royal Canadian Mounted Police is not meeting its obligation to offer services in both official languages on Parliament Hill, according to a preliminary report stemming from four complaints last year. Yvon Godin — who at the time was NDP MP for the New Brunswick riding of Acadie–Bathurst and official languages critic — complained that RCMP officers were not able to provide service in French. With security on his mind following the Oct. 22, 2014 shootings, Godin noted that when he said, "Bonjour" to RCMP officers on the Hill, the response would be, "I don't speak French," he told Radio-Canada. "I thought this made no sense," he said. "As official languages critic, I started a little investigation (...)" The Office of the Commissioner of Official Languages found in an April 2016 report that the complaints — dated Feb. 15, May 27, June 5 and June 8 in 2015 — were founded. As a federal institution, the RCMP is required to offer services in both French and English on Parliament Hill, according to the *Official Languages Act*. CBC News; Presse canadienne (L'actualité)

Opitciwan police back on the job next week

One month after Opitciwan's police force was disbanded, 22 officers will be back on the job next week in the remote First Nation. The local department was disbanded on April 1 as negotiations over a renewed funding agreement between Opitciwan's band council, the federal and provincial governments fell apart. At issue was Quebec's refusal to help pay for the department's $600,000 deficit — a sum it had previously agreed to fund, according to Opitiwan's band council. For Opitciwan to continue paying its police officers as of April 1, the council would have had to divert money from other services like health care and education. Given that the community struggles with some of the highest unemployment levels in Quebec, band chief Christian Awashish says redirecting funds wasn't an option. As Awashish met with representatives from Quebec and Ottawa, the Sûreté du Québec assumed policing duties in Opitciwan at a cost of about $100,000 per week. Opitciwan's locally-run police force operated on less than half that budget. Montreal Gazette; CBC News

'Despicable act': Senior robbed at gunpoint inside Richmond home

Mounties are searching for a man who robbed a Richmond senior at gunpoint inside her own home Tuesday. The RCMP said the robber entered the 80-year-old woman's residence through an unlocked garage door shortly after 5 p.m. The man then pulled out a handgun, demanded the victim's purse and car keys, and then fled in her vehicle. "This despicable act was particularly brazen, especially given the time in which it took place. We are doubling down our efforts in tracking down those responsible for this crime," Cpl. Dennis Hwang said in a statement. CTV News

RCMP puppies trained in Alberta named in annual contest - 13 future police dogs all given names starting with 'J'

Try reading this without saying "aww." Thirteen cute and cuddly pooches set to become police dogs for the RCMP now have names, after nearly 16,000 children from across the nation submitted their picks for

the annual "Name That Puppy" contest. All names had to start with the letter "J." The 13 winners will each receive a certificate, a photo of the puppy they named, a plush German Shepherd toy dog named Justice and an RCMP cap. CBC News

RCMP withdraw pay from one suspended Woodstock officer - Only other N.B. Mountie currently suspended without pay was convicted of impaired driving

The New Brunswick RCMP say they have now withdrawn pay from one of the two Woodstock officers suspended from the detachment. RCMP spokesperson Const. Jullie Rogers-Marsh said the move happened at some time after February 16. Rogers-Marsh said the second officer remains suspended with pay, but did not reveal to CBC News whether the force is trying to remove pay from that member. The RCMP had said in February that they were pursuing suspension without pay for both officers. The two are still subject to a criminal investigation and a Police Act investigation. Four of the Woodstock RCMP's 29 officers were suspended last fall for alleged discreditable conduct. CBC News

Halifax shootings prompt meeting of justice minister, mayor, police - Diana Whalen says there are 'no simple solutions,' highlights programs she says are working

Nova Scotia's minister of justice met with the Halifax's mayor, chief of police, and RCMP Wednesday to discuss improving public safety in the wake of four deadly shootings in the region in the past month. Diana Whalen called it a "starter meeting" aimed at addressing the recent gun violence. She said the two levels of government and the two police services meet regularly one-on-one, but this was their first opportunity to sit around the table as a group. "There are no easy answers," Whalen said, "no simple solutions, and I think the community knows that. They understand that as well as, or better than, we do. "We want to work together. We want to make sure that we're leveraging as many of the resources that we can. But the answer lies in all of us putting our heads together … and it's a long-range plan. It's not something you can do in a snap." CBC News

RCMP confirm Troy Napope's remains found

RCMP confirmed on Wednesday that the human remains located on April 20 near the Saskatchewan Penitentiary belonged to those of Troy Napope. The Office of the Chief Coroner held an autopsy on April 22 to confirm the identity of the remains. The RCMP Underwater Recovery Team located human remains during a planned search in a rural area west of the Saskatchewan Penitentiary in Prince Albert. Prince Albert Daily Herald; Star-Phoenix; CBC News

RCMP investigating bridge fire as suspicious

A day after a trestle bridge near Mayerthorpe was destroyed in a fire, police confirmed the blaze was considered suspicious. On Wednesday, Mayerthorpe RCMP said the fire on the CN Rail trestle bridge, located on the northwest edge of the town, was being handled as suspicious. Police said provincial fire investigators, along with CN Rail officials were at the scene and trying to determine what caused the fire to assist the RCMP investigation. Officials said RCMP were called to the fire on Tuesday, at about 1:20 p.m. – Mayerthorpe RCMP said the bridge fire is the fifth fire they had been called to in the last ten days. CTV News

Nova Scotia RCMP charge Amherst woman with fraud

Nova Scotia RCMP have charged 54-year-old Rhonda Charmaine Kelly of Amherst with fraud and uttering forged documents following a 20-month investigation. Kelly is facing several charges including one count of fraud over $5,000 and nine counts of uttering forged documents. She appeared in Amherst Provincial Court April 25 and is due back on June 23. The RCMP received a complaint in July 2014 of a possible fraud in the amount of several hundred thousand dollars against the Nova Scotia Department of Economic and Rural Development and Tourism. Chronicle-Herald

Bondage cop steps down

A B.C. Mountie has left the RCMP over a controversy involving explicit bondage photos. Photos of Coquitlam RCMP Cpl. Jim Brown posted on a sadomasochism website made the Mountie the subject of three separate investigations in 2012. He was suspended with pay for alleged professional misconduct when the photos were first brought to the attention of the RCMP. Brown is seen wearing his RCMP boots in various bondage photos. CTV News has learned that Brown's disciplinary hearing was cancelled and

the commanding officer of the RCMP in British Columbia said Brown submitted his discharge papers, which were "immediately" signed. "His career with the RCMP is over," Dept. Comm. Craig Callens said in a statement. Castanet

What It's Really Like to Spend Time in a Canadian Prison
An opinion piece states "I'd heard the horror stories about prison. I'd seen the TV shows, movies, and news reports about the rampant violence, race-based wars, and sexual abuse that occurs behind the walls. I heard the advice from friends on how to survive in jail. Some say to find the biggest guy on a range (what inmates call a cell block) and pick a fight with him immediately. Some say to keep your head down and stick to yourself. Some say to go into protective custody. But above all, don't drop the soap. So when I spoke to my lawyer for the first time and heard I was facing over two years in prison, I was scared—two years and over in Canada means time in a federal penitentiary... So when I got to Millhaven Institution's Assessment Unit in Bath, Ontario, I felt like I was starting over again. Right out of the gate it was culture shock. My tattoo was photographed and sent to the Security Intelligence Officer to investigate any gang ties. They had me write down any emergency contacts they might need to know. They instantly put $80 of my personal money on hold until my release—but I knew that would happen." Vice News

Yukon study finds high levels of FASD in the justice system
A Yukon study has found people in the territory's justice system are much more likely to have fetal alcohol spectrum disorder than the general population. Health Canada estimates about one per cent of Canadians have the disability. According to preliminary findings of a Department of Justice study, the prevalence within the Yukon justice system is about 17.5 per cent. FASD is a disability caused when a mother consumes alcohol during pregnancy. People with FASD can have developmental disabilities, problems with memory, and difficulty with sequencing events and understanding consequences... Reports on FASD and the justice system are few and far between. In 2006-2007 a study by Corrections Canada found a 10 per cent rate in federally sentenced men. Yukon News

Fewer crimes committed in Montreal in 2015, report shows
Montreal's overall crime rate dropped in 2015, but the number of violent incidents took a disquieting upturn last year, statistics released by the Montreal police force reveal. And as the number of cyclists has surged, so has the number of those who suffered serious injuries, a statistic police said could be linked to an increase in the number of bike paths. Crimes against individuals, which include homicides, attempted murders, sexual assaults and robberies, rose by 4.5 per cent over 2014, with 19,435 cases reported. The number of attempted murders leaped 48 per cent to 111 cases in 2015, compared with 75 in 2014. Sexual assault cases also saw a large increase, up 17 per cent to 1,299 cases in 2015. "We have to say that, in general, we are satisfied, because the overall crime rate dropped by 2.5 per cent," said Claude Bussières, assistant director of corporate services for the police force. Montreal Gazette

RCMP investigating killing of Canadian hostage by militants in Philippines
The RCMP is conducting a criminal investigation into the murder of hostage John Ridsdel in the Philippines. A senior official says the Mounties are relying on the extraterritorial provisions of the Criminal Code in pursuing the overseas investigation. It means the perpetrators, if found and charged, could one day face justice under Canadian law. The official spoke with The Canadian Press on condition of anonymity given the sensitivity of the ongoing hostage case. Ridsdel, 68, of Calgary, was beheaded earlier this week after a large random demand from his captors, members of the Abu Sayyaf militant group, went unmet. Canadian Robert Hall, abducted with Ridsdel from a marina in September, is still being held along with several others. Canadian Press (CP24; Toronto Star); Presse canadienne (L'actualité)

Headless torso discovered on Jolo Island may be Canadian kidnap victim, Philippine army says
The headless torso of a Caucasian man that may be Canadian kidnap victim John Ridsdel was discovered Wednesday on Jolo Island, Colonel Noel Detoyato, the chief Philippine army spokesman told Postmedia Wednesday. Prime Minister Justin Trudeau confirmed Monday that Ridsdel's severed head had been found that day after a ransom deadline set by Abu Sayyaf for the freedom of the mining executive and three other hostages had passed. The group, which claims to be allied with Islamic State in Iraq and the Levant, had demanded more than $8 million for each of the people they had kidnapped near Davao City last September and have been holding 600 kilometres to the west of there since then in the jungles of Sulu province. We're meeting with Minister Goodale on C-51, and we want you to make sure your voices are heard: What should we say?
Alright OpenMedia community, we need your help! On Thursday, May 5, OpenMedia will be meeting in person with Canada's Minister of Public Safety and Emergency Preparedness, Ralph Goodale to discuss Bill C-51. This is where you come in: We need you to tell us what you want us to say! You have been at the heart of this campaign from the very start. Over 300,000 people have spoken up against this dangerous and ineffective bill. Protests and rallies have been held across the country. Tens of thousands of emails have been sent to MPs. Artists, business leaders, law professors, civil society groups, academics, and experts have all spoken out against this reckless legislation that jeopardizes our rights and freedoms. Open Media

Ontario health workers demand end to 'inhumane' immigration detention process

A group of doctors, nurses and health-care providers have signed an open letter urging the province to stop allowing immigration detainees with health concerns to end up in Ontario prisons. The letter, signed by more than 140 medical professionals, was mailed Tuesday to Community Safety and Correctional Services Minister Yasir Naqvi. Concerns have been raised after two men detained by the Canada Border Services Agency (CBSA) died in separate incidents this spring in Ontario and a 24-year-old man died while being held at the Edmonton Remand Centre. The group behind the letter is calling on Queen's Park to end what they call a "worrisome practice," claiming the transfers of vulnerable people with health issues to provincial prisons is "adversely impacting the health of a very vulnerable population in our province." (…) The letter detailed the many harms those in custody can be exposed to while detained, from illnesses such as tuberculosis, HIV and Hepatitis C to the possibility of being assaulted or injured. "Refugee claimants and other migrants are especially vulnerable to the toxic stress of incarceration, as many have already experienced prolonged and repeated trauma, including torture, in their countries of origin," the letter stated. (…) On Monday, a CBSA spokesman confirmed immigration detainees are not provided with written reasons for transfers. "Detained individuals can speak to a CBSA officer about any aspect of their detention," said CBSA spokesman Travis O'Brien. "The officer is available by phone for any facility and also conducts regular site visits." In the letter, the group also mentioned how these placements have a "profound and debilitating impact" on those dealing with suicidal thoughts because they are sometimes placed in complete isolation or solitary confinement. (…) On Sunday, **Public Safety Minister Ralph Goodale'**s office released a statement saying they are concerned with the recent deaths in government custody and said the federal government is reviewing the detention program. CBC News

OPINION: New bill just a start to protect the rights of transgender people
An editorial states, "On Tuesday, Justice Minister Jody Wilson-Raybould tabled new legislation to better protect the human rights of transgender people in Canada. Timing the announcement to coincide with the International Day Against Homophobia, Transphobia and Biphobia, the proposed legislation would add "gender identity" and "gender expression" as prohibited grounds of discrimination to the Canadian Human Rights Act, along with the hate crimes provisions of the Criminal Code. In doing so, the goal of the legislation is to redress the extraordinarily high rates of discrimination, harassment and violence experienced by transgender people across the country. (…) After the photo opportunities are over on Tuesday, however, Ms. Wilson-Raybould and others in the Liberal cabinet must do more than simply pay lip service to transgender human rights. They need to get to work on a range of federal laws and policies. Take, for example, the legal regulation of transgender women in federal prisons – a portfolio overseen by the **Minister of Public Safety and Emergency Preparedness, Ralph Goodale**. In prisons across Canada, transgender women who have not undergone gender-affirming surgery are forced to be housed in men's institutions. Prison administrators know that placing transgender women in men's facilities is likely to make them vulnerable to violence and sexual assault. Administrators often place them into solitary confinement – a practice that has devastating mental-health consequences. While Ontario and British Columbia recently enacted policies to remove surgical requirements, the federal government has failed to show the same leadership." Globe and Mail

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

Fort McMurray firefighters facing extreme fire conditions - 'We had to pull the firefighters off the line because it was so dangerous out there'
Heavy smoke, limited visibility and an unpredictable fire is making life dangerous for firefighters north of Fort McMurray. "Yesterday the fire was showing extreme behaviour and lots of smoke in the air," said wildfire information officer Travis Fairweather Tuesday. "We had to pull the firefighters off the line because it was so dangerous out there." The 285,000-hectare fire that destroyed whole sections of Fort McMurray earlier this month, forced the evacuation of 8,000 oilsands workers Monday. Most of the workers involved in the evacuation work at 12 plants for Suncor and Syncrude, located between Fort McMurray and Fort MacKay. "Those facilities have some fire treatment in place that will hopefully prevent them seeing too much impact from the fire," Fairweather said. "Any time you see a fire getting close to

anything, it's a scary situation." The fire slowed overnight as temperatures cooled but as the day heats up, the fire is expected to speed up. CBC News

Canada wildfire threatens Fort McMurray again as further 12,000 people evacuated
At least 12,000 people have been asked to evacuate oil sand camps close to the Canadian town of Fort McMurray after a fresh wildfire began to shift to the north. According to the BBC, more than 8,000 people were urged to leave the area on Monday night, in addition to 4,000 people who had already been issued with evacuation orders. Suncor Energy Inc was among several operators which confirmed on Tuesday that it had been forced to shut down operations as a precautionary measure. A spokesman said there had been no damage to the company's assets and that fire defences were in place around the facilities. Suncor and Syncrude Canada also confirmed they had evacuated workers from the area. "Suncor has enhanced fire mitigation and protection around all of its facilities," one Suncor official told AFP. UK Telegraph; Radio-Canada International

Fort McMurray: le feu menace les installations des pétrolières
Les incendies de forêt qui font rage dans le nord de l'Alberta menacent maintenant les installations de l'industrie pétrolière près de Fort McMurray, ont annoncé les autorités, mardi. Tard lundi soir, un avis d'évacuation obligatoire a été diffusé pour les quelque 8000 personnes résidant dans des campements au nord de Fort McMurray. La zone touchée, qui commence à environ 50 kilomètres au nord de Fort McMurray et s'étend jusqu'au sud de Fort MacKay, comprend les infrastructures de Syncrude et Suncor ainsi que celles de plusieurs autres compagnies. Scott Long, de l'organisation de gestion des urgences de l'Alberta, avait déclaré lundi soir que l'évacuation concernait les installations du secteur pétrolier et gazier, affirmant que Fort McMurray n'était pas visé. Selon John Archer, un porte-parole du gouvernement albertain, le brasier n'était pas trop près des infrastructures de Syncrude et Suncor, mais les autorités avaient tout de même décidé d'évacuer les gens lundi soir par mesure de précaution et pour ne pas avoir à lancer une telle opération à 2 h du matin. Presse canadienne (La Presse)

Nearly $1B of oilsands production lost due to Fort McMurray fire - report
A new assessment of the economic impact of the Fort McMurray wildfires says close to $1 billion of oilsands production has been lost. The Conference Board of Canada estimates that the fire in northeastern Alberta resulted in a loss of 1.2 million barrels of oil per day for two weeks, translating into $985 million in lost gross domestic product. That represents about 0.33 per cent of Alberta's projected GDP this year and 0.06 per cent of Canada's projected GDP. Twelve oilsands operations were shut down and several more curtailed output this month because of the wildfire that closed pipelines and forced the evacuation of more than 80,000 people from the area. Canadian Press (Edmonton Journal)

Safety commission says no danger from radiological devices after Alberta wildfire
The Canadian Nuclear Safety Commission says there is no risk to the public or the environment from radiological devices that could have been affected by the wildfire in Fort McMurray. The commission sent two radiation safety specialists to the oilsands city last Thursday after getting a request for assistance from Alberta's provincial emergency operations centre. Those specialists have completed field verifications and confirm that the devices stored in about 20 locations are OK. The equipment, including radiography cameras used to check welding work and portable gauges to measure density of roadways, is all in packaging designed to survive building or vehicle fires. The specialists were also asked to check a radioactive waste site just south of Fort McMurray that is under the control of Atomic Energy of Canada. Canadian Press (CFJC)

Fort Chipewyan firefighter says trying to save Fort McMurray homes was 'heartbreaking' - 'We worked very hard to save whatever we could,' says Kerry Antoine
Kerry Antoine says her mind was made up long before she got the call May 3 to help fight the Fort McMurray wildfire. "I knew the day I became a volunteer firefighter, this was what I wanted to do, even though it takes putting my life at stake," she said. "That's what firefighters do. We train for this stuff." For the past six summers, Antoine has been helping fight fires in Fort Chipewyan, Alta., 200 kilometres north of Fort McMurray. On May 3, the day the wildfire spread into Fort McMurray, Antoine was at work. Her brother's neighbourhood was one of the first to fall under a mandatory evacuation order. "I was so worried about my brother who was living in Abasand. My brother had just got off a night shift so I knew he was at

home sleeping and his kids were at work and his spouse was at work." When she wasn't calling her brother to make sure he was getting out, she was calling her local fire chief asking how soon they would be sending volunt eers to help. "It's just heartbreaking. There's no other words to explain it. Those are our neighbours; Fort McMurray is our neighbour," she said. CBC News

Fort McMurray fire won't devastate economy, says new report
Despite the Fort McMurray wildfire causing widespread devastation and shutting down about half of all oilsands production, a new report suggests the impact to the provincial and national economy will be minimal. The Conference Board of Canada expects the fire will translate into a .33 per cent loss to Alberta's projected GDP for 2016 and just a .06 per cent share for the Canadian economy. The report, released on Tuesday, assumed most of the oilsands producers will return to full production by the end of the month. In addition, the loss of work in Fort McMurray will be offset by increased economic activity elsewhere in the province. "Families have moved temporarily to other areas, mostly within Alberta, and they will spend on food and accommodations and other services - with much of the spending covered by insurance, donations or government transfers," states the report. "At the national level, the impacts will hardly be noticeable." CBC News

Mandatory evacuation caused by intense wildfire near Fox Creek, Alta. dropped
UPDATE: Tuesday, May 17, 2016, 9:42 a.m. MT The Little Smoky area evacuation order has been rescinded. A two hour evacuation notice is in effect for the Town of Fox Creek and residents previously evacuated from the Little Smoky area. A mandatory evacuation order was dropped Tuesday morning for residents in northwestern Alberta whose community has been threatened by a wildfire. About 200 residents in the Municipal District of Greenview, south of the Hamlet of Little Smoky between Township Roads 650 and 664 and Range Roads 210 and 215 on both sides of Highway 43, were allowed to return home but remain on a two hour evacuation notice. The evacuation notice was also in effect for the Town of Fox Creek and Little Smoky. Global News

Heavy rain expected later this week in the Peace Country
Peace Country residents are being advised to brace themselves for a major moisture event, which could also see a return to more seasonable overnight low temperatures. The season's first large scale cold low is heading this way from the coast of Alaska and both Environment Canada and the Weather Network agree it is likely to result in a significant two to three day total precipitation post, beginning Wednesday night. How significant however, seems difficult to determine as estimates are running from 30, to more than 60 millimetres or one, to more than two and half inches. The Weather Network, before it revised it this morning, had posted an overnight long range forecast calling for 53 to 67 millimetres of rain, with more than half of it on Thursday, but has now essentially cut it in half to just over 30. Caddy Lake fire shrinking, evacuation orders lifted in Whiteshell, northwest Ontario - Fire detected May 5 in Whiteshell Provincial Park forced dozens to leave area
Cottagers and year-round residents are heading back to their properties in Caddy Lake, West Hawk Lake and Ingolf, Ont., after officials from the Manitoba and Ontario governments lifted forest fire evacuation orders at 8 a.m. Tuesday. Two forest fires straddling the Manitoba-Ontario border, first detected May 5, forced dozens of evacuations. One burned in the Nopiming Provincial Park area east of Beresford Lake and into Ontario, while the other fire was in Whiteshell Provincial Park, northeast of Caddy Lake, and northwestern Ontario. Bill Benson and his wife had three hours to gather their belongings and get out 10

days ago. He has been staying on the south side of West Hawk Lake, across the lake from his property, watching the fire puff clouds of smoke into the sky nearby. CBC News

Feux de forêt et qualité de l'air : toujours des préoccupations en Saskatchewan
Le risque de feux de forêt est de nouveau extrême sur une bonne partie de la Saskatchewan cette semaine alors qu'Environnement Canada maintient son avis concernant la qualité de l'air pour le nord de la province. La province indique que le risque d'incendie est particulièrement élevé dans l'ouest de la Saskatchewan, près de la frontière albertaine. Le risque augmente ailleurs également en raison des températures chaudes et de la faible quantité de précipitations attendues au cours des prochains jours. L'interdiction de faire des feux à ciel ouvert dans plusieurs parcs la semaine dernière perdure jusqu'à ce que les conditions s'améliorent. Radio-Canada

Saskatchewan summers could be even hotter, drier in future
A prairie climate think-tank says Saskatchewan should brace itself for hot, dry weather in years to come. Over the next 30 years, research from the Prairie Climate Centre shows the number of 30+ C days in an average summer is expected to almost double. By 2080, at current carbon emission rates, that number could quadruple. "That just transforms the climate of the prairies," said Danny Blair, Director of Science for the Prairie Climate Centre. "Even if we significantly reduce our carbon emissions, there's a really important change coming to the prairie climate." The centre has created an online tool called a climate atlas that shows how climate is expected to change on the prairies. The website allows people to track climate data down to the Rural Municipality level. "Saskatoon's summer climate, under our current really bad emissions scenario, will have summers like that of Colorado and New Mexico," said Blair. While the amount of rain and snowfall is expected to increase in the winter and spring, summers are expected to get much drier. That is expected to have consequences on everything from forest fires to agriculture. CBC News

U.S. Customs Brokerage Leader, Carmichael International Service Expands To Canada
Carmichael International Service, a division of APL Logistics and one of the largest customs brokerage, trade compliance and consulting specialists in the United States, today announced that it will expand its full suite of services into Canada. The expansion will cover all major entry points into Canada. With this move, Carmichael will offer seamless assistance to importers throughout the USA and Canada. The move marks Carmichael's first expansion outside of the U.S. in the company's 55-year history. The expansion will be facilitated through the Kintetsu World Express (KWE) office network in Canada. KWE is the parent company of APL Logistics. "We are excited to offer our full suite of customs brokerage and trade compliance services and expertise to Canadian customers," said Todd Boice, President of Carmichael International Service. "This milestone event will establish a full-service Canadian footprint and network right out of the gate. Our whole team is looking forward to the single-source synergies and conveniences that this expansion will offer to North American shippers." Carmichael's Canadian Customs Brokerage operation will initially serve clients at border crossings and major airports through dedicated offices operated by KWE in Canada. Key offerings include: 24-hour/6-day a week coverage; compliance and transaction validation; classification; Non-resident importer (NRI) programs; documentation; duty payment processing; regulatory compliance; and electronic entry preparation, filing and release. All of these services feature full electronic integration with CBSA's ACROSS system. And all can either be used solely in Canada or integrated with Carmichael's U.S. or global service offerings. Canada: Immigrant Children In Canada Outperform Canadians
Immigrants play an important role in bridging gaps in the labour market, both short and long-term. Statistics now confirm that the children of immigrants outperform children from Canadian-born parents in

educational attainment thus adding another important benefit that immigrants bring to Canada. These findings are outlined in a Statistics Canada paper entitled 'Educational and Labour Market Outcomes of Childhood Immigrants by Admission Class' and reveals that children of immigrants graduate high school at a rate of 91.6 per cent, against 88.8 per cent of children who are third generation or more. At university, the gap increases, with 35.9 immigrant children graduating against 24.4 per cent from the established Canadian group. In educational terms, third generation Canadians are also bettered by every class of refugee in both the high school and university graduation categories. Only when it comes to average earnings does the third-generation Canadian group rank on top, at $46,100 compared to $42,900 for immigrants. Mondaq

Canadian Border Equally Vulnerable as Mexico
The U.S.-Mexico border is a hotbed for controversy regarding illegal immigration, but immigration officials have become equally as worried with the Canadian border. Border Patrol officials have expressed concerns about the amount of people trying to get into the U.S. through Canada as well as the drug smuggling. “Its definitely less secure, its longer and there are far fewer agents that are assigned to the Canadian border,” says Shawn Moran, spokesperson fro the National Border Patrol Council. “You have large areas that go largely unpatrolled for long stretches of time,” he says. “So if someone were to cross the Canadian border in a remote area, it could take several hours for a border patrol agent to get out there and be able to check, and hopefully apprehend that person.” Moran says radical Islam also is a real threat along the northern border, pointing to an arrest made back in 2000. “Border Patrol agents were the ones that stopped the 'Millennium Bomber' who crossed through Port Angeles, Washington,” he says. “So we know there is several hundred radicalized Canadian citizens, and that is a concern to us, that they would try to come to the United States and conduct attacks here.” KTRH

New Documents Show How Canadian Cops Use Secret Phone Surveillance Technology
New court documents are shedding more light on the controversial use of mobile phone surveillance technology by Canadian police, the second such case to emerge this year. In the new case, court documents recently filed in a Toronto court show that the Royal Canadian Mounted Police (RCMP) used a device commonly known as a Stingray, or IMSI catcher, during a pair of criminal investigations into organized crime in early 2014. However, lawyers for the accused have argued that police misrepresented the nature of the device when seeking permission for its use by failing to disclose its range, its ability to pinpoint the location of phones, and potential for interference with 911 calls. In a hearing that was originally slated for Tuesday — but postponed — the defense will seek more information about the IMSI catcher's capabilities and operating manual, the device's effect on non-targeted phones, and a copy of the non-disclosure agreement (NDA) between the RCMP and the device's manufacturer. Notably, crown lawyers have argued the NDA prevents the RCMP from disclosing further information about the device, its capabilities, and how it used. "This is despite the fact that the agreement in place — likely akin to the ones in place with American law enforcement agencies — is almost surely unconstitutional," the defence lawyers write. The existence of the highly secretive technique has been known in the US for years, but Canadian police have attempted to keep details about the technique secret. It is only in the past few months that information detailing the use of IMSI catchers by police in Canada has come to light. The RCMP have frequently been in court in recent years, fighting to keep a lid on its high-level surveillance tactics. Last month, VICE News revealed details of how the police agency obtained the global encryption key for all consumer-grade BlackBerry phones, and used it to bust a mafia murder plot in Montreal. Vice News

Case involving first documented use of 'stingray' technology in Toronto goes to trial

On Feb. 21, 2014, Detective Shingo Tanabe swore an affidavit in hopes of getting a warrant. Feuding gangs had been shooting in the streets, so he told a judge some powerful surveillance was in order. He suggested the Asian Assassinz gang could be dismantled only if Toronto Police could get a read on its shifting array of mobile phones. Police teams shadowing suspects needed a machine that mimicked a cellphone tower, he argued, capable of capturing data from all phones in a given radius. The document acknowledged some risks. Such as possible inadvertent interference with bystanders' data or 911 calls. Or, even that police could run afoul of Canada's radio laws. Yet, "investigators require a means to covertly identify the numbers of these mobile devices without alerting the subjects of the investigation," Det. Tanabe wrote. The sworn statement, obtained by The Globe from court documents, reveal the first documented use of police "stingray" technology in Toronto, the country's most densely populated metropolis. Across North America, this mobile-phone-targeting device - also known as an "IMSI catcher" - is being revealed as controversial and indiscriminate, but judges have endorsed the police legal logic in this case and others. Like other law-enforcement agencies in North America, Toronto Police have never publicly confirmed using an IMSI catcher. The force last year fended off a freedom of information request from a journalist by arguing before a tribunal that any such disclosure "would quickly lessen its effectiveness" or even "jeopardize the safety of law enforcement officials operating such devices." (…) The RCMP appears to have pioneered police use of such devices in Canada, and it is not clear how much latitude municipal forces have to use them. The Toronto Police affidavit materials suggest a Mountie expert was brought in to operate the machine in Toronto. Globe and Mail

Courtroom sealed as undercover officers testify at murder trial

An Edmonton court will take extraordinary steps today to protect the identities of five undercover RCMP officers set to testify at a first-degree murder trial. Had the police force had its way, the public and the media would have been banned from hearing what the officers have to say. The case involves Shawn Wruck, who is accused of murdering his girlfriend, Shannon Collins, in 2007. It took the RCMP years to lay charges. Wruck was arrested in 2013 after he allegedly confessed his crime to undercover officers in a so-called "Mr. Big" sting. That makes the officers' testimony in this case is crucial. Mr. Big sting operations involve police posing as criminals in an attempt to obtain a confession from a suspect. The target is often told a confession is the only way they can join a fictitious criminal organization. Last Friday, a federal Crown prosecutor representing the RCMP served 11th-hour notice to the judge and the lawyers involved in the case that she would apply Monday morning to have the courtroom sealed during testimony from all five undercover officers. Notice was also served to an Edmonton lawyer representing the media. CBC, Postmedia and CTV all opposed sealing the courtroom. "All of us find ourselves in what I would describe as an awkward situation," lawyer Fred Kozak told the court Monday. Justice Donna Shelley agreed, and appeared concerned about the short notice. "It could not have been a surprise to the RCMP that these officers were going to testify," she said. "It certainly could have been brought a long time ago." The RCMP requested the extreme measure to protect the safety of their undercover officers, concerned that suspects in other cases might attend the Wruck trial to expose their identities. CBC News

Woman's lengthy stay in Yellowknife RCMP cells unconstitutional, rules judge

A judge has ruled that a regular practice of the Northwest Territories justice system - holding women who are awaiting bail hearings in Yellowknife in RCMP cells - is a violation of the Charter of Rights and Freedoms. Women in custody awaiting court hearings in the city are often held in the RCMP detachment cells because there is no women's correctional facility in Yellowknife. On Friday, Judge Robert Gorin reduced a woman's 10-month sentence to eight months because of the charter violation. The woman had pleaded guilty to trafficking cocaine. She was kept in RCMP cells in Yellowknife for 12 days. "If she had been a male offender, in the normal course, she would have spent a day or two in RCMP cells," said her defence lawyer, Peter Harte. A man in the same circumstances would be housed at the North Slave Correctional Centre. Harte successfully argued that the extended stay in RCMP cells violated the woman's constitutional right to equal treatment under the law. "At North Slave Correctional Centre, you're not in solitary confinement - or close confinement as it's now called. You're in the general population, you get to watch TV, you get to go to the bathroom without having a camera watching you." The Crown had asked for a sentence of 15 to 18 months. CBC News

Dangerous new drug making its way north

Members of the Bonnyville RCMP Detachment are watching to see if the dangerous new opioid W-18 surfaces in the community. The drug first surfaced in the southern reaches of Alberta. It then appeared in Lethbridge, moved to the streets of Calgary and was finally identified in Edmonton last month. "I suspect it will continue to travel northward. I don't know when or the location but logically we can assume it will continue to travel north, though we haven't seen it yet," said S/Sgt. Luis Gandolfi. Gandolfi brought W-18 to the attention of town council last Tuesday. "It's a new trend we are starting to see in the province. It's my job to keep council informed," said Gandolfi. "(W-18) has been getting my attention so I wanted council to know that (Bonnyville RCMP) is aware of the issue." W-18 is a sister drug of Fentanyl. It is an opioid compound that can be pressed into pills. Fentanyl is 100 times stronger than morphine, and W-18 is 100 times stronger than Fentanyl. "It's like anything new. If there's something new, people want to try it if that's their lifestyle. (W-18) is the new kid on the block, a year ago it was Fentanyl," said Gandolfi. W-18 can be pressed into pills, or ingested as a powder mixed in with food or liquid. Doses are unreliable as they are manufactured by dealers. The first dose can be deadly. Gandolfi explained drug trends are slowly changing in the region. Methamphetamine is becoming more regular, as is cocaine. Bonnyville Nouvelle; Energetic City

Toronto gun violence must be addressed by entire city, Rexdale pastor says
A Toronto-area pastor says there's a feeling of hopelessness and helplessness in the city's Rexdale neighbourhood and it's a problem for the entire city to fix. On Sunday, a 35-year-old pregnant woman was shot and killed in a drive-by shooting while riding in the back seat of a vehicle in the area. Toronto police say Candice Rochelle Bobb shot was in the chest, but add she was not the likely intended target. Authorities say the 20-week-old premature baby is now in stable condition, but residents of Rexdale are still trying to cope with the reality of gun violence in the area. "I think the community is rightly feeling shocked and outraged," Sam Aragones, a pastor with the Rexdale Alliance Church, told host Matt Galloway Tuesday on CBC Radio's Metro Morning. (…)The pastor says he wants to see all three levels of government working to address issues plaguing the community, from a lack of resources and opportunities to a need for a stronger police presence. CBC News

Art installation seeks to unwrap human trafficking
Sarnia will soon be the latest community host to an interactive gift-box display highlighting the sordid reality of human trafficking. The Sarnia-Lambton Committee Against the Trafficking of Women and Children, along with a slew of partners, is bringing to the community a walk-in, seven-by-11-foot, steel GIFT (Global Initiative to Fight Human Trafficking) box. Outside, it's a pretty package, symbolic of the promises of wealth, travel and a better life that traffickers make to their would-be victims. But inside, stories and information unwrap the grim truth. Human trafficking includes people bought and sold for forced labour, sexual exploitation, organ harvesting, child soldiers and other purposes, according to the Sarnia-Lambton committee. "We still hear from people in our community, 'Really? Is that a problem in Sarnia?' And people have no idea that, yeah, it is happening here," said committee chairperson Michelle Batty. Sarnia may not be a likely destination site for human trafficking, but being a border community, Sarnia is part of the corridor along which people are trafficked from one destination to another, she said. Attentat commis à Paris en 1980: le suspect canadien sort de prison
Le principal suspect d'un attentat commis à Paris en 1980 contre une synagogue, l'attentat de la rue Copernic, a été remis en liberté avec un bracelet électronique, après un témoignage de son ex-épouse qui conforte son alibi et nécessite de nouvelles investigations. Trente-six ans après les faits, l'enquête est ainsi à nouveau relancée dans un dossier où les victimes avaient repris espoir après l'extradition fin 2014 d'Hassan Diab depuis le Canada, où il était un respectable professeur d'université en sociologie. Âgé de 62 ans, le Libano-Canadien est mis en examen en France, notamment pour assassinats terroristes, et considéré dans l'enquête comme l'auteur présumé de cet attentat perpétré devant une synagogue de l'ouest de la capitale. Bilan: 4 morts et une quarantaine de blessés le 3 octobre 1980, dans le premier attentat contre la communauté juive en France depuis la Seconde Guerre mondiale. Une juge des libertés et de la détention a mis fin jeudi à la détention provisoire du suspect et ordonné son assignation à résidence avec bracelet électronique, ont indiqué à l'AFP des sources judiciaire et proche de l'enquête. Le parquet de Paris a fait appel. Une nouvelle audience aura lieu le 24 mai. La Presse

Auditor general says leaks of spending review did not come from his office
Auditor general Michael Ferguson says a leak of his high-profile review of Senate spending couldn't have come from his office, pointing the finger back at the Senate as the source of the unauthorized release. Ferguson said his office hired an outside security firm to investigate his staff to see if any of them could have leaked the audit to journalists ahead of its public release in early June 2015. He told senators investigating the source of the leak that he is confident any information in the audit didn't come from his people, but said he can't be 100 per cent sure. It was that possibility that senators on the Senate's rules committee locked on to as they used the morning meeting to blame Ferguson's office as the source of the leak. This investigation is the second time in as many years that the Senate has looked into the leak of Ferguson's report, an event that senators argue violated their parliamentary privilege and the right to see the document before the public. In some cases, senators said they learned the details of the audit from reading media reports. Leaks to multiple media outlets, including The Canadian Press, made public the names of nine senators who would be recommended for referral to the RCMP for a criminal review, the total amounts owing for the 30 senators identified in the report as having problematic expense claims and the recommendations Ferguson made to overhaul Senate spending rules. Surveillance de Salah Abdeslam: le travail de la police belge mis en cause
Le travail de la police belge dans la surveillance de Salah Abdeslam, seul survivant des commandos des attentats du 13 novembre à Paris, a été à nouveau mis en cause mardi par une télévision belge. Trois semaines avant les attaques qui ont fait 130 morts à Paris, Salah Abdeslam publiait le 23 octobre sur Facebook une photo où il pose avec l'emblème de l'organisation État islamique (EI), explique notamment

la RTBF, sans citer de source. La chaîne publique, citant un document confidentiel des autorités belges, indique par ailleurs que les enquêteurs belges disposaient d'informations sur des «échanges directs», début 2015, entre Salah Abdeslam et son vieil ami Abdelhamid Abaaoud, jihadiste notoire et alors futur organisateur des attentats de Paris. L'image d'un Salah Abdeslam revendiquant sur les réseaux sociaux ses liens avec l'EI n'avait pas échappé à l'Organe de coordination pour l'analyse de la menace (OCAM), mais «cela n'a, en son temps, entraîné aucune réaction ni du côté de la police, ni du côté du renseignement», selon la RTBF. Salah Abdeslam et son frère Brahim, originaires de Molenbeek, en région bruxelloise, avaient pourtant été signalés comme étant en voie de radicalisation dès janvier 2015. Agence QMI (Journal de Montréal, TVA Nouvelles)

Bombings in Baghdad kill at least 69

A wave of bombings struck outdoor markets in Shia-dominated neighbourhoods of Baghdad on Tuesday, killing at least 69 people, officials said — the latest in deadly militant attacks far from the front lines in the country's north and west where Iraqi forces are battling the ISIS group. The new, higher death toll comes after a bombing in the northeastern Baghdad neighbourhood of Habibiyah killed nine people and wounded 18 early on Tuesday afternoon. Police officials say the attack targeted a restaurant. In the largest attack of the day, a car bomb struck a crowded market in Baghdad's northeastern Shaab neighbourhood, killing 34 people there and wounded 75. Elsewhere in the Iraqi capital, at least 26 were killed. CBC News

Europe's Top Cop: It's 'Almost Certain' Terrorists Will Try to Strike Again

"The threat is alive and current. Another attempted attack is almost certain." For months, E.U. officials have faced criticism for failing to prevent the Paris and Brussels attacks, with many intelligence experts blaming the lack of information sharing. Away from the debate and out of the spotlight, the E.U's law-enforcement agency Europol has quietly tried to piece together the terror threats, working out of its sleek, modern headquarters in the small Dutch capital of The Hague. Europol has not escaped criticism, too: Some E.U. lawmakers fear some European officials want the organization to become a "European CIA." However, the organization is tiny by comparison to the CIA, with a staff of about 1,000 and a budget in 2015 of €94.4 million ($106 million). On May 13, exactly six months after the Paris attacks, the organization invited TIME into its fortress-like building to discuss the ongoing terrorist threat in Europe with Europol director Rob Wainwright. Wainwright's assessment is sobering, including that "several hundred" battle-trained European jihadists are likely plotting further major attacks, and that his agency is supporting some 50 ongoing terrorist investigations. Wainwright, who is British, is also convinced his country will be far less secure if Britons vote on June 23 to leave the E.U. in a so-called "Brexit." As for Europe as a whole, he says: "The threat is alive and current. Another attempted attack is almost certain." Time (2016-05-16)

Leaked NSA docs show details on Russian mobster, search for WMDs in Iraq, Guantanamo Bay 'Tiki Bar'

In-house newsletters from the clandestine National Security Agency have been released by an online news site -- part of the mountain of documents leaked by former NSA contractor Edward Snowden. The Intercept, whose founding editors were the first to publish documents leaked by Snowden, released on Monday the first batch of nine years' worth of the newsletters, which offer a behind-the-scenes glimpse into the NSA's work. The newsletters reveal efforts to eavesdrop on a Russian crime boss, the search in Iraq for possible weapons of mass destruction and help with interrogations at the U.S. military prison at Guantanamo Bay, Cuba. An article in the May 2003 newsletter describes how NSA spent "many months" obtaining the phone number of a Russian organized crime figure so his calls could be intercepted. The State Department asked the NSA for information on the boss of the Tambov crime network in Russia -- a figure known only as "Mr. Kumarin" -- and whether he had any ties to Russian President Vladimir Putin. The man later was convicted of fraud and money laundering and sentenced to 14 years behind bars. In a newsletter article published Dec. 22, 2003, an NSA liaison officer recounts a temporary duty assignment at Guantanamo Bay where the task was to provide intelligence to support Defence Department, CIA and FBI interrogations of detainees picked up off battlefields. The job entailed relaying information back to NSA, based at Fort Meade in Maryland. But sometimes, NSA would share "sensitive NSA-collected technical data" to help the interrogators. CBSA considers electronic tracking of detainees rather than holding them in custody
The Canada Border Services Agency is looking into tracking detainees electronically, rather than keeping them in custody. A government tender posted online this month asks industry for feedback on how to manage alternatives to detention, "including a community supervision program supported with electronic supervision tools," for people detained under the Immigration and Refugee Protection Act. In the criminal justice system, electronic supervision usually means using an ankle bracelet or something similar to track people via GPS or cellular data. It's used in several Canadian jurisdictions, including Nova Scotia and Ontario. The CBSA has the oft-criticized — and largely unchecked — power to hold non-Canadians in migrant detention centres indefinitely. There are usually about 600 "clients" in custody, according to the tender. With the government promising to increase oversight, the agency appears to be looking for ways to reform its practices. "Detention guidelines require CBSA officers to consider all

reasonable alternatives before detaining someone for immigration purposes and will consider all release proposals presented by or on behalf of the detainee," spokeswoman Wendy Atkin said (...) **Public Safety Minister Ralph Goodale** plans to convene an all-party parliamentary committee this year to look at the activities of CBSA and other security and intelligence agencies. ***"We will also be looking at where there are gaps or holes in the existing architecture," Goodale*** said in a scrum Wednesday. ***"One obvious one is CBSA, the border services agency that has no review mechanism whatsoever."*** Postmedia (National Post)

Fort McMurray Wildfire / Feu de forêt à Fort McMurray

Notley gets kudos in handling Fort McMurray wildfire crisis, but hard work yet to come
Alberta Premier Rachel Notley is getting high marks for leadership in handling the Fort McMurray wildfire crisis, but political observers say the disaster remains a dicey political proposition with limited upside and a lot of downside. Political scientist Duane Bratt says the process of getting people back into their homes and getting aid and reconstruction money will tell the tale on how Notley will be remembered in the long term for her handling of the crisis. "On the political side ... if you handle it well, it's a short term blip," said Bratt, a political scientist with Mount Royal University in Calgary. "If you screw it up, it never goes away." About 80,000 evacuees begin returning in phases to Fort McMurray on June 1, almost a month after a raging blaze broke through the firelines and destroyed 2,400 structures, most of them houses. Canadian Press (Global News, Calgary Sun, Edmonton Sun)

Firefighters help their colleagues deal with stress of Alberta wildfire
There are small teams of Alberta firefighters travelling to Fort McMurray who aren't on the front lines of the wildfire that's been threatening the city, but are instead helping by listening to those who are. Patrick Jerome, a Medicine Hat firefighter, is a member of his department's Critical Incident Stress Management Team that recently travelled to Fort McMurray to assist crews deal with the mental effects of fighting such a large fire, which forced the evacuation of the city. Post-traumatic stress disorder is a known side-effect of emergency service work such as firefighting, and it's something that teams like the one Jerome is on work to prevent. "The fires that those guys fought is a lifetime of fires for a firefighter. It's just so much firefighting that they've done in so little time," said Jerome, speaking from Medicine Hat. "It's just so much. I can't believe what those guys went through." The four-member Medicine Hat team, which includes their chaplain, aren't mental health professionals but are trained in managing stress and draw from their own experiences. Canadian Press (Calgary Herald, Toronto Sun, Ottawa Sun, Calgary Sun, Edmonton Sun, Chronicle-Herald)

Evacuation order lifted for all Fort McMurray oilsands camps
A mandatory evacuation order has been rescinded for the remaining oilsands camps in the Fort McMurray area that were evacuated last week. Workers won't be able to return, however, until Alberta Agriculture and Forestry and Alberta Health Services complete fire and health inspections to ensure occupant safety. There is no timeline set for these inspections, but they are being completed as soon as possible, said Robin Smith, press secretary for the Regional Municipality of Wood Buffalo. CBC News; Global News; Bloomberg

Thousands of oilsands workers are losing pay while Fort McMurray fires shuts sites
While wages are continuing for many employees of oilsands companies forced off the job by Fort McMurray wildfires, thousands of tradespeople hired by contractors are off the payroll. "It's certainly an economic hardship. People have bills to pay, people make plans around when they expect the work will take place," Warren Fraleigh, executive director of the Building Trades of Alberta, said Friday. "Folks who have had a fairly lean winter (were) waiting for this work." He estimated 2,000 to 4,000 members of the trade union umbrella group lost their jobs after many oilsands operations were shut down or scaled back because of fire safety concerns. Postmedia (Financial Post, National Post)

Support for Fort McMurray spans the globe

News of the Fort McMurray wildfire has people around the world opening up their pocketbooks for displaced residents. The wildfire is now more than 520,000 hectares in size and remains out of control, but people across the globe are finding ways to help. Students at Hangzhou International School, a private K-12 school in China, are selling "Stay Strong For Fort Mac" wristbands to raise money for the Canadian Red Cross. They've already sold out of wristbands, and are in the process of ordering more. CBC News

Feux de forêt : des ordres d'évacuations levées dans l'est du Manitoba
Les ordres d'évacuation ont été levés pour les régions de Nora Lake et Florence Lake, a déclaré le Service des incendies de forêt du Manitoba. Des pompiers travaillent encore près des routes environnantes. Ils peuvent à l'occasion retirer des arbres devenus dangereux, ce qui peut perturber la circulation automobile. Le gouvernement demande aux conducteurs de ne pas dépasser 20 km/h en raison du mauvais état des routes et de faire attention aux pompiers vêtus de gilets aux couleurs vives. Par ailleurs, il est encore interdit de faire des feux en pleine nature dans le centre et l'est du Manitoba. Certains feux de camp sont permis dans des structures désignées. Le Manitoba a enregistré 74 feux de forêt depuis le début de l'année. Radio-Canada; CBC News

Cottagers allowed back, but business slow to return in Caddy Lake
The wildfires along the Manitoba-Ontario border are hampering business in cottage country. Louay Alghoul, who owns Caddy Lake Resort in Manitoba's Whiteshell Provincial Park, said he's grateful the fire didn't touch his business but the situation has made for a slow start to the season. He's had 20 per cent drop in business compared to last year, but he's staying positive. If the rest of the summer holds out to be as nice as this weekend, in terms of the weather, Alghoul expects business to bounces back quickly. "We're ready for a really good season and it's starting beautiful," he said. CBC News

Possibility of funnel clouds today in Sask., Environment Canada says
Funnel clouds are possible in central and west-central Saskatchewan today, Environment Canada says. The weather agency issued a weather advisory for the Prince Albert, Martensville, Battlefords and Kindersley areas on Monday morning. It said a low pressure system spinning over southwest Saskatchewan will lead to the development of scattered showers and thunderstorms late this morning into this afternoon. As these storms develop, conditions will be favourable for funnel clouds. The threat of funnel clouds will decrease later this afternoon. CBC News; Radio-Canada; 620 CKRM

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

The fearless woman behind America's cyber rapid response team
Amid a torrent of cyberattacks and seemingly endless data breaches, the United States Computer Emergency Readiness Team, the government's premier cybersecurity monitoring unit, has never been busier. US-CERT, as it is known, protects the country's computer networks by analyzing malware samples, intrusion patterns, and other digital residue left behind by hackers, and then packages those insights into guidance for federal agencies and critical-infrastructure sectors (including the nation's most

sensitive shared resources, like power plants and hospitals). It deploys incident-response teams to the sites of massive cyberattacks (it worked with Sony in 2014 and the Office of Personnel Management in 2015), and it coordinates international cybersecurity efforts with other nations' CERTs. The mission of US-CERT, a Department of Homeland Security unit established in 2003, is to study active intrusions for lessons that can inform the design of more robust security systems. "One person's detection can be another person's mitigation," Ann Barron-DiCamillo, director of US-CERT, told the Kernel (…) As we see certain things trending, certain vulnerabilities—we put out a paper, I believe it was around this time last year, or maybe in the spring; I have to go back and look—and we partnered with our Five Eyes partners, so with CERT-UK, **Public Safety Canada,** Australia CERT, as well as the New Zealand CERT, and we looked across our domestic markets at what common vulnerabilities were we constantly seeing as far as incident-response activities and engagements, not only in our government space but also in our critical infrastructure and just general space of the Internet within our domestic markets. We came up with about 31 different CVEs, which are common vulnerability exploits. The Kernel

Registre des armes: des policiers retraités le déconseillent
Le policier retraité du Service de police de la Ville de Montréal (SPVM) Marc Brisebois se souvient d'avoir toujours été reconnaissant pour toute information concernant les armes à feu qui apparaissait à son écran lorsqu'il devait aller patrouiller ou intervenir dans une résidence. M. Brisebois, qui a pris sa retraite en 2006 après 30 ans de carrière, a affirmé que ces renseignements permettaient de prendre des décisions plus rapidement, et que ses collègues et lui-même étaient heureux de les avoir. Vingt et un ans après la création du registre fédéral des armes à feu, qui a été aboli en 2012 par l'ancien gouvernement conservateur, le Québec travaille à mettre sur pied sa propre base de données sur les armes sans restrictions. Darryl Rondeau accused of pretending to be a Fort McMurray evacuee, bilking donations
A British Columbia man is facing charges for impersonating a Fort McMurray evacuee and allegedly taking advantage of people who were trying to help, police say. The RCMP says they received a complaint from Family and Community Support Services in Claresholm, Alta., because they believed a man and woman were pretending to have evacuated the wildfires. Police allege the man travelled to Claresholm and "took advantage" of people who thought they were helping wildfire victims. Canadian Press (National Post, Times Colonist, Vancouver Sun)

Woman pulled dead from water near Peggys Cove
A woman is dead after being seen in the water off of Peggys Cove, N.S., on Sunday afternoon. Peter Andrews, the On-Duty Division Commander for the Halifax Fire Department, confirmed they responded to a report of a woman spotted in the water around 1:40 p.m. local time. A local fishing boat pulled the body of the woman from the ocean and the crew attempted CPR. The boat transported her to the Government Wharf where emergency workers continued CPR, but the woman was pronounced dead. Peter Richardson, owner of Peggys Cove Boat Tours, said the woman was seen on the rocks at the popular tourist destination just moments before she ended up in the water. "There's a couple of people here that were standing close to her, but they saw her one minute and the next minute, she was in the water," Richardson said. CBC News; Chronicle-Herald

Moncton restaurant employee shot with pellet air gun in holdup, say RCMP
An armed robbery Sunday night at the Sun Sun Restaurant on Mountain Road in Moncton, N.B., has the local RCMP seeking the public's help. At 10:50 p.m. Sunday, "a man armed with a pellet air gun approached an employee out back of the Sun Sun Restaurant located at 979 Mountain Road and demanded money. During the incident, the employee was shot with the pellet gun." police said in a written release Monday. The employee was transported to hospital for treatment for non-life-threatening injuries, RCMP added. CBC News

Fusillade impliquant un policier : 10 accusations portées contre un Winnipégois
La Gendarmerie royale du Canada (GRC) annonce le dépôt de dix chefs d'accusation à l'endroit de Carl Devin Beaulieu à la suite d'un incident qui s'est soldé par une fusillade jeudi matin près de Portage-la-Prairie, dans le sud-ouest du Manitoba. Selon la GRC, un de ses agents a ouvert le feu sur Carl Beaulieu à la suite d'une « interaction » qui s'est produite près de l'intersection de l'autoroute Transcanadienne et de la route 240. Carl Beaulieu a été hospitalisé, mais on ne craint pas pour sa vie. M. Beaulieu fait face à de nombreuses accusations liées à la possession d'une arme dangereuse et à une conduite au volant imprudente. Radio-Canada

RCMP patrolling highways for Canada Road Safety Week
Officers increased presence during May long weekend as part of national strategy. RCMP Cst. Chris Gunn explains the various pieces of equipment inside his patrol car to premier Wade MacLauchlan before heading to a checkstop in Queens County. Police will be patrolling Island highways today as part of a national campaign to make roads safer in Canada. Officers choose the first long weekend of the "summer" from May 17-May 23 to hold Canada Road Safety Week. Charlottetown Guardian

Saskatchewan RCMP on lookout for missing man
Saskatchewan RCMP are asking the public for help in locating a missing 40-year-old man. Keith Leavens, of Lashburn, was last seen on the evening of May 17 when he left his mother's residence in Lloydminster. Maidstone RCMP believes he may have been in the Lloydminster area at around 9 p.m. CT on May 19. Leavens is believed to be travelling in his grey 2006 Pontiac Montana van, which may have Alberta licence plate BSL3619. Global News; StarPhoenix

Police seeking help in finding missing Royal Road woman
A 54-year-old woman from Royal Road has gone missing and the West District RCMP is asking for the public's help in locating her. Odila Marie Daigle was last seen leaving her home on Route 620 on Sunday at around 7 p.m., according to a written statement from the RCMP. Route 620, known as the Royal Road as it approaches Fredericton, runs between the capital city and the village of Stanley. CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Liberals' pot plan looks for way to detect and deter drug-impaired driving
The man tasked with coming up with Canada's marijuana law has a proposal for dealing with one of the biggest issues facing legalization: prevention of driving under the influence of pot. While police can conduct field sobriety tests if they suspect a driver is impaired by any substance, there is no established breathalyzer equivalent in roadside policing to easily detect and measure impairment when it comes to driving while high. Liberal MP Bill Blair says oral fluids testing could be the roadside measure used by Canadian authorities to detect marijuana in a person's system. "The kits are currently used in Europe," Blair told CBC News in an exclusive interview. The oral fluids drug test is conducted with a small plastic stick. When the police officer suspects a driver has smoked marijuana, the officer would take the stick and swipe it over the driver's tongue. The saliva would then be mixed with the enzymes in the device. If a red line appears three minutes later it indicates there are drugs in the driver's system. The officer would then have the right to take the driver to the station for a full evidence test. CBC News

Tougher laws against drunk driving 'well overdue,' MADD Canada says
New laws aimed at getting tougher on impaired drivers could be in the works, following a meeting between Newfoundland and Labrador's Liberal caucus and the chief executive officer of MADD Canada. "It's been years since the provincial government has done anything major in the area of impaired driving. It's well overdue," said Andrew Murie, CEO of MADD Canada, about the meeting held earlier this month at Confederation Building (...)While in the province, Murie also met with the RNC and RCMP about introducing saliva testing for drivers impaired by drugs. Murie said instances of drugged driving are rising on the province's roadways. CBC News

PUBLIC SERVICE / FONCTION PUBLIQUE

With civil service shakeup, Trudeau brings youth, diversity to top jobs
Retirements of Ottawa's highest-ranked bureaucrats have accelerated under the Justin Trudeau government as the Liberals shuffle the leadership of the public service after years of management under Stephen Harper. The government has made a series of moves with its highest-ranked bureaucrats since coming into office last fall, most recently promoting senior officials who had worked on the Environment and Foreign Affairs portfolios. Ian Shugart, a bureaucrat who for a couple of years managed Environment Canada under Mr. Harper, and Daniel Jean, the Foreign Affairs deputy minister who has advised the Trudeau government on key files from refugees to Canada at the UN, both received promotions as about seven senior mandarins announced their retirements (...) Privy Council Clerk Michael Wernick, the head of the public service appointed by Mr. Trudeau in January, has been working on the appointments, recently promoting Louise Levonian to deputy minister of Employment and Social Development Canada. Ms. Levonian had been serving as an associate deputy for the department and prior to that was a senior Finance Department and tax policy official under the Conservatives. Mr. Jean, who had served as deputy minister of Foreign Affairs since 2013, was heading the department as the Trudeau government implemented key foreign-policy priorities after the election, including Canada's withdrawal from air strikes in Syria and Iraq and the resettling of 25,000 Syrian refugees. Mr. Jean, in his new position as national security adviser to the PM, takes on one of the most important public-servant roles in government, advising Mr. Trudeau on top-secret national-security issues. He replaces Richard Fadden who retired in March. **Malcolm Brown**, who served as special adviser to Mr. Wernick in the efforts to welcome the 25,000 Syrian asylum seekers, was also promoted in April, to deputy minister of **Public Safety (...)**The handful of deputies who have retired include Mr. Fadden, **François Guimont**, Colleen Swords, George Da Pont, Matthew King, Krista Outhwaite and Daphne Meredith. Globe and Mail

'That is not the son I raised': How a British citizen became one of the most notorious members of ISIS

The last member of the group of British jailers who supervised the torture and killing of Western hostages held by the Islamic State has been identified as a 27-year-old Londoner who traveled to Syria in 2012. El Shafee Elsheikh, a British citizen whose family fled Sudan in the 1990s, was one of four jailers dubbed the "Beatles" by their prisoners because of their British accents. The cohort's most prominent figure was Mohammed Emwazi, better known as "Jihadi John," whose videotaped beheadings of American and British hostages became a global emblem of the Islamic State's brutality (…) Elsheikh was identified through a joint Post and BuzzFeed News investigation. His name was confirmed by a former U.S. counterterrorism official and other people familiar with British nationals in Syria. They spoke on the condition of anonymity to discuss an ongoing investigation. The FBI declined to comment. Elsheikh's family said he is still alive and living in Syria. He remains in touch with some friends and family — but not his mother, she said (…) Elsheikh, when he was 21, married an Ethiopian woman living in Canada but became frustrated when she was unable to move to London to be with him. The following year, the mother said, she started to noticed changes in her son after an older friend introduced him to the preaching of a West London imam known for his radical beliefs. Washington Post; Independent UK

Egypt official says plane didn't swerve, plummet as claimed

The head of Egypt's state-run provider of air navigation services says that EgyptAir flight 804 did not swerve or lose altitude before it disappeared off radar, challenging an earlier account by Greece's defence minister. Ehab Azmy, head of the National Air Navigation Services Company, told The Associated Press on Monday that in the minutes before the plane disappeared it was flying at its normal altitude of 37,000 feet, according to the radar reading. He says, "that fact degrades what the Greeks are saying about aircraft suddenly losing altitude before it vanished from radar." Associated Press (Globe and Mail, CBC News)

Bombs kill nearly 150 in Syrian government-held cities: monitor

Bombs killed nearly 150 people and wounded at least 200 in Jableh and Tartous on Syria's Mediterranean coast on Monday in the government-controlled territory that hosts Russian military bases, monitors and state media said. Islamic State claimed responsibility for the attacks in the cities that have up to now escaped the worst of the violence in the five-year-old conflict, saying it was targeting members of President Bashar al-Assad's Alawite minority. The Britain-based Syrian Observatory for Human Rights said 148 people were killed in attacks by at least five suicide bombers and two devices planted in cars. State media had said 78 people had been killed in what is Assad's coastal heartland. Reuters

Attacks in Yemeni port city of Aden kill at least 45 men waiting to join army

Suicide bombers targeting prospective army recruits killed at least 45 and injured many in the restive southern Yemeni city of Aden in two assaults, highlighting the obstacles to ongoing peace talks in Kuwait. The first attacker targeted applicants gathered outside the home of a military commander, Brig. Gen. Abdullah al-Subaihi, killing at least 25, according to witnesses and Yemeni officials (…)The second attack unfolded 10 minutes later outside an army base that also served as a recruitment center, killing at least 20, witnesses and officials said. Washington Post; Associated Press (Toronto Star)

Future of national security whistleblowing at stake in US inquiry

Former head of the CIA David Petraeus, in an interview published in the Financial Times on 6 May, was asked if Edward Snowden should be prosecuted. "Unquestionably," said Petraeus (…) "If Snowden had wanted to help that debate, he could have very easily been a whistleblower who could have gone to the

appropriate organization and offered his views. He didn't." It is a line that has been repeated by Barack Obama, Hillary Clinton and just about every other establishment figure asked about Snowden. Rather than a leak to the media, they argue, there were alternative routes: he could have taken his concerns to Congress or pursued the official internal route, through the inspector general's office. But a powerful new insider account undermines the idea that the inspector general's office offers whistleblowers a safe route. John Crane supervised the whistleblower-protection unit of the Pentagon inspector general, which has oversight responsibility for defense department components such as the National Security Agency. His story, told at length in Mark Hertsgaard's powerful new book Bravehearts: Whistle-Blowing in the Age of Snowden, suggests that an office meant to aid whistleblowing can put whistleblowers in danger. Fort McMurray Wildfire / Feu de forêt à Fort McMurray

Re-entry delayed for Fort McMurray neighbourhoods hit hardest by wildfire
Dangerously toxic ash barred some Fort McMurray residents from re-entering some of the most badly damaged neighbourhoods of the city on Saturday. The Abasand, Beacon Hill and Waterways

neighbourhoods were originally scheduled to reopen on Saturday, the fourth day of re-entry. Residents from these areas were told last week they might have to wait until September, but they will now be given access to their properties on June 10. CBC News

Fort McMurray wildfire: Final day of re-entry for liveable neighbourhoods
The last of the Fort McMurray neighbourhoods considered safe enough for re-entry began to welcome back its residents Saturday, on the fourth day of the province's voluntary phased re-entry plan. People who fled the communities of Grayling Terrace and Draper, which make up Zone 4(b), were expected to join the thousands of people who arrived in the northern Alberta community earlier in the week after being forced out by a massive wildfire last month. As of 2 p.m. on Friday, the enormous wildfire remained out of control but was considered to be 56 per cent contained. It now covers more than 581,000 hectares including part of Saskatchewan. The province said 2,146 firefighters and support staff were battling the blaze with the help of 80 helicopters and 219 pieces of heavy equipment. While the gradual return of residents continued Saturday, there was still no timetable for re-entry into the hard-hit neighbourhoods of Abasand, Beacon Hill and Waterways, considered uninhabitable because of toxins and where debris is still being removed by the municipality. Global News

Fort McMurray business owners call for financial help in face of uncertain future
As Fort McMurray fire captain Ryan Pitchers battled the wildfire known as "The Beast" with all his might, he wondered, as a business owner, if his downtown pet food store would still be standing afterwards. "Is it going to burn down, is it going to be damaged or what's going to happen in the future?" Pitchers, a co-owner of Pet Valu, asked himself. As the fire began to retreat from the city, Pitchers spent his downtime with some friends rescuing two hedgehogs, a lizard and other animals from his store (…) But now, Pitchers has another rescue on his hands: his business. It's the weighty task facing many Fort McMurray business owners who were already struggling in a slumping economy. CBC News

Psychological challenges loom as large as reclamation tasks for Fort McMurray residents
Fort McMurray's scars are not just on the landscape, but in the psyche. Like many of Fort McMurray's returnees, Kenny St. Croix hoped he was emotionally prepared for the trip home. That's not how it turned out. "You think you're strong? You can't prepare yourself for that," St. Croix, 60, said Friday, recounting his experience staring at the remains of the Timberlea home he and his son shared. "Kinda tough. Kinda tough," he said, noting his daughter also lost her house in nearby Parsons Creek. "I'm trying to warn the kids before they come back. I took a video, and I sent it down to them, so I've kind of prepared them the best I can. But they'll still be shocked (…)"As a sign of the psychological hardships returnees are facing, about 275 people sought mental health support Thursday, including 114 one-on-one appointments, Alberta Health Services said. It's a significant number, especially for a town known for a tough work ethic and a reputation for shrugging off adversity. Residents may go through many phases of grief over the next few days and weeks as they think about what they've lost and feel anxiety about rebuilding their lives, said Marjorie Epp, a clinical supervisor overseeing community mental health at the temporary urgent care centre. Edmonton Sun (Calgary Sun)

Plus de 800 voitures abandonnées attendent d'être réclamées
En vidéo ci-dessus, revoyez les images saisissantes d'un résident de Fort McMurray forcé de fuir et de tout laisser derrière lui, le mois dernier. Plus de 800 voitures abandonnées il y environ un mois par les sinistrés de Fort McMurray attendent maintenant d'être réclamées par leurs propriétaires. Des remorques de la fourrière Mobster Towing ont travaillé sans relâche pendant des semaines pour remorquer les véhicules, a rapporté le *Edmonton Journal* vendredi. Les voitures ont pour la plupart été laissées sur le bord des routes, mais certaines ont été abandonnées en plein milieu des voies de circulation. Agence QMI (TVA Nouvelles)

Les incendies de Fort McMurray ont envoyé des cendres jusqu'en Suisse
Des cendres et de la poussière générées par les immenses incendies qui frappent l'ouest du Canada depuis un mois ont atterri en Suisse, selon des météorologues suisses. «Les feux ont injecté une quantité énorme de poussière dans l'atmosphère» dont la présence «est actuellement mesurée au-dessus de la Suisse», indiquent les autorités météorologiques suisses dans un rapport publié sur son site et repris dans la presse suisse vendredi. Agence France-Presse (TVA Nouvelles) (2016-06-03)

'Cascadia Rising' earthquake drill to commence on June 7
A magnitude 9.0 earthquake along the Cascadia subduction zone and the resulting tsunami have devastated the Pacific Northwest. Telephone and Internet service is gone, leaving ham radio operators our only means of communication with the outside world. It is a frightening scenario, and probably the most complex and devastating disaster emergency services and public safety officials in the Pacific Northwest could ever face. KXRO explains that this scenario called "Cascadia Rising" will be played out starting June 7, and will last until June 10. Be aware that this is a drill, and it will be big. This drill is a simulation of a complete rupture of the Cascadia subduction zone (CSZ), causing a magnitude 9.0 earthquake situated 100-150 miles to the West of the Coastline in the Pacific Ocean. Emergency Operations and Coordination Centers (EOC/ECCs) at all levels of government and the private sector will be included in a simulated field response operation within their jurisdictions and with neighboring communities, state EOCs, FEMA, and major military commands, according to FEMA. Russian Satellite for Defense Ministry Put Into Orbit
A Russian satellite for the needs of the country's Defense Ministry has been successfully put into orbit, the Russian Defense Ministry said on Saturday. "The launch [of the satellite] into orbit has been carried out in a normal mode," the ministry's press service told RIA Novosti. Earlier in the day, Russia launched the Rokot carrier rocket with the satellite from the Plesetsk space center in northwest of the country. The Rockot carrier, first launched from the Plesetsk spaceport in 2000, has so far put 65 satellites for various purposes into the orbit. Sputnik News; TASS; TeleSur

Islamophobia runs deeper than failed Tory election tactics
An opinion piece states "Muslim Conservative Uruzurum Heer made headlines recently for castigating the Islamophobic campaign run by her party in the last election. "This party worked actively and aggressively against my people," Heer said, at the Conservative convention. "It didn't differentiate who Muslims were versus the enemies." The Harper-headed Conservatives certainly deployed a particularly crude form of anti-Muslim animus during the election: a continuation of their governing modus operandi. However, Islamophobia did not begin with Stephen Harper, and it will not end with his exit from power. It is very tempting to relegate Islamophobia to a past we have overcome or to a future we have avoided. It is too easy to project racism onto other times or onto other people: onto those like Stephen Harper or Donald Trump, who ostentatiously brandish anti-Muslim stereotypes as political weapons. It is far more difficult to confront the normalized Islamophobia that has permeated Canadian national security law and policy since the initiation of the War on Terror, under both Liberal and Conservative governments (…) Stereotypes about Muslim violence have sustained the War on Terror's project of violence since its birth. The War's dangerous excesses in Canada — an extra $92 billion allocated to national security spending in the decade after 9/11; expansion of state powers of surveillance, which have been used to monitor and stifle activists and dissenters; the proliferation and broadening of terrorism offences, to now include such vague crimes as "promoting or advocating the commission of terrorism offences in general" — have been justified by citing the supposedly excessive danger posed to Canadians by Muslim "terrorists." CBSA pilots new initiative in Manitoba with the Canadian Centre for Child Protection
The Canada Border Services Agency (CBSA) has announced that they will be working on a pilot project in Manitoba with the Canadian Centre for Child Protection (the Canadian Centre) to enhance officer knowledge and training for identifying situations involving missing, sexually abused and exploited

children. This Manitoba pilot project involves the CBSA and the Canadian Centre working together to better identify missing and abducted children, and those at-risk of exploitation, at the border. The Canadian Centre will provide support to officers with specific cases where they must intervene, such as abduction and family reunification or instances where children or youth may be at-risk of sexual exploitation. “Protecting and identifying missing children is a matter that is close to the hearts of our employees,” said Kim R. Scoville, Regional Director General, Prairie Region, Canada Border Services Agency. mySteinbach

Air Canada grounds Toronto family after passports are stolen
When Keethai Tharmaseelan's family had their passports stolen from their hotel room during an Arizona vacation last April, Air Canada assured them that their return tickets were enough to fly back to Toronto. They had no idea of the ordeal that awaited them. On their departure day, the family of four did make it through Phoenix airport security. But just before an Air Canada agent handed them their printed-out boarding passes, another agent came along - and told them it was "illegal under Canadian law" to travel back to Toronto without passports (...) Tharmaseelan's family isn't the first to be unexpectedly grounded thanks to mixed messages from Air Canada staff about missing passports. Last year, a Kelowna, B.C., woman who lost her passport on an Air Canada plane wasn't allowed to board a return flight from Philadelphia - even though, she told Global News, officials had repeatedly assured her she could. When Tharmaseelan called the Canadian consulate about her family's stolen passports, they told her to speak with her airline. An Air Canada rep told her that, because they'd purchased round-trip tickets, all of their information was still logged in Pearson International Airport's system. The Canadian consulate also told Tharmaseelan that Pearson would let her, her husband, and their two young children through, as long as security could verify their ID another way. Toronto Star

Canada's dairy farmers say diafiltered milk from U.S. costs them millions
Our wily neighbours to the south have figured out a clever way of not paying tariffs on a certain — let's say "controversial" — commodity, and Canadian dairy farmers say it's costing them hundreds of millions every year. The product in question is called diafiltered milk. Essentially, it's milk that's filtered, flushed with water, and then filtered a second time, with a few other steps along the way. The end product has a high concentration of protein, about 85 per cent, and very little of the fat and lactose that make up natural milk. The Canadian government allows it to cross the border without a tariff, because if it were dried into a powder, it would have the same amount of protein as the kinds of protein powders allowed to pass through tariff-free under trade agreements. City of Moncton unveils memorial to slain Mounties
A commemorative sculpture was unveiled in Moncton Saturday on the second anniversary of the shootings there that left three RCMP officers dead. Constables Doug Larche, Fabrice Gevaudan and Dave Ross were killed as they responded to a call regarding a man carrying weapons. Newfoundland artist Morgan MacDonald was chosen to make the permanent monument, which has been placed in the heart of Moncton, in Riverfront Park on the banks of the Petitcodiac River. Among the speakers were RCMP Deputy Commissioner Dan Dubeau, local MP and government leader in the House of Commons Dominic LeBlanc, New Brunswick Premier Brian Gallant and former Moncton Mayor George MacDonald. The wives of the three slain Mounties, Nadine Larche, Rachael Ross and Angela Gevaudan, also spoke at the ceremony. The families got an early chance to view the finished memorial on Friday afternoon. Des restes humains découverts à Rosthern
La Gendarmerie royale du Canada (GRC) enquête sur la découverte de restes humains sur une ferme près de Rosthern, au nord de Saskatoon. La GRC n'a pas indiqué quand la découverte a eu lieu, mais a souligné qu'un fermier a trouvé les restes et a contacté les policiers par la suite. Les causes de la mort et l'identité de la victime n'ont pas été dévoilées. Radio-Canada

Un entrepreneur québécois arrêté à Fort McMurray
Un Québécois de 33 ans a été arrêté en Alberta, pour avoir forcé le coffre-fort laissé derrière par un sinistré de Beacon Hill. La Gendarmerie royale du Canada de Wood Buffalo a arrêté l'individu jeudi, a rapporté Global News. Les policiers ont précisé que l'homme, dont l'identité n'a pas été révélée, devra se présenter en cour le 7 septembre prochain, à Fort McMurray, les accusations exactes portées contre lui n'ont pas été précisées. La GRC a précisé que le coffre était vide et qu'aucun autre item n'a été volé. Journal de Montréal; Agence QMI (TVA Nouvelles); Canadian Press (National Post)

Rescue crews call off search for missing swimmer in Fraser River
Rescue crews have called off a search for a missing swimmer in the Fraser River on Saturday morning. The man disappeared overnight in Surrey's Brownsville Bar Park located between the Pattullo Bridge and the neighbouring SkyTrain bridge. According to RCMP, a group of men were drinking on the beach when they decided to swim around the SkyTrain bridge pillar and back to shore. A 32-year-old Burnaby man was spotted going under the water and never came up. Divers were seen going into the water and a coast guard hovercraft was also on scene. RCMP say they were unable to locate the man after several hours of searching, and made the difficult decision to call off the search. Global News; Vancouver Sun

Dispatches from an indefinite period in isolation
The guards led Richard Wolfe to the segregation unit in April, 2014. They stopped at cell five, considered the most luxurious because it was wheelchair-accessible and slightly larger than the others: 12 feet by 10, Richard guessed. As he stood at the door, he saw a bunk covered by a thin mattress. On one side of the room sat a stainless-steel toilet with built-in sink. Natural light filtered in through a skinny window about six inches high and two feet wide. For the next 21 months – though he didn't know it at the time – this would be his home (…) Over the next 91 weeks, Richard regularly wrote letters and made phone calls describing what it was like to be locked in segregation. His account provides a rare glimpse inside a prison regime that is controversial, little known and, according to prominent critics, counterproductive (…) As a founder of the Indian Posse, a large, primarily indigenous street gang, he was a high-profile inmate and a significant target for rival gangs. Although his brother died in 2010, and Richard said he himself had left the Indian Posse more than a decade ago, the Wolfe name remained notorious in Canadian prisons. And, because he faced a charge of sexual assault, the unwritten rules of prison subculture made him vulnerable to attack. Globe and Mail

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

5 questions with Carolyn Bennett, minister of Indigenous affairs
She has been called the minister of reconciliation (…) She sat down with *Unreserved* host Rosanna Deerchild and answered questions about her new job, the history between Indigenous peoples and the

Canadian government and what she hopes an inquiry into missing and murdered Indigenous women will accomplish (…) *Let's focus in on the missing and murdered Indigenous women inquiry that the Liberal Party is set to launch. What was it like to go across the country meeting families and hearing their stories?* "I think having the three ministers — the Minister of Justice Jody Wilson-Raybould, and Minister [Patty] Hajdu is the Minister of Status of Women and myself — hear directly from the families who have been so frustrated over a decade, I think we learned a lot. It's very different than a report on your desk with a few quotes in the margin. "There are real regional differences coast to coast to coast, therefore the solutions are going to have to be different. The actual root causes of poverty and housing, sexism and racism in policing, child abuse, the child welfare system, these are common elements, deep, complex." *What do you hope to see come out of the MMIW inquiry?* "In listening to the families, they want justice. They want to seek justice and they want to stop the uneven application of justice that happens coast to coast to coast. They feel their loved ones' lives were less valued. They want healing for themselves and their families, but mainly every one of them wants to prevent this. They want this to stop. This tragedy has to stop." CBC News - Unreserved

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Legal cannabis lobbyist opposes illegal dispensaries
More than half of the 31 licensed marijuana producers in Canada are members of a lobby group called Cannabis Canada. Members of Cannabis Canada have been vocal in their opposition to illegal marijuana dispensaries, like the ones raided at the end of May in Toronto. The group talked to city authorities months before the police crackdown, warning them of the rapidly growing number of pot shops operating outside the law. *Out in the Open* talked with Cam Battley, who is the Chair of Cannabis Canada Advocacy Committee and senior vice president of one of the licensed producers of medical marijuana, Aurora. Cam said that he finds it difficult to understand the anger and shock of the Toronto dispensary owners whose shops have been raided. "They were warned multiple times. There were letters delivered to their landlords. Essentially, the police were saying, 'We will bust you if you don't stop operating.' And then they got busted and they pretend to be shocked. I find that perhaps a little bit disingenuous." CBC News - Out in the Open

Is ISIS preparing for 'Plan B' as losses mount?
With recruitment down, its finances squeezed and having lost considerable ground, ISIS just may be in the throes of near defeat, according to some analysts. But whether the Islamic State is on its last legs or is still capable of waging an indefinite campaign, attention is now being focussed on just what happens on the so-called "day after." "The West should have no illusion that the Islamic State will simply slump into defeat," wrote Brian Michael Jenkins and Colin Clarke, both of the Rand Corporation, which specializes in insurgency and transnational terrorism. "Instead, it must focus on thwarting the group's Plan B." That the group has formulated such a contingency plan is still a subject of speculation, and expert opinions differ on how close it is to actual defeat. "After maybe years of really stunning success, I think the Islamic State has run into trouble," said Austin Long, assistant professor of international and public affairs at Columbia University and a former adviser to the multinational force in Iraq. CBC News

Tropical Rains, Possible Tornadoes Threaten Half of the US
From tropical rains to tornadoes, about half of the U.S. expected to see wet and at times severe weather this weekend, capping a week of scorching temperatures out West and flooding that killed nine soldiers when their military vehicle got caught in the rushing waters of a rain-swollen creek at Fort Hood, Texas. People along the Gulf Coast kept a watchful eye on a system over the Caribbean Sea that was forecast to bring 5 to 10 inches of rain to parts of Florida. The storm is likely to develop into a tropical cyclone. Associated Press (ABC News, National Post)

In an open letter, the former chief constables say it is "vital" to be able to share fingerprint data and criminal records with police forces across Europe to stop jihadists and criminal gangs. There is "no case" for putting Britain's security at risk by withdrawing from the EU, they warn. Telegraph UK

Unofficial ISIS Apps Pose Security Risks For The Islamic State Group
The Islamic State group has used social media platforms and apps as vehicles to spread information to its followers as well as aid in recruitment. The apps, while being viewed as a trustworthy source of intelligence, can also be exploited, according to a report from Motherboard. Recent alerts sent out through official channels of the terrorist organization, also known as ISIS or ISIL, warn of fake news apps filled with malware. ISIS' app portfolio includes Amaq Agency for news and al-Bayan for streaming radio. There's also an instructional children's app where letters of the alphabet are associated with various pictures of weapons. An English version of Amaq Agency has been released, while other news apps in French and Turkish have been developed by the group. International Business Times

Exclusive: Snowden Tried to Tell NSA About Surveillance Concerns, Documents Reveal
On the morning of May 29, 2014, an overcast Thursday in Washington, DC, the general counsel of the Office of the Director of National Intelligence (ODNI), Robert Litt, wrote an email to high-level officials at the National Security Agency and the White House. The topic: what to do about Edward Snowden. Snowden's leaks had first come to light the previous June, when the *Guardian's* Glenn Greenwald and the *Washington Post's* Barton Gellman published stories based on highly classified documents provided to them by the former NSA contractor. Now Snowden, who had been demonized by the NSA and the Obama administration for the past year, was publicly claiming something that set off alarm bells at the agency: Before he leaked the documents, Snowden said, he had repeatedly attempted to raise his concerns inside the NSA about its surveillance of US citizens — and the agency had done nothing. VICE News

Niger's defence ministry says Boko Haram kills 32 soldiers
Niger's defence ministry says Boko Haram extremists attacked a military post near the country's border with Nigeria, killing at least 32 soldiers. The ministry said Saturday that hundreds of Boko Haram fighters attacked the post Friday night, killing at least 30 Niger soldiers and two soldiers from Nigeria. It said 67 other soldiers were wounded. The military reclaimed the post Saturday morning. Associated Press (Boston Herald); Reuters

Tax question raised over Canada's border data sharing plan
As part of a new border information exchange with the U.S., Canada has proposed legislation that would see personal data collected when truck drivers and other motorists *exit* the country, as is currently done at border *entry* points. The Act to amend the Customs Act-Exit information was introduced to the House of Commons on June 15, making good on the March announcement from Prime Minister Trudeau and President Barack Obama that both countries would implement a system to exchange basic biographic entry/exit data, all while maintaining privacy safeguards. The information collected would primarily be found within the traveller's passport, and the traveller's record of entry in one country could serve as a record of exit from the other, the legislation suggests. ***"It's important that we have a clear picture of who is entering and exiting our country so we can ensure the efficient movement of legitimate trade and travel and keep our border secure,"*** announced **Minister of Public Safety and Emergency**

Preparedness, Ralph Goodale, who introduced the legislation. But news of the entry-exit data exchange has created some concern for those seeking clarification around federal tax implications. An individual could be subject to the U.S. Internal Revenue Service's "substantial presence test" if he or she spends more than 120 days in the country over the course of a year. In an interview with the *Toronto Star* on Saturday, Canadian Trucking Alliance president, David Bradley, said clarification is needed about whether simply dropping off a load south of the border could be considered as a day spent in the U.S. Today's Trucking

Welcome parliamentary oversight is not enough to fix security policy: Editorial
An editorial states, "The lives of Canadians have never been more transparent to the state's security apparatus, yet the security apparatus remains troublingly opaque to the people. That dangerous asymmetry was compounded by the Harper government's overreaching Anti-Terrorism Act, formerly Bill C-51, which introduced vast new powers for spy agencies last year and yet did nothing to make them more accountable. It was reassuring, then, to see the new Liberal government table Bill C-22 last week, an important first step toward accountability. The legislation would finally give to Canada what most of our allies already have: a parliamentary committee that provides democratic oversight of our national security establishment. (…) As welcome as Bill C-22 is, it could be better. **Public Safety Minister Ralph Goodale** said last week that the committee would have ***"the ability to look at any issue, any activity, any operation, any document."*** But that's not quite true. In fact, under the proposal, the prime minister and his cabinet would be allowed to withhold any information or veto any inquiry they deem to be "injurious to national security." This "Mack truck exception," as University of Ottawa law professor Craig Forcese calls it, makes it too easy for the ruling party to cover up politically inconvenient information. (…) Worse still, some national security organizations, such as the Canada Border Services Agency, escape independent scrutiny altogether. Fifteen people have died in CBSA custody since 2000, yet in the absence of any arm's-length oversight Canadians remain completely in the dark about the circumstances of those deaths. The parliamentary committee would be a good start here, but more integrated and robust access to information is needed. (…) The act compromises Canadians' privacy in unprecedented ways, criminalizes the "promoting" of terrorism, gives CSIS the power to perform the sort of dirty tricks it was created to pre-empt, and allows imprisonment of up to five years to prevent crimes that "may be carried out."" Toronto Star

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Chemawawin, Easterville to lift state of emergency after Manitoba forest fires
The state of emergency for Chemawawin Cree Nation and Easterville is expected to be lifted Monday afternoon after a rainy weekend helped combat forest fires near the Manitoba communities. The area about 400 kilometres north of Winnipeg has been under the state of emergency since last week as flames crept as close as 100 metres to homes. CBC News

Heavy rains over weekend cause damage, O'Connor Township declares State of Emergency
The city has so far received about 230 calls reporting flooding and damage as a result of heavy storms on the weekend. About 92 millimetres of rain fell on Thunder Bay over the course of Saturday. A portion of one lane of Fort William Road, north of First Avenue, will be closed while crews repair a washed-out shoulder. The work is taking place today. City crews will continue making other repairs around the city today, as well. Kerri Marshall, the city's general manager of infrastructure and operations, said it's important those who suffered damage due to the storm contact the city. CBC News

Whiteshell flood damage 'devastating,' homeowner says
Grant Fisette's home is in a precarious situation after the weekend downpour in the Whiteshell caused flooding and a landslide on his property. The province recommended people along parts of the Manitoba-Ontario border pack up and temporarily leave the area after torrential rains washed out a few major roads and threatened to do the same to others on Friday night. More heavy rain Saturday night created gaping holes on roads in West Hawk Lake and Falcon Lake, and on Sunday, the province again urged people to exit the area. Fisette's home is on Caddy Lake, about 140 kilometres east of Winnipeg. The lake has

risen so much that by Monday morning, there was 56 centimetres of lake water on the highway, he said. CBC News

Cinq projets contre la radicalisation des jeunes

Québec mise sur cinq projets de tables rondes, de théâtre et d'actions communautaires pour lutter contre la radicalisation des jeunes menant à la violence. Environ 165 000$ seront injectés sur deux ans pour intervenir notamment auprès des jeunes issus de minorités racisées. En tout, 17 000 jeunes de partout au Québec participeront à ces projets, qui font partie du Plan d'action 2015-2018 pour lutter contre la radicalisation au Québec. Seulement six organismes ont répondu à l'appel de projets, parce que «peu d'organismes ont la capacité de porter des projets aussi complexes», croit la ministre de l'Immigration, de la Diversité et de l'Inclusion Kathleen Weil. «Il n'y a pas un jour qui passe sans qu'on entende parler d'islamisme, de racisme, de terrorisme. Nos animateurs observent une montée de l'intolérance dans nos écoles, particulièrement de l'islamophobie. C'est donc important d'aborder ces thèmes avec les jeunes», croit Marie-France Legault, d'Ensemble pour le respect de la diversité. Cet organisme présentera le projet Escale je prends ma place afin d'aborder ces thématiques sensibles auprès de jeunes de second cycle du secondaire partout au Québec. Journal de Montréal; Montreal Gazette

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Heading South to the United States? Plan Your Return
Travellers should plan to cross the border outside of peak traffic periods if possible to avoid delays. Travellers can also help speed up processing by ensuring that they have proper identification for everyone in their vehicle readily available upon arrival to Canada. Returning Canadians should have receipts for all purchases in hand," states Paul Loo, Acting Regional Director General, CBSA, Northern Ontario Region. Now that summer is officially here, the Canada Border Services Agency (CBSA) is making every effort to effectively manage the expected higher traffic volumes during this peak period. Net News Ledger

Brexit : quel type d'accord entre l'Union européenne et le Royaume-Uni ?
Voilà 43 ans que le Royaume-Uni et l'Union européenne sont engagés dans un mariage tumultueux. Lors du référendum de jeudi dernier, les Britanniques ont choisi le divorce, votant pour 51.9% en faveur du "Leave". (...) Un vaste accord commercial a été signé entre le Canada et l'Union européenne en 2009, le CETA (Accord économique et commercial global). Cet accord de libre-échange prévoit la levée des droits de douane sur de nombreux produits à l'importation et à l'exportation entre le Canada et l'Union européenne. Ce scénario permettrait au Royaume-Uni de négocier des accords bilatéraux avec d'autres pays comme les pays émergents et les Etats-Unis. Cet accord de libre-échange ne garantit cependant pas la levée des barrières douanières sur les services financiers. Si le Royaume-Uni choisit de se lancer dans cet accord de libre-échange, il devra par ailleurs négocier pendant plusieurs années : alors que les négociations durent depuis sept ans entre le Canada et l'UE, l'accord n'a pas encore été ratifié. France Bleu

Les producteurs de bois d'oeuvre du Québec réclament un coussin de 5 milliards $
Les producteurs de bois du Québec suggèrent à Ottawa de durcir le ton dans ses négociations avec les Américains. Ils sollicitent également un coussin financier pouvant atteindre jusqu'à 5 milliards de dollars afin de protéger les scieries et les emplois canadiens en cas de conflit prolongé. Ces scénarios ont été discutés lors d'une rencontre avec la ministre canadienne du Commerce international, Chrystia Freeland, à Montréal en début juin. Les négociateurs canadiens étaient d'ailleurs à Washington la semaine dernière. La question du bois d'oeuvre reviendra sur le tapis cette semaine, alors que le premier ministre Justin Trudeau accueille à Ottawa ses homologues américain et mexicain, Barack Obama et Enrique Peña Nieto. Les producteurs québécois, et certains de leurs collègues ontariens, croient qu'au lieu de conclure une entente avec les États-Unis, le gouvernement canadien devrait plutôt prendre la voie des tribunaux, devant l'Organisation mondiale du commerce (OMC). « Ce serait la première fois que le Canada s'en remettrait complètement à l'OMC et attendrait la décision finale, sans conclure d'entente bilatérale avec les États-Unis », avance le pdg du Conseil de l'industrie forestière du Québec, André Tremblay. Selon lui, une entente négociée « limite nécessairement l'exportation du bois d'oeuvre canadien vers les États-Unis », soit par des quotas ou des barrières tarifaires (de 15 à 25 %), « qui limite l'expansion de l'industrie ». Tandis que si le Canada remet le dossier entre les mains de l'OMC, André Tremblay espère « gagner un plein accès au marché américain », soit une situation complète de libre-échange. Radio-Canada

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Analyst: Brexit Cybersecurity Ramifications Could be Significant
After 43 years of inclusion, the UK has voted to leave the European Union in the historically unprecedented "Brexit" referendum vote. Aside from causing uncertainty in the world's financial markets and across the political landscape, the result has implications for cybersecurity too. While some cybersecurity pros say that Brexit will have little ill effect on the space, others aren't so sure. For one, Michela Menting, research director for ABI Research, noted that the UK will need to review its role Europol and the European Cybercrime Centre (EC3), which is the focal point in the EU's fight against cybercrime. "Organized online criminal activities are undeniably best tackled from a cooperative, supra-national perspective, and the UK's isolation that may result from Brexit would be an unwelcome development in the fight against cybercrime," she said. "Further to this, new cybersecurity information and

asset sharing structures will need to be put in place between the EU and the UK." Infosecurity Magazine (2016-06-24); SC Magazine; ComputerWeekly

Should the Careless Be Punished for Getting Hacked?
An opinion piece states "Nearly everyone with Internet access is harmed, at least indirectly, by digital criminals. Josephine Wolff, a professor at the Rochester Institute of Technology, believes cybersecurity policy would benefit from a debate about if and when it might be appropriate to punish careless computer users for their role in enabling those criminals. She writes: The question in my field (cybersecurity) that I think would most benefit from more vigorous, widespread debate is what degree of responsibility and liability individual Internet users should have for participating, unknowingly, in the perpetration of cybercrimes and data breaches. The (generally well-meaning) people whose computers are infected and become part of the large bots that spew phishing emails and ransomware, or who click on the links and attachments in those phishing emails and carelessly surrender their login credentials or the contents of their hard drives play an enormous and devastating role in many (perhaps most) of the major cybersecurity incidents that occur today." The Atlantic

LAW ENFORCEMENT / APPLICATION DE LA LOI

Complaints into RCMP conduct reveals dangers of being Mountie in the North
The dangers of being an RCMP officer in the North are being revealed in an unlikely place: public complaints into the conduct of Mounties. Complaints made in the last five years to the Commission for Public Complaints Against the RCMP about N.W.T. officers were obtained by the CBC through an access to information request. The Commission is an independent oversight body created to investigate public complaints about the RCMP's conduct. The majority of the complaints filed were for alleged "excessive use of force" by officers, which were most often during an arrest. However, investigations into many of those incidents revealed that RCMP officers had been physically assaulted by the complainants. In an excessive force complaint investigation in 2014, an intoxicated person punched an officer in the side of the head while the officer was trying to remove the person's shoes prior to putting them in a cell. While the officer was trying to handcuff the person, the individual grabbed the male officer's testicles, squeezed and twisted them. The officer then punched the person to get them to release his testicles. The individual then bit the officer on the leg. CBC News

Body recovered in Exploits River by search and rescue crew
A body has been recovered from the Exploits River, after police were called about an object in the water Monday morning. Roger Goobie of Exploits Search and Rescue said his group was called to help the RCMP, after police were notified of an object in the river around 5:50 a.m. The body was recovered from an area of the river adjacent to the weigh scales on the Trans-Canada Highway, on the eastern boundary of Grand Falls-Windsor. No further details have been released as of yet. CBC News

4 collisions en 5 minutes pour un homme qui est accusé de tentative de meurtre
Un homme de 21 ans de Bedford, en Nouvelle-Écosse, est accusé de tentative de meurtre après avoir heurté volontairement quatre véhicules en cinq minutes dans la région de South Harbour, au Cap-Breton. Vers 15 h dimanche, la GRC a reçu plusieurs appels pour signaler quatre collisions sur un tronçon de un kilomètre du chemin White Point. « C'est un événement inquiétant, raconte Andrew Joyce de la GRC. Il semble qu'il ait foncé volontairement sur un véhicule sport utilitaire et deux motos. Il a ensuite raté de peu un autre véhicule avant de frapper un garde-fou. » Heureusement, dit le policier, personne n'a été blessé sérieusement. L'accusé conduisait une fourgonnette Honda Odyssey lorsqu'il a d'abord heurté le véhicule sport utilitaire d'une femme de 49 ans qui avait un enfant de 5 ans à bord. La fourgonnette a fui les lieux de l'accident et a ensuite frappé un motocycliste et son passager. ICI Radio Canada

B.C. high school forced to close, postpone graduation amid threats
A high school in southeastern B.C. remains closed Monday as officials investigate a threat. Posts on the website of Mount Sentinel Secondary in South Slocan, about 25 kilometres west of Nelson, confirm a threat to the safety of students and staff was received last week. Officials decided to shut down the school and also postponed graduation ceremonies set for the weekend. An update posted Sunday and

attributed to Mount Sentinel vice-principal Shellie Maloff says the RCMP, Nelson Police, the Ministry of Children and Family Development and the school district's Violent Threat Assessment Team are investigating. The post urges parents and students to "continue to be vigilant" if attending any grad activities, parties or events where students might congregate. Canadian Press (CTV News)

Crash involving BMW and RCMP vehicle shuts down Hwy. 1
The Trans-Canada Highway was closed westbound for several hours overnight after a serious collision involving an RCMP vehicle and BMW sedan. Video taken at the scene shows a black SUV with severe front-end damage and a white BMW sedan with damage as well. Abbotsford Police say a Chilliwack RCMP vehicle was involved in the collision. Westbound lanes of Highway 1 near Sumas Road in Abbotsford were shut down as police investigated. Police have not confirmed whether a pursuit was involved in the accident, if anyone was injured, or if any arrests were made. CTV News

Opération Clemenza: les accusés sont tous libérés
Les huit individus arrêtés dans l'opération Clemenza de la GRC le 11 mai dernier, et qui étaient détenus depuis, ont tous été libérés lundi matin par la juge Linda Despots de la Cour du Québec en attendant la suite des procédures. Marco Pizzi, Erasmo Crivello, Frank Iaconetti, Riccardo Preterotti, Antonio Ciavaglia, Hansley Lee Joseph, Frank Albanese et Carmelo Marsala sont accusés de complot, trafic de cocaïne, importation de cocaïne et gangstérisme. Un interdit de publication nous empêche de dévoiler les détails de la preuve et les raisons données par la juge pour les libérer. La Presse

Un Américain arrêté après avoir envoyé des photos de lui nu à une policière
Une policière de la GRC en Nouvelle-Écosse a contribué à l'arrestation d'un homme du Missouri, aux États-Unis, qui sera accusé d'inconduite sexuelle avec un enfant âgé de moins de 15 ans. L'homme, qui vit à St. Peters, une localité à 2900 km de la Nouvelle-Écosse, fait face à huit accusations d'avoir envoyé des photos et des vidéos de lui nu à une policière qui se faisait passer pour une enfant de 12 ans. La policière en question est membre du Groupe provincial de lutte contre l'exploitation des enfants dans Internet de la GRC. Son identité est protégée en raison de ses fonctions au sein de cette unité. Elle a néanmoins accepté de parler de son travail au réseau CBC et de ce cas en particulier. « Séduisez-moi » La policière a donné une présentation sur le travail de son unité. Afin de démontrer l'étendue du problème devant un groupe, elle a utilisé son téléphone intelligent pour se brancher à un populaire site de clavardage auprès des enfants. Elle s'est identifiée en tant que jeune fille de 12 ans. « J'ai publié "ce site est bizarre LOL. Mais je m'embête. Séduisez-moi" », a raconté la policière à CBC. ICI Radio Canada

Remise en liberté de Dennis Oland: la Cour suprême se prononcera jeudi
La Cour suprême du Canada doit rendre sa décision jeudi quant à la remise en liberté de Dennis Oland qui en appelle du verdict de meurtre non prémédité prononcé à son endroit. Les avocats de Dennis Oland avaient demandé au plus haut tribunal une décision rapide sur sa demande de remise en liberté après qu'il eut été trouvé coupable du meurtre non prémédité de son père, l'homme d'affaires Richard Oland. La Cour d'appel du Nouveau-Brunswick avait rejeté cette demande en février dernier. Les tribunaux néo-brunswickois n'ont jamais accordé de libération conditionnelle à un accusé trouvé coupable de meurtre. Dans leur demande à la Cour suprême, les avocats d'Oland reprochent à l'instance précédente d'avoir imposé des standards élevés qui sont en porte-à-faux avec des causes similaires ailleurs au Canada. L'ex-conseiller financier avait écopé d'une sentence d'emprisonnement à perpétuité sans possibilité de

libération avant 10 ans, plus tôt cette année, après que son père eut été trouvé mort dans ses bureaux de Saint-Jean en juillet 2011. Presse canadienne (La Presse, Droit-Inc); Radio-Canada; Canadian Press (Toronto Star, Global News); CBC News

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

National Aboriginal Day marks 20 years
Elders and outstanding community members were honoured, and lives lost remembered as National Aboriginal Day celebrations kicked off in Muskoseepi Park on Sunday. (…) A unique aspect to this year's celebrations was the fashion show featuring clothing designed by Tishna Marlowe. Marlowe said the show was a chance to use her platform as a designer to bring awareness to all the missing and murdered aboriginal women. "I have family and friends who are missing and/or murdered indigenous women," she said. After walking out in the clothes individually, the models did a second loop and had a moment of silence to honour all those lives lost. "Residential schools played a part in (the women's) upbringing and their lifestyle," she said. "The red dresses represent all the lost kids, babies and young women who didn't make it back from the residential schools. There's about 100 years of missing and murdered women. It goes back farther than people realize and we're only now starting to understand it... The numbers are so large it can't be ignored anymore. We as aboriginal culture and society have to make it stop. We can't completely end it but we can do something." Daily Herald Tribune

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Debate on marijuana shops operating in Toronto deferred until October
The debate around Toronto's pot shops will have to wait a few more months as the city has deferred official discussions about the matter until October. In a letter sent to the Licensing and Standards Committee last month, Mayor John Tory asked the executive director to work with the chief medical officer of health and police to review a possible regulatory framework for marijuana dispensaries. The group was asked to report back on their findings at today's meeting and but the report now won't be received until Oct. 25. Coun. Jim Karygiannis – who is on the committee -- was joined by Michael Price McLellan of the Toronto Dispensaries Coalition and medical marijuana patient and advocate Jesse Beardsworth Monday. They told reporters prior to the meeting at city hall that the crackdown on marijuana dispensaries was a "knee-jerk reaction to a couple hundred emails." CTV News

China reportedly tightens visa rules for Hong-Kong born Canadians
China appears to have quietly tightened its visa requirements for Canadian citizens born in Hong Kong who want to visit the mainland, requiring them to obtain two-year travel permits rather than the usual 10-year visitor visa. Ming Pao Daily, a Vancouver-based Chinese newspaper, published a report on June 19

that says as of June 2, Canadian nationals born in Hong Kong can no longer obtain a 10-year tourist visa and must instead seek a two-year travel permit. But there is no information announcing the change on the Chinese embassy's visa requirements web page, last updated on December 1, 2015, or on the Canadian government's travel advice and advisory page for China, last updated on June 1, 2016.Details are slim but the Canadian government says it has received a number of questions about the apparent change and is trying to gather more information from Chinese authorities. However, spokespersons from Global Affairs Canada declined to confirm whether they had received that clarification and would not confirm the details of the changes.(…) One Toronto-based visa services company said it has heard of the policy change and provided details on what they understand the changes to include, which matched and expanded on the information in Ming Pao Daily's initial report. iPolitics

EgyptAir: Paris ouvre une enquête pour homicides involontaires
Les autorités françaises ont ouvert une enquête pour homicides involontaires relativement à l'écrasement d'un avion du transporteur aérien EgyptAir en mai, tout en déclarant que rien ne permet pour l'instant de croire à un attentat terroriste. La porte-parole du bureau du procureur de Paris, Agnès Thibault Lecuivre, a précisé qu'il s'agit d'une enquête sur un accident, et non d'une enquête pour terrorisme. Elle a dit que les autorités ne favorisent « pas du tout » l'hypothèse d'un geste délibéré, mais le statut de l'enquête pourrait changer en fonction des preuves recueillies. Les enquêteurs ont décidé d'entamer l'enquête sur la base des éléments retrouvés jusqu'à présent et sans attendre l'analyse du contenu des deux boîtes noires, a-t-elle ajouté. La Presse; Toronto Star

Russia passes 'Big Brother' anti-terror laws
Russia's parliament has passed harsh anti-terrorism measures that human rights campaigners including the NSA whistleblower Edward Snowden say will roll back personal freedoms and privacy. The lower house of parliament voted 325 to 1 on Friday to adopt the "Yarovaya law", a package of amendments authored by the ruling United Russia party member Irina Yarovaya, who is known for previous legislative crackdowns on protesters and non-governmental organisations. Snowden, who has lived in Russia since receiving asylum in 2013, tweeted on Saturday that the "Big Brother law" was an "unworkable, unjustifiable violation of rights" that would "take money and liberty from every Russian without improving safety". Guardian UK (2016-06-26)

858 killed: Not a day in April passed without a terror attack
Habib Ullah chugged along a dusty road in rural Pakistan on his battered motorcycle, his wife, infant son and 7-year-old daughter hanging on — a family of farm laborers on their way to work the fields. A 60-year-old father of seven, Ullah was steering through the barren, mountainous district of Khuzdar, in Pakistan's poorest province. The family never reached the fields. One of the motorcycle's wheels struck a mine on Loop Leak Road. (…) It was April 12, 2016 (…) One day, six countries, 19 deaths. And it wasn't the deadliest day in April. That was a week later, on April 19, when terrorist attacks in five countries killed 71 people and wounded 391 others. To assess the scope and nature of terrorism in 2016, the Los Angeles Times sought to chart the worldwide toll of deaths and injuries in a single month (…) They confirmed 858 deaths in 27 countries. An additional 1,385 were injured (…)The number of terrorist attacks around the world actually decreased by 13% last year, according to the U.S. State Department, the biggest decline in more than a decade. But the reality is that terrorist attacks over the last 15 years have become more deadly, more indiscriminate and more wide-ranging. During April, not one day escaped bloodshed committed by terrorists. Los Angeles Times (2016-06-24)

One million Canadians have donated to Red Cross campaign for Fort McMurray fire victims
More than one million Canadians have now donated to the massive Red Cross campaign to help Fort McMurray residents forced from their homes almost two months ago. The campaign is the largest and most successful in the organization's post-war history, said Conrad Sauvé, president and CEO of the

Canadian Red Cross. "This has been a real Canadian moment," Sauvé said Tuesday. "A tremendous Canadian moment. I think we need to recognize that, and I think everybody was touched throughout the country by seeing those images of Canadians fleeing this situation." The campaign has raised more than $136 million so far, and that total does not include matching funds from provincial and federal governments, Sauvé said. CBC News

Here's what life is like after the massive fire in Canada's Fort McMurray
More than a dozen people line up in the rain outside the only food bank in Fort McMurray, Alberta. Even as the downpour gets stronger, they wait in place holding green laminated numbered cards — most of them using this service for the very first time. It's Monday afternoon and since the food bank wasn't open over the weekend, this place is especially hectic as one team of workers take the green cards, and another team hurries in and out of the building with boxes of food to load into clients' parked cars. Over the last two weeks, since it reopened, the bank has fed some 3,000 people, displaced and put out by the raging wildfires that hit the town in May, prompting a state of emergency and a mandatory evacuation of the city — the longest in Canadian history — and wiped out entire neighborhoods. While climate change has been listed a factor for extremely dry weather and unruly forest fires in western Canada, Alberta wildfire investigators have said the Fort McMurray fires, also known as "The Beast," were likely caused by "human activity" and police have put a call out to people asking for any information. The police say they are treating the investigation as a criminal matter. VICE News

Crews battling three wildfires in wooded areas throughout Nova Scotia
The Nova Scotia government says crews are battling several wildfires in wooded areas throughout the province. The province says the largest is burning in Fenwick, just south of Amherst, and is approximately 12 hectares in size. Spokesman Brian Taylor says that fire has been contained and more than 50 crew members are working to extinguish the blaze. Taylor says another fire, one hectare in size, is burning in Lunenburg County, but it has been contained and there are no concerns. Canadian Press (St. John's Telegram, Charlottetown Guardian)

Forest fire burning outside community of Pollard's Point
Water bombers have been dispatched to a forest fire outside the community of Pollard's Point in White Bay. The province's fire duty officer, Basil English, said the blaze was reported around 3:30 p.m. and is burning about 15 kilometres outside of the community. CBC News

Kenora declares state of emergency
The City of Kenora declared a state of emergency on Monday following heavy rainfall and flooding that hit the northwest over the weekend. It's the second municipality in the region to do so after many parts of the region saw over 100 millimetres of rain. O'Connor Township, just outside of Thunder Bay had already declared a state of emergency on Sunday. A press release issued by the City of Kenora said the over 109 millimetres that fell on the city over a two day period led to more than 20 roads experiencing moderate to extensive damage. CBC News

Sandbag machine arrives in Whiteshell as flooding continues
People in the Whiteshell are watching the floodwaters continue to rise and have been told a sandbag-making machine is on its way. Grant Fisette, whose property borders Caddy Lake, said the lake level went up by about 10 centimeters overnight. Much of the hillside next to his home has already slumped away from heavy rains on the weekend that washed out roads. "I boated around last night and there's so much water damage and sheds on their sides around the lake and boat houses that are pretty much totally submerged," he said. CBC News

Calgary group urges flood-affected homeowners to appeal property tax assessments
A small group of Calgary homeowners impacted by the 2013 floods is encouraging others to appeal their property tax assessments, saying they shouldn't have to pay more in taxes until "big" flood mitigation measures are taken. The group, called "Still Paying for the 2013 Flood," is headed up by local political strategist Stephen Carter. He says homeowners in Calgary haven't yet seen the type of mitigation needed to justify an increase in property taxes. A dry dam for the Elbow River is planned for the Springbank area, though it is now undergoing a federal environmental assessment. CBC News

Somali cabinet minister killed by car bomb the latest in growing number of Canadian terror deaths
Despite the risks, Buri Mohamed Hamza returned to Somalia to serve the country's struggling federal government, but on the weekend Al-Shabaab extremists struck his hotel with a car bomb, killing the former Toronto resident. The zoologist was the 10th Canadian to be killed abroad by terrorists in 2016, the worst year for such deaths since the Sept. 11, 2001 attacks, according to a terrorism database. Nine other Canadians have also died in Burkina Faso, the Philippines and Indonesia. "Overseas exposure of Canadians to terrorism seems to be up, markedly so," said terrorism researcher James O. Ellis. "The widespread travel and work of Canadians has exposed them to greater danger this year than we've seen in many recent previous years (...)" Ellis is a research affiliate at the Canadian Network for Research on Terrorism, Security and Society (TSAS), which maintains a database of known terrorism incidents. Excluding attacks on Canadian military personnel in Afghanistan, the database points to 2016 as the worst in 15 years. Canadians have not necessarily been targeted more than in previous years, but they have been falling prey to overseas extremist groups intent on killing Westerners, said Alan Bell, president of Toronto-based security firm Global Risk International Inc. National Post

It involves U.S. Customs and Border Protection, the Department of Homeland Security and Canadian authorities. Valley News Live

Drugs, Weapons Seized At Ambassador Bridge
May was a busy month for customs officers at the Ambassador Bridge. On May 2nd, two non-residents made a wrong turn onto the Ambassador Bridge. Upon exiting the vehicle in secondary inspection, both occupants of the vehicle admitted that there were drugs in the vehicle. Both were placed under arrest and personal searches were conducted. An examination of the vehicle with detector dog assistance resulted in the seizure of 413.9 grams of marijuana wax butter, 916 grams of marijuana cookies, 148.9 grams of marijuana, 220 tabs of LSD, 1 tab of Xanax, and US$999. All of the drugs were seized, and a vehicle penalty assessment of CAN$1,200 was issued and paid by the travellers, who returned to the United States. Windsorite

Things a Criminal Could Do With 9 Million Hacked Health Care Records
What can a fraudster do with medical records stolen from several health care organisations? Last weekend, a hacker advertised over 600,000 alleged records for sale on the dark web. Then on Monday, the same hacker listed around 9 million supposed health care insurance details. Those dumps included, among a few other tidbits, Social Security numbers, dates of birth, physical addresses, and victim's full names. Some also include details on health insurance, such as policy numbers, but their medical history isn't being sold, it appears. Motherboard

Mozilla made a game to teach you the basics of encryption
Sure, people will tell you that encryption is important to maintaining your online privacy, but how do you wrap your head around the concept? Mozilla wants to help. It's introducing a web-based game, Codemoji, that illustrates how ciphers work through emoji. Type in a phrase and Codemoji will both shift the letters and replace them with emoji. The challenge, as you might guess, comes when you get your friends to guess the meaning without turning to the Codemoji website. Engadget

Explosion destroys home in Mississauga, at least 1 person seriously injured
Emergency crews are investigating after a massive explosion in Mississauga destroyed one home and left several others damaged Tuesday afternoon, with at least one person seriously injured. Peel Regional police, firefighters and paramedics responded to the call of an explosion at 4:20 p.m. on Hickory Drive near Willowbank Trail, in the Dixie Road and Rathburn Road East area. Heavy smoke was visible in the area, with debris scattered across the neighbourhood. At least four homes were damaged in the explosion and a small fire was also seen burning at the scene. Global News; National Post (Ottawa Citizen); CTV News; Canadian Press (Global News, Metro News); Huffington Post; ABC News; Torstar (Hamilton Spectator)

Man wanted by RCMP in Alberta arrested in northwest Ontario: OPP
Ontario Provincial Police say a 32-year-old man wanted by the RCMP in Alberta has been arrested. They say they were told by the RCMP that the man and a female companion were possibly in the Dryden, Ont., area. OPP say the man and woman were located on Highway 17 in Southworth Township, Ont., on Monday, and arrested the man on a charge of failing to comply with a recognizance. Police say Jason Masse was wanted by RCMP in Provost, Alta., on charges including assault with a weapon, pointing a firearm, forcible confinement, uttering threats, and possession of a weapon for a dangerous purpose. RCMP support Pride in Steinbach, city council refuses to endorse
The first Steinbach Pride March has faced a number of challenges and concerns along the way to the July 9 date, now the city council is refusing to endorse the event. City council announced their decision in a media release Tuesday, “Council has not officially endorsed the July 9 Pride March. Steinbach residents will decide themselves whether they wish to attend this event.” The city announcement comes after Manitoba RCMP supported the march on Monday. D Division Commanding Officer Scott Kolody said he would attend the Pride March and Manitoba RCMP would “provide all required resources to ensure participants can walk in Steinbach knowing they are safe, secure and have the RCMP by their side.” Global News

Memorial in St. Albert will honour slain RCMP Const. David Wynn
The life and legacy of fallen St. Albert RCMP Const. David Wynn will be honoured with a special memorial and an endowment fund. The design for the memorial was unveiled near Lacombe Park Lake in St. Albert Tuesday. Benches will surround a plaque on a large rock next to the Sturgeon River. The memorial in the park is intended as a place for reflection. Mayor Nolan Crouse hopes it will be completed by October. RCMP search for missing 15-year-old Gillian Mikayla Bruce
RCMP are asking for help to find a 15-year-old girl who ran away during a family visit to Winnipeg. RCMP were called after Gillian Mikayla Bruce from the rural municipality of Tache didn't show up to meet her ride back home. The teenager ran away during a family visit to Winnipeg on June 18, RCMP said. "While our investigation so far has confirmed that Gillian left on her own accord and likely does not want to be located, we are doing everything we can to confirm her well-being," RCMP Sgt. Bert Paquet said in a news release. CBC News; myToba

Sylvan Lake RCMP investigate attempted abduction of 13-year-old girl
Sylvan Lake RCMP are investigating after two men allegedly attempted to abduct a 13-year-old girl. Police said the girl was walking with friends near the Sylvan Lake library at around 11 p.m. Monday when she and her friends separated. Shortly after, the teen noticed a vehicle which was operating “in a suspicious manner,” so she hid in a nearby bush. Global News

RCMP investigating after shots fired into a home in Surrey
Police are investigating a targeted incident involving shots being fired into a home in Surrey on Tuesday morning. When Surrey RCMP arrived at the home in the 10100-block of 127 Street, they found bullet

holes in the front door and window. Police also found the family dog dead inside and it's believed the dog died of a gunshot wound. One person was in the home at the time of the incident but was not injured. Global News; Vancouver Province

RCMP rule sudden death as a homicide
An autopsy has determined that a sudden death in Onoway on June 26thwas a homicide, RCMP said. Glen Allen Abbott, 37, was found dead in his residence by RCMP officers. The RCMP Major Crimes Unit and the Stony Plain General Investigation are now handling this homicide investigation, and they are seeking the public's assistance to determine the victim's movements in the days leading up to his death. CTV News; Edmonton Journal; CBC News

Nanaimo RCMP seize weapons and drugs after searching 2 homes
RCMP in Nanaimo have seized a number of weapons along with quantities of various drugs after raiding two homes. Police were called to a home in the 500 block of Dundas Street on Monday last week after a report of a man with a rifle. They were then called to a home in the 400 block of Nicol Street three days later. Officers say there had been dozens of previous complaints about both locations and the homes had been the focus of the Street Crimes and Drug Unit for some time. CBC News

Property crime and fraud up: RCMP annual report
Property crime and reports of fraud have increased, according to an annual report from the New Brunswick RCMP. The report, RCMP in New Brunswick Annual Report 2015 released Monday says property crime rose by 15.4 per cent. In 2014, there were 16,880 reports of property crime, which includes arson, break and enter, fraud, possession of property obtained by crime, theft $5,000 and under and theft $5,000 and over and theft of motor vehicle. A year later, the number of reports grew by 2,610 to 19,490. But the most startling statistic in the report was that showing a 50 per cent increase in reports of fraud. "This is a significant increase, and one the RCMP takes very seriously," the reports states. CBC News

Firearms like AR-15 used in Orlando shooting tougher to get on P.E.I.
Weapons like the AR-15, which was used in the Orlando shooting earlier this month, are more difficult to obtain in Canada than in the U.S., according to P.E.I.'s director of public safety. Following the shooting, U.S. media coverage showed just how easy it was to obtain an AR-15 semi-automatic rifle in less than 10 minutes. "I think the gun culture in Canada is much different than the gun culture in the U.S. from what we see in media and what's reported," said Aaron Campbell. "The interest in the safety of the public is something that is well-considered under the federal Firearms Act to ensure that communities are safe." There are 1,297 restricted firearm licences on P.E.I. Weapons in the restricted category include handguns or rifles with shorter barrels. Non-restricted weapons, of which 4,608 are licenced on P.E.I., include shotguns and hunting rifles. CBC News

Laval inmate, serving eight years, dies in hospital
An inmate of the Federal Training Centre, a multi-security level penitentiary in Laval, has died. Robert Harvey, 57-years-old, was serving an eight-year-sentence for several offences including robbery as well as breaking and entering. He had been serving since July 6, 2011. Harvey passed at the hospital of Archambault Institution in Sainte-Anne-des-Plaines. According to a report issued by the Correctional Service Canada, the police and coroner have been notified, and the circumstances of the incident will be reviewed. The inmate's next of kin have also been given notice of his death. Montreal Gazette

Deadly W-18 drug found in Vancouver say police

The deadly drug W-18 has made its first reported appearance in Vancouver, according to police. Police found the synthetic opioid in pills seized from two men who were arrested in a break-and-enter incident in Vancouver's West End on April 8th. Officers initially thought one of the pills may have been a counterfeit oxycontin pill and sent it to Health Canada for analysis. Those results came back last Friday and revealed the presence of W-18 in those pills. Experts say W-18 is many times more lethal than fentanyl. Metro News; Global News

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS / ENQUÊTE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINÉES

Provinces studying terms of reference for inquiry on missing, murdered women
Prime Minister Justin Trudeau was the one who promised a national inquiry into missing and murdered indigenous women, but the provinces still need to sign off on the details. The recommendations that came out the Liberal government's consultations earlier this year were clear: the upcoming national inquiry should have the authority to make recommendations within provincial and territorial jurisdictions as part of a larger attempt to tackle what the inquiry will determine are the root causes of the issue. That authority does not come automatically, however, which is why officials at Indigenous and Northern Affairs Canada are having some back-and-forth discussions with the provinces and territories over the terms of reference, which sources said the federal government proposed in early June. Canadian Press (Winnipeg Free Press); CBC News

Families of 34 missing or dead Indigenous women demand 'proper' investigations
CBC News is investigating the deaths or disappearances of dozens of Indigenous women — all cases where the police said there is no evidence of foul play. But families say their loved ones may have been murdered and that the police investigations were riddled with problems. The Current speaks to three CBC reporters: Connie Walker, Geoff Leo and Angela Sterritt, to find out what their investigations have turned up so far. CBC News - The Current - Transcript

Operations for LRT tunnel secret for VIP visits to Ottawa
The city won't say if it will ever have to close the Confederation Line LRT tunnel during visits by a U.S. president or other VIPs after the $2.1-billion rail system opens in 2018. A city spokeswoman chalked it up to "security reasons" Tuesday after consulting with the Ottawa Police Service. Part of the 2.5-kilometre tunnel is under Queen Street, just a couple of blocks from Parliament Hill.] On Wednesday the city is closing downtown streets north of Albert Street as a security precaution while U.S. President Barack Obama meets with Prime Minister Justin Trudeau and Mexican President Enrique Pena Nieto. Obama will be addressing Parliament. OC Transpo is detouring a few bus routes away from the street closures in the core. Stephanie Carvin, an assistant professor of international affairs at Carleton University and a former national security analyst, said the city will need to consider how it will operate LRT during a visit by a VIP the stature of a U.S. president. "We might see an LRT shutdown during future visits. I wouldn't rule that out at all," Carvin said, noting the city will need to balance the importance of running the transit system with any security threats identified by law enforcement agencies. Ottawa Citizen

Last chance to wave goodbye to U.S. President Barack Obama in Ottawa
If you're hoping to catch a glimpse of outgoing U.S. President Barack Obama at the North American Leaders' Summit tomorrow in Ottawa, your best bet is late in the afternoon on Parliament Hill. Prime

Minister Justin Trudeau will host Obama and Mexican president Enrique Peña Nieto for the so-called Three Amigos meeting here in the capital, and the jam-packed itinerary means road closures and travel restrictions, mostly downtown. Obama is scheduled to arrive at the Ottawa airport at 10:15 a.m. However, the Ottawa Airport Authority says there will be no public viewing area, and it's reminding travellers about traffic reductions and road closures in the vicinity of the airport at the time of Obama's arrival. It's also recommending travellers get to the airport two to three hours before flights scheduled to depart mid-morning and in the early evening. CBC News

Trudeau, Mexican president stand up for free trade, take shots at Trump-style protectionism
The leaders of Canada and Mexico stood shoulder to shoulder on Tuesday, as they heralded a new era of friendship while taking subtle jabs at Brexit and Donald Trump's anti-trade rhetoric. Prime Minister Justin Trudeau and Mexican President Enrique Pena Nieto presented their united front outside the House of Commons, where they pushed reset on the country-to-country relationship by promising reciprocal action on visas and beef. "We've seen around the world many examples of protectionism, of stepping away from trade agreements and engagements like we're showcasing today," Trudeau said. "And I think it's important that allies and partners like Mexico and Canada work together to address the challenges we're facing together (...) As Trudeau and Pena Nieto, who will be joined by U.S. President Barack Obama for the Three Amigos summit on Wednesday, were proclaiming their new friendship, Britain's decision to leave the EU as well as the potential for a Trump presidency hovered over the leaders like a cloud. Many analysts have attributed Brexit to growing angst about the effects of globalization and free trade in the United Kingdom. Those sentiments have also manifested themselves in other parts of Europe as well as the United States. Postmedia (National Post, Ottawa Citizen); Toronto Star

With U.K.'s commitment to NATO questionable, Canada could pick up its security slack
Britain's decision to bolt from the European Union and the ensuring market turmoil, political infighting at Westminster and the EU's hardening position on the impending breakup talks have received massive global attention. But the first real earthquake since last Thursday's repudiation of Europe by British voters has occurred in the security realm on the distant eastern margins of the continent. It was Turkish President Recep Tayyip Erdogan's stunning volte-face in his dispute with Russian President Vladimir Putin over the shooting down of a Russian warplane last fall. Others security aftershocks are sure to follow, especially in Britain itself. Scottish nationalists who are bent on holding another referendum on independence want to get rid of the Royal Navy's multibillion-dollar nuclear deterrence force, based

entirely near Glasgow. This suggests an opportunity for Canada to show greater leadership in NATO, although there is little evidence that the Trudeau government wishes to do more than the bare minimum. National Post

IS believed to be behind Istanbul airport attack; Nearly 50 dead
A senior Turkish government official has told The Associated Press all initial indications suggest the Islamic State group is behind the attack at Istanbul's Ataturk airport. The official also said nearly 50 people were killed in the attack Tuesday at the airport's international terminal and as many as four attackers may have been involved. Associated Press (Yahoo! News); Al Jazeera; BBC News; Reuters (CBC News); Canadian Press (Huffington Post); Washington Post; Telegraph UK

'Long Summer of Discontent': Officials Worry Turkish Attack Could Be Start of Terror Campaign
The deadly bombings at a Turkish airport could be the start of a new wave of terror attacks, worried U.S officials told NBC News. "Our long summer of discontent has just begun," a senior intelligence official told NBC News Tuesday evening. The use of multiple suicide bombers fits the M.O. of ISIS — not the Kurdistan Workers' Party, or PKK — and so does the target, in this case Ataturk International Airport in Istanbul, they said. "There are only two groups capable of carrying out such a large scale attack," a senior U.S. counter-terrorism official said. "This does not fit the PKK profile, they go after Turkish targets, not international targets." Also, ISIS is far more bloodthirsty than the Kurdish rebel group, which has been battling Ankara for years and tends to go after military targets. NBC News

Immigration detainees on hunger strike demand meeting public safety minister
A blog post states "Sixty-eight immigration detainees in two maximum security prisons in Ontario -- Toronto East Detention Centre in Scarborough and Central East Correctional Centre in Lindsay -- began a hunger strike on Monday to demand an end to indefinite detentions in maximum security prisons. The immigration detainees, all racialized and undocumented men, will not end their hunger strike until they are able to meet with **Public Safety Minister Ralph Goodale**. **Goodale's** receptionist has refused to schedule a meeting between **Goodale** and the detainees, and maintains that **Goodale** cannot speak to members of the public. When detainees phoned their local MP, Conservative MP Jamie Schmale, he refused to facilitate a meeting with **Goodale**. "We are in this together, we gotta make this happen 'cause we're really really tired of being in here. We can't take this no more," said Patrick, one of the hunger striking detainees in Lindsay, in an End Immigration Detention Network media release (…)Immigration

detainees began a hunger strike in April, following the death of Francisco Javier Romero Astorga, a 39-year-old Chilean father of four. The hunger strikers demanded an end to indefinite detention in maximum security, an overhaul of the judicial review process, and improvement in prison conditions. The hunger strike came to an end when CBSA officials agreed to meet with the detainees, but the CBSA did not follow through on the promises they made. This time around, the hunger strike takes aim at elected officials. "They [have] no way to have their voices heard, so they are on a hunger strike with one clear demand -- to meet with **Minister Ralph Goodale**," Chak explained." Rabble.ca

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Disaster assistance officials in Estevan today
Flood-affected residents of Estevan will be getting some help from provincial disaster assistance officials today. The southeastern Saskatchewan city is no longer under a state of emergency, but that was the case Sunday night, after heavy rainfall flooded streets and basements. The area got more than 13 centimetres of rain. Now, residents of the town are in cleanup mode. On Thursday, staff with the Provincial Disaster Assistance Program will be in the city to help people submit claims. They'll be bringing all the forms people will need for their applications. PDAP program advisors will be available at the Estevan Leisure Centre board room from noon to 8 p.m. CST. They'll also be available Friday (9 a.m. to 8 p.m.) and Saturday (9 a.m to 1 p.m.). There will also be a building inspector from the province's building standards branch to help with onsite inspections. The inspector will be available Thursday from noon to 8 p.m. CBC News

Road to Caddy Lake reopens after weeks-long flood closure
A road to a popular cottage destination near the Manitoba-Ontario border that closed for almost three weeks due to flooding has finally reopened. Highway 312 between Highway 44 and the Ontario border, which leads to Caddy Lake, opened back up Thursday. It was closed at the end of June after a section of the road washed out following a heavy two-day downpour. Several other roads in the Whiteshell were damaged by erosion during the same storms. Some roads and hiking trails remain closed or are under construction, while others have been opened. CBC News; Winnipeg Free Press

The enthusiasm to rebuild homes after the Fort McMurray wildfire has given way to frustration for some residents. "You really don't know who you can trust, that is the biggest thing in Fort McMurray right now," said MacKenzie Cadieux, who lost her home in Abasand. Cadieux and other residents from fire-ravaged communities attended a forum at Shell Place on Wednesday evening, where a lawyer and a contractor answered questions. CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

What's Next For Canada's Surveillance Landscape?
Edward Snowden's 2013 revelations of massive state surveillance shocked the world and made it more aware of electronic privacy issues, but north of the border, Canada continues to struggle with its own. Just over a year ago, the former Conservative Canadian government, led by Stephen Harper, enacted a piece of legislation that enraged privacy advocates. Bill C-51 extended the powers of Canada's intelligence services, prompting an open letter from over 100 Canadian academics imploring the government to rethink it. Even the federal Privacy Commissioner complained about it. A year later, we have a new government that has promised to overhaul things. What has been done, and where does Canada's complex debate over privacy and national security sit now? C-51 angered privacy advocates by increasing information-sharing powers between 17 government agencies. The Canadian Security Intelligence Service (CSIS), which is Canada's domestic intelligence agency, can now obtain the tax records of anyone perceived to be a national security threat, for example. The bill also permitted the disclosure of information shared between government agencies to others. Dark Reading

Border services' gun smuggling busts 'showcasing': criminologist
Smuggling charges, hidden handguns more of a warning to gun-toting U.S. tourists, not crime-related says SFU prof. If you feel safer from gun violence thanks to news that border agents have been catching U.S. handguns at the border recently, you're likely mistaken. The Canada Border Services Agency announced on Tuesday that two travellers busted with guns at the Abbotsford border crossing were convicted of smuggling, and on Monday the agency announced it had caught a woman in Prince Rupert who had hidden parts of a handgun throughout her car while driving from Alaska. "Canadian firearms laws are clear," CBSA said in a press release. "Anyone importing firearms and weapons into Canada must declare them and meet all licensing and registration requirements under the Firearms Act. (…) Although gun violence in the Lower Mainland has led to furor amongst residents after several fatal shootings this year — and mounting concern about rampant mass shootings south of the border — one Simon Fraser University criminology professor said the two issues are entirely unrelated and should not be confused.. Clever Tool Shields Your Car From Hacks By Watching Its Internal Clocks
Car hacking demonstrations tend to get all the glory in the security research community—remotely paralyzing a Jeep on the highway or cutting a Corvette's brakes through its Internet-connected insurance dongle. But as the nascent automotive security field evolves, defensive tricks are getting cleverer, too. Now there's a new prototype gadget that stops those vehicular attacks with an ingenious hack of its own. In a paper they plan to present at the Usenix security conference next month, University of Michigan researchers Kyong-Tak Cho and Kang Shin describe an easy-to-assemble tool they call the Clock-based Intrusion Detection System, or CIDS. It's designed to spot the malicious messages car hackers use to take control of vehicle components like brakes and transmission. Wired Magazine

Bob Paulson apologizes for 'egregious behaviour,' nudity at RCMP bomb school
RCMP Commissioner Bob Paulson is apologizing to victims and witnesses of "egregious behaviour" at one of the Mounties' top training facilities. CBC News has learned the force has also removed Chief Supt. Marty Chesser, commanding officer of the force's national headquarters, from his post. The apology comes in a long-awaited internal report into allegations of harassment and sexual misconduct at the explosives training unit at the RCMP's Canadian Police College in Ottawa. The RCMP accepts all of the findings and has already drafted a plan on how it intends to implement all 28 recommendations. The force has committed to making more than two dozen reforms, including significant changes to how it investigates and disciplines employees, as well as a national initiative to eradicate sexual misconduct in the police agency's workplace. The review of what happened at the college followed CBC News reports about rampant nudity, allegations of sexual harassment, bullying and other disgraceful conduct at the school for bomb technicians. At the end of February, Paulson asked assistant commissioner Steve White to lead the review. The results, shared with CBC News, detail a historically dysfunctional workplace where employees felt they couldn't complain about mistreatment without risking retaliation and being labelled "rats." The review team found a long string of "unacceptable" failures in the leadership of RCMP

management, the disciplinary system and human resources practices. "Specifically, the investigations and processes related to these events were fraught with missed opportunities to effectively deal with misconduct, protect the victims and witnesses and heal the workplace. It is for these reasons that the RCMP commissioner and the RCMP as an organization sincerely apologize to all who were negatively impacted," the report says. Despite two previous investigations into disturbing behaviour at the school, this new inquiry has turned up new allegations, including "bullying, intimidation, harassment and new allegations of unwanted sexual touching." CBC News

RCMP collide with pick-up during chase
An Okotoks RCMP member and a Volker Stevin employee are in hospital after a police car collided with a pick-up truck during a chase this morning. At about 7:45 a.m. an RCMP SUV was in pursuit of a vehicle travelling north in the southbound lane on Northridge Drive near the intersection at Elizabeth Street. The RCMP vehicle collided with a Volker Stevin pick-up truck in the intersection and the suspect vehicle then fled north in the southbound lane. The officer had to be removed from the SUV on stretcher and the Volker Stevin employee was able to walk from the truck. Both were transported to South Health Campus with minor injuries. Man threatenes to kill police while brandishing rifle in Nova Scotia: RCMP
Police in Nova Scotia say a young man is facing charges after he allegedly threatened to kill police while holding a rifle. The RCMP say they were called to a dispute on East Side Harbour Road in the community of Boylston, Guysborough County around 9 p.m. Wednesday after a man had broken the windows of a home, and several vehicles. When officers arrived, they were told by people inside the home that a man had threatened to kill them, and that he had fired his rifle several times. At that point, police allege the man threatened to kill officers on site. “RCMP officers moved the individuals inside the residence to a safe location and called in additional RCMP officers from neighbouring detachments and the Nova Scotia RCMP Emergency Response Team,” a police release states. “The situation was resolved when the man surrendered to the RCMP just after 5 a.m., without incident.” No one was injured. Police say the accused and the people inside the home were known to one another. A 20-year-old man from Boylston is now facing 12 charges, including eight counts of uttering threats, and single counts of assault, careless use of a firearm, unauthorized possession of a firearm and mischief. Metro News

Millington loses appeal in Dziekanski tasering
The Mountie who tasered Robert Dziekanski at YVR airport almost 9 years ago has lost an appeal of his perjury conviction in the BC Court of Appeal. Last February, Kwesi Millington was found guilty of one count of perjury for lying under oath at the Braidwood Inquiry into the death of Polish Immigrant Robert Dziekanski at YVR airport. Millington tasered Dziekanski twice before he died. He was sentenced to 30 months in prison, but appealed. That appeal has now been dismissed. Millington’s lawyers argued the evidence that Millington colluded with other officers before the inquiry was weak. The BC Court of Appeal says “it was not an abuse of process for the Crown to pursue the collusion allegation, nor was the Crown estopped from relitigating the collusion issue because of the outcome of the earlier trial.” Another Mountie convicted of perjury, Cpl. Monty Robinson, also appealed. It has yet to be heard. Two other officers were acquitted. One of them, Constable Gerry Rundel, was in court today to support Millington. He says he’s back on the force, working in Nanaimo. AM 730 (CJOB); Canadian Press (CFRA News, Castanet, Vancouver Sun, Chronicle Herald)

Nunavut RCMP least reflective of region's population of all Canadian police forces
Nunavut's top cop says it will likely take 'many generations' to build a police force that reflects Nunavut's diversity. A new CBC investigation surveyed police forces across the country to compare how diverse they are compared with the populations they serve. In Nunavut, 12 per cent of the police force is racially diverse, compared 88 per cent of the territory's total population. That makes the territory the least reflective jurisdiction in the country. Mike Jeffrey, commanding officer for Nunavut's RCMP, says the low

graduation rate of Nunavut high school students is a challenge to recruitment and those who do graduate are actively sought by other government departments looking to hire more Inuit. He said there is also a "security issue." "If you want to be a police officer, or in law enforcement, you have to have demonstrated that you were living a lifestyle that would promote the law enforcement mentality of desire," he said. "We don't want people who are taking drugs, or who would have committed a crime in the recent past." Right now, all 11 Inuit RCMP members are based in Iqaluit. About 150 people work for Nunavut RCMP, although that includes both sworn officers and civilian staff. CBC News

Rate of complaints against Codiac RCMP increase in 2016

The Codiac RCMP has received a higher rate of complaints so far this year than it did in 2015. There have been 18 complaints within six months this year, compared to a total of 24 for all of last year. At the Codiac Regional Policing Authority meeting Wednesday night in Moncton, board member Courtney Pringle Carver asked Inspector Jamie George about the types of complaints the RCMP receive. "People are not happy with the way they were spoken to, perhaps; it could be somebody who said that the police used excessive force; It could be something where there was an irregularity in procedure, in some cases it's about people feeling that the RCMP did not conduct an adequate investigation into their complaint," George listed as examples. George said he was not alarmed by the increase. He said until April, the trend suggested the RCMP were making progress addressing complaints and the numbers were down. But George said a new process now allows people to file complaints online. "We were going along very, very well in the beginning of the year and we only had three or four," George said. "But there were a number that came in through the online system that went directly to Ottawa, that didn't get processed in Ottawa and pushed down to us so we could follow them up. And then we got seven or eight in a row." CBC News

Codiac RCMP costs expected to rise in greater Moncton

Taxpayers are going to need to dig deeper to pay for the Codiac RCMP in the future as the force looks to cover several big ticket items and plan for an increase in staffing, the Codiac Regional Policing Authority heard on Wednesday night. Paul Van Iderstine, the Codiac Regional Policing Authority's treasurer, said there are several inevitable costs in front of the force that must be paid for in the next few years. "We have the new communication system, we have the new police building and we've got a collective bargaining unit that we are going to have to deal with," he said. "So the total increase in costs for the policing services in the Codiac region are really, we can't say at this point in time, but we know there's some big, big ticket items coming down that we're going to have to look at." Moncton, Riverview and Dieppe have already budgeted about $2 million to get the Codiac RCMP up and running on the New Brunswick Trunk Mobile Radio system, a communications system that will allow the police across the province to encrypt communications. Van Iderstine said a special committee has already been formed with the three municipalities to start investigating a new Codiac RCMP headquarters. That group is looking at the potential costs with the new headquarters. RCMP Insp. Jamie George was asked about a possible financial outcome of the Supreme Court of Canada decision that allows RCMP officers a right to collective bargain. George said there are still many unanswered questions about how the top court's decision will roll out and what financial demands it will create. Terry McKee, a retired RCMP officer and current spokesperson for the Mounted Police Professional Association of Canada, told the police authority that the board should expect staffing costs to rise. "Members are looking for a substantial raise in their salary," he said. CBC News

Ottawa police officer Marie Josee Seguin acquitted on drunk driving charge

An Ontario judge has acquitted an Ottawa police officer charged with impaired driving, and chastised the RCMP officers who pulled her over for their "atrocious" and "disturbing" note taking. In May 2014 RCMP Const. Gary Lee pulled Marie Josee Seguin over for erratic driving on the Highway 417 eastbound off-ramp at St. Laurent Boulevard. Seguin, who was off duty at the time, was later charged with impaired driving and failing to provide a breath sample. Sequin argued that the stop and her detention were unlawful. She argued the RCMP does not have the authority to stop drivers on Highway 417, nor is there a bilateral agreement between the RCMP and Ottawa police for that stretch of road. In his ruling Justice Allan Letourneau said he believed Lee pulled Sequin over because he feared for the public's safety. But Letourneau went on to characterize Lee as "a very poor witness," and scolded all four responding RCMP officers for their "atrocious" note taking. In court even Lee admitted he would grade his own notes that day with an "F." The judge chastised Lee for filing his general report more than 15 hours after the

incident. When pressed about why he omitted certain details in his notes, Lee said he didn't remember them until he testified. For example, he wrote that Sequin fumbled to find her ID, but failed to mention that the licence was behind other documents in her wallet. The extent of the failure of all four officers to comply with their own force's note taking requirements is astounding and disturbing," wrote Letourneau. "Contemporaneous and comprehensive notes are especially important in drinking and driving cases where often there is no independent evidence available to corroborate the testimony of police officers." The judge questioned if Sequin was in fact inebriated when "no other witness testified that she was very drunk." CBC News

Unmasked: The face of Anonymous activist shot dead by RCMP
One year after a masked man linked to Anonymous was shot dead by RCMP in northeastern B.C., a relative wants to reveal the true face of James McIntyre. McIntyre, 48, was killed on a sidewalk by officers responding to a call about a disturbance at an open house for BC Hydro's controversial Site C dam project in Dawson Creek on July 16, 2015. "Jim didn't deserve to die in a brutal manner," said McIntyre's cousin, Keith LaRiviere, Sr. "The man lying on the ground was not a criminal. He was a victim of police violence." LaRiviere described the cousin he grew up with as a gentle, innocent, intelligent man who stuttered, rarely conversed with people and loved model trains. (...) After Anonymous claimed McIntyre as a comrade and threatened to avenge his death, the Dawson Creek man made international headlines.(...) Initial reports to BC's police watchdog alleged McIntyre was shot after a man with a knife "approached officers in an aggressive manner" outside a Site C open house in Dawson Creek on July 16, 2015. Witness Mike Irmen said the man who was shot was wearing a mask, similar to the Guy Fawkes mask often used by Anonymous and refused to throw away his knife, even as he lay bleeding. LaRiviere believes his cousin was at the Site C meeting to make a statement, not to hurt anyone. "Making a statement with that mask makes all the sense in the world to me for Jim, because he was alone in his life," said LaRiviere. RCMP declined to comment, as the fatal incident is still being investigated by B.C.'s police watchdog."The bulk of the investigative work is complete," said Marten Youssef, the Independent Investigation Office's manager of strategic communications. Youssef said an internal review of the investigation still needs to be completed. Until then, there's no official information about what happened or whether RCMP officers acted appropriately. Youssef says he's aware of reports of Anonymous' interest in the case. But he says that's had no bearing on the IIO investigation. CBC News

2017 RCMP Musical Ride tour application deadline is now here
The deadline to book a 2017 appearance of the RCMP Musical Ride is Friday. "We are excited to have cities and towns across the country help us celebrate Canada's 150th birthday by hosting the 2017 Musical Ride and raising money for their communities," says Superintendent Leslie Cook, Officer in Charge of the Musical Ride Branch. To celebrate Canada's 150th birthday next year, the RCMP Musical Ride is organizing a coast-to-coast Canadian tour with stops near capital city regions, along with stops in between major centres to ensure the horses' welfare. The RCMP Musical Ride is performed by a full troop of 32 riders and their horses. Their performance consists of intricate figures and drills choreographed to music. These movements demand the utmost control, timing and coordination. The RCMP is seeking non-profit organizations to submit online applications to host the Musical Ride during this 2017 tour. Due to the large scope of this tour, applications must be received by July 15, 2016. The 2017 tour will commence in May. The Musical Ride will return to Ottawa in late June to participate in Canada Day celebrations in Ottawa. The tour will resume in early July and will continue until September. Dawson Creek Mirror

Increase in firearm arrests 'staggering:' Prince Albert police
As drug use and trafficking rises in Prince Albert, so does the number of firearms in the city. According to Prince Albert police Chief Troy Cooper, 52 firearms have been seized so far in 2016, compared to 19 in 2015. He said the "staggering" increase in numbers is closely tied to crystal meth and gang activity. "If one gang is using a firearm, the other gang has to use firearms as far as protection or intimidation. We saw it 15 years ago with the increase of concealed weapons like knives and now it's a real trend. It's scary for sure," he said. Police said weapons seized were primarily rifles and shotguns, many of which had been sawed-off for better concealment. Handguns contributed to six per cent of weapons arrests. CKOM

Toronto police constable quits, says tension with community contributes to decision
Former constable Marc Rainford says he recently quit the Toronto Police Service because of the difficulties in policing a society with increasingly polarized attitudes towards cops. With The Current, Rainford offers insight into the importance of police maintaining positive relationships with the communities they serve, and explains the devastating impacts of associating Canadian law enforcement with the behaviour of police officers in the United States. CBC Radio - The Current

Racism on the agenda as Mayor, Premier meet with Black Lives Matter this evening
Mayor John Tory and Premier Kathleen Wynne will hear about racism directly from the community in Toronto this evening. The province's new anti-racism directorate will meet with members of Black Lives Matter and community representatives during its first consultation. They say the meeting will focus on systemic racism, including anti-Black racism, Islamophobia, anti-Indigenous racism and racism experienced by other communities. The Premier agreed to the meeting after several BLMTO protests, including one at Queen's Park in early April and later, during this month's Pride parade. Sandy Hudson, a representative from Black Lives Matter Toronto, asked for the meeting. "We wanted to facilitate a space where the public would be able to communicate directly with decision makers and policy makers what their experiences have been at the hands of the police and how the system falls short", she told Metro Morning's Matt Galloway Thursday. She says the meeting will bring together different voices from racialized communities. (…)Lawyer and advocate Anthony Morgan will also be at the meeting. "That we have representatives from various heads of government is really important. I don't think there has been this much interest in having this honest a conversation about race, racism and its impact on impeding the lives and well-being of racialized people." Morgan says black people are over represented in the prison system, and carding has still not been fully eliminated. These are some of the issues he'd like to see addressed this evening. CBC News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Too-stringent cannabis rules a bad idea
An editorial states, "It was always clear that many hurdles will have to be jumped before legal marijuana can become a reality in Canada. Pot advocates won't be too pleased with the latest one. Ottawa, which recently struck a marijuana task force led by former deputy prime minister Anne McLellan, is sending strong signals legalized pot will be so strictly controlled that homegrown weed (even for medical purposes) may remain an illegal substance. For advocates, this will come as surprising and unwelcome news. Federal Health Minister Jane Philpott says the government wants to treat pot like tobacco. She

may or may not be aware, however, that it is actually legal to grow your own personal-use tobacco in small amounts in Ontario. Liberal MPP Bill Blair, justifying a heavy-handed approach, told the Toronto Star last week: "Unlike (growing) tomatoes, (marijuana) is a substance that poses … significant … social and health harms and risks to Canadians … the science is overwhelmingly clear that marijuana is not a benign substance." On that basis, it doesn't exactly sound like something that should be legal, does it? Except that doctors are prescribing it for glaucoma, anxiety, pain relief, muscle spasms caused by MS, nausea, arthritis discomfort, Crohn's disease and more. And we all know recreational use is widespread. A 2015 survey showed 20 per cent of Canadians indulge and another 10 per cent will light up once it appears in stores. A Conservative attempt to prevent medical users from growing their own pot has already been tossed out by the courts. It stands to reason then that preventing non-medical users of a legal substance from growing their own plants could amount to discrimination. Perhaps that is the wrench in the gears." Simcoe

Student workers hit hard by federal government's Phoenix pay system glitch
One student worker went five months without a pay cheque. Another had to call the government help centre 177 times before getting an explanation about why she was being underpaid. These are just two extreme examples of how the federal government's new computerized pay system is causing significant problems for public service workers across the country. (…) Yardon, 23, has not been given a proper paycheque since January. He maxed out his credit card, exhausted his savings, and fears he will be forced to drop out of university this fall, because he can't afford his tuition. Making things worse for Yardon, he's stuck in an uncomfortable catch-22. He's employed through the federal student work experience program. To qualify for his job he must be able to prove that he is enrolled in school. CBC News

Broadcast Media / Médias télédiffusés:

The federal government has publicly acknowledged that the situation around the new pay system is unacceptable and they've opened up a temporary work centre to help deal with some of these cases, but workers say that they're still having a difficulty reaching out for help. MINISTER / MINISTRE

Protesters unite to call on federal government to take action on issues
In a show of support for immigrant detainees, members of the Colonialism No More Solidarity Camp, gathered in front of **Ralph Goodale's** Regina office for a peaceful demonstration. Over the noon hour on Thursday, about two dozen people - including children - carried signs, waved flags and called on **Goodale** to take action in Ontario. On Monday, immigrants at two Ontario federal detention centres began refusing food because they want to meet with **Goodale**, **the federal minister of public safety.** Sue Deranger, a member of the camp, says the immigrant detainees are not asking for much. "All they are asking with this hunger strike is to meet **Goodale** and he will not meet that demand," she said... Deranger said members also invited **Goodale** to come to the solidarity camp and he has not. "We asked **him** in person and he said, ***'Send an email.'*** We did, and still **no response**," she said. "What's the harm in sitting with people?" Robyn Pitawanakwat greets **Ralph Goodale's staff**. Robyn Pitawanakwat, a

member of the camp, doesn't think it's right the Canadian government gets to decide who stays in Canada and who cannot... **Goodale** was not in Regina and could not meet with the protesters, but **his Regina staff did**. **They asked** if the group had any written requests they wanted to pass on to **Goodale**. The group did not have a letter, but asked **the staff** to tell **Goodale** to reply to his emails. **The staff said** they received all **Goodales's** email and received nothing from the solidarity camp. After some discussion, it was discovered that the protesters had the incorrect email address. The correct address was provided and the group was **encouraged** to resend their messages. Leader-Post

60 Migrants Detainted Indefinitely Launch Hunger Strike
Canada is the only western nation with a policy of indefinite immigrant detention, and over a third of detainees are held in maximum security prisons. Nearly 60 immigrant men at two Ontario maximum security prisons Thursday entered the fourth day of a hunger strike to protest the Canadian policy of indefinite immigration detention that denies immigrants access to any judicial process. The immediate aim of the strikers is to pressure Ontario's **Public Safety Minister Ralph Goodale** to meet with the detainees to discuss concerns about indefinite detention, and the use maximum security prisons for immigrants who have not been charged with crimes... According to the End Immigration Detention Network, the strikers have been organizing around these issues since 2013 but elected officials — including **Goodale** — have been unwilling to meet with them. The watchdog organization has been calling on supporters to petition the minister's office to meet strikers' demands. But so far **Goodale's** sole response to the hunger strike has been a statement this week claiming that immigration detention is a ***"last resort"*** policy, even while the immigrant justice organization No One is Illegal has long described it as a "first resort." teleSUR

RCMP apologizes over harassment episode, promises national effort
The RCMP will launch a new national effort to eliminate sexual misconduct in the workplace after an internal review criticized the police force's response to an "egregious" case involving nudity and harassment. The review concluded the RCMP's initial investigations into behaviour at the Canadian Police College were "fraught with missed opportunities" to effectively deal with the misconduct, protect the victims and witnesses and heal the workplace. RCMP Commissioner Bob Paulson accepted a special steering committee's 28 recommendations based on the findings, and he apologized to those who experienced distress over the episode. Paulson has been wrestling for years with problems of bullying and harassment within the national police force by introducing a "respectful workplace" course, setting up employee advisory committees, encouraging settlement of complaints at the earliest opportunity and promoting more women to senior posts. Earlier this year, **Public Safety Minister Ralph Goodale** expressed outrage to Paulson when allegations surfaced about unwanted sexual touching, bullying and rampant nudity in the explosives training unit of the RCMP-administered police college in Ottawa... Paulson has committed to providing **Goodale** with a "comprehensive action plan" within 30 days on implementing the recommendations. Canadian Press (Maclean's, Winnipeg Free Press); Toronto Star

Whistleblower Edward Snowden to keynote Toronto conference
The man that says he lives on the Internet will be the showcase speaker at SecTor, a Toronto-based security conference this year. Edward Snowden, the former CIA employee and government contractor that leaked classified documents about a mass surveillance operation run by the National Security Administration (NSA), will be appearing at the conference via a video link from Russia, where he's been living under asylum since 2013. SecTor will be Snowden's first and only commercial conference appearance in North America this year, conference organizers say. "Edward Snowden is not only one of the biggest names in cybersecurity, but his unique situation and cybersecurity experiences also make him one of the most important and influential," said SecTor co-founder Brian Bourne in an email announcement…Beyond NSA's clandestine mass surveillance operations that were leaked by Snowden, Canada's Communications Security Establishment (CSE) has also been the subject of some of his classified leaks. He's also said that Canada's intelligence gathering operations have the "weakest oversight" among western nations. IT World Canada

Mother of an ISIS Recruit Tells of Loss and Hope
Christianne Boudreau was standing in her garage, braving the cold Calgary night to finish her cigarette, when the phone rang. She didn't recognize the number on the caller I.D. Thinking it could be her 22-year-old son Damian Clairmont calling from Syria, she quickly answered. But the voice on the other end of the line was not Damian's – it was a reporter. "He asked me for a current picture of Damian," Boudreau says. "I told him he should just use the one Damian has as his profile picture on Facebook. But the reporter sighed and said, 'Never mind, that's the same picture ISIS has just used in your son's eulogy.'" Then he hung up. That was how Boudreau learned her son was dead. It had been just over a year since two agents from the Canadian Security Intelligence Service (CSIS) had arrived on Boudreau's doorstep and shattered her world by telling her that Damian – her kind-hearted, curious, goofy boy – was fighting with the so-called Islamic State (ISIS)…Like so many mothers who lose their children to radicalization, Boudreau had no support; no one to help her cope with her new, tragic reality. The CSIS banned her from telling anyone that Damian had joined ISIS, and so she spent her days pretending everything was fine. News Deeply

Twitter spies
An opinion piece states, "While the intelligence services of their southern neighbour are well-known, Canada's own surveillance network has remained more low-key, in keeping with the country's own easy-going image. But on Wednesday, the agency broke cover with its first ever tweet: "Yes, we're on Twitter. Now it's your turn to follow us." Canada's spies don't get much publicity – the closest to Hollywood glamour came in a bit part for a Canadian intelligence officer in the James Bond film Quantum of Solace – but the country ought to have very good spies, drawn from a multilingual, multicultural society used to people abroad thinking they're someone else ("No, I'm not American"). Plus, of course, being low-key means they don't see you coming. Bad guys used to avoiding CIA drones or charming MI5 operatives are likely to be less adept at avoiding flying ice hockey pucks." RCMP say problems with phone lines continuing in N.W.T.
N.W.T. RCMP say they are still getting reports of problems with telephone service two days after Northwestel repaired a damaged fibre line that disrupted service across the North. Service problems were reported over the weekend and Northwestel said Monday the problems were due to a fibre line in northern B.C. damaged by a landslide, and congestion on the line to which all services were rerouted. Some customers had trouble using long distance and wireless services, as well as 1-800 calling. At the time, officials advised people in N.W.T. and Yukon to go to their local RCMP detachments if local emergency phone lines were unavailable. CBC News

RCMP: iTunes tax scam
RCMP in the North Okanagan have issued yet another warning about a scam in which a caller claims to be from the Canada Revenue Agency (CRA) and demands payment. The scam has a new twist, with the caller demanding payment in iTunes cards. "Several local people have been contacted by scammers pretending to work for the CRA," said Const. Jocelyn Noseworthy, RCMP spokesperson. Castanet.net; CFJC Today

RCMP investigating reports of counterfeit currency, searching for two suspects
Police in central Alberta are on the lookout for two suspects as they investigate reports of counterfeit Canadian currency being used. Red Deer RCMP said they first received reports of counterfeit currency on July 8, after a staff member at Wild Bill's Sports Bar noticed a problem with a number of $100 bills that had been used in the establishment. First Nations chiefs urge holdout provinces, Ottawa to stop 'dragging feet' on MMIW inquiry
First Nations chiefs expressed growing frustration with a delay in the federal government's launch of a national inquiry into missing and murdered Indigenous women, calling on both the provinces and Ottawa to stop dragging their feet, during a third and final day of an annual general assembly meeting in Niagara Falls, Ont. The delay comes as two provinces, including Manitoba, continue to negotiate with the federal government over the terms of reference that would help determine the focus and scope of a national inquiry. It's unclear which other province is still negotiating. CBC News

Broadcast Media / Médias télédiffusés :

CBC News' Power & Politics interviewed Manitoba Justice Minister Heather Stefanson regarding that province's stance into the inquiry of missing and murdered indigenous women. Rough Transcript

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Pot dispensary shuttered
The operator of a medical marijuana dispensary in Penticton has closed his doors for now, after the city issued a notice of non-occupancy Wednesday. Mayor Andrew Jakubeit said Herbal Greens Apothecary was given the notice to cease operation as the city is currently suspending the business licence and have scheduled a hearing for operator Jukka Laurio. Attentat à Nice: la préfecture demande aux habitants de rester cloîtrés
Un camion a foncé jeudi soir dans la foule sur la Promenade des Anglais à Nice pendant le feu d'artifice du 14 juillet, faisant plusieurs victimes selon la mairie et des témoins sur place. La préfecture des Alpes-Maritimes évoque un attentat et demande aux habitants de rester cloîtrés. Le président de la métropole Nice Côte d'Azur, Christian Estrosi, a évoqué sur Twitter des dizaines de victimes. Vers 23H20, un important périmètre de sécurité était délimité à proximité, autour de la place Masséna. "Les gens courent, c'est la panique. Il est monté sur la Prom et il a foncé sur tout le monde" explique notre collègue. "Il y a du monde en sang, sans doute plein de blessés", explique un journaliste de Nice Matin présent sur place. Le Figaro

Au moins 73 morts dans un attentat à Nice
La scène s'est produite sur la promenade des Anglais, sur une distance de deux kilomètres, près notamment de l'hôtel Negresco, en fin de soirée après le feu d'artifice. Un témoin a affirmé avoir vu un chauffeur de camion foncer dans une foule de fêtards avec son véhicule et puis sortir en tirant avec une arme à feu, tuant plusieurs personnes. Un autre a dit: « Il y avait des mouvements de foule de partout. Moi je me trouvais devant un lieu d'animation. Des centaines de personnes se sont mises à courir dans tous les sens. On pensait à une alerte à la bombe. (...) Beaucoup de gens tapaient aux portes pour se réfugier dans les maisons. Des scènes de terreur. » Radio-Canada

Kenya police officer 'goes berserk,' kills 7 colleagues
A Kenyan police officer went on a shooting spree Thursday, killing seven colleagues including a hostage response team member before the standoff ended in a shootout, a police report said. The suspect, Abdihakim Maslah, was shot, said the report provided to The Associated Press. Associated Press (Hamilton Spectator, ABC News)

PM Trudeau says Canada will work to fight terrorism
Prime Minister Justin Trudeau says Canada is thinking of "our friends in France" and will work to fight terrorism. "We had a terrible attack last night and our hearts go out to the victims and their families," Trudeau said Friday while in Calgary to attend the Stampede. "Canada stands with France as a steadfast ally and we will work with the international community to fight terror to ensure that we live in a peaceful world. "At least 84 people were killed when a truck full of weapons plowed into a crowd of Bastille Day revellers in the French resort city of Nice late Thursday. There were no reports of Canadian casualties. **Public Safety Minister Ralph Goodale** said the federal government has no information that would necessitate a change in Canada's terror threat level, which is currently at medium. Still, **Goodale** urged Canadians to stay vigilant and alert. ***"Canadians can rest assured that when the security and intelligence sector receives credible warnings on a specific threat, they work with the appropriate***

government partners to ensure the safety of Canadians," **Goodale** said in a statement. **Goodale** noted that while in Paris in January, he signed a declaration with his French counterpart, Bernard Cazeneuve, to work together on terrorism, organized crime and irregular migration. 200 from Red Earth Cree Nation evacuated to Saskatoon due to flooding
About 200 people from Red Earth First Nation in northeast Saskatchewan are in a Saskatoon evacuation centre and hotel after getting forced out by rising water levels along the Carrot River. The evacuees, who are considered "health priority" individuals, are at the Henk Ruys Soccer Centre, and a hotel. Some people arrived last night around midnight. This is not the first time the community has been evacuated to Saskatoon. Last year, smoke from forest fires drove families south. Hendrick Head arrived last night along with his wife and daughters. He said that he has learned a few tricks about packing over the years. Of course, the family packs medications, clothes and identification. Sleeping on cots in an evacuation centre presents its own challenges. "We got a little bit of wisdom now," Head said. "We kept a bag of extra pillows, extra blankets and some mattresses." CBC News

Minister Jim Reiter to tour flooded Sask. communities of Arborfield and Carrot River
Saskatchewan's Emergency Management Minister Jim Reiter will tour Arborfield and Carrot River on Thursday to meet with local officials after heavy flooding devastated homes. Reiter and Carrot River MLA Fred Bradshaw will attend meetings with the mayor and deputy reeve of Arborfield, before travelling to Carrot River to do the same. The minister also announced on Thursday that a flood recovery centre would be set up in Arborfield from July 17-19. The centre will offer advice for residents of the Rural Municipality of Moose Range, the Town and RM of Arborfield and the Town of Carrot River. Workers from the Provincial Disaster Assistance Program will be stationed at the centre to help affected resident make claims, and a building official will be available to answer questions about structural safety and building concerns. CBC News

Relief centre helps flood victims
Estevan residents who suffered losses during the severe thunderstorm and the subsequent flood on July 10 have been able to turn to the Canadian Red Cross for support. The Red Cross set up a flood relief centre at the Civic Auditorium on July 11. Flood victims have been able to discuss their damaged homes, ask questions to volunteers and pick up a disaster relief kit. "Each household is able to have a cleanup kit," said Kathy Undseth, a volunteer with the Canadian Red Cross who came from Regina to help local residents. Most of the volunteers' time has been dedicated to helping people who have questions about damage to their homes, but they also had to handle a couple families who had to flee their homes due to the damage, and had to find hotel rooms. Estevan Mercury

Canada's new $14.1M fixed-wing drones are runway free
The Department of National Defence (DND) has purchased five new unmanned aircraft designed to take off, surveil an airspace and land without needing a runway. It's an easy task for a helicopter, but tougher

for a fixed-wing plane. For overhead surveillance, fixed-wing planes can usually fly higher, farther and remain airborne longer than their helicopter cousins. But most planes need long, straight, flat spaces for both takeoff and landing, and runways are not always located where military officials need them. The Canadian government has purchased one system, which includes five of the aircraft, from the United States Navy for $14.1 million, according to documents posted online earlier this week (…) The Blackjack drone is designed for surveillance purposes only, with its promotional material stating it offers "imagers, communication and signals intelligence capabilities and other tools to help give the warfighter a look ahead in all operational environments." CBC News

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Toronto man arrested on suspicion he'd travel and engage in terrorism agrees to peace bond
A Toronto man arrested over police concerns he would travel abroad to engage in terrorism agreed Friday to the terms of a one-year peace bond that requires him not to communicate or associate with ISIL. At a court appearance in Brampton, Kadir Abdul, 27, signed a peace bond that the RCMP had sought against him after he was arrested at Pearson airport on April 15 upon returning from Turkey, where he had allegedly been detained. The peace bond restricts him from leaving Ontario. He cannot possess a passport or weapons. He must also stay off the Internet, except under supervision. It further says he cannot "associate or communicate" with ISIL, Jabhat Al-Nusra or Samuel Aviles. Federal and defence lawyers worked out the terms in meetings Friday morning, and Abdul agreed to abide by them at a subsequent appearance before the Ontario Court of Justice. "I don't want to say anything," Abdul said following the proceedings. National Post

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Police make arrest after four sex assaults in Toronto and Vaughan
A 30-year-old Toronto man has been arrested and charged in connection with a brazen daylight sexual assault in Vaughan and three similar random attacks in Toronto. (…) A suspect identified as Le Roi Wisdom Saul was detained by Canadian Border Services agents on July 7, as he re-entered Canada at the Ambassador Bridge in Windsor, Ont. He has since been charged with a total of four counts of sexual assault and one count of criminal harassment. CP24; York Region

Pedestrian Ferry 'Extremely Unlikely' In September
A passenger ferry between Windsor and Detroit appears to be in rough waters as U.S. customs officials say it's "extremely unlikely" to happen in September. Earlier this month BlackburnNews.com first told you about a pedestrian ferry pilot project that's in the works, spearheaded by a group in Detroit. Organizers of the Open Streets Festivals in both Windsor and Detroit this September were hoping to have the service operational. (…). customs says there is no current agreement that would allow Canadian border officers to process passengers in the U.S. Some have suggested the Detroit Port Authority building be used as the designated spot for visitors to be cleared. But the CBP remains firm that "there is not a completed building on the U.S. side." The Canada Border Services Agency also says it has not received any formal application for a new ferry service. An appropriate facility to question, detain and process the public is something the CBSA requires before it can proceed. It's also the operator's responsibility to front the fees where a CBSA service didn't previously exist. Black Burn News

Nannies in Canada warned against working 'under-the-table' jobs
Canada's border services authorities are warning caregivers that they would face consequences for violating immigration laws, notwithstanding the abusive situations they may find themselves in. The Canada Border Services Agency (CBSA) urges caregivers to lodge complaints against their employers before Canada's immigration ministry if they feel abused, instead of accepting "under-the-table" jobs as "Band-Aid" solutions to their employment problems. Caregivers face being sent home the like the 19 caregivers who recently suffered the consequence following tips and complaints and subsequent investigations by the border services agency. Inquirer .net

Windsor-Essex ranked fifth among most affordable communities to do business
The Windsor and Essex County region has ranked as the fifth most affordable municipality to do business in Canada in the second annual ranking of municipalities in Canada's Best Places to do Business by Canadian Business and PROFIT magazines. The region came in 25(th) in the overall survey of municipalities. "It's an honour to be recognized nationally as one of Canada's best places to do business," said Rakesh Naidu, interim CEO of the WindsorEssex Economic Development Corporation. (…) The survey said the following about the region's economic initiatives: "Windsor is connected directly to the U.S. border and already handles one-third of all Canada-U.S. trade. The Gordie Howe International Bridge, when it opens in 2020, will increase that capacity further. Fiat Chrysler has invested $2 billion in retooling its Windsor auto assembly plant." Windsor Star

Does Mobile Passport Eliminate the Need for Global Entry?
Nothing ruins the memory of a great international vacation or a successful business trip than landing in the U.S. and having to wait in a long Customs and Border Protection (CBP) queue. There's a solution — no, not Global Entry— and it's also free. Meet Mobile Passport. Mobile Passport is a smartphone app that makes Customs clearance quick and painless. And the best thing about it is that it's completely free, unlike Global Entry. (…) Almost everyone has a smartphone these days, so it's surprising that so few people know about this. You are still required to possess and travel with your valid U.S. or Canadian Passport to use the app. Travel Pulse

The Incredible Complications of Living Atop the U.S.-Canada Border
An opinion piece states " Estcourt Station is a smudge of a village that straddles the Maine-Quebec border at the northernmost tip of the state. Although it's technically in Maine, you can't get there by way of American roads. At least not easily. (…)When visiting Estcourt Station recently, I spied a bank of mailboxes with the familiar insignia of the U.S. Postal Service and drove toward it. Almost Any Messaging App Will Do—If You're ISIS
On July 1, five Islamic State fighters stormed the Holey Artisan Bakery in Bangladesh's capital, Dhaka, ultimately claiming 28 lives in a 12-hour siege. Before IS (ISIS, or Daesh) officially released the claim, the group's 'Amaq News Agency released ongoing updates from inside the restaurant through its Telegram channel. The first message stated that IS "commandos" attacked the restaurant, which was "frequented by foreigners," and an update minutes later reported that over "20 people of different nationalities [were] killed." 'Amaq then increased the number of casualties to 24 with 40 wounded, and followed up with photos of the bloody scene inside the restaurant. It was clear that this direct, uninterrupted communication the attackers had with 'Amaq was facilitated by a smartphone app. Five days later, The Times of India reported that the app was Threema, an end-to-end encrypted messaging service. This reported confirmation of yet another messaging app used in a terror attack echoed other reports from this past year. The Paris attackers are known to have communicated with WhatsApp and Telegram apps prior to their operations on November 13, 2015. Najim Laachraoui, the bomb maker and co-attacker in the March 22, 2016 Brussels attacks, reportedly used Telegram, while fugitives connected to the aforementioned Paris attacks used WhatsApp, the mobile app Viber, and even Skype to talk to IS leaders in Syria before authorities located them. Motherboard

US Cyber Mission Force Nearly Ready for Action
The US military's Cyber Mission Force will finally be ready for action by the end of September, according

to US Cyber Command and NSA boss, Admiral Michael Rogers. The new elite cyber force will eventually contain over 6000 operatives split into 133 groups, which will be tasked with both offensive and defensive missions. Unusually for a military endeavor, troops will be deployed before the unit has been completely staffed, Rogers told a National Press Club gathering attended by NPR. "We find ourselves in a situation a little unusual in the military arena. As soon as we get a basic framework, we are deploying the teams and putting them against challenges," he's reported as saying (…) The force, which apparently features military personnel alongside civilians, is estimated to finally be ready on 30 September 2018. Last month Air Force Brig. Gen. Charles L. Moore Jr. told the House Armed Services Committee that the Cyber Mission Force has already encountered a few challenges relating to equipment, training, recruitment and "finalizing the command-and-control structure." Infosecurity Magazine

Here's What We Know About the NSA's Elite Hacking Squad
Some of the best hackers in the world work for the NSA. They are the ones who are tasked with hacking into the most—supposedly—impenetrable targets, be it the computers of an Iranian nuclear power facility, or the cellphones of a fugitive terrorist. As far as anyone knows, they don't have a cool sounding name, but they are collectively known as "The Office of Tailored Access Operations," or TAO. They have been called "a squad of plumbers that can be called in when normal access to a target is blocked." And while that name, and that description, might sound underwhelming, they're the NSA's elite-hacking unit, its black bag operations team. Very little is known about TAO, but most of what we know today comes from documents leaked by the former NSA contractor Edward Snowden. To learn more about them, and as part of CYBERWAR, VICELAND's ongoing series on hacking, we travelled to Berlin and London to talk to the journalists who have investigated these sophisticated government hackers in the last few years. Motherboard

Man Charged in Killings of Mother, Abducted 5-Year-Old Girl After Authorities Find Child's Body
A desperate search for a little girl abducted after her mother's murdered in their Canada home has come to a devastating end as law enforcement officials announced they found a body believed to be the missing 5-year-old child. Calgary Police say they found a body they believe is Taliyah Leigh Marsman on a rural property east of Chestermere on Thursday, bringing the three-day search for the little girl to a tragic end. Inside Edition

'I was just reading a book': Canadian cops called on black man reading C.S. Lewis in his car
After the blue and red police lights flashed behind his car, Louizandre Dauphin figured he may have added another "prohibited" item to the list of things you can't do while black: Reading. Dauphin, 33, a former high school English teacher, had decided to relax last week with a few books at Stonehaven Wharf, a parking lot for fishing boats that's frequented by tourists to the Canadian province of New Brunswick. He sat inside his Volkswagen Golf hatchback watching the waves and poring over "Mere Christianity" by C.S. Lewis and another book by theologian Timothy Keller. As he drove home afterward, Dauphin recounted on Instagram, an officer with the Royal Canadian Mounted Police pulled him over, saying someone nearby had called authorities "because . . . a suspicious black man in a white car was parked at the Wharf for a couple hours. My response, Really? I was just reading a book." Cortez Journal

Canada's criminal courts get an F, cops a C+ in public confidence: poll
Technically, a 50.5 per cent test score is a passing grade. But would you consider that a good enough average mark for your country's justice system? That's the average level of Canadians' confidence in our courts, according to new Angus Reid Institute opinion poll. Provincial criminal courts in particular lagged with a mere 44 per cent of public confidence. "When you have numbers close to half or below 50 to 60 per cent, that would give rise to raised eyebrows," said the institute's executive director, Shachi Kurl, in a phone interview. "It also speaks to a sense of, 'Do we feel safe in our communities, well-protected, and have access to fairness in this country?'" However, Kurl said there are two more positive findings of this year's survey that outshine the negatives. For one, the results have actually improved dramatically over time for both police and courts — particularly compared to 2012, in some cases nearly doubling in confidence since the institute's first justice survey. "Prior to 2012 … our institutions related to justice were

not necessarily inspiring a lot of confidence in Canadians," she explained, citing the botched investigation of serial killer Robert Pickton and the tasering death of Polish immigrant Robert Dziekanski in Vancouver airport. "There's been a notable and significant improvement since." Secondly, police fared better than the courts: our national force, the RCMP, earned the equivalent of a C+ grade, with 66 per cent public confidence. Provincial police were most supported with 70 per cent, or a B-. Municipal police and local detachments, 65 per cent. Metro News

Quebec police forces have best representation of women in Canada
Quebec's major police forces have among the highest proportions of female officers in the country, a CBC News analysis has found. Leading the country is the Montreal Police Service, where nearly 32 per cent of its sworn officers are women. At the tail end for major cities is the Winnipeg Police Service, where the proportion is less than half of Montreal`s at just under 15 per cent. Of the 332 RCMP officers in Nunavut and the Northwest Territories, less than 11 per cent are women. CBC News

Black Lives Matter & Police: What's real for a young, black man from Hamilton
Black lives matter. Three simple words. But rarely has there been such a divisive statement splashed over what feels like the entirety of the Internet. It has been adopted as an impassioned rallying cry for some, while met with eye rolls and vitriol from others. In the wake of multiple police shootings of black men in the U.S., five police officers gunned down in Dallas, and Toronto's Pride parade halted in protest, there's no way to ignore the conversation. Professional dancer Rodney Diverlus, 26, is the co-founder of

Black Lives Matter Toronto. He went to high school in Hamilton, and his family still lives in the city. CBC News reached him in New York City to talk about his experiences as a black man, the violence he's seeing in the world, and why Black Lives Matter interrupted the Toronto Pride Parade to protest. Nanaimo students in Nice safe but some 'stressed' after witnessing attack, says school official
Nanaimo school officials say its students and chaperones are safe in Nice, France but they are now watching for signs of trauma after some from the group witnessed the deadly attack.
Dale Burgos, director of communications at the Nanaimo-Ladysmith School District, said he's been told some students were less than 30 metres away from the scene of the incident. (...) About 85 students and 12 adult chaperones from the Nanaimo area were on a school-related trip to Nice, where a terrorist attack during Bastille Day celebrations killed at least 84 people and injured many more. CBC News

"The French will remain resilient"
Raffelina Sirianni-Smith had been in Nice, France since Monday and had watched revellers from her balcony daily, flocking to the Promenade des Anglais for nightly celebrations. She was unsure about the crowds, which is why she decided to visit a relative in Monte Carlo Thursday evening to enjoy the Bastille Day fireworks. "We were a little uneasy about it - which sounds ridiculous but you have to consider that when you travel now - so we went to see my cousin in Monte Carlo," the former Kamloops journalist told Postmedia News. After spending the evening in Monte Carlo, Sirianni-Smith and her travelling companion were driven back to their AirBnB apartment, located on the Promenade, but were unable to get through due to road closures. The pair walked back to their apartment and once they were able to access a wifi connection, the news started pouring in. Just 10 minutes earlier, a truck had driven onto the sidewalk and through a crowd of Bastille Day revellers, including a number of families and children, who had gathered

to enjoy the fireworks. As of Friday morning, at least 84 people were dead and 50 were still critical. Sirianni-Smith and her companion are located about a kilometer from the attack site and in the hours since the attack, Sirianni-Smith said all she could see was "a long line of emergency vehicles flashing" and helicopters overhead. Postmedia Network (Vancouver Sun)

'There was carnage on the road'
A large truck plowed through revellers gathered for Bastille Day fireworks in Nice, killing at least 84 people and sending others fleeing into the sea as it bore down for more than a mile along the Riviera city's famed waterfront promenade. The driver was killed by police and no one immediately claimed responsibility for the Thursday night attack on France's national holiday, which rocked a nation still dealing with the aftermath of two attacks in Paris last year that killed a total of 147 people. "Terrorism is a threat that weighs heavily upon France and will continue to weigh for a long time," Prime Minister Manuel Valls said after an emergency government meeting Friday. "We are facing a war that terrorism has brought to us. The goal of terrorists is to instill fear and panic. And France is a great country, and a great democracy that will not allow itself to be destabilized." The truck plowed into the crowd over a distance of two kilometres (about 1.2 miles), a lawmaker said, and broadcast footage showed a scene of horror up and down the promenade, with broken bodies splayed on the asphalt, some piled near one another, others bleeding onto the roadway or twisted into unnatural shapes. Some tried to escape into the water, Eric Ciotti, a lawmaker for the region that includes Nice said Friday, giving new details of the horrifying last minutes of the attack. Associated Press (Kingston Whig-Standard, Toronto Sun, Ottawa Sun, Winnipeg Sun, London Free Press, National Post, Calgary Sun

Les pays arabes, l'Iran et Israël condamnent l'attentat «terroriste» de Nice
Les pays arabes, l'Iran et Israël ont vivement condamné vendredi l'attentat qui a fait plus de 80 morts la veille à Nice et appelé à intensifier les efforts pour faire face au fléau du «terrorisme». Alors que l'auteur de l'attaque a été identifié comme un franco-tunisien, la Tunisie, victime ces dernières années d'attentats meurtriers, a dénoncé un acte «terroriste lâche» et «exprimé ses profondes condoléances à la France». Son président Béji Caïd Essebsi a appelé à la «solidarité» dans la lutte antiterroriste. (...)En Egypte, la plus haute institution de l'islam sunnite, Al-Azhar, a estimé que ces «attaques terroristes abominables contredisent les enseignements de l'islam» et souligné «la nécessité d'unir les efforts pour vaincre le terrorisme et débarrasser le monde de ce mal». Les six monarchies arabes du Golfe ont condamné l'attaque «terroriste». En Arabie saoudite, le roi Salmane a, dans un message de condoléances au président François Hollande, «affirmé la solidarité du royaume avec la France» et réitéré sa position «rejetant le terrorisme sous toutes ses formes» et la nécessité des efforts internationaux en vue de l'éradiquer». MINISTER / MINISTRE

NATIONAL AFFAIRS: Reports could hide true police activity
An opinion piece states, "Clear gaps" in how the federal government reports invasive surveillance practices may hide the true scope of police activities, according to documents prepared for Canada's privacy watchdog. Although the number of authorized wiretaps has "plummeted" since 2002, a January briefing for Privacy Commissioner Daniel Therrien suggests those numbers may mask police surveillance practices. "It would be erroneous to infer from the drop in overall warrants issued that surveillance is affecting fewer individuals," reads the document, obtained under access to information law. "While federal authorities issued just over a hundred surveillance warrants last year (2014), they issued 792 notifications of surveillance to individuals previously targeted. From this, one can conclude more and more individuals are being named as targets in a warrant application... **Public Safety** is required to issue a report each year about the number of warrants sought to put individuals under surveillance - "wiretap" warrants that

allow police extraordinary powers to keep tabs on individuals... The Star requested an interview with both Therrien and **Public Safety Minister Ralph Goodale** for this article. Neither was available Wednesday or Thursday. But in an emailed response to the Star, **a spokesman for Goodale said the minister** is open to changing the system. ***"Reporting is an important component of Canada's system accountability for security agencies," Scott Bardsley wrote. "We're open to consideration in this review (of national security oversight) of how to improve these elements to better achieve our two objectives (of) ensuring that our police and security agencies are being effective ... and safeguarding the values, rights and freedoms of Canadians in a plural, open, democratic society."*** Lisa Austin, a law professor at the University of Toronto specializing in privacy issues, said calls globally for transparency about police surveillance have increased, not just for wiretap warrants, but for any extraordinary powers for law enforcement snooping..." Chronicle Herald

(UPDATE) First Nations call on feds, Ontario to hash out deal as police strike looms

First Nations leaders and a northern Ontario MP say police officers' lives are on the line and they want the federal government and the province to negotiate a new policing agreement with Nishnawbe-Aski Police Service. The force services 35 First Nations communities in northern Ontario and currently faces a strike deadline as a result of a vote earlier this week. Two of the central issues include the call for increased staffing and wage parity. Alvin Fiddler, the grand chief of Nishnawbe-Aski Nation, said First Nations have raised concerns about dangerous conditions for officers for two decades. "We cannot keep going the way that we have been operating," Fiddler said... Officers are rolling the dice when they go out in the field with a lack of resources such as a lack of backup, says New Democrat MP Charlie Angus... The complaint suggests disparity in services between aboriginal and non-aboriginal community stems from flaws in the federal government's First Nations Policing Program and funding regime. Resource struggles also impact the mental health of officers, said Sgt. Jason Storkson, a local union president with the Public Service Alliance of Canada. In a **statement** Friday, a **spokesman for Public Safety Minister Ralph Goodale** said the government is committed to making progress on community safety and policing for indigenous communities. At this stage of the engagement process, no decisions have been made on funding, expansion or other details of how the renewed approach to indigenous policing would be implemented, **said press secretary Scott Bardsley**. ***"In the event of a strike, the OPP would have to take over policing duties in the Nishnawbe-Aski community as it would fall under provincial jurisdiction," he said.*** Canadian Press (Brandon Sun)

Coroner's inquest called into immigration detainee Abdurahman Hassan's death at Peterborough Regional Health Centre

A coroner's inquest has been ordered into the June 11, 2015 death of a mentally ill diabetic Somali refugee at the Peterborough Regional Health Centre while he was in immigration detention at the Central East Correctional Centre in Lindsay. Abdurahman Hassan, 39, died at the hospital after a police escorted transfer from the provincial jail for medical treatment. The inquest is mandatory under the Coroners Act, according to a release issued Friday afternoon by Dr. Paul Dungey, the regional supervising coroner for the Ministry of Community Safety and Correctional Services' East Region office in Kingston... Hassan had been in Canadian Border Services Agency custody for more than three years... The End Immigration Detention Network watchdog group called on Immigration Minister **Ralph Goodale** this week to end indefinite immigration detentions. The group has posted an online petition at https://www.change.org/p/no-more-deaths-no-more-detentions. The group had also urged a coroner's inquest into Hassan's death last year. The End Immigration Detention Peterborough group is planning a rally on Monday from noon to 1 p.m. outside the constituency office of Democratic Institutions Minister and Peterborough-Kawartha MP Maryam Monsef at 417 Bethune St. in support of the hunger strike and to back up the call to end indefinite immigration detention. The protesters will be urging Monsef to take action to urge **Goodale** and the federal government to respond to the claims of the detainees on the hunger strike, according to a release. Peterborough Examiner

Edmonton student missing as Trudeau pledges solidarity with France following truck attack

Prime Minister Justin Trudeau made a pledge Friday that Canada will work with the global community to fight terrorism following a deadly truck attack in the French resort city of Nice — as an Edmonton university raised the grim spectre of a Canadian victim among the 84 dead. Edmonton's MacEwan University said Friday that five students and one faculty member were in the Mediterranean hotspot

participating in a program at the European Innovation Academy, but one of those students is missing... **Public Safety Minister Ralph Goodale said** the federal government has no information stemming from the attack that would necessitate a change in Canada's terror threat level, which is currently at medium. Still, **Goodale** urged Canadians to stay vigilant and alert. ***"Canadians can rest assured that when the security and intelligence sector receives credible warnings on a specific threat, they work with the appropriate government partners to ensure the safety of Canadians,"* he said** in a statement. A spokesman with a Vancouver Island school district said several students from the Nanaimo area were just metres from the site of the terrorist attack, but that all 85 teens are safe. Canadian Press (iPolitics)

Canadian politicians express solidarity with France after Nice attack; Goodale says threat level unchanged

Canadian politicians are joining the outpouring of international outrage and sympathy after a truck plowed through a Bastille Day crowd on the iconic seaside Promenade des Anglais in Nice, France Thursday night. At the Calgary Stampede Friday, Prime Minister Justin Trudeau said Canada is thinking of "our friends in France" and will work to fight terrorism. "We had a terrible attack last night and our hearts go out to the victims and their families," Trudeau said of the massacre of 84 people during the annual celebrations of the French Revolution. "Canada stands with France as a steadfast ally and we will work with the international community to fight terror to ensure that we live in a peaceful world." **Public Safety Minister Ralph Goodale** said Friday that the federal government has no information that would require a change in Canada's terror threat level, which is currently at medium. Still, **Goodale** urged Canadians to stay vigilant and alert. ***"Canadians can rest assured that when the security and intelligence sector receives credible warnings on a specific threat, they work with the appropriate government partners to ensure the safety of Canadians," Goodale*** said in a statement. French officials say that, in addition to those killed, at least 50 more people were injured in what is widely assumed to have been a terrorist attack, though no group has yet claimed responsibility for the carnage and the motive of the driver, who was killed by police, remains unknown. iPolitics; CBC News

Five ways Canada is trying to prevent the kind of attack that happened in France

Investigators are still trying to determine why a man drove into crowds celebrating Bastille Day in Nice, France, killing scores of people. But authorities have called it an undeniable act of terror. Here are five ways that Canada is trying to prevent this kind of attack on Canadian soil: Threat assessments: Federal agencies are constantly gauging possible threats to dignitaries, public events and symbolic sites. The Integrated Terrorism Assessment Centre draws on expertise from across the federal government to evaluate the intent and capability of terrorists to carry out attacks. The assessments go to members of the Canadian security community, provincial emergency authorities, first responders and the private sector. Individual agencies also produce specialized assessments. For instance, Transport Canada has looked at the threat to various modes of transportation including airliners, passenger trains and buses. A November 2014 assessment mentioned the possibility of a bus being used as a weapon in a large crowd setting. Counter-radicalization: **Public Safety Canada**, the RCMP and some municipal police forces actively work with communities to try to prevent young people from becoming radicalized and embracing violence. The Mounties also train first responders, investigate national security cases and help intervene in high-risk cases. The Liberals have promised to appoint a co-ordinator of community outreach and counter-radicalization to serve as a needed focal point for multi-agency efforts. An announcement is expected soon. Interventions: Once a suspect comes to their attention, authorities can use a range of tools. The Canadian Security Intelligence Service has power to disrupt a plot — for example by disabling the ignition of a suspect's truck or cancelling their airplane reservation. Police can ask a judge to have someone with information relevant to the investigation of a future terrorist act appear before a court and answer questions. They can also seek an order for the court appearance of someone who may carry out a terrorist attack. A judge then considers whether to impose restrictions. It is a crime to go abroad to receive terrorist training, take part in extremism or facilitate terrorism. Federal officials collaborate to deny issuance of a passport or revoke an existing one, preventing overseas travel. Terrorist listing: Any person or group on Canada's terrorist list may have their assets seized, and there are criminal penalties for assisting listed entities with the aim of helping them carry out extremist activities. In addition, foreign nationals or permanent residents found to be members become ineligible to enter Canada. National security review: **Public Safety Minister Ralph Goodale** plans to publish a discussion paper as early as

next month to begin an in-depth review of Canada's national-security system. **Goodale** says the goal is to examine policies, laws and procedures with the aim of ensuring both public safety and fundamental freedoms. A parliamentary committee is expected to hold hearings before the government tables any new legislation to rescind existing measures or introduce new ones. Canadian Press (Metro News, Winnipeg Free Press, Hamilton Spectator, News 1130)

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

200 from Red Earth Cree Nation evacuated to Saskatoon
About 200 people are being evacuated from Red Earth Cree Nation in northeast Saskatchewan in response to rising water levels along the Carrot River. The evacuees, who are considered "health priority" individuals, are being taken to the Henk Ruys Soccer Centre in Saskatoon. Some people arrived last night around midnight. Some of the evacuees will also be sheltered in local hotels, the provincial government said. Also struggling this week are people at Shoal Lake Cree Nation, which is just east of Red Earth. Rising water has covered some of the roads leading into the First Nation. Some people from the reserve who have medical conditions, or who are considered at high risk of health problems, have been evacuated to Prince Albert. CBC News

Severe weather watches and warnings blanket southern Alberta
Environment Canada is warning people in the Calgary area and around southern Alberta about a severe thunderstorm that could hammer the region early Friday afternoon. The watch for Calgary was issued at 11:43 a.m. just as dark clouds started to move east towards the city... Just before 1 p.m. Environment Canada also issued a tornado watch for Lethbridge, Taber, Milk River, Crowsnest Pass, Pincher Creek and Waterton Lakes National Park. Cardston, Fort Macleod and Magrath were added to the list about half an hour later. Global News

St. John's shipyard wins multi-million-dollar coast guard contract
A lucrative federal contract granted to a St. John's shipyard is expected to add dozens of jobs to the firm. Newdock has won a $3.6-million contract for repair and maintain the Samuel Risley, a Canadian Coast Guard Ship, the federal government said Friday. CBC News

Mississauga mosquitoes test positive for West Nile virus
Mississauga residents might want to load up on the bug spray this summer. Peel Region public health officials say that mosquitoes captured in a Mississauga trap this week tested positive for West Nile virus. CBC News

Storm's consequences could have been serious
An opinion piece states, "When I was driving up Two Mile Hill on Tuesday evening, I could see the storm coming, and it looked like a bad one (Star, July 13). We all have seen them before... The city fire department was on it very fast, and that shows great work by them. Then, when I went on Facebook, there were pictures of flooding in different places. Does the city have in place a rapid response team for this kind of flooding and other types of situations?... Fort Mac was a major mess from the May wildfire, and they were not prepared for what was to come. They will pay the price of $4 billion (so far), and 2,400 structures are gone. I will ask city council to order a complete evaluation of the fire and other potential dangers to the city of Whitehorse..." Daily Star

Gun smuggler caught at Aldergrove
A Florida man who tried to bring a loaded pistol through the Aldergrove border crossing has been convicted of smuggling. Joseph Buice, 66, pulled up to the border crossing on April 11 of this year, according to a Canada Border Services Agency announcement. Joseph Buice, 66, pulled up to the border crossing on April 11 of this year, according to a Canada Border Services Agency announcement. Langley Advance

Two men convicted of gun smuggling at Abbotsford border in separate incidents
Two men have been convicted of smuggling firearms at the Abbotsford-Huntingdon border crossing in separate incidents, in May of this year. Rodrick Hines, 32, of Sacramento, California was trying to enter Canada on May 4 when border agents decided to do a secondary examination of his vehicle, according to a statement from the Canadian Border Services Agency. Abby News

Special Investigation Unit clears Peterborough Police officer, OPP officer in immigration detainee's death at Peterborough Regional Health Centre
No charges are warranted against a Peterborough Police officer and an Ontario Provincial Police officer in the June 11, 2015 death of an immigration detainee at Peterborough Regional Health Centre, the Special Investigations Unit has concluded after a 13-month investigation. Abdurahman Hassan, 39, died at the hospital after a police escorted transfer for medical treatment from the Central East Correctional Centre in Lindsay. He had been in custody for more than three years awaiting deportation... The SIU investigation determined the following: •On June 10, 2015, subject officer 1 (with the Peterborough Police) and subject officer 2 (with the Ontario Provincial Police) accepted a paid duty assignment at the Peterborough Regional Health Centre. The duty entailed guarding a refugee claimant who was in the custody of the Canadian Border Services Agency and awaiting deportation. The 39-year-old man suffered from significant mental health issues, including schizophrenia and bipolar disorder. Peterborough Examiner

Arctic science cooperation agreement 'good for Canada': POLAR
An agreement on enhancing scientific cooperation among circumpolar countries and others interested in polar research signed in Ottawa last week by the representatives of all eight Arctic nations will benefit Canada's northern communities, says the president of Polar Knowledge Canada (POLAR). "I think this is good for Canada, it will assist us in creating more knowledge about Canada and it will be globally relevant knowledge about Canada," said David J. Scott. "And from the perspective of the organization that I have the privilege to lead, Polar Knowledge Canada, we really trying to ramp up the creation of new knowledge that is primarily intended to benefit the lives of northern Canadians."..."At the conclusion of the Ottawa round of discussions last week, we were very pleased that were able to come up with a text that addressed all of the important issues basically to the satisfaction of each of the negotiating teams," Scott said. "And it's now the responsibility of each of the countries to bring that back, check in with each country's respective authorities and approval system." In case of Canada that means checking with other federal agencies whose mandates are impacted by this agreement, including the Canadian Border Services Agency, because part of the agreement deals with facilitating the entry of foreign scientists who are coming to Canada to collaborate on science research, Scott said. RCI

Double booked: The library that's in two countries at the same time
Meet the library which is in two countries at the same time: Haskell Free Library and Opera House was deliberately built on the border between the USA and Canada. A black line is marked on the floor of the building to show where Derby Line, Vermont ends and Stanstead, Quebec begins – and vice versa. BT.com

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Almost Any Messaging App Will Do—If You're ISIS
On July 1, five Islamic State fighters stormed the Holey Artisan Bakery in Bangladesh's capital, Dhaka,

ultimately claiming 28 lives in a 12-hour siege. Before IS (ISIS, or Daesh) officially released the claim, the group's 'Amaq News Agency released ongoing updates from inside the restaurant through its Telegram channel. The first message stated that IS "commandos" attacked the restaurant, which was "frequented by foreigners," and an update minutes later reported that over "20 people of different nationalities [were] killed." 'Amaq then increased the number of casualties to 24 with 40 wounded, and followed up with photos of the bloody scene inside the restaurant. It was clear that this direct, uninterrupted communication the attackers had with 'Amaq was facilitated by a smartphone app. Five days later, The Times of India reported that the app was Threema, an end-to-end encrypted messaging service. This reported confirmation of yet another messaging app used in a terror attack echoed other reports from this past year. The Paris attackers are known to have communicated with WhatsApp and Telegram apps prior to their operations on November 13, 2015. Najim Laachraoui, the bomb maker and co-attacker in the March 22, 2016 Brussels attacks, reportedly used Telegram, while fugitives connected to the aforementioned Paris attacks used WhatsApp, the mobile app Viber, and even Skype to talk to IS leaders in Syria before authorities located them. Motherboard

US Cyber Mission Force Nearly Ready for Action

The US military's Cyber Mission Force will finally be ready for action by the end of September, according to US Cyber Command and NSA boss, Admiral Michael Rogers. The new elite cyber force will eventually contain over 6000 operatives split into 133 groups, which will be tasked with both offensive and defensive missions. Unusually for a military endeavor, troops will be deployed before the unit has been completely staffed, Rogers told a National Press Club gathering attended by NPR. "We find ourselves in a situation a little unusual in the military arena. As soon as we get a basic framework, we are deploying the teams and putting them against challenges," he's reported as saying (…) The force, which apparently features military personnel alongside civilians, is estimated to finally be ready on 30 September 2018. Last month Air Force Brig. Gen. Charles L. Moore Jr. told the House Armed Services Committee that the Cyber Mission Force has already encountered a few challenges relating to equipment, training, recruitment and "finalizing the command-and-control structure." Infosecurity Magazine

Here's What We Know About the NSA's Elite Hacking Squad

Some of the best hackers in the world work for the NSA. They are the ones who are tasked with hacking into the most—supposedly—impenetrable targets, be it the computers of an Iranian nuclear power facility, or the cellphones of a fugitive terrorist. As far as anyone knows, they don't have a cool sounding name, but they are collectively known as "The Office of Tailored Access Operations," or TAO. They have been called "a squad of plumbers that can be called in when normal access to a target is blocked." And while that name, and that description, might sound underwhelming, they're the NSA's elite-hacking unit, its black bag operations team. Very little is known about TAO, but most of what we know today comes from documents leaked by the former NSA contractor Edward Snowden. To learn more about them, and as part of CYBERWAR, VICELAND's ongoing series on hacking, we travelled to Berlin and London to talk to the journalists who have investigated these sophisticated government hackers in the last few years. Motherboard

LAW ENFORCEMENT / APPLICATION DE LA LOI

(UPDATE) RCMP didn't 'purge' public documents, the Mounties actually just had no idea where they were

The RCMP now says it didn't destroy access-to-information files, after all. It only thought it did. That's why it announced a "purge" of documents that never really happened. And the series of snafus built on itself until it appeared that the Mounties had even erased details of scores of access-to-information records — everything it had processed since the start of 2016. You may recall the details, described Friday morning by the Citizen. Someone had asked the RCMP for documents related to former prime minister Stephen Harper's 2012 trip to India. The 219 pages released by the RCMP gave details on the cost of flying three armoured limousines to and from India — more than $1 million. Once one person receives documents under the access laws, anyone can receive the same set of papers. The Citizen asked for this one — and got a letter from the RCMP access office saying the documents could not be found and "it is likely that any RCMP record that may have existed has been purged." The letter blamed rules from Library and

Archives Canada, though a check with Library and Archives showed that no such rules exist. Dirty dealings? Dark secrets? Political interference? Nope. Friday afternoon, an RCMP spokesman phoned, offering an apology, and the story of a tough week at the office that processes access-to-information requests. Snafu No. 1: "This was wrong from our part," he said. "What happened was that the (person) that checked for that file number checked our system and she could not find it in the system." Out went the letter saying the documents were probably destroyed. In fact, they do exist, and they will be sent out next week. But that isn't all. At the same time as the documents were reported as purged, the list of all RCMP access-to-information records from 2016 had disappeared off the federal Open Government website, which means the public can't see, or ask for, whatever is available. Ottawa Citizen

RCMP did nothing wrong in Peguis First Nation shooting death, review finds
RCMP who were on the scene when a Peguis First Nation man died during a shooting last fall did everything by the book, the Independent Investigation Unit (IIU) of Manitoba finds. RCMP from Fisher Branch and Peguis were both called Sept. 4, 2015, after reports of gunshots, two people injured and a vehicle in the ditch. Four officers arrived to find a third person, who was in the vehicle by himself at the time. He was heard talking and officers tried to communicate with him, RCMP said. Not long after, a gun went off inside the vehicle, RCMP said. CBC News; Winnipeg Sun

Nunavut RCMP struggle to get Inuit cadet program off the ground
Prospective Inuit police officers will have to wait a bit longer for a new year-long police foundations course aimed at improving Indigenous representation within Nunavut RCMP. The Inuit Cadet Development Program has been in the works for more than a year and has gotten support from senior management within the RCMP and territorial government. CBC News

Beaverbrook man facing charges after allegedly hitting RCMP car with vehicle
A 48-year-old man from Beaverbrook, N.S., is in custody after he allegedly struck an RCMP vehicle with his own Thursday afternoon. Nova Scotia RCMP say the incident happened around 1 p.m. on Princeport Road. The officer suffered minor injuries and was able to arrest the driver without incident. CTV News

400 marijuana plants seized at property near Gibbons
Two Sturgeon County residents are facing child endangerment and drug charges after an RCMP raid on a rural property northeast of Gibbons, Alta. A search of a rural property netted more than 400 marijuana plants and more than two kilograms of marijuana packaged for sale, plus cultivation equipment and some foreign currency, St. Albert RCMP said in a news release Friday. CBC News

Burnaby realtor has grow-op charges drop over court delays
A realtor who was charged after police raided a suspected grow-op at a home he owned in Burnaby has had his charges stayed due to an unreasonable delay in getting the case to trial. In February 2011, RCMP received a tip about a possible marijuana grow operation in a house at 7206 Braeside Dr. in Burnaby and began surveillance of the premises. Vancouver Sun

Halifax man arrested after police seize cocaine
Police arrested a 49-year-old man in Halifax Thursday after seizing contraband including 2.2 kg of cocaine. Officers executing a search warrant at the Ivanhoe St. residence found drug paraphernalia, 14.5 cases of contraband cigarettes and approximately $75,000. Khalid R. Mansour was arrested and charged with Trafficking in Cocaine, Possession of Cocaine for the Purpose of Trafficking and Possession of Proceeds of Crime... The RCMP were assisted by both Halifax Regional Police and Service Nova Scotia's audit and enforcement unit during this investigation. Chronicle Herald

Cocaine, cash & contraband tobacco seized by N.S. RCMP
Police say charges have been laid against a Halifax man following a six month investigation by RMCP and the Serious Organized Crime Unit. This week, RCMP executed a search warrant at a home on Ivanhoe Street where they seized 2.2 kilograms of cocaine, drug paraphernalia and 14 cases of contraband cigarettes. $75,000 in cash was also seized from the residence. Global News

This event will bring in people from all across We s t m a n and parts of Eastern Saskatchewan. Virden Empire-Advance

Bonavista RCMP officer awarded Sovereign's Medal for Volunteers
Bonavista RCMP officer, Const. Justin Lyall says he was shocked when he found out last fall he was going to be recognized with a national award for his volunteer work. The Packet

Four arrested in Gatineau drug raids; 300 meth pills, 53 grams of pot seized
Gatineau police have seized nearly 300 methamphetamine pills, four marijuana plants and a 2011 Ford Edge after a two-month drug operation. On Wednesday, police raided a location on Daniel Johnson Street. The next day, police raided another location on Normand Street. Ottawa Citizen

Toronto council asks police to consider 911 texting
Toronto city council is asking the police services board to review options that would enable residents to text 911 instead of making phone calls. The motion was put forward Thursday by Coun. Norm Kelly, who came up with the the idea following a mass shooting at Orlando nightclub Pulse last month. During that incident police received frightened calls from the club's bathroom from trapped people worried the shooter might hear them talking. CBC News

Data Hub proposed for former Waterloo police station
If big data is the new oil, the former police station on Erb Street could be Waterloo's new economy gusher. The Communitech Data Hub is slated to move into 19,000-square-feet of space in the former police station at Erb and Albert streets late this fall. The Record

Windsor Islamic Council urges members to expose extreme ideologies
The Windsor Islamic Council, in condemning Thursday's deadly attack in Nice, Frances calling on members of the local Muslim community to expose extreme ideologies. "The perpetrators who commit such attacks in the name of Islam are criminals who follow a sickening perverted ideology that is the farthest from the noble teaching of Islam and the basic norms of humanity," the Windsor Islamic Council said in a statement released Friday. REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Coming soon to store near you: pot
A federal task force has rolled up its sleeves to put together a report due in November on how Canada might legalize marijuana. It would then take until next spring for the governing Liberals (perhaps April 20?) to bring a legislation up for debate in the House. Notwithstanding the gateway argument, which suggests the slippery slope into drug addiction begins with weed, there are many other questions to be answered: In the meantime, entrepreneurs are still trying to find loopholes in laws around the use and distribution of medical marijuana in Canada. A British Columbia company thinks it's found a way to offer mail-order marijuana. Well not quite, but close. Weed Glass and Gifts Ltd. has already opened locations in B.C., Ontario, Quebec and, just last week, in Winnipeg. The business in the Exchange District is there basically to take your "medically prescribed" order and arrange shipment to you. They'll also sell you some usage tools, while you wait... Meanwhile, the highly reported decision to legalize marijuana in Colorado is two years old and statistics are now coming in. They are now tops in the nation when it comes to weed use among kids 12 to 17. Less than 10 years ago, they were number 14. And a 2015 Washington State report found DUIs involving marijuana had almost doubled since legalization. Couple that with the contention from the medical case that "today's" marijuana is a super potent and potentially lethal version of the highly romanticized product of the '60s and '70s. Public service unions taking Ottawa to court over pay system problems
Thousands of Canadian public servants have missed paycheques, been over- or underpaid, or have been denied health benefits since the roll-out of the government's new pay system, Phoenix, which went live in February. Thirteen public service unions are now taking the government to Federal Court over the matter, seeking a ruling that will force the government to pay public servants properly and punctually. Globe and Mail

Minister blames payroll problems on inadequate training
While federal government employees continue to struggle to make ends meet without a regular income, the minister in charge of the beleaguered new payroll system blames the problems partly on inadequate training, and admits those issues should have been worked out sooner. "It would appear that there wasn't sufficient training done of those who had to implement the system to ensure that it was rolled out as it was intended to be," said Judy Foote from St. John's, Nfld., in an interview with CBC News. Foote explained that although the Phoenix system was tested thousands of time before the switchover from the previous payroll system, staff had not been properly trained in data entry, resulting in a backlog of files. Turkish President Erdogan urges supporters to take to streets, protest coup
Chaos and confusion gripped Turkey on Friday after an attempted coup by elements of the military plunged the country into a state of unrest, with reports of gunshots fired in the area near Istanbul's Bosporus Bridge. A Turkey military faction has claimed armed forces have "fully seized control" of the country, but Deputy Prime Minister Numan Kurtulmus said on local television that Turkey's AK Party is still in charge. Turkey's state-run Anadolu Agency reported 17 police officers had been killed in a helicopter attack on police special forces headquarters on the outskirts of Ankara. The agency said Turkish Air Force planes shot down the helicopters. CBC News has not been able to independently confirm the reports. Reuters (CBC News); Associated Press (CTV News); Global News

Estranged wife of man who slammed truck into crowd in Nice, France arrested
French leaders extended the country's 8-month-old state of emergency Friday and vowed to deploy thousands of police reservists on the streets after a Tunisian man drove a truck through crowds celebrating Bastille Day in Nice, killing 84 people and wounding 202 others. Thursday night's massacre of pedestrians leaving a fireworks display along the southern city's famed boulevard ended only after police killed the armed attacker in a hail of bullets. Associated Press (Whig-Standard, Edmonton Sun)

President Obama Calls Attack on Nice 'Appalling' and 'Sickening'
President Obama today called the killing of more than 80 people in Nice an "appalling attack on the freedom and the peace that we cherish," adding that the hearts of Americans are with the people of France. The president made the remarks at what was originally planned as a private reception for the Diplomatic Corps in the East Room of the White House. Obama said he had spoken to French President Francois Hollande and that he "reminded him that France is America's oldest ally and one of our strongest." ABC News; Reuters; Fox News

France attacks bolster growing global fears, but long-term impact uncertain
The deadly truck attack in Nice, France, had an enormous human cost, but it may also weigh on the economy of a country - and a world - that has now seen several horrific terrorist incidents over a relatively short period of time. It is very hard to determine what impact a single tragedy can have on a huge economy such as France, said Craig Wright, chief economist at Royal Bank of Canada, but the fact that there have been a series of attacks could put a damper on growth. Globe and Mail

The terrible new tools of terrorism
The use of a 19-tonne truck to cut down scores of seaside revelers in Nice, France - if connected to jihadist-inspired terrorism - would represent a dramatic escalation in what experts describe as an emerging trend in attacks: simple, even crude instruments employed to kill ever-larger numbers of people. Thursday's rampage appears to have set a grisly new standard as one of the deadliest attacks in years in which most victims were killed by nonexplosive means. Instead of guns or bombs, the driver mainly used his vehicle to crush men, women and children who had gathered to watch a fireworks display. Hamilton Spectator

Horrifying details of the Bataclan Theatre massacre revealed
The Islamic State terrorists who attacked the Bataclan Theatre in Paris last November may have committed heinous acts of torture, including gouging the eyes and genitals of some hostages, according to a shocking new French report. Some victims' bodies from the second floor of the theater appeared to have been beheaded, eviscerated and otherwise mutilated, according to the report, which details testimony before a parliamentary committee by French police who rushed to the scene. New York Post

Post Pulse, hearing into why Orlando didn't get funds
A month after the Pulse nightclub massacre, law enforcement leaders told a congressional committee in Washington on Friday that the Orlando area's tens of millions of tourists should be given a greater say in determining which metro areas get federal money for preventing and responding to terrorist threats. Associated Press (660 News, ABC News)

Secret chapter of 9-11 inquiry released after 13-year wait
The U.S. on Friday released once-top secret pages from a congressional report into 9-11 that questioned whether Saudis who were in contact with the hijackers after they arrived in the U.S. knew what they were planning. The newly declassified document , with light redactions, names people the hijackers associated with before they carried out the attacks, killing nearly 3,000 people in New York, Washington and on a plane that crashed in Pennsylvania. It identifies individuals who helped the hijackers get apartments, open bank accounts, attend local mosques and get flight lessons. Fifteen of the 19 hijackers were Saudi nationals and several were not fluent in English and had little experience living in the West. Associated Press (London Free Press, Toronto Sun, Ottawa Sun, Whig-Standard)

There is no clash of civilizations
An opinion piece states, "Mohamed Bouhlel, who turned a truck into a deadly weapon and murdered dozens of people in Nice, was not unknown to police. He'd had run-ins with the law for small offences, and earlier this year had been convicted in an incident of road rage. He apparently beat his wife; she was divorcing him. Neighbours described him as a weird and creepy loner who made them nervous. Originally from Tunisia, he doesn't seem to have been religiously observant or deeply interested in Islam. He wasn't on a terror watch list..." Globe and Mail

Hunger strike continues at Central East Correctional Centre; activists press Monsef to end indefinite immigration detentions
A rally outside Peterborough-Kawartha MP Maryam Monsef's constituency office Monday offered solidarity to immigrant detainees on hunger strikes at jails in Lindsay and Toronto. About 40 people gathered at the Bethune St. office over noon hour to show their support for detainees who've been on hunger strike for several days. More than 50 detainees between the two jails haven't eaten since July 11. They're demanding to speak with **Public Safety and Emergency Preparedness Minister Ralph Goodale**. They want to express their concerns about state of current jail conditions and are seeking an end to indefinite immigration detention in Canada. Peterborough Examiner

EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

The one per cent are coming to Canada's Arctic
Residents of Ulukhaktok, N.W.T., population 402, may feel as though New York's tony Upper East Side has come to visit when Crystal Serenity steams into town later this summer. The towering cruise ship, the biggest to traverse the fabled Northwest Passage, will be carrying 1,070 passengers who paid between $25,000 and $155,000—and 655 crew members—for a 32-day trip that promises "intrepid adventure, the great outdoors and immersive cultural experiences (…)" With the Arctic's defences melting, Los Angeles-based Crystal Cruises is understandably excited about a huge opportunity to wow well-heeled cruise junkies who've grown bored of sand and sun. The company's inaugural Northwest Passage cruise, from Anchorage, Alaska, to New York, sold out quickly, and tickets for next year's trip are already on sale. Less thrilled are those asked to make sure such voyages go smoothly and safely (…) Indeed, the straits and sounds of Canada's Arctic archipelago are mostly uncharted and, depending on the day, can either be totally clear or choked with hull-cracking sea ice. Add to that the unpredictable weather and a general lack of Arctic infrastructure—like deepwater ports or search-and-rescue bases—and it's easy to see why the Guardian asked whether Crystal Serenity might be "a new Titanic (…)"One thing Crystal Serenity doesn't offer, however, is much tolerance for sea ice. So its owners set out to hire a support ship as an insurance policy. But finding a suitable vessel in Canada wasn't easy. "There's been a long-term rundown of the fleet," explains Dermot Loughnane, the CEO of Tactical Marine Solutions in Victoria, who was hired to give Crystal a helping hand. Crystal eventually found what it needed on the opposite side of the planet: the British Antarctic survey vessel RRS Ernest Shackleton. The sturdy, red-hulled ship will carry two helicopters and containers full of extra water and emergency rations for Crystal Serenity—enough for three days. There's also emergency oil-spill and damage-control gear on-board. "By having the Shackleton there, we can make up for quite a few things," says Loughnane, who spent 11 years of his 35-year career working in the Arctic. "It's above and beyond anything that's required." The planning didn't stop with equipment. Crystal Cruises did an extensive analysis of Arctic sea ice in past years, including the most likely choke points. One of those areas is the Victoria Strait, to the west of King William Island. "I describe it as the toilet," says Loughnane. Maclean's

Huge military aircraft visits St. John's International Airport
The St. John's Airport played host to a rather noticeable guest on Monday — a gigantic Canadian Forces Aircraft. The CC-177 Globemaster III, with a length of 53 metres and a wingspan of almost 52, landed at the St. John's Airport Monday afternoon for training, just after a stop in Stephenville (…) The Globemaster is a transport plane, used to fly troops and machines all throughout the world. Church says his plane has launched Canada's Disaster Assistance Response Teams in the Philippines and in Nepal. It's also been used to fly into Afghanistan and Iraq for the military's middle-eastern missions. CBC News

Ranger Patrol
They are the eyes and ears of remote Canada and a vital part of the Canadian Armed Forces' (CAF) domestic operations, but most people still don't know they exist. With that in mind, the newly appointed commanding officer of the 4th Canadian Ranger Patrol Group (4 CRPG), Lt.-Col Russ Meades, says one of his key focuses will be educating both military personnel and the public about the approximately 5,000 part-time Canadian Rangers across our country who provide patrols for national-security and public-safety missions in difficult to access, sparsely settled regions as members of the Canadian Army Reserve (…) With the transformation complete, the 4 CRPG ranks have swelled from 600 in 2007 to its present-day level of approximately 1,000 Rangers, plus over 800 Junior Canadian Rangers, all overseen by 65 full-time staff. He notes how 4 CRPG, a unit of the 3rd Canadian Division which is headquartered in Edmonton, has become a go-to organization for both Joint Task Force West and Joint Task Force Pacific. "The Canadian Rangers have gone from being a pre-2007 military backwater, a program with very limited funding and resources, to a robust organization that is a very capable and a reliable resource for Division and Joint Task Force commanders," said Lt.-Col Meades. Esquimalt Lookout

Glimpsing the future: Researchers predict how fires will change N.W.T. forests
A group of forest fire scientists are studying areas of forest in the Northwest Territories that have re-burned in the past 15 years to try and understand what the future boreal forest might look like. "We're seeing more and more big fire years in the past decade or so," said Daniel Thompson, a forest fire

scientist with the federal government. "That means we're expecting to have more fires in younger forest stands," he said, which could result in a very different kind of forest in the N.W.T. "Trees have evolved to be burning every 70 to 120 years," explained Thompson. "But if they're now burning at 16 to 18 years, we're wondering whether the seeds are going to propagate in the same way, are the plant communities going to react in the same way?" CBC News

Tree Canada commits to urban replanting in Fort McMurray in wake of wildfire
After visiting the scorched areas of the Wood Buffalo region, Tree Canada is now committed to helping Fort McMurray rejuvenate its urban foliage. Following a helicopter tour of the area July 14, Tree Canada president Michael Rosen met with city officials, including Wood Buffalo Mayor Melissa Blake and urban forestry planner Stephen Fudge, to discuss how best to go about replanting the 10,000 urban trees that the city lost during the wildfire that began in May. "Fire is a natural part of the boreal forest, so it regenerates naturally quite well," said Rosen, explaining why they won't be replanting trees in rural areas. "So we're looking more at people's residences, like the 2,000-plus homes that actually burnt. We're trying to give them that sense of normalcy when they finally come back and build their new homes." Edmonton Journal

Thunderstorms knock out power to thousands in Quebec
More than 33,000 Hydro-Québec customers lost their power during thunderstorms on Monday that saw torrential rain, strong winds and hail tear through parts of the province. Though the outages affected parts of Montérégie and the Eastern Townships, more than half of the customers who lost power were in the Montreal area. As of 6 a.m. Tuesday power was returning to most customers, with Hydro-Quebec saying 1,431 customers were still without power, including 12 in the Montreal region. Montreal Gazette; Radio-Canada

Calgary under severe thunderstorm warning, tornado watch issued for swath of southern Alberta
After Calgary was under a severe thunderstorm warning for most of Monday, Environment Canada has now downgraded the advisory to a severe thunderstorm watch. Large portions of Southern Alberta, including Strathmore, Fort Macleod and Lethbridge remain under severe thunderstorm warnings. As of late evening, several areas were also under a tornado watch, including Okotoks, Strathmore, and Fort Macleod. Lethbridge and Cypress Hills Provincial Park are under tornado warnings as of late Monday evening. Calgary Herald

Rafters run into trouble on Gander Lake
Three rafters on Gander Lake were safely located in the early morning hours of July 11 thanks to the efforts of Bonavista Bay Ground Search and Rescue members. According to Staff Sargent Roger Flynn, with the Gander RCMP, two men and a woman – all in their early 20s from Gander – decided to head out for a day of rafting in a rubber dingy and inner tube. The group was headed for Little Harbour but had some trouble reaching the location. “The wind probably came up and they didn’t quite make it as far as they had wanted to,” said Flynn. ”Darkness had set in and they didn’t quite know where they were.” So the group headed for shore and started a fire, as the weather had turned misty and cold. Luckily they were within cellphone range and were able to call for help. Flynn said the RCMP received the call at 10:15 p.m. and followed up with the area Ground Search and Rescue members, who travelled in from Glovertown and launched at Little Harbour. The two-person crew located the group by 3 a.m. and returned to shore less than an hour later, cold but uninjured. Rogers had nothing but praise for the work of the ground search and rescue crew, saying the response was timely and the men involved carried themselves in a very professional manner. “It’s nice to have ground search and rescue on hand to assist, call them up and in an hour or so they are on scene with a boat in the water,” he said. Gander Beacon

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Why France—again?
An opinion piece by Canadian security expert Phil Gurski states “The horror of what happened in Nice compounds the horror of what happened in Paris in January and November 2015. These large-scale attacks got a lot of attention, but there were also some smaller ones like the killing of a police officer and

his wife and an attempt to blow up a gas plant that have to be added to the list of terrorist attacks in France. It seems that France is making the headlines for all the wrong reasons (…) Nevertheless, there are a number of issues in France that are complicating matters. I provide a partial list with the caveat that none of these gives us a complete answer whether we tackle them individually or as a whole, nor are they necessarily tied to an increase in terrorism. France has done a terrible job of integrating Muslims. Yes, integration is a two-way street and it is not all the state's fault, but there is a huge gap between different types of citizens. France could learn a lot about how we do things here in Canada. French prisons are breeding grounds for radicalization; this is a tough problem to solve, but something needs to be done about it. French Muslims are estimated to represent between 60-80 per cent of the prison population, widely disproportionate to their almost 8 per cent of the general population (…) We are never going to "beat" terrorism anymore than we are going to "beat" crime. It is a part of the human condition and while we have to do everything we can to minimize the incidents and effects of terrorism, we must accept that it will occur on rare occasions. Our security agencies will continue to do the best job they can and we will be safer because of them." Hill Times

Time for Canada to export inclusivity: Gwyn
An opinion piece states "Among the official explanations given for the slaughter in the French city of Nice were, from the jihad organization Daesh, that the murderer was one of their "soldiers," and from France's president, François Hollande, that the act had "a terrorist character (…)" Certainty is impossible but what may have triggered the horror that Bouhlel unleashed was not the tempting explanation that he did it because he hated non-Muslims but that, as a deeply depressed man whose life had become an utter failure, he hated himself. Legitimately, many would say, so what? The difference does matter, though. In contemporary Europe the single most important political issue is an ever-increasing fear and rage by Europeans about Muslims. In a recent survey by the Pew Research Center, a majority in eight of ten European nations declared that the presence of refugees increased the likelihood of acts of terrorism (…) Just about the only country where Muslims are now treated as individuals no different in almost all respects than are all other individuals is — this one. Canadians owe that singularity to the values they possess and which they consistently refuse to give up. They owe it also to the fact that Justin Trudeau won the last election and then, as prime minister, set about "bringing Canada back (…) Many years back we made a major contribution to international affairs by developing the idea and the institute of peacekeeping. Somehow we need to develop a contemporary equivalent, this one based on the presumption that all are equal. Easy to say; excruciatingly difficult to accomplish. But it's what the world needs." Toronto Star

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

CBSA asking Americans to leave weapons at home; hundreds of guns seized locally in recent years
If you're coming to visit us, please leave your guns at home. That's the message the Canada Border Services Agency plans to deliver to our American friends following hundreds of gun seizures in our region in recent years. A total of 466 guns have been seized by the CBSA over the last five years in the Pacific region. An additional 72 have been confiscated in the first half of this year. "It's a huge concern," says Erin Steeksma with the CBSA. "Illegal firearms are very high risk, and they're an enforcement priority for us across Canada. It's something that we're very aware of." Given this, Steeksma says in the coming months, the CBSA is planning an information campaign to let Americans know what they can and can't bring up here. News 1130

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

'Prominent' Admin of Top ISIS Forum Hacked
An administrator of a top-tier ISIS web forum, who one expert describes as a "prominent" member of the online jihadi community, has been hacked. On Sunday, an independent researcher known as "Switched," who first reported the news, tweeted two Pastebin posts containing alleged correspondence of Abu Alaaina Khorasani, who is an administrator of the "Shumukh al Islam" website. Shumukh al Islam, or

"Glory of Islam," regularly hosts official ISIS propaganda (…) According to Alkhouri, the messages, which are mostly in Arabic and stretch back over two years, deal with the conflict between ISIS and Al Qaeda supporters, the procedures around obtaining new members for the forum, and other correspondence with current members. A small number of messages also appear to have been encrypted with Asrar al-Mujahideen, a custom jihadi encryption program similar to PGP. Motherboard

Governments Ramp Up User Data Requests to Google
Google handed over data on users to the authorities in nearly two-thirds of cases in the second half of 2015, according to its latest Transparency Report. The report shows that the web giant received requests for data 40,677 times during the period 1 July and 31 December 2015, and user account information 81,311 times - up from 69,000 during the previous six months. It claimed that 64% of the time it produced "some data," although it's impossible to know how much. Infosecurity Magazine

Pre-Snowden Whistleblower Explains How NSA Got 'Unleashed' To Spy On Everyone
Thomas Drake was a 48-year-old decorated Air Force and Navy veteran, and a senior executive at the National Security Agency, the NSA, when he decided he had to speak up against what he considered the spy agency's abuses. That's when he anonymously contacted a reporter at The Baltimore Sun, helping her expose wrongdoing at the agency in a series of articles. Two years later, the FBI raided his home, and the US government launched an investigation into Drake for leaking classified information and espionage (…) "History was at stake," he said in a recent interview with VICE's reporter Ben Makuch filmed for VICELAND's series on hacking and surveillance, CYBERWAR. In a deleted scene, Drake explains how the NSA got "unleashed" after 9/11 and expanded its spying powers, pushing it beyond the limits of what he believed was acceptable. "The mantra was, just get the data," Drake said. "Collect it all, so we can know it all." Motherboard

Mystery of Hudson Brooks shooting death sparks emotional rally
A candlelight vigil for Hudson Brooks yesterday outside the South Surrey RCMP detachment turned into a raucous protest for the 20-year-old who was shot in a police encounter a year ago. A 100-strong crowd gathered near the detachment chanting and waving "Honk for Hudson" signs. At one point the vigil took a turn for the worst when a man driving by sparked a fight and police officers had to break up an obscenity-peppered shoving match.The circumstances surrounding Brooks's shooting on July 18, 2015, remain a mystery to people who loved him, mired in investigation and shrouded in suspicion. "You ruin our lives. You make us sit there and ruin our lives. It's the worse. How did my son die? I want to know," said Brooks's mother Jennifer. All the Independent Investigations Office (IIO) has told family is that Brooks was shot at 2:30 a.m. PT by the RCMP. Another officer ended up with a gunshot wound in her leg during the incident, but the only weapons found at the scene were police weapons. Neither the IIO, nor the RCMP has revealed what happened in the moments leading up to the shooting, and why, or how a weapon was drawn on the young man described as "quirky" and "happy" by those who knew him. It remains unclear whether Brooks was armed or not, but a IIO statement released earlier this year said: "Other than police issued equipment, nothing of significance was recovered from the scene." Who pays? New guide sets out rules for Trudeau travels
Justin Trudeau's frequent trips abroad — often with an entourage of family, officials and guests — raise tricky questions about who travels on the public dime and who does not. So the government recently "formalized" the rules, setting out who digs into their own pockets for travel expenses and who gets their bills picked up by taxpayers. One unexpected disclosure in the four-page guideline document, obtained by CBC News under the Access to Information Act, is the extent to which public money can underwrite the prime minister's personal travels, such as vacations or trips for the Liberal party. (…) In addition, one aide from the Prime Minister's Office is allowed to travel to "support" Trudeau on personal trips, again on the government dime. The principle is that the prime minister must have access to secure communications at all times, even during vacations, to respond effectively to crises, such as the recent attempted coup in Turkey. Privy Council Office spokeswoman Regine Beauplan says staff provide

support during all travel by the prime minister, including "the creation of a temporary satellite equipped office that provides access to the secure equipment he needs to carry out his duties." The RCMP is responsible for all ground transportation if the Trudeau family travels for personal reasons, the guidelines say, and the government pays the entire bill without seeking reimbursement. CBC News

Man accused of ramming into RCMP cruiser released on bail
A provincial court judge agreed to unlock the door and throw away the key for a Colchester County man Tuesday. Kevin Dean Underwood, 48, was released on $1,000 bail until his return to Truro provincial court on Sept. 21 to face four charges related to ramming into an RCMP cruiser on Thursday. The conditions of his release preclude Underwood from possessing the key to or sitting in the driver's seat of any vehicle. The release conditions, read in court by defence lawyer David Mahoney and agreed to by Crown lawyer Alison Brown, also stipulate that the accused keep the peace and be of good behaviour. Underwood, whose 34 address listings have jumped from British Columbia to Kennetcook, Maitland, Truro, South Maitland, Upper Kennetcook, Five Mile Creek and Beaver Brook, is accused of twice smashing into the RCMP vehicle early Thursday afternoon on Princeport Road in southwestern Colcester County. An RCMP spokeswoman said that police were heading toward the Princeport Road area, about halfway between Truro and South Maitland and just off Highway 236, to set up a checkpoint when an officer noticed a small pickup truck with no licence plate and no box. The officer turned the cruiser around and deployed the emergency lights in an effort to pull the truck over. The pickup driver did not stop and instead turned back toward the police cruiser and rammed into it, police said. The driver then backed up and smashed into the police vehicle again. The driver tried to drive off in the pickup truck but was apprehended and arrested. The officer sustained minor injuries. Local Xpress

Whitehorse police investigate car fires
A second car fire in as many days has police in Whitehorse investigating a potential serial arsonist. Shortly after 6 am Monday, fire crews and RCMP responded to a car fire along Taylor Street. On Sunday, fire crews were called to 6th Avenue and Steele Street for a report of a car fire causing damage to three vehicles. There were no reported injuries in either case. Mounties are calling both incidents suspicious, and say they are not ruling out the possibility that the two are connected. CKRW; CBC News

Il avait tué sa femme le jour de la fête des Mères: Timothy Rapley meurt en prison
Emprisonné depuis 2011 pour avoir tué sa femme le jour de la fête des Mères, dans la résidence familiale de Dollard-des-Ormeaux, Timothy Rapley est mort en prison, ont annoncé les autorités carcérales. Rapley, 61 ans, était incarcéré au Centre régional de santé mentale, à Sainte-Anne-des-Plaines. Le Service correctionnel du Canada (SCC) n'a pas fourni davantage d'informations quant aux circonstances du décès du meurtrier, survenu samedi. «Comme c'est toujours le cas lors du décès d'un détenu, la police et le coroner ont été prévenus, et le Service correctionnel du Canada examinera les circonstances de l'incident», a indiqué le SCC dans un communiqué laconique. (…)L'homme a été condamné pour meurtre non prémédité en mai 2015 et purgeait depuis ce temps «une peine indéterminée», selon le SCC. Journal de Montréal; CJAD

Triple killer Jon Rallo's defiant claims of innocence slam the door on parole
Forty years after Jon Rallo killed his wife and two small children, his refusal to admit his guilt is still standing in the way of his freedom. The Parole Board of Canada has once again turned down the former Hamilton city manager's bid for full parole Tuesday morning during a hearing at Beaver Creek Minimal Institution in Gravenhurst. The two-member panel also refused to increase the number of days Rallo is allowed to live out in the community. Currently Rallo, 73, spends four days living in an apartment with his girlfriend in Sudbury. The other three days he must spend at a halfway house in that city. It took the panel just 10 minutes to come to its decision. Hamilton Spectator

25% of Canada's human trafficking victims are minors: Statistics Canada
People under the age of 18 made up about a quarter of recorded human trafficking victims in Canada between 2009 and 2014, new data reveals. In a recent report, Statistics Canada noted that minors not only make up a significant portion of victims of forced labour or sex trafficking crimes, but that they also make up around seven per cent of the perpetrators. The 18 to 24 age cohort was even more startling, with nearly 50 per cent of victims and 41 per cent of perpetrators falling into that range. Nicole Barrett, a human-trafficking expert at the University of British Columbia's Allard School of Law, said that some of those numbers are supported by her experience with the Canadian Women's Foundation's National Task Force on the Trafficking of Women and Girls. Anecdotally, she said, 12 or 13 years old was generally the age when young women were forced into the sex trade. Barrett said that much like the overall picture of human trafficking in Canada, the data related to the ages of victims and abusers is hobbled by the fact that only a small fraction of trafficking crimes are ever uncovered or reported. Canada still isn't doing a good job monitoring labour trafficking in particular (nannies, seasonal agricultural workers, etc.), she said, and human trafficking is still "vastly under-counted" for a variety of reasons. Global News

Human trafficking convictions increasing in Toronto since last year
Toronto Police Service has been collecting statistics related to human trafficking since 2013. There has been a total of 9 human trafficking convictions to date; as of last summer police had only one. A provincial strategy was recently announced to combat human trafficking. It was noted Ontario has 65 per cent of human trafficking cases in Canada. The conviction rate across Ontario is seven per cent. Inside Toronto

ESCAPING THE TRAP: Coming up with a co-ordinated strategy to combat human trafficking
The young man stands before the judge, barely crossing the age threshold of being tried in adult court. Charges against him are lengthy and grim: a snippet includes forcible confinement, uttering threats, sexual assault, and human trafficking. Police know the human trafficking charge will be the hardest one to land a conviction on, mainly due to the victim's unwillingness to testify or memory lapses, and will often take pleas for lesser offences. The total number of human trafficking convictions in Toronto since 2014 now stands at nine; in the first week of July alone, Toronto police arrested seven men within a four-day span on human trafficking charges, one case involving a victim as young as 14. And one York Region cop has no problem dropping human trafficking charges if it means pimps will land in jail. "It doesn't mean they all walk, they all got away," said Det. Sgt. Thai Truong, adding as a police officer, as long as the accused is found guilty for what he's done and justice is served, "I'm happy with that." The provincial government unveiled the long-awaited human trafficking strategy Thursday, June 30, which calls for an investment up to $72 million aimed at increasing awareness and coordination, enhancing justice-sector initiatives and improving survivors' access to services. Currently, Ontario is grappling with roughly 65 per cent of police-reported human trafficking cases in Canada. The strategy involves nine ministries and is based on four pillars: strong leadership through an anti-human trafficking office through CommSoc, which will collect and share information; increased awareness and community supports to help survivors heal; justice sector initiatives to identify trafficking earlier and hold traffickers to account; and indigenous-led approaches. Oops! Can someone just program this damn computer?
Everyone's apologizing, there's lots of pointing fingers, words like "unacceptable" are being thrown around, and a whole lot of people who work for the Canada's federal government are not getting their proper monetary compensation. What, you may wonder, is going on? Turns out a vaunted new pay system called Phoenix has managed to mess up more than a few peoples' lives. Federal public service employees are reporting tanking savings, maxed-out credit cards and growing mounds of unpaid bills because....well, the federal government, (and its Phoenix surrogate) is just not coming up with the money. "This is a national disgrace," says Chris Aylward, vice-president of the Public Service Alliance of Canada, which wants Phoenix taken off line until the problems are solved. The Conservative government originally introduced Phoenix last year, but Marie Lemay, deputy minister for Public Services and Procurement, says the Liberal government "grossly underestimated the time and training needed to move to the new system and clear out old cases, outstripping the capacity to respond." Radio-Canada

Unpaid Parks Canada staff are getting so desperate — they're borrowing money from their parents
A new payroll system introduced by the federal government earlier this year has been so riddled with problems, that it's forcing some Parks Canada staff to borrow money from their parents. "I can't afford to pay gas, I can't afford to pay my insurance. I can't afford rent or food," said Scott Munro, who works at the Lake Louise campground in Banff National Park. Since the end of May, Munro and at least 30 other staff at the Lake Louise campground have either been underpaid, overpaid or not paid at all. His coworker, Natasha Olsoff, said she's so short on cash right now, that she "can't really even afford to buy groceries" and often relies on leftover food donated by people leaving the campground. CBC News

Liberals replacing Tory-appointed ambassadors
The Trudeau Liberals have replaced several high-profile political appointments made by the previous Conservative government with a major shuffle of the top ranks of Canada's foreign service. Almost all are career public servants, with three of them replacing political appointees of the Harper government in the United Kingdom, Iraq and Israel.Foreign Affairs Minister Stephane Dion announced the appointment of 26 new ambassadors, high commissioners and others — 13 men, 13 women — in a major shuffle the government says is intended to ensure diplomats represent a wide diversity of Canadians. (...) Former Prime Minister Stephen Harper had appointed the former head of his RCMP security detail, Bruno Saccomani, as the ambassador to Jordan but he is now being replaced. The Jordan mission oversaw neighbouring Iraq, where Canada has no embassy.Saccomani, who was appointed three years ago, spent much of his time in Iraq, as the diplomatic spearhead of Canada's military engagement in the U.S.-led military coalition fighting the Islamic State of Iraq and the Levant.Prior to his appointment, Saccomani faced criticism for his management style while in charge of the more than 100 Mounties that made up the prime minister's security detail, but he quickly won the respect of many of his new diplomatic employees in the Middle East. Canadian Press (Citizen 100, National Post, Chronicle Journa)

Refugee arrivals delays from Turkey likely in wake of attempted coup
Delays in the resettlement of Syrian refugees from Turkey to Canada are likely to grow even longer after a failed coup attempted there last week. Securing exit permits for Syrians in Turkey has been a difficult process already, holding up the Liberal government's plans last fall to resettle thousands of people from there as part of their landmark program to bring 25,000 Syrians to Canada in a matter of months. Now, political instability in the country in the wake of the military's failed efforts to seize power last week is expected to delay things more. "We are continuing to work with the government of Turkey to obtain exit permits as quickly as possible and are continuing to monitor the situation," said Sonia Lesage, a spokesperson for the Immigration Department. "However, given recent events, we do expect delays." Canadian Press (CTV News, CP24, Times Colonist, Winnipeg Free Press)

Mystery Numbers in N. Korea Broadcasts Carry Cold War Echoes
North Korea's state radio has recently broadcast strings of indecipherable numbers, Seoul officials said Tuesday, in a possible resumption of a Cold War-era method of sending coded messages to spies operating in South Korea. A female announcer at the radio station read numbers for 2 minutes on June 24 and 14 minutes on Friday, according to Seoul's Unification Ministry and National Intelligence Service. A copy of those comments provided by the ministry included phrases such as "No. 35 on Page 459" and "No. 55 on Page 913." During the Cold War, Pyongyang sent such numbers via shortwave radio to give missions to agents dispatched to South Korea, according to captured North Korean spies. It later reportedly stopped such broadcasts once it could communicate with its spies overseas via the internet, and as animosities with South Korea eased following a historic inter-Korean summit meeting in 2000. Relations have deteriorated greatly since then as North Korea has pursued the development of nuclear weapons despite international sanctions. Associated Press (New York Times)

Islamic State claims Germany train attack, but officials dispute link
The Islamic State group claimed responsibility Tuesday for an axe-and-knife attack on a German train that left at least five people wounded, but authorities said the 17-year-old Afghan asylum-seeker who was shot and killed by police as he fled the scene appears to have self-radicalized and had no direct link to the extremists. The boy shouted “Allahu akbar” (“God is great”) as he attacked people on the regional train near the Bavarian city of Wuerzburg Monday night, and a hand-painted flag of the Islamic State was found during a search of his room, according to state Interior Minister Joachim Herrmann. (...)Herrmann said people close to the attacker told investigators he had seemed like a calm person, not overtly

religious or an extremist. He said investigators were still looking into the evidence found in the teenager's room, saying it could be possible that the notes included a farewell letter to his father. Globe and Mail

Erdogan tells Turkey coup escape story, hints at death penalty
Turkish President Recep Tayyip Erdogan made a series of televised appearances overnight in which he disclosed dramatic details of his survival on the night of a failed coup and raised the spectre of reintroducing the death penalty to punish conspirators. He told U.S. broadcaster CNN he narrowly escaped death after coup plotters stormed the resort town of Marmaris where he was vacationing. "Had I stayed 10, 15 additional minutes, I would have been killed or I would have been taken," he said in the interview broadcast late Monday. Addressing hundreds of supporters outside his Istanbul residence in the early hours of Tuesday, Erdogan responded to calls for the death penalty with the simple statement: "You cannot put aside the people's demands." Dorchester residents hope prison farm returns
Mel Goodland and other Dorchester residents are hoping the local penitentiary gets its prison farm program back. "I think the biggest thing that was lost was the identity because the inmates that I have spoken to over the years that worked on the farm enjoyed the fact that they got to work," said Goodland, a cranberry farmer and former mayor, who served when the prison farm system was operational."And the local people had pride in the farm because it was recognized as one of the better farms in the region. And it was a sad time when the farm closed." In 2010 the federal government decided to stop the six prison farms across the country. Federal Minister of Public Safety and Preparedness Ralph Goodale started a feasibility study to examine Ontario's previous two prison farms in the Kingston region. CBC News

Driving over ramp too fast may have damaged temporary water line in Saskatchewan
Government officials say efforts to activate a temporary water pipeline following an oil spill into the North Saskatchewan River were interrupted by what they suspect was a motorist who drove over the line too fast. Workers have been building the 30-kilometre-long pipeline for more than a week in order to supply Prince Albert with an alternate source of water after the city of about 35,000 shut its intakes to prevent oil from the spill upstream from entering its treatment plant. Duane McKay, Saskatchewan's commissioner of emergency management, says the line crosses a highway in several places. McKay says there are ramps at the crossings, but he says it appears a driver may have failed to obey the speed limit at one of the crossings on Saturday and damaged the line. The city has been relying on stored water from reservoirs and a retention pond since the Husky Energy pipeline near Maidstone leaked up to 250,000 litres of oil and other materials into the North Saskatchewan more than a week ago. McKay says he believes the damage to the water pipeline has been repaired, but doesn't know how much of a delay the incident caused. Canadian Press (iPolitics)

Heavy rains flood parts of Fort McMurray, closing roads and causing power outages
After going through hell, Fort McMurray is going through high water, as heavy morning rainfall floods parts of Gregoire, downtown and Thickwood. People who had spent weeks clearing smoke fumes out of their homes woke up to flooded basements and leaking roofs. The high waters formed pools on the road that are deep and wide enough to make regular traffic impossible. Roads throughout the city have been closed, as work crews scramble to divert flooding with barriers and use vacuum trucks to suck up the rising waters. Power outages have been reported across the city. For the first time since May's wildfires, the municipality activated the Regional Emergency Operations Centre around 11 a.m. A state of emergency has not been declared by any level of government. No evacuations, mandatory or voluntary, have been announced for any area of Wood Buffalo, although the municipality is asking people to restrict travel and respect any barricades. National Post; Canadian Press (CFJC Today)

Vernon wildfire: Evacuation order rescinded
The City of Vernon rescinded its evacuation order for residents of Adventure Bay Sunday morning after firefighters contained an aggressive wildfire east of the community. The fire started shortly after 9 p.m. Saturday and quickly grew due to high winds and difficult terrain. Firefighters worked through the night to bring the fire under control and at about 1 a.m. Sunday, 60 residents had been evacuated. "Although all the fires are not yet extinguished, they are contained and crews from Vernon Fire Rescue Services and The Ministry of Forests, Lands and Natural Resource Operations are still mopping up," the news release said. "Helicopters are being used for water drops to aid in fighting the fire in challenging terrain." As of Sunday 11 a.m., displaced residents were being allowed to return home. There was no structural damage due to the fire. The Province; Vernon Morning Star

Nuttall and Korody back in Victoria following release

During this busy B.C. Day long weekend, the grounds of the B.C. legislature will be bustling with tourists and locals. It was a similar scene three years ago on Canada Day, when a couple from Surrey were recorded by RCMP cameras, putting what police believed to be lethal pressure-cooker bombs around the legislature building. Victoria Councillor Charlayne Thornton-Joe was in the crowd that day. "We're definitely more vigilant than we've been in the past," she said. Michael Vonn, with the B.C. Civil Liberties Association, said it was clear from the beginning it had been an RCMP "plot." And Duke Islamic Studies Centre Director, Omid Safi, agrees. "They were in charge of radicalizing him. They passed on erroneous information to him, only then to turn around and arrest him," Safi said. Safi was an expert witness during the Nuttall and Korody trial. The couple have been released on a Peace Bond while the Crown appeals the case. Global News learned the pair boarded a BC Ferry after leaving the courthouse Friday night. They decided to spend their first night of freedom in three years, back in Victoria. But many in Victoria were not too happy to learn the couple was back in the city where the alleged terrorism sting had been carried out. Nuttall and Korody have several bail conditions banning them from possessing weapons or accessing Jihad extremist internet sites. They are also prohibited from visiting the B.C. legislature. Global News

BORDER SECURITY / SÉCURITÉ FRONATLIÈRE

Border mayors want feds to resolve bridge delays
Niagara's three border mayors plan to write a letter next week calling on the federal government to address the traffic backups that have been a frequent problem at bridges into Canada this summer. "We're all feeling the pain. It's very frustrating," said Niagara Falls Mayor Jim Diodati, adding counterpart mayors in the U.S. are equally frustrated. Diodati said he has heard from people that it has taken them more than an hour to come back to Canada on Niagara's bridges. He said even at the Whirlpool Bridge, which is a Nexus-only crossing, it took motorists half an hour to come into Canada Saturday. "This is having an impact on cross-border trade and tourism and it needs to be addressed right away," he said. "We have seen the pendulum swing on this side of the border – the dollar is encouraging Americans to come back and gas prices are relatively inexpensive." Diodati said Canada Border Services Agency does not have appropriate staffing levels at the bridges, and that he, along with Fort Erie Mayor Wayne Redekop and Niagara-on-the-Lake Lord Mayor Pat Darte, will send a letter to the federal minister responsible for CBSA, as well as Prime Minister Justin Trudeau, outlining their concerns. Niagara Falls Review

Passengers try to fly out of Canadian airports with tear gas, blades, Tasers, guns and drugs
It should be no surprise to anyone who has travelled through an airport that there are some common-sense restrictions on what we are allowed to bring along in our carry-on baggage. Things such as meat cleavers, shotguns, rifles, handguns, live bullets and all manner of butterfly knives, switchblades and, yes, even throwing stars are all items we should leave at home with our far more benign household items... Through access to information requests, CBC News has obtained a list of items seized or identified as potentially dangerous by the Canadian Air Transport Security Authority (CATSA) at airports across the country from Jan. 1 to Dec. 31, 2015. Here's a look at ten of the most interesting incidents: The fake grenade. CBC News

Now all the new train station needs is passengers
An editorial states, "As Niagara Falls celebrates its $42 million train station — to open later this summer — it is a time of hope for the revival of rail passenger service to this city and across the state. That is indeed one 21st century challenge for the Cataract City... Meanwhile, the Cataract City is uniquely positioned at the U.S.-Canada border to benefit from international travel between two of the most important destinations in North America, New York City and Toronto. Being a widely acclaimed magnet for tourists, Niagara deserves at least a better piece of that action..." Niagara-Gazette

Manitoba man charged in alleged cocaine smuggling ring in Ontario
A Manitoba man was arrested after a two-year RCMP investigation following cocaine from Mexico to Canada. The man was arrested on Friday near Rosenort, Man. and charged with conspiracy to traffick cocaine, while three other people were being arrested in Ontario in relation to the investigation. During the investigation, police seized more than two kilograms of cocaine and uncovered what it called "sophisticated concealment methods which enabled the cocaine shipments to cross international borders." Officers with the RCMP, CBSA, OPP and the Chatham-Kent police worked in tandem on the investigation, according to a media release from the RCMP. CBC News

RCMP vehicle involved in Highway 101 collision
Highway 101 is shut down between exit 19 and 20 following a collision involving an RCMP cruiser and a civilian vehicle. Traffic is being diverted along Highway 1 until around 6 p.m. Sunday evening. Traffic analysts are assisting at the scene. RCMP say the crash happened around 9:40 a.m. Sunday morning. The driver of the RCMP cruiser and the two people in the civilian vehicle had minor injuries. 'We are reliving it:' Victim of serial rapist Larry Takahashi speaks as her as attacker is freed on day parole
There are no pictures of Erica Hammermeister. None in her house. None on her phone. She hasn't allowed one to be taken since March 1982, since the night she was raped by a masked man in the utility room of her downtown Edmonton apartment building. "There are none, that's the sad fact," said Hammermeister, 56. "I moved 10 times in less than eight years, just because I did not want to be found. To this day, I don't own a house, I don't own a car, I don't own credit cards. There is no way that anybody can find me." On that March night more than three decades ago, Hammermeister came home from a evening out with friends. When she pressed the button to call the freight elevator, Larry Takahashi, known as the 'Balaclava Rapist,' stepped out of the shadows and held a knife to her throat... The other charges were stayed or withdrawn as part of a plea deal, according to the Parole Board of Canada. In court, Takahashi admitted to "hands-on" attacks of 29 women. He sexually assaulted one woman in front of her children. CBC News

Fentanyl fears: Surrey woman would have chosen pain relief alternative
The fentanyl Lynette Killam was administered after her colonoscopy last week is not the same as the street pills - manufactured and pressed illegally - that have been responsible for an overdose epidemic in Metro Vancouver in recent months. The prescription version Killam took is intended for pain relief, but it's still a powerful opioid. "That first day was not so bad, but the next morning when I got up I was tense, agitated, depressed," Killam said. "I was not in a good way at all. It felt awful. I don't have a good clinical word to describe it." CTV News (2016-07-30)

Legalize pot, but bring in quality controls
Back in the day, when Canadians bought their weed from a mustachioed guy in a '72 Camaro in a back parking lot, there was no quality control. You forked over 10 bucks and hoped you didn't get a dime bag of schwag in return. Today, marijuana has gone mainstream and upscale. It's sold in dispensaries that could be mistaken for tea shops, by dudes and dudettes in Rasta tams, who can lecture earnestly about the comparative benefits of strains named Triple Diesel and Golden Goat while they weigh purchases on a digital scale. Yet despite fancy digs and botanical baristas, most dispensaries have about the same quality control as the guy in the '72 Camaro. Globe and Mail

France church attack: Two arrested over priest's killing

Two men have been placed under formal investigation over the murder of a priest in a Normandy church, including a cousin of one of the killers. Farid K, 30, a cousin of attacker Abdel Malik Petitjean, was arrested on suspicion of terrorist association. The other man, named as Jean-Philippe Steven J, 20, was put under formal investigation for attempting to travel to Syria in June with Petitjean. Petitjean and fellow attacker Adel Kermiche were shot dead by police. They had interrupted the church service in Saint-Etienne-du-Rouvray last Tuesday, taken hostages and slit the throat of Father Jacques Hamel, 86. The Paris prosecutor's office said both men arrested on Sunday were being held in custody. BBC News; AFP (Canoe); Reuters (Radio-Canada)

Al-Shabaab claims a car bomb attack that killed 10 in Mogadishu
Militants set off two car bombs outside a police base in Somalia's capital before gunmen stormed inside on Sunday, leaving at least 10 people dead, police said. Islamist group al-Shabaab claimed responsibility for the assault on the headquarters of Somalia's Criminal Investigation Department (CID) in Mogadishu. "At least 10 people including four militants, five civilians and a soldier died in today's attack," Hussein Ali, a police officer, told Reuters. Another 15 people were injured, some seriously, he added. VICE News; UPI.com

Kabul explosion: Huge blast rocks Afghan capital
Witnesses said the blast struck at about 01:25 local time (20:55 GMT Sunday) and was heard across most of the city. Reports on social media indicated that the electricity in parts of Kabul briefly cut off shortly before the explosion. The cause of the explosion is not yet clear, but reports indicate it may have happened in a gas storage facility. Afghanistan's Tolo news organisation said the explosion happened in the Pul-e-Chakri area to the west of the city. Last week, two suicide bombers linked to the so-called Islamic State (IS) killed 80 people and wounded 230 more in Kabul. BBC News

Mohamed Harkat girds himself for another fight to stay
Mohamed Harkat — an Algerian who says he was wrongly accused of being an Al Qaeda sleeper agent — hopes he can finally win his freedom and the right to stay in Canada. "What the government is doing is wrong, and it's not fair," Harkat said in an exclusive interview with the Star. "And they got the wrong guy." Harkat, who came to Canada in 1995 and claimed refugee status, has been fighting deportation since his arrest on a national security certificate in December 2002. He still dreams of one day becoming a Canadian citizen, even though his life in Canada has been very different from what he'd expected. "I thought one day I would have children, a house, a family . . . everything is destroyed. When I met Sophie, we had a plan to buy a house and have children." The 47-year-old Harkat says he's innocent and will face torture and persecution in his native Algeria if he is deported. Canada Border Services Agency did not comment on the specifics of the case, but confirmed that Harkat is under a removal order, following a

Federal Court decision upheld by the Supreme Court of Canada. Esme Bailey, a senior media spokesperson for CBSA, added that the removal order "can only be enforced once due process under the Immigration and Refugee Protection Act has taken place." A February 2016 CBSA document — marked top secret — states that, "should Mr. Harkat be allowed to remain in Canada, it can be presumed that, given the opportunity, he would work toward the ends espoused by the Bin Laden Network." It recommends his removal from Canada. His lawyer, Barbara Jackman, plans to argue, in a formal petition to the **public safety minister**, that Harkat will face torture and persecution if sent back. She also plans to argue he is not a threat to Canada and should be allowed to stay on humanitarian grounds. In early September, she will seek an exemption from deportation. (…) Organizations such as the Canadian and B.C. civil liberties associations have added their voices to those asking **Minister of Public Safety Ralph Goodale** to exempt Harkat from deportation. If Goodale decides there is no risk of torture and opts to send Harkat back, Jackman says there will be a constitutional challenge. But Harkat is hopeful the new Liberal government will decide he is not a threat to Canada and will allow him to stay. Toronto Star

Husky oil spill: Prince Albert water situation stabilizing
After an oil spill last week, officials in Prince Albert, Sask., say the city's water situation will slowly be returning to normal. Water from the South Saskatchewan River will flow into the city's water reservoir today. Last week, city workers began building a 30-kilometre emergency waterline connecting the city's water treatment plant to the South Saskatchewan River. Now, after several days of testing, officials are convinced that the water is ready to be treated. CBC News

Emergency medical cards help rural Albertans with special needs better communicate with first responders
A non-profit organization that serves special needs Albertans living in rural areas has developed a program to help its clients better communicate with police, paramedics and firefighters. The 1st Response Emergency Details, or 1st R.E.D., is a pocket-sized card that provides first responders with important patient medical information. CBC News

Nuke the oilsands - Alberta's narrowly cancelled plan to drill for oil with atomic weapons
It's often forgotten what a technological feat it was to pump oil out of the Fort McMurray area. While it's long been known that the Athabasca region is swimming with petroleum, geologists spent decades banging their head against the problem of how to turn oily sand into something that could be refined into gasoline. National Post

OPP locate body of missing Michigan woman in Lake Erie
Ontario Provincial Police have located the body of a woman who went missing on Lake Erie Sunday afternoon. Police said the Michigan woman's body was discovered around 8:45 p.m. on Monday. Officers with Essex County OPP marine unit, emergency response team, K-9 unit, helicopter and underwater search and recovery unit had been searching for the woman since she went missing around 4:30 p.m. Sunday. Two boaters OK after BC ferry sails to the rescue of grounded vessel
A BC ferry travelling between Duke Point, on Vancouver Island, and the mainland has been involved in a rescue. BC Ferries spokeswoman Deborah Marshall says the Coastal Inspiration was called to assist Tuesday morning when a 10-metre pleasure boat ran aground off Valdez Island, south of Gabriola Island, in Georgia Strait. Canadian Press (Eagle Valley News)

More flare training for SAR-Techs tonight
There will be more flare training taking place in the skies over the Quinte Region tonight. Members of CFB Trenton's 424 Transport and Rescue Squadron will be shooting off search and rescue flares over Lake Ontario, south of Brighton and west of Prince Edward County, starting at 9:00 tonight. A C-130 Hercules will be flying at about 5,500 feet and launching the yellow-white flashes, to help SAR-Techs train for night time missions. Quinte News

North Shore Rescue to talk funding with local Liberal MP
North Vancouver Liberal MP Jonathan Wilkinson says he wants to help North Shore Rescue solve its funding problems. But first, Wilkinson said he must determine if the federal government is the correct jurisdiction to provide those funds. CBC News

Resources called in to locate missing child at Cobourg beach
Children getting lost isn't an uncommon occurrence along the Cobourg beach throughout the summer months but on Saturday when an 11-year-old was last spotted in the waters of Lake Ontario a number of resources were called in to search. Cobourg Police, lifeguards, Northumberland OPP Marine Unit, YIPI students, and a Search and Rescue helicopter from CFB Trenton were called in for the search that lasted nearly an hour. Lifeguards organized volunteers who joined arm-in-arm walking through the water in a grid searching for the child. In the end, the child was located along the beach by Cobourg Police and returned back to his parents safe and sound. Northumberland Today

Search and rescue training for trouble
More than a dozen search and rescue (SAR) personnel from Drumheller, Strathmore, Calgary, Olds, Sundre and elsewhere have taken part in a six-day training course at Cipperly's Pond Campground south of Olds. Held over two weekends, the course saw participants take part in various exercises, lectures and hands-on indoor and outdoor training. Events were also held at the Olds SAR building. Mountain View Gazette

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Snowden made Canadian spies review contractor policy
When Edward Snowden began leaking secrets about mass surveillance in the United States, Canada's electronic spy agency quietly wondered if their security screening was sufficient to stop a copycat. Newly released documents show some of the behind-the-scenes actions taken by the Communications Security Establishment (CSE) three years ago, when contractor Snowden first pulled back the curtain on the West's pervasive mass surveillance capabilities. Whatever changes were contemplated have been blacked out from the heavily censored document, most watermarked "secret" or "top secret." While the documents note that CSE is generally confident in its security clearance process for contractors, officials added that contractors are only "assessed for engagement for short, defined periods of time." (…) The secretive spy agency, who had received less than 40 media calls in 2012, was suddenly thrust into the spotlight. "As CSE has not been able to provide the level of detail about activities that the media requested, academics, so-called experts and commentators have provided their opinions on the subject," the memo reads. "While some commentators have been well-versed on the issues, and have outlined accurate accounts of CSE activities, others, including [name censored] have inaccurately represented CSE's activities and authorities." "CSE has been accused of being too secretive, which has led to misunderstandings of the agency's activities and authorities. This has highlighted the need for outreach to the academic community and to the media." CSE's communications staff recommended a briefing for academics and journalists, including reporters at the Star, La Presse, the Globe and Mail, the CBC and a number of other outlets both Canadian and international. It does not appear that briefing took place. CSE did give a briefing earlier this year, when its independent oversight body revealed the agency had inadvertently broken the law by transferring Canadian metadata to international partners. It was touted at the time as the first press conference in CSE's 70 year history. Toronto Star

Risque terroriste : l'Université Laval outille ses étudiants
En raison du contexte actuel de risque terroriste, les étudiants de l'Université Laval qui comptent se rendre en échange à l'étranger devront obligatoirement suivre deux nouvelles formations sur le terrorisme. Ces deux ateliers, qui portent respectivement sur la menace terroriste et la sécurité, s'intégreront à la formation sur l'adaptation culturelle qui est déjà offerte aux étudiants. Ces formations ont été mises sur pied par un professeur expert en terrorisme de l'Université Laval et un militaire à la retraite. « Il n'y a plus d'endroit à l'abri dans le monde. Il faut vraiment être attentif », affirme la vice-rectrice aux études et activités internationales de l'Université Laval, Nicole Lacasse. « Ça fait partie du bagage qu'un

voyageur doit avoir aujourd'hui. On veut essayer de contrôler les risques. » Échanges en Turquie En raison de la tentative de coup d'État du 15 juillet en Turquie et de l'état d'urgence qui a été décrété, l'Université Laval a pris la décision de ne pas y envoyer d'étudiants pour la prochaine session. Affaires mondiales Canada a baissé la cote de sécurité de la Turquie à 3. Les universités québécoises envoient des étudiants seulement dans les pays dont la cote est de 1 ou 2. Chaque année, une moyenne de 1000 étudiants quittent l'Université Laval pour se rendre à l'étranger. Radio-Canada

Sur les traces de ces sectes qui se cachent au Canada
Un auditeur nous demande de lui faire un portrait de la présence des sectes au Canada. À ce chapitre, la meilleure référence au pays demeure celle d'Info-Secte qui débat en français et en anglais du visage contemporain des sectes en sol canadien. Cet organisme qui se fixe comme but de venir en aide aux personnes qui ont été victimes d'abus à la suite de leur adhésion affirme que la présence des sectes au pays est beaucoup plus importante qu'au moment de sa fondation en 1980. La poussée des points de vue extrémistes et terroristes contribue beaucoup à cette impression. De fait, un grand débat a lieu au Canada comme en France autour du phénomène de la radicalisation des jeunes musulmans qui adopte au contact du web bien souvent des comportements qui s'apparentent à ceux exhibés par les victimes de sectes. Mais une secte n'est pas seulement une communauté d'esprit aveuglée par une série de croyances uniques et partielles, mais aussi une communauté réelle d'hommes et de femmes qui entretient une proximité physique au point de former un clan exclusif et fermé dans un lieu géographique donné. Selon cette définition, les jeunes terroristes ou brebis égarées ne sont pas des membres d'une secte au sens conventionnel. Radio Canada International

Passengers find knife on Air Canada flight leaving St. John's
Air Canada is dealing with a security breach after a St. John's couple found a knife on one of their assigned seats as they boarded AC1197 to Toronto on Saturday. Glenn Deir said his wife, Debbie Youden, discovered the knife when she sat on it. (...) Deir said he showed the knife to the window seat passenger, folded the potential weapon back up and put it in his pocket until everyone had boarded the 6:30 a.m. flight. Then he "discreetly" approached the flight director. (...) He said the incident speaks to the need for better screening of airport workers. CBC News (2016-08-01)

Le Canada augmentera la protection des passagers victimes des compagnies aériennes
Le ministre des Transports du Canada, Marc Garneau, vient de terminer une série de consultations pancanadiennes sur un éventail de questions touchants les transports. Il a ainsi entendu des plaintes variées allant de mesures de sécurité excessives à des cabines exiguës et des vols où plus de billets ont été vendus qu'il n'y a de sièges disponibles dans l'avion. Le porte-parole du ministre, Marc Roy, déclare que le manque de protection des passagers est un thème récurrent et que c'est une grande préoccupation des Canadiens : « c'est une question qui a été soulevée d'un océan à l'autre » précise-t-il. Les histoires abondent sur les passagers des compagnies aériennes frustrés par un mauvais service, y compris le cas cet été d'un garçon de 15 ans qui a fini par dormir une nuit sur le plancher de l'aéroport international Pearson de Toronto après avoir perdu son siège sur un vol d'Air Canada. On ne lui a fourni qu'un simple bon alimentaire de 10 $. (...) En juin, le Canada a annoncé la création d'un nouveau bureau fédéral qui traitera les plaintes des voyageurs éprouvant des problèmes aux aéroports en raison des listes de sécurité aérienne. Radio-Canada

Pregnant Canadians urged to avoid parts of Florida because of Zika virus
The Public Health Agency of Canada is urging pregnant women and women planning to get pregnant to avoid travelling to parts of South Florida with reported cases of the Zika virus. The advisory comes as the State of Florida reports additional cases of Zika virus infections transmitted by local mosquitoes in small areas of Miami-Dade and Broward Counties. (...) "Zika virus is occurring in many regions of the world, although local transmission of Zika virus was first reported in the Americas in 2015," the advisory states. "There have been travel-related cases of Zika virus reported in Canada in returned travellers from countries with ongoing Zika virus outbreaks." (...)That outbreak started in Iowa and spread to nine states, several of which were on the Canadian border. Toronto Star

Bridge takeover bad idea for Canada
A letter to the editor states, "Canada buying Ambassador Bridge - Does it make sense? Opinion column by Anne Jarvis, July 28. This deal only makes sense if, in effect, Canada pays all of Matty Moroun's legal expenses over the past 15 years, pays for all of what he has provided in infrastructure for his bridge, and endows his family corporation with the most golden of handshakes for taking over what could be the whitest of elephants. Also, it would mean Canada assuming the cost of providing necessary repairs to an almost 100-year-old structure. In military terms, this is a tactical retreat to allow the enemy to come in and occupy territory no longer deemed necessary for defense and at a greater cost to himself." Windsor Star

Crime spree leads to arrest
Calgary's William Riley Gossen, 20, and Michaila Mitchell, 18, are facing a list of charges after an alleged multi-jurisdictional crime spree and police chase that took place last week. Calgary Police arrested the couple without incident at around 6 p.m. on July 27 in a Calgary apartment building, located in the 2000 block of 11 Avenue S.W., after seven hours of following them as they drove around the city. The Bonnie and Clyde style crime spree allegedly began just before 10 a.m. on July 25 in Mountain View county when Didsbury RCMP responded to a report of a residential break-in involving two suspects armed with a sawed-off shotgun. A homeowner returned to his rural home to find a red Hummer—later discovered stolen from Cochrane—parked in his driveway. A man and woman exited the home and demanded his keys, brandishing the gun and loading it with shells. The duo took off towards Carstairs. Mounties say the couple also searched for fuel at a different residence. They left and headed south on Range Road 12 in the Hummer. Airdrie Echo

UPDATE: Victim identified in potentially targeted Surrey shooting
The victim of last night's shooting in Surrey has been identified by IHIT as 27-year-old Sean Christopher Kelly. Homicide investigators say they believe the shooting was targeted. Court documents show a man with the same name faced several charges including trafficking and aggravated assault. Mounties were called to the 13900 block of Antrim Road last night around 8:30 to reports of an injured man. He later died. IHIT says it is now notifying the victim's next of kin. AM 730

Investigation continues into house fire
Tensions are running high in Happy Valley-Goose Bay where residents are concerned about a suspicious house fire on July 24 that claimed the life of an 88-year-old woman. As of Aug. 1, the RCMP said they have 15 members on the case and cannot release any further details as the investigation is ongoing. Reports from around town say the RCMP are searching areas and homes, even taking some people in for questioning. RCMP media liaison Rick Mills said the searches are related to the ongoing investigation, but no further information is available. A woman who lives in the area where police appear to be searching the most told the Labradorian that residents want more information from police, just to feel safe in their homes. "There's a tension over the whole town," she said. "Even just to come out and tell us they're searching the town for evidence, if they have suspects or should we keep our eyes out, should we keep our doors locked. Give us something. The murder on the island that happened recently, at least they put out a release saying they're looking for people. Even that." Labradorian

Local RCMP looking for help
100 Mile House RCMP is looking for assistance from the public to help solve the suspicious death of a Deka Lake man. The body of Gary Edwards, 72, was found in his home on July 29. Police believe foul play may be involved in the Edwards' death. Noting that he had not been for a week, the RCMP hopes

members of the public might be able to help establish a timeline leading up to his death. 100 Mile Free Press

Leduc RCMP investigate fatal railway collision
On the morning of August 1, Leduc RCMP responded to a report of human remains found by a passerby on the railroad tracks near Highway 2A and 50 Street in Leduc, Alberta. Officers arrived on scene to find a deceased adult male with injuries consistent with a train versus pedestrian collision. The Leduc RCMP were assisted in their investigation by Leduc Fire Services and CP Police Service. Leduc RCMP believe that the collision occurred sometime after 10 p.m. on Sunday, July 31. The identity of the deceased male is not known at the time of this release.The investigation remains ongoing. Leduc Rep; CTV News; Global News

No increased calls to police during Hells Angels gathering in Musquodoboit Harbour
As the Hells Angels makes its return to Nova Scotia, police say they are continuing to monitor biker gang activity, including a meetup this past weekend. RCMP say there was a Hells Angels gathering in Musquodoboit Harbour, at the former Gate Keepers clubhouse. That clubhouse was the site of an official opening of a Nova Scotia Hells Angels chapter last month, where a party was held to mark the club's return to the province. Police said there were no calls from the public about the meeting, but they were closely watching the activity. "We didn't have any increase in calls or anything like that because of it, but there was a lot of proactive work that was done over the weekend," says RCMP Cpl. Jennifer Clarke. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Study suggests federal prisons blacking out errors in death reports: ombudsman
A study prepared by Canada's federal prison ombudsman says Corrections Canada consistently blacked out possible errors or shortfalls documented in investigation reports into jail deaths sent to families. Howard Sapers says in a study released Tuesday that his office compared the uncensored investigatory reports it received from Corrections Canada with the highly edited versions eight families obtained through access-to-information laws. The report says the "current practice of exempting errors, shortfalls and policy non-compliance leaves little room for public scrutiny, accountability or ... legal recourse." Titled "In the Dark," the 38-page study was carried out last year after some families complained to Sapers' office about their difficulty in receiving information about how loved ones died between 2013 and 2015. "It's very hard for me to conclude that all the redactions that I reviewed for this investigation were that legitimate. There were some redactions that I think Correctional Service Canada is going to have to explain," Sapers said in an interview. There were 65 deaths in 2015-16 in federal correctional institutions. Sapers' report says his office's advisor concluded that the blacking-out of sections of the seven reports, prepared by a panel that looks into non-natural deaths, "completely change the context of the information that is provided." But the report says the greater concern was the slicing out of sensitive material that might implicate Correctional Service Canada officials for failing to follow policy. (...) Sapers said he believes the edits were a misuse of the access to information law and privacy laws, given that the commissioner of Correctional Service Canada has discretion to release information in the public interest. (...) A spokeswoman for Correctional Service Canada said a response to the report will be provided later Tuesday. Canadian Press (Times Colonist, Western Star, Brandon Sun, iPolitics, Huffington Post, Truro Daily, Mississauga News, City News, CP24, St. John's Telegram, Prince Albert Daily Herald, CTV News, Coast Mountain News, The Guardian, Montreal Gazette); Presse canadienne (La Presse)

Prisons callous and secretive with families when inmates die: watchdog
Families of inmates who die in federal penitentiaries are told very little about what happened and complain that prison staff are “callous and unprofessional” in dealing with them, a report published by Canada’s prison watchdog charged today. In one case, a dead inmate’s cremated remains arrived without warning at a family member’s home in a Purolator shipment. Sapers started investigating how prisoners’ next of kin are treated after a death when three families complained to his office “in quick succession,” the report says. In cases where inmates were near death in hospital, Sapers found that families weren’t told at first that the situation was serious, just that the inmate had been hospitalized: “The

family reported being very upset because had they been better informed of the seriousness of the situation … they could have called the hospital to get more information and would have come immediately and been able to spend more time with the offender before death," he wrote. (…) In a response published today, federal prison officials conceded that "more can be done to facilitate the disclosure process." "We recognize that the death of a family member is an extremely challenging time, often made more difficult when he or she has been incarcerated away from his or her home community," the unsigned statement says. "We want to ensure that we are communicating with the families of offenders following a death in a clear, transparent and empathetic way." Global News; CBC News; Radio-Canada

Broadcast media / Médias télédiffusés :

Many radio stations mentioned that Howard Sapers, the Correctional Investigator, is raising concerns that families are not getting the whole story when inmates die behind bars. In a new study, Howard Sapers makes nine recommendations including one that urges investigative reports to be shared in a timely manner with the next of kin. (CHQR-AM, 11:35ET, CFFR-AM, 9:20ET, CHQT-AM, 12:40ET, CJOB-AM, 9:00ET, CBC-R, 11:00ET)

Northern Ontario students more likely to be cyberbullied, study finds
Students in northern Ontario face more cyberbullying than their peers in the rest of the province. (…) Those are among the findings of a new report titled The Mental Health and Well-being of Ontario Students, published by the Centre for Addiction and Mental Health. The report is based on data collected in a large-scale survey of students in Grades 7 through 12 called the Ontario Student Drug Use and Health Survey, which has been taking place every two years since 1977. A total of 10,426 students took part in the 2015 survey. CBC News

Red Deer tops province in Crime Severity Index
Red Deer is top of the Alberta list when it comes to the Crime Severity Index measured by Statistics Canada and some people tell CBC News that crime has started to hit more people at home. (…) Mayor Tara Veer says that's because the city has started working more closely with regional and provincial crime task forces. "We knew full well that if we were going to be more aggressive in terms of focusing on those areas, that it would translate into higher reported crime and higher arrests and convictions made." Veer says she's pleased violent crimes are generally trending down. CBC News

Crime down compared to last spring
Crime stats compiled by the Merritt RCMP show a slight dip in a number of offences this spring compared to last year. From April through June of 2016, police responded to 40 assault cases, 13 less than the 53 from the same time period last year. Break and enters also saw a dip between quarters. Last spring there were 11 break-ins reported to police, but only nine this year. Fewer vehicles were stolen too. Last year five vehicles were stolen between April and June, but only three were reported stolen this past spring. Theft of items from vehicles numbered 13 this past spring down from the 15 theft from vehicle files police had in the spring of 2015. However, one statistic that wasn't lower was the number of domestic dispute files, which can range from a verbal argument to a physical confrontation. Merritt Herald

Un festival de musique veut se doter d'une machine pour détecter le fentanyl
Le festival de musique électronique Shambhala, qui commence mercredi en Colombie-Britannique, lance une campagne de financement participatif en ligne pour se procurer une machine coûteuse permettant de détecter certains produits présents dans les drogues comme le fentanyl. Les organisateurs du festival espèrent amasser les fonds nécessaires pour acheter la machine, un spectromètre de masse miniature,

d'ici l'année prochaine. Pour l'heure, ils ont été incapables d'obtenir le financement de la part des gouvernements pour l'appareil qui peut coûter 250 000 $ ou plus. En attendant, cette année, ils distribueront 4000 dépliants pour mettre les festivaliers en garde contre les dangers du fentanyl. L'événement, qui a lieu depuis 14 ans sur un ranch dans les montagnes de la région Kootenay Ouest, aide depuis des années ses participants à découvrir ce que contiennent les substances qu'ils consomment en mettant à leur disposition des agents chimiques qui changent de couleur selon leurs compositions. Toutefois, ces produits ne détectent pas le fentanyl. « Nous devons agir très rapidement si nous voulons empêcher d'autres morts », dit Chloe Sage qui s'occupe des activités de réduction des risques depuis six ans pour le festival. NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

Bennett to meet families of MMIW ahead of inquiry announcement
Indigenous Affairs Minister Carolyn Bennett will meet families of missing and murdered indigenous women tonight on the eve of the government's formal announcement of an inquiry into the deaths and disappearances. That Wednesday announcement will mark the end of the government's role in shaping the design of the inquiry and the beginning of work for the commissioners. It is expected that five commissioners will be appointed to the body. They will have the power to summon witnesses and to compel them to give evidence. The federal government has earmarked $40 million over two years for the inquiry but Bennett has said this is a placeholder budget. Key themes raised in pre-inquiry consultations included policing practices and the justice system, the role of colonialism and residential schools and poverty. Canadian Press (iPolitics, CTV News)

Winnipeg Indigenous leader calls Bobby Hull's hall of fame induction a 'slap in the face'
The head of the Aboriginal Council of Winnipeg says it would be a "slap in the face" to see Bobby Hull, an alleged abuser of women, inducted into the new Winnipeg Jets hall of fame. Damon Johnston, who also serves on mayor Brian Bowman's Indigenous Advisory Circle, says violence against women is a central issue within the Indigenous community, pointing to the upcoming inquiry on murdered and missing women. "It's a slap in the face to all of us. It's a step backward in time," he said of True North Sports and Entertainment's decision to honour Hull. "There's zero tolerance for violence against women. Zero. Period. No ifs, ands or buts, and the same with racism." Metro News

Récompense de 25 000 $ pour l'arrestation d'un terroriste canadien au Bangladesh
La police du Bangladesh offre des récompenses pour toute information sur deux islamistes, dont le Canadien Tamim Chowdhury. Ils sont accusés de mener des groupes extrémistes dans le pays. Le Canadien serait l'un des auteurs de l'attaque d'un restaurant de Dacca qui avait fait 20 morts, dont 18 étrangers, le 1er juillet. L'homme âgé d'une trentaine d'années, né au Bangladesh, est suspecté d'être le cerveau de l'attaque de Dacca. Mais il a disparu des écrans radars depuis le sanglant événement. Les services antiterroristes soupçonnent Tamim Chowdhury de diriger une faction du Jamayetul Mujahideen

Bangladesh (JMB), un groupe islamiste local interdit et accusé du meurtre de dizaines d'étrangers ou de membres de minorités religieuses. La police a annoncé une récompense de deux millions de takas (25 000 $) pour toute information conduisant à son arrestation. La police offre également une récompense pour retrouver un commandant renvoyé de l'armée, Syed Mohammad Ziaul Haq. Il est accusé d'être à la tête d'un autre groupe islamiste, Ansar al Islam, suspecté de meurtres d'activistes laïques. Radio Canada International

Gas dropped on Syrian town where Russian helicopter downed: rescuers
A Syrian rescue service operating in rebel-held territory said on Tuesday a helicopter dropped containers of toxic gas overnight on a town close to where a Russian military helicopter had been shot down hours earlier. The opposition Syrian National Coalition (SNC) accused President Bashar al-Assad of being behind the attack. Assad has denied previous accusations of using chemical weapons. A spokesman for the Syria Civil Defence said 33 people, mostly women and children, were affected by the gas, which they suspect was chlorine, in Saraqeb, in rebel-held Idlib province. The group, which describes itself as a neutral band of search and rescue volunteers, posted a video on YouTube apparently showing a number of men struggling to breathe and being given oxygen masks by people in civil defence uniforms. "Medium-sized barrels fell containing toxic gases. The Syrian Civil Defence was not able to determine the type of the gas," said the spokesman. The Syrian government and its Russian allies were not immediately available for comment. Reuters (Globe and Mail)

Bodies found off coast of Libya as migrant toll climbs
The bodies of 120 migrants believed to have been trying to reach Italy by boat from Libya have been found off the Libyan coast over the past 10 days, the International Organization for Migration (IOM) said on Tuesday. "We are getting this information from Libyan authorities that we are collaborating with," said IOM spokesman Joel Millman. The bodies had been discovered near Sabratha and had not come from previously known shipwrecks in the Mediterranean. Mainly African migrants are taking often unseaworthy boats from Libya to Italy, gateway to Europe. Nearly 8,000 were rescued at sea between Friday to Monday on that central Mediterranean route, Millman told a briefing. It is a longer and more perilous journey than that from Turkey to Greece, largely shut down since a deal was struck between the European Union and Turkey in March, although 174 migrants did make it by sea to Greece over the weekend, IOM said. MINISTER / MINISTRE

Trudeau says rights must be balanced with security in battling terrorism
An alleged terrorist plot in Ontario that created anxieties over police monitoring of suspects hasn't shaken Prime Minister Justin Trudeau's emphasis on balancing civil liberties with public safety. In his first reaction to an alleged plot that led to the death of Aaron Driver in Strathroy, Ont., Trudeau said Tuesday that balancing individual rights with keeping Canadians secure from bombing threats has to be handled with care. "Canada is a country that values its freedom (and) its basic charter rights," he said during a stop in Bridgetown, N.S., for an infrastructure announcement. "All Canadians expect their government to do two things: to keep Canadians safe and to defend and uphold the values and rights that all Canadians hold dear." "Getting that balance right isn't always easy in the challenging situation we now live in but it's

extremely important."...Trudeau said to applause from about 300 people gathered along the tranquil Annapolis River that he congratulates the security services and police for "having managed to prevent any serious incidents related to this particular individual." "It is something we continue to work very, very hard on to keep Canadians safe in their homes and communities right across this country." The prime minister mentioned the continuing presence of Canada's special forces in northern Iraq, where they are assisting in the war against the Islamic State of Iraq and Syria, also known as ISIS or ISIL. He said the wider response against domestic terrorism will be rolled out by **Public Security Minister Ralph Goodale** as the Liberals continue plans to reform former prime minister Stephen Harper's anti-terror law, Bill C-51. Parliamentary oversight. During the last federal election, the Liberals pledged to guarantee that all Canadian Security Intelligence Service warrants respect the charter, that the right to lawful protests and advocacy aren't violated, and they pledged to "narrow overly broad definitions (in Bill C-51), such as defining 'terrorist propaganda' more clearly." They also said a Liberal government would limit the Communications Security Establishment's powers by requiring a warrant to engage in the surveillance of Canadians and emphasize community outreach to battle radicalization of youths. Asked if the reforms are being revisited in light of cases like Driver's, Trudeau referred to the Liberals' plan to create an all-party committee of parliamentarians to oversee national security agencies. He said the committee will ensure the agencies "don't go too far and violate our fundamental rights and freedoms when they work hard to keep us safe." "But at the same time, oversight will ensure that our intelligence and security agencies do everything necessary to keep Canadians safe," said Trudeau. "This situation of last week and situations like it will be exactly the kind of thing I expect this committee of parliamentarians to weigh in on and advise how we can do an even better job of keeping Canadians safe, like we were able to do last week." Canadian Press (CBC News, Globe and Mail)

Toronto passed over for detention centre spending

The **federal public safety minister** says a $138-million plan unveiled Monday to replace two immigration detention centres in greater Vancouver and Montreal will ease pressure on an overburdened national system. However, **Ralph Goodale** offered nothing to expand or replace an immigration holding centre in the Greater Toronto Area...At the time **Goodale**, the minister responsible for Canada Border Services Agency, promised reforms were coming. On Monday at a news conference in Laval, **Goodale** pitched his announcement as the launch of a new national immigration detention strategy and a marked departure from the narrow approach of the previous Conservative government...**Goodale** stressed Monday that ***"the law says that detention should be the last resort, that the agency has to look at every other alternative. "Well, we've had — in my judgment — a list of alternatives in the past that is too limited. There aren't enough other choices to make."***...He said the new funding will reduce use of provincial jail facilities and mean ***"safer, more secure and humane detention conditions"*** in a system that will operate under consistent national standards. One of its objectives is to ***"minimize to the greatest extent possible the housing of children in detention facilities,"*** he said. ***"If we fail in our duty of care to the smallest among us then we fail the most basic test of justice and compassion."***...**Goodale** said the hunger strike that ended a couple of weeks ago underscored the ***"serious pressures within the system."*** He said he hoped his plan would ***"alleviate the root causes of those pressures,"*** and while the system wouldn't be ***"absolutely perfect and without flaw," this is "a major step in the right direction."*** He said he wrote the hunger strikers to explain ***"the broad nature of our plan"*** and to invite written submissions about why their individual detention is unfair or inappropriate, but had not yet received any written responses. Toronto Star

The Sprout: MacAulay, Freeland working on canola dispute with China

Good afternoon and welcome to the Sprout, where your host is told today is National Rum Day. In Canada: **Public Safety Minister Ralph Goodale** is headed to Kingston today for a town hall meeting over whether to reinstate some of Canada's prison farms. The meeting, which is set for 6 p.m. at Kingston City Hall, will be preceded by a rally organized by prison farm activists, who want the programs restored. Officials from Correctional Services Canada are also expected to be at the meeting. The National Farmers Union says it is opposed to Health Canada's plans to allow meat irradiation. In a press release Tuesday, the union said irradiation could instil "a false confidence in the meat's safety." Canada's food safety system, the NFU insisted in its submission, should instead be a priority for officials - including an increase in inspections and improved regulations. Irradiation is a process that exposes food to a controlled amount of energy called ionizing radiation in order to kill bacteria and prevent food poisoning

and spoilage. Canada's grain fleet is in serious need of repair, with more than 800 cars considered as "bad order" cars, a new federal report says. iPolitics

Le Canada veut prévenir la radicalisation de certains de ses citoyens
Au Canada, le gouvernement cherche des moyens pour prévenir la radicalisation de ses citoyens. Un dossier d'actualité alors que la police a dû abattre la semaine dernière un jeune homme qui avait projeté un attentat contre une ville canadienne. Le ministre canadien de l'Intérieur a visité, ce 15 août 2016, un centre spécialisé à Montréal au Québec. Dès cet automne 2016, le gouvernement canadien va mettre en place un bureau national pour lutter contre la radicalisation. **Ralph Goodale**, le ministre canadien de l'Intérieur, a annoncé la création de cet organisme alors qu'il visitait le Centre de prévention de la radicalisation à Montréal. Inauguré il y a un peu d'un an, ce regroupement de travailleurs sociaux, de chercheurs, de psychologues vient en aide à ceux et à celles qui s'inquiètent pour un proche. Jour et nuit, amis et parents peuvent joindre le Centre et leur demander conseil. Les Voix du Monde

'Traumatized' by jail, immigration detainee encouraged by government review of system
A French man detained at the Ottawa-Carleton Detention Centre while he awaited a Canadian work permit says he's encouraged the federal government is pledging to review and upgrade its system for detaining immigrants. Antoine Pacory says the experience last spring left him traumatized, and he welcomes news the minister responsible for Canada Border Services Agency will be looking at the system that landed him in jail. **Public Safety Minister Ralph Goodale** announced Monday the federal government would be adding $138 million to upgrade immigration detention centres as well as begin a review of alternatives to detention. ***"The government is anxious to address the weaknesses that exist and to do better," Goodale*** said. Pacory, along with his Ottawa lawyer Arghavan Gerami, have been fighting the decision to remove the 25-year-old from Canada and send him back to France. The deportation process began when a CBSA agent detained him in May, on the same day he was to receive his work permit from the federal government. CBC News

Public Safety Minister Goodale Outlines Intention to Combat Radicalization
Public Safety Minister Ralph Goodale says Canada must do better to be a leader in understanding and countering violent radicalization. **Goodale** says the death of Aaron Driver in Strathroy, who was suspected of planning a terrorist attack, demonstrates the need for ***"continued vigilance"*** in responding to threats posed by those who have been radicalized to the point of wanting to harm or kill innocent people. While there are no official plans in place, he says the federal government is working to create a new national office for community outreach and engagement that will help combat radicalization. There is no word on when the office will open, or if multiple locations will be established across the country. **Goodale** made his comments after visiting a centre in Montreal on Monday that works to prevent radicalization leading to violence. Last Thursday, the RCMP revealed that it was the FBI and not the Mounties who discovered a video that led them to Aaron Driver in Strathroy, who police said had threatened to detonate an explosive in an urban centre. Driver died Wednesday night after a confrontation with police that saw a bomb detonated in a taxi cab that was called to take him to Citi Plaza in London. An investigation continues to determine if Driver died from the blast or from a police bullet. AM980

Une stratégie nationale de lutte contre la radicalisation
Le gouvernement fédéral souhaite implanter une «stratégie nationale» pour la lutte contre la radicalisation menant à la violence. Hier, le **ministre fédéral de la Sécurité publique**, **Ralph Goodale**, a rappelé que les événements des dernières semaines», faisant référence à l'attaque terroriste déjouée en Ontario a démontré que nous avons besoin d'outils pour comprendre et agir en réaction au problème sérieux de radicalisation menant à la violence. L'analyse de Jocelyn Bélanger professeur de psychologie à l'Université de New York Abou Dhabi, spécialiste des processus de radicalisation. Radio-Canada

C-51 review expected to launch before Parliament resumes
The government's highly-anticipated review of its national security framework, including the Harper government's controversial anti-terrorism legislation C-51, is expected to start before parliamentarians return from summer break. "***Yes, it will be soon — so most likely before parliament resumes***," **said Scott Bardsley, press secretary for Public Safety Minister Ralph Goodale**. (…) In Bridgetown, N.S.

Tuesday, Trudeau reiterated his position on the importance of balancing security with civil liberties — a balance critics of C-51 said the previous government did not achieve. "All Canadians expect their government to do two things: to keep Canadians safe and to defend and uphold the values and rights that all Canadians hold dear," Trudeau said. "Getting that balance right isn't always easy in the challenging situation we now live in but it's extremely important." As **Goodale** recently re-iterated in a column with the Huffington Post, the problematic C-51 elements identified in the campaign platform are only the minimum of what the government will do to fix national security legislation. In particular, those elements include the need to "***ensure compliance with the Charter of Rights and Freedoms, full protection for advocacy and protest, the correction of appeal procedures in respect of 'no fly' lists, a more precise definition of 'terrorist propaganda', and a full review of all anti-terrorism laws after three years***." Input from Canadians could see those priorities expand during the course of the national security review, which is expected to wrap up this fall. A more specific timeline will be announced once the review is launched, **Bardsley says**. (…) In June, **Goodale** announced the creation of a new government office to support those travellers, with the eventual goal of allowing those travellers to apply for a unique identification number to distinguish them in aviation systems.That overhaul could take roughly a year and a half, **Goodale says**. iPolitics

Public Safety Canada launches public consultation on cybersecurity landscape
Public Safety Canada (PSC) has launched a public consultation on the "evolving cybersecurity landscape." On Tuesday, the federal government launched the Consultation on Cyber Security to help identify gaps and opportunities, bring forward new ideas to shape Canada's renewed approach to cybersecurity and capitalize on the advantages of new technology and the digital economy, PSC said in a statement. From now until Oct. 15, PSC will be leading the consultation by engaging stakeholders and Canadians on the trends and challenges of cybersecurity, as well as on new initiatives under consideration which will strive to build Canada's resilience, capability and innovation in cybersecurity, the department said. Topics of the consultation include: the evolution of the cyber threat; the increasing economic significance of cybersecurity; the expanding frontiers of cybersecurity; and Canada's way forward on cybersecurity. "***Canadians spend more time online than people in any other country***," **said Ralph Goodale, Minister of Public Safety and Emergency Preparedness, in the statement**. "***We need to get really good at cybersecurity – across our personal, business, infrastructure and government sectors – so we can take full advantage of the digital economy, while protecting the safety and security of Canadians, and selling our valuable cyber skills and products into a booming market throughout the rest of the world***." Canadian Underwriter

Canadians Have Your Say on Cyber Security
The Government of Canada has launched its public consultation to engage with Canadians on the evolving cyber security landscape. This consultation will help identify gaps and opportunities, bring forward new ideas to shape Canada's renewed approach to cyber security and capitalize on the advantages of new technology and the digital economy… ***"The government's cyber security review is an opportunity to build Canadian strength and expertise. Canadians spend more time online than people in any other country. We need to get really good at cyber security - across our personal, business, infrastructure and government sectors - so we can take full advantage of the digital economy, while protecting the safety and security of Canadians, and selling our valuable cyber skills and products into a booming market throughout the rest of the world. I hope Canadians will participate vigorously to help us shape this opportunity."*** **The Honourable Ralph Goodale, Minister of Public Safety and Emergency Preparedness**. Montreal Gazette

How much do we really know about the Canadian intelligence community?
An opinion piece states, "The Trudeau government is set to review the activities of Canada's spy agencies at a time when it appears Bill C-51 has empowered many of the more than 20 agencies and departments with surveilling powers to violate the Canadian Charter of Rights and Freedoms. Last year American whistle-blower Edward Snowden proclaimed that Canadian intelligence agencies have the "weakest oversight" in the Western world and compared the Canadian government's Bill C-51 to George W. Bush's post-9-11 U.S. Patriot Act…There should be an inquiry into the events that led to Driver's death. In essence he was "engaged and killed" for an action he had not yet carried out. Moreover, it appears the young man was under close surveillance by at least two different countries, making it difficult

to imagine that authorities could not see it coming. However, putting aside those important questions for the moment, one thing is clear: the event gave **Minister of Public Safety Ralph Goodale** justification for the continued delay of the Liberals' election promise to reform C-51... Mapping the issue is helpful. Different agencies report to different ministries. The RCMP and CSIS, for example, report to **the Minister of Public Safety**, while The Canadian Security Establishment (CSE) reports to the Minister of National Defence. Broadly speaking, the agencies are divided into civilian and military, but there is a lot of overlap... For example, the Integrated National Security Enforcement Teams (INSET), established in 2002, is made up of special inter-departmental counter-terrorism units that operate under **Public Safety Canada**. It is very unlikely that they have no contact with the Canadian military. Moreover, Canada is a small country and in the course of an individual's professional life they may work for two or more agencies (see the career trajectory of Leonard N. Giles, for example). But back to the question of numbers — or to be more precise, how difficult it is to establish the exact number. A recent article in the Toronto Star mentioned four intelligence agencies listed in a government document with the fourth name blacked out (why would the government black out the name of a security agency?). However, the six security agencies that most people may have heard of include the RCMP, and then, under the umbrella of the Department of National Defense, the CSE, and the lesser known Intelligence Branch. The latter is the main intelligence service of the Canadian Forces, which is concerned primarily with vetting personnel and is associated with The Canadian Forces School of Military Intelligence (CFSMI) in Kingston. There is also the aforementioned CSIS, and finally, the Canadian Border Services Agency (CBSA). One does not normally think of a border agency as an intelligence agency but collecting information is a by-product of their operations. Even more surprising, the list mentioned above also included Citizenship and Immigration Canada. That brings the number up to seven, which already seems like a lot for a country with only 34 million people. The U.S., for example, has 17 different intelligence agencies for a population of 322 million. In addition to the aforementioned agencies, there are at least two groups occupied with psychology which could also arguably be added. The Canadian Forces has a Psychological operations (PSYOPS) unit, and then there is the Extremism and Terrorism section of the Canadian Psychology Association... The RCMP is monitored by the Civilian Review and Complaints Commission (CRCC), while CSIS is tracked by the Security Intelligence Review Committee (SIRC). The CSE has the CSE Commissioner, who supposedly provides some kind of external assessment. Considering the importance of the internet to our lives now, the fact that there is only one man in charge of checking up on the CSE is alarming, to say the least. In contrast, SIRC reports directly to the Government of Canada rather than any one minister. Chaired by various corrupt individuals during the Harper era, it lacks funding and any real authority..." The Independent (Newfoundland & Labrador)

ISIL supporter Aaron Driver was killed by police gunfire, not explosive device he detonated, family says

An ISIL supporter who died during a confrontation with an RCMP tactical team outside his home in Strathroy, Ont. was killed by a police bullet, his family said Tuesday. Wayne Driver said an autopsy had determined that his son Aaron had been shot two times and that one of the bullets had struck his liver and traveled to his heart. The other hit his spleen, he said... Following the incident, the RCMP said it was

unsure whether Driver had died as a result of his own bomb or police bullets but the father said the autopsy had put that question to rest. "It was the police officer's bullet that killed him," the father told the National Post. "The bomb that exploded he could have walked away from with minor to severe injuries they said." National Post; CBC News; Canadian Press (London Free Press, Kingston Whig-Standard, CTV News); Radio-Canada

Crime in Canadian cities: 'Perceptions do not necessarily match the reality,' pollster says
The statistics say Saskatoon, Regina and Edmonton have the most severe crime but Canadians believe Winnipeg, Toronto and Montreal are the most dangerous cities, according to a new poll from Mainstreet Research. "The results paint an interesting portrait of how we see each other," Mainstreet president Quito Maggi said in a release. "Perceptions do not necessarily match the reality of crime and safety." Ottawa was perceived as the safest city of 15 included in the poll, followed by Charlottetown and Moncton. According to Statistics Canada, however, the cities with the least severe crime last year were Quebec City, Toronto and Ottawa, respectively. Canada's biggest city had the biggest perception-reality gap - despite having the second-lowest crime severity index, Toronto was perceived as the second most dangerous city, behind only Winnipeg. And Manitoba's capital, despite its unsafe reputation, had less severe crime than Vancouver, Edmonton, Regina and Saskatoon. CBC News

Cybersécurité: les chefs de police réclament l'accès légal aux mots de passe
Les chefs de police canadiens réclament une loi pour contraindre les gens à révéler leurs mots de passe aux forces de l'ordre avec l'approbation d'un juge. L'Association canadienne des chefs de police (ACCP) a adopté une résolution incitant le gouvernement à prendre des mesures législatives pour faciliter l'obtention de preuves électroniques. L'ACCP estime que les criminels ont de plus en plus recours au chiffrement pour dissimuler leurs activités illicites en ligne. Le commissaire adjoint de la Gendarmerie royale du Canada (GRC), Joe Oliver, a déclaré qu'aucune loi canadienne ne contraignait actuellement le détenteur d'un mot de passe à le révéler aux policiers dans le cadre d'une enquête. Lors d'une conférence de presse mardi, M. Oliver a soutenu que les criminels, qu'ils soient membres de la mafia ou pédophiles, bénéficiaient d'un anonymat quasi absolu en ligne. Cette résolution de l'ACCP survient alors que le gouvernement fédéral entame ses consultations en matière de cybersécurité, notamment par rapport à l'équilibre entre les besoins des policiers et les libertés fondamentales. Ces consultations se poursuivront jusqu'au 15 octobre. Presse canadienne (L'Actualité) ; Canadian Press (CTV News, News 1130, iPolitics); CHED 630 AM

Severe summer storm in the Prairies causes more than $48 million in insured damage
Insurance Bureau of Canada (IBC) reports a severe storm that swept through Alberta, Saskatchewan and Manitoba during the second week of July has resulted in more than $48 million in insured damage according to Catastrophe Indices and Quantification Inc. (CatIQ). From July 8 - 11, a low pressure system caused severe thunderstorms in the Prairies. The storms produced strong winds, hail, lightning, heavy rainfall, and funnel clouds. This system also caused significant flooding in Estevan, SK and produced a brief tornado touchdown in Humboldt, SK on July 10. Insurance Bureau of Canada News Release (Montreal Gazette)

B.C. Hydro concerned earthquakes from fracking could damage Peace River dams
Internal documents show B.C. Hydro officials have had concerns since at least 2009 that earthquakes triggered by fracking are a potential risk to its Peace River dams. The electricity-generating dams in northeastern B.C. include one of the largest earth dams in the world, the W.A.C. Bennett Dam, as well as the smaller Peace Canyon Dam, and the $9-billion Site-C dam, which is under construction. The Crown agency has not discussed the issue publicly. But as a result of its concerns, B.C. Hydro worked out an agreement, possibly as early as 2014 with the B.C. Oil and Gas Commission (BCOGC), to create five-kilometre buffer zones around dams where no new fracking and drilling rights are issued, according to a report released today from the Canadian Centre for Policy Alternatives, a left-wing think-tank. Financial Post

Wildfires north of Kamloops caused by lightning, people
Lightning in the Kamloops region over the past few days has led to a number of new wildfire starts, but at least one blaze north of the city is believed to have been caused by people. The BC Wildfire Service is fighting two fires east of Barriere, one at the north end of East Barriere Lake, and the other near Momich Lakes Provincial Park. Both are about one hectare in size, and both are classified as lightning-caused. A very small fire has been noted in the O'Connor Lake Road area north of Kamloops, also caused by lightning. ATV found, but search continues for overdue Kugluktuk hunter
A search is underway for a hunter reported overdue in Kugluktuk, Nunavut. RCMP say Allen Kudlak Jr. left the community on Thursday Aug. 11, travelling on his ATV with a rifle, but no other supplies or equipment. Kudlak was reported missing to the RCMP the following day when he failed to return home. Local search and rescue started searching for Kudlak on Saturday when his ATV was found in Kugluk territorial park, about 10 kilometres southwest of the community. CBC News

Volunteer marine unit in Grimsby suffers serious setback
Members of the Grimsby Auxiliary Marine Rescue Unit hoping to get a short term loan of a rescue boat after their 22 foot Zodiac suffered what they call a catastrophic failure Saturday. The Zodiac experienced a massive breach of its fibreglass hull while towing a disabled boat during a rescue mission on Lake Ontario. The Zodiac, or GAMRU 334, is one of only two vessels available to the group during boating season and allows the unit to respond quickly in shallow water. nit leader Bob Gordon calls it a significant setback to the only dedicated marine search and rescue organization on the south shore of Lake Ontario that services an area from Hamilton to Port Weller. Quebec funding program for at-risk youth in St-Léonard
The province will be funding a prevention program to help keep at-risk youth out of trouble, officials announced Monday. Quebec Public Security Minister Martin Coiteux said the government will invest $625,000 over five years into thwarting youth delinquency in the northern Montreal borough of St-Léonard. The project brings together the municipal group Prévention Jeunesse - which addresses issues of radicalization in Montreal - and the YMCA Quebec to run programs aimed at preventing youth involvement in street gangs and radicalization. "(This initiative) will allow us to act locally and in a succinct manner in order to prevent and intervene directly within a population of youth who are vulnerable to violence, delinquency and radicalization," said Anie Samson, the city's executive committee member responsible for public security. Montreal Gazette

Countering extremism
A letter to the editor states, “Re: Young terror supporter had troubled upbringing (Aug. 30). I am absolutely shocked that the RCMP identified a homegrown extremist originally from Winnipeg who was planning to attack a public area in Canada. It is quite scary, in fact, to see the power of social media and how it is being manipulated to serve the interests of ideological extremist recruiters. Aaron Driver, a 24-year-old living in a town in Ontario, had shown support for ISIS in the past and was thus being monitored.

I am thankful this situation did not escalate to an attack and was mitigated immediately. Although there may be many solutions to homegrown extremism, the most effective one is having a true and powerful counter-narrative. One example of such a narrative is the Ahmadiyya Muslim Youth Association, which is known for giving back to society through blood drives, food drives, city cleanups and much more. These counter-narratives will help put an end to homegrown extremism and continue to make Canada great…" Winnipeg Free Press

Largest ransomware-as-service scheme pulls in US$195,000 a month: Report
Canadians are among those who have fallen victim to a global ransomware-as-a-service scheme which targeted tens of thousands of users in 201 countries and territories in July alone, according to security researchers. The researchers at Check Point Software and IntSights Cyber Intelligence of Israel released a report Tuesday saying the service, which it calls Cerber, is currently running 161 active campaigns with a total estimated profit of US$195,000 last month alone. In July an estimated 150,000 devices were infected. Each day an average of eight new campaigns on average are launched, Check Point says. The biggest percentage of victims so far are in South Korea (29 per cent), the U.S. (14 per cent), Taiwan (9 per cent) and China (eight per cent). However, Check Point says there's evidence to support the developer's claim that Americans are among the top people willing to pay up. IT World Canada

$19K found inside Hamilton man's car on Trans-Canada Highway
A man from Hamilton, Ont., faces criminal charges after RCMP in Manitoba pulled a car over for speeding, only to find "stacks of cash" exceeding $19,000 in cash along with some marijuana inside. RCMP say they stopped a 2007 Cadillac on the Trans-Canada Highway near Headingley, which is just west of Winnipeg, around 1 p.m. CT on Aug. 11. Officers found a small quantity of marijuana and "stacks of cash in excess of $19,000" inside the vehicle, RCMP said in a news release Tuesday. Both the money and the car were seized. Police say they believe the cash was obtained through criminal activity. An RCMP spokesperson says the vehicle is being held as part of the investigation, which will determine whether or not it came from proceeds of crime. La GRC se penche sur la vente de blindés canadiens en Libye
Le gouvernement libéral est préoccupé par un rapport des Nations unies (ONU) qui déplore qu'une compagnie canadienne ait livré plusieurs dizaines blindés en Libye, alors qu'un embargo commercial interdit la vente d'armements à ce pays déchiré par la guerre. Le ministère des Affaires mondiales a ainsi demandé à la Gendarmerie royale du Canada (GRC) de se pencher sur le document produit par le comité de l'ONU chargé de faire le suivi des sanctions imposées à la Libye. On ignore toutefois pour l'instant si la GRC va lancer une enquête en bonne et due forme sur les agissements du constructeur de véhicules blindés Streit Group. Le gouvernement libéral a dit vouloir laisser l'affaire entre les mains de la police. « Il appartient à la GRC d'enquêter sur d'éventuelles violations à la loi canadienne, et c'est le Service des poursuites pénales du Canada qui doit déterminer, en s'appuyant sur les éléments disponibles, si le Canada a la juridiction pour poursuivre les contrevenants », a indiqué François Lasalle, porte-parole du ministère des Affaires mondiales dans un communiqué. Le ministère n'a pas précisé quand le rapport produit en mars dernier avait été transmis à la police fédérale. La nouvelle intervient moins d'une semaine après que la CBC eut diffusé série de reportages sur les activités de Streit en Libye, mais aussi au Soudan du Sud. Rencontre avec Streit Le comité des Nations unies a reproché à l'entreprise canadienne, qui a une usine à Innisfil, en Ontario, le « transfert illicite » de 131 véhicules de transport de troupes (VTT) en 2012. Des représentants de Streit ont rencontré les enquêteurs de l'ONU en 2014 et leur ont remis plusieurs documents portant sur la livraison de blindés de modèles Cougar, Spartan et Cobra à la Libye en 2012, de même que des déclarations de douanes. CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Mission mayor wants answers from Corrections Canada about sex offender
The mayor of Mission is demanding answers and he's hoping to get them as he meets with Corrections Canada to talk about a high-risk sex offender who has been living in his community for two weeks now. Mayor Randy Hawes says he wasn't told the truth about James Conway's relocation from Abbotsford. "I keep being told by Corrections that they had no choice, that it was completely the decision of Conway, The William James Society and the courts. Well, now I am finding out that there were quite a number of other options put forward and Corrections rejected them all," Hawes tells NEWS 1130. "I feel like we haven't been told the truth and I'm not very happy about that." Conway, a convicted pedophile with a long criminal history, has been the target of protests since moving to Mission. (…)He was convicted of sex crimes against children three times and is considered at high risk to re-offend. BC Corrections says he is under 24-hour surveillance and he can't leave his home unsupervised. News 1130

"Balaclava Rapist" to live in Vancouver while serving day parole
Vancouver Police have confirmed to Global News that the man known as the "Balaclava Rapist" will be serving his day parole at a correction halfway house in that city. The 63-year old was serving three life sentences, having admitted to raping at least 30 women in Edmonton in the 1970's and 80's. In 1984, Takahashi was convicted of 14 charges, including four counts of rape, sexual assault with a weapon, aggravated sexual assault and six counts of disguise with intent. CKNW

Indigenous relationships to be focus for justice system changes
Canada's federal Minister of Justice and Attorney General Jody Wilson-Raybould told a crowd of hundreds of lawyers that the federal government is committed to improving relationships with indigenous people, as well as promoting diversity on the bench. "Many of the issues we face as a country have a justice element to them, and which is why our government has embarked on a very ambitious agenda, and an effort to reform our justice system," Wilson-Raybould said to lawyers from across Canada gathered in Ottawa last week for the Canadian Bar Association's annual conference. Wilson-Raybould was the conference's keynote speaker Friday morning. (…)"It is a sad reality that many members of indigenous communities are among the most marginalized segments of our population, and that they are over-represented both as offenders and victims in the justice system," said Wilson-Raybould. (…)Wilson-Raybould pointed to a report from the federal Office of the Correctional Investigator that illustrated the gap. From 2005 to 2015, she said, the indigenous inmate population increased by 50 per cent, compared with the overall growth rate of 10 per cent. She also noted that while indigenous people make up 4.3 per cent of the population, they represent more than 25 per cent of inmates. She also said that indigenous women comprise 37 per cent of all female inmates serving a sentence of more than two years. "This is totally unacceptable," she said. Canadian Lawyer Magazine (2016-08-15)

COMMUNITY SAFETY & PARTNERSHIPS / SÉCURITÉ DE LA POPULATION ET PARTENARIATS

Crime in Canadian cities: 'Perceptions do not necessarily match the reality,' pollster says
The statistics say Saskatoon, Regina and Edmonton have the most severe crime but Canadians believe Winnipeg, Toronto and Montreal are the most dangerous cities, according to a new poll from Mainstreet Research. "The results paint an interesting portrait of how we see each other," Mainstreet president Quito Maggi said in a release. "Perceptions do not necessarily match the reality of crime and safety." Ottawa was perceived as the safest city of 15 included in the poll, followed by Charlottetown and Moncton. According to Statistics Canada, however, the cities with the least severe crime last year were Quebec City, Toronto and Ottawa, respectively. Canada's biggest city had the biggest perception-reality gap - despite having the second-lowest crime severity index, Toronto was perceived as the second most dangerous city, behind only Winnipeg. And Manitoba's capital, despite its unsafe reputation, had less severe crime than Vancouver, Edmonton, Regina and Saskatoon. CBC News

His family called 911 for help with a seizure but this man claims police beat him instead
The family of a man with epilepsy says police beat him severely in his home then arrested him after they had called 911 for help with violent symptoms from a seizure. And his was the second case like it in Edmonton within a week. Neil Ryley, 49, has epilepsy, a brain disorder characterized by recurring seizures. At the end of June, his ex-wife Tracey Schimpf suspected he was having a medical episode when he started acting erratically. "He was upset. Freaking out," she said. Ryley has seizures often, but it's only about three times a year that he displays defensiveness, violence or anger, Schimpf said. Symptoms such as hallucinations, confusion and violence can occur during and after certain types of epileptic seizures, according to the Edmonton Epilepsy Association. Schimpf said she called 911 for an ambulance three times. She also recommended the paramedic crew bring police officers with them. In the past, officers had helped the paramedic team restrain Ryley and bring him to the stretcher when he had aggressive episodes during or after seizures. (…)Edmonton police spokesperson Cheryl Sheppard said Ryley head-butted one of the officers, breaking his nose, and bit another. Police offered no comment on Schimpf's claim that it took 90 minutes for police to arrive after she first called 911. The officers charged Ryley with assaulting a peace officer. They took him to hospital, arrested him, then put him in jail for eight days. His lawyer got him out on bail after producing a letter that verified his medical condition. CBC has

also confirmed a second man with epilepsy was arrested and charged with assaulting a peace officer six days earlier, while displaying symptoms linked with epileptic seizures. CBC News

Canadians see Winnipeg as most dangerous city in country, poll says
Winnipeg is seen as the most dangerous city in Canada, a poll released Tuesday suggests. The Mainstreet/Postmedia poll of 4,213 Canadians ranks Ottawa as the safest among 15 major cities while Winnipeg sits dead last. The survey is based on the perceived safety of cities, not the actual data, said Quito Maggi, president of Mainstreet Research, who noted that numbers recently released by Statistics Canada show Saskatoon actually has the highest crime rate in the country. In the Mainstreet poll, that city ranks 12th out of 15 cities for safety. "Perceptions compared to Statistics Canada's Crime Severity Index yields some interesting comparisons," Maggi said. Toronto, for example, ranks 14th out of 15 in terms of perceived safety in the Mainstreet poll. But when it comes to actual crime statistics, it is one of the safest cities. It has the second best crime severity index, behind only Quebec City and ahead of Ottawa, which Canadians perceive to be the safest. And Winnipeg's actual crime severity index is better than Vancouver, Edmonton, Regina and Saskatoon in terms of safety. CBC News; Winnipeg Free Press; Winnipeg Sun; iNews 880; Radio-Canada

Not just perception: Winnipeg is a violent city
There's a reason Winnipeg is perceived as the most unsafe city in Canada — because it is. A new Mainstreet Research Poll has found that Winnipeg is perceived by Canadians as the most dangerous city in the country. And while general crime rate data does show crime in Winnipeg is less severe than in cities like Vancouver, Saskatoon and Edmonton, it's the amount of violent offences — and the severity of those offences — that shows people's perceptions of Winnipeg as the most unsafe city in the country are well founded. According to Statistics Canada's violent crime severity index, Winnipeg had the most violent crime of any city in Canada in 2015 with a value of 122.1. Thunder Bay had the second highest violent CSI at 119.2 and Saskatoon ranked third at 113.5. Winnipeg's violent crime index actually rose 5% last year, according to StatsCan. So it's not just people's perceptions that Winnipeg is a violent city. The stats back up how people see this city. Winnipeg Sun

Canadians perceive Calgary as Canada's sixth least safe city, poll finds
Canadians perceive Calgary to be one of the country's less safe cities, ranking it 10th out of 15 major centres in a new poll. The poll comes after last month's release of Statistics Canada crime stats, which showed a 29 per cent increase in the severity of crime in Calgary. Based on StatsCan's Crime Severity Index, Calgary ranks ninth among the 15 cities covered by the poll (it ranks seventh for overall crime rate, regardless of severity). Winnipeg was seen as Canada's least safe city by poll respondents, followed by Toronto and Montreal. But Quito Maggi, Mainstreet's president of research noted that perceptions were considerably different from the statistics. Calgary Herald

Disconnect between perceptions and crime data: poll
It seems there is a difference between how dangerous you think Metro Vancouver is and what the statistics actually show. A new national poll suggests there's a disconnect between our perceptions and what the data proves. Vancouver ranked ninth in the poll among 15 major cities, while Victoria was just one spot better according to the research from Mainstreet. But pollster David Valentin says the crime rate trends according to Statistics Canada don't quite back that up. "It's interesting that Victoria actually saw its crime rate go up last year by 10 per cent. It's interesting that even though the crime is increasing in Victoria, people do rank it as safer than Vancouver." Saskatoon has been deemed the most dangerous city in this research. News 1130

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Reasonable Doubt: the history of marijuana law in Canada
The 1908 Opium Act was the first Canadian law that prohibited drugs, and it was at least a partially racist response to Chinese immigrants associated with opium use at the time. It was a tough economic time, and resentment was growing toward Chinese and other immigrants working for low wages. After race riots in 1907, Mackenzie King, the deputy minister of labour at the time, visited opium dens in Vancouver and became concerned with apparent increased opium use, particularly by white people and women. That visit is said to have been a catalyst for the Opium Act. In 1923, the government added marijuana to the schedule of prohibited drugs in the Opium and Narcotic Control Act. Some people point to The Black Candle, a (very racist) book by so-called and famed feminist Emily Murphy, who linked drug use to specific risks to white women. It is hard to know with any certainty how much of an influence this book had on drug legislation, but it certainly contributed to the reactionary, often racist, anti-drug sentiment of the time. To be fair, there were also international discussions occurring at the time over the evils of drugs and virtues of prohibition. (...)In 1972, the Le Dain Commission published a report on the non-medicinal use of drugs and recommended decriminalizing cultivation and possession of marijuana for person use. Instead, what followed was nearly thirty years of prohibition. (...)In 2012, the Harper government introduced mandatory minimum prison sentences for possessing set amounts of marijuana or plants. Over the next three years, several courts deemed several of these mandatory minimum laws unconstitutional. (...)Next year, the Liberals are set to introduce laws legalizing and regulating marijuana use. The plan will likely earn the government millions in tax revenue and save the considerable cost of prosecuting and jailing people for marijuana offences. NOW Toronto

Peterborough plane crash: Should there be more security at private airports?
Security concerns are being raised at some of Canada's smaller, private airports after a 20-year-old man with mental health issues stole a plane from a small airport in Markham before crashing it in Peterborough last week. On Thursday, Global News revealed the RCMP was investigating the crash as a "national security issue" and had met with the father of suspect Mohammad Hassan Chaudhary multiple times to discuss his son's involvement... Chaudhary's father Afzal Chaudhary told Global News he was outraged his son, who lived with schizophrenia and other mental health issues, was able to break into the airport, steal a small aircraft and crash into the streets of an Ontario city without any intervention from

police or security officials. "This is a national story. They're spending billions and billions of dollars on the airports. He opened the airport here. Not a fence, not any gate, [nor] any guard, and he left an airplane over there," he said..."These more regional, perhaps almost part-time airports where there is not a lot of activity, it's not fully under CATSA's mandate for standards of protection. The security gets quite a lot lower and certainly in some cases can lead to concerning incidents like this one." According to its website, CATSA is responsible for security screening of people and baggage at 89 designated airports in Canada. Mathieu Larocque, a spokesperson for CATSA, said the agency is not responsible for perimeter security at airports. "The airports where we are present we are not responsible for the security of the airport," said Larocque. "The security of the airport itself, like the airport perimeter, access to the tarmac, security guards at the airport, that is local responsibility handled individual airport authorities."... In a statement to Global News, Transport Canada said said any "operator of an aerodrome must have, at all times, at least one security official or acting security official" under Canadian Aviation Security Regulations. "Canada has a risk-based approach to aviation security, and within this framework, Transport Canada works in partnership with airport associations and regional airport councils to maintain and improve the safety and security of civil aviation at aerodromes in Canada," said a spokesperson for Transport Canada in an email. **Public Safety Minister Ralph Goodale** told Global News there is currently an investigation into the Peterborough crash and wasn't able to comment specifically on private airport security measures. ***"[Transportation Minister Marc Garneau] pays very close attention to these things,"*** **he said.** ***"The safety regime is designed to protect Canadians. Accidents happen, and we'll have to determine what was the nature of this particular incident. Canada overall has a very safe and secure and strong air safety regime and Minister Garneau is determined to keep it that way."*** Patrick Gillian, vice president of operations with the Canadian owners and pilots association, said the theft of planes is so rare most private airports and aerodromes (small general aviation airfields) don't need additional private security. Global News

Fighting terrorism requires outreach as well as policing
An editorial states, "Police were both skilled and lucky when they narrowly stopped Aaron Driver from inflicting major damage last week in the name of a radical jihadist ideology. We can applaud their quick work in derailing Driver's violent plan, but we should not be relying on luck to stop such threats. **Public Safety Minister Ralph Goodale** was right this week when he acknowledged that the peace bond imposed on Driver was not enough to deter him. Despite a court order requiring him to stay away from jihadist propaganda on the Internet, not touch any weapons, and check in regularly with police, the young man came close to setting off an explosion in a crowded public space before he was killed by police..." Toronto Star

The unflappable Ralph Goodale - Trudeau's point man on terrorism is also the minister in charge of not freaking people out
An opinion piece states, "Every government has to have a steady hand on the wheel. In the current Liberal government, it's Ralph Goodale, minister of Public Safety. In a speech to the Canadian Association of Chiefs of Police the other day, Goodale took his audience through the hot files that have landed on his desk since the Liberals took office last fall: re-settling 25,000 Syrian refugees in Canada; the Black Friday terror attack in Paris last November and the attack in Nice on Bastille Day; wildfires in northern Alberta and the evacuation of 90,000 people from Fort McMurray — the biggest Canadian natural disaster of modern times. Just last week, of course, there was the coordinated police takedown of Aaron Driver, a 24-year old ISIS sympathizer with an improvised explosive on his person. The device went off in a cab near London, Ontario; Driver evidently was on his way to a mall there, having made a video promising to shed Canadian blood for the terrorist cause. To every one of these situations, Goodale has brought his characteristic phlegmatic demeanour: Keep calm and carry on. In the case of Driver, police were acting on information posted to social media by the ISIS acolyte and picked up by the FBI. Asked about cooperation between the RCMP and FBI, Goodale replied that it happens all the time — the Americans share information with us, we share it with them. Next question.Driver had frequently broken the terms of his court-ordered peace bond, which barred him from weapons and proselytizing for ISIS on social media. Goodale mused that the government may look at revising the law to compel terror suspects under peace bonds "to engage with counter-radicalization professionals." In any event, Goodale said, the Driver incident demonstrated the need to "up our game" in deprogramming potential homegrown terrorists. He repeated the Trudeau government's promise to hire a deradicalization adviser with an

annual budget of $10 million and a mandate to work with cities on their own deradicalizing efforts..." iPolitics

MP Kerry Diotte fires at Ralph Goodale over 10/22 magazine controversy
Another Member of Parliament has spoken out against the reinterpretation of legality surrounding the Ruger 10/22 magazines A user, who wishes to remain anonymous, took to a Canadian firearms forum board to share the letter he received from his Member of Parliament, Conservative Kerry Diotte representing Edmonton Greisbach, on the issue of the 10/22 magazine controversy. According to Diotte, he has received many correspondences from his constituents on the matter, prompting him to urge the **Minister of Public Safety and Emergency Preparedness, Hon. Ralph Goodale**, to reverse this bureaucratic decision that was without any proof of enhanced public safety. Dear [redacted]: Thanks for your correspondence regarding the classification of the 10/ 22 Ruger Magazine. I hear you. It is unfair that with just a stroke of a pen, law – abiding firearm owners can be criminalized for owning property that they purchased legally. The RCMP Canadian Firearms Program's decision to prohibit the 10/ 22 Ruger Magazine does just that, while doing nothing to promote public safety. Prime Minister Justin Trudeau and his cabinet have the authority to undo this classification... On behalf of the many constituents I've heard from on this classification decision, I've written the attached letter to the **Hon.Ralph Goodale, Minister of Public Safety and Emergency Preparedness**. I encourage you to also make your views known to the **Hon.Ralph Goodale.** As your Member of Parliament, I'm proud to stand up for common sense firearm regulations that prioritize public safety without penalizing law- abiding hunters, farmers and sport shooters. Sincerely, Kerry Diotte... They also included Diotte's letter to **Hon. Ralph Goodale**, which echos almost entirely the same sentiment held by MP Bob Zimmer in his letter to the Minister last month. Dear **Minister Goodale:** The RCMP Canadian Firearms Program's decision to prohibit the 10/22 Ruger Magazine is unfair to law-abiding firearms owners. I've heard from many of my constituents, who have expressed sincere disapproval of this bureaucratic decision... I urge **you** to reverse the classification of the 10/22 Ruger Magazine or introduce an amnesty for those who purchased this magazine legally, Sincerely, Kerry Diotte... While we need to continue fighting this battle, it's clear that writing to your Member of Parliament is not a useless tactic. The more MPs we have writing to the Minister on this matter, the more likely it is we will be able to overcome this obstacle and once again be able to use magazines with capacities greater than 10 rounds in our 10/22s without being a criminal for doing so. Canadian Firearms Blog

(MIS À JOUR) : Pas de cause unique à la radicalisation des jeunes, mais des constantes
Il n'y a pas de cause unique à la radicalisation, pas plus qu'il y a de portrait type de la personne radicalisée, mais certaines constantes se dégagent tout de même d'une recherche détaillée menée après que des jeunes du Collège de Maisonneuve et d'ailleurs eurent tenté d'aller faire le djihad en Syrie. Le Centre de prévention de la radicalisation menant à la violence (CPRMV) a présenté à Montréal, vendredi, le rapport d'analyse réalisé à la demande du Collège de Maisonneuve... Le maire de Montréal, Denis Coderre, a également salué le travail du Centre et a noté que les services policiers, le Collège de Maisonneuve et les gouvernements avaient déjà amorcé des démarches de toutes sortes. Il a rappelé que **le ministre fédéral de la Sécurité publique, Ralph Goodale**, avait manifesté son appui et même sa volonté de s'inspirer de l'expérience québécoise pour le reste du Canada. Presse Canadienne (La Presse) ; Montreal Gazette

Broadcast media / Médias télédiffusés :

CBC News' Power & Politics interviewed Christianne Boudreau, mother of Damian Clairmont who was killed fighting for ISIS, regarding the radicalization of Aaron Driver. **Public Safety Minister Ralph Goodale** was mentioned during this segment. Rough Transcript

TOP STORIES / MANCHETTES

No signs that plane crash linked to national security: RCMP
RCMP probing a fatal crash in southern Ontario involving a stolen plane say there is no indication that the incident is linked to national security. RCMP released a statement into the investigation into the Aug. 12

crash in which 20-year-old Markham Ont. man Mohammad Hassan Chaudhary was killed. Chaudhary was the sole occupant of the Piper aircraft, which crashed on a street in Peterborough, Ont. after it was allegedly stolen from an airport in Markham. Authorities said Friday that they have "no information to indicate there is a link with national security. "The investigation has not revealed the motive for the theft and all indications are that the young man acted alone." RCMP is working with local authorities, including York Regional Police, to investigate the crash in Peterborough, Ont. CTV News

Aaron Driver's dad believes alleged terrorist wanted 'suicide by cop'
The father of a suspected terrorist shot dead by police in Strathroy, Ont. last week believes his son didn't want to kill anybody other than himself when he set off a homemade explosive in the backseat of a cab as Mounties pulled their guns on him. In an interview Friday, Wayne Driver said his youngest son Aaron - who police allege planned to attack an urban centre during rush hour - built a bomb that wasn't strong enough to severely injure anyone. Based on a note that Aaron left behind, Wayne Driver said he's convinced his son wanted instead to commit "suicide by cop." Toronto Star

Dalhousie professor calls for 'controlled, prescribed burns' after Nova Scotia wildfires
The majority of Nova Scotia is once again under burn restrictions as the dry weather creeps back in. A Dalhousie University professor says the province should be more proactive when it comes to preventing wildfires. Global News

Five things to know about wildfires as hot, dry, windy weather sparks warning from B.C. Wildfire Service
British Columbia is experiencing a mild forest fire season compared to last year's record-breaker, but B.C. Wildfire Service officials are warning this weekend's predicted hot, dry weather could see a spike in fires throughout the province. Here are five things about the fire season you should know: Fires this year are well below B.C.'s long-term average. Vancouver Sun

What you need to know about home disaster restoration
On August 13, Ontario's uncharacteristically dry summer was interrupted by a torrential downpour and extremely high winds. Environment Canada issued a severe thunderstorm watch for much of southern Ontario, while Guelph, Erin, Southern Wellington County, Region of Waterloo, Kitchener and Cambridge were on alert for the possibility of a tornado. Toronto Star

This Is What the Ice-Free Northwest Passage Looks Like
An ice-free Northwest Passage was once the stuff of legend. But it's now becoming the norm thanks to global warming, and commercial freighters to luxury cruise ships are racing to turn a profit off the newest frontier on earth... The Crystal Serenity, a hulking 820-foot, 13 deck cruise ship, set out earlier this week from Anchorage on a 32-day voyage that will end in New York. It's the largest ship to ever pass through the Northwest Passage. But with a driving range on board, the cheap berths going for $22,000 and $50,000 emergency evacuation insurance policies required for each passenger, it's made, shall we say, waves. Bonner County Daily Bee; Climate Change News; Gulf News

Thank you for a magnificent response to wildfires
An opinion piece states, "During the more than 50 years that I have lived in Queens, I have often been impressed by the resilience and bounce-back of its residents, but never more so than recently, during huge fight against the forest fires. While some of the fires were in Annapolis County, they were all fought from bases in Queens..." Chronicle Herald

Terrorists don't speak for me
An opinion piece states, "Aaron Driver does not speak in my name, the name of my community and my faith, Islam. His views are strange, illogical, unethical, dangerous and contradict all what I know about my faith and my community. I also applaud the efforts of the RCMP and its partners in thwarting a planned attack..." London Free Press

Preventing another Aaron Driver
Letters to the editor state, "Re: 'We are thirsty for your blood," Aug. 12. One needs to only look at Aaron Driver's history. His family home burned down at the age of 4, his mother died when he was 7. He was part of a military family that moved around frequently. All the things that were supposed to provide him with safety were gone... Can terrorism be justified? Is hatred more powerful than love? As an Ahmadi Muslim, the answer is clear that terrorism has no place in Islam or any religion..." Toronto Star

Letters to the Editor: Aug. 20
A letter to the editor states, "We're all responsible. I applaud and feel we as a community should support and call for programs that will alert all citizens to the increasing danger of our youth being radicalized by cleverly disguised recruiters in our community or via the Internet. It is not the responsibility of our Muslim community and the London Muslim Mosque alone. The responsibility lies with each one of us, regardless of our ethnic and religious affiliation... Monitor mosques. Aaron Driver, the 24 year old ISIS sympathizer, came from a good family but soon found himself striving for the wrong cause. The problem, in my opinion, is that too many youth are disenfranchised within their communities. They have nowhere to go, nowhere to belong, and that's exactly what ISIS is looking for. Extremism gives these youth a purpose, albeit a terrible one, and a sense of belonging... Counter toxic narratives. It is really shocking to see that a youth who was born and raised in Canada had fallen prey to the toxic ideology of ISIS. The recent public endorsement of ISIS by Aaron Driver is yet another warning that home-grown terrorism has infected our country and we need to be extremely vigilant..." London Free Press

Trial data set for alleged fentanyl importer
A September 2017 trial date was set Friday for suspected fentanyl importer Kasimir Tyabji-Sandana. Lawyer Janna Watts appeared for defence counsel Hersh Wolch and Tyabji-Sandana to schedule the hearing, which will be before a judge sitting without a jury...Tyabji-Sandana, 27, was arrested July 23, not

long after Canadian Border Services Agency officers in Vancouver intercepted a package destined for Calgary from China. Calgary Herald

Un argument anti-immigration qui se déguise
Présentement, l'Assemblée Nationale tient des consultations publiques sur les politiques d'immigration au Québec. Quand on jase d'immigration, il y a plusieurs conceptions erronées (ou tout simplement fausses) qui sont répétées. La journaliste Josée Boileau, associée avec le journal Le Devoir, a donné une entrevue ce matin à Gravel le Matin dans laquelle elle répétait l'un de ces mythes. Elle soulignait avoir peur « qu'on vide les pays étrangers des meilleurs » personnes qu'elles ont. Parmi les mythes qui me dérangent le plus, c'est celui-ci qui me dérange le plus! Soyons clairs, je me fous de la Tunisie ou de Haïti. Je me soucie des Tunisiens et des Haïtiens. Après tout, ces pays ne sont que des bouts de terre, c'est le bien-être des individus qui me préoccupe. Dès qu'un Tunisien ou un Haïtien arrive ici, son revenu augmente dramatiquement. Pour un Haïtien, cette augmentation est d'un facteur de 22! Pour un Tunisien, ce ratio est de 3.20! Ces chiffres sont basés sur le revenu moyen per capita, mais même au revenu moyen du bas 20% de la distribution des revenus au Québec, il s'agit d'une amélioration significative du niveau de vie ! Agence QMI (Journal de Montréal, Journal de Québec)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

New Snowden docs support claim of NSA cyberweapon hack
The latest documents from Edward Snowden, published by The Intercept on Friday, appear to support earlier reports that the National Security Administration's "secret" cyberweapons are anything but. The Intercept, whose reporters have access to files Snowden took from the agency in 2013, says a top-secret NSA manual contains the same 16-character alphanumeric tracking code that appears throughout a portion of code released online earlier this week by a group called The ShadowBrokers. The group was auctioning off the code, which it said was stolen from the NSA. CNET News

IPhone hackers pick wrong target — a UW expert
apil Haresh Vigneswaren was just scribbling in a University of Waterloo lab, trying to finish a grad student assignment on cryptography and network security. That's when the tinny little red-alert klaxon in his nearby iPhone went off... He dismissed the alert. It reappeared an instant later. This was trouble. His phone was in "lost" mode. A message on the screen playfully taunted him. Hey why did you lock my iPhone ha-ha. Call me. 1(234)567-890. Vigneswaren quickly realized he was being hacked. The phone number, with its obvious Sesame Street construction by The Count himself, felt vampire phoney. The Record

LAW ENFORCEMENT / APPLICATION DE LA LOI

Coquitlam RCMP car struck at intersection
Four people — including a child and two Coquitlam Mounties — were rushed to hospital this afternoon (Friday) following a collision on Barnet Highway in Coquitlam. Police say the accident happened shortly before 1 p.m. as the female driver of a white Hyundai was turning northbound onto Falcon Drive and struck a Coquitlam RCMP cruiser travelling west on Barnet, near Eagle Ridge GM. The woman also had a young child in the backseat, Cpl. Neil Roemer told The Tri-City News at the scene. The four occupants sustained minor injuries and were transported to the nearby Eagle Ridge Hospital in Port Moody. The incident remains under investigation. Barnet Highway reopened to traffic at around 1:20 p.m. Tri-City News

RCMP search rural B.C. property after receiving tip about girl missing since 1993
Mounties in Comox Valley have searched and excavated a rural property after receiving a tip from the public about a 23-year-old missing person's case. Fourteen-year-old Lindsey Nicholls was last seen walking down the street to meet friends at a B.C. Day Celebration in Comox on Aug. 2, 1993. RCMP say next month would be her 38th birthday and her family has never given up hope that one day they would have answers about her disappearance. RCMP say 20 forensically trained police officers spent two days

this week searching a rural property with an excavator in response to a tip. Mounties say the search has been completed but the results cannot be shared as the investigation is ongoing. Canadian Press (Toronto Sun, Canoe.ca)

RCMP arrest man wanted on nation-wide warrant in Sorrento
The Salmon Arm RCMP arrested Richard Robert Taylor, 28, wanted on a Canada-wide warrant for parole violations in Sorrento on August 10. Taylor was recently released from custody in the Lower Mainland and is alleged to have fled from police and damaged an RCMP vehicle in Salmon Arm on July 25. Salmon Arm Observer

#FraudRedFlags: RCMP enlist helpers to prevent phone fraud
Fraudsters targeting vulnerable Nova Scotians are prompting the RCMP to enlist friends and family to address the scourge. "We want Nova Scotians to have the conversation about these phone scams and #FraudRedFlags," said RCMP Cst. Tammy Lobb. Chronicle Herald

Port Hawkesbury man arrested for child sex charges
The RCMP Provincial Internet Child Exploitation Unit has arrested and charged a Port Hawkesbury man after an online child exploitation investigation. On Thursday, 28-year-old Malcolm Smith was arrested and has been charged with making arrangements to commit a sexual offence against a child. Chronicle Herald

Warrant execution nets $220,000 in drugs - police
Approximately $220,000 in drugs was seized by Kingston Police after a drug warrant was executed on Vine Street. Officers entered the residence at approximately 4 a.m. on Friday utilizing members of the drug enforcement unit, street crime unit and the emergency response unit, said a news release. Inside they located two kilograms of crystal methamphetamine and one-third a kilogram of cocaine. Officers also located about $15,000 in Canadian and American currency, digital scales, packaging materials, a vacuum sealer, and cell phones. Whig-Standard

OPP bust $1.7M marijuana grow-op at Ruthven greenhouse
Two men from the Greater Toronto Area are facing charges after OPP busted a $1.7 million marijuana grow operation at a greenhouse in Ruthven. On Aug. 17 around 9:30 a.m., Ontario Provincial Police executed a search warrant in the 1500 block of Essex County Road 34. Windsor Star

Edmonton-area father charged with incest, sexual exploitation
An Alberta father has been charged with incest and sexual exploitation for offences allegedly committed against his own daughter. The charges are the result of an investigation by ALERT's Internet Child Exploitation team. CBC News; Edmonton Journal

Saskatoon man, 43, charged with making and accessing child pornography
A 43-year-old man from Saskatoon has been charged in connection to a child sexual exploitation case. The Saskatchewan ICE unit received a complaint from a U.S. internet provider regarding a user that had saved child sexual abuse images to their account. The account was subsequently shut down. CBC News; StarPhoenix

Ottawa mayor Jim Watson blasts police union over treatment of chief
Ottawa Mayor Jim Watson says he's concerned criticism levelled against the city's police chief by the head of the union representing officers could undermine public confidence in the force. In a strongly worded letter sent to Ottawa Police Association president Matt Skof Thursday, Watson waded into the fracas and sided with police Chief Charles Bordeleau. CBC News

CORRECTIONAL SERVICES / SERVICE CORRECTIONNEL

Alberta dangerous offender who disappeared during powwow has violent, brutal past
A dangerous offender who escaped during an escorted visit to an Alberta powwow on Saturday has a history of "brutal" and "sadistic" violent assaults, according to documents from the Parole Board of Canada. Darrell Moosomin, 54, was at a powwow at the Samson Cree First Nation in Maskwacis, south of Edmonton, on Saturday evening when he walked away from the elder escorting him. RCMP have issued a Canada-wide warrant for his arrest. In 1994, Moosomin confined and tortured a woman for eight hours before she was able to escape, according to a parole board decision from May 2016, which denied him requests for full parole, day parole or the right to unescorted temporary absences. Police need legal counsel on marijuana dispensary
Merritt RCMP are waiting to get legal counsel before taking any action against a medical marijuana dispensary that reopened last Thursday despite being denied a business license. "Everything seems — on the face of it — not up to par from a business license standard [and] from a lawful dispensary standard, so I think there has to be some research into what it is they're doing, what they are providing [and] what the purpose of the society itself is," said RCMP Sgt. Norm Flemming. Merritt Herald

Kelowna considers position on legalization of marijuana for task force
City staff have outlined how they view the legalization of marijuana for the federal legalization task force and are seeking council support for their position. Urban planning manager Ryan Smith in a report to council says with legalization sometime in 2017 assumed, staff believe minimum age of consent should be the same or higher than alcohol. Infotel.ca

Medicinal marijuana task force
An editorial states, "On Aug. 22, the City of Fernie has their next Committee of the Whole meeting. I attend these meetings regularly, and I'm expecting this upcoming one to be a little different. The City is planning to participate in the federal government's marijuana task force, and is hoping to incorporate the views and opinions of Fernieites in their form. The federal government has set up a task force of eight experts from a variety of fields, including doctors, lawyers and policy makers. The job of the task force is to collect information from across Canada in regards to the legalization of cannabis before submitting a report to Trudeau's cabinet. Essentially, this task force is laying the foundation for the legalization of marijuana in Canada. This proves that it isn't a question of if for the federal government – it's a question of when..." Security experts laud Liberals' go-slow approach to reviewing Conservatives' anti-terror laws
The Liberal government's unhurried approach to its promised reform of national security laws is appropriate given the dangers of getting it wrong, say security policy experts. The Aug. 10 police killing of would-be jihadi bomber Aaron Driver in Strathroy, Ont., renewed questions about the Grits' campaign-trail pledge to dismantle parts of the contentious Anti-terrorism Act, previously Bill C-51. The legislation was rushed into law by the former Conservative government in June 2015 with the qualified support of the then-opposition Liberals, who promised to fix several "problematic elements" if elected. The new government has delivered on a commitment to table legislation to create a special committee of parliamentarians to review select activities and the strategic direction of the country's expanding national

security apparatus. But the planned changes to C-51 remain in a state of flux and secret, with Public **Safety Minister Ralph Goodale** suggesting last week that proposed reforms won't be put before Parliament until next year. **Goodale** said officials will need the rest of this year to consult with security experts, rights advocates and the public on the broader question of how to structure the post-9/11 national security state. That's expected to hit high gear this fall with the anticipated release of national security framework consultation paper. Postmedia Network (National Post)

TOP STORIES / MANCHETTES

Canadian Police Don't Want to Talk About How They Spend Surveillance Dollars
Police in Ontario's biggest cities have received hundreds of thousands of dollars in grants to deploy unspecified surveillance equipment as part of an obscure provincial program. The problem is, no one knows exactly what they're buying with all that money. Police in Toronto, Ottawa, and the municipalities of Peel and York (near Toronto) have received hundreds of thousands of dollars each to pay for the Provincial Electronic Surveillance Equipment Deployment Program (PESEDP). This little-known project is described by police as "funding for the purchase of, or improvements to, equipment used in the investigation of organized crime", which doesn't reveal much. Mentions of the program can be found in publicly-available meeting agendas and reports dating back to 2011. Between February and June of this year, the Toronto police spent $100,000 on PESEDP, although they won't publicly offer any specifics. Documents produced by the York Regional Police Services Board and the Peel Police Services Board show that both forces received $200,000 each to fund PESEDP, in 2011 and 2013, respectively. York Regional Police got another $100,000 in 2016. (…) The Ottawa Police Service, Toronto Police Service and the York Regional Police all refused to answer questions about PESEDP. Toronto Police Service spokesperson Mark Pugash replied to questions about PESEDP by stating that "[Toronto Police Service does] not discuss investigative techniques or equipment." (…) In December 2015, Toronto Police Service denied having or using Stingrays or cell-site simulators, but a 2016 court case forced the TPS to reveal that they applied for permission to use a Stingray-type device as part of a gang investigation. The Vancouver Police Department has also admitted to using a Stingray device on loan from the Royal Canadian Mounted Police, Canada's federal force. (…) Many experts believe that local police departments borrow such devices from the RCMP, instead of owning them, adding to the mystery of what kinds of surveillance equipment local police are spending so much money on. Motherboard

Corrections officials reviewing case of dangerous offender who escaped custody
Correctional Service Canada is reviewing the case of Darrell Moosomin, a dangerous offender with a violent history who escaped custody in Maskwacis, Alta., during an escorted temporary absence. Moosomin, who had been wanted on a Canada-wide warrant, was arrested without incident around 6 p.m. Sunday on Highway 13 just east of Daysland. A member of the public had reported to police that a man matching Moosomin's description was hitchhiking on the highway. Moosomin, 54, remains in police custody awaiting a hearing, Killam RCMP said. He had been unlawfully at large for eight days. A review of Moosomin's escape is being conducted, Jeff Campbell, regional communications manager for Correctional Service Canada, said Monday. "Part of the information gathering that comes as an early part of that review is already underway and will certainly be augmented now that the offender who was at large is now back in custody." Campbell said. "We will speak with him and gather up some more information as part of that investigation." Escapes and other serious incidents are reviewed as a matter of standard operational procedure, he said. "We look to see if there are any changes that need to be made in terms of maintaining public safety." Campbell didn't speak to the specifics of Moosomin's case. But he said that when an offender is taken into custody after being unlawfully at large, "one of the efforts we undertake is to ascertain what he or she was doing while they were at large. "(They) could also be facing some new criminal charges," he said. "We are getting input from an offender themselves, typically we'd also talk to police, and there may be a role for courts involved as well." EMERGENCY MANAGEMENT / GESTION DES MESURES D'URGENCE

Garneau says he'll act fast to figure out what caused Toronto train derailment
Transport Minister Marc Garneau says he intends to act swiftly if it's determined safety lapses caused a Toronto train derailment over the weekend. Part of a Canadian Pacific freight train derailed in the city's mid-town early Sunday, but police and railway officials said the incident posed no threat to public safety. Canadian Press (iPolitics, Winnipeg Sun, Calgary Sun, Ottawa Sun, Edmonton Sun)

Crews clean up freight train derailment in midtown Toronto
Crews are cleaning up after a Canadian Pacific Railway train derailment in midtown Toronto on the weekend that resulted in a leak of 1,200 litres of diesel fuel next to a residential area... Coun. Josh Matlow, who represents Ward 22, St. Paul's, told CBC's Metro Morning on Monday that the derailment raises serious concerns. "Having this derailment happen so close to home, certainly I hope it serves as a wake-up call to the federal government to accelerate their commitments on improving safety standards as we requested," he said. CBC News

Bear Creek Provincial Park campground evacuated due to wildfire risk
Central Okanagan Emergency Operations says it has evacuated the Bear Creek Provincial Park campground because of a wildfire that appears to be steadily growing along Westside Road in West Kelowna. CBC News; Canadian Press (Vancouver Sun, Whig-Standard, London Free Press)

Luxury cruise to Arctic sails into controversy and opportunity
For the 1,000 passengers aboard the Crystal Serenity cruise ship, climate change has brought a luxurious opportunity: to sail into the history books on the largest passenger vessel to traverse the once unnavigable Northwest Passage. The historic voyage has never before been possible for such a large ship, but climate change has nudged open the door to the Arctic. The arrival of the massive 820-foot ship and its wealthy passengers (each paying from $20,000 to $120,00 for the month-long journey) has brought a flurry of excitement and tourist income to the remote town of Nome, Alaska. But it has also brought intense scrutiny from the critics, who say Crystal Cruises is capitalizing on the destruction of the planet. Christina Science Monitor; The Week; Tech Times

Fire crews in British Columbia's Okanagan Valley were hard at work over the weekend. Multiple wildfires have forced dozens. People from their homes and residents there remain on alert. (CBC News Network, 11:45 ET; CTV Vancouver, 9:30 ET, 11:00 ET, 11:30 ET; CityTV Vancouver, 9:00 ET)

The federal minister of Transportation, Marc Garneau, says he wants to learn why two trains collided near a densely populated part of Toronto. It happened in what's called the annex area. It's in a central part of the city just northwest of the downtown core. A westbound train struck an eastbound one that was changing tracks at the time. (CBC News Network, 10:00 ET, 11:00 ET, 12:30 ET; CP24, 12:30 ET; CHCH News 12:00 ET)

NATIONAL SECURITY / SÉCURITÉ NATIONALE

Is Richard Bain a terrorist?
On election night 2012, Richard Bain opened fire on a group of people he believed were Parti Québécois supporters, killing one man and severely injuring another, as premier-designate Pauline Marois gave her victory speech inside the Metropolis nightclub. At the time, Bain seemed to claim responsibility on behalf of all disgruntled anglophones. "The English are waking up!" he cried upon his arrest. Then in a variety of Facebook posts, jailhouse interviews and letters, he spoke alternately about his "vision" for a separate Montreal - his mission from God - and how he wanted to kill as many separatists as possible. So why didn't the charges against him include terrorism? (...)Bain's entire defence consisted in pleading that he wasn't anti-PQ or anti-francophone - he worked and lived with francophones all his life - but he was ill. "As

far as I'm concerned you're dealing with a lunatic, not a terrorist," Bain's lawyer, Alan Guttman, told the Gazette. "A guy goes on a shooting spree in a blue bathrobe. You're dealing with a madman." Terrorists, on the other hand, "are recruited and brain-washed," Guttman said. After evaluating Bain, psychiatrist Marie-Frédérique Allard concluded he was "most likely" suffering from an undiagnosed mental illness, possibly bi-polar disorder, at the time of the incident. But Bain's written responses to Allard two months after the incident seem to speak of a political agenda. Montreal Gazette

Yes, the threat of terrorism is real Mr. Prime Minister
An opinion piece states, "You can hardly blame Canadians if we continue to have lingering doubts about just how serious Justin Trudeau is about terrorism. His delayed response in even commenting on the alleged plot that led to the death of Aaron Driver in Strathroy Ontario is hardly reassuring. Immediately after this serious near miss with Driver headlines like "PM Justin Trudeau marches in Montreal Pride parade" and "Justin Trudeau to apologize for historic persecution of gay Canadians" and frivolous stories about a "shirtless" Prime Minister in Tofino were grabbing the attention of the mainstream media. (…)Interestingly enough the anti-terroism bill brought in by the Harper government that Justin Trudeau campaigned against and which the Liberals continue to threaten to water down may have at least been partially responsible for thwarting the Aaron Driver attack. Just maybe Erin O'Toole, the public safety critic for the Conservative Party is correct that his party's Bill C51 already provides the right "balance" in giving police needed powers in cases of suspected terrorism. Contrastingly Trudeau rammed through his controversial, radical and politically motivated Bill C-6 which gives a convicted Islamist terrorist Canadian citizenship most certainly making Canada more vulnerable to a terrorist attack." Canada Free Press

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Deputies: Man accused in school threats allowed to enter Canada after arrest
The man arrested after he was accused of threatening to place bombs and shoot students at several Orange County schools has been released, deputies say. Jesus Kong, 23, who is also known as as Jessie Eloah Calix and Jesus Matute, was arrested while attempting to cross the Canadian border. He was questioned and then allowed to enter Canada, Sheriff's Office spokesman Jeff Williamson said. Williamson did not specify where the border was. When he was arrested, he "appeared to be in some form of distress," Williamson said, adding the warrant charges were not out of Florida. Details of the arrest were not available Sunday. It's not clear if any charges will be filed. Orlando Sentinel

Canadian border agency: Leave your guns at home, America
The Canada Border Services Agency is reminding residents of the United States that bringing guns over the border is a major no-no unless you have the required permits and store them properly. The CBSA issued a statement Monday afternoon announcing it is launching "a firearms awareness campaign" to gently remind U.S travellers about Canadian law. "It is strongly recommended that you not carry your firearm when travelling to Canada and/or transiting through Canada to reach another U.S. destination." The reminder comes less than ten days after two men from Texas tried to bring hidden guns across the border on separate Canadian vacations. Global News

Canadian border services looking at steel rebar imports in anti-dumping probe
The Canada Border Services Agency (CBSA) has launched an anti-dumping investigation into concrete reinforcing bar, or rebar, shipped into Canada from several areas of Europe and Asia. With a special import measure currently in place on rebar from China, South Korea and Turkey, the border service will investigate whether or not rebar is being sold in Canada at unfair prices, and in turn, hurting Canadian producers. Working on a complaint filed by three Canadian steel companies, the CBSA probe will look into rebar from Belarus, Portugal, Spain, Japan, Taiwan and Hong Kong. The Canadian International Trade Tribunal will also play a role in the investigation. According to the Canadian Steel Producers Association, the probe will be the second Canadian investigation into unfairly imported rebar in as many years. "It is vital for domestic steel producers and their employees that market-based competition in Canada is preserved," the organization's President, Joseph Galimberti, said. "This is an important investigation for the 22,000 Canadians employed directly and the 100,000 employed indirectly in steel." Canadian Manufacturing

City: Riverside Park fixes ahead of schedule
Mayor Mike Duggan and owners of the Ambassador Bridge say part of a $5 million plan to overhaul a riverfront park in southwest Detroit is two years ahead of schedule. On Monday morning, Mayor Duggan, representatives from the Detroit International Bridge Co. and neighborhood residents gathered at Riverside Park to watch the demolition of the final wall of a former Detroit News warehouse on West Jefferson. The warehouse, owned by an subsidiary of the bridge company, was originally planned to be razed in 2018. The warehouse is on 4.8 acres of land next to Riverside Park. The bridge company agreed to give that land to the city to expand the park. The bridge company, owned by members of the Moroun family, will also pay up to $5 million to overhaul the park. Riverside Park is a somewhat plain strip of 20 acres where West Grand Boulevard meets the Detroit River. Planned upgrades include a baseball diamond, soccer field, picnic and fishing areas and a riverside promenade. In September, the bridge owners paid $3 million toward the park upgrades. The park deal sparked controversy when it was unveiled in April 2015. That's partly due to the fact it keeps the bridge owners' hopes alive of building a second private span to the Ambassador Bridge. As part of the park deal, the city will transfer three acres of city-owned land to the bridge company, land it needs for the second span. Detroit News; Detroit Free Press; Windsor Square

China edges ahead in the race to build hack-proof cyber security systems
The international power struggle for the control of data has intensified with a number of Chinese companies now trying to challenge entrenched cloud vendors such as Microsoft, Google and Amazon. The growing market, targeted by Chinese players such as Huawei, Alibaba and Baidu, has raised serious questions about security of data storage and whether tech firms in China or elsewhere are vulnerable to attack. The National UAE

China's proposed cyber law unnerves foreign players in cloud
International platforms such as Google, Facebook and Twitter are already banned in China. But there are worries about a new cyber security law being formulated in Beijing that would require data collected in China to remain in the country. The National UAE

Commentary: Evidence points to another Snowden at the NSA
An opinion piece states, "In the summer of 1972, state-of-the-art campaign spying consisted of amateur burglars, armed with duct tape and microphones, penetrating the headquarters of the Democratic National Committee. Today, amateur burglars have been replaced by cyberspies, who penetrated the DNC armed with computers and sophisticated hacking tools... Now, in the latest twist, hacking tools themselves, likely stolen from the National Security Agency, are on the digital auction block. Once again, the usual suspects start with Russia – though there seems little evidence backing up the accusation..." Reuters

News In Brief: $90,000 grant opens more counselling services for veterans in Winnipeg
Canadian Legion Manitoba/Northwest Ontario Command will mean more counselling services for local veterans. The command provided the grant to the Veterans Transition Network and will fund counselling and transition services for veterans who are not covered by Veterans Affairs Canada or the Department of National Defence. The Veterans Transition Network is a Canadian charity that delivers group-based programs to assist current and former members of the Canadian Forces and RCMP struggling with the transition to civilian life. Winnipeg Free Press

Grande Prairie RCMP seek assistance in finding 16 year-old girl
Grande Prairie RCMP are asking for the public's help in locating a missing 16 year-old girl. Madelyn Whyte (16) was reported missing on August 20th 2016. Whyte is from Dawson Creek but police think she may be in the Grande Prairie area. Madelyn Whyte is described as: Aboriginal; Shoulder length blonde/faded orange hair; Brown eyes; 5'2" tall; 130 lbs; Multiple scars on both arms; Possibly wearing a wrist brace. Energetic City

Glenn Bauman charged with murder in case of missing Wellesley mother Linda Daniel, daughter Cheyenne Daniel
Waterloo Regional Police detectives, with help from the RCMP, have charged an Alberta man with two counts of first degree murder and two counts of indignity to a body in connection with the disappearance of a mother and daughter from Waterloo region. Linda Daniel and Cheyenne Daniel were 47 and 13 years old, when they disappeared in July, 2011. Their last known address was in Wellesley Township. Police arrested Glenn Kraemer Bauman, 43, on Friday in Valleyview, Alta., a town about three hours northwest of Edmonton, on a Canada-wide warrant. CBC News

Old bomb disposed of by Gagetown team
A team from CFB Gagetown disposed of an old military ordnance Monday morning that had been stored in outbuilding in Goose River, near St. Peter's, P.E.I., for years. RCMP received the call to get rid of the device on Sunday. It was determined it was safe to wait until a team could arrive from New Brunswick to dispose of it. The area was secured until the team arrived. "It appeared to be a bomb of sorts, maybe an airplane bomb with fins on it. It was about 12 inches [30 cm] long and four inches [10 cm] wide," said RCMP Cpl. Ron MacLean. MacLean said the bomb was likely decades old. The ordnance was originally found many years ago, RCMP said. RCMP reminded the public that military ordnance can be volatile and should not be handled or moved. CBC News; Journal Pioneer

New Kings RCMP district commander takes the helm
The Kings District RCMP is welcoming a new district commander who begins working out of the New Minas detachment today, Aug. 22. S/Sgt. Dan Morrow, a 23-year veteran of the force, comes to Kings District from Eskasoni First Nation in Cape Breton where he was posted for nine years. "I'm really looking forward to taking on this new and challenging role within Kings District," Morrow said. "I want to ensure the RCMP continues to be an integral part of the community while meeting the needs of those we serve." Morrow grew up in Manitoba and enrolled with the RCMP in 1992. Since then, he has gained diverse experience working in the RCMP's General Investigative Services, Traffic Services Unit, Customs and Excise Program and Undercover Operations. His role in New Minas marks his tenth detachment with the force. As district commander, Morrow will be promoted to the rank of Inspector, responsible for

monitoring and guiding administrative and operational functions in Kings District and working with stakeholders to identify and implement local policing priorities. "It's very important for me to get to know the stakeholders and citizens in the area so I encourage them to take a minute to stop by the detachment to introduce themselves and say hello," Morrow said. Nova News Now (Kings County News)

RCMP investigates threats made to Brazeau County Council
The Brazeau County Council received threats via text on Aug. 12 at 6 p.m. Drayton Valley RCMP reported that investigations led to the arrest of an individual in Edmonton on Aug. 16. The local RCMP was also present at the Brazeau County Council meeting on Aug. 16. The case is still under active investigation. Drayton Valley Western Review

Hate speech vs. freedom of speech in the age of social media
The social media firestorm following the shooting death of Colten Boushie, 22, has prompted questions of what constitutes hate speech in the digital age. The racist and hateful statements in some comment sections have prompted Premier Brad Wall to speak out, writing on his Facebook page "racism has no place in Saskatchewan" last weekend. The RCMP have stated they are actively investigating all social media posts that could be considered hate speech. Ken Norman is a professor at the College of Law at the University of Saskatchewan. He said that for a comment to be considered hate speech, certain elements must be at play in the statement. (…) Norman added our law does not allow people to say the most violent kinds of racist things without the law stepping up and that posts on social media can constitute hate speech as they are public statements. "RCMP I think are rightly looking into this and should take very seriously this kind of level of hatred," he said. CBC News

Détenu mort à Dorchester: des gardiens ont fait usage d'une « force inappropriée » selon un rapport

Étendu sur le sol d'une douche du pénitencier de Dorchester, au Nouveau-Brunswick, Matthew Hines a prononcé ces mots qui ont peut-être été ses derniers : « S'il vous plaît, je vous en supplie, je vous en supplie. » Les gardiens du pénitencier de Dorchester ont alors ouvert le robinet de la douche.Trente secondes plus tard, ils le refermaient. Le détenu de 33 ans semblait pris de convulsions.Il a été conduit à l'Hôpital de Moncton - à une demi-heure de route de Dorchester - où on a constaté son décès.Depuis 13 mois, la famille de Matthew Hines, qui vit au Cap-Breton, croyait la version des faits rapportée par Service correctionnel Canada. L'agence avait conclu que Matthew, qui avait déjà eu des épisodes de convulsions dans le passé, était mort des suites d'une surdose de drogue qui aurait déclenché les convulsions. Les services correctionnels se sont faits avares de commentaires au sujet de cette mort, survenue le 27 mai 2015. Au moment du décès, l'agence avait publié un communiqué disant que Matthew Hines « avait eu besoin d'attention médicale » et que le personnel avait procédé « immédiatement » à des manoeuvres de réanimation cardiorespiratoire. (...)Service correctionnel Canada a refusé une entrevue sur cette histoire. Dans une déclaration écrite, la porte-parole Lori Halfper précise qu'elle ne peut discuter des détails entourant la mort de Matthew Hines, ni d'éventuelles mesures disciplinaires contre des membres du personnel, à cause des lois sur la protection de la vie privée. Elle ajoute que l'enquête en cours sur la mort du détenu a déjà permis de cibler des procédures qu'il est possible d'améliorer, sans fournir plus de détails. Service correctionnel Canada a également refusé de fournir à CBC des copies des vidéos montrant l'altercation entre Matthew Hines et les agents, citant à nouveau la confidentialité de l'enquête entourant la mort du détenu. Radio-Canada

Calgary police say 'high-risk' serial rapist re-released

Convicted serial rapist James Alexander Parent has been re-released in Calgary. Parent was arrested last week after being released on Aug. 5. Police said Monday that Parent has been released after further investigation. Parent's convictions include the 1987 sexual assault of a woman inside her Calgary home. He stormed into the house wearing a mask and gloves, holding a knife to the victim's throat and threatening to kill her as he repeatedly raped her. He was convicted in 2011, identified over two decades later by DNA evidence from a rape kit. Parent was also previously found guilty on charges of indecent assault and kidnapping of two girls, ages eight and nine, in incidents from 1980 and 1982. He was convicted of break-and-enter with intent against two women in 1988. Parent will continue to be monitored by Correctional Service Canada, including electronic monitoring. Calgary Herald; CBC News; CTV News

Canada-wide warrant issued for Nunavut offender Willie Ishulutak

A Canada-wide warrant has been issued for a Nunavut man convicted of setting fire to an Iqaluit jail for breaching parole, according to a news release by the Ontario Provincial Police. The OPP is looking for Willie Ishulutak, a 36-year-old repeat offender who pleaded guilty to arson in May 2014 for setting a fire inside a washroom at Nunavut's Baffin Correctional Centre. Ishulutak is described as an aboriginal male, five feet four inches tall and 136 pounds. He has tattoos on both forearms and "INUKSTA" tattooed on his back. Police say he is known to frequent the Greater Toronto Area. The OPP say Ishulutak is serving a sentence of two years and five months for arson endangering human life, assault and intimidation. CBC News

Jeffrey MacLean's plea relating to Dorchester prison breakout delayed

A federal inmate accused of assaulting two women before stealing their car during an alleged breakout of Dorchester penitentiary had his pleas on the charges delayed again on Monday. Jeffrey MacLean will be back in court on Sept. 19 to answer charges of robbery, forcible confinement, assault with a weapon, flight, resisting arrest and theft over $5,000. The charges relate to incidents on Feb. 12 after an inmate escaped the Dorchester Penitentiary at 3:15 p.m. The inmate led police on a chase that ended on Charlotte Street in Fredericton. (...)While MacLean isn't being remanded into custody on these charges, he will remain behind bars at the Atlantic Institution in Renous where he is serving a previous sentence for armed robbery, robbery with violence and disguise with intent. CBC News

Broadcast media / Médias télédiffusés :

Elizabeth Fry Society seeks clothing for newly released women
Tamara Delorme was wearing shorts and sandals when she was arrested last August, so when she was released from Pine Grove women's jail in February, the only clothes she had were the institutional grey sweat pants and sweat shirt she'd worn inside. "I came here to Elizabeth Fry and they gave me decent winter clothing I can wear. It builds up your self esteem if you have nice clothes to wear," Delorme said. The non-profit advocacy organization for women involved with the court system and corrections is now building on its practice of helping women find donated clothing when they're released or when they're going to court, said executive director Sue Delanoy. They've worked with Pine Grove director Michelle Gaudet to expand a small clothing depot at the institution and formally create institutional jobs for inmates who sort, fold and repair the items if necessary, Delanoy said. StarPhoenix

Peel Police Weigh in on Gun Crime Increase in Mississauga
The reveal didn't come as a terrible shock, as Peel Police Chief Jennifer Evans mentioned the worrying uptick earlier in the year and shooting incidents are dominating the news a little more than usual. But while the news is not good by any means, it's important to remain calm in the face of troubling statistics -- and to remember that Mississauga (and Ontario overall) is very safe. "Ontario [in general] is very safe," says Constable Mark Fischer, public information officer, corporate communications with Peel Regional Police. "Crime rates have been going down, so [this increase] could be an anomaly or a spike, but we're taking notice and want it to improve." According to the documents, there were 23 shooting victims in Peel in the first seven months of the year. That's an increase of 187 per cent from 2015 to 2016. In 2014, there were four victims and in 2015, there were eight. In 2014, there were 18 total incidents of shots being fired. In 2015, that number increased to 21. This year, there have been 43 incidents (this number does not include the very recent shooting at Sugar Daddy's night club over the weekend). As for stabbings, those are on the rise, too. Insauga

Les jeunes et les réseaux sociaux: quelques outils pour les parents
Facebook, Twitter, Instagram, Snapchat, pour de nombreux parents d'enfants et d'adolescents, il est plutôt difficile de se retrouver dans cet univers virtuel en constante évolution. Bruno Guglielminetti, spécialiste des nouvelles technologies et des médias numériques, nous éclaire quant aux règles d'or et aux précautions à prendre afin que soit saine l'utilisation des technologies numériques à la maison. Le Huffington Post l'a rencontré. (...) Bruno Guglielminetti l'a répété à de nombreuses reprises lors de notre entretien, «tout est dans la discussion et non dans l'oppression» en ce qui concerne l'utilisation des réseaux sociaux par les adolescents. «Rien ne sert de démoniser tout cela. C'est la discussion qui est la clé et qui contribuera à faire avancer le jeune dans sa réflexion.» Pour ce père de deux enfants, les dangers reliés à cette pratique sont similaires à ceux se retrouvant dans la société. «On ne fait que les

déplacer dans le monde virtuel. La grosse différence, c'est la portée qui est beaucoup plus grande si l'on compare, par exemple, avec l'enfant qui se faisait intimider en petit groupe à l'école jadis.» Cybersécurité, cyberintimidation (qui touche 1 jeune sur 10 au pays), communication et prédateurs sexuels, facilité de diffusion; ces dangers sont bien réels. Huffington Post

NATIONAL INQUIRY INTO MISSING AND MURDERED INDIGENOUS WOMEN AND GIRLS | ENQUETE NATIONALE SUR LES FEMMES ET LES FILLES AUTOCHTONES DISPARUES ET ASSASSINEES

Trudeau discusses China trade, marijuana legalization, and Donald Trump
In an interview that touched on everything from marijuana legislation to the inquiry into missing and murdered women, Prime Minister Justin Trudeau said he was looking forward to strengthening trade ties with China while also "challenging" the nation on human rights and other issues. Trudeau is set to embark on an eight-day visit to the Asian giant next week, and told CTV's Your Morning in a wide-ranging interview that China presents an opportunity for Canadian businesses to expand their exports Here's a sampling of what he had to say: (…)On why the inquiry into missing and murdered Aboriginal women is not looking into police conduct: "The idea that we would create an inquiry that would dive into individual cases would make it so cumbersome and would take so much time and resources, we wouldn't be able to have the same kind of impact we need to have to make those changes as quickly as we can." (…)On whether Canada has a problem with racially biased policing: "Yes, there are real challenges in our justice system that we have to address. But a lot of them, when you look at the root causes, have to do with education and opportunities and investment in those communities." (…)On why the federal government chose not to decriminalize marijuana while it works on legalizing it: "The reason why legalizing marijuana is the right step for us is because of two things: One, it will be make it harder for young people to access marijuana, because whatever you say about marijuana compared to alcohol or cigarettes, we know that the impact on the developing brain is something we need to prevent. Right now, young people have easy access. Controlling and regulating it will make it more difficult for them." CTV News

REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Le gouvernement du N.-B. s'apprête à annoncer son investissement dans le projet Zenabis
Radio-Canada a appris que le gouvernement du Nouveau-Brunswick annoncera mardi le montant de son investissement pour l'installation d'une usine de culture de marijuana médicinale à Atholville, dans le nord de la province. L'annonce devrait avoir lieu mardi à 9h, à l'intérieur de la future usine de Zenabis, située dans le parc industriel d'Atholville, au Nouveau-Brunswick. La province doit révéler le montant de sa contribution financière au projet. Radio-Canada

Saint John medical marijuana storefront operating illegally
The medical marijuana store that recently opened in Saint John might say it's going by the books to stay open but the location is still operating illegally in Canada, according to one lawyer. Medicinal Grounds Cannabis Centre owned and operated by Ryan Francis only allows in those over 19 years of age with a certified prescription from a doctor or a card from Health Canada. But the only licensed provider of medicinal marijuana in New Brunswick is currently OrganiGram, located in Moncton, according to Health Canada's website. Kathryn Wells, a criminal defence lawyer at Wells Frost Litigation Group in Toronto, told *Information Morning Saint John* the rules are clear when it comes to selling medicinal marijuana. "There's no grey area, either you have the exemption and the ability to obtain it for medicinal purposes or you're breaking the law," Wells said. She says despite the federal Liberal campaign promise to legalize marijuana, it is still an illegal substance under the Controlled Drugs and Substances Act. CBC News

Les Canadiens se souviennent des événements du 11-Septembre
Alors que les États-Unis commémorent dimanche les attentats terroristes du 11 septembre 2001, les Canadiens souligneront également la mémoire de cet événement, qui a eu des résonnances chez eux également. Le premier ministre Justin Trudeau a tenu à rendre hommage aux victimes et à leurs proches, rappelant que 24 Canadiens avaient péri dans les attaques. **Le ministre de la Sécurité publique Ralph Goodale** a pour sa part soutenu que cet événement ***«brutal»*** avait permis de connaître ***«des héros»,***

soulignant par ailleurs la contribution des habitants de Gander, à Terre-Neuve. Cette ville située dans le nord-est de la province avait accueilli près de 7000 passagers qui avaient dû rester trois jours alors que leurs avions étaient cloués au sol. Plusieurs événements se tiendront à Gander dimanche. La Presse Canadienne (La Presse); Canadian Press (Brandon Sun, Metro News, London Free Press, Toronto Star, Chronicle-Herald); Radio-Canada

Montreal airport customs lineups are just the beginning
An opinion piece states "For all those first-time visitors arriving at Trudeau airport in Dorval these days, Montreal is blowing it. International passengers touching down at YUL this summer have faced customs lineups of epic proportions. The wait times can often run up to two hours. What impression does that make? But as returning Montrealers well know, that's just the tip of the iceberg. Or, should I say, the orange cone? Last week, a group of civic leaders sounded the alarm. A letter was sent to the federal minister of public safety, **Ralph Goodale**, on behalf of representatives of Aéroports de Montréal, Montréal International, Tourisme Montréal, the Board of Trade, Palais des congrès and carriers serving the airport. Together, they are calling on the federal government to find a durable solution to the problem of long delays in the international arrivals hall that have worsened since the beginning of the summer. Mayor Denis Coderre has also added his voice to those appealing to Ottawa for help." Montreal Gazette

Fort McMurray residents claim 'nightmare' dealing with insurance
Some Fort McMurray residents repairing homes damaged by May's wildfire say they've had it with insurance companies that don't return calls and emails, pressure them to accept low settlements or have been rude and unprofessional. "Horrible from the beginning. From mass evacuation, it's been absolutely a horrible nightmare," said Terena Gunderson, a homeowner in the Timberlea neighbourhood. Gunderson's claim is among the 27,000 residential claims filed due to the wildfire. It is Canada's costliest disaster with damages estimated at $3.58 billion, according to the Insurance Bureau of Canada. The bureau's latest stats show clients have filed 45,000 claims as of July, with the majority being residential. CBC News

NATIONAL SECURITY CONSULTATIONS / CONSULTATIONS SUR LA SÉCURITÉ NATIONALE

Why the former CSIS director says the Liberals shouldn't touch Bill C-51
The former director of Canada's Security Intelligence Service says Bill C-51 should remain untouched. He does, however, support the government's plan to re-examine the controversial piece of anti-terror legislation. "I would leave it as it is, but as a Canadian, I'm glad the government's carrying through on its promise to review things," Richard Fadden told the West Block's Tom Clark this weekend (…) Last week, the Liberals formally announced a review of the law as part of an overall consultation on national security. Fadden said he is aware that many Canadians have concerns about parts of the law that allow agencies and government bodies to share information. Privacy is an important consideration, he acknowledged, but it must be balanced with security. Global News

Oliver Stone on Canadian surveillance and 'Snowden"s timing
Canadians who take in the new film "Snowden," about National Security Agency whistleblower Edward Snowden, should know they're not immune to the online privacy issues raised in the drama, says director Oliver Stone. "Canadians are part of the Five Eyes," Stone noted in an interview at the Toronto International Film Festival, referring to the intelligence alliance comprised of Australia, Canada, New Zealand, the United Kingdom and the United States. "(They) trust each other to the degree that apparently they share quite a bit together. However, it's hard to believe that the U.S. gives everything away." "Snowden" made its world premiere at the Toronto film fest on Friday. Canadian Press (Ottawa Citizen)

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Toronto's Pearson International Airport could break passenger record
A boom in summer travel is propelling Pearson International Airport in Toronto to record levels of passenger traffic, bolstering the airport's goal of becoming one of the world's elite international airports by 2020. About 9.6 million people travelled through the airport between Canada Day and Labour Day, putting Pearson on pace to break its 2015 record of 41 million passengers annually. The Greater Toronto Airports Authority (GTAA) envisions Pearson reaching the status of "mega-hub" by the end of the decade – an airport that handles at least 50 million passengers a year, with 20 million of those travelling to or from international destinations... In a submission made to the federal government last month, the GTAA said Pearson needs $2-million for new Canada Border Service Agency officers so that 90 per cent of passengers are screened in 20 minutes or less. Another $20-million is needed to reduce security wait times so that 95 per cent of passengers wait 10 minutes or less to go through the Canadian Air Transport Security Authority screening process, the GTAA submission said. Globe and Mail

CIA head warns of Russian hacking, says US must be on guard
IA Director John Brennan is warning that Russia has "exceptionally capable and sophisticated cybercapabilities" and that the United States must be on guard. Brennan was asked in a television interview Sunday whether Russia is trying to manipulate America's presidential election. Brennan didn't say, but he noted the FBI is investigating recent computer intrusions at the Democratic National Committee. He also cited Moscow's aggressive intelligence collection. Brennan said: "I think that we have to be very, very wary of what the Russians might be trying to do in terms of collecting information in a cyber-realm, as well as what they might want to do with it." Creep Catchers: UBC law professor warns of vigilantism's dangers
A University of B.C. law professor has warned that stings conducted by vigilante groups to shame child predators could backfire with violent results. On Friday, Surrey RCMP announced that an officer had been taken into custody following a livestream of a sting by the vigilante group Creep Catchers. The unidentified officer was released from custody Saturday and is suspended from duty. Police said they are

continuing to work with Crown counsel with respect to criminal charges. Posing as minors, the Creep Catchers set up fake online-dating profiles to lure suspected predators to meeting spots. They then film the interaction and post footage online to shame the suspect. Similar stings were used in the controversial reality series To Catch A Predator and have been conducted by other groups in B.C. Benjamin Perrin, an associate professor at UBC's Peter A. Allard School of Law, said that while such stings uncovered the "really horrific behaviour" of Internet child luring, "the end doesn't justify the means." Perrin, an expert on human trafficking and child sexual exploitation, warns that the use of such tactics to solve serious crimes poses a series of problems, particularly the lack of legal safeguards that police must have in place during an investigation. Ottawa Citizen

RCMP looking for cause of explosion reported in Aldergrove
Startled families in Aldergrove are dealing with a bit of a mystery as they try to figure out the cause of what sounded like a loud explosion at 8 p.m. Langley RCMP tell NEWS 1130 ground and air searches as well as interviews in the neighbourhood have yet to pinpoint a cause. At this time there have been no reports of anyone hurt although some parents say their kids were frightened out of bed and had to be calmed down. Some people are comparing the noise and vibration to being near a large fireworks show. News 1130

Walk for Valour aims to raise funds for service personnel support centre
Recovery is often a one-step-at-a-time process. This weekend, Edmontonians are being asked to take a few of those steps for someone else. The third annual Walk for Valour is set to raise money to help military members, veterans and RCMP have a place to stay while they deal with medical treatments. "We call it hope away from home," said Dennis Erker, chairman of Valour Place's board of directors. "At Valour Place you have people with similar situations hurting too. So the home is designed to encourage interaction between our guests. Everyone has a reason for staying there." Edmonton Journal

Canada's most dangerous cities 2016: How safe is your city?
For the first time in 15 years, crime has risen in Canada. A look at the 2015 data from Statistics Canada reveals the jump is driven significantly by increased violations in Western Canada. Case in point: For the second year in a row, Grande Prairie, Alta., was the worst among Canada's 100 largest cities and police districts in all three major crime categories: overall, violent and non-violent. In addition, it tops the list of total drug crimes. (Methodology at the end). While the focus is on this small Albertan city, let's not forget about the unlawful acts committed in other cities and communities. Does Ottawa reveal itself on any of the top 10 lists? (No.) Where are you most likely to have your identity stolen? (Longueuil, Que.) In Ontario, is your car safer in Barrie or Brantford? (Barrie, by a lot.) The tools below allow you to compare illicit activities in the top 100 largest cities and police districts in Canada. How does your hometown fare compared to such crime heavyweights as Grande Prairie, Prince George and Victoria? Maclean's

Conference aims to stop human trafficking between Manitoba, North Dakota
A conference in Winnipeg aims to establish a protocol between Manitoba and North Dakota to help end cross-border human trafficking. Organizers say thousands of Canadian teens are lured into empty hotel rooms every year and end up being moved around circuits across Canada and the United States. Barb Gosse, CEO of the Canadian Centre to End Human Trafficking, says the goal of the conference's participants is to set up a collaborative and responsive system of dealing with that. She says that will include training border control officers to be able to spot potential cases of human trafficking. Gosse

hopes the event will be the first of many across Canada and in the United States. Canadian Press (Metro News)

'Hide everything': Report finds silence prevails in N.W.T. sexual assaults
"Elders have worked to keep sexual assaults secret. It has always been 'Hush. Hush."' "The community attitude is to hide everything." Those are quotes from women and service providers who took part in a two-year study looking at the needs of women who have been sexually assaulted in the Northwest Territories. Lani Cooke, author of the new report Hush Hush No More, was commissioned by the YWCA to work on the project. She spoke with 10 women from five N.W.T. communities who have been sexually assaulted (...) Of the 10 women interviewed, only one had reported her sexual assault to RCMP (...) Cooke's report offers nine recommendations, which she points out all came from the people involved in the study. They include a dedicated 24/7 toll free N.W.T. Rape Crisis Line, more training for service providers, better collaboration among services, and a territory-wide sexual violence awareness campaign. CBC News

Do more to stop online predators
With online predators just a few mouse-clicks away, young people can be victimized with tragic ease, even from the far side of the world. That's why it's essential to have strong protections in place. And why it's so troubling to find "serious gaps" in existing efforts to shield kids from cyber-exploitation. "Much more needs to be done" to keep vulnerable children safe, according to a consultant's study prepared for the federal government in March and revealed by The Canadian Press. That's a sobering finding, especially in light of an earlier memo indicating that police have insufficient resources to keep pace with this threat. Commissioned by Public Safety Canada, and obtained through the Access to Information Act, the newly released study is meant to guide federal funds to where they're most needed to combat online sexual exploitation. Existing resources are "are being strained," according to the study, with CP's Jim Bronskill reporting that kids in parts of Canada, especially in rural areas and the north, at risk of being underserved by counselling, prevention programs, victim treatment and other initiatives. This is especially worrisome given evidence that rural and other isolated kids are particularly vulnerable. The heart-rending fate of Port Coquitlam teenager Amanda Todd is stark evidence of what can happen when kids fall prey to computer predators. Manipulated by an online tormentor, she committed suicide at the age of 15 after years of cyberbullying, including the repeated circulation of nude photos. No child, or parent, deserves to go through that. Hamilton Spectator

Ex-CIDA staffers need 10 years to adapt to department merger: report
Former employees of now defunct Canadian International Development Agency might need as long as a decade to get used to the idea they have been subsumed by the larger foreign ministry. That is a key finding of an internal government report on the 2013 decision by the former Conservative government to merge CIDA with the larger Department of Foreign Affairs and International Trade, as it was then known. Consultant Alain Jolicoeur wrote in a report delivered to the government last year that it could take five to 10 years for CIDA employees to accept the "cultural change" associated with the merger. The Canadian Press obtained a copy of Jolicoeur's report under access to information. Canadian Press (CTV News)

WestJet passengers arriving Sunday evening after emergency landing in Iceland
Westjet passengers forced to spend the night in Iceland after an emergency landing will arrive back in Alberta on Sunday evening. On Saturday morning, a WestJet flight bound from London Gatwick to Edmonton was forced to make an unscheduled stop in Reykjavík. WS27 was diverted to Keflavík International Airport after crews detected a potential mechanical issue. Passengers were put up in hotels for the night and the plane was grounded for maintenance. Global News

INTERNATIONAL

Fifteen years after 9/11, the jihadist threat looms larger than ever across the globe
Nine days after the Sept. 11, 2001, attacks, President George W. Bush stood before Congress to outline a two-pronged response to history's deadliest terrorist act: dramatic improvements in security at home and an all-out assault against what he called a "fringe form of Islamic extremism" at war with the West. Fifteen years later, the first goal arguably has been met, as Americans by almost every measure are safer today from another 9/11-scale attack than in 2001. Yet the struggle to defeat the global network of violent, rabidly anti-Western jihadist groups has recorded fewer successes. Indeed, the problem appears to have grown bigger (...) There is little to show for more than a decade's worth of U.S.-sponsored programs aimed at countering extremist messages, terrorism experts say, and U.S. officials have struggled to block the jihadists' use of social media or disrupt international funding and support for extreme interpretations of Islam (...) despite gains in safeguarding the U.S. homeland, efforts to counter the root causes of violent jihad largely have fallen flat. The National Counterterrorism Center (NCTC), which was created by the post-9/11 wave of intelligence reforms, mounted a series of efforts to map the radicalization paths of Islamist militants. But there are divided opinions on what came of that work. Michael Leiter, who led the NCTC from 2007 to 2011, said the research produced important insights that have helped guide U.S. counterterrorism policy, but never led to the discovery of sequences or patterns that would reliably signal an individual's intent to carry out an attack. Washington Post

Homeland Security secretary: 'Lone wolf' threat different than 9/11
Homeland Security Secretary Jeh Johnson said Sunday the threat of terrorist-inspired "lone wolf" attacks is "the thing that keeps me up at night" 15 years after the September 11, 2001, terrorist attacks. "It's a new environment. It's a new phenomenon," Johnson told CNN's Jake Tapper on "State of the Union," when Tapper asked if the United States is safer now than it was then. "So the answer to your question is really a mixed one," Johnson said. "We're better now at detecting the 9/11-style attacks, but it's more challenging with this new environment that we're in." Johnson said he could see the towers collapse from his Manhattan office window on 9/11, when he was an attorney in private practice. He said the biggest difference in terms of security threats since then is that terror groups can now "literally into our homeland through the internet with social media to recruit and inspire people here." CNN

On 15th anniversary of 9-11, 'the grief never goes away'
The U.S. marked the 15th anniversary of 9-11 on Sunday, with victims' relatives reading their names and reflecting on a loss that still felt as immediate to them as it was indelible for the nation... The 15th anniversary arrives in a country caught up in the campaign, keenly focused on political, economic and social fissures and still fighting terrorism. But for those who lost relatives, the fraught passage of 15 years

feels "like 15 seconds," said Dorothy Esposito, who lost her son, Frankie. Over 1,000 victims' family members, survivors and dignitaries at ground zero under an overcast sky. "It doesn't get easier. The grief never goes away. You don't move forward -- it always stays with you," Tom Acquaviva, who lost his son, Paul Acquaviva. James Johnson was there for the first time since he last worked on the rescue and recovery efforts in early 2002, when he was a New York City police officer. "I've got mixed emotions, but I'm still kind of numb," said Johnson, now a police chief in Forest City, Pennsylvania. "I think everyone needs closure, and this is my time to have closure." Nearly 3,000 people died when hijacked planes slammed into the World Trade Center, the Pentagon and a field near Shanksville on Sept. 11, 2001. It was the deadliest terror attack on American soil. Homeland Security Secretary Jeh Johnson said on Sunday news shows that the United States is safer now than it was in 2001 against another 9-11-style attack but continues to face the challenge of potential attacks by solo and homegrown violent extremists. Associated Press (Whig-Standard)

15-year-old boy arrested in France for planning 'imminent' Paris attack
A 15-year-old boy has been arrested in Paris suspected of preparing imminent "violent action", two judicial sources said, the second alleged plot with links to Islamic State discovered in France this week. Last Sunday, a car loaded with gas cylinders was found near Notre Dame cathedral and jerry cans of diesel, leading to the discovery of a plot to attack a Paris railway station under the direction of Islamic State. Seven people, including four women, were arrested. The boy had been under house arrest since France declared a state emergency after Nov. 13 attacks in Paris in which Islamic State militants killed 130 people, two sources said on condition of anonymity. They did not say why he was under house arrest. Reuters (Global News)

Magnitude-5.3 quake hits Macedonia; at least 30 injured
An earthquake with a preliminary magnitude of 5.3 struck on the outskirts of Macedonia's capital on Sunday, injuring at least 30 people and causing minor damage to buildings, authorities said. The quake occurred just after 3 p.m. (1300 GMT; 9 a.m. EDT), seismologist Dragana Cernih from the national seismological observatory told The Associated Press. She said she received reports of cracks in the walls of buildings or collapsed chimneys, as well as damage to roofs in villages around Skopje. At least 30 people were slightly injured leaving their homes in panic, crisis management department spokeswoman Nadica V'ckova told The Associated Press late Sunday. MINISTER / MINISTRE

Expulsé du pays après avoir purgé sa peine

Une pétition circule toujours et une centaine de personnes sont attendues pour manifester devant les bureaux montréalais de l'Agence des services frontaliers du Canada (ASFC) ce jeudi 15 septembre après que Michele Torre eut reçu son avis d'expulsion assorti d'un billet d'avion pour l'Italie. Installé dans Vimont depuis 30 ans, résident permanent au Canada depuis 1967, le père de 3 enfants, tous mariés et parents, devra quitter son foyer ce vendredi 16 septembre à moins que les ministres John McCallum

(Immigration) et **Ralph Goodale (Sécurité publique)**, ou le premier ministre Justin Trudeau, ne soient cléments à son endroit. (…) Condamné pour trafic de cocaïne en 1996, une accusation à laquelle il avait plaidé coupable aux côtés du chef mafieux Frank Cotroni sénior et le fils de celui-ci, sans oublier Giovanni Marra, propriétaire du café qu'il lui avait acheté deux ans auparavant, Michele Torre a purgé une peine de huit ans et neuf mois. «Après ma sentence, je n'ai eu que des bons rapports de mon agent de libération conditionnelle André Harvey, de dire M. Torre. On m'avait même dit que je n'étais pas considéré comme une personne à risque. Pourtant, ils ne trouvent aucun des documents qui plaidaient tous en ma faveur.» Du côté du gouvernement fédéral, «la décision de renvoyer une personne du Canada n'est pas prise à la légère, répond brièvement Dominique McNeely, conseiller en communications de l'Agence des services frontaliers du Canada. L'ASFC accorde une très grande priorité aux cas de renvoi portant sur des questions liées à la sécurité nationale, criminalité organisée, aux crimes contre l'humanité et à la criminalité». «Selon la Loi sur l'immigration et la protection des réfugiés, les mesures de renvoi doivent être exécutées le plus tôt possible, ajoute-t-il. L'ASFC est déterminée à le faire.» Notons qu'en 2006, Michele Torre avait été arrêté dans le cadre de l'opération Colisée qui visait la mafia italienne. Cependant, il n'avait été reconnu coupable d'aucune infraction. Courrier Laval

MP Zimmer concerned by minister's decision on AR-15

Local Conservative MP Bob Zimmer says he's concerned with **Canada's Public Safety Minister's** decision to give Mounties the authority to classify weapons. Zimmer was responding after **Minister Ralph Goodale** said the government had no plans to change the classification of the Armalite AR-15 rifle. "Before, when we were in government we had a group of … firearms experts, Canadian sport shooters, RCMP, different groups that were represented, advising us about firearms issues," Zimmer said. "When only one of those user groups is giving advice and making decisions on firearms, you're going to get only one perspective, and that's concerning." In May, Zimmer sponsored and presented an e-petition in the House of Commons to reclassify the rifle, popular with sports shooters, from its restricted status. The petition garnered 25,000 signatures nationwide. (…) Zimmer and gun advocates, say the rifle is popular for sports and hunting, and is only classified as restricted due to its design. But in his response, **Goodale** said ***"the AR-15 is restricted because of its lineage to the military-issued M-16 assault rifle." "The Government is committed to putting decision-making authority about weapons classification back into the hands of police, not politicians,"*** **Goodale** wrote in his decision earlier this month. ***"The Royal Canadian Mounted Police is responsible for the technical determination of the classification of firearms in accordance with the criteria stipulated by Parliament in the Criminal Code."*** Alaska Highway News

Pot question bans some Canadians from U.S. for life

In case you missed this story percolating to our north on CBC News, Canadians are being banned from entering the U.S. if they admit to customs agents that they've recreationally used marijuana. **Canada's Public Safety Minister Ralph Goodale** called the lifetime bans ***"ludicrous,"*** especially in light of ***"certain ironies about the current American position."*** Adults, including foreigners, are allowed to consume pot in Washington state (as well as Colorado, Alaska, Oregon and Washington, D.C.). But the U.S. federal government still considers pot illegal. Customs agents may ask Canadians coming into the Washington, such as Matthew Harvey, if they've consumed pot in the past. Harvey, on his way from Vancouver, B.C. to a concert in Seattle, answered affirmatively. He was hit with a lifetime ban because the feds treat such an admission as if it were a criminal conviction. Canadians can apply for a waiver to enter the U.S. but it costs $585 and has to be renewed. With Canada planning to legalize pot, and research showing that 44 percent of the country's residents have tried pot, there's a concern more and more Canadians could face bans for answering a seemingly harmless question. While every country has the right to determine who can cross their border, **Goodale** said he would urge U.S. officials to use common sense ***"instead of the rather ridiculous situation that has emerged."*** Seattle Times

National security consultations must make good on Liberal promise to restore civil liberties, says rights group

An opinion piece states, "Canadian Journalists for Free Expression (CJFE) is encouraged by the long-awaited announcement by the **Minister of Public Safety** and Justice of a consultation on reforming Canada's national security framework. "This consultation is an important first step in building a national security system that truly protects our rights and undoes the dangerous failures of previous legislation,"

says Tom Henheffer, CJFE's Executive Director. "Our current framework undermines free expression rights, civil liberties and the rule of law. The government must listen to the voices of Canadians calling for a real, substantive change to our national security regime. We can and must do better." The review process comes one year after the Liberal Party released its election platform that included a pledge to "repeal the problematic elements of Bill C-51, and introduce new legislation that better balances our collective security with our rights and freedoms." Since the day the Anti-terrorism Act, 2015 - or Bill C-51 - was announced, CJFE has worked to stop, and then overturn, this dangerous, reckless and ineffective legislation. In July 2015, CJFE and the Canadian Civil Liberties Association (CCLA) launched a Charter challenge on the grounds that five sections of Bill C-51 unjustifiably violate the Canadian Charter of Rights and Freedoms." Fort McMurray will review wildfire rebuild fees after complaints from homeowners
Facing a swell of complaints, councillors with the Regional Municipality of Wood Buffalo have agreed to review the fee structure for rebuilding homes leveled by May's wildfire. On Tuesday, municipal councillors asked administrators to re-evaluate the fees associated with inspections, demolition, and redevelopment of damaged properties. The motion, proposed by Counc. Sheldon Germain and co-authored by councillors Keith McGrath and Allan Vinni, passed unanimously after a rigorous discussion about the financial challenges facing homeowners. CBC News

Lightning the 'deadliest summer weather threat' in Canada
It's been a tumultuous year for thunderstorms. Big storms have caused damage across the country this season. Just last weekend, much of southern Ontario was under a severe thunderstorm warning. In July, 20,000 Nova Scotia Power customers were left in the dark as lightning strikes fried transformers. That same month, intense thunderstorms swept across the Prairies, causing $48 million in insured damage. "It's been a very active year for a summer severe weather point-of-view across all of the Prairies, and specifically in southern Alberta," said Environment Canada meteorologist Brian Proctor. Alberta is always an active area, and on average gets 400,000 lightning strikes over the summer. Last year there was 358,753 lightning strikes in the province, but this year that number was up to 576,721 as of Sept. 9. The number of severe thunderstorm warnings and watches more than doubled in southern Alberta this summer, and summer storms felt like a daily occurrence in Calgary. The public doesn't always take weather alerts seriously, but Proctor says they should. CBC News

Cloudy with a chance of icebergs
From flying planes over the Arctic's vast surface to crunching numbers with cutting-edge technology, a small but growing group of young engineers are keeping ships safe from the hazards of ice while working at the forefront of computer science. In Canada, ice forecasting dates back to the Cold War, when the government needed safe routes to install missile radar in the Far North. It has since grown with recent developments in computing capacity and weather modelling-not to mention interest in tourism, shipping, and oil and gas exploration in the Northwest Passage. With changing climate and an estimated 90 billion barrels of oil buried under the Arctic, ice forecasting promises hot salaries and rapid career advancement (…) The technology could prevent the fate of the Franklin expedition (icebound) or the Titanic (iceberg collision) befalling the crew and passengers of a much more modern ship, such as the 1,070-passenger cruise liner Crystal Serenity, the largest vessel ever to navigate the Northwest Passage. It just completed its maiden voyage. On rare occasions, engineers plant acoustic sensors on the Arctic seabed to calculate ice thickness, or fly in planes outfitted with devices to measure ice drifts. But ice forecasting isn't solely for fans of cold climates; most of the work involves processing statistics from satellites, weather stations and historical databases. Maclean's

Massive submarine war games launched in Nova Scotia
The largest anti-submarine warfare exercise hosted in Canadian waters in two decades is now underway off Nova Scotia's coast. The exercise is called Cutlass Fury. Eleven warships and more than 24 aircraft are simulating military activities approximately 160 kilometres southeast of Halifax. "As this exercise progresses, it becomes more complex," said Petty Officer Shawn Swinimer, the underwater warfare director onboard HMCS Fredericton (…) Swinimer said the exercises are starting with simple search and recognizance. As the exercise progresses, it will escalate to full war games with simulated weapons launches. CBC News (Yahoo! News)

Un adolescent de Brandon plaide coupable d'avoir soutenu le groupe armé État islamique
Un adolescent de Brandon, au Manitoba, qui a été arrêté l'an dernier pour avoir utilisé les médias sociaux afin d'exprimer son appui au groupe armé État islamique, recevra sa peine le mois prochain pour des accusations de terrorisme. Le jeune homme, qui avait 16 ans lorsqu'il a été arrêté dans la ville de l'ouest du Manitoba en novembre dernier, a plaidé coupable lundi à des accusations d'avoir conseillé la perpétration d'un acte criminel au profit ou sous la direction d'un groupe terroriste ou en association avec lui. L'adolescent, qui ne peut être identifié à cause de son âge, est derrière les barreaux depuis son arrestation et y demeurera jusqu'à ce que sa peine soit connue, affirme le procureur de la Couronne Ian Mahon Aucun détail sur ce qui a mené à l'arrestation du jeune homme n'a été révélé en cour lundi. La Couronne et la défense ont convenu de le juger comme un adolescent puisqu'il a reconnu sa culpabilité. S'il avait été jugé comme un adulte, la peine maximale pour son crime aurait été l'emprisonnement à vie. Radio-Canada

BORDER SECURITY / SÉCURITÉ FRONTALIÈRE

Canada customs: Carried firearms must be declared
The Canada Border Services Agency wants U.S. travelers to be informed about Canadian firearms laws. On Aug. 23 the agency launched a firearms awareness campaign in Western Canada. Most undeclared firearms seized by the CBSA at land border ports of entry in British Columbia and Alberta are personal firearms belonging to travelers arriving from the United States. From Jan. 1 to July 31, 2016, the CBSA Pacific Region saw a 116 percent increase in the number of firearms seized in the Pacific Highway District, compared to the same period last year. The CBSA Prairie Region has seen a 10 percent increase in the number of firearms seized in southern Alberta. Canadian firearms laws are clear. American travelers who do not declare firearms upon arrival can face seizure, criminal prosecution and deportation from Canada. All firearms must be declared. “Firearms and weapons are high-risk commodities and their interdiction is a CBSA enforcement priority. The CBSA is Canada’s second largest federal law enforcement agency and our officers are Canada’s first line of defence in protecting Canada from illegal weapons and other contraband,” said Roslyn H. MacVicar, Pacific Region director general. Lynden Tribune

Côte d'Ivoire: Canada, un ex rebelle soupçonné de crime de guerre expulsé vers à Abidjan
Abou Fofana membre de l’ex rébellion Search rébellion est soupçonné de crime de guerre par les autorités Canadiennes lors de la crise survenue en Côte d’Ivoire dans la nuit du 18 au 19 septembre 2002, comme révélé par des médias canadiens. Selon le nouvelliste, qui a relayé mardi l’information sur son site, l’ex élément des forces nouvelles a été extradé lundi soir vers la Côte d’Ivoire. Ses proches, qui ont espéré jusqu'à la dernière seconde un revirement de situation, ont dû se résigner au pire scénario qu'ils avaient envisagé. «C'était plein d'émotions. Je n'ai pas amené les enfants car c'était trop difficile. C'était dans la même salle que d'habitude. Il n'y a pas eu d'extra. Je n'ai pas pu l'accompagner à l'aéroport», a-t-elle confié d'une voix tremblotante, a expliqué sa conjointe Geneviève Trottier, comme rapporté par ledit media. (...) Au moment où nous publions, nous ne pouvons confirmer si Abou Fofana Search Abou Fofana a réellement foulé lundi le sol ivoirien suite à son expulsion annoncée vers son pays d’origine. Koaci

Canada faces big questions about the future of immigration
Canada's immigration policy is at a crossroads. As other countries turn away refugees or have divisive debates on limiting newcomers, Canadians will welcome as many as 300,000 immigrants to the country this year, up from a cap of 285,000 in 2015. Immigration Minister John McCallum, who is fresh off of a Canada-wide summer consultation on immigration policy, is looking to boost that number even higher next year. "We are in need of new blood because Canadians aren't having enough babies," he said in Calgary in August. "The labour force growth depends very much on the entrance of immigrants." At the same time, the Liberal government is looking to overhaul many parts of the immigration system, from the controversial Temporary Foreign Worker Program to how skilled immigrants get into the country. A key focus is "breaking down the barriers so we can have the ability to seek out the best and brightest," said McCallum over the summer in Ottawa. The government's current review, which is expected to lead to policy changes within months, comes on the heels of dramatic changes by the former Harper government to almost every aspect of immigration policy. A year-long Postmedia investigation shows the consequences of current policies range from a spurt in the number of temporary foreign workers overstaying their four-year limit - and an ensuing growth in the underground economy - to constraints on how wealthy immigrants interested in investing in Canadian businesses can settle in the country. Calgary Herald

Desperate Canadian businesses seek changes to temporary foreign worker program
The workers move quickly at Sunterra Farm's pork processing plant in the central Alberta town of Trochu. Dressed in white overcoats, blue aprons, rubber boots and hard hats, dozens of butchers and meat packers, mostly from Mexico and the Philippines, rapidly debone, sort and package cuts of pork into boxes destined for Japan. It's a promising export for Canada, but one struggling to expand its market abroad because the meat-packing industry doesn't have enough people to do the gruelling work. At Sunterra, there are only enough employees to handle basic primal cuts like loins, butts and shoulders. Secondary cuts that are delicacies abroad, including hearts, livers and feet, don't make it down the processing line. "We're throwing food away," laments Mark Chambers, senior production manager at Sunterra. For years, the agri-food company relied on temporary foreign workers to fill ongoing labour

shortages in facilities around Alberta. Most obtained permanent residence and stayed. But the flow of migrant workers has slowed after a series of restrictions enacted between 2011 and 2014 on how employers can use the Temporary Foreign Worker Program. Margie Badao moves boxes of meat along the packing line at Sunterra Meats in Trochu, Alta. Badao originally came to the company from the Philippines as a temporary foreign worker and now has permanent status. (Ted Rhodes/Postmedia) Meat packers aren't the only ones hurting. From the ski slopes of Whistler in the West to the shores of the Bay of Fundy in the East, Canadian businesses say they are desperately looking for employees and blame restrictions on the temporary foreign workers for costing the national economy jobs, productivity and revenue. Calgary Herald

Fort McMurray rebuild gets more expensive

Fire-ravaged Fort McMurray is one of several Canadian cities and towns being impacted by skyrocketing drywall costs. Builders and suppliers blame new anti-dumping tariffs on US gypsum board products for the price spike over the past week. Canada Border Services Agency slapped tariffs up to 276% on US products imported to Canada to offset dumping following complaints filed in April. The industry says the surprise ruling could disrupt the supply of drywall and risks bankrupting contractors working under fixed-price contracts. There is some production in Western Canada, but an industry official says they can only meet 40% to 60% of the needed supply, so extra product must be imported from the US. The CBSA decision is under review for the next three months, but the import duty will remain in effect until a final decision is made. iNews 880

Trucker fined for guns found at Osoyoos border crossing

A South Carolina trucker is paying a fine and is unable to return to Canada after prohibited and restricted weapons were found in his truck after lying to border agents in Osoyoos. Marion Furman Taylor Jr., 55, was sentenced to pay a fine of $7,500 after pleading guilty to charges of making a false statement at the border, possession of a loaded, prohibited firearm and possession unauthorized overcapacity magazines in Penticton Provincial Court on Sept. 12.Taylor Jr., a U.S. citizen with no prior record in Canada or the U.S., was hauling a load of canoes and kayaks into Canada with his business partner for a U.S. company, Landstar Rover Inc. on April 3. After an initial inspection by a Canada Border Services Agency (CBSA) employee, the tractor-trailer was given a secondary inspection after Taylor Jr. told border security there were no firearms to declare in the vehicle. In a duffel bag located under the bottom bunk of the sleeper cab border agents found a loaded Beretta PX Storm pistol, three loaded, overcapacity magazines, a box of 50 rounds of .38 ammunition and a loaded .38 special Smith and Wesson revolver. Also located in the truck were two canisters of mace, a canister of bear spray as well as a switchblade, which are prohibited items in Canada. Taylor Jr. admitted he was the owner of the weapons to border agents after confronted and he was arrested and eventually released — paying $7,000 for the release of his truck. Penticton Western News

Cross-border companies join forces

Eschewing their patchwork approach of the past, leading cross-border trade organizations in the US and Canada have organized a united front in their efforts to reach the hearts and minds of governments and legislators. The inaugural 2016 US-Canada SAGE Summit, which took place at Ohio State University's Columbus campus in late June, featured delegates representing 60 leading cross-border business organizations as well as policy and political leaders from both countries. SAGE is an acronym for "strategies, advocacy, gateways, engagement," the organization's action pillars. "This summit marked the first time that these organizations came together under one roof to chart a course for the future of the Canada-US relationship," says Columbus-based Daniel Ujczo, a summit co-founder and an international trade lawyer at Dickinson Wright, a firm with offices in Canada and the US whose practice includes a significant focus on cross-border law and trade. "With a new government in power in Canada and American elections on the horizon, we needed to come up with a new way to manage this relationship." The timing was right. "The cross-border scene has been racking up a lot of losses, including the rejection of the Keystone Pipeline, the dispute over country-of-origin labelling, and the fight over who would pay for the Gordie Howe Memorial Bridge," he says. "We definitely needed a new approach." The new Canadian government, it turns out, was a key catalyst for SAGE. Lexpert

Why it's so important for Trudeau to fix the Canada-U.S. border

An opinion piece by Colin Robertson of the Canadian Global Affairs Institute states, “Call it the 9/11 effect. Fifteen years on we are still paying the price of that tragic day. It changed how we trade. Tourism to Canada by Americans has never recovered. It also altered, probably permanently, the easy trust that characterized what was once the "longest undefended border." The trade effect with the United States is the most evident. A smart and secure border must be the Trudeau government's priority with the next administration. Notwithstanding a series of initiatives - Smart Border, Security and Prosperity, and now Beyond the Border, the border has thickened. While rail shipments have increased, especially for oil in the absence of new pipelines, trucks remain the primary mode of cross-border transport although truck traffic is down almost 20 per cent since 9/11. A study concluded that the premium paid to move goods across the border rose, from 0.3 per cent of the value of goods shipped prior to 9/11, to about 0.6 per cent after 9/11 because of inspection and a surge in paperwork required for passage. Verification programs for "secured" carriers and goods and regulatory co-operation have mitigated border delays. But we are still awaiting the promised single electronic portal that will satisfy the information requirements of governments and their agencies.” Globe and Mail (2016-09-13)

CYBER SECURITY / SÉCURITÉ CYBERNÉTIQUE

Volkswagen sets up cyber security firm with ex-Israeli spy chief
Volkswagen is forming a company with the former head of Israel's Shin Bet intelligence agency to develop cyber security systems for Internet-connected cars and self-driving vehicles, the partners said in a statement on Wednesday (…)"To enable us to tackle the enormous challenges of the next decade, we need to expand our know-how in cyber security in order to systematically advance vehicle cyber security for our customers," said Volkmar Tanneberger, Head of Electrical and Electronic Development at Volkswagen. Reuters; PC World

GCHQ creating national firewall to stop cyber criminals
The UK’s intelligence agency GCHQ is stepping up the fight against cyber criminals with plans to launch a national firewall to block malicious websites and emails. GCHQ will work with internet service providers such as BT, Talk Talk and Virgin Media to filter websites set up by scammers that download malware onto victims' computers. For the firewall to work, the surveillance agency wants to create a national domain name system (DNS) that can be used to block suspicious sites. Telegraph UK; IT Pro UK; Tech Radar

LAW ENFORCEMENT / APPLICATION DE LA LOI

Fort Simpson mayor says RCMP used excessive force in detaining her intoxicated brother
The mayor of Fort Simpson, N.W.T., has filed a complaint against the RCMP, alleging an officer was too aggressive when dealing with her intoxicated brother. "It was humiliating. To me, I would have been humiliated just by how he was treated," said Darlene Sibbeston. She didn't see the incident herself, but arrived minutes later to find her brother Darrell Sibbeston pinned to the ground by an RCMP officer, with a knee in his back. "Part of his pants were, like they were falling down," she said. "He was lying on his right side. His face was down and there was just blood covering his forehead, his eyes and around his nose. Around his head was a pool of blood." Darlene Sibbeston is one of two community members who have filed complaints with the Civilian Review and Complaints Commission for the RCMP about the incident last Friday. (…) In an email response to CBC, RCMP say senior management are "aware" of the incident and an internal review has been started. A media spokesperson said "RCMP have not received any formal complaints from any members of the community." It could take a few days before they are notified of any formal complaints. In the meantime, Darlene Sibbeston, and other local Indigenous leaders plan to meet with RCMP members from Fort Simpson and Yellowknife later today to talk about the incident. CBC News

Déploiement des Casques bleus canadiens: le Mali largement favori
Tout indique que le réengagement du Canada dans les opérations de paix de l'ONU se fera au Mali, en Afrique. Le gouvernement Trudeau annoncera d'ici quelques semaines à quel endroit seront déployés les

Casques bleus canadiens, et plusieurs sources ont mentionné à L'actualité que la liste des destinations est maintenant très courte. Il ne reste que quatre possibilités: le Mali, le Soudan du Sud, la République démocratique du Congo et la République centrafricaine. Et de ces options, le Mali est largement en tête. Au début octobre, le chef d'État-major de la Défense, le général Jonathan Vance, remettra au ministre de la Défense, Harit Sajjan, son analyse militaire sur la situation dans ces quatre pays et le rôle que le Canada peut y jouer. Le ministre Sajjan devra ensuite discuter des possibilités avec le ministre des Affaires étrangères, Stéphane Dion, et la ministre du Développement international et de la Francophonie, Marie-Claude Bibeau. Le cabinet Trudeau devrait trancher d'ici la fin du mois d'octobre. (…) Le gouvernement Trudeau a envoyé une équipe de reconnaissance au Mali au début du mois de septembre, composée d'experts du ministère de la Défense, du ministère des Affaires étrangères et de la GRC, afin d'évaluer la situation sur place. L'ONU n'a pas demandé au Canada de fournir des fantassins qui seraient directement impliqués dans le conflit, dans le nord du pays. Elle souhaite qu'Ottawa fournisse des troupes spécialisées, notamment des ingénieurs de combat et des hélicoptères. Le Canada pourrait d'ailleurs déployer un peu moins que les 600 soldats annoncés à la fin du mois d'août. Le chiffre de 400 militaires est évoqué. «Les 600 soldats, c'est la capacité canadienne pour les missions de paix sur une année. Il n'est pas dit qu'ils seront tous déployés au même moment, au même endroit», mentionne d'ailleurs une source bien au fait des discussions au sein du gouvernement. L'actualité

RCMP officers tell their story of being exposed to fentanyl
Some B.C. RCMP officers are speaking out about the dangers of fentanyl exposure after nearly overdosing on the job. At least three B.C. officers are known to have had contact with the deadly drug while on duty. "They did an EKG [electrocardiogram] and my heart rate was elevated and blood pressure. They also did a urine test and all that and there was trace opiates," said Cst. Rob Dupis with Kamloops RCMP. "That was just from a 15 minute exposure in a vehicle." Global News

Williams Lake RCMP issue fentanyl warning to parents
A letter by Inspector Pelley states, "Dear Parents: Thank you for taking time to read this important notice. Being a parent is the most important job any of us will ever have. As some of you may be aware through media, friends or family, more than 433 people in the Province of British Columbia have died between January and July 2016 as a result of an overdose. According to the BC Coroner fentanyl was detected in approximately 62 per cent of those cases. The families of these people have been left devastated and their lives will never be the same. After examining several recent fentanyl-related calls for service, the Williams Lake RCMP is issuing a warning to parents about the dangers of fentanyl and other drug use. Fentanyl, new fentanyl equivalents, and W compounds are appearing in the illegal market. Williams Lake Tribune

RCMP searching for missing teen girl from Cowessess First Nation who may be in Regina
Broadview RCMP is asking for the public's help in locating a missing 16-year-old girl from the Cowessess First Nation. Norma Sheperd was last seen at a residence on the Cowessess First Nation on Sept. 9, and left the location with a man in a blue pickup truck. She was reported missing on Monday, and so far RCMP members have been unable to locate her. The RCMP said Sheperd may be in Regina, but that has not been confirmed. Leader-Post

Accused in Kelowna fentanyl bust was former Hells Angels 'middleman'
A Kelowna man charged in connection with a massive fentanyl bust was a former 'middleman' for the Hells Angels, according to parole documents. Leslie John McCulloch was charged with possession for the purpose of trafficking this summer following a raid in which RCMP seized two industrial pill presses and hundreds of fake OxyContin and Percocet pills made out of fentanyl. According to parole documents obtained by the CBC, the 38-year-old was on parole from a four-and-a-half year sentence for possession for the purpose of trafficking cocaine at the time of the alleged offences. McCulloch is slated to appear in Kelowna provincial court on Wednesday. CBC News

Alberta appeals court hears of brutal death of Calgary girl killed by dad, stepmom

The Alberta Court of Appeal has reserved its decision on appeals in the convictions of a Calgary couple found to have killed the man's 6-year-old daughter, Meika Jordan. The Crown wants the appeal court to find Spencer Jordan and Marie Magoon guilty of first-degree murder instead of the original trial judge's finding of second-degree murder. Jordan and Magoon want to be acquitted or face new trials. Last September, the pair were sentenced to life in prison with no chance of parole for 17 years in the death of Meika, who was killed in 2011. Appeal prosecutor Jolaine Antonio told the panel of three justices on Tuesday that the original trial judge erred by not finding the element of unlawful confinement in the conviction. Canadian Press (Toronto Star)

Angela Nicholson launches appeal after found guilty of conspiring to kill husband
A woman found guilty of plotting to kill her husband and her lover's wife is appealing her conviction. In June, Angela Nicholson was found guilty of conspiracy to commit murder and then, earlier this month, was sentenced to three years in prison. Today, Nicholson will be formally appealing her conviction and will be asking to be granted bail. In 2013, Brigitte Vey, the wife of Nicholson's lover, secretly recorded the couple talking about a plot to kill her in a house fire. They also talked about killing Nicholson's husband. During the trial, Nicholson, and co-accused Curtis Vey, argued they weren't serious about killing their spouses. The appeal centers around the trial judge's charge to the jury. CBC News

Full parole for Calgary woman in drunk driving crash that killed friend, other driver
A young woman convicted of impaired driving causing death in a 2012 crash that killed two people has been granted full parole. Amie Nottebrock was at the wheel when she ran a red light at Shaganappi Trail and Country Hills Boulevard in January 2012. Her vehicle hit another car, killing her passenger, Danielle Russell. Arsh Brar, the driver of the other vehicle involved in the crash, also died from his injuries. (…)Nottebrock, 29, had been serving a four-year-and-six-month sentence for two counts of causing death by criminal negligence and two counts of impaired driving causing death, according to Parole Board of Canada documents. The sentence began in November 2014. Global News

More freedom for killer of 16-year-old Stephanie Spooner
A teen killer, who is now 44, has again gained more freedom from prison. Bradley Paetsch, who changed his name to Tristan Ryan, was 18-years-old when he killed his then 16-year-old on-again off-again girlfriend Stephanie Spooner in her Okotoks home. Ryan was granted unescorted temporary absences 48 hours per month at a parole hearing Sept. 8. The visits will allow him to visit his wife, who he married in prison two years ago, and re-integrate into the community. The unescorted absences will last for six months, but can be revoked by his case management team. He was seeking 72 hours per month outside the prison unescorted, but board members called that amount of time excessive. Two of Spooner's relatives were at the hearing, but did not speak. Stephanie's father, Bob Spooner, was not at the hearing, but has repeatedly said he opposes any form of release for his daughter's killer. Ryan told two Parole Board of Canada (PBC) members he was feeling hopeless, suicidal and was drinking daily when he killed Spooner. (…)He was convicted of first-degree murder and is serving a life sentence. Western Wheel

Thunder Bay police respond to allegations trainer was verbally assaulted in race-relations course
Allegations that a facilitator was verbally assaulted by police officers while conducting race-relations training in Thunder Bay are the result of a "misunderstanding", according to the police service. "You can misread people's tone, attitude and body language in these kinds of sessions," said Chris Adams, executive officer with the Thunder Bay police service. A training session with police officers in July was shut down after "things just got really bad" during a discussion on missing and murdered Indigenous women, the facilitator said. CBC News has agreed not to name the facilitator because she fears that speaking out could have implications for her employment. She described "disruptive and dismissive" behaviour by officers throughout the session and said they accused her of lying about the statistics on missing and murdered Indigenous women and asked her for proof of differential police treatment of Indigenous and non-Indigenous people. "The concerns were dealt with by the [police] training unit, administration and the city," Adams said. The city of Thunder Bay trains local volunteers who are paid an

honorarium to conduct training sessions for all city staff, including first responders such as police, using the Walk a Mile film series, created by local filmmaker Michelle Derosier. CBC News

Fentanyl involved in at least 32 Maritime drug deaths
Jenn Perry doesn't believe her fiancé knew what fentanyl was before it took his life. Two years ago, Perry stood outside a Moncton apartment building, clutching a picture of 29-year-old Julien Gould and waiting to hear if he was alive. She hadn't heard from Gould for five days, silence she said was out of character for him. A few hours later, she identified his body by the tattoos on his hands. Gould and his 36-year-old friend were found dead on an apartment floor on Nov. 9, 2014, after ingesting a white, crystallized powder in a clear plastic bag. That powder tested positive for a derivative of fentanyl, a powerful drug that can be deadly even in tiny doses. (...)Fentanyl has wreaked havoc across New England and in British Columbia, where officials declared a public health emergency after hundreds were killed by overdoses earlier this year. Like Gould, some of those people died after taking the drug for the first time. While fentanyl abuse hasn't reached epidemic levels in the Maritimes, Gould and his friend are not the only people in the region to die after taking the drug. CBC News has analyzed the details of hundreds of drug-involved deaths in New Brunswick, Nova Scotia and Prince Edward Island dating back to 2008. The data shows fentanyl was involved in at least 32 drug-involved deaths. CBC News

Delta holds fentanyl forums to warn community of the deadly drug
In response to the fentanyl health crisis in B.C., two forums are being held in Delta this week to educate the community about the dangerous synthetic opiate showing up in a variety of street drugs. The first of two Fentanyl Forums, hosted by police, city officials and the school district, will take place Wednesday evening at 6 p.m. at the South Delta Secondary School. The second forum will be held Thursday, also at 6 p.m., at North Delta Secondary School . Delta police say speakers will discuss a range of topics including what fentanyl is, why it's dangerous, how prevalent it is, and how it can impact recreational users and their families. Members of the community can also ask the speakers some questions. Two weeks ago, a group of nine friends overdosed within 20 minutes in Delta after snorting cocaine believed to be laced with fentanyl. They all survived after paramedics administered the opioid antidote naloxone. Police believe the 20-something revellers were casual cocaine users and not habituated opiate users. Vancouver Sun

Canada and Muslims: "partners against radicalization, not the problem
A new survey of Canadian attitudes towards the Muslim community shows a slight majority see them as partners in the fight against radicalization, and not part of the problem. However, the survey also shows a distinct desire for the Muslim leaders here to do more to denounce acts of terrorism. Two domestic attacks, the Parliament Hill shooting, and a hit-and-run vehicle killing of a soldier were identified by police as being motivated by violent political ideology related to Islam. When Canadians were asked how they view the Muslim community and its leaders in light of those tragedies, 58 percent said the community and leaders were partners in fighting radicalization, while 42 percent felt the community was part of the problem. In either case, a strong majority (73%) responded that Muslim leaders here were not speaking out enough against homegrown terrorism. Another slight majority, just over 50 percent also believe there are radicalized individuals already in their communities or people in the process of becoming radicalized. As for what people thought caused someone to become radicalized, 47 percent cited religion/culture, 37 percent cited mental illness, and feelings of marginalization were listed by 34 percent of respondents Other causes cited were 'internet recruitment', 'old country beliefs', and 'economic/financial problems'. As to confidence in police ability to stop radicalized Canadians from carrying out acts of violence, the numbers were fairly, with 50 percent saying they felt confidence in police ability, while 43 percent said they were not confident the police can stop radicalized violence. REGULATION OF MARIJUANA / RÉGLEMENTATION DE LA MARIJUANA

Chambers want consultation on marijuana
Local chambers are urging the provincial government to begin a consultative process aimed at developing a regulatory framework for the distribution of medical marijuana. Both the Belleville and District and the Quinte West chambers of commerce are standing behind a letter, authored by Ontario Chamber of Commerce (OCC) President and CEO Allan O'Dette and directed to Premier Kathleen Wynne. on the issue of recreational marijuana. In light of recent commitments from the federal government to legalize marijuana, the OCC is calling on the province to immediately begin a robust consultative process aimed at developing a regulatory framework for the distribution of recreation marijuana. The letter outlines key messages (see fact box on Page A4 for more details) that the collective business community thinks the province should consider. According to the OCC, the government needs to ensure – if recreational marijuana becomes available – that the underground economy is eliminated, access points are limited and that communities have decision-making power. Addiction prevention and treatment programs need to be invested in and the government needs to ensure marijuana products are subject to best-practice health regulation. Intelligencer

Alberta producer launches medical marijuana app
An Alberta-based pot producer has launched a mobile app to make it easier for patients with a prescription to purchase federally-regulated medicinal weed. Cam Battley, of Aurora Cannabis, said the idea was to give customers the same service as giant online retailers such as Amazon. "As far as we know, it is the first legal app for Android and Apple for federally-approved legal medical cannabis," Battley said. "The fact is that people live on their phones and tablets. They use them to shop for everything from consumer products and health products to medicine. It is an acknowledgment of the reality of how people operate today." Canadian Press (Global News)

Public service jobs appealing to majority of Canadians: survey
Public service employers that offer job stability, workplace flexibility and technological resources are likely to attract new talent, according to a new survey by global professional services company Accenture. Of the 1,000 Canadians surveyed, 64 per cent said they would consider working for a government department, Crown corporation or agency in the future. Candidates are likely to take a job due to a good salary, benefits and pensions (94 per cent), technology that would improve their productivity and ability to succeed in a role (82 per cent) and the option to work from home or outside the office (93 per cent). Ex-UN investigators call for release of Canadian academic jailed in Iran
Twenty former United Nations special human rights investigators added their voices on Wednesday to the growing calls for Iran to release a jailed Canadian-Iranian academic. They raised Homa Hoodfar's case as the UN continued its general assembly in New York. The 65-year-old, who taught at Montreal's Concordia University, has been held at Tehran's notorious Evin prison since June 6. The former

rapporteurs said Hoodfar's academic work poses no threat to Iranian security and that she should be released immediately. "We stress that Iran is breaching its national constitutional principles by arbitrarily arresting and detaining people for simply expressing their opinion and conducting academic research, as is their professional right and duty," they said in a statement. Chronicle-Herald

Canadian Citizen Homa Hoodfar Has Been Detained in Iran for 100 Days
An opinion piece states, "Skull fracture, broken fingers, missing fingernails, severe abdominal bruising, burst ear membrane, broken ribs, broken nose, flogging to the legs, evidence of a brutal rape—that is what the doctor described the night the body of 54-year-old Canadian photojournalist Zahra Kazemi was brought into a Tehran military hospital. Kazemi endured four days of torture inside the Islamic Republic of Iran's notorious Evin prison, before arriving brain dead to the hospital. No one has ever been found guilty or held to account for her death. Thirteen years later, a similar situation is unfolding. Today marks 100 days since Canadian academic Dr. Homa Hoodfar was illegally detained and imprisoned in Iran. She is being held in solitary confinement in the same prison as Kazemi, and last week Canadians were told that Dr. Hoodfar had been taken to hospital in Iran. The press release distributed by her family described Dr. Hoodfar as being "barely able to walk or talk." (…)Dr. Hoodfar is not the only Canadian languishing in an Iranian prison. For the past eight years, Saeed Malekpour, a Canadian resident since 2004, has been imprisoned in Iran on trumped up charges of operating a pornographic website that was "operated by western influences and made to corrupt Iranian youth," the indictment read. Malekpour had made an urgent trip to Iran to visit his dying father in 2008 when he was imprisoned. His sister, Maryam Malekpour lives in Edmonton and told me recently that despite all the letters she has written to Foreign Affairs Minister Dion, their response continues to be that they cannot help her brother because he is not a Canadian citizen. But Homa Hoodfar is a citizen of Canada, and any consideration of re-establishing diplomatic relations with the Islamic Republic of Iran must include both her and Malekpour's immediate release from prison and safe return to Canada." Pardon for former NSA contractor Snowden seen unlikely
The U.S. government will not budge on its demand that former National Security Agency contractor Edward Snowden return to face prosecution for stealing thousands of classified intelligence documents, despite new calls for President Barack Obama to pardon him, U.S. officials said on Tuesday. The officials said they expect Snowden's supporters to use the Thursday release of "Snowden" - directed by veteran filmmaker Oliver Stone - to mount a public campaign demanding a pardon before Obama leaves office in January. Reuters

Paris police arrest second teenager with suspected terrorist links in five days
Counterterrorism police in Paris arrested a 15-year-old on Wednesday on suspicion of having links to the so-called "Islamic State" and plotting terror attacks. This is the second time that a 15-year-old with suspected ties to "IS" has been arrested in just five days. French Interior Minister Bernard Cazeneuve confirmed the arrest and said that intelligence services were working harder than ever to prevent future attacks. "We're working with extreme intensity to identify those we think are likely to carry out an attack," Cazeneuve told reporters. "[France] is in an exceptional level of mobilization." Deutsche-Welle

The young women behind France's 'terrorist commando' network
The recent arrest of four Frenchwomen linked to a failed Paris terror plot has exposed the increasing role women are playing in conducting attacks as the Islamic State (IS) group comes under increasing pressure (…) The high-profile roles that women have played in the latest plot – as well as the resistance some of them put up during their arrest – have raised eyebrows in anti-terror circles. Paris prosecutor François Molins has called the young female suspects a "terrorist commando" network, a label quickly adopted by journalists attempting to unravel the links between the women and Rashid Kassim, a well-known jihadist, as well as other Frenchmen and women involved in a number of terror attacks in France over the past two years. The people of Saskatchewan must decide pipeline regulation future - Liberal MP Goodale
Governments and energy companies "need to go to school" on the effects of oil spills, but it is up to the citizens of the province to determine how pipelines are regulated following the July 20 Husky Energy oil spill, according to **Canada's public safety minister**. ***"That is an issue that the people of Saskatchewan will have to examine, whether the current methodology is appropriate or whether something of a more arms-length nature would be more effective,"*** **Liberal MP Ralph Goodale told**

reporters Thursday in Saskatoon. The roughly 25,000 kilometres of licensed pipelines in Saskatchewan are regulated by the provincial Ministry of Energy and Resources. Its approach has been sharply criticized by the provincial auditor, who concluded in 2012 that it was not in compliance with the law. "There are requirements under this legislation that are not being acted upon. Failure to regulate pipelines effectively could harm people or the environment," Judy Ferguson's 2012 report into the province's pipeline regulatory regime stated. Star-Phoenix

Famille et amis de Michele Torre manifestent
Une soixantaine de personnes ont réclamé la suspension sinon l'abandon de l'avis d'expulsion du Lavallois Michele Torre durant la matinée du 15 septembre devant les bureaux montréalais d'Immigration Canada, rue Saint-Antoine. La manifestation s'est déroulée également devant l'hôtel Ritz-Carlton où le premier ministre Justin Trudeau était de passage. «Notre message a été, j'espère, bien entendu, de confier Nellie Torre. Mon père a purgé sa peine il y a 20 ans. Il a payé sa dette et n'a plus jamais été condamné. Nous demandons aux ministres **Goodale**, McCallum et Trudeau de remédier à cette injustice.» Les nombreuses demandes et lettres acheminées aux ministres libéraux fédéraux sont toujours sans réponse. Seuls eux peuvent suspendre la mesure de renvoi pour des considérations d'ordre humanitaire. Le 9 septembre, Michele Torre a reçu un billet d'avion aller simple pour l'Italie. Il est attendu à l'aéroport Pierre-Elliott-Trudeau ce vendredi 16 septembre à 15h pour être escorté hors du pays. Courrier Laval
