About his future plans, he said, "I think that I will continue look at vulnerables in important websites in Asia." Asked about his nationality, he said, "I don't want to tell where I'm from, but most media are claiming that I'm from the Netherlands.

Times of Israel
Using AI, Israel's Aperio protects infrastructure from hackers
Wednesday, 16 November 2016
Byline: Shoshanna Solomon

Jerusalem - Israel's APERIO Systems said it has developed the cyber industry's first technology that identifies, sends out alerts and takes real time corrective action when hackers try to artificially manipulate data to damage critical infrastructures, such as electricity grids or water supply networks. "For real impact hackers need to create a dangerous state in which operators of the critical systems get messages that all systems are functioning well whereas they are actually being damaged or destroyed," said Michael Shalyt, APERIO's VP Product. "Data forging is when you give the impression that things are working as they should, but they are actually not."

Shalyt, a 29-year old former researcher and team leader in an elite IDF intelligence unit, brings as an example an unfolding bank robbery in which video feed to the guard is hijacked to transmit not a real-time feed but that of the previous day, showing that everything is fine.

The Stuxnet malicious worm that sabotaged Iran's nuclear program "was operating for 18 months and the control room felt all was well, but it was all fake," Shalyt said. "This kind of forgery can cause lasting physical damage because if a turbine, for example, is rendered dysfunctional without an operator being aware of the fact it could be months before the damage is repaired and the system is up and running again."

"Many companies are trying to achieve our same goal, but our approach is different. We are a different breed of cyber company," said Shalyt, who previously led the malware research team at Check Point Software Ltd. "We are a lie detector for machines."

And this is the niche -- data forgery protection -- in which APERIO operates, with its team of former Israeli army intelligence veterans, electronic engineers, physicists and signal processing experts.

APERIO said it secured seed funding from a consortium of private investors, including cybersecurity veterans Doron Bergerbest-Eilon, Liran Tancman, and Shlomi Boutnaru. Bergerbest-Eilon helped establish the agency charged with protecting all critical infrastructures in Israel and is the former director of the security and protection division of the Shin Bet security agency. Tancman and Boutnaru, who played key roles in building Israel's cybersecurity capabilities, founded predictive cybersecurity startup CyActive, which was acquired by PayPal in 2015.

APERIO, founded in January this year, targets its new product, which is actually a server, to industrial control systems (ICS) of anything from the temperature of turbines in a power plant to pharmaceutical or food manufacturing plants and gas flow at a petroleum refinery.

Through the use of algorithms, APERIO's technology scours the systems and alerts users to forgeries by monitoring the machinery and seeking inconsistencies in physical realities compared to their historical performance. Any mismatches generate an alert and APERIO Systems pinpoints the attacked equipment and faked process data.

Then, using a sophisticated combination of physics and state-of-the-art machine learning techniques, APERIO Systems reconstructs the real values of the forged operational data and reverts it to its original state in real time -- establishing operational resilience.

"A fan, when operating, tends to emit a high pitch when it rotates fast. The noise is a side effect of the fan's operation," he said. "But if suddenly I notice that the fan is operating but is not emitting a noise, then that is strange. We learn the physical models and what they should be. Then we look for inconsistencies, based on past experiences."

The company uses several methods for verification, all of which are based on physical signs. "It all has to make sense," Shalyt said.

APERIO's servers are already being used by several big gas pipelines across Israel, said Yevgeni Nogin, the CEO of APERIO. The company recently won a cybersecurity competition run by Italy's Enel, a multinational energy producer and Europe's largest utility by market cap, and will be deploying its servers at their plants.

The huge expansion of computer inteconnecitvity and the global dependence on data has increased the risks and severity of cyberattacks, spurring a need for more efficient and effective defensive measures.The cybersecurity market will likely grow at an annual rate of almost 11 percent to to $202 billion by 2021 from $122 billion in 2016, according to MarketsandMarkets, a research company.

Nogin, 28, is a graduate of the elite Talpiot IDF military academy who served over nine years in elite intelligence and R&D units of the IDF. "We are targeting our product to any controlled systems, whether they are cars, airplanes and services that are critical in our everyday life," Nogin said.

Jerusalem Post
Did Uri Ariel pass sensitive security technology to Russia?
Wednesday, 16 November 2016
Byline: Yossi Melman

Jerusalem - The Israeli government is embarrassed and fears that a unilateral decision by Agriculture Minister Uri Ariel to transfer sensitive technology with US-made components to Russia could damage security ties with the US and Spain.
Russian Prime Minister Dmitry Medvedev visited Israel last week and met with many government officials, including Ariel. Medvedev paid a visit to the Agriculture Ministry's Volcani Center in Rishon Lezion, where he took a shining to a small drone that was on display.

Despite clear instructions from the Defense Ministry that any transfer of unmanned vehicles to foreign countries requires an export license, Ariel didn't ask for one, and offered the drone to Medvedev on the spot.

The Russian president gladly accepted the gift and sent two members of his delegation to collect the small helicopter and load it onto his plane.

The Israeli media focused on the cost of the "toy" - NIS 200,000 - and the violation of government procedures that occurred. But The Jerusalem Post has learned that the transfer was also in violation of Israeli security export instructions and most probably was done without the approval of the manufacturers.

The drone was produced by the Spanish company Alpha Unmanned Systems, and one of its essential components is the thermal camera installed.

The camera is produced by the US giant Flir, which makes most of its cameras for military or dual use. According to the company website, its products require an export license by the US Department of Commerce. It is unlikely that such a license was given to either the Spanish company or Israel to transfer it to Russia, which is under US and NATO sanctions because of its invasion of Ukraine and the annexation of the Crimean peninsula more than two years ago.

In the past, Israel has been reprimanded by the United States for transferring US technology and equipment to China without permission.

All parties involved - Ariel's office, the Agriculture Ministry, the Volcani Center, the Prime Minister's Office, the Alpha and Flir companies and the US Embassy - declined to comment. The Defense Ministry said Ariel's decision "was not coordinated with us."

Jerusalem Post
Cyber concerns bring leaders from across globe to Tel Aviv
Wednesday, 16 November 2016
Byline: Anna Ahronheim

Jerusalem - Thousands of top decision-makers, along with senior government and law enforcement officials from 80 countries, gathered in Tel Aviv this week for the fourth International Homeland Security and Cyber Conference.
The conference, which runs November 14 to November 17 at Tel Aviv's Convention Center, focuses on the ever-changing challenge of protecting data from the merging of physical and cyber crime.

Israel is a leader in cyber security. More than 300 companies had sales of $4b. in 2015 alone, and the conference is showcasing hundreds of those companies tops in the field of homeland and cyber security.

Speakers will discuss how and why the increased number of terror attacks worldwide has led to government strategies to better protect their strategic assets, including citizens.

Chief information security officer at Barclays Bank, Troles Oerting, said, "When the rules of the game have changed, we have to change as well." That sentiment was echoed by Meir Hayun, chief superintendent and head of the national cyber crime unit of the Israel Police, who said there needs to be a "change in how we think of intelligence today."

As part of the conference's main focus on cyber security, a discussion was held on the significant role played by social media in radicalization and encouragement of terrorism.

In a world of constant change, new threats arise on a daily basis. One game-changer is the threat posed by robots on social media, where decisions must be made if inciteful material on sites such as Twitter and Facebook were posted by human beings or "bots."

As the influence of social media grows, so does concern about its effect on vulnerable youth, especially in regard to Islamic extremism.

Former chief of Shin Bet Yoram Cohen talked about the large number of third-generation Muslim immigrant youths who did not integrate into European society and "underwent an identity crisis which caused them to become disenfranchised with the state." These predominantly male youth from lower-economic households often turned to radical Islam and terror in order to atone for what they perceive as past crimes or sins, usually involving drugs.

"When they can't make it to the Middle East, they carry out attacks at home. And those who do make it often serve as role models for those who remain in Europe," Cohen said, "posing an additional threat to law enforcement."

Salafi, or fundamentalist, Jihadi terrorism can also found among Palestinians, Cohen said. While there is limited support within that sector, the rise of its popularity and influence of the Islamic State create worries to, among others, Palestinian authorities.

According to Cohen, while most Palestinians don't support or identify with Islamic State, there has been an increase in ISIS-influenced cells, caught at the end-stages of planning attacks on Israeli targets, before plans could be carried out.

In his second public appearance since leaving Shin Bet, Cohen told the crowd that "the reality of mass terror cannot be expected to change in our favor any time soon," and pointed to online incitement as a major player in the process of radicalization and terrorism.

Gulf News
Cyber security consultancy firm Dark Matter to expand operations (Canada).
Wednesday, 16 November 2016
Byline: Fareed Rahman

Abu Dhabi - Abu Dhabi-headquartered cyber security consultancy firm Dark Matter is planning to expand operations as cyber security threats grow, the chief executive officer of the company said on Tuesday.
"As part of our expansion plans we will be opening a managed security operations centre in the first quarter of next year that will enable us to monitor the IT network of different entities all the time and prevent it from cyberattacks," said Faisal Al Bannai, addressing the media.

He did not give a total investment figure in building the new centre but said investments will be huge.

The company launched in 2014 has offices in Dubai, Abu Dhabi, Canada, China and Finland. It has a large number of customers ranging from government entities to private firms.

"It's been an interesting journey in the last two years. We grew from 100 team members last year to more than 400 employees at present. The biggest accomplishment has been the kind of people we could attract in the last two years. We have a team from different parts of the world."

He said there is a heavy demand from entities, governments and individuals to secure themselves. "The industry is large and growing and looking for innovative solutions. The aim of Dark Matter is not to serve the UAE or GCC market but to become a global player using UAE as a hub."

The products which the company is developing currently include Securecom, blockchain technology, crypto development and big data analytics.

"We are developing securecom that will enable secure email, secure chat, secure voice and secure file share. There is a whole host of securecom portfolios which we will be announcing at the end of the quarter and next year."

Blockchain technology improves efficiency and processes and Big data analytics can be used for smart city deployment where you can integrate everything from traffic feeds, to camera feeds to electricity feed to social media feed, he said.

According to the company, European Union security agency has identified a number of cybercrime trends. They include payment fraud, the criminal use of data, online child sexual abuse, ransomware, among various other online crime activities.

UAE responding to cyber threats
Wednesday, 16 November 2016
Byline: Ashwani Kumar

Abu Dhabi - The UAE is evolving and seriously looking to tackle the challenges of cyber security, an official said on the sidelines of the RSA Conference - the world's leading information security conference and exposition - in Abu Dhabi on Tuesday.
"The UAE, in terms of security, is pretty good. There is recognition. They are willing to do more about handling the challenges. They are spending so much on industry. If we look at stats, the UAE in 2014 spent $5.7 billion, but by 2019 they will be spending $9.56 billion. That is a 13 per cent rise in term of index, so there is recognition," RSA (Europe, Middle East and Africa) advanced cyber defence practice director Azeem Aleem said. "But are they evolving with the threat? They are not advancing," Aleem noted.

"It's evolving but they are still using traditional tools. Criminals are now very specifically picking targets. They are evolving whereas we are not. There is no skills sector problem. We can't have one fix-solution for all problems," he added.

"We are seeing the industry control system in the Middle East is vulnerable. We have seen evidence in Iran, Saudi Arabia and Ukraine," Aleem added.

The conference, held in partnership with UAE National Electronic Security Authority (NESA), saw five keynote speeches, 22 track sessions and over 35 companies showcasing their latest capabilities.

Adelaide Advertiser
ID fraud linked to terrorism
Wednesday, 16 November 2016
Byline: Staff reporter

Adelaide - New research shows Australians are falling victim to identity crime at the rate of one every 20 seconds.
Justice Minister Michael Keenan will also reveal today that people convicted of terrorism offences in Australia have used false identities to assist in planning terrorist attacks.

"This includes purchasing ammunition and chemicals to make explosives and prepaid mobile phones to communicate anonymously," he told The Advertiser yesterday.

Mr Keenan said a new $50 million biometric identification system would help police and other agencies crack down on identity fraud."The Government made this investment because we realise that biometric data sources, such as fingerprints and facial images, offer a degree of accuracy and assurance in identity verification processes," he said.

Sydney Morning Herald
Airports warned of 'terrorist infiltration'
Wednesday, 16 November 2016
Byline: Rachel Olding

Sydney - Australian airports are "extremely vulnerable" to infiltration by terrorists who could launch catastrophic attacks from within, one of the world's leading cybercrime and counter-terrorism experts has warned.
Jim Kent, an adviser to the United Nations who pioneered digital investigation techniques as a British police officer, said recent events have highlighted the potential for terrorists to infiltrate airports by corrupting airport officials or hacking digital systems.

In May, Fairfax Media uncovered widespread and unprecedented corruption among Australian border security workers in Melbourne and Sydney who have been assisting organised crime rings and drug smugglers for years.

Last week, the Australian Federal Police revealed that air traffic control broadcasts at Melbourne had been hacked over several weeks by a hoaxer and there have been warnings from the Australian Criminal Intelligence Commission that links between crime gangs and terrorists are growing.

Dr Kent, who spoke to Fairfax Media in Sydney ahead of briefings with the federal government, said the risk was greater when large agencies operated in silos.

"Airports are still extremely vulnerable to infiltration ... by terrorist groups because critical monitoring of unusual activity and enforcement of security measures is rarely joined up," he said.

"Terrorist groups could still work their way into an airport like a virus, for example by covertly infiltrating baggage handlers, immigration staff, freight drivers, pilots and cabin crew."

He said the risk of infiltration was not confined to airports. It also affected nuclear reactors, utilities, transport companies and financial institutions.

As the global head of security and intelligence for data investigation company Nuix, he has briefed several companies this week on using systems that pick up on seemingly innocuous pieces of information among employees and collate it to detect patterns. He has observed terrorist cells recruit employees by "hammering" them with Facebook requests or targeting those with money troubles. He said recruitment happens over two to three years.

But Clarke Jones, a counter-terrorism adviser who worked in aviation security before the Sydney Olympics, said Australian extremists lack the capability for such attacks.

"The level of sophistication is just not there," he said.

Kit Bennetts, a former intelligence officer, policeman and airline executive, said Australia does a good job at airport security but it would be "certainly feasible" to infiltrate it.

"Terrorist organisations ... watch and learn," said Mr Bennetts, a Southern Cross University lecturer in aviation management. "You only have to pick up a spy book from the '60s to learn about recruitment and gradual involvement [or] about penetration operations."

He said investigators can follow the money trail when it comes to organised crime but ideological crime was harder to detect.

Sydney and Melbourne Airports referred questions to the Department of Border Protection and Immigration, which didn't respond by deadline.

Intelligent Risks chief executive Neil Fergus, who conducted a government review into airport security, said Dr Kent's assertion was not "grounded in fact or in any apparent understanding of the checks, controls and systems that mitigate against such developments".

He said the corruption scandals showed detection systems were working.

Wall Street Journal
NSA Chief: 'Uneven' Cooperation Between Public, Private Sectors Impedes Cyber Defenses
Wednesday, 16 November 2016
Byline: Alan Cullison

New York - The head of the U.S. National Security Agency said "uneven" cooperation between the government and private sector has hampered the fight against a "literal onslaught" of cyber attacks from criminal and state-supported hackers.
Speaking at The Wall Street Journal CEO Council, Adm. Michael S. Rogers said the host of hackers is "so large and so diverse" that perpetrators are difficult to identify. About two-thirds are criminals or criminal groups looking to steal personal information for financial gain, and the balance are state-sponsored hackers, he said.

He said company leaders need to take a personal interest in cyber security, which has become too important a matter to be delegated entirely to network security specialists.

"You need to shape the discussion," he said. "I don't pretend that this needs to totally dominate your life, but there is a significant role for you to play."

The appeal for greater cooperation challenges the abiding suspicion in the private sector about government intentions.

In a poll of executives at the conference, 9% of the respondents said they would never sufficiently trust the government with information to work with it during a cyber attack.

Another 34% said they would cooperate with the government only if their own company was being attacked, while the 57% said they would readily cooperate.

Adm. Rogers, who also heads the U.S. Cyber Command that coordinates U.S. military networks, said the traditional understanding of private and public property hampers cooperation.

"My point is that cyber does not recognize these arbitrary lines that we have drawn -- it doesn't recognize the geography," he said. "Network structures in the world wide web [are] not organized that way. Our adversaries don't work that way."

Although the U.S. is trying to defend networks within its borders, it cannot effectively do so without the help of U.S. companies that need to reveal something about their networks, he said.

"If you want me to defend something, I can't do it from the outside," he said. "I can't defend something if I don't have access to the network structure - it's like fighting with one hand tied behind your back."

Adm. Rogers said the government worked productively with Sony Pictures Entertainment Inc. after the company reported that a hacker group released a trove of data looted from its networks. That included personal information about employees and their families, e-mails, salaries at the company, and copies of then- unreleased Sony films. The U.S. government determined the attack was sponsored by the government of North Korea. Pyongyang denied the accusation.

After realizing the seriousness of the hack, he said, Sony officials contacted the U.S. government for help determining the perpetrators of the hack and developing a plan to prevent further intrusions.

He said he explained to Sony officials that government investigators would need full access to Sony networks to do an effective post-mortem, something that the company allowed only after the government promised to explain what the government was doing and why.

Toronto Star and CBC News
Canadians support more investigative powers for police -- with a catch
Thursday, 17 November 2016
Byline: Robert Cribb and CBC Staff

Ottawa - Nearly 70 per cent of Canadians are willing to give police greater powers to investigate suspects cloaked by online anonymity - as long as their actions are monitored by a judge, a Toronto Star/CBC national poll has found.
While 2,500 respondents to the poll were split down the middle on Canadians' right to complete digital privacy, most said that right should not extend to suspects in a serious crime investigation.

"The vast majority of Canadians . . . are willing to accept certain conditions . . . if it means that public safety is put first and their own families or personal safety is protected because police and intelligence agencies have these tools," said David Coletto, CEO of Ottawa-based Abacus Data, which conducted the polling on behalf of the Toronto Star and CBC News.

"When a judge is involved, when a warrant is needed, we find broad support. It's only when you take away that judicial oversight that you see a much more divided population."

The findings are part of a Toronto Star/CBC investigation into policing in the digital age, a topic under debate in national security public consultations. Top RCMP officials warn that serious crimes are increasingly unpunished because evidence is disappearing behind sophisticated encryption or being purged from the servers of telecommunications companies. The poll has an error margin of plus or minus two percentage points, 19 times out of 20.

Perhaps the most striking finding is that Canadians are open to a police proposal for a law allowing authorities to compel a suspect in a criminal investigation to hand over the password or encryption key to investigators.

Initially, nearly half of respondents - 49 per cent - agreed police should have the ability to access personal devices. With the addition of a judge's authorization, support jumps to 77 per cent.

"There's broad support . . . which I think was an interesting finding," Coletto said.

"Canadians - and I've seen this in other research we've done on other controversial issues - are open-minded. They're willing and open to being persuaded about public policy questions."

There is a notable gender gap in the responses with men taking a distinctly stronger privacy position than women.

For example, 55 per cent of men agreed that every Canadian has the right to complete digital privacy versus 40 per cent of women.

For suspects in serious crime investigations, 30 per cent of men insist on complete digital privacy as a right. Only 17 per cent of women demand that right for crime suspects.

Other key findings include:

19 per cent of Canadians are "privacy purists" who oppose any infringement on their digital privacy, even if they are suspected of committing a serious crime. The purists are 71 per cent male and are much more likely to use encryption. They are also less trusting of law enforcement, security, or legal institutions.

47 per cent of Canadians are "conditionalists" who are split on the complete right to digital privacy but agree that suspects in serious criminal investigations would lose the right if a judge issues a warrant.

19 per cent of Canadians are "security firsters" who believe Canadians do not have a right to complete digital privacy, especially for those suspected of committing a serious crime. Security firsters are 61 per cent female, older (57 per cent are 45 years or older) and are more trusting of law enforcement and intelligence institutions.

The initial polling of 1,500 people was completed Oct. 20 to 22.

A second phase of polling took place Nov. 7 to 9, after reports that a Federal Court judge found that Canada's intelligence agency, CSIS, had illegally gathered Canadians' private information and that Quebec police intercepted and tracked the cellphones of at least 10 journalists to discover their sources.

An additional 1,000 Canadians were polled in this second phase.

The results showed almost no meaningful change.

There was very little or no change among different age groups (young people share many of the same opinions as older respondents) and political persuasions.

Police in Canada - including RCMP Commissioner Bob Paulson - are calling for access to the basic identifying information without requiring a warrant from a judge.

That's where Canadians draw a line.

More than three-quarters of respondents say police should be required to get a warrant from a judge every time they search a suspect's basic digital information.

Even when presented with law enforcement's argument that the time and red tape involved in obtaining a warrant can slow down and even entirely undermine an investigation, only 35 per cent supported a law that would allow warrantless access.

Canadians are split on the police proposal for a law that would require telecommunications companies to retain data for two years so police could access data.

Forty-one per cent agree, 39 per cent disagree and 19 per cent are unsure.

But agreement rises to 66 per cent if a warrant is obtained.

"That check actually makes people who were initially uncomfortable, far more accepting of the police having that ability to use that data when they think it's important for their investigation," Coletto said.

The only question that produced near consensus asked Canadians if police and intelligence agencies already have the ability to monitor Internet activities.

Ninety-four per cent said they believe authorities can already do so surreptitiously.

Nearly half of respondents said they believed their Internet activity is monitored by police or intelligence agencies.

"These two data points suggest that even though . . . a significant portion believes they have a right to digital privacy, very few think that it's possible for them to be completely anonymous online," Coletto said.

They are right, said former provincial information and privacy commissioner Ann Cavoukian.

"This type of activity has been going on for a long time," she said.

"This is something we need to be very concerned about. To me, freedom is absolutely critical. Preserving that freedom now and well into the future will take all of our efforts."

Robert Cribb can be reached at rcribb@thestar.ca

Surveillance watchdog says C-22 not likely to be abused
Thursday, 17 November 2016
Byline: Amanda Connolly

Ottawa - The man in charge of overseeing Canada's electronics surveillance agency says there is no reason to believe the government would abuse controversial provisions in its national security committee legislation that give ministers the power to refuse to disclose requested information.
"I don't see why they would do that unless they are in bad faith, and I assume that everybody is in good faith unless the contrary is proven to me," said Jean-Pierre Plouffe, commissioner of the Canadian Security Establishment. "The fears we have are seldom realized to the same extent we had thought. Yes, it is a restriction, but it is a reasonable one."

Bill C-22, currently being studied at the House of Commons public safety committee, would create a nine-member committee of parliamentarians tasked with monitoring and scrutinizing the activities of all government departments and agencies that engage in national security activities.

While it would bring Canada up to speed among the Five Eyes intelligence allies (we are currently the only one without such a committee), opposition critics have raised red flags over several key components of the bill.

First, the legislation would allow the government to appoint a chair of the committee as well as all of its members rather than allowing parliamentarians to vote to confirm them or allow committee members to elect their own chair.

Second, the bill contains what some national security experts have dubbed "potential Mack truck exemptions" when it comes to giving ministers the power to refuse to disclose information the committee has requested.

Third, it requires the committee to submit any reports it produces to the prime minister for vetting and requires that the committee scrub the report for issues the prime minister flags as potentially jeopardizing national security before the report can be presented to Parliament.

There is no recourse mechanism for the committee to challenge required redactions or ministerial refusals to disclose information.

The government says the committee would have the power to complain publicly when it feels it is being censored and the public backlash would be a powerful mechanism for motivating a government not to refuse or redact unless absolutely necessary.

However, the lengthy battle of trying to force the former Conservative government to disclose information related to the Afghan detainee scandal in 2010 often comes up in discussions among committee members who suggest "national security" could encompass pretty much anything the

government doesn't want to make public and also cannot be challenged or evaluated in an objective way.

The creation of a committee tasked with national security oversight was a key campaign promise by the Liberals and also part of their plan to reform national security in light of the controversial bill C-51, passed by the former government.

That bill sparked a huge public backlash after it was perceived as going too far in allowing for expanded information sharing among government departments, enhancing the powers of the Canadian Security Intelligence Service, and lowering the legal threshold for who can be surveilled by law enforcement.

Ian McPhail, chair of the RCMP's Civilian Review and Complaints Commission, was also at the committee and stressed the need for a continued discussion around the balance of privacy and civil liberties, and suggested the committee can play a leading role in leading that conversation for Canadians.

"There is a constant tension between our commitment to civil liberties but also to the protection of Canadians in terms of national security issues," he said. "Exactly how that balance should be reached I would see as being one of the key purposes of this committee because the review bodies aren't able to perform that function. The committee, provided there's not undue partisanship, should be able to do so."

The committee is working to complete hearings and move to clause-by-clause consideration by November 23.

Once complete, the bill will head back to the House of Commons for third reading.

CBC News and Toronto Star
Canadians want judicial oversight of any new digital snooping powers for police: Poll
Thursday, 17 November 2016
Byline: Dave Seglins, Robert Cribb and Chelsea Gomez

Most Canadians feel strongly about their right to privacy online, but a new poll shows the vast majority are willing to grant police new powers to track suspects in the digital realm -- so long as the courts oversee the cops.
Nearly half of the respondents to an Abacus Data survey of 2,500 Canadians agreed that citizens should have a right to complete digital privacy. But many appeared to change their mind when asked if an individual suspected of committing a serious crime should have the same right to keep their identity hidden from police.

"The vast majority of Canadians ... are willing to accept certain conditions ... if it means that public safety is put first and their own families or personal safety is protected because police and intelligence agencies have these tools," Abacus CEO David Coletto said.

"When a judge is involved, when a warrant is needed, we find broad support. It's only when you take away that judicial oversight that you see a much more divided population."

The survey, conducted on behalf of CBC News and the Toronto Star, asked Canadians about their views on three specific proposals to expand police powers, which are raised in a federal discussion paper that's part of a review of Canada's Anti-Terrorism Act.?

Police across the country say they need expanded powers to track crime suspects and national security threats who use encryption and other high-tech tricks to hide their digital tracks.

RCMP Commissioner Bob Paulson put it this way:

"If you've got a complaint of criminality on the internet, you're going to have to think about where you go with that complaint because I don't know that we can help you. And that's a terrible thing for a person who's in charge of a police force to say when citizens, when companies, when corporate Canada, or indeed the government comes to us and says, 'Hey, we've been victimized on the internet.'"

Passwords and encryption codes

Respondents were evenly split on whether police should be able to demand suspects or witnesses hand over passwords or codes to unlock devices and encrypted data.

But support for granting police this authority increased to 77 per cent if a judge is required to first approve a warrant.

Phone and internet user data

Less than half of respondents agreed communications providers should be forced to keep text, email, phone and internet records for two years to assist potential criminal investigations.

But support jumped to 66 per cent if access to the stored information is protected and police would need a judge's order before accessing a suspect's records.

"Under the right conditions, there is broad support for this across political lines, across gender and even across generation," Coletto said.

Paulson says access to this information is crucial.

"That's a very important data set that we would only access with a warrant, but it has to be there," the top Mountie told CBC News and the Toronto Star. "Because there's nothing worse than trying to go and recreate somebody's movements through cell sites or to deduce who the offender is and the data's all been destroyed."

Easy access to subscriber info

Opposition was strongest to the third proposed new power for police: access to basic subscriber information (such as a user's name and IP address) without authorization from a judge.

Most respondents (78 per cent) said police should need judicial approval to ask a communications company for a person's basic digital identity, and only 35 per cent said they'd support a system where a senior police officer or prosecutor could sign off.

Police used to request subscriber information hundreds of thousands of times a year, but that changed in 2014, when the Supreme Court ruled that in the absence of a specific law, police requests to phone and internet companies amount to a search and therefore require a warrant.

Police compare it to looking up licence plate information, which doesn't require permission from a judge.

Plus, Paulson says, Canada lags behind its allies the U.S., Australia, New Zealand and the U.K., which allow senior police officers or prosecutors to oversee the requests.

But again, Coletto says, judicial oversight is clearly important to Canadians.

"Even when we give both sides of the argument, we find Canadians are more likely to oppose a new law that would give police that authority or administrative authorization than those that would support it."

Abacus Data surveyed 1,500 Canadians in October, before two major news stories broke about privacy and authority. The first found CSIS had violated court orders and the other revealed Montreal police got approval from a justice of the peace to track the cellphones of six journalists.

CBC and the Toronto Star had Abacus survey another 1,000 Canadians after the stories made headlines.

Coletto says the overall results remained identical, but he cautions the stories could still affect public trust.

"Awareness of these stories has not reached a saturation point," he said.

"Support for expanding powers is tied to judicial oversight. If these organizations don't follow the court orders, then we might see public acceptance of expanded powers deteriorate."

Globe and Mail
Canadian journalists push for 'shield law' to protect sources
Thursday, 17 November 2016
Byline: Daniel Leblanc

Ottawa - Journalists and parliamentarians are putting pressure on the Liberal government to enhance the protection of reporters and confidential sources, calling for quick legislative changes instead of rhetorical support for the freedom of the press.
The calls flow from recent cases in which police spied on journalists to obtain information on their sources, raising questions across Canada about the quality of the judicial process for obtaining warrants.

At a news conference in Ottawa on Wednesday, two journalists who are in legal battles with police authorities backed a proposal for a "shield law" that allows reporters to protect the identity of their sources and confidential information.

"Mine is just one of many cases of the growing erosion of press freedom in Canada," said Ben Makuch, a journalist for Vice News who is refusing to provide information from a confidential source to the RCMP.

Mr. Makuch faces a possible jail sentence for refusing to comply with a court order. He said the RCMP's actions have created "irreparable damage" to journalists' ability to win the trust of sources.

Patrick Lagacé, a journalist at La Presse, recently learned that the Montreal police service had obtained judicial approval to consult his phone records, tap his phone and trigger the GPS on his mobile device to track his meetings with sources. He said the Liberal government is saying all the right words in the defence of journalistic freedom, but that police officers need to face tougher requirements to go after a journalist's sources.

"The mentality of police officers is not different whether you are in Saskatchewan or British Columbia or Quebec," Mr. Lagacé said. "I am convinced that other police agencies, if they can have access to this type of information, will try to do so without asking themselves any questions."

Also present at the news conference were journalist and author Mohamed Fahmy, who was imprisoned for more than a year in Egypt because of his reporting, and Tom Henheffer, the executive-director of Canadian Journalists for Free Expression. Mr. Henheffer said he distrusts agencies such as the RCMP and CSIS that have increased means to monitor electronic communications, and that new laws are needed to curtail their powers.

"The fact is the state apparatus and the surveillance capabilities of the state are absolutely enormous, and we cannot fully protect ourselves against them," he said. "That is why there needs to be a change at the legislative level in order for us to really enjoy a free press in Canada. I don't fully trust government

agencies because there is a lack of accountability, but all of that can be fixed with simple legislative changes."

Prime Minister Justin Trudeau has expressed his concerns over the recent revelations involving Mr. Lagacé, and Public Safety Minister Ralph Goodale has said his government is open to toughening the rules that govern how and when the federal government can investigate members of the media. "All of the safeguards in place at the federal level are being reassessed to make sure they are strong enough," he said in the House of Commons. "We are welcoming any input from journalists, lawyers or others if they have suggestions to make about how the law needs to be improved."

The NDP is arguing the government needs to go further and launch a public inquiry into the protection of sources at the federal level.

"The government certainly talks a better game than the previous [Conservative government], but at the end of the day, it's the legislation that matters," NDP MP Matthew Dubé said.

Washington Post
In our new Cold War, deterrence should come before detente
Tuesday, 15 November 2016
Byline: David Ignatius

Column - The White House sent a secret "hotline"-style message to Russia on Oct. 31 to warn against any further cyber-meddling in the U.S. election process. Russia didn't escalate its tactics as Election Day approached, but U.S. officials aren't ready to say deterrence worked.
The previously undisclosed message was part of the high-stakes game of cyber- brinkmanship that has been going on this year between Moscow and Washington. How to stabilize this relationship without appearing to capitulate to Russian pressure tactics is among the biggest challenges facing President-elect Donald Trump.

The message was sent on a special channel created in 2013 as part of the Nuclear Risk Reduction Center, using a template designed for crisis communication. "It was a very clear statement to the Russians and asked them to stop their activity," a senior administration official said, adding: "The fact that we used this channel was part of the messaging."

According to several other high-level sources, President Obama also personally contacted Russian President Vladimir Putin last month to caution him about the disruptive cyberattacks. The senior administration official wouldn't comment on these reports.

The private warnings followed a public statement Oct. 7 by Director of National Intelligence James Clapper and Secretary of Homeland Security Jeh Johnson charging that "Russia's senior-most officials" had authorized cyberattacks that were "intended to interfere with the U.S. election process."

The senior administration official said Russia gave a "noncommittal" response to the Oct. 31 message, neither acknowledging the U.S. charges nor denying them. But the official confirmed reports by other high-level sources that after the public and private warnings, Russia did not increase its cyber-activity and may have reduced it.

"We did not see an escalation of Russian cyber-activity aimed at either trying to disrupt the election process or trying to influence the process, in the month leading up to the election," said one senior official. A second senior official cautioned, however, that it was too early to say "whether the Russians were deterred" from additional activity.

The White House feared a last-minute Russian cyber-onslaught right up to Nov.?8, but it apparently never came. "We saw no evidence of any systematic attempt to disrupt the election on Election Day," the first official said.

These disclosures about secret U.S.-Russia contacts are the latest chapter in the story of heightened confrontation between the two countries -- a process that Putin and Trump say they are seeking to reverse. Putin phoned Trump on Monday to discuss ways to improve current "unsatisfactory" relations after Trump takes office and seek a "partner-like dialogue," according to a Kremlin statement.

The Obama administration has grappled with how to establish norms of deterrence in cyberspace that check destabilizing actions by an aggressive, risk-taking Russia. The White House thought it was making progress with a joint statement at the November 2015 G-20 summit in Antalya, Turkey, which affirmed that "international law applies to state behavior in cyberspace." The United States argues that this commitment includes observing laws of armed conflict that require proportionality and limited collateral impact in whatever battlespace. But the Obama administration fears Russia is ignoring these limits.

The Obama administration is ready to explore these issues further with Russia through a little-known "working group" created under a defunct "presidential bilateral commission." The working group last met in April in Geneva. At that meeting, according to the White House, "both sides discussed the possibility of expanding the quantity and scope of information sharing about malicious activity occurring on the networks of both countries."

Those words ring hollow now, in light of alleged Russian activities this year.

Russia experts in the Obama administration caution their successors: "It will be very difficult for the next administration .?.?. to know what Russia's intentions are and whether you can have confidence that they will live up to their commitments," said the second official. Russia has shown "increasing willingness to take risky actions," and "old assumptions about the careful, calculating, risk-averse nature of Russian leadership .?.?. seem to be shifting."

Republican Sen. John McCain (Ariz.), a longtime critic of Russia, issued a similar warning Tuesday about Putin's professed desire for "partner-like" relations. "We should place as much faith in such statements as any other made by a former KGB agent who has plunged his country into tyranny, murdered his political opponents, invaded his neighbors, threatened America's allies and attempted to undermine America's elections," he said.

A new Cold War has begun in cyberspace. Trump seems to want detente. But first he should think carefully about how to establish clear norms of deterrence in this new domain.

New York Times
The World Needs WikiLeaks
Thursday, 17 November 2016
Byline: Sarah Harrison

Op-ed from Berlin - My organization, WikiLeaks, took a lot of heat during the run-up to the recent presidential election. We have been accused of abetting the candidacy of Donald J. Trump by publishing cryptographically authenticated information about Hillary Clinton's campaign and its influence over the Democratic National Committee, the implication being that a news organization should have withheld accurate, newsworthy information from the public.
The Obama Justice Department continues to pursue its six-year criminal investigation of WikiLeaks, the largest known of its kind, into the publishing of classified documents and articles about the wars in Iraq and Afghanistan, Guantánamo Bay and Mrs. Clinton's first year as secretary of state. According to the trial testimony of one F.B.I. agent, the investigation includes several of WikiLeaks founders, owners and managers. And last month our editor, Julian Assange, who has asylum at Ecuador's London embassy, had his internet connection severed.

I can understand the frustration, however misplaced, from Clinton supporters. But the WikiLeaks staff is committed to the mandate set by Mr. Assange, and we are not going to go away, no matter how much he is abused. That's something that Democrats, along with everyone who believes in the accountability of governments, should be happy about.

Despite the mounting legal and political pressure coming from Washington, we continue to publish valuable material, and submissions keep pouring in. There is a desperate need for our work: The world is connected by largely unaccountable networks of power that span industries and countries, political parties, corporations and institutions; WikiLeaks shines a light on these by revealing not just individual incidents, but information about entire structures of power.

While a single document might give a picture of a particular event, the best way to shed light on a whole system is to fully uncover the mechanisms around it -- the hierarchy, ideology, habits and economic forces that sustain it. It is the trends and details visible in the large archives we are committed to

publishing that reveal the details that tell us about the nature of these structures. It is the constellations, not stars alone, that allow us to read the night sky.

There are two contradictory myths about how we operate: on one hand, that we simply dump whatever comes to us into the public's arms; and on the other, that we pick and choose material to harm our alleged political enemies.

We do neither. Yes, we believe in the integrity of source material, in the value of conserving pristine collections of documents, and we strive to make this historical record accessible to the public. We publish in full, in an uncensored and uncensorable fashion. But we also research, validate and contextualize the submissions we receive. While it can be difficult to balance the needs of the public to have timely access to large archives with individual privacy, such concerns have mostly been disingenuous.

At times we receive individual documents, but we have come to specialize in large collections. Over the last decade we have vetted, indexed and published an average of 3,000 documents per day, including over 300,000 reports covering the wars in Iraq and Afghanistan, more than two million emails from Syrian political figures and over 120,000 documents from the Saudi Arabian Ministry of Foreign Affairs. We also curate the Public Library of United States Diplomacy, the world's largest collection of diplomatic cables (nearly three million).

WikiLeaks has transformed more than 10 million documents into a unique searchable archive, not only making our website the world's largest online library for suppressed information, but also enabling greater contextualization through relationships across publications.

Some have accused us of being pawns of the Russian government, but this misrepresents our principles and basic operations. WikiLeaks relies on our editor's invention of a secure anonymous online submission system to protect sources' identities. This technology has become a standard for many media outlets around the world. We prefer not to know who our sources are; we do not want to, and usually do not need to. What matters to us is the authenticity of the documents.

This has always been our position and approach, whether we were publishing material about the George W. Bush administration's wars or corruption within the Democratic Party. The establishment media was happy to work with us on the former, but turned against us when it came to the latter, calling into question our intentions and those of Mr. Assange. CNN has even suggested, wrongly, that readers may have legal troubles if they download documents from our site.

While we have no institutional bias and can publish only what we receive, we are happy to publish documents about any presidential candidate, at any time, anywhere for a globally significant election.

We publish without fear or favor, bringing transparency to powerful factions and secretive institutions, not taking any sides except that of the truth. We believe in the democratization of information and the power that knowledge gives to people to further peace, accountability and self-determination.

WikiLeaks will continue publishing, enforcing transparency where secrecy is the norm. While threats against our editor are mounting, Mr. Assange is not alone, and his ideas continue to inspire us and people around the world.

Note: Sarah Harrison is a journalist and editor for WikiLeaks.

Reuters
Trump cyber security team, policy slow to take shape: officials
Thursday, 17 November 2016
Byline: Dustin Volz, Mark Hosenball

Washington - President-elect Donald Trump's transition team has not announced a point person dedicated to cyber security policy or staffing in his administration, an omission that could make the United States more vulnerable to threats and worsen a government cyber talent shortfall, current and former national security officials said.
They and multiple sources involved with the Trump transition organization said they were unaware of any person in the Trump orbit who is dealing specifically with cyber security, and that there has been minimal contact with federal agencies.

The apparent lack of expertise or prioritization coincides with U.S. intelligence agencies, including the CIA, having pivoted to digital warfare to address the growing national security and economic threats that nation-states and extremist groups pose in cyberspace.

In response to a request for comment, a Trump spokeswoman referred to a cyber-security "vision" on Republican Trump's campaign website, which calls for an immediate review of U.S. cyber defenses and vulnerabilities and lists high- profile hacks as "key issues" without further explanation.

It did not mention cyber attacks on Democratic Party political organizations during the election campaign that the U.S. government said were carried out by Russia to interfere with the Nov. 8 vote. Trump praised WikiLeaks for publishing leaked emails from his opponent Hillary Clinton's campaign and also questioned whether Russia was responsible for the hacks.

A former National Security Agency (NSA) official who reviewed the "vision" statement said it was short on detail.

Kellyanne Conway, a senior advisor to Trump who managed his campaign, told reporters in the lobby of Trump Tower Wednesday that reports of a rocky transition process were false.

"You don't form a federal government overnight," she said.

The ousting of former Republican lawmaker Mike Rogers from Trump's transition team on Tuesday left a void of expertise on cyber and intelligence matters for the president-elect, officials said.

Rogers, who chaired the House Intelligence Committee while in Congress was talked about in Washington as a potential CIA Director or Director of National Intelligence.

Former Defense Intelligence Agency Director Michael Flynn and retired lieutenant general Ronald Burgess are part of Trump's transition team. They were focused on intelligence and security matters, according to a Trump team document that has circulated among Washington trade and lobbying organizations in the week since the New York businessman's stunning election victory.

Flynn is a contender to be the next Director of National Intelligence or White House National Security Adviser, according to people close to him and multiple media reports. A less likely possibility, according to the people, is Flynn would be named head of the National Security Agency.

But neither Flynn nor Burgess are experts on cyber security, nor have they indicated an interest in the subject to Obama administration officials, sources close to the Trump and Obama teams said.

TALENT GAP

The federal government has struggled for years to keep pace with the rising need for cyber talent.

A July memo from the White House's Office of Management and Budget found a critical shortage of talent across the country was worsened in government, caused in part by an inability to compete with lucrative salaries in the private sector.

James Norton, a former George W. Bush administration official who helped set up the Department of Homeland Security's first cyber security team, said that Trump's transition team may be waiting to move forward on the issue until after cabinet-level security posts are filled.

"Cyber will be a priority," said Norton, now president of Washington-based consulting firm Play-Action Strategies LLC. "There's a little bit of fog, but I think that will clear once the names of the nominees are out."

But finding and retaining qualified technical people to serve in government may become even more difficult under a Trump presidency because of disagreements with his policies and politics, three former national security officials said.

The president-elect's bombastic statements on the campaign trail frequently alarmed tech companies and at times elicited public mockery, such as when Trump called for closing off parts of the Internet to limit militant Islamist propaganda or urged his supporters to boycott Apple when it refused to help the FBI unlock an iPhone tied to one of the San Bernardino, Calif., shooters.

Susan Hennessey, a former attorney in the office of the general counsel at the NSA, said she has been urging people in the intelligence community to keep working in Trump's administration because their expertise will be necessary to protect the country and resist potential abuses of executive power on issues such as surveillance.

"In candor, I'm sad to be asking former colleagues whom I respect to consider setting aside their conscience in order to serve their country," said Hennessey, who now serves as managing editor of the national security blog Lawfare. "I can't and don't blame anyone who feels they can't stay."

A current national security official who has been approached by the Trump transition team said all or most political appointees in the Obama administration are expected to be sent packing after Trump's inauguration on Jan. 20. He predicted that as much as five to 10 percent of the federal workforce also might leave.

Richard Clarke, a former senior White House advisor on counterterrorism and cyber security in both the Bill Clinton and George W. Bush administrations, said Trump's election presents an opportunity to civil servants to help shape or resist the president-elect's opinion on policy matters. He said many of the same concerns about Trump existed within the federal bureaucracy when former President Ronald Reagan was elected in 1980.

"These people like Reagan and Trump are not well-grounded in policy," Clarke said. "They don't have a lot of firm beliefs that stem from years of analysis and experience," Clarke told Reuters. "You can change their mind if you do it subtly, if they trust you. And you may not even know you've changed their mind, because they don't know what their mind is."

Some parts of government are more effective than others at "slow-rolling" the president's impulses, Clarke said. But "you can't slow-roll work that needs to be done," such as improving cyber security and addressing cyber threats, he said.

New York Times
White House Confirms Pre-Election Warning to Russia Over Hacking
Thursday, 17 November 2016
Byline: David E. Sanger

Washington - Over the past month, President Vladimir V. Putin of Russia has received two starkly different messages about hacking into American computer networks from the current and future presidents of the United States: Don't you dare, and don't worry, we're not even sure it was you. The White House confirmed in a statement on Wednesday that eight days before the presidential election, the United States "contacted the Russian government directly regarding malicious cyberactivity" that was "targeting U.S. state election-related systems." It sent the message over a rarely used system: a hotline connecting the Nuclear Risk Reduction Centers in both countries, which they had agreed three years ago could also be employed to deal with major cyberincidents.

The pre-election warning -- only the latest after verbal cautions by President Obama, his defense secretary and the director of national intelligence -- was reported by The Washington Post.

The warnings to Russia against further hacking into polling or registration systems, or any further effort to affect the outcome of the election, are being hailed by the Obama administration as a success in deterrence. After all, they argue, a year and a half of Russian hacking activity seemed to slow, or halt, and there is no evidence that voting or counting of ballots was disrupted on Election Day.

But more than a few experts in deterring cyberattacks take a more skeptical view. They say the Russians had already achieved their main goal: to demonstrate how they could disrupt the American electoral process with the leak of hacked emails, including from the Democratic National Committee and Hillary Clinton's campaign chairman, John D. Podesta.

Mr. Putin suffered nothing worse than a warning, they note -- no sanctions, no counter cyberstrikes, no embarrassing revelations engineered by the United States. And he now has the satisfaction of dealing with President-elect Donald J. Trump, who during the campaign praised him, promised to build a more productive relationship with Russia and maintained there was no evidence that the Russians were behind the hacking.

"Anytime anything wrong happens they like to" blame the Russians, Mr. Trump said in an Oct. 10 debate with Mrs. Clinton. "She doesn't know if it's the Russians doing the hacking. Maybe there is no hacking."

Mr. Trump contended that the allegations of Russian activity were intended to "tarnish me" for advocating a new relationship with Moscow. He frequently repeated similar sentiments in the last weeks of the campaign, suggesting the hacking was a fabrication. The leaks of emails worked largely to his advantage, embarrassing Democratic leaders like Representative Debbie Wasserman Schultz of Florida, who was forced to resign as the chairwoman of the Democratic National Committee.

Mr. Trump's larger strategic message is that the United States and Russia need to cooperate on a range of issues.

But for now the situation underscores the uncertainty around the world about the direction of American foreign policy and gives Mr. Putin the opportunity to exploit differences between the current president

and his successor until Mr. Trump is inaugurated on Jan. 20. It is also raising the question of whether the Obama White House pushed back hard enough when American intelligence agencies concluded on Oct. 7 that "only Russia's senior-most officials could have authorized these activities."

James A. Lewis, a computer expert at the Center for Strategic and International Studies in Washington, dismissed the administration's claim that it had deterred Russia's hacking.

"It seems a little bold to claim this is a success for deterrence, since the Russians weren't deterred from doing anything," he said. "Their hacking work was mostly complete. The issue now is whether they will be deterred in the future, and the guessing is they will not. Strong private warnings aren't enough to constitute deterrence."

In fact, the Russians appear to have paid less of a price for their hacking around the election than North Korea did for its attack on Sony Pictures Entertainment in 2014. That attack melted down about 70 percent of Sony's computers and servers at its studios, wreaking considerable damage, and embarrassed many Sony executives. It was in response to the release of a movie, "The Interview," that imagined a C.I.A. plot to kill Kim Jong-un, the North Korean leader.

After the Sony episode, the United States issued more sanctions against North Korea and encouraged China to limit the North's internet access, all of which runs through Chinese switching centers. Many experts had expected the White House to follow a similar path with Russia.

Instead, the White House concluded that the warnings, and the unstated suggestion that the United States had the power to reach inside Russian networks and see the origin of attacks, might suffice. It is not clear if the administration plans any other actions against Russia before Mr. Obama's departure from office, but that seems less and less likely.

The Oct. 31 warning did not deal with the hacking of the Democratic National Committee or Mr. Podesta's account, which James R. Clapper Jr., the director of national intelligence, had previously said was conducted with the knowledge of the Russian leadership. Instead, it referred only to the concerns about hacking around the election process itself, and the fear it was originating from Russian territory, though it stopped short of saying it was a state-sponsored attack.

China Daily
Xi: Share internet governance
Thursday, 17 November 2016
Byline: Cao Yin and Zhang Zhihao

Wuzhen, Zhejiang - President Xi Jinping, who addressed a meeting of global internet experts on Wednesday, called for all countries to have independence in managing their own internet industry and equality among nations in participating in global information industry governance.

In a keynote speech via video at the opening of the third annual World Internet Conference in Wuzhen, Xi said that China would like to work together with the international community to "ensure the common well-being of humanity, uphold cyberspace sovereignty and also promote more fair and equitable global internet governance".

The three-day internet conference in the ancient Zhejiang province township has attracted more than 1,600 attendees from 110 countries and regions.

Xi applauded the great progress that has come with the internet, and discussed its new challenges and opportunities. "The development of the internet has no national boundaries. To take advantage of, promote and govern it, we must call for closer international cooperation and joint efforts to build a community of a common future in cyberspace," he said.

"A gentleman puts basic principles first, which will illuminate the way forward," he quoted a Chinese proverb as saying.

Liu Yunshan, a member of the Standing Committee of the Political Bureau of the Central Committee of the Communist Party of China, who attended the opening ceremony, said that China, a large internet country with more than 700 million netizens, is willing to strengthen policy coordination and cooperation with other countries.

To benefit all people of the world, "we should build a multilateral and transparent global internet governance system," Liu said.

Cooperation should be strengthened in coping with cyberspace security challenges, aiming to safeguard State security, public interest and citizens' legitimate rights, he said.

Del Christensen, chief of global business development for the Bay Area Council, a business- sponsored, public policy advocacy group based in San Francisco, said after listening to Xi that there should be "some standard that the world should abide by forge better cooperation and trade."

"The internet is not a lawless zone. Every other subject like finance, military and medicine all have rules. The internet should be no different," he added.

Global Times
Threats from cyberspace 'pressing and vital' in China: top State secret official
Thursday, 17 November 2016
Byline: Staff reporter

Beijing - Security threats coming from cyberspace are pressing and vital and China must increase its efforts to improve security technology to safeguard national interests, said a top official from the State secret administration.
"A series of Internet leaks in China and other countries show the threats coming from cyberspace are pressing and vital, and the technology to safeguard information security needs to be reliable, self-developed and controllable," Tian Jing, director of the National Administration for the Protection of State Secrets, told the People's Daily in an interview that was published on the newspaper's website on Wednesday.

Over 70 percent of leaked information classified as national secrets was passed on via the Internet, according to a 2014 report from the Internal and Judicial Affairs Committee of the National People's Congress.

China's top legislator adopted a revision to the Law on Guarding State Secrets in 2010 which defines a "State secret" as "information concerning State security and interests," the Xinhua News Agency reported.

Though China has established a system of security technology that covers a wide range of areas and is mutually supportive, information security technology still cannot meet the current requirements, and China must improve its technology effectively and innovatively, said Tian.

R&D talents and resources from academic institutes, universities and information security companies must be integrated into the country's efforts to safeguard State secrets with increasing government support, Tian noted.

Whoever steals, spies on, or unlawfully supplies State secrets or intelligence to overseas agencies may face punishments including the death penalty, according to China's Criminal Law.

Kyodo News
Japanese ICT solutions providers gearing up for Thai digital economy
Thursday, 17 November 2016
Byline: Silpchai Prasarnsuklarp

Bangkok - Japanese companies providing information and communication technology solutions are gearing up to meet increasing demand for digital services among Thai businesses, as the government is attempting to drive forward the country on the strength of the digital economy.
Japan's Ministry of Internal Affairs and Communications signed agreements Monday with two Thai government organizations in a bid to encourage bilateral ICT collaboration.

One agreement was inked with the National Broadcasting and Telecommunications Commission, Thailand's telecom regulator, for the purpose of telecom and broadcasting exchanges, while the other

accord was signed with the newly established Ministry of Digital Economy and Society for ICT development cooperation covering disaster risk management, cyber security and postal services.

Atsuko Tominaga, deputy manager at the Global Business Division of Internet Initiative Japan Inc., a leading cloud service provider, said IIJ has seen growing demand for data centers in Thailand due to government efforts to enhance the ICT sector by promoting the digital economy.

The company is planning to provide a modular data center and its procedural knowledge to the Thai side in the near future, she added.

IIJ has set up a joint venture with a Thai partner, T.C.C. Technology Co., which provides hosting and data center services, to offer local companies cloud solutions.

IIJ's cloud services, launched in the Thai market in October, have received good feedback from entrepreneurs who need cloud computing technology to help them run businesses, Tominaga said, adding the joint venture, Leap Solutions Asia Co., now has nearly 100 clients, both Thai and Japanese.

Veerapol Paisarnsupnimit, sales director at NTT Data (Thailand) Co., a subsidiary of Japan's Nippon Telegraph and Telephone Corp., said the company also sees potential for digital economy development in Thailand and plans to widen its customer base to small and medium-sized enterprises next year by collaborating with NTT's offices in Singapore and Malaysia.

Moreover, the company will pay more attention to serving non- Japanese corporations rather than focusing on Japanese multinational businesses. It is aiming to even the ratio of Japanese and non-Japanese customers, compared with 60:40 at present.

The Australian Financial Review
Infrastructure may fall victim to cyber attack
Thursday, 17 November 2016
Byline: Yolanda Redrup

Canberra - A former FBI special agent who oversaw the bureau's investigation of the 9/11 terrorism attacks says nation states are at risk of cyber terrorism attacks, with many foreign nations already having the capability to take down a foreign country's infrastructure assets.
But Mary Galligan, who is visiting Australia as part of her role as managing director of Deloitte & Touche's Cyber Risk Services practice, said the real risk would arise if these offensive measures were to fall into the hands of terrorists or rogue nations.

"Right now the way terrorists use the internet is highly concentrated on how they can radicalise individuals. They've figured out how to use the internet and click media campaigns to get individuals around the world to become radicalised and travel around the world," she said.

"But we can never talk enough about what could happen. Looking at history we've been criticised for not having done this enough. But it ends up coming back to the response ... so we also need to talk about having resilience to technical issues, regardless of where it comes from or how it's caused."

Ms Galligan spent 25 years with the FBI, with the first half of her career spent in the terrorism division combating al-Qaeda, before becoming the head of cyber and crisis management, where she responded to high-level cyber threats involving the financial services industry, media, hotels and retailers.

She joined Deloitte after leaving the FBI in 2013 and since then has provided cyber briefings to more than 60 boards of major US private and public companies.

The ASX and the Australian Investments and Securities Commission launched cyber "health checks" for the ASX top 100 firms last week, and Ms Galligan said firms that do not undertake risk assessments end up ill-equipped to deal with cyber threats.

"Organisations who do not take the time to do a cyber risk assessment and then come up with a strategy have often found themselves not being about to find out how much they should spend in each area, or they spend way too much in one area [of protection]," she said.

"Like any other part of the business, if you don't do an assessment, you don't have a strategy to follow."

The ASX's health checks, which form part of the government's cyber security strategy, were developed alongside professional services firms such as Deloitte, EY, KPMG and PwC.

Deloitte head of cyber governance and strategy in Australia, Tommy Viljoen, said the health checks for Australia's biggest businesses were just the first part of a larger strategy that would eventually see them rolled out to smaller companies.

"We have to start with the biggest organisations. It's about getting an independent view of how healthy the top 100 are, and then over time we'll cascade that down," he said.

"We've done a number of these reviews in the past 12 months, following the United State's National Institute of Standards and Technology (NIST) framework with organisations on a voluntary basis ... and I'm yet to see an organisation that has reached the level of cyber maturity that they'd like to be at."

Mr Viljoen said even though big businesses had more resources, they knew they still had room for improvement on cyber security.

"They're still not 100 per cent comfortable with where they're at."

The Intercept
TITANPOINTE
Wednesday, 16 November 2016
Byline: Ryan Gallagher, Henrik Moltke

New York - They called it Project X. It was an unusually audacious, highly sensitive assignment: to build a massive skyscraper, capable of withstanding an atomic blast, in the middle of New York City. It would have no windows, 29 floors with three basement levels, and enough food to last 1,500 people two weeks in the event of a catastrophe.
But the building's primary purpose would not be to protect humans from toxic radiation amid nuclear war. Rather, the fortified skyscraper would safeguard powerful computers, cables, and switchboards. It would house one of the most important telecommunications hubs in the United States -- the world's largest center for processing long-distance phone calls, operated by the New York Telephone Company, a subsidiary of AT&T.

The building was designed by the architectural firm John Carl Warnecke & Associates, whose grand vision was to create a communication nerve center like a "20th century fortress, with spears and arrows replaced by protons and neutrons laying quiet siege to an army of machines within."

Construction began in 1969, and by 1974, the skyscraper was completed. Today, it can be found in the heart of lower Manhattan at 33 Thomas Street, a vast gray tower of concrete and granite that soars 550 feet into the New York skyline. The brutalist structure, still used by AT&T and, according to the New York Department of Finance, owned by the company, is like no other in the vicinity. Unlike the many neighboring residential and office buildings, it is impossible to get a glimpse inside 33 Thomas Street. True to the designers' original plans, there are no windows and the building is not illuminated. At night it becomes a giant shadow, blending into the darkness, its large square vents emitting a distinct, dull hum that is frequently drowned out by the sound of passing traffic and wailing sirens.

For many New Yorkers, 33 Thomas Street -- known as the "Long Lines Building" -- has been a source of mystery for years. It has been labeled one of the city's weirdest and most iconic skyscrapers, but little information has ever been published about its purpose.

It is not uncommon to keep the public in the dark about a site containing vital telecommunications equipment. But 33 Thomas Street is different: An investigation by The Intercept indicates that the skyscraper is more than a mere nerve center for long-distance phone calls. It also appears to be one of the most important National Security Agency surveillance sites on U.S. soil -- a covert monitoring hub that is used to tap into phone calls, faxes, and internet data.

Documents obtained by The Intercept from the NSA whistleblower Edward Snowden do not explicitly name 33 Thomas Street as a surveillance facility. However -- taken together with architectural plans, public records, and interviews with former AT&T employees conducted for this article -- they provide

compelling evidence that 33 Thomas Street has served as an NSA surveillance site, code-named TITANPOINTE.

Inside 33 Thomas Street there is a major international "gateway switch," according to a former AT&T engineer, which routes phone calls between the United States and countries across the world. A series of top-secret NSA memos suggest that the agency has tapped into these calls from a secure facility within the AT&T building. The Manhattan skyscraper appears to be a core location used for a controversial NSA surveillance program that has targeted the communications of the United Nations, the International Monetary Fund, the World Bank, and at least 38 countries, including close U.S. allies such as Germany, Japan, and France.

It has long been known that AT&T has cooperated with the NSA on surveillance, but few details have emerged about the role of specific facilities in carrying out the top-secret programs. The Snowden documents provide new information about how NSA equipment has been integrated as part of AT&T's network in New York City, revealing in unprecedented detail the methods and technology the agency uses to vacuum up communications from the company's systems.

"This is yet more proof that our communications service providers have become, whether willingly or unwillingly, an arm of the surveillance state," said Elizabeth Goitein, co-director of the liberty and national security program at the Brennan Center for Justice. "The NSA is presumably operating under authorities that enable it to target foreigners, but the fact that it is so deeply embedded in our domestic communications infrastructure should tip people off that the effects of this kind of surveillance cannot be neatly limited to non-Americans."

The NSA declined to comment for this story.

The code name TITANPOINTE features dozens of times in the NSA documents, often in classified reports about surveillance operations. The agency uses code names to conceal information it deems especially sensitive -- for instance, the names of companies it cooperates with or specific locations where electronic spying is carried out. Such details are usually considered "exceptionally controlled information," a category beyond top secret and thus outside the scope of most of the documents that Snowden was able to obtain.

Secret NSA travel guides, dated April 2011 and February 2013, however, reveal information about TITANPOINTE that helps establish its connection to 33 Thomas Street. The 2011 guide, written to assist NSA employees visiting various facilities, discloses that TITANPOINTE is in New York City. The 2013 guide states that a "partner" called LITHIUM, which is NSA's code name for AT&T, supervises visits to the site.

The 33 Thomas Street building is located almost next door to the FBI's New York field office -- about a block away -- at Federal Plaza. The 2011 NSA travel guide instructs employees traveling to TITANTPOINTE to head to the FBI's New York field office. It adds that trips to the site should be coordinated with AT&T (referenced as "LITHIUM") and the FBI, including an FBI "site watch officer."

When traveling to TITANPOINTE, NSA employees are told to hire a "cover vehicle" through the FBI, especially if they are transporting equipment to the site. In order to keep their true identities secret while visiting, agency employees are instructed not to wear any clothing displaying NSA badges or insignia.

Upon arrival at TITANPOINTE, the 2011 travel guide says, agency employees should ring the buzzer, sign in, and wait for a person to come and meet them. The Intercept visited 33 Thomas Street and found a buzzer outside its entrance and a sign-in sheet on a desk in the building's lobby, which is manned by a guard 24 hours a day. There are also parking bays in front of the skyscraper designated "AWM," a traffic code for federal agencies.

A 1994 New York Times article reported that 33 Thomas Street was part of AT&T's "giant Worldwide Intelligent Network, which is responsible for directing an average of 175 million phone calls a day." Thomas Saunders, a former AT&T engineer, told The Intercept that inside the building there were at least three "4ESS switches" used to route calls across phone networks. "Of the first two, one handled domestic long-distance traffic and the other was an international gateway," said Saunders, who retired from his role at the company in 2004. The NSA's documents describe TITANPOINTE as containing "foreign gateway switches" and they state that it has a "RIMROCK access." RIMROCK is an NSA code name for 4ESS switches.

The NSA's documents also reveal that one of TITANPOINTE's functions is to conduct surveillance as part of a program called SKIDROWE, which focuses on intercepting satellite communications. That is a particularly striking detail, because on the roof of 33 Thomas Street there are a number of satellite dishes. Federal Communications Commission records confirm that 33 Thomas Street is the only location in New York City where AT&T has an FCC license for satellite earth stations.

The man behind the design of 33 Thomas Street, John Carl Warnecke, was one of the most prominent architects in the U.S. between the 1960s and 1980s.

Warnecke's high-profile projects included producing designs for the U.S. Naval Academy in Maryland, the Hart Senate Office Building in Washington, D.C., and the Hawaii State Capitol. In 1962, President John F. Kennedy's administration commissioned Warnecke to preserve and restructure buildings at Lafayette Square, across from the White House. And following Kennedy's assassination, Warnecke was asked to design the president's eternal flame and gravesite at Arlington National Cemetery. He also helped construct a new embassy complex in Washington for the Soviet Union, in which the Soviets claimed they found eavesdropping equipment embedded in the walls.

But it was not only governments that trusted Warnecke -- who died in 2010, aged 91 -- with major construction projects. He cultivated a close relationship with telecommunications companies, too, possibly helped by family ties to the industry. Warnecke's father-in-law had been a director at Pacific Bell, a California-based AT&T subsidiary. In the 1960s, Warnecke was asked to design a telephone

exchange building for Pacific Bell in Oakland. He would subsequently receive a series of other major commissions from AT&T: Aside from the 33 Thomas Street building, he also designed a telephone exchange in Williamsburg, Brooklyn, and an AT&T facility in Bedminster, New Jersey.

Some of Warnecke's original architectural drawings for 33 Thomas Street are labeled "Project X." It was alternatively referred to as the Broadway Building. His plans describe the structure as "a skyscraper to be inhabited by machines" and say that it was "designed to house long lines telephone equipment and to protect it and its operating personnel in the event of atomic attack." (At the time the building was commissioned and built, amid the Cold War, there were genuine fears in the U.S. about the prospect of a Soviet nuclear assault.)

It is not clear how many people work at 33 Thomas Street today, but Warnecke's original plans stated that it would provide food, water, and recreation for 1,500 people. It would also store 250,000 gallons of fuel to power generators, which would enable it to become a "self-contained city" for two weeks in the event of an emergency power failure. The blueprints for the building show that it was to include three subterranean levels, including a cable vault, where telecommunications cables likely entered and exited the building from under Manhattan's bustling streets.

After it was built, the unusual style of 33 Thomas Street attracted a lot of attention. Its dark, somewhat dystopian appearance contrasted dramatically with other buildings in lower Manhattan. Yet it proved popular, particularly among architecture buffs.

In a 1982 piece in the New York Times, architecture critic Paul Goldberger praised 33 Thomas Street as "one of the neighborhood's few pieces of good modern architecture," adding that it "blends into its surroundings more gracefully than does any other skyscraper in this area."

"Other telephone company buildings from that era, designed solely for equipment, all look like horrible boxes," Goldberger told The Intercept. "This one has an allure of its own to it. ... There's something about that shape. You see it and you don't see it at the same time."

In 1975, just a year after Warnecke's 33 Thomas Street building was completed, the NSA became embroiled in one of the biggest scandals in the U.S. intelligence community's history. Following revelations about domestic surveillance operations targeting anti- Vietnam War activists, a congressional select committee began investigating the alleged abuses.

The inquiry, led by Democratic Sen. Frank Church, published its findings in April 1976. It concluded that U.S. intelligence agencies had "invaded individual privacy and violated the rights of lawful assembly and political expression." Surveillance programs operated by the NSA through this period, it was later revealed, had targeted "domestic terrorist and foreign radical" suspects, including a host of eminent Americans, such as the civil rights leaders Martin Luther King and Whitney Young, the boxer Muhammad Ali, Washington Post columnist Art Buchwald, and New York Times journalist Tom Wicker.

The Church Committee recommended that new and tighter controls be placed on intelligence gathering. And in 1978, Congress approved the Foreign Intelligence Surveillance Act, requiring the executive branch to request warrants for spying operations from a newly formed court.

Through this tumultuous time for American spies, the NSA established a new surveillance program under the code name BLARNEY, which was first exposed in a Snowden-leaked slide published in 2013. According to a previously unpublished document provided to The Intercept by Snowden, BLARNEY was established in the early 1970s and, in mid-2013, remained one of the agency's most significant initiatives.

BLARNEY leverages "commercial partnerships" in order to "gain access and exploit foreign intelligence obtained from global networks," the document states. It carries out "full take" surveillance -- a term that refers to the bulk collection of both content and metadata -- under six different categories: counterproliferation, counterterrorism, diplomatic, economic, military, and political.

As of July 2010, the NSA had obtained at least 40 court orders for spying under the BLARNEY program, allowing the agency to monitor communications related to multiple countries, companies, and international organizations. Among the approved targets were the International Monetary Fund, the World Bank, the Bank of Japan, the European Union, the United Nations, and at least 38 different countries, including U.S. allies such as Italy, Japan, Brazil, France, Germany, Greece, Mexico, and Cyprus.

The program was the NSA's leading source of data collection under the Foreign Intelligence Surveillance Act, an April 2013 document disclosed, and information gleaned from the communications it intercepted was a top contributor to the president's daily briefing.

Notably, TITANPOINTE has played a central role in BLARNEY's operations. NSA documents dated between 2012 and 2013 list the TITANPOINTE surveillance facility among three of BLARNEY's "core sites" and describe it as "BLARNEY'S site in NYC." Equipment hosted at TITANPOINTE has been used to monitor international long-distance phone calls, faxes, voice calls routed over the internet (known as Voice-Over-IP), video conferencing, and other internet traffic.

In one case that may have involved 33 Thomas Street, NSA engineers with the BLARNEY program worked to eavesdrop on data from a connection serving the United Nations mission in New York. This spying resulted in "collection against the email address of the U.N. General leading the monitoring mission in Syria," an April 2012 memo said.

Mogens Lykketoft, former president of the U.N.'s general assembly, criticized the surveillance. "Such spying activities are totally unacceptable breaches of trust in international cooperation," he told The Intercept.

At the TITANPOINTE site, the NSA equipment is stored inside a secure room, known as a "Sensitive Compartmented Information Facility." Top-secret diagrams dated April 2012 show that within the

secure space there is "NSA controlled" equipment linked to the routers of its "access partner," referring to AT&T. Intercepted internet data was collected from the "backbone," then processed at TITANPOINTE, before being passed to NSA for storage. Phone calls that were intercepted were collected from TITANPOINTE's "foreign gateway switches" before being routed through the partner's "call processor." They were then forwarded to NSA's headquarters in Maryland through an interface shared with the partner.

Much of the surveillance carried out at TITANPOINTE seems to involve monitoring calls and other communications as they are being sent across AT&T's international phone and data cables. But the site has other capabilities at its disposal. The NSA's documents indicate that it is also equipped with powerful satellite antenna -- likely the ones located on the roof of 33 Thomas Street -- which monitor information transmitted through the air.

The SKIDROWE spying program focuses on covertly vacuuming up internet data -- known as "digital network intelligence" -- as it is passing between foreign satellites. The harvested data is then made accessible through XKEYSCORE, a Google-like mass surveillance system that the NSA's employees use to search through huge quantities of information about people's emails, chats, Skype calls, passwords, and internet browsing histories.

Fletcher Cook, an AT&T spokesperson, told The Intercept that the company does not "allow any government agency to connect directly to or otherwise control our network to obtain our customers' information. Rather, we simply respond to government requests for information pursuant to court orders or other mandatory process and, in rare cases, on a legal and voluntary basis when a person's life is in danger and time is of the essence, like in a kidnapping situation."

Cook added that NSA representatives "do not have access to any secure room or space within our owned portion of the 33 Thomas Street building." When pressed on whether any room within 33 Thomas Street contains equipment used for the purposes of NSA surveillance, an AT&T spokesperson pointed to a 1983 deed and declaration filed with New York City indicating that Verizon's predecessor company maintained ownership of three floors and a basement floor in the building. The New York City Department of Finance said the predecessor company has an easement for the space and pays utility taxes, but insisted that AT&T owns the whole building. The AT&T spokesperson declined to comment further.

The NSA's documents do not state that it can "connect directly to" or "otherwise control" AT&T's networks, but they do make clear that the agency has placed its own equipment inside TITANPOINTE to tap into phone calls and internet data. It may be the case that the secure room where the equipment is installed is overseen by AT&T's own engineers or technicians who have a security clearance. One NSA document dated from March 2013 suggests such a relationship, noting that the "corporate sites" the agency collects data from "are often controlled by the partner, who filters the communications before sending to NSA."

As in 1983, AT&T may not be completely alone at 33 Thomas Street. Earlier this year, a technician working at the building -- who did not want to be named because he was not authorized to speak to the media -- told The Intercept that a handful of Verizon employees were still based inside. However, the NSA's documents do not suggest that Verizon is implicated in the surveillance at the TITANPOINTE facility, and instead only point to AT&T's involvement. Verizon declined to comment for this story.

AT&T is far from the only company that has a relationship with the NSA. The agency has established what it calls "strategic partnerships" with more than 80 corporations. But some companies are more cooperative than others.

Historically, AT&T has always maintained close ties with the government. A good example of this came in June 1976, when a congressional subcommittee served AT&T with a subpoena demanding that it hand over information about its alleged role in unlawful FBI wiretapping of phone calls. President Gerald Ford personally intervened to block the subpoena, stating that AT&T "was and is an agent of the United States acting under contract with the Executive Branch." Ford said the company was in a "unique position" with respect to telephone and other communication lines in the U.S., and therefore it had been "necessary for the Executive Branch to rely on its services to assist in acquiring certain information necessary to the national defense and foreign policy." The details sought by the committee could not be shared, Ford asserted, because they could expose "extremely sensitive foreign intelligence and counterintelligence information."

In more recent decades, as the New York Times and ProPublica reported last year, AT&T has allowed the NSA to access billions of emails, exhibiting what the agency called its "extreme willingness to help." These revelations were foreshadowed in 2006 by allegations made by Mark Klein, a former AT&T technician. Klein stated that the company had maintained a "secure room" in one of its San Francisco offices, which was fitted with communications monitoring equipment apparently used by the NSA to tap into phone and internet traffic. Klein's claims formed the basis of a lawsuit brought by the Electronic Frontier Foundation on behalf of AT&T customers (Jewel v. NSA), which remains ongoing today.

Coincidentally, between 1981 and 1990, Klein also worked for AT&T at 33 Thomas Street. "I wasn't aware of any NSA presence when I was there, but I had a creepy feeling about the building, because I knew about AT&T's close collaboration with the Pentagon, going way back," he told The Intercept. When presented with the details linking 33 Thomas Street to NSA's TITANPOINTE, Klein added: "I'm not surprised. It's obviously a major installation. ... If you're interested in doing surveillance, it's a good place to do it."

According to the Snowden documents, AT&T has installed surveillance equipment in at least 59 U.S. sites. And on any given day, NSA employees may be working at the company's facilities. Classified memos dated from April 2013 describe one- to four-day deployments of NSA technical staff to TITANPOINTE and other buildings. Most AT&T personnel at these locations, however, are unlikely to have knowledge of the agency's presence. NSA staff are encouraged to wear clothes that make them "blend in to the environment." Even the car hire company the agency uses for its trips to AT&T facilities

is kept in the dark. "Some personnel are aware of the FBI link," states the agency's travel guidance, "but [they] have no knowledge of NSA's involvement."

Straits Times
Banks in Singapore must give cyber security high priority: ABS, ministry
Thursday, 17 November 2016
Byline: Rachael Boon

Singapore - Industry and government leaders on Thursday (Nov 17) urged financial institutions to step up cybersecurity efforts even as they seek innovation and digitise, at a technology risk conference by the Association of Banks Singapore (ABS) and the Monetary Authority of Singapore (MAS).
ABS chairman Wee Ee Cheong told the audience at the Sands Expo and Convention Centre that the focus is no longer just to defend against cyber threats, "but to respond promptly".

The idea is to use tools such as machine learning and big data analytics to aid in such efforts, "to be agile in responding to cyber threats" and move from being reactive in defence to being proactive.

Mr Aubeck Kam, Permanent Secretary of the Ministry of Communications and Information, said the Government is already working on its cyber security strategy, and hoped this would encourage financial institutions to deepen their own plans.

He noted that even as the industry embraces innovative fintech solutions, it has to give thought to keep security on top of the organisation's agenda, especially when the financial sector plays an important role here.

Jerusalem Post
Security expert: Pressure social media to block terrorist incitement
Thursday, 17 November 2016
Byline: Yonah Jeremy Bob

Jerusalem - Countries grappling with terrorists who use Facebook and Twitter to incite should unite together to formulate new international standards against such activity, INSS national security expert Col. (res.) Gabi Siboni recently told The Jerusalem Post.
Even national efforts in democratic countries to restrain terrorism and incitement via social media are only at their earliest stages, making Siboni's idea an innovative and potentially game-changing solution, though the challenges in accomplishing it are probably at least as great as the positive potential.

The INSS expert did emphasize that the initiative - what he calls fighting on the "cognitive warfare" plane - should be carried out in consultation with the leading social media giants.

His initiative is part of a larger multifaceted plan he is proposing for addressing the challenge of terrorists' brilliant use of online propaganda to hound Israel and the West.

Regarding Israel, he adds that a leading problem from Israeli adversaries, some linked to terrorists and some well-meaning human rights activists who downplay the challenge terrorism poses to Israel, is the power of social media to delegitimize Israel and "limit its freedom to act in self-defense."

Even if the media has delegitimized Israel's use of force in self-defense situations against terrorists (especially with television coverage of victims of IDF strikes), Siboni explains that social media has increased the breath of that delegitimization exponentially.

Besides using social media to delegitimize Israel, its right to self-defense and to encourage the worldwide Boycott Divestment and Sanctions campaign against Israel, he said that social media is also used to actively incite lone wolves into attacking Israelis.

These two distinct but related trends mean that terrorists are using social media to incite violence against Israel at the same time that human rights defenders are using it to limit Israel's ability to fight back.

Siboni said Israel has improved its efforts to counter suicide bombers and is beginning to improve tracking the social media pages of potential lone wolves in order to catch them before they act. Yet, he suggests Israel must act to proactively block terrorists' use of social media and to reduce the impact of incitement before it turns disgruntled but benign persons into lone wolf attackers.

At the same time, he explained that Israel must continue and double its efforts in the legal and public relations sphere to cope with the propaganda impact of social media delegitimization of Israel.

Specifically, he added that ways should be found where possible to go on the legal offensive against those trying to delegitimize Israel.

Returning to his idea of international efforts, he suggested that a paradigm-shift in how the top social media conceive of themselves and operate can be achieved far better with a united international front pressing media platforms to change and developing better technologies to deal with their drawbacks.

In order to coordinate all such efforts, Siboni said Israel must establish a new situation room for networking all of the military, intelligence, diplomatic, legal and public relations efforts, specifically fighting the negative impact of social media propaganda. He said coordination with Jewish organizations globally was also critical.

Part of the program would also include additional training for IDF commanders to be prepared for how social media can frame their activities and impact the IDF's overall ability to use force. Even as they may

already have some exposure to such issues, he implied that continued education regarding social media's evolving challenges is imperative.

Finally, he said, it is necessary for a surge in investing funds in developing new technologies to fully address these new challenges.

Jerusalem Post
Rafael seeks to bring Iron Dome technology to civilian market
Thursday, 17 November 2016
Byline: Anna Ahronheim

Jerusalem - Iron Dome might be known best for its precision in intercepting incoming rockets, but now one of the principal designers of the system is hoping to use that technology in the civilian market. Rafael Advanced Defense Systems subsidiary mPrest, located in Petah Tikva, is responsible for developing the algorithms that direct the missile defense system, but the underlying technology has a variety of other uses.

Now, with the increased threats posed by terrorism, including cyber terrorism, mPrest is hoping to use Iron Dome technology to protect government buildings and civilian infrastructure such as airports, major tourist spots, ports and other strategic installations.

mPrest is well known for their work in the field of command and control systems and already offers solutions for smart cities, allowing organizations to use its generic software platform to connect several sensors at any time with unrivaled flexibility and obtain real-time situational awareness.

New York State's Power Authority bought a system developed by mPrest which detects malfunctioning power transformers, automatically shutting them down or rerouting the power before they might cause larger problems on the electrical grid.

mPrest CEO and founder Col. (res.) Natan Barak told The Jerusalem Post that the company "comes with a new approach in how to manage the huge amount of data and sensors that thousands of organizations are using. We are giving total asset management to our clients for the process of increasing productivity, efficiency and energy as well as the safety and security of the organization."

Most importantly, Barak added, mPrest "gives our clients the power to change any rules in the system on a daily basis, in real time without the need to go through the whole development cycle again."

The asset management system was developed on the basis of the command and control system of Iron Dome, but uses a unique IoT (Internet of Things) platform interface with several sensors and systems. The system provides a "robust protection layer" which gives organizations full control and allows for a

lightning-fast response while controlling, processing, and transferring all the information to the appropriate authorities.

In a statement to the press, Barak said "IOT technology enables organizations to control many interfaces by placing sensors that monitor activity on a regular basis and produce an updated assessment of the situation at any given moment.

"The mPrest system will allow enterprises, cities and states to face the challenges in the coming years in terms of raising productivity, improving processes and boosting real-time information sharing between all officials and fulfilling tasks in the best way possible," Barak added.

Gulf News
Data of 34 million Keralites leaked in massive breach
Thursday, 17 November 2016
Byline: Mazhar Farooqui

Dubai - Confidential personal records of over 34 million residents in the Indian state of Kerala have been compromised in one of the biggest data breaches in the world.
The breach occurred last fortnight when an Indian man living in Tokyo hacked the Kerala government's civil supplies department website and uploaded the sensitive information of all of Kerala's 8,022,360 Public Distribution System (PDS) beneficiaries and their family members on Facebook.

The data reveals names, addresses, birth dates, gender, monthly incomes, electoral card details, consumer numbers of power and cooking gas connections. The massive leak has sparked fears that the information could fall into the wrong hands if it hasn't already.

A cyber security expert in Dubai fears the breach can have dangerous consequences. "The data could be used to duplicate SIM cards or reset net banking passwords. It's very serious." Tokyo-based IT consultant N.T.R. who hacked the website civilsupplieskerala.gov told XPRESS he took the extreme step to expose the security flaws in the site after attempts to draw attention towards them [weaknesses] fell on deaf ears. The website is designed, developed and hosted by India's National Informatics Centre (NIC).

"I wrote to the NIC several times pointing to the vulnerabilities and even called the civil supplies office warning them about a possible breach, but they ignored me. I had no option but to make the information public in a Facebook post," N.T.R., a native of Thiruvananthapuram, said from Tokyo.

He said breaking into the website was easy as the government had made a major gaffe by posting the entire list of PDS beneficiaries online.

Prepared as part of the Food Security Act 2013, the list was released just last month. According to reports, the Kerala government put the list online so that residents could verify their personal data and apply for corrections before new ration cards are printed in 2017.

"It was foolish on their part to put all ration card numbers on the website. All I had to do was make a data set of these numbers and then fetch the corresponding data for each number. It was simple as the security methods on the website were primitive. It took me just one week to access and transfer around 100GB of data. I am appalled no one raised the red flag despite the fact that I used the same IP address to make over 30 million requests," said N.T.R. Significantly, most servers block multiple requests originating from the same IP address.

The National (UAE)
Twitter to clamp down on abusive content following persistent criticism
Thursday, 17 November 2016
Byline: John Everington

Abu Dhabi - Twitter has announced new features to curb abusive content, as the social network seeks to increase advertiser engagement on its platform as a means of boosting profitability.
Twitter today said it was making it easier for users to report "hateful conduct" directed at them or others, had retrained its staff to better deal with improper conduct, and extended the service's "mute" function to include notifications of selected keywords, phrases and conversations.

"Twitter is an open public platform where the vast majority of people have a really positive experience," Bruce Daisley, Twitter's vice president for Europe the Middle East and Africa, said in a telephone interview today.

"Obviously some of the attention goes on the negative experiences, and that's why we're foc-using our energies on ensuring that we deal with the negatives so that the positives of an open platform like Twitter can benefit everyone."

Twitter has faced persistent criticism for not doing enough to curb racist, sexist and religiously motivated abuse on the platform.

Ghostbusters star Leslie Jones abandoned the platform temporarily in July after being inundated with racist and sexist hatred, with a large rise in online abuse in the run-up to this month's presidential elections.

Twitter's perceived failure to deal effectively with such abuse cases was reportedly a factor in suitors including Salesforce and Disney declining to submit bids for the company last month.

"There's no single platform that can say they've got everything right," said Mr Daisley. "We've set up a safety council and worked with a lot of users to try and understand what their big issues are."

"These battles are never won, but most people who look at our response and the way we deal with [online abuse] say we've made more progress in the last six months than we've done up to that point."

Newsweek
Donald Trump Can Either Continue the Shadow War With Vladimir Putin or End Sanctions
Thursday, 17 November 2016
Byline: Owen Matthews

New York - The telegram was one of the first to arrive from a world leader. On the morning of November 9, the Kremlin announced that Russian President Vladimir Putin had sent a message to U.S. President-elect Donald Trump expressing "his hope they can work together toward the end of the crisis in Russian-American relations, as well as address the pressing issues of the international agenda and the search for effective responses to global security challenges." Just minutes before, the Russian State Duma had erupted in applause when its members learned that Trump had won the election.
Putin appeared to be taking his lead from repeated comments Trump has made suggesting the two would get along: "I would treat Vladimir Putin firmly, but there's nothing I can think of that I'd rather do than have Russia friendly, as opposed to the way they are right now, so that we can go and knock out ISIS with other people," the then-candidate of the Republican Party said on July 28, referring to the Islamic State militant group.

But the blossoming bromance between the two men may come to a sudden end when Trump becomes commander in chief on January 20, 2017. That's when he will, on a daily basis, have to cope with a resentful former superpower engaged in an aggressive campaign of espionage and propaganda against the United States and its allies--one more intense and menacing than at any time since the Cold War. Trump will likely face a binary choice: continue to engage in that intensifying shadow war, as his predecessor chose to do, or end sanctions against Russia--essentially allowing Putin to expand his influence in Eastern Europe and beyond.

The pressure on Trump to come up with an answer will be considerable. In early November, Andrew Parker, head of Britain's internal security service MI5, became the first leader of the agency in 107 years to give an interview; the focus of his conversation with The Guardian newspaper was Russia's mobilization of "a whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways: propaganda, espionage, subversion and cyberattacks." Russia's secret war involves everything from criminal sabotage to espionage to influencing news cycles, as well as supporting disruptive political movements and deep penetration of cyberinfrastructure. That's a lot for an American president who has never before held elected office to deal with on day one.

With Trump's victory, Russia might feel that its potent mixture of hacking, propaganda and sowing distrust has worked spectacularly well. The temptation to continue spreading chaos by backing right-wingers in France, the Baltics, Germany and elsewhere is stronger than ever. "Putin has interfered in our elections and succeeded. Well done," tweeted former U.S. Ambassador to Russia Michael McFaul after Trump's victory. And Russia's elite, while careful to deny involvement in the Kremlin's alleged meddling in the U.S. presidential race, is openly jubilant about Trump's win. "First was Brexit. Now Hillary," says Russian parliamentarian Vyacheslav Nikonov, a Putin ally. "A while ago, America was saying that Russia is just a gas station, a regional power. Now, apparently, we're so influential that we are determining the outcome of their presidential election. We follow the ancient Chinese policy--we sit on the riverbank and wait for our enemy's body to float past."

But Russia isn't just sitting and waiting. It is actively engaging its enemies, albeit in clandestine ways. The Kremlin's shadow war has intensified since Russia's annexation of Crimea in March 2014 and the international sanctions that followed. That was the moment it began to "define itself by opposition to the West and act accordingly," MI5's Parker told The Guardian. "Russia has been a covert threat for decades. What's different these days is that there are more and more methods available.... There is high-volume activity out of sight with the cyberthreat."

Russia has spearheaded some increasingly bold and sophisticated operations over the past year, including hacking attacks on Ukraine's power grid and the servers of the White House, the Democratic National Committee (DNC) and Germany's Bundestag that Western intelligence agencies believe came from Russia. Western governments are belatedly waking up to the scale of the threat and are readying the biggest counterespionage operation since the end of the Cold War. Spy agencies have pivoted with urgency. When the decades-long nuclear standoff with the Soviet Union and its allies came to an effective end with the demise of the Soviet empire in 1991, Western intelligence and security agencies largely turned their attention and resources elsewhere--especially to the Middle East and Afghanistan, as Islamist extremists' attacks appeared to become the greatest threat to the West. That challenge remains. But the Russian threat is back.

The Kremlin's new army of spooks is motivated by a single ideology-- to fight back against a supposed Western campaign to undermine Russian power and foment unrest and revolution in Moscow's backyard. Bizarre as this may seem to American and European observers, the majority of Russians--crucially, Putin and his inner circle--are convinced that the pro-democracy revolutions that swept Georgia, Ukraine and Kyrgyzstan in 2003 and 2004, the mass protests in Moscow against Putin in 2012 and the uprising in Kiev against pro-Moscow President Viktor Yanukovych were all part of a CIA-led conspiracy to weaken Moscow. "This is not just laughable rhetoric but an expression of a genuine belief," says Mark Galeotti, a senior research fellow at the Institute of International Relations in Prague. "When Moscow identifies all kinds of NGOs as 'foreign agents,' this is not only a convenient way to silence and marginalize critics. It also reflects a conviction that the West supports investigative journalists and anti- corruption movements in Russia not on their own merits but to undermine the regime."

Russia's spying operations, therefore, are justified as a part of a major pushback against perceived aggression. "You Americans meddled in our elections for years; now we meddle in yours. How do you like it?" wrote Ekaterinburg-based blogger Evgeny Smirnov in September. "You say we are influencing your politics with our propaganda. Yes--just as you taught us!"

Preventing further Russian meddling in American politics will become the problem of a president-elect whose true feelings about Russia, Putin and just about every other major policy area remain opaque. Sure, in the days following Trump's victory, Russia's television talk shows were full of clips of the president-elect's warm words about Putin. Trump called Putin a "stronger leader" than outgoing U.S. President Barack Obama and told ABC in July that "the people of Crimea, from what I've heard, would rather be with Russia than where they were." Asked by a reporter in July whether he would consider recognizing Crimea and lifting sanctions, Trump replied, "Yes, we would be looking at that," sparking jubilation in Moscow. Gennady Zyuganov, veteran leader of Russia's Communist Party, tells Newsweek he sees Trump as "a candidate of peace, not war, who will respect the interests of Russia and stop [the last administration's] aggressive encroachment on our borders."

But Trump has also blasted Putin. "Russia took Crimea during the so-called Obama years," Trump tweeted in September. "Who wouldn't know this, and why does Obama get a free pass?" And Russia's optimism about the end of sanctions is also misplaced; His "Yes, we would be looking at that" response is, as many reporters pointed out, just a line Trump often uses to move on to the next question. Russian hackers may have helped Trump to victory. But if and when Trump disappoints the Kremlin--perhaps by bowing quickly to congressional Republicans' strong support for Ukraine in its fight against Russian-backed separatists--the 45th president of the United States could find himself facing off against the same ruthless adversary in Moscow who made life so hard for the 44th. And the 43rd. And the 42nd.

Hybrid Warfare

If Trump is looking for a reminder of the real-world damage Putin's online special forces can cause, he might want to ask the CIA for a briefing on a cyberattack that began on December 23, 2015. A winter's early dusk was falling over the Ivano-Frankivsk region in western Ukraine when Russian hackers took control of the electricity grid. Controllers at the headquarters of the local energy utility, PrykarpattyaOblEnergo, watched helplessly as they were locked out of their computers. Cursors began operating on their own, clicking circuit breakers in the utility's central command system, shutting down electricity substations one by one. Within half an hour, 700,000 residents, as well as hospitals and schools, were without power. That marked the start of the biggest and most sustained cyberattack against any nation ever conducted. Over the following nine months, according to the Ukrainian Security Service, hackers made more than 15,000 other attempts to sabotage Ukraine's critical infrastructure, from the control systems at Kiev's Boryspil International Airport to the country's Central Election Commission. So far, nobody has died as a result of the cyberassault--but the attacks proved the hackers could shut down operating rooms and airports at will.

"A clear Rubicon was crossed," says Alexander Klimburg, senior fellow at the Atlantic Council think tank in Washington and author of the upcoming book The Dark Web, which describes how future conflicts will be fought over the internet. "Cyberweapons have officially joined the arsenal of modern warfare."

Putin has apparently tasked Russia's securocrats with doing what Soviet spies dreamed of but could never achieve--fighting a war of covert disruption in parallel to their more traditional role, straight intelligence-gathering. The strategy is laid out in the latest version of Russia's official military doctrine. A key task of modern so-called hybrid warfare is "the prior implementation of measures of information warfare in order to achieve political objectives without the utilization of military force and, subsequently, in the interest of shaping a favorable response from the world community to the utilization of military force." To that end, all the state's resources--led by Russia's security services--are responsible for "developing forces and resources for information warfare."

Aric Toler, an American researcher at the activist group Bellingcat, has been on the receiving end of that information war machine. Founded by British blogger Eliot Higgins in 2014, Bellingcat has used open-source material, such as social media posts and YouTube video footage, to expose Russian troops operating illegally in eastern Ukraine and, most controversially, to precisely track the course of a Russian Army BUK rocket launcher that shot down Malaysian Airlines Flight 17 over eastern Ukraine on July 17, 2014. It was Russia's involvement in the shooting down of MH17 and its subsequent stonewalling over the investigation that became the main focus of biting EU and U.S. sanctions on the Russian economy--not, as Russia often claims, its annexation of Crimea. Moscow has continued to deny its BUK rockets were involved--blaming the crash on, variously, Ukrainian jets or Ukrainian surface-to-air missiles. But Bellingcat's evidence, from dozens of sources tracking the BUK's progress into and out of eastern Ukraine on that fateful day, is more than just the work of internet geeks. Official Dutch and Malaysian investigators are using it to draw up formal charges against the Russian soldiers and officials responsible. The British bloggers have exposed attempts to cover up the truth on MH17--and in the process helped deny the Russian economy billions of dollars in investment. No wonder the Kremlin appears to have gone after Bellingcat with such ferocity.

Over the past 18 months, Toler has regularly received phishing emails containing viruses that would allow hackers to access his computer--if any of us were dumb enough to click on the links." More threatening, over the summer pro-Russian online activist group CyberBerkut hacked into the emails of Ukrainian government officials and used the information to smear Toler by alleging he is linked to the Kiev government. Finally, Russian state-sponsored TV channels, like Russia Today and Sputnik, keep up a regular stream of invective against Bellingcat's work, while a small army of trolls on Twitter and social media are busy denouncing it on an hourly basis.

"We've been targeted by the full force of the Russian information machine," says Toler. "We can't say for sure if these are Russian government or proxy groups...but the phishing emails [we received] are the same as those which targeted the Democratic National Committee."

In June, Russian hackers gained international notoriety by breaking into the email database of the DNC and releasing emails embarrassing to Hillary Clinton. The hacker groups behind the break-in, APT 28 and APT 29 (or more snappily nicknamed Cozy Bear and Fancy Bear by U.S. cybersecurity companies) are in fact two operations linked, respectively, to Russia's Federal Security Service, or FSB, and Russian military intelligence, or GRU. James Clapper, the U.S. director of national intelligence, has launched an investigation into alleged Russian operations against the U.S. presidential election.

The incoming American president would do well to consider that while the DNC hack might have helped him during the election campaign, Fancy Bear and Cozy Bear later showed they have a broad range of targets. In September, the groups were linked to the release of sensitive data stolen from the World Anti-Doping Agency that revealed that several top Western athletes--including U.S. tennis stars Venus and Serena Williams--had been given exemptions for taking prohibited drugs during the Olympics, while a swath of Russian athletes had been banned for illegal drug use. Later that month, the groups leaked emails from General Philip Breedlove, NATO's former supreme allied commander for Europe, that suggested his dissatisfaction with some European allies and then released first lady Michelle Obama's passport and sensitive travel information from the White House. To cap off a busy U.S. election season of hacking, Fancy Bear in October leaked a series of emails from former Secretary of State Colin Powell in which he allegedly said, "I would rather not have to vote for [Hillary]" and described Clinton as having "a long track record [of] unbridled ambition, greedy, not transformational."

It's enough to make an incoming president and his aides wonder whether the Kremlin is already reading in on the transition plans.

Crooks and Spooks

If Russian hackers launch fresh attacks on the U.S. after January, the new president will likely face flat denials of involvement from the Kremlin--and he and U.S. intelligence officials will struggle to provide evidence to back up their claims of state involvement, say Western intelligence sources and computer security experts. That's because Russia's spies have formed an alliance with the country's notorious cybercriminals--and the spooks use the crooks as cover. "At least half" of the Kremlin-backed hackers' arsenal "is derived from cybercrime, perhaps much more," says internet security expert Klimburg. The partnership between Russian criminals and Russian spies goes back as far as 2007, when hackers known collectively as the Russian Business Network deployed computers they had infected with Trojan horse viruses and turned them into a network of zombified machines known as botnets to bombard and shut down internet servers in Estonia. The attack was apparent punishment for Estonia taking down a monument to a Red Army soldier. Just as with the DNC hack, the Kremlin indignantly denied responsibility. But subsequent investigations linked the attack to, variously, the pro-Kremlin youth group Nashi and a former parliamentary aide. A clear chain of command was never established-- but the pattern was: The cybercriminals had become the Kremlin's cyber hatchet men.

"It's not unprecedented for governments to use criminals to do their dirty work. Back in the day, [French President Charles] de Gaulle used the Corsican Mafia against the [ultranationalist] OAS; the CIA used the

Italian Mafia against the Cubans," says a senior U.K. security official not authorized to speak on the record. "But most of us thought that kind of thing has been left behind with the Cold War--along with poisoning defectors and the like. We've been proved quite wrong on both counts."

In October, a Russian hacker was arrested in Prague on an Interpol warrant issued after an investigation by the FBI. Identified by Czech police only as Yevgeniy N., the hacker was busted for his involvement in a massive 2012 break-in at LinkedIn, a company spokesman told Reuters, which compromised the credentials of 100 million users, prompting the company to launch a massive password reset operation. According to one cyberexpert who advises Western governments, Yevgeniy N. is of special interest to law enforcement because of suspicions that the information he gathered during his hacking career "cropped up in later hacks that we believe are clearly [Russian] state- sponsored."

Multiple spy agencies are involved in Russia's full-spectrum assault--and some of them are growing rapidly. The FSB is Russia's largest security agency--and will, according to a document leaked to the Russian Kommersant Daily in September, soon become larger, thanks to its plan to create a new super-ministry of state security. The Kremlin's Presidential Administration is the most influential agency involved in Russia's shadow war, says Galeotti, coordinating traditional spies controlled by Russia's External Intelligence Service, or SVR, alongside propaganda operations run by state-funded media outlets, such as Sputnik and the RT English-language television news channel, formerly Russia Today, which is available to 700 million people in more than 100 countries around the world. The SVR's headquarters, in the Yasenevo district of Moscow, has doubled in size since 2007, as images posted online by transparency activist Steven Aftergood of the Federation of American Scientists' Secrecy News blog clearly show.

And it's not just computer geeks who are filling the desks and offices inside. Russia's old-school spies are working to undermine the West as much as, if not more than, their Soviet predecessors. According to John Bayliss, a former official at Britain's electronic surveillance agency, the Government Communications Headquarters (GCHQ), "There are more Russian intelligence agents [in the U.K.] now than at the height of the Cold War."

The chief analyst of Sweden's SAPO intelligence service, Wilhelm Unge, warned in October that a third of all Russian diplomats stationed in Sweden are intelligence officers, far more than during the 1980s, and that Russia constitutes "the biggest intelligence threat against Sweden." In May, a Warsaw military court convicted a Polish army lieutenant-colonel for passing information about soldiers with disciplinary problems to a Russian handler (prosecutors claimed that servicemen in trouble with the authorities were easier to recruit). In October, Montenegro's long-serving, pro-Western prime minister, Milo Djukanovic, claimed he'd been the victim of an attempted coup with a "strong foreign connection." Montenegro's security forces arrested 20 Serbs and Montenegrins on October 16, and Serbian Prime Minister Aleksandar Vucic confirmed that the men arrested in Montenegro had hatched their coup plot in Serbia, assisted by Russian intelligence. An indignant Vucic said he would not allow his country to "act as the puppet of world powers."

There's no proof linking the Kremlin to the Montenegrin coup plotters--but there is plenty of evidence that there has been a major uptick in Russian efforts to meddle in the internal politics of a range of European countries. Last month, the Czech Republic's BIS intelligence agency accused Russia of not just spying but also of "creating or promoting inter-societal and inter- political tensions" in the country, including covert support for domestic extremist and populist organizations that "tend to hold consistently pro- Russian stances on domestic and international issues. They are also highly critical of NATO and the EU, and promote the view that, like Britain, the Czech Republic should seek to exit the EU." Czech intelligence's annual report caused a sensation when it was published in September, because it stated bluntly that the Kremlin's aim was to "destabilize or manipulate Czech society at any time, if Russia wishes to do so."

Moscow has also been actively reaching out to France's National Front, whose anti-immigrant, anti-EU leader, Marine Le Pen, has become a hero on Russian media. The National Front confirmed that it had borrowed 9 million euros from the Moscow-based First Czech Russian Bank in 2014, while in February of this year the party's treasurer, Wallerand de Saint-Just, made no secret of the fact that he was seeking up to 23 million euros from "any other" Russian banks that would be willing to stump up. At a private pro-Trump election party I attended in an English-themed pub in downtown Moscow, three specially commissioned portraits stood in pride of place: Trump, Putin and Le Pen. Le Pen has called for sanctions on Russia to be lifted and for a deal to build two Mistral-class warships for Moscow--blocked by French President François Hollande under strong U.S. pressure in the wake of the Crimea annexation--to go ahead.

"We are entering a new era of politics," says political scientist Sergei Mikheyev. "Europe will be free to think for itself instead of obeying Washington's Russophobia. Le Pen is a patriot who is ready to defy American diktat."

Le Pen will be a candidate for the French presidency in the spring of 2017. She is expected to do well--but, like Trump at a similar stage of the electoral cycle, nobody is expecting her to win.

Best Frenemies

The West is starting to fight back against the Putin threat--and Trump will find himself in charge of the effort to combat the man he has called "very much a leader." This month, the U.S.'s most important ally--the U.K.--announced a new £1.9 billion national cybersecurity strategy designed to develop what Finance Minister Philip Hammond called a "fully functioning cyberattack capability" to be able to "match the cyberattack abilities of foreign rogue states." Britain is opening a new cyberinnovation center and scaling up its security services by recruiting 1,900 additional staff. And intelligence agency MI6, which employs around 2,500 people, is set to receive over half of those new personnel. "The areas of expansion are obviously internet resources like social media, plus the use of facial recognition technology," for intelligence gathering, says one former Secret Intelligence Service staffer with knowledge of the expansion plans. "The emphasis has changed from just running agents like in the

past." But even with the new recruits, Russia will have more than six intelligence officers for every British spook, according to Bayliss, the former GCHQ officer.

There's also been a scramble across Western intelligence services to recruit and train Russian experts. For the first time since the Soviet Union's collapse in 1991, the U.S. has diverted resources from counterterrorism to counterespionage to push back against Russia, according to Evelyn Farkas, a top Russia official at the Pentagon until his retirement in 2015. "The Russia beat for intel folks was a more quiet one, frankly speaking, over the last couple decades," Farkas told NPR recently. "And now it's quite hot. And we have to find linguists. We have to find people who can analyze all the information that we have to find coming in, in Russian and other languages."

Trump is unlikely to ask America's intelligence agencies to give up recruiting Russian-speakers and let Putin have his way. And it's entirely possible that by the time he is inaugurated, the new president will have concluded that the affinities he shares with Putin are really only slogan-deep. Both may harbor a strong nostalgia for postwar glory days when, as Trump told an interviewer in March, "we were not pushed around. We were respected by everybody. We had just won a war." Both may espouse social conservative rhetoric, claim a distrust of educated elites and rely on the support of the American and Russian working classes. But in the Venn diagram of American and Russian interests, there's not a huge overlap.

Moscow is trying to disrupt and fragment Europe, but it's in the U.S.'s interest to keep Europe prosperous, united and at peace. In Syria, Russia would like to demonstrate that its military and diplomatic support can keep despotic client leaders like Bashar al-Assad in power--while the U.S. has always insisted that Syria must have democratic elections that include all non-jihadi opposition groups. The Kremlin would like to once again make Ukraine a client state--or, failing that, cripple the country by sponsoring an ongoing civil war to prevent it from joining the EU and becoming a post-Soviet success story. But congressional Republicans--working in parallel with the Obama White House-- have always strongly supported the struggle of what Senator John McCain calls "the captive nations" against their former Russian overlords.

And then there's the Baltics, a corner of northeastern Europe Trump may not have spent much of his career thinking about. It's in the Baltic states of Estonia, Latvia and Lithuania--all once constituent parts of the U.S.S.R. with large ethnic Russian populations--that Trump's potential chumming up with Putin could have its first tragic consequences. Trump has called NATO "obsolete and extremely expensive" and has suggested he would not honor NATO members' commitments on collective defense unless other alliance members pay their fair share. If he repeats that rhetoric, let alone implements it, Putin could order his troops or local proxy forces to attack or destabilize the Baltic states--all of them members of NATO--under the pretext of protecting fellow ethnic Russians. "I really hope that the rhetoric on defense and Russia was mostly a part of the election campaign," Saulius Skvernelis, Lithuania's incoming prime minister, said in an interview with Reuters on November 9. "I hope the election campaign is now over and it is not yet time to panic."

The coming months will likely show Skvernelis whether his hopes are justified. If he gets lucky, he'll watch the former reality-TV star rapidly figure out who America's allies are--and how important it is to protect pro-American countries like Lithuania. "It is a very imperfect world, and you can't always choose your friends," Trump said in September. "But you can never fail to recognize your enemies."

The next president has only a few more weeks to figure out whether Putin is a friend or a foe.

Associated Press
China doubles down on internet control after tough new law
Thursday, 17 November 2016
Byline: Gerry Shih

Beijing - China's leaders and official media are pushing for greater control of the internet and technology products as tensions surrounding a far-reaching Chinese cybersecurity law loom over a gathering this week of the world's leading tech firms and Chinese officials.
The Communist Party's mouthpiece People's Daily warned in an editorial on Thursday that China must break monopolies over core technologies and standards and remain untethered to other countries' technology supply chains.

The commentary, aimed apparently at Silicon Valley in unusually stark terms, comes one day after President Xi Jinping called for "more fair and equitable" governance of the internet at the opening of the state-run World Internet Conference. Since 2014, China has hosted executives from the likes of Microsoft, Apple, Facebook and Alibaba in eastern China to promote its vision of an internet that is more tightly controlled by national governments rather than running unchecked as a transnational network.

The conference this week has highlighted U.S. and China's competing and increasingly entrenched views about the internet, trade and cybersecurity, and the potential for these issues to become an enduring irritant in bilateral relations.

Xi reiterated on Wednesday the Chinese position of "internet sovereignty" over its 700 million Internet users, while other top leaders declared the country's willingness to work with the global industry for mutual benefit -- if security could be assured on China's terms.

Earlier this month, China passed a broad cybersecurity law that gives law enforcement greater powers to access private data and requires data to be stored locally on Chinese servers. Human rights groups have voiced concern about police overreach while U.S. firms have lobbied against the measure, saying it would wall off China's internet and unfairly hamper their access to the market.

Other Chinese proposals in recent years have effectively discouraged state-backed companies and agencies from buying foreign products out of cyber-spying concerns. China has also encouraged its

state-backed sector to develop -- or outright acquire -- technologies in strategically critical industries like semiconductors, which it believes to be an Achilles heel of the Chinese economy. Recent efforts to acquire U.S. chip companies have been rebuffed by U.S. regulators on national security grounds.

Foreign technology trade groups say the regulations have used security as a pretext for enacting protectionist trade policies to benefit China's tech industry, and more than 40 groups signed a letter to Communist Party cyberspace officials last week urging China to respect its World Trade Organization commitments.

"We are concerned that these commitments are undermined by public statements and other forms of high-level guidance that call for indigenous and controllable substitution plans for information technology products and services," the trade groups said, while acknowledging that China faced "legitimate security concerns."

Beijing has said the internet has been overwhelmingly dominated by the United States and it has backed a proposal to transfer control over some of the internet's core architecture to a U.N agency, the International Telecommunication Union.

Critics, however, objected to letting authoritarian regimes like Iran and China get equal votes on matters affecting speech. The U.S. government in September privatized control over the systems by transferring them to a nonprofit oversight organization.

The People's Daily made clear in its editorial on Thursday that China needed to avoid dependence on foreign firms "particularly by breaking monopolies over core technologies and standards and not allowing other countries to control vital supply chains."

ADP veut réduire l'attente aux contrôles de police
Thursday, 17 November 2016
Byline: Bruno Trévidic

Paris - Le groupe ADP va financer le déploiement d'une nouvelle génération de bornes de contrôle automatisé des passeports.
Devant l'allongement des files d'attente aux guichets de la police aux frontières (PAF), à Roissy, Paris Aéroports s'est finalement résolu à mettre la main à la poche, pour tenter de remédier à une situation de plus en plus cauchemardesque pour les passagers. En l'absence de moyens supplémentaires émanant du ministère de l'Intérieur, le groupe ADP va financer à 100 % l'installation d'une centaine de nouvelles bornes Parafe de contrôle automatisé des passeports, a annoncé mercredi son PDG, Augustin de Romanet, lors d'une rencontre avec la presse.

Avec le renforcement des contrôles aux frontières, suite aux attaques terroristes, la durée de l'attente est devenue le principal motif de mécontentement des passagers débarquant à Roissy. Au contrôle systématique de tous les passagers, français et étrangers, entrant dans l'espace Shengen se sont en effet ajoutés des contrôles aléatoires à l'arrivée de certains vols au sein même de l'espace Shengen. Le tout sur fond de manque chronique d'effectifs à la PAF que ne compensent pas les actuels sas Parafe, peu nombreux, trop lents, souvent en panne et réservés aux détenteurs de passeports français biométriques.

« Depuis le début de l'année, les temps d'attente de plus de trente minutes ont été multipliés par 20 » , déplore Augustin de Romanet. De quoi ruiner tous les efforts d'ADP pour améliorer l'accueil des passagers et l'image de l'aéroport de Roissy-CDG et convaincre plus d'un touriste étranger de choisir un autre point d'entrée en Europe.

Passeports biométriques

Après avoir tenté, sans succès, d'obtenir de l'Etat des moyens supplémentaires, le PDG du groupe ADP a donc jugé préférable de lancer sans plus attendre un appel d'offres, remporté par Gemalto. Ces nouveaux portillons, différents des actuels sas Parafe, peu nombreux, peu fiables et trop lents, devraient être déployés dans le courant du premier semestre, à l'issue d'une période de test qui débutera le mois prochain. Ils devraient être accessibles à tous les passagers français munis de passeports biométriques, mais peut-être aussi à tous les autres ressortissants de l'Union européenne, à l'instar de ce qui se fait déjà dans d'autres grands aéroports européens comme Londres- Heathrow.

A condition toutefois que l'administration française accepte de valider le système de reconnaissance faciale, basée sur la photo du passeport. Car, pour l'heure, la réglementation française ne reconnaît comme valide que le contrôle des empreintes digitales.

À l'école des cybersoldats
Tuesday, 22 November 2016
Byline: Raphaël Bouvier-Auclair

Avec les menaces de cyberattaques qui ne cessent de se multiplier et d'évoluer dans leur forme, les Forces armées canadiennes veulent augmenter considérablement leurs ressources pour bien se défendre. Nous sommes allés visiter des classes où sont formés des militaires armés de claviers. Des fils et des écrans qui débordent de codes. Nous sommes loin des images qui nous viennent habituellement en tête quand on pense à des exercices militaires.

Pourtant, dans cette classe du Collège militaire royal du Canada, à Kingston, sont formés certains des soldats de demain.

Le collège offre un programme de génie électrique et informatique au premier cycle et aux cycles supérieurs. Des programmes qui ont été affinés et qui ont gagné en popularité au cours des dernières années.

Au premier cycle par exemple, l'un des cours de cyberdéfense se termine avec un stage de deux semaines organisé par l'agence américaine National Security Agency (NSA).

Francis Langlais, élève-officier de premier cycle au Collège militaire royal, à Kingston. Photo : CBC / Radio-Canada / Raphaël Bouvier-Auclair

L'élève- officier Francis Langlais est inscrit au programme de premier cycle.

J'ai fait un diplôme en jeu vidéo avant. Ça m'intéressait beaucoup. Mais j'ai décidé de faire autre chose, aussi en informatique. S'il n'y avait pas le côté cyber dans les Forces, ça m'aurait beaucoup moins intéressé.

Francis Langlais, élève-officier au Collège militaire royal

Apprendre à attaquer

Si, au premier cycle, l'apprentissage est beaucoup plus concentré sur la création de réseau et la cyberdéfense, certains cours des cycles supérieurs vont beaucoup plus loin. Il y a, par exemple, le cours qui s'intitule menaces et techniques d'attaque cybernétiques.

Au menu : craquage de mots de passe, virus, etc. En lisant la description, on croirait consulter le guide du parfait pirate informatique.

En ce moment, les Forces armées canadiennes doivent se concentrer sur la cyberdéfense et n'ont pas pour mandat de mener des attaques.

N'empêche, pour l'instructeur au Collège Guillaume Vigeant, apprendre certaines techniques d'attaque est essentiel.

On ne peut pas dire à un soldat : "ne fais qu'encaisser les coups". Il faut savoir comment attaquer pour savoir comment bien se défendre.

Guillaume Vigeant, instructeur au Collège militaire royal de Kingston

En classe, les étudiants analysent des menaces en se basant sur des cas d'actualité. Ils se penchent, par exemple, sur l'utilisation de cyberattaques dans certains conflits, notamment en Ukraine et en Irak. Le ver informatique Stuxnet, qui a paralysé des centrales iraniennes en 2010, est aussi un cas discuté.

Loin des stéréotypes

L'instructeur Guillaume Vigeant pendant un cours de cycle supérieur. Photo : CBC / Radio-Canada / Raphaël Bouvier-Auclair

L'instructeur Guillaume Vigeant en convient, sa classe est formée de nombreux « geeks », des maniaques de l'informatique.

« C'est un style de soldats qu'on n'est pas habitué d'associer au stéréotype de soldat », explique-t-il.

Son collègue, le professeur Sylvain Leblanc, précise qu'il n'y a là rien de nouveau. Plusieurs ingénieurs font déjà partie des rangs de l'armée ainsi que de la marine et de l'aviation royales.

Je ne pense pas que ce soit quelque chose de nouveau. Historiquement, il y a beaucoup de développement que l'on utilise aujourd'hui, dans le transport, dans les télécommunications, qui ont été développés par des gens intelligents en uniforme.

Sylvain Leblanc, professeur agrégé au département de génie électrique et génie informatique au Collège militaire royal

Dans un contexte où les bombes et les armes ne suffisent plus pour défendre les frontières canadiennes, les débouchés sont intéressants pour les étudiants de génie informatique à Kingston.

D'ailleurs, les Forces armées entendent créer dès l'an prochain un nouveau métier, celui d'opérateur cybernétique, qui sera uniquement dédié à la protection des réseaux.

Radio-Canada (Le Radiojournal)
Cyberattaque contre les Forces canadiennes : un nouveau métier verra le jour
Tuesday, 22 November 2016
Byline: Isabelle Poulin

Montréal - Les forces canadiennes intensifient leurs efforts dans la cyberdéfense.
BRIG.-GÉN. FRANCIS ALLEN (FORCES CANADIENNES) :

Il y a des adversaires qui veulent exploiter des vulnérabilités. -

Bonsoir, ici Isabelle Poulin, à Montréal. L'attaque qui a visé le site Internet de recrutement des Forces canadiennes, la semaine dernière, rappelle que le Canada demeure une cible dans le cyberespace. Le gouvernement Trudeau est en train de revoir sa politique de défense et Radio-Canada a appris qu'entre-temps les forces vont créer un nouveau corps de métier qui sera uniquement consacré à la cyberdéfense. Voici Raphaël Bouvier-Auclair.

RAPHAEL BOUVIER- AUCLAIR (REPORTER) :

Le constat des Forces canadiennes est sans équivoque. Les bombes et les fusils ne suffisent plus pour défendre le Canada. La brigadière-générale Francis Allen.

BRIG.-GÉN. FRANCIS ALLEN (FORCES CANADIENNES) :

Il y a un changement dans la menace. Maintenant, il y a des adversaires, des acteurs non étatiques qui veulent exploiter des vulnérabilités.

RAPHAEL BOUVIER-AUCLAIR (REPORTER) :

Pour l'instant, les Forces disposent de 200 personnes pour assurer la protection de leur réseau. Le nombre doit plus que doubler d'ici quatre ans, et dès l'an prochain, un nouveau métier très spécialisé, opérateur cybernétique, verra le jour. D'ailleurs, au Collège militaire royal, à Kingston, on forme ces soldats de demain. Dans des salles remplies de claviers et d'écran, des étudiants presque tous en uniforme assistent à des cours de premier et de deuxième cycle en génie informatique. Francis Langlais est du nombre.

FRANCIS LANGLAIS (ÉTUDIANT, COLLÈGE MILITAIRE ROYAL DE KINGSTON) :

Défendre le territoire canadien ou tout autre territoire physiquement, c'est important, mais s'il y a de l'information qu'on veut protéger est perdu, le domaine physique est compromis aussi.

RAPHAEL BOUVIER-AUCLAIR (REPORTER) :

À Kingston, on enseigne non seulement la défense, mais aussi les cyberattaques, des opérations que les forces ne sont pas autorisées à lancer en ce moment. L'ancien directeur du Service canadien du renseignement de sécurité, Richard Fadden, croit que cela devrait être envisagé, mais avec prudence.

RICHARD FADDEN (ANCIEN DIRECTEUR DU SCRS) :

Si on n'aime pas se faire attaquer, il faut se demander quelle va être la réaction des autres quand on attaque.

RAPHAÀL BOUVIER-AUCLAIR (REPORTER) :

L'option est sur la table. Le gouvernement Trudeau est en train de revoir les stratégies canadiennes de cybersécurité et de défense. Ici Raphaël Bouvier-Auclair, Radio-Canada, Ottawa.

Radio-Canada (Nouvelles)
Un nouveau métier au sein des forces armées pour se protéger des cybermenaces
Monday, 21 November 2016
Byline: Raphaël Bouvier-Auclair

Ottawa - La menace de cyberattaques est de plus en plus présente et les Forces canadiennes veulent mieux y répondre. Radio-Canada a appris qu'à partir de l'année prochaine, un nouveau corps de métier totalement consacré à la cyberdéfense sera créé au sein de l'armée.
Le risque de cyberattaques a de nouveau été exposé au grand jour la semaine dernière. Même si l'origine du problème demeure inconnue, le site de recrutement des Forces canadiennes a été ciblé jeudi.

Lorsqu'ils tentaient d'y accéder, les internautes étaient redirigés vers une page du gouvernement chinois. Par la suite, le site de recrutement des Forces est demeuré inaccessible pendant plusieurs jours.

Pour protéger les frontières virtuelles du pays de ce genre d'incident, les Forces canadiennes sont en train de développer un nouveau métier qui verra le jour l'an prochain.

Selon nos informations, les futurs opérateurs cybernétiques devront entre autres tester la vulnérabilité des réseaux, analyser les incidents liés à la sécurité et protéger les actifs informatiques.

Pour l'instant, ce sont surtout des ingénieurs et des techniciens qui sont responsables de la cyberdéfense au sein des forces.

Actuellement, 202 personnes assurent ce service. D'ici quatre ans, ce nombre doit passer à 429, notamment grâce à l'arrivée des opérateurs cybernétiques.

Attaquer ou non?

Au Canada, l'armée a pour fonction d'assurer la défense des réseaux, mais n'est pas autorisée à mener d'attaques. Ailleurs dans le monde, certains pays comme la Chine, la Russie et les États-Unis participent à des attaques dans le cyberespace.

Puis il y a des organisations terroristes comme Daech (connue aussi sous le nom de groupe armé État islamique).

Les possibilités qu'offre Internet sont quasi infinies. Prise de contrôle de sites hostiles, contrôle de réseaux électriques... Dans ce contexte le Canada devrait-il être autorisé lui aussi à aussi mener des assauts?

L'ancien directeur du Service canadien du renseignement de sécurité (SCRS) Richard Fadden y est favorable, mais croit qu'il faut avoir une discussion nationale sur le sujet puisque, selon lui, mener des cyberattaques vient avec son lot de risques.

Pour le professeur Thomas Keenan, chercheur associé à l'Institut canadien des affaires mondiales, les Forces canadiennes auraient tout à gagner à se concentrer sur la défense. Selon lui, ce qui s'est produit sur le site de recrutement de l'armée est la preuve qu'il y a encore du travail à accomplir.

Quant à mener des cyberattaques, Thomas Kennan souligne les risques qu'il y a à se frotter à des forces plus développées que les nôtres.

Il revient au gouvernement de Justin Trudeau de décider si les Forces canadiennes doivent développer une force de frappe dans le cyberespace. Un examen de la politique de défense est en cours en ce moment.

Au Canada, il n'y a pas que la Défense nationale qui est responsable d'assurer la cybersécurité. Le ministère de la Sécurité publique et des agences comme le Centre de la sécurité des télécommunications ont aussi un rôle important à jouer.

Sputnik
Russia, China Target Canada's Classified Data - Security Intelligence Service
Monday, 21 November 2016

Washington - Russia and China have been targeting Canada's classified information and official persons, the briefing notes for Canadian Security Intelligence Service (CSIS) Director Michel Coulombe claimed on Monday.

CSIS spokeswoman Tahera Mufti explained that "a number of foreign states" have sought to obtain political, economic and military information in Canada.

"Russia and China, in particular, continue to target Canada's classified information and advanced technology, as well as government officials and systems," the briefing notes, obtained by the Canadian Press through an Access to Information Request, said. "States and other entities abroad have interests... and will pursue those interests by a variety of means," Mufti told the Canadian Press. "Some will do so through espionage and interference, targeting the Canadian economy, strategic interests and assets, societal institutions and members of the diaspora." In October, US authorities accused Russia of trying to interfere with the election process in the United States by breaching of the Democratic National Committee (DNC) email servers, but have offered no proof to back their claims. Russian officials have denied the allegations, calling them absurd and further stating Moscow does not want to interfere in or attempt to influence the US elections.

ABC (Australia)
Superannuation funds vulnerable to terrorist funding and money laundering abuses: AUSTRAC
Tuesday, 22 November 2016
Byline: Stephen Letts

Canberra - Financial intelligence agency AUSTRAC has found evidence Australia's $1.3 trillion superannuation pool may be being used to fund terrorism activities and remains vulnerable to criminal exploitation.
A two-year study of so-called "suspicious matter reports" (SMRs) by AUSTRAC found 19 reports related to potential terrorism funding, with transactions totalling almost $260,000.

However, AUSTRAC pointed out the study, conducted with the Australian Federal Police, Australian Crime Commission and Australian Taxation Office, may have significantly under-reported the problem given just five funds reported more than half of all SMRs.

The study -- conducted over 2014 and 2015 -- found terrorism financing is a small but emerging and serious threat.

"There is evidence foreign terrorist fighters have rolled over payments from APRA-regulated superannuation funds to SMSFs (self-managed superannuation funds), with the money ultimately being used for terrorism financing," the AUSTRAC report noted.

"Fighters may also be supported by family or others in their community who are accessing their superannuation savings legitimately."

Superfund accounts also appear to be a handy tool for patient criminals to launder proceeds of crime, parking their money in the legitimate financial system and securing long-term low tax capital gains.

Cyber-attacks on super funds now a daily event

However, AUSTRAC said by far the biggest threat of criminal activity in superannuation was fraud and cybercrime with most funds contacted for the study noticing regular, even daily, hacking attempts.

Around 85 per cent of all suspicious transactions reported to the study, or 249 in total, related to fraud or cybercrime.

"Hacking provides criminals with the data they need to breach the defences that superannuation providers have in place," the report said.

"One large fund noted that cyber-enabled fraud attempts often started with small-scale attempts to find weaknesses in a fund's procedures and systems.

"Once a weakness was established, the fund was subject to 'mass waves of attack' from a number of fraudsters."

The study found the superannuation system had several key vulnerabilities to breaches of money laundering and terrorist funding (ML/TF) laws.

These include:The extremely large number of member accounts and volume of transactionsLow levels of member engagement, which hampers timely detection of fraudPost-preservation accounts which have few restrictions on making transactions to and from the accountsVoluntary contributions to accumulation accounts by members, where the source of money is difficult to verifyPayments to members and outgoing rollovers that are vulnerable to fraud and illegal early releaseThe growing reliance on online delivery of products and services, resulting in less face-to-face interaction with customers and increasing online data storage

Low levels of reporting may indicate weak protection

The report urged all super funds to strengthen anti-money laundering and counter- terrorism funding controls.

"Given the size of superannuation holdings and the level of criminal activity in the sector, it is likely that all funds would be exposed to potential suspicious matters," the report said.

"Low levels of reporting compared to industry peers may be an indicator of an ineffective [Anti-Money Laundering/Counter-Terrorism Financing] program."

AUSTRAC chief executive Paul Jevtovic said the risk assessment report should encourage the superannuation sector to identify and submit increased volumes of suspicious matter reports.

"As with all regulated sectors, AUSTRAC will seek to engage funds that appear to have lower levels of compliance than their industry peers," Mr Jetovic said.

"There is considerable scope for superannuation funds to expand their suspicious matter reporting and strengthen internal controls against financial crime."

Saudi Gazette
KSA ranked 1st in MEA for ransomware attacks
Tuesday, 22 November 2016
Byline: Staff Report

Riyadh - Symantec's Internet Security Threat Report (ISTR), Volume 21, revealed an organizational shift by cybercriminals: They are adopting corporate best practices and establishing professional businesses in order to increase the efficiency of their attacks against enterprises and consumers. This new class of professional cybercriminal spans the entire ecosystem of attackers, extending the reach of enterprise and consumer threats and fueling the growth of online crime.
"Advanced criminal attack groups now echo the skill sets of nation-state attackers. They have extensive resources and highly-skilled technical staff that operate with such efficiency that they maintain normal business hours and even take the weekends and holidays off," said Eyas Hawari, Country Director, Saudi Arabia, Symantec.

The Kingdom of Saudi Arabia's (KSA) 2015 global Internet Security Threat Profile ranking improved in 2015, moving from 42nd place globally in 2014 to 47th in 2015. This shift indicates a lower global percentage of source-based security threats, including malicious code, spam, phishing hosts, web and network attacks, and bots detected emanating from the country. In the Middle East and Africa, KSA ranked 7th, one place below the UAE and improving three places from last year.

"Given the size of its population, strategic geographical local, breadth of industries, and strong consumer spending power, Saudi Arabia is home to some of the region's largest organizations. Cyberthreats are one of the most critical security challenges that organizations across the globe face.," said Hawari added. "Organizations and consumers across the country are targeted with a variety of threats, including ransomware. It is therefore imperative that they continue to adopt robust security measures and global best practises to protect themselves against such attacks."

Advanced professional attack groups are the first to leverage zero-day vulnerabilities, using them for their own advantage or selling them to lower-level criminals on the open market where they are quickly commoditized. In 2015, the number of zero-day vulnerabilities discovered on a global level more than doubled to a record- breaking 54, a 125 percent increase from the year before, reaffirming the critical role they play in lucrative targeted attacks.

Globally, there were 430 million new malware variants discovered in 2015, a 36 percent increase from the previous year, proving that professional cybercriminals are leveraging their vast resources in attempt to overwhelm defenses and enter corporate networks.

In addition, organizations in KSA were highly attacked by malware, ranking 4h within Middle East and Africa region. 1 in 98 emails contained malware, while more than half (57.3 percent) of the emails were spam. In addition, large organizations (2,501+) were the most targeted for malware where 1 in 75 malware-mails received contained malware.

In KSA, web attacks were the most prevalent threat, catipulating the country's global web attack rank to 30th place, up 9 positions from 2014 and 2nd in the MEA region. Social media scams are also highly prevalent in Saudi Arabia, where it ranked 4th in the Middle East and Africa and 25th globally. This could be attributed to a range of socio-economic factors including the high smartphone penetration and high-speed internet access rate in the country as these connections can be easily leveraged and exploited by cybercriminals.

Data breaches continue to impact the enterprise. In fact, large businesses that are targeted for attack will on average be targeted three more times within the year. Additionally, the largest data breach ever publicly reported occurred last year with 191 million records compromised in a single incident. There were also a record-setting total of nine reported mega-breaches. While 429 million identities were exposed, the number of companies that chose not to report the number of records lost jumped by 85 percent. A conservative estimate by Symantec of those unreported breaches pushes the real number of records lost to more than half a billion.

Ogranizations in the Finance, Insurance and Real Estate and Wholesale sectors sector were the most affected by targeted attacks in KSA in 2015.. These organizations may be targeted as they have a lucrative database of customers, which cybercriminals can leverage for future attacks.

Ransomware also continued to evolve in 2015, with the more damaging style of crypto-ransomware attacks growing by 35 percent. This more aggressive type of ransomware, known as crypto-ransomware attacks encrypts all of a victim's digital content and holds it hostage until a ransom is paid. This year, ransomware spread beyond PCs to smartphones, Mac and Linux systems, with attackers increasingly seeking any network-connected device that could be held hostage for profit, indicating that the enterprise is the next target. KSA was the #1 most impacted country in the Middle East and Africa region in regards to ransomware, and the 31st globally with about 41 attacks per day measured.

As people conduct more of their lives online, attackers are increasingly focused on using the intersection of the physical and digital world to their advantage. In 2015, Symantec saw a resurgence of many tried-and-true scams. Cybercriminals revisited fake technical support scams, which saw a 200 percent increase last year. The difference now is that scammers send fake warning messages to devices like

smartphones, driving users to attacker-run call centers in order to dupe them into buying useless services.

Bahrain News Agency
For a New Approach to Cyber Security
Tuesday, 22 November 2016

Manama - Last January, Brown University launched a milestone Executive Master in Cybersecurity. The 16-months program aims at training a new generation of top security executives by offering professionals with a combination of on-campus as well as online, highly collaborative and interactive education modules.
Experts from many different departments of the University were drawn into the program in order to provide students with a deep understanding of this multi-faceted issue looking at InfoSec from a global, technical, human, and policy perspective.

This ambitious program stands out thanks to this interdisciplinary approach and is a much- needed step towards the shift Corix Partners has constantly been advocating for that is, the realisation that InfoSec is not a merely technical challenge and should primarily be approached from a governance and management perspective. The programs motto says it best: Strategy is the best Security.

The three main pillars of this program Technology, Law and Policy, and more importantly Human Factors are reflective of such mindset.

Advanced technological knowledge is of course essential for any cybersecurity professional, and many universities are already doing a great job training technical experts in this field.

On the other hand, Law and Policy is perhaps that part of InfoSec that is the most salient to top executives and board members in all organizations. It is obvious that the regulatory environment surrounding cyber-protection and the sometimes disastrous legal consequences of undergoing a cyber attacks are very important as businesses dive into the digital era. However, this focus tends to lead organizations to approach InfoSec from a merely reactive, tick-in- the-box and compliance-oriented perspective that prevents them from effectively addressing the issue.

What is truly underestimated when it comes to true cybersecurity leadership is the last pillar Human Factors. Your people indeed represents the biggest threat to the digital security of your organization, and any successful InfoSec strategy must fully recognize and address this issue. Classes such as Human Factors in Computer Security and Privacy which aims at giving students a rich understanding of the complexity of human agents and draws from behavioral science, user interface and personal management should allow future top executives of organizations to build innovative, much more resilient cybersecurity strategies.

It is good to see top universities finally addressing the critical cross-silo aspects of cybersecurity

And it should help a number of executives come to terms with the true dimension of the problem, looking beyond its mere technical dimension.

However, this kind of program is still mostly designed for CISO-level executives who rarely make it to the board room. The incorporation of InfoSec considerations into top executive MBA curriculums is the next crucial step that business schools must take in order to truly drive change at the top decision-making level. This is especially true as cyber security, data protection and privacy issues are quickly entering the realms of both CSR and corporate ethics. As of now, however, none of the worlds best-ranked MBA programs has yet decided to place enough emphasis on these emerging issues.

Washington Post
Hackers get leeway to report Pentagon bugs
Tuesday, 22 November 2016
Byline: Ellen Nakashima

Washington - The Defense Department on Monday became the first U.S. government agency to launch a policy enabling researchers to report bugs or flaws they discover in its websites without fear of prosecution.
Calling it a "see something, say something" policy for the digital domain, Defense Secretary Ashton B. Carter said the program is aimed at improving the security of the Pentagon's unclassified, public-facing networks.

The Army also opened registration Monday for Hack the Army, a challenge in which researchers and hackers scour Army sites for software flaws and compete for thousands of dollars in bounty rewards.

The Army contest explicitly authorizes researchers to try to hack a limited set of Army systems to find weaknesses. Meanwhile, the new policy is aimed at creating a way for hackers or researchers who come across flaws to report them without exposing themselves to criminal liability.

"This is a historic moment for hackers and the U.S. government," said Katie Moussouris, founder of Luta Security and an adviser to the Pentagon on the new policy. "For the first time since hacking became a felony offense over 30 years ago, the Department of Defense has now opened the doors for ongoing vulnerability disclosure from helpful hackers who want to help secure these systems without fear of legal prosecution."

There are security researchers who conduct broad scanning of Internet systems to discover and map vulnerabilities. In doing so, they might come across flaws in Pentagon websites. There are also hackers who, for an intellectual challenge, probe systems to try to find flaws that might be exploited. In either

case, these researchers and hackers could be charged with violating the Computer Fraud and Abuse Act, a prospect that has chilled security research.

Assistant Attorney General Leslie Caldwell, head of the Justice Department's criminal division, called the new policy "a laudable way to help computer security researchers to use their skills in an effective, beneficial and lawful manner to reduce security vulnerabilities." Her division advised in the crafting of the policy.

Pentagon networks are under constant assault from hackers seeking to find weaknesses they can exploit. In recent years, there have been intrusions into the unclassified email systems of the secretary of defense and at the Joint Chiefs of Staff. In 2008, the department's classified network was compromised in an operation thought to have originated in Russia.

The vulnerability disclosure policy will provide a standard avenue of reporting for all department websites. Bug data that is reported will be used for defensive purposes only, the policy states, to fix vulnerabilities in the department networks or applications, or in the software of vendors.

Individuals who report flaws will not receive bounties. The policy states that they may not harm the network, withdraw any data, compromise the privacy of department personnel or disclose details of the vulnerability without permission from the Pentagon.

The policy is aimed at people who come across the bugs in the course of their jobs or through research, said Alex Rice, chief technology officer and co-founder of HackerOne, a tech firm that helps companies set up bug-bounty and vulnerability disclosure programs. It has been working with the Pentagon on the program.

"The Department of Defense is not explicitly asking them to hunt for vulnerabilities," he said, "but they want to make sure they have a clear line of disclosure when they find them."

The program grew out of Hack the Pentagon, a bug-bounty challenge earlier this year in which about 250 people found and submitted flaws found in Pentagon sites. Of those, 138 received bounties totaling $75,000. One of the lessons learned from that experience, Rice said, was the lack of a way for people to report these vulnerabilities to the department outside of the bounty program.

The new policy does not cover the use of bugs for offensive or hacking purposes. The White House has a separate policy addressing that issue as applied to government agencies that discover or purchase software flaws. Tech policy experts have called for more disclosure of the policy's details and how it has been implemented.

Wall Street Journal
NSA Chief Michael Rogers Talks Cybersecurity

Tuesday, 22 November 2016
Byline: Rebecca Blumenstein

Interview - Cyberattacks represent an expanding and perilous front line for companies and the government. What do we do about a borderless war that has impacted business across the world and even a presidential campaign?
The Wall Street Journal's Rebecca Blumenstein spoke with Adm. Michael S. Rogers, head of the National Security Agency and commander of the U.S. Cyber Command. Here are edited excerpts of the discussion.

MS. BLUMENSTEIN: How worried should CEOs be about the state of cybersecurity?

ADM. ROGERS: Do we have a challenge here that requires attention? Yes. Is there a role for CEOs to play in this? Yes. You don't want your network-security team deciding unilaterally what's important. You as the leader need to set that tone. I do that in my own organization.

MS. BLUMENSTEIN: What can go wrong? It was now two years ago when the Sony hack happened. What can we learn?

ADM. ROGERS: I thought the positives were great collaboration between a private company--they knew they were dealing with something. They felt they needed to reach out to the government.

They could have sat there and said to themselves, "We really need to minimize this. Let's not really confront this publicly." They were very up front when they approached the government.

And we're going, "Look, if you want us to provide value and insight to you, then the only way this is going to work is if we get full access to your network and your data. It's the only way we can really generate the level of insight that I think you expect from us. I realize that that may make you uncomfortable. You're opening your structure. You're opening your networks. You're opening your data. You have to be comfortable with that."

They came back to us and said, "We're comfortable with that. What we ask you to do is inform us of what you're doing while you're doing it. And you stick to that."

MS. BLUMENSTEIN: But there were things that went wrong. It took a long time for them to detect this, right?

ADM. ROGERS: It doesn't matter if it's a commercial network, if it's a government network.

Networks that I have been accountable for defending, we generally find there's a significant time lag for most organizations between discovery of activity and the actual time the adversary initially penetrated the network.

MS. BLUMENSTEIN: How concerned should we be about state actors?

ADM. ROGERS: Probably 60% to 65% of the total activity we see of concern is criminal. It's not nation-states. Criminal activity includes theft of intellectual property. You also see nation-states doing this. But you see criminal groups penetrating networks to steal information that they think they can sell to someone. At the same time, you also have nation- states who you find are engaged in actions designed to penetrate the networks within the commercial sector.

You also find individuals and groups who are brought together for specific purposes under a specific ideology or focus. They'll harness that interest to a specific outcome. "Hey, let's do the following because we're all united by the idea we don't like this particular policy." We have seen Anonymous engage in activities against nation-states, companies, individuals.

I don't want it to get to the point where it takes some significant calamity to drive us to the conclusion that we've got to do something different than what we're doing now. The ultimate solution in my mind is how do you bring this public-private partnership?

The agreement I always reach with whoever we're working with is: I will not use the data we gain for anything other than the exact purpose I communicate to you.

Traditionally as a nation, we have very much differentiated between what is the role of the government, and what is the role of the private sector.

Cyber does not recognize these arbitrary lines that we have drawn. It doesn't recognize geography. I think it is totally unrealistic to expect the private sector to withstand the onslaught of activity that is being directed against them by nation-states and other actors.

Likewise, I don't think it's realistic to say, "Well, the government's going to do this." The challenge with the government doing it is if you want me to defend something, I can't do it from the outside. It's like fighting with one hand tied behind your back. It's not realistic, and it doesn't generally lead to positive outcomes.

MS. BLUMENSTEIN: I have to ask about WikiLeaks. You told NPR in August, "These emails were clearly leaked for a reason, and they were leaked, I believe, to achieve an effect." What can you tell us?

ADM. ROGERS: There's an ongoing investigation. I'm just not getting into the specifics. I still think there shouldn't be any doubt in anybody's mind. This was not something done casually. This was not something done by chance. This was not a target that was selected purely arbitrarily. This was a conscious effort by a nation-state to attempt to achieve a specific effect.

Christian Science Monitor
Influencers: Trump won't improve cybersecurity
Tuesday, 22 November 2016
Byline: Sara Sorcher

Boston - President-elect Donald Trump has promised that protecting the country from cyberattacks will be a "major priority" for his administration, but three-quarters of Passcode's pool of digital security and privacy experts say they do not believe cybersecurity will improve with the Republican in the Oval Office.
Passcode's latest Influencers Poll, a regular survey of 160 current and former government and intelligence officials, and leaders from the private sector and advocacy community, revealed broad pessimism about country's digital security over the next four years both because of Mr. Trump's stated policies - and his own personal lack of tech knowledge.

"I voted no simply because the president elect himself has shown no interest in understanding the issue," says Michael Hayden, a retired Air Force general and the former director of the CIA and National Security Agency.

Trump's response to a question about how he would improve the country's cybersecurity at a presidential debate this fall - in which he brought up his 10-year-old son's "unbelievable" computer skills and referred to digital threats as "the cyber" - was largely panned by the security community as an indication he didn't understand the complexity of digital threats facing the country. And many security experts were mystified by his refusal to blame Russia for the high-profile hacks on political organizations that took place during the campaign, a public break with the conclusions of the US intelligence community and prominent researchers who investigated the cyberattacks.

While Mr. Hayden, now a principal at global advisory firm The Chertoff Group, says "there may be some hope, however, that the government under him will continue to move albeit slowly in the right direction," other experts are wondering if Trump's campaign trail comments make it less likely top tech talent will choose to work in his administration over (typically) higher-paying jobs in the private sector.

"Set aside the lack of understanding (10-year-old sons excluded) and turning a blind eye to Russian role in an attack on American institutions, the real damage may be on the people side," says Peter Singer, strategist and senior fellow at New America think tank. "It is hard enough for government to recruit and retain talent, especially in a field like cybersecurity. It just got bigly harder."

Several security and privacy experts voiced concerns with Trump's strong stance against encryption. During the campaign, he went so far as to call for a boycott of Apple as it pledged to fight a court's ruling to help the FBI unlock the iPhone used by the shooter in the San Bernardino terror attack. Those who believe that strong encryption is essential for protecting consumers' data from cyberattacks are alarmed at the prospects of Trump's administration trying to mandate companies build in ways for the US government to access secure communications.

"To date, Trump's stance on encryption, backdoors, and cybersecurity appears naive and contrary to our founding fathers' vision and innovation," says Nico Sell, cofounder of encrypted messaging app Wickr. "Everyone in the global information security community is now watching to see who Trump surrounds himself with. Security is a global critical challenge; my hope is that he brings his views up to date once briefed by intelligence experts. The world needs a strong role model on this very important issue that impacts us all."

Cindy Cohn, executive director of the Electronic Frontier Foundation, is also calling for Trump to listen to security experts on encryption policy. "We desperately need leadership that recognizes that empowering users and companies to provide the strongest security and creating incentives for them to do so is the best way for us to actually be more secure," she says. "That means supporting strong encryption and helping companies fix security problems rather than keeping them open and hoping no bad guys find them. While Mr. Trump could remedy his lack of knowledge with some reasonable appointments, there's no indication yet that he will."

However, 25 percent of Influencers said they believed cybersecurity would improve under Trump. "Yes, I think The Cyber will continue to enjoy more attention from both the executive and legislative branch under the new administration," said one Influencer who chose to remain anonymous. "Cyber will be a priority issue for the Trump administration, and progress will continue, as it would had the election results been different," another Influencer added. "It is a 'must do,' not a 'nice to do' issue." Passcode allows Influencers to reply on the record or anonymously to preserve the candor of their responses.

The cybersecurity plan on Trump's campaign website offers some ideas about how he might improve cybersecurity, including commissioning an "immediate review" of both the country's defenses and security weaknesses, and creating task forces to respond to digital threats. Trump has also said he will seek recommendations on how to enhance the military's Cyber Command with "a focus on both offense and defense." He's also already tapped retired Army lieutenant general Michael Flynn, a former director of the Defense Intelligence Agency, as his National Security Adviser.

"Could this be a Nixon to China moment? I hope so. Trump's more aggressive rhetoric on cybersecurity gives him an obvious opportunity to set norms of restraint on certain kinds of destabilizing behaviors," says Steve Weber, professor at the School of Information at the University of California - Berkeley. "A 'no first use' pledge around something like critical infrastructure would mean a lot coming from this new administration."

Other Influencers were optimistic even if they didn't think that the president-elect or his administration would be the ones to alleviate the cyberthreats. "If there is some major national hack, Congress will act instead," one Influencer said.

And some privacy advocates said they thought Trump himself could be the reason people fortify their digital defenses - in opposition to his embrace of surveillance and government access to encrypted

communications. "Trump's presidency," says Elana Zeide, a research fellow at New York University's Information Law Institute, "gives everyone more incentive to secure their communications."

Comments:

NO

"With change in administrations there is opportunity, but in the near term they will be learning how to govern. While cybersecurity played out as a backdrop to the election it was not focal to Trump's campaign. Immigration, trade, infrastructure, and Obamacare reform will suck all the oxygen out of the room and leave little room for the (civilian) security community to make gains." - Jeff Moss, founder of Black Hat and DEF CON

"Data security and security of IoT is a major concern for consumers. My biggest concern is the next administration mandating broad exceptional access mandates which would undermine the security of IoT." - Terrell McSweeny, Federal Trade Commissioner

"The current mix of incentives and disincentives in the US is not driving improvements and the Trump stated goals for information sharing are unlikely to improve the situation. Hopefully his focus on more efficient and effective government causes reform of acquisition and procurement, which would have a net positive effect within government." - Influencer

"The answer of course depends on who the advisors to the president are and on the final policy decisions that are made and enacted, but initial indications are not favorable overall with respect to cybersecurity policy. Based on his prior comments (essentially anti-Apple/anti-encryption), the president-elect is likely to favor less security in exchange for more government access, which would weaken our security overall. Further, with a closely divided Senate, the current glacial rate of policy developments on cybersecurity will not likely accelerate, placing us further 'behind the curve' relative to worldwide developments and needs in cyberspace over time. One outstanding issue that could improve under the Trump administration is the Wassenaar Agreement, more specifically its language on 'intrusion software' to which cybersecurity technology firms and legitimate cybersecurity are strongly opposed. As this ongoing debate will run into the next presidential term, the Trump Administration has an opportunity (and presumably an interest) in 'rebooting' the conversation, hopefully aiding in bringing it to a more acceptable conclusion. With proper industry expertise being applied to the renegotiation of this problematic contract, cybersecurity companies can confidently take a more active role in stopping cybercrime and cyberespionage without running the risk of prosecution or other negative impacts to their business or freedom." - Influencer

"My assessment is based on the initial challenges I believe the Trump administration will face in retaining and attracting the best technical talent and the most strategic policy and law thinkers. I believe we will continue to maintain a robust cybersecurity technical and tactical capacity, but I worry that episodic interference from President Trump's senior political advisors, or unconventional geopolitical

decisions by President Trump himself, may complicate a coherent approach. This challenge may, ironically, lead to more public discussion, debate, white papers, recommendations, etc. from the establishment cyber-warrior class and perhaps have more influence of time on the global cybersecurity strategy of a Trump administration over time." - Influencer

"Nothing suggests Trump - or anyone on his staff - understands even the basics of why we need to improve the nation's defenses. - Chris Finan, CEO of Manifold Security

"It is too early to tell, and not enough is known about their concrete policy objectives to speak with authority on whether they will take actions that improve or weaken cybersecurity. I am open to working to educate the administration about the Internet, and others should be as well." - Christian Dawson, executive director and cofounder of the Internet Infrastructure Coalition (i2Coalition)

"[What's on Trump's website] is extremely vague and contains no meaningful indication that Trump would improve the current state of cybersecurity. - Yan Zhu, engineer at Brave

"Trump has advocated an 'America first' foreign policy, but this type of isolationism will not work for cybersecurity. Improving cybersecurity will require US leadership and global partnerships as this is not a problem that the US can solve on its own." - Influencer

"Our most capable adversaries will exploit the gaps created by a change in leaders and capabilities. State sponsored activity is frequent, and taking fewer steps to disguise the activity." - Jenny Durkan, global chair of the Cyber Law and Privacy Group at Quinn Emanuel law firm

"One tries to be hopeful. In reality there's no way to predict." - Influencer

"Trump will not regulate the IoT makers or the software makers for fear of hurting their growth and jobs. Cybersecurity under Trump will be more of the same current reactive 'cyber smoke alarm and cyber fire station' approach which has proven in the physical world not to prevent cities from burning down. It's not until we have the fortitude to mandate the equivalent of brick firewalls between buildings and sprinkler systems will things change. Expect to see plenty of offense from our cyber glass house." - Chris Wysopal, cofounder at Veracode

"I haven't seen any urgency on this matter during his campaign, nor do I think his base is particularly concerned with matters of cybersecurity." - Jeffrey Carr, president and CEO of Taia Global, Inc.

"US cybersecurity will continue to grow in relevance and attention regardless of who the president is, and companies will have to dedicate more resources and time to making good and secure decisions about how to protect data. Now, whether US *government* cybersecurity will improve - for that we'll have to wait until a cybersecurity chief is named to begin to guess." - Influencer

"Trump and his advisors have demonstrated no understanding of cybersecurity, nor any comprehension of its importance. Moreover, the recent purge of any qualified cybersecurity experts such as Mike Rogers from his team - in favor of hacks from Breitbart and Jeff Sessions' office - makes clear that they are more interested in absolute power than any constructive accomplishments." - Influencer

"Trump lacks the discipline and vision to implement a coherent and effective approach to cybersecurity." - Tor Ekeland, managing partner of Tor Ekeland, P.C. law firm

"My biggest fear is Trump's implied support for extension of law enforcement powers to include forcing vendors to break their end-to-end security in order to accommodate search warrants. The FBI's analogy is a bank's safety deposit box; I believe data to be fundamentally different though, and without precedent. A lot of damage can be done between now and when a relevant Supreme Court decision on this is made." - Nick Selby, cofounder and chief executive officer of StreetCred Software

"It is *WAY* too soon to say cybersecurity will get better or worse under a Trump Presidency, or whether the Presidency will have any influence on the state of cybersecurity. We have zero track record on what his administration will or will not champion and what his administration will or will not mandate." - Influencer

"There are not enough 400 pound hackers." - Influencer

"US cybersecurity will improve during the Trump administration. But any improvements will have more to do with overcoming an era of cyber inertia than with anything stemming from a Trump presidency." - Influencer

"Cybersecurity defenses are always getting better and the next four years will not be an exception (in large part because most improvements in cybersecurity arise from the private sector with its own motives). Unfortunately, cybersecurity offenses are always getting better too. Finally attack surfaces are growing, as an increasing number of Internet of Things stories reminds us. So, a broad answer has to balance three very different trends. Then there's the question: improved relative to what? Will science advance in a Trump administration? Undoubtedly, because science never goes backwards and that would be true if science funding were cut to zero. But, with cybersecurity as with science, the question is one of comparison. If cybersecurity would have advanced more in a hypothetical Clinton administration than in a Trump administration is the answer to your question still 'yes'? And of course, we have no clue who Trump is going to appoint - and, otherwise, I really cannot tell what Trump's cybersecurity policies are going to be." - Martin Libicki, senior management scientist at RAND

YES

"Fresh eyes." - Mark Weatherford, principal at The Chertoff Group

"While Trump in his campaign program gave little or no indication of a concrete plan to improve cybersecurity in the US, the reality is so dire that improvements in cybersecurity will be a must." - Influencer

"Yes, contingent on him walking the talk regarding regulation accelerating the protection of the .gov morass. He needs to support the transformation at NSA and rethink the role of government." - Influencer

"I really don't see how he can make it worse so any changes at all will likely be improvements no matter how small. Obama couldn't get stuff through Congress and so had to make his changes through executive proclamation. Barring some major national hack I don't see Trump doing that. If there is some major national hack, Congress will act instead. So really I don't see much improvement under Trump other than incremental changes. Anything like CFAA reform or changes to DMCA are pretty much off the table now I am sure. We may see a new 'cyber' bill get passed but it will be about as effective as CISA, in other words sound real good and have 'cyber' in the title but not really make a whole hell of a lot of difference." - Influencer

"President-elect Trump has been more specific about the need to improve cybersecurity than about most defense issues. At a minimum, he's likely to continue initiatives from the Obama administration to strengthen cybersecurity." - Influencer

"Previous presidents have so far been unsuccessful in constructing cohesive and well informed cybersecurity policies or installing multi-disciplinary leadership. As the International cyber threats have increased in sophistication and scope, we're rapidly approaching an inflection point where if something isn't done, it will be done to us via external entities. Just as hacking, cybersecurity, and email breaches have been core to the election process, they will continue to grow and affect Trump's new government. Hence, in Trumps presidency, the US government and agencies are having their hands forced in to dealing with this invasive hacking epidemic. - Günter Ollmann is chief security officer at Vectra

"In October, the US Chamber wrote an open letter to the 45th president to recommend that the incoming administration prioritize three cybersecurity issues: First, we need to build on the momentum behind the joint industry-National Institute of Standards and Technology Framework for Improving Critical Infrastructure Cybersecurity, which business leaders and policymakers see as a key pillar for managing cyber risks at home and internationally. Closely linked, we urge the incoming Trump administration to harmonize existing regulations with the cyber framework. Cutting cyber red tape will serve the cause of bolstering security. Second, the Trump team starts in a strong position with the enactment of the Cybersecurity Information Sharing Act (CISA). By working as an ally with industry, the next administration can lead a culture shift to bring businesses off the sidelines to engage in effective threat information-sharing. Third, Washington's policies ought to encourage greater adherence to international norms of acceptable behavior and deterrence in cyberspace. The pros and cons of cyber deterrence deserve more careful scrutiny than they have received to date." - Matthew Eggers, executive

director for cybersecurity policy in the National Security and Emergency Preparedness Department at the US Chamber of Commerce

"The reason for 'Yes' is that, in cybersecurity, offense has permanent structural advantage. AI applied to offense will result in Mexican standoff, which will be called 'peace.' - Dan Geer chief information security officer for In-Q-Tel

"It is not possible at this point to predict this. Trump changes his mind all the time and the direction is most likely to be determined by top advisors who as yet remain unnamed." - Influencer

Bloomberg News
Firing NSA Chief Would Be 'Extremely Reckless,' Nunes Says
Tuesday, 22 November 2016
Byline: Chris Strohm, Nafeesa Syeed

Washington - Removing the head of the National Security Agency and U.S. Cyber Command would be "extremely reckless" and leave the U.S. vulnerable to security threats during a delicate time of presidential transition, said House Intelligence Committee Chairman Devin Nunes.
Nunes, a California Republican, commented in an interview Monday after a Nov. 19 report in the Washington Post said that Defense Secretary Ash Carter and James Clapper recommended that Admiral Michael Rogers be removed as the head of both agencies.

Carter has grown increasingly frustrated with Cyber Command and Rogers for a lack of progress in countering Islamic State's cyber operations, according to a U.S. official who asked to not be identified discussing internal deliberations.

Clapper's motivation for removing Rogers would be to split the leadership roles of the NSA and Cyber Command and to have a civilian in charge of the NSA, according to the Washington Post report. Clapper already has submitted his resignation as Director of National Intelligence in anticipation of the new administration.

The Pentagon and Office of the Director of National Intelligence declined to comment when contacted by Bloomberg, while the NSA didn't respond to requests for comment.

To date, no reason has been communicated to the intelligence committee to justify firing Rogers, and intelligence leaders haven't informed the panel that the chief of the NSA and Cyber Command was failing in his duties, Nunes, a California Republican, said in the phone interview.

'Snake Pit'

"The knives are out to get Rogers," Nunes said, describing elements of the intelligence community as a "snake pit."

Rogers took over NSA and Cyber Command in 2014 in the wake of former contractor Edward Snowden's disclosures of secret surveillance programs. The NSA was bruised earlier this year by revelations that another of its contractors was accused of stealing millions of pages of data over 20 years. That followed an incident in August in which an online group called ShadowBrokers posted two encrypted dossiers with what appeared to be highly classified NSA hacking tools to online file-sharing sites.

President Barack Obama this weekend called Rogers "a terrific patriot" and declined to say whether he would seek his resignation.

Nunes, who is serving as an adviser to President-elect Donald Trump's transition team, said he believes Rogers is doing an excellent job and would support him as the next director of national intelligence under Trump.

Rogers, 57, met last week with Trump in New York as his name surfaced as a potential replacement for Clapper. Discussions about the possibility of removing Rogers occurred before that meeting, the official said.

Decision Shelved

The intelligence committee has asked Clapper and Carter, or their aides, to confirm Monday whether a recommendation has been made to remove Rogers and, if so, why.

Clapper and Carter have formally recommended that the NSA and Cyber Command be split apart, a second U.S. official said. For now, that recommendation has been shelved during the presidential transition, but a new leader for each agency could be chosen if the plan goes forward.

Nunes said in a Nov. 19 letter to Carter and Clapper that he has been "consistently impressed" with Rogers' leadership and accomplishments.

"His professionalism, expertise, and deckplate leadership have been remarkable during an extremely challenging period for NSA," Nunes said, using a term for leaders who set the tone for their teams. "I know other members of Congress hold him in similarly high esteem."

San Francisco Chronicle
Trump's CIA pick would reinstate US collection of phone data
Tuesday, 22 November 2016
Byline: Bob Egelko

San Francisco - The federal government's long-hidden authority to sweep up records of all phone calls made in the U.S. was repealed last year in a bipartisan vote of Congress. But President-elect Donald Trump's choice to head the CIA has called for reinstatement of the data haul and said its elimination was part of "Edward Snowden's vision of America."
Snowden, a former National Security Agency contractor, revealed in 2013 that the NSA had been collecting bulk data on U.S. phone calls without a warrant for more than a decade. President George W. Bush's administration had ordered the collection unilaterally after the terrorist attacks of Sept. 11, 2001, then obtained approval from a secret intelligence court in 2006.

The records contain so-called metadata, showing the numbers called and duration of the calls, but not the content of the messages. The law that President Obama signed in June 2015, called the USA Freedom Act, leaves the records with the phone companies but allows the National Security Agency to request data on individual customers without a court order.

Rep. Mike Pompeo, R-Kan., whom Trump named Friday as his choice for CIA director, was among a minority of House Republicans who opposed the change. In a December 2015 column in the National Review magazine, he attacked Republican presidential candidates who supported the new law.

"Those who today suggest that the USA Freedom Act, which gutted the National Security Agency's metadata program, enables the intelligence community to better prevent and investigate threats against the U.S. are lying," Pompeo wrote.

"Less intelligence capacity equals less safety. To share Edward Snowden's vision of America as the problem is to come down on the side of President Obama's diminishing willingness to collect intelligence on jihadis."

In a January 2016 Wall Street Journal column co-authored by conservative commentator David Rivkin, Pompeo called for Congress to reauthorize collection of U.S. phone records, which would be combined with "publicly available financial and lifestyle information" into a government database.

"Legal and bureaucratic impediments to surveillance should be removed," Pompeo and Rivkin wrote.

Neither Trump's presidential transition office nor Pompeo's congressional office responded Monday to inquiries about the issue. But privacy advocates predicted congressional resistance to any attempt to reinstate government authority to gather Americans' phone records.

"This was an invasion of privacy for every single American, Americans who had never been accused of any crime," said Neema Singh Guliani, legislative counsel for the American Civil Liberties Union. And a review by the government's Privacy and Civil Liberties Oversight Board found that the records haul "never played a substantial role in stopping an act of terrorism or stopping a terrorist suspect," she said.

"I think a lot of Americans would be very nervous to learn Donald Trump has access to our phone records," said Elizabeth Goitein, co-director of the Liberty and National Security Program at the Brennan Center for Justice in New York. "It would make a lot of Congress nervous as well."

Although Snowden, now in Russia, has been accused of wrongdoing by both Trump and his defeated Democratic presidential opponent, Hillary Clinton, Goitein said Pompeo's attempt to discredit the former NSA contractor had misfired.

"If Edward Snowden's vision of America is an America that doesn't spy on Americans, I guess (Pompeo's) right," she said.

Because the USA Freedom Act was passed by Congress, it would take an act of Congress to repeal it. But the Trump administration could act within the law to expand data collection.

For example, said Singh Guliani, the U.S. Drug Enforcement Administration had its own program since the 1990s of collecting metadata on phone calls to and from countries associated with drug trafficking, including Canada, Mexico and most of Central and South America. The Obama administration suspended that program in September 2013 after Snowden's disclosures, but a new administration might revive it.

Snowden also disclosed records of surveillance programs that monitored the content of phone calls to and from certain countries without court approval, programs that the Trump administration could expand, Singh Guliani said.

Goitein noted that the USA Freedom Act was compromise legislation that allowed the government to obtain not only individual records from a phone company, but also records of anyone the targeted person had called. And she said one of the law's safeguards, requiring the secret court to publish a summary of any ruling it issues on a significant issue, allows the government to decide which issues are "significant" and what information should be withheld for security reasons.

Another privacy-rights advocate, Cindy Cohn, executive director of the Electronic Frontier Foundation in San Francisco, said Obama could have done more to adopt lasting protections against surveillance abuses.

"The Obama administration's approach was fixing internal rules" for its own actions, Cohn said. "That leaves it really ripe for change by the next administration." And Obama, she added, "could have taken a turn away from all this secrecy" that still envelops the programs.

Susan Freiwald, a University of San Francisco law professor who teaches courses in privacy and cyberlaw, said Pompeo and his future colleagues will have leeway to interpret the law "broadly so they may collect vast amounts of information."

"Pompeo is promoting the discredited view that it is always good for a government to collect more data on its people," she said.

The National (UAE)
BlackBerry Dtek60: Phone maker returns to the fray (Canada).
Tuesday, 22 November 2016
Byline: John Everington

Abu Dhabi - With the new Dtek60 BlackBerry has produced a pretty compelling Android smartphone at a quite reasonable price of Dh1,999, all overlaid with the brand's security features IT departments supposedly love.
It's just a shame it comes out so late in the game for the company, with its market share lower than ever.

The Dtek60 is pretty similar design wise to its predecessor the Dtek50, sporting the same solid, if slightly uninspiring, off-the-shelf form factor of the Alcatel Idol 4S.

Looks aside though, the Dtek60 is a massive upgrade on its predecessor; the display is slightly larger at 5.5 inches, and is now Amoled, offering a far higher pixel density and much more vibrant colours.

At long last, BlackBerry has fin-ally made a handset with a fingerprint scanner, located on the rear of the phone just below the camera, as per the LG G5 and others.

Camera-wise, the Dtek60 now sports a 21MP rear snapper (compared with the 13MP of the Dtek50), with the same 8MP selfie camera as its predecessor. Performance is decent if not stellar, with one or two struggles in low light compared with the iPhone 7 and the best-in-class Samsung Galaxy S7.

The Dtek60 is still a BlackBerry at heart. BlackBerry Messenger (BBM), BlackBerry Hub and BlackBerry Intelligent Keyboard are all present and correct for the faithful. There's even a little red notification light in the top right-hand corner.

Plus the brand continues to tout its security features as its trump card. Like its predecessor, the Dtek60's storage is encrypted right out of the box, while its Dtek app notifies you when the handset camera, micro-phone and location are being accessed.

Additionally, BlackBerry has been active in providing Android security patches faster than any other manufacturer other than Google (for its Nexus and Pixel ranges), something that will continue to appeal to IT managers and the more security-conscious consumers.

The Dtek60 at long last provides BlackBerry with a properly compelling smartphone after the overly expensive Priv and the uninspiring Dtek50, offering pretty high performance and solid security at a reasonable price. Such a shame then that it didn't come out 12 months ago.

Herald Sun

Call to arms on cyber attacks

Wednesday, 23 November 2016

Byline: Annika Smethurst

Section: general

Melbourne - Cyber terrorism is a growing threat, and state-sponsored -attackers are using online technology to strike Australia, the Federal Government will warn today.
Just seven months after the Coalition launched a multi-million-dollar strategy to -tackle criminal and state--sponsored cyber attacks, Prime Minister Malcolm Turnbull will reveal that tech experts are also helping in the fight against Islamic State in Iraq and Syria.

"Less well known, but of increasing importance, is that this fight against Daesh is also conducted through cyberspace," Mr Turnbull is expected to say in a national security speech to parliament.

In recent years, the Federal Government has bolstered its defence against hi-tech heists, and appointed a minister to help defend the nation's cyber networks.

In an address to the National Press Club today, Dan Tehan, the Prime Minister's Assisting Minister on Cyber-security, will emphasise the need to stay "ahead of the game" in the face of growing cyber crime from hackers.

Mr Tehan is expected to urge the government to accelerate the rollout of its Cyber Security Strategy in the face of the growing threat.

"What we do today will prepare us for tomorrow," he says in a draft speech. "If we can do this, we can be confident in facing what comes next." Mr Tehan has identified a number of areas where the government could improve its online defence capabilities, -including better co-ordination between departments -- that he says should take "greater responsibility" for internet -security.

He believes governments and businesses should also be more open with the public about cyber attacks.

"We need to continue to be transparent when attacks occur and release this information to the public as soon as the details are known, and it is safe and secure to do so," Mr Tehan will say.He will also flag new laws and a "strong cop on the beat" to deter criminals and protect online information.

Australian Associated Press

Aust hits Islamic State in cyberspace

Wednesday, 23 November 2016

Byline: Max Blenkin and Roje Adaimy

Section: general

Canberra - Australia is conducting online warfare against Islamic State but Australian businesses, government organisations and individuals remain vulnerable to cyber attacks.
In a revelation about Australia's growing cyber capability, Prime Minister Malcolm Turnbull disclosed the Australian Signals Directorate had taken the fight against Islamic State into cyber space.

It was making "a real difference", he told parliament on Wednesday.

But neither Mr Turnbull nor his cyber security minister Dan Tehan would reveal any details of how that was being done.

Delivering a statement on national security, Mr Turnbull said cyber security operations were subject to the same rules of engagement that apply to other military capabilities.

That includes the six RAAF F/A-18 Hornets which have been bombing IS targets in Iraq and Syria whose rules are intended to minimse risk of harm to civilians.

Similarly Mr Tehan declined to discuss offensive cyber capabilities - though he said publicly available literature speculated on what could be done.

IS has long been adept at using the internet for its own purposes, using slick video productions to trumpet its successes and persuasive social media pitches to potential western converts.

Cyber attack could take the form of denying IS use of its computer networks, or penetrating their systems to steal information or compromise command and control.

One academic paper terms this type of attack as above espionage but below violence.

Australia certainly isn't going it alone against IS - the US also has a Cyber Command with advanced capabilities for defensive and offensive operations.

Mr Tehan warned of the devastating "cyber storm" in which attacks compromise power, telephone, emergency and financial networks.

Such attacks could be mounted by a foreign power, criminals or kids causing trouble. Cyber terrorism is an emerging threat.

"We are naive if we think that in Australia we are immune to any of these threats," the minister told the National Press Club.

Mr Tehan said everyone needed to do more to guard against the threat.

"All of us must be on notice - it is not a case of if but when government, businesses or individuals will be hit," he said.

Mr Tehan said there were areas where more needed to be done, including working with state and territory governments and businesses to better protect critical infrastructure.

We needed to recognise that links between government departments were where attackers would find vulnerabilities to exploit.

"When the Bureau of Meteorology was compromised it was most likely because it was seen as an entry to other organisations," Mr Tehan said.

New Straits Times

MCMC: 4,800 websites blocked from 2015 to Sept this year

Wednesday, 23 November 2016

Section: general

Kuala Lumpur - From 2015 to the end of Sept this year, 4,800 websites were blocked for various offences under the law, said the Ministry of Communications and Multimedia.
In a written reply in the Dewan Rakyat today, the ministry said some of the websites were blocked upon the request of the Royal Malaysian Police under the Common Gambling Houses Act 1953.

Replying to a question from Datuk Liang Teck Meng (BN-Simpang Renggam) who asked about the measures taken to censor websites, especially pornographic ones, the ministry said police had requested that 1,931 internet pornographic and gambling sites be blocked.

"At the same time, some sites were blocked upon the request of other enforcement agencies including the Health Ministry, the Ministry of Domestic Trade, Cooperatives and Consumerism, as well as Bank Negara Malaysia. "Action was also taken against advertisements which contravened the law," the ministry said.

The Malaysian Communications and Multimedia Commission (MCMC) had also taken steps to educate and increase awareness among consumers throughout the country on the positive use of the internet and practicing self-control.

According to the ministry's statement, the steps include applications for parental control tools which could be set up with the cooperation of the internet service provider.

Malware cleaning centre to start in a month

Wednesday, 23 November 2016

Byline: Staff Reporter

Section: general

Hyderabad - After missing deadlines for more than a year, a unique centre that can detect a virus and clean it from the digital gadgets and devices might finally see the light of the day. The Botware Cleaning and Malware Analysis Centre will be operational within a month, said Ministry of Electronics and Information Technology Additional Secretary Ajay Kumar.
He said that the centre can be utilized by the citizens to clean up their mobiles, laptops and PCs. The facility had to come up last year as part of the digital India programme.

Speaking at the launch of the second edition of the Cyber Security Conclave on Tuesday, Mr. Kumar informed that the tendering process for setting up National Cyber Coordination Centre is in its final stages. The Centre will report on possible cyber threats in the Indian cyber space and protect it from breaches, he said adding that it will be operational from March 2017.

Listing out the initiatives taken up by the Central Government in the field of cyber security, he said that they are also working on developing strategies to safeguard biometric and financial database of various institutions of the country.

"In all 24 per cent of the Indian companies are exposed to cyber attacks as against the global average of 15 per cent," said Mr. Kumar. "We have written to the ministries and companies of major sectors like banking, petroleum, IT and others to have CISO (Chief Information Security Office) in every organisation."

He said that cyber threats are a matter of concern and that IT industry also has to join hands as the Government alone cannot tackle this menace.

Minister for IT, Telangana, K.T. Rama Rao said that the shortage of cyber security experts presented an opportunity for youngsters in terms of employment. He said that in the backdrop of demonetization and subsequent increased use of online transactions, the challenges in cyber space have increased multiple times.

NASSCOM (National Association of Software and Services Companies) Chairman C.P. Gurnani said that the cyber security market is expected to be around $35 Billion with a requirement of one million cyber security experts. The two-day conclave is being organised by Society for Cyberabad Security Council and Kenes Exhibitions.

Jerusalem Post

IAI introduces system to prevent collisions between civilian and military aircraft

Wednesday, 23 November 2016

Byline: Anna Ahronheim

Section: general

Jerusalem - The first military system to prevents mid-air collisions between civilian and military aircraft has been introduced by Israel Aerospace Industries.
The Collision Warning System (CWS), is an "innovative, lifesaving solution designed to warn combat pilots in situations when potential collision with commercial and civilian aircraft is imminent," according to an IAI statement.

The system monitors non- military aircraft by integrating two independent systems; one is known as "Interrogation Friend/Foe," and the other as "Automatic Dependent Surveillance- Broadcast."

The breakthrough technology was developed by the industry's MALAM Division to create an aerial picture that "provides a complete air situational picture, with warnings visible only to the military pilot."

And though civilian aircraft pilots do not get any collision avoidance warnings, military pilots get three: one by voice; one by graphic indicators sent via a tablet panel; and one by symbols presented on the plane's cockpit displays.

Designed for fourth and fifth generation fighter jets, training aircraft, military helicopters and remotely piloted aircraft, the CWS plots existing and projected flight paths of all aircraft flying in the area. The military pilot then receives a detailed picture that shows the proximity of any civilian aircraft and the potential risk of collision.

On July 7 2015, two people were killed when a civilian and military aircraft collided in the United States. According to the National Transportation Safety Board, the F-16 pilot had been aware of the civilian Cessna, and had even been advised by air traffic control to avoid colliding with it.

But, according to the military pilot, there was no visual confirmation on the civilian aircraft until it was 500 feet in front of his plane, and despite the attempts at avoidance, the two aircraft did ultimately collide.

"The growing congestion of the airspace and lack of integration between military and civil air spaces requires new, independent solutions to prevent collisions. Such systems will improve flight safety without compromising operational freedom," said Jacob Galifat, General Manager of the IAI/MALAM Division.

"The CWS we are introducing today combines the independence, operational freedom, ease of integration and affordability which are so important for the military operator, enabling military pilots to fly safely, without risk to civilian or military aircraft nearby in both training and operational flights." The system is currently being tested by several leading air forces.

Gulf News

Cybercrime cost UAE Dh5.14b this year

Wednesday, 23 November 2016

Byline: Naushad K. Cherrayil

Section: general

Dubai - The financial cost of cybercrime to the UAE has reached $1.4 (Dh5.14) billion to date this year, an increase of 4.9 per cent as hackers take advantage of consumer complacency, said an industry expert. Globally, the financial cost decreased by 16 per cent to $125.9 billion this year.
Tamim Taufiq, head of Norton Middle East, told Gulf News that the rise in the financial cost in the UAE is due to multiple reasons. The country has become the ideal target for hackers due to the high penetration rates of smartphones (over 83 per cent), adoption of new technologies, and the high profile this country has internationally.

He said that 2.53 million consumers were affected by cybercrime in the UAE this year compared to two million last year, an average of 31.5 hours per victim dealing with the consequences compared to 30 hours last year.

Globally, 689.4 million consumers were affected and an average of 19.7 hours per victim to deal with the consequences.

Consumers around the world lost an average of 21 hours (for perspective that's the entire next season of Arrested Development) over the past year dealing with the fallout from online crime, and nearly $358 on average per person, enough for a year of home security monitoring

Taufiq said that the UAE consumers are the most likely to continue engaging in risky online behaviour, leaving themselves vulnerable to further attacks.

According to Norton Cyber Security Insights Report, nearly seven out of 10 people know they must actively protect their information online, yet are still willing to click on links or open malicious attachments from senders they don't know.

"Consumer complacency and risky online behaviours are helping hackers reap rewards from their efforts as they continue to hone their craft and adapt scams. Millennials are the most commonly affected by the crime, with 53 per cent having experienced it within the past year," he said.

"Our findings show that people are growing increasingly aware of the need to protect their personal information online, but aren't motivated to take adequate precautions to stay safe," he said.

While consumers remain complacent, he said that hackers are refining their skills and adapting their scams to further take advantage of people, making the need for consumers to take some action increasingly important.

The report said that 49 per cent indicate that it is now harder to stay safe and secure in the online world than in the real, physical world while 59 per cent said they believe entering financial information online when connected to public WiFi is riskier than reading their credit or debit card number aloud in a public place.

Experiencing cybercrime is a potential consequence of living in a connected world, but he said that consumers still remain complacent and demonstrate risky online habits when it comes to protecting their personal information online.

"UAE consumers are still willing to click on links from senders they don't know or open malicious attachments. Three in ten (30 per cent) cannot detect a phishing attack, and another nine per cent have to guess between a real message and a phishing email, meaning nearly four in 10 are vulnerable," he said.

When asked to identify a real and fake banking email, he said that a third (39 per cent) of the UAE consumers was vulnerable to falling for the phishing e-mail. Moreover, those who have been phished, a majority (87 per cent) experienced a negative outcome such as an account or data compromise.

Khaleej Times

Cybercrimes are on the rise in UAE

Wednesday, 23 November 2016

Byline: Bernd Debusmann Jr.

Section: general

Dubai - More than 2.5 million consumers in the UAE have been the victims of cybercrime in the last year, according to newly released data from cyber security giant Norton by Symantec.
The Norton Cyber Security Insights Report - with 21,000 consumers globally and 883 in the UAE - estimates that 2.53 million consumers have fallen victim, each of whom have had to spend an average of 31.5 hours dealing with the consequences.

"It's definitely an increase from the last time we did the survey, which initially found that about 2.1 million people had fallen victim," said Tamim Taufiq, Head of Norton Middle East.

"There's not one particular reason we can pinpoint, but there are a few key factors," he added. "The UAE has one of the highest smartphone penetration rates globally, and there's also a perception among cybercriminals that people in the UAE are wealthy, so it's good to target them."

In the UAE, millennials were found to be the most affected, with 53 per cent saying they'd experienced it in the last 12 months.

"Millennials are more connected in general than Generation-X and the 'Golden Oldies'," explained Taufiq. "They're also more risk averse. They exhibit very slack security habits. They share their passwords easily, for example."

Men (52 per cent) and frequent travellers (50 per cent) were also likely to fall victim.

Regarding travellers, Taufiq noted that the need to be constantly connected in different locations makes them an attractive target to cyber criminals on the prowl.

"They access public Wi-Fi networks which aren't necessarily secure," he said. "It's all about having access to information and being connected wherever they are.

"People with smartphones and tablets don't necessarily have them protected," he added. "They access social media accounts, share personal information, and sometimes even make transactions online on unsecure networks."

Alarmingly, despite growing public awareness of the risks, many continue to be complacent about taking security measures necessary to safeguard their personal information. A majority of people - 68 per cent - noted that while they understand the need to protect their privacy, they are still willing to click on links from senders they don't know.

"We know that cyber crime is inevitable and is part of living in a connected world," Taufiq noted. "But human nature comes into play. Even victims of cyber crimes fall back into old habits."

Taufiq added that the only way to prevent falling victim to cyber criminals is to take common-sense security measures on "any and all" connected devices.

The report also found that 55 per cent of local consumers believe that safety should be self-taught, which - given the general ignorance of security practices - Taufiq says presents a danger.

"It's about creating good habits. Reject complacency. Make sure every device you use is protected," he said. "People need to be educated about safety tips. If you don't know the source of the e-mail, don't click on it. Avoid sharing or using the same passwords."

Associated Press

Interpol: Use biometric data to find extremist fighters

Tuesday, 22 November 2016

Byline: Staff report

Section: general

The United Nations - Interpol urged all countries on Tuesday to obtain biometric data from fighters for the Islamic State and other extremist groups to help law enforcement track them down, especially when they return home.
Interpol Secretary General Jurgen Stock said in an interview with The Associated Press that the international police organization only has biometric data -- fingerprints, DNA, iris scans and the like -- for about 10 percent of the 9,000 "foreign terrorist fighters" in its database.

Stock said Interpol is helping countries to develop biometric technology not only to identify fighters from extremist groups but criminals as well.

He cited the case of "a terrorist" who attacked a police station in France last year who had traveled across Europe using 20 different identities -- something that could have been thwarted with biometric data.

Stock said there are an estimated 20,000 to 30,000 "foreign terrorist fighters" from almost all over the world -- and about 15,000 from over 100 countries remain mainly in Syria and Iraq.

With 9,000 names in the Interpol database, this means that about 6,000 of the extremist fighters are not on an international register where they could be tracked, which Stock said is a "serious gap."

But he said the database has grown rapidly when it started in 2013 with just 12 files, and will hopefully continue to add names and biometric data.

The Interpol chief came to the United Nations from the organization's headquarters in Lyon, France to speak to the General Assembly which adopted a resolution expanding the organizations cooperation with the U.N.

Stock called the Internet "a virtual university of terrorism," where extremist groups attract and radicalize would-be fighters, and where information on building or buying bombs and explosives is readily available.

"The threat level with regard to international terrorism is unprecedented," he said, with international "terrorists" moving to short- term actions using simpler methods such as knives, axes and in the deadly attack in Nice, France on July 15 a truck.

"We are fighting a terrorist network or an organized crime network with a law enforcement network," he said.

But Stock said it's "not easy" because of legal issues which differ in various countries, including on sharing information, and the difficulties in ensuring that relevant data gets to police, border guards and other officials who need it.

He said the increasing use of encrypted websites by extremist groups is also posing "a huge challenge to law enforcement" authorities trying to conduct surveillance or track fighters and potential "terrorists."

The "dark net" has also become a major trading place for weapons and explosives used by "terrorists," Stock said.

"Investigations into the dark net are not impossible, of course," he said. "We are developing our tools, but it creates a challenge."

Stock also said Interpol is cooperating with industry on new tools "to make sure that there's no safe haven for terrorists or criminals."

Sources: Utah man held in Venezuela likely to be released by Dec. 6 as part of deal

Tuesday, 22 November 2016

Byline: Alex Vasquez S.

Section: general

Caracas - Joshua Holt, the Utah man imprisoned in Venezuela on weapon charges for almost five months now, is included on a list of 21 political prisoners the government has agreed to release in the following weeks, according to a source familiar with the ongoing negotiation with the opposition.
"He's on the list. The government is also expected to release two congressmen, journalists, Twitter users, students and protesters," the source, who asked to remain anonymous, told Fox News Latino.

He said the release should happen on or before Dec. 6, the date set for Holt's court hearing - the fourth one, after the first three were suspended - and also the date set for a third round of negotiations between the two sides of the deeply divided Venezuela.

Jeannette Prieto, lawyer of the Utah man, said she visited the 24-year-old, a member of the Church of Jesus Christ of Latter-day Saints, on Monday and found him in good condition. "He's fine. A doctor had seen him [the previous] Thursday and they will run some medical tests, but he's OK," she told FNL.

According to the unidentified source, the complaint of "cruel and inhumane treatment" brought by Prieto last month has been decisive in bettering Holt's living conditions.

Edder Jimenez, president of the Church of Jesus Christ of Latter-day Saints in Caracas, has been monitoring the case of Holt and his wife, Thamara Caleño Candelo, also a Mormon, since the beginning of their ordeal.

He said that the postponement of hearings has affected his mood, but he remains hopeful. "He has strengthened spiritually. He has his Bible and we pray for this process to end well," Jimenez said.

Holt and his Venezuelan wife face weapons charges after authorities during a raid allegedly found a small arsenal they say was intended to assist the U.S.'s efforts to undermine President Nicolás Maduro's socialist rule. Holt and his wife have insisted that the weapons were planted.

The mediation of Under Secretary of State for Political Affairs Thomas Shannon is deemed crucial in the dialogue process. He visited the South American country in late October and allegedly held a meeting with Venezuelan President Nicolás Maduro on Oct. 31.

Six political prisoners have been released since Oct. 30, when the government and the opposition started a dialogue. One of them was longtime prisoner Rosmit Mantilla, a congressman from the opposition detained on May 2, 2014 during a protest against President Nicolas Maduro. He was released on Nov. 17.

According to the NGO Foro Penal Venezolano, 108 political prisoners remain behind bars in Venezuela.

The opposition says the government uses intimidation tactics to keep them quiet.

The government is known for its use of blackmail, FNL's source said. "They release a political prisoner and then they demand that we silence ourselves, that we don't criticize them. If we do, they won't release any other prisoners."

U.K. Parliament Approves Unprecedented New Hacking and Surveillance Powers

Tuesday, 22 November 2016

Byline: Ryan Gallagher

Section: general

Washington - A few years ago, it would have been unthinkable for the British government to admit that it was hacking into people's computers and collecting private data on a massive scale. But now, these controversial tactics are about to be explicitly sanctioned in an unprecedented new surveillance law. Last week, the U.K.'s Parliament approved the Investigatory Powers Bill, dubbed the "Snoopers' Charter" by critics. The law, which is expected to come into force before the end of the year, was introduced in November 2015 after the fallout from revelations by National Security Agency whistleblower Edward Snowden about extensive British mass surveillance. The Investigatory Powers Bill essentially retroactively legalizes the electronic spying programs exposed in the Snowden documents -- and also expands some of the government's surveillance powers.

Perhaps the most controversial aspect of the new law is that it will give the British government the authority to serve internet service providers with a "data retention notice," forcing them to record and store for up to 12 months logs showing websites visited by all of their customers. Law enforcement agencies will then be able to obtain access to this data without any court order or warrant. In addition, the new powers will hand police and tax investigators the ability to, with the approval of a government minister, hack into targeted phones and computers. The law will also permit intelligence agencies to sift through "bulk personal datasets" that contain millions of records about people's phone calls, travel habits, internet activity, and financial transactions; and it will make it legal for British spies to carry out "foreign-focused" large-scale hacks of computers or phones in order to identify potential "targets of interest."

"Every citizen will have their internet activity -- the apps they use, the communications they send, and to who -- logged for 12 months," says Eric King, a privacy expert and former director of Don't Spy On Us, a coalition of leading British human rights groups that campaigns against mass surveillance. "There is no other democracy in the world, possibly no other country in the world, doing this."

King argues that the new law will cause a chilling effect, resulting in fewer people feeling comfortable communicating freely with one another. He cites a Pew survey published in March 2015 that found that 30 percent of American adults had altered their phone or internet habits due to concerns about government surveillance. "It's going to change how people communicate and express their thoughts," King says. "For a society that's supposed to be progressive, that encourages open debate and dialogue, it's awful."

Other civil liberties advocates are concerned that the new law will be viewed by governments across the world as a green light to launch similar sweeping surveillance regimes. "The passing of the IP Bill will have an impact that goes beyond the U.K.'s shores," says Jim Killock, executive director of the London-

based Open Rights Group. "It is likely that other countries, including authoritarian regimes with poor human rights records, will use this law to justify their own intrusive surveillance powers."

Despite the broad scope of the Investigatory Powers Bill, it generated little public debate in the U.K., and did not receive a great deal of coverage in the mainstream press. One reason for this was undoubtedly the U.K.'s shock vote in June to leave European Union -- known as Brexit -- which has dominated news and discussion in recent months. But there was another major factor for the swift passage of the law in the face of little backlash. The Labour Party, the U.K.'s leading opposition political party, had pledged to fight back against "unwarranted snooping," but ended up supporting the government and voting in favor of the new surveillance law. "Blame has to be fixed on the Labour Party," says Killock. "They asked for far too little and weren't prepared to strongly challenge many of the central tenets of the bill."

In an effort to placate some of its critics, the government has agreed to strengthen oversight of the surveillance. The Investigatory Powers Bill introduces for the first time a "judicial commissioner" -- likely a former senior judge -- who will have the authority to review spying warrants authorized by a government minister. It also bolsters provisions relating to how police and spy agencies can target journalists in a bid to identify their confidential sources. New safeguards will mean the authorities will have to seek approval from the judicial commissioner before obtaining a journalist's phone or email records; previously they could obtain this data without any independent scrutiny.

The U.K.'s National Union of Journalists, however, believes that the law does not go far enough in protecting press freedom. The union is particularly alarmed that any potential surveillance of media organizations will be kept completely secret, meaning they will not be afforded the chance to challenge or appeal any decisions relating to them or their sources. "The bill is an attack on democracy and on the public's right to know and it enables unjustified, secret, state interference in the press," the union blasted in a statement last week, adding that "the lack of protection for sources has an impact on journalists working in war zones or those investigating organized crime or state misconduct."

Other issues relating to how the law will be applied remain unclear. It contains a provision, for instance, allowing the government to serve a company with a "technical capability notice," which can include "obligations relating to the removal by a relevant operator of electronic protection applied by or on behalf of that operator to any communications or data." Earlier this year, technology giants Apple, Facebook, Google, Microsoft, Twitter, and Yahoo criticized this power, expressing concerns that it could be used by the government to force companies to weaken or circumvent encryption technology used to protect the privacy of communications and data.

In practice, if the law is used to undermine encryption, it may never come to light. The government included a section in the law that criminalizes "unauthorized disclosures" of any information related to its surveillance orders, which could potentially deter any whistleblowers or leakers from coming forward. The punishment for breaches is a prison sentence of up to 12 months, a fine, or both.

Though the Investigatory Powers Bill will soon to come into force, it is likely to face several lawsuits. There are at least three ongoing cases that could result in changes to some of its provisions. One of these cases is a major challenge in the European Court of Human Rights, which could potentially rule the government's mass collection and retention of data to be illegal. (Judgments from the European Court of Human Rights remain binding in the U.K., despite its vote to leave the European Union.)

Either way, some are not willing to leave it up to the courts to determine how much of their data the government can vacuum up. One recently established British nonprofit company, calling itself Brass Horn Communications, says it is planning to build a new internet provider that is based on Tor -- a tool used to browse the internet anonymously -- in an effort to help people protect themselves from the spying. "We should be able to research an embarrassing medical condition, or ask questions on Google, without having to worry about it being stored on a permanent internet record somewhere," says a spokesperson for the company. "The government has decided that everyone is a suspect, but you can't treat an entire society as criminal."

Tribune de Genève

Un informaticien indiscret du SRC devant la justice

Wednesday, 23 November 2016

Byline: Lucie Monnat

Section: general

Berne - Le procès de l'homme qui a volé des données du Service de renseignement s'ouvre aujourd'hui.
On avait frôlé la catastrophe
Cette affaire avait fait l'effet d'un séisme au sein du Service de renseignement de la Confédération (SRC). En mai 2012, Carlo B. , alors informaticien spécialisé dans les banques de données au sein du SRC, est arrêté pour avoir dérobé 507. 1 GByte de données dans le but de les revendre. L'équivalent, environ, d'un document de deux millions de pages. Son procès s'ouvre ce matin au Tribunal pénal fédéral (TPF) de Bellinzone. Accusé de service de renseignements politiques aggravé et tentative de violation du secret de fonction, il risque 3 ans de prison maximum.

L'affaire est hors norme, et les faits relatés dans l'acte d'accusation sont à la limite du rocambolesque. En mai 2012, Carlo B. , alors en congé maladie, se rend plusieurs fois dans les bureaux du SRC à Berne. Il y télécharge et copie illégalement 159 fichiers du système de sécurité du SRC contenants des données sensibles, « non seulement confidentielles mais également classifiées » . Dans les fichiers, on trouve des informations détaillées sur des coopérations effectuées avec des services étrangers, des opérations de

renseignement, des données sur les marchés ou encore la totalité des échanges de mails du personnel du SRC, membres de la direction compris.

Carlo B. est peut-être fourbe, mais il ne fait pas partie des plus malins. Quelques jours après le vol, il se rend dans une filiale bernoise d'UBS pour se renseigner sur les modalités d'ouverture d'un compte à numéros. Il confie même à l'employé de banque qu'il attend le versement d'une somme variant entre 100 000 et 1 million de francs, fruits d'une vente de données. L'employé de banque a la puce à l'oreille. Il sent que son client, en tant qu'informaticien du SRC, a accès à des données mais qu'il ne marchande pas celles-ci à la demande de ses employeurs. Il le signale à la police, qui perquisitionne le domicile de Carlo B. Les policiers y trouvent, entre autres, une lettre d'offre en anglais proposant son magot pour un montant de 100 000 francs, « probablement à des partis ou des organisations étrangères » , présume le Ministère public. Carlo B. est arrêté avant d'avoir pu transmettre quoi que ce soit.

Bien que la catastrophe ait pu être évitée, la facilité avec laquelle cet employé a pu agir choque la Suisse entière. Quelques mois plus tard, un rapport de la Délégation des commissions de gestion du parlement émet de sévères critiques envers le directeur du SRC, Markus Seiler, et le ministre de la Défense d'alors, Ueli Maurer. Ni l'un ni l'autre n'auraient rempli leur devoir de surveillance. Depuis, 40 mesures ont été prises.

D'origine italienne, Carlo B. , 48 ans aujourd'hui, vit désormais à Salerne (I). Reste à savoir s'il se présentera à son procès. Il bénéficie toutefois d'un sauf-conduit, ce qui signifie qu'il ne peut être arrêté pendant son séjour.

Vers un Google du renseignement suisse

Wednesday, 23 November 2016

Byline: Mehdi Atmani

Section: general

Berne - Surveillance Achat de logiciels d'interception, embauche de personnel, écoutes renforcées: après le plébiscite dans les urnes le 25 septembre dernier, l'heure est à la mise en oeuvre de la loi sur le renseignement. Quels sont les plans de la Confédération?
Le 25 septembre, deux tiers des Suisses ont décidé de muscler les moyens d'action du Service de renseignement de la Confédération (SRC). Les espions helvétiques pourront désormais mener des opérations de surveillance préventive dans des espaces privés: écoutes téléphoniques, intrusion dans

des réseaux informatiques, surveillance des réseaux câblés, c'est-à-dire le réseau filaire par lequel transitent les communications électroniques (courriels, téléphonie, Internet). Mais tout cela est encore très théorique. En pratique, le SRC va d'abord devoir repenser son organisation en profondeur et renouveler sa boîte à outils. Après le plébiscite dans les urnes, l'heure est à la mise en oeuvre.

Le SRC a publié une feuille de route précise pour la mise en oeuvre de la loi sur le renseignement. Elle entrera en principe en vigueur le 1er septembre 2017. Dès la mi-octobre 2016, les offices cantonaux ont démarré la consultation des trois ordonnances d'application, qui portent sur le service de renseignement, les systèmes d'information et de stockage électronique du SRC, ainsi que sur l'autorité de surveillance indépendante.

Ces ordonnances seront élaborées avec les Commissions de la politique de sécurité du parlement et la Délégation des Commissions de gestion (DélCdG), qui conservera un droit de regard sur les activités du SRC. De janvier à avril 2017, ces ordonnances seront mises en consultation publique. Une deuxième consultation des offices est prévue en juin 2017, pour déboucher, en principe en août, sur l'arrêté du Conseil fédéral.

Un effectif renforcé

L'effectif du SRC sera renforcé pour assumer ses nouvelles missions. La nouvelle loi prévoit l'embauche de 20 nouveaux collaborateurs entre 2017 et 2019. A terme, les trois quarts (16) de ce personnel seront affectés au service de renseignement pour « la mise en oeuvre des mesures de recherches spéciales soumises à autorisation », explique Isabelle Graber, porte-parole du SRC. Parmi eux, des techniciens opérationnels pour le suivi des moyens de recherche soumis à autorisation du Tribunal administratif fédéral et du chef du Département de la défense.

Concrètement, ce sont ces nouveaux employés qui pourront mener les intrusions dans les réseaux câblés ou demander la mise sur écoute d'un individu. Ils devront préalablement justifier la nécessité de cette mission et obtenir une autorisation valable six mois. La loi prévoit aussi l'embauche d'analystes pour l'évaluation des informations obtenues, et de juristes pour la préparation des demandes d'autorisation. Le solde restant sera réparti entre le Tribunal administratif fédéral (un poste), la base d'aide au commandement (deux) et les Archives fédérales (un). Les premiers postes seront mis au concours en janvier 2017 pour une entrée en fonction au mois de juillet.

Nouveauté: la loi prévoit la création d'une autorité de surveillance du service de renseignement. Aujourd'hui, la surveillance du SRC est rattachée au secrétariat du Département fédéral de la défense. C'est donc l'armée qui jette un oeil sur les activités des espions. Selon le calendrier prévu, le Conseil fédéral nommera en février prochain le chef de l'autorité de surveillance en tenant compte de la proposition de Guy Parmelin. Cette autorité disposera de son propre budget et engagera son propre personnel. Aucun chiffre n'est pour l'heure articulé.

Dans la future boîte à outils du SRC, l'exploration du réseau câblé par lequel transitent les communications électroniques (courriels, téléphonie, Internet) est la mesure de surveillance qui a cristallisé toutes les critiques durant la campagne. La nouvelle LRens autorisera en effet le SRC à intercepter en continu toutes les communications internationales qui transitent par la Suisse via le réseau câblé. Avec l'aval du Tribunal administratif fédéral et de la Délégation pour la sécurité du Conseil fédéral, le SRC pourra filtrer les courriers électroniques, procéder à des écoutes téléphoniques par Internet, et rechercher des informations dans le réseau câblé par catégorie de mots- clés.

En Suisse, la surveillance se fera sur les noeuds où convergent et transitent les données. Le SRC ne pourra rechercher que des informations sur des « événements importants en matière de politique de sécurité se produisant à l'étranger » . Les données qui ne correspondraient pas à ce critère devront être détruites. L'habilitation du SRC est également valable dans le cas d'une « menace pour la sécurité intérieure » ainsi que pour « préserver les intérêts nationaux d'une grande importance » .

Seules les données transitant par le réseau câblé suisse vers des fournisseurs étrangers seront surveillées. L'utilisation des données collectées entre expéditeur et destinataire situés en Suisse sera interdite. Pour autant que leurs adresses e-mails soient enregistrées auprès d'un fournisseur d'accès à Internet (FAI) en Suisse.

Prenons l'exemple d'un courrier électronique envoyé de Lausanne à Saint-Gall. Si le destinataire utilise une adresse Gmail ou appartenant au service de messagerie allemand GMX, le courriel transitera par les serveurs de Google à l'étranger ou par l'Allemagne, traversera momentanément les frontières helvétiques et pourra donc être intercepté. Le projet de loi précise que « les exploitants suisses de réseaux câblés ainsi que les fournisseurs suisses de prestations de télécommunications » fournissent « des renseignements sur les itinéraires des flux de données et, sur ordre, en détournant les flux de données en question » .

« Garantir un contrôle fiable »

Toutes les agences internationales de renseignement n'utilisent plus seulement des motsclés, mais surtout des algorithmes. Ces méthodes de calcul permettent l'exécution optimisée de procédés répétitifs précis. Ceux-ci viennent enrichir des bases de données dans lesquelles l'information interceptée est structurée, puis mise en relation et enrichie avec d'autres informations, dites secondaires: adresse postale, abonnement de téléphone mobile, profil LinkedIn, c'est-à- dire les données personnelles d'un citoyen.

Cette technique du Deep Learning Management permet aux agences d'affiner au maximum l'information et d'en tirer le plus de sens possible. Elle fonctionne comme un Google du renseignement. Si les services suisses ont l'objectif de se mettre au niveau des techniques de collecte et d'analyse des agences internationales, ils devront employer les mêmes méthodes. Ce sont du moins les craintes des opposants à la LRens.

Pour explorer le réseau câblé, le SRC va s'appuyer sur des partenaires extérieurs. Dans le cadre de la LRens, c'est l'Autorité de contrôle indépendante (ACI) pour l'exploration radio qui sera désormais responsable de cette tâche. Selon Martin Wyss, président de l'Autorité, tout est encore très théorique. « Nous avons rédigé notre futur cahier des charges. Nous examinons actuellement comment l'assumer. Il n'est pas exclu que nous devions modifier nos méthodes de travail et notre fonctionnement. Et ce, pour garantir un contrôle fiable. »

Les nouvelles ambitions du SRC coûteront cher: 720 000 francs par an pour le nouveau personnel, 6 millions pour l'acquisition de matériel espion, 800 000 francs pour sa maintenance sans compter les frais de licence. A cela s'ajoutent les frais occasionnés par la surveillance des communications ellemême. « Elle coûte extrêmement cher, souligne François Charlet, juriste spécialisé en droit des technologies. En matière pénale, une telle surveillance se chiffre à plusieurs milliers de francs à la charge des autorités de poursuite. »

Puis viennent les coûts d'acquisition et d'investissements des nouveaux systèmes de surveillance. Selon le rapport du Conseil fédéral, ils se chiffrent entre « 5 et 7 millions de francs par an, auxquels il faut ajouter des frais ré cur rent s de que lque 800 000 francs pour la maintenance, l'adaptation et le coût des licences » .

En règle générale, poursuit le Conseil fédéral, « ces systèmes sont acquis et financés dans le cadre du programme d'armement » . Pour les mesures de recherche d'informations soumises à autorisation en Suisse, par exemple la localisation, la surveillance de données d'utilisation et de communication de raccordements de téléphonie fixe et mobile ou la surveillance d'accès à Internet, le SRC fera appel au service Surveillance de la correspondance par poste et télécommunication du Département fédéral de justice et police. Les frais de traduction des communications enregistrées se montent à 800 000 francs.

Quant aux coûts pour l'exploration des réseaux câblés, le Conseil fédéral les estime à « 500 000 francs. Certaines technologies, par exemple pour l'introduction dans des systèmes informatiques hautement sécurisés, ne sont encore que peu développées. Comme le marché pour ces systèmes est relativement limité et volatil et que les développements techniques dans ce domaine sont rapides, leurs coûts ne peuvent pour l'instant que faire l'objet d'estimations. »

Qui fournira les logiciels?

Pour garnir sa nouvelle boîte à outils, la Confédération va devoir acheter ce matériel. Mais auprès de quels fournisseurs? Isabelle Graber ne commente pas ce point. Mais le service de renseignement peut-il passer outre l'exigence d'un appel d'offres sur le marché public? Selon le juriste François Charlet, « il n'y a pas d'exceptions dans la LRens » .

Les nouveaux moyens du SRC permettront-ils d'assurer la crédibilité du renseignement suisse, et donc une collaboration plus soutenue avec les Etats étrangers? Une autre source au sein du renseignement

souligne « qu'il est clair que si la Suisse a davantage de moyens techniques, elle acquiert plus de crédibilité vis-àvis de ses partenaires étrangers et restreint sa dépendance » .

Quelques semaines après le vote, l'opposant à la nouvelle loi Balthasar Glättli accuse le coup, mais veille au grain. « Il y a toujours des termes et des définitions qui ne sont pas clairs dans le nouveau texte de loi, estime le président des Verts suisses. Nous allons veiller à ce que cela soit traduit de manière précise. Nous allons également veiller à ce que les nouvelles compétences du SRC ne soient pas utilisées de manière abusive. » Dans les faits, Balthasar Glättli mise beaucoup sur la procédure de consultation des ordonnances du Conseil fédéral. « J'espère qu'il tiendra compte de nos critiques. »

Chaque courriel transitera par les serveurs de Google à l'étranger ou en Allemagne et pourra être intercepté en Suisse

« Nous allons veiller à ce que les nouvelles compétences du SRC ne soient pas utilisées de manière abusive »

Nucléaire: les services belges n'ont rien trouvé dans le "darknet"

Tuesday, 22 November 2016

Byline: Journaliste maison

Section: general

Bruxelles - Ni les services de sécurité, ni une société privée n'ont trouvé sur le "darknet" des documents relatifs aux installations nucléaires belges qui auraient mis en péril la sécurité de celles-ci, a indiqué mardi le directeur du Centre de cybersécurité, Miguel De Bruycker, devant la sous- commission "sécurité nucléaire" de la Chambre.
Les journaux de SudPresse ont relaté le mois passé la façon dont ils avaient trouvé sur le "darknet" (des réseaux de partage anonymes utilisés en général par des criminels) des plans des centrales nucléaires de Tihange. Le Centre de cybersécurité en a immédiatement référé à la Sûreté de l'Etat et aux renseignements militaires (SGRS) afin de savoir si des documents mettant en jeu la sécurité des installations nucléaires se trouvaient dans le "darknet". Une société privée a également été consultée et un "pirate éthique" a proposé ses services.

"Aucune de nos sources d'information n'a trouvé les plans des installations nucléaires de Tihange ou des documents d'installations nucléaires qui comportaient un risque sérieux de sécurité", a expliqué M. De Bruycker.

Les seules indications retrouvées visaient un document disponible sur le serveur d'un sous-traitant à l'étranger. L'information n'était toutefois pas suffisamment concrète.

Certains députés se sont demandés s'il fallait en conclure qu'il n'y avait pas eu de document sur le net. Le directeur n'a pu fournir une réponse définitive. "Les documents n'y sont peut-être pas, ou peut-être y a-t-il autre chose. C'est chercher une aiguille dans une botte de foin", a-t-il souligné.

Le Devoir
Protection des sources - Une loi nécessaire
Thursday, 24 November 2016
Byline: Manon Cornellier

Editorial - Perquisitions, saisies de notes, collecte de relevés d'appels téléphoniques... Les corps policiers ne ménagent pas leurs efforts pour identifier les sources de journalistes qui dérangent. Les tristes révélations des dernières semaines au Québec ont tout de même eu un effet positif. Elles ont ravivé l'intérêt pour une loi sur la protection des sources journalistiques et ont poussé au moins un parlementaire fédéral à l'action, le sénateur conservateur Claude Carignan.Secoué par les révélations sur la surveillance policière d'une dizaine de journalistes québécois, le gouvernement Couillard a rapidement réagi en créant entre autres une Commission d'enquête sur la protection de la confidentialité des sources journalistiques. Cette dernière doit faire rapport d'ici le 1er mars 2018 et pourra aller jusqu'à recommander l'adoption d'une loi sur la protection des sources journalistiques. C'est loin, 2018, et une loi sur la protection des sources ne peut avoir de dents sans mettre le fédéral dans le coup. Le Code criminel et les dispositions autorisant la délivrance de mandats relèvent de lui.

Pour l'instant, le fédéral n'affiche aucune volonté d'agir et tente d'apaiser tout le monde. Le premier ministre Justin Trudeau et le ministre de la Sécurité publique, Ralph Goodale, disent avoir obtenu l'assurance de la GRC et du Service canadien de renseignement de sécurité (SCRS) qu'aucun journaliste n'était " actuellement " sous surveillance. Mais qu'en est-il des années passées ? M. Goodale ne le sait pas et ne l'a pas demandé parce que ce qui compte, c'est le présent, dit- il.

Rien de rassurant quand on se souvient de la perquisition de la GRC, effectuée en 2004, chez la journaliste Juliet O'Neill ou de la filature, en 2007, de deux journalistes de La Presse. Actuellement, la GRC exige les messages numériques échangés entre le journaliste de Vice Ben Makuch et un Canadien s'étant joint au groupe État islamique. L'affaire est en appel et si M. Makuch perdait et refusait toujours de remettre ses messages, il pourrait se retrouver en prison.

La protection des sources est un principe fondamental en journalisme. Le travail journalistique, surtout d'enquête, est impossible sans une relation de confiance entre un reporter et la personne qui accepte, souvent à grands risques, de lever le voile sur des malversations ou des problèmes au sein d'un gouvernement, d'une entreprise ou d'une organisation. Si les journalistes deviennent malgré eux des outils policiers, on se méfiera d'eux, les empêchant d'alerter le public de ce qui se passe dans l'ombre. Alors pas de commission Charbonneau, pas de mise en lumière des problèmes dans le système de santé, pas de projecteurs sur les dérives de certaines institutions... C'est la liberté de presse qui écope.

Une loi, comme il en existe ailleurs et comme le demandent les journalistes québécois depuis quelques décennies, est nécessaire pour protéger la confidentialité de ces sources et les mettre à l'abri de représailles.

Le sénateur Carignan en est lui aussi convaincu. Devant ce qu'il appelle les tergiversations d'Ottawa, il a décidé de présenter un projet de loi mardi qui répond largement aux inquiétudes soulevées par les membres de la Fédération professionnelle des journalistes du Québec lors de leur congrès de la fin de semaine dernière.

En vertu de ce projet de loi, seul un juge d'une cour supérieure pourrait accorder un mandat de perquisition, d'écoute ou de surveillance contre un journaliste. Pour guider sa décision, le projet de loi établit une série de critères où figurent la liberté de presse et les conséquences de la divulgation sur la source et le journaliste. Le fardeau de démontrer le respect des conditions énoncées dans la loi reviendrait au demandeur du mandat. Si ce dernier était accordé, tout matériel recueilli devrait être mis sous scellés avant d'être consulté, copié, analysé ou utilisé. Le policier ou l'agent de renseignements voulant y avoir accès devrait en aviser le journaliste et son média, et ceux-ci auraient 10 jours pour contester la demande ou exclure des informations.

" Il s'agit d'un bon pas dans la bonne direction ", a réagi mercredi un des spécialistes du droit des médias présents au congrès, Me Mark Bantey. Selon lui, ce projet ouvre la porte à un débat sérieux sur des mesures concrètes.

Un autre de ses grands mérites est de mettre le gouvernement fédéral au pied du mur. Soit il attrape la balle au bond, soit il se défile et révèle ainsi ses vraies intentions.

L'Actualité
Le gouvernement vous écoute (encore plus que vous ne le pensez)
Wednesday, 23 November 2016
Byline: Naël Shiab

Ottawa - Sans qu'on s'en soit rendu compte, le Canada s'est doté d'une machine de surveillance digne de Big Brother.
Oublions un instant l'espionnage policier subi par les journalistes Patrick Lagacé, Alain Gravel, Isabelle Richer, Marie-Maude Denis et Vincent Larouche. Parlons de vous. Parlons de votre droit à la vie privée, qui s'est effrité petit à petit au fil des années.

Vos grands-parents pouvaient décider de partir au chalet pour la fin de semaine et personne ne le savait. Vous, c'est différent. Votre cellulaire indique constamment votre position à votre service téléphonique. L'application GPS que vous utilisez pour connaître le bon chemin vous suit également à la trace. Le petit café où vous vous arrêtez en cours de route offre le Wi-Fi gratuitement. Pendant que vous grignotez une pâtisserie, l'identifiant unique de votre téléphone et les sites Web que vous consultez sont gardés en mémoire. À la petite épicerie du village où vos grands-parents auraient payé comptant, vous avez sorti votre carte de crédit: l'opération a été enregistrée et sera conservée. Sur Facebook et

Instagram, vous publiez ces photos de magnifiques paysages enneigés, ajoutant une pièce de plus à votre autobiographie numérique.

Si quelqu'un obtient ces empreintes électroniques que vous disséminez lors de vos pérégrinations, il peut alors reconstituer votre existence. Vos déplacements, vos achats, vos loisirs, vos interactions sociales. Non seulement votre passé peut être fouillé, mais votre avenir proche peut être prédit.

«Et alors?» pensez-vous sans doute à ce moment. «Qu'est-ce que ça change si on sait que je suis allé au chalet? Je n'ai rien à cacher.»

C'est vrai, le chalet est anodin. Mais une clinique d'avortement? Le bureau d'un psychiatre? Une rencontre pour alcooliques anonymes? Une célébration religieuse? Et je ne parle même pas de vos achats. Un jouet sexuel? Une revue politique d'extrême droite ou d'extrême gauche?

«Bah! Qui s'intéresse à ma vie? Je ne suis personne...»

Peut-être bien. Pour l'instant. Mais beaucoup de choses ont changé ces dernières années. Auparavant, pour surveiller un suspect, il fallait une équipe de plusieurs personnes. Aujourd'hui, une seule derrière un écran peut en surveiller des milliers, voire des millions. Les autorités recueillent de gigantesques quantités de données, et les trient ensuite à la recherche de quelque chose de louche. Si vous êtes au mauvais endroit au mauvais moment, vos données peuvent faire partie du lot, être un jour ou l'autre utilisées, que vous soyez un suspect ou non, que vous le vouliez ou pas, et être conservées pendant une période indéterminée.

De nombreux indices glanés par les médias, recueillis par des fonctionnaires, déposés en preuve devant les tribunaux ou rendus publics par des lanceurs d'alerte portent à croire qu'une entité ayant de tels pouvoirs existe: notre gouvernement. Son objectif, louable, est de surveiller de potentielles menaces à notre sécurité et de nous en préserver. Mais peut-être avons-nous laissé s'emballer cette machine censée nous protéger.

Notre droit à la vie privée s'est dissous dans un océan de données ces dernières années et certains événements semblent tirés d'un film d'espionnage. Pourtant, tout est vrai. Toutes mes sources sont en hyperliens. Pour faciliter la compréhension, je vous présente tous les faits en ordre chronologique.

Comme le disait l'ancien chef du Centre de la sécurité des télécommunications du Canada, John Adams, lors d'une entrevue exclusive accordée à la CBC en octobre 2013: «Si vous êtes sur Internet, c'est littéralement comme si vous étiez sur la première page du Globe and Mail.» L'ancien militaire était aux commandes de cette agence de renseignements, aux activités secrètes, de 2005 à 2011. En mai 2014, devant le caucus des sénateurs libéraux, il y est allé d'une autre déclaration, cette fois à propos des internautes canadiens: «La moitié [d'entre eux] est stupide et l'autre moitié est stupide [aussi]. [.] Nous mettons davantage de choses sur Facebook que n'importe quel autre pays dans le monde. Nous ne

sommes pas très intelligents, nous avons beaucoup de chemin à faire.» Plutôt tranchant, pour celui qui était à la tête de l'une des plus importantes machines de surveillance du pays.

***

Au Canada, il existe deux agences fédérales spécialisées dans le renseignement: le Service canadien du renseignement de sécurité (SCRS) et le Centre de sécurité des télécommunications (CST). Le SCRS recueille et analyse des informations au Canada et à l'étranger pour déceler de potentielles menaces à la sécurité nationale. De son côté, le CST se spécialise dans la surveillance des télécommunications à l'étranger et dans la protection de l'infrastructure électronique de l'État. À elles deux, ces agences emploient 5 500 personnes et disposent d'un budget cumulé de 1,2 milliard de dollars pour 2016-2017.

Leur histoire remonte à la Deuxième Guerre mondiale. Les Forces canadiennes interceptaient des signaux électroniques cryptés en provenance d'armées étrangères. Des civils enrôlés au sein de la Sous-section de l'examen avaient pour mission de les déchiffrer. Après la guerre, en août 1946, la Direction des télécommunications du Conseil national de recherches est mise sur pied, et les 179 personnes qui tentaient de décoder les messages ennemis y sont intégrées. La création de ce nouveau service se fait grâce à un décret adopté en secret. Dès leurs débuts, les organismes de surveillance du Canada baignent dans une aura de mystère. L'organisme d'État travaillera dans l'ombre pendant trois décennies, avant d'être révélé au public par un documentaire de la CBC, en 1974. L'année d'après, il changera de nom pour devenir le Centre de sécurité des télécommunications.

La Sous- section de l'examen était une équipe civile qui avait pour mission de déchiffrer les signaux électroniques ennemis pendant la Deuxième guerre mondiale. (Photo: Centre de la sécurité des télécommunications)

En parallèle, pendant la guerre froide, la Gendarmerie royale du Canada est responsable de la collecte de renseignements liés à la sécurité nationale. Lors de la crise d'Octobre, en 1970, le gouvernement fédéral demande à la GRC d'accumuler des informations sur les militants souverainistes. Les policiers mettent en oeuvre «une vaste campagne de collecte de renseignements, d'infiltration, de harcèlement et de perturbation visant la quasi-totalité des manifestations du sentiment nationaliste au Québec». Une multitude d'actes illégaux sont commis par les agents, dont notamment l'entrée par effraction dans les locaux du Parti québécois et le vol de la liste de ses membres.

Plusieurs reportages révéleront au public les agissements des policiers. En 1977, la pression est trop forte: le gouvernement de Pierre Elliott Trudeau institue une commission d'enquête sur les activités de la Gendarmerie royale du Canada. On y apprend que les policiers mènent depuis des années des activités de surveillance qui n'ont jamais été autorisées par la loi, comme l'ouverture du courrier, par exemple. On recommande de retirer à la GRC la responsabilité du renseignement de sécurité. Selon la commission, l'équilibre entre la collecte de renseignements de sécurité et le respect des droits et libertés sera problématique tant que ce mandat restera entre les mains de policiers. En 1984, le

Parlement décide finalement de voter une loi pour créer une agence civile spécialisée: le Service canadien du renseignement de sécurité (SCRS).

À la fin des années 1980, le Service canadien du renseignement de sécurité et le Centre de sécurité des télécommunications sont donc en place. Mais deux événements changent radicalement la nature et l'ampleur des moyens à la disposition des agences: l'essor d'Internet et les attentats du 11 septembre 2001.

La loi antiterroriste de 2001 donne de nouveaux pouvoirs aux agences d'espionnage canadiennes, qui continuent de fonctionner dans le plus grand secret.

Dans les années 1990, les communications numériques envahissent rapidement la vie quotidienne. Pour les agences de surveillance, c'est à la fois une manne extraordinaire et un défi de tous les instants. D'une part, la technologie évolue sans arrêt et devient de plus en plus complexe, et d'autre part, les lois régissant les pouvoirs d'enquête ont été écrites avant ces bouleversements technologiques, laissant les agences dans des impasses ou des flous juridiques.

Puis, survient l'écrasement de deux avions contre les tours du World Trade Center, à New York, le 11 septembre 2001. La Loi antiterroriste est rapidement déposée à la Chambre des communes et entre en vigueur dès le 18 décembre de la même année. Les élus, craignant d'autres attaques, dotent les agences de nouveaux pouvoirs et de nouveaux moyens. Le budget du SCRS a plus que triplé depuis les années 2000. Les effectifs du Centre de sécurité des télécommunications ont quant à eux doublé depuis la mise en place de la Loi.

Auparavant, le CST était uniquement autorisé à saisir des échanges électroniques à l'extérieur du pays. La Loi antiterroriste lui permet désormais de surveiller les communications en partance ou à destination du Canada. Le Centre n'a pas le droit de surveiller des citoyens canadiens, mais le changement législatif rend cette option possible si des échanges ont lieu avec une entité étrangère. Le CST n'avait pas le droit non plus d'intercepter des communications privées. La nouvelle loi lui accorde aussi ce pouvoir, à condition d'obtenir l'autorisation spéciale du ministre de la Défense. Tous ces changements sont majeurs. D'ordinaire, les autorités doivent obtenir un mandat d'un juge, qui s'assure de façon indépendante que les enjeux de sécurité justifient un tel empiètement sur la vie privée des personnes. Mais le CST, lui, n'a pas à se conformer à ce protocole. La décision revient au ministre, qui peut déclencher l'interception de milliers de communications en une seule autorisation. Selon un reportage diffusé par Radio-Canada en 2013, le ministre en avait signé 48 depuis la nouvelle loi.

En décembre 2005, le New York Times révèle que l'ancien président George W. Bush a secrètement autorisé l'espionnage de centaines, voire de milliers de citoyens aux États-Unis, et ce, sans aucun mandat, après les attentats du 11 septembre 2001. La même chose s'est-elle produite avec son équivalent canadien, le Centre de sécurité des télécommunications? Le commissaire du CST, l'ancien juge en chef de la Cour suprême du Canada Antonio Lamer, veut en avoir le coeur net. Son rôle est de s'assurer que l'agence d'espionnage respecte les lois, notamment la Charte canadienne des droits et

libertés. Dans des documents obtenus par La Presse Canadienne en 2006, on apprend qu'une enquête interne de deux mois a été menée. Mais les documents sont hautement confidentiels et de nombreuses parties ont été censurées. Les conclusions du commissaire devaient être déposées devant le Parlement, dans son rapport annuel. Finalement, le document en question apporte bien peu de réponses. Aucune conduite illicite de la part du Centre n'a eu lieu, conclut le rapport, sans donner de détails.

Antonio Lamer (à gauche) et Charles D. Gonthier (à droite), deux anciens juges de la Cour suprême qui ont été commissaires du Centre de la sécurité des télécommunications. (Photo: Cour suprême du Canada)

L'année suivante, un nouveau commissaire entre en fonction, Charles D. Gonthier, lui aussi ancien juge à la retraite. Son rapport donne un aperçu beaucoup plus clair des opérations de surveillance du CST. En vertu de la loi, il est strictement illégal pour le Centre d'espionner expressément des citoyens canadiens, mais «lorsqu'il recueille des renseignements étrangers, le CST peut incidemment acquérir des renseignements personnels sur des Canadiens». Le Centre peut conserver ces renseignements s'il «les juge indispensables à la compréhension des renseignements étrangers». De plus, il peut divulguer ces informations, par exemple à la GRC, si un mandat est obtenu. Le CST peut aussi aider d'autres agences fédérales à collecter des renseignements, y compris sur des Canadiens, si un mandat a été obtenu.

À la fin des années 2000, la capacité de surveillance de masse du CST et du SCRS sont encore peu connus. Le rôle du CST, par exemple, est d'«acquérir et utiliser l'information provenant de l'infrastructure mondiale d'information». Mais qu'est-ce que cela signifie concrètement? Les citoyens et les élus n'ont pas la moindre idée de l'ampleur des opérations qui sont menées. En vertu de la loi, ces agences ne rendent des comptes qu'au ministre de la Défense, qui est lui-même tenu au secret.

Survient alors le 9 juin 2013: le lanceur d'alerte Edward Snowden entre en scène et lève le voile sur les opérations les plus secrètes du gouvernement.

Pour la première fois, grâce au lanceur d'alerte Edward Snowden, les Canadiens découvrent l'ampleur des opérations de leurs agences d'espionnage.

Le 9 juin 2013, Edward Snowden sort de l'ombre. L'Américain de 29 ans a travaillé pendant quatre ans pour la National Security Agency (NSA), l'agence d'espionnage des États-Unis. Le lanceur d'alerte donne aux journalistes des milliers de documents ultrasecrets qui mettent au jour un système de surveillance de masse. Comme la NSA collabore très souvent avec les agences canadiennes, certains documents émanent directement de ces dernières. Pendant des mois, des journalistes s'affaireront à trier et à tenter de confirmer l'authenticité de tous les documents donnés par Snowden. Les Canadiens ne le savent pas encore, mais des révélations explosives feront bientôt les manchettes...

Entre-temps, les remises en question des services de renseignements s'enchaînent. En juin 2013, le commissaire sortant du Centre de sécurité des télécommunications, Robert Décary, présente son dernier rapport sur les activités de l'agence d'espionnage. L'ancien membre de la Cour fédérale d'appel souligne que certaines données sur les opérations passées du CST, qui permettent normalement de s'assurer que les cibles du Centre sont «bel et bien étrangères et situées à l'extérieur du Canada», sont manquantes. «L'absence d'information a limité ma capacité à évaluer la légalité des activités du Centre à cet égard», écrit le commissaire. Plus loin dans son rapport, un autre passage montre les limites de sa capacité d'examiner les actions de l'agence d'espionnage: «Un petit nombre de dossiers suggéraient la possibilité que des Canadiens aient été visés par certaines activités, ce qui est contraire à la loi. Certains dossiers du Centre relatifs à ces activités n'étaient pas clairs ou étaient incomplets. Après un examen minutieux et approfondi, je n'ai pas pu parvenir à une conclusion définitive sur la conformité ou non à la loi.»

Les mois qui suivent ne sont pas de tout repos pour les agences de renseignements, qui continuent de se retrouver à la une des journaux. En octobre 2013, c'est l'ancien chef du CST lui-même, John Adams, qui soutient lors d'une entrevue à la CBC qu'il faut une plus grande supervision des activités de l'agence d'espionnage.

Un mois plus tard, en novembre 2013, le juge de la Cour fédérale Richard Mosley rend une décision dans laquelle il conclut que le SCRS et le CST ont délibérément caché des informations à la Cour. L'affaire remonte à 2009. Les agences d'espionnage demandent un mandat spécial pour surveiller deux citoyens canadiens à l'extérieur du pays. Les autorisations sont données par le juge Mosley, à condition que les opérations soient menées par des fonctionnaires canadiens, à partir du Canada. Cinq ans plus tard, alors que le juge fait un suivi de l'affaire, il se rend compte que les agences ont en fait demandé à des autorités étrangères de surveiller les citoyens canadiens à leur place. «Compte tenu que, au cours des 10 dernières années, le partage de renseignements avec des agences étrangères a souvent mal tourné [...], il ne fait aucun doute que les agences canadiennes sont conscientes de ces dangers», indique le juge Mosley dans sa décision, faisant écho à l'affaire Maher Arar. Cet ingénieur canadien a été expulsé vers la Syrie en 2002, alors qu'il revenait de vacances en Tunisie en passant par New York, à cause de fausses informations provenant de la GRC, qui le soupçonnait d'être un activiste terroriste. Emprisonné et torturé dans son pays d'origine, il a finalement été blanchi quatre ans plus tard, après une enquête publique qui a coûté 15 millions de dollars.

Puis, le 28 janvier 2014, c'est au tour de la Commissaire à la protection de la vie privée du Canada de demander davantage de transparence au Centre de sécurité des télécommunications, dans un rapport spécial au Parlement. «La manière dont [les activités de renseignements] sont menées peut ouvrir la voie à une collecte à grande échelle, écrit Chantal Bernier. L'information [...] comme celle que l'on retrouve sur les sites de réseautage social, est balayée électroniquement et a le potentiel de devenir la principale source de renseignement. [...] Le potentiel d'atteinte à la vie privée dans ce nouveau contexte est tel qu'il exige une protection de la vie privée proportionnelle.»

Ironie du sort, deux jours seulement après l'appel de la Commissaire à davantage de transparence, les journalistes de la CBC sont prêts à rendre publiques les révélations d'Edward Snowden. Dans un des documents donnés par le lanceur d'alerte et daté du 10 mai 2012, une révélation explosive: le Centre de sécurité des télécommunications a recueilli des métadonnées sur toutes les personnes qui s'étaient connectées au réseau Wi-Fi d'un aéroport canadien, pendant deux semaines. Dans le même document, on apprend aussi que le Centre a balayé une «ville de taille modeste». Ses employés se sont attardés à deux réseaux sans fil en particulier, auxquels 300 000 appareils différents se sont connectés sur une période de deux semaines. Il n'est pas indiqué dans le document si cette autre opération s'est déroulée au Canada, mais selon la CBC, ce serait le cas. Le CST s'intéressait aussi à d'autres aéroports, en plus d'hôtels, de cafés et de bibliothèques publiques.

Après ces révélations, le chef du CST doit s'expliquer devant le Comité sénatorial permanent de la Sécurité nationale et de la défense, le 3 février 2014. On y apprend que les métadonnées avaient été recueillies à l'aéroport international Pearson, à Toronto, le plus fréquenté du pays. «L'opération faisait partie de notre collecte de données habituelle à l'échelle mondiale», indique John Forster, avant d'ajouter que «les terroristes ou les auteurs de prises d'otages accèdent souvent à Internet dans les lieux publics, comme un aéroport ou un café, parce qu'ils essaient de se cacher au milieu de la foule». Ses équipes essayaient de mettre au point un logiciel pour identifier une cible dans la nuée des millions d'échanges et de connexions qui ont lieu en même temps sur Internet. «Je sais que ce modèle a été utilisé au moins deux fois au cours des 12 derniers mois pour trouver des cibles étrangères légitimes», ajoute John Forster pour défendre son service.

Lors de cette audience sénatoriale, on découvre aussi que deux directives ministérielles ont été signées, l'une en 2005, par le libéral Bill Graham, et l'autre en 2011, par le conservateur Peter MacKay. Ces deux directives autorisaient le CST à conserver des métadonnées, comme celles de l'aéroport Pearson, pendant une durée déterminée. «S'agit-il d'une directive secrète?» a demandé le sénateur Hugh Segal. «Oui», a répondu John Foster. Impossible donc de savoir si les données de l'aéroport Pearson ont été détruites ou si elles sont toujours entre les mains de l'agence.

Les enjeux de sécurité percutent de plein fouet le droit à la vie privée des personnes. Deux événements jettent de l'huile sur le feu: l'attentat de Saint-Jean-sur- Richelieu et la fusillade au parlement, en octobre 2014. Encore une fois, la question se pose: où se trouve la limite entre le respect de la vie privée et la surveillance de l'État au nom de la sécurité nationale?

Malgré les révélations des années précédentes, le gouvernement décide de donner encore plus de pouvoirs aux agences d'espionnage, avec le projet de loi C-51.

Le 27 janvier 2015, les journalistes qui ont étudié les documents donnés par Edward Snowden publient une nouvelle bombe: une opération nommée Levitation permet au Centre de sécurité des télécommunications de surveiller des centaines de millions de téléchargements sur des sites d'échanges gratuits, tout autour de la planète. Selon le document, datant de 2012, le CST épie de 10 à 15 millions de téléchargements par jour. Une dizaine d'entre eux sont dits «intéressants» au quotidien. Le filet du CST

est tellement large qu'une des pages du document est intitulée «Filtrer les épisodes de Glee», série télévisée populaire très téléchargée. Selon la CBC, ce serait une note d'humour de la part des employés du CST.

Lorsque l'agence détecte un téléchargement suspect, par exemple un manuel pour fabriquer des explosifs, elle est capable de reconnaître l'adresse IP de l'ordinateur utilisé. À partir de cet identifiant, elle peut alors repérer toutes les activités faites sur cet appareil cinq heures avant et après le téléchargement. Si la personne s'est connectée à son profil Facebook pendant cette période, le Centre est ainsi capable de l'identifier. Deux adresses IP canadiennes, localisées à Montréal, se trouvaient dans le document non censuré, d'après la CBC. Selon la fiche descriptive du système Levitation, le logiciel a permis de découvrir la vidéo d'un otage allemand ainsi que des documents stratégiques d'al-Qaïda au Maghreb islamique. On ne sait pas si ce sont là ses seuls succès.

Dès le lendemain de la diffusion du reportage sur le sujet par la CBC, les réactions fusent de toutes parts. D'un côté, le ministre associé à la Défense nationale, le conservateur Julian Fantino, pour justifier les opérations, déclare que «notre gouvernement ne restera pas immobile pendant que les terroristes utilisent des sites Web pour attirer, radicaliser et entraîner des individus qui menacent nos valeurs et notre liberté». Le chef du Parti libéral et futur premier ministre, Justin Trudeau, rétorque qu'il est «temps de parler d'une supervision adéquate pour s'assurer que le gouvernement agit de façon responsable».

La députée néo- démocrate de Portneuf-Jacques-Cartier, Élaine Michaud, renchérit lors de la période des questions: «Le gouvernement veille-t-il à ce que les activités personnelles des Canadiens ne soient pas surveillées, pour ne pas dire espionnées? Comment s'assure-t-il de protéger la sécurité des Canadiens, tout en préservant leur vie privée?» Julian Fantino se contente de répondre que le commissaire du Centre de sécurité des télécommunications «a confirmé qu'elles étaient conformes à la loi».

Pour rappel, le commissaire du CST doit s'assurer que le Centre agit en toute légalité. C'est généralement un juge à la retraite qui occupe ce poste à temps partiel. Il dispose d'une équipe de 11 personnes pour surveiller les activités des 2 200 employés du CST. Depuis sa création, en 1996, le Bureau du commissaire du CST n'a jamais constaté la moindre activité illégale, sauf une fois, en 2016, et c'était parce que... le CST l'avait prévenu.

Les révélations des journalistes et l'indignation des partis politiques d'opposition n'empêcheront pas le gouvernement conservateur de Stephen Harper de déposer le projet de loi C-51 deux jours après les révélations, le 30 janvier 2015, pour... donner encore plus de pouvoirs aux agences. Pour l'opposition, ce texte de loi va trop loin. «Comment peut-on empêcher que ce projet de loi soit utilisé pour espionner les ennemis politiques du gouvernement?» s'inquiète le chef du NPD, Thomas Mulcair.

Le Commissaire à la protection de la vie privée du Canada, Daniel Therrien, décide alors de prendre position. Dans une lettre ouverte publiée dans des quotidiens du pays, il soutient que la nouvelle loi fera

en sorte que «tous les citoyens seront pris dans cette toile, pas seulement ceux soupçonnés de terrorisme». En vertu de la loi, 17 nouveaux organismes pourront échanger et recevoir des informations du SCRS. Or, 14 d'entre eux ne font l'objet d'aucune surveillance indépendante. «Le terrorisme représente une menace croissante. Des mesures s'imposent en matière de sécurité nationale. Mais à quel prix? [...] Ces nouveaux pouvoirs sont démesurés et les mesures de protection de la vie privée proposées sont nettement insuffisantes.»

Le 25 mars 2015, la nouvelle chef du CST, Greta Bossenmaier, témoigne devant le Comité permanent de la défense nationale. La députée du NPD, Élaine Michaud, lui rappelle les opérations secrètes d'aspiration de données de l'aéroport Pearson et de surveillance des téléchargements, avant de lui poser sa question: «Pouvez-vous confirmer cela ou nous donner plus de précisions sur cette nouvelle vocation plus offensive que semble prendre le CST?» Réponse de la patronne du CST: «J'espère que vous comprenez qu'il m'est impossible de me prononcer sur la divulgation non autorisée d'informations classifiées.» La députée tentera à plusieurs reprises de pousser Greta Bossenmaier à répondre à ses questions. Sans succès. Elle baissera finalement les bras tout en concluant: «Il est essentiel de disposer d'un comité parlementaire de surveillance qui soit habilité en matière de sécurité de façon à pouvoir analyser ce qui se passe. À l'heure actuelle, la reddition de comptes est strictement impossible à l'endroit des parlementaires. Ils ne peuvent pas non plus obtenir de réponses à des questions pourtant légitimes.»

Alors que le projet de loi C- 51 poursuit son chemin à la Chambre des communes, Michael Doucet, directeur général du Comité de surveillance des activités de renseignement de sécurité (CSARS), s'inquiète lui aussi des possibles conséquences. Son comité a pour mandat de s'assurer que le Service canadien du renseignement respecte les droits et libertés des citoyens. «Le projet de loi C-51 aura un impact considérable, non seulement sur l'efficacité même du CSARS, mais sur la reddition de comptes en matière d'activités de renseignement de sécurité au Canada», dit-il dans son discours d'ouverture au comité sénatorial permanent de la sécurité nationale et de la défense, le 23 avril 2015. «L'adoption du projet de loi C-51 placerait le CSARS dans une position délicate où sa capacité de s'acquitter efficacement de ses fonctions de surveillance pourrait être compromise.»

Mais tous les avertissements venant des élus et des fonctionnaires ne changeront rien: le projet de loi C-51 est adopté sans amendement à la Chambre des communes le 6 mai 2015, grâce à la majorité conservatrice et à l'appui libéral, dont notamment celui de Justin Trudeau, futur premier ministre.

Le SCRS est alors doté de nouveaux pouvoirs, dont celui d'«atténuation de la menace». C'est un tournant historique. Le Service se contentait jusqu'à présent de recueillir de l'information, de l'analyser et de guider le gouvernement dans ses décisions. Désormais, l'agence d'espionnage peut perturber des transactions financières, des voyages ou des communications au pays ou à l'étranger, s'il existe «des motifs raisonnables de croire qu'une activité donnée constitue une menace envers la sécurité du Canada». De plus, la Loi sur la communication d'information ayant trait à la sécurité du Canada ayant aussi été créée, le SCRS n'a plus besoin du mandat d'un juge pour obtenir, par exemple, des informations provenant de l'Agence du revenu du Canada.

En juillet 2015, le National Post publie un document apparemment secret du Conseil du Trésor, divulgué par le groupe Anonymous. Alors que le gouvernement n'avait admis l'existence que de trois stations d'opération étrangères du Service canadien du renseignement de sécurité (à Washington, Londres et Paris), le document stipule qu'il y en aurait 25, «dont la plupart se trouvent dans des pays en voie de développement et/ou dans des environnements instables». Quelque 70 employés seraient chargés d'y traiter environ 22 500 messages par an. Il semblerait de plus qu'elles soient en fonction depuis au moins 30 ans, puisqu'il est précisé dans le document que ces stations n'ont pas été rénovées «depuis que les activités de collecte étrangères du Service ont commencé, au milieu des années 1980». Le gouvernement n'a pas confirmé l'authenticité de ce document.

Le 19 octobre 2015, Justin Trudeau et les libéraux prennent les commandes de la Chambre des communes. Une de leurs promesses: reprendre le pouvoir sur les agences d'espionnage. Mais le début de leur règne commence avec de nouveaux déboires...

Le nouveau gouvernement libéral de Justin Trudeau respectera-t- il sa promesse de remettre la haute main sur les agences d'espionnage du pays?

En 2016, les révélations continuent d'accaparer les agences d'espionnage. En janvier, pour la première fois de son histoire, le commissaire du Centre de sécurité des télécommunications écrit au ministre de la Défense et au procureur général du Canada «pour les informer qu'il avait découvert que le CST ne se conformait pas à la Loi sur la défense nationale et à la Loi sur la protection des renseignements personnels». Le CST échange régulièrement des informations avec des partenaires étrangers. Lorsque ces données concernent des Canadiens, le Centre doit les anonymiser, ce qui n'avait pas été fait correctement, indique Jean-Pierre Plouffe, selon qui «le CST n'avait toutefois pas agi avec une diligence raisonnable».

La polémique se poursuit en février, lorsque le commissaire Jean-Pierre Plouffe témoigne devant le Comité sénatorial permanent de la Sécurité nationale et de la défense. On y apprend que le manquement a duré pendant des années. Il a été découvert en novembre 2013, et la procédure a été arrêtée en 2014, bien que le public n'en ait été prévenu qu'en 2016. «Parle-t-on de centaines de milliers [de Canadiens touchés]?», demande le sénateur Claude Carignan. «Il est impossible de déterminer quoi que ce soit», lui répond le commissaire.

En juin, c'est le Globe and Mail qui en apprend davantage, grâce à des documents confidentiels déposés devant les tribunaux. Le partage d'informations non anonymisées sur des Canadiens remonterait jusqu'en 2005 et comporterait des listes d'appels téléphoniques et d'échanges par Internet. Selon le document, pour les courriels, les adresses étaient anonymisées, mais pas les adresses IP. Et le CST lui-même ne sait pas quelle est l'ampleur de cette erreur qui a duré probablement pendant près d'une décennie. Le contenu des messages, a priori, n'aurait pas été collecté.

Puis, en novembre 2016, c'est de nouveau au tour du SCRS de se faire taper sur les doigts. Le juge de la Cour fédérale Simon Noël rend une décision sans équivoque: «Le SCRS a manqué, une fois encore, à son obligation de franchise envers la Cour.» Depuis 2006, le SCRS conservait des métadonnées, obtenues auprès de fournisseurs de service, «même si le contenu auquel elles sont associées n'était pas considéré comme lié à une menace». De nombreuses parties du jugement étant confidentielles, il est difficile de savoir de quoi il s'agit exactement. Toutefois, ces données étaient traitées par un puissant logiciel nommé Operational Data Analysis Centre, qui permettait de donner «un portrait précis et intime de la vie et de l'environnement des personnes sur lesquelles le SCRS enquête. Le programme permet d'établir des liens entre diverses sources et d'énormes quantités de données, ce qu'aucun humain n'arriverait à faire.» Sauf que la Cour n'a jamais autorisé le Service à conserver les données en question, et donc, que le programme était illégal dès ses débuts, il y a 10 ans. «Il est peut-être temps que les Canadiens relancent le débat sur le mandat et les fonctions de son service de renseignement national», ajoute le juge Noël dans sa décision.

Justement, les libéraux, bien qu'ils aient voté pour le projet de loi C-51, ont aussi promis lors de la dernière campagne électorale qu'ils «ramèneront l'équilibre entre notre sécurité collective et nos droits et libertés». Une consultation est d'ailleurs en cours sur le sujet depuis le 8 septembre. Les Canadiens ont jusqu'au 15 décembre pour y participer.

Mais le débat semble aujourd'hui dépasser les agences de surveillance fédérales. Les services policiers, eux aussi, utilisent de plus en plus des techniques qui menacent la vie privée de milliers de personnes qui ne sont suspectées d'aucun crime.

En avril dernier, on apprenait que la Gendarmerie royale du Canada utilisait secrètement depuis 2005 un appareil pour surveiller tous les échanges téléphoniques ayant lieu dans une zone donnée, lors de certaines de ses enquêtes. Appelé Stingray ou IMSI Catchers, ce dispositif de la taille d'une mallette relève toutes les communications, sans discrimination, par exemple dans un quadrilatère d'appartements. Que vous soyez le suspect ou non, si vous êtes au mauvais endroit au mauvais moment, vos communications peuvent donc être épiées, et vous ne le saurez jamais. Par ailleurs, au Canada, tous les appareils utilisant les ondes radio doivent être approuvés par une agence fédérale, et ces appareils ne l'ont jamais été.

Mais ce n'est pas tout. Dans des documents déposés devant les tribunaux, la GRC a aussi été forcée de révéler cette année qu'elle disposait de la clé globale de cryptage des téléphones BlackBerry. Sur ces appareils, les messages sont tous cryptés lorsqu'ils transitent entre deux interlocuteurs. Si quelqu'un intercepte ces messages, il est en théorie impossible pour lui d'en connaître le contenu. Sauf qu'il existe une clé universelle pour les déchiffrer et que les policiers fédéraux la possédaient depuis au moins 2010. Lors d'une enquête menée à Montréal à pareille date, la GRC a intercepté et déchiffré près d'un million de messages grâce à cette technique. Dans les documents déposés devant le juge, la Gendarmerie a indiqué que cette technologie équivalait à «avoir les clés pour déverrouiller les portes des maisons de tous les utilisateurs, sans qu'ils le sachent».

Les services de police municipaux semblent aussi avoir de plus en plus d'appétit pour de vastes quantités de données concernant les citoyens. En avril 2014, la police régionale de Peel, en banlieue de Toronto, enquête sur une série de braquages de bijouteries. Pour identifier les voleurs, les policiers réclament à Rogers et à Telus le relevé de «tous les téléphones activés, ayant transmis et reçu des données» de toutes les tours de réception cellulaire «à proximité de 21 adresses civiques», pendant la période des cambriolages. La quantité de données est énorme. En une seule requête, les policiers recevraient les informations téléphoniques, nominatives et bancaires de près de 43 000 personnes. La Cour supérieure de l'Ontario a jugé la demande excessive et l'a rejetée. Toutefois, dans la décision du juge John Sproat, on apprend que de telles demandes sont loin d'être exceptionnelles et que les policiers s'en servent régulièrement.

***

Selon le plus récent rapport du Commissaire à la protection de la vie privée du Canada, Daniel Therrien, «90 % des Canadiens ont l'impression de perdre le contrôle qu'ils exercent sur leurs renseignements personnels et s'attendent à être mieux protégés». Le Commissaire souligne que la Loi sur la protection des renseignements personnels a été promulguée en 1983 et la Loi sur la protection des renseignements personnels et les documents électroniques est entrée en vigueur en... 2001. Mark Zuckerberg avait alors 17 ans et Facebook n'existait pas.

La menace, il est vrai, est réelle. Le 7 mars 2016, devant le Comité sénatorial permanent de la sécurité nationale et de la défense, le directeur du Service canadien du renseignement de sécurité rappelait que 180 personnes ayant des liens avec le Canada mènent des activités terroristes à l'étranger. Selon Michel Coulombe, une centaine d'entre eux se trouveraient en Irak et en Syrie. «Comme la participation des Canadiens à ces conflits nuit aux pays où ils se trouvent et les déstabilise, le Canada a l'obligation internationale d'empêcher les voyages à des fins terroristes.» Il y a aussi toute la question de ceux qui reviennent au pays -- une soixantaine, selon le directeur -- et qu'il faut surveiller. Sans compter les attaques informatiques, de plus en plus nombreuses et perfectionnées.

Mais comment surveiller ceux qui sont suspectés d'avoir commis des crimes sans enfreindre la vie privée des gens qui ne sont suspectés de rien? Comment garder un oeil sur ceux qui pourraient poser une menace à la sécurité sans fouiller dans la vie de tout le monde? Quels sont les critères qui déterminent ce qu'est une menace? L'histoire regorge de trop nombreux exemples dramatiques où un gouvernement en savait tout d'un coup beaucoup trop sur les orientations politiques, l'origine ethnique ou la religion de ses citoyens.

Dans une démocratie, c'est aux citoyens de décider à quel point ils sont prêts à laisser l'État fouiller dans les aspects les plus intimes de leur vie. Mais les preuves des dernières années montrent combien les Canadiens ne connaissent pas les capacités des autorités publiques. Et c'est pourtant crucial, car le droit à la vie privée, c'est le droit d'être soi-même, en toute liberté.

Globe and Mail
Not warranted
Thursday, 24 November 2016

Editorial: The discovery that the Montreal Police obtained a warrant to monitor the phone of La Presse journalist Patrick Lagacé, for several months, has rightly galvanized efforts to give substantially stronger protection to journalists and their sources.
It wasn't that the police were investigating Mr. Lagacé on the contrary, they were piggybacking on the columnist's work, and that of his sources, to investigate one of their own. They also obtained a warrant to tap the communications of another La Presse journalist, Vincent Larouche. As a result, Montreal Chief Philippe Pichet has been unrepentant, saying, "There were criminal allegations against a police officer, and we have a job to do."

This isn't only about cops and robbers and reporters. Much of our legal system, and our way of life, is based on the idea that a person's home and personal effects are his or her castle. They cannot be violated without a warrant. A judge or justice of the peace has to assess whether a violation of privacy is legally justified. Police turning reporters into unwitting police sources stretches the limits very far.

The newly arrived independent Senator André Pratte, formerly also of La Presse, had already expressed hope that the Liberal government would act to give better protection to reporters and their sources. And Senator Claude Carignan, a Conservative, this week introduced a private member's bill, the Journalistic Sources Protection Act. Bill S-231 would amend both the Criminal Code and the Canada Evidence Act.

Of course, private members' bills, especially those that begin in the Senate, don't often become law. They tend to get lost in the shuffle, unless the government smiles upon them. This is an issue, and a bill, that the Trudeau government should make part of its agenda.

What happened in Montreal raises question about when warrants are granted to police, under what circumstances and by what judicial authority. Warrants are a fundamental guarantee that the privacy rights of all citizens will only be infringed in exceptional circumstances, and after a careful and legal test that balances public safety against privacy. Yet it was clearly too easy for the Montreal police to obtain their warrants in this case. Fixing that should be top of mind for the government.

Security body plans malware research centre in city
Thursday, 24 November 2016
Byline: Staff Report

Hyderabad - Cyber security is now a national concern and the next world war would be fought in cyberspace without shedding a drop of blood, said IT minister K T Rama Rao, speaking at the second edition of the cyber security conclave that began on Tuesday.
The conclave is meant to bring the think tank of cyber security under one roof and chart out a road map for taking the state's cyber security policy to the implementation phase.

An Israeli delegation led by Ram Levi, CEO of Konfidas meanwhile engaged in a panel discussion with cyber security experts, academicians, cops and government officials from the information technology department for the purpose.

During the conclave, the Society for Cyberabad Security Council (SCSC) announced its plans to come up with a `malware research centre' in the city, for helping companies and organizations facing cyber attacks.

The centre is also planning to set up a `BOTNET and malware analysis centre' as one of the biggest threats in the current scenario is mal ware being embedded into hardware systems.

KTR said though no blood would be shed in cyber war, "Still businesses will be hurt and people will be hurt. While digital space comes with its inherent threats, it is an opportunity for India to provide solutions not just for itself but also for others," he said.

Al Arabiya
Hezbollah chief's guard seen in Aleppo
Thursday, 24 November 2016
Byline: Ahd Fadhel

Beirut - Social media accounts since last week have circulated pictures of Lebanese Hezbollah chief Hassan Nasrallah's bodyguard, donning a military attire, in Syria.
Lebanon's Shiite movement Hezbollah is an Iranian proxy and has long supported Syrian President Bashar Al-Assad's government following the regionalization of the Syrian conflict, which began in early 2011.

On a Facebook account belonging to 'Sham Zainab' on Nov. 16, a picture of Nasrallah's body guard, who is known by his alias 'Abu Ali', was published. The caption said: "Abu Ali, Sayed Hassan Nasrallah's guard, in one of the battle fields in Syria."

On another Facebook account under the name of 'Faris Al-Quds', a picture of 'Abu Ali' was published, showing him wearing a military uniform. The caption said that the picture belonged to Nasrallah's bodyguard.

One Facebook account under the name 'Mihwar Al-Mukawa" reported on Nov. 16 that Israel's Channel 10 said that 'Abu Ali' is in Qusayr - a city in the western Syrian governorate of Homs - where a military parade was taking place.

Meanwhile, other Twitter accounts under the names of 'Ali Nazal' and 'Abu Al-Huda Al-Humsi' on Nov. 18 said "Iranian websites close to Iran's Republican Guards said Hezbollah has sent Hassan Nasrallah's guard to Aleppo, and he is called Ali Abu Jawad in search for Jerusalem's path."

'Jerusalem's path' is a term used by Hezbollah to justify its involvement in the Syrian conflict as it considers liberation of Jerusalem from Israel as its final battle that should be won for Muslims.

Lebanese media has also reported about the pictures. The independent Lebanese newspaper Annahar published on Tuesday that social media users have circulated a new picture for 'Abu Al', said to be taken at the "frontier battles between the Syrian army and militants in Aleppo."

Israeli researchers: Snoops can hack your headphones to record conversations
Thursday, 24 November 2016
Byline: Sue Surkes

Jerusalem - First we learned that hackers could watch us undress through our webcams, then we discovered that they could listen to us answering security questions and giving passwords through our microphones.
Now, an Israeli team has found, mischief-makers can theoretically convert our headphones into microphones to record our conversations, Wired magazine reported Tuesday.

Researchers at Ben Gurion University of the Negev have developed a prototype, known in the trade as a proof of concept, to show that headphones can be re-purposed into microphones to enable a snooper on one side of a room to record a conversation being conducted on the other by someone using a headset.

Headphone speakers convert electromagnetic signals into sound waves through a membrane's vibrations. The malware developed by the Ben Gurion team programs the membranes to work in reverse - - picking up sound vibrations and converting them back into electromagnetic signals.

"Even if you remove your computer's microphone, if you use headphones you can be recorded," said Mordechai Guri, who led the research in the laboratories of the university's Cyber Security Research Center.

The team's malware -- malicious software -- exploits a little-known feature of RealTek, software that controls sound. Because RealTek is so widely used, the malware works on almost any desktop computer, as well as most laptops.

So far, there is no simple remedy for this kind of audio peephole, Guri said, adding that RealTek's chip will probably need to be redesigned for future computers.

Khaleej Times
Mobile data traffic to rise 13-fold by 2022 in Mena
Thursday, 24 November 2016
Byline: Staff Report

Dubai - Mobile data traffic will increase 13-fold by 2022 in the Middle East and North East Africa and help boost 5G subscriptions to 20 million, a report says.
The latest Ericsson Mobility Report for the Middle East and North East Africa forecasts that smartphones will account for 56 per cent of total subscriptions by 2022 across the region.

Mobile subscriptions are growing steadily across the region and expected to reach 690 million by the end of 2016, making up eight per cent of the global market, and reaching 850 million mobile subscriptions by 2022.

The report further said the total number of GSM subscriptions will account for 60 per cent of total mobile subscriptions by the end of 2016. It is expected that mobile broadband subscriptions will surpass GSM-only subscriptions by 2018. WCDMA/HSPA subscriptions will increase from around 30 per cent of total subscriptions in 2016 to 42 per cent in 2022.

"Our latest mobility report reflects how digital technology is fast becoming part of everyday life in the region," said Rafiah Ibrahim, head of Ericsson Middle East and East Africa.

She said the report highlights the rapid uptake of LTE deployment across the region, paving the way for 5G where the company is expecting 20 million subscriptions by 2022.

"LTE subscriptions are rapidly increasing to account for seven per cent of total mobile subscriptions by the end of 2016 and reaching up to 38 per cent by 2022," she said. "Today, we are working together with our partners to pave the way for 5G across the region and we are already seeing a great interest among operators launching 5G plug-ins on existing 4G networks," she added.

By 2022, the report anticipates that mobile data traffic will multiply 13-fold while average active smartphone data consumption per month will increase from 1.8GB in 2016 to 13GB in 2022. These figures are driven by an increase in video consumption, social networking and app usage.

For example, over 70 per cent of smartphone users in Saudi Arabia, Turkey and the UAE watch video clips on social networking websites at least once a week.

Philippine armed forces build up capability to fight in cyberspace
Thursday, 24 November 2016
Byline: Gilbert P. Felongco

Manila - The Philippine military said it is building up capability to fight in cyberspace -- a frontier where terrorists have steadily strengthened their competency.
"It is high time for the Armed Forces of the Philippines (AFP) to build up its cyberspace capability as we are in the midst of rapidly evolving technologies," AFP public affairs chief Marine Col. Edgard Arevalo said.

The new technologies spawned by the internet had created challenges for the Philippine military, a relatively budget- constricted fighting force.

In recent years, tech-savvy terror groups such as the Abu Sayyaf, the Bangsamoro Islamic Freedom Fighters (BIFF) and the Lanao-based Maute group had made effective use of cyberspace in carrying out propaganda and to some-extent, recruitment of fighters. They were able to do this mainly by uploading video clips on internet-sharing sites such as YouTube and other websites.

The terror groups have effectively maximised the new realm of cyberspace for their purposes and their operations have gone on without opposition.

Only a small fraction of the country's gross national product goes to military expenditures compared to the militaries of nearby countries such as China and Malaysia.

According to Arevalo, the move to beef up the AFP's presence in the virtual world was highlighted during the November 12 to 23 celebration of the 81st AFP Signal Corps Anniversary.

The AFP Signal Corps maintains the main communication backbone of the AFP. The Corps has been providing the AFP's command and control with voice and data services for the past 60 years.

The Corps also plays a key role in delivering crucial information services during natural disasters as well as in national events such as the recent Asean Summit.

Major Gen Jose P Tanjuan Jr, AFP Deputy Chief of Staff for Communications, Electronics and Information Systems, said the Signal Corps also envisions the establishment of a cyber-capable armed force by developing policies and establishing a responsive organisational structure manned by a pool of Cyber-capable workforce.

The Signal Corps was officially formed as one of the technical services of the Philippine Army in 1936 through the National Defence Act. The term "signal" became known to refer to a highly distinct military occupation dealing with methods of communications.

The Courier-Mail
Cyber war hits jihadis hard, says PM
Thursday, 24 November 2016
Byline: Staff reporter

Melbourne - Australia has taken its fight against ISIS online - and it's working, Prime Minister Malcolm Turnbull has -declared.
Mr Turnbull told Parliament the country's top-secret offensive cyber capabilities were becoming more important in countering terrorism.

"While I won't for obvious reasons go into the details of those operations, I can say that they are being used and that they are making a real difference in the military conflict," he said in an address on -national security.

Australian combat aircraft have participated in coalition air operations in Iraq and Syria since 2014, while Australian and New Zealand troops have been training Iraqi soldiers for the fight against ISIS.

ISIS has long maintained an extensive capability to use the internet for its own purposes, using slick video productions to trumpet its successes and persuasive pitches to potential Western converts.

Last week ISIS released a propaganda video that prominently featured Melbourne landmarks.

"(ISIS) will continue doing this in an attempt to intimidate us but they will not succeed," Mr Turnbull said yesterday.He said terror threats -remained at "probable".

China Daily
Enterprises prepare for insider threats to data
Thursday, 24 November 2016
Byline: Wu Yiyao

Shanghai - Insiders have become one of the largest threats to enterprises' critical digital and physical assets, according to research commissioned by EY, a consultancy services provider.
The study polled more than 665 senior executives in 17 countries and regions, including 40 professionals from China. More than 25 percent of respondents said they believe insider threats and illicit behaviors taking advantage of internet technologies are the fastest growing risk.

"About 70 percent of our services delivered to clients are focusing on illicit behavior taking advantage of internet technologies such as using loopholes in network systems and online payment schemes, particularly in fintech and online payment sectors," said Chen Zhi, an EY partner and expert in fraud investigation and dispute services.

More exposure amid increased connectivity is making it difficult to detect threats to critical assets, such as intellectual property, formulas, payment information, and clients' personal information, said Chen.

"It is not just an IT issue - it takes an enterprisewide approach including many human elements - to plan for, prevent, detect, respond to and recover from insider threats," said EY's research note on managing insider threats.

China's enterprises said they have increasingly invested in improving their organization's internet safety and internet security, including deploying more resources to build up their cybersecurity teams and use more third-party services, such as data monitoring, data recovery and user behavior pattern analysis.

On Nov 7, China's cybersecurity law was approved by the Standing Committee of the National People's Congress, China's top legislature. The law will come into effect on June 1, 2017.

"Having worked extensively with clients in APAC and China, we know the challenges they face managing data in legal proceedings and ensuring that privacy and state secrecy laws are respected. E-discovery solutions that allow clients to process data in the country and on-site at a company's premises in China are therefore essential," said Kate Chan, regional managing director in Kroll Ontrack's Asia Pacific practice, an end- to-end provider of electronic evidence services.

Even small-sized enterprises, such as startups, should bear in mind that computer forensics, e-discovery, and document review are important for protecting rights. They should start working with professionals, such as lawyers, at a very early stage of operations to ensure long-term growth and safety, said Chan.

Global Times
Xinjiang tightens passport policy to maintain social order: official
Thursday, 24 November 2016
Byline: Zhao Yusha

Beijing - Northwest China's Xinjiang Uyghur Autonomous Region has tightened passport regulations, requiring all residents to hand in their passports to local police stations for examination and management.
An anonymous police officer in Aksu prefecture confirmed with the Global Times on Wednesday that all citizens in Aksu are required to hand their passports, be it a private passport or passport for public affairs, to the police stations. The passports will be managed by the police.

"Anyone who needs the passport must apply to the police station," said the source, adding that the passport management policy is implemented throughout Xinjiang.

The Public Security Bureau in Shihezi city gave the same directive on its official Weibo account on October 19, saying that it was for "annual examination" purposes.

"Those who refuse to hand in their passports should bear the responsibility themselves if they are forbidden from going abroad," read the post.

Meanwhile, the post was deleted later.

A resident from Kashar city who didn't want to be named told the Global Times that she received a call asking her to hand her passport to the police.

She said that her husband's application for passport was denied by the local police station a few days ago. "The passport application center claimed they didn't know when citizens could apply for passports again, as they were waiting for further instructions from higher authorities," she said.

A local official in Xinjiang told the Global Times on Wednesday that the Xinjiang government had loosened control over residents' passports in 2015. The current policy tightening aims mainly to maintain social order, he noted.

Getting a passport is often complicated and takes more time in Xinjiang than in other provinces, given the rising threat of terrorism in the region and the government's ongoing anti-terrorism campaign, said the official.

The new policy will not affect ordinary people's travel plans since they can easily get their passports back, but those who have criminal or any other suspicious records would be restricted from going abroad, according to the official.

The policy in 2015 stipulated that residents in some areas in Xinjiang who obtain a passport under tourism category can still keep the passport in their personal possession.

In the past, passports under tourism category were required to be handed to the local tourism bureaus upon return, while those obtained for business or family visit purposes needed to be kept with the local police, Turgunjan Tursun, a research fellow at the Xinjiang Academy of Social Sciences, said.

Xinjiang authorities announced in 2015 that they would simplify the paperwork and speed up procedures for those who apply for a passport under the category of visiting [a family member or friend overseas], business, tourism and education.

Enigma Codebreaker site to house cyber security college
Thursday, 24 November 2016
Byline: Staff report

London - Bletchley Park, the home of the Enigma codebreakers, is to become the home of UK's first National College of Cyber Security.
During the Second World War, Alan Turing and his team of computer scientists broke the system used by the Nazis in what many believed to be the single biggest contribution to Allied victory.

And now, some of the brightest teenagers in the country will be given the chance to follow in their footsteps.

The college - which is being created by a new cyber security body called Qufaro, will open in 2018 once a £5m restoration of buildings on the Bletchley Park site is complete.

Alastair MacWilson, chair of Qufaro and the Institute of Information Security Professionals, said: "Our cyber education and innovation landscape is complex, disconnected and incomplete putting us at risk of losing a whole generation of critical talent.

"For those interested in forging a career in cyber, the current pathway is filled with excellent but disparate initiatives - each playing a vital role without offering a truly unified ecosystem of learning and support.

"By connecting what already exists and filling the gaps, Qufaro will make it easier for budding professionals to grow their cyber security skills at every stage of their journey, and contribute more to the sector as a result."

The college will "select only the most talented and skilled students" and will combine its syllabus with modules in complementary subjects including maths, computer science and physics.

In order to tempt those who are interested in a career change, a new range of online courses are also planned.

The Daily Beast
Sorry, Hillary Clinton Fans. There's 'Zero Evidence' of Election Hacking.
Wednesday, 23 November 2016
Byline: Shane Harris

Washington - Does Hillary Clinton still have a path to the White House?

That's the provocative question posed by some computer security experts, who think voting results in key states could have been manipulated by hackers.

The emphasis here is on "could." There's no clear evidence that voting machines were rigged or that ballots were altered, but as reported Tuesday night in New York magazine, a group of computer scientists and election lawyers has urged Clinton to call for a recount in Wisconsin, Michigan, and Pennsylvania, three swing states that Donald Trump won--to the surprise of just about every pollster, pundit, and journalist in America.

Clinton would have to win those states back in order to change the outcome of the election. And while it's tempting to blame hackers, and not the failure of the political professional class, for Trump's upset, experts warn not to get your hopes up for a shocking turnaround. For hackers to have changed the votes in three states would have been even more surprising than Trump's victory.

"There is zero evidence of tampering right now. Zero," David Becker, the executive director of the Center for Election Innovation and Research, told The Daily Beast. The simpler explanation for why the vote deviated from expectations and historical trends was that Barack Obama wasn't at the top of the ticket. The results for Clinton "only look off when you compare them to the Obama elections" in 2008 and 2012, Becker said.

The hackers would have had to begin their work in advance of the election. And in those states or counties that don't use electronic voting machines exclusively, they'd probably have to be on the ground, infiltrating elections offices, and working up to Election Day if not on the day itself. Throwing the votes in these three states on the same day would have required teams of people working in coordination with a high risk that they'd get caught, Becker said.

"I don't know how you'd plan for something like this even if you had George Clooney and Brad Pitt," he said, referring to the Oceans movie franchise in which talented thieves pull of absurdly implausible heists.

Even one of the computer scientists reportedly urging Clinton to call for a recount seemed to downplay the notion that hackers stole the election for Trump.

"Were this year's deviations from pre- election polls the results of a cyberattack? Probably not," J. Alex Halderman, a professor of computer science at the University of Michigan, wrote in a post on Medium. "I believe the most likely explanation is that the polls were systematically wrong, rather than that the election was hacked. But I don't believe that either one of these seemingly unlikely explanations is overwhelmingly more likely than the other."

"The only way to know whether a cyberattack changed the result," Halderman continued, "is to closely examine the available physical evidence?--?paper ballots and voting equipment in critical states like

Wisconsin, Michigan, and Pennsylvania. Unfortunately, nobody is ever going to examine that evidence unless candidates in those states act now, in the next several days, to petition for recounts."

But that's not entirely true, because in some states, officials routinely go back and look at vote counts in order to determine to determine that laws were followed and voting machines worked properly.

Wisconsin, a state that Halderman flagged, is one of them. There, the law requires a random audit of each type of voting equipment used in the state, of which there are about half a dozen from different vendors and manufacturers, Michael Haas, the administrator of the Wisconsin Elections Commission, told The Daily Beast.

"People go through and hand count the ballots and make sure that the equipment counted them as you'd expect based on how the ballots were marked," he said. The elections commission will compile a final report by December 15 and provide it to an oversight body. Any petition to hold a recount is due by this Friday at 5pm. "We haven't received any inquires from the Clinton campaign about a petition" to hold a recount, Haas said.

Becker said he was confident that the Wisconsin audit would detect any irregularities that could indicate vote tampering. "If there is a problem, we'll know about it."

But the auditing procedures in other states may give skeptics less comfort. In Michigan, there is no audit aimed at re-tabulating or counting ballots. Rather, officials conduct a review to ensure that local officials properly followed laws and procedures. Experts say it's better than nothing, but isn't a robust means for verifying that there were no shenanigans or errors on Election Day.

Michigan only uses optical scanning systems--voters make their choices on paper ballots that are tabulated by a machine. The state doesn't use electronic voting machines, like those with touch screens that may rely on software downloaded from the internet, which could be vulnerable to tampering.

This doesn't mean the election results couldn't have been altered. But Fred Woodhams, a spokesperson for the Michigan Secretary of State, told The Daily Beast that the state has used the optical machines for more than a decade and that "time and again they have demonstrated their extreme accuracy and integrity."

Official assurances count for something. But in the last state flagged by the researchers, Pennsylvania, it's not clear that an audit would detect tampering in some parts of the state.

Pennsylvania is one of those states that gives election security experts heartburn, because the electronic voting machines it uses don't print out a paper record of the voter's selections. In effect, there is no way to verify that the machine accurately recorded the votes, experts say.

Experts have long pointed out that these paperless electronic machines would make a prime target for hackers. Pennsylvania does use paper ballots in some parts of the state, and it does conduct some post-election audits. But it could be difficult to detect tampering with the voting machines unless they're directly examined.

A spokesperson for the Pennsylvania Department of State said in a statement that officials are "aware of the report" in New York magazine. "The Pennsylvania Election Code includes a provision allowing an election to be contested in the courts. Such action must be taken within 20 days after the election. We will not speculate or comment on any potential litigation."

The statement made no mention of an audit.

The bottom line is that there's no evidence yet of election hacking, but there's also no universal policy to audit results after an election. And that's unfortunate, because regular audits would help build confidence that elections went off smoothly and weren't targeted by hackers, said Pamela Smith, the president of Verified Voting, a nonprofit group that advocates transparency and security in U.S. elections.

"My feeling is audits should be done as a matter of course," Smith told The Daily Beast, adding that states that don't conduct them now could launch "a pilot audit" as a sign that they take the issue seriously.

"A state could say, we know this was a contentious election, we have that unusual situation where the popular vote winner didn't win the most electoral college votes, what the heck, let's do an audit. I think that's a perfectly legitimate thing to do."

Le Temps
Un esprit troublé à l'origine du vol des données secrètes
Thursday, 24 November 2016
Byline: Céline Zünd

Bellinzone, Suisse - Fuite L'informaticien du Service de renseignement de la Confédération, qui avait volé des données ultrasensibles à son employeur, écope de 20 mois avec sursis
C. B., 48 ans, jeans et pull à capuche, s'est excusé devant la cour, avant de demander de pouvoir repartir d'où il venait, Salerne, en Italie, pour tenter d'y retrouver « une vie normale » . L'ancien informaticien qui avait plongé le Service de renseignement de la Confédération (SRC) dans l'une des plus graves crises de son histoire, répondait mercredi devant le Tribunal pénal fédéral de Bellinzone des chefs d'accusation d'espionnage politique aggravé et de tentative de violation du secret de fonction.

Son acte, le vol d'informations au coeur du serveur sécurisé des renseignements helvétiques, avait eu l'effet d'une bombe en 2012. La cour s'est réunie en janvier dernier à huis clos pour pouvoir examiner ce matériel sans risquer de divulguer des secrets d'Etat.

L'accusation a insisté sur ce point: ces données contenaient des informations ultrasensibles sur des opérations secrètes du SRC, ses collaborations avec des renseignements étrangers. Si elles s'étaient retrouvées dans le domaine public, non seulement la réputation des services secrets helvétiques et leur travail à l'étranger auraient été gravement compromis, mais, en plus, les vies de sources du SRC auraient été mises en danger. Sans compter les risques pour la sûreté de la Suisse.

Aux yeux du procureur Carlo Bulletti, l'accusé avait parfaitement conscience de la sensibilité du matériel copié du serveur sécurisé du SRC, puisqu'il avait été nommé administrateur de ce système, conçu précisément dans un but de protection des données. « Il était préparé, structuré, il a planifié son acte », a-t-il argumenté devant la cour. L'accusation en est convaincue: C. B. avait bien l'intention de vendre ce matériel à des tiers. Mais, même si ce n'était pas le cas, le fait de l'avoir copié avec ces données et de les avoir sortis du bâtiment du SRC suffit à le condamner. Le procureur a requis 5 ans de prison « si la capacité de discernement de l'accusé est intacte », une question qu'il a laissé le soin aux juges de trancher.

« Motivé par un sentiment d'injustice »

L'état psychiatrique de C. B., 48 ans, s'est trouvé au coeur des débats. Une première analyse, dans les mois qui ont suivi les faits, relevait l'état dépressif de C. B. Rien qui ne permette d'attester d'une responsabilité diminuée, lorsque l'informaticien a décidé de se rendre au bureau à six reprises, entre le 4 et le 18 mai 2012, pour copier 507 gigabytes de données sur deux serveurs, avant de les emmener à son domicile, dans la banlieue de Berne.

Une seconde expertise commandée par la défense aboutissait quant à elle à la conclusion inverse. Le Ministère public avait alors convoqué l'avis d'un troisième expert, Carlo Calanchini, qui s'est présenté hier devant la cour pour faire part de son analyse. Selon le psychiatre tessinois, C. B. souffre d'un trouble délirant, une psychopathologie lourde. Il a certes planifié son acte, mais « il était motivé par un sentiment d'injustice et la menace qu'il percevait de la part de ses collègues », affirme le psychiatre.

La pathologie de C. B. expliquerait aussi son étrange comportement dans l'épisode de la banque, qui s'apparente selon l'expert à une « dissociation de la personnalité » et a fini par conduire à la chute de l'informaticien. Le 15 mai, l'homme se rend dans une filiale bernoise d'UBS pour se renseigner sur les modalités d'ouverture d'un compte à numéros. Il laisse entendre qu'il attend une grosse somme pour la vente de données de la Confédération. Suspicieux, l'employé de banque alerte les autorités.

Devant la cour, l'accusé a invoqué une mémoire défaillante. Il ne se souvient pas avoir rédigé une offre en anglais pour la vente des données volées, ni avoir déclaré, à la banque, attendre le versement d'une

grosse somme. L'avocat, qui a plaidé l'acquittement, a livré sa version des faits: C. B. a copié le contenu du serveur du SRC pour prouver le harcèlement dont il aurait fait l'objet sur sa place de travail.

Au début, il entretenait de bonnes relations avec ses collègues. R. M., son premier supérieur, est venu en témoigner hier devant la cour: C. B. était un informaticien doué et loyal. C'est après le départ de ce chef, en 2011, que la situation se corse. L'informaticien se sent « mobbé », s'absente du travail de plus en plus souvent. Jusqu'à l'issue que l'on connaît.

« C'est sa maladie mentale qui a fait agir mon client. Un vrai criminel ne se serait jamais lancé dans une opération aussi risquée », affirme l'avocat. Ce n'était pas la première fois que l'informaticien rencontrait des difficultés relationnelles sur son lieu de travail. Dans toutes les entreprises où il est passé, il a fini par quitter son poste pour des pressions, des « machinations », des « animosités » de la part de collègues.

La cour aurait suivi l'avis de l'accusation et condamné l'ancien informaticien à une peine privative de liberté de 5 ans, si elle n'avait pas estimé la responsabilité pénale de l'accusé limitée en raison de ses troubles mentaux sévères. Aussi, à l'issue de ce procès d'une journée, les juges ont décidé de réduire la peine de deux tiers et condamné l'ancien informaticien à 20 mois de prison avec sursis. Quant au motif de l'accusé, « il reste inconnu », ont déclaré les juges.

Indo-Asian News Service
Indian Android smartphone users too at data theft risk: Experts
Thursday, 24 November 2016

New Delhi - News that security firm Kryptowire identified a "backdoor" spyware in Android smartphones in the US which collected sensitive personal data and transmitted it to servers in China has shaken cybersecurity experts in India -- a country where one in five smartphones are of Chinese make. Jump-started by the US Defense Advanced Research Projects Agency (DARPA) and the Department of Homeland Security (DHS), Kryptowire last week revealed that these Android devices were available through major US-based online retailers like Amazon and BestBuy and included popular smartphones such as BLU R1 HD devices.

The devices actively transmitted user and device information including text messages, contact lists, call history with full telephone numbers, and unique device identifiers to third-party servers in China without user-consent, Kryptowire claimed.

Shanghai Adups Technology Co Ltd, the Chinese company behind the spyware -- or firmware -- later admitted that it planted them in some Android phones "by mistake" but the "text messages, contacts or phone logs" were not shared with anyone else.

The revelation has raised security and privacy concerns in India. There are nearly 250 million unique smartphone users in the country and by the end of the year, there will be 280 million Indians with these devices.

"Nearly 94 per cent of these people are using Android devices and Chinese smartphone users are at roughly 60 million, which means one out of five smartphone users in India is using a 'Made in China' device. Thus, security becomes a paramount concern here," Tarun Pathak, Senior Analyst, Mobile Devices and Ecosystems at New Delhi-based Counterpoint Research, told IANS.

With digital consumption on the rise, the security risk is growing multifold. "Indian smartphone users are at the same risk as users in the US when it comes to sensitive personal data and information being copied from phones and transmitted to undisclosed locations without their consent or knowledge. This is owing to the security vulnerabilities that exist in the Android system," explained Pavan Duggal, one of the nation's top cyber law experts.

Android is a very fertile platform with a large number of contaminants and infections. Hundreds of thousands of infections have been discovered on the Android platform in the last few years.

According to Rahul Tyagi, Vice President (Training) at IT risk assessment and digital security services provider Lucideus, Indian users share the same threat as China continues to be a major exporter of smartphones.

"Given the current market, there are a lot of new phone companies/models being launched every day with advanced features at a low price, most of them being manufactured in China -- which may put user-privacy at great risk," Tyagi told IANS.

Owing to the competition, companies are trying to give the best hardware experience to consumers but what is lacking is proper security auditing in their custom-operating systems and firmware.

"Bugs at the operating system's application layer can be tackled by using updated anti-virus and other third-party security applications, but bugs at the firmware level is beyond users' reach as they will never have direct access to the firmware," Tyagi pointed out.

The threat gets bigger with more and more people embracing mobile digital payments in the wake of demonetisation.

"Mobile continues to be an area of exposure. As we get more and more used to transactions with mobile banking or e-commerce, mobile becomes more of a financial gateway and the implications are huge," added Anand Ramamoorthy, Managing Director, South Asia, Intel Security.

What if such a data theft case is identified in India? "If the government comes to know that Chinese smartphones are stealing users' data from their customers, then it is very apparent that our cyberlaw is not at all adequate to deal with such challenges," Duggal told IANS.

Though under the 2008 amendments to the Information Technology Act, 2000, all mobile phones, including smartphones, have been covered within the ambit of the Indian cyberlaw, the law still does not comprehensively deal with relevant issues in the mobile ecosystem.

The absence of India as a signatory to any international treaty on cybercrime further complicates the intrinsic ability of the immense law and legal frameworks to provide effective remedies against any such contravention.

"One of the biggest challenges in this regard would deal with the issue of attribution. How would the Indian agencies be able to attribute to the fact that the said misuse has been done from the indicated/suspected source. The issues pertaining to attribution need far more clarity," Duggal noted.

According to Rakshit Tandon, consultant at the Internet and Mobile Association of India (IAMAI) and a cyber security expert, the threat is very real for Indian users and the country lacks a sufficient law framework to tackle the situation.

"Thus, it is challenging for the Centre/state governments to ward off data stealing from smartphones by third-party software. We need stronger laws to apply enforcement on data stealing via such devices," he told IANS.

Keeping new-age security needs in mind, steps must be taken to make Indian cyberlaw more effective and redressal mechanisms must be built in for the users who are part of the digital and mobile ecosystem, Duggal added.

CBC News
The Canadian government doesn't want hackers' help
Monday, 28 November 2016
Byline: Matthew Braga

The U.S. Department of Defence has turned to well-intentioned hackers and independent security researchers to help the government agency find software bugs and vulnerabilities in its computer systems.
But in Canada, the government appears to still have no formal policy or public guidelines, which makes it difficult for those who do find flaws to know what to do, or how the government might respond.

"There's no formal process," says Imran Ahmad, a partner at the law firm Miller Thomson who works with clients on cybersecurity related issues. In the absence of such a process, he says, those who find flaws "just don't know how the government's going to react, and they just want to protect themselves."

"My advice to anyone who finds a flaw in a government website at this time would be to forget they ever saw it," wrote web developer and security researcher Kevin McArthur in an email.

In the past, companies and governments often threatened security researchers and coders who found and published details about vulnerabilities in software with litigation, prompting the adoption of an informal process called "responsible disclosure."

In practice, it means researchers will typically notify a company in private about a bug and give that company time to fix the flaw before disclosing its existence in part or full to the wider public.

In recent years, U.S. technology companies such as Facebook, Google and Microsoft have offered financial incentives and bragging rights for the responsible disclosure of bugs through the creation of programs called bug bounties ? welcoming, rather than warring against the efforts of outside researchers who manage to penetrate their systems with the goal of making them safer.

The companies typically have guidelines for how far researchers are able to go in their search for flaws, outlining specifically what is allowed and providing assurance that a researcher won't be labelled a criminal for finding a serious flaw.

Last Monday, the U.S. DoD announced a vulnerability disclosure policy, following a pilot project called "Hack the Pentagon" it organized earlier this year.

"For the first time, anyone who identifies a security issue on a DoD website will have clear guidance on how to disclose that vulnerability in a safe, secure and legal way," Secretary of Defence Ash Carter wrote.

CBC News asked seven Canadian federal government agencies - the departments of Finance; National Defence; Justice; Innovation, Science and Economic Development; Public Safety; Shared Services; and Canada Revenue Agency - questions about their policies, but did not receive a response.

"There are a lot of good people who are better at coding, who are better at hacking, who are better at a lot of things than government resources allow them to be," said Ahmad of the U.S., where the DoD's attitude has changed. "So, where in the past, you may want to jail someone for something like this, I think they're now moving towards ? bringing them into the fold, and even bringing them onto the team, instead of coming down hard on them."

Chilling effects

In 2014, a serious bug was discovered in the security software that underpinned hundreds of thousands of trusted websites. It was called Heartbleed, and researchers wasted little time determining which sites and services were vulnerable so that the hole could be patched.

Justin Bull ? a software engineer with the financial tech startup Wealthsimple and a security enthusiast in his spare time ? noticed that software used by the Canada Revenue Agency was also vulnerable. He says he spent about two hours attempting to contact various federal government agencies, finally leaving both an encrypted e-mail and voice mail with the Canadian Cyber Incident Response Centre, or CCIRC.

The CCIRC operates within Public Safety Canada, and is the government's primary point of contact for tips on cyberattacks and other computer-related incidents, but the Centre's website does not specifically address the discovery and disclosure of software flaws.

"I never ever ever got a response," Bull said. "So when I was hearing that the RCMP was investigating ? I'm like 'Holy shit, is my door going to get kicked down?' Because I'm trying to tell them here, and I don't know what's going to happen."

"You don't want to anger the beast," he added. "I understand that chilling effect. The messenger always gets shot."

Similarly, McArthur cited the fallout from the RCMP's case against Stephen Solis-Reyes, as one of the reasons he no longer discloses bugs to the Canadian government.

Like Bull, Solis-Reyes discovered that the CRA's website was vulnerable to Heartbleed, but he accessed 900 SIN numbers in the process. Solis-Reyes ? who was 19 and a student at Western University ? was investigated by the RCMP for the breach, accused of being a terrorist by his interrogators, and pleaded guilty in May to four charges.

Solis-Reyes told the court that he had no malicious intent, and only intended to test the bug's severity. His lawyer argued that he did the country a service by exposing the flaw.

"If you don't provide proof of actual vulnerability exploitation, then the problem is simply ignored and downplayed as theoretical," McArthur wrote of his own experiences bringing bugs to the government's attention, which has discouraged him from disclosing more.

"On the other hand, if you provide the government the required proof, like Solis-Reyes did by demonstrating the Heartbleed vulnerability at CRA, then they classify you as an evil hacker and you're heading for the police cells."

Canadian Press
Parents of young kids say federal no-fly inquiries office is little or no help
Saturday, 26 November 2016
Byline: Jim Bronskill

Ottawa - Families of young children who repeatedly run into no-fly list snags at the airport say a federal inquiries office intended to help them has been of little or no use.
The problems seem likely to persist because a more permanent solution promised by the Liberals -- a full redress system to deal with mistaken identities -- is still at least 16 months away.

The parents of dozens of youngsters have experienced nerve-fraying airport delays because their children's names match those on a confidential security list.

In June, the Liberal government announced the Passenger Protect Inquiries Office to help people who are delayed during the check-in process and asked to provide identification, have to wait at the counter due to a ticketing agent placing a phone call to other officials, or are denied boarding for whatever reason.

Families with young children who have explained their cases to the office continue to experience airport hassles, said Khadija Cajee, a spokeswoman for the group known as the No Fly List Kids.

Cajee, who lives in Markham, Ont., said at least four families -- including her own -- received only an explanatory letter from the inquiries office one month after submitting details of their children's cases.

"So far it hasn't really resulted in any positive steps forward for any of us," said Cajee, whose seven-year-old son Adam was most recently delayed at the airport two weeks ago when travelling with his father.

A July 27 letter to Cajee's husband from the inquiries office, a unit of Public Safety Canada, says officials were beginning to work with Canadian air carriers and other government agencies to improve the application of search filters used in screening air traveller manifests. "These measures, such as refining search functions, could help to improve the accuracy of the screening process."

That hasn't helped Heather Harder, whose two-year-old son Sebastian has triggered red flags on two trips to Saskatoon from their home in London, Ont., since receiving a similar response from the inquiries office.

"There wasn't a lot of substance to the letter," Harder said in an interview. "It definitely didn't resolve anything for us."

The family usually faces delays of 20 to 30 minutes, and Sebastian is allowed to board the plane when it becomes obvious he is a toddler. But Harder worries what might happen when he's older and begins to travel on his own.

"It's worrisome for the future."

Four federal employees -- one manager and three analysts -- are responsible, among other duties, for responding to inquiries received by the office, said Jean-Philippe Levert, a Public Safety spokesman.

"While there is no set timeline for the resolution of each inquiry, as cases greatly vary in their level of complexity, the (office) sets out to resolve all requests in a timely manner, with the goal of being as expeditious as possible," said Levert.

"A small sample of cases may not be representative of all outcomes."

The Liberals have promised a redress system that would eventually allow travellers whose names closely match those on the Canadian no-fly list to apply for a unique identification number. They could use this number at the time of ticket purchase to clear their name in advance and prevent delays.

Public Safety Minister Ralph Goodale has said Canada needs "an entirely new database and information system" to fully solve the problem of people -- including children -- being delayed at airports.

Unlike the standalone U.S. system, Canada's no-fly list database was designed to piggyback on to airline computers, meaning it's more difficult to clear up misunderstandings.

"To put this new system in place, important regulatory and data system changes are required," Levert said. "While those changes are underway, we are aiming for implementation by spring of 2018."

Cajee, Harder and other families with youngsters who are grappling with security-list mismatches plan to attend a public meeting in Markham on Sunday with Goodale and two other Liberal cabinet ministers -- part of the federal consultation on national security policy.

Meantime, Harder and her family are planning another plane trip, and wondering what will happen at the check-in counter.

"We fly again on Wednesday, so we'll see," she said. "Each time, we're not sure. It's frustrating."

Journal De Montreal
Espionnage à l'ère du numérique
Saturday, 26 November 2016
Byline: Annabelle Blais

Montreal - Facile d'espionner en 2016? Oui, répond un enquêteur privé. Nos cellulaires et nos activités sur internet laissent beaucoup de traces et on s'intéresse peu aux enjeux de cybersécurité.
Le SPVM et la SQ ont pu espionner aisément et sans trop d'effort plusieurs journalistes québécois. Il leur a suffi d'obtenir leurs relevés téléphoniques ou d'intercepter en temps réel des numéros de téléphone, et d'activer la localisation par GPS en ce qui concerne le chroniqueur à La Presse Patrick Lagacé.

Pour comprendre la filature 2.0, Le Journal s'est entretenu avec le détective privé Claude Sarrazin, président de l'Association professionnelle des enquêteurs privés du Québec et président de l'Agence d'enquête Sirco. Il a d'ailleurs récemment présenté au Sénat-- canadien un état de la menace en matière de cybersécurité.

Est-ce que les Québécois protègent suffisamment leurs renseignements personnels ?

Non. Ce n'est pas tant une question d'équipement. Les gens disent oui à tout sur internet et font aveuglément confiance à des sites web et des fournisseurs de services. Le premier responsable de la sécurité est la personne elle-même. Et elles se font hameçonner ou se font installer un logiciel malveillant sur leur système informatique. Ce logiciel peut récupérer des images sur ton ordinateur, tes mots de passe, tes numéros de carte de crédit et même prendre le contrôle de ton appareil à distance. C'est en plein essor et plus on avance, plus on va avoir de la difficulté à contrôler.

Faut-il se protéger en utilisant certaines applications pour échanger des messages cryptés ?

Ça dépend... Vous savez, on peut tout extraire d'un cellulaire. La navigation web, les textos, appels sortants et entrants. Il faut être prudent. Je me suis fait approcher par une compagnie qui n'est pas canadienne, qui m'a dit: "Je peux rentrer dans n'importe quel cellulaire". Mais moi, je n'ai pas le droit de faire ça, alors je ne vais pas aller chercher une preuve qui n'est pas utilisable. Mais par curiosité, je leur ai demandé de pirater mon téléphone--. Et effectivement, ils m'ont piraté à distance, sans jamais avoir

accès à mon cellulaire qui est pourtant d'une marque réputée inviolable. Il avait accès à mes contacts, mes courriels, mes appels entrants, sortants, mes textos. Tout. Ça fait peur.

À titre de détective privé, pouvez-vous aller chercher nos informations sur nos téléphones intelligents ou sur nos ordinateurs ?

Les enquêteurs privés ont accès à la même information que le public, sauf qu'on a des outils d'analyse pour travailler ces données. On ne peut pas commettre d'actes illégaux. Mais on peut faire certaines choses, car on a un permis d'agent qui nous autorise à faire notre travail. Par exemple, si un patron décidait de suivre son employé pour savoir s'il est vraiment malade, ça peut être du harcèlement criminel, mais pas si c'est un détective qui le fait, parce qu'il a un mandat d'enquête. À la base, il faut aussi un motif raisonnable pour effectuer une enquête.

Et depuis cinq ans, il y a aussi un Bureau de la sécurité privée qui encadre vos pratiques.

Oui. Il y a un code d'éthique et l'Association professionnelle des enquêteurs privés a son code de conduite. La jurisprudence des tribunaux détermine aussi ce qui est acceptable.

Qui sont les clients des enquêteurs membres de votre association ?

Certains enquêteurs se spécialisent dans les infidélités conjugales. Mais ce sont surtout des entreprises, des institutions gouvernementales. On touche beaucoup aux relations employés-employeurs, par exemple, un employé qui abuse de la CSST, des problèmes de vols dans une entreprise. Il y a des centaines de milliers d'enquêtes qui se font tous les jours dans toutes sortes d'organisations, outre les organisations policières. Il y a des enquêteurs à l'interne au sein de plusieurs organisations. Toutes les grandes sociétés publiques ont un département des enquêtes: Hydro-Québec, Postes Canada, etc.

Pouvez-vous obtenir des mandats pour mettre des téléphones sur écoute ou faire des perquisitions ?

Pas pour faire une écoute. On va travailler avec des avocats pour obtenir des ordonnances pour avoir des informations que possède une banque ou une compagnie de téléphone, par exemple. Ça peut être une ordonnance qui oblige un individu à se laisser saisir d'un élément de preuve. C'est un juge qui devra autoriser ces ordonnances--, et c'est donné au compte---gouttes.

Normalement, ce n'est pas conservé longtemps sur les serveurs des compagnies de téléphonie. Mais théoriquement, ce serait possible de le faire. Personnellement, à date, je n'ai jamais-- fait de demande pour obtenir-- ce genre d'information.

Quelles informations les policiers peuvent-ils demander et obtenir de plus que les enquêteurs privés ?

Ils peuvent avoir un mandat de géolocalisation. Il y a certains cas où des enquêteurs privés ont participé à l'obtention-- d'une telle ordonnance, mais c'est excessivement rare. Il y a différents niveaux de mandat

et le plus élevé est l'enregistrement des conversations. Et ça peut être capté à distance. Les enquêteurs privés ne l'ont jamais fait. Ils n'en ont jamais fait la demande, car ils n'ont pas eu besoin de se rendre jusque-là.

Pouvez-vous installer un GPS sur la voiture d'un individu sur lequel vous enquêtez ?

Théoriquement, selon la jurispru-dence, tu peux le mettre à partir du moment où le véhicule est la propriété de l'employeur. Mais ça peut dépendre des opinions juridiques... dans certains cas, ça dépend ce qui est fait avec la preuve, si ça a été fait de bonne foi dès le départ. C'est le tribunal-- qui décide si ça doit être accepté--.

Utilisez-vous beaucoup les réseaux sociaux ?

Oui, il y a un intérêt à aller voir sur Facebook, parce qu'il y a des gens qui mettent tout ce qui se passe dans leur vie. L'année dernière, on a réglé notre premier cas de fraude à la CSST uniquement grâce aux preuves recueillies-- sur Facebook. L'individu était sur la CSST et mettait en ligne des vidéos de lui en train de construire son chalet. C'était public. Alors oui, on va continuer à utiliser Facebook pour un bon bout de temps. Mais il y a eu des cas où l'information recueillie sur Facebook a été jugée irrecevable en cour parce que c'était jugé abusif.

Est-ce que la bêtise des gens vous surprend encore après toutes ces années de métier ?

Les gens sont faciles à détourner. Leur attention n'est pas super aiguisée. On dirait que les gens ne portent pas attention aux détails. Les gens se questionnent peu et ne se méfient pas assez.

Est-ce que le travail d'enquêteur se fait maintenant surtout derrière un ordinateur ?

Il y a encore des agences qui se spécialisent uniquement en filature. Mais dans l'ensemble des dossiers maintenant, il y a une portion informatique.

Est-ce que la technologie a faci-lité le travail ?

Oui et non. Ça a complexifié le travail, c'est certain. Il y a 25 ans, il n'y avait pas d'ingénieur informatique dans les agences d'enquête. Aujourd'hui, ça en prend. La quantité de documents à analyser est parfois phénoménale. Dans un dossier, on a eu 23 millions de documents à analyser. Tu ne fais pas ça à la mitaine.

Quel conseil pouvez- vous donner pour mieux protéger l'information sur nos cellulaires ?

Si tu veux vraiment avoir des conversations confidentielles, fais-le en personne sans ton téléphone. C'est à ce point-là. Il y a des logiciels qui rendent ton cellulaire hyper sécuritaire, mais tôt ou tard, ça peut être craqué.

Plus de 25 ans de métier

Claude Sarrazin a fondé son agence d'enquête il y a 25 ans. Son premier mandat, à 20 ans, a été d'infiltrer une entreprise, qu'il ne peut identifier, afin de découvrir si du trafic de drogue avait cours sur le lieu du travail.

En se faisant passer pour un employé, il a découvert que certains vendaient de la drogue à leurs collègues et utilisaient même les camions de l'entreprise pour distribuer de grandes quantités de stupéfiants.

«Il s'agissait de personnes associées aux motards qui se servaient de l'entreprise comme cover pour distribuer de la marchandise aux quatre coins du Québec et en Ontario, sans même avoir à payer le gaz!» dit-il. Le travail d'infiltration avait duré un an.

Canberra Times
Security Headquarters plagued with clearance problems Cyber spooks quit ASIO
Sunday, 27 November 2016
Byline: Stephen Jeffery

Canberra - Australia's premier cyber security agency has released plans to leave ASIO's headquarters for larger, lower security premises, two years since it first moved into the custom-designed building. The hurdles to gaining clearance to work in or visit the Australian Cyber Security Centre (ACSC) in the classified Ben Chifley Building in Parkes hindered the organisation's recruitment and collaborative goals, a Department of Defence submission to the parliamentary committee evaluating the proposal said. The department proposed a $38.8 million relocation and fitout of the ACSC to Defence-leased buildings at Brindabella Business Park near Canberra Airport.
If approved, the centre's new headquarters would incorporate multiple security clearance levels, a mix of classified, unclassified and public meeting rooms, and space for a major expansion of its workforce to about 650, flagged in this year's Cyber Security Strategy. The centre, currently made up of about 260 cyber security specialists from the Australian Signals Directorate, the Attorney- General's Department, ASIO, the Australian Federal Police and the Australian Crime Commission, began operating on November 27, 2014, and was the first tenant to move into the Ben Chifley Building. But the Defence submission said

the classified nature of the building had impeded the centre's ability to collaborate with businesses and researchers, a core element of the Cyber Security Strategy. The need to be approved for high security clearance, which can take more than two years, was dissuading skilled workers from joining the ACSC, the submission said. The strategy, released in April, stipulates that "organisations need easy and consistent interfaces with government agencies on cyber security" and mandated that the centre move to a new location. "The need for private industry partners to obtain security clearances - and even the

overheads associated with organising visitor entry for short-term visits - currently make achievement of the government's intent considerably more difficult," the submission said. "Cyber security skills are in short supply and high demand ... very few people with the requisite skills will be prepared to wait for a role with ASD, particularly when private industry is able to offer very attractive remuneration." The building has had a chequered history, including delayed construction, reported security breaches and a $200 million budget blowout. Most of ASIO's estimated 1800 staff had moved into the $700 million building by 2015, two years behind schedule. Smashed glass panels and malfunctioning alarms made unwanted headlines last

year. Most of the work of the Australian Signals Directorate with the ACSC could be handled in a lower security environment, the Defence submission said, with its classified status seen as more of a "legacy". It pointed to Britain's National Cyber Security Centre, which is being built in London as a mostly unclassified facility, as a comparison. Depending on when it is approved, the ACSC's new headquarters could be completed by the end of 2017, with initial workers moving into the building from June. The Parliamentary Standing Committee will accept submissions on the proposal until January 13, with public hearings expected to take place later in the new year.

The International Business Times
FBI targets Islamic State social media chiefs
Sunday, 27 November 2016

Washington - The FBI has assassinated more than a dozen of Islamic State's (IS) most influential social media experts who incited followers to commit terrorist atrocities in the Western world, it has been claimed.
An American and allied forces campaign, aimed at tackling online extremism, targeted a cell known as "the Legion" in a coordinated and secretive mission to undermine IS's (Daesh) ability to incite attacks by its followers across the globe.

While American military, intelligence and law enforcement officials acknowledge the group's potent social media influence, they believe their efforts against "the Legion" have significantly reduced IS's capabilities to order and inspire attacks in Europe and the US.

Junaid Hussain, from Birmingham, led the group as one of its most influential hackers and online recruiters, according to the New York Times.

The 21- year-old was targeted in 2015 by armed drones in eastern Syria, killing him as he exited an internet cafe in Raqqa.

Initially, the threat of "the Legion" was considered to be at a law enforcement level. However, last year, the FBI stepped up its monitoring of the cell, according to officials.

While allied forces in Syria took aim at the group in a series of drone strikes, the FBI analysed their social media reach, pinpointing who had been inspired to take action and making nearly 100 subsequent arrests.

Many of the arrests were of people who had been in direct contact with "the Legion" on social media. Others had connections with Hussain and Reyaad Khan, another British leader of the group, Andrew McCabe, deputy director of the FBI told the New York Times.

In March 2015, Hussain and Khan's group was responsible for posting the names and addresses of military officials with the message: "Kill them in their own lands, behead them in their own homes, stab them to death as they walk their streets thinking they are safe."

Court records show Hussain was in touch with at least four men in four different states, urging them to commit attacks and fuel violence.

Hussain encouraged Usaamah Abdullah Rahim, who was killed by the FBI in 2015, to behead Pamela Geller, a conservative blog author. A mission he did not fulfil.

Other members of "the Legion" were also inciting violence online. Another Briton, Raphael Hostey, urged 19-year-old Mohammed Hamzah Khan from Illinois to travel to Syria, however he was stopped with his two younger siblings by the FBI.

According to a senior American law enforcement official, the spring and summer of 2015 was a "nightmare" for the FBI after a string of attacks left the bureau overstretched and under strain.

FBI director, James B Comey, told the New York Times the bureau was struggling to keep up with the fast-moving pace of the evolving threat, forcing it to move criminal officers to surveillance squads.

Months of drone strikes by American and British forces followed, killing Hostey in May and Khan some months later.

An Australian, Neil Prakash, was targeted in a strike around the same time. However, he survived the attack. According to a military official, he was arrested recently by an undisclosed Middle Eastern Government.

IS has been slow to replace "the Legion" and American officials have expressed surprise at its failure to replace hackers such as Hussain.,

However, the Bureau says it's still working hard to fight the group's work, even after "the Legion" has been neutralised.

"We are still dealing with the repercussions of that development and that recruitment of that network to this day," the FBI's Mr McCabe told the the New York Times.

Press Trust of India
Cyber attacks can cause more damage than conventional forces
Monday, 28 November 2016

New Delhi - In April 2015, the website of the office of Principal Controller of Defence Accounts (Officers) - PCDA(O) - located in Pune, was hacked. The website contains information about salaries and allowances of all serving officers of the Indian Army, across ranks. Though officials claimed that no data was lost, the act prompted the office to launch a new website with updated security features. Nearly a year later, the same office warned Army officers against clicking on links sent to them via fake messages, saying PCDA(O) had developed a phone-based app and was seeking the officers' personal information. The messages were considered to be another attempted cyber attack.

This example from Pune in the recent past is yet another proof of the increasing threat of cyber terrorism, pointed out defence officials.

With almost all sectors - railway networks, communication and stock markets among others - heavily dependent on data communication and storage, experts fear that a cyber attack on any of these is capable of causing more damage than conventional forces.

A senior Army official, who has been working in the field of cyber security, said, "This is an ongoing war and it is on as we speak. The threat to our cyber security is not just from countries like China and Pakistan, but also from non-state actors like terror groups. And these attacks can come in any form, such as hacking of websites, computer viruses and Trojan attack. It can also be a more specialised form of attack, like denial of service, a cyber attack when even authorised persons lose access to their systems, or a cryptological attack, when the attacker encrypts all the data and it takes time and effort to decrypt it. In this non-contact type of warfare, the adversaries will try to cripple each others' systems, rather than actually carry out an attack on the ground."

National security expert Lieutenant General (Retired) D B Shekatkar, who has served in the intelligence arm of the Army, said, "Cyber terrorism is currently one of the biggest challenges to national security. We are heavily dependent on web-based technology for the operation of railway networks, air transport network and communications networks. These systems can be brought to a grinding halt by cyber attacks... for example, attacking the railway or air traffic network would prove way more damaging than bombing a bridge or an airport. These attackers can even target our nuclear armoury or satellite systems."

Another Army official spoke about the "psychological aspect" of a cyber attack. "Here, the adversaries indoctrinate people, especially the young generation. They then train and use them to carry out attacks

on others. We have several examples of the youth being targeted through Internet by organisations like the Islamic State."

He added, "But the Indian Army is keeping no stone unturned in preparing itself to face any kind of cyber attack. We are in constant communication with the National Informatics Centre, the Indian Computer Emergency Response Team, the National Information Security Assurance Programme of the central government. Regular cyber audits are carried out at the unit level and above. The Army strictly uses its own network for internal communication... storage devices are completely prohibited and any kind of violations is strictly dealt with".

Bangkok Post
Fingerprint ID set to be mandatory
Monday, 28 November 2016
Byline: Komsan Tortermvasana

Bangkok - All mobile operators will have to introduce an online fingerprint ID system for new prepaid and postpaid mobile SIM card registration, with a tentative deadline set for next February.
The National Broadcasting and Telecommunications Commission (NBTC), however, compelled all existing mobile users to put their fingerprints in the system on a voluntary basis for their own security benefit.

"We urge all mobile users to participate in the system to ensure greater security of the mobile banking channel and prevent the risk of fraud, which is likely to increase in a cashless society," said NBTC secretary-general Takorn Tantasith.

Thailand has 103 million mobile subscribers, 14 million of whom use mobile banking services, he said.

Through a fingerprint enrolment process, mobile operators will scan each person's fingerprints and store the records on the NBTC's secure database server, said Mr Takorn. Mobile operators will develop an application that verifies customers' fingerprints.

Mobile banking is a service provided by banks or other financial institutions as well as mobile operators that allows customers to conduct some financial transactions remotely using any mobile device, with no bank account required.

The popularity of mobile banking activities marks a significant trend taking place in banking. But fraud and other criminal acts targeting telecommunication networks are also becoming increasingly sophisticated.

The NBTC's telecom committee approved the plan to use a fingerprint registration system in September. Mr Takorn said the NBTC adopted the fingerprint system which was developed by the Engineering

Faculty of Kasetsart University. The school won an auction held by the NBTC this month offering to supply the system for 15 million baht.

He said the fingerprint system would not create a financial burden on mobile operators because the investment can be deducted as a business expense from the universal service obligation (USO) fee operators pay annually to the NBTC.

Telecom operators have to share 5% of their total revenue with the NBTC. Of the total, 3.5% is paid for the USO fee and the remaining 1.25% goes to the licensing fee.

Mr Takorn insisted that the fingerprint system will complement the existing registration system. The regulator will not force all mobile users to register with the new system.

Banks and mobile operators have increasingly been urged to boost the standards for customer authentication systems in a bid to prevent fraud through mobile banking activities -- currently one of the most popular mobile services. The concern follows several cases of fraud committed through mobile banking apps over the past several months.

Le Monde
La surveillance de masse tend à se generaliser
Saturday, 26 November 2016
Byline: Morgane Tual

Paris - Après la France et l'Allemagne, le Royaume-Uni vient d'adopter une loi musclée sur le renseignement
De son côté, l'Allemagne a élargi, en octobre, le champ de la surveillance du BND, le service fédéral de renseignement, dans le cadre d'une réforme qui vise à mieux l'encadrer. Le BND est désormais autorisé à collaborer avec la NSA et, dans certains cas, à espionner les institutions européennes et les Etats membres.

Plus tôt dans l'année, le gouvernement avait donné son accord à l'utilisation d'un logiciel espion qui permet de dérober des informations sur une machine. Des signaux loin d'être anodins, dans un pays où la question de la surveillance reste épineuse, en raison d'une histoire marquée jusqu'à la chute du Mur par la Stasi, la police secrète est-allemande.

Du côté des Etats-Unis, la victoire de Donald Trump à l'élection présidentielle, le 8 novembre, a suscité des inquiétudes. " Voilà pourquoi il ne faut pas construire des outils de surveillance secrets et tout-puissants, critiquait, par exemple, sur Twitter, un ingénieur en sécurité informatique au lendemain de l'élection. Vous ne savez jamais quel gars finira par avoir les clés. " La proposition de Donald Trump d'installer Mike Pompeo à la tête de la Central Intelligence Agency n'a pas rassuré les opposants à la surveillance de masse : celui-ci veut encore étendre ses pouvoirs, s'est plaint de les avoir vus s'affaiblir

après les révélations de Snowden, et a fait savoir qu'il souhaiterait voir le lanceur d'alerte condamné à la peine de mort.

" Empêcher la dérive fasciste "Déjà, des voix s'élèvent pour implorer Barack Obama de restreindre le champ d'action de la NSA avant la prise de pouvoir de son successeur. L'actuel président américain " a encore quelques semaines pour faire une chose qui pourrait empêcher les Etats-Unis de dériver vers le fascisme : déclassifier et démanteler autant que possible " les outils de surveillance de la NSA, écrit, le 9 novembre, dans une tribune publiée dans le Time, Evan Greer, directeur de campagne de l'organisation Fight for the Future, consacrée aux libertés numériques.

Edward Snowden a tenu sur Twitter des propos dans ce sens, peu après le résultat de l'élection : " Les pouvoirs d'un gouvernement sont transmis au suivant. Les réformer maintenant est l'une des plus grandes responsabilités de ce président, ce qui aurait dû être fait il y a longtemps. "

Mais, jusqu'ici, Barack Obama semble rester sourd à ces appels, tout comme à ceux qui l'implorent d'accorder son pardon à Edward Snowden avant de quitter le bureau Ovale. " En pardonnant à Snowden, le président Obama contribuerait à pérenniser son héritage, tout en envoyant un puissant message - que s'élever contre les abus d'un gouvernement est une tradition que nous devons chérir et emporter avec nous ces quatre prochaines années ", soulignait, le 18 novembre, Noa Yachot, responsable de la campagne Pardon Snowden. Le même jour, dans les colonnes du quotidien allemand Der Spiegel, Barack Obama répondait par la négative : " Je ne peux pas pardonner à une personne qui ne s'est pas présentée devant un tribunal ", a-t-il déclaré.

De son côté, le lanceur d'alerte ne semble pas s'inquiéter outre mesure des conséquences de l'arrivée de Donald Trump. Lors de plusieurs visioconférences données depuis la Russie, où il a obtenu l'asile, Edward Snowden a répété que M. Trump " n'est que président ". Pour lui, la victoire de ce candidat représente " un moment sombre dans l'histoire, mais ce n'en est pas la fin "." Il faut que nous commencions à réfléchir non pas à la façon de se protèger de Trump, mais à la façon de protéger le droit de tout le monde, partout. (...) Et si on protégeait nos communications, dans le monde entier ? Soudain, on ne ferait pas que protéger les droits des gens, on pourrait les garantir. La technologie rend cela possible. "

Ces propos lui ont valu des critiques acerbes, notamment de la part du site Gizmodo, qui a qualifié l'Américain de " putain d'idiot ", qui " croit que la technologie est plus importante que la politique pour protéger les libertés ".

Et pourtant, c'est surtout sur ce plan qu'Edward Snowden a réussi son pari : celui des technologies. Ses révélations ont certes entraîné, dans la foulée, quelques timides réformes aux Etats-Unis, ainsi que des enquêtes parlementaires en Allemagne et au Brésil. Mais son action a surtout permis de faire découvrir au grand public l'ampleur de la surveillance et des capacités techniques de la NSA, ainsi que les moyens de s'en prémunir. Là où l'utilisation d'outils de communication chiffrés était, jusque-là, réservée à un petit groupe d'initiés, leur usage s'est démocratisé ces dernières années. L'application Signal, qui permet

de communiquer de façon sécurisée, plébiscitée par M. Snowden, assure avoir vu ses téléchargements multipliés par quatre depuis la victoire de Donald Trump.

Qui plus est, l'épisode Snowden a profondément modifié la façon dont les géants du Web conçoivent leurs produits. Certains de ses documents faisaient mention d'un accès direct de la NSA aux serveurs d'entreprises comme Google et Facebook - ce qu'elles ont toujours démenti.

Pour reconquérir la confiance de leurs utilisateurs, la plupart de ces entreprises ont renforcé la sécurité de leurs services, et les messageries chiffrées tendent désormais à devenir la norme. Ironie de l'histoire : ce sont désormais ces grandes multinationales qui se posent en rempart contre la surveillance de masse, alors même que leur modèle repose sur l'exploitation des données personnelles des internautes.

L'homme le mieux renseigné du monde
Saturday, 26 November 2016

Washington- Oubliez la Maison-Blanche. L'endroit le plus stratégique des Etats-Unis, le coeur du réacteur de la première puissance du monde n'est pas au 1600 Pennsylvania Avenue, à Washington. Il se situe derrière un grand mur de minuscules briques rouges percé de vitres teintées. C'est le siège de Palantir. Une société américaine qui tire son pouvoir de l'exploitation industrielle, mais minutieuse, de milliards de données géographiques, économiques, climatiques, militaires, politiques, démographiques... Une entreprise secrète, qui travaille aussi bien pour l'armée que pour de grands groupes privés et n'a ni l'habitude ni l'envie de recevoir des journalistes. Avant de pénétrer dans la forteresse Palantir, le visiteur peut néanmoins aller prendre des forces chez Lyft, un bar qui sert du jus de concombre à la menthe ou des smoothies au chou kale, fréquenté par des étudiants de Stanford. Quel silence ! Seul le ronflement du Caltrain, ce vieux tramway mécanique qui rallie, en quarante-cinq minutes, la petite ville tranquille de Palo Alto à San Francisco, rivalise avec la caresse du vent sur les érables. Au 100 Hamilton Avenue, on vérifie bien que l'on ne s'est pas trompé d'adresse : ici, il n'y a pas d'écriteau flashy géant devant lequel les touristes se prennent en photo comme on en trouve devant les QG de Facebook, Google ou Yahoo! La même discrétion est de mise sur la vingtaine de bâtiments loués par Palantir, un espace qui occupe environ 10 % des bureaux de la capitale de la Silicon Valley.
A l'accueil, c'est à un iPad que l'on doit montrer patte blanche. Quelques questions rapides pour gagner le droit de s'asseoir dans une salle d'attente décorée de peintures néocubistes, à côté d'un garage à vélos et juste au-dessous d'un immense mur de tee-shirts. Toutes les tailles sont disponibles, mais le teeshirt est toujours le même. Gris anthracite, il est estampillé de la devise maison : « Save the shire ». Clin d'oeil de la société au roman fantastique de J. R. Tolkien, « Le seigneur des anneaux » : The Shire, c'est la Comté, le pays paisible et verdoyant des Hobbits. Il faut sauver la Comté. Ce qui revient à vouloir sauver le monde pour les 1 500 employés de l'entreprise. Le nom de Palantir, désigne, lui, la « Pierre de vision », une sorte de globe de cristal inventé par les elfes, qui permet d'observer des lieux distants dans l'espace et surtout de voir dans le futur. Avant de monter dans les étages, le visiteur passe à travers un sas surplombé de deux drapeaux : un américain et un britannique.

Palantir, créé en 2004 et valorisé 20 milliards de dollars, c'est un peu les oreilles et les yeux de l'Amérique. Grâce à sa puissance de calcul, il a aidé la CIA à localiser et neutraliser Oussama ben Laden, ou encore à tracer les hackers qui s'en sont pris à la messagerie électronique du dalaï-lama. Et dire que ce projet, qu'on croirait tiré du film de science-fiction « Minority Report », est né dans la tête d'un docteur en théorie sociale. Inclassable Alex Karp... Un fan du philosophe allemand Jürgen Habermas, dont il fut l'un des élèves en Allemagne. Et un dingue de robotique. Durant son temps libre, Karp dirige Robotex, entreprise qui met au point des robots de surveillance. Né à Philadelphie il y a quarante-neuf ans, il a d'abord étudié au Haverford College dans une ambiance libertaire. Ses parents étaient deux hippies - l'un des deux était artiste, l'autre pédiatre. Il a rédigé ensuite une thèse à la Johann Wolfgang Goethe Universität de Francfort, « Aggression in der Lebenswelt : Die Erweiterung des Parsonsschen Konzepts der Aggression durch die Beschreibung des Zusammenhangs von Jargon, Aggression und Kultur ». En clair, Karp est un spécialise du Lebenswelt, le « monde vécu », une philosophie de la vie théorisée par Edmund Husserl, mort en 1938, qui insiste sur la nécessité de vivre pleinement son existence.

Son doctorat en poche, Karp, par ailleurs francophone, crée, avec l'argent dont il a hérité après le décès de son grand-père, un premier fonds d'investissement à Londres, le Caedmon Group - le nom rend hommage à un poète anglais du VIIe siècle, dont l'histoire a été racontée par le moine érudit Bède le Vénérable. Il traque les plus prometteuses des start-up. Mais le 11 septemble 2001 lui fait l'effet d'une grande claque. Alex Karp se sent soudain investi d'une mission salvatrice. Il y a quelque chose à faire, avec Internet, avec les données, pour aider l'Amérique en danger. Il en parle avec son ami Peter Thiel, rencontré sur les bancs de la fac de droit de Stanford, où Karp avait effectué un autre doctorat à son retour d'Allemagne. Ils ont cohabité dans l'internat de Crothers Hall. Ils partagent le même goût pour la culture allemande et pour la philosophie. C'est avec Peter Thiel, le spécialiste de l'intelligence artificielle Stephen Cohen, l'entrepreneur Joe Lonsdale, qui est désormais membre du conseil d'administration de Hyperloop, et Nathan Gettings, un autre diplômé de Stanford, que Karp fonde Palantir. Aujourd'hui, cette entreprise est devenue son obsession. « Les seuls moments où je ne pense pas à Palantir, c'est quand je pratique la natation, le qi gong ou une activité sexuelle », explique Alex Karp au magazine Forbes.

Ce célibataire fan de tai-chi version Chen, le plus ancien style de cet art martial chinois, suscite l'admiration de ses troupes. « Il est notre conscience », ira jusqu'à expliquer l'ingénieur senior de Palantir Ari Gesher. Ce proche de Michael Dell est capable de déclarer que « la profession est culturellement corrosive » tout en planchant, avec Farry Tan, le dixième employé de l'entreprise, sur le design du logo qui représente « un orbe de connaissance qui vous donne la possibilité de lire à travers les secrets de vos ennemis ». Un des premiers investisseurs dans Palantir est le fonds de capital- risque In-Q-Tel, le bras financier de la CIA, qui mise 2 millions de dollars. Peter Thiel, qui avait déjà fait fortune grâce à la vente de PayPal, investit également un gros paquet de dollars, ainsi que son savoir- faire technique développé dans le service de paiement en ligne pour détecter les activités frauduleuses...

La recette de Palantir ? Le « data crush », c'est-à-dire rassembler, compiler, qualifier, croiser, recroiser une foule d'informations qui, a priori, n'ont rien à voir les unes avec les autres. Ses logiciels qui sont

autant de références à la science-fiction ou à l'univers des comics - Gotham, Metropolis... - transforment des données abstraites en informations tangibles et exploitables. Des données qui sont ensuite visualisées dans des cartes et des plans hyperdétaillés. En récupérant des data par tous les moyens, notamment sur les historiques de nos ordinateurs ou sur les réseaux sociaux, on établit des liens entre les individus, les lieux qu'ils fréquentent, leurs habitudes de vie et de consommation... Dans le jargon, on appelle cela le big data à signaux faibles. Palantir travaille par exemple avec la ville de New York pour anticiper l'écroulement des bâtiments les plus fragiles, ou encore, depuis six mois, avec la banque Credit Suisse pour déterminer lesquels de ses salariés sont susceptibles de détourner l'argent de l'établissement et les confondre, le cas échéant.

Cette entreprise, d'après le site d'information TechCrunch, travaille pour au moins 13 administrations américaines - dont la CIA, la NSA, le FBI ou les Marines. En fait, Palantir n'a cessé d'enrichir le profil de ses clients. Pas de certitude, car le secret est bien gardé. Mais Coca-Cola et BP seraient clients, ainsi que de nombreuses institutions financières américaines, comme JP Morgan ou encore le Nasdaq, Bridgewater Associates, l'assureur Axa, qui traque la fraude dans les déclarations de sinistres, ou le fabricant de confiseries Hershey's. En interne, les grands comptes sont affublés de noms de code : Sherlock désignait un moment Home Depot et American Express répondait au doux pseudo de Charlie's Angels. Vous entendez parler de Gouda ? Il s'agit en réalité de News Corp, le géant du divertissement et de la communication de Rupert Murdoch. Le millardaire australien s'est déplacé lui-même dans les bureaux protégés de Palo Alto. Grâce aux informations sur les abonnés et leurs habitudes collectées par Palantir, le groupe aurait réussi à réduire son taux de désabonnements. Un organisme canadien de recherche sur l'émergence du cyberespace, l'Information Warfare Monitor, utilise le logiciel offert par Palantir pour démasquer les réseaux de hackers, dont GhostNet. Autre exemple, les données de Palantir ont été utiles à l'Agence internationale de l'énergie atomique. Elle voulait obtenir certaines assurances, notamment que l'Iran et la Corée du Nord respectent bien le traité de non-prolifération...

« La vie des autres. » Palantir dispose, depuis quelques mois, d'un bureau à Paris. « Les entreprises françaises qui développent des systèmes ne sont pas encore capables de répondre à nos besoins, alors que nous devons acquérir ces big data immédiatement. Nos camarades européens sont dans la même situation. Le choix n'a pas encore été fait, mais, en tout état de cause, la solution sera temporaire », a expliqué Patrick Calvar, le directeur de la Sécurité intérieure, lors d'une audition à l'Assemblée, le 10 mai. Comme une façon de convaincre les sceptiques dans le cas où les services secrets français feraient appel à une entreprise américaine...

D'autant que Palantir compte parmi ses conseillers l'ex-secrétaire d'Etat Condoleezza Rice, l'ex-directeur de la CIA George Tenet ou David Petraeus, ancien général de l'armée américaine. « Croire que les données sensibles n'atterrissent pas au Pentagone, ce serait faire preuve d'une grande naïveté », assure Bernard Benhamou, secrétaire général de l'Institut de la souveraineté numérique. Il anticipe un scénario qui ressemblerait à celui du film « La vie des autres », mettant en scène un agent allemand espionnant tout de la vie de ses cibles : « Ce genre de société qui sait tout sur tout permet de faire pression sur les gens sans le savoir. » Pour Henri Verdier, le directeur informatique de l'Etat, la meilleure manière de ne pas abandonner le traitement de toutes nos informations aux Américains serait de nous

donner la capacité d'analyser nous-mêmes nos propres données. « Il ne faut pas réagir à la Vauban comme si on devait protéger une citadelle assiégée, mais plutôt sur le modèle des Anglo-Saxons en manoeuvrant de manière agile pour créer notre propre solution. »

Dans les bureaux de Palo Alto, on regarde souvent cette carte du monde dessinée à la manière du jeu de société Risk. Palantir a déjà des bureaux dans une dizaine de pays. En interne, chaque nation a un nom de code tiré de l'oeuvre de Tolkien. Arandor a ainsi été le surnom pour certains employés d'Australie, Almaren de Singapour, et Belfalas d'Italie. Le nom des salles, comme Galadriel, rend également hommage à l'écrivain britannique. Après seulement douze ans d'existence, Palantir a levé plus de 2,3 milliards de dollars auprès de différents investisseurs. Y a-t-il une bulle Palantir ? L'entreprise n'étant pas cotée, les informations précises sur les ventes, les clients ou les bénéfices sont invérifiables. Son PDG, Alex Karp, avait annoncé en 2013 que la compagnie ne serait pas introduite en Bourse, car « cela la rendrait très difficile à diriger ». Palantir peut sans cesse être challengé par de nouveaux concurrents, à l'instar de l'américain Lumify. Et il doit rendre des comptes sur l'exploitation des données. Récemment, il a par exemple été montré du doigt parce qu'il avait utilisé le scan de milliers de plaques d'immatriculation aux Etats-Unis...

« Beer pong. » Pour montrer que la mission de Palantir est planétaire et surtout sert la bonne cause, Alex Karp met l'accent sur la philanthropie. « Nous voulons éviter que des virus ne déciment des populations entières tout en respectant les libertés individuelles », explique le numéro un. On l'a récemment vu converser à la conférence Sun Valley, dans l'Idaho, avec la philanthrope Laura Arrillaga Andreessen. Bill Clinton a salué, dans une vidéo, la technologie maison pour mettre en place les secours après l'ouragan Sandy. En 2012, l'entreprise a par ailleurs travaillé avec Interpol pour lutter contre les abus sexuels sur les enfants.

De Palantir on aura aperçu des salles tapissées de posters de Fleetwood Mac, des photos d'un séminaire de ski à la Squaw Valley, la pièce où les salariés jouent au « beer pong », dont le but est d'envoyer une balle de ping-pong dans un verre et, en cas d'échec, de descendre d'une traite un shot de pale ale. Mais, au final, on repart avec autant de questions qu'à l'arrivée. Au moment du départ, une employée sort un appareil photo pour réaliser un cliché du visiteur. « C'est pour ma collection personnelle », dit-elle d'un ton rassurant. On quitte les lieux un peu chamboulé tout de même. Dehors, le vent continue de caresser les érables.

London Times
Hackers target British and US athletes
Saturday, 26 November 2016
Byline: Martyn Ziegler

London - Dozens of confidential emails from senior figures in the World Anti-Doping Agency and US antidoping have been released by the Russian hacking group Fancy Bears. The emails, seen by The

Times, contain private details about athletes from a range of sports and include details of suspicious samples, medical information and confidential discussions between anti-doping officials.
The security breach has led to emails and voicemail messages from the account of Wada's legal director Julien Sieveking being released by the Russian group, and will be a concern to the agency, which is still reeling from having its database hacked in September. That hack revealed dozens of athletes' therapeutic use exemptions allowing them to take banned drugs to treat medical conditions.

It is the second time the hackers have released emails from Usada. This time the Usada emails reveal: ? Possibly unusual blood values for some of the biggest names in American sport.

? Details on legal medications and supplements taken by dozens of athletes including by distance runner Galen Rupp, Mo Farah's training partner, such as thyroid medicine Cytomel that Usada and UK Anti-Doping want to see banned but is legal at present. ? Usada chief executive Travis Tygart suggesting officials "go robust" with an NFL player considering trying out for the US Olympic rugby sevens team.

The Wada emails contain numerous details about existing doping cases from around the world and whether they constitute doping violations.

The emails also show a Wada official stating on July 28 that Qatar's testing laboratory was going to be suspended the following week. As it turned out, that announcement was not made until this month -- and Wada was strongly criticised for making the announcement on the same day that Qatar was hosting an Olympic conference.

The leak also contains further exemptions obtained by British athletes to treat medical conditions -- there is no suggestion any of those concerned have done anything wrong. Sprinter Adam Gemili was given an exemption for a painkiller he was given after he tore his hamstring at the Birmingham Grand Prix in June 2015. Emily Scott, a British rugby sevens player, said she was given corticosteroids to treat rheumatoid arthritis, adding: "I know that I have done everything I can as a clean athlete and fully support the work of the anti-doping movement."

One Team Sky cyclist was given the diuretic furosemide in 2014 as part of a kidney scan when his major organs were inspected after a crash where he fractured a vertebrae.

Wada said the leak came from the same breach to its system as that which took place in August.

In a separate development, the German broadcaster ARD has published a 2014 letter sent to the IAAF by Russia's then athletics chief threatening to expose the organisation for blackmailing them over positive drugs tests. The letter claims that he had seen a list of athletes with biological passport violations, saying: "Surprisingly we found there some prominent British athletes including [an] Olympic champion."

The IAAF said it had no knowledge of anyone the letter was referring to.

Daily Telegraph (Australia)
MI5 urged to begin keeping tabs on far-Right extremists
Saturday, 26 November 2016

London - The security services have been urged to start monitoring far-Right extremists amid concern over the rising numbers of fanatics coming to the attention of the authorities.
Currently the police, not the MI5, have responsibility for monitoring political extremists.

But in the wake of the murder of Labour MP Jo Cox by neo-Nazi Thomas Mair, there have been calls for the security services to put the problem of the far-Right on a par with the Islamist terror threat. The number of Right-wing extremists referred to the Government's counterradicalisation programme, Prevent, has increased by more than 70 per cent in the past 12 months, figures show.

Rupert Sutton from the Henry Jackson Society, a think-tank that works to combat extremism, said "if far-Right groups such as National Action continue to develop ... I certainly think there would be a case to be made for MI5 to become more involved."

New York Times
U.S. Officials Defend Integrity of Vote, Despite Hacking Fears
Saturday, 26 November 2016
Byline: David E. Sanger

Washington - The Obama administration said on Friday that despite Russian attempts to undermine the presidential election, it has concluded that the results "accurately reflect the will of the American people."
The statement came as liberal opponents of Donald J. Trump, some citing fears of vote hacking, are seeking recounts in three states -- Wisconsin, Michigan and Pennsylvania -- where his margin of victory was extremely thin.

A drive by Jill Stein, the Green Party candidate, for recounts in those states had brought in more than $5 million by midday on Friday, her campaign said, and had increased its goal to $7 million. She filed for a recount in Wisconsin on Friday, about an hour before the deadline.

In its statement, the administration said, "The Kremlin probably expected that publicity surrounding the disclosures that followed the Russian government-directed compromises of emails from U.S. persons and institutions, including from U.S. political organizations, would raise questions about the integrity of the election process that could have undermined the legitimacy of the president-elect."

That was a reference to the breach of the Democratic National Committee's email system, and the leak of emails from figures like John D. Podesta, Hillary Clinton's campaign chairman.

"Nevertheless, we stand behind our election results, which accurately reflect the will of the American people," it added.

Supporters of Mrs. Clinton have enthusiastically backed the notion of challenging the results in the three states as a last-ditch effort to reverse Mr. Trump's clear majority in the Electoral College. They have seized on suggestions by some computer scientists that the states, which were crucial to Mr. Trump's victory, need to manually review paper ballots to assure the election was not hacked.

The campaign, uniting around the hashtag #AuditTheVote, has picked up momentum among grass-roots activists still mourning Mr. Trump's victory. But the pleas for recounts have gained no support from the Clinton campaign, which has concluded that it is highly unlikely to change the outcome.

In Michigan, Ms. Stein must wait for a Monday meeting of the state's Board of Canvassers to certify the results of the Nov. 8 balloting before filing for a recount. In Pennsylvania, where paper ballots are used only in some areas, election officials said that the deadline to petition for a recount had passed, but that a candidate could challenge the result in court before a Monday deadline.

The recount efforts have generated pushback by experts who said it would be enormously difficult to hack voting machines on a large scale. The administration, in its statement, confirmed reports from the Department of Homeland Security and intelligence officials that they did not see "any increased level of malicious cyberactivity aimed at disrupting our electoral process on Election Day."

The administration said it remained "confident in the overall integrity of electoral infrastructure, a confidence that was borne out." It added: "As a result, we believe our elections were free and fair from a cybersecurity perspective."

However, intelligence officials are still investigating the impact of a broader Russian "information warfare" campaign, in which fake news about Hillary Clinton, and about United States-Russia relations, appeared intended to influence voters. Many of those false reports originated from RT News and Sputnik, two state-funded Russian sites.

Those fake-news reports were widely circulated on social media, independent studies, including one set for release soon, have shown, sometimes in an organized fashion by groups that appear to have had common ownership. Individuals, conservative talk- show hosts and activists recirculated them, often not knowing, or apparently not caring, about the accuracy of the reports.

A study published just before the election on warontherocks.com, written by Andrew Weisburd, Clinton Watts and J. M. Berger, documented efforts by "trolls" to attack the reputations of those who challenged Russia's activities in Syria, and to spread rumors about Mrs. Clinton's health. The study said that an effort to track 7,000 social media accounts over two and a half years indicated that support for

Mr. Trump "isn't the end of Russia's social media and hacking campaign in America, but merely the beginning."

But the misinformation effort is far from black-and-white. Many people who spread false news have no connections to any foreign power, including a man in Austin, Tex., who posted a Twitter message saying that paid protesters were being bused to an anti-Trump demonstration there. Though the report quickly went viral, the buses, it turned out, were there for a corporate conference.

Other examples, including one studied by a group called Propaganda or Not, appear to have more concrete connections to Russia. In late August, stories suggesting that Mrs. Clinton might have Parkinson's disease were circulated on trupundit.com, which often runs pro-Russian material. It clearly twisted an email sent by one of Mrs. Clinton's top aides about a drug called Provigil that is used to treat sleepiness. It has also been prescribed to patients with sleepiness as a side effect from several different ailments, the email added, including "Parkinson's, Alzheimer's and multiple sclerosis."

That single reference was enough to create a fake story suggesting that Mrs. Clinton was being treated for Parkinson's.

The allegation was quickly shot down by several news organizations. It made little difference: Propaganda or Not, made up of former national security, intelligence and other professionals, and some workers at Google and other technology firms, concluded that it was reproduced tens of thousands of times, sometimes by botnets, and viewed millions of times.

But it is not known whether that news was circulated under Russian government direction, or simply by Russian sympathizers, or Mrs. Clinton's opponents.

The barrage of online efforts to influence the election this year has prompted broader concerns that similar attempts, directed by the Kremlin or its surrogates, could now be focused on elections next year in Germany and France. The goal, intelligence officials and outside experts fear, is to undermine the cohesiveness of the Western alliance, particularly NATO members, by calling into question the validity of democratic elections.

"We simply don't know what the effects of the 'fake news' and other disinformation was," said Jason Healey, an expert on cyberconflict at Columbia University. "If they were able to influence in favor of Trump by one or two percentage points in some places, they will be encouraged to try again for the French and the Germans."

The efforts have also prompted debate inside Facebook and other social media firms about their responsibility to filter out false news. But doing so is a complex task, akin to editing a news operation, and it comes with complex political calculations: Once social media firms begin editing here to American standards, they will be under pressure from authoritarian regimes to do the same to their standards.

In its statement, the administration focused chiefly on the threat of Russian manipulation of the vote on Election Day, not on the proliferation of propaganda and fake news.

Ms. Stein, of the Green Party, acknowledged on Thursday in an interview with the PBS "NewsHour" that it was unlikely that recounts could change the results. Still, she said that "this was an election in which we saw hacking all over the place," and that "at the same time, we have a voting system which has been proven to basically be wide open to hackers."

Times of India
India ranked ninth in global race of supercomputers
Monday, 28 November 2016

New Delhi - Supercomputers are broadly defined as the fastest computing systems at any given time and are used for scientific purposes that require handling of troves of data at high speed. This includes testing mathematical models using thousands of variables to infer complex phenomena like weather, climate change, nuclear reactions, origin of the universe and so on.
The standard unit to measure computational power is FLOPS- floating point operations per second. It is the number of mathematical operations involving fractions that a computer can do per second. For the most basic computers and smartphones, the computational ability is a few megaflops (more than a million operations per second). Chinese supercomputer Sunway TaihuLight - which is ranked the fastest in the world by Top500 (a supercomputer ranking project) - has a computational ability of 93 petaflops, more than a billion times faster than normal computers. Recently it was announced that Japan will spend $173 billion to build the world's fastest supercomputer system with a capacity of 130 petaflops.

First, the maximum speed at which electronic signals can travel cannot be faster than the speed of light. Second, because of frequent receiving and transmission of these signals, it was important to have a suitable cooling technique to control the temperature of the system. Both barriers were tackled by decreasing the lengths these signals were required to traverse by using circuit boards and innovation in cooling techniques. Other advancements involved introduction of vector arithmetic in computing.

In 1965, CDC 6600, a supercomputer designed by US engineer Seymour Cray was installed at the CERN in Geneva, Switzerland. CDC 6600 had a computational capacity of three megaflops. In the 1970s, the series CDC 7600 was introduced, which was 10 times faster than the earlier version. In 1976, the Cray-1 supercomputer was installed in the Los Alamos laboratory with a computation capacity of 160 megaflops.

Cray's designs used expensive technology and liquid immersion technology to achieve high speeds. W Daniel Hill, an MIT graduate proposed a decentralised control instead of one CPU, which meant several inexpensive processors could be arranged to achieve speeds comparable to the most expensive supercomputer designed by Cray. Hill designed the CM-1 in 1985, which used thousands of inexpensive processors to achieve the same speed as Cray's computer.

Of the 500 fastest supercomputers, the highest numbers are in the US and China, each having 171 such systems. Germany, Japan and France each have 20 or more such systems. India is ranked 9th with five of its supercomputers listed in Top500.

London Daily Telegraph
Petition to repeal new surveillance powers reaches 100,000 signatures
Monday, 28 November 2016
Byline: James Titcomb

London - A petition demanding that the UK's new sweeping surveillance powers are repealed has garnered more than 100,000 signatures, the level at which Parliament can debate it.
Theresa May's controversial Investigatory Powers Bill, which have been described as the most extreme snooping laws in a Western democracy, were approved by the House of Lords earlier this month and are set to pass into law in the coming weeks.

They require internet providers to store customers' web histories for 12 months and make those records available to police, and write computer hacking by spy agencies into law.

The bill also requires companies to break encryption in certain circumstances, although groups such as Apple, Facebook and Google have argued that the parameters for this are hazy.

The petition warns that "With this bill, they will be able to hack, read and store any information from any citizen's computer or phone, without even the requirement of proof that the citizen is up to no good.

"This essentially entitles them to free reign of your files, whether you're a law-abiding citizen or not!"

On Monday morning the petition had received more than 118,000 signatures. At the 100,000 mark means a petition can be considered for debate in the House of Commons, although there is no obligation for Parliament to do so, and several petitions that have hit the level have not been debated.

Others include a demand for a second EU referendum, with over 4 million signatures, and one saying Donald Trump should be blocked from entering the UK, with over 500,000.

Opponents of the Investigatory Powers Bill believe that it has barely been scrutinised due to the fallout from June's EU referendum.

It has been criticised on privacy grounds, with bulk data collection even of those not suspected of wrongdoing. Internet providers will not collect the individual web pages browsers visit, just the main domain (such as telegraph.co.uk), but this is still seen as an invasion of privacy.

Security experts have also raised fears that companies' databases of browsing histories would be a boon for hackers.

The petition's supporters have included Kim Dotcom, the flamboyant founder of Megaupload, and the Open Rights Group.

The bill also faces legal challenges from anti- surveillance groups.

New York Times
Pentagon: Looking for a Few Good Hackers
Monday, 28 November 2016
Byline: Editorial Board

Editorial - In June 2015, the Office of Personnel Management announced that foreign hackers had stolen the personnel records of millions of federal employees, one of the most damaging cyberattacks in history. Just weeks later, the office of the Joint Chiefs of Staff shut down its unclassified email system for several days after officials detected that it had been breached.
These serious intrusions came months after a group affiliated with the Islamic State briefly commandeered the Central Command's Twitter account and rebranded it as the "Cyber Caliphate."

Given the enormity of the problem, one of the responses by the Department of Defense might seem befuddling. They've asked hackers willing to play by strict rules to find vulnerabilities in some of the Pentagon's unclassified computer system.

Well-intentioned computer security experts routinely scan the internet in search of vulnerabilities, which they often map out and report. Until now, doing that on Pentagon sites carried the considerable legal risk of running afoul of the Computer Fraud and Abuse Act.

"Hack the Pentagon" kicked off in April with a monthlong trial program that attracted 1,400 so- called white hackers to fiddle with Department of Defense websites on the hunt for weak points that could be exploited to steal data or jam systems. Those hackers spotted 138 weaknesses, according to the Pentagon, and were paid $75,000 in rewards.

Encouraged by the results, the Defense Department last week announced a formal policy permitting outside computer experts to test for vulnerabilities in the system and report them to the department. Secretary of Defense Ashton Carter called the initiative "a 'see something, say something' policy for the digital domain." Those hackers won't be paid for their reports, but officials hope they will do it out of a sense of duty.

In addition, the department has started "Hack the Army," a program asking hackers who have been approved by the government to test the Army's recruiting websites for weaknesses.

While these efforts represent just one aspect of the federal government's effort to protect secret data more rigorously, Mr. Carter deserves credit for championing an unconventional approach.

"Hack the Pentagon" and "Hack the Army" allows defense officials to draw from a talent pool that includes people who would not ordinarily feel at home in the military's hierarchical culture. It may well turn into an unconventional recruitment pipeline for an organization that always benefits from outside perspectives and carefully calibrated disruption.

Washington Free Beacon
Twitter Grants Verification to Muslim Brotherhood's Violent, Anti-Semitic Online Mouthpiece
Monday, 28 November 2016
Byline: Adam Kredo

Washington - The social media website Twitter is facing criticism for its recent decision to grant verification to the Muslim Brotherhood's official mouthpiece, which routinely writes in favor of violent terror acts and disseminates anti-Semitic propaganda.
The Muslim Brotherhood-which has been designated as a terror outfit and banned by Egypt, Saudi Arabia, Russia, and elsewhere-operates in the online sphere via a website known as Ikhwan Web, which serves as the Brotherhood's "official" English-speaking feed.

Twitter recently granted verification to Ikhwan Web's online feed, giving the organization an air of legitimacy that leading lawmakers and experts described as reckless given the Brotherhood's history of supporting violent jihad and terrorism.

"Verifying the Muslim Brotherhood's Twitter feed helps further their narrative of civilization-Jihad," Sen. Ted Cruz (R., Texas), a Muslim Brotherhood critic who has authorized legislation to designate it in the United States as a terror organization, told the Washington Free Beacon.

"This maneuver makes the Brotherhood seem like a legitimate group while providing them cover to spread their radical version of Islam," Cruz added. "I look forward to working with the new administration to expose the Brotherhood's efforts to increase their influence in America."

Ikhwan Web's Twitter feed serves as a central hub for the Brotherhood's radical propaganda and official statements. A Free Beacon request for comment to Twitter's public relations department went unanswered.

Twitter has faced a wave of criticism for failing to shut down various accounts promoting radical jihad and terrorism against Western countries. Others have criticized the social media site for cracking down on accounts associated with conservative-leaning thinkers and writers.

Recent tweets indicate that the Brotherhood is, via its Twitter feed, advocating continued violence and resistance against Egypt's ruling government. It also is working to mainstream the Brotherhood as a legitimate resistance organization and governing body.

Ikhwan Web has a history of promoting violence in the Middle East, primarily in Egypt, where the Brotherhood led a bloody coup and continues to support violence against the country's ruling authority.

"It is incumbent upon everyone to be aware that we are in the process of a new phase, where we summon what is latent in our strength, where we recall the meanings of jihad and prepare ourselves, our wives, our sons, our daughters, and whoever marched on our path to a long, uncompromising jihad, and during this stage we ask for martyrdom," the Brotherhood said in a 2015 statement that was posted on Ikhwan Web.

The website also has a history of defending individuals accused of organizing terror attacks on U.S. soil.

Other recent articles posted by the group promote violence against the Israeli government and Jewish people, including one 2009 post quoting a Muslim Brotherhood leader as calling for "jihad" to "liberate" Jerusalem from Israeli control.

The Brotherhood falsely claims that Israel is attempting to vandalize Muslim holy sites and prevent access for adherents to the faith.

Other postings rally against "the ugly face" of Zionism.

Kyle Shideler, director of the Center for Security Policy's Threat Information Office, told the Free Beacon that Twitter's decision to grant legitimacy to the organization is "deeply concerning."

"This decision by Twitter to provide the Muslim Brotherhood with this literal blue check of approval is deeply disconcerting," Shideler said.

"At a time when Twitter is already facing criticism for banning individuals based solely on speech, Twitter has effectively lionized a group responsible for the burning of Coptic churches and the killing of Egyptian police and judiciary officials," Shideler added. "How is Twitter supposed to help defeat online radicalization when it essentially endorses the biggest source for Islamist radicals in the world?"

Wall Street Journal
For China's Huawei, Hurdles Loom As It Plans U.S. Smartphone Sales

Monday, 28 November 2016
Byline: Juro Osawa, Ryan Knutson i

Hong Kong - A Chinese technology giant, whose telecom-networking equipment is shut out of the U.S. because of security concerns, is taking its high-end smartphone to American consumers for the first time.
But a number of obstacles are blocking Huawei Technologies Co.'s path to success in the U.S. smartphone market.

U.S. carriers, which distribute more than 80% of handsets in the country, are reluctant to work with Huawei -- the world's third-largest smartphone maker by shipments behind Samsung Electronics Co. and Apple Inc. -- because of its low brand recognition and security concerns associated with its networking equipment, people familiar with the matter say. A 2012 congressional report recommended that U.S. carriers avoid using Huawei gear in their networks for fear that China might use it to spy on Americans.

Huawei has denied such accusations, saying it operates independently of Beijing.

There are also technical hurdles related to cellular standards that would make U.S. expansion costly for the Chinese company.

"We haven't figured out how to remove those obstacles," said a Huawei manager based in the U.S. "It's very challenging."

Huawei said this month that it would launch its high-end Mate 9 smartphone in the U.S. But the phone, which carries a 699 euro ($740) price tag in Europe, will likely be sold just through online retailers such as Amazon.com Inc., people familiar with the matter said. Huawei hasn't disclosed the price or exact release date in the U.S.

The U.S. is the biggest missing piece in Huawei's smartphone global expansion strategy. The company, founded by former People's Liberation Army engineer Ren Zhengfei three decades ago, has become a major force thanks to its growth in China -- the world's biggest smartphone market -- as well as Europe, the Middle East, Africa and Latin America. In the U.S., where it sells inexpensive models, it had a market share of just 0.4% in the third quarter, according to research firm Canalys. Apple was the U.S. market leader with 39%, followed by Samsung with 23%.

The U.S. is the world's largest market for high-end phones priced above $500, according to Canalys. Cracking that market would help Huawei in its mission to overtake Apple and Samsung within five years as the world's top smartphone maker.

"It takes time to build trust in the U.S.," Richard Yu, head of Huawei's smartphone business who has set that ambitious goal, said in an interview this month.

But there are technical challenges. To comply with the cellular standard used by Verizon Communications Inc. and Sprint Corp., Huawei would have to make substantial and costly changes to its mobile chips. Verizon and Sprint also see little upside in adding Huawei devices to their already crowded lineup of phones, given Washington's wariness toward the Chinese company, people familiar with the matter said.

Huawei is also in a patent dispute with T-Mobile US Inc., making collaborations between the two unlikely.

While Huawei is more hopeful about the possibility of working with AT&T Inc., one of the country's two biggest carriers along with Verizon, and has communicated with the telecom giant, it is unclear whether they can agree on a partnership, according to the U.S.- based Huawei manager.

AT&T and T-Mobile declined to comment.

Until now, Huawei has largely ignored the U.S. as it concentrated on more welcoming markets. In Western Europe, the Chinese company has spent heavily on advertising, working closely with local retailers and sponsored professional soccer teams. As a result, its market share there more than doubled to 13% in the third quarter from 6% a year earlier, according to research firm IDC.

Canberra Times
Security Headquarters plagued with clearance problems Cyber spooks quit ASIO
Sunday, 27 November 2016
Byline: Stephen Jeffery

Canberra - Australia's premier cyber security agency has released plans to leave ASIO's headquarters for larger, lower security premises, two years since it first moved into the custom-designed building. The hurdles to gaining clearance to work in or visit the Australian Cyber Security Centre (ACSC) in the classified Ben Chifley Building in Parkes hindered the organisation's recruitment and collaborative goals, a Department of Defence submission to the parliamentary committee evaluating the proposal said. The department proposed a $38.8 million relocation and fitout of the ACSC to Defence-leased buildings at Brindabella Business Park near Canberra Airport. If approved, the centre's new headquarters would incorporate multiple security clearance levels, a mix of classified, unclassified and public meeting rooms, and space for a major expansion of its workforce to about 650, flagged in this year's Cyber Security Strategy.
The centre, currently made up of about 260 cyber security specialists from the Australian Signals Directorate, the Attorney- General's Department, ASIO, the Australian Federal Police and the Australian Crime Commission, began operating on November 27, 2014, and was the first tenant to move into the Ben Chifley Building. But the Defence submission said the classified nature of the building had impeded the centre's ability to collaborate with businesses and researchers, a core element of the Cyber Security

Strategy. The need to be approved for high security clearance, which can take more than two years, was dissuading skilled workers from joining the ACSC, the submission said.

The strategy, released in April, stipulates that "organisations need easy and consistent interfaces with government agencies on cyber security" and mandated that the centre move to a new location. "The need for private industry partners to obtain security clearances - and even the overheads associated with organising visitor entry for short-term visits - currently make achievement of the government's intent considerably more difficult," the submission said. "Cyber security skills are in short supply and high demand ... very few people with the requisite skills will be prepared to wait for a role with ASD, particularly when private industry is able to offer very attractive remuneration."

The building has had a chequered history, including delayed construction, reported security breaches and a $200 million budget blowout. Most of ASIO's estimated 1800 staff had moved into the $700 million building by 2015, two years behind schedule. Smashed glass panels and malfunctioning alarms made unwanted headlines last year. Most of the work of the Australian Signals Directorate with the ACSC could be handled in a lower security environment, the Defence submission said, with its classified status seen as more of a "legacy".

It pointed to Britain's National Cyber Security Centre, which is being built in London as a mostly unclassified facility, as a comparison. Depending on when it is approved, the ACSC's new headquarters could be completed by the end of 2017, with initial workers moving into the building from June. The Parliamentary Standing Committee will accept submissions on the proposal until January 13, with public hearings expected to take place later in the new year.

Le Figaro
Des écouteurs audio qui jouent les espions
Monday, 28 November 2016
Byline: Didier Sanz

Jérusalem - Des chercheurs israéliens ont montré qu'il était possible de transformer les oreillettes en microphones et d'enregistrer les discussions dans un rayon de six mètres.
On savait que les pirates pouvaient activer à distance la webcam d'un ordinateur pour filmer son propriétaire et son environnement. Ce sont maintenant des écouteurs audio dont il faudra se méfier. Des chercheurs du centre de recherche en cybersécurité de l'université Ben Gourion ont, en effet, démontré que ces accessoires pouvaient être transformés en microphones, par une astuce de programmation, et enregistrer toutes les conversations alentour, même si la victime a pris la précaution de désactiver le microphone de son mobile ou qu'elle ne possède pas de microphone sur ses écouteurs. Ils ont ainsi développé un logiciel, baptisé « Speak(a)r » , qui agit comme un programme espion, détournant les caractéristiques du système audio.

À première vue, le principe n'est pas nouveau. Il est tout à fait possible de brancher des écouteurs sur une entrée audio pour s'en servir comme microphone, comme l'expliquent de nombreux forums sur Internet et comme le montrent plusieurs vidéos sur YouTube. La fine membrane des écouteurs, qui transforme habituellement les signaux électromagnétiques en ondes sonores, devient alors un capteur de vibrations, lesquelles seront ensuite converties sous forme de signal électrique.

De l'ordinateur au smartphone

Mais la grande originalité de ce logiciel est qu'il exploite la sortie audio ! Il s'attaque directement aux composants pour reprogrammer la sortie audio en entrée audio. Les écouteurs se comportent alors comme de véritables microphones, capables d'enregistrer à la fois les sons de proximité et les discussions dans un rayon de 6 mètres. Comme un logiciel espion, le programme des universitaires peut compresser les enregistrements et transmettre le fichier correspondant sur Internet. Pour illustrer leur trouvaille, les chercheurs ont déconnecté le microphone d'un PC, dans un bureau, ne laissant que les écouteurs branchés sur la sortie audio. Puis ils ont diffusé un clip vidéo sur un téléviseur et lancé leur logiciel. Le graphique affiché par l'ordinateur montre alors que la musique et les paroles sont directement enregistrées par les écouteurs, et que le résultat pourra être écouté clairement sur des haut-parleurs.

Pour l'instant, les essais n'ont porté que sur des ordinateurs équipés de circuits audio Realtek, qui sont les plus répandus. Mais la technique serait identique dans le cas des smartphones : il suffit d'étudier quels composants sont utilisés et la manière de les programmer pour obtenir le même résultat. Coller un ruban adhésif sur sa webcam comme le fait le PDG de Facebook, Mark Zuckerberg, enfermer son mobile dans un réfrigérateur comme le conseille Edward Snowden ou encore désactiver le microphone des appareils électroniques ne suffira plus... Il faudra désormais penser à débrancher systématiquement les écouteurs...

Associated Press
U.K. spy bill brings 'dark, dark days'
Sunday, 27 November 2016

London - In Britain, Big Brother just got bigger.
After months of wrangling, parliament has passed a contentious new snooping law that gives authorities - from police and spies to food regulators, fire officials and tax inspectors - powers to look at the Internet browsing records of everyone in the country.

The law requires telecoms companies to keep records of all users' web activity for a year, creating databases of personal information that the firms worry could be vulnerable to leaks and hackers.

Civil liberties groups say the law establishes mass surveillance of British citizens, following innocent Internet users from the office to the living room and the bedroom.

Tim Berners-Lee, the computer scientist credited with inventing the web, tweeted news of the law's passage with the words: "Dark, dark days."

The Investigatory Powers Bill - dubbed the "snoopers' charter" by critics - was passed this month after more than a year of debate and amendments. It will become law when it receives the formality of royal assent next week.

But big questions remain about how it will work and the government acknowledges it could be 12 months before Internet firms have to start storing the records.

"It won't happen in a big bang next week," Home Office official Chris Mills told a meeting of Internet service providers on Thursday. "It will be a phased program of the introduction of the measures over a year or so."

The government says the new law "ensures powers are fit for the digital age," replacing a patchwork of often outdated rules and giving law-enforcement agencies the tools to fight terrorism and serious crime.

In a move taken by few other nations, it requires telecommunications companies to store for a year the web histories known as Internet connection records - a list of websites each person has visited and the apps and messaging services they used, though not the individual pages they looked at or the messages they sent.

Julian Huppert, a former Liberal Democrat lawmaker who opposed the bill, said it "creates a very intrusive database."

"People may have been to the Depression Alliance website, or a marriage guidance website, or an abortion provider's website, or all sorts of things which are very personal and private," he said.

Officials won't need a warrant to access the data, and the list of bodies that can see it includes not just the police and intelligence services, but government departments, revenue and customs officials and even the Food Standards Agency.

"My worry is partly about their access," Huppert said. "But it's much more deeply about the prospects for either hacking or people selling information on."

James Blessing, chairman of the Internet Services Providers Association, said the industry has "significant questions" on how the law will work - including "how to keep the vast new data sets secure."

Bangkok Post

Internet control eyed

Tuesday, 29 November 2016

Byline: Aekarach Sattaburuth

Section: general

Bangkok - The National Reform Steering Assembly (NRSA) panel on media reforms has proposed that military and police officers handle both policy and operation in ensuring cyber security.
The proposal is included in the panel's report for a study conducted on a cyber security bill, presented at an NRSA meeting on Monday. The report was approved by the NRSA in a 141-1 vote with five abstentions.

Pol Maj Gen Phisit Pao-in, deputy chief of the panel, insisted the bill needs more details to be comprehensive. He said the cyber-security framework must be underlined, and it has to be consistent with strategic plans adopted by all security agencies.

A key agency must be identified to take care of cyber security situations in both normal and emergency situations, he said.

Military and police officers must play a role both in advocating policies and carrying out ground operations in dealing with the cyber security problems, Pol Maj Gen Phisit said.

After the new constitution is put into force, the prime minister should use his power under Section 265 of the charter to set up a national committee to maintain cyber security for a specific period of time before the bill is enacted, he said.

The approach is needed because it could take time for the bill to be approved by the National Legislative Assembly (NLA) and come into force, during which damage could arise to the country's security and the government's policy on the digital economy.

However, Kamnoon Sidhisamarn, an NRSA member, expressed concerns about empowering officials to deal with cyber security. "Would it be necessary for the officials to regulate the private sector in the whole process?" Mr Kamnoon asked. Details should be drawn up on how much the authorities can regulate and operate.

He also insisted a national committee on maintaining cyber security lacks the participation of public and private sectors.

Another NRSA member, Sompong Sakawee, said he was worried that the bill might affect the businesses of Line, Facebook, Instagram and Twitter and drive them away.

Pol Maj Gen Phisit insisted the bill is aimed at shielding the internet system from cyber attacks. He said the websites of Thai state agencies come under cyber attack every day, causing damage worth hundreds of millions of baht.

Under the bill, there will be a central standard measure set for each agency to adopt in protecting their computer systems, he added.

The NRSA also suggested stepped-up measures to boost military security and approaches to educate the public about cyber security laws.

The Australian

Professionalism key to tackling cyberthreats

Tuesday, 29 November 2016

Byline: Anthony Wong

Section: oped

"Speed is the essence of war. Take advantage of the enemy's unpreparedness; travel by unexpected routes and strike him where he has taken no precautions." So wrote Chinese military strategist Sun Tzu in his classic, The Art of War.
I was recently in China, in a region where Sun Tzu lived around 500BC. Despite the time difference, Sun Tzu's insights are highly applicable to modern warfare, which experts predict will increasingly be fought in cyberspace, using technology to block communications and cripple infrastructure.

The importance of cybersecurity precautions cannot be overstated, which is why the Australian Computer Society will tomorrow release our new guide, entitled Cybersecurity: Threats, Challenges, Opportunities. It seeks to raise awareness of cyberthreats, which can affect everyone from an individual with a smartphone through to business and enterprise, and even our entire nation.

At the Australia-US Cyber Security Dialogue in September, Prime Minister Turnbull said: "For each large enterprise, there are many small businesses putting a toe in the water of the online world. They are connected to you as suppliers, distributors and contractors. Many are far less secure, far less savvy, far less resourced than governments and big business. Or at least, than governments and big businesses should be." The ACS has long played an active role in raising awareness of cyberthreats, supporting the government with expert advice back in 2011 and providing a co-ordinating role for an industry response. At the time, we used this column to challenge the government to "establish a central authority to co-ordinate both the policy development and operational aspects of Australia's cybersecurity framework to ensure an integrated and congruent approach to any cyber-related initiatives".

That call was answered with the formation in 2013 of the Australian Cyber Security Centre, an umbrella body which brings together the cyber security activities of the key security-related agencies: the Australian Signals Directorate, Defence Intelligence Organisation, Australian Security Intelligence Organisation, Computer Emergency Response Team Australia, Australian Criminal Intelligence Commission and the Australian Federal Police.

We also welcome this month's appointment of Dr Tobias Feakin as Australia's inaugural Ambassador for Cyber Affairs to work closely with Dan Tehan, the Minister Assisting the Prime Minister for Cyber Security and Alastair MacGibbon, Special Adviser to the Prime Minister on Cyber Security, in providing leadership and advocacy on cyber security policy and strategy.

In October this year, the ACSC released its 2nd Threat Report, highlighting the severity and breadth of cyber intrusions in the 2016 financial year.

Between July 2015 and June 2016, CERT Australia responded to 14,804 cybersecurity incidents affecting Australian businesses, 418 involving systems of national interest and critical infrastructure. At the same time, the ASD responded to 1095 cybersecurity incidents in government systems that were serious enough to warrant operational responses.

We are seeing significant growth and convergence of technologies including big data, the Internet of Things, mobility, cloud computing, artificial intelligence, robotics and more. As technology continues to innovate, enhance, challenge and disrupt our world in new and different ways, cybersecurity will only grow in importance.

In May, Leon Strous, president of IFIP, the global body established in 1960 under UNESCO and of which the ACS is a member, took part in the strategic European Foresight Cyber Security Meeting. He highlighted the critical role that professionalism plays in building trustworthy, reliable and secure ICT systems.

Tomorrow, the ACS plays host to a ministers forum in Sydney where the Victorian Minister for Small Business, Innovation and Trade, Philip Dalidakis, will lead a panel of international cybersecurity experts

to explore "global approaches to building resilience, the cybersecurity ecosystem and staying on top of old and new threats".

The panellists include Elly van den Heuval, secretary to the Dutch Cyber Security Council, which is calling for the harmonisation of legal frameworks and duties of care to enable a consistent and reliable approach to cybersecurity and IoT, and to address issues of professionalism and standards.

As part of our commitment to security professionalism, the ACS supported Tehan at his inaugural address, A Cyber Storm at the National Press Club in Canberra last week.

Anthony Wong is ACS president and CEO of AGW Consulting, a multidisciplinary ICT, intellectual property legal and consulting practice.

China Daily

Crackdown targets cyber black market

Tuesday, 29 November 2016

Byline: Cao Yin

Section: general

Beijing -China has experienced an increase in cases of online data leaks in the past few years due to the development of the "cyber black market", according to a report by the Shanghai Academy of Social Sciences' Institute of Information.
The Annual Report on Development of Cyberspace Security in China, which the institute released on Monday, says that cases relating to information leaks have become more frequent since last year, such as the high-profile case involving Gfan - the country's largest online platform for Android systems - in which data of the platform's more than 23 million users, including their names, passwords and email addresses, were published on the internet.

It said that economic losses from June last year to June this year resulting from text message spam, online scams and information leaks totaled 91.5 billion yuan ($13.3 billion).

Such losses were attributed to the cyber black market, a commercial chain where participants such as hackers and network operators gain profits illegally, it said, adding that the industry is a growing multi-billion-US dollar economy.

"In the past, hackers conducted cyberattacks for fun, or to show off their hacking skills, but now they operate as businesses, gaining money through utilizing their techniques, such as stealing personal information and selling it," said Zhang Huaping, an associate professor specializing in cybersecurity at Beijing Institute of Technology.

"Cybersecurity issues used to relate to the actions of individuals, but in recent years, hackers have started making deals with network businessmen, earning a percentage of the profits," Zhang said.

On Thursday, a report on cybersecurity by Chinese internet giant Tencent said that online social platforms with an abundance of personal information have become the most popular space for those working on the cyber black market to gain illicit profits.

It estimated that at least 560,000 people engaged in the industry in the first six months this year, involving more than 148.2 billion yuan.

Qihoo 360, China's largest security software provider, said in November last year that at least 1.6 million people are engaged in the cyber fraud, with their annual output value surpassing 110 billion yuan.

Pei Zhiyong, a cybersecurity specialist at Qihoo 360, said: "A simple fraud operation needs a team of at least 10 people, while a fraud chain has more than 15 links. The work of each participant is clear. Some take charge of sending text message scams, while others are responsible for designing fraud programs, for example."

Experts said sometimes such fraud results is more than just financial losses.

In August, Xu Yuyu, an 18-year-old from Linyi, Shandong province, died of a heart attack after losing 9,900 yuan ($1,500) in a phone scam. The money had been saved to cover her college tuition fees.

Peng Yang, a professor specializing in big data and information security at Beijing University of Posts and Telecommunications, said that the cyber black market has disturbed normal market order as well as network competition.

"The fight against the cyber black market is not hard, as we can trace how data is released online," Peng said. "The problem is that there are no laws defining the industry as illegal."

Experts said the most effective way of addressing the problem is to pass legislation on protecting information and clarify governmental departments' obligations on law enforcement and supervision.

Kyodo News

Data breach from reported cyberattack not found: defense chief

Tuesday, 29 November 2016

Byline: Staff reporter

Section: general

Tokyo - Defense Minister Tomomi Inada said Tuesday a recently reported cyberattack was not found to have resulted in a data breach, but did not confirm media reports that a ministry communication network shared with the Self-Defense Forces was hacked.
Noting that the ministry and the SDF receive suspicious e-mails on a daily basis, Inada said at a press conference, "We have not confirmed any leakage of information or destruction of equipment at this point."

Kyodo News reported Sunday that the ministry and the SDF discovered around September that their shared communication network had suffered a cyberattack that enabled a hacker to penetrate the Ground Self-Defense Force's computer system, and that some information may have been leaked in the incident.

According to ministry sources, the Defense Information Infrastructure, a high-speed large-capacity communication network connecting SDF bases and camps, was subjected to the attack. The sources suspect the involvement of a state-backed attacker.

The infrastructure consists of a system connected to the Internet and another that is used for information sharing by people inside the organizations, but the two systems are not completely detached.

Inada declined to comment on specific cases, saying that doing so could reveal the country's response to cybersecurity issues. But she said the ministry is dealing with cyberattacks through such mechanisms as its Cyber Defense Group which monitors communication networks around the clock.

New York Times

Hate Speech Laws Test Facebook

Tuesday, 29 November 2016

Byline: Mark Scott, Melissa Eddy

Section: general

Berlin - Yorai Feinberg was going about his daily routine this month when his social media feeds and cellphone began lighting up.
It was the 78th anniversary of the Kristallnacht, the 1938 Nazi pogrom against Jews, and the Berlin restaurant owned by Mr. Feinberg, a 35-year-old Israeli, had been included without his knowledge on a map of the city that a far-right group had published on Facebook.

The social media post listed the names -- and addresses -- of local Jewish institutions and Israeli-owned businesses under the banner "Jews Among Us," in bright yellow Gothic script. Mr. Feinberg soon received anonymous phone calls telling him, "I hate Jews."

A standoff quickly developed between Facebook, the social media giant, and German authorities over what many here said was its inadequate response to the publication of the map. But Germany's rules on what may be said or published -- among the world's toughest, with long prison terms for denying the Holocaust and inciting hatred against minorities -- ensured that the post was eventually deleted.

The incident is one of several examples -- including threats of regulation and attempts to prosecute Facebook's chief executive, Mark Zuckerberg -- of how Germany has become an important test case globally for how the social network polices what may be published online, and how it should respond to inappropriate and illegal content.

Such steps in Germany are part of a growing push around the world to regulate what users are allowed to post online.

Mr. Feinberg did not report the incident to Facebook, convinced after previous anti-Semitic attacks that the social network would not act, he said.

"I have reported things to Facebook at least 20 times," he explained over coffee at his restaurant in a residential neighborhood in western Berlin. "And 100 percent of the time, they have refused to take it down. Facebook doesn't do anything."

Others identified in the map did complain. At first, Facebook did not remove the map, saying it complied with the company's "community standards," or guidelines for what it deems within the bounds of free speech.

But within 48 hours, after an outcry on social media, in local newspapers and from German lawmakers, Facebook relented. It deleted the far- right group's entire page, including the post that had listed the Jewish institutions and businesses across Berlin.

"We recognize that this is a work in progress," Richard Allen, Facebook's director of policy in Europe, said in an interview. "It was hate speech, and it should have been taken down."

In Germany, more than almost anywhere else in the West, lawmakers, including Chancellor Angela Merkel, are demanding that Facebook go further to police what is said on the social network -- a platform that now has 1.8 billion users worldwide. The country's lawmakers also want other American tech giants to meet similar standards.

The often-heated dispute has raised concerns over maintaining freedom of speech while protecting vulnerable minorities in a country where the legacy of World War II and decades under Communism still resonate.

It is occurring amid mounting criticism of Facebook in the United States after fake news reports were shared widely on the site before the presidential election. Facebook also has been accused of allowing similar false reports to spread during elections elsewhere.

Mr. Zuckerberg has denied that such reports swayed American voters. But lawmakers in the United States, Germany and beyond are pressing Facebook to clamp down on hate speech, fake news and other misinformation shared online, or face new laws, fines or other legal actions.

"Facebook has a certain responsibility to uphold the laws," said Heiko Maas, the German justice minister. In October, Mr. Maas suggested the company could be held criminally liable for users' illegal hate speech postings if it does not swiftly remove them.

Facebook rejects claims that it has not responded to the rise in hate speech in Germany and elsewhere, saying it continually updates its community standards to weed out inappropriate posts and comments.

It says such material represents a small fraction of the millions of posts daily, and argues there is a fine balance between protecting freedom of expression and stamping out internet hate speech.

"We've done more than any other service at trying to get on top of hate speech on our platform," Mr. Allen said.

Tussles with German lawmakers are nothing new for Facebook.

It has routinely run afoul of the country's strict privacy rules. In September, a local regulator blocked WhatsApp, the internet messaging service owned by Facebook, from sharing data from users in Germany with its parent company. The country's officials also have questioned whether Facebook's control of users' digital information could breach antitrust rules, accusations the company denies.

Facebook's problems with hate speech posts in Germany began in summer 2015 as more than one million refugees began to enter the country.

Their arrival, according to company executives and lawmakers, incited an online backlash from Germans opposed to the swell of people from Syria, Afghanistan and other war-torn countries. The number of hateful posts on Facebook increased sharply.

As such content spread quickly online, senior German politicians appealed directly to Facebook to comply with the country's laws. Even Ms. Merkel confronted Mr. Zuckerberg in New York in September 2015 about the issue.

In response, Facebook updated its global community standards, which also apply in the United States, to give greater protection to minority groups, primarily to calm German concerns.

Facebook also agreed to work with the government, local charities and other companies to fight online hate speech, and recently started a billboard and television campaign in Germany to answer local fears over how it deals with hate speech and privacy.

Facebook hired a tech company based in Berlin to monitor and delete illegal content, including hate speech, from Germany and elsewhere, working with Facebook's monitoring staff in Dublin.

"They have gotten better and quicker at handling hate speech," said Martin Drechsler, managing director of FSM, a nonprofit group that has worked with Facebook on the issue.

Despite these steps, German officials are demanding further action.

Ms. Merkel, who is seeking a fourth term in general elections next year, warned lawmakers last week that hate speech and fake news sites were influencing public opinion, raising the possibility of new regulations.

And Mr. Maas, the justice minister, has repeatedly warned that he will propose legislation if Facebook cannot remove at least 70 percent of online hate speech within 24 hours by early next year. It now removes less than 50 percent, according to a study published in September by a group that monitors hate speech, a proportion that is still significantly higher than those for Twitter and YouTube, the report found.

For Chan-Jo Jun, a lawyer in Würzburg, an hour's drive from Frankfurt, new laws governing Facebook cannot come soon enough.

Mr. Jun recently filed a complaint with Munich authorities, seeking prosecution of Mr. Zuckerberg and other senior Facebook executives on charges they failed to sufficiently tackle the widespread wave of hate speech in Germany. The company denies the accusations.

While his complaint may be dismissed, Mr. Jun says the roughly 450 hate speech cases that he has collected, more than half of them aimed at refugees, show that Facebook is not complying with German law. Despite its global size, he insists, the company cannot skirt its local responsibilities.

"I know Facebook wants to be seen as a global giant," Mr. Jun said. "But there's no way around it. They have to comply with German law."

Jerusalem Post

How hackers tried to 'poison' Syria's Assad

Tuesday, 29 November 2016

Byline: Yasser Okbi, Maariv Hashavua

Section: general

Jerusalem - Rumors of Syrian President Bashar Assad's demise spread quickly throughout the social media landscape Monday after the country's Ministry of Information became the target of a cyber attack.
"There was an attempt to poison his Excellency Bashar Assad. He was infected by a contagious, dangerous disease and is in grave condition," read a message apparently posted by hackers on the ministry's homepage for several hours. "Doctors are at the president's side and are trying to save his life."

News of the dictator's alleged ill health spread shortly after the posting, causing confusion among the government and military along with the social media sphere.

Locked out of the ministry's system for several hours, government employees turned to Facebook to deny there was an attack against Assad and update viewers on his actual, living condition.

"The announcement that President Assad was poisoned is false and has no basis," the social media post read, adding "the news was planted by a hacker."

The Jerusalem Post's sister publication Ma'ariv noted that as of Monday the message announcing Assad's poisoning had yet to be removed from the Syrian ministry's website.

It was not clear whether this was due to technical reasons or an attempt by authorities to locate the parties responsible.

The Guardian (London)

Julian Assange: Ecuador says no 'quick way out' of embassy impasse

Tuesday, 29 November 2016

Byline: Staff report

Section: general

Quito - The WikiLeaks founder Julian Assange has no "quick way out" of the Ecuadorean embassy in London where he took refuge more than four years ago, Ecuador's prosecutor has said.
An Ecuadorean state attorney accompanied by a Swedish prosecutor questioned Assange at the embassy on 14 November over allegations that he committed rape in Sweden in 2010.

Ecuador's prosecutor, Galo Chiriboga, said Ecuadorean officials would send the official transcript of Assange's evidence to Swedish authorities "in mid-December".

Assange, who is Australian, has said he fears deportation to Sweden and the United States, where he could be charged for the publication of hundreds of thousands of secret US diplomatic cables.

"Four years have passed and we are only at this stage, but that is no longer attributable to Ecuador, it is attributable to Swedish prosecutors. I do not think there is a quick way out," Chiriboga said.

Assange, who has denied the rape charges, is also wanted by British authorities for violating the conditions of his house arrest, which he fled to seek refuge at the embassy.

Ecuador's foreign minister, Guillaume Long, has said Assange should receive guarantees that he will not be extradited if he faces justice in Sweden.

A DNA sample had been taken by British police from Assange at the embassy for Swedish prosecutors to use in their investigation against him, Chiriboga said.

"Therefore Sweden will now have to request that DNA sample from the British police," the prosecutor said.

Washington Free Beacon

Pentagon Links Chinese Cyber Security Firm to Beijing Spy Service

Tuesday, 29 November 2016

Byline: Bill Gertz

Section: general

Washington - A Chinese cyber security firm is covertly working with Beijing's Ministry of State Security intelligence service in conducting cyber espionage operations, according to Pentagon intelligence officials.
The company known as Boyusec, officially the Bo Yu Guangzhou Information Technology Co., is also working with China's global telecommunications company Huawei Technologies, which has been identified by U.S. intelligence agencies as linked to the Chinese military.

According to an internal report by the Pentagon's Joint Staff J-2 intelligence directorate, Boyusec and Huawei are working together to produce security products that will be loaded into Chinese-manufactured computer and telephone equipment. The doctored products will allow Chinese intelligence to capture data and control computer and telecommunications equipment, said Pentagon officials familiar with the report.

"It's closely connected to the [Ministry of State Security] and Huawei and they are developing a start-up program that will use malware allowing for capturing and controlling devices," said one official of Boyusec.

No other details of Boyusec's activities could be learned.

The employment of a cyber security firm as cover for intelligence gathering has been used in the past by Russian intelligence. China appears to be following the same pattern, analysts say.

The Defense Intelligence Agency reported last spring that Russia's Kaspersky Labs was marketing security software for industrial control networks that the agency warned could create cyber vulnerabilities.

Government cyber actors from both China and Russia have been detected mapping American critical infrastructure networks, including the U.S. electrical grid.

Boysec's website reveals that the company is based in Guangzhou, China, and is a "cooperative partner" with Huawei, along with the Guangdong Provincial Information Security Assessment Center, a government bureau that conducts security assessments of software.

Guangzhou is a Chinese city located inland from Hong Kong in Guangdong province.

Boyusec did not respond to emails seeking comment.

A Joint Staff spokesman had no immediate comment.

Disclosure of Chinese security firm's links to the Ministry of State Security followed a report in the New York Times earlier this month that China had pre-installed software on some Android phones that covertly provided a backdoor to supply data from the devices to China every three days.

Security researchers at Kryptowire discovered that the secret reporting software was produced by a company called the Shanghai Adups Technology Co. and was found on more than 700 million phones, cars, and other smart devices.

The software is used on phones made by Huawei and another major Chinese telecommunications firm, ZTE.

Huawei was identified in a 2009 Pentagon report on China's military as one of several Chinese information technology companies that maintains "close ties to the [People's Liberation Army] and collaborates on R&D."

A report by the CIA-based Open Source Center in 2011 revealed that Huawei's chairwoman, Sun Yafang, worked at the Ministry of State Security's communications department before joining the company.

The report stated that Sun used her ties to the intelligence service to help Huawei fight off unspecified financial difficulties after the company was founded in 1987.

National Security Agency documents made public by former contractor Edward Snowden revealed that the agency had penetrated Huawei's communications networks and was spying on foreign countries' communications through Huawei equipment in Iran, Afghanistan, Pakistan, Kenya, and Cuba.

The NSA also expressed concerns in one document that Huawei equipment could be used by China for cyber attacks.

"There is also concern that Huawei's widespread infrastructure will provide the PRC with SIGINT capabilities and enable them to perform denial of service type attacks," stated an NSA briefing slide labeled "Top Secret."

The NSA revealed that the Huawei cyber threat also was outlined in a National Intelligence Estimate, a major report approved by the 16 U.S. intelligence agencies.

The document was titled "The Global Cyber Threat to the U.S. Information Infrastructure" and warned: "We assess with high confidence that the increasing role of international companies and foreign individuals in U.S. information technology supply chains and services will increase the potential for persistent, stealthy subversions."

John Tkacik, a former State Department official, said the company appears from its website to pose a security risk.

"If I were at the Pentagon or Cybercom, I would keep my eyes on Boyusec, and only blow the whistle on them if they were actively marketing services to U.S. companies," Tkacik said.

"If the United States had a functional offensive cyber capability, and if I caught them in flagrante, I'd quietly blow up their servers with a ransomware attack and let them figure out what happened."

Tkacik said a Chinese cyber security company working with a Chinese intelligence service is a "dog-bites-man story."

"I want to hear U.S. cyber warriors strike back, a man-bites-dog story, although if man ever bites dog maybe it's best not to let the cyber- PETA hand wringers get wind of it in the press," he said.

A congressional China commission annual report made public this month stated that the Ministry of State Security is the main civilian spy service under the State Council, the chief administrative authority of the Chinese government and the ruling Communist Party's Politburo Standing Committee, the seven-member collective dictatorship that runs China.

"The [Ministry] conducts a variety of intelligence collection operations, such as human intelligence (HUMINT) and cyber operations," the report says.

Regarding cyber espionage, "China has a large, professionalized cyber espionage community," stated the report of the U.S.-China Economic and Security Review Commission.

"Chinese intelligence services have demonstrated broad capabilities to infiltrate a range of U.S. national security (as well as commercial) actors with cyber operations," the report said.

The Ministry of State Security, according to the commission, was behind the hacking of the Office of Personnel Management, the government's personnel records repository, and the theft of some 22 million records on federal workers, which included sensitive background investigation data.

According to the report, China is using cyber attacks to support intelligence collection against the U.S. diplomatic, economic, and defense industrial base sectors that support U.S. national defense programs.

The cyber thefts may benefit China's defense industry and high-technology sector as well as provide the Communist Party of China with insights into U.S. leadership perspectives on key China issues.

"Additionally, targeted information could inform Chinese military planners' work to build a picture of U.S. defense networks, logistics, and related military capabilities that could be exploited during a crisis," the report says.

In addition to both civilian and military cyber espionage units, other unofficial Chinese hackers have conducted cyber espionage operations targeting the United States.

These include Chinese nationalist hackers and criminal cyber spies.

"Some observers suggest China is shifting cyber espionage missions away from unofficial actors to centralize and professionalize these operations within its intelligence services," the report said.

Boyusec states on its website that it provides information security services, consulting, and security evaluations.

Its testing services include static application security testing and dynamic network security testing, including simulate cyber attacks.

Last year, Boyusec joined with the Guangdong information security office to create a joint laboratory for testing software and developing cyber defenses.

CBC News
Cybersecurity talent shortage on the radar of government, business
Wednesday, 02 November 2016
Byline: Julie Ireton

An international shortage of cybersecurity talent is expected to grow over the next few years, according to the Information and Communications Technology Council.
The council's vice-president of talent innovation, Sandra Saric, said there's an expected need for more than 1.5 million people to work in cybersecurity globally by 2020.

Solving the talent shortage was one of the challenges emphasized by government and private industry executives at a cybersecurity forum at the GTEC conference in Ottawa on Tuesday. It's an annual technology event that brings together business and government.

"Getting more people to take science, technology, engineering and mathematics courses and degree programs, and also training them to be cybersecurity savvy is probably the first challenge," said Scott Jones, assistant deputy minister responsible for the information technology security program with Communications Security Establishment Canada (CSEC).

Starting early

Saric said there's a need for computer scientists, analysts, investigators and psychologists, as well as communications and marketing professionals.

"We connect with the Ottawa police who have a cybercrime unit, they're having difficulty finding people. I've spoken to the RCMP who are also struggling ... it's across the board," she said.

Saric said the Information and Communications Technology Council, a Canadian non-profit, is working on developing talented students before they have even graduated high school.

The council has created cybersecurity competitions at high schools across the country to get students to develop these unique skills.

"It's about youth, regardless of what career they enter, cybersecurity is a critical component of their learning and the knowledge they need," said Saric, who presented at the cybersecurity forum.

Health information area of concern

But Jeff Curtis, the chief privacy officer at Sunnybrook Health Science Centre in Toronto, said his hospital needs talent now, not years down the road.

"People need to hear what's going on in the trenches, I'm here to bring that perspective," said Curtis.

He said the hacking of private health information is becoming a bigger concern for hospitals and health-care providers in Canada, noting hospitals hold a lot of valuable personal data and everyone is counting on the health-care centres to keep information safe.

In March the Ottawa Hospital reported a cyberattack after four of the hospital's computers in a network of 9,800 devices faced a hacker attempt.

The hospital said malware locked down the files after someone using the computer clicked a link that activated it, but it said no patient information was compromised.

In a statement at the time, the hospital said it was confident the appropriate safeguards were in place to protect patient information, but it would "continue to look for ways to increase security."

"We're just starting to look for scaled operations and the people to fill those positions," said Curtis about Sunnybrook.

"We have to catch up fast, and it's hard to find folks who not only have the hard skills in security, but also know the [hospital] sector as well."

New national security committee could study RCMP surveillance of reporters: Goodale
Wednesday, 02 November 2016
Byline: Amanda Connolly

Ottawa - Public Safety Minister Ralph Goodale suggested Tuesday that if reports emerged of RCMP keeping tabs on journalists for reasons linked to national security, the government's planned new national security committee could look into them.
Along with Government House Leader Bardish Chagger, Goodale took questions from members of the House of Commons public safety committee Tuesday evening. The questions largely focused on critics' concerns about the government's ability to appoint the chair of the all- party committee, ministers' ability to veto requests for information, and the prime minister's authority to review the committee's reports and ask for redactions.

However, controversial recent reports of police surveillance of La Presse journalist Patrick Lagacé's iPhone also came up. Goodale pointing out that Lagacé's case falls under Quebec's political jurisdiction, but if similar cases should come to light involving the Mounties and national security, the new committee could investigate them.

"There may well be concerns about that from members of this future committee ... and it may well be that the committee would say we need to look at that," Goodale said. "First and foremost, the committee needs to decide what's important."

During a pre-committee scrum with reporters, Goodale was asked about the Lagacé case and why he would not say if RCMP have made similar requests for warrants to conduct surveillance on journalists.

RCMP also refused to disclose that information when asked to report the number of times the force has sought a warrant to conduct surveillance on journalists over the past year.

"For security reasons, we cannot provide operation details of this nature," a force spokesperson said. "Cases of RCMP investigations relating to reporters are extremely rare, and when such cases occur, these are conducted under close monitoring parameters guided by ministerial directives. We recognize the importance of the freedom and independence of the press, and we respect it."

The issue of disclosure by national security agencies -- including the RCMP -- to the new committee dominated questions Tuesday evening.

C-22 allows for the committee to request information from any government agency working on national security -- a much broader mandate than similar committees in ally countries like the United Kingdom or Australia have.

However, it also allows for several controversial circumstances where disclosure can be refused -- most notably, the case of a ministerial veto in the event a department or agency can convince a minister certain information cannot be shared.

As well, C-22 also requires the committee to submit its reports to the prime minister prior to sharing them with Parliament and allows the prime minister to require redaction in cases where national security could be at risk.

Committee members pushed hard for explanations of those exemptions and asked if the government was open to amending or tightening the wording on exclusions.

"We're prepared to look seriously at all amendments and give them fair consideration," Goodale said.

The only issue the government appears unwilling to negotiate on at this time is that of having a government-appointed chair.

Goodale announced in January that Ottawa South MP David McGuinty will chair the committee of parliamentarians, and that has sparked outrage from opposition critics who say the role should be elected by committee members, as is the case with parliamentary committees.

The U.K. model currently allows for that, although it didn't always: That power came in a significant 2013 statutory review of the Intelligence and Security Committee's mandate.

Goodale said that issue specifically might be reserved for adjustment at the five-year review of the committee built into C- 22.

When pressed on the matter by NDP critic Matthew Dube, Chagger said there is no model for this specific committee anywhere in Canadian history and it won't be an exact match for the current U.K. model.

"We aren't the UK," Chagger said.

The committee will continue its study of the bill over the next several weeks before moving to clause-by-clause considerations, which will then be referred to the government.

Goodale ducks question about journalists under surveillance
Wednesday, 02 November 2016

Public Safety Minister Ralph Goodale won't say how many Canadian journalists might be under police surveillance.
In question period today, NDP leader Tom Mulcair raised the case of Montreal journalist Patrick Lagacé -- who learned recently that police had been monitoring his phone calls and location through GPS in his cellphone as part of an internal police probe. At least 24 warrants were issued on Lagacé's phone.

"'It's disgusting', as one of my colleagues said," Mulcair told the Commons, also citing the case of La Presse journalist Joel-Denis Bellavance, who has been tailed by police. Mounties followed Bellavance for nine days in 2007 in an attempt to track down a leak of classified documents.

"Can the minister of public safety tell us whether other journalists are being spied upon either by the police, the RCMP or CSIS?" Mulcair asked Goodale.

Goodale skirted the question, saying only that the issue is "entirely in the jurisdiction of Quebec, and this morning the premier of Quebec has made a very import pronouncement in that regard.

"We all, I'm sure, in this House believe profoundly in the freedom of the press. It is a value that is enshrined in the Charter of Rights and Freedoms."

He said police forces need to be "assiduous" in following the Supreme Court judgement which laid out rules to be followed in respect to press freedom.

According to the Journal de Montréal, police also reportedly tried to track down sources used by journalists Félix Séguin, Monic Néron and Fabrice de Pierrebourg.

Mulcair was not satisfied with Goodale's response. He said freedom of the press is not something a government can just "claim to support."

He asked how Canadians can believe the government believes in press freedom when the minister refuses to say whether there any journalists are under surveillance.

Goodale said the Supreme Court has rules on this issue which are laid out explicitly.

"It is very clear that freedom of the press is something that matters to all Canadians and this government and I expect every member of this House to defend that freedom," he said.

Mulcair replied by saying that defending that freedom means defending journalists like Bellavance. "That minister did nothing."

Montreal Gazette
Curbing online extremism 'like trying to block wind'
Wednesday, 02 November 2016
Byline: Caroline Plante

Montreal - Pulling hate material from the Internet will never be enough to curb the phenomenon of violent extremism, the head of free expression and international relations at Google told a conference on radicalization Tuesday.
"What we've seen over the past couple of years is a realization that simply taking the content down doesn't work because one website goes down, two or three more are up the very next day," Ross LaJeunesse said.

"Simply taking down the content doesn't address the feeling and the hatred which caused the speech in the first place. You need to engage the speakers who are promoting radicalization and hate online."

He acknowledged that Google, the U.S.-based company that runs a search engine and the video-sharing service YouTube, has a role to play and argued the company is taking that responsibility very seriously.
"We have started doing various programs, where, much like a regular advertising campaign, when someone searches for a key word that we think indicates they're looking for radical content, we then show them an advertising campaign about content that counters that speech," LaJeunesse said.

Also, "we don't allow violent images on YouTube, we don't allow pornography, we've always built YouTube to be a community where everyone is going to feel comfortable participating and speaking and watching content that they like."

LaJeunesse added people must differentiate between YouTube, which Google controls, and the Internet, which the company doesn't control. Many people equate Google with all of the Internet, he said.

When young people search the Internet, they're asking questions and are usually not confirmed radicals, the conference heard on Tuesday. They're at a stage where you can reach them, engage them, and present them with authentic, alternative voices.

Arguing that "blocking the Internet is a bit like trying to block wind," panellists agreed that instead of focusing on censorship, societies should teach young people to navigate through the overload of information on the Internet and help them determine what is credible and what is bunk.

"Basically, you want the younger generation to question everything," said Anantha Kumar Duraiappah, director of the UNESCO Mahatma Gandhi Institute of Education for Peace and Sustainable Development (MGIEP).

Duraiappah insisted the most important skill to have in the 21st century is critical inquiry, "deconstructing an argument and then reconstructing it to see if you're comfortable with it, being able to say 'That's not right.' " He said he'd also like young people to "fire their Gandhi neurons," in other words, express compassion and empathy, and develop the moral courage to change. All of that has to be in school curricula, Duraiappah argued, because it is what will help teenagers build their identities and belief systems.

While not promising to change the curriculum in Quebec, Premier Philippe Couillard said it is important to maintain an "analysis culture."

"We're doing it. Are we doing it enough? That's another question to be resolved," he said.

Couillard announced $10,000 for a "No to hate" campaign that will travel across Quebec schools and youth clubs in the months to come.

Ottawa Citizen
A Canadian parallel to FBI versus Clinton
Wednesday, 02 November 2016
Byline: Andrew Cohen

In the last fortnight of the presidential election of 1960, the race between John F. Kennedy and Richard Nixon was very close. Kennedy won the televised debates, but had not closed the deal.
Kennedy learned that Dr. Martin Luther King, Jr., had been arrested on a technicality - a traffic charge - and was in jail. On Oct. 26, Kennedy called King's wife, Coretta, to show his sympathy and offer his help. His brother, Robert F. Kennedy, made a call of concern to the judge.

Surprisingly, King was released. African-Americans voted for Kennedy overwhelmingly. They may have been the difference in a race that Kennedy won by some 118,000 votes.

The point: when elections are close, anything can tip the balance. Four days after the FBI revelation that it is reinvestigating

Hillary Clinton's emails, polls show no clear impact, though the announcement has changed the tone of this race.

The conversation is about her, not Donald Trump, and that is bad for her. When he is under scrutiny - his refusal to pay income taxes, his treatment of women, his views on Russia, minorities and nuclear arms - he loses. Now he has a stick and he is beating her, with glee. It isn't over.

If you doubt how an unseen hand can reverse a race, ask these Canadians: Ralph Goodale, Paul Martin, Stephen Harper.

Just weeks before the federal election on Jan. 23, 2006, the Liberals were leading the Conservatives. On Dec. 23, the RCMP faxed a letter to the office of Judy Wasylycia-Leis, the NDP's finance critic. She had asked about potential insider trading on government policy involving Goodale, who was minister of finance.

The response from Giuliano Zaccardelli, then commissioner of the RCMP, said a criminal investigation had been opened. On Dec. 29, after the NDP belatedly discovered the fax and made it public, the RCMP said in a news release: "In particular, the RCMP wishes to note that at this time there is no evidence of wrongdoing or illegal activity on the part of anyone associated to this investigation including Ralph Goodale."

Beyond bad grammar, it was a foolish statement, full of innuendo. It said, "Oh, we're looking at something bad, and it may involve Minister Goodale. We're not really sure but we thought we should drop his name anyway and create some mischief."

Martin had been in office for two years, the Liberals for 12 years. The investigation reinforced a perception of corruption and invited Canadians to consider the Conservatives, despite their reservations about Harper's "secret agenda." In polls taken in January, the Conservatives led. They won a minority government.

Did the RCMP sway the election? Two years later, a report from Paul Kennedy, the RCMP's public complaints commissioner, said the decision "had an adverse impact" on the vote and called it "a pre-meditated and calculated course of conduct." He said he had not "the slightest idea what was going through the commissioner's mind."

Yet this all passed with little notice - and without consequences.

In Canada, there was no outrage, no broader inquiry, no accountability.

In the United States, with a more adversarial system and much higher stakes, the FBI's conduct is now at the centre of the campaign. The director is under fire. Jurists, politicians and former attorneysgenerals here fill the editorial pages and television screens. They call the announcement unprecedented, improper and indefensible.

In Canada, Zaccardelli, who threw the election to the Conservatives, has said nothing. He still owes us an explanation. Wasylycia-Leis, who said it was "credible" to think Goodale was involved in the allegations, and who expressed righteous indignation at other injustices as an MP, says she has no regrets. She still owes Goodale, whose reputation was smeared, an apology. (She ran for mayor of Winnipeg in 2010 and was trounced, poetically).

More than a decade later, no one explains. No one apologizes. This is Canada's politics of passivity.

No chance of that happening down here.

Andrew Cohen, a Canadian journalist, author and professor, is a Fulbright Scholar at the Woodrow Wilson International Centre in Washington, D.C.

Montreal Gazette
Police spying on press deemed an 'overreach'
Wednesday, 02 November 2016
Byline: Linda Gyulai

Montreal - International journalist organizations are condemning the Montreal police department's spying on a La Presse journalist through his cellphone as a violation of freedom of the press and as an "extraordinary example of overreach" by the authorities.
They're also calling it a reminder to journalists to use data encryption and other means to protect their communications with their sources.

"This seems like an outrageous breach of precedent and a threat to media freedom in Quebec," Peter Bale, president of the Global Editors Network, said from Washington, D.C., on Tuesday when he learned of the Montreal police surveillance of columnist Patrick Lagacé's phone as part of what the police claim was part of an internal probe of Montreal anti-gang squad officers later charged with fabricating evidence.

Bale offered the same reaction to an incident involving the Sûreté du Québec's seizure of Journal de Montréal reporter Michaël Nguyen's computer in September after he reported on two judges who are under investigation by a provincial body that oversees the conduct of judges.

"These cases seem like an extraordinary example of overreach by the Quebec police and Montreal police," Bale said, adding that both cases are fundamentally about protection of journalists' sources. The Committee to Protect Journalists, based in New York, also condemned the surveillance of journalists in Quebec.

"Clearly, this is a violation of press freedom and we're concerned because the decision to spy on the journalist for information about his sources may have an implication on the free flow of information," Carlos Lauría, the organization's senior program coordinator for the Americas, said of the Lagacé case.

Canada offers no constitutional immunity to journalists to protect their sources. However, the Supreme Court of Canada in a 1991 ruling recognized the special role they play in a democracy and set out a series of legal tests to be applied by the courts on a caseby-case basis to decide whether a journalist has the right to guard the confidentiality of a source.

But the two Quebec examples of the authorities exceeding their powers are "all too typical of what we are seeing in many countries," Bale said.

"I think it is often harder in Commonwealth and U.K.-based systems like Canada, New Zealand and Australia, where you don't have an absolute constitutional protection" for journalists' sources, he said.

And in the United States, where the First Amendment protects freedom of the press and freedom of expression, journalists have come under repeated attack to reveal their sources, particularly in cases involving the nation's intelligence services, and even under the administration of President Barack Obama, Bale said.

"Oddly, you've seen with the Obama administration ... journalists and whistleblowers, which are often in combination, being treated remarkably aggressively by an administration that you might otherwise have thought was more open to concepts of freedom of speech and leaking in the public interest," he said.

Bale is also chief executive officer for the International Center for Public Integrity, which oversees the International Consortium of Investigative Journalists, which released the Panama Papers, containing confidential details of more than 200,000 offshore accounts.

The team of journalists that worked on the Panama Papers worked on the Internet, he said, but they managed to protect their material from leaking out before they were ready to release it by using such tools as two-factor authentication - meaning a password and then a second-level access code - to access their database.

ICIJ journalists also use encrypted emails and burner phones, and they know to turn offlocation services on their mobile devices when they're meeting sources, Bale said.

The Committee to Protect Journalists offers a technology security guide to help journalists prevent their material from being confiscated or destroyed or having their emails and phone signals interrupted by the police or criminal organizations.

It recommends tools like Signal to encrypt messages.

"Journalists, even in countries like Canada and the United States, should use source protection methods in their communications and records," Lauría said.

"They should consider when and how to contact sources, whether to call them on a land line, a cellphone or visit them in their office or at home, where to open a secure email or chat message, and consider using a simple code or pseudonym in written or electronic files."

Other resources for journalists include: journalism.co.uk and Freedom of the Press Foundation, which manages an opensource whistleblower submission system that media outlets can use to securely accept documents and communicate with anonymous sources.

"But the moment you connect anything to the Internet, you're vulnerable," Bale said. Sometimes, simple and old-school work better than encryption, he said, such as by putting documents on a USB stick or working with paper.

"I think it's about being paranoid, and rightly paranoid," Bale said. "Maybe I'm not paranoid enough."

Enquête publique et projet de loi réclamés à Ottawa
Wednesday, 02 November 2016
Byline: Vincent Brousseau-Pouliot

Ottawa -- La pression s'accentue sur le gouvernement Trudeau à la suite de l'affaire Patrick Lagacé. Le NPD veut une enquête publique. Le sénateur indépendant André Pratte et le Bloc québécois entendent tous deux déposer un projet de loi sur la protection des sources journalistiques si le gouvernement n'en propose pas un, a appris La Presse. Et le commissaire à la protection de la vie privée du Canada souhaite aussi des lois plus claires en matière de protection des sources journalistiques.
Le gouvernement Trudeau estime « prématurée » la question d'une intervention législative, mais le ministre fédéral de la Sécurité publique Ralph Goodale a annoncé hier qu'il « examinera » la directive ministérielle de 2003 demandant aux forces policières de porter une « attention spéciale » au statut des médias dans le cadre d'enquêtes sur la sécurité nationale. Le cabinet du ministre Goodale n'était pas en mesure d'indiquer hier si cet « examen » comprendrait des consultations publiques.

« Le ministre examine la directive ministérielle [...] afin de s'assurer que les plus grands soins sont pris lorsque des enquêtes criminelles et du journalisme se recoupent et que la valeur canadienne fondamentale de la liberté de presse est protégée », a indiqué Scott Bardsley, attaché de presse du ministre Goodale, qui se dit « toujours ouvert à recevoir des représentations » sur le sujet.

Plusieurs parlementaires auront des suggestions pour le gouvernement Trudeau. Au Sénat, le sénateur indépendant André Pratte, qui a été journaliste pendant 37 ans (la grande majorité du temps à La Presse) avant d'être nommé au Sénat au printemps dernier, se dit « prêt à déposer un projet de loi privé » si le gouvernement n'a pas l'intention de revoir les lois en vigueur.

« Compte tenu de ce qu'il s'est passé [dans le cas de Patrick Lagacé], les législateurs ne peuvent pas juste dire "c'est préoccupant, c'est inquiétant". Il faut examiner les lois actuelles pour voir si elles sont suffisantes. »

-- Le sénateur André Pratte

« Ce qui est particulièrement inquiétant, ajoute le sénateur André Pratte, c'est que le SPVM et les juges estiment avoir agi à l'intérieur de la législation actuelle. Mon préjugé favorable porte vers une clarification de la loi. »

Un projet de 2007 revit

Le Bloc québécois déposera au cours des prochaines semaines un projet de loi privé sur la protection des sources journalistiques. Sa version préliminaire, déposée lundi au bureau du légiste de la Chambre des communes, reprend de façon quasi identique un projet de loi présenté par l'ex-député bloquiste Serge Ménard en 2007.

Ce projet de loi C-426, mort au feuilleton en raison des élections en 2008, aurait permis aux journalistes de ne pas divulguer leurs sources, leurs renseignements recueillis ou d'être l'objet d'une perquisition sauf dans de rares exceptions (ex. : si la police a tout fait pour obtenir la source autrement et si la divulgation est dans l'intérêt public).

« C'est un outil essentiel. Le cadre actuel ne protège pas suffisamment bien ces sources d'information là. Il faut une réponse législative parce que c'est un problème majeur qui concerne l'ensemble de la population. »

-- Rhéal Fortin, chef par intérim du Bloc québécois

Serge Ménard serait « très heureux » de voir une nouvelle version de son projet de loi à l'étude au Parlement. « J'ai voulu mettre dans une loi les principes de la Cour suprême », dit Serge Ménard, qui estime qu'il faudrait moderniser son projet de loi pour traiter notamment de géolocalisation.

Avant de modifier la loi, les néo-démocrates veulent d'abord une enquête publique. « On voit clairement des histoires de la sorte à répétition, dit le député Matthew Dubé. Nous sommes très ouverts à un changement législatif au besoin, mais ce n'est pas la première étape. Il faut une enquête publique pour déterminer si les forces policières respectent la liberté de la presse. Est- ce la directive ministérielle qui fait défaut ou si c'est la GRC qui ne respecte pas la directive ? »

Québec veut resserrer les règles de surveillance
Wednesday, 02 November 2016
Byline: Denis Lessard; Philippe Teisceira-Lessard

Québec -- L'espionnage des sources des journalistes porte atteinte à la valeur fondamentale de la liberté de la presse, a souligné le premier ministre Philippe Couillard au milieu d'une nouvelle journée de tourmente pour le chef de police Philippe Pichet.
Devant les révélations « graves » sur la filature électronique du journaliste de La Presse Patrick Lagacé, Québec a annoncé la mise en place de trois mesures pour resserrer les contrôles de ces mandats de surveillance.

Enregistrement de Mario Guérin du SPVM

« On fait face à un enjeu majeur pour une société démocratique. Je veux assurer la population et les médias que je les soutiens dans leur travail, dans la protection des sources journalistiques », a soutenu M. Couillard en point de presse, flanqué de ses ministres de la Justice et de la Sécurité publique, Stéphanie Vallée et Martin Coiteux.

Philippe Pichet, lui, a promis de s'accrocher à son poste. Il devra toutefois répondre de ses actes à l'hôtel de ville, où le bureau du maire Coderre a annoncé sa convocation.

« Des gens sont morts pour la liberté de presse, c'est une liberté fondamentale, et elle inclut la protection des sources », a affirmé Philippe Couillard. « Il est hors de question de banaliser » une atteinte à une valeur aussi importante, a-t-il souligné.

« Parmi les libertés durement gagnées au fil des siècles, se trouvent la liberté d'expression et la liberté de presse. »

-- Le premier ministre Philippe Couillard

« Le mot "préoccupé" est faible », a dit M. Couillard, appelé à décrire sa réaction quand il a pris connaissance des révélations de La Presse, « il n'était pas question pour moi d'arriver avec une réponse administrative, de dire : les règles ont été suivies. »

Groupe d'experts

Québec entend mettre sur pied un « groupe d'experts » où les médias auront conjointement à choisir leur représentant. Les policiers aussi y auront un siège. Le groupe devra faire des recommandations d'ici le printemps prochain - son mandat sera défini bientôt par la ministre Vallée.

Le comité sera présidé par un juge qui a de l'expérience dans les questions touchant les médias. Le choix du président sera discuté au préalable avec les partis de l'opposition.

La Commission parlementaire des institutions devra par la suite étudier les recommandations du groupe, un exercice public par définition. « Une grande partie de leur travail sera de faire le recensement de ce qui se fait mieux ailleurs », a dit le premier ministre, avouant ne pas savoir si le groupe aurait le pouvoir de convoquer des témoins ou de saisir les documents dont il estime avoir besoin, comme une commission d'enquête.

À la période des questions, M. Couillard a souligné qu'il « serait fort surpris » que le comité ne propose pas de changements législatifs au gouvernement.

Contrôle resserré des mandats

Le ministre de la Sécurité publique, Martin Coiteux, donnera plus tard cette semaine une directive aux trois corps de police qui peuvent demander des mandats de perquisition à un juge - Montréal, Québec et la Sûreté du Québec. Avant de se présenter devant un juge, les policiers devront avoir soumis leur demande à la Direction des poursuites criminelles et pénales.

Les mandats de surveillance visant les journalistes seront soumis désormais au même niveau que ce qui est déjà en place pour les avocats, les juges ou les députés. « La demande devra passer par le filtre du DPCP qui devra évaluer si le niveau de preuve et de soupçon justifie une pratique intrusive », a expliqué M. Couillard.

Il faut, selon lui, « hausser considérablement » les exigences pour obtenir un mandat de surveillance visant un journaliste. M. Coiteux soutenait ne pas savoir si d'autres journalistes, dans le passé, avaient pu être visés par un mandat de surveillance.

La police « inspectée »

Le ministère de la Sécurité publique procédera à une « inspection des processus, avec une attention particulière pour les cas touchant les journalistes », mise en place par les trois corps policiers, sur leurs pratiques pour les mandats de surveillance. Le rapport du Ministère sera transmis au comité d'experts pour alimenter leur réflexion.

Les polices de Québec, Montréal et la Sûreté du Québec sont les seuls corps de police à pouvoir demander des mandats pour intercepter des communications. On va commencer par le SPVM.

« Aujourd'hui, est-ce qu'on a un objectif pour dire : telle personne doit être condamnée ? Aujourd'hui, non... Mais on veut faire toute la lumière. Si nos pratiques actuelles ne sont pas adéquates, on aura des recommandations pour les changer. »

-- Martin Coiteux, ministre de la Sécurité publique

Tant M. Couillard que le ministre Coiteux n'ont pas voulu commenter le travail de Philippe Pichet, le directeur du SPVM, mis sur la sellette lundi. On voulait éviter de commenter un cas où des recours judiciaires sont toujours en cours - les policiers visés par l'enquête controversée ont été accusés.

M. Couillard n'a pas voulu dire s'il faisait toujours confiance au directeur. « Il faut faire attention au lynchage, aux procès bâclés devant l'opinion publique. Il faut surtout parler à nos partenaires municipaux », a-t-il dit. La Ville « doit réfléchir là-dessus, mais surtout, gardons notre calme », a souligné le premier ministre.

Pour le ministre Coiteux, il serait difficile à Québec de forcer une revue de cette nomination « sur la base des informations qu'on a ». Il a expliqué avoir parlé avec le maire Coderre lundi et hier. « Le Service de police de la Ville de Montréal relève avant tout de la Ville, les questions doivent d'abord être adressées à la Ville et au SPVM », a-t-il soutenu.

Le chef demeure

Ces déclarations n'ont pas fait ciller le principal intéressé.

« Oui, je l'ai », la légitimité pour rester en poste, s'est limité à dire M. Pichet en après-midi, refusant de répondre aux questions des médias.

Dans la tourmente depuis la veille, il participait à une réunion habituelle de la Commission de la sécurité publique de Montréal, où les élus municipaux peuvent poser des questions aux responsables de la police.

« Ce que j'ai fait ce matin, j'ai convoqué mon comité de direction à 9 h. On a donné différents mandats. J'ai demandé à ce qu'on fasse un paquet de vérifications parce que vous avez soulevé de bons points », a-t-il dit en sortant de la réunion.

M. Pichet devra toutefois revenir devant cette même Commission pour s'expliquer plus longuement.

« La Commission de la sécurité publique [sera] mandatée afin d'étudier toutes les façons ou les procédés que le Service de police a lorsqu'il fait enquête [surtout avec la situation actuelle] sur les journalistes », a

dit Anie Samson, responsable de la Sécurité publique au sein du conseil exécutif. « Le Service de police aura à expliquer leur méthode. »

Mme Samson a affirmé que M. Pichet avait « entièrement [leur] confiance ».

Montreal Gazette
Quebec tightens rules for monitoring of journalists
Wednesday, 02 November 2016
Byline: Philip Authier

Montreal - With the premier saying journalistic freedom is a fundamental right, the provincial government is tightening the rules that allow police to obtain warrants to conduct surveillance of reporters.
And in a sign of how seriously Quebec considers the situation, Public Security Minister Martin Coiteux has ordered inspections of Quebec's main police forces including Montreal's and the Sûreté du Québec to verify their investigation practices.

"Concerned is too weak a word," Premier Philippe Couillard said Tuesday at a hastily called news conference.

"For me what is happening is serious. It's not something that can be treated lightly.

"We are faced with a major issue for a democratic society. I want to reassure the population and the media that I support them in their work, in the protection of journalistic sources.

"People have died in the name of freedom of the press. It is a fundamental freedom."

But despite calls from the opposition that the government either fire or suspend Montreal's police chief, Philippe Pichet, the government tread carefully, with Coiteux noting people have rights but refusing to affirm his confidence. Pichet's future is also chiefly the responsibility of Montreal and its executive committee, Coiteux said.

"We are not going to indulge in a public lynching operation," Coiteux said standing with Couillard. Later, Pichet told reporters in Montreal in his mind he still has the legitimacy to stay on the job despite the revelation of police spying on reporters including La Presse columnist Patrick Lagacé. The news has rocked the province and made international headlines.

Couillard announced new directives will be issued this week making it more difficult for the three police forces in Quebec that are allowed to make such requests to get warrants to conduct surveillance on journalists. From now on such requests have to be handled with kid gloves in much the same manner as they are for MNAs, lawyers and judges.

All requests now will be filtered by crown prosecutors at the Directeur des poursuites criminelles et pénales, which will determine if police suspicions are founded and not intrusive fishing expeditions.

"The level of difficulty to get such a warrant needs to be increased," Couillard said.

He also announced the creation of a panel of experts presided by a judge to make recommendations on improving the system. Couillard said he wants to give the committee, which will include police and media representatives, the time to do a good job.

Its report is due by the spring of 2017. Couillard did not exclude new legislation to protect journalistic sources.

Couillard's moves were met with a mix of approval and criticism by the two opposition parties, with Parti Québécois Leader Jean-François Lisée saying Quebec should send in the Bureau des enquêtes indépendantes, a provincial agency, to investigate the force's actions.

While Lisée supported the creation of the panel, he told Couillard in question period that all the parties should have a say in who sits on it.

There was no satisfying Coalition Avenir Québec Leader François Legault, who demanded the government hold a complete public inquiry into the actions of Montreal police.

He criticized Couillard for not saying one way or another whether he still has confidence in Pichet.

"I think right now there's a breach of confidence," Legault said. "Mr. Pichet must think about resigning."

Couillard's remarks came one day after it was revealed Montreal police spied on Lagacé through his cellphone, obtaining his call records and tracking his movements as part of what police called an internal probe of anti-gang squad officers.

It was later revealed police have been spying on other reporters using similar tactics. Some journalists have taken to using three or four cellphones each to avoid the police scans.

The Féderation professionelle des journalistes du Québec (FPJQ) said Monday it was "revolted" by the revelations and is pushing the government to launch a public inquiry on the way surveillance court orders are doled out.

Mark Bantey, a specialist in media law (who is also the Montreal Gazette's lawyer), said he was stunned by the scope of the warrant involved in the Lagacé case. He said it seems the police were more worried about who was leaking information to the press than the actual crime.

"It sure looks like they (the police) have gone overboard because they're not out there investigating a crime, but trying to determine who in the police department is leaking information to the press. You can't use search warrants to get that sort of information," Bantey said in an interview Tuesday. "There's an obligation to exhaust all other possible sources of information before targeting the media."

As for Couillard's new directive about obtaining search warrants, he called it a first step that was unlikely to bring an immediate change to police practices.

A better solution might be to adopt new legislation - a shield law - that protects media sources, he said.

Canadian Press
Tracking of journalist highlights need for guidance to courts: privacy czar
Wednesday, 02 November 2016
Byline: Jim Bronskill

OTTAWA _ Police surveillance of a Montreal journalist's smartphone suggests a need for clearer federal guidance to the courts, Canada's privacy czar says.
Parliament has a role to play in instructing the courts on when to grant police a warrant to obtain sensitive data, privacy commissioner Daniel Therrien told a House of Commons committee on Tuesday.

"This is a very worrisome issue," Therrien said under questioning at a meeting of the Commons information, ethics and privacy committee, which is conducting a review of the federal Privacy Act.

Montreal-based La Presse newspaper said this week it had learned at least 24 surveillance warrants were issued for columnist Patrick Lagace's iPhone this year at the request of city's police service.

The surveillance flowed from an internal probe into allegations police anti-gang investigators fabricated evidence.

Three warrants reportedly authorized police to get the phone numbers for all Lagace's incoming and outgoing texts and calls, while another allowed them to track the phone's location via its GPS chip.

"It's one thing to say that the courts are involved," Therrien said. "That's a good start. But this case leads me to believe that that's not adequate in itself. It may be useful to give the court tools so that they're better able to exercise their power."

Public Safety Minister Ralph Goodale said Tuesday the Supreme Court of Canada had already explicitly laid out the test that must be satisfied when police investigations intersect with media freedoms.

Goodale played down the need for any further direction.

"It's pretty clear in the Charter of Rights. I don't know how you could make it more clear than to embed it in the Constitution of Canada," he said after a cabinet meeting.

"If there are those in the federation of journalists or others who have recommendations to make about how this can be more abundantly emphasized, I would certainly be glad to receive their recommendations."

During question period in the Commons, NDP Leader Tom Mulcair pressed Goodale to reveal whether other media members were being monitored by police or spies, but the minister did not say.

"We're not talking about police stumbling into journalists," Mulcair said. "We're talking about police surveillance of the media in Canada in the 21st century. How can we believe this government respects press freedom when the minister refuses to say whether or not other journalists are currently under surveillance?"

Among Therrien's recommended revisions to the federal privacy regime is a call for agencies involved in law enforcement to publish regular reports on the requests they make to telecommunications companies for information about subscribers.

Therrien noted that many communications outlets produce such transparency reports about the data they hand over to police and spies.

"It's one thing for companies to do it. But the ones who should really be transparent are those who ask for and use the information," he said.

"I'm not asking them to reveal law-enforcement secrets, things that would impede lawful investigations, but there is a way for departments to be more transparent."

Globe and Mail
Quebec acts to protect press freedom after police tracking of journalists
Wednesday, 02 November 2016
Byline: Ingrid Peritz

The Quebec government has moved quickly with a series of measures to try to restore confidence in the judicial system and protect press freedom amid a widening controversy over the surveillance of journalists by police.
Premier Philippe Couillard announced his government would immediately send directives to the province's three largest police forces aimed at making it harder to obtain a search warrant against a journalist.

"People have died for the freedom of the press," Mr. Couillard said. "It's a fundamental freedom."

The announcement came in the aftermath of damaging disclosures that high-profile Quebec journalist Patrick Lagacé had been the target of a months-long covert police operation that tracked the calls and texts on his iPhone, and allowed law enforcement to follow his movements through the phone's GPS. Montreal police were seeking the source of an internal leak to the media.

The scope of the controversy appeared to grow on Tuesday after a Montreal daily said three of its journalists had also been the object of police attention. Citing police sources, Le Journal de Montréal said police brass did not obtain court warrants but had scrutinized the call logs of its officers to find out who had been speaking to the reporters.

The continuing revelations have caused a firestorm both in Quebec and in Ottawa. They also led to calls for the resignation of Montreal's police chief, Philippe Pichet, including from rank-andfile members of his force. The union representing Montreal police say a clampdown to find the sources of leaks to the media is evidence of a "witch hunt."

"There was already a very weak climate of confidence toward Chief Pichet and his administration, but now this confidence is broken," Yves Francoeur, head of the Montreal Police Brotherhood, told Radio-Canada.

Mr. Couillard sidestepped questions about the Lagacé case but, repeatedly invoking his commitment to a free press, announced three steps. The province will set up an expert panel headed by a judge that will include representatives of the police and media; it will make recommendations to the National Assembly that could include legislative changes.

The Ministry of Public Security will also begin an "inspection" of procedures at the province's largest forces - Montreal, Quebec City and the provincial Sûreté du Québec. The precise mandate was not clear.

And rules to obtain the kind of warrant that put La Presse columnist Mr. Lagacé in the police's sights - a process that has come under heavy criticism - will be tightened. Officers will have to get clearance from the Quebec public prosecutor's office before seeking a warrant before the courts.

"The level of difficulty to obtain a surveillance warrant for a member of your profession deserved to be increased," Mr. Couillard told a press conference in Quebec City. Journalists would be given the higher level of protection afforded to lawyers, judges and provincial legislators, he said.

In Ottawa, Public Safety Minister Ralph Goodale told reporters his government is open to toughening the rules that govern how and when the federal government can investigate members of the media.

"We'll look at the ministerial directive at the federal level to ensure that is appropriate and sufficient in the circumstances. If we think some additional adjustment needs to be taken, we'll make it," he said.

RCMP Commissioner Bob Paulson added he was not aware of "any ongoing investigations or surveillance activities against any journalists."

The role of justices of the peace is facing intensified scrutiny in light of the Lagacé controversy in Quebec. Police obtained 24 warrants to target the Montrealbased journalist, some from Justice of the Peace Josée De Carufel, a long-time lawyer for the Quebec government who had worked in the public prosecutor's office before being named in 2012.

A report this year found that 94 per cent of those nominated to become justices of the peace in the past nine years came from jobs in the civil service, including the prosecutor's office. The absence of private-sector candidates raises a problem with "the appearance of institutional bias," the report said. "The fact that the very large majority of justices of the peace had previously worked for the government could lead people to question their impartiality," it said.

Danièle Roy, head of the Montreal Association of Defence Lawyers, raised concerns about the "appearance of justice."

"Since most of them come from the public prosecutors' office and worked with police officers all their lives, you can ask yourself if they don't tend to be a little more indulgent toward them," she said.

Experts raised questions about the court's willingness to grant the warrants to monitor Mr. Lagacé.

"A search warrant is a gross invasion of privacy, and they [justices of the peace] have the authority to grant them," said lawyer Mark Bantey, a media law specialist in Montreal.

He said a judge or justice of the peace has to be convinced there are "reasonable grounds" that a search warrant will yield evidence related to the commission of a crime.

"I don't even think they satisfied the basic test [for Mr. Lagacé]. The real purpose was to find out his sources, not who committed a crime."

Montreal Gazette
Snowden to speak at McGill
Wednesday, 02 November 2016
Byline: Staff reporter

Montreal - The timing couldn't be better.
With many Quebecers in an uproar over police spying on La Presse reporter Patrick Lagacé, McGill University on Wednesday will welcome whistleblower Edward Snowden, who is wanted in the United States for giving classified material on U.S. surveillance programs to journalists.

Speaking via video link, Snowden, a former government contractor at the U.S. National Security Agency, will discuss surveillance in Canada.

The free public lecture is being organized by Media@McGill, an interdisciplinary hub focused on the study of contemporary media.

It will take place on Wednesday at 7 p.m. in the Leacock Building, 855 Sherbrooke St. W. Seats will be first come, first served, with a lineup starting at 5:30 p.m. Snowden's leaks revealed how the U.S. and other countries monitor global private communications.

He is now living in exile in Russia to avoid prosecution in the U.S. Last month, Snowden criticized Prime Minister Justin Trudeau for not repealing Canada's anti-terror law.

On Monday, Snowden tweeted about the Lagacé surveillance, quoting a Montreal Gazette story and warning journalists that police are spying on them to identify sources.

Snowden spoke via video link at Bishop's University in Lennoxville last fall.

For more information on his McGill lecture, visit Media@McGill's website.

Montreal Gazette
Police union wants chief's resignation
Wednesday, 02 November 2016
Byline: Michelle Lalonde

Montreal - The head of the Montreal police union said police Chief Philippe Pichet should be fired for allowing his officers to spy on journalists, calling the decision to track the cellphones of La Presse columnist Patrick Lagacé and at least three other reporters "unforgivable."
"It was a serious error in judgment and it is unforgivable," Yves Francoeur, head of La Fraternité des policiers et policières de Montréal told the Montreal Gazette Tuesday. "The SPVM is the second largest police service in Quebec and the fifth largest municipal

force in North America, so we need a strong leader."

La Presse reported Monday that police requested 24 search warrants to track Lagacé's iPhone since January, which allowed police to access the numbers Lagacé had called or received calls from and track him by activating a GPS mechanism on his phone.

At least three other journalists have since learned they were under similar surveillance by police - Félix Séguin of TVA, Monic Néron from 98.5 FM, and freelance journalist Fabrice de Pierrebourg.

Francoeur said the police chief should have been well aware that courts have already established the principle that surveillance operations on journalists should be as rare as those on lawyers and judges, and can only be justified in cases involving serious crimes, when all other methods have been exhausted.

"Trying to justify spying on journalists as part of an effort to resolve problems of internal management just doesn't hold water," Francoeur said.

He added that the union was aware that officers were being threatened by upper management about speaking to journalists in recent months.

"We sent a letter to our members telling them that if they were called into meetings about this (talking to journalists) that they should contact their union so we could provide them with a lawyer. We knew there was a climate of fear, a paranoia about leaks."

He added that as chief of such a large municipal force, Pichet sits on provincial, national and international committees that advise smaller forces and governments on major global issues such as terrorism and communication with media outlets.

"I don't see how Pichet can represent us now. He has lost all credibility and legitimacy." At a press conference where he announced he had ordered an inspection of the SPVM's surveillance policies, Premier Philippe Couillard stopped short of endorsing Pichet's leadership. Pichet was besieged by reporters on his way into a closed-door meeting of Montreal's public safety commission at city hall Tuesday afternoon. Asked if he felt he had the legitimacy to remain as police chief, Pichet replied tersely: "Yes, yes, I have it."

Pichet told reporters that he had seen the premier's news conference and would "fully collaborate" with the measures announced.

He added that he had met with his deputies Tuesday morning and that "verifications" of various questions that have dogged the department since news of the Lagacé story broke on Monday have been ordered.

"We have to check and validate whether all of this information is good," he said. "We can't answer those questions in a couple of hours."

Néron, a justice reporter at 98.5 FM since 2013, told the Montreal Gazette she had been tipped off months ago that her phone might be tapped by police. After she produced a column in June criticizing SPVM management for "muzzling" longtime police communications director Ian Lafrenière by transferring him to a new job, sources contacted her to warn her her phone might be tapped. She didn't believe it at first.

"But it defied understanding that we (journalists) would be spied on. And I was more focused on the threats and pressure that police officers were experiencing internally, and I put aside the idea that we could be targeted, thinking it couldn't happen. But you better believe it can happen."

But Deputy Director Bernard Lamothe told reporters that checks were being made into the reports that three other journalists were monitored by the Montreal police department.

"The information we have today is that three journalists are not under investigation," he said. "The checks we're making involve going back in time to see if, in the course of different investigations - not major cases, but what I'd call more simple cases, more regular cases ... a journalist had been looked at."

Earlier Tuesday, the directors of Quebec's major media organizations called on the provincial government to act to protect journalists' sources after learning that Montreal police were tracking Lagacé.

They published an open letter calling on Pichet to reveal which other journalists have been or are being spied on by police.

Among the signatories to the letter were the Montreal Gazette, Radio-Canada, La Presse, Le Devoir, the Journal de Montréal, Le Soleil and CTV News.

The media organizations called on the government to make it more "burdensome" for police to obtain a warrant for surveillance of a journalist.

Fourteen Montreal legal experts are also calling on the Quebec government to launch a public inquiry into spying on media outlets and reporters.

In a statement Tuesday, they said police surveillance of Lagacé "constitutes a serious infringement of constitutional guarantees."

They called the surveillance "a dangerous precedent" and complained that judicial power is often used to curtail freedom of the press. "Since our legal system is based on trust that citizens place in the courts, we have a responsibility to ensure that everyone's rights and freedoms are respected," the legal experts said.

The legal experts are Marc-Antoine Cloutier, Julien David Pelletier, Yves Ménard, Julius Grey, Patrick Taillon, Daniel Turp, Frédérick Bérard, Rémi Bourget, Félix-Antoine D. Michaud, Sophie Tremblay, Marie-Eve Gagné, Mireille Beaudet, Marie-Hélène Dubé et Catherine Ranalli. James Mennie and Kevin Mio of the Montreal Gazette contributed to this report mlalonde@postmedia.com

How Montreal police may have been able to spy on a journalist
Wednesday, 02 November 2016
Byline: Staff reporter

The Quebec government says it wants to make it more difficult to obtain a search warrant that would target a journalist, raising the bar to a higher level - on par with lawyers and judges.
The move, announced by Premier Philippe Couillard, comes after it came to light that La Presse journalist Patrick Lagacé was being spied on by Montreal police.

Through 24 issued surveillance warrants, the SPVM was able to obtain the identities of the people he spoke and texted with as well as to track his whereabouts via his iPhone's GPS.

But how were the Montreal police able to obtain that in the first place?

Cyberbullying law to blame?

It will only by known on Nov. 24 how the Montreal police obtained the warrants from a justice of the peace. That's the date the warrants will be unsealed.

Though some have pointed to the contentious anti-terrorism legislation, Bill C-51, as a catalyst for more invasive police tactics in Canada, Christopher Parsons, managing director of the Telecom Transparency Project at Citizen Lab, says a bill originally passed to curb cyberbullying may be to blame.

Bill C-13 amended the Criminal Code to allow police to, among other things, track an object, person, or transmission of data if the authorities have the suspicion or belief that doing so could assist an investigation.

Pasons said that Bill C-13 was "sold to the Canadian public as necessary to stop cyberbullying," but applies to the general public.

"These orders that were used to conduct surveillance on the journalist and his respective sources, those are all powers that can be used in ongoing investigations, so most Canadian citizens will be subject to them," he said.

What's more, the target of such surveillance "won't necessarily be notified that they were targeted by the surveillance unless charges are brought against them," Parsons told CBC. "So the police could conduct surveillance and the target would never know."

Parsons said Bill C-13 is serious legislation that was rushed through Parliament.

Critics already expressed concern that the bill gave police too much surveillance power when it was on the cusp of being approved in December 2014.

"What it really means we need to do is evaluate the existing powers, evaluate whether or not they should be granted to the police in their current format," Parsons said, adding that no one really knows how these surveillance powers are being used.

"We have an absolute deficiency in accountability, to be honest, at both the provincial and federal level," he said.

The justice of the peace

Regardless of the laws the police used to justify requesting the warrants, a justice of the peace had to approve them.

That's not so hard to do, according to criminal defence lawyer Jeffrey Boro, who added that in Lagace's case, "it was particularly easy."

That's because police only wanted to monitor Lagacé's metadata - tracking the numbers of all incoming and outgoing calls and texts. They did not want the content of his data, which would require a wire tap.

The latter "is the tool of absolute last resort," Parsons said, and the police would need to go to court instead of seeing a justice of the peace.

"Usually police know which justice to go see if they want to have a liberal interpretation of what it is they want to know," Boro said, adding that justices ask fewer questions and offer up less of a challenge.

"They take advantage of that when they have touchy cases," Boro said of the police.

To get the justice they want, police can find out when they're on duty and time their requests accordingly, he added.

"There's a certain familiarity that, let's say, is born between the parties, and the result is a certain laxity," Boro said.

The justice that approved most the surveillance warrants that targeted Lagacé's phone records used to work for the Crown Prosecutor, an agency that works closely with the office.

Parsons says Couillard's promise to better protect journalists from surveillance would be "relatively novel," but there are still unanswered questions as to what those protections are.

However, the fact that Montreal police chose to spy on Lagacé in the first place may point to "the cultures that have been built up within policing or security services," Parsons said.

Even CSIS, he said, "tends to place the monitoring of journalists alongside monitoring of academics or monitoring certain government officials, so they're fairly protected."

"The very fact that they were using these very, very invasive tools to monitor where the journalist was going and whom they were speaking with struck me as fairly extraordinary."

The Express Tribune
New leak shows Pakistani ISPs may have been hacked by the NSA
Wednesday, 02 November 2016
Byline: Tech Desk

Islamabad - A group called the Shadow Brokers has released a new cache of data purporting to be taken from the NSA in a Medium post titled "Trick or Treat" -- revealing hundreds of IP addresses apparently compromised by the NSA as part of its operations.
Interestingly, the majority of the nodes are located overseas, including compromises in China, Russia, India, or Pakistan, presumably to make it difficult for targets to attribute any attack launched through the network. At least four Pakistani Internet Service Providers (ISPs) are also part of the leaked list.

As with any anonymous leak of stolen data, it's possible the information was fabricated or altered in transit, although previous Shadow Brokers publications have proven to be genuine. The Medium post is also signed with PGP, thus verifying that it was written by the same source as previous Shadow Brokers drops.

In Pakistan, the compromised ISPs include PTCL gateway exchange in Lahore, Paknet (which was merged into PTCL in 2007), Multinet and Micronet.

The data dumped online by the group contains 352 distinct IP addresses and 306 domain names that purportedly have been hacked by the NSA. As indicated by the timestamps included in the leak, the servers were targeted between August 2000 and August 2010.

According to details, PTCL ITI Lahore 5 was targeted in May 2003, while Micronet and Multinet's severs were attacked in year 2000 and 2002, respectively. Interestingly, all compromised ISPs were running on Solaris, a Unix operating system originally developed by Sun Microsystems.

The development comes after online publication The Intercept reported in August that NSA hacked Pakistan's National Telecommunications Corporation (NTC) to spy on Pakistani civilian and military leadership.

According to an April 2013 NSA presentation, NSA hackers used SECONDDATE - a tool designed to intercept web requests and redirect browsers on target computers to an NSA web server - to breach

targets in NTC's VIP division. It said the targets contained documents pertaining to "the backbone of Pakistan's Green Line communications network used by its civilian and military leadership."

The identity of the Shadow Brokers is still unconfirmed, but a number of analysts have suggested the campaign is a way for Russia to undermine NSA capabilities. The most recent message from the group plays with that impression further, writing, "Amerikanskis is not knowing USSA cyber capabilities is being screwed?"

Iran Ready to Defuse Cyber Threats
Wednesday, 02 November 2016

Tehran - Deputy Head of Iran's Civil Defense Organization Brigadier General Mohammad Hassan Mansourian underlined his organization's full preparedness to confront the cyberattack and cultural invasion threats.
"Iran's Civil Defense Organization can defuse cyberattacks and cultural invasions," Brigadier General Mansourian said.

He underlined that the advanced countries are currently making huge investments in the field of civil defense.

Mansourian underscored that the cyberattack and cultural invasion should only be responded by the national civil defense system.

In May 2015, Head of Iran's Civil Defense Organization Brigadier General Gholamreza Jalali announced that the country has set up cyber defense workgroups to better coordinate measures for defending nuclear facilities against enemies' cyber attacks.

"The country's vital cyber infrastructures have been identified and separate cyber workgroups have been formed in all fields," Jalali told reporters in Tehran.

"For instance a cyber defense workgroup was set up in the nuclear field for Natanz nuclear installations and no serious incident has threatened this section in the past two years," he added.

In relevant remarks in October 2014, Jalali revealed that a US cyberattack on Iran's nuclear enrichment facility in Natanz failed due to his organization's tough defensive measures.

"The first cyberattack, codenamed Olympic Games, was carried out on Natanz and was declared by the US President, but it met our heavy (defensive) response," Jalali told reporters in a press conference in Tehran.

The senior commander said the US changed its cyber commander following the failure in the cyberattack on Natanz, adding that the US general was forced to retire several months ago "due to the wrong information and data that he had presented to President Obama". And this was the result of our direct confrontation with them, General Jalali added.

The US was the principal player in the most sophisticated cyber-attack ever known and has been orchestrating a campaign against Iran designed to undermine the country's nuclear program.

The New York Times came up with an in-depth report on June 1, 2012 saying that from the very first month Barack Obama took over as US President, he secretly ordered increasingly sophisticated attacks on Iran's computer systems that run the country's main nuclear enrichment facilities.

The disclosures about Obama's role in the cyberwar against Iran appear to show beyond doubt that the US, with the help of Israel, was behind the Stuxnet virus attack on Iran's centrifuge machines - used to enrich uranium. The revelation then indicated that Washington and Tel Aviv were also behind the Flamer and Duqu virus attacks discovered by experts in May 2012.

Codenamed Olympic Games, the attacks were spearheaded by the US government under the Bush administration. Stuxnet targeted Siemens industrial equipment to spin hundreds of centrifuges beyond their breaking points and eventually disable Iran's nuclear efforts.

According to the report, Obama decided to speed up the attacks, even after the worm escaped from Iran's Natanz plant in 2010 and later ended up on the Internet.

During a meeting following the worm's escape, Obama even considered that the worm should be stopped thinking that America's most ambitious attempt to slow the progress of Iran's nuclear efforts had been fatally compromised. Should we shut this thing down? Obama asked members of the President's national security team.

However, he finally decided to go ahead with the cyberattacks. What followed thereafter was the Natanz plant being hit by several newer versions of the worm.

The report is said to be based on 18 months of interviews with current and former American, European and Israeli officials involved in the program as well as with outside experts, who provided contradictory assessments of how successful the attack was in slowing down Iran's progress of developing nuclear weapons.

While internal Obama administration estimates claim the effort was delayed by 18 months to two years, some other experts, both inside and outside the government, said that Iran's enrichment levels had steadily recovered. A year later, Iran enriched uranium to the 20-percent grade, way beyond the 5-percent purity level that was done in Natanz in 2012.

The Australian Financial Review

Government agencies the new 'honey pots' for cyber spies

Wednesday, 02 November 2016

Byline: Fleur Anderson

Canberra - More than 40 per cent of Australia's government agencies have inadequate awareness of cyber security risks and could become the new "honey pots" of state-sponsored online espionage and cybercrime, a new investigation by private-sector cyber security experts has found.
The Australian National University's National Security College found smaller government agencies and medium-sized business were the weakest link in Australia's cyber security defences because they are not vigilant enough about "low-level" threats like malware and denial of service attacks.

Lead researcher Dr Tim Legrand, working in partnership with Macquarie Telecom Group, found it was very likely many attacks were not being reported to the federal government's Computer Emergency Response Team. This is despite a $230 million cyber security strategy introduced by Prime Minister Malcolm Turnbull in April.

"This means authorities may lack the accurate and comprehensive information needed to appropriately prioritise national cyber defence initiatives," the research paper said.

The security of government computer systems is in doubt after the Bureau of Meteorology was hacked last year by a foreign power, which installed malicious software to steal documents and compromise other government networks, and the botched 2016 Census which was "attacked" but not hacked by traffic from Singapore.

In addition, the Australian Federal Police and the Department of Innovation, Industry and Science - one responsible for catching cyber criminals and the other for cyber policy - to meet the government's own standard for cyber security in an Auditor-General's audit in May this year.

The latest report, to be launched on Wednesday by minister assisting the PM on cyber security Dan Tehan, found widespread weaknesses in security practices, and poor awareness by senior management.

Of 22 government agencies surveyed, 84 per cent have an individual chiefly responsible for cyber security but only 64 per cent of these sit on an executive team or board which indicated cyber risk management was not at the highest decision-making level.

About 41 per cent of the agencies' executives were described as having poor or limited knowledge of cyber risk and not one agency reported reviewing their cyber security monthly or weekly, in contrast with 31 per cent of the private sector which reviewed its security at least monthly.

"All businesses and agencies are interconnected to other businesses and parts of government in the modern digital economy, and becoming more so every day," Macquarie Government managing director Aidan Tudehope said.

ABC News
Senior Canberra bureaucrats under pressure to improve security processes
Wednesday, 02 November 2016
Byline: Lexi Metherell

Canberra - The Federal Cyber Security Minister says he will press heads of government departments to improve their security processes as research reveals they are a "weak link" in national defences against cyber attacks.
The ANU's National Security College and Macquarie Telecom Group surveyed employees responsible for cyber security at about 60 government agencies and medium-sized businesses.

About 40 per cent said their boards had limited or poor knowledge of cyber risks like hacking, espionage, malware or data breaches, and only around 60 per cent of cyber security managers are at executive levels.

Dr Tim Legrand from the National Security College said cyber security arrangements in the sectors are "shaky".

"There's a distinct lack of knowledge and awareness of the forms of vulnerabilities in cyber space that governments and private industry face," he said.

That lack of knowledge can lead to events like the attack that took the census offline, a case in which the Australian Bureau of Statistics , according to Dr Legrand.

"Often those who are in control of contracting out services don't know what they don't know," he said.

"They don't have sufficient levels of knowledge about the risks to be able to adequately assess a procurement contract, and I think that came through quite clear with what happened with the census attack."

Senior executives unprepared

After a , the Government announced in April it would spend $230 million on preventing cyber attacks.

The Minister Assisting the Prime Minister on Cyber Security, Dan Tehan, who is launching the report, said the Government would tell heads of departments to take cyber security seriously.

"What I will be doing is writing to all cabinet ministers asking them to point out to their departmental heads and agency heads the need for them to take cyber security very seriously," he said.

"[I will also urge] the need for them to make sure that there is reporting occurring at senior levels of the executive, and that there is someone responsible at the senior level of the executive for cyber security."

The managing director of the Australian Institute of Company Directors, John Brogden, admitted boards were playing catch-up.

"There's no doubt that the issue of cyber security has landed with a thud on the board table," Mr Brogden said.

"It's a worldwide problem being driven very strongly by organised crime, and it's true that in too many cases boards and companies are simply too slow to understand the size of the threat."

Mr Brogden said part of the issue was that technology so rapidly evolved and boards could not keep up.

"At the moment, the best guarantee any board can get from its management is that we're safe against cyber attacks now," he said.

"Literally the moment we say it, we don't know whether we're safe this afternoon tomorrow or next week because the technology's changing all the time."

Gulf Times
Qatar, UK working on digital system against cyber-attacks
Wednesday, 02 November 2016
Byline: Satyendra Pathak

Doha - British cyber-security experts are working in close cooperation with the Ministry of Interior (MoI) officials to map out 'digital defence' mechanism to protect FIFA 2022 World Cup from cyber- attacks, a London-based security advisor has said.
"We want to work closely with the Qatar government in preparing for the 2022 FIFA World Cup. The lessons of how and what we did to protect 2012 Olympics from cyber threats, we are very keen to share it with Qatar," Richard Freeman, senior police and security advisor at UK Defence and security organisation, told Qatar Tribune on the sidelines of the Milipol Qatar 2016 exhibition in Doha.

Large scale events such as the upcoming 2022 World Cup are more vulnerable to cyber-attacks, the expert said, adding that the UK is sharing classified intelligence with Qatar to deepen ties between the two countries' security agencies in the face of a burgeoning international threat from cyber warfare.

Cyber-security is still one of the biggest IT issues in Qatar with majority of organisations lacking the internal capabilities to protect against sophisticated cyber-attacks, he said. Freeman said that the Supreme Committee for Delivery & Legacy officials interact with British officials on a regular basis to protect information related to World Cup preparations from cyber espionage.

"The nature of cyber-attacks has changed over the years. Cyber espionage, which is stealing intellectual property, has emerged as one of the major threats. We prevented many such attacks before and during the 2012 Olympics. Qatar needs to invest heavily in protecting data, which is most valuable to them in organising the mega event," the expert said.

Citing awareness as a major tool to prevent cyber-attacks, Freeman said that British experts are also working with Qatari officials to create awareness among Qatari residents and citizens about such threats and ways to deal with them.

Talking about the importance of Milipol Qatar exhibition in cementing ties between British and Qatari entities, the expert said many British firms have struck many deals during the previous editions of the mega exhibition.

This year around 12 British companies are showcasing innovative products, he said, adding that booth visitors have shown great interest in the products on display. "UK companies are looking to enhance opportunities in Qatar through industrial partnerships and long term joint ventures.

We have a strong track record in organising major sporting events and we will continue to work with Qatar as they prepare for the 2022 World Cup and develop national security capabilities to support the wider 2030 vision," he said.

The Japan News
Train a cohort of IT security experts to fight cyberterrorism ahead of 2020
Wednesday, 02 November 2016
Byline: Staff reporter

Editorial: Both the public and private sectors should cooperate in nurturing manpower to protect the security of our information society.
The Economy, Trade and Industry Ministry has established a new national qualification system in which those who have advanced knowledge and skills in the field of cybersecurity will be registered as "IT security support providers." Examinations for qualification in this field will begin next fiscal year.

To fight cyberterrorism during the 2020 Tokyo Olympics and Paralympics, the ministry hopes to train at least 30,000 cybersecurity specialists.

Crimes committed via the internet have become more diverse. Hackers have stolen customer lists and credit card information from the computers of public organizations and private companies, and have tampered with websites. In some cases, they have demanded large sums of money in exchange for the data they have stolen.

The main tasks of IT security support providers would be to serve as a control tower to determine the weaknesses of in-house cybersecurity systems, augment their protection and make sure they can withstand cyber-attacks. They are also required to promptly deal with any breaches in security.

The planned examinations will be of the highest degree of difficulty among the tests related to information processing that have been conducted by the central government. Previous examinations have only resulted in the issuance of a certificate showing a passing grade, and did not extend a registered national qualification to the successful examinee.

Registered IT security specialists will be obliged to take annual training courses and pass an exam to upgrade their knowledge and maintain a high level of cybersecurity skills. It will be necessary to enhance the qualification's credibility in society by constantly reviewing the content of lectures to ensure they are up-to-date and of the highest level.

Firms must join in

The inauguration of the new national qualification system would be meaningless unless enterprises and organizations effectively use qualified experts. The government plans to draw up a list of registered security support providers, so business enterprises can refer to it when hiring IT security professionals.

It is important, first of all, to make it widely known that registered security specialists are at work.

Another essential need is for company managers to change their mind-sets. According to a 2013 survey conducted by an auditing firm that operates internationally, companies with executives who energetically take in-house cybersecurity measures totaled 59 percent in the world as a whole, while among Japanese enterprises it was a mere 27 percent.

If private information leaks from a business enterprise as a result of a cyber-attack, the company's credibility will be impaired. Taking cybersecurity measures is an important investment to ensure corporate defense.

If enterprises offer cybersecurity professionals preferential employment conditions, it will help generate a virtuous cycle of highly talented people aiming to become IT security support providers.

There are fears that the Tokyo Olympic and Paralympic Games may be easy targets of cyberterrorism.

In regard to ticket sales, competition management and other matters, the Olympics cannot be held without information technology. If a security system related to an event comes under a cyberterrorist attack, the Games will be thrown into utter confusion.

Reinforcing the security of transportation networks and financial systems is also vital. The skills of IT security support providers will be tested everywhere.

Jerusalem Post
Israel unprepared for 'dramatic uptick' in cyber threats
Wednesday, 02 November 2016
Byline: Yonah Jeremy Bob, Lidar Gravé-Lazi, Sharon Udasin

Jerusalem - Israel is woefully unprepared for the "dramatic uptick" in cyber threats confronting it, according to State Comptroller Joseph Shapira.
In a report released on Tuesday, Shapira explained that more and more of the country relies on electronic platforms, which are vulnerable to cyber attacks. He referred to the recent worldwide massive cyber hacks, and possibly to the cyber hacking interference in the US presidential election, to show the increasing volume and sophistication of the attacks.

The comptroller said that other than certain critical infrastructure sectors, which are well-protected, much of the country is still heavily exposed to cyber attacks.

Shapira's report, which deals mostly with economic issues, also criticized the Education Ministry, after an investigation found serious deficiencies in the management of the ministry's budget.

The report noted that the budget is one of the country's largest, at NIS 48.9 billion in 2015, not including the budget for higher education, and at NIS 50.9b. in 2016.

The comptroller said the last few years have seen a steady increase in the education budget in comparison with other OECD countries, but that despite this, Israel still has one of the largest educational gaps in the world.

The report cited the need to optimize the budget to minimize gaps in education, and bring the Israeli education system up to par with other OECD countries.

"The government in general, and the education and finance ministries in particular, have a duty to optimally realize all the resources intended for the education system, while constantly reviewing the allocation and outputs and the degree of attainment of the government's goals in the fields of education and society," the report concluded.

In another section, the report said that the Company for Location and Restitution of Holocaust Victims' Assets has "inadequately" prepared for the termination of its activities, set to end in December 2017.

The report found numerous failings by the company in tracking down and restoring assets to Holocaust victims' heirs.

The company's cost of operations up to the end of the year is estimated at some NIS 186m., most of which comes from the assets of those who perished in the Holocaust.

Since its establishment, the company has identified assets of Holocaust victims from various sources in Israel, totaling NIS 1.8b., although it has only returned NIS 280m. to heirs - approximately 15.6% of the total property located.

Shapira's report also took a look at a number of infrastructure issues, including a critique of the country's decentralized water corporations, the deficiencies of research institutes within the National Infrastructure, Energy and Water Ministry, malfunctions with the Transportation Ministry's driver's licensing department, and shortcomings in that ministry's budgetary planning.

Another area of focus was the country's natural gas distribution system, which the report described as failing to expand to meet the needs of consumers.

Shapira sharply criticized the government for the troubling rise in traffic fatalities over the past several years, finding particular fault with the operation of the National Road Safety Authority.

The comptroller also slammed the IDF for inadequate attention to safety issues, in particular the outbreak of fires and the failure to fully investigate them.

Moreover, he criticized the IDF for a lack of attention to proper recruiting and sorting of recruits according to their capabilities and potential contributions.

The IDF responded that it is already working on improving on both issues. The report also contained a section on upkeep and oversight of building in the Old City's Jewish Quarter.

Times of Israel
Watchdog says Israel unprepared for civilian cyber-threat
Wednesday, 02 November 2016
Byline: Shoshanna Solomon

Jerusalem - A new report by the Israel's State Comptroller Yosef Shapira has found that the nation is mostly unprepared to protect its civilian cyberspace in view of the growing intensity of cyber-threats globally.

"The findings of this report suggest that there are gaps between the intensity of the threat to the entire civilian cyberspace and the rate of response in terms of organization and staging of the state's defense, except for a few areas and sectors such as critical state infrastructure," the report said.

From September 2013 to July 2015 the State Comptroller's office held an audit on the country's preparations for the protection of cyberspace. The team examined a number of issues, including the formulation of a comprehensive defense approach to cyberspace; regulation of responsibility for dealing with the cyber-realm; regulation of the cyber-market; the setting up of bodies and systems for cyber-protection; and the level of protection required.

The team also evaluated the protection of the computer systems that are critical state infrastructure.

The audit was held at the National Cyber Bureau, which was set up in 2011 and is part of the Prime Minister's Office, and at the Shin Bet security agency and a number of government agencies and other entities.

The National Cyber Bureau was mandated with regulating responsibility for cyberspace and submitting a proposal for a comprehensive defense approach. Its establishment has in fact expanded the government's cyber-activities, the report said. Even so, the report found "gaps" between the intensity of the threat to the civilian cyberspace and the state's ability to respond.

The report said the government's implementation of decisions about the cyber-realm was slow and did not keep up with the rising threat against Israel; decisions regarding where cyber-defense responsibilities lie were "not clear enough"; and there were "significant flaws" in the work of the cyber bureau.

The report recommended that the cyber bureau set up an operational framework with yearly or multi-year milestones and define the scope of the civilian cyber-threat and how to address it.

A steering committee should make sure the Shin Bet's safety recommendations are implemented for critical national infrastructures and a system for reporting progress to the government is in place, including a set of quantitative measures for progress.

The government should "learn lessons"and "promote the required tasks in the field of cyber security preparedness," the report said. Large parts of the report, presented on Tuesday to Knesset Speaker Yuli Edelstein, were not allowed to be published due to confidentiality issues, the comptroller's office said.

Los Angeles Times
FBI faces high bar in Clinton case; Legal scholars say charges are unlikely, partly because of Comey's past remarks.
Wednesday, 02 November 2016

Byline: Del Quentin Wilber

Washington - Even if FBI agents discover classified information on a newly seized laptop, Hillary Clinton is unlikely to face criminal charges, according to legal experts and former federal prosecutors.
That's largely because the Justice Department and FBI Director James B. Comey have already declined to prosecute based on a legal conclusion that there was no evidence that Clinton and her aides intended to violate laws governing the handling of classified information, a key element of such a criminal offense.

To change the calculus, the FBI would have to find correspondence that clearly demonstrates Clinton or her aides knowingly broke the law, exchanged materials they knew to be classified or attempted to interfere with the investigation by withholding or destroying evidence, according to former federal prosecutors and legal scholars.

"Such an email itself would have to be one of those things you would be saying, 'I can't believe you wrote that down,' " said Roscoe Howard Jr., a former federal prosecutor and U.S. attorney for the District of Columbia during the George W. Bush administration. "I would be shocked if they found such a thing."

The chances of the bureau missing such evidence after what Comey had described as a comprehensive inquiry would be slight, former prosecutors said.

"Short of a truly inculpatory email, the existence of which I find hard to fathom, I don't see a situation that comes out of this that justifies the hoopla," said Stephen Vladeck, a law professor at the University of Texas.

The analysis comes as federal agents and analysts are scrambling to review emails found on a laptop used by former Rep. Anthony Weiner and his estranged wife, Huma Abedin, one of Clinton's closest aides. Agents came across Abedin's correspondence while searching the computer for evidence that the disgraced former lawmaker may have violated federal laws when exchanging sexually explicit messages with a 15-year-old girl.

During its nearly yearlong inquiry, the FBI interviewed dozens of witnesses, conducted forensic tests and examined tens of thousands of messages that passed through the private email server used by Clinton and some of her aides while she was secretary of State.

In the end, agents uncovered classified information in 193 emails that were part of 81 email chains, though none of the emails were marked with a classified header. Of those chains, the department concluded that eight should have been treated as top secret, the highest level of classification, the FBI reported.

"So if there were 100 examples of classified information before and now they find 10 more, how is that going to change the analysis?" asked Peter Zeidenberg, a former federal prosecutor who signed a public letter critical of Comey's decision last week to publicly reveal the new inquiry. "It's the same question. It's the same issue. That's even assuming the emails they find on the laptop are classified emails. There may all be duplicates, or emails that don't have any classified information. We don't know."

And even if agents discover evidence that warrants an indictment, Comey's past public statements could undermine a future prosecution, legal experts said.

Defense lawyers would certainly seek all records associated with his public announcement in July, when he declared Clinton's actions were "careless" but not criminal.

An about-face by the FBI would permit defense attorneys to attack the thoroughness of the entire investigation, pointing out that it failed to turn up Abedin's emails on a laptop she shared with her husband.

"A classic defense in any criminal case is to accuse the investigating law enforcement agents of 'shoddy police work.' " said Mary Pat Brown, a former federal prosecutor. "When there are inconsistencies in the evidence itself, or any delays or missteps in collecting evidence, the government's case is vulnerable to attack."

Comey's unusual move to publicly discuss the case with reporters and Congress in July was in part to demonstrate that the bureau's inquiry was meticulous and independent.

But Vladeck said his action could now backfire. "Those statements make it difficult for there ever to be a prosecution," he said. "Comey laid a trap for himself in July."

Perceptions that the new emails won't dramatically change the case are part of the reason Clinton supporters were so incensed by Comey's surprise and vague announcement last week that the bureau would examine the materials over the coming weeks.

Agents are hoping to have a preliminary assessment of the Abedin emails completed by election day, though it remains unclear whether the FBI will make a further public statement about the case, despite calls for more information from Democrats and Republicans.

Agents will need to sort out Abedin's emails, discard duplicates and then examine what's left to see whether anything is relevant to the Clinton inquiry, a federal law enforcement official said.

The laptop contains hundreds of thousands of emails -- most of them Weiner's -- and it will take weeks to fully vet them, the official said.

London Times
Cyberforce seeks 50 elite brains
Wednesday, 02 November 2016
Byline: Mark Bridge

London - Workers with no background in technology will be recruited to an "elite" force to defend the nation against cyberattacks through a ten- week bootcamp.
As part of a £1.9 billion National Cyber Security Programme announced yesterday, the government will launch the free training course in London next year to turn people looking for a career change into codebreakers.

In a move reminiscent of the War Office's use of a Telegraph cryptic crossword to recruit for Bletchley Park in 1942, the government will use psychometric tests to identify 50 brilliant brains. Once selected, they will complete exercises including dealing with a nationwide cyberattack. They will also study the mindset of hackers.

The government said that, if successful, the GCHQ-certified scheme would later be introduced nationwide. According to the SANS Institute, the private company running the bootcamp, it will cram two years' worth of training into the ten-week schedule.

Students on the course would be tracked by leading cybersecurity employers and would be ready to secure jobs on completion.

It added that the programme was targeted at "high-aptitude people" looking to retrain -- including soldiers, doctors and nurses.

Matt Hancock, the minister for digital and culture, said: "This new academy will give students the skills the nation needs to fight cyberattacks and help us achieve our ambition of making the UK the safest place to live and do business online."

The course is part of a package of measures including the creation of a cybersecurity research institute and funding for start-ups working on novel security tools. In its National Cyber Security Strategy document, the government identified "Russianlanguage organised criminal groups" in eastern Europe and state and statesponsored groups as major threats. Speaking at a technology conference, Philip Hammond, the chancellor, spoke in dramatic terms about the risks if Britain did not prepare adequately to meet the threat from cyberattacks that could potentially bring down the power network. He said: "We would be left with the impossible choice of turning the other cheek, ignoring the devastating consequences or resorting to a military response."

David Emm, principal security researcher at Kaspersky Lab, said: "The steps taken by the government to educate individuals across different job disciplines are indeed positive. However, as the government has

very specific national security needs in mind, they are in the best position to determine what level of training is sufficient."

London Daily Telegraph
Russia is organising a cyber-coup in America
Wednesday, 02 November 2016
Byline: Con Coughlin

Column - In the world of global espionage it used to be the case that, if you wanted to stage a coup, what you needed was a rebel group that was prepared to drive its tanks through the gates of the presidential palace and overthrow the ruler.
The Cold War saw the CIA spend a fortune funding groups dedicated to overthrowing regimes deemed to be either unfriendly to Washington or too close to the Soviet Union. Iran, Iraq, Guatemala, Vietnam, Laos, Haiti, Zaire, Cuba, Chile: no corner of the world was spared Langley's determination to shape the global political landscape to Washington's liking.

Nor were the Americans alone in fomenting unrest and discord. The Soviet Union was just as active in its efforts to proselytise the merits of communism, while the primary role of Britain's MI6 intelligence service was to infiltrate the highest echelons of Moscow's military and intelligence establishments, a mission where it achieved remarkable success.

If the old Cold War marked the high-water mark for the oldfashioned military coup, then the new one that Russian President Vladimir Putin seems determined to launch against the West will be fought with a higher level of sophistication.

No one in Washington seems in any doubt that Moscow has been behind the release of thousands of Hillary Clinton's personal emails that are seriously undermining her attempt to win the presidential election for the Democrats. As with Edward Snowden, the whistleblower who exposed sensitive details concerning America's intelligencegathering operations, the Clinton revelations have been made through Julian Assange's WikiLeaks website.

This has resulted in the unlikely scenario where Donald Trump, the maverick Republican contender, is now publicly heaping praise on a website that prides itself on its Leftwing, anti-establishment credentials. Does Mr Assange really want to go down in history as the man who put Donald Trump in the White House? The more troubling point, though, is the direct impact Russia's skillfully managed cyber-offensive on the American political system could have on next week's poll.

Mrs Clinton has made it clear on the campaign trail that, if she wins, she will take a more robust approach towards Moscow than we have seen from the White House during Barack Obama's presidency. Denying Mrs Clinton victory, then, is very much in Russia's interests, particularly if it results

in a victory for Mr Trump, who has yet to provide a satisfactory explanation about the close links between his own advisers and the Russian government.

Irrespective of who wins next week's contest, though, the real concern is that the precedent has been set whereby a hostile government can seek to change the political landscape of a rival nation without having to fire a shot in anger.

For in the increasingly sophisticated cyber age in which we live, it is far easier and cheaper to undermine opponents through carefully targeted internet attacks than assembling and funding rebel armies. Moscow's ability to undermine the fundamental infrastructure of government is well known in Ukraine, where a Russianbased cyber attack closed down the country's power grid.

But it is the ability of cyber warriors to invade the political space that is causing most concern.

Apart from interfering in the American democratic process, Russian hackers were most likely behind a massive cyber attack on Germany's lower house of parliament this year which resulted in its computer systems being closed down for days.

Andrew Parker, the head of MI5, says Britain, too, is a major target for Moscow, with the Russians willing to use "propaganda, espionage, subversion and cyberattacks" to undermine the Government. Nor is Russia the only country employing cyber as a tool of aggression. China, North Korea and Iran are among a number of countries that are known to have developed sophisticated cyber capabilities.

As the most sophisticated cyber attacks are directed from countries with authoritarian regimes, the challenge for Western democracies is to be able to defend themselves without having to compromise the liberties of their citizens.

The first line of defence for countries like Britain against cyber Armageddon is for firms and individuals to take far greater care with their internet security, whether regularly changing passwords or updating anti-virus software.

The sheer scale of the threat, though, means that governments must be just as prepared to protect themselves against unwelcome interference in their political institutions as they are for attacks against their national infrastructure.

Otherwise the day will surely come when powerful democratic states are brought to their knees simply by clicking a mouse.

The Guardian (London)
Cybersecurity firm fails to find links between Donald Trump and Russian bank
Wednesday, 02 November 2016

Byline: Julian Borger

Washington - A US cybersecurity firm hired by a Russian bank to investigate allegations of a secret line of communication with the Trump Organization said on Tuesday there was no evidence so far of substantive contact, email or financial links.
Mandiant, which is owned by the California-based company FireEye, said it examined internet server logs presented to the bank by media organisations investigating the link.

The online magazine Slate published a story on Monday about communication between a server hosting Trump domain addresses and a server owned by the Moscow-based Alfa Bank, owned by two oligarchs, Mikhail Fridman and Pyotr Aven. Aven worked with Vladimir Putin in city government in St Petersburg in the early 1990s.

The Slate story, quoting a range of cybersecurity experts, said the communication between the servers suggested it was human rather than robotic, and that it was intended to be secret and exclusive.

In a statement, FireEye said it had been presented with a log of the communication between the servers over a period of 90 days, listing the separate contacts.

"The information presented is inconclusive and is not evidence of substantive contact or a direct email or financial link between Alfa Bank and the Trump campaign or Organization," the statement said. "The list presented does not contain enough information to show that there has been any actual activity opposed to simple DNS lookups, which can come from a variety of sources including anti-spam and other security software."

The statement continued: "As part of the ongoing investigation, Alfa Bank has opened its IT systems to Mandiant, which has investigated both remotely and on the ground in Moscow. We are continuing our investigation. Nothing we have or have found alters our view as described above that there isn't evidence of substantive contact or a direct email or financial link between Alfa Bank and the Trump campaign or Organization."

The allegations have triggered debate among security experts in the US, in the midst of a fierce political row over the role of the FBI. Democrats have decried the decision of the FBI director, James Comey, to notify Congress of the discovery of new emails relevant to its inquiry into Hillary Clinton's use of a private server while secretary of state, without making public parallel investigations into Trump's ties to Russia.

Computer scientists quoted in the Slate story said that the Trump server had a capacity for mass email but was only being used for a small amount of traffic, nearly 90% of which was with servers from a single organisation, Alfa Bank.

"The parties were communicating in a secretive fashion. The operative word is secretive. This is more akin to what criminal syndicates do if they are putting together a project," said Paul Vixie, a software expert and one of the creators of the domain name system (DNS) that guides communication on the internet.

Robert Graham, a cybersecurity expert and head of Errata Security, dismissed the claims as "nonsense". He said the domain in question, trump-email.com, was actually controlled by Cendyn, a company that handles marketing for hotels, including Trump's hotels.

Graham also argued that there was no sign of human communication between the servers, which appeared to be looking up each other's IP (internet protocol) addresses, the first step towards establishing communication. The logs show that two Alfa Bank servers sent a total of more than 2,700 lookup requests to the Trump email server.

"The requests are spread out evenly throughout the day, with no correlation to time zones," Graham said in an email. "This would indicate automated tools looking up incoming spam addresses, not humans sending email. If it were sign of human activity, we would see spikes around 9am when people got to work and 1pm when they got back from lunch."

John Bambenek, a consultant with Fidelis Cybersecurity, who has also studied the logs, said there were unanswered questions about their provenance and authenticity.

"The identity of the person bringing the data can be more important than the data," Bambenek said. "I'm suspicious of the claims that this was gathered legally. They tell an interesting story, but it's not clear whether there is selection or filter applied ... I smell smoke. I just don't know where the smoke is coming from.'

L Jean Camp, a professor of informatics at Indiana University, said there were still a lot of unanswered questions about the communication between the servers.

"It doesn't act like a marketing server. Because you wouldn't use a heavy-duty mailer with over 80% of its communication with just one organisation," Camp said. "I don't know of any marketing campaign that would do that."

According to Slate, the Trump email domain was hastily reconfigured after a New York Times reporter approached Alfa Bank about the connection in September. On Tuesday, the New York Times reported that the FBI had spent weeks looking into the Alfa-Trump logs but concluded that "there could be an innocuous explanation, like a marketing email or spam, for the computer contacts".

Washington Times
Huma Abedin handled classified data on computer shared with Anthony Weiner

Wednesday, 02 November 2016
Byline: Ben Wolfgang, Andrea Noble

Washington - Emails released by the State Department over the past 18 months show that Huma Abedin frequently handled classified information -- suggesting a major reason why the FBI has been eager to get a full look at the personal computer she shared with her now-estranged husband.
That computer has become the center of a major political flap in the final week before Election Day. Ms. Abedin's boss, former Secretary of State Hillary Clinton, is trying to fend off concerns that there is a smoking gun still to be found among her top personal aide's messages.

But the track record indicates a reason for concern: Of the messages Mrs. Clinton turned over to the State Department, nearly 5,000 were sent to, or received from, Ms. Abedin. More than 180 of those contain information now determined to be "confidential," and one message is deemed to contain "secret" information.

In the "secret" message, Ms. Abedin forwards to Mrs. Clinton information about a 2009 ballistic missile test by North Korea.

"It is frankly remarkable that the FBI and Justice Department are only now investigating Abedin's connection to Clinton's mishandling of classified information," said Tom Fitton, president of the watchdog group Judicial Watch, which has sued to try to get to the bottom of the Clinton-Abedin connection at the State Department.

The Weiner investigation is the latest involving the Clintons and those in their circle. It joins a reported investigation earlier this year into the Clinton Foundation; another into campaign donations to Virginia Gov. Terry McAuliffe, a longtime fundraiser and political ally; and the renewed look at Mrs. Clinton's handling of classified information.

Whether anything on the Abedin-Weiner computer is relevant to the investigation into Mrs. Clinton, which the FBI closed in July, is heatedly debated.

Mrs. Clinton's team insists there is nothing to be found, and they have excoriated FBI Director James B. Comey for publicly announcing less than two weeks before an election that he is looking at the new emails.

Ms. Abedin's attorneys say the longtime Clinton aide -- who is virtually guaranteed to get an influential White House post if Mrs. Clinton defeats Republican Donald Trump on Election Day -- was wholly unaware that any of her messages were on Mr. Weiner's computer.

"From the beginning, Ms. Abedin has complied fully and voluntarily with State Department and law enforcement requests, including sitting for hours-long interviews and providing her work-related and potentially work-related documents," her attorney, Karen Dunn, said in a statement Monday night. "She

only learned for the first time on Friday, from press reports, of the possibility that a laptop belonging to Mr. Weiner could contain emails of hers."

She said Ms. Abedin will be "forthcoming and cooperative" with the latest FBI investigation, which surely will drag past the election.

Mrs. Clinton briefly addressed the controversy on Monday by acknowledging that voters had questions about the FBI inquiry, But during an appearance in the battleground state of Florida on Tuesday, Mrs. Clinton dropped all references to the investigation and instead slammed Mr. Trump's past statements about women.

"Some of what we've learned, some of this stuff is very upsetting," she said before reciting some of Mr. Trump's most inflammatory comments.

Mr. Trump and fellow Republicans, meanwhile, have tried to keep attention focused on the FBI's renewed probe, saying it shows voters what to expect if Mrs. Clinton wins the White House.

Indeed, the Clinton family and its allies have faced an extraordinary number of investigations over their quarter-century in Washington.

"There's an interesting circumstantial case to be made how much smoke there has been surrounding the Clintons over the years," said Chris Jenks, a law professor at Southern Methodist University and a former attorney adviser at the State Department.

In addition to the investigation of Mr. Weiner, whose sex- related text messages may have been sent to a juvenile, the FBI also reportedly pushed this year to open public corruption probes of the Clinton Foundation, citing concern about rewarding donors with special political access and favors.

The Justice Department, which last year found insufficient evidence to open a case, declined to investigate, CNN reported.

"We are not aware of any investigation into the Foundation by the Department of Justice, Federal Bureau of Investigation, or any United States Attorney's Office and we have not received a subpoena from any of those agencies," the Clinton Foundation said in a statement.

But the difference of opinion between FBI agents and Justice Department prosecutors roiled investigators, according to The Wall Street Journal, which this week reported that agents from the FBI's New York field office continued to pursue a case until at least as recently as August. That month, a senior Justice Department official called Andrew McCabe, the bureau's second in command, "to voice his displeasure at finding that New York FBI agents were still openly pursuing the Clinton Foundation probe during the election season," The Journal reports.

News also leaked this year that the FBI was investigating Mr. McAuliffe, who in addition to being a political ally also served as a board member of the Clinton Global Initiative, an endeavor of the family's charitable foundation.

News reports from May indicated that the investigation involved $120,000 worth of donations made to Mr. McAuliffe's 2013 campaign by Chinese businessman Wang Wenliang. Mr. Wang's companies also donated $1 million to $5 million to the Clinton Foundation, and investigators were reportedly probing the legality of the campaign contributions.

When news of the probe leaked in May, Mr. McAuliffe said he had "no personal relationship" with Mr. Wang and that a team of lawyers vetted his campaign donations, finding that Mr. Wang had held a green card since 2007, making him eligible to donate.

The Washington Post reported this week that federal investigators have also been looking into Mr. McAuliffe's time on the board of the foundation.

Analysts say the sheer number of investigations surrounding Mrs. Clinton will raise questions in the minds of voters. Because those investigations are likely to continue into next year, they could dog Mrs. Clinton if she wins the White House.

Rep. Jason Chaffetz, Utah Republican and chairman of the House Oversight and Government Reform Committee, has already said there is plenty of room for investigations.

Mr. Jenks, the SMU professor, said that could immediately strain relations between Congress and Mrs. Clinton and her staff.

"It's going to be painful," he said.

Russian hackers have launched repeated cyber attacks on UK government intranet, senior source says
Tuesday, 01 November 2016
Byline: Toby Meyjes

London - Russian hackers have launched sustained cyber attacks on the UK government intranet, a senior source has revealed, amid growing tensions between the countries.
The hackers have tried repeatedly to access the government's intranet, the source told metro.co.uk, as well as disrupt the gov.uk web addresses its various departments use.

It is understood that the attacks have targeted all government departments rather than one in particular and the threat posed by Russian cyber attacks is one of the biggest the UK government faces.

It comes on the same day the director general of MI5 Andrew Parker said the Kremlin was becoming 'increasingly aggressive' in its approach to its foreign policy, including cyber attacks.

And just last week it was feared an attack had been launched on the government website after it crashed on more than one occasion, although it is understood this was due to a coding error.

The government has not directly commented on the threats to the intranet but they do tally with Mr Parker's claim that Russia had been carrying out a 'high volume' of 'out of sight' activity.

He told the Guardian: 'It is using its whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways - involving propaganda, espionage, subversion and cyber- attacks.

'Russia is at work across Europe and in the UK today. It is MI5's job to get in the way of that.'

But those claims were denied by Kremlin spokesman Dmitry Peskov who said they do not 'correspond to reality'.

He said: 'We do not agree with them, and claims regarding cyber-attacks we have already commented on.

'No-one has yet given any evidence so we cannot consider claims that are not founded on evidence.'

Metro.co.uk did approach the Kremlin about the specific allegations but has not yet had a response.

The head of MI5's claims come as the Investigatory Powers Bill returned to the House of Commons on Tuesday so MPs could consider amendments made by peers.

Ministers are determined to complete the Bill's passage through Parliament by the end of the year, when many of the spying powers in the compromise Data Retention and Investigatory Powers Act 2014 expire.

Elsewhere, Chancellor Philip Hammond unveiled the Government's new cyber-security strategy, insisting the UK would 'strike back' if it comes under attack.

Part of the strategy will see increased funding for the education of IT professions on the threats facing the UK.

James Tolfree, from Cryptzone, said the Government's apparent change in thinking was positive for UK cyber security.

Clinton Emails Could Help ex-NSA Contractor Who Took Terabytes Home, Attorneys Say
Tuesday, 01 November 2016
Byline: Steven Nelson

Washington - In the four years Hillary Clinton sent and received State Department correspondence using a private and insecure email system, Harold T. Martin III allegedly stockpiled classified information inside his Maryland home and an unlocked shed.
Martin faces charges for alleged theft of government documents and mishandling classified information that carry up to 11 years in prison, and he's been behind bars since his August arrest, with prosecutors saying they intend to file more serious Espionage Act charges, often used by the Obama administration to go after leakers and whistleblowers.

Though prosecutors have not alleged the now-fired Booz Allen Hamilton contractor -- who worked for the National Security Agency six years before a transfer to the Pentagon last year -- is a spy or that he shared the information or allowed it to be accessed by a third party, they do allege he could be responsible for one of the largest security violations ever and knowingly mishandled classified records working various jobs over two decades.

Defense attorneys for prominent whistleblowers, accused leakers and careless clearance-holders say that unless more damning evidence emerges they could see Martin making a successful plea for leniency by pointing to the Justice Department's decision this summer not to prosecute Clinton.

There are, of course, key differences in the cases, with volume the most glaring. The FBI found that Clinton, the Democratic nominee for president, sent or received 110 emails that had classified information at the time they were sent, with eight email threads containing top secret information. Martin, by contrast, allegedly had many printed pages marked as being classified and 50 terabytes of potentially classified data (equivalent to roughly 500 million pages), much of it believed to be considered top secret.

Martin also allegedly confessed knowing he was not allowed to take the information home and that he initially lied to investigators. Clinton, by contrast, insists she never knowingly sent or received classified information using her private email server and repeatedly told the FBI she could not recall specifics.

"The Clinton case and the Martin [case] do have different facts. However, it is problematic that the severity of punishment in these cases has been based not on the facts of each case, but whether or not the accused is powerful and politically connected," says Jesselyn Radack, an attorney who has represented whistleblowers Edward Snowden, Thomas Drake and John Kiriakou.

"The defense could seek leniency given the conclusion in the Clinton email case that extreme carelessness was not enough for charges," she says.

Indeed, after the FBI announced in July that it would not recommend charges against Clinton, some defense attorneys said they would seek "the Clinton deal," a sarcastic term meaning leniency for alleged misconduct.

FBI Director James Comey said in July that Clinton was "extremely careless" and had put classified information at risk of interception, but that the bureau could not establish that she intentionally mishandled records, and that without intent "no reasonable prosecutor" would bring a case. He subsequently told Congress that Clinton lied to the public, but not the bureau -- a crime that ensnares many defendants.

The first test of the so-called "Clinton deal" defense came in August when former Navy machinist mate Kristian Saucier unsuccessfully requested probation after admitting he took photos of a nuclear submarine. He was sentenced to one year in prison for unlawfully retaining national defense information by keeping the photos, which were discovered on an old phone at a landfill.

Saucier is currently in prison for the photos, which he insisted were taken as innocent keepsakes to show his future children, but his attorneys say a forceful push to connect Saucier's case to Clinton's may have worked. The judge, who rebuffed a six-year sentence requested by prosecutors, noted the comparison from the bench.

"Whether it worked or not is up in the air... was there some leniency based on that? I don't know, it's possible," says Greg Rinckey, one of Saucier's attorneys.

As Martin is accused of doing, Saucier admitted he knew he was not allowed to take the photos and that he initially lied to investigators. He also admitted destroying evidence.

Rinckey says a clear takeaway for low-level officials unacquainted with criminal investigations is that they should not answer interrogator questions without an attorney present. Sometimes they mistakenly believe they can talk their way out of trouble, he says, and in so doing provide evidence against themselves.

"I think this Clinton defense would be used in this NSA individual's case on sentencing. Is it going to protect him from being convicted? No. But on sentencing is it going to be used? I think it will be," Rinckey says.

Another test of the "Clinton deal" defense is approaching as Marine Reserves Maj. Jason Brezler challenges the military's decision to fire him for storing on his personal computer a report about a corrupt Afghan official, which he sent as a warning to troops before an apparent sexual abuse victim of the official murdered three Marines.

Mark Zaid, a defense attorney who has represented many whistleblowers and people accused of mishandling classified information, says he could see Martin's attorneys being successful citing Clinton when asking for a lower sentence.

Examples of powerful people accused of mishandling records can help put the case into context, Zaid says.

Zaid says he secured a "Petraeus deal" for a client -- probation and a fine -- after former CIA Director David Petraeus was given that penalty last year when he admitted providing highly classified information to a biographer with whom he was having an affair and then lying about it to the FBI.

Zaid says many people with security clearances are accused of improperly taking home records, either for personal reasons or to finish work assignments on a deadline, but that the massive scale of Martin's stash points to intent. He says his client who cited Petraeus, who he declined to name, took home classified information to read, some of it dating back to the Cold War.

"It's unfortunate that the courts tend to look at the smaller fries as the ones to try to set the bigger examples," Zaid says. "What I'd like to see is the higher ups are leading by example and their punishment is meant to send a signal to everyone beneath them."

James Wyda, a federal public defender representing Martin, did not respond to a request for comment, but in court filings has described him as a patriot who did not damage U.S. national security.

Martin reportedly was caught when authorities investigated the theft of computer code from the NSA that was posted online earlier this year by the Shadow Brokers, an individual or group that offered additional code for sale before calling off an auction.

Prosecutors have given some hints that Martin may be more than a classic hoarder. In arguing against pre-trial release, they note although he does not have a valid passport, he did have 10 guns -- some previously unknown to his wife and including a loaded handgun in his car. Also in his car, authorities found "a printed email chain marked as 'Top Secret' and containing highly sensitive information."

On the back of the printed emails are "handwritten notes describing the NSA's classified computer infrastructure and detailed descriptions of classified technical operations," prosecutors said, as well as "descriptions of the most basic concepts associated with classified operations, as if the notes were intended for an audience outside of the intelligence community unfamiliar with the details of its operations."

"The Hillary Clinton story isn't over yet," Rinckey adds. "It's going to depend on what they find on Anthony Weiner and Huma [Abedin]'s laptop."

The FBI informed Congress on Friday that it is reviewing additional emails that may be relevant to the Clinton email probe. Those emails reportedly were found on a computer used by Weiner, the estranged husband of top Clinton aide Abedin. Weiner resigned from Congress in 2011 after tweeting a photo of his crotch. After repeatedly sending sexual messages on Twitter, he came under FBI investigation for communications with a minor.

The Guardian (London)
UK must build cyber-attack capability, chancellor says
Tuesday, 01 November 2016
Byline: Jessica Elgot

London - The UK must strike back at hostile states in cyberspace and be capable of mounting sophisticated cyber-attacks of its own in place of military strikes, the chancellor has said.
Philip Hammond said that unless the UK could match the cyber-attack abilities of foreign rogue states, the alternatives would only be to ignore digital attacks on Britain's infrastructure or use military force.

Launching the government's £1.9bn national cybersecurity strategy, Hammond said the UK had to develop "fully functioning cyber-attack capability".

He said: "If we do not have the ability to respond in cyberspace to an attack that takes down our power networks, leaving us in darkness, or our air traffic control, leaving us in darkness, we would be left with the impossible choice of turning the other cheek and ignoring the devastating consequences or resorting to a military response."

Hammond said the world's next great conflict was likely to at least begin in cyberspace, before guns were loaded.

"There is no doubt in my mind that the precursor to any future state-on-state conflict will be a campaign of escalating cyber-attacks, to break down our defences and test our resolve before the first shot is fired," he said in a speech on Tuesday at Microsoft's Future Decoded conference.

Hostile states appeared to believe cyber-attacks were far less risky, Hammond said. "Kinetic attacks carry huge risk of retaliation and may breach international law, but in cyberspace those who want to harm us appear to think that they can act scalably and deniably," he said.

Hammond said the new funding, which doubles the amount set out in 2011 in a similar strategy, will "allow us to take even greater steps to defend ourselves in cyberspace and to strike back when we are attacked".

Speaking before the launch, Cabinet Office minister Ben Gummer said cyber warfare was "no longer the stuff of spy thrillers and action movies ... Our adversaries are varied - organised criminal groups, 'hacktivists', untrained teenagers and foreign states."

The funds will focus on defences for critical infrastructure such as energy and transport. Websites impersonating government departments will be shut down much more quickly, and efforts will be made to crack down on spoof email accounts used in fraud cases. The reforms include a new cyber-innovation centre in Cheltenham.

Hammond's announcement came as Russia rebuffed claims made to the Guardian by the head of MI5, Andrew Parker, that the Kremlin is behind hostile manoeuvres against Britain.

Parker told the Guardian that Moscow was "using its whole range of state organs and powers to push its foreign policy abroad in increasingly aggressive ways - involving propaganda, espionage, subversion and cyber-attacks. Russia is at work across Europe and in the UK today. It is MI5's job to get in the way of that."

"Those words do not correspond to reality," said Kremlin spokesman Dmitry Peskov on Tuesday. "Until someone produces proof, we will consider those statements unfounded and groundless."

Pourquoi un tel fichier ? Que contient-il ? Qui peut le consulter ? Quelle conservation ?
Wednesday, 02 November 2016
Byline: Journaliste maison

Paris - Le fichier des « Titres électroniques sécurisés » (TES) vise à remplacer deux fichiers existants : le Fichier national de gestion (FNG) relatif aux cartes nationales d'identité et celui du système TES lié à la délivrance des passeports. Le nouveau fichier qui a été créé par le décret n° 2016-1 460 du 28 octobre 2016 collectera toutefois davantage de données que les deux fichiers qu'il remplacera (lire ci-contre). L'un des objectifs affichés par le gouvernement est de lutter contre la fraude et ce dernier assure qu'il n'y aura pas d'identification administrative, mais une authentification automatisée et élargie.
Les données pourront être consultées par les agents chargés de réaliser les documents mais aussi par une très impressionnante liste de personnes, « pour les besoins exclusifs de leurs missions. ». Ainsi les agents des services de la police nationale et les militaires des unités de la gendarmerie nationale chargés des missions de prévention et de répression des atteintes aux intérêts fondamentaux de la Nation et des actes de terrorisme, individuellement désignés et dûment habilités auront accès au fichier. Idem pour les agents des services spécialisés du renseignement. Idem pour les agents de la direction centrale de la police judiciaire, individuellement désignés et dûment habilités (à l'exclusion de l'image numérisée des empreintes digitales). Les données pourront être par ailleurs partagées par le système de sécurité de Schengen et par Interpol. « Dans le cadre de ces échanges, des données à caractère personnel peuvent être transmises aux autorités compétentes des États membres d'Interpol aux seules fins de confirmer l'exactitude et la pertinence du signalement d'un titre perdu, volé ou invalidé. »

Les informations contenues dans le TES seront conservées pendant 15 ans pour les passeports et 20 ans pour les cartes d'identité (10 ans et de 15 ans lorsque le titulaire du titre est un mineur).

Les données relatives au demandeur ou au titulaire du titre. Il s'agit là du nom de famille, du nom d'usage, des prénoms; de la date et lieu de naissance; du sexe; de la couleur des yeux; de la taille; du domicile ou de la résidence ou, le cas échéant, de la commune de rattachement de l'intéressé ou de l'adresse de l'organisme d'accueil auprès duquel la personne est domiciliée; des données relatives à sa filiation (les noms, prénoms, dates et lieux de naissance de ses parents, leur nationalité). Il y a aussi le cas échéant, le document attestant de la qualité du représentant légal lorsque le titulaire du titre est un mineur ou un majeur placé sous tutelle; l'image numérisée du visage et celle des empreintes digitales qui peuvent être légalement recueillies; l'image numérisée de la signature du demandeur de la carte nationale d'identité; l'adresse de messagerie électronique et les coordonnées téléphoniques du demandeur (lorsque celui-ci a choisi d'effectuer une pré-demande de titre en ligne ou a demandé à bénéficier de l'envoi postal sécurisé, ou sur déclaration de l'usager lorsqu'il souhaite être informé par ce moyen de la disponibilité de son titre). Le cas échéant, le code de connexion délivré par l'administration au demandeur pour lui permettre de déclarer la réception de son passeport lorsque ce titre lui a été adressé par courrier sécurisé.

Les informations relatives au titre d'identité. Il s'agit du numéro du titre; du type de titre; du tarif du droit de timbre; de la date et du lieu de délivrance; de l'autorité de délivrance; de la date d'expiration. Le fichier TES peut aussi mentionner, avec la date, l'invalidation du titre et son motif (perte, vol, retrait, interdiction de sortie du territoire, autre motif), la restitution du titre à l'administration, sa destruction. Le fichier mentionne également les justificatifs présentés à l'appui de la demande de titre. D'autres données techniques sur l'établissement, la demande et la remise du titre sont inscrites dans le fichier.

Les données relatives au fabricant du titre et aux agents chargés de la délivrance du titre. Il s'agit là de répertorier les nom, prénom et références de l'agent qui enregistre la demande de titre; l'identifiant du fabricant du titre.

Enfin, le ficher comporte l' image numérisée des pièces du dossier de demande de titre.

South China Morning Post
Cyber law aimed at foreign hackers
Tuesday, 01 November 2016
Byline: Viola Zhou

Beijing - Beijing has proposed a revised internet law to punish foreigners who hack Chinese websites as it steps up its campaign against cyberattacks it blames on the West.
Although it was hard for governments to identify those behind cybercrimes, the move paved the way for China to take legal action against other states, analysts said.

The proposed cybersecurity law changes would let the government freeze assets of foreign individuals or groups if they damaged China's key information infrastructure, Xinhua reported. Police would apply "other necessary punishment" to those outside the country who attacked, intruded, disrupted or harmed Chinese websites, according to the revised draft quoted in the report.

The draft had been sent to the Standing Committee of the National People's Congress for approval, Xinhua said.

China claims to be a victim of global cybercrimes, reporting growing numbers of attacks from overseas every year. Last year, authorities found more than 64,000 "control points" that had been controlling Chinese websites with malware from abroad, a 52 per cent rise from 2014, according to a government website.

In 2013, Xinhua called the US the top source of hackers who planted malware in its servers.

Hong Kong security analyst Michael Gazeley said hackers usually launched attacks through other people's servers so it was hard to bring them to justice.

Beijing denies Washington's claims that it is behind cyberattacks on US government, military and corporate computers.

In 2014, China accused the US Justice Department of "fabricating facts" after it charged five members of the PLA over attacks on six US corporations.

Liu Deliang, an internet law professor at Beijing University of Posts and Telecommunication, said that while it was difficult to freeze hackers' assets, the threat of doing so was a warning to institutions and countries that might launch cyberattacks on China.

Khaleej Times
Hackers turn to connected devices to launch attacks
Tuesday, 01 November 2016
Byline: Bernd Debusmann Jr.

Dubai - Cyber security experts warn that the rapid proliferation of cameras and other "Internet of Things" (IoT) devices may mean an increase in cyber attacks as the world - particularly the UAE - moves towards the concepts of "smart cities".
Such fears were starkly highlighted earlier in October, when hijackers used hundreds of thousands of Internet-connected household devices and cameras to launch a devastating cyber attack in which many popular websites, including Twitter, Netflix, Amazon and the New York Times were significantly slowed down or completely knocked offline.

In a separate incident, in September 145,000 hacked cameras were used to bring down security news website KrebsOnSecurity for over 24 hours.

"The Internet of Things has become a crucial part of our day-to-day activities, especially with the introduction of what we call smart cities, such as is the trend in Dubai and the UAE," said Mohammed Abukhater, Regional Director for the Middle East and North Africa at FireEye, a security company. "Aside from all of the good things the Internet of Things brings to us, such as cameras and connected devices ... all of them have a risk."

"Most people are not aware of the risk," he added. "But recent attacks have specifically targeted simple devices that are connected to the Internet. Those then can be utilised to attack more important or more sensitive websites or organisations."

Abukhater noted cyber criminals and hackers have increasingly turned to connected devices as platforms for their attacks, as they lack sophisticated security measures.

"These are simple devices that give benefits to people, but they are lacking security measures," he noted. "From a vendor's point of view, they need to quickly meet people's needs so they introduce easy-to-manage devices."

"These are good targets for attackers to use in many ways," he added. "Some of them can use them to generate massive amounts of junk data that can be directed to important websites, and overwhelm servers."

Abukhater noted that there is a variety of motives for such cyber attacks. In some cases, it could be politically motivated. In other cases, the primary motive could be theft. In one recent instance, hackers managed to overwhelm a jewellery shop's security system, allowing thieves to enter.

Additionally, Abukhater noted that the massive proliferation of Internet-enabled security cameras may mean an increase in cyber attacks in the UAE. According to market research company 6Wresearch, the market for surveillance cameras in the UAE will rise to $197.8 million by 2021.

"This shift puts us at risk of being targeted by hackers, for personal reasons, political reasons, or even state-sponsored attacks," he said.

"But the good thing here is that the government of the UAE and Dubai are putting very good protection measures," he added. "But you can never guarantee a 100 per cent secured environment against such hackers."

Gulf News
IT security spend in Mena to reach $1.3b this year
Tuesday, 01 November 2016
Byline: Naushad K. Cherrayil

Dubai - Spending on Information security technology and services is on pace to reach $1.3 billion in 2016 in the Middle East and North Africa, an increase of eight per cent over 2015.
Greg Young, research vice- president at Gartner, said that increased awareness about the business impact of security incidents is causing organisations to focus their security strategy on detection and response approaches, which is driving this growth.

"Enterprises in the region are the targets of some of the world's most advanced attacks, as well as the highest rate of attacks. Organisations are trying to increase detection, blocking, and advanced defences while faced with limited availability in the security workforce," he said.

According to recent stats, the UAE is now the second most targeted country after the US. However, Young said that spending growth is not that great when compared to last year, and it is not that organisations are investing much but the organisations can consume only this much.

There is a big shortage in skilled workforce and approximately 50 per cent of positions are going unfilled. About 86 per cent of senior IT and business professionals believe there is a shortage. It takes longer to hire them and they don't stay that long, he said.

By 2019, Gartner expects 30 per cent of large enterprises to increase their security consulting services as they transition into digital business.

"Large organisations in the region continue to invest in building out security operations capabilities either in house or by leveraging external services offered by managed security services providers," he said.

He said that organisations recognise the inevitable adoption of cloud and virtual IT and shift their defences to an adaptive security architecture. Organisations should look for, and secure, shadow IT whereby IT has been adopted outside the normal IT procurement and management processes.

Gartner expects a third of successful attacks experienced by enterprises will be on their shadow IT resources by 2020.

He said that targeted attacks, ransomware and denial of service attacks are the most relevant threats to enterprise today, however they are enabled by failing patch vulnerabilities and overloading security personal with alerts.

"99.9 per cent of attacks in the coming years will be based on product vulnerabilities that were known for at least a year by security and IT professionals," he said.

CNBC
FBI's Comey opposed naming Russians, citing election timing: Source
Tuesday, 01 November 2016
Byline: Eamon Javers

Washington - FBI Director James Comey argued privately that it was too close to Election Day for the United States government to name Russia as meddling in the U.S. election and ultimately ensured that the FBI's name was not on the document that the U.S. government put out, a former bureau official tells CNBC.
The official said some government insiders are perplexed as to why Comey would have election timing concerns with the Russian disclosure but not with the Huma Abedin email discovery disclosure he made Friday.

In the end, the Department of Homeland Security and The Office of the Director of National Intelligence issued the statement on Oct. 7, saying: "The U.S. intelligence community is confident that the Russian

Government directed the recent compromises of emails from U.S. persons and institutions, including from U.S. political organizations. ... These thefts and disclosures are intended to interfere with the U.S. election process."

An FBI spokesperson declined to comment on Comey's role in the decision- making surrounding the Oct. 7 statement.

According to the former official, Comey agreed with the conclusion the intelligence community came to: "A foreign power was trying to undermine the election. He believed it to be true, but was against putting it out before the election." Comey's position, this official said, was "if it is said, it shouldn't come from the FBI, which as you'll recall it did not."

Comey took a different approach toward releasing information about the discovery of emails on a laptop that was used by former congressman Anthony Weiner and his estranged wife Huma Abedin, the official said.

"By doing a press conference, and personally testifying and giving his opinion about the conduct, he made this about James Comey and his credibility," the official said. "You can see why he did it, from his perspective, once he had had that press conference."

The official said FBI investigators can get a "preliminary read" of the newly discovered emails within a couple of days and come to an initial conclusion about whether there is classified material in the files. "The questions is whether they will decide to share that read or not," the official said. "Normally in the FBI we would not, but we're not in normal land anymore."

Comey's decision to announce the new investigative steps has come under severe criticism from Democrats, including Hillary Clinton who addressed the issue at a rally Monday.

"I'm sure a lot of you may be asking what this new email story is about and why in the world the FBI would decide to jump into an election with no evidence of any wrongdoing with just days to go. That's a good question," Clinton said. "I am sure they will reach the same conclusion they did when they looked at my emails for the last year. There is no case here."

The Donald Trump campaign, meanwhile, has praised Comey for continuing to investigate Clinton. "The right thing to do is whatever the FBI thinks," said Trump campaign manager Kellyanne Conway on CNBC Monday morning. "It's not for us to say speed it up because of the election or slow it down because of the election."

BBC News
UK to increase national cyber-defence grid
Tuesday, 01 November 2016

Byline: Staff report

London - Automatic defences to stop hackers hijacking websites or spoofing official domains will get a boost from a £1.9bn government cybersecurity strategy.
Chancellor Philip Hammond will give details of the plans in a speech later.

Other defences that intercept booby-trapped emails or shut down thieves impersonating bank websites will also be expanded.

The strategy will also help enlarge specialist police units that tackle organised online gangs.

Some cash will go towards education and training of cybersecurity experts.

Mr Hammond is expected to formally launch the scheme, called the National Cyber Security Strategy, on Tuesday.

The plans will set out action needed to protect the UK economy and the privacy of British citizens, and will also encourage industry to ramp up efforts to prevent cyber-attacks.

Mr Hammond said Britain "must now keep up with the scale and pace of the threats we face".

"Our new strategy... will allow us to take even greater steps to defend ourselves in cyberspace and to strike back when we are attacked," he added.

Ben Gummer, paymaster general, said in a statement: "No longer the stuff of spy thrillers and action movies, cyber-attacks are a reality and they are happening now.

"Our adversaries are varied - organised criminal groups, 'hacktivists', untrained teenagers and foreign states."

Finding talent

The £1.9bn to pay for the national strategy was allocated last year and will fund the programme until the end of 2020.

In its strategy, the government explained what some of the money has been spent on already.

With the aid of industry, it has set up automated systems that limit how much malware and spam reaches UK citizens. Other projects have helped the government verify where emails come from to thwart specific tax fraud campaigns aimed at the UK.

Future spending plans involved cash for recruiting more than 50 specialists who will work at the cybercrime unit at the National Crime Agency. These will help tackle organised gangs and aim to raise the cost of engaging in hi-tech crime to make it much less attractive.

The cyber-plan will also involve the creation of a Cyber Security Research Institute that aims to unite researchers across the UK's universities to work together on improving defences for smartphones, laptops and tablets.

Security-based start-ups will also get help via an innovation fund that will commercialise work on novel tools and defences.

A national scheme will also be set up to retrain "high-aptitude professionals" as cybersecurity experts.

Prof Alan Woodward, a computer security expert from the University of Surrey, said he hoped the government spent cash on the "high volume, low sophistication attacks" that plague people and cause the majority of financial losses.

"I hope the £1.9bn will be spent in growing talent," he said. "The government talk about 50 recruits here and 50 there. I'm afraid we need many more."

Prof Woodward said it was getting "increasingly difficult" to persuade young people to study computer science and getting them to try cybersecurity was "a real headache".

"I would really like to see money put into reaching young people early enough to influence the subjects they decide upon at school and pairing an image for them of just how interesting and rewarding a career in cybersecurity can be," he said.

The Guardian (London)
Philip Hammond to spend extra £1.9bn fighting cyber-attacks
Tuesday, 01 November 2016
Byline: Anushka Asthana, Jessica Elgot

London - Outdated computer systems are allowing malicious hackers to target everyone from companies at board level to individuals in their living rooms, according to the chancellor, who is promising to strike back against cyber-attacks.
Philip Hammond will use a speech on Tuesday to unveil a £1.9bn package designed to boost Britain's defences against a growing online threat, which he will say is invading personal privacy and putting national security at risk.

Speaking before the launch, Hammond said Britain must "keep up with the scale and pace of the threats we face" and insisted that the new funding will "allow us to take even greater steps to defend ourselves in cyberspace and to strike back when we are attacked".

The money - which almost doubles the amount set out for a similar strategy in 2011 - will be used to improve automated defences to safeguard citizens and businesses, support the cybersecurity industry and deter attacks from criminals and "hostile actors".

Hammond will say the steps are needed because the cost of crimes in cyberspace globally is $445bn (£365bn), and will argue that society is becoming more vulnerable because of the way in which devices connect.

The government also fears that "old legacy IT systems used by many organisations in the UK" are increasingly susceptible to hackers who find them easier to crack.

Hammond will promise government support but insist that chief executives have a duty to ensure their companies are secure.

The Cabinet Office minister, Ben Gummer, said: "No longer the stuff of spy thrillers and action movies, cyber-attacks are a reality and they are happening now. Our adversaries are varied - organised criminal groups, 'hacktivists', untrained teenagers and foreign states.

"The first duty of the government is to keep the nation safe. Any modern state cannot remain secure and prosperous without securing itself in cyberspace. That is why we are taking the decisive action needed to protect our country, our economy and our citizens."

The money for the new national cybersecurity strategy will be used to focus on defence, including protecting critical infrastructure such as energy and transport.

It is intended that websites impersonating government departments will be shut down much more quickly, and efforts will be made to crack down on spoof email accounts used in fraud cases.

The second plank of the policy will be to target those who persistently attack Britain, with a promise to deploy more than 50 specialist cybercrime investigators, currently being recruited.

There will also be more funding to improve the security of smartphones, tablets and laptops.

The reforms include a new cyber- innovation centre in Cheltenham.

Tim Berners-Lee, the founder of the world wide web, speaking on Radio 4's Today programme on Tuesday said: "Clearly we have seen the internet can be attacked and the United Kingdom needs to have

strong, but responsible and accountable police forces and GCHQ has to have the tools to defend us and defend the open internet.

"I don't think we'd want to make a first strike, but when you are being attacked by a whole lot of domestic appliances, then the way you defend yourself is striking back, by taking over those machines yourself. On the internet, offence and defence really are very related.

"If you buy something and plug it into the internet, for example your webcam, is that it comes with a password set in a factory. So if you as a consumer buy one and plug it in, you better put a password on it not because someone particularly wants to look in your own house, but because an automated machine could be taking over all webcams."

Le Devoir
Hydro-Québec cherche à se prémunir contre la menace des cyberattaques
Friday, 02 December 2016
Byline: Karl Rettino-Parazelli

Montréal - La société d'État s'associe à une nouvelle chaire de recherche
Les systèmes informatiques d'Hydro-Québec sont souvent la cible de cyberattaques, qui sont pour l'instant demeurées sans conséquences. Face à une menace réelle et croissante, la société d'État a néanmoins senti le besoin de participer à la création d'une chaire de recherche, lancée jeudi à Montréal, pour prévenir les attaques de demain.

L'Université Concordia a annoncé la mise sur pied de la Chaire de recherche industrielle sur la sécurité des réseaux électriques intelligents et les attaques cyberphysiques, qui est notamment le fruit d'un partenariat avec Hydro- Québec et l'entreprise Thales, laquelle se spécialise dans la protection des systèmes informatiques. Elle est dotée d'un budget de 2,2 millions de dollars sur cinq ans, dont 500 000 $ proviennent d'Hydro-Québec.

Protéger le réseau

Le titulaire de la chaire, le professeur Mourad Debbabi, mettra à contribution une équipe de 25 chercheurs pour développer des techniques permettant de détecter, de prévenir et d'atténuer des cyberattaques. L'objectif est d'améliorer la sécurité de l'ensemble du réseau électrique québécois, dit-il.

" Toute plateforme qui intègre des technologies de l'information et de la communication est susceptible d'être attaquée, explique celui qui travaille dans le domaine de la cybersécurité depuis près de 20 ans. Ce n'est pas quelque chose d'hypothétique. C'est une menace qui est réelle. "

"Attaques quotidiennes"

Pour s'en convaincre, note-t-il, on n'a qu'à penser à la cyberattaque qui a paralysé une partie du réseau électrique ukrainien en décembre 2015. L'utilisation d'un logiciel malveillant a plongé dans le noir près de 700 000 personnes, ce qui en ferait la plus importante attaque du genre à survenir dans le monde, estiment les analystes.

" Toute infrastructure qui est pilotée par des logiciels et qui emmagasine des informations variées est la cible d'attaques quotidiennes dans le monde. Hydro-Québec fait partie du lot. Il y a en permanence des tentatives d'intrusion ", affirme sans détour le directeur principal de l'Institut de recherche d'Hydro-Québec, Jérôme Gosset.

" En date d'aujourd'hui, Hydro-Québec n'a pas eu à déplorer de conséquences ", précise-t-il.

La société d'État refuse de dévoiler le nombre de cyberattaques auxquelles elle est confrontée annuellement en invoquant des raisons de sécurité. Elle fait cependant valoir qu'elle met tout en oeuvre pour protéger ses systèmes et bloquer les tentatives d'intrusion.

En bref, les attaques potentielles pourraient généralement prendre deux formes : l'interruption du service, ce qui entraînerait des pannes de courant, ou encore la collecte des données des clients, lesquelles sont par exemple récoltées grâce aux compteurs intelligents.

Dans sa documentation présentant la technologie de ces compteurs de nouvelle génération, Hydro-Québec se montre rassurante en indiquant que " les données transmises sont sécurisées, car elles sont cryptées et anonymes. C'est seulement dans les systèmes d'Hydro-Québec que ces données sont décryptées, puis associées à un client particulier au moyen d'une clé unique. "

" Nous avons tout un tas de systèmes de surveillance et de contrôle pour éviter que des personnes malveillantes ne s'infiltrent, renchérit M. Gosset. Ce qu'on cherche à faire avec la chaire, c'est de préparer l'avenir, de faire évoluer les technologies de défense, de comprendre comment les cyberattaques peuvent évoluer et de préparer des solutions pour garantir la continuité du service. "

Ottawa Citizen
Shared services vows to improve as email project pushed out to 2018
Friday, 02 December 2016
Byline: James Bagnall

Ottawa - For once, Shared Services Canada met its deadline. On Thursday, as promised, the federal government's computer services agency said how it would correct certain deficiencies in its operations identified early this year by Auditor General Michael Ferguson. In a report it delivered to the House of Commons committee for public accounts, the agency promised it would do a better job providing key information-technology services to the 43 departments it deals with, and spelled out the level of service the latter could expect. For instance, government call centres, data centres, email and other telecommunications services are to be available 24 hours a day, 365 days a year - with outages to be fixed in most cases in less than four hours.
But these are statements of intent about services, to be judged later as to progress. Shared Services has yet to finalize its revised plan for actually upgrading the government's electronic backbone, the more difficult part of its mandate. This part of the plan will be presented to the public accounts committee after it wins approval from the Liberal cabinet. It's not clear when that will be.

The report presented Thursday by Shared Services suggests the upgrade overall isn't proceeding well. For one thing, Shared Services is now targeting March 2018 for the delivery of the $400-million government-wide email system that was supposed to have been completed by March 2015. Contractors Bell Canada and CGI Group have encountered a number of technical roadblocks owing in part to revisions in the email platform. This is one of three key jobs assigned to Shared Services.

Not only is Shared Services trying to consolidate 63 email systems into one, it is also decommissioning more than 500 data centres to make way for a handful of super centres, and streamlining government telecommunications services ranging from mobile phones to video conferencing.

The original target for getting all this done was 2020, including the transfer of some 14,000 software applications from old data centres to new ones. Shared Services insiders no longer believe this target can be met.

On top of this, Shared Services is facing the potential loss of part of its mandate.

Treasury Board, the cabinet committee responsible for setting the government's IT policy, finally responded last June to pressure from individual federal departments upset at Shared Services' less-than-stellar progress in modernizing its IT networks.

Treasury Board opened the door to eventually allowing private sector firms such as Amazon Web Services and Microsoft to perform the role of data centre. They would do so by offering pay-as-you-go storage (hosting) services through what the industry calls the cloud - networks of third party computers shared by multiple customers or federal departments.

Details were few but these will be on offer in coming weeks when Shared Services issues a request for proposals for the provision of cloud services. The most likely scenario for the moment is that Shared Services will continue to build and operate its new data centres in Borden, Barrie and Buckingham, Que. Crucially, however, Shared Services would also play the role of broker, which means it would no longer be the monopoly supplier of data services. The agency would vet qualified cloud suppliers and make sure that federal departments' plans for using them are sound.

Shared Services noted Thursday in its response to the auditor general that it "will challenge its customers (federal departments) to build the right cases for using cloud services, while serving as public stewards to ensure that services delivered always meet the government's highest standards of security, availability and value."

The danger for Shared Services is that its 43 customers - the federal departments forced to rely on the agency for data storage - will eventually exercise their right to choose. Exactly when will depend on the soon-to-berevealed cloud services procurement. Treasury Board revised its cloud services policy after commissioning a report from Gartner Group, a consultancy. Gartner was not impressed by Shared Services' ability to keep current on a number of technology fronts. It predicted that even if the agency configured its new data centres to offer cloud services, Shared Services' ability to innovate, reduce costs and react to sudden changes would be "constantly outpaced" by third-party providers such as Amazon Web Services.

There will likely always be a role for Shared Services in storing classified data, but this represents a small minority of the government's total. For the rest, it may have little choice but to compete for the business by trying to get better at what it does. Indeed, there was more than a hint in its response to the auditor general that Shared Services was seeking a role that would secure its place at the centre of the government's IT world.

"Notwithstanding the many challenges, the creation of SSC remains a sound government decision," the agency reminded us Thursday. "The idea that each federal organization would modernize its IT infrastructure by building independent systems one by one is simply not viable," it added.

But, increasingly, Shared Services recognizes that viability also depends on being able to deliver. It has precious few months to show that it can. jbagnall@postmedia.com Twitter.com/JamesBagnall1

Al Jazeera
Qatari news website raises 'censorship' concerns
Friday, 02 December 2016

Doha, Qatar - An English-language news website in Qatar has raised the issue of "censorship" after it was blocked by the country's two internet service providers simultaneously for reasons unknown. Doha News, which has operated for eight years in the capital, said in a statement on Thursday the site's URL has been inaccessible by internet users inside the country since Wednesday - with the exception of those with access to a VPN (virtual private network) or unfiltered corporate internet. The website was available to those outside of Qatar, however.

Omar Chatriwala, a co-founder of Doha News, told Al Jazeera: "We're reaching out to authorities to understand why this has happened. Although there's been no public or official comment on the matter, our initial discussions with them have indicated this won't be immediately resolved."

The two internet service providers, Vodafone Qatar and state-controlled Ooredoo, declined to comment.

Earlier, when the site's administrators tried to divert followers to another domain name, the new URL was also blocked soon after, the Doha News statement said. "We are incredibly disappointed with this decision, which appears to be an act of censorship," it said.

There was no immediate response from the Qatari government. Some Qataris took to social media saying they were upset at the news site being blocked, while others said they supported the move because of overly critical reporting by Doha News.

Times of India

Congress Twitter hacking: Server traced to Bengaluru, IP address in Scandinavia
Friday, 02 December 2016
Byline: Somreet Bhattacharya

New Delhi - Delhi police registered two FIRs on Thursday following a complaint that the Twitter handles of Congress and its vice-president Rahul Gandhi were hacked. Police said a case under Section 66 of the IT Act was registered and a probe has been initiated.
Sources said that preliminary investigation revealed that the server from where the hackers had logged in was based in Bengaluru. However, the IP address they used was found to be in Norway or Sweden.

Police suspect that Rahul's account might have been accessed from a device that did not have an updated anti-virus software or from a compromised IP address. They said that the hackers might have logged in from multiple IP addresses to make tracking difficult.

Sleuths suspect that a malware existed on the computer system from which both the accounts were accessed. They called the modus operandi "spear phishing", where the email account used to create the Twitter handle or the Twitter account itself is hacked using phishing software.

A cyber security team under DCP Anyesh Roy has been formed to probe into the full dump of the INC mail id. A request has been sent to Twitter to access the related information that the hackers had used to create their Twitter profile.

The Hindu
For hackers, it's open season on Congress
Friday, 02 December 2016
Byline: Devesh K. Pandey

New Delhi - The Congress's website was on Thursday taken down and hundreds of e-mail and Twitter accounts of its members, including those of several senior leaders, were disabled following a series of massive cyber attacks on the server that hosts the services. The hackers have threatened to make public the e-mail contents by Christmas.
Based on complaints, the Delhi Police have registered two FIRs under Section 66 of the Information Technology Act and sought the service provider log records and IP addresses of the devices that were used to access the accounts.

The Ministry of Electronics and Information Technology is also investigating the digital footprints of the hackers.

The cyber attacks have triggered a war of words between the Congress and the BJP leaders. The issue was also raised in Parliament by several members, raising concern about the cyber security preparedness of the country.

Alleging a conspiracy behind the hacking of its website and e-mail and Twitter accounts, the party, in its police complaint, said: "The profanity, abuse and derogatory remarks were then retweeted within seconds and minutes by various individuals carrying the same mal-intent in concert with the said hackers as part of a ring of conspiracy to publish, propagate and spread the highly abusive, obscene ... as posted illegally."

"The e-mail accounts operating through domain inc.in and the Twitter accounts of a large number of party members have been suspended due to the cyber attacks," said a Congress member, requesting anonymity. It comes just a day after Congress vice-president Rahul Gandhi's Twitter account was hacked.

Party chief spokesperson Randeep Surjewala blamed the "fascist" forces, stating that it reflected the extremities of an intolerant culture that resorted to abuse when cornered. Congress president Sonia Gandhi's political secretary Ahmed Patel tweeted: "Those forcing country to adopt online payment overnight, have they taken steps to ensure a/c of ordinary ppl will be immune from hacking?"

Jerusalem Post
Biometric database, fingerprinting to be required for all IDs in Israel
Friday, 02 December 2016
Byline: Yonah Jeremy Bob

Jerusalem - Interior Minister Arye Deri has decided to push to mandate the joining of the national biometric database, including taking finger prints and facial recognition pictures for all identity cards going forward, he announced on Wednesday.
It is still unclear whether Deri will garner a Knesset majority to make the requirement law, but every recent interior minister has supported the initiative, even as the Movement for Digital Rights and some cyber experts have opposed it for fear of rampant hacking threats and invasion of privacy.

The debate has lasted years and included multiple extensions of a pilot program which has taken in a sizable portion, though still a minority, of the country's citizens.

Those objecting would still have their fingerprints and facial recognition picture taken, but it would only be connected to their smart-card, not placed in the database, and as a penalty of sorts, they would need to renew their ID cards every five years instead of every 10 years.

The Movement for Digital Rights has vowed to continue fighting the initiative in the Knesset and even to petition the High Court of Justice to block making fingerprinting and facial recognition required if the Knesset passes the initiative into law.

Arab News
National Center for Electronic Security monitors cyberattacks
Friday, 02 December 2016
Byline: Mohammed Al-Sulami

Jeddah - The National Center for Electronic Security detected destructive electronic strikes against several government agencies and vital establishments inside the Kingdom aimed at disrupting computer servers and electronic appliances to affect the services provided by the establishment.
The hack tries to seize entry information into the system to implant malware or a virus to disrupt users' data. The hack attempt targeted several sectors, including the government sector, transport and other agencies.

The center had sent warnings against organized threats aimed at disabling the services provided by some agencies, on Nov. 19, 2016. Warnings were also sent and shared with many government agencies and vital facilities, and contained important and necessary information on how to avoid any hacking attack, and the means of protecting and safeguarding, along with technical steps to ward off any repercussions as a result of the breach.

The center recommends following the best practices in the protection of electronic systems, in particular with regard to reducing Remote Desktop Protocol (RDP) access via VPN service.

The indicators show that the source of this attack is from outside the Kingdom and has come in several ongoing electronic attacks aimed at government agencies and sectors.

The center stresses the need for various sectors and businesses to follow the best practices and take the necessary preventive measures to safeguard and protect their data and systems from potential electronic intrusion.

During the past few years, a number of Saudi networks and websites witnessed systematic and violent cyberattacks that targeted both the public and private sectors in the Kingdom, the last being in August, while the most severe was in 2012 targeting Saudi Aramco.

Reuters
La Russie dit avoir déjoué une cyberattaque contre ses banques
Friday, 02 December 2016
Byline: Christian Lowe avec Elena Fabrichnaya et Kira Zavialova

Moscou - La Russie a annoncé vendredi avoir mis en échec un complot ourdi par des espions étrangers pour semer le chaos dans le système bancaire russe par des cyberattaques coordonnées et la diffusion de fausses informations sur l'état de ses banques sur les réseaux sociaux.

Le Renseignement intérieur russe (FSB) précise dans un communiqué que les serveurs qui devaient servir à lancer les cyberattaques sont situés aux Pays-Bas et qu'ils sont enregistrés auprès de BlazingFast, une société ukrainienne d'hébergement de sites internet.

Les attaques devaient débuter le 5 décembre et cibler des banques nationales et régionales dans plusieurs villes russes, ajoute le FSB.

"Il était prévu que la cyberattaque s'accompagne de l'envoi massif de SMS et de messages alarmistes sur les réseaux sociaux évoquant une crise du système bancaire russe, des faillites et des retraits de licence", lit-on dans le communiqué.

"Le FSB prend les mesures nécessaires pour neutraliser les menaces contre la sécurité de l'économie et de l'information en Russie", ajoute le service de renseignement sans plus de précision, notamment sur la nationalité des espions étrangers mis en cause.

Le directeur de BlazingFast, Anton Onopritchouk, a déclaré à Reuters que la société basée à Kiev n'avait été contactée ni par le FSB, ni par aucun autre service de renseignements. Il a dit attendre d'en savoir davantage pour mener une enquête interne.

A la question de savoir si ses serveurs pourraient servir à lancer une cyberattaque, il a répondu: "Techniquement, c'est possible. Cela peut arriver à n'importe quelle société d'hébergement où on peut louer un serveur. A partir de là, on peut attaquer ce qu'on veut et dans 99% des cas, on ne s'en rend compte que quand cela a eu lieu."

La Russie est particulièrement vigilante aux cyberattaques depuis qu'elle a été accusée d'avoir été impliquée dans le piratage du système de messagerie électronique du Parti démocrate pendant la campagne présidentielle américaine.

Le vice- président américain, Joe Biden, avait à l'époque menacé le Kremlin d'une réponse "proportionnée".

Plusieurs cyberattaques ont depuis visé des institutions russes sans que l'on sache si elles étaient liées aux tensions entre Moscou et Washington.

Major Russian banks say unaffected by cybersecurity threats
Friday, 02 December 2016

Moscow - Russia's leading financial group VTB and the biggest lender Sberbank said on Friday cyber threats have not affected their activities.
Earlier in the day, Russia's Federal Security Service (FSB) announced that foreign special services were plotting a series of cyber attacks starting from December 5 aimed at destabilizing the country's financial system, including the activity of major Russian banks.

"The security systems of the group's banks meet all the latest requirements and guarantee full protection of our clients' operations," the press service of the VTB Group told TASS.

Sberbank, the third largest bank in Europe, said it is "working in a normal mode."

"Sberbank does not comment on other news within the competence of law enforcement agencies," the bank said.

Russia's Central Bank, the main regulator of the country's banking industry, said it knows about the cyber threats and is constantly cooperating with law enforcers and the banks. "The situation is under control. The necessary recommendations have been given to the banks," the press service said.

The regulator also stressed that it held a meeting with Russia's Ministry of Telecom and Mass Communications and telecom operators. The sides agreed on top priority measures to prevent these attacks.

"Such attempts to destabilize the situation have been already seen, for example in late 2014. Joint steps of credit organizations with the support of the Bank of Russia allowed countering negative trends caused by a targeted information attack," it said.

New York Times
Cyberattacks Disrupt Saudi Aviation Agency
Friday, 02 December 2016
Byline: Sewell Chan

New York - Saudi Arabia's aviation agency was attacked last month by an aggressive computer virus intended to disrupt high-profile government targets, officials and experts said on Thursday.
The attack, which experts say emanated from outside the country, used a version of Shamoon, malware used to target the Saudi energy sector four years ago. Similar kinds of data-clearing software were used in 2014 against the Las Vegas Sands and Sony.

The Saudi government confirmed the latest breaches on Thursday, after several cybersecurity firms noted them. Bloomberg News reported that thousands of computers were damaged at the headquarters of the General Authority of Civil Aviation starting in mid-November, "erasing critical data

and bringing operations there to a halt for several days," although operations at Saudi airports did not appear to be affected.

The state-run Saudi Press Agency, citing a government statement, reported on Thursday that the national cybersecurity department had detected what officials called a systemic attack on crucial government agencies, including in the transportation sector. The attacks were aimed at halting operations, stealing data and planting viruses, the news agency reported.

Saudi Press reported that officials had alerted the government to the attacks last month and had sent vulnerable agencies tips on defending their computers -- suggesting that officials had failed to heed the messages.

The statement acknowledged that the attacks were staged from outside Saudi Arabia, but it did not specify the targets nor say when the breaches began.

If Saudi officials were fazed, they did not show it on Thursday.

"What attack?" Mohsen al-Shahrani, a communications officer for the general security department at the Interior Ministry, said when asked about the assault. "I have not heard anything about this."

Bloomberg, citing anonymous sources, reported that state-sponsored hackers were believed to be responsible for the breaches and suggested that they might have emanated from Iran.

Iran and Saudi Arabia have been in a tit-for-tat cyberwar for more than four years. In April 2012, Iranian engineers working at the Kharg oil terminal, a speck in the Persian Gulf from which a large portion of Iran's oil is exported, noticed that their computers had stopped working. The same happened at the Oil Ministry's headquarters in Tehran, the capital, according to local news accounts.

A computer virus known as a wiper had been interfering with the ministry's internal network, removing files from hard drives and taking over computers. Insiders suspected Saudi hackers of carrying out the attacks, though there was no evidence.

Four months later, Saudi Aramco, the largest company in the Saudi Arabia, was hit by a virus that erased data on three-quarters of the company's computers, replacing everything with an image of a burning American flag. American intelligence officials said the real perpetrator was Iran, although they offered no evidence.

Dmitri Alperovitch, the co-founder and chief technology officer of the security firm CrowdStrike, wrote in a blog post on Thursday that the malware was a variant of Shamoon, which was used in the Aramco attack.

Mr. Alperovitch said the motives for the most recent attacks were not clear. He noted, however, that Iran had targeted Saudi Arabia with cyberattacks before, that the two countries have been locked in a sectarian competition for regional dominance for years, and that they are backing opposing sides of the wars in Syria and Yemen.

Iranian intelligence agents used Shamoon in 2012 in retaliation for international sanctions, Mr. Alperovitch said, adding that the latest attacks came just before a meeting in Vienna of the Organization of the Petroleum Exporting Countries, which agreed on Wednesday to cut oil production for the first time in eight years, prompting an immediate rise in oil prices.

Another security firm, Symantec, reported that the breaches had been timed for the evening of Nov. 17, the end of the workweek, which in much of the Muslim world runs from Sunday to Thursday.

"The attackers appear to have done a significant amount of preparatory work," Symantec reported. "The malware was configured with passwords that appear to have been stolen from the targeted organizations and were likely used to allow the threat to spread across a targeted organization's network. How the attackers obtained the stolen credentials is unknown."

Symantec added, "It would appear that the attack was timed to occur after most staff had gone home for the weekend in the hope of reducing the chance of discovery before maximum damage could be caused."

Another security company, Palo Alto Networks, reported that Shamoon breaches used malware known as Disttrack, "a multipurpose tool that exhibits wormlike behavior by attempting to spread to other systems on a local network using stolen administrator credentials." At least 30,000 computer systems were damaged in the 2012 attacks, Palo Alto Networks reported.

Deutsche Welle
Wikileaks releases 2,420 documents from German government NSA inquiry
Friday, 02 December 2016
Byline: Staff report

Berlin - The documents contained 90 gigabytes of information including many classified documents, according to the statement on the Wikileaks website on Thursday. They are the property of government agencies such as the Federal Intelligence Service (BND, pictured above) and the Federal Office for the Protection of the Constitution (BfV).
The published materials had been submitted last year as part of a German parliamentary inquiry into the surveillance activities of the BND and its cooperation with the NSA.

"The collection contains early agreements between the BND and the NSA and internal processes at the BND, but also more recent details on the close collaboration between the two agencies," Wikileaks

announced, adding: "This substantial new collection of primary source documents provides significant new evidence (of their collaboration)."

The documents, Wikileaks claimed, contain the answers to questions posed by the inquiry committee as well as administrative documents, correspondence, agreements and press reactions. Wikileaks says there are 125 documents from the BND, 33 from the BfV and 72 from the Federal Office for Information Security (BSI).

Wikileaks announced the documents contained "a detailed insight, not just into the agencies themselves, but also into the mechanics of the inquiry." This included information on which private US companies were operating in Germany's security sector.

German ruling on Snowden testimony

The Wikileaks action comes after a German court ruling last week concerning testimony by former NSA employee Edward Snowden to the inquiry. It was in the wake of Snowden's revelations about the activities of the NSA that the inquiry was set up in 2014.

Snowden's travel to Germany was conditional on a guarantee from the government that he "would not be handed over to the US."

Last Monday, the Federal Court of Justice ruled that the committee was obliged to hear Edward Snowden in person. But at the next inquiry hearing on Thursday, the issue of Snowden's invitation was removed from the agenda, according to agency reports. Representatives from Germany's governing coalition say they want to appeal the court's decision.

Founder of Wikileaks, Julian Assange, said: "This substantial body of evidence proves that the inquiry has been using documents from Mr. Snowden and yet it has been too cowardly to permit him to testify. Germany cannot take a leadership role within the EU if its own parliamentary processes are subservient to the wishes of a non-EU state."

Last year, WikiLeaks published documents that suggested the communications of more than 120 top German government officials, including Chancellor Angela Merkel, were being intercepted by the NSA.

FSB reports foreign special services preparing massive cyber attacks
Friday, 02 December 2016
Byline: Staff report

Moscow - Foreign special services are preparing to carry out massive cyber attacks starting from December 5 aimed at destabilizing Russia's financial system, the Federal Security Service said on its website on Friday.
The goal of the cyber attacks is also to destroy the activity of "a range of major Russian banks," according to the FSB.

The servers and command centers for carrying out these cyber attacks are located in the Netherlands and are owned by Ukraine's hosting company BlazingFast.

The cyber attacks are expected to be accompanied by mass SMS and provocative publications in social networks or blogs about "a crisis in the Russian credit and financial system, bankruptcy and withdrawal of licenses of leading federal and regional banks."

"The campaign is directed against several dozen Russian cities," the FSB stressed.

The FSB is carrying out the necessary measures to neutralize the threats to Russia's economic and information security and documenting the forthcoming campaign, it said.

London Times
French poll warning over Russian hacking threat
Friday, 02 December 2016
Byline: Adam Sage

Paris - France's political parties have been summoned to a meeting by the country's top spy agency and told to strengthen their defences against cyberattacks amid fears that Russian hackers could seek to influence the presidential election next year.
French intelligence agencies endorse claims that the Kremlin tried to sway the US presidential race, and believe that similar tactics might be deployed in France. Germany's spy chief expressed concern this week that Russia would use cyberattacks to spread misinformation before the German elections next autumn.

The issue is particularly sensitive in France given President Putin's support for right- wing presidential election candidates. He is an admirer of François Fillon, of the Republican party, and has close ties with Marine Le Pen, leader of the far-right National Front. Both have pledged to build bridges with Moscow if they come to power.

Intelligence agencies have not said specifically that Mr Putin may try to help one or the other win the election but they believe Russian hackers could try to cause chaos by publishing false information on French news sites. They also fear that the Kremlin could seek to infiltrate French political parties, gaining access to membership lists and obtaining information on the country's rulers.

Party leaders were summoned by the General Secretariat for Defence and National Security in October for a briefing on the US cyberattacks and a warning that the Russians could strike in France. They were told to reinforce their computer systems.

A day later, the National Commission for Information Technology and Liberty publicly warned the ruling Socialist party that it was vulnerable. The commission said its inspectors had hacked into a list of all the party's members since 2010, obtaining names, addresses and payment details. The party said it had rectified the flaw, but the incident fuelled fears of a hostile attack.

Media outlets are also thought to be vulnerable to hackers wanting to mislead the public. Guillaume Poupard, director of the National Agency for the Security of Information Systems, said western democracies were facing "the development of a digital threat whose goals were political and to [cause] destabilisation. "In the American case, we cannot dismiss the hypothesis that there was a real plan to influence the election," he said.

Reuters
Russia says foreign spies plan cyber attack on banking system
Friday, 02 December 2016
Byline: Staff report

Moscow - Russia said on Friday it had uncovered a plot by foreign spy agencies to sow chaos in Russia's banking system via a coordinated wave of cyber attacks and fake social media reports about banks going bust.
Russia's domestic intelligence agency, the Federal Security Service (FSB), said in a statement that the servers to be used in the alleged cyber attack were located in the Netherlands, and were registered to a Ukrainian web hosting company called BlazingFast.

The attack was to have started on Dec. 5, and its targets were a number of major national and provincial banks in several Russian cities, the statement said.

"It was planned that the cyber attack would be accompanied by a mass send-out of SMS messages and publications in social media of a provocative nature regarding a crisis in the Russian banking system, bankruptcies and license withdrawals," said the statement.

"The FSB is carrying out the necessary measures to neutralize threats to Russia's economic and information security," it said.

The statement did not say which countries' intelligence agencies were behind the alleged plot.

Anton Onoprichuk, director of Kiev-based BlazingFast, said neither the FSB nor any other intelligence agency had been in touch with his company. He told Reuters he was waiting for more information so the firm could investigate.

Asked if his servers could be used to mount a cyber attack he said: "Technically it is possible. It is possible with any hosting company, where you rent a server. You can attack whatever (you want) from it and in 99 percent of cases it will become known only after the event."

Russia is on high alert for foreign-inspired cyber attacks, especially since U.S. officials accused the Kremlin of being involved in hacks on Democratic Party emails during the U.S. presidential election.

U.S. Vice President Joe Biden said at the time that the United States would mount what he described as a "proportional" response to Russia.

Since then, there have been a number of cyber attacks affecting Russian institutions, though it is unclear if they were linked to the row between Moscow and Washington.

In October, a network of Ukrainian hackers released a cache of emails obtained from the account of an aide to Vladislav Surkov, a Kremlin advisor dubbed "the grey cardinal" because of his behind- the-scenes influence.

On Nov. 11, Russian lenders Sberbank and Alfa Bank said they had been hit by cyber attacks.

Saudi Gazette
Shamoon virus returns in new Gulf attacks after 4-year hiatus
Friday, 02 December 2016

Riyadh - A version of Shamoon, the destructive computer virus that crippled tens of thousands of computers at Middle Eastern energy companies four years ago, was used in mid-November to attack computers in Saudi Arabia and elsewhere in the region.
US security firms CrowdStrike, Palo Alto Networks Inc and Symantec Corp. warned of the new attacks on Wednesday. They did not name any victims of the new version of Shamoon, which cripples computers by wiping their master boot records that they use to start up. They also did not say how much damage had been caused or identify the hackers.

FireEye said in a blogpost that its Mandiant unit "has responded to multiple incidents at other organizations in the region." A spokesman declined to identify the countries or organizations.

Saudi Arabia said on Thursday that a computer virus attack on Nov. 19 targeted Saudi government bodies and vital installations including the Kingdom's transport sector.

"The attack appeared to originate outside the country and was one of "several ongoing cyber attacks targeting government authorities", the Saudi Press Agency quoted the National Cyber Security Center, an arm of the Ministry of Interior, as saying.

It did not give further details of the identity of the attacker or the damage that had been done, beyond saying the virus aimed to disrupt servers and plant malicious software in computer systems.

The reappearance of Shamoon is significant as there have only been a handful of other high-profile attacks involving disk-wiping malware, including ones in 2014 on Sheldon Adelson's Las Vegas Sands Corp. and Sony Corp's Hollywood studio.

Governments and businesses pay close attention to such cases because it can be time-consuming and extremely expensive to restore infected systems.

The original Shamoon hackers left images of a burning US flag on machines at Saudi Aramco and RasGas Co Ltd in 2012. Researchers said the Shamoon 2 hackers also left a calling card: a disturbing image of the body of three year-old Syrian refugee Alan Kurdi, who drowned in the Mediterranean last year.

The FireEye spokesman said the malware contains embedded credentials, which suggests the attackers may have previously conducted intrusions to gather the necessary logins and passwords before later embedding them into the malware for the destructive attack.

The 2012 Shamoon attacks were likely conducted by hackers working on behalf of the Iranian government, said CrowdStrike Chief Technology Office Dmitri Alperovitch. It is too early to say whether the same group was behind Shamoon 2, he said.

The motive of the recent attacks was also not immediately clear. "Why Shamoon has suddenly returned again after four years is unknown," the Symantec Security Response team said on its blog. "However, with its highly destructive payload, it is clear that the attackers want their targets to sit up and take notice."

The malware triggered the disk- wiping to begin at 8:45 p.m. local time on Thursday, Nov. 17, according to the security firms.

The Saudi business week ends on Thursday, so it appears to have been timed to begin after staff left for the weekend to reduce the chance of discovery and allow maximum damage.

"The malware had potentially the entire weekend to spread," Palo Alto researcher Robert Falcone said in a blog post.

CBC News
Privacy watchdogs urge caution with encryption laws
Wednesday, 07 December 2016
Byline: Matthew Braga

Ottawa - Privacy watchdogs from across Canada warned the government on Tuesday to "proceed cautiously" before passing encryption legislation -- a move that would have the potential to undermine the security of everything from financial transactions to online communication.
The warning comes at a time when government and law enforcement agencies have been seeking the ability to access encrypted information, the lack of which they see as a growing investigative problem.

However, both privacy and cryptography experts have long warned that efforts to weaken or defeat encryption for police puts the security of all users at risk.

The government is currently soliciting feedback and holding public consultations on this and other national security issues, as part of its pledge to to repeal the "problematic elements" of Bill C-51.

In a submission to Public Safety Canada, Canada's Privacy Commissioner Daniel Therrien and his colleagues warned against introducing any legislation aimed squarely at encryption, as well as other proposed powers that police do not currently have.

"The government should only propose and Parliament should only approve new state powers if they are demonstrated to be necessary and proportionate -- not merely convenient," Therrien said in a prepared statement to reporters Tuesday morning in Ottawa. The statement was also posted to the commissioner's website.

Existing tools should be examined

A recurring theme of the group's submission is that police have not provided adequate evidence for why they should require additional powers -- such as expanded data retention requirements, or lower thresholds for acquiring basic subscriber information -- nor explained why existing tools are insufficient.

Therrien, along with the country's other provincial and territorial commissioners, are advocating for a closer examination of existing tools, and recommending that some rules should even be tightened.

"This is not the time to further expand state powers and reduce individual rights," Therrien said in his statement.

"This is the time to enhance both legal standards and oversight to ensure we do not repeat past mistakes and achieve real balance between security and respect for basic individual rights."

Legal measures sought

One particularly divisive issue is the matter of encryption -- cryptographic protections that prevent attackers and police alike from eavesdropping on messages as they travel across the internet, or from accessing files on a password-protected device.

"There is currently no legal procedure designed to require a person or an organization to decrypt their material," according to Public Safety Canada's "National Security Green Paper," which was released in September to "prompt discussion and debate about Canada's national security framework."

Both law enforcement and government agencies have increasingly characterized encryption as an impediment to investigations, a problem they refer to as "going dark." Canada's police chiefs, for example, recently called on the government to introduce legal measures that deal with encryption, and the US Senate introduced a draft bill addressing encryption earlier this year.

Yet Therrien argues that powers that came into force with Bill C-31 last year already allow police to seek "assistance" in decrypting information, without compromising the underlying technology behind encryption.

"The crux of the problem springs from the fact there is no known way to give systemic access to government without simultaneously creating an important risk to the security of this data for the population at large," the submission reads. "Laws should not ignore this technological fact."

The country's privacy watchdogs suggest "technical solutions which might support discrete, lawfully authorized access to specific encrypted devices, as opposed to imposing general legislative requirements."

Push for transparency

Encryption isn't the only issue dealt with in the Privacy watchdogs' submission.

Metadata is a perennial concern, and the submissions suggests more stringent legislation under which metadata can be collected and shared with police, as well as international partner agencies.

The commissioners also call on the government to strengthen requirements that private companies and government agencies "be open about the number, frequency and type of lawful access requests they respond to," in regularly issued transparency reports.

They also propose an expanded oversight committee that includes independent expert reviewers, and would oversee all agencies that have a role in national security, calling the government's current proposal "insufficient."

Montreal Gazette
Habib had combat manuals on computers, trial hears
Wednesday, 07 December 2016
Byline: Staff reporter

Montreal - The trial of Ismael Habib, a 29-yearold man accused to trying to leave Canada to commit terrorist acts abroad heard Tuesday what RCMP investigators recovered from the computers seized in the wake of their investigation.
Maxime Embury-Larocque, a member of the RCMP's Integrated National Security Enforcement Team, told the court that two tablet computers seized from a residence in Gatineau last February contained several pictures of the accused, one showing him what appeared to be military fatigues and carrying a knife on his hip while the other depicted him wearing a black T- shirt that Embury-Larocque believed bore the inscription of the Muslim shahada - the acknowledgement of the oneness of God and of Muhammed as his prophet - in Arabic script.

A check of the computers also revealed the name Alexandre Fortin, Embury-Larocque said, the same name on a driver's licence in Habib's possession when he was arrested, although the licence bore Habib's photo.

The court also heard that searches of Habib's computers also yielded PDF files of combat training manuals as well as covers from Inspire, an online magazine perceived as a propaganda and recruitment tool used by al Qaeda terror network.

Embury-Larocque noted that most of the online links found on the computer no longer existed, although investigators were able to extract an apparent record of an online conversation between two persons, one of whom identified himself as "Stéphane Leclair," a false name the correspondent said he used for security reasons.

Reading from an inventory of the information gleaned from the computer, Embury-Larocque said "Leclair" described himself as having a father from Afghanistan,

a Canadian mother and being fluent in English, French, Arabic and Afghani. Embury-Larocque quoted "Leclair" as saying "As for me, I love jihad (holy war) more than anything."

"Leclair" also detailed some of the day-to-day life fighting as a jihadi, noting he fought at the front and saying "There is no place where I feel more at home than here."

Habib is accused of trying to leave the country to commit terrorist acts abroad - specifically with ISIL in Syria - and giving false information to obtain a passport. The 29-year-old was arrested last February and is only the second Canadian to be tried under socalled terrorist travel legislation enacted in 2013, and the first adult.

However a large part of the evidence against Habib was gathered in a "Mr. Big" police operation, during which a police officer pretended to be a high ranking criminal and offered employment to Habib - and in this case help getting a passport and safe passage to Syria - as long as he comes clean about his past and his current intentions.

On Monday, before he heard any new evidence, Quebec Court Judge Serge Delisle announced he would rule on whether the scenario presented to Habib fit the definition of a Mr. Big operation and, if so, whether the statements made by Habib to the undercover police operative are admissible.

Delisle noted, however, that he would first hear all the evidence.

GCSB wants to give ISPs more power to block cyber threats
Wednesday, 07 December 2016
Byline: Sophie Boot

Wellington - The Government Communications Security Bureau wants to give internet service providers more information and power to block cyber threats which are increasing, its director told the intelligence and security select committee yesterday.
The communications-focussed spy agency has recorded 338 cyber security incidents in the last year, from 109 a year earlier, which director Andrew Hampton said was due to both the number of threats increasing and the improved system picking up more threats.

Cyber threats to New Zealand are "becoming more complex and their sources more diverse" with a "growing range of international threat actors targeting New Zealand organisations for financial gain," Hampton said.

Public and private organisations are targeted for their intellectual property for new technology, customer data, business and pricing strategies, and government positions on sensitive topics, Hampton said.

The agency is also looking to increase the information it gives to ISPs from Cortex, the system which aims to disrupt advanced cyber threats to organisations of national significance in both the public and the private sector.

"We've increased cyber security services to organisations of national significance through Cortex, with the consent of the organisations involved," Hampton said, adding the agency had responded to 69 notifications of network changes within areas of security interest in the year. "More broadly Cortex is a big focus, but our regulatory role under the TICSA Act (the Telecommunications Interception Capability and Security Act 2013) is important because that helps us with telcos to ensure they're not inadvertently introducing vulnerabilities into the system.

"Where we're wanting to evolve Cortex is where we can provide more information to other parties such as ISPs so they can do some of the blocking on our behalf," Hampton said. "An obvious benefit of that is it gets the security agency out of there which deals with any public concern about privacy, but also increases the ability to scale."

Yonhap News Agency
Suspected N.K. attackers hack into S.K. cyber command through main server
Wednesday, 07 December 2016
Byline: Staff reporter

Seoul - Military investigators looking into the first hacking of South Korea's cyber command intranet said Wednesday the suspected North Korean attackers accessed the network through a server at the armed forces' main information center.
The findings raised concerns that confidential information may have been compromised as the affected server is connected with the information systems of the Army, Navy and the Air Force. But the ministry said information saved on the server system was not stolen.

A total of 3,200 computers, including 700 linked with the intranet, were contaminated with malware in the latest cyber attack, which occurred on Aug. 4, the Ministry of National Defense said.

It said some military documents were hacked while refusing to provide details. The computer used by Defense Minister Han Min-koo was also affected, the official said.

On Tuesday, the ministry said the IP addresses linked to the attack were traced to a location in China that has been used by North Korean hackers.

"As one of the military's two integration servers was jointly linked to the internet and the intranet, it allowed the hackers to gain access to the intranet," a ministry official said.

It is one of two servers the military operates. The other server involves information for the defense ministry, the Defense Security Command and the Defense Acquisition Program Administration (DAPA).

"We are still in the process of determining what data were leaked. We found the hackers infiltrated the intranet using the main server but information in the server remains intact," the official said.

The cyber command separated the affected server from the whole network to avoid the spread of viruses in October, two months after the initial hacking attempt was made in August.

It marked the first time that the data of South Korea's cyber command has been compromised. South Korea set up the command in January 2010 as part of its efforts to counter external hacking attempts on the country's military.

North Korea -- which has thousands of cyberwarfare personnel -- has a track record of waging cyberattacks on South Korea and the United States in recent years, though it has flatly denied any involvement.

South Korea's unification ministry said that there is no sign of possible North Korean cyberattacks on its networks and other security- related ministries' system.

"Our ministry and foreign and defense ministries have continued to craft up various measures to boost cybersecurity," Jeong Joon-hee, ministry spokesman, said at a regular press briefing.

Earlier this year, Seoul accused North Korea of stealing information from about 10 South Korean officials by hacking into their smartphones.

Two months ago, Rep. Kim Jin-pyo, a lawmaker of the main opposition Democratic Party, claimed that the cyber command was hacked in September. He told Yonhap that the attack targeted the "vaccine routing server" installed at the cyber command.

Kim, who is a member of the parliament's national defense committee, said that a malicious code was identified and it appears to have taken advantage of the vulnerability of the routing server.

The server is tasked with security on computers that the military has for internet-connection purposes. Around 20,000 military computers are known to have been connected to the server.

Kim said in October that chances are "very low" that the hacking led to a leak of confidential information, given that the military's intranet is not connected to the server.

The defense ministry later announced it has identified the intrusion of the malicious code into the system.

Xinhua News Agency
Beijing shuts down thousands of illegal live streaming accounts
Wednesday, 07 December 2016
Byline: Staff reporter

Beijing - Thousands of illegal accounts have been shut down by Beijing-based live streaming websites since a regulation went into effect on Dec. 1, authorities said Tuesday.

Reports of violent, obscene and vulgar content on live streaming websites abound. In November, the Cyberspace Administration of China published a regulation that bans the use of live streams to undermine national security, destabilize society, disturb social order, infringe upon others' rights and interests, and disseminate inappropriate content, including pornography.

According to the regulation, service providers are obliged to censor content before releasing it and are instructed to establish a system that would allow them to block improper live streams immediately.

So far, more than 4,500 accounts on the Beijing- based websites were closed and more than 3,100 illegal live streaming programs have been removed, according to Beijing's cyberspace administration.

Officials with the administration said they will enhance regulation efforts to "safeguard order in the Internet industry." They also called on the public to join in supervision.

Gulf News
Oman warns against spreading sectarian material online
Wednesday, 07 December 2016
Byline: Fahad Al Mukrashi

Muscat - Oman has warned that it will take serious legal action against anyone who is found disseminating video clips on social media platforms that incite sectarian and religious strife, said Hussain Al Hilali, public prosecutor, in a press statement.
Al Hilali said it is important to criminalise the menace as it destabilises the security of any country and shakes its pillars.

He said sectarian incitement is a criminal offence as per Oman Penal Law since 1974. Al Hilali issued a judicial circular recently to all heads of public prosecution departments in the country to take serious legal action in this regard.

Oman has a unique religious make-up where the dominant sect is the Ibadhi sect of Islam, with a sizeable population of Sunnis and a minority of Shiites, all of which live in relative harmony. It is not clear what triggered the statement from the public prosecutor.

Al Hilali cited Sultan Qaboos' address on the country's 24th national day in which he blasted extremism, fanaticism and partisanship as "poisonous plants which the country's good soil rejects".

The public prosecutor warned Omanis to stay away from such sectarian and religious strife, arguing that it violated the way of life in Oman, warning that the government shows zero tolerance against anyone involved in such matters.

In 2008, Oman introduced a law stipulating that anyone involved in crimes related to terrorism and sectarianism would be jailed for a minimum of 10 years.

It has signed the International Convention for the Suppression of the Financing of Terrorism. Oman also established the anti-money laundering Combating the Financing of Terrorism (CFT) system in 2002, as per a royal decree.

In November, Oman scored zero in the global terrorism index, reflecting on its safety and security against terrorist threats, according to the Global Terrorism Index 2015 released recently by the Economics and Peace Institute.

Jerusalem Post
Israeli experts heading to Japan to provide much needed cybersecurity
Wednesday, 07 December 2016
Byline: Michael Zeff

Jerusalem - Local cybersecurity company Cybereason announced on Tuesday that it is partially relocating to Japan, following a $59 million investment by Japanese Internet giant Soft- Bank. The move is part of a larger trend by Japan, which is seeking international corporations and foreign experts in its fight against an increasing wave of cyber attacks against its institutions.
"Japanese companies and national institutions are constantly under cyber attack, but the public awareness in Japan as to the need for cybersecurity is low compared to Israel or the United States. But now, we've partnered with SoftBank to establish Cybereason Japan Corp to help defend Japan," Lotem Guy, a security research group manager at Cybereason who will be moving his family to Japan in the coming days, told The Jerusalem Post.

Tel Aviv-based Cybereason is a company that locates, isolates and responds to cyber attacks in real-time. Their platform - which relies on the company's tech and human wealth - can find a single component of an attack and connect it to other pieces of information gathered by Cybereason, in order to reveal an entire campaign and shut it down.

"Our product specializes in identifying attacks on large organizations. Our team sits inside an organization and gathers and analyzes data from inside their computers, servers and workstations. That data is then sent to our central server, which runs on our software and studies the organization's behavior, breaking it down into separate units. Then we can identify anything that is out of the ordinary and characterizes a cyber attack, isolate it and respond to it without disrupting the organization's work routine," Guy explained.

According to Japan's National Institute of Information Communications Technology, Japan has experienced more than 50 billion cyber attacks in the last two years. In the past two years, Japanese investment - both private and national - in Israel grew exponentially, especially in the fields of

autonomous drones, recognition and authentication technology, and security- related technology. Now SoftBank and Cybereason are bringing in Israeli experts to upgrade Japan's cyber defenses.

SoftBank is a Japanese multinational corporation with operations in telecommunications, e-commerce, Internet services, technology services, finance, media and other businesses worldwide, and it provides infrastructures for Internet giants like Alibaba and Yahoo.

According to Forbes Magazine, SoftBank is the 62nd largest public company in the world and the third largest in Japan.

SoftBank bought a cybersecurity platform from Cybereason back in 2015, and, after being impressed by the Israeli company's abilities and technology, decided to make a large investment in the company.

"Our deployment of the Cybereason platform internally gave us first-hand knowledge of the value it provides and led to our decision to invest," stated Ken Miyauchi, president and CEO of SoftBank Corp, in a testimonial.

According to Guy, a large portion of the $59m. investment went toward the joint venture of creating the Japanese subsidiary, Cybereason Japan Corp.

"After SoftBank used our platform as a client, it opened their eyes. They realized that now they can do all the things they wanted to do, all the things they knew they needed to do, but never had the tools to do before. They now believe that the Japanese market is in dire need of this tool and that together we can bring it to Japan," said Guy.

"Unlike other more traditional and conservative Japanese businesses, SoftBank is a younger company; it specializes in everything IT and has a younger and more innovative and open spirit," Guy told the Post.

According to Guy, it was that unique spirit that allowed SoftBank to develop an awareness as to the need for cyber defense and led the company to take a more proactive approach, partner up with Cybereason and establish the Japanese subsidiary to cater to the Japanese market.

"The Japanese market is really hard to penetrate for a Western company, it's difficult to sell anything here unless you are Japanese. But this cooperation gives us a very big opportunity to succeed," said Guy.

The partnership between an Israeli cybersecurity pioneer and an established Japanese corporation makes market penetration easier and more likely to succeed, especially in light of Japan's growing need for technologies it doesn't have. The Cybereason Japan team is composed of Cybereason Israel expatriates and Japanese locals, some of whom were originally from SoftBank. The subsidiary already has a number of large Japanese clients who preferred not to make public their use of cybersecurity platforms.

"We didn't think to grow into the Japanese market, at least not this quickly. Our focus was on the US market mostly, but since the beginning of our relationship with SoftBank, this great opportunity has opened up. In my opinion, our ability to sell in the Japanese market will be equal to the US market very soon," Guy said.

Les services américains et britanniques ont espionné les appels passés à bord des vols Air France
Wednesday, 07 December 2016
Byline: Jacques Follorou

Non identifié - La NSA et son homologue anglais peuvent capter toutes les données, y compris les codes secrets, des communications des passagers de la plupart des grandes compagnies aériennes. Dont Air France.
Dans l'immense stock d'archives extraites par Edward Snowden, l'ancien consultant de l'Agence nationale de sécurité américaine (NSA), c'est une pépite. Elle débute par une devinette: «Quel est le point commun entre le président du Pakistan, un trafiquant de cigares ou d'armes, une cible du contre-terrorisme ou le membre d'un réseau de prolifération nucléaire? Ils utilisent tous leur téléphone portable lorsqu'ils sont dans un avion.»

Posée en 2010 dans une des lettres d'information interne de l'une des principales directions de la NSA, «SIDtoday», et classée top secret , elle annonce l'émergence d'un nouveau terrain d'espionnage, qui n'avait pas encore été exploré: l'interception des données de communications à bord des avions de ligne. En2009, la NSA souligne dans un document interne que, en décembre2008, 50000personnes ont déjà utilisé leur téléphone portable en vol, un chiffre qui atteint 100000 en février2009. Pour expliquer cet engouement, la NSA énumère: «De plus en plus d'avions équipés, la crainte recule de voir l'avion s'écraser. Pas aussi cher qu'on le croyait. (...) Le ciel pourrait appartenir à la NSA.»

Fin 2012, le Government Communications Headquarters (GCHQ), l'homologue britannique de la NSA, livre, à son tour, dans une présentation «top secret strap», un des plus hauts niveaux de classification, les dessous du programme Southwinds («vents du sud») , mis en place pour collecter tout le trafic, voix et data, métadonnées et contenu des connexions à bord des avions. La zone est encore limitée aux régions Europe, Moyen-Orient et Afrique, couvertes par les satellites Inmarsat.

La collecte des données se fait «quasiment en temps réel» et un avion peut être suivi toutes les deux minutes. Pour espionner un téléphone, il suffit qu'il soit à une altitude de croisière de 10000 pieds. Le signal transitant par satellite, la technique d'interception se fait par des stations secrètes d'antennes au sol. Le seul fait que le téléphone soit allumé suffit à le localiser, l'interception peut alors être croisée avec le registre des listes de passagers et les numéros des avions, pour mettre un nom sur l'utilisateur du smartphone. Le GCHQ peut même, à distance, perturber le fonctionnement d'un téléphone de sorte que son utilisateur soit contraint de le redémarrer avec ses codes d'accès: les services britanniques interceptent du même coup ses identifiants.

Une fixation qui ne tient pas du hasard

Le GCHQ et la NSA ont baptisé leurs opérations de mise sous surveillance des communications en avion de doux noms d'oiseaux, «Pie voleuse» et «Pigeon voyageur» , comme cela a été rapidement évoqué par Glenn Greenwald, journaliste indépendant américain, dans son ouvrage Nulle part où se cacher (JCLattès, 2014). Mais un examen plus poussé de ces pièces et la lecture de documents inédits extraits par Le Monde , en collaboration avec le site The Intercept, des archives Snowden données à M. Greenwald et Laura Poitras, sur la surveillance entre 2005 et 2013 des avions commerciaux dans le monde entier, prouve que la compagnie Air France a été très tôt au coeur de l'attention de ces deux pays amis, les Etats-Unis et la Grande- Bretagne.

La cible Air France apparaît dès 2005 dans un document de la NSA fixant les grandes lignes du projet de «traque des avions civils dans le monde entier» . Daté du 5juillet et signé par le numéro deux de l'une des principales directions de la NSA, chargée du renseignement d'origine électromagnétique (SID, Signal Intelligence Directorate), ce mémo de 13pages recense sous forme chronologique et détaillée les principales étapes de ce programme pensé pour éviter «un nouveau 11-Septembre» . On peut lire que, dès la fin 2003, «la CIA considère que les vols Air France et Air Mexico sont des cibles potentielles des terroristes» . Le service juridique de la NSA précise alors «qu'il n'y a aucun problème légal pour cibler les avions de ces deux compagnies à l'étranger» et qu' «ils devraient être sous la plus haute surveillance dès qu'ils entrent dans l'espace aérien américain» . Dès février2005, ces mêmes juristes insistent sur la procédure légale à suivre, «en particulier pour la collecte des communications à bord des avions» .

La désignation d'Air France comme risque majeur pour les intérêts et le territoire américains ne relève pas d'une simple hypothèse de quelques techniciens-espions de la NSA. Un cercle impressionnant d'autorités chargées de la sécurité du pays a été informé du «danger» représenté par la compagnie française. Le mémo de la NSA est, en effet, adressé à une vingtaine de destinataires, dont le commandement de la défense aérienne de l'Amérique du Nord, la CIA, le département Homeland Security (la sécurité intérieure), l'Agence de renseignement spatial (NRO), l'Agence de renseignement de la défense (DIA) ou encore l'état-major de l'armée de l'air. Cette fixation sur Air France sera constante au fil des années qui vont suivre et ne tient pas du hasard.

Le premier test de l'utilisation d'un smartphone en plein ciel a été effectué à bord du vol AF1046 d'Air France, le 17décembre 2007, sur une liaison Paris-Varsovie. «On a commencé tôt, confirme au Monde la direction d'Air France, mais, depuis, on n'a pas cessé de faire des tests, aujourd'hui, on s'apprête, comme les autres compagnies, à passer directement au Wi-Fi à bord.» La compagnie française, interrogée sur les pratiques des services secrets anglo-saxons, a d'ailleurs réagi avec mesure: «Nous ne sommes pas les seuls, visiblement, à avoir été visés et nous ne disposons d'aucun élément sur ces pratiques.»

Prises de guerre

En2012, le GCHQ note que 27 compagnies ont déjà permis aux passagers d'utiliser un téléphone portable ou sont sur le point de le faire, surtout pour les premières classes et les classes affaires des vols long-courriers. Parmi elles, British Airways (seulement data et SMS), Hongkong Airways, Aeroflot, Etihad, Emirates, Singapore Airlines, Turkish Airlines, Cathay Pacific ou encore Lufthansa. Air France est, pour sa part, un tel symbole de la surveillance des communications en avion que les services britanniques utilisent un croquis pleine page de l'un de ses avions pour illustrer le fonctionnement de l'interception en vol.

Pour prouver leur savoir-faire, le GCHQ et la NSA fournissent nombre d'exemples d'interceptions passées à bord de vols commerciaux d'autres compagnies. On trouve ainsi les relevés, le 23mars 2012, à 13h56, du vol Etihad ETD8271 des Emirats arabes unis, entre JFK et Denver, du Nice-Moscou du 20mai 2011 (Aeroflot) ou encore, la même année, du Milan-Doha (de Qatar Airways), du Athènes-Doha (toujours de Qatar Airways), du Jeddah-LeCaire (de la Saudi Airlines) ou du Paris-Mascate (d'Oman Air).

La collecte concerne également des Blackberry dont les codes PIN et les adresses e-mails sont identifiés dans un avion, le 2janvier 2012 à 10h23, sans que l'on connaisse sa destination et le nom de la compagnie. Les prises de guerre sont fièrement annoncées: voix, data, SMS, Webmail, Webchat, réseaux sociaux (Facebook, Twitter, etc.), Google Maps, Currency Converters, Media, VOIP, BitTorrent ou Skype. Au cours de leurs exercices d'intrusion, les services secrets britanniques découvrent, un peu surpris, qu'ils ne sont pas les seuls intéressés par ces communications en vol. Ils notent que la compagnie russe Aeroflot a mis en place un système de connexion spécifique pour les GSM à bord de ses appareils, «sans doute pour procéder à des interceptions...», glissent-ils dans une note technique.

Aujourd'hui, près d'une centaine de compagnies permettent de téléphoner en avion. «Les clients estiment désormais normal, voire nécessaire, de rester connecté en vol», assure la direction d'Air France. Les autorités en matière de sécurité aérienne ont toutes validé l'utilisation des GSM à bord des avions et les experts estiment que 2016, 2017 et 2018 seront les années historiques du portable en vol, notamment par l'installation pérenne du Wi-Fi en plein ciel.

De quoi étendre encore l'ampleur de l'espionnage en visant «plusieurs centaines de milliers de personnes» à surveiller, selon les projections de la NSA, soit un périmètre qui dépasse de loin les seules cibles reliées au terrorisme. L'espionnage politique ou économique des passagers en première ou en affaires sur des long-courriers intéresse d'ailleurs bien davantage les services.

La surveillance, elle, n'a aucune limite et chaque nouveauté est un défi technique qui paraît vite relevé. Les services semblent en être même un peu blasés. Les techniciens-espions de la NSA, dans une note interne de 2010, avaient même déjà la tête ailleurs. «Quel sera le prochain terrain d'expérimentation? Les trains? Il faudra qu'on regarde ça...»

New York Times
Europe Presses U.S. Tech Giants to Curb Online Hate Speech
Wednesday, 07 December 2016
Byline: Mark Scott

New York - European officials pushed on Tuesday for American technology giants to do more to tackle online hate speech across the region, adding to the chorus of policy makers worldwide demanding greater action from the likes of Facebook, Google and Twitter.
The rebuke came a day after many of those companies announced that they were joining forces to fight the spread of terrorist content on the internet, agreeing to share technology and information to prevent propaganda and other dangerous materials from being disseminated on their services.

Amid growing security tensions in much of the Western world, governments, intelligence agencies and advocacy groups want Google, Microsoft and other technology companies to take further steps to curb hate speech on digital platforms, as well as to clamp down on how terrorists circulate information online.

But freedom of expression campaigners have warned that such demands may limit people's ability to communicate across the internet, and they have cautioned that the line between hate speech and legitimate political discussion can be blurry.

In a report published on Tuesday, however, the European authorities signaled that only 40 percent of material flagged as possible hate speech online (albeit in a relatively small sample of 600 posts, videos and other online material) had been reviewed by the Silicon Valley companies within 24 hours. Of those 600 postings, just over a quarter was eventually taken down, the report said.

"While I.T. companies are moving in the right direction, the first results show that the I.T. companies will need to do more to make it a success," Vera Jourova, the European commissioner for justice, consumers and gender equality, said in a statement. "It is our duty to protect people in Europe from incitement to hatred and violence online."

Press officers for Google and Microsoft declined to comment. Representatives for Facebook and Twitter were not immediately available to comment.

In a recent interview, Richard Allen, Facebook's head of public policy in Europe, said that the social network was committed to tackling hate speech online, but that there was a fine line between what was legitimate under freedom of speech laws and what was required to protect people online.

"Our policies provide protection from hate speech," Mr. Allen said last month. "We shouldn't apply media regulation to the speech of ordinary citizens."

The report on Tuesday is part of European efforts to coax American technology companies to take more responsibility for what is published through their services. In May, companies including Google, Facebook and Twitter signed a voluntary code of conduct, agreeing to do more to tackle the rise of online hate speech across the 28-member European Union.

Some lawmakers, though, are not satisfied.

In Germany, where Facebook, in particular, has come under scrutiny, a government-backed task force is to report early next year on whether the social network, among other companies, has met national targets for responding to -- and potentially eliminating -- hate speech. Officials want companies to remove at least 70 percent of online hate speech within 24 hours of it being reported.

Heiko Maas, the German justice minister, has said that Facebook could even be held criminally liable for illegal hate speech posts, and he has called for legislation if the company does not meet its legal commitments.

"Facebook has a certain responsibility to uphold the laws," Mr. Maas said.

The social network denies any wrongdoing.

The Guardian (London)
Cable: new hacking scandal is likely without proper regulation
Wednesday, 07 December 2016
Byline: Jasper Jackson

London - Vince Cable is to call on the government to get on with creating a system of press regulation that matches the recommendations of the Leveson inquiry, or risk a repeat of the scandals that led to it. Speaking at an event organised by campaign group Hacked Off, the former business secretary will say that a new ministerial consultation on press regulation is delaying the implementation of Leveson's recommendations, which were made following the phone-hacking scandal.

"The government decision to consult again on the framework for self-regulation has the political effect of stopping progress towards a solution based on the royal charter model," he will tell an audience at the University of Westminster on Tuesday evening. "Suffice to say that the type of scandals which prompted Leveson will happen again in the absence of effective checks and balances."

He is also expected to argue that the government's failure to introduce new regulation exists within the context of a fear among politicians of powerful newspaper owners.

"Nothing better illustrates the deficiency of genuine plurality than the fear which politicians still have of crossing newspaper proprietors or the belief that party advantage will accrue from sucking up to them," he will say.

The speech is the fourth annual Leveson lecture organised by Hacked Off, which supported the creation of a press regulator backed by royal charter and has been heavily critical of industry-backed regulator Ipso.

The government announced the new 10-week consultation at the start of November to consider such issues as whether or not to introduce rules forcing newspapers to pay both sides' costs in libel cases if they do not sign up to a royal charter-backed regulator. The move came just days after Ipso rival Impress gained recognition under the charter, which was meant to trigger the so-called cost-shifting rules.

Newspaper publishers have argued that cost-shifting would have a chilling effect on journalism and is essentially a form of blackmail to force them to sign up to state-backed regulation.

Cable will also suggest that regulation could be used to help tackle the spread of false information, particularly if firms such as Google were brought under a voluntary system.

He is expected to say: "There surely has to be accountability for the algorithms these companies use, with greater disclosure, and named individuals who can be summoned to face democratic scrutiny."

"Bringing them within the framework of voluntary regulation, but with a regulator enjoying independence from the industry itself so it is genuinely faced with responsibility for retraction and redress, is a necessary next step which will also reassure the traditional print press that it is not being singled out for special punishment, as they claim."

Cable's hostility towards some parts of the media is well known. In 2010 he was recorded by two Telegraph journalists saying he had "gone to war with Murdoch" by intervening to block a takeover of Sky by the media mogul's News Corp.

Exposing Cable's views on Murdoch was deemed to be in the public interest by Ipso's predecessor, the Press Complaints Commission. However, the way the sting against Cable and other ministers was carried out breached the organisation's editorial code on subterfuge.

Cable's speech comes just hours after the News Media Association (NMA), which represents the UK's national and regional newspapers, took the first step towards launching a judicial review of the decision by the Press Recognition Panel to give the go-ahead to Impress.

In a pre-action letter, the NMA claims that the PRP decision was not legal because Impress, which is indirectly funded by former F1 tycoon Max Mosley, failed to meet criteria in areas such as its funding, what rules it imposes and how much support it has from the newspaper industry.

The NMA said it had been "advised that it has a powerful case that the Press Recognition Panel made serious and fundamental legal errors in its recognition of Impress".

New York Times
Kremlin Updates Its Plan to Counter Cyber Threats
Wednesday, 07 December 2016
Byline: Andrew E. Kramer

Moscow - The Kremlin published a new plan on Tuesday to defend Russia against what it described as stepped-up cyberattacks and "information-psychological" methods by foreign intelligence agencies bent on influencing its population with online information.
The plan updates a similar information security doctrine put in place by President Vladimir V. Putin in 2000, early in his first term, that staked out a renewed role for post-Soviet government in monitoring information.

The latest iteration of the doctrine comes as American officials have mulled retaliating against Russia for what the Department of Homeland Security said was government- orchestrated hacking before the presidential election, including stealing emails from the Democratic National Committee.

The plan, signed by Mr. Putin on Monday but published on Tuesday, described a threat to Russia of technological malfeasance similar to what the United States has accused the Russians of committing. It did not mention, however, any specific online strikes against Russia indicating that American retaliation could be underway.

Russia, the document says, is at risk of attacks on systems of "information support for democratic institutions" and the spread of harmful, false information.

It notes the "increasing scale of certain countries and organizations using information technologies for military and political goals."

The 16-page document sketches out what the Kremlin sees as the main threats to its security and national interest from foreign information making its way into the country, and sets priorities for countering them. It identifies terrorist recruiting and financial crime as dangers.

Under Mr. Putin, the Kremlin has staked out a role as a defender of conservative values, notably pushing back against gay rights, and the new doctrine is no exception, with a clause raising concern about risks to "traditional Russian spiritual and moral values" of Russian young people.

It also notes the risk to Russia of "a tendency toward an increase of materials containing biased assessments of the state policies of the Russian Federation in foreign media."

The doctrine supports a plan, in the works for some time, to gain control over the Russian segment of the web by basing more servers inside the country. The plan envisions operating the Russian internet autonomously, if needed in time of war, by switching it off from the rest of the world.

And it directs Russian diplomats to pursue the Kremlin's policy goals on information security at international organizations like the United Nations.

Russia has advocated, without much success so far, replacing the nonprofit group that now controls top-level domains with a global agency, the International Telecommunication Union.

The document calls attention to "information-psychological actions" from abroad undermining Russian "patriotic traditions of defending the Fatherland."

Russia has already passed laws aimed at regulating internet content and forcing foreign companies to base data servers in Russia. Last month, a Moscow court ordered internet service providers to block LinkedIn, the professional social networking site, for failing to comply.

Under a separate law governing news aggregators, sites with daily traffic exceeding 1 million users would bear responsibility as publishers, including a requirement to verify the truthfulness of the articles reposted on their websites. The law would apply to Google, among other aggregators.

A spokesman for the regulator, Roskomnadzor, on Tuesday denied a report in the Izvestiya newspaper saying Russian officials had already instructed Google to comply.

Bloomberg View
Russia Expects a Taste of Its Own Cyber Medicine
Tuesday, 06 December 2016
Byline: Leonid Bershidsky
Section: column

Column - Russia, demonized as the biggest cyber-villain in the world in the wake of the U.S. election campaign, must now take special care of its own information security. Its adversaries don't just possess powerful cyber spying and offensive capabilities -- they suspect Russian involvement in every incident, and that makes Russia vulnerable to all kinds of retaliation.
After it was accused of trying to influence the U.S. presidential race, Russia faces the same charges in Germany. Given Chancellor Angela Merkel's support of anti-Russian sanctions and her deep- seated support of a close partnership with the U.S., Russian President Vladimir Putin has strong motives to undermine her. Last week, Wikileaks, which appeared to closely coordinate its U.S. election-related publications with Russian propaganda outlets such as the RT channel and Sputnik network of websites, published material from a German parliamentary inquiry into the cooperation between Germany's BND

intelligence service and the U.S. National Security Agency. The issue is politically sensitive to privacy-minded Germans, who do not appreciate their country's collaboration with the intrusive U.S. service. The Russian propaganda organizations were on it immediately.

Merkel's government anticipates more than leaks. Late last month, about 900,000 customers of Germany's biggest internet provider, Deutsche Telekom, experienced outages after what appeared to be an attack on a particular type of router. The company said the problems were caused by "deliberate hacking," and German politicians wasted no time in hinting at Russian involvement. Merkel said she didn't have any specific information about the Deutsche Telekom attack, but added, "Let me just say that such cyberattacks, or 'hybrid attacks' as they're known in Russian doctrine, are part of everyday life today, and we need to learn to deal with them."

In a recent interview with the daily Sueddeutsche Zeitung, Bruno Kahl, the head of the BND, said he had evidence Russian was undertaking cyberattacks "which have no other purpose but to cause political uncertainty." Add the powerful, well-funded BND to the U.S. intelligence services plotting to prevent Russian attacks, and the Kremlin has a serious problem.

Putin clearly understands that and feels the need to shift the narrative or at least signal his preparedness. On Monday, he approved a new Russian information security doctrine which mentions "a number of foreign countries increasing their technological capacity to impact" Russian infrastructure "to attain military goals." It also talks about foreign intelligence services attempting to "exert psychological influence by information means in order to destabilize the domestic political situation in various regions of the world and undermine the sovereignty and territorial integrity of states."

According to the document, the Russian stance against such practices is defensive. But it is more likely an attempt to justify cyberattacks and the spreading of propaganda in the Kremlin's favorite way - - by saying everybody else does it too.

The new doctrine was published on the day the FSB, Russia's domestic intelligence service, said it expected the start of a major cyberattack by "foreign special services" against the Russian banking sector. On Dec. 2, the FSB said in a brief statement that Russian banks would be attacked from servers in the Netherlands owned by the Ukraine-based hosting company BlazingFast. At the same time, the FSB said, social networks would fill with panic-inducing messages about the collapse of certain banks and the central bank's plans to strip them of licenses.

The threat apparently was taken seriously. The communications ministry held meetings with bankers and internet providers, and the central bank offered extra liquidity in case there's a bank run. Monday came and went, though, and nothing happened to Russian banks; no panic spread through social networks, either. A BlazingFast representative suggested that the publicity scared off any hackers that might have planned the attack, but the FSB announcement also may have been part of a Kremlin campaign to present Russia as a victim rather than an instigator of hybrid warfare in cyberspace.

Though the Ukrainian firm -- a legitimate infrastructure provider with a branch in Amsterdam -- wasn't directly accused of involvement in the cyberattack, Russia has plenty to fear from Ukrainians. Unlike the U.S. and German spy agencies, careful not to start an all-out war with Russia, Ukraine is already involved in a proxy war with its eastern neighbor. It is also a lawless place full of excellent information technology specialists. The recent global operation to roll up Avalanche, a giant botnet used by cybercriminals for various malware attacks that have caused hundreds of millions of dollars in damage, culminated in the arrest of Hennady Kapkanov, a Ukrainian citizen, in Poltava. Avalanche was just the type of criminal network that could be used for an attack on a country's banking system, and it was far from the only one or even the biggest.

It was a Ukrainian hacktivist group that breached the email of Putin adviser Vladislav Surkov in October. They didn't find anything particularly sensational, but they did demonstrate their ability to hack Kremlin servers.

Moscow has long been worried about the dominance of Western software and the wide reach of U.S. internet companies. Last week, Natalya Kasperskaya, head of the InfoWatch information security company suggested that the Russian government stake a claim to all the data collected from Russian citizens on the internet before foreign companies get their hands on it. Russia has introduced stringent rules for internet firms, obliging them to store Russians' personal data within the country. Now, though, it's no longer a matter of protectionism or even securing Russians' personal data: Russia has every reason to expect attacks on its critical systems perpetrated in retaliation for Russian meddling in foreign elections.

Making sure these attacks don't come is a matter of constant vigilance. The FSB warning may even have been a drill. It also helps if elections in Western countries are won by people who won't be interested in retaliating. Donald Trump probably isn't. If indeed Putin has authorized election meddling and Western intelligence agencies have proof of that, we can expect that he will double down on the activity and step up the cyberwar.

La Presse (site web)
Surveillance: les commissaires à la vie privée demandent un meilleur encadrement de la police
Tuesday, 06 December 2016
Byline: Vincent Brousseau-Pouliot

Ottawa - Citant les révélations d'Edward Snowden et les cas de journalistes surveillés au Québec, les commissaires à la protection de la vie privée du pays mettent le gouvernement Trudeau en garde: au lieu de donner de nouveaux pouvoirs aux corps policiers, Ottawa doit plutôt mieux encadrer les pouvoirs policiers existants en matière de surveillance.
Dans le cadre de la consultation du gouvernement Trudeau pour moderniser le cadre de sécurité nationale, le commissaire à la protection de la vie privée du Canada Daniel Therrien ainsi que tous ses

homologues provinciaux demandent à Ottawa de ne pas hausser les pouvoirs policiers en matière de surveillance.

«Ces agences ont vu leurs pouvoirs augmentés de façon très considérable ces dernières années, particulièrement en vertu des projets de loi C-51 et C-13. En même temps, dans la foulée du 11 septembre 2001, nous avons été témoins trop souvent d'activités inappropriées ou même illégales de la part d'agents de l'État qui portaient atteinte aux droits des citoyens ordinaires qui n'étaient pas soupçonnés d'aucun crime ou activité terroriste. À mon avis, ces écarts s'expliquent par l'absence de normes claires qui encadrent suffisamment l'action de l'État», a dit le commissaire à la protection de la vie privée du Canada Daniel Therrien, en conférence de presse ce matin à Ottawa.

Le commissaire Daniel Therrien estime que «des garanties juridiques claires sont nécessaires pour protéger les droits et les abus, que les organismes de sécurité nationale doivent faire l'objet d'un contrôle efficace, et que l'octroi de nouveaux pouvoirs à l'État doit être justifié par des faits réels.»

«Sans vouloir faire comparaison» avec les services de renseignement des ex-républiques de l'Europe de l'est, le commissaire Daniel Therrien rappelle toutefois une décision récente de la Cour fédérale dénonçant le fait que le Service canadien du renseignement de sécurité (SCRS) a conservé de façon illégale pendant plusieurs années des métadonnées de citoyens canadiens (le SCRS interprétait la loi différemment et s'est plié à la décision de la Cour fédérale). «Nous parlons ici de retenir des données de citoyens ordinaires. Je ne crois pas que c'est le type de société dans laquelle [les Canadiens] veulent vivre», dit le commissaire Daniel Therrien.

Métadonnées

Les commissaires de protection de la vie privée s'inquiètent particulièrement de la collecte de métadonnées des citoyens (ex: leurs numéros de téléphone et non le contenu de leurs conversations). À ceux qui demandent de baisser le seuil juridique pour obtenir un mandat pour accéder à des métadonnées auprès d'un juge, le commissaire Daniel Therrien rappelle que le projet de loi C-13 a abaissé l'an dernier le seuil «à un motif raisonnable d'avoir un soupçon». «Je ne peux pas concevoir un test moins exigeant», dit le commissaire Daniel Therrien, qui s'oppose à la suggestion de certains intervenants que des métadonnées pourraient être obtenues par les forces policières en vertu d'une autorisation administrative.

Les commissaires de protection de la vie privée aimeraient aussi que les conditions d'obtention des métadonnées soient mieux encadrées, «de sorte que les juges aient en tête le caractère sensible des données» selon le commissaire Daniel Therrien. «Les métadonnées peuvent révéler davantage que le contenu des enregistrements», dit-il.

Les métadonnées devraient ainsi être aussi difficiles au plan juridique à obtenir que le contenu des enregistrements, selon les commissaires à la vie privée. Les forces policières devraient ainsi démontrer qu'il s'agit d'une mesure de dernier ressort et que d'autres méthodes d'enquête ont été utilisées. «On

pourrait limiter [l'accès aux métadonnées] aux crimes les plus graves», suggère aussi le commissaire Daniel Therrien.

Encryptage

Les commissaires à la protection de la vie privée «exhorte» le gouvernement fédéral «à faire preuve de prudence» avant de songer à légiférer sur l'encryptage, un «outil essentiel pour la protection des renseignements personnels». «Il n'existe aucun moyen connu de donner un accès systémique au gouvernement sans exposer parle fait même la population générale à un risque importante à la sécurité de leurs données», écrit le Commissariat à la protection de la vie privée du Canada.

Les commissaires à la protection de la vie privée accueillent favorablement l'idée de créer un comité de députés sur la sécurité nationale et le renseignement, mais suggère de leur adjoindre des experts «afin d'assurer une protection efficace des droits».

En conférence de presse, le commissaire à la protection de la vie privée du Canada Daniel Therrien était accompagné de ses homologues de l'Ontario Brian Beamish et du Québec Jean Chartier. «Nous pensons que même le processus judiciaire reste à parfaire et mérite d'être mieux encadré. [...] Les pouvoirs policiers qui recherchent davantage de pouvoirs n'ont jamais fait la preuve [...] que le système actuel ne fonctionnait pas», dit Me Jean Chartier, président de la Commission d'accès à l'information du Québec.

Le gouvernement Trudeau a lancé a lancé cette année une consultation sur la modernisation du cadre de sécurité nationale. Les commissaires à la protection de la vie privée ont déposé aujourd'hui un mémoire commun.

Korea Herald
Military intranet hacked by North Korea
Wednesday, 07 December 2016
Byline: Yoon Min-sik

Seoul - South Korea's Defense Ministry said Tuesday the military's intranet had been hacked for the first time ever, presumably by North Korea, resulting in a number of military secrets being leaked.
The military found that malicious code had been spread on its computers via its servers used to relay updates on Sept. 23.

"The military formed a cyber investigative team to look into this matter and found that some military data -- including confidential information -- has been leaked. It appears to be a North Korean act," the ministry said.

Code used in the attack has certain similarities with that previously used by North Korean hackers, a ministry official explained.

He added that the attack originated from Shenyang, China, where many North Korean hackers are believed to be based and which was the believed origin of a 2014 attack on Korea Hydro & Nuclear Power Co.

But the official refused to specify what data had been stolen.

"We cannot give out details on what information was leaked, because it might give (North Korea) an advantage in the ongoing cyber warfare," he said. He also refused to confirm how many computers were hit by the cyberattack, but added that multiple servers in the intranet was infected.

The military said that none of the data from other countries that has signed intelligence sharing agreements with South Korea has been stolen.

The incident raised questions about the security of what the military had basically described as "unreachable."

The military's manual states that no classified information can be saved on computers connected to the internet, and that the line must be cut off during the operation and any activity must be erased afterwards.

But some of the computers -- located in one of the bases -- linked to the intranet was connected to the internet due to "administrative carelessness and violation of regulation," the ministry said.

The connection opened a path to infection of malicious code, allowing hackers to remotely control the computers and steal the data.

While the first large- scale activity took place on Sept. 23, some of the code that allowed the attack had already been planted on Aug. 8.

During the hacking attack on the Korea Hydro & Nuclear Power Co. in 2014, officials had also claimed that a hacker could not infiltrate its intranet because it was cut off from outside.

As follow-up measures for the attack, the military outlined 14 tasks to step up cyber security. This includes procuring a measure to monitor the section where the internet and the military intranet could be interlinked and replacing the current computer vaccine system.

China shuts thousands of illegal live streaming accounts - Xinhua
Wednesday, 07 December 2016
Byline: Staff reporter

Shanghai - Beijing-based live streaming websites have shut down thousands of illegal accounts after new regulations by Chinese internet authorities guarding against violent and obscene content came into effect, the official Xinhua news agency said on Wednesday.
The Cyber Administration of China (CAC) formalised controversial rules regulating the country's fast-growing live-streaming video industry in November, in a move that stripped out smaller competitors and placed hard-line surveillance measures on leading firms.

More than 4,500 accounts on Beijing-based websites had been closed and more than 3,100 live streaming programmes had been shut, Xinhua reported the CAC as saying.

"Reports of violent, obscene and vulgar content on live- streaming websites abound," Xinhua said.

The new rules, which came into effect on Thursday, require streaming services to provide information on users who stream content the government deems a threat to national security or social order.

CAC officials said they would enhance regulations further and called on the public to engage in supervising the internet.

UAE's digital security has room for improvement
Wednesday, 07 December 2016
Byline: Caline Malek

Dubai - Building a layered security network that has the trust of the local population and shares data among governments departments is just one of the ways the UAE can protect itself from digital threats, experts have said.
Although the UAE has been working on its e-government services for the past two and a half years, there is room for improvement.

"The GCC will cross the UK and Europe in the next few years in smart automation," said Dr Usman Zafar, chief executive at Duc International Consulting in the UAE. "But as citizens, we want information at the right time so pushing information has become crucial."

He said large investments in data centres had not achieved any return. "There is no unified integration," he said at the second day of Biometrics Middle East Conference on Tuesday.

"Government departments work in silos and don't communicate so you can't get a smart service. We need interoperability and we need to find a mechanism to enable scattered government systems to talk to each other."

Dr Zafar said a national framework was needed to share data as it removes barriers and allows for better collaboration among ministries.

Gaining more trust from the community in e-government services is another crucial factor for success.

"Innovation has no geographic boundaries," said Daniel Hughes, managing director at Forge Training and Management Consulting in the UAE and former head of navigation at the UAE Navy Forces Institute. "It's been a core part of every region and it's leading to a lot of the new developments."

He said a lot more innovation in biometrics could happen but consumers lacked trust in technology.

"We're moving down the path of biometrics," he said. "From cardiac rythm to vein patterns in our fingers and eyes, it is what we are. The technology is there and it's easy to use but it's the individuals that use that data to spread it that cause problems."

For Richard Castillo, master trainer and consultant at the firm, a layered security is vital as it is one of the most effective tools for enforcement.

"One of the key elements of layered security is criminals never know what to expect," he said. "They have very strong intelligence but technology and biometrics has had such an impact on enforcement operations. There is no single security solution, to me it's a combination and every layer of security is crucial, from the officers, to the training, technology, biometrics verification and private sector assistance."

Mr Castillo, who has worked in airports, land borders and alongside customs and security enforcement, said the Gulf has been targeted.

"There are threats here like everywhere," he added. "We're talking about money laundering because it's a passageway for commerce so every business should have a layered security in place."

Although he said the UAE had very good security features, but there was room for improvement. "There is no one country that has a 100 per cent fault proof system," he said. "But it requires an educational effort."

Canadian Press
RCMP fabricated response to access-to-info request 'unacceptable:' Goodale
Thursday, 08 December 2016

OTTAWA _ Public Safety Minister Ralph Goodale says it's "unacceptable" that an RCMP employee fabricated a response to an access-to- information request.
Goodale says the individual involved was "at a very junior level" and has been disciplined.

The fabrication was revealed last week in a letter from RCMP Supt. David Vautour to Bruce Cheadle, a reporter for The Canadian Press who in May 2015 had requested information regarding the now-defunct long-gun registry.

Cheadle did not receive a response to his access request until March 1, 2016, but that letter was backdated almost five months.

Vautour said a note included with the tardy response claimed that the letter had originally been sent to Cheadle in October 2015, but was returned to the RCMP by Canada Post due to an incorrect postal code.

He said the Mounties have since determined that the backdated letter and the explanatory note were fabricated to avoid a possible complaint about the delay in responding to the request.

"Our office does not condone actions that are contrary to the RCMP core values of honesty, integrity and professionalism," Vautour wrote Cheadle.

"We want to advise you that we have addressed this matter through a formal disciplinary process and made the Office of the Information Commissioner aware of this matter."

Goodale noted that it was the RCMP itself that discovered the fabrication and informed both Cheadle and the access-to-information watchdog.

"This behaviour is not tolerated and discipline has been delivered," Goodale said Wednesday.

Ironically, Cheadle's original access request involved the issue of backdated legislation which retroactively absolved the RCMP of any wrongdoing when it illegally destroyed long-gun registry records even as Legault was conducting an investigation into a complaint about access to those records.

Stephen Harper's previous Conservative government passed the Ending the Long-gun Registry Act in April 2012 and then pushed the Mounties to quickly destroy the data, despite assuring Legault that the records would be preserved until her investigation was completed, as legally required.

When Legault subsequently informed the government that the RCMP had committed an alleged offence, the Conservatives re-wrote the law, retroactively stripping Legault of her jurisdiction over the

registry records, absolving the Mounties of any wrongdoing and shutting down an active investigation into the matter which had been started by the Ontario Provincial Police.

As part of his coverage of that story, Cheadle had submitted an access request for copies of electronically scanned long-gun registration application forms and transfer applications. The backdated response he received informed him that the Access to Information Act no longer applied to the requested records.

Despite the fabricated date and explanation for the delay in responding, Vautour said the substance of the response "was accurate."

Cheadle has lodged a formal complaint with Legault's office about the fabrication.

In June 2015, Legault filed a court challenge to the constitutionality of the retroactive law, arguing that it undermines the rule of law and government access-to-information systems across the country.

However, the court case has been on hold for months as Prime Minister Justin Trudeau's year-old Liberal government attempts to negotiate a settlement.

Third China-U.S. cyber security ministerial dialogue convenes in Washington
Thursday, 08 December 2016
Byline: Staff reporter

Washington - The third China-U.S. ministerial dialogue on fighting cyber crimes was held here Wednesday.
The dialogue was co-chaired by China's State Councilor and Minister of Public Security Guo Shengkun with U.S. Attorney General Loretta Lynch and Secretary of Homeland Security Jeh Johnson.

In his remarks to the meeting, Guo noted that under the auspices of Chinese President Xi Jinping and his U.S. counterpart Barack Obama, China-U.S. cooperation in safeguarding cyber security is booming and has yielded positive outcomes in cracking down on cyber crimes and related matters.

Calling the current China-U.S. cooperation in cyber security a link between past and future, Guo proposed that the two sides press on in using the dialogue mechanism as the main channel for communication in tackling cyber security issues, give prompt and effective response to the requests from the other side, and constructively manage their differences.

The U.S. side said that China and the United States share common interests in fighting cyber crimes and protecting cyber security, and the high-level dialogue mechanism also serves as a crucial platform for

candid communication and enhancing mutual understanding and trust between law enforcement officials of the two countries.

U.S. officials also called for continuing and developing the current dialogue mechanism to jointly fighting cyber crimes, including cyber terrorism and e-mail fraud.

The two sides agreed to convene the next cyber security ministerial dialogue in China in 2017.

ABC (Australia)
Cyber security war game set in 2022 hopes to prepare governments, businesses for the worst
Thursday, 08 December 2016
Byline: Matthew Clayfield

Australia's first simulated cyber security "game" kicks off at the National Security College of the Australian National University.
Australia's first simulated cyber security "game" was set in 2022 and explored two equally unpalatable cyber attack scenarios in the hopes to prepare governments and businesses for the inevitable.

The game was co-hosted by the National Security College at the Australian National University and the RAND Corporation, bringing together 90 participants from government, business and academia.

Michelle Price, senior adviser in cyber security at the National Security College who helped to co-ordinate the game, said Australians "human behaviour" in cyber space needed to improve.

"It's in large part why we're such a significant target for malicious activity," she said.

Australia is currently losing up to $17 billion each year through malicious cyber activity.

And the attacks on this year's Census website remain an equally stark reminder of what can happen when organisations are unprepared.

Professor Rory Medcalf, head of the National Security College, said the game was a full-scale simulation of the "kind of complex cyber security attacks Australia could face in years to come".

"The whole point is to bring together senior levels of the private sector, the government, the bureaucracy, to make very quick complex decisions against uncertain challenges," he said.

Game designed to work out what needs to change now

Participants included ministers and shadow ministers, state and federal agencies, and representatives of the Australian Securities Exchange.

They were presented with two strategic scenarios set six years from today and forced to develop solutions to problems while taking into account their various interest and concerns.

Ms Price said each person in the room took on a role across the six different groups, to ensure the questions that the facilitator asked everyone to focus on were approached "from different points of view".

"To try and work out if we did find ourselves in different circumstances in 2022, which of course we will, how would we respond at that time," she said.

"What are the kinds of things that we need to do over the next couple of years to either course correct on our policy setting, or which parts of the current policy settings we need to keep working on embedding."

Cyber security 'needs to be an automatic behaviour'

She said that while the game was designed to be challenging, it's real purpose was to generate conversations and ideas.

"Most Australians don't understand why cyber security is important to them as individuals," she said.

"That's not just adults, that's also children.

"We need to make sure that across the board cyber security is something that becomes an automatic human behaviour.

"So that we not only understand it, but we appreciate why it's so important that we make sure we're secure when were online."

Dan Tehan, the federal minister assisting the Prime Minister for cyber security, was among the game participants and said the Government had put in place a cyber security strategy in April this year and were implementing it.

"That strategy clearly defines the need for government, for business, for academia and for the community to work hand in hand," he said.

"It's going to be a whole of community approach and what we're going to do today is map how we can get all sectors of the economy working together to deal with the cyber threat."

Press Trust of India
More attacks on cloud, IoT devices likely in 2017: Symantec
Thursday, 08 December 2016

New Delhi - Higher instances of attacks on cloud and Internet- connected devices are likely in the coming year as cybercriminals evolve their approach towards accessing enterprise and consumer data, security software maker Symantec today said.
"Given the significant shift towards cloud-based storage and services, the cloud is becoming a very lucrative target for attacks. The cloud is not protected by firewalls or more traditional security measures, so there will be a shift in where enterprises need to defend their data," Symantec Director Solutions Product Management APJ Tarun Kaura said. He added that attacks on cloud could result in multi- million dollar damages and loss of critical data.

"Given the consistently changing security landscape, it's important to take a moment and determine where the security industry needs to focus their attention as we move into the next year," Kaura said unveiling Symantec's security predictions for 2017.

Highlighting the proliferation of devices connected to the cloud and Internet, he said the shift toward "modern workplace" where businesses allow employees to introduce new technologies like wearables and virtual reality will continue.

"Enterprises will need to shift their focus from safeguarding end-point devices toward protecting users and information across all applications and services. They will have to look beyond computers and mobile devices for vulnerabilities," he said.

Kaura added that nearly everything in an enterprise is now connected to the internet and will need to be protected.

Another security challenge that may gain traction is 'fileless malware'. Fileless infections are those written directly onto a computer's RAM without using files of any kind. These are difficult to detect and often elude intrusion prevention and antivirus programs. "This type of attack increased throughout 2016 and will continue to gain prominence in 2017, most likely through PowerShell attacks," he said.

Kaura also highlighted the issue of rogue nation states financing themselves by stealing money. "There is a dangerous possibility that rogue nation states could align with organised crime for their personal gain, such as what we saw in the SWIFT attacks. This could result in down time for countries' political, military or financial systems," he said.

In February this year, a group of cybercriminals stole USD 81 million from the Bangladesh central bank. The attack triggered an alert by payments network SWIFT after it was found the attackers had used malware to cover up evidence of fraudulent transfers.

In October, the Indian banking sector saw the biggest-ever security breach with 32 lakh debit cards of various public and private sector banks being feared to have been 'compromised' by cyber malware attack in some ATM systems.

Hackers operated Twitter handles of Rahul, Congress from 5 countries (Canada).
Thursday, 08 December 2016
Byline: Somreet Bhattacharya

New Delhi - The Twitter handles of Rahul Gandhi and the Congress which were recently hacked were operated from five countries including the US, Delhi Police on Wednesday said.
The Economic Offences Wing (EOW), which is probing the matter, received a reply around three-four days ago from Twitter headquarters on the Internet Protocol (IP) addresses used by the hackers to send derogatory tweets from these accounts, a senior police officer said.

"We have got to know that the IP addresses from where the accounts were accessed don't fall under our jurisdiction. The Twitter handle logs show both the accounts were operated from five countries - Sweden, Romania, the US, Canada and Thailand. We will write to the Internet service providers of these countries to share details of users with us and that is how the investigation will proceed," the officer said.

Analysis of the data shows that the accounts were accessed from these countries on November 30 from 9.15am to 9.30am and from 10:30am on December 1, the officer added.

In case, police do not get the necessary details, they might have to initiate the process of sending Letters Rogatory to competent courts in these countries for assistance, sources said. According to the officer, police are yet to get log details of the Congress website from the party's server.

Police had lodged two FIRs in connection with the hacking of the two Twitter accounts, the party website and the email accounts of Congress and Rahul on December 1 following two complaints from Congress chief spokesperson Randeep Surjewala to the EOW.

Rahul's Twitter account was hacked on November 30 and some remarks full of expletives were posted. On December 1, his email account was also hacked, the party had claimed. Two cases under section 66 of IT Act were registered, police had said.

Haaretz
U.K. Intelligence Called Israel 'True Threat' to Middle East
Thursday, 08 December 2016

Jerusalem - British intelligence spied on Israeli diplomats and firms in addition to its military, the French daily Le Monde reported on Wednesday, based on leaked documents that came into the possession of whistleblower Edward Snowden. In one of the files, Britain's GCHQ intelligence-gathering apparatus defined Israel as "a true threat" to the Middle East.
"The Israelis constitute a true threat to regional security, notably because of the country's position on the Iran issue," a leaked top- secret document from 2009 said.

According to Le Monde, the GCHQ collected information on Israeli diplomats, including a person described by the newspaper as the second-highest ranking official in the Israeli foreign ministry. That person was not named. The British also spied on the Palestinian Authority, the report said.

Email correspondence belonging to the Israeli ambassadors to Nigeria and Kenya was also the subject of British intelligence-gathering efforts as was Ophir Optronics, a firm deemed to be tied to the Israeli defense establishment that specializes in fiber optics, and the Hebrew University of Jerusalem's Racah Institute of Physics.

According to Le Monde, the GCHQ kept track of the phones of Palestinian Authority President Mahmoud Abbas as well as that of his two sons, Yasser and Tarek Abbas, on December 9, 2008. Noting that these interceptions occurred three weeks before Israel's military offensive in Gaza in January 2009, the newspaper suggests they may have served to aid Israel to prepare for the operation.

From the end of 2008 through 2009 the British agency monitored communications among the PLO secretary general and numerous Palestinian delegations, in particular those in France, Belgium, Portugal, Pakistan, South Africa and Malaysia. It also spied on Israeli Arab lawmaker, Dr. Ahmad Tibi, and former Palestinian Prime Minister Ahmed Qurei.

A 2008 note from the American security agency, the NSA, revealed in the Snowden archives, and cited on the American site The Intercept, described the Palestinian Authority's security forces as "no threat to the United States or its allies...and these forces are frequently the best informed on violence in the region."

Another NSA document from April 18, 2013 cited "the great closeness of the NSA dating back to the 1980s with the Electronic Warfare Directorate, Jordan's technical secret services. The two cooperate on priority targets and the Jordanians provide a large portion of the names of individuals targeted by the NSA in the region."

The Le Monde report followed a previous publication based on documents stolen by Snowden dealing with spying by U.S. and British intelligence on Israeli military aircraft.

For 18 years, GCHQ and its American counterpart, the NSA, had collected drone transmissions after cracking the Israeli army's encryption for communication among fighter jets, drones and army bases. The information was reported in January by The Intercept and the German newspaper, Der Spiegel.

Britain and the United States reportedly have used this access to monitor Israel Defense Forces operations in the Gaza Strip, watch for a potential strike on Iran and keep tabs on drone technology that Israel exports. Snowden worked for U.S. intelligence before publishing classified material in 2013 and fleeing to Russia.

Reuters
Germany sees increase in Russian propaganda, cyber attacks
Thursday, 08 December 2016
Byline: Staff report

Berlin - Germany's domestic intelligence agency on Thursday said it had seen a striking increase in Russian propaganda and disinformation campaigns aimed at destabilizing German society, and targeted cyber attacks against political parties.
"We see aggressive and increased cyber spying and cyber operations that could potentially endanger German government officials, members of parliament and employees of democratic parties," Hans-Georg Maassen, head of the domestic BfV intelligence agency, said in statement.

Maassen, who raised similar concerns about Russian efforts to interfere in German elections in an interview with Reuters last month, cited what he called increasing evidence about such efforts and said further cyber attacks were expected.

The agency said it had seen a wide variety of Russian propaganda tools and "enormous use of financial resources" to carry out "disinformation" campaigns aimed at the Russian-speaking community in Germany, political movements, parties and other decision makers.

The goal of the effort was to spread uncertainty in society,"to weaken or destabilize the Federal Republic of Germany," and to strengthen extremist groups and parties, complicate the work of the federal government and influence political dialogue.

The agency said it had seen a "striking increase" in spea-phishing attacks attributed to a Russian hacking group APT 28, also known as "Fancy Bear" or Strontrium, the same group blamed for the hack of the U.S. Democratic National Committee this year and a cyber attack on the German parliament in 2015.

The attacks were directed against German parties and members of parliament, the agency said, adding they were carried out by government bodies posing as "hacktivists".

"Propaganda and disinformation, cyber attacks, cyber espionage and cyber sabotage are part of the hybrid threat facing western democracies," Maassen said.

German officials have accused Moscow of trying to manipulate German media to fan popular angst over issues like the migrant crisis, weaken voter trust and breed dissent within the European Union so that it drops sanctions against Moscow.

But intelligence officials have stepped up their warnings in recent weeks, alarmed about the number of attacks.

Last month, German Chancellor Angela Merkel said she could not rule out Russia interfering in Germany's 2017 election through Internet attacks and misinformation campaigns.

Russian officials have denied all accusations of manipulation and interference intended to weaken the European Union or to affect the U.S. presidential election.

U.S. intelligence officials had warned in the run-up to the Nov. 8 presidential election of efforts to undermine the credibility of the vote that they believed were backed by the Russian government.

The Intercept
Drowning in Information: NSA Revelations From 262 Spy Documents
Thursday, 08 December 2016
Byline: Micah Lee, Margot Williams

Washington - By the first half of 2004, the National Security Agency was drowning in information. It had amassed 85 billion phone and online records and cut the ribbon on a new hacking center in Hawaii -- but it was woefully short on linguists who could make sense of captured communications and lacked enough network analysts to effectively monitor all the systems it had hacked.
The signals intelligence collected by the agency was being used for critically important decisions even as NSA struggled to understand it. Some bombs in Iraq were being targeted based entirely on signals intelligence, a senior NSA official told staff at the time -- with decisions being made in a matter of "minutes" with "less and less review."

Information overload is just one of several themes running through 262 articles from the NSA's internal news site, SIDtoday, which The Intercept is now releasing after careful review. The documents also detailed an incident in which the Reagan administration appears to have leaked classified intelligence to the press for political purposes, described in an accompanying article by reporter Jon Schwarz.

SIDtoday articles published today also describe how the NSA trained FBI agents, enabled U.S. intervention in Latin America, and, with the help of a gifted analyst at the Defense Intelligence Agency, learned the value of simply reading information that was already public. One document even suggests that NSA personnel routinely got dangerously chatty at restaurants near headquarters. These stories and more are described in the highlights reel below. The NSA declined to comment.

Dropping Bombs in Iraq "With Less and Less Review"

A top NSA official disclosed in a January 2004 SIDtoday column that U.S. forces were "dropping bombs" based entirely on signals intelligence, the type of intelligence collected by the agency. He then implied that the American officers involved risked prosecution for war crimes.

Charles Berlin, chief of staff in the Signals Intelligence Directorate, recounted an anecdote about a former commander of his who, in one session in the winter of 1995-96, personally reviewed more than 100 possible airstrike targets in the Balkans. The commander's motivation, Berlin said, was to protect his underlings from being prosecuted for war crimes, and his actions "really brought home the concepts of responsibility and accountability."

"For us today this lesson is especially important," he added. "The planning cycle for dropping a bomb has compressed from a day to minutes and the criterion for the aiming point has less and less review."

"As many of you know, our forces in Iraq are dropping bombs on the strength of SIGINT alone. We are proud of their confidence in us, but have you ever considered the enormous risk the commanders are assuming in this regard? Are you ready to share that risk?"

Inside the NSA's Call-Logging Machine

Among the ways the NSA identified potential terrorists was through a practice known as "information chaining," which uses communications metadata to draw a social graph. And there's no question the agency had lots of metadata: As of 2004, the NSA had amassed a database of more than 85 billion metadata records related to phone calls, billing, and online calls -- and was adding 125 million records a day, according to a January 2004 SIDtoday article titled "The Rewards of Metadata."

The database, known as FASCIA II, would at some unspecified point in the future begin processing 205 million records a day and storing 10 years of data, the article added. One of the world's largest Oracle databases at the time, FASCIA II held metadata records from telephone calls, wireless calls, billing, the use of media over the internet, and high- powered cordless phones, with plans to add email metadata in the future.

The article explained that metadata is used by the agency in the process of "information chaining," in which analysts spy on relationships between people. It further claimed that two senior al Qaeda operatives had been captured with the help of such techniques. A March 2004 SIDtoday article said a chaining tool called MAINWAY helped a counterterrorism analyst uncover six new "terrorist-related numbers."

Short on Linguists, NSA Struggled to Understand Targets

It's one thing to collect phone calls, email messages, and other signals intelligence. It's quite another to make sense of it. Several SIDtoday articles from the first half of 2004 made clear that the NSA was falling far short in its attempts to process communications conducted in languages other than English.

Only half of the agency's more than 2,300 "language missions" worldwide had qualified personnel, according to a June 2004 SIDtoday article by an NSA "senior language authority." The author declared that "this shortcoming must be rectified." An NSA report to an oversight council, quoted in the article, said that the lack of qualified language analysts was particularly acute in the "Global War on Terrorism."

Exacerbating the situation was the fact that captured communications require a high level of linguistic proficiency to understand. "The cryptologic language analyst must be able to read and listen 'between the lines' to unformatted, unpredictable discourse," as the article put it. Only a quarter of military cryptologic linguists, who formed the vast majority of the workforce, could work at this level, known as "level 3" proficiency, while barely half of the civilian cryptologic linguists could, according to a follow-up SIDtoday article. The military's language training institute offered "virtually no existing curriculum" above level 2.

NSA's plan to address the problem included reforms to the training institute and on-site instruction to bring existing linguists up to higher levels. The agency planned to invest about $80 million per year in training over five years. Other efforts included an internal online language training tool, an evaluation of redundant Arabic machine translation projects underway in various government agencies, and the formation of a language technology team within the NSA.

How the NSA Over-Hacked

Sometimes metadata isn't enough and the NSA decides it needs to compromise targets' computers to collect much more data. The first half of 2004 saw a ramp-up of NSA's hacking capabilities. In March, SIDtoday reported, the agency's elite hacking team Tailored Access Operations approved Kunia Regional Security Operations Center in Hawaii -- the same facility where Edward Snowden later worked -- as the first NSA field office to conduct "advanced" Computer Network Exploitation. Other facilities conduct the first stage of hacking, "target mapping," but the Kunia facility began doing "vulnerability scanning" all the way through to "sustained SIGINT collection."

Another March SIDtoday article said that an advanced network analysis division used to help "exploit targets of interest" had "played an instrumental part" in capturing alleged al Qaeda operative Husam al-Yemeni, had developed a "more complete understanding of the Pakistani Army Defense Network (ADN) infrastructure," and had assisted with the hacking of "an important digital network associated" with the leader of Venezuela at the time, referred to erroneously as "Victor Chavez."

The NSA was so successful at hacking networks that the agency was overwhelmed with information. "We simply do not have enough network analysts to effectively monitor these targeted networks," an

NSA division chief wrote in an April 2004 SIDtoday article. To solve the problem, the agency began prototyping an automated monitoring system.

"Outstanding" Bookworm Spy Doesn't Need to Really Spy

Even as the NSA made enormous efforts to collect vast quantities of private communications, a lone SIDtoday article extolled the value of publicly available data. The piece, from May 2004, gushed about a Defense Intelligence Agency analyst who dug up leads by poring over Russian material that was "open source." The DIA bookworm searched in newspapers, government documents, and "obscure websites" for information that aided the NSA in collecting intelligence, including names, telephone numbers, and addresses. The article, co-authored by an NSA director with responsibility for Russia, praised the analyst's "outstanding language and research skills." It turned out that "critical lead information" on Russian underground facilities, including a mysterious and widely discussed site at Yamantau Mountain in the Urals, was "often only available in open source literature, such as the Internet."

How the NSA Secures -- and Routinely Puts at Risk -- Sensitive Information

Knowing how much intelligence value could be reaped from openly circulated information, the NSA worked to encourage discretion among members of its workforce. NSA employees practiced poor operational security on a "monthly" basis by disclosing too much information in restaurants and other public settings near the agency's Fort Meade headquarters, an agency security manager indicated in a tutorial on operational security that ran in SIDtoday in April 2004.

The article used a hypothetical scenario to explain why operational security, or OPSEC, was important for everyone. The author, OPSEC manager for the NSA's Signals Intelligence Directorate, wrote: "You're at a luncheon at a local restaurant to bid farewell to Sue, a co-worker who is moving on to a new office." Your boss makes a toast to Sue, describing her contributions against organized crime and offering various details of her work. Sue then gives a toast thanking some of the gathered individuals.

"Sound familiar?" the OPSEC manager asked. "Then you've witnessed (or perhaps participated in) a demonstration of poor OPSEC. ... Have you ever stopped to consider what your unclassified public discussions might be giving away? Take the scenario, for instance. This is a scene that is played out monthly in the Fort Meade area." The article went on to list the pieces of information that an adversary, who could have been listening in from a nearby table, would have learned.

OPSEC turned out to be a recurring theme for SIDtoday -- OPSEC training is, after all, mandatory for all NSA personnel. A January 2004 article, written by the author of the April 2004 piece, listed some tips to help personnel to apply OPSEC to their day-to-day activities: Identify your critical information, analyze the threat, identify vulnerabilities, assess risk, and apply countermeasures.

NSA employees aren't the only ones trained to practice good OPSEC. A March 2005 article reported that the leaders of Venezuela and Cuba practiced OPSEC successfully. President Bush considered Venezuelan

President Hugo Chavez a "threat to democracy in the region and a threat to U.S. interests in particular." But "from a SIGINT perspective, Venezuela poses a particularly difficult challenge. With Castro as his mentor, Chavez has learned the importance of communications security and has made sure that his subordinates understand this as well."

Law & Order & the NSA

Various 2004 SIDtoday articles highlight the NSA's behind-the-scenes work on behalf of federal law enforcement.

One detailed a two-week training course on "intelligence reporting" given by NSA staff to FBI officers working on terrorism cases. The course, which had a component dubbed "SIGINT Reporting 101," aimed to provide "insight into the complexity and difficulty of our business" and to dispel "Hollywood myths about the NSA."

Another SIDtoday article showed how the U.S. Coast Guard was able to interdict a boat carrying 3.2 metric tons of cocaine thanks to the NSA's monitoring of VHF radio signals, which carried voice communications of narcotraffickers. An official Coast Guard history of the incident elides the NSA's role. The same SIDtoday article also disclosed that the Colombian air force carried out a strike against a suspected trafficker aircraft after a tip-off from the NSA.

NSA vs. FARC

Colombian guerrillas holding American hostages evaded massive NSA surveillance, according to a February 2004 SIDtoday article.

One year after three American contractors, who had been on a surveillance mission for the U.S. military, were captured by the Revolutionary Armed Forces of Colombia, a Marxist guerilla group, the U.S. "has not been able to determine with high confidence the exact location and status of the hostages," wrote an NSA account manager for the military's Southern Command. This despite "hundreds" of U.S. government personnel having worked to gain their release. U.S. efforts were stymied when FARC's leadership ordered that personnel cease mentioning hostage operations directly in their communications; the best the NSA could achieve at the time of the SIDtoday article was to monitor calls between two radio operators, "Paula and Adriana," who in turn were connected to the FARC leaders "we strongly suspect are linked to the hostages."

The author of the SIDtoday article added that the agency continued to try and get a fix on the location of the hostages. Yet their captors eluded the Americans for another four years. The three Americans were freed by Colombian commandos in July 2008.

A March 2004 SIDtoday article noted a success against FARC, bragging that the arrest of FARC financial leader Anayibe Rojas Valderrama, known as "Sonya," and a number of her associates a month earlier

"resulted from years of monitoring. ... Accurate geolocational data as to where she was and when, allowed a vetted Colombian team to capture them by surprise and without any loss of life." Valderrama was extradited to the United States where she was tried and convicted on drug trafficking charges in 2007.

Internal NSA Criticism of Political Groups and the News Media

A national intelligence officer gave a top-secret "issue seminar" to NSA staff on the question of "where political action fades into terrorism," according to a seminar announcement published in June 2004. The announcement suggested that the line between "legitimate political activity" and "activity that is the precursor to, or supportive of, terrorism" is fuzzy. The course used the Vienna-based organization Anti-Imperialist Camp as a case study, describing it as "ostensibly a political organization" but noting that "its many ties to terrorist organizations -- and its attempts to collaborate with Muslim extremists -- raise questions about where political action fades into terrorism." No further details were given to substantiate the alleged ties; the group's website remains online. A spokesperson for the group, Wilhelm Langthaler, told The Intercept that the group was targeted for such accusations for political reasons, including its opposition to the war in Iraq and "our public support for the resistance against occupation which we have compared with the antifascist resistance against German occupation."

Another seminar announcement said the news media helped stymie U.S. intelligence collection. "A day hasn't gone by that our adversaries haven't picked up a newspaper or gone on the Internet to learn something new about how the US intelligence gathering system operates and what its capabilities or limitations are," the course overview explained. "And in response, a day hasn't gone by that our adversaries haven't modified their operations and activities to avoid being detected and collected against by the US intelligence gathering system."

NSA's Role in the Failed Iran Hostage Rescue Attempt

In an anecdote about signals intelligence during the 1980 Iranian hostage rescue mission, a SIGINT staffer recalled the night of April 24 of that year, when he was told he was monitoring the ongoing "Operation Ricebowl." In a May 2004 SIDtoday article, the staffer wrote: "We knew the parameters of the Iranian Air Defense system because it was U.S. equipment and installed by U.S. contractors while the Shah of Iran was still in power. We knew exactly where the gaps in coverage were and we exploited it during the rescue attempt." The author went on to describe his shock the next morning when he saw on TV news at home that the mission had ended with a disastrous helicopter crash.

The Hill
Former NSA chief: Trump lacks 'deep knowledge' of cybersecurity
Thursday, 08 December 2016
Byline: Joe Uchill

Washington - Gen. Michael Hayden, a former head of the NSA and CIA, says he's worried about Donald Trump's understanding of cybersecurity.
"When he was asked in the second or third debate about his views on cyber, I think it's fair to say he displayed -- he did not have a deep knowledge of the subject," said Hayden Wednesday at the Wall Street Journal Future of Cybersecurity breakfast.

Hayden was one of a bevy of former military and intelligence officials who served under Republican presidents but declined to support Trump's presidential bid.

"If he governs in any way consistent with the language he used as a candidate, I would be very, very concerned," Hayden said at Wednesday's event.

He expressed hope that Trump would eventually pivot and learn more about cybersecurity but said he had not seen any signs that was happening.

Asked by moderator John Bussey of the Journal why he was skeptical, Hayden rattled off a list of reasons he did not trust Trump's judgment on cybersecurity.

"Number one, an absolute refusal to admit to a high confidence judgment of the American intelligence community that the Russians had an aggressive, covert influence campaign on the American political process," said Hayden.

In an article released Tuesday that proclaimed the president-elect Time magazine's "Person of the Year," Trump continued to deny Russia's involvement in the hacks on Democratic party organizations and personnel.

Hayden also expressed concerns about Trump's announced intention to have the Department of Defense develop a plan to protect critical infrastructure.

"Statutorily, that job belongs to Homeland Security," said Hayden.

Hayden was also concerned by what he characterized as Trump's rush to judgment in the encryption debate, noting Trump's call to boycott Apple.

Hayden, like former Homeland Security Director Michael Chertoff, is a firm believer that civilian use of encryption provides stronger national security.

Trump, like FBI Director James Comey, believes that encryption provides terrorists and criminals with a way to hide from law enforcement.

"I think that is a reflexive national security position, not a thoughtful one," Hayden said.

Vols au-dessus d'un nid d'espions

Thursday, 08 December 2016

Byline: Jacques Follorou

Non identifié - La NSA américaine et son homologue britannique peuvent capter toutes les données, y compris les codes secrets, des communications des passagers de la plupart des compagnies aériennes. Dont Air France.

Dans l'immense stock d'archives extraites par Edward Snowden, l'ancien contractuel de l'Agence nationale de sécurité américaine (NSA), c'est une pépite. Elle débute par une devinette : " Quel est le point commun entre le président du Pakistan, un trafiquant de cigares ou d'armes, une cible du contre-terrorisme ou le membre d'un réseau de prolifération nucléaire? Ils utilisent tous leur téléphone portable lorsqu'ils sont dans un avion. "

Posée en 2010 dans une des lettres d'information interne de l'une des principales directions de la NSA, " SIDtoday ", et classée top secret, elle annonce l'émergence d'un nouveau terrain d'espionnage, qui n'avait pas encore été exploré : l'interception des données de communications à bord des avions de ligne. En 2009, la NSA souligne dans un document interne que, en décembre 2008, 50 000 personnes ont déjà utilisé leur téléphone portable en vol, un chiffre qui atteint 100 000 en février 2009. Pour expliquer cet engouement, la NSA énumère : " De plus en plus d'avions équipés, la crainte recule de voir l'avion s'écraser. Pas aussi cher qu'on le croyait. (...) Le ciel pourrait appartenir à la NSA. "

Fin 2012, le Government Communications Headquarters (GCHQ), l'homologue britannique de la NSA, livre, à son tour, dans une présentation " top secret strap ", un des plus hauts niveaux de classification, les dessous du programme Southwinds (" vents du sud "), mis en place pour collecter tout le trafic, voix et data, métadonnées et -contenu des connexions à bord des avions. La zone est encore limitée aux régions -Europe, Moyen-Orient et Afrique, couvertes par les satellites Inmarsat.

La collecte des données se fait " quasiment en temps réel " et un avion peut être suivi toutes les deux minutes. Pour espionner un téléphone, il suffit qu'il soit à une altitude de croisière de 10 000 pieds. Le signal transitant par satellite, la technique d'interception se fait par des stations secrètes d'antennes au sol. Le seul fait que le téléphone soit allumé suffit à le localiser, l'interception peut alors être croisée avec le registre des listes de passagers et les numéros des avions, pour mettre un nom sur l'utilisateur du smartphone.

Le GCHQ peut même, à distance, perturber le fonctionnement d'un téléphone de sorte que son utilisateur soit -contraint de le redémarrer avec ses codes d'accès : les services britanniques interceptent du même coup ses identifiants.

UNE FIXATION CONSTANTELe GCHQ et la NSA ont baptisé leurs opérations de mise sous surveillance des communications en avion de doux noms d'oiseaux, " Pie voleuse " et " Pigeon voyageur ", comme cela a

été évoqué par Glenn Greenwald, journaliste américain, dans son ouvrage Nulle part où se cacher (JC Lattès, 2014). Ce dernier a été le dépositaire avec Laura Poitras des documents Snowden. Ils sont tous deux cofondateurs du site d'information The Intercept .

La lecture attentive de la présentation de ces opérations ainsi que celle d'autres pièces inédites des archives Snowden, -consultées par Le Monde en collaboration avec The -Intercept, sur la surveillance entre 2005 et 2013 des avions et de leurs passagers dans le monde entier, prouvent que la compagnie Air France a été très tôt au coeur de l'attention de ces deux pays amis, les Etats-Unis et la Grande-Bretagne.

La cible Air France apparaît dès 2005 dans un document de la NSA fixant les grandes lignes du projet de " traque des avions civils dans le monde entier " . Daté du 5 juillet et signé par le numéro deux de l'une des principales directions de la NSA, chargée du renseignement d'origine électromagnétique (Signal Intelligence Directorate, SID), ce mémo de 13 pages recense sous forme chronologique et détaillée les principales étapes de ce programme pensé pour éviter " un nouveau 11-Septembre " . On peut lire que, dès la fin 2003, " la CIA considère que les vols Air France et Air Mexico sont des cibles potentiellesdes terroristes " . Le service juridique de la NSA précise alors " qu'il n'y a aucun problème légal pour cibler les avions de ces deux compagnies à l'étranger " et qu' " ils devraient être sous la plus haute surveillance dès qu'ils entrent dans l'espace aérien américain " . Dès février 2005, ces mêmes juristes insistent sur la procédure légale à suivre, " en particulier pour la collecte des communications à bord des avions " .

La désignation d'Air France comme risque majeur pour les intérêts et le territoire américains ne relève pas d'une simple hypothèse de quelques techniciens-espions de la NSA. Un cercle impressionnant d'autorités chargées de la sécurité du pays a été informé du " danger " représenté par la compagnie française. Le mémo de la NSA est, en effet, adressé à une vingtaine de destinataires, dont le commandement de la défense aérienne de l'Amérique du Nord, la CIA, le département Homeland Security (la sécurité intérieure), l'Agence de renseignement spatial, l'Agence de renseignement de la défense ou encore l'état-major de l'armée de l'air. Cette fixation sur Air France sera constante au fil des années qui vont suivre et ne tient pas du hasard.

PRISES DE GUERRELe premier test de l'utilisation d'un smartphone en plein ciel a été effectué à bord du vol AF 1046 d'Air France, le 17 décembre 2007, sur une liaison Paris-Varsovie. " On a commencé tôt, confirme au Monde la direction d'Air France, mais, depuis, on n'a pas cessé de faire des tests, aujourd'hui, on s'apprête, comme les autres compagnies, à passer directement au Wi-Fi à bord. " La compagnie française, interrogée sur les pratiques des services secrets anglo-saxons, a d'ailleurs réagi avec mesure : " Nous ne sommes pas les seuls, visiblement, à avoir été visés et nous ne disposons d'aucun élément sur ces pratiques. "

En 2012, le GCHQ note que 27 compagnies ont déjà permis aux passagers d'utiliser un téléphone portable ou sont sur le point de le faire, surtout pour les premières classes et les classes affaires des vols long-courriers. Parmi elles, British Airways (seulement data et SMS), Hongkong Airways, Aero-flot, Etihad, Emirates, Singapore Air-lines, Turkish Airlines, Cathay Pacific ou encore Lufthansa. Air France est,

pour sa part, un tel symbole de la surveillance des communications en avion que les services britanniques utilisent un croquis pleine page de l'un de ses avions pour illustrer le fonctionnement de l'interception en vol.

Pour prouver leur savoir-faire, le GCHQ et la NSA fournissent nombre d'exemples d'interceptions passées à bord de vols commerciaux d'autres compagnies. On trouve ainsi les relevés, le 23 mars 2012, à 13 h 56, du vol Etihad ETD 8271 des Emirats arabes unis, entre JFK et Denver, du Nice-Moscou du 20 mai 2011 (Aeroflot) ou encore, la même année, du Milan-Doha (de Qatar Airways), du Athènes-Doha (toujours de Qatar Airways), du Jeddah-Le Caire (de la Saudi Airlines) ou du Paris-Mascate (d'Oman Air). La collecte concerne également des Blackberry dont les codes PIN et les adresses e-mails sont identifiés dans un avion, le 2 janvier 2012 à 10 h 23, sans que l'on connaisse sa destination et le nom de la compagnie. Les prises de guerre sont fièrement annoncées : voix, data, SMS, Webmail, Webchat, réseaux sociaux (Facebook, Twitter, etc.), Travel Apps, Google Maps, Currency Converters, Media, VOIP, BitTorrent ou Skype.

Au cours de leurs exercices d'intrusion, les services secrets britanniques découvrent, un peu surpris, qu'ils ne sont pas les seuls intéressés par ces communications en vol. Ils notent que la compagnie russe Aeroflot a mis en place un système de connexion spécifique pour les GSM à bord de ses appareils, " sans doute pour procéder à des interceptions... ", glissent-ils dans une note technique.

AUCUNE LIMITE À LA SURVEILLANCEAujourd'hui, près d'une centaine de compagnies permettent de téléphoner en avion. " Les clients estiment désormais normal, voire nécessaire, de rester connecté en vol ", assure la direction d'Air France. Les autorités en matière de sécurité aérienne ont toutes validé l'utilisation des GSM à bord des avions et les experts estiment que 2016, 2017 et 2018 seront les années historiques du portable en vol, notamment par l'installation pérenne du Wi-Fi en plein ciel. De quoi étendre encore l'ampleur de l'espionnage en visant " plusieurs centaines de milliers de personnes " à surveiller, selon les projections de la NSA, soit un périmètre qui dépasse de loin les seules cibles reliées au terrorisme. L'espionnage politique ou économique des passagers en première classe ou en classe affaires sur des long-courriers intéresse d'ailleurs bien davantage les services.

La surveillance, elle, n'a aucune limite et chaque nouveauté est un défi technique qui paraît vite relevé. Les services semblent en être même un peu blasés. Les techniciens-espions de la NSA, dans une note - interne de 2010, avaient même déjà la tête ailleurs : " Quel sera le prochain terrain d'expéri-mentation? Les trains? Il faudra qu'on regarde ça... "

Atlantico (site web)
Les dernières révélations Snowden atomisent la théorie d'une mondialisation heureuse
Thursday, 08 December 2016
Byline: Franck Decloquement

Non identifié - Les dernières révélations Snowden atomisent la théorie d'une mondialisation heureuse (et ça, c'est nettement plus gênant que les arguments des populistes sur le libre-échange)
Les guerres économiques que se livrent les pays du monde entier représentent une menace bien plus sérieuse pour le libre-échange que les théories économiques de Donald Trump.

Atlantico : Les révélations d'Edward Snowden mettent chaque jour en avant de nouvelles informations sur les pratiques de la NSA. Parmi ces révélations, certaines soulignent le risque que font courir les agences de renseignement au libre-échange et à la libre-concurrence. Quel est-il exactement ? Les missions poursuivies par les organes de renseignements vont-elles à l'encontre des principes du libre-échange ?

Franck Decloquement : Selon de très nombreux observateurs ayant pu enquêter en profondeur sur le sujet, la NSA est une « arme d'espionnage économique massive » , et un « fer de lance sous l'égide de Washington » , évidemment prête à tout - dans le cadre de ses prérogatives propres - pour défendre les intérêts commerciaux américains. A l'image du dernier livre de Claude Delesse « NSA - National Security Agency » , édité chez Tallandier, qui est une très bonne introduction en la matière, à destination d'un lectorat grand public. Ceci est indéniable et ressort très clairement de toutes les analyses sérieuses de documents connus et de témoignages crédibles qui ont pu être considérés pour comprendre ce qui se passe à l'intérieur de cette immense « black box » . Pour autant, il reste de très nombreuses zones d'ombre, et ceci est bien compréhensible. Contrairement à la CIA, fondée de manière très officielle, l'existence de la NSA est restée très secrète et ne fut officiellement reconnue qu'en 1957. En outre, ceci lui fit gagner son premier sobriquet, inventé par les gens de presse, de « No Such Agency » . Expression malicieuse que l'on pourrait aussi traduire par : « une telle agence n'existe pas ! » . Compte tenu de sa suprématie planétaire quant à la captation des données en transit dans l'ensemble du spectre électromagnétique, son appui opérationnel à la captation d'actifs immatériels, industriels ou technologiques pour les ravir à la concurrence internationale - au bénéfice des intérêts américains - est notable. À l'image de certains fleurons industriels comme le Brésilien Petrobras ou le Français Alcatel. Certains documents NSA ayant parfois même fuité, malgré l'étroite surveillance et l'exigence d'une stricte confidentialité imposée aux parties prenantes. L'affaire Snowden démontre aussi que « l'ennemi de l'intérieur » peut à tout moment surgir, agir et divulguer opportunément d'énormes quantités de données « ravies » , même dans les enceintes secrètes les plus sanctuarisées du monde. Pour autant, les différentes attributions secrètes qui incombent à la NSA ne sauraient se réduire aux seules divulgations qui ont pu être rendue possible. Ce continent noir ne se laisse évidemment par percer à jour aussi facilement.

Mais les sous-traitants partenaires de la NSA ne sont pas en reste non plus, à l'image de Palantir Technologies, la très secrète entreprise fondée par Nathan Gettings, Alex Karp, Joe Lonsdale, Stephen Cohen et l'emblématique Peter Thiel. Palantir Technologies est une start-up de services et d'édition de logiciels spécialisés dans l'analyse et la science des données, communément appelé « Big data » ou « méga données » , qui a révolutionné le monde du renseignement. L'entreprise basée à Palo Alto en Californie ; et fondée il y a 12 ans ; travaille pour la communauté du renseignement des États-Unis, et notamment pour la NSA. Mais aussi pour la CIA et le FBI. Ainsi que pour différents autres acteurs du

système de défense des Etats-Unis, à l'image des US Marines, de l'US Air force et des opérations spéciales. Elle s'est également diversifiée dans les secteurs de la santé, de la finance, de l'assurance mais aussi des biens de consommation courante. Elle met par ailleurs sa technologie à disposition d'ONG comme « Community solutions » . Cette entreprise atypique en raison de la jeunesse de ses collaborateurs était valorisée en 2014 à 15 milliards de dollars. Son patronyme provient en droite ligne de l'oeuvre de Tolkien, « Le Seigneur des Anneaux » , et plus spécifiquement de ces pierres mystérieuses qui permettent de voir l'avenir... Aussi appelé « pierre de vision » ou « pierre clairvoyante » . « Un palantír a l'apparence d'un globe sombre de matière transparente (une sorte de boule de cristal), permettant à son utilisateur d'observer des lieux distants dans l'espace et le temps, ou bien de dialoguer avec une autre personne qui utilise elle aussi un palantír » . Le décor est planté quant aux fins poursuivies ! On le voit ici, le mythe de la concurrence « pure et parfaite » est très largement entamé par les pratiques obscures de l'agence, et renvois pour beaucoup d'observateurs avisés et de spécialistes, aux contes enfantins pour adultes... La concurrence et les actions déloyales sont légion. Et elles n'ont que très peu d'acteurs à craindre sur le plan mondial, compte tenu de la puissance du dispositif, de l'ampleur des moyens techniques et humains alloués pour y parvenir, des impératifs stratégiques toujours clairement énoncés par le pouvoir politique, et l'obligation de garantir à tout prix les conditions de la sécurité nationale.

Philippe Crevel : Si les écoutes des passagers d'Air France par les services de renseignements américains et britanniques apparaissent en l'état peu réalistes du fait que la connectivité des avions d'Air France n'est pas l'une de leur qualité, elles posent néanmoins une réelle question, celle des moyens mis en oeuvre par les agences gouvernementales pour obtenir des informations qui concernent tant la sécurité que les activités économiques.

Dans un contexte de concurrence exacerbée, les Etats et les entreprises essaient d'obtenir des renseignements stratégiques. Si nous évoluons dans un système de libre-échange encadré par l'Organisation mondiale des échanges, de plus en plus de comportements peu coopératifs se développent. Cela ne peut que conduire à une montée du protectionnisme, montée réclamée par les populistes. Or, à partir du moment où les Etats commencent à intervenir dans le commerce et dans l'économie, le déclin n'est pas loin. De la Chine du 16ème à la France de Méline en passant par celle de Colbert, le protectionnisme étatique a toujours mené à la catastrophe. Aujourd'hui, ce sont les tentatives des nationalistes en tout genre de vouloir contrecarrer le libre-échange qui pourraient peser sur la croissance. Il ne faut pas oublier que depuis 1945 nous tirons une grande partie de la croissance du commerce international. De même, si la pauvreté a reculé ces vingt dernières années, au niveau mondial, c'est avant tout la conséquence de l'ouverture de la Chine et des pays d'Europe centrale au commerce extérieur. L'OMC devrait, pour faire face aux tentatives des Etats d'utiliser des techniques militaires à des fins commerciales, disposer de pouvoirs de sanctions, afin d'assurer la liberté des échanges et de la circulation des biens, des services et de l'innovation. En effet, le renouveau du populisme pourrait aboutir à une protection accrue des innovations qui aurait pour conséquence leur moindre diffusion au sein de la population.

Dans quelle mesure l'objectif de la NSA et de ses homologues est-il prioritairement économique ? De quand date réellement cette transformation ?

Franck Decloquement : Depuis sa création le 4 novembre 1952, la fonction première de la NSA est connue rétrospectivement des spécialistes. Ses missions sont définies par la « National Security Council Intelligence » - Directive numéro 6 - selon les besoins et ordres du Directeur du renseignement national. Bien qu'elle appartienne au département de la Défense, la NSA agit pour l'ensemble de la communauté du renseignement américain. De nos jours, la centrale est plus spécifiquement en charge du « renseignement d'origine électromagnétique » , de la « sécurité des systèmes d'information » et du « traitement des données » à l'échelle planétaire pour le compte du gouvernement américain. Et ceci pour des raisons historiques assez claires : le renseignement d'origine électromagnétique - « COMINT » (ou « Communications Intelligence ») - joua un rôle primordial dans la conduite de la deuxième guerre mondiale par les États-Unis, et son issue victorieuse. Les éléments des forces armées des États-Unis chargés de l'écoute et du décryptage des communications ennemies pour le compte de l'US Navy et de l'US Army, remportèrent de très nombreux succès contre les communications allemandes et japonaises dans les opérations connues sous le référentiel « Ultra » et « Magic » . Combinés avec la radiogoniométrie, l'analyse de trafic et l'exploitation du texte diffusé en clair, le « COMINT » pu fournir énormément de renseignements d'importance vitale. Des affres de la Deuxième Guerre mondiale dérivèrent alors une certaine « culture du renseignement » marquée par le besoin de concentrer d'importantes ressources humaines et de matériels techniques, afin d'attaquer des systèmes d'informations et de cryptages / chiffrages, toujours plus puissants et toujours plus complexes de l'ennemi.

L'entrée de plain-pied dans la guerre froide ne put que renforcer encore cette inclinaison initiale dans la captation et le décryptage des signaux d'origine électromagnétique émanent de la Russie. De même que dans le cadre de l'intensification croissante de la guerre économique, à travers le globe, compte tenu du processus de mondialisation des échanges commerciaux en cours. Une fois l'Union Soviétique vaincu, il fallu très vite réorienter l'appareil de guerre conventionnel américain et son dispositif humain très lourd, vers le secteur marchand. Ce que fit Bill Clinton sous sa mandature. Accélérant ainsi la reconversion de plus de 10 000 agents américains du renseignement, vers la sphère économique. Président à la naissance d'un « Advocacy Center » , sorte de « War Room » en charge d'orienter les agences du renseignement américain vers l'aide opérationnelle à leurs entreprises nationales parties à la conquête des marchés internationaux. Dans ce cadre hyperconcurrentiel, les services spécialisés de la NSA ne pouvant qu'être d'une aide précieuse, on l'imagine aisément avec le recul. Aux Etats Unis, les partenariats publics- privés ne sont pas un vain mot, puisqu'ils se déclinent en action très concrètes. A la différence de la France et des ses conservatismes idéologiques et administratifs.

De très nombreuses personnalités politiques françaises ont eu des mots parfois très durs concernant l'ingérence américaine dans les affaires hexagonales. A l'image des allemands aujourd'hui, suite aux actions d'espionnage dont ils firent l'objet. Et beaucoup n'auraient pas été surpris d'apprendre qu'il était mis sur écoute par la National Security Agency (NSA) américaine, à l'image d'un François Mitterrand au crépuscule de sa vie, qui confia au journaliste Georges-Marc Benhamou sa perception géopolitique de la

situation que le confident s'empressa vite de retranscrire dans son livre « le dernier Mitterrand » : « La France ne le sait pas, mais nous sommes en guerre avec l'Amérique. Oui, une guerre permanente, une guerre vitale, une guerre économique, une guerre sans mort apparemment. Oui, ils sont très durs les Américains, ils sont voraces, ils veulent un pouvoir sans partage sur le monde. C'est une guerre inconnue, une guerre permanente, sans mort apparemment et pourtant une guerre à mort » . Délire d'un vieille homme agonisant ou extrême lucidité d'un ancien président de la République au fait des réalités géoéconomiques ? Chacun pourra arbitrer en conscience.

Quels sont les procédés traditionnellement mis en place à des fins de guerre économique par les agences de renseignement et d'intelligence économique ? Peut-on vraiment croire à l'infiltration d'entreprises stratégiques ou aux guerres des normes ?

Franck Decloquement : : Il ne faut pas confondre les pratiques tout à fait légales de l'intelligence économique et stratégiques (IES), qui ne travaillent qu'à partir de sources ouvertes - « blanches » ou « grises » - avec les pratiques de l'espionnage économique ; régalien en ce qui concerne la NSA ; qui représentent la partie congrue du renseignement que l'on peut qualifier de « clandestin » , puisque celui-ci ne vise prioritairement que le recueil frauduleux de documents et de données de sources « noires » , d'accès confidentiel, ultra restreint ou très secret. Considérant les écoutes illégales, la surveillance globale des télécommunications, l'empiégeage des matériels ou des composants informatiques, des applications pouvant aisément moucharder sur les données de leurs utilisateurs, des malwares en circulation sur l'internet et plus généralement la captation du « signal » à l'échelle de la planète, nul ne doute aujourd'hui que nous sommes en face d'une réalité - celle des actions coercitives, illégales, déloyales et clandestines - qu'il nous est bien difficile aujourd'hui de ne plus voir, mais aussi de contrecarrer compte tenu de nos liens politiques, diplomatiques, stratégiques et de notre subordination économique manifeste à nos alliés.

Le « confidentiel entreprise » n'ayant pas véritablement pu percer et s'imposer, nos firmes, nos multinationales et nos PME - à l'identique du monde économique dans sont ensemble - sont plongés dans les affres de « la guerre du tous contre tous » et du « chacun pour soi » , face aux velléités d'une puissance sans équivalences dans le monde, et qui accompagne la croissance et le succès de ses entreprises le cas échéant, via ses outils de guerre technologique. La projection du droit et des normes, sont en effet des armes également redoutables contre lesquelles nous n'avons pas su réagir, ou su imposer collectivement notre véto. Et ceci, en intelligence avec d'autres pays européens soumis aux mêmes formes de contrôle. L'union dans ce cas faisant toujours la force. Il s'agit d'une véritable guerre de mouvement, d'agilité intellectuelle, de supériorité technologique et stratégique, agissant dans un registre d'action spéciale, aux confins de la sphère économique et de la souveraineté des Etats. Nul ne peut l'ignorer désormais.

L'Humanité
WikiLeaks accuse le régime de collusion avec Daech
Thursday, 08 December 2016

Byline: S.A.

Ankara - Le site a publié 57 934 mails de Berat Albayrak montrant des relations troubles entre l'« État islamique » et la compagnie pétrolière Powertrans.
Le ministre turc de l'Énergie, Berat Albayrak, pourrait bien se faire tirer les oreilles par son beau-père pour manque de prudence. Lundi et mardi, le site d'information WikiLeaks a publié 57 934 mails du gendre de Recep Tayyip Erdogan qui prouveraient les liens troubles entretenus par la Turquie et l'organisation de l'« État islamique » (EI). La compagnie pétrolière turque Powertrans aurait en effet bénéficié d'une dérogation à l'embargo imposé par le gouvernement sur les importations et exportations de pétrole en provenance ou en direction des régions sous contrôle de Daech. Ankara aurait donc sciemment acheté du pétrole syrien à l'EI, finançant indirectement le groupe djihadiste en hommes et en matériel militaire.

Ces mails - qui courent de juillet 2000 à septembre 2016 (putsch avorté compris) - corroborent ce que le quotidien d'opposition Cumhuriyet a tenté de faire savoir le 29 mai 2015.

Sur son site Web, le journal avait diffusé des images tournées par les forces de sécurité turques en janvier 2014 près de la frontière syrienne montrant des gendarmes en train d'intercepter deux convois de camions chargés d'armes dirigés par les services secrets turcs (MIT). Pour avoir osé montrer ces images, le rédacteur en chef, Can Dündar, et Erdem Gül, son chef de bureau à Ankara, ont été accusés d'« espionnage » et « divulgation de secrets d'État », déclenchant l'ire de Recep Tayyip Erdogan, qui menaça publiquement le journaliste : « Je ne le laisserai pas, je le suivrai et il devra payer la facture. »

Cette nouvelle affaire prouve également l'état de corruption généralisé qui règne dans l'entourage proche du président turc. En 2013, Bilal Erdogan, son propre fils, avait déjà été pris la main dans le sac pour une sombre affaire de trafic illicite d'or avec l'Iran : c'est un certain Can Dündar qui avait révélé l'affaire.

La Tribune (France)
L'Europe au défi de la souveraineté dans le cyberespace
Thursday, 08 December 2016
Byline: Les Arvernes

Paris - Les pays européens ne font que suivre Washington. Or la France pourrait être à l'avant-garde d'une politique européenne dans ce domaine.
L'échéance présidentielle française, dans un peu plus de 6 mois maintenant, concerne bien évidemment les destinées de la France, mais avec elle, une part de celles de l'Europe. En tant qu'acteur majeur de la construction communautaire, aussi bien que par son rang de grande puissance économique et militaire, la France a un rôle spécial à jouer en Europe. Parmi les chantiers qui attendent le prochain président français et son gouvernement, celui de la place de notre pays et, par ricochet, de l'Europe dans le cyberespace, est l'un des plus importants.

Vassalisation des pays européens

Depuis Wikileaks et les révélations d'E.Snowden sur l'espionnage pratiqué par les Etats-Unis, on aurait pu s'attendre à ce que les Européens se saisissent enfin du dossier de la place du continent dans le cyberespace. Or rien n'a changé. Pis encore, la vassalisation des pays européens à l'égard des Etats-Unis s'est encore accrue. Aucune grande capitale n'a pipé mot sur l'extension jusqu'en 2017 du Foreign Intelligence Surveillance Act (FISA) Amendements Act of 2008 qui autorise les services américains à intercepter toute communication où que ce soit sur la planète, dès que la « sécurité nationale » apparaît menacée.

Cette loi est, en somme, un blanc- seing pour l'espionnage généralisé des communications électroniques mondiales. De la même manière, les parlementaires européens ont accepté en avril 2016 le transfert des données des passagers des compagnies aériennes (Passenger Name Record) aux autorités américaines, alors même que le G29, organisme européen regroupant les entités nationales chargées de la protection des données, avait rendu un avis dans lequel il pointait les dérives potentielles d'un tel système. A l'heure où les autorités européennes se saisissent des questions de droit à l'oubli, il est quelque peu étonnant de constater que les instances politiques de l'Union acceptent sans ciller de confier ces mêmes données personnelles des citoyens européens à une puissance extérieure. En même temps il suffit de compiler les chiffres du lobbying européen pour se rendre compte que dans le top 10 apparaissent Microsoft (3e), Google (6e), mais aussi le chinois Huawei (9e) qui a lui aussi bien compris que l'Europe était tout sauf un acteur animé d'une volonté souveraine en ce domaine.

Au bon vouloir de Washington

En réalité, depuis les débuts de l'ouverture d'Internet aux particuliers, l'Europe est calée dans la roue des Etats-Unis et, si elle bénéficie de quelques miettes, n'en est pas moins soumise au bon vouloir de Washington pour ce qui touche au cyberespace. La faiblesse chronique des acteurs économiques européens dans le domaine des matériels et des logiciels, ne doit pas servir d'excuse facile à ceux qui refusent de penser une certaine forme de cybersouveraineté. Alors que la Chine a depuis longtemps pris son cyber- destin en mains et que d'autres pays comme la Russie, imposent la localisation des serveurs abritant les données des citoyens sur le sol national les pays européens demeurent passifs. Ceux-ci entraînés par le Royaume-Uni, allié privilégié des Etats-Unis, y compris sur la partie cyber- espionnage, avaient eu tendance à suivre béatement les positions de Washington, y compris lors des tentatives de régulation de l'Internet, comme la conférence de Dubaï de l'Union internationale des télécoms de 2012. Le Brexit étant maintenant consommé, les Européens ont tout loisir de reprendre leur destin en mains; pour autant qu'ils le veuillent.

La France, seule cyberpuissance de rang mondial du Vieux continent

La France, en tant que seule cyberpuissance de rang mondial du Vieux continent, est la mieux à même d'être à l'avant-garde de la politique communautaire en ce domaine. L'excellence des entreprises

françaises dans plusieurs domaines, à commencer par la pose et l'entretien des câbles sous-marins, secteur-clé du Net, ou la cybersécurité, issue des technologies militaires (Thalès, Airbus, Safran, etc.), doit être valorisée pour permettre à la France et à l'Europe de retrouver une marge de manoeuvre dans les politiques liées au cyberespace. Les questions de stockage des données des citoyens, de gouvernance internationale, d'indépendance des entreprises sur les questions normatives, sont autant de grandes problématiques que le futur président français sera le mieux à même de porter à Bruxelles. Si la France est trop petite pour devenir un acteur majeur du Net, elle peut, en entraînant l'Europe, faire que le continent ne soit plus dans le cyberespace qu'une simple banlieue de Washington.

China Daily
China, US to do more on cyber crime
Thursday, 08 December 2016
Byline: Chen Weihua

Washington - Chinese and US officials meeting in Washington on Wednesday for a bilateral cybersecurity dialogue have agreed to expand cooperation, according to Chinese officials.
Chinese State Councilor and Minister of Public Security Guo Shengkun joined US Attorney General Loretta Lynch and Secretary of Homeland Security Jeh Johnson in co-chairing the third China-US High-Level Joint Dialogue on Cybercrime and Related Issues.

The two sides reached a new consensus in deepening cooperation in cybersecurity. Achievements made in the meeting cover areas such as cracking down on cybercrimes, cooperation in cybersecurity, improving the hotline mechanism, cyber counterterrorism cooperation and information sharing, according to a press release from the Chinese delegation.

The two sides recalled the achievements made since the first dialogue and spoke positively of the importance and necessity of the mechanism, the press release said.

Guo was quoted as saying in the meeting that China and the US established the high-level dialogue mechanism based on the important consensus reached between President Xi Jinping and US President Barack Obama in September 2015.

He said the two leaders gave important input to the dialogue when they met in Lima, Peru, last month on the sidelines of the APEC Leaders Summit.

"With the high attention and promotion by the two heads of state, the cooperation in cybersecurity between China and the US has advanced rapidly to become a new highlight in bilateral relations," Guo said at the meeting.

The two-day meeting from Dec 7-8 is attended by top officials from multiple government departments in both countries, including China's Ministry of Public Security, Cyberspace Administration, Ministry of Foreign Affairs, Ministry of Industry and Information Technology, Ministry of State Security and Ministry of Justice and the US' Department of Justice, Department of Homeland Security, Department of State and Federal Bureau of Investigation.

Guo said the two sides have achieved notable progress in areas such as cracking down on cybercrimes, protecting cybersecurity and sharing information. "(It) has made a positive contribution to ensuring the national security and the safety of the people in both countries," he said.

He noted that it has been an important period for the two countries in carrying out their law enforcement cooperation focusing on cybersecurity. He expressed that the dialogue mechanism should be the main channel for the two countries in communicating cyber-related issues.

Guo also emphasized the importance of focusing on cooperation, managing and controlling differences,

and timely and effective responses to each other's concerns as well as the need of achieving no-conflict, no-confrontation, mutual respect and win-win cooperation.

"The Chinese side is willing to make continued efforts with the current US government team and the next government team to take the bilateral cooperation in cybersecurity to a new high and to make a contribution to the building of a new type of major country relationship," Guo said.

An official from the Chinese delegation, who prefers not to be identified, said US officials also agree that without such a dialogue mechanism, China and the US could still face confrontation and conflict in cybersecurity, as the situation appeared more than a year ago.

In the past year, China has requested the US for assistance in investigating 10 cybercrime cases while the US has made request for nine cases.

The official also praised the hotline mechanism for helping reduce miscalculation when serious cases emerge.

Both Lynch and Johnson expressed that two countries have shared interest in cracking down on cybercrimes and protecting cybersecurity, according to the Chinese press release.

They described the high-level dialogue mechanism as "a new highlight of China-US cooperation" and "playing an important role in protecting cybersecurity and cracking down cybercrimes" as well as "providing an important platform for the law enforcement departments in both countries to conduct candid exchanges and enhance mutual understanding and trust".

Both Lynch and Johnson hoped that the mechanism could be further developed and more practical cooperation will be carried out in cracking down on criminal activities such as cyber terrorism and email scams. Both sides proposed to hold the fourth round of dialogue in China in 2017.

Everyone's a Target to the NSA. Here's How the Courts Can Stop It.
Thursday, 08 December 2016
Byline: Ashley Gorski

Comment - Next month, President-elect Donald Trump will be handed the keys to the NSA's vast spying apparatus. As a candidate, he supported mass surveillance of Americans' phone calls, called for expanded spying on American Muslims, and even invited Russia to hack the emails of his political opponent. With these threats to privacy and liberty on the horizon, our courts will likely be more important than ever as a bulwark against unlawful spying.
One of the courtroom battles that will shape Trump's spying powers is already under way.

On Thursday, the Fourth Circuit Court of Appeals will hear oral arguments in Wikimedia v. NSA, our case challenging "Upstream" surveillance. First revealed by whistleblower Edward Snowden in June 2013, Upstream surveillance involves the NSA's bulk searching of Americans' international internet communications with the assistance of companies like AT&T and Verizon. If you email friends abroad, chat with family members overseas, or browse websites hosted outside the United States, the NSA almost certainly has searched through the contents of your communications--and it has done so without a warrant.

Upstream surveillance takes place in the internet "backbone"--the network of high- capacity cables, switches, and routers that carries Americans' domestic and international internet communications. The NSA has installed surveillance equipment at dozens of points along the internet backbone, allowing the government to copy and then search the contents of vast quantities of internet traffic as it flows past.

The government claims that Upstream surveillance is authorized by Section 702 of the Foreign Intelligence Surveillance Act. That law allows the NSA to engage in warrantless surveillance of Americans when they are communicating with so-called targets abroad. But these targets can be virtually any foreigner overseas--including people who are not accused of any wrongdoing whatsoever, like journalists, lawyers, and human rights researchers. No judge signs off on the government's individual targets. Instead, the NSA secretly vacuums up millions of communications under a single court order each year.

One of the most glaring problems with Upstream surveillance is that it is not targeted at all--at least not in any ordinary sense of the word. Instead, the government is systematically examining online communications in bulk, scanning their full contents to see which ones merely mention its targets.

Because of how it operates, Upstream surveillance represents a new surveillance paradigm, one in which computers constantly scan our communications for information of interest to the government. To use a non- digital analogy: It's as if the NSA sent agents to the U.S. Postal Service's major processing centers to conduct continuous searches of everyone's international mail. The agents would open, copy, and read each letter, and would keep a copy of any letter that mentioned specific items of interest--despite the fact that the government had no reason to suspect the letter's sender or recipient beforehand.

The ACLU brought this lawsuit on behalf of a coalition of legal, media, educational, and human rights organizations, including the Wikimedia Foundation (which runs Wikipedia), Amnesty International USA, The Nation magazine, PEN American Center, Human Rights Watch, the Rutherford Institute, the National Association of Criminal Defense Lawyers, Global Fund for Women, and the Washington Office on Latin America.

Each of these nine plaintiffs has been deeply affected by U.S. government spying. The confidentiality of plaintiffs' international communications is essential to their work, and Upstream surveillance undermines their ability to ensure that these communications--with colleagues, journalists, witnesses, foreign government officials, victims of human rights abuses, and the tens of millions of people who read and edit Wikipedia--are indeed private. This spying violates our clients' constitutional rights to privacy, freedom of expression, and freedom of association.

Last year, a federal district court in Maryland dismissed our suit (PDF), wrongly concluding that our clients lack standing to challenge Upstream surveillance because they had not "plausibly" alleged that their communications are intercepted. Without standing, our plaintiffs can't have their day in court to challenge this spying on the merits.

However, as we explained in our appeal briefs (PDF, PDF), it's more than plausible that our clients' communications are intercepted: The government's own disclosures about Upstream surveillance, along with media reports, show that the NSA is vacuuming up and reviewing almost all text-based communications that enter and leave the country.

Wikimedia alone engages in over a trillion internet communications each year, with individuals located in virtually every country on earth. Given the volume and geographic distribution of these communications, it's indisputable that plaintiffs' communications are ensnared by the NSA.

We hope that the Fourth Circuit agrees. With Trump about to take over, there's simply too much at stake for the judiciary to close the courthouse doors on those harmed by mass surveillance.

Ashley Gorski is a staff attorney in the ACLU's National Security Project.

National Post
Ottawa denies using data from vote reform website
Friday, 09 December 2016
Byline: Marie-Danielle Smith

Ottawa - The government says information collected by an online electoral reform consultation isn't accessible to the Liberal Party, after an Ontario man alleged he started getting fundraising emails soon after completing the survey.
Sean Fullerton, a database analyst in Kitchener, Ont., told the National Post he unsubscribed from Liberal emails more than a year ago, but started receiving them again almost immediately after entering his email address on MyDemocracy.ca, a website being used to gather opinion on democratic values.

But both the government and Vox Pop Labs, the company that designed the site, deny email addresses are even being collected.

"Protecting personal information is something we take very seriously. Political parties have no access whatsoever to any information shared with MyDemocracy. ca. That is just not happening," said John O'Leary, the director of communications for Democratic Institutions Minister Maryam Monsef.

"Emails are not retained in the system when results are emailed to users. They are not stored and cannot be retrieved by anyone, Vox Pop Labs included," said Clifton van der Linden, the CEO and founder of the public opinion company, in an email. "The implication that these email addresses are stored or shared with third parties is utterly baseless."

He added, "our organization would of course investigate any reports about the security of our system and integrity of our database, but we have not received such reports thus far."

Fullerton, who works at an insurance company, explained Thursday he found it "really, really odd" when Liberal fundraising emails started pouring into his email account within a few hours of completing the electoral reform consultation Monday.

He said he rescinded his party membership in May 2015 - in protest after the Liberals voted in favour of a controversial anti-terror law, Bill C-51 - and stopped receiving fundraising asks after unsubscribing from email lists. "They just stopped," he said. "As soon as I did that survey, I started getting them again."

Based on his experience with managing databases, his best guess, he said, was that the system automatically linked the email he inputted to another database containing past party affiliates.

Fullerton insisted he didn't engage in any other activity, or fill out any other forms, that could've caused him to start receiving emails again. That's why he found it "suspicious."

He plans to make a formal complaint against the Liberal Party for going against anti- spam legislation by sending him emails he doesn't want to receive.

NDP MP Nathan Cullen wonders why email addresses are being asked for at all, along with other details such as age, income, level of education and postal codes. Originally, the fine print on MyDemocracy.ca said survey entries that did not include those details would not be counted in results. But that text changed Thursday to say purely anonymous entries would be included in the overall, aggregate results - just not the results weighted to be more representative. "They know a lot about you, with that much information," Cullen said. "And there's worries that this eventually turns into a Liberal fundraising list." If the government was collecting data for partisan use, he said, "that would be one of the most unethical and cynical things imaginable." A spokesman for the Treasury Board Secretariat, which is responsible for government web policy, said Thursday government institutions are responsible for making sure contracts with third parties meet Privacy Act requirements. That includes not sharing personal information publicly or with other organizations, including political parties.

Personal information "is not generally collected in the course of a survey," said Alain Belle- Isle, but when it is, "respondents would be informed of the protection of their personal information prior to collection." In the case of MyDemocracy.ca, that information is available but participants must click into the "privacy policy" section of the site to find it.

The website itself is not registered to the government but to a domain name company called Go Daddy. Canada's privacy czar is looking into the electoral reform survey, but hasn't said if and when a formal investigation will be conducted.

Canadian Press
Door open to CSIS use of metadata from innocent people
Friday, 09 December 2016
Byline: Jim Bronskill

Ottawa -The federal public safety minister is keeping the door open to the idea of Canada's spy agency crunching potentially sensitive data about innocent people.
Ralph Goodale told MPs at a House of Commons committee Thursday he is weighing views on whether the Canadian Security Intelligence Service should be allowed to retain and use such information.

Last month Federal Court Justice Simon Noel said CSIS violated the law by keeping electronic data about people who were not actually under investigation.

CSIS processed the metadata beginning in 2006 through its Operational Data Analysis Centre to produce intelligence that can disclose intimate details about individuals.

Metadata is information associated with a communication, such as a telephone number or email address, but not the message itself.

The court ruling means metadata can be kept and used by CSIS only if it relates to a specific threat to Canadian security or if it is of use to an investigation, prosecution, national defence or foreign affairs.

Privacy watchdogs from across the country said this week that Canada's spy agencies should destroy the data trails of innocent people they collect incidentally during terrorism investigations, once the actual targets have been cleared of suspicion.

The office of federal privacy commissioner Daniel Therrien says metadata must be handled with care because it can reveal medical conditions, religious beliefs and sexual orientation, among other personal traits.

Goodale told MPs on the public safety committee the government would "consider all of the factors that are relevant in these circumstances" as it completes a review of national security policy.

NDP public safety critic Matthew Dube expressed concern about future problems.

"So you're not closing the door, then, to the possibility of this happening again?" Dube said. "Because to me it seems that if the Federal Court has deemed this illegal, then the answers should be clear."

CSIS director Michel Coulombe told the committee he hoped the spy service would be in a position within about six months to decide what to do with the associated metadata collected over the 10-year period.

Conservative public safety critic Tony Clement wondered why CSIS was keeping the data in question at all.

Coulombe said the law dictates that CSIS must hang on to any data used in criminal or administrative proceedings. As a result, the agency is going through the material to see what it needs to keep.

"So before we rush and destroy that information, we have to make sure that by destroying it we're not going to be contravening another court decision," Coulombe said.

"We have to take the time to do that analysis."

Globe and Mail Online
Canadian spywatcher's Snowden remark 'highly inappropriate,' Goodale says
Friday, 09 December 2016
Byline: Colin Freeze and Daniel Leblanc

Toronto and Ottawa - Public Safety Minister Ralph Goodale has rebuked a Canadian spywatcher for publicly suggesting Edward Snowden "should be shot."
"That remark strikes me as highly inappropriate," the minister told reporters in Ottawa on Thursday.

He was not the only person offended. From Russia, the famous fugitive American at the centre of the comment also found it disturbing.

"Canadian spy, charged with keeping spies from breaking the law, wants man dead for showing spies broke law," read a Tweet from Mr. Snowden on his verified account. He then added wryly, "Bonus: he's mad he was recorded."

On Wednesday, The Globe that Michael Doucet, a former Canadian intelligence analyst, gave a 90-minute talk to a small audience at Toronto's Ryerson University in which he made several off-the-cuff remarks. He later said he did not think his talk was being recorded.

When a member of the audience asked Mr. Doucet what Mr. Snowden's fate would have been had he been Canadian and leaked intelligence secrets, he replied: "Do you want my opinion on that? Do you really want it? I'll give it to you. If Edward Snowden had worked for CSIS and did what he did, he should be shot."

This comment was surprising because Mr. Doucet is executive director of a government watchdog agency, the Security Intelligence Review Committee. SIRC reviews the highly classified operations of the Canadian Security Intelligence Service, and its officials rarely make unscripted remarks in public.

Mr. Doucet quickly added that he was merely being provocative, and would like Mr. Snowden to face trial.

In 2013, Mr. Snowden was a security- cleared contractor who fled the United States with volumes of U.S. government documents. He leaked them to select journalists who wrote articles about their contents, including secret spy programs of questionable legality.

Mr. Snowden has lived in Russia for the past 3 1/2 years and would face charges under the Espionage Act should he return to the United States. Supporters consider him a principled whistle-blower, and have been pushing (https://pardonsnowden.org/supporters) for outgoing President Barack Obama to pardon him.

The Snowden leaks have woken the world up to the fact that the U.S. National Security Agency and its allies in a partnership known as the Five Eyes - Canada, Britain, Australia and New Zealand - have been collecting, pooling and analyzing global telecommunications traffic on a massive, constant and indiscriminate basis.

As a result of the Snowden revelations, the U.S. government gave up some potentially unlawful surveillance. For example, U.S. federal agents had been secretly requisitioning Americans' phone records in bulk from phone companies.

Over the years, The Globe has written about several Snowden documents pertaining to Canada.

A leaked presentation about the capabilities of powerful analytical software known as Olympia showed that, in 2012, Canadian analysts dissected telecommunications traffic related to Brazil's Ministry of Mines and Energy. They winnowed flows of global data down to specific Brazilian devices that were earmarked to be hacked at a later point.

After that leak, many Canadians expressed surprise that the federal government would apparently engage in economically driven espionage against a friendly nation.

The Snowden leaks also showed that an allied agency did similar topographical data analysis against Canadian corporations.

NSA documents suggested U.S. spies had mapped out traffic flows associated with a major Canadian bank and a telecommunications company. The reasons were never made explicit, but the mapping raised questions about whether the Five Eyes countries actually make good on their supposed gentlemen's agreement to refrain from spying on each other.

Visite sur le dark web
Friday, 09 December 2016
Byline: Journaliste maison

Non identifié - Observer ce qui se dit sur la partie « ?cachée? » d'Internet permet aux entreprises d'anticiper une attaque informatique. Mais infiltrer les réseaux cybercriminels nécessite de prendre des précautions.
Internet tient son oiseau de malheur. Cette semaine, Dailymotion n'a pas pu faire autrement que de reconnaître ses faiblesses quand le site Leaked Source a annoncé que des mots de passe et des identifiants de ses membres inscrits étaient tombés aux mains de cybercriminels. Heureusement, la plate-forme française de vidéos en ligne avait chiffré une partie de ces informations, les rendant difficilement exploitable pour un informaticien mal intentionné. Ces derniers mois, LinkedIn, Foursquare, MySpace et d'autres ont vécu l'amère expérience d'être brocardé par le site hébergé en Russie. A chaque fois, ses administrateurs invitaient gratuitement les internautes à vérifier s'ils sont concernés. Contre paiement, il propose aussi de consulter les bases de données volées. Leaked Source affirme les repérer en scannant le Web officiel et le dark web. Mais les entreprises pourraient très bien s'infiltrer elles-aussi sur la partie « cachée » d'Internet, celle où les moteurs de recherche traditionnels ne fonctionnent plus. « Je ne conseille pas aux entreprises de le faire seul mais repérer ce qui se passe

sur le dark web leur permettra de limiter les dégâts », pointe Alexeï Chachourine, analyste pour Orange Cyberdéfense. Ainsi, Dropbox a anticipé le pire l'été dernier.

Auprès des marchands d'armes informatiques

Attention, surfer sur le dark web n'est pas une promenade en bord de mer par temps calme. Certes, tout n'y est pas noir, malgré ce que laisse penser l'appellation de ce coin du cyber-espace. De simples citoyens soucieux de leur vie privée y communiquent entre eux. Mais, c'est aussi là qu'on y trouve des espions peu recommandables, des trafiquants de drogue et des marchands d'armes informatiques.

Daniel Smith, responsable de la recherche en sécurité chez Radware, guide ses interlocuteurs sur les réseaux Tor et Invisible Internet Project (I2P). Sur le moteur de recherche spécialisé Torch, il lance en anglais la requête « louer un botnet » . Pour 25 dollars, il peut souscrire au détournement de la puissance informatique d'un ordinateur vers la cible de son choix. A très grande échelle, cette technique a paralysé une partie du Web mondial en octobre dernier. Sur le darknet, des places de marché-façon eBay de la cybercriminalité- proposent des logiciels rançonneurs pour moins de 400 dollars. Pas étonnant que ce fléau fasse de plus en plus de victimes. Pour davantage de discrétion, la facture peut être réglée en bitcoins, la monnaie électronique anonyme. Sur les forums de hackers, Daniel Smith fait lire les discussions entre vendeurs et acheteurs de logiciels malveillants. Certaines communautés lui sont fermées : « pour s'inscrire, il faut commettre un crime », explique-t-il. Lui-même se dit ancien hacker mais assure n'avoir jamais franchi la limite de la loi. Certains de ses anciens camarades comptent eux sur leurs réputations d'experts techniques prêts à tout pour décrocher les meilleures missions sur des sites de petites annonces spécialisées.

Infiltration sous pseudonyme

L'environnement est effrayant mais entrer en contact avec ce monde-là permet aux responsables de la sécurité informatique de mieux comprendre leurs adversaires. « Sur le dark web, les entreprises peuvent apprendre comment sont monétisées les données volées, notamment les données bancaires, ou entendre parler d'une faille concernant leurs propres système de paiement en ligne ou leurs objets connectés », explique Alexeï Chachourine. C'est aussi là que les sites Internet peuvent savoir s'ils ont été ou sont encore dans le viseur de cybercriminels. Par exemple, des listes de sites où le vol d'identifiant de cartes bancaires paraît facile sont mises à jour quotidiennement.

Pour s'y infiltrer, les spécialistes préconisent d'utiliser un ordinateur entièrement déconnecté du réseau de l'entreprise et qui ne servira qu'à ça. « Naviguer dans le dark web est dangereux , prévient Daniel Smith, on peut cliquer sur un lien qui lance une attaque informatique sans s'en rendre compte et devenir complice d'un crime » . Lorsqu'il discute en ligne avec des hackers, il utilise une liste de pseudonymes à rallonge pour ne pas se faire repérer. Alexeï Chachourine utilise le même stratagème. « Les cybercriminels réputés se protègent des curieux. Si votre profil n'est pas sérieux, ils ne vous répondront pas », remarque-t-il. Pire, ils attaqueront. Malheureusement, c'est aussi auprès d'eux que les analystes peuvent apprendre les informations les plus intéressantes. Pour contourner le problème,

des start- up comme Cybelangel scanne le dark web pour ses clients. Mais la tâche est plus ardue que la recherche de fichiers de données menée par Leaked Source. « Lancer une surveillance automatique du dark web est impossible car les sites changent souvent de noms , réfute Alexeï Chachourine, de plus, les cybercriminels utilisent des jargons et des expressions codées inspirés par plusieurs langues » . Pour ne rien arranger, il s'agit souvent des langues rares : russe, chinois ou roumain. Sur le dark web plus qu'ailleurs, le crime n'a pas de nationalité.

Yonhap News Agency
N. Korea denies involvement in cyberattack on S.Korean military
Friday, 09 December 2016
Byline: Staff reporter

Seoul - North Korea on Friday denied its involvement in a hacking attack against South Korea's military, saying Seoul is pulling off "a childish plot" to divert public attention from its political crisis.
South Korea accused North Korea this week of being behind the first infiltration of the intranet of its cyberwarfare command in August, noting that the Internet Protocol address linked to the attack was traced to a location in China that was previously used by North Korean hackers.

North Korea's main propaganda website, Uriminzokkiri, rebuffed the claim, saying hackers never make the mistake of exposing their IP addresses or methods, which could risk revealing their identities.

"If we are behind the hacking, why do we use the IP address that the South takes issue with," Uriminzokkiri said in a report. "This a total nonsense."

It claimed South Korea is trying to provoke a confrontation with the North in a desperate attempt to survive the current political conundrum.

The National Assembly is set to vote on an impeachment motion against President Park Geun-hye over a corruption scandal on Friday afternoon.

North Korea is known to have thousands of cyberwarfare personnel. It has a track record of waging cyberattacks on South Korea and the U.S. in recent years, though it has denied involvement.

Meanwhile, the ministry neither confirmed nor denied media reports that military documents involving key operation plans were also compromised.

"We cannot confirm whether the reports are true or not as it could be useful information for North Korea," a ministry official said.

Given the hacked intranet is linked to some 700 personal computers in the Army, Navy and Air Force, chances are high that some military operation plans leaked to the rogue state.

South China Morning Post
Beijing puts out peace feeler to US on cybersecurity
Friday, 09 December 2016
Byline: Nectar Gan

Beijing - The nation's top security official told Washington yesterday that Beijing was ready to work with the administration of president-elect Donald Trump on cybersecurity, a thorny issue in Sino-US ties, state media reported.
The olive branch was extended in Washington by Public Security Minister Guo Shengkun as he met US officials for a third round of cybercrime talks, a dialogue set up by Xi Jinping and US President Barack Obama in September of last year.

Beijing and Washington have been squabbling over cybersecurity for years, with each side accusing the other of hacking and stealing trade secrets.

Beijing suspended the two nations' only cybersecurity working group in 2014 after Washington indicted five PLA officers on theft of trade secrets.

It is still unclear whether Trump will raise concerns over cybersecurity with China once he assumes office.

Trump wrote on Twitter four years ago that "the Chinese are now hacking White House computers. Why not? They already own the place".

In a debate with Hillary Clinton on the campaign trail, Trump dismissed her claims of Russian hacking, saying: "She's saying Russia, Russia, Russia. Maybe it was. It could be Russia but it could be China ... it could be somebody that sits on their bed that weighs 400 pounds."

Guo said cybersecurity cooperation had become "a new highlight in bilateral relations" between the US and China since Xi and Obama created a mechanism for the two nations to discuss cybercrimes.

"Both sides should treat this dialogue mechanism as the chief channel for communication over cyber issues to focus on cooperation, manage disputes and respond to each other's concerns in a timely and effective way," Guo was quoted as saying by Xinhua.

Allegations of hacking, however, persist.

In the latest case, the US magazine Fortune reported on Wednesday that a series of security breaches that struck prestigious law firms last year was carried out by people with ties to the Chinese government.

Beijing has repeatedly said that China is a victim of hacking and that Chinese authorities always opposed "cyber attacks in any form".

Le Temps (Suisse)
« Tous les dirigeants des organisations internationales sont espionnés »
Friday, 09 December 2016
Byline: Simon Petite

Genève - Pascal Lamy, ancien directeur de l'OMC, a été écouté par les services secrets britanniques. C'est l'une des révélations du « Monde » basées sur des documents d'Edward Snowden
Les grandes oreilles américaines et britanniques s'étendent jusqu'à Genève. L'ancien directeur de l'Organisation mondiale du commerce (OMC), le Français Pascal Lamy, a été espionné à la fin de son premier mandat en 2009. C'est l'une des révélations du Monde de jeudi, qui a eu accès à des documents de l'ancien contractant de la NSA américaine Edward Snowden. « Tous les dirigeants d'organisations internationales savent qu'ils ont le privilège d'être espionnés par tout le monde sans pouvoir espionner quiconque, ironise Pascal Lamy. Cela évite les cas de conscience, et cela permet de se croire important. »

Pays africains sur écoute

Le journal a travaillé sur des relevés d'interceptions datant du début de l'année 2009. Des recherches menées en collaboration avec le site américain The Intercept, auquel Edward Snowden, réfugié en Russie, a transmis tous ses documents. Ce travail d'enquête montre que l'Afrique et les intérêts français sur le continent ont été l'objet d'une attention particulière de la part des services de renseignement britannique et américain. En analysant ces relevés, il est apparu que les e-mails et les conversations de téléphoniques de Pascal Lamy étaient interceptés par le service de renseignements électronique du Royaume-Uni (GCHQ).

Toujours selon Le Monde, les agents britanniques cherchaient à connaître les positions du directeur de l'OMC, afin de mieux préparer une réunion du G20 en avril 2009, alors présidé par le premier ministre britannique Gordon Brown. D'autres Français occupant des positions stratégiques au sein des organisations internationales auraient été visés. Ce qui pose la question d'autres cibles à Genève, qui concentre un nombre inégalé d'institutions internationales.

Au bout du lac, ces informations ne surprennent pas. Depuis les premières révélations d'Edward Snowden sur l'espionnage de masse américain, les organisations internationales disent avoir pris des mesures pour tenter de garder leurs données sensibles à l'abri des oreilles indiscrètes. « Nous mettons régulièrement à jour nos systèmes de protection », explique Ewan Watson, chef des relations publiques du Comité international de la Croix-Rouge (CICR). Les délégués font remonter des informations sensibles, comme des rapports de visites de prison ou des témoignages de victimes de guerre avec

toutes leurs données personnelles. Des informations, qui, si elles tombaient dans les mains des gouvernements concernés, mettraient immédiatement en danger ces personnes. Le Haut- Commissariat aux droits de l'homme recourt, lui, à des systèmes cryptés, notamment pour son travail sur la Corée du Nord ou la Syrie.

Le Monde
Une vingtaine de pays africains sur écoute
Friday, 09 December 2016
Byline: Journaliste maison

Londres - Une vingtaine de pays africains ont été espionnés par les satellites du GCHQ, les services secrets britanniques, au moins entre 2008 et 2011. L'identité des cibles figure parmi des listes de milliers d'interceptions, au premier rang desquelles apparaissent les chefs d'Etats et les premiers ministres. Le GCHQ intercepte les échanges du président kényan Mwai Kibaki et de ses conseillers les plus stratégiques, mais aussi de son premier ministre, Raila Odinga, en mars 2009. Il en va de même de l'Angola, premier producteur de pétrole d'Afrique, dirigé depuis 1979 par le président José Eduardo Dos Santos - le palais présidentiel a été ciblé.
Les autorités de Kinshasa sont également étroitement surveillées. Joseph Kabila, à la tête de la République démocratique du Congo, intrigue les Britanniques, qui visent toutes ses communications et celles de ses conseillers. Le GCHQ a aussi mené des interceptions massives au Nigeria, où il suit les conversations du président Umaru Yar'Adua et de ses proches. Le chef d'Etat nigérian est mort en mai 2010 - son successeur, Goodluck Jonathan, figure aussi parmi les lignes à -intercepter.

Au Ghana, le président John Kufuor et ses collaborateurs sont écoutés; en Sierra Leone, le président Ernest Koroma; au Togo, Faure Gnassingbé; en Guinée-Conakry, Kabiné Komara, premier ministre de la junte dirigée par le président putschiste Moussa Dadis Camara, dont les proches conseillers figurent aussi dans les bases de données britanniques.

Dans les relevés de 2009 apparaissent également d'anciens chefs d'Etat : Olusegun Obasanjo au Nigeria (1999-2007) et son homologue de Sierra Leone, Ahmad Tejan Kabbah (1998-2007).

A Conakry, il s'agit de Cellou Dalein Diallo et Lansana Kouyaté, anciens premiers ministres, aujourd'hui chefs de file de l'opposition. Au Congo-Brazaville, Pascal Lissouba (1992-1997), en exil en France, a été au coeur de la surveillance en 2009.

Les ministres des affaires étrangères du Nigeria, du Kenya, du Zimbabwe, du Soudan et de Libye et nombre d'ambassadeurs sont écoutés, leurs courriels interceptés, ainsi que les élites militaires, économiques ou financières.

Les millions de clés de chiffrement volées de Gemalto
Friday, 09 December 2016
Byline: Damien Leloup

Londres - Ce ciblage massif et systématique de techniciens et d'employés figurant à des échelons intermédiaires de la hiérarchie d'opérateurs techniques a déjà prouvé son utilité, par le passé, pour le GCHQ. En février 2015, The Intercept révélait, sur la base de documents Snowden, que c'est par ce biais que les services britanniques étaient parvenus à voler des millions de clés de chiffrement de cartes SIM à l'entreprise franco-néerlandaise Gemalto. Peu connue du grand public, Gemalto est l'un des principaux fabricants mondiaux de puces sécurisées : ses produits équipent passeports électroniques, cartes de paiement, ou encore téléphones portables.
C'est notamment ce dernier point qui intéressait le GCHQ: une fois les clés de chiffrement des cartes SIM en sa possession, l'agence pouvait aisément mettre sur écoute des lignes téléphoniques dans un certain nombre de pays. L'agence s'est donc penchée sur toute une série de salariés de l'entreprise, dont les noms ou adresses mail ont été ajoutés à sa base de données de cibles potentielles. Plusieurs responsables techniques ou commerciaux ont ainsi été surveillés électroniquement - un document interne du GCHQ évoque ainsi comme cible prioritaire un employé de l'entreprise qui communique occasionnellement par courriels chiffrés : «Nous avons vu qu'il envoyait des fichiers chiffrés grâce à XKey score [le principal outil de surveillance de la NSA et du GCHQ]. Si nous nous intéressons de nouveau à ce dossier, c'est probablement un très bon endroit par où commencer. »

Méthodologie constante

A l'époque, Gemalto utilisait occasionnellement des fichiers chiffrés transmis par email pour fournir des clés de chiffrement à ses clients - une pratique qui n'a plus cours dans l'entreprise. La méthodologie du GCHQ, elle, semble être restée constante au fil des ans, et sur tous les continents: identifier des «cibles» intéressantes, puis tenter de prendre le contrôle de leur boîte e- mail ou de leur ordinateur grâce à des logiciels-espions envoyés par courriel.

Comment les services secrets britanniques choisissaient-ils ces cibles ? D'autres documents Snowden, publiés par The

Intercept, montrent que le GCHQ avait mis au point un système de classement élaboré, qui leur permettait de « noter » les cibles potentielles. Un script automatisé récoltait toutes les conversations électroniques des cibles potentielles, et «notait» ces dernières en fonction de la fréquence à laquelle elles utilisaient certains termes techniques. Au début des années 2010, le GCHQ avait ainsi sur sa liste prioritaire des employés de Gemalto, du constructeur chinois Huawei, du finlandais Nokia, du fournisseur d'accès Belgacom ou encore de Yahoo! et de Google.

Les techniciens télécoms, cibles de choix
Friday, 09 December 2016
Byline: Damien Leloup, et Martin Untersinger

Londres - La surveillance des employés permet d'accéder au réseau interne des opérateurs téléphoniques
Parmi les cibles du -Government Communications Headquarters (GCHQ), l'agence de -renseignement technique britannique, ils côtoient trafiquants d'armes, leaders politiques du Moyen- Orient et chefs de groupuscules terroristes.

Leur tort? Travailler pour un opérateur de téléphonie. Plusieurs documents extraits par Le Monde, en collaboration avec le site The Intercept, des archives de l'ex-consultant de l'Agence nationale de sécurité (NSA) américaine, Edward Snowden, confiées à Glenn Greenwald et Laura Poitras, prouvent en effet que les employés des télécoms constituent une part significative des cibles du GCHQ. Ils permettent aussi d'éclairer d'un jour nouveau les -piratages de Belgacom et de -Gemalto, deux opérations d'ampleur menées notamment par les services britanniques et révélées ces trois dernières années.

Le Monde a pu éplucher des -dizaines de documents internes de l'agence britannique de renseignement, des comptes rendus de tests sur des liaisons par satellite acheminant trafic Internet et téléphonique. Les employés d'opérateurs téléphoniques, à tous les niveaux de la hiérarchie, apparaissent très fréquemment dans les cibles du GCHQ. Deux pièces, datées du printemps 2009, relatent même les efforts de l'agence pour intercepter les communications internes de deux opérateurs très présents au Moyen-Orient et en Afrique.

Un document du 10 juin 2009, intitulé " Réseau intranet Zain ", décrit les tests menés par le GCHQ sur un flux satellitaire -faisant transiter des communications internes à l'opérateur -téléphonique Zain. Basé au Koweït, il est présent dans huit pays, essentiellement au Moyen-Orient. En 2010, Zain a vendu ses activités dans ces pays à l'indien Bharti Airtel, troisième opérateur mobile mondial. Mais, à l'époque des documents, il est très présent en Afrique et opère encore dans quinze pays, du -Burkina Faso au Niger en passant par l'Ouganda et le Tchad.

Négociation commercialeCet opérateur n'est pas le seul à intéresser les Britanniques : un document du 16 avril 2009 montre que le GCHQ a repéré une liaison satellite acheminant des communications internes à l'opérateur, " entre ingénieurs ", de MTN. MTN, groupe sud-africain fondé en 1994, est présent dans une vingtaine de pays d'Afrique et fait partie des poids lourds du secteur, avec plus de 200 millions de clients.

Dans nombre de ces documents apparaissent des employés d'opérateurs télécoms. Il y a bien sûr des cadres de haut -niveau comme le directeur des opérations de Zain en Arabie saoudite, le directeur logistique du groupe, le directeur technique de Touch, filiale de Zain au Liban, et même Chris Gabriel, le -directeur Afrique du groupe à l'époque.

Mais la plupart des cibles ne sont pas des cadres importants de ces entreprises télécoms. Il s'agit des responsables " roaming " dans au moins quinze pays - africains. Ils représentent à eux seuls environ la moitié des cibles au sein des opérateurs télécoms - aucun d'entre eux n'a donné suite à nos sollicitations. La -minutie avec laquelle le GCHQ s'intéresse à eux ne fait aucun doute sur le caractère stratégique, pour l'agence, de leurs échanges électroniques.

Le " roaming ", ou " itinérance ", permet aux abonnés mobiles d'un opérateur téléphonique d'utiliser leur téléphone dans un autre pays. Pour que cela fonctionne, les opérateurs téléphoniques doivent nouer des partenariats, soit directement l'un avec l'autre, soit en passant par un intermédiaire qui centralise les accords.

Cette négociation commerciale a un pendant technique : il faut pouvoir configurer les réseaux pour que le téléphone soit reconnu où qu'il se trouve, et -pouvoir également décompter pré-cisément l'activité du téléphone pour la facturation. Les personnels des opérateurs téléphoniques ont donc un double profil, à la fois technique et - commercial. Ils peuvent donc être amenés à disposer du Graal pour les agences de renseignement : un accès au réseau interne de leur opérateur.

Une attaque visant des responsables itinérance est rare, mais pas inédite. Des documents Snowden publiés par The Intercept avaient révélé que l'entreprise Belgacom avait été victime d'un piratage massif organisé par le GCHQ, touchant aussi bien ses ordinateurs que son réseau de télécommunications, au début des années 2010. Ce piratage, particulièrement bien conçu et discret, visait en priorité une -filiale peu connue de l'opérateur : BICS, Belgacom International Carrier Services, la branche de l'opérateur qui gère les accords d'itinérance avec d'autres opé-rateurs. C'est cette filiale qui -négocie avec des opérateurs dans le monde entier pour établir des partenariats d'itinérance, permettant d'interconnecter leurs réseaux.

Ce piratage accrédite l'hypothèse selon laquelle ces responsables itinérance ne sont pas la cible finale du GCHQ, mais plutôt la porte d'entrée au réseau -interne des opérateurs télécoms. Les documents n'indiquent pas si une attaque a bien eu lieu : ils indiquent simplement que les agents du GCHQ se sont intéressés de très près aux e-mails de ces responsables. Les informations recueillies dans ces courriels peuvent être cruciales pour une reconnaissance préalable à une véritable attaque des réseaux des opérateurs.

" Ticket d'entrée "Espionner les courriels est en effet un bon moyen pour comprendre leurs responsabilités, leurs relations hiérarchiques, les processus de décision interne, mais aussi comprendre la partie du réseau informatique à laquelle ils ont accès, sa configuration, les matériels qui y sont - installés, les différentes autorisations... Autant d'informations nécessaires pour cibler une attaque, par exemple en effectuant une opération d'hameçonnage, qui consiste à l'envoi de courriels apparemment anodins ou habituels pour subtiliser des mots de passe ou installer un logiciel malveillant. Une fois dans l'ordinateur, il est facile d'installer un dispositif d'espionnage dans le réseau de l'opérateur.

Ce mode opératoire est même décrit dans un document interne à la NSA et lui aussi publié, dès 2014, par The Intercept . Un ingénieur de l'agence y décrit sa " chasse " aux gestionnaires des réseaux. Il explique : " On ne peut pas collecter tout, tout le temps. Si une cible commence à utiliser un réseau que nous n'interceptons pas, il y a un peu de travail à faire pour diriger notre système d'écoutes dans sa direction. (...) Imaginons qu'une de vos cibles utilise son mobile sur un réseau à l'étranger. (...) Ce serait vraiment sympa si nous avions accès aux infrastructures locales - qu'il utilise - , où nous pourrions suivre sa position et l'intégralité de ses appels. "

Pour cela, écrit cet analyste, il faut d'abord surveiller et compromettre ceux qui détiennent " les clés du royaume ", soit les techniciens gérant ce réseau. Il mentionne, dans ce même document - une lettre d'information interne -, les adresses e-mail comme un mot-clé très intéressant pour repérer et compromettre ces techniciens. Les pirater, " c'est généralement le ticket d'entrée au réseau ", conclut-il.

Les documents consultés par Le Monde n'indiquent pas la cible finale du GCHQ, ni même si la surveillance des communications de la liste des cibles a bien eu lieu. En revanche, est-il légitime de surveiller des gens qui n'ont rien de suspect, ou de pouvoir accéder aux communications de centaines de milliers de clients d'un opérateur téléphonique?

Le Monde
Les satellites, des espions venus du ciel
Friday, 09 December 2016
Byline: Jacques Follorou et Martin Untersinger

Yorkshire, Royaume-Uni - Les services captent les données qui arrosent la planète et y cherchent des mots-clés pour évaluer leur intérêt
Les révélations de l'ex-consultant de la NSA Edward Snowden, qui ont essentiellement porté sur l'espionnage d'Internet par les câbles sous- marins, ont eu tendance à le faire oublier, mais l'espionnage par satellite a fait figure, pendant des décennies, de joyau du renseignement technique. Voici comment les grandes puissances écoutent encore des communications du monde entier.

Le fonctionnement des satellites géostationnaires qui encerclent la planète est relativement simple, et leur surveillance l'est tout autant. Lorsqu'un satellite renvoie les données vers la surface de la Terre, il arrose une vaste zone où les flux de communication (Internet, téléphone...) sont récupérés par des antennes de réception. Et où ils peuvent aussi être interceptés. Il suffit par exemple aux stations d'écoute des services de -renseignement britanniques du -Government Communications Headquarters (GCHQ), l'équivalent de la NSA américaine, de pointer leurs antennes vers ces satellites et de se " brancher " sur les fréquences utilisées pour récupérer ce flux de communication.

Parmi ses sites d'interceptions satellitaires, le GCHQ dresse ses grands radômes blancs au bord d'une falaise, à Bude, bourgade de Cornouailles. Deux sites sont installés sur des bases militaires à l'étranger, l'une à Chypre, l'autre à Oman, assurant une couverture idéale du Proche et du Moyen-Orient. Le

Royaume-Uni abrite une autre station d'écoute satellite, dans le Yorkshire, à Menwith Hill, administrée par des personnels de son grand allié, la NSA.

Méticuleux travailLorsqu'un satellite est reconfiguré ou un nouveau flux de communication inauguré, les techniciens du GCHQ sont d'abord - chargés de déterminer si l'interception est techniquement possible. Les documents obtenus par Le Monde sont le résultat de ce travail de test. Dans l'écrasante majorité des cas, à la question : " Est-ce que cet opérateur - "carrier" - peut être chargé - "tasked", surveillé - dans le système de collecte? ", la réponse est positive.

Ensuite, les techniciens doivent déterminer si des informations pertinentes peuvent en être extraites. Pour ce faire, ils soumettent à ce flux de communication une liste de " sélecteurs ", des mots-clés qu'ils estiment être -intéressants correspondant à des numéros de téléphone ou à des adresses électroniques. Les documents font donc apparaître une liste des communications : il ne s'agit pas de la retranscription du contenu de l'appel ou de l'échange de courriels, mais simplement de l'énumération de toutes les conversations impliquant ce numéro ou cette adresse surveillée. Parfois des échanges SMS.

Ces documents ne fournissent pas de renseignement, ils sont simplement destinés à déterminer si l'écoute d'un flux satel-litaire est susceptible, à l'avenir, d'en fournir, en listant toutes les fois où une adresse ou un numéro de téléphone intéressant les services s'est manifesté.

Le résultat de ce méticuleux travail figure dans la centaine de documents techniques du GCHQ que Le Monde a pu consulter. Ils donnent un aperçu de la manière dont les services de renseignement techniques travaillent pour s'assurer d'un accès toujours plus complet aux communications. Même si les documents ne détaillent ni la durée, ni l'ampleur, ni le contexte de la surveillance des cibles du GCHQ, ils permettent de mieux comprendre qui les services britanniques et leurs alliés veulent surveiller, et donc de discerner leur stratégie et leurs objectifs - qui vont souvent bien au-delà de la lutte contre le terrorisme ou la prolifération nucléaire.

La place conservée par les satellites pour les communications entre l'Afrique et le reste du monde tient à trois facteurs. L'architecture des télécommunications de ce continent est encore marquée par l'histoire coloniale et une des épines dorsales de ce réseau relie encore l'Europe, dont la France ou la Belgique, à ses anciennes colonies. Le deuxième réside dans des considérations purement pécuniaires : il n'est pas financièrement intéressant de construire des infrastructures qui relient directement l'Afrique au Moyen-Orient ou à d'autres régions du monde. Mieux vaut -emprunter des routes déjà tracées par l'Europe.

Enfin, si l'ouest de l'Afrique est plutôt bien -connecté à Internet grâce à plusieurs câbles sous-marins qui le relient à l'Europe, le reste du -continent et notamment l'Afrique centrale manquent encore d'infrastructures terrestres.

Un document de synthèse à diffusion restreinte du ministère britannique de la défense, daté de 2010 et fourni par Edward Snowden, résume l'intérêt des satellites pour les espions de la surveillance. Dans les

vingt principaux marchés d'Afrique subsaharienne, 45,6 % des communications internationales empruntaient la voie satellitaire, note le document, qui constate aussi que " de nombreux fournisseurs d'accès à Internet africains reçoivent de la bande passante de l'étranger par satellite " . L'explosion d'Internet n'a pas été complètement absorbée par la pose de nouveaux câbles : la demande satellitaire en Afrique a, depuis, continué à progresser L'interception est devenue massive.

New York Times
After Cyberattacks, Germany Fears Russia May Disrupt Vote
Friday, 09 December 2016
Byline: Melissa Eddy

Berlin - After hackers infiltrated the German Parliament's computer network in May 2015, it took nearly a year before the country's intelligence agency concluded that the attack was most likely the work of their Russian counterparts.
Last week, when 900,000 Germans lost access to internet and telephone services, it took a matter of hours before politicians began pointing fingers at Moscow.

Berlin is now concerned that Germany will become the next focus of Moscow's campaign to destabilize Western democracies as national elections approach next year.

Those fears intensified after the Obama administration accused the Russian government of attacking Democratic Party emails during the American presidential campaign.

The increasing dissemination of false news, disinformation and propaganda during the American campaign and before Italy's referendum last weekend has added a related layer of worry about the potential to corrupt public debate and democratic processes.

Hans-Georg Maassen, the head of Germany's domestic intelligence agency, warned in an interview on Thursday of "growing evidence for attempts to influence the federal election next year."

His agency has seen an increase in "aggressive cyberespionage" targeting German politicians, he said.

If the advent of the personal computer helped undermine a closed Soviet system that could not compete in an information age, then exploiting the vulnerabilities of the internet and social media may be Russia's revenge.

Intelligence and other officials can now point to a growing string of campaigns of disinformation, hacked computer networks and leaked emails fitting a pattern that traces a murky route back to Moscow.

The aim, they say, is to undercut liberal opponents of Moscow, destabilize political systems and undermine democratic processes across the European Union and in NATO member countries, while supporting anti-European forces.

"Based on the prevailing Russian strategy of hybrid influence and destabilization, which we have observed over time and for which we have facts, the government, officials and some political parties have become sensitized to this form of conflict," said Wilfried Jilge, an expert on Ukraine and Eastern Europe with the German Council on Foreign Relations.

"Such suspicions are the result of observation and experience over the past year and a half," Mr. Jilge said.

Many of the efforts seem intended to tilt elections in a direction preferred by Moscow or to undercut certain leaders.

That was presumably the motivation for hacking the Democratic National Committee and leaking emails that embarrassed Hillary Clinton, who long had an antagonistic relationship with the Russian president, Vladimir V. Putin.

On the other hand, her challenger, the eventual winner, Donald J. Trump, was effusive in his praise for the Russian leader.

False news, also linked to Russia, was widely disseminated in Italy by opponents of the push by Prime Minister Matteo Renzi for constitutional changes. Many of those opponents are much closer to Moscow than to Mr. Renzi, who lost and has now resigned.

Germans have not been immune to such disinformation, either.

In January, a news article that said a 13-year-old Russian-German girl had been kidnapped and raped by migrants in Germany spread quickly on Russian-language news channels.

Outrage over a supposed cover-up of the abuse drew members of Germany's Russian-speaking minority into the streets across the country, shocking German politicians.

German police officials later proved that the events never took place. But the damage was already done, and the false report fed opposition to Chancellor Angela Merkel's decision to open the doors to nearly a million refugees.

As for Moscow's motivations in Germany, Eberhard Schneider, a professor of political science at the University of Siegen, has observed Russia's propaganda tactics since the days of the Cold War.

Ms. Merkel, he noted, was one of the strongest supporters of the sanctions against Russia for its annexation of Crimea and the war in eastern Ukraine. Mr. Putin has a strong incentive to undermine her.

"Germany is the most important power in the European Union," he said. "If you can harm Germany and prevent that Merkel has a good outcome in the next election, that is in his interest."

The disruption at Deutsche Telekom, which began on Nov. 27, set off a fresh round of alarm over potential Russian meddling and the vulnerability of Germany's computer networks, which could be disrupted or hacked during an election.

A day after the breach, Bruno Kahl, head of the Germany's foreign intelligence service, raised the prospect of evidence linking Russia to interference in the United States election campaign and warned that Germany could be next.

"It is known that cyberattacks take place which have no other purpose than to provoke political uncertainty," he told the newspaper Süddeutsche Zeitung.

"These attempts to interfere focus on Europe, and on Germany especially," Mr. Kahl said. "A kind of pressure is being exercised on public discourse and democracy here, which is unacceptable."

Investigations into the incident later blamed links to "criminal organizations," though neither Deutsche Telekom nor the government disclosed any concrete link to Moscow.

Observers like Mr. Jilge of the Council on Foreign Relations say that caution is prudent in assigning blame, but that suspicion of Moscow is warranted given the accumulating pattern.

"The fact that hackers appeared to have carried out this attack does not automatically mean that they are linked to Russia," he said of the Deutsche Telekom attack.

"But if we look at the target and the timing, and know that such influence and disinformation is part of the Russian approach, then it is not surprising that some would seek to address this issue," he said.

Asked about the Deutsche Telekom disruption, Ms. Merkel said she did not know who was responsible, but she also mentioned Russia.

"I will simply say, such cyberattacks, or hybrid conflicts as they are known in Russian doctrine, are now part of daily life and we must learn to cope with them. We must inform people a lot on this point," the chancellor told reporters last week.

"We cannot allow ourselves to be unsettled by this," Ms. Merkel said. "We must simply know that this exists and learn to live with it."

Both Deutsche Telekom and the government's Office of Information Security said a strain of the Mirai malware, which seeks to embed itself in devices connected to the internet, appeared to have caused the disruption.

Mirai was the same malware used in an attack in the United States in October that brought down websites for Twitter, Netflix, Spotify, Airbnb, SoundCloud and The New York Times, among others.

In Germany, the malware apparently succeeded only in knocking out the routers and disrupting internet connections.

"According to our analysis, the objective of the attack is to install malware on the routers to add them to a botnet -- meaning they could be used as the remote-controlled infrastructure for future attacks," Deutsche Telekom later said in a statement.

The company pledged to focus on improving its network security to render it better able to resist any form of attack.

The speed with which officials began to suspect Russia was a stark contrast to 2015, when hackers used a phishing tactic, using a fake email, to penetrate computers in Germany's lower house of Parliament.

Only this past May did Mr. Maassen's domestic intelligence agency confirm suspicions that Russian intelligence was behind the attack. Finally, in October, it issued a broad warning.

"German parties or politicians," it cautioned, "could fall into the focus of Russian cyberespionage campaigns and operations."

Wall Street Journal
Georgia Says Someone in U.S. Government Tried to Hack State's Computers Housing Voter Data
Friday, 09 December 2016
Byline: Brian Tau

New York - The secretary of state of Georgia is asking the Department of Homeland Security to explain what appears to be an attempted breach of the state's computer systems that house its voter registration database by someone in the federal government.
In a letter to Department of Homeland Security Secretary Jeh Johnson dated Thursday, Georgia's Secretary of State Brian Kemp said the state had discovered an unsuccessful attempt to breach the firewall of state computer systems. The attempt occurred on Nov. 15 and was linked to an IP address associated with DHS, he said.

"We are looking into the matter. DHS takes the trust of our public and private sector partners seriously, and we will respond to Secretary Kemp directly," a spokeswoman for DHS said.

"At no time has my office agreed to or permitted DHS to conduct penetration testing or security scans of our network," wrote Mr. Kemp, a Republican. "Moreover, your department has not contacted my office since this unsuccessful incident to alert us of any security event that would require testing or scanning of our network."

The alleged attempted intrusion by the federal government on a state computer system responsible for election security was detected by a third-party security firm working for the state of Georgia. The attempt was unsuccessful, according to the state. The computers also house information about company incorporations.

In his letter, Mr. Kemp asked the department to confirm whether a scan attempt was made, who authorized the scan and whether the department was scanning other state systems without authorization.

The Department of Homeland Security made a major push in advance of November's elections to help states secure election systems against possible hacking, as fears of foreign interference in the U.S. election process reached a fever pitch in the months leading up to Election Day.

The department also considered declaring election systems "critical infrastructure," which would have given the federal government additional authority to protect the systems. DHS didn't take that step, however, as many states expressed concern about additional federal authority over their election systems and said the constitution provided states the right to run their own elections.

As a result of some of the concerns, the department clarified that assistance on election-related security matters was voluntary and encouraged states to take advantage of DHS resources and expertise to help secure state election systems.

"DHS assistance is strictly voluntary and does not entail regulation, binding directives, and is not offered to supersede state and local control over the process," Mr. Johnson, the DHS chief, said in September.

Georgia was one of the states that had declined the federal government's assistance for election security, citing state sovereignty. "Right now, we're just demanding answers," said David Dove, a top aide to the Georgia secretary of state. "My boss, Secretary Kemp, has been a very vocal critic of the Department of Homeland Security declaring election systems critical infrastructure."

Jerusalem Post
Ministers welcome social media sites tackling terrorism
Friday, 09 December 2016
Byline: Gil Hoffman

Jerusalem - Justice Minister Ayelet Shaked and Strategic Affairs Minister Gilad Erdan welcomed on Thursday a move by social media giants Facebook, Twitter and YouTube aimed at curbing the spread of terrorist content online.
According to the companies, they will create a shared industry database of "hashes," unique digital "fingerprints," for violent terrorist imagery, terrorist recruitment videos or images that have been removed from their services that they will then share with one another.

The database will be open to all of the companies. Each individual company will then be able to review a "hash" according to their own content policies and decide whether or not to remove something that another company has already removed.

The move came after Israel and other countries complained that social media companies had not been doing enough to reduce the amount of terrorist-related content. Erdan and Shaked met in September with top executives from Facebook who visited Israel.

Shaked said that while the initiative was a positive step, there was still plenty more that companies like Facebook, Youtube, and Twitter could be doing.

"Terrorism is a common enemy for the entire free world, so there should be no difference between sovereign countries and massive suppliers of content that have been used by terrorists in order to murder men, women, children, and elderly people," Shaked told The Jerusalem Post. "I am glad that the meetings with Facebook executives that I conducted together with Minister Erdan brought positive results."

Erdan posted the announcement by the social media companies on his official Twitter account in English, along with an explanation in Hebrew. He added that the social media companies still need to take more responsibility to clean themselves of incitement and "not wait for our overtures to do the work for them." "This is important in order to clean the Internet of content identified as inciting," Erdan wrote.

Shaked also credited a bill she and Erdan publicized in July that would require removing terrorism-promoting content from the Internet and various social media platforms. The Ministerial Committee for Legislation advanced the bill, which was officially sponsored among others by Zionist Union MK Revital Swid, who heads a Knesset caucus on fighting violent discourse and incitement on the Internet.

The bill would empower courts to order social media providers to remove content that is in criminal and constitutes a danger to personal, public or state security. It would also give the state vast powers that it does not possess in standard proceedings. The state could seek a court order for removal without giving notice to the social media platform, introduce classified evidence and introduce evidence that would not normally be admissible.

The legislation would give social media companies 48 hours from the time the incitement is posted to remove it or be fined NIS 300,000 per post. If there is proof the site knew about the content encouraging terrorism and still did not remove it, the fine will be increased to NIS 400,000.

Swid said the social media companies realized, albeit too late that they play a key role in the struggle against terrorism. "Forming the database is a welcome first step in the worldwide struggle against terrorism," she said. "I expect the companies to take more steps like including a link to report incitement to terrorism that would be dealt with immediately. This is necessary and can save lives."

Gulf News
Public-private partnerships in cyber security
Friday, 09 December 2016
Byline: Faisal Al Bannai

Dubai - The model of government as regulator and companies as regulated is not sustainable in the realm of cyber security. Instead, what's required is the fostering of public-private partnerships (PPP). PPPs have been effective in addressing problems associated with large physical infrastructure projects and have been extremely useful in overcoming barriers to project execution related to all types of risks, access to capital, and efficient project delivery.

These partnerships also provide a powerful means of addressing social and economic problems -- education, public health, road safety and pollution -- that are difficult or next to impossible for a single entity or government agency to tackle on its own. Through PPP, all parties involved -- government, the private sector, academia, etc -- bring their different resources to the problem.

This is the kind of public-private partnership approach we need for cyber security. Neither government nor the private sector by itself can be singularly effective enough. Bringing all parties' resources together is the key.

In the digital world, cyber threats move faster than regulations and legislation can be implemented. This can mean laws are constantly playing catch up.

What's more, for us to address cyber threats, it's essential that information be shared in a timely fashion, and often in unconventional directions -- such as between government and industry, between law enforcement and industry, among nations, and across both industry and government department silos.

Making this information flow and keeping it flowing is one of the most important roles that government can play in boosting cyber security. Government also must work with industry and educators to build a larger pipeline of young people into the cyber security industry.

As a coordinator, government can set up the systems and organisations to enable rapid information sharing across stakeholders, including reticent corporates. Government can also encourage other types of knowledge sharing, including best practice, and help formalise this with standards and regulations that at least provide a baseline level of security.

Public-private partnership is no panacea. But in a world where traditional lines are blurred; information is held by countless parties; and attackers and targets are a mishmash of strategic government agencies, individual consumers and lone wolf hackers, PPP is a compelling way to respond effectively.

We are already seeing evidence of this with the establishment of entities such as the Smart Dubai Office, the government entity charged with overseeing Dubai's citywide smart transformation, engaging with leadership in the public and private sector to make Dubai a global benchmark smart city.

The passage of Dubai's Open Data Law last year, also highlights the efforts in the public sector to organise the operation and security of digital information. The law regulates the use and sharing of "Dubai Data", which is defined as any data related to the Emirate of Dubai and which is available to data providers. This makes this legislation a fundamental component of Dubai's smart city ambitions with respect to the exchange of actionable information between critical entities.

We've built everything from power plants to hospitals with PPP. Now it's time to use it to build perhaps our most important edifice yet, a secure cyber future.

Xinhua News Agency
Third China-U.S. cybersecurity ministerial dialogue yields positive outcomes
Friday, 09 December 2016
Byline: Staff reporter

Washington - The third China-U.S. ministerial dialogue on fighting cyber crimes and other related affairs issued Thursday a list of positive fruits as the two sides worked hard to strengthen cooperation in cybersecurity.
The dialogue was co-chaired by China's State Councilor and Minister of Public Security Guo Shengkun with U.S. Attorney General Loretta Lynch and Secretary of Homeland Security Jeh Johnson.

During this round of dialogue, both sides endorsed the establishment of the dialogue mechanism as beneficial to bilateral communication and enhanced cooperation, and both regarded further solidifying, developing, and maintaining the dialogue mechanism as beneficial to mutual interests.

Both sides recommitted to cooperate on investigating cyber crimes and related matters emanating from China or the United States and to refrain from cyber-enabled theft of intellectual property with the intent of offering competitive advantages to companies or commercial sectors, said the document.

China and the United States identified a number of areas for future cooperation on enhancing cybersecurity, including enhancing network hygiene by cleaning and patching malware infections in respective networks, engaging in regular reciprocal sharing of malicious IP addresses, malware samples and other network protection information.

The two countries pledged to continue discussion on future cooperation in cybersecurity of critical infrastructure, and to hold as early as possible in 2017 a China-U.S.government and technology company roundtable to discuss cybersecurity issues of mutual concern.

As to the fight against cyber terrorism, both sides acknowledged the seminar on misuse of technology and communications to facilitate violent acts of terrorism held in November this year in China. Both sides will consider holding another seminar in 2017.

The two countries agreed that the dialogue should continue to be held each year.

In his remarks to the meeting, Guo noted that under the auspices of Chinese President Xi Jinping and his U.S. counterpart Barack Obama, China-U.S. cooperation in safeguarding cybersecurity is booming and has yielded positive outcomes in cracking down on cyber crimes and related matters.

Calling the current China-U.S. cooperation in cybersecurity a link between past and future, Guo proposed that the two sides press on in using the dialogue mechanism as the main channel for communication in tackling cybersecurity issues, give prompt and effective response to the requests from the other side, and constructively manage their differences.

The U.S. side said that China and the United States share common interests in fighting cyber crimes and protecting cybersecurity, and the high-level dialogue mechanism also serves as a crucial platform for candid communication and enhancing mutual understanding and trust between law enforcement officials of the two countries.

According to 2014 data from the Cyberspace Administration of China, China has been a victim of cyber-attacks. More than 10,000 websites are tampered with every month, and about 80 percent of government websites suffered attacks, mainly originating in the United States.

Also, the Internet Society of China reported that 84 percent of Internet users in the country have been affected by personal information leaks. The number of Internet users in China hit 710 million in June this year.

China's top legislature in November adopted a cybersecurity law to safeguard sovereignty on cyberspace, national security and the rights of citizens.

German Maker of Israeli Submarines Says Secrets Stolen in 'Massive' Cyberattack
Friday, 09 December 2016
Byline: Gili Cohen

Jerusalem - ThyssenKrupp, the German maker of Israel's new fleet of submarines, has been the victim of a "massive" cyberattack, the company said Thursday.
In response to a question from Haaretz, ThyssenKrupp said that the cyberattack did not affect any of its naval projects, including those linked to Israel.

The company, which owns the shipyards now building new warships for Israel, has been in the center of a scandal in recent weeks involving Netanyahu's personal lawyer and the role he might have played in Israel's deal to buy the submarines.

Technical trade secrets were stolen earlier this year in the hack, the steelmaker said on Thursday. "ThyssenKrupp has become the target of a massive cyberattack," the German company said in a statement.

In attacks discovered in April and traced back to February, hackers stole project data from ThyssenKrupp's plant engineering division and from other areas yet to be determined, the company said.

Israel has bought submarines from ThyssenKrupp for billions of dollars. Iran, which indirectly owns stock in the group, has received the equivalent of tens of millions of euros in dividends from ThyssenKrupp, a Haaretz investigation of the company's financial reports revealed.

ThyssenKrupp, one of the world's largest steel makers, attributed the breaches to unnamed attackers located in Southeast Asia. It did not identify which documents were stolen and said it could not estimate the scale of the intellectual property losses. A criminal complaint was filed with police in the state of North Rhine-Westphalia, it said.

Secured systems operating steel blast furnaces and power plants in Duisburg, in Germany's industrial heartland in the Ruhr Valley, were unaffected, the company said.

No breaches have been found at other businesses ranging from elevators to its marine systems unit, which produces military submarines and warships. ThyssenKrupp is a major supplier of steel to Germany's automotive sector and other manufacturers.

It said the attack was uncovered by ThyssenKrupp's in house computer emergency response team. State and federal cyber security and data protection authorities were informed. The management board was made aware of the attacks at an early stage, it said.

Ottawa Citizen
Cheaper alternative for Canada.ca project ignored, sources say
Saturday, 17 December 2016
Byline: Vito Pilieci

Ottawa - The federal government could have employed a simple framework for its massive Canada.ca web renewal project, making it much cheaper than the large corporate Adobe contract it signed, several sources familiar with the project say.
The web renewal initiative, which aims to move all of the government's disparate department websites into a single Canada.ca domain, has been plagued with budget overruns and delays. Today, fewer than 10 federal departments are in the process of moving to the new website. The project intended to see as many as 90 departments move to Canada.ca by 2017.

The government awarded Adobe a $1.95-million contract in March 2015 to provide services that would allow it to merge its various departmental websites under the Canada. ca banner. The value of that contract has since ballooned to more than $9.2 million.

Another solution that was passed over, according to insiders, could have resulted in a more cost-effective approach.

DrupalWXT, a website technology already used by departments such as Statistics Canada, as well as the technology powering Whitehouse.gov in the United States, was proposed by government employees during the consultation process, several people familiar with the talks confirm. DrupalWXT would have allowed staff to manage the conversion to Canada.ca, and its open-source software would have made the project far cheaper than turning to a commercial solution.

Government employees even created a demonstration website that mimics the look, colour scheme and layout of the Canada. ca webpage to prove the technology could work.

However, according to sources, the open-source option wasn't even considered by Services Canada when it was tasked with revamping the federal government's presence online. Only commercial offerings were looked at.

The Request for Proposals document, released on Oct. 16, 2014, notified businesses of the government's intentions so they could bid on the project and stated: "Canada has a requirement for a commercially available fully hosted Managed Web Service."

The document later said the government is specifically looking for "100 authenticated user licences" for the new web platform.

Open-source software isn't commercially available: it's open by nature, and users don't need to pay for a licence.

The request attracted interest from three companies: Adobe, Dell and the Hewlett-Packard Company (HP). The bids by Dell and HP were deemed "non-compliant" by Service Canada, and Adobe won the contract.

Government officials would not say why the open-source, in-house solution was passed over. Instead, officials asserted a competitive bidding process took place and the best bid was awarded the contract.

"The RFP was to procure a Managed Web Service that would support the Government of Canada's objective to transform its web presence to better serve Canadians by taking advantage of new technology and make it easier for the public to search and find information online using any device," said Amélie Maisonneuve, a spokeswoman for Human Resources and Skills Development Canada, the department responsible for Services Canada.

"Contracts were awarded following an open and fair competitive procurement process."

Tom Cochran, chief digital strategist at cloud computing firm Acquia and former deputy assistant secretary at the U.S. Department of State, as well as director of digital technology at the White House, said the reason the governmentmade solution wasn't chosen is because there are still too many people who don't understand the value of open-sourced software.

"It is disappointing to see a great opportunity for digital innovation in government and shared economic prosperity fall flat due to old-school IT procurement practices, favouring proprietary software companies," he said.

"A large advantage of our shift to open source was the removal of vendor lock-in, opening up our support contracts to hundreds of small-and medium-size companies. Rather than awarding sizable millions to massive corporations, we were able to work with small local businesses to support the regional tech economy."

Cochran said in the U.S., 11 of the 15 departments in the president's cabinet are using open-sourced software - Drupal - to run their websites. He said 20 per cent of state governments have also shifted to run their websites on the open-source software, and it's also expanding in popularity with municipal governments.

The ballooned $9.2-million Adobe contract does not reflect what it will cost each government department to prepare their websites for the move to Canada.ca. While an overall cost estimate is not available, each department is responsible for rolling the costs into their own budgets, and six federal departments revealed they expected to spend $19.79 million in total of their own funds to prepare for the switch.

The push to consolidate the sites cost the federal government one of its top bureaucrats, who said he resigned from his position specifically because he believed the move to a single unified website could hamper the ability of individual departments to disseminate timely information to Canadians.

"I objected, saying, 'This wasn't going to work for us. Statistics Canada could not go work through this shared website because we would lose control over the dissemination of our information. People wouldn't have access to this information in a timely manner,'" said Wayne Smith, formerly the chief statistician with Statistics Canada. "We fought a long, hard battle over that. They had said there will be no exceptions. You can't have people outside of Statistics Canada having access to extraordinarily sensitive market information before the official release time. There was no way I was ever going to agree with that."

Smith abruptly quit his position in September, accusing the federal government of hobbling his agency's independence by forcing it to participate in the Canada.ca project. Of particular concern to Smith was the mandate to see all content on Canada.ca, which would include Statistics Canada reports and research, published by employees at Services Canada, the department responsible for Canada.ca, and not Statistics Canada employees.

He also said the massive project had become a financial albatross for many departments.

"I am aware that this has turned into a money pit for the departments participating," he said.

The Canada.ca project has become the latest federal government technical initiative to face criticism.

The government's handling of the Phoenix pay system and the rollout of new email addresses and technical services by Shared Services Canada have also come under fire in recent months for having technical issues, being over budget and behind schedule.

Journal de Montréal
Infos entre de mauvaises mains
Monday, 19 December 2016
Byline: Sarah-Maude Lefebvre

Montréal - Des cas survenus par le passé montrent que la perte d'informations confidentielles dans les corps policiers ou les services de renseignements peut avoir des conséquences importantes.
Le 17 décembre 2015, pendant qu'il assiste à un party de Noël avec ses collègues, le commandant au SPVM Patrice Vilceus se fait dérober un sac dans son véhicule. Le sac en question contient une clé USB sur laquelle se trouvent des informations hautement confidentielles concernant une enquête impliquant les Hells Angels. Le voleur, qui semblait ignorer l'identité de la personne dont il avait volé les effets, a ensuite été épinglé et a écopé de sept mois de prison. Les objets volés ont été retrouvés, mais il n'y a eu aucune confirmation officielle quant à la clé USB.

INFORMATIONS DÉROBÉES AU PARTY DE NOËL

TUÉ À CAUSE D'UNE FUITE

Le 3 février 2000, Claude DeSerres, un individu lié aux Hells Angels devenu informateur formateur de la police, a été tué par le motard René Charlebois. Les Hells avaient deviné que DeSerres était devenu un informateur grâce au contenu d'un ordinateur portable volé à un enquêteur de la police provinciale de l'Ontario. Ce dernier avait laissé son ordinateur sans surveillance dans sa chambre d'hôtel alors qu'il épiait les motards en «congrès» à l'hôtel Delta de Sherbrooke. Lorsqu'il a été tué, Claude DeSerres portait sur lui un micro, ce qui a permis par la suite aux policiers d'identifier la voix de René Charlebois.

VOLÉE AU HOCKEY

Le 10 octobre 1999, un dossier hautement confidentiel est volé dans le véhicule d'une employée du SCRS, pendant qu'elle assistait à un match de hockey au Maple Leaf Garden de Toronto. Selon le rapport du SCRS à l'époque, «l'enquête policière révélera que les auteurs du vol, du menu fretin en manque de drogue, ont vraisemblablement jeté les documents classifiés, sans en avoir pris connaissance, dans une benne à déchets». Les documents ne seront jamais retrouvés et le SCRS a licencié l'employée.

Journal de Montréal
Perdus par les services secrets
Monday, 19 December 2016
Byline: Sarah-Maude Lefebvre

Ottawa - Six téléphones cellulaires et un ordinateur portable appartenant à des employés du Service canadien du renseignement de sécurité ont été volés ou perdus depuis quatre ans, a appris notre Bureau d'enquête. et le SCRS ne peut pas garantir que des informations sensibles ne sont pas tombées entre de mauvaises mains.
Le nombre d'appareils électroniques égarés par l'organisme chargé de lutter contre l'espionnage et le terrorisme au Canada peut sembler peu élevé à première vue.

Mais les conséquences peuvent être cruciales pour la sécurité nationale, affirme l'ancien agent du SCRS Michel Juneau-Katsuya.

«Ce n'est pas la quantité de téléphones perdus qui compte, c'est ce qu'il y a dedans. On peut n'en perdre qu'un et tout est perdu», illustre-t-il.

«Ça doit être pris au sérieux. Si quelqu'un avec de mauvaises intentions réussit à franchir le code d'accès d'un téléphone , il peut avoir accès à plusieurs informations importantes: des listes de contacts, des

numéros de téléphone, les endroits où le propriétaire du téléphone s'est rendu avec un GPS, etc. Ce n'est pas négligeable.»

SILENCE DU SCRS

Toutes nos questions au SCRS sont demeurées sans réponses. L'organisme fédéral a refusé de confirmer si des informations sensibles se trouvaient à l'intérieur des téléphones et de l'ordinateur qui ont été perdus ou volés à ses employés.

«Nous ne pouvons pas élaborer davantage. Ce que je peux dire, c'est que le SCRS fonctionne conformément à la Loi sur le SCRS, aux directives ministérielles et à un système solide de politiques et de procédures internes», a indiqué le porte-parole Tahera Mufti.

BIEN PROTÉGÉS ?

Selon Michel Juneau-Katsuya, on peut raisonnablement croire que les téléphones des employés du SCRS sont «bien protégés», voire que de l'information classifiée peut même être détruite à distance si c'est nécessaire.

«Mais il est difficile de déterminer la portée de ces incidents. Si des informations confidentielles ont été la cible d'un vol planifié, ce peut être préoccupant», dit-il.

«Les cellulaires peuvent contenir des mots de passe de bases de données et de serveurs. Le problème, c'est qu'on ne saura jamais si des données sensibles ont été perdues. Cela ferait paraître extrêmement mal le SCRS», souligne aussi le titulaire de la Chaire de recherche du Canada en surveillance et construction sociale du risque, Stéphane Leman -Langlois.

À une époque où chaque pays tente de collecter le plus de données possible sur son voisin, on ne peut risquer de «jouer avec le feu», rappelle le codirecteur de l'Observatoire sur la radicalisation et l'extrémisme violent, Stéphane Berthomet .

«On ne sait pas dans quelles mains sont tombés ces appareils. Est-ce que, par exemple, le cellulaire est simplement tombé dans la neige ou est-ce que quelqu'un avec de mauvaises intentions l'a piraté? Perdre ne serait-ce que deux appareils par année représente suffisamment de stress pour une organisation comme le SCRS pour qu'on s'en préoccupe .»

Vice News Canada
The best defense...
Saturday, 17 December 2016
Byline: Justin Ling

Ottawa - The Canadian Armed Forces is finally upping its game in the realm of cybersecurity -- bolstering its shields against nation-state actors like Russia and China, malicious hacker groups, and "insider threats" that may be looking to follow in Edward Snowden's footsteps.
In a pair of documents published Friday, the Canadian military is asking industry to submit ideas on how they can assess and respond to cyber threats in real- time.

Under the Defensive Cyber Operations Decision Project, which will ultimately culminate in a plan that will be submitted to the federal government, the Department of National Defense will be looking at capabilities that will allow the military to "operate effectively in cyberspace on government-authorized military missions, to support our federal partners in national cyber security efforts, and to work with international allies," according to a departmental spokesperson.

Cyber defense is obviously top-of mind right now, as the American intelligence community stands behind the fact that the results of the presidential election were directly affected by Russian hacking, and with revelations that Russia had targeted the Joint Chiefs of Staff.

Canada is no stranger to state-based hacking. A VICE News report revealed earlier this year that Canada faces 25 sophisticated attacks per day, likely launched by state- backed hackers.

"The future security environment will require a level of domestic integration among agencies that does not exist at the present time."

The request for information published Friday does ask industry to propose technology that can "hunt for APTs" -- referring to Advanced Persistent Threat hacks, which are often complex hacks organized by nation- state hackers.

The documents also ask for technology that can help identify "insider threats," seemingly an allusion to those with access to government systems who might be looking to either sell or publish sensitive data from within military systems.

The project will bring in software, hardware, and training that will help the military collect and store data about domestic and international cyber threats, run forensic analysis of that information, and to create predictive systems that can analyze and alert to possible incoming threats.

Those systems will largely boost the already-growing cyber operations centres run by the department.

"Cyber threats are increasing in both numbers and sophistication, and a growing number of state and non-state actors of concern have already developed and employed cyber capabilities that can be used for intrusive, disruptive or offensive purposes. Our key priorities are to continue to develop [Department of National Defense/Canadian Armed Forces] cyber capabilities and workforce," the spokesperson added.

The new cyber defense plan will be able to operate abroad, to ensure that foreign militaries or governments won't be able to access Canadian systems during battle. "The [Canadian Armed Forces] of the future must be a multi-role, combat capable force that can perform a broad range of tasks and operate in all engagement spaces (land, maritime, air, space, and cyber)," the documents read.

It's how the plan might work in Canada that is particularly interesting.

"Domestic (routine and contingency) operations might involve assisting civil authorities in responding to natural disasters, cyber-attacks, terrorist attacks, crises in urban centres, threats to critical infrastructure, risks to health and food systems, or Chemical, Biological Radiological or Nuclear (CBRN) attack," the document reads.

"Owing to the potential for an increase in domestic threats, [the Department of National Defense/Canadian Armed Forces] as a whole needs to become more integrated within the domestic response community -- in particular, the security and intelligence sectors. In particular, the future security environment will require a level of domestic integration among agencies that does not exist at the present time."

Canadian intelligence-watchers have, for years, noted an uptick in domestic activity amongst Canadian military intelligence units -- which, traditionally, do not run national intelligence-gathering. This journalist reported in 2014 that military counter-intelligence kept tabs on Indigenous protesters, perhaps countering their own mandate. More recently, the Ottawa Citizen reported that military intelligence conscripted the Communication Security Establishment to track a Canadian within the country.

The Communication Security Establishment, the signals intelligence agency that works hand-in- hand with the American NSA, does not appear to be covered by this cyber defense strategy. That agency does not have authority to do surveillance inside Canada, unless specifically mandated to by another department.

A guide to planned spending for the Department of National Defense says the Cyber Operations Decision Support Project is expected to cost between $50 million and $99 million.

Global News
Canada's military too vulnerable to cyber attacks: documents
Saturday, 17 December 2016
Byline: Monique Scotti

Ottawa - The Department of National Defence and the Canadian Armed Forces are looking to improve their ability to defend against cyber attacks, with newly released documents suggesting the current system remains woefully inadequate.
DND/CAF published a request for "industry feedback" on Friday morning, stating that the Canadian military wants to develop a new system "that will enable a reliable, near-real-time analysis of its Information Technology Infrastructure (ITI) to detect and identify malicious activities and then provide decision aids and tools" to defend against those attacks.

The initiative has been dubbed the "Defensive Cyber Operations Decision Support Project" and it's expected to set taxpayers back between $50 and $99 million.

Friday's documents were released less than a month after the department's main webpage was hacked. Canadians trying to learn about career opportunities with the military at forces.ca instead found themselves staring at the landing page of the Chinese central government's official web portal.

Details of the upgrade plan made public on Friday describe the project as a "complex multi-year requirement" that is still in its infancy. The final delivery date is slated for 2024.

But the documents reveal that the sooner the department's current system for dealing with cyber threats can be replaced, the better. They acknowledge that "state and non-state adversaries are developing increasingly sophisticated cyber capabilities" that can target the Canadian military.

The sensors used to detect cyber attacks are "not sufficient," they go on to say, and when they do come across malicious attempts to compromise the department's computer systems, "analysts must manually piece the data together to understand the extent of the breach and its operational impacts."

On top of that, the current defence system lacks the ability to compare what the technicians are seeing to existing intelligence reports, or to other information that could help them decide how to respond.

The fundamental problem, according to the department, is that DND's cyber defences "mainly focused on yesterday's problem while combating today's adversaries."

Industry stakeholders will now have a chance to submit feedback on possible ways to bring the system into the modern era.

After that, the department will need to examine the feedback, then come up with a business case for approval by September 2017.

Global News has reached out to the department for additional information and comment.

Washington Post

How Russia overtook China as our biggest cyber-enemy
Sunday, 18 December 2016
Byline: James Lewis

Analysis: In June 2015, the U.S. government discovered something horrifying: The Office of Personnel Management had been hacked by China. The attackers had stolen the Social Security numbers, performance ratings and job assignments of millions of current and former federal employees.
It wasn't the first time the Chinese had been tied to security breaches in the government. They had gained access to the computers of the Federal Deposit Insurance Corp.'s top officials as well as sensitive data in government employees' security clearance files. The Chinese military was able to steal weapons designs, data on advanced technologies and insight into U.S. government policies. They had collected information about America's electrical power grid, gas lines and waterworks.

Headlines about China's attacks bordered on the hysterical. "Successful hacker attack could cripple U.S. infrastructure," NBC blared. "China hacks the world," the Christian Science Monitor declared. The National Interest called China's data theft a "national security threat."

Over the past year, though, China has largely faded from the conversation. It's not because its hackers have gone away. The Chinese continue to extract secrets from the U.S. government. But their efforts are, and have always been, far less scary than Russia's brazen new challenge in the information space. Unlike China, the Russians aren't using their cyberspies to steal business insights or gather information that officials can use in private negotiations with the United States. They're looking to disrupt elections in the United States and Europe, break NATO, and undermine democratic values - big strategic goals that President Vladimir Putin energetically pursues. Russia has become the biggest threat in cyberspace, and it will be very hard to defeat.

Both Russia and China have absconded with America's secrets for decades. China's efforts have been better known because Chinese hackers have gotten caught more. As the New York Times reported, they stole "designs for the F-35 fighter jet, corporate secrets for rolling steel, even the blueprints for gas pipelines that supply much of the United States." In 2008, they accessed the campaign servers of Barack Obama and John McCain, stealing internal position papers and communications, the Times said. Those documents were never leaked.

Russian hackers have used more sophisticated techniques and, as a result, have operated mostly under the radar, navigating their way into the networks of major agencies, including the Defense and State departments. They have also gained access to U.S. Central Command, the White House, energy companies and critical infrastructure around the country.

Today, China's cyberespionage efforts have become more refined. But they're still focused on gathering information as quietly as possible. China isn't looking to take down U.S. infrastructure, and its spies generally no longer steal secrets from foreign companies to help their own. President Xi Jinping has

professionalized and centralized cyberspying, and China is careful to avoid anything that could look like an attack.

The Russians are not. The country's aims are much more aggressive - and personal. Its leaders believe that the United States is trying to use the Internet (which the Kremlin calls a tool of the CIA) to remake the world in its own Western liberal image. Putin's henchman Dmitry Medvedev, Russia's prime minister, even claimed that Western social media is part of a plan for Arab Spring-style political unrest in his country, saying that "they have been preparing such a scenario for us, and now they will try even harder to implement it."

As a result, Russian hackers aren't just looking for information that could bolster their business efforts or improve their ability to negotiate with Washington. They're aggressively working to destabilize and destroy democracy. The Democratic National Committee hack, which has been tied to Russia, was only one of several high-profile incidents. The Russians allegedly hacked the German Bundestag. They broke into a leading French TV network (pretending to be the Islamic State) and took it offline. A power plant in Ukraine was hacked as a warning to Kiev. Russian hackers have been accused of planting false news to undercut a partnership between Sweden and NATO. European intelligence services say the Russians are more active and more dangerous than at any other time since the Cold War.

This is what Russia calls a "new generation of warfare," which uses hacking, leaks and nontraditional weapons such as RT, an English- language news site with a strident anti-American tone. Russia's government has hired hundreds of trolls to plant pro-Russian messages in the comment sections of Western media outlets, uses "chatbots" to flood social media with hostile comments, and, of course, leaks purloined emails through various organizations, including WikiLeaks. China doesn't do this.

This past week, Obama pledged to retaliate against Russian hackers, telling NPR that "we need to take action. And we will." But figuring out what comes next has been a struggle. We can't unleash a major U.S. Cyber Command operation without risking war. Some proposals put forward by experts are silly, such as leaking Putin's Botox injection schedule. Others are feckless, such trying to embarrass Putin by publicizing pictures of his girlfriends.

America needs a better strategy, one that's more assertive and nimble. And it can't be focused on Russia alone. Other opponents remain busy and dangerous. North Korea, Iran and China have all tested American cyberdefenses and found them wanting. A good cybersecurity strategy can't play whack-a-mole. We need an approach that convinces opponents it's dangerous to attack the United States, and if they do, there will be consequences. The response to North Korea's Sony hack shows that opponents' behavior can be changed: After the United States imposed retaliatory sanctions, the number of attacks decreased significantly. We can reshape cyber-risk if we take action. We must.

New York Times

Obama Confronts Complexity of Using a Mighty Cyber arsenal Against Russia
Sunday, 18 December 2016
Byline: David E. Sanger

Washington - Obama assembled a menu of options to respond to Russia's hacking during the election, ranging from the obvious -- exposing President Vladimir V. Putin's financial ties to oligarchs -- to the innovative, including manipulating the computer code that Russia uses in designing its cyberweapons. But while Mr. Obama vowed on Friday to "send a clear message to Russia" as both punishment and deterrent, some of the options were rejected as ineffective, others as too risky. If the choices had been better, one of the aides involved in the debate noted recently, the president would have acted by now.

In his last weeks in office that Situation Room debate has confronted a naturally cautious president with a complex calculus that President-elect Donald J. Trump will soon inherit: how to use the world's most powerful cyberarsenal at a moment when the United States, as the election showed, remains highly vulnerable.

"Is there something we can do to them, that they would see, they would realize 98 percent that we did it, but that wouldn't be so obvious that they would then have to respond for their own honor?" David H. Petraeus, the former director of the Central Intelligence Agency under Mr. Obama, asked on Friday, at a conference here sponsored by Harvard's Belfer Center for Science and International Affairs. "The question is how subtle do you want it, how damaging do you want it, how do you try to end it here rather than just ratchet it up?"

The idea of exposing Mr. Putin's links to oligarchs was set aside after some aides argued that it would not come as a shock to Russians. Still, there are proposals to cut off leaders in Mr. Putin's inner circle from their hidden bank accounts in Europe and Asia. There is an option to use sanctions under a year-old executive order to ban international travel for senior officials in the G.R.U., the Russian military intelligence unit that American spy agencies say stole emails from the Democratic National Committee and Hillary Clinton's campaign chairman, then doled them out to WikiLeaks, betting that media outlets eager for insider details would amplify them, doing the Kremlin's work for it.

The National Security Agency and its military cousin, the United States Cyber Command, which is responsible for computer-network warfare, have worked up other ideas, officials said, though some have been rejected by the Pentagon.

Those plans could deploy the world-class arsenal of cyberweapons assembled at a cost of billions of dollars during Mr. Obama's tenure to expose or neutralize some of the hacking tools favored by Russia's spies -- the digital equivalent of a pre-emptive strike. But the selection of targets by Americans and the accuracy of that retaliation could also expose software "implants" that the United States has patiently inserted and nurtured in Russian networks, in case of future cyberconflicts.

And the revelation in August about some of the N.S.A.'s own tools for breaking into foreign computer networks has raised the possibility that the Russians are already inside American networks and are sending a warning that they can respond in kind.

All of this has led Mr. Obama to ask how the Russians might escalate the confrontation, and whether the United States in the end may have more to lose than Russia.

"He doesn't have great options," said Michael D. McFaul, formerly one of Mr. Obama's top national security aides and then his ambassador to Moscow.

Mr. Obama is the president who, in his first year in office, reached for some of the most sophisticated cyberweapons on earth to blow up parts of Iran's nuclear facilities. Now, at the end of his presidency, he has run headlong into a different challenge in the cyberwarfare arena.

The president has reached two conclusions, senior officials report: The only thing worse than not using a weapon is using it ineffectively. And if he does choose to retaliate, he has insisted on maintaining what is known as "escalation dominance," the ability to assure you can end a conflict on your terms.

Mr. Obama hinted as much at his news conference on Friday, as he was set to leave for his annual Hawaii vacation, his last as president.

"Our goal continues to be to send a clear message to Russia or others not to do this to us because we can do stuff to you," he said. "But it is also important to us to do that in a thoughtful, methodical way. Some of it, we will do publicly. Some of it we will do in a way that they know, but not everybody will."

He rejected calls for a big, symbolic show of power, dismissing the idea that if the United States "thumped our chests about a bunch of stuff, that somehow that would potentially spook the Russians."

The goal, Mr. Obama said, was to come up with a response "that increases costs for them for behavior like this in the future but does not create problems for us."

There is not much new in tampering with elections, except for the technical sophistication of the tools. For all the outrage voiced by Democrats and Republicans this week about the Russian action -- with the notable exception of Mr. Trump, who has dismissed the intelligence findings as politically motivated -- it is worth remembering that trying to manipulate elections is a well-honed American art form.

The C.I.A. got its start trying to influence the outcome of Italy's elections in 1948, as the author Tim Weiner documented in his book "Legacy of Ashes," in an effort to keep Communists from taking power. Five years later, the C.I.A. engineered a coup against Mohammad Mossadegh, Iran's democratically elected leader, when the United States and Britain installed the Shah.

"The military coup that overthrew Mosaddeq and his National Front cabinet was carried out under CIA direction as an act of US foreign policy, conceived and approved at the highest levels of government," the agency concluded in one of its own reports, declassified around the 60th anniversary of those events, which were engineered in large part by Kermit Roosevelt Jr., a grandson of President Theodore Roosevelt.

There were similar interferences over the years in Guatemala, Chile and even in Japan, hailed as a model of post-World War II democracy, where the Liberal Democratic Party owes its early grip on power in the 1950s and 1960s to millions of dollars in covert C.I.A. support.

The only differences from what happened this year is that the effort was directed at the United States, and that it was cyberenabled, giving Moscow a tool to amplify its efforts through the echo chamber of social media and news organizations that quoted from the leaked emails.

"What has changed is that this was using cyberspace for advancing a political objective," said Admiral James A. Winnefeld Jr., who served as vice chairman of the Joint Chiefs of Staff until he retired last year.

Cybertechniques, he said, have amplified an old form of "political warfare, and the issue is not whether it successfully influenced the election -- but the fact that they did it."

Over the past few months, an administration that prided itself on its work on cyberoffense and cyberdefense has come face-to-face with a hard reality: When it came to the 2016 election, an economically failing Russia, dismissed by Mr. Obama on Friday for its inability to grow or to innovate, exploited giant holes in the American system.

Mr. Obama conceded that he first heard about the attack on the Democratic National Committee "early last summer," or nine months after the F.B.I. first alerted low-level D.N.C. officials about what happened. That now appears to be critical lost time.

If Mr. Obama had confronted the Russians immediately, in public or in the kind of private warning he said he delivered to Mr. Putin only three months ago during a meeting in China, the United States might have derailed the hacking campaign before it harvested and revealed thousands of emails.

But the election hacking also raised questions about whether the American fixation on a "cyber Pearl Harbor" -- a devastating attack on the power grid, cellphone network, financial system or computer-controlled gas pipelines -- overlooked a more obvious vulnerability.

As a detailed account in The New York Times last Wednesday revealed, the D.N.C. had virtually no protections for its electronic systems, and Mrs. Clinton's campaign chairman, John D. Podesta, had failed to sign up for the "two-factor authentication" on his Gmail account. Doing so probably would have foiled what Mr. Obama called a fairly primitive attack.

Now the question facing Mr. Obama is how public a retaliation to execute.

The president laid out a case on Friday for acting with subtlety, so as not to start a tit-for-tat conflict.

But as Joseph Nye, a strategist on so-called soft power, noted on Friday, "The reason to make some of this public is not just to deter the Russians, it is to deter others as well," in future elections.

It is possible, said Mr. McFaul, the former ambassador to Russia, that Mr. Obama's most lasting contribution may be to get the details of the Russian hack declassified and to publish a report he has instructed the intelligence community to assemble before he leaves office.

"Given that Obama only has a few more weeks in office, I think he needs to focus his remaining time on attribution -- that is declassification of intelligence so that there is no ambiguity about the Russian actions," Mr. McFaul said.

That "is completely within his powers," he added, and would spur more congressional investigations regardless of the stance taken by Mr. Trump on the hack.

Mr. Obama's comments on Friday have led Democrats to demand further action. Representative Adam Schiff of California, the ranking Democrat on the House Intelligence Committee, said the response should mix "additional economic sanctions along with our allies, and clandestine means of exacting a cost on the Russians for their flagrant meddling in our election."

"I have little confidence," he continued, "that the incoming president will take the actions necessary to make the Russians pay any price for the most consequential 'active measures' campaign against us in history."

Huffington Post
Yahoo Lawsuit: Canadian Customers Want To Sue In $50-Million Class Action
Saturday, 17 December 2016

Toronto - Yahoo is now facing a proposed class action on behalf of Canadians whose personal information may have been stolen, according to a notice of action filed Friday.
The $50-million claim would take in Canadians whose user account information was stolen or whose email accounts were accessed in recent years.

According to the notice, the representative plaintiff, Natalia Karasik, of Barrie, Ont., received a letter from Yahoo on Thursday informing her that her information was part of a hack of its servers _ in 2013.

Karasik, who could not immediately be reached, was unaware of the breach until she received the letter, the notice of action filed in Ontario Superior Court states. She has used email to chat about a wide range of personal information, including financial and health information, according to the notice.

"She's been using her Yahoo email account as her exclusive email system," lawyer Ted Charney said in an interview. "So, essentially, she's at risk for someone having access to all of her emails and everything she's done with her email account for a couple of years."

Yahoo, based in Sunnyvale, Calif., did not immediately respond to a request for comment.

Hackers used 'forged cookie files'

In September, the company sent a mass email to users to inform them that their account information had been stolen from its network in a cyberattack in late 2014. The information included email addresses, telephone numbers, dates of birth, passwords and security questions. The company said at least 500 million user accounts were affected.

he notice of action also asserts that documents filed with the Securities and Exchange Commission in November show Yahoo knew about the 2014 breach shortly after it occurred "contrary to its representations to its users."

Toronto-based Rogers Communications, whose customers' email accounts are "powered" by Yahoo, said it had "every reason" to believe some of them would have been affected.

"We have been in contact with Yahoo and understand they are taking steps to notify people potentially impacted," spokesman Rogers Aaron Lazarus said in an email. "We encourage people to regularly change and set strong passwords."

Company facing similar action in U.S.

The unproven claim -- which has yet to be certified as a class action or tested in any court -- alleges Yahoo breached its contract with users, invaded their privacy, and unjustly enriched itself at their expense. The claim also seeks $10 million in punitive damages.

Charney said it was not necessary to prove under Canadian law that anyone actually suffered damages as a result of the hacks. Besides leaning on contract law, he noted relatively recent recognition of the wrongdoing of "intrusion upon seclusion," which presumes damages if a privacy breach is proven.

While a proposed suit has previously been launched on behalf of users in British Columbia, Yahoo's terms of use for Canada requires proceedings to take place in Ontario. The company also faces similar action over the hacks in the United States.

Yahoo is the parent company of Toronto-based Yahoo Canada, which is also named in the action. CEO Marissa Mayer has previously said Yahoo had a total of one billion users. While it's not known how many Canadians might have been affected, Charney estimated as many as eight-million Canadians may have used one of Yahoo's services.

One quarter of Canadian online traffic vulnerable to NSA sweeps: researchers
Saturday, 17 December 2016
Byline: Amanda Connolly

Ottawa - A large amount of Canadian internet traffic is being routed through the United States, leaving it vulnerable to collection and probing by the National Security Agency.
And most Canadians have no idea of how exposed they are to American data sweeps, say the researchers behind a new tool that aims to show Canadians what path their internet traffic takes to connect to the websites they want to visit.

In a new online project launched Thursday, researchers from the University of Toronto and York University have partnered with Open Media to create a tool to show the paths Canadians' internet data take when they access websites or send online communications.

While past estimates have suggested roughly 90 per cent of Canadian internet traffic is routed through the United States -- particularly in cases where a Canadian visits an American or foreign website -- the new data gathered so far by the researchers build on that and suggest that even when both the origin and destination of the traffic are in Canada, there's still a one-in-four chance it goes through the U.S.

"I think most Canadians would be really surprised to learn that quite so much of our internet traffic, even our domestic Canada-to-Canada traffic, actually ends up being routed through the U.S.," said David Christopher, spokesperson for Open Media.

"Canada's lack in sufficient internet exchange points within our borders is really a big reason why so much of our traffic does travel through the U.S. I think nowadays a lot of people think of the internet as almost like a cloud and I think a lot of people don't put a lot of thought into what happens when we visit a website on the other side of the country."

To get a user to a website, internet service providers (ISPs) must connect to internet exchange points -- physical hubs that connect all of the most important cables that connect internet access points -- like your computer -- with the end destination, such as the iPolitics homepage.

There are nine internet exchange points located in Canada: one each in Vancouver, Edmonton, Calgary, Winnipeg, Toronto, Ottawa, Montreal, Halifax and Waterloo, Ont.

(Picture an extension cord connecting your laptop to the power bar across the room: You need some intermediary to help you access the power bar, but you could use one, two or even three extension cords to help you get there.)

"You get to there and then you can connect to other networks that have also reached that," said Andrew Clement, professor emeritus at the University of Toronto and coordinator of the school's Information Policy Research Program. "It's like a big power bar in the sense that everybody just plugs in there rather than making all of these arrangements with individual carriers."

But Canadian internet traffic can also be routed through intermediary exchange points in the U.S., rather than directly through the hubs in major Canadian cities.

Sometimes this is because the U.S. exchange points are cheaper and more developed: Think of routing through the U.S. as being like taking the Trans Canada Highway instead of a winding, two-lane road to drive across country.

Sometimes it can also be because larger internet service providers don't want to directly transport traffic from smaller services piggy-packing on their expensive network infrastructure.

"That's about the pricing policies and the lack of government regulatory intervention," Clement said.

The problem lies in the fact that the use of such "boomerang" routes means Canadian internet traffic loses its protections under Canadian privacy law -- and instead becomes subject to the Patriot Act while it passes through U.S. exchange points. That exposes the Canadian traffic to the National Security Agency's broader powers to intercept and probe both the metadata and content of the traffic.

An example: In the course of setting a time for an interview, iPolitics and Christopher exchanged a number of emails between the iPolitics office in Ottawa and his office in Vancouver. While even internet traffic within cities can be routed through the U.S., the likelihood of traffic crossing south of the border increases between websites or servers that are distant from one another.

"That chance increases when it comes to long-haul traffic, so with you being in Ottawa and me being in Vancouver I think there's a bigger chance than 25 per cent that the emails we've been exchanging have been routing through the U.S. because Canada just lacks sufficient long-haul background capacity in our networks," Christopher said.

And when Canadians access websites based outside North America, the traffic almost always will be routed through the U.S. because the primary seafloor cables -- connecting Asia and North America, for example -- make landfall in the U.S.

While the Canadian Internet Registration Authority, the service that registers domain names for websites hosted in Canada, actively encourages the use of Canadian internet exchange points, there is no regulation requiring internet service providers to do so.

Clement said that if every internet service provider with access to the Canadian exchange points used them, it would help to keep more traffic within Canada.

He pointed to one example where he and his students traced the route their internet data took when they accessed the Ontario Student Assistance Program website from his office just down the street at the University of Toronto.

"The route that that data takes is from Toronto to New York and Chicago, where [provincial government carrier] Telus then connects it back to the provincial government," Clement said. "We've observed this for years and this pattern is fairly reliable."

But that doesn't mean it should stay that way, he said, pointing to the coming inauguration of President-elect Donald Trump as a reason Canadians should be concerned about their internet traffic, including the content of online communications, being routed through the United States.

"Going to the United States exposes it to NSA surveillance and now I think with Trump and his government, it's going to be even worse," Clement said. "It's an unnecessary loss of legal and constitutional protection."

The project itself doesn't advocate for any particular course of action but rather is set up as a platform to allow people to trace the routes their own internet traffic takes so they can better understand the issue.

But that doesn't mean those behind it don't have clear ideas on how to solve the problem.

"Fundamentally it's about education, so people understand how this can happen, and further about the risks to privacy," said Clement, pointing to the need for a baseline level of understanding before Canadians and policy makers can move to find solutions.

"There are a number of things that can be fixed but the easiest thing is to reduce that exposure to US surveillance. Make it easier and require that connection within Canada."

London Times
Tyrie demands clarity on cybercrime
Monday, 19 December 2016
Byline: Marcus Leroux

London - The chairman of the Treasury select committee has written to Britain's cybersecurity chief to highlight "serious concerns" over the reliance of financial regulators on intelligence agencies to stop bank hacks.
In the wake of last month's hacking attack on Tesco Bank, Andrew Tyrie has written to Ciaran Martin, chief executive of GCHQ's National Cyber Security Centre, to ask him to consider a "single point of responsibility" for cybercrime in financial services.

He writes: "The committee has serious concerns [over] the opaque lines of accountability between the relevant authorities, particularly the regulators on the one hand and intelligence agencies on the other, and a very high degree of reliance on information from the intelligence community."

Mr Tyrie argues that it is essential the intelligence community gives regulators the technical and practical support they need to do their job. "It is for consideration whether a single point of responsibility for cyber risk in the financial services sector is now required."

New York Times
Senators Push to Widen Inquiry on Russian Meddling in Election
Monday, 19 December 2016
Byline: Nicholas Fandos

Washington - Pressure mounted on Sunday for a broader congressional investigation of Russian cyberattacks aimed at influencing the American election, even as a top aide to President-elect Donald J. Trump said there was no conclusive evidence of foreign interference.
The effort was being led by a bipartisan group of senators, including John McCain, Republican of Arizona, and Chuck Schumer of New York, the Senate Democratic leader, who called on Sunday for the creation of a Senate select committee on cyberactivity to take the investigative lead on Capitol Hill.

"Recent reports of Russian interference in our election should alarm every American," the senators wrote on Sunday in a letter to Senator Mitch McConnell, Republican of Kentucky and the majority leader, who has said a select committee is not necessary. "Cybersecurity is the ultimate cross-jurisdictional challenge, and we must take a comprehensive approach to meet this challenge effectively."

The developments served to deepen the fissures between high-ranking lawmakers of both parties who see American intelligence reports implicating Russia as the basis for additional inquiries and Mr. Trump, who continues to reject the conclusions of those reports.

But the developments also put new strain on Mr. McConnell. He now faces calls from Mr. McCain and Lindsey Graham, two Senate Republicans considered well versed on national security issues, to form a select committee. If he were to reject that appeal, he would be subject to criticism that he was trying to avoid a spotlight on an issue that senators in both parties believe is worthy of more focused scrutiny.

Mr. McConnell said last week that while he respects the intelligence agencies' conclusions, the Senate Intelligence Committee is "more than capable of conducting a complete review" itself. He also acknowledged that Mr. McCain could conduct an investigation on the Armed Services Committee, an option that remains open should Mr. McConnell decide against a select committee.

Those divisions, coming as the Electoral College prepares to meet on Monday to ratify Mr. Trump's election and the president-elect completes his cabinet choices, all but ensured that the issue would cloud the first months of Mr. Trump's presidency, when he will be asking Congress to approve an aggressive legislative agenda.

Several permanent congressional committees have already been tasked with examining various aspects of the Russian interference, which has been largely accepted as fact by most members of Congress.

But in their letter on Sunday, the lawmakers argued the issue was too important and complicated for an existing committee to take on properly.

"We share your respect for, and deference to, the regular order of the Senate, and we recognize that this is an extraordinary request," the senators wrote to Mr. McConnell. "However, we believe it is justified by the extraordinary scope and scale of the cyber problem."

In addition to undertaking a "comprehensive investigation of Russian interference," the senators recommended that such a committee also develop "comprehensive recommendations and, as necessary, new legislation to modernize our nation's laws, governmental organization, and related practices to meet this challenge."

Select committees, which are typically created to examine a particular issue for a limited time, are rarely formed. The most prominent recent example is the House Select Committee on the attacks in 2012 on the American diplomatic compound in Benghazi, Libya, an inquiry that Democrats have denounced as unduly partisan.

Speaker Paul D. Ryan said last week that the House Intelligence Committee would continue its own examination of Russian hacking.

Mr. Schumer said in a news conference on Sunday that they intended to avoid such charges of partisanship.

"We don't want it to just be finger pointing at one person or another," Mr. Schumer said. "We want to find out what the Russians are doing to our political system and what other foreign governments might do to our political system. And then figure out a way to stop it."

A spokesman for Mr. McConnell, David Popp, referred to Mr. McConnell's earlier comments and said the majority leader would be reviewing the latest letter.

The letter was also signed by Mr. Graham, Republican of South Carolina, and Senator Jack Reed, Democrat of Rhode Island, two members of the Senate Armed Services Committee that Mr. McCain leads. It follows a signed statement from the lawmakers, released last week, warning that any congressional investigation into the hacks "cannot become a partisan issue."

Mr. Trump, for his part, has sought to paint the intelligence community's conclusions about the matter as just that -- a partisan attack against him. He said last week that the reports were "just another excuse" by Democrats frustrated with the election results that might be used to try to undermine his victory.

Asked on CBS's "Face the Nation" on Sunday what information Mr. Trump had received that led him to reject intelligence assessments, Kellyanne Conway, one of Mr. Trump's top advisers, insisted that the reports about the hacking were groundless.

"Where is the evidence?" Ms. Conway asked, turning the question around. "Why, when C.I.A. officials were invited to a House intelligence briefing last week, did they refuse to go?"

Robert M. Gates, the former defense secretary under President Obama and President George W. Bush who has offered counsel to Mr. Trump, speculated on NBC's "Meet the Press" that the president-elect "felt the way this information came out through newspaper stories and so on was somehow intended to delegitimize his victory in the election and that he's reacting to that rather than 'the facts on the ground,' as it were."

But Mr. Gates also said the Russian hacking was aimed at discrediting the American electoral process.

"Whether or not it was intended to help one candidate or another, I don't know," said Mr. Gates, who also served as C.I.A. director under President George Bush. "But I think it clearly was aimed at discrediting our elections, and I think it was aimed certainly at weakening Mrs. Clinton."

Mr. Obama, in a news conference on Friday, vowed that the United States would respond to the attack. He said that he was still weighing a mix of covert and public actions to retaliate before he leaves office. And lawmakers from both parties have proposed new sanctions to punish Russia.

Speaking Sunday on CNN's "State of the Union," Mr. McCain sought to add urgency to the matter.

"There's no doubt they were interfering and no doubt that it was cyberattacks," he said of the Russians. "The question now is how much and what damage and what should the United States of America do? And so far, we have been totally paralyzed."

Mr. McCain said that he had faith that "reality is going to intercede at one point or another" on Mr. Trump, suggesting that the president-elect might come to agree about Russian influence.

Asked on CBS about Mr. Obama's pledge of retaliation, Ms. Conway said Mr. Trump "respects" Mr. Obama's right to respond as he sees fit for the remainder of his presidency. But, she added, that "doesn't mean that new President Trump will agree with it and continue it."

"It does seem to be a political response at this point because it seems like the president is under pressure from Team Hillary, who can't accept the election results," she said.

Press Trust of India
Indian Security Experts Are Confident About Their Cyber Defense
Monday, 19 December 2016

New Delhi - Indian security professionals are confident, despite a global decline in assurance that cyber defenses are meeting expectations, reveals the new 2017 Global Cybersecurity Assurance Report Card released by Tenable Network Security.
According to the survey, India earned the highest overall global score in cybersecurity confidence, with 84 percent (B). India debuted in the annual survey this year, beating out last year's leader in overall score, the United States, which fell two points to second place with 78 percent (C+). The overall global cybersecurity confidence, on the other hand, fell six points over 2016 to earn a 70 percent (C-).

The 2017 Global Cybersecurity Assurance Report Card solicited insights from 700 security practitioners in nine countries and across seven industry verticals to calculate a global index score reflecting overall confidence that the world's cyber defenses are meeting expectations. While the 2017 Global Risk Assessment Index dropped by 12 percent, India stayed ahead of the curve with an above average rating of 73 percent (C).

"India's high cybersecurity confidence is certainly a positive trend, especially when the global outlook is gloomy," said Manoj Taskar, Country Manager India & SAARC, Tenable Network Security. "These scores are a testament to the increased focus Indian enterprises have towards security as they embrace the digital economy. There has been a conscious effort from various stakeholders in the industry to empower the security ecosystem of the country, and we are now seeing the results."

Despite leading in overall grades, Indian security professionals struggle with assessing risks in new and emerging technologies. This year's data indicate that the growing adoption of containerization platforms and DevOps environments poses new challenges, with respondents grading themselves a 68 percent (D+) in their ability to assess risk in both categories.

Globally, security practitioners continue to face challenges in securing cloud and BYOD environments, while web application security emerged as a bigger risk this year than in 2016, dropping 18 points to 62 percent (D-).

"This year's research reveals that Indian CISOs must prepare themselves and their organizations for the new security challenges of the modern workplace," said Taskar. "Across industry verticals and around the world, organizations are struggling to assess IT security risks brought on by new technologies. Leveraging data and insights from the Global Cybersecurity Assurance Report Card, IT teams can improve their security program effectiveness and better prepare themselves for continued technological innovation."

Face the Nation (CBS)
Henry Kissinger says "I hope we're doing some hacking" in Russia
Sunday, 18 December 2016
Byline: Rena Flores

Washington - Former Secretary of State Henry Kissinger, responding to intelligence reports that Russia directed hacks to interfere with the U.S. election, is hoping that the American government is retaliating against the Kremlin with cyberattacks of its own.
"I don't doubt that the Russians are hacking us," Kissinger told CBS' "Face the Nation" in an interview that aired Sunday. "And I hope we're doing some hacking there."

"Everybody has a hacking capability. And probably every intelligence service is hacking in the territory of other countries," he said. "But who exactly does what? That would be a very sensitive piece of information. But it's very difficult to communicate about it. Because nobody wants to admit the scope of what they're doing."

Kissinger, a secretary of state under President Richard Nixon, also offered candid thoughts about Russian President Vladimir Putin, calling him a "character out of Dostoyevsky," referencing the Russian novelist who wrote "Crime and Punishment."

"He is a man with a great sense of connection, an inward connection, to Russian history as he sees it," Kissinger remarked of Putin, who intelligence sources have said gave direct approval for the recent hacks in the U.S. related to the 2016 presidential election.

"He is a cold calculator of the Russian national interest, as he conceives it, and which he believes, probably correctly, has some very unique features," Kissinger said.

"For him, the question of Russian identity is very crucial. Because as a result of the collapse of communism, Russia has lost about 300 years of its history," the former secretary of state continued.

"And so that the question of 'What is Russia?' looms very large in their mind. And that's a problem we have never had."

Kissinger, who declined to endorse either party's candidate in the general election, also commented on President-elect Donald Trump, giving a cautiously optimistic assessment of the businessman's potential on the international stage.

"Donald Trump is a phenomenon that foreign countries haven't seen. So it is a shocking experience to them that he came in to office," Kissinger said. But the president-elect, he acknowledged, presented "extraordinary opportunity" because of it.

"I believe he has the possibility of going down in history as a very considerable president," he continued. "Because every country now has two things to consider. One, their perception that the previous president, or the outgoing president, basically withdrew America from international politics, so that they had to make their own assessments of their necessities."

"And secondly, that here is a new president who's asking a lot of unfamiliar questions," he said. "And because of the combination of the partial vacuum and the new questions, one could imagine that something remarkable and new emerges out of it. I'm not saying it will. I'm saying it's an extraordinary opportunity."

Kissinger added that Mr. Trump's instincts -- which he said were a "different form of analysis as my more academic one" -- have led to him raising issues that were of great import.

"And if they're addressed properly, could lead to good - great results," Kissinger said.

Asked to weigh in with his general impression of the president-elect, Kissinger said at first he had believed the support for Mr. Trump was a "transitory phenomenon."

But, he said, "I give him huge credit for having analyzed an aspect of the American situation, develop a strategy, carry it out against his leadership of his own party, and prevailing. Now, his challenge is to apply that same skill to the international situation."

The Guardian (London)
GCHQ asked to step up action against cyber-attack threat to financial services
Monday, 19 December 2016
Byline: Jill Treanor

London - More action may be needed to protect the financial services industry from a devastating cyber-attack, the head of the Treasure select committee has suggested.

Andrew Tyrie MP wrote to Ciaran Martin, head of the new cybersecurity centre of UK surveillance agency GCHQ, saying the lines of responsibility and accountability for reducing cyber-threats are opaque.

Tyrie's letter to Martin, who is leading the Cheltenham-based National Cyber Security Centre (NCSC), uses last month's incident at Tesco Bank to illustrate the vulnerabilities of the financial system.

In November, the banking arm of supermarket chain Tesco admitted that £2.5m had been stolen from 9,000 accounts in an incident which raised fresh concerns about the methods used by financial services firms to detect cyber- attacks.

Two-thirds of all major UK companies - not just financial services firms - have reported security breaches in the last year. The Bank of England has also listed the threat of cyber-attacks as one of the major risks facing the financial services industry.

In his letter Tyrie, a Conservative MP, outlines the responsibility for cyber-threats as being shared between the Bank's Prudential Regulation Authority (PRA), the Financial Conduct Authority and GCHQ. In turn, the regulatory arms are responsible to the Treasury, while GCHQ reports through the foreign secretary.

In light of this, Tyrie said: "It is for consideration whether a single point of responsibility for cyber risk in the financial services sector, with full ownership of - and accountability for - financial cyber- threats is now required. It may be necessary to create a line of accountability to the Treasury for financial cybercrime."

Tyrie also asks Martin for clarity on the objectives of NCSC, which was set up two months ago to take charge of the UK's defences against cyber-offences.

"Legacy systems, human error and deliberate attack have resulted in unacceptable interruptions to vital banking services and weakened the public's confidence in the banking system as a whole. The recent attack on Tesco Bank is only the latest example of criminals exploiting vulnerabilities in the banking industry's IT systems," said Tyrie.

A spokesman for the NCSC said: "We have received this letter and there will be a government response in the New Year."

The parliamentary committee has been asking questions about the need for a clearer command structure to tackle cyber-attacks during its evidence sessions. Last week, Sam Woods, the Bank's deputy governor who runs PRA, was asked his views on the need for a single point of contact.

Woods replied it was important to know which body was in charge of each incident rather than have the same point of contact.

"It is essential that the intelligence community gives the regulators the technical and practical support they need to do their job. This means making sure that financial cybercrime has a high priority, and is not subordinate to other work," said Tyrie.

"Certainly, as millions of customers are exposed to the risks of cybercrime, a higher level of scrutiny and accountability for existing arrangements is needed," he added.

This Week (ABC)
DNC Chair Contradicts Obama: Russian Hackers Came After Us 'Until End of Election'
Sunday, 18 December 2016
Byline: Nicki Rossoll

Washington - Democratic National Committee Chair Donna Brazile said Russian hackers persisted in trying to break into the organization's computers "daily, hourly" until after the election -- contradicting President Obama's assertion that the hacking stopped in September after he warned Russian President Vladimir Putin to "cut it out."
"They came after us absolutely every day until the end of the election. They tried to hack into our system repeatedly," Brazile told ABC's Martha Raddatz in an exclusive interview on "This Week" Sunday.

Obama said at a press conference Friday that Russia's "tampering" with the U.S. election process stopped in early September after he spoke to Putin at an international conference.

"In early September when I saw president Putin in China, I felt that the most effective way to ensure that that didn't happen was to talk to him directly and tell him to cut it out, and there were going to be serious consequences if he didn't," Obama said. "In fact we did not see further tampering of the election process. But the leaks through Wikileaks had already occurred."

Brazile said she supports Obama's call for a thorough investigation of the hacking but she lamented the administration's failure to protect the party and its infrastructure.

"We were attacked by a foreign adversary, and I think it's the responsibility of the government to help individual citizens -- as well as institutions, nonprofits, corporations -- to protect us," she said.

While critical of President Obama, Brazile also slammed President-elect Donald Trump, accusing him of using information obtained in the hack to "sow division" during the campaign.

"The emails were weaponized," the Democratic chair said of the thousands of emails that were hacked from the DNC and Hillary Clinton campaign staff and then released publicly. "Donald Trump used this information in ways to also sow division. I was very disappointed in his repeated usage some of the stolen information. He used it as if he received daily talking points."

But Brazile refused to blame Russia's interference in the election for Democrats' loss.

"I'm not going to sugarcoat what happened on Election Day. We, the Democratic Party have a lot of things that we have to do. Donald Trump cracked the blue wall," she said, referring to the once reliably Democratic-voting states Michigan, Pennsylvania, and Wisconsin. "He cracked the blue wall. We had a blue wall; we should've maintained it."

Brazile, who took over as chair months after the cyberattacks had begun, also accepted that the DNC was partly responsible for the hack after leaving itself vulnerable to this kind of intrusion.

"There's no question; I took full responsibility ... I spent the entire month of July, all of August, apologizing because of the leaks," she said, while highlighting the "appropriate steps" the party took to prevent another attack afterwards.

She added that although she is outraged by the hacking, the country needs to look to the future to ensure it doesn't happen again.

"I'm still outraged by it," Brazile said. "But I want to make sure that this never happens again because this country deserves to have the kind of cybersecurity experts involved to make sure that our homeland is protected."

In particular, she sent a letter to Congress on Sunday on behalf of the DNC, asking for an independent, bipartisan commission to study the entire episode.

The Daily Beast
How to Really Punish Russia for Hacking
Saturday, 17 December 2016
Byline: James Lewis
Section: Analysis

Analysis: After much hand-wringing, the Obama administration admitted that the Russian government interfered with the presidential election. (It was not a 400-pound hacker, unless that hacker lives in Moscow.) It's true that people often question attribution, but the critics were wrong on Sony and they are wrong now. It was the Russians.
What the U.S. worries about when it comes to responding to cyberattacks, once attribution has been determined, is the risk of escalating conflict or damaging other important equities.

One reason for Obama's delay in addressing the hacking was a desire not to appear to be interfering in the election--which seemed like a safe calculation back when the White House thought Clinton was certain to win. There was also the pious hope--don't laugh--for a peace deal with Moscow on Syria.

The Obama administration's response options were ready in August. So why only act now? The most likely reason is domestic politics (and maybe a final realization of the futility of negotiating over Syria). The goal is to hem in the new administration on Russia. If President Obama imposes sanctions, President Trump will have to take action to lift them, complicating his relations with the Hill and the nominating process. This muddles what should be a straightforward story, since one essential lesson for cybersecurity is that unpunished acts are seen as a green light by an attacker.

The Russians calculated that they could manipulate the U.S. without punishment. So far, they have been right. They have succeeded beyond their greatest hopes. There is no reason for them to stop of their own accord and the likelihood of further Russian action is high if the U.S. does not take action in response.

On a secondary note, the Germans, French, and British have found that the Russians are doing to their upcoming elections what they did to ours. We need to do something to help our friends.

The administration is considering an "all tools of government" approach. The agencies involved are CIA, NSA, Cyber Command, Treasury, and the Department of Justice. The most likely public action will be to use the cybersecurity sanctions announced in April 2015, accompanied by some kind of covert response involving either interference with Russian attack servers or, perhaps, leaks of documents detailing Russian corruption.

Any response raises important issues. First, the U.S. and Russia agreed sever

al years ago to create a hotline for cybercrises and to consult before acting. Russian sources imply the U.S. has used neither. Any call would be pro- forma, as the Russians will deny everything, but it sets a bad precedent if we create a crisis management structure and then do not use it in the first test.

Second, the U.S. has struggled for a decade with how to respond to cyberattacks. If an attack produces an effect equivalent to a kinetic weapon, destroying physical infrastructure or harming American citizens, the nature of the response is clear. But when the attacks do not involve force (or its cyberequivalent) as is the case with espionage or the kind of information warfare the Russians are using now, how to respond is unclear.

There are several reasons for this. In discussing how to respond to Russia, people ask when we will unleash Cyber Command without noting that using Cyber Command for offensive action would likely be disproportional and counterproductive. We are not going to go to war with Russia over their blatant intrusions. The Russians know this and it gives them a kind of freedom. The only thing that has changed is that now, the Russians will want to avoid damaging their relationship with the incoming administration. That gives Obama room to be a little more aggressive, if he wants.

Third, international law and the Laws of Armed Conflict, which the U.S. tries to follow, define when force can be used in self-defense and require that it be proportional to the attack. International law and state practice do not define espionage, crime, or disinformation as actions that justify the use of force in response.

For example, some years ago a U.S. general threated that a cyberattack might provoke a cruise missile in response. This threat had no effect because it was not believable. A cruise missile is not proportional to most cyberattacks. Sending a cruise missile in response to a cyberattack risks the opponent sending a missile back. The threat was aimed at China, which ignored it and kept on spying. Faced with widespread PLA hacking, it took the U.S. a decade to define a realistic and proportional response, settling on indictment and the threat of sanctions.

Finally, the U.S. is constrained by its Constitution. The Russians clearly committed a crime when they stole private emails, and we may not like WikiLeaks publishing those emails, but the publication raises difficult First Amendment issues about freedom of speech and the right to publish, rights that protect WikiLeaks as well as The New York Times. The Russians know this complicates our decision-making and take advantage of it.

One question about a response to Russian hacking is how we will control the risk of escalation without being ineffective. Unplugging a few servers will not end Russian action, but unplugging many servers may lead to broader conflict. When facing an opponent who is nimbler in decision-making, less bound by law, and more willing to take risks, the chance of escalation is greater.

So retaliation probably means a lawful response not involving force and that does not unduly risk escalating the conflict. This response cannot be that old favorite of amateur cyberstrategists, name-and-shame. Vladimir Putin cannot be shamed. He believes his actions are justified against an aggressive U.S. that is implacably hostile to Russia. While some kind of counterattack by Cyber Command is tempting, any retaliation must have political effect, and in Russia, that means going after relationships and money.

It is important to lay down a marker with the Russians. They have gone too far and need to be checked. The U.S. needs to navigate a narrow and difficult path between inaction and escalation. We can start by recognizing that this is cyberconflict, not the kind of cyberconflict we planned for--no cyber Pearl Harbor or cyber 9/11--but a conflict nonetheless. Anything we do should reinforce (or at least not undercut) the long-term goal to create a framework of agreements for stability in cyberspace. The U.S. needs a new strategy for dealing with Russia and its new style of conflict that uses hybrid warfare, including a mix of cyberaction, threats, disinformation, and corruption. It is too late for this administration to define that new Russia strategy, but it can lay the groundwork for it with the actions it takes now. This sounds like a long list of requirements, but none of these are impossible or preclude action.

Russia's Hacks Followed Years of Paranoia Toward Hillary Clinton

Saturday, 17 December 2016
Byline: Max Fisher

Washington - Russia's unprecedented intervention in the United States election came amid more than United States-Russia tension and Donald J. Trump's praise of Vladimir V. Putin, the Russian president. It also coincided with a growing belief, in Moscow, that Russia faced an imminent threat in Hillary Clinton's candidacy.
Mrs. Clinton is viewed in Moscow as innately hostile to Russia. Widely held conspiracy theories portray her as seeking to foment unrest that will return Russia to the chaos and depression of the 1990s. Even many government technocrats view her with suspicion that at times verges on paranoia.

She referred to these views at an event on Thursday, telling donors that Mr. Putin's "personal beef" with her had driven Russia's intervention in the American election.

Mark Galeotti, a Russia expert at the Institute of International Relations, based in Prague, said the Kremlin was consumed by something more urgent than petty revenge: self-preservation.

"It's not just they didn't like Clinton, but they actually thought that she represented a threat," he said, describing Russia's actions as a matter of "policy, not pique."

No one factor can fully explain Russia's decision to hack and pass on Democratic emails, analysts say, and intelligence agencies appear divided on assessing Russian motives. But, in Moscow, fear of Mrs. Clinton has loomed as large or larger than any warmth for Mr. Trump.

Mr. Putin accused Mrs. Clinton of instigating protests against him in late 2011.

"She set the tone for some actors in our country and gave them a signal," he said, reflecting a widespread view in Moscow that Mrs. Clinton, then secretary of state, had sought to topple Russia's government.

Mr. Putin returned to the presidency a few months later, appearing to believe that the United States had engineered the Middle East's descent into chaos and was targeting his country to be next. He put Mrs. Clinton at the center of these plots.

Mrs. Clinton is indeed more hawkish than other Democrats, including toward Russia. In 2008, while a senator, she mocked President George W. Bush's claim that he had looked into Mr. Putin's soul.

"I could have told him -- he was a K.G.B. agent. By definition, he doesn't have a soul," Mrs. Clinton joked. The line is still remembered in Moscow.

But the Kremlin's views of Mrs. Clinton go beyond defining her as hawkish. They are also layered with a pre-existing Russian belief that promoting American democracy is a ploy to unseat unfriendly

governments, that the United States remains bent on Russia's destabilization or even destruction, and that there is an American hand behind nearly every Russian misfortune.

These suspicions go back decades. But, since Mrs. Clinton's tenure as secretary of state, popular telling has cast her as the culprit responsible for America's misdeeds and, therefore, Russia's setbacks.

In the summer of 2015, when Russian hacking groups first infiltrated Democratic National Committee servers, I happened to be reporting in Moscow. The American name on everyone's lips was not Mr. Trump's, who was already praising Mr. Putin, but rather Mrs. Clinton's.

Fyodor Lukyanov, a prominent Russian foreign policy commentator, told me at the time that there was a widespread view in his country's government that Mrs. Clinton, as president, would take "a very hostile approach" toward Russia.

Consensus in Moscow, Mr. Lukyanov said, was that "Hillary is the worst option of any president, maybe worse than any Republican."

It was conventional wisdom, he added, that Mrs. Clinton considered her husband's efforts to reform Russia in the 1990s an unfinished project, and that she would seek to finish it by encouraging grass-roots efforts that would culminate with regime change.

This summer, when Russian hacking groups began releasing Democratic emails through third parties such as WikiLeaks, many Americans suspected an effort to help Mr. Trump, who had promised to realign the United States with Russia.

But Mr. Galeotti, the Russian expert, said that, in all his time in Moscow, "I didn't speak to anyone who thought a Trump presidency was possible."

Rather, conversation there followed the same polls that dominated the discussion in America, and which all projected a landslide for Mrs. Clinton.

Even as Mr. Putin deemed Mr. Trump "colorful" and suggested they might get along, officials in Moscow "were absolutely working from the assumption that Clinton was going to get it," Mr. Galeotti said.

This belief may have informed Russia's actions during the campaign, which a number of analysts still suspect were aimed at weakening, rather then preventing, Mrs. Clinton's presumedly imminent presidency.

But if Moscow does gain an ally in Mr. Trump, it will lose a foil in Mrs. Clinton -- something that has been politically useful for Mr. Putin as his country's economy has sank and its isolation deepened.

New York Times
Obama Says He Told Putin: 'Cut It Out' on Hacking
Saturday, 17 December 2016
Byline: Mark Landler and David E Sanger

Washington - President Obama said for the first time on Friday that he had held back before Election Day from retaliating against Russia for meddling in the presidential race for fear of inciting further hacking "that could hamper vote counting." But he said he was weighing a mix of public and covert actions against the Russians in his last 34 days in office, actions that would increase "the costs for them." Mr. Obama said he was committed to sending the Kremlin a message that "we can do stuff to you," but without setting off an escalating cyberconflict.

"There have been folks out there who suggest somehow if we went out there and made big announcements and thumped our chests about a bunch of stuff, that somehow it would potentially spook the Russians," he said. "I think it doesn't read the thought process in Russia very well."

The president did not reveal what steps he was considering if he decided to retaliate against the Russians and suggested that some of the options, if they were carried out, could remain secret. "Some of it we will do in a way that they will know, but not everybody will," he said.

Mr. Obama made his comments at an annual end-of-year news conference, one tinged with melancholy at the impending end of his presidency, foreboding about the changes that could follow President-elect Donald J. Trump into office next month, and uneasiness about the role Russia played in the political earthquake that has resulted from his election.

The president spoke hours after Hillary Clinton, addressing campaign donors in New York, bluntly accused President Vladimir V. Putin of Russia of orchestrating the hacks against her campaign and the Democratic National Committee "to undermine our democracy," as part of a "personal beef against me."

Mr. Obama declined to place the blame for the hacking so squarely on Mr. Putin, though he noted, "Not much happens in Russia without Vladimir Putin." Mr. Obama also sought to diminish the specter of Russian influence over the American political process, saying Russia was a smaller, weaker country that "doesn't produce anything that anybody wants to buy, except oil and gas and arms."

Still, the president was clearly wrestling with what he said the hacking affair and the reaction to it revealed about the state of American politics. Citing a recent poll that showed more than a third of Trump voters saying they approved of Mr. Putin -- "Ronald Reagan would roll over in his grave," Mr. Obama said -- the president appealed to Americans not to allow partisan hatred and feuds to blind them to manipulation by foreign powers.

"Unless that changes," Mr. Obama said, "we're going to continue to be vulnerable to foreign influence because we've lost track of what it is that we're about and what we stand for."

Mr. Obama offered a long list of accomplishments that he said marked his eight years in office. But his victory lap has been attenuated by the messy aftermath of Mr. Trump's defeat of Mrs. Clinton, which has raised questions about Mr. Obama's pre-election response to the hacking, ignited a nasty squabble between Mr. Trump and the nation's intelligence agencies, and left a residue of suspicion over the vote itself.

The president continued to defend his cautious approach to reports of hacking -- an approach that has come under criticism from Democrats after it emerged last week that the intelligence agencies had concluded Russia was trying to help Mr. Trump win the election.

"We were playing this thing straight -- we weren't trying to advantage one side or the other," Mr. Obama said. "Imagine if we had done the opposite. It would have become one more political scrum."

The president, however, is likely to face further questions after his C.I.A. director, John O. Brennan, issued a statement Friday disputing reports of a rift between the intelligence agencies and the C.I.A. over Russia's motives in hacking the D.N.C. and handing over emails to WikiLeaks, which released them in the weeks leading up to the vote.

In his statement, first reported by The Washington Post, Mr. Brennan said he had met with the director of the F.B.I., James B. Comey, and the director of national intelligence, James R. Clapper, and "there is strong consensus among us on the scope, nature and intent of Russian interference in our presidential election."

That statement will also challenge Mr. Trump, who has seized on reports of an interagency squabble to undermine the credibility of the hacking findings. He has criticized the C.I.A. analysis, saying it was supplied by the same agency that provided erroneous intelligence about Saddam Hussein's weapons of mass destruction before the Iraq War.

Mr. Obama held out hope that when Mr. Trump takes office, he would take a more sober approach. He said he had had "cordial" conversations with his successor, and that Mr. Trump had listened to his suggestions about "maintaining the effectiveness, integrity, cohesion of our office, our various democratic institutions," though he was not specific.

The president also defended the F.B.I., which has come under fierce criticism from Mrs. Clinton and her aides because of Mr. Comey's 11th-hour announcement that the bureau was considering reopening its investigation of Mrs. Clinton's email, which she has said cost her the election.

Mrs. Clinton's remarks on Thursday underscored longstanding differences she has had with her former boss in how the United States should view Mr. Putin.

"This is not just an attack on me and my campaign," she told donors. "This is an attack against our country."

For his part, Mr. Obama also made a startling admission as he described how his administration had reacted to the Russian hack: He said it was not until the "beginning of the summer" that the White House was "alerted to the possibility that the D.N.C. has been hacked."

That was nine months after an F.B.I. agent had first contacted the Democratic National Committee with evidence that a major, government-linked hacking group was inside the committee's networks, raising the question of why it took so long for that news to reach the president.

Mr. Obama made it clear that he went out of his way to play down the news, because "in this hyperpartisan atmosphere" he did not think he or anyone else at the White House could talk about it without risking to appear to be acting on behalf of Mrs. Clinton.

But the unintended result, as some of Obama aides concede, was that the Russians faced very little resistance. Not until September, when Mr. Obama pulled Mr. Putin aside at a Group of 20 meeting in Hanghzhou, China, was the Russian leader given a warning directly from the United States. Mr. Obama said he told him "to cut it out, there were going to be serious consequences if he did not."

The president made it sound like that worked, saying "we did not see further tampering of the election process." But the leaks of D.N.C. emails, and those of John D. Podesta, the Clinton campaign manager, continued, because they were already in the hands of WikiLeaks, which doled them out to an eager news media until the last days of the campaign.

The Russian government's motives were hardly a mystery, Mr. Obama said, "because you guys wrote about it every day, every single leak about every little juicy piece of political gossip, including John Podesta's risotto recipe."

National Post
Digitally secure, but private
Thursday, 22 December 2016
Byline: Adam Belsher
Section: oped

Historically, liberal democratic societies have tried to balance security challenges and reconcile the limits on civil liberties required to maintain the peace. In the 1950s, in an effort to curb the growing number of drunk drivers, Canadians became subject to breath tests and subsequently random spot checks without a reasonable doubt of guilt.
Over 25 years ago, we accepted the collection of DNA samples of suspects in major crimes such as murder and rape. This personally intrusive investigative tool, which could be argued as self-incriminating, was deemed an acceptable limit on civil liberties, because it would lead to truths in some of the most horrendous crimes against humanity.

This debate has reemerged in the contemporary, digital age. However, the nuance seems to have been lost.

Police agencies, both in Canada and abroad, have looked for leadership from their governments since investigations into major crimes such as human-trafficking, terrorism, murder and the sexual abuse of children have been enabled by digital devices or the internet. The magnitude of the challenge was highlighted by the Royal Canadian Mounted Police's unprecedented looks into the challenges they face in securing Canadians in the digital age.

Law enforcement agencies largely have the legal framework they need to investigate digital devices that enable crimes. However, the increasing levels of encryption that now exist on commonly used smartphones and applications will render these authorities borderline toothless.

Here in Canada, privacy commissioners from around the country came together recently to caution lawmakers against legislating against encryption. Their argument is that any weakening of encryption would result in both risks to our civil liberties and unintended security challenges as we weaken the security architecture of commonly used platforms.

The civil liberties argument against providing police the powers to collect and share the private data of citizens is not misguided. Security agencies around the world were alleged to have violated civil liberties in the name of national security by former U.S. National Security Agency contractor, Edward Snowden. This has created a sense of distrust by citizens and frustration on the part of police and security agencies who are struggling to perform their societal role in the digital age.

The polarizing nature of this debate is not helpful as it leaves citizens trying to reconcile what is presented as an intractable dichotomy: They either accept that their civil liberties will be trampled in exchange for their security. Or they allow for what is presented as absolute guarantees of their privacy,

through modern technologies, while placing their security at risk, given the global and virtual nature of crime today.

The reality is that there is no absolute right to privacy in a liberal-democratic society. We cede portions of our civil liberties for our own protection and to uphold a common good.

We would not tolerate an individual building impenetrable physical walls around a home where it was known children were being sexually exploited. However, we are inadvertently doing this as we accept virtually impenetrable digital encryption on our smartphones and in social media we commonly use, and that are also used by those creating and disseminating child sexual abuse images and videos. This is an area of crime that has exploded both in Canada and around the world in the digital age.

This is not to suggest police agencies should expect citizens simply accept constant surveillance or backdoors to encryption. There is need for a reset on this debate, one which places a commitment to securing citizens in the context of our digital age and protecting civil liberties as equal pillars.

Technology itself is not to blame for the security and civil liberties challenges we face since many of online products we use were not purpose-built to secure vulnerable populations from internet-enabled crimes. Nor were the tools used by police agencies developed to respect civil liberties.

Technological innovation at its best enables the world we wish to build for ourselves and future generations. If we truly want our security and our civil liberties to be respected, we must call for a rethink of laws governing these issues and invest in the technologies that our law enforcement and security agencies require to reconcile this dichotomy.

Adam Belsher is CEO of Magnet Forensics, a Waterloo-based technology company that develops tools for law enforcement and national security agencies.

London Times
European ruling raises risk of terror, says ex-MI5 chief
Thursday, 22 December 2016
Byline: Sean O'Neill

London - Weakening surveillance laws in response to a European court ruling that they are excessive would leave Britain at greater risk of a terrorist attack, former spy chiefs have warned.
The Court of Justice of the European Union said yesterday that Britain's retention of bulk data on calls, emails and text messages for a year "exceeds the limits of what is strictly necessary and cannot be considered to be justified within a democratic society".

The case concerned emergency legislation from 2014 but the ruling opens the door to further challenges to the powers, and others contained in the new Investigatory Powers Act.

The Home Office said that it was disappointed by the ruling and would argue against it in the British courts. It is studying the implications but former intelligence chiefs and police leaders cautioned against any dilution of their ability to track and thwart terrorists and serious criminals.

Lord Evans of Weardale, the former head of MI5, said that the impact of the ruling on intelligence agencies may be limited because the EU has no remit over national security issues.

The ruling could, however, damage the police's ability to access communications data and hamper the work they do alongside MI5.

"Anything that impacts on their operational effectiveness would be a concern and could leave us more vulnerable to attacks such as those we have seen only too frequently in recent months elsewhere in Europe, including that in Berlin," Lord Evans said.

Sir David Omand, the former head of GCHQ, said that British data- retention powers were stronger than those available to our European allies. "My expectation is that we have a better picture of what is going on in the UK and the links between suspects and jihadists in Syria than the German authorities," he told BBC Radio 4.

David Davis, the secretary for exiting the European Union, was a party to the action against the so-called snooper's charter before withdrawing when he joined the cabinet.

The court ruled that mass retention of every citizen's communications data for access by the authorities was "likely to cause the persons concerned to feel that their private lives are the subject of constant surveillance". It added that the only justification for retaining data was "the objective of fighting serious crime" and that could not be made out when every electronic communication was logged and retained.

Security agencies said that communications data had been used in every MI5 anti-terrorism operation for the past decade and in 95 per cent of serious crime prosecutions.

Tom Watson, Labour's deputy leader and a party in the case, said the judgment showed it was "counterproductive to rush new laws through parliament without proper scrutiny".

Liberty, the human rights group, said the ruling "upholds the rights of ordinary British people". The case will return to the Court of Appeal.

Q&A

What exactly is communications data? The who, what, where, when, how -- but not the content -- of calls and electronic messages. Logs of when suspects were in contact with each other and for how long are core evidence in many criminal cases.

What are the rules? The government requires the data to be retained for 12 months so it can be accessed by police or spy agencies. In Germany data is retained for ten weeks.

Is everyone's data held? Yes. Opponents of the power say it means everyone is treated like a suspect. They want tighter rules on who can access the data and the reasons for accessing it.

If you haven't done anything wrong, why worry? Because the police have a habit of abusing these powers -- eg, hoovering up information from journalists' phones after leaks to the press.

What law was challenged? The arguments pertain to the Investigatory Powers Act, which recently received royal assent.

Brexit is coming, why do we care what Europe thinks? The government is anxious not to antagonise the EU before negotiations

What happens now? The Court of Appeal has asked the EU for clarification and the matter will return to the British courts for further arguments.

CBS News
Russian hacks into Ukraine power grids a sign of things to come for U.S.?
Thursday, 22 December 2016
Byline: Holly Williams

New York - Russian hacking to influence the election has dominated the news. But CBS News has also noticed a hacking attack that could be a future means to the U.S. Last weekend, parts of the Ukrainian capitol Kiev went dark. It appears Russia has figured out how to crash a power grid with a click. Last December, a similar attack occurred when nearly a quarter of a million people lost power in the Ivano-Frankivsk region of Ukraine when it was targeted by a suspected Russian attack.

Vasyl Pemchuk is the electric control center manager, and said that when hackers took over their computers, all his workers could do was film it with their cell phones.

"It was illogical and chaotic," he said. "It seemed like something in a Hollywood movie."

The hackers sent emails with infected attachments to power company employees, stealing their login credentials and then taking control of the grid's systems to cut the circuit breakers at nearly 60 substations.

The suspected motive for the attack is the war in eastern Ukraine, where Russian-backed separatists are fighting against Ukrainian government forces.

But hackers could launch a similar attack in the U.S.

"We can't just look at the Ukraine attack and go 'oh we're safe against that attack,'" said Rob Lee, a former cyberwarfare operations officer in the U.S. military, investigated the Ukraine attack.

"Even if we just lose a portion, right? If we have New York City or Washington D.C. go down for a day, two days, a week, what does life look like at that point?" he said.

He said that some U.S. electric utilities have weaker security than Ukraine, and the malicious software the hackers used has already been detected in the U.S.

"It's very concerning that these same actors using similar capabilities and tradecraft are preparing and are getting access to these business networks, getting access to portions of the power grid," he said.

In Ukraine, they restarted the power in just hours. But an attack in the U.S. could leave people without electricity for days, or even weeks, according to experts. Because, ironically, America's advanced, automated grid would be much harder to fix.

Washington Post
Cybersecurity firm finds evidence that Russian military unit was behind DNC hack
Thursday, 22 December 2016
Byline: Ellen Nakashima

Washington - A cybersecurity firm has uncovered strong proof of the tie between the group that hacked the Democratic National Committee and Russia's military intelligence arm -- the primary agency behind the Kremlin's interference in the 2016 election.
The firm CrowdStrike linked malware used in the DNC intrusion to malware used to hack and track an Android phone app used by the Ukrainian army in its battle against pro- Russia separatists in eastern Ukraine from late 2014 through 2016.

While CrowdStrike, which was hired by the DNC to investigate the intrusions and whose findings are described in a new report, had always suspected that one of the two hacker groups that struck the DNC was the GRU, Russia's military intelligence agency, it had only medium confidence.

Now, said CrowdStrike co-founder Dmitri Alperovitch, "we have high confidence" it was a unit of the GRU. CrowdStrike had dubbed that unit "Fancy Bear."

The FBI, which has been investigating Russia's hacks of political, government, academic and other organizations for several years, privately has concluded the same. But the bureau has not publicly drawn the link to the GRU.

CrowdStrike's fingering of the GRU helps to deepen the public's understanding of how different arms of the Russian government are carrying out malicious and deeply troubling cyber acts in the United States. The director of national intelligence and the homeland security secretary in October publicly blamed the Russian government for interfering in the U.S. election, including through hacks of political organizations and targeting of state election systems.

After the election, the CIA and other intelligence agencies concluded that one of Russia's aims was to help President-elect Donald Trump win the election through a campaign of "active measures" or influence operations that included the hacking and dumping of emails onto public websites.

The GRU, evidently, was key to this operation.

"The GRU is used for both tactical intelligence collection in the battlefield in support of Russian military operations and also strategic active measures or psychological warfare overseas," said Alperovitch, who is an expert on Russia and a senior fellow at the Atlantic Council. "The fact that they would be tracking and helping the Russian military kill Ukrainian army personnel in eastern Ukraine and also intervening in the U.S. election is quite chilling."

CrowdStrike found that a variant of the Fancy Bear malware that was used to penetrate the DNC's network in April 2016 was also used to hack an Android app developed by the Ukrainian army to help artillery troops more efficiently train their antiquated howitzers on targets.

The Ukrainian army's D-30 towed howitzers, which date to the Soviet era, typically take a number of minutes to position based on hand-drawn targeting data. With the Android app, positioning takes 15 seconds, CrowdStrike found.

The Fancy Bear crew evidently hacked the app, allowing the GRU to use the phone's GPS coordinates to track the Ukrainian troops' position. In that way, the Russian military could then target the Ukrainian army with artillery and other weaponry.

Ukrainian brigades operating in eastern Ukraine were on the front lines of the conflict with Russian-backed separatist forces during the early stages of the conflict in late 2014, CrowdStrike noted. By late 2014, Russian forces in the region numbered about 10,000. The Android app was useful in helping the Russian troops locate Ukrainian artillery positions.

According to the International Institute for Strategic Studies, Ukrainian artillery forces lost more than 50 percent of their weapons in the two years of conflict and more than 80 percent of their D-30 howitzers, the highest percentage of loss of any artillery piece in their arsenal, the report stated.

The app was not available in the Android app store and was distributed only through the social media page of its developer, who is a Ukrainian artillery officer, Yaroslav Sherstuk, according to CrowdStrike. It could be activated only after the developer was contacted and a code was sent to the individual downloading the application.

The other group that hacked the DNC also works for Russian intelligence, CrowdStrike reported earlier this year. But the firm is not sure if it is the more internally focused FSB, or the foreign intelligence arm, the SVR. Both grew out of the KGB.

That group, which CrowdStrike has called Cozy Bear, has not apparently been deployed in the influence operation, Alperovitch said. Rather, it is focused on traditional espionage. It is the group that is believed to have hacked unclassified networks of the State Department, White House and the Joint Chiefs of Staff.

Reuters
Yahoo email scan shows U.S. spy push to recast constitutional privacy
Wednesday, 21 December 2016
Byline: Joseph Menn

San Francisco - Yahoo Inc's secret scanning of customer emails at the behest of a U.S. spy agency is part of a growing push by officials to loosen constitutional protections Americans have against arbitrary governmental searches, according to legal documents and people briefed on closed court hearings.
The order on Yahoo from the secret Foreign Intelligence Surveillance Court (FISC) last year resulted from the government's drive to change decades of interpretation of the U.S. Constitution's Fourth Amendment right of people to be secure against "unreasonable searches and seizures," intelligence officials and others familiar with the strategy told Reuters.

The unifying idea, they said, is to move the focus of U.S. courts away from what makes something a distinct search and toward what is "reasonable" overall.

The basis of the argument for change is that people are making much more digital data available about themselves to businesses, and that data can contain clues that would lead to authorities disrupting attacks in the United States or on U.S. interests abroad.

While it might technically count as a search if an automated program trawls through all the data, the thinking goes, there is no unreasonable harm unless a human being looks at the result of that search and orders more intrusive measures or an arrest, which even then could be reasonable.

Civil liberties groups and some other legal experts said the attempt to expand the ability of law enforcement agencies and intelligence services to sift through vast amounts of online data, in some

cases without a court order, was in conflict with the Fourth Amendment because many innocent messages are included in the initial sweep.

"A lot of it is unrecognizable from a Fourth Amendment perspective," said Orin Kerr, a former federal prosecutor and Georgetown University Law School expert on surveillance. "It's not where the traditional Fourth Amendment law is."

But the general counsel of the Office of the Director of National Intelligence (ODNI), Robert Litt, said in an interview with Reuters on Tuesday that the legal interpretation needed to be adjusted because of technological changes.

"Computerized scanning of communications in the same way that your email service provider scans looking for viruses - that should not be considered a search requiring a warrant for Fourth Amendment purposes," said Litt. He said he is leaving his post on Dec. 31 as the end of President Barack Obama's administration nears.

DIGITAL SIGNATURE

Reuters was unable to determine what data, if any, was handed over by Yahoo after its live email search. The search was first reported by Reuters on Oct. 4. Yahoo and the National Security Agency (NSA) declined to explain the basis for the order.

The surveillance court, whose members are appointed by U.S. Supreme Court Chief Justice John Roberts, oversees and approves the domestic pursuit of intelligence about foreign powers. While details of the Yahoo search are classified, people familiar with the matter have told Reuters it was aimed at isolating a digital signature for a single person or small team working for a foreign government frequently at odds with America.

The ODNI is expected to disclose as soon as next month an estimated number of Americans whose electronic communications have been caught up in online surveillance programs intended for foreigners, U.S. lawmakers said.

The ODNI's expected disclosure is unlikely to cover such orders as the one to Yahoo but would encompass those under a different surveillance authority called section 702. That section allows the operation of two internet search programs, Prism and "upstream" collection, that were revealed by former NSA contractor Edward Snowden more than three years ago. Prism gathers the messaging data of targets from Alphabet Inc's Google, Facebook, Microsoft, Apple among others.

Upstream surveillance allows the NSA to copy web traffic to search data for certain terms called "selectors," such as email addresses, that are contained in the body of messages. ODNI's Litt said ordinary words are not used as selectors.

The Fourth Amendment applies to the search and seizure of electronic devices as much as ordinary papers. Wiretaps and other surveillance in the internet age are now subject to litigation across the United States. But in the FISC, with rare exceptions, the judges hear only from the executive branch.

Their rulings have been appealed only three times, each time going to a review board. Only the government is permitted to appeal from there, and so far it has never felt the need.

PUBLIC LEGAL CHALLENGES

The FISC's reasoning, though, is heading into public courts. The 9th U.S. Circuit Court of Appeals on Dec. 5 cited FISC precedents in rejecting an appeal of an Oregon man who was convicted of plotting to bomb a Christmas tree lighting ceremony after his emails were collected in another investigation.

Groups such as the American Civil Liberties Union and the Electronic Frontier Foundation are fighting the expansion of legalized surveillance in Congress and in courts.

On Dec. 8, the ACLU argued in the 4th U.S. Circuit Court of Appeals that a lawsuit by Wikipedia's parent group against the NSA should not have been dismissed by a lower court, which ruled that the nonprofit could not show it had been snooped on and that the government could keep details of the program secret.

The concerns of civil libertarians and others have been heightened by President-elect Donald Trump's nomination of conservative Representative Mike Pompeo of Kansas to be director of the CIA. Pompeo, writing in the Wall Street Journal in January, advocated expanding bulk collection of telephone calling records in pursuit of Islamic State and its sympathizers who could plan attacks on Americans. Pompeo said the records could be combined with "publicly available financial and lifestyle information into a comprehensive, searchable database."

Yahoo's search went far beyond what would be required to monitor a single email account. The company agreed to create and then conceal a special program on its email servers that would check all correspondence for a specific string of bits.

Trawling for selectors is known as "about" searching, when content is collected because it is about something of interest rather than because it was sent or received by an established target. It is frequently used by the NSA in its bulk upstream collection of international telecom traffic.

The Privacy and Civil Liberties Oversight Board, an appointed panel established by Congress as part of its post-9/11 expansion of intelligence authority, reported in 2014 that "about" searches "push the program close to the line of constitutional reasonableness."

A glimpse of the new legal arguments came in a FISC proceeding last year held to review NSA and FBI annual surveillance targets and four sets of procedures for limiting the spread of information about Americans.

Judge Thomas Hogan appointed Amy Jeffress, an attorney at Arnold and Porter and a former national security prosecutor, to weigh in, the first time that court had asked an outside privacy expert for advice before making a decision.

Jeffress argued each search aimed at an American should be tested against the Fourth Amendment, while prosecutors said that only overall searching practice had to be evaluated for "reasonableness." Hogan agreed with the government, ruling that even though the Fourth Amendment was all but waived in the initial data gathering because foreigners were the targets, the voluminous data incidentally gathered on Americans could also be used to investigate drug deals or robberies.

"While they are targeting foreign intelligence information, they are collecting broader information, and there needs to be strong protections for how that information is used apart from national security," Jeffress told Reuters.

ODNI's Litt wrote in a February Yale Law Review article that the new approach was appropriate, in part because so much personal data is willingly shared by consumers with technology companies. Litt advocated for courts to evaluate "reasonableness" by looking at the entirety of the government's activity, including the degree of transparency.

Litt told Reuters that he did not mean, however, that the same techniques in "about" searches should be pushed toward the more targeted searches at email providers such as Yahoo.

Although speaking generally, he said: "My own personal approach to this is you should trade off broader collection authority for stricter use authority," so that more is taken in but less is acted upon.

This position strikes some academics and participants in the process as a remarkable departure from what the highest legal authority in the land was thinking just two years ago.

That was when the Supreme Court's Roberts wrote for a majority in declaring that mobile phones usually could not be searched without warrants.

After prosecutors said they had protocols in place to protect phone privacy, Roberts wrote: "Probably a good idea, but the Founders did not fight a revolution to gain the right to government agency protocols."

With little evidence that the Supreme Court agrees with the surveillance court, it remains possible it would reverse the trend. But a case would first need to make its way up there.

China rights website founder held over 'state secrets': Amnesty
Thursday, 22 December 2016
Byline: Staff reporter

Beijing - The founder of one of China's few websites dedicated to reporting human rights abuses has been formally arrested for "leaking state secrets", Amnesty International said Thursday -- the latest blow in a broad crackdown on activists.
Huang Qi ran the website "64 Tianwang", named in part after the bloody June 4, 1989 crackdown on Tiananmen Square protestors, for nearly two decades.

Its headlines -- "Village Officials Stab Campaigner", "Gangsters Detain Protestor" -- are rarely seen in ordinary Chinese media, and the content is blocked on the mainland.

The site was awarded the Reporters Without Borders (RSF)-TV5 Monde Press Freedom Prize in early November. Twelve years ago, he received RSF's "Cyber-Dissident Prize."

Just weeks after receiving the most recent prize, Huang was detained by police in his hometown of Chengdu, the capital of the southwestern province of Sichuan, according to Amnesty -- his third detention this year.

Last Friday, his family received official notice that he had been formally arrested for leaking state secrets to overseas entities, the campaign group said.

It remained unclear whether he had access to a lawyer, Amnesty China researcher Patrick Poon told AFP, stating that Huang was "at risk of torture and other mistreatment".

"He may have been targeted because of the international attention he and his website received" from the RSF prize, Poon said.

Huang's arrest might also be intended as a warning to websites chronicling grassroots activism in advance of a controversial new law set to impose restrictions on foreign NGOs operating in China, which will come into force in January.

The law gives police wide-ranging powers over overseas charities and bans them from recruiting members or raising funds in the country.

"I'm quite worried that the government is trying to send a signal to organisations that they believe to have foreign links," said Poon, noting that authorities had detained Liu Feiyue, founder of the Civil Rights and Livelihood Watch website, around the same time as Huang.

President Xi Jinping has overseen a wide-ranging clampdown on civil society since assuming power in 2012.

But Huang's struggles to continue his work date even further back.

In 2000 he was jailed for five years, the first ever Chinese "cyber-dissident" to be imprisoned for online activism.

He was imprisoned again for a further three years in 2009 for reporting on low-quality school buildings that collapsed in a massive earthquake the previous year in Sichuan which claimed 87,000 lives.

He had been physically abused while in jail, Huang told AFP during an interview last year, but stated that he nevertheless felt that authorities now appreciated his coverage, as the exposure of injustices committed by local officials dovetailed with an anti-corruption campaign also launched under Xi.

"The top levels of government no longer think of me as a threat," he said at the time. "They even see me as useful, because I expose a lot of cases which they don't know about."

Jerusalem Post
Government likely to okay bill to ban terrorism content from Internet
Thursday, 22 December 2016
Byline: Yonah Jeremy Bob

Jerusalem - Justice Minister Ayelet Shaked and Public Security Minister Gilad Erdan announced on Wednesday that they expect their much- anticipated bill for removing terrorism content from the Internet and social media to be approved by the government on Sunday.
The bill would empower courts to order social media providers such as Facebook, Google, YouTube and Twitter to remove content which is, in itself, criminal and constitutes a danger to personal, public or state security.

Shaked said that the effect of such posts "going viral, where what one person types in one place creates a genuine storm which can even lead to killings in another place, without any measure of control or law enforcement capability, is grossly unreasonable and must end."

Erdan added: "Despite the incitement leading to terrorism, Facebook and social media companies do not respond to all of the complaints by police for removal of posts of incitement." The bill would give vast powers to the state that it currently lacks in standard proceedings.

That could allow it to seek court orders for removal of content without notifying the social media platform, introduce classified evidence, or bring evidence which would not normally be admissible.

In justifying these unusual powers, the ministers have emphasized the uniqueness of the problem and that content removal is not a criminal proceeding, in which removing standard defenses is a more serious action that can end with a jail sentence.

Additionally, if someone is convicted of a crime for such a post, the conditions for its removal can be assumed to have been proven. On June 22, the ministers had instructed their respective ministries and the police to draft the legislation.

The expected principles of the bill were advertised on June 22. They would start with the state issuing a warning letter to the Internet domain name and social media providers which indirectly host or have the ability as site administrators to remove the content. If the providers remove the terrorist content there would be no further action.

If they did not remove the content, the bill would allow the state to request the courts to order the providers to do so. However, Wednesday's announcement was unclear as to whether threat letters would be issued in all cases or whether some would go straight to court.

Wednesday's announcement also did not clarify if the sanctions against providers that ignore the court order would include criminal sanctions, a point which the bill's promoters have treated inconsistently.

The bill moved forward as ministers made aggressive statements, despite Shaked's September 21 announcement that Facebook removed 95% of 158 inciting posts and YouTube, owned by Google, removed 80% of 13 videos at the government's request.

"These are impressive numbers; however, we understand that there is too much online incitement, and we must continue to increase our efforts," Shaked said at the International Institute for Counter-Terrorism's World Summit at the Interdisciplinary Center in Herzliya in September.

Various petitions to courts in the past to remove content that could cause incitement have often failed because of free speech concerns, such as a 2012 petition by then- MK Taleb a-Sana to order Google to remove a YouTube video disgracing the prophet Muhammad.

The bill would carve out an exception to free speech concerns for incitement to terrorism as has been done in recent years in other criminal areas, such as child pornography.

Times of Israel
US-Israel cybersecurity collaboration act signed into law
Thursday, 22 December 2016

Byline: Staff Report

Jerusalem - US President Barack Obama on Friday enacted legislation to strengthen collaborative cybersecurity research and development efforts between the United States and Israel, one of the congressman involved in drafting the bill said Monday.
The US-Israel Advanced Research Partnership Act of 2016, which had bipartisan support, will expand existing joint research and create a grant for new development.

Reps. John Ratcliffe, R-Texas, and Jim Langevin, D-R.I., introduced the measure after returning from a congressional trip to Israel in July that focused on addressing cybersecurity issues facing both countries, Ratcliffe's office said in the statement issued Monday. Ratcliffe is chairman of the House Homeland Security subcommittee on cybersecurity, infrastructure protection and security technologies.

Langevin in a statement said cybersecurity is "the national and economic security challenge of our time, and we must use every resource at our disposal to support research, foster innovation, and fortify our cyber defenses. This must include a collaborative approach that allows us to work with our leading partners, like Israel, to develop new technologies for our cyber incident responders."

The lawmakers said their meetings with top Israeli officials, including Prime Minister Benjamin Netanyahu and then-defense minister Moshe Yaalon, laid a critical foundation for their US-Israel cybersecurity legislation.

"Our discussions with Israeli national security and cybersecurity leaders revealed the immense wealth of untapped potential we can leverage together to collectively vamp up our efforts to combat growing cyber threats," Ratcliffe said in the statement. "We are extremely grateful for the opportunity to work more closely with a country that's a proven pioneer in cyber science and a top leader in cyber expertise."

La Croix
En Grande-Bretagne, une législation très poussée sur la surveillance
Thursday, 22 December 2016
Byline: Tristan de Bourbon

Londres - Pour lutter contre la menace terroriste, Theresa May, alors ministre de l'intérieur, avait fait voter une législation très dure pour permettre la collecte de données. Mais la Cour européenne de justice a considéré, hier, que cette loi n'était pas justifiée.
Le gouvernement britannique s'est doté, à l'été 2014, de l'une des législations sur la surveillance les plus poussées au monde. Au point que, mercredi, la Cour européenne de justice a estimé qu'elle « excède les limites du strict nécessaire et ne saurait être considérée comme étant justifiée dans une société démocratique » . Concrètement, la loi permet aux autorités de récupérer en masse les données liées aux communications Internet et téléphoniques des Britanniques. Elle impose également aux opérateurs de

téléphonie et aux fournisseurs d'accès Internet de garder les historiques de tous leurs utilisateurs pendant douze mois. Devenue première ministre, Theresa May justifie en effet aujourd'hui la collecte de données par « la menace terroriste » et le « crime organisé » .

Mais les juges luxembourgeois ont estimé que ces pouvoirs n'étaient pas assez restreints, car ils ne se limitent pas à « une période donnée et/ou une zone géographique et/ou un cercle de personnes susceptibles d'être mêlées à une infraction grave » .

Bien qu'ayant exprimé « sa déception » , le gouvernement britannique ne peut être surpris. Le 17 juillet 2015, la Haute Cour de justice britannique avait déjà donné raison aux plaignants, deux députés de la Chambre des communes opposés à la législation. Le gouvernement avait immédiatement fait appel de cette décision. Les juges de la cour d'appel britannique avaient alors demandé l'éclairage de la Cour européenne de justice.

Comme l'explique Pamela Cowburn, l'une des responsables de l'organisation non gouvernementale Open Rights, « je comprends très bien le besoin de surveiller les utilisateurs à risque de terrorisme. Mais cette loi permet (aux autorités) d'écouter tout le monde. Les autorités ont même admis que l'immense majorité des gens suivis sont innocents de tout crime » .

Elle indique que, si la plupart des citoyens lambda pensent ne pas être concernés car ils n'ont rien à cacher, cette surveillance « met fin au secret professionnel des journalistes et des avocats. Par ailleurs, n'importe quel manifestant, même quand il respecte la loi, pourra être suivi par les autorités. C'est la loi la plus intrusive au monde » .

Est critiqué notamment le fait que pas moins de 48 entités gouvernementales sont autorisées à accéder aux métadonnées des internautes. Quel rôle peuvent bien jouer, dans la lutte contre le terrorisme, le ministère de la santé, celui du travail et des retraites, le service des impôts, l'administration chargée de la supervision de la qualité de l'alimentation, etc.?

Pamela Cowburn réfute également l'argument du gouvernement affirmant que lui retirer sa capacité de surveillance le rendrait incapable de lutter contre le terrorisme. « Les attentats belges et parisiens ont prouvé que les services secrets et la police connaissaient les terroristes mais qu'ils n'avaient pas les moyens humains et financiers de les suivre et d'analyser les données les concernant » , rappelle l'activiste. « Cette loi ne fera qu'accentuer le problème: les autorités disposeront d'encore plus de données et pourront donc encore moins cibler efficacement leurs suspects. »

Radio-Canada - Télévision - Ottawa
Des dizaines d'agents de la GRC ont fouillé dans la vie privée de Canadiens sans permission
Thursday, 22 December 2016
Byline: Guillaume Dumont et Valérie Ouellet

Ottawa - Des documents obtenus par Radio-Canada révèlent que des dizaines d'agents de la Gendarmerie royale du Canada (GRC) se sont servis de bases de données policières pour chercher des informations sur la vie privée de Canadiens sans autorisation.
Selon des documents obtenus grâce à la Loi sur l'accès à l'information, de 2010 à 2015, 62 agents de la GRC se seraient servis sans permission de bases de données policières pour fouiller dans la vie privée de proches ou de citoyens.

Selon notre analyse des plaintes portées contre ces agents, 33 d'entre eux ont été blâmés pour avoir utilisé des renseignements confidentiels à des fins personnelles. Notons par exemple le cas d'un agent du Manitoba reconnu responsable d'avoir cherché sans autorisation le numéro d'une plaque d'immatriculation dans la base de données du Centre d'information de la police canadienne (CIPC).

D'autres cas sont beaucoup plus inquiétants : en 2012, un agent a été reconnu responsable d'avoir recueilli de l'information sans autorisation d'une base de données de la GRC, en plus d'avoir entretenu des liens avec un criminel connu. Sa sanction? Une simple réprimande informelle.

Une plainte déposée en février 2015 accuse un agent de s'être servi d'une base de données de façon inappropriée, d'avoir envoyé des photos à caractère sexuel à un mineur et d'avoir utilisé sa position en tant que policier pour entretenir une relation avec cette personne.

L'information ne précise pas quelle sanction a été appliquée et la GRC a refusé de nous dévoiler plus de détails sur cette plainte sans une autre demande d'accès à l'information.

Plusieurs plaintes considérées comme fondées par la GRC précisent que les renseignements confidentiels ont été transmis à un tiers parti. Dans d'autres cas, la plainte inclut aussi des allégations de harcèlement ou d'intimidation.

Dans la majorité des cas identifiés, les agents reconnus responsables d'avoir « mal utilisé » ou de « s'être servis à des fins personnelles » de ces bases de données policières n'ont reçu qu'une simple réprimande, parfois accompagnée d'une formation ou d'une séance de thérapie.

L'une des punitions les plus sévères est une suspension de dix jours sans salaire, en 2014, dans le cas d'un agent qui a utilisé une base de données liée à une opération d'infiltration.

Une seule plainte fondée s'est soldée par un renvoi, en lien avec des recherches faites par un policier de la Saskatchewan en 2011.

« Un manquement à l'éthique flagrant et important », selon un éthicien

Le NPD veut des actions concrètes du gouvernement fédéral pour éviter que des gestes répréhensibles commis par des agents de la GRC restent impunis.

Une casquette de la Gendarmerie royale du Canada (archives). Photo : Radio-Canada

Selon le sénateur et ancien commissaire adjoint de la GRC, Vernon White, ces recherches sont très graves.

Personne ne devrait avoir la possibilité d'accéder à cette information privée à propos d'autres personnes, à moins que ce soit pour le travail.

Vernon White, sénateur et ex-commissaire adjoint de la GRC

« Quand nous faisons notre travail de policier, nous sommes dans une position très avantageuse où nous avons accès à de l'information que personne ne possède », souligne-t-il. « Mais c'est une relation fragile. »

L'éthicien René Villemure, président d'Éthikos, va encore plus loin, affirmant que ces recherches peuvent entacher tout le processus judiciaire si les policiers perdent la confiance du public.

« Si dans le cadre d'une enquête, on me demande de dire certaines choses et que je ne parle pas parce que j'ai peur que l'information se retrouve ailleurs, la police ne pourra pas faire son travail », soutient-il.

À son avis, les corps policiers ont tendance à banaliser ces recherches à des fins personnelles, alors qu'elles démontrent « un manquement à l'éthique flagrant et important ».

Alors que de plus en plus de données confidentielles sont colligées et partagées dans des bases de données du genre, René Villemure croit qu'il est essentiel que la GRC révise la gravité des sanctions octroyées pour ces fautes qui « passent inaperçues, ou presque ».

« Il y a 20 ans, la base de données avait des informations comme des numéros de téléphone seulement. Maintenant, il y a des éléments de preuve, des dossiers qui peuvent vraiment intéresser les criminels », ajoute M. Villemure.

Nous avons tenté à plusieurs reprises, mais sans succès, d'obtenir une entrevue avec la GRC et davantage de détails sur les plaintes fondées qui n'ont mené à aucune sanction.

Dans un courriel, une porte-parole de la GRC affirme que « la GRC prend très au sérieux les contraventions au code de déontologie, et elle s'emploie résolument à gérer les affaires disciplinaires

avec diligence, efficacité et équité ». Elle ajoute que les employés de la GRC « doivent se comporter de façon non seulement à satisfaire, mais à dépasser les attentes élevées et justifiées des Canadiens. »

Quels renseignements détient la GRC?

Centre d'information de la police canadienne (CIPC) : 10 millions de dossiers traités chaque année incluant des casiers judiciaires, des permis de conduire, des plaques d'immatriculation, des véhicules volés, des mandats d'arrêt et des armes à feu enregistrées.

Système d'incidents et de rapports de police de la GRC (SIRP ou PROS en anglais) : 1,6 million de dossiers traités chaque année par 24 corps policiers, incluant les contacts de victimes, suspects, témoins ou contrevenants qui ont été en contact avec des policiers.

PRIME-BC : Créée après l'enquête gouvernementale sur l'affaire Paul Bernardo, cette base de données permet aux policiers de la Colombie- Britannique de coordonner les enquêtes majeures et multijuridictionnelles sur les prédateurs en série avec d'autres forces policières.

« Une situation très préoccupante » pour le NPD

Le porte-parole du NPD en matière de Sécurité publique, Mathieu Dubé, affirme que la situation est préoccupante.

« Les informations confidentielles de la GRC doivent être gérées avec le plus de précautions possible », affirme-t-il.

Ce genre de comportements d'agents qui accèdent à de l'information privilégiée sans raison valable nous inquiète et j'espère que le ministre va faire enquête.

Mathieu Dubé, porte-parole du NPD en matière de Sécurité publique

Plusieurs experts à qui nous avons parlé ont souligné que de nombreux garde-fous sont déjà en place pour limiter et surveiller l'accès à des bases de données hautement confidentielles, comme celles utilisées par la GRC. Par exemple, tous les agents doivent se connecter au système avec un identifiant unique, ce qui permet à la GRC de surveiller la nature et la pertinence de leurs recherches.

Le sénateur Vernon White ajoute que la GRC prend maintenant au sérieux l'accès aux bases de données policières sans autorisation, « mais ce ne l'était pas il y a 15 ans ».

Dans un courriel, le Commissariat à la protection de la vie privée du Canada souligne quant à lui que la GRC a mis en place la vaste majorité des recommandations suggérées par le commissaire en 2011.

Son rapport avait dénoncé un « manque de surveillance » de la GRC vis-à-vis des recherches des policiers sur ses bases de données et le fait que la GRC « ne pouvait pas prouver » que les renseignements personnels étaient toujours utilisés en conformité avec ses politiques dans tous les corps policiers avec lesquels elle partageait ses accès.

En 2015-2016, le Commissariat à la protection de la vie privée du Canada a reçu 107 plaintes contre la GRC, incluant 12 alléguant une atteinte à la vie privée.

Selon nos chiffres, le nombre de plaintes fondées en lien avec l'usage inapproprié de bases de données policières n'a toutefois pas baissé depuis 2011.

Quelles conséquences dans d'autres corps policiers au Canada ?

2016 - Une policière de Gatineau perd son emploi après avoir consulté à six reprises des bases de données policières sans raison apparente.

2012 - Une femme dépose une plainte au Commissaire à la protection de la vie privée du Canada alléguant que deux propriétaires d'appartements, membres de la GRC, ont vérifié ses antécédents criminels dans une base de données policière sans sa permission. Une enquête prouvera que la plainte est fondée.

2011 - Un policier de Windsor est renvoyé après avoir, entre autres, fait des recherches dans la base de données CIPC sur ses partenaires d'affaires et des compétiteurs de restaurants dans lesquels il avait investi.

2005 - Un avocat qui défend les droits de détenus accuse dix agents de la police d'Edmonton d'avoir cherché son nom à 16 reprises dans une base de données de la GRC sans raison valable.

1995 - Un policier de Delta, en Colombie- Britannique, comparaît en cour après avoir cherché les plaques d'immatriculation de véhicules stationnés devant une clinique d'avortement.

Tous les accès aux sites de la Grande Allée sécurisés le 31 décembre
Friday, 23 December 2016
Byline: Annie Morin

Québec - Tous les accès au site des festivités du 31 décembre sur la Grande Allée seront sécurisés pour éviter qu'un camion puisse pénétrer, a annoncé jeudi le maire Régis Labeaume.
«Du cours du Général-De Montcalm jusqu'au parlement, toutes les rues transversales seront - entre guillemets - sécurisées et bloquées», a expliqué en après-midi le maire de Québec en marge d'une

activité avec des réfugiés. Il n'a pas voulu préciser la forme et le volume des obstacles qui seront ajoutés. Il s'agit généralement de blocs de béton. Des policiers seront également postés aux entrées.

«Un camion normalement ne devrait pas entrer sur le site», a souligné M. Labeaume. La référence à Berlin est directe. Lundi, un terroriste a projeté un camion-remorque sur la foule d'un marché de Noël, tuant 12 personnes et faisant des dizaines de blessés dans la capitale de l'Allemagne.

Mercredi, la mairie a tenu une séance de travail avec des représentants de la police, de la direction générale ainsi que les organisateurs de la fête du 31 décembre sur le thème de la sécurité. «Évidemment, ce n'est pas nouveau. Ce sont des mesures de sécurité qui étaient envisagées depuis longtemps», a tempéré M. Labeaume. «Je le dis parce qu'il y a des gens qui avaient une certaine inquiétude, mais tout a été fait, vraiment tout a été fait» pour que le public soit bien protégé, a-t-il insisté, assurant que la circulation piétonne demeurerait fluide.

Le maire n'est pas en mesure de dire combien il en coûtera pour toutes les mesures de sécurité : «On verra ça après. On investit l'argent qu'il faut pour sécuriser le site.»

Du côté de la police de Québec, le porte-parole n'a ni confirmé ni infirmé les informations. «On ne veut pas dévoiler nos stratégies, justement pour des raisons de sécurité», a souligné David Poitras. Selon le policier, les mesures sont «les mêmes que pour les autres grands événements». «Ce n'est pas une réaction à Berlin», a-t-il déclaré jeudi.

Agence QMI
Bases de données La GRC a fouillé dans la vie privée de Canadiens
Friday, 23 December 2016
Byline: Journaliste maison

Ottawa - Une soixantaine d'agents de la Gendarmerie royale du Canada (GRC) ont fouiné dans la vie privée de Canadiens sans autorisation entre 2010 et 2015, a révélé Radio-Canada hier matin.
En tout, 62 policiers auraient fouillé dans des bases de données policières pour y obtenir des informations sur des proches ou des citoyens. Un agent aurait notamment recherché un numéro de plaque d'immatriculation, tandis qu'un autre aurait recueilli des informations et entretenu des liens avec un criminel. Plus de la moitié des plaintes formulées, soit 34, ont été jugé fondées. Des renseignements formels ont notamment été transmis à des tiers partis.

Le Point
Services secrets français - NSA contre DGSE, petites écoutes entre amis
Thursday, 22 December 2016
Byline: Jean Guisnel

Paris - L'espionnage informatique est l'arme fatale de prédilection du renseignement, et, au sein de la DGSE, les Français ne sont pas en reste.
Nous sommes en juin 2012. Edward Snowden est pour une année encore l'un de ces bons petits soldats de l'ombre, tapi dans une base secrète de la NSA à Hawaï. À Paris, Nicolas Sarkozy termine son mandat, quand le chef des services informatiques de l'Élysée, un homme de la DGSE, s'inquiète. Sur les réseaux de la présidence, il a découvert des mouvements préoccupants et en avertit son ancien service, qui enquête. L'affaire sera révélée dès le mois de juillet 2012 par le quotidien Le Télégramme. Mais il a fallu attendre juin 2016 pour que l'ingénieur centralien Bernard Barbier, à cette époque patron des « grandes oreilles » de la DGSE, choisisse d'en parler devant les élèves de son ancienne école. L'ex-directeur technique de Mortier confirme alors que l'attaque a été conduite par la NSA avec sa méthode de piratage la plus puissante, dont Edward Snowden avait révélé l'existence : le Quantum Attack. Les espions américains ont lancé leur opération en faisant croire à l'ordinateur d'un collaborateur de l'Élysée qu'il se connectait sur Facebook. En réalité, la page d'accueil vers laquelle la machine élyséenne était orientée n'était autre qu'une copie conçue par la NSA. Une fois le lien entre les machines établi, la puissante agence américaine de renseignement technique injectait un logiciel malveillant lui ouvrant un accès complet au réseau élyséen.

L'opération de cyberespionnage Snowglobe © DR

Envoyé aux États-Unis, le 12 avril 2013, pour une explication de gravures, l'expert en cryptographie et en interception des communications entend Keith Alexander, directeur de la NSA, lui dire qu'il est « déçu » car il pensait que « jamais on ne [les] détecterait ». Barbier aura la désagréable surprise de voir quelques mois plus tard les documents préparatoires à cette rencontre transmis par Snowden au Monde. Et le truculent Barbier, joueur de rugby à la faconde méridionale, de poursuivre : « Avant la publication, j'ai convoqué le correspondant de la NSA à Paris pour qu'il me donne une copie du papier. Il me répond : C'est impossible, Bernard, seul le président Obama peut le déclassifier. Je lui ai dit d'arrêter de m'emmerder, 10 millions de Français allaient lire cette note et je ne peux pas la voir ? Je l'ai finalement eue un jour avant sa publication. » À la fin des années 1980 déjà, le FBI découvre que des taupes françaises ont été placées par la DGSE dans ses entreprises les plus performantes.

Et puis les choses se sont arrangées. Les révélations incessantes ? Les preuves que la NSA a organisé à l'échelle planétaire le siphonnage électronique de ses alliés ? Les communications des présidents français successifs interceptées par les autorités américaines ? Les moyens de l'État américain mis au service des entreprises pour déstabiliser leurs concurrents ? Une station d'écoutes installée sur le toit de l'ambassade américaine à Paris ? Calembredaines... Bernard Barbier n'en veut pas le moins du monde aux Américains : « Le patron de la NSA, c'est un copain, on est très amis. Lui et moi, on s'entendait très bien. J'ai beaucoup apprécié de travailler avec les Américains, il faut travailler avec les meilleurs. Il faut savoir que, dans les services de renseignements, on n'a pas d'amis, on a des partenaires. »

Ancien chef de poste de la CIA à Paris, espion de la vieille école, Charles Cogan, 88 ans, brille aussi par sa lucidité. Il sait qu'en matière d'espionnage les deux pays, « plus vieux alliés, amis prudents », conserveront toujours une certaine circonspection. Entre services, c'est le ping-pong perpétuel : à la fin

des années 1980 déjà, le FBI découvre que des taupes françaises ont été placées par la DGSE dans ses entreprises les plus performantes. Les espions français éviteront la prison grâce à Michel Rocard, et on jura qu'on ne jouerait plus à ces jeux pervers. Mais les Américains, dans la foulée, se déchaînent et Charles Pasqua, alors ministre de l'Intérieur, fera expulser sans ménagement, en 1995, tous les responsables de la CIA en poste à Paris, violant les règles les plus sacrées du savoir-vivre entre espions !

Signé « Titi »

Dans ce monde si curieux, les Français affirment aujourd'hui qu'ils n'espionnent plus leurs alliés. On a le droit de les croire, mais ce serait un grand changement ! Il y a quelques années, en 1998, Le Point avait révélé de quelle manière la France espionnait le monde, y compris les États-Unis, en interceptant massivement les communications. Mais faut-il s'en étonner ? Au gré des documents de l'affaire Snowden, on a appris qu'une étrange peuplade informatique est récemment apparue sous les yeux ébahis des experts des services secrets canadiens, le Centre de la sécurité des télécommunications du Canada (CSEC). Ils ont découvert qu'un redoutable logiciel d'attaque circulant clandestinement sur les réseaux ciblait des organisations francophones, le programme nucléaire iranien, d'anciennes colonies françaises comme l'Algérie ou la Côte d'Ivoire. Quand ils ont vu que ce logiciel avait été baptisé « Babar » et que son créateur avait signé « Titi », ils en ont conclu que la DGSE était à la manoeuvre. Des entreprises de sécurité informatique ont fouillé et découvert d'autres logiciels-espions portant les mêmes marques de fabrique, à des degrés divers d'évolution, souvent nommés d'après des personnages de dessins animés : « Bunny », « Dino », « Tafacalou » - qui a provoqué de gros dégâts en Syrie - et surtout « Casper », actif depuis 2014. Tous ces moyens d'intrusion hypersophistiqués ont été rangés sous l'appellation générique d'« Animal Farm », titre du roman antistalinien de George Orwell publié en 1945. Quand on demande à un cadre de la DGSE ce qu'il pense de l'attribution de ces logiciels malveillants à ses experts informaticiens, il botte en touche : « À quoi croyez-vous qu'on nous paie ? »

Lancée en 2008 par Nicolas Sarkozy, la lutte informatique active est une composante désormais intégrée à la stratégie française, dans laquelle l'état-major des armées et la DGSE - pour la composante clandestine - sont étroitement associés. Jean-Yves Le Drian et François Hollande n'ont lésiné ni sur les moyens financiers ni sur les moyens humains, et les moyens offensifs « sont désormais totalement intégrés à l'ensemble des opérations françaises », souligne un expert. Manière de dire que, dans ce domaine, les Français ne sont pas si loin des Américains.

Washington Free Beacon
CIA, NSA Missed Warning Signs of Snowden Betrayal
Friday, 23 December 2016
Byline: Bill Gertz

Washington - Both the CIA and National Security Agency missed warning signs that renegade contractor Edward Snowden was a disgruntled worker who would eventually steal 1.5 million secret documents, according to a congressional study made public Thursday.

Snowden, who fled to Moscow after publicizing some of the documents through left-wing journalists, also "has had, and continues to have contact with Russian intelligence services" and voiced admiration for China during his brief career at the CIA and then NSA.

A declassified and redacted report by the House Permanent Select Committee on Intelligence concluded that Snowden's actions resulted in the Obama's administration's most damaging intelligence failure.

"The American people can now get a fuller account of Edward Snowden's crimes and the reckless disregard he has shown for U.S. national security, including the safety of American servicemen and women," said Rep. Devin Nunes (R., Calif.), the intelligence committee chairman. "It will take a long time to mitigate the damage he caused, and I look forward to the day when he returns to the United States to face justice."

Rep. Adam Schiff (D., Calif), the committee's ranking member, added that "Snowden and his defenders claim that he is a whistleblower, but he isn't, as the committee's review shows. Most of the material he stole had nothing to do with Americans' privacy, and its compromise has been of great value to America's adversaries and those who mean to do America harm."

The report concluded that intelligence documents disclosed by Snowden "caused massive damage to national security." All examples of the damage, however, were blacked out in the report.

On Twitter, Snowden stated in response to the report: "Was I a pain in the ass to work with? Perhaps; many technologists are. But this report establishes no worse."

"Bottom line: this report's core claims are made without evidence, and are often contrary to both common sense and the public record," he said.

The report is dated Sept. 15 and was originally classified "top secret." Markings indicate the report dealt with signals intelligence--sensitive data collected electronically by NSA around the world.

"In June 2013, former National Security Agency contractor Edward Snowden perpetrated the largest and most damaging release of classified information in U.S. intelligence history," the report said.

The findings were based on a two-year committee probe that did not include interviews with Snowden, who is currently facing U.S. espionage charges.

Contrary to some media portrayals, the House report indicates Snowden was a disgruntled employee who argued with his superiors, ultimately fleeing NSA's Kunia facility in Hawaii in May 2013. He then began disclosing documents in what he asserted was a bid to expose improper NSA surveillance.

The committee's findings "demonstrate that the public narrative popularized by Snowden and his allies is rife with falsehoods, exaggerations and crucial omissions, a pattern that began before he stole 1.5 million sensitive documents," the report said.

Snowden compromised secrets that once protected American troops overseas and secrets that were used in countering terrorism along with dealing with threats from states such as China and Russia.

Some of the disclosures "resulted in the loss of intelligence streams that had saved American lives," the report said.

The Pentagon identified 13 high-risk areas of potential damage from future intelligence disclosures, including several that related to defense capabilities. "If the Russian or Chinese governments have access to this information, American troops will be at greater risk in any future conflict," the report said.

Snowden was described as a "serial exaggerator and fabricator" who intentionally lied about his past in order to promote himself to senior positions and gain greater access to secrets.

However, the report includes new disclosures that security officials at both CIA and NSA failed to recognize that Snowden was likely to betray the government's trust and disclose significant U.S. intelligence capabilities that have been lost or restricted as a result.

For example, NSA security officials failed to conduct a routine check of Snowden's educational background. Had they done so, NSA would have learned that Snowden had dropped out of high school in his sophomore year, yet falsely stated on his resume he had graduated from "Maryland High School" in 2001. There is no high school in Maryland with that name.

Snowden also was granted a "top secret" security clearance in 2005 despite an associate warning security investigators he should not be given access to secrets.

Snowden was hired as a computer technician by a CIA contractor and converted to CIA employment in 2006 after obtaining a security clearance. While at CIA, he complained of harassment by a supervisor.

He was posted overseas, but was relieved of his position after altering CIA software improperly and disobeying orders.

Snowden then applied for work at NSA and was hired by an NSA contractor in 2009. However, the report revealed that CIA failed to update a security database with derogatory information about Snowden. As a result, NSA failed to learn of his problems at CIA before hiring him.

The Office of Personnel Management updated Snowden's security clearance in 2011 with an investigation later found to have been incomplete.

"Among other flaws, the investigation never attempted to verify Snowden's CIA employment or speak to his CIA supervisors, nor did it attempt to independently verify Snowden's self- report of a past security violation--areas where further information could have alerted NSA to CIA's concerns," the report said.

Investigators also failed to check job references on Snowden beyond those he offered: his mother and girlfriend.

While working for NSA in Hawaii, Snowden was described by coworkers as "arrogant" and "squirrelly." They said he was chronically late for work, and would claim he overslept as a result of staying up late to play video games.

Coworkers said Snowden expressed few political views, but voiced sympathies for China based on meetings with Chinese hackers.

Snowden, according to the report, once claimed "the United States caused problems for China but China never caused problems for the United States."

Another NSA coworker said Snowden defended Wikileaks' collaborator Army Pvt. Bradley Manning, who stole tens of thousands of State Department and Pentagon documents while posted in Iraq.

The report also disclosed the methods used by Snowden to break into NSA's classified computer networks and download large numbers of documents.

The secrets were stolen from NSANet, the agency's internal computer network, and from an intelligence community-wide system called the Joint Warfighter Information Computer System. The 1.5 million documents, if printed out, would form a pile more than 3 miles high.

As a computer systems administrator, Snowden used downloading tools called scraping software, specifically a program called "wget" and "DownThemAll!" that allowed large numbers of files to be downloaded over slow networks.

NSA failed to use monitoring tools that could have detected the illegal document downloading, the report said.

Snowden also used a desktop computer in Hawaii, a loophole that allowed him to avoid security scrutiny while stealing documents.

The document theft began in the summer of 2012 at the same time Snowden sought full-time NSA employment. According to the report, Snowden was able to cheat on a test he was given in pursuit of full-time NSA position by accessing the test answers on an NSA network.

He was offered a post in NSA's hacking intelligence unit, the Tailored Access Operations office. However, Snowden's demand for a higher salary derailed the job offer.

Snowden contacted leftwing journalist Glenn Greenwald and filmmaker Laura Poitras in December 2012 and January 2013, respectively, and provided both with documents.

By late 2013, Snowden went to work for intelligence contractor Booz Allen Hamilton in an NSA office that battled cyber attacks from Russia and China. While working there, Snowden stole additional documents from the NSA National Threat Operation Center--information that would be valuable to governments in Russia and China.

Snowden boarded a flight for Hong Kong on May 19, 2013. The first disclosures from Greenwald were published on June 5, 2013.

The report said Snowden did not use legal whistleblower protections to raise his objections to NSA surveillance.

In a heavily redacted section on foreign influence, the report quoted a Russian official as saying Snowden shared intelligence with the Russian government.

Intelligence agencies conducted limited damage assessments of the Snowden case, and have not investigated his motive or whether he worked as an agent of a foreign intelligence service.

The disclosures of NSA documents to date represent what the report called the "tip of the iceberg" of more damaging disclosures, the report said.

The cost of mitigating the damage could reach $1 billion.

Security reforms also have not been fully implemented by NSA and other agencies to prevent future insiders from compromising secrets.

"The committee remains concerned that NSA, like the [intelligence community] as a whole, have not done enough to reduce the chances of future insider threats like Snowden," the report concludes.

Vice News
Extract, decode, analyze
Friday, 23 December 2016
Byline: Justin Ling

As the RCMP tries to convince the public that phone encryption is hobbling its investigations, new documents obtained by VICE News show that the federal police agency already has the ability crack encrypted and locked cellphones without help from the owner or the manufacturer.
The records, obtained via access to information request, show that the RCMP's British Columbia branch just renewed its license for the Cellebrite Touch Ultimate.

That device, according to the documents, "enables the most technically advanced extraction, decoding, analysis, and reporting of mobile data. It performs physical, logical, file system, and password extraction of all data (even if deleted) from the widest range of devices including legacy and feature phones, smartphones, portable GPS devices, tablets, and phones manufactured with Chinese chipsets."

The cost of the renewal, dated February, 2016, was redacted from the documents. The records show that they were sent out to both the B.C. division of the RCMP, and the local RCMP detachment in Nanaimo. Other contract documents suggest that, for the Cellebrite device and an enclosure in which police can hack the phone -- one that blocks all outside cell, Wi-Fi, and other signals -- the total cost was just above $90,000.

The police went through TEEL Technologies Canada, the Canadian distributor for Israel-based Cellebrite, to buy the technology.

Cellebrite has become a handy tool for investigators worldwide. And there's good reason. The company recently reported that their devices can even extract user data from Pokemon Go.

In San Bernardino, California, the FBI reportedly went to Cellebrite after Apple refused to help them crack the iPhone of two terror suspects.

While it's not exactly a secret that the RCMP uses Cellebrite -- the only public admission from the force is a testimonial posted to the Cellebrite website by an RCMP officer, lauding the technology and saying his team uses it "every day" -- the federal police have otherwise been publicly silent about the phone-hacking technology.

VICE News has followed the RCMP's surveillance powers closely. Last April, VICE News and Motherboard reported how the RCMP obtained BlackBerry's global decryption key. More recently, we've covered how the force deploys phone-tracking hardware, how they've been trying to keep it secret, and how they've worked to build a "new public narrative" to obtain even more powers.

The RCMP refused to address their use of Cellebrite technology for this story, just as they have refused to address questions on other stories regarding their sensitive investigative techniques.

"We generally do not comment on specific investigative methods, tools and techniques outside of court," an RCMP spokesperson told VICE News over email.

Staying mum on their current techniques hasn't stopped the force from launching a public relations campaign on the problem of encryption -- dubbed "going dark" -- aimed at getting new powers, however.

In a five-part series where the RCMP made a public case for those new powers, the federal police provided a summary of an ongoing investigation to the Toronto Star and CBC where a locked phone thwarted their efforts to solve a child abuse case. "The phone is locked by a pass code and investigators have not been able to access the video," the two outlets reported. "Police have no legal authority to compel the man to unlock his phone."

That is exactly the sort of case where Cellebrite has come in handy for the RCMP.

In a sexual assault and child pornography case from this past April, an RCMP investigator had an iPhone 5 that was password protected. Corporal Gary Luk, of the Richmond, B.C. detachment of the RCMP, cracked it.

"Cpl. Luk explained that Cellebrite creates a mirror image of the data stored on a mobile device without altering the content of that information. This preserves the integrity of the data," wrote a B.C. judge in a ruling pertaining to the case. The judge noted that Luk limited the search of the devices to the search warrant that authorized the use of the Cellebrite, and managed to obtain some 10,000 messages, as well as photos and video from the iPhone, and five other devices.

In another case, a drug investigation in Calgary, the RCMP used the Cellebrite device to extract call records, contacts, text messages, and images.

In the half-dozen court rulings where Cellebrite is mentioned by name, the RCMP managed to crack a variety of phone models -- iPhone, BlackBerry, Sony, and LG.

But there are a variety of other cases where the nature of the RCMP's phone-hacking prowess simply isn't detailed in court.

In one Vancouver kidnapping case that wrapped-up in 2015, the RCMP cracked into three encrypted BlackBerry phones, and "GPS tracking information was extracted from the laptops and encrypted emails were extracted from the Blackberries and decrypted by the RCMP Technical Assistance Team." The police also obtained text messages, including some messages that had been deleted by the users.

One of the RCMP officers involved in that case is the same officer whose signature appears on the invoice receipts for the Cellebrite technology sold to the RCMP's B.C. division.

The RCMP, behind closed doors, appear to even recognize that existing technology can fix their 'going dark' problem -- within the confines of existing laws.

Next month, Constable Frank Dudas of the RCMP's Technological Crime Section, is slated to speak on a panel regarding the "cutting-edge solutions" for search warrants, especially for encrypted and locked smartphones, "to maximize technology investments and respect privacy rights within Canada."

Dadas will be joined on that panel by Daniel Embury, a technical director at Cellebrite.

Ultimately, mention of this sort of technology appears nowhere in the federal government's national security consultations, which were designed to give the public a voice in drafting new legislation that could authorize -- or forbid -- certain intrusive investigative techniques.

A backgrounder prepared for that consultation specifically mentions that "encryption challenges also apply to the court- ordered production of historical data, such as email, text messages, photos and videos from lawfully seized smartphones, computer hard drives and other digital devices," and mentions such difficulties in the San Bernardino case.

The government consultation, however, fails to mention how police are already able to obtain and analyze such data.

Draft standards could help development of cyberspace
Friday, 23 December 2016
Byline: Chu Daye

The rolling out of cyber standards is a good thing, as it helps facilitate the communication of data in cyberspace, an expert said on Thursday, following the publication of a string of draft standards seeking public input on Tuesday.
The National Information Security Standardization Technical Committee, a standard-setting committee jointly supervised by the Standardization Administration of China and the Cyberspace Administration of China, on Tuesday released seven sets of draft standards related to cyber security and data privacy for public comment. The deadline for feedback is February 2, 2017.

Qin An, director of the China Institute of Cyberspace Strategy, said the standardization of data together with the governing of behavior of man are two components of cyberspace governance and will make cyberspace a better place.

"The standardization will help cyberspace grow economically, and facilitate cyberspace communication and data flow crossing national borders in an orderly manner," Qin told the Global Times on Thursday, noting that data standardization is also one of the hallmarks of what he called cyber civilization.

The standardization process is also the channel through which the State exercises its governance in cyberspace, noted Qin.

The new draft standards include information security technology on personal information security specifications and security capability requirements for Big Data services technique requirements.

Hindustan Times
Govt hires Cisco to help it handle cyberattacks
Friday, 23 December 2016
Byline: Anirban Ghoshal

New Delhi - Demonetisation has given a big boost to digital payments, and also to the threat of cyberattacks in the country. American technology services company Cisco has signed a memorandum of understanding (MoU) with the government's Computer Emergency Response Team (CERT-In) to tackle issues related to cyberattacks.
India's currently doesn't have a national encryption policy, CERT-In is the nodal agency under the ministry of electronics and IT that deals with cyber security threats such as hacking and phishing, and strengthens the Indian Internet domain. "In light of rapidly evolving cyber tactics and shared risks in cyberspace, the need to work side-by-side with industry partners on pressing cyber-challenges becomes important. Our collaboration with Cisco looks to enhance the security of India's digital infrastructure and speed up digitalisation of India" electronics and IT minister Ravi Shankar Prasad said.

Prasad had said that e-wallet usage has seen a 271% increase in volume and 267% in value since high-value currency was demonetised last month. Cisco will open a security operations centre (SOC) in Pune, a cyber range lab in Gurgaon and a security and trust office (S&TO) to enhance cyber security capabilities.

The announcement is as a part of the $100-million investment, which chairman and ex-CEO John Chambers had announced earlier in the year. "The SOC will provide a broad range of services, from monitoring and management to comprehensive threat solutions and hosted security, which can be customised to meet customer needs," said Dinesh Malkani, president for India and SAARC, Cisco.

The unit will have 24-hour continuous monitoring and advanced analytics capabilities. Cisco currently has three SOCs globally - in Poland, the US and Japan. It has signed similar MoUs with the French and German governments. "Most cyberattacks or breaches take an average detection time of 205 days from the time of breach," Malkani said; nearly 35 records are breached every second globally, he said.
Malkani said the government has asked Cisco to train startups to help create more security solutions from India.

This training will be provided by the cyber range lab. SOC will be operational next quarter. The cyber range lab is already functioning. "A significant amount of investment has gone into the facilities. Nearly

20% of our cybersecurity workforce operates from India. We can scale this up as need arises," Malkani said.

Reuters
Lithuania said found Russian spyware on its government computers
Friday, 23 December 2016
Byline: Staff report

Vilnius - The Baltic state of Lithuania, on the frontline of growing tensions between the West and Russia, says the Kremlin is responsible for cyber attacks that have hit government computers over the last two years.
The head of cyber security told Reuters three cases of Russian spyware on its government computers had been discovered since 2015, and there had been 20 attempts to infect them this year.

"The spyware we found was operating for at least half a year before it was detected - similar to how it was in the USA," Rimtautas Cerniauskas, head of the Lithuanian Cyber Security Centre said.

When presented with the allegations, President Vladimir Putin's spokesman Dmitry Peskov told Reuters they were "laughable" and unsubstantiated.

"Did it (the spyware) have 'Made in Russia' written on it?" quipped Peskov. "We absolutely refute this nonsense." He said Russia itself was targeted in cyber attacks "round the clock," but said it would be stupid to accuse foreign governments.

Fears of Russian cyber attacks have come to the fore since the U.S. election campaign when hacking of Democratic Party emails led to allegations from U.S. intelligence that Moscow was involved.

Lithuania, Estonia and Latvia, all ruled by Moscow in communist times, have been alarmed by Russia's annexation of Ukraine's Crimea peninsula in 2014 and its support for pro-Russian separatists in eastern Ukraine.

In what Baltic officials say was a wake-up call, Estonia was hit by cyber attacks on extensive private and government Internet sites in 2007. State websites were brought to a crawl and an online banking site was closed.

Lithuanian intelligence services, in their annual report, say cyber attacks have moved from being mainly targeted at financial crimes to more political spying on state institutions.

Russian spyware was transferring all documents it could find, as well as all passwords entered on websites such as GMail or Facebook, to an internet address commonly used by Russian spy agencies, Cerniaukas said.

"This only confirms that attempts are made to infiltrate our political sphere," said Cerniaukas.

PREPARATIONS

Germany's domestic intelligence agency reported earlier this month a striking increase in Russian targeted cyber attacks against political parties and propaganda and disinformation campaigns aimed at destabilizing German society.

The domestic intelligence chief said Russia may seek to interfere in its national elections next year.

Although no Russian cyber meddling was detected in the run up or during the Lithuanian general election in October, Cerniauskas said his country needs to understand it is vulnerable to such meddling.

"Russians are really quite good in this area. They have been using information warfare since the old times. Cyberspace is part of that, only more frowned upon by law than simple propaganda", he said.

"They have capacity, they have the attitude, they are interested, and they will get to it - so we need to prepare for it and we need to apply countermeasures."

Lithuanian officials targeted by the Russian spyware held mid-to-low ranking positions at the government, but their computers contained a stream of drafts for government decisions of its positions on various matters, said Cerniauskas.

The head of the Lithuanian counter-intelligence agency Darius Jauniskis said Russia tried to sow chaos in Lithuania by orchestrating a cyber attack in 2012 against the Lithuanian central bank and its top online news website.

"It is all part of psychological warfare," he told Reuters earlier this month.

NPR
CIA Director Urges Caution In U.S. Response To Russia Hacking
Friday, 23 December 2016
Byline: Staff report

Washington - The director of the Central Intelligence Agency, John Brennan, is warning against in-kind retaliation by the U.S. government for Russian hacking during the election.
In an interview with NPR's Mary Louise Kelly, Brennan said, "They do some things that are beyond the pale," referencing those who would undermine democratic processes, adding:

"I don't think we should resort to some of the tactics and techniques that our adversaries employ against us. I think we need to remember what we're fighting for. We're fighting for our country, our democracy, our way of life, and to engage. And the skullduggery that some of our opponents and adversaries engage in, I think is beneath this country's greatness."

Brennan said that, despite the fact that forces loyal to Syrian President Bashar Assad had taken the city, which was controlled by rebels for much of the five-year conflict, he did not believe the violence would end.

"Aleppo's fall, to me is not a sign that there is going to be an end this conflict because I am convinced that many, many of those oppositionists, the ones who are trying to reclaim their country for their families for their neighbors, for their children, will continue to fight," he said.

"This insurgency is not going to go away until there is some type of viable and genuine political process that will bring to power in Damascus a government that is representative of the Syrian people and really will try to repair and recover from this this awful war."

Assad himself appeared to confirm Brennan's assessment earlier this month in an interview with Russian television, in which he said, "Liberating Aleppo doesn't end with liberating the city itself, for it needs to be secured on the outside. Afterwards, identifying which city comes next depends on which city contains the largest number of terrorists."

Brennan also said he felt some responsibility for the horrific bloodshed of the Syrian war. "I think we always like to say that we wish that we would have been able to make a difference, in a way that would have prevented the slide and the situation there," he said.

"There's no way you can divorce yourself or be emotionally or mentally from these situations that you play a role in."

But, he said, he thinks there are limits to American power, saying, "...as great a country -- as powerful country -- as the United States is, we have, in many areas, limited ability to influence the course of events."

Politico
U.S. government begins asking foreign travelers about social media
Friday, 23 December 2016
Byline: Tony Romm

Washington - The U.S. government quietly began requesting that select foreign visitors provide their Facebook, Twitter and other social media accounts upon arriving in the country, a move designed to spot potential terrorist threats that drew months of opposition from tech giants and privacy hawks alike.

Since Tuesday, foreign travelers arriving in the United States on the visa waiver program have been presented with an "optional" request to "enter information associated with your online presence," a government official confirmed Thursday. The prompt includes a drop-down menu that lists platforms including Facebook, Google+, Instagram, LinkedIn and YouTube, as well as a space for users to input their account names on those sites.

The new policy comes as Washington tries to improve its ability to spot and deny entry to individuals who have ties to terrorist groups like the Islamic State. But the government has faced a barrage of criticism since it first floated the idea last summer. The Internet Association, which represents companies including Facebook, Google and Twitter, at the time joined with consumer advocates to argue the draft policy threatened free expression and posed new privacy and security risks to foreigners.

Now that it is final, those opponents are furious the Obama administration ignored their concerns.

"There are very few rules about how that information is being collected, maintained [and] disseminated to other agencies, and there are no guidelines about limiting the government's use of that information," said Michael W. Macleod-Ball, chief of staff for the American Civil Liberties Union's Washington office. "While the government certainly has a right to collect some information ... it would be nice if they would focus on the privacy concerns some advocacy groups have long expressed."

A spokeswoman for Customs and Border Protection, who said the government approved the change on Dec. 19, told POLITICO on Thursday the new policy is meant to "identify potential threats." Previously, the agency had said it wouldn't prohibit entry to foreigners who didn't provide their social media account information.

The question itself is included in what's known as the Electronic System for Travel Authorization, a process that certain foreign travelers must complete to come to the United States. ESTA and a related paper form specifically apply to those arriving here through the visa-waiver program, which allows citizens of 38 countries to travel and stay in the United States for up to 90 days without a visa.

As soon as the government unveiled its draft proposal in June, however, consumer protection advocates expressed outrage. In a letter sent in August, the ACLU, Center for Democracy and Technology charged it posed immense privacy risks, given that social media accounts serve as "gateways into an enormous amount of [users'] online expression and associations, which can reflect highly sensitive information about that person's opinions, beliefs, identity and community." The groups also predicted the burden would "fall hardest on Arab and Muslim communities, whose usernames, posts, contacts and social networks will be exposed to intense scrutiny."

After the policy changed, Nathan White, the senior legislative manager of Access Now, again blasted it as a threat to human rights.

"The choice to hand over this information is technically voluntary," he said. "But the process to enter the U.S. is confusing, and it's likely that most visitors will fill out the card completely rather than risk additional questions from intimidating, uniformed officers -- the same officers who will decide which of your jokes are funny and which ones make you a security risk."

Opponents also worry that the U.S. change will spark similar moves by other countries.

"Democratic and non-democratic countries -- including those without the United States' due process protections -- will now believe they are more warranted in demanding social media information from visitors that could jeopardize visitors' safety," said Internet Association general counsel Abigail Slater. "The nature of the DHS' requests delves into personal information, creating an information dragnet."

Yahoo News
Snowden is still in contact with Russian intelligence, House report charges
Thursday, 22 December 2016
Byline: Michael Isikoff

Washington - Newly declassified passages from a highly critical House Intelligence Committee report on Edward Snowden assert that since arriving in Moscow the former NSA contractor "has had, and continues to have, contact with Russian intelligence services."
Minutes after the report was released Thursday, Snowden's chief lawyer, Ben Wizner, tweeted that the report was "petulant nonsense." Snowden has adamantly denied such contacts, most recently this month in an interview with Yahoo Global Anchor Katie Couric. Snowden told Couric he gave Russian officials "the stiff-arm" when they first approached him in 2013, and that since then, while living with President Vladimir Putin's approval as a fugitive in Moscow, "they have left me alone, for the most part."

The panel's newly declassified 33-page report, which is being released this morning, cites classified U.S. intelligence reporting to support its assertion of continuous contacts with Russian intelligence -- an especially explosive charge in light of the current uproar in Washington over Russian interference in the U.S. election.

But all details of that intelligence reporting are still classified and blacked out in the report, making it difficult, if not impossible, for the public to assess. The charge comes at a time when Snowden's defenders -- who portray him as a courageous whistleblower who exposed U.S. surveillance abuses -- are making their final, uphill pitch for a pardon before President Obama leaves office.

His lawyers have also repeatedly pointed out he has also criticized Russian surveillance practices; in his interview with Couric, Snowden said these "severe" criticisms have made him a "liability" to the Russians.

"The House committee spent three years and millions of dollars in a failed attempt to discredit Edward Snowden, whose actions led to the most significant intelligence reforms in a generation," Wizner said in a statement after the committee's release. "The report wholly ignores Snowden's repeated and courageous criticism of Russian surveillance and censorship laws. It combines demonstrable falsehoods with deceptive inferences to paint an entirely fictional portrait of an American whistleblower.

"For all of its harsh rhetoric, the report contains no evidence whatsoever that Snowden's intentions were anything other than public-minded, that his actions caused harm, or that he is under foreign influence -- because no such evidence exists," he added. "In fact, the NSA's former deputy director has stated publicly that he does not believe that Snowden acted under the influence of a foreign power."

A U.S. government official told Yahoo News the committee's characterization of continuing contacts between Snowden and Russian intelligence reflects "the current thinking" of the U.S. intelligence community. But U.S. officials do not have evidence that Snowden has actually shared NSA documents with the Russians, said the official, who did not provide any further details about the nature of the alleged contacts. A congressional staffer familiar with the matter said the committee and the intelligence community have "high confidence" in the reports of continuous contacts and "you don't have high confidence based on a single [intelligence] report."

House Intelligence Chair Rep. Devin Nunes said in a statement Thursday the newly declassified report shows Snowden's "reckless disregard" for U.S. National Security, adding "I look forward to the day when he returns to the United States to face justice."

California Democratic Rep. Adam Schiff, the panel's ranking minority member, added: "Snowden and his defenders claim that he is a whistleblower, but he isn't, as the committee's review shows."

The House report fleshes out a three-page executive summary that was released in September and was approved on a bipartisan basis by all members of the intelligence committee. That summary -- denounced as "aggressively dishonest" by one of the journalists who received documents from Snowden -- labeled him a "serial exaggerator and fabricator" as well as a disgruntled employee who did "tremendous damage to national security" by disclosing classified material about U.S. surveillance practices. (The summary did not include the allegation about Snowden's contacts with Russian intelligence, which was declassified by the U.S. intelligence community only this week.)

After the release of the executive summary, the committee asked Director of National Intelligence James Clapper to declassify the panel's full report (much of which is based on secret U.S. intelligence reports and interviews with officials at the National Security Agency and other U.S. agencies). Many key sections of the document remain classified and blacked out -- including 20 specific examples of damage that U.S. officials believe was caused by Snowden's disclosures. Also still classified are estimates about the cost to the U.S. government -- believed to be in the billions of dollars -- to rebuild and repair U.S. signals intelligence systems capabilities as a result of his disclosures.

Still, the newly declassified version cites a wealth of previously undisclosed internal emails, memos and interviews to draw a highly unflattering portrait of Snowden as an intelligence Community misfit driven as much by personal grievances as by his publicly stated concerns about invasions of U.S. privacy.

It also reveals a glaring internal screwup by U.S. intelligence officials that allowed documented concerns about Snowden's conduct by the CIA to go undetected when he landed a job as an NSA contractor.

Among the highlights:

-- Snowden had a troubled work history within the U.S. intelligence community. He'd raised multiple complaints about his treatment that had nothing to do with U.S. surveillance practices. Less than three months after obtaining his first job with the CIA as a telecommunications information system officer (TISO) in 2006, he sent an email to the agency's inspector general complaining that he was being "unfairly targeted" by his supervisor because he had raised concerns about "morale and retention issues" including the pay of TISOs compared with contractors doing similar work. Snowden, then 23, had surveyed other TISOs in his office and then written up his findings, sending them directly to the CIA's deputy director for support, one of the 10 most senior executives in the agency. What prompted Snowden to complain to the inspector general, according to the report, was that his supervisors -- after learning that he had gone over their heads -- had pulled him into their offices for unscheduled "counseling," during which, he asserted to the IG, they were "extremely hostile" and "seemed to believe I have trouble bonding with my classmates." Snowden asked the IG to help protect him from "reprisal for speaking truth to power." Notably, the report said, this was the only record of Snowden contacting the inspector general during his tenure at the CIA.

-- Snowden later landed a CIA TISO post overseas -- in Geneva, it has been publicly reported, although the city is blacked out in the report -- despite the concerns of his previous supervisor, recorded in a Sept. 8, 2008, internal memo, that Snowden "often does not positively respond to advice from more senior officers ... does not recognize the chain of command, often demonstrates a lack of maturity, and does not appear to be embracing the CIA culture." Snowden later modified the software for his performance review "by manipulating the font," the report says. (Snowden has said that while writing his annual self-evaluation he discovered flaws in the software of the CIA's personnel Web applications that would make them vulnerable to hacking. With his supervisor's approval, he asserted, he wrote some code and text in his personnel evaluation, but a more senior manager grew furious and wrote a critical comment in his personnel file.)

His behavior caused him to be recalled for "professional consultations" with the chief of all CIA technical officers in Europe, according to the committee report. His supervisor called him in for six counseling sessions between October 2007 and April 2008. When he flew home to Washington with his girlfriend in September 2008 for medical appointments -- "disobeying orders," the report says -- his supervisors recommended that he not return to his position. Although Snowden has since asserted that he had ethical qualms about working for the CIA in Geneva -- the Oliver Stone movie "Snowden" depicts him recoiling at being asked to blackmail a potential Pakistani asset over sexual misconduct -- the report says

records of Snowden's multiple counseling sessions show no evidence he ever raised such issues at the time.

-- When Snowden applied for a new position with an NSA contractor (Perot Systems, later purchased by Dell) in March 2009, NSA Security checked with an intelligence community-wide database known as "Scattered Castles" to verify his security clearance and, seeing no red flags, approved his hiring on April 7 of that year. This happened because CIA Security had yet to update Scattered Castles with the issues raised about Snowden's employment in Geneva. Thirteen days later, on April 20, the CIA did, entering negative information about Snowden that was unknown to NSA and was apparently never detected. "Because NSA had checked the database three weeks earlier, NSA Security did not learn of the (blacked out) in his record at that time," the report states. In the fall of 2010, a government contractor, U.S. Information Services, did a periodic background investigation of Snowden and cleared him in a report that never verified his CIA employment or checked with any of his supervisors. Nor did it request any character references beyond the two Snowden had provided: his mother and his girlfriend.

-- In early 2012, Snowden took a new position with Dell as a systems administrator at the NSA's Hawaii Cryptologic Center. Some co-workers recall him expressing strong political opinions, complaining about bills in Congress that he believed would be harmful to online privacy and -- according to one co-worker's account -- indicating sympathy for China. (He claimed that, based on his meeting with Chinese hackers at a conference, "the United States caused problems for China but China never caused problems for the United States," the report states, citing a committee interview with a co- worker.) He soon got into an email dispute with his supervisor over an issue that is blacked out in the report. But, much like he did at the CIA, Snowden went outside channels, according to the committee: He copied a deputy head of NSA's technical services directorate in one of his replies during which he accused one of his middle managers of "evasion and finger-pointing." This earned him a rebuke from an NSA civilian employee in Washington who, on June 22, 2012, wrote him in an email that his response was "totally UNACCEPTABLE" because "under no circumstances will any contractor call out or point fingers at any government manager whether you agree with their handling of an issue or not."

-- Snowden has publicly claimed that his "breaking point" for disclosing classified documents was Director of National Intelligence Clapper's March 13, 2013, testimony before Congress in which he (falsely) denied that the NSA collected data on Americans. But the report states that Snowden began his mass downloading of documents from NSA networks on July 12, 2012, barely three weeks after his rebuke from the NSA official. (Snowden has asserted that, while he had already begun his downloading and had reached out to journalist Glenn Greenwald in December 2012, he didn't actually disclose any documents until after Clapper's testimony.) He used blunt "scraping" tools to download the material and used his systems administrator privileges to search across other NSA employees personal network drives and copy what he found, the report states. He also asked several of his unwitting co-workers for their security credentials so he could obtain information he could not access, causing at least one NSA co-worker to lose his security clearance and resign. Snowden's searches "quickly expanded beyond surveillance programs" and included searches for "human resource files" and files relating to promotion

and hiring decisions, as well as the personal network drives of individuals belonging to individuals involved in the hiring decision for a job for which Snowden had applied, the report states.

Jakarta Post
Police step up cyberoperation
Friday, 23 December 2016
Byline: Haeril Halim, Arya Dipa, Fadli

Jakarta/Bandung/Batam - The recent terrorism plots foiled by the police's counterterrorism squad all have the same feature: They were inspired and orchestrated remotely by an Indonesian militant with the Islamic State (IS) group in Syria.
The 33-year-old militant, Bahrun Naim, who is known to be tech-savvy, allegedly managed to recruit new militants and created a number of new terrorist cells across the country through online chat groups.

Terrorist groups, the police have said, are now engaging in cyber-jihad, which includes activities such as recruitment of followers, online training on bomb making and the spread of radical thought to potential followers, as well as the transfer of money from jihadists overseas to Indonesian extremists.

In the past 12 days following the foiled plot to attack the State Palace on Dec. 10, the nation's counterterrorism squad, Densus 88, has uncovered at least 13 terrorist cells in West Java, Central Java, Banten, North Sumatra, West Sumatra and Batam, arresting a total of 21 people who had allegedly planned attacks during Christmas and New Year's Eve this year.

The raids were only possible because the police had stepped up their cybersurveillance, National Police chief Gen. Tito Karnavian said on Thursday. "This is the result of launching massive cybercounterterrorism as we are really concerned about what's going on in the cyberworld. We have been stepping up efforts for cybersurveillance on them [terrorist groups]," he added.

Tito said that the police's cybertroops worked every day to monitor and track activities of radical groups on the internet. Its members usually create fake accounts so that they could join chat rooms of terrorist groups after they introduce themselves as potential followers.

Participants of the online chatting, the police chief said, would later exchange phone numbers so that the cybertroops could join their Whatsapp groups for daily conversations among suspected terrorists to find out where they might launch attacks and with which other terrorist groups they actively communicate.

"These kinds of cyberpatrolling techniques are actually the same as the methods in undercover activities in the real world," Tito said, adding that the only difference was they were conducted online.

Tito, however, admitted that the cybertroops had difficulties monitoring terrorism plots that were devised by lone wolves, as they usually did not join any terrorist group chats online. "Lone wolves independently study from the internet and carry out attacks alone," Tito said, adding that Densus 88 had arrested a total of 40 suspected terrorists this year.

Police officers stand guard at a residential neighborhood where police conducted a raid on a house used by suspected militants, in South Tangerang, Banten, on Dec. 21. Three suspected militants who were planning a holiday season suicide bombing were killed in the raid.(AP/Tatan Syuflana)

From the recent arrests, the police identified three terrorism plots devised by followers of the arrested Bahrun. They were allegedly planning to attack the State Palace, a police station in Tangerang, and an unspecified location in Bali.

"We have arrested members of the group that wanted to attack Bali. The female [alleged suicide bomber intended for an attack in Bali] has also been arrested," the police chief said.

Of the 23 terrorists Densus 88 arrested recently, two were women who were alleged to be suicide bombers, namely Dian Yulia Novia and Ika Puspitasari. Bahrun had allegedly assigned Dian to attack the State Palace and Ika to undertake the attack in Bali.

Densus 88 has reportedly arrested about 1,000 terrorists since its establishment in 2004 and since the deadly JW Marriot Hotel bombing it has derailed a total of 50 terrorism plots.

Terrorism expert Noor Huda said that the fast growing use of social media had changed discourse on terrorist activities in Indonesia.

In the past, would-be terrorists would have had to join major radical groups like Jamaah Islammiya (JI), Jamaah Ansharut Tauhid (JAT), or Jamaah Ansharut Daulah (JAD) to be involved in terrorism, but nowadays with the help of the internet they are able to establish small cells quickly after chatting with people with similar visions online.

"[Under the new discourse], some easily become members of unknown groups, although they have never met each other. This has been proven in the case of Dian who was exposed to radicalism through Facebook and got connected with Bahrun's network," Noor said.

Officers infiltrate chat groups to track terrorism plots Cybersurveillance cannot detect lone wolves, police chief says.

The Agencies/Nouvelles des services

A weekly compendium on corporate and administrative issues of partner (and adversarial) intelligence agencies around the globe.

'Troubling' Conservative torture policy up for review, Goodale says
Canadian Press, Jim Bronskill, 2016 01 19
Ottawa - **The Trudeau Liberals will review controversial directives enacted by the Harper government that allow for the sharing of information even when it might lead to torture**, says the public safety minister. The ``troubling set of issues'' raised by the foreign information-sharing policy ``will be raised in the course of our consultations'' on the overall national security direction of the new government, Ralph Goodale said in a recent interview with The Canadian Press. The news follows pressure from human-rights and privacy advocates to conduct a wide-ranging examination of security policies introduced by the Conservatives, whisked from office in the October election. The federal policy on foreign information-sharing has been roundly criticized for effectively condoning the torture of people in overseas prisons, contrary to international law and Canada's United Nations commitments. A four-page 2010 framework document, released under the Access to Information Act, says when there is a ``substantial risk'' that sending information to, or soliciting information from, a foreign agency would result in torture _ and it is unclear whether the risk can be managed through assurances or other means _ the matter should be referred to the responsible deputy minister or agency head. In deciding what to do, the agency head will consider factors including the threat to Canada's national security and the nature and imminence of the threat; the status of Canada's relationship with _ and the human rights record of _ the foreign agency; and the rationale for believing that sharing the information would lead to torture. Critics say when there is a serious risk of torture, there should be no sharing _ period. **The Canadian Security Intelligence Service, the RCMP, the Canada Border Services Agency, National Defence and the Communications Security Establishment, Canada's electronic spy agency, are bound by the federal policy on sharing information with foreign agencies.**

Burkina Faso attack shows need to boost information-gathering: Sajjan
Ottawa Citizen, Lee Berthiaume, 2016 01 19
St. Andrews, N.B. - **Defence Minister Harjit Sajjan says better intelligence capabilities, as well as co-operation with Canada's allies, are essential for preventing the types of terror attacks that have struck Burkina Faso and other parts of the world**. Six Canadians were killed over the weekend when militants linked to al-Qaida stormed a hotel in Ouagadougou, the capital of Burkina Faso in West Africa. Days earlier, a Canadian was killed during an attack by Islamic State-inspired terrorists in Indonesia. Speaking on the sidelines of a three-day retreat between Prime Minister Justin Trudeau and his cabinet ministers, Sajjan said Canada has "to get better at our intelligence capabilities in other parts of the world so that we have a better chance of preventing attacks like this from happening. Edward Snowden revealed that American and Canadian spy agencies have been running massive intelligence-gathering **operations. The previous Conservative government also enacted controversial anti-terror legislation, Bill C-51, that increased the scope and powers of Canada's intelligence operations.** The Liberals promised during the election to amend the law, but haven't said how. Instead, they have promised broad consultations first. Sajjan, who is responsible for the ultra-secret **Communications Security Establishment**, which is Canada's electronic spy agency, said "the safety of Canadians will always be paramount," but also that there "has to be a balance."

L'armée veut épier les réseaux sociaux
Le Devoir, Fabien Deglise, 2016 01 15
Ottawa - **Surveiller, pour mieux protéger. Le ministère de la Défense nationale du Canada souhaite créer une escouade d'une quarantaine d'analystes chargés d'espionner en temps réel les grands réseaux sociaux, de manière confidentielle**, et ce, afin d'identifier les " nouvelles instabilités ", tout comme les personnes ou groupes pouvant représenter une menace pour le Canada, a découvert Le Devoir. Selon un document d'appel de soumissions, les réseaux Twitter, Facebook, LinkedIn, Instagram et Reddit, entre autres, sont dans la mire des Forces canadiennes, qui cherchent à faire l'acquisition d'une plateforme complète de surveillance, d'analyse et de filtrage des données personnelles et publiques des internautes transitant sur les réseaux sociaux.

Top Employers for Young People tap into the next generation
Globe and Mail, Diane Jermyn, 2016 01 15
Analysis: **Employers for Young People sends out a message of confidence in today's students and recent grads just starting their careers**. The 95 winning companies for 2016 not only welcome young people into their ranks, but also offer unique opportunities for them to develop their knowledge and skill sets through a variety of paid internships, educational support, job shadowing, rotational programs and the chance to travel and work abroad. These employers also profit by giving young talent a voice, allowing them to put forward ideas that add value and bring fresh energy to the workplace. **Canadian Security Intelligence Service (CSIS), Ottawa. Federal government; 3,299 employees. Staff attended more than 100 recruitment events in the past year, including 10 networking sessions, and held 11 career information sessions.**

Government may take extra steps to examine security agencies
Ottawa Citizen, Ian MacLeod, 2016 01 14
Ottawa - **Public Safety Minister Ralph Goodale says the Grits may consider more than just a new committee of parliamentarians to scrutinize the effectiveness and lawfulness of Canada's growing national security activities**. His comments coincide with a new discussion paper circulating within government by national security law scholars Craig Forcese and Kent Roach. It calls for a three-pronged reform of national security review and oversight based on the experiences of Canada's leading allies. Goodale and Ottawa Liberal MP David McGuinty, chair of the yet-to-be-struck special committee, were in Europe this week, where they appraised the workings of Britain's respected Intelligence and Security Committee of Parliament. Speaking to reporters, **Goodale said his priority is that the Liberal's proposed national security committee of parliamentarians be a credible, trustworthy body capable of substantive review of Canada's spy agencies and other classified government intelligence operations**. Canada is the only nation among major western allies that does not allow parliamentarians access to classified security and intelligence information about spying, policing and other sensitive national security operations. While they agree with the need for such a committee, Forcese and Roach, who led the expert assault on the Conservative's controversial Bill C-51 security legislation last year, say it is probably not the best tool for detailed review. They propose two additional review mechanisms. One revives the idea of revamping the existing **Security Intelligence Review Committee (SIRC)**, responsible for expert monitoring of select **Canadian Security Intelligence Service**, into a "super-SIRC" responsible for expert scrutiny of all of **Canada's national security establishment**. As it now stands, there is no dedicated, external monitoring of the **Canada Border Services Agency**, which has a dual intelligence-law enforcement role, or of the intelligence arms of the RCMP, Citizenship and Immigration Canada, the Privy Council Office, Department of Foreign Affairs, Trade and Development, and the Financial Transactions and Reports Analysis Centre of

Canada. A super agency also would consolidate the existing functions of the expert review body monitoring the activities **of Canada's electronic spying service**, as well as the Civilian Review and Complaints Commission for the RCMP, which has very limited review powers over RCMP national security operations.

Canada campaigners to demand public debate on controversial anti- terror law
The Guardian (London), Jessica Murphy, 2016 01 13
Ottawa- **Opponents of Canada's sweeping new anti-terror law are planning a major campaign to pressure the Liberal government to launch broad public consultations before overhauling the controversial legislation**. Civil society groups, legal scholars and labour unions are calling on the government to hold a public debate on reforms for the legislation - known as C-51 - which they say are necessary to protect Canadian civil liberties, freedoms and personal privacy. "We know very little about the government's plans for C-51, so our hope is they are going to listen to the huge number of Canadians who expressed deep, deep concerns about this bill when it was passed," British Columbia Civil Liberties Association executive director Josh Paterson says. "They need to be very clear on what their intentions are before actually doing anything." Federal public safety minister Ralph Goodale is in London this week looking to the UK's intelligence and security committee of Parliament - which examines the policy, administration and expenditure of that country's intelligence agencies - as a possible model. Goodale's spokesman, Scott Bardsley, said: "Work on our platform commitments on C-51 is ongoing. The full details will be unveiled in due course." Those commitments include a guarantee all **Canadian Security Intelligence Service (CSIS**) warrants respect the charter and a statutory review of the full anti- terror act after three years.

Conservatives say security committee is a 'radical departure,' breaks election promises
CBC.CA, Staff Writer, 2016 01 13
Ottawa - **Conservative critics are panning last Friday's announcement that veteran Liberal MP David McGuinty will have a "leadership role" on a new statutory committee of Parliamentarians responsible for reviewing security-related issues**. Public Safety Minister Ralph Goodale's announcement came without "any meaningful dialogue with the security and intelligence community in Canada and without any consultation with Parliamentarians," said public safety critic Erin O'Toole and Conservative House Leader Andrew Scheer in a press release issued Tuesday. "Minister Goodale's approach undermines the establishment of a committee that is supposed to be free from political agendas." Goodale, who is in the U.K. this week consulting with parliamentarians and intelligence officials there who have experience with a similar oversight body, confirmed Tuesday that McGuinty was the government's choice to chair the committee. "The prime minister has invited Mr. McGuinty to serve as chair and I'm very glad that David has been with me in these consultations, to have the benefit of that first hand reflection," he said. McGuinty is travelling with Goodale but was not available for comment. Goodale said it's time Canada added parliamentary oversight to its security agencies, something other members of the so-called **Five Eyes intelligence alliance -- the spy group comprising Canada, the U.S., Britain, Australia and New Zealand -- already have.** The previous Conservative government was criticized for weakening the oversight of Canada's spy agency, **CSIS**, when its internal watchdog office was shut down. The Security Intelligence Review Committee, which reports to Parliament, not the minister, has been criticized as insufficiently transparent and accountable. It also lacks sufficient power over the security agencies it supervises.

The government doesn't want you to click here
Embassy, Marie-Danielle Smith, 2016 01 13

Ottawa - **Government of Canada users should avoid clicking on suspicious or catchy articles or email links, warns a Canadian spy agency in its Cyber Defence Report for the first quarter of 2015.** "Clickbait," it explains, "are websites or online articles designed to drive visitor traffic by containing catchy sensationalist headlines like 'must see' or 'unbelievable' and are distributed over social media and online ads." They want to exploit curiosity, the **Communications Security Establishment warns**-- to "drive web traffic and generate advertising revenue" or to "launch exploits against systems that visit a seeded website." Though the former sounds like the behaviour of any modern news organization, it's the latter that concerns Canada's government. Luring users through email links, or phishing, is one of the ways that hackers can attempt to compromise systems or access classified data. The report, obtained with an access to information request, is heavily censored, citing Access to Information Act restrictions: information can't be released that could reasonably be expected to expose the vulnerability of computer or communication systems. A pair of incidents were being investigated at the **Canadian Security Intelligence Service** in March, Embassy reported last year. They consisted of an "unauthorized disclosure of information" and an "inadvertent release of classified information which was ultimately accessed." Documents obtained through access to information law didn't offer many details about what happened, so whether Canadian spies are as susceptible to clickbait as the rest can't be verified.

Révision constitutionnelle : les Algériens du Canada se mobilisent contre l'article 51
El Watan, Samir Ben, 2016 01 13
Montréal - **Le projet de révision de la constitution entérinée par le conseil des ministres de lundi dernier fait réagir les Algériens du Canada qui représentent la deuxième communauté nationale à l'étranger, avec un peu plus de 100 000 citoyens dont une majorité de binationaux**. Un rassemblement devant le consulat d'Algérie à Montréal est prévu le samedi 16 janvier à partir de 14 :30 pour dénoncer la disposition contenu dans l'article 51 du projet de révision constitutionnelle qui exclut les Algériens détenteurs d'une seconde nationalité ou plus de la possibilité d'accéder « aux hautes responsabilités de l'Etat et aux fonctions publiques». Lancé par l'organisme Mouvance migratoire O Canada que préside l'Algérien Ahcène Moussi, l'appel dénonce l'article 51 qui de crée « deux classes de citoyens, diamétralement opposées : les Algériens qui résident en permanence en Algérie et les Algériens établis à l'étranger, appelés aussi "émigrés ou binationaux". ». Pour cet organisme qui s'occupe, entre autres, de réfugiés au Canada, l'article 51 « porte atteinte à l'unité nationale, en plus d'être discriminatoire.

Sajjan wants increased use of Canadian intelligence in ISIS mission
CTV.CA, Michelle Zilio, 2016 01 14
Ottawa - **Defence Minister Harjit Sajjan says the government is looking at ways to increase Canadian intelligence capabilities in the U.S.- led coalition against ISIS.**
Speaking to CTV's Power Play on Wednesday, Sajjan emphasized the importance of the Canadian intelligence skills in the fight against the terror group. "**Our intelligence capability is second to none. It's always sought after and we are looking at different forms of capabilities, how we can increase that,"** said Sajjan. "We have a robust intelligence capability and how do we integrate that into our training that we're already doing?" Sajjan said the need for increased medical assistance also came to mind during his recent visit to Iraq. He said the government is still considering what is needed in terms of medical help, and is cautious not to propose options that won't work on the ground.Last week, the Globe and Mail reported that the federal cabinet is reviewing options to boost Canada's role in the coalition against ISIS, ranging from clandestine operations to the maintenance of surveillance and refuelling aircraft. The report also said cabinet is expected to make a decision within 30 days of Jan. 7. The minister said he and Chief of the Defence Staff Jonathan Vance have been talking frequently about options for

the future of Canada's role in the coalition. He added that his list of options has been refined "considerably," but did not say when exactly he plans to delivery that finalized list to cabinet.

'Teens' Who Hacked CIA Director Also Hit White House Official
Motherboard (Vice), Lorenzo Franceschi-Bicchierai, 2016 01 19
New York - **The hacking group that has been targeting government officials since October, when it broke into the AOL email account of CIA Director John Brennan**, has claimed yet another victim. This time, the victim is President Barack Obama's senior advisor on science and technology John Holdren, Motherboard has learned. One of the cybercriminals linked to the group that hacked Brennan broke into Holdren's home telephone and email account and set it so that all the calls would get forwarded to the Free Palestine Movement. This is exactly what happened to **US Director of National Intelligence James Clapper** last week. On Monday, one of the members of the hacking group, which is known as Crackas With Attitude, or CWA, sent me an email to tell me about his latest feat. "If you don't believe me you can call the home phone," he said, before sending me a phone number that belongs to Holdren, according to public records. When I called the number, the founder of the Free Palestine Movement Paul Larudee picked up the phone. Larudee said that the same person who called him last week to tell him that he would receive calls directed at Clapper called him again on Monday morning. Cracka told me on Monday that the group hacked several other government officials, including some the group never publicly bragged about. He mentioned Amy Hess, the FBI's executive assistant director for science and technology, White House Communications Director Jen Psaki, White House Chief of Staff Denis McDonough, the Deputy Secretary of State Tony Blinken, and the White House Deputy National Security Advisor Avril Haines.

Michael Bay's Benghazi movie 13 Hours is 'inaccurate', according to CIA officer
The Guardian, Scott Bixby, 2016 01 19
London - **Bay's film, which depicts the events of the deadly terrorist attack in Libya, has been criticised by an officer who says a main plot point never happened.** Michael Bay has assured audiences that his Libyan-set military thriller 13 Hours: The Secret Soldiers of Benghazi is an accurate retelling of the events surrounding the terrorist attack in Benghazi in 2013, which resulted in the death of four people, including the US ambassador to Libya. But **according to the CIA officer in charge of the American intelligence agency's top-secret Benghazi facility that night, one of the most important moments of the film is entirely wrong.** "There never was a stand-down order," the officer – the former chief of the so-called Annex who identified himself as 'Bob' – told the Washington Post. "At no time did I ever second-guess that the team would depart."

Court Requires NYPD to Purge Docs on Terrorists Inside U.S.
Washington Free Beacon, Adam Kredo, 2016 01 18
Washington - **The New York Police Department has been directed by a U.S. court to remove from its online records an investigation pertaining to the rise of Islamic extremists** in the West and the threats these individuals pose to American safety, according to legal documents. As part of a settlement agreement reached earlier this month with Muslim community advocates in U.S. District Court, the NYPD will purge from its website an extensive

report that experts say has been critical to the department's understanding of radical Islam and its efforts to police the threat.

When the CIA had a magazine
National Post, Robert Fulford, 2016 01 16
Column: **In 1953 a remarkable magazine called Encounter appeared, as if out of nowhere, in London. There were two editors - the famous English poet Stephen Spender and the New York intellectual Irving Kristol, who would later be called the godfather of the neo-conservatives.** With Spender's tentacles reaching every corner of British literature and Kristol's shrewd sense of American thinking, they proved an impressive pair. Their magazine was full of life and ideas. John Berryman, the first-class American poet, called Encounter "the most consistently interesting magazine now being published." The writers ranged from Evelyn Waugh to Mary McCarthy and from Arthur Schlesinger, Jr., a leading American liberal, to Anthony Crosland, a Labour cabinet minister and theorist. Somehow Encounter managed to get the best work that most of these people, and a few dozen others, could produce. For 14 years it was a success, but then it was disgraced. Ramparts, a magazine of the then New Left, disclosed that Encounter was financed by the Paris-based Congress for Cultural Freedom, a creature of the Central Intelligence Agency. This was in 1967 when anger at the Vietnam War threw a shadow over anything done by the U.S. government - especially anything secretive. Fighting the Cold War, Washington had noticed that Soviet propaganda was succeeding among artists and leftists. **The West needed to demonstrate the superiority of freedom as against the stultifying censorship in the U.S.S.R. In 1951 the CIA made Nicolas Nabokov (Vladimir Nabokov's composer cousin) head of the Congress for Cultural Freedom**. He organized festivals and conferences around Europe while encouraging Encounter and other CIA-backed magazines in Germany, Japan and elsewhere.

No word on former FBI agent missing since 2007
Washington Post, Adam Goldman, 2016 01 17
Washington - **As the families of Americans celebrate the release of their loved ones held in Iran, the authorities in Tehran said they would not be freeing a businessman arrested in October and were silent on the fate of a former FBI agent who disappeared in the country**. It was unclear why Siamak Namazi, 44, an Iranian American based in Dubai, was arrested in October while visiting a friend in Tehran where he had done consultant work over the previous decade. Namazi is the son of a prominent family in Tehran who couldn't be reached. Namazi immigrated to the United States in 1983, and he later returned to Iran after graduating from college to serve in the Iranian military. "I don't know what's going on," said Ahmad Kiarostami, a friend.

More recently though, it's been pretty clear the cat is out of the bag
Motherboard Blog, Joshua Kopstein, 2016 01 17
Washington - **A federal judge has ruled that the FBI must release documents it improperly withheld about StingRays, the now-infamous cellphone mass-surveillance devices that police and federal agencies have deployed in secret for decades**. The judgment comes courtesy of Daniel Rigmaiden, a reclusive former tax fraudster-turned-government transparency advocate who first exposed the StingRay's existence after being busted by one in 2008. Initially writing appeals while imprisoned on fraud charges, Rigmaiden has worked for years sleuthing out the secretive devices, resulting in revelations of their use by dozens of agencies and police departments across the country. Rigmaiden was released on probation in 2014 after taking a plea deal. Now the federal judge working Rigmaiden's FOIA lawsuit has ordered the FBI to release 8 additional StingRay documents, saying the information was "not properly withheld."

The agency had tried to hide the documents, invoking the broadly-written Exemption 7(E), which can exclude records that might reveal "techniques and procedures" used in law enforcement investigations.

Ex-CIA Operative Faces Italian Prison Term
Wall Street Journal, Patricia Kowsmann and Manuela Mesco, 2016 01 16
Washington - **A Portuguese court has ruled that a former U.S. Central Intelligence Agency operative convicted in Italy for kidnapping under the U.S. rendition program should be turned over to Italian authorities to serve a seven-year prison sentence. Sabrina de Sousa**, a dual citizen of the U.S. and Portugal, was briefly detained at Lisbon's airport in October while preparing to board a flight to India. Her Portuguese lawyer, Manuel Magalhaes e Silva, confirmed the court's ruling Friday and said she would be allowed to remain in Portugal while appealing it. "Unexpected," Ms. de Sousa wrote via Twitter early Friday after learning of the ruling. Ms. de Sousa and 25 other Americans, mostly CIA agents, were tried and convicted in absentia by an Italian court in 2009 for participating in the 2003 kidnapping of Egyptian cleric Osama Mustafa Hassan Nasr, also known as Abu Omar, on a street in Milan. The CIA and Italian police considered the cleric to be a recruiter for al Qaeda. Italian magistrates said Ms. de Sousa and others gave logistical support to the operation

Ex-CIA chief in Benghazi breaks silence to dispute film
Washington Post, Adam Goldman Greg Miller, 2016 01 16
Washington - **It is the most fateful moment in a movie that purports to present a searingly accurate account of the 2012 attacks that left four Americans dead in Benghazi, Libya**: a scene in which the highest- ranking CIA operative at a secret agency compound orders his security team to "stand down" rather than rush off to rescue U.S. diplomats under siege less than a mile away. **According to the officer in charge of the CIA's Benghazi base that night, the scene in the movie is entirely untrue**. "There never was a stand-down order," said the **base chief known as Bob**, speaking publicly for the first time. "At no time did I ever second-guess that the team would depart." Nor, he said, did he say anything that could be "interpreted as equivalent" to an order to stand down. In a lengthy interview with reporters from The Washington Post, Bob provided new details about the attacks and his interactions with J. Christopher Stevens, the U.S. ambassador to Libya who perished in them. The account from the CIA base chief adds a critical and previously missing voice to the public record on Benghazi, an attack that even three years later remains so politically charged that Sen. Ted Cruz (Tex.), a Republican presidential candidate, made it the center of his closing remarks during this week's GOP debate.

A News Agency With Scoops Directly From ISIS
New York Times, Rukmini Callimachi, 2016 01 15
New York - The San Bernardino shootings. The killing rampage this week in a Baghdad mall. On Thursday, it was the explosion that ripped through a Starbucks in Jakarta. **In each of those terrorist attacks, an outlet called the Amaq News Agency was first with the news that the Islamic State was going to claim responsibility. The agency has been getting the scoops because it gets tips straight from ISIS,** and for those of us on the terrorism beat, that has made Amaq a must-read every time a bomb goes off. It publishes a heavy stream of short releases on an encrypted phone app called Telegram, functioning much like an official news agency might inside a totalitarian state. The alerts, articles and videos take on the trappings of mainstream journalism, with "Breaking News" and "Exclusive" headings. And its reporters try to appear objective, toning down the jihadist hyperbole ISIS uses in its official releases. (The

Jakarta attackers were "Islamic State fighters" rather than the ISIS-preferred "soldiers of the Caliphate."

Secretary of Defense Lauds Push Against ISIS
New York Times, Michael S. Schmidt, 2016 01 14
Fort Campbell, Ky. - **Defense Secretary Ashton B. Carter provided an upbeat assessment on Wednesday of the Obama administration's efforts to defeat the Islamic State** and said that **missions now underway by a new deployment of Special Operations forces are "generating a virtuous cycle of action" against the extremist group**. Mr. Carter's speech here to troops set to deploy to Iraq came as the Obama administration tried to convince an apprehensive public that it has an effective strategy to destroy the Islamic State, also known as ISIS or ISIL. Mr. Carter lauded Iraqi security forces who, aided by American airstrikes, reclaimed the western city of Ramadi from the Islamic State last month as the latest example that the United States and its allies have the right approach. The defense secretary also said other measures -- cutting off the Islamic State's supply routes, destroying its oil fields and disrupting its finances -- "are significantly constraining its ability either to defend or attack." "We have not only gathered momentum but done even more, and are now pressuring ISIL in Iraq and Syria on more fronts than at any other point in the campaign," Mr. Carter said.

U.S. official sees more cyber attacks on industrial control systems
Reuters, Staff report, 2016 01 14
Miami - **A U.S. government cyber security official warned that authorities have seen an increase in attacks that penetrate industrial control system networks over the past year**, and said they are vulnerable because they are exposed to the Internet. Industrial control systems are computers that control operations of industrial processes, from energy plants and steel mills to cookie factories and breweries. "We see more and more that are gaining access to that control system layer," said Marty Edwards, who runs the **Department of Homeland Security's Industrial Control Systems Cyber Emergency Response Tea**m, or ICS-CERT. ICS-CERT helps U.S. firms investigate suspected cyber attacks on industrial control systems as well as corporate networks.

Ex-CIA boss: ISIS gaining affiliates 'faster than Al Qaeda ever did'
Fox News, Staff report, 2016 01 12
Washington - **The Islamic State's web of affiliates is growing faster than Al Qaeda's ever did, a former top CIA official told Congress on Tuesday - on the heels of yet another attack blamed on ISIS. Michael Morell**, President Obama's former deputy and acting CIA director, issued the warning in testimony to the House Armed Services Committee. He said the number of militant groups now swearing allegiance to ISIS has grown to cover nearly 20 countries, from practically "nothing" a year ago. "ISIS has gained affiliates faster than Al Qaeda ever did," Morell said. The Islamic State's web of affiliates is growing faster than Al Qaeda's ever did, a former top CIA official told Congress on Tuesday - on the heels of yet another attack blamed on ISIS. Michael Morell, President Obama's former deputy and acting CIA director, issued the warning in testimony to the House Armed Services Committee. He said the number of militant groups now swearing allegiance to ISIS has grown to cover nearly 20 countries, from practically "nothing" a year ago. "ISIS has gained affiliates faster than Al Qaeda ever did," Morell said.

Ex-spy chief: Ukrainian cyberattack a warning sign for US utilities
Christian Science Monitor, Paul F. Roberts, 2016 01 13
Washington - **Former National Security Agency chief Gen. Michael Hayden warned that a**

recent malware attack on the Ukrainian power grid is yet another troubling sign that the US electric supply is vulnerable to hackers. The Dec. 23 attack on utilities serving the Ivano-Frankivsk region of Ukraine appears to be the second confirmed incident of a computer-based attack to damage physical infrastructure. The attack led to blackouts throughout the region for several hours before power was restored. The Stuxnet worm that targeted the Iranian nuclear program is the only other such incident. What happened in Ukraine is a harbinger for the kinds of cyberthreats the US faces, possibly from rival nations such as Russia and North Korea, the retired Air Force general told a crowd of critical infrastructure experts at the S4x16 security conference in Miami.

Hacker claims to tap into intelligence chief's email
Washington Post, Ellen Nakashima, 2016 01 13
Washington - **One of the hackers who boasted last fall of breaking into the private email account of the CIA director apparently has struck again - this time targeting the director of national intelligence**. A prankster who goes by the nickname "Cracka" told a reporter for the online magazine Motherboard that he had broken into a series of accounts linked to National Intelligence **Director James R. Clapper**. They included Clapper's home telephone and Internet, his personal email and his wife's Yahoo email account, according to the site, which is owned by Vice. The reporter, Lorenzo Franceschi-Bicchierai, said Cracka provided him with screenshots of some of that material but not Clapper's personal email. A spokesman for Clapper, Brian Hale, said the Office of the Director of National Intelligence was "aware of the matter and reported it to the appropriate authorities." The FBI is investigating.

Teen Who Hacked CIA Email Is Back to Prank US Spy Chief
Motherboard (Vice), Lorenzo Franceschi-Bicchierai, 2016 01 12
New York - **One of the "teenage hackers" who broke into the CIA director's AOL email account last year hasn't given up targeting government intelligence officials**. His latest victim is the **Director of National Intelligence James Clapper**, Motherboard has learned. A group of hackers calling themselves "Crackas With Attitude" or CWA made headlines in October, hacking into CIA Director John Brennan's email account and apparently getting access to several online tools and portals used by US law enforcement agencies.The hackers' exploits prompted the FBI to issue an alert warning government officials of their attacks. One of the group's hackers, who's known as "Cracka," contacted me on Monday, claiming to have broken into a series of accounts connected to Clapper, including his home telephone and internet, his personal email, and his wife's Yahoo email. While in control of Clapper's Verizon FiOS account, Cracka claimed to have changed the settings so that every call to his house number would get forwarded to the Free Palestine Movement. When they gained notoriety last year, Cracka and CWA claimed their actions were all in support of the Palestine cause. "I'm pretty sure they don't even know they've been hacked," Cracka told me in an online chat. But Brian Hale, a spokesperson for the Office of the Director of National Intelligence, confirmed the hack to Motherboard on Tuesday. "We're aware of the matter and we reported it to the appropriate authorities," Hale said, declining to answer any other questions on the record. (The FBI declined to comment.)

MI5 is voted best place to work for homosexuals
The Daily Telegraph, Tom Whitehead, 2016 01 19
London - **MI5 has been named Britain's most gay-friendly employer, only 25 years after homosexual candidates were first allowed to apply**. The security service, which has a "reverse mentoring" scheme that matches straight managers with junior gay staff, topped the index of the best 100 employers for lesbian, gay, bisexual and transgender (LGBT) equality compiled by the charity Stonewall. The domestic intelligence agency has appeared on the list since 2012 and was ranked seventh last year. **It jumped to first place thanks to an increased commitment to diversity, holding events to improve awareness of LGBT issues and sharing ideas with GCHQ and MI6.** The ban on homosexual people working for MI5 persisted until the early Nineties, long after male homosexual acts were decriminalised in 1967. But these days the reality of being a spy in Britain is very different from the macho, womanising James Bond stereotype. Initiatives at MI5 include an active LGBT network, which meets socially and formally to improve diversity, and having an LGBT "champion" on the board who promotes equality.

Inquiry into foreign backers of UK extremists gets green light
The Observer, Mark Townsend, 2016 01 17
London - **David Cameron has authorised an investigation into the foreign funding and support of jihadi and extremist groups in the UK**, a development that could lead to a potential standoff with the government's key Gulf ally Saudi Arabia. Political pressure on Cameron to investigate extremist revenue streams in the UK has come from the Liberal Democrats who requested the inquiry in exchange for supporting the extension into Syria of British airstrikes against Islamic State. The Home Office's new extremism analysis unit has been directed by Downing Street to specifically examine the scale and origin of funding of extremist groups in the UK with a remit to follow overseas funding streams. Home Office sources would not give details on the level of resources which will be assigned to the inquiry. Its findings will be sent directly to the home secretary Theresa May and Downing Street this spring. The Gulf kingdom has repeatedly been accused of funding mosques and groups with links to Islamist terrorism in the west. Last month Angela Merkel's deputy, Sigmar Gabriel, told the Bild am Sonntag newspaper that the Saudi regime posed a danger to public security through its support for Wahhabi mosques around the world. Wahhabism, a fundamentalist form of Islam practised in Saudi Arabia, has been identified by the European parliament as a driver of global terrorism.

A former MI5 agent told us why it's so easy for Islamic State terrorists to move around without being noticed
Business Insider, Jim Edwards, 2016 01 17
Interview: **One of the most depressing aspects of the appearance of a "new Jihadi John" video is that the man killing the prisoners in the video, Siddhartha Dhar, was known to UK security services before he fled to Syria** and had even been arrested by British police before being let go on bail. Dhar had also repeatedly shown up at Islamic extremist rallies in the UK and had appeared on TV advocating the terrorist cause. This is not unusual. The first "Jihadi John," Mohammed Emwazi, escaped from the UK to go to Islamic State/ISIS/Daesh even though he was known to MI5 and was on the Home Office Warnings Index. The ringleader of the Paris attacks, Abdelhamid Abaaoud, entered and left the UK before planning the attacks. And five other Islamists linked to Dhar left the UK undetected in the months prior to Dhar's execution video. So why is the UK so bad at keeping tabs on terror suspects? Business Insider has noted before that the job is more complicated than it sounds, even after the suspect has been identified. In France, for instance, former French intelligence counterterrorism chief Louis Caprioli estimated that it takes 18 to 20 officers to keep an eye, 24 hours a day, on any one suspect. **There are 6,000 employees at GCHQ and 4,000 at MI5. But there are up to 3,000**

suspects in the UK. At the French ratio, you would need 60,000 officers to track them all. That's almost half of Britain's total number of police officers, 127,000 (PDF). It's an impossible job. So we asked a former MI5 operative, Annie Machon, how they do it. Machon was once responsible for monitoring IRA suspects in the UK in the 1990s.

Trident is old technology': the brave new world of cyber warfare
The Guardian (London), Julian Borger, 2016 01 16
London - Forget debates about Britain's nuclear deterrent. **New technology means a country can be brought to its knees with the click of a mouse. The naval base at La Spezia in northern Italy is in an advanced state of decay. The grand Mussolini-era barracks are shuttered; the weeds won their battle with the concrete some time ago**. But amid the crumbling masonry, there is an incongruously neat little building, shaded behind a line of flags, with smartly outfitted security men behind its glass doors. This is **Nato's Centre for Maritime Research and Experimentation (CMRE).** As one battleship after another has been removed from what remains of the Italian navy, and the base is wound down, the centre is preparing for a new kind of marine warfare amid the wreckage of the old. In a line of workshops along the quay, technicians tinker at the innards of the next generation of naval weapons. They may look like large bright yellow torpedoes, but they are in fact underwater drones, capable of being remote controlled on the surface and taking autonomous actions in the deep. But the technicians here insist they are working on the state of the art.In the wake of criticisms that the UK's cyber fortifications are inadequate, **George Osborne announced in November that the government would spend nearly £2bn on cyber defence and establish a National Cyber Centre, led by GCHQ.** As well as data collection, mass surveillance and monitoring terrorist threats, the UK is prepared to carry out offensive operations. Officials say these might include infecting and disconnecting enemy computers, or creating "real world effects" by targeting computer systems that control civilian infrastructure - the power grid, for instance.

Snooper's charter: cafes and libraries face having to store Wi-Fi users' data
The Guardian (London), Alan Travis, 2016 01 14
London - **Coffee shops running Wi-Fi networks may have to store internet data under new snooping laws**, Theresa May has said. Small-scale networks such as those in cafes, libraries and universities could find themselves targeted under the legislation and forced to hand over customers' confidential personal data tracking their web use. The home secretary has also given her first hint that the costs of her snooper's charter are likely to go far beyond the official £240m estimate. May told peers and MPs that talks were under way with internet and phone companies over costs and their technical capacity to deliver the measures, after being told that Vodafone, O2 and EE had testified that each company could each spend that amount alone in implementing the proposed surveillance law.

Met chief cannot say if more terror suspects skipped bail
London Daily Telegraph, Tom Whitehead, 2016 01 14
London - **The head of Scotland Yard admitted yesterday that he had no idea if more terrorism suspects have fled police bail after he ordered an urgent review**. Sir Bernard Hogan-Howe, the Metropolitan Police Commissioner, has ordered officers to review dozens of bail cases to check if any others have "slipped through" in the wake of the blunders that allowed Siddhartha Dhar to escape. The Londoner fled to Syria in 2014 after failing to surrender his passport while on police bail but officers did not realise for up to six weeks. **The former bouncy castle salesman is now suspected of being Isil's new "Jihadi John", who fronted a recent video in which prisoners were killed.** On Tuesday, David Cameron pledged to toughen up the

police bail system after Mark Rowley, the Met's counterterrorism chief, branded it "weak" and "toothless". Mr Rowley said around 110 terrorism suspects are on police bail.

Colin Duffy 'targeted in Majorca MI5 sting operation'
BBC News, Staff report, 2016 01 14
London - **High-profile dissident republican Colin Duffy was allegedly targeted in an MI5 sting operation in Majorca, a court has been told**. An agent said he posed as a holidaying Serbian businessman with criminal links in a bid to secretly record discussions about potential arms dealing. Another operative acted as his girlfriend during the assignment aimed at securing an encounter with Mr Duffy. A hearing took place to decide if he is to stand trial on terror charges. Mr Duffy is accused of directing and belonging to an IRA grouping, and attempting to murder members of the PSNI. He faces further counts of possessing firearms and ammunition, and conspiring with Alex McCrory and Henry Fitzsimons to murder security force members.

Russian whistleblower may have spoken to MI6 before his death, court hears
The Guardian (London), Luke Harding, 2016 01 14
London **- A Russian whistleblower may have "talked to Britain's spy agencies" before his mysterious death in November 2012, when he was possibly poisoned by a lethal fern, a coroner's court has been told**. Alexander Perepilichnyy collapsed and died outside his luxury home in Weybridge, Surrey, after he had been out jogging. He was 44. Surrey police insist there are no suspicious circumstances surrounding his death. Previous hearings, however, have heard that faint traces of a rare and deadly Himalayan plant, Gelsemium elegans, were found in Perepilichnyy's stomach. Perepilichnyy was instrumental in exposing a massive alleged money-laundering ring involving the Russian mafia and the Russian state. He provided details of an alleged $230m (£148m) fraud carried out by senior Russian tax officials. The money was allegedly stolen from taxes paid by Hermitage Capital, a hedge fund run by the US-born financier Bill Browder. On Wednesday Hermitage's lawyer, Geoffery Robertson QC, accused Surrey police of covering up vital information. T

UK Home Sec stumbles while trying to justify blanket cyber- snooping
The Register (UK), Alexander J. Martin, 2016 01 14
London - **UK Home Secretary Theresa May was grilled on Wednesday by a Parliamentary committee scrutinizing fresh powers proposed for GCHQ**. Crucially, she was unable to explain to the panel exactly why Blighty's **intelligence services need the ability to carry out mass surveillance on millions of innocent Brits** - which would be strongly authorised if a draft law - the Investigatory Powers Bill (IPB) - is passed. While the joint committee was pleased that **GCHQ's bulk surveillance** and hacking operations are being brought under parliamentary scrutiny for the first time, having previously been effected through royal prerogative, the panel noted that the agency's sweeping powers have yet to be fully justified. The committee specifically asked the Home Secretary to make an operational case for GCHQ's abilities. May replied instead that she wished "to give a greater degree of transparency" to the intelligence agency's efforts, and promised to write in with some more information.

Australia/ Australie

Australia not prepared for cyber war
ABC (Australia), Francis Keany, 2016 01 19

Canberra - **A new report warns Australia is not adequately prepared for cyber war, with the nation "badly lagging" behind overseas counterparts and the Defence Force also at** risk. Research by the **Australian Centre for Cyber Security (ACCS)** said Australian government and civilian organisations were well behind China and the United States, which have gone to great lengths to prepare themselves. The report released by Professor Greg Austin called for a "rapid catch-up in Australian capabilities for military security in the information age", warning Australia's response to the threats that have emerged in cyberspace has been "slow and fragmented". Another report by the ACCS has also warned the Australian Defence Force (ADF) has not done enough to test its ability to ward off cyber attacks against weapons systems. While Australia has relied on the United States for its security needs for the past 60 years, the report warned that support would be limited when it came to cyber warfare. This is despite Australia's involvement in the Five Eyes intelligence alliance. "The reliance by middle powers such as Australia on the United States for extended deterrence may not have as much impact in cyber space as for kinetic operations," Professor Austin said. He said while there was public debate about the future of Australia's naval, air and ground capabilities, there has been "no effort in public by the government to benchmark Australian national security needs in cyber space in the same way".

Airports step up security checks for returning jihadis
The Australian, Dan Box & Jannine Khalik, 2016 01 16
Canberra - **Counter-terrorism teams at Australia's international airports have been "recalibrated" to increase their focus on foreign fighters returning from the warzone in Syria and Iraq, alongside checks for those travelling to join Islamic State**. Australian Border Force chief executive Roman Quaedvlieg said the change, made over the past month, reflected fears that those who returned might bring with them both combat experience and the more radical ideologies the terrorist group promoted. "The focus when the Counter Terrorism Unit was established was on the outbound travel because that was where the foreign fighter problem was manifesting but we've recalibrated," he said. "When they come back in, presumably battle-hardened, more extreme, my fear is that they will form a leadership role in the community." Established in August 2014 with almost $50 million in federal government funding, these units are now based at all eight Australian international airports. Responding to automated alerts on passengers as well as making real-time assessments of potential threats, they play a key role in preventing those travelling to join the roughly 110 Australians thought to be fighting with Islamic State. In December, **ASIO director-general of security Duncan Lewis** said this number appeared to have reached a plateau, while about 40 more Australians were thought to have died on the battlefields of Syria and Iraq.

College established to fight terrorism
China Daily, 2016 01 18
China's first educational institute of its kind focusing on counterterrorism law has been created at a university in Northwest China, which aims to build a pool of legal experts to help **China combat terrorism**. The institute was set up by the Northwest University of Political Science and Law in Xi'an, Shaanxi province, and is expected to receive its first class of undergraduates in spring semester. "To better fight terrorism under new circumstances, China has an urgent and strategic need for a team of qualified experts who have comprehensive knowledge in the field," Jia Yu, president of the university, said at the launching ceremony for the institute on Saturday. Undergraduate students will get lectures on counterterrorism strategies of China and other countries, along with lessons on religion and ethnic affairs. The institute will also introduce doctoral and master's degree programs in counterterrorism law. China is facing intensified terrorism problems as foreign terrorists and extremist groups have stepped up their efforts to target the country, and an increasing number of domestic attacks were found to have been plotted overseas via the Internet, authorities say. To cope with changes and trends in the fight against terrorism at home and abroad, China enacted its first counterterrorism law in 2015. Unlike counterterrorism institutes at the People's Public Security University of China, the Yunnan Police Officer Academy and Xinjiang Police College, the newly created institute will focus on law and policy studies rather than how to react to terrorist attacks. Graduates of the institute could be advisers on antiterrorism policy at several levels, including the front-line fight and in the central government, Jia said.

Naperville man tied to Chinese intelligence agency became U.S. citizen illegally
Chicago Tribune, Clifford Ward, 2016 01 15
Chicago— A **Naperville man who failed to disclose his past affiliation with the Chinese Communist Party and an alleged tie to the Chinese intelligence service** has been charged with unlawfully becoming a U.S. citizen, federal authorities said Friday. **Lu Lin**, 58, of the 4200 block of Colton Circle, is due to appear Thursday in federal court in Chicago to be arraigned on a charge of obtaining citizenship or naturalization illegally. Lin was indicted this past Thursday, according to the FBI. According to the indictment, Lin provided false information on paperwork he turned in during his process of becoming a naturalized U.S. citizen. In the documents, Lin said he had never been a member of or associated with the Chinese Communist Party and had never used any other names, according to the indictment.But authorities say Lin belonged to the Communist Party from 1987 to 1997. They also allege that he had received identification with his photo but under the name Yung Yeung. That identification belonged to China's Ministry of Public Security, which is that country's national police force and law enforcement agency, the FBI said. Federal authorities allege that Lin used the ID to enter Hong Kong and obtain information that he forwarded to **the Ministry of State Security**. The ministry is an intelligence agency responsible for counterintelligence, foreign intelligence and political security, the FBI said.

Xinjiang drafting 1st statute against religious extremism
China Daily, 2016 01 14
Beijing - **Lawmakers in the Xinjiang Uygur autonomous region will begin to draft a regulation against religious extremism this year, the top regional legislator said on Wednesday**. It will be China's first legislation targeting religious extremism, which has led to a

number of terrorist attacks in the country in recent years. "Drafting local regulations on anti-terrorism and eliminating religious extremism are the main focus of this year's legislative work, which will provide solid legal support for Xinjiang to combat terrorism and religious extremism," said Nayim Yassen, director of the Standing Committee of the Xinjiang Regional People's Congress. Nayim made the remarks on the sidelines of the annual session of the local people's congress in Urumqi, the regional capital. Local lawmakers will also start to draft the practices for implementing the counter terrorism law in Xinjiang this year. They had already begun to draft local anti-terrorism legislation before the National People's Congress passed China's first counter terrorism law in December.

SBU says IS supporters recruiting new members in Ukraine
UNIAN (Ukraine), Staff report, 2016 01 18
Kiev - **In Ukraine, there are separate groups of IS ideology supporters, who are engaged in propaganda among people they know and in the recruitment of new members, the relocation of recruited persons**, including those from the Caucasus and Central Asia via Ukraine and Turkey to the Syrian-Iraqi zone for fighting for or against the ISIS. They also provide [recruits] with material and financial support, temporary accommodation and supply [them] with passports and travel documents," the **SBU Security Service** of Ukraine told Gordon. According to the SBU, the recruits include both immigrants from Muslim countries, permanently or temporarily residing in Ukraine, and Ukrainian citizens who do not belong to ethnic groups that practice Islam. "As of today, the SBU has identified 50 people from among residents of Crimea (Ukrainian citizens and foreigners residing in Crimean territory), who are involved in fighting in Syria and Iraq as part of the Islamic State, Al-Nusra Front and related organizations. In addition, the SBU revealed 63 IS supporters from among foreign nationals who have been brought to Turkey through our country," the security service reported. The SBU concludes that Ukraine is considered by IS agents mainly as a zone for supporting terrorists' activity in third countries. At the same time, the security agency does not rule out the possibility of IS terrorist attacks on Ukrainian-based representative offices, enterprises, institutions, organizations and individual citizens of the anti-terrorist coalition.

Ukraine says cyber attack on airport launched from Russia
Reuters, Staff report, 2016 01 18
Kiev - **A cyber attack on Kiev's main airport was launched from a server in Russia, Ukraine's military spokesman told Reuters on Monday, as the state-run Computer Emergency Response Team (CERT-UA) warned of the threat of further attacks**. Malware similar to that which attacked three Ukrainian power firms in late December was detected in a computer in the IT network of Kiev's main airport, Boryspil, last week. The network includes the airport's air traffic control. "The control center of the server, where the attacks originate, is in Russia," military spokesman Andriy Lysenko said by phone, adding the malware had been detected early in the airport's system and no damage had been done. A spokeswoman for the airport said Ukrainian authorities were investigating whether the malware was connected to a malicious software platform known as "BlackEnergy," which has been linked to other recent cyber attacks on Ukraine. There are some signs that the attacks are linked, she said.

America may be doomed to cooperate with Putin
Washington Post, David Ignatius, 2016 01 13
Column - **Russia is emerging as an essential diplomatic and security partner for the United States in Syria, despite the Obama administration's opposition to Moscow's support for President Bashar al- Assad**. Russian-American cooperation on Syria now includes regular diplomatic, **military and intelligence contacts**. Moscow and Washington have evolved a delicate process for "deconfliction" in the tight Syrian airspace, where accidents or miscommunication could be disastrous. Administration officials see working with Russia as the best of a bad set of options. An administration that has had trouble living with Russian President Vladimir Putin, especially after his actions in Ukraine, finds that it can't live without him in Syria. Washington's hope is that Putin will support U.S. efforts to negotiate a cease-fire because he concludes it's the only way to avoid a quagmire. "While we remain skeptical of Russian interests and intentions in Syria, we also believe that they will be an essential part of any political solution to this conflict," one senior administration official explained Tuesday.

Detained Turkish reporters defiant over espionage claim
BBC News, Selin Girit, 2016 01 19
Istanbul - "We were kept in total isolation for 40 days. We were all alone in our prison cells. This punishment is the same a murderer of five people gets," writes Can Dundar, a prominent Turkish journalist currently behind bars in Istanbul. Mr Dundar, editor-in-chief of the opposition Cumhuriyet daily has been in pre-trial detention for almost two months now, along with his colleague Erdem Gul, the newspaper's Ankara bureau chief. In November, a court in Istanbul charged both journalists with espionage after their reports alleged Turkey's intelligence services were sending weapons and ammunition to Islamist rebels fighting the Syrian regime. Turkish security forces intercepted a convoy of lorries near the Syrian border in January 2014, and Cumhuriyet alleged these vehicles were linked to **Turkey's MIT intelligence organisation**. Alongside the newspaper report was video footage showing police discovering crates of weapons hidden beneath boxes of medicine. The government insisted that the lorries were not carrying weapons to the Islamist rebels as alleged, but bringing aid to Syria's Turkmen minority, a Turkic-speaking ethnic group.

Ex-police chief: MİT was aware of PKK stockpiling weapons in SE
Cihan News Agency (CNA), 2016 01 19
Istanbul - **Former Diyarbakır Police Chief İlyas Burunak has said the National Intelligence Organization (MİT) was aware that the terrorist Kurdistan Workers' Party (PKK) was piling up weapons in southeast Turkey during the settlement process launched in 2012 that aimed to end the country's long-standing Kurdish problem**. The process, launched by the government with the PKK's jailed leader, Abdullah Öcalan, in late 2012, came to an end in late July, with the revival of intense clashes in the region. During the settlement process, a de facto cease-fire was in place. The PKK has traditionally used an attack and leave" tactic. Today, however, PKK terrorists are challenging government forces in urban centers by digging trenches and using heavy weapons. The government has been harshly criticized for allegedly closing its eyes to the PKK's increasing activities in urban areas and the terrorist group's stockpiling of weapons in some tense, southeastern towns, such as Cizre, Silopi, Sur and Nusaybin, during the cease-fire period.

Découverte d'une hotline de l'État Islamique
Le Figaro, Journaliste maison, 2016 01 18
Paris - **La Direction Générale de la Sécurité Extérieure (DGSE) a expliqué dans une note confidentielle rédigée début décembre avoir fait la découverte d'une "cellule d'assistant informatique" de l'État Islamique, révèle RTL**. Cette hotline est disponible 24 heures sur 24 par des "experts informatiques titulaires de diplômes universitaires". Ils distillent des conseils sur la façon de crypter les messages et sécuriser les communications et possèdent un compte Twitter "islamiscate technical" qui forme à l'utilisation des messageries Telegram (Russie) et Threema (Suisse) et des blogs qui offrent des cours à distance. "Il faut être clair, à partir du moment où le cryptage est réalisé correctement de bout en bout, il n'y a pas de parade. Même avec les supers ordinateurs que les uns ou les autres peuvent avoir, on est aujourd'hui sur des logiciels qui utilisent des cryptages importants et le décryptage de ces messages s'avère impossible", l'expliquait ce matin François Paget, secrétaire adjoint du Club de la Sécurité de l'Information Français (CLUSIF) au micro de Damien Delseny, journaliste RTL.

German data surveillance includes Finland
Yle (Finland), Staff report, 2016 01 17
Helsinki - **At least 6 Finnish transit lines were monitored in the mid-2000s by German intelligence agency BND, according to leaked German intelligence documents**. The list was leaked to Austrian politician and member of parliament Peter Pilz, who published the first part the list in May 2015. According to Pilz, the leaked list was around 2005 and was part of the German and American surveillance operation Eikonal. "Operation Eikonal" gathered telephone and Internet data between 2004 and 2008, in co-operation with the American security agency, the **NSA**. The German surveillance list -- 256 foreign transit lines from 31 European countries were monitored -- was made public last October in Slovenia's investigative journalism programme Epilog. At that time, the list brought into light unknown details regarding Finland. According to the list, six transit lines were monitored: Helsinki- Paris, Brussels-Helsinki, Helsinki-Shanghai, Budapest-Helsinki, Helsinki- Luxembourg and Helsinki-Reims. Finnish Security Intelligence Service Supo said that generally speaking, it comes as no surprise if it Finnish lines had been monitored.

France Moves to Better Coordinate Its Antiterrorism Efforts; French intelligence agencies to share information and resources
The Wall Street Journal Online, Matthew Dalton, 2016 01 19
Paris - **France on Thursday said it is moving to increase cooperation between its domestic and overseas intelligence services, pushing to break down bureaucratic barriers that have hindered its efforts to prevent terrorist attacks**. The government has been seeking to bolster its antiterrorism infrastructure since Islamist militants killed 130 people in Paris in Novemberand another 17 a year ago. **A weak point, security analysts say, is the lack of coordination across the multitude of French intelligence agencies, including the police, the country's foreign intelligence service, its counterespionage agency and a military intelligence directorate**.The French government decided “to deepen coordination between interior and exterior intelligence services in France as well as overseas…particularly from transit zones and sanctuaries where terrorists gather who want to commit acts on our territory," President François Hollande's office said after the government's weekly cabinet meeting.France, like other Western governments, is scrambling to gather information on Islamic State's attack planning in Syria, where hundreds of French citizens are still fighting in the ranks of the militant group. France ramped up that effort even before Islamic State operatives from France and Belgium slipped into Europe to sow carnage on the streets of Paris on Nov. 13. That intelligence usually collected by France's main external intelligence agency, the **DGSE**, or by its military intelligence agency. But the information sometimes isn't shared with France's main

domestic intelligence service, the **DGSI**."Information collected overseas is not transmitted systematically and automatically to the DGSI," says Jean-Charles Brisard, president of the Center for Analysis of Terrorism, a French think tank.An investigation conducted by the French legislature in the aftermath of the January 2015 attacks, which left 17 people dead, including 12 at the satirical newspaper Charlie Hebdo, **called for better intelligence cooperation**, in particular between the DGSI and the intelligence service of the French police.

Portuguese court orders that former CIA officer be sent to Italy
Washington Post, Ian Shapiraw, 2016 01 16
Washington - **A Portuguese appeals court has ordered the extradition of a former CIA officer to Italy, where she was convicted in absentia for her role in the rendition of a terrorism suspect and faces four years in prison**. Sabrina De Sousa, a U.S. and Portuguese citizen, traveled in April to Lisbon, where she and her husband spend part of the year. But in October, when she went to the airport to travel to the Indian state of Goa to visit her ailing mother, De Sousa was arrested when authorities saw an alert that she was wanted in Italy. In an interview Friday morning, De Sousa said she was surprised by the court's decision this week and will appeal the ruling to Portugal's Supreme Court. If she loses there, she can tak e her case to the country's Constitutional Court. She will not be sent to Italy until she exhausts her judicial options, she said.

Renseignement antiterroriste : qui fait quoi de la DGSI et de la DGSE ?
L'Opinion, Journaliste maison, 2016 01 15
Paris - **A la suite du conseil national du renseignement (CNR), qui s'est tenu mercredi à l'Elysée, au cours duquel le « pilotage opérationnel quotidien » du renseignement sur le terrorisme visant le territoire national a été explicitement confié au ministre de l'Intérieur, nous pouvons apporter des précisions sur le fonctionnement de la lutte antiterroriste**. Tout d'abord, la **DGSE** ne passe pas sous la « tutelle » du ministère de l'Intérieur, mais le coeur du dispositif tient en une « coopération opérationnelle » entre la Direction générale de la sécurité intérieure et Direction générale de la sécurité extérieure. Les autres services de la communauté du renseignement, qui ont une mission dans le domaine de la lutte antiterroriste (LAT), s'organisent autour de ce « noyau ». Dans la pratique, il existe une « cellule » au sein du ministère de l'Intérieur, où sont présents tous les services du premier cercle (DGSI, DGSE, **DRM**, **DPSD**, **DNRED** et **Tracfin**). La **DGSI** est « le référent, le chef de file, le pilote » de la coordination de la lutte antiterroriste sur le sol national. La DGSE est chargée de la détection et de « l'entrave » de la menace à l'étranger. Dans le langage des services, l'entrave fait référence à l'action clandestine visant à empêcher la commission d'un acte hostile. Dans ce cadre, la DGSE vient en appui à la DGSI lorsque la menace contre le territoire national est détectée à l'étranger.

Dutch spy services unravel 'myth' of life with IS
Agence France-Presse, Staff report, 2016 01 14
The Hague - **Dutch secret services fear as many as 70 Dutch children may be growing up among Islamic State jihadists, warning in a bleak new report about life under such a "totalitarian" regime**. "Life among ISIS, unravelling the myth" was released late Tuesday by **the intelligence services, the AIVD**, in a bid to spell out to families, police and aid workers the true hardships and dangers facing those who travel to Iraq and Syria. It paints a stark picture of life under a regime where "violence is inherent", new male recruits to IS are interrogated for days to ensure they are not spies, and children are routinely taken to watch executions of those sentenced to death by harsh Sharia courts. Thousands of foreign fighters from Western Europe as well as Gulf countries have been attracted to IS ranks in the past two years wanting to

support its goal of establishing an Islamic caliphate stretching across Iraq and Syria and beyond. Among them are more than 200 Dutch nationals, including about 50 women.

L'agresseur de l'enseignant à Marseille se dit " très fier " de son acte
Le Monde, Soren Seelow, 2016 01 14
Marseille - **Le jeune lycéen turc d'origine kurde qui a agressé à Marseille un enseignant juif à l'aide d'une machette, lundi 11 janvier, devait être présenté dans la journée de mercredi à un juge antiterroriste en vue de sa mise en examen pour " tentative d'assassinat aggravée en raison de l'appartenance à une religion et en relation avec une entreprise terroriste "**. Sa garde à vue n'aura duré que quarante-huit heures, contre un maximum prévu de quatre-vingts heures en matière de terrorisme, en raison de son âge : il aura 16 ans dans quelques jours. Le parquet a requis son placement en détention provisoire dans un établissement pour mineurs. Durant sa garde à vue, ce lycéen scolarisé en 2de dans un lycée professionnel des quartiers est de Marseille s'est montré particulièrement vindicatif. " Il a revendiqué son acte, dont il s'est dit très fier , explique une source proche de l'enquête. Il tient des propos cohérents, particulièrement haineux à l'égard des juifs et des mécréants. Son seul regret est que sa victime ne soit pas morte. Il se présente comme un partisan de l'Etat islamique, qu'il a découvert sur Internet. " Le jeune homme, qui prétend avoir agi seul, aurait en outre évoqué son désir de partir en Syrie. L'enquête, confiée à la police judiciaire de Marseille, **à la sous-direction antiterroriste (SDAT) et à la direction générale de la sécurité intérieure (DGSI)**, devra déterminer s'il a effectivement tenté de rejoindre la Syrie.

Iranian Intelligence Ministry has thwarted terror acts abroad
Tehran Times, Political Desk, 2016 01 19
Tehran - **The Iranian Intelligence Ministry has thwarted plots of extremist groups against the Islamic Republic in operations abroad**, an MP has quoted Intelligence **Minister Mahmoud Alavi** as saying. "Alavi said the ministry has foiled plots of Takfiri groups hundreds of kilometers away from Iranian borders," Mehr news agency quoted MP Abdolreza Mesri as saying on Monday as he was reporting a closed session with the intelligence minister. During the session, the minister submitted a report to the country's parliament about the ministry's anti-terror activities, Mesri stated. The Intelligence Ministry also neutralized hundreds of anti-Iran operations planned by Takfiri groups at the country's borders, Mesri quoted Alavi as saying. According to the ministry, some reactionary countries in the region are providing financial, military and informational support to Takfiri groups, Mesri further said.

Israel faces no existential threats, says departing Mossad chief
Times of Israel, 2016 01 16
Jerusalem—**Israel is no longer facing any existential threats, Tamir Pardo, the outgoing head of Israel's Mossad intelligence agency**, said in an interview published Saturday. But he warned that the nature of the challenges that the Jewish state must meet has shifted dramatically in recent years. Everyone knows that Israel is a very strong nation. This is no longer a time when Israel, as a young state, is forced to deal with existential fears," Pardo told the Hebrew-language Maariv newspaper. The greatest challenge faced by every head of the organization is to adapt to reality," he said. This is a profoundly different reality to the one that

existed when I was drafted into the IDF in 1971. Then we dealt with entirely different issues, as the threats were different. Hezbollah was an entirely different entity, Iran has completely changed, and even Turkey and Saudi Arabia are not what they once were." Pardo was a Mossad officer who came up through the ranks. A political insider, he served as the radio operator for the late Yoni Netanyahu (the prime minister's brother) during the rescue mission in Entebbe in 1976.

How Gazan Hackers Are Targeting Israelis
Haaretz, Oded Yaron, 2016 01 15
Jerusalem - **The Molerats – a group of hackers from the Gaza Strip who have been targeting Israelis and Israeli websites since 2012 – have recently started using a piece of software that they developed themselves to spy on their targets, according to an Israeli cybersecurity company.** Thus far, ClearSky Consulting and Intelligence Services reported that the Gazan hackers have been using off-the-shelf malware. According to the report, this is the same group of hackers that was responsible for the now infamous Benny Gantz virus, which targeted several government officers in 2012 by using the name of the then-IDF chief of staff. ClearSky experts believe that the group has also been targeting other countries in the Middle East, has links to Hamas and that at least some of its members reside in the Gaza Strip. According to ClearSky, the hackers have been focusing on Israeli military industries, embassies, journalists, banks and public bodies – as well as software developers.

Indonesia to Discuss Terror Law Revision at Special Cabinet Meeting
Jakarta Globe, 2016 01 19
Jakarta - **President Joko Widodo is mulling a revision of Indonesia's 2005 Anti-Terrorism Law in order to give law enforcers more authority to prevent attacks, following a bombing and shooting spree in Central Jakarta last week that left people eight, the State Palace said**. According to the Cabinet Secretariat, the president was scheduled to hold a closed-door meeting on Tuesday with senior law enforcement and security officials to discuss a possible revision of the law. Cabinet Secretary Pramono Anung said the meeting would hear suggestions and advice from the relevant agencies as well as discuss the human rights dimension of national security. "Since November, we had suspected, felt and detected extraordinary activities [of terrorists]. But the [Anti-Terrorism] Law, stipulates that there are some steps [in this process] where we are not able to take action," Pramono told reporters at the State Palace. After last week's attack, which was claimed by the Islamic State movement, people have pointed fingers at the **State Intelligence Agency (BIN),** saying it failed to detect the threat before it happened. In his defense, BIN chief Sutiyoso has said his people did detect the threat but lacked the legal authority to take act on it. Four of those killed in the attack were terrorists, the others civilians. Sutiyoso has proposed that intelligence officers also be given the authority to make arrests before an attack happens. Pramono, however, hinted that the president would likely turn down that request, saying that the National Counter-Terrorism Agency (BNPT) and the National Police would continue to lead the country's fight against terrorism. (full article)

Intelligence agent gunned down by motorcyclists in Nimroz
Pajhwok Afghan News, Ramin, 2016 01 19
Zaranj - **Unidentified gunmen have shot dead an agent of the intelligence service in southwestern Nimroz province**, a security official said on Tuesday. The official, who wished to

go unnamed, told Pajhwok Afghan News two motorcyclists opened fire on Mirajuddin late on Monday in the Shuhada Square of Zaranj, the provincial capital. Col. Abdul Hadi Aziz, the crime branch chief, confirmed the shooting and said the local spy network employee was on his way home when gunmen opened fire on him. The assailants managed to flee the scene, but police have launched a search for the killers. It was the third target killing incident in Zaranj in the past one week. (Full Report).

North Korea nuclear test paves way for rare party congress
Reuters, James Pearson and Ju-min Park, 2016 01 19
Seoul - **North Korean leader Kim Jong Un's recent nuclear weapon test was designed to boost his domestic legitimacy ahead of a rare ruling party conference in May that could formalise market-based economic experiments in the isolated country,** analysts say.The Workers' Party Congress, once a regular event, was last held in 1980.Although violent, the years since Kim took power following his father's death in late 2011 have moved the country towards increased stability and a return to a more "formal" way of running the country, said Michael Madden, an expert on the North Korean leadership,"North Korea needed a good result to celebrate at the congress and that was the hydrogen bomb test," **said Lee Cheol-woo, a member of South Korea's parliamentary intelligence committee, citing a briefing by the South's intelligence agency.**

Spy chief's role threatens hopes for Korea peace
London Times, Richard Lloyd Perry, 2016 01 19
Tokyo - **Kim Jong Un, the North Korean leader, has placed a hardline spy chief in charge of relations with South Korea,** in a setback for peace efforts on the peninsula. According to an intelligence report presented to South Korean MPs, Kim Yong Chol was appointed to the job after its previous occupant died in a car crash last month. As head of the general reconnaissance bureau, General Kim is held responsible by South Korea for acts of aggression that have brought the two sides close to war. In 2010 he ordered a submarine attack on a South Korean naval corvette, the Cheonan, which killed 46 sailors. General Kim, 70, was formerly a bodyguard of Kim Jong Un's father, Kim Jong Il. After several years moving up the bureau's hierarchy, he became its head in 2009, the year that other **intelligence agencies** were consolidated under its authority. Intelligence about General Kim's appointment was included in a report by the Yeouido Institute, a think tank affiliated with South Korea's ruling party, the contents of which were leaked to journalists in Seoul yesterday. (Full report).

Sri Lankan intelligence agencies on high alert on possibility of ISIS threat
Colombo Page, 2016 01 18
Colombo - **Following the recent attack in Jakarta by Islamic militants, Sri Lankan intelligence agencies are on high alert on the possibility of local groups having links with the extremist group Islamic State of Iraq and Syria (ISIS),** according to a report in Sunday Observer. Sri Lanka's Ministry of Defense earlier this month assured that the security forces and **all intelligence agencies were on full alert** on the possibility of any groups having links with the ISIS making their appearance in the country. When questioned about the presence of ISIS terrorists or links to sympathizer groups in Sri Lanka, Military Spokesman Brigadier Jayanath Jayaweera has said that the situation is no way a cause for panic or alarm. Brigadier Jayaweera however has declined to provide details saying that divulging vital and sensitive information could be counterproductive to the intelligence network established in the country and could jeopardize identifying the elements. Defense Secretary Karunasena Hettiarachchi recently said that security officials have received information that 36 Sri Lankan citizens have entered Syria secretly and some of them have joined the ISIS.

Rajnath meets intelligence, police officials over IS
Press Trust of India, 2016 01 18
New Delhi - **Top officials of central intelligence and investigative agencies and police of 13 States on Saturday held a meeting with Home Minister Rajnath Singh and discussed steps to check the growing influence of Islamic State (IS) among youngsters through social media and other sources**. Mr. Singh held the meeting to review the situation arising out of some Indian youths getting attracted towards IS and how to deal with the emerging challenge. "The issues that were discussed included misuse of social media, sources of impetus that attract persons, specially youth, to IS, the growth of IS influence in India's neighbourhood and the best possible law enforcement response," a Home Ministry spokesperson said.

Un homme lié aux attentats de Paris arrêté à Mohammedia
La Nouvelle Tribune (Maroc), Journaliste maison, 2016 01 18
Mohammedia, Maroc - **Le bureau central des investigations judiciaires (BCIJ) relevant de la Direction Générale de la Surveillance du Territoire (DGST) a réussi à arrêter, vendredi dernier à Mohammedia**, un ressortissant belge d'origine marocaine en relation directe avec certains auteurs des attentats terroristes perpétrés en novembre dernier à Paris. L'enquête en cours a révélé que le prévenu a voyagé en Syrie à partir de la Belgique en compagnie de l'un des kamikazes de Saint Denis (Paris) pour rejoindre, dans un premier temps, le » Front Al-Nosra » avant de rallier, par la suite, les rangs de l'organisation » Daech » où il a bénéficié d'entrainements militaires sur le maniement de différents types d'armes et sur les techniques de guérilla, avant d'être affecté sur l'un des fronts du conflit, indique un communiqué du ministère de l'Intérieur.

La Tunisie échappe aux opérations terroristes grâce à l'efficacité de son dispositif de renseignement
African Manager, Journaliste maison, 2016 01 12
Tunis - **La Tunisie vit, depuis quatre ans, sous haute menace de déstabilisation terroriste au point que la réactivation du système de renseignement, qui opère à l'abri de toute ingérence politique, est devenue une démarche impérieuse pour protéger le pays**. Il s'agit de l'une des solutions envisagées par plusieurs parties gouvernementales pour remodeler le rôle de l'appareil des renseignements en Tunisie, **s'inspirant en cela de l'expérience de l'Allemagne en matière de renseignements** garantissant à la fois la sauvegarde des droits de l'homme, l'autorité de la loi et la sécurité du pays. Le porte-parole du ministère de l'Intérieur Walid Loughini, a déclaré dans une interview accordée, lundi, à l'hebdomadaire « Assabah Ousboui, que grâce à la réactivation des systèmes de renseignement, la Tunisie a échappé à de nombreuses opérations terroristes.

Nisman's mysterious death: one year later, still more questions than answers
Buenos Aires Herald, 2016 01 17
Buenos Aires— A year later, the mystery remains. Tomorrow marks 12 months to the day when

Alberto Nisman shook the country's political world to its core after he was found in a pool of blood in his apartment, mere days after filing a criminal complaint against former president Cristina Fernández de Kirchner. But the death of the prosecutor in charge of investigating the country's worst-ever terrorist attack continues to be plagued with unanswered questions. The shock wave his death caused around the world continues to resonate at the Pink House. President Mauricio Macri has sent a message to make it clear that he wants to reactivate the investigation into the prosecutor's mysterious death and to thrust the former administration into the heart of the inquiry. On December 16, 2014, CFK shook up the **Intelligence Secretariat** (SI) in an attempt to reduce the power Antonio "Jaime" Stiuso yielded as Operations chief. The decision went largely unnoticed until January 14, when Nisman filed a criminal complaint accusing CFK and her Foreign minister, Héctor Timerman, of having signed the 2013 Memorandum of Understanding with Tehran to whitewash the alleged Iranian involvement in the 1994 attack on the AMIA Jewish community centre. The former administration immediately described the writ as a consequence of Stiuso's anger.

AFI to cooperate with Nisman probe
Buenos Aires Herald, 2016 01 17
Buenos Aires— **President Mauricio Macri yesterday gave the green light for the Federal Intelligence Agency (AFI) to fully cooperate with the criminal investigation into the mysterious death of former AMIA special prosecutor Alberto Nisman**. The move illustrates how the new government is making an effort to relaunch the Nisman probe ahead of the upcoming one-year anniversary of his death on January 18. AFI head Gustavo Arribas yesterday said members of the secret services were free to appear before Judge Fabiana Palmaghini. The agents will be free to provide information as to whether Nisman was being spied on before his death, as the magistrate requested on Wednesday. Palmaghini seems determined to reactivate the case in line with the claims of Nisman's ex-wife, San Isidro Federal Judge Sandra Arroyo Salgado, who has long said that Nisman was assassinated days after filing a criminal complaint against former president Cristina Fernández de Kirchner, accusing her of seeking to whitewash the alleged Iranian involvement in the 1994 attack on the AMIA Jewish community centre.

Mounties use cellphone data in bid to track architects of terrorist attack
Globe and Mail, Geoffrey York, 2016 01 25
Canadian investigators are analyzing cellphone data in an attempt to track down the masterminds of a terrorist attack that killed six Canadians, a senior Burkina Faso cabinet minister says. The comments by Foreign Minister Alpha Barry, in an interview with The Globe and Mail, are the first details of the Canadian role in hunting for the organizers of the brutal attack that killed six Quebec volunteers and 24 other people at a popular restaurant and hotel in Ouagadougou on Jan.15.. **RCMP** officers were swiftly dispatched to Burkina Faso after the attack, but the RCMP would not comment on exactly what the Canadian police are doing. Mr. Barry said the Canadian police are working with French and U.S. investigators and local police. Investigators in white protective suits and masks have been seen combing for clues at the site of the attack, for which a militant group affiliated with alQaeda claimed responsibility.

Télévirements internationaux: les autorités veulent abaisser le seuil de signalement
La Presse, Joel-Denis Bellavance, 2016 01 24
Ottawa - **Pour mieux débusquer les voyageurs à risque qui souhaitent grossir les rangs d'organisations terroristes à l'étranger comme le groupe armé État islamique, les autorités canadiennes jonglent avec l'idée de réduire le seuil à partir duquel les institutions bancaires doivent signaler les télévirements internationaux**. À l'heure actuelle, tous les télévirements internationaux de 10 000 $ et plus doivent obligatoirement être signalés au Centre d'analyse des opérations et déclarations financières du Canada, mieux connu dans les cercles d'enquête sous l'acronyme CANAFE. Mais selon le directeur de cet organisme de réglementation fédéral, Gérald Cossette, des voyageurs à risque peuvent se faufiler entre les mailles du filet en versant des sommes moindres vers l'étranger.

Latin America Takes Action to Control Hezbollah's Activities
Asharq alawsat, Staff Writer, 2016 01 25
Buenos Aries-- **Mexican intelligence, in cooperation with Canadian intelligence services, has recently revealed activities for the Lebanese Hezbollah under Iranian support being detected in Latin America, at Venezuela, Mexico, Nicaragua, Chile, Colombia, Bolivia, Ecuador, in addition to the zone between the Paraguay, Argentine, and Brazil border triad**. George Shea, expert in Middle Eastern affairs and lecturer at the Buenos Aires University, explained that Hezbollah, under Iranian sponsorship, now plans on further expansion following the Russian interference in Syria, in addition to the military Iranian presence that has reduced the need of Hezbollah ground troops in Syria. Authorities in Mexico had already arrested a Lebanese Hezbollah affiliate, on borders with the US, who was caught with fake identification papers and drugs. However, official authorities have yet not disclosed his name for further investigation on Hezbollah's activities there. The Lebanese detainee has confessed to being associated with the Iranian Army of the Guardians and that he was on a mission to collect data on foes of the Iranian government. Moreover, intelligence services in Mexico and **Canadian Security Intelligence Service** revealed that groups affiliated with Hezbollah have begun taking ground action, such as groups of the "Abbas al-Musawi unit" and the "Imad Mughniyah unit". Media pointed out that, during interrogations, the Lebanese detainee had confessed that the two groups' mission is to scout out any threats on Iran in a score of countries across the world and prepare for striking them.

Canadian Embassies Worry They Can't Deal With Earthquakes, Terrorists, and Hackers
Vice News Canada, Justin Ling, 2016 01 23
Ottawa - **Diplomats have told Justin Trudeau that Canada's embassies don't have the funding necessary to deal with terror or cyber attacks, according to memos provided to the incoming prime minister.** "Canadian missions abroad face significant and evolving risks at a time when security resources are diminishing," reads the classified note prepared for the new government. It continues that while the foreign affairs department will continue to look after overseas embassies and staff, "there is a direct correlation between resource investments and mission security." And those investments have simply dried up. The report prepared for Trudeau in October specifically singles out "civil unrest and terrorism" as threats to Canada's missions abroad, but it also warns of "violent criminality in large swaths of Latin America and Africa," the risk of "a range of hostile espionage activities" as well as earthquakes, typhoons, and hurricanes. A 2014 request for funding from the **Canadian Security Intelligence Services (CSIS**), leaked by a hacker who claimed to be part of the Anonymous hacker collective, purports to show that the intelligence agency was frustrated by outdated technology infrastructure in Canada's embassies, and was requesting some $20 million in upgrades.

B.C. judge rules against secret hearings for CSIS in terror probe
Canadian Jewish News, Geordon Omand, 2016 01 23
Vancouver - **Canada's spy agency has lost a bid to hold a secret hearing over its involvement in an investigation involving a couple who were later found guilty on terror charges in British Columbia**. B.C. Supreme Court Justice Catherine Bruce has ruled the media and the public will be allowed to attend the hearing that is considering if the RCMP manipulated the couple into carrying out the bomb plot. John Nuttall and Amanda Korody were found guilty for plotting to blow up the B.C. legislature on Canada Day 2013, but the convictions have been put on hold while their lawyers argue the pair was entrapped by police in an undercover sting. The **Canadian Security Intelligence Service** had asked the judge to allow a hearing to be held in camera, arguing that some of the information is so sensitive to national security that only lawyers for the service and the judge should hear it.

Lawyers attempt to pull curtain over terror plot trial
Vancouver Sun, Ian Mulgrew, 2016 01 22
Column - **Call him Bond, not James Bond, OO7, but Superintendent Daniel Bond -- one of B.C.'s top RCMP liaisons with the Canadian Security Intelligence Service**. He joked outside B.C. Supreme Court that he is ribbed about his name by those who know what he does but his involvement and the role of the country's national security apparatus has become the focus of the Canada Day terror plot trial. A poor Surrey couple, John Nuttall and Amanda Korody, were convicted last summer of terrorism offences for planting inert pressure-cooker bombs at the legislature on July 1, 2013. But their lawyers have asked Justice Catherine Bruce to stay the guilty verdicts and release the pair because of police misconduct. Recovering addicts and recent converts to Islam living in a Metro Vancouver basement suite, the common-law couple were entrapped by the **RCMP**, who preyed upon their vulnerabilities, which included daily doses of methadone, the lawyers say. In stunning testimony Wednesday, Bond testified Nuttall was targeted by **CSIS** in 2012 and the agency had an "investigative technique engaged" in early 2013 when they pointed the Mounties at him. "What was the investigative technique CSIS told you they had engaged with respect to Mr. Nuttall at this meeting on Feb. 1, 2013," lawyer Marilyn Sandford innocuously asked.

CSIS asks judge to keep B.C. terror probe details secret
Canadian Press, Geordon Omand, 2016 01 22

Vancouver - **Canada's spy agency is back in court asking that information about its involvement in a British Columbia terrorism probe be kept secret from the public**. For the second time in two weeks, the **Canadian Security Intelligence Service** asked Justice Catherine Bruce of the British Columbia Supreme Court to allow a closed-door hearing into whether the **RCMP** entrapped a couple found guilty in a terrorist bomb plot. John Nuttall and Amanda Korody were found guilty of planting pressure-cooker explosives at the B.C. legislature on Canada Day 2013. The convictions have been put on hold while their lawyers argue the pair was manipulated by police in an elaborate undercover sting. This time, a lawyer representing the Canadian Security Intelligence Service argued some of the information is sensitive enough to national security that part of the closed-door proceedings must also exclude both defence and Crown lawyers, with only intelligence agency lawyers and the judge present. CSIS's argument is that information might be revealed that would risk identifying this alleged human source, which would put both that person and the person's family in danger.

Canada hard-pressed to deliver on offer to aid intelligence in Iraq
Ottawa Citizen, David Pugliese, 2016 01 20
Ottawa - **Defence Minister Harjit Sajjan has been touting the potential for Canada's military to help gather intelligence in Iraq in the battle against Islamic extremists.** But with no recent history of meaningful involvement in Iraq or Syria, a scarcity of Arabic speakers, and a lack of intelligence-gathering equipment such as drones, how much of a contribution can Canada's military make? In late December, Sajjan told journalists that the Liberal government is considering contributing an intelligence capability to the war against the Islamic State, including helping improve the abilities of Iraqi security forces to target extremists. He suggested the Canadian Forces have technology to play this role, but didn't specify whether that would be equipment on the ground or in the air. In other interviews, the minister has said that Canada's intelligence capabilities are second to none and the government was looking at how to increase that in the Iraq war. "While the Canadian Armed Forces does maintain rosters of members with ability in languages other than English and French, we do not specifically track the number of Arabic speakers within the Intelligence Branch," **Defence Department spokesman Evan Koronewski** said in an email. But he added, "all intelligence officers and operators are highly trained and provide commanders with valuable support to decisionmaking, planning and operations." The federal government's electronic spy agency, the **Communications Security Establishment**, could play more of a role, but it is already monitoring phone calls and emails of Islamic extremists.

How Petraeus avoided felony charges over leak
Washington Post, Adam Goldman, 2016 01 26
Washington - Inside a secure conference room on the sixth floor of the Justice Department in early 2014, top federal law enforcement officials gathered to hear what criminal charges prosecutors were contemplating against **David H. Petraeus**, the storied wartime general and former **CIA** director whose public career had ended about 15 months earlier over an extramarital affair. Attorney General Eric H. Holder Jr. and **FBI Director James B. Comey** listened as prosecutors did a mock run-through of the government's case, a preview of how they would present their evidence to Petraeus's lawyers in order, they hoped, to force a guilty plea. The presentation included felony charges: lying to the FBI and violating a section of the

Espionage Act. A conviction on either carried potentially years in prison. They were also considering bringing the same charges against Petraeus's biographer and former mistress, Paula Broadwell. The government would never file those charges. The plea agreement left some in the Justice Department angry, particularly at the FBI, and some agents have argued privately that it will hamper future efforts to secure prison terms in leak cases. But others in the government defended the deal as the only viable conclusion to a case in which a successful prosecution on the more serious charges was far from certain.

Government background checks still don't require review of social media profiles
Washington Times, Stephen Dinan, 2016 01 25
Washington - The **Obama administration has announced a new set of rules for government background checks -- but still doesn't require a review of applicants' social media profiles**, leaving the government well behind the private sector in vetting high-risk employees. After a series of high- profile bungles, the administration on Friday announced that it was changing the name of the background check investigations agency and revamping the office to which it reports. Key among those changes is giving the Defense Department, which has the biggest need for security clearances and makes up the majority of background checks, a leading role in setting up and running the National Background Investigations Bureau. But the Office of Personnel Management, which oversees background checks, said the bureau's investigators still don't have permission to delve through the social media accounts and profiles of applicants, forgoing a tool that all sides say is becoming more important in the 21st century. Samuel Schumach, an OPM spokesman, said they agree on the need to look at social media, but they haven't worked out how to do that while balancing privacy and accuracy.

U.S. Prisoner Who Stayed in Iran Was F.B.I. Consultant, Expatriate News Service Says (Canada)
New York Times, Rick Gladstone, 2016 01 24
Washington - **An American prisoner recently freed by Iran, but about whom little is known, is a former California-based carpet seller and F.B.I. consultant, a news service run by expatriate Iranian journalists reported on Saturday**. It said Iranian officials might have believed the man had links to the case of **Robert A. Levinson**, an American who went missing in Iran nearly nine years ago. The news service, **Iranwire**, also reported that the prisoner, **Nosratollah Khosravi**, whom it identified by an alternately used name, Nasrollah Khosravi-Roodsari, had left Iran. Mr. Khosravi was the only American prisoner who did not immediately depart the country after a deal to release prisoners was announced a week ago.. If confirmed, the **Iranwire report** would fill in some gaps in what is known about the prisoner release, in which five people, including four Iranian- American dual citizens, were released by Iran, and seven people, including six Iranian-American dual citizens, were released by the United States. Iranwire was created by Iranian journalists living outside the country, which exerts strict controls on the domestic news media. The founders include **Maziar Bahari, an Iranian-Canadian** who was himself a prisoner in Iran. It has maintained numerous contacts inside Iran.

Saudis, the C.I.A. and the Arming of Syrian Rebels
New York Times, Matt Apuzzo, 2016 01 24
Washington - **When President Obama secretly authorized the Central Intelligence Agency to begin arming Syria's embattled rebels in 2013, the spy agency knew it would have a willing partner to help pay for the covert operation**. It was the same partner the C.I.A. has relied on for decades for money and discretion in far-off conflicts: the Kingdom of Saudi Arabia. Since then, the C.I.A. and its Saudi counterpart have maintained an unusual arrangement for the rebel-training mission, which the Americans have code- named Timber Sycamore. Under

the deal, current and former administration officials said, the Saudis contribute both weapons and large sums of money, and the C.I.A takes the lead in training the rebels on AK-47 assault rifles and tank-destroying missiles.

Clues Emerge on Robert Levinson, C.I.A. Consultant Who Vanished in Iran
New York Times, Barry Meier, 2016 01 23
Washington - **When the United States and Iranswapped prisoners last week, nothing was said to resolve the mystery about another captive: Robert A. Levinson, a Central Intelligence Agency consultant who disappeared in Iran in 2007**. Iranian leaders have long said that they knew nothing about the missing American, and United States officials have said that he may no longer be in Iran -- or even still alive. Aside from a hostage video and photographs of him in an orange jumpsuit five years ago, there had been no public clues about his fate. But newly disclosed documents suggest that Iranian officials knew far more about Mr. Levinson.

Senators To Obama: The CIA Owes Us An Apology And You Know It
BuzzFeed News, Ali Watkins, 2016 01 21
Washington - **Three U.S. Senators are renewing their calls that CIA Director John Brennan cop to spying on Senate Intelligence Committee computers two years ago** -- and this time, they're going above the spy chief's head. In a letter sent to the White House Thursday, Democratic Sens. Martin Heinrich, Ron Wyden and Mazie Hirono, all members of the Senate Intelligence Committee, asked President Barack Obama to step in on the Senate's behalf and force the spy chief to, if not apologize, at least acknowledge that the search was wrong. "We believe it is necessary for you to address this matter directly, and to ensure that senior officials in your administration recognize the importance of adhering to the rule of law," the letter reads. "We ask that you instruct Director Brennan to acknowledge that the CIA's unauthorized search of Senate files was improper and will not be repeated."

NSA Chief Says U.S. at 'Tipping Point' on Cyberweapons
Wall Street Journal, Damian Paletta, 2016 01 21
Washington - **The U.S. military has spent five years developing advanced cyberweapon and digital capabilities and is likely to deploy them more publicly soon, the head of the Pentagon's U.S. Cyber Command said Thursday**. Adm. Mike Rogers, who is also director of the National Security Agency, said U.S. policy makers have largely agreed on rules of engagement for when cyberweapons can be used for defense. There is still an open discussion, however, about when cyberweapons should be used for "offense," such as carrying out attacks against a group or foreign country. "You can tell we are at the tipping point now," Adm. Rogers said. "The capacity and the capability are starting to come online [and] really starting to pay off in some really tangible capabilities that you will start to see us apply in a broader and broader way." Still, Adm. Rogers stopped short of specifying how exactly these cyberpowers could be deployed in coming months.

U.S. discloses zero-day exploitation practices
FCW.com (US), Chase Gunter, 2016 01 21
Washington - **The federal government has confirmed that it uses undisclosed software bugs not only in espionage and intelligence gathering, but also in the course of law enforcement activities.** In November 2015, the government released a redacted version of the Vulnerabilities Equities Process, the policy that lets agencies such as the **National Security Agency and FBI** decide whether to announce the flaws to vendors for patching. Just weeks ago, the government argued that acknowledging its exploitation of the software flaws, known as

zero-day vulnerabilities, would damage national security. Now the government has rescinded some of those redactions in its first official acknowledgment of "defensive, offensive and/or law enforcement-related [and] prosecutorial" uses of the vulnerabilities beyond counterterrorism efforts.

NSA Chief Stakes Out Pro-Encryption Position, in Contrast to FBI
The Intercept, Jenna McLaughlin, 2016 01 21
Washington - **National Security Agency Director Adm. Mike Rogers said Thursday that "encryption is foundational to the future," and arguing about it is a waste of time. Speaking to the Atlantic Council, a Washington**, D.C., think tank, Rogers stressed that the cybersecurity battles the U.S. is destined to fight call for more widespread use of encryption, not less. "What you saw at OPM, you're going to see a whole lot more of," he said, referring to the massive hack of the Office of Personnel Management involving the personal data about 20 million people who have gotten background checks. "So spending time arguing about 'hey, encryption is bad and we ought to do away with it' ... that's a waste of time to me," he said, shaking his head. "So what we've got to ask ourselves is, with that foundation, what's the best way for us to deal with it? And how do we meet those very legitimate concerns from multiple perspectives?"

MI5 and MI6: time to come clean on torture
The Guardian (London), Richard Norton-Taylor, 2016 01 26
London--A **British newspaper splashed a story saying a former MI5 officer wants to "present explosive new evidence"** that the Security Service knew inmates at Guantanamo Bay were being tortured. The unidentified officer wants to reveal his evidence to the parliamentary **Intelligence and Security Committee (ISC),** it said. We already know from documentary evidence that officers from **MI5** and from **MI6**, Britain's Secret Intelligence Service, were aware British residents and citizens, and other detainees and terror suspects, were being tortured in US jails in Afghanistan before being rendered to Guantánamo Bay. Security and intelligence officers privately discussed how to handle matters they knew would cause problems if disclosed. When did MI5 and MI6 chiefs - and the ministers to whom they are accountable - knew about the torture, and what steps did they take to stop it? The questions still await answers.

This is the KGB news: how the BBC fell for Soviet ring
Sunday Times (UK), 2016 01 24
London - **The BBC was fooled into giving a job to Guy Burgess, a member of the Cambridge Five ring of Soviet agents, at the request of MI5 -- with neither organisation realising that he used the position to betray Britain to the KGB,** writes Nicholas Hellen. His appointment was orchestrated by Anthony Blunt, another of the Cambridge Five and who worked for MI5 during the Second World War, according to newly discovered documents. It was just one example of how Burgess and other traitors ran rings around the BBC as well as the security services in the late 1930s and during the war. They went on to occupy key positions in the Foreign Office, MI5 and the Secret Intelligence Service, or MI6, which they exploited to pass information to the Russians. The revelations appear in Guy Burgess -- The Spy Who Knew

Everyone by Stewart Purvis and Jeff Hulbert which is to be published by Biteback on Wednesday.

The KGB's Dumbest Double Agent: Yevgeni Brik thought he could outsmart his Russian spy-masters. He was terribly wrong. (Canada)
The Daily Beast, Paddy Hayes, 2016 01 24
Analysis: Daphne Park was briefed personally by her Director (probably Shergold) in Wright's house, rather than in London Block, the center of British administration in the city, home also to SIS Berlin station with its hundred members of staff, where her presence might have been noticed. After the barest minimum of niceties he got right down to it. The Service, he said, had a potential source in Moscow and she was to be given the opportunity to handle him. **The source was Yevgeni Vladimirovich Brik**. Brik was a **KGB** illegal, originally from Kiev in the Ukraine, who had been sent to Canada by Moscow Centre in 1951. Aware that border controls between Canada and the U.S. were lax to the point of invisibility, the KGB plan was to use Canada as a staging post for the infiltration of its illegals into the United States, the 'Principal Adversary', Britain being reduced by this time to the status of 'Principal Ally'. The illegals (officers working under assumed identities) were to be used to handle U.S.- based KGB agents such as the 'atom spies'. Brik's life as a 'double' lasted for two years. His every move was monitored more closely than a laboratory mouse as the **RCMP** determined to learn everything possible about **KGB operations in Canada**. The monitoring led to the uncovering of several KGB sources but it was hard-earned: Brik 'the double' was at least as much trouble to his Canadian handlers as Brik 'the illegal' had been to his Soviet ones. Then Brik was recalled to Moscow. This was supposedly to attend a pre-arranged debriefing and to spend some time with his wife. Despite his concerns that he might have been compromised, Brik's hubris encouraged him to go ahead with the visit, convinced he could outwit the KGB's interrogators. **His RCMP controllers weren't so sure, but the opportunity to obtain a fuller picture of KGB operations from inside Russia swayed them**. However the Canadians were not set up to handle Brik while he was in Moscow, so they turned to [Britain's] SIS who had been briefed on Brik from the beginning. SIS had, in theory at least, the capacity to run an agent in the Russian capital and was happy to take over. Russia's spying on Britain is back to Cold War level
London Times, Marc Bennetts, 2016 01 25
Moscow - **The number of Russian spies operating in Britain is comparable or higher than during the Cold War, according to Russia's leading expert on President Putin's security services.** Andrei Soldatov, a Moscow- based journalist and author, said that there were likely to be at least 30 agents in the United Kingdom. Some operate under diplomatic cover while others -- so-called "illegal" agents -- use false identities to pose as British citizens, Mr Soldatov said. A third group of agents are Russian nationals, often businessmen, living openly in Britain. "These people are usually recruited and trained by the Russian security services to gather intelligence," he said. Besides London, towns and cities close to Royal Navy bases are targets, he said. These include Clyde, home to the UK's nuclear deterrent as well as a new generation of hunter-killer submarines, and Devonport, in Plymouth, the largest naval base in western Europe. There are three Russian intelligence services with active agents in Britain: the GRU military intelligence agency, the SVR foreign intelligence service, and the FSB, the main successor agency to the **KGB**.

MI5 officer: I will expose torture secrets
Sunday Times (UK), Sean Rayment, 2016 01 24
London - **A former MI5 intelligence officer is to break ranks with the agency to present explosive new evidence the security service knew inmates at the Guantanamo Bay detention centre were being tortured**. The former senior officer is seeking to give evidence to a parliamentary inquiry about how **MI5** officials witnessed detainees being tortured at Camp X-Ray and Camp Delta -- two of the Guantanamo prisons -- in December 2002. Even though the former officer is trying to get official permission to give evidence, it is thought to be unprecedented for a former member of staff to defy the agency in this way. Senior security sources have told The Sunday Times that the testimony will prove for the first time that MI5 was fully aware detainees at Guantanamo were systematically abused and tortured. Details of the torture were disclosed during a series of toplevel meetings held at Thames House, MI5's London headquarters, when control of the organisation was passing from Stephen Lander, then director-general, to **Eliza Manningham- Buller**, according to intelligence sources. A source has revealed a significant number of highranking officials, including MI5's senior management board, lawyers and senior officers, held confidential "torture" meetings on several occasions during 2002. The former officer, who had access to the country's most important state secrets, is expected to tell the parliamen-tary intelligence and security committee (ISC) that the abuse was conducted by trained interrogators from America's intelligence agency, the CIA.

Litvinenko suspect mocks Britain on TV
London Times, Deborah Haynes, 2016 01 23
London -**The prime suspect in the murder of Alexander Litvinenko will use a television show to mock Britain by documenting the fate of Russian spies who, like his victim, worked for the UK. Andrei Lugovoy** showed no sign of concern hours after he was named as the main assassin by a British inquiry into the death of Litvinenko. The former Russian intelligence officer, who fled to Britain after falling out with his **FSB** bosses, was assassinated in London in 2006. Rather than preparing for a police interrogation as requested by Britain, Lugovoy was getting ready to front the latest series of his Russian television programme, Traitors. The presenter, who is also an MP, was asked if the chosen theme was deliberate. "That's what the series producers wanted me to focus on this time," he told the BBC. The showman gave a defiant response to the outcome of the inquiry, which found that he and Dmitri Kovtun, a former Russian army officer, killed Litvinenko using radioactive polonium-210, on the orders of the Russian state -- a mission that was probably sanctioned by President Putin. Litvinenko became a British citizen just weeks before he was killed at the age of 44 and was an outspoken critic of the Russian president and is believed to have worked for MI6.

FSB links make it highly unlikely Putin would be unaware about plot to assassinate former spy
The Independent (UK), Chris Green, 2016 01 22
London - **It was, the Litvinenko inquiry was told, "rule number one" of life in the KGB: cover your back.** According to former Russian spies and others familiar with the power nexus inside the Kremlin, this motto also explains why it is likely that even the head of the country's security agency would have turned to Vladimir Putin to sign off the decision to murder Alexander Litvinenko. At the time of his death, the head of the **KGB's** successor the **FSB** was Nikolai Patrushev, who served as Mr Putin's deputy at the intelligence agency before taking over when his superior left to become Prime Minister in August 1999. The operation to poison Mr Litvinenko's tea with polonium was probably approved by both men, who had remained close, according to Sir Robert Owen's report. Exactly how much Mr Putin knew about the FSB's day-to-day work at the time - and how much he was involved in dictating what it did - remains unclear, mainly because of the Russian president's obsession with collective solidarity and

confidentiality among his ministers and officials. According to Professor Robert Service, a former professor of Russian history at the University of Oxford who submitted a lengthy report on the Kremlin power structure to the inquiry, Mr Putin has presided over a "severe constriction" in the type of information released about his activities since coming to power. However, some Kremlin observers have claimed that an incident which took place shortly after Mr Putin left the FSB for politics illustrates his willingness to interfere with the agency's often murky work through his friend and former colleague Mr Patrushev.

Snoopers and scrutiny
The Economist, Editorial Board, 2016 01 21
Editorial - **A lot is riding on Britain's attempt to update the law governing the domestic activities of its spy agencies**. The draft bill will make explicit how the electronic-intelligence agency, **GCHQ**, may (with a warrant) plant bugs on computers and other devices, collect and analyse bulk information (such as mobile-phone activity and web-browsing records) and read private messages. Get the details right, and Britain can provide a model of how to balance security and freedom; get them wrong, and centuries of freedom might shrivel. The bill's biggest success is its self-restraint. It does not require firms to weaken the encryption they sell to customers, as politicians in several countries, including Britain, would like. If people want security on the internet, they have no alternative to strong encryption. The agencies have other means of collecting data, including bugging phones and computers. The draft bill is also right to require companies to retain, at least for a time, data about mobile-phone and internet activity that may, subject to a warrant, be of use to future investigations. Intelligence agencies need to be able to look back at the history of a suspected terrorist's contacts and movements. Elsewhere, however, the bill could be better. It rightly strengthens **GCHQ's** powers to pursue terrorists, gangsters and foreign spies.

Of warrants and watchers
The Economist, Staff report, 2016 01 22
Commentary - **Britain's laws on bugging and snooping are out of date. Written in a pre-internet era, they give sweeping powers to the home secretary to authorise the interception and collection of electronic information, and the planting of bugs (in spookspeak, "equipment interference").** Without a stronger legal basis, these powers could fall foul of European judges on human-rights and data-protection grounds. Moreover, until the revelations by Edward Snowden, a fugitive American intelligence contractor now living in Moscow, most people had no idea of the reach of Britain's digital spy agency, **the Government Communications Headquarters (GCHQ)**, and how close its ties are with America's **National Security Agency**. The Snowden revelations infuriated digital-privacy advocates and also alarmed the technology industry, which feels squeezed between government demands and its customers' expectations. The draft bill on investigatory powers going through Parliament attempts to sort out this mess. It follows the failure two years ago of a previous bill, dubbed the "snoopers' charter", and the hurried passage of a stopgap bill that expires this summer. The bill is under scrutiny by a joint committee of peers and MPs, which will report on February 11th. The biggest divide is not over the technicalities of intelligence oversight, but in attitudes to what spies do. Some believe the agencies to be overmighty, beguiling politicians with tales of derring-do and lobbying zealously for their cause in the media.

Litvinenko murder suspect dismisses inquiry as 'nonsense'
The Guardian (London), Luke Harding, Esther Addley, 2016 01 22
London - **The former Russian spy Andrei Lugovoi has denounced the British inquiry that said he was one of the state-directed murderers of dissident Alexander Litvinenko**,

describing it as "**nonsense**". Speaking to the BBC, the former **KGB** bodyguard and **FSB** secret service agent dismissed the findings of Sir Robert Owen, chairman of the inquiry that said President Vladimir Putin "probably" approved the assassination of Litvinenko in London in 2006. Lugovoi said: "I've seen the nonsense conclusions of your judge who has clearly gone mad. I saw nothing new there. I am very sorry that 10 years on nothing new has been presented, only invention, supposition, rumours. "And the fact that such words as 'possibly' and 'probably' were used in the report means there is no proof, nothing concrete against us."

GCHQ spies quashed this phone encryption because it was too good against snoopers
The Register (UK), Kieren McCarthy, 2016 01 22
London - The researcher who discovered that the UK government's phone encryption standard has a huge backdoor installed has made another discovery: **GCHQ's rejection of a better encryption standard because it didn't allow for undetectable spying**. **Dr Steven Murdoch** has updated his original post on the MIKEY-SAKKE standard, developed by UK listening post GCHQ, to include a document from the 3GPP standardization group that was responsible for the 3G mobile phone standard and which also developed the 4G and LTE standards (i.e., what your phone currently uses). That document stems from a meeting back in 2010 and outlines how a representative from the National Technical Assistance Centre (NTAC) - GCHQ's decryption and data analysis arm - worked to reject the MIKEY-IBAKE standard because it could produce a slight delay in people's phone calls when they were being intercepted.

Accused Claims MI6 Offered To Recruit Him, Suspects He Was Also Exposed To Polonium
International Business Times, Sneha Shankar, 2016 01 22
London - **Andrei Lugovoi, one of the men accused of poisoning former Russian KGB agent Alexander Litvinenko in 2006, said in an interview Thursday that British intelligence agency MI6 offered to recruit him before Litvinenko's death**. He said he suspected he was also exposed to polonium- 210, the radioactive poison that killed Litvinenko. The U.K. public inquiry concluded Thursday that Litvinenko was killed by Lugovoi and another KGB agent, Dmitry Kovtun, "probably" on the personal orders of Russian President Vladimir Putin. The inquiry said Litvinenko drank a cup of tea with Lugovoi and Kovtun that was laced with polonium-210, adding that the two agents could have been working on behalf of the **Russian Federal Security Service (FSB). "**Litvinenko died in November 2006, in March-April I was openly offered cooperation [by MI6] and in order to motivate me somehow, I was denied a visa, that was in May 2006. And after I called Litvinenko - I've said this multiple times - I was granted a visa all of a sudden. I have always connected these two events," Lugovoi said during an interview to Rossiya1 network, according to Sputnik News, adding: "They [UK] always gave me visas, and did it with great pleasure before May 2006, when I was denied a visa after the British intelligence MI6 tried recruiting me." In another report by Sputnik News, Lugovoi was cited suspecting that he had also been exposed to polonium-210. "I can suspect that I got it [polonium exposure] together with Litvinenko. But I lived in British hotel, took British flights, met with representatives of the British establishment and only God knows who could have given it to me," Lugovoi said, according to Sputnik News.

Alan Turing, James Bond and London Spy: how MI5 became Britain's most inclusive employer
The Guardian (London), Richard Norton-Taylor, 2016 01 19
Column - **If you had walked past MI5's headquarters in central London earlier today, you might have noticed the rainbow flag flying above the building. It is not the first time - it flew there on the day of London's Pride festival last summer**. But this time it was raised to

mark the accolade of Stonewall's employer of the year: Britain's Security Service came top in the annual Stonewall Workplace Equality Index. The index measures an organisation's work in tackling discrimination and creating an inclusive workplace for lesbian, gay, bi and trans people. MI5 in particular, it might be argued, needs to be inclusive. Much of its work, as it director general Andrew Parker, said, "goes on by necessity out of view". Its employees cannot talk about their work with outsiders. They need a workplace that is tolerant and welcoming, and an esprit de corps that encourages diversity. MI5 now has a LGBT "champion" to promote diversity, an 80-plus-strong LGBT network, and a "reverse mentoring" scheme for staff who want to develop their understanding of diversity. Staff are offered "unconscious bias training". Meanwhile MI6, Bond's employer, uses Stonewall's logo on recruitment ads appealing for people who are "able to get on with diverse groups".

For fsck's SAKKE: GCHQ-built phone voice encryption has massive backdoor - researcher
The Register (UK), Kieren McCarthy, 2016 01 20
London - **The UK government's official voice encryption protocol, around which it is hoping to build an ecosystem of products, has a massive backdoor that would enable the security services to intercept and listen to all past and present calls, a researcher has discovered**. Dr Steven Murdoch of University College London has posted an extensive blog post digging into the MIKEY-SAKKE spec in which he concludes that it has been specifically designed to "allow undetectable and unauditable mass surveillance." He notes that in the "vast majority of cases" the protocol would be "actively harmful for security." Murdoch uses the EFF's scorecard as a way of measuring the security of MIKEY-SAKKE, and concludes that it only manages to meet one of the four key elements for protocol design, namely that it provides end-to- end encryption.

Indonesian government 'using Sydney server for surveillance program'
ABC (Australia), Conor Duffy, 2016 01 26
Sydney - **An Indonesian government agency is using a Sydney-based proxy server to run the notorious spyware FinFisher, according to technology researchers**. The notorious spyware FinFisher, used to infect mobile phones and computers to place targets under surveillance, has been found in a Sydney data centre. A proxy server inside the Global Switch data centre in Ultimo, Sydney is being used to obscure the real user of the spyware, in this case an Indonesian government agency, according to a group of technology researchers. A proxy server acts as an intermediary which protects the identity of its real user. The intrusive spyware developed by Munich-based is sold exclusively to government agencies as a way to "help identify, locate and convict serious criminals". However, there are also well documented cases in which governments have abused the highly invasive spyware by targeting political opponents within their borders and overseas. According to Privacy International FinFisher was recently used by the Ugandan government to gather "hordes of information" on political opponents and "control the media houses". In Bahrain, authorities are accused of using the technology to place three young activists under surveillance whilst they were living in the UK. The trio say as a result of the surveillance they were relentlessly pursued and tortured at the hands of Bahraini authorities. Once deployed, FinFisher is able to remotely control any computer or mobile phone it infects, copy files, intercept Skype calls, and activate a microphone or webcam. It is not clear

which Indonesian government agency is responsible for the proxy server at Ultimo. The ABC approached **ASIO** and the **Department of Defence**, which declined to comment. The ABC also approached Damon Reid, the executive director of the Global Switch data centre, to ask if the company was aware of the FinFisher server.

Digital age makes old-style spying vital
The Australian, Paul Maley, 2016 01 23
Canberra - **Australia's intelligence agencies are increasingly reliant on dangerous forms of intelligence collection, such as the use of informants and physically infiltrating terror cells, as the rise of freely available encrypted messaging apps makes electronic eaves-dropping more difficult**. Police and intelligence agencies are relying more heavily on "humint", or human intelligence, as commercial-grade encryption technology moves into the mainstream and electronic communication becomes harder to find, buried amid ever greater quantities of digital data. Encryption technology has been embraced wholeheartedly by jihadists, in both Australia and in Syria, prompting US **FBI director James Comey** to demand last year that developers of such apps be required to provide a "back door" into the system so that police and intelligence agencies could access them with a warrant. A spokeswoman for Attorney-General George Brandis confirmed that it had become a major problem in Australia. "(Islamic State) and other terrorist organisations are increasingly using encrypted communications and closed networks to spread their propaganda, recruit new members and plan terrorist attacks here in Australia and overseas," she said.

Digital attacks on China critics intensify, says cybersecurity firm
Christian Science Monitor, Jaikumar Vijayan,, 2016 01 26
Washington - **A shadowy hacker group with suspected ties to the Chinese government has increased its attacks on human rights groups and is even targeting the Russian spy agency**, according to a report released Monday. The cybersecurity company Palo Alto Networks noticed a recent upswing in activity in a four-year-old malware campaign dubbed "Scarlet Mimic," a reference to the program attackers use to imitate legitimate software, designed to steal location data and sensitive communications from targeted computers. While the attackers mostly target organizations that support the rights of Tibetan and Uyghur minorities, the unknown group behind the campaign appears to be targeting the **Russian Federal Security Service** and Indian government organizations with targeted phishing attacks. "We do believe there is a government behind this," says Ryan Olson, director of threat intelligence at Palo Alto's Unit 42 research team. "But we don't have any evidence linking China" directly to Scarlet Mimic, he said.

Putin's Spokesman Calls Litvinenko Inquiry a 'Quasi- Investigation'
Moscow Times, Staff report, 2016 01 21
Moscow - **Putin's spokesman Dmitry Peskov called the British inquiry into the murder of Alexander Litvinenko -- a former Federal Security Service (FSB) agent poisoned in London in 2006 -- a "quasi-investigation" and said it may "poison" bilateral relations between Russia and the U.K.,** the Interfax news agency reported Thursday. A report into Litvinenko's death based on a public inquiry was published earlier on Thursday. It alleged that Litvinenko was poisoned with highly toxic isotope polonium 210 by two Russians -- current State Duma deputy Andrei Lugovoi and entrepreneur Dmitry Kovtun - that were "probably" acting under the instructions of the FSB, which were "probably" approved by President Vladimir Putin. Russia's Foreign Ministry deemed the inquiry "politically motivated." The Kremlin will not take the inquiry seriously, because it is based on "probabilities" and uses the word "probably," according to Peskov. "Such terms are not allowed in our legal proceedings, or the legal proceedings of other countries, and we can't perceive it as a court's verdict," he was quoted by Interfax as saying. "Russia was hoping for cooperation with the British in investigating this case. Unfortunately, the British froze not only the cooperation, but the dialogue in other spheres, too," Peskov added.

Kremlin does not perceive Litvinenko death investigation results as verdict
ITAR-TASS World Service, Staff report, 2016 01 21
Moscow - **The Kremlin does not perceive as verdict any part of the results of investigation into the death of Russian Federal Security Service (FSB) defector Alexander Litvinenko, Russian presidential spokesman Dmitry Peskov said Thursday**. "Why am I saying 'quasi-investigation' and why can't we perceive that as an investigation?" Peskov told journalists. "Because the talk is about some judgments based on probability, on the use of words 'possibly', 'probably'." He said "such terminology is not allowed in Russian judicial practice; nor is it allowed in court practices of other countries, and it certainly can't be perceived by us as a verdict in any part [of the investigation's results]." According to Peskov, the results of the investigation may be ironically "referred to subtle British humor."

Europe

Prêt à frapper, Daech s'européanise
Le Figaro, Jean-Jacques Mével, 2016 01 26
Paris **- Le groupe État islamique a développé « une nouvelle capacité de combat pour effectuer une campagne d'attaques d'ampleur » concentrée sur l'Europe, et en particulier sur la France, avertit l'agence Europol**. TERRORISME La menace terroriste est immédiate - particulièrement pour l'Hexagone - mais d'un coup, elle paraît aussi bien plus proche. Daech est parvenu à « européaniser » le recrutement de ses tueurs, leur entraînement et peut-être même leur commandement, d'après un rapport rendu public par Europol, l'agence policière qui ambitionne de devenir le **FBI** du Vieux Continent. L'État islamique a développé « une nouvelle capacité de combat pour effectuer une campagne d'attaques de grande ampleur » centrée sur l'Europe « et en particulier contre la France » , explique Rob Wainwright, directeur de l'agence

et ancien du **MI5** britannique. Le terrorisme islamique « peut frapper presque toutes les cibles où il veut, quand il veut » dans des opérations complexes et bien coordonnées. Depuis les attaques du 13 novembre à Paris, rares sont ceux qui peuvent encore en douter. Europol rajoute à l'alarme en évoquant la possibilité d'autres attentats « dans un avenir proche » .

Prominent intelligence officer Gohar Vardanyan celebrates 90th birthday anniversary
Armenpress, 2016 01 25
Yerevan, Armenia—**Prominent intelligence officer, veteran of Russian Foreign Intelligence Service Gohar Vardanyan, who made a big contribution in acquisition of the needed information for the country's national interests and safety, celebrates her 90th birthday** jubilee on January 25, "Armenpress" reports. Gohar Vardanyan was born on January 25, 1926 in Leninakan (Gyumri) city. In the early 1930s, her family moved to Iran. At age 16, she entered her future husband and comrade-in-arms Gevorg Vardanyan's anti-fascist group along with which she lead an active intelligence work.

France: Hollande veut prolonger l'état d'urgence de trois mois
Radio France Internationale, 2016 01 23
Paris - **Le président François Hollande veut prolonger l'état d'urgence de trois mois, jusqu'à fin mai.** L'annonce a été faite par l'Elysée ce vendredi en fin de journée après les entretiens du chef de l'Etat avec les responsables des partis politiques représentés au Parlement et avec qui il a évoqué la question de la révision constitutionnelle. Décrété le 13 novembre au soir après les attentats à Paris et à Saint-Denis qui ont fait 130 morts, l'état d'urgence devait arriver à terme le 26 février prochain. François Hollande souhaite le prolonger de trois mois. Un projet de loi sera donc présenté le 3 février en Conseil des ministres. La décision du chef de l'Etat de solliciter sa prolongation au Parlement a été dévoilée avant la publication du communiqué par le leader du Parti communiste français Pierre Laurent à la sortie de son entretien avec le président de la République.

Les services belges infiltrés par un indic ?
Marianne, Philippe Engels, 2016 01 22
Bruxelles - **Enorme malaise dans le procès d'une filière syrienne : un Marocain en contact régulier avec les renseignements belges accompagnait les candidats au djihad jusqu'au pied même de l'avion.** Aujourd'hui, il s'est évaporé dans la nature... La voiture qui le conduisait à l'aéroport de Bruxelles-National le 20 novembre 2013 s'est arrêtée au dépose-minute. Etape suivante : Istanbul. Muni d'un simple sac et d'un téléphone portable, Murat D. est parti faire le djihad sans trop y croire. Aux flics qui l'ont cueilli à son retour quelques semaines plus tard, à la veille de ses 19 ans, ce jeune Belge d'origine turque a avoué qu'il avait hésité à chaque pas, ou presque, jusqu'au comptoir d'embarquement. Il a donné aux enquêteurs le nom de son convoyeur, le Marocain Abdelkader el-Farssaoui, dont on est sans nouvelles aujourd'hui

Security researcher: Ukraine power grid facing new wave of cyberattacks
The Hill, Katie Bo Williams, 2016 01 22
Washington - **Ukrainian power plants are still facing an onslaught of cyberattacks in the wake of a malware-caused blackout in December, according to a U.S. security firm. "[On January 19th],** we discovered a new wave of these attacks, where a number of electricity distribution companies in Ukraine were targeted again following the power outages in December," malware researcher Robert Lipovsky wrote in a post on the blog We Live Security. But the kind of malware used in this latest wave of attacks is not the same code that left 80,000 people in the western regions of Ukraine without power last month, Lipovsky notes. "What's particularly interesting is that the malware that was used this time is not BlackEnergy, which poses further questions about the perpetrators behind the ongoing operation," he wrote.

NATO, EU poised to assist Ukraine in security service reform
Kyiv Post, Staff report, 2016 01 21
Kyiv - **Security Service of Ukraine (SBU) Head Vasyl Hrytsak and representatives of the NATO Communication Office in Ukraine and the EU Advisory Mission for Civilian Security Sector Reform Ukraine, have agreed during their meeting to create a permanent international advisory group on the SBU reform**. Representatives of the EU Advisory Mission for Civilian Security Sector Reform Ukraine, foreign advisors at the NATO Communication Office in Ukraine, employees of the NATO Centre for information and documentation in Ukraine, and other international organizations will join the group, as well as leading foreign and Ukrainian experts in this field, the SBU press service said in a report. "The main goal is [to organize] expert support of the process of the Security Service reforming by way of holding permanent consultations on improvement of legal regulation, development of an advanced SBU model with consideration of the best political and legal practices of EU member states and NATO, and to lay out an agreed package of proposals (a plan) with regard to stages of the reform," the report says.

Norwegian intelligence chief says Muslim, other immigrants causing challenges
BBC News—via Norwegian news agency NTB, 2016 01 21
Oslo— **PST [Norwegian Police Security Service] chief Benedicte Bjornland fears that increased immigration, especially from Muslim countries, may provide a breeding ground for radicalization, increased conflict in society and bigger right-wing extremist communities.** The warning came at the national conference of Society and Defence in Sweden on 11 January, where the PST chief was one of the openers. "Sharply increasing immigration, especially from Muslim countries, may also bring other challenges with it in the long term. When a large number of asylum seekers come to local communities, this can have unfortunate consequences," Bjornland said from the rostrum, according to TV 2 [commercial television station]. She warned of an increased conflict level, acts of violence and the emergence of right-wing extremist communities.

You'd be surprised how many animals are arrested for being Israeli spies
Al-Bawaba News, 2016 01 26
Jerusalem— On Tuesday morning, **residents in the southern Lebanese town of Bint Jbeil captured what they claimed was an Israeli spy vulture**. They thought the bird was carrying Israeli spy equipment, but it was released after authorities determined it was not carrying anything dangerous. This is not the first time an animal has been arrested for espionage. There have been numerous incidents in which creatures ranging from rats to Zionist spy ducks" have been detained for their alleged undercover operations. Israel is often the target of these accusations, allegedly using animals to spy on various countries in the Islamic world, including Saudi Arabia and Sudan.

Foreign Ministry Rejects US Media Claims on Presence of Levinson in Iran
Fars News Agency, 2016 01 22
Tehran - **An informed source in the Iranian foreign ministry dismissed media reports claiming that the US retired FBI agent, Robert Levinson, is in Iran**. The source rejected the CNN news channel's claim that Levinson is being held in Iran, and said, "Different US officials,

the latest of whom the White House spokesman, have many times underlined in their remarks that this person has been traced out of Iran." "The Islamic Republic of Iran has done any possible cooperation to help clarify this person's fate based on a humanitarian attitude," the source told FNA on Thursday. CNN quoted US officials who were briefed on the investigation as claiming that FBI investigators believe Robert Levinson, if he is still alive, is being held in Iran despite public statements from US officials in other agencies indicating he may be elsewhere.

Palestinian Intelligence Chief: We Foiled 200 Attacks Against Israelis
Haaretz, Jack Khoury, 2016 01 21
Jerusalem - **The Palestinian Authority has foiled 200 attacks against Israelis in the upsurge in violence that began in October and it will continue its security coordination with Israel, Palestinian intelligence chief Majid Faraj said** in an interview this week with Defense News. Faraj, who is considered very close to Palestinian President Mahmoud Abbas, rarely makes public statements. He told the U.S.-based publication that Palestinian security and intelligence forces also confiscated weapons and arrested about 100 Palestinians during this period. He said was important to keep the Islamic State organization from establishing a base in the West Bank in bringing about the PA's collapse.

Terror Prince: Hezbollah leader's son led terror cell in West Bank, says Shin Bet
Jerusalem Post, Yaakov Lappin, 2016 01 20
Jerusalem - **Security forces announced on Wednesday the foiling of a terrorist suicide bombing and shooting cell based in Tulkarm in the West Bank that was under the command of Hezbollah, and which was set up by the son of Hezbollah chief Hassan Nasrallah**. A total of five Palestinians are in custody on suspicion of joining the Hezbollah terrorist cell, and they were close to launching attacks, according to the **Shin Bet**. The Shin Bet intelligence agency said its investigation found that Juad Nasrallah, the son of Hezbollah chairman Hassan Nasrallah, used online social media networks to recruit Mahmoud Za'alul, a Palestinian resident of Tulkarm, who in turn received instructions on how to recruit other members into the cell. Za'alul, aged 32, acting under Hezbollah instructions received from his handler, a man named only as 'Fadi,' set up an email account through which he received instructions on how to recruit other members of the cell, gather field intelligence, and select targets.

Foreign intelligent services trigger unrest on Iran, Pakistan borders
Islamic Republic News Agency, 2016 01 20
Tehran - **Pakistan Army Chief General Raheel Sharif conferred on Tuesday with the Secretary of the Supreme National Security Council Ali Shamkhani on expansion of border cooperation in dealing with bandits and armed groups**. In the meeting, Shamkhani said such insecurities have roots in the activities of the **intelligent services** of the alien countries. They seek to promote unrest in the region to prevent expansion of economic, commercial and cultural relations and cooperation between the two countries, he said. To seriously deal with the threat imposed by terrorist groups in the region requires collective contribution of the countries in the region, Shamkhani said.

Rajnath Singh reviews security situation with NSA, intelligence agencies
India Blooms News Service, Staff Writer, 2016 01 25

New Delhi- **On the eve of the Republic Day, Union Home Minister Rajnath Singh met National Security Advisor Ajit Doval, intelligence bureau and RAW chiefs to review the security preparedness,** reports said. The meeting came just a day after a car of an army officer was stolen from a south Delhi area, sounding an alarm ahead of the Republic Day parade which will be attended by French President Francois Hollande and top Indian leaders. **Intelligence agencies** had already received inputs about the presence of members of terror outfits. The alert has been intensified especially keeping in mind the kind of attack Pakistani terrorists carried out in the Pathankot air base early this month.

Kim Jong-un's father wanted to end hereditary rule, top spy reveals
London Telegraph, Julian Ryall, 2016 01 23
Tokyo—**Kim Jong-il, the former leader of North Korea, planned to end the hereditary system of rule that handed power to his son Kim Jong-un,** a new book by a **top South Korean spy** has revealed. In a move that could have put the hermit nation on a radically different course, the elder Kim planned instead to create a 10 strong-committee that would run the country instead, according to **Ra Jong-yil**, the **former head of South Korea's national intelligence service**."Those close to Kim Jong-il suggested that he should name one of his children as his successor, but he brushed those suggestions aside." In an interview with The Telegraph, Ra Jong-yil, who also served as ambassador to both London and Tokyo, said Kim Jong-il's plans to end the sole system of hereditary succession in the communist world was thwarted by a combination of his sudden death in December 2011, jostling for influence among the 10 chosen members of his committee - and the brazen determination of Kim Jong-un to seize ultimate power.

Govt to focus on terrorism prevention
The Jakarta Post, 2016 01 21
Jakarta— The **government is currently considering several options that may be included in possible revisions to the current antiterror laws**, including one that would prevent jihadists who have fought with the Islamic State (IS) movement abroad from returning to Indonesia. **President Joko "Jokowi" Widodo** said on Wednesday that a provision that would allow authorities to strip the citizenship of Indonesian nationals fighting in foreign lands, would be part of a draft of new policies that aimed to improve terrorism prevention. **National Counterterrorism Agency (BNPT) chief Comr. Gen. Saud Usman Nasution** said that an amendment to the 2003 Terrorism Law would have at least four provisions, including a change in the definition of "treason" that would allow authorities to criminalize individuals who joined radical groups or declared "caliphates" abroad. Jakarta Police chief Insp. Gen. Tito Karnavian backed the proposal, saying that intelligence information should be included as a legitimate form of evidence. Jakarta Police chief Insp. Gen. Tito Karnavian backed the proposal, saying that intelligence information should be included as a legitimate form of evidence. Tito, however, rejected any proposal that would allow the **National Intelligence Agency (BIN)** or the Indonesian military (TNI) to arrest and detain terrorism suspects.

BIN Requests for Broader Authorities
Tempo (Indonesia), 2016 01 21
Jakarta— **Intelligence Agency (BIN) chief Sutiyoso said that he will deliver a proposal requesting broader authority for the Agency to President Joko Widodo, Vice President Jusuf Kalla and cabinet ministers.** "Yes, I will present it," said Sutiyoso on Thursday, January 21, 2016. Sutiyoso requested that BIN should be allowed to detain suspected terrorists. Sutiyoso argued that one of the reasons why terrorists are difficult to eradicate was because BIN has limited authorities. "That's been our weakness all this time," Sutiyoso said. The prohibition for BIN to arrest suspected terrorists is regulated in Law No. 17/2011 on State

Intelligence. BIN is however, allowed to tap communications, inspect flow of funds and gather information about its targets.

Gov't calls for parliamentary endorsement of anti-terrorism bills
Yonhap News Agency, 2016 01 20
Seoul— **The government renewed its call on Wednesday for the parliamentary approval of anti-terrorism bills to protect the lives of South Koreans**, citing growing threats of terrorism both at home and abroad. In addition to the first bill proposed by the government in 2011 following the 9/11 attacks, a number of anti-terrorism bills are currently pending in the National Assembly. However, the bills have not yet been put to a full floor vote due to strong dissent from the opposition party on concerns about giving more authority to the **National Intelligence Service (NIS),** South Korea's top spy agency. "There have been needless battles at the National Assembly for the past 15 years," said Kim Soo-min, a senior NIS official who participated in the government-ruling party meeting. "The anti-terrorism bills are designed to protect the lives of the people and should not be the subject of a bargaining tool."

Book shows regime's darkest side
Korea JoongAng Daily, 2016 01 18
Seoul—**Former North Korean leader Kim Jong-il did not initially plan to pass on his authority to his third son**, Kim Jong-un, according to a book containing accounts by experts with special knowledge of the country. In the book, the author, **former intelligence official Ra Jong-yil**, depicts North Korea's founding father Kim Il Sung as a cold-blooded dictator, who once ordered his confidants to kill his son, Jong-il, if he veered from the country's official ideological line. Ra, 75, previously served as the **former deputy director of the North Korea bureau inside the National Intelligence Service** as well as the national security adviser to the late President Kim Dae-jung. His book, tentatively titled, "The Path Taken by Jang Song-thaek: A Rebellious Outsider," is due to be released by the end of the month. According to copies of its transcript obtained by the Monthly JoongAng, Kim Jong-il, who died in December 2011, told his aides that the power succession would end with him.

Seoul announces new counterterrorism effort
Korea JoongAng Daily, 2016 01 18
Seoul—Authorities in Seoul announced Friday **plans to create a consolidated network involving the police, the military and firefighting forces to boost counterterrorism measures**. The three agencies will "freely share" information on terrorism and enhance communication channels among one another via official liaisons, the Seoul Metropolitan Fire & Disaster Headquarters said. Authorities will also design an instruction manual outlining the roles of each department in case of a terror attack, and a combined practice drill will take place annually on Jan. 21. The first combined drill was scheduled to take place Friday afternoon at a training area for the SWAT team in Seodaemun District, central Seoul. Earlier this week, the **National Intelligence Service (NIS)** announced that 51 people had been deported over the past five years over terrorism allegations, including ties to ISIS.

Athmane Tartag coordinateur des Services de renseignement
El Watan, Mokrane Ait Ouarabi, 2016 01 25
Alger - **Le DRS est renommé Direction des affaires de sécurité**. Le nouveau service, rattaché à la présidence de la République, quitte l'enceinte du MDN pour s'installer dans

l'ancien ministère des Affaires étrangères. La restructuration des services de renseignement passe à une nouvelle étape. Le **Département du renseignement et de la sécurité** (DRS), qui a eu un nouveau chef en septembre dernier, vient d'avoir une nouvelle dénomination. Selon les informations rapportées hier par plusieurs médias électroniques et confirmés par nos sources, un décret non publiable, signé le 20 janvier courant, met ainsi fin à ce sigle qui a accompagné l'Etat algérien pendant 25 ans. Ce service est donc renommé Direction des affaires de sécurité. Le successeur du général de corps d'armée Mohamed Mediène à la tête du DRS, le général-major à la retraite Athmane Tartag en l'occurrence, est maintenu à la tête de cette nouvelle structure sécuritaire qui est également mise sous la tutelle de la présidence de la République comme l'a toujours été le DRS.

Algeria's Bouteflika dissolves DRS spy unit, creates new agency – sources
Reuters, 2016 01 25
Algiers— **Algerian President Abdelaziz Bouteflika has dissolved the long-standing military spy directorate known as the DRS**, creating a new agency under the control of the presidency in another step to ease the military out of politics, security sources said. Bouteflika, rarely been seen in public since he suffered a stroke in 2013, began curbing the military's influence before his re-election in April 2014, in what analysts said was preparation for his eventual departure after more than 15 years in power. But the decree to shut the Department of Intelligence and Security, or DRS by its French initials, and replace it with the Direction of Security Services is a significant move to restructure the intelligence apparatus.

Ultime phase de restructuration des services de renseignement Bouteflika dissout le DRS
L'Expression (Algérie), Brahim Takheroubt, 2016 01 25
Alger - **Le président de la République, chef suprême des armées Les enjeux du moment, la nature des conflits imposent une réadaptation des services de renseignement. L'Algérie veut redonner à la justice, aux droits de l'homme et aux libertés individuelles le rôle et la place majeure qui leur siéent**. Comme attendu par les observateurs avertis, les services de renseignement algériens changent de nom avec l'ultime phase de restructuration. Désormais, Département du renseignement et de la sécurité, le **DRS**, s'appellera la **«Direction des services de sécurité» (DSS)** chapeautée par le général Bachir Tartag. Ce décret qui renomme le DRS en DSS institue ainsi, le poste de Coordinateur des services de sécurité et lui redonne de larges prérogatives. C'est ce que rapportent plusieurs sites électroniques ainsi que les télévisions privées. L'information a été confirmée par des sources sécuritaires crédibles. Ces sources indiquent que la nouvelle structure dont le siège est sis au Golf (celui de l'ancien ministère des Affaires étrangères) sera composée de trois départements chargés respectivement de la «sécurité intérieure, de la sécurité extérieure et d'une direction technique», ajoutant que la DSS, travaillerait en coordination avec la Gendarmerie nationale et la police.

Algérie/Bye Bye le DRS !
Algérie Focus, Abdou Semmar avec Essaïd Wakli, 2016 01 24
Alger - **Comme nous l'avons rapporté il y a de cela plusieurs mois, le DRS est dissout et les services secrets algériens changent d'appellation comme le dicte la restructuration de cet appareil sécuritaire décidée par Abdelaziz Bouteflika**. Une restructuration menée depuis pratiquement fin 2011 et dont les prémices remontent jusqu'à 2008. L'Algérie enterre donc le DRS pour donner naissance à un nouveau service de renseignement dénommé le **Département des Affaires sécuritaires (DAS)**, qui se chargera désormais de centraliser tous les départements chargés du renseignement dans le pays. Athmane Tartag, ancien chef du DRS, a été nommé comme ministre-conseiller chargé du renseignement. C'est lui qui se

chargera désormais de coordonner toutes les actions du renseignement, que cela vienne de l'ancien DRS, de la police ou de la gendarmerie.

Attentats terroristes - Le gouvernement rassure le corps diplomatique (Canada)
All Africa, Journaliste maison, 2016 01 20
Ouagadougou - **Sur instruction du président du Faso et du Premier ministre, des ministres du gouvernement ont rencontré les membres du corps diplomatique présents au Burkina Faso ainsi que les organisations internationales afin d'échanger sur la situation qui prévaut au pays**, avec notamment l'attentat terroriste qu'il a enduré le 15 janvier dernier, l'attaque d'un convoi de gendarmerie dans l'Oudalan et la prise en otage d'un couple d'Australiens survenue à Djibo. Alpha Barry a, par ailleurs, souligné que des mesures urgentes (voir encadré) ont été prises pour assurer la sécurité du Burkina Faso, de ses amis et de ses partenaires. Il a également salué les **Forces de défense et de sécurité (FDS**) burkinabè, les Forces spéciales françaises, les Forces américaines et les **Canadiens** qui sont présents au Burkina Faso pour l'identification des corps.

Let's Change leaders show up at Nisman rally
Buenos Aires Herald, 2016 01 19
Buenos Aires— Thousands of people, including the top ranks of the Let's Change administration, attended a demonstration in Palermo yesterday to commemorate the **one-year anniversary of AMIA special prosecutor Alberto Nisman's death.** The gathering took place at Plaza Alemania, in the Buenos Aires City neighbourhood of Palermo, where participants marked precisely one year since Nisman was found dead in his apartment in Puerto Madero from a single gunshot wound to the head, though speculation since remains rife as to how the man formerly tasked with investigating the 1994 AMIA bombing — the deadliest terror attack in Argentine history — met his end. "Forty million Argentines want to know how did the gun (that killed Nisman) go off and who did it," Ariel Cohen Sabban, the head of the DAIA Jewish organization, said amid strong applause from those in attendance. "How is it possible that after one year of investigations we're nowhere near (the truth)?" the DAIA leader went on. **"We hope statements from intelligence agents may shed some light on this unfair** death. We don't want Nisman to become the 86th victim of the AMIA attack."

La sécurité doit être une priorité pour Ottawa
Agence QMI, Guillaume Saint-Pierre, 2016 03 01
Ottawa - **Deux anciens hauts fonctionnaires canadiens demandent au gouvernement Trudeau de moderniser la structure du renseignement et de la sécurité afin de mieux protéger les Canadiens de la menace terroriste**. Après avoir essuyé des compressions sous le précédent gouvernement conservateur, les agences de renseignement doivent être à nouveau mieux financées, estiment l'ancien patron de **l'Agence des services frontaliers du Canada (ASFC), Luc Portelance, et un ex-agent du Service canadien du renseignement de sécurité (CSIS), Ray Boisvert.** «Les Canadiens ont besoin d'être rassurés», affirment-ils conjointement dans une publication rédigée pour le compte de l'Institut MacDonald-Laurier et rendue publique lundi. En plus d'injecter des fonds dans les agences existantes, MM. Portance et Boisvert croient qu'il est temps de créer de nouveaux organismes de surveillance. Selon eux, le Canada doit se doter d'un service de renseignement responsable d'épier ce qui se passe à l'étranger, afin qu'il soit moins dépendant du travail de ses alliés. La mise en place d'une agence centrale qui coordonnerait tous les efforts de surveillance canadiens devrait aussi être une priorité, disent-ils.

Money transfer called a 'pre-meditated plan'
Ottawa Citizen, James Bagnall, 2016 03 01
Ottawa - After nearly four years of criminal proceedings against former construction boss **Roland Eid,** the Crown on Monday presented its final submissions. Federal prosecutor Moray Welch said nothing about **Eid's activities as an informant for the Canadian Security and Intelligence Service**, concentrating instead on the financial drama that unfolded in Ottawa's construction industry early in 2008. That's when Eid's firm - ICI Construction - went bankrupt, leaving dozens of creditors on the hook for millions owed. The circumstances, well known by now, still seem bizarre.. Eid has suggested, in interviews conducted before the trial, that the government pushed ICI into bankruptcy at the behest of CSIS, which he claims was upset that he refused to perform a high- risk assignment in Lebanon.

Bewildering case of former spy to hear final arguments
Ottawa Citizen, James Bagnall, 2016 02 27
Ottawa - It's difficult to imagine a stranger set of circumstances and evidence facing an Ontario Superior Court Justice. **Judge Timothy Ray, starting Monday, will hear final arguments from Crown and defence lawyers in a bewildering fraud trial involving Roland Eid - a former spy with the Canadian Security Intelligence Service**. The criminal proceeding, a judge- only affair, began nearly a year ago but has taken several breaks, including a lengthy one to accommodate a key witness with health issues. Eid was charged in 2012 with multiple counts of fraud and forgery in connection with the transfer of $1.7 million from his firm, ICI Construction, to his personal account in Lebanon. Shortly after the cash arrived in his Beirut bank late in 2007, ICI Construction filed for bankruptcy, leaving dozens of creditors on the hook. Evidence at the criminal trial to date has focused on how the money flowed. Witnesses from a variety of financial intermediaries unique to the construction industry offered perspective. But here's the problem facing Ray: So many of the facts in the case are simply unknowable - or involve potential witnesses, including Eid, who were not called upon to testify. Eid has never

denied that the $1.7 million was transferred. At trial, it emerged that he was planning to use the money as startup capital for building projects in Syria.

Sixty linked to terror back in Canada
Agence France-Presse, Staff reporter, 2016 02 25
Sixty Canadians have returned home after travelling abroad to join banned terror groups, while another 180 are still engaged with these organizations, Canada's spy master told a local newspaper. "The total number of people overseas involved in threat-related activities, and I'm not just talking about Iraq and Syria, is probably around 180," **Canadian Security Intelligence Service director Michel Coulombe told the Globe and Mail newspaper**. "In Iraq and Syria, we are probably talking close to 100," he added. An agency official was not immediately available to confirm the figures, which represent a significant jump in the number of Canadians reported to be involved in "terrorist" activities. A 2014 national security report said 130 Canadians overseas were being tracked by CSIS. They are said to be involved in fighting, training, fundraising to support attacks, promoting extremist views and planning attacks. Federal police chief Bob Paulson said the Royal Canadian Mounted Police is keeping tabs on those who have returned to Canada, some of them around the clock. (Full report)

Bring our spies to heel
Toronto Star, 2016 02 25
Editorial: **Just how many Canadians had their personal information handed over to the Americans and other allies when Ottawa's electronic spies dropped the ball a few years ago and unlawfully passed along metadata to foreign security services without scrubbing it first? Was it hundreds, thousands, millions? Jean-Pierre Plouffe**, the commissioner-watchdog for the **Communications Security Establishment**, can't say. Because he doesn't know. "It's impossible to know the exact figure," he told the Senate's national security committee a few days ago. We can only wonder. How long did the **CSE** security breach go on before it was noticed? Was it a year? Two? More? Again, Plouffe is in the dark. CSE "didn't know for how long the problem existed," he told the committee. And just what personal information ended up in the hands of Canada's "Five Eyes" allies, the United States, Britain, Australia and New Zealand? There's no prize for guessing that, either. Plouffe doesn't know. "After a certain time, data disappears," he said. But rest assured, CSE said in a press release after Plouffe addressed the committee, "the privacy impact is assessed as low." Really? CSE, which reports to Defence Minister Harjit Sajjan, is barred by law from targeting Canadians. Yet it passed on a torrent of so-called metadata information and now wants to wave off the breach as small potatoes. If anyone needed more evidence that our security agencies ought to be more transparent and accountable for their activities, this is it.

Une soixantaine de Canadiens liés à des groupes extrémistes de retour chez eux
Agence France-Presse, Journaliste maison, 2016 02 24
Ottawa - Une soixantaine de Canadiens sont revenus dans leur pays après avoir rejoint à l'étranger les rangs d'organisations classées "terroristes" par Ottawa, et 180 autres y sont toujours engagés, surtout en Irak et en Syrie, a indiqué le patron du service du renseignement. "Le nombre total de personnes impliquées à l'étranger dans des activités menaçantes --et je ne parle pas uniquement de l'Irak et de la Syrie-- est probablement autour de 180", a déclaré **Michel Coulombe**, directeur du **Service canadien de renseignement de sécurité (SCRS)**, dans un entretien au quotidien le Globe and Mail de mercredi.

CSIS using new powers to disrupt terrorists since Bill C-51 became law
CBC News, Peter Zimonjic, 2016 02 24

Ottawa - **Michel Coulombe, director of the Canadian Security Intelligence Service, told a Commons committee today that Canada's spy agency has used new disruption powers it was granted when Bill C-51 became law this past summer**. This marks the first time CSIS has publicly acknowledged the use of its new powers under the Anti-terrorism Act to disrupt suspected plots rather than just relay information about those plots to the federal government and the RCMP As an intelligence agency, CSIS does not have powers to enforce the law. Its role has been to relay intelligence to other branches of government. That changed when Bill C-51 became law, giving the spy agency power to actively interfere with suspected terrorists if it has reasonable grounds to think a security threat exists. The disruption powers allow CSIS to interfere with, telephone calls, travel plans and bank or financial transactions. The agency can also disrupt radical websites and Twitter accounts of groups or people inside and outside of Canada. This provision in the act has garnered criticism from the outset, because there is no clear definition of what "disrupt" means in the legislation, causing some to be concerned the power would be abused by police and intelligence services.

Canada's spies expecting a budget boost
Toronto Star, Alex Boutilier, 2016 02 24
Ottawa - **Canada's spies are expecting a budget boost when the Liberals table their first fiscal plan next month, documents released Tuesday show. The Canadian Security Intelligence Service (CSIS) and the Communications Security Establishment (CSE) have estimated an additional $95 million for intelligence and cyber defence operations next year**. The figures were released in the government's main estimates document, a best-guess scenario for departments and agencies released a month before the Liberals table their first budget. CSIS expects an additional $35.5 million "in support of Canada's national security and the safety of Canadians." A breakdown of CSIS budget -- grouped vaguely into "intelligence" and "security screening" -- shows most of the increase will go to intelligence operations. CSE, the electronic spying and cyber defence agency, is expecting a net increase of $59.5 million "in support" of its mandate. Specifically, CSE expects to spend the money to increase its "capacity to address cyber threats and advancements in technology." Together, the two spy agencies estimate they'll spend $1.2 billion in 2016-17, a slight increase compared to the 2015-16 estimates of $1.075 billion. CSE spokesperson **Lauri Sullivan** said in a statementthat the funding will go to addressing several "key vulnerabilities" in government networks, as well as moving forward with the national Cyber Security Strategy.

180 Canadiens environ partis faire le djihad
Agence QMI, Journaliste maison, 2016 02 24
Ottawa - **Près de 180 Canadiens ont quitté le pays pour aller combattre en Irak et en Syrie, selon le Service canadien du renseignement de sécurité (SCRS) et la Gendarmerie royale du Canada (GRC)**. Dans un point de presse commun tenu hier matin, à Ottawa, les services de renseignement ont précisé qu'une centaine de ces individus sont allés grossir les rangs du groupe armé État islamique (ÉI). Les directeurs du SCRS et de la GRC ont dit qu'ils utilisaient les outils mis à leur disposition par la loi antiterroriste (C-51) entrée en vigueur en juin dernier. «Est-ce que nous avons utilisé les nouveaux pouvoirs que nous donne la loi C-51? La réponse est oui, a fait savoir le commissaire de la GRC, Bob Paulson. Dans certains cas, nous faisons de la surveillance 24 heures sur 24, sept jours sur sept. Dans d'autres cas, nous travaillons avec des groupes communautaires pour essayer de réintégrer ces jeunes à la société canadienne.»

In New York, Apple wins a battle in its legal war with the U.S.
Washington Post, Ellen Nakashima, 2016 03 01
Washington - **A federal judge in New York ruled in favor of Apple on Monday, saying that an obscure Colonial-era law did not authorize him to force the firm to lift data from an iPhone at the government's request**. The ruling is not binding in any other court, but it takes on an outsize importance as the U.S. government battles Apple in a separate case in California over whether the tech firm should help unlock a phone used by one of the shooters in the San Bernardino terrorist attack in December. The two cases involve different versions of iPhone's operating system and vastly different requests for technical help, but they both turn on whether a law from 1789 known as the All Writs Act can be applied to cases in which the government cannot get at encrypted data stored on suspects' devices.

Un nouvel accord recadre l'espionnage américain
Le Temps (Suisse), Ram Etwareea, 2016 03 01
Bruxelles - **Protection de données Les citoyens européens obtiennent de nombreuses garanties et diverses possibilités pour faire recours s'ils s'estiment lésés par des services de renseignement ou des entreprises américains « Safe Harbour »,** le règlement transatlantique en matière de transmission et de protection des données, est mort. Vive « Privacy Shield », qui entrera en vigueur dès qu'il aura obtenu le feu vert des vingthuit Etats membres de l'Union européenne (UE) ainsi que celui du Parlement européen. En gros, les Etats-Unis promettent de moins espionner les citoyens européens. « Notre objectif est d'assurer la protection des droits fondamentaux de nos citoyens et d'apporter une sécurité juridique à nos entreprises », a expliqué lundi un haut fonctionnaire européen. Du côté des Etats-Unis, le président Barack Obama a signé la semaine dernière le Judicial Redress Act qui accorde aux Européens les mêmes droits qu'aux Américains en matière de protection des données. Programme américain d'espionnage à grande échelle ,

Last Batch of Clinton Emails Is Released
New York Times, Steven Lee Myers, Julie Hirschfeld Davis, 2016 03 01
Washington - The **State Department on Monday released the last set of emails from the 30,000 messages on Hillary Clinton's private computer server**, including an email about North Korea that remains a point of dispute between the department and one of the nation's spy agencies over the secrecy of information that passed through the server. That email -- written on July 3, 2009, after a North Korean ballistic missile test -- was one of four that prompted intensified scrutiny of the emails for classified information and a referral last year to the F.B.I. for a review of the handling of classified information by Mrs. Clinton, her aides and other State Department officials while she was secretary of state. It was released as part of a chain of five replies and forwards on Monday with portions blocked out on the grounds that they **contained information now classified "secret," though not "top secret**," the higher classification that the spy agency, the National Geospatial-Intelligence Agency, had cited last summer.

28. Washington; 2002 Letter on Eavesdropping Is Made Public
New York Times, Charlie Savage, Eric Lichtblau, 2016 03 01
Washington - The **Obama administration on Monday made public a previously classified letter from 2002 about the Bush administration's secret program that allowed the National Security Agency to eavesdrop on Americans' international communications without court orders**. The release of the 22-page letter, written by John Yoo, then a top lawyer in the Justice Department's Office of Legal Counsel, adds to the historical record of one of the

most controversial pieces of the Bush administration's response to the terrorist attacks of Sept. 11, 2001: The surveillance and bulk data collection program known by the code name Stellarwind.

Apple's congressional testimony: 'Dangerous precedent' would weaken all iPhones
Washington Post, Andrea Peterson, 2016 02 29
Washington - **Apple's general counsel plans to argue Tuesday on Capitol Hill that the FBI's request to unlock the smartphone used by one of the San Bernardino, Calif. terrorists would set "a dangerous precedent" of the federal government ordering a company to weaken the security of its own products, according to a copy of his testimony obtained by The Washington Post.** Bruce Sewell, the general counsel, plans to say that Apple has "no sympathy for terrorists." But he will argue that once the iPhone is weakened in this way, hackers and cyber criminals could wreak havoc on the personal safety and privacy of the hundreds of millions of people who own an Apple device. "They are asking for a backdoor into the iPhone," Sewell's testimony states. "Building that software tool would not affect just one iPhone. It would weaken the security for all of them.... We can all agree this is not about access to just one iPhone." Sewell's testimony also states that FBI **Director James Comey** has acknowledged that the FBI would likely use the precedent in other cases involving iPhones.

Pentagon chief to appeal to Silicon Valley for help with cybersecurity
Los Angeles Times, W.J. Hennigan, 2016 02 29
Los Angeles - **Defense Secretary Ashton Carter will visit a crucial front this week in the war the Pentagon considers its greatest potential threat: cyberspace. Carter will visit a Pentagon outpost in the heart of Silicon Valley, speak at a cybersecurity conference in San Francisco and go to Microsoft and Amazon headquarters in Seattle to highlight the risks of cyberattacks and the need for greater digital cooperation with the Pentagon**. His visit to the West Coast -- his third in less than a year, more than he's made to Kabul or Baghdad -- marks the latest effort by the Obama administration to recruit telecommunications, social media and other technology companies as partners in national security operations despite deep suspicion in Silicon Valley about government surveillance. "One hand of the government is reaching out to the valley, while another is poking them in the eye," said Peter W. Singer, a fellow at the nonprofit New America Foundation in Washington and coauthor of the book **"Cybersecurity and Cyberwar."**

Apple-FBI battle renews push for encryption bill
Washington Post, Karoun Demirjian, 2016 02 29
Washington - **The controversy over whether Apple should help federal investigators access the iPhone of one of the San Bernardino shooters is putting renewed urgency behind legislative efforts to settle the contentious issue of when tech companies should comply with government requests for help accessing their customers' secure information**. **FBI Director James B. Comey** strongly hinted to lawmakers last week that it's time for Congress to begin a serious debate about encryption as Apple and the government battle it out in court with a California judge ruling recently that the tech giant should comply with investigators' demands. "Whatever the judge's decision is in California - I'm sure it will be appealed no matter how it ends up - will be instructive for other courts," Comey said Thursday during a House Intelligence Committee hearing. "But I do think the larger question is not going to be answered in the courts, and it shouldn't be, because it's really about who do we want to be and how do we want to govern ourselves." The heated atmosphere is focusing attention on the anticipated release of a bill being drafted by Senate Intelligence Committee Chairman Richard

Burr (R-N.C.) and Sen. Dianne Feinstein of California, the panel's top Democrat, that would compel companies to override encryption technology when presented with a warrant.

NSA deploys game-changer against U.S. enemies
WTOP Radio (Washington), J.J. Green, 2016 02 29
Washington - **U.S. intelligence has hard proof that almost 1,000 foreign intelligence targets, including terrorists tracked by the U.S., have changed their communications methods because they were tipped off by Edward Snowden's leaks**. Those targets, according to Rick Ledgett, deputy director of the National Security Agency, include a group of terrorists that were actively plotting to attack the U.S. In an exclusive interview with WTOP, Ledgett described as "significant" the continuing damage caused by the leaks. He also detailed a new program to recapture the advantage over U.S. adversaries. "The information that Snowden leaked caused immediate risk and long-term risk to the safety of Americans around the world, and our friends and allies," said Ledgett. High-level foreign intelligence targets of the U.S. government, that number "in the high hundreds," he said, have altered the way they communicate because of the Snowden leaks.

CIA director: Armed forces would ignore Trump
Politico.com, Nick Gass, 2016 02 28
Washington - **Former CIA Director Michael Hayden blasted Donald Trump's rhetoric in a recent interview, saying that the U.S. military would refuse orders from him, even as commander-in-chief, to kill the families of terrorists, as Trump has pledged to do**. Appearing on HBO's "Real Time with Bill Maher" to promote his latest book, Hayden expressed concern about Trump's language, including the Manhattan real-estate magnate's vow to bring back waterboarding and worse because "they deserve it." "I would be incredibly concerned if a President Trump governed in a way that was consistent with the way that candidate Trump expressed during the campaign," Hayden said. Maher brought up Trump's pledge to kill family members of Islamic State terrorists. "That never even occurred to you, right?" Maher deadpanned. "God, no!" Hayden exclaimed. "Let me give you a punchline: If he were to order that once in government, the American armed forces would refuse to act."

FBI vs. Apple Establishes a New Phase of the Crypto Wars
The Intercept, Dan Froomkin & Jenna McLaughlin, 2016 02 27
Washington - **For over two decades, the battle between privacy- minded technologists and the U.S. government has primarily been over encryption. In the 1990s, in what became known as the Crypto Wars, the U.S. tried to limit powerful encryption** -- calling it as dangerous to export as sophisticated munitions -- and eventually lost. After the 2013 Snowden revelations, as mainstream technology companies started spreading encryption by putting it in popular consumer products, the wars erupted again. Law enforcement officials, led by **FBI** Director James Comey, loudly insisted that U.S. companies should build backdoors to break the encryption just for them. That won't happen because what these law enforcement officials are asking for isn't possible (any backdoor can be used by hackers, too) and wouldn't be effective (because encryption is widely available globally now). They've succeeded in slowing the spread of unbreakable encryption by intimidating tech companies that might otherwise be rolling it out faster, but not much else. Indeed, as almost everyone else acknowledges, unbreakable encryption is here to stay.

U.S. government concludes cyber attack caused Ukraine power outage
Reuters, Staff report, 2016 02 26
Washington - **A December power outage in Ukraine affecting 225,000 customers was the result of a cyber attack, the U.S. Department of Homeland Security said Thursday, marking the first time the U.S. government officially recognized the blackout as caused**

by a malicious hack. Security experts had already widely concluded that the downing of utilities in western Ukraine on December 23 was due to an attack, which is believed to be the first known successful cyber intrusion to knock a power grid offline. The published alert from DHS's Industrial Control Systems Cyber Emergency Response Team does not confirm attribution of the attack. But U.S. cyber intelligence firm iSight Partners and other security researchers have linked the incident to a Russian hacking group known as "Sandworm." DHS said its assessment was based on interviews with six Ukrainian organizations affected by the blackout and said its investigators were not able to independently review technical evidence.

U.S. Asks Tech and Entertainment Industries to Aid Antiterror Efforts
New York Times, Cecilia Kang, Matt Apuzzo, 2016 02 25
Washington - **Obama administration officials met with executives of major technology and entertainment companies in Washington on Wednesday to discuss combating the activities of violent extremists online, according to industry and government officials**. The meeting was called by the White House, according to a person who attended and who spoke on the condition of anonymity. The session began with government officials admitting their shortcomings in tackling the explosion of activity by terrorist groups online. John P. Carlin, assistant attorney general for national security, started the meeting by saying that federal law enforcement had struggled to reach audiences that were responding to recruitment by violent extremists, according to the participant. Nick Rasmussen, director of the national counterterrorism center, lauded some social media platforms for aggressively taking down accounts of suspected terrorists. **The hourslong meeting, which took place at the Justice Department, also included speeches by Megan Smith, the national chief technology officer; and Jen Easterly, the senior director for counterterrorism**. The subject of encryption and Apple's resistance to being ordered to break through its encrypted software for law enforcement was not on the agenda.

As it defies U.S., Apple complies with China
Los Angeles Times, David Pierson, 2016 02 26
Los Angeles - **Apple Inc. has come out swinging in its pitched battle with the government on its home turf. But when it comes to its second-largest market, China, the Cupertino, Calif., company has been far more accommodating**. Since the iPhone was officially introduced in China seven years ago, Apple has overcome a national security backlash there and has censored apps that wouldn't pass muster with Chinese authorities. It has moved local user data onto servers operated by the state-owned China Telecom and submits to security audits by Chinese authorities. The approach contrasts with Apple's defiant stance against the **FBI**, which is heaping pressure on the company to decrypt an iPhone that belonged to San Bernardino shooter Syed Rizwan Farook.

Ex-CIA, NSA chief Michael Hayden: 2016 rhetoric 'scares me'
CNN.com, Tal Kopan, 2016 02 26
Washington - **Former CIA and National Security Agency Director Gen. Michael Hayden says the rhetoric from the GOP candidates in the presidential race is scary -- and he suspects the rest of the world is concerned, too**. Hayden was responding Thursday to a question from CNN's Michael Holmes about the rhetoric on the campaign trail, with Holmes mentioning Texas Sen. Ted Cruz's promise of carpet bombing ISIS and GOP front-runner Donald Trump's praise for waterboarding and harsher interrogation techniques as well as a proposed temporary ban on foreign Muslims. "We have taken ... very complicated, serious issues and we've pushed them down to the level of bumper stickers," Hayden said. "That scares me and I'm sure it scares a lot of the rest of the world."

Apple challenges FBI's iPhone demand as 'oppressive'
Washington Post, Ellen Nakashima, Mark Berman, 2016 02 26
Washington - **Apple on Thursday asked a court to quash a judicial order that would force the company to help the Justice Department unlock an iPhone used by one of the San Bernardino attackers, arguing that the order imposed an "unprecedented and oppressive" burden on the tech giant**. The motion to vacate was the latest step in a high-stakes legal battle that could stretch out for months and possibly wind up at the Supreme Court. The filing comes as Apple and the U.S. government are engaging in a public back- and-forth that in the coming weeks will extend to an appearance before Congress and a court hearing. While the debate centers on a locked iPhone 5C, it has far-reaching consequences about the way a digital society balances privacy and civil liberties with law enforcement. "This is not a case about one isolated iPhone," Apple wrote in its motion, filed in the U.S. District Court for the Central District of California. "Rather, this case is about the Department of Justice and the **FBI** seeking through the courts a dangerous power that Congress and the American people have withheld: the ability to force companies like Apple to undermine the basic security and privacy interests of hundreds of millions of individuals around the globe." The company argues that the government is attempting to cut off a debate about the privacy issues in this case and that asking Apple to create a back door would expose personal information "to hackers, identity thieves, hostile foreign agents, and unwarranted government surveillance."

Homeland secretary tells Congress DHS won't squander cyber funds
Federal Times, Aaron Boyd, 2016 02 26
Washington - **Homeland Security Secretary Jeh Johnson is asking for an extra $200 million for cybersecurity in next year's budget but promised legislators the department won't be squandering those funds**. Johnson presented the DHS 2017 budget request to the House and Senate appropriations committees on Feb. 24, laying out the department's priorities, **including cybersecurity.** The department's plans for 2017 go beyond technology, putting DHS at the center of the government's cybersecurity operations and proposing a reorganization of operations within the department.

Homeland Security Is Spilling a Lot of Secrets
Bloomberg View, Josh Rogin, 2016 02 26
Column - **The Department of Homeland Security suffered over 100 "spills" of classified information last year, 40 percent of which came from one office, according to a leaked internal document I obtained**. Officials and lawmakers told me that until the Department imposes stricter policies and sounder practices to better protect sensitive intelligence, the vulnerabilities there could be exploited. Not only does this raise the threat that hostile actors could get their hands on classified information, but may lead to other U.S. agencies keeping DHS out of the loop on major security issues. There were 119 of these classified spills reported throughout the Homeland Security Department in fiscal year 2015, according to the internal document, which itself is unclassified. The section with the most spills by far was the Office of Intelligence and Analysis, headquartered at building 19 of the Nebraska Avenue Complex in Washington, led by retired General Francis Taylor. This office is composed mostly of intelligence analysts assigned to produce and review classified reports that are often the **work of other intelligence agencies, including the Central Intelligence Agency and the Office of the Director of National Intelligence.**

U.S. Set to Expand Sharing of Intercepted Calls and Email
New York Times, Charlie Savage, 2016 02 26
Washington - **The Obama administration is on the verge of permitting the NationalSecurity Agency to share more of the private communications it intercepts with other American**

intelligence agencies without first applying any privacy protections to them, according to officials familiar with the deliberations. The change would relax longstanding restrictions on access to the contents of the phone calls and email the security agency vacuums up around the world, including bulk collection of satellite transmissions, communications between foreigners as they cross network switches in the United States, and messages acquired overseas or provided by allies. **The idea is to let more experts across American intelligence gain direct access to unprocessed information, increasing the chances that they will recognize any possible nuggets of value.** That also means more officials will be looking at private messages -- not only foreigners' phone calls and emails that have not yet had irrelevant personal information screened out, but also communications to, from, or about Americans that the N.S.A.'s foreign intelligence programs swept in incidentally. Civil liberties advocates criticized the change, arguing that it will weaken privacy protections. They said the government should disclose how much American content the N.S.A. collects incidentally -- which agency officials have said is hard to measure -- and let the public debate what the rules should be for handling that information. "Before we allow them to spread that information further in the government, we need to have a serious conversation about how to protect Americans' information," said Alexander Abdo, an American Civil Liberties Union lawyer.

Apple enhancing its iPhone security
Washington Post, Ellen Nakashima, Todd C. Frenkel, 2016 02 25
Washington - **Fearing that the government may be able to order it to bypass security features in newer-model phones, Apple has begun working on enhancements that would prevent the company from updating the software of an iPhone without knowing a user's password**, according to individuals familiar with the effort. These security improvements would make it impossible for Apple to help the government unlock newer iPhones in the manner authorities want the company to do so now. The move would force those authorities to find a new technical solution even if they gain the legal authority to force the company to unlock the phones of suspects. Security experts hailed Apple's move. "They've never thought before that they might be forced by the government to break into its own products and reverse security procedures," said Jonathan Zdziarski, a security researcher who has proposed about a dozen solutions to the problem to Apple. "Now that they've been forced into this mode of thinking, a lot of the security updates in the future will be not just to keep the hackers out, but to keep themselves out until the user authorizes the update."

U.S. spy chiefs expect continuing problems in Libya, Ukraine
Reuters, Mark Hosenball, 2016 02 25
Washington - **U.S. spy agencies expect continuing upheaval in Libya and Ukraine, top intelligence officials told Congress on Thursday.** James Clapper, the U.S. Director of National Intelligence, told a **House of Representatives Intelligence Committee** hearing that the United States had "great hope" that a new government of national accord will soon be formed in Libya. But at the same hearing, **CIA chief John Brennan** acknowledged that the United States in practice was pursuing a two-track policy in Libya, in which it was engaged both in a diplomatic effort to knit together two competing, regionally based self-proclaimed Libyan governments while also conducting "counter terrorism" operations against a growing contingent of Islamic State militants. U.S. officials now estimate that up to 4,000 foreign fighters have traveled to Libya to base themselves in Islamic State training camps that have sprouted up around the country, where they have joined up with hundreds if not thousands of local Libyans who have joined the movement.

U.S. Power Producers Seeking to Stem Grid Cybersecurity Threats
Bloomberg News, Harry Weber, Meenal Vamburkar, 2016 02 25

New York - **Exelon Corp. and other major U.S. power producers are in discussions with regulators and stakeholders on a detailed plan for preventing and responding to cyberattacks designed to disrupt the country's electric system**. Unresolved questions in the talks include who is in charge and would substations that are hit be considered a crime scene, said Exelon Chief Executive Officer Christopher Crane during a Thursday panel discussion at IHS CERAWeek in Houston. "Think about the civil unrest in Philadelphia and Baltimore and some of the communities we serve if you have multiple days of power not flowing," Crane said. The debate comes as U.S. power grids are upgraded from an analog to a digital system, raising the potential that the systems that manage the flow of electricity to millions of Americans could be shut down by a cyberattack. Among the challenges are differences in security requirements across the country and the world, how the grids share power in times of high demand and the massive task of bringing together industry, government and the technology community to find solutions.

Top Intel Officials: U.S. Faces Highest Terror Threat Level Since 9/11
Washington Free Beacon, Adam Kredo, 2016 02 25
Washington - **Top intelligence community officials warned Thursday that the United States faces the highest terrorist threat level since the 9/11 terror attacks, citing a record-breaking increase in the flow of foreign fighters to Syria and Iraq, as well as joint Iranian-North Korean plans to boost "attack capabilities"** and other efforts by leading terror groups to increase their offensive capabilities. As Iran "continues to be the foremost sponsor of terror" across the globe, ISIS has emerged as the "preeminent global terrorist threat," with its combined strength now exceeding al Qaeda's, **according to Director of National Intelligence James Clapper**, who warned lawmakers on the House Permanent Select Committee on Intelligence that "unpredictable instability has become the new normal." The United States has never dealt with this type of threat landscape and struggles to ensure it can continue gathering intelligence on these terror groups, which have shown unprecedented proficiency at obfuscating their actions. Violent extremists now operate in 40 countries, Clapper said. Another seven countries have collapsing governments, and 14 are in danger of falling due to violent instability. An additional 59 countries have been marked as facing "significant risk of instability through 2016," Clapper said.

Spy head: 'Jury's out' on whether China quit hacking after deal
The Hill, Cory Bennett, 2016 02 25
Washington - **The Obama administration still can't assess whether China is adhering to a September pledge to stop hacking private American companies, Director of National Intelligence James Clapper told lawmakers on Thursday**. "I think the jury's out," Clapper said in a rare open House Intelligence Committee hearing. "We have seen some reduction, but I don't think we're in a position to say at this point whether they're in strict compliance," he added in response to the question from Rep. Jim Himes (D- Conn.).

FBI Chief: Apple Issues Are Hardest He's Seen in Government
Associated Press, Staff report, 2016 02 25
Washington - **The policy issues raised in the Justice Department's dispute with Apple Inc. over a locked iPhone represent the "hardest question I've seen in government, and it's going to require negotiation and conversation," FBI Director James Comey said Thursday in defending the government's demand for the tech company to help access the device**. "I do think the larger question is not going to be answered in in the courts, and it shouldn't be. Because it's really about who do we want to be as a country, and how do we want to govern ourselves," Comey told the House Intelligence Committee. Days after making his first public statement on the matter in an Internet blog post, Comey appeared determined to tamp

down the tension that has flared publicly between the government and the company in the week since the judge's order.

FBI's Tor hack shows the risk of subpoenas to security researchers
Threat Level (Wired), Andy Greenberg, 2016 02 25
New York - **Computer security researchers who expose hackable vulnerabilities in digital products face plenty of occupational hazards: They can have their work censored by threats of lawsuits from the companies whose products they hack, or they can even be criminally indicted if their white-hat hacking runs afoul of the Computer Fraud and Abuse Act.** But one still-mysterious encounter between security researchers and the law points to a newer, equally troubling possibility: They can have their work subpoenaed in a criminal investigation and used as a law enforcement tool. A judicial ruling released yesterday in the case of Brian Farrell, an alleged staffer of the defunct Dark Web drug site Silk Road 2, confirmed what many who followed that black market's downfall have suspected for months: That the FBI was able to bypass the anonymity software Tor--the central tool used by the Silk Road 2 and its buyers and sellers to evade the cops--with information they obtained from a subpoena to Tor-focused security researchers at Carnegie Mellon University's Software Engineering Institute.

Apple's top lawyer to testify before Congress over encryption fight with FBI
The Guardian (London), Spencer Ackerman, 2016 02 25
Washington - **Apple's top lawyer will testify before a congressional panel next week about the company's escalating battle with the FBI over smartphone privacy, Washington sources have confirmed.** The hearing, scheduled for 1 March before the House judiciary committee, will be Congress's first opportunity to quiz an Apple representative, vice-president and general counsel Bruce Sewell, over the company's rejection of a court order demanding the company unlock the iPhone belonging to one of the terrorists who killed 14 people in San Bernardino, California, in December. **FBI director James Comey**, who conceded to a different House panel on Thursday that the resolution of the case will likely set a legal precedent, will also testify - but not alongside Sewell. Comey will speak first and without other witnesses, something aides said was typical for government witnesses, and Sewell will follow.

400 Intel Pros Warn: ISIS Info Flawed
The Daily Beast, Shane Harris, Nancy A. Youssef, 2016 02 25
Washington - **Forty percent of analysts working at the U.S. military's Central Command, which is running the war against ISIS, think there are problems with "analytic integrity" in their work, a top congressman said on Thursday**. Rep. Devin Nunes, chairman of the **House Intelligence Committee**, asked senior intelligence officials about the figure, which was discovered in a recent survey of analysts by the country's top intelligence office. The survey was first reported by The Daily Beast this month. "To me, it seems like if 40 percent of analysts are concerned at **CENTCOM**, that's just something that can't be ignored," Nunes told top intelligence officials testifying before the committee, including **Director of National Intelligence James Clapper and CIA Director John Brennan.** "I would consider that unusually high," Lt. Gen. Vincent Stewart, the director of the Defense Intelligence Agency, said of the 40 percent figure. "We've already had requests where there's been a dispute at CENTCOM where we've sent out an ombudsman there to look at the analytic rigor."

Spy agencies say Clinton emails closely matched top secret documents: sources
Reuters, Mark Hosenball, 2016 02 25
Washington - **U.S. spy agencies have told Congress that Hillary Clinton's home computer server contained some emails that should have been treated as "top secret" because their wording matched sections of some of the government's most highly classified**

documents, four sources familiar with the agency reports said. The two reports are the first formal declarations by **U.S. spy agencies** detailing how they believe Clinton violated government rules when highly classified information in at least 22 email messages passed through her unsecured home server. **The State Department has already acknowledged that the emails contained top secret intelligence**, though it says they were not marked that way. It has not previously been clear if the emails contained full classified documents or only some information from them. The agencies did not find any top secret documents that passed through Clinton's server in their full version, the sources from Congress and the government's executive branch said. However, the agency reports found some emails included passages that closely tracked or mirrored communications marked "top secret," according to the sources, who all requested anonymity. In some cases, additional classification markings meant access was supposed to be limited to small groups of specially cleared officials.

Apple CEO Tim Cook Says iPhone-Cracking Software 'Equivalent of Cancer'
ABC News, Enjoli Francis, 2016 02 25
New York - **In an exclusive interview with ABC News today, Apple CEO Tim Cook told "World News Tonight" anchor David Muir that what the U.S. government was asking of the tech giant -- to essentially create software enabling the FBI to unlock an iPhone used by one of the San Bernardino, California, shooters** -- amounted to the "software equivalent of cancer." "The only way to get information -- at least currently, the only way we know -- would be to write a piece of software that we view as sort of the equivalent of cancer. We think it's bad news to write. We would never write it. We have never written it -- and that is what is at stake here," he said. "We believe that is a very dangerous operating system." The FBI has called on Apple to help crack into the iPhone of Syed Farook, who along with wife Tashfeen Malik killed 14 and injured 22 at a training session and holiday party in December. The FBI attempted to crack the pass code but failed because Apple phone systems have a function that automatically erases the access key and renders the phone "permanently inaccessible" after 10 failed attempts. Last week, at the request of the Justice Department, a federal judge told Apple to assist law enforcement.

NPR's Interview With CIA Director John Brennan
NPR, Mary Louise Kelly, 2016 02 24
Interview: MARY LOUISE KELLY: **Let me start with this week's news with cyber and the legal showdown unfolding between Apple and the FBI over this San Bernardino iPhone. Should Apple be forced to help the FBI unlock this phone? CIA DIRECTOR JOHN BRENNAN:** Well, on that particular case, it is being worked now through the courts. But from the standpoint of the government's responsibility to keep its citizenry safe, I think there needs to be a very healthy debate and discussion about what the government should be able to do and access when it comes to electronic communications. You know, for many years, I think there has been a fairly well-established principle that the government, when it has the appropriate basis, or a court order, will be able to have access to information that is important to determine guilt-innocence, or what needs to be done in order to protect the citizens. So for example, when I think about electronic communications, it is sort of a unique environment. But at the same time, what would people say if a bank had a safe-deposit box, or a storage company had a storage bin, that individuals could use and access and store things, but the government was not going to be able to have any access to those environments? And so criminals, terrorists, whatever, could use it. So what is it about electronic communications that makes it unique in terms of it not being allowed to be accessed by the government when, again, the law, the courts, say that the government should have access to it? So these are things that need to be worked through.
KELLY: Is that a yes, that you think Apple should be forced to help the FBI in this case?
BRENNAN: I think that the FBI clearly has a legitimate basis to try to understand what is on a

phone that is part of a very active investigation; again, consistent with what their responsibilities and authorities are. So, again, this is being worked out through the courts. But I do believe that electronic communications, like other means of communication, or means of storage, should have the opportunity for the government, when there is a legitimate basis, to access it.

Feds secretly tracked 6,000 phones
USA Today, Brad Heath, 2016 02 24
Washington - **Federal marshals have secretly used powerful cellphone surveillance tools to hunt nearly 6,000 suspects throughout the USA, according to newly disclosed records in which the agency inadvertently identified itself as the nation's most prolific known user of phone-tracking devices**. The fact that the U.S. Marshals Service uses cellphone trackers, commonly known as stingrays, has long been among law enforcement's worst- kept secrets, though the agency refuses to acknowledge it. The Marshals Service confirmed its use of the devices to USA TODAY only in the process of trying to keep it secret, rejecting a Freedom of Information Act request for a copy of its log of cases in which agents used stingrays. The Marshals Service's response to that request included an almost totally censored spreadsheet listing its stingray cases. Information about the cases was stripped out line by line, which made it possible to count the number of entries the agency had made on its log of stingray uses.

Bill Gates 'Disappointed' by Reports He Backs FBI Over Apple
Bloomberg News, Jing Cao, 2016 02 24
New York - **Bill Gates is "disappointed" with a recent report suggesting that he supports the U.S. government in its clash with Apple Inc. over unlocking an iPhone, saying it doesn't accurately reflect his opinion on the matter**. "That doesn't state my view on this," he said in an interview on "Bloomberg Go." "The extreme view that government always gets everything, nobody supports that. Having the government be blind, people don't support that." The Financial Times reported that Gates sided with the U.S. government, saying that a court order requiring Apple to help unlock the phone of a terrorist involved in a December attack was a one-time request and "no different" from accessing bank and telephone records. It's important to strike the right balance between the government getting to see everything versus nothing, Gates said on "Bloomberg Go."

House Committee Looks at Possible T.S.A. Lapses and Mistreatment
New York Times, Ron Nixon, 2016 02 24
Washington - **A congressional committee is investigating allegations that the agency in charge of airport security retaliated against employees who reported security lapses and awarded bonuses to supervisors who ignored their warnings**. The agency, the **Transportation Security Administration**, has until March 4 to provide the House Oversight Committee with documents detailing how it awards bonuses to top agency officials. The investigation comes after Andrew Rhoades, an assistant federal security director at Minneapolis-St. Paul International Airport, sent documents to the committee that he said indicated that the top supervisors who ignored warnings about security lapses were awarded bonuses. One top official in charge of security for the agency received more than $70,000 in bonuses in a three-year period despite a leaked audit that showed screeners failed to detect investigators with fake weapons and bombs going through security lines. The audit showed that screeners failed to detect the weapons 95 percent of the time.

Encryption's tight grip
Los Angeles Times, Paresh Dave, 2016 02 24
Los Angeles - **The FBI hasn't made any headway in its standoff with Apple Inc., and the bitter feud isn't changing minds at competitors either. Several tech executives have**

voiced their support for Apple and are forging ahead with their plans for greater privacy, arguing that what consumers want is more control over their devices and no backdoors for governments. That's bad news for the FBI, and signals that even as it battles Apple, pushback will persist from other tech companies, including social media giants, hardware makers and online storage providers. The government has shown no signs of backing down, though. But where the government wants reasonable paths into phones and databases for criminal investigations, it is instead being met with stiffer barriers. "As much as they try to play up terrorism and child pornography and make an emotional play, we are going to see more encryption," said John Adams, director of security at San Francisco payments processing start-up Bolt and a former head of security at Twitter Inc. "They try to use the horrors of the world to erode civil liberties and privacy, but the greater good -- having encryption, more privacy for more people -- is always going to trump small isolated incidents."

Donald Trump's national security policy would look like a high school UN
Foreign Policy, Peter Feaver, 2016 02 23
Comment - **What kind of national security policy would a President Donald Trump conduct? Since the fall, there have been some heroic attempts by serious analysts to identify a method to the madness of Trump's positions**. George Mason's Colin Dueck thinks he is a traditional American nationalist. Walter Russell Mead at Bard claims Trump has recreated a "nihilistic populism." The National Review's Rich Lowry borrows from Mead's own framework to suggest that Trump is a "Jacksonian" populist. Thomas Wright, writing in Politico, asserts that Trump has had a consistent foreign policy framework, albeit one drawn from the populism and isolationism of the pre-World War II era. Each of these analyses has some merit to it in the sense that sometimes Trump's positions coincide with some of the tenets of these worldviews. And while many of his foreign policy positions bounce around erratically -- he now claims he always opposed the Iraq war when, in fact, he was an early supporter of it -- there are some areas where he does hold a consistent position. For instance, Trump has consistently opposed free trade. **And Trump has consistently believed that our security treaty allies are ripping us off --** perhaps because he is apparently unaware that our allies actually subsidize the cost of U.S. troops stationed. Yet, none of this adds up to the kind of coherent foreign policy framework that would allow us to make the plausible predictions that are possible with a normal candidate.

Home Office to publish revised draft of snooper's charter
The Guardian (London), Alan Travis, 2016 03 01
London - The home secretary, **Theresa May, has revised some elements of her controversial "snooper's charter" legislation in an attempt to address criticism by MPs and peers of the surveillance powers it confers**. Home Office sources say the revised bill, to be published on Tuesday, will reflect a majority of the 129 recommendations made by three parliamentary committees in reports published over the last three weeks. The committees called for a fundamental rewrite of the draft investigatory powers bill, for privacy safeguards to be made the backbone of the legislation and for safeguards to be created against new powers to track everyone's web browsing histories - known as internet connection records. The bill will not meet demands that the most intrusive snooping operations should be authorised by a judge - and not by a minister as is the case at present.

May using campaign sneak in snoopers charter
Mail On sunday, Glen Owen, 2016 02 28
London - **Home Secretary Theresa May was last night accused of rushing her so-called snoopers charter into the Commons while MPs are distracted by the EU referendum campaign. Tory rebels joined forces with Labour to criticise the Home Secretary for hastily putting the Draft Investigatory Powers Bill to a Commons vote next week, despite warnings from MPs that it did not sufficiently address concerns about the intrusive spying powers of the intelligence agencies**. Mrs May has called for **MI5**, **MI6** and **GCHQ** to be allowed to access the web browsing histories of UK citizens for up to 12 months, among other new snooping measures designed to combat the terror threat. The powerful Intelligence and Security Committee, chaired by former Tory Attorney General Dominic Grieve, was one of three committees to complain that the new powers did not appear to have been fully thought through. Tory rebels also expected the House of Lords to force the Government to insert more protections for civil liberties into the legislation.Shadow Home Secretary Andy Burnham said: For Labours support, Ministers must show they have listened to our calls for greater transparency, stronger safeguards and protection of peoples privacy.

Keep calm and earn a big pay rise
Sunday Times (UK), Staff Writer, 2016 02 28
London - **MI5 is trying to poach bomb disposal experts from the army to help handle terrorist attacks in Britain, writes Sean Rayment**. The security service wants to recruit members of the Armed Forces Explosive Ordnance Disposal to join its **weapons intelligence unit -- and is offering pay rises of about £19,000. Successful applicants will earn up to £56,000**, far higher than the average £37,000 salary for an armed forces bomb disposal operator or an ammunition technical officer. The work will involve analysing intelligence from a range of sources and providing expert advice and support to members of MI5 and the wider intelligence and military communities. An advert on the MI5 website reads: "To join our Weapons Intelligence Group you'll need to make rapid, informed technical assessments, often based on incomplete information. An ability to remain calm and objective under pressure is vital for this role."

'GCHQ spy who raped us is still working there because police didn't take us seriously'
The Daily Mirror, Nick Dorman, 2016 02 28
London - **A spy accused of rape by two women is still working at the heart of Britain's security services after police ignored their claims**. The spook's first alleged victim, who met him through a dating website, today say detectives TWICE failed to act over her accusations - even after the second woman, who worked with him at the top secret **GCHQ** base, had come forward. The man was never even arrested. And in a further twist the intelligence expert was SACKED by his spy bosses after child porn was found on his computer. But he was reinstated three months later - after police again dropped the case. These shocking details have only emerged because the first alleged victim, who has a child by the spy, had a dramatic confrontation with him in a civil court. She has also complained to the Independent Police Complaints ¬Commission over her dealings with officers in Gloucestershire, where the Government's top secret listening post is based. She told the Sunday Mirror: "It seems like this man is untouchable because he works for GCHQ. I don't feel any of the claims against him have ever been properly investigated by the police. "There must be a full enquiry, and I am intending to sue the police over the damage this has caused." The Gloucestershire force has confirmed the women's disturbing claims are being investigated.

Provo's nephew in legal move to stop MI5 'harassment'
Beirut Daily Star, Alan Erwin, 2016 02 27

London - **A west Belfast taxi driver has begun legal moves to stop alleged repeated approaches by MI5 agents, it has emerged**. Christopher Catney has instructed his lawyer to explore seeking a High Court injunction amid claims he is being harassed by the security services. He alleges contact was made during a holiday in the Canary Islands and on his return to Belfast International Airport. Mr Catney, the nephew of former IRA man Tony Catney, said he fears others in his community will suspect him of being an informant. He stressed he had no links to any political group or organisation, and attributed the alleged targeting to his family name. In a statement prepared as an initial stage in the legal process, Mr Catney claimed he had come under increased attention from **MI5 and the PSNI**. He alleged that officers called at his ex-partner's home looking for him, and that unmarked cars followed his taxi. The level of attention increased following an approach by MI5 agents while on holiday last November, according to his account.

Spooky London: how Britain's spy agencies are using new and unexpected methods to recruit the next generation
The Evening Standard, Samuel Fishwick, 2016 02 25
London - **Gone are the days when a tap on the shoulder from an Oxbridge don was the only way into British intelligence services. Now you're more likely to be recruited when playing video games (this is no exaggeration: GCHQ adverts have been found on Xbox Live online game networks, where pixelated posters for 'gchq-careers.co.uk' are pasted on the simulated street corners of titles such as racing game Need for Speed: Carbon).** In October, Mumsnet users noticed banner ads for **MI6 intelligence officer** roles popping up as they browsed Dorset holiday destinations, while East London's GCHQ graffiti campaign recently took social media by storm. The approach may sound bizarre, but it seems to be working. John was browsing discussion forums when he stumbled upon canyoucrackit.co.uk, a website set up by GCHQ to recruit code breakers. 'I spent a bit of time just staring at the webpage and had a flash of understanding when I saw a pattern I recognised,' says John, 24. 'From that point I was hooked.' Online forums lit up with would-be spooks swapping ideas on how to break through. 'The air of mystery was what most got to me,' he admits. 'What kind of challenges would an organisation like GCHQ be designing for people to attempt to break? Was it possible for mere mortals to do so?'

Singing star Katherine Jenkins comes to GCHQ and sings to staff as thanks for their work
Gloucestershire Echo, Staff report, 2016 02 26
Cheltenham - **GCHQ staff took a break from their top secret work to listen to international opera and classical singing star Katherine Jenkins this afternoon**. The singer visited the Doughnut in Cheltenham and sang at a 45 minute concerts as a thank you to staff for their work in keeping Britain safe, and to raise money for charity The Welsh singing star, who performed for free, said: "I'm delighted to have been asked to sing here to show my support for all those keeping our country safe, as I am aware how hard they work. I have also kindly been shown around the headquarters which has been very interesting. I would like to wish them my on-going thanks for all that they do for our country."

Australia/ Australie

Cybercriminals increasingly targeting Australia as a launch pad for cybercrime
ABC (Australia), Mohamed Taha, 2016 02 26
Canberra - **A Threat Intelligence Brief report finds Australian- based cyber threats -- including malicious IP addresses, suspicious URLs and phishing sites -- more than doubled in 2015. A published on Wednesday by one of the largest internet security companies in the US, Webroot, has found Australia is a lucrative market for cybercriminals.** The report found Australian-based cyber threats -- including malicious IP addresses, suspicious URLs and phishing sites -- more than doubled in 2015. It was found that in 2015 2,000 new harmful IP addresses were created every day. The data used for the Webroot report was captured, analysed and correlated by a data security platform, which reviewed 27 billion URLs, 600 million domains, 4 billion IP addresses, 20 million mobile apps from 10 million connected sensors. Although Australia only accounted for 2 per cent of global attacks, it featured in the top 10 global hosts for cyber threats.

Hi-tech upgrade to cost billion
The Australian, Joe Kelly, 2016 02 26
Canberra - **The defence white paper has poured hundreds of billions of dollars into delivering strategic planners a series of hi-tech acquisitions, including long-range spy planes, 12 new submarines, new- generation armoured vehicles and electronic attack aircraft**. Across the next 10 years, Defence will invest nearly $49 billion in its maritime and anti-submarine assets including 12 submarines, nine anti-submarine frigates and 12 offshore patrol vessels. The submarine fleet will cost at least $50bn from 2018 to 2057, doubling its size from six to 12. The weapons system is estimated to cost $5bn to $6bn over 2018-45. The government did not put a sustainment cost on the fleet but Defence Force chief Mark Binskin previously has put the upkeep at twice the value of the initial acquisition, suggesting a total expense of about $150bn.

White paper reveals broad range of threats
Sydney Morning Herald, David Wroe, 2016 02 25
Sydney - **Tensions in the South China Sea, the rise of the Islamic State group and the danger of crippling cyber attacks mean the Turnbull government's defence blueprint will tackle "a broader range of threats" than Australia has faced before, a senior Defence official has said**. The Defence white paper, to be released on Thursday, will unveil what government sources said would be a $29.9 billion increase in defence spending over the next 10 years. This boost will help pay for what sources say will be the most powerful and capable defence force the nation has had, in particular a modernised navy in recognition of the growing strategic uncertainty in Asia. "It's fair to say that this white paper has had to take account of a broader range of threats than any previous white paper," the defence official with close knowledge of the document told Fairfax Media. "

New Zealand/Nouvelle-Zélande

Kiwi Big Brother is watching you
New Zealand Herald, 2016 02 27
Wellington - **In the US, Apple is fighting the FBI's court order to unlock a dead terrorist's iPhone. The terrorist, with his wife, massacred 14 people in San Bernardino last year. It's a tough case. There is not a lot of sympathy for murdering terrorists, but Apple says**

complying with the FBI's warrant would set a precedent for all Apple users. Meanwhile, in New Zealand our companies fall over themselves to give private information when a Government department asks for it. The Government mostly needs no warrant and companies hand over information even if not legally obligated to do so. The Government asks, companies provide. The Privacy Commissioner reports the big three that ask for information are the Inland Revenue, the Ministry of Social Development and police. These three departments issued 11,333 information requests to just 10 companies - two telcos, seven financial services companies and one utility.

Terrorists win if our privacy is lost
New Zealand Herald, David Rutherford, 2016 02 24
Op-ed: **The Independent Review of Intelligence and Security Services is due to deliver its recommendations to the Government on Monday. The questions Sir Michael Cullen and Dame Patsy Reddy have been tasked with reviewing sit at the heart of the Human Rights Commission's remit so we await the review's findings and the Government's response with immense interest.** In the frame is whether the **Government Communications Security Bureau (GCSB) and the Security Intelligence Service (SIS)** are well placed to protect New Zealand's national security needs, while protecting individual rights, and whether the current oversight arrangements are sufficiently robust to ensure they act within the law. In particular, the reviewers must consider whether the powers conferred by the anti-terrorism legislation brought in on December 12, 2014, as part of the UN-co-ordinated reply to the Isis (Islamic State) threat should be extended beyond their expiry date of April 1, 2017. We would have liked the information-collecting and surveillance functions of the police to have been included in the inquiry but note that this gap may now be filled as Justice Minister Amy Adams has asked the Law Commission to examine the Search and Surveillance Act 2012, including the impact of modern technology on the ability of the police and other authorities to prevent and investigate crime.

China/Chine

China stealing military information from Norway
The Local (Norway), 2016 02 29
Oslo— In its annual threat assessment, **the Norwegian Intelligence Service (Etterretningstjenesten - NIS) said that both Russia and China present security challenges to Norway** and that the latter has most likely stolen military intelligence from Norwegian companies. While much of the NIS report – like that of the threat assessment released by the Norwegian Police Security Service (PST) earlier this month – focused on the dangers posed by Russian spies, it also revealed that China has stolen information from Norwegian weapons companies. See also: Russian spying can 'damage' Norway: PST "We believe that they [China, ed.] have succeeded in extracting information that they are using in their own weapons technology," NIS head Morten Haga Lunde told TV2.

China collecting personal data through Android apps: report
Globe and Mail, Nathan Vanderklippe, 2016 02 25
Hundreds of millions of Android smartphone users have downloaded photo-collage, karaoke and video-chat apps that send location data and other identifying details back to

servers in China, a new report has found. The information is collected by Chinese search and advertising engine giant Baidu, which collects users' GPS co-ordinates, names of nearby wireless networks and a unique device number that can be used to identify a person's phone, according to findings contained in a new report from The Citizen Lab at the University of Toronto's Munk School of Global Affairs. That information is stored on Baidu servers. The company says it gives Chinese authorities access to its data in accordance with local laws. But placing such material in government hands could provide a detailed picture of a person's movements and contacts, potentially threatening those who anger the Chinese state, such as human-rights campaigners or democracy activists, said **Ronald Deibert**, the lab's director. "That is obviously the ultimate and most serious risk," he said. "The collection of all that finegrained, detailed information is either poor engineering choices, or this is surveillance by design," he said. And, he added, "don't forget - none of that data disappears."

Chinese tech execs backing Apple
Los Angeles Times, Jonathan Kaiman, Samantha Masunaga, 2016 02 25
Beijing - Chinese technology executives are weighing in on the standoff between Apple Inc. and the FBI -- and they're taking Apple's side. Chinese Internet companies operate in one of the world's most restrictive online environments, in which bowing to official censorship and surveillance demands is a necessity of doing business. Services that don't comply, including Facebook, Twitter, YouTube, Google and Instagram, are summarily blocked. So it might seem counterintuitive that this week two prominent chief executives of Chinese technology firms threw their support behind Apple Chief Executive Tim Cook's refusal to create software that would help the U.S. government break into the encrypted iPhone used by one of the shooters in the deadly San Bernardino terrorist attack. But these public statements may have less to do with potential business advantages than they do with global politics, said James Lewis, senior fellow at the Center for Strategic and International Studies in Washington. "China has decided, as a matter of policy, to become very critical of the United States," he said. "We don't know what [the executives'] motives are ... but since you see this whole spate of Chinese articles saying the U.S. is corrupt and its democracy is flawed, this is another example of that."

Russia/Russie

Snowden's Russian Improves After Over 2 Years of Living in Russia
Sputnik (Russia), Staff report, 2016 02 25
Moscow - **Former US National Security Agency (NSA) contractor Edward Snowden, currently residing in Russia, has learned a reasonable amount of Russian, the whistleblower's lawyer, Anatoly Kucherena, said Wednesday**. Kucherena has represented Snowden since 2013, continuing to do so without charge. "Edward is fine. He is working and learning Russian. We can already talk with him on certain issues, which is positive," Kucherena told RIA Novosti.

Moscow dispatches FSB hitmen to Donetsk city to eliminate some separatist leaders - intelligence
Ukrinform (Ukraine), Staff report, 2016 02 24
Kyiv - **In order to eliminate uncontrolled individual commanders of rebels a detachment comprising special operations teams of the Russia GRU of the General Staff of the Armed Forces and the FSB have arrived in Donetsk city**. Ukraine defense ministry

intelligence reported on it site. "In order to kill some commanders of illegal armed formations uncontrolled by the command of the Russian occupation troops 150-servicemen detachment comprising special operations teams of the Russia GRU of the General Staff of the Armed Forces and the FSB have arrived in Donetsk city," a statement said.

Europe

Germans spied on our Brussels baroness
Sunday Times (UK), James Lyons, 2016 02 28
London - **Germany's secret service spied on the EU's British foreign policy chief and the US secretary of state, it emerged yesterday. The BND, Germany's equivalent of MI6, placed Baroness Ashton of Upholland under electronic surveillance when she was EU high representative on foreign affairs and security**. It also tried to tap the mobile and office phones of John Kerry, the secretary of state, according to Der Spiegel magazine. The attempt to listen in to Kerry's mobile conversations failed because a bungling spy used an African country code by mistake. His other phones, including one at the US State Department, were successfully tapped. The revelations are deeply embarrassing for Angela Merkel, who criticised the US over allegations that the **National Security Agency** monitored the chancellor's phone as part of a mass surveillance programme that included snooping on allies. At the time, Merkel told President Obama that "spying on friends is not acceptable". Ashton, 59, who was given a peerage by Tony Blair, was targeted by the BND when she became Europe's de facto foreign secretary in 2009.

Surveillance des frères Kouachi : autopsie d'un échec
Le Monde.fr, journaliste maison, 2016 02 27
Paris - **Si la DGSI ne manquait pas d'informations sur les tueurs de « Charlie Hebdo », elle n'a pas su les analyser. Chaque nouvel attentat souligne les défaillances des services de renseignement et fournit l'occasion d'octroyer plus de moyens à la Direction générale de la sécurité intérieure (DGSI, ex-DCRI).** La réflexion sur l'organisation du renseignement français, elle, est sans cesse repoussée. A la mi-novembre2015, quarante et une notes de la Direction centrale du renseignement intérieur (DCRI) - devenue la DGSI en mai2014 - sur les frères Kouachi et Amedy Coulibaly ont été déclassifiées à la demande de la justice, comme l'a révélé Le Monde le 4janvier. Leur examen retrace de manière très précise le travail effectué entre 2010 et 2013 sur les futurs auteurs des attentats de janvier2015. Il permet surtout de mieux cerner la nature des failles dans ce dossier. Premier enseignement: la DCRI n'a pas manqué de moyens.

Après trois mois d'état d'urgence, un bilan contesté et mitigé
Le Monde, Julia Pascual, 2016 02 26
Paris - **Sur les 274 assignations à résidence, moins de 100 devaient être renouvelées. La LDH porte plainte contre ces mesures " arbitraires " Vendredi 26 février, à minuit, l'état d'urgence voté par le Parlement après les attentats de Paris et Saint-Denis touche à sa fin**. Ainsi s'achève ce régime d'exception dans lequel les pouvoirs de police administrative sont décuplés. En réalité, il va être aussitôt renouvelé, jusqu'au 26 mai prochain, ainsi que l'a voté, le 16 février, l'Assemblée nationale. La menace terroriste " est plus élevée que jamais " , avait alors affirmé le ministre de l'intérieur, Bernard Cazeneuve, devant les députés. Le bilan de l'état d'urgence est pourtant diversement apprécié. Mercredi 24 février, dans son rapport annuel, Amnesty International s'en est pris à la réponse " liberticide " de la France aux attentats

terroristes de 2015. L'ONG juge l'état d'urgence disproportionné et estime que sa mise en oeuvre a donné lieu à des " dérives " .

Équipés de moyens pointus d'interception, les services de renseignements resserrent leur filet
Le Figaro, Christophe Cornevin, 2016 02 26
Paris - **Équipés de moyens pointus d'interception, les services de renseignements resserrent leur filet en campagne Volontiers brandi comme un funeste symbole, Maxime Hauchard est l'archétype du péril terroriste qui pousse en germe dans nos campagnes**. Bourreau de Daech paradant en novembre 2014 dans une vidéo de décapitations collectives, celui qui s'est fait appeler Abou Abdallah al-Faransi avait grandi à Bosc-Roger-en-Roumois, commune de 3 200 âmes proche de Rouen. Issa K., un Tchétchène de 27 ans, décrit comme « profondément radicalisé » ,neutralisé mi-décembre dernier en Indre-et-Loire, est quant à lui venu allonger cette galerie d'épouvantails qui mettent les services territoriaux sur les dents. Ayant prêté allégeance à Deach, ce Tourangeau venait d'enregistrer une vidéo testamentaire avant d'être intercepté par la **DGSI**. Il ne se déroule guère une semaine sans que les services ne déjouent une équipée djihadiste loin de Paris. Le 26 janvier dernier encore, quatre présumés combattants volontaires francais, deux mineurs et deux majeurs, ont été surpris, selon nos informations, près de l'étang de Berre (Bouches-du-Rhône) alors qu'ils s'apprêtaient à rejoindre la Syrie.

Lithuania: verdict in spying paramedic's case due next week
Baltic News Service, 2016 02 25
Vilnius— **Vilnius Regional Court on Thursday finished hearing the case of a former army paramedic accused of spying for Belarus**, and the verdict is due on March 4. Former army paramedic Andrej Osurkov was on Thursday given the right to address the court for the last time. The hearing was held behind closed doors. Osurkov, who formerly served at the Lithuanian Grand Duke Algirdas Mechanized Infantry Battalion, was arrested in January, 2014. In December of 2014, the **State Security Department** said it had established Osurkov had been recruited by the **Chief Intelligence Board** of the Belarusian Armed Forces' General Staff in Belarus to later infiltrate him in the Lithuanian army for special tasks. He is suspected to have provided Belarus with data for five years, receiving cash in return. Osurkov pleaded guilty.

Jailed journalists' rights breached, Turkish court rules
Anadolu News Agency, Staff report, 2016 02 25
Ankara - Two Turkish journalists accused of espionage and trying to overthrow the government suffered rights violations, Turkey's highest court has ruled. Can Dundar, editor-in-chief of the newspaper Cumhuriyet, and the daily's Ankara bureau chief Erdem Gul were arrested on Nov. 26 over the publication of photographs and video footage purportedly showing shells and ammunition loaded **on Syria-bound trucks belonging to Turkey's National Intelligence Organization (MIT).** .

En Libye, la guerre secrète de la France
Le Monde, Nathalie Guibert, 2016 02 25
Paris - **Pour lutter contre l'Etat islamique, l'armée française a recours aux forces spéciales et aux actions clandestines Plusieurs sources ont indiqué au Monde que la lutte contre les terroristes pouvait couvrir des opérations clandestines, menées par le service action de la Direction générale de la sécurité extérieure (DGSE).** Les premières engagent la France car leurs soldats, même très discrets, agissent sous l'uniforme. Les secondes sont aussi assurées par des militaires mais restent invisibles. Forces spéciales et clandestines sont considérées dans la doctrine militaire comme des " précurseurs ", des outils

classiques en l'absence de cadre disponible pour une guerre ouverte. Ces moyens, dits " d'ouverture de théâtre ", ne préjugent toutefois pas d'une future opération en bonne et due forme.

Les services de renseignement allemands pourront utiliser des logiciels espions
Le Monde, Journaliste maison, 2016 02 24
Berlin - **Le gouvernement a officiellement donné son feu vert à l'utilisation du Bundestrojaner, le « cheval de Troie fédéral ».** Le gouvernement allemand a officiellement donné son feu vert à l'utilisation d'un logiciel espion de type «cheval de Troie», par les services de renseignement du pays. Une fois installés sur un ordinateur, ces programmes créent une porte dérobée, invisible pour l'utilisateur, qui permet à un tiers de se connecter à la machine pour y dérober des informations. Le logiciel, surnommé par la presse allemande «Bundestrtojaner» («cheval de Troie fédéral»), a été conçu par la police fédérale et testé pour éviter tout abus, a affirmé le ministère de l'intérieur.

Les grandes oreilles de la NSA vont jusqu'à Genève
Le Temps (Suisse), Simon Petite, 2016 02 24
Genève - **Les Etats-Unis sont notamment accusés par WikiLeaks d'avoir espionné un fonctionnaire du Haut-Commissariat pour les réfugiés (HCR) nommé représentant en Iran Les Etats-Unis ont placé sur écoute plusieurs lignes téléphoniques à Genève. Voici les dernières révélations du site WikiLeaks**. La **National Security Agency (NSA)** est accusée d'avoir espionné de hauts responsables de l'Organisation mondiale du commerce (OMC) et du Haut-Commissariat pour les réfugiés (HCR). Les deux institutions n'avaient pas réagi mardi. « Il sera intéressant de voir la réaction de l'ONU, car les Etats-Unis avaient promis qu'ils ne l'espionneraient pas », a estimé Julian Assange depuis l'ambassade équatorienne à Londres, où le fondateur de Wiki-Leaks est toujours bloqué. La Suisse s'était émue par le passé des activités d'espionnage de la mission américaine à Genève. Un autre célèbre lanceur d'alerte, Edward Snowden, y avait travaillé entre 2007 et 2009 pour le compte de la CIA avant de révéler des années plus tard l'ampleur de la surveillance de la NSA.

La guerre secrète de la France en Libye
Le Monde, Journaliste maison, 2016 02 24
Paris - **Forces spéciales et opérations clandestines sont engagées en Libye par les autorités françaises pour lutter contre l'expansion de l'Etat islamique**. Des frappes ponctuelles très ciblées, préparées par des actions discrètes voire secrètes: en Libye, telle est la ligne de conduite de la France face à la menace de l'organisation Etat islamique (EI). Un haut responsable de la défense française confirme au Monde que «la dernière chose à faire serait d'intervenir en Libye. Il faut éviter tout engagement militaire ouvert, il faut agir discrètement.» Dans ce pays où la France scrute depuis des mois la menace de l'EI, l'objectif n'est pas de gagner une guerre mais de frapper l'encadrement du groupe terroriste, dans l'idée de freiner sa montée en puissance. Une action menée de concert par Washington, Londres et Paris, comme l'a de nouveau illustré le raid américain du 19février contre un cadre tunisien de l'EI à Sabratha. Moyens d'« ouverture de théâtre » La ligne fixée par le président François Hollande repose pour l'heure sur des actions militaires non officielles. Elles s'appuient sur des forces spéciales - leur présence, dont Le Monde a eu connaissance, a été repérée dans l'est de la Libye depuis mi-février par des blogueurs spécialisés. Ce n'est pas tout. Plusieurs sources ont indiqué au Monde que la lutte contre les terroristes pouvait couvrir des opérations clandestines, menées par le service action de la **Direction générale de la sécurité extérieure (DGSE).**

L'Italie condamnée pour l'enlèvement par la CIA en 2003 d'un imam à Milan
La Nouvelle Tribune (Maroc), Journaliste maison, 2016 02 23

Strasbourg - **L'Italie était au courant de l'enlèvement par la CIA d'un imam égyptien à Milan en 2003 et a abusivement invoqué le secret d'Etat pour assurer l'impunité aux responsables, a tranché mardi la Cour européenne des droits de l'Homme (CEDH**). Les juges de Strasbourg ont estimé que l'Italie s'était rendue coupable de nombreuses violations des droits de l'Homme dans cette affaire, notamment l'interdiction de la torture et le droit au respect de la vie familiale. La Cour « tient pour établi que les autorités italiennes savaient » que l'imam Abou Omar - alors soupçonné de liens avec le terrorisme, et depuis condamné en Italie par contumace pour association de malfaiteurs à des fins de terrorisme international- était victime d'une opération d'enlèvement montée par des agents américains.

FM, NATO chief discuss regional, int'l issues
Kuwait News Agency, 2016 02 29
Kuwait— First Deputy Prime Minister and Foreign Minister Sheikh Sabah Khaled Al-Hamad Al-Sabah met with Secretary General of the North Atlantic Treaty Organization (NATO) Jens Stoltenberg, where they shed light on regional and international issues of common interest. **National Security Bureau Chief Sheikh Thamer Ali Sabah Al-Salem Al-Sabah was present at the meeting,** that was held at the Foreign Ministry's Headquarters on Monday. Sheikh Sabah Al-Khaled reiterated Kuwait's unwavering support to the NATO since it joined NATO's Istanbul Cooperation Initiative in 2004; an initiative that aims to contribute to long-term global and regional security by offering countries of the broader Middle East region practical bilateral security cooperation with NATO.

Intelligence Minister: Security Forces Acting on Leader's Recommendations on Foreign Influence
Fars News Agency, 2016 02 26
Tehran - **Intelligence Minister Seyed Mahmoud Alavi said Iran's security forces are working round the clock to ensure the full implementation of the Supreme Leader's recommendations as regards protecting the country against foreign influence**. "Supreme Leader of the Islamic Revolution (Ayatollah Seyed Ali Khamenei) said foreign influence is a threat, the strategy has to be derailing such influence, and the security and intelligence authorities should be highly sensitive to it," Alavi said Friday after casting his votes for the Parliamentary and Assembly of Experts elections in Tehran. He said the intelligence ministry and security forces are acting on the Leader's recommendations accordingly. Alavi also lauded the high turnout at the Friday vote. Iranian voters queued up at the polling stations in hotly-contested elections on Friday to choose their legislators for the next four years.

Nuclear physicist part of Iran spy ring
Saudi Gazette, Mansour Al-Shihri, 2016 02 25
Riyadh - **More and more skeletons are tumbling out of the closet everyday during the trial of 32 people accused of spying for Iran. A Saudi defendant on trial at the Criminal Court in Riyadh on Tuesday turned out to be a nuclear physicist**. The spy ring consists of 30 Saudis, an Afghan national who worked as a cook at a Bukhari rice restaurant and an Iranian who speaks fluent Arabic. Another Saudi defendant was a senior bank official. But neither his name nor the bank where he worked has been revealed. On Tuesday, the third day of the court sessions, eight of the defendants stood before the court. They consisted of six Saudis, the

Iranian and the Afghan whom the court provided with an interpreter. The nuclear physicist told the judge that he had worked in China for six years. The Iranian suspect refused a lawyer and said he would defend himself.

Shin Bet: Number of Terror Victims in 2015 Highest in Seven Years
Haaretz, Gili Cohen, 2016 02 24
Jerusalem - **The number of terror attack victims in 2015 was the highest since 2008, Shin Bet data published on Tuesday said. According to the Shin Bet, 28 people were killed last year in terror attacks, most of them civilians - two were foreigners, one was Palestinian, three were members of the security services, and the rest were Israeli civilians. The Shin Bet** noted that in 2015 there was a slight decline in the number of terror attacks in the West Bank compared to the previous year, but the attacks that happened were more severe. In Jerusalem, the Shin Bet noted, the number of attacks rose: 92 percent of the attacks were firebomb throwing incidents, and only a small fraction of the attacks involved firearms. The Shin Bet said that the assailants in the ongoing terror wave are mostly youngsters, with no group affiliation. However, the Shin Bet said that Hamas poses the central threat in the West Bank due to its efforts to rebuild its militant command posts.

NGOs charge Shin Bet with outsourcing torture to PA, state denies
Jerusalem Post, Yonah Jeremy Bob, 2016 02 24
Jerusalem **- The NGOs B'Tselem and Hamoked on Wednesday accused the Shin Bet (Israel Security Agency) of outsourcing torturing Palestinian detainees to the PA as well as other direct abuses of detainee rights**. The allegations were also directed at the IDF, the police and the Prisons Service, though the Shin Bet got the lion's share of the criticism, with the main focus on the Shin Bet's Shikma Prison in the South. The Justice Ministry denied the claims in the NGOs' report, saying they "distort the existing reality" of detainee treatment, which it said complies with all legal requirements. Focusing mainly on affidavits and witness accounts provided by 116 Palestinians held for security reasons and interrogated at the Shikma facility, the period covered by the report is August 2013-March 2014 and comes in the aftermath of a firestorm over alleged recent torture of right-wing Jewish detainees.

Iran spy network includes professor, student
Saudi Gazette, Mansour Al-Shihri, 2016 02 24
Riyadh **- A cell of 32 people accused of spying for Iran includes a professor at King Saud University in Riyadh and a student at Imam Muhammad Bin Saud Islamic University, court sources have said**. They did not disclose the names but said the suspects also included an academician who held the job of "development researcher" at the Ministry of Education for more than 25 years. The Criminal Court in Riyadh began its sessions on Sunday to try the suspects and has so far listened to the charges against 16 of them. The list of charges against the accused was presented by the attorney general who accused them of high treason and called for capital punishment. The court sources said one of the defendants was assigned three lawyers to defend him while another gave power of attorney to eight members of his own family. The suspects also included an Afghan national and an Iranian who appeared before the court of Tuesday.

Telegram founder expresses concern over anti-terror bill

The Korea Times, 2016 02 28
Barcelona— **Pavel Durov, the founder and CEO of secure messaging app Telegram, has expressed concern over the South Korean government's push for an anti-terrorism bill**, citing possible infringements of privacy and potential abuses of surveillance by the authorities. The Park Geun-hye administration and the main opposition Minjoo Party of Korea (MPK) have been clashing over a bill that, if passed in the National Assembly, will grant the **National Intelligence Service (NIS)** greater authority to investigate individuals and organizations and collect information on the private communications of citizens. President Park and the governing Saenuri Party are calling for the Assembly to approve the bill in order to establish powers, they say, which can help counter threats from North Korea and militant organizations such as the Islamic State group.

Official renews call for parliamentary approval of anti-terrorism bill
Yonhap News Agency, 2016 02 26
Seoul— The presidential office on Friday asked the parliament to endorse an **anti-terrorism bill** in the latest push to try to **better protect South Korea from any possible terror attacks**. Presidential spokesman Jeong Yeon-guk expressed hope that the National Assembly "would take into account public safety exposed to terror threats." Opposition lawmakers staged a marathon filibuster for the third straight day Friday, dimming prospects of any bipartisan breakthrough on the bill. The rival parties have been at odds over how much power the **National Intelligence Service,** South Korea's spy agency, should be given in pursing suspected terrorists. The main opposition Minjoo Party is concerned about giving far-reaching authority to the spy agency, citing possible power abuse by the agency.

Defense Minister inspects readiness of military's counter-terror units
Yonhap News Agency, 2016 02 25
Seoul - **Defense Minister Han Min-koo inspected the combat readiness of the military's special counter-terror units Thursday as the government recently warned of possible terror attacks by North Korea.** Han visited the Special Warfare Command's counter-terror unit and a special chemical warfare battalion to check the forces' battle preparedness earlier in the day, the ministry said in a statement. The defense chief instructed the troops to maintain a "thorough readiness position" against possible terrorist attacks from North Korea, the statement said. Han is "aware of the seriousness of the current state where North Korea's terror threats are increasing after (leader) Kim Jong-un ordered increased terrorist forces against South Korea," the statement also noted. Last week, President Park Geun-hye warned of possible terror or cyberattacks by North Korea. "New types of threats such as terror (attacks), cyberattacks or biological weapons could occur anywhere," Park said in a meeting with mayors and governors. On Tuesday, North Korea threatened to launch a "pre-emptive strike" on the presidential office Cheong Wa Dae and the United States mainland in a statement by the Supreme Command of the (North) Korean People's Army as it denounced joint military exercises between Seoul and Washington, slated to start early March. Africa/Afrique

Dans les geôles de Bujumbura
Le Monde, Jean-Philippe Rémy, 2016 03 01
Bujumbura, **Burundi - Burundi, au pays de la peur 1|2 Depuis les manifestations d'avril 2015 contre le troisième mandat de Pierre Nkurunziza, la police ratisse la capitale. Des centaines de personnes sont jetées dans les prisons secrètes de la ville pour y être interrogées et souvent torturées.** Parfois même, elles en disparaissent On est ici en plein

coeur de Bujumbura, la capitale du Burundi. La cathédrale Regina Mundi est à deux pas. Le silence qui règne dans le **service national de renseignement (SNR)** n'en est que plus étrange. Tous les bruits - sons de cloche, conversations, circulation - sont étouffés par les nombreux murs. Le monde extérieur semble tenu à distance. Le SNR, qu'on appelle aussi de son ancien nom, " la Documentation ", est une planète en soi, avec ses règles. Et ses secrets.

Le Maroc et l'Allemagne conviennent de signer un « nouvel accord en matière de sécurité globale »
La Nouvelle Tribune (Maroc), Journaliste maison, 2016 02 29
Rabat, Maroc - **Le Maroc et l'Allemagne se sont mis d'accord sur la signature d'un nouvel accord en matière de sécurité globale devant couvrir toutes les formes de criminalité, particulièrement contre le terrorisme**, a affirmé, lundi à Rabat, le ministre de l'Intérieur, M. **Mohamed Hassad**. « Nous avons convenu de signer rapidement un nouvel accord en matière de sécurité globale qui englobe toutes les formes de criminalité, particulièrement contre le phénomène du terrorisme », a souligné M. Hassad dans une déclaration à la presse, à l'issue d'un entretien avec son homologue allemand **Thomas de Maizière**.

Why Algeria dissolved its powerful spy agency
Al Jazeera, Richard Nield, 2016 02 26
Algiers - **Algerian President Abdelaziz Bouteflika last month dissolved the Department of Intelligence and Security (DRS), the powerful state security service long seen as the nexus of political power in the country** - a move that has raised questions about the extent of power wielded by the country's intelligence apparatus. The dissolution of the DRS followed the removal of its long-standing chief, Mohamed Mediene, last September. Mediene, more commonly known as Toufik, had been head of the organisation for 25 years and was believed by many to be the real power behind the president. Senior figures in the DRS and the army were instrumental in propelling Bouteflika to the presidency in 1999. DRS support was also crucial to Bouteflika's successful re-election campaigns in 2004, 2009 and 2014. Now, the DRS will be replaced by the **Department of Surveillance and Security (DSS)** which, unlike its predecessor, will report directly to the presidency.

'Police algèrienne : Création d'une nouvelle unité antiterroriste
El Watan, Mohamed Fawzi Gaïdi, 2016 02 25
Alger - **La police algérienne aura bientôt son unité d'élite de choc. Selon des sources policières, une première promotion sortira dans quelques jours où elle est actuellement en fin de cycle de formation, dispensée par des experts spécialisés de la gendarmerie et de la police**. GOSP (Groupement opérationnel spécial de la police) est l'acronyme, illustré d'une tête de lion, qu'arborera l'uniforme noir de ses éléments encagoulés. Le quartier général de ce nouveau service sera basé à Boumerdès, l'épicentre d'une région où le terrorisme active toujours. Placé sous l'autorité directe du directeur général de la **Sûreté nationale (DGSN),** «le GOSP est appelé à intervenir dans des situations extrêmes, notamment le terrorisme urbain et le grand banditisme. Des événements de crise où il est nécessaire d'utiliser des techniques et des moyens spécifiques pour neutraliser des individus dangereux, soit par la négociation sinon l'intervention armée, assistée de snipers.

La nouvelle guerre qui ne dit pas son nom
All Africa, Journaliste maison, 2016 02 24
Paris - **Le quotidien Le Monde a fait état, mercredi 24 février, de la présence de forces spéciales** et d'agents secrets français en Libye. Selon le quotidien du soir, des forces spéciales sont présentes dans ce pays, où le service action de la Direction générale de la sécurité extérieure (DGSE) mène aussi « des opérations clandestines » contre des cadres du groupe

Etat islamique (EI). Début décembre, l'Elysée révélait que des avions de combat Rafale, embarqués à bord du porte-avion Charles-de-Gaulle, avaient mené des missions de reconnaissance les 20 et 21 novembre dans une zone située entre Syrte (bastion de l'EI) et Tobrouk. Depuis, de mystérieux vols d'avions ravitailleurs C135FR français ont été relevés au large de la Libye par le site spécialisé Flight Radar 24 sur Internet. Enfin, il y a eu le raid américain sur la base de l'organisation à Sabratha le 19 février. Raid dans lequel une cinquantaine de jihadistes a été tuée. Comme l'a révélé RFI, Sabratha était un camp d'entrainement de l'organisation de l'Etat islamique. C'est par ce camp que seraient passés les auteurs des attaques des hôtels de Sousse et du musée du Bardo en Tunisie.

Ex-spymaster Stiuso testifies befote Judie Palmaghini
Buenos Aires Herald, 2016 02 29
Buenos Aires— **Former Intelligence Secretariat (SI) Operations chief Antonio "Jaime" Stiuso** was testifying today for the second time in the investigation into the mysterious death of former AMIA special prosecutor **Alberto Nisman**, the case that thrust the spymaster out of the shadows and into the light. Stiuso appeared this morning before prosecutor Viviana Fein and Judge Fabiana Palmaghini, who were angered last week by a writ filed by prosecutor Ricardo Sáenz before the Buenos Aires City Appeals Court claiming that Nisman had been murdered. They fear today's testimony could be part of a manoeuvre to take the case to a federal court, a friendlier arena for San Isidro Federal Judge Sandra Arroyo Salgado, Nisman's ex-wife.

Palmaghini wants AFI to access Nisman's e-mails
Buenos Aires Herald, 2016 02 27
Buenos Aires— Agency hasn't responded to **judge's petition so far Judge Fabiana Palmaghini is seeking to involve the Federal Intelligence Agency (AFI) in the investigation into former AMIA special prosecutor Alberto Nisman's mysterious death**. The magistrate requested that the secret services intervene after the United States turned down a request for access to Nisman's e-mail accounts. The AFI is expected to tell Palmaghini — who took charge of the probe on December 17 — whether it has the necessary equipment to access two e-mail accounts, anisman@yahoo.com and algarfun@hotmail.com — which were reportedly used by Nisman to monitor the unregistered account he had in an US bank. Earlier this week, the judge also added a new e-mail account that was provided by former secret agent Carlos "Moro" Rodríguez, who appeared before Palmaghini and prosecutor Viviana Fein on February 15. Rodríguez told Fein and Palmaghini that the former AMIA special prosecutor used another e-mail account.

Five Eyes/Groupe des cinq

Canada

Could Brussels happen in Canada?
The Hill Times, Phil Gurski, 2016 04 25
Commentary: In the wake of the horrendous **attacks in Brussels, there has been a cascade of stories, op-ed pieces, and analyses of the event, ranging from why Belgian security services did not prevent it to whether more are on their way.** Political scientists, sociologists, and even a few former spies have weighed in, and the verdict is generally not kind to Belgium. Others have referred to the terrorist attacks as a watershed or a harbinger of worse to come. Are these dire prognoses correct? We here in Canada are also asking ourselves whether what occurred at the airport and metro station could happen here and whether the government should raise the threat level or take other action. It may be illustrative to examine what went wrong in Belgium and ask whether we are in a different situation here. First and foremost, many have called the attack a failure of intelligence. **There is no question that there are challenges in sharing information across the EU and even within Belgium itself. Security intelligence and law enforcement agencies should do a better job of coordination**, but this will be difficult in a union of 28 member states with wide ranging levels of experience and competence in counter terrorism. The story here **in Canada is markedly better. Information sharing at the federal level, especially between CSIS and the RCMP is very good**, and there are mechanisms to talk among federal, provincial, territorial and municipal partners. Relationships can always improve, but we are working from a solid base. Note: Phil Gurski worked for over 30 years as an intelligence analyst in Canada, including 15 at CSIS. He is the author of The Threat from Within: Recognizing Al Qaeda- inspired Radicalization and Terrorism in the West.

Social Media Emerges as a Valuable Terrorist Fundraising Tool
Investigative Project on Terrorism (via Breitbart News), Abha Shankar, 2016 04 21
Analysis - **Social media has emerged as a valuable and effective fundraising tool for terrorist groups.** The Internet's easy access and relative anonymity allows terrorist groups to solicit online donations from both supporters and unsuspecting donors who believe they are supporting a humanitarian or charitable activity. Terrorist groups have also been known to use crowdfunding websites to raise money by setting up a fundraising page ostensibly for charitable and humanitarian activities while collecting donations to bankroll their jihadi activities. "Terrorism financing continues to manifest itself in so many different ways with more recent developments coming in the form of the use of largely unregulated space of social media by terrorist groups such as ISIL [Islamic State of Syria and the Levant] for crowdfunding," Paul Jevtovic, head of Australia's financial intelligence unit, AUSTRAC (Australian Transaction Reports and Analysis Centre), said during a November regional security summit in Sydney. **In testimony before Canada's Standing Committee on National Security and Defense, Michael Peirce, a senior official with the Canadian Security Intelligence Service (CSIS), also highlighted the use of crowdfunding websites by terrorists to raise funds. "**The Internet age has given us the ability for people to go and put a public message seeking funds. They won't necessarily direct the full purpose of raising the funds. Again, they might do it under the cover of humanitarian aid,

but crowd share. 'I want to go carry out humanitarian aid in Somalia, please share funds,' and they set up a website, and funding flows through. It's quite a troubling development from the Internet."

The Troubling Questions After Terror Trial
Vancouver Sun, Ian Mulgrew, 2016 04 21
Column: The **Canada Day terror plot** trial has wrapped up, except for final submissions on whether the RCMP entrapped the hapless Surrey drug addicts convicted of the murderous 2013 scheme. **John Nuttall and Amanda Korody** will have been imprisoned for three years by the time B.C. Justice Catherine Bruce retires to deliberate this summer. Convicted by a jury last June of conspiracy to commit murder and possession of an explosive substance for terrorism, the pair faces life imprisonment. The verdict has been on hold, though, while the judge considered defence allegations that someone associated with the **Canadian Security Intelligence Service may have helped radicalize the couple in 2012** and set them up to be victimized by a sophisticated RCMP sting marred by misconduct. There is much that is troubling about this case. During the several months they were under surveillance by police and CSIS from late 2012 until their arrest on July 1, 2013, Nuttall and Korody were obviously vulnerable and challenged individuals.

Canada's spies closely watching quantum tech developments
Toronto Star, Alex Boutilier, 2016 04 20
Ottawa - **Canada's electronic spies are working on ways to defend government systems from the "impending threat" of quantum computing**, a document obtained by the Star shows. The **Communications Security Establishment warned chief Greta Bossenmaier that emerging quantum technology could "easily break" today's strongest methods of protecting electronic information**. "A new class of technologies that operates at quantum speeds is beginning to move from the domain of academic curiosity into the world of commercial technological reality," the memo, heavily censored and stamped secret, reads. "Quantum computing poses an impending threat to widely-deployed public-key cryptography (PKC) and therefore has a significant impact on any information being protected with PKC." Governments, journalists, activists and hackers have increasingly turned to public-key encryption to protect information. Journalists protect sources, activists and hackers protect themselves and the people they communicate with, and governments protect classified or sensitive information from theft or eavesdropping. When implemented correctly, it is very difficult for malicious actors -- even with serious resources and expertise -- to crack the code. But quantum technology greatly increases the power and speed of computer functions, allowing computers to break today's strongest encryption methods.

ISIS Growing in Europe, U.S. Spy Chief Warns
New York Times, Eric Schmitt, Alissa J. Rubin, 2016 04 26
Washington - The **Islamic State is operating clandestine terrorist cells in Britain, Germany and Italy, similar to the groups that carried out the attacks in Paris and Brussels, the top-ranking American intelligence official said** on Monday. When asked if the Islamic State was

engaging in secret activities in those nations, the official, **James R. Clapper Jr.**, the **director of national intelligence**, said: "Yes, they do. That is a concern, obviously, of ours and our European allies." He then added, "We continue to see evidence of plotting on the part of ISIL in the countries you named." ISIL is another name for the Islamic State. Mr. Clapper, speaking to reporters at a breakfast meeting organized by The Christian Science Monitor, became one of the most senior Western officials to publicly acknowledge the Islamic State's extensive reach into Europe, which has set off growing fears among American and European spy services and policy makers. The Islamic State has vowed to conduct attacks in those three European countries. Western experts, however, emphasize that it is impossible to know where the next attack might take place.

CIA, torture and secrecy; Victims' lawsuit is aided by landmark Senate report on agency's tactics
Los Angeles Times, Rick Anderson, 2016 04 25
Los Angeles - It's the type of legal case that usually gets tossed out once the government claims national security is at stake. But something surprising happened in a federal courtroom here last week -- **a judge ruled that a potentially embarrassing lawsuit against the CIA could go forward**. And even more surprising, the Justice Department agreed to go along. This isn't to suggest the federal government is throwing in the towel in the suit filed by three alleged torture victims against two **CIA psychologists**. The government will continue to fight. But its approach to the case is different from similar suits in the past, and the shift can be traced in part to a landmark report on the CIA in 2014. The report, partially released by the Senate Select Committee on Intelligence, exposed the dark depths of the U.S. rendition and torture programs overseas, including waterboarding, beatings, mind-bending experiments and rectal feedings intended to provoke reluctant detainees to talk. Committee Chairwoman Sen. Dianne Feinstein (D-Calif.) urged Americans not to let such history be "forgotten and grievous past mistakes to be repeated." History, for example, like Suleiman Abdullah's. He is the lead plaintiff suing the psychologists.

The 'October Surprise' was real hints legendary spymaster in his final interview
Column: Newsweek, Nicholas Schou, 2016 04 25
Last spring, I spent a week in Washington, D.C., **hoping to interview national security reporters and former CIA officers for my upcoming book, Spooked: How the CIA Manipulates the Press and Hoodwinks Hollywood,** and one of the people I contacted was **Duane Clarridge**, who died from cancer on April 9. Known as much for his love of safari suits and cigars as for his spy-craft, **"Dewey" was the CIA's former Latin America director and the founding leader of the agency's counterterrorism center during the 1980s**. He also was one of the most high-profile culprits of the Iran-Contra scandal, in which Reagan administration officials illegally sold missiles to Tehran to help raise cash for anti-Communist rebels in Central America. In 1991, Clarridge was indicted for lying to Congress about his role in Iran-Contra, but President George H.W. Bush pardoned him the following year, along with five other intelligence officials. On April Fools' Day last year, I arrived at Clarridge's retirement community in northern Virginia. Looking relaxed in a red track suit and tennis shoes, he was waiting for me at a small wooden table at the clubhouse, where we began what would prove to be his last major sit-down interview.

Encryption hindering efforts to stop Islamic State, intelligence director says
Christian Science Monitor, Anna Mulrine, 2016 04 25
Washington - The **Edward Snowden leaks have accelerated the sophistication of encryption technologies by "about seven years," Director of National Intelligence James Clapper told reporters** this morning. And that is not a development to be celebrated, he added

in remarks at a breakfast hosted by The Christian Science Monitor. "From our standpoint, it's not a good thing." New, commercially available encryption software "had and is having major, profound effects on **our ability" to collect intelligence**, "particularly against terrorists," he warned. Clapper warned Monday that (Isis) has clandestine cells that are plotting more terrorist attacks in Germany, Italy, and England. To this end, the United States is stepping up efforts to promote more intelligence sharing. In the meantime, since the recent IS attacks on Paris and Brussels, US intelligence officials have learned some things about the terrorist group, he said. For starters, they are "very op-sec conscious," Clapper said. A former Air Force lieutenant general, he was using military parlance for "operational security."

Spy Chief Complains That Edward Snowden Sped Up Spread of Encryption by 7 Years
The Intercept, Jenna McLaughlin, 2016 04 25
Washington - The **Director of National Intelligence on Monday blamed NSA whistleblower Edward Snowden for advancing the development of user-friendly, widely available strong encryption.** "As a result of the Snowden revelations, the onset of commercial encryption has accelerated by seven years," James Clapper said during a breakfast for journalists hosted by the Christian Science Monitor. The shortened timeline has had "a profound effect on our ability to collect, particularly against terrorists," he said. When pressed by The Intercept to explain his figure, Clapper said it came from the National Security Agency. "The projected growth maturation and installation of commercially available encryption -- what they had forecasted for seven years ahead, three years ago, was accelerated to now, because of the revelation of the leaks."

Ex-CIA Agent Loses Appeal Against Extradition to Italy
Associated Press, Staff report, 2016 04 26
Lisbon - An **official says Portugal's Constitutional Court has rejected a former CIA operative's appeal against her extradition to Italy to serve a six-year sentence for her part in the U.S. extraordinary renditions program**. The court official has told The Associated Press that a judge ruled there were no constitutional grounds to reverse a decision by a lower court and the Supreme Court to send **Sabrina de Sousa** back to Italy. The official spoke on condition of anonymity Tuesday in accordance with court rules. De Sousa was among 26 Americans convicted in absentia for the 2003 kidnapping in Milan of suspect Osama Moustafa Hassan Nasr. The Constitutional Court was De Sousa's only remaining recourse after her arrest last October. Her Italian lawyer says he is hopeful of obtaining clemency from Italy's president.

U.S. Says Apple's Help No Longer Needed
The Wall Street Journal, Devlin Barrett, 2016 04 23
Washington - The **Justice Department on Friday night dropped a court case trying to force Apple Inc. to help authorities open a locked iPhone**, adding new uncertainty to the government's standoff with the technology company over encryption.In a one-page letter filed with a Brooklyn federal court Friday night, the government said an individual had recently come forward to offer the passcode to the long-locked phone. Accordingly, **the government no longer needs Apple's assistance to unlock the iPhone, and withdraws its application**."Apple declined to comment. Last week, Apple had asked U.S. District Judge Margo Brodie to drop the case, saying the government had failed to demonstrate that it had exhausted all other options before demanding the company's help.

On Encryption Battle , Apple Has Advocates in Ex-National Security Officials
The New York Times, Eric Lichtblau, 2016 04 23
Washington - In their years together as top national security officials, **Michael V. Hayden and Michael Chertoff were fierce advocates of using the government's spying powers to pry**

into sensitive intelligence data. Mr. Hayden directed a secret domestic eavesdropping program at the National Security Agency that captured billions of phone records after the attacks of Sept. 11, 2001. Mr. Chertoff pushed for additional wiretapping and surveillance powers from Congress both as a top prosecutor and as Homeland Security secretary.**But today, their jobs have changed, and so, apparently, have their views on privacy. Both former officials now work with technology companies like Apple at a corporate consulting firm that Mr. Chertoff founded, and both are now backing Apple — and not the F.B.I., with which they once worked — in its fight to keep its iPhones encrypted and private.**They are among more than a half-dozen prominent former national security officials who, to varying degrees, have supported Apple and the idea of impenetrable "end-to-end encryption" during a furious national debate over the balance between privacy and security in the digital age.In white papers, op-ed articles, conferences, newspaper and television interviews and elsewhere, the former officials have made their support for Apple clear.

Chinese firm at center of cyber fears
The Washington Post, Hayley Tsukayama & Dan Lamothe, 2016 04 23
Washington - Ever since Chinese computer maker Lenovo spent billions of dollars to acquire IBM's personal-computer and server businesses, **some lawmakers have called on federal agencies to stop using the company's equipment out of concerns over Chinese spying**.This past week, those lawmakers thought the Pentagon finally heeded their warnings. An email circulated within the Air Force appeared to indicate that Lenovo was being kicked out."For immediate implementation: **Per AF Cyber Command direction, Lenovo products are being removed from the Approved Products List and should not be purchased for DoD use.** Lenovo products currently in use will be removed from the network," stated the message. The apparent directive was generally welcomed as it circulated around Capitol Hill.Then the Pentagon's press office weighed in. Not so fast, it said.Ann Stefanek, an Air Force spokeswoman, said the message was mistaken, "not properly coordinated" and should not have been sent. Neither the Air Force nor the rest of the Defense Department has banned Lenovo products, she added.In fact, the "Approved Products List" referenced in the Air Force message focused on communications equipment such as routers, rather than personal computers, for which Lenovo is known. Army Lt. Col. Valerie Henderson, a Pentagon spokeswoman, said Lenovo has never been on that list.

Bay Area judge upholds FBI's secret national security letters
San Francisco Chronicle, Bob Egelko, 2016 04 22
San Francisco - A Bay Area **federal judge has upheld the FBI's power to keep secret the tens of thousands of "national security letters"** the agency issues each year demanding customer records from phone companies, banks and other record keepers. In 2013, U.S. District Judge Susan Illston of San Francisco ruled that the letters violated freedom of speech because they were accompanied by gag orders forbidding the recipients from disclosing that they had been contacted by the FBI. But she put her ruling on hold while the government appealed, and last year Congress passed a law, the USA Freedom Act, that made it somewhat easier to challenge national security letters in court and increased judges' authority to lift the veil of secrecy.

Color index for US border security is rejected
Associated Press, Staff report, 2016 04 22
San Diego - Five years ago, the **U.S. Department of Homeland Security dropped its color-coded terror threat index developed after the 9/11 attacks amid widespread confusion and ridicule**. So what did it do when tasked by Secretary Jeh Johnson in 2014 with measuring security along the country's borders? Agency staff proposed another system of reds, yellows

and greens. The Institute for Defense Analyses, a consulting firm, was hired by DHS to review the idea and found the index simplistic and misleading, noting that colors were a "disaster" for communicating terror threats. "DHS should learn from its own history and avoid repeating this error," the consultants said in its 53-page report. The DHS proposal was never made public, nor was the report.

Ex-CIA officer faces extradition from Portugal to Italy for alleged role in cleric's rendition
Washington Post, Ian Shapira, 2016 04 22
Washington - **More than 13 years after an Egyptian cleric was kidnapped off the streets of Milan by CIA operatives, one former agency officer now living in Portugal faces extradition to Italy and the possibility of a four-year prison sentence for the abduction** -- an outcome that a former agency historian describes as "unprecedented." **Sabrina De Sousa**, 60, was one of 26 Americans convicted in absentia by Italian courts for her alleged role in the February 2003 rendition of Hassan Mustafa Osama Nasr, also known as Abu Omar. Like the other convicted Americans, De Sousa never really faced the threat of Italian imprisonment, because she had moved back to the United States long before their Italian trials began. But last spring, De Sousa traveled to Portugal to visit relatives. In the fall, she was detained by local authorities at the Lisbon airport on a European arrest warrant. This week, Portugal's highest court upheld the country's lower courts' rulings, declared that they did not violate the constitution, and said De Sousa should be sent to Italy as soon as May 4.

F.B.I. Director Suggests Bill for an iPhone Hacking Topped $1.3 Million
New York Times, Eric Lichtblau, Katie Benner, 2016 04 22
Washington - The **director of the F.B.I. suggested Thursday that his agency paid at least $1.3 million to an undisclosed group to help hack into the encrypted iPhone** used by an attacker in the mass shooting in San Bernardino, Calif. At a technology conference in London, a moderator asked James B. Comey Jr., the F.B.I. chief, how much bureau officials had to pay the undisclosed outside group to demonstrate how to bypass the phone's encryption. "A lot," Mr. Comey said, as audience members at the Aspen Institute event laughed. He continued: "Let's see, more than I will make in the remainder of this job, which is seven years and four months, for sure." The F.B.I. director makes about $185,100 a year -- so Mr. Comey stands to earn at least $1.35 million at that base rate of pay for the remainder of his 10-year term.

Justice Department won't block CIA interrogation suit
Associated Press, Staff report, 2016 04 22
Washington - The **Justice Department has signaled that it won't try to block a lawsuit arising from the CIA's harsh interrogation techniques**, leaving the door open for a court challenge over tactics that have since been discontinued and widely discredited. Lawyers call the government's stance unprecedented, but also a recognition that a once-secret program is now largely out in the open. They say it's the first time the Justice Department has not sought, as its first step, to dismiss a lawsuit over the interrogation program by arguing that its mere existence is too secret to discuss in court. Judges have previously accepted that assertion, turning aside cases about a program that was designed to extract intelligence from suspected militants captured overseas. The lawsuit at issue, pending in federal court in Washington state, accuses the two Air Force psychologists who designed the interrogation program of endorsing and teaching torture tactics under the guise of science.

C.I.A. to Pay Death Benefits to Relatives of Terror Victims
New York Times, Nicholas Fandos, 2016 04 21
New York - For almost two years, the family of **Glen Doherty, a C.I.A. contractor and former Navy SEAL** who was among four Americans killed in the 2012 terrorist attack in Benghazi,

Libya, has fought to claim the government death benefits they believe Mr. Doherty deserved. **On Monday, the C.I.A. informed the Doherty family and others like them that their wait would end. The agency has secured funds to begin paying out death benefits of up to $400,000 each** to families like the Dohertys who are survivors of unmarried and childless federal employees or contractors killed in acts of terrorism overseas. The measure circumvents a 1941 law that requires overseas contractors -- including those working for the C.I.A. -- to carry disability and life insurance but pays out death benefits only to those with surviving spouses or children. Kate Quigley, Mr. Doherty's sister who led the family's lobbying efforts, said her brother, who had no spouse or children, did not know that his life insurance package would not pay any death benefits.

FBI urges agents to keep secrets - from each other ; Bureau doesn't want surveillance tactics revealed in court
USA Today, Brad Heath, 2016 04 21
Washington - The **FBI guards its high-tech secrets so carefully that officials once warned agents not to share details even with federal prosecutors for fear they might go on to work as defense attorneys**, newly disclosed records show. A supervisor cautioned the bureau's "technically trained agents" in a memo in 2003 not to reveal techniques for secretly entering and bugging a suspect's home to other agents who might be forced to reveal them in court. "We need to protect how our equipment is concealed," the unnamed supervisor wrote. The records, released this year as part of a Freedom of Information Act lawsuit, offer a rare view of the extent to which the FBI has sought to keep its most sensitive surveillance capabilities secret, even from others within federal law enforcement. That secrecy remains a common feature of the FBI's most sophisticated investigations, including recent cases in which it cracked the encrypted iPhone of a gunman in last year's San Bernardino, Calif., terror attacks and breached the anonymous **Tor computer** network.

U.S. court rejected claim FBI use of spy data is unconstitutional
Reuters, Staff report, 2016 04 21
Washington - The **top judge on the secretive Foreign Intelligence Surveillance Court ruled last year against a constitutional challenge to U.S. surveillance rules permitting the FBI to access foreign intelligence data** for use in domestic criminal investigations, according to a newly declassified court opinion. **Judge Thomas Hogan** said there was no requirement that access to email and other forms of Internet communications under a controversial surveillance program be restricted only to foreign intelligence uses, he wrote in a November opinion released this week in partially redacted form. Hogan's ruling dismissed a legal challenge submitted by **Amy Jeffress**, a former federal prosecutor, who was appointed to serve as a "friend of the court" to advocate privacy considerations before the court.

F.B.I. Tells Panel It Needs Hackers to Keep Up With Tech Companies
New York Times, Cecilia Kang, Eric Lichtblau, 2016 04 20
Washington - The F.**B.I. defended its hiring of a third-party company to break into an iPhone used by a gunman in last year's San Bernardino, Calif., mass shooting**, telling some skeptical lawmakers on Tuesday that it needed to join with partners in the rarefied world of for- profit hackers as technology companies increasingly resist their demands for consumer information. **Amy Hess, the Federal Bureau of Investigation's executive assistant director for science and technology**, made the comments at a hearing by members of Congress who are debating potential legislation on encryption. The lawmakers gathered law enforcement and Silicon Valley company executives to discuss the issue, which has divided technology companies and authorities in recent months and spurred a debate over privacy and security. The hearing follows a recent standoff between the F.B.I. and Apple over a court order to force

the company to help gain access to an iPhone used by one of the San Bernardino attackers. Apple refused to comply with the order, citing harm to the privacy of its users.

FBI can't unlock 13% of protected phones it seized
USA Today, Erin Kelly, 2016 04 20
Washington - **The FBI cannot unlock 13% of the password-protected cellphones it has seized as evidence in the past six month**s, a top bureau official told a House panel Tuesday. About 30% of the 3,000-plus phones that the FBI has seized since Oct. 1 require passwords to open, said **Amy Hess**, executive assistant director of the FBI's science and technology branch. The FBI was able to unlock most of those phones, but the number that they can't get into is growing as tech companies build devices with stronger data encryption, Hess said. She also said passwords are becoming longer and more difficult to guess, even with special computer programs designed to crack them.

Judge Rejects Challenge to Searches of Emails Gathered Without a Warrant
New York Times, Charlie Savage, 2016 04 20
Washington - A **federal judge has rejected a legal challenge to rules permitting F.B.I. agents, when working on domestic criminal cases**, to search emails written by Americans that the government has intercepted without a warrant in the name of gathering foreign intelligence. In an 80- page opinion that was issued in November and remained classified until being made public on Tuesday, **Judge Thomas F. Hogan**, the chief judge of the Foreign Intelligence Surveillance Court, ruled that what critics call "backdoor searches" of messages by the F.B.I. comply with both the **Constitution and the FISA Amendments Act**.

Secret U.S. court issues first order for phone data under new law
Reuters, Mark Hosenball, 2016 04 19
Washington - **The secretive U.S. Foreign Intelligence Surveillance Court has issued its first order allowing the National Security Agency to collect telephone records under a new electronic spying law** Congress passed last year. According to an order from the court posted Tuesday on a website operated by the **Office of the Director of National Intelligence**, the court issued the order on Dec. 31. The order, signed by FISC Chief Judge **Thomas Hogan**, said the court concluded that a surveillance application, apparently submitted by the NSA, met the requirements of the USA Freedom Act, which President Barack Obama signed last year. That law replaced an older one that allowed NSA to collect telephone "metadata" - records of American citizens' and residents' calls, including their origin and destination, when a call was placed and how long it lasted. However, U.S. intelligence officials have said the NSA did not collect the content of phone calls under this program and did not look at the data without some specific justification.

Tech: A double-edged sword for national security
Tech City News (UK), Emily Spavin, 2016 04 26

London - "I remember my first day at Mi6. I thought it was probably going to be nothing like the James Bond books and films. 'It'll just be a desk job', I told myself. I was wrong." **Matthew Dunn** now lives in Gloucestershire and writes spy novels for a living - an interesting enough way to earn a crust, but his previous career is much more fascinating. **He served as a British intelligence officer and Mi6 field officer, taking part in around 70 missions that saw him travel the world, moving undercover from one hostile environment to another**. "I was tasked with targeting senior echelons, people who had access to secrets in rogue states that offered significant threats in terms of things like regional conflicts, nuclear conflicts and hostile threats against the West in the guise of intelligence attacks or military attacks," Dunn explained. He used his training in all aspects of intelligence collection and direct action, including explosives, military unarmed combat, surveillance, advanced driving, infiltration techniques and covert communications, with one particular mission earning him a rare personal commendation from the Secretary of State for Foreign and Commonwealth Affairs.

Former Top U.K. Spy Now Works for Team Putin--and a Mobbed-Up Russian Lawyer
The Daily Beast, Michael Weiss, 2016 04 25
Washington - If Robert Ludlum and Bertolt Brecht ever collaborated on a plotline, they might have come up with something like "**The Browder Effect**," which aired on April 13 on Rossiya-1 as a two-hour documentary and follow-up discussion. **In this paranoid rendering, Alexey Navalny, the leader of Russia's decimated opposition, is an agent of either the CIA or MI6 (or maybe both, it's never explained) who was recruited in 2006 by William Browder, the CEO of Hermitage Fund** and a onetime apologist for Russian President Vladimir Putin who had turned into a prominent Kremlin gadfly. Browder, in this rendering, was himself recruited by MI6 in 1995. But what's so interesting about the broadcast of "The Browder Effect" is that a key source lending ostensible credibility to the allegations is named as Andrew Fulton, a former high-ranking MI6 spy once implicated in a plot to assassinate Slobodan Milosevic. His opinion was presented on air as that of an independent analyst who verifies the authenticity of these dubious documents. In fact, email correspondence leaked online and independently verified by The Daily Beast by a source who asked to remain anonymous, shows that Fulton has been working as a private investigator for Andrey Pavlov, the lawyer for the alleged Russian mafia types accused of committing the crimes the television channel is trying to pin on U.S. and British intelligence.

Dark Days': UK Spy Agency Files Reveal Bulk Data Capture of Citizens
Sputnik News, 2016 04 24
London - The **bulk personal datasets collected by British intelligence agencies is reminiscent of dark days and dark regimes, Yair Cohen, of the London-based law firm Cohen Davis Solicitors, told Sputnik**.In an interview with Sputnik, Yair Cohen, of the London-based law firm Cohen Davis Solicitors, slammed the UK intelligence agencies' bulk personal datasets (BPD) as a reminder of dark days and dark regimes.The interview came after the human rights **watchdog Privacy International managed to obtain a cache of documents which shed light on the UK spy agencies' controversial BPDs**. This is the collection of personal data of people, most of whom present no particular interest to the intelligence services."It appears that the vast majority of data was supplied on a volunteer basis. I suspect that some of the information was being supplied by email providers or organizations that handled emails as well," Cohen said.

UK guards 'powerless to stop jihadi suspects'
London Daily Telegraph, David Barrett, Camilia Turner, 2016 04 22
London - **British border guards are virtually powerless to stop and detain Britons they suspect of returning from jihad or terrorism training**, a whistleblower claims today. UK

Border Force guards have "zero discretion" to detain and interview travellers trying to re-enter Britain if they hold a UK passport and have not been "flagged" by police or security services. It means that the UK border has a potentially fatal flaw in relation to "cleanskin" jihadis, who have never come to the attention of police but could go on to commit atrocities on British soil. **The Terrorism Act 2000** sets out how immigration officers could be granted the power to "stop, question and detain" anyone they believe is "concerned in the commission, preparation or instigation of acts of terrorism". However, these powers have not been conferred on immigration and borders staff. The Home Office whistleblower, who The Daily Telegraph is not identifying, said it was a "glaring omission" that border guards have been forbidden from using the powers set out in Schedule 7 of the Act.

Border security budget to fall by £2 million, Theresa May confirms
London Daily Telegraph, David Barrett, 2016 04 21
London - The **Government is to cut the UK Border Force's resource budget by £2 million this year despite fears over Britain's border security**. A debate in the House of Commons, which highlighted The Telegraph's campaign examining worrying shortcomings in border security, said the agency's budget - which covers staffing - will decline by 0.4 per cent to £558 million. However, **Theresa May**, the Home Secretary, insisted border spending had been "protected" because capital spending on technology such as electronic passport gates will rise from £40.1 million last year to £68.3 million. She told the Commons: "That means that Border Force spending to all intents and purposes is protected compared to 2015-16 with increased capital investment to improve the technology at the border, to **improve security and intelligence and strengthen control**."

UK spy agencies have collected bulk personal data since 1990s, files show (Canada)
The Guardian (London), Owen Bowcott, Richard Norton-Taylor, 2016 04 21
London - **Britain's intelligence agencies have been secretly collecting bulk personal data since the late 1990s** and privately admit they have gathered information on people who are "unlikely to be of intelligence or security interest". **Disclosure of internal MI5, MI6 and GCHQ documents reveals the agencies' growing reliance on amassing data as a prime source of intelligence** even as they concede that such "intrusive" practices can invade the privacy of individuals. A cache of more than 100 memorandums, forms and policy papers, obtained by Privacy International during a legal challenge over the lawfulness of surveillance, demonstrates that collection of bulk data has been going on for longer than previously disclosed while public knowledge of the process was suppressed for more than 15 years. The files show that GCHQ, the government's electronic eavesdropping centre based in Cheltenham, was collecting and developing bulk data sets as early as 1998 under powers granted by section 94 of the 1984 Telecommunications Act. The documents offer a unique insight into the way MI5, MI6, and GCHQ go about collecting and storing bulk data on individuals, as well as authorising discovery of journalists' sources. Bulk personal data includes information extracted from passports, travel records, financial data, telephone calls, emails and many other open or covert sources. Often they are "fused" together to help pinpoint suspects. Bulk personal data is exchanged with "foreign agencies", presumably mainly those from other countries in the UK's traditional **"Five Eyes" alliance - the USA, Canada, Australia and New Zealand.**

We cannot be complacent about security in face of Islamist attacks, says former spy chief
London Daily Telegraph, Tom Whitehead, 2016 04 21
London - A **former spy chief** has joined calls for a review of border security as he warned Britain cannot afford to be complacent. **Sir David Omand**, who was director of GCHQ in 1996 and 1997, said the main focus of any review must be on whether there is adequate staffing at

our ports and points of entry and whether intelligence sharing is at its best. It came as a former head of the Royal Navy warned Britain's coastline away from major ports is "highly vulnerable". Mr Omand spoke a day after former senior policemen and counter terrorism experts signed an open letter calling for the UK's borders to be tightened, to better protect against the threat from Islamist fanatics. Sir David told this newspaper: "I welcome any rational review. We can never be complacent about these things." He said the main drive of a review should examine staffing levels and training at the borders, amid concerns that they are under pressure.

Border Security: How the US and Britain compare
London Daily Telegraph, David Barrett, Nick Allen, 2016 04 20
London - The **United States deploys a much tougher regime than Britain to hunt down Islamists in their midst** and screen out potential extremists who attempt to reach American soil. Intelligence and security The **US deploys its formidable intelligence network to keep out extremists and other undesirables,** drawing on the surveillance capabilities of agencies including the **CIA and the National Security Agency**. In comparison, Britain takes a more softly-softly approach. The Home Office places heavy emphasis on community-based schemes, as part of the Prevent strategy, to encourage Muslim families, imams and other community leaders to report concerns about potential extremism. Raffaello Pantucci, of the British think-tank the Royal United Services Institute, said US intelligence agencies take a more "vigorous, pro-active approach", including extensive surveillance, to track down potential terrorist threats. "A lot of that is based on surveillance of online activities, which then leads to further action in the offline world," Mr Pantucci said.

GCHQ should split into separate defence and attack units, says expert
Computing (UK), Stuart Sumner, 2016 04 20
London - **Government listening agency GCHQ should be split into separate attack and defence units, reporting to the Cabinet via different government ministers**, according to a leading security expert. This would allow the body responsible for defence to operate more openly, and would make other public and private organisations more likely to collaborate with it, according to Professor Ross Anderson, professor of security engineering at the computer laboratory, University of Cambridge. "The problem is that the UK government has demonstrated repeatedly that it's not trustworthy," said Anderson. "The Snowden documents made it clear that the British State is more interested in exploiting stuff than protecting it. If you find a vulnerability in Windows, do you report it to Microsoft and protect 60 million Brits, or do you keep quiet and exploit a billion Chinese, a billion Indians and around 100 million Russians? From a GCHQ perspective it's a no brainer," he argued.

Australia PM launches cybersecurity campaign
Reuters, 2016 04 21
Sydney - **Australia set out a far-reaching cybersecurity strategy on Thursday**, invoking the leaks of United States whistleblower Edward Snowden, terrorism and even the threat of war to push for a coordinated global approach to protection of online data.Prime Minister Malcolm

Turnbull, who faces an election in July amid waning popularity, is trying to position himself as a leader who can transform Australia into a tech-savvy business hub as its economy deals with a commodities downturn. In a speech in Sydney, the former online entrepreneur said hacking attacks cost the country A$1 billion ($780 million) a year and unveiled a long list of measures - from appointing his own special cybersecurity adviser to having internet safety taught in schools - to make the online world freer and safer. Turnbull, who delivers his first budget in May, two months before the election, said he wants to spend A$230 million on 33 cybersecurity measures involving 100 new jobs, including extra resources for the government's Computer Emergency Response Team, and law enforcement agencies. He **also plans to relocate the cybersecurity office of intelligence agency, the Australian Signals Directorate, outside the broader Australian Security Intelligence Organisation to make it easier to coordinate with busineses.**

Asio backs down in bid to keep security assessment 'law' secret
The Guardian, Paul M. Farrell, 2016 04 20
Canberra— **Australia's domestic spy agency sought to suppress parts of a document which it was argued forms part of Australian law – and would therefore usually be available to the public** – to fight a legal challenge to a security assessment it made. Evidence has also emerged in the case of junior officers allegedly making "embellishments" in a security report to the **director general, Duncan Lewis**.Court documents reveal the extraordinary lengths the **Australian Security Intelligence Organisation (Asio)** has gone to to fight a judicial review of an adverse security assessment of a man currently held in immigration detention. The man, who cannot be named for legal reasons, is challenging his security assessment in the federal court, in part, because he alleges the Asio officers who interviewed him embellished facts in a report to the director general. He also claims they attributed comments to him that he did not make.

UK spy agencies have collected bulk personal data since 1990s, files show
The Guardian, staff reporters, 2016 04 20
London— Agencies privately concede that 'intrusive' practices can invade privacy and that data is gathered on people 'unlikely to be of interest." **Britain's intelligence agencies have been secretly collecting bulk personal data since the late 1990s and privately admit they have gathered information on people who are "unlikely to be of intelligence or security interest". Disclosure of internal MI5, MI6 and GCHQ documents reveals the agencies'** growing reliance on amassing data as a prime source of intelligence even as they concede that such "intrusive" practices can invade the privacy of individuals. A cache of more than 100 memorandums, forms and policy papers, obtained by Privacy International during a legal challenge over the lawfulness of surveillance, demonstrates that collection of bulk data has been going on for longer than previously disclosed while public knowledge of the process was suppressed for more than 15 years. The files show that GCHQ, the government's electronic eavesdropping centre based in Cheltenham, was collecting and developing bulk data sets as early as 1998 under powers granted by section 94 of the 1984 Telecommunications Act. Spy alert: foreign Romeos leave China dolls in chains
The Australian, Rowan Callick, 2016 04 23
Canberra - **David**, who is living in Beijing for a while, has red, wavy hair and a pointy nose, and wears glasses. He could be taken for Woody Allen.He claims to be "a visiting scholar researching issues about China". And he starts dating a "pretty lady", Xiao Li, who recently started work in a government agency. **But he's really a foreign spy.Spoiler alert: This romance will end in tears.China has introduced a National Security Day to alert people to the need to be guarded about what information they share, and with whom, and to keep their eyes peeled for foreigners with evil intent.**The cautionary tale of David and Xiao Li has been related in posters distributed around apartment compounds in Beijing's oldest district, Xicheng, this week.In Nanjing, the city authorities responded to the new security day by highlighting to schoolchildren the case — clearly intended to scare them — of the Australian citizen Stern Hu. Hu was jailed for 10 years in 2010 for "stealing business secrets" and for accepting bribes to ensure certain steel companies received shipments of iron ore from his employer, Rio Tinto, during a time of excess demand.China Central TV used the example on Wednesday night, as part of a series of reports on national security concerns, of Chen Wei — who was arrested in December 2013 in the port city of Ningbo, near Shanghai, after he was seen taking photographs at the East Fleet naval centre.While working for a joint- venture company, he had met a foreigner — with a Japanese- sounding name — who asked him to provide some photos, at first of Christians worshipping in China then of ships in port, especially those equipped with weapons, and of the routes of vessels sailing to the Diaoyutai Islands contested with Japan, which administers them as the Senkaku Islands.

Chine : Xi Jinping en « commandant en chef »
Le Figaro, Patrick Saint-Paul, 2016 04 22
Pekin--Campé dans son uniforme militaire aux couleurs camouflage, **Xi Jinping vient de s'offrir un nouveau titre prestigieux : « commandant en chef » des armées.** L'annonce est intervenue, mercredi, alors que le numéro un chinois visitait le nouveau centre de commandement interarmées du pays, dont il a pris la direction. Le dirigeant communiste consolide ainsi son emprise sur l'armée. Et la formulation ne laisse rien au hasard, puisqu'elle est identique à celle attribuée au président des États-Unis, signalant ainsi que le dirigeant de la République populaire se place sur un pied d'égalité avec son alter ego américain. Les images du « commandant en chef » , apparu pour l'occasion en treillis, sans insigne ni grade, ont été diffusées à la télévision publique et par les médias d'État. **L'Armée populaire de libération (APL) se doit d'être « totalement loyale » , a martelé Xi Jinping.** Et d'ajouter que l'APL doit

être « ingénieuse dans la bataille, efficace dans le commandement, audacieuse et apte à remporter des guerres » .

Overseas security to get upgrade
China Daily, Zhong Nan, 2016 04 22
Beijing - **China will beef up its private security services overseas to protect life and property, with stronger manpower, better equipment and intelligence, and more effective operations**, industry analysts and insiders said on Thursday. The country now has about 3,200 security professionals protecting Chinese companies overseas. That is far fewer than major global security service providers such as US-based Blackwater Worldwide, which has more than 23,500 employees around the world and has trained over 100,000 professionals, data from the **China Overseas Security and Defense Research Center** in Beijing show. Large companies, including China Security and Protection Co and JAS Security Group, both based in Beijing, plan to recruit more professionals, as well as to establish an industry union to integrate resources of China's 20 largest security service companies to gain more contracts. Tools including multifunctional safety rooms, armored vehicles, anti-bomb walls, police dogs and chemical defense equipment will help them upgrade their ability to protect such clients as China National Petroleum Corp and China Road and Bridge Corp in Africa and Latin America. Liu Xinping, deputy director of the China Overseas Security and Defense Research Center, said members of the union will share intelligence, maritime-and land-based logistics networks, base facilities and defense equipment.

PLA orders anti-spy software for soldiers' smartphones
South China Morning Post, Minnie Chan and Celine Ge, 2016 04 20
Beijing - The **People's Liberation Army (PLA) has come up with comprehensive counter-espionage software** since it lifted a ban on its soldiers using smartphones in their spare time, state media reported on Monday. All devices used by PLA soldiers should be installed with special software created by the army's IT experts and domestic mobile operators, so their activities can be closely monitored by the army's newly established internet administration centres, according to Communist Party mouthpiece People's Daily. The software aims to filter all "unhealthy and negative messages" that could harm the army's political spirit and morale, curb access to sensitive information that might lead to leaking of military intelligence, the report said. It also tracks off-duty officers incase they visit "unwanted places".

Spy who sold codes sentenced to death
South China Morning Post, Liu Zhen, 2016 04 20
Beijing - **China has sentenced to death an employee at a scientific research institution for espionage. Huang Yu**, 41, sold more than 150,000 classified documents to foreign intelligence agencies, CCTV reported. These included 90 "top confidential", 292 "confidential" and 1,674 "secret" files which leaked cipher codes for Communist Party, government, military and financial communications. "This case would have led to bloodshed and cost lives had it happened in wartime," the television report quoted a National Security Agency official as saying. The report did not say for whom Huang was spying.

Xi vows to boost cyber Deterrence
South China Morning Post, Catherine Wong, 2016 04 20
Beijing - **China will beef up its cybersecurity capabilities, including cyber deterrence, President Xi Jinping said yesterday**, a move analysts said was needed to counter other countries' capabilities. Speaking to senior officials, engineers and information technology executives, Xi encouraged internet firms to expand globally and told governments bodies to help companies lure global talent to work in China's internet sector. Xi said **accelerated**

development of China's cybersecurity systems was needed to protect key information infrastructure and to "strengthen cyber defence and deterrence capabilities". The new five-year plan, passed in March, devotes much attention to the development of the internet sector and cybersecurity, including cyber defences. But it does not mention "cyber deterrence". Last year, the US defence department updated its cyber strategy to include "cyber deterrence". "Some countries would use supremacy in cyber power to attack other countries," said Huang Chengqing, director of the National Computer Network Emergency Response Technical Team/Coordination Centre of China, who was at the meeting.

Putin Builds New Force To Tighten Security Grip
Wall Street Journal, Thomas Grove, 2016 04 25
Moscow - The **Kremlin is creating a new internal security force that answers directly to Russian President Vladimir Putin**, ahead of parliamentary elections. The Russian government says the new force, called the **Russian Guard**, **will be headed by Viktor Zolotov**, who served as Mr. Putin's personal bodyguard for 13 years. Mr. Putin directed the creation of the force this month through an executive order now under review by the lower house of parliament. Mr. Putin said the security force is intended to tighten control over the arms trade in the country and streamline counterterrorism efforts. "We believe we can. . .reduce the cost of having various services," he said in a televised question-and-answer session. With parliamentary elections set for September, Russian security experts said the new force will be capable of putting down the kind of mass protests that arose following allegations of voting violations in the last such polls in 2011. "This is really about upcoming elections and the possibility of mass unrest," said Boris Volodarsky, a former Russian military intelligence officer.

Eye-Watering Spies: Russia's State-Of-The-Art Jets Stir Envy in Washington
Sputnik News Service, 2016 04 23
Moscow - **Russia's military modernization program and impressive improvements within conventional forces arsenal, especially its signals intelligence (SIGINT)** and electronic warfare (EW) capabilities have apparently come as a big surprise to Washington.In Syria, Russia has supposedly deployed two **Electronic Intelligence (ELINT) and SIGINT aircraft**, which "may be gaining the envy of some in Washington", according to Caitlin Patterson, a veteran of the US Marine Corps where she served as Cryptologic Linguist and Signals Intelligence Analyst.One of the planes is Ilyushin Il-20 surveillance aircraft, "Coot" in NATO code."The Il-20 comes packed with an array of sensors, antennas, IR (Infrared) and Optical sensors, a SLAR (Side-Looking Airborne Radar), and satellite communication equipment for real-time data sharing," Patterson describes the aircraft.The Il-20 is a military version of the Il-18 passenger airplane. It was designed for intelligence gathering with its distinguishing features being the Igla-1 phased-array SLAR pod under the forward fuselage, housings for A-87P LOROP cameras and the Romb 4 sigint system, according o the GlobalSecurity.com website.Two antennas also protrude from the top of the fuselage for the Vishnaya communications intelligence gathering system.It is flown by a crew of five accompanied by eight mission specialists.

Les moyens manquaient pour suivre les frères Abdeslam
Le Soir (Belgique), Journaliste maison, 2016 04 26
Paris - Le Comité P pointe les failles qui ont abouti au classement sans suite du dossier de surveillance des deux terroristes. C'est ce mardi qu'est rendu public le second rapport intermédiaire du Comité P évaluant l'enquête sur les auteurs des attentats de Paris. Le Soir a pris connaissance des grandes lignes de ce rapport. La police des polices met en lumière une série de « manquements » qui ont permis à Salah et Brahim Abdeslam d'échapper à la surveillance dont ils auraient dû faire l'objet. On apprend ainsi que début 2015, un inspecteur de Bruxelles-Ouest signale par P.-V. à la cellule antiterroriste de cette zone de police que les frères Abdeslam cherchent à se rendre en Syrie. Ceux-ci sont auditionnés sans faire l'objet d'aucune inculpation. Informé des faits, le parquet demande à l'unité antiterroriste de la police fédérale d'enquêter sur la téléphonie des frères Abdeslam et de vérifier leurs mails. Mais l'enquête finira parmi les « dossiers rouges » : ceux qui sont urgents mais pour lesquels la section antiterroriste ne dispose pas de moyens suffisants.

Les écoutes judiciaires ont coûté un milliard d'euros depuis dix ans
Le Figaro, Pauline Chateau, 2016 04 26
Paris - Dans un courrier adressé au Premier ministre, la Cour des comptes dénonce le coût exorbitant des interceptions judiciaires. Pour des résultats jugés peu satisfaisants. Interception des conversations téléphoniques, SMS, MMS, emails... **Les interceptions judiciaires coûtent de plus en plus cher à l'État, selon la Cour des comptes.** Dans un référé adressé au premier ministre en février dernier, et publié lundi dernier, la **dépense cumulée des écoutes est estimée à 1 milliard d'euros,** par les Sages de la rue Cambon, sur les dix dernières années. Dans le détail, le coût global des interceptions judiciaires est passé de 89,78 millions d'euros en 2005, à 122,55 millions d'euros, en 2015. Soit une hausse de 37%, en dix ans! Comment expliquer une telle augmentation? Pour la Cour des comptes, elle est essentiellement due à la mise en place, très laborieuse, de la plateforme nationale des interceptions judiciaires (PNIJ), censée faciliter la centralisation, la collecte, et l'analyse des interceptions judiciaires, afin de réaliser des économies budgétaires.

Supo: Foreign intel tried to influence Finnish energy policy
Yle (Finland), Staff report, 2016 04 26
Helsinki - **Finland was the target of an attempt by foreign powers to influence energy policy decision making, according to a report by STT news agency**. STT said Monday that **Supo** revealed the espionage attempt in a new yearbook released Friday. Supo did not name the party suspected to be behind the attempt to influence Finnish energy policy, however. Nor did it indicate which specific area of energy policy was targeted. The publication offers an assessment of issues such as developments in terrorism and the actions of foreign intelligence services in Finland. Supo said that 2015 had been a very active year for intelligence activity in Finland. The organisation added that in many instances espionage had clearly been more aggressive than in previous years.

The Very Strange Extradition of a CIA Spy
The Daily Beast, Christopher Dickey, Barbie Latza Nadeau, 2016 04 26
Rome - Former **CIA employee Sabrina De Sousa**, now fighting extradition from Portugal to Italy, was skiing on a mountainside far away from the action, skiing, on February 17, 2003,

when Hassan Mustafa Osama Nasr was snatched off a street in Milan on his way to the mosque. The cleric, known as **Abu Omar**, was first flown by executive jet to Germany and then to Cairo, where he was tortured for nearly seven months, according to his own testimony and Amnesty International accounts. The kidnap was part of the infamous "extraordinary rendition" program being run at the time by the United States. The CIA was grabbing suspected terrorists from all over the world and shipping them to various countries, including Bashar Assad's Syria, Muammar Gaddafi's Libya and Hosni Mubarak's Egypt, to suffer the tortures of the damned and in some cases execution. In 2015, De Sousa, a naturalized American who was born in India and who has a Portuguese passport (her family is from the former Portuguese colony of Goa), defied warnings by the U.S. State department not to travel to Europe where she could be picked up on a European arrest warrant and sent to Italy to serve the prison term. It's not like De Sousa didn't know the risk. Indeed, **in 2009 after the Italian conviction she filed a lawsuit against the U.S. Central Intelligence Agency, former Rome station chief Castelli**, he former boss Robert Seldon Lady, the State Department and Secretary of State Hillary Rodham Clinton, alleging that they had failed to protect a loyal public servant. In the meantime, Italy reluctantly followed through with the request for extradition as stipulated on the European arrest warrant. A source close to the Italian president's office told The Daily Beast that they had never actively sought extradition, but couldn't avoid it if one of the convicted operatives was "dumb enough to travel to Europe."

Former CIA officer faces extradition to Italy over Abu Omar kidnapping
The Guardian, Stephanie Kirchgaessner, 2016 04 25
Rome— A **former undercover CIA officer is to be extradited to Italy** following her conviction over the 2003 extraordinary rendition of a terror suspect to Egypt. **Sabrina De Sousa**, a dual US and Portuguese citizen, was arrested in Portugal last October and has since lost three appeals against being handed over to Italian authorities. Her extradition is scheduled for 4 May.At the heart of the case lies the kidnapping of an Egyptian cleric, **Hassan Mustafa Osama** Nasr – known as Abu Omar – who was snatched off the streets of Milan by the CIA, allegedly with the help of Italian officials, and sent to Egypt, where he was allegedly tortured. The case was investigated by an independent prosecutor in Italy, leading to the conviction in absentia of De Sousa and 21 other CIA operatives and high-ranking officials. At the time, the case was seen as the only exhaustive investigation of the illegal counter-terrorism practice known as extraordinary rendition, and exposed US allies' role in helping to execute the strategy. Convictions of members of the **Italian military intelligence agency Sismi** were later overturned by Italy's high court on the grounds of "state secrecy".

CIA and Bosnia authorities cooperating in anti-terror fight
Hina-Croatan News Agency, 2016 04 23
Zagreb— The **Director of the Central Intelligence Agency, John Brennan**, who arrived in Sarajevo on Friday unannounced, **informed the senior officials of local law enforcement and security authorities of Washington's full support to Bosnia and Herzegovina's fight against terrorism**, according to local media outlets. "We have received support and we are reassured that we can count on cooperation with CIA and on exchange of data," the Bosnian Croat-Muslim Federation's Interior Minister Aljosa Campara said after the meeting in Sarajevo. The CIA Director arrived in Sarajevo from Riyadh and held talks with Bosnia's representatives on the struggle against terrorism.

Head of the CIA unexpectedly arrives in Bosnia
Associated Press, Staff report, 2016 04 22
Sarajevo - **Bosnia government officials say the U.S. intelligence director, John Brennan, arrived unexpectedly in Sarajevo to meet officials of the nation's anti-terrorism group**.

Officials spoke under condition of anonymity on Friday because the visit was not officially announced. The CIA director arrived from Riyadh, Saudi Arabia, where met with senior officials from six Arab nations aimed at coordinating efforts in the conflicts in Iraq, Syria and Yemen. The U.S. Embassy in Sarajevo had no comment. Bosnian officials said Brennan would meet with officials of several agencies which are coordinating anti-terrorism efforts. About 130 Bosnians are thought to be fighting in Syria for the Islamic State group. According to the government, many of them want to return home although they could face jail sentences.

Vers une meilleure coordination entre le GIGN et le RAID
Le Monde, Soren Seelow, 2016 04 21
Paris - Le **ministère de l'intérieur a décidé d'autoriser l'unité la plus proche à intervenir en cas d'attaque de masse** A défaut de parvenir à fusionner les trois unités d'élite de la police et de la gendarmerie - **RAID, BRI et GIGN** - en une seule force compétente sur l'ensemble du territoire, le ministre de l'intérieur a annoncé, mardi 19 avril, un " schéma national d'intervention " visant à coordonner leurs actions en situation de crise. Les derniers attentats ayant frappé la France n'ont pas révélé de - dysfonctionnement dramatique, mais ils ont ravivé suffisamment de tensions et de rivalités entre ces trois corps pour convaincre **Bernard Cazeneuve** de remettre à plat leurs protocoles d'intervention. La mesure la plus spectaculaire de ce plan réside dans la suspension des zones de compétences territoriales de la police et de la gendarmerie en situation d'urgence absolue.

German court: anti-terror laws partially unconstitutional
Deutsche Welle, Staff report, 2016 04 20
Berlin - The **German Federal Constitutional Court** in Karlsruhe said on Wednesday that although secret **surveillance powers given to the Federal Criminal Police (BKA) are in principle in line with the country's constitution**, the current legal framework granting these powers does not satisfy the principle of proportionality. In 2009, a law was passed granting the BKA the power to act preventatively against crimes relating to international terrorism. Previously, the BKA was responsible for law enforcement, with preventative measures assigned to state police forces. This included the ability to secretly conduct surveillance through recorded conversations or photographs, carry out wiretaps, or to remotely search computers. The appeal to the Constitutional Court argued that these preventative powers of the BKA went too far and intruded on the private lives of German citizens. The court's ruling addresses these concerns without completely rejecting the law. Specifically, the court said "with regard to the legal requirements for carrying out covert surveillance measures, the provisions introduced in 2009 are in part too unspecific and too broad."

Antiterrorisme : Cazeneuve met de l'ordre
Sud Ouest, Benoît Lasserre, 2016 04 20
Paris - Sécurité Le **ministre de l'Intérieur a annoncé hier après- midi des mesures destinées à accélérer la coopération et l'intervention des forces de l'ordre en cas d'attentat** L'épisode a contribué à bâtir la réputation de **Bernard Cazeneuve**, jusqu'alors ministre de l'Intérieur passe- muraille. En pleine traque des frères Kouachi, les assassins de " Charlie Hebdo ", en janvier 2015, et en pleine prise d'otages à l'Hyper Cacher de la porte de Vincennes, Bernard Cazeneuve, exaspéré par les cachotteries des services de police qui handicapent l'enquête, pique une de ces colères froides dont il a le secret. Il enferme tous les patrons du Quai des Orfèvres et de la gendarmerie dans une salle du sous-sol du ministère de l'Intérieur pour s'assurer de leur collaboration pleine et entière.

Shin Bet mulls renewed entry permits for Palestinians
Jerusalem Post, Ben Hartman, 2016 04 26
Jerusalem - The **Shin Bet (Israel Security Agency) is reevaluating the way it provides entry permits after large numbers of Palestinians were denied entry to Israel due to security concerns**, despite the fact that they had previously received permits to enter Israel. The Shin Bet said that the permits were revoked due to recent security concerns, including a wave of attacks carried out by Palestinians in recent months. "Due to the security situation in recent months, the Shin Bet carried out a reassessment of the criteria for giving entry permits to Palestinians from the West Bank, in order to make it more difficult for potential suspects to enter Israel," the Shin Bet said Monday, adding that "it's impossible to rule out the possibility that Palestinian who previously had received entry permits were recently denied them when they asked to enter Israel for the purpose of work."

Terrorists' Huge Bomb Workshop Discovered by Iranian Intelligence Agents
Fars News Agency, 2016 04 25
Tehran - **Iranian Intelligence Minister Seyed Mahmoud Alavi said his forces discovered and dismantled a large bomb-making workshop of the terrorists** during the parliamentary election days in February. "Two days before the election, meaning on February 24, and on the election day, meaning February 26, and even two days after the election, terrorist teams were identified and came under raid by the Iranian security forces and a number of them were killed and some others were arrested," Alavi said on Sunday. "The security forces also discovered and seized the terrorists' huge bomb-making workshop," he added. Stressing the Iranian forces' high vigilance and capability in war against terrorism, Alavi said the sound of explosions is heard in different parts of the world from the regional states to the European countries, while Iran enjoys unique security due to the supremacy and control of its **intelligence forces**.

In 'Post' interview, state attorney backs Shin Bet's interrogation tactics
The Jerusalem Post, Yonah Jeremy Bob, 2016 04 22

Jerusalem— **State Attorney Shai Nitzan** has a wide smile, is sometimes quiet, and can switch suddenly into reciting poetry or putting forth philosophical positions on judicial activism. But there is always a certain passion and an all-encompassing seriousness that animates him. He is so busy that he rarely speaks to the media on or offthe- record and is hardly even available to the spokespeople who are supposed to represent him to the public. He was appointed state attorney in November 2013 – somewhat as an outsider who has never served as a prosecutor – replacing Moshe Lador. **But one position Nitzan has always felt comfortable holding, earning enemies on both the Right and Left, is his defense of the Shin Bet's (Israel Security Service)** use of aggressive interrogation tactics. Nitzan admitted in the past that individual agents of the service may have exaggerated in interrogations on rare occasions, emphasizing however that as an institution it obeys the law with strong oversight. The High Court's 1999 torture ban and the 2013 Turkel Report on the compliance of interrogations with international law, led to the transfer of investigations of torture complaints against the Shin Bet to the Justice Ministry's responsibility.

Israel to give Jordan and Egypt intelligence help against Islamic State
Jerusalem Post, Staff Report, 2016 04 21
Jerusalem - **Israel provides Jordan and Egypt with intelligence assistance in their fight against Islamic State,** a senior Israeli military officer said on Wednesday, describing the U.S.-

backed Arab neighbors as stable despite the insurgent threat. Egypt made peace with Israel in 1979, followed by Jordan in 1994. They are the only Arab countries to have treaties with Israel, a matter unpopular with many Egyptians and Jordanians and which generally keeps Amman and Cairo quiet about the ties. Major-General Yair Golan, deputy commander of the Israeli armed forces, said in a briefing that the countries were working with Israel as they try to beat back Islamic State. "Egypt fights the Islamic State in the Sinai peninsula. Jordan is terrified by the presence of the Islamic State in Jordan's cities and towns. And we try to work with them in order to contribute something to their security," he said.

Israelis accused of spying in Romania ordered to stay in jail
Times of Israel, Raoul Wootliff, 2016 04 20
Jerusalem - **Two Israelis suspected of espionage in Romania were ordered by a local court to remain in police custody for another 30 days**, Romanian media reported Monday. David Geclowitz and Ron Weiner, employees of the Israeli private intelligence firm Black Cube, were arrested on April 3 on suspicion that they had tried to intimidate the head of the national anti-corruption agency and had hacked her emails. The Bucharest Magistrate's Court accepted the request of the Romanian serious crime investigation unit and ruled that the two remain in police custody for the next month. There was no immediate response from Black Cube following the Monday decision.

The bomber who slipped through the net
Jerusalem Post, Yaakov Lappin, 2016 04 20
Jerusalem - The **terrorist bomb that tore through a Jerusalem bus on Monday is just the type of attack that security forces, led by the Shin Bet (Israel Security Agency) domestic intelligence agency,** have been working intensively for months to try and prevent. Security forces are looking the possibility that the bomber is among one of the seriously wounded in hospital. Beyond that fact, they are maintaining a fog of secrecy around their investigation into the bombing, and key questions remain unanswered, at least in the public domain, at this stage. These include the question of whether the attacker acted alone,was part of small, amateur cell, or whether an organized terrorism cell, sent and funded by one of the established Palestinian armed factions, is behind the atrocity. Additionally, it remains unclear whether the attack occurred when it did because the bomb went off prematurely, or whether a suicide bomber detonated an explosive device.

Intelligence minister: Nuclear agreement removes sanctions' pressure
Islamic Republic News Agency, 2016 04 20
Tehran - **Intelligence Minister Seyyed Mahmoud Alavi underlined that the nuclear agreement signed between Iran and the six world powers lifted the sanctions' pressures**. 'Nuclear agreement with Group 5+1 countries removed the pressures of the sanctions imposed on the country,' Alavi said, addressing the people of Damghan on Tuesday. He reiterated that the positive effects of lifting the sanctions influences the entire country and all individuals will benefit from such effects. 'The Islamic Republic of Iran should reach a level of self-sufficiency and self-reliance in order to prevent the oppressive sanctions to influence Iran's economy,' Alavi added.

S. Korea prepares to protect athletes' health and safety at Rio Olympics
Yonhap News Agency, 2016 04 25

Seoul— South Korea will be ready to protect its athletes' health and safety at the Rio de Janeiro Summer Olympics as various organizations have teamed up to provide a secure sporting environment. South Korea will first concentrate on defending its athletes from the Zika virus, which the World Health Organization has declared an international public health emergency. Brazil is believed to be the country hit hardest by Zika. South Korea will also put its best effort forward to protect players from crime and terror attacks. **The Brazilian intelligence agency** recently revealed that terror threats for the Rio Olympics are rising, led by the Islamic State (ISIS) and other extremist groups. The government said that its joint inspection team last week already checked and discussed with Brazilian authorities the security plans for the Summer Games. The South Korean inspection team included officials from the **Terror Information Integration Center, which is a counterterrorism unit under the National Intelligence Service.**

Call for better intelligence on kidnap groups
The Star Online, Ruben Sario and Stephanie Lee, 2016 04 21
Kota Kinabalu - **Better intelligence is key to stopping southern Philippines-based, kidnap-for-ransom groups striking in Sabah's east coast waters**, said a state assemblyman. Datuk Shamsuddin Yahya (BN-Sekong) said Malaysian security forces should work with their Philippine counterparts in **building up their intelligence capabilities against these criminal groups.** "We cannot merely rely on improved assets or increased manpower," he said when debating Yang di-Pertua Negeri Tun Juhar Mahiruddin's policy speech. He said there was a need to work with the Philippines and Indonesia regarding patrols and other security arrangements in the sea off Sabah's east coast. "We already have similar security arrangements in the Strait of Malacca with Singapore and Indo-nesia," said Shamsuddin. Noting that many Sabahans had grown impatient over the persistent kidnapping cases in the east coast, he said the full brunt of the law should be enforced.

Attack on Intelligence Unit Carried Out By Haqqani
TOLO News, Sayed Sharif Amiri, 2016 04 21
Kabul - **Tuesday's deadly attack on the intelligence unit tasked with the protection of VIPs was reportedly carried out by the Haqqani Network**, said officials Wednesday. Kabul NDS Chief Mohammad Omar Azizi said at a press conference in Kabul that the attack was organized outside the country. In Tuesday's attack 64 people were killed and 347 were wounded. The question being asked however is how did a truck, loaded with explosives, reach the intelligence unit, which is part of the greater ring of steel within Kabul city? In a bid to test the level of security within the city, Sharif Amiri, TOLOnews' correspondent, on Wednesday traveled through the heart of the capital in the same type of truck used in Tuesday's bombing. Amiri traveled a distance of seven kilometers, from Pul-e-Charkhi in east Kabul and went through five check posts.

S. Korea considers biometric sensors for gov't offices
Yonhap News Agency, 2016 04 21
Seoul-- The **South Korean government is reviewing an option to beef up security at public office buildings by adopting a biometrics recognition system**, the interior minister said Thursday.The policymaker's announcement comes as Seoul took fire for lax security after a man broke into a government building earlier this month. The 26-year-old, identified only by his surname Song, was formally arrested over unauthorized entry into the government complex in central Seoul and manipulating the result of the civil service examination he took. Song illegally entered the building a total of five times after he stole an identification card of a public official working in the building in February, according to the **National Police Agency (NPA).**

Taliban Strikes a Deadly Attack in Kabul on Elite Agency
Asharq Al-Awsat, Staff Report, 2016 04 20
Kabul - More than 320 people injured and more than 24 killed in one of the most devastating attacks in Kabul since years as the aftermath of **an attack by Taliban militants on a government security agency with a suicide bomb and gunfire Tuesday**, Afghan officials said. Noting that this attack has ended all efforts and disappointed the several past weeks of peace and relative calm in the capital of Afghanistan, **the main target was an elite Afghan intelligence unit tasked with protecting senior government politicians** - a direct strike against the Western-aided government only a week after the Taliban announced its spring offensive. This attack is remarked as one of the biggest attacks to rock the Afghan capital in years. It took place by the time a suicide bomber blew himself up at the gates of the agency, touching off a three-hour gun battle less than a mile away from the presidential palace and the Ministry of Defense in a densely-populated part of the city.

Japan, Canada agree to cooperate on counterterrorism measures (Canada)
Kyodo News, 2016 04 20
Tokyo - **Japan and Canada agreed Tuesday to strengthen cooperation in counterterrorism at a meeting of their vice foreign and defense ministers in Tokyo**, the Japanese Foreign Ministry said. Japan, Canada and the other Group of Seven countries of Britain, France, Germany, Italy and the United States -- at a summit in May in central Japan -- plan to adopt an action plan on countering terrorism in the wake of the attacks by Islamic State militants in Brussels and Paris. They also reaffirmed that nations must act in accordance with international law amid concerns raised by China's construction and potential use for military purposes of facilities in contested waters of the South China Sea, the ministry said. That issue is also expected to be discussed at the G-7 summit in May. Japan was represented by Deputy Foreign Minister Shinsuke Sugiyama and Vice Minister of Defense for International Affairs Toru Mimura in the so-called 2-plus-2 security talks, the third of their kind. Canada was represented by Daniel Jean, deputy minister of foreign affairs, and **John Forster**, deputy minister of national defense.

Arrested RAW agents reveal communication codes
Pakistan Observer, 2016 04 20
Islamabad— Two **Research and Analysis Wing's (RAW) agents copped by Counter-Terrorism Department have made key revelations during interrogation including coded sentences that they used to communicate.** The two agents belong to a group that comprises of ten members. The two arrested agents named Saddam Hussain and Bachal Solangi revealed that nine different Indian telephone numbers were used to contact them. Indian officer named 'Karan Singh' provided the agents with mobile phones that were equipped with advanced softwares. Nabbed agents revealed that they used different coded sentences to communicate with one another.

S. Korean pastor convicted of breaching security law
Yonhap News Agency, Staff reporter, 2016 04 20
Seoul - The **nation's top court has sentenced a 54-year-old pastor to six months in prison for praising North Korea in violation of South Korea's national security law**, court records showed Wednesday. Upholding a lower court's decision, the **Supreme Court convicted Park Kwang-hyuk of supporting the authoritarian regime on the website of a pro-North Korean online community from 2010**. The top court agreed with the lower court's judgment that Park's posts on the website pose a clear threat to national security as they can be distributed to many people. Still, the jail term was suspended for two years. The Ulsan District Court said there is a lack of evidence to say Park tried to preach his thoughts at the church. It also took into

consideration that he had no other criminal records. South Koreans are prohibited from supporting or praising the North in any way under the National Security Law. They are also banned from joining a pro-Pyongyang organization or having unauthorized contact with North Korea.

Failure to Share Data Hampers War on Boko Haram in Africa
The New York Times, Eric P. Schmitt & Dionne Searcey, 2016 04 24
Dakar, Senegal - The **military campaign by Nigeria and neighboring nations to combat the West African militant group Boko Haram has been hampered by a failure among those countries to share crucial intelligence** — sometimes even within their own security services, American and other Western officials say.Western partners have balked as well. **The Pentagon and American intelligence services have struggled at times to provide information quickly about Boko Haram militants to the African countries — Cameroon, Chad, Niger and Nigeria** — without violating restrictions on what can be shared from spy satellite imagery or electronic eavesdropping within rules for not disclosing sources and methods.Until recently, Western officials and analysts said, Britain and the United States provided only sanitized intelligence reports to the Nigerian military. The countries feared that more detailed information might be misused by an army that human rights groups say has committed abuses against civilians as it battled Boko Haram, which has pledged loyalty to the Islamic State.And a new intelligence "fusion center," created in Chad as part of a multinational task force, has only recently overcome budget and staffing shortfalls, as well as lingering mistrust among the participating countries, to help coordinate operations."

Délivrance du passeport biométrique (Canada)
L'Essor (Mali), 2016 04 22
Bamako--**Face aux impératifs de sécurité liés au terrorisme, nombre de Maliens ont adopté - à juste titre - de nouveaux comportements**. Le nouveau contexte a également incité les hautes autorités du pays à prendre une batterie d'initiatives et de mesures parmi lesquelles **l'introduction de la carte NINA** et, aussi et surtout, le lancement le 4 avril dernier du passeport biométrique. Si l'opération se déroule bien pour les Maliens de l'intérieur, nos compatriotes de la diaspora éprouvent des difficultés à se procurer le document. En effet à la date du 20 avril 2016, 8596 demandes de passeports étaient en souffrance dans nos représentations diplomatiques. Ce chiffre s'élevait à 7000, il y a une dizaine de jours. Selon le ministère des Maliens de l'extérieur, la principale raison de ce retard réside dans l'absence de moyens d'enregistrement dans la plupart de nos ambassades et consulats. Seuls neuf de nos représentations à l'étranger en disposent : France, Côte d'Ivoire, Gabon, Congo Brazzaville, **Canada**, New York, Washington, Djeddah et Riyad.

Sudan appoints new ambassador to European Union
Sudan Tribune, 2016 04 21
Khartoum— The foreign ministry in Khartoum this week announced that **Motrif Siddiq has been appointed as Ambassador Extraordinary and Plenipotentiary of Sudan to the European Union** (EU). His appointment comes as Sudan and EU's relations have been witnessing remarkable improvement recently. Siddiq was a member of the Sudanese intelligence community before to join the diplomatic corps. He **served as the deputy director**

of the External Intelligence Agency till 1995 when Sudan was accused of attempting to kill the Egyptian president Hussani Mubarak. He also served as deputy minister of the humanitarian and the foreign affairs ministries when he left the external intelligence agency.

Experts accuse Mexico of 'torture' in investigation into missing 43
Buenos Aires Herald, 2016 04 25
Mexico City-- At an emotional press conference that drew tears from families of the victims and the investigators themselves, a panel of international experts yesterday accused Mexico's government of "torture" and of undermining their probe into the fate of 43 trainee teachers massacred in 2014 — the most notorious human rights case in Mexico in recent years. The independent panel, commissioned by the Inter-American Commission on Human Rights (IACHR), said the government's stonewalling had allowed "impunity" and repeatedly stopped them from finding out the truth. The panel said they had discovered "strong evidence" that suspects had been tortured. While the experts' probe showed that the municipal police were the main culprits of the detention and disappearance of the students, they said the federal police should also be investigated. They also said both the Army and the **intelligence agency known as CISEN had failed to hand over reports that could help the case.**

Spy agency cagey on privacy breaches
Toronto Star, Alex Boutilier, 2016 05 03
Ottawa - **The Communications Security Establishment is refusing to release the number of privacy breaches the agency has logged since 2007.** Documents obtained by the Star state the **intelligence and cyber defence agency has maintained a central database for certain privacy violations since 2007**. These breaches are categorized as minor "procedural errors" or more serious "privacy incidents," and reviewed by the CSE Commissioner's office every year. "In these files, CSE records any incidents it identifies that put at risk the privacy of a Canadian in a manner that runs counter to (or is not provided in) its operational policies," says a September 2014 letter from former CSE **chief John Forster** to a senior Treasury Board official. The Star requested just the number of breaches - no details about what actually transpired or the Canadian personal information involved - but was told the agency could not comply due to "operational security concerns." "Releasing the number of (breaches) would provide insight into CSE's capacity to conduct operations, the extent of its capabilities, the degree to which partner organizations benefit from sharing and the reach of the programs," wrote spokesperson **Ryan Foreman** in an email last week.

What Happens When Canadian Cops Find a Software Security Flaw?
Motherboard, Matthew Braga, 2016 05 03
When l**aw enforcement and intelligence agencies in Canada discover flaws in computer software--say, a bug that could help hackers steal messages from a smartphone, or spy on unsuspecting victims via internet**- connected webcams--do they disclose those holes to the software's creator so they can be plugged? Or do they keep such flaws secret for their own use in future investigations, with the hope that no one else will find and use them maliciously first? These types of weak spots, if left unpatched, can pose a very real security risk to users. But unlike counterparts in the US, the Canadian government has never gone on the record about how it handles the disclosure of newly discovered software bugs. Often referred to as zero day vulnerabilities, such flaws are valuable to spies and police because their existence is not widely known, not even to the companies themselves. Thus, they can be used to gain access to computer networks, smartphones, or other electronic devices again and again, until the vulnerability is discovered, or disclosed and patched. . "**We generally do not comment on specific investigative methods, tools and techniques outside of court**," wrote **Sgt. Julie Gagnon. Ryan Foreman, spokesperson for the Canadian government's cyberspy agency Communications Security Establishment (CSE),** wrote in an email that CSE shares "cyber threat information" with government stakeholders that "may originate from CSE's own analysis," but did not not specifically address software exploits, nor whether a policy comparable to the VEP exists.

No toilets, no light - DND workers to get headlamps
Ottawa Citizen, David Pugliese, 2016 05 03
Ottawa - **Federal public servants and military staff will be issued headlamps and bottled water in preparation for working in the dark at National Defence headquarters** in **Ottawa for three days this month**. Fire alarms and the sprinkler system will be turned off, but the workers, who will be on the 11th floor, have been told the likelihood of a blaze breaking out in the headquarters is remote, according to documents obtained by the Citizen. They can use their

BlackBerries to contact emergency crews. The ventilation system will also be shut down and the elevators won't be working. **The arrangements will affect 15 military and civilian staffworking their regular shifts at a communications centre at National Defence headquarters over the May long weekend**. The building will be without electricity as part of regular maintenance. Generators will be used to temporarily power the communications system, which is used to keep in touch with overseas military missions.

Ex-CSIS source guilty of fraud
Ottawa Citizen, James Bagnall, 2016 05 03
Ottawa - **Ontario Superior Court Judge Timothy Ray could not have been clearer Monday in delivering his verdict to former construction boss and CSIS informant Roland Eid**. "ICI (Construction) was a sham from early 2007 until its demise," Ray said in delivering a summary of his 89-page decision. ICI was the construction company launched by Eid in 2006. It went bankrupt early in 2008 after Eid transferred $1.7 million from its coffers to a personal account in Beirut. The money was never returned. The judge found Eid guilty of 10 counts of breaching the Criminal Code and the Bankruptcy and Insolvency Act. He found Eid had defrauded ICI creditors, causing them to suffer collective losses of $3.8 million. The judge also found that Eid had "perpetrated a fraud by taking $1.7 million which were trust funds belonging to the subcontractors and suppliers out of Canada and beyond their reach." Eid's defence contended the money was to have been used to finance a new construction project in Lebanon and Syria. He claimed the Syrian government would match the money deposited in his Beirut account - money that Eid said he would return to ICI in Ottawa.. **The judge made no note of what impact, if any, Eid's history as an informant for the Canadian Security and Intelligence Service had on his thinking.** Neither defence counsel Richard Addelman nor Crown lawyer Moray Welch brought it to Ray's attention. Welch said he had "no knowledge" that Eid was engaged in CSIS activities. Indeed, Eid did not appear as a witness during the trial, though he did launch a civil suit last year against CSIS and the RCMP, in which he alleged these organizations triggered the bankruptcy of ICI as retribution for Eid's refusal to take on a "dangerous" CSIS assignment in Lebanon.

Canada's spies in spat over privacy breach reporting
Toronto Star, Alex Boutilier, 2016 05 01
Ottawa - **Canada's electronic spies are concerned reporting too many details about serious privacy breaches could reveal too much about the agency's highly secretive surveillance and cyber-defence activities, the Star has learned**. The **Communications Security Establishment has been in a yearlong spat with privacy commissioner Daniel Therrien's office over reporting "material" privacy breaches**. The spy agency's reluctance comes despite government-wide regulations requiring all serious privacy breaches - - those that potentially could cause serious harm to an individual, or involving a large number of Canadians - - to be disclosed to the independent watchdog. "As with all (government) departments and agencies, CSE is required to report material privacy breaches to the Office of the Privacy Commissioner," CSE spokesman **Ryan Foreman** wrote in a statement. "However, we do continue to discuss the most effective manner to report material privacy breaches when they occur in the operational space, in a matter that safeguards the sensitive nature of information related to CSE's mandated activities."

Vice Media appeals court order to give records of terrorist interviews to RCMP
Canadian Press, Colin Perkel, 2016 04 30
Toronto - **A Canadian news outlet is asking an appeal court to throw out a ruling forcing one of its journalists to give the RCMP records of interviews he did with an accused terrorist.** Documents filed this week show Vice Media also wants the Ontario Court of Appeal to

allow publication of the information police relied on to get their order for the records. "This appeal raises issues concerning one of the hallmarks of a democratic society -- a free and independent press," the appeal application states. "Journalists' ability to pursue the truth without fear of reprisal or interference is essential to every facet of Canadian life." Vice argues that the RCMP demand would have a "detrimental chilling effect" on journalism in Canada if it is allowed to stand. Last month, Superior Court **Justice Ian MacDonnell ordered Vice and reporter Ben Makuch to turn over background materials related to stories about Farah Shirdon**. Three Vice stories in 2014 were largely based on conversations Makuch had with Shirdon via an online instant messaging app called Kik Messenger. RCMP want access to Makuch's screen captures of those chats. Among other things, Makuch cited Shirdon, of Calgary, as saying from Iraq: "Canadians at home shall face the brunt of the retaliation. If you are in this crusader alliance against Islam and Muslims, you shall see your streets filled with blood."

B.C. woman seeks millions for being wrongly branded as terrorist
Canadian Press, Geordon Omand, 2016 04 29
Vancouver - **A British Columbia woman's life was "destroyed" after the federal government wrongfully branded her a terrorist** and ruined her multimillion-dollar business in its zeal to appear tough on crime, alleges a lawsuit filed in Washington state court. Perienne de Jaray is suing the Canadian government for at least $21 million for what the court documents say was "extreme and outrageous conduct" that saw her lose her home, her health and her business after enduring years of baseless and aggressive investigations on both sides of the border. "The only thing worse in this day and age than being labelled a terrorist is being wrongly labelled a terrorist," reads the complaint for damages, filed April 19 in Seattle. "The label breeds fear and hatred across the world." **Also named in the civil action filed in U.S. District Court in Seattle are the Canadian Border Services Agency, the Department of Foreign Affairs, Global Affairs Canada and several civil servants.**

Trudeau fills senior job at Indigenous and Northern Affairs
Ottawa Citizen, Kathryn May, 2016 04 28
Ottawa - Prime Minister Justin Trudeau promoted a Finance Canada executive to fill a key top job at Indigneous and Northern Affairs, one of the government's toughest portfolios. Diane Lafleur, assistant deputy minister of Finance's federal and provincial relations and social policy branch moves into the associate deputy minister post effective May 9. **Trudeau still has to name a national security adviser to replace Richard Fadden**. David McGovern, the deputy national security adviser, is acting national security advisor and is among a list of contenders to replace Fadden. There has been much speculation over who has the leadership and security experience to fill the job. Few can match Fadden, who held deputy level jobs in five departments and agencies including many of the key security and intelligence portfolios, as well as an early version of the security advisor job under the Jean Chrétien government. Possible dark-horse candidates **include Greta Bossenmaier, the current chief at Communications Security Establishment.**; some argue she needs more experience. **Another is John Ossowski, deputy commissioner at Canada Revenue Agency who worked at Public Safety, Treasury Board's international affairs, security and justice sector and CSE.**

ISIL uses canadians: ex-CSIS official; Propaganda wing
National Post, Stewart Bell, 2016 04 28
Ottawa - **The propaganda wing of ISIL**, known for its gory videos and exploitation of social media, **has recruited several Canadians**, a former senior counter-terrorism official told a security conference Wednesday. **Andy Ellis, who recently retired from the Canadian Security Intelligence Service, where he was assistant director of operations, said not all the roughly 100 Canadians who have converged in the region are active in combat**

operations. "Many of the Canadians, for example, found their way into the propaganda wing of Daesh," the 30-year-veteran of CSIS said, using another name from the Islamic State of Iraq and the Levant, in a speech at the Royal Canadian Military Institute in Toronto.

Agents unilingues anglophones au parlement La GRC a enfreint la loi fédérale
La Presse canadienne, Journaliste maison, 2016 04 28
Ottawa **- La Gendarmerie royale du Canada (GRC) a enfreint la Loi sur les langues officielles, puisque des agents n'ont pas été en mesure d'offrir des services en français au public sur la colline du Parlement.** Le commissaire aux langues officielles, Graham Fraser, s'est penché sur le cas de plaignants - dont l'ancien député Yvon Godin - qui disaient s'être adressés en français à plusieurs reprises à des policiers de la GRC patrouillant sur la colline. Les agents étaient incapables de leur fournir des services en français. Dans son rapport préliminaire d'enquête, le commissaire donne raison aux plaignants. Il note que des agents « peuvent avoir à dicter des consignes de sécurité, telles que des ordres d'évacuation ». « Dans de telles situations, il est essentiel que les membres des deux communautés de langue officielle soient en mesure de bien comprendre les consignes dictées », signale le commissaire.

Pentagon on alert after names of American generals appear on ISIS 'hit-list'
Jerusalem Post, Yasser Okbi, Maariv Hashavua, 2016 05 03
Jerusalem - **The Pentagon is on alert following the publication of the names of several high ranking American military officials on the latest Islamic State "hit list."** Hackers affiliated with **the Islamic State Hacking Division posted details of more than 70 American military personnel including their full names, addresses, phone numbers, emails and photographs on the Internet**, claiming that the officials named were directly involved in attacks on Syria and Iraq. Topping the list of names is Lieutenant Sean McFarland, the commander of the coalition forces in Syria. "As you continue your aggression towards the Islamic State and your bombing campaign against Muslims, know that we are in your e-mails and computer systems, watching and recording your every move," read the warning to the US military officials.

CIA to boost benefits for workers' survivors
Washington Post, Catharine Ho, 2016 05 03
Washington - **The CIA will provide $400,000 in new survivor benefits to family members of federal employees and contractors killed by acts of terrorism while working overseas.** The change, confirmed by the agency, comes three years after the family of **Glen Doherty - one of two CIA contractors killed during the 2012 attacks in Benghazi, Libya - began lobbying the federal government for survivor benefits.** Before the change, surviving family members received benefits from the employee or contractor's life insurance and some additional benefits from the CIA, depending on each individual's situation. Now, the CIA will provide a uniform $400,000 to families. On top of that, the agency will provide one year's salary and financial assistance that can be put toward educational expenses for surviving children. The benefits will go to family members of a very specific subset of federal employees and contractors - those killed overseas as a result of acts of terrorism dating to April 18, 1983 - the date of the bombing of the U.S. Embassy in Beirut.

Feds have found 'unbelievable' amounts of child porn on National Security computers. Is this the answer?
Nextgov.com (US), Staff report, 2016 05 03
Washington - **A top National Security Agency official wants to keep tabs on national security personnel off-the-clock, in part by tracking their online habits at home**. The aim is to spot behavior that might not be in America's best interests. Historically, some illicit activity, like downloading child pornography, has occurred on government computers and been prosecuted. But today, the digital lives of employees cleared to access classified information extend beyond the office. About 80 percent of the National Security Agency workforce has retired since Sept. 11, 2001, says **Kemp Ensor,** NSA director of security. **When the millennial and Gen Y staff that now populate the spy agency get home, they go online. "That is where were we need to be, that's where we need to mine," Ensor said.**

CIA Chief on ISIS: Not Just an Organization, 'It's a Phenomenon'
Meet The Press (NBC), Sally Bronston, 2016 05 01
Washington - On the fifth anniversary of the raid that killed Osama bin Laden, **Director of the Central Intelligence Agency John Brennan** spoke exclusively with NBC's Chuck Todd on "Meet the Press". In a wide- ranging interview, **Brennan soberly discussed the threat of ISIS, dismissed allegations of Saudi Arabia's role in 9/11, and reacted to Donald Trump and the current political climate in the country. On the threat of ISIS, Brennan assured viewers,** "We will destroy [ISIS], I have no doubt in my mind. And we have to remove the leadership that directs that organization to carry out these horrific attacks." ISIS' number one is Abu Bakr al-Baghdadi, and if he were to be killed, Brennan believes it would have an affect on the terrorist group. "If we got Baghdadi, I think it would have a great impact on the organization, and it will be felt by them," he said. Brennan warned fighting ISIS has its unique challenges, calling them not just an "organization," but "a phenomenon." "We know that ISIS is trying to carry out attacks in Europe and in other parts of the globe. Also, we are working very, very closely with our European partners," he said. ABrennan was careful not to oversell America's ability to affect change in the Middle East. "The United States has only limited influence to shape events in the Middle East. And a lot of individuals think that the United States can wave a magic wand, and we can't," the CIA Director said.

CIA director: '28 pages' contain inaccurate information
The Hill, Jessie Hellmann, 2016 05 01
Washington **- CIA Director John Brennan said Sunday that releasing the 28 classified pages from the 9/11 Commission report would be a mistake because they contain inaccurate, un-vetted information that could be used to tie Saudi Arabia to the Sept. 11, 2001, terror attacks**. "This chapter was kept out because of concerns about sensitive methods, investigative actions, and the investigation of 9/11 was still underway in 2002," Brennan said on NBC's "Meet the Press." He said information in the 28 pages hasn't been vetted or corroborated, adding that releasing the information would give ammunition to those who want to tie the terror attacks to Saudi Arabia. "I think there's a combination of things that are accurate and inaccurate [in the report]," Brennan said. "I think the 9/11 Commission took that joint inquiry and those 28 pages or so and followed through on the investigation and then came out with a very clear judgment that there was no evidence that ... Saudi government as an institution or Saudi officials or individuals had provided financial support to al Qaeda."

Former NSA head: US safer from terrorism than Europe
The Hill, Harper Neidig, 2016 05 01
Washington **- Former National Security Agency (NSA) Director Gen. Michael Hayden said**

on Sunday he believes the U.S. is safer from terrorism than European countries. During a radio interview with John Catsimatidis, Hayden was asked if European nations are becoming larger targets than the U.S. "No question about it," Hayden responded. "Now, John, that doesn't mean there's no threat here. There are a variety of things that actually make us more safe." The first, Hayden said, is simply that Europe is closer to where groups like the Islamic State in Iraq and Syria operate. "Second is we're actually pretty good at this, John," he continued. "Our security services have a pretty good record compared to the European services, or at least to many of the European services."

How the CIA failed a spy who went missing in Iran
Washington Post, Valerie Plame, 2016 05 01
Book Review: In a world of seemingly random massacres in Paris, Brussels and San Bernardino, Calif.; Islamic State beheadings; and an erratic potentate in a nuclear-armed North Korea, we like to think that the **CIA, the FBI and the other 14 agencies charged with gathering intelligence are doing their damnedest to keep us safe**. And, for the most part, they are. But embedded within the vast U.S. intelligence complex is a bloated bureaucracy that creates turf battles and inefficiencies that can lead to dire and even deadly consequences. The tale of Robert Levinson - a retired Drug Enforcement Administration and FBI agent turned CIA contractor who disappeared in 2007 from a resort island in the Persian Gulf - underscores the dangers of the multi-headed bureaucratic monster called the CIA. In January of this year, after the United States and Iran reached a deal to curb the Islamic republic's nuclear program, the two countries swapped prisoners. Levinson was not part of the agreement. Proof that he was alive has come only twice - in a 2010 video, during which he pleaded for help from his government, and in 2011 photos of Levinson wearing an orange prison jumpsuit and looking ill and disheveled. **Barry Meier's new book, "Missing Man," catalogues how Iranian and U.S. officials knew far more about Levinson's disappearance than previously acknowledged**. Through the contacts and machinations of Doug Coe, head of a powerful and secretive Christian organization called the Fellowship, the U.S. government learned from the Iranian ambassador to France in late 2011 that Iran was holding Levinson.

How to Beat ISIS: Blow Up the Money
NBC News, Robert Windem & William Arkin, 2016 05 01
Washington - **The U.S. has quietly turned to a new strategy in fighting ISIS -- follow the money, then blow it up,** U.S. officials tell NBC News. At least four times in the past four months, U.S. military jets have targeted [major] ISIS financial centers, destroying them in strikes that have turned millions of U.S. dollars into confetti. The war is not just about tracing the movement of money but the movement of individuals linked to the cash. It's part of what CIA Director John Brennan calls a broader cyber effort against ISIS. "They are murderers and we need to be able to change this narrative -- including in the cyber environment, the digital domain, in social media," said Brennan. "It is a question of what type of activities might take place in that cyber environment that we would be able to carry out destructive actions against." Financial transactions, one senior intelligence official tells NBC News, have become one of the most lucrative forms of intelligence on personal relations, foreign fighter movements, and sources of supply. The intelligence community tracks ISIS financial transactions through data collection programs with such secret code names as **"Kaching" (CIA), "TRACKFIN" (NSA) and FINO (the National Clandestine Service). Newly created electronic portals for the processing of what is now called financial intelligence (or FININT) -- Swordfish, QLIX/HYDRA and Sentry,** among others -- fuse together conventional banking, transaction and intercepted data.

U.S. Steel Accuses China of Hacking
Wall Street Journal, John W. Miller, 2016 04 29
Pittsburgh - **U.S. Steel Corp. is alleging that Chinese government hackers stole proprietary methods for making lightweight steel on behalf of Chinese steel producers seeking to supply a bigger share of the U.S. auto- making market**. Pittsburgh-based U.S. Steel, in a complaint filed on Tuesday with the International Trade Commission, said a computer belonging to a Pittsburgh researcher was hacked in 2011, and that plans for developing new steel technology were stolen. The ITC, an independent agency that reviews and enforces U.S. trade policy, has within 30 calendar days to decide whether to launch an investigation. The agency typically investigates complaints. U.S. Steel says it expects any ITC probe resulting from its complaint "to reveal that the Chinese government disseminated U.S. Steel's trade secrets to" Chinese steelmakers, "enabling them to manufacture [lightweight steels] that [compete] with U.S. Steel's products." In a statement Wednesday, China's Commerce Ministry urged U.S. authorities to reject U.S. Steel's trade complaint, and said that allegations of intellectual property infringement "are completelywithout factual basis." The Commerce Ministry on Thursday didn't respond to a request for comment on the hacking allegations by U.S. Steel.

U.S. high court approves rule change to expand FBI hacking power
Reuters, Staff report, 2016 04 29
Washington - The Supreme Court on Thursday approved a rule change that would let U.S. judges issue **search warrants for access to computers located in any jurisdiction despite opposition from civil liberties groups who say it will greatly expand the FBI's hacking authority**. U.S. Chief Justice John Roberts transmitted the rules to Congress, which will have until Dec. 1 to reject or modify the changes to the federal rules of criminal procedure. If Congress does not act, the rules would take effect automatically. Magistrate judges normally can order searches only within the jurisdiction of their court, which is typically limited to a few counties. The U.S. Justice Department, which has pushed for the rule change since 2013, has described it as a minor modification needed to modernize the criminal code for the digital age, and has said it would not permit searches or seizures that are not already legal. Google, owned by Alphabet Inc., and civil liberties groups such as the American Civil Liberties Union and Access Now contend the change would vastly expand the Federal Bureau of Investigation's ability to conduct mass hacks on computer networks.

FBI paid under $1 million to unlock San Bernardino iPhone: sources
Reuters, Mark Hosenball, 2016 04 29
Washington - **The FBI paid under $1 million for the technique used to unlock the iPhone used by one of the San Bernardino shooters - a figure smaller than the $1.3 million the agency's chief initially indicated the hack cost, several U.S. government sources said on Thursday**. The Federal Bureau of Investigation will be able to use the technique to unlock other iPhone 5C models running iOS 9 - the specifications of the shooter's phone - without additional payment to the contractor who provided it, these people added. FBI Director James Comey last week said the agency paid more to get into the iPhone than he will make in the remaining seven years and four months he has in his job, suggesting the hack cost over $1.3 billion, based on his annual salary. The identity of the contractor is so closely-held inside the FBI that not even Comey knows who it is, one of the sources said.

Fears of risk to key phone database
Washington Post, Ellen Nakashima, 2016 04 29
Washington - **Federal officials fear that national security may have been jeopardized when the company building a sensitive phone-number database violated a federal requirement that only U.S. citizens work on the project**. The database is significant because it tracks

nearly every phone number in North America, making it a key tool for law enforcement agencies seeking to monitor criminal or espionage targets. Now Telcordia, a Swedish- owned firm, is being compelled to rewrite the database computer code - a massive undertaking - **to assuage concerns from officials at the FBI and Federal Communications Commission that foreign citizens had access to the project**. These officials fear that if other countries gain access to the code, they could reap a counterintelligence bonanza, learning the targets of U.S. law enforcement and espionage investigations. The security rewrite began in March after the agencies learned that a **Chinese citizen** with a U.S. work permit had helped write the system code, said individuals familiar with the matter who spoke on the condition of anonymity to discuss a sensitive matter. made public this week that he was fired in retaliation for blowing the whistle on a foreign worker.

Letter details plan for secretive anti-radicalization committees
The Intercept, Cora Currier, Murtaza Hussain, 2016 04 28
Washington - **Of the plans put forward by the federal government to identify and stop budding terrorists, among the least understood are the FBI's "Shared Responsibility Committees."** The idea of the committees is to enlist counselors, social workers, religious figures, and other community members to intervene with people the **FBI thinks are in danger of radicalizing -- the sort of alternative to prosecution and jail time many experts have been clamoring for**. But civil liberties groups worry the committees could become just a ruse to expand the FBI's network of informants, and the government has refused to provide details about the program. The Intercept has obtained a letter addressed to potential committee members from the FBI, outlining how the process would work. While the letter claims that committees will not be used "as a means to gather intelligence," it also makes clear that information from the committees may be shared widely by the FBI, including with spy agencies and foreign governments, and that committee members can be subpoenaed for documents or called to testify in cases against the people they are trying to help. At the same time, committee members are forbidden even from seeking advice from outside experts without permission from the FBI.

Three TSA managers say 'bullies' punish whistleblowers
Washington Post, Ashley Halsey III, 2016 04 28
Washington - **The Transportation Security Administration on Wednesday was caught in a crossfire by three of its executives who said the agency's managers punish employees when they point out security lapses at the nation's airports**. "These leaders are some of the biggest bullies in government," Jay Brainard, a TSA security director in Kansas, told the House Committee on Oversight and Government Reform. "While the new administrator of TSA has made security a much-needed priority once again, make no mistake about it, we remain an agency in crisis."

T.S.A. Official Discloses Advice to Target Somalis
New York Times, Ron Nixon, 2016 04 28
Minneapolis - **A Transportation Security Administration manager here said he was instructed by his supervisor to provide the names of Somali-American leaders visiting the agency's local office so they could be screened against national security databases for terrorist ties,** a disclosure that quickly drew **accusations of racial profiling**. In a midyear performance evaluation, **David McMahon**, the supervisor of Andrew Rhoades, an assistant federal security director, wrote that he had advised Mr. Rhoades to check potential visitors to the agency's offices with the field intelligence officer to determine "if we want them in our office space or meet elsewhere." The Office for Civil Rights and Civil Liberties said Tuesday that it had opened an investigation into the allegations.

F.B.I. Opts Not to Share iPhone-Unlocking Method
New York Times, Eric Lichtblau, Katie Benner, 2016 04 28
Washington - **The F.B.I. closed the door Wednesday to the possibility of giving Apple the technical solution that the government bought to unlock the iPhone** used by one of the attackers in the mass shooting in San Bernardino, Calif. The decision leaves Apple in the dark about the technical details of how the F.B.I. -- with help from an unknown outside group that was apparently paid at least $1.3 million -- managed to bypass the company's vaunted encryption. Apple declined to comment on Wednesday. Soon after the government said that a third party had successfully gotten data from the phone, after giving the F.B.I. a demonstration of its method in February, many security professionals were hopeful that the method would be made public. "It's the position of Obama administration that security flaws should be disclosed to the parties that can fix them," said Denelle Dixon-Thayer, chief legal and business officer at Mozilla.

U.S. Kills ISIS Operatives Linked to Europe Attacks
The Daily Beast, Kimberly Dozier, 2016 04 28
Washington **- As the self-proclaimed Islamic State trumpets its global terrorist campaign, U.S. special operations forces have quietly killed more than three dozen key ISIS operatives blamed for plotting deadly attacks in Europe and beyond**. Defense officials tell The Daily Beast that U.S. special operators have killed 40 "external operations leaders, planners, and facilitators" blamed for instigating, plotting, or funding ISIS's attacks from Brussels and Paris to Egypt and Africa. That's less than half the overall number of ISIS targets that special operators have taken off the battlefield, one official explained, including top leaders like purported ISIS second-in-command Haji Imam, killed in March. **The Central Intelligence Agency, the National Security Agency, and other elements of the U.S. intelligence community** are also driving the effort, finding and feeding the intelligence to the coalition strike force.

The CIA Illegally Let the Wrong People Do Intelligence Work, Declassified Report Finds
Vice News, Jason Leopold, 2016 04 27
New York - **The CIA violated federal laws and its own internal regulations by hiring independent contractors for a wide variety of intelligence and national security-related work** that was supposed to be performed by government employees, according to a CIA Office of Inspector General (OIG) audit report obtained by VICE News in response to a Freedom of Information Act lawsuit. The report said the CIA "relies heavily on independent contractors to accomplish important facets of its mission," particularly at the National Clandestine Service, the covert arm of the agency responsible for clandestine operations around the world. The report, dated June 22, 2012 but only declassified last month, raised numerous red flags about the CIA's use of independent contractors throughout all divisions within the agency, and for work performed work in areas that included covert operations and protective security services overseas. By law, that work must be done by CIA employees.

After Missteps, U.S. Tightens Rules for Espionage Cases
New York Times, Matt Apuzzo, 2016 04 27
Washington - The **Justice Department has issued new rules that give prosecutors in Washington greater oversight and control over national security cases** after the collapse of several high-profile prosecutions led to allegations that **Chinese-Americans were being singled out as spies.** The new rules are intended to prevent such missteps, but without undermining a counterespionage mission that is a top priority for the Obama administration. While (the) cases raised the specter of Chinese espionage, none explicitly charged the

scientists as spies. The cases involved routine criminal laws such as wire fraud, so national security prosecutors in Washington did not oversee the cases. In a letter last month to federal prosecutors nationwide, Deputy Attorney General Sally Q. Yates said that would change. All cases affecting national security, even tangentially, now require coordination and oversight in Washington. That had always been the intention of the rule, but Ms. Yates made it explicit. "The term 'national security issue' is meant to be a broad one," she wrote.

After the Snowden NSA leaks, fewer people are searching for info on terror groups online (Canada)
Reuters, Joseph Menn, 2016 04 27
San Francisco - **Internet traffic to Wikipedia pages summarizing knowledge about terror groups and their tools plunged nearly 30 percent after revelations of widespread Web monitoring by the U.S. National Security Agency,** suggesting that concerns about government snooping are hurting the ordinary pursuit of information. A forthcoming paper in the Berkeley Technology Law Journal analyzes the fall in traffic, arguing that it provides the most direct evidence to date of a so-called "chilling effect," or negative impact on legal conduct, from the intelligence practices disclosed by fugitive **former NSA contractor Edward Snowden**. Author Jonathon Penney, a fellow at the University of Toronto's interdisciplinary Citizen Lab, examined monthly views of Wikipedia articles on 48 topics identified by the U.S. Department of Homeland Security as subjects that they track on social media, including Al Qaeda, dirty bombs and jihad.

FBI chief sees better cyber cooperation from China
Agence France-Presse, Staff report, 2016 04 26
Washington - **FBI Director James Comey said Tuesday he has seen some improvement in cooperation from China in fighting cybercrime following last year's bilateral agreement on the issue.** Chinese authorities "seem to have an agreed upon framework for what is nation-state action appropriate, that is intelligence collection, and what is theft," Comey told a cybersecurity event in Washington, when asked about international cooperation on cybercrime. "There are signs of progress in the Chinese helping us impose costs on active engagement and theft. I'm reasonably optimistic (about China), less so with Russia."

FBI says it can't explain how iPhone was hacked
Washington Post, Ellen Nakashima, 2016 04 27
Washington - **The FBI intends to tell the White House this week that its understanding of how a third party hacked the iPhone of a shooter in San Bernardino, Calif., is so limited that there's no point in undertaking a government review of whether the tool should be shared with Apple, officials said**. The decision, said officials familiar with the discussion who spoke on the condition of anonymity, ends several weeks of internal debate by bureau lawyers and technical experts about the FBI's obligation to disclose the method. Last month, the FBI paid more than $1 million for a tool to crack an iPhone used by one of the shooters in California. But the contract did not include rights to the software flaws that went into the tool, officials said. As a result, the bureau has a limited technical understanding of how the method worked, officials said.

Former head of MI5 says French authorities were blamed too quickly for the Paris terror attacks
BT.com (UK), Staff report, 2016 05 03
London - A **former head of MI5 believes French authorities were blamed too quickly for the Paris terror attacks. Baroness Eliza Manningham- Buller** also said the hunt for scapegoats was damaging and that no service is automatically at fault when something like last November's tragedy occurs. However she added that she was not seeking to suspend accountability and that she would have resigned if MI5 was found to have made a serious error under her leadership. Baroness Manningham-Buller told the Radio Times: "The head of a Commonwealth security service once told me he intended to resign if a terrorist act happened under his watch, but it's a mistake to assume that a service is automatically at fault when that happens.

ISIS hackers threaten to leak 'British secret intelligence' obtained from Ministry of Defence
The Mirror UK, Jonathan Sharman, 2016 05 01
London - **Islamic State hackers have threatened to leak "secret intelligence" they claim to have obtained from a mole at the Ministry of Defence, and say they are slowly "infiltrating" the UK and America.** A group calling itself the **Islamic State Hacking Division** made the claim in an anti- drone warfare document that purported to make public the identities, addresses and other details of US Predator and Reaper drone operators. The terrorists used the hit-list document to suborn the murder of drone teams it dubbed "cowards". But the the details of US military personnel appeared to have been scraped from publicly-accessible sources like Facebook, rather than obtained through a hack or leak, the Sunday Times reported. Several British ISIS terrorists, including the murderer Mohammed Emwazi, known as Jihadi John, have been killed in drone strikes.

GCHQ Has Disclosed Over 20 Vulnerabilities This Year, Including Ones in iOS
Motherboard Blog, Joseph Cox, 2016 04 30
Analysis: Earlier this week, **it emerged that a section of Government Communications Headquarters (GCHQ), the UK's signal intelligence agency, had disclosed a serious vulnerability in Firefox to Mozilla.** Now, GCHQ has said it **helped fix nearly two dozen individual vulnerabilities in the past few months, including in highly popular pieces of software like iOS.** "So far in 2016 GCHQ/CESG has disclosed more than 20 vulnerabilities across a number of software products," a GCHQ spokesperson told Motherboard in an email. CESG, or the National Technical Authority for Information Assurance, is the information security wing of GCHQ. Those issues include a kernel vulnerability in OS X El Captain v10.11.4, the latest version, that would allow arbitrary code execution, and two in iOS 9.3, one of which would have done largely the same thing, and the other could have let an application launch a denial of service attack. The spokesperson also pointed to two vulnerabilities in Squid, a caching proxy which can improve web response times. Recently, GCHQ intervened in the rollout of smart gas and electricity metres, which were planned to use a signal encryption key. "We are not always credited by vendors for bugs that we disclose.

British jihadist taunts security services with account of how he and Jihadi John escaped to Qatar National Bank
International Business Times (UK), Jason Murdock, 2016 04 28
London - **A 1.4GB trove of internal documents, files and sensitive financial data**

purporting to be from the Qatar National Bank (QNB) has been leaked online. The massive data dump appears to contain hundreds of thousands of records including customer transaction logs, personal identification numbers and credit card data. Additionally, dozens of separate folders consist of information on everything from Al Jazeera journalists to what appears to be the Al-Thani Qatar Royal Family. However, it is a folder listed as "SPY, Intelligence" that quickly catches the eye. **Upon analysis, it contains a slew of records listed as Ministry of Defence, MI6 (the UK foreign intelligence service) and Qatar's State Security Bureau, also known as "Mukhabarat".** The MI6 file, which sits alongside similar documents reportedly holding information on Polish and French intelligence, opens up an in-depth report on an alleged agent. This includes names of close relations, phone numbers, social media accounts and credit card data. Furthermore, in one instance, a file marked "wife", opens a photo showing a woman and two children.

Syria on UK passports
London Daily Telegraph, Josie Ensor, 2016 04 27
Beirut - **A British jihadist has taunted security services with a detailed account of how he and Isil executioner "Jihadi John" managed to travel through Europe to Syria on UK passports, despite being on terror watchlists**. Mohammed Emwazi, the Londoner filmed beheading Western hostages, and the unnamed friend, managed to leave Britain in early 2013 without attracting the attention of authorities. Writing in Islamic State's monthly Dar al-Islam magazine, the author says they travelled in a freight lorry carrying migrants along a popular people-trafficking route to a Channel port. **After giving UK border control the slip, they continued on to France and then Belgium, where he says they shaved off their beards, bought new clothes and booked flights to Albania using their British passports - confident MI5 had not shared its intelligence with the Belgian authorities.** Terrorism experts speculate that the account could come from Emwazi's associate Ibrahim Magag, a Somalia-born Londoner who went missing in late 2012 when he absconded from a Terrorism Prevention and Investigation Measure (Tpim) notice after ripping off his electronic tag.

Open borders let Isil into Britain, warns US spy chief
London Daily Telegraph, Josie Ensor, Tom Whitehead, 2016 04 27
London - **Open borders across Europe have allowed Isil to plant sleeper cells in the UK, poised to carry out Paris or Brussels-style massacres, America's intelligence chief has warned**. **James Clapper**, the US Director of National Intelligence, warned that the free movement of citizens around the European Union was "in conflict" with the need to protect security. He said there was evidence of fanatics from Islamic State of Iraq and the Levant (Isil) in Britain, Germany and Italy secretly plotting attacks like those witnessed in France and Belgium. He warned that some had taken advantage of the migrant crisis to slip into Europe and called for better intelligence-sharing between EU member states. The comments came a week after The Daily Telegraph launched a campaign to highlight weaknesses in border security with senior policing and counter-terrorism figures calling for a review. The US operates a far more stringent border control policy which sees potential suspects profiled and background checks carried out before they are allowed in. **Mr Clapper's warning echoes concerns voiced by the head of MI5 that Isil is intent on carrying out mass casualty attacks in the UK. Keith Vaz, chairman of the Commons home affairs select committee**.

ASIO has its funding cut
Australian Associated Press, Staff reporter, 2016 05 03
Canberra - **The Turnbull government has cut funding for ASIO by almost $15 million.** Despite being the lead security agency responsible for dealing with Australians who have joined IS, the federal government announced on Tuesday that ASIO's funding would be cut to $518,639 in 2016- 17. (Full report)

Money cards come under terror law scrutiny
Australian Associated Press, Staff Writer, 2016 05 01
Canberra - **The federal government plans to assess the risk of stored-value cards, which are believed to have been used in the Paris terror attacks, as it strengthens Australia's anti-money-laundering and counter- terrorism financing laws**. A review of the nation's AML/CTF laws tabled in parliament on Friday includes 84 recommendations to bolster the regime. One of the recommendations Justice Minister Michael Keenan says the government has identified for action is a risk assessment of the stored-value cards. **The report says anti-money laundering regulator AUSTRAC should assess the risks of these cards, to see whether the AML/CTF regulatory thresholds for these cards - at $1000 or more**, if cash can be withdrawn, or $5000 or more, if cash cannot be withdrawn - should be maintained.

Cyber security check-up
The Age, Georgia Wilkins, 2016 04 28
Canberra - **The federal government will foot the bill for cyber security "health checks" at some of Australia's biggest companies. The top 100 ASX-listed companies will be have the chance to get their voluntary check under the government's new $230 million cyber security package**. The government has declined to say how much it will spend on the scheme but said it hoped to eventually roll out the service to all public and private companies. It would not say whether the checks would be done by a government regulator or private consultants. Industry experts said on Monday that large companies should have to shoulder the burden of data protection themselves. "If the ASX100 are not competent enough to govern their own cyber security issues, those boards are not doing their jobs," said Dr Robert Merkel, a lecturer in software engineering at Monash University. Prime Minister Malcolm Turnbull last week announced the government's cyber security strategy, which will focus on closer collaboration of government and business. It is the result of a year-long review of the industry. The strategy will see the **Australian Cyber Security Centre** moved away from the **Australian Security Intelligence Organisation** in Canberra to allow for greater ties with business.

ASIO thought terror teen Numan Haider was being 'deliberately antagonising'
Nine MSN News Australia, Staff Writer, 2016 04 27
Canberra - **An ASIO director has been forced to justify the agency's failure to prevent a 2014 terror attack in Melbourne that left two police wounded and a teenager with a bullet in his head**. Testifying before an inquest into the stabbing of two Endeavour Hills police officers by radicalised teen Numan Haider, the high-level spook defended ASIO's inaction in the face of what seems to be compelling evidence that a plot was afoot. The inquest heard that Haider had used Google to search for "firecrackers wrapped in steel", "Tony Abbott next visit to Victoria", information about AFL, and the Holsworthy military base before telling a friend he planned to "do it soon". But ASIO failed to act, the Herald Sun reports, with the director, giving evidence under the codename "Natalie Mayfair", telling the hearing that the spy agency did not know what "it" was. Despite admitting security operatives had been warned against approaching the 18-

year-old, Ms Mayfair confirmed ASIO, which had discussed Haider with Victoria Police, had not changed his "threat level"."It seemed like he was being deliberately antagonistic and may have been attention seeking," she said.

Vic teen searched Tony Abbott's plans
Australian Associated Press, Genevieve Gannon, 2016 04 27
Melbourne - **ASIO had fears a radicalised Melbourne teen was considering targeting the then prime minister, Tony Abbott, an AFL game and a military base before he was shot in 2014 while attacking two police**. In the weeks before he was killed, Numan Haider had conducted internet searches of the terms "firecrackers wrapped with metal sheet", "Tony Abbott next visit to Victoria", "Holsworthy military base" and "AFL football", which a senior ASIO officer says was an unusual search for him. Haider had also told an associate he would "do it soon", an inquest into the young man's death heard on Wednesday in Melbourne. The ASIO officer, giving evidence under the pseudonym Natalie Mayfair, said she had shared this information with federal police in a meeting on September 17, 2014. Haider, 18, was shot in the head outside the Endeavour Hills police station after he stabbed a Victoria Police officer and an Australian Federal Police officer attached to the Joint Counter Terror Team on September 23, 2014. ASIO met with police three times in the week before Haider's death.

New Zealand/Nouvelle-Zélande

Trust a vital asset as NZ faces future
New Zealand Herald, Gehan Gunasekara, 2016 05 03
Op-ed:With the recent announcements of manufacturing closures in New Zealand, such as Fisher & Paykel's Auckland plant, it is important to develop new knowledge-based jobs here. Twenty-first century business is increasingly data-driven by analytics and Big Data.. The recent Independent Review of Intelligence and Security by the Hon Sir Michael Cullen and Dame Patsy Reddy has produced remarkably **detailed recommendations for revamped laws surrounding the activities of our spy agencies. If they are implemented in their entirety we will have some of the toughest controls on such agencies in the western world**. If instead the Government cherry-picks aspects of the Cullen-Reddy report then the gaps would quickly be exploited by the agencies concerned and we may as well not have bothered with any reform. To give just one example, one of the currently neglected areas is "incidentally gathered information". **Electronic surveillance tends to "vacuum up" vast amounts of information. Most is undoubtedly discarded by the likes of the GCSB but currently it can be sent to its partners in the Five-Eyes network who can do what they want with it.** The report recommends plugging this gap by requiring the New Zealand agency to decide which part of the data it wants to keep or share and to go through procedures (such as an obtaining an interception warrant). Note: Gehan Gunasekara is an associate professor in commercial law at the University of Auckland Business School and advised the Law Commission on reform of the Privacy Act 1993.

New Zealand government seeking business help in cybercrime fight
Xinhua News Agency, John Macdonald, 2016 04 28
Wellington - **Leading international cyber security specialists will discuss how New Zealand businesses can help fight cybercrime at the first government-backed Cyber Security Summit in Auckland next week,** Communications Minister Amy Adams said

Thursday. "Cyber-attacks can and do damage our economy. Businesses are acutely aware of the 257 million NZ dollars (178.2 million U.S. dollars) lost to cybercrime last year," Adams said in a statement. "The challenge cyber security presents can't be met by the public sector alone. What's clear is that we need a joined up response - - the private and public sectors working together to share information and expertise," she said. "The summit is an opportunity for chairs and chief executives from across New Zealand to continue the conversation around how as a country we tackle the threat of cybercrime, and improve our resilience and security in this increasingly digital age."

China/Chine

Children in Xi's China Urged to 'Spot the Spy'
Wall Street Journal, Te-Ping Chen, 2016 04 30
Beijing - **In Xi Jinping's campaign to galvanize China around threats to national security, the latest focus has turned to spies**. In recent weeks, **the country has dramatically amped up a call for vigilance even from its youngest citizens, with games such as "Spot the Spy" being played in schools**. Around the first-ever **National Security Education Day** in mid-April, volunteers in Beijing handed out thousands of umbrellas imprinted with a hotline to call to report any perceived risks. Posters have gone up in housing complexes and at subway stops with a cartoon story of a foreigner posing as an academic who tricks his Chinese girlfriend into leaking state secrets. The various campaigns warn of other guises as well, including consultants or commercial investigators. Since Mr. Xi assumed power in 2012, the country has sought to beef up domestic security, including passing a counterespionage law and a national-security law last year. The emphasis comes as Mr. Xi moves to shore up the party's hold on power and build social cohesion amid more trying economic times. The government says the national- security law was needed to counter emerging threats, from cybercrime to terror.

China Reins in Foreign Groups Under New Law
New York Times, Edward Wong, 2016 04 29
Beijing - **China took a major step on Thursday in President Xi Jinping's drive to impose greater control and limit Western influences on Chinese society**, as it passed a new law **restricting the work of foreign organizations and their local partners, mainly through police supervision**. More than 7,000 foreign nongovernment groups will be affected, according to state news reports. Foreign groups working across Chinese civil society -- on issues including the environment, philanthropy and cultural exchanges, and possibly even in education and business -- will now have to find an official Chinese sponsor and must register with the police. This also applies to groups from Taiwan, Hong Kong and Macau. Those organizations that do not receive official approval will be forced to stop operating in the country.

Taiwan Readies for Fresh Wave of Espionage by China
Voice of America, Ralph Jennings, 2016 04 28
Taipei - **Taiwan's incoming ruling party is signaling its intention to get tougher on espionage by China as cross-strait relations sour and increased contact between the two sides makes spying easier.** The **Democratic Progressive Party** government of President-elect Tsai Ing-wen intends to raise the military budget and experts said it may add a cyber-

espionage unit to the defense ministry. Parliament, which is controlled by the same party, aims to pass a bill by year's end that would cut pensions for Taiwanese military retirees who spy for China. Analysis said spying cases, which embarrassed Taiwan in November and again this week, stand to increase because China will lack legal channels to understand the island's new government after May 20, when Tsai takes office.

Beware of secret lovers; China warns women of seductive foreign agents
Los Angeles Times, Julie Makinen, 2016 04 28
Beijing - When Yu Hongna, a 24-year-old graduate student in English language and literature, told her mom she was dating a British guy, her mother was wary. "She warned me not to be deceived by a foreigner's honey tongue, and they can be bad guys," Yu said. But it's not just parental approval that Yu has to worry about. **The Chinese government itself is cautioning young women to think twice before taking up with boyfriends from overseas. Handsome gents from abroad, authorities say, are on the prowl for ladies with access to state secrets.** To mark China's first **National Security Education Day** this month, propaganda officials plastered certain neighborhoods of the capital with a poster campaign called "Dangerous Love" warning of devious Don Juans lurking in their midst.

Aviation workers may face security checks
China Daily, Xin Dingding, 2016 04 27
Beijing - **The civil aviation authority is adding measures to a regulation to prevent terrorist attacks on passenger planes and airports,** including for the first time requiring that all industry employees receive security clearance. According to the draft of the revised **Regulation on Safety and Security of Civil Aviation**, all of the country's civil aviation personnel must undergo background security investigations. Additionally, civil aviation and public security administrations, airports and airlines are asked to enhance their anti-terrorism intelligence capabilities. Safety and security plans drafted by foreign airlines that operate in China also must conform with China's laws and regulations, and the plans need to be examined and approved by local civil aviation administrations. Besides anti- terrorism measures, **the draft also bans passengers from attacking or occupying check-in counters, security check lanes and boarding gates in airports, and it stipulates penalties for various offenses**. These parts of the plan are designed to deal with an increasing number of angry passengers who are frustrated by flight delays. The draft is posted on the website of the State Council's Legislative Affairs Office to solicit public opinion before May 20. The current regulation was adopted 20 years ago.

Russia/Russie

'ISIS recruiters' arrested - including sisters who worked at Moscow airport and for Russian intelligence - after raid on apartment uncovers grenades and explosives
Daily Mail (UK), Will Stewart, 2016 04 28
Moscow - **A Russian secret services operation has exposed a gang of alleged jihadist recruiters including a woman who is said to work for an intelligence agency and her sister who is believed to be employed at a Moscow airport**. Four people - the women and two men - were detained on suspicion of involvement in terrorist activities, along with associates, it was reported today. A **Federal Security Service (FSB)** and police operation detained the group plus an alleged male 'leader'. They were identified as recruiters for the Islamic State working in the Russian capital, it was claimed. A source cited by pro-Kremlin

media outlet LifeNews stated: 'According to information from the secret service, all are active ISIS recruiters.' A woman named only as Saida K was reported to be working at Vnukovo Airport in Moscow, used by major airlines but also VIPs including President Vladimir Putin and senior officials as well as visiting foreign dignitaries.

La Suisse craint le retour de djihadistes
Le Temps (Suisse), Valérie de Graffenried, 2016 05 03
Berne - **Dans son rapport 2016, le Service de renseignement suisse avertit: des individus radicalisés basés en Suisse peuvent commettre des actes de violence sans avoir été en contact direct avec un groupe terroriste** ou s'être rendus dans une zone de djihad Menaces La Chine citée comme facteur de risque Extrémisme de gauche, extrémisme de droite, PKK, prolifération nucléaire, espionnage: les « menaces » pour la sécurité de la Suisse se suivent et se ressemblent chaque année dans le Rapport de situation du SRC, avec quelques variations sur le baromètre de la peur. Mais cette année, **le Service de renseignement de la Confédération (SRC),** les yeux rivés vers le futur, a décidé de mettre l'accent sur la Chine.Le pays est le principal partenaire commercial de la Suisse en Asie et, après l'UE et les Etats-Unis, le troisième plus important du monde. L'accord bilatéral de libreéchange entré en vigueur en 2014 a permis des conditions favorables pour les entreprises suisses, de nombreuses taxes de douanes étant progressivement abaissées. Et l'augmentation éclair de la nouvelle classe moyenne en Chine a provoqué l'enregistrement de plus d'un million de nuitées de Chinois en Suisse en 2014, précise le rapport. Mais c'est justement cette dépendance de plus en plus marquée vis-à-vis de la croissance économique de la Chine qui est considérée comme un risque.

Germany's domestic intelligence chief calls for more powers in anti-terror fight
Deutsche Welle, Staff report, 2016 05 02
Berlin - Hans-Georg Maassen told a symposium in Berlin his intelligence agency needed more resources to fight threats from militant Islamists and right-wing extremists. He warned of a growing danger of terror attacks in Germany. Maassen told Monday's symposium, called to discuss the global threat posed by militant Islamists, that "a worsening security situation needed corresponding adjustments" in the powers and resources given to security authorities. Among other things, he suggested tighter supervision of conduct for convicted Islamists and the introduction of electronic tagging. He also criticized a recent ruling by Germany's highest court, based on personal privacy concerns, to revoke some anti-terror powers accorded to the authorities under a 2009 law.

Comment Europol lutte contre la propagande djihadiste sur Internet
Le Point, Marc Leplongeon, 2016 05 02
Paris - La communication de l'EI peut-elle être contrée ? Un officier supérieur du **centre antiterroriste d'Europol répond aux questions du Point.fr. Cette cellule est composée de 17 personnes et a été mise en place très rapidement après les attentats de janvier 2015 contre Charlie Hebdo et l'Hyper Cacher de Vincennes.** Le coeur de métier d'Europol est l'analyse criminelle. Historiquement, nous possédions un service appelé « check the web » dont l'objectif était de surveiller sur Internet toutes les sources ouvertes, c'est-à-dire les sources que tout le monde peut consulter. Nous suivons ainsi depuis une dizaine d'années l'évolution de la propagande terroriste et nous concentrons principalement sur deux groupes que sont Al- Qaïda

puis l'État islamique (EI). Qui en sont les grands penseurs ? Quels thèmes sont le plus souvent abordés ?

Secret service can hack innocent people to reach target: Volkskrant
Dutch News, Staff Writer, 2016 04 30
Amsterdam - **The new law giving greater powers to the secret service to intercept internet traffic will allow officials to hack innocent people despite protests by privacy groups**, the Volkskrant said on Friday. The paper bases its claim on the new draft legislation, which has not yet been officially published. The new powers mean that people who share the same server as suspects could be hacked by the spy service to get access to their targets. Ministers say this is crucial because suspects are often well protected against hacking.

Poroshenko Removes Foreign Intelligence Service Head Hvozd
Ukraine News Agency, 2016 04 29
Kiev—**President Petro Poroshenko has dismissed Chairman of the Foreign Intelligence Service Viktor Hvozd.** Ukrainian News Agency learned this from Decree 193 dated April 29. The decree did not indicate the cause of the dismissal. As Ukrainian News Agency earlier reported, Poroshenko has dismissed an advisor to the President Yurii Biriukov

Hans Leyendecker: 'The BND has a life of its own'
Deutsche Welle, Staff report, 2016 04 28
Interview - Over two years after the NSA affair, **the head of Germany's foreign intelligence agency is leaving his post.** Investigative journalist Hans Leyendecker tells DW it's because he didn't know whom his staff were spying on. DW: More than two and a half years ago, the German people - who are very sensitive when it comes to matters of privacy protection - were shocked to learn about the NSA affair. Now, Gerhard Schindler, the head of Germany's foreign intelligence agency, BND, is being replaced. Why is that only happening now? Hans Leyendecker: Because, at the time, the assumption was that he didn't know what certain departments were doing. But now, looking back, it's become clear that this has often been the case at the BND. You could say that the BND, which is turning 60 this year, has always tended to have a life of its own, no matter who was president. Now this president is suffering from this tendency to act independently. **In this case, it's about the fact that selectors were being used [search terms provided by the NSA to conduct surveillance, including on allies - Ed.] and that Schindler had no knowledge about what these selectors were.** DW: You talk about the BND having a life of its own.

Romania's Anti-Graft Chief Slams Intelligence Service
Balkan Insight, Staff report, 2016 04 28
Bucharest - **The chief prosecutor of the National Anti-Corruption Directorate, the DNA, Laura Codruta Kovesi, on Tuesday accused Romania's Foreign Intelligence Service, SIE, of not sending the DNA any information about possible crimes abroad since she became head of the DNA.** "I have never received any counter-intelligence reports from the SIE since I took over this office at the DNA. However, we see many suspects setting up businesses abroad. This raises the reasonable question about why we have never received any information about such activities," she said. "We haven't been informed about foreign bank accounts, luxury villas or luxury yachts," Kovesi said, emphasizing that "it is illegal to have information about possible crimes and not inform the DNA.

Head of Department at National Security Agency Indicted for Corruption, Classified Information Disclosure

Bulgarian News Agency, 2016 04 27
Sofia—The **Specialized Anticorruption Unit (SAU) of the Sofia City Prosecution Office has presented to the Sofia City Court an indictment against Miroslav M., head of department at the Financial Security Specialized Directorate of the State Agency for National Security (SANS)**, the prosecution service said on Wednesday. The indictment states that in Sofia between September 27, 2013 and October 1, 2015, M. disclosed information classified as a state secret, contained in 11 documents which were entrusted to him in his official capacity. M. provided copies of the documents to a former voluntary collaborator with the National Security Service at the Interior Ministry and the SANS and used him to obtain extra cash. The information in question concerned the operational methods and means used by the security services and their voluntary collaborators, which could have endangered their life and safety and could have obstructed work on operational cases. **The offence had a particularly grave consequences for national security** because the information contained in the documents reveals events and actions against national economic and financial security, reveals the operational interest that the service takes in particular persons, the information gathered about them and other persons who have committed or who were preparing to commit offences endangering national security, the press release says.

Belgique / Terrorisme - Antiterrorisme: la police des polices belge pointe des manquements
Radio France Internationale, Pierre Bénazet, 2016 04 27
Bruxelles - **La police des polices belge a présenté mardi 26 avril devant une commission parlementaire les premiers résultats d'un rapport entamé après les attentats de Paris** qui conclut à **de nets manquements**. Parmi les noms des personnes soupçonnées de radicalisation figuraient à la fois Salah Abdeslam et son frère Brahim, celui qui s'est fait exploser boulevard Voltaire lors des attentats du 13 novembre. Il y a un an, dans le cadre d'une enquête relative à un trafic de drogue, un procès-verbal signé par un commissaire de police bruxellois signale à la cellule antiterroriste que Brahim se serait peut-être rendu en Syrie. Les deux frères sont auditionnés mais pas inculpés. Leur dossier est classé « rouge », code des dossiers urgents mais auquel il n'est pas donné suite en l'absence de nouvel élément concret, et aussi parce que d'autres priorités s'imposent entre temps.

Tough Grilling Behind German Intel Chief's Abrupt Sacking
Sputnik (Russia), Staff report, 2016 04 27
Moscow - **The reasons behind the abrupt replacement** - two years early - **of the head of Germany's BND foreign intelligence agency, Gerhard Schindler, by Chancellor Angela Merkel are a combination of mistrust and tiredness**. Schindler had faced tough questions by German lawmakers after it was revealed that his agency had cooperated with the **US National Security Agency (NSA) in surveillance operations on its European allies via the Bad Aibling surveillance station used by the BND and Americans near Munich**. An investigation by German broadcasters ARD, NDR and WDR, together with the Süddeutsche Zeitung said various reasons were behind the reported reshuffle, including a major BND restructuring that will see the agency transfer many of 6,500 employees from Munich to new headquarters in Berlin by next year. However, sources within the **BND suggested Schindler's position had become untenable because of the NSA links**, which caused anger when it was revealed and led to a parliamentary investigation in which he faced a barrage of criticism.

Germany confirms that spy agency chief will leave his post 2 years early
Reuters, Staff report, 2016 04 27
Berlin - **The German government confirmed on Wednesday that Gerhard Schindler, the head of the BND foreign intelligence agency, would leave his post two years early but**

provided no reason for the surprise change. In a short statement, Chancellor Angela Merkel's chief of staff Peter Altmaier said Mr Schindler, who has run the BND since 2012 and is not due to retire until 2018, **would be replaced on July 1 by Mr Bruno Kahl,** an official in the Finance Ministry responsible for privatisations and government real estate. "The BND faces major challenges over the coming years, encompassing all aspects of its work," Mr Altmaier said. "These include the evolution of its mission in light of shifting security challenges, the upgrading of the agency on the technical and personnel front, **organisational and legal consequences arising from the parliamentary investigation into the NSA** and the move of large parts of the BND from Pullach to Berlin." The move comes a year after damaging revelations that the BND had helped the United States National Security Agency spy on European allies.

François Heisbourg: « L'état d'urgence permanent est une victoire psychologique du terrorisme »
L'Opinion, Charles Sapin, 2016 04 27
Non identifié - Contributeur aux trois derniers livres blanc sur la défense et la sécurité nationale, **François Heisbourg liste les défaillances des pouvoirs publics dans la lutte contre le terrorisme** Conseiller spécial à la Fondation pour la recherche stratégique, président de l'International institute studies de Londres et du Centre de politique de sécurité de Genève, François Heisbourg signe mercredi un essai aux éditions Stock, intitulé **Comment perdre la guerre contre le terrorisme.** Un retour critique sur la façon dont les gouvernements successifs luttent contre le terrorisme. Au fil des semaines, la capacité de réaction du gouvernement s'est révélée très faible. Cette année 2015 a été marquée par un certain nombre d'événements que je ne veux pas voir se reproduire. C'est pour cette raison que j'ai écrit ce livre. Quelles sont les principales erreurs du gouvernement dans la lutte contre le terrorisme? La première erreur a été commise sous le mandat de Nicolas Sarkozy: marginaliser ce que l'on peut appeler le renseignement de proximité. **Tout d'abord en éliminant les renseignements généraux, lors de la création de la direction centrale du renseignement intérieur (DCRI) en 2009, et en bannissant la gendarmerie nationale du premier cercle du renseignement, alors qu'elle couvre près 90 % du territoire**. Nous avons vu les conséquences très rapidement sur le terrain, notamment à Toulouse avec l'affaire Merah en 2012.

Berlin axes scandal-hit foreign spy chief
The Local (Germany), Staff report, 2016 04 27
Berlin - **The German government confirmed on Wednesday that the head of its foreign intelligence service would be replaced two years ahead of schedule, triggering mass speculation about the cause. Gerhard Schindler** had given "long years of commendable service" at the head of the **Bundesnachrichtendienst (BND),** Germany's foreign spying agency, Chancellery chief Peter Altmaier said on Wednesday. The departure had initially been reported by German media including the Süddeutsche Zeitung before the government confirmed Schindler's replacement. And it seems that the spy chief needed to be pushed out of the door. Schindler at first refused to resign and had to be forced to leave by his superiors at the Chancellery, Berlin's Tagesspiegel reported citing government sources. But questions remain over whether the BND boss is being replaced because of embarrassing stories about the agency in the press - or whether the government prefers an intelligence chief who is politically closer to them.

Les renseignements français recrutent leurs indics au Maroc
Libération, Journaliste maison, 2016 04 27
Paris - **Le danger terroriste se fait de plus en plus menaçant. Pour le contrer, les**

renseignements français sont en passe de recourir à des méthodes bien adaptées. Le dernier moyen mis en place serait le recrutement d'indicateurs et d'agents marocains pour leur prêter main forte en vue de déjouer les stratagèmes des cellules dormantes, ou en action dans des quartiers populaires habités par une majorité de ressortissants d'origine maghrébine. L'expertise marocaine en la matière n'est plus à démontrer. Les renseignements marocains ont été ofn ne peut plus efficaces, en fournissant à leurs homologues français des tuyaux d'une extrême importance. **Selon des médias français, la direction générale de la sécurité intérieure (DGSI) recrutera 430 personnes dans les cinq années à venir**. Il y a quelques jours seulement, le Premier ministre Manuel Valls a annoncé, dans ce contexte, le renforcement des services de renseignements.

Crown Prince Muhammad: Architect of counter-terrorism strategy
Saudi Gazette, Mansour Al-Shahri, 2016 04 29
Jeddah - **Crown Prince Muhammad Bin Naif, deputy premier and minister of interior, is regarded as the architect of the Kingdom's successful counter-terrorism strategy and modernizing the Kingdom's security forces and enhancing its efficiency at par with world-class standard**. He can rightly be called as the "Royal Military Commander." This is because he has won two royal honors for his relentless efforts in combating terrorism, decimating Al-Qaeda in the Kingdom, and foiling several planned terror attacks and plots aimed at undermining the security and stability of Saudi Arabia. Crown Prince Muhammad has possessed extraordinary caliber and wisdom as well as very good expertise in governance, handling security issues and taking prompt decisions and swift actions.

Hadramout security agencies being rebuilt with coalition help
Gulf News, Saeed Al Batati, 2016 04 28
Al Mukalla - The **chief of security of Yemeni province of Hadramout, Brigadier Mohammad Saeed Al Jariri,** said on Wednesday that he is working with UAE officers **to reconstruct security institutions that broke down a year ago** when Al Qaida stormed the province's capital and many other major cities. The UAE officers are working in Yemen under a Saudi-led coalition to restore order in the impoverished country. "I have been in touch with UAE officers for months discussing how to build effective security agencies. They promised to build the security bodies from scratch," Al Jariri told Gulf News. Government forces backed by the Saudi-led coalition recaptured the city of Al Mukalla, Yemen's fifth largest city, on Sunday night after fierce clashes with Al Qaida in the eastern suburbs of the city. Al Jariri said that security forces have arrested many Al Qaida operatives in the city and raided many suspected arms depots.

Intelligence services minister: We can't count on US at UN
Jerusalem Post, Gil Hoffman, 2016 04 28
Jerusalem - US President **Barack Obama's administration has not been supportive enough of Israel at the UN and elsewhere, Intelligence Services Minister Israel Katz** charged on Tuesday night in an interview with The Jerusalem Post. Katz will be coming to New York next month to address The Jerusalem Post Conference on May 22. While he is in the US, he intends to seek Democratic and Republican support for legislation in Congress backing proactive sanctions on Hezbollah and whoever helps the terrorist group with money or weapons. He said the fact that Arab countries also see Hezbollah as a terrorist organization helps on the issue. "It

is very important for Israel to know that the US supports us in international organizations, including with its veto at the United Nations Security Council," he said. "This is a key component of our national security and our security considerations. Unfortunately, with the current administration, we cannot be sure of that."

Senate panel endorses constitutional amendments
Jordan Times, 2016 04 28
Anam—The Senate's legal committee on Thursday endorsed the draft constitutional amendments as sent by the Lower House during a meeting chaired by Senate President Faisal Fayez, the Jordan News Agency, Petra, reported. Fayez said the amendments show that the Kingdom is marching steadily towards political reform, embodied by the formation of parliamentary, partisan governments, based on a clearly defined vision. The Lower House on Wednesday passed the constitutional amendments that gave new powers to the King and allowed citizens with dual nationalities to occupy senior public posts and parliamentary seats with a sweeping majority. As reworded by the Council of Ministers, a new paragraph was added to Article 40 of the Constitution to read: Despite what is stated in Paragraph A, the King shall exercise his powers individually and **appoint the Crown Prince,** the Regent, Senate president and members, and members of the Constitutional Court, president of the Higher Judicial Council, **the army's chairman of the Joint Chiefs-of-Staff and the General Intelligence Department and Gendarmerie Department directors.**

Operational Cyber Intelligence
Times of Israel, 2016 04 27
Jerusalem - **Visitors to the CyberTech 2016 exhibition had the impression that every single exhibitor boasted a cyber intelligence capability.** Indeed, **cyber intelligence (or threat intelligence) has evolved** into one of the hottest trends of the cyber technology industry in the last few years. Even the relatively small Israeli market generates massive demand for intelligence services and some ten product and service companies are involved in this activity, competing one another.

Identity of key IS recruiter still a mystery (Canada).
The Hindu, Vijaita Singh, 2016 05 03
New Delhi - Three months after Indian agencies busted a widespread Islamic State network with many members in India, its key recruiter's identity still remains a mystery. Security agencies believe that Shafi Armar alias Yousuf al Hindi operates from Syria but are not fully convinced if all communications in his name are from this former Indian Mujahideen member. Eight of the 25 suspects in the custody of the **National Investigation Agency** and allegedly recruited by Armar have told interrogators that they had never seen him as he did not communicate with them through video calls. Armar used only web-based applications, 'We Chat', 'Kick' and the audio messaging service on Skype. The answer to Armar's location and whether he indeed posted messages from Syria, now lies in requests sent to the U.S., **Canada**, China and Hong Kong.

Radicalisation a real threat, says intel official
The Hindu, Vijaita Singh, 2016 04 27
New Delhi - **Top intelligence officials have been asked to step up techniques to keep a watch on activities related to the Islamic State,** with 80-100 youths in India still under the

scanner for links to the terror outfit. The IS threat was one of the topics discussed at a **two-day conference organised by the Intelligence Bureau in Delhi.** At the conference, National Security Adviser Ajit Doval is learnt to have given a pep talk to intelligence officials from across the country. A senior official said that as for the unrest in Kashmir, intelligence officials felt "radicalisation" was a more real threat than the Pakistan-backed terror outfits that operated in the State. "The number of militants killed so far this year is more than that in the previous year in the Valley. The real threat is radicalisation of young men, and this has to be prevented. We have more or less controlled Pakistan-based terrorist elements in the Valley, and they are not gaining ground," the official said.

20 overseas N. Korean restaurants closed: spy agency
Yonhap News Agency, Staff reporter, 2016 04 27
Seoul - **Some 20 overseas restaurants run by the North Korean regime have either stopped operations or closed down, a South Korean ruling party lawmaker said Wednesday, citing Seoul's spy agency.** Lee Chul-woo of the ruling Saenuri Party made the comment to reporters after holding a meeting with officials from the National Intelligence Service (NIS) at the National Assembly. "The restaurants in foreign countries have either halted business or have been closed due to financial difficulties," Lee said, adding that the NIS believes Pyongyang will more likely turn to illegal means to raise hard currency. North Korea-run restaurants in foreign nations serve as one of the main sources of hard currency flowing into North Korea. Some of these funds are suspected of bankrolling the North's nuke and missile programs amid toughened international sanctions.

Intersociety Accuses FG, Security Agents of Gross Human Rights Abuses
This Day, 2016 05 03
Abuja—The **International Society for Civil Liberties & the Rule of Law (Intersociety) has accused the President Muhammadu Buhari-led Federal Government of gross human rights violation aided by the activities of the security agencies**. This was contained in a well detailed statement signed by the Board Chairman, Intersociety, Emeka Umeagbalasi, titled: "Ethnic Bloodshed, Rights Abuses & Other Regime Atrocities In Nigeria: Exposing The Conspiratorial Roles Of Some CSOs, Buhari Administration & Security Forces". Umeagbalasi, in the statement, gave instances of what the group viewed as the conspiratoral roles of the security agents, in the state of insecurity and killings across the country. He noted that while the security agencies including the military, **Nigerian Police and Department of State Security Service (DSS),** were quick to act in arresting and quelling protests by members of Indigenous People of Biafra (IPOB) and Movement for the Actualisation of the Sovereign State of Biafra (MASSOB), they were on the other hand slow to act in defence of the defenceless citizens in Agatu in Bunue and Nimbo at Uzo-Uwani in Enugu State massacred by suspected herdsmen.

Le Quai, nid d'espions
L'Opinion, Pascal Airault, 2016 04 28
Dakar - **Ancien haut responsable de la DGSE, Christophe Bigot vient d'être nommé comme ambassadeur de France au Sénégal**. Un mouvement symptomatique : les diplomates ont aujourd'hui un pied au sein des services secrets, qui ont des agents dans les ambassades françaises. Au fil des ans, la Direction générale de la sécurité extérieure (DGSE) et le ministère des Affaires étrangères ont fini par cohabiter harmonieusement même s'ils forment un couple

singulier. La relation entre le ministère des Affaires étrangères et la Direction générale de la sécurité extérieure (DGSE) n'a toujours pas été idyllique mais elle est aujourd'hui sanctuarisée. Les cadres passent même allègrement d'une maison à l'autre. Le 15 avril, **Christophe Bigot** a succédé à Jean-Félix Paganon à la tête de l'ambassade de France au Sénégal. **Il occupait le poste le directeur de la stratégie (DS) à la DGSE**, après avoir été ambassadeur en Israël de 2009 à 2013. Le choix de cette personnalité, à la double experience diplomatique et du renseignement, ne sera pas inutile d'un pays actuellement très exposé à la menace terroriste. Dakar accueille les éléments français du Sénégal (EFS), commandés par le général Pascal Facon, sur la base de Ouakam.

Pour la création d'une association algérienne de cryptographie
All Africa, Journaliste maison, 2016 04 27
Oran, Algérie - **La création d'une société savante dédiée à la cryptographie figure parmi les ambitions affichées mardi à Oran par des participants à un un premier workshop international consacré à cette spécialité scientifique portant sur le développement des techniques de protection des données informatiques**. "La réflexion est engagée en vue de la création d'une association algérienne de cryptographie", a indiqué Pr Adda Ali Pacha, président de la rencontre réunissant deux jours durant une cinquantaine de participants algériens et étrangers à l'Université des sciences et de la technologie Mohamed Boudiaf (USTO-MB).

Argentina ex-air force head on trial for disappearances
Agence France Presse, 2016 05 03
Buenos Aires - **An Argentine former military chief has gone on trial for the disappearance of a left-wing couple during the country's dictatorship**. The former chief of the air force, Omar Graffigna, 90, is accused with two other defendants of the forced disappearance of Jose Manuel Perez Rojo and Patricia Roisinblit in 1978. His trial opened on Monday, with the court on the outskirts Buenos Aires hearing the charge list of accusations of crimes against humanity. Perez and Roisinblit were allegedly kidnapped by air force personnel on October 6, 1978 and have never been found. The victims' families say Roisinblit gave birth in captivity and her child was stolen. **One of the two other defendants, former intelligence officer Francisco Gomez, was already convicted in 2005 of stealing Roisinblit's child.**

Honduras strengthens border security in anticipation of Salvadoran gangs fleeing
Southern Pulse Info Latin America News, 2016 05 28
Tegucigalpa - **Honduras announced on 27 April 2016 an increase in security forces along land and sea borders to keep out individuals with criminal motives, alluding to Salvadoran gangs (La Prensa Grafica). The Fuerza de Seguridad Nacional (Fusina)** announcement comes after El Salvador unveiled new elite police-military groups to regain territorial control and target gang members. **Fusina added it would increase intelligence gathering on individuals planning to illegally enter Honduras.** Furthermore, citizen security operations focused on decommissioning weapons, ammunition, explosives, drugs, illicit money, as well as capturing criminal groups would continue throughout the country (El Heraldo).

Armed with chalk, Ottawa women take on Canada's spy agencies -- over parking
CBC News, Hillary Johnstone and Trevor Pritchard, 2016 05 10
Ottawa - **Two women living in Ottawa's east end say they're upset their neighbourhood's been taken over by employees of Canada's intelligence agencies -- and they're fighting back with pieces of chalk.** Retired nurses **Danielle Sullivan** and **Diane Day** have been patrolling the residential streets that border the headquarters of the **Canadian Security Intelligence Service (CSIS) and the Communications Security Establishment (CSE), outlining parked cars and trucks with chalk and carefully marking down the time the vehicles arrived.** They do it because the drivers of those vehicles, they say, tend to overstay their welcome. "It's an ongoing issue. We've had this for three years. And it's just unbearable," said Sullivan, who lives on Leigh Crescent, near the two agencies. 3-hour limit On most of the residential streets around CSIS and CSE headquarters, vehicles are allowed to park for a maximum of three hours. Sullivan said drivers often arrive early in the morning, well before the posted restrictions kick in, and leave their vehicles in their spots for longer than the posted limit -- or they move their car just up the block before it gets ticketed. The resulting glut of vehicles makes life difficult for residents who want to do renovations, the pair said, while also hampering snowplows, buses, and other city vehicles. In a statement to CBC News, CSIS noted that while there are "limited number of parking spaces" at its headquarters, the agency works to ensure that employees are obeying municipal and private parking restrictions. CSIS employees are also "encouraged to consider alternative transportation methods" like public transit, the agency said. CSE issued a similar statement, noting that they also offer an "internal ride sharing tool" for employees looking for a ride to work.

RCMP to examine Panama Papers data: Goodale
iPolitics.ca, Staff reporter, 2016 05 10
The RCMP and other **Canadian police forces will be poring over the Panama Papers data released Monday, searching for possible connections to criminal activity, says Public Safety Minister Ralph Goodale.** Speaking to reporters on the way out of question period, Goodale said Canadian tax authorities aren't the only ones that have taken an interest in the documents from the Panamanian law firm Mossack Fonseca, obtained by the International Consortium of Investigative Journalists (ICIJ). "Now that it is in the public domain it will be possible for all the appropriate authorities, including the revenue agency and the RCMP, potentially other police forces to take a look at it and determine whether or not it reveals behaviour that ought to be further investigated." **Goodale also didn't rule out the possibility the data could be of interest to the Canadian Security Intelligence Service (CSIS), Canada's spy agency. "If there is a security dimension to this that raises any kind of alarms with CSIS, they will take the appropriate steps."** Goodale's comments come as the ICIJ further lifted the veil of secrecy over the identities of thousands of people around the world who hold bank accounts in offshore tax havens Monday, making part of the information from the 11.5 million documents it obtained public through a searchable database and through downloads. In April, a network of media outlets around the world led by the ICIJ began rolling out a devastating series of stories based on a year-long investigation of 11.5 million files leaked from the Panamanian law firm Mossack Fonseca. The stories detail one bank's part of the global web of offshore companies that enables clients ranging from members of the Mafia to

international political leaders or members of their families to stash assets in secretive tax havens.

Eid's counsel mulls strategy for sentencing on fraud convictions
Ottawa Citizen, James Bagnall, 2016 05 07
Ottawa - Former construction boss and CSIS informant Roland Eid appeared in court Friday for the first of what could be several sessions before Justice Timothy Ray in connection with the sentencing phase of his criminal fraud proceeding. Eid was convicted on Monday of 10 counts of fraud and other offences related to the 2008 bankruptcy of his firm, ICI Construction. Ray ruled that Eid had perpetrated a fraud by shifting $1.7 million in company funds to a personal account in his native Lebanon - funds, the judge said, should have been held in trust to pay for wages and materials at ICI's ongoing projects. The judge also ruled that Eid's actions caused ICI's creditors to suffer combined losses of $3.8 million. Had the events taken place after 2012, when the former Conservative government amended the Criminal Code, Eid would be facing a minimum of two years in prison. But under the pre-2012 regime, Ray has considerable discretion in applying a sentence. Eid's counsel, Richard Addelman, on Friday suggested the penalty should reflect Eid's state of mind at the time. "There is a mental issue here that the court should know about," Addelman told Ray in reference to Eid's claim that he suffers from bipolar disorder, a brain illness that can cause people to exhibit huge swings in mood, and exercise poor judgment. Eid, a Christian, claimed to have secured a housing project contract in the region - one that would see the government of Syria match his funds if he could show a $2-million deposit. Eid said that was why he arranged to transfer ICI's cash. Judge Ray characterized this scheme as "a sham and a fraud." Eid's next appearance is scheduled for June 6, when opposing counsel will argue over whether the number of counts should be reduced.

La GRC a saisi des calepins djihadistes troublants
Journal de Montréal, Hugo Joncas, 2016 05 07
Montréal - **En mai 2015, la GRC arrêtait in extremis huit jeunes soupçonnés de vouloir rejoindre les djihadistes en Syrie, à l'aéroport Pierre-Elliott-Trudeau de Montréal. Parmi eux, une jeune femme transportait deux calepins de notes troublants dans ses bagages**. Ils détaillaient la marche à suivre pour les jeunes, et les raisons qui les ont poussés à partir en zone de guerre. **L'un de ces calepins contient une lettre d'adieu. La jeune femme y explique qu'elle devait quitter le Québec, une terre de «mécréants», pour aller faire la «hijra», l'émigration vers un pays musulman, souligne une déclaration de la GRC qu'a obtenue notre Bureau d'enquête.** Parmi tous les pays où l'islam est majoritaire, elle choisit la partie de la Syrie sous le contrôle de l'État islamique, «puisque c'est là que la charia est appliquée», selon le document déposé à la Cour du Québec. Elle ajoute que «si un morceau des terres musulmanes est touché, il est obligatoire de faire le djihad pour repousser l'ennemi». «L'auteure dit que si elle tombe en martyre, Allah lui demandera qui sont les personnes qu'elle aime pour [qu'elles] puissent entrer au paradis», rapportent aussi les enquêteurs de l'Équipe intégrée de sécurité nationale (EISN), l'escouade antiterroriste que dirige la police fédérale. Dans l'un des calepins se trouve détaillée la procédure à suivre pour passer en Syrie. «Il faut prendre un billet aller-retour. Une fois en Turquie, il faut faire un appel téléphonique. Les passeurs vont informer qu'il faut se rendre à Gaziantep et qu'ils viendront les chercher», résume l'EISN. La ville de Gaziantep est l'un des principaux points de passage des djihadistes entre la Turquie et la Syrie. La jeune femme dit qu'elle voulait «se marier avec un frère», mais que sa famille s'y était opposée.

Canada's Sorely Needed Enhanced National Security Oversight and Review May Be Near
The Algemeiner, Scott Neward, 2016 05 06
Opinion - They are the issues that won't go away. First raised following the 2010 investigation and report into the 1985 Sikh terrorist attack on an Air India flight that killed 329 people, the issues of improving national security operational oversight and after-the-fact review resurfaced during the debate on Canada's C-51 terrorism legislation and the 2015 election. The new Liberal government campaigned on changing national security oversight and review. This was further emphasized in the mandate letter provided to Public **Safety Minister Ralph Goodale i**n November 2015, which included a direction to: Assist the Leader of the Government in the House of Commons in the creation of a statutory committee of Parliamentarians with special access to classified information to review government departments and agencies with national security responsibilities. In practical terms, operational oversight means having an independent entity as part of the ongoing interagency investigative groups. This helps ensure that all of the governmental agencies cooperate, and helps identify and fill in any gaps that can accompany interagency work. Such a process may have identified the intended Air India attack or prevented the departure from Canada to Syria of convicted Toronto 18 terrorist Ali Mohammed Dirie, who escaped despite being under a supervision order. Enhanced oversight can also be achieved through full use of the existing review procedures under the **Canadian Security Intelligence Services (CSIS) Act, whereby the Security Intelligence Review Committee (SIRC) can investigate and review the activities of CSIS in defined scenarios.** It should also be noted that SIRC does appear to have express statutory authority under the CSIS Act in defined circumstances to summon and question representatives from other agencies or Departments beyond CSIS and, with some restriction to seek relevant information from them. Clearly for oversight to be effective, it must include the activities of all relevant agencies. (Note: Scott Newark is a former Alberta Crown Prosecutor who has also served as Executive Officer of the Canadian Police Association, Director of Operations for the Investigative Project on Terrorism and as a Security Policy Advisor to the Governments of Ontario and Canada.)

Trudeau's pick for security adviser shows focus on foreign affairs expertise
Ottawa Citizen, Kathryn May, 2016 05 06
Ottawa - **Prime Minister Justin Trudeau has picked an experienced deputy minister in foreign affairs rather than a senior security bureaucrat as his new national security adviser. Daniel Jean, the deputy minister at Foreign Affairs, takes over the weighty job, effective May 16, filling the vacancy left when his predecessor, Richard Fadden, retired**. The national security adviser wields much influence. He has the prime minister's ear on security and intelligence issues, foreign and defence policy and acts as a conduit for conveying the prime minister and cabinet's directions to the national security community. The departure of Fadden left a gaping hole in the senior ranks that many speculated Trudeau would have to fill with either an experienced senior leader or someone who knows the security portfolio well. There appeared to be few candidates like Fadden, who had an abundance of both. Several senior bureaucrats say Jean's appointment is a deliberate departure from the Conservatives' emphasis on direct security experience and shows how interrelated foreign affairs and security issues have become. They say dealing with thorny security issues around Syria, Libya or Iran would be more effective with a broader global view or "foreign affairs sensibility."**With Jean's appointment, other key bureaucrats in the broader security file include Shugart, Malcolm Brown, deputy minister at Public Safety, and CSIS director Michel Coulombe.**

Bilateral talks may resolve Huawei workers' spy spat
South China Morning Post, Bien Perez, 2016 05 06

Hong Kong - A bilateral dialogue between Beijing and Ottawa could help allay concerns about spying levelled by Canadian authorities on the immigration applications of two Chinese employees of Huawei Technologies, an expert said. "If there are genuine concerns of espionage, and if there is genuine evidence to support these concerns, then governments should communicate," said Paul Haswell, a partner at international law firm Pinsent Masons. The South China Morning Post reported yesterday that Canadian immigration officials have cited the risk of espionage as they prepared to reject the immigration applications of the two Huawei employees, the first such cases to emerge amid a swirl of unsubstantiated security concerns about the Shenzhen-based telecommunications equipment manufacturer. Victor Lum, vice-president at Well Trend United, the two applicants' immigration consultant, said it was the first time Huawei employees are being singled out in such a manner. The procedural fairness letters gave the applicants 30 days to respond. "Huawei cannot substantiate any speculative allegations on any independent person's application to emmigrate to Canada or any other country," a Huawei spokesman told the Post . Haswell played down speculation that other Huawei, Hong Kong-listed ZTE and otherChinese technology companies could now be suspected ofespionage. "Nationals from a range of countries have been denied entry, detained and in some cases charged on allegations of spying by countries around the world," Haswell said. "This issue says more about the current climate regarding security than itdoes about tech companies and their actions." (Full report)

Canada Says Huawei Employees May Be Spies, Rejects Immigration Applications
Epoch Times, Joshua Philipp, 2016 05 06
Ottawa - **The Canadian consulate in Hong Kong allegedly rejected the immigration requests of two Huawei employees, citing "reasonable grounds" that they may be spies.** The reasons for the rejections were outlined in two letters, obtained by the South China Morning Post. A letter from Canada's Hong Kong consulate in March states the immigration application was rejected on ground the individual falls under section 34(1)(f) of the Immigration and Refugee Protection Act. The section refers to people employed by organizations involved in subversion, terrorism, or espionage. The second rejection letter, sent in April, cited the same concerns over an individual's spouse. South China Morning Post did not release names of the alleged spies, but the piece is slanted in their defense. **The Hong Kong-based news outlet has for years been growing closer to the Chinese regime, but came under more direct influence after its purchase by Alibaba CEO Jack Ma in December 2015.** The Canadian consulate in Hong Kong did not immediately respond to an email inquiring about the claims. Huawei is a Chinese telecommunications company which has been accused of spying on behalf of the Chinese Communist Party. The U.S. House Intelligence Committee listed the company in 2012 as a national security threat, and it has since been accused of launching cyberattacks and placing backdoors in its products.

Canada cites spy risk in barring Huawei workers
South China Morning Post, Staff reporter, 2016 05 05
Beijing - Canada is citing the risk of espionage as it prepares to reject the immigration applications of two Chinese employees of mainland telecom giant Huawei, in the first such cases to emerge amid a swirl of unsubstantiated international spying concerns about the firm. In a letter obtained by the South China Morning Post, an immigration officer at Canada's Hong Kong consulate told one applicant in March: "There are reasonable grounds to believe that you are a member of the inadmissible class of persons described in section 34(1)(f) of the Immigration and Refugee Protection Act." That refers to people who belong to an organisation engaged in espionage, government subversion or terrorism. A second applicant was told last month that the same concern existed about their spouse, who was included in the immigration application. "After careful and thorough

consideration ... I am preparing to refuse your application," said both letters, which were provided to the Post bythe applicants' immigration consultants, Beijing-based Well Trend United.This is the first time we've seen Huawei employees singled out in this wayWell Trend vice-president, Victor Lum Well Trend vice-president Victor Lum said the two Huawei staff "definitely and categorically" denied being spies. Their unrelated applications were lodged separately more than two years ago, Lum said, but the so-called "procedural fairness" letters arrived within days of each other on March 18 and March 21. Huawei , the world's third-biggest smartphone maker and a major provider of global telecoms infrastructure, has long been cited by the United States as a Chinese espionage risk, but Well Trend's clients are believed to be the first individuals singled out by any foreign government in such a way. Huawei has repeatedly denied involvement in espionage. But in 2012, a US House intelligence committee concluded Huawei was a threat to national security. The firm has been barred from bidding on US and Australian broadband projects. The Post has agreed not to identify the two employees, who work in low- and mid-ranking non-executive positions. "Their respective job-description narratives could not be more mundane," said Lum, who said hebelieved the immigration applications were lodged withoutHuawei's knowledge. "The only common thread is that they work for Huawei, the largest telecom equipment manufacturer in the world, with over 170,000 employees, and R&D institutes all over the world, including, ironically, Canada. What our clients find particularly galling is that they know of many former Huawei colleagues who have successfully emigrated to Canada." Scott Bradley, Huawei's vice-president of corporate and government affairs in Canada, said he was unaware of the two cases, and had "no idea" of the identity of the employees. "We have a very defined process for [immigration] applications," Bradley said, referring to cases in which Huawei staff are transferred abroad. "There is nothing to indicate this has anything to do with us." A spokeswoman for Canada's immigration department said that it could not comment on individual cases.

More oversight coming for CBSA, says Goodale
The Hill Times, Peter Mazereeuw, 2016 05 04
Canada's border agency "undoubtedly" needs a new oversight mechanism, Public Safety Minister Ralph Goodale told The Hill Times in a wide-ranging interview on his role guiding the government's public safety priorities. Mr. Goodale said April 30 that **his government will create "another tool" for keeping an eye on the Canada Border Services Agency, beyond the promised all-party parliamentary oversight committee for Canada's intelligence and security agencies**. He noted the public outcry over the lack of supervision for CBSA, which became louder following the deaths of two immigration detainees in the agency's custody within one week in March. Mr. Goodale promised to listen to the public during consultations on reforming **Bill C-51,** the so-called anti-terrorism act passed by the previous government that granted the government's security agencies more powers. The minister also said he's considering a long list of people to head a new counter-radicalization co-ordinator's office, set to get off the ground this year. The following interview has been edited for length and style. When do you plan to bring forward the legislation to change and repeal parts of Bill C-51? "I would hope that we would see that later on this year. "There are four really important responses to C-51. The first one, and the flagship commitment that we made: establish a committee of Parliamentarians to provide a new dimension in review and scrutiny that we have not had before. Other countries have had this, all of the Five Eyes countries have a parliamentary mechanism. Most of the democracies in the Western world have that kind of a mechanism. Canada has been the anomaly. So that legislation is being drafted now, and we hope to have that in the public domain by the time Parliament rises for the summer. "The second element is the creation of our new Office of the Community Outreach and Counter-Radicalization Co- ordinator. We will have that operation up and running later on this year. There's some consultation to be done with provinces and local communities and NGOs and so

forth, but that work is getting underway. The Liberal campaign platform included promises to address several issues in its review of C-51, including no-fly lists, the right to take part in lawful protests, requiring warrants for the Communications Security Establishment, and more. Should Canadians expect that the government's legislation is going to address each and every one of those promises? "They are very much a part of our plan, that's what we intend to do. There will be a variety of consultations undertaken; some of them are already underway. We will obviously listen to what we are told in that consultative process. But, based on what I've heard so far, I would expect to hear people commenting on all of the issues I've mentioned here, saying that the changes have to be made, as we indicated in our platform. And there may well be others that they would want to raise.

Americans still believe in intelligence community
Washington Times, Michael Hayden, 2016 05 10
Column - It's been six months since I've appeared in these pages. That gap hasn't been about a boycott or a contract dispute. Actually, The Washington Times has been rather generous, giving me that time to finish a book, **get it cleared through the intelligence community review process and then endure an aggressive countrywide book tour organized by my publisher, Penguin**. For the most part...the public dialogues were lively, respectful, occasionally challenging and generally fun. I found a good reservoir of support out there for American espionage and its practitioners, a reality that gave me pause the longer the tour continued. Americans are very practical folks. Accustomed to hard choices in their own lives, they are willing to give us in intelligence a lot of slack as we make the hard choices our profession demands. All that was heartening but also a little scary. With the D.C. political rhetoric cut away, it was clear that there is a large body of people out there who instinctively both believe in and depend on the intelligence community. If nothing else, that should underscore the heavy burden on those still in the game to do what they do well -- technically, operationally and legally.

The former CIA head talks about 'firing yourself', hard lessons learnt, and why there's no substitute for US leadership
Financial Times, Edward Luce, 2016 05 08
Interview: Just four years ago, Petraeus was lionised as the Douglas MacArthur of his generation. Even discounting the hype, he stood head and shoulders above other US generals. In the depths of the Iraq war, when the country was undergoing death by a thousand improvised explosive devices, he was dubbed "King David" of Mosul -- a city he cleared and held before it fell back into rebel hands. He was then appointed chief architect of George W Bush's 2007 Iraq surge and, after a stint as head of the Pentagon's Central Command, Barack Obama put him in charge of his own surge in Afghanistan. His reward was to be made head of the **Central Intelligence Agency in 2011. Many thought the CIA was a springboard for Petraeus's own presidential ambitions.** America loves a successful general and his approval ratings were stratospheric. Could anything stand in his way? The answer was yes -- David Petraeus himself. Shortly after Obama's re-election in 2012, Petraeus abruptly resigned from the CIA when it emerged he had shared eight notebooks of classified information with his biographer, Paula Broadwell. They had also had an affair. Rarely has a fall from grace been so brutal. It did not help that Broadwell's fulsome biography was entitled All In: The Education of

General David Petraeus. It was a gift to late-night comics. Following a long investigation, Petraeus, who had pleaded guilty to the unauthorised removal of classified information, was fined $100,000. Some thought him lucky to escape jail. Either way, his downfall was absolute (he remains married to his wife Holly). Almost a year after the dust has settled, I email Petraeus to invite him to do a Lunch with the FT. His acceptance pops up within minutes. What lessons should the US draw from Iraq though? Was today's Isis insurgency not born of post-invasion mistakes? Petraeus agrees with much of the critique that blunders were made in the early US occupation. "There is no question that two decisions early on created enormous problems that continue to this day," he said. The first was de-Ba'athification, which rooted out former Saddam Hussein loyalists from government jobs. The second was demobilisation of the Iraqi military, which threw a lot of angry -- and often armed -- men on the streets. "We had a question on the wall of our operation centre in Mosul," he says. "'Will a policy take more bad guys off the street than put them on?'" and if the answer is no then you should go sit under a tree until the thought goes away. You can't put people out of work and not tell them how they're going to get food on their table. Enormous damage was done that continues to haunt Iraq to this day."

The Former Head of the CIA on Managing the Hunt for Bin Laden
Harvard Business Review, Leon E. Panetta & Jeremy Bash, 2016 05 08
Analysis: May 2 marks the fifth anniversary of the operation that killed the world's most wanted terrorist, Osama Bin Laden. His death was the culmination of a global manhunt that lasted more than a decade and assumed extreme urgency after the September 11, 2001, attacks. The Bin Laden operation was a seminal moment in the campaign to decimate Al Qaeda's leadership. **Three prior CIA directors, and countless senior officials, operations officers, analysts, technical experts, and support teams carried out this campaign, developing important pieces of intelligence along the way**. But when we arrived at Langley in early 2009, there were no solid leads on Bin Laden's whereabouts. The trail had gone cold. The hunt for Bin Laden from 2009-2010 yielded many lessons about managing a large, complex organization that is focused on varied missions under intense pressure. These management lessons, we believe, are relevant far beyond Langley. The CIA is a global institution that undertakes high-risk missions to defend the United States. Its analysis is scrutinized every morning by no less an exacting customer than the president of the United States. Its successes are largely unknown; its failures are legendary. Simply put, CIA has one of the toughest jobs in all of government. The workforce is comprised of career professionals who are deep experts in their craft. They often came to the Intelligence Community early in their careers and stayed. Due to the secret nature of their work, the employees confide mostly in one another, creating skepticism of outsiders and an understandable resistance to doing the life- and-death business of intelligence in a new way. (Note: Leon E. Panetta served as United States Congressman, Budget Director, White House Chief of Staff, CIA Director, and the 23rd Secretary of Defense of the United States. He is the author of "Worthy Fights: A Memoir of Leadership in War and Peace" (Penguin Press, 2014). He chairs the Panetta Institute for Public Policy in Monterey, CA, and is a Senior Counselor at Beacon Global Strategies, a business advisory firm. Jeremy Bash served as Chief of Staff to Leon Panetta at CIA and the U.S. Defense Department. He is a Managing Director of Beacon Global Strategies.)

Twitter Bars Intelligence Agencies From Using Analytics Service
Wall Street Journal, Christopher S. Stewart, Mark Maremont, 2016 05 09
New York - Twitter Inc. cut off U.S. intelligence agencies from access to a service that sifts through the entire output of its social-media postings, the latest example of tension between Silicon Valley and the federal government over terrorism and privacy. The move, which hasn't been publicly announced, was confirmed by a senior U.S. intelligence official and other people familiar with the matter. The service--which sends out alerts of unfolding terror

attacks, political unrest and other potentially important events--isn't directly provided by Twitter, but instead by Dataminr Inc., a private company that mines public Twitter feeds for clients. Twitter owns about a 5% stake in Dataminr, the only company it authorizes both to access its entire real-time stream of public tweets and sell it to clients. Dataminr executives recently told intelligence agencies that Twitter didn't want the company to continue providing the service to them, according to a person familiar with the matter. The senior intelligence official said Twitter appeared to be worried about the "optics" of seeming too close to American intelligence services.

U.S. advisers on the ground in Yemen, Pentagon says
Washington Post, Thomas Gibbons-Neff & Missy Ryan, 2016 05 07
Washington - The Pentagon has placed a small number of U.S. advisers on the ground in Yemen to support Arab forces battling al-Qaeda, military officials said Friday, signaling a new American role in that country's multi-sided civil war. Navy Capt. Jeff Davis, a Pentagon spokesman, said U.S. personnel had been in the country for about two weeks, supporting Yemeni and Emirati forces that are fighting a pitched battle against militants near the southeastern port city of Mukalla. "We view this as short-term," Davis told reporters. Officials said the U.S. military is also providing Emirati forces with medical, intelligence and maritime support, and is flying surveillance and aerial refueling missions. In addition, it has staged ships from the 13th Marine Expeditionary Unit off Yemen's coast. The flotilla includes the USS Boxer, an amphibious assault ship with Marine infantry and aircraft, and two destroyers, the USS Gravely and the USS Gonzalez. Col. Patrick Ryder, a spokesman for U.S. Central Command, said the United States is helping the Arab forces plan operations as part of its "limited" mission in and around Mukalla. "We welcome operations undertaken by Yemeni Forces, with the support of Arab Coalition Forces, to liberate the Yemeni port city of Mukalla from control by al-Qaeda in the Arabian Peninsula (AQAP)," Ryder said in an email.

Washington Accuses Pakistan of Poisoning CIA Representative
Asharq Al-Awsat, Mohammad Ali Salih, 2016 05 09
Washington - On the fifth anniversary of the death of Al Qaeda leader Osama bin Laden, former Central Intelligence Agency (CIA) Leader Mark Kelton believes that Pakistani intelligence businesses poisoned him after the raid on Osama bin Laden. Kelton, who retired from CIA five years ago, said that he began having serious abdomen pains and needed to have stomach surgical operation to clear up the issue. "I'd moderately allow that entire unhappy episode lie," he stated. "I'm very, very pleased with the folk I labored with who did superb issues for his or her U.S. at an overly tricky time. While the real tale is advised, the rustic will probably be very pleased with them." Talking on Kelton's allegations of poisoning, Pakistan Embassy spokesman Nadeem Hotiana brushed aside the tale saying, "Clearly the tale is fictional, now not worth of remark. We reject the insinuations implied within the allegations."

Romanian hacker who claims he breached Clinton server says he spoke with FBI at length
Fox News, Catherine Herridge, 2016 05 07
Washington - The Romanian hacker who says he easily breached Hillary Clinton's personal email server also claimed, in a series of interviews with Fox News, that he spoke with the FBI at length on the plane when extradited from Romania to Virginia last month. "They came after me, a guy from the FBI, from the State Department," 44-year-old Marcel Lehel Lazar, who goes by the moniker "Guccifer," told Fox News during a jailhouse phone interview. He said the conversation was "80 minutes ... recorded," and he took his own notes. A government source confirmed that the hacker had a lot to say on the plane but

provided no other details. Lazar was flown to the U.S. to face separate cyber-crime charges. In addition to the apparent conversation with the FBI on the plane, Fox News has learned a meeting was expected as early as this week at the Alexandria, Va., detention center where he's being held involving Guccifer, the FBI, the U.S. attorney and the defendant's court-appointed lawyer. These officials have not commented on his clams or detention. An intelligence source close to the investigation, speaking with Fox News last month, questioned the timing of Lazar's extradition to the U.S., coming amid the Clinton email probe. As for what was discussed on that plane, Lazar said he told a State Department representative on the plane about "hot" data, some of which was hidden in Google drives, and other data that was too sensitive and deleted. The hacker, who offered no proof for his claims, said cryptically that he could not say more.

Lawmakers, advocates push to reveal extent of surveillance
Associated Press, Staff report, 2016 05 09
Washington - Even though the bulk collection of Americans' telephone records has ended, calls and emails are still being swept up by U.S. surveillance work targeting foreigners. Congress is making a renewed push to find out how many. Six Republicans and eight Democrats on the House Judiciary Committee have asked the nation's top intelligence official for the number of Americans' emails and phone calls collected under programs authorized by Section 702 of the Foreign Intelligence Surveillance Act. The programs target foreigners, but domestic communications sometimes are vacuumed up as well. They were first revealed to the public by **Edward Snowden**, who leaked files from the **National Security Agency.** "Surely the American public is entitled to some idea of how many of our communications are swept up by these programs," the committee members wrote in their April 22 letter to Director of National Intelligence James Clapper.

FBI Told Cops to Recreate Evidence From Secret Cell-Phone Trackers
The Intercept, Jenna McLaughlin, 2016 05 05
Washington - A recently disclosed document shows the FBI telling a local police department that the bureau's covert cell-phone tracking equipment is so secret that any evidence acquired through its use needs to be recreated in some other way before being introduced at trial. "Information obtained through the use of the equipment is FOR LEAD PURPOSES ONLY," FBI special agent James E. Finch wrote to Chief Bill Citty of the Oklahoma City Police Department. The official notice, dated September 2014, said such information "may not be used as primary evidence in any affidavits, hearings or trials. This equipment provides general location information about a cellular device, and your agency understands it is required to use additional and independent investigative means and methods, such as historical cellular analysis, that would be admissible at trial to corroborate information concerning the location of the target obtained through the use of this equipment." The document, obtained by nonprofit investigative journalism outlet Oklahoma Watch, pertains to the use of cell site simulators, or Stingrays -- surveillance technology that mimics a cellphone tower to trick cellphones into transmitting location data and other information, sometimes even the contents of calls.

After presiding over bin Laden raid, CIA chief in Pakistan came home convinced he was poisoned by ISI
Washington Post, Greg Miller, 2016 05 06
Washington - **Two months after Osama bin Laden was killed, the CIA's top operative in Pakistan was pulled out of the country in an abrupt move vaguely attributed to health concerns and his strained relationship with Islamabad**. In reality, the CIA station chief was so violently ill that he was often doubled over in pain, current and former U.S. officials said.

Trips out of the country for treatment proved futile. And the cause of his ailment was so mysterious, the officials said, that both he and the agency began to suspect that he had been poisoned. Mark Kelton retired from the CIA and his health has recovered after he had abdominal surgery. But agency officials continue to think that it is plausible -- if not provable -- that Kelton's sudden illness was somehow orchestrated by Pakistan's Inter- Services Intelligence agency, known as the ISI. Kelton, 59, declined multiple requests for an interview, but in a brief exchange by phone he said that the cause of his illness "was never clarified," and added that he was not the first to suspect that he had been poisoned. "The genesis for the thoughts about that didn't originate with me," he said. In the conversation, Kelton declined to answer questions about his illness or tenure in Pakistan. "I'd rather let that whole sad episode lie," he said. "I'm very, very proud of the people I worked with who did amazing things for their country at a very difficult time. When the true story is told, the country will be very proud of them." The CIA declined to comment. Pakistan dismissed the allegations against the ISI. "Obviously the story is fictional, not worthy of comment," said Pakistan Embassy spokesman Nadeem Hotiana. "We reject the insinuations implied in the allegations."

Spies Worry Candidate Trump Will Spill Secrets
The Daily Beast, Shane Harris, 2016 05 05
Washington **- After Donald Trump is formally chosen as the Republican presidential nominee, he'll be able to receive classified U.S. intelligence briefings, which could include some of the same sensitive information that President Obama is given in the Oval Office**. And that prospect has some spies sweating. Trump, who can't seem to dam his stream of consciousness on Twitter, and who has lately taken to spreading rumors and conspiracy theories on national television, has never been privy to national secrets. Nor has he ever demonstrated that he's capable of keeping them. "My concern with Trump will be that he inadvertently leaks, because as he speaks extemporaneously, he'll pull something out of his hat that he heard in a briefing and say it," said a former senior U.S. intelligence official who has participated in the process of briefing presidential candidates. "It's not an unreasonable concern that he'll talk publicly about what's supposed to stay in that room," said another former senior intelligence official. A currently serving U.S. official echoed some of those anxieties and wondered whether Trump would respect the discretion of the briefing and not use it to his advantage on the campaign trail.

NSA plan to trash employee complaint files raises concerns for some
Nextgov.com (US), Aliya Sternstein, 2016 05 05
Washington - **The National Security Agency plans to immediately discard records containing preliminary workplace complaints raised by employees. The files set to be destroyed are created by the NSA Ombudsman program, a low-profile office that resolves conflicts between personnel.** It is not the ombudsman's job to handle reported abuses of power, rather inspectors general and diversity offices deal with those issues. However, amid a legal battle about the potential improper disposal of whistleblower evidence, there are concerns that informal information reported by informants or victims of retaliation could be thrown out under the ombudsman policy. "Destroy immediately after case is closed," state new recordkeeping instructions for working case files produced by the NSA ombudsman.

Measuring change at the CIA
Foreign Policy, Stephen Slick, 2016 05 04
Essay - **This time next year, a new president will be reviewing recommendations from a transition team, and likely also the views of a new director or director-designate, on the state of affairs at the Central Intelligence Agency** -- including the impact of a major

reorganization initiated by the agency's current director, John Brennan. The new national security team will not lack for advice on this topic from serving officers, CIA alumni, congressional overseers, and the burgeoning intelligence commentariat. This advice will be well-intentioned in the main, but not universally well-informed. There is considerable skepticism in these communities that the changes underway will ultimately produce a more effective CIA. Such skepticism is rooted in a strong (and well-exercised) aversion to change at Langley, nostalgia for tradition-rich institutions that were unceremoniously dismembered, and sincere concern that some of the changes may actually hinder, rather than enhance, the agency's ability to deliver "timely, accurate, and insightful" intelligence to policymakers. **The CIA is an essential institution positioned at the heart of an intelligence community (IC) charged with anticipating, understanding, and often neutralizing threats to our national security.** It would be a mistake to reverse or suspend any of the reforms now underway at Langley without the benefit of a rigorous and objective assessment of how the new priorities, structures, and work processes are actually impacting the Agency's core missions: collecting intelligence from human sources (HUMINT), evaluating information from all sources, and shaping conditions abroad through covert actions. The objective evaluation of the performance of any intelligence organization is fraught, but such an exercise should be completed before the CIA workforce is subjected to the uncertainty and disruption of another makeover. Note: This essay was reviewed and approved by the CIA's Publication Review Board. The PRB requested removal of text that described a counterterrorism program previously acknowledged by the president and recent CIA directors.

How to evade the NSA: OpSec guide for journalists also used by terrorists
The Register (UK), Darren Pauli, 2016 05 04
London - Privacy guides meant for journalists are being re- purposed by terrorist groups, Trend Micro researchers say. The guides are designed to help hacks avoid surveillance by nation-states and well- resourced adversaries focusing on encryption, operational security, recommended and untrusted platforms. It is one finding of dozens from the report Dark Motives Online, which analyses the similarities and differences between terrorist and criminal communications. "... terrorists [are] adopting and distributing anonymising (sic) guides originally meant for activists and journalists ... evidently to teach new or uninitiated members ways to avoid being spied on," the researchers say. "Some of these guides even mention the National Security Agency and how to avoid surveillance." Trend Micro did not name the studied terror group but said it was listed as a designated group by at least seven nations. That limits choices to less than a dozen groups including Hezbollah; al-Qaeda; Islamic State; Al-Nusra Front; and the Kurdistan Workers' Party.

'Mirror Imaging' and America's Dangerous Middle East Illusions
Wall Street Journal, Henry A Crumpton, Allison Melia, 2016 05 04
Op-ed - Intelligence officers are taught to avoid "mirror imaging." That is, assuming your adversary shares your analytic reference points and thinks the way you do. Americans tend to ascribe to other countries the best of our own values: tolerance, equal opportunity, rule of law, freedoms of speech and religion, and separation of church and state. But many countries do not share these values. Two of them are among our most problematic foreign relationships: Saudi Arabia and Iran. These states, one friend and the other foe, promote ideologies that compete with America's vision of liberal institutions, secular democracy and world order. Yet instead of confronting their illiberal, repressive, and often reprehensible narratives, we attempt to reconcile their views with our own, giving them a free pass based on our own tolerance of religious differences. The problem is that in these states religion does not exist in a vacuum. On the contrary, their religion is their political ideology -- and a critical element of their foreign policy. Although Saudi Arabia, sometimes with U.S. support, has launched effective

counterterrorism operations against al Qaeda and ISIS, these efforts are shortchanged if the Saudi kingdom does not also address the underlying ideology that inspires ISIS attacks around the globe. And Riyadh, as custodian of Islam's holiest sites, is uniquely positioned to act. Americans' natural aversion to government involvement in religious matters should not become an excuse for U.S. failure to tackle this ideological challenge. The U.S. should redouble its efforts to counter Iranian terrorism -- with deadly force if necessary. Meanwhile, U.S. economic power continues to be a valuable tool. Even after the removal of some major sanctions as part of the nuclear agreement, Tehran has sought additional access to U.S. dollars to conduct international transactions and has called for the remaining sanctions to be lifted. Yet that should only happen if Iran ceases its violent, destabilizing behavior, which is unlikely under the current regime. Religious tolerance is one of our country's highest ideals. Americans are fortunate to live in a society that respects all religions. Yet we should never allow this inclination to skew our analyses of other nations' behavior. It is important that we see these states not as an image in the mirror, but as actors willing to use religion- based ideology in ways that undermine our interests. Note: Mr. Crumpton, a 24-year veteran of the CIA and former U.S. coordinator of counterterrorism, is the CEO of Crumpton Group LLC, where Ms. Melia, a former CIA analyst and director for Pakistan and Afghanistan on the White House National Security Council, is director of analysis.

CIA: Bin Laden's Takedown is of Historical Value
Asharq Al-Awsat, Mohammed Ali Saleh, 2016 05 04
Washington - The U.S. Central Intelligence Agency (CIA) spokesman Ryan Trapani, in the past few days, defended the agency's tweeted details posted in commemoration of five years marking the takedown of al-Qaeda founder Osama bin Laden. Speaking to ABC- a U.S. based television broadcasting company-, Trapani said that bin Laden's takedown stands to be a historical masterpiece of planning and execution going to the agency's portfolio. "On the fifth anniversary, it is appropriate to remember the day and honor all those who had a hand in this achievement," Trapani told ABC. Out of nowhere, a series of CIA tweets, on bin Laden's takedown flooded the agency's page. The first tweet mentioned that in tribute of the fifth year passing on the raid which killed bin Laden in Abbottabad, Pakistan, the CIA would post details on the event "as if it were happening today." Throughout the day, the agency tweeted non-stop.

DHS sweetens cyber workforce recruiting with new bonuses
Federal News Radio, Jared Serbu, 2016 05 04
Washington - In the intense competition to hire qualified cybersecurity professionals, the government's advantage has always been its appeal to a sense of mission, not necessarily large salaries. On the other hand, money helps too. **So the Department of Homeland Security is about to roll out a new series of incentive payments to lure cyber experts from the private sector and keep them in the civil service.** DHS began piloting the bonuses within its National Protection and Programs Directorate (NPPD) six months ago and is about to expand them across the rest of its headquarters elements. They provide an additional 20 to 25 percent on top of an employee's annual pay, depending on the certifications they've earned and the position they occupy, said Paul Beckman, the chief information security officer for DHS' headquarters.

NSA and CIA Double Their Warrantless Searches on Americans in Two Years
The Intercept, Jenna McLaughlin, 2016 05 03
Washington - **From 2013 to 2015, the NSA and CIA doubled the number of warrantless searches they conducted for Americans' data in a massive NSA database ostensibly collected for foreign intelligence purposes, according to a new intelligence community**

transparency report. The estimated number of search terms "concerning a known U.S. person" to get contents of communications within what is known as the 702 database was 4,672--more than double the 2013 figure. And that doesn't even include the number of FBI searches on that database. A recently released Foreign Intelligence Surveillance Court ruling confirmed that the FBI is allowed to run any number of searches it wants on that database, not only for national security probes but also to hunt for evidence of traditional crimes. No estimates have ever been released of how often that happens. Under Section 702 of the Foreign Intelligence Surveillance Act, the NSA collects hundreds of millions of digital communications at rest and in transit from the major internet backbones running in and out of the U.S., as well as from Google, Facebook, YouTube, and other companies, involving "targets" overseas. The Office of the Director of National Intelligence has said the practice of searching the database for American communications is not "unlawful" because the content is collected legitimately in the first place--and because there are protections against sharing Americans' identities unless it's absolutely necessary.

Obama Plan to Cut Refugee Screening Time Raises Concerns About Terrorism
Washington Free Beacon, Adam Kredo, 2016 05 04
Washington - An Obama administration plan to resettle a greater number of foreign refugees in the United States by expediting the screening process is drawing concern from Capitol Hill, where lawmakers are warning that the administration is not capable of properly screening these individuals for ties to terrorism. The Obama administration has committed to bring at least 10,000 Syrian refugees onto American soil in fiscal year 2016 by accelerating security screening procedures from 18-24 months to around three months, according to sources who spoke to the Washington Free Beacon. Obama administration officials told the Free Beacon that they remain committed to the plan, despite warnings from the FBI and other law enforcement officials who say the federal government is not equipped to properly vet these individuals within that timeframe. The administration is committed to moving forward this year with a plan to resettle 10,000 Syrian refugees and 85,000 refugees overall, officials said.

Top U.S. intel official: ISIS can stage Europe-style attacks in U.S.
CNN.com, Nicole Gaouette, 2016 05 04
Washington - ISIS has the capability to stage a Paris-style attack in the U.S. using local cells to strike in multiple locations and inflict dozens of casualties, according to the Obama administration's top U.S. intelligence official. "They do have that capacity," Director of National Intelligence James Clapper told CNN's Peter Bergen in an exclusive interviews on "AC 360" on terrorism, Osama bin Laden and al Qaeda's most virulent offshoot -- ISIS. "That's something we worry about a lot in the United States, that they could conjure up a raid like they did in Paris or Brussels," where March attacks on a train and at an airport left 32 dead and 300 people injured, Clapper said. The November Paris attacks killed at least 130. However, President Barack Obama and some of his other security advisors spoke of the threat in less stark terms and emphasized efforts to protect the U.S. Obama told Bergen that "we, here in the United States, face less of a threat than Europe" from ISIS. National Security Adviser Susan Rice said "whether or not" ISIS can attack the U.S., the administration would do "our utmost to try to prevent it." Still, Obama said, "The Paris-style attack, the Brussels style attack is the challenge that we're going to continue to face."

Foreign Intelligence Services Targeted 2008 Campaign, Officials Were Warned
The Intecept, Jenna McLaughlin, 2016 05 06
Washington - **The Intelligence Community evidently gave some incoming members of the**

Obama administration a star-spangled welcome briefing -- complete with a stern warning. In a newly disclosed document titled "Unlocking the Secrets: How to Use The Intelligence Community," intelligence officials told incoming officials that foreign intelligence services had been extensively spying on the 2008 political campaigns. "Foreign intelligence services have been tracking this election cycle like no other," the authors from the Office of the Director of National Intelligence wrote. On the campaign trail, the ODNI authors wrote, foreign spooks met with campaign staff and other sources, hacked into campaign data, and engaged in "perception management" more aggressive than traditional lobbying--though the lack of specifics make it's unclear what any of that really entails.

He's the FBI 's inside man; The agency's new No. 2 makes decisions , not headlines , as he prefers it
Los Angeles Times, Del Quentin Wilber, 2016 05 06
Washington - From his perch on the seventh floor of FBI headquarters, Andrew McCabe is one of the most powerful figures in U.S. law enforcement, but most Americans would be hard-pressed to pick him out of a lineup. Responsible for overseeing investigations of terrorists, spies and corrupt officials, as well as the sensitive inquiry into Hillary Clinton's use of a private email server, the longtime FBI agent toils mostly behind the scenes, and he likes it that way. "My focus is on the inside [of the FBI] and all the work we do that is not talked about in the newspaper, on CNN, on the Hill," McCabe, 48, said in his first interview since he was named FBI Director James B. Comey's second-in-command in January. Comey is "totally focused" on high-profile issues like the recent legal fight with Apple over an encrypted iPhone used by one of the San Bernardino killers and questions from members of Congress, McCabe said. "My focus is on the stuff we have done for 100 years and do every day that people never hear about," he added.

Navy 'Spy' Edward Lin Spilled No Secrets To Taiwan
The Daily Beast, Nancy A. Youssef, Shane Harris, 2016 05 06
Washington - A U.S. Navy sailor charged with espionage didn't provide military secrets to a foreign government, but rather to an FBI informant who was posing as a Taiwanese official, military officials revealed Thursday. The latest twist in the case against Lt. Cmdr. Edward Lin, 39, came as military officials allowed reporters to listen to a recording from a military pretrial hearing held on April 8. There, prosecutors alleged that Lin was the target of a sting operation that led to his arrest and two-day interrogation at the Honolulu International Airport last September. Prosecutors said that during questioning, Lin confessed to being a spy. Lin's job, working in and around military reconnaissance aircraft, gave him access to information about sensitive equipment that the U.S. uses to spy on its adversaries. Lin's attorney vigorously refuted the charges and said that his client had been denied his right to speak with a lawyer at the time he was arrested and questioned. The Pentagon Thursday played an 80-minute section from the pretrial hearing, known as an Article 32. But they left out at least a half hour that officials said was classified. The recording sheds new light on Lin's case, but it also raises several unanswered questions. And prosecutors offered no explanation of how Lin, who once spoke in uniform about fulfilling his dreams of becoming a U.S. citizen, had turned from a model sailor to a spy.

NSA reveals hundreds of bugs a year, says former official
San Francisco Chronicle, Sean Sposito, 2016 05 06
San Francisco - A retired technical director for the National Security Agency, Richard George, says that the NSA regularly disclosed more than a thousand software and hardware bugs a year to companies. That may make the agency a far more significant player

in patching the fraying digital fabric that secures our lives than has previously been understood. George's comments come as the technology industry and the government grapple with the question of how intelligence agencies and law enforcement disclose bugs they discover. From the 1990s until his retirement from the NSA in 2011, George said, he was responsible for disclosing serious bugs to private companies. "I imagine everybody had a similar process to the one that we had at NSA," he said. Regulations required a review board, he explained: "Anybody who finds a vulnerability in a product has to report it to that board, so that we can figure out how we are going to address it."

NSA Won't Say How Many Spies Have Child Porn
The Daily Beast, Shane Harris, 2016 05 06
Washington - Two senior U.S. intelligence officials said recently that defense and intelligence employees have an "unbelievable" amount of child pornography on their work computers and devices, and that child porn has been found on the systems of the National Security Agency, the country's biggest intelligence organization. But the NSA, which is responsible for keeping tabs on its own computers as well as military and intelligence agency networks, cannot say just how many time employees have been found to posesses or share child pornogrpany, **or how many times such cases have been referred to law enforcement for investigation and potential criminal prosecution**. An agency spokesperson was unable to provide The Daily Beast with statistics to elaborate on comments by Kemp Ensor, the NSA's director of security, who said at a public conference in Virginia on April 28 that he had seen child porn on agency systems. Despite the fact that NSA employees know they work inside the most powerful surveillance organization on the planet, it doesn't stop some from engaging in criminal behavior. "What people do [at work] is amazing," Ensor said. Privately, current and former intelligence officials told The Daily Beast that the NSA does know when employees are downloading, storing, or sharing graphic and illegal images. Downloading, purchasing, and disseminating child pornography is a crime. But NSA is probably not keeping track of the number of times child porn has been found, the current and former officials said--at least not in any form that it's willing to release publicly.

Once Donald Trump Is Nominee, He Is Likely to Get Intelligence Briefing
New York Times, Charlie Savage, 2016 05 06
Washington - The White House on Thursday said that it expected intelligence officials to provide a classified briefing to Donald J. Trump after the Republican Party formally nominates him for president at its convention in July, a tradition for major party nominees dating back to 1952. Asked whether President Obama was concerned about Mr. Trump's receiving classified information in light of the presumptive Republican nominee's reputation for making unfiltered comments, Josh Earnest, the White House press secretary, said the president would leave it to intelligence professionals to decide what to share with him. Mr. Trump said in an interview with The Washington Post this week that he was eager to start receiving regular classified intelligence briefings. But that overstates the information Mr. Trump will receive. After the party conventions and before the election, the major-party nominees for president and vice president receive only a one-time intelligence briefing about the state of the world. **Michael J. Morell, a former deputy C.I.A. director, who regularly briefed Mr. Obama before retiring in 2013, said the postconvention nominee briefing would last several hours**. The idea is to "get them to understand that they have now stepped into a bigger world" in which foreign allies, adversaries, and neutral parties are paying close attention to whatever they say, and that their words may have broad consequences, he said.

Trump will soon be getting briefings from U.S. spy agencies. It might not go well.
Washington Post, Greg Miller, 2016 05 06
Washington - Presumptive Republican presidential nominee Donald Trump told my colleague Robert Costa that he is eager to start meeting with U.S. intelligence officials for classified briefings on the nation's secrets. The feeling may not be mutual. The outlandish GOP candidate is not known for discretion or nuanced understanding of global security issues, let alone awareness of the widespread revulsion among U.S. intelligence officials over some of Trump's positions -- including his expressed admiration for Russian President Vladimir Putin and pledge to resume torturing terrorism suspects. Where should the U.S. intelligence community's first PowerPoint presentation for Trump begin? "It beggars the imagination," said former CIA director Michael V. Hayden, who was among those who briefed President Obama after the 2008 election. "Given that [Trump's] public persona seems to reflect a lack of understanding or care about global issues, how do you arrange these presentations to learn what are the true depths of his understanding?" "This is a person who doesn't seem to have much of a filter," said Aki Peritz, a former CIA analyst who contributed to the President's Daily Brief (PDB) -- the digest delivered each morning to the Oval Office. "The scary part is that nobody knows who he really is. Is he this blowhard demagogue we see on TV or is he really a sophisticated consumer of information that will keep this information close to his chest?"

Where the FBI's top cybercrime agents go after quitting the force
The Daily Dot, Patrick Howell O'Neill, 2016 05 05
Chicago - The FBI team that brought down Silk Road has a new home. After headline-grabbing investigations, arrests, and prosecutions on some of America's highest-profile cybercriminals, five of U.S. law enforcement's most prized cybercrime aces have all left government service for greener pastures--a titan consulting firm called Berkeley Research Group (BRG). BRG's newly hired gang of five includes former federal prosecutor Thomas Brown, as well as former FBI agents Christopher Tarbell, Thomas Kiernan, and Ilhwan Yum--names that punctuated many of the biggest cybercrime stories of the last decade. That group's 2013 bust of Silk Road, the first major Dark Net market where anyone could purchase drugs and other illicit goods and services, is famous enough. That story will be transformed into a 21st Century Fox movie soon--a fact BRG happily boasted about in its February press release announcing new hires.

Chilcot report on Iraq war to be published on 6 July
The Guardian (London), Ewen MacAskill, 2016 05 09
London - The long-awaited Chilcot inquiry into the invasion of Iraq is to be published on Wednesday 6 July, two weeks after the EU referendum. There had been concern that the report might be published in the weeks before the vote, distracting attention from the campaign. **Sir John Chilcot, head of the inquiry, wrote to the prime minister to say that the checking process by the intelligence services to ensure that nothing which might inadvertently endanger national security, such as the name of an agent, had been completed. Intelligence staff spent two weeks vetting the report.** The Chilcot inquiry said in spite of the vetting there had been no redactions in the text. Criticism is expected of intelligence chiefs for providing inaccurate information about Iraq's then president Saddam Hussein having weapons of mass destruction and of military chiefs' failure to stand up to the prime minister.

Don't vote for Brexit, US defence chiefs warn
London Times, Francis Elliott, Matt Chorley, 2016 05 10
London - Britain must not bank on its "special relationship" with the United States to compensate for losing global influence by leaving the EU, foreign and defence chiefs from every White House administration over the past 40 years have warned. In a letter to The Times, 13 former US secretaries of state and defence and national security advisers say that the country's "place and influence in the world would be diminished and Europe would be dangerously weakened" after a vote to leave in next month's referendum. Washington's intervention will inflame the argument over whether Britain would be safer or more vulnerable outside the EU, after David Cameron said yesterday that Brexit could shatter world peace. "In our globalised environment it is critical to have size and weight in order to be heard," **say the group of 13, which includes Ronald Reagan's secretary of state, George Shultz; the former CIA chief and defence secretary Leon Panetta; and Madeleine Albright, the first woman secretary of state. "**The special relationship between our countries would not compensate for the loss of influence and clout that the UK would suffer if it was no longer part of the EU, a union of 28 nations with 500 million inhabitants, which is the largest economic bloc in the world," they add. "This would be true in foreign policy, defence policy and international trade matters, and other areas where the EU is indeed a significant voice."

Ex MI5 chief accused of changing his mind on Brexit
Daily Mail (UK), James Slack, 2016 05 09
London - A former MI5 chief was dragged into a Brexit row last night amid claims he had changed his mind over whether Britain was safer inside the EU. No, 10 hailed an intervention from Jonathan Evans, along with ex-MI6 chief Sir John Sawers, in which the two men said in an article that leaving would hamper 'our ability to protect ourselves' from terrorists. The pair added that the UK benefited from sharing information with fellow EU countries and a vote for Out on June 23 could trigger instability on the continent. But Tory MP Julian Lewis, a former member of Westminster's Intelligence and Security Committee, said he had met Lord Evans in Westminster's Portcullis House less than a month ago - and been given a different story. Dr Lewis, who has known Lord Evans for many years and is now chairman of the Commons defence committee, questioned whether the Government machine was guilty of manipulation. He added: 'I was quite impressed by the fact that although he told me he was in favour of remaining in the EU, it would make no difference to our security. I am very surprised and rather disappointed to see this article has appeared. I find it rather difficult to believe he has changed his mind in such a short period of time.' However, in a statement last night, Lord Evans denied his views had changed since his meeting with Dr Lewis.

Now Experts Say Don't Change Your Password
Mail on Sunday, Martin Beckford, 2016 05 08
London **- It is one of the banes of modern life - you finally come up with a memorable yet secure password for your office computer, only to be told just a few months later that it has expired and you have to find a new one**. But now Britain's security services themselves have decreed that workers may be safer from hackers if they do not have to keep changing passwords. In a new briefing to Whitehall, power stations, banks and the public sector, cyber experts at **CESG** - the information security arm of intelligence agency **GCHQ** - concluded: 'It's one of those counter-intuitive security scenarios; the more often users are forced to change passwords, the greater the overall vulnerability to attack.' The advice continues: 'Most password policies insist that we have to keep changing them. And when forced to change one, the chances are that the new password will be similar to the old one. Attackers can exploit this... New passwords are also more likely to be forgotten, and this carries the productivity costs of

users being locked out... CESG now recommends organisations do not force regular password expiry.'

Row as ex-intelligence chiefs say EU membership protects UK security
BBC News, Staff Writer, 2016 05 08
London - **Leaving the EU would make the UK "less safe", a former intelligence services chief has warned. Former MI6 boss Sir John Sawers told the BBC's Andrew Marr that the UK would be shut out of decisions on the "crucial" issue of data sharing.** But Justice Secretary Michael Gove, who backs the campaign for the UK to leave the EU, said Sir John was "flat wrong". He told the programme many security experts did not think that "Brexit" would harm Britain. 'Wider stability' Security is the latest battleground in the run-up to the referendum on the UK's EU membership on 23 June. Sir John and ex-MI5 chief Lord Evans stepped into the debate with an article in the Sunday Times. Sir John told the BBC that he and Lord Evans, who led MI5 until three years ago, had waited to intervene until after Thursday's elections. He said: "The reason we would be less safe [if the UK voted to leave], is that we would be unable to take part in the decisions that frame the sharing of data, which is a crucial part of counter-terrorism and counter-cyber work that we do these days, and we would lose the abilities of thing like the European Arrest Warrant."

SAS snatch IS chiefs in secret Iraq raids
Daily Mail (UK), Chris Hughes, 2016 05 07
London - **British special forces are leading a secret Coalition mission to snatch Islamic State commanders before a major assault on Mosul in Iraq**. Since the operation began three weeks ago, three mid-ranking IS warlords have been seized in attacks headed by the SAS. Prisoners are being handed over to Kurdish and Iraqi security officials for interrogation. It is part of a plan to unnerve the enemy before an assault on the stricken city in the north. A senior source said: "There are a wide range of activities taking place around Mosul which allows our commanders to shape the dispositions of enemy forces prior to any engagement. "Seizing enemy commanders has always been a key driver in changing the way your opponent thinks, it will unsettle them and may force them to make mistakes. "From our point of view killing the enemy is not always the answer. "If we can get a commander to change sides, as we did in Afghanistan, this can have major influence on people inside Mosul and save lives." A source said: "The SAS are at the heart of this but it is important credit goes to the Iraqis to bolster their standing. " Sources say British security officials are barred from handling or taking part in any interrogations. **However, the Mirror understands officers from MI6 and MI5 are in the area to receive any new information.**

Spy chiefs say quitting EU is security risk
Sunday Times (UK), Richard Kerbaj, Tim Shipman, 2016 05 08
London - The former heads of MI5 and MI6 have warned that leaving the EU could undermine "our ability to protect ourselves" from terrorists. Baron Evans of Weardale, the former **director-general of MI5, and Sir John Sawers, the former head of MI6**, say Brexit could also lead to "**instability on the Continent**", compounding the current "economic difficulties, the migration crisis and a resurgent Russia". In an article for The Sunday Times, the former spy chiefs warn that a vote to leave could damage intelligence sharing because the EU would restrict surveillance powers if the UK were not in the union. They write: "Intelligence work today relies on the lawful and accountable use of large data-sets to reveal the associations and activities of terrorists and cyber-attackers. The terms on which we exchange data with other European countries are set by agreement within the EU. As an EU member, we shape the debate, we push for what we think is the right balance between security and privacy and we

benefit from the data that flows as a result." They conclude: "An agreement reached without us would probably be too restrictive for our needs . . . this could undermine our ability to protect ourselves." Sawers said that he and Evans had not co- ordinated their intervention with Downing Street: "We're not doing it at anybody's behest. We are completely politically neutral."

Downing Street accused of 'manipulating' spy chiefs after they warn against Brexit
The Telegraph (UK), Steven Swinford, 2016 05 08
London - David Cameron has been accused of "manipulating" the former head of MI5 into warning that Britain's national security would be put at risk by a Brexit. Lord Evans, a former director of MI5 and Sir John Sawers, a former head of MI6, said in a joint article that a Brexit would hamper 'our ability to protect ourselves from terrorists'. However Julian Lewis, the Conservative head of the defence select committee, said that Lord Evans had told him privately that leaving the EU would "make no difference" to national security. Speaking in a personal capacity he said: "I had a conversation very recently with one of the two and I was quite impressed by the fact that although he told me he was in favour of remaining in the EU, it would make no difference to our security. "I am very surprised and rather disappointed to see this article has appeared. I find it rather difficult to believe he has changed his mind in such a short period of time. I can only wonder if there's some sort of manipulation going on here."

Two Australians killed in US air strikes, including terrorist recruiter Neil Prakash
ABC (Australia), Andrew Greene, 2016 05 05
Canberra - The Islamic State group's most senior Australian recruiter Neil Prakash is killed in a US air strike on a terrorist stronghold in Iraq, while a separate strike in Syria kills the sister of the radicalised teen who shot dead police accountant Curtis Cheng in Sydney last year. Australia's most wanted terrorist Neil Prakash has been killed in a US air strike on the Islamic State (IS) stronghold of Mosul in northern Iraq. The ABC understands Prakash was among a gathering of IS operatives targeted on April 29, with the United States recently confirming his death and advising Australia. American authorities have also advised the Federal Government that Australian woman Shadi Jabar Khalil Mohammad was killed in a similar air strike near the Syrian city of Al Bab a fortnight ago. Mohammad was the sister of Farhad Mohammad, the teenager who . Prakash's death is considered "significant" by Australian and American authorities because of his highly prominent and influential role as a senior IS recruiter. He was believed to have left Melbourne for Syria in 2013, where he changed his name to Abu Khaled al-Cambodi, and was put on a US kill list.Attorney-General George Brandis and Defence Minister Marise Payne said in a statement that the pair were both active recruiters of foreign fighters on behalf of IS, and had been inspiring attacks against Western interests. **"The latest advice I have from ASIO as of this morning is they assess there are about 110 Australians engaged with ISIL in the Middle East as foreign fighters or otherwise engaged within the ISIL network," Senator Brandis told AM.**

Neil Prakash's death a significant blow to terror recruitment in Australia, Government says
ABC (Australia), Lexi Metherell, 2016 05 05
Canberra - The death of Neil Prakash -- Australia's most wanted terrorist -- is a significant blow to Islamic State's recruitment of Australians, the Federal Government says. The

Melbourne extremist had been a key player in inspiring violent terrorism in Australia. He was killed in a US airstrike in Iraq on Friday night. Rumours of Prakash's death first began in January, but it is now known that he was still alive up until last Friday, when the United States Government said it killed him in an American airstrike. Attorney-General George Brandis told Sky News that Australia cooperated with the US in relation to the identification and location of Prakash. Senator Brandis said the death was significant in the fight against terrorism on home soil and in frustrating Islamic State recruitment. "He was actively involved both in recruitment and in encouraging domestic terrorism in Australia," Mr Brandis said. "He was the principal Australian reaching back from the Middle East into Australia and in particular into terrorist networks in both Melbourne and Sydney." The US also confirmed it had killed the sister of Farhad Jabar, who killed police employee . Shadi Jabar Khalil Mohammad and her husband, who were IS members, died in an airstrike in al Bab, near Aleppo in Syria. Prakash was reportedly involved in foiled terror plots on last year's and this year's Anzac Day commemorations. **Senator Brandis said ASIO advised him that there were still 110 Australian foreign fighters in Iraq or Syria.** Mr West said it is not clear who would fill the void left by Prakash.

ASIO warns of cyber terror risks
The Australian, Cameron Stewart, 2016 05 04
Sydney - ASIO has warned Australia is losing the battle against cyber espionage as spy agencies yesterday received a fresh funding boost to combat both the growing cyber threat and the ongoing spectre of Islamic terrorism. The government will also step up its investment in countering violent extremism with an extra $5 million to set up community support programs to encourage early tip-offs about would-be Islamic extremists. **ASIO, which will receive an extra $24m in funding in 2016-17 on top of a series of major funding increases in recent years, has delivered a stark warning in the budget papers that the scope of espionage and cyber attacks is outstripping the ability to combat them**. "Clandestine foreign actors are causing harm to Australia through espionage, interference and cyber activity that seeks to undermine our political and economic sovereignty," ASIO said. "The gap is likely widening between the scale and scope of harm experienced to Australia's sovereignty, government systems, and commercial and intellectual property, and the ability of ASIO and partner agencies to successfully mitigate that harm." ASIO also warned the terrorism threat in Australia would continue to remain high and that it could provide no guarantee in the current climate that there would not be a terrorist attack here. "The counter-terrorism challenge Australia faces is underscored by events; since the national terrorism threat level was raised on 12 September, 2014, there have been three attacks and eight disruption operations in relation to imminent attack planning in Australia." The budget gives another funding increase to Australia's overseas spy agency ASIS to help in the struggle against Islamic State.

Big guns wheeled out to fight cyber crime
Adelaide Advertiser, Staff reporter, 2016 05 04
Adelaide - Nearly $200 million has been allocated in the Federal Budget to deliver a comprehensive cyber security strategy for Australia. The announcement, which was "vital to our economic and national security", builds on the $38 million announced in the National Innovation and Science Agenda. Over the next four years, the Federal Government will spend $194.9 million to implement the recommendations from Australia's **Cyber Security Review**. These included $51 million for the **Defence Department** to relocate the **Australian Cyber Security Centre**, and $11 million to identify cyber vulnerabilities in Commonwealth systems. The Australian Federal Police will receive $20.4 million and the Australian Crime Commission will get $16 million to increase its capabilities to fight cyber crime. The Education Department

will also receive a share of $3.5 million to open up to six academic centres of cyber security excellence.

New Zealand/Nouvelle-Zélande

$22m for cyber security
The Daily Post (New Zealand), Nicholas Jones, 2016 05 06
Wellington - Seven potentially significant cyber intrusions aimed at New Zealand organisations are being detected by a Government security agency every month. What organisations are protected by the **Government Communications Security Bureau's Cortex cyber security programme is secret, but significant economic targets and vital network utilities are likely to be included**. Cortex is mostly automated, with machines using information and patterns gleaned from previous attacks to scan data and systems for points of weakness and possible intrusions. Its existence was first revealed by Prime Minister John Key before the last election, ahead of Kim Dotcom's "moment of truth" event in Auckland. In a speech in Auckland yesterday, Communications Minister Amy Adams revealed more about the attacks that Cortex encounters. "In a typical month, the GCSB through Project Cortex detects seven potentially significant cyber intrusions affecting one or more substantial New Zealand organisations.

Panama Papers a cyber security warning - PM
Radio New Zealand News, Mohamed Hassan, 2016 05 05
Wellington - The Panama Papers leak is a warning to New Zealand businesses to protect themselves from cyber hacking, Prime Minister John Key says. Mr Key announced today a $22 million fund that will go towards setting up a national security agency aimed at protecting businesses and infrastructure from online attacks. The Computer Emergency Response Team (CERT) was first announced in December, and will be included in this year's budget. $20 million will go towards the agency's operating funds over the next four years, with $2.2 in new capital. It is expected to begin operating in early 2017. Speaking at the Cyber Security Summit in Auckland this morning, Mr Key said New Zealanders needed to start taking the threat of cyber attacks seriously. "This is real, it's happening, and there are people sitting out there who just want to make mischief, and want to get access to that information." He said hackers present a real threat to the government, to businesses and to NGOs. "If we're going to do our jobs properly, we better start realising that we've got to take this issue seriously." Mr Key said it wasn't just up to the government to take action, and directors and chief executives of businesses need to get on board. "We can't make you do that for your businesses." "But we are through the CERT, and through all of the other work that **GCSB** and the police and others do, quite willing to work with you, and help you, and provide the best technology that we can."

China's Anbot: future of law enforcement?

South China Morning Post, Stephen Chen, 2016 05 10
Beijing - bombs, making arrests and neutralising threats with an electric shock - robotic officer can do it all, but it's making rights watchers uneasy. China is developing a robotic security officer that can sniff out bombs, grab suspects with a mechanical clamp and deliver a jolt of electricity to neutralise threats. The military researchers behind the project say it will start patrolling public areas such as banks, airports and schools, although a human-rights watcher has questioned whether its ability to carry out commands with no questions asked will be abused. A prototype of "AnBot" - developed by the National University of Defence Technology in Changsha (長沙), Hunan (湖南) - was unveiled at a technology expo in Chongqing (重慶) last month. **"We are very, very interested in AnBot," said a senior official with the China Security Association, a trade organisation run by the Ministry of Public Security**. "It is difficult to gauge the size of the market for police robots at this early stage, but it could easily exceed 10 billion yuan [HK$11.97 billion]," the official said. If manufacturers could bring the price below 100,000 yuan per unit, it would "sell big", he said.

Int'l community calls for peaceful solution to South China Sea issue, opposes internationalization
Xinhua News Agency, Staff reporter, 2016 05 10
Beijing - Countries around the world have voiced their support for a peaceful negotiation on the South China Sea issue between the parties directly concerned, opposing its internationalization. Russian Foreign Minister Sergey Lavrov said recently that any disputes in the South China Sea should be resolved through dialogue and attempts to internationalize the issue must be stopped. "We believe that all countries involved in the disputes should follow the principles of non-use of force, and continue seeking mutually acceptable political and diplomatic solutions," Lavrov said in a joint interview with Chinese, Japanese and Mongolian media in Moscow. He urged external players to stop interfering in the negotiations among the parties directly involved. "I am convinced that they (attempts to internationalize the issue) are completely counterproductive," said Lavrov. "Only negotiations, which China and the ASEAN are pursuing, can bring the desired result, namely, mutually acceptable agreements." The core of the Beijing-Manila South China Sea dispute is a territorial one, caused by the illegal occupation of some of China's islands and reefs since the 1970s by the Philippines, and an issue of maritime delimitation.

ISIS claims female Russian spy infiltrated terror network
Fox News, Staff report, 2016 05 10
Washington - Her name was "Elvira," and her treachery cost several ISIS members their lives before the caliphate's spy hunters tracked her down and executed her, according to the latest issue of the Islamic State's Russian-language online magazine. The article in Istok, titled "Elvira Karaeva - Agent of the **Russian Special Services**," focuses on a woman whom ISIS in the Caucasus accused of being an agent of the **Russian intelligence services**. According to the piece, Karaeva worked as a spy for four years, during which she secretly passed along information on the jihadi groups in the Caucasus, including locations and photographs of ISIS fighters. The article notes that although Karaeva was questioned by ISIS's "investigative authorities," she was able to convince them of her innocence. But when the terror

network used a "cunning investigative maneuver," the woman confessed and was later executed by an ISIS member, according to the article.

Terrorists planning attacks on mass May 9 V-Day celebrations detained in Moscow
RT (Russia), Staff report, 2016 05 05
Moscow - A group of citizens from Central Asian countries has been detained by Russia's security agency, the FSB, on suspicion of planning massive terror attacks during Victory Day celebrations, at the behest of Syrian and Turkish terrorist leaders. "We have found a large quantity of weapons, explosives and other terrorist equipment," the Federal Security Service, known by the abbreviation FSB, said in a statement. "The suspects were planning to fire weapons into a crowd, during mass street celebrations on May 9," an FSB source told RIA news agency. The security agency said that the citizens of the former Soviet republics were based in Moscow and were planning to target the capital. A source inside the FSB told the Russian news portal life.ru that the detainees numbered 12, and were residents of a single apartment in suburban Moscow. Among them were nine men from Uzbekistan, one from Kirghizstan, and two Russians. Investigators found evidence of communication with terrorists from Syria and Turkey on their phones, as well as a library of extremist literature.

Two Turkish journalists sentenced after one survives assassination attempt
Washington Post, Erin Cunningham, 2016 05 07
Istanbul - A Turkish court sentenced two prominent journalists to five years in prison for "divulging state secrets" Friday in a high-profile case that has drawn international scrutiny - just hours after one of the reporters was nearly killed in an assassination attempt outside the courthouse in Istanbul. Can Dundar, editor in chief of Turkey's daily Cumhuriyet newspaper, escaped the attack by an armed assailant unscathed but was then handed the five-year sentence for publishing a report on the government's alleged smuggling of arms to Syrian rebels. His colleague, Ankara bureau chief Erdem Gul, was also convicted for his part in publishing the report. Dundar and Gul were acquitted of separate charges of espionage and conspiring to topple the government. The report, published in May 2015, was based on footage purporting to show Turkish intelligence facilitating weapons transfers to rebels across the border in Syria. The incident, which took place early in 2014, came to light after Turkish paramilitary and police forces halted trucks reportedly transporting the weapons. Rights groups have condemned the proceedings and urged Turkish authorities to drop the charges. The Turkey researcher for Human Rights Watch, Emma Sinclair- Webb, called the trial "monstrous" Friday. Media watchdog Reporters Without Borders blasted the case as "autocratic retribution" from Turkish President Recep Tayyip Erdogan, who was named as a complainant in the suit.

Les questions que pose l'affaire de cyberespionnage de RUAG
Le Temps, Lise Bailat, 2016 05 06
Berne - L'attaque a été longue, de haut niveau, menée depuis l'étranger, et elle a requis une classification secrète de la part du Conseil fédéral. L'entreprise d'armement et de systèmes de défense RUAG, qui appartient à 100% à la Confédération, a été infiltrée par un maliciel étranger de haut niveau pendant des mois. « D'après les premiers éléments disponibles, l'attaque de cyberespionnage menée contre RUAG a commencé en décembre 2014 », indique Renato Kalbermatten, porte-parole du Département fédéral de la défense. Et le logiciel espion utilisé semble si sophistiqué qu'il est impossible d'affirmer aujourd'hui avec 100%

de certitude que l'attaque a pris fin. Selon nos informations, c'est un service de renseignement étranger qui a découvert le pot aux roses et transmis l'information aux espions suisses. En janvier dernier, **le Service de renseignement de la Confédération (SRC) a alerté RUAG ainsi que le Ministère public de la Confédération (MPC),** qui a ouvert une enquête pénale contre inconnu le 25 janvier. Dans le même temps, une tentative d'attaque informatique a eu lieu contre le **Département fédéral de la défense (DDPS**), département de tutelle de RUAG, révélait mercredi le Tages-Anzeiger. Elle a pu être déjouée, selon le conseiller fédéral Guy Parmelin.

Un diplomate succède à un autre à la DGSE
Le Figaro, 2016 05 06
Le directeur de la stratégie de la DGSE, Christophe Bigot, devient ambassadeur de France au Sénégal. Ancien ambassadeur en Israël, il retrouve les chemins de la diplomatie, après un passage par les services de renseignements. C'est un autre diplomate, Martin Briens, directeur de cabinet adjoint de Laurent Fabius au Quai d'Orsay, qui prend la direction de la stratégie à la « Piscine » , surnom donné au service de renseignements extérieurs. (article complet)

La Suisse reste démunie face aux cyberattaques
La Tribune de Genève, Florent Quiquerez, 2016 05 06
Berne - «Les risques de cyberespionnage sont totalement sous- estimés en Suisse. » Pour Corina Eichenberger (PLR/AG), qui préside la Commission de la sécurité du National, l'affaire d'espionnage chez RUAG - important groupe de défense et d'aéronautique - est la preuve qu'il y a toujours plus d'attaques contre les sociétés privées et les administrations publiques. L'affaire a été en partie révélée par leTages-Anzeiger. Le Service de renseignement a informé le Conseil fédéral en début d'année de la présence de logiciels espions sur les ordinateurs de RUAG, entreprise en mains de la Confédération. Le Ministère public a ouvert une enquête pénale. Tout cela a de quoi mettre en état d'alerte le Département de la défense (DDPS): la Confédération partage de nombreuses interfaces informatiques avec RUAG. «On ne peut pas encore dire s'il y a eu des dégâts. L'analyse est toujours en cours», explique Renato Kalbermatten, porte-parole du DDPS, qui ne commente pas non plus l'information selon laquelle l'attaque viendrait de Russie. Ce cyberespionnage, qui aurait commencé en décembre 2014, occupe le DDPS depuis des mois. Quatorze mesures ont été prises pour éliminer les risques de vol de données. Lesquelles? «Top secret. » Le Conseil fédéral annonce aussi la création d'une task force pour examiner si l'informatique de l'administration a subi des dommages et renforcer la sécurité le cas échéant.

Russian Spies Are Reportedly Trying to Stop NATO and Sweden From Hooking Up
Vice News, Ryan Faith, 2016 05 03
New York - The Swedish state security police, or SAPO, is getting pretty worried about a dramatic uptick in Russian espionage activity in Sweden, according to leaks in the Swedish press. And SAPO is hinting that it's **related to the fact that Sweden is gearing up for a May 25 parliamentary debate about ratifying a "Host Nation Support Agreement" that would make it easier for NATO troops to use Swedish territory, ports, and bases in exercises or emergencies.** SAPO sources have told the Swedish press that "Russia has tried to influence the debate on Sweden's security policy choices through public statements," and that this overt activity has been matched by an increase in covert activity. Although SAPO is shying away from making lots of specific statements -- charges of espionage are extremely politically sensitive -- it has indicated that it's tracked people affiliated with Russian intelligence services participating in conferences aimed at blocking further Swedish cooperation with NATO.

This is part of a longer-term increase in the aggressiveness of Russian posturing toward Sweden.On March 19, two days after SAPO released its unclassified annual report, which detailed Russian psychological and disinformation campaigns, Swedish media were hit with a massive cyberattack; the "distributed denial of service" attack blocked the sites of seven major Swedish newspapers. This year's SAPO report also asserts that members of **Russia's civilian overseas intelligence service (SVR) and military intelligence service (GRU) have been active in carrying out an aggressive reconnaissance of civilian and military infrastructure**. Last year's report identified 10 SVR and GRU officers among the 37 Russian diplomats in Sweden; this year's report notes an increase in contacts with Swedish radical right-wing organizations.

Le djihadiste breton préparait un attentat
Ouest-France, Jean-Yves Hinault et Thibaud Grasland, 2016 05 04
Côtes-d'Armor - Originaire des Côtes-d'Armor, il préparait l'attaque du commissariat d'Orléans. Il a été interpellé en décembre dans l'Indre. En 2014, Cüneyt Kolankaya tente de rejoindre la Syrie pour y mener le djihad. Il est arrêté le 8 décembre de la même année par la police turque à la frontière syrienne et expulsé vers la France, où il est entendu par l'antiterrorisme. **Le 13 février 2015, âgé de 19 ans, il est interpellé par la Direction générale de la sécurité intérieure (DGSI) chez sa mère à Saint- Martin-des-Prés (Côtes-d'Armor).** Après sa présentation au pôle antiterroriste de Paris, il est mis en examen pour association de malfaiteurs en relation avec une entreprise terroriste et écroué. « Oussama » arrêté chez son père Dans l'émission Spécial investigation , diffusée lundi soir sur Canal + , on retrouve la trace du jeune homme quelques semaines après. Le journaliste, qui s'est infiltré dans un réseau de djihadistes, révèle que Cüneyt Kolankaya, qui se fait appeler « Oussama » , est resté en détention provisoire cinq mois à la prison de Fresnes, puis est retourné vivre chez son père dans l'Indre.

Dutch children as young as nine being trained in ISIS camps: Intelligence Chief
Newsweek, Jack Moore, 2016 05 03
New York - Dozens of children from the Netherlands are now residing in the Islamic State militant group's caliphate, with some as young as nine training in combat, the country's top intelligence official said on Monday. **Rob Bertholee**, the head of the **Dutch intelligence service,** told a Berlin conference on Monday that 250 Dutch nationals have fled the country to fight for the ultraconservative ISIS cause overseas in both Iraq and Syria. This figure includes some 60 women and 70 children. Bertholee said that Dutch authorities have information that shows children aged nine are being used for military purposes by the group.

Former Mossad chief: State Comptroller report on Gaza conflict 'is very severe'
Jerusalem Post, Yaakov Lappin, 2016 05 10
Jerusalem - Former Mossad Director Maj.-Gen. (res.). Danny Yatom said on Tuesday that a draft State Comptroller report, which examines Israeli political and military decision-making in the lead-up to Operation Protective Edge in Gaza in 2014, is a "very severe" document that points to serious failings. Yatom, who spoke during the launch of his new book, Labyrinth of Power, said, "Hamas dragged Israel into Operation Protective Edge, and on our side, we did not understand this." He added that Israel began dealing with tunnels "after a

big delay, and only after terrorists infiltrated Israel through a tunnel." Last week, a security source told The Jerusalem Post that the Comptroller's report is not as severe as has been described in other reports. He added that "nothing was hidden from cabinet ministers. They were exposed to all the details. This was the case before Operation Protection Edge, and certainly after it."

Shin Bet Head: Palestinian Security Forces Respond to Israeli Tips and Thwart Attacks
Haaretz, Barak Ravid, 2016 05 05
Jerusalem - **Head of the Shin Bet security service Yoram Cohen told the cabinet on Wednesday that when Palestinian security forces receive Israeli intelligence information, they act on it to thwart attacks.** Ministers said Cohen sung the praises of security coordination with the Palestinians, but also said that most of the terrorism thwarted in the West Bank was as a result of Israeli operations. During the meeting, Education Minister Naftali Bennett and Internal Security Minister Gilad Erdan argued with Cohen about talks held with the Palestinians about reducing IDF operations in Area A. Cohen replied that he wasn't specifically addressing the extent of attacks that were thwarted by the Palestinians because the issue had to be viewed in a more complex manner.

Accused Israeli spy released
Jerusalem Post, Ariel Ben Solomon, 2016 05 04
Jerusalem **- A Druse from Israel detained by Syria for allegedly spying for Israel has been released after almost 13 years in jail, according to Israeli media reports.** Berjas Awidat, 47, from Majdal Shams in the Golan, left Israel to study in Syria and disappeared after he was taken in Damascus by the Palestine division of the secret police, said Druse Deputy Regional Cooperation Minister Ayoub Kara. "No one knew what had happened to him until a high level Israeli government official intervened in the case," he said. An important figure in the Israeli government handled the Berjas case for many years and twice succeeded in sending Berjas's mother to Syria, explained Kara. Events in Syria, the situation in the prisons and pressure from relatives and, especially, various entities connected to the case in Israel, brought the situation to the attention of Syrian authorities, which decided to release him in order to decrease tensions with the Druse community, Kara said.

Accused Israeli spy released
Jerusalem Post, Ariel Ben Solomon, 2016 05 04
Jerusalem - **A Druse from Israel detained by Syria for allegedly spying for Israel has been released after almost 13 years in jail, according to Israeli media reports**. Berjas Awidat, 47, from Majdal Shams in the Golan, left Israel to study in Syria and disappeared after he was taken in Damascus by the Palestine division of the secret police, said Druse Deputy Regional Cooperation Minister Ayoub Kara. “No one knew what had happened to him until a high level Israeli government official intervened in the case,” he said. An important figure in the Israeli government handled the Berjas case for many years and twice succeeded in sending Berjas’s mother to Syria, explained Kara. Events in Syria, the situation in the prisons and pressure from relatives and, especially, various entities connected to the case in Israel, brought the situation to the attention of Syrian authorities, which decided to release him in order to decrease tensions with the Druse community, Kara said.

Afghan forces facing terrorists supported by neighboring intelligence: Stanikzai
Khaama Press, 2016 05 10
Kabul - **The former acting minister of defense and acting head of the Afghan intelligence Masoom Stanikzai said the Afghan forces are facing threats posed by terrorists who are receiving support from the neighboring intelligence**. Stanikzai was speaking during a gathering in Kabul to introduce the acting NDS chief and acting Minister of Defense. Without elaborating further on which neighboring country's intelligence agency is supporting the terrorists fighting in Afghanistan, Stanikzai said the NDS operatives are always on alert to foil conspiracies against the national stability of the country. Stanikzai called the NDS operatives a 'Silent Force' who are always prepared to fight against the foreign conspiracies. He promised President Mohammad Ashraf Ghani and CEO Abdullah Abdullah and the Afghan people to use all efforts to protect the country against the threats posed by the terror groups.

Military probe underway over alleged N. Korean hacking into navy vessel builder
Yonhap News Agency, Staff reporter, 2016 05 10
Seoul - South Korea's military counter-espionage service has opened an investigation into an alleged North Korean hacking attack on Hanjin Heavy Industries & Construction Co. a key builder of naval warships, officials said Tuesday. "After identifying signs that Hanjin Heavy Industries may have been hacked on April 20, the Defense Security Command is currently leading a security investigation into whether any military secrets were leaked and whether North Korea was involved," official sources said. "North Korea could have been involved, but we are not absolutely sure at this stage," he added. Hanjin is a major naval warship builder, having built the latest frigates and amphibious assault vessels including the ROKS Dokdo (LPH-6111). (Full report)

India building 160-strong lab network to tackle bio-terrorism
Times of India, Chethan Kumar, 2016 05 10
Bengaluru - At a time when even the US has been slammed by experts for failing in dealing with bio-terrorism, India's efforts in creating a network of labs to fight it has taken off well with 35 labs established in the first phase having completed collection of data from more than 1,00,000 patients on various kinds of viruses, bacteria and parasites. In about 18 months, a breakout in even a remote part of India will be known to New Delhi and other relevant centres regardless of the casualty count. The labs will detect and map all known viruses and other agents, while also doing research on unknown agents. National and international reports, including a WikiLeaks cable made public five years ago have pointed to the threats bio-terrorism - - use of infectious biological agents such as smallpox or anthrax virus as weapons of terrorism -- has posed to India. India, according to reports in the public domain, has been on the bio-terrorism radar since the mid-2000s.

Ghani names picks for acting defence minister, spymaster
Pajhwok Afghan News, Azizullah Hamdard, 2016 05 06
Kabul - After a flurry of calls from the parliament, President Ashraf Ghani has nominated his picks for defence minister and spy chief. In two separate decrees issued last night, the president nominated Maj. Gen. Abdullah Khan as acting defence minister. According to a statement from the Presidential Palace, Gen. Khan replaces Masoom Stanikzai the current acting defence minister. Stanikzai has been picked as presidential advisor and acting head of

the **National Directorate of Security (NDS**) - the Afghan spy service. Following his nomination by the president, Stanikzai won a vote of confidence from the parliament on June 6, 2015. Last month, the Wolesi Jirga speaker asked the president to nominate his picks for spymaster and minister of defence.

Afghan forces facing terrorists supported by neighboring intelligence: Stanikzai
Khaama Press, 2016 05 10
Kabul - **The former acting minister of defense and acting head of the Afghan intelligence Masoom Stanikzai said the Afghan forces are facing threats posed by terrorists who are receiving support from the neighboring intelligence**. Stanikzai was speaking during a gathering in Kabul to introduce the acting NDS chief and acting Minister of Defense. **Without elaborating further on which neighboring country's intelligence agency is supporting the terrorists fighting in Afghanistan, Stanikzai said the NDS operatives are always on alert to foil conspiracies against the national stability of the country**. Stanikzai called the NDS operatives a 'Silent Force' who are always prepared to fight against the foreign conspiracies. He promised President Mohammad Ashraf Ghani and CEO Abdullah Abdullah and the Afghan people to use all efforts to protect the country against the threats posed by the terror groups.

Haqqani network terrorist arrested in Kabul before targeting parliament
Khaama Press, 2016 05 09
Kabul - A Haqqani network terrorists have been arrested by the Afghan intelligence operatives before the suspects manage to target the parliament building. The **National Directorate of Security (NDS)** said the terrorist was looking to attack the parliament building with BM12 rockets. No further details regarding the exact location where the terrorist was arrested by the intelligence operatives. This comes as the Afghan intelligence operatives foiled attack plots by the notorious Haqqani terrorist network in Kabul city by arresting 3 suspects in connection to the attack plots on Wednesday. The intelligence operatives foiled at least four large attack plots by Haqqani terrorist network in capital Kabul last month. Haqqani network was formed in the late 1970s by Jalaluddin Haqqani. The group is allied with al-Qaida and the Afghan Taliban and cooperates with other terrorist organizations in the region.

CIA director fears Pakistan poisoned him
Daily Telegraph (Australia), Andrew Marszal, 2016 05 07
Washington - **The CIA director who oversaw the raid that killed Osama bin Laden suspected that he was poisoned by Pakistani spies weeks later, according to a report**. Mark Kelton, the agency's Pakistan chief in 2011, was pulled out of Islamabad suffering from a violent stomach illness two months after the CIA-led raid on bin Laden's compound. CIA officials "continue to think that it is plausible - if not provable" that Mr Kelton's illness was the work of Pakistani spy chiefs, and launched an investigation into the matter at the time, the Washington Post claimed yesterday. **It said the "mysterious" nature of the illness, combined with allegations that Pakistani intelligence had been "linked to numerous plots against journalists, diplomats and other perceived adversaries", prompted CIA suspicions**. Relations deteriorated sharply just 48 hours after Mr Kelton's arrival in Pakistan when Raymond Davis, a CIA contractor, shot dead two Pakistani men in Lahore in February 2011. By the time of the bin Laden raid in May, Mr Kelton was barely speaking with Pakistan's spy chief Ahmed Shuja Pa, CIA officials told the newspaper. No evidence was ever found that Mr Kelton had been targeted, nor that Pakistani authorities had poisoned any US official serving in the country. Mr Kelton, 59, now retired from the CIA, said only that it had not been him who first raised the possibility that he had been poisoned.

Indonesia, Malaysia, Philippines sign maritime security declaration
Jakarta Post, Marguerite Afra Sapiie, 2016 05 06
Jakarta - **Foreign ministers and defense force chiefs from Indonesia, Malaysia and the Philippines signed a joint declaration on maritime security on Thursday, calling on all governments in the region to increase efforts to tackle marine threats**. The leaders called for intensified maritime security following the recent kidnapping of seamen by the Southern Philippines-based Abu Sayyaf militant group, and other armed sea robberies, that have endangered national security in the region. In the joint declaration obtained by The Jakarta Post, the officials agreed to conduct patrols and to render immediate assistance for the safety of all vessels and crew in the three countries' respective maritime areas. The governments will also establish a joint focal point to facilitate the timely sharing of information and intelligence, according to the statement released by the Foreign Ministry.

Ghani names picks for acting defence minister, spymaster
Pajhwok Afghan News, Azizullah Hamdard, 2016 05 06
Kabul - After a flurry of calls from the parliament, President Ashraf Ghani has nominated his picks for defence minister and spy chief. In two separate decrees issued last night, the president nominated Maj. **Gen. Abdullah Khan** as acting defence minister. According to a statement from the Presidential Palace, Gen. Khan replaces Masoom Stanikzai the current acting defence minister. Stanikzai has been picked as presidential advisor and acting head of the **National Directorate of Security (NDS) - the Afghan spy service**. Following his nomination by the president, Stanikzai won a vote of confidence from the parliament on June 6, 2015. Last month, the Wolesi Jirga speaker asked the president to nominate his picks for spymaster and minister of defence.

Ghani assigns Stanikzai as acting NDS chief, Abdullah Khan acting defense minister
Khaama Press, 2016 05 06
Kabul - President Mohammad Ashraf Ghani has appointed Mohammad Masoom Stanikzai as the acting Intelligence, National Directorate of Security (NDS) Chief. According to a statement by the Office of the President, General Abdullah has been assigned for the post of acting minister of defense. The statement further added that Stanikzai will also serve as Ministerial Adviser to President Ghani. Abdullah Khan was previously serving as the Chief of Staff in Afghan National Army Chief of Staff office before he was assigned as acting minister of defense. This comes as President Ghani promised to introduce the nominees for Minister of Defense and National Directorate of Security (NDS) Chief during a gathering in the Afghan parliament late last month. Ghani made the promise during a gathering in the Afghan parliament while announcing the government's stance regarding the peace efforts and fight against corruption.

S. spy chief visits Seoul over N. Korean issues
Yonhap News Agency, Staff reporter, 2016 05 05
Seoul - The top U.S. intelligence official visited South Korea this week and met with top Seoul officials to discuss North Korean issues, officials here said Thursday. Director of **National Intelligence James Clapper arrived in Seoul on Wednesday as North Korea is set to hold its key party congress on Friday, amid lingering concern the country will conduct its fifth nuclear test.** "Clapper visited the Ministry of Defense building yesterday morning in an unofficial visit and met with Defense Minister Han Min-koo," a government official said on the condition of anonymity. The two discussed the possibility of another North Korean nuclear test and other security issues, the official said, without elaborating. Clapper also met with other ranking security and military officials, as well as Gen. Vincent Brooks, the new commander of

U.S. Forces Korea, they said. "The visit is believed to have been made in time for the appointment of Gen. Vincent Brooks," said another government official, noting that they are believed to have exchanged intelligence on recent developments in the North's nuclear activities.

Would-be suicide bomber, accomplice held in Takhar, claims NDS
Pajhwok Afghan News, Pajhwok Report, 2016 05 05
Kabul - A would-be suicide bomber and an accomplice guiding him have been detained in northern Takhar province, the National Directorate of Security (NDS) said on Thursday. A statement from the intelligence agency identified the would-be bomber as Mohammad Ayub and his guide as Mohammad Ibrahim. They were arrested during an operation in Ishkamish district. The suspects planned to carry out a suicide attack in the province, but they were caught before reaching their target, the spy service said, adding the detainees were involved in attacks in Takhar, Baghlan and Kunduz. (Full Report).

Something seriously wrong with counterterror security: Pathankot terror attack
Times of India, Staff Report, 2016 05 04
New Delhi - A Parliamentary panel has rapped the government for its failure to prevent the Pathankot terror attack, saying "something is seriously wrong" in the country's counterterror establishment and the airbase's security was not robust. The panel said it has failed to understand that in spite of terror alert sounded well in advance, how terrorists managed to breach the high-security airbase and subsequently carried out the strike. The committee said it is constrained to note that despite concrete and credible intelligence inputs received from abducted and released SP of Pathankot and his friend and through interception of communication between terrorists and their handlers by the terrorists disclosing that they were planning an attack on a defence establishment, the security agencies were so ill-prepared to anticipate threats in time and counter them swiftly and decisively.

Intelligence Official: Islamic State Growing in Somalia
Voice of America, Harun Maruf, 2016 05 05
Washington - Pro-Islamic State Somali militants have grown in numbers and are receiving financial and military support from Yemen, a top intelligence official told the VOA Somali Service. Abdi Hassan Hussein, the former Director of the U.S.-backed Puntland Intelligence Agency (PIA) said when the pro-IS Somali faction was founded in October last year it had about 20-30 men, but has since set up training camps and recruited more fighters. He said the group's fighters now number between 100-150 fighters. "They have graduated their first units and they have received their military supplies," he said. Hussein led PIA until a year ago when he was replaced. His main job was to detect militant threats and plan counter-terrorism operations. He said Islamic State has welcomed its Somalia branch and has started delivering supplies through their affiliate faction in Yemen. "They received military supplies from Yemen - weapons, uniform, ISIS sent trainers who inspected their bases, and they have started sending financial support," he said. "The weapons' shipment was delivered by sea from Mukallah city in Hadramouth, it has arrived from the Red Sea coast of Somalia in February and March this year." Hussein said the government and African Union troops can't win against al-Shabab or IS factions militarily, and urged them to confront the groups ideologically. "The youth they are

sending are assets, but misguided; they need to be saved from harming the people and harming themselves," he said.

Cuban Five caused no harm to US as they fought against terrorism - Russian lawmaker
TASS World Service, 2016 05 10
Moscow - The activities of the so-called Cuban Five - a group of five Cuban intelligence officers, did not cause any harm to the United States, as were aimed against the terrorist threat, first vice-speaker of the Russian State Duma lower house of parliament, first deputy chairman of the Central Committee of the Communist Party of Russia (CPRF) Ivan Melnikov said on Tuesday at a meeting in Moscow with the Cuban antiterrorists heroes. The five arrived in Moscow on Sunday, May 8 to attend a military parade celebrating Russia's victory over fascism in Moscow"s Red Square on May 9. They were expected to meet with Russian Foreign Minister Sergey Lavrov, parliamentarians, members of the Cuba solidarity movement and state officials. "Now there is much talk in different parts of the world that terrorism has become a major threat to peace. This is true, but only, as always, the Americans apply double standards to all issues, as well as to this issue," he said. "Your activities in the US territory caused absolutely no damage to the US national interests", Melnikov said, adding that members of the Cuban Five were "real antiterrorist fighters." "You were engaged in preventing those terrorist attacks that were aimed against your country, and did this successfully", the State Duma official said.

Leader opposition party in Venezuela assassinated
Fox News Latino, Staff Writer, 2016 05 08
Caracas - **Venezuelan politician German Mavare, leader of the opposition UNT party, died Friday after being shot in the head, an assassination that occurred in the western state of Lara, his organization said.** "The board of the UNT expresses its deepest sorrow for the slaying of colleague German Mavare. We demand justice and an end to violence," was the message posted on the Twitter account of the UNT party, headed by jailed ex- presidential candidate and former governor of Zulia state, Manuel Rosales. The mayor of Iribarren in Lara state, Alfredo Ramos, said on his Twitter account minutes after the incident occurred before dawn Friday: "German Mavare, of the popular urbanization of Carucieña, a tireless fighter for social causes, has just been hit by a bullet in the head." For his part, Luis Florido, an opposition lawmaker of the Voluntad Popular party, said on Twitter: "German Mavare died. A red bullet ended his life. Politics today is high risk. We demand an investigation of the case #NoMoreViolence #Lara".

Canada

Security officials gather in B.C.
The Province (Vancouver), Rob Shaw, 2016 06 20
Vancouver - **Top police, intelligence and security officials from Canada and the United States will gather at the B.C. legislature this week to discuss how best to protect politicians inside capital buildings from the growing threat of terrorist attacks**. The conference was organized by sergeant-at-arms Gary Lenz, head of security at the B.C. legislature, who said a discussion is needed on the rapidly changing pace of investigating, responding to and preventing threats against politicians, staffers and tourists inside capital buildings across North America. "The world has changed, security has changed and the people in charge of life, property and security need to also change," said Lenz. adding the goal is to develop standards, policies and expectations for sergeants-at-arms, as well as breaking down silos among agencies that monitor and respond to threats. **More than 43 officials plan to attend, including the western director of Canada's spy agency, the Canadian Security Intelligence Service, and RCMP officers who head up the Parliamentary Protective Service and Integrated National Security Enforcement Teams**. Security officials from legislatures in Scotland, Texas, Virginia and Hawaii are also attending, as well as the first chairman of the New York State Senate Homeland Security Committee, who helped craft modern-day security legislation after the terrorist attacks at the Twin Towers in 2001.

Goodale hopes new spy oversight committee will be 'spontaneous' with reports
CBC.CA, Catharine Tunney, 2016 06 18
Ottawa - Public Safety Minister **Ralph Goodale says he hopes Canada's new spy watchdog committee will file multiple public reports about its findings and concerns about the country's covert security and intelligence activities.** "The law says a minimum once per year, but I would hope the committee would send a report whenever they felt it was necessary," he told Chris Hall in an interview on CBC Radio's The House. On Thursday the federal government introduced new legislation to create a joint oversight committee with robust powers to scrutinize national security matters.. When questioned if a nine people would be enough for the sweeping monitoring he's promised, Goodale pointed out there are already oversight bodies in place including the **Security Intelligence Review Committee that oversees CSIS, and the Civilian Review and Complaints Commission for the RCMP.**

Security supercommittee to report to prime minister
Globe and Mail, Daniel Leblanc, 2016 06 17
Ottawa - A **group of nine MPs and senators will receive extraordinary powers to delve into Canada's national-security secrets**, although questions remain about the government's right to restrict its access to documents or its ability to raise its concerns in public. As promised in last year's election, the Liberal government tabled legislation to create a national security and intelligence committee of parliamentarians to provide oversight of all 17 federal agencies involved in security issues. While composed of parliamentarians, the new committee will report to the prime minister, unlike traditional parliamentary committees. As such, the new committee's annual and special reports will be vetted by the government before they are released to prevent the disclosure of any classified information, which stands to constrain the body's ability to raise red flags with the public. **The committee will have a "broad mandate," Public Safety Minister Ralph Goodale insisted at a news conference**. The seven MPs and two senators will be able to review "any activity" carried out by national- security agencies and "any matter

relating to national security or intelligence," according to Bill C-22. However, the government will be able to constrain certain investigations as ministers will have the right to refuse to provide information that "would be injurious to national security." **The committee will be able to monitor the work of the Canadian Security Intelligence Service, but will be prevented from looking at continuing RCMP criminal investigations or delve into "ongoing defence intelligence activities supporting military operations."**

Spy watchdog mandate covers 'any operation'
Ottawa Citizen, Ian Macleod, 2016 06 17
Ottawa - **Sweeping powers to scrutinize "any issue, any activity, any operation" will be granted to a new committee of parliamentarians to watch over federal spying and other clandestine security and intelligence activities,** the government has announced. The long-promised **Bill C-22**, tabled in the Commons Thursday, proposes the creation of an unprecedented "national security and intelligence committee of parliamentarians" to hold to greater account the nation's two chief spy services and at least 15 other departments and agencies with national security responsibilities. The move fulfils a major Liberal election promise to increase parliamentary scrutiny of national security operations to offset the expansive and controversial counterterrorism powers under the **Anti-terrorism Act of 2015, formerly Bill C-51**, to investigate, detain, arrest, silence or otherwise thwart individuals suspected as threats to the security of Canada.. "They are going to have the ability to look at any issue, any activity, any operation, any document in the government of Canada that relates to security and intelligence matters," Public Safety Minister **Ralph Goodale** told reporters after the bill's unveiling. Current review of the national security apparatus and the handling of public complaints is now siloed within three small watchdog agencies, led by the **Security Intelligence Review Committee** (SIRC), which conducts afterthe-fact reviews of the operations of **CSIS**.

Liberals want to stop MPs from saying too much
Toronto Star Online, Tonda MacCharles, 2016 06 16
Ottawa - **A bill to establish a long-promised parliamentary committee to review Canada's national security agencies will make it a criminal offence for MPs to blab what they learn**, says Public Safety Minister **Ralph Goodale**. It is already an offence under the Security of Information Act for government officials to disclose security and intelligence information and for any person to make unauthorized disclosures, but Goodale suggested there will be additional precautions taken in the act. "These MPs will be undertaking a very serious responsibility," he told reporters. "They'll have to meet certain, very specific security standards. They'll have to swear an oath with regard to the information they obtain. And violation of that oath is a criminal offence and a breach of trust. So the consequences for illegally improperly divulging information that is contrary to the national security of Canada is a serious, criminal offence." The proposed law Goodale will introduce Thursday in Parliament will fulfill a Liberal promise to give **elected MPs the ability to oversee the activities of agencies like the RCMP, the spy agency CSIS, the electronic signals intelligence agency CSE, and border guards at the CBSA.** It is not yet clear whether the Liberal government will allow MPs to oversee in real time the activities and operations of national security agencies, or whether they will operate more as the civilian-led watchdog of CSIS now does -- conducting after-the-fact review of those activities.

Frontières - Ottawa donnera plus d'informations aux Américains... et à l'assurance-emploi
Le Devoir, Marie Vastel, 2016 06 16
Ottawa - **Le Canada traquera bientôt les entrées et sorties de tous ses citoyens à la frontière américaine et refilera ces informations à Washington**. Le tout, sans baliser davantage le partage de ces renseignements. Ce qui fait bondir une fois de plus les groupes de

défense des droits civils. Mais le gouvernement Trudeau modifie en outre ses lois pour partager ces données avec ses propres ministères afin de déceler ceux qui fraudent ses programmes sociaux. Justin Trudeau avait annoncé, de passage à Washington ce printemps, qu'il élargirait bientôt le partage d'informations entre le Canada et les États-Unis. Les données biographiques -- nom, sexe, date de naissance, nationalité, et autres informations figurant sur le passeport -- des ressortissants étrangers et des résidents permanents étaient déjà récoltées à la frontière depuis cinq ans. Elles le seront aussi pour les citoyens des deux pays qui traversent par voie terrestre. Surprise, cependant, dans le projet de loi déposé par le ministre de la Sécurité publique, **Ralph Goodale : l'Agence des services frontaliers pourra également partager ces données avec le ministère de l'Emploi et du Développement social si l'information peut être utile à l'application de la Loi sur l'assurance-emploi ou de celle sur la sécurité de la vieillesse**.

New bill would allow border guards to collect biographic data on those leaving Canada
CBC News, Staff reporter, 2016 06 16
Ottawa - The federal government plans to introduce **a bill today that would allow border guards to collect biographic information from everyone leaving Canada**. The move will implement the final stages of the entry-exit agreement Canada signed under a joint border initiative with the U.S. in 2011. Public Safety Minister **Ralph Goodale** is holding a news conference after question period today. CBCNews.ca is carrying the news conference live at 3:20 p.m. ET. The legislation proposed by Goodale, **titled "An Act to amend the Customs Act,"** is one of three public safety bills the Liberal government plans to introduce this week. A bill on pre-clearance for people crossing the border is expected tomorrow. Addressing reporters in Ottawa, Goodale said **the biographical information collected would not go beyond what Canadians might find on the second page of their passport**: Name, nationality, date of birth, gender and issuing authority of the passport. The **Canada Border Services Agency** currently collects biographical information from everyone entering Canada but does not track when and where a person leaves Canada. This bill will close the gap and provide the federal government with a way to better track who is entering and leaving the country.

Canadians not so eager to weaken our country's anti-terrorism legislation anymore
National Post, John Ivison, 2016 06 15
Column: In the general election campaign, the Liberals were vocal about repealing the "problematic elements" of the Conservative government's anti-terror legislation. In the wake of the carnage in Paris last November, and now Orlando, **it is fair to say there is much less enthusiasm to overturn many of its provisions, particularly those that allow the Canadian Security Intelligence Service to disrupt potential terrorist activity. Ralph Goodale, the public safety minister, will introduce a bill creating an all-party committee of parliamentarians to provide oversight to the expanded national security apparatus before the House rises this summer**, as the Ottawa Citizen's Ian MacLeod reported earlier this month. The government will also review all appeals by Canadians to the no-fly list and create a counter- radicalization office to work in vulnerable communities, as promised in the election platform. Goodale has further said he intends to engage in public consultations on the entire national security framework over the summer, to look at areas where the current legislation might be improved. But, in the wake of ISIL-inspired outrages in Paris and Orlando, there does not seem to be an appetite to roll back the substantive parts of the bill that allow CSIS to use loosely defined disruptive "measures," or attempt to raise the threshold for preventative detention. The reason for that is simple. **When he appeared before parliamentary committees in the spring, CSIS director Michel Coulombe said the powers are being used and have been successful in disrupting terror attacks. "For every terror attack that takes place in Canada and abroad, many more are disrupted," he told the Senate defence**

committee in March. "Threat mitigation measures" have been used "less than two dozen times" in the previous six months, he said. When C-51 was introduced, many civil rights advocates were concerned it would impact adversely on constitutionally protected rights.

FBI no-fly list revealed: 81,000 names, but fewer than 1,000 are Americans
Washington Times, Stephen Dinan, 2016 06 21
Washington - The **FBI's no-fly list contains about 81,000 names, but fewer than 1,000 of those are "U.S. persons,"** a top lawmaker revealed Monday, giving the outlines of the secretive program on the floor of the Senate. Another list maintained by the FBI, dubbed the "TSA selectee list" because it triggers higher scrutiny but doesn't ban flying, has some 28,000 records, of which fewer than 1,700 are U.S. persons, Sen. Dianne Feinstein said as she argued for denying gun sales to those who appear on the lists, in the wake of the Orlando terrorist shooting. Democrats say those lists and a broader list, the **Terrorist Screening Database**, with about 1 million names, should be used to deny potential terrorists lethal weapons. Mrs. Feinstein has proposed banning those who appear on any of the lists from being able to clear a background check enabling them to purchase a firearm. Republicans argue the lists are too broad, and are riddled with errors that, if followed, would deny law-abiding Americans their Second Amendment rights without due process of law.

Former El Paso FBI chief to lead US Border Patrol (Canada)
El Paso Times, Cindy Ramirez, 2016 06 21
El Paso - An **FBI veteran** who once led the El Paso division **has been named to head the U.S. Border Patrol,** bringing in an outsider to run an agency traditionally led by agents who rise through the ranks. **Mark Morgan**, who briefly led the internal affairs department at the Border Patrol's parent agency, has been chosen to oversee a multibillion-dollar annual budget and about **20,000 agents who patrol the nation's land borders with Canada and Mexico** and its maritime boundaries, the Associated Press reported. "It is my great privilege and honor to be selected to serve with the men and women of the U.S. Border Patrol and to lead this great organization," Morgan said in a statement issued by the U.S. Customs and Border Protection, which oversees the agency.

U.S. Spies: Israeli Agent Jonathan Pollard Could Spill More Secrets--Even After 30 Years Behind Bars
The Daily Beast, Shane Harris, 2016 06 21
Washington - **Jonathan Pollard, the former U.S. intelligence analyst turned spy for Israel, wants the American government to ease up on the conditions of his parole**. In legal briefs, he has argued that Washington should stop monitoring his personal computer and online activities and not force him to wear a personal GPS device that tracks Pollard's movements in New York, where he has been living since his release from federal prison last year. To which the U.S. intelligence community has essentially replied, "Oh, hell no." **In a series of declarations filed late Friday with the U.S. Parole Commission, senior U.S. intelligence officials forcefully argued that Pollard still poses a risk to national security because if left unchecked, he could divulge U.S. secrets**--and even old ones could do harm. "Some of the sources and methods used to develop some of the intelligence exposed by Mr. Pollard not only remain classified but are still in use by the Intelligence Community today," Jennifer L. Hudson, a

senior official in the **Office of the Director of National Intelligence**, said in a written statement. One former official who worked on the damage assessment after Pollard's espionage was discovered said that he was driven not by patriotism for Israel, but by the need to pay for his high-spending lifestyle and drug habit. "It was all about money, and he put most of it up his nose.

Inside the Pentagon's secretive preparations for a 'cyber 9/11'
Army Times, Andrew Tilghman, 2016 06 21
Suffolk - A fictitious scenario was laid out for nearly 1,000 military, government and private sector personnel here at **this year's Cyber Guard exercise**, the nation's largest test of its network defenses. Conducted over nine days in June, the event offered a disturbing look at the type of catastrophe that could unfold during what the government's top officials call "cyber 9/11." "For us, it's not a question of ifit will happen but when," said **Coast Guard Rear Adm. Kevin Lunday, U.S. Cyber Command's director of training.** "The more relevant question is: When it does [happen], will we as a Department of Defense, will we as a nation and with our allies, be ready for it?"

FBI chief Comey stakes out unusually public profile on biggest issues
USA Today, Kevin Johnson, 2016 06 20
Washington - **When President Obama named James Comey to succeed FBI Director Robert Mueller, the popular nominee acknowledged the long shadow cast by the man who in the previous 12 years had led the bureau longer than anyone except J. Edgar Hoover**. "I must be out of my mind to be following Bob Mueller," Comey said in the 2013 White House Rose Garden ceremony. "I don't know if I can fill those shoes, but I know that, however I do, I will be standing truly on the shoulders of a giant." Indeed, Mueller's tenure was widely credited with the post-9/11 transformation of the FBI from a largely reactive law enforcement institution to an intelligence-driven agency bent on preventing new terror strikes. And he did it by shunning the spotlight at virtually every opportunity. By contrast, **Comey, 55, has staked out a public profile that couldn't be more different than his predecessor and the traditional confines of the office itself**. "I've known Jim for a quarter century," said Chuck Rosenberg, director of the Drug Enforcement Administration who also served as Comey's first chief of staff at the FBI. "When he feels like he has something to say, he does so only after careful judgment. And while it may seem like an unusual role for an FBI director, it's not a reflex action. It has nothing to do with self promotion or aggrandizement."

Amid gun scrutiny, government's growing watch lists are in sharper focus
Washington Post, Jerry Markon, 2016 06 18
Washington - The **push by congressional Democrats to bar suspected terrorists from acquiring guns and explosives has focused renewed attention on the government's secretive terrorist watch lists,** which have grown exponentially since the 9/11 attacks and triggered widespread concern among civil liberties groups. Since the mass shooting in a gay nightclub in Orlando on Sunday, Democrats have endorsed various measures to get weapons out of the hands of people on the lists. The Senate is expected to vote Monday on a series of competing gun-control measures that will highlight the continuing partisan divide over the issue. The Orlando shooter, Omar Mateen, had been on the FBI's terrorist watch list but was removed in 2014. His was one of approximately 800,000 names in that database, the most prominent of at least seven overlapping watch lists maintained by at least four federal agencies. The system has grown so large and complex that **Sen. Bob Corker (R- Tenn.), the chairman of the Senate Foreign Relations Committee, said this week that the Senate will vote "with almost no one understanding how these lists are put together**, how they're adjudicated,

how you get off of them." He added: "The terror watch list is not what people think it is . . . and there's 11 different lists."

CIA: Militants Still Able to Stage Attacks
Wall Street Journal, Damian Paletta, Alan Cullison, 2016 06 17
Washington - A **two-year campaign by the U.S. and other countries to defeat Islamic State has failed to disrupt its capability to carry out terrorist attacks, Central Intelligence Agency Director John Brennan saidThursday**. Airstrikes and efforts to cut off its access to cash have been in place since mid-2014, but the group has continued to adjust its strategy to continue operating -- and influencing others. Although the terror group has lost territory in Iraq and Syria, it has still been able to direct or inspire terror attacks in Europe, the Middle East, and the U.S. "The group's foreign branches and global networks can help preserve its capability for terrorism regardless of events in Iraq and Syria," Mr. Brennan said. "In fact, as the pressure mounts on [Islamic State], we judge that it will intensify its global terror campaign to maintain its dominance of the global terrorism agenda."

CIA chief outlines 'blinking red lights' for White House hopefuls
Politico, Ellen Mitchell, 2016 06 16
Washington - The **CIA director told Congress Thursday that cyberthreats, North Korea's nuclear program, and instability across the Middle East and Africa are the top issues he would highlight when briefing President Barack Obama's potential successors on the world's "blinking red lights."** Both Donald Trump and Hillary Clinton are expected to receive classified briefings from intelligence agencies once they officially become the Republican and Democratic presidential nominees, as expected, next month. "Terrorism is going to continue to plague us, and that's related to the cyber issue and how we're going to make sure that FBI and NSA and CIA and others are going to be able to do their jobs to protect this country," **John Brennan** told members of the Senate Select Committee on Intelligence. He added that the whoever is elected in November "needs to use all four years" to take on cyber.

CIA drone strikes plummet in shift to Pentagon
Washington Post, Greg Miller, 2016 06 17
Washington - The **pace of the CIA's drone campaign has plunged this year as part of a renewed push by the Obama administration to shift responsibility for lethal counterterrorism operations to the Pentagon,** current and former U.S. officials said. The agency has carried out at most seven strikes in 2016, putting the spy service on course to take fewer shots from remotely piloted aircraft than in any year since 2007, two years before President Obama took office and made the agency's drone program a pillar of his counterterrorism approach. U.S. officials said several factors have contributed to the sharp drop in the number of strikes, including the staggering depletion of al-Qaeda's ranks in Pakistan, where in 2010 the agency launched 118 attacks. By comparison, the CIA has fired missiles from remotely piloted aircraft only twice this year. But the decline also has been driven by White House decisions to curtail the CIA's lethal role in Yemen and restrict it from even flying armed drones over Syria - instead handing the unambiguous lead for such operations to the U.S. military's elite **Joint Special Operations Command (JSOC**). Officials at the CIA and the White House declined to comment.

FBI Should Crack Smartphones Themselves, Says Cybersecurity Expert
Popular Science, Coby McDonald, 2016 06 17
New York - **When the FBI asked Apple to help crack the San Bernardino shooter's iPhone, the agency was wading into dangerous waters**. That's according to **an essay by Susan Landau, Professor of Cybersecurity Policy at Worcester Polytechnic Institute**, published

today in the journal Science . Landau, who worked as a privacy analyst for Google, writes that the FBI's approach was shortsighted and risked undermining smartphone protections for users across the board while inviting exploitation of the resulting security weaknesses by bad guys. The real problem, Landau says, was the way the FBI wanted Apple to crack the phone. The agency had ordered Apple to create a special update that would disable a security feature normally causing the phone to shut down after ten failed password attempts. If the use of updates to hack smartphones were to become routine, it could lead to misuse by bad actors, she argues. "Some neglect in the process or the collaboration of a rogue employee would make it easy for false requests to be slipped into the update queue." And consumers might wonder if new updates might actually be surveillance tools. If distrust leads users to avoid updates it "would have devastating security effects," she writes.

Former CIA Chief: Trump's Conspiracy Theory About ISIS Is Nonsense
Politico, Michael Morell, 2016 06 17
Comment - **Presumptive GOP presidential nominee Donald Trump, seeking to make the case following the Orlando shootings that the Obama administration was somehow sympathetic to terrorists, resurrected an old conspiracy theory Thursday about the Islamic State**, one that has no place in our public discourse. In a tweet, Trump pointed his followers to an article about the 2012 memo titled "Hillary Clinton Received Secret Memo Stating Obama Admin 'Support' for ISIS." This is, of course, quite a charge against President Obama and his administration at a time when Clinton was still serving as secretary of state. The problem with the charge is that it is simply not true. I know this, since in **my role as deputy director and acting director of the CIA, I participated in nearly every meeting in the Situation Room at the time of the supposed memo regarding the deteriorating situation in Syria**. These included deputies meetings chaired by then-Deputy National Security Adviser Denis McDonough; principals meetings chaired by then- National Security Adviser Tom Donilon; and National Security Council meetings chaired by the president.

House votes down surveillance reform effort
The Hill, Katie Bo Williams, 2016 06 16
Washington - **House lawmakers on Thursday voted down language that would have closed what critics call the "backdoor search loophole" in current surveillance law**. The amendment to the annual defense appropriations bill failed 198-222. Intelligence Committee Republicans had lobbied against the proposed edit in the days leading up to the vote, petitioning colleagues in a Thursday letter to "give our Intelligence Community all of the authorities it needs to detect and stop terrorist attacks."

In Declassified Transcripts, Details of C.I.A. Torture
New York Times, Charlie Savage, 2016 06 16
Washington - After the **Central Intelligence Agency transferred Abu Zubaydah to the American military prison at Guantánamo Bay, Cuba, and he was brought before a panel of officers for a hearing in March 2007, he described in broken English how he had been tortured in the agency's black-site prisons**. He said his body had shaken when he stood for hours, naked and shackled in a cold room and unable to shift his weight to an injured leg. He spoke of his humiliation at having to relieve himself in a bucket in front of other people, "like an animal." And he described being waterboarded until he stopped breathing and required resuscitation. The government disclosed the accounts this week in response to a Freedom of Information Act lawsuit brought by the American Civil Liberties Union, which provided the documents to The New York Times.

Pentagon Unleashes Cyber Effort to Counter Militants on Battlefield
Voice of America, Carla Babb, 2016 06 16
Washington - The **Pentagon has launched a new cyber task force to counter the Islamic State group,** and officials say it is creating advantages both in cyberspace and on the battlefield. The task force, **JTF-Ares**, was developed in May and is in its "initial operation phase," U.S. Cyber Command spokesman Joe Holstead said. The military has carried out several cyber offensive operations against IS militants, which experts say have produced many coalition successes in the last few months. "There's no bang, and there's no explosion, but it does give you a military advantage," said James Lewis of the Center for Strategic and International Studies.

CIA chief: ISIS working to send operatives to the West
Associated Press, Staff report, 2016 06 16
Washington - **CIA Director John Brennan will tell Congress on Thursday that Islamic State militants are training and attempting to deploy operatives for further attacks on the West and will rely more on guerrilla- style tactics to compensate for their territorial losses**. In remarks prepared for the Senate Intelligence Committee, Brennan says IS has been working to build an apparatus to direct and inspire attacks against its foreign enemies, as in the recent attacks in Paris and Brussels -- ones the CIA believes were directed by IS leaders. "ISIL has a large cadre of Western fighters who could potentially serve as operatives for attacks in the West," Brennan said, using another acronym for the group. He said IS probably is working to smuggle them into countries, perhaps among refugee flows or through legitimate means of travel. Brennan also noted the group's call for followers to conduct so-called lone-wolf attacks in their home countries.

Homeland Security Chief: Gun Control 'Part and Parcel' of Agency Mission
Wall Street Journal, Julian Routh, 2016 06 15
Washington - **Homeland Security Secretary Jeh Johnson said Tuesday that gun control is "critical" to public safety and should be part of his agency's mission to protect Americans from "homegrown" terrorism.** In what he said were his first public comments on the issue, Mr. Johnson told CBS News that the government must "minimize" the opportunities for terrorists to obtain guns in the U.S. "We have to face the fact that meaningful, responsible gun control has to be part of homeland security as well, given the prospect of homegrown, home born bound extremism in this country," Mr. Johnson said. "We've seen this now with Orlando and San Bernardino.

Newly released CIA files expose grim details of agency interrogation program
Washington Post, Multiple reporters, 2016 06 15
Washington - The **CIA released dozens of previously classified documents Tuesday that expose disturbing new details of the agency's treatment of terrorism suspects after the Sept. 11, 2001, attacks,** including one who died in Afghanistan in 2002 after being doused with water and chained to a concrete floor as temperatures plunged below freezing. The files include granular descriptions of the inner workings of the CIA's "black site" prisons, messages sent to CIA headquarters from field officers who expressed deep misgivings with how detainees were being treated and secret memos raising objections to the roles played by doctors and psychologists in the administration of treatment later condemned as torture. But the collection also includes documents that were drafted by senior CIA officials to defend the interrogation program as it came under growing scrutiny, including a lengthy memo asserting that the use of often brutal methods had saved thousands of civilian lives.

EU referendum: Poll reveals third of Leave voters believe MI5 conspiring with Government to stop Brexit
The Independent (UK), Ashley Cowburn, 2016 06 21
London - **Nearly a third of Leave voters believe Britain's intelligence agency MI5 is in cahoots with the Government to stop Britain leaving the European Union**, according to a new poll. The poll, by YouGov for LBC, also found 28 per cent of all voters believe Thursday's referendum is rigged. A total of 64 per cent of Ukip supporters thought it was likely the referendum would be rigged, compared with just 16 per cent from the party who thought such an idea was "probably false". In total, 21 per cent of those surveyed believed MI5 was working with the UK government to try and stop Britain leaving the EU. Around 40 per cent said this was "probably false" while 39 per cent opted for "don't know".

Remain in EU, say former UK security and intelligence chiefs
The Guardian (London), Richard Norton-Taylor, 2016 06 21
London - Economists can argue forever - or neverendum, as the saying goes now. What is extraordinary is the breadth and depth of the arguments over the pros and cons of EU membership - even entering the realm of spooks. **Former security and intelligence chiefs (who make it clear they are speaking for serving officers) are warning that leaving the EU would hinder their work protecting Britain**. It is as if Brexiteers, including some senior ministers, are dismissing offhand **warnings from MI5 and MI6.** "I do know", said Nigel Inkster, a former director of MI6, "that the intelligence community places enormous value on exchanges" with intelligence agencies of other EU countries, notably over information on suspected terrorists or violent extremists. In the event of Brexit, "I do know the intelligence community would be concerned", he stressed. Existing EU agreements on sharing datesets would have to be renegotiated on a bilateral basis, he said.

Police chief urges companies to step up terror response training
Sunday Times (UK), Mark Macaskill, 2016 06 19
London - **One of Scotland's most senior police officers is urging employers to give staff anti-terrorism training under plans to boost Britain's preparedness for an atrocity**. Up to 1m civilians a year are to be trained in how to help prevent -- and in the worstcase scenario, react to -- a terror attack on British soil. The move signals a step change in the training of civilians, which until now has focused on those working in "high-risk" venues such as stadiums, shopping centres and airports. Under **Project Griffin**, about 100,000 people a year receive anti-terrorism training, but it is hoped to increase this to 1m a year with the launch of a self-help anti-terror manual. The guide aims to help civilians to understand the threat from terrorism, to empower them to recognise and report suspicious activity, and teach them what to do if they are caught up in a terrorist incident. "While being prepared and knowing what to do is vital, it is equally important that as many people as possible who work in busy places are aware of the threat and are better equipped to recognise and report suspicious activity," said **Chief Inspector Ronnie Megaughin, deputy director of the Scottish Business Resilience Centre**.

Local anti-terrorism advisers will provide briefings to trainers from companies and organisations, who will be able to feed the information back to colleagues.

I am a former MI6 chief and a lifelong patriot. Here's why I'm voting Remain
London Daily Telegraph, John Sawyers, 2016 06 17
Comment - I've spent my professional life batting for Britain. **As Chief of MI6, I led a service devoted to defending Britain from attack** . When I was Ambassador at the UN and in Egypt I worked exclusively for British interests. I've always helped implement the policies of the government of the day. But the motivation was to serve our country. Unlike my parents and grandparents, I've been privileged to live my life in an era of peace in Europe. I want the same for my children and grandchildren. The EU helped stabilise continental Europe. France and Germany are reconciled and are now committed partners. Newly democratic countries in the south and east of Europe strove to be part of the EU as it was an anchor point for democracy and the rule of law. Today, however, I am worried by the turn that politics in Europe is taking. Extremist pressures are returning, with echoes of the Thirties. **If Britain leaving causes the EU to crumble , where are the brakes to stop Europe sliding backwards to extremes of Left and Right, inviting renewed conflict ? We would inevitably be drawn in to try to sort it out. We can't pass that on to the next generation. We must defend ourselves against terrorists.** Terror networks operate across borders, and so must we if we are to stop them. The EU provides a valuable legal framework for sharing information and data - crucial tools in the modern era.

Inside the GCHQ doughnut, code breakers face up to our encrypted future
i News (UK), Gordon Corera, 2016 06 16
London - **If you journey beneath GCHQ's "Doughnut", you find yourself in a cavernous computer hall, stretching to 10,000 square metres. Ear protectors are required for visitors to hush what sounds like a constant electronic waterfall** - and the exact names of some of the computers are secret, as is their processing power. Bletchley Park's great innovation while cracking the Nazis' Enigma Code during the Second World War was the melding of human ingenuity with the kind of processing power that only a computer could offer. That remains the model for today's codebreakers. **Inside the "Doughnut", the mathematical heirs to Alan Turing sit in front of screens displaying ones and zeros rather than the pads of paper with letters that made up the Enigma code.** But it is the same task of understanding a system and its weaknesses. "My job is a combination of maths and computer programming and just being crafty at problem-solving," a female twenty- something mathematician explains. "You know why it is important. And that is what spurs you on."

Snowden Disclosure Prompts Backlash in Scotland
The Intercept, Ryan Gallagher, 2016 06 16
Washington - Top **government officials in Scotland are under pressure to explain their knowledge of a secretive police surveillance unit that was exposed in documents leaked by National Security Agency whistleblower Edward Snowden**. On Tuesday, cabinet secretary for justice Michael Matheson was grilled in the country's parliament about the so-called Scottish Recording Centre and its previously undisclosed involvement in covert surveillance operations. As The Intercept revealed last week, the Recording Centre is one of several domestic organizations within **the United Kingdom involved in a top-secret program named MILKWHITE**, which has provided law enforcement agencies with access to "bulk" internet data intercepted by the British eavesdropping agency Government Communications Headquarters, or GCHQ. Prior to the disclosure, few in Scotland knew the Recording Centre even existed -- much less that it has been tapping into GCHQ's troves of data. In recent days,

several Scottish media outlets have picked up the issue, increasing pressure on the government.

AFP report leaves unanswered questions on top secret intelligence leak
Sydney Morning Herald, Deborah Snow, 2016 06 18
Canberra - **Independent Tasmanian MP Andrew Wilkie has strongly rejected what he claims is offensive and unfounded "innuendo" levelled against him in a 12-year old Australian Federal Police report into the leaking of an intelligence document on the Iraq War to conservative columnist Andrew Bolt** in 2003. Mr Bolt, a supporter of the Howard government, used the document to undermine the credibility of Mr Wilkie, who by then had left his **job as an intelligence analyst with the top secret Office of National Assessments and become a vocal public critic of the war**. The AFP report, released on Friday after a freedom of information request by Labor, is highly critical of the way the bureaucracy handled Mr Wilkie's highly classified report, which he produced in late 2002 on the eve of the Iraq War. Federal investigators say 84 copies were distributed around the government between December 2002 and September 2003. But only seven of the receiving agencies external to ONA had "handled the receipt, distribution and return of the document in accordance with the ONA handling guidelines."Despite this, the AFP says, "we are prepared to accept only two copies of the report cannot be reasonably be accounted for". One was a copy which went to a since disbanded Defence Department branch.

Hundreds of cases on grid of ASIO
The Australian, Paul Maley, 2016 06 15
Sydney - **There is no such thing as a terrorist watch list, at least not in Australia. Instead, ASIO operates what it calls a "grid" -- a framework for determining the level of surveillance and investigation it applies to any of the hundreds of Islamic radicals who at any one time are of security interest to the agency**. ASIO does not say how many suspected extremists are on the grid. However, the domestic intelligence agency told The Australian yesterday it had more than 400 "high-priority" counter- terrorism investigations on its books. That's more than double the number of serious investigations ASIO was conducting in 2014, - before Islamic State declared its caliphate in Syria and Iraq, an event sources say supercharged extremist sentiment in Australia. ASIO has also said there are about 190 Australians actively supporting Islamic State in some way, although they would almost certainly form part of the 400-odd people being "watched" on the agency's grid. The grid is organised into concentric circles, with subjects moving from the centre, where scrutiny is at its most intense, towards the periphery, where the level of surveillance is gradually scaled down.

New Zealand / Nouvelle-Zélande

NZ military in US for cyber terrorist attack exercise
New Zealand Herald, Staff Writer, 2016 06 19
Wellington - **New Zealand military personnel have jetted into the US for a major cyber terrorist attack exercise alongside other countries of the "Five Eyes" intelligence-**

gathering network. The 16-strong **New Zealand Defence Force (NZDF)** team is joining forces with around 2000 personnel from the Five Eyes partner nations in responding to attacks from a "dynamic and skilled adversary" during Exercise Cyber Flag 16. The large-scale two-week training exercise began on Friday at a United States Department of defence facility in Suffolk, Virginia. To ensure a realistic training environment, participants are using systems that simulate the allied information networks and adversary networks. "Over a two-week period, we will be under constant bombardment from an opposing force that uses a range of tactics," said Wing **Commander Rhys Taylor, Senior National Officer of the NZDF** contingent. While Mr Brownlee would not give specific details about the scale of an expanded cyber security unit, but said it would be "significant"and was likely to work in co-operation with the **Government Communications and Security Bureau (GCSB).**

New Zealand military to join "Five Eyes" cyber attack exercise (Canada)
Xinhua News Agency, Staff reporter, 2016 06 17
Wellington - **New Zealand military personnel are to join a major cyber attack exercise for countries of the "Five Eyes" intelligence- gathering network, the New Zealand Defence Force (NZDF) said** Friday. Sixteen NZDF personnel would join about 2,000 personnel from the Five Eyes nations - - **New Zealand, the United States, Britain, Canada and Australia -- in fending off simulated cyber attacks as part of a training exercise hosted by the U.S**. from June 17 to 30. Major General Tim Gall, Commander Joint Forces New Zealand, said Exercise Cyber Flag 16, being held at a U.S. Department of Defense facility in Suffolk, Virginia, would involve systems that simulated the allied information networks and adversary networks. The teams would respond to the cyber attacks as a coalition, allowing participants to practice interoperability and defence, Gall said in a statement. "Although we are all using the same tools to defend our respective networks, it will be great to learn how other countries are using those tools to defend their systems," he said.

China / Chine

Chinese Curb Cyberattacks on U.S. Interests, Report Finds
New York Times, David E. Sanger, 2016 06 21
Washington - **Nine months after President Obama and President Xi Jinping of China agreed to a broad crackdown on cyberespionage aimed at curbing the theft of intellectual property, the first detailed study of Chinese hacking has found a sharp drop-off in almost daily raids on Silicon Valley firms, military contractors and other commercial targets. But the study, conducted** by the iSight intelligence unit of FireEye, a company that manages large network breaches, also concluded that the drop-off began a year before Mr. Obama and Mr. Xi announced their accord in the White House Rose Garden. In a conclusion that is largely echoed by **American intelligence officials**, the study said the change is part of Mr. Xi's broad effort to bring the **Chinese military**, which is considered one of the main sponsors of the attacks, further under his control. As a result, the same political forces that may be alleviating the theft of data from American companies are also responsible for Mr. Xi's stunningly swift crackdown on the Chinese media, bloggers and others who could challenge the Communist Party. "It's a mixed

bag," said Kevin Mandia, the founder of Mandiant, now part of FireEye, which first detailed the activities of a People's Liberation Army cyber-arm, called Unit 61398, that had been responsible for some of the most highly publicized thefts of American technology.

Cybersecurity collaboration to increase
China Daily, Zhang Yi, 2016 06 15
Beijing - **Chinese and US security officials held the second High- Level Joint Dialogue on Cybercrime and Related Issues on Tuesday, pledging to iron out differences and to make fighting cybercrime a part of bilateral cooperation**. The dialogue in Beijing, following the first such conversation in Washington in December, was attended by **Minister of Public Security Guo Shengkun and Suzanne Spaulding, an undersecretary at the US Department of Homeland Security**. Other senior officials from both countries also participated. "Stepping up collaboration on cybersecurity conforms to common interests of both countries. The joint dialogue should be developed into a major channel for communication and cooperation on cybersecurity issues between China and the United States," Guo, who also is a state councilor, said at the dialogue. **US Secretary of Homeland Security Jeh Johnson and Attorney General Loretta Lynch** had been scheduled to attend the meeting, but they withdrew after the mass shooting in Orlando, Florida.

Russian Lawmakers Propose Harsher Punishment for Extremism
Moscow Times, Staff report, 2016 06 20
Moscow - **Russian State Duma deputies have proposed an increase in fines and prison sentences for extremist activities,** the RBC news website reported Monday. The amendments to the anti-terrorism bill were approved for a second reading by the Duma's Security Committee. The measures were prepared by United Russia lawmaker Irina Yarovaya and Federation Council member Viktor Ozerov. With the new amendments, inciting hatred or enmity publicly -- via the media or on the Internet -- could carry a fine of up to 500,000 rubles ($7,800). Under the current law, fines of up to 300,000 rubles ($4,700) can be given, RBC reported. The new amendments would allow prison sentences of up to five years, compared to the current maximum of four years. When violence is involved, a fine of up to 600,000 rubles ($9,300) could be given -- compared to a maximum fine of 500,000 rubles under current legislation.

Russia may be behind 'jihadist' cyberattacks
London Daily **Telegraph, Roland Oliphant, 2016 06 20**
Moscow - A jihadist hacking group linked to Isil may be a front for a Russian government cyberwarfare programme against the West, European intelligence chiefs believe. The **Cyber Caliphate**, a hacking collective affiliated to Islamic State of Iraq and the Levant (Isil), came to prominence in April last year when it attacked the French TV5Monde television channel. Jihadist propaganda was plastered over **TV5Monde's Facebook page** and the channel was forced to broadcast pre-recorded programmes. Police linked it to a Russian hacking collective, APT28, raising questions about Kremlin involvement. Now German intelligence services believe Russian secret services may be behind other cyberattacks ascribed to the Cyber Caliphate, Der Spiegel reported.

As Russian Hackers Attack, NATO Lacks a Clear Cyberwar Strategy
New York Times, David E. Sanger, 2016 06 17
Tallinn, Estonia - In **the six months since part of Ukraine's power grid came crashing down, turned off by highly sophisticated hackers, cyberspace allies of President Vladimir V. Putin of Russia have been leaving their mark here in the Baltics and across the sea in Finland and Sweden**. Perhaps to discourage the traditionally neutral Finns and Swedes from growing closer to NATO -- this past week NATO conducted a naval exercise from Finnish territory for the first time -- hackers disabled the **Finnish Ministry of Defense's website**. That was preceded by electronic espionage against a Dutch commission that had concluded that a Russian-made Buk missile brought down a Malaysian airliner two years ago, killing 298 people. And **Germany's intelligence agency, the BND**, recently told American officials that it believed Russian hackers had been behind a cyberattack that destroyed a German steel mill. Here in Estonia, where NATO maintains a center to explore the alliance's cyberspace vulnerabilities and potential responses to attacks, there is a widespread recognition that the Western alliance has yet to develop a strategy to counter Russia's increasingly aggressive action in cyberspace. While there are frequent conferences and papers, there are no serious military plans, apart from locking down the alliance's own networks. **Russia, China and Iran** have increasingly sophisticated offensive cyberforces; NATO has none, and no established mechanism to draw on United States Cyber Command or its British equivalent.

SVR doesn't comment on reports on Russian spy exposed in Spain
Interfax News Agency, 2016 06 16
Moscow—**The Russian Foreign Intelligence Service (SVR) refrains from commenting on the report on a Russian sleeper agent allegedly exposed in Spain.** "We are not commenting on foreign media reports on this matter," Sergei Ivanov, the head of the SVR bureau, told Interfax on Thursday. According to foreign media reports, the first sleeper agent from Russia has allegedly been exposed in Spain. According to the reports, he has worked for 20 years using another person's name and identity. Foreign media reports said the man, named Sergei Cherepanov, lived in Madrid under the name of business consultant Henry Frit.

Russia denies DNC hack and says maybe someone 'forgot the password'
Washington Post, Andrew Roth, 2016 06 15
Moscow - When Russia faces uncomfortable accusations from abroad, the Kremlin normally lashes back with official declarations and scornful comments on state television. But when the Democratic National Committee and cybersecurity experts told The Washington Post that Russian government hackers had stolen an entire database of opposition research on presumptive GOP presidential nominee Donald Trump, officials here met the accusations with little more than a simple denial and a shrug. **"Usually these kinds of leaks take place not because hackers broke in, but, as any professional will tell you, because someone simply forgot the password or set the simple password 123456," German Klimenko, Putin's top Internet adviser, said in remarks carried by the RIA Novosti** state news agency. "Well, it's always simpler to explain this away as the intrigues of enemies, rather than one's own incompetence." "I absolutely rule out the possibility that the government or government agencies were involved in this," Dmitry Peskov, a spokesman for President Vladimir Putin, told journalists in a curt statement.

Russian FSB behind cyberattacks on MH17 investigators in 2015 - German Intelligence
Ukraine Today, Staff report, 2016 06 15
Kiev - **Russian secret services were behind the cyberattack on the servers of the Dutch Safety Board in late 2015**. Hackers, supervised by the FSB, likely attempted to obtain the Dutch report, which named the Russian BUK anti-air system as the weapon behind the airplane

crash. This is according to the German Intelligence. Berlin calls the cyberattacks on the investigators an example of the espionage operations, conducted by Moscow. The German report doesn't indicate, however, if the hackers were successful in their attempt. The Dutch safety board, responsible for the MH17 investigation, also doesn't comment on Russia's alleged involvement in the attacks, according to the Dutch newspaper The Telegraaf.

Russian government hackers penetrated DNC, stole opposition research on Trump
Washington Post, Ellen Nakashima, 2016 06 15
Washington - **Russian government hackers penetrated the computer network of the Democratic National Committee and gained access to the entire database of opposition research on GOP presidential candidate Donald Trump**, according to committee officials and security experts who responded to the breach. The intruders so thoroughly compromised the DNC's system that they also were able to read all email and chat traffic, said DNC officials and the security experts. The intrusion into the DNC was one of several targeting American political organizations. The networks of presidential candidates Hillary Clinton and Donald Trump were also targeted by Russian spies, as were the computers of some GOP political action committees, U.S. officials said. But details on those cases were not available. A Russian Embassy spokesman said he had no knowledge of such intrusions.

Europe

Le terrorisme, casse-tête judiciaire
Le Soir (Belgique), Journaliste maison, 2016 06 21
Bruxelles - La **persistance de la menace djihadiste oblige la Belgique à revoir avec pragmatisme son arsenal juridique**. La **prégnance du risque terroriste a obligé le gouvernement à adapter l'arsenal judiciaire belge**. Depuis plus d'un an, le ministre de la Justice Koen Geens a mis en place une série de mesures pragmatiques pour combler les lacunes d'un Code pénal pas forcément adapté au mode opératoire du terrorisme contemporain. Certaines d'entre elles font débat, qu'elles soient déjà d'application (perquisitions de nuit, possibilité d'écoutes sans intervention d'un juge d'instruction...) ou en projet (allongement du délai de garde à vue à 72 heures). La lutte contre le terrorisme passe aussi par une collaboration judiciaire internationale renforcée, comme l'a rappelé Patrick Dewael, président de la Commission attentats, présente ce lundi à Paris.

Attentats à Bruxelles: trois mois après, la menace terroriste pèse toujours sur la rue de la Loi
RTL Info (France), Journaliste maison, 2016 06 20
Bruxelles - **Trois mois après les attentats bruxellois de l'aéroport national (Zaventem) et du métro Maelbeek, la rue de la Loi reste sous le coup de la menace terroriste**. Retour sur un trimestre de politique fédérale fait de démissions - refusées ou acceptées -, de mesures anti-terroristes, de polémiques et d'opérations policières. Ces derniers jours ont été marqués par les fuites dans les médias sur l'existence présumée d'une menace sur les centres commerciaux et autres lieux publics, le renforcement de la protection de plusieurs personnalités et une importante opération policière de la nuit de vendredi à samedi qui aurait permis de déjouer un projet d'attentat. Le **Premier ministre Charles Michel a appelé au calme et annoncé dans le même temps plusieurs mesures de sécurité complémentaires**. La commission d'enquête prépare ses premières recommandations Un premier train de mesures avait déjà été adopté,

rendant possibles les perquisitions de nuit dans les dossiers antiterroristes, les écoutes téléphoniques dans le cadre de la lutte contre le trafic d'armes, ou encore l'instauration de registres des combattants étrangers.

François Hollande souhaite garantir l'anonymat des policiers
Le Monde, 2016 06 18
Paris - **Quelques jours après le double assassinat de Magnanville (Yvelines), lundi 13 juin, le chef de l'Etat, François Hollande, a voulu donner sans attendre des gages aux forces de l'ordre, meurtries par la perte de deux collègues pris pour cible au nom de l'organisation** Etat islamique (EI). Vendredi 17 juin, lors d'un hommage officiel à Versailles, il a promis que « des mesures seront prises pour garantir leur anonymat, et donc leur protection » . Il entend ainsi éviter que « les policiers et les gendarmes soient identifiés » et « pris pour cibles par les malfaiteurs qu'ils ont mis hors d'état de nuire » . Concrètement, l'exécutif peut vouloir modifier l'article 413-13 du code pénal, qui interdit de révéler l'identité d'un agent appartenant à certains services spécifiques. Cette interdiction est aussi prévue pour les médias à l'article 39 sexies de la loi de 1881 sur la **liberté de la presse et vise, entre autres, les agents de l'unité de coordination de la lutte antiterroriste (Uclat), ceux de la sous-direction antiterroriste (SDAT), de la Direction générale de la sécurité intérieure (DGSI), de l'unité d'intervention de la police nationale (RAID)**, de la brigade de recherche et d'intervention (BRI) ou encore du groupe d'intervention de la gendarmerie nationale (GIGN). « Le président peut vouloir étendre cette liste », théorise la source policière. Et pourrait ainsi obliger les médias à flouter le visage des agents, même s'ils officient sur la voie publique.

State Agency for National Security Chairman Awarded Order of the Star of Italy
Bulgarian News Agency, 2016 09 18
Sofia—Chairman **of the State Agency for National Security (SANS) Dimiter Georgoev has been awarded the Order of the Star of Italy, Officer class, for merits in the development of the bilateral relations and cooperation between Bulgaria and Italy**, SANS said on Friday. The order was handed over by Italian Ambassador to Sofia Marco Conticelli. It is bestowed by decree of the President of Italy on the recommendation of the Minister of Foreign Affairs. Accepting the distinction, Georgiev said that the order is a big recognition for Bulgaria and for the work of SANS.

Bulgaria Sets Up National PNR Unit
Bulgarian News Agency, 2016 09 16
Sofia—**Bulgaria is setting up a National Passenger Name Record (PNR) Unit to counteract terrorism and serious crime, BTA learned from Violeta Ducheva, the project's manager at the State Agency for National Security (SANS).** The unit will start out by recording all air passengers' data. The unit will not have access to passenger data in the air carriers' reservation systems. Air carriers will transfer the PNR to the unit 48 hours before a flight and immediately before the flight, said Ducheva. PNR transfer in advance is already a fact, which enables timely data analysis. PNR were manually processed for certain flights only until recent technological developments made it possible to receive the data in advance, said Ducheva.

Depuis 2012, près d'une dizaine de lois ont renforcé l'arsenal antiterroriste
Le Monde, Journaliste maison, 2016 06 15
Paris - « **Nous avons tiré les leçons des attentats de ces trois dernières années », a martelé le premier ministre, Manuel Valls**, devant les députés, mardi 14 juin. Certains à droite souhaiteraient un nouveau durcissement. Le **premier ministre, Manuel Valls, et son ministre de l'intérieur, Bernard Cazeneuve, n'ont eu de cesse de le répéter, lors des questions au gouvernement à l'Assemblée nationale**, mardi 14 juin. Au lendemain de l'attaque terroriste

contre un couple de fonctionnaires du ministère de l'intérieur, à Magnanville (Yvelines), pas question de répondre par un nouvel arsenal législatif. Pour l'exécutif, tout est déjà en place : « Nous avons tiré les leçons des attentats de ces trois dernières années, beaucoup a été fait, nous nous sommes dotés des moyens d'agir » , a martelé le chef du gouvernement dans l'hémicycle, déroulant ses chiffres sur les hausses d'effectifs et le nombre de lois votées depuis 2012.

Valls prévient que la France sera encore frappée
Agence France-Presse, Journaliste maison, 2016 06 15
Paris - **Manuel Valls a défendu mercredi l'action du renseignement et de l'antiterrorisme en France après l'assassinat d'un policier et de sa compagne lundi soir près de Paris**, tout en prévenant que le pays serait frappé par de nouvelles attaques. Le Premier ministre, qui a écarté l'idée de centres de rétention pour les personnes radicalisées, portée par la droite, a affirmé sur France Inter qu'il n'y avait eu ni "négligence" ni "manque de discernement" dans le suivi du tueur de Magnanville (Yvelines). **"Moi je ne laisserai pas dire qu'il y a eu de la part de nos forces chargées de la lutte contre le terrorisme la moindre négligence ni le moindre manque de discernement, je sais la difficulté de leur tâche", a déclaré M. Valls**, même s'il a reconnu qu'il y avait "toujours un échec" en cas d'attentat. Comme mardi à l'Assemblée nationale, le Premier ministre a de nouveau écarté l'idée de centres de rétention pour les personnes radicalisées n'ayant pas été condamnées, qui seraient "dangereux" et "affaibliraient la lutte contre le terrorisme". Selon lui, la France doit plutôt "poursuivre le travail" engagé par le gouvernement pour "resserrer les mailles du filet" de l'antiterrorisme, en délivrant de nouveaux moyens à la police et au renseignement. Mais le pays "connaîtra de nouveau des attaques", a prévenu le chef du gouvernement.

Report: Chinese hackers target Dutch-German defense company
NL Times (The Netherlands), Janene Peters, 2016 06 15
The Hague - A **group of Chinese hackers for years had access to the systems of a Dutch-German defense technology company, during which time they "definitely" obtained access to technological information and "probably" also had control of the company's network**, the Volkskrant reports based on sources in the intelligence community. According to the newspaper's sources, the company involved is Rheinmetall Defence, based in Ede. The company is one of the world's largest suppliers of defense technology and security systems. Among other thing, the company produces materials for armored vehicles. Delft based digital **security company Fox-IT** discovered the hack when they found unknown malicious software in the company's systems in the autumn of last year. After months of investigation, they managed to identify the hackers as Chinese based on the language settings in the malware, the targets selected ad the working method. The Volkskrant sources stated that the hackers sent English-language emails from fake email addresses to the Ede company's employees. The emails seemed to contain news about the Dutch- German cooperation. The malware was installed once the emails were opened.

Switzerland snubs plans to strip terrorists of nationality
The Local (Switzerland), Staff report, 2016 06 15
Bern - The **measure put forward by Swiss president and chairman of the country's populist Swiss People's Party Toni Brunner was rejected by the Swiss senate** to the tune of 27 votes against and 12 in favour. The move was initially approved by MPs in the Swiss lower house in a vote held three weeks after the Paris attacks of November 2015. But in a debate on the issue held this week Swiss senators said the wording of the proposal was too vague, and insisted the current legislation was effective. **Current rules allow allows for the stripping of Swiss nationality if a person's "behaviour is a serious threat to Swiss interests or**

reputation". The law dating back to 1953 has never been used. However, a Swiss-Italian teenager suspected of joining terrorists in Syria could have his Swiss nationality withdrawn in what would be the first such case in Switzerland.

Former Shin Bet head 'bursts myth' on cyber hackers who attack Israel
Jerusalem Post, Yonah Jeremy Bob, 2016 06 21
Jerusalem - In his first big speech **since stepping down as head of the Shin Bet (Israel Security Agency) last month, Yoram Cohen departed from conventional wisdom Tuesday saying he wanted to "burst the myth of retribution," explaining that Israel always eventually learns who to hold responsible for attempted cyber hacks**. Conventionally, most government and private sector officials say that one of the puzzles of cyber warfare is identifying who initiated a cyber attack. Cohen's statements, made at Tel Aviv University's international cyber conference, indicated that the Shin Bet's abilities to decipher who cyber attacks Israel are more advanced than has been previously known. He headed the Shin Bet from May 2011 until May 2016. The former Shin Bet director listed Israel as facing three main cyber threats: computer network attacks, computer exploitation attacks and social media influence attacks.

Iran Intelligence University calls for applicants
Iranian Labour News Agency (via BBC Monitoring Middle East), 2016 06 18
Tehran— **Iran's University of Intelligence and National Security (UNIS**) has announced its postgraduate student recruitment preferences, offering a range of required topics and competitive bursaries for applicants under the age of 27. According to the latest released booklet outlining different universities' entry subjects, the UNIS announced the following topics of interest for its new cohort of students, including: management of intelligence; protection of intelligence; Iranian security studies; security research; security and criminology; engineering of security and telecommunication; engineering of information and security technology. In addition, the following sub-topics will be taught: coding; cyber security; bioterrorism and crisis management.

Intelligence chief warns of growing gaps between Israel, neighbors
Times of Israel, Judah Ari Gross, 2016 06 17
Jerusalem - Since the Arab Spring in 2011, Israel has gotten stronger, more stable and wealthier than its neighbors. But that's not necessarily something to be proud of -- it's something that should be worrisome, according **to Military Intelligence chief Maj. Gen. Herzi Halevy**. His speech gave a general overview of the region, but did not reveal any information not previously released by the Israel Defense Forces. He **touched on the Syrian civil war, Iran's nuclear ambitions, Hezbollah in Lebanon, Hamas in Gaza, terror in the West Bank and the Islamic State group. Each of these threats has existed for years, but one area of concern Halevy touched on was the growing disparity between Israel and its neighbors**. On the one hand, Israel's status as a strong, stable democracy in the Middle East is something that should be treasured and not forgotten. Economic strife can give rise to religious extremism and terrorism, the Military Intelligence chief warned.

Intelligence minister warns 'megalomanic' Hezbollah chief
Times of Israel, Stuart Winer, 2016 06 17

Jerusalem - **Intelligence Minister Yisrael Katz launched a scathing attack on the Hezbollah terror group's leader, calling Hassan Nasrallah a "megalomaniac" with no concept of reality and warning that Lebanon would be "ruined"** in a future conflict between the IDF and Hezbollah. "Hezbollah continues to be the primary non-state threat, not only to Israel but also to Lebanon," he told the Herzliya Conference, an annual seminar reviewing Israel's security. He added that a conflict with the Lebanon-based Shiite group could be triggered by a minor incident due to "the megalomaniac character of the organization's leader, Hassan Nasrallah, a fanatical personality who lacks any conception of reality except, perhaps, anything to do with protecting his personal security." Hezbollah is believed to have an arsenal of more than 100,000 missiles and rockets, along with weapons systems "that they never had before," Halevy said.

Dam, State Security threaten to further cripple government
The Daily Star, Hussein Dakroub, 2016 06 16
Beirut— The Cabinet will meet Thursday amid lingering differences over the controversial Janna dam project and the State Security agency, two contentious issues that threaten to further cripple the work of an already paralyzed government. The meeting also comes against the backdrop of the resignation of two Kataeb Party ministers in a dramatic development that will further weaken government productivity. **The Cabinet is also expected to address the long-running dispute over the leadership of the State Security agency.** The agency has been plagued by a funding row and a leadership struggle between the agency's head, Maj. Gen. George Karaa, and his deputy, Brig. Gen. Mohammad Tufayli. Karaa is a Greek Catholic, and his duties overlap with those of Tufayli, a Shiite. In effect, the latter has the same powers as the agency's head. This has ultimately caused a sectarian-related issue. All the ministers had agreed in April to task Salam with negotiating a solution to the crisis which has deepened divisions within the Cabinet

Iranian-British Female Spy Arrested in Tehran's Imam Khomeini Airport
Fars News Agency, 2016 06 16
Tehran - The **Islamic Revolution Guards Corps (IRGC) announced in a statement on Wednesday that it has arrested an Iranian-British national at Imam Khomeini International Airport for spying charges**. Nazanin Zaghari was arrested by the IRGC's Kerman Province Intelligence Department at Imam Khomeini International Airport on April 3 while she was trying to leave the country and was later transferred to Kerman for her involvement in a regime change plot, the IRGC statement read.

Counter-terror bill passed into law
Israel National News, 2016 06 15
Jerusalem— The K**nesset passed on Wednesday an anti-terror bill proposed by Justice Minister Ayelet Shaked, with 57 votes in favor and 16 against.**The legislation, which increases the punishments for organizers of terrorism and enables courts to convict terror cell leaders more easily, replaces a series of emergency provisions used since the establishment of the state. According to the law, those involved directly or indirectly in organizing terror cells could face up to 25 years in prison, while leaders of terror cells would face a mandatory life sentence. Terrorists who use chemical, biological, or radioactive weapons during attacks would also face mandatory life sentences. Under the new law the Prime Minister and **Defense Minister will now be able to declare groups terrorist organizations, based upon the recommendation of the Shin Bet security agency** and in consultation with the Attorney General.

Israeli parliament approves contentious anti-terror bill
Xinhua News Agency, 2016 06 15

Jerusalem— The **Israeli parliament approved on Wednesday a controversial anti-terror bill which aims to increase penalties on terror-related moves and qualify more activities as part of its definition of terrorism.** The bill, which has been under discussion by the Knesset's Constitution, Law and Justice Committee since 2010, was recently adopted and advanced by Israel's Justice Minister Ayelet Shaked from the ultranationalist Jewish Home right-wing party. Fifty-seven lawmakers voted in favor of the bill, while 16 lawmakers objected to it. The promotion of the bill in recent months came amid a wave of violence between Israelis and Palestinians, which started in October, claiming the lives of 32 Israelis and 205 Palestinians since. The bill extends the state and its security authorities' powers against potential terror suspects and expands the definition of what qualifies as terrorist-related activities.

Park instructs government to exhaustively check terror response capabilities
Yonhap News Agency, Staff reporter, 2016 06 21
Seoul - **President Park Geun-hye on Tuesday instructed her government to "exhaustively" check the country's terror response capabilities, warning that North Korea, with direct or indirect links to international terrorist groups**, could mount attacks against the South. Her remarks came a few days after the **National Intelligence Service** revealed that the Islamic State jihadist group had designated some U.S. military installations here and a South Korean citizen as targets for attacks. "There are concerns over the possibility of the North -- with direct or indirect links to terrorist groups -- launching attacks (against South Korea)," she said during a Cabinet meeting at the presidential office **Cheong Wa Dae**. **"There has continuously been intelligence about terrorist attempts to abduct our citizens**, while the North has been posting videos explicitly threatening to blow up Cheong Wa Dae and the government complex," the chief executive added, underscoring that South Korea is no longer safe from terrorism. Park ordered Cabinet ministers to ensure that the anti-terrorism center, launched earlier this month under the prime minister's office, is equipped with sufficient measures to properly respond to diverse scenarios of terrorist attacks. Over the last five years, South Korean authorities have found and deported some 50 foreigners with links to terrorist organizations. The authorities have also caught two South Koreans who attempted to join such entities.

S. Korea to hold anti-terrorism ministerial meeting
Yonhap News Agency, Staff reporter, 2016 06 21
Seoul - The **South Korean government said Tuesday it will hold a special anti-terrorism meeting amid rising threats from overseas terrorist groups**. The date of the meeting has not been set, but it will be chaired by **Prime Minister Hwang Kyo-ahn** with related ministers to take part in the discussions. The gathering comes as reports indicate the militant Islamic State (IS) group has made threats against South Korea. **South Korea's National Intelligence Service earlier said IS has been calling for terrorist attacks through messaging services by revealing the locations of key military bases and individuals associated with them around the globe.** The spy agency said the list included some U.S. military bases in South Korea, as well as a staff worker of a local civic group. South Korea currently operates an anti-terrorism center under the prime minister's office after the country's first comprehensive anti-terrorism bill went into effect this month. Related to the meeting, the National Assembly's Intelligence Committee said the government aims to come up with countermeasures to cope with the threats made by IS.

Wolesi Jirga approves Stanikzai as spymaster
Pajhwok Afghan News, Khawaja Basir fitri, 2016 06 20
Kabul - The **Wolesi Jirga -- or the lower house of parliament -- on Monday approved Mohammad Masoom Stanikzai as National Directorate of Security (NDS) chief**. Stanikzai was introduced as President Ashraf Ghani's choice for spymaster along with the defence minister-designate to the Wolesi Jirga for the trust vote on June 8. After Stanikzai outlined his programmes to the house, of the 224 lawmakers present, 161 voted in his favour. He has been serving as acting defense minister for the past one year.

Afghan MPs confirm new defence minister, intelligence chief
Agence France-Presse, 2016 06 20
Kabul—**Afghan lawmakers on Monday approved President Ashraf Ghani's nominees for defence minister and intelligence director**, two crucial posts that sat vacant for months as the country struggles to rein in an ascendant insurgency. The confirmations came as attacks left at least 23 people dead across Afghanistan Monday and wounded dozens more, as the Taliban's resurgence continues to raise serious questions about the ability of Afghan forces to hold their own without the support of US-led NATO troops. MPs voted for Abdullah Habibi, formerly a senior official in the defence ministry who holds the rank of army general, to become its new minister. **Mohammad Masoom Stanekzai, a former top official in the government body overseeing the country's peace process who has worked to bring the Taliban to the negotiating table, was named head of Afghanistan's National Directorate of Security (NDS) intelligence agency.**

South Korea spy agency bars 12 waitresses from North from court
Reuters, 2016 05 20
Seoul— A **South Korean court has ordered the spy agency to make 12 North Korean waitresses who defected to the South available to answer whether they defected of their free will,** but the agency said they would not be presented in court. The **National Intelligence Service** is holding the 12 women who fled a restaurant run by the North in China. An official at the service said on Monday only the women's "legal representatives" would attend the court hearing on Tuesday. The court order came after a group of lawyers filed a petition for a hearing to determine whether the 12 were being held against their will.

ISIS threat to U.S. air bases, South Korea intelligence agency warns
CNN.com, Paula Hancocks, 2016 06 20
Seoul - **ISIS has collected information on 77 U.S. and NATO air force facilities around the world and is calling on supporters to attack them, according to South Korea's intelligence agency**. The terror group has also released information on individuals in 21 countries, including the personal details of one employee of a South Korean welfare organization, the **National Intelligence Service** (NIS) said in a statement Sunday. That person is now under protection, the agency said. The NIS says ISIS' hacking organization, the United Cyber Caliphate, collected details of U.S. air force units in South Korea including Osan Air Base, and addresses and Google satellite maps have been released through the Telegram messaging service.

Police seek to legalize private investigators
The Korea Times, 2016 06 19
Seoul—A group of senior and retired police officers have set up an **organization in a bid to legalize private investigators,** according to police, Sunday. This is the first time that former and incumbent police officers are seeking to allow private detectives in Korea, while previously

demands have usually come from the so-called “errand centers,” companies that work for individual clients. According to the **National Police Agency (NPA)**, a notice has been recently posted on the police’s intranet to recruit members for the organization. It is aimed at studying overseas private investigator systems with the final goal of having the National Assembly legalize the profession. “Police cannot intervene actively in many civil cases such as disputes over medical malpractice and insurance, sometimes because of manpower or budget shortages,” according to an officer at Jongno Police Station. “We believe that private investigators would meet the demand by clients in such cases,” he said.

Anti-terror official likely to be Indonesia's youngest top cop
Nikkei Report, 2016 06 18
Jakarta— **President Joko Widodo's recent nomination of Tito Karnavian to lead the Indonesian police has drawn applause from many, with Karnavian's clean track record and long counterterrorism experience bringing hope for reforms amid the growing threat of global terrorism**. Widodo on Wednesday submitted a nomination letter to Parliament, which will hold a "fit-and-proper test" to decide the eligibility of Karnavian -- now the head of Indonesia's anti-terrorism agency -- to replace National Police chief Badrodin Haiti, who will soon reach retirement age. "I'm hoping Commissioner Gen. Tito will be able to enhance the professionalism of the National Police and also improve the quality of law enforcement -- especially against drug crimes, terrorism and corruption," Widodo told reporters Thursday. Karnavian's nomination has surprised many. **At 51, he is the youngest of eight three-star generals on the police force originally considered for the top job**.

Establishing new spy agency would require law revision
Jakarta Post, Marguerite Afra Sapiie, 2016 06 17
Jakarta - The **State Intelligence Law would need to be revised if the Defense Ministry decided to form its own spy body, National Intelligence Agency (BIN) chief Sutiyoso said on Thursday**. "The law states that the actor in defense intelligence is within the Indonesian Military, namely the military's Strategic Intelligence Agency [BAIS]," Sutiyoso told journalists. The Defense Ministry has yet to contact BIN to deliberate the plan, but Sutiyoso warned that the consequences of establishing a new agency could burden the ministry in terms of budget and human resources. He said the central intelligence committee - which gathers all spy bodies in the country including those under the National Police, the Indonesian Military, the Attorney General's Office and numerous ministries - met and coordinated at least once a month.

New spy agency is unnecessary: Vice President Jusuf Kalla
Jakarta Post, News Desk, 2016 06 16
Jakarta - The **Defense Ministry's plan to establish its own intelligence agency is unnecessary, Vice President Jusuf Kalla says on Tuesday**. Even though the government had yet to make comprehensive discussion about the realization of the plan, Kalla asserted that the newly spy agency was in-fact not an urgency in the present. "[The government] haven't discussed anything, but I can assure that we don't need too much agencies in the meantime," Kalla said as quoted by kompas.com. The officials should initially conduct in-depth assessment on the intelligence body planning since it is feared that the newly spy body would overlap with the **National Intelligence Agency** (BIN), Kalla said. Earlier, Defense Minister Ryamizard Ryacudu announced the plan to establish an intelligence body under the Defense Ministry, which aimed to dig deeper on information needed for the country's defense interests.

Iran responds to letter about Indian spy
Pakistan Dawn, Iftikhar A. Khan, 2016 06 16

Islamabad - The **Iranian government has finally responded to a letter written by the interior ministry seeking investigation into Indian intelligence agency RAW's network in Iran**. According to sources, the response was handed over to Interior Minister Chaudhry Nisar Ali Khan by **Iranian Ambassador Mehdi Hunerdoost** who called on him here on Wednesday. According to an official statement, progress in expansion of cooperation in a number of areas, including security, was reviewed during the meeting which also took stock of the situation prevailing in the region. The contents of the Iranian response were not shared with the media. Chaudhry Nisar made it clear that no third country could influence relations between Pakistan and Iran. He stressed the need for strengthening monitoring of the border between the two countries and timely exchange of information.

Dasuki loses bail bid at Appeal Court
Nigerian Tribune, 2016 06 16
Abuja— **The Court of Appeal, Abuja division, has dismissed the appeal of former National Security Adviser (NSA), Colonel Muhammad Sambo Dasuki** (retd), seeking order of the appellate court to compel the Federal Government to allow him to enjoy the bail granted him by an Abuja High Court. The appellate court, in its judgment delivered by Justice Abdul Aboki, held that the appeal lacked merit and substance and consequently, dismissed it. In an unanimous judgment of the full panel of the court, it upheld the submission of the Economic and Financial Crimes Commission (EFCC), which put Dasuki on trial, that it was not in contempt of any court order because the re-arrest of the appellant in December last year, was not at its instance.

Olympic Brazil detects IS radical posts in Portuguese
Agence France-Presse, 2016 06 17
Rio de Janiero—Authorities in this year's Olympic host Brazil detected **users exchanging messages in Portuguese linked to the Islamic State extremist group in an online web forum, intelligence services said Friday**. The warning raised security concerns about the potential existence of sympathizers of the armed group in Brazil, which was previously thought to be relatively free of Islamic extremism. Pre-Olympic jitters had already risen after a French jihadist warned on Twitter after deadly attacks in France last November that Brazil was the "next target." The **Brazilian Intelligence Agency** said in a statement Friday that it "confirms the existence of a group and its way of operating" online with jihadist messages. It said the group was found on Telegram, an online messaging application.

Watchdog condemns lack of diversity among CSIS senior staff
Globe and Mail, Laurent Bastien, 2016 07 02
Ottawa - The **federal government's human-rights watchdog has repeatedly admonished the Canadian Security Intelligence Service over a lack of diversity in its upper echelons**, according to newly disclosed reports. Records obtained by The Globe and Mail show that the Canadian Human Rights Commission has conducted two employment equity audits of CSIS over the past decade and, on both occasions, the spy agency was criticized because it had not hired a sufficient number of visible minorities, people with disabilities and indigenous Canadians. The 2014 and 2011 audits found that none of CSIS's senior managers were indigenous or visible minorities, and only 17 per cent are women, a decrease of 13 per cent since 2009. "Your organization has a lower overall EE [employment equity] result when compared to separate agencies and is therefore considered to be a less successful employer with respect to EE," the commission wrote, urging the agency to close gaps in its hiring practices. One of its main challenges, the commission noted, was to increase the diversity of its managerial staff. Formed three decades ago from a former **RCMP intelligence division**, CSIS is a $500-million-a-year organization with 3,000 employees.

Data encryption hampering police work
Toronto Star, Alex Boutilier, 2016 07 02
Toronto - The **growing popularity of programs that protect online privacy is creating a barrier for police and security agencies' ability to intercept and use data**, documents obtained by the Star suggest. Officials warned **Public Safety Minister Ralph Goodale** in November that encryption - the ability to mask communications so only the intended recipients can make sense of the message - is hindering their ability to use online communications in investigations. "Canadians are increasingly using mobile phone networks, the Internet and other electronic means to communicate and execute transactions with each other," read the documents, heavily censored and stamped "secret." "This has led to a significant gap between the technologies available for criminal exploitation and our means to enforce Canada's laws and keep Canadians safe." The Star requested an interview with Goodale to discuss these issues, but the minister was unavailable over the past two weeks. His office noted that the minister recently addressed the encryption debate in a speech at the University of Regina.

CIA Chief Blasts 'Stubborn' Kim Jong-un
Chosun Ilbo, 2016 07 05

Seoul--**Central Intelligence Agency Director John Brennan said North Korean leader Kim Jong-un is "exceptionally stubborn and not a very good listener,"** according to Voice of America last Friday.Brennan made the remark at the Council on Foreign Relations in Washington last Wednesday."North Korea remains my top concern in terms of nuclear proliferation, as the country leader Kim Jong-un fails to recognize that the rest of the world won't accept his pursuit of nuclear weapons," Brennan said.He added that the U.S. wishes to help North Korea emerge from isolation and to support the country's people. But he warned that Kim must realize that his pursuit of nuclear weapons and missiles harms the longevity of his rule.(full report).

CIA caught off guard by Islamic State's rise in post-Moammar Gadhafi Libya
Washington Times, Rowan Scarborough, 2016 07 04
Washington - **CIA chieftains were caught off guard by the spiraling Islamic violence in postwar Libya,** suddenly realizing that analysts had never brainstormed what the country would look like and that the White House had not asked. The agency also acknowledged in a classified report that Moammar Gadhafi, Libya's U.S.-deposed dictator, had long suppressed a variety of radical Islamic groups, including al Qaeda, from taking root in his country and endangering North Africa. The CIA views are among the interviews and documents compiled by the House select committee that investigated the Islamic extremist attacks on the U.S. diplomatic mission in Benghazi and on a nearby CIA base on Sept. 11, 2012.

Transgender People Will Be Allowed to Serve Openly in Military
New York Times, Matthew Rosenberg, 2016 07 02
Washington - **Defense Secretary Ashton B. Carter on Thursday removed one of the final barriers to military service by lifting the Pentagon's ban on transgender people serving openly in the armed forces.** "Effective immediately, transgender Americans may serve openly," Mr. Carter said. "They can no longer be discharged or otherwise separated from the military just for being transgender." The decision pushes forward a transformation of the military that Mr. Carter has accelerated in the last year with the opening of all combat roles to women and the appointment of the first openly gay Army secretary.

5 issues the U.S. military must still address about allowing transgender service
Washington Post, Dan Lamothe, 2016 07 02
Analysis: **Defense Secretary Ashton B. Carter repealed the U.S. military's ban on transgender service members Thursday, but the Pentagon still has a number of decisions to sort through in the coming months.** In his remarks, Carter focused heavily on why he thought the repeal was the right thing to do, noting there are presently at least 2,500 transgender troops on active duty. But he also laid out a multi-layered implementation process that requires numerous decisions in coming months by service chiefs and senior civilian officials in the Pentagon alike. They include: 1. Forming rules for restrooms, showers and other day-to-day functions Senior defense officials, speaking on the condition of anonymity to speak frankly, said after Carter's announcement Thursday that commanders will be given wide latitude to decide how to best equip their facilities for transgender service. In many cases, the officials said, that could be as simple as putting up new privacy curtains in some bathrooms or setting specific shower hours for different kinds of troops.

Civilian bomb squad cleared in Pentagon pay error
Washington Post, Dan Lamothe, 2016 07 02
Washington - The **Pentagon has decided that members of its civilian bomb squad will not be obligated to pay back up to $173,000 that it says each of them was erroneously paid since the unit was established in 2008**, a defense official said. The Defense Office of

Hearings and Appeals waived the debts "after completion of the normal waiver-of-debt process," said Air Force Lt. Col. Eric Badger, a Pentagon spokesman. The decision was acknowledged late Wednesday, a day after The Washington Post published an article that detailed how members of the bomb squad faced potential financial ruin after the Pentagon decided in 2015 that it had incorrectly paid them a 25 percent hazardous-duty incentive for years. The waivers were completed despite some members of the bomb squad expecting that their cases would not be heard for several more weeks.

Federal Agencies Continue to Shed Security Clearance Holders
Government Executive, Eric Katz, 2016 06 30
Washington—The **federal government cut the number of individuals holding security clearances by a quarter of a million people in fiscal 2015**, according to a new report, marking the second consecutive year agencies have successfully followed through on an Obama administration goal to trim the cleared population. **The Office of the Director of National Intelligence report showed agencies continuing to reduce what had been a growing population of federal employees and contractors who hold clearances.** The number of people with clearances had ticked up in each of the first three years since ODNI began measuring it in 2011. The total reduction in 2015 continued a multi-year trend of federal agencies doling out fewer new security clearances each year. About 4.2 million individuals held security clearances as of Oct. 1, 2015, down 6 percent from the same time in 2014. The cleared population has fallen by about 17 percent since fiscal 2013. The new approvals for security clearances -- including first-time issuances as well as reinvestigations -- dropped 4 percent to 639,000.

Brexit crisis contributing to 'daunting' US security challenges, CIA director says
The Guardian (London), Staff report, 2016 06 30
Washington - The **US is facing its most daunting national security challenge in a generation after the European Union was plunged into "crisis" by Britain's vote to leave**, the head of the **CIA** warned on Wednesday. **John Brennan** insisted that Brexit would not undermine cooperation with MI6 in the fight against terrorism, but suggested that the EU, a bulwark of peace and stability since the fall of the Berlin wall, would now be preoccupied with the UK's departure. "In the 36 years since I first entered government, I have never been witnessing a time with such a daunting array of challenges to our nation's security," Brennan told the Council on Foreign Relations in Washington. "Notable among those challenges is that some of the institutions and relationships that have been pillars of the post-cold war international system are under serious stress. "Of all the crises the EU has faced in recent years, the UK vote to leave the EU may well be its greatest challenge. Brexit is pushing the EU into a period of introspection that will pervade virtually everything the EU does in the coming weeks, months and even years ahead," he said.

CIA Chief Says Brexit Will Test Europe For Years
Wall Street Journal, Damian Paletta, 2016 06 30
Washington - The **decision by British voters to leave the European Union will test the continent for some time, the head of the Central Intelligence Agency said Wednesday**, warning that "decision-making and forging consensus" in the EU will become "much harder." "Brexit is pushing the EU into a period of introspection that will pervade virtually everything the EU does in the coming weeks, months, and even years ahead," **CIA Director John Brennan** said in remarks at the Council on Foreign Relations. Voters in the U.K. last week approved a referendum measure to leave the European Union, a decision that has shocked global market and allies. It still hasn't been determined precisely how or when the U.K. will exit the EU, and some are suggesting the outcome is reversible, but Mr. Brennan suggested it is only a matter of

time. "No member-state has ever left the Union, so Europe is entering a period of uncertainty as the U.K. and the EU take stock of the situation and begin staking out their negotiating positions," he said. Mr. **Brennan said Brexit, as the country's EU departure is commonly called, won't impede intelligence-sharing arrangements between U.S. and British officials**.

U.S. Probes Chinese Ownership of CIA-Linked Insurance Company
Newsweek, Jeff Stein, 2016 06 30
New York - **Federal investigators are taking a close look at the Chinese ownership of an American insurance company that has been selling legal liability insurance to senior CIA, FBI and other intelligence officials** and operatives for decades. The company, Wright USA, was quietly acquired late last year by Fosun Group, a Shanghai-based conglomerate led by Guo Guangchang, a billionaire known as "China's Warren Buffett" who has high-level Communist Party connections. The links between Guo and Wright USA came under scrutiny by the Treasury Department's Committee on Foreign Investment in the United States, as well as the **Office of Director of National Intelligence**, the coordinating body of all U.S. spy agencies, soon after Fosun announced the purchase of Wright's parent company last November. The FBI has also launched a criminal probe into whether the company made "unauthorized disclosures of government data to outsiders," according to a well-placed source, who like others, spoke to Newsweek on condition of anonymity because the information was sensitive. (The FBI declined to comment, and Fosun denies the FBI has asked it for any documents.)

CIA chief Brennan looks at Turkish attack and sees a warning for Americans
Yahoo News, Daniel Klaidman, 2016 06 29
Washington - Four hours after three suicide bombers killed at least 41 people and wounded hundreds more at **Istanbul's Ataturk airport, CIA Director John Brennan said the attacks bore the grim hallmarks of ISIS and warned that the fanatically violent Islamic terrorist group wants to conduct similar large-scale attacks in the United States**. "I am worried from the standpoint of an intelligence professional who looks at the capabilities of Daesh ... and their determination to kill as many as people as possible and to carry out attacks abroad," Brennan said in an exclusive interview at CIA headquarters with Yahoo News. Brennan credited effective homeland security measures and intelligence for the fact that ISIS has been unable to attack America directly -- the Orlando and San Bernardino shootings were carried out by radicals inspired by ISIS but not under its control -- but he believes the group will keep trying to penetrate American defenses.

Intelligence Community Held 12 Diversity and Inclusion Seminars Last Year
Washington Free Beacon, Elizabeth Harrington, 2016 06 29
Washington - The **intelligence community held 12 seminars on diversity and inclusion last year, including "unconscious bias" training and a women's summit that focused on "emotional intelligence**." An employee resource group on "Islamic Culture" is also offered for employees of the National Security Agency to provide "cultural sensitivity." The Office of the Director of National Intelligence released its annual demographics report this month, which detailed the number of community-wide events the intelligence community held during fiscal year 2015.

CIA taps huge potential of digital technology
BBC News, Gordon Corera, 2016 06 29
London - At **CIA headquarters in Langley, the office of the director of digital innovation sits next to the agency's in-house museum filled with artefacts from its history**. Featuring heavily are gadgets such as early secret cameras and bugging devices that would not appear out of character in a Hollywood film. The line-up makes the point that even though the CIA is an

intelligence agency whose central mission has been to recruit people to provide secrets, technology has always had a crucial role. **Andrew Hallman - who runs the recently created Directorate of Digital Innovation -** has the job of making sure that the new digital world works to the CIA's advantage rather than disadvantage.

US Increasingly Focused on Social Media to Weigh Terror Threats
Voice of America, Chris Hannas, 2016 06 29
Washington - The **United States government has become increasingly focused on the idea of examining social media posts in order to make determinations about who represents a security threat to the country**. The latest example is a proposal from the **Customs and Border Protection arm of the Department of Homeland Security** to ask foreign travelers to disclose information about their accounts on services like Facebook and Twitter. It would appear as an optional question on the form people fill out either upon arrival or presubmit online with information such as their name, address, phone number and the names of countries they have visited since 2011. It would also only apply to travelers from the 38 countries allowed visa-free entry into the U.S. "**Collecting social media data will enhance the existing investigative process and provide DHS greater clarity and visibility to possible nefarious activity** and connections by providing an additional tool set which analysts and investigators may use to better analyze and investigate the case," the proposal says.

The Hunter
The Intercept, Peter Maass, 2016 06 28
Washington - The message arrived at night and consisted of three words: "Good evening sir!" The sender was a hacker who had written a series of provocative memos at the **National Security Agency. His secret memos had explained -- with an earthy use of slang and emojis that was unusual for an operative of the largest eavesdropping organization in the world** -- how the NSA breaks into the digital accounts of people who manage computer networks, and how it tries to unmask people who use Tor to browse the web anonymously. Outlining some of the NSA's most sensitive activities, the memos were leaked by Edward Snowden, and I had written about a few of them for The Intercept. There is no Miss Manners for exchanging pleasantries with a man the government has trained to be the digital equivalent of a Navy SEAL. Though I had initiated the contact, I was wary of how he might respond. The hacker had publicly expressed a visceral dislike for Snowden and had accused The Intercept of jeopardizing lives by publishing classified information. One of his memos outlined the ways the NSA reroutes (or "shapes") the internet traffic of entire countries, and another memo was titled "I Hunt Sysadmins."

I Spy: GCHQ reaches out to Mumsnet generation in new recruitment drive
Yorkshire Post, Staff report, 2016 07 04
Scarborough - The **director of GCHQ has announced a multi-million pound investment to transform a Yorkshire base into the North of England's training hub as the spy agency looks to recruit more middle-aged women from the Mumsnet generation.** The £42m package was outlined yesterday by Robert Hannigan, the director of the UK's Government

Communications Headquarters, on a visit to its base on the outskirts of Scarborough. The base is to be the training and skills hub of the northern network of GCHQ, the intelligence and security organisation which monitors radio and signals communications and protects against a wide range of threats, from terrorism and cyber crime to child sex exploitation and hacking. Along with **MI5 and MI6,** there will be an emphasis on recruiting more women, especially those who middle-aged and also mid-career, dubbed "Jane Bonds", and the organisation has used Mumsnet for that purpose. Of the £42m that is being invested in the next four years, £30m will go towards the base's infrastructure - modernising and improving the current environment - and £12m to skills training.

Kincora MI6 agent 'was aware of abuse'
Belfast Telegraph, David Young, 2016 07 02
London - **At least one MI6-run agent was aware of sexual abuse being committed in a notorious Belfast boys' home, according to one of the agency's historic intelligence documents.** A classified MI6 note containing the claim about the Kincora abuse scandal was presented in evidence as a senior ranking MI6 officer was questioned at Northern Ireland's Historical Institutional Abuse inquiry. But the anonymised deputy director of the Secret Intelligence Service (MI6), referred to as officer A as he testified via video-link, rejected any suggestion his organisation was aware of the abuse. He told the inquiry panel that an extensive trawl of MI6's files could find no other documentary evidence to corroborate the 1989 note. "We have found nothing that was written at the same time that justifies that assertion or nothing in our subsequent records that backs up that assertion," he said.

Chilcot 'will blame MI6 chief' for Iraq dossier
London Times, Staff Writer, 2016 07 02
London - **Spy chiefs in office during the Iraq war will be "fed to the wolves" when the Chilcot inquiry delivers its findings next week**, it has been claimed. **Sir Richard Dearlove, the former head of MI6**, will be strongly criticised for intelligence given to Tony Blair that laid the groundwork for the "dodgy dossier" claims about Saddam Hussein's weapons of mass destruction, a source told the Daily Mirror. Mr Blair is also expected to be condemned as Sir John Chilcot reports that the former prime minister sidelined experts and the cabinet in order to make the case for war. The report, which has taken seven years to compile, is also expected to expose a failure by British embassy staff in Washington to pass on misgivings from the CIA about preparations for the reconstruction of Iraq.

Police boost surveillance at Australian airports as experts call for new security strategy
The Australian, Mitchell Bingemann, 2016 06 30
Canberra - **Australian Federal Police have been ordered to increase their presence at the nation's largest airports following yesterday's terrorist attacks in Turkey**. The Office of Transport Security -- which regulates security at aviation and maritime hubs -- briefed airlines and airports following yesterday's attacks at Istanbul's Ataturk International Airport, while the AFP enhanced its surveillance in the publicly accessible areas of Australia's major airports.Australia remains on a "high" level of alert, with ASIO maintaining its national terrorism threat level as "probable". "The Department of Infrastructure and Regional Development has

encouraged industry participants to review security in public areas," a spokesman said. "As aviation is a global industry, the government is also in contact with its international counterparts. This is so we can co-ordinate actions and work to ensure that the aviation sector does not grind to a halt as it is critical for our economy and way of life.

Andrew Kibblewhite : First responder
The Dominion Post, Tracy Watkins, 2016 07 02
Column : Did you want to talk about Five Eyes? **Andrew Kibblewhite**, head of the Department of Prime Minister and Cabinet, is asking the question as I'm packing up, tape recorder already turned off and halfway to my pocket. Oh, yeah. Five Eyes. Kibblewhite and I have just finished a 40-minute interview about security and somehow it never came up. But it was clearly on Kibblewhite's list of talking points. This fact alone speaks volumes about how far the national security apparatus has moved in recent years. Five Eyes used to be the club that dare not speak its name; an elite grouping of world "powers" through which much of the world's heavy duty intelligence passes. It's largely thanks to circumstances of geography and historic alliances that we are there at all, Five Eyes' smallest member. There is another club that used to fall in the same secret category - ODESC, or, to go by its more mundane title, the Officials Committee for Domestic and External Co-ordination, chaired by Kibblewhite. **Kibblewhite is among the new breed of public servant heading these previously invisible agencies. In place of the shadowy faces of the past are the likes of Security Intelligence Service boss Rebecca Kitteridge, and new Government Communications Security Bureau boss Andrew Hampton** - personable, smart and refreshingly open, though critics argue that's just clever window dressing. But Kibblewhite has kept a lower profile during that period. Some of that may be tactical - he has made the headlines previously for unrelated reasons, including his offer to Key to resign when it was revealed he knew about Parliamentary Service accessing a journalist's private emails.

Warning to online news sites on social media sources
South China Morning Post, 2016 07 05
Beijing--The **powerful internet censorship body has further tightened its grip on online news reports by warning all news or social network websites against publishing news without proper verification**, according to state media reports. The instruction, issued by the **Cyberspace Administration of China**, came only a few days after Xu Lin, formerly the deputy head of the organisation, replaced his boss, Lu Wei, as the top gatekeeper of internet affairs.No

website is allowed to report public news without specifying the sources, or report news that quotes untrue originsCyberspace Administration of China. Xu is seen as a key supporter of President Xi Jinping.

State Department Report Says Chinese Cyber Attacks 'Ongoing'
Washington Free Beacon, Bill Gertz, 2016 06 29
Washington - **Chinese cyber attacks against American firms are "ongoing" and the use of covert cyber tools and methods by Beijing hackers** led to a statistical decline in cyber activities, according to an internal State Department security report. The report by the State Department-led Overseas Security Advisory Council, or OSAC, a public-private partnership, challenges the findings of a recent study by the private cyber security firm FireEye that says the decline in the number of Chinese-origin cyber attacks indicated China has cut back from large-scale cyber attacks. "While media reporting has emphasized this alleged decrease in malicious activity, cases of Chinese espionage campaigns against the U.S. private sector are ongoing," the report said, adding that "OSAC constituents should remain aware that China is still considered a highly capable and motivated cyber threat actor."

Chinese economic cyber-espionage is diminishing, says U.S. official
Reuters, Staff report, 2016 06 28
Washington - U**.S. Assistant Attorney General John Carlin said on Tuesday that Chinese hacking activity appears to have declined since the Chinese government** vowed last September to stop supporting the hacking of U.S. trade secrets. The assertion supports findings released earlier this month from cyber security firm FireEye that breaches attributed to China-based groups had plunged by 90 percent in the past two years. "Generally, people have seen a change in activity," Carlin said at the Center for Strategic and International Studies think tank in Washington.

Former Ukrainian security chief says no chances for NATO membership over short term
ITAR-TASS World Service, Staff report, 2016 07 05
Moscow - **Ukraine has lost an opportunity to get NATO membership over the short term, the former chief of the Ukrainian Security Service (SBU), Igor Smeshko** told the ICTV channel on Monday as he commented on the summit of the North-Atlantic pact that will be held in Warsaw on July 8-9. "Ukraine doesn't have the chances to become a NATO member - in the short term as a minimum," he said. "This country will have to build a combat-ready powerful army of its own." **NATO's Secretary General Jens Stoltenberg** said earlier he expected the latest information on developments in Ukraine from President Pyotr Poroshenko at a session of the NATO-Ukraine commission in Warsaw.

Moscow 'secret police grads' stage luxury car parade, prompt storm of criticism
RT (Russia), Staff report, 2016 07 04
Moscow - A **video showing a group of youngsters thought to be fresh graduates of Moscow's FSB secret police academy out for a joyride in Moscow while packed into 30 Mercedes luxury SUVs worth at least $100,000 has raised more than a few eyebrows**. The **FSB newbies** cruising the streets of the Russian capital in black four-wheel drive G-Wagens

blocked traffic in their lane several times, while honking their horns for no reason. To help a cameraman take some great shots, they formed a long line from time to time, making it difficult for other vehicles to pass by safely. Meanwhile, young men in white shirts keep protruding from the car windows, joyfully shouting and waving to each other while taking pictures and videos on their cell phones. The footage of the parade was later posted on the internet by its participants, as well as several witnesses.

Patrushev discuss int'l security with Israel's Mossad chief
Interfax News Agency, 2016 07 01
Moscow—**Russian Security Council Secretary Nikolai Patrushev has discussed international security with the director of Israeli Foreign Intelligence and Security Agency (Mossad),** the press service of the Security Council's administration told Interfax on Friday. "Russian Security Council Secretary has discussed the issues of provision of international security with the director of Israeli Foreign Intelligence and Security Agency. Nikolai Patrushev and Yossi Cohen have paid special attention to the situation in the Middle East," the press service said. The meeting has been held as part of the Cohen's working visit to Moscow, the press service said.

Russia Says U.S. Diplomat In Moscow Altercation A Spy
Radio Free Europe, 2016 06 30
Moscow— **Russia's Foreign Ministry says a U.S. diplomat who was involved in an altercation with a Russian guard outside the Moscow Embassy was a spy returning from an unspecified intelligence operation**. The June 30 announcement comes amid a slew of complaints by both sides of improper treatment of diplomatic staff in each other's country. The public statements represent a remarkable escalation with echoes of Cold War spy capers between Moscow and Washington. The U.S. diplomat suffered a broken shoulder after being tackled on a sidewalk outside the U.S. Embassy compound in central Moscow on June 6, according to a U.S. official who spoke to RFE/RL about the incident. The guard who was said to have tackled the man was part of the **Russian Federal Security Service (FSB)** division that both guards and monitors the embassy. That led to speculation that the American had been specifically targeted as an intelligence officer, a question raised by The Washington Post, which first reported on the incident.

Russian FSB guard attacked U.S. diplomat outside Moscow embassy
Washington Post, Josh Rogin, 2016 06 30
Column - In the early morning of June 6, a **uniformed Russian Federal Security Service (FSB) guard stationed outside the U.S. Embassy in Moscow attacked and beat up a U.S. diplomat who was trying to enter the compound, according to four U.S. officials who were briefed on the incident**. This previously unreported attack occurred just steps from the entrance to the U.S. Embassy complex, which is located in the Presnensky District in Moscow's city center. After being tackled by the FSB guard, the diplomat suffered a broken shoulder, among other injuries. He was eventually able to enter the embassy and was then flown out of Russia to receive urgent medical attention, administration officials confirmed to me. He remains outside of Russia. The attack caused a diplomatic episode behind the scenes that has not surfaced until now. The **State Department in Washington called in Russian Ambassador Sergey I. Kislyak to complain about the incident, an administration official said.** The motive for the attack remains unclear.. A different U.S. official told me **the diplomat may have been working as a spy in Russia under what's known as "diplomatic cover,"** which means he was pretending to be a State Department employee. Spokesmen for the both the **State Department and the CIA declined to comment** on the incident or whether or not the diplomat was in fact an undercover U.S. spy.

Poutine renforce son arsenal antiterroriste
Le Monde, Isabelle Mandraud, 2016 06 29
Moscou - Les opérateurs Internet et de téléphonie devront conserver tous les échanges pendant six mois A une cadence effrénée avant l'interruption de l'été, les députés de la Douma, la chambre basse du **Parlement russe, ont adopté deux lois antiterroristes controversées que le Conseil de la fédération, l'équivalent du Sénat**, s'apprête à son tour à entériner mercredi 29 juin. " Notre pays et notre société en ont besoin " , a déjà prévenu sa présidente, Valentina Matvienko. Présenté comme une réponse à l'attentat d'octobre 2015 contre un charter russe au-dessus du Sinaï, qui avait entraîné la mort de 224 passagers et membres d'équipage, ce **Patriot Act** version russe soulève l'inquiétude des organisations des droits de l'homme. Réfugié en Russie depuis deux ans, le lanceur d'alerte Edward Snowden a également dénoncé sur Twitter un arsenal " Big Brother " , " qui constitue une violation inapplicable et injustifiable des droits " .

The spying game: The former KGB officers who run Russia today
Russia Behind The Headlines, Yekaterina Sinelschikova, 2016 06 28
Moscow - **Secret Agents, sinister prison basements, widespread wiretapping and mass denouncements: There were always many rumors circulating about the KGB. And Russia's most famous Chekist** (from Cheka, the Emergency Committee, the first Soviet state security organization), President Vladimir Putin, and his work as a spy in Dresden continue to keep many people from sleeping at night. "What did Putin actually do in the late the 1980s in East Germany? " But surveillance was not the only secret unit in the KGB - the newspapers did not write about many of the sectors. "I served in the S administration, 'illegal' surveillance. We had false passports and biographies. There were many of us," says retired KGB Major General Valery Malevany. The structure of this command was never divulged. A Soviet agent could have been an engineer, a librarian or a broker. It was easier with the 'illegals' since they had official diplomatic positions. For example, the first secretary of an embassy was always someone from the **KGB**.

Attentats : la commission d'enquête propose une profonde refonte du renseignement
Le Monde, Journaliste maison, 2016 07 05
Paris - La **commission d'enquête parlementaire sur les attentats de janvier et novembre 2015 a rendu son rapport mardi, soulignant l'étonnant défaut de coordination du renseignement français**. Au terme de six mois de travail, la commission d'enquête parlementaire sur l'action de l'Etat face aux attentats de janvier et novembre2015 a rendu son rapport, mardi 5juillet. Ce **document de trois cents pages se nourrit notamment des auditions de quatre ministres et des directeurs des services de renseignement.** Un important travail de synthèse qui aboutit à trente-neuf propositions, que le rapporteur de la commission, le député PS Sébastien Pietrasanta, et son président, le député LR Georges Fenech, ont présentées au Monde . Ces propositions balayent plusieurs thématiques allant de l'organisation des secours en situation de crise à la sécurisation du territoire en passant par les failles des services de renseignement.

Attentats : renseignement, terrorisme... Ce qu'il faut retenir du rapport de la commission Fenech
Le Point, Journaliste maison, 2016 07 05
Paris - **Georges Fenech**, à la tête de la commission d'enquête parlementaire, **ne décolère pas contre les "aberrations" du 13 novembre 2015.** Ses propositions. Huit mois après les attentats du 13 novembre qui ont secoué Paris, la commission d'enquête parlementaire vient de rendre ses conclusions. Le député Les Républicains Georges Fenech, président de cette commission, ne décolère pas. Il fustige les « aberrations » découvertes durant les cinq mois d'audition. Aux côtés du rapporteur socialiste Sébastien Pietrasanta, il a présenté un rapport pour éviter de telles « tragédies ». **En voici les principales propositions. Un « commandement unifié » Le 13 novembre 2015, ni le ministre de l'Intérieur ni le directeur général de la police nationale n'ont déclenché la Force d'intervention de la police nationale (la FIPN). La Brigade de recherche et d'intervention (BRI) a donc géré la direction des opérations, « alors que nous avons deux forces d'élite spécialisées :** le Raid, qui, ce soir-là, n'a été que force d'appoint, et le GIGN, qui est resté cantonné quai des Célestins », explique Georges Fenech au . Le député préconise « un commandement unifié en cas d'intervention de nos trois forces d'intervention ». **Renforcer la DGSI Georges Fenech s'étonne que « le travail de la Direction générale de la sécurité intérieure [DGSI]** s'arrête à la frontière parisienne ». Ainsi, la recherche de Saïd Kouachi, l'un des tueurs de , avait connu des difficultés à cause de rupture entre les services de la préfecture de police de Paris et la DGSI.

Terrorisme : les propositions chocs de la commission Fenech
Le Figaro, Paule Gonzalès avec Jean-Marc Leclerc, 2016 07 05
Paris - **Pour éviter un nouveau 13 novembre, le président de la Commission d'enquête parlementaire sur les attentats de 2015 propose une révolution dans les structures spécialisées**. «Devant le Bataclan, le 13 novembre, les policiers de la BAC, arrivés les premiers, voulaient au moins que les militaires de l'opération Sentinelle, arrivés sur place, leur prêtent leurs fusils d'assaut Famas, puisque les militaires n'avaient pas le droit de tirer. Et ils ont essuyé un refus!» Le député Les républicains **Georges Fenech**, président de la Commission d'enquête parlementaire sur les attentats de 2015 en France, ne décolère pas contre les «aberrations» mises à jour au fil de ses cinq mois d'auditions. Voici ce qu'il propose, avec le rapporteur socialiste Sébastien Pietrasanta pour éviter de telles «tragédies».

French lawmakers propose intelligence overhaul after 2015 attacks
DPA News Agency, 2016 07 05
Paris—**France's intelligence services should be overhauled**, a parliamentary inquiry commission tasked with assessing possible security flaws recommended Tuesday. The commission was set up in the wake of terrorist attacks that hit the country in 2015. The commission said that counter-terrorism activities should be re-organized around a national agency directly under the authority of the prime minister, French newspaper Le Monde said. It also recommended measures to bolster cooperation between police and military intervention forces, and to streamline intelligence services.The head of the parliamentary group, **Georges Fenech**, said Tuesday on social media that the commission's report conclusions had been adopted unanimously and that a body was set up to monitor the implementation of the proposals. Speaking to broadcaster BFM-TV, Fenech had pointed specifically to the case of Said Kouachi, one of the Charlie Hebdo shooters, who was under Parisian surveillance until it was lifted when he left Paris. The **case was then taken up by French intelligence agency DGSI.**

Former Ukrainian security chief says no chances for NATO membership over short term
ITAR-TASS World Service, Staff report, 2016 07 05
Moscow - **Ukraine has lost an opportunity to get NATO membership over the short term, the former chief of the Ukrainian Security Service (SBU), Igor Smeshko** told the ICTV channel on Monday as he commented on the summit of the North-Atlantic pact that will be held in Warsaw on July 8-9. "Ukraine doesn't have the chances to become a NATO member - in the short term as a minimum," he said. "This country will have to build a combat-ready powerful army of its own." NATO's Secretary General Jens Stoltenberg said earlier he expected the latest information on developments in Ukraine from President Pyotr Poroshenko at a session of the NATO-Ukraine commission in Warsaw.

CIA arrested wrong man but jailed him anyway
McClatchy News Service, Matthew Schofield, 2016 07 04
Berlin--By January 2004, when German citizen **Khaleed al-Masri arrived at the Central Intelligence Agency's secret prison in Afghanistan, agency officials were pretty sure he wasn't a terrorist**. They also knew he didn't know any terrorists, or much about anything in the world of international terror. In short, they suspected they'd nabbed the wrong man. Still, the agency continued to imprison and interrogate him, according to a recently released internal CIA report on al-Masri's arrest. The report claims that al-Masri suffered no physical abuse during his wrongful imprisonment, though it acknowledges that for months he was kept in a "small cell with some clothing, bedding and a bucket for his waste." Al-Masri says he was tortured, specifically that a medical examination against his will constituted sodomy. **The embarrassing, and horrifying, case of al-Masri is hardly new. It has been known for a decade as a colossal example of CIA error in the agency's pursuit of terrorists during the administration of President George W. Bush**. But the recently released internal report makes it clear that the CIA's failures in the al-Masri case were even more outrageous than previous accounts have suggested.

German spy chief says can't rule out Istanbul-style attacks at home
Reuters, 2016 07 02
Berlin—**Attacks by Islamist militants pose the biggest security threat for Germany and events like the shooting and bombing in Istanbul this week could happen in Germany, the head of the domestic intelligence agency (BfV)** told a Saturday newspaper. Three suspected Islamic State suicide bombers killed 44 people at Istanbul's main airport on Tuesday, the deadliest in a string of attacks in Turkey this year. "We can't rule out attacks like those in Istanbul also happening in our country," **Hans-Georg Maassen** told German newspaper Frankfurter Allgemeine Zeitung.

Security Service calls for 700 MHz band to remain state-owned
Esmerk Swedish News, 2016 07 01
Stockholm—The **Swedish Security Service (Säpo) has expressed concern regarding the possible outsourcing of the 700 MHz band by the Swedish Post and Telecom Authority** (PTS). The 700 MHz band will be used for mobile broadband for private consumers. Säpo has responsibility for security protection of telecom connections and the service concluded that it will be hard to maintain security without a secure system.

Russian Federal Security Service officer is charged for espionage in Lithuania
Lithuanian News Agency, 2016 07 01
Vilnius—The Organised Crimes and Corruption Investigation Department at the Prosecutor General's Office of Lithuania has submitted an **espionage case to Vilnius County Court.** A **defendant in the case is identified by initials N. F., the citizen of the Russian Federation**

who at the time was a senior operational officer at the intelligence section of the Russian Federal Security Service's Kaliningrad Regional Office. The Russian citizen is accused of espionage, forgery of documents, the use of forged documents and multiple illegal crossings of the Lithuanian border. N. F. is accused of acting as a foreign intelligence officer in an organised group and attempting to recruit Lithuanian citizens during meetings in several foreign countries from October 2011 to the end of 2014 to spy against Lithuania, collect and transfer information to a foreign intelligence agency and actively organising such activities and paying money for information.

Turkish intelligence warned of potential Istanbul airport attack around 20 days ago: Report
Hurriyet Daily News, Staff report, 2016 06 30
Istanbul - **Turkish intelligence units sent a warning letter to related state institutions about a potential attack by the Islamic State of Iraq and the Levant (ISIL) jihadist group targeting Istanbul around 20 days ago**, before the city's main airport was hit in a deadly terror attack late on June 28, a senior Turkish journalist based in Ankara has reported. Speaking during a live broadcast on June 29, Dogan TV's Ankara representative Hande Firat stated that intelligence units sent a warning letter to all state institutions about a possible attack on Istanbul. "Intelligence units sent a warning letter to the top of the state and all its institutions in early June, around 20 days ago, about Istanbul," Firat said.

Rinkevics warns of foreign intelligence services' increased activity
Latvian News Agency, 2016 06 30
Riga—**Intelligence activity of countries that are not NATO and EU members increases ahead of major events and Latvian security agencies have to be prepared for this, Foreign Minister Edgars Rinkevics (Unity) said** on Latvian Radio today.Asked if foreign intelligence services had been stepping up their activities ahead of the upcoming NATO summit in the Polish capital Warsaw, the Latvian minister said that countries that are not NATO and EU members always want to learn more about forthcoming talks and decisions that could influence their own decision making."In recent years, because of the events in Ukraine, the activity of many countries' intelligence services and their interest in decision makers have only increased.

How a Czech 'super-spy' infiltrated the CIA
The Guardian (London), Benjamin Cunningham, 2016 06 30
Prague - On a cold February night in 1986, **Berlin's Glienicke Bridge became the scene of the cold war's last ever prisoner exchange - a dramatic hand-over involving a Soviet dissident and Karel Koecher**, the **only foreign agent ever known to have infiltrated the CIA.** Koecher was a Czech citizen who had been living undercover in the US for 21 years. Alternately codenamed Rino, Turian or Pedro, he had moved to America in 1965 to establish himself as a mole within the CIA. Koecher's KGB case officer, Colonel Alexander Sokolov, would later call him a super-spy. According to files held by Czech secret police, his wife, Hana Koecherova, codenamed Adrid, had distributed secret messages on Koecher's behalf during their decades abroad but was never charged with espionage. For years she had been a New York City diamond dealer.

Germany girds for potential spike in Islamic State attacks in Europe
Reuters, Staff report, 2016 06 28
Berlin - The **German government voiced concern on Tuesday that Islamic State could step up attacks in Europe** as it loses territory in Iraq and Syria, and said its domestic intelligence agency is training to respond to a large-scale assault. Interior Minister Thomas De Maiziere welcomed gains made by a U.S.-led coalition against Islamic State (IS) in Iraq and Syria, but

said they were not diminishing the risk of attacks in Europe. "On the contrary, we fear that Islamic State will externalize, transfer its activities to Europe, especially because of military losses in the region," the minister, a member of Chancellor Angela Merkel's conservative Christian Democratic party, told reporters. Germany has been on high alert for possible large-scale militant incidents - potentially including military- style weapons - since the IS attacks in Paris last November and Brussels in March, **Hans-Georg Maassen, the head of the BfV domestic intelligence agency**, told the same news conference.

Germany puts a (long) leash on its spooks
Deutsche Welle, Staff report, 2016 06 28
Berlin - The **German government is moving to tighten rules on its foreign intelligence service, the Bundesnachrichtendienst (BND), following a series of revelations that it was acting independently of any government oversight, spying on allies, international organizations and helping the US National Security Agency (NSA) without it ever being appropriately monitored by any parliamentary watchdog**. In a cabinet meeting on Tuesday, Angela Merkel's administration agreed to a new draft bill that would see legal guidelines imposed on spying on European Union citizens, as well as an external committee to oversee the agency. But the bill is actually a diluted version of what had been originally planned and recommended by the parliamentary committee, building in a number of exceptions to allow the BND to spy on targets within the EU.

IRGC Intelligence Official: Iran Seriously Pursuing Fate of Kidnapped Diplomats
Fars News Agency, 2016 07 05
Tehran - **Head of the Islamic Revolution Guards Corps (IRGC) intelligence unit Hossein Ta'eb underlined that Iran is seriously pursuing the fate of its four diplomats who had been abducted by Phalange forces in Northern Lebanon** in 1982. "The relevant bodies are seriously pursuing the issue until attainment of final results," Ta'eb told FNA on Monday. "We are not yet disappointed at obtaining results as we pursue the case," he added. In relevant remarks yesterday, Son of former Iranian charge d'affaires in Beirut Seyed Mohsen Moussavi underlined that evidence and documents indicate that the four diplomats abducted in Lebanon are still alive and imprisoned in Israel.

Syria intelligence chief visits Rome
Now Lebanon, Albin Szakola, Amin Nasr, 2016 07 05
Beirut - A leading pro-regime newspaper has reported that a **top Syrian intelligence chief sanctioned by the EU recently made a secret visit to Italy.** "A high-level Syrian security delegation visited Rome last week, where they met with senior Italian security officials," Al-Watan reported Sunday. The newspaper--which is owned by Bashar al-Assad's influential cousin Rami Makhlouf--cited a "Western diplomatic source in Beirut" as saying that **Syrian General Intelligence Directorate chief Major General Mohammad Deeb Zaytoun headed the delegation.** "Zaytoun, who was accompanied by a number of officers, made a two-day visit in Rome during which he met with his [Italian] counterpart and a number of security officials," the source told the newspaper.

Iran officials urges intelligence body to find sender of "threatening" messages
BBC Monitoring Caucasus, 2016 07 02
Tehran - **Some Iranian officials and journalists have called on the Ministry of Intelligence and the Cyber Police to investigate the source for "threatening messages" recently sent to journalists**. On 30 June, a message was sent to over 700 political activists and journalists, warning them to stop cooperating with foreign media. "Warning: Any kind of connection or cooperation with hostile elements [presumably referring to the foreign media] residing in foreign countries via email, secured portals or any other communication devices is considered as an offence that will be brought to prosecution. You should cut your relation. This message is the final security warning," it read. Vice-Speaker of the parliament Ali Motahhari called on the **Ministry of Intelligence and FATA (Persian acronym for the Cyber Police)** to investigate the case and find the sender of the message.

Japan, Italy to cooperate on counterterrorism after Dhaka attack (Canada)
Kyodo News, 2016 07 05
Tokyo--**Japan and Italy agreed Monday to cooperate on counterterrorism in the wake of a terrorist attack in Dhaka** which resulted in the deaths of 20 hostages, including nine Italians and seven Japanese, the Japanese Foreign Ministry said. Foreign Minister Fumio Kishida and his Italian counterpart Paolo Gentiloni also affirmed in telephone talks to cooperate in dealing with the aftermath of the deadly attack at a restaurant in Dhaka on Friday evening, the ministry said. Noting that the Group of Seven leaders agreed in their summit in May in central Japan on efforts to fight terrorism and violent extremism, the ministers agreed on close coordination to that end, it said. Italy will succeed Japan as the chair of the G-7 grouping Britain, **Canada**, France, Germany, Italy, Japan and the United States next year.

Pakistan denies ISI's role in Dhaka carnage
Dawn (Pakistan), 2016 07 05
Islamabad—The **Foreign Office on Monday denied that Pakistan's premier intelligence agency ISI was behind the Dhaka carnage and described the allegations as "baseless and unfounded".**"These are highly regrettable, irresponsible and provocative stories being carried in the Indian media. They are utterly baseless and unfounded. Pakistan strongly rejects such allegations," FO spokesman Nafees Zakaria said in a statement. He was reacting to media reports that ISI had links with the militant group Jamayetul Mujahideen Bangladesh, the group that carried out the weekend attack in an upscale cafe in the Bangladeshi capital in which 20 hostages, mostly foreigners, were killed by the terrorists.

Indian agencies had alerted Bangladesh
Deccan Herald, 2016 07 04
Kolkata—In a **move that could cause diplomatic unease, Indian intelligence agencies claim that they repeatedly warned Dhaka about an "imminent" terror strike.** The seed of the inputs can be traced back to the October 2014 blast at Khagragarh in Burdwan district of West Bengal. Sources said inputs were passed on to Bangladesh as recent as June 14 after investigating officials observed some pro-Islamic state youths who were using Facebook and Twitter to exchange notes. "Our agencies deciphered these coded missives, mostly

photographs, to realise that Dhaka's diplomatic zone would be under attack," an official said. Sources said **Rajinder Khanna, chief of Indian counter-intelligence agency RAW**, had sometime in early June notified his counterpart in Bangladesh about an "imminent attack". However, Indian agencies are not willing to comment on the measures taken by Dhaka. "It is an internal matter and we shouldn't comment on it, but the last few alerts had specific information. We also know that US agencies shared similar alerts with Dhaka," the source said.

NIS arrests two men for spying for Pyongyang
Korea JoongAng Daily, 2016 07 03
Seoul - The **National Intelligence Service (NIS) arrested two South Korean men on espionage charges and is questioning them about alleged anti- state activities they planned to carry out**, the NIS reported to lawmakers Friday. In a briefing to members of the parliamentary intelligence committee Friday, the NIS revealed that it arrested one espionage suspect in an Internet cafe in Dongjak District, northern Seoul, in May as he was writing an email to a contact in North Korea describing domestic affairs. The NIS didn't elaborate on the suspect's report or his identity except saying that he was in his late 40s or early 50s. The NIS reported it arrested another man in Ansan, Gyeonggi, around the same time on charges of violating the national security law.

S. Korea draws up detailed antiterrorism plans
Yonhap News Agency, 2016 07 02
Seoul—**South Korea's antiterrorism center under the Prime Minister's Office on Friday drew up a detailed plan on tackling possible terrorist attacks in the country**, amid rising concerns that international radical groups may target Asia's fourth-largest economy as well. Under the plan, the country will make a four-step alert system depending on the circumstances, while designating an "antiterrorism squad" composed of special forces under the military, police, and the Ministry of Public Safety and Security. "There is a possibility that North Korea will abduct our citizens overseas, or conduct attacks by hiring international terrorism organizations," Prime Minister Hwang Kyo-ahn said. "All related organizations must make efforts to have no blind spots when it comes to preventing terrorism." The government has been speeding up its efforts to bolster antiterrorism capabilities, especially as the **National Intelligence Service** revealed last month that the Islamic State jihadist group had designated some U.S. military installations here and a South Korean citizen as targets.

Defense and Security to be Focus in K/L Expenditure in APBN-P 2016
Iindonesian Government News, 2016 06 30
Jakarta—Ministry/Institution (K/L) expenditure budget in the Revised State Budget (APBN-P) 2016 will **focus on defense and security expenditur**e. This aims to strengthen national security stability. "The focus of ministry/institution's expenditure in APBN-P 2016 is defense and security expenditure, which aims to strengthen security stability," explains Minister of Finance Bambang P.S. Brodjonegoro in the press conference on APBN-P 2016 and Tax Amnesty on Wednesday (29/06) at the Djuanda Hall, Ministry of Finance, Jakarta. Minister adds, budget increase will also touch K/L that are deal with terrorism and narcotics eradication. "**The beneficiaries, other than Ministry of Defense and POLRI, are BNPT (National Antiterrorism Agency), BNN (National Narcotics Agency), BIN (National Intelligence Agency**), and other institutions related to terrorism and narcotics eradication," he says.

NDS creating subversive spying network in Punjab
The Nation, Jawad R. Awan, 2016 06 29
New Delhi—Tracing NDS footprints in the Punjab, **the security services have spotted Afghan intelligence agency's bids to create a subversive spying network in the province through**

their refugees, The Nation learnt through sources in the security agencies. Against the backdrop of possible encirclement of Pakistan by Kabul, New Delhi and some western powers in the region, Afghanistan's key intelligence service has made bids to erect a network of its agents in the Punjab. The probable network is aimed to launch subversion in the relatively calm province for multiple purposes of which CPEC routes can be the major target, they added. **Inter-Services Intelligence** (ISI), in some key operations, hunted down subversive spy rings of **National Directorate of Security (NDS)** from Taxila, Attock, Rawalpindi and Tarnol, Islamabad. Weapons and explosives were also recovered in the intelligence-led operations to create havoc on Pakistani soil.

State Spies Put Catholic Bishop Mtumbuka, Malawi Activists Under Surveillance Over 'Regime Change' Agenda
Nyasa Times, 2016 07 04
Lilongwe, Malawi—The **dreaded National Intelligence Bureau (NIB) has put on surveillance Bishop Dr Martin Mtumbuka of Karonga Diocese of the influential Catholic Church and other activists following its intelligence gathering** that the bishop has joined the underground movement discussing a regime change agenda in Malawi, Nyasa Times understands. The state spies are following His Grace Bishop Mtumbuka after its intelligence notes claim the Public Affairs Committee (PAC) has successfully convinced him to join the movement that has been discussing the possibility of having President Arthur Peter Mutharika removed from power before the next general elections slated for 2019.

Avengers, Tompolo disown alleged bombers in DSS custody
Vangard News, Emma Amaize, 2016 07 03
Abuja - The **Niger Delta Avengers, NDA, yesterday, denied that two suspects, Christian Oluba, alias Sensor, and Selky Kile Torughedi, arrested by the Department of Security Service, DSS**, in connection with foiled attacks on oil facilities in the Niger Delta, were its members. In addition, fugitive ex-militant leader, Government Ekpemupolo, alias Tompolo, allegedly identified by Torughedi, according to the DSS, as the person that sent him to kill a serving army officer, Major M.B Yahaya, said the claim was a farce. The DSS, had, last Friday, said it arrested Torughedi, described as a close associate of Tompolo in Calabar, Cross River State, after he had carried out reconnaissance on the home of Yahaya in Kaduna, while Sensor was seized as he was allegedly perfecting plans to carry out attacks on oil and gas pipelines, including storage points. The security agency said both suspects were members of the NDA and that it foiled fresh plans by militants to attack oil pipelines in the region by arresting the masterminds.

DSS foils NDA's planned bombing of oil pipelines
Vangard News, Soni Daniel, 2016 07 02
Abuja - The **Department of State Security Service, DSS, has recorded a major success against criminals posing serious challenges to the nation through attacks on oil installations and kidnap of prominent Nigerians for pecuniary gains**. The DSS said last night that it foiled fresh planned attacks on vital oil facilities in the Niger Delta region by arresting the masterminds of the onslaughts before they were able to carry out their nefarious actions. A

statement made available to Saturday Vanguard in Abuja by the security agency and signed by Tony Opuiyo, said the DSS also arrested no fewer than 15 kidnap kingpins from various parts of the country, including the man who kidnapped the Personal Assistant to the Transport Minister, Igo Chinda. The DSS said all the arrests were made in the month of June through what it called 'series of special tactical operations', which led to the decimation of the criminals' hideouts.

Niger Delta: Buhari, Osinbajo meet service chiefs
The Sun (Nigeria), 2016 07 01
Abuja—**President Muhammadu Buhari and Vice President Yemi Osinbajo yesterday held a closed door meeting with Service Chiefs and other heads of security agencies in the country.** The meeting reportedly reviewed military operations in the Niger Delta region and the ongoing anti-terrorism war in the North-East. Those who attended the meeting included the Chief of Defence Staff, Gabriel Olonisakin; Chief of Army Staff, Tukur Buratai;Chiefof Air Staff, Air Marshal SadiqueAbubakar;Chief of Naval Staff,Ibok-Ete Ibas; **Director General of the Department of State Services, Lawal Daura; Director General, National Intelligence Agency, Mr. Ayo Oke;** and theacting Inspector General of Police, Mr. Ibrahim Idris.

Brazil has 'total confidence' in Olympics security
Agence France-Presse, Staff report, 2016 06 29
Rio de Janeiro - **Brazil has "total confidence" that it can ensure security for more than half a million tourists and athletes attending the Rio Olympics this August**, a senior official said Wednesday. Andrei Rodrigues, secretary for major events at the justice ministry, said that a heavy police presence on the ground and **international cooperation on intelligence gathering would overcome potential terrorist threats and the danger of violent crime**. "I have total confidence in our preparations for the security of the Games," Rodrigues told reporters a month ahead of the August 5-21 Olympics, which he described as "the biggest event on the planet."

Demoralized RCMP want union to force change
Ottawa Citizen, Kathryn May, 2016 07 11
Ottawa - **Most rank-and-file RCMP officers don't believe Canada's national police force will survive without unionization** but they have firm ideas about what they want and expect from a new unionized workplace. A report on a major consultation of rank-and-file RCMP found they have "intense and emotional" feelings about the force. Their chief frustration is management who they mistrust and feel doesn't listen to them and their top concerns revolve around wages and benefits, working conditions and protection against "unfair or arbitrary treatment." Alain Jolicoeur, a former senior bureaucrat who led the consultation, recently told a Senate committee that he was taken aback by the "intensity of feelings" among the pro-union and anti-union forces but more favoured unionization than were against.

RCMP legal fund used to finance union drive
Ottawa Citizen, Kathryn May, 2016 07 11
Ottawa - **As Canada's Mounties prepare to choose their first-ever union, two rival factions are warring over the propriety of a loan one side received to finance its organizing drive**. The debate is casting a shadow over the historic public-sector organizing drive, set in motion by a Supreme Court of Canada decision, and considered the biggest in 50 years. At the centre of the dispute is the RCMP's multimillion-dollar legal fund, which took the unusual step of approving a loan - of undisclosed value -- to one of the groups vying to become the force's first bargaining agent. The loan dispute throws a spotlight on the differences that have divided the force for nearly 20 years on how to manage labour relations - a division that paved the way for a landmark top court ruling giving the RCMP the right to unionize.

Government documents suggest Snowden 'altered' the cyberspace discussion
Toronto Star, Alex Boutilier, 2016 07 09
Ottawa - It's not a matter of if there will be another **Edward Snowden**, it's a matter of when, according to internal government documents obtained by the Star. **Global Affairs officials warned ministerStéphane Dion in November an event on the scale of Snowden's disclosures about Internet surveillance is inevitable.** "Incidents similar to the Snowden disclosures and the Sony hack will happen again and we can expect that sudden events will affect international debates on cyberspace," the document reads. The briefing note, prepared for Dion in November and obtained under access to information law, suggests that Snowden's disclosures about western mass surveillance "altered the tone" of the international discussion on cyberspace. In 2013 Snowden, a former employee of the **U.S. National Security Agency (NSA),** pulled back the curtain on mass surveillance online, detailing the capabilities of the "Five Eyes" countries - Canada, the United States, the U.K., Australia and New Zealand - to monitor activity online. While Canada has long advocated for an open and free Internet, suggestions that the nation's spy agency the **Communications Security Establishment** (CSE) has engaged in mass online surveillance have complicated that narrative.

Mounties revamp witness protection
Canadian Press, Jim Bronskill, 2016 07 08
Ottawa - The **RCMP is retooling its witness protection program following a secret internal review that called for changes to enrolment decision-making and better reporting on the**

program's impact. The changes come less than two years after a fullscale overhaul of the program prompted by high-profile controversies. The federal witness program, administered by the RCMP, is seen as a key tool in the fight against terrorism and organized crime. It shields people who help authorities by providing everything from short-term protection to permanent relocation and identity changes. Protectees may be victims, informants, witnesses or others threatened with intimidation or violence.

Mounties refusing to join 'red serge' community events in protest over working conditions
CBC.CA, Alison Crawford, 2016 07 07
Ottawa - **Members of the RCMP across Canada are taking part in quiet protests over what they say is unsustainable under-staffing and an overall morale problem within the force**. Some Mounties are refusing to volunteer for so-called "red serge duty" where they march in parades and appear at events such as fairs, festivals and sporting events in their ceremonial red uniforms and Stetson hats.

U.S. intel warns: ISIS not desperate, just 'adapting'
CNN.com, Barbara Starr, 2016 07 11
Washington - **Recent raids against ISIS targets have given the U.S. intelligence community a better understanding of how the terror group is structured and organized** and about its plans for attacks outside areas it controls in Syria and Iraq, according to a senior administration official. They also have made it clear that for some time ISIS was planning to focus on those attacks around the world, although there were no clear indications of when and where that would have provided actionable intelligence to prevent them, **the senior official** said. "We were aware they were moving this way," the official said. "It's not like we didn't see it coming." The official declined to say where the intelligence came from, but a spokesman for the U.S.-led coalition in Iraq and Syria recently revealed the Syrian Arab Coalition (SAC) -- Arab fighters in northern Syria that the U.S. supports -- had collected a significant amount of ISIS intel in raids in northern Syria.

Two Russian diplomats are expelled after U.S. official is jumped in Moscow
Washington Post, Carol Morello, 2016 07 09
Washington - The **United States last month expelled two Russian diplomats as a response to a Russian police guard tackling a U.S. diplomat outside the American Embassy in Moscow**, the State Department said Friday. The diplomats were declared persona non grata on June 17, spokesman John Kirby said. That was less than two weeks after the incident that sparked the diplomatic row. The June 6 scuffle between the police officer and the diplomat was captured on security footage and broadcast on Russian television last week. It shows a man emerging from a taxi and walking briskly up the embassy steps. He is just outside the door when a guard jumps out of a gatehouse and wrestles him to the ground. Even with the patrolman on top of him, the diplomat pushes with his feet and, while on his back, manages to get inside the door to the embassy, which is U.S. territory and inviolate.

U.S. Says Kremlin Harasses Diplomats
Wall Street Journal, Felicia Schwartz, 2016 07 08

Washington - **The U.S. has grown increasingly concerned about the Kremlin's harassment of U.S. diplomats**, the State Department said on Thursday in criticism that coincided with the release of a video appearing to show a Russian police officer attacking a U.S. official outside the U.S. Embassy in Moscow. The video on Russian television station NTV shows a man getting out of a taxicab and walking up the stairs of the U.S. Embassy, when a door swings open and a man described as a Russian police officer tackles him, throwing him to the ground. In the footage, the officer pinned the other person, described as a U.S. diplomat, who is seen attempting to slide across the ground outside the embassy to make his way inside. State Department spokesman John Kirby said he couldn't confirm the authenticity of the video but said he didn't have any reason to doubt it.

F.B.I. Director Testifies on Clinton Emails to Withering Criticism From G.O.P.
New York Times, Eric Lichtblau, Michael D. Shear, 2016 07 08
Washington - The F.B.I. director, **James B. Comey Jr., defended himself Thursday against an onslaught of Republican criticism for ending the investigation into Hillary Clinton's emails, but he also provided new details that could prove damaging to her just weeks before she is to be named the Democrats' presidential nominee**. At a contentious hearing of the House oversight committee, Mr. Comey acknowledged under questioning that a number of key assertions that Mrs. Clinton made for months in defending her email system were contradicted by the F.B.I.'s investigation. Mr. Comey said that Mrs. Clinton had failed to return "thousands" of work-related emails to the State Department, despite her public insistence to the contrary, and that her lawyers may have destroyed classified material that the F.B.I. was unable to recover. He also described her handling of classified material as secretary of state as "negligent" -- a legal term he avoided using when he announced on Tuesday that "no reasonable prosecutor" would bring a case against her.

Man Says He Was a Spy; Now He Fears Deportation (Canada)
The New York Times, Benjamin Weiser, 2016 07 07
New York— One evening in February, a man entering the subway at Barclays Center in Brooklyn was detained by the police for using a discounted student MetroCard -- his daughter's, it turned out. It was, he would say later, a stupid mistake that would lead to absurd consequences: The man, **Blerim Skoro**, a citizen of Kosovo, now sits in jail, facing potential deportation. But Mr. Skoro was no mere hapless fare-beater. "I was working for U.S. government," he told a United States asylum officer in May, explaining his past life overseas and why he was now afraid of being sent back to Kosovo, a transcript shows. **"I was trained for Washington. I was a spy."** He says he posed as a willing operative and insinuated himself with members of Al Qaeda in the Balkans, secretly supplying the Central Intelligence Agency with information about plots and the people behind them. **After the C.I.A. cut ties with him in 2010**, he says, **he eventually returned to the United States via Canada** -- illegally, he admits -- and last year, with the help of a lawyer, met separately with the F.B.I. and counterterrorism officials with the New York Police Department, trying unsuccessfully to offer clandestine assistance in the fight against the Islamic State.

WH rejects call to block Clinton from receiving classified briefings
The Hill, Jordan Fabian, 2016 07 06
Washington - The **White House on Wednesday brushed aside House Speaker Paul Ryan's (R-Wis.) call to block Hillary Clinton from receiving classified intelligence briefings as punishment for the FBI's probe into her use of a private email server while secretary of State**. White House press secretary Josh Earnest said it's a "longstanding tradition" for major party presidential nominees to receive such briefings -- and indicated that practice is almost certain to continue. "What the **Office of the Director of National Intelligence [DNI]** has

indicated is that they expect those briefings to move forward after the party conventions," Earnest said. "And the expectation that the DNI has is that they'll provide the same information to both candidates," he added.

Behind James Comey's Big Gamble
Politico, Garrett M. Graff, 2016 07 06
Analysis - Whether or not the **FBI Director James Comey** would speak publicly about the Hillary Clinton email server investigation had been a matter of debate throughout the spring on the seventh-floor corridor that denotes the executive offices inside the J. Edgar Hoover Building on Pennsylvania Avenue, according to those close to the FBI director. During the winter, as the long-running investigation unfolded, the FBI did not expect to make any sort of public statement regarding its investigatory conclusions. That role historically has fallen to the Justice Department; the FBI rarely--if ever--makes public remarks regarding prosecutorial recommendations. But even weeks before Attorney General Loretta Lynch's ill- conceived and seemingly compromising tarmac run-in with former President Bill Clinton in June, **Comey and his leadership team had come to understand that the public credibility of the century-old law enforcement agency would hinge on its handling of the politically touchy email investigation**. The decision to hold Tuesday's news conference came after bureau leaders decided that the FBI couldn't simply conduct its investigation behind closed doors and then kick the decision across Pennsylvania Avenue to what's known as "Main Justice." Instead, to defend the FBI's independence and future credibility and avoid the perception that its investigation had been politically influenced, he had to publicly account for its own work.

Clinton's email could have been hacked, FBI says
Washington Post, Karen DeYoung, 2016 07 06
Washington - The **FBI investigation into Hillary Clinton's private email server found no evidence that her communications were hacked while she was secretary of state**, but it made clear that "hostile actors" here and abroad could have done so. **Clinton "used her personal email extensively while outside of the United States," FBI Director James B. Comey said**, including "in the territory of sophisticated adversaries." It was "possible" that they accessed her account, he said. But "given the nature of the system and the actors potentially involved, we assess we would be unlikely to see such direct evidence."

James Comey's Rebuke of Hillary Clinton Fits a 3-Decade Pattern
New York Times, Michael S. Schmidt, Eric Lichtblau, 2016 07 06
Washington - Shortly after Hillary Clinton was interviewed on Saturday by agents at the F.B.I.'s headquarters, its director, **James B. Comey,** heard from his deputies that Mrs. Clinton had been truthful and forthcoming in the three-and-a-half-hour meeting. Mr. Comey, who had been regularly briefed on the progress of the yearlong investigation into Mrs. Clinton's email account as secretary of state, **had known for some time that his agents had not uncovered enough evidence to charge her or anyone else with a crime**. Now, with the interview done, he told his deputies, according to F.B.I. officials, that he wanted to move forward with a plan he had been working on for months to explain the findings from such a politically contentious investigation to the public. And he did not wait to do it. At 11 a.m. on Tuesday, Mr. Comey walked into a conference room on the first floor of the F.B.I.'s headquarters, where he stood behind a lectern for 15 minutes and laid out in clinical detail how Mrs. Clinton's use of the account was "extremely careless." But, he said, the bureau would recommend to the Justice Department that she not be charged with a crime because his investigators had found no clear evidence that Mrs. Clinton had intentionally broken the law. The careful approach to publicly explaining his thinking fit a pattern for Mr. Comey, who, throughout his three decades as a law enforcement official, has refused to shy away from politically fraught issues.

From GCHQ to Google: the battle to outpace hackers in the cyber race
London Daily Telegraph, Staff report, 2016 07 11
London - **Law enforcement and corporations are still losing the fight against cyber criminals, the National Crime Agency admitted this week**, reporting that the "accelerating pace" of criminal ability is outpacing the country's defences. "You've got the perfect storm of increasingly sophisticated cyber attacks and high adoption of cloud infrastructure," says Alexis Scorer, a director at technology dealmakers GP Bullhound who specialises in technology. No amount of money will help overcome one of the greatest difficulties in the security industry though: the lack of skilled people. **By 2019 there will be a global shortfall of 1.5 million security professionals, according to ISC Squared**, a security certification and industry education body. And the numbers could in fact be significantly higher, given that there are already more than 1 million cybersecurity positions unfilled worldwide, according to a 2015 Cisco report. **Heading up the government's move to train more cyber defenders is spook agency GCHQ, which sponsors academic bursaries, runs summer camps and training days, holds competitions and has created a cyber excellence accreditation for top universities and masters programmes.** The intention is to spot talent in children and nurture them through their education, with the end goal being a career in the industry. "It's an interesting departure from our day to day work, but we have a role to play in this," says Chris Ensor, a technical director for GCHQ's information security arm.

Spies warned invading Iraq would inspire terrorists
Sunday Telegraph (UK), Robert Mendick, 2016 07 10
London - **Britain's spy chiefs warned Tony Blair just weeks before the invasion of Iraq that he would be putting the UK at risk of increased terror attacks**. A top-secret report released to the Chilcot inquiry spells out how al-Qaeda was planning to use the invasion to target Britain. The intelligence report also warned of the danger of Iraq's chemical and biological weapons falling into the hands of terrorists. Setting out the increased risk of attack, the Joint Intelligence Committee wrote in February 2003: 'The threat from al-Qaeda will increase at the onset of any military action against Iraq. They will target Coalition forces and other Western interests in the Middle East. "Attacks against Western interests elsewhere are also likely, especially in the US and UK, for maximum impact. "The worldwide threat from other Islamist terrorist groups and individuals will increase significantly."

Spies keen to please No 10 were fooled by lying sources
London Times, Sean O'Neill, 2016 07 09
London - **On the first anniversary of the September 11 attacks, MI6 produced a dramatic intelligence report on the threat from Saddam Hussein**. The information, from a new source, showed that Iraq was making and planning to use chemical and biological weapons. For Tony Blair, in his search to justify Britain's participation in an invasion of Iraq, this was as close as it would get to the silver bullet. The next day, September 12, 2002, Sir Richard Dearlove,head of MI6, was in Downing Street to brief the prime minister on the source and his information. These were heady times for Sir Richard and his agency. **The Secret Intelligence Service** (SIS), commonly known as MI6, had been in the Whitehall wilderness since the end of the Cold War, but that had changed when Osama bin Laden struck in New York and Washington.

15 secretive orders 'allow spy agencies to collect communications data'
Press Association, Staff report, 2016 07 08
London - **Fifteen secretive orders are in force allowing British spy agencies to collect large volumes of communications data**, it has been revealed. The measures were issued by Home and Foreign Secretaries on behalf of **MI5** and **GCHQ** using a little-known legal provision between 2001 and 2016. A report published on Thursday by the Interception of Communications Commissioner's Office (IOCCO) disclosed that there were a total of 23 "extant" section 94 directions within the scope of its oversight. They were all given by the Home Secretary or Foreign Secretary at various times between 2001 and 2016 on behalf of MI5, GCHQ, the three intelligence agencies collectively **- MI5, GCHQ, and MI6** - or the Metropolitan Police's counter-terrorism command.

Blair: I should have challenged intelligence chiefs
London Times, Zachary Spiro, 2016 07 07
London - **Tony Blair expressed regret today that he did not challenge incorrect intelligence assessments about Saddam Hussein's supposed weapons of mass destruction, but still insisted that he was right to overthrow the dictator**. "I can regret the mistakes and I can regret many things about it but I genuinely believe, not just that we acted out of good motives, and I did what I did out of good faith, but I sincerely believe that we would be in a worse position if we hadn't acted that way," he told the BBC Radio 4 Today programme. Mr Blair denied that he had not challenged the intelligence reports more rigorously because he wanted to believe what they were telling him about Saddam's supposed Weapons of Mass Destruction (WMD) to justify going to war.

Exposed: MI5, GCHQ have 15 secret bulk data collection warrants in force
RT (Russia), Staff report, 2016 07 07
London - **Fifteen "secret warrants" are in force to enable British intelligence services to collect bulk data about online and phone traffic, the Interception of Communications Commissioner's Office (IOCCO) has revealed.** The number of orders imposed on telephone and internet companies under Section 94 of the Telecommunications Act has been published for the first time by the surveillance watchdog. A further eight warrants are in place to provide for emergency services, civil contingencies and to protect security personnel. The directions were acquired by the government's electronic monitoring agency **GCHQ** and the national security service MI5. The watchdog says all Section 94 directions are subject to secrecy restrictions, which severely limits what it is able to say about the directions and the actions taken as a result of them.

MI6 must learn how to tell a spy from a fabricator
London Times, Ben Macintyre, 2016 07 07
Column - **Chilcot focuses closely on the MI6 report from September 11, 2011 heralding a "significant breakthrough" after recruiting a spy in Iraq** with "phenomenal access" who might be the "key to unlock" Saddam's biological and chemical weapons programme. In the words of Chilcot, Britain's spymasters already held the "ingrained belief" that Saddam was concealing weapons of mass destruction. The new spy merely fed into that certainty. The highly placed source reported that Iraq had accelerated production of chemical and biological agents, built new facilities across the country and "was concentrating its efforts on the production of anthrax". A second "high impact" report from the same source, circulated by MI6 two weeks later, stated that sarin and other nerve agents were being stored in "hollow glass spheres". But this Iraqi source was a fake who, like Wormold, was spinning his fiction out of whatever came to hand, in his case Hollywood movies. All intelligence services are vulnerable to the danger of

imagining the truth and then luring the available information towards it. **The Iraq defector codenamed "Curveball" by the CIA claimed to have worked in one of Saddam's mobile biological weapons labs and provided key "evidence" in the build-up to the Iraq War**. Rafid Ahmed Alwan was finally revealed to be a taxi driver who had spun his engineering knowledge into a devastatingly damaging con trick.

Spy chiefs were too eager to please with flawed weapons intelligence
London Times, Sean O'Neill, 2016 07 07
London - **Britain's spy agencies bolstered Tony Blair's desire to go to war in Iraq with "flawed intelligence", the Chilcot report concludes**. It paints a picture of intelligence chiefs who appeared all too eager to please the prime minister with information on Saddam Hussein's access to weapons of mass destruction (WMD), which was discredited and withdrawn within two years. **Sir Richard Dearlove, former chief of MI6, and John Scarlett, head of the joint intelligence committee in the months before the invasion, are criticised**. Both had an "ingrained belief" that Saddam had WMD stocks, the inquiry found, and no effort was made to examine the possibility, which turned out to be true, that those weapons had been destroyed after the first Gulf War. Sir John Chilcot said yesterday:

The Rock movie plot 'may have inspired MI6 source's Iraqi weapons claim'
The Guardian (London), Peter Walker, 2016 07 07
London - An **allegation in an MI6 report about Iraq's supposed chemical weapons capability before the 2003 war to remove Saddam Hussein appeared to have been lifted from a Hollywood film, according to the Chilcot report**. A section of the inquiry's findings about the build-up to the conflict in the autumn of 2002 found that MI6, formally known as the Secret Intelligence Service or SIS, feared a source might have taken inspiration from The Rock, a 1996 thriller starring Sean Connery and Nicolas Cage. The report details how MI6 sent information to "a small number of very senior readers", including Tony Blair and the then foreign secretary, Jack Straw, on 11 and 23 September 2002. **Based on what MI6 called "a new source on trial with direct access", this alleged that Saddam's government had accelerated the production of chemical and biological agents,** and in particular that chemical agents might be carried in glass containers. After some discussion on the reliability of the new source, in early October MI6 was questioned directly about this idea.

MI5 officers 'bound' to report abuse if evidence uncovered, Kincora inquiry told
Belfast Telegraph, Staff report, 2016 07 06
Belfast - A **retired MI5 officer has insisted the Security Service would have been duty bound to take action if it uncovered evidence of abuse at Kincora boys' home**. The officer, known as 9347, was giving evidence to the Historical Institutional Abuse (HIA) inquiry, which is examining claims that intelligence agencies covered up the crimes committed by a paedophile ring in the east Belfast home in order to blackmail some alleged high- profile abusers. Three senior care workers **Joseph Mains, Raymond Semple and William McGrath were convicted for abusing boys at Kincora in 1980**, but it has long been alleged that other more prominent figures, including politicians, judges, civil servants and police officers, were also involved. It has also been claimed that McGrath, who had links to a shadowy Protestant paramilitary organisation known as Tara, was working as an MI5 agent.

None of MI6 and MI5's senior officials are from BAME backgrounds
The Guardian (London), Alice Ross, Owen Bowcott, 2016 07 05
London - **None of the senior officials in MI5 or MI6 are from minority ethnic backgrounds, according to diversity figures released by parliament's intelligence and security committee.** Details of the more than 16,000 spies and personnel in Britain's intelligence

apparatus have been released in the committee's annual report. The overall budget of the Single Intelligence Account - which covers expenditure on MI5, MI6 and the government monitoring service GCHQ - rose to £2.63bn last year. In the previous year, it was £2.48bn; in 2010, it stood at £2bn. The smaller agencies, Defence Intelligence, the National Security Secretariat, the Joint Intelligence Organisations and the Office for Security and Counter-Terrorism, cost £1.16bn in 2014-15. The latest figures show that 27% of senior roles in MI5 are held by women but none by those from black, Asian or minority ethnic (BAME) backgrounds. For MI6, 20% of its senior officials are women but none are from BAME backgrounds. Within GCHQ, 18% of its senior staff are women and 2% from a minority ethnic background.

Spy agencies 'produced flawed information on Saddam's WMDs'
The Guardian (London), Ewen MacAskill, 2016 07 06
London - The Chilcot report identifies a series of major blunders by the British intelligence services that produced "flawed" information about Saddam Hussein's alleged weapons of mass destruction (WMDs), the basis for going to war. **The intelligence community emerges from the report with its reputation and some of its most senior staff badly damaged.** The report singles out for criticism Sir John Scarlett, the chairman of the joint intelligence committee (JIC), an umbrella group that pulls together the work of the main intelligence agencies, mainly the findings of the overseas service, MI6. The then MI6 chief, Sir Richard Dearlove, also comes in for criticism. In one of the most damning sections, the report concludes that Tony Blair presented the assessments of the spy agencies to parliament with a "certainty" not justified by the intelligence that had been gathered.

Terrorist trap sprung
The Herald-Sun, James Dowling, 2016 07 05
Sydney—Would-be terrorists are being caught up in airport stings as they try to join extremist groups overseas. **Security agencies secretly cancel the passports of would- be foreign fighters**, allowing them to go to the airport where they are intercepted, questioned and have their electronic devices scanned for information. Even if they are not charged, the airport stops can lead to an **intelligence windfall**. Australian Federal Police deputy commissioner Neil Gaughan revealed the tactic while giving evidence in an application for a control order last month. The **AFP** is trying to place a number of conditions on **Harun Causevic**, who had terrorism charges dropped against him after he was arrested during the Anzac Day raids last year. Mr Causevic — whose passport was cancelled — made similar humanitarian searches. He also searched for information about the **AFP and ASIO**.

It costs to keep tabs on twitter
The Press (Christchurch), 2016 07 08
Auckland— **Government department has revealed it spends $35,000 of taxpayers' money a year on social media monitoring tools, while others are happy using free software**. But

the departments you would expect to be the biggest spenders on social media monitoring - our Government spy agencies - are keeping mum on just how much they pay for such technology. Information released under the **Official Information Act** showed the Ministry for Primary Industries paid US$25,000 (NZ$35,000) a year in licensing costs to use a web-based social media monitoring tool called Crimson Hexagon. The **country's two spy agencies, the Government Communications Security Bureau and the Security Intelligence Service refused to provide information on their use of social media monitoring tools or services, citing national security**.

China/Chine

ICIT Report: Despite pact with U.S., China continues to steal intellectual property
SC Magazine, Bradley Smith, 2016 07 12
New York - A **new report released today from the Institute for Critical Infrastructure Technology (ICIT) warns that China's five-year plan for the years 2016-2020 is heavily reliant upon the digital theft of Western nations' intellectual property,** despite the 2015 Sino-U.S. pact to eliminate cyberattacks against corporate assets. Entitled China's Espionage Dynasty: Economic Death by a Thousand Cuts, the paper looks to paint a comprehensive portrait of China's cyberspy program through the aggregation of reports from the U.S. government, cybersecurity firms and independent sources. The ICIT will present its findings in Washington D.C. on July 28 before an audience of federal agencies and critical infrastructure private-sector organizations. In September 2015, the U.S. and **China publicly agreed not to digitally spy on each other for commercial gain**. "While it is possible that China has reduced its targeted attacks against American organizations, it seems more likely that it restructured its cyber operations to assert greater control over its operatives," the report concludes. In other words, the report states, China may have reined in its most obvious threats, while continuing to infiltrate Western businesses with more advanced, virtually undetectable advanced persistent threat (APT) attacks.

Ye Xuanning, son of national founding father, led PLA intelligence wing
South China Morning Post, 2016 07 11
Beijing-- **Ye Xuanning, a son of a founding father of the People's Republic of China and who led a national military intelligence department, died yesterday at 77, mainland media reported**. Ye died of an unspecified illness in Guangzhou in Guangdong province, according to Shanghai-based ThePaper.cn. Although Ye did not rise as high as his elder brother Ye Xuanping, who was provincial governor during the early years of market reforms from 1985 to 1991, he became an important figure in the People's Liberation Army. Ye was in charge of the Liaison Department of the General Political Department for seven years until 1997, when he retired from the military at the rank of general. The liaison wing was responsible for collecting and analysing intelligence, with events in Taiwan being a chief concern.

Russia's FSB Didn't Open Espionage Case Against Opposition Figure Navalny
Sputnik (Russia), Staff report, 2016 07 12
Moscow - The **Russian Federal Security Service (FSB) confirmed it had not opened a criminal case against Russian opposition figure Alexei Navalny on espionage allegations**. The document with the FSB's confirmation was attached to the civil lawsuit case filed by Navalny against Russia's state-run broadcaster VGTRK, which on April 10 aired a preview of a documentary on its show Vesti Nedeli, claiming that Navalny had received money from the UK intelligence service MI6, a RIA Novosti correspondent reported from the court. The request to attach the response from the FSB to the case was filed by Navalny.

Russian Spy In the Cotswolds Who Sent Her Report Back to Moscow Via Her Washington Line
Mail on Sunday, Anne McElvoy, 2016 07 10
Moscow - On aa hot summer's day in wartime, a dapper young woman with a broad smile pushes a bicycle along a quiet lane deep in the Oxfordshire countryside. With her is a nervous-looking man with intense brown eyes. Passers-by notice the couple holding hands. Yet far from being innocent star-crossed lovers, they are two of the Cold War's most important spies, serving Stalin's military intelligence network and betraying some of our vital nuclear secrets to Moscow. The 'romance' is a cover for controller and agent. **The woman is Sonya, the code name of Ursula Kuczynski, of the GRU (Soviet military intelligence) - a German-born illegal living undercover with her British-born husband Len, also a Soviet spy**. She sends secrets back to Moscow with the help of a specially adapted washing line. The man is **Klaus Fuchs**, also a German immigrant. He is a gifted physicist, working on the Tube Alloys project. At the heart of it is the manufacture of pure uranium-235. Tube Alloys would go on to become the basis of the Manhattan Project in Los Alamos, New Mexico, which developed the first nuclear weapon. Its betrayal by Fuchs gave Moscow a leap forward worth at least two years in its nuclear programme. **New material unearthed from MI5 and East German files confirms that both before and after the war, many of Britain's nuclear secrets were betrayed by Fuchs, with Sonya as his controller.**

Russia Expels American Diplomats in Response to U.S. Move
The Wall Street Journal Online, Nathan Hodge, 2016 07 09
Moscow— The Russian **Foreign Ministry said Saturday it had expelled two U.S. Embassy employees amid a feud between Moscow and Washington** over the treatment of American diplomatic personnel. In a statement Saturday, Russian Deputy Foreign Minister Sergei Ryabkov said two U.S. Embassy employees had been declared persona non grata, saying the **two Americans had been conducting "activities incompatible with diplomatic status" in Russia.** Mr. Ryabkov said the move followed the expulsion of two Russian diplomats by the U.S. "The U.S. government demanded the departure of two employees of the Russian Embassy in Washington, D.C., without presenting any specific complaints against them," Mr. Ryabkov said. "And the State Department at a high level asked us not to make this fact public." Saturday's announcement follows official U.S. expressions of concern about alleged Russian harassment of U.S. diplomats. The State Department complained about the treatment of diplomatic personnel public this week after the release of a video on Russian national television that appeared to show a Russian police officer tackling a U.S. official outside the U.S. Embassy in Moscow. Russian Foreign Ministry spokeswoman Maria Zakharova claimed the U.S. official involved in the June **incident was a spy**.

Russian Media Blames U.S. Diplomat for Embassy Incident, Despite Video
Moscow Times, Staff report, 2016 07 08
Moscow - State-**run television channel NTV has aired the video of a Russian FSB guard attacking a U.S. diplomat outside the U.S. Embassy in Moscow, placing the blame on the American man**. The NTV program "Incidents" presented the video as an attack of an "American spy on a Russian policeman." The video commentary closely resembles the remarks of Maria Zakharova, the Russian Foreign Ministry's official spokesperson. The low- quality footage shows a uniformed Russian **Federal Security Service (FSB) guard attack a U.S. diplomat** as he tries to enter the U.S. Embassy. Lunging at the man, the guard appears to be the aggressor in the altercation. Regardless, The NTV correspondent narrates the video in contradiction with the visuals: The diplomat is said to be a spy wearing a suspicious knitted hat over his face -- dashing to get inside the embassy.

Infamous Russian Double Agent Dies In U.S. -- Reports
Moscow Times, Staff report, 2016 07 08
Moscow - A **Russian double agent who fled to the U.S. has died, the Interfax news agency reported Thursday, citing unnamed sources. Alexander Poteyev, a former colonel in Russia's Foreign Intelligence Services (SVR**), handed state secrets to American authorities before fleeing to the U.S. He was subsequently sentenced in absentia to 25 years imprisonment for treason in 2011. The SVR have so far refused to comment on the reports of the former colonel's death, the RBC newspaper reported.

Poteyev to stay on intl wanted list until his death officially confirmed – source
Interfax News Agency, 2016 07 07
Moscow— **Former intelligence service officer and defector Alexander Poteyev, who was sentenced in Russia in absentia to 25 years in prison for high treason, will remain on the international wanted list and will not be removed from it until reports about his death are officially confirmed**, a source familiar with the situation told Interfax. "In the absence of official documents on his death, he is listed as being alive and, consequently, cannot be removed from the international wanted list," he said. Sources told Interfax earlier on Thursday Russia was verifying information that ex-Russian Foreign Intelligence Service officer Poteyev, who had fled to the U.S, had died.

Law enhancing legal regulation of counterterrorism activity
Russian Government News, 2016 07 07
Moscow— **Vladimir Putin signed Federal Law On Amendments to the Federal Law On Counterterrorism and Certain Legislative Acts of the Russian Federation as concerns Introduction of Additional Measures to Counter Terrorism and Guarantee Public Security**. The Federal Law aims to enhance legal regulation of counterterrorism activity. The Law makes amendments to the federal laws On Counterterrorism, On Transport Security, and On Security of Fuel and Energy Sector Facilities. The amendments clarify the grounds for carrying out counterterrorist operations, strengthen the binding nature of antiterrorist commissions' decisions in the Russian regions, defines the powers of local government bodies in this area, and sets out cooperation procedures when investigating information on the threat of unlawful intervention in the operation of transport and energy sector infrastructure. In particular, the provisions of the Law introduce a ban on using the basic components of combat and service firearms in production of certain categories of civilian arms and devices similar in their construction model to arms. The provisions clarify the definition of financing terrorism, establish the right of federal executive bodies responsible for security and the **Russian Federation Foreign Intelligence Service** to receive for free information systems and (or) data bases from state bodies and state extra-budgetary funds, and set additional demands on telecommunications providers and

organisers of information dissemination in the internet and on organisation of transport and logistics activity.

Putin Tasks FSB With Decrypting Russian Messaging Apps
Moscow Times, Staff report, 2016 07 07
Moscow - **Russian President Vladimir Putin has tasked Russia's Federal Security Service (FSB) with finding the encryption keys needed to monitor the country's online messaging**, the Meduza news website reported Thursday. The FSB have been given two weeks to find the keys, which will make it possible to implement controversial new anti-terror legislation. Alexander Bortnikov, head of the FSB, has been charged with overseeing the task, Meduza reported. Increased government surveillance forms part of the anti-terrorism package authored by ultra-conservative United Russia deputy Irina Yarovaya. The legislation requires all internet messaging platforms which employ additional encryption to supply the FSB with information on how to decode all messages on the platform. If companies do not apply, they can be fined up to 1 million rubles ($15,000), Meduza reported.

Terrorisme: les sombres prédictions du directeur de la DGSI
Le Figaro, Christophe Cornevin, 2016 07 12
Paris - **Patrick Calvar, le patron du renseignement intérieur en France, est «persuadé» que Daech va faire évoluer son mode opératoire en France pour éviter «d'aller à l'assaut avec la mort à la clef».** Il craint notamment que l'organisation terroriste passe «au stade des véhicules piégés et des engins explosifs». Les terroristes de Daech qui ont endeuillé le pays en mitraillant les terrasses et le Bataclan, puis en menant des attaques kamikazes au Stade de France en novembre dernier pourraient encore intensifier leurs frappes en changeant de méthode. Cette sombre hypothèse est celle de Patrick Calvar, directeur général de la sécurité intérieure (DGSI). Dans une audition menée à huis clos le 24 mai dernier à l'Assemblée nationale par la commission d'enquête relative aux moyens mis en oeuvre par l'État pour lutter contre le terrorisme depuis le 7 janvier 2015, ce professionnel incontesté l'assure: **«Je suis persuadé qu'ils passeront au stade des véhicules piégés et des engins explosifs, et ainsi qu'ils monteront en puissance». «Ils vont finir par projeter des commandos dont la mission consistera à organiser des campagnes terroristes sans nécessairement aller à l'assaut avec la mort à la clef.»** «Pour cela, il leur faut des artificiers et organiser toute une logistique, c'est-à-dire s'installer sur notre territoire, acquérir tous les produits», poursuit Patrick Calvar.

Sources humaines, chiffrement... les lourds défis de la DGSI
Le Figaro, Christophe Cornevin, 2016 07 12
Paris - Confrontée à la fois à une menace extraordinairement complexe et à une recomposition du paysage du renseignement français depuis quelques années, la **Direction générale de la sécurité intérieure (DGSI) doit à la fois être le fer de lance de la lutte antiterroriste tout en menant une profonde métamorphose pour accompagner sa montée en puissance**. Là réside peut-être l'un de ses principaux défis. « La croissance en effectifs, sur une période de cinq ans, sera de près de 40 % » , a déclaré le 24 mai à l'Assemblée Patrick Calvar, patron d'un service dont les effectifs, de 3 000 agents aujourd'hui, ont déjà été musclés par trois plans de recrutements avant de franchir la barre des 4 000 en 2018.

Les trois failles de l'antiterrorisme selon le patron de la DGSI
Ouest-France, Journaliste maison, 2016 07 12
Paris - **Les services du renseignement intérieur sont confrontés à trois défis majeurs dans la lutte antiterroriste, a estimé le 24 mai leur patron Patrick Calvar devant la commission d'enquête parlementaire sur les attentats de 2015 en France**. Son audition, à huis clos, a été rendue publique ce mardi. Les limites du contrôle judiciaire Pour la commission, le cas de Samy Amimour, assaillant du Bataclan qui a pu aller en Syrie en 2013 malgré une mise en examen et une interdiction de sortie du territoire, est « emblématique des défaillances du contrôle judiciaire » . **Pour ne pas porter « atteinte aux droits de la défense » , les services ne peuvent « plus suivre ni intercepter les gens les plus dangereux dès lors qu'ils sont mis en examen ; à moins, s'ils sont impliqués dans un autre projet, qu'une autre enquête soit ouverte »** , a expliqué M. Calvar, directeur général du renseignement intérieur (DGSI), interrogé sur le suivi d'Amimour. « Il s'agit d'un angle mort » , a-t-il estimé, ajoutant qu' « il appartient à un contrôle judiciaire de permettre le suivi de l'intéressé ».

Renseignement : pas touche aux documents secrets du Squale !
Le Point, Mélanie Delattre avec Christophe Labbé, 2016 07 12
Paris - La **justice n'aura pas accès aux documents classifiés retrouvés chez Bernard Squarcini, l'ancien patron du renseignement intérieur**. L'histoire d'un maître espion rattrapé par la justice aurait pu faire un bon polar. Sauf qu'elle est bien réelle et qu'elle concerne l'ancien directeur du renseignement intérieur de Nicolas Sarkozy. **Bernard Squarcini actuellement visé par plusieurs enquêtes. Au départ, il y a ce courrier reçu par le juge Serge Tournaire.** Dans la lettre adressée au magistrat, un fonctionnaire de police évoque des écoutes téléphoniques dont il aurait été victime alors qu'il enquêtait sur le Wagram, un cercle de jeu parisien tenu par des Corses. Plusieurs policiers du service des courses et jeux auraient fait l'objet de « zonzons » de la part de la Direction centrale du renseignement dirigée à l'époque par Bernard Squarcini, lequel était réputé proche d'un des deux clans se disputant le contrôle de l'établissement.

A Genève, le chef de l'armée évoque la cybersécurité
Tribune de Genève, Journaliste maison, 2016 07 12
Genève - André Blattmann était hier l'invité du Club suisse de la presse à Genève. **L'armée suisse est bien protégée contre les cyberattaques, estime son chef, André Blattmann**. Mais après l'affaire Ruag, la lutte contre cette menace potentielle envers des infrastructures critiques restera prioritaire. Plus de 30 000 ordinateurs sur le réseau de l'armée ont été contrôlés après l'attaque qui a visé l'entreprise d'armement de la Confédération, a déclaré hier devant la presse à Genève le chef de l'armée. **Sans qu'aucun virus ne soit trouvé. « L'armée est bien protégée et c'est mon but pour le futur. »**

German spooks monitored EU, NATO government members, report says
DPA News Agency, 2016 07 11
Berlin— New details have emerged on the scale of spying by Germany's foreign intelligence in previous years on members of EU governments and NATO countries in a parliamentary committee report seen by dpa. A "low two-digit number of people" belonging to foreign governments were spied on until October 2013, including heads of states and governments, ministers and members of their offices, as well as members of military institutions, it said. The focus of espionage by the Bundesnachrichtendienst (BND) was on diplomatic representations of EU and NATO member states around the world, making up more than two thirds of all 3,300 targets.

New head of German intelligence service officially installed
dpa News Agency, Staff report, 2016 07 07
Berlin - **Germany's BND intelligence service is "as important today as hardly ever before in history"** German Chancellor Angela Merkel's chief of staff, Peter Altmaier, said on Wednesday as he **officially installed Bruno Kahl, 53, as the new head of the service**. Altmaier stressed the service's increased importance given the heightened threat from international crises, terrorism and cyberattacks. Former senior civil servant Kahl said Wednesday he would work hard to rebuild the trust that had been lost in the service among the German population and the country's international intelligence partners. **Kahl pledged on Wednesday that he would continue his predecessor's moves towards transparency for the service.**

Raid, BRI, GIGN... Les forces d'intervention d'élite peuvent- elles vraiment fusionner ?
FranceTv Info (site web), Journaliste maison, 2016 07 07
Paris - La **commission d'enquête sur l'action de l'Etat face aux attentats parisiens**, qui a présenté ses conclusions mardi, soulève cette épineuse question. Ils sont vêtus de noir, cagoulés et casqués, lourdement armés et parfois protégés par un bouclier. Les hommes des forces d'intervention spéciales françaises se ressemblent à s'y méprendre. A **un détail près, leur écusson. Les uns arborent le parachute blanc du GIGN, les autres la panthère noire du Raid ou la gargouille à l'oeil rouge de la BRI.** La différence entre ces trois unités d'élite ne se limite pas à leur blason, loin de là. Leur histoire, leur savoir-faire et leur périmètre d'intervention les caractérisent.

Bulgaria's Govt OKs Controversial Anti-Terror Bill
Sofia News Agency, Staff report, 2016 07 06
Sofia - The **government of Bulgaria has adopted draft legislation that gives law enforcement and security agencies rights to curb civil liberties in case of a terror emergency**. Apart from giving sweeping powers to the military, police and other officials in case the highest alert is triggered, the bill also sets up a National Counter-Terrorism Center with the security and **counter-intelligence body DANS (State Agency for National Security).** The Bulgarian Armed Forces will be included in a national counter-terrorism plan and will intervene when a threat is detected or in the event of a terror act, when they will also help deal with the aftermath. Institutions, schools and kindergartens will be obliged to develop and apply anti-terror measures, according to the proposal.

Antiterrorisme : " Il y a eu des failles de nos services "
Le Monde, Hélène Bekmezian, 2016 07 06
Paris - Les **responsables de la commission d'enquête parlementaire pointent du doigt les faiblesses du renseignement pénitentiaire**. A l'issue d'un travail qu'ils ont voulu " au-delà des clivages politiques ", le président et le rapporteur de la commission d'enquête " relative aux moyens mis en oeuvre par l'Etat pour lutter contre le terrorisme depuis le 7 janvier 2015 " présentent leurs conclusions, dans leur rapport adopté mardi 5 juillet. Au terme de votre enquête, êtes-vous en mesure de dire si les attentats du 13 novembre auraient pu être évités ? Y a-t-il eu des failles? Sébastien Pietrasanta (PS, Hauts-de-Seine), rapporteur. Il est facile de réécrire l'histoire quand on connaît la fin. **Même les Etats-Unis n'ont pas pu éviter le terrible attentat d'Orlando malgré les moyens immenses dont ils disposent**.

Doubts weigh on France's push for a more-unified intelligence system
Washington Post, James McAuley, 2016 07 06
Paris - On Tuesday, **French lawmakers announced the results of a six-month inquiry into their nation's intelligence services**, still reeling from two deadly terrorist attacks in 2015. The

major recommendation of the committee: **Create a unified intelligence structure better equipped to prevent future attacks**. In January 2015, extremists attacked the editorial offices of the satirical publication Charlie Hebdo and, two days later, a kosher supermarket on the outskirts of Paris. On Nov. 13, militants with ties to the Islamic State killed 130 people in coordinated attacks across the city. In both cases, the inquiry's leaders acknowledged Tuesday, the perpetrators were previously known to authorities. Some were under judicial surveillance at the time, while others had prior convictions.. **Georges Fenech, a conservative member of France's National Assembly who spearheaded the inquiry, placed the bulk of the blame on what he called the country's overly complicated intelligence apparatus**, an overlapping structure of various agencies that are not always in contact with one another.

French Inquiry on Terror Urges Changes to Intelligence Agencies
New York Times, Aurelien Breeden, 2016 07 06
Paris - A **parliamentary committee examining two devastating terrorist attacks in France last year called on Tuesday for the nation's intelligence agencies to be streamlined and merged, finding widespread failures** in the collection and analysis of information that could have helped prevent the attacks. Among 40 proposals, **lawmakers urged the government to merge some of France's overlapping and sometimes competing agencies and to create a new national agency -- like the National Counterterrorism Center that the United States established after the Sept. 11, 2001, attacks** -- reporting directly to the prime minister. It also urged the government to set up a shared antiterrorism database; to better monitor prisons, where radicalization of inmates is a major problem; and to tighten the sentencing of convicted terrorists. The nonpartisan committee included lawmakers from France's two largest parties, the Socialists and the center-right Republicans. It offered the most definitive account so far of the 2015 attacks, and of the intelligence failures preceding them, but was more limited in scope than the 9/11 commission. It did not have access to classified documents, **although it held several closed-door meetings with intelligence and security officials.** Judicial and criminal investigations into the attacks are continuing. While the recommendations are not binding, they are likely to add to the pressures confronting President François Hollande, a Socialist, who is expected to pursue re-election next year despite abysmal popularity ratings.

Terrorisme : les propositions de la commission Fenech
Le Figaro, Paule Gonzalès avec Jean-Marc Leclerc, 2016 07 06
Paris - **Pour éviter un nouveau 13 novembre, le président de la commission d'enquête parlementaire sur les attentats propose une révolution dans les structures spécialisées**.
Sécurité « Devant le Bataclan, le 13 novembre, les policiers de la BAC, arrivés les premiers, voulaient au moins que les militaires de l'opération « Sentinelle » , arrivés sur place, leur prêtent leurs fusils d'assaut Famas, puisque les militaires n'avaient pas le droit de tirer. Et ils ont essuyé un refus ! » Le député les Républicains **Georges Fenech**, président de la commission d'enquête parlementaire sur les attentats de 2015 en France, ne décolère pas contre les « aberrations » mises au jour au fil de ces cinq mois d'auditions. **Son but : « Comprendre comment les auteurs des pires attaques terroristes que l'Hexagone ait connues depuis l'après-guerre ont pu se déplacer à leur guise, alors qu'ils étaient, dans leur quasi-totalité, fichés, surveillés, condamnés ou sous le coup d'un mandat d'arrêt. »**

Abadi Sacks Top Baghdad Security Officials
Asharq Al-Awsat, Hamza Mustafa, 2016 07 11
Baghdad - **Only one day after accepting the resignation of Interior Minister Mohammed Salem al-Ghabban, Iraqi Prime Minister Haidar al-Abadi sacked a number of high-ranking officials responsible for security in Baghdad, including the head of the Baghdad Operations Command**. Minister Ghabban resigned after the Karrada terrorist bombing that killed 300 and injured over 200 civilians. A statement issued by Abadi's office said that the prime minister had dismissed the head of the Baghdad Operations Command Abdul Amir al-Shammari and commanders of military operations, security services and intelligence in the capital. Minister Gabban told Asharq Al- Awsat newspaper that the **security of Baghdad falls under the responsibility of Baghdad Operations Command.** Abadi didn't announce any alternatives for both positions of Interior Minister and head of Baghdad Operations Command.

911 now includes all security agencies
Arab News, Staff Report, 2016 07 06
Riyadh - **Maj. Gen. Abdul Rahman bin Mohammed Al-Saleh, chief of National Security Operations Center at the Ministry of Interior, said that the unified security operations center, 911, now includes all the relevant security agencies for emergencies**, such as security patrols, traffic, road safety, and Civil Defense. He stressed that it facilitates the coordination between the relevant parties and prevents duplication or conflict of jurisdiction. Saleh said during a phone interview on Al-Ekhbariya TV channel that the new program now includes major partners such as the Saudi Red Crescent Society, the Ministry of Health, Ministry of Water, Environment and Agriculture, and the Ministry of Transport, along with many other bodies such as government secretariats.

Two Koreans indicted after spying for Pyongyang
Korea JoongAng Daily, 2016 07 13
Seoul—**Prosecutors on Monday indicted two South Koreans for making reports on domestic affairs to be sent to North Korea and for writing documents extolling the Communist regime**. One of the two indicted suspects is a 52-year-old man surnamed Kim who was arrested at an internet cafe in Seoul on May 24. Another suspect is Kim's accomplice, a man surnamed Lee, 54, who was apprehended in Ansan, Gyeonggi, on the same day. The **National Intelligence Service** reported earlier this month that Kim was arrested as he was trying to send his espionage reports in an email to his contact in North Korea. The NIS took the unusual step of showing recorded footage of the apprehension to members of the parliamentary intelligence committee on July 1 to prove they had taken legal due process for the arrest, such as showing an arrest warrant issued by a court. The **Seoul Central District Prosecutors' Office reported Tuesday that the two men were suspected of having contacted North Korean agents** dispatched by the clandestine 225th Bureau under the Workers' Party of Korea in Pyongyang in March 2014 and last August.

Japan to add more terrorism analysts after Dhaka attack
Nikkei Report, 2016 07 12
Tokyo— The **Japanese government decided Monday to ramp up an anti-terrorism unit's intelligence-gathering capabilities in response to the recent incident in Bangladesh**. The information collection and analysis unit draws staffers from the foreign and defense ministries as

well as the **National Police Agency and the Cabinet Intelligence and Research Office**. It now has about 20 people stationed abroad, with another 20 or so traveling overseas from Tokyo to gather information. The unit will strengthen its presence in the Middle East and Asia, though the scale of the expansion has yet to be determined.

Dhaka attack exposes shortcomings in Bangladesh's security apparatus
Times of India, IndraniBagchi, 2016 07 07
Dhaka - The **Bangladesh government came in for some sharp responses from the foreign diplomatic community over the terror attack in Dhaka** area last week. At a briefing for foreign diplomats by the foreign office here, among expressions of sympathy and solidarity, the Sheikh Hasina government was at the receiving end of some home truths. **Most important is a concern by some countries that if foreigners' security cannot be guaranteed**, it would affect foreign investment in Bangladesh's crucial garment and textile industry. Certainly the Japanese and Europeans would be affected. **Countries like US have offered assistance in counterterrorism and tech-intelligence cooperation**. However, Dhaka has been wary of accepting many of them for several reasons like Washington has in the past tried to pressure Hasina to come to a political "understanding" with Khaleda Zia of BNP. Hasina has refused to give in to the pressure.

Malaysia must share intelligence resources with other nations to tackle IS threats
New Strait Times, Beatrice Nita Jay, 2016 07 07
Putrajaya - The **terror attacks by the Islamic State (IS) is a new phenomenon faced by Malaysia which needs exchange of intelligence with various countries, said Defence Minister Datuk Seri Hishammuddin Hussein**. "This attack requires us to share intelligence with authorities from Belgium, France as well as Saudi Arabia. "We are used to Al Qaeda and Jemaah Islamiah but the threat posed by IS is different from what we faced before. These are things that we must not take for granted," said Hishammuddin at the Hari Raya open house hosted by Prime Minister Datuk Seri NajibRazak, today.

Helal appointed defence minister deputy for strategic intelligence affairs
Pajhwok Afghan News, Pajhwok Report, 2016 07 07
Kabul - **HilaluddinHelal has been appointed Defence Minister assistant to the strategic intelligence department in the rank of General in line with presidential order**, a statement from the Presidential Palace said on Thursday. The Strategic Intelligence post has been newly created in the hierarchy of ministry of defence. Earlier, **Helal served as commander in the air force and deputy security in charge in the Ministry of Interior (MoI)**. He completed higher education in military and remained a brave military officer in the past. Helal also served as Wolesi Jirga member from Baghlan.

Former, current lawmakers acquitted of detaining intelligence agent
Yonhap News Agency, 2016 07 06
Seoul--A **Seoul court acquitted four former and current opposition lawmakers Wednesday on charges of illegally detaining an intelligence agent before the last presidential election**. Rep. Lee Jong-kul of the Minjoo Party of Korea and three others who were formerly affiliated with the party were indicted in 2014 on charges of unlawfully detaining the female agent in her home in Seoul for about 35 hours in December 2012. The agent allegedly took part in the intelligence agency's operation to influence public opinion on the internet ahead of the critical vote. The Seoul Central District Court found the defendants not guilty, saying the agent, identified only by her surname Kim, was not held in captivity as she could have left the house if she wanted.

Diplomats dismayed by security lapses
Bangladesh Daily Star, Rezaul Karim, 2016 07 06
Dhaka - **Expressing serious concern over the systematic attacks and gradual escalation of terrorism and violent extremism, foreign diplomats in Dhaka today stressed the need for more effective security steps**. They also expressed their dismay over militants' targeting foreigners in Bangladesh, especially those who had come to Bangladesh with intent to help the country in socio-economic development, poverty alleviation, infrastructure development and business. Taking part in a discussion at a diplomatic briefing arranged by the foreign ministry at State Guesthouse Padma in the morning, the diplomats called for conducting transparent investigation, maintaining the international standard, into the July 1 terrorist attack on the Holey Artisan Bakery in Gulshan. **A source who attended the meeting said an ambassador told the discussion that the Bangladesh government did not follow up with the intelligence information** on terrorism it was provided by other states as warnings.

FG appoints new CDI
The Sun (Nigeria), 2016 07 09
Lagos—The Federal ederal Government yesterday **appointed a new Chief of Defence In-telligence (CDI) for the armed forces. He is Air Vice Marshal Mohammed Saliu Usman.** He takes over from Ma-jor General John Sarduana Davies, who had been acting since January this year, when the former CDI, Air Vice Marshal Monday Morgan retired. According to the Armed Forces Stat-utes, the position of **Chief of Defence Intelligence** (CDI), which is the apex in the intelligence community, is ro-tational among the services. With the Army and the Navy serving their terms of three years, it fell on the Air Force but AVM Morgan who got appointed when President Muhammadu Buhari assumed office in 2015, was caught up with (ROD), 'run out date' and had to retire.

Bujumbura rejette un rapport de Human Rights Watch accablant ses services secrets
Panapress, 2016 07 11
Bujumbura, Burundi— Le **gouvernement burundais a rejeté** en bloc, lundi, **un récent rapport de «Human Rights Watch» (Hrw) sur de «graves abus» imputables aux agents du pouvoir** qui ont frappé des opposants en détention «à coups de marteau et de barres en acier, leur ont planté des barres en acier aiguisées dans les jambes, ont versé du plastique fondu sur eux, ont noué des cordes autour des parties génitales des hommes et leur ont envoyé des décharges électriques" entre avril 2015 et avril 2016. Le rapport d'enquête soutient encore que «certains détenus qui ont été torturés ou blessés se sont vu refuser des soins médicaux et de nombreux détenus ont été maintenus dans des cachots malodorants et dépourvus de fenêtres ».«Des **agents du service national de renseignement** traitent certains opposants présumés, à leur siège ainsi que dans les lieux secrets, de façon effroyable parce qu'ils savent qu'ils peuvent le faire en toute impunité au lieu que le gouvernement devrait faire cesser la torture immédiatement», peut-on encore lire dans le rapport daté du 7 juillet dernier. Le gouvernement burundais s'offusque aussi du fait que Hrw ne mentionne «nulle part dans ce rapport», les réfugiés burundais enrôlés et entraînés au Rwanda, «dont des enfants mineurs», pour attaquer le Burundi.

Burundi intelligence services torture detainees, report says
Associated Press, 2016 07 07

Kampala— **Human Rights Watch says Burundi's intelligence services have tortured scores of suspected government opponents at their headquarters and in secret locations**. The rights group reported Thursday that abuses often have been carried out in collaboration with members of a pro-government youth militia group known as the Imbonerakure. Burundi has been chaotic since April 2015, when President Pierre Nkurunziza announced plans to seek a third term that he ultimately won. Hundreds of people were killed as security forces tried to quell protests.

Israel and Kenya to boost security partnership in terror fight
Business Daily (Kenya), 2016 07 05
Nairobi— **Kenyan security troops are set to benefit from increased training, equipment and intelligence sharing with Israel** to boost their combat capability in the war against terrorism. President Uhuru Kenyatta said Tuesday that visiting Israeli Prime Minister Benjamin Netanyahu had pledged this in their bilateral meeting to further help strengthen Kenya's army. Nairobi already receives military support from Tel Aviv. Mr Netanyahu is on a three-day state visit to Nairobi. "We have established partnership in fighting terrorism and we will benefit from strategic intelligence," said Mr Kenyatta in a televised joint briefing at State House. Kenya has recently suffered a spate of deadly bomb and gun attacks on civilians and soldiers by Somalia-based Al Shabaab militants who are demanding removal of Kenyan troops from the horn of Africa State. **Israel boasts of Mossad**, the country's intelligence agency, which gathers information to pre-empt terror attacks.

Parrilli slams 'psychopath' Stuiso after ex-spymaster lets rip at CFK
Buenos Aires Herald, 2016 07 12
Buenos Aires—**Former spymaster Antonio "Jaime" Stiuso played down his role in covert intelligence operations during the last decade and levelled explosive accusations against Cristina Fernández de Kirchner** and her administration in a rare interview published yesterday. The former **Operations chief of the Intelligence Secretariat (SI, formerly SIDE),** who fled the country after becoming one of the most sought-after witnesses in the investigation into the death of AMIA special prosecutor Alberto Nisman, claimed that the former Victory Front (FpV) adminstration had operpation a parallel intelligence system that persecuted him. His statements were denied later in the day by former Federal Intelligence Agency (AFI) chief Oscar Parrilli, who occupied the head of the intelligence agency following Stiuso's removal.

An extensive intelligence background
Buenos Aires Herald, 2016 07 12
Buenos Aires—**Antonio "Jaime" Stiuso**, 62, is a **former operations chief of Argentina's domestic intelligence service previously called SIDE** and later the Intelligence Secretariat (SI). A communications expert, Stiuso joined the SIDE in 1972 aged 18 and remained at the organization throughout the last military dictatorship (1976-1983) when it carried out sweeping clandestine surveillance operations on the domestic population. After the return to democracy, Stiuso rose through the ranks of the secretariat to become Operations chief. **He remained at the pinnacle of the organization until his sacking by the Fernández de Kirchner administration in December 2014.** In the weeks following the death of AMIA special prosecutor Alberto Nisman in January, 2015, soon after Stiuso's departure from the

government, the former spy chief fled the country, prompting CFK to accuse the United States of hiding him during her final address to the United Nations General Assembly last year.

Honeymoon in hell: U.S. newlywed jailed in Venezuela as possible spy
Miami Herald, Jim Wyss, 2016 07 08
Caracas - **Joshua Holt, a former missionary from Utah, traveled to Venezuela on June 11 with one plan in mind: marry the woman he'd fallen in love with and take her and her two girls back to the United States**. Instead, **Holt and his wife, ThamaraCaleño, are being held by military intelligence - - and may face charges of terrorism, espionage and illegal possession of weapons after authorities** found two automatic rifles and a hand-grenade in their apartment. But his real crime, said a woman who was present when he was detained, was being a U.S. citizen. And she claims that she and four others saw security forces plant the weapons in the apartment to frame the 24-year-old man. "The only reason they have him is because he's a gringo," said the woman, who asked the Miami Herald not to use her name for fear of retaliation. "I don't care what color his eyes are, what color his hair is, where his passport says he's from -- he's innocent and his human rights are being violated."

Rio Olympics: Brazil vows to be ready in case terror strikes
CNN, Tiffany Ap, 2016 07 07
Rio de Janeiro— Rio de Janeiro has long had a reputation for dangerous favelas, with muggings and kidnappings not uncommon. But authorities are stepping up measures to tackle a different kind of security threat altogether when the Rio Olympic Games begin August 5. **Wary that the international sporting event is a potential prime target for terrorists, Brazilian forces have been working with specialist French SWAT teams** to simulate attack scenarios. In one drill, Brazil special forces and a police dog chase down an armed gunman to thwart a possible attack on Rio's subway system. The dramatic display is meant to reassure journalists that a country with limited experience in handling terrorism is ready for the unthinkable. "There is not a specific threat," said Lt. Gen. Luiz Linhares with the Brazilian Ministry of Defense. "You have to screen for a great (spectrum) of threat." **Brazil's intelligence agency** reported in April that the number of those influenced by ISIS ideology had increased in recent months but insisted there was no threat to the Olympics.

Brazil to strengthen intelligence services
Agencia Brasil, via BBC Monitoring Americas, 2016 07 04
Rio de Janiero-- After 17 years of waiting, the **National Intelligence Policy (PNI)** becomes effective today (30) with the publication of the full text of presidential decree 8,793/16. In an exclusive interview granted to Agencia Brazil, the **incumbent general director of the Brazilian Intelligence Agency [Abin], Wilson Trezza, and the future occupant of the office, intelligence officer Janer Tesch, said that, by approving the PNI, President Michel Temer shows his commitment to strengthen intelligence activity** in Brazil. "We still do not have much to say about Temer's administration because he only took office recently, on 12 May. But he has expressed his commitment to strengthen the intelligence activity, and this decision to approve the PNI is a demonstration that that commitment will materialize," Wilson Trezza said. After eight years as Abin director general, Trezza will hand over his position, in the coming days, to Janer Tesch, who has been an intelligence agent for more than three decades. "I am a professional, with a career of almost 32 years now.

Canada

Recruiting changes rile RCMP ranks
National Post, Douglas Quan, 2016 07 25
Vancouver--**An association that represents some of Canada's Mounties says members have "grave reservations" about the RCMP's recent decision to ease entrance requirements, including allowing permanent residents to apply**. **The Mounted Police Professional Association of Canada (MPPAC)** said Sunday management has caved in to political correctness and the "knee jerk" changes amount to lowering standards. "Essentially we face operational security issues as well as serious repercussions in service delivery if we hire people to meet political vs. operational criteria," the association said in a statement through spokesman Rob Creasser.

B.C. judge to rule whether couple was entrapped by police in terrorism sting
Globe and Mail, Sunny Dhillon, 2016 07 23
Ottawa - **John Nuttall and Amanda Korody** were high. In June, 2013, the Muslim converts were at a hotel in the Okanagan city of Kelowna, where they were supposed to be working on a **terrorist plan** to kill revellers and first responders during an attack at the **British Columbia Legislature grounds on Canada Day**. But the husband and wife, heroin addicts who had rarely ventured far from their Surrey basement suite and subsisted on welfare payments, spent much of their time smoking marijuana and playing video games. **The plot was international news**. The couple were found guilty by a jury in June, 2015, of conspiring to murder persons unknown and making or possessing an explosive substance - in both cases for the benefit of or at the direction of a terrorist group. But their convictions have not been entered. **Mr. Nuttall and Ms. Korody have argued that they were victims of police entrapment** and, a year after those arguments began, Justice Catherine Bruce of the B.C. Supreme Court is to deliver her decision at the end of this month. The court heard that the RCMP began looking at Mr. Nuttall after the **Canadian Security Intelligence Service** told the force in early 2013 that he had tried to purchase potassium nitrate, which can be used in explosives.

Darktrace repêche un ancien agent du SCRS
Direction informatique (site web), Dominique Lemoine, 2016 07 20
Toronto - **Darktrace s'implante au Canada avec l'ouverture d'un bureau à Toronto et nomme à la tête de sa direction au Canada un ancien agent de renseignements au service du Canada (SCRS)** et de l'Angleterre (MI5), **David Masson**. Cette multinationale se spécialise en produits de cybersécurité pour les entreprises. Elle a été fondée en 2013 à Cambridge en Angleterre et elle serait née d'une collaboration entre des mathématiciens de l'Université Cambridge et d'anciens agents du MI5, le service de renseignement responsable de la sécurité intérieure au Royaume-Uni de Grande-Bretagne et d'Irlande du Nord.

Electronic spy agency mum on foreign info-sharing that could lead to torture
Canadian Press, Jim Bronskill, 2016 07 20
Ottawa - **Canada's electronic spy agency won't say how often it shares information that could lead to someone being tortured in an overseas prison**. The **Communications Security Establishment** - which monitors threats from foreign terrorists and spies - **has censored documents that spell out the figures, even though the RCMP and Canadian Security Intelligence Service have revealed such numbers in the past.** The reticence

prompted Amnesty International Canada to say "much greater transparency" is needed from the Ottawa-based CSE. "At stake is Canada's compliance with crucial international human rights obligations to prevent torture and ill- treatment," said **Alex Neve**, Amnesty's Canadian secretary general. The secretive CSE has been thrust into the national spotlight in recent years due to leaks by Edward Snowden, the former spy contractor who worked for the National Security Agency, CSE's American counterpart. It is also among a handful of Canadian agencies, including the RCMP, CSIS, the Canada Border Services Agency and National Defence, bound by a government instruction that allows it to share information with foreign partners - even when it means someone could be abused as a result of that exchange. **Public Safety Minister Ralph Goodale** said earlier this year the Liberals will review the "troubling set of issues" raised by the foreign-sharing policy, enacted by the previous Conservative government. Records obtained by The Canadian Press under the Access to Information Act offer a glimpse into how the CSE handled such cases in the first three months of 2015. The quarterly report to **CSE Chief Greta Bossenmaier, l**abelled Top Secret and for Canadian Eyes Only, told her the number of cases that required a "mistreatment risk assessment" and the level of risk associated with passing the information to others. But those details were deleted from the publicly released version of the document. The report says there were "no known instances" of a recipient country's non-compliance with conditions attached to information-sharing during the three months. But little else was disclosed. The CSE faces "unique considerations" it must weigh when discussing details of assessments, said **Christopher Williams**, a senior spokesman for the intelligence agency. "With this in mind, we are not able to release the specific number you have requested without risking revealing insight into our capabilities."

Why Experts Are Sure Russia Hacked the DNC Emails

NBC News, Josh Meyer, 2016 07 26

New York - **Many U.S. officials and cyber security experts in and out of government are convinced that state-sponsored Russian hackers** are the ones who stole 20,000 emails from the Democratic National Committee and leaked them to the public just in time to disrupt the Democrats' national convention in Philadelphia. Here's why the experts are so confident the Russians did it: * GEOGRAPHY: At least one of the hacker groups attacking the DNC appeared to cease operations on Russian holidays, and its work hours aligned with a Russian time zone, **cybersecurity company FireEye** concluded in a report. * LANGUAGE: The hackers also left an obvious digital fingerprint, one cybersecurity expert said, perhaps on purpose: a signature in Russia's Cyrillic alphabet. * FORENSIC EVIDENCE: After a different batch of hacked Democratic emails was released last month, a wide spectrum of cyber-security experts concluded that it was the work of Russian intelligence agencies through previously known proxy groups known as COZY BEAR or APT 29, and FANCY BEAR or APT 28.

White House to Issue New Policy for Cyberattack Responses

Wall Street Journal, Damian Paletta, 2016 07 26

Washington - **The White House as soon as Tuesday is expected to issue a new directive on how the government should respond to significant cyberattacks**, two people familiar with the matter said, aiming to end confusion about the responsibilities of agencies involved in security breaches. The new presidential policy directive is a response to the rapid escalation of cyberattacks by criminals and foreign governments that have stolen information from U.S.

companies, citizens and government offices. The policy has been in the works for months, but it will be released at a time when there is an acute focus on the damage caused by cyberattacks. Hackers last year broke into the **Democratic National Committee's network and WikiLeaks** began releasing some internal party emails several days ago. Some of the emails humiliated top DNC officials and led to an uproar at the party's convention in Philadelphia and the resignation of DNC chairwoman Debbie Wasserman Schultz.

WikiLeaks' Julian Assange: 'No Proof' Hacked DNC Emails Came From Russia
NBC News, Alex Johnson, 2016 07 26
New York - **WikiLeaks founder Julian Assange told NBC News on Monday that "there is no proof whatsoever" that his organization got almost 20,000 hacked Democratic National Committee emails from Russian intelligence** --adding it's what's in the emails that's important, not who hacked them. In a Skype interview with Richard Engel for "NBC Nightly News," Assange rejected that it hadn't even been proven that it was WikiLeaks that published some email messages that have been analyzed in outlets like The New York Times. Three cybersecurity experts have told NBC News that the DNC's servers were hacked by Russian intelligence. But Assange said Monday that DNC servers have been riddled with security holes for years and that many sets of documents from multiple sources are now in public hands. "The emails that we have released are different sets of documents to the documents of those [that] people have analyzed," he said.

F.B.I. Examining if Hackers Gained Access to Clinton Aides' Emails
New York Times, David E. Sanger, 2016 07 26
Washington - The **F.B.I. investigation into the suspected state- sponsored Russian theft of emails and documents from the Democratic National Committee's computer networks** has expanded to determine if aides and organizations considered close to Hillary Clinton were also attacked, according to federal officials involved in the investigation. But so far, a sampling of senior Clinton aides at the Democratic National Convention in Philadelphia found none who said they had been notified by the F.B.I. or private investigators that their private emails had been compromised. At this point, law enforcement officials say, there is evidence only of attempts to gain access to those associates through "spear-phishing" attacks, often crude efforts to get someone to click on an email that releases malware into the computer. The committee has said that **Russia hacked** into its computers and has been supported in its assertion by several private cybersecurity firms, including Crowdstrike, the company that investigated the committee's breach. Federal officials say their investigation has been underway since the spring, when the committee notified the F.B.I. of the intrusion. The **committee's suspicions were triggered by what appeared to be a relatively clumsy attack by the G.R.U. In the course of investigating that attack**, the F.B.I. discovered an earlier, more sophisticated attack on the committee by the F.S.B., which is often in competition with the G.R.U.

Preclearance at Foreign Airports Seen as a Necessity to Fight Terrorism (Canada)
New York Times, Ron Nixon, 2016 07 25
Brussels - The **Department of Homeland Security is pushing to increase the number of American law enforcement personnel stationed at airports abroad to screen passengers before they board planes to the United States**, officials say. The effort would be designed to extend the United States' border security to foreign airports as part of new initiatives to reduce the risk of potential terrorists entering the country. Under a smaller program already in place, called **Preclearance** and run by United **States Customs and Border Protection**, officers are based at foreign airports where they collect fingerprints and photos and check travel documents before allowing passengers to board a plane traveling to the United States. The proposed

expansions are mostly for airports in Europe, including the one here in Brussels, which was the site of terrorist attacks in March. The **agency has more than 500 people stationed at 15 foreign airports, including facilities in Canada, Bermuda, the Bahamas, Aruba, Abu Dhabi and Ireland. Ralph Goodale, Canada's minister of public safety,** said the preclearance program has been "tremendously beneficial for both of our countries." He added that it provides an effective way to move people quickly across the border between Canada and the United States, and enhances security between the two countries. Preclearance began in 1952 in Toronto, primarily as a way to streamline the customs process for passengers arriving at American airports from Canada.

FBI Suspects Russia Hacked DNC; U.S. Officials Say It Was to Elect Donald Trump
The Daily Beast, Shane Harris and Nancy A. Youssef, 2016 07 25
Washington—The **FBI suspects that Russian government hackers breached the networks of the Democratic National Committee and stole emails** that were posted to the anti-secrecy site WikiLeaks on Friday. It's an operation that several U.S. officials now suspect was a deliberate attempt to influence the presidential election in favor of Donald Trump, according to five individuals familiar with the investigation of the breach. The **theory that Moscow orchestrated the leaks to help Trump, who has repeatedly praised Russian President Vladimir Putin and practically called for the end of NATO**, is fast gaining currency within the Obama administration because of the timing of the leaks and Trump's own connections to the Russian government, the sources said on condition of anonymity because the investigation is ongoing and developing quickly. "The release of emails just as the Democratic National Convention is getting underway this week has the hallmarks of a Russian active measures campaign," David Shedd, a former director of the Defense Intelligence Agency, told The Daily Beast. Shedd said that additional leaks were likely, echoing an opinion expressed by U.S. officials and experts who said that the release of emails on Friday may just be an opening salvo. An **FBI spokesperson** said in a statement Monday that the bureau was investigating the breach but declined to comment on whether political motivation was part of the inquiry. The theft of information, which at the time reportedly consisted of opposition research and the DNC's files on Trump, seemed to be part of a longer campaign of spying by the Russians in order to glean insights into the next president. **Director of National Intelligence James Clapper also said in May that there were indications both presidential campaigns had been targeted by foreign hackers**.

Snowden Posts Document Alleging US Policy to Hack Foreign Political Parties
Sputnik (Russia), Staff report, 2016 07 25
Washington - The **US intelligence community allegedly authorized the hacking of foreign political parties**, according to a 2010 national security document posted by whistleblower and former National Security Agency contractor Edward Snowden on Monday. The document, originating from the **Director of National Intelligence** and dated July 16, 2010, purported to identify "foreign-based political organizations" allegedly targeted by US intelligence. "Our government specifically authorized the hacking of political parties. Mistakes were made," Snowden said in a Twitter message. Among them were Egypt's Muslim Brotherhood and National Salvation Front, the Pakistan Peoples Party, the Lebanese Amal group and the Indian Bharatiya Janata Party.

9/11 defense lawyers: Judge let U.S. secretly destroy CIA 'black site' evidence
Miami Herald, Carol Rosenberg, 2016 07 25
Guantanamo Bay - **Defense lawyers for the alleged 9/11 plotters said for the first time Sunday that the government destroyed a secret CIA prison with secret permission of the trial judge**, and they learned of it only after the fact. Defense attorneys have been complaining

about a mysterious destruction of evidence episode in a cloaked manner since May. Prosecutors have said they did nothing wrong but declined to explain with any specificity. After a closed session Friday, during which the judge apparently agreed some details were no longer classified, the defense lawyers laid out what they knew in a Sunday roundtable. It did not appear that the "torture chamber," as defense attorney Cheryl Bormann called it, was razed, lawyers said.

Clinton campaign -- and some cyber experts -- say Russia is behind email release
Washington Post, Tom Hamburger, Ellen Nakashima, 2016 07 25
Washington - A **top official with Hillary Clinton's campaign on Sunday accused the Russian government of orchestrating the release of damaging Democratic Party records to help the campaign of Republican Donald Trump** - and some cybersecurity experts agree. The extraordinary charge came as some national security officials have been growing increasingly concerned about possible efforts by Russia to meddle in the election, according to several individuals familiar with the situation. Although other experts remain skeptical of a Russian role, the hacking **incident has caused alarm within the Clinton campaign and also in the national security arena.** Officials from various intelligence and defense agencies, including the National Security Council, the Department of Defense, the FBI and the Department of Homeland Security, attended the White House meeting Thursday, on the eve of the email release. If the accusation is true, it would be the first time the Russians have actively tried to influence an election in this manner, analysts said.

Spy agencies struggle to spot threats from lone, mentally ill attackers
Reuters, Mark Hosenball, 2016 07 24
Washington - **Recent attacks on civilians in the U.S. and Europe have exposed a gap in the intelligence community's efforts to track suspected extremists and prevent mass killings**, a half dozen American, British and French counterterrorism officials told Reuters. The **attacks have a common theme of being carried out by actors with an apparent history of mental illness - but few if any direct links to extremist groups**, the officials told Reuters. From both a legal and a strategic perspective, counterterrorism investigators globally are focused on plots by established violent groups with known ideologies, such as Islamic State. In the U.S., laws designed to protect citizens from intrusive government spying can limit investigations of individuals unless they have provable ties to foreign terror groups. Counterterrorism officials told Reuters that the assailants in a recent spate of mass killings all had histories of apparent mental illness.

Israeli spy Jonathan Pollard seeks easing of parole conditions in US court
Deutsche Welle, Staff Writer, 2016 07 23
Berlin - **Jonathan Pollard** served 30 years in prison for stealing hundreds of secret and top-secret documents and selling them to Israel. He **was paroled in November but is still considered a security threat -** so he wears a tracking device. But as Pollard's attorney Eliot Lauer argued for an easing of some restrictions on Friday, US District Judge Katherine Forrest cautioned that her authority was limited. "The information [Pollard stole] is ridiculously stale, and it's the type of information that no human being could reasonably recall," Lauer told Forrest, referring to the 30-year-old documents. He said Pollard was being denied a job at an investment firm because of the computer monitoring.

A reality check on the Middle East from America's spy chief
Washington Post, David Ignatius, 2016 07 22
Column - **America's top spymaster offered contrarian assessments of some key issues: warning against "hyping" the threat posed by the Syrian al- Qaeda affiliate (terrorist**

group) Jabhat al-Nusra, cautioning against Obama administration plans to share intelligence with Russia on Syrian targets and questioning Turkish claims that last Friday's coup attempt was organized by a cleric living in the United States. National Intelligence Director **James Clapper** made the characteristically blunt comments in an interview Wednesday. He expanded on a warning he made in an interview in May that the United States can't by itself "fix" the problems of the turbulent Middle East. Clapper's skeptical view is shared by President Obama and has reinforced the administration's wariness about committing military force in Syria. Clapper began the wide-ranging discussion by questioning the recent "groundswell" of concern about Jabhat al-Nusra.

How the Real Edward Snowden Helped Write the Ending to Oliver Stone's 'Snowden'
The Daily Beast, Jen Yamato, 2016 07 22
Washington - The **NSA's worst nightmare made his San Diego Comic- Con debut by way of video chat, moments after the first public screening of Oliver Stone's Snowden**. "The FBI actually gets a copy of this talk because we're going through Google Hangouts, which unfortunately has a sort of built-in surveillance capability," joked **Edward Snowden**, his face peering down on a theater full of critics and journalists. He joined Stone and stars **Joseph Gordon-Levitt and Shailene W**oodley from Moscow, his home for the foreseeable future, "live--from the internet." Snowden tracks the NSA analyst as he wrestles with the decision to blow the lid off of the U.S. government's top-secret global surveillance program, an act that made him persona non grata in America and changed history.

Russian Agent Sentenced for Illegally Exporting US High-tech Gear
Voice of America, Staff report, 2016 07 22
New York - A **federal court in New York on Thursday sentenced an admitted agent of the Russian government to 10 years in prison and ordered him to forfeit $500,000 in profit he'd gained from his criminal activity**, which focused on acquiring and secretly shipping abroad high-tech microelectronics for Russian military equipment. **Alexander Fishenko** pleaded guilty to all 19 charges brought by the Department of Justice. U.S. officials said a company that Fishenkohad founded shipped $50 million worth of electronic products to Russia between 2002 and 2012, all in defiance of a government licensing system meant to control such exports. "These commodities have applications and are frequently used in a wide range of military systems," U.S. officials said, "including radar and surveillance systems, missile guidance systems and detonation triggersUltimate recipients of the electronic components acquired by Fishenko's companies, known as **ARC and Apex**, included a research unit for the Russian internal security agency **FSB**, a Russian entity that builds air and missile defense systems, and another that produces electronic warfare systems for the Russian Ministry of Defense.

CIA Chief Hedges When Asked if U.S. Saw Turkey Coup Coming
Wall Street Journal, Damian Paletta, 2016 07 20
McLean Va. - **Central Intelligence Agency Director John Brennan said intelligence officials were well aware of strains within Turkey and sizable opposition to President RecepTayyip Erdogan, but he wouldn't say whether they foresaw an attempted coup last week**. Mr. Brennan, speaking Tuesday evening to an audience at the Intelligence and National Security Alliance, described the setting U.S. officials were in Friday night when the attempted coup was unfolding. "The first thing you do when you have a situation like that is you try to ascertain the facts, and a lot of time...it's very very difficult because a lot of information is coming in and it is hard to distinguish between rumors," he said.

Lawmakers push TSA to strengthen Amtrak passenger security
The Hill, Melanie Zanona, 2016 07 20
Washington - A **pair of House lawmakers is backing a bill that would prod the Transportation Security Administration (TSA) into implementing all the requirements of a decade-old law aimed at addressing terror threats on Amtrak**. The legislation was crafted in response to a recent watchdog report that found the TSA has "limited regulatory oversight processes" to strengthen passenger security at Amtrak, because the agency has not complied with all of the recommendations mandated by Congress following the 9/11 terrorist attacks.

US intel bulletin warns of persistent threat from 'Western female violent extremists'
Fox News, Matthew Dean, 2016 07 20
Washington - The **U.S. intelligence community is warning law enforcement agencies around the country of persistent terror threats posed by radicalized Western women. In a Joint Intelligence Bulletin - or JIB -** distributed Tuesday and obtained by Fox News, the FBI, Department of Homeland Security, and National Counterterrorism Center note a "continued trend of Western female violent extremists... engaging or attempting to engage in plotting against targets in the West, including their home countries." The information was circulated after a review of recent arrests, as well as observations made following successful and disrupted plots. The **agencies find that extremist-sympathizing Western women "are likely to continue" to follow persistent calls by terror groups like ISIS and Al Qaeda to plot and/or carry out lone wolf-style terror attacks in their home countries or other Western nations**. Additionally, FBI, DHS and NCTC warn of the women's potential role in carrying digital surveillance of potential targets over the Internet through a practice known as "doxing." Doxing leverages publicly available information on the web to plot attacks against specific individuals or locations.

Spies among us: Get a peek at their playbook
CNN, Thomas Patterson, 2016 07 20
Washington— Spies are living among us. **In the United States alone, one expert estimates that there are about 100,000 foreign agents working for at least 60 to 80 nations -- all spying on America**. "That's not paranoia -- that's a good guess," said **Chris Simmons, a retired counterintelligence supervisor for the U.S. Defense Intelligence Agency, appearing on CNN's "Declassified."** It all sounds very much like the exciting Hollywood dramas set during the Cold War with Soviet spies pretending to be harmless citizens -- like **F/X's popular TV series "The Americans."** **Evgeny Buryakov**, 41, posed as an employee in the Manhattan office of a Russian bank. He entered the United States and stayed as a private citizen, the Justice Department said. Buryakov gathered "intelligence on the streets of New York City, trading coded messages with Russian spies who send the clandestinely collected information" to **Russia's foreign intelligence agency, the SVR**, Bharara said. According to court documents, Buryakov was "receiving taskings from Moscow." He reportedly was sentenced to 2.5 years in prison and ordered to pay a $10,000 fine.

MI6 casts aside its veil of secrecy to show schoolchildren that anyone can become a spy
London Daily Telegraph, Ben Farmer, 2016 07 26

London - **MI6 has welcomed its first school trip as it tries to broaden its recruiting pool for spies and dispel the perception that staff are only chosen via a "tap on the shoulder"** at Oxbridge. Seven pupils from some of the most deprived areas of Wales met the chief of the intelligence agency after winning a careers trip to London. The Secret Intelligence Service wants to attract a wider range of recruits as it fears potentially successful candidates may not think of a career with them. **Sources said an ever broader pool of spies and skills is needed to meet the range of security threats Britain now faces**. A senior intelligence official said: "The Service wants to encourage people from all walks of life, irrespective of their religious or ethnic background, to understand they can have a fulfilling career working for MI6. The world of modern espionage requires a wide range of skills, and we need to broaden our recruitment to every corner of society to ensure we get the best people available to make sure we can defend the nation from a wide range of threats." The schoolchildren who visited MI6 last week were not told of the visit to the service's headquarters on the banks of the Thames until an hour beforehand.

Judge appointed 'surveillance tsar' after police spy row
London Times, Neill Johnston, 2016 07 26
London - A **leading judge has been appointed as the country's new "surveillance tsar" after a controversial row over police spying. Lord Bracadale**, who presided over the trials of Nat Fraser and Tommy Sheridan, is now being urged to "vigorously protect" the interests of the public and journalists. The appointment comes after police were found to have spied on one of their own officers in an effort to uncover the source of media leaks, and was wel-comed by opposition parties after more than a year of delay in filling the role. Liam McArthur, a Liberal Democrat MSP, said: "The fact that a commissioner is now in place will mean nothing unless he vigorously protects the interests of journalists and others who have had their communications data intercepted unlawfully.

MI5 may be stirring Corbyn strife
Daily Telegraph, Ben Riley-Smith, 2016 07 23
London - **Len McCluskey the Unite leader, has claimed Britain's intelligence agencies may be responsible for the bullying and abuse directed towards critics of Jeremy Corbyn**. The union boss, a loyal supporter of the Labour leader, said the security services had a history of "dark practices" and suggested "Right-wingers" in disguise may be responsible for the actions attributed to the Labour leader's supporters.

Boris Johnson once outed MI6 spy 'for a laugh'
Politics.co.uk, Adam Bienkov, 2016 07 20
London - There was some nervousness in the Foreign Office when it was announced that **Boris Johnson had been made foreign secretary.** Part of Johnson's new role involves overseeing **MI6**. This is a highly sensitive and delicate task which some within his department worry he is unsuited for. It now appears there is good reason for them to feel uneasy.In 2001, while editor of the Spectator, Johnson published a piece suggesting that a former **friend and colleague had worked for the secret service. On the front page of the magazine, Johnson splashed the headline "Who was Smallbrow?" Inside, Boris published an article naming Agent Smallbrow as then Sunday Telegraph editor Dominic Lawson.** The allegation was based on a controversial book by renegade spy Richard Tomlinson which had been published in Russia. Tomlinson claimed that Lawson had provided cover for **MI6 agents working in Eastern Europe**.

MI5 monitored protesters at RAF bases in the 1980s
The Independent (UK), Gavin Gordon, 2016 07 21

London - **Peace protesters demonstrating against the deployment of US nuclear missiles at British air bases in the 1980s were kept under close watch by MI5**, newly released government papers suggest. Files released by the **National Archives** in Kew, west London, indicate that peace camps set up around the bases involved were monitored by the security service for evidence of infiltration by "subversive organisations".

GCHQ and Leamington charity aim to inspire girls to take up a career in cyber security
The Courier (Leamington Spa), Staff report, 2016 07 20
Leamington Spa - **National security experts at GCHQ are working with a Leamington charity to offer a free cyber security course for teenage girls this summer**. The Smallpeice Trust is running the CyberFirst Futures residential course with GCHQ at Birmingham University from August 1 to 4, during which participants will gain an insight into the next generation of cyber security tools. **The course will also test their skills in dealing with modern and advanced cyber defence scenarios. Open to 16 and 17-year-old girls, those taking part in the four-day course will work closely with experts from GCHQ, the Smallpeice Trust and academia, gaining an insight into the importance of cyber security and getting first-hand experience of defending against a cyber-attack. Chris Ensor from GCHQ** said: "We want to develop a diverse, continuous flow of people with the right skills and knowledge to help protect the UK against future cyber-attacks.

Australia/ Australie

PM's tough new plan to keep terrorists behind bars
The Australian, Brendan Nicholson, 2016 07 26
Sydney - **Malcolm Turnbull wants new counter-terrorism measures in place urgently to discourage radicals in Australian jails from continuing their calls for jihad.** The Prime Minister announced yesterday the government would legislate for the continued detention of convicted terrorists who had served their sentences and who still posed a ¬serious threat to society, and for courts to impose control orders on children as young as 14. The Australian has been told Mr Turnbull was concerned about terrorists actively trying to spread their message in jails and encouraging violence outside them.

Government moves towards indefinite detention for some terrorists in push for new anti-terror laws
ABC (Australia), Louise Yaxley, 2016 07 25
Canberra - **Australia is taking a step towards indefinite detention for some convicted terrorists, with the Federal Government pushing for legislation in every state so terrorists could be kept in jail after their sentences expire if a court says they would reoffend**. Prime Minister Malcolm Turnbull has written to state and territory leaders asking them to quickly agree on laws that could keep terrorists in jail if the threat is assessed as serious. Federal Attorney-General George Brandis said he wanted laws similar to those in some states which keep sex offenders in jail after they have served their sentence if they still posed a serious risk to the community. He argued it would only apply to very high risk offenders who show no signs of rehabilitation when they are near the end of their sentence. **'Measure will only apply to most serious category of offender 'State leaders were briefed by ASIO's Director General last**

December at Mr Turnbull's first council of Australian Governments meeting and agreed to the idea, then endorsed the next step in April.

PM rushes to pass strict terror laws
The Advertiser, Jackson Gothe-Snape & Rob Harris, 2016 07 25
Canberra - **New laws to keep convicted terrorists behind bars - potentially for life - if they remain a danger to the community, must be fast-tracked, amid an increase in global terror threats**, Prime Minister **Malcolm Turnbull** says. He spoke to state Attorneys-General yesterday to invite them to gather within weeks because he wants to enact a national regimen by the end of the year. In a follow-up letter sent overnight, Mr Turnbull said the laws would cover only "high-risk terrorist offenders" and would "contain appropriate procedural protections and safeguards". "This is a significant public safety and security issue and governments must do all we can to protect the community from individuals posing a high risk of reoffending," he said.

Agencies to focus on 'lone wolves'
The Australian, Brendan Nicholson, 2016 07 22
Canberra - **Malcolm Turnbull has ordered Australia's counter- terrorism agencies to urgently develop a strategy to prevent rapidly radicalised terrorists carrying out Nice-style attacks in public areas.** The government has been advised that the threat of an attack by "lone-wolf" terrorists using a truck or knife and potentially causing scores of casualties could last for decades. Senior sources have told The Australian the **Prime Minister is particularly concerned that while it would be hard for a terrorist to obtain a cache of automatic weapons here, an attack using a vehicle as a weapon could cause devastating casualties**. Mr Turnbull has called in **counter-terrorism co-ordinator Greg Moriarty** and directed him to quickly identify lessons for Australia arising from the Bastille Day attack in Nice.

Security services doing good job: Stratfor
Australian Associated Press, Max Blekin, 2016 07 22
Canberra - **The lack of large-scale terror attacks in the US and Australia show security services are doing a good job, a US private sector intelligence group says**. Terrorist group Islamic State's call to adherents to conduct "lone wolf" attacks was a response to police pressure and an admission of weakness. In an analysis of "lone wolf" terrorism, **Stratfor security analyst Scott Stewart** says organised terror groups are more effective at mounting large attacks as they contained skilled operatives. But they were also more likely to attract attention of counter-terrorism services. "Judging from the lack of such attacks, at least in North America and Australia, they are doing a good job," Mr Stewart said. Based on sheer numbers, both are more likely to encounter grassroots terrorists than officers of the **Australian Security Intelligence Organisation**. The Australian government has recognised this with the "be alert not alarmed" and similar campaigns and the national security hotline.

New Zealand/Nouvelle-Zélande

Waihopai documentary digs into the world of spies, eyes and peace video
Stuff News New Zealand, Philip Matthews, 2016 07 23
Wellington - They walked through a vineyard and cut fences in the dead of night, approached the enormous white domes of the **spy base** and said, "In the name of Jesus Christ, we disarm you". Then they plunged sickles into a dome, which deflated like a balloon, and they cried next

to a shrine they set up. The three men were a teacher, a farmer and a Catholic priest. The teacher, **Adrian Leason**, said, "Catholic spirituality was the glue that brought us together." Leason, Father Peter Murnane and farmer Samuel Land were charged for the **2008 attack on the Waihopai spy base near Blenheim** that New Zealand's prime minister at the time, Helen Clark, called "a senseless act of criminal vandalism". But was it senseless? **Leason is the central figure in a new documentary that spreads outwards from that incident at Waihopai to encompass the vast subject of global surveillance and New Zealand's role in the Five Eyes alliance**. Viewers of The **5th** Eye may experience unsettling flashbacks from 2014 as these figures appear before you: **Edward Snowden, Kim Dotcom, Nicky Hager and Glenn Greenwald.**

China says sensitive issues could damage ties with US military
Agence France-Presse, Staff reporter, 2016 07 25
Beijing - **Failure to properly handle sensitive issues between the US and China could "very likely disturb and undermine" their military-to- military relations, a top Chinese official told US National Security Advisor Susan Rice** Monday. Rice is the highest-level US official to visit the capital since an international tribunal this month rejected China's vast territorial claims in the South China Sea -- infuriating Beijing and fuelling tensions with Washington. Her trip is intended to prepare for a visit by President Barack Obama to a G20 summit in the city of Hangzhou in September. The Permanent Court of Arbitration in The Hague on July 12 denied the legal basis for Beijing's claim to nearly all of the sea, parts of which are also claimed by neighbouring nations.

Xinhua, China's news agency and 'propaganda tool' (Canada).
The Hindustan Times, Rezaul H Laskar, 2016 07 25
New Delhi - **China's state-run Xinhua news agency is no stranger to controversy, having been accused by governments and journalistic bodies of spreading disinformation at the behest of the ruling Communist party**, biased coverage and even espionage. India last week expelled three Xinhua journalists by refusing to renew their visas to work in the country after they came under the "**adverse attention of security agencies**" for allegedly indulging in activities beyond their journalistic brief. In August 2012, **Canadian journalist Mark Bourrie quit working for Xinhua after accusing it of directing him to spy on the Dalai Lama in Ottawa**. Bourrie alleged his Chinese bureau chief wanted him to use his parliamentary press accreditation to cover the Tibetan spiritual leader's news conference, gather information on the Dalai Lama's meeting with the Canadian prime minister and turn over all notes and materials without writing any reports.

Police hold anti-terrorism drills for 2017 Universiade
The China Post, 2016 07 22
Taipei— The **central government held anti-terrorism exercises in preparation for the 2017 Universiade games Thursday in Taipei**. The exercises were organized by the **Interior**

Ministry's National Police Agency (NPA) and included descent from high-rises, weapons training and non-weapon techniques to display the ability of law enforcement agencies to prevent a potential terrorist attack. According to NPA Director General Chen Kuo-en, the maneuvers were tasked to a special commando unit under the NPA to prepare for possible terrorist incidents.The Universiade is an important event and it is necessary for the police to train its anti-terrorism forces. The government is confident that security preparations against terrorism can be adequately provided, Chen added.

Russia/Russie

Russian FM Lavrov refuses to use 4-letter words in comments about Russian hackers
Pravda, Staff report, 2016 07 26
Moscow - **Russian Foreign Minister Sergei Lavrov said he could not exclude expletives from his comments about the Russian trace in the hacking of the US Democratic Party mail server**. It was reported that Russian hackers could be involved in the recent cyber attack on the USA. Last week, WikiLeaks published documents indicating that the party leadership was favoring Hillary Clinton in the fight for the right to become a candidate for US presidency to the detriment of Bernie Sanders. "I would not like to use four-letter words," Lavrov said when asked to comment on the Russian track in the data leak.

In Hacking, Russia Is Accused of Playing in American Politics
New York Times, David E. Sanger, Nicole Perlroth, 2016 07 25
Washington - An unusual question is capturing the attention of cyberspecialists, Russia experts and Democratic Party leaders in Philadelphia: **Is Vladimir V. Putin trying to meddle in the American presidential election?** Until Friday, that charge, with its eerie suggestion of a Kremlin conspiracy to aid Donald J. Trump, has been only whispered. But the release on Friday of **some 20,000 stolen emails from the Democratic National Committee's computer servers**, many of them embarrassing to Democratic leaders, has intensified discussion of the role of **Russian intelligence agencies** in disrupting the 2016 campaign. The emails, released first by a supposed hacker and later by WikiLeaks, exposed the degree to which the Democratic apparatus favored **Hillary Clinton** over her primary rival, **Senator Bernie Sanders** of Vermont, and triggered the resignation of **Debbie Wasserman Schultz**, the party chairwoman, on the eve of the convention's first day. Proving the source of a cyberattack is notoriously difficult. But researchers have concluded that the national committee was breached by two Russian intelligence agencies, which were the same attackers behind previous Russian cyberoperations at the White House, the State Department and the Joint Chiefs of Staff last year.

Russian intelligence saved Erdogan from coup - media reports
Russian Press Digest - Russicalzvestia, Dmitry Kalinin, 2016 07 22
Moscow - **Reports that Russian intelligence warned the Turkish president about the military coup, allowing him to escape and retain power, appeared in various Russian media outlets in the evening of July 20.** However, it is **unclear to what extent the reports are true:** Erdogan himself said that he learned about the coup from his brother-in-law. Russian media have reported that Turkish **President RecepTayyip Erdogan was warned by Russian intelligence services** about the military coup against him that was thwarted in the early hours of July 16. The Russian media outlets that have spread the version of Moscow's involvement in Erdogan's victory over the plotters cite the major Iranian news agency Fars, which, in turn,

refers to reports by several Arab media outlets (in particular, the Sudanese newspapers Al Sudan Al Youm).

High-flying Russian spies banished to Siberia as punishment for 'indecent' graduation stunt where they paraded through Moscow which revealed their identities
Daily Mail (UK), Multiple reporters, 2016 07 21
London - **Dozens of high-flying trainee Russian spies have been banished to the Siberian wilderness after taking part in 'indecent' graduation that compromised their identities**. The agents staged a brash cavalcade of black Mercedes Gelandewagens through Moscow streets in a mafia- style show of strength to mark their graduation from the **FSB Academy**. They were given the choice of quitting the country's elite security service or being stationed in Chukotka or Kamchatka, and almost all of them picked the second option. Both locations are more than eight hours flying time from Moscow. A **spy source said: 'It was important for the FSB leadership to teach their graduates a lesson for such a provocative behaviour.'**

Moscow security chiefs held over links to mobster
London Times, Tom Parfitt, 2016 07 20
London - **Russia's Federal Security Service has detained officials at the powerful Investigative Committee for alleged links to the mafia godfather Shakro the Young**. The security service said that it had arrested **Major General Denis Nikandrov**, deputy head the Moscow directorate, along with Mikhail Maksimenko, head of the committee's internal security division, and MrMaksimenko's deputy, Alexander Lamonov. Service sources said that General Nikandrov was suspected of promising to free Shakro, whose real name is ZakharyKalashov, for $1 million. Officers were searching the suspects' homes and places of work. A lawyer for MrLamonov said that the detained had men denied doing anything wrong.

One Russian Security Agency Raids Another, in Rare Sign of Dysfunction
New York Times, Andrew E. Kramer, 2016 07 20
Moscow - **Russia's main domestic intelligence service raided the Moscow headquarters of an investigative agency on Tuesday, in a rare sign of dysfunction in the country's domestic security services**. The raid, recalling the rivalries and infighting of the immediate post-Soviet period, played out on a main street in the capital, New Arbat, and ended with arrests of three senior prosecutors. Agents of the **Federal Security Service**, or F.S.B., the main successor to the Soviet K.G.B., searched the offices of the **Investigative Committee**, the powerful branch of the prosecutor's office that deals with politically hued crimes. The raid was all the more baffling because the two agencies are generally viewed as operating in lock step to repress political dissent, crack down on organized crime and pursue other high-profile cases in the capital.

SBU refute Russian security service claims that OSCE SMM translator was their agent
Kyiv Post, Staff report, 2016 07 19
Kyiv - **YuriyTandit, advisor to the chief of the Ukrainian Security Service (SBU), has refuted the statement recently made by the Russian security agencies that a translator employed with the OSCE Special Monitoring Service (SMM) was an SBU informant**. "We do not recruit OSCE employees. Authoritative international organizations confirm our position. We cooperate with the OSCE. It is important for us to implement the Minsk agreements. And the OSCE is here to help us with it," Tandit said in his comment for the online version of Ukrainska Pravda. The **Russian Federal Security Service (FSB)** alleged on July 18 that an SBU agent employed with the SMM as a translator had acted under instructions given by Ukraine's state security agencies to collect intelligence in Donbas.

DGSE : l'hommage discret aux trois soldats français tués en Libye
Midi Libre, F.B., 2016 07 26
Perpignan - Deux avions pour des autorités militaires très protégées. Une cérémonie très discrète s'est tenue lundi après-midi au coeur de la Citadelle de Perpignan, qui **abrite le Centre d'instruction parachutiste spécialisé (CPIS), le régiment qui est le bras armé de la DGSE**. **Trois militaires français de la Direction générale de la sécurité extérieure sont morts la semaine dernière**, au cours d'une mission de renseignement en Libye. Leur hélicoptère a été vraisemblablement abattu par un missile sol- air tiré par un groupe jihadiste, dans la région de Benghazi.

2 Turkish generals in Afghanistan detained by authorities in Dubai
Daily Sabah, 2016 07 26
Ankara--**Two Turkish generals based in Afghanistan were detained** on Tuesday by authorities in Dubai following the **failed coup attempt** by the Gülenist Terror Organization (FETÖ). The Commander of Afghanistan Turkish Task Force and Hamid Karzai International Airport **Cahit Bakır** and Brigadier General Şener Topuç were detained at Dubai Airport following joint cooperation efforts by the Ministry of Foreign Affairs and the **National Intelligence Organization (MİT)**, diplomatic sources said. They were brought to Turkey early Tuesday. **Bakır previously served as the Head of Intelligence Division of Turkish Air Force Command.**

Bulgarians Practically Equate Politics with Corruption – Poll
Bulgarian News Agency, 2016 07 26
Sofia— **Bulgarians practically equate politics with corruption**. Corruption and political influence in the operation of courts are precisely what is perceived as the main problems in the judicial system, an express survey of Gallup International Balkan agency shows. The poll was conducted through direct telephone interviews of 1,605 people across Bulgaria on July 14-19. The survey is part of the agency's own research programme focused on crime, a topical subject for the judicial system.Bulgarians approve more the institutions that seem depoliticized, instrumental and even repressive. And vice versa, those associated with political power or the judicial system are criticized almost automatically, Gallup says. **Approval of** the National Revenue Agency (60 per cent approval against 32 per cent disapproval), the **State Agency for National Security (51 per cent against 35 per cent),** the Interior Ministry (54 per cent against 42 per cent) is tangibly higher than that for the judiciary, the Justice Ministry or Parliament.

Spain to invest 60m euros to modernize intelligence centre
La Vanguardia (via BBC Monitoring Europe), 2016 07 26
Madrid— A decision in favour of **cyber security and the fight against Jihadist terrorism**. This is how acting **Deputy Prime Minister Soraya Saenz de Santamaria** explained the approval this morning, 22 July, by the cabinet, of an agreement whereby "a commitment to spend" 60 million euros "is undertaken," during future fiscal years, beyond 2016, to **modernize the National Intelligence Centre (CNI).** This "spending commitment" modifies the ceilings laid down by the General Budgetary Act, with the goal of making it possible for the intelligence services to enter into contracts for technological renewal and infrastructure investment.

Ukraine's chief prosecutor to arrest some security service employees for torture
ITAR-TASS World Service, Staff report, 2016 07 26
Moscow - A **group of Ukraine's Security Service brass may be arrested soon for complicity to torture,** Ukraine's Chief Prosecutor Yuri Lutsenko said. "Judging from last week reports, a group of **Ukraine's Security Service employees** is going to be arrested soon because of complicity to torture," Ukraine's Public TV quoted Lutsenko as saying. According to the chief prosecutor, high-ranking security service employees shot at people and inflicted heavy bodily harm in the process of extortion.

Number of Norwegians joining Isis in decline
The Local (Norway), Staff report, 2016 07 25
Oslo - According to Ritzau, **reports from the Danish, Norwegian and Swedish intelligence services indicate that there are fewer Scandinavian citizens travelling to the Middle East to fight for the militant group Isis,** also known as Daesh or Islamic State. Recruitment across the three countries appears to have peaked in 2013 and 2014 when ISIS was aggressively expanding throughout Iraq and Syria. Around 90 Norwegians have gone abroad to join up with Isis and the Norwegian intelligence service **PST** believes that at the end of 2015 there were still roughly 40 Norwegian foreign fighters actively participating in hostilities in Syria and Iraq. Magnus Ranstorp, Research Director Center for Asymmetric Threat Studies (CATS)at the **Swedish National Defence College**, believes that this partially has to do with the fact that Isis has already attracted many of the disaffected citizens in these countries who were receptive to the organisation's extremist ideology.

Turkey's interior minister says plotters' 'brain team' among police intelligence
Hurriyet Daily News, Staff report, 2016 07 25
Istanbul - **Interior Minister Efkan Ala has said there had not been any information from police intelligence ahead of the July 15 coup** attempt and the coup plotters had a "brain team" developed inside the body. "There was no information coming from the police intelligence. There has been a brain team developed among them. Information should have been received from soldiers. Police should have received information as well. **The fact that the MIT [National Intelligence Agency] received information some four to five hours ahead foiled the game for them. We have changed the head of gendarmerie intelligence but could not change within it.** There was no intelligence received from there," said Ala, as he gave an interview to a group of journalists in the aftermath of the July 15 failed coup attempt. Ala added that in five to 10 years another coup attempt could be initiated if the problem, which stemmed "more from system weaknesses, rather than intelligence weaknesses," could not be changed.

Intelligence collection, monitoring of people with mental-health issues seen as keys to improving safety
Wall Street Journal, Julian E. Barnes & Matthew Dalton, 2016 07 23
Berlin - First the massacre by truck in Nice, France, then an ax attack on a German train and now a shooting spree in Munich: Over the past 10 days, Western Europe has seen the calm of everyday life shattered by high-profile acts of violence. **Security officials said the recent string of attacks in both Europe and America show the importance of improving intelligence collection, and improving services and monitoring of people with mental-health issues**. "We are living in fear whether it is from terrorists or [mentally ill] people," said a U.S. official in Europe. "Whether they are self-radicalized or mentally ill they can terrorize and change peoples lives. We have two problems here, we have to focus on both." U.S. officials say the one thing European intelligence and law-enforcement officials could do quickly is find a mechanism with which to **share more intelligence and law enforcement information**, and

share it more widely. American officials have been pushing Europe for more intelligence sharing with the U.S.--not simply providing information on terrorists or potential terrorists who are intent on attacking the U.S. but a far broader swath of information.

Erdogan's 'secret keeper' under fire over Turkey coup lapse
Agence France-Presse, 2016 07 23
Ankara— **Turkey's shadowy spy chief Hakan Fidan has faced an unprecedented public dressing down in the wake of the failed coup but appears set to stay on in his post -- at least for now**. There has been intense speculation over **the future of Fidan, head of the National Intelligence Organisation (MIT) and widely seen as one of Turkey's most powerful men, after President Recep Tayyip Erdogan said intelligence lapses had helped last week's coup.** Erdogan late on Friday held a two-hour meeting with Fidan at the presidential palace but there was no statement afterwards that Turkey's top spy was to go. Indeed, the most significant development -- much to the amusement of social media users -- was that the usually clean-shaven spy chief had grown a moustache in what some saw as an expression of loyalty to the similarly mustachioed president. "No, he did not offer his resignation. We did not discuss this," Erdogan said in an interview with France 24 television. Following reports that MIT caught wind of the coup hours beforehand but did not warn Erdogan, the president admitted there had been an **intelligence failure**. According to the Hurriyet daily, Erdogan had furiously scolded Fidan following the coup, saying: "You got a really bad mark." To which Fidan replied: "Whatever you command, I am ready to do." Erdogan had previously complained of finding out about the coup not from the intelligence service but his brother-in-law -- and then, extraordinarily, of being unable to reach Fidan.

Turkey spy chief survives despite Erdogan criticism... for now
Agence France-Presse, Staff Writer, 2016 07 23
Istanbul - **Turkey's powerful spy chief HakanFidan is to stay on in his job after presiding over an intelligence failure that allowed the botched coup, but his position is under review**, President **RecepTayyip Erdogan** said in an interview broadcast Saturday. There has been intense speculation over the future of Fidan, head of **the National Intelligence Organisation (MIT)** and widely seen as one of the most powerful men in the country, after Erdogan publicly rebuked him for failing to see the putsch coming. Erdogan late on Friday held a two-hour meeting with Fidan at the presidential palace but there was no statement afterwards that Turkey's top spy was to go. "No, he did not offer his resignation. We did not discuss this," Erdogan said in an interview with France 24 television. Following reports that MIT had intelligence of the coup hours beforehand but did not warn Erdogan, the president admitted there had been an intelligence failure.

Ukraine's Security Services and Rebels Are Said to Be Equals in Torture
New York Times, Andrew E. Kramer, 2016 07 22
Moscow - A report by two leading human rights groups released on Thursday **accuses Ukraine's Western-backed security services of practicing abuse and torture in a manner similar to that of the rebel groups they are fighting**. In the report about disappearances and torture in the Ukraine war, titled "You Don't Exist," **Human Rights Watch and Amnesty International** document harrowing abuse by both sides, including waterboarding and the use of electrical shocks. "People in eastern Ukraine who are being seized and hidden away by the warring sides are at the mercy of their captors," Tanya Lokshina, a researcher with Human Rights Watch and one of the authors of the report, said in a statement. "It is never legal or justified to seize people off the streets, cut them off from contact with family and lawyers, and beat and abuse them," she said. **Ukraine's domestic intelligence agency, the Security Service of Ukraine,** denies illegally detaining suspects in the conflict. And yet as recently as

May, it refused to allow a United Nations delegation investigating reports of torture access to sites where suspects were alleged to be held illegally.

Trois militaires de la DGSE morts en Libye
Le Monde, Frédéric Bobin, Cyril Bensimon, et Madjid Zerrouky, 2016 07 22
Tripoli - La **présence militaire française** aux côtés du général Haftar irrite le gouvernement d'union nationale libyen Cinq ans après avoir participé à la chute de Mouammar Kadhafi, la France agit bien militairement en Libye. **Le ministère de la défense a annoncé, mercredi 20 juillet, que trois militaires français y avaient perdu la vie en " service commandé ".** Le gouvernement libyen d'union nationale (GNA) a accusé Paris de " violation " de son territoire, mercredi au soir. Rien ne " justifie une intervention " sans que Tripoli en soit informé, a déclaré le GNA. **Les trois sous- officiers, membres du service action de la Direction générale de la sécurité extérieure (DGSE) selon une source française haut placée**, sont morts dans un " accident d'hélicoptère " en Libye, a précisé, mercredi matin, François Hollande. La France mène " des opérations périlleuses de renseignement (...) . La Libye connaît également une instabilité dangereuse.

Turkish Intelligence Spied on People Involved in Coup Attempt
Sputnik (Russia), Staff report, 2016 07 21
Ankara - **Turkish intelligence service had spied on those arrested and dismissed after the failed coup attempt before it happened**, YasinAktay, deputy chair of Turkey's ruling Justice and Development Party (AKP), told Sputnik on Thursday. "There were lists [of participants before the coup]. The country's intelligence spied on all of them... Of course it knows who is who but everything is in line with the law. We never struggle with people only because they are adherents of a certain organization or have certain political views," Aktay said.

Des militaires français sont morts sur le sol libyen
Le Figaro, Tanguy Berthemet, 2016 07 21
Paris - **L'Élysée a annoncé le décès de trois soldats dans ce pays où des membres des forces spéciales sont engagés contre Daech**. Afrique du Nord Trois sous-officiers français sont morts en Libye lors de la chute d'un hélicoptère, a expliqué mercredi François Hollande. Cette annonce est la confirmation de la présence de militaires français dans ce pays, jusqu'alors jamais officiellement reconnue, même si ce secret était depuis plusieurs mois un secret de polichinelle. « La Libye connaît une instabilité dangereuse. C'est à quelques centaines de kilomètres seulement des côtes européennes. Le **nombre exact de soldats français présents en Libye, membres du service action de la DGSE ou des forces spéciales, est inconnu,** mais ils ne seraient que peu nombreux. La décision d'envoyer des forces sur le terrain aurait été prise fin 2015, alors que l'État islamique gagnait du terrain en Libye.

Turkey to restructure its army after coup attempt: Erdogan
Xinhua News Agency, 2016 07 21
Ankara—Turkish military will be restructured in a short time following a **failed coup attempt**, **President Recep Tayyip Erdogan** said on Thursday. "The army will get fresh blood," Erdogan said in a televised interview in Ankara. The **president underlined significant deficiencies and failure in their intelligence gathering** about the July 15 coup attempt. "No need to hide or deny. I told it to the **undersecretary of national intelligence organization (Hakan Fidan),"** he said. President Erdogan said he was not able to reach the chief of intelligence agency and the general staff at the night of July 15. "I hardly had contact with the prime minister," he said.

Libye : les militaires français tués viendraient du centre de la DGSE de Perpignan
Midi Libre avec l'Agence France-Presse, Romain Duriez, 2016 07 21
Perpignan, France - **Les trois militaires français tués en Lybie seraient du Centre parachutiste d'instruction spécialisée de Perpignan, un centre d'entraînement dédié aux opérations commando et à la guerilla.** Ce mercredi 20 juillet au matin, Paris a annoncé que trois soldats français étaient morts en Libye. **Des espions qui agissent clandestinement** Le ministre de la Défense, Jean-Yves Le Drian, a déploré dans un communiqué la "perte de trois sous-officiers français décédés en service commandé en Libye" sans préciser leur identité ou leur grade. "Ce qui laisse penser qu'il s'agit de trois agents de la **DGSE**" indique RTL précisant qu'ils appartiennent au Centre parachutiste d'instruction spécialisée de Perpignan, anciennement connu sous le nom de 11e régiment parachutiste de choc.

Ukraine, Canada will sign agreement on cooperation in security soon - ambassador
Kyiv Post, Staff report, 2016 07 20
Kyiv - **Ukraine and Canada will soon sign an agreement on cooperation in the field of security, Ukrainian Ambassador to Canada Andriy Shevchenko** has stated. "We hope in the next few months we will sign a security cooperation agreement. This is an agreement on cooperation between the defense ministries of Ukraine and Canada. Work on the text has been actually completed, we are at the finish line, the text is ready to be signed," he said in an exclusive interview with Interfax-Ukraine. According to the ambassador, this is a framework document to be filled with concrete areas of cooperation.

Turkish intel informed top generals hours before coup attempt, says army
Hurriyet Daily News, Staff report, 2016 07 20
Ankara - **Turkey's National Intelligence Organization (MIT) informed the country's top generals hours before the coup attempt was initiated by a group of soldiers within the army on July 15**, while Chief of General Staff Gen. HulusiAkar evaluated the information and issued all necessary warnings and orders against "this despicable and miserable attempt," according to a statement published on the General Staff's official website on July 19.

Turkey intelligence agency suspends 180 personnel
YeniSafak (Turkey), 2016 07 20
Ankara--The **National Intelligence Organization of Turkey (MIT) has suspended 180 personnel following the foiled coup of July 15, which was aiming at toppling the democratically elected government.** MIT personnel were discovered to have been inactive before the discharge. Before MIT, Turkey's Prime Ministry suspended almost 260 personnel , including 257 individuals of 230 clerks, six advisers and two legal advisers. Turkish prime ministry suspends 257 personnel Turkey's Prime Ministry suspended almost 260 personnel on Tuesday amid a nationwide move against those suspected of having links to Friday's military coup attempt which killed hundreds of people. **At least 208 people, including members of the security forces and civilians, were martyred in Istanbul and Ankara** and nearly 1,500 others wounded as they protested against the coup.

Bernard Cazeneuve : « L'état d'urgence ne peut pas être un état permanent »
Le Monde, Journaliste maison, 2016 07 20
Nice - Au lendemain de l'attentat de Nice, le **ministre de l'intérieur se dit « préoccupé de l'exacerbation de certaines tensions dans la société française ».** Mis en cause par la droite et l'extrême droite pour sa gestion de la menace terroriste, Bernard Cazeneuve, le ministre de l'intérieur, répond dans une interview au Monde, et s'en prend à ceux qui, en proposant des « lois d'exception », veulent « s'affranchir de l'Etat de droit ». La droite a immédiatement mis en cause le gouvernement après l'attentat de Nice, survenu le 14 juillet. **Y a-t-il eu une faille dans**

la sécurité ou au niveau des services de renseignement ? A Nice, la polémique a commencé dans les minutes qui ont suivi la commission de l'abject attentat. Des élus ont proféré des accusations et mis en cause les services de l'Etat. Que s'est-il passé ? Un individu, qui n'était pas connu des services de renseignement, qui n'avait jamais été condamné pour des faits en lien avec le terrorisme, est passé à l'acte de manière extrêmement violente.

Iran's Top Security Official Vows Tough Reaction to States Sponsoring Terrorist Acts at Borders
Fars News Agency, 2016 07 26
Tehran - **Secretary of Iran's Supreme National Security Council (SNSC) Ali Shamkhani warned that Tehran will not allow certain countries to support and supply terrorists with arms to foment insecurity at borders** and inside Iran. Shamkhani made the remarks in a meeting with National Security Advisor of Pakistan Nasser Khan Janjua in Tehran on Monday, alluding to Saudi Arabia which has blatantly showed its support for terrorist activities against Iran and other regional countries.

Top National Security Council appointee withdraws candidacy
The Jerusalem Post, Herb Keinon, 2016 07 21
Jerusalem— Avriel Bar-Yosef, **tabbed in February by Prime Minister Benjamin Netanyahu to serve as head of the National Security Council, withdrew his candidacy** Thursday, saying he has decided to work instead in the private sector. Bar-Yosef's appointment was held up for months amid various conflict of interest allegations.He **was to replace Yossi Cohen, who left the job in December to become head of the Mossad**. Since that time, Yaakov Nagel has been serving as acting head of the council. The NSC head is effectively the prime minister's top foreign policy adviser.

North orders terror strikes on South Koreans
Korea JoongAng Daily, 2016 07 27
Seoul— **North Korean leader Kim Jong-un ordered terror attacks against South Koreans living overseas, a high-ranking official in Seoul said Tuesday, adding that his intelligence organizations are dispatching agents to China and Southeast Asian** countries. Kim was said to have ordered the terrorist attacks in retaliation for the defection en masse of a group of North Korean restaurant workers to the South earlier this year. He ordered agents who specialize in such acts of terror to Shenyang and Dandong in China's northeastern Liaoning Province, as well as Southeast Asian countries that have maintained diplomatic relations with Pyongyang, such as Laos and Cambodia, which are also key routes for North Koreans to defect through, according to this official. According to a source knowledgeable on Pyongyang affairs,

the **North Korean agencies that were mobilized for potential terrorist attacks on South Koreans include its General Bureau of Reconnaissance's department of overseas intelligence, the State Security Department and the cultural exchange department of the Unification Front Department**.

Pyongyang Radio Revives Coded Broadcasts for Spies
The New York Times, Choe Sang-Hun, 2016 07 22
Seoul— In **an era of sophisticated spycraft, North Korea appears to be returning to the days of shortwave radio**. The North broadcast a series of seemingly random numbers on Pyongyang Radio twice recently, an eerie reminder of the days when the North encrypted messages to its spies in South Korea. In the latest episode last Friday, an announcer read what she described as "a mathematics review assignment for investigative agent No. 27," engaged in a "distance learning" program. "Turn to Page 459, No. 35; Page 913, No. 55; Page 135, No. 86," she said, continuing to cite numbers for 14 minutes. **Kim Dong-sik, a former intelligence officer for North Korea**, said he used to listen for such broadcasts at midnight each night to check whether his spymasters had a message for him. Mr. Kim was caught by the South in 1995 after a gun battle with South Korean agents and police officers. "When I arrived in the South, I had five different call signs assigned to me," said Mr. Kim, who now **works as a senior analyst at the Institute for National Security Strategy, a think tank run by South Korea's National Intelligence Service**. "Each night, I listened for my call signs.'

NIA seeks assistance of six countries in ISIS case probe (Canada).
Press Trust of India, 2016 07 21
New Delhi - **The National Investigation Agency (NIA) has sought assistance from six countries, including the US, UAE and Canada, in its ongoing investigation against various suspected ISIS operatives and their terror activities in the country**. The probe agency disclosed this in its charge sheet filed before District Judge Amar Nath against 16 suspected ISIS operatives, arrested from across the country allegedly on the charges of recruiting and financing people to join the terror group. The agency claimed that these accused were trying to "advance the cause of ISIS and establish Caliphate in India".

Suhardi to boost counterterrorism efforts
The Jakarta Post, 2016 07 21
Jakarta—The **inauguration of Comr. Gen. Suhardi Alius as the new National Counterterrorism Agency (BNPT) head** on Wednesday has not only **raised hopes for better coordination of the nation's counterterrorism efforts**, but is also being seen as a positive sign of unity within the National Police amid rumors of internal power struggle. Suhardi, a reputable officer who has been spearheading reform in the detective division, particularly in addressing the long-running tradition of officers in the division giving money to their superiors, is known to have a close relationship with National Police chief Gen. Tito Karnavian. The appointment of the former chief secretary of the National Resilience Institute (Lemhanas), a position formerly held by Tito, is seen as a move that will greatly assist Tito in leading the police institution.

Malaysia's counter-terrorism efforts draw India's attention
The Star Online, Zulkifli Abdul Rahman, 2016 07 21
Kuala Lumpur - **Indian Prime Minister Narendra Modi has shown serious interest in Malaysia's moderation agenda and its counter-terrorism efforts,** said Deputy Prime Minister Datuk Seri Dr Ahmad Zahid Hamidi. During his 45-minute meeting with Modi on Tuesday, he said Modi asked extensively about Malaysia's de-radicalisation module, anti-terrorism legislation and welfare of Muslims. Modi told him Malaysia had vast experience in combating terrorism and

extremism, and he wanted to know more about terrorism preventive laws such as the Prevention of Terrorism Act (Pota) 2015 and the **Special Measures Against Terrorism in Foreign Countries Act 2015.** "I explained to him that such laws are not punitive legislation, but are more preventive in nature. "He told me that despite being a smaller nation, Malaysia had contributed much to counter-terrorism efforts at the international level.

Menace terroriste sur le Maroc : La DGSN dément
Aujourd'hui Le Maroc, Journaliste maison, 2016 07 25
Casablanca, Maroc - **Pas de menaces terroristes à Casablanca et Marrakech. C'est ce qu'assure la Direction générale de la sûreté nationale suite à la propagation de rumeurs portant sur un éventuel danger terroriste** menaçant ces deux grands pôles urbains du Maroc. La Direction générale de la sûreté nationale a, dans ce sens publié, un communiqué de presse pour démentir de manière catégorique une information attribuée à des «sources sécuritaires», véhiculée sur les réseaux sociaux, selon laquelle les «autorités marocaines auraient élevé le niveau d'alerte en raison d'une menace terroriste imminente durant ce week-end dans les villes de Marrakech ou de Casablanca, en demandant aux citoyens d'éviter de se rendre dans les lieux où pourraient être commis ces actes terroristes». **Dans son communiqué, la DGSN informe l'opinion publique que cette information est «fausse et dépourvue de toute vérité»,** et «dément catégoriquement l'existence d'une quelconque déclaration émanant d'une source sécuritaire officielle faisant état d'un éventuel risque d'acte terroriste imminent».

Kenya security accused of murder and abduction: report
Agence France-Presse, Staff report, 2016 07 20
Nairobi - **Security agencies are killing and abducting men in north-east Kenya who they suspect of links to Islamist extremists, a rights group said Wednesday. Human Rights Watch (HRW)** documented 34 "enforced disappearances" and 11 suspected "extrajudicial killings" over two years in Garissa, Mandera and Wajir counties as part of **counterterrorism operations in Kenya's predominately ethnic Somali north-east**. "People in northeastern Kenya deserve protection from Al-Shabaab attacks, not further abuse from the authorities," said HRW executive director Ken Roth, adding the cases documented were "just the tip of the iceberg." The report details people taken from their homes by masked, armed men who did not identify themselves, or beaten in the streets, before being driven away in government vehicles. Some of the disappeared were last seen in police or military custody. None has been charged with any crime, nor are their families able to trace them.

Dubi expresses confidence in Rio 2016 security plans following alleged plot on Games
Reuters, Liam Morgan, 2016 07 24

(Unidentified Placeline) - **International Olympic Committee (IOC) executive director for the Olympic Games Christophe Dubi has moved to allay fears over security at Rio 2016** by claiming the plans in place are "robust" enough to deal with any threat posed at the event. Concerns over security have been heightened after a group of 10 people were arrested on Thursday (July 21) on suspicion of planning a terrorist plot at next month's Games. An 11th suspect then handed himself into police on Friday (July 22), while authorities have continued to warn of "lone wolf" attacks at the event in the wake of a number of incidents across the world in recent months. Dubi told AgenciaBrasil that he had full confidence in the security plans that are in place for Rio 2016, some of which have had to be revised following attacks in Paris, Orlando and Nice.

A tug-of-war over the right to eavesdrop on Argentines
Buenos Aires Herald, 2016 07 24
Buenos Aires— The brewing debate over which public agency and who precisely has the **legal authority to eavesdrop on the private conversations** was sparked early last month but it is only the latest episode in a tug of war between the **Federal Intelligence Agency** (AFI), the Attorney General's Office and the Supreme Court that dates back to the first months of 2015. According to the La Nación newspaper, AFI officers have said they want to regain control of the agency — currently in the hands of the Buenos Aires City Federal Criminal Appeals Court — to help solve kidnapping cases and aid the fight against drug-trafficking. "Several judges have complained about the way the wiretaps are conducted and it is true that only judges can order to invade someone's privacy, not prosecutors. Prosecutors are one of the parties in investigations," said Justice Minister Germán Garavano when the transfer was announced. Former President Cristina Fernández de Kirchner and Congress had approved a major reform of the **intelligence services** because she thought that **Antonio "Jaime" Stiuso** and other agents had been behind the complaint late AMIA prosecutor Alberto Nisman filed accusing her of seeking to whitewash the alleged Iranian involvement in the 1994 attack on the AMIA Jewish community centre.

Brazilian intelligence community seeks French cooperation
Brazilian daily Folha de Sao Paul (via BBC Monitoring Americas), 2016 07 22
Rio de Janeiro— **Luiz Alberto Santos Sallaberry, Abin (Brazilian Intelligence Agency) counterterrorism director, in Paris held contacts with his French counterparts to seek information on the terrorist attack that killed 84 people in Nice** on 14 July. The intention is to use the information as prevention in possible attacks during the Olympics. Sallaberry, who declined to comment on the arrests that took place on Thursday (21) in Brazil, claiming that this information should be disclosed exclusively by the Justice Ministry, said that Abin every day receives dozens of terrorist warnings, which are assessed and investigated thoroughly. The main level of threat is the one already established, that is, the lone wolves. This is a worldwide trend. It happens not just in our country. Today, these lone wolves represent the major challenges in the areas of intelligence and security," Sallaberry said. The Brazilian team, also including Ronaldo Zonato Esteves, Analysis Coordinator, and Federal Police Agent Camilo Graziani Caetano Paes de Almeida, deputy coordinator of the Counter-terrorism Integrated Center, met with French agents of the DGSI and DGSE (General Directorate of Domestic and Foreign Security), the DRM (General Military Intelligence Directorate) and the UCLAT (Counter-Terrorism Coordination Unit).

Olympic security: Brazil adjusts to new threats with help from global partners
Christian Science Monitor, Taylor Barnes, 2016 07 21
Rio de Janeiro - Even amid questions of whether Brazil will face international threats of terror as host of the first Summer Olympics in the southern hemisphere, nations from around the globe

have stepped up to offer support and training opportunities to prepare it for this extraordinary situation. **Brazilian security officials say the cooperation will not only benefit athletes and fans here for the Olympics this summer, but could leave Brazil's forces with a legacy of new professional skills that can be applied more broadly at home**, ranging from detection of fake documents to improved airport security. Successfully hosting the sporting event will give the country - better known for its deeply troubled domestic security record, and underpaid law enforcement suffering poor working conditions - a positive international bump. "Wherever there has been an important event, we've had Brazilian police collecting information," **Andrei Rodrigues, a federal agent and the head of Brazil's special government agency dedicated to mega- event security,** said in an interview with Brazil's Zero Hora. Rodrigues has been invited to create a database of best practices in partnership with Japan, which will host the 2020 summer games, and has said observers from Russia and Qatar, the sites of the two upcoming World Cups, will come to Brazil for the August Games.

Brazil probes Olympics threats after group backs Islamic State
Reuters, Staff report, 2016 07 20
Brasilia - **Brazil's intelligence agency said on Tuesday it was investigating all threats to next month's Rio Olympics after a presumed Brazilian Islamist group pledged allegiance to Islamic State (IS)** less than three weeks before the Games. The SITE Intelligence Group that monitors the internet reported that a group calling itself "Ansar al-Khilafah Brazil" said on the Telegram messaging app on Sunday that it followed IS leader Abu Bakr al-Baghdadi and had promoted IS propaganda in Arabic, English and Portuguese. Brazilian authorities stepped up security measures following the truck massacre in Nice last week, planning security cordons, further roadblocks and the frisking of visitors in Rio de Janeiro for the Olympics. Police and soldiers took part over the weekend in drills near sports facilities and along transport routes. "All threats related to the Rio 2016 Games are being meticulously investigated, particularly those related to terrorism," the **Brazilian intelligence agency ABIN said in a statement when asked to comment on the previously unknown group's claim of support for Islamic State**. "Many are dismissed and those that deserve attention are investigated exhaustively," ABIN said.

Argentina's spy agency regroups, wins back power under Macri
Reuters, 2016 07 20
Buenos Aires— **A little over a year since Argentina's spy agency was shackled in the wake of the mysterious death of a star prosecutor, President Mauricio Macri is backing its quest for broader powers that critics fear will revive unfettered domestic spying**.
Argentina's spies are pressing Macri to remove restrictions imposed by former president Cristina Fernandez after public investigator Alberto Nisman was found dead in his home in 2015, a source in the judiciary said. Fernandez accused a rogue agent of playing a role in Nisman's murder, which came days after he accused her of covering up Iran's alleged role in the 1994 bombing of a Jewish center in Buenos Aires. Fernandez overhauled the country's spy agency in response, branding it the Federal Intelligence Service, or AFI. But despite the new name, the agency is starting to look more like the *former Intelligence Secretariat, w*ith agents purged by Fernandez moving back into old posts since Macri took power in December, said an intelligence source who spoke on the condition of anonymity.

Attentat terroriste déjoué: Trudeau compte sur le comité parlementaire annoncé
Presse Canadienne, 2016 08 16
Bridgetown, N.É.-- Le premier ministre **Justin Trudeau estime que le comité parlementaire créé pour surveiller les activités des agences de renseignement aura à évaluer l'efficacité du travail de ces agences.** La semaine dernière, la Gendarmerie royale du Canada (GRC) a intercepté un jeune Canadien qui préparait une attaque terroriste. Aaron Driver a été abattu par la police, mercredi soir, dans une petite ville du sud-est de l'Ontario. Le jeune homme était connu des autorités canadiennes. Mais c'est le FBI qui a alerté la GRC alors que l'homme préparait un attentat imminent. Le premier ministre a d'abord félicité les policiers canadiens pour leur travail. Puis, il a rappelé la nécessité d'un équilibre entre la sécurité des Canadiens et le respect de leurs droits, avant d'ajouter qu'un comité parlementaire, annoncé par son gouvernement le printemps dernier, jugera du travail des agences **comme la GRC et le SCRS (Service canadien du renseignement de sécurité).** "La surveillance assurera que nos agences de renseignement et de sécurité sont bel et bien en train de faire tout ce qui est nécessaire pour garder les Canadiens en sécurité", a déclaré M. Trudeau.

RCMP's handling of case questioned
The Globe and Mail, Alex Migdal, Tu Thahn Ha & Kathryn Blaze Baum, 2016 08 13
Ottawa - As police work to clear the scene of a foiled terrorism attack in Strathroy, Ont., residents are **questioning law enforcement's handling of the case and asking why they were not informed that an Islamic State sympathizer was living in their community**. Forensic officers and police dogs continued to comb the property where 24-year-old Aaron Driver had been living under a peace bond until he died Wednesday, in a confrontation with the RCMP that culminated in a bomb blast and gunfire. Canadian officials had acted on a tip from the **FBI**, which had somehow become aware of a video showing a man pledging allegiance to Islamic State leader Abu Bakr al-Baghdadi. Within hours, the RCMP determined that man to be Mr. Driver. A tactical team descended on the home and intercepted the bombcarrying man as he was about to leave in a taxi, bound for a mall in downtown London, Ont....Earlier this spring, **CSIS director Michel Coulombe** said the agency was aware of about 180 Canadians who are engaged with terrorist organizations abroad, while another 60 were back in Canada. RCMP Commissioner Bob Paulson said at the time that Canadian security agencies are keeping tabs on the 60 people who have returned here, even if there is not enough evidence to charge them.

Liberals still plan to repeal parts of counterterrorism powers brought in by Harper government
Ottawa Citizen, Jason Fekete and Marie-Danielle Smith, 2016 08 12
Ottawa - The **Liberal government**, following a thwarted terrorism plot, says it **still plans to repeal parts of sweeping new counterterrorism powers adopted by the Conservatives and insists Canada must focus much more on counter-radicalization**. Prime Minister Justin Trudeau's government came under fire Thursday from the opposition Conservatives over its plans to revoke some of the national security measures contained in the contentious Bill C-51, as well as for the Liberals' overall approach to fighting terror. The **Liberals want to guarantee that all Canadian Security Intelligence Service warrants respect the Charter of Rights and Freedoms;** require that government review all appeals by Canadians on the no-fly list; and

narrow overly broad definitions such as defining "terrorist propaganda" more clearly, among other measures.

Security threat in Ontario shows Canada is not immune to terrorism, says public safety minister
Regina Leader-Post, Will Chabun, 2016 08 12
Ottawa - **Wednesday's deadly terrorist incident in southwest Ontario underlines the importance of the new counter-radicalization centre the federal government plans to set up later this year, federal Public Safety Minister Ralph Goodale said** Thursday." The radicalization of young men raised in Canada has been a constant theme of terrorist attacks and near-attacks within Canada, including Wednesday's incident in Strathroy. Coming legislation for oversight of security agencies will give "extraordinary access" to classified information that will let committee members assess whether these agencies -- **RCMP, CSIS and Communications Security Establishment,** for example -- are effectively protecting Canadians while they also "safeguard the rights and freedom and values of Canadians."

Edmonton Police Admit to Owning Stingray Surveillance Device
Motherboard Blog, Jordan Pearson, 2016 08 12
Edmonton - The **Edmonton Police Service owns a controversial surveillance device called a "Stingray" that indiscriminately surveils any cellphone within its multi-kilometre range,** a police spokesperson confirmed on Thursday to Motherboard. According an emailed statement from police spokesperson **Anna Batchelor**, Edmonton's cops have "used the device in the past during investigations," but would not release any additional details in order to "to protect [Edmonton Police Service] operations." Until now, the only law enforcement in the country known to use the devices was the **Royal Canadian Mounted Police**, the country's analogue to the US **Federal Bureau of Investigation**.

Canada security questioned after FBI tip thwarts attack
Reuters, 2016 08 12
Ottawa - Aaron Driver first came to the attention of Canadian officials in late 2014 after he voiced support for Islamic State on social media. In 2015, the Muslim convert was arrested for communicating with militants involved with attack plots in Texas and Australia. Early this year, he agreed to a court order known as a peace bond that restricted his online and cell phone use. Yet **it took a tip from the U.S. Federal Bureau of Investigation to alert Canadian intelligence officials to what police say was an imminent attack Driver was planning on a major Canadian city**. Driver, 24, died after he detonated an explosive device in the backseat of a taxi as police closed in and opened fire, the Royal Canadian Mounted Police (RCMP) said in Ottawa. The 2016 budget provided C$35-million over five years to combat radicalization, but **little in the way of new funding for the RCMP or the Canadian Security and Intelligence Service (CSIS). Ray Boisvert**, a former assistant director of intelligence at CSIS, said Driver was likely on an increasingly long list of so-called "B- listers" - people known to law enforcement, but considered lower risk than others and not followed regularly.

Honest talk about terrorism
Ottawa Citizen, Phil Gurski, 2016 08 12
Opinion: Wednesday, in the southwestern Ontario town of Strathroy, a young man known to police for having terrorist connections was killed by security forces after he appeared to explode a device, and had another in his possession. The victim, Aaron Driver, had been arrested in June 2015 after expressing support for Islamic State (ISIL) and praising the October 2014 terrorist attack on Parliament Hill. Mr. Driver had been bound by a peace bond and had had several restrictions placed on him, including no online access and no possession of firearms or

explosives...**With what we know so far, it is fairly clear that the peace bond issued on Driver was not sufficient to stop him from preparing a terrorist act**. It is only thanks to the RCMP and its partners that no one was hurt or killed by whatever action Driver was planning. If Canadians decide that the **RCMP and CSIS should not be given certain powers and an act of terrorism takes place that perhaps would have been stopped** had those powers been granted, we are going to face a lot of soulsearching in this country. I am not trying to be dramatic, just a realist. No, we don't have to sacrifice everything in the pursuit of safety - but we do have to make sure we don't hamstring our protectors. (Note: Phil Gurski is president and CEO of Borealis Threat and Risk Consulting. www. borealisthreatandrisk. com)

VPD admit to mass-surveillance tool
Canadian Press, Geordon Omand, 2016 08 11
Vancouver - The **Vancouver Police Department's revelation that it has indeed employed a controversial mass-surveillance device despite initially insisting it had no documentation of its use raises serious legal and public accountability concerns**, a civil liberties group says. The VPD said it received help from the RCMP in using a socalled **StingRay** device during a 2007 investigation in an attempt to track down the cellphone of a person they believed had been abducted. **Micheal Vonn of the B.C. Civil Liberties Association** said it was only after a freedom-of-information request, direct questioning and the prospect of an inquiry by the province's privacy commissioner that the Vancouver police willingly disclosed any information. "This certainly raises a number of further questions," Ms. Vonn said. "How, if they've actually used the RCMP's StingRay, could there be no documents: no memorandum of understanding with the RCMP, no policies and procedures, no communications, nothing. This seems deeply problematic."

Donald Trump's Terrorism Plan Mixes Cold War Concepts and Limits on Immigrants
New York Times, David E. Sanger, Maggie Haberman, 2016 08 16
New York - **Donald J. Trump on Monday invoked comparisons to the Cold War era in arguing that the United States must wage an unrelenting ideological fight if it is to defeat the Islamic State.** He said he would temporarily suspend immigration from "the most dangerous and volatile regions of the world" and judge allies solely on their participation in America's mission to root out Islamic terrorism. In a speech at Youngstown State University in Ohio, a critical swing state where polls show him trailing Hillary Clinton, Mr. **Trump combined old vows to seize Middle Eastern oil fields with the announcement of a series of new, if still vague, proposals to change America's battlefield tactics.**

Hackers Say They Hacked NSA-Linked Group, Want 1 Million Bitcoins to Share More
Motherboard (Vice), Lorenzo Franceschi-Bicchierai, 2016 08 15
New York - A **mysterious hacker or hackers going by the name "The Shadow Brokers" claims to have hacked a group linked to the NSA and dumped a bunch of its hacking tools.** In a bizarre twist, the hackers are also asking for 1 million bitcoin (around $568 million) in an auction to release more files. " The hackers referred to their victims as the **Equation Group**, a codename for a government hacking group widely believed to be the NSA. The security firm Kaspersky Lab unmasked Equation Group in 2015, billing it as the most advanced hacking group Kaspersky researchers had ever seen.

Military Officials Distorted Intelligence on ISIS, Report Says
New York Times, Helene Cooper, 2016 08 12
Washington - **Officials from the United States Central Command altered intelligence reports to portray a more optimistic picture of the war against the Islamic State in Iraq and Syria than events on the ground warranted**, a congressional panel said in a report issued Thursday. The interim report, from a task force established by the Republican chairmen of the **House Armed Services Committee, Intelligence Committee and Defense Appropriations Subcommittee**, found "widespread dissatisfaction" among Central Command intelligence analysts, who said superiors were doctoring their assessments of American efforts to defeat the Islamic State. **Central Command, known as Centcom**, is the military headquarters in Tampa, Fla., that oversees American military operations across the Middle East and Central Asia. "Intelligence products approved by senior Centcom leaders typically provided a more positive depiction of U.S. antiterrorism efforts than was warranted by facts on the ground and were consistently more positive than analysis produced by other elements of the intelligence community," a news release about the report said.

Pentagon updates Reagan-era intelligence gathering guidelines
Washington Times, Andrew Blake, 2016 08 12
Washington - The **Pentagon on Wednesday published revised procedures governing the collection, retention and dissemination of intelligence concerning American citizens**. Outlined within the pages of DoD Manual 5240.01, **"Procedures Governing the Conduct of DoD Intelligence Activities,"** the changes pertain to how the U.S. military and assorted government agencies sweep up and store information concerning U.S. persons, including individuals whose details are incidentally collected during the course of investigating foreign targets. The manual updates provisions first laid out in an Executive Order signed by President Reagan in 1982, in turn incorporating new language and instructions for intelligence gathering to apply in a digitally-connected world that would have been impossible to imagine 30 years earlier.

How the U.S. Spies on Medical Nonprofits and Health Defenses Worldwide
The Intercept, Jenna McLaughlin, 2016 08 11
Washington - As part of an ongoing effort to "exploit medical intelligence," the **National Security Agency teamed up with the military- focused Defense Intelligence Agency to extract "medical SIGINT"** from the intercepted communications of nonprofit groups starting in the early 2000s, a top-secret document shows. Medical intelligence can include information about disease outbreaks; the ability of a foreign regime to respond to chemical, biological, and nuclear attacks; the capabilities of overseas drugs companies; advances in medical technology; medical research, and the medical response capabilities of various governments, according to the document and others like it, provided by **NSA whistleblower Edward Snowden**.

Iraqi Insurgents Stymied the NSA and Other Highlights from 263 Internal Agency Reports (Canada)
The Intercept, Margot Williams, Micah Lee, 2016 08 11
Washington - **Early in the fight against al Qaeda in Afghanistan and insurgents in Iraq, the National Security Agency was blindsided by enemy fighters' frequent use of rudimentary wireless communications devices known as "high-powered cordless phones**," according to documents among 263 published today by The Intercept. The documents, drawn from the agency's internal news site, **SIDtoday**, and provided by **NSA whistleblower Edward Snowden**, date mostly to the latter half of 2003, and show the NSA was at the time rapidly expanding its internet monitoring. But even as its digital surveillance grew more sophisticated,

the agency saw its targets increasingly adopting crude forms of communications like shortwave radio, SMS cellphone messaging and, most vexingly, high-powered cordless phones. The "poor man's cell phones," as the cordless devices were called, spread through Afghan borderlands and along Iraqi roadsides. Three months after announcing **InfoWorkSpace**, SIDtoday reported that signals intelligence directors from each Five Eyes agency held their first virtual meeting using the system, but "GCHQ was unable to attend due to a computer failure." In addition to sharing information within the U.S. government, the NSA also provides extensive signals intelligence to its allies. The NSA's closest foreign collaborators are known as "Second Party" partners or the "**Five Eyes**:" spy agencies from the world's English-speaking nations, including the **United Kingdom, Canada, Australia, and New Zealand**.

Classified Briefings and Candidates
New York Times, Michael Hayden, 2016 08 10
Op-ed - The **no-longer-presumptive nominees of the Democratic and Republican parties will soon start receiving periodic classified intelligence briefings**, with the first one coming perhaps this week. Rarely has this routine ritual received so much public attention -- and with good reason. To anyone who has actually had to protect the nation's secrets, Hillary Clinton's email setup as secretary of state was inconceivable and her later explanations of it were incomprehensible. The **judgment by the F.B.I. director, James B. Comey, that her handling of the emails was "extremely careless" was, to the intelligence tribe, a huge understatement**. **Donald J. Trump** has never been exposed to state secrets, so the issue is not that he may have been careless in the past. It's just that he seems to say anything that enters his head at the moment. That's a danger for someone who will now be living partly in a classified world. But with Mr. Trump, the issue goes even deeper. Earlier this week I joined 49 other former national security officials who had served in Republican administrations in declaring that he lacked the "character, values and experience" to be president.

FBI probe of Clinton's emails prompted by espionage fears, secret letters say
Vice News, Jason Leopold, 2016 08 10
New York - **Two secret letters the FBI sent to the State Department have revealed for the first time that the bureau's investigation into Hillary Clinton's private email server, and the classified emails sent through it, stemmed from a so-called "Section 811" referral from the Intelligence Community's Inspector General (ICIG).** The ICIG determined that classified, national security information in Clinton's emails may have been "compromised" and shared with "a foreign power or an agent of a foreign power." Section 811 of the Intelligence Authorization Act of 1995 "is the statutory authority that governs the coordination of counterespionage investigations between Executive Branch departments or agencies and the FBI." A Section 811 referral is a report to the FBI about any unauthorized information that may have been disclosed to a foreign power.

Is It OK for Spies to Elect a President?
The Daily Beast, Shane Harris, 2016 08 10
Washington - **It's a tenet of the intelligence business that spies are supposed to avoid the political fray,** declaring allegiance to no party or candidate, and speaking the unvarnished truth to whomever is in power. **Donald Trump has turned that tradition on its head.** Compelled by a candidate whom they say poses a unique threat to U.S. foreign policy and security, dozens of current and former intelligence professionals have in the past few months lept into the political arena in an unprecedented, coordinated effort to keep a presidential nominee from being elected. **This is new territory for American spies, who, when they do criticize politicians, tend to do it retrospectively in score-settling memoirs or op-eds**, and not in the heat of a presidential campaign. But just as the 2016 election has departed from tradition in so many

ways, intel professionals are now feeling unleashed to try to block Trump and help his opponent get elected.

Man used as test subject in CIA torture program to ask for Guantánamo release
The Guardian (London), Spencer Ackerman, 2016 08 09
New York - A **man the CIA used as a guinea pig for its post-9/11 torture program will plead his case for freedom from Guantanámo Bay later this month**, the Pentagon announced on Tuesday, in perhaps the hardest challenge to date for Barack Obama's intentions to empty the infamous detention center. **Zayn al-Ibidin Muhammed Husayn, better known as Abu Zubaydah**, is one of three men the CIA acknowledged that it waterboarded, a process simulating drowning, at an unacknowledged prison in Thailand. At some point during his 14-year captivity by the US, he lost the use of his left eye. The 23 August hearing, Guantánamo's equivalent of a parole board, will present the first time Zubaydah will have an opportunity to speak about his captivity - an opportunity that contradicts the CIA's preferences. The CIA, per a landmark 2014 Senate investigation, has contended that he ought to be held incommunicado until he dies.

British MPs given Mossad self-defence training after Jo Cox murder
Indo-Asian News Service, 2016 08 16
London - **British MPs are being taught unarmed street-fighting techniques used by the Israeli intelligence agency Mossad** in a bid to protect themselves from stalkers, terrorists, and political extremists in the light of **Jo Cox's murder**, it was reported on Monday. According to the Telegraph, the self-defence training known as "Krav Maga" -- Hebrew for "contact combat" -- combines jiu jitsu, judo, boxing, and street fighting. It teaches MPs how to defend themselves against attacks, including swinging punches to the head, a bottle, glass, or ashtray to the head, and a "slash with a knife, most commonly a 3-4 inch lock blade or kitchen utility knife". They will also learn how to disarm a lone-wolf attacker.

No Pokémon for British Spies, as Pokéstops Vanish From MI5 and MI6 Buildings
Motherboard (Vice), Victoria Turk, 2016 08 11
London - **British spies hoping to apply their skills to pokémon training may be out of luck**: Players report that pokéstops and pokémon gyms have vanished from London's **MI5 and MI6 headquarters**. A redditor by the name of Mesoplodon remarked this week that a gym located at the MI6 Building in Vauxhall (the one blown up in the James Bond film Skyfall) had been removed. Previously, several players had reported on Twitter and Reddit that there was a gym located at the MI6 Building, though some said it was not reachable from outside.

Nuclear espionage charge for China firm with one-third stake in UK's Hinkley Point
The Guardian (London), Maria L. La Ganga, 2016 08 11
San Francisco - The **Chinese company with a major stake in the proposed Hinkley Point C nuclear power station has been charged by the US government over nuclear espionage**, according to the US justice department. In a 17-page indictment, the US government said nuclear engineer **Allen Ho**, employed by the **China General Nuclear Power Company**, and

the company itself had unlawfully conspired to develop nuclear material in China without US approval and "with the **intent to secure an advantage to the People's Republic of China".** CGNPC has a 33% stake in the £18bn Hinkley Point project in Somerset, which Theresa May has delayed partly because of concerns over China's involvement.

Australia / Australie

Cyber spies target high schools
Canberra Times, Adam Gartrell, 2016 08 14
Canberra - **Australia's top cyber security agency is targeting high school students as young as 14** as part of a recruitment plan to build an army of "white hat" hackers to shield the country from internet attacks like those that crippled the census. The **Australian Signals Directorate,** the shadowy spy agency that works out of the Department of Defence, **has embarked on a major new recruiting drive** - and teenaged bedroom hackers and computer whizkids are in its sights. The directorate - which is tasked with intercepting and analysing foreign communications under the motto "Reveal their secrets, protect our own" - has been distributing a recruitment brochure in public and private secondary schools and has even begun opening its doors for work experience placements for students from years 9 to 12.

A-G claims terror fears for diary secrecy
The Australian, Sean Parnell, 2016 08 12
Canberra - **Lawyers for the federal Attorney-General George Brandis have invoked a counter-terrorism argument in their bid to restrict access to official diaries under Freedom of Information laws,** potentially allowing elected officials greater secrecy over their affairs. Government lawyers will ask the Federal Court today to overturn an Administrative Appeals Tribunal ruling that Senator Brandis's office was wrong to refuse to process a Labor FOI request for diary entries on the basis that it would be too time- and resource-intensive. While the AAT found in favour of Labor, requiring the Attorney-General's office to process the FOI request for eight months of diary entries during 2013-2014, Senator Brandis's lawyers have advanced their initial argument that a "practical refusal reason" exists.

ASIO monitoring of right-wing extremists uncovered alleged plan to attack radical left
Sydney Morning Herald, Nick McKenzie & Michael Bachelard, 2016 08 12
Canberra - **ASIO's monitoring of the aggressive right-wing extremist movement uncovered alleged plans to attack an "extreme left" target, and led to the arrest last week of Braybrook man Phillip Galea.** Fairfax Media understands that Mr Galea's arrest was prompted by concerns that he and possibly two other members of right-wing groups were canvassing an attack aimed at their perceived political enemies in radical left-wing groups. His arrest marks a new and potentially dangerous development in the recent growth of extreme right-wing opinion in Australia. "Politically- motivated extremism is increasing, and it is a concern to the AFP and its law enforcement and national security partners," **Federal Police Assistant Commissioner Jennifer Hurst** told Fairfax Media. The Australian Security Intelligence Organisation warned in October that "violent rhetoric continued from extreme right-wing and left-wing individuals in Australia", and that the "terrorism environment is likely to remain fluid and will be affected by nationalist and ethnic tensions, acts of violence overseas and an increased propensity and ability for violence-prone individuals to move to action".

Australia blocks electricity network sale to Chinese bidders on security concerns
Reuters, Jonathan Barrett and Byron Kaye, 2016 08 11
Sydney - **Australia blocked the A$10 billion ($7.7 billion) sale of its biggest energy grid to State Grid Corp of China and Hong Kong's Cheung Kong Infrastructure Holdings** citing security concerns, a blow to the country's privatisation plan. Nine months after clearing the sale of TransGrid to an investor group 40 percent controlled by Kuwaiti and Abu Dhabi interests, **Australian Treasurer Scott Morrison** said on Thursday he was rejecting the sale of Ausgrid to the rival Asian bidders because of risks to the national interest. "**During the review process national security issues were identified in critical power and communications services that Ausgrid provides to businesses and governments,**" Morrison said in a statement. State Grid, China's dominant power distributor, did not immediately respond to requests seeking comment. Cheung Kong Infrastructure (CKI), controlled by Hong Kong billionaire tycoon Li Ka-Shing, said the decision was not related to CKI. Australia's decision to reject the bids deprives the New South Wales state government of what would have been a record haul for a single privatisation sale, and also underscores the country's changed political climate since a handful of protectionist senators took power in general elections last month.

Australian Bureau of Statistics says website attacked by overseas hackers
ABC (Australia), Staff reporter, 2016 08 10
Canberra - The **Australian Bureau of Statistics says it believes a series of hacking attacks which led to the census website being shut down last night were part of a deliberate attempt to sabotage the national survey**. The Australian Bureau of Statistics (ABS) says it believes a series of hacking attacks which led to the census website being shut down last night were part of a deliberate attempt to sabotage the national survey. Thousands of Australians were prevented from taking part in the census on Tuesday night as the ABS website crashed. This morning the ABS's **David Kalisch** said the census website had been attacked by hackers four times and was shut down as a precaution after the fourth attack. "It was an attack, and we believe from overseas," When asked if the hacks were a deliberate attempt to sabotage the census, Mr Kalisch replied: "We believe so". "The **Australian Signals Directorate** are investigating, but they did note that it was very difficult to source the attack."

Lone terrorists proving difficult to track
Australian Associated Press, Lauren Farrow, 2016 08 10
Jakarta - If **Australia is going to be able to successfully track the "virtually indistinct" financial transactions of lone wolf terrorists, the region must work together**, Justice Minister Michael Keenan says. More than 100 people are being monitored by Australia's financial intelligence agency - **AUSTRAC** - as authorities continue to grapple with a problem that will be around for decades. In an address to a summit in Bali on counter- terrorism, Mr Keenan is expected to tell the meet that while operationally there have been some successes in combating Islamic State, there has also been an increase in frequency and severity of terrorist attacks.

New Zealand / Nouvelle-Zélande

GCSB wins power to spy on Kiwis
Dominion Post, Vernon Small, 2016 08 16
Wellington--The **Government is set to break a long-standing ban on the Government Communications Security Bureau (GCSB) spying on New Zealanders** with a sweeping

revamp that brings our spy agencies under a single law. Prime Minister **John Key** yesterday said Cabinet had accepted the bulk of changes, **including extra powers for the GCSB**, as recommended by the Cullen-Reddy review in March. He said the changes were the most significant reform to the agencies' legislation in the country's history. New Zealanders had a high degree of confidence the Government was "not out there snooping on their private thoughts, their private emails or aspects of their life that have no relevance to other New Zealanders", he added. **They expected the GCSB and the Security Intelligence Services (SIS)** to look for genuine or real threats that one or two of a very small group of people potentially posed.

The Raid
The Intercept, Ryan Gallagher, Nicky Hagger, 2016 08 15
Washington - Tony Fullman is a middle-aged former tax man and a pro-democracy activist. But four years ago, a botched operation launched by New Zealand spies meant he suddenly found himself deemed a potential terrorist -- his passport was revoked, his home was raided, and he **was placed on a top-secret National Security Agency surveillance list**. The extraordinary covert operation, revealed Sunday by Television New Zealand in collaboration with The Intercept, was launched in 2012 after New Zealand authorities believed they had identified a group planning to violently overthrow Fiji's military regime. As part of the spy mission, the NSA used its powerful global surveillance apparatus to intercept the emails and Facebook chats of people associated with a Fijian "thumbs up for democracy" campaign. The agency then passed the messages to its New Zealand counterpart, **Government Communications Security Bureau**, or GCSB. One of the main targets was Fullman, a New Zealand citizen, whose communications were monitored by the NSA after New Zealand authorities, citing secret evidence, accused him of planning an "an act of terrorism" overseas.

New GCSB bill allows spying on Kiwis
Stuff News New Zealand, 2016 08 14
Wellington - A **new bill which gives New Zealand's security and intelligence agencies more power to spy on Kiwis is likely to be introduced this week. Prime Minister John Key** said the expansion of powers of the **Government Communications Security Bureau (**GCSB) was for good reason. "If you wanted to allow GCSB to spy against a New Zealander, at the moment they can't do that," Key said on Breakfast. "Under the new law they would be able to, under very narrow conditions, but they'd need what's called a triple- lock warrant, so they need a warrant not only from the Commissioner and from the Minister but with review from the Inspector-General." A review undertaken by Sir Michael Cullen and Dame Patsy Reddy called for reform in a report released in March. The report into the country's intelligence and security laws recommended a single piece of legislation be established to cover both the GCSB and the **Security Intelligence Service (SIS)** - and its authors would have recommended a merger of the two agencies if they had been allowed.

Espionage arrest of nuclear engineer fuels US suspicions of Chinese tactics
The Guardian, Rob Davies, 2016 08 11
London— A **string of cases have fuelled suspicions in the US and beyond that some Chinese firms will resort to any measures to obtain valuable intellectual property** that could give them a technological leg-up. In 2010, **former Boeing engineer Dongfan "Greg" Chung was jailed for 15 years and nine months for economic espionage** after he was convicted of passing trade secrets to Beijing to assist the Chinese aviation industry. In letters to a Chinese state official, Chung said that he wanted to "make some contributions to the modernisations [sic] of the Motherland". **FBI** agents began looking into Chung while investigating a separate case against Chinese-born naturalised US citizen Chi Mak. Mak was found guilty in 2007 of conspiring to export sensitive defence technology to China while working for defence contractor Paragon Power… Repeated allegations of spying by state-sponsored hackers have also added to tensions between the west and China. Repeated allegations of spying by state-sponsored hackers have also added to tensions between the west and China. Google's travails in China, where the search engine is banned, are well documented. In 2010, the US internet firm said a **cyber-attack originating in China** had targeted its intellectual property. Google said the attackers' main aim was to infiltrate the email accounts of Chinese dissidents and human rights activists, but it also flagged up efforts to steal information from companies in industries including chemicals, technology and finance. In 2014, a Chinese hacker group called Putter Panda, thought to be based in the offices of the **People's Liberation Army**, was said by security experts to have hacked satellite technology companies in the US and UK.

China steals FBI surveillance secrets through veteran who worked inside as spy
Asia Times, Bill Gertz, 2016 08 10
Unidentified Placeline— A **Chinese penetration agent operated secretly within the U.S. Federal Bureau of Investigation and passed valuable intelligence to Beijing** for at least 10 years without being detected. The case of Kun Shan Chun was disclosed by the Justice Department Aug. 1 as part of a plea agreement involving Chun admitting he acted illegally as a Chinese government agent. Chun, a Chinese-born naturalized U.S. citizen, was arrested in March although authorities kept the case secret until the plea bargain was announced last week. No details of the information supplied by Chun to China were provided by court papers made public in the case. However, as an electronic technician, Chun likely supplied **Chinese intelligence** with valuable **counter-surveillance information** that would assist the large numbers of Chinese agents operating in the United States in avoiding detection. Most of China's human and technical spying activities in the United States are carried out by the two main services, the civilian Ministry of State Security and militarily what has been called until recently the Second **Department of the General Staff Department**, known as 2PLA. China's espionage against the United States has produced several legendary coups. They included the theft during the 1990s of secrets related to all deployed nuclear warheads through recruiting American scientists at nuclear weapons labs.

Putin Dismisses a Longtime Ally as Chief of Staff in Favor of a 'Servant'
New York Times, Neil MacFarquar, 2016 08 13

Moscow - **President Vladimir V. Putin unexpectedly fired his longtime chief of staff on Friday**, the latest in a series of high-profile Kremlin changes that have ushered out an older layer of Putin peers and replaced them with a younger generation of unquestioning loyalists. "Putin is gravitating toward those who serve him, and distancing himself from those who, by virtue of their resources, attempt to rule alongside Putin," wrote Tatyana Stanovaya, a political scientist, in a recent commentary for the Carnegie Moscow Center. "He does not need advice, he needs people who will carry out his orders with as little fuss as possible." As if on cue, after the announcement, pictures of **Anton E. Vaino, 44**, the relatively unknown aide promoted to chief of staff to replace **Sergei B. Ivanov**, suddenly popped up online. They showed Mr. Vaino shadowing Mr. Putin and even carrying an umbrella to protect the president from the rain. The changes come amid a spike in foreign and domestic tensions that might arrive as a welcome -- or manufactured, as some have suggested -- diversion for a nation depressed by a long stretch of economic hardships brought on by the collapse of oil prices and Western economic sanctions for Mr. Putin's adventures in Crimea and eastern Ukraine.

Crimea subversion group included professional secret service officers
ITAR-TASS World Service, Staff report, 2016 08 11
Moscow - **Yevgeny Panov, the supposed leader of the Ukrainian subversive group seized in Crimea, has made a confession stating that secret service career officers had been members of the group in charge of preparing sabotage attacks**. The video recording with his confessions was aired by Rossiya'24 news channel. "The group included the professional intelligence officers Alexander Kirillov (codename Kirill), someone Dmitry by name, and Oleg Litvinenko (codename Dog Fox). Also, the group includes Sambul Alexei (codename Sigh), and a guy whose first name or surname I don't know but who has the codename Deshikh," Panov said. The **Russian Federal Security Service** said on Wednesday, August 10, that it had detained a group of Ukrainian saboteurs near the city of Armyansk (Crimea) and that it had prevented terrorist attacks in Crimea prepared by the Ukrainian Defense Ministry's main intelligence directorate. The **FSB** said their planned targets were critically important infrastructure and life support facilities. (Full report).

Russia's FSB thwarts activity of online cells raising funds for IS
ITAR-TASS World Service, Staff report, 2016 08 11
Moscow - The **Russian Federal Security Service (FSB) has prevented the activity of the international Internet community cells promoting the ideas and raising funds for the Islamic State terrorist group (outlawed in Russia).** "The **Federal Security Service** in cooperation with the Russian Interior Ministry has identified and thwarted the activity of cells of the international online community "Rohnamo ba sui davlati Islomi" (translated as A Guide to Islamic State from Tajik) in the Sverdlovsk, Tyumen and Chelyabinsk regions set up to promote terrorist ideology and recruiting gunmen to the Islamic State of Iraq and the Levant," the FSB Public Relations Center has told TASS.

Russia Allows Rare Protest of New Antiterrorism Laws
New York Times, Lincoln Pigman, 2016 08 10
Moscow - **In a mass public protest with a rare permit, hundreds of critics of the Russian government gathered in Moscow on Tuesday evening to demonstrate against a new set of so-called antiterrorism laws.** Signed into law by President **Vladimir V. Putin** in July, the legislation introduced what critics have called intrusive measures, including requirements to store all communications data for six months, and phone and texting records for one to three years. **Protesters decried the legislation as an assault on privacy and internet freedom**.

Europe

Un service de renseignement mieux armé mais mieux surveillé
Agence Télégraphique Suisse, 2016 08 15
Berne— Le **Service de renseignement de la Confédération (SRC)** disposera d'un nouvel arsenal de mesures pour lutter contre le terrorisme. Mais il sera davantage surveillé. Aperçu du projet soumis en votation et qui ne devrait pas entrer en vigueur avant la mi-2017. **Avec la nouvelle loi sur le renseignement, les agents du SRC pourront surveiller des communications (courrier, téléphone, courriel),** observer des faits dans des lieux privés, si nécessaire en installant des micros, ou perquisitionner secrètement des systèmes informatiques et y installer des "chevaux de Troie". Le Conseil fédéral estime à une dizaine par an le nombre de cas pouvant faire l'objet de ces "recherches spéciales", un cas complexe pouvant nécessiter plusieurs mesures..

One month after coup bid, Turkey transformed
Agence France Presse, Stuart Williams, 2016 08 14
Analysis : **With a thorough shake-up of its armed forces, a reassessment of foreign policy and the biggest purge in its modern history, Turkey has undergone a transformation in the month since the July 15 coup bid**. On the surface, street life has returned to its normal bustle in Istanbul and Ankara, where terrified residents witnessed bombings by fighter jets and tanks driving amok in the streets on the night of the attempted putsch. But the huge red Turkish flags hanging from public buildings, billboards hailing the coup's defeat and pictures in metro stations of the "martyrs" killed are all reminders that life is not the same as it was before the events which began at around 1900 GMT on July 15. **So far untouched by the shake-up is the powerful National Intelligence Agency (MIT)**, which has faced vehement criticism for failing to warn Erdogan about the coup. But the government has vowed it will also undergo restructuring.

Germany Proposes Measures to Combat Terrorism
New York Times, Alison Smale, 2016 08 12
Berlin - The **German government proposed a broad range of measures on Thursday to bolster security and combat terrorism**, its strongest official response so far to two recent attacks by terrorists pledging loyalty to the Islamic State and a deadly shooting rampage in Munich. Many of the measures, which include closer monitoring of refugees and enhanced surveillance, seem likely to win legislative approval but prompted concerns in a country that is deeply protective of privacy and civil liberties. The **proposals announced by the interior minister, Thomas de Maizière, call for hiring more federal police officers; making it a crime to express sympathy for terrorism; greater sharing of intelligence data across Europe**; closer watching of the "dark web," the part of the internet that is invisible to ordinary users; stripping dual citizens of their German citizenship if they fight for extremist groups; and making it easier to deport foreigners deemed to be dangerous.

Lutte antiterroriste : « le défi d'une génération » , selon Valls
Le Figaro, Philippe Goulliaud, 2016 08 12
Paris - En plein coeur de l'été, **l'exécutif tient à montrer que la sécurité reste une priorité absolue et qu'il reste à la barre,** après les polémiques qui ont suivi les attentats de Nice et de Saint-Étienne-du- Rouvray. **François Hollande a présidé jeudi matin un nouveau conseil de défense à l'Élysée, en présence de Manuel Valls, des ministres de l'Intérieur Bernard**

Cazeneuve, de la Défense Jean-Yves Le Drian, de la Justice Jean-Jacques Urvoas et des Affaires étrangères Jean-Marc Ayrault, ainsi que de hauts responsables civils et militaires. L'objectif était de faire le point sur les opérations antiterroristes en cours, tant qu'en France que sur les terrains extérieurs.

New far-right group comes under gaze of state spies
The Local (Germany), 2016 08 12
Berlin—The far-right Identitarian Movement is growing in popularity in Germany to the extent that the main federal intelligence agency has started watching them. Up until this point, the movement, which originated in France and has been present in Germany since 2012, had been observed by spy agencies at the state level. "We are seeing in the Identitarian Movement indications of efforts to undercut the democratic order," said **Hans-Georg Maaßen, head of the Federal Office for the Protection of the Constitution - Germany's domestic security agency**. He added that the group seems to have become more radicalized in its anti-asylum efforts in the time since Germany started accepting hundreds of thousands of refugees last summer.

Estonian PM, US intelligence coordinator speak about security
Baltic News Service, 2016 08 11
Tallinn--**Estonian Prime Minister Taavi Roivas and Director of U.S. National Intelligence James Clapper in their meeting on Thursday spoke about the security situation** in the region and cooperation between the two countries. **"Good intelligence analysis and substantive exchange of information help to make the right decisions. I'm glad that the intelligence institutions of Estonia and the United States are working closely together," Roivas said** at the meeting held in Tallinn. A retired lieutenant general in the United States Air Force, Clapper served as director of the **Defense Intelligence Agency (DIA**) from 1992 until 1995. He was the first director of defense intelligence within the Office of **the Director of National Intelligence** and simultaneously the under secretary of defense for intelligence. Clapper has held several key positions within the U.S. intelligence community. He served as the director of the National Geospatial-Intelligence Agency (NGA) from September 2001 until June 2006.

Terrorisme: nouveau conseil de défense à l'Elysée
Agence France-Presse, Journaliste maison, 2016 08 11
Paris - Le **président François Hollande a réuni jeudi à l'Elysée un nouveau conseil restreint de défense en présence du chef de gouvernement et de plusieurs ministres pour faire le point sur les opérations anti- terroristes en cours**, à l'intérieur et à l'extérieur de la France. Dans la foulée de la réunion, le chef de l'Etat doit se rendre en Corrèze pour visiter l'Ecole de gendarmerie de Tulle et Manuel Valls à Montluçon, dans l'Allier, également pour visiter une Ecole de gendarmerie accueillant des réservistes en formation. Le Conseil a commencé juste après 9H00 par un point d'information sur les graves incendies dans les Bouches-du-Rhône effectué par le ministre de l'Intérieur **Bernard Cazeneuve**. A côté des deux têtes de l'exécutif, étaient également présents le ministre de la Défense Jean-Yves Le Drian, de la Justice Jean-Jacques Urvoas et des Affaires étrangères Jean-Marc Ayrault. Avec eux se trouvaient le chef d'état-major des armées, le général Pierre de Villiers, **le directeur de la DGSE Bernard Bajolet et Louis Gauthier, secrétaire général de la Défense et de la Sécurité nationale**.

L'Allemagne veut durcir sa législation antiterroriste après les attentats
Agence France-Presse, Journaliste maison, 2016 08 10

Berlin - **Le ministre allemand de l'Intérieur prépare une batterie de mesures pour renforcer ses outils de lutte contre le terrorisme après les deux attaques du mois de juillet** revendiquées par le groupe Etat islamique, a indiqué la presse allemande mercredi. Le ministre Thomas de Maizière, qui a prévu une conférence de presse jeudi, veut en particulier introduire une procédure accélérée d'expulsion de réfugiés et demandeurs d'asile "représentant un danger pour la sécurité publique", selon le quotidien populaire Bild citant des sources sécuritaires. Cette mesure fait suite aux deux attentats commis dans le sud du pays fin juillet dans le pays qui a accueilli plus d'un million de migrants en 2015.

Iran detain a dual national linked to British intelligence

Reuters, 2016 08 16

Tehran - **Iran said on Tuesday it had arrested a dual national last week in Tehran linked to Britain's intelligence service**, the latest in a string of arrests of dual nationals over the past year. "The accused was working in an economic sector related to Iran," Tehran prosecutor general, **Abbas Jafari Dolatabadi**, was quoted as saying by the state news agency IRNA. Dolatabadi **did not identify the accused person nor the second nationality**. The prosecutor said the arrest was part of a crackdown against what officials have portrayed as "Western infiltration". Iran's potential opening up to the West after last year's nuclear deal has alarmed Iranian hardliners.

Israel arrests Palestinians 'recruited by Hezbollah' via Facebook

Agence France Presse, 2016 08 16

Jerusalem— **Israel's Shin Bet security service announced Tuesday it has arrested a network of Palestinians allegedly recruited via Facebook** by Lebanon's militant Hezbollah movement to attack Israelis. "Along with the orders to carry out shooting attacks and suicide bombings against Israeli targets, the agents were ordered to help recruit more (Palestinians) for the organisation's activities," a **Shin Bet** statement read. In one case, a Hezbollah agent had used Facebook to recruit a resident of Qalqilya who in turn recruited four others from his city in the north of the occupied West Bank, it said. The five allegedly began gathering intelligence on Israeli army activities in the area and to conduct weapons training, before being arrested in June. Shin Bet also said a Gazan recruited by Hezbollah through Facebook recruited three Palestinians from the West Bank who had started to train and plan attacks.

'The James Bond of Israel': Daniel Silva's spy series takes us deep into Israeli intelligence

National Post Online, Robert Fulford, 2016 08 15

Review : A building blows up in the Marais district of Paris. Vengeful Palestinians are knifing Israeli civilians at random. ISIL, the Islamic State, is charging across the landscape. This is the torn-from-the-headlines background where **Daniel Silva locates his most recent thriller featuring an Israeli spy, Gabriel Allon**. Once a year since 2000, Silva has written a new novel about the exploits of Allon as a soldier on "the secret battlefields of Europe and the Middle East." The 16th in the series, The Black Widow (HarperCollins), will not surprise his followers. Like the earlier books it takes us deep into Israeli intelligence as Silva imagines it and into the life of the remarkable Allon, a spy so good that all other spies measure their careers against his. e's the James Bond of Israel, but more talented and deeper. Like Bond, he chases villains into

every remote corner where they hide. Like Bond, he often gets into life threatening predicaments at the hands of his enemies. In fact, a recent attempt on his life was so credible that Israel decided to announce his death just to confuse the would-be killers and give him time off-the-grid to recover from his injuries. Unlike most fictional spies, Allon can double as an administrator. He's slated to become head of what Israel calls the **Mossad**, which Silva's characters never call anything except the Office.

A spy tale so real that Israel censored it
The Washington Post, Richard Lipez, 2016 08 15

Book Review: **"The English Teacher" is the story of a Mossad operative written by a former Israeli intelligence officer**. It's not an autobiography but rather a thriller, based loosely on facts, or as its author, **Yiftach Reicher Atir**, writes in his introductory note, "a true story, of real life operatives that are wholly made up, and actual missions that never happened." **Atir provides an astonishing look at Middle Eastern spycraft.** He alerts readers that "numerous changes and omissions were imposed" by his government's censors. Because a lot of what got into the novel seems plenty revealing and is often hair-raising, one is left wondering what shockers were left out. Also, how much of what Atir (who participated in the 1976 hostage-rescue operation in Entebbe, Uganda) put into the book is actually disinformation meant to throw other Middle Eastern intelligence agencies off track about how the Mossad spy agency actually operates?

Iranian Supreme Leader Meets Intelligence Minister, Officers
Fars News Agency, 2016 08 10
Tehran - **Supreme Leader of the Islamic Revolution Ayatollah Seyed Ali Khamenei held a meeting with the intelligence ministry officials and officers, advising them to keep a close eye on the country's redlines, specially with regard to the US**. "Drawing a line of separation with the head of the (world) arrogance stream, that is the US, is amongst the most crucial, and definite principles pursued by the late Imam (Khomeini) and this issue can no way be compromised and ignored," Ayatollah Khamenei said during the meeting in Tehran on Tuesday.

More info needed to analyze change over N.K. intelligence agency: Seoul
Yonhap News Agency, 2016 08 16
Seoul--**South Korea said Tuesday that more information is needed to analyze whether control of North Korea's intelligence agency** has changed following the latest overhaul of its cabinet organization. The **Ministry of State Security**, **Pyongyang's intelligence** agency, was previously placed under the control of the powerful National Defense Commission (NDC) before the country's parliament replaced the NDC with a newly created state apparatus named the State Affairs Commission (SAC) in late June. The NDC previously had three ministries--the Ministry of People's Armed Forces, the North's defense ministry, and the Ministry of People's Security, the North's police agency--under its wing.

Bali summit agrees to stronger collaboration to combat terrorism financing
Jakarta Post, Ni Komang Erviani, 2016 08 12
Jakarta - **Country representatives participating in the second Counter-Terrorism Financing Summit agreed on Thursday to a Nusa Dua Statement for stronger**

collaboration on countering terrorism financing. The statement is a follow-up to the Sydney Communiqué agreed to in the first summit in Sydney, Australia, last year. All delegates from 26 countries proclaim in the Nusa Dua Statement that "the Islamic State (IS) in Iraq and the Levant constitutes a global threat to international peace and security". In the statement, they also emphasize that governments cannot work alone to protect financial systems and regional security from terrorism and its financiers.

Govt. to strengthen anti-terror laws, apparatus
Press Trust of India, 2016 08 12
New Delhi - With terrorists widely using social media for their propaganda and new threats emerging, **Union Home Minister Rajnath Singh on Friday said the NDA government is working on strengthening the anti-terror laws and providing legal protection for under cover operations**. Addressing the 'national conference on investigating agencies', the Home Minister said the government is committed to punishing terrorists and is working to strengthen the **Unlawful Activities (Prevention) Act and the National Investigation Agency (NIA) Act.** "We are considering legal protection for undercover operation, use of intelligence collected as evidence and entire gamut of issues relevant to combating terrorism," he said. Mr. Singh said due to widespread use of social media by terrorists, new threats have been emerging in the country.

Security forces seek warrantless wiretaps
Bangkok Post, Wassayos Ngamkham and Ariane Kupferman-Sutthavong, 2016 08 11
Bangkok - **Police are seeking the cabinet's go-ahead to wiretap criminal suspects without having to wait for the court's permission to speed up their investigations**. The request is believed to have support and backing from other security forces and the **National Security Council (NSC)**. A source at the Royal Thai Police (RTP) said Pol Col Kreangsak Chutiwut, chief of the Office of Legal Affairs and Litigation's legal affairs unit, had made the request to the cabinet.

Kunduz intelligence chief wounded in Taliban ambush
Pajhwok Afghan News, Ajmal Kakar, 2016 08 10
Kunduz City - The **intelligence chief for northern Kunduz province was wounded in a Taliban ambush** on Wednesday, a security official said. The **National Directorate of Security (NDS) director, Gen. Mohammad Jassim Anwari**, came under attack on his way to the airport in the provincial capital. Senior police officer Brig. Gen. Aziz Kamawal told Pajhwok Afghan News the NDS director had been wounded in the legs. However, he is said to be in stable condition. Meanwhile, another police officer, who did not want to be named, said Gen. Anwari had been evacuated to a hospital of German forces in Mazar-i-Sharif for medical care. With the Taliban yet to comment on the ambush, security officials said no one else was harmed in the incident.

PM should sack officers of intelligence agencies if they fail to trace Quetta attack perpetrators
Pakistan Dawn, Raza Khan, 2016 08 10
Islamabad - **Pakhtunkhwa Milli Awami Party (PkMAP) chief Mahmood Khan Achakzai on Tuesday demanded from the prime minister to sack officers from the security and intelligence agencies** if they fail to trace out the elements involved in the **deadly Quetta attack**. “Nawaz Sharif should sack the concerned officers of the intelligence and security agencies if they are unable to trace-out the executors and masterminds of the attack in Quetta within a specified time,” said Achakzai while taking part in the National Assembly debate on Monday’s blast. The PkMAP chief termed the Quetta attack an intelligence failure and

demanded to fix the responsibility of the blast. He asked the premier to "act as the real chief executive and take bold decisions". “Nawaz Sharif is chief executive of the country. He must order the security and intelligence agencies to hold an inquiry into the Quetta attack,” said Achakzai.

Le clan présidentiel continue de voir partout l'ombre de l'ex- chef du DRS
Liberté (Algérie), Mehdi Mehenni, 2016 08 14
Alger - Le **clan présidentiel continue de voir partout l'ombre de l'ex-chef du DRS Toufik ou la paranoïa du pouvoir** Il ne se passe plus un événement dans le pays sans que le clan au pouvoir soupçonne l'ombre du toujours mystérieux ex-patron du **Département du renseignement et de la sécurité (DRS).** Après la main de l'étranger, c'est désormais la main de Mohamed Mediène, dit Toufik, que le pouvoir agite pour... sévir ! Son ombre plane toujours et l'"exagération" dont use actuellement le clan au pouvoir, par rapport à de supposées manoeuvres en sourdine du général Toufik, prêtent parfois à rire.

Africa Intelligence Chiefs Unite to Protect International Law
The New Times (Rwanda), 2016 08 10
Kigali—**African intelligence and security services chiefs have called for temporary suspension of all pending arrest warrants and prosecutions filed against African leaders** and high ranking officials until discussions are held among stakeholders to resolve the stalemate. This was part of the declaration following a week-long **Conference of the Committee of Intelligence (CISSA) in Kigali** that attracted Chiefs of Intelligence Services from 51 African countries. Among other items on agenda, the meeting deliberated on how African countries have fallen victim to abuse of international law. The Conference was held under the theme, "Countering the Growing threat of Abuse of Universal Jurisdiction against Africa."

Brazil uses collaborative approach to track terror threats during Olympics
USA Today, Taylor Barnes, 2016 08 12
Rio de Janiero—Above the food trucks and cruise ships stationed along Rio's festive Olympic Boulevard, a quiet room is lined with desks that have a flag above each computer: Iran, Russia, China, United States, Oman. The police here watch a news memo board, a map with roving red squares that represent federal agents monitoring sports venues, and a live stream of Olympic judo. **Brazilian organizers say this control room is one of several such centers that represent a unique approach to collaboration to provide security for the 500,000 foreign guests during the August and September sports competitions here in Rio de Janeiro**. The Games have so far gone off without any major hitch in security for visitors other than conventional crime and robberies, just like Brazil's 2014 World Cup and 2013 Confederations Cup. Brazilian hosts say they have taken every measure necessary to prepare themselves for threats unknown. Brazilian authorities gave few details on the arrests, only saying that the goal was "to guarantee the security of the Olympic Games and citizens' well-being." In a similar series of arrests in July, a prosecutor confirmed that their tip came from the **Federal Bureau of Investigation**. What's unique about **Rio's International Police Cooperation Center (IPCC),** according to Urquiza, is actively sharing information rather than the host nation's police

informing visiting agents once a day in briefings of occurrences in the area, as he said was the case in the 2010 World Cup in South Africa and the 2008 Beijing Olympics. Brazilian police opened this special control room for international law enforcement to work on its premises around the clock. In addition to Rio's IPCC, which hosts representatives from 31 countries, a corollary center in Brasilia pools intelligence data to monitor foreigners arriving in Brazil. Another in the capital city focuses on counter-terrorism, drawing on nine countries which Urquiza said have the best know-how in the field

Port du hijab dans la GRC --Une pratique déjà permise dans d'autres agences représentant la loi
La Presse+, Joël-Denis Bellavance, 2016 08 29
Ottawa--En permettant à ses agentes de confession musulmane de porter **le hijab avec leur uniforme** en janvier, la **Gendarmerie royale du Canada** (GRC) **a simplement emboîté le pas à plusieurs autres organisations fédérales chargées de faire respecter la loi et l'ordre**. La Presse a appris que **l'Agence des services frontaliers du Canada (ASFC), le Service canadien du renseignement de sécurité (SCRS), l'Administration canadienne de la sûreté du transport aérien (ACSTA) et Services correctionnels Canada (SCC) offrent déjà à leurs employées respectives depuis un certain temps le droit de porter le hijab**...Le SCRS, dont les employés travaillent dans l'ombre et à l'abri des regards, n'offre pas d'uniforme à ses employés de sorte que ces derniers peuvent porter ce qu'ils veulent. « Le SCRS est un organisme civil. Par conséquent, les employés ne portent pas d'uniforme. Il n'y a donc pas de politique en oeuvre à ce sujet. Au SCRS, non seulement la diversité fait- elle partie de sa culture, mais elle y constitue une stratégie fondamentale. La diversité de son effectif aide le SCRS à atteindre ses objectifs. Elle lui permet de mieux comprendre les données démographiques des communautés canadiennes qu'il protège et ainsi d'être mieux outillé pour recueillir des renseignements pertinents et exacts. Ensemble, les employés du service parlent environ 106 langues et son effectif est représentatif de cela », a précisé **Tahera Mufti**, porte-parole du SCRS.

Exclusive: Mountie outlines roadblocks in terror fight
CTV.CA, Josh Dehaas, 2016 08 26
Ottawa - **On the same day a new report confirmed hundreds of Canadians have travelled abroad in support of terror groups like ISIS, one of the country's top cops outlined for CTV News what he sees as flaws in the fight against extremism**. In an exclusive interview with Mercedes Stephenson, RCMP **Deputy Commissioner Mike Cabana** said the Mounties receive significant amounts of **information from CSIS and the FBI** but are barred from bringing charges. "Sometimes we have information that clearly indicates the individuals may be moving toward violent tendencies but unfortunately we cannot proceed with criminal charges because that information would be inadmissible," Cabana said. Another problem for the RCMP is tracking terror suspects. Police estimate that only about half of terror suspects in Canada are ordered by judges to wear GPS tracking bracelets.

Liberals end Harper Tories' anti-terror project
Globe and Mail, Colin Freeze, 2016 08 26
Ottawa - **As the Liberals prepare to launch their signature anti- terrorism initiative, they have closed the door on a previous one by the Conservative government**. On Thursday, Liberal **Public Safety Minister Ralph Goodale released a report on the terrorist threat to Canada that said the Islamic State is the main concern**. The report also said that a fiveyear initiative by the Tories that had delivered $10-million, mostly to academics researching terrorism in hopes of finding ways to understand and fight it, had ceased operations in March.

RCMP allow wearing of hijab to attract Muslim women to force
Globe and Mail, Laura Stone, 2016 08 25
Toronto - **Female members of the RCMP are now allowed to wear a hijab head scarf as part of their uniform, as the Mounties look to encourage more Muslim women to join their ranks**. The newly discovered uniform option was adopted by the force in January. But according to law, members must still seek approval from RCMP Commissioner Bob Paulson for any faith-based accommodation, and there has yet to be a formal request to wear the hijab while on duty. "The move to offer the hijab as part of the RCMP uniform is intended to better reflect the changing diversity in the community and encourage more Muslim women to consider policing as a career option," **according to an RCMP briefing note sent to Public Safety Minister Ralph Goodale.** "The objective will be to demonstrate that the RCMP is a progressive and inclusive police service that values and respects persons of all cultural and religious backgrounds," it said.

What Aaron Driver taught us - As Ralph Goodale's ministry of public safety takes the lead on counter-radicalization, where is the RCMP?
Maclean's Magazine, John Geddes, 2016 08 25
In showing that chilling video of Aaron Driver, clad in a black balaclava, on a big screen at the force's Ottawa headquarters, above the heads of two grim-faced senior Mounties, the RCMP's message was clear: This is what homegrown terrorism looks and sounds like, and Canadians should be thankful that fast, smart police work stopped him from carrying out his murderous plan. But another point could also be taken from the story of Driver's death on Aug. 10 in Strathroy, Ont., killed by a police bullet after the 24-year-old self-proclaimed ISIS supporter set off a homemade explosive device in the back of a taxi. In fact, Public Safety Minister Ralph Goodale wasted no time making it: "The government of Canada has to get far more proactive on the whole issue of outreach, community engagement, counter-radicalization, determining how and in what means the right positive constructive influences can be brought to bear to change what otherwise would be dangerous behaviour." Within days he was visiting a Montreal centre that tries to help parents who fear their sons are being drawn to violent ideas, like Driver's embrace of radical Islam. Goodale announced that he will soon appoint an adviser on the issue, and later set up a counter- radicalization office. **What Goodale didn't spell out was that by assuming the lead on this long-overdue push, his department appears to be taking over where the RCMP has failed to make visible progress. The federal police force has been touting its work on countering violent extremism for a few years. In late 2014, Mounties said a landmark program would be rolled out in early 2015.** The basic concept was to support "hubs" where RCMP officers would work with groups of social agencies, religious leaders and community groups to intervene when radicalized individuals looked to be heading toward violence. But no big national launch ever happened.

FBI says foreign hackers penetrated state election systems
Yahoo News, Michael Isikoff, 2016 08 30
Washington - **The FBI has uncovered evidence that foreign hackers penetrated two state election databases in recent weeks, prompting the bureau to warn election officials across the country to take new steps to enhance the security of their computer systems,**

according to federal and state law enforcement officials. The FBI warning, contained in a "flash" alert from the FBI's Cyber Division, a copy of which was obtained by Yahoo News, comes amid heightened concerns among U.S. intelligence officials about the possibility of cyberintrusions, potentially by Russian state-sponsored hackers, aimed at disrupting the November elections. Those concerns prompted **Homeland Security Secretary Jeh Johnson to convene a conference call with state election officials on Aug. 15**, in which he offered his department's help to make state voting systems more secure, including providing federal cybersecurity experts to scan for vulnerabilities, according to a "readout" of the call released by the department. Johnson emphasized in the call that Homeland Security was not aware of "specific or credible cybersecurity threats" to the election, officials said.

Russian Bid to Affect U.S. Voting Is Suggested
New York Times, David E. Sanger, 2016 08 30
Washington - The **Senate minority leader, Harry Reid of Nevada, asked the F.B.I. on Monday to investigate evidence suggesting that Russia may try to manipulate voting results in November**. In a letter to the F.B.I. director, James B. Comey Jr., Mr. Reid wrote that the threat of Russian interference "is more extensive than is widely known and may include the intent to falsify official election results." Recent classified briefings from senior intelligence officials, Mr. Reid said in an interview, have left him fearful that President Vladimir V. Putin's "goal is tampering with this election." **News reports on Monday said the F.B.I. warned state election officials several weeks ago that foreign hackers had exported voter registration data from computer systems in at least one state**, and had pierced the systems of a second one. The bureau did not name the states, but Yahoo News, which first reported the confidential F.B.I. warning, said they were Arizona and Illinois. Matt Roberts, a spokesman for Arizona's secretary of state, said the F.B.I. had told state officials that Russians were behind the Arizona attack. After the F.B.I. warning, Arizona took its voter registration database offline from June 28 to July 8 to allow for a forensic exam of its systems, Mr. Roberts said.

If Spies Can Hack Our iPhones, What's Stopping Them From Framing Us for Crimes?
Haaretz, Jack Watling, 2016 08 30
Jerusalem - "**There is something intimate and insidious about a telephone," observed former CIA officer William Johnson, in his 1987 monograph on the spy trade.** "No matter how careful I am when using the telephone, I cannot help giving away information of value to somebody investigating me." If you want to put this to the test, try setting up a meeting with someone without using any words that could allow a third party to work out where or when it will take place, or the subject to be discussed. **Today's spies are just as quick to acknowledge that phones — and especially smartphones — are not secure**. These devices leak revealing personal information to anyone who takes an interest, and yet outside the intelligence community the news of the latest vulnerability is met with an amnesic surprise.

FBI vs. State Department Over Hillary Clinton's Secrets
The Daily Beast, Shane Harris, 2016 08 29
Washington - **The FBI and the State Department are at odds over whether Hillary Clinton's personal lawyers had the proper government-issued security clearances that they needed to keep copies of her emails in a Washington**, DC, law office last year. Some of those emails contained classified information, which the lawyers and State Department officials knew at the time. The issue has become a flashpoint in the broader controversy over Clinton's private email server. Republican lawmakers are pressing the FBI on whether it investigated the State Department's decision to give security clearances to Clinton's attorneys and let them store copies of the emails on a thumb drive.

U.S. Revamps Line of Attack in Social-Media Fight Against Islamic State
Wall Street Journal, Nicole Hong, 2016 08 29
New York - Recent initiatives by technology companies to push back against Islamic State's social-media messaging highlight a sobering fact: The U.S. government's battle on that front has mostly sputtered. In a number of terrorist attacks over the past year, the attackers were found to have been inspired by Islamic State propaganda and videos, which are often described as Hollywood-level productions. Despite numerous military victories against Islamic State, U.S. officials acknowledge they have struggled to counteract the terrorist group's online campaign. **"We were able to disrupt networks, arrest terrorist cells, kill terror operatives," said Ali Soufan, a former Federal Bureau of Investigation counterterrorism agent who now runs a security consulting firm, the Soufan Group**. But "we haven't been doing a great job in countering the ideology." The government's countermessaging efforts so far have been scattershot and, some close to the government think, largely ineffective. **Officials say the government's new strategy is to empower third parties to create their own messages**, a contrast from earlier efforts that were criticized for having too much direct government involvement.

Lessons in how not to operate the FBI
Los Angeles Times, Del Quentin Wilber, 2016 08 26
Washington - Dressed in plainclothes to blend in with tourists at the National Mall, **a few dozen FBI agents in training fanned out across the Martin Luther King Jr. memorial on an unusual mission.** Their months-long training at the FBI Academy in Quantico, Va., covers target practice, boxing, surveillance and self-defense. But these trainees were dispatched on a more personal quest at the Washington memorial: Pick the most inspirational King quote among those etched into stone slabs and then share their insights during a brief, touchy-feely rap session in the shadow of the slain civil rights leader's statue. The field trip capped one of the **newest exercises** added to the training for aspiring agents and analysts. It's a **daylong dive into the FBI's investigation into King, including a surprisingly frank review into improper wiretapping**, harassment, abuse of power and racially motivated double standards. The training is the brainchild of **FBI Director James B. Comey**, who in 2014 began mandating this institutional introspection into what he called the "shameful" targeting of King by former FBI Director J. Edgar Hoover, which included delving into King's sex life and trying to destroy his reputation.

U.S. rules out swap of jailed Cuban spy Ana Belen Montes
Miami Herald, Nora Games Torres, 2016 08 26
Miami— The O**bama administration "has no intention" of releasing or swapping jailed Cuban spy Ana Belen Montes,** according to a letter sent by the U.S. Department of State to the House Permanent Select Committee on Intelligence. The Aug. 19 letter, obtained by el Nuevo Herald, followed a number of news reports pointing to the **possibility of freeing Montes -- a top Defense Intelligence Agency (DIA) analyst on Cuban affairs who is serving a 25-year prison sentence --** in exchange for Cuba handing over American fugitive Assata Shakur, formerly known as Joanne Chesimard. The letter, addressed to committee chairman Devin Nunes, R-Ca., says the State Department "want(s) to assure you that the United States government has no intention of releasing or exchanging Montes."

US intelligence still sorting out NSA hack
Associated Press, Staff report, 2016 08 25
Yorba Linda, California - The U**.S. is still probing the extent of a recent cyber leak of what purports to be hacking tools used by the National Security Agency**, the nation's top intelligence official said Wednesday. "We are still sorting this out," **James Clapper**, director of

national intelligence, said at an event at the Nixon Presidential Library and Museum in Yorba Linda, California. "It's still under investigation," Clapper said. "We don't know exactly the full extent -- or the understanding -- of exactly what happened." The tool kit consists of malicious software intended to tamper with firewalls, the electronic defenses protecting computer networks.

CIA releases thousands of previously classified briefings to Presidents Nixon and Ford
Los Angeles Times, David S. Cloud, 2016 08 24
Washington - The **CIA pulled the veil back Wednesday on long- classified foreign intelligence briefings it gave President Nixon in the 1970s during both the height of his power and his fall from grace,** a period of intense turmoil at home and abroad. The release of 2,500 President's Daily Briefs -- about 28,000 pages in all -- shed light on such historic events as Nixon's opening to China, the invasion of Cambodia, the U.S.- backed overthrow of an elected leader in Chile, the 1973 Arab-Israeli war, and ultimately the first resignation of a sitting U.S. president. The release also covers briefings given to President Ford, who took over when Nixon resigned on Aug. 9, 1974, until he left office in January 1977. That period included the fall of Saigon and the end of America's bitter war in Vietnam. **CIA Director John Brennan and Director of National Intelligence James Clapper released the briefs and other documents at a symposium at the Richard Nixon Presidential Library in Yorba Linda**.

Chinese cyber spies may be watching you, experts warn
CNN.com, Thom Patterson, 2016 08 24
Washington - About a year ago, **China and the United States formally agreed not to conduct or knowingly support the cyber theft of each other's intellectual property**. So, how is that agreement working out? **Not great, said Adm. Mike Rogers, head of US Cyber Command. "Cyber operations from China are still targeting and exploiting US government, defense industry, academic and private computer networks**," Rogers said last April during testimony before a US Senate committee. Cyber theft of US trade secrets can easily ruin American businesses and result in higher prices for consumers. Even more worrisome, stolen American military secrets could put US servicemen and women at risk during combat.

Police Broke Surveillance Rules After 9/11, Inquiry Finds
New York Times, Rick Rojas, Al Baker, 2016 08 24
New York - The **New York police repeatedly broke rules governing intelligence-gathering while targeting Muslims for surveillance after the terrorist attacks of Sept. 11, 2001**, according to a report issued on Tuesday. The report -- by the Office of the Inspector General for the New York Police Department, an oversight agency created in 2013 -- said that the department's Intelligence Bureau regularly let deadlines pass before asking to extend investigations into political activity, and often failed to explain the roles of undercover officers and confidential informers, as required. "The fact that deadlines were missed and rules were violated is troubling and must be rectified," the report said.

The Real Russian Mole Inside NSA (Canada)
