

2. But, oh noes! What happens when a target uses a service where the data **DOESN'T** go through our access? (bad guy has horns for clarity)

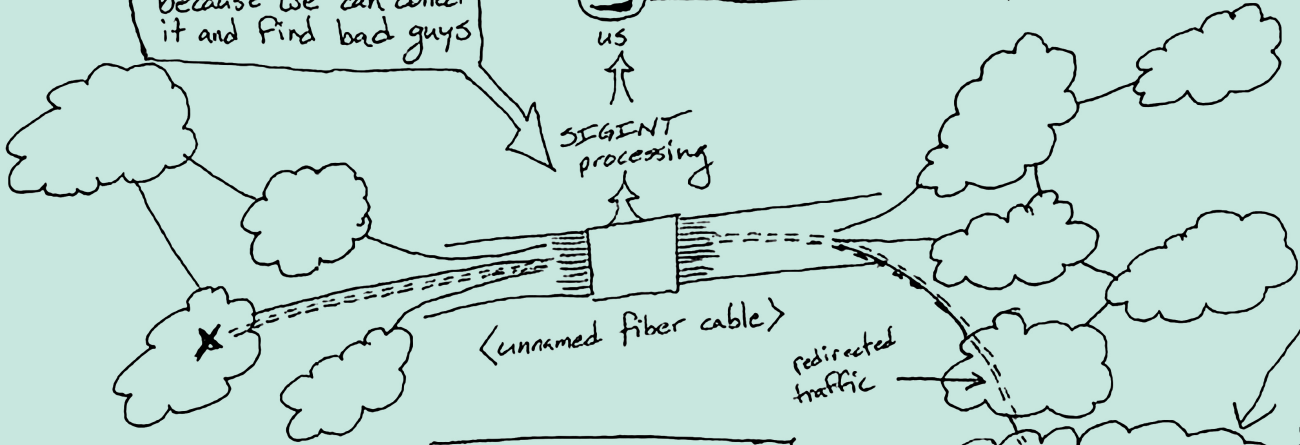

1. We like it when data goes through *<unnamed fiber cable>* because we can collect it and find bad guys

YEAH!!!
MAKE DATA HAPPEN!

us

SIGINT processing

3. CNE midpoint to the rescue!

4. Now we can see the data, we just need to create a copy, and send that copy through *<unnamed fiber cable>* so it can get processed into the SIGINT system.
